While in Philadelphia, Gates lobbied his friends in Congress to supersede Schuyler as commander of the Northern Department. Achieving his purpose on 25 March 1777, he arrived at Fort Ticonderoga, only to learn that Schuyler had gone to Philadelphia to demand that he be restored to command. This continual bickering between Gates, Schuyler, and congressional proponents of the two generals profited no one except Major General John Burgoyne, who threatened to invade New York from Canada in the spring of 1777. But the matter was not easily resolved, for it reflected deep political divisions in America between proponents of a strong central government, who supported Schuyler, and "small government" men, who favored Gates. The quarrel still had one more round to go before it ceased. On 15 May, Congress restored Schuyler to office, only to have Gates rush southward to lobby against him once more. On 5 July, Burgoyne captured Fort Ticonderoga and impelled Schuyler to order an American retreat toward the Hudson River. The British general seemed poised to capture Albany and seize control of the upper Hudson River. Taking advantage of Schuyler's reversal, congressional supporters of Gates succeeded on 4 August in having their favorite restored to command of the Northern Department.

THE NORTHERN COMMAND

With the command situation at last clarified, Gates devoted his full attention to stopping Burgoyne's advance toward Albany. Putting into action his views on defensive warfare, he ordered Colonel Thaddeus Kosciuszko, a Polish engineer, to construct impressive fortifications on the west bank of the Hudson River at Bemis Heights. He then posted his troops behind these works, which Burgoyne must capture if he would make further progress southward toward Albany. In the battle of Freeman's Farm on 19 September, Gates stymied an attempt by Burgoyne to turn the Americans left by sending the riflemen of Colonel Daniel Morgan and Major Henry Dearborn to stop him. Benedict Arnold, who was quarreling with Gates, also likely was involved in the fighting, although without orders. Encamping near the American lines, Burgoyne contemplated the military situation for the next few days. On 7 October, in the battle of Bemis Heights, he attempted once more to bypass the enemy's formidable works by flanking them on their left, and once again was stopped by Gates's forces.

On 9 October Gates learned that Burgoyne was withdrawing toward Fort Ticonderoga, and cautiously followed him. Four days later, Burgoyne's line of retreat was severed when John Stark's militiamen took up positions on the east bank of the Hudson River. On 17 October Burgoyne capitulated to Gates, with the stipulation that his army return to England and no longer serve in America. Gates was severely criticized for the liberality of this provision, but correctly noted that during negotiations with Burgoyne, his supply base at Albany was threatened by a British army under Sir Henry Clinton. Thus, he was compelled to direct his attention to that problem. He was also charged with deliberately delaying the report of his victory to Washington, but he explained that his messenger, James Wilkinson, through no fault of his own, had dallied on his way southward with the news. Finally, he was accused of withholding troops from Washington's hard-pressed main army in Pennsylvania in late 1777. But Gates correctly pointed out that he had in fact sent more than was prudent for his own safety.

These criticisms of Gates, and many others besides, were leveled against him in the winter of 1777–1778 by adulators of Washington who believed that Gates was complicit in a scheme against the commander in chief. Generally called the Conway Cabal, this conspiracy supposedly was intended to remove Washington as commander in chief of the Continental army and put Gates in his place. The plotters were thought to include the army officers Gates (although in a secondary role), Thomas Mifflin, and Thomas Conway, and politicians John Adams, Samuel Adams, Richard Henry Lee, and James Lovell. Gates himself was not believed to be the prime mover of the cabal, only the willing recipient of its fruits.

The plotters, all "small government" men, putatively feared that army officers around Washington were not evincing due deference to civilian authority. Washington and his admirers were particularly sensitive about these matters, for the triumphant Gates had prevailed over his enemies in the military campaigns of 1777 while Washington had lost the city of Philadelphia, as well as a number of battles against William Howe.

In defending his position as commander in chief, Washington publicly treated Gates and his supposed plotters with scorn. Gates, serving as chairman of the Board of War during the winter of 1777–1778, was attempting to implement a number of useful army reforms. Any success he might have had was destroyed by Washington's attitude. Innocent of the charges laid against him by Washington and his friends, Gates was hurt and angry, and although he managed to weather the storm of invective, he developed a profound and lasting dislike of Washington. Without trial, he declared, he had been found guilty of dissuading true believers from divine worship of Alexander's statue. On 15 April 1778, he was ordered by Congress to take command in the Hudson Highlands, where on 4 September he fought a ludicrous duel with James Wilkinson. He commanded at Boston and Hartford in the winter of 1778–1779. After spurning Washington's offer to lead an expedition against the Mohawk Indians in 1779, he served instead at Providence.

THE SOUTHERN COMMAND

In the summer of 1780, Gates was ordered by Congress to take command of the Southern Department, after Benjamin Lincoln had surrendered Charleston to the enemy on 12 May. Although he was not optimistic about his chances against surging British military power in the south, he assumed command of a small army at Coxe's Mill on 25 July. Marching immediately against an enemy garrison at Camden, he directed his army through country barren of provisions, instead of taking a more distant line of advance through country abounding with supplies. Gates's haste seemed to violate his own precepts about careful, defensive warfare, but he had his reasons. He wanted to maneuver his army into a defensive position just north of Camden, which he would fortify, and compel the British army, led by General Lord Charles Cornwallis, to assault at a disadvantage. Unfortunately for him, as he marched his army southward on the night of 15 August toward Camden, he encountered Cornwallis's army marching northward toward him. Forced to deploy his soldiers in the open, Gates hoped that his army of 3,050 men would overwhelm Cornwallis's force of 2,100 soldiers.

In the battle of Camden, on 16 August, Gates commenced the battle by ordering untrained militiamen on his left to charge against veteran British regulars. Soon that entire part of his battle line collapsed, leaving the Continental

regulars on his right, commanded by Johann de Kalb, facing most of Cornwallis's army. Gates was forced off the field by his panicky militiamen, and even though his regulars were still fighting, he rode toward Hillsborough, North Carolina, to rally his forces and reorganize. Meanwhile, de Kalb was killed and the Continentals also disintegrated into a retreating mob. Gates's defeat at Camden and his unfortunate gallop northward destroyed his military reputation, and his political foes never allowed him to forget his poor performance at Camden. In the next three months, as he worked diligently to get his army back into fighting form, Congress debated his future. During that time he learned the devastating news that his son, Robert, was dead at the age of twenty-two. On 5 October Congress voted to order a court of inquiry into the general's conduct at Camden, and to allow Washington to appoint another officer to take his place. Washington immediately appointed Nathanael Greene, who superseded Gates on 2 December. The American army then numbered 1,804 men, and according to Banastre Tarleton, a British cavalryman, presented a tolerable appearance.

For almost two years after his defeat in the south, Gates labored to restore his military reputation, while his political enemies allowed him to languish in forced retirement at Traveller's Rest. The court of inquiry was never convened, and it was not until 14 August 1782, months after the War for America had begun to wind down, that Congress finally voted unanimously to rescind its resolution and invite Gates to rejoin the army. On 5 October he reached the army's final cantonment at Newburg, New York, where he was greeted by his nemesis, Washington. According to observers, their meeting passed with perfect propriety on the part of both men. Gates was placed in command of the right wing of the army, composed of New York, New Jersey, and Connecticut troops. During the winter of 1782–1783, he played an important role in mobilizing officer discontents against Congress, sometimes called the Newburgh Conspiracy. He was particularly disgusted that the officers had not received their pay. Nationalists in Congress apparently tried to use these discontents to increase the authority of the national government. Gates refused to be their tool; his only aim was to secure justice for his fellow officers. When Washington suppressed the discontents, for fear that they might lead to an army mutiny, Gates acquiesced.

LAST YEARS

In late March 1783 Gates rode away from the army for the last time, to be by the bedside of his dying wife, Elizabeth. On 1 June she died, leaving her husband a lonely and embittered man. As the Continental army went through final shudders of demobilization, he reflected upon the ungratefulness of a country that would send its loyal soldiers home to an uncertain future without even paying them. His own economic future seemed uncertain, and he

completely lost interest in politics. In 1786, his future began to look rosier, for on 31 July of that year he married Mary Vallance, a rich widow. Once again politically engaged, he expressed concern that Congress was making inadequate provision for the peacetime military. Also he expressed concern that the government as defined by the Articles of Confederation was too weak, even though he had earlier been a proponent of decentralized power.

In 1787, Gates supported the Constitutional Convention, but made no effort to attend the deliberations in Philadelphia or the ratifying convention held later in Virginia. When the Constitution went into effect in early 1789, he seemed happy about the new system of government, despite concerns about Washington's election as the first president and his appointments to the cabinet and Supreme Court. But Gates had no reservations about the nomination of Thomas Jefferson, his fellow Virginian, to be secretary of state. In 1790, Gates and his wife moved to Manhattan and bought an estate named "Rose Hill Farm." Reverting to his earlier Whiggish principles, he became a Jeffersonian republican and supported the French Revolution. In 1800 he was elected to one term in the New York legislature, but then fell into unmerited neglect by the public. Nevertheless, he spent his last years recollecting with pleasure his part in the creation of the American republic, and died fulfilled.

Gates was a controversial man during the American Revolution, and he made a number of powerful enemies. His politics were too radical for some, and he had a habit of meddling in military politics. But his reputation was most sullied by unwarranted accusations that he was plotting to supersede Washington as commander in chief. At best, he was only a modestly gifted military man, although his conduct of the campaign against Burgoyne was hard to fault. His uncharacteristic lack of caution in the Camden campaign led him to disaster. Clearly his strongest military gifts lay in the areas of army organization and administration. On balance, he has been too severely criticized for his errors and too little credited for his successes. His contributions to the cause of American independence outweigh his failures and deficiencies.

GATES–SCHUYLER CONTROVER-

SY. The antipathy between New Englanders and New Yorkers—an aspect of the factionalism in revolutionary America—forced Generals Horatio Gates and Philip Schuyler into the roles of contending champions. It was not that either had any particular animosity toward the other, but the New Englanders felt their interests would be served if Gates commanded the Northern Department whereas the New Yorkers wanted Schuyler to hold this position. In March 1777 the New England faction prevailed in Congress, and Gates succeeded Schuyler. The latter managed to have himself reinstated the next month. On 4 August 1777 Congress, dissatisfied with the abandonment of Fort Ticonderoga before Burgoyne's offensive, ordered Schuyler superseded by Gates. The northern army remained split into partisans of the two generals; the Schuyler supporters could not make a hero out of their general during the Revolution, but they conducted a successful postwar campaign to make a villain out of Gates.

GATES'S FLIGHT FROM CAMDEN.

16–19 August 1780. After retreating to Rugeley's Mill with the routed militia of his left wing from Camden, and after failing to rally them to stand, General Horatio Gates covered 60 miles on a horse famous for its speed and reached Charlotte the evening of the battle (16 August). During the next two days, mounted on a relay of horses, he covered 120 miles to reach Hillsboro, North Carolina, on 19 August. Alexander Hamilton, whom one scholar (Lynn Montross) has called Gates's "leading character assassin," commented:

Was there ever an instance of a general running away as Gates has done from his whole army? And was there ever so precipitous a flight? One hundred and eighty miles in three days and a half! It does admirable credit to the activity of a man at his time of life. But it disgraces the general and the soldier.

Gates explained in a letter of 22 August to Governor Richard Caswell his reasons for going so precipitously to Hillsboro:

I therefore resolved to proceed directly thither, to give orders for assembling the Continental Troops on the March from Virginia, to direct the Three Corps of Horse at C[ross] Creek to cover the stores . . . and to urge the Resources of Virginia to be drawn forth for our support.

Henry Lee praised Gates for seeing that Hillsboro was the best place to rebuild his army and for going immediately there despite "the calumny with which he was sure to be assailed."

Although Congress replaced Gates with Nathanael Greene, a congressional committee would exonerate Gates's conduct at Camden. Overall, historians would be harder on Gates than most of his contemporaries. Perhaps, Nathanael Greene, his successor, should have the last word on Gates's performance. In January 1781 Greene wrote Alexander Hamilton:

The battle of Camden is represented widely different from what is to the Northward. Col[onel] Williams thinks that none of the General Officers were entitled to any extraordinary merit. . . . The Col also says that General Gates would have shared little more disgrace than is common lot of the unfortunate notwithstanding he was early off, if he had only halted at the Waxhaws or Charlotte.

Later, in October 1781, Greene would personally write to Gates:

I had the opportunity of viewing the ground where you fought, as well as the disposition and Order of Battle, from all which I was more fully confirmed in my former sentiments, that you were unfortunate, but not blameable; and I am confident, from

all the inquiries I have since made, you will acquit yourself with honor.

GAYAULT DE BOISBERTRAND, RENÉ ETIENNE-HENRI DE VIC. (1746–1823). French officer captured with Lee at Basking Ridge, New Jersey. He was born at Bourges and entered the Hainault Regiment on 10 July 1763 as *sous-lieutenant*. Named lieutenant on 20 April 1768, he became provost general of the mounted constabulary of Berry with the rank of lieutenant colonel in 1772. He was granted two years leave on 23 June 1776 to carry correspondence from Dubourg to Franklin in America but did not sail from Nantes until 10 September.

Seriously wounded and captured at Basking Ridge on 16 December 1776, the French volunteer received two years of successive imprisonments by the British at New York, Rhode Island, and eventually Forton in England. Escaping from Forton on 23 July 1778, he reached France to find that his hereditary post had been given to another. He made two requests for reinstatement in the army at the rank of brigadier general but both were denied, presumably because of his poor physical condition. In 1788 he was awarded the chevalier of the Order of Saint Louis and retired at the rank of *maréchal de camp* on 1 March 1791. In 1820 he applied for and received admission as colonel to the Invalides, the military pensioners’ hospital.

GENTLE SHEPHERD. Nickname of George Grenville.

SEE ALSO *Grenville, George*.

GEORGE III. (1738–1820). King of the United Kingdom of Great Britain and Ireland, and elector of Hanover. George was born the eldest son of Frederick, Prince of Wales, and his wife, Augusta of Saxe Gotha, in the Duke of Norfolk’s house in St. James’s Square, London, on 24 May 1738. Baptised George William Frederick, he was far from being the backward unbalanced child of legend. Although shy and of only average intellect, he could read and write English and German at eight, and in later life was drawn to astronomy, clocks, chess, drawing and painting, art and book collecting and—above all—music. Although he travelled little and read fewer books than he collected, he could hold a cultivated conversation with the likes of Dr. Johnson and the astronomer William Herschel. Early tendencies to melancholy and anxiety stayed with him, but although he was plagued by porphyria—a genetically inherited physical malady—as early as 1762, there was nothing wrong with his mind. The young king was an idealist with an almost unbearable sense of duty, borne up by a narrow but deep religious faith and a desire to see the rule of virtue. His misfortune was that no one had taught him to deal with the realities of the political world.

EARLY YEARS

George’s alleged early slowness may have had more to do with a shy disposition and uninspiring tutors than with any intellectual inadequacies. From 1756, when he was given

King George III. *The king of England during the American Revolution, in a painting (1781) by Thomas Gainsborough.*

his own establishment, his tutor and close adviser was John Stuart, Earl of Bute, with whom he formed a close, at times pathetically dependent, relationship. Bute, as scores of George's marked essays testify, worked the adolescent prince hard and his rebukes cut deep. Indeed, Bute's schoolmasterly comments on his pupil's diligence were excessive, distressing, and—for later historians—misleading. While his influence tended to reinforce George's leanings to priggish puritanism, suspicion, and histrionics, Bute also inculcated a sense of patriotism and duty. George became the first Hanoverian to publicly “glory in the name of Briton.”

There is no substance in the old accusation that Bute, whose politics were theoretical rather than practical, led George towards autocracy and the subversion of the constitution. On the contrary, both George and Bute saw the monarch as the proper defender of the constitution as established after 1688: a partnership between parliament's law making and fiscal powers and the king's rights to choose ministers and (when absolutely necessary) veto legislation. They were particularly anxious to guard against a possible coup by George's uncle, the Duke of Cumberland. Both, like George's late father Frederick, despised “party” (that is, political partisanship) not because they wished to undermine parliament but

because—like many others—they disapproved of self-interested factionalism. George, with the extremism of idealistic youth, moved from this position to contempt for all politicians except for Bute. To him, the Duke of Newcastle (Thomas Pelham-Holles), William Pitt (the elder), Henry Fox, and their cronies were all obnoxious. Unfortunately for George, this phase in his development coincided with the moment when, as the new king, he was forced to work with these very villains.

PRE-WAR MINISTRIES: BUTE TO GRAFTON

George succeeded his grandfather, George II, on 25 October 1760. Bute at once assumed the office of secretary of state for the north, replacing Robert Darcy, the Earl of Holderness, in this position. The young king saw that this protected Bute against talk that he was a court favorite who gave ministerial advice in secret. George's immediate aim was not to create a party of “king's friends” but to encourage consensus by offering household posts to opposition Tories. Ironically, far from eliminating partisanship, the policy contributed to the political instability in the 1760s.

While royal patronage could be, and was, deployed to cement majorities and influence elections, eighteenth century political parties were kaleidoscopic and constantly shifting alliances of personal followings and interest groups. George's determination to have Bute as his prime minister contributed further to the uncertainty. Finally, the king's wish to end the Seven Years' War, and especially to withdraw from the German conflict, put him at odds with Pitt, then secretary of state for the south, and Newcastle, the prime minister. He was not sorry when Pitt fell in October 1761 after his cabinet colleagues refused to countenance a pre-emptive strike against Spain. However, it was not until July 1762 that he was rid of Newcastle and able to appoint Bute.

Although from this point on ministries rose and fell with bewildering rapidity, George behaved with impeccable constitutional propriety. In 1763 he had to reluctantly accept Bute's resignation and accept George Grenville, who could command a parliamentary majority. There was no disagreement on policy. He agreed with Grenville that John Wilkes had to be punished for attacking the king and his court in print, and accepted the new prime minister's insistence that the colonies must be taxed in order to spread the financial burden of the war and of keeping a garrison in North America. Nevertheless, Grenville's tediousness and his tendency to harangue the king at length, not to mention his hostility to Bute, soon made him unbearable.

When Charles Watson Wentworth, the Earl of Rockingham, succeeded Grenville, and ran into severe opposition to repeal the Stamp Act, George gave the repeal

bill his personal backing, incidentally demonstrating his willingness to compromise on colonial questions. When William Pitt, the Earl of Chatham, succeeded Rockingham as prime minister, George overcame his earlier distaste for the man and gave the new administration his unstinting support. (At this time, Bute had withdrawn from public life.) Even when it became apparent that Chatham's body and mind were giving way, George continued to encourage him to stay on in office. It was Chatham himself who finally insisted on resigning. This left George with the stop-gap ministry of Augustus Henry Fitzroy, the third Earl of Grafton, which was brought down, not by the king, but by Chatham's unexpected attack on Grafton in the House of Lords in January 1770. Only then, almost in desperation, did George turn to the only politician capable of keeping a parliamentary majority together: Lord Frederick North. At no point was there any possibility of the king imposing a ministry upon an unwilling Parliament, nor did George III think in such terms.

LORD NORTH'S PRIME MINISTRY

Just as the instability of the 1760s had nothing to do with George's supposed autocratic tendencies, so the longevity of Lord North's ministry did not derive from the prime minister's supposed subservience to the king. If anything, the relationship was the other way about: having at last found a minister who could deliver stable majorities in parliament, George was very glad to follow North's lead. At first North led him, not to confrontation but to conciliation, by persuading his parliamentary followers to accept the withdrawal of all the Townshend duties except that on tea. George had as little interest in America as most of his subjects, so the idea that he wanted to exploit the American tax issue to build a popular following at home is as mythical as Rockingham's and Fox's allegations that he was secretly subverting both British and colonial liberties.

The turning point in George III's reign, with regard to the American colony, was the Boston Tea Party in 1773. Almost every serious politician, Chatham and Rockingham included, was outraged by this act of rebellion. Most concluded that the Americans would never be satisfied by concessions and must be brought firmly into line. George approved the Coercive Acts not as an enemy of liberty, but as the defender of the existing constitution: and in particular, of parliament's lawful supremacy over colonial assemblies. Indeed, he had very little choice. To do otherwise would have been both improper constitutionally and tantamount to giving his support to rebels. No eighteenth century sovereign could have done that.

Once hostilities began, George took little part in directing the conduct of the war. His principal contribution was to encourage his ministers to carry on—especially Lord North, who was thrown into acute depression by the

disastrous battle at Saratoga and wanted to resign his office. While the king's opposition in Parliament was tiny, it was vociferous, and North's gifts for conciliation and parliamentary management were invaluable, so the king refused to let him go. Instead, George paid off North's debts in 1777 and for years monitored his state of mind through a correspondence with Charles Jenkinson and John Robinson. When all else failed, George used emotional blackmail, accusing North of wanting to desert him in his hour of need. The king was also concerned with the raising of troops, the building of warships, and the rewarding of successful commanders. Throughout this period George's aims were in tune with the majority of his members of Parliament and peers in the House of Lords and, after French entry into the war (on the American side) in 1778, with a significant share of popular opinion as well.

WAR AND THE POST-WAR PERIOD

George III's insistence on victory, and his long resistance to the idea of American independence, did not significantly prolong the war. It is true that Rockingham's early commitment to independence made it impossible to include him in the ministry in 1780. His terms included full powers to negotiate peace with the Americans, laws limiting the power of the executive, and the sacking of the Lord North's entire cabinet. This not only offended George's determination to fight to the finish, it also challenged his prerogative to choose ministers. Moreover, the Rockingham Whigs by themselves did not have a majority in the House of Commons, or anything like it. George was therefore under no sort of obligation, constitutional or political, to accept their demands. At that stage, victory in America was still attainable, and even after Yorktown it was still a military, as opposed to a political, possibility.

Only at the end of 1781 did George's views part company with what most others saw as reality. He held onto Lord North as prime minister for as long as possible, but was obliged to let him resign when, on 15 March 1782, the ministry barely survived a vote of no confidence. George then seriously contemplated abdication and retirement to Hanover. In the end, however, he behaved as a constitutional monarch, accepting Rockingham as prime minister and William Fitzmaurice-Petty, Earl of Shelburne, and Charles James Fox as a secretaries of state, and acquiesced to their insistence on American independence.

Having once accepted it, however, he never looked back. When Shelburne fell from power, George accepted the a coalition headed by Fox and Lord North, despite his deep personal aversion to Fox, and allowed it to ratify the peace terms it had just censured in opposition. In 1785 he welcomed the former arch-rebel John Adams as America's ambassador to Britain:

I will be free with you, I was the last to consent to the separation; but the separation having been made and having become inevitable, I have always said, as I say now, that I would be the first to meet the friendship of the United States as an independent power.

With the peace treaties secure, George used the occasion of Fox's India Bill to get rid of the coalition and bring in William Pitt the younger as prime minister in December 1783. The king's partnership with Pitt lasted with only one short break until the latter's premature death on 23 January 1806.

In 1788 George suffered his first serious public bout of the porphyria that had been plaguing him since at least 1762. This is a peculiarly nasty disease, in which low hemoglobin production causes porphyrins to enter the blood stream and attack the nervous system. The physical effects are bad enough, but at the stage it had now reached in George, it causes delirium, loss of self-control, and hallucinations. In other words, it looked like madness. A specialist, complete with straight-jacket and restraining chair, was called in to treat the king. Although the king recovered, the attacks became increasingly frequent, severe, and distressing.

By 1801 the king's previously happy marriage was breaking apart as the queen became terrified of his periodic violence and obscene language. He became thinner, exhausted, less able to cope with crises, and his eyesight began to fail. By the end of 1810 he was permanently incapacitated and in January 1811 Parliament allowed his son to take over his kingly role as prince regent. The last decade of George's life was spent in an imaginary world of the past, as he slowly lost his eyesight altogether and his hearing declined. He died at Windsor on 29 January 1820.

George III was a highly moral man, whose personal life was beyond reproach. An able politician after overcoming the acute learning curve of the early 1760s, he never aspired to be more than a strictly constitutional monarch and had a painfully acute awareness of his constitutional duty. Sometimes that sense of duty was unimaginative, narrow, or even wrongheaded. For example, the reverberations of his refusal to countenance Catholic emancipation because, in his view, it violated his coronation oath, reverberates in Ireland even today. His abhorrence of French republicanism was dogmatic and his patriotism could be chauvinistic. Yet his very prejudices were shared by most of his countrymen, and his uprightness and respectability, combined with homely interests such as farming, made the monarchy a popular symbol of the nation. In a sense, it was his model of monarchy that was picked up by Queen Victoria and was further developed by her twentieth century successors.

GEORGETOWN, SOUTH CAROLINA.

15 November 1780. Acting on information that this small coastal town off the mouth of the Peedee was garrisoned by only fifty British regulars, Colonel Francis Marion moved to capture it. The regulars, however, were subsequently reinforced by Loyalist militia under Captains Jesse Barefield and James ("Otterskin") Lewis. At dawn on the 15th, Colonel Peter Horry's mounted militia collided with Lewis at White's plantation, and in a short skirmish Lewis was killed and four rebels were captured. Captain John Melton led another mounted force that collided with Barefield's troops in a dense swamp near The Pens, Colonel William Alston's plantation. Barefield was hit in the face and shoulders with buckshot but survived. Marion's nephew Gabriel was unhorsed and subsequently murdered. With his ammunition almost exhausted, Marion withdrew.

revised by Michael Bellesiles

GEORGETOWN, SOUTH CAROLINA.

24 January 1781. Soon after Lieutenant Colonel Henry Lee joined the recently promoted General Francis Marion, the two commanders raided Georgetown, which at that time was held by two hundred British troops under Lieutenant Colonel George Campbell. On the night of 22–23 January, the infantry of Lee's Legion dropped down the Peedee and hid on an island near the town. The next night this group landed undetected on the undefended waterfront; Captain Carnes led one party that seized Campbell in his quarters near the parade ground, and Captain John Rudolph led another party into positions from which Rudolph could cut off the garrison as his men moved into the British defenses. Lee's cavalry and Marion's partisans charged through the light defenses on the land side to link up with the Legion infantry. Everything worked perfectly until the rebels discovered that they had nobody to fight. The British soldiers refused to leave their fortified

garrison, which was on the water next to an armed sloop that could provide covering fire, and Lee lacked the necessary means (battering rams, scaling ladders, and artillery) to force them out into the open. Not wanting to take casualties in assaulting the enemy positions, Lee and Marion paroled Campbell and withdrew.

GEORGETOWN, SOUTH CAROLINA. 25 July 1781–2 August 1781. Georgetown came into Patriot hands on 6 June 1781 when the small British garrison abandoned its fortifications and sailed to Charleston in the face of a large Patriot force led by General Francis Marion, who had this time brought the necessary tools for a proper siege. In August, after Loyalists had been plundered by the irregulars of General Thomas Sumter, the British retaliated by burning forty-two houses in the town. This resulted in the issuance by Governor John Rutledge of an official nullification of further operations in accordance with “Sumter’s law.” Sumter had retired to his plantation by the end of the month.

GEORGIA, MOBILIZATION IN. Georgia, a royal colony since 1752, was the youngest colony seeking independence. Parliament provided an annual subsidy to support civil government, few taxes were collected, and the crown supported territorial expansion. Government gave new settlers land at no cost until 1773 and at modest cost subsequently. Most white males could vote and middling men of property could hold office. The colony was sparsely populated and poor, except in the rice-producing low country, with about 30 percent of the white population living at the subsistence level. A small group of planter elites established rice and indigo plantations along the tidal rivers, and by the early 1770s the slave population almost matched that of the white. The belief that regular troops would arrive in the event of an Indian war was an important aspect of the colonists’ relationship with Great Britain, for gunmen from surrounding Indian tribes outnumbered the militia nearly five to one.

Violence was a part of life in the frontier colony, and geography played a key role in its presence. The coast, cut

by numerous rivers and inlets and protected by a chain of offshore islands, was impossible to defend against pirate vessels of any size. From South Carolina to the north came horse thieves and squatters who encroached upon Indian land. Settlers were isolated and vulnerable, for there were few roads and only a handful of towns, including the capital, Savannah, about 17 miles upriver from the coast, and Augusta, 140 miles away in the backcountry. British-held East Florida, to the south, was even more sparsely populated than Georgia.

The coming of the Revolutionary War heightened the violence already experienced by Georgia’s inhabitants. East Florida remained a royal colony and its ships and mounted raiders plundered and harassed settlers. Creek Indians served as British auxiliaries, terrifying settlers and soldiers. Raiders and partisan bands crossed the Savannah River from South Carolina to plunder and kill. When British and American soldiers arrived, they took stores, crops, and livestock. Deserters from every army plundered. Georgia was a long way from Philadelphia and London, and once armed combat began, neither seats of power paid much attention to supplying men or matériel. Although Georgia at all times had a functioning civil government, it did not have the resources to defend itself adequately.

Rebel activity was slow to build in Georgia. During 1774 Indian attacks occurred in the backcountry, and settlers therefore objected to any revolutionary action, as British troops might be needed to protect them. Governor James Wright helped subdue the opposition movement. No delegates were sent to the first Continental Congress and the rebels’ first Provincial Congress did not support the call for nonimportation measures. In May 1775, after news of the Battle of Lexington reached Charleston, rumor spread into Georgia that the British ministry might not only start a slave insurrection, but also arm the slaves and Indians. The white colonists’ inherent fears of a race war and an Indian war galvanized the Revolutionary cause. Yet as rebels aggressively took military stores and formed a council of safety, some citizens pleaded for the preservation of public peace and for reconciliation. Wright had no military might to put down the rebel disturbances. Although his authority began to diminish when the council of safety took over the militia, he and other crown officials were not harassed.

Members of the second Provincial Congress established a firmer hold on Georgia. They sent delegates to the Second Continental Congress, lowered the voting requirement, and adopted the Association, a policy of nonimportation and nonexportation to Britain and the West Indies. These trade restrictions proved impossible to enforce due to the nature and length of the coastline and the number of citizens continuing to trade with East Florida. Initially, those who refused to sign the Association or to declare support for liberty were

physically harassed, imprisoned, or ordered to leave the colony; over time the response was reduced to the collection of fines. When a convoy of British ships anchored off Tybee Island, rebels placed Wright and other crown officials under house arrest. They escaped down river to the ships in February 1776, expecting British control to be reestablished. Instead, the convoy sailed away after obtaining needed supplies during the Battle of the Rice Boats, taking Wright and the others along. With British authority removed, the unity that had existed among rebel conservatives and radicals came to an end.

REBEL CONTROL

The fabric of Georgia's society began to unravel due to the inexperienced civil leadership of the revolutionaries, limited financial resources, a poorly equipped and divided military, and shrinking manpower. Lack of authority prevented the government from driving out suspected Loyalists, despite the Expulsion Act of 1777. It also was unable to raise money through the confiscation of property belonging to absent Loyalists and those attainted for high treason in the Act of Attainder of 1778. The military could do little to prevent plunderers, outlaws, and pirates from stealing slaves and running off cattle and horses, ruining fields, and forcing settlers to abandon their holdings. The plantation system fell into disrepair, and agricultural routines became disrupted through the loss of both slaves and whites. With no cooperation existing between civil and military authorities, the general population remained apathetic regarding the war.

Georgia's rebel soldiers were ill equipped, rarely paid, plagued by illness, and generally ignored by the Continental Congress. The Georgia Continental Line, established in November 1775, eventually had four battalions, with a regiment of horse; steady loss of men continued until only six officers were left after the British captured Charleston in May 1780. The Georgia State Line contained two minuteman battalions, two legions, several independent companies, and other regular units, and they performed guard duty on the western frontier; but low bounties, insufficient equipment, and poor discipline limited their effectiveness. The Georgia navy consisted of five galleys, eight row galleys, and two sloops in 1776; it could do little to defend coastal waters. The militia, under the state constitution of 1777, consisted of one battalion in each county for every 250 able bodied men or an independent company; militiamen maintained patrols and outposts, but continuous duty was impossible during planting season, and men generally refused to leave their local area. Demoralized and worried about their homes and families, some soldiers deserted or refused to rejoin, while others sickened and died.

Georgia's soldiers could do little against the organized armed forces of East Florida. The Florida Rangers, led by

Lieutenant Colonel Thomas Brown, raided deep into Georgia, communicating with Loyalists wherever they went. Their primary function was to secure the border and feed the garrison at St. Augustine. The Rangers, with their Indian auxiliaries, drove massive herds of cattle and valuable horses from Georgia and accompanied British regular troops on plundering missions. Between 1776 and 1778, three ill-equipped expeditions, variously including Georgia's militia and navy, South Carolina militia, and Continental troops attempted to subdue East Florida; overall lack of organization and a divided command prevented any military success.

The second and third East Florida expeditions illustrate the high price the Georgia state government paid for its determination to have all military forces, including Continental forces, be subordinate to it. Although neither Governor Button Gwinnett nor Governor John Houstoun had military experience, the state gave them executive power in military matters during the second and third expeditions, respectively. Acrimony between Gwinnett and Continental General Lachlan McIntosh led to a duel; Gwinnett died and McIntosh was forced to leave the state. Their lack of respect for his authority led Houstoun to obtain General Robert Howe's removal as head of the Southern Department and Commodore Oliver Bowen's removal as head of the Georgia navy. The loss of experienced men and the continued factionalism and conflict among civil and military leaders eroded Georgia's defenses.

As Continental currency was scarce, soldiers were usually paid with state currency, which constantly depreciated. Neither soldiers, potential recruits, nor citizens wanted to accept it in exchange for goods and services. The already high cost of all manufactured items increased and horses became unobtainable. The military began to take what it needed without paying, which alienated citizens. Members of the Continental army staff felt their reputations as gentlemen would be destroyed through nonpayment of debt accrued by the army under their name, and valued officers resigned or threatened to resign if their men were not paid. By the summer of 1778 Continental currency arrived to provide back pay due the Georgia Continental troops, but no further money became available prior to the recapture of the state by the British, in December 1778.

BRITISH REOCCUPATION

An invasion force of approximately three thousand British troops captured Savannah on 29 December 1778, meeting a disorganized defense. Known rebels fled into the backcountry to reestablish civil government and re-group military units. Many civilians chose to cooperate with the British, and Loyalists who had fled rebel Georgia now began to return. From this time forward, no decisive military victory occurred to establish dominant control of Georgia and sway the wavering population, which, as

a result, did not rise up to oppose either the British or the rebels.

Both British and rebel civil governments and their armed forces tried to establish authority in Georgia between January 1779 and June 1782. They needed settlers to farm, join the militia, and uphold government; without their support, famine and anarchy would destroy all civil claim to Georgia by either Britain or the United States. As they captured and recaptured territory and reestablished civil government in various parts of Georgia, both powers required oaths of allegiance from the population. This pledging of allegiance lost its binding power, particularly in the backcountry, where some of the settlers had been pressured to change their allegiance seven times between January 1779 and October 1780. The repetitive pattern of oath taking, oath breaking, and renewal of allegiance, coupled with the fact that neither power could protect them, eventually broke down the oath's symbolic power in the eyes of the settlers. By the end of the war, the loyalty oath had been transformed from a political tool wielded by authority into a tool manipulated by the settlers to remain on their land and possibly benefit from land bounties.

The British forces, under Lieutenant Colonel Archibald Campbell, had hoped to live off the land and enjoy the support of an active Loyalist population, but they were disappointed. Unable to benefit from the food supplies in the backcountry, which the rebels held, or repair the dilapidated plantation system in a timely way, the British remained near the coast in order to receive supplies by ship and confiscate civilian supplies. Civilians could not prevent the military from taking what it wanted, and this created an environment of devastation and immense waste. During the spring of 1779 General Augustine Prevost, Campbell's replacement as head of Georgia military, led troops into South Carolina to obtain food. His indiscriminate plundering destroyed any hope of building Loyalist support in that state and provoked retaliatory raids on Georgia for the rest of the war.

Reoccupation brought a return of specie and the reopening of trade, which began to revive Georgia's economy. Upon Governor Wright's return in July, conflict between British civil and military authorities commenced over property, particularly slaves, thousands of whom had been brought back by Prevost from South Carolina. Many inhabitants in and around Savannah, including returning Loyalists, Patriot refugees, and those who had remained in Georgia all along, began to rebuild their former holdings or accrue additional property under reestablished legal processes. The government made an attempt to reorganize the monetary system. Wright's plan to furnish Loyalists with property from confiscated rebel estates and to aid refugees with income from land assets failed due to the continual destruction of the infrastructure by plunderers.

The British established Loyalist militia units among local inhabitants and refugees, but membership was fluid, with men deserting, serving irregularly, and switching allegiance as necessitated by events for the rest of the war. Loyalist provincial units were formed from regular troops, with only one of them known to be composed principally of Georgians. The regular British army in Georgia was systematically reduced in force after December 1778, and those troops remaining were composed primarily of Loyalists and Hessians. There were approximately 500 troops in Savannah and 240 troops in Augusta during 1780; a buildup to approximately 1,000 troops in Savannah and environs came during 1782.

REBEL EFFORTS, 1779

All attempts by the Continental army to drive the British out of Georgia during 1779 failed despite the significant number of troops and militia from Georgia and South Carolina gathered by Continental General Benjamin Lincoln. While rebel militia defeated Loyalist forces at the Battle of Kettle Creek in February, British regular forces defeated rebel militia and Continental forces at Briar Creek in March. In April, Lincoln changed his plan to attack Savannah and the army returned to Charleston. During September and October, Continental troops and militia joined French troops under Admiral-General Count Eustache de la Moignon in the unsuccessful siege of Savannah. The town and its environs were heavily damaged, and intense plundering by French and rebel deserters further worsened conditions there. After the failed siege, the French sailed away, the Continental army returned to South Carolina, and the militia evaporated. The resident population of Georgia remained neutral, for none of these military actions had a significant outcome.

Factionalism crippled rebel civil and military authority in the backcountry during 1779. Four rebel civil governments had been established in Augusta, two of them simultaneously, and personal animosities divided the military command. The Continental Congress recognized the fourth government as constitutional and released to it long-awaited operating funds. Much of this money was apparently spent on extravagant salaries for government officials, while Georgia troops continued to rely on loans from South Carolina to meet military expenses. After the British captured the Continental army in Charleston during May 1780, the Georgia rebel government went into hiding. Until the reestablishment of rebel civil government in August 1781, settlers looked to Governor Wright for help.

BRITISH CIVIL AUTHORITY, 1780

Rebel militiamen captured at Charleston were quickly released on parole. The possibility now existed that the

British might win the war, and many returned to Georgia to regain their property. In July 1780 Wright's reestablished civil government passed the Disqualifying Act, which limited known rebels from holding office but allowed them to live on their property. Parolees now had a chance to reestablish the financial security they had lost when the British reoccupied Georgia, if not earlier. At the same time, they were liable for their debts to Loyalists who had returned to Georgia after 1778, and those known for their depredations against Loyalists were vulnerable to retaliation. Yet others may have joined plundering or partisan bands in order to survive. While their presence generated concern because of their potential to arouse various elements of the population to rebellion or retaliation, Wright hoped to keep the parolees neutral.

Loyalist provincial units under Brown captured Augusta without resistance in June 1780. Later that month hundreds of the rebels paroled in Charleston returned to their homes in the backcountry. Hoping to prevent violence, Wright did not require that they declare their allegiance or surrender their weapons and sent no troops to keep the peace. Rebel Colonel Elijah Clarke rose up with a force of irregulars and pressured many to break their parole and join him in his unsuccessful attack on Augusta that September. British troops drove them out of Georgia, and the army's reprisals against the resident population polarized the backcountry. Those rebels interested in fighting in Georgia now formed partisan bands under local men and made or took what they needed to survive.

With the British civil and military authorities able to provide little protection, lawless bands from both political camps now joined other plunderers. In October 1780 Governor Wright had secured passage of a bill to call out and arm slaves during emergencies. He used slaves to construct new fortifications around Savannah from November to January 1781. By 1781 Wright was providing rice to those owners who could not feed their slaves, hoping to keep the latter alive and available. If unfed, they might run away to join one of the armed communities established by slaves in and around Savannah after the siege and now out of reach of civil authority.

DETERIORATING CONDITIONS, 1781–1782

As a result of British troop movements during the fall of 1780 that eventually led Lord Charles Cornwallis to Yorktown, General Nathanael Greene began to move his Continental troops slowly into the south. As a result, Georgia rebel militiamen fighting in other states returned to the backcountry. During the spring of 1781 they killed at least one hundred loyalists, both officials and settlers. Loyalists began to join rebel bands in order to protect

themselves and their families. Sympathetic to the plight of the settlers, Wright did not blame those who changed their allegiance; instead, he blamed the British military for abandoning the Loyalist population. Rebel forces captured Augusta in June 1781 and ordered Loyalists out of the backcountry. The resulting exodus swelled the population of Savannah, which was fed and housed with parliamentary funds. Wright armed the male refugees, formed new militia units, and raised troops of horsemen while at the same time trying to locate food and maintain the infrastructure of the town.

In August 1781 Greene oversaw the reestablishment of Georgia's rebel government in Augusta. This government immediately offered generous land bounties to citizens who agreed to remain on their land and obey civil and military authority. It offered amnesty, the retention of their property, and land bounties to Loyalists who became soldiers. With settlers now peaceful in the backcountry, rebel forces moved towards Savannah. The state had no funds to pay soldiers and resorted to using confiscated Loyalist property, including slaves, to pay for goods and services.

Plundering, murder, and approaching famine also inhibited recruitment, for potential militiamen would not leave their families and farms unprotected and, as there was no longer any stored food supply, they had to plant or starve. In 1782 rebel Governor John Martin tried to stop the plundering, provide troops, and obtain supplies of powder and lead so men could shoot game. To make matters worse, both armies destroyed food and forage. Martin distributed food rations received from South Carolina via the military commissary, while Wright fed his people with the parliamentary stipend, employed slaves as pioneers to repair the defenses, and made room for more refugees.

In January 1782 Continental General Anthony Wayne came into Georgia with approximately five hundred soldiers. Most left when their enlistment period ended, and Wayne asked the rebel assembly to encourage desertion from Savannah. Despite a superior force, the British made no attempt to attack the modest rebel troops. News reached Savannah in June that General Alexander Leslie had been ordered to evacuate the troops, stunning the Loyalist population. Those who chose to leave had little time to prepare, for the British army departed Savannah on 11 July and spent three weeks staging the evacuation from Tybee Island. Savannah was turned over to Wayne in perfect shape.

The end of the British occupation forced many thousands of Loyalists and their slaves to evacuate. The state desperately needed settlers on the land to support a militia and to provide sufficient manpower to begin to rebuild the shattered agricultural system. While some Loyalists made the choice to leave, others had no choice, for their names appeared in the Confiscation and Banishment Act passed by the rebel government in May 1782. Wayne granted

protection to Loyalist merchants who had valuable goods and provisions to sell and offered full American citizenship to those who joined the Georgia Continentals for two years or the duration of the war. It is impossible to determine the number of people, black and white, evacuated from Georgia in 1782, for many were not documented. Possibly between seven thousand and eight thousand slaves left at this time. The state government made every effort to retain or regain slaves, both in East Florida and in the Indian territory. Most evacuees went to East Florida, either by ship or overland, while other destinations included Jamaica, New York, Nova Scotia, and England. The evacuation of East Florida, due to its cession to Spain, began in 1784 and resulted in the return to the United States of possibly over five thousand whites and uncounted slaves, some resettling in Georgia.

Although the war essentially ended in the South in July 1782, plundering bands continued to threaten civil authority and inhibit rebuilding of the infrastructure. With only a limited number of reliable troops available, Martin and Governor Patrick Tonyn of East Florida agreed to cooperate to prevent crossborder raiding and plundering. The Georgia assembly took a more moderate stance regarding confiscated estates and the return of banished Loyalists. In part this was because the state needed to increase its population and also possibly because loyalty had been broadly viewed by both sides during the war. Georgia continued to be a sparsely populated and violent frontier long after the war, its civil government coping as best it could with the familiar problems of potential Indian war, financial difficulties, factionalism, and an unreliable militia.

GEORGIA EXPEDITION OF WAYNE. January–July 1782. On 12 January, General Anthony Wayne crossed the Savannah River with one hundred dragoons commanded by Colonel Anthony White and a detachment of artillery; their mission was restoring American authority in Georgia. Wayne was soon joined by 300 South Carolina mounted infantry under Colonel Wade Hampton and 170 Georgia militia under Colonel James Jackson. Lacking sufficient men for his goals, Wayne urged the state to create an African American regiment but was rebuffed. Wayne was also held back by a paucity of arms and other supplies.

Although Savannah was too strong to be taken with the means at his disposal, Wayne drove the enemy's outposts back into the town, suppressed Loyalist bands, and cut off supplies. Lieutenant Colonel Alured Clarke, commander of British forces in Georgia, ordered a scorched earth policy, and his withdrawing outposts burned what they could not carry back into Savannah. Clarke also called for help from the Cherokees and Creeks, sending out a force to open the way for the Indians. But they encountered stiff resistance from Jackson's militia. Wayne drove reinforcements sent from Savannah back into British lines. On the night of

22–23 January, three hundred Creeks approached Wayne's bivouac with the intention of attacking the pickets, but they accidentally fell upon the main body at 3 A.M. In a fierce action, the Indians were driven off with the loss of their leader, Guristersigo, and seventeen others killed. Wayne's pursuit netted another twelve, who were executed at sunrise. British desertions accelerated, especially among the German and Loyalist troops. General Alexander Leslie, British commander in the South, was concerned that he could not continue operations and proposed a truce to General Nathanael Greene, who saw right through the ploy. Clarke and Governor James Wright suggested a truce to Wayne, with the same results.

After six months of siege, the British evacuated the city for Charleston on 10 and 11 July, taking four thousand Loyalists and five thousand slaves with them. Wayne's troops entered Savannah immediately after the last British troops embarked.

GEORGIA LINE. The Georgia Line was unique within the Continental Army because the small population base of the state required that a large proportion of its recruiting be conducted outside the territorial boundaries of Georgia. The Line originated with the request by the Continental Congress on 4 November 1775 to raise a single Continental regiment that would be particularly responsible for defense of the Florida border and the seacoast, and would keep watch on the frontier. The Provincial Congress began to form the Line on 20 January 1776, but by the summer it began to request permission to recruit additional regiments in other states. Congress approved two additional regiments on 2 July, specifying that one should be armed with rifles. On the 24th of that month, Congress also approved the transfer to the Continental army of Georgia's four troops of horse and their expansion into a regiment of rangers who could serve on foot or mounted as the situation demanded. Congress added a final regiment on 1 February 1777.

Of the five formations in the Line, the First Georgia Regiment and the Georgia Regiment of Horse Rangers were recruited in the state; the Second Georgia Regiment in Virginia; the Third Georgia Regiment in North Carolina; and the Fifth Georgia Regiment in Pennsylvania. All served exclusively in the south, and all were captured at Charleston on 12 May 1780. All but the First were officially disbanded on 1 January 1781. The remaining unit began reorganizing on 1 January 1783, after the British left Savannah, to

become the three-company Georgia Battalion. It disbanded on 15 November 1783.

GÉRARD, CONRAD-ALEXANDRE.

(1729–1790). First French minister to the United States. He received a doctorate of jurisprudence at the University of Strasbourg (1749). Gérard later served at Mannheim as secretary of legation (1753–1759) and at Vienna as first secretary (1761–1766). In 1766 he was promoted at Versailles to first assistant to the ministry. As trusted adviser of the new foreign minister, Vergennes, he became secretary of the Council of State. There he was intermediary with the Americans on behalf of the French government. Signatory to the treaties with the Americans, he was selected to represent the crown in America and arrived in Philadelphia on 12 July 1778. During the period July 1778–October 1779, Gérard was minister plenipotentiary to the Continental Congress. His forceful efforts to micro-manage aspects of American policies led to discontent among some members.

Due to failing health from exhaustion, he was replaced by La Luzerne and returned to France in 1780. That year Gérard was named royal praetor of Strasbourg. He participated in the Assembly of Notables in 1787 and the Assembly of Nobles of Alsace in the election of deputies to the Estates General in 1789, but he was too ill to serve his city and king further.

GERMAIN, GEORGE *SEE* *Sackville, George*.

GERMAN AUXILIARIES. More than 30,000 Germans fought in the War of American Independence, taking part in every major campaign from the Floridas to Canada; and fighting overseas in the campaigns in the Mediterranean and India. Six independent German states contributed units to the British army for service in America: Hesse-Cassel, Hesse-Hanau, Anspach-Bayreuth, Braunschweig-Lüneburg (Brunswick), Anhalt-Zerbst, and Waldeck. Hanover, which was ruled by King George III of England, allowed individual recruiting for British regiments, and sent several units to Gibraltar, Minorca, and India. But German units also served in the armies of Britain's opponents—two other Waldeck regiments were part of the Dutch army, and Zweibrücken provided a number of regiments to France, including the Royal Deux-Ponts Regiment, which was part of General Jean comte de Rochambeau's 1780 to 1782 expedition to assist the Americans.

MYTHS

The common image of the "Hessians" as brutal mercenaries sold for blood money by corrupt rulers is imbedded in the Declaration of Independence and in two hundred years' worth of schoolbooks, but it is not true. It was the result of propaganda efforts initiated by the Continental Congress (with Benjamin Franklin in charge) and by liberal German intellectuals who were deeply influenced by the French Revolution and nineteenth-century nationalism. In point of fact, each of the states that furnished troops to the British did so after negotiating treaties that set forth a variety of conditions and concessions. For example, Hesse-Cassel's situation was the direct opposite of the old myth. It had a formal alliance under which the British and Hanover guaranteed to defend the country from aggressors while the bulk of the nation's army served overseas. In addition, the monies the Landgrave (territorial ruler) gained from the treaty were used to provide social services to the civilian population and to encourage industry.

A second myth is that the Germans deserted in droves whenever they had the chance, or died from combat or

disease, leaving only about 60 percent to return home at the end of the war. This is a wild exaggeration, and attempts to depict all units behaving in a manner that applies to only a few. German losses in the Crown's forces were no worse, overall, than those of the British or the Loyalists. Further, the numbers given for "returning" troops disregard personnel who were sent home earlier than the latter part of 1783. They also ignore the large numbers of troops who chose to take discharges in North America and settled in either Canada or the United States.

The third myth about the Germans is that they were all well-disciplined and drilled in the tradition of Frederick the Great. In this interpretation, historians argue that, when first employed, the Hessians were respected by the British and feared by the Americans. As this theory goes, they quickly found that the traditional tactics of the Potsdam parade ground brought disaster in American conditions. It is true that by the end of the 1777 campaigns, Americans had lost their fears and the British had started to relegate German units to garrison duties or service in the second line of battle formations, but not for the reasons commonly assumed. It was not contempt, but rather the recognition that the very tables of organization of the German units limited their ability to maneuver in broken terrain, although they functioned quite well in situations where a premium was placed on frontal attack or solid defense. German formations like the jägers (riflemen) or the highly-trained chasseurs (light infantry) who had organizational flexibility and training to carry out skirmishing provided British commanders with perhaps their best light troops.

AUGMENTING BRITISH FORCES

When the British government went to war in 1775 the conflict turned out to be very unpopular. The recruits available were barely sufficient to bring existing regiments up to strength. Only one new unit (the Seventy-first Foot) could be raised, and that only by turning to Highland Scots. In this situation the Ministry quickly turned to a century-old tradition and sought to bring foreign units into their service, primarily drawn from the Protestant states in the north-western part of Germany. Some were procured to provide trained units to the generals in North America quickly (raising new regiments in Britain would require a long period of training before they could be sent into combat). Others were obtained to relieve British regiments from garrison duty so that they could be transferred to the war zone.

Preliminary negotiations began on 2 December 1775, and the first three treaties were submitted to Parliament on 29 February 1776. Not counting Hanover, four states concluded treaties in 1776: Brunswick (9 January), Hesse-Cassel (31 January), Hesse-Hanau (5 February), and Waldeck (25 April). While the terms of each treaty varied, basically the British picked up the costs of paying

Auxiliary Units		
State	Units Furnished	Total Manpower Sent
Anspach-Bayreuth	Two infantry regiments with a supporting artillery detachment Six companies of jägers or chasseurs	2,459
Anhalt-Zerbst	One infantry regiment (two battalions) with two-gun artillery detachment	1,260
Braunschweig-Lunenburg	Four infantry regiments One dismounted dragoon regiment One grenadier battalion One chasseur battalion (including a jäger company)	5,723
Hesse-Cassel	Complete division staff Four grenadier battalions 11 Infantry regiments Four garrison infantry regiments (reserve formations called to active duty) Six companies of jägers (one mounted) Three companies of artillery A field hospital	18,970
Hesse-Hanau	One infantry regiment One chasseur battalion One artillery company	2,422
Waldeck	One infantry regiment Supporting artillery detachment (2 guns)	1,225
Total manpower		32,059

Table 1. COURTESY OF THE AUTHOR.

the troops, providing them with food, and transporting them. The Germans retained responsibility for weapons, equipment, and uniforms, and for furnishing replacements. The treaties also called for cash payment to enable the individual states to conduct recruiting and carry out other preparations, and for each casualty—but this was the same practice used when a new unit was formed in Britain or when a unit had to recruit new troops to replace losses. In 1777 Britain made two smaller treaties with Anspach-Bayreuth (1 February) and Anhalt-Zerbst (October, although the troops did not reach Canada until late 1778 due to transportation problems). Some of the contingents increased (especially by adding more jägers) during the course of the war after supplemental treaties. Table 1 gives a summary of the size of each contingent.

SIGNIFICANCE

Three significant British defeats involved forces which were primarily composed of Germans: Trenton, Fort Mercer, and Bennington. These failures have been used to argue that the Germans were not an effective combat force, but purely British or Loyalist engagements also ended in stunning defeats. The truth is that the only way that the Ministry could have procured enough troops for the relief of Canada and the simultaneous capture of New York in 1776 was to turn to the policy of treaties. The troops from Hesse-Cassel, Braunschweig-Lünenburg, and

Hesse-Hanau generally performed credibly, those of Anspach-Bayreuth and Waldeck competently, and only the small Anhalt-Zerbst contingent could be considered sub-par. When employed properly, they were extremely valuable, and once France entered into the war, no British offensive could have been undertaken without having Germans available to garrison the major bases.

German service in the American Revolution had another impact frequently overlooked by American historians—it was an important learning experience for those participants interested in professional development. The Hesse-Cassel army completely changed both its organizational structure and its tactical doctrine after reviewing the lessons of the war, producing units that were much more flexible and patterned after the Americans they had fought. This change made their forces the most effective in the opening years of the Napoleonic Wars. One Hessian, Johann Ewald, would go on to reach the rank of lieutenant general in the Danish army and become the foremost authority on light infantry tactics in that period.

GERMAN FLATS (HERKIMER), NEW YORK.

13 September 1778. Originally called Burnet's Field, this settlement was actually a ten-mile stretch of the Mohawk Valley extending west from the mouth of West Canada Creek, with its center five miles south of the subsequently named Herkimer. Its name comes from the fact that the first settlers were German immigrants from the Palatine. It contained about seventy houses on both sides of the river when the Revolution started, including Brigadier General Nicholas Herkimer's stockaded mansion (called Fort Herkimer). Two miles westward on the north bank of the river was Fort Dayton, established by Colonel Elias Dayton in the fall of 1776 on the site of an earlier French and Indian War post. It was one of the few Continental Army posts in the Mohawk Valley and its explicit purpose was to protect German Flats.

In the late summer of 1778, the settlers heard rumors that Joseph Brant and Captain William Caldwell intended to raid German Flats with a force of 300 Loyalists and 150 Mohawk warriors. In response, Colonel Peter Bellingier, commander of Fort Dayton, sent out scouts to probe towards Unadilla, which was suspected of being Brant's base. They were ambushed near the later town of Edmeston. Three scouts were killed but the fourth, Adam Helmer, got away. He had a

German Regiment

reputation as the best cross-country runner in the valley, and his escape is the basis for Henry Fonda's dash in the movie *Drums Along the Mohawk* (1939). Helmer reached the settlement on 13 (or 17) September and gave the alarm in time for most of the inhabitants to retreat into the several local forts. Brant's raiding party came up the Unadilla River by way of Cedarville and arrived on the southern end of the settlement an hour after the alarm. Unaware of the fact that the inhabitants were already warned, he camped for the night near the known Loyalist area of Shoemaker's Tavern (modern Mohawk). The next day the raiders had to content themselves with burning the abandoned farms and mills from Little Falls to Frankford.

On 29 October 1780, Sir John Johnson passed through German Flats after raiding Schoharie Valley. In early 1781 Indians appeared in small parties and destroyed property at German Flats. The hated Walter Butler was captured at Shoemaker's house.

GERMAN REGIMENT. Early in 1776, Congress decided to raise an eight-company regiment from among the roughly 130,000 people of German birth or descent then living in Pennsylvania, Maryland, and Virginia. It authorized the regiment on 25 May 1776, to serve for three years or the duration of the war, and on 17 July appointed Nicholas Haussegger, a hatter from Lebanon, Pennsylvania, as colonel. Haussegger had been a captain in the French and Indian War and then the major of the Fourth Pennsylvania Battalion (since 4 January 1776). On 31 December he led ten men on a reconnaissance of Princeton, New Jersey, and surrendered himself and his party to the British. The regiment remained intact after Haussegger's defection. Although forced to retreat under British attack at the Second Battle of Trenton (Assunpink Bridge) on 2 January 1777, it fought well at Princeton (3 January). Congress considered it an "extra" Continental regiment in the reorganization of 1777 (as part of the Maryland Line), and appointed Henry Leonard Philip, baron de Arendt, a veteran of the Prussian service, as its new colonel on

19 March. As a unit of Washington's main army, it was present at Brandywine and was heavily engaged at Germantown. Washington granted de Arendt a leave of absence for health reasons on 18 August 1778; he never reassumed command. The regiment was sent to the Pennsylvania frontier in April 1779, served in Sullivan's expedition against the Iroquois, and remained on the frontier until April 1780. It served with the main army until disbanded on 1 January 1781. German-Americans were also prominent in another German regiment, this one authorized by the Virginia Convention as the Eighth Virginia on 11 January 1776. Raised by John Peter Muhlenberg in the frontier counties of Virginia's Shenandoah Valley between 9 February and 4 April, it was adopted into the Continental army on 25 May 1776. After participating in the defense of Charleston, South Carolina, in June 1776, the unit joined Washington's army for the defense of Philadelphia in the summer of 1777. It was consolidated with the Fourth Virginia on 12 May 1779.

GERMAN SOLDIERS SERVING IN BRITISH REGIMENTS. In the summer of 1775, British infantry regiments serving in America were ordered augmented by 120 men. The home islands provided the largest proportion of these, but additional men were garnered via contract with Hanoverian Lieutenant Colonel Georg Heinrich Albrecht von Scheithar, who provided 2,000 German recruits to serve in British regiments.

A study of the Twenty-second Regiment of Foot shows on average the Germans comprising 10 percent of each 1776 battalion company, with the flank companies (grenadier and light infantry) containing only veteran soldiers. The Twenty-second Regiment Germans enlisted in England in May 1776 but did not actually join the regiment at Staten Island, New York, until the late summer and autumn of that year.

Desertion proved a problem. British Fourth Brigade orders for 6 May 1777 noted:

the German Recruits . . . may be put together to sleep in one or more Rooms which rooms are to be locked: at 8 at night and Opened: at Reveille beating in the morning that their names may be called: Over Every hour During the day . . . that the Articles of war Against Desertion to be read to them together with these Orders, this Evening for which purpose they are to be Assembled: at the parade of the Regiment: at half past five & That they be told the reason they are treated: in this manner is because of the frequent Desertion Among them at the same time they are to be forbid going to the Waldeck Regiment. (Rees, transcr., "Selected Transcriptions")

Despite this admonition, most of the men served honorably and well through the war.

GERMANTOWN, PENNSYLVANIA, BATTLE OF. The very name, "Germantown," says much about the social complexities of the military task that William Howe accepted in agreeing to bring his army to Pennsylvania in 1777 to try to fatally wound the rebellion. When the former Pennsylvania assembly speaker and then Loyalist, Joseph Galloway, assured Howe that Pennsylvanians were eager to return to their allegiance to their king, he was referring primarily to Quakers and other Englishmen, not to the province's German-speaking inhabitants, supposedly nostalgic for George, the former elector of Hanover. As both captured and deserting Hessian mercenaries would discover to their dismay between 1776 and 1783, the colony's Germans were for the most part firmly committed to independence.

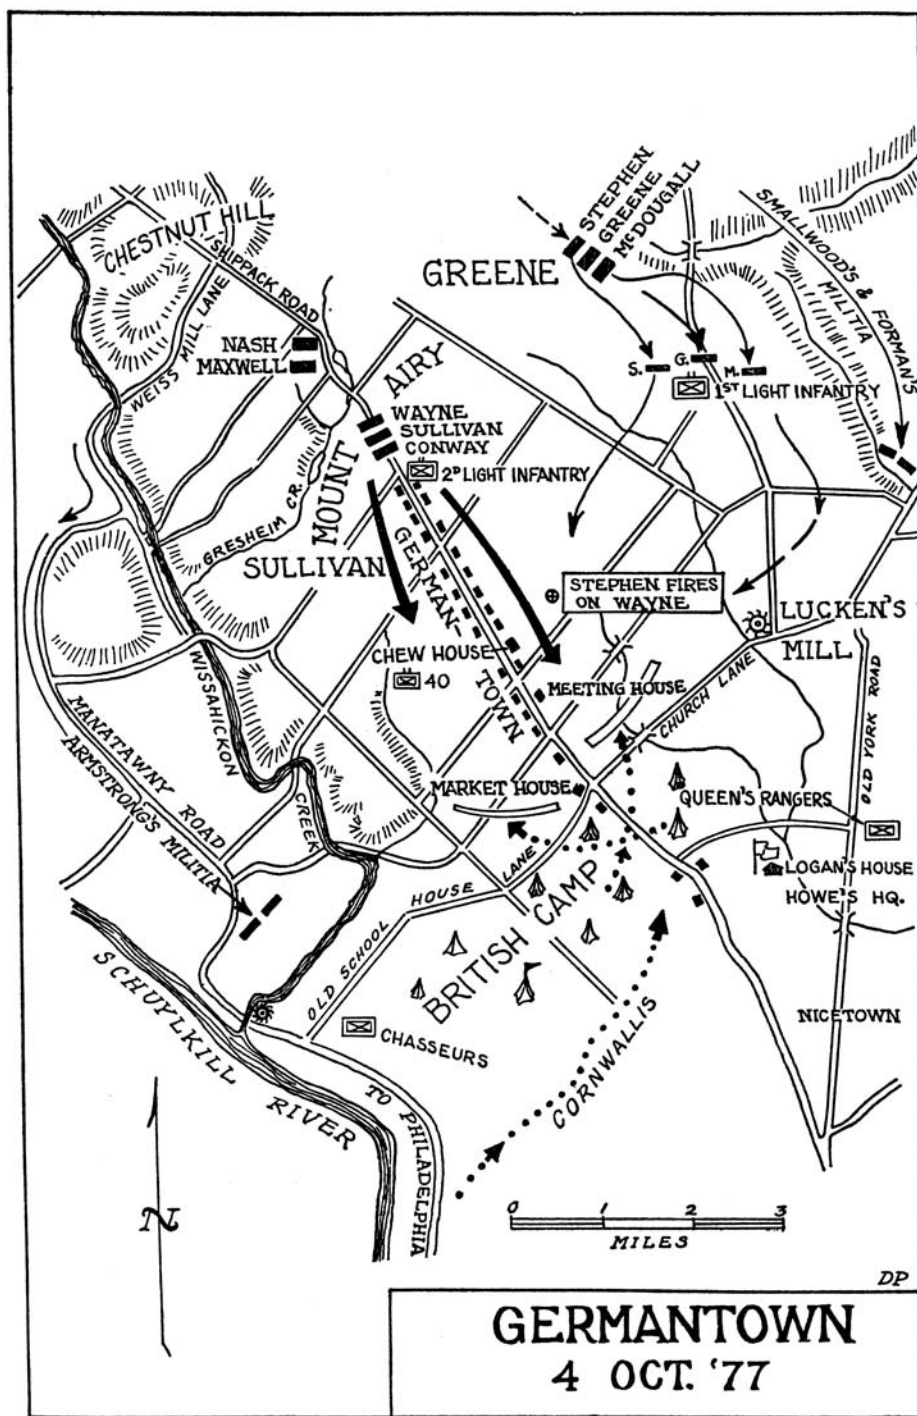

Germantown was not named for the hordes of Rhineland migrants who flooded through Philadelphia between 1720 and 1750, creating a Germanic belt in the near-western counties of Northampton, Berks, and parts of Lancaster and York. Its name, rather, derived from the old German Township, settled by people from Frankford and Crefeld in the Roman Empire who were

contemporary with and recruited by William Penn in the 1680s and 1690s. Settling compactly about fifteen miles northwest of Philadelphia, north of the Schuylkill Valley, these people had created an artisanal and craft village by the mid-eighteenth century. The town had a linear streetscape, stretching for a mile mostly along the Germantown Road. Its small houses had backyards, gardens, and orchards, tightly fenced and covered with outbuildings, along a handful of intersecting roads and lanes. These structures were mixed after 1750 with a few large summer houses for members of the provincial gentry, who made the half-day drive from town to escape the heat, noise, and occasional return of pestilence.

BATTLE PLANS

Shortly after the Battle of Brandywine, General Washington moved the Continental army to Germantown before striking up the Schuylkill Valley in an unsuccessful effort to keep the British out of Philadelphia. Thus, he had a much better sense of the ground than he had possessed at Brandywine three weeks before. The army moved by small steps down the Schuylkill between 29 September and 2 October until the troops were within about twenty miles from Philadelphia. Washington drew small reinforcements from the reserve kept in the middle Hudson River Valley in late September. In doing so, he potentially exposed General Horatio Gates—north of Albany and facing British General John Burgoyne's invading force—to attack from behind by any rescue force sent north from New York City by General Henry Clinton to extricate Burgoyne. On 28 September, Washington called a council of war to discuss the possibility of taking offensive action. His generals advised against an immediate attack but urged watching for a favorable opportunity.

General Howe, meanwhile, moved cautiously to take possession of Philadelphia. He sent a garrison force of five thousand troops there directly across the Schuylkill on 26 September but left the bulk of his army at Germantown until he could prepare the city for occupation. He had witnessed civil-military tensions during the previous two years in both Boston and New York. His main objective after Brandywine was to clear obstructions from the Delaware River below Philadelphia so that Admiral Richard Howe's transport fleet could reach the city docks with provisions. Howe's commissary general, Daniel Weir, managed to feed the army from the countryside between Head of Elk and the Schuylkill, reaching Philadelphia with slightly more provisions than he had carried away from the fleet in August. But those supplies would now diminish, and the British would be held politically responsible for any shortages that civilians faced in competition with soldiers. The rebels still held forts at Red Bank in New Jersey and at Mud Island on the

THE GALE GROUP.

Pennsylvania side, near the mouth of the Schuylkill River, and they had obstructed the channels between those positions by placing partially sunken wood and metal barriers called *chevaux-de-frise* across the river. The latter were chained together and threatened to damage British

warships. Washington learned that Howe was making detachments from his force in the city to the lower Delaware as part of an effort to seize the forts and to clear these river obstructions. He informally communicated this news to his general officers, who on 2 October

advised Washington to execute an attack on the British garrison at Germantown.

If General Howe's battle plan for Brandywine was loosely modeled on the one that he had used successfully the year before on Long Island, Washington's thinking about Germantown reflected his successful counterstroke four months later at Trenton and Princeton. The action would begin overnight, it would involve a surprise attack on an exposed outpost, and it would be elaborately timed and conceived, requiring very careful coordination among diverse army units. Washington divided his army, with its militia reinforcements, into four separate columns. The outside wings of the attack would be executed by militiamen, who in some cases were led by regular army officers. The interior columns would be composed of regular troops and led by the officers in whom Washington had the greatest confidence. The army was about fifteen miles above the outer positions of the British force at the northern end of Germantown. The troops were ordered to leave their packs behind to foster mobility, and they carried substantial but finite supplies of ammunition, which amounted to about forty rounds per man.

The largest Continental column, about five thousand troops under General Nathanael Greene, pushed off at mid-evening on 3 October. They marched down Skippack Road, then filed off into Limekiln Road and approached their target from the northwest. Shortly after Greene left, the second Continental column, commanded by General John Sullivan and accompanied by Washington, followed down Skippack Road then turned into Germantown Road, the main street through town. Greene would form the left and Sullivan the right wing of the main Continental attack. Washington ordered about two thousand Pennsylvania militia troops, commanded by the aging but highly regarded John Armstrong, to approach Germantown along the Manatawny or Ridge Road, which followed the Schuylkill, until he reached the junction of the Wissahickon Creek with that river. This force would serve as the right wing of the overall attack. It was intended to be in a position to support the action if the regulars were successful. A smaller group of about one thousand Maryland and New Jersey militia, under Maryland General William Smallwood, took a much more circuitous (and very poorly described in its instructions) route, designed to bring it out to the north of Germantown, to add force to an effort to drive the British downhill toward the Schuylkill River.

As had been the case at Trenton the previous year, the plan assumed that a diverse group of poorly trained units would be able to arrive at the point of battle almost simultaneously. To achieve this end, it was expected that each column would maintain mobile peripheral parties and that couriers would cross back and forth between them, maintaining frequent communications. The

columns were instructed to arrive at their battle positions, within two miles of the enemy's watchmen, by 2 A.M. on 4 October, and then to rest for about two hours. Then they would organize their units and strike at 5 A.M. against the enemy pickets or watchmen. Washington wanted the latter to be quietly overwhelmed with bayonets or, if necessary, captured, to avoid signaling the sleeping encampments at Germantown of the impending attack.

THE BATTLE BEGINS

Major aspects of this attack plan went awry from the beginning, although the operation initially appeared to succeed. Most divisions were late getting to their halting points, although the built-in interval for rest absorbed some of this delay—possibly at the cost of tiredness and confusion after daybreak. Toward dawn, a typical mid-Atlantic early morning autumn fog arose, thicker than the one that had benefited Howe's flanking detachment at Brandywine three weeks before. Somewhere between Chestnut Hill and Mount Airy, well short of the British lines at Germantown, Sullivan's advance units encountered parties of British infantrymen. Thus, the action began not with muffled or bayoneted guardsmen, but rather with a small, sharp, and noisy skirmish. The defenders resisted, then gave ground to an attack force whose size they could not estimate. Both attackers and defenders groped in the murky first light. Retreating British forces set fire to small fields of mature buckwheat plants, ready for harvest, and to hay stubble, both of which burned eerily and smokily. As American troops reached the edges of Germantown proper, the webs of fencing and other agricultural infrastructure that littered the small fields and garden plots behind the houses presented difficult obstacles that had to be passed or dismantled at great risk to the men.

Washington was concerned and confused as much by silences as by familiar battle sounds coming out of the obscure light. He expected noise telling him that Greene's, Armstrong's, and Smallwood's columns had joined or were about to join the battle, but he heard none. He also inferred from the retreat of musket fire in front of him and from its subsequent increase closer in that the British were indeed withdrawing under American pressure, but that Sullivan's troops were discharging their weapons too freely and risking the exhaustion of their limited ammunition supplies. Washington quickly ordered that those troops be restrained from undisciplined firing. On several occasions he moved up right behind the first lines of attackers and had to be urged by his own aides and officers to stand back and avoid exposing himself unnecessarily to gunfire. Again and again he was unable to resist trying to move to the heart of the battle itself.

General Howe, meanwhile, became involved in directing the defense on the other side of the fog. Howe

made his quarters at Stenton, the country house of the prominent Logan family of Pennsylvania, situated about halfway between Germantown and Philadelphia proper. When the action began, Howe was awakened by messengers who could not say for sure whether the army was under sustained attack or merely facing a limited series of tactical probes. Until evidence proved otherwise, he chose to presume the latter. He dressed, mounted his horse, and rode northwest toward the center of Germantown. Arriving near the lines he chastised his troops, saying that he “never saw you retreat before,” and he claimed that the attackers were “only a scouting party.” Howe’s privates knew better, as did, presumably, his dog, who accompanied the general, then wandered out of line in the fog and quickly became a Continental prisoner of war.

As the British retreated into the fog, one hundred members of an infantry regiment somewhat impulsively took shelter in a large stone house sitting back from the Germantown Road by several hundred feet and began barricading its lower doors and windows. This was the summer country home of Benjamin Chew, a Philadelphia gentleman and the late chief justice of the defunct provincial supreme court of Pennsylvania. The redcoats withdrew to the second floor, from whose windows they could pour deadly fire on passing American troops. Washington’s aides and generals debated what to do about this situation. Several of them advocated leaving a guard party near the building to prevent the embedded soldiers from escaping and then diverting the flow of the attack out of range of its sniper fire. However, the commander of Continental artillery, General Henry Knox—a soldier whose somewhat doctrinaire military ideas reflected his earlier career as a colonial bookseller and an avid reader of military histories and treatises—invoked an old aphorism about the dangers of leaving a fortified “castle” in the army’s rear. Washington accepted Knox’s judgment and ordered American artillery to try to reduce the “fort.” The building’s thick stone walls were impervious to cannon fire, however, and the fierce firing kept up by the redcoats prevented their dislodgement by any other means. Washington eventually acceded to the more conservative wisdom of the dissenters and ordered a guard thrown around the house. But a large number of Americans died in the Chew House’s capacious front yard that morning, and valuable time was lost forever. Washington then threw the reserve troops that he had held back from the initial assault on Germantown into the chase. He soon allowed himself to imagine that his enemies were abandoning the field in a disorderly retreat.

THE AMERICAN PLAN DISSOLVES

Something like the opposite was instead happening. As General Howe relinquished the convenient fiction that his forces had been attacked by a “scouting party,” he began to

regain control over his shaken troops. At about the same time, Washington lost a measure of control over his own men. The fog, gunsmoke, and smoke from burning fields, fences, and outbuildings was a disadvantage to troops on both sides, but it was easier for the British to retreat through it than for numerous separate attacking bodies of men to advance while trying to form a unified line. Despite Washington’s orders to conserve ammunition, many of Sullivan’s men began to run out and in the process were losing confidence in their own safety. The other three columns of which the initial American attack consisted had either not become involved in the action at all or had stumbled into it in problematic ways. Down the Wissahickon Ridge toward the Schuylkill River, John Armstrong’s Pennsylvania militia companies had probed their way hesitantly along the riverbank. Upon reaching its junction with Wissahickon Creek, above the Falls of Schuylkill, their only route into the action was uphill and through the mist. It is difficult to conclude that they were very anxious to make that climb into what must have sounded like noisy chaos.

The other body of militia, forming the left wing of the Continental thrust, had been given a very circuitous marching itinerary, with written instructions to guides that invoked local names for mills, lanes, and houses—some of them referring to the names of long-departed owners. Even General Smallwood’s guides had difficulty making sense of these directions, and his forces floundered around ineffectively in the mist on the north side of the town and thus of the battle. More problematic than the units that did not join the clash was the dilemma of the largest single section of the army, under the command of general Greene, that did in fact become belatedly involved. Greene’s column had missed one turn because of a confused guide, and the distance it had been assigned to cover had been miscalculated, preventing it from reaching its staging area on time.

Although Greene’s troops were at first able to push the British units that they encountered back with little difficulty, their lateness in arriving at the center of Germantown prevented them from forming a smooth juncture with Sullivan’s men—some of whom were already retreating as they pushed forward. The confusion was not diminished by the fact that one element of Greene’s party, David Forman’s troop of New Jersey regulars, was wearing captured red British uniforms. At some point, Greene’s troops and elements of Anthony Wayne’s division attached to Sullivan’s column overlapped and began firing at each other in the confusion. One division of Virginia soldiers under Greene’s command was the victim of its own aggressive activity. It fought its way to the Germantown Market Square, at the center of the British encampment, after the American units in the center column had already withdrawn from

The Battle of Germantown. The October 1777 American advance on Benjamin Chew's summer house is depicted in this nineteenth-century engraving by Robert Hinshelwood after a painting by Alonzo Chappel. PICTURE COLLECTION, THE BRANCH LIBRARIES, THE NEW YORK PUBLIC LIBRARY, ASTOR, LENOX, AND TILDEN FOUNDATIONS.

that area. While the Virginians had taken a number of prisoners, they were eventually themselves surrounded and thus captured en masse.

AMERICAN RETREAT

By shortly after 9 A.M., a general panic began to sweep the American lines, as first individuals and then whole groups of men withdrew in an undisciplined mass. Officers tried to stop the retreat and Washington threw himself into the action behind the lines, trying—as he had successfully done at Brandywine—to shore up a shaky situation. This did no good, and eventually the artillery division and even some of the officers were abandoning the field. By 10 A.M. it was clear to Washington that the only realistic step was to try to extract the army from a hopeless situation. Howe and Cornwallis again did not seem disposed to run a defeated adversary into the ground, and the American retreat became relatively more orderly and gradual with every mile that it moved away from Germantown. The

army followed the same general route to the northwest by which it had arrived that morning, up the east side of the Schuylkill River to well-known places in the northwestern part of Philadelphia County. By nightfall, the exhausted American troops—some of them literally sleeping on the backs of slowly ambling horses—came to a halt at Pennypacker's Mill, about twenty miles north of the Chew House.

The Americans casualties were 152 men killed, over 500 wounded, and more than 400 missing. British sources admitted a total of about 387 casualties, but subsequent estimates are closer to 500, including about 70 men killed and nearly 400 wounded.

Washington began drafting yet another rueful, analytical announcement to Congress conceding an unsuccessful endeavor, this time one in which he firmly believed that victory had been thrown away. His staff and field officers in some cases slept in their clothes that night. Over the next several days they too began to pick through the shards

Attack on the Chew House. A view by the illustrator Howard Pyle of the American attack on the Chew house near Germantown, Pennsylvania. *THE ATTACK UPON THE CHEW HOUSE*, BY PYLE, HOWARD (1853–1911) © DELAWARE ART MUSEUM, WILMINGTON, DE / BRIDGEMAN ART LIBRARY

of bitter memory, trying to figure out what had gone wrong.

POSTMORTEMS

Washington believed, probably sincerely, that victory had been “declaring itself in our favor” before the unaccountable American panic turned the tide. While we can and should be impressed by the American ability to drive substantial British-trained units back with the benefit of surprise, there is little evidence that Howe was anywhere near to “taking to his ships” that morning (as another American officer believed). The British gave their adversary full credit for its willingness to mount a major offensive a few weeks after having been soundly beaten at Brandywine. Without abandoning his intention to reopen the lower Delaware River as soon as possible, Howe quickly made plans to begin building earthwork redoubts across the neck of land between the Delaware and Schuylkill just north of Philadelphia. He also pressed his aides to complete inventoring available officers’ quarters and building barracks in the city so that he could remove the troops at Germantown from harm’s way by placing them in the garrison.

Eighteenth-century contemporaries and later historians have picked elements of the Germantown battle and battle plan apart in search of either an explanation for the result or for a scapegoat. Washington’s decision to have largely unreliable militia forces operate on the wings of the attack while the center was comprised of units tested at Brandywine has been questioned. Critics have suggested that instead of wandering on the periphery of the battle, militia might have been “stiffened” by their placement between sturdier regular columns. But—given the finite nature and number of approaches to Germantown from the north and west—it is hard to imagine what could have been accomplished by irregulars as the opening battering ram of the surprise. Washington’s decision to treat the problem of the Chew House as a priority item—rather than as an annoyance that could have been isolated and dealt with later—has seemed to many analysts to have been a substantial error of judgment. His initial battle plan, which depended on the ability of multiple columns marching in the dark to time their arrival at the point of attack to within close ranges, now seems almost quixotic. Whatever tribute that plan paid to the resourceful

performance of the “old” army at Trenton ten months before, it was ill adapted to the strengths and weaknesses of its “new” successor. Two months later, in the first days at Valley Forge, Washington would once more envision a complex descent by the whole of what was left of the army on Howe’s lines north of Philadelphia, a movement entirely at odds with his concurrent depiction to Congress of the army’s immobility. Thankfully, he thought better of the idea, and it was quietly shelved.

GERMANTOWN AND SARATOGA

It was at best with mixed feelings that Washington, shortly after extracting his army from Germantown, received notice (and had to announce to his troops) that Horatio Gates’s northern army had won a second major engagement with John Burgoyne’s invading force at Saratoga, New York, and that Burgoyne had agreed to a convention that removed his troops from the war. There would inevitably be invidious comparisons between Gates’s successes in the north and Washington’s bitter defeats in Pennsylvania. In preparing his soldiers for their night-long march to Germantown, Washington had urged them to “Cover! My Countrymen, and fellow soldiers . . . A share of the glory due to heroic deeds.” They would now have to wait for that share. The awkward way in which news of Gates’s triumph was officially sent to Congress would play a part in the perhaps inevitable growth of tensions between Gates and Washington that—before the end of the winter—would threaten the military establishment with internal division.

That tension at the command level had its counterpart in the army in the field. Shortly after Saratoga, Washington ordered substantial reinforcements from Gates’s force to join him in Pennsylvania to continue the campaign to hold the Delaware River. Most of Gates’s soldiers were Yankees and New Yorkers, while many of the men in the main army came from places located from New Jersey through the Lower South. The northerners crossed the Delaware just as the Pennsylvania campaign stalled, and there were predictable personal and cultural tensions between two very different subcultures of Anglo-Americans. Yankees made the word “burgoyne” into a smug verb form to describe their humbling of a superior adversary. Many of them wondered why their new campmates had not done as much to William Howe. These tensions would somehow have to be reconciled at Valley Forge before the army could be “continental” in anything more than name.

TAKING AN OPTIMISTIC VIEW

For what it was worth, many if not most of Washington’s commanders and field officers agreed with him that victory had been at hand at Germantown, and that it had

been snatched away by a stroke of what was more fairly described as bad luck than enemy superiority. If only to console themselves, they quickly reduced these feelings to words in letters to their friends. William Alexander (Lord Stirling) wrote that “this affair will convince the world that we can out general our enemy, that we dare attack them, that we can surprise them, that we can drive them before us several miles.” Benjamin Tallmadge of Connecticut insisted that the Americans had driven their adversaries “from post to post” on 4 October, and he recalled that he had “expected to have been in Philadelphia by ten o’clock.” An army commissary official stationed in New Jersey heard about the “bloody and almost fatal to our enemy [action] at Germantown.” A delegate to Congress in York, Pennsylvania, relayed reports that “a most compleat victory seemed in full prospect [un]till this unfortunate mistake occasioned by the fog snatched it out of our hands.” General Weedon of Virginia rationalized that “tho[ugh] the enterprise miscarried, it was well worth the undertaking, “as . . . [the British] light infantry (the flower of their army) was cut to pieces.” These accounts were at best highly selective, but the officer corps, at least, seems to have embraced them as real by mid-October. They were accompanied by insistent predictions that the army would soon have “another tryal,” “another battle,” “another attack,” and “another brush” with the redcoats, in which the Americans almost universally expected to prevail.

These hopeful predictions were not to come to pass. But their failure to materialize owed more to supply and organizational failures, whose causes were largely invisible to officers and troops, than they did to failures of army nerve. The soldiers—especially the Yankee reinforcements joining the army from the Hudson Valley—saw the sheer abundance of Pennsylvania and wondered why they were going unsupplied in what they portrayed as a biblical Land of Goshen. They also wondered why the local militia was anxious to call it a campaign by November and go home for the winter. The results of these perceptions—set largely in reaction to the complex events of 4 October—shaped the Valley Forge winter.

GERRY, ELBRIDGE. (1744–1814). Signer, Massachusetts. Born on 17 July 1744 in Marblehead, Massachusetts, Gerry graduated from Harvard in 1762 and joined the family shipping business. Returning to Harvard to get his master's in 1765, he spoke out against British injustices in a college paper. As a merchant and businessman, he soon became wealthy and entered public life in 1772 as a representative in the general court. He met and came under the influence of Samuel Adams at this time, and also served on the Committee of Correspondence, writing the circular letter sent to the other provinces. In 1774 he was elected to the Massachusetts provincial congress, and was active over the next two years in the Committee of Safety and in gathering militia supplies, particularly when enforcement of the Boston Port Bill made Marblehead a leading port of entry. He was chairman of the Committee of Supply until 25 January 1776, when he was sent to the Continental Congress. There he sat on the financial and militia supply committees. He was an early advocate of independence and an eager signer of the Declaration of Independence and the Articles of Confederation.

Alarmed by continuing inflation, Gerry proposed measures to halt the currency depreciation and served with Robert Morris on a committee to examine George Washington's plans for the 1777–1778 winter campaign. Their report showed dissatisfaction with the commander's vigor, and Gerry was an avowed supporter of General Thomas Conway. Gerry was not in favor of the French alliance. He supported Arthur Lee, believing that Benjamin Franklin had been corrupted by his stay in France. In 1780, as chairman of the treasury committee, he antagonized Benedict Arnold by examining his financial accounts. In February 1781 he resigned from Congress, charging that personal privilege and states' rights had been infringed upon. He then spent his time in trade and privateering.

Gerry was called to the state senate twice as joint representative, but accepted a seat in the lower house only. He returned to Congress in 1783 and was active in the peace negotiations with Great Britain. After the war, he worked to abolish the standing army and the Order of the Cincinnati, both of which he saw as posing a threat to

republican government. In November 1785 he left Congress and took a seat in the Massachusetts legislature. Although he had been opposed to a strong Federal government, he reversed himself after Shays's Rebellion, 1786–1787, persuaded him that the country was on the verge of anarchy. He sat in the Federal Constitutional Convention and followed an erratic course, proposing and opposing almost at will. He refused to sign the Constitution, largely because it lacked a bill of rights, but supported Washington's government while serving in the House of Representatives from 1789 to 1793.

In 1797 President John Adams sent Gerry to France as part of a special peace mission. When Talleyrand's agents (known as X, Y, and Z) demanded bribes, the other two emissaries, John Marshall and Charles Cotesworth Pinckney, went home. Gerry stayed behind and, in Adams's view, made peace possible through his continued negotiations. After several unsuccessful bids for governor, he was elected to that office in 1810 on the Republican ticket, and was re-elected in 1811. This term brought about the "Gerrymander Bill" of 1812, which redistricted the state in such a way as to create Republican senators in excess of the party's voting strength and which created one district that had a salamander-like shape on the map (thus "gerrymander:" Gerry plus salamander). Although the act worked with spectacular success to elect 29 Republican senators and only 11 Federalists, despite nearly equal votes for the two parties, Gerry himself was defeated. Gerry, who favored war with Britain, was elected Madison's vice-president in the 1812 election. He died in Washington on 23 November 1814.

GIBAULT, PIERRE. (1737–1802). Catholic missionary. Born in Quebec in 1737, Gibault was educated at the Seminary of Quebec and served for a short time at the cathedral. In 1768 Bishop Briand of Quebec sent Gibault to the Illinois country; where Gibault set up residence at Kaskaskia with his mother and sister. The next year he became vicar-general of the territory.

Grateful to George Rogers Clark for his tolerant religious attitude, Father Gibault made himself extremely useful to the Americans in their western operations. He later denied doing anything more than attempting to

avoid bloodshed, but this position appears to have been adopted in 1780 to avoid British charges of treason. In 1785 he moved to Vincennes, and four years later he established his residence in Cahokia. In 1790 he petitioned General Arthur St. Clair for a grant of seminary land to compensate for his losses in the war, and when this was blocked by Bishop John Carroll of Baltimore—who objected to the alienation of church land to an individual clergyman—Father Gibault moved across the Mississippi to become parish priest in the Spanish settlement at New Madrid. He died there early in 1802.

GIBSON, GEORGE. (1747–1791). Continental officer. Pennsylvania. Born in Lancaster, Pennsylvania, on 10 October 1747, Gibson joined his brother, John, and together they operated a trading post in Pittsburgh. After that endeavor failed, Gibson returned to eastern Pennsylvania. He served briefly in Dunmore's War (1774). Commissioned Captain of the First Virginia Regiment on 2 February 1776, he organized a company of frontiersmen and took them to join General Hugh Mercer's Brigade at Williamsburg, Virginia. This unit saw no action, but earned a reputation for rowdiness. Appointed agent to deal with Oliver Pollock in New Orleans, he left Fort Pitt on 19 July 1776 with about 25 men disguised as traders, reaching the Spanish city in mid-August, and returned with close to 10,000 pounds of powder. He was promoted to major of the Fourth Virginia Regiment on 4 January 1777, then served in the 1777–1778 military operations in New York and New Jersey. He was promoted to colonel of the First Virginia State Regiment on 5 June 1777. In 1779 he was put in charge of prisoners at York, Pennsylvania, and held this position until January 1782. With the war's end, Gibson returned to his farm at Carlisle, Pennsylvania. In 1791 he was commissioned colonel of the Pennsylvania and New Jersey levies to take part in General Arthur St. Clair's ill-fated expedition against the Indians. Twice wounded at Black Swamp, near Fort Recovery, on 4 November, he was evacuated about 30 miles to Fort Jefferson and died there on 14 December 1791.

GIBSON, JOHN. (1740–1822). Continental officer. Pennsylvania and Virginia. Born in Lancaster, Pennsylvania, on 23 May 1740, Gibson joined General John Forbes's expedition when he was 18, then settled at Fort Pitt to become an Indian trader. He was captured at the start of Pontiac's War, and released in 1764 after a year's captivity. During this period he seems to have been adopted by a Shawnee family and married an Indian woman who may have been Chief John Logan's sister. After resuming his trading enterprise from Fort Pitt, he took part in Dunmore's War and relayed Chief Logan's controversial speech, known as "Logan's Lament."

In 1775 Gibson was an agent of Virginia to the Indians and, being an excellent linguist by this time, he did much to keep them neutral. On 12 November 1776 he was commissioned lieutenant colonel of the Thirteenth Virginia Regiment, and on 25 October 1777 he was made colonel of the Sixth Virginia regiment. He took part in operations in New York, New Jersey, and Pennsylvania before transferring west to take part in the inept expedition led by General Lachlan McIntosh in 1778. Gibson was left as commander of the newly established Fort Laurens when McIntosh returned in the late summer or early fall to Fort Pitt, and remained there throughout the winter. Meanwhile, in the reorganization of the Virginia line, he was given command of the Ninth Virginia Regiment on 14 September 1778. Soon after this he apparently returned to the Western Department as second in command to George Rogers Clark for a proposed expedition toward Detroit, but Daniel Brodhead refused to make his regiment available for this operation. Gibson helped oust Brodhead as commander of the Western Department toward the end of the year. He became commander of the Seventh Virginia Regiment on 12 February 1781 and was in command at Fort Pitt for a while before General William Irvine was ordered there on 8 March 1782. On 1 January 1783 he retired from the army, and on 30 September 1783 he was brevetted brigadier general.

Settling in Allegheny County, Pennsylvania, he became judge of the court of common pleas and a major general of the militia. With Richard Butler he negotiated the purchase of the "Erie triangle" in 1789. During the Whiskey Rebellion (1794) he made serious enemies among his neighbors and within his own family by siding with the federal authorities. He was secretary of the Indiana Territory from 1801 to 1811, served as acting governor of the new state from 1811 to 1813, and took part in the War of 1812. He died near Pittsburgh on 10 April, 1822.

GIMAT DE SOUBADÈRE, JEAN-JOSEPH. (1747–1793). (Later chevalier de.) Continental officer, aide-de-camp to Lafayette. France. Born in Gers, he became an ensign in the Regiment of Talaru in 1761. Lafayette later indicated that he was a veteran of the German campaigns. On 8 June 1776 he was promoted to first lieutenant in the regiment of Viennois. Recommended by Deane for the rank of major, he went to America with Lafayette as a member of his staff. Reaching Philadelphia in July 1777 with Lafayette, Gimat was commissioned major in the Continental army with retroactive pay and date of rank of 1 December 1776 as recommended by Deane. Lafayette solicited for him the rank of lieutenant colonel, which Congress granted in February 1778, but when Lafayette sought a promotion to colonel for him in October 1778, Congress refused. Gimat served at Lafayette's side at Brandywine, Pennsylvania, Gloucester, New Jersey, and Barren Hill, Pennsylvania. In January 1779 he returned to France on a leave of absence that had been granted by Congress.

In France, Lafayette endorsed petitions for Gimat, and he was awarded the Cross of the Order of Saint Louis (1780) and commissioned a major in the Viennois regiment in 1779, having been promoted to captain in 1778 during his absence. He returned to America with Lafayette. On 17 February 1781 Washington named Gimat commander of a light infantry regiment. Leaving Peekskill, Gimat marched south with Lafayette and led his regiment in the subsequent operations in Virginia. There, Lafayette noted to Washington, Gimat was "particularly beloved" by his troops. He had a prominent part at Green Spring (Jamestown Ford) on 6 July. Lafayette selected him to lead the attack on Redoubt 10 during the operations against Yorktown, but Hamilton claimed the honor by seniority, and Washington chose Hamilton. Gimat's regiment followed in the night attack of 14–15 October, and he was wounded there.

On 4 January 1782 Gimat left Philadelphia for France on indefinite leave, carrying a letter to Lafayette from Washington. His discharge from the Continental army was dated 3 November 1783. On 25 August 1782, at Lafayette's recommendation, he was promoted to colonel in the French army and put in command of the colonial regiment of Martinique. He was governor of Saint Lucia from 21 June 1789 to 3 June 1792, when he

left the service of the French revolutionary government. He was commanding a force of eleven hundred émigrés at Martinique when he was mortally wounded.

GIRTY, SIMON. (1741–1818). Loyalist officer. Born near Harrisburg, Pennsylvania, in 1741, Girty's father and stepfather were both killed by Indians. In 1756 Girty, his mother, and his three brothers were captured by Indians. After living with the Senecas for three years, he became an interpreter at Fort Pitt in 1759 and a lieutenant of militia. In 1774 he served as a scout under Simon Kenton. At the beginning of the Revolution he continued to serve as an interpreter, helping the Patriot effort to maintain Indian neutrality. But in 1777, after the Shawnees and other Ohio Valley nations went to war against the Patriots, he and his friends, Alexander McKee and Matthew Elliott, were imprisoned at Pittsburgh as Loyalists. The following spring the three men managed to escape to Detroit, where they were given positions with the British, Girty as interpreter to the Iroquois Confederation. From then on Girty figured prominently in western operations, earning a reputation as the "renegade white terror of the Old Northwest." He seemed to be present at every encounter in the West, as he was often confused with his brothers, George and James.

Girty took advantage of the grievances of the Iroquois against white Americans to recruit them to the British side of the war. After operating against Fort Laurens early in 1779, on 4 October he and Elliott led a party of Indians in ambushing Colonel David Rodgers on the Ohio River, killing fifty-seven out of seventy men and capturing six

hundred thousand Spanish dollars in addition to much-needed blankets and other supplies being transported from New Orleans to Fort Pitt. In 1780 he took part in Captain Henry Bird's expedition against the Kentucky settlements, which captured two posts and more than three hundred prisoners. Girty played an important part in Crawford's defeat in June 1782 and witnessed the brutal torture of Crawford.

After taking part in the raid that led to the slaughter of pursuers at Blue Licks, Kentucky, on 19 August 1782, Simon Girty continued to lead Indian raids and to act as an interpreter at most of the conferences between Indians and the British in the Ohio region. He continued in that capacity after the Revolution and took part in the defeat of Arthur St. Clair on 4 November 1791 where, it was charged, he encouraged a warrior to kill the wounded General Richard Butler and chop up his heart for distribution among the tribes. He, McKee, and Elliott were also present at the Battle of Fallen Timbers of 20 August 1794. When Detroit was surrendered to the United States in 1796, Girty moved to Amherstburg just across the border in Canada, continuing to draw his pay as a member of the Indian Department. He died on 18 February 1818.

His brothers James (1743–1817) and George (1745–c. 1812) lived among the Shawnees and Delawares, respectively; both fought with the British and were Indian traders. Modern Saint Marys, Ohio, is on the site of Girty's Town, named after James. A fourth brother, Thomas (1739–1820), was closely associated with the Indians but did not take part in their wars and sided with the Patriots during the Revolution.

GIST, CHRISTOPHER. (1705?–1759). Colonial explorer and scout. Maryland. Born near Baltimore, Gist went to work for the Ohio Company in 1750 as a surveyor and cartographer. He accompanied George Washington on his mission into the Ohio country in 1753 and is credited with twice saving Washington's life. He was with Washington in the operations that led to the surrender at Fort Necessity in 1754. The next year he served as Edward Braddock's guide, and with two of his

sons, he fought in the defeat on the Monongahela River. After this defeat, Gist was named captain of the Virginia company of scouts under Washington's command. He also served as commissary of the Virginia militia from 1755 to 1757. He was accused of corruption, but was probably just incompetent. Gist resigned in 1757 when threatened with demotion. At Washington's urging, he was made deputy agent of Indian affairs of the Southern Department. In that capacity he worked to win over Indian allies for the British. He died of smallpox near Winchester, Virginia, on 25 July 1759.

GIST, MORDECAI. (1743–1792). Continental general. Maryland. Great-grandson of Christopher Guest (d. 1691) and nephew of the famous colonial scout, he received an elementary education and somewhat later entered business in Baltimore. In July 1775 he was elected captain of the Baltimore Independent Company and on 14 January 1776 was commissioned second major of the First Maryland, the famous regiment raised by William Smallwood. He commanded this unit at Long Island in New York on 27 August, where he and his men distinguished themselves in heavy fighting in the open against European professionals. Smallwood commanded the Marylanders at White Plains but was wounded there, and Gist led them in their role as rear guard during the retreat through New Jersey. He was promoted to colonel on 10 December 1776 and commanded the Third Maryland at Germantown. In 1778 he served in the light infantry corps commanded by General Charles Scott. On 9 January 1779 he was appointed brigadier general and assumed command of the Second Maryland Brigade. In April 1780 he started south with Kalb's column. At Camden on 16 August, he won the praise of Kalb and on 14 October 1780 was included in the Camden Thanks of Congress. Gist fought at Yorktown in September and October of 1781, and at Combahee Ferry on 27 August 1782. Retiring on 3 November 1783, he bought a plantation near Charleston and settled there with his third wife. He carried

Gist, Nathaniel

his preoccupation with American politics so far as to name one son Independence (1779) and another States Rights (1787). A grandson, Brigadier General States Rights Gist, was killed in action at Franklin, Tennessee, on 30 November 1864, while leading his Confederate brigade.

GIST, NATHANIEL. (1733–1796). Continental officer. Virginia. Often mistaken for his uncle Nathaniel, this Gist (pronounced "guest") was the son of the famous colonial scout Christopher Gist and first cousin of General Mordecai Gist. He took command of one of the sixteen Additional Continental Regiments on 11 January 1777. The younger Nathaniel Gist lived among the Cherokee as an Indian trader from the mid-1750s until 1775 and was a hunting companion of Daniel Boone. Many scholars maintain that he was the father of Sequoyah (born 1760 or 1761). Gist, who served as a captain of Virginia militia during the Seven Years' War, attempted to persuade the Cherokee to remain neutral during the Revolution, as he also had doubts as to which side to take. By 1776 he had definitely taken the Patriot side and was made a colonel in the Continental Army on 11 January 1777. Washington immediately pressed him into service to negotiate a peace with the Cherokee. By the end of the year, Gist was attempting to persuade Washington to make better use of the Patriots' Indian allies, without much success. Commanding Red Stone Fort in Pennsylvania in 1779, he was sent to reinforce Charleston, becoming a prisoner of war on 12 May 1780. He retired 1 January 1783. In 1793 he moved to his grant of seven thousand acres in Kentucky (awarded by Congress for his services during the Revolution) and died there on his Canewood plantation in 1796. His widow, Judith Cary Bell Gist, married General Charles Scott, who served as governor of Kentucky from 1808 to 1819.

GLACIS. A bank sloping away from a fortification in such a way as to expose the attacker to fire from the defenders. Since a considerable amount of labor is usually involved in clearing timber and grading the soil to form a glacis, it normally was found only around permanent fortifications.

Mark M. Boatner

GLOUCESTER, CAPE ANN, MASSACHUSETTS. 8 August 1775. Captain John Linzee of the sixteen-gun sloop-of-war *Falcon* cruising in Massachusetts waters captured an American schooner returning to Gloucester from the West Indies on 1 August, and the following day captured another in Gloucester harbor. On 8 August Linzee sent two of his ship's small boats into the harbor again and became embroiled with the local militia. Linzee lost both of the boats, although American accounts grossly exaggerated his casualties. Fire directed at the town inflamed the Americans. The *Falcon* was later lost at sea in a storm in September 1779.

Mark M. Boatner

GLOUCESTER, VIRGINIA. 3 October 1781. General Claude-Gabriel, Marquis de Choisy closed in on Gloucester on 3 October, establishing his headquarters at Sewell's Plantation and Ordinary. He formed a cordon completely across the peninsula about three miles out from the British lines and aggressively patrolled the resulting no-man's-land. The defenders under the field command of Banastre Tarleton attempted to oppose this advance but were driven back in a sharp skirmish. This engagement, the only one of substance on the north side of the York River during the siege, began at daybreak when Captain Johann von Ewald moved out of the British works with a task force of about sixty light infantry (primarily from his jäger company) and one hundred light horsemen to establish a screening line while the main body of British and Loyalist infantry conducted a foraging operation. The foragers were falling back to camp about ten in the morning when Choisy pushed forward. Armand, duc de Lauzun's dragoons, about thirty-five of whom were armed with lances, formed the allied vanguard, and the cavalry of Tarleton's Legion covered the British rear. Here is Lauzun's account of what happened:

[When enemy dragoons were reported, he says,] I went forward to learn what I could. I saw a very pretty woman . . . [who] . . . told me that Colonel Tarleton had left her house a moment before; that he was very eager to shake hands with the French Duke. I assured her that I had come on purpose to gratify him. She seemed very sorry for me, judging from experience, I suppose, that Tarleton was irresistible.

Lauzun went on:

I was not a hundred steps from the house when I heard pistol shots from my advance guard. I hurried forward at full speed to find a piece of ground where I could form a line of battle. As I arrived I saw the English cavalry in force three times my own; I charged it without halting; we met hand to hand. Tarleton saw me and rode towards me with pistol raised. We were about to fight single-handed between the two troops when his horse

was thrown by one of his own dragoons pursued by one of my lancers. I rode up to him to capture him [as he lay pinned under his horse]; a troop of English dragoons rode in between us and covered his retreat; he left his horse with me. He charged me twice without breaking my line; I charged the third time, overthrew a part of his cavalry and drove him within the entrenchment of Gloucester. (Lauzun, pp. 207–208)

The action took place along a road that ran between enclosed fields about four miles from Gloucester. This lane debouched into an area where there were woods on Lauzun's left and an open field on the right; half a mile farther along the road was a small redoubt. After the last charge mentioned above by Lauzun, Tarleton reassembled his cavalry behind supporting infantry that came to his rescue and pushed the French hussars back. Next, Virginia militia under the experienced John Mercer came forward to form an unyielding line of allied infantry. Tarleton briefly tested the men, but when they stood firm, he withdrew back into the entrenchments, ending the action.

French casualties were three killed and sixteen wounded; adding Mercer's probably raises the allied total slightly. Estimates of losses on the British side range from twelve to fifty killed, wounded, and captured.

GLOVER, JOHN. (1732–1797). Continental general. Massachusetts. Born in Salem, Massachusetts, on 5 November 1732, Glover moved to nearby Marblehead as a boy and progressed from cordwainer (shoemaker) to wealthy shipowner and merchant. A militia ensign in 1759, by 1773 he was a captain and commanded a company in the regiment of John Gallison. He worked with Elbridge Gerry to establish a smallpox hospital in support of inoculation. Opponents, fearing that partial inoculation would spread the disease, succeeded in preventing the hospital opening in 1773, and then burned the building. A supporter of the Patriot cause, Glover was a member of the Committee of Correspondence and a lieutenant in the town militia. On 19 May 1775 he became a colonel in

the Twenty-first Massachusetts Regiment. After the battle of Bunker Hill, which was fought on 17 June 1775, Glover's regiment joined the troops besieging Boston.

Colonel Glover was charged with equipping and manning armed vessels to attack British supply ships in Massachusetts Bay, and some of his men took part in the capture of the *Nancy*. Glover's regiment was then ordered off to meet a threat against Marblehead and then to protect Beverly. His regiment, now designated the Fourteenth Continental, joined the army in New York City. Glover's unit did not take part in the battle of Long Island on 27 August. Rather, it was sent into the Brooklyn lines on the night of the 29th to extricate General George Washington's encircled army. Glover was put in charge of manning the boats assembled for the evacuation of Long Island on 29 and 30 August, a remarkable operation in which his regiment and the Twenty-seventh Continental Regiment safely ferried men and equipment across East River. At Kip's Bay, on 15 September, his Marbleheaders were rushed up to contain the British beachhead while John Sullivan's Brigade and Henry Knox's guns covered their escape from New York City. Commanding a brigade at Pell's Point on 18 October, Glover fought a well-managed independent action. At White Plains on 28 October, his regiment once again gave a good account of itself.

Washington's famous crossing of the Delaware was made possible by the skilful work of Glover's Marbleheaders under extremely adverse weather conditions and with equipment—Durham Boats—foreign to them. Putting the last man of Washington's main body across at 3 A.M., they participated with Sullivan's Division in the attack on Trenton, on 26 December. Glover's men played a key role in bottling up the enemy's last escape route, and then ferried more than 900 Hessian prisoners back across the Delaware. It was an almost incredible achievement. In 36 hours, in subzero weather, operating much of the time in a storm of wind, hail, rain, and snow, Glover's men put 2,400 troops, 18 cannon, and horses across the river without a loss; marched nine miles to Trenton; fought a battle; marched nine miles back to McKonkey's Ferry with prisoners and captured matériel; and recrossed the river.

The amphibious regiment ended its famous career with this engagement, because its terms of enlistment was complete. Many ex-soldiers became privateersmen. Glover initially declined an appointment as brigadier general, but accepted it in June 1777 in response to a personal request from Washington.

Glover served under Gates in stopping General John Burgoyne's offensive, and escorted the Convention Army to Cambridge, Massachusetts. He commanded one of the two veteran brigades that Washington sent under the Marquis de Lafayette's command to support Sullivan's militia in the Franco-American attack against Newport, Rhode Island, in

1778. In the spring of 1779 he succeeded Sullivan as commander at Providence, Rhode Island, but joined the main army on the Hudson River in June and remained in the highlands during the Yorktown Campaign. Early in 1782 he went to Massachusetts to muster recruits, but bad health led to his retirement on half pay on 22 July 1782. He was brevetted major general on 30 September 1783. He died in Marblehead on 30 January 1797.

GNADENHUTTEN MASSACRE,

OHIO. 7–8 March 1782. In 1772 the Moravian Brethren established the settlements of Gnadenhutten (huts of mercy) and Schoenbrunn in what was later north-eastern Ohio (Tuscarawas County) on a branch of the Muskingum River. The inhabitants were Christian converts from the Leni Lenape (Delaware) and Mahican tribes. In 1781 the Lenapes broke their tradition of neutrality and sided with the British, placing the still-neutral converts in danger because their missionaries decided to support the Americans. At that point the converts resided at Gnadenhutten and nearby Salem, where the missionaries had hoped they would be out of the zone of conflict. Major Arent de Peyster, the British commandant in Detroit, sent an expedition in August 1781 to forcibly remove the villages so that they could not assist the Americans. The refugees reached the Upper Sandusky on 1 October and struggled to survive the winter. A party returned to the Muskingum to harvest crops and were briefly arrested by suspicious militia. The following February another group went back to work the fields and the Washington County, Pennsylvania, militia mobilized to clear the valley—making no effort to distinguish between the actively hostile bands of Lenapes and the converts.

On the evening of 5 March, militia scouts located Indians near Gnadenhutten; the next day the main body under Colonel David Williamson feigned friendship and entered the village (a detachment simultaneously secured Salem.) On the 7th, when the Salem villagers were brought to Gnadenhutten, the men were seized and tied up in one building, while the women and children were put in a second structure. After voting on the fate of the captives (only sixteen of the militiamen opposed the majority's decision) the prisoners were brought out on the morning of 8 March and brutally

clubbed to death. The exact number of victims is not clear, but it was at least 90 and possibly as high as 140, including 35 children. Williamson's men then burned the two villages and went home. Two young boys survived and brought the news back to the Upper Sandusky. This inexcusable massacre touched off another bitter wave of border warfare.

GOLDEN HILL, BATTLE OF. 17

January 1770. Beginning in January 1766, the New York assembly resisted providing the funds required under the terms of the Quartering Act (15 May 1765) to house regular troops in the colony, principally in New York City. This opposition led the imperial government to threaten to suspend the assembly until it complied with the requisition, and ultimately to its being prorogued in December 1766. When a new assembly finally voted in December 1769 to appropriate money to house the troops, Alexander McDougall, a leader of the New York Sons of Liberty, published a broadside that began, "To the Betrayed Inhabitants." Friction between the regular troops and inhabitants of New York City finally led to a riot on Golden Hill. The local Sons of Liberty objected when some off-duty soldiers sawed down a liberty pole. When three thousand Sons and their supporters put up a new one, thirty or forty off-duty soldiers armed with bayonets fought citizens armed with swords and clubs. Casualties occurred on both sides over the course of the next two days in what were the most serious civil-military disturbances outside of Boston to that time.

GONDOLA SEE *Gundalow*.

GORDON, WILLIAM. (1728–1807). Historian, clergyman. England and Massachusetts. Born in Hitchin, England, in 1728, Gordon began his ministry

in an Independent church in Ipswich in 1752. Twelve years later he left, after a quarrel with a leading member of the church over the latter's use of workmen on Sunday. He then became minister in Southwark. In 1770, having become sympathetic to the colonial cause and having corresponded with several prominent Americans, he emigrated to Massachusetts. He became pastor of the Third Congregational Church in Roxbury (6 July 1772), and in 1775 was made chaplain of the Provincial Congress. He held the position for less than a year, being dismissed in 1776 in a political dispute. That same year he appointed himself the task of writing a history of the Revolution. Over the next seven years he collected documents, interviewed participants, and traveled widely.

In 1786 Gordon, feeling that the Americans would not accept what he saw as an unbiased history of the Revolution, returned to England. But Gordon found it difficult to get a publisher in England, and he had to remove passages his publisher thought too critical of the government before it could be printed. Gordon's four-volume *History of the Rise, Progress, and Establishment of the Independence of the United States of America* was published in London in 1788. A three-volume American edition was published in New York City the next year. After being considered a prime authority for more than a century, the work was criticized for plagiarizing from the *Annual Register*. The book is nevertheless valuable, because Gordon used letters borrowed from participants (and seldom returned) and corresponded with generals to secure missing details. In 1789 Gordon secured a congregation at St. Neots, in Huntingdonshire. Returning to Ipswich in 1802 he lived the last five years of his life in great poverty, having realized only £300 from the sale of his *History*. He died in Ipswich on 19 October 1807.

GORDON RIOTS. 2–9 June 1780. The Roman Catholic Relief Act of 1778 in Britain removed restrictions on Catholics. In violent objection to this act, the eccentric Lord George Gordon (1751–1793) headed a Protestant Association in the presentation of a petition to Parliament on 2 June calling for its repeal. That night the mob took control of London, attacking Catholic churches and the houses of well-known Catholics. It took more than

twelve thousand British troops ten days to restore order in the bloodiest riots in British history. Similar riots had already occurred in Glasgow and Edinburgh, but the London riots claimed between seven hundred and a thousand lives. Whereas twenty-one leaders of the crowd were executed and the Lord Mayor of London fined £1,000 for negligence, Gordon was acquitted of treason on the grounds of insanity.

Once generally seen as a curious footnote to the period, the Gordon Riots are now regarded by most historians as extremely important. They put an end to the emerging reform movement in Britain that had been born in response to the failures of the government's policies toward America. The British elite consolidated their support behind the crown, and the general public appears to have rallied to George III at a time when he had broached the idea of abdication with Lord North. As a consequence, the potential impact of the American Revolution was greatly lessened by this renewed support for the king and his government.

GORHAM, NATHANIEL. (1738–1796). President of the Continental Congress. Massachusetts. Born in Charlestown, Massachusetts, in May 1738, Gorham was a prosperous merchant who sat in the colonial legislature from 1771 to 1775, in the Provincial Congress from 1774 to 1775, on the Board of War from 1778 to 1781, and in the state constitutional convention from 1779 to 1780. He was in the state senate in 1780 and served in the state house from 1781 to 1787. He was speaker of the house in 1781, 1782, and 1785. He was sent to the Continental Congress in 1782–1783 and 1785–1787. He was elected president of that body on 6 June 1786. He presided over the 1787 federal Constitutional Convention for three weeks, and was influential in his state's ratification of the Constitution the next year. After the war, he and a partner were involved in the development of six million acres ceded by New York to Massachusetts in settlement of a border dispute. Complications over rising prices and Indian claims, however, wiped him out financially, and he died 11 June 1796.

GORNELL, GEORGE SEE *Mutiny of Gornell.*

GOULD, PASTON. (?–1783). British commander in the South. On 16 October 1755, Gould became a captain in the Twenty-third Foot (an infantry regiment). He became major of the Sixty-eighth Foot on 1 March 1762, and lieutenant colonel of the Thirtieth Foot on 28 March 1764. On 29 August 1777 he was promoted to the rank of colonel. Colonel Gould reached Charleston on 3 June 1781 with reinforcements from Ireland. From that time until the arrival of Lieutenant General Alexander Leslie on 8 November 1781, Gould was the senior British officer in the south. General Henry Clinton gave Gould the local rank of brigadier general upon his arrival in America, and by the time he led reinforcements to join Colonel Alexander Stewart at Monck's Corner on 12 September, he had been given the local rank of major general. Gould was invalided out of the service in 1782, and died the next year.

GOUVION, JEAN BAPTISTE. (1747–1792). (Chevalier de.) French volunteer. Gouvion was from Toul, the son of a *conseiller du roi*. He was a student-second lieutenant at the engineering school of Mézières (1769–1770) and became an engineer on 1 January 1771. While assigned at Metz, he decided to go to America. On 25 January 1777 he was given leave of absence to go and on 8 July entered the Continental army as major of engineers with rank from 13 February. On 17 November 1777 he advanced to the grade of lieutenant colonel. The fortifications at West Point were planned and executed in part by Gouvion; he also built the redoubt at Verplancks Point and made significant repairs at Fort Schuyler. He served under Duportail in the Yorktown campaign. On 16 November 1781 he was breveted colonel and granted six months' leave to France. Washington commended him in 1783 for "unquestionable proofs of bravery, activity, intelligence and skill" (*Writings*, 27, pp. 40–41). On 10 October 1783 he retired from the Continental army.

He resumed his military career in France, becoming an aide to the *maréchal général* of army operations with the rank of lieutenant colonel. In 1784 he became a chevalier in the Order of Saint Louis. He was promoted to *mestre de camp* in 1787. As a deputy from Paris to the Legislative Assembly in 1791, he served on its military

committee. Rejoining the Army of the Center under Lafayette, he was killed in action at Maubeuge in 1792.

GRAFTON, AUGUSTUS HENRY FITZROY. (1735–1811). British prime minister. Succeeding to his grandfather's dukedom in 1756, Grafton was at first an admirer of Pitt and an ally of Lord Temple. On 9 December 1762 he led the opposition to the peace preliminaries and made a personal attack upon Bute. He was secretary of state for the Northern Department in the Rockingham administration of 1765–1766, resigning two months before the ministry fell. In Chatham's ministry he was first lord of the Treasury, but until 1767, when illness disabled him, the real head of the government was Pitt himself. Grafton stepped reluctantly into the breach but preferred inaction to leadership. In 1769 he was outvoted in the cabinet on the question of retaining Townshend's tea tax. On 30 January 1770, plagued by the opposition of a revived Chatham, he resigned in favor of Lord North.

GRAHAM, JOSEPH. (1759–1836). American officer. Pennsylvania and North Carolina. Born in Chester

County, Pennsylvania, on 13 October 1759, Graham moved south with his family after his father's death in 1763, eventually settling in Mecklenburg County, North Carolina. In September 1778 he was commissioned as a lieutenant in the North Carolina Rangers, and later was promoted to captain. He then enlisted with the Fourth North Carolina Continentals, serving a year as quartermaster sergeant. After completing this duty he again volunteered in 1780, was appointed adjutant of a militia regiment, and later became captain of a mounted infantry company. He distinguished himself at Charlotte, North Carolina, on 26 September 1780, where he commanded the rear guard that secured the safe retreat of William Davie's forces from General Charles Cornwallis, receiving nine wounds in the battle. Two months after his recovery he returned to his regiment and remained there until March 1781. In August he organized a dragoon company, and soon thereafter he was promoted to major. For about two months he served near Wilmington, and in November 1781 resigned his commission.

After the war Graham became a successful businessman and local political leader. In 1814 he was appointed commander of a brigade for duty in the Creek War, but delays in equipping his force resulted in its arrival too late to see action. Nonetheless, he was promoted to major general of the North Carolina militia. In 1820 he started writing letters and articles promoting the dubious claims for the Mecklenburg Declaration of Independence. He died at his plantation in Lincoln County, North Carolina, on 12 November 1836.

GRANT, JAMES. (1720–1806). British general. In his youth, James Grant studied law, but in September 1741 he abandoned his studies and enlisted in the First Royal Scots Regiment as an ensign. Promoted second lieutenant in May 1742, he was sent to Flanders in June 1744. During the summer he was promoted to the rank of lieutenant, and on 24 October he was made a captain. He fought at Fontenoy (Belgium) on 11 May 1745, emerging from the action without a scratch. Appointed aide-de-camp to General James St. Clair, he was in the raid on Quiberon Bay, off the coast of France, in October 1746. In 1747 and

1748, he accompanied General Arthur St. Clair on a mission to Vienna and Turin. From 1752 to 1755 he tutored St. Clair's nephew, a student at Göttingen, in Germany. In February 1757 he was promoted major in the First Highland Regiment (later the Seventy-seventh Highland Regiment), commanded by Archibald Montgomery. After garrison duty in South Carolina, he joined John Forbes's expedition in 1758 against Fort Duquesne. On 14 September, while leading a reconnaissance party against the French and Indians, he was defeated and captured.

Released in late 1759, Grant accompanied Montgomery as second in command, with the brevet rank of lieutenant colonel, on an expedition against the Cherokees in South Carolina. He campaigned with General Archibald Montgomery during the summer of 1760 against the Cherokee settlements known as the Lower Towns, and in July was promoted permanent lieutenant colonel. In 1761, he commanded his own expedition against the Cherokees, defeating them at the village of Etchoe on 10 June. He was promoted to brevet colonel of the Fortieth Regiment on 25 February 1762, and participated in the siege of Havana, Cuba. After short service as lieutenant governor of Havana, he returned to England in early 1763. Obtaining the governorship of East Florida, he spent the next seven years trying to improve that province. He promoted the cultivation of indigo, dealt fairly with the Indians, and strengthened East Florida's defenses. On 9 May 1771 he returned home to take possession of Ballindalloch, his family's estate in Scotland, which he had inherited the year before.

Fond of high living, the corpulent Grant lived in comfort at Ballindalloch and his London town house. In April 1773 he was elected to the House of Commons and became a firm supporter of the North ministry (the government of Prime Minister Frederick, Lord North). Taking a hard line against Americans who resisted British authority, he advocated coercion and proposed a naval blockade to bring the recalcitrants to heel. On 2 February 1775 he made a disparaging and inflammatory speech against Americans in the House of Commons, which he later attempted to moderate. In March he was promoted brigadier general for America, and on 30 July he joined the British army in Boston. There he advocated harsh, retributive warfare against the rebels and was disgusted when his superiors did not take his advice. He was made colonel of the Fifty-fifth Regiment on 11 December, and two days later was promoted to major general. In the battle of Long Island, on 26 August 1776, he commanded the British left, and on 16 November he assisted in the capture of Fort Washington on Manhattan.

In December 1776, Grant was placed in command of Hessian garrisons in New Jersey. He was surprised on 26 December, when American troops successfully assaulted the garrison at Trenton. Disgusted, he observed

in 1777 that the rebels would neither fight nor surrender. They were, he declared, a bore. In April and June he skirmished against the Americans at Bound Brook and Woodbridge, and he fought well at Brandywine (11 September) and Germantown (4 October). On 20 May 1778 he was criticized for allowing rebel troops to escape an encirclement at Barren Hill, but he fought ably at Monmouth on 28 June. By that time he had become convinced that the war in America was unwinnable, and was happy in October to be ordered to the West Indies.

Grant seized St. Lucia from the French on 13 December, he but lost St. Vincent and Grenada to the enemy in the next few months. Sick and exhausted, he returned to England on 1 August 1779. He resumed his seat in the House of Commons, and served there until his retirement in 1802 at the age of eighty-one. In 1782 he was promoted lieutenant general and appointed governor of Dumbarton Castle. Because of his loyalty to the Pitt ministry, in 1789 he was given the governorship of Stirling Castle. In addition, he was appointed colonel of the Eleventh Regiment on 9 November 1791, given command of troops in northern England in 1793, and promoted to the rank of general in 1796. Only once did he defy Prime Minister William Pitt's wishes, voting against the Slave Trade Bill in 1791. He resigned from the army in 1796, and spent the remainder of his days in comfort and leisure at Ballindalloch.

Early in life, Grant had announced that his intention in life was to secure a good house in London, along with a good cook, good food, good wine—good everything. He succeeded. A bon vivant, he became corpulent and gouty in his old age. But he was also a loyal, competent, intelligent, brave, and idealistic soldier and politician.

GRAPE OR GRAPESHOT. Iron balls, held together in a rack or bag, that scatter when discharged from a cannon. Differing from canister only in that the balls are much larger and hence less effective against personnel, grape was designed for fire against enemy gun

batteries, ships, and light fortifications but could also be effective against massed formations.

GRASSE, FRANÇOIS JOSEPH PAUL, COMTE DE. (1722–1788). French admiral. A page of the Knights of Malta (1733), he was inscribed on the rolls of the naval guard in June 1734 and activated that duty in 1737. In 1740 he served in the Antilles and the Mediterranean during the War of Jenkins's Ear. In May 1747 he was captured while serving as an ensign in the battle off Finisterre and was taken to England. A nobleman of one of France's oldest families, six feet two inches tall, and considered one of the handsomest men of the period, he rose steadily in his profession, serving in Indian waters, the West Indies, the expedition against the Moroccan corsairs, and in the Mediterranean before taking command of the Marine Brigade at Saint-Malo in 1773.

On 5 June 1775 he sailed for Saint Domingue as commander of the twenty-six-gun frigate *Amphitrite*. Back in France the next year, he took command of the seventy-four-gun ship of the line *Intrépide* and on 1 June 1778 became a *chef d'escadre*. He commanded a division in the indecisive battle off Ushant on 27 July 1778 before returning to American waters. He commanded a squadron under Estaing in the battle against Admiral Byron off Grenada and in the operation against Savannah. After temporarily commanding the French fleet in the West Indies, he led a squadron in Guichen's engagement with Rodney off Martinique. In bad health, he sailed home with Guichen, reaching Cadiz on 23 October 1780 and Brest on 3 January. Although his health had not recovered and he was almost sixty years old, on 22 March 1781 he was promoted to rear admiral, and the same day he sailed from Brest with a fleet of 20 ships of the line, three frigates, and a convoy of 150 ships for the West Indies.

With discretionary orders to give Rochambeau and Washington whatever support was possible, Grasse played a decisive role in the Yorktown campaign. Consequently, he had a decisive role in the winning of American independence.

He started back for the West Indies on 4 November 1781, and after capturing St. Kitts (12 February 1782) he was—despite efforts of Hood to relieve the eleven-hundred-man garrison—defeated and captured aboard the *Ville de Paris* on 12 April in the battle off Saints Passage (9–12 April). While in London as a prisoner during the

period 2–12 August 1782, he had several conversations with Lord Shelburne, who spoke to him of terms under which the new ministry would consider negotiating peace. The day after he returned to Paris on parole, Grasse sent his nephew to see the comte de Vergennes and give an oral report, and on this same day (17 August) Vergennes used this information to draft his Preliminary Articles of Peace. Grasse then served as an intermediary between Shelburne and his government in this important preliminary phase of the peace negotiations.

Although the official attitude toward his defeat in the West Indies was favorable at this time, Grasse found himself the popular scapegoat for this French disaster. The admiral had bluntly reported to the minister of marine, duc de Castries, that most of his fleet had abandoned him on 12 April 1782. In a flood of letters and memoirs, he spelled out his accusations against his subordinates, particularly Bougainville. The subordinates went to Castries with their counteraccusations, and a publicity storm developed. During four months a tribunal heard 222 witnesses and on 21 May 1784 announced its findings. Bougainville was officially reprimanded for misconduct on the afternoon of the 12th—which amounted to a slap on the wrist. No official action was brought against Grasse, but when he appealed to Louis XVI to pass judgment, he found the king was displeased not by the naval defeat but by Grasse's attempts to clear his own name at the expense of his subordinates and the French navy. He was informed of this in a blunt letter from Castries and advised to retire to his country home. He died suddenly at his town house in Paris. During the French Revolution, his Château de Tilly was destroyed by a mob, and the four captured cannon from Yorktown, which Congress had sent him in 1784, were dragged off to be melted into revolutionary coin.

GRASSHOPPER. Lightweight, sturdy, brass three-pounder guns were developed in Britain in the early 1770s and were valued for their high mobility. Officially known as the “Light Infantry Three-Pounder,” mounted on a carriage developed by William Congreve, and elevated by a iron screw rather than a wooden quoin, the gun could be drawn by a single horse (known as a “galloper”) or disassembled and carried on packhorses, or even by the gunners themselves. It was frequently the only artillery piece that could accompany a unit that had to travel light. Its mobility, along with the manner in which this relatively small field piece recoiled when fired, earned it the nickname “grasshopper.”

GRAVES, SAMUEL. (1713–1787). British admiral. He began his naval service on HMS *Exeter* in November 1732. Passing for lieutenant on 6 October 1739, he saw service in the War of Jenkins’s Ear and the War of the Austrian Succession. In 1743 he was at Cartagena in the *Norfolk* under his uncle Thomas and served alongside the latter’s son, also Thomas. Samuel attracted attention for his part in the storming of the batteries, and in December he was given the command of the sloop *Bonetta*. He was made post captain the following year and was on active service until 1748. During the Seven Years’ War he took part in the abortive 1757 expedition against Rochefort and commanded the *Duke* in Admiral Hawke’s victory at Quiberon Bay on 20 November 1759. He remained on the *Duke* until 1762, when he was made rear admiral. The peace, however, put him on half pay, though he was raised to vice admiral in October 1770.

On 28 March 1774 he was made commander in chief of the North American squadron, with orders to enforce the Boston Port Act and in particular the blockade of Boston declared by his predecessor. Later he was told to prohibit imports of arms and ammunition into the all colonies. With only nineteen vessels, the wider task was impossible, and even with nine of these off Boston, he could not command all the channels leading to the port. On top of this, he was not officially permitted to seize American ships until September 1775 and was understandably unwilling to allow his commanders to fire unless attacked themselves. His apparent inaction provoked attacks on the government in Parliament, and Sandwich, who did his best to protect Graves, ordered him to attack coastal towns. Predictably, the burning of Falmouth, Massachusetts, on 18 October alienated uncommitted colonists even more surely than British press gangs. Yet Graves was still accused of incompetence and idleness. In the end, even the king wanted him sacked, and Sandwich could not save him. On 27 January he handed over his command and sailed for home. Shortly afterwards his thankless task passed to Lord Richard Howe.

Graves was now politically unemployable, at least in an active post that he would need to salvage his reputation. Even Sandwich’s best efforts could procure him only the Plymouth command, an offer Graves angrily rejected. The spat sealed his fate, and he was never again employed. In January 1778 he became admiral of the Blue and four years later he was advanced to the White. Twice married, he had no children and died in Devon on 8 March 1787.

Graves was a perfectly competent admiral brought up to obey orders and execute the fighting instructions. Given a conventional campaign and an enemy fleet to engage, he might have acquitted himself tolerably well. Confronted with a situation which demanded brilliance, moral daring, and ruthlessness, he was entirely out of his depth. However, it was the ministry’s failure to offer him sufficient ships, adequate orders, and firm political support—as well as the sheer scale of the task—that doomed him to failure.

GRAVES, THOMAS. (1725–1802). British admiral. Entering the navy at an early age and made lieutenant on 25 June 1743, he served in a number of actions, including both battles of Cape Finisterre (3 May

and 2 October 1747). He was made post captain on 8 July 1755 and was instrumental in saving Newfoundland in 1761. After varied peacetime service he went in the *Conqueror* to America with Byron in 1778. Promoted to rear admiral on 19 March 1779, he became second in command to Sir Charles Hardy in the Channel Fleet. Here in 1779–1780 he and Richard Kempenfelt experimented with more flexible modes of signaling and fleet control. In the spring of 1780 he sailed with reinforcements for the North American squadron and joined Arbuthnot at New York on 13 July. Graves took part in the action against Destouches on 16 March 1781 and on Arbuthnot's departure took over the North American station.

He found himself facing a crisis: many of his ships were out of repair, and the stocks of naval stores were run down; Arbuthnot had quarrelled with Rodney and Clinton; and warnings from the Admiralty and Rodney told of a large French force in the West Indies. On 28 August 1781, Hood appeared off New York with fourteen of the line and the news that De Grasse had left the West Indies, while other intelligence told Graves that Barras had sailed from Rhode Island. The likely targets were the Chesapeake or New York itself. Three days later Graves sailed for the Chesapeake, but when he arrived on 5 September, De Grasse was already in the bay with twenty-four of the line. Graves, not wishing to be trapped inside, turned seaward to offer battle. In the ensuing action Graves, wary of De Grasse's superior numbers, kept his line of battle tightly closed up and approached the French line diagonally. As a result, his leading ships were heavily engaged, but those in the rear (Hood's) were unable to come up before dark.

Having failed to cripple De Grasse's fleet and fearful of the condition of his own ships, Graves dared not resume the battle. He could have taken Hood's advice to race back to reach Cornwallis at Yorktown, but then the French could have penned him into the bay with possibly dire consequences for New York. On the night of 9–10 September, De Grasse slipped away, and when Graves reached the Chesapeake on the 11th, both French squadrons were there, a combined force of thirty-six of the line. Graves could only return to New York for repairs. Reinforced by five of the line under Rear Admiral Digby and by two latecomers from the West Indies, Graves sailed again on 19 October with twenty-four ships of the line and seven thousand soldiers. It was a desperate venture, and it was probably as well that Cornwallis surrendered the next day. On hearing the news Graves prudently returned to New York, where he handed over to Digby and sailed to take command in the West Indies.

Graves was not blamed for the Yorktown disaster, and he went on to have a distinguished career. Promoted to vice admiral in 1787, he became commander in chief at

Plymouth in 1788. In 1793 he was appointed Lord Howe's second in commanding the Channel fleet. He rose to full admiral in 1794 and commanded the British van in the chase action of 1 June, when his arm was so badly wounded that he had to resign. He was awarded an Irish barony and a pension of one thousand pounds a year.

GREAT BREWSTER ISLAND, MASSACHUSETTS. American raids of 21 and 31 July 1775 during the siege of Boston. Also called Light House Island, a mile offshore from Nantasket Point, it was successfully raided on 21 July by Major Joseph Vose. Recalled Heath,

The detachment under his command, brought off 1,000 bushels of barley, all the hay, &c. [from Nantasket]—went to Light-House Island; took away the lamps, oil, some gunpowder, the boats, &c. and burnt the wooden parts of the lighthouse. An armed schooner and several boats, with men, engaged the detachment; of the Americans, two were wounded.

The night of 30–31 July, Major Benjamin Tupper led a force of three hundred men in whaleboats to stop repair

work on the lighthouse and capture the British guard and workmen. Tupper's excellent leadership resulted in the killing or capture of the entire enemy detachment, which numbered thirty-two marines, a subaltern, and ten carpenters. Although Tupper's escape was delayed by missing one tide, he evacuated all the enemy wounded and sustained only two casualties.

GREAT BRIDGE, VIRGINIA. 9 December 1775. In the late fall of 1775, Colonel William Woodford led a patriot force built around the riflemen of the Culpeper Minute Battalion towards Norfolk. Governor Dunmore's defenses began at Great Bridge about nine miles away. Here he had fortified one end of a long causeway the rebels would have to cross on their way to Norfolk; surrounded by tidal swamps and covering a defile, the British position was potentially strong and was made stronger by the removal of part of the causeway's planks. It was held by some three hundred Loyalist levies, some from Dunmore's Ethiopians (a regiment formed from freed slaves) and the others from his all-white Loyal Virginians.

Woodford had built a redoubt at the other end of the causeway, posted Lieutenant Edward Travis there with about ninety men, and encamped the rest of his force on a hill about four hundred yards to the rear. John Marshall, later chief justice of the U.S. Supreme Court, was a lieutenant in Woodford's command, and his father, Major Thomas Marshall, was also there. A captured British officer later admitted that the senior Marshall's servant pretended to be a deserter and told them there were no more than three hundred "shirt-men" (militia riflemen) at the bridge. This stratagem tempted Dunmore into ordering an assault on the rebel breastworks in an effort (reminiscent of Gage's decision at Bunker Hill) to break the back of Patriot resistance by a show of force. About 3 A.M. he reinforced the causeway with two hundred of his precious regular infantry, men drawn from the Fourteenth Foot. The British also quietly began replacing the planks. The exact number of Americans present as reveille sounded is not known, but it included a detachment of the Second Virginia Regiment (Continental) as well as the minutemen and some militia.

Responding to Governor Dunmore's orders, Captain Charles Fordyce led a frontal attack down the causeway with his 60 grenadiers and another 140 or so available regulars; Captain Samuel Leslie was to follow up with a reserve of 230 Loyalists. As Fordyce crossed the bridge his advance drew fire, alerting the American camp, and Woodford and Major Alexander Spotswood raced forward to reinforce the redoubt. The resulting struggle lasted about a half an hour, with the lead element of Fordyce's grenadiers under the command of a Lieutenant John Batut, bayonets fixed, making it to within a few yards of the redoubt before being decimated and driven back. As at Bunker Hill, the British regulars behaved with great courage and took appalling losses, but to no valid military purpose. Woodford said in his official report to President Edmund Pendleton of the Virginia Convention that the "victory was complete," and that the British withdrew into their fort. Two days later they abandoned the position and its six cannon and fell back to their ships.

The Virginians buried Captain Fordyce and twelve of his men. They also captured Lieutenant Batut and sixteen privates, all wounded. Captured weapons, including three officers' fusils, led the victors to assume (probably optimistically) that there were substantial additional British casualties. The only rebel casualty was one man slightly wounded in the hand.

This was the first real engagement between British soldiers and colonists in Virginia. Like Bunker Hill, it carried significance beyond its numbers or its tactical results, serving to boost American confidence not only in Virginia but also in North Carolina, whose Continentals under Robert Howe arrived almost immediately to reinforce Woodford. Dunmore's evacuation allowed the rebels to occupy Norfolk, which in turn prompted Dunmore's destruction of the town in January 1776.

GREATON, JOHN. (1741–1783). Continental general. Massachusetts. Born on 10 March 1741 at Roxbury, John Greaton was the son of a small-time retail merchant who was also the last landlord of the famous Greyhound Tavern in Roxbury. The son joined his father in the family's businesses and opposed changes in imperial trade regulations after the French and Indian War, in which he apparently did not serve.

Although he was a member of the Anglican Church and accepted a commission from the royal governor as lieutenant in an elite militia unit on 18 November 1774, he also joined the Sons of Liberty and was one of fifteen local leaders chosen by their neighbors on 26 December 1774 to enforce the Continental Congress's nonimportation agreement. The Massachusetts Provincial Congress named him colonel of his local Suffolk County minuteman regiment, and he led part of the regiment in the pursuit of the British from Lexington and Concord on 19 April 1775. On 19 May 1775 he was appointed lieutenant colonel of William Heath's regiment, raised for the siege of Boston. Promoted to colonel of the regiment on 1 July after Heath had been made a Continental brigadier general, he led raids on British depots during the siege, the most famous of which was against Long Island in Boston Harbor on 12 July 1775. In the reorganization of the Continental army for 1776, he was named colonel of the Twenty-fourth Continental Regiment on 1 January and on 15 April was ordered to Canada. After arduous and demoralizing service in the north, he took command of the Thirty-Sixth Continental Regiment in October and was named on 1 November 1776 as colonel of the new Third Massachusetts Regiment for 1777. In December 1776 he joined Washington's army and took part in the Battles of Trenton and Princeton. He served in Brigadier General John Nixon's brigade in opposing Burgoyne's invasion in 1777, then became senior officer at Albany and for a time commanded the Northern Department.

Greaton served with his regiment in the main army for the remainder of the war, and as a colonel was given permanent command of the Third Massachusetts Brigade in August 1782. The delay in his promotion to brigadier general seems to have been a result of the reduction in size of the Massachusetts Line, not because he took an active part in expressing to Congress the distress and unrest in the army. He was being considered for promotion in December 1782 when he joined with officers from five states to ask Congress to commute half-pay for life for retired officers, already promised, into five years of full pay or a single lump sum payment. Several months later, Congress agreed to give officers five years of full pay after it had appointed Greaton brigadier general on 7 January 1783. He retired on 3 November and died 16 December 1783 at Roxbury.

GREAT SAVANNAH, SOUTH CAROLINA. 20 August 1780. When the Whigs of the Williamsburg district (thirty miles up the Peedee from Georgetown) in South Carolina asked that Colonel Francis Marion come take command of their militia, General Horatio Gates, who shared the view of most regulars that the partisans were unreliable, was happy to oblige. Though Gates needed every man for the upcoming confrontation with the British, he ordered Marion to destroy boats along the Santee and to assist in trapping and destroying whatever portion of the British army might escape the defeat Gates expected to inflict around Camden. Marion left Rugeley's Mill on 14 August 1780.

Marion quickly set about organizing his scattered partisan forces. On 17 August he sent Colonel Peter Horry with four new dragoon companies to operate against Georgetown, and with the rest of his command started a march of about sixty miles toward the Santee. On the 19th Marion learned of Gates's defeat at Camden, but he continued his advance without telling his men. That night he received information that a large group of prisoners from Camden had camped with a strong guard on Thomas Sumter's abandoned plantation at Great Savannah, six miles above Nelson's Ferry on the Santee. Although greatly outnumbered, he prepared a surprise attack at dawn. Just before daylight he sent Colonel Hugh Horry with sixteen picked men to block the main road where it crossed a wide

swamp at Horse Creek Pass, and with the rest of his command, Marion circled around to strike the enemy from the rear. The surprise was complete, and elements of the British Sixty-third Regiment and the Prince of Wales Loyal American Volunteers fled before the first onslaught, which inflicted four casualties. Marion took 20 prisoners while liberating 150 soldiers of the Maryland line.

After this coup Marion returned to the protective covering of the swamps while General Charles Cornwallis sent troops to clear the guerrillas from his line of communications with Charleston. On 28 August, Cornwallis ordered Major James Wemyss to march the Sixty-third Regiment from the High Hills of the Santee to Cheraw on the Upper Peedee, and on 5 September, Wemyss started a raid that left a fifteen-mile-wide swath of destruction between these two places.

GREEN, JOHN. (?–1793). Continental officer. Virginia. Green was made captain of the First Virginia Regiment on 6 September 1775, and was promoted to major on 13 August 1776. He was wounded at Mamaroneck on 21 October 1776. He was promoted to lieutenant colonel on 22 March 1777, colonel of the Tenth Virginia Regiment on 26 January 1778, and transferred to the Sixth Virginia Regiment on 14 September 1778. He joined Nathanael Greene's army with 400 militia in mid-January 1781, before the battle of Cowpens, and commanded the Fourth Virginia Continentals at Guilford, where his regiment was held out of the main line to provide support and protection for the withdrawal of the main body. His troops successfully covered Greene's retreat from the field of battle that day. He commanded the Sixth Virginia Regiment until 1 January 1783, when he retired from military service.

GREENE, CHRISTOPHER. (1737–1781). Continental officer. Rhode Island. Born in Warwick, Rhode Island, on 12 May 1737, Greene was a businessman engaged in the operation of forges, anchor works, dams, and sawmills on the south branch of the Pawtuxet River. He represented Warwick in the Rhode Island legislature in 1771 and 1772. In 1774 he was made a lieutenant in the Kentish Guards, marching with them to Boston on the day of the battles at Lexington and Concord. He was appointed major of James Mitchell Varnum's Rhode Island Regiment on 3 May 1775, and shortly thereafter he moved with them to participate in the siege of Boston.

Volunteering for Benedict Arnold's march to Quebec (September through November 1775), Greene was commissioned as a lieutenant colonel and given command of the first battalion. He was captured during the assault on Quebec on 31 December 1775–1 January 1776, and held prisoner until August 1777. While in captivity he was promoted to the position of colonel of the First Rhode Island Regiment, on 27 February 1777.

Given command of strategic Fort Mercer on the Delaware River, near Philadelphia, Greene conducted its defense and then supervised its evacuation when it was no longer tenable. Congress voted to present him with a sword in recognition of his achievements. Commanding a newly raised regiment of African American troops who had been recruited from slaves freed to serve in the army, he played a prominent and highly commended part in the battle of Rhode Island on 29 August 1778. In both the Fort Mercer and Newport operations he was under the command of his famous kinsman, General Nathanael Greene. After continuing to serve with General George Washington's main army, Greene took command of the lines in Westchester County, New York, in the spring of 1781. He was killed at Croton River on 14 May 1781.

GREENE, NATHANAEL. (1742–1786). Continental general. Rhode Island. The American who

Nathanael Greene. *Greene, a continental general from Rhode Island, emerged from the American Revolution with a military reputation second only to George Washington's. He is depicted here in a portrait (c. 1783) by Charles Willson Peale.* HULTON ARCHIVE/GETTY IMAGES.

emerged from the Revolution with a military reputation second only to that of General (later President) George Washington was born in Warwick, Rhode Island, to Quaker parents. His father, Nathanael Greene, Sr., had a bias against schooling, preferring that Nathanael, Jr. get his learning in the family business. Nathanael Greene therefore received no formal education. Self-taught, however, he became an avid reader, especially of military subjects, and a book collector. As a youth, Greene worked at the family iron forge at Warwick, and in 1770 he was put in charge of the family forge at Coventry, on the Pawtuxet River. He married Catherine "Kitty" Littlefield in 1774.

GREENE'S RAPID RISE

On the eve of the Revolution in 1774, Greene organized a militia unit, the Kentish Guards, which deed earned him excommunication from the local Quaker Meeting. Members of the Kentish Guards did not elect him an officer because he had a stiff knee and limped slightly, but he demonstrated his patriotism by enlisting as a private. In six months he would be a general.

Greene served in the Rhode Island legislature from 1770 to 1772 and again in 1775. During his final term, attracting notice because of his military knowledge and fervor, he was named to a committee on Rhode Island defenses. To the surprise of many, Greene, without any previous military experience other than being a private in the Kentish Guards, received a commission from the Legislature in May 1775 as a brigadier general of the new Rhode Island Army of Observation. Greene marched his brigade to Cambridge, Massachusetts, where, on 23 May 1775, he joined in the siege of Boston. In Providence at the time, he missed the Battle of Bunker Hill on 17 June 1775. On 22 June Congress brought Greene's brigade into the Continental Army and appointed him a brigadier general—the youngest officer in that grade. During the Boston siege, Greene showed an ability in facilitating logistics and smoothing relationships among troops from different geographical regions.

After the British evacuated Boston, Washington's army headed for New York City and its environs. Greene and his brigade assumed responsibility for defenses on Long Island. On 9 August 1776 Congress promoted Greene to major general, thereby making him a division commander. Too ill at the time, Greene did not participate in the battle of Long Island, 27 August 1776, and was replaced by General John Sullivan, who was captured by the enemy. Although he did not personally participate in the battle of Harlem Heights on 16 September 1776, Greene was nearby, giving encouragement to the troops. On 17 September Greene was placed in command of the Flying Corps, American troops, mainly militia, that were guarding New Jersey. On 15 October Greene led his troops across Arthur Kill to Staten Island, expecting to attack the British post there, but found it too strongly defended. He withdrew his forces to the New Jersey shore.

Unfortunately for Greene's reputation, Washington heeded his advice to retain Forts Washington (on the east bank of the Hudson River, on Manhattan Island) and Lee (on the opposite bank of the Hudson, in New Jersey). As Washington retreated across New Jersey, both forts fell behind British lines. The enemy captured them on 16 and 20 November, respectively. Fort Washington gave up 2,800 prisoners to the British. Despite Greene's bad judgment, Washington continued to trust his advice and hold him in high esteem.

Greene, again commanding a division, demonstrated his reliability at the battles of Trenton (26 December 1776) and Princeton (3 January 1777). During the winter and spring of 1777, Greene set up an advanced line of posts, forming a screen to the coast for Washington's winter quarters at Morristown. Greene's forces and other American troops persistently harassed British foraging and scouting parties, with the occasional result of major skirmishing.

POLITICAL AND MILITARY SKIRMISHES

In March 1777 Washington sent Greene to confer with Congress when that body indicated a growing dissatisfaction with the performance of the army. This and other evidence of Washington's confidence in Greene's judgment led to criticism that Greene was dominating the commander in chief. In May 1777 Greene and Henry Knox were sent to study the terrain of the New York Highlands when it appeared that the British might launch an offensive in that direction. Greene joined Generals Henry Knox and John Sullivan in a threat to resign if Congress appointed a Frenchman, Charles Phillippe Tronson Du Coudray, over their heads. The politicians resented this "dictation" by army officers, and John Adams advised Greene to apologize. Greene refused to do so, and Congress worked out a solution acceptable to the generals, making Du Coudray a major general of the staff. Du Coudray's subsequent accidental death provided a convenient solution to the crisis.

At the battle of Brandywine, 11 September 1777, Greene's division had to shift quickly from the center of the American line to cover the army's right flank against an unexpected assault by the enemy. Greene's troops met the challenge, marching four miles in forty-five minutes. The determined stand by soldiers under one of Greene's brigade commanders, George Weedon, halted the advance of the enemy. At the battle of Germantown, 4 October 1777, although Greene's division, forming the main column, arrived on the field of battle after the action had begun, it pushed the enemy to the Schuylkill River. With utter confusion developing among the American troops, Greene ultimately had no choice but to join the general retreat of the American forces.

AN EXTRAORDINARY ADMINISTRATOR

Greene reluctantly accepted the post of quartermaster general thrust upon him by Congress on 2 March 1778. An exception to the common practice of staff officers not serving in the line, Greene was allowed to retain his field command, meaning that he, too, could participate in battle. Greene, nevertheless, thought he was forfeiting opportunity for glory, the leading motivation for his military service. Writing to General Alexander McDougall on 28 March 1778, Greene said: "All of you will be immortalizing your selves in the golden pages of History, while I am confined to a series of druggery to pave the way for it." Greene presided over a Quartermaster Department, under which an ever expanding number of agencies eventually were subordinated. Ultimately, there were three thousand employees working under Greene's authority. Greene brought greater order to his department. Not only did he

supervise all kinds of provisioning but he also managed site selection and the establishment of camps for Washington's army. In addition, his department supplied General John Sullivan's expedition against the Iroquois Indians in summer 1779.

Greene and his two top assistants, Charles Pettit and John Cox, were allowed to share equally in a commission of one percent on all purchases. Until the commission system was abolished by Congress in 1780, this system gave rise to the suspicion that those administering the Quartermaster Department were unfairly reaping great personal profits. Indeed, Greene seemed to have ample funds for investment in shipping, privateering, iron-manufacture, and real estate speculation. Greene was a partner in two firms which did business in supplying the army, albeit minimally. One of these companies was headed by his brother, Jacob, and the other by an associate of Greene's, Jeremiah Wadsworth.

Despite qualms that Greene might be profiteering, Washington remained adamant in his praise of Greene's administration of the Quartermaster Department. Writing to the President of Congress on 3 August 1778, Washington asserted that "the public is much indebted" to Greene "for his judicious management and active exertions in his present department. When he entered upon it, he found it in a most confused, distracted and destitute state. This by his conduct and industry has undergone a very happy change." Indeed, Washington added, the vigorous pursuit of the American army of British troops after they evacuated Philadelphia may be credited to Greene's fine tuning of the Quartermaster Department.

The effects of Greene's able direction of the Quartermaster Department were dramatically apparent during the Morristown winter encampment, 1779–1780, with weather conditions much worse than they had been at Valley Forge. Operations in the summer of 1780 also showed that Greene's system of field depots and his improvement of the transportation system greatly increased the army's mobility. Two of his detractors in Congress, Thomas Mifflin and Timothy Pickering, presented a plan for reorganizing his department. Greene's methods, if not his results, had given Congress grounds for criticism, and the reorganization plan gathered support. Incensed, Greene demanded a vote of confidence but was refused it by Congress. After they adopted the new plan, on 15 July, Greene announced he would no longer serve as Quartermaster General. Congress considered this a second challenge to its authority and after accepting his resignation on 3 August, some delegates made an unsuccessful attempt to have him expelled from the army. With Timothy Pickering as his replacement, Greene himself moved on to assume command of American forces at West Point and the adjacent Highlands, a position just vacated by the treason of General Benedict Arnold.

RETURNING TO THE FIELD

During his tenure as Quartermaster General, Greene, on occasion, exercised field command. When Washington dismissed Charles Lee as commander of the American troops at the battle of Monmouth (28 June 1778), Greene took Lee's place, the British army left the battle site at nightfall. Greene brought his division to aid General John Sullivan's troops against the British in Rhode Island, and was in thick of the battle at Newport on 29 August 1778. In June 1780 Greene commanded 2,500 troops and Henry Lee's Legion to resist General Wilhelm Knyphausen and 5,000 troops in their second invasion of New Jersey. Although Greene himself was not in the forefront of the engagement at Springfield on 23 June 1780, units under his overall command forced the enemy to retreat and withdraw from the state.

Only a few days after Greene assumed his Highlands command, a larger challenge intervened. Authorized by Congress to name a new commander in chief of the southern army, Washington gave the appointment to Greene on 14 October 1780. On his journey southward to his new command, Greene met with the governors and legislatures of Maryland and Virginia and also communicated with officials of Delaware and North Carolina, gathering strong commitments for material aid for the southern army. On 2 December Greene officially took over command of some one thousand Continentals and twelve hundred militia at Charlotte, North Carolina. One of Greene's first actions was the unorthodox decision to divide his army, sending General Daniel Morgan and troops to scour the backcountry. Morgan's resounding victory at Cowpens on 17 January 1781 lured General Charles Cornwallis and his army from his bases in South Carolina in pursuit of Greene's army deep into North Carolina. Again demonstrating ingenuity, Greene led Cornwallis on a wild chase, with the British commander having to discard valuable supplies and munitions. Beating Cornwallis to the Dan River, Greene appropriated all the boats and crossed into Virginia, leaving the British commander in the lurch.

On his return to North Carolina, Greene chose favorable ground and met the enemy at Guilford Courthouse on 15 March 1781. Greene disposed his troops, as he would also do in later battles, and just as Morgan had done at Cowpens: militia in the front line, backed up to Continentals, and on the flanks, cavalry and light infantry. Greene was forced to abandon the battlefield, but not before Cornwallis lost one-fourth of his army in casualties. Biographer Theodore Thayer notes that "the long sequence of brilliant maneuvers which culminated in the Battle of Guilford Courthouse was Nathanael Greene's principal contribution to the final American victory in the War of Independence" (p.331).

Cornwallis licked his wounds at Wilmington, North Carolina, and soon invaded Virginia, leaving other British

troops under Lieutenant Colonel Lord Francis Rawdon to secure the British gains in South Carolina and contend with Greene. Engaging Rawdon at the battle of Hobkirk's Hill (Camden) on 25 April 1781, Greene replicated his operations at Guilford Courthouse, with the same result—once again abandoning the battlefield, but leaving the enemy heavily damaged. From then on, it was a matter of constriction for British forces in South Carolina, the pulling in from interior posts, one by one, through pressure exerted by Greene, Henry Lee's Legion, and militia units. After the battle of Hobkirk's Hill, Greene declared that "we fight, get beat, rise, and fight again" (Thayer, p. 348).

Greene's sole attempt at siege tactics failed when he applied them against the British post at Ninety Six, from 22 May to 19 June 1781. An important mistake was to run an initial parallel line of troops too close to the enemy's fortifications. Greene lifted the siege when Rawdon's relief column approached the fort. Rawdon pursued Greene, but could not catch him. The British commander subsequently ordered the evacuation of Ninety Six, in effect giving Greene the victory. Greene was earning a reputation as "the strategist of the American Revolution." Indeed, Greene wrote General Henry Knox in July 1781: "There are few generals that have run oftener, or more lustily than I have done. But I have taken care not to run too far, and commonly have run as fast forward as backward, to convince the Enemy that we were like a Crab, that could run either way" (Thayer, p. 367).

At Eutaw Springs, South Carolina, on 8 September 1781, Greene fought his last and most bloody battle of the southern campaign. Greene's forces were nearly equal in size to those of the British that were arrayed against him. The battle ended in a draw; Greene withdrew from the field, and the British commander, Lieutenant Colonel Alexander Stewart, brought his army southeastward to Charleston. Greene lost one-fourth of his men at Eutaw Springs, whereas the British lost more than forty percent. British troops had now been cleared out of the Deep South except for Charleston and Savannah, although partisan militia leaders and General Anthony Wayne's Continentals performed some mop-up operations.

LIFE AFTER THE WAR

After the war, Greene and his family resided at Mulberry Grove, Georgia, a 2,000-acre plantation, twelve miles from Savannah. The estate had been confiscated from a former Tory governor, John Graham, and given to Greene. Greene cultivated corn, rice, and fruit orchards, and engaged in logging. He struggled in an attempt to pay off enormous debts, accrued in part by his having provided surety for John Banks and Company, which supplied Greene's Southern army. Despite Greene's financial support, the company went bankrupt. Rumors

persisted that Greene profited from the provisioning of his troops. It was discovered that two of Greene's most trusted aides, Robert Burnet and Robert Forsyth, had been secret partners of John Banks and Company, and Greene himself was suspected of having been a silent partner of the firm.

Nathanael Greene died on 19 June 1786, probably from a sunstroke suffered during his homeward trip from Savannah. His wife, Kitty, and five of their children (all under the age of eleven) survived him. Greene would have been pleased had he known that Congress, over the succeeding decade, honored his military service by paying off most of his debts.

GREENE'S LEGACY

The exalted military esteem in which Nathanael Greene is held results from a combination of factors. He retained the complete trust and friendship of George Washington, and, for that matter, of several other key generals, including Henry Knox and Anthony Wayne. Even among the lower-ranked brigadiers, there were many such as George Weedon who cherished Greene as a hero and friend, although the two men were not closely connected. Greene, with a winning smile and cheerful disposition, made friends easily. He had the knack of smoothing out differences among colleagues, whether as a field commander or in his role as quartermaster general. It was also a plus for Greene that he was married to the prettiest wife among the officer corps. Kitty Greene enthralled the commander in chief, who found in her his favorite dancing partner—on one occasion the two danced continuously for three hours. Greene might be compared to General Henry Knox, with whom Washington established a close friendship. Knox gave Washington costly wrong advice (at Germantown), as did Greene (regarding Forts Washington and Lee), and both Greene and Knox were self-taught in military science.

While Greene exhibited congeniality, his character had some defects, namely (as Douglas S. Freeman has noted), "haste in decision, an overconfidence in his judgment, an insistence that his integrity be acknowledged formally whenever any act of his was criticized. The less reason he had for heeding carpers, the more sensitive he became" (*Washington*, vol. 4: p. 367).

Greene proved to be a superb administrator of a large staff department, and he planned and executed complex military operations. He was always solicitous of both public and military officials for the welfare of his men, although he did not hesitate to mete out the death penalty for desertion and mutiny. He also set an example on how to employ flexibility and mobility in the use of his army. In addition, he was willing to borrow from the successful practices of other generals. Learning from Washington,

like Lafayette, Greene was convinced that a maneuver and harassment strategy would pay off in the long run. Greene's major battles in the Southern campaign were fought according to Morgan's tactics at Cowpens, with little variation.

The insufficiency of the British prosecution of the war in the south made Greene's task easier. Cornwallis removed his army, small as it was, from the Carolinas by invading Virginia in May 1781. The total of 5,000 troops dispatched from New York City, including those under Arnold in December 1780 and those under General William Phillips in March 1781, were not matched by reinforcements in the deep south. A circumstance that further contributed to British failure in the Carolinas and Georgia was the neglect to reestablish royal government, except for a limited effort in Georgia. A policy of retrenchment led to withdrawal of British forces to Charleston and Savannah.

When Greene assumed command of the Southern army, the pendulum had already swung against British military fortunes in the region. The crushing of the Loyalist militia at Kings Mountain on 7 October 1780 ruined any chance that the British could count on an outpouring of backcountry Loyalist support. The victory at Cowpens three months later indicated that the British would have difficulty holding onto the interior regions. These were not the only events that eased Greene's mission; also helpful was the relentless pounding of Loyalist positions, ending in victory for the rebels, by partisan leaders such as Thomas Sumter, Andrew Pickens, Francis Marion, and others. The roving Patriot bands, in what amounted to a civil war, also helped to quash potential support for the British cause. If circumstance and British military policies contributed heavily to Greene's success in the southern campaign, this does not render his accomplishments unworthy of praise. Greene's accomplishments in the Southern campaign may not have been extraordinary, but it is undeniable that he was the right man, in the right place, at the right time.

GREEN (OR GREENE'S) SPRING, SOUTH CAROLINA. 8 Aug. 1780. There is some confusion over the exact identity and date of this running battle, which is also known as Second Cedar Spring. Between 150 and 200 mounted Loyalists under Major James Dunlap preceded Major Patrick Ferguson's main column in the advance toward Gilbert Town, South Carolina, during the movements that eventually led to the battle of Kings Mountain. Warned of Dunlap's approach, roughly 400 rebel militia under Lieutenant Colonels Elijah Clarke and William Graham were waiting when the Loyalists attacked before dawn. After a sharp, fifteen-minute skirmish that left many casualties on both sides, the Loyalists were driven back. As Clarke and Graham began their pursuit, Ferguson came up with the main body of troops, and the rebels retreated to higher ground. Judging the rebel position as too strong, Ferguson withdrew. Estimates of the casualties vary widely; though it appears that eight Loyalists and three rebels were killed, with about twenty wounded on each side.

GREEN MOUNTAIN BOYS. Under the leadership of Ethan Allen, whose most famous lieutenants were Ira Allen, Seth Warner, and Remember Baker, the Green Mountain Boys were organized to defend the claims

of settlers in the region that became Vermont. They figured prominently in the capture of Ticonderoga on 10 May 1775, and during the Revolution they were useful in guarding passes through their home country.

GREEN SPRING (JAMESTOWN FORD, VIRGINIA). 6 July 1781. Having failed to catch and destroy Lafayette and being ordered by Clinton to detach reinforcements to New York, Cornwallis abandoned his plan of holding Williamsburg and prepared to cross the James River. Lafayette followed cautiously and on 6 July started getting indications that he might catch Cornwallis astride the river.

The historian Henry P. Johnston has written,

Cornwallis had shrewdly conjectured that Lafayette would take the occasion to attack his rear, and when he learned of his approach he did everything to confirm his antagonist in the belief that at that time, the afternoon of the 6th, only his rear remained to cross. Simcoe's Rangers and the baggage alone had passed over (*Yorktown Campaign*, p. 61).

Anthony Wayne led a five-hundred-man advance guard to keep contact and feel out the enemy. When Lafayette joined Wayne at about 1 P.M., there were contradictory reports as to whether the British main body was still on the peninsula or whether only a rear guard remained. Under these circumstances Lafayette ordered the remaining Pennsylvania Continentals and all the light infantry to close upon Wayne's command at Green Spring Plantation. The militia stayed twelve miles to the rear.

While waiting for these reinforcements to advance the six miles from Norrell's Mills, Wayne spent most of the afternoon skirmishing with the enemy. Against the delaying tactics of Tarleton's outposts, the Virginia riflemen of Majors Richard Call and John Willis (about two hundred

men), supported by John Francis Mercer, William Galvan, and William McPherson with their dragoons and light infantry, gained ground steadily. Walter Stewart's Pennsylvania Continental Battalion followed in reserve. From Green Spring Plantation (whose mansion had belonged to Governor Sir William Berkeley), the Americans had to cross four hundred yards of marshy ground to the main Williamsburg-Jamestown road. About a mile along this road the enemy camp, hidden behind some woods, was on the river bank opposite the north end of Jamestown Island. Although the American light forces performed splendidly, shooting down three rear guard commanders in succession, "the striking feature of this preliminary skirmishing," according to Johnston, "was the art practiced by Cornwallis in attempting to draw Wayne and Lafayette to destruction" (ibid., p. 61).

By the time the reinforcements reached Green Spring at about 5 P.M., Wayne was close to the main British army, although he apparently thought he had nothing but a rear guard on his hands. Lafayette, however, seems to have suspected that things were not as they appeared, and he held in reserve at Green Spring the veteran light infantry battalions of Francis Barber and Joseph Vose. Across the swamp to support Wayne went the light infantry battalion of Major John P. Wyllys and the two remaining Pennsylvania battalions, those of Richard Butler and Richard Humpton. Supported by three cannons, these reinforcements brought Wayne's total strength up to about nine hundred men. When Lafayette rode to a tongue of land on the river bank for a personal reconnaissance to see, if possible, whether the main body of enemy troops was still on his side of the James, he discovered the alarming truth and rushed back to keep Wayne from getting drawn into a general engagement. But it was too late.

Cornwallis could have attacked as early as 4 P.M. and crushed Wayne's advance guard, but he waited until he was sure that enough of Lafayette's corps was on the field to make his blow decisive. While the young marquis was making his reconnaissance, Major Galvan was ordered to lead his fifty or sixty light infantry in an attempt to capture an exposed cannon; after a spirited effort he had to fall back on the American left flank. Assured either by this attack or by other evidence that Lafayette's main body was now on the field, Cornwallis sprung the trap. Lieutenant Colonel Yorke's light infantry formed the British right, and the Forty-third, Seventy-sixth, and Eightieth formed the left under Lieutenant Colonel Thomas Dundas.

When Wayne suddenly found himself attacked by Cornwallis's entire force, he reacted with courage and also with good tactical sense: he attacked. In what he called "a choice of difficulties," he realized that under the circumstances an attempted retreat might turn into a panic. An attempted stand against such odds would be

disastrous, particularly since the enemy line overlapped both his flanks. Wayne's solution also had the feature of surprise, and it showed an understanding—probably instinctive—of the human factor. There is a chapter of battlefield leadership in this decision.

"The movement was successful, though costly," Johnston has observed. Wayne's men charged through grapeshot and musket fire to within seventy yards of the enemy and stopped them in their tracks for fifteen minutes. Lafayette took a prominent part in salvaging the situation he had not quite been able to prevent. Retreating rapidly but in good order to the reserve line at Green Spring, the Americans remained there a few hours and then withdrew during the night to Chickahominy Church. Since Cornwallis did not attack until "near sunset," as he reported to Clinton, this left him only an hour of daylight for the entire action, and there was no pursuit.

NUMBERS AND LOSSES

Out of 900 engaged, Wayne lost 28 killed, 99 wounded, and 12 missing. Two guns were lost, one of them a piece captured at Bennington. British losses were 75 killed and wounded. As for numbers, about 7,000 British were on the field, since only Simcoe's Rangers and the baggage had crossed the James, but the Guards, the Twenty-third and Thirty-third Regiments, and Hessians were in reserve when Cornwallis launched his counterattack and participated little, if at all.

COMMENT

Although clearly defeated, Lafayette handled the action well. "The criticism that he exposed his army to destruction, when so much depended upon keeping it intact, is hardly supported by the facts," Johnston has said. His dispositions were such that not more than a third of his regulars could have been destroyed even under the worst possible turn of events. As for Earl Cornwallis, after all his skill in luring "the boy" into position for a knockout, he swung just a little bit too late. "One hour more of daylight must have produced the most disastrous conclusions," said "Light-Horse Harry" Lee. Cornwallis himself said another thirty minutes of daylight would have enabled him to destroy most of Lafayette's force. His military reputation would fare better in India, where he was not opposed to such generals as Lafayette and "Mad Anthony" Wayne.

GRENADIERS. One of the flank companies of each British regiment was composed of grenadiers. Originally they had been large, powerful men selected from the battalion (regiment) to throw the “hand bombs” introduced during the Thirty Years’ War (1618–1648). Later they were formed into special companies, and long after their grenade-throwing function had ceased to exist the grenadiers were retained as elite troops. In some cases they were formed into permanent regiments, like the Grenadier Guards. Grenadier and light infantry companies were usually detached from their regiments for special, particularly important, or hazardous combat missions. While the American army copied the British to the extent of having flank companies in each regiment, they had two light infantry companies but no grenadier companies.

GRENVILLE, GEORGE. (1712–1770). British politician and prime minister. Grenville was born at Wotton, Buckinghamshire, on 14 October 1712. His contemporaries often spelled his surname as “Greenville,” and this may have been the accepted pronunciation. He was educated at Eton from 1725 and from 1729 at the Inner Temple, one of the major London law schools. Called to the bar in 1735, he handled family and estate business until about 1744. Through the patronage of his mother’s brother, Richard Temple, Lord Cobham, Grenville became member of Parliament for Buckingham and so—along with young William Pitt—joined the group of Walpole’s opponents dubbed “Cobham’s Cubs” or “Boy Patriots.” His marriage to Elizabeth Wyndham, sister of the later second earl of Egremont, and Pitt’s own marriage in 1754 to Grenville’s sister, cemented and extended his political connections.

In 1744 Grenville became a lord of the Admiralty. In 1747 he moved to the Treasury Board and over the next

seven years became expert on the problems of the national budget. Treasurer to the navy and a privy councillor from 1754, he returned briefly to the Admiralty Board in 1756. Even so, resentful of Pitt’s extravagant spending on the Seven Years’ War, he kept up connections with the Leicester House faction around the future George III. The year after the new king succeeded in 1760, Grenville became leader of the House of Commons under Bute in addition to his post at the Admiralty. In May 1762 he became secretary of state for the North; in October first lord of the Admiralty (exchanging with Halifax); and finally, in 1763, first lord of the Treasury (prime minister). Narrowly surviving an attack on the general warrants used against Wilkes, Grenville turned his attention to postwar finance and colonial questions.

The decision to tax the colonies (not just the American ones) had already been taken in principle by Bute’s ministry, and it fell to Grenville, the financial expert, to devise the means. The reasoning was simple and not at first controversial. Britain had incurred a massive national debt during the war, and the ministry could only keep its House of Commons majority by undertaking to reduce it while lowering the land tax. Moreover, there would have to be a large and expensive peacetime garrison in the American colonies, which had benefited from the war and, compared with the British Isles, were grossly undertaxed. The troops were partly to patrol the Indian frontier but principally to guard against a Bourbon descent on Canada or Florida, which would in turn threaten the other colonies. It therefore seemed perfectly logical and fair to make Americans bear not the whole, but at least a proportion, of the cost.

Grenville’s means, the so-called Grenville Acts, were meant to raise the money in ways that Americans would accept. The Sugar Act actually lowered the duty on foreign molasses but at the same time sought to make sure that it was collected. Stamp duties had long been levied in England, so from London’s perspective it hardly looked like a tyrannical innovation. Moreover, Grenville had no intention of imposing an unpopular tax; when Americans complained of lack of consultation over the Stamp Act, the ministry delayed its implementation so that their views could be heard. It was not until resistance became violent and widespread that Grenville insisted on going ahead with the duty in order to establish Parliament’s right to tax. This provoked some parliamentary opposition, not to the principle but to the wisdom of the measure; but the colonial assemblies’ response to the Quartering Act seemed to justify his attitude. Though his ministry fell in July 1765, in opposition Grenville strenuously opposed the repeal of the Stamp Act.

Grenville should not be dismissed as the accountant who set off American opposition in order to balance the books. He was an energetic prime minister and introduced

a range of domestic economies and administrative reforms. Nor was there such a thing as a “Grenville program.” Grenville actually opposed the frontier boundary line policy adopted in 1763–1764, and the Quartering Act was requested by General George Gage, who was anxious to end the use of private billets. Above all, Grenville understood that Americans were opposed to Parliament raising a colonial revenue by any means and made no distinction between internal and external taxes. For this Pitt mocked him, but the subsequent fiasco of the Townshend duties showed that Grenville had been right all the time.

GRENVILLE ACTS. Under the leadership of George Grenville, who headed the ministry that came to power in March 1763, the imperial government enacted a number of measures intended to increase the amount of control it exercised over the North American colonies. The decisions were a response both to colonial evasion of the Navigation Acts, scandalously revealed during the final French and Indian War (1759, 1760), and to the needs of the newly expanded empire. From the imperial point of view, reform was urgently required and the measures were reasonable. Because they altered the approach to imperial administration that Britain has followed for half a century (a policy known as “salutary neglect”), many colonists came to believe, erroneously, that the decisions represented a carefully conceived program to deprive Americans of their rights. The measures included reform of the customs service (4 October 1763), the Proclamation of 1763 (7 October 1763), the Revenue Act of 1764 (the so-called Sugar Act, 5 April 1764), the Currency Act of 1764 (19 April 1764), and the Stamp Act (22 March 1765). This last act was the one the colonists found most threatening to their liberties. Not strictly part of the Grenville program but generally blamed on him by the colonists was the Quartering Act (15 May 1765), requested by Major General Thomas Gage, commander in chief in North America, to better house his troops in the colonies.

GREY, CHARLES. (1729–1807). (“No-flint.”) British general. At age fourteen he was commissioned an ensign in the Sixth Regiment and in 1746 fought at Culloden. After service at Gibraltar, he was promoted to lieutenant of the Sixth Regiment on 23 December 1752. Three years later he raised an independent company and in May 1755 was promoted to captain of the Twentieth Regiment. He was in the Rochefort expedition in September 1757. At Minden, on 1 August 1759, he was wounded while serving as aide-de-camp to Prince Ferdinand. On 16 October he was in the hottest fighting at Klosterkamp. He was promoted to lieutenant colonel of the Ninety-eighth Regiment on 21 January 1761. Prevented by illness from serving with his regiment at Belle Île (1761) and Havana (1762), he joined the Portuguese army with the rank of colonel in June 1762. He served as aide-de-camp to the Count zu Lippe-Brückenberg and in 1763 was retired on half pay.

For the next decade, Grey did not advance in the army. In 1774 he was promoted to colonel and appointed aide-de-camp to George III. In March 1777 he was made colonel of the Twenty-eighth Regiment and ordered to join the British army at New York with the local rank of major general. On 24 June, in command of the Third Brigade, he skirmished with Lord Stirling at Woodbridge, New Jersey. In August he was promoted to permanent major general and landed with the British army at Head of Elk, Maryland. Leading a night action at Paoli, Pennsylvania, on 21 September, he surprised and overwhelmed Anthony Wayne’s troops with a brilliant bayonet assault. His success established his reputation as a master of light infantry tactics and won him his nickname, “No-flint,” but he was bitterly resented by the Americans. On 4 October at Germantown, Pennsylvania, he led a valiant assault and rescued British soldiers in Chew House.

Grey was involved in an ineffectual attack on the Marquis de Lafayette at Barren Hill on 20 May 1778 and in a more successful one at Monmouth, New Jersey, on 28 June. In September he conducted brilliant amphibious operations against Massachusetts seacoast towns and on the 28th led a successful night bayonet attack against George Baylor’s Third Dragoons at Old Tappan, New York. Criticized by Britons and Americans for allowing his men to perpetrate atrocities during the battle, Grey was unrepentant, for he had become a proponent of sanguinary warfare against his foes. He returned to England on 24 November, convinced that Britain did not possess the will to win the war. In 1782, after service at Plymouth, he was promoted to lieutenant general, knighted, and named commander in chief for North America. He never assumed the office, for ministerial politics precluded his departure. In 1793–1795 he led a successful West Indian expedition and in August 1796 was promoted to general. He commanded England’s southern district from 1796 to

1800. In 1801 he was made a baron, with the style of Baron Grey of Howick, and five years later he was created Viscount Howick and Earl Grey.

Grey was a controversial officer. He was, however, among Britain's best field commanders in the second half of the eighteenth century.

GRIBEAUVAL, JEAN BAPTISTE VAQUETTE DE. (1715–1789). French artillery general. While Gribeauval was captain of artillery in 1752, Minister of War Comte Marc-Pierre d'Argenson sent him to study the use of light cannon in Prussian infantry battalions. In 1776 Saint-Germain named him first inspector of artillery. His system of artillery development, gradually adopted in France between 1764 and 1776, called for lighter, smaller, more mobile guns and more precise calculations in their use; therefore, more highly trained artillerists were required. The adoption of his system in France made vast stocks of effective but heavy, outdated matériel available for the Americans through agents such as Beaumarchais.

GRIDLEY, RICHARD. (1710–1796). First American chief engineer. Massachusetts. Born on 3 January 1711 at Boston, Gridley was apprenticed to a merchant but developed his talent for mathematics and became a surveyor and civil engineer. He studied under

John Henry Bastide, a British military engineer who was planning the fortifications of Boston and vicinity. In 1745 he was commissioned lieutenant colonel of the artillery train in the expedition against Louisburg, became chief bombardier during the siege, and supervised the erection of the siege batteries. He was rewarded with a commission as captain in one of the British army regiments that garrisoned Louisburg; he retired on half pay when Louisburg was returned to the French in 1749 and his regiment was disbanded. He was a skilled draughtsman, as seen in his *Plan of the City and Fortress of Louisburg*, published at Boston in 1746 and republished at London in 1758. He was Governor William Shirley's engineer on the Kennebec expedition in 1752 and built Fort Western (Augusta, Maine) and Fort Halifax. He was the chief artillery officer during William Johnson's 1755 expedition against Crown Point and, as chief engineer, built Fort William Henry at the head of Lake George. He served at Louisburg under Jeffrey Amherst in 1758 and at Quebec under James Wolfe in 1759. After the French and Indian War, he again retired on half pay and was granted fishing rights in the Magdalen Islands in the Gulf of St. Lawrence as well as three thousand acres in New Hampshire. In 1770 he and Edmund Quincy began smelting iron ore in Stoughtonham (later Sharon), Massachusetts.

When the Massachusetts Provincial Congress organized the provincial army for the siege of Boston in late April 1775, it appointed this distinguished veteran, the most experienced military engineer in the province, as chief engineer, although he was already in his sixty-sixth year, and it also gave him the additional task of organizing a train of artillery. He directed the engineering work at Bunker Hill and was wounded in the battle on 17 June. Six days later, the Massachusetts Congress gave him the provincial rank of major general. The Continental Congress appointed him colonel and chief of Continental artillery on 20 September (dropping his provincial rank), but because of his advanced age and querulous nature he was replaced on 17 November 1775 by Henry Knox. He remained the Continental chief engineer, with the rank of colonel, and planned the field works on Dorchester Heights that helped to force the British from Boston. While many officers had a low opinion of his ability, and on 28 April 1776 Washington reprimanded him about his "shameful neglect" of duty, Gridley deserves much credit for successful artillery and engineering work at the siege of Boston. He was succeeded on 5 August 1776 by Rufus Putnam and served thereafter as "Colonel and Engineer," working on the defenses of Boston as engineer general of the Eastern Department from 1 January 1777 until his retirement from the Continental army on 1 January 1781. During 1777 he had some success manufacturing mortars and howitzers for the Continental army at his furnace at Stoughtonham. He died at Canton, Massachusetts, on 21 June 1796.

His brother Jeremiah (1702–1767) was a lawyer who became attorney general of Massachusetts, and in defending writs of assistance in 1761 he became an opponent of a former pupil, James Otis.

GRIERSON, JAMES. (?–1781). Planter, Loyalist militia officer. Date and place of birth unknown. Grierson moved to Georgia in 1762, settling in St. Paul's Parish. Active as an officer in the colonial militia, he commanded the Loyalist forces of St. Paul's Parish-Richmond County.

A prominent citizen of the backcountry, Grierson owned over one thousand acres and a fortified building or stockade fort in Augusta called Grierson's Fort. He served St. Paul's Parish as tax collector and assessor, surveyor of roads, and justice of the peace. By 1774 he was colonel of the Augusta provincial militia regiment. On 6 August 1775 the Augusta revolutionary committee of safety asked Grierson to call out the militia to protect the town from a potential attack by Loyalist Thomas Brown and his followers. He refused. Despite his loyalty to the crown, however, Grierson served the rebel government when it functioned in the backcountry, continuing as justice of the peace for St. Paul's Parish in 1776 and tax assessor for Augusta and environs in 1778. In January 1779, when British troops came into the backcountry, rebels incorporated the use of Grierson's Fort in their defensive plans. Although Grierson was openly a Loyalist, he remained unmolested in Augusta while rebel government existed there.

Grierson returned to an active role with the Loyalist militia when British forces, under Colonel Thomas Brown, reoccupied Augusta in May 1780. Rebel Colonel Elijah Clarke and partisans unsuccessfully attacked Augusta during August–September 1780, taking Fort Grierson as their temporary headquarters. Grierson arrived with a group of regulars and Indians on 18 September, just in time to pursue fleeing rebels and take prisoners. In retaliation for Clarke's attack, Loyalist troops

destroyed plantations and settlements in the surrounding backcountry and hundreds of women and children fled Georgia. Rebel strength built slowly around Augusta beginning in April 1781. Grierson and Brown sought reinforcements from the British garrison in Savannah in vain. Eventually besieged by rebel forces, on 22 May 1781 Grierson and a detachment of loyalist militia occupied his fort, which was from one-half to three-quarters of a mile west of Fort Cornwallis, a new and well-constructed fortification Brown had built in the center of town and now occupied with his regulars. Quickly overcome by Lieutenant Colonel Henry Lee's Legion, Grierson and his surviving troops managed to reach Fort Cornwallis. On 5 June, Brown surrendered. Colonel Grierson was taken prisoner under General Andrew Pickens and held at his own fort.

While some sources state Grierson died before reaching Fort Cornwallis, it is generally believed that he was assassinated on 6 June by Captain James Alexander, one of Pickens's men, whose family had suffered under British rule. Some reports indicate that Grierson was shot in front of his children and his body mutilated and thrown in a ditch outside the fort. Lee stated that it was difficult to prevent such murders, and other Loyalists were also killed at this time. General Nathanael Greene offered a reward on 9 June 1781, but no one was arrested.

GRIFFIN, CYRUS. (1748–1810). President of the Continental Congress. Virginia. Born in Farnham Parish, Virginia, on 16 July 1748, Cyrus Griffin studied law in England and Scotland, and in 1770 eloped with the eldest daughter of John Stuart, the sixth Earl of Traquair. After studying in the Middle Temple for three years, Griffin returned to Virginia in 1774, where he practiced law. He was not an advocate of rebellion, believing in the peaceful settlement of the differences between the Crown and the colonies. While in London on business, he sent a "Plan of reconciliation between Great Britain and her Colonies" to the William Legge, the second Earl of Dartmouth and secretary of state to the colonies on 30 December 1775.

Griffin was a member of the Virginia legislature from 1777 to 1778 and was sent to the Continental Congress from 1778 to 1780, where he served on several financial committees. However, the factions in Congress that led to delay and procrastination were distasteful to him, and he welcomed his appointment, on 28 April 1780, as Judge of the court of appeals that heard “cases of capture.” He sat on this court until it was abolished in 1787, at which time he was its presiding judge. In 1782 Griffin was one of the commissioners who settled the contest between Connecticut and Pennsylvania over the Wyoming Valley, deciding for Pennsylvania. He returned to the Virginia legislature from 1786 to 1787, and to the Continental Congress from 1787 to 1788. He was the last to be elected president of the Congress, on 22 January 1788, and he served in that capacity until the Congress permanently adjourned in November 1788. After serving as commissioner to the Creek Nation in 1789, Griffin returned to the bench and served as judge of the U.S. District Court of Virginia from December 1789 until his death in Yorktown, Pennsylvania, on 14 December 1810.

GROTON HEIGHTS, CONNECTICUT SEE *Fort Griswold, Connecticut; New London Raid, Connecticut*.

GUERRILLA WAR IN THE NORTH. 1775–1783. The term “guerrilla warfare” came into use after the American Revolution. In the eighteenth century, the term more commonly used was “partisan warfare.” They both mean basically the same thing: a type of warfare where the emphasis is on the use of small parties of warriors, sometimes regular soldiers detached from the professional army and sometimes irregulars and only semi-trained fighters. These forces engage in hit-and-run tactics, ambushes, raids, skirmishes, scouting, and other activities, often around and between the larger regular armies, sometimes in conjunction with them, sometimes totally on their own. In the American Revolution, many different types of partisans existed: Whig and Loyalist militia; Native Americans; civilians unattached to any military unit; and detachments

from the regular armies. In the northern states, this partisan warfare occurred in two main areas: in combination with the regular armies operating in the area, and on its own against partisans of the other side, be they militia, outlaws, or Native warriors.

Usually the goal of this kind of warfare is to engage the enemy in numerous small engagements in order to inflict casualties while avoiding a potentially war-ending, large-scale battle. By using tactics such as hit-and-run and ambushes, the partisan forces attempt to minimize their own losses while causing a slow but steady drain on the opposing forces. In addition, there is psychological and physical wear and tear as the opposing forces have to fight and stand guard constantly, allowing them little time to rest. In effect, a guerrilla strategy is based on the assumption that the guerrilla forces can outlast the enemy, either in terms of numbers or in terms of willpower. However, it is not entirely accurate to claim that the American rebels engaged in a partisan war with this attritional plan in mind. Much of the guerrilla activity in the war, especially in the northern states, occurred on its own, often with vital interests at stake in a particular region and no other forces available except the local irregular forces. On the other hand, generals such as George Washington also learned to employ guerrilla activities deliberately in an effort to wear down the British. Guerrilla warfare in the American Revolution was complex and varied over the course of the eight and one-half years of war.

INITIAL GUERRILLA ACTIVITY

The initial fighting of the Revolutionary War fit the description of guerrilla warfare. When the Massachusetts militia met the advancing British troops on the morning of 19 April 1775, they did not line up and fight it out with the British regulars in a European style of battle. Except for the opening actions in Lexington and Concord themselves, the combat that day degenerated into a running ambush and hit-and-run operation as small units of militia operated on their own, hiding in the woods and buildings and behind fences and targeting the British troops marching down the road. The Lexington militia got its revenge for the casualties taken in the early morning by ambushing the returning British troops just outside of Lexington.

When General George Washington arrived in Boston in July 1775 and took command of the assembled New England provincial regiments, the beginnings of the Continental Army, he made a deliberate decision not to rely solely on a guerrilla style of warfare, despite the urging of generals such as Horatio Gates and Charles Lee, both of whom were veterans of the British army and urged Washington to rely very heavily on the partisan qualities of the local militia. Washington, however, wanted to maintain some semblance of control during the war, and thus he worked at turning the fledgling Continental Army

into a semi-regular force. Still, despite this decision, the northern states would be the center of an active guerrilla war for the next eight years, a type of war that sometimes occurred spontaneously and at other times was directed by Washington and his generals in coordination with the campaigns of the army itself.

The British made a decision that would add an element to the guerrilla warfare in the North early in the war. Agents out of their base at Niagara contacted the nations of the Iroquois Confederation for help in the war against the Americans. The Mohawks and their leader, Joseph Brant, would prove to be excellent guerrilla warriors throughout much of the war along the northwestern frontier of New York and Pennsylvania.

COASTAL PARTISAN OPERATIONS

Partisan warfare started in the middle states after the British captured New York City in 1776. This guerrilla warfare took on several different characteristics. One aspect of the guerrilla activity was the warfare undertaken by the militia, often in conjunction with detachments from the Continental Army, to raid and harass the British and the Loyalists. These operations were normally not connected in any way with the main operations of the larger regular armies, except in a peripheral manner.

Long Island and Connecticut. One of the first efforts occurred between Long Island and Connecticut in what would be called the Whale Boat War. This conflict actually started in August 1776, even before the Continental Army retreated off the island. Washington ordered Lieutenant Colonel Henry Livingston to take his Continental regiment to the east of the American lines and try to prevent or slow any British advance toward the middle of the island. Soon afterward the Americans evacuated the island, and the British began to expand their control eastward; Livingston's men fell back slowly, skirmishing with the British advance. Once the British had secured most of the island, Livingston retreated across the Long Island Sound to Connecticut, but he continually sent raiding parties back onto the island to forage; to harass British, German, and Loyalist garrisons; and to help people escape from the island. Over the next seven years, this war of raids and counterraids raged on, with Long Island Sound serving as the path between the two sides.

In fact, Connecticut's Governor Jonathan Trumbull commissioned about one hundred men to use the whale boats and coordinate with the Connecticut militia along the Sound to raid whenever possible, and occasionally Continental units stationed in the area participated in such raids. The usual targets for these raids were the Loyalist settlements and forts in middle and eastern Long Island, as well as forage being collected for the

British army in nearby New York City. The Whig militia focused on swift descents, a quick raid into the interior, and then a fast retreat off the island. Loyalist parties raided the Connecticut coast, mostly to steal horses and cattle and to capture Whigs to trade for Loyalist prisoners or to ransom for money. To counter these Loyalist attacks, Trumbull had to maintain militia garrisons in most of the seacoast towns throughout the war. Continental units often participated when they were stationed in the area. For example, General Samuel Parsons led two hundred militia and Continentals to Long Island in August 1777. After an unsuccessful siege of a Tory fort, they retreated back to the mainland. By 1778, Washington routinely kept Continental detachments stationed along Connecticut's coast to help defend the ports, and these detachments also participated in the raids, often against Washington's orders. In response, by 1778 the British maintained more and more regular forces on the island to stop these attacks. Throughout the winter of 1778–1779, the Queen's Rangers and a detachment of British grenadiers joined one thousand Loyalist militia to defend the island, and the next summer, the British Light Infantry and the Seventeenth Regiment were both stationed along Long Island Sound. Mainly, the British command was worried about the supplies and forage available in the area.

New York Governor George Clinton denounced the Whale Boat War because it often spilled over into New York, and Washington also urged against it. Finally, in 1781 Trumbull ordered the raids stopped, and by 1782 Sir Henry Clinton had ordered the Loyalists to stop as well. Ultimately, the roughly five thousand refugees from Long Island returned, only to find utter destruction. The Whale Boat War had ruined rich and poor.

Westchester County. Westchester County faced a particularly brutal internecine war for seven long years. In fact, the area was so devastated that it became known as the Neutral Ground, or the No-man's Land. Whig and Loyalist militia, detachments from the armies, and groups of robbers and outlaws attached to neither side plagued the area throughout the entire war. Most of the fighting had little to do with the campaigns of the larger armies; rather, it was for personal plunder and revenge. However, the forage of the area was critical to both armies, so skirmishes and clashes between the foraging parties of both armies were frequent and bloody.

Two of the most notorious units in the county were the Cowboys, Loyalists who ravaged the area for personal gain and to support the British army, and the Skinners, a group of Whig militia who hunted the Cowboys, looted the area, and occasionally brought in supplies for the Continental army. Since the Skinners could not contain and prevent the worst of the Cowboys' depredations, Washington often had to send in Continental units to

help protect the area. He sent in the newly created Light Infantry Corps in 1778 and often positioned other units and detachments in the area, especially during the winter and spring months. The local Whig militiamen of Westchester County were not called to serve outside of the area since the danger to the county was so severe.

Southwestern Connecticut. Caught between the Whale Boat War along the Sound and the bitter partisan struggle in the Neutral Ground was southwestern Connecticut. Raids across the Sound often originated in, or targeted towns in, southwestern Connecticut. Frequently, a Continental unit would be positioned there, so as to be available to help along the Connecticut coast and still be close enough should the British emerge from New York City. In addition, Loyalist and British raiding parties moving through Westchester County often entered the southwestern corner of Connecticut to plunder and burn. William Tryon, the former royal governor of New York, targeted the area several times during the war, mainly to forage but also simply to ravage the area. As with the Norman's Land next door, southwestern Connecticut was virtually abandoned by war's end, despite the constant, valiant efforts of the local militia for seven long years.

New Jersey. New Jersey faced a similar dilemma, caught between the two main armies in the region. The partisan activity began in December 1776, after Washington had retreated through the state into Pennsylvania. British and German soldiers occupied most of the towns in northeastern and central New Jersey, and they treated the local population so brutally that the men of the area forgot their newly taken oaths of allegiance to the king and rose up spontaneously against the occupation army. They targeted lone enemy soldiers, Loyalists, and small patrols moving through the area. This started six years of vicious warfare along the coastal regions of New Jersey. During this time, General Philemon Dickinson rose to prominence as a key leader of the eastern New Jersey militia.

Washington learned here, as he did regarding New York and Connecticut, that the local militia simply could not offer enough protection on its own, so he stationed Continental detachments near the coast to support the militia whenever possible. In particular, as in the Neutral Ground, the forage of the area was vital to both sides. Washington saw the British need for locally gathered supplies as a key weakness in their war effort, and he took full advantage of the situation to force the British into a constantly escalating guerrilla war for food in eastern New Jersey. Parties of militia, Continentals, or both met each British or German or Loyalist foraging party throughout the next six years, at any time of the year, whether in the freezing winter or hot summer. As the skirmishes continued, casualties for both sides mounted,

which was a drain that the British in particular found hard to absorb. At times, these foraging parties could be as large as from one thousand to five thousand men. British commanders between 1776 and 1782, Generals Sir William Howe and Sir Henry Clinton, both complained of the constant fighting, the inability to rest the troops during the winter, and the constant state of fatigue caused by this incessant warfare. Partisan leaders such as the Hessian Johann von Ewald and the British commander of the Queen's Rangers, John Simcoe, admitted that this constant fighting was always to the advantage of the Americans.

New Jersey also had its own Whale Boat War aimed at Staten Island and even western Long Island. In 1780 the Honorable Board of Associated Loyalists was created, and William Franklin, former royal governor of New Jersey, was its first director. The Associated Loyalists targeted New Jersey's coast, mostly to annoy and harass rebel shipping in the area. Since the Loyalists were not paid, they raided for plunder.

This Board of Associated Loyalists at one time had three groups under its command: the Loyalists on Long Island; the Cowboys; and the Loyalists based on Staten Island raiding into New Jersey. Included in the board's forces were numerous escaped slaves who had fled New Jersey.

Southern and southwestern New Jersey saw the emergence of numerous groups of robbers. Some were Loyalists and others were out for themselves. New Jersey militia and occasionally Continentals were sent into the area to stop the raids, with minimal success. In response, the Monmouth County Association for Retaliation was formed in 1780, partly to try to stop Loyalist raids along that county's coast and partly to scour the southern parts of the state. It achieved minimal success at both jobs.

FRONTIER WARFARE

Meanwhile, another brand of guerrilla warfare raged along the northwestern frontier of New York and Pennsylvania. This was a war as old as the English colonies, a war that would continue long after the end of the Revolutionary War. The British were able to convince parts of the Iroquois Confederation, including most of the Mohawk nation, to join them in their fight against the Americans. The frontier raids began in 1777, after the defeat of General Sir John Burgoyne's campaign in northern New York and the aborted siege of Fort Stanwix in western New York. Iroquois parties, often supported by Loyalist forces led usually by John Butler, launched brutal raids deep into New York and Pennsylvania. These attackers were swiftly moving, light parties that could not capture a defended fort but could devastate an area, burning the homes and killing or capturing the inhabitants and just as swiftly disappearing. One of the more successful raids occurred

in June 1778 in the Wyoming Valley of Pennsylvania. Roughly 110 Loyalist rangers and 400 Native warriors trapped 800 local militia in a fort. Disaster struck when half the garrison emerged to attack the raiding party and instead ran into an ambush, losing about 300 men killed. The fort subsequently surrendered and the entire settlement was burned. Similar raids up and down the Mohawk River valley were less successful because the inhabitants of the area learned quickly and stayed safe within their small forts and blockhouses. The people of Cherry Valley, New York, saved their lives in November 1778 by staying within the walls of their fort, but they had to watch as the 200 Loyalists and 300 Indians burned their homes.

The frontier war escalated as American parties struck back against the Iroquois. Militia forces burned the towns of Tioga and Unadilla in autumn 1778. In 1779 Washington detached General John Sullivan and over four thousand men from his army to march through the homelands of the Iroquois, while another six hundred men marched from Fort Pitt into the western Iroquois lands. The Native warriors and Loyalist militia avoided battle through most of the summer, but in late August about eight hundred men tried to spring an ambush on the Continentals at Newtown. The American soldiers, however, avoided the trap, and the resulting fighting led to just a few casualties for both sides before the Indians and Tories retreated. Sullivan's army ravaged the area, burning villages and crops, and then retired to the east. The Iroquois were forced to spend the winter near the British post at Niagara.

Despite this setback, the Iroquois and Loyalists continued to raid for the next couple of years. They destroyed several towns along the frontier, and they also turned their anger against another member of the confederation, the Oneidas, who were supporting the Americans in the war. These raids were complemented by similar raids conducted by Canadian warriors along the Lake Champlain valley. In 1780 alone, over three hundred people died, six forts fell, and hundreds of other buildings were burned in northern New York. Local militia proved ineffective against these raids. Brant even led Mohawks into the Ohio territory in 1782. By then, the frontier war had slackened and finally, by the end of 1782, it came to an end for the moment. For the Iroquois, their wars against the Americans were over. However, the frontier war in Ohio was just heating up.

COORDINATED PARTISAN-ARMY OPERATIONS

The other aspect of the guerrilla war in the northern states was its coordination with the campaigns of the regular armies. American generals such as Washington and Horatio Gates became very adept at using partisan warfare to harass and slow the enemy in northern New York,

around New York City, and in Pennsylvania. In fact, it is the coordination of guerrilla and regular styles of warfare that truly made this a revolutionary war.

In northern New York, partisan activity clearly had a direct impact on the outcome of General Burgoyne's campaign in 1777. Initially, local militia responded to Burgoyne's threats to unleash his Indian warriors along the northern frontier by mustering and flocking to the American army in the vicinity. Generals Philip Schuyler and his successor, Horatio Gates, used the militia in a similar way, sending out parties to harass and slow the British advance, to threaten and ultimately cut the British line of supply back to Canada, and to neutralize the threat of the Native American forces. Arriving on 30 August, Daniel Morgan's riflemen in particular were useful in facing the Indian threat. It took Burgoyne's forces two months to move from Fort Ticonderoga to the Hudson River, partially due to the delaying tactics of ambushes, the cutting down of trees, and hit-and-run raids. Militiamen also inflicted stinging losses on the German troops near Bennington in August 1777. In addition, raids against the supply wagons helped keep the British low on supplies even as the climactic battles near Saratoga were fought in September and October 1777. At the same time, militiamen joined with the main American army, so when those battles were fought, Gates commanded close to thirteen thousand soldiers against the seven thousand men remaining with Burgoyne.

In Pennsylvania, during the campaign for Philadelphia in 1777, Washington used detachments and advanced forces to engage in running skirmishes with the British to slow their movements and inflict casualties. After the British landing, Pennsylvania and Delaware militia kept in front of the advance British forces, scouting, removing livestock, and occasionally skirmishing with British detachments. Since the rifle corps was in northern New York with Gates, Washington created a Light Infantry Corps of about seven thousand men, the best marksmen from each regiment, and then put General William Maxwell in command. This corps took post in front of the British, harassing their march, supporting the militia, and in general slowing the British movements. On 3 September 1777, the Light Infantry and militiamen fought the British advance at Cooch's Bridge and Iron Hill, inflicting several casualties and delaying the British for about seven hours. After the Battle of Brandywine in mid-September, Washington used the Light Infantry and the dragoons as a screen to skirmish with the enemy as he withdrew. Once the British had secured Philadelphia, Washington sent Maxwell and about one thousand Continentals to join the local militia southwest of Philadelphia to interrupt the enemy supply line, scout, stop enemy patrols, and protect American commerce in the area.

Washington develops the strategy. Combined guerrilla and regular warfare became most pronounced in the campaigns around New York City. Here, Washington developed this strategy, perfected it, and helped train General Nathanael Greene in its use; Greene would then employ it to perfection in the southern states in 1780–1781. Washington had to overcome his initial bias against irregular forces, but once he did, he learned how best to coordinate their specialties with the army's campaigns. Militia forces in particular were good for scouting and gathering intelligence and for local defense, and they served further as a shield for the army. Once Washington learned how best to employ the militia forces to perform these functions, he was able to maximize his resources to get the best use out of his understrength regular army and the numerous but less reliable local militia.

Perhaps the most innovative use of the militia by Washington was as a shield for the army, what in modern times is called a forward defense. He positioned militia units near the British lines, occasionally supported by Continental detachments nearby that were placed behind the militia. Then, if the British advanced, the militia could skirmish with the enemy, slow its advance even as more militia mustered, with the Continental detachments acting in reserve. This would give Washington time to assess the situation and decide if he wanted to advance the main army to fight or withdraw it to safety. Thus, whereas other aspects of the guerrilla war occurred spontaneously, this type of partisan warfare was employed deliberately by Washington to make full use of the two very different types of forces on which he had to rely. His strategy emerged in 1776–1777, when he began using this guerrilla activity to weaken, wear down, and disrupt British operations and to create an opportunity for the Continental Army to engage the British on better terms in a conventional-style battle.

He first employed this coordination of militia and the army in New Jersey in late 1776, when the local militia rose up against the British occupation of the state. With the British and German garrisons in New Jersey off balance and dealing with the partisan strikes of the local militia and even a detachment of Continentals near Morristown, Washington saw his opportunity and struck first Trenton and then Princeton. About five thousand Continentals and perhaps ten thousand militia struck at the British from New Jersey to Connecticut, forcing the British to contract their lines and abandon much of New Jersey by the end of January 1777.

When Sir William Howe led his army into New Jersey in the spring of 1777, Washington deliberately relied on this combination of regular and irregular operations. The New Jersey militia engaged in a running skirmish with the British and German advance forces, while Washington slowly fed in Continental units, all the while keeping the main army concentrated and available should an

opportunity to strike the harassed British army arise. It did not arise, and he kept his army out of reach behind this moving shield. Ultimately, the British retreated back into their lines after sustaining hundreds of casualties.

General Wilhelm Knyphausen launched a similar offensive in 1780 into New Jersey, with an almost identical result. Militia and Continentals slowed the advance while Washington edged the army ever closer to the front lines. Knyphausen finally decided against engaging Washington on his chosen field and retreated to Staten Island.

Perhaps the most striking use of this combined partisan and regular warfare occurred again in New Jersey, during the Monmouth campaign of 1778. When the British evacuated Philadelphia, Washington first sent Maxwell with the New Jersey Continentals, then Morgan with the Light Infantry, to cooperate with the New Jersey militia in slowing and harassing the British march. Washington then shadowed the British with the main army. By 24 June, five different Continental detachments of totaling thirty-six hundred men were hovering around the British, supported by parties of local militiamen. Washington kept sending more Continentals, so that by 26 June, five thousand Continentals and twenty-five hundred militia had surrounded the British in a moving ring. At that point Washington saw an opportunity and moved the army swiftly to intercept the British, the result being the Battle of Monmouth Courthouse. At the same time, the detachments were ordered to strike at the British supply trains. Thus, partisan strokes distracted the British army and allowed Washington to attack, and the army's attack then distracted the British army and opened the door for more guerrilla attacks. The British commander, Sir Henry Clinton, even admitted after the battle that he had accepted battle partially to try to force Washington to call in his numerous detachments. The Hessian Johann von Ewald saw the march across New Jersey as one in which "each step cost human blood."

Thus, Washington developed a sophisticated strategy that combined guerrilla actions with the campaigns of the regular army. In effect, he combined what could loosely be termed a European style of warfare with a North American style of warfare. Its effectiveness can be seen by the British attempt to emulate this strategy in the northern states. They made use of the Hessian jägers while creating the Queen's Rangers. These Rangers and jägers were often the advance corps or the rearguard during British operations. However, the British never mastered this combination of guerrilla and regular strategy. Their raids tended to be more isolated, seeking to destroy supplies or demoralize the rebels. The British did not coordinate them well with the main army. Washington's ability to fit the irregular aspects of the war into the regular campaigns was a key to his success.

Whether on their own or in conjunction with the regular armies, militia and guerrilla corps had a dramatic

impact on the war in the northern states. Scouting, gathering supplies, skirmishing with the enemy, reinforcing the main army, raiding supply lines, hunting people who supported the opposing side—all of these activities made the war as much a guerrilla war as a conventional one. The final success of the United States is largely due to the Americans' greater success at coordinating the regular and partisan forces in a revolutionary way to defeat the armed might of the enemy.

Mark V. Kwasny

GUICHEN, LUC URBAIN DE BOUËXIC, COMTE DE. (1712–1790).

French admiral. Born at Fougères, he entered the naval service as *garde-marine* in 1730, was promoted to ship's ensign in 1735, served in the Atlantic and English Channel during the War of the Austrian Succession (1740–1748), and became ship's lieutenant in 1746 and ship's captain in 1756. He was made a chevalier in the Order of Saint Louis in 1748; in that year he successfully fought off British attackers against his Antilles convoy. Rear admiral in November 1776, he served in the naval division under Orvilliers at the beginning of the war. He distinguished himself in the battle off Ushant on 27 July 1779 and was promoted to lieutenant general. In March 1780 he led a strong squadron to the West Indies to relieve Estaing. He met Grasse in the waters around Martinique and fought three battles with Rodney on 17 April and 15 and 19 May. Although Guichen had no victories, he showed skill in handling his fleet and successfully checked the British. After escorting a convoy back to Cádiz, he placed himself under Estaing's orders and set into Brest in September 1780. Guichen was selected the next year to convoy supplies and reinforcements back to the West Indies. British Admiral Kempenfelt, sent to intercept this convoy, struck the transports in the Bay of Biscay in December with many French losses. In February 1782 he left again with a Spanish squadron to escort to Cádiz some reinforcements for the Antilles and Indies and then failed to intercept Admiral Richard Lord Howe's effort to resupply Gibraltar. After the Peace Treaty of 1783, Guichen ceased to sail.

Though Guichen did not directly act in North America, his movements provided a source of hope that the French squadron at Newport might be sufficiently reinforced to venture out of port. Washington and Lafayette appealed to him in 1780 for a joint operation in the south, but to no avail.

GUIDES AND PIONEERS. A corps of guides and pioneers was normally to be found in all armies of the eighteenth century, and it usually was recruited from local citizens who knew the country in which the army was operating. Sir William Howe authorized the Guides and Pioneers in December 1776 to support the outpost line around New York City. Men from other colonies also joined the Guides. According to Sir Henry Clinton, "I was reduced to the necessity of reforming some of these nominal [Provincial] battalions [in the summer of 1778] and placing their officers either upon half pay or in a corps of guides and pioneers, which I had instituted principally with a view of affording a maintenance to the most needy." Other men who functioned as intelligence gatherers and spies were given commissions in the Guides to protect them with a cloak of legality in case they were captured in enemy territory. Still others performed the engineering tasks usually associated with the term "pioneers" at this period. Detachments were sent on Tryon's raid on Danbury in late April 1777, on Howe's campaign to Philadelphia later that year, on Clinton's expedition to Charleston in May 1780, and on the three raids into Virginia in 1780–1781 (including thirty men with Benedict Arnold in December 1780). In the New York lines, they operated frequently with Colonel Beverley

Robinson's Loyal Americans. The unit was evacuated to New Brunswick on 12 September 1783 and disbanded there on 10 October.

GUILFORD, SECOND EARL OF. (1732–1792). The title of Frederick North (Lord North) after he succeeded to his father's earldom in 1790.

SEE ALSO *North, Sir Frederick*.

GUILFORD COURTHOUSE, NORTH CAROLINA. The southern campaigns of Major General Nathanael Greene began when he divided his Continental southern army in the face of a larger British army, an unorthodox splitting of the less numerous American force in the face of the larger British army under the command of General Charles Earl Cornwallis. Driven by the logistical necessity of obtaining food and forage, the two double American advances into South Carolina clearly indicated that the British did not totally control the state by the end of 1780. Brigadier General Daniel Morgan's victory at Cowpens (in January 1781) precipitated a British pursuit as Cornwallis tried to recover over 600 prisoners and brought on the "race to the Dan River."

When Greene's army escaped across the river, Cornwallis moved to Hillsborough, North Carolina, to raise troops and refit his men. Greene immediately sent cavalry and light infantry back across the river to harass the British, disrupt recruiting, and prevent foraging. The pressure, and a lack of supplies or recruits, forced Cornwallis to evacuate Hillsborough and move westward. After maneuvering in a circular fashion just east of Cornwallis's base, and avoiding any major engagement,

THE GALE GROUP.

Greene moved from his camp at High Rock Ford to the Guilford Courthouse. Apprised of the movement, Cornwallis began a 12 mile march to the battlefield early on morning of 15 March 1781.

Greene was ready to fight, because he had been receiving reinforcements since 1 March that raised his strength to approximately 4,300. These men could be supplied for less than ten days without overextending his logistical

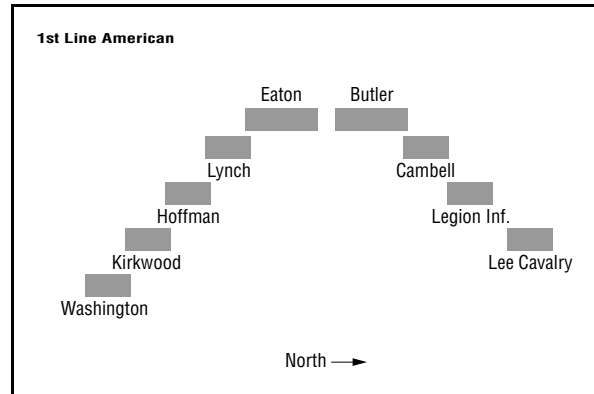

network. Cornwallis knew of the reinforcements, but overestimated their numbers, rating the American force at about 10,000 men against his 1,900 veterans. Half of Greene's troops had not yet seen any heavy action, but they had been drilling intensely for at least a week, ensuring that the militia had a fair grasp of tactical maneuvering and understood linear fighting with volley firing. From about 10 March, Greene's men also received more than adequate supplies of meat and bread, brought in by North Carolina militia and Continental foragers.

AMERICAN DISPOSITIONS

Greene had carefully studied the area in early February, when he considered fighting Cornwallis before retreating into Virginia. The courthouse stood in an extensive clearing on higher ground along the New Garden Road. To the west, the ground dropped off after less than 150 yards into a creek bottom with overgrown fields. Less than a mile west of the courthouse, the New Garden Road emerged from the woods and went downhill, crossing a cleared area that may have recently been plowed. The road continued across a small, marshy stream and left the valley heading west through a defile.

Greene posted three lines across the New Garden Road. The first line was manned by two North Carolina militia brigades numbering about 500 men each. Brigadier General John Butler was south of the road, while Brigadier General Thomas Eaton was on the north side. These militiamen were Greene's least reliable troops. Many were posted behind a fence with a clear, 500-yard field of fire. Between the two brigades, Captain Anthony Singleton placed two six-pounder guns. The outer flanks were strengthened by Continental infantry and riflemen echeloned forward to fire across the militia's front. Cavalry units were posted with these flankers. Lieutenant Colonel William Washington's Third Continental Light Dragoons were on the northern flank, supporting Delaware Captain Robert Kirkwood's 60 veteran Continentals, Virginia Captain Philip Hoffman's approximately 60 Continentals, and Colonel Charles Lynch's 200 Virginia riflemen. After they completed their morning's delaying action, Lee's Legion of 75 horse and 82 infantry, and Colonel William Campbell's 200 Virginia riflemen, took positions on the southern flank.

The second line had two Virginia militia brigades about 300 yards behind the first. Brigadier Generals Edward Stevens and Robert Lawson had approximately 600 men, with four regiments in each brigade. Stevens was south of the road in a very dense forest, whereas Lawson held the north side in slightly thinner woods. Until the flanking parties from the first line withdrew, the Virginia brigades' flanks were unprotected.

THE GALE GROUP.

The third line was on high ground, more than 500 yards behind the Virginia militia and posted north of the road. Lieutenant Samuel Finley's two six-pound cannons were posted between the Maryland and Virginia troops of Colonel Otho Holland Williams and Brigadier General Isaac Huger. On the southern end of this line, the Second Maryland Regiment was partially bent back to face open fields south of the courthouse. After pulling back from the second line, Singleton's two six-pound cannons would be placed adjacent to the road in the middle of the Second Maryland. As the line went north, away from the New Garden Road, the next regiment was the First Maryland, then Finley's artillery pieces, and Colonel John Green's Virginia Continental Regiment. The northern end of the third line was manned by Lieutenant Colonel Samuel Hawe's Virginians. Neither Virginia regiment was numbered at this time but Green's would be designated the First Virginia and Hawe's the Second Virginia by mid-April 1781.

The three battle lines bore a superficial resemblance to the deployment of American troops at the Cowpens, in South Carolina, on 17 January 1781. Daniel Morgan, who was present at the Cowpens action, did write to Greene suggesting this formation. There were significant differences, however, because Greene left himself no reserve and the three lines were beyond effective supporting distance. No line could see the other, but this might have proved advantageous for the relatively inexperienced militia. The American positions were dictated by the terrain, and the landscape would impact the battle in dramatic ways. On the east end of the battleground, the ridge above open fields was a logical place for the main line, because it provided open fields of fire for both muskets and artillery. A tree line on the western edge of the battleground also fronted open fields, making the position suitable for longer range firing by riflemen and artillery. In the dense woods between the first and third lines, there was a low ridge that provided a point for the middle line to

THE GALE GROUP.

form. While Greene did not have a reserve, he may have envisioned using withdrawing militia if they could be rallied behind the Continentals on the third line.

CORNWALLIS ADVANCES

Cornwallis broke camp about dawn and began moving eastward without breakfast. The 12-mile march from New Garden Meeting House toward Guilford would take some time because of American resistance along the route. About 7:15 A.M., Lieutenant Colonel Banastre Tarleton's advance guard clashed with Lieutenant Colonel Henry ("Light Horse Harry") Lee's Partisan Legion, Captain Andrew Wallace's Virginia Continental company, and Colonel William Campbell's Virginia riflemen four miles west of Guilford Courthouse. Both sides claimed the better of this engagement, but Tarleton received a wound that cost him two fingers and Wallace was killed. At about noon the British emerged from the woods onto the battlefield's western end and started deploying. They knew a fight was imminent because Captain Singleton's six-pounders opened fire. Lieutenant John Macleod of the Royal Artillery replied with two three-pounders (he would employ these cannons admirably during the engagement), and Cornwallis made immediate preparations to attack. The British were outgunned in this exchange by the bigger American guns, and MacLeod's assistant, Lieutenant Augustus O'Hara, son of the Guards' General Charles O'Hara, was killed.

The British commander learned nothing of the terrain; his guides "were extremely inaccurate in their description," and prisoners taken that morning "could give me no account of the enemy's order or position." Cornwallis was told that the woods on both sides of the clearing were impracticable for cannon, but apparently was not told that there were other roads heading generally eastward north and south of the battlefield. As a result, the New Garden (or Salisbury) Road became the battle's central axis.

The British deployed with Brigadier General Alexander Leslie south of the road with the Seventy-first Foot (Fraser's Highlanders) and the Hessian Regiment von Bose. North of the road, Cornwallis placed Brigadier General James Webster's brigade, composed of the Twenty-third Foot and the Thirty-third Foot. The rest of his forces were in reserve. The First Battalion of the

Guards was behind Leslie. The Second Battalion of Guards and Grenadiers, all under Brigadier General Charles O'Hara, were behind Webster's brigade. A small body of Jägers (marksmen), the Guards Light Infantry, and Tarleton's 155-man British Legion Dragoons were also in reserve.

THE BATTLE

The battle at Guilford Courthouse can be broken down into a series of phases as the British moved forward and engaged each line. In some ways, each regiment almost literally fought its own separate battle, because terrain and ground cover so obstructed passage of the linear formations and because there was no long range view between the first and third American lines.

Phase I: The North Carolina militia fires and retreats

Approximately 20 minutes after the artillery opened fire, Webster and Leslie started toward the first American line, which stood almost 500 yards away. American flanking riflemen opened fire when the British came within 150 yards, and it is possible some North Carolina militiamen did likewise. The British advance came to a spontaneous halt about 40 yards from the fence. The North Carolinians were crouched down, resting their muskets on the fence, taking a good aim. The British infantry hesitated, knowing a volley of buckshot and ball inside 40 yards would be devastating. Webster rode to the front and ordered them forward as he led the way. The halt was broken and the Twenty-third Regiment rushed on the militiamen, taking a volley as they did so.

The North Carolina militiamen immediately broke and headed for the rear. The rout was so complete that an outraged Greene later asked the North Carolina legislature to call the men back into service for a year as punishment for running away. Lee also thought the rout was mortifying, but he did point out that Forbis's Guilford County company stayed with his legion and fought on.

Lee, on the southern flank, was unaware that some of Eaton's northern flank militiamen also continued the fight by joining William Washington's forces. The additional men were important, because the British could not move against the second American line until they dealt with the American flankers. Since the American flanks held their ground even after the militia fled, Cornwallis was forced to commit all his infantry reserves to extend the battle line before advancing. The troops in von Bose's regiment adjusted their direction, inclining to the southeast against Lee and Campbell, while the Thirty-third Regiment executed a corresponding maneuver against the north flank. When the Light Infantry and Jägers moved with Webster, the Grenadiers and the two Guards battalions advanced to maintain the original line and fill gaps.

Cannon on the Third Line. *An American cannon stands on the third line at the battlefield of Guilford Courthouse National Military Park in North Carolina. © DAVID MUENCH/CORBIS.*

O'Hara's Brigade moved into the battle line with the Grenadiers north of the road, the Second Guards on and south of the road. The First Guards inclined to their right, taking position between von Bose and the Seventy-first. Schematically, the line, from north to south consisted of the Light Infantry and Jäegers, the Thirty-third and Twenty-third Regiments, the Grenadiers, the Second Battalion of the Guards, the Seventy-first, the First Battalion of the Guards and von Bose. Webster personally led the attack, initially with the Twenty-third, but he soon moved to direct the Light Infantry and Thirty-third. O'Hara appears to have stayed with the Second Battalion of the Guards. Leslie is difficult to place but seems to have overseen the Seventy-first. Due to the thickness of the woods, the artillery and dragoons stayed on the road.

Phase II: The Virginia militia are hammered back. Driving through woods so thick that Cornwallis reported

bayonets were almost useless, the British assaulted the second line. The two right flank regiments drove a wedge between the Virginia militia and Lee's flanking troops. The First Battalion of the Guards and von Bose then continued in a southeasterly direction, moving away from the main battle and creating their own separate battle against Lee and Campbell. Washington's flank forces still held the northern flank, extending the Virginia militia line northwards. On at least one occasion, they drove the British back.

The second American line was no pushover. The militia brigades of Stevens and Lawson fought well. Lawson's brigade fared badly because its three regiments were ordered forward, perhaps in response to the Thirty-third moving against Washington. The brigade was split as the advancing Virginians were simply rolled up from their left by the Twenty-third. In the thick woods, the Virginians were slowly driven back, in part because they

THE GALE GROUP.

THE GALE GROUP.

were opposed by Light Infantry and Jägers. The Twenty-third possibly used a faster loading procedure for developed woods fighting, according to the Twenty-third Regiment's Sergeant Lamb (who also reported seeing Virginians behind brush breastworks). Washington counterattacked to relieve the pressure, but Lawson's brigade was no longer on line. Men from Stevens's three regiments fought individual and squad-sized engagements against the Welsh Fusileers, who pursued them eastward through the woods. Now isolated, the flank elements were eventually driven to the rear, while Lawson's one remaining regiment continued fighting on Stevens's right flank.

Stevens's Virginia militia ran away at Camden, and he had no intention of seeing that happen again. He placed men, probably sergeants, behind his battle line. These men were given orders to shoot any man who tried to run. Stevens and his men held their position until he was shot in the thigh. He was evacuated as part of a general withdrawal because the British were already beyond his position on both the north and south. The two regiments on the British far right continued their struggle with Lee and Campbell, but all American forces were pushed eastward. Washington's flankers retired to the third line, conducting a fighting withdrawal.

Phase III: Webster attacks the Continental line. Lieutenant Colonel James Webster advanced more rapidly with the Thirty-third, driving the American flankers and militia back to the main line. Thinner woods, good leadership, and a solid infantry regiment meant that Webster's men reached the American third line first. They came out of the woods, went down a steep slope, and found Greene's best soldiers waiting for them across the little valley. Aligned from north to south were Captain Robert Kirkwood's Delawares, arguably one of the best company formations the Continentals produced during the war. To their south was Huger's Virginia Brigade, then Finley's two guns and the First Maryland. The Americans watched from good defensive terrain as the aggressive Webster

came down the opposite slope, formed to their front, and charged. At close range, the Continentals delivered a murderous fire of musketry and artillery, then followed up with a bayonet attack. The First Maryland inclined to the right and struck Webster's right flank elements. Although severely wounded, and with his command badly hurt and disorganized, Webster withdrew northwestward onto steep, high ground and then repulsed his pursuers. Webster's command was stunned and temporarily out of action.

Phase IV: Cornwallis masses against the third line. As the Virginians filtered back through the dense woods, the British right also came on. O'Hara moved forward with the Second Battalion of the Guards. The Grenadiers lagged slightly behind, hampered by the thick woods. The Twenty-third was disorganized and was also slowed by the dense woods and sporadic militia resistance. The Seventy-first, further south, continued forward but also trailed well behind O'Hara's Guards. Lieutenant Macleod continued moving his three-pounders up the road, partially supported by the Grenadiers, and backed up by the dragoons.

Before they reached the slope leading down to the valley, the Guards had drifted across the road because the terrain sloped in a southerly direction. The Second Guards Battalion commenced their attack without waiting for any assistance. As soon as the Guards came down into the cleared valley west of the courthouse, they attacked. Maryland Colonel Otho Holland Williams, behind the First Maryland, saw the charging Guards and rode out to help direct the Second Maryland, a unit with only six months' service behind it. Without combat experience and with their original officers being replaced by veteran supernumerary Maryland officers, the Second Maryland was about to face elite British infantry. Williams ordered its left flank to wheel right and face the oncoming Guards, then he ordered the entire regiment to charge. After a few steps, the unit was halted. Under fire, the regiment broke as Lieutenant Colonel James Stuart led his Guards into their ranks.

The Guards swarmed through the gap, taking Singleton's two guns, and pushed forward until they were hit by two vicious counterattacks. Washington's dragoons had moved from the right flank along a road and were the first to crash into the Guardsmen. They rode through, wheeled, and came back again, hacking away as they went. At almost the same time, the First Maryland, which Fortescue called "the finest battalion in the American Army" trotted uphill, opened fire, and then charged into the Guards. The Marylanders were led by Lieutenant Colonel John Eager Howard who assumed command when Colonel John Gunby's horse went down, pinning him under it. Militiamen at the courthouse reported that the two regiments were so close their muzzle flashes overlapped as volleys were fired.

Struck in front, flank and rear, the Guards drifted westward, fighting hand to hand in a melee back across the little valley. Stuart was killed in a celebrated "duel" with Maryland Captain John Smith, but his men fought valiantly to avoid annihilation. Some idea of the ferocity of the bayonet fight can be seen in an account provided by Smith's post-war partner, Samuel Mathis:

In the heat & mist of the Battle at Guilford while the Americans & British Troops were intermixed with a charge of Bayonets, Smith & his men were in the throng killing guards & Grenadiers. . . Colonel Stewart [sic] seeing the mischief Smith was doing made up to him through the crowd, dust and smoke unperceived & made a violent lunge at him with his small Sword, the first that Smith saw was the shining Metal . . . he only had time to lean a little to the right, & lift up his left Arm so as to let the polished steel pass under it when the hilt struck his breast, it would have been through his Body but for the haste of the Col & happening to set his foot on the arm of a Man Smith had just cut down. His unsteady Step, the violent lunge & missing his aim brought him with one knee upon the dead man, the Guards came rushing up very throng [sic], Smith had no alternative but to wheel round to the right & give Stewart a back handed Blow over or across the head on which he fell; his orderly sergeant attacked Smith, but Smith's Sergeant dispatched him; a 2d attacked him Smith hewed him down, a 3rd behind him threw down a cartridge & shot him in the back of the head, Smith now fell among the slain but was taken up by his men & brot [sic] off, it was found to be only a Buck Shot lodged against the Skull & had only stunned him.

As the infantry slugged it out, Washington's dragoons began riding across the valley toward a British officer and his aides. By this time, MacLeod had arrived and placed his two guns on a little knoll above the valley's western edge. Cornwallis ordered MacLeod's guns to fire on

Washington's dragoons, but made no mention of the infantry melee behind them, where the Guards and Marylanders were still fighting. Despite the wounded O'Hara's protests, Cornwallis persisted in his decision. Even if Macleod directed his fire so as to spare the British infantry as much as possible, the normal dispersal of grape shot made it inevitable that casualties were inflicted on both sides. Rumors later circulated that Cornwallis had ordered the artillery on his own men to break up the melee between the Marylanders and the Guards, but the fire was meant to halt Washington's dragoons. After the artillery fire, the Guards retired to the western slope, and the Marylanders moved back toward the courthouse.

Final phase: Cornwallis renews attack, Greene retreats.

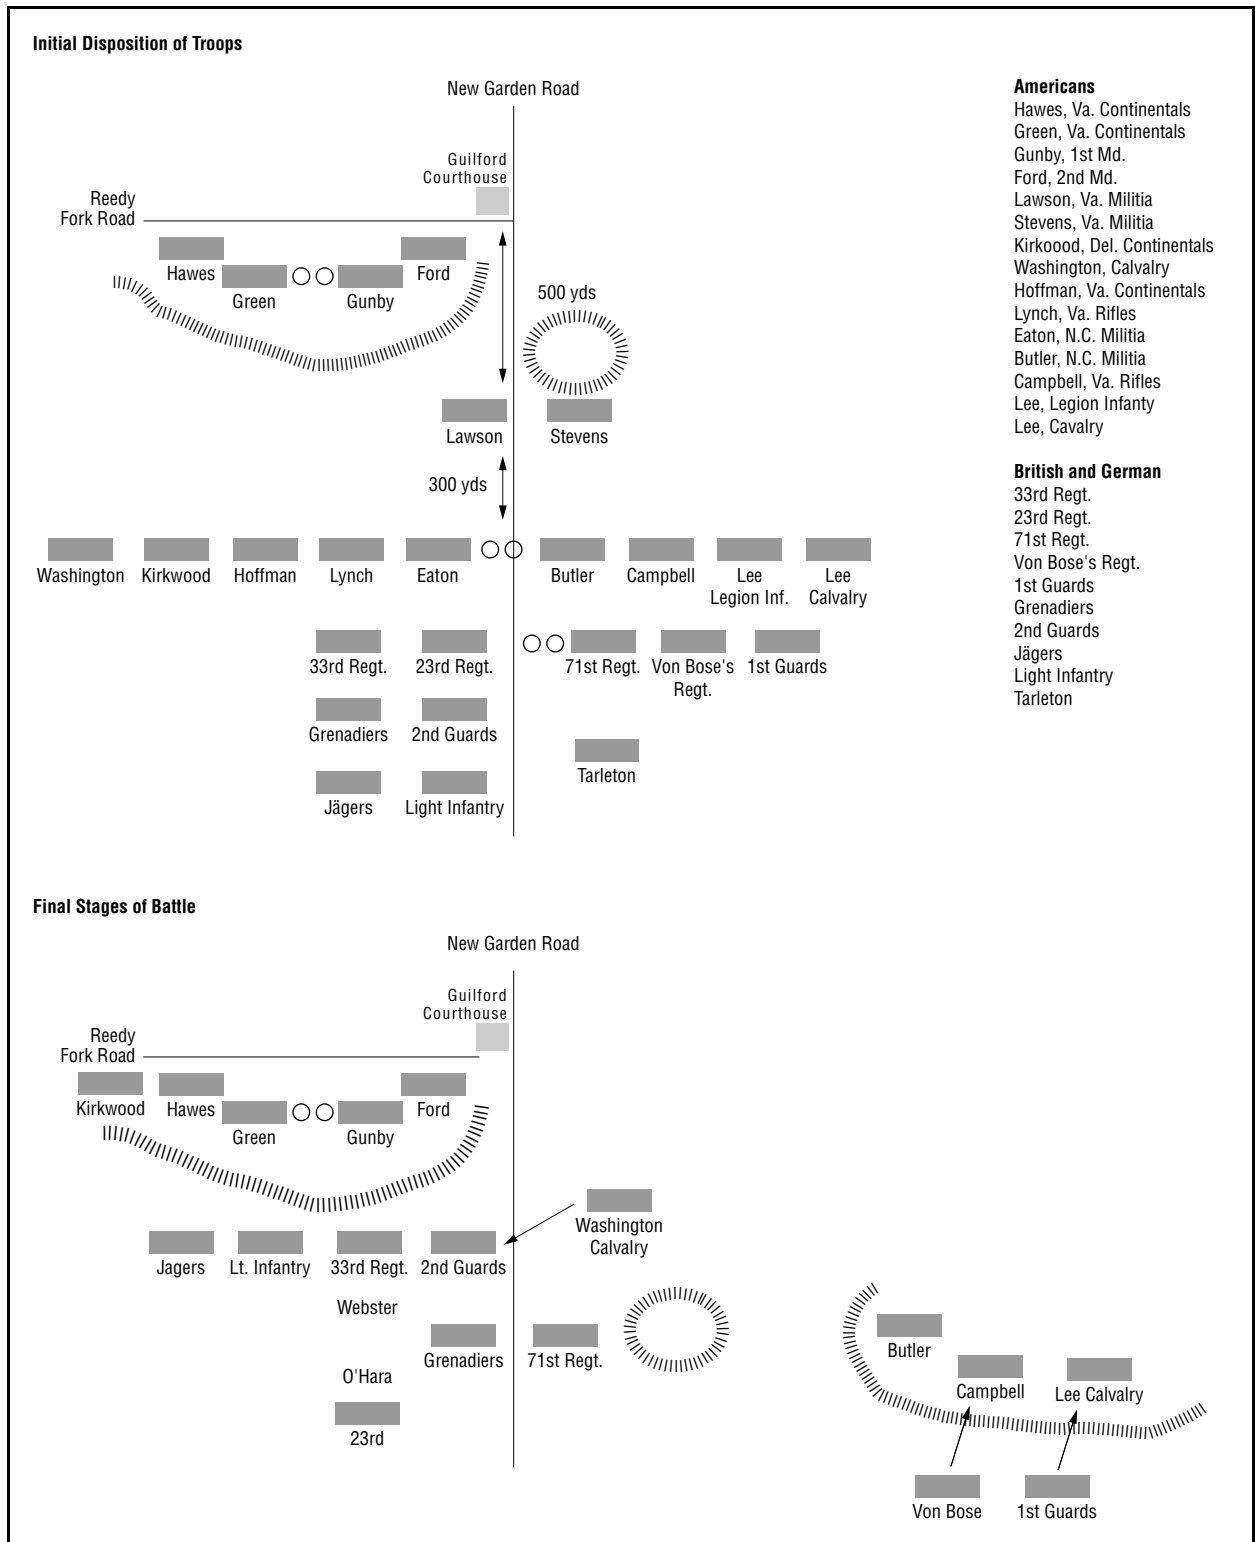

After Washington was driven back, the Second Guards retired to the west slope and reformed. The Grenadiers, who had come up with McLeod, joined the Guards as the Seventy-first Regiment came into the valley south of the guards. O'Hara, despite his wounds, rallied the Guards and went back across the valley. About this time, the Twenty-third Regiment finally reached the third line vicinity as well, and there it linked with the Thirty-third. The British infantry finally took possession of the third line positions.

Since Greene's men were already withdrawing, the British had no trouble retaking Singleton's guns, and Finley's as well. The four American guns were left on the field because their horses had been killed and Greene did not want to risk men dragging them away by hand. Contrary to later mythology, none of the American guns (six-pounders) had been captured at Cowpens, whereas the British had lost two three-pounders.

Tarleton's dragoons were finally in open ground. About half of them, along with the Seventy-first and Twenty-third, followed after the Americans in a very careful pursuit. The other half rode south, down into the valley, and fell upon the Virginia militiamen who were still conducting a fighting withdrawal.

Both Tarleton and Lee reported that the First Battalion of Guards and von Bose had difficulties with the Americans who swarmed through the woods. Men from von Bose reported their regiment had to fight to their front and rear at one time, and that at another time, the Guards rallied behind them. The Americans were at their best in the thick woods, using trees and brush for cover and concealment, letting the British and Germans advance beyond them and then hitting their rear. It was not an easy fight; one American later reported that they thought the Hessians were Continentals and rushed up shouting, "Liberty! Liberty!," only to be fired upon by the exasperated Germans. After Lee moved his Legion toward the rear, the Virginia flankers got the worst of it because they were on open ground.

Guilford Courthouse, North Carolina

THE GALE GROUP.

Cavalry at the Battle of Guilford Courthouse. American cavalry officers skirmish at the 1781 Battle of Guilford Courthouse in this engraving based on a nineteenth-century painting by Alonzo Chappel. © BETTMANN/CORBIS.

By the time Tarleton arrived to charge the Americans on the southern flank, Lee's dragoons, and probably his infantry too, were covering the army's retreat, and Campbell's men were moving toward the courthouse. Tarleton's account suggests his men broke up an organized line, rather than that they were punishing a straggling rear guard. Those Virginians who did encounter Tarleton at this stage were badly hacked up, and Campbell never forgave Lee for abandoning him. This was the dragoons' only effort on the battlefield, because the heavily wooded landscape around Guilford Courthouse was not cavalry country, and Greene's orderly retreat ruled out any effective pursuit.

Greene made his decision to withdraw his army about the time the Second Maryland collapsed. As the army moved north, Greene halted three miles from the battlefield to collect stragglers and check a pursuit that was halfhearted at best. The British were simply worn out by their exertions that day. Greene withdrew to a former camp at Speedwell Iron Works on Troublesome Creek. Cornwallis remained on the field until 18 March, when he began moving toward Wilmington, North Carolina.

NUMBERS, LOSSES, AND LESSONS LEARNED

A few days before the battle, Greene's army numbered 4,449, of whom 1,670 were Continentals and the rest militia. Lee reported the Continentals lost 14 officers and 312 men killed, wounded, and missing. The figures for the militia were never adequately reported. Greene claimed the militia lost 22 killed, 73 wounded, and 885 missing, whereas the Continentals reportedly lost 57 killed, 111 wounded, and 161 missing. The American figures are almost guesswork for the militia, but Continental losses were miniscule when compared with the losses suffered by the British.

Cornwallis's forces numbered approximately 1,900 men. The British lost 532 officers and men, of whom 93 were killed and another 50 were mortally wounded and died within a few days. The Guards also suffered badly, 11 of their 19 officers and 206 out of 462 men were casualties. A total of 41 British officers and men were counted among the dead. These experienced men could not be replaced by local recruiting, even if the Tories had turned out to volunteer. Cornwallis's force was virtually crippled by their casualties.

The British infantry clearly demonstrated outstanding bravery. After short rations over the preceding month, and faced with constant marches, they fought at Guilford Courthouse after a twelve-mile, contested march on empty stomachs. The quality and courage of Cornwallis's troops was certainly borne out by their performance on this day,

In the context of his southern campaigns, and ever since he so perplexingly divided his army at Charlotte in December 1780, Greene had now mastered Charles Cornwallis as a general, in part because of his astute management of his logistics. In some ways, Cornwallis beat himself with his aggressiveness, and with his reliance on magnificent subordinate leaders and troops. In his eagerness to engage Greene, Cornwallis did not conduct an adequate reconnaissance. Once the battle began, he lost effective control of his battalions, leaving their direction to commanders who drifted away from the main axis and lost contact with supporting units. Greene had a similar cadre of outstanding assistants and a hard core of veteran infantrymen who had also fought well. The slighted North Carolina militia performed much better than the Continentals wished to admit. Their initial volley and some flank fighting had contributed to British casualties, perhaps even more than the Virginians, but they were scorned for running away. In September, however, after much more training and led by battle-hardened officers they knew, these same men would fight well at Eutaw Springs.

GUN. This word should be restricted to cannon, but in the eighteenth century, as in the twentieth, it also was used to mean a musket or rifle.

Mark M. Boatner

GUNBY, JOHN. (1745–1807). Continental officer. Maryland. Born 10 March 1745, Captain Gunby, the son of a Loyalist, organized an independent company on 14 January 1776, devoting himself primarily to attacking Loyalists. He was promoted to lieutenant colonel of the Seventh Maryland on 10 December and colonel on 17 April 1777. Serving in Smallwood's First Maryland Brigade at Camden, he took no part in the battle. On 1 January 1781 he took command of the First Maryland Continentals, acclaimed as one of the best units in the Continental army, and led them with distinction at Guilford, North Carolina, on 15 March 1781. At Hobkirk's Hill South Carolina, on 25 April 1781, he commanded the First Maryland, whose premature retreat is generally blamed for Greene's defeat. He served the rest of the war. On 30 September 1783 he was brevetted brigadier general, and on 15 December 1783 he left the army. He died on 17 May 1807 at his farm in Snow Hill, Maryland.

GUNDALOW. Sometimes spelled "gundalo" (properly, gondola), this was a boat pointed at both ends, usually flat bottomed, and normally rigged with two square sails on a single mast. Although very fast in a favoring wind, they were essentially rowboats. Gundalows figured prominently in the Champlain squadrons.

SEE ALSO *Champlain Squadrons*.

Mark M. Boatner

GUNPOWDER. Albert Manucy explains that

black powder was used in all firearms until smokeless and other type propellants were invented in the latter 1800's. "Black" powder (which was sometimes brown) is a mixture of about 75 parts saltpeter (potassium nitrate), 15 parts charcoal, and 10 parts sulfur by weight. It will explode because the mixture contains the necessary amount of oxygen for its own combustion. When it burns, it liberates smoky gases (mainly nitrogen and carbon dioxide) that occupy some 300 times as much space as the powder itself. . . . About 1450, powder makers began to "corn" the powder. That is, they formed it into larger grains, with a resulting increase in the velocity of the shot. It was "corned" in fine grains for small arms and coarse for cannon. Making corned powder was fairly simple. The three ingredients were pulverized and mixed, then compressed into cakes which were cut into "corns" or grains. . . . It has always been difficult to make powder twice alike and keep it in condition. . . . Black powder was, and is, both dangerous and unstable. Not only is it sensitive to flame or spark, but it absorbs moisture from the air. (Manucy, pp. 23–25)

Moreover, the components can settle out in storage, with the saltpeter, the heaviest ingredient, settling to the bottom of the cask. Powder casks had to be rolled periodically to ensure that the ingredients remained evenly distributed in the mixture.

GWINNETT, BUTTON. (1735–1777). Signer. Born at Down Hatherley in Gloucestershire, England, in 1735. He arrived in Savannah in 1765. After failing as a merchant and planter he experienced financial difficulties the rest of his life. He held several minor public offices, and in 1775 he led the radical faction of the local Patriots. As a member of the Georgia council of safety, he was sent on 20 January 1776 to the Continental Congress. He arrived in May, signed the Declaration of Independence, and returned to Georgia in August. While in Congress, he was proposed as a brigadier general, but the Continental brigade in question was given to Lachlan McIntosh, instead.

Gwinnett was elected speaker of the radically controlled Assembly in October 1776 and led the opposition to union with South Carolina and the committee that drafted Georgia's first state constitution, which effectively silenced the conservative faction. In March 1777, after the death of the governor, Archibald Bulloch, Gwinnett was appointed to serve out the term of office and to act as commander in chief of Georgia's military forces. In his short term as governor, he followed extreme radical views and thereby antagonized the conservative faction in the state, including Lachlan McIntosh. Gwinnett had arrested McIntosh's brother on suspicion of treason, and the two men had often clashed over the limits of military and civil authority and state control of Continental troops. Unable to cooperate during the Georgia expedition against British posts in Florida in the spring of 1777, they were both recalled to Savannah by the state assembly, which launched an investigation into their conduct. Although absolved of any blame, Gwinnett failed to win re-election to the governorship. On 19 May he died from wounds suffered in a duel with McIntosh. He is believed to have died insolvent, and there is no record of his grave. The dearth of materials associated with his name has made the few known items quite valuable to collectors. In 1979, his signature (of which only thirty-six are known to exist) brought \$100,000 at auction.

GWYNN ISLAND, VIRGINIA. Chesapeake Bay, 8–10 July 1776. Dunmore's last stand. After setting fire to Norfolk on 1 January, the British spent the next several months operating in the lower Chesapeake Bay, largely obstructing shipping and harassing Patriots living near the shore. On 27 May the royal governor established a base on Gwynn Island at the mouth of the Piankatank River, just south of the mouth of the Rappahannock. The island of twenty-three hundred acres was reasonably safe, lying about five hundred yards from the mainland, and provided a sheltered anchorage for his little provincial fleet. Supported by several small Royal Navy warships, a handful of regulars and some five hundred Tory troops—black and white—Dunmore hoped to maintain a foothold in his province and establish a base from which to raid the neighboring plantations. Local militia mobilized on the mainland and began watching from a distance, but Dunmore's forces sat immobilized by disease, including an outbreak of smallpox.

On 8 July, Brigadier General Andrew Lewis arrived with a brigade of Virginia troops to eliminate this last vestige of royal authority. At 8 A.M. of the 9th, Lewis opened fire at a range of five hundred yards from two batteries. One armed with two eighteen-pound guns put five shots into the governor's flagship, the *Dunmore*, wounding its namesake. A second battery of lighter guns then bombarded the enemy fleet, camp, and fortifications for an hour. Most of the governor's vessels slipped their cables and tried to escape; some ran aground and were burned by their crews. The guns that did fire back were quickly silenced. When no sign of surrender came from the island, the rebel guns resumed their cannonade at noon. The next morning after boats had been found, Lieutenant Colonel Alexander McClanahan crossed with two hundred men and found evidence of the smallpox outbreak that explained why there had been so little resistance. Graves dotted the island, and the dead and dying were scattered about in various directions. The rest had fled with Dunmore.

Gwynn Island, Virginia

British losses included three vessels captured and several more destroyed. It is not known how many personnel were killed or wounded in the attack, but the Americans made no claims, indicating that they could not have been heavy. The only Patriot casualty was Captain Dohickey Arundell, the artillery commander, who was killed “by the bursting of a mortar

of his own invention” (*Virginia Gazette* [Purdy], 19 July 1776).

H

HABERSHAM, JAMES. (c. 1712–1775). Merchant, planter, colonial official. Georgia. Born in Beverly, Yorkshire, England, James Habersham left a mercantile career in London and emigrated to Georgia in 1737. Arriving with his friend George Whitefield, the evangelist, Habersham opened a school for destitute children and later cooperated with Whitefield in establishing the Bethesda Orphanage (one of the first in America). He was in charge of that institution from 1741 to 1744. In 1744 he resigned and organized Harris and Habersham, the first and, for many years, most important commercial enterprise in Georgia. He then developed large farming interests, and in 1749 he took the lead in getting the colonial trustees to consent to the importation of slaves. This saved the economy of the colony, converting its agriculture from grapes and silkworms to the profitable cultivation of rice and cotton.

Now the leading merchant and trader, and one of the largest planters, Habersham became president of the colonial council in 1767. A close personal friend and political supporter of royal Governor James Wright, he helped the latter maintain British authority in the province during the Stamp Act crisis and was acting governor during Wright's absence in England from 1771 to 1773. His first-generation brand of loyalism helped delay Georgia's revolutionary movement. Overburdened with work and distressed by the now inevitable revolutionary trend in Georgia, he traveled north for a change of climate and died 28 Aug. 1775 in Brunswick, New Jersey.

Habersham had three surviving sons who were educated at Princeton. Two of them, John and Joseph, became prominent Patriot leaders, and the other was also a Patriot. Their mother was Mary Bolton, whom he wed on 26

December 1740 in a marriage ceremony performed by Whitefield.

HABERSHAM, JOHN. (1754–1799). Continental officer. Georgia. Third surviving son of James Habersham, John was educated at Princeton and in England before entering business. On 7 January 1776 he became a first lieutenant in the First Georgia Continental Regiment and was promoted to captain on 8 May 1776. He became brigadier major to General Robert Howe on 25 December 1777, major of the First Georgia Regiment on 1 April 1778, was captured at Savannah, 29 December 1778, and was again a prisoner after the surrender of Charleston in May 1780. Exchanged both times, he served to the end of the war under General Anthony Wayne in the liberation of Georgia and then patrolling the eastern Florida border. He served in the state assembly and the Continental Congress in 1785. During the ten years before his early

Habersham, Joseph

death in 1799 he was a planter and customs collector at Savannah.

HABERSHAM, JOSEPH. (1751–1815). Patriot leader, U.S. Postmaster General (1795–1801). Georgia. Second son of the prominent James Habersham, Joseph attended Princeton, and, in 1768, was sent to England. After three years with a mercantile firm he returned to Georgia and was set up in business by his father, first with his elder brother James and then, in 1773, with his kinsman, Joseph Clay.

Although his father was president of the Georgia colonial council and a close friend and supporter of Governor James Wright, Joseph emerged as a Patriot leader. He took Governor Wright and his council prisoner on 18 January 1776.

Habersham was made a major of the First Georgia Continental Regiment on 7 January 1776, he became lieutenant colonel on 5 July and colonel on 17 September 1776. He resigned his military commission in the Continental army on 31 March 1778, for he had alienated the radical faction, thus thwarting his military career. His plans to seek election to the state assembly ended with the British re-occupation of Georgia in late 1778. He moved his family first to the Carolinas and then to Virginia. He took part in the temporary rebel government in Augusta during July 1779 and the disastrous Franco-American attack on Savannah during that October.

After the war Habersham served twice as speaker of the Georgia General Assembly, and in 1788 was a member of the convention that ratified the Federal Constitution in Georgia. President George Washington appointed him Postmaster General in February 1795. He served in this post until President Thomas Jefferson's administration. Pressured to resign, he left this post in November 1801. Returning to Savannah, he resumed his commercial career, and is credited by some to have been the first to export American-grown cotton.

HADDRELL'S POINT. The rebels fortified this position, in what was later called Mt. Pleasant, prior to the unsuccessful British attack on Sullivan's Island in 1776. They established a three-gun battery there during Clinton's siege of Charleston (1780) to keep the Royal Navy out of the Hog Island Channel and the Cooper River. After Lincoln's surrender on 12 May, the British sent captured American officers to a camp at Haddrell's Point.

Carl P. Borick

HALDIMAND, SIR FREDERICK. (1718–1791). British general and colonial governor. Born in Yverdon, Switzerland, Haldimand first found employment in the Prussian army, serving at Mollwitz, Hohenfriedberg, and Kesseldorf during the War of the Austrian Succession. In 1748 he moved to the regiment of Swiss guards in the Dutch service. On 4 January 1756 he accepted a British offer to be lieutenant colonel of a battalion of the Royal American Regiment, which was to be raised from Dutch and German settlers in Pennsylvania. Arriving in America in 1757, he fought at Ticonderoga in 1758 and in 1759 repelled an attack by four thousand French and Indians on half-rebuilt Oswego. In 1760 he took part in the Montreal campaign, and he liaised with Vaudrieul over the terms of capitulation. He was military governor of the Trois Rivières district until September 1765, after which he was promoted to brigadier general and appointed to succeed Bouquet in command of the Southern Department.

In this role he provided a competent administration of the Floridas from 1769 to 1773. From June 1773 to July 1774 he was acting commander in chief in New York while Gage was in London. However, three less-experienced

The Execution of Nathan Hale. British soldiers march Nathan Hale to the gallows in this nineteenth-century lithograph after an image by J. Ropis. "NATHAN HALE (1755–76) ON THE WAY TO HIS EXECUTION," 1856 (LITHO), ROPIS, J (FL.1856) (AFTER) / BRITISH LIBRARY, LONDON, UK. BRIDGEMAN ART LIBRARY.

generals had been appointed to assist Gage at Boston, and Haldimand returned to Britain without employment or apparent prospects. Although given the valuable sinecure of inspector general of the West Indian forces, his next active commission was as governor of Canada in 1777. His most pressing task being security, he rightly spent vast sums on presents for the Indians and issued bills of exchange that the treasury was reluctant to honour. He left office in September 1784 and was knighted a year later. He spent most of his final years in London and continued to take an interest in Canadian affairs. He died in Yverdon in June 1791.

John Oliphant

HALE, NATHAN. (1755–1776). Spy, martyr. Continental officer. Connecticut. Born 6 June 1755 in Coventry, Connecticut, Hale graduated from Yale in 1773. He was widely admired for his intelligence and good looks. A teacher when news of Lexington arrived at New London, Hale delivered an impassioned call for rebellion to the town meeting and rushed north to Boston, being commissioned lieutenant in the

Seventh Connecticut militia on 6 July 1775 and captain on 1 September. On 1 January 1776 he became captain in the Nineteenth Continental Regiment. Moving with the army to New York City in early September, he led a group of seamen from his company in capturing a supply sloop from under the guns of the man-of-war *Asia*.

Lieutenant colonel Thomas Knowlton, impressed with this action, selected Hale to command a company of his rangers. When Washington asked for a captain to volunteer from Knowlton's Rangers for an intelligence mission within the enemy lines shortly before the Battle of Harlem Heights, Hale stepped forward after the first appeal had brought no volunteers. In the guise of a school teacher, he left the camp at Harlem Heights on 12 September, moved to Long Island by a roundabout route, gathered the desired information about enemy dispositions, and was captured the night of 21 September as he approached his own lines. At Howe's headquarters, then located at the Beekman mansion, he allegedly was betrayed by his Loyalist cousin, Samuel Hale, Howe's deputy commissioner of prisoners. Since incriminating papers were found on his person and he was not in uniform, there was no question about his being guilty of spying and, without the formality of a trial, Howe ordered him hanged. While awaiting execution on

Sunday, 22 September, he occupied the tent of Captain John Montresor, chief engineer of the British army in America, who treated him with cordiality. Here he wrote to his brother Enoch and to Knowlton, not knowing that the latter had been killed six days earlier. At the gallows he made a statement that closed with, "I only regret that I have but one life to lose for my country." The phrase undoubtedly was inspired by the lines of Joseph Addison (1672–1719): "What a pity is it? That we can die but once to save our country!" Hale became an instant hero to the American cause.

HALE, NATHAN. (?–1780). Continental officer. New Hampshire. A captain of New Hampshire minutemen when hostilities with the British began on 19 April 1775, he was a major in the Third New Hampshire on 23 April and remained with that unit when it was redesignated the Second Continental Infantry on 1 January 1776. On 8 November 1776 he was promoted to lieutenant colonel of the Second New Hampshire and was made colonel on 2 April 1777. His unit was in the rear of the retreat from Ticonderoga, guarding the invalids overnight on 6 July 1777. The next morning an advancing party of the enemy caught up with him at Hubbardton, Vermont, and Hale was unable to extricate his unit. Taken prisoner with about one hundred of his men, Hale died on 23 September 1780 while still a captive.

HALFWAY SWAMP–SINGLETON’S, SOUTH CAROLINA. 12–13 December 1780. When the newly promoted General Francis Marion learned that the easygoing British Major Robert McLeroth with his Sixty-fourth Regiment was escorting some two hundred recruits of the Seventh Regiment of Foot from Charleston toward Winnsboro, he assembled seven hundred mounted men and moved to intercept this force. Some twenty miles northwest of Nelson’s Ferry on the Santee River, just above Halfway Swamp, Marion

made contact. The British pickets were driven in and their rear guard was attacked while McLeroth took up a defensive position. His path now blocked, McLeroth sent a flag to protest the shooting of pickets and daring Marion to meet him in the open. Marion replied that so long as the British burned houses and continued their raids, he would continue to shoot pickets. As for the fair fight in the open, Marion countered with the suggestion that teams of twenty men should fight it out. This archaic challenge was accepted, a field was selected, and the contest was organized. Marion named Major John Vanderhorst team captain and carefully picked twenty men. The rebels decided to hold their fire until they were within fifty yards. One man was designated to notify Vanderhorst when the range was right, and Marion’s men, each one eyeing his target, moved forward. The deadly game was not played out, however: on orders from its officers, the British team marched off the field, and it became apparent that McLeroth had merely been stalling for time, as he expected reinforcements at any minute.

Captain James Coffin was moving with 140 mounted men to join McLeroth, but when he got word of Marion’s presence, he declined to come forward to attack. Around midnight McLeroth slipped away from his burning campfires and headed toward Singleton’s Mill. Learning of this maneuver, Major John James beat the British to Singleton’s, took position on the hill, delivered one volley at the approaching British, and then, to the amazement of the latter, fled. In fact, the rebels took flight when they discovered that the Singleton family was down with smallpox. Marion withdrew toward Nelson’s Ferry while Coffin joined McLeroth near Singleton’s, and on 16 December the British column reached Winnsboro.

HALL, LYMAN. (1724–1790). Signer. Connecticut. He graduated from Yale in 1747 and was ordained a minister in 1749 in Fairfield, Connecticut. He took up medicine and, abandoning the ministry, set up practice in Wallingford. About 1757 he moved to South Carolina, settling in Charleston as a physician. Hall was granted land in Georgia in 1760 and established a rice plantation near Midway and built a home in Sunbury, St. John's Parish. He returned to South Carolina in 1762 and moved back to Georgia in 1774, soon becoming a radical leader in the area. Leading the other parishes in rebellion, St. John's elected Hall in March 1775 as its delegate to the Continental Congress; the Provincial Congress and then the state legislature chose him as a delegate from 1776 to 1780, although he did not attend after February 1777. Hall and Button Gwinnett led the radical faction in Georgia, which eventually dominated state politics with the adoption of the state constitution in 1777. Calling themselves the Liberty Society, the radicals labeled anyone not in support of their party a Loyalist or Tory. After General Lachlan McIntosh, viewed by radicals with hostility, killed Gwinnett in a duel in May 1777, Hall used every means at his disposal, including coercion, to obtain signatures on a circular letter supporting McIntosh's removal from Georgia. When the British reoccupied Georgia in December 1778, he moved his family first to Charleston and later, it is thought, to Connecticut. He returned at the end of the war to practice medicine in Savannah. Elected governor in 1783, he displayed a broad grasp of the many issues facing the state. He then served in the assembly and as judge of the Inferior Court of Chatham County. In 1790 Hall moved to Burke County, Georgia, where he soon died.

Leslie Hall

HALL, PRINCE. (1735?–1807). Abolitionist. Born in Bridgetown, Barbados, perhaps in 1735, Hall—though the son of an English artisan and a free black woman—was a slave of William Hall. In 1752 he went to Boston, joining the Congregational Church and

gaining his official freedom in 1770, whereupon he opened a leather shop. In 1775 Hall and fourteen other African Americans organized a Masonic lodge in Boston, Hall serving as its "worshipful master" until his death. During the Revolution, Hall made leather drumheads for the Continental army, probably serving briefly as well, and he spoke out often in favor of the abolition of slavery. Hall and seven other African Americans petitioned the Massachusetts assembly in 1777 to end slavery in their state, pointing out the obvious hypocrisy of fighting for freedom while preserving slavery. The petition was sent on to Congress, which ignored it. During Shays's Rebellion in 1786, Hall's Masonic lodge volunteered to raise a militia company to aid the state in putting down the western Massachusetts uprising. Governor John Bowdoin, however, refused their offer. The following year Hall led a petition drive requesting the state to pay for black emigration to Africa, arguing that African Americans could never enjoy freedom in America. Again, Hall was ignored.

In 1788 Hall finally received a positive response to one of his petitions when he and his lodge, supported by Quakers and several clergymen, protested the abduction of free blacks by slave traders operating in Boston. With surprising speed, the state assembly banned the slave trade in Massachusetts in March 1788 and the state successfully negotiated the release of the kidnapped freemen from the French West Indian island of St. Bartholomew. Hall's petitions consistently threw the ideals of the Revolution back at the state's leadership, as when he pointed out in 1787 that, although they paid taxes, blacks did not have access to many public institutions, including the schools. In 1796 Hall opened a school for black children in his home to meet their educational need. Hall died in Boston on 4 December 1807.

HAMILTON, ALEXANDER. (1757–1804). Continental officer, statesman. British West Indies and New York. The son of a Scottish merchant, James Hamilton, and Rachel Faucett Laven, Alexander Hamilton was born on Nevis, in the British West Indies, perhaps on 11 January 1757. Hamilton's mother died when he was three and his father deserted him when he was eight, leaving him an apprentice in a merchant house.

Alexander Hamilton. *America's first secretary of the treasury, in an 1806 portrait by John Trumbull.* SMITHSONIAN INSTITUTION.

A Presbyterian clergyman mentored Hamilton and arranged financing for him to attend college in New York.

Hamilton entered King's College (now Columbia) in 1773. He entered rapidly into the world of patriot politics, attending the mass meeting presided over by Alexander McDougall, wherein it was decided to send New York delegates to the first Continental Congress. At the precocious age of seventeen, Hamilton also began speaking to patriot rallies and writing a series of pamphlets highly critical of British policies.

With the commencement of military conflict, Hamilton threw himself into the study of military methods and theory. In 1775 he formed a volunteer artillery company and was commissioned captain of the Provincial Company of New York Artillery on 14 March 1776. The skill with which he commanded his ninety-three gunners won praise from General Nathanael Greene, who is said to have introduced Hamilton to General George Washington. Declining an opportunity to join the staff of General William Alexander (Lord Stirling), he commanded his guns in the battles of Long Island, helped fortify Harlem Heights, and employed two artillery pieces effectively at White Plains. He led his company throughout the New Jersey campaign and saw action at Trenton and Princeton.

On 1 March 1777 he became secretary and aide-de-camp to Washington, who had been impressed by his reputation as a writer and organizer, and desperately needed aides with these qualifications to assist him with military business that went far beyond the command of his little field army. Washington promoted Hamilton to lieutenant colonel. Although Hamilton wrote often of his desire for military glory, he served as Washington's military secretary and close confidant for more than four years.

On 14 December 1780 Hamilton married Elizabeth Schuyler, daughter of General Philip Schuyler, thereby connecting himself with one of the wealthiest and most powerful families in New York. Lest his intentions in this matter be considered mercenary, he appears to have found great happiness in the match. They had eight children. The expansion of the light infantry corps finally gave Hamilton the opportunity he had long sought for—a field command. On 31 July 1781 he was given a battalion in Moses Hazen's Brigade of the Marquis de Lafayette's Division. When an attack on the two redoubts at Yorktown, Pennsylvania, was planned, Hamilton claimed the right to lead one of the columns and acquitted himself with great credit. He was breveted as a colonel on 30 September 1783 and left the service 23 December 1783.

After a year in Congress (1782–1783) he practiced law in New York. In the Annapolis convention of 1786 he drafted the report that led to the Constitutional Convention in 1787, where he became the advocate of a strong central government. Working hard for ratification of the Constitution, he wrote more than half of the Federalist papers and overcame strong opposition in the New York convention to win a close vote of support for the new Constitution. As the new nation's first secretary of the treasury, from 1789 to 1795, Hamilton was the key member of Washington's cabinet, since finances were the most critical problem facing the country. In establishing the "Hamiltonian system" he became leader of the Federalists, and the bitter opponent of the Democrat-Republicans led by Thomas Jefferson.

Hamilton resigned as treasury secretary on 31 January 1795, mainly because he found his salary of \$3,500 a year too small. He resumed his law practice, becoming a key figure in the creation of American contract law. He continued to advise Washington, and helped write the famous "Farewell Address." Hamilton attempted to manipulate the election of 1796 to secure a victory for the Federalist vice presidential candidate, Thomas Pinckney. Instead, he not only alienated John Adams, but also accidentally helped to elect Jefferson to the vice presidency. Despite this failure, Hamilton persisted in trying to undermine Adams's presidency, working to control government operations through the secretaries of the State and Treasury Departments.

When the war with France threatened to break out in 1798, Adams, at Washington's insistence, overlooked his personal feelings for Hamilton and commissioned him major general on 25 July with the post of inspector general. Hamilton served until 15 June 1800, apparently disappointed that Adams chose the path of negotiation over war. At that point Hamilton again attempted a callous and foolish political maneuver to replace Adams with the current Federalist vice presidential nominee, Charles Cotesworth Pinckney. He again erred badly, insuring the election of his bitter enemy, Thomas Jefferson.

In 1804 Vice President Burr, who had fallen out of favor with Jefferson, ran for governor of New York. Hamilton actively worked to defeat Burr, who lost a close election. Burr blamed Hamilton for his defeat and challenged him to a duel. On the morning of 11 July 1804, Hamilton was mortally wounded, and the next afternoon he died after excruciating suffering.

Although he sought military glory and performed a valuable administrative function as Washington's secretary, Hamilton's greatest service to the United States came in his support of the Constitution and his work as Treasury Secretary. In the latter role, he deserves praise for promoting government support for the nation's economic development.

HAMILTON, HENRY. (1734?–1796). (The “Hair Buyer”), British officer. Born in Dublin, perhaps in 1734, Henry Hamilton served under Jeffery Amherst at Louisburg, under James Wolfe at Quebec, in the West Indies as a lieutenant colonel, and was lieutenant governor of Canada and commandant at Detroit from 1775 to 1779. With only a few regulars of the Eighth Regiment under his command, Hamilton exploited Indian hostility toward the encroaching American settlers, cultivating notorious followers such as Simon Girty, Matthew Elliott, and Alexander McKee. Under Hamilton, Detroit became Britain's headquarters and supply base for the Old Northwest. In June 1777 Hamilton received instructions from George Sackville Germain (through Governor Guy Carleton) to send Indian raiders under white leaders to

attack frontier settlements. Although an attack was made on Wheeling on 1 September 1777, General John Burgoyne's offensive drew off most of his Indian warriors. Hamilton was not able to organize these forays until early 1778, when Daniel Boone was a prize catch. General George Rogers Clark's western operations then disrupted Hamilton's plans, and after leading a remarkable march to retake Vincennes, Hamilton was captured 25 February 1779, when Clark surprised him by an even more audacious move. After being kept under close guard for several months in Williamsburg, Virginia, he was subsequently paroled and sent to New York in 1781.

Hamilton received his nickname of “Hair Buyer” because of his supposed practice of paying Indians for the scalps of whites. There is little valid evidence to support these rumors, which Hamilton always denied. After the war Hamilton served as lieutenant governor of Quebec, from 1782 to 1785, and as governor of Bermuda from 1785 to 1794. He became governor of Dominica in 1794, and held that post until his death in 1796.

HAMILTON, JOHN. (c. 1740–1816). Loyalist officer. Born around 1740 in Scotland, Hamilton established a trading company in Virginia with his brother and uncle in 1756. They soon spread their operations into North Carolina, becoming the most successful company in that colony by the start of the Revolution. The Hamiltons made clear their loyalty to the crown in 1775, earning the enmity of many neighbors. When they refused to take an oath of allegiance to the Revolutionary government in 1777, they were ordered to leave the state. Enlisting in the British army in New York City, Hamilton traveled to Savannah in 1778 to recruit Loyalist troops in the South, succeeding in enlisting more than seven hundred men into the Royal North Carolina Regiment, which he commanded as lieutenant colonel. After participating in the British campaigns in Georgia and the Carolinas, Hamilton's

regiment joined General Charles Cornwallis on his march into Virginia in 1781. Hamilton was wounded three times before the British surrendered at Yorktown, earning high praise from Cornwallis and other British officers. At the close of the war the Royal North Carolina Regiment was sent to Nova Scotia, where it was disbanded. The following year, 1784, Hamilton went to London to attempt to reclaim some of the two hundred thousand pounds he claimed to have lost because of the Revolution. He stayed in England until 1790, succeeding in recovering fourteen thousand pounds for his family as well as a small pension and land in the Bahamas. Having been named British consul at Norfolk, Virginia, in 1789 (though he took up his position the following year), Hamilton returned to America and stayed in Norfolk until 1812. With the start of the War of 1812, he returned to London, where he died on 12 December 1816.

HAMMOND'S STORE RAID OF WILLIAM WASHINGTON. 27–31 December 1780. On 27 December, General Daniel Morgan, camped near Grindall's Shoals on the Pacolet River, detached Colonel William Washington with his 80 dragoons and 200 mounted militia, commanded by Lieutenant Colonel James McCall, to attack a party of 250 Loyalists led by Thomas Waters. The Loyalists were ravaging the country along Fairfort Creek (or Fair Forest Creek, between the Pacolet and Enoree). Riding forty miles on the second day, Washington's men found the Loyalists near Hammond's Store (near modern Clinton, South Carolina) and, without a loss to themselves, brutally killed or wounded 150 and captured 40. On the next day, 29 December, Colonel Joseph Hayes rode west with forty dragoons toward Williamson's Plantation, where the Loyalists held a stockaded log house called Fort Williams. The Loyalists abandoned the post to the Patriots and fled to Ninety Six, fifteen miles south southwest of Fort Williams. This action convinced Cornwallis that no reliance could be placed in the Loyalist militia. He determined that he could not start his planned winter offensive into North Carolina until this threat to his rear was eliminated. He therefore sent Tarleton out to deal with Morgan, which led to the Battle of Cowpens.

HAMPTON, VIRGINIA. 24–27 October 1775. The conflict between Governor John Murray, Lord Dunmore and the rebels reached the shooting stage after the frustrated royal governor and his supporting naval forces left the York River. Following the arrival of two hundred reinforcements (Fourteenth Foot) from St. Augustine, Dunmore became more active in Hampton Roads. Captain Squire augmented his marines and sailors with some of the troops and fitted additional tenders. The shallow-draft raiders first probed the Elizabeth River towards Portsmouth and then five crossed over to the peninsula. Landing parties came ashore near Hampton after dark on 25 October and robbed several houses. Captain George Lyne, with the minute company from King and Queen County, responded to the news the following morning along with the local militia and started sniping at the tenders, which returned fire. Regular Virginia troops came up in support but were unable to lure the British ashore. Firing ceased at dark but resumed on the 27th, with the vessels bombarding the town about 8 A.M. During the course of the action, Colonel William Woodford assumed command and drove the tenders back to Norfolk. One tender, the *Hawke*, was captured along with ten crewmen; the Americans believed they had killed or wounded another nine. Squire admitted losing two killed, two wounded, and four prisoners. There were no rebel casualties.

HAMPTON, WADE. (early 1750s–1835). Planter, politician, soldier. South Carolina. Hampton's birth year and place are unknown, as are his early years. When the Revolution started he was living on the Middle Fork of the Tyger River in South Carolina. In 1776 he was a lieutenant and paymaster of the First South Carolina Regiment and was promoted to captain in 1777. He made a great deal of money selling supplies to the Continental army. On 21 September 1780 he declared himself to be a loyal British subject, but some time prior to 2 April 1781 he renounced this allegiance and joined General Thomas Sumter's

partisans. Commissioned colonel, he became one of Sumter's most valuable subordinates, particularly distinguishing himself at Eutaw Springs in 1781.

After the war he held a number of important political posts, and during the periods 1795–1797 and 1803–1805 served in the U.S. House of Representatives, where he devoted himself to gaining compensation for himself and the other investors in the corrupt Yazoo Company. He opposed the federal Constitution and later became a Republican. On 10 October 1808 he was commissioned colonel of Light Dragoons, and on 15 February 1809 he became a brigadier general. In the fall of that year he succeeded James Wilkinson as commander in New Orleans. In 1811 he brutally suppressed a slave rebellion in the city. In 1812 he took command at Norfolk, Virginia; on 2 March 1813 he was promoted to major general; and in July he was made commander of the forces on Lake Champlain. Wilkinson, for whom Hampton had nothing but contempt, soon became Hampton's senior officer in Military District No. 9 and subsequently blamed him for the failure of the campaign against Montreal in the fall of 1813. Hampton resigned on 16 March 1814.

Hampton never failed to enrich himself, becoming by 1820 one of the wealthiest men in South Carolina. He owned thousands of acres and a thousand slaves, whom he notoriously treated with notable cruelty. At his death in Columbia, South Carolina, on 4 February 1835, he was reputed to be the wealthiest planter in America.

HANCOCK, JOHN. (1737–1793). Signer. Massachusetts. Born on 12 January 1737 in Braintree, Massachusetts, the son of a minister, John Hancock was orphaned early in life and adopted by his uncle, Thomas Hancock, the richest merchant in Boston. He graduated from Harvard College in 1754 and inherited his uncle's business at the age of twenty-seven in 1764, just as the economy sank into a depression after the end of the final

French and Indian War. Four years later the *Liberty* affair rocketed Hancock into prominence as a victim of the overzealous enforcement of imperial customs regulations. He was elected a Boston selectman (1765–1774) and a member of the General Court (1766–1774), roles in which he displayed a keen political sense that made him a leader who could be trusted to be radical only when reason had failed. He could be a rabble-rouser when necessary (on 5 March 1774 he delivered the annual oration commemorating the victims of the Boston “Massacre”) but generally used his considerable economic clout and social position in more subtle ways to support American rights.

He was elected the first president of the Massachusetts Provincial Congress in October 1774 and was also chairman of the Committee of Safety, which had authority to call out the militia. He and Samuel Adams were specifically excluded from General Thomas Gage's offer of amnesty to rebels (12 June 1775) because their offenses were “of too flagitious a nature.” Hancock was a member of the Continental Congress from 1775 to 1780 and its president from 24 May 1775 until 29 October 1777. Vanity led him to seek appointment as commander-in-chief of the Continental Army, and he felt insulted when the delegates chose Washington instead. But his inclination to suffer politically convenient bouts of ill health would have limited his effectiveness in the field, and he had to take consolation in the fact that, as presiding officer of Congress, he signed the Declaration of Independence first and most prominently. After resigning the presidency for reasons of health, he lost interest in Congress (which had elected the able Henry Laurens to succeed him) and spent much of his time thereafter in Boston. As major general of the Massachusetts militia, he commanded six thousand Massachusetts troops in the operations against Newport, Rhode Island, in the summer of 1778, where he played only a minor role in the failure of the Franco-American attack.

On 1 September 1780 he became the first governor of Massachusetts under the new state constitution. In the throes of a sinking postwar economy and rising popular unrest, he resigned the governorship after a well-timed attack of gout on 29 January 1785, and was out of office during Shays's Rebellion in the winter of 1785–1786. He returned to the governorship in 1787 and pardoned the Shaysites. Although elected president of the state convention to ratify the federal Constitution in 1788, Hancock withdrew with another attack of gout. Despite some reservations about the extent of federal power, Hancock favored ratification, and with the issue in doubt, he returned to the convention and spoke in support of the document, thus playing a major role in winning ratification by a vote of 187 to 176. As William Fowler writes, “this was Hancock's finest moment, for without the

support of Massachusetts the entire constitutional effort might have failed” (“John Hancock,” *American National Biography*). Reelected governor, he was in his ninth term when he died at the age of 56.

“A moderate man who loved to court popularity,” as Fowler describes him, Hancock was a pivotal figure promoting unity and harmony at the center of American politics from the start of the resistance to Britain to the establishment of the new republic.

HANCOCK, THE. The *Hancock* was one of the first thirteen frigates of the Continental navy, authorized by Congress on 13 December 1775. It was built at Newburyport, Massachusetts, by John Greenleaf, based on a design by Joshua Humphreys. Placed under the command of Captain John Manley on 17 April 1776, it was launched on 10 July 1776 and spent the next ten months fitting out. It sailed from Boston in company with the Continental frigate *Boston* on 21 May 1777. The two frigates captured HMS *Fox* (twenty-eight guns) on 7 June. Both the *Fox* and the *Hancock* were captured by HMS *Rainbow* (forty-four guns) and HMS *Flora* (thirty-two guns) on 8 July, after a twenty-nine-hour chase. The *Hancock* was taken into the Royal Navy as HMS *Iris* and earned a reputation as one of the world’s fastest and finest frigates. On 8 August 1781, the *Iris* captured the Continental frigate *Trumbull* off the Delaware Capes. The *Iris* was captured by the French in the West Indies on 11 September and used as a cruiser. When the British took Toulon in 1793, they found her dismantled and used as a powder hulk. The Royal Navy blew her up on 18 December as the British evacuated Toulon.

HANCOCK’S BRIDGE, NEW JERSEY.

21 March 1778. After the action at Quenton’s Bridge, New Jersey, Colonel Charles Mawhood returned to Salem, New Jersey, and planned an attack on Hancock’s Bridge, five miles away on Alloways Creek. This was the last of the pockets of resistance to his foraging expedition, and Mawhood believed that it was defended by two hundred New Jersey militia. Major John Graves Simcoe was given the task with his Queen’s Rangers. He set out on 20 March and moved by boat up Alloways Creek to a point from which they could move cross-country to take the bridge from the rear. The Twenty-seventh Foot approached the other side of the bridge by marching overland from Salem. The operation should have been a great success, but wind and tides held the boats up, and Simcoe and his men had to wade through two miles of swamp. Simcoe did not get into position to attack until the morning of 21 March but quickly eliminated two sentries. The Americans had detected the movement the day before, and most of the militia had already withdrawn. The last twenty men took refuge in Hancock’s brick house. Two companies of the Rangers knocked down the front and back doors and charged in. At this point Simcoe lost control of his men. His Loyalist soldiers killed everyone in the building including the owner and his brother, who were supporters of the King. Simcoe called this “very unfortunate;” the Americans called it a massacre.

HAND, EDWARD. (1744–1802). Continental general. Ireland and Pennsylvania. Born 31 December 1744 in Clyduff, Ireland, Hand completed his medical studies at Trinity College in 1766. As surgeon’s mate of the 18th Royal Irish Regiment he came to Philadelphia in 1767. Made an ensign in 1772, he went to Fort Pitt with

the regiment, returned to Philadelphia with the unit in 1774, and then resigned to practice medicine. With the outbreak of Revolution, Hand joined the Americans, serving in the siege of Boston as a lieutenant colonel (25 June 1775) in William Thompson's Pennsylvania Rifle Battalion. Later active in organizing and drilling the Lancaster County Associators, on 1 January 1776 he was assigned to the First Continental Infantry. On 7 March he was made a colonel, and on 1 January 1777 he assumed command of the First Pennsylvania Regiment. (This was the new designation for Thompson's Battalion, which had been renamed twice: from Thompson's Battalion to the First Continental Regiment to the First Pennsylvania Regiment.)

On Long Island he was General George Washington's principal source of information as the British built up strength on Staten Island. His regiment performed well in the events immediately preceding the battle of Long Island and was engaged at White Plains. He and his men executed a skillful and well-disciplined delaying action without which Washington's victory at Princeton, 3 January 1777, would not have been possible. Impressed by Hand's consistently fine conduct, Washington prevailed on Congress to appoint him brigadier general on 1 April 1777. General Hand then went to Fort Pitt with orders to mobilize the militia of western Pennsylvania, push into the Indian country, and destroy the British base at Detroit. In February 1778 Hand moved with 500 militia toward Sandusky, but snow, rain, and swollen streams stopped him short of his objective. On his way back to Fort Pitt he killed and captured some Indian women at Salt Lick, leading to his operation being dubbed the "Squaw Campaign."

Criticized for both this wasted campaign and for his failure to adequately support General George Rogers Clark's western operation, Hand resigned in disgust, and on 8 November 1778 took over from John Stark as commander at Albany. He arrived just in time for the Cherry Valley Massacre and subsequently played a major role in Sullivan's expedition against the Iroquois (May–November 1779). During General Wilhelm Knyphausen's raid on Springfield, New Jersey, in June 1780, General Hand led a task force of 500 men, and in August he was given command of a new brigade of light infantry. In that capacity he sat on the court-martial that condemned Major John André to death for spying. When Alexander Scammell resigned as Washington's adjutant general on 16 November 1780, Washington selected Hand to succeed him.

Brevetted as a major general on 30 September 1783, he served until 3 November 1783 and then returned to his medical practice. Active also in political and civic affairs, he was a congressman in 1784–1785, and in 1790 he signed the Pennsylvania state constitution. He was inspector of revenue from 1791–1802. A staunch Federalist, he started

having trouble with his accounts early in the Republican administration, and in 1802 a petition was brought into court to sell his lands in order to cover the losses. He died of a stroke in the midst of this trouble, on 3 September 1802.

HANGER, GEORGE. (1751–1824). George Hanger, third son of the first baron Coleraine, was born in Gloucestershire, England, on 13 October 1731. He was educated at Eton, where he earned a reputation for the affairs he had with local girls. He went on to the university at Göttingen, where he learned German. Extravagant, eccentric, dissipated, and violent (he fought three duels before he was twenty-one), he learned light cavalry tactics in the Prussian army before buying an ensigncy in the First Foot Guards on 31 January 1771. While a guards officer, he married a Gypsy girl who soon ran off with a tinker. On 20 February 1776 he bought a lieutenantcy in the guards, only to resign on 25 February, allegedly because a more junior officer purchased a promotion over his head. Returning to Germany, he took up a captaincy in the Hessian jägers and sailed with Wilhelm Knyphausen to North America.

Hanger commanded a detachment on the Charleston expedition of 1780, and marched with James Paterson's diversionary column. Afterward he personally reconnoitred the Charleston defenses and advised Sir Henry Clinton on his plan of attack. He became Clinton's aide-de-camp, but was left behind in South Carolina to help Major Patrick Ferguson raise Loyalist militia there. Disliking this employment, he managed to be transferred, with the aid of Lieutenant Colonel Banastre Tarleton to the command of the British Legion's light dragoons. Hanger, now a provincial major, took temporary command of the Legion when Tarleton fell seriously ill. However, without Tarleton's inspired direction, he was a poor leader. At Wahab's Plantation on 21 September 1780, he carelessly allowed himself to be surprised by a partisan attack, and five days later he mishandled an attempt to dislodge a weaker American force at Charlotte, where he was wounded. Falling ill of yellow fever, he missed the catastrophes of Cowpens and Yorktown. He was made a major of the British establishment in 1782,

and when the Legion was formally disbanded in 1783, Hanger was put on half pay.

In retirement, Hanger continued his old social habits, acting as bouncer for Tarleton's faro bank in a London tavern, helping him to recruit "bludgeon men" for the Whigs in the 1787 Westminster by-election and becoming a friend of the Prince of Wales. In 1796 he sold his major's commission to raise ready cash, went to debtor's prison from June 1798 to April 1799, and briefly hid from his creditors in Paris. In 1800 he even set himself up as a coal merchant in an effort to secure money, but in 1806 he obtained a military sinecure and in 1808 retired from it on full pay—a blatant fraud and a scandal. He wrote and published works on military and sporting subjects, as well as a two-volume autobiography. He became the third Baron Coleraine on his brother's death in December 1814, but preferred to be known as "Colonel" Hanger, promoting himself to "General" in 1816. Fittingly, the barony became extinct when he died on 31 March 1824.

HANGING ROCK, SOUTH CAROLINA. 6 August 1780. In conjunction with his harassment campaign against the British occupying Camden, South Carolina, General Thomas Sumter moved against nearby Rocky Mount on 30 July 1780. At the same time, North Carolina Major William R. Davie, following Sumter's wishes, attacked the enemy garrison at Hanging Rock to divert British attention from Sumter's attack. The enemy garrison at Hanging Rock was under Major John Carden, of the Prince of Wales American Volunteers. In addition to his own unit, some three companies of British Legion Infantry under Captain Kenneth McCulloch, Colonel Morgan Bryan's North Carolina Provincial Regiment of refugees, and some of Colonel Thomas Brown's South Carolina Rangers were also present.

Davie's feint against Hanging Rock came on 1 August, when he led his forty cavalymen and some forty mounted riflemen from the Mecklenburg militia. Davie learned during his approach that three companies of Bryan's Tories were camped near a farmhouse after foraging. Davie divided his men, sending the riflemen to ride into the camp masquerading as Loyalists while his

dragoons waited nearby. The riflemen fired on Bryan's men, who fled toward Davie's dragoons and were driven back into the rifle fire. The Tories were caught at a corner of a fence and were hewn down by the dragoons. Davie later reported that "no prisoners could be safely taken." Davie captured some 60 horses, 100 rifles and muskets, and alarmed the main garrison, then withdrew his troops.

In the meantime, Sumter retreated from Rocky Mount and, upon being reinforced by Davie's 80 men and Colonel Robert Irwin's 400 North Carolina militia, he attacked Hanging Rock at dawn on 6 August. Despite Davie's raid, the post, divided into three camp areas, was unfortified.

Three assault columns that were intended to hit every camp were misdirected. The attack fell on the northern camp, where Bryan's North Carolina refugees were quickly routed. The assault continued against the British Legion infantry, allowing Brown's Rangers to rally and hold a rapidly forming battle line. Heavy fighting, including Legion bayonet charges, took place before the Legion and Rangers began to surrender or withdraw to form a hollow square around an artillery piece. As some militia stopped to plunder, Carden led his regiment from the British right flank in order to block Sumter's pursuit. Sumter's men faced the attack and opened a deadly fire that virtually annihilated the Prince of Wales American Regiment. As his men fell around him, Carden turned command over to Captain John Rousselet, who was the senior ranking Legion captain after McCulloch was mortally wounded in the intense fighting.

British and American accounts differ as to what happened next. Davie apparently outflanked the British line and scattered some Tories, while Sumter continued firing on the hollow square where the Loyalist militia was reforming. Other Americans were plundering the camp when Davie, returning toward Sumter's position, encountered a British Legion company of mounted infantry led by Captains Patrick Stewart and Charles McDonald. According to the history later written by Banastre Tarleton, these men broke the American will to continue fighting, but Davie says that his men drove the Loyalists off. There may be some truth in both accounts. Davie himself noted that the Americans were withdrawing because their ammunition was expended and many were intoxicated. Sumter's men and their plunder moved off, unmolested, shortly after noon, covered by Davie's dragoons.

The hotly contested battle lasted more than five hours, and the casualties reflect close fighting. Sumter said that twenty of his men were killed and another forty were wounded. There is a question as to whether these numbers included the dead and wounded from Davie's troops, because Davie noted severe losses. Tarleton claimed the British Legion alone had three officers and twenty men killed, plus nearly thirty wounded. He also

noted that the Provincials led by Brown and Bryan were badly scattered.

Sumter retired to the Waxhaws, in South Carolina, gathering men and waiting for the arrival of the Maryland and Delaware Division of Continentals, who were then on the march toward South Carolina. His raiding precipitated British reinforcement of the Hanging Rock garrison with the Twenty-third Regiment. Upon the arrival of Continentals under Horatio Gates, the post was abandoned.

Sumter's attack came close to succeeding. His men had broken the will of the Loyalists to resist, and they were scattered. Only the determined resistance of McCulloch, and then Rousselet, with the British Legion infantry, stabilized the situation. As the fight went on, Sumter's men began to run out of ammunition. By that time, Davie and Sumter decided on a withdrawal to save their plunder. The engagement boosted American morale and led more recruits to join Sumter and other partisans. The Loyalists were dismayed, both by Davie's earlier attack and then the ferocity of the main battle.

“HANGMAN, YEAR OF THE.” To superstitious patriots, particularly in the Continental Congress, the last three digits of 1777 suggested gibbets awaiting them should their cause fail. Also widely called “the year of the bloody sevens.”

revised by Michael Bellesiles

HANSON, JOHN, JR. (1721–1783). Continental Congress president. Maryland. Born in Port Tobacco Parish, Maryland, on 3 April 1721, Hanson, a wealthy planter and merchant, was a member of the Maryland House of Delegates almost every year from 1757 to 1779, and was extremely active in events leading to the war. He was a member of the legislative committee that drafted instructions for the Maryland delegates to the 1765 Stamp Act Congress. He also signed the

nonimportation agreement that Maryland adopted on 22 June 1769 in protest of the Townshend Acts and was a member of the Association of Maryland that, in June 1774, approved armed resistance to British troops. Serving as treasurer of Frederick County in 1775, he was chairman of the committee of observation and was commissioned, about that same time, by the Maryland convention to start a gun-lock factory at Frederick. He entered the Continental Congress on 14 June 1780 and started working immediately for ratification of the Articles of Confederation. This was completed on 1 March 1781, and Hanson was elected president of the Congress of the Confederation on 5 November 1781, serving a one-year term. He then retired from public life, dying on 15 November 1783.

HARADEN, JONATHAN. (1744–1803). State naval officer and privateer. Massachusetts. Born in Gloucester, Massachusetts, on 11 November 1744, Haraden started his sea service in July 1776 as a lieutenant on the Massachusetts navy sloop *Tyrannicide*, which was commanded by John Fiske. After two successful cruises that year, Haraden took command of the vessel in 1777, when it was converted into a brigantine. Captain Fiske's *Massachusetts* and Haraden's *Tyrannicide* took 25 prizes from France and Spain, including a transport loaded with Hessian troops. Back to Boston in August 1777, Haraden sailed again in the fall and was in the West Indies during the winter. In the summer of 1778 he started his career as a privateer, commanding the *General Pickering* (16 guns). Distinguishing himself as a commerce raider, he gained a reputation for winning against heavy odds. Off Sandy Hook in October 1779, he captured three enemy privateers in a ninety-minute action and took them all into port. In June 1780 he fought a much more powerful British privateer, the *Achilles*, at close range for nearly three hours in the Bay of Biscay. The *Achilles* broke off the engagement, and Haraden recaptured this twenty-two-gun schooner, which had been taken by the enemy just a few days earlier. When Admiral George Rodney captured the Caribbean island of St. Eustatius for the British, on 3 February 1781, he set a trap that caught Haraden and several of his prizes. After being released, Haraden commanded the *Julius Caesar* (fourteen guns), another Salem privateer, which started operations in 1782. In June of that

Hard Money

year he fought two larger British ships and escaped. He died in Salem, Massachusetts, on 26 November, 1803.

HARLEM COVE (MANHATTANVILLE), NEW YORK.

16 November 1776. In the British attack on Fort Washington, on this date, Lord Hugh Percy’s column drove in the American pickets at Harlem Cove. They then attacked the forces under Lieutenant Colonel Lambert Cadwalader in the old Harlem Heights defenses, which were located at today’s West 147th, 153d, and 159th Streets).

HARLEM HEIGHTS, NEW YORK.

16 September 1776. Admiral Howe’s three warships, which had bombarded New York City from the Hudson as a distraction during the Kips Bay invasion on 15 September, had moved upriver opposite Bloomingdale village (at modern Broadway and One Hundredth Street) to support the western end of the British cordon that extended across Manhattan from river to river. The line included an outpost at McGowan’s Pass (in the northeast corner of modern Central Park) and was anchored on the East River by the captured American fort at Horn’s Hook (on modern East Eighty-ninth Street). Seven miles to the south, New York City had become occupied territory, or as Loyalists saw it, had been liberated. Washington’s forces had taken refuge on Harlem Heights, a rocky plateau (north of modern West 125th Street between the Hudson and Harlem Rivers) that offered a naturally strong defensive position.

The Americans created three parallel lines of forts and trenches across the plateau (at modern 147th, 153rd, and 159th Streets) that sealed off the northern end of Manhattan, protecting Washington’s headquarters in the

Morris house (at modern 161st Street) along with Fort Washington (at modern 183rd Street) and the Kings Bridge at the northern tip of the island. Five thousand American troops occupied the Kings Bridge area, another seventy-five hundred were distributed in the three defensive lines, and some thirty-three hundred under General Nathanael Greene (the brigades of Nixon, Sargent, and Beall) guarded the southern face of Harlem Heights overlooking a valley called the Hollow Way (modern 125th Street, or Martin Luther King Jr. Boulevard).

AMERICAN SCOUTS SPARK FIGHTING

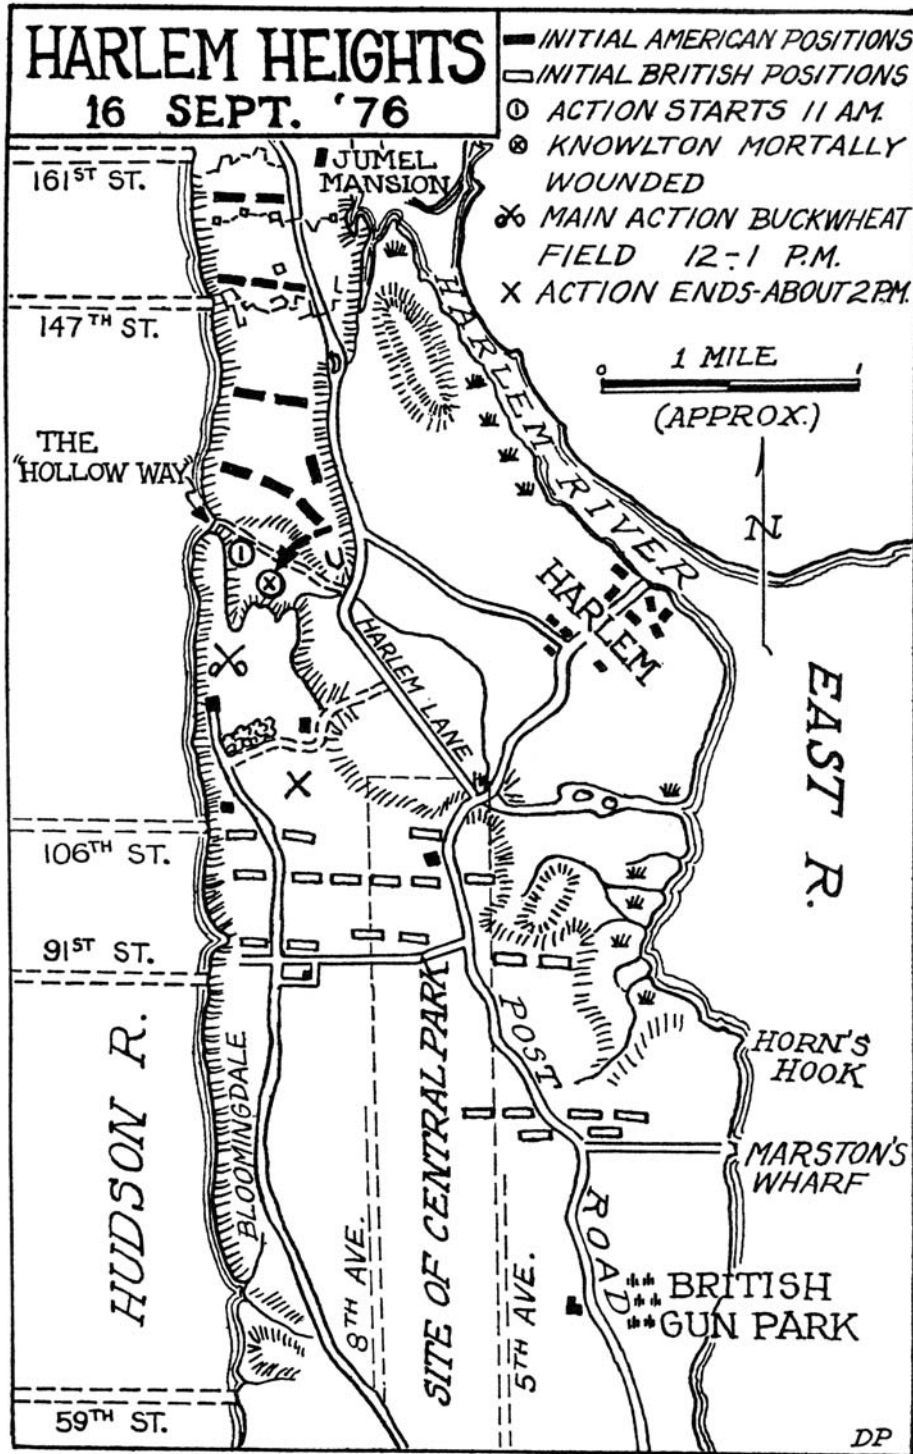

Before dawn on 16 September, Washington sent a reconnaissance party of 120 men drawn from Lieutenant Colonel Thomas Knowlton’s Rangers to ascertain the disposition of enemy troops on Bloomingdale Heights (the plateau south of 125th Street, modern Morningside Heights), where the farmland was largely covered with trees that would mask any movement of the British left wing up the Bloomingdale Road (modern Broadway). Washington needed to know if Howe planned to dig in or quickly launch a major offensive.

The scouting party moved south across the Hollow Way and headed for the Bloomingdale Road (which ended at modern 115th Street), where the British were last seen the night before. As the sun came up, the Rangers arrived at Nicholas Jones’s stone farmhouse (at modern 106th Street) and were spotted by the most advanced British pickets, who fired their guns as a signal to the British light infantry and the Forty-second Highlanders camped a little farther south. Knowlton’s men fired a few shots and then retreated behind a stone wall. The British soon advanced in a column, and in the ensuing skirmish each side fired more than one thousand rounds before Knowlton and his men retreated, with ten casualties, across the Hollow Way to the American lines.

A BRITISH TAUNT

Washington had come down from his headquarters to the front lines—to a redoubt on the Point of Rocks, a craggy projection at the southeastern corner of Harlem Heights from which he could look out over Harlem Plains to the east and scan the ragged northern face of the Bloomingdale plateau to the west. A report of the enemy advancing across the plains proved incorrect. Meanwhile, the sounds of Knowlton skirmishing to the west prompted Washington to send his adjutant, Joseph Reed, to look for the Rangers and to see if the British had moved their main force up to Bloomingdale Heights.

Reed reported back to Washington at 9 a.m. that he had found Knowlton and seen the British light infantry moving rapidly northward. Knowlton and his men had just returned to the American lines, and word of their

THE GALE GROUP.

bravery spread quickly through the ranks. Reed urged Washington to use the momentum of Knowlton's mission and draw the British into a larger engagement. Just then, "the enemy appeared in open view," Reed reported

in a letter to his wife, "and in the most insulting manner sounded their bugle horns as is usual after a fox chase. I never felt such a sensation before. It seemed to crown our disgrace."

WASHINGTON DEVICES A TRAP

Washington gave orders for 150 volunteers from Brigadier General John Nixon's brigade to march down into the Hollow Way and engage the attention of the 300 British infantrymen, while a flanking party of 230 men—Reed leading Knowlton's Rangers and three companies of riflemen from Weedon's Third Virginia Regiment under Major Andrew Leitch—crossed the valley to the east to get behind them. Initially, everything went as planned, and the British were lured into a skirmish in the valley by Lieutenant Colonel Archibald Crary and a party of volunteers from his Rhode Island regiment. This was a holding action at long range, with few casualties.

The rest of Nixon's brigade—some eight hundred men—was brought in, and the British were driven back out of the valley to a post-and-rail fence overgrown with bushes (straddling modern Broadway between 123rd and 124th Streets), where they took cover. Nixon's brigade had pressed its attack too soon, however, which meant that the flanking party did not have time to get around behind the British. Instead, Knowlton and Leitch arrived at the fence at the same time as the British, who were thus able to turn and face the attack on their side—not their rear. Knowlton was killed on the spot, and Leitch died of his wounds a day later.

THE FIGHTING ESCALATES

Washington sent in reinforcements, including Connecticut militia, other New Englanders, and parts of two Maryland regiments, along with two fieldpieces that helped dislodge the British from their position behind the fence. The American troops pursued them into the woods, and by noon the British had fallen back to a buckwheat field (the modern site of Barnard College), where they made a stand. Howe dispatched reinforcements and two cannon to confront the eighteen hundred Americans on the field, led by Generals Israel Putnam, Nathanael Greene, and George Clinton (an American cousin of the British general and the first governor of New York State).

Under Major General Alexander Leslie, the British brought in German jägers (riflemen), light infantry, and more Highlanders, who dragged a pair of cannon three miles from the rear to the buckwheat field. The battle raged for two hours until the British—having fired sixty rounds from the cannon—ran low on ammunition and retreated again. The Americans pursued them dangerously close to the British main camp and to Admiral Howe's frigates anchored off Bloomingdale. As Private Joseph Martin later recalled, the American advance ended when the British "found shelter under the cannon of some of their shipping in the North River."

With new reinforcements, the British by this time had five thousand troops on the scene, including British

and Hessian grenadiers. Intent on avoiding a "general engagement" like the disastrous Battle of Long Island, Washington sent his aide-de-camp, Lieutenant Tench Tilghman, to pull the troops back. As if answering the morning's insulting bugle call, "they gave a hurra and left the field in good order," Tilghman wrote. The Battle of Harlem Heights ended by 3 P.M. where it had begun at dawn, in front of Nicholas Jones's farmhouse.

AN AMERICAN MORALE BOOST

"This affair I am in hopes will be attended with many salutary consequences," Washington wrote to Congress, "as it seems to have greatly inspired the whole of our troops." Despite the loss of two exceptional officers—Knowlton and Leitch—the relatively small battle raised American morale significantly. After the rout in Brooklyn two weeks earlier, the narrow escape to Manhattan, and the humiliating retreat from Kips Bay, on 16 September the American soldiers learned they could make the enemy's finest troops turn and run. Washington praised "their great resolution and bravery," which put the enemy "to flight when in the open Ground."

On the British side, the Battle of Harlem Heights became a further irritant in the antagonistic relationship between General Howe and his second in command, General Clinton, who was in charge of the most advanced British posts on the morning of the 16th. Clinton was incensed by Howe's order to retreat at the end of the battle. In his account of the war, Clinton later implied that the British should have contested and held Bloomingdale Heights with a larger force, which would have put them in a good position to cross the Harlem River into Morrisania (the modern Bronx), get behind the Americans, and cut off their escape via the Kings Bridge, as he had repeatedly advised. Instead, in October, Howe decided to make a wider encirclement through the dangerous waters of Hell Gate to land at Throg's Neck and Pelham Bay.

Adhering to his policy of not reporting Hessian losses, Howe counted 92 British casualties at Harlem Heights, but in all the toll was 14 killed and 154 wounded. In Washington's initial estimate to Congress, he counted some 40 wounded and a "very inconsiderable" number killed. The final count was about 30 killed and 100 wounded and missing.

HARMAR, JOSIAH. (1753–1813). Continental officer, lieutenant colonel, commandant of the U.S. army, 1784–1791. Pennsylvania. Born in Philadelphia on 10 November 1753, Josiah Harmar was orphaned three months later. He was educated at Robert Proud's Quaker school. Commissioned as a captain of the First Pennsylvania Battalion on 27 October 1775, he was promoted to major in the Third Pennsylvania Battalion on 1 October 1776, and lieutenant colonel of the Sixth Pennsylvania Battalion on 6 June 1777. He saw action in the battles of Brandywine, Monmouth, and Stony Point, and endured the winter of 1777–1778 at Valley Forge. After 9 August 1780, Harmra commanded the Seventh Pennsylvania Battalion, transferring to the Third Pennsylvania in the reorganization of the Pennsylvania Line on 17 January 1781. At this point, Harmar was second in command to Genreal Anthony Wayne in the Yorktown campaign. Transferred to the First Pennsylvania on 1 January 1783, he was promoted to colonel on 30 September 1783 and served until 3 November of that year.

After the reconstitution of the Continental army, Harmar was recalled and made lieutenant-colonel commandant of the First United States Regiment, which constituted the entire army at the time. He held this post from 12 August 1784 to 4 March 1791, being brevetted brigadier general on 31 July 1787.

In 1790 Harmar pushed the Shawnees along the Scioto River, and later in the year he left Fort Washington (Cincinnati) to attack the Indians in the Maumee Valley with a force of 400 regulars and a thousand militia from Kentucky and Pennsylvania. Although his force reached his objective of Miami Town and burned a number of Shawnee settlements, Harmar twice detached units that were mauled by Little Turtle's forces. Coming under withering criticism for this fiasco, Harmar was cleared by a court of inquiry but replaced by General Arthur St. Clair, who went on to suffer even greater failure against the Indians. Harmar resigned from the army on 1 January 1792. From 1792 to 1798 Harmar served as Pennsylvania's Adjutant General. He died on 20 August 1813 at his estate on the Schuylkill River, called, appropriately enough, "The Retreat."

HARPERSFIELD, NEW YORK. 2 April 1780. This exposed settlement, twenty miles south of Cherry Valley and fifteen miles southwest of the Lower Fort of Schoharie Valley, was completely destroyed by Indians and Loyalists under Joseph Brant. Most of the inhabitants had already vacated the settlement, but several were killed and the militia captain and eighteen others were captured. After overhearing the Indians say they planned to attack Upper Fort (near modern Schoharie) if it was not too strongly held, Alexander Harper gave Brant the false information that it was defended by three hundred Continentals. The raiders therefore shifted their focus eastward and attacked Minisink on 14 April before withdrawing.

HARRISON, BENJAMIN. (1726?–1791). Signer. Virginia. Born on the family estate in Charles City County, Virginia, Benjamin Harrison belonged to a wealthy and powerful family. He attended the College of William and Mary before taking charge of the family estate, "Berkeley," upon his father's death. He served in the House of Burgesses (1749–1775), frequently as speaker. Although strongly in favor of colonial rights in 1764, he opposed Patrick Henry's 1765 Stamp Act Resolutions as impolitic. By 1773 he was a member of the Committee of Correspondence and completely in favor of resisting British authority. He was appointed to the first Continental Congress, serving until 1777. He was politically active, signed the Declaration of Independence in 1776, and sat on the committees concerned with foreign affairs, war and ordnance, and the navy. Returning to state politics in 1777, he sat in the House of Delegates, 1777–81, 1785–87, serving as its speaker from 1778 to 1781. He was then governor of Virginia for three years. He opposed the federal Constitution at the state ratifying convention of 1788, and was elected governor that year as an antifederalist. He died in office, 24 April 1791. His youngest son, William Henry, and his great-grandson, Benjamin, were presidents of the United States.

HART, JOHN. (1714–1779). Signer. New Jersey. Born in Hopewell, New Jersey, in 1714, John Hart served several years (1761–1771) in the provincial legislature. The 1765 Stamp Act aroused his indignation at British oppression, and he became active in the events leading to the Revolution. He was a judge of the court of common pleas when, on 8 July 1774, he was sent to the first provincial congress. He served in that body until June 1776, when he was sent to the Continental Congress, where he signed the Declaration of Independence and served on the Committee of Correspondence. In August 1776 he was elected to the first state assembly and was unanimously chosen speaker. When the British invaded the state of New Jersey, they destroyed Hart's farm and livestock. His family fled, and he and his wife hid in the woods for several days to avoid capture. After the battles of Trenton and Princeton he was able to return to his farm. In March 1777 he became treasurer of the New Jersey Council of Safety, the governing body of the state, as well as returning to the State Assembly as speaker. He held both positions until November 1778, when he became seriously ill. He died in Hopewell, New Jersey, on 11 May 1779.

HART, NANCY MORGAN. Patriot heroine. Born in about 1735 on the frontier of Pennsylvania or North Carolina, Nancy grew to be about 6 feet tall, very muscular, cross-eyed, vulgar, and illiterate. She married Benjamin Hart, a prominent citizen by whom she had eight children. The couple settled first in South Carolina in about 1771, and then moved to Georgia. Half a century after the Revolution, her exploits were written up in a Milledgeville (Georgia) newspaper, and in the 1830s were recorded again by Elizabeth Ellet, whose sources were old-timers. She was credited with performing several scouting trips and with entering

Augusta as a “crazy man” to get information about the enemy. One legend holds that six Tories from Augusta entered her house and ordered a meal. While they sat drinking she told her 12-year-old daughter, Sukey, to run off and warn her husband of the intruders. Nancy then managed to slip two of the men's muskets through a hole in the wall before they caught her with the third one in hand. One of the men rushed her, and she used the musket to kill him. Sukey returned to pass her mother a second musket, with which she wounded another Tory. While she covered the rest of the party with the third weapon, her husband arrived with a posse of neighbors, and the surviving Tories were hanged. E. Merton Coulter, a history professor at the University of Georgia, was suspicious of the myth. He investigated, and found that a railroad excavation through the site of Nancy's cabin, done years after the Revolution, had uncovered six skeletons.

HARVEY, EDWARD. (c. 1726–1778). Acting commander in chief of the British army. Harvey, at the time colonel of the Third Regiment of Light-Horse, came to the attention of his superiors in 1764 for the publication of a new drill book, *A New Manual and Platoon Exercise*, that quickly superceded Humphrey Bland's outdated *Military Discipline*. Harvey was promoted to major general in 1768 and made adjutant general of the British army. When John Manners, Marquess of Granby resigned his offices in 1770, the office of commander in chief was not filled. As the highest ranking officer remaining on active duty, Adjutant General Edward Harvey was, in effect, the acting commander in chief. He was promoted to lieutenant general in 1772. Having little influence with the Cabinet,

he is remembered only for his pungent professional comments on their mismanagement, particularly of the American colonies and the War for Independence. The flavor of his commentary can be seen in excerpts from his correspondence: "To attempt to conquer it [America] internally by our land force is as wild an idea as ever controverted common sense," he wrote to General Irwin on 30 June 1775, before receiving news of Bunker Hill. The same day he wrote to General William Howe, "Unless a settled plan of operations be agreed upon for next spring our army will be destroyed by damned dribbles." Eight days later he wrote to a Lieutenant Colonel Smith (possibly Francis Smith, who led British forces against the Patriots): "America is an ugly job . . . a damned affair indeed." Harvey's primary concern through most of the war was recruitment, as the British Army found the Revolution dampening what little enthusiasm there was to serve. As the personal military advisor to George III, Harvey attempted to persuade the king that Britain could not win a land war and that the best course of action was to blockade the colonies and negotiate. But the king rejected Harvey's advice. Harvey died suddenly early in 1778.

HASLET, JOHN. (c.1750–1777). Continental officer. Delaware. Born in Derry, Ireland, he studied theology before turning to medicine at the University of Glasgow. In 1757 he emigrated to Delaware, where he established his practice and became a Presbyterian minister. At the start of the Revolution he was colonel of the Kent County militia. On 19 January 1776 Haslet became colonel of the Delaware Regiment of the Continental Army, which became one of the best in the army, distinguishing itself at Long Island under Major Thomas McDonough. Haslet was absent on court-martial duty during the this battle; but he led the raid to Mamaroneck, New York, which defeated Major Robert Rogers's Loyalists, and rejoined Washington's main body in time for the battle at White Plains, 28 October 1776, where his regiment gained praise for its professional conduct. Haslet was killed in action at Princeton, 3 January 1777.

HAUSSEGGER, NICHOLAS. (1729?–1786?). Continental officer. Pennsylvania. On 4 January 1776, Nicholas Haussegger became a major in the Fourth Pennsylvania Battalion, and on 17 July was named colonel of the German Regiment. This unit was routed near Trenton, New Jersey, on 2 January 1777, and Haussegger "surrendered under somewhat suspicious circumstances." (Freeman, p. 343) He was paroled to his home in Lancaster County and General George Washington, who suspected Haussegger of treason, had him watched. Under uncertain circumstances, Haussegger returned to the British, but it is unclear if he served with them.

HAW RIVER, NORTH CAROLINA.

25 February 1781. General Andrew Pickens and Lieutenant Colonel Henry Lee crossed the Dan from Virginia into North Carolina on 18 February, ahead of General Nathanael Greene's main army, with the mission of breaking up the Loyalist uprising for which Cornwallis had called. After a frustrating failure to surprise Colonel Banastre Tarleton, and learning that several hundred mounted militia were marching to join the British in Hillsboro, the rebels decided to try a trick. The green uniform of Lee's Legion was so similar to that of Tarleton's Legion that Lee would pretend his men were a reinforcement sent to join Tarleton. Two captured officers of the latter's command were placed with Lee's cavalry "to give currency to the deception" (Lee, p. 256). This stratagem worked immediately. Two of Colonel John Pyle's approximately three hundred Loyalists rode up and were gulled into thinking that Lee was Tarleton. One was sent back with two rebel dragoons to ask that Pyle pull his troops off to the side of the road so Tarleton could lead his "much fatigued troops . . . without delay to their night positions" (ibid., p. 257). Meanwhile, Pickens's militia, who could be identified by the green twigs in their hats (the insignia of the southern militia), were hidden in the woods. Lee said his plan was to get his cavalry among the unsuspecting enemy troops and then give them the alternatives of disbanding or joining the Patriot side.

Fortunately for Lee's plan, Pyle's mounted men had formed on the right side of the road so that Lee would lead his troopers the length of their front to meet Pyle. Furthermore, they had their rifles and fowling pieces on

their shoulders, so the rebel cavalry, with drawn sabers and close to the heads of the enemy's horses, could do a lot of damage before the Loyalists could recover from their surprise and defend themselves. Here, in Lee's words (writing in the third person) is what happened:

Lee passed along the line at the head of the column with a smiling countenance, dropping, occasionally, expressions complimentary to the good looks and commendable conduct of his loyal friends. At length he reached Colonel Pyle, when the customary civilities were promptly interchanged. Grasping Pyle by the hand, Lee was in the act of consummating his plan, when the enemy's left, discovering Pickens' militia, not sufficiently concealed, began to fire upon the rear of the cavalry commanded by Captain Eggleston. This officer instantly turned upon the foe, as the whole column did immediately afterward. The conflict was quickly decided, and bloody on one side only. Ninety of the royalists were killed, and most of the survivors wounded. Dispersing in every direction, not being pursued, they escaped. During this sudden encounter, in some parts of the line the cry of mercy was heard, coupled with assurance of being our best friends; but no expostulation could be admitted in a conjuncture so critical. Humanity even forbade it, as its first injunction is to take care of your own safety, and our safety was not compatible with that of the supplicants, until disabled to offend. Pyle, falling under many wounds, was left on the field as dying, and yet he survived. We lost not a man, and only one horse.

The British accused Lee of a massacre in violation of the standards of warfare. Lee defended himself by pointing out that he did not order a pursuit of the fleeing Loyalists and did not have much choice but to act with quick brutality, since Tarleton's Legion was only a mile away.

In the following month, on 15 March, Cornwallis fought the battle of Guilford Courthouse without any Loyalist troops in his ranks. The action at Haw River is the main reason why.

HAYNE, ISAAC. (1745–1781). Militia officer executed by British. South Carolina. Remembered

primarily as the victim of British injustice, Isaac Hayne was born on 23 September 1745. He was a planter and breeder of fine horses before the war. He and William Hill also owned the iron works in York District, South Carolina, that were destroyed by British and Loyalist raiders led by Captain Christian Huck. At the beginning of the Revolution, Hayne served as a member of the assembly and as a captain in the Colleton militia. He resigned the latter post and re-enlisted as a private when a junior officer was put in command over him. He was captured at Charleston on 12 May 1780, having served in the outposts, and was paroled to his farm on condition that he never again take up arms against the British. Ordered in 1781 to join the British army, he considered his parole invalidated and took the field as a militia colonel. In July he captured General Andrew Williamson, the turncoat, just a few miles from Charleston, but was himself taken prisoner by British troops sent to rescue Williamson. Without a trial, Hayne was condemned to death by Colonel Nesbit Balfour, the British commandant at Charleston, on charges of espionage and treason. Despite a concerted protest by the citizens of Charleston, Haynes was hanged on 4 August 1781.

The fate of “the Martyr Hayne,” as he was instantly labeled, aroused widespread anger. When the issue came up in Parliament, Colonel Balfour attempted to defend himself by blaming Lord Rawdon (George Augustus Francis Rawdon), commander of British troops in the South although not Balfour's direct superior, who had approved the decision to execute Hayne. Rawdon placed the fault right back on Balfour. By their efforts to affix the blame on one another, both implicitly acknowledged their error. General Henry Lee later summarized the American view:

Colonel Hayne was certainly either a prisoner of war, or a British subject. If the latter, he was amenable to the law, and indisputably entitled to the formalities and the aids of trial; but if the former, he was not responsible to the British government, or its military commander, for his lawful conduct in the exercise of arms. Unhappily for this virtuous man, the royal power was fast declining in the South. The inhabitants were eager to cast off the temporary allegiance of conquest; it was deemed necessary to awe them into submission by some distinguished severity, and Hayne was the selected victim! (Lee, pp. 456–457).

By their handling of this case, the British authorities made a martyr out of Isaac Hayne instead of an “example,” thereby defeating the purpose that such a severe act might have accomplished. Nathanael Greene marched his army out of the High Hills of Santee after issuing a proclamation that “reprisals for all such inhuman insults” would be against “officers of the [British] regular forces, and not the deluded Americans who had joined the royal army.” Far

from repressing the sort of insurrection that Hayne had been accused of starting, Balfour sent Carolinians flocking to the American colors.

HAYS, MARY LUDWIG. (1754–1832).

Heroine of the Molly Pitcher legend. Pennsylvania. Born on 13 October 1754, near Trenton, New Jersey, Hays worked on her father's dairy farm before becoming a servant in Carlisle, Pennsylvania. At sixteen she married a barber named John Caspar Hays. Five years later she accompanied her husband's regiment, the First Pennsylvania Artillery, when it joined General George Washington's army. During the Monmouth campaign her husband served initially in the infantry, and in the record-breaking heat of 28 June 1778 "Molly" brought water to the troops. In the final phase of the action, John Hays was ordered back to the guns. When he fell wounded Mary Hays stepped up with a rammer staff to take his place in the crew and keep the gun in action.

After her first husband died at the war's end, Hays married George McCauley, a comrade in arms of her former husband, but a man whom she subsequently left because of his shiftlessness. She supported herself as a laundress and nursemaid, never being able to collect a military pension. She died on 22 January 1832, in Carlisle, Pennsylvania, where a statue of "Molly Pitcher" commemorates her heroism.

HAZEN, MOSES. (1733–1803). Continental officer. Massachusetts and Canada. Born in Haverhill, Massachusetts, on 1 June 1733, Hazen served as the lieutenant of a ranger company in the Seven Years' War, seeing combat at Crown Point (1750), Louisburg (1758), Quebec (1759), and Sillery (1760). His burning of St. Ann's (Fredericton) and the murder of civilians there earned him a reputation for brutality that did not prevent his promotion to captain and a commendation from General James Wolfe. He settled in Montreal, where he

became a justice of the peace and the center of numerous controversies, including the seduction of a friend's wife. He also found himself regarded with suspicion by both sides, and arrested by each in turn. Left behind by the British retreat, Hazen joined General Richard Montgomery's forces for the operations against Quebec. During the retreat he clashed with Benedict Arnold and was charged with insubordination, but a court-martial acquitted him. Congress recompensed him for property destroyed by the British, and on 22 January 1776 commissioned him colonel of the Second Canadian Regiment. This unit, known as "Congress's Own" and "Hazen's Own," consisted mostly of French-Canadians. The regiment fought at Long Island, Brandywine, and Germantown.

An advocate of further operations into Canada, Hazen was engaged in planning and gathering supplies for the proposed Canada Invasion of 1778. After this misguided scheme was abandoned, Hazen proposed that a military road be constructed to the Canadian border, and in the summer of 1779 he was back in the north working on this project, which became known as "Hazen's Road." Recalled to New Jersey, he tried unsuccessfully to have Congress pay his regiment; but was told that no funds were available. On 29 June 1781 he was brevetted brigadier general, and on 27 September he took command of a brigade in the Marquis de Lafayette's Light Infantry Division. Just before the allied armies closed in on Yorktown, Edward Antill succeeded to the command of "Hazen's Own," which was now part of Hazen's new brigade. Having taken charge of prisoners at Lancaster, Pennsylvania, in 1782, he precipitated an embarrassing dilemma for Washington in the Huddy-Asgill Affair. Retiring 1 January 1783, Hazen settled on land he had bought in Vermont during the war. He died deeply in debt on 5 February 1803 in Troy, New York.

HEATH, WILLIAM. (1737–1814). Continental Army general. Massachusetts. Born at Roxbury on 13 March 1737, Heath was a farmer, militiaman, and politician before the Revolution. He represented Roxbury in the Massachusetts General Court in 1761 and again

from 1771 until its dissolution by General Thomas Gage in 1774. Then he became a member of the Provincial Congress of Massachusetts and of the committees of correspondence and safety. He described himself candidly as “of middling stature, light complexion, very corpulent, and bald-headed” (Heath, p. 15). Interested in soldiering from an early age, he read every military work he could get his hands on. He saw no action during the final French and Indian War but joined Boston’s Ancient and Honorable Artillery Company in 1765 and later became captain of his local militia company; as war approached he was active in rousing the militia. On 9 February 1775 the Massachusetts Provincial Congress appointed him one of its five brigadier generals. The first American general on the scene as the British retreated to Boston from Lexington and Concord, he ordered the initial dispositions for what became the siege of Boston. Promoted to major general of Massachusetts troops on 20 June, he was appointed a Continental brigadier general two days later. On 13 March 1776 he led the first detachment of troops from Boston to New York City and became Israel Putnam’s second in command when the latter arrived on 3 April.

Heath was elevated to major general on 9 August 1776 and a month later was one of three senior officers who voted in a council of war to defend New York City. Washington recognized Heath’s limitations and during the New York and New Jersey campaigns posted him where no major threat was expected. On 12 November Heath was placed in command of troops defending the Hudson Highlands. His best chance for distinction as a field commander resulted in the mismanaged diversion against Fort Independence, New York, on 17–18 January 1777. Washington wrote him privately that “your conduct is censured . . . as being fraught with too much caution by which the Army has been disappointed, and in some degree disgraced” (Twhig, p. 240). On 11 February 1777 Heath left Peekskill for a short leave. He reached Roxbury on 19 February and on 14 March had started back toward his headquarters when he received orders to succeed Artemas Ward as commander of the Eastern Department. The highlight of this tour of duty was his temporary custody of Burgoyne and the Convention army. He remained in Boston until 11 June 1779, when he left to join the main army on the Hudson. On 23 June he took command of troops on the east side of the river, the advance posts of which were then at Peekskill. He remained in the Highlands for the rest of the war except for the period from 16 June to 1 October 1780, when he was in Providence to handle the reception of the Comte de Rochambeau’s French expeditionary force. On 1 July 1783 he returned to his farm at Roxbury. He was a member of the state convention that ratified the Constitution, served as a state senator in 1791–1792, and then became a probate judge. He published his

valuable *Memoirs* in 1798. Heath was the last surviving major general of the Revolution when he died on 24 January 1814, in the house where he had been born.

HEISTER, LEOPOLD PHILIP VON.

(1707–1777). Hessian commander in chief. A veteran of many campaigns in Europe, Heister commanded the first contingent of seventy-eight hundred German troops hired by the British government for service in the American Revolution. These troops landed at Staten Island in early July 1776. Heister commanded the center of the British line in the Battle of Long Island, personally receiving the sword of General Alexander. He led the Germans in the action at White Plains, N.Y., on 28 October 1776. Disagreements with General William Howe and the German defeat at Trenton on 26 December 1776 led to Heister’s recall in 1777, to be succeeded by Knyphausen. Heister died back in Hesse on 19 November 1777.

HENRY, PATRICK.

(1736–1799). Revolutionary orator and statesman. Virginia. Born at Studley,

Virginia, on 29 May 1736, Henry failed twice as a storekeeper and once as a planter by the time he was 23. Deciding to try his luck at law, Henry passed the bar in 1760 without either formal education or even private study with a lawyer. He enjoyed impressive success in his new profession, and his sparkling performance in the Parson's Cause of 1763 established his reputation throughout Virginia. Two years later he became a member of the House of Burgesses, grabbing attention at his first session with his opposition to the Stamp Act. Proposing seven resolutions (29 May 1765), the last of which claimed that Virginia enjoyed complete legislative autonomy, Henry pressed his resolutions in a speech closing with the famous lines: "Caesar had his Brutus—Charles the first, his Cromwell—and George the third—may profit by their example..." Interrupted at this point by cries of treason, Henry supposedly said, "If this be treason, make the most of it." There was some confusion over how many resolutions passed, but Henry saw that the entire list was rushed off in unrevised form to the other colonies. Henry thus became a major political figure throughout the colonies, and for the next five years he dominated public life in Virginia.

Under Henry's leadership, the legislators met at Raleigh Tavern on 27 May 1774 after Governor John Murray, Earl of Dunmore dissolved the Assembly. On 23 March 1775 he urged armed resistance in a speech that declared: "Give me liberty, or give me death!" He had been a delegate to the first Continental Congress and was preparing to attend the second when he learned that Dunmore had seized the ammunition in the arsenal at Williamsburg. On 2 May 1775, Henry marched on Williamsburg with the militia of Hanover County, and two days later Dunmore reimbursed the colony for the powder. On 6 May, Dunmore outlawed "a certain Patrick Henry" for disturbing the peace. On 18 May the outlaw took his seat in Congress, but early in August he returned to Virginia to assist in military preparations. He was appointed colonel of the first regiment formed in Virginia, which made him the commander in chief of all state militia, but Henry's political enemies chose a Committee of Safety and put it under the control of Edmund Pendleton. William Woodford was given command of the force that ran Dunmore out of the colony. Henry was infuriated by this cavalier treatment and he also resented the attitude of the military committee of the Continental Congress, so on 28 February 1776 he resigned his commission and went home.

Henry promptly came back into the political arena when he was elected to the third revolutionary convention. In May he had a decisive part in drafting the Virginia constitution, and on 29 June he was elected governor. In this post he authorized the western operations of George Rogers Clark. Shortly before the end of his tenure, in the

summer of 1779, Virginia was hit by the first of the raids against which it was to show itself virtually helpless. In this initial operation, Admiral George Collier and General Edward Mathew did an estimated £2,000,000 worth of damage without losing a man.

Succeeded by Thomas Jefferson, his close friend and political lieutenant, Patrick Henry retired to a huge tract of land in Henry County, Virginia. In 1780 Henry returned to the state legislature, where he led the opposition to James Madison's efforts to reform the state's constitution. In 1781 he joined those who demanded an investigation of Jefferson's conduct as governor, initiating a feud that lasted the rest of Henry's life. Even though he opposed Jefferson's Statute for Religious Freedom, Henry again became governor, serving from 1784 to 1786. He opposed the Constitution on the grounds of states' rights, almost blocking its ratification in Virginia until Madison outmaneuvered him. Back in the legislature as a convinced antifederalist, Henry blocked Madison's election to the U.S. Senate and led the demand for a second Constitutional Convention.

In declining health, Henry left the assembly and returned to the practice of law. In January 1799 he consented to George Washington's request that he campaign for election as a Federalist to the Virginia House of Delegates, completely reversing political direction. He defeated young John Randolph in this last campaign, but died on 6 June 1799, before he could take his seat.

HERKIMER, NICHOLAS. (1728–1777).

New York militia general. Born near the present town of Herkimer, New York, Nicholas Herkimer was a militia lieutenant during the Seven Years' War. When the Revolution began he was active in patriot affairs in politically divided Tryon County, serving as chairman of the Committee of Safety. In 1776 he was promoted from colonel of militia to brigadier general. In July 1777 he led 380 militia to Unadilla, New York, for a conference with Joseph Brant, who had 130 Mohawk warriors with him. Herkimer hoped to work out some arrangement to keep Brant's Mohawks neutral, but the conference did not accomplish this purpose. After learning that a British

Hewes, Joseph

expedition led by General Barry St. Leger was approaching, and after getting little response from the militia when efforts were made to turn out 200 men for the defense of Fort Schuyler (Stanwix), Herkimer issued a proclamation on 17 July calling on all adult males to appear for service. Eight hundred men responded, and Herkimer led them to the relief of Fort Schuyler. Two days later, on 6 August, he led them into the tragic Oriskany ambush. Herkimer was seriously wounded and his army routed. About ten days later his leg was unskillfully amputated by a French surgeon of Benedict Arnold's command, who could not stop the bleeding. He died 16 August 1777.

HEWES, JOSEPH. (1730–1779). Signer. North Carolina. Born in Kingston, New Jersey, on 23 January 1730, Hewes moved to Edenton, North Carolina, in 1755, becoming a successful merchant. Reared a Quaker, he had left the sect by the beginning of the Revolution. He was elected to the colonial assembly in 1766 and in 1773 became a member of the Committee of Correspondence. He went to all the provincial congresses and in 1774 was elected to the Continental Congress. Active on several committees, including the Secret Committee responsible for getting supplies for the Continental army, he signed the Declaration of Independence. He was not reelected in 1777. Returning to Congress in 1779, he died on 10 November.

HEYWARD, THOMAS, JR. (1746–1809). Signer. South Carolina. Born in Saint Helena Parish,

South Carolina, on 28 July 1746, Thomas Heywood Jr. studied in the Middle Temple before becoming a South Carolina lawyer in 1771. From 1772 to 1775, he sat in the state assembly, and in 1775–1776 he went to the Provincial Congresses in Charleston, serving as a member of the Council of Safety. As captain of a militia artillery battalion, he helped to defend Charleston from British attack in late 1775. In February 1776 he was a member of the committee that wrote the state constitution. Sent to the Second Continental Congress, 1776 to 1778, he signed the Declaration of Independence. He returned to Charleston and became a circuit judge. On 4 February 1779 he was wounded while leading the successful attack on the British at Port Royal Island. He was captured the following year when the British took Charleston. Initially paroled, he was one of a group of political leaders arrested by the British and sent as prisoners to St. Augustine, Florida, in August 1780, where they were kept until they were exchanged in July 1781. He sat in the state legislature from 1779 to 1780 and from 1782 to 1790, and served as circuit judge until 1789. He took part in the state's ratifying convention, supporting the Constitution. He also served in the state's Constitutional Convention of 1790, at which time he retired from public life. He was one of the founders and the first president of the South Carolina Agricultural Society in 1785. He died on 22 April 1809.

HICKEY, THOMAS SEE *Mutiny of Hickey.*

HILLSBORO RAID, NORTH CAROLINA. 12 September 1781. On 6 September 1781, Loyalist Colonel David Fanning issued a call for volunteers. Within a short time he had 950 men under his command. He then undertook a long-cherished scheme of capturing rebel Governor Thomas Burke of North Carolina. Reaching Hillsboro the morning of 12 September, having marched all day and all night, he got possession of that place after a skirmish in which he lost only one man (wounded) but killed fifteen Patriots, wounded twenty, and captured more than two hundred. Among his prisoners were Burke, members of the governor's council, several Continental officers, and seventy-one Continental soldiers. He also liberated a number of Loyalist and British soldiers. Leaving Hillsboro at noon, the Loyalist raiders had covered eighteen miles when

they were attacked at Cane Creek (Lindley's Mill) by four hundred Continental soldiers under the command of General John Butler. Colonel Hector McNeil, in command of the advance guard, was lax and thus surprised by the Patriots. He and seven other Loyalists were killed.

To secure his retreat, Fanning then launched an attack. In a four-hour fight, the rebels were finally routed with a loss of twenty-five killed, ninety wounded, and ten captured, but Fanning was badly wounded, twenty of his men were killed, and ninety were wounded. Leaving Fanning and the other wounded behind, Lieutenant Colonels Archibald McDugald and Archibald McKay and Major John Raney succeeded in eluding pursuit with the rest of the expedition until it linked up four days later with the relief column led by Colonel James Henry Craig from Wilmington.

Fanning's coup was a brilliant success. It shook Patriot confidence throughout the South.

HINRICHS, JOHANN VON. (c.1750–1834). Hessian officer. Arriving with the first contingent of German troops to America in 1776, he served as a jäger lieutenant until promoted to captain in early 1778. He received a severe chest wound after the British occupied New York City and was wounded several other times. In the Charleston operations of 1780 he was actively engaged and left an important historical record in his diary. Although he was schooled as an engineer and distinguished himself during the Revolution as a jäger, he transferred to the infantry in 1784. Soon thereafter he entered the Prussian service, was raised to the nobility, and died in 1834 as a lieutenant general.

HISTORIOGRAPHY. The historiography of the American Revolution always has been a much larger subject than the historiography of the War of Independence. Consider comments by two of the Revolution's major participants. For John Adams, the real Revolution was the huge change in Americans' attitudes as they abandoned being British. That change was over before a shot was fired. But for Philadelphia's Benjamin Rush, the end of hostilities marked the

beginning of the real Revolution, the change in how Americans lived their lives.

The consequence is that much of the Revolution's most sophisticated study has paid scant attention to the long, bloody, difficult conflict that actually achieved independence. For scholars in Adams's long shadow, primarily interested in problems of language and consciousness, the interest has been to probe the destruction of British identity and the creation of what Gordon Wood has called "the American Science of Politics." For scholars more inspired by Rush, the experience of places, individuals, and groups has loomed larger than campaigns, battles, and generalship.

Most would agree with the proposition that the military narrative is not strong enough by itself to carry the larger Revolutionary story. This is unlike the Civil War, in which the story of armed conflict also is the story of failed southern white nationhood, of slavery's destruction, of African American freedom, and of the transformation of the fundamental terms of American existence. Yet the Revolutionary War is the second longest in American history. Its roughly 30,000 American casualties cannot possibly equate to the Civil War's 630,000, but they struck a much smaller population. Almost every place except central New England saw actual conflict at one point or another.

As Washington Irving's fictional Rip Van Winkle found, the war did leave America a vastly different place. Some of its historians have dealt only with the movement of troops, but many others have understood the need to see the Revolutionary War in all of its complexity. Beginning in the second half of the twentieth century, the problems of military history and revolutionary transformation have come together in sophisticated ways.

ACCOUNTS OF PARTICIPANTS

In the beginning there were the participants. No military leader of the Revolution on either side produced a memoir comparable to the majestic achievement of Ulysses S. Grant. We cannot know the direct, first-hand experiences and remembered consciousness of Washington, Charles Lee, Nathanael Greene, and Henry Knox or of Thomas Gage, William Howe, John Burgoyne, and Henry Clinton.

But ranging from slightly below their level to ordinary privates, participants did believe that their stories were worth recounting. Many of these were published during the nineteenth century, and in 1968 the *New York Times* and Arno Press assembled most of the published editions into one series, called Eyewitness Accounts of the American Revolution (1968). The books show the Revolutionary War through many eyes and from many perspectives, and they are of great value. The memoirs of

Hessian Major General Friedrich Adolphus Riedesel provide the best single source on Burgoyne's failed campaign down the Champlain-Hudson corridor in 1777. Virtually every historian of the war in the North draws on the rich diary kept by Connecticut private Joseph Plumb Martin during his long service in the Continental army. Between those two extremes, the *Times* series presents a wide variety of experiences, at all ranks and from all sides.

In the aftermath of the actual war, writers set out to create more formal histories, most of which are reprinted in the *Times* series. Necessarily, they took sides. For New York Loyalist Thomas Jones (as for others of his ilk), the story told in his *History of New York during the Revolutionary War* (2 vols., 1879) was of illicit, ungrateful rebellion. For the South Carolina physician David Ramsay, the tale in his *History of the American Revolution* (2 vols., 1793) was of heroic resistance and American liberty. Though Ramsay took direct part in the conflict, his real interest was political rather than military. Plagiarism was not a writerly sin in his time, and Ramsay unashamedly drew much of his account from Britain's *Annual Register*. The playwright Mercy Otis Warren of Boston, whose brother Joseph died at Bunker Hill, gave the war much more extended treatment. In her three-volume *History of the Rise, Progress, and Termination of the American Revolution* (1805), the conflict takes up half of the first volume and all of the second. But Warren was partisan in more than simply taking the American side. For her, the real point of the Revolution was not simply American independence, but the triumph of the Jeffersonian vision (limited rather than active government, agriculture-based development, and civil liberties) of what independence should mean.

As the Revolutionary generation aged and memories faded, emphasis shifted. Ordinary men and occasionally ordinary women who had served with the Revolutionary army found reason to recover and tell their personal stories. That was the only way to get the pensions owed them from the federal government, and frequently it meant overcoming the suspicions of latter-day clerks and budget-conscious Congressmen. Their petitions eventually found their way to the National Archives, where they became the stuff of genealogy.

Historians have realized that these accounts present a mosaic of first-hand Revolutionary experience. John C. Dann assembled a collection of them in 1980 as *The Revolution Remembered*, covering the whole war from the firefight at Lexington in 1775 to Washington's departure from command in 1783. However rich the volumes in the *New York Times* series, there is no need anymore to rely on it alone for contemporary perspectives. The full riches of the tales in the archives remain to be exploited. Two studies by Alfred F. Young demonstrate the possibilities. *The Shoemaker and the Tea Party: Memory and the American Revolution* (1999) shows the surprises and

changes in one very ordinary man's life. *Masquerade: The Life and Times of Deborah Sampson, Continental Soldier* (2004) turns its subject from a figure of curiosity into a boundary prober (a woman who probed the boundaries of gender and opportunity) who redefined herself in uniform for fourteen undetected months and who grasped the Revolution's possibilities. Many women in addition to Sampson had direct military experience. A few others disguised themselves, though only briefly. Most were "women of the army." Holly A. Mayer tells their story in *Belonging to the Army: Camp Followers and Community during the American Revolution* (1996).

THE NINETEENTH CENTURY

While the veterans were telling their stories, nineteenth-century historians were embarking on other tasks. George Bancroft, in particular, set out to tell the American story in epic terms. During his studies in Germany, Bancroft felt the influence of the philosopher G.F.W. Hegel, who insisted that the course of history led to an increase in human freedom. During this time, Bancroft produced a *History of the United States from the Discovery of the Continent* (6 vols., 1888) that construed the entire tale in terms of the rise of American liberty. Bancroft was a staunch follower of President Andrew Jackson, and like Warren before him, he had a political agenda. The war years filled one and one-half volumes. His rhetoric could be overblown, as in his account of the spread of the news of fighting at Lexington and Concord:

Darkness close upon the country . . . but it was no night for sleep. Heralds by swift relays transmitted the war message . . . till village repeated it to village; the sea to the back woods; the plains to the highlands. . . . its loud reveille broke the rest of the trappers of New Hampshire. . . . The hills along the Hudson told to one another the tale. As the summons hurried to the south, it was one day at New York; in one more at Philadelphia. . . . Crossing the Potomac near Mount Vernon, it was sent forward without a halt to Williamsburg.

Bancroft's German training had given him a strong positivistic sense of evidence as well as the capacity for high-flown generalizations about the course of history. Even at its most overblown, his prose rested on hard fact.

Benson J. Lossing's two-volume *Pictorial Field Book of the Revolution* (1860) was another monument of the era. Intended for general readership, it was a compilation of accounts of battles, capsule biographies, and verse, told in good part in the first person as Lossing explored the Revolution's sites. Like the enormous county histories that were popular at the time, Lossing's volumes were lavishly illustrated with steel engravings of historic places, natural features, the dwellings of great men and Lossing's

hosts on his travels, and such latter-day achievements as a suspension bridge across the Niagara River below the Falls. Like Bancroft's account of the history of a United States that did not yet exist, Lossing's volumes indiscriminately included details from the whole colonial era. Its combined total of nearly fifteen hundred closely packed pages presented a formidable reading task. But the book is one to be leafed through and perhaps consulted for facts rather than taken as a narrative or analytical account.

Another nineteenth-century project was simply to assemble and preserve primary materials before the paper crumbled and the ink faded on aging manuscripts. Overt interpretation could wait. The contents of European and American archives, town records, muster rolls, and officers' reports were more important. Yet these collections were haphazard and often incomplete. Peter Force's nine massive volumes of *American Archives* (1837–1853) provide immense detail on the years from 1776 to 1778, but then they stop. Force originally planned at least twenty volumes, funded by the Department of State. Publication stopped when Secretary of State William Marcy withdrew funding. Edmund Bailey O'Callaghan's fifteen-volume *Documents Relative to the Colonial History of New York* (1853–1887) include three on the war years. Half a century later, New York State archivists assembled an alphabetical list of soldiers who served in the Revolution. Such collections are invaluable for the war's social history. But to put faces on that list of names one must make a long trawl through county and town histories.

THE TWENTIETH CENTURY

After the turn of the twentieth century, scholarship on the Revolution turned in different directions. One, reflecting America's own emergence as an imperial power, was toward appreciation of Britain's difficulties in dealing with the cantankerous, disobedient, tax-resisting colonists. Another, drawing on the open class divisions of industrial capitalist society, was to break down the hitherto unitary concept of undifferentiated "Americans" into groups that conflicted with one another over the terms and conduct of American life. The first tendency is associated primarily with the work of Charles McLean Andrews and the second with that of Carl Lotus Becker and Charles A. Beard. Yet neither they nor their students and disciples dealt with the problems presented by the actual war.

For the most part, study of the war remained at the level of accounts of campaigns and battles or of particular units. Frequently, that meant recounting familiar tales about a half-organized rabble in arms who managed somehow to face down the might of Britain's majestic, highly trained, well-disciplined, and well-equipped armed forces. Virtually all such writing construed the conflict solely in terms of one white group facing down another white group, with virtually no attention paid to the importance

of the war from the point of view of both Native people and black slaves. To such writers, these people were simply problems to add to the American grievance list against Britain. John Richard Alden's mid-twentieth-century synthesis dismissed Natives, particularly, as no more than "savages" or, in one memorable phrase, "fickle, red-skinned allies." (*The American Revolution*, p. 139)

The British perspective. Matters changed during the twentieth century's second half. One reason was the Revolution's bicentennial, which provoked interest in (and funding for) studies of virtually every aspect of the Revolutionary era, the war included. Another was the emergence of a new style of military history, whose practitioners were interested not simply in armed hostilities but also in the entire social, economic, and cultural experience of warfare. Still another was a broadened scope of American social history, taking into account not only the class divisions that preoccupied early-twentieth-century "progressive" historians such as Becker and Beard but also the experiences of race and gender. It also became possible to take the experiences of both major sides seriously without waving either the Stars and Stripes or the Union Jack. The problem ceased to be one of justifying either the British or the American position and shifted to understanding a complex, total, and in many ways tragic historical process.

An important early statement came in 1964 from Oxford military historian Piers Mackesy. In *The War for America, 1775–1783*, Mackesy sought to understand the whole British experience of a distant, lost war from which Britain extricated itself slowly and painfully but ultimately successfully. Mackesy took London's perspective, in the sense that he set out to understand the problems of logistics, grand strategy, and politics that surrounded actual campaigning. He came closer than any previous historian to appreciating Britain's difficulties. As one instance, though British soldiers were better trained man-to-man than American ones, each of the former also represented a very high investment. Their lives were not to be squandered because every casualty was very difficult and very expensive to replace. This was one reason for the reluctance of British strategists to provide the forces needed or commanders to commit them in battle.

Mackesy also understood the sheer difficulty of supplying the distant troops. Previous accounts of the inland campaigns of Burgoyne in northern New York and of Charles Lord Cornwallis in the South had treated their problems of supply as, in effect, matters of happenstance or foolishness. The tale of Burgoyne's mile-long baggage train, laden with his and his officers' china, good food, and fine wine as well as with the troops' basic needs, is well-known. But Mackesy linked it to the larger problem that any British force faced as soon as it advanced more than a few miles from open water.

Mackesy's principal achievement was to explore the problems that the British effort faced at the very highest levels, among ministers and commanding officers of the army and the fleet. Far from being unified, they were a squabbling, conflicted lot, wracked with mutual antipathy, self-centered ambition, clashing goals, and poor coordination. Lord George Germain, who was war minister for much of the conflict, had no doubts about the goal he was pursuing in the king's name (although privately he wrestled with the lasting shame of his supposed cowardice at the Battle of Minden three decades earlier). His generals and admirals, however, did have doubts. It was impossible to recruit many of Britain's most experienced generals, such as Sir Jeffrey Amherst. But the first commander in chief, Thomas Gage, knew America well. He had replaced Amherst as commander, and his wife, Margaret Kemble, was American. Among the commanders in chief and lesser generals who followed him, both William Howe and John Burgoyne were opposition members of Parliament.

Mackesy also understood that from Britain's viewpoint the war during its course turned into a global conflict. To Americans, the combined French-American victory at Yorktown in 1781 marked the end of the struggle. But to British policy makers another problem loomed from 1778: protecting the West Indies from the combined force of the French and Spanish navies. The Royal Navy did so successfully in 1782 at the Battle of the Saints, capturing the French commander Admiral de Grasse. Yet even with that victory, Britain's problems were not over. The very last armed conflict between representatives of the two sides took place in India, in 1783. It ended without conclusion, thanks to the arrival of the news of a preliminary peace. Mackesy succeeded in turning a favorite American phrase to describe the opening bullets at Lexington in 1775—"the shot heard round the world"—into a statement of literal fact.

Three major works. Three important books by American scholars followed directly on Mackesy's achievement and in the direction he charted. John Shy, a West Point graduate with a Princeton doctorate in history, explored the place of the British army in the coming of the Revolution in *Toward Lexington* (1965). Shy's interest was not at all in the conventional stuff of military history; he was writing about a peacetime army. He understood that the army's very presence was a major irritant to the colonials and sought to explore the reasons. As one reviewer noted, Shy broke free of "headquarters" history and explored the army's role in American society, particularly the ways in which both soldiers and officers came into conflict with their respective civilian counterparts. Sixteen years later, Sylvia Frey extended this theme into the war years with *The British Soldier in America: A Social History of Military Life in the Revolutionary Period* (1981). Ira Gruber returned to the level of generals and generalship in *The*

Howe Brothers and the American Revolution (1972). Using previously untouched British archives, he probed the connections between the two brothers' political ambitions, their commissions both to wage war and to negotiate peace, and their duty as joint commanders in chief between 1776 and 1778. Among the problems that Gruber confronted was William Howe's reluctance, particularly, to follow through whenever he seemed to have an advantage over his opposite number, George Washington.

Mackesy's treatment of the large issues of the war from a British (though not chauvinistic) viewpoint virtually required an American-framed riposte on a similar scale. In 1971 Don Higginbotham provided that response with *The War of American Independence: Military Attitudes, Policies, and Practice, 1763–1789*. As one British reviewer noted, Higginbotham's great theme was to link military experience on the American side to the sort of people Americans were, meaning both their long experience as colonials and their immediate needs as revolutionaries. Mackesy had shown the infighting and sheer inefficiency of the British command and logistic structures, leading to their inability to achieve what policy makers and strategists wanted. Higginbotham began with the fact that though the rebellious colonials had ample experience of subordinate service under British leadership, they had no experience at all at the levels of organizing, financing, supplying, and fighting a major war by themselves. Their eventual success at the first three underpinned their ultimate success at the fourth. Like Mackesy, Higginbotham blended policy level, strategic level, and soldier level history into a coherent account. Taken together, the two books form a remarkably complementary pair.

Shy returned to the subject of the Revolution in 1976 with a collection of essays, *A People Numerous and Armed: Reflections on the Military Struggle for American Independence*. Published in the aftermath of America's own losing experience in Vietnam, the volume asked what was genuinely revolutionary about the armed conflict. Its centerpiece was his previous contribution to *Essays on the American Revolution* (1973), titled "The Military Conflict as a Revolutionary War." Shy knew better than simply to stamp the American struggle with a latter-day mold constructed from the writings and experiences of Trotsky, Mao, and Giap. But he did understand what already was implicit in the work of Mackesy: the British were using conventional European military means to attempt to suppress an extra-European attempt at revolutionary social and political change. Taken this way, several old-chestnut questions found new answers. One is whether the British "lost" the war through their mistakes or the Americans "won" it by their virtues and the help of their French friends. Another is whether on the American side it is more important to consider the Continental army or the separate state militias. The real point, Shy suggested,

was that from the American perspective the whole experience of war between 1775 and 1781 was “a social process of political education that can be explored and should be analyzed” (*The American Revolution: The Military Conflict Considered as a Revolutionary War*, p. 156).

Culture and the military. One major general development in Revolution studies during the twentieth century’s third quarter was an extended exploration of political culture, especially in the work of Bernard Bailyn and Gordon S. Wood. Primarily, this meant the study of civilian writings as Americans wrestled with the problem of creating their eventual republic, but as both Higginbotham and Shy understood, the problem spilled over into military life. Charles Royster rose to the task of linking culture and warfare in *A Revolutionary People at War: The Continental Army and American Character, 1775–1783* (1979). Densely argued and not reader friendly, Royster’s book set out to bridge the whole gap between conventional (or even new-style) military studies and cultural development. One of his achievements reached right back to Bancroft’s highly dramatized account of the spread of the war news from Lexington in 1775. Bancroft had rightly understood that as the messengers rode north, west, and south, they precipitated a general crisis. Royster described what ensued as *rage militaire*, (martial enthusiasm) and he explored both that phenomenon’s extent and its limits.

In particular, Royster picked up on a point that military historians long had understood. Whatever the importance of the militia, the Continental army had perdured throughout the war and ultimately could claim victory. Royster explored both the tensions between the fact of what Washington would describe as a “respectable army” and a culture that regarded standing armies as dangerous. He also considered the emergence of the army’s officer corps as a self-conscious gentry, however absurd their pretensions appeared to the real gentlemen and outright aristocrats whom they faced. One outcome of the Revolution is the subordination of military might to political control in American life. Royster turned that outcome into something much more complex than Washington’s personal squelching of the Newburgh Conspiracy and his resignation from command in 1783.

Military supply. Culture alone, however, does not keep an army in the field. Supply is not a glamorous subject, but both Mackesy and Higginbotham understood its great importance. E. Wayne Carp addressed the problem squarely in *To Starve the Army at Pleasure: Continental Army Administration and American Political Culture, 1775–1783* (1984). Carp’s insights fitted both with Royster’s and with the earlier economic history of Curtis P. Nettels, *The Emergence of a National Economy, 1775–1815* (1962), developing the point that both the absolute needs of the army and the experience of the people charged

with meeting those needs began the process of transforming divergent provincial and local economies into a single structure.

The local context. James Kirby Martin and Mark Edward Lender brought many of these themes together in their student-level synthesis, *A Respectable Army: The Military Origins of the Republic, 1763–1789* (1982). At a more specialist level, so did the collection edited by Ronald Hoffman and Peter J. Albert, *Arms and Independence: The Military Character of the American Revolution* (1984). Other historians probed the question of the war and its effects from the very different perspective of local and group experience. Unlike general arguments about strategy, political culture, and supply, their studies were concerned with particular people in specific places.

One pioneer study was Robert Gross’s account of *The Minutemen and Their World* (1976). Short and elegant, Gross’s book worked within the then-dominant paradigm of New England town studies to examine how the very ordinary farmers, artisans, and gentlemen of Concord, Massachusetts, came to the point of confronting British regulars at the bridge on the edge of their town on the morning of 19 April 1775. Their town’s moment of actual armed conflict was brief, but it was part of a much larger transformation.

Gross’s townsmen rallied, of course, because messengers like Paul Revere brought them the news that “the Regulars are coming out.” Revere’s ride and the firefights that followed were the moment when uneasy peace bled into conflict that British soldiers and New Englanders alike had been expecting. *Paul Revere’s Ride* (1994), by David Hackett Fischer, explored that tense moment. Like Royster, Fischer wrote in George Bancroft’s long shadow, but more than Bancroft he understood that what happened was the result of intense preparation and organization. New Englanders had risen spontaneously and incoherently in September 1774, when news spread that General Gage had seized the gunpowder in the Cambridge powderhouse. They were quick to rally the following April, and this time they were disciplined and ready. The damage they inflicted on retreating British troops and the impromptu siege that they imposed on occupied Boston sprang from those facts. So did their Pyrrhic victory at Bunker (Breed’s) Hill in June, when they inflicted unacceptable losses on the British before finally retreating.

The war in Connecticut. For most Massachusetts people the war was effectively over after the British withdrew from Boston in March 1776. But for their Connecticut neighbors it had barely begun. The British occupation of New York City and Long Island the following summer made Long Island Sound into a permanent war zone and put great pressure on the people on that zone’s northern side. Richard Buel Jr. explored that problem in *Dear*

Liberty: Connecticut's Mobilization for the Revolutionary War (1980). Like Carp, his prime concern was how people supplied the army. Much more than Carp, however, he dealt with the demands that doing so placed upon civilian life. Beyond supply, Connecticut people had to deal with constant raiding across Long Island Sound. They never endured a major campaign, but the war was on their doorsteps, particularly in 1779, when the British attacked New Haven and destroyed the towns of Fairfield and Norwalk. In Buel's estimation, Connecticut did not fully recover from the war's costs until into the nineteenth century.

NEW YORK WARFARE

Of all the founding states, New York probably suffered longest and most intensely. The British took over its "southern district"—New York City and vicinity—just after independence was declared. They stayed there until 1783, withdrawing only when the Treaty of Paris required them to go. The state lost two of its counties when Vermont seceded from it early in 1777. It experienced not only invasion by the largest seaborne armada the modern world had seen when the Howe brothers drove Washington from Brooklyn and Manhattan, but another major invasion a year later when Burgoyne came south from Montreal. In its western reaches, what had been a mixed society of Native and white people collapsed into a civil war that seemed to pit all against all and that lasted for years. With so much and such extended conflict, it is not surprising that the state generated a rich wartime historiography.

Barnet Schechter's *The Battle for New York: The City at the Heart of the American Revolution* (2002) brings much of that seven-year agony into a single account. Schechter's interest is much larger than the battle of New York that followed immediately on the British invasion, although that does comprise somewhat more than half of his account. To his mind, New York City remained central throughout the war. As he shows, Washington would have agreed, wanting until the very end to achieve military recompense for the humiliation he had suffered at the hands of the Howes. The fiasco of British policy in 1777, when Burgoyne's grand expedition came to nothing and when Howe decided to take Philadelphia, formed part of the larger battle for the city. Within New York, only the western conflict does not fit into Schechter's framework.

Taken on its own, the Saratoga campaign of 1777 has generated a great deal of writing. The most recent complete account is Richard Ketchum's extended narrative, *Saratoga* (2002). But Max Mintz's *The Generals of Saratoga: John Burgoyne and Horatio Gates* (1990) develops the human interest point that the two had known each other since they joined the same British regiment at

the entry-level rank of subaltern during Britain's long contest with the French. That Burgoyne climbed to fame, wealth, and a seat in Parliament while Gates left the army and settled in Virginia, speaks to the large differences between the two sides. It also lends poignancy to their famous exchange at the surrender, when Gates told Burgoyne that he was "very glad" to see him and Burgoyne broke gentlemanly form by replying that he was not glad to see Gates at all.

War against Native peoples. New York's other great conflict was westward. Irregular war broke out in 1777 as Lieutenant Colonel Barry St. Leger led an expedition of regulars, Loyalists, and Native fighters east from Oswego to link up with Burgoyne. The sharpest conflicts came that summer as Patriot militia blundered into slaughter in a ravine near Oriskany, and in 1779, when an American expedition under Generals John Sullivan and James Clinton set out to ravage the country of the Six Nations.

But Isabel Kelsay's more-than-full-length biography, *Joseph Brant: Man of Two Worlds* (1984), more than compensates. Brant acquired a ferocious, Atlantic-spanning reputation, but Kelsay shows both him and his people as caught up in a complex struggle in which they sought their own best interests on completely rational grounds. They were not at all the "merciless Indian savages whose known rule of warfare is an undistinguished destruction of all ages, sexes, and conditions" whom Jefferson described in the Declaration of Independence. Kelsay shows as well that this struggle was not entirely racial; many of the people whom the highly cultured Brant led in combat were white, not Native at all. Like their settler neighbors, the nations of the Haudenosaunee, the Iroquois Confederation, had split. For each of these convoluted sides, the Revolutionary War amounted to a total conflict that, in fact, did end in mutual "undistinguished destruction."

Colin Calloway has expanded this theme in what is the most comprehensive account of warfare against Native Americans in *The American Revolution in Indian Country: Crisis and Diversity in Native American Communities* (1995). Calloway understands that to speak simply of "Indians" is to phrase the subject so broadly as to render it meaningless. Instead of synthesizing, he offers close descriptions of eight separate Native communities, from Abenaki people near the St. Lawrence to Choctaws on the Mississippi. Like Kelsay, Calloway understands that Native people split, that they became totally caught up in the war, and that no matter which side they chose, they got little good from the Revolution at all.

Many of the same points emerge from modern studies of the southern interior, including Henry Lumpkin's *From Savannah to Yorktown: The American Revolution in the South* (1981) and such anthologies as *An Uncivil War: The Southern Backcountry during the American Revolution*

(1985), edited by Ronald Hoffman and Peter Albert. For southerners the duration of civil conflict was shorter than for New Yorkers and the Iroquois, really erupting only when British strategy turned southward in 1779. The British hope was to find loyalist support, which did exist. But the reality was to tear the South's tri-racial society to shreds. Cherokee Indians already had experienced Patriot wrath for joining the British side, but they had negotiated their way out of a losing situation at the price of surrendering a huge amount of land.

Impact on Black Americans. In the South and North alike, enslaved and free black people also became part of the Revolutionary struggle. The era saw the beginning of western-hemisphere slavery's long, difficult destruction, and in important ways the war opened into a struggle for black liberation. But as with Native and white people, the broad category "black" is far too simple. On both the British and American sides there were white people who were bothered by slavery and other white people who cared not at all. Some black people found their own freedom under the Union Jack, others under the Stars and Stripes. British General Lord Cornwallis disgraced himself by expelling black people from his ranks during the siege of Yorktown. But to his credit, Sir Guy Carleton, the final commander in chief, refused to permit victorious revolutionaries to remove self-freed slaves from transports about to depart from New York.

The full story of black soldiers remains to be told. But it is explored by Benjamin Quarles (*The Negro in the American Revolution* [1961]) and Sylvia Frey [*Water From the Rock: Black Resistance in a Revolutionary Age* (1991)]. Sydney and Emma Kaplan provide a great deal of evidence in *The Black Presence in the Era of the American Revolution* (1989), including a brief discussion of the so-called Black Regiment of Rhode Island. George Washington's own journey, from rejecting the black men among the New Englanders who besieged to including one largely black Rhode Island company among the troops making the final assault at Yorktown, is described by Henry Wiencek in *An Imperfect God: George Washington, His Slaves, and the Creation of America* (2003).

The Rhode Island Black Regiment deserves a full treatment. But the most famous black unit of the era was Lord Dunmore's Ethiopian Regiment, recruited from among slaves "pertaining to rebels" by Virginia's final royal governor late in 1775. By then Dunmore's own safety required that he be on shipboard in Chesapeake Bay, and his proclamation helped rally white Virginia opinion in favor of independence. Nonetheless, about eight hundred black men made their way to the British, and the uniforms he provided bore the motto "Liberty to Slaves."

Inoculation against smallpox. Sadly, most of them perished in the smallpox epidemic that was breaking out at the same time they tried to claim their freedom. Elisabeth Fenn's *Pox Americana: The Great Smallpox Epidemic of 1775–82* (2001) shows how the war between human beings and the *variola major* virus for control of human bodies intersected with the war of humans with one another for control of America. As she demonstrates, one of Washington's great achievements as the American commander was to require that his soldiers undergo the dangerous process of inoculation rather than wait for the disease to come and take them.

EARLY TWENTY-FIRST CENTURY

As of 2005, Washington himself is the prime subject of three of the most recent studies of the Revolutionary period. Each has received wide attention. All are part of a general surge of interest in the "founding fathers" on the part of writers, publishers, and the general reading public. One of them, Joseph Ellis's *His Excellency: George Washington* (2004), is a biography in snapshots, devoting two chapters to the war years. In the spirit of his earlier writing, Ellis unashamedly rejects the social history project, presenting what some might call "traditional (narrative, heroic) American history" in virtually pure form.

The other two are more tightly focused in time and much more ambitious intellectually. David Hackett Fischer's *Washington's Crossing* (2004) is in the spirit of his earlier close study, *Paul Revere's Ride*. Fischer rejects all determinism, arguing strongly that historians must deal in the language of change and contingency. Nowhere is this more true for him than in the study of war. But in another sense he draws deeply on social historiography, including its recognition that structures do count. Taking as his theme Emmanuel Leutze's famous painting, *Washington Crossing the Delaware* (1850), he shows that far from being latter-day patriotic bombast, the canvas tells a great deal about the sort of people whom Washington led against Hessians at Trenton and Princeton at the end of 1776, when the Revolution's fortunes and prospects looked very dark. Reaching beyond that core group, he goes on to explore the lives and situations of all ranks among the Hessians Washington attacked, their British allies, Washington's own soldiers, and the civilians who surrounded them all. One of his points is to contrast the two sides in the largest terms, but also to show each as presenting a different face of emerging modernity. The face of the British and their hired Hessians was of hierarchical obedience for the sake of a common cause. The face of the Americans was of voluntary adherence, again for the sake of a common cause. Neither side was capable of fully understanding the other. The result is both a grand

narrative of the first two years of the war and an intense dissection of the participants.

David McCullough's project is very similar in *1776* (2005). His goal is simply to describe one intense year in the fullest possible narrative detail, without theorizing or academic controversy. But, like Fischer, he understands that during that year, a very large number of human beings became caught up in events that were not wholly or even largely of their choosing and that turned on the most fundamental questions that they were capable of imagining.

In one sense, early twenty-first-century accounts of the Revolutionary War have returned full circle to the themes running through the patriotic narratives of Mercy Otis Warren and George Bancroft. In this they were prefigured by the strong emphasis on traditional military history by Robert Middlekauff in *The Glorious Cause: The American Revolution, 1763–1789* (1982). Taken this way, they can be seen as in reaction to the concern with the experience of minorities and subordinates and to the interest in internal conflict that ran through much of the social history movement of the second half of the twentieth century. Abandoning overt analysis, their authors opt to tell highly readable stories. But no reaction can be complete. Taken in another way, Fischer and McCullough attempt to present a picture of the Revolutionary War not so much in the spirit of George Bancroft, with his unashamedly purple prose, as in the spirit of another great nineteenth-century American writer who is read much more often now than Bancroft: the poet Walt Whitman. Whitman sought to grasp the full complexity of American life in his time. Perhaps the full complexity of the Revolutionary War still eludes writers, at least in terms of a single comprehensive account. But anybody who chooses can learn a great deal about it, particularly if the reader finds that one book leads to another, and then another.

HOBKIRK'S HILL (CAMDEN), SOUTH CAROLINA. 25 April 1781. When Charles Cornwallis advanced into North Carolina after the Battle of Cowpens, military operations in South Carolina were placed in the hands of Francis, the Lord Rawdon. The principal British post outside Charleston was Camden, the keystone of a defensive arch extending from Georgetown through Camden to Ninety Six and on to Augusta, Georgia.

Major General Nathanael Greene returned to South Carolina after General Cornwallis withdrew to Wilmington, North Carolina. Greene commenced operations at long range by detaching Lieutenant Colonel Henry Lee's Partisan Legion to cooperate with Colonel Francis Marion, in part because Rawdon had sent Colonel John Watson with some 500 men to destroy Marion's partisans in the Pee Dee swamps. Greene expected Lee to help block Watson's return to Camden. After covering 140 miles in 14 days, including three days spent crossing the Pee Dee, Greene reached the Camden area. Greene wanted Sumter to join the main army for an attack on Camden, but Sumter did not do so. (See the map "Camden and Vicinity" for Greene's approaches to Hobkirk's Hill and the subsequent battle.)

Greene's arrival failed to surprise Rawdon because Tory agents had continually sent news of his progress to Camden. After Lieutenant Colonel William Washington's dragoons probed British positions on 20 April, Greene learned Camden's fortifications were too strong to be frontally attacked. The Americans then camped on Hobkirk Hill, over a mile outside Camden, and began harassing the British. (The ridge on which the battle was fought is known as Hobkirk Hill, but the battle has, through common usage, become known as Hobkirk's Hill, and that use is continued here.)

On 21 April, Greene learned that Watson was moving toward Camden. To intercept Watson, Greene left Hobkirk Hill and moved east of Camden. The road system would not permit artillery movement so the guns were sent toward Lynches Creek for safety. When Lee and Marion successfully blocked Watson, Greene returned to Hobkirk Hill on 24 April.

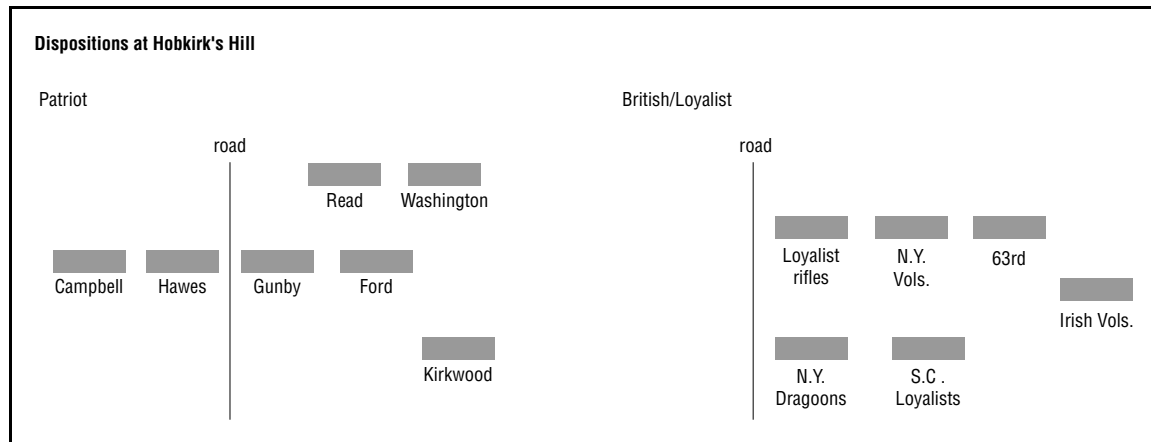

Table 1. THE GALE GROUP.

Rawdon was thoroughly familiar with Camden's defenses since he had been posted there since the summer of 1780. With his forces garrisoning scattered outlying posts, and short on supplies and provisions, Rawdon met Greene's threat with skill and audacity. Rawdon was already well-informed of Greene's situation when, on the night of 24–25 April, an American deserter—probably a drummer named James Jones from the Maryland Line—reported that Greene's artillery had been sent away, that Sumter had not arrived, and that Greene's men lacked supplies. The deserter also related Greene's troop dispositions. Rawdon assembled every available man, including convalescents and musicians, and prepared an attack for 25 April.

SETTING AND DISPOSITION

Hobkirk Hill is a sandy ridge north of Camden. The long axis of the hill runs east-west and the Great Road (now Broad Street) from Camden to Waxhaws crosses over about its midpoint. During 1780 the road had been widened to ninety feet. The hill's western slope was somewhat protected by the Wateree; the eastern by swampy bottom lands surrounding Pine Tree Creek and a mill pond. Along the main road, the steep hill sloped southward about one hundred yards onto a densely covered plain that surrounded Logtown, a few hundred yards north of Camden. South of Logtown, the land had been clear-cut, in part by the British to provide clear fields of fire.

Greene disposed his troops skillfully to conform to the terrain. To the southeast, the probable main avenue of approach, he posted Captain Robert Kirkwood's Delaware company with two strong outposts commanded by Captains Perry Benson and Simon Morgan still further south, but less than three hundred yards from the American camp. Patrols covered the southern and western approaches. The main body was camped across Hobkirk Hill in line of battle along the crest with the Great Road

dividing the Virginia and Maryland brigades. It was not a straight line because over one hundred yards separated the First and Second Maryland Regiments. The Second Maryland also extended southeastward, following an extension from the main ridge. Lieutenant Colonel William Washington's dragoons and North Carolina militia were in reserve. Perhaps a third of Washington's men were dismounted due to the shortage of cavalry horses. Greene's men received welcome provisions brought forward by Colonel Edward Carrington, who had marched all night and arrived shortly after sunrise. The artillery returned with Carrington but was not initially posted in the line. Colonel Charles Harrison's forty artillerymen, with their three six-pounders, shortly took up concealed positions, two on the road and one between the First and Second Maryland Regiments.

THE BATTLE

With about eight hundred combatants assembled from his nine-hundred-man garrison, Rawdon moved out of Camden about 9 A.M. on 25 April. The British moved along a terrace west of Pine Tree Creek, planning to exit the lower ground where a little stream, fed by springs behind the Maryland Brigade, flowed into the creek. Instead, they turned west too soon and emerged almost in front of Benson's picket post on the relatively gradual southeastern slopes of Hobkirk Hill.

The Americans were somewhat surprised by the attack because no one reported the British departure from Camden. Since the enemy approached from the expected direction, Benson, Morgan, and then Kirkwood were well placed to slow the attack. The fiercest fighting seems to have occurred in this delaying action as the outposts gave the regiments time to form. The men had already finished cooking and eating the rations brought up by Carrington, and some were washing at the springs.

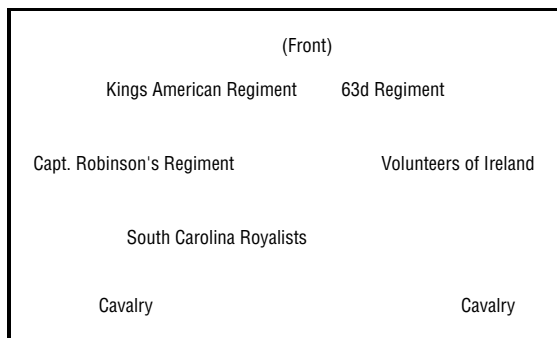

Table 2. DIAGRAM COURTESY OF THE AUTHOR.

Greene was taking breakfast with officers in the same area when the first shots were fired.

When Rawdon made contact, at about 11 A.M., he deployed in the following manner as shown in table 2. Rawdon also placed Tory marksmen on the left flank. They had instructions to shoot at the American officers.

The British came up the slope and moved west, advancing across the front of the Maryland Brigade toward the main road, where they displayed their column. The three regiments presented a relatively narrow front centered on the road, leading Greene to attack Rawdon rather than wait for the British to reach the main battle line. With Lieutenant Colonel Benjamin Ford's Second Maryland left flank already extended well to the front, Greene might be seen as trying a double envelopment, because Lieutenant Colonel Richard Campbell's First Virginia already outflanked the British left. Greene ordered his two flanking regiments to swing forward and enfilade the British line while the two center regiments attacked frontally. He also ordered Washington to make a wide sweep beyond the British left and hit the enemy rear.

The Americans started auspiciously. The outlying pickets had slowed the British advance and forced them to deploy in front of the American center. Once the British advanced, they were surprised and momentarily checked when two American guns were unmasked and opened fire with grape shot at short range, catching the British exposed on the road. As soon as Greene's infantry started forward, however, Rawdon extended his battle line so the British overlapped the American right. Things continued to go well for a few minutes. General Benjamin Huger's Virginia Brigade was still gaining ground against the British left.

For reasons that are still not clear, the veteran First Maryland faltered. Gunby compounded the problem by ordering a short, sixty-yard withdrawal to the foot of the hill to reorganize, but the enemy quickly exploited this error by advancing rapidly. Gunby claimed, and Greene supported him, that he halted the regiment to let the right

wing catch up. The Second Maryland went through a crisis and then withdrew after Ford was mortally wounded. Campbell's First Virginia, exposed to fire from front and flank, also began withdrawing. Hawes's Second Virginia, the only Continental regiment remaining in position, probably saved Greene's army. It checked the enemy pursuit and withdrew only on orders from Greene to avoid encirclement. As the other three regiments began to rally in the rear, Greene ordered a general retreat, just as he had at Guilford Courthouse.

RETREAT

There was a gallant fight to save the three guns. One was run down into a brush-covered hollow and recovered later that day. When the matrosses started abandoning the other two guns, Greene sent Captain John Smith with a company of forty-five young Irishmen of the Maryland line to their rescue. The regulars dropped their tow ropes twice to repulse attacks by Captain John Coffin's sixty New York Provincial dragoons. After enemy infantry fire shot down Smith and all but fourteen of his men, Coffin came back to kill or capture the survivors. Greene returned with some matrosses and personally assisted in towing the guns.

The American dragoons, meanwhile, having been forced to take a very wide route to the west due to the brush, rode into the enemy rear once they reached the clear space around Logtown. Falling upon some two hundred noncombatant support troops and men who had fled from the first artillery fire, Washington stopped to take prisoners instead of moving on to attack the British rear. There is a tale that Rawdon was surrounded and almost captured by the dragoons but saved by a relief force. While it is possible that Rawdon was attempting to rally men broken by the American artillery fire, it is far more likely that he was toward the front, directing his infantry.

When Washington learned of the retreat, he hastily paroled those enemy officers he could not evacuate and rode back encumbered with fifty prisoners. He arrived just in time to save the guns by hitching them to his horses. Some idea of how fast the battle developed can be seen here because all accounts indicate that Washington was still dealing with the prisoners when he learned of the American withdrawal and moved to save the artillery.

Greene retreated two or three miles in good order while an effective rear guard checked pursuit. About 4 P.M., he sent Washington and Kirkwood back to collect wounded, retrieve the last cannon, and round up stragglers. By then, the British, except Coffin's dragoons, had retired to Camden. When Coffin saw the American cavalry advancing, he charged them. Washington set up an ambush that drove the enemy horse off the field in disorder. The Americans camped near the old Camden

battlefield at Saunders Creek and moved back to Rugeley's Mill the next day.

The withdrawals were not panic-stricken rushes to the rear because the men were quickly rallied and fought back. Most accounts agree that it started in Gunby's First Maryland and spread to the Second Maryland and First Virginia. They also agree that Gunby made a mistake in attempting to withdraw and re-form. It is also evident that the loss of American officers figured prominently in the panic. There are conflicting versions of what caused the veteran First Maryland to break.

Greene had ordered the two center regiments to advance without firing. Captain George Armstrong moved out ahead of the First Maryland with two sections (four companies). As the advance got underway, Captain William Beatty Jr., with an additional two-company section moving up the road, was shot, probably at long range by South Carolina royalist riflemen. His company faltered and fell back when he was killed, taking the adjacent company with it. At this point Gunby ordered the regiment's leading elements back to reorganize instead of using Armstrong as a base on which to bring forward the two companies. Even though the regiment rallied, re-formed, and commenced firing on the British, a retrograde movement had begun.

ASSESSMENT

A court of inquiry, called at Gunby's request, found that his "improper and unmilitary" order for the First Maryland Regiment to retire was "in all probability, the only cause why we did not obtain a complete victory." Although the court found no criticism with his personal "spirit and activity," Gunby became the official scapegoat for the loss. This is somewhat unfair as there were many things going on at the time and the main units never came to a close-range engagement.

Greene took about 1,550—including 1,174 Continentals—onto the battlefield. Rawdon's force, reduced by sickness and outlying garrisons, was 800. Losses were about equal on both sides, as Greene reported 266 casualties, of whom 18 were killed, while Rawdon reported a total of 258 lost, 38 of them killed. Greene successfully evacuated his artillery and supply train.

Maryland's Colonel Otho Holland Williams reported there was little heavy fighting, pointing out that few men were wounded with bayonets or buckshot except the advance parties. The heavy fighting seems to have passed rather quickly and was replaced with skirmishing as the Americans attempted to save their artillery and the British conducted a lukewarm pursuit.

Not having destroyed the American army, Rawdon gained nothing from his tactical victory. Faced with growing American numbers, plagued by sickness and an

inability to obtain adequate supplies, he abandoned Camden after destroying much of the town. Greene, with reinforcements coming in, including newly raised North Carolina Continentals, occupied Camden. He then sidestepped the British and headed for Ninety Six. The collapse of the entire outer British defense line was underway once Camden fell to Greene.

HOGUN, JAMES. (?–1781). Continental general. Ireland and North Carolina. In about 1751, James Hogun came from Ireland and settled in Halifax County, North Carolina. In 1774 he was in the Halifax Committee of Safety, and he represented his county in the provincial congresses of 1775 and 1776. On 22 April 1776 the Provincial Congress elected him the first major of the Halifax militia, and on 26 November he became colonel of the Seventh North Carolina Continentals. Joining General George Washington's army in July 1777, he fought at Brandywine and Germantown (11 September and 4 October 1777). When Congress called for new Continental regiments, he was ordered home to help raise and organize the four from North Carolina. In August 1778 he reached White Plains, New York, with the first of these regiments. During the last two months of the year, he was involved with fortification work at West Point. Congress appointed Hogun brigadier general on 9 January 1779. After briefly commanding the North Carolina Brigade of Washington's army, on 19 March, Hogun succeeded Benedict Arnold as commander in Philadelphia and retained that position until 22 November 1779. He then led his brigade to the defense of Charleston, arriving 3 March with 700 men after an

arduous march of nearly three months through snow and extreme cold. Taken prisoner when General Benjamin Lincoln surrendered the city on 12 May 1780, Hogue later refused parole in order to stay with his men, who were suffering the hardships of the prison at Haddrel's Point on Sullivan's Island. He died there on 4 January 1781.

HOLKER, JEAN. (1745–1822). French merchant, French consular agent. He was born in England and moved to France at an early age. Holker accompanied Gérard to America in 1778 with instructions to gather information on the English and American armies and on American attitudes toward their leaders. He also served as an agent for Le Ray de Chaumont. He presented himself to Congress on 16 June 1778 as “Royal Agent of France,” but since he offered no credentials, Congress deferred; however, on 9 July it did order the Committee of Commerce to contract with him for provisions of blankets and shoes. On 23 July, Gérard announced to Congress his appointment as inspector general of French trade and manufactures, agent to the French navy in all American ports, and French consul for Philadelphia. Holker's appointment was more narrowly defined on 25 June 1780 as consul general for Pennsylvania, Delaware, New Jersey, and New York. Holker grew wealthy but resigned early in 1781, when the French government prohibited further commercial enterprise by its representatives. After the war he returned to France, having been detained to untangle accounts with Robert Morris, his wartime partner.

HOLTZENDORFF, LOUIS-CASIMIR, BARON DE.

(1728–?). Continental officer. Prussia–France. He served on the Prussian general staff but was living in Paris by 1775. Silas Deane commissioned Holtzendorff on recommendation by persons “of the first order.” On 17 July 1777 Holtzendorff was commissioned lieutenant colonel in the Continental army in accord with Deane's commission, effective 20 November 1776. He served at Brandywine and Germantown. Washington criticized him indirectly by complaining about foreign officers who lacked good English and an understanding of the “genius of our service and men.” When he sought Washington's “protection” for a projected book on Prussian military tactics, Washington agreed if it appeared in English. Believing himself unappreciated, Holtzendorff petitioned Congress on 31 December 1777 to return to France on the conditions that expenses be paid and he receive a colonel's commission with pay and privileges. On 30 January 1778 Congress granted him permission to resign and on 21 February agreed to pay his recent debts and travel expenses. Back in France, he was made captain of the Anhalt Regiment on 29 April 1779. Through 1779 he continued futilely to petition Franklin and Vergennes for past expenses. He entered the Dutch service in 1785.

HONDURAS. In September 1779 the Spanish governor of Honduras took the British settlement at St. George's Key, a small island in the harbor of Belize. Shortly before, the British command in Jamaica had sent three ships and a contingent of troops under the command of Major John Dalrymple to reinforce Belize. On 16 October the British recaptured St. George's Key and went on to storm the Spanish fort at Omoa. Though they outnumbered the British nearly two to one and were behind eighteen-foot walls, the Spanish surrendered almost immediately after just two men were wounded; the British suffered no serious casualties. In addition to 365 prisoners, Dalrymple captured gold, ships, and cargoes valued at £600,000.

Dalrymple left a garrison at Omoa and captured the Bay Island of Roatán. Governor Dalling of Jamaica meanwhile had conceived his unfortunate plan for operations in Nicaragua and ordered Dalrymple to destroy and evacuate Omoa. These instructions were not received in time, and on 28 December 1779, the Omoa garrison, devastated by disease, abandoned the post at the approach of a Spanish force.

On 26 August 1782, the new governor general of Jamaica, Major General Archibald Campbell, learned that the Spaniards planned an expedition against Cape Gracias á Dios, the northernmost tip of Nicaragua. He sent Colonel Edward Despard with Major William Odell and 80 of the Loyal American Rangers to launch a "spoiling attack" against the Black River settlement in Honduras about 130 miles northwest of the cape. Covered by the fleet of Commodore Francis Parry—the 50-gun ship *Preston* and five or six frigates—the Loyal American Rangers landed in October 1782 and were immediately joined by 500 runaway slaves and 600 Mosquito Indians, all eager to get even with the Spaniards. The Spanish governor immediately surrendered the garrison, which comprised some 740 men of the Guatemala Regiment. The surrendered blockhouse yielded a large sum of money in addition to quantities of artillery, small arms, and ammunition.

HONORS OF WAR. A military force is said to be accorded "the honors of war" when the terms of its capitulation include the right to march away with colors flying, bands playing, bayonets fixed, and in possession of weapons and equipment. Conditions may vary somewhat in accordance with the agreement worked out between

the opposing commanders. Originally, the honors of war probably were reserved for defenders who had distinguished themselves by a particularly heroic resistance. In practice, however, it is good strategy to gain time and save casualties by convincing the defenders of a strong position to surrender their fortress or terrain in return for being allowed to go free and with honor. Troops accorded the honors of war normally are required to proceed to a specified place before they are free to resume hostilities.

HOOD, SAMUEL. (1724–1816). British admiral. Born in Budleigh, Somerset, on 12 December 1724, the eldest son of a country parson, Hood entered the navy in 1741 and for a time was a follower of Captain George Brydges Rodney. He saw action in the North Sea and the Channel and was in American waters between 1753 and 1756. A captain from 1756, he again served under Rodney when they broke up a French invasion flotilla at Le Havre in 1759. In 1767–1770, as commodore commanding the North American station, he encountered American discontents and warned the government to choose conciliation over provocation. In September 1780 he accepted promotion to rear admiral as the irascible Admiral Rodney's second in command in the West Indies.

After the capture of St. Eustatius in January 1781, Hood was detached to intercept Admiral de Grasse off Martinique, but in the action of 29 April he failed to close with his opponent. Hood blamed Rodney's interference with his initial dispositions, whereas Rodney was quick to criticize Hood's attention to duty. During the Yorktown campaign, Hood claimed later, Admiral Thomas Graves was too slow in starting for the Chesapeake and should have abandoned the strict line of battle to attack French ships as they came out of the bay. But in the ensuing action it was Hood who kept the line so rigidly that his rear division was never engaged. Hood then urged his superior to race back to reach Cornwallis at Yorktown, but Graves, who rightly feared being bottled up there by de Grasse, declined.

In short, Hood, as a subordinate admiral, while possessed of some strategic instinct, was excessively cautious in battle and insolent to the point of insubordination. By contrast, returning to the West Indies as his own master, he displayed unusual talent and determination. Although he failed to save St. Kitts in February 1782, his maneuvers against de Grasse's superior numbers were daring and masterly. When Rodney returned to assume command, Hood became his old self, bombarding him

Hood's Point

with gratuitous advice and later unreasonably criticizing his failure to pursue de Grasse after the victory of The Saints (or Saints Passage) on 12 April 1782. His relationship with Robert Pigot, Rodney's more amiable successor, was little better.

In September 1782 Hood was given an Irish barony and returned home in June 1783. In 1784 he entered Parliament, and from 1788 to 1794 he was a lord of Admiralty. In 1793-1794, as commander in chief in the Mediterranean, he briefly occupied Toulon and conquered Corsica. Dismissed for insubordination in 1795, he became governor of Greenwich Hospital, and Viscount Hood in 1796. He died after a fall at Bath on 27 January 1816.

HOOPER, WILLIAM. (1742-1790). Signer. North Carolina. Born in Boston, Massachusetts, on 17 June 1742, William Hooper graduated from Harvard in 1760 and then studied law under James Otis. He moved to Wilmington, North Carolina, in 1764, where he was active in the law and politics. In 1770, as deputy attorney general, he took the royal government's part against the

Regulators, and in 1771 he marched with Governor William Tryon against them. By 1773 he was opposing the Crown's arbitrary measures in the general assembly. A member of the Committee of Correspondence, Hooper presided at the meeting that called the provincial congress, to which he was duly elected. Sent to the Continental Congress (1774-1777), he signed the Declaration of Independence. Active on committees, including the Board of War, Marine Committee, and Secret Committee, he played an important role in helping to arm the Continental army. After getting yellow fever in Philadelphia, Hooper returned to North Carolina and resigned from Congress on 29 April 1777, though he returned to the assembly from 1777 to 1781. The British invasion forced him to flee Wilmington in 1782, and much of his property was then destroyed. Back in the assembly from 1784 to 1786, Hooper was a leader of the conservative faction opposed to debtor relief and in favor of restoring Loyalist property. He died in Hillsborough, North Carolina, on 14 October 1790.

HOPKINS, ESEK. (1718-1802). First commander in chief of the Continental navy. Rhode Island. Born in Scituate, Rhode Island, on 26 April 1718, Esek Hopkins was a successful sea captain, served as a privateer in the Seven Years' War, and retired to his farm in 1772. Having taken a keen interest in local politics, and being the brother of the most prominent figure in Rhode Island, Stephen Hopkins, Esek became state brigadier general on 4 October 1775 and was put in command of the militia. Stephen, meanwhile, was a delegate to Congress and an influential member of the Marine Committee. When the Continental navy was organized, Esek Hopkins was named commander in chief (confirmed on 22 December 1775), and his son, John Burroughs Hopkins, was appointed captain.

At the beginning of 1776, Congress ordered Hopkins to take his small fleet of eight ships and clear the coast from the Chesapeake Bay to a point south of the British ships. Reasoning that the British were too strong for him to best, Hopkins sailed to Nassau in the Bahamas. After a quick victory that included the taking of a great many cannon and other munitions, Hooper sailed for Rhode Island. On the return voyage, the U.S. fleet encountered a lone British

frigate, the *Glasgow*, which out-sailed, out-fought, and out-foxed the superior American force before getting away. Humiliated, Hopkins was called to Philadelphia and was censured by Congress on 16 August 1776.

Hopkins intended to head back to sea, but his fleet collapsed around him. Congress suspended him from command on 26 March 1777, formally dismissing him on 2 January 1778. He served in the Rhode Island assembly from 1777 to 1786, but never again went to sea. He died on 26 February 1802.

HOPKINS, JOHN BURROUGHS.

(1742–1796). Continental naval officer. Rhode Island. Born 14 August 1742 in Newport, Rhode Island, Hopkins was the eldest of Esek Hopkins's ten children, and nephew of Stephen Hopkins. He followed family tradition by going to sea early and being politically involved. He led the boats that attacked the British vessel, the *Gaspée*, on 9 June 1772. On 22 December 1775 he became the junior of the first four captains appointed in the new Continental navy and took command of the *Cabot* (14 guns). He took part in the expedition to Nassau led by his father, Esek, and in the embarrassing encounter with the *Glasgow*, which occurred on 6 April 1776. His ship, being in the lead, bore the brunt of the action. Named commander of the frigate *Warren* in 1777, he slipped through the British blockade of Narragansett Bay early in March 1778, took two prizes, and put into Boston Harbor. In 1779, with the *Warren*, *Queen of France*, and *Ranger*, he led a six-week cruise off the Virginia capes that captured the *Jason* (twenty guns) and seven other British ships. Although initially pleased at this triumph, The Marine Committee of Congress learned that Hopkins had failed to follow instructions and ordered an investigation. Hopkins was suspended, and never returned to service in the U.S. navy.

Instead, Hopkins took command of the Massachusetts privateer *Tracy* (sixteen guns) in 1780. He took several prizes before being captured and paroled. The next year he was captain of a Rhode Island privateer sloop, the *Success*. Retiring to private life after the war, he died on 4 March 1796.

revised by Michael Bellesiles

HOPKINS, STEPHEN.

(1707–1785). Signer. Rhode Island. Born in Scituate, Rhode Island, on 7 March 1707, Stephen Hopkins sat in the general assembly all but four of the years from 1732 to 1752, and held several other public offices before moving to Providence in 1742 to join his brother Esek in business. He served on the superior court from 1747 to 1749, and became chief justice in 1751. In 1755 he became governor, and held this office until 1768 with the exception of three years when he was defeated by Samuel Ward of Newport, his bitter rival. An early champion of colonial rights and union, Stephen attended the Albany Congress of 1754. In 1764 he wrote *Rights of the Colonies Examined*, in which he argued against the Stamp and Sugar Acts and foreshadowed John Dickinson's theory of colonial home rule. As chief justice of the superior court, he frustrated Crown authorities in the *Gaspée* affair of 1772. He was a delegate to the first and Second Continental Congresses, signed the Declaration of Independence, and was a member of the committee to organize the navy. In this capacity he would appear to have done his country a disservice in supporting the selection of his brother Esek as naval commander in chief. Presumably he was not an innocent bystander when Esek's son, John B. Hopkins, was appointed one of the four captains in the new navy. After serving on the committee for preparing the Articles of Confederation, Stephen Hopkins returned home because of ill health in September 1776. He served in the assembly from 1777 through 1779, and then retired from politics. He died in Providence on 13 July 1785.

HOPKINSON, FRANCIS.

(1737–1791). Signer, writer, artist. Pennsylvania. His father, an English lawyer, immigrated to Philadelphia in 1731 and became a

member of the governor's council as well as of numerous civic and social organizations. Francis was the first graduate (1757) of the College of Philadelphia (later the University of Pennsylvania). He studied law under Benjamin Chew and was admitted to the bar in 1761, but for the next twelve years he tried a variety of careers. In 1763 he was named customs collector in Salem, New Jersey. In 1766–1767 he made an unsuccessful trip to England for political preferment. After becoming a shopkeeper, he was named customs collector at New Castle, Delaware (about forty miles below Philadelphia). Returning to the law, he set up practice at Bordentown, New Jersey, and was an immediate success. In 1774 he was named to the governor's council, but in that year he published an allegorical political satire, *A Pretty Story*, in which he expressed his ardent Whig convictions. Another similar type of story, called *A Prophecy*, anticipated the Declaration of Independence. Elected to Congress from New Jersey in June 1776, he was one of the Signers. A few months after adoption of the Flag Resolution of 14 June 1777, he was appointed one of three commissioners of the Continental Navy Board. As chairman and secretary he served capably for almost two years before Congress elected him treasurer of loans. A year later, while still holding the latter post, he became judge of the Pennsylvania Admiralty Court. Ten years later in 1789, the court was dissolved and Hopkinson became judge of the U.S. district court of eastern Pennsylvania for the last two years of his short but memorable life.

Hopkinson designed, or had a part in designing, seals of the American Philosophical Society, the State of New Jersey, and what became the University of Pennsylvania. On 25 May 1780 he wrote the Board of Admiralty that he was pleased they liked his design for their seal; he also requested recognition for this work and a number of other "devices." At the top of the list he claimed to have created the Stars and Stripes, later valuing this work at £9 cash or £540 paper money. Congress decided on 23 August 1781 that too many others had worked on design of the flag for Hopkinson to deserve credit for being its originator. Meanwhile, a serious quarrel had resulted in his resignation as treasurer of loans.

Among his wartime writings were *A Letter to Lord Howe*, *A Letter Written by a Foreigner*, and *An Answer to General Burgoyne* (all in 1777). *A Letter to Joseph Galloway* and his famous *Battle of the Kegs* appeared in 1778. In 1781 he wrote words and music of a cantata, *The Temple of Minerva*, celebrating the French alliance. In his later years he invented a ship's log and a shaded candlestick, among other things. He continued to write, producing political essays, general social criticism, satire, and verse. Among his musical compositions was a collection, *Seven Songs for the Harpsichord or Forte Piano* (1788). His son Joseph

followed in his footsteps as a politician, jurist, and composer; Joseph wrote *Hail Columbia*.

HORRY, DANIEL HUGER. (1737–1785). American officer. South Carolina. A cousin of Peter and Hugh (see below), Horry (pronounced "O'Ree") was a captain of militia at the beginning of the Revolution. After taking part in the defense of Charleston as captain of the Second South Carolina in 1776 and as a colonel in 1780, Horry swore allegiance to the crown after the surrender of Charleston (12 May 1780). With the help of his brother-in-law, Charles Cotesworth Pinckney, Horry was able to save his estate, Hampton Plantation House, from confiscation.

HORRY, HUGH. (1744–1795). American officer. South Carolina. Like his brother Peter Horry, Hugh Horry was a captain of South Carolina militia at the start of the Revolution, rising to the rank of lieutenant colonel by 1780. He commanded the mounted troops of Marion's Brigade, becoming a colonel in 1781 and acting commander of the foot element. At Eutaw Springs, 8 September 1781, he was wounded in action.

HORRY, PETER. (1747–1815). American officer, South Carolina. A captain in the Second South Carolina Regiment on 17 June 1775, he was promoted to major on 16 September 1776. Promoted to lieutenant colonel of the Fifth South Carolina militia regiment in 1779, he lost his command when the state consolidated its militia in 1780. After Horatio Gates's defeat at Camden, Horry joined Marion's Brigade, becoming colonel of a regiment of light dragoons. In 1783 he was made brigadier general of the Sixth Brigade of the South Carolina militia, a position he held until 1806. He is remembered mainly for his unhappy collaboration with Parson Weems on the biography of Francis Marion, in which Weems altered much of the material Horry supplied to produce a work of myth rather than history.

HORSENECK LANDING (WEST GREENWICH), CONNECTICUT.

25–27 February 1779. Major General William Tryon, with a task force of five regiments reinforced by light troops left the vicinity of Kings Bridge, New York, on the 25th to destroy American facilities at Horseneck Landing. The next morning he entered it, brushed aside a Connecticut militia force (of probably less than 150 men) led by Major General Israel Putnam, and then moved on to Greenwich. With the loss of only two or three killed, fourteen wounded, and from twenty to forty captured, Tryon destroyed a salt works, three small cannon, three small vessels, and a store; plundered the settlement; and carried off about two hundred head of cattle and horses. He then successfully withdrew before a much larger militia force could assemble, getting back to Kings Bridge on the 27th. Local lore emphasizes that Putnam escaped capture by a daring ride down a steep, rocky hill that enemy dragoons were afraid to negotiate.

HORTALEZ & CIE. Although remembered almost entirely for his literary works, Pierre-Augustin Caron (1732–1799), who assumed the title “de Beaumarchais” in 1756, distinguished himself in his father's trade of watchmaking, became accepted at court, and showed himself to have a remarkable business talent. He also had a talent for intrigue. French foreign minister Vergennes sent him to London in April 1775 to retrieve some controversial letters in the possession of former French diplomat Charles d'Eon de Beaumont, who was famous for assuming the persona of a woman. In 1763 Louis XV had ordered d'Eon to survey England for locations of a possible French invasion, but he continued to hold Louis's letters on the matter in hopes of obtaining an increased pension from the king. While performing this assignment, Beaumarchais also took the opportunity to compose for the French government a series of reports on conditions in England and of the unrest in its American colonies.

Back in France, Beaumarchais met with Vergennes on 20 September 1775 and prepared a memorandum to be presented by the French naval minister and former head of the Paris police, Sartine, to Louis XVI, which concluded both that civil war was imminent in England and that “the colonies are lost for the metropole” (Beaumarchais, 2, p. 140). Vergennes pressed Louis for a prompt answer, which he apparently received only orally. On 15 November, Beaumarchais addressed another memorandum to the king, this time supporting a plan for France to seize the British Antilles by surprise, which he believed would have profound impact on the English economy. If the king would provide one million livres to him under the name of “Roderique Hortalez and Company,” he could make it nine million.

AN AID CONTRACT

While in London during the autumn of 1775, Beaumarchais met Arthur Lee, agent there for the Continental Congress Committee of Secret Correspondence. They discussed what Americans would need to succeed—French aid. These discussions led Beaumarchais to write the king again in February 1776 that if French aid were not forthcoming, the American cause might fail, which would threaten the French West Indies. On 2 May, Vergennes wrote Beaumarchais that his proposals were making headway slowly. Before leaving London, he met with Lee one final time, and in that discussion it appears the two failed to agree that French aid would be not an outright gift, but rather an exchange for tobacco and other merchandise. Misunderstanding ensued almost immediately. In his first letter, Lee saw Beaumarchais as a mere façade for French secret aid: “The want of tobacco ought not to hinder your sending out your supplies to the Americans, . . . the essential object is to maintain the war.”

On 10 June 1776 Beaumarchais received one million livres from Duvergier, cashier for the French foreign ministry. Establishing his home and business in a large building once used as the Dutch embassy and now known as the Hôtel des Ambassadeurs de Hollande, he wrote to Congress's agent in Paris, Silas Deane, on 18 July and met him the next day to read his commission and to offer him credit for three million livres, one million already received, another promised by the Spanish, and a third from his friends; he expected tobacco in exchange. Deane's acceptance led Beaumarchais to assume that he had a contract with Congress and that American ships bringing goods would carry munitions back to Americans.

Shortly before the French government approached Beaumarchais in May 1776, it had selected Dr. Barbeu Dubourg, a botanist who knew Franklin, to serve as its intermediary on the matter of secret aid. When the French government decided upon the Hortalez venture conducted through Silas Deane, both Dubourg and Lee were upset and undertook to hamper Beaumarchais. Furthermore, the British ambassador to France, Stormont, learned of Beaumarchais's project and forced the French to issue orders against the shipping of war supplies from French ports. Although Beaumarchais's operations were supposed to be overlooked, a few minor French officials complicated matters by observing the letter of the law and forbidding the shipments. But why were these munitions so available from the French arsenals?

BEAUMARCHAIS'S OPERATIONS

During the years prior to 1776, French weaponry had undergone significant redesign through the efforts of Jean Baptiste de Gribeauval. As an expert on artillery, Gribeauval introduced uniform production and higher standards to the manufacture of cannon and muskets. Consequently, armories overflowed with the outdated munitions. Purchaser of many of these weapons was Carrier de Montieu, who became a source of arms for Beaumarchais's venture.

By 1777 Beaumarchais had more than twelve vessels operating out of Le Havre, Nantes, Bordeaux, and Marseilles. Eventually, he had about forty. From Martinique or Saint Domingue they would sail north. Portsmouth, New Hampshire was port of entry for most of them; they usually stopped at Charleston on the return trip in hopes of picking up rice or tobacco, but usually they returned empty. The first Hortalez convoy reached Portsmouth in early 1777 with three million livres' worth of goods: two hundred field guns, thousands of muskets, a large supply of powder, blankets, clothes, and shoes—enough for twenty-five thousand men. As Beaumarchais's bills came due on 31 May 1777, Vergennes provided him with 400,000 livres. To his

benefactor Beaumarchais wrote, "I can breathe again until the fifteenth." Within a month's time, the venture would cost the French government additional payments, totaling over a million livres.

PAYMENT FROM CONGRESS

As of September, Beaumarchais had yet to receive a cargo from the Continental Congress in compliance with his contract. So he decided to send Theveneau de Francy to America as his agent to Congress and to oversee future business. However, Congress had yet to be informed by the Committee of Secret Correspondence of Deane's contract with Beaumarchais for fear that Tory delegates in Congress would tell the British. Meanwhile, Arthur Lee had been busy spreading the word that the Hortalez firm was a blind for dishonorable business. Two months before Francy's arrival in America, Lee wrote the Committee on Foreign Affairs on 6 October 1777, "The Minister [Vergennes] has repeatedly assured us [Franklin, Deane, and Lee], and that in the most explicit terms, that no return is expected for these subsidies." After the Committee of Commerce examined the evidence brought by Francy, however, Congress authorized the commissioners to settle accounts on 16 April 1778, in which they assured payment for past shipments. Rival factions in Congress then started a long haggle over whether France should be paid for military aid. It was convenient for those in opposition to argue that Beaumarchais and France were acting in self-interest; they capitalized on the fact that France, officially neutral, could not publicly admit the arrangements under which Beaumarchais operated.

Deane reached America in July 1778 after his recall from Paris and fell into an acrimonious controversy with the congressional faction that opposed payment of Beaumarchais. The Virginia Lees and Massachusetts Adamses led this opposition. Deane's supporters finally succeeded in getting Vergennes to write to French minister Gérard on 16 September 1778 that Hortalez & Cie was a private, commercial firm and that some of its stocks had come from French arsenals with the understanding that these stocks would be replaced by the firm. However, before this critical information reached Philadelphia, Deane blew the entire affair into a public scandal by publishing in the 5 December 1778 issue of the *Pennsylvania Packet* a letter that denounced Arthur Lee's machinations and accused Congress of neglect and appalling ignorance of foreign affairs. Congress split into pro- and anti-Deanites. Henry Laurens, a member of the latter element, was forced to resign as president of Congress to be succeeded by John Jay, a friend of Deane. Thomas Paine, then secretary of the Committee of Foreign Affairs, entered the lists as a supporter of Arthur Lee and on 2 January 1779 claimed publicly that he had written

evidence that France had promised the supplies as a gift before Deane ever reached Paris. The French minister issued an official denial, followed up with a formal protest against Paine's indiscretion in revealing "classified" information; on 9 January, Paine resigned under pressure. On 15 January, Beaumarchais was given a written apology from Congress and a pledge of payment.

Yet Franklin did not appear to be satisfied. With the 2,832,000 livres of congressional letters of credit to Beaumarchais coming due in 1782, he wrote a sixteen-page letter to Vergennes's assistant Durival on 12 June 1781 inquiring whether it was in fact a gift. The reply? "The minister knows nothing about them."

On 6 April 1781 Deane submitted an official document showing that, based on his own records, Congress owed Beaumarchais 3.6 million livres. But Beaumarchais's case was hurt by the scandal that wrecked Deane, and settlement was postponed. When Beaumarchais renewed his claims, Congress appointed Arthur Lee and Samuel Osgood in 1787 to examine the Hortalez accounts. They concluded that Beaumarchais owed Congress 742,413 livres. It was not until 1837 that his heirs finally received 800,000 francs.

What was America's reaction to Beaumarchais's efforts in support of the American cause? In October 1778 Beaumarchais's American agent, Francy, wrote him that several members of Congress were about to propose a motion to erect a statue in his honor. Beaumarchais's biographers, Brian Morton and Donald Spinelli, have simply concluded that the statue or any other monument to Beaumarchais was not to be.

HOTHAM, WILLIAM. (1736–1813).

British naval officer. Son of the seventh baronet Hotham, William Hotham was born on 8 April 1736 and educated at Westminster School and the Royal Naval College at Portsmouth (1748–1751). After service in the West Indies and North America, he passed for lieutenant on 7 August 1754. A post captain from 1757, he served with some distinction throughout the Seven Years' War. In 1776, flying a commodore's broad pennant in the *Preston*, (50 guns), he escorted a large troop convoy to America and joined the North American squadron under Lord Howe, supporting the landing at Kips Bay on 15 September. During the Philadelphia expedition, he remained at New York as senior naval officer and supported Clinton's offensive into the Hudson Highlands in October 1777, though he had reservations about capturing forts that were not to be held. In July 1778 he took part in the preparations to defend Sandy Hook against Estaing's expected attack. Off Newport on 12 August, he engaged the storm-crippled *Tonnant* (seventy-four guns) until other French ships came to her aid. He was then sent with a reinforcement for Barrington in the West Indies, where on 15 December he played a distinguished part in the battle off St. Lucia. In the summer of 1779 Hotham was at Barbados, and in 1780 he moved his pennant to the *Vengeance* (seventy-four guns). In it he took part in engagements on 17 April and on 15 and 19 May. He was selected to escort the homeward-bound convoy from St. Eustatius but was unable to save the merchant ships from a powerful French squadron off the Scilly Isles on 2 May 1781.

In 1782 Hotham, with his pennant in the *Edgar*, took part in Howe's relief of Gibraltar. He was promoted to rear admiral in 1787 and vice admiral in 1790. In 1795, while in temporary command in the Mediterranean, he won two

minor engagements off Leghorn before being relieved by Jervis in November. It was the last active service for this outstanding junior commander and indifferent commander in chief. He became Baron Hotham in 1797, succeeded to his nephew's baronetcy in 1811, and died on 2 May 1813.

John Oliphant

HOUDIN DE SAINT-MICHEL, MICHEL-GABRIEL. (1739–1802). Continental officer. France. A lieutenant in the Port-au-Prince Regiment, he resigned in 1776 and became first lieutenant of the Fifteenth Massachusetts Regiment on 1 January 1777. After serving against Burgoyne, at Stillwater, at Valley Forge, in the Monmouth Campaign, and at Newport, he was promoted to captain on 28 June 1779 and transferred to Rufus Putnam's Fifth Massachusetts Regiment on 1 January 1781. On 12 June 1783 he joined Sproat's Second Massachusetts Regiment. He was honorably discharged on 1 January 1784. With a strong recommendation from Washington that he deserved a place in the peacetime army, Congress breveted him a major on 8 February 1784. He appears to have gone to France and later returned to America, dying at Albany. Houdin became store-keeper of the U.S. Army in 1801.

HOUK, CHRISTIAN SEE *Huck, Christian.*

HOUSTOUN, JOHN. (1750?–1796). Lawyer, politician. Born in Georgia, he was the son of Sir Patrick Houston, baronet and royal official. John Houston set up a law practice in Savannah in 1771 and was involved in revolutionary activities by 1774. Although elected a delegate to the Continental Congress three times, Houston attended only once, from September to December 1775. In May 1777 he was elected a member of the Georgia executive council, and in January 1778 he was chosen governor. In April 1778 the executive council requested that Houston assume executive power over military matters, and he planned the third expedition against the British in East Florida.

On this three-month expedition, Houston was determined that the military be subordinate to the state government. Although he lacked military experience, he commanded the Georgia militia. Neither he nor Colonel Andrew Williamson, who commanded the South Carolina militia, recognized the senior officer present, General Robert Howe, who commanded the Georgia and South Carolina Continental troops. In July, Howe and Colonel Samuel Elbert abandoned the expedition and returned north with their Continental troops. Houston and Williamson soon followed. Houston asked the Continental Congress to pay for this failed expedition, possibly because of Georgia's depreciating currency.

When the British arrived in Savannah in late December 1778, Houston, Howe, and militia Colonel George Walton failed to create a unified defense, and the town was easily taken by superior forces. Houston ordered the seat of government established in Augusta, and he and other prominent rebels headed into the backcountry to escape capture. British forces came into the backcountry in January 1779, and Houston fled Augusta for South Carolina but returned when the British left the area in mid-February. He attempted to organize an assembly during July, and during September and October Houston served on Lachlan McIntosh's staff during the siege of Savannah, although Houston was not a member of the Continental army. He may also have served on McIntosh's staff at Charleston.

At some point, probably after the capture of the Continental army in Charleston during May 1780, Houston considered returning to British-held Georgia. The reestablished royal government applied to him the Disqualifying Act of July 1780, which limited his participation in government but allowed him to return to his property. He petitioned for protection, claiming he had been induced to join the rebellion without any intention of

seeking separation from the empire and that he now feared for his safety if he returned to Georgia. On 20 December 1780 the attorney general determined that only the king's pardon would provide him with the legal protection he sought. Houstoun's brothers Sir Patrick, William, and James chose to align themselves with royal government during this period.

Whatever John Houstoun's motivation, Georgia rebels did not hold his petition against him. He was elected to the rebel assembly in 1782 and elected governor in 1784. He ran unsuccessfully for governor in 1789 and served as the first mayor of Savannah in 1790 and as a state superior court judge in 1791.

HOWARD, JOHN EAGER. (1752–1827). Continental officer. Maryland. Born in Baltimore County, Maryland, on 4 June 1752, Howard became a captain in the Second Maryland Battalion of the Flying Camp in July 1776 and fought at White Plains. On 22 February 1777 he was commissioned major of the Fourth Maryland and saw action at Germantown. Promoted to lieutenant colonel of the Fifth Maryland on 11 March 1778, he fought in the Monmouth campaign. On 22 October 1779, he was transferred to the Second Maryland and distinguished himself at Camden and Cowpens (17 January 1781). For his part in the latter victory he received the thanks of Congress and one of the eight medals awarded by that body. He figured prominently in the battles of Guilford, Hobkirk's Hill, and Eutaw Springs, being wounded in the last action.

Howard was considered a particularly able leader of one of the army's finest regiments. General Henry Lee praised Howard as "one of the five lieutenant-colonels on whom Greene rested throughout the hazardous operations" in the southern campaign. Lee credited Howard with turning the tide of battle at Cowpens and preventing disaster at Guilford and the Eutaws. According to Lee, he "was always to be found where the battle raged, pressing into close action to wrestle with fixed bayonet" (Lee, p. 592).

After the war Howard was a delegate to the Continental Congress (1787–1788), governor of Maryland (1788–1791), and U.S. senator (1796–1803). He was a leader of the Federalists and a candidate for vice president in their

last, unsuccessful campaign in 1816. He died at his home in Baltimore on 12 October 1827.

HOWE, GEORGE AUGUSTUS. (1724–1758). British general and third Viscount Howe. The eldest surviving brother of Richard and William Howe, he entered the First Foot Guards as an ensign in 1745. On 25 February 1757 took command of the Third Battalion of the unconventional Sixtieth Foot, the Royal Americans. Reaching Halifax in July, he became colonel of the Fifty-fifth Foot on 28 September. Howe's warmth and lack of affectation, combined with his energetic interest in forest fighting, won him the admiration of American soldiers at a time when their relations with regular officers were frequently strained. A local brigadier general from 29 December, he was attached to Sir Robert Abercromby's advance on Ticonderoga. On 6 July 1758 Howe was killed in a woodland skirmish near Lake George, and his healthy influence on Anglo-American relations came to an untimely end.

HOWE, RICHARD. (1726–1799). First Earl Howe and British admiral. The brother of George and William Howe, Richard went to sea very young, serving from 1735 in a merchant ship, the *Thames*. His naval service began on 16 July 1739 on HMS *Pear*. On 24 May 1744 he passed for lieutenant and was promoted to post-captain on 10 April 1746. He distinguished himself with Boscawen in 1755, at Rochefort (September 1757), and at Quiberon Bay (20 November 1759). On 23 May 1757 he was elected member of Parliament for Dartmouth, a seat he held until his elevation to the British

peerage in 1782. (His Irish title of Viscount Howe, inherited from George in 1758, did not debar him from the Commons). In 1762 he took up his parliamentary seat and turned to politics. He was a lord of admiralty (1763–1765) and later treasurer to the navy. During the 1770 Falkland Islands crisis he was rear admiral commanding the Mediterranean fleet.

Howe's period as naval commander in chief and (with his brother William) joint peace commissioner in America is still controversial. The Howes had long-standing contacts with America and Richard Howe met Benjamin Franklin in London in 1774. Howe himself insisted on having political as well as military powers to end the rebellion and was (rightly) dissatisfied with the very limited commission he and William were actually given. His orders to blockade the entire American coastline to intercept military supplies from France were impossible to execute properly, partly because first lord of the admiralty John Montagu, earl of Sandwich, insisted on keeping the bulk of the navy at home. In addition he had to support his brother's military operations, and, on balance, Lord Howe tended to give priority to the latter. Even so, shortages of shipping and supplies, combined with difficult strategic and navigational constraints, gave these operations the appearance of unwonted slowness. These circumstances have been used to argue that the Howes were both incompetent and bent on peace at almost any cost, and that their slowness effectively lost the war for Britain.

When Richard arrived off Staten Island on 12 July 1776, William's army was too small and ill-equipped to attack New York. The brothers had to wait but were not inactive. Between 12 and 18 July Richard pushed a small force high up the Hudson to Tappan Sea, deep in Washington's rear. On 14 July the Howes, knowing they had too little to offer, began negotiations that soon proved futile. But once William was satisfied that his army was ready for a campaign, Richard landed him on Long Island on 22 August. William's victory on 27 August pinned Washington against the water. However, William was reluctant to make a frontal attack on the American earthworks, and contrary winds prevented Richard from getting ships into the East River in time to intercept Washington's escape on 29–30 August. It was now up to Richard Howe to mass boats, transports, and covering warships in the East River ready for the proposed landing at Kip's Bay, Manhattan. That required very precise conditions of wind, tide, and darkness and another inevitable delay. During the pause the Howes again tried negotiations, which duly broke down on 11 September. Within days Richard Howe was able to run vessels into the East River, and the troops landed at Kip's Bay on 15 September. The pattern suggests that, for the Howes, negotiation was a complement to military action, not a substitute.

In 1777 Lord Howe's main preoccupation was the safe conveyance of William's troops to Philadelphia. Once again the Howes faced intractable delays: the late arrival of sufficient shipping from Britain, the need to watch Washington's movements before choosing a landing place, and the consequent decision to disembark in Chesapeake Bay. Philadelphia was occupied on 26 September, but not until 23 November was Lord Howe able to force the Delaware. Both brothers were dissatisfied by the narrowness of their diplomatic powers and by the level of support they received from home. William had already offered his resignation, and Lord Howe followed suit early in 1778. He stayed to confront D'Estaing until 26 September, when he judged it safe to sail for home.

Howe refused to serve again under Sandwich and attacked the government in Parliament. He was given the Channel Fleet by the Rockingham ministry on 2 April 1782, and on 20 April he was raised to the British peerage as Viscount Howe. In October he successfully relieved Gibraltar. Howe was first lord of the admiralty until 1788, when he became Earl Howe. On 1 June 1794, again commanding the Channel Fleet, he won "the Glorious First of June" by piercing the French line. On 12 March 1796 he briefly became admiral of the fleet and the following year personally negotiated an end to the Spithead mutiny. He died in London on 5 August 1799.

HOWE, ROBERT. (1732–1786). Continental general. North Carolina. Son of a wealthy planter on the Cape Fear River, Howe was captain of Fort Johnston in 1766–1767 and 1769–1773. On Governor Tryon's expedition against the Regulators, he was an artillery colonel. An ardent Whig, he served in the North Carolina assembly in 1772–1773 and was a delegate to the Provincial Congress at New Bern in August 1774. The Loyalist governor, Josiah Martin, denounced him on 8 August 1775 for his radical politics and also for his activity in forming and training rebel militia. On 1 September 1775 he became colonel of the Second North Carolina Regiment, and three months later he marched north to assist the Virginians. Widely acclaimed for his success in this affair, he was appointed a Continental brigadier general on 1 March 1776. Returning to the South to help defend Charleston, Howe found that

his plantation at Brunswick had been ravaged by Cornwallis's troops on 12 May.

Howe took command of the Southern Department and was promoted to major general on 20 October 1777. The presence of this North Carolina man at Charleston was resented by South Carolina and Georgia authorities, and Howe's expedition against the British in Florida was a fiasco. Criticism of Howe was led by Christopher Gadsden, and when the latter refused to deny or retract certain statements, the two met in a duel on 13 August 1778. Howe's shot grazed Gadsden's ear, and Gadsden fired in the air. John André wrote a mocking poem about the affair, and Howe and Gadsden ended up being close friends. Benjamin Lincoln succeeded Robert Howe as department commander in September 1778, but Howe continued to command in Georgia. The British capture of Savannah on 29 December 1778 led to such public outcry against the unfortunate Howe that it was necessary for the Continental authorities to order him north in April 1779, even though a court-martial had acquitted him "with highest honor" of any misconduct at Savannah. Washington selected him as president of the court-martial resulting from Benedict Arnold's troubles as commander of Philadelphia. Howe then went to the Hudson Highlands north of New York City and led the unsuccessful operation against Verplanck's Point that was ordered after Wayne's capture of Stony Point in July.

In February 1780 Howe was made commander of West Point. Succeeded by Arnold in August, Howe showed the man who had by then turned traitor around West Point, innocently pointing out its numerous weaknesses. On 29 September he sat with the board of officers that recommended the hanging of Arnold's British contact, John André. He commanded troops from the Highlands that successfully stopped the mutiny of the New Jersey line of 20–25 January 1781. In 1783 he dispersed the Philadelphia mob that had driven Congress out of town.

Resuming the life of a rice planter in 1783, he was appointed by Congress in May 1785 to work on boundary negotiations with the western Indians. He returned to North Carolina the following year and was elected to the state legislature. He died before he could take his seat.

HOWE, WILLIAM. (1729–1814). Fifth Viscount Howe, British general. William, younger brother of George Augustus Howe and Richard Howe, was born on 10 August 1729 and educated at home and at Eton (1742–1746). He entered the army in 1746 as a cornet of the Fifteenth Dragoons, and his unusual application and ability, coupled to powerful connections, enabled him to rise rapidly. Promoted to lieutenant in 1747, he served in Flanders until the end of the War of the Austrian Succession. He became a captain in the Twentieth Foot on 2 January 1750 and formed a close friendship with Major James Wolfe. He was made major in the new Sixtieth (later the Fifty-eighth) Regiment in 1756 and became its lieutenant colonel in 1757. He served with distinction at Louisburg in 1758, Quebec (where he led Wolfe's advance guard onto the Plains of Abraham) in 1759, and the capture of Montreal in 1760. He led a brigade at the capture of Belle Isle in 1761 and was adjutant general of the expedition to Havana in 1762. During the years of peace he continued to rise: colonel of the Forty-sixth Foot in 1764, lieutenant governor of the Isle of Wight in 1768 and major general in 1772. In the late summer of 1774 he was given charge of seven line companies learning light infantry tactics on Salisbury Plain. When war broke out in America in 1775, Howe was a successful soldier distinguished for energy, leadership, and courage.

When George was killed in 1758, William replaced him as member of Parliament for Nottingham. He used his seat to oppose the ministry's policy of coercion in 1774 and it was thought he would not agree to serve in America. His appointment as Gage's second in command and prospective successor was thus something of a surprise, which he explained to his constituents as a matter of duty over personal preference. He also seemed to think that a negotiated settlement was still possible and that he might be the man to reach it. This background has led some historians—most prominently and persistently Ira D. Gruber—to attribute his later military failure to overanxiety to find a political solution. (Gruber rightly has little time for older accusations of laziness, self-indulgent living, and overattachment to his American mistress, Mrs. Joshua Loring). The matter is still open to debate. However the alternative argument put many years ago by Piers Mackesy—that Howe was slowed by intractable military difficulties—appears to be more convincing.

When he reached Boston on 25 May 1775, the time for negotiation was already past: Lexington and Concord had been fought and Boston was under siege. Howe planned and led—with great courage—the British attack on Breed's Hill and Bunker Hill on 17 June. The terribly high price of the British victory demonstrated that costly attacks were to be avoided for two reasons: first, the army's qualitative advantage over the rebels must not be eroded

William Howe. General Howe led British forces at the Battle of Bunker Hill and later at the battles of Long Island and Brandywine. © BETTMANN/CORBIS.

by losses, and second, the Americans must not be allowed to gain confidence through even partial successes. On the contrary, the redcoats' superior discipline and skill in maneuver was the key to ultimate victory: pitched battles were to be avoided until victory was certain. All this was conventional military wisdom in 1776: the idea of attacking and annihilating the enemy's army regardless of cost is Napoleonic in origin and by definition was not available to Howe.

STRATEGY IN NEW YORK

He took over command in Gage's absence on 10 October. Compelled to hurriedly evacuate Boston early in 1776, Howe took his army to Halifax to reorganize and await adequate reinforcements and transports. He was still waiting for his reinforcements and campaign equipment when he reached Staten Island off New York late in June and landed his men on 2 July. His brother, Admiral Richard Lord Howe, arrived on the 12th with supporting warships, some reinforcements, and the news that he and William had been appointed peace commissioners. Both brothers knew that their power to offer pardons and an end to restrictions on trade in return for rebel disarmament were out of date and useless. On the other hand Howe needed more men, supplies, and essential camp equipment

before he could risk his precious regulars in a campaign. He had no choice but to wait. Thus, far from changing his strategy to make room for negotiation, as Gruber would have it, he and Richard used the period of enforced inactivity to begin negotiations on 14 July. The overture came to nothing, largely because the Howes would not address Washington as "General"—a point, had they been really serious, they might have overlooked.

But still Howe could not move, largely because everything he needed had to come across the Atlantic and because the government, which determined strategy, sent Clinton off on a wild goose chase to Charleston before he went on to join Howe. Meanwhile, some British regulars and Germans arrived from Europe, but Howe did not feel strong enough to risk an amphibious assault on Long Island until Clinton finally arrived on 12 August. Even then Howe would launch his offensive without the last of his equipment, the camp kettles that were essential to his men's health in the field. When they arrived at the end of August, he promptly attacked Long Island.

Brilliantly outmaneuvering Washington and pinning the rebels against the water at Brooklyn on 27 August, Howe opted for a regular siege of their works rather than an immediate storm. The memory of Bunker Hill cast a long shadow. Howe knew that he must not risk giving the Americans even the illusion of success, a policy that Clinton, who was very critical later when blame had to be apportioned, heartily approved at the time. In the same way, after Washington's escape, Howe planned another outflanking move that would lever Washington out of New York City rather than force him to fight for it street by street. That meant a wait until boats, transports, and supporting warships could be concentrated inside the East River, and once again the Howe brothers used the lull to negotiate. Then the indirect assault began, again catching the Americans off balance and driving them out of the city at minimal risk. Washington escaped, of course, but his army was shaken and demoralized and nearer to the point when Howe could risk a final battle. The pattern was repeated at Harlem and White Plains. Then, when he was sure that Fort Mifflin was isolated and vulnerable, Howe proved he could attack decisively. A few more weeks and Washington's army might have been harried to pieces.

FRUSTRATION IN NEW JERSEY

But the campaigning season was now far advanced. As autumn turned the roads of New York and New Jersey to mud and the soldiers became exhausted, hot pursuit became impossible and Washington escaped behind the Delaware. Howe's army went into winter quarters and on 30 November the brothers used the unavoidable lull to offer a pardon to all who would return to their allegiance within sixty days. This might have succeeded in pacifying

New Jersey but for Washington's double success at Trenton and Princeton, demonstrating that the British army was now dangerously overextended. Howe's subsequent retreat behind the Raritan exposed the New Jersey men who had come out to support him and shook the faith of Loyalists everywhere in the ability of the British army to liberate and protect them. Worse still, it confined the British in New York in an area too small to provide it with adequate supplies, leaving it dangerously dependent upon transatlantic shipments of everything from powder and flints to writing paper and firewood. However, the attempt to overrun and rally support in New Jersey was fully justified by the winter pause in operations, something eighteenth-century commanders took for granted, and one Howe could not ignore if he was to conserve his precious regulars.

INVASION OF PENNSYLVANIA

Howe's objective in 1777 was to engage and defeat Washington's army, and all his apparent hesitations and delays sprang from the difficulty of bringing this about. His fundamental strategic error, failure to thrust up the Hudson to meet Burgoyne, was one shared with the ministry and with Burgoyne himself: no one imagined that Burgoyne would need direct help. On the other hand, if Howe could pin down and decisively defeat Washington's army, he would render effective help to Burgoyne while bringing the rebellion swiftly to an end. An amphibious invasion of Pennsylvania would—by threatening Philadelphia—probably force Washington to offer battle on Howe's terms. It would also give Howe secure lines of communication, restore Loyalist confidence, and secure an adequate territory from which to draw supplies. The drawback was that because so many troops had been sent from Britain to Burgoyne rather than to New York, Howe would have to evacuate the Jerseys in order to find enough men for Pennsylvania.

For a moment, Washington's appearance at Middle Brook north of the Raritan seemed to promise a decisive battle without going to Philadelphia at all. In June, Howe successfully lured Washington out of his strong position and tried to cut him off and make him fight in the open. The attempt failed, and Washington escaped to his fastness at Middle Brook. Once again refusing an assault on a strong position—a decision later praised by Charles Lord Cornwallis—Howe then evacuated the Jerseys and resumed his plan to attack Philadelphia.

His primary target was still Washington's army, not the city, and its movements determined his strategy. As in 1776, the embarkation was delayed by the shortages of troops, shipping, and supplies, not to mention contrary winds. Howe had also to make sure that Burgoyne was not running into any unexpected trouble and that Washington did not slip north to intercept him. He had no orders to

march up the Hudson himself, except in an emergency; so far from ignoring his instructions (as Gruber insists he was), Howe was being commendably careful and conscientious. Consequently, there was a three-week pause on Staten Island from 1–23 July before he embarked his fifteen thousand men for Pennsylvania.

Howe already knew that he could land at Chester or New Castle, below the known Delaware forts and obstacles, or in the Chesapeake at Head of Elk, depending on Washington's movements. When the expedition reached the mouth of the Delaware on 30 July, Howe discovered that his opponent had not marched north against New York or Burgoyne, a move which would have ended the whole British expedition. Instead, Washington appeared to have moved south and west, towards the line of the Susquehanna River, behind which he would be hard to get at and would be able to threaten the flank of an advance from the Delaware to Philadelphia. As Howe's primary objective was still Washington's army, he decided to go to Head of Elk, further from Philadelphia but closer to Washington and on a line of operations that would keep the enemy to his front and might—by still threatening Philadelphia—bring him to battle. That meant longer at sea, and when Howe's men disembarked at Head of Elk on 25 August, they were so exhausted that it was the 28th before they could march inland.

Once on the move, Howe consistently outgeneraled Washington. On 11 September he won a clear victory at Brandywine Creek, a battle Washington survived only because Howe's cavalry horses were still in no state to offer hot pursuit. Washington was again outmaneuvered on the Schuylkill, Philadelphia was occupied on 26 September, and Washington's counteroffensive was skillfully contained at Germantown on 4 October.

Washington's army survived, however, and Burgoyne's surrender at Saratoga negated all of Howe's achievements in Pennsylvania. Howe, already irritated by criticism from a ministry that had kept him short of men and shipping, offered his resignation on 22 October 1777. On 14 April 1778 he learned that it had been accepted and on 25 May, after Clinton's arrival and the abortive attempt to trap Lafayette at Barren Hill, Howe sailed for home.

RETURN TO BRITAIN

Howe was greeted by a barrage of criticism from the opposition and the press. He and his brother Richard (who returned home on 25 October 1778) insisted on a parliamentary inquiry, and from 22 April to 30 June 1779 they vigorously defended their conduct. In 1780 William gave up his Commons seat and resumed his military career. In 1782 he became a privy councillor and lieutenant general of the ordnance, a post he held

until 1804. He became colonel of the Nineteenth Dragoons in 1786, and after the outbreak of war in 1793 he was given regional commands in the north and east of England. He was governor of Berwick from 1795 to 1808 and of Plymouth from 1808 until his death in 1814. On Richard's death on 5 August 1799, he became the fifth viscount Howe. He died at Plymouth on 12 July 1814.

ASSESSMENT

Although Howe's excessive caution led him to miss decisive opportunities in 1776 and 1777, he was neither lazy nor did Mrs. Loring keep him from operations in the field. It is true that the Philadelphia expedition was partly misconceived: a thrust up the Hudson might have as effectively brought Washington to battle while eliminating most of the risk to Burgoyne. However, that would have sacrificed the political and moral advantages of invading Pennsylvania, not to mention the prospect of conquering a territory large enough to provide adequate supplies. Howe in the field was slow and methodical but his tactical performance was nothing short of stunning. Howe was a capable commander saddled with an enormous task, inadequate means, and (in 1777) a flawed strategy imposed from above.

HOWETSON, JAMES. (?–1777). Loyalist officer. Nothing is known of Howetson (also called Hewetson) before his appearance at the beginning of the Revolution as a British lieutenant living on half pay in Lunenburgh, New York. From the start, the local committee of safety kept an eye on him as a suspect person. At the insistence of the Albany committee, he signed a parole

on 30 April 1775 promising to stay near his home, talk with no other Loyalists, and take no action against the Revolution. The committee became aware that he was violating this parole by helping to set up a Loyalist communication network but settled for a mild warning. Shortly after the British captured New York City in September 1776, Howetson received a commission as colonel of the Loyal Volunteers of Albany County. Howetson had the unenviable task of raising this regiment secretly, since he was behind enemy lines. Howetson did not receive any precise orders and so set about planning a number of operations, most importantly to seize the gunpowder stored at Albany; in grandiose moments, his Loyal Volunteers even thought to capture the whole city. None of these plans ever came to fruition. After disarming a few Patriot militia, the Loyal Volunteers fell into a trap set by militia units from New York, Massachusetts, and Connecticut at Livingston Manor on 2 May 1777. Over the next few days the Patriots arrested most of the Loyalists, including Howetson, who was charged with treason as he recruited for the enemy while a citizen of New York. A court-martial held on 14 June 1777 found him guilty and sentenced him to death. Howetson was hanged in Albany on 4 July 1777.

HOWITZER. A howitzer is a short muzzle-loading, smooth-bore cannon developed to reach targets behind obstructions with explosive projectiles fired at a high angle and a low muzzle velocity. In trajectory and muzzle velocity, it falls between a mortar and a gun. In field service, it could also be used as an antipersonnel weapon, firing grapeshot and canister.

HUBBARDTON, VERMONT. 7 July 1777. Defeat of American rear guard. After Burgoyne's

THE GALE GROUP.

operations made it clear that Ticonderoga could not be held, Arthur St. Clair evacuated the post under cover of darkness on 5–6 July. There were only enough boats for the invalids and baggage, so he marched the main body, about 2,500 strong, on the roundabout route through Castleton following to parallel roads. He intended to join Colonel Long's force at Skenesboro. At the tiny settlement of Hubbardton (later East Hubbardton), Vermont, St. Clair left behind Seth Warner to cover his rear while the column continued another six miles to Castleton, where St. Clair's men camped for the night. Warner's orders were to wait with his 150 men for the rear guard regiments to arrive and then to join the main body at Castleton, but he chose instead to remain in Hubbardton for the night. His command, all Continentals, consisted of his own regiment from Vermont, Colonel Ebenezer Francis's hand-picked 450-man rear guard built around his own Massachusetts regiment, and Colonel Nathan Hale's Second New Hampshire Regiment. Including stragglers, they numbered about 1,000 under experienced commanders, but

they were exhausted. After consulting with the other two colonels, Warner assumed that he was beyond danger. While failing to post adequate security guards, the three components of the force spread out and occupied different pieces of key terrain. That assumption of safety would be a critical error.

The enemy had in fact pursued with uncharacteristic vigor upon realizing that St. Clair's evacuation was not a trap. Simon Fraser's Advance Corps left Mount Independence on 6 July and trailed St. Clair down the miserable roads by only a few hours. The British were followed by Riedesel with a force of Brunswickers, including his own regiment and Breymann's Advance Corps. At about 4 P.M. Riedesel, with his vanguard of jägers and grenadiers, caught up with Fraser and took command by virtue of seniority. Arguing that the heat had been harder for his Germans, he agreed to let Fraser push on another three miles before halting and that both contingents would resume the advance the next morning at 3 o'clock. Fraser bivouacked about three miles from Warner's camp, at the place later called Hubbardton. During the night his

Indians discovered the location of Warner's camp and Fraser planned a dawn attack.

Led by Loyalist and Indian scouts, the British moved on schedule. At about 4:40 A.M. they collided with American pickets and firing began. After considering and discarding the possibility of an ambush, Fraser chose to attack without waiting for the Germans to close up. His column had a leading detachment of the Twenty-fourth Foot, supported by the Earl of Balcarres's light infantry, with Major John Acland's grenadiers bringing up the rear. Around daylight the column hit Hale's regiment finishing its breakfast near Sucker Brook. As they deployed into line, the British came under fire. The first American volley cut down about twenty, killing Major Grant of the Twenty-fourth and wounding Balcarres. Then the action cooled down a bit as Hale's men withdrew.

Francis and Warner had just finished a meeting to discuss orders that a messenger had brought from St. Clair. The general informed them that the British had broken through the boom and sailed to Skenesboro, and he now ordered them to retreat to Rutland. Francis's force had just started its march when British light infantrymen emerged from the woods where they had been sent to maneuver around Hale's rear guard. Francis promptly deployed behind a stone wall and some fallen trees and easily drove the British back. A more cautious Fraser now built up his own forces and the two sides created a one-thousand-yard line of battle. The American left flank was on the slopes of twelve-hundred-foot Zion Hill (as it was later named); Fraser must have instinctively seen that this was critical terrain, and he started thinning out his forces on the left to build up strength to envelop by way of this hill. When his grenadiers clawed their way up the steep, rocky, wooded slopes, the Americans curved this end of their line to the rear, in a maneuver known as "refusing the flank," and kept up their fire. On the other end of the line, Francis started pushing back the weakened British left. The wooded terrain favored the American emphasis on musket fire rather than the bayonet charges and close combat at which the British excelled. As a result Fraser was getting the worst of it when Riedesel's Germans arrived and turned the tide. Riedesel had set out that morning as planned, but when he heard gunfire he hurried forward with his jägers and grenadiers, just as he had done the day before.

The American line held its ground and pulled back only after it was threatened with envelopment. Whether by intent or simply because it made tactical sense on a minute-by-minute basis, Colonels Francis and Hale's survivors both began a type of fighting withdrawal known as delaying on successive positions. This gave the British all they could handle. By this time the fight reached the position where Warner's regiment had formed, and as Riedesel came up he immediately attacked the American

right, having his men sing to the music of their band to dramatize the arrival of reinforcements and exaggerate their size. At this point Francis was killed and his men gave way and raced across Hubbardton Brook. Seeing a bayonet attack coming and knowing that the other two contingents were in retreat, Warner told his men, "Scatter and meet me at Manchester."

NUMBERS AND LOSSES

The two-hour action was "as bloody as Waterloo" in proportion to the numbers engaged. British and German participants actually thought from the intensity of the fight that the Americans had 2,000 or more men when in reality there were only half as many. By the final phase of the action Fraser and Riedesel probably had 850 men in action. American casualties probably amounted to 325 or so, mostly prisoners. British losses appear to have been around 35 killed and 148 wounded; German casualties were relatively light.

SIGNIFICANCE

Although not immediately apparent, the combination of the tough fight here and the companion engagement at Fort Anne took the starch out of Burgoyne's pursuit. Exhausted by their efforts, the elite Anglo-German troops had to stop and refit. That enabled St. Clair to get clear and fall back to the Hudson River while Schuyler's delaying tactics began to destroy the lines of communications. Trading space for time let the Americans recover from the loss of "the Gibraltar of the North" and would make it possible for Burgoyne to blunder into disaster in the fall.

HUCK, CHRISTIAN. (c. 1747–1780). Loyalist officer. Little is known of Captain Christian Huck, a Philadelphia Loyalist serving in Tarleton's British Legion. As British and Loyalist raiders ravaged South Carolina

after the surrender of Charleston, Huck commanded a body of cavalry in the outposts around Camden. Not long after destroying the iron works of William Hill and Isaac Hayne, he moved on Williamsons Plantation. Huck had ninety Loyalists and some twenty-five British soldiers under his command when he camped for the night on 11 July 1780. A slave named Watt came across Huck's encampment and informed his owner, Colonel William Bratton. Bratton gathered some 250 militia together and surprised the Loyalists and the British the following morning. Huck and about thirty of his men were killed in this fierce little battle, most of the rest being taken prisoner.

HUDDY–ASGILL AFFAIR. April–October 1782. On 24 March 1782, Loyalist irregulars captured Captain Joshua Huddy of the New Jersey militia in a surprise attack at Toms River, New Jersey, confining him on a prison ship near New York City. General Henry Clinton's headquarters had given the Associated Loyalists permission to take Huddy and two others for purposes of a prisoner exchange. The Associated Loyalists, apparently acting on orders from William Franklin, had different plans. They were seeking to avenge the death of Philip White, a Loyalist who had been shot while attempting to escape from the New Jersey militia. Though Huddy had no connection to White's death, he was led by a guard commanded by Captain Richard Lippincott to the heights of Middletown and hanged from a tree on 12 April. A placard pinned to his breast read:

We the refugees having long with grief beheld the cruel murders of our brethren, . . . determine not to suffer without taking vengeance, for the numerous cruelties, and thus begin, and have made use of captain Huddy as the first object to present to your view, and further determine to hang man for man, while there is a refugee existing. Up goes Huddy for Philip White. (Smith, 2, p. 1750.)

Huddy's execution became an immediate sensation, infuriating General Clinton, who ordered Lippincott court-martialed, and evoking a rare outburst of ill temper from Washington, who demanded that Clinton deliver the

guilty officer. Clinton, of course, refused, promising Washington that Lippincott would face British justice. But the court-martial ruled that Lippincott had acted on orders from a civil officer, since Franklin was still officially New Jersey's royal governor, and set him free.

Washington insisted on retribution, ordering Colonel Moses Hazen to select a British prisoner by lot for execution. Thirteen British captains picked straws, with the one marked "unfortunate" being pulled by Captain Charles Asgill, who was seventeen years old. Almost immediately, Washington regretted the whole affair and tried to get out of executing Asgill. Congress became involved, launching into a bitter debate in which the majority wanted to mete out "an eye-for-an eye" justice. Elias Boudinot, arguing for clemency, persuaded his colleagues to postpone the vote for a day. The next morning a special courier arrived from the king and queen of France, who had been petitioned by Asgill's family, requesting Asgill's pardon as a personal favor. Much to Washington's, and Asgill's, relief, Congress complied and the affair ended with the full pardon of the young British captain.

HUDSON RIVER AND THE HIGHLANDS. The Hudson River, which could be navigated by the largest warships one hundred miles upstream, was a vital avenue of strategic movement between Canada and the thirteen colonies during the colonial wars and during the Revolution. The Hudson River region was of particular concern to the British during the Revolution because of its high concentration of Loyalists.

The Hudson Highlands are a topographical curiosity in that they cross the strategic Hudson River forty-five miles north of New York City, constituting a natural barrier of easily defensible terrain. Rising above the five-hundred-foot contour, they are the highest ground along the Hudson-Mohawk-Lake Champlain system of waterways. Early in the war, on 25 May 1775, the

THE GALE GROUP.

Continental Congress therefore resolved to fortify the Highlands, and a few months later work was started opposite West Point at Martelaer's Rock (later

Constitution Island). Early the next year this effort was abandoned, but Forts Clinton and Montgomery were built astride Popolopen Creek.

Clinton's expedition to the Highlands in October 1777 made short work of these defenses, but for strategic reasons the British were forced to abandon their gains. Washington's engineers took another look at this critical terrain and decided that the main fortification should be at West Point. Planned for the most part by the French engineer Louis de La Radière, construction started on 20 January 1778 by Samuel H. Parsons's brigade. Fort Arnold, later called Fort Clinton, was situated on the tip of the forty-acre plateau that dominated the double right-angle bend of the river at West Point. From March 1778 until June 1780 the Polish engineer Thaddeus Kosciuszko was in charge, and an elaborate system of redoubts and water batteries was constructed. In April 1778 a great sixty-ton chain was stretched across the river to Martelaer's Rock, and the land approaches to West Point from the west were barred by Forts Putnam, Webb, and Wyllys. These were in turn protected by four redoubts.

Despite British efforts, the Hudson Highlands remained in American hands for the rest of the war. Visiting West Point in November 1780, Chevalier de Chastellux was overwhelmed by the engineering wonders accomplished here "by a people, who six years before had scarcely ever seen a cannon."

HUGER, ISAAC. (1743–1797). Continental general. South Carolina. One of the Huger Brothers, Isaac Huger served as a lieutenant against the Cherokee in 1761. He was made lieutenant colonel of the First South Carolina Regiment on 17 June 1775, colonel of the Fifth South Carolina Continentals on 16 September 1776, and brigadier general on 9 January 1779. At Stono Ferry, South Carolina, on 20 June 1779, he was severely wounded while leading the left wing. In the fiasco at Savannah, Georgia, on 9 October 1779, he commanded the Georgia and South Carolina militia in an unsuccessful diversion. During the Charleston campaign of 1780 he was routed by Tarleton at Monck's Corner on 14 April. In the Southern campaigns of Nathanael Greene, he led one wing of the army in a remarkable march from Cheraw, South Carolina, to link up with Morgan's wing at Guilford Courthouse. He was seriously wounded at Guilford, North Carolina, on 15 March 1781, but

commanded Greene's right wing at Hobkirk's Hill, South Carolina, on 25 April 1781. His brigade in both of these actions was composed of the Fourth and Fifth Virginia Continentals. He was in the South Carolina General Assembly in 1782.

HULL, WILLIAM. (1753–1825). Continental officer. Connecticut. William Hull was born in Derby, Connecticut, on 24 June 1753, graduated from Yale College when he was nineteen years old, studied law at Litchfield, and was admitted to the bar in 1775. He was appointed a captain-lieutenant in the Seventh Connecticut Regiment on 6 July 1775 and captain on 9 October, and served in the Boston lines. On 1 January 1776 he became captain of the Nineteenth Continental Regiment (Connecticut). He rose steadily in rank, becoming major of the Eighth Massachusetts Regiment on 1 January 1777 and lieutenant colonel of the Third Massachusetts Regiment on 12 August 1779. He served almost continuously, taking part in the battles of White Plains, Trenton, Princeton, Saratoga, Monmouth, and Stony Point, and for three winters in a row commanded the American advanced lines just above New York City. He led the bold raid on Morrisania, New York, on 22–23 January 1781. Brave and energetic, he won commendations from Washington and Congress. Retained in Colonel Henry Jackson's Continental Regiment on 3 November 1783, he served to 20 June 1784.

After leaving the army he returned to the law, became active as a Jeffersonian politician, and helped suppress Shays's Rebellion. President Jefferson appointed Hull governor of the newly organized Michigan Territory on

22 March 1805. President Madison named him a brigadier general on 8 April 1812, with the job of defending the territory with a motley army of militia and volunteers. He suffered a series of defeats at the hands of the British, including the surrender of Detroit on 16 August 1812, and was cashiered after a court-martial presided over by Henry Dearborn. (Three days after he surrendered Detroit, his nephew Captain Isaac Hull won his famous victory over the *Guerrière*.) William Hull spent his remaining years at Newton, Massachusetts, where he had established a home after the Revolution. He published a defense of his conduct at Detroit in 1824, a year before he died at home on 29 November 1825.

HUMPHREYS, DAVID. (1752–1818). Continental officer, diplomat, poet. Born in Derby, Connecticut, on 10 July 1752, Humphreys entered Yale College in 1767, founding a literary society that would become the core of a group known as the Connecticut Wits. The college friends in the group later became prominent writers, including Humphreys, Joel Barlow, Timothy Dwight, and John Trumbull. After being graduated in 1771, Humphreys became a teacher in Wethersfield, Connecticut, and later worked as a tutor at Philipse Manor in New York. Humphreys enlisted in the Continental army in August 1776 as a captain in the Second Connecticut Regiment. He served with Generals Israel Putnam and Nathanael Greene before becoming aide-de-camp to General George Washington on 23 June 1780. In the ensuing years Humphreys traveled everywhere with Washington, wrote hundreds of letters dictated by the general, and became Washington's close friend and confidant, making his own home at Mount Vernon. At the same time, Humphreys began publishing his poetry, starting with *Address to the Armies of the United States of America* in 1779. Most of his early poems were deeply patriotic,

including *The Glory of America* (1782), and were widely reprinted in the American press.

In October 1781 Humphreys was given the honor of taking the news of Cornwallis's surrender at Yorktown and the captured British standards to Congress. Over the next two years, he continued to serve as Washington's personal aide. After joining the European commerce commission of Thomas Jefferson, John Adams, and Benjamin Franklin from 1785 to 1786, Humphreys returned to Mount Vernon as Washington's secretary, a position he held when Washington became president. In response to Shays's Rebellion, he and the other Connecticut Wits produced *The Anarchiad*, which warned of the dangers of uncontrolled democracy. It is probably the only one of Humphreys's poetical works to arouse much interest in modern times. From 1790 to 1800 he undertook a number of diplomatic missions for Washington and Adams, including service as minister to Portugal and Spain. He returned to Connecticut with one hundred merino sheep he had been given as a gift from the king of Spain; with these he started a successful woolen business at Rimmon Falls, where he lived the rest of his life. Over the years he wrote a wide variety of essays and biographies, including *An Essay on the Life of the Honourable Major-General Israel Putnam* (1788) and *The Yankee in England* (1815). But like his poetry, his prose was written in a heavily ornamented rhetorical style that did not survive his own lifetime. On 21 February 1818 he died in his home in what was later renamed Humphreysville.

HUMPTON, RICHARD. (1733?–1804). Continental officer. England and Pennsylvania. Born in Yorkshire, perhaps in 1733; Richard Humpton was a captain in the British army, taking part in the siege of St. Malo (on the northern coast of Brittany) in 1758. He resigned his commission at the end of the Seven Years' War and settled on an upper branch of the Susquehanna River. Named lieutenant colonel of the Flying Camp on 16 July 1776, he became colonel of the Eleventh Pennsylvania Regiment on 25 October. As General George Washington retreated across New Jersey, Humpton was assigned the task of removing boats from the Delaware River. His

success on this mission helped stop the British pursuit and made possible Washington's counterstroke at Trenton, New Jersey, on 26 December 1776. He fought at Brandywine, and sought a court-martial of General Anthony Wayne for failing to avoid the disastrous battle of Paoli (often called the Paoli Massacre.) He took command of the Tenth Pennsylvania Regiment on 1 July 1778, and of the Sixth Pennsylvania Regiment in the reorganization of 17 January 1781. He led the Second Pennsylvania Regiment from 1783 until the Continental army was disbanded on 3 November 1783. He was brevetted brigadier general on 30 September 1783. After the war he returned to his farm in Pennsylvania, and was adjutant general of the militia until his death on 21 December, 1804.

HUNTINGTON, JABEZ. (1719–1786). Merchant, militia general. Connecticut. Born at Norwich, Connecticut, on 7 August 1719, Jabez Huntington graduated from Yale College in 1741. He became a wealthy West Indies trader of great social and political prominence in his home town. An early opponent of increased imperial control, in May 1775 he became a member of the council of safety—the executive authority in Connecticut government—and was one of its most active and important members over the next four years. He devoted himself and his fortune to the patriot cause, even as the war took a heavy toll on his shipping interests. In December 1776 the General Assembly commissioned him major general of the militia in eastern Connecticut and named him to succeed David Wooster as commander of all state militia after Wooster was mortally wounded during the Danbury raid in April 1777. Huntington played an important role in organizing and equipping the militia, but he never took the field himself. In February 1779 he was incapacitated by a nervous disease brought on by overwork. All four of his sons served with distinction in the war. His eldest son, Jedediah Huntington, who married Faith Trumbull, daughter of Jabez's good friend Governor Jonathan Trumbull, retired from the Continental Army as a brevet major general.

HUNTINGTON, JEDEDIAH. (1743–1818). Continental general. Connecticut. Born at Norwich, Connecticut, on 4 August 1743 and reared amid wealth and great social prominence, Jedediah Huntington graduated from Harvard College in 1763, joined the mercantile business of his father, Jabez Huntington, and became an active Son of Liberty. He was elected ensign of the local militia company in 1769, lieutenant in 1771, and captain in May 1774. The General Assembly appointed him colonel of the Twentieth Militia Regiment in October 1774. On 26 April 1775 he reached Cambridge with elements of his militia regiment and remained for twenty-three days while the New England army was organized to maintain the Boston Siege. The Assembly named him colonel of the Eighth Connecticut Regiment in July 1775, and he led it to Boston in mid-September, where it remained until its enlistment expired on 10 December 1775. He was named colonel of the reorganized unit (Seventeenth Continental Regiment) and led it to New York in April 1776. The regiment fought at Long Island, where it suffered heavily, although Huntington himself was absent sick, and in subsequent skirmishes of the New York Campaign. He was named to command the First Connecticut Regiment (1777) on 1 January 1777 and was ordered to Peekskill in April. He took a detachment to guard Danbury, Connecticut, and participated in skirmishing against the British troops who raided the depot at the end of the month. Congress promoted him to brigadier general on 12 May 1777; he joined Israel Putnam at Peekskill in July but saw no action when Sir Henry Clinton seized Forts Montgomery and Clinton on 6 October. He rejoined the main army near Philadelphia in mid-October, and sat on the court-martial that acquitted Anthony Wayne of dereliction of duty for the surprise attack on his command at Paoli, Pennsylvania. After suffering through the hard winter at Valley Forge, he was part of Charles Lee's advanced force that fought at Monmouth on 28 June 1778. He was a member of the court-martial that convicted Lee of "shameful" conduct and disrespect to Washington (12 August). The regiment spent the winter of 1778–1779 at Danbury while Huntington went home on leave. In 1779 and 1780 he served in the Hudson Highlands and New Jersey, and was a member of the board of general officers that convicted Major John André on 29 September 1780. He remained in the Highlands during the Yorktown campaign, spent much of 1782 recruiting in Connecticut, and helped to found the Society of the Cincinnati at Newburgh, New York, in 1783. Brevetted major general on 30 September 1783, he resumed his commercial affairs at Norwich after 3 November.

Although Huntington was an able officer and was in the field throughout most of the war, he had spent his

military career largely in the management of the army and did not see a great deal of combat. After the war he served as state treasurer and, as a delegate to the state convention, voted to ratify the federal Constitution. President Washington, a personal friend, appointed him collector of customs at New London in 1789, a post he held for twenty-six years. He died at New London on 25 September 1818.

HUNTINGTON, SAMUEL. (1731–1796). Signer. Connecticut. Born in Windham, Connecticut, on 3 July 1731 and distantly related to Jabez and Jedediah Huntington (both families were descended from Simon Huntington, who died on the trip to the colonies in 1633), Samuel Huntington was apprenticed to a cooper at the age of sixteen and later worked on his father's farm and in his shop. He studied Latin and the law by himself and, after reading law with a local attorney, was admitted to the bar in 1758. He settled in Norwich two years later and was elected to the General Assembly in May 1765. Appointed King's Attorney for Connecticut the same year, he resigned because he opposed the Stamp Act. The Assembly appointed him a justice of the peace (1765–1775) and a judge of the superior court (1773). An increasingly prominent supporter of colonial rights, he was elected to the governor's council (the upper house of the General Assembly) from 1775 through 1784. In May 1775 the Assembly named him to the committee for the colony's defense and in October elected him to the Continental Congress. One of three Connecticut delegates to sign the Declaration of Independence, he was elected president of Congress, to succeed John Jay, on 29 September 1779. He served until 6 July 1781, when he resigned due to poor health; he returned in 1783 for another year. He was elected lieutenant governor in May 1785 and served as governor from 1786 to 1796. He was a strong supporter of the federal Constitution and helped to get it ratified in Connecticut. He died at Norwich on 5 January 1796.

HUTCHINSON, THOMAS. (1711–1780). Royal governor of Massachusetts. Great-great-grandson of the famous Anne (Marbury) Hutchinson (1591–1643), who emigrated from England with her husband and children in 1634 and was banished from the Massachusetts Bay Colony for her religious beliefs, Thomas was a leader of the conservatives in the colony before the American Revolution. He entered Harvard at the age of thirteen, graduated in 1727, and three years later received his master of arts degree.

Wealthy, able, and socially part of what he called the “better sort,” his first big step in alienating the “common sort” came in 1749, when his leadership succeeded in establishing “hard money” as the medium of exchange in the colony. He did this through his plan to call in the major portion of the inflated bills of credit, which the government had been issuing since 1690 without adequate backing, and paying these off at the rate of eleven to one by using the £183,650 that England had sent to reimburse Massachusetts for its expenses in the Louisburg expedition. This measure, like the abolishing of the Land Bank (1740–1741), was to the benefit of persons living on fixed incomes and of creditors—who, naturally, were of the “better sort”—and was tremendously unpopular with debtors. He attended the Albany Convention of 1754 and probably had a hand in drafting the famous Plan of Union that is primarily associated with Franklin’s name. In 1758 Hutchinson became lieutenant governor, and in 1760 he became chief justice, a position to which the father of James Otis had aspired. Hutchinson opposed the Sugar Act and the Stamp Act, but only because of their adverse effect on British as well as on colonial trade. Loyal to the authority that had commissioned him, however, he made every effort to enforce the unpopular acts.

Hutchinson had given the popular leaders of Boston several reasons to believe he had a personal interest in enforcing the British measures they found so objectionable. Already a wealthy man, he appropriated more than his fair share of offices and salaries, which brought him perhaps three hundred pounds a year in days when an ordinary family could live comfortably on forty pounds a year. His brother-in-law, Andrew Oliver, was a stamp distributor. So on the night of 26–27 August 1765, his home was sacked by the Boston mob. In the absence of

Sir Francis Bernard, he was acting governor during the period 1769–1771. In the latter year he became governor and served until 1774. Hutchinson weathered the resistance to the Townshend Acts, but during the subsequent lull in agitation he proved his congenital inaptitude for the post he held. The Hutchinson letters affair in 1773 was his final undoing. Then, he unwisely used his influence for the personal profit of himself and his sons, Thomas and Elisha, in the matter of the East India Company’s tea being sent to America. Compounding this, Hutchinson—in refusing to facilitate the removal of this tea—played into the hands of the rabble-rousers and brought on the Boston Tea Party on 16 December 1773.

Although he did not know it at the time, he was through. On 29 June 1774 he reached England, and a few days later he spent two hours reporting to George III on the situation in his province. General Gage had meanwhile taken over as governor, but the understanding was that Hutchinson would return to that post when the crisis was over. Hutchinson had no idea that he would have more than a few months to wait, and he urged on the London authorities a policy of conciliation that he had not followed when he was in a position to do so in Boston. So it was that those of the “common sort” rose as leaders of the American Revolution, and Hutchinson never realized his hope of laying his “bones in New England.”

He was an historian of note, publishing the first volume of his *History of the Colony of Massachusetts Bay* in 1764 and writing the third while exiled in England. (It was published in 1828). He also wrote a pamphlet, *Present State of the Bills of Credit* (1736); *The Witchcraft Delusion of 1692* (1780); and many other works of a political and historical nature.

In 1768 Hutchinson constructed an imaginary dialogue between abstract characters he named “European Englishman” and “American Englishman,” in which the two sides of the imperial controversy exchanged their views with calmness and mutual respect. Never before and never again did Hutchinson come so close to revealing to himself his own divided mind and political ethics. The very names of the speakers in his dialogue suggest how similar—and how vastly different—Hutchinson believed imperial officials and colonial politicians were to each other. There was no more telling a moment in the history of Loyalism.

HUTCHINSON LETTERS AFFAIR.

1773. Letters written principally to Thomas Whately, former secretary to the British treasury, by Thomas Hutchinson and Andrew Oliver between May 1767 and October 1769, when they were chief justice and province secretary of Massachusetts, respectively, fell into the hands of Benjamin Franklin in late 1772, when Franklin was the agent of the province in London. How Franklin obtained them is not known. The letters urged the imperial government to take a tougher stance with the colonies and were given to Franklin to show him the type of advice from America that was influencing Parliament. Franklin sent the six Hutchinson and four Oliver letters to Thomas Cushing, speaker of the Massachusetts House of Representatives, on 2 December 1772 with the advice that they should be shown to influential patriots for their information only, and should not be copied or published. Samuel Adams read them before a closed session of the House on 2 June 1773 and later had them published. In the resulting scandal, the House petitioned the king to remove Hutchinson and Oliver, and a duel was fought between John Temple, a distant relative of George Grenville, and Thomas Whatley's younger brother William, over the alleged theft of the letters. Franklin then came forward to announce (25 December 1773) that he alone was responsible. The British government disciplined Franklin by removing him as Joint Deputy Postmaster for the British colonies north of North Carolina. Hutchinson, now governor, prorogued the General Court on 9 March 1774 before it could institute impeachment proceedings against him.

HUTCHINSON'S ISLAND, GEORGIA.

7 March 1776. The Georgia Patriots take control. On 11 May 1775, after news of Lexington and Concord arrived in Savannah, the "Liberty Boys" seized five hundred pounds of powder from the provincial magazine. When an armed British schooner appeared on 2 June, a crowd expressed the town's defiance by spiking a battery in Savannah. Three days later they erected the colony's first liberty pole and paraded under arms. On 13 June they called for a provincial congress to meet on 4 July, and later in the month they helped a South Carolina force drive Indian Superintendent John Stuart to East Florida. After more powder had been seized, Governor Sir James Wright gave up hope of keeping the revolution out of his province and appealed to General Thomas Gage and Admiral Samuel Graves for armed support. Although authority in Georgia passed to a council of safety and the Provincial Congress in July 1775, the royal governor remained unmolested in Savannah until early 1776. When two warships and a loaded transport arrived in belated response to Wright's request for help, the council of safety ordered his arrest to prevent him from rallying Georgia Loyalists. Joseph Habersham, who had risen as leader of the Patriots, led a group that captured the governor on 18 January and placed him under house arrest. He escaped the night of 11 February 1776 and took refuge aboard the *Scarborough*.

After the assembly refused to answer his conciliatory letter of 13 February, Wright resorted to force. The warships moved up the river on 6 March and took eleven rice-laden merchant vessels; troops under Major John Maitland landed on Hutchinson's Island, opposite the town. After their warnings to the British to withdraw were ignored, the rebels set fire to two merchant ships on 7 March. These drifted toward the troop transport and caused a panic. Colonel Stephen Bull arrived about this time with four hundred Carolinians, and the British abandoned their plan for attacking the town. Only two of the rice ships escaped.

Governor Wright left with the British ships, making the return journey to London, where he urged the crown to recapture the province. He returned to Savannah in July 1779, after the British had retaken the city.

HYLER, ADAM. Whaleboat guerrilla. New Jersey. A native of Germany, for a time he served in the British navy. Settling in New Brunswick, New Jersey, he had charge of a number of trading vessels. In cooperation

with William Marriner, he figured in a number of daring exploits in the coastal waters between Egg Harbor and Staten Island, where every Tory fisherman was compelled to pay them enormous tribute. Their boats were destroyed by the British in the summer of 1777, but they built new ones and undertook a systematic harassment of the enemy. Hylar captured several small British vessels, and with two armed boats he seized a corvette off Coney Island. He captured a Hessian major in Gowanus one night, surprised and carried off a sergeant's guard from Canarsie, and was the terror of prominent Tories. An attempt to capture

Richard Lippincott, the man charged with murdering Joshua Huddy, was foiled only by the absence of the former from his home in Broad Street in New York City.

ICONOGRAPHY. The War of American Independence led to a large body of visual art. Some met the highest artistic standards of its time; some was naïve. Some came from direct observation; some was constructed remembrance of how an event “ought” to have been. Taken together, the oil paintings, watercolors, and drawings that depict the Revolution give a strong sense of what participants and observers saw at the time.

NARRATIVE PAINTINGS

All of the Revolution’s artists produced their work in the shadow of Benjamin West (1738–1820). Born in Philadelphia, West left for England both to pursue advanced training and to work on topics beyond the limits of provincial culture, particularly history painting. West’s *Death of General Wolfe* (1770, National Gallery of Canada) is considered the first work of modern-dress history painting, thus breaking the convention that history painting dealt with ancient subjects. West took care to model his characters’ faces realistically, but the painting was an allegory of the concept of civic virtue displayed in the North American wilderness. British Major General James Wolfe fell after routing the French under Montcalm and securing North America for the British; as depicted in the painting, Wolfe’s death was transcendent, validating a much larger cause.

Not only West but also the students who gathered in his London studio were now free to explore variations on the modern theme. One student, Matthew Pratt (1734–1805), titled a group portrait *The American School* (1765, Metropolitan Museum of Art). Two members of this school, John Trumbull (1756–1843) and Charles

Willson Peale (1741–1827), took the Revolutionary War as their main subject.

Like West, Trumbull and Peale wanted to escape the confines of portraiture. Trumbull, in particular, produced a series of monumental canvasses on the events of the Revolution. Some of them, such as *The Declaration of Independence* (1786–1794, Yale University) showed civilian events. But Trumbull emulated West’s military subject matter in *The Death of General Wolfe* at least twice. The best known is *The Death of General Warren at the Battle of Bunker Hill* (1786, Yale University), but *The Death of General Montgomery in the Attack on Quebec* (1786, Yale University) is of equal power. Both canvasses show the Revolutionary leader overwhelmed, Warren by oncoming British troops and Montgomery by figures in frontier garb. West had used a pensive Indian in *The Death of General Wolfe* to indicate the American setting. Trumbull also used figures of color, a carefully observed young black male in *The Death of General Warren* and several Indians in *The Death of General Montgomery*. Sensitive, perhaps, to the problem of slavery, he identified the black figure as on the American side and placed a musket in his hands.

Trumbull did other large war canvasses, including a monumental rendering of the surrender of Hessian Colonel Rall at Trenton on Christmas Day, 1776 (Yale University). Rall, dying of the wounds he has sustained, nevertheless remains upright, propped up by an American. Washington is mounted, extending his right arm in a diagonal line that reaches down across to Rall, who continues it toward a fallen drum. The American commander wears an expression of compassion and pity.

The Death of James Wolfe. Benjamin West's *Death of General Wolfe* (1770) is conventionally considered the first modern-dress history painting, although it is not a literal depiction of the event. This copy of West's painting was rendered around 1770. © COURTESY OF THE DIRECTOR, NATIONAL ARMY MUSEUM, LONDON/BRIDGEMAN ART LIBRARY.

Trumbull completed his war sequence with two versions of *The Surrender of Cornwallis at Yorktown* (1797, Yale University; 1824, United States Capitol). In both versions, the British second-in-command, on foot, yields his sword to Washington's delegate, General Benjamin Lincoln. Mounted American and French officers fence the British officer in on both sides, as red-coated troops stand at attention in the deep background. The sky is shot with red and with smoke, suggesting the destruction the British had endured and the larger destruction of Britain's American project. The Union Jack is not to be seen, but both the Bourbon Fleur-de-Lys and the Stars and Stripes flutter in the wind. The British general stands at the bottom of a diagonal line of light that ascends past Lincoln, a more distant Washington, to the triumphant American flag. This time there is no death, only the mixture of triumph and defeat.

Peale never attempted such large themes. Instead, he aimed to capture the likenesses of the Revolution's leaders (a large project to which Trumbull also contributed). But the contrast between Peale's first Washington portrait (1772, Washington and Lee University) and his second (1779, Princeton University) belongs to the war's iconography. In the first, Washington is a naïve provincial, showing off his new wealth and his colonel's uniform. In the second, set at the triumph over British troops at Princeton early in 1777, Washington has become the General, fully in command of himself, of the cannon on which he rests his hand, of the history he is enacting, and of the canvas.

Like virtually all paintings in the genre, these canvasses were inventing tradition. The successes of the American army and militia were undeniable, but Yorktown became possible because the French allies had

George Washington in Militia (1772). In this portrait by Charles Willson Peale, the young Washington appears as a provincial, showing off his new wealth and his colonel's uniform.
THE LIBRARY OF CONGRESS.

what America lacked, a significant navy. To most Americans, however, the naval history of the Revolution is associated with the figure of John Paul Jones, most notably for his victory off the English coast over the British vessel *Serapis*. Jones's own *Bonhomme Richard* sustained so much damage that it sank. Perhaps it is appropriate that one of the best-known paintings of the event is by the English naval painter Robert Dodd (1748–1816), who worked primarily in the London dockland district called Wapping and whose main theme was the glories of the Royal Navy in the age of Nelson. Other images abound. Several are available in the online picture collection of the New York Public Library.

The revolutionary era's tradition of grand-scale narrative painting continued into the nineteenth century. Two different monumental canvasses produced at about the same time depict Washington's crossing of the Delaware River to raid the Hessian forces at Trenton on Christmas Day, 1776. One is by the American painter George Caleb Bingham (1811–1879). Painted between 1856 and 1871 and held by the Chrysler Museum of Art, Norfolk, Virginia, the painting shows Washington astride a white horse, aboard a flat-bottom boat that two men are poling across the nearly-frozen

water. His head defines the top of a triangle. Aura-like, glowing blue sky surrounds him, driving back dark winter clouds to the top of the frame and to his right. The image is crowded with soldiers and with other boats, but it also is static. The two men poling the boat define the sides of the triangle at whose apex is Washington's head, but they seem to be working against one another. Curiously reminiscent of Bingham's better-known *Fur Traders Descending the Missouri* (1845, Metropolitan Museum of Art), the painting projects no internal driving energy.

That is not at all the case with Emmanuel Gottlieb Leutze's (1816–1868) version of the same event (1851, Metropolitan Museum of Art). Although identified as American, Leutze was German-born and identified himself strongly with the failed European democratic revolutions of 1848. As in Bingham's similarly monumental canvas, an aura of bright sky seems to emanate from Washington himself. But unlike the Bingham, Leutze's canvas pulses with energy. The foreground boat, bearing the general, is off-center to the right, with ice-choked water ahead. The water, however, is lit by the bright sky, and the brightness, like the boat itself, seems to be cleaving a way through the ice. The polemen all are pushing in the same direction. Their poles are at the same angle as the pole of the Stars and Stripes behind Washington, which is borne by the future president, James Monroe. As in the Bingham, there are other boats in the background. But instead of forming a jumble, all are pushing in the same direction, and a point of land reaches out from the left as if to meet them. There is a hint of a rainbow's hopeful arc between the top of the flagpole in Washington's boat and the more distant vessels. Washington himself is standing, facing forward, bracing himself against what appears to be a cold wind.

David Hackett Fischer has demonstrated that Leutze took great care in the accurate construction of his image. The flat-bottom vessels are Durham boats, used as river ferries and large enough to hold many people. Passengers usually stood, because the boats were stable on the water. Leutze included a microcosm of American people, including a frontiersman and a black figure. That figure is emblematic of the artist's own strong opposition to slavery and of Washington's transformation on the slavery question. Initially hostile to blacks in his army's ranks, he was changing his mind by the time of the raid on Trenton. In 1781 a light infantry battalion instrumental in the final assault at Yorktown included a Rhode Island company in which blacks were probably the majority. The boatmen of John Glover's Fourteenth Continental mostly came from the fishing port of Marblehead, Massachusetts, and many of them were black. But despite Leutze's care both with iconography and details, the painting has its flaws. As the Stars and Stripes was not adopted until months later, the

Portrait of George Washington (1784). In this later portrait by Peale, Washington has become the general, fully in command of himself, of the cannon upon which he rests his hand, of the history he is enacting, and of the canvas. PENNSYLVANIA ACADEMY OF THE FINE ARTS, PHILADELPHIA, PA/BRIDGEMAN ART LIBRARY.

flag behind Washington's head should have featured a small Union Jack rather than stars.

IMAGES ON A SMALLER SCALE

The grand narrative paintings by Trumbull, Bingham, and Leutze and the portraits of leaders by Peale and many others form only part of the war's iconography. A remarkable permanent exhibition mounted by the Chicago Historical Society traces the "Voices and Images of the New Nation." The exhibit includes extended coverage of the war, from the opening shots at Lexington to Cornwallis's surrender at Yorktown.

Among the prominent items in the display are four color engravings by apprentice silversmith Amos Doolittle of New Haven, Connecticut. Doolittle completed the

series by the end of 1775, and he seems to have based the images on interviews with participants. Rather than heroic deaths and surrenders on the part of towering officers, Doolittle's sequence depicts the coming of battle to two small New England towns.

Unlike Paul Revere's well-known and overtly propagandistic engraving of *The Bloody Massacre perpetrated in King Street, Boston, on March 5, 1770*, showing the Americans killed that night merely as hapless victims, Doolittle presents a crescendo of conflict. The first engraving in the sequence, clearly set at dawn, depicts the initial skirmish at Lexington. The village is in the background, and the eight-hundred-strong British force is snaking its way through the streets and buildings. The image is not large enough to contain them all, and the rearguard is off the edge of the frame to the right. In the mid-foreground one mounted officer has raised his saber to give an order. Responding to the order, the foremost squad of redcoats has opened fire and its members are obscured by the smoke of their muskets. In the foreground the Lexington militia is in a haphazard retreat, with five of its members fallen. Some appear to be only boys. The viewer cannot tell who, if anybody, is in command.

Doolittle's second plate shows *A View of the Town of Concord*. Now the whole British force is in view. Some are drawn up in their ranks, with their arms grounded, but others are entering from the left. There is not a Patriot to be seen. The point of view is from within the town graveyard, where two British figures are standing. Both appear to be officers, and one has a spyglass raised, peering out of the frame and apparently observing more colonials in retreat.

In the two final engravings the dynamic has changed. The third shows the fight at Concord North Bridge, as the colonials resist the British entry. The bridge is in mid-background at almost center frame, forming an arch that both unites and separates the colonial forces to the left and the oncoming redcoats to the right. Now the colonials also are drawn into ranks, with two mounted officers in the lead. They are outnumbered by the enemy, but each side is pushing toward the other, snakelike, and the sense of imminent collision at the apex of the bridge is strong. Taken together, the two forces define a line across the engraving, separating peaceful fields in the foreground from a farmstead and more fields deep in the frame. The two forces are throwing up clouds, which a wind is blowing into the frame so as not to obscure them. The clouds most likely are dust, stirred up by their feet, but could be smoke from their firelocks.

In the final image, set at the southern part of Lexington, the British in retreat are in trouble. Each of the three buildings within the frame is on fire, with smoke billowing to heaven. The British are crossing the frame left to right, in mid-background. In the near foreground

Battle of Lexington. This illustration is an 1832 rendition of an engraving made by Amos Doolittle in 1775. Doolittle based his images of the battle on interviews with participants. THE GRANGER COLLECTION, NEW YORK.

militiamen are sheltered by a stone wall as they prime and aim their muskets. Other Americans are closer to the redcoats, also firing at them, some from the shelter of trees atop a small hill. Deep in the frame, beyond the first line of British troops, patriots appear to be firing at still more redcoats. The British still outnumber the Americans, and in an open field they easily could defeat them with their combination of firepower and discipline. But they are caught from both sides.

Doolittle could not have known how long the War of Independence was going to last. But his four engravings convey a strong sense of the rapid collapse of British intentions—a bold strike to shock and awe the colonials—into a quagmire from which the British could find no easy escape. Doolittle, who had no formal training, fully appreciated color and was skilled at presenting perspective. On the morning of 19 April there were no heroes, no dominant figures, no looming skies, and no apparent allegories. The deaths that he presents in the first of the engravings seem tragic and wasted, rather than gloriously brave and sacrificial. Nonetheless, of all those depicting the Revolution he is perhaps the most successful at capturing the war's intrusion into one small community. It came to many others in about the same way during the years that followed.

Other images in the Chicago exhibit also give the sense of battle as soldiers experienced it. On 11 September 1777

Brigadier General George Weedon wrote an excited diary entry about the encounter between Washington's troops and Sir William Howe's at Brandywine Creek, near Philadelphia. In the diary he also sketched the positions of the respective American units. His haste and excitement come through both in his handwriting and his drawings.

Soldiers also recorded thoughts and visual impressions by engraving the powder horns that they carried. The Chicago exhibit includes several. In 1776 James Pike, probably of New Hampshire, carved an image showing six British "Regulars, the Aggressors," one with a musket to his shoulder firing toward a "Liberty Tree." Five "Provincials Defending" stand on the other side of the tree. Four have their weapons on their shoulders. One is holding his in front of him, as if to deflect the oncoming musket ball. Pike was no Amos Doolittle, let alone a John Trumbull. His figures are crude, even insectlike. But as surely as any grand canvas, his image presents a strong sense of the Revolutionary War's significance, at least as he understood it.

IMAGES OF INDIANS

Willing or not, native people found themselves forced to become participants in the war. Some must undoubtedly have created images to remember and understand their

experiences, but if such images survive, they are hidden from outside eyes. Nonetheless, the iconography that white artists created around Indian figures reveals yet another of the war's dimensions. Two such notable paintings are *The Death of Jane McCrea*, done in 1803 by the New York painter John Vanderlyn (Wadsworth Athenaeum, Hartford, Connecticut) and George Romney's portrait of Thayendanagea/Joseph Brant, done in London in 1776.

Jane McCrea was a young woman engaged to a Loyalist officer who was with General John Burgoyne's expedition in 1777. Setting out to join him, she was killed in a fight between Indian groups, one of which was escorting her. That much is certain, as is her fiancé's horrified recognition of McCrea's scalp when it was brought into Burgoyne's camp. Vanderlyn's painting, done in bright colors, draws not on eyewitness description but rather on a sensationalized description of the murder in Joel Barlow's epic poem, *The Vision of Columbus* (1787). Barlow describes how "two Mohawks meet the maid"; he then instructs, "Historian, Hold!" so that he can dwell on her "globes of snow." In Vanderlyn's rendition she kneels as one of the Indians jerks back her hair. Her bodice is pulled down to reveal her right breast fully. The Indians are shown stripped to the waist, and one has raised a tomahawk to smash her forehead. The sense of imminent rape and murder is very strong. So is the contrast between her gentle and fragile civilized qualities and their savagery.

George Romney's portrait of Brant presents a different image of a warlike Indian. Brant, a literate Anglican and a Freemason, posed for a number of portraits during his lifetime, including one in 1786 for Gilbert Stuart, always insisting on wearing native costume. He posed for Romney while he was an honored guest at the court of George III and the toast of London society. He bears a tomahawk, but it is not raised. He also wears an army officer's gorget, indicating his rank as a British captain, and a fine linen shirt. He is about to return to America, where he will fight, as his concerned expression suggests. But the war he will wage will be for his people's survival, not a mindless bloodbath. A native and a Loyalist, a figure who rose to fame during the War of Independence, his image is as much a part of the war's iconography as any battle scene, or engraved powder horn, or portrait of a white fighting man wearing blue or red.

ÎLE AUX NOIX, CANADA. A low, flat, brush-covered island dotted with insect-infested swamps, it was located in a bend of the Richelieu (Sorel) River between the outlet of Lake Champlain and St. Johns. The island was about a mile long and four hundred yards wide. A solitary farm occupied a slight elevation in the middle. The French organized defenses on this unwholesome spot in 1759 after they had been forced by Amherst's advance to abandon their works at Ticonderoga and Crown Point. During the Revolution the island was an intermediate objective of American and British forces in their advances and retreats along the Lake Champlain route. Some eight thousand Americans who camped on the island in June 1776 as survivors of the Canada invasion retreated into New York. Thousands of them fell victim to smallpox, malaria, and dysentery. It subsequently was garrisoned by the British.

"ILLUMINATION." As early as 1702, the term "illuminate" meant "to decorate profusely with lights, as a sign of festivity or in honour of some person or some event" (sixth definition in the *Oxford English Dictionary*). A notable instance of such a display occurred on 24 October 1781. Colonel Tench Tilghman had reached Philadelphia at 3:00 A.M. on 22 October with news of the Yorktown surrender. A Committee of Safety handbill, headed "Illumination," announced that "those Citizens who chuse to illuminate on the glorious occasion, will do it this evening at Six, and extinguish their lights at Nine o'clock. Decorum and harmony are earnestly recommended to every citizen, and a general discountenance to the least appearance of riot."

In her account of the Brunswick general Baron Friedrich Riedesel's service in Canada, Louise Hall Tharp related the following anecdote about an illumination at Quebec City:

The next day [4 June 1776] was the birthday of George III. The city of Quebec was "illuminated"

in the evening by means of lighted candles set in every window. It was well known that a good many French people living in Quebec had hoped that the Americans would win. Yet it seemed that in all of Quebec's fifteen hundred houses, everyone was joyously burning candles in honor of the King of England. The reason for this was soon apparent, however. Soldiers were going about heaving rocks through any unlighted windows. (Tharp, pp. 42–43)

INDEPENDENCE. There is much conflicting evidence as to when colonists came to the conclusion that political independence from Britain might be desirable. As early as 1701 the Board of Trade thought that the American thirst for independence was notorious. Trying to calm British fears, Benjamin Franklin in a pamphlet published in London in 1763 asserted that the Americans would probably never claim independence. Few Americans before 1763 desired independence. Thereafter, the anger provoked by ill-considered British imperial policies contributed significantly to their growing inclination to contemplate such a step. An unidentified Frenchman traveling through the colonies at the height of the Stamp Act crisis in 1765 reported that “no nation was better calculated for independence, the people were disposed to it, and there was nothing they talked of more” (*American Historical Review*, p. 84). In 1768 the German soldier Johann De Kalb, traveling from the Carolinas to New England, observed that “all the people here are imbued with such a spirit of independence and even license, that if all the provinces can be united under a common representation, an independent state will certainly come forth in time” (ANB). But in 1768 Samuel Adams was undoubtedly in the minority in thinking of independence as a political objective. The idea certainly began to grow in the five years preceding the war, but Rhode Island regiments reporting for the siege of Boston spoke of themselves as being “in his Majesty’s service,” and Congress in its “Declaration of the Causes and Necessity for Taking Up Arms” (6 July 1775) said: “We have not raised armies with the ambitious design of separating from Great Britain and establishing independent states” (Jensen, p. 842).

There was no general drift by the colonies toward the idea of independence until near the close of 1775. People recognized that the steps already taken to manage and maintain the war effort, including establishing new state governments, amounted to something very much like practical independence. Southerners were particularly incensed by the efforts of Lord Dunmore, the royal governor of Virginia, to raise armed units of runaway slaves. Edward Rutledge of South Carolina wrote home from Philadelphia on 8 December 1775 with some hard questions:

What are the sentiments of the English nation? Are the people of that country determined to force us into independence? . . . Do they expect that after our towns have been destroyed, our liberties repeatedly invaded, our women and children driven from their habitations, . . . our slaves emancipated for the express purpose of massacring their masters, can they, I say, after all their injuries, expect that we shall return to our former connection with a forgiving and cordial disposition? (Smith, p. 463)

Still, in late 1775 the idea of separation was so radical that delegates to Congress delicately approached the problem of how they could lead the people toward an acceptance of independence. Thomas Paine, whose pamphlet *Common Sense* was published on 10 January 1776 and quickly and widely read thereafter, jolted the political system with his matter-of-fact advocacy of independence. The publication of *Common Sense* probably did more than any other single event to clarify thinking on the issue. The North Carolina convention had the distinction of being the first of the ad hoc, extralegal political bodies that now governed the colonies to give official sanction to the call for independence when, on 12 April 1776, it authorized its delegates to join others in Congress who might advocate such a movement. On 4 May the Rhode Island Assembly publicly announced its independence, the first colony to do so. The first colony to instruct its delegates to Congress to take the initiative on this matter was Virginia (15 May 1776), and on 7 June Richard Henry Lee moved a resolution “that these United Colonies are, and of right ought to be, free and independent States” (Jensen, p. 867). John Adams seconded the motion, and played an important role in building the congressional consensus that produced the Declaration of Independence.

Such conservative delegates as John Dickinson of Pennsylvania, James Wilson of Pennsylvania, Robert R. Livingston of New York, and even Edward Rutledge remained cautious about independence, overwhelmed by the peril of fighting a war and pessimistic about the future. Dickinson said, “I fear the virtue of Americans. Resentment of the injuries offered to their country may

irritate them to counsels and to actions that may be detrimental to the cause they would dye to advance” (Smith, pp. 352–353). Other delegates of proven courage and patriotism, among them Robert Morris of Pennsylvania, John Jay of New York, George Read of Delaware, James Duane of New York, and Benjamin Harrison of Virginia, also believed that independence was premature. According to Carter Braxton of Virginia (14 April 1776), independence “is in truth a delusive bait which men inconsiderably catch at without knowing the hook to which it is affixed. It is an object to be wished for by every American, when it can be obtained with safety and honor” (Smith, p. 522).

INDIANA, VIRGINIA. A tract in what became West Virginia, between the Little Kanawha River and the boundary of Pennsylvania and extending from the

Ohio River on the west to the Monongahela on the east, was known as Indiana. The Iroquois Indians ceded this land to the English in the Treaty of Fort Stanwix in 1768 in response to the fraudulent claims of a number of merchants, who maintained that the Iroquois had cheated them out of thousands of pounds in goods. Nothing ever came of their plans to organize settlement of this region. By the Treaty of Sycamore Shoals of 1775, this area became part of Benjamin Franklin’s proposed western state of Vandalia.

revised by Michael Bellesiles

INDIANS IN THE COLONIAL WARS AND THE AMERICAN REVOLUTION.

American Indian peoples played a vital role in the armed conflicts between the European empires in eighteenth-century North America and an equally significant role in the American Revolutionary War. In the War of the Austrian Succession (1740–1748) and the Seven Years’ War (1754–1763), both of the contending European powers—France and Great Britain—went to war allied with communities of American Indians. During the American Revolution, both Great Britain and the United States sought Indian allies, although the British were far more successful in this endeavor. Native peoples in eastern North America understood the stakes of the British-American colonists’ struggle for independence, and most believed that they would not benefit from a change in the status quo. Many American Indian communities continued to resist the United States after the Peace of Paris (1783), although dwindling British support made native armed resistance increasingly problematic. Upon the reorganization and strengthening of the United States government with the Constitution of 1787, the majority of eastern Indians attempted to reach some kind of accommodation with the new regime, although usually these accommodations did not favor the Indians.

BACKGROUND: SEVENTEENTH AND EARLY EIGHTEENTH CENTURIES

By 1740 the majority of American Indian communities of eastern North America had a history of contact and interaction with European settlers stretching back a century, if not longer. Spanish conquistadors had made multiple forays, or *entradas*, into eastern North America during the sixteenth century, although the only significant settlement of the Spanish lasting into the seventeenth century in the East was at St. Augustine in Florida. In the first three

decades of the seventeenth century, English, French, Dutch, and Swedish settlers established settlements along the Atlantic coast. New Netherland was conquered by the English in the Anglo-Dutch Wars of the 1660s, and New Sweden (on the lower Delaware River) was absorbed in the English colonies of Pennsylvania, West Jersey, and Delaware, leaving the colonies of France and Great Britain as the major European imperial presences in eastern North America in the early eighteenth century. Both the French Empire and the British Empire had extensive contacts and sustained interactions with the native peoples of eastern America, although the nature of the relationships varied greatly between the two empires.

Both France and Britain sent settlers to North America, and both groups established diplomatic and commercial relations with their Indian neighbors. Yet each empire emphasized these activities—settlement and Indian diplomacy—in such differing degrees that their colonial empires had become qualitatively different when their relations with American Indians were concerned. In North America, French settlement was concentrated in the St. Lawrence River Valley—including the substantial outposts of Quebec (founded 1608) and Montreal (settled 1638), and a number of peasant cultivators (*habitants*)—and the Lower Mississippi Valley. The bulk of the denizens of New France were either French military officers, fur traders, or Roman Catholic missionaries. Since the mid-seventeenth century, missionaries and fur traders had traveled throughout the Great Lakes Basin, Ohio Valley, and into the Mississippi River Valley, entering into alliances with various Indian communities, erecting a small number of forts and missions, and, in doing so, working to cement political and commercial alliances between the various native peoples and the kingdom of France. In exchange for furs, especially those of the beaver, the French traders provided European manufactured goods the Indians could not make for themselves—firearms, textiles, metal tools, and alcohol—and French Catholic priests provided access to the Sacraments to those Indians who chose to accept them. By 1740 New France was, as the historian Eric Hinderaker puts it, an “empire of commerce,” from which the French extracted wealth in the form of furs acquired through commerce and diplomacy.

The British empire was markedly different. By 1740 Britain’s settler colonies extended from the coast of Maine (then administered by the colony of Massachusetts) in the north to the recently founded colony of Georgia (founded 1732) between the Savannah and St. Mary’s Rivers in the south. Settlers of many European nationalities (and in many places, enslaved Africans) populated each of the thirteen colonies on the Atlantic seaboard, and in most cases these settler populations extended up to the foothills of the Appalachian Mountains. The indigenous peoples of the seaboard had been killed, dispersed, or encapsulated within reservations by British settlers in the seventeenth

and early eighteenth centuries. Although British settlers often engaged their American Indian neighbors in commerce, more often than not they did so as a precursor to the purchase or expropriation of that American Indian community’s lands. The British had constructed an empire of land: settlers came to British North America not to participate in the fur trade or to proselytize to the Indians, but to acquire land in order to build a family farm or a plantation, to provide the mother country with exotic agricultural commodities like tobacco and indigo and raw materials such as timber and naval stores, and also to provide the British West Indies with foodstuffs. A fur trade between British agents and American Indians did exist, but it was not the dominant economic sector in any colony. Thus, for British settlers, interaction with American Indians was usually a means to an end; for French settlers, interaction with American Indians was an end unto itself. The divergent nature of the two empires’ relations with American Indians would influence their conduct in the imperial wars of the mid-eighteenth century and the Revolutionary War.

FRENCH ALLIANCES WITH AMERICAN INDIANS

In large part because they emphasized commerce over acquisition of land, France had a more extensive alliance structure with the American Indians of eastern North America. France’s longest-standing Indian allies were the various Algonquian-speaking peoples of Canada, the Great Lakes Basin, and the Ohio Valley. (Algonquian, the family of Indian languages, is distinct from Algonquin, an Indian nation; the Algonquin were one of many Algonquian tribes.) In the early decades of the seventeenth century, the French made alliances with their near neighbors, the Huron, the Algonquin, and the Montagnai (or Innu). Through the Huron, the French goods came to the more westerly Ottawa. To the south of New France, the Dutch had made an alliance with New Netherland’s nearest neighbors, the Iroquois. Armed with superior Dutch guns, the Iroquois ranged out of their homeland, occupying fur-trapping grounds by force and, more often than not, taking already trapped furs from French allies. The so-called Beaver Wars (c.1640–1701) disrupted Huron communities especially. Some Huron embraced Catholic Christianity and lived alongside the French; others moved westward into the Great Lakes Basin, joining the villages of the Petun, the Erie, and the nation known as the “Neutral.” Iroquois attacks on these peoples followed. As the Huron moved westward, French trappers, traders, and missionaries followed them, and this movement of people opened the door for an expansive French alliance. By the end of the seventeenth century, the bulk of the Great Lakes Algonquians—the Ottawa, the Potawatomi, the Sauk and Fox, and

the Ojibwe (or Chippewa)—as well as the Iroquoian-speaking Huron-Petun and the Siouan-speaking Winnebagos, had all committed themselves to alliance with the French.

The French maintained their alliance through the annual exchange of goods for furs, conducted at a chain of missions, forts, and small settlements that came to dot the shores of the Great Lakes in the seventeenth century and by 1740 stretched the entire length of the Mississippi Valley. French mission towns were founded at Sault Saint Marie (1668), Green Bay (1669), Michilimackinac (1670), and at Kaskaskia among the Algonquian-speaking Illinois (1675). When Jacques Marquette and Louis Joliet traversed the length of the Mississippi River to its mouth in 1673, many French, notably explorer and imperial promoter René-Robert Cavelier, sieur de La Salle, began to imagine a chain of French forts and settlements stretching from Montreal to what would become New Orleans. Although La Salle was killed by the men under his command in 1687 during an abortive attempt to establish a settlement at the mouth of the Mississippi, subsequent French efforts led to the founding of Natchitoches (1714) on the Red River and the strategically invaluable New Orleans (1718) at the mouth of the Mississippi. The French also claimed sovereignty over most of the interior of North America drained by the Mississippi, which they called Louisiana. Yet their nominal control of Louisiana, like that in Canada, was rooted in their constant maintenance of alliances with native peoples. It is important to note that, as the historian Richard White has demonstrated, the French-Algonquian alliances were rooted in mutual misunderstandings as much as they were rooted in common interests. What the French saw as purely commercial transactions, native peoples saw as the exchange of gifts that continually reinforced and reaffirmed fictive kinship relationships. The various Algonquian peoples called every French governor at Montreal by the same name, Onontio, after a Mohawk transliteration of the name of an early governor. Thus, through trade, Indian peoples affirmed timeless identities while the French (and all Europeans) sought to maximize advantage in a marketplace they knew was constantly changing. Both sides realized that they each took something different away from their exchanges, but they tacitly agreed to disagree.

BRITISH ATTEMPTS AT INDIAN ALLIANCES IN THE EARLY EIGHTEENTH CENTURY

The British managed similar alliances but on a smaller scale. After they displaced the Dutch in the 1660s and 1670s, and remade New Netherland into New York (confirmed at the Treaty of Westminster, 1674), the British sought to take the place of the Dutch as the main European allies of the Iroquois. It was in the later decades of the seventeenth century that many of the Algonquians, aided by the French, began to push back against the

Iroquois. This ultimately brought the Beaver Wars to an end with the negotiation of the Grande Paix, or Grand Settlement, of 1701 at Montreal, which terminated hostilities between the Iroquois and the French-allied Algonquians. Over the next decades, the Iroquois remained equally divided internally between Francophiles, who advocated a real alliance with France, Anglophiles, who wanted closer ties to the British colonies, and Neutralists, who wanted neither. The Iroquois League moved firmly toward a regular alliance with the British colonies with a 1722 treaty conference at Albany. The 1722 treaty was negotiated between representatives of the original Five Nations and the governors of New York, Pennsylvania, and Virginia. Pennsylvania would open Philadelphia to trade, and Virginia agreed to broker an end to hostilities between some of its Indian allies and the Iroquois. All three colonies recognized long-standing (and somewhat unrealistic) claims to Iroquois suzerainty over the Delaware and the Shawnee. The parties came together (minus New York, but with Maryland) two decades later at the Treaty of Lancaster (1744), in which the Iroquois actually sold their shaky claims to the Ohio Valley lands of the Delaware and the Shawnee to the colony of Virginia. The Lancaster treaty coincided with an increased interest among Virginia elites in speculation in trans-Appalachian lands, as well as the beginning of the hostilities on North American ground between Britain and France related to the War of the Austrian Succession.

INDIANS IN THE WAR OF THE AUSTRIAN SUCCESSION (1740–1748)

The British colonials' interest in engagement with American Indian communities was multifaceted. Pennsylvania and Virginia agents penetrated the trans-Appalachian region with increasing frequency in the mid-1740s; traders from Pennsylvania, in particular, could offer Ohio Valley Indians British-made trade goods that were of higher quality than French goods, and they could offer more of them. Many Shawnee, Wyandot, Miami, and other Indians chose alliance and trade with Pennsylvania over New France during these years. The French-Algonquian alliance was weakening. At the same time, few American Indians were willing to join the British in open warfare against the French. Some Iroquois—mostly Mohawk—went along with Crown agent William Johnson's plans to attack Montreal, which did not go well. At the same time, on the southern borderlands, the Creek Indians (ostensibly British allies) refused to follow the orders of the governor of South Carolina, James Glen, to attack the French outpost of Fort Toulouse. Likewise, the French incorporated some of their Algonquian allies in their war effort, but with British traders actively weakening their alliance, they usually did not push too hard. The 1740s was a quiet

period compared to the full-scale warfare in North America in the 1750s and 1760s.

BETWEEN THE WARS, 1748–1754

When the Treaty of Aix-la-Chapelle ended the War of the Austrian Succession in 1748, the leadership of both the French and British colonies believed that a renewal of war would only be a matter of time. British colonial elites were very concerned that their colonies were unprepared for another war. Many officials and commentators, including Pennsylvania's Benjamin Franklin, New Yorkers Cadwallader Colden and Archibald Kennedy, and Carolina's Edmund Atkin, called for a strengthening of the alliance structure between the British colonies and their Indian neighbors. Indian allies were seen as France's secret weapon, and it was widely argued that the British needed to have Indian allies of their own. While politically aware British Americans called for stronger British-Indian relations, agents of the French Empire were seeking to undermine the inroads the British had already made. New France's governor dispatched Captain Pierre-Joseph Céloron de Blainville on an expedition to traverse the entire Ohio Valley in 1749. While Céloron was supposed to renew the French-Algonquian alliance, his only real substantive accomplishment was to bury a series of lead plates proclaiming the French claim to the Ohio Valley at regular intervals along the river. More direct action was taken in 1752, when Charles Langlade led a force of French, Ottawa, and Ojibwa to destroy the Miami town of Pickawillany, in modern-day central Ohio. Pickawillany was home to a trading post operated by British traders, and its destruction was an active attempt on the part of the French to assert their primacy over the Ohio Valley and its Indian communities. Like the British, the French were preparing for war, and the arrival of Marquis Duquesne, a career military officer, as governor of Canada in 1752 only confirmed this. Building on Langlade's success at Pickawillany, Duquesne in 1753 ordered the construction of four new forts—including Fort Duquesne at the strategically important confluence of the Ohio, Allegheny, and Monongahela Rivers. France thus actively sought to inhibit both British territorial expansion into the Ohio Valley and to prevent British colonial traders from having access to the valley's Indian communities.

THE SEVEN YEARS' WAR (FRENCH AND INDIAN WAR), 1754–1763

The construction of Fort Duquesne touched off the series of events that led to the beginning of the Seven Years' War. Seeking to assert its claims to the Ohio Forks region, the Virginia colony's legislature dispatched militia colonel George Washington on expeditions toward the Forks in

1753 and 1754. Washington was unable to secure Indian allies of any significant number, and though the French garrisons at Fort Duquesne were relatively small, the large numbers of Indians who came to the fort to trade ensured that French commanders would have ample numbers of allies to draw from to repel British incursions. This was the state of affairs when Washington surrendered the makeshift Fort Necessity in 1754, and when General Edward Braddock's armies suffered defeat (and Braddock himself was killed) in an ambush on the road to the Forks in 1755. As the Seven Years' War (or French and Indian War) erupted, France could count the vast majority of the Algonquian peoples of the Great Lakes Basin and Ohio Valley as allies. The British relationship with many of its Indian allies had grown rocky in the early 1750s; for example, the intercolonial alliance with the Iroquois, the Covenant Chain, was only renewed at the Albany Congress of 1754.

The French followed up their victory over Braddock with further successes in the North American theater over the course of the next two years. By 1757 French forces under General Louis-Joseph, marquis de Montcalm-Gozon de Saint-Véran, penetrated deep into upstate New York via the Lake Champlain–Lake George–Hudson River corridor. Montcalm's success was due in large part to the recruitment of many Algonquian warriors from all over New France, a policy engineered by Pierre de Rigaud de Vaudreuil, the Governor of New France. Understanding that he could not field matching numbers of regular troops against the British, Vaudreuil called in as many Indian warriors as he could to allow his commanders to take the offensive as deep as possible into British territory. Montcalm was the most successful at adopting this strategy, but after his capture of Fort William Henry in 1757 it came undone. Vaudreuil having promised them captives to adopt in their communities, the Algonquian warriors did not approve of Montcalm's strict adherence to European rules of warfare and thus took dozens of captives after the formal surrender of Fort William Henry. The loss of life was not great enough to justify the claims of a "massacre" put forward by authors such as Francis Parkman and James Fennimore Cooper, and the ultimate damage at Fort William Henry was done to the French forces rather than the British. Vaudreuil was forced to pay the Algonquians for the return of most of the captives in order to satisfy Montcalm's surrender agreement. With the rules of American Indian warfare thus broken, the French could never again call on the numbers of native allies they had during the campaigns of 1756–1757. Montcalm was forced to fight on the defensive until his defeat (and death) at the hands of James Wolfe at Quebec (1759). New France fell completely to British arms with the surrender of Montreal the following year. British dominion over all

of eastern North America was confirmed with the Treaty of Paris (1763).

THE STRUGGLE FOR A COHERENT INDIAN POLICY, 1763–1775

In the years following the Treaty of Paris, Great Britain's policy of engagement toward the American Indian communities of eastern North America was a confused one, alternately turning on considerations of military and economic expediency, accommodation of Indian interests and expectations, and attempts to mollify growing resentment of imperial policies at the colonial level. With James Wolfe's death at Quebec in 1759, Jeffery Amherst succeeded to the post of commander in chief of British forces in North America. At the war's end, Amherst made a conscious decision to adopt a policy of economizing. He consolidated his scattered frontier forces in a smaller number of posts, and also acted to limit the amount of trade goods regularly given to Indian leaders in the Great Lakes–Ohio Valley region. Most of the Algonquian peoples—the former allies of the French—resented Amherst's new policies deeply, and at the instigation of Ottawa war chief Pontiac and Delaware religious leader Neolin, a pan-Algonquian uprising against British forces began in May 1763. Pontiac's Rebellion, as it became known, lasted into 1765. The main results of the uprising were the removal of Amherst as commander in chief and the British Indian Agents' adoption of the generous trade policies that had characterized the French alliance. On 7 October 1763, the British government also put forward the Royal Proclamation of 1763, which established the spine of the Appalachian Mountains as the boundary line between the British settler colonies on the eastern seaboard and the vast Indian country to the west. During and after Pontiac's Rebellion, the British government sought to maintain peaceful relations with the Indians of eastern North America: it adopted the generous trade and gift-giving policies of the French and also sought to curtail potentially violent interactions between European settlers and Indians.

The new British policy of the mid-1760s provoked discontent in a number of quarters. The British Indian Agents—William Johnson in the north and John Stuart in the south—brokered treaties and deals that often favored their own personal interests; moreover, they favored the interests of some Indian nations over others. A case in point was the Treaty of Fort Stanwix of 1768, which Johnson negotiated. This treaty conference brought together representatives of the Iroquois League as well as numerous Algonquian peoples from the Ohio Valley and eastern Great Lakes. Johnson secured a readjustment to the boundary line set forward in the Proclamation of 1763, extending the realm of white settlement out to the Ohio River. He did so, however, by ignoring the western

Indians present and by negotiating through the Iroquois—confirming the claims of Iroquois suzerainty that had been put forward two decades before at the Lancaster Treaty. Johnson also negotiated private land sales from various Indian communities for speculative interests he was involved with outside of the formal treaty negotiations. Thus British policy, as it was experienced, treated some Indian nations better than others.

At the same time, many colonial governments bristled at the restrictions on expansion imposed on them by the Proclamation of 1763. Responding to colonial pressures, in March 1768 the Board of Trade, at the urging of the new American Secretary Wills Hill, earl of Hillsborough, removed control of Indian trade from the Indian superintendents and returned it to the individual colonial governments. The Indian Agents retained control over diplomacy, but each colony began licensing increasing numbers of Indian traders, and many of these men were more interested in Indian lands than they were in Indian trade. Generally speaking, the interests of the colonial governments and the imperial government were divergent: the former wanted expansion of settlement, whereas the latter wanted to preserve the status quo. Indian peoples recognized this and, when the rupture between the two sides finally occurred, were more receptive to agents of the crown than to agents of the colonies.

AMERICAN INDIANS IN THE AMERICAN REVOLUTION

With the outbreak of war between the American colonies and the British government in the spring of 1775, the question of which side the various American Indian communities would take in the conflict loomed large. Both the Continental Congress and the British government initially hoped that the various American Indian communities would remain neutral. Nevertheless, preparations were soon made on both sides to attempt to woo Indians into alliance and accommodate them once that was accomplished. To coordinate Indian policy among the thirteen colonies, the Continental Congress created three Indian departments on 12 July 1775. The Northern Department would focus on the Iroquois and all of the nations to their north, the Southern Department on the Cherokees and all nations to the south, and the Middle Department on the Indian nations in between these two. Congress then appointed commissioners for each of these departments who would be responsible for conducting diplomacy and managing military interaction between the Indians and the various American armies. The British retained the Indian Superintendent system, with its Northern and Southern Departments. John Stuart remained southern superintendent at the start of the war; Guy Johnson had succeeded his uncle William Johnson as northern superintendent when the elder Johnson died in 1774. In 1775 and 1776, agents

on both sides made numerous attempts to win as many Indian allies as possible.

As had been the case during the imperial wars of mid-century, British North Americans generally regarded the Iroquois League as the most important of all the eastern Indian nations. The Six Nations' crucial geopolitical position between Loyalist Canada and Patriot New York, placing them on the front lines of any conflict, no doubt played a great role in both sides' strategic calculus. Operating out of a headquarters in Albany, General Philip Schuyler served as the lead Indian commissioner for the Northern Department and made repeated attempts to entice as many of the Iroquois nations to the American side as possible. He held a series of diplomatic conferences with the Iroquois—Albany (1775), German Flats (1776), Albany (1777), and Johnstown (1778)—that had the effect of attracting only a majority of the Oneida and Tuscarora nations to the American side. The bulk of the Iroquois remained loyal to the Johnsons and the British. Members of the Iroquois League would fight on both sides during the Revolutionary War, and Iroquois actually fought against one another during the Battle of Oriskany (1777), a part of John Burgoyne's failed invasion of New York. The nadir of hostilities came with the infamous Sullivan Expedition of 1779, in which General John Sullivan led American troops into the lands of the British-allied Iroquois nations, systematically destroying villages and burning crops. Americans viewed the expedition as retaliation for Indian attacks in Pennsylvania's Wyoming Valley the year before (1778) and also as an attempt to weaken the Iroquois' ability to wage war.

The United States met with similar frustrations in attempting to find Indian allies on the southern and western borderlands. John Stuart succeeded in keeping most of the southern nations either allied with the British or ostensibly neutral. The Cherokee were a prominent exception, openly declaring war on the American colonists in 1776. Cherokee raids were countered by punitive expeditions from all of the southern colonies in the summer and fall of 1776. The Americans destroyed many Cherokee towns and cornfields, and the Cherokee sued for peace a year later. Low-level warfare between Indians and colonists persisted until the formal end of the Revolutionary War. In the Ohio Valley and the Great Lakes region, only the Delaware joined wholeheartedly with the American cause. Congress appointed George Morgan, a Pennsylvania merchant and land speculator, as Indian agent for the Middle Department. After much negotiation Morgan succeeded in getting a Delaware delegation, led by pro-American chief White Eyes, to sign a formal treaty at Fort Pitt (1778). After White Eyes was murdered by American settlers, the alliance with the Delaware fell apart, and more Delaware communities in the Ohio Valley lapsed into either neutrality or outright

hostility toward the American cause. Momentary success also occurred in the Ohio Valley with the expedition in 1778–1779 of Virginian George Rogers Clark, who captured British posts at Vincennes and Kaskaskia. The Kaskaskia Indians sent a delegation that was received by Virginia Governor Thomas Jefferson in 1781. The alliance with the Kaskaskia was never formalized via treaty, and Clark's "conquest" of the Northwest proved to be tenuous. Low-level conflict persisted between American settlers in Kentucky and the Shawnee and between American settlers in the Ohio Forks region and Wyandot, Mingo, and other British-allied Algonquians through the remainder of the Revolutionary War and into the 1780s.

Although most eastern Indians fought on the British side and held their ground in trans-Appalachia, with the Peace Treaty of 3 September 1783 British negotiators ceded sovereignty of the entire trans-Appalachian region south of the Great Lakes, north of Florida, and east of the Mississippi to the now-independent United States of America. When commissioners of the American Congress asserted their sovereignty over all of the British-allied (and hence defeated) Indian nations at the Treaty of Fort Stanwix (1784) and subsequent negotiations, Indian negotiators generally reacted with dismay, and ultimately with continued resistance. General resistance (either through fighting the Americans or ignoring them) would continue until the adoption of a policy of Indian negotiation, put forward by Secretary of War Henry Knox during the first Washington administration (1789–1793), that paid more respect to native sovereignty.

INTELLIGENCE, AMERICAN. American civilian and military leaders during the Revolution conducted a surprisingly large array of intelligence activities: espionage, violent and non-violent covert action, deceptions, and counterintelligence operations. The impact that these activities had on the course of the war usually is overlooked in military studies and biographies of the period. In contrast to the British army's intelligence system, which was created and controlled from the top down, American intelligence activities initially were decentralized and carried out by self-appointed groups and committees operating on the local level. Fairly soon after hostilities broke out in April 1775, however, the Continental Congress started organizing overseas operations and, after a stumbling start, Continental army commander George Washington became an adept battlefield practitioner of the "black arts."

AN INTELLIGENCE "MILITIA"

The first Patriot intelligence network on record was a secret group in Boston known as the Mechanics. An offshoot of the Sons of Liberty, who had successfully opposed the Stamp Act in 1765, the Mechanics (meaning skilled laborers and artisans) organized resistance to British authority, sabotaged and stole British military equipment in Boston, and gathered intelligence on British troop strength and movements.

Through numerous intelligence sources, the Mechanics saw through the cover story the British devised

to mask their march on Lexington and Concord in April 1775. The best-known Mechanic, Paul Revere, was part of an elaborate warning network of riders and messengers that spread news of the British action over much of eastern Massachusetts within 12 hours.

NATIONAL-LEVEL INTELLIGENCE ORGANIZATIONS

Later in 1775, the Second Continental Congress began conducting intelligence activities. On 18 September it created a Secret Committee that employed agents to covertly obtain military supplies abroad through intermediaries (in modern parlance, "cutouts" and "fronts"). The Committee also gathered intelligence about hidden Tory ammunition stores and arranged to seize them. Operatives of the committee also plundered British supplies in the southern colonies. Its members included some of the most influential representatives in the Congress, such as Benjamin Franklin, Robert Morris, Robert Livingston, and John Dickinson.

Recognizing the need for foreign intelligence and foreign alliances, the Second Continental Congress created the Committee of Correspondence (soon renamed the Committee of Secret Correspondence) on 29 November 1775. The Committee—America's first foreign intelligence agency—employed secret agents, conducted covert operations, devised codes and ciphers, funded propaganda activities, opened private mail, and developed its own naval force. Its agents overseas included Arthur Deane, a physician in London, and Silas Deane, a former delegate to the Congress, who went to France under cover as a Bermudian merchant to make secret purchases.

After Franklin went to France in 1777 as one of the Congress's emissaries to the royal court, Paris became the hub of American intelligence and propaganda activities in Europe. Operating through front companies and intermediaries, American agents arranged for covert aid shipments from Spain and the Netherlands in their Caribbean territories. The American mission also secretly communicated with Britons and Scots sympathetic to the Patriot cause.

PROPAGANDA AND COVERT ACTION

Patriot leaders ran several efforts to influence European opinion and undermine morale in the British army, particularly by targeting the Hessian mercenaries. The Committee of Secret Correspondence employed Charles Dumas, a Swiss journalist in The Hague, to plant stories in a Dutch newspaper to raise the United States's rating in Dutch credit markets. Franklin was especially imaginative in using propaganda. While in Paris he fabricated a letter purportedly sent by a German prince to the commander of his mercenaries in America. The letter disputed British

casualty figures for the German troops, arguing that the actual number was much higher and that he was being cheated of payments owed him for dead or wounded soldiers. The bogus letter also told the officer to let his wounded soldiers die because the British would pay more for fatalities, and because injured troops might return home unfit for further service. Franklin's forgery was widely circulated in Europe and among Hessian troops in the colonies, and was credited with causing some of the between 5,000 and 6,000 Hessians desertions. On another occasion Franklin created a copy of a Boston newspaper with a phony article that said the British royal governor of Canada was paying his Indian allies for each American scalp they gave him. The story touched off an uproar in Britain, and opposition Whig politicians used it to attack British conduct of the war.

Based on intelligence received by the Committee of Secret Correspondence, the Continental Congress on 15 February 1776 authorized a covert action plan to urge the Canadians to become a "sister colony" in the struggle for independence, and appointed Franklin, Samuel Chase, and Charles Carroll to undertake the mission. They dispatched a French printer to Canada to publish pro-Patriot materials, and Father John Carroll negotiated with the local Catholic clergy. Franklin and his colleagues also were empowered to enlist Canadian fighters in a proxy force and to offer them sanctuary in the thirteen colonies. The overall project failed because of American military excesses against the Canadian populace, hostility of the clergy, and the inability of American commissioners to deliver little more than promises in exchange for Canada's defection.

American revolutionaries conducted many sabotage operations against British targets in the colonies and launched one mission in England. After he went to Paris with the American mission, Silas Deane engaged the services of James Aitken, who offered to sabotage English dockyards with an incendiary device he designed. On 7 December 1776, Aitken set a fire at the Portsmouth dockyard that destroyed many tons of naval supplies. After failing to penetrate the security at Plymouth, Aitken proceeded to Bristol, where he destroyed two warehouses and several homes. In response, the British government stepped up security at all military facilities, offered a reward of £1,000, and even discussed suspending habeas corpus and imposing martial law. Aitken was soon apprehended while carrying a pistol, incendiaries, and a French passport. After a speedy trial, he was hanged on 10 March 1777 in Portsmouth dockyard, where his exploits had begun.

THE FIRST AMERICAN INTELLIGENCE CHIEF

George Washington was a skilled manager of intelligence. He recruited and debriefed Tory and Patriot sources,

developed informants, interrogated prisoners and travelers, cleverly used deception and propaganda, and practiced sound tradecraft. He recognized the need for multiple sources so reports could be crosschecked, and so the compromise of one asset would not cut off intelligence from an important area. His first recorded expenditure for intelligence came only two weeks after he took command, and during the war he spent more than 10 percent of his military funds on intelligence operations.

However, Washington's first wartime intelligence venture ended in failure. Nathan Hale probably was the best-known but least successful American agent in the War of Independence. He volunteered to spy in British-held New York, but had no espionage training, no contacts or channels of communication, and no cover story to explain his absence from camp. Only his Yale diploma backstopped his cover as an itinerant schoolmaster. British Major Robert Rogers, a hero of the French and Indian War who pretended to be a Patriot spy, tricked Hale into disclosing his mission. Hale was immediately captured and went to the gallows on 22 September 1776, reportedly uttering as his last words a paraphrase of a line from Joseph Addison's play, *Cato*: "I only regret that I have but one life to lose for my country."

The Hale debacle convinced Washington that he needed an elite detachment dedicated to tactical reconnaissance that reported directly to him. He picked Thomas Knowlton to command the army's first intelligence unit, known as "Knowlton's Rangers"—130 soldiers and 20 officers sent on secret missions too dangerous for regular troops. The date 1776 on the seal of the army's intelligence service today refers to the formation of Knowlton's Rangers. Washington also received vital intelligence from stay-behind agents, such as Hercules Mulligan, who ran a clothing shop in New York frequented by British officers who often let secrets slip while in his store. Mulligan was the first to alert Washington to two British plans to capture the American commander in chief and to a planned incursion into Pennsylvania. Another source in New York was Lieutenant Lewis J. Costigin, who stayed in the city after his release in a prisoner exchange in September 1778. For several months he pretended to be on parole and roamed about, gathering intelligence on British commanders, troop deployments, shipping, and logistics, and then smuggled the information out through underground Patriot communication networks.

FURTHER ESPIONAGE SUCCESSES

John Honeyman's intelligence work for Washington in December 1776 may have helped keep the Continental army in the war. The year before, Honeyman had volunteered his services and, posing as a butcher, passed freely inside British-held areas and observed enemy troop strength and movements. At Trenton he contrived to be

arrested by American pickets as a suspected Tory spy and was brought to Washington, to whom he reported what he had learned. Washington then arranged for Honeyman to “escape” from the American camp so he could return to Trenton with disinformation about the Continentals’ sorry state. His bogus information may have contributed to the complacency of the commander of the Hessian garrison, which was caught by surprise when Washington’s forces attacked across the Delaware River on 26 December. The Trenton victory came at a critical time for the Patriots, providing a huge political and psychological boost.

The most elaborate and productive network Washington oversaw was the Culper Ring in New York and on Long Island. In the summer of 1778, General Sir Henry Clinton occupied the city, while Washington’s forces were scattered around New York, New Jersey, and Connecticut. Needing intelligence on Clinton’s forces and intentions, Washington ordered Major Benjamin Tallmadge, a native of Long Island, to establish an espionage net. The spy ring eventually had about 20 members who either reported on British activities on Manhattan Island or conveyed the intelligence out of the city to Setauket and across Long Island Sound to Tallmadge’s couriers in Connecticut, who then rode to Washington’s encampment.

Tallmadge’s operatives practiced sophisticated trade-craft that included code names, cover stories, secret writing, encryption, and dead drops. For security reasons, Washington did not have Tallmadge tell him who was in the Culper Ring. Its chief field operative was Abraham Woodhull, a Setauket farmer, whose main agents were a Quaker businessman, Robert Townshend, and the king’s printer in New York, James Rivington. Other key members were Austin Roe, a Setauket tavern keeper whose frequent travels to the city for supplies afforded good cover for his work as a courier, and Caleb Brewster, who took Roe’s messages from dead drops along the south coast of Long Island Sound across to Connecticut.

DECEPTIONS AND DISINFORMATION

To offset British superiority in firepower and number of troops, Washington made frequent use of deception operations. He allowed fabricated documents to fall into the hands of enemy agents or be discussed in their presence; told couriers carrying spurious information to be “captured” by the British; and inserted forged documents in intercepted British pouches that were then sent on to their destinations. He had army procurement officers make false purchases of large quantities of supplies in places picked to convince the British that a sizeable Continental force was massing. After learning from the Culper Ring that the British planned to attack a French expedition that had just landed in Newport, Rhode Island,

Washington planted information with known British agents indicating that he intended to move against New York, and he staged a “march” toward the city. Those ploys persuaded Clinton to call back his troops headed for Rhode Island. A few years later, Washington used similar techniques to hide his movement toward the Chesapeake Bay—and eventual victory at Yorktown—by convincing the British initially that he was again moving on New York.

At Yorktown, James Armistead, a slave who had joined the Marquis de Lafayette’s service with his master’s permission, crossed into General Charles Cornwallis’s lines in the guise of an escaped slave, and was recruited by Cornwallis to return to American lines as a spy. Lafayette gave Armistead a fabricated order supposedly for a large contingent of patriot replacements—a force that did not exist. Armistead delivered the fake order in crumpled, dirty condition to Cornwallis, claiming he found it along a road during his spy mission. Cornwallis believed Armistead and did not learn he had been tricked until after the climactic battle. Another deception operation at Yorktown had Charles Morgan entering Cornwallis’s camp as a “deserter.” When debriefed by the British, he convinced them that Lafayette had enough boats to move all his troops against the British in one landing operation. Cornwallis was duped and dug in, rather than march out of Yorktown.

SECRET WRITING, CODES, AND CIPHERS

American intelligence officers tried to keep their communications secure by concealing the writing, encrypting the message, or both. While serving in Paris, Silas Deane wrote some of his intelligence reports to America with a heat-developing invisible ink. Later, he used a “sympathetic stain” created for secret communications by James Jay, a physician and the brother of John Jay. The stain was more secure than the ink used previously, because it required one chemical for writing the message and a second to develop it. Dr. Jay used the “stain” for reporting military information from London to America, and supplied quantities of the stain to Washington in America and to Deane in Paris. The Culper Ring used the stain for its secret writing.

Patriots used cryptographic methods to make messages incomprehensible to the reader. John Jay and Arthur Lee devised dictionary codes, in which numbers referred to the page and line in an agreed-upon dictionary edition where the plaintext (words of the unencrypted message) could be found. In 1775, Dumas designed the first diplomatic cipher, used by the Continental Congress and Franklin to communicate with agents and ministers in Europe. Dumas’s 682-symbol system substituted numbers for letters in the order in which they appeared in a pre-selected paragraph of French prose. The Culper Ring used

a numerical substitution code that Tallmadge developed. He took several hundred words and several dozen names of people or places and assigned each a number from 1 to 763 (for example, 38 meant attack, 192 stood for fort, Washington was identified as 711, and New York was replaced by 727). After receiving a message from a courier, a female operative in the ring signaled that a dead drop had been filled and identified its location using a code involving laundry hung out to dry. A black petticoat indicated that the drop was full, and the number of handkerchiefs identified the cove on Long Island Sound where the message had been hidden.

The Patriots had two notable successes in breaking British ciphers. In 1775, Elbridge Gerry and the team of Elisha Porter and Reverend Samuel West, working separately at Washington's direction, decrypted a letter that implicated Dr. Benjamin Church, the Continental army's chief surgeon, in enemy espionage. In 1781, James Lovell, who designed cipher systems used by several prominent Americans, cracked the encryption method that British commanders used to communicate with each other. When a dispatch from Cornwallis in Yorktown to Clinton in New York was intercepted, Lovell's cryptanalysis enabled Washington to gauge how desperate Cornwallis's situation was and when to attack the British lines. Soon after, another decrypt by Lovell warned the French fleet off Yorktown that a British relief expedition was approaching. The French scared off the British flotilla, assuring victory for the Americans.

COUNTERINTELLIGENCE

At the start of the war, American counterintelligence efforts focused on identifying and arresting British agents, Tories, and Tory sympathizers. Several discoveries—Church's service as a British spy; the royal governor of New York's recruitment of agents to sabotage Patriot defenses in and around New York City; and an assassination plot against Washington by his bodyguards—prompted American leaders to give greater attention to counterintelligence. Probably the first Patriot organization created for such purposes was the New York State Committee for Detecting and Defeating Conspiracies. Led by future chief justice John Jay, the Committee collected intelligence, apprehended British spies and couriers, and interrogated suspected British sympathizers. The Committee's main area of operation was the strategic Hudson River Valley area, where the British were aggressively enlisting Tory sympathizers. The Committee had the power to arrest and try, to grant bail or parole, and to jail or deport. A company of militia was placed under its command to implement its broad charter. The Committee heard over 500 cases involving disloyalty and subversion.

A few American counterintelligence officers made significant operational achievements. Enoch Crosby was

probably the best known of Jay's agents. A shoemaker by trade, Crosby traveled around the lower Hudson River Valley area in true cover, joining Tory groups, gathering evidence of their pro-British activities, and then passing the information to Jay, who then had the groups arrested. Crosby always managed to "escape" just as the group he had infiltrated was about to be apprehended. His success made him one of the models for the central character in the first espionage novel written in English, James Fenimore Cooper's *The Spy* (1821).

Another successful American counterintelligence officer was Captain David Gray of Massachusetts. Posing as a deserter, Gray entered the service of Colonel Beverly Robinson, a Tory intelligence officer, and became his courier. As a result, the Americans read the contents of each of Robinson's dispatches before their delivery. Gray eventually became the courier for Major Oliver DeLancey Jr., the head of the British secret service in New York. For two years Gray, as DeLancey's courier to Canada, successfully penetrated the principal communications link of the British secret service. Upon completing his assignment, Gray returned to the Continental army, and his name was struck from the deserter list, where Washington had placed it at the beginning of the operation to establish his cover.

The most notorious counterintelligence case of the war involved General Benedict Arnold, an accomplished but ambitious, greedy, and disgruntled Continental army commander. Arnold—whose arduous but abortive wintertime campaign against Quebec in 1775 and serious wound at Saratoga had proven his devotion to the cause—felt aggrieved because he had been passed over for promotion and was court-martialed for financial malfeasance. In addition, he had married a devoted Tory, Peggy Shippen. In May 1779 he began conspiring with a British friend of his wife's, John André. While commander at West Point, he negotiated with the British to surrender that strategically vital installation for £20,000. When Arnold learned that André had been caught, he fled to the British lines and later organized the "American Legion" that staged guerrilla-style raids in Virginia and Connecticut. Arnold's treachery so incensed Washington that he ordered at least two operations to capture the war's most infamous turncoat.

INTELLIGENCE'S IMPACT ON THE WAR'S OUTCOME

Although it is hard to precisely gauge the overall contribution intelligence made to the American victory, it directly contributed to important tactical successes at Trenton, Princeton, Newport, and Yorktown. The war probably would have lasted longer, cost more lives, and caused more social and economic upheaval without the secret activities that the Americans conducted. As the first president, Washington drew on his wartime experience to run

intelligence operations using secret funds he persuaded Congress to appropriate for that purpose.

INTERIOR LINES. A term used in tactics and strategy to indicate a situation in which one commander has an advantage in being able to employ his forces against the enemy faster than the enemy can counter his moves. A commander may possess interior lines by virtue of a central position with respect to his opponent. This is so self-evident that one is led into error in assuming that there is nothing more to the concept of interior lines. But a commander may also possess interior lines by virtue of having superior lateral communications. Consider Washington's dilemma at the start of the Philadelphia campaign: he was located in New Jersey; the British were in New York City; and Burgoyne's offensive was moving south along the Lake Champlain–Hudson River line. Washington had a "central position" from which, in theory, he could move the bulk of his forces to meet Burgoyne's threat in the north or any of three threats from General Howe in New York City: up the Hudson to join Burgoyne; overland through New Jersey to Philadelphia; or by sea to the Delaware and against Philadelphia. Yet by virtue of their superior lateral communications—which in this instance were by water—the British actually had interior lines.

An understanding of interior lines and a correct use of the concept has been a hallmark of successful tacticians and strategists through the ages; the concept has been misunderstood by other military men and by most writers for the same period. The main purpose of this article is to put the reader on guard: it is beyond the scope of the present work to attempt a complete explanation of what interior lines are, but it is possible to point out what they are not.

Before leaving the subject, however, it should be noted that a commander who does not possess the advantage of interior lines at the start of a campaign may often create the situation by a "strategic penetration." The campaigns of Napoleon offer many examples.

Mark M. Boatner

INTOLERABLE (OR COERCIVE) ACTS. Opposition to the Tea Act, centered at Boston, Massachusetts, and culminating in the Boston Tea Party, led an angry and exasperated Parliament to pass several measures to crush the center of colonial resistance and ensure the effectiveness of increased imperial control.

The Boston Port Act, to take effect on 1 June 1774, prohibited any ship from entering or leaving the port of Boston until restitution had been made for the cost of the tea destroyed in the "tea party." The customs office in Massachusetts was moved to Salem, allowing commerce to continue but bypassing Boston. To intimidate the Boston activists and ensure that duties would be paid if Boston port was opened in the future, Governor Thomas Hutchinson was replaced as governor of Massachusetts by Major General Thomas Gage, commander in chief of British forces in America, who was backed up with four regiments of regular troops.

The Massachusetts Regulating Act, to take effect in stages through 1 October 1774, annulled important parts of the Massachusetts charter of 1691. The first provision gave the king the right to choose the Council (the upper house of the assembly), the second allowed the governor (then General Gage) to appoint judges and sheriffs without local assent, the third prohibited town meetings more than once a year without the governor's permission, and the fourth placed the selection of juries in the hands of the royally appointed sheriffs. By annulling important parts of the Massachusetts charter without due process, these provisions threatened the foundation of government throughout the colonies because they changed "the long-established rule that once a provincial act had been approved by the Crown, the Crown had no authority to repeal or amend it" (Knollenberg, p. 138).

The Administration of Justice Act, to take effect on 1 June 1774, allowed the governor to move the trial of anyone who had been indicted for a capital crime, including murder, while “acting under the direction or order of any magistrate, for the suppression of riots or for the carrying into effect the laws of revenue” to another colony or to Britain (*ibid.*, p. 139).

Although not part of Parliament’s direct response to the Boston Tea Party, two other measures aimed at tightening imperial control—an expansion of the Quartering Acts and the Québec Act—contributed to inflaming colonial opinion against Parliament.

The Intolerable Acts allowed Massachusetts activists to portray themselves as victims of British tyranny, helped opponents of increased imperial control in other colonies to claim that Parliament was threatening the rights and liberties of all colonists, and made the calling of the first Continental Congress seem like the necessary next step.

Cayugas, the Oneidas, the Onondagas, the Senecas, and the Tuscaroras. The Iroquois were arguably the most powerful and important group of American Indians in eastern North America during the eighteenth century. They were firm British allies in the middle decades of the eighteenth century but were sharply divided by the American Revolution. Members of the Iroquois League fought on both the British and American sides during that conflict, and campaigns conducted within the Iroquois homeland proved particularly devastating.

THE COVENANT CHAIN

For most of the eighteenth century, the Iroquois League occupied most of what became upstate New York. The five original nations of the league—the Mohawks, the Cayugas, the Oneidas, the Onondagas, and the Senecas—had been joined together in an alliance that predated European contact. The Iroquois League was not only a political organization but a spiritual one as well, as the origins of the confederation were explained through an elaborate story in the Iroquois mythos that anthropologists and historians label the Deganawidah Epic. The proper name for the political-spiritual Iroquois League was the Great League of Peace and Power, or the Haudenosaunee, the Iroquois word meaning longhouse. Europeans most often referred to the Iroquois League first as the Five Nations and then as the Six Nations after the addition of the Tuscaroras to the League in 1722. The Iroquois political forms included not only the league that bound the member nations to one another, but also a set of foreign alliances, conceptualized as fictive kinship relationships, known as the Covenant Chain. This alliance structure tied together neighboring Indian nations, such as the Delawares, as well as the British colonies that had dealings with the Iroquois and their neighbors. Periodic ceremonies conducted at Albany by colonial officials—notably Sir William Johnson, superintendent of the Northern Indian Department—and Iroquois leaders, which included the exchange of trade goods, served to

renew and “brighten” the Chain. It was through this alliance structure that the Iroquois remained British allies during the Seven Years’ War and into the early part of the American Revolution. It was also under the aegis of the Covenant Chain that the Iroquois claimed title to western lands they sold to various colonial governments.

THE EARLY HOSTILITIES

The Iroquois League and the Covenant Chain Alliance were buffeted in the early years of the American Revolution, and the conflict ultimately split the League and its alliances. In July 1774 the longtime broker of relations between the Iroquois, neighboring Indians, and the British colonists, Sir William Johnson, died. His nephew, Colonel Guy Johnson, succeeded him as superintendent of the Northern Indian Department. Shortly after the death of Sir William, the Iroquois League refused to assist the Shawnee Indians in their conflict against the colony of Virginia in 1774 known as Lord Dunmore’s War. The tensions of 1774 were followed by the outbreak of open hostilities between the British government and the leadership of the American colonies in early 1775.

At the start of the American Revolution the Iroquois League desired to remain neutral and managed to preserve its neutrality during the first year and a half of the conflict. General Thomas Gage warned Guy Johnson that the New England revolutionaries might attempt to influence the Iroquois, especially through the activities of Presbyterian missionary Samuel Kirkland, who had been living with the Oneidas since the early 1760s. Johnson sent an Anglican missionary to the Oneida towns to counter Kirkland’s influence and watched the latter closely. In 1775 the governor of Canada, Guy Carleton, threatened the Iroquois with seizure of their lands if they did not support the crown against the colonists.

DIVISIONS AMONG THE IROQUOIS

At the same time, Kirkland began to advise the Continental Congress on how it might conduct diplomacy with the Iroquois League. Congress had created an Indian Committee in July 1775 and, listening to Kirkland’s advice, it opened negotiations with several Iroquois leaders in August 1775 at Albany. General Philip Schuyler, one of several Indian commissioners for the Northern Department, took the lead in negotiations, convening the conference at Albany and a conference at German Flats the next year. Schuyler could never negotiate with all of the Six Nations, and the Oneidas and Tuscaroras formed the bulk of his negotiating partners. Until the spring of 1776, they were not willing to abandon neutrality. However, by that point in time, the bulk of the Senecas, Cayugas, and Mohawks, along with many Onondagas, openly sided with Guy Johnson and the British government. Fearing

capture by Patriot militias, Johnson had left the Mohawk River Valley in the summer of 1775. The British government had granted lands in Canada to the Mohawks and their leader, Joseph Brant, or Thayendenaga. Many Iroquois communities relocated to the western part of modern upstate New York, where the British post of Fort Niagara served as a communication and commercial center. The British willingness to provide trade goods and a perception that the Americans were more likely to demand further land cessions than were the British both made the western Iroquois steady allies of the British. In contrast, the more easterly Oneidas and Tuscaroras, responsive to Schuyler’s diplomacy and Kirkland’s influence, were openly on the American side by the end of 1776.

DEVASTATING IMPACTS

The campaigns of the War of the American Revolution experienced by the member nations of the Iroquois League proved devastating in a number of respects. The British called on their Iroquois allies to assist them in the campaign of 1777 to conquer the Hudson Valley and seal off New England from the rest of the United States. Not only did the that campaign witness the defeat of the main invasion force under General John Burgoyne, but British and Iroquois forces under Barry St. Leger, attempting to secure Fort Stanwix and the Mohawk Valley, retreated to Canada in the wake of an advance by Benedict Arnold. Before their retreat, St. Leger’s forces defeated an American force at the Battle of Oriskany, a bloody battle that shocked many Iroquois warriors who participated and survived. Two years later, in the late summer and autumn of 1779, General John Sullivan led a detachment of the Continental army into the Iroquois homelands. Sullivan’s forces destroyed forty Iroquois towns and burned cornfields containing 160,000 bushels of corn. Designed to weaken Iroquois support for the British cause, the Sullivan expedition only served to stiffen the resistance of the British-allied western Iroquois to the United States. The expedition did cause many of the Iroquois who had lost their homes to move to the vicinity of Fort Niagara.

TREATY OF FORT STANWIX

With the Treaty of Paris (1783), the sovereignty of the United States and the state of New York over Iroquoia would no longer be contested by the British. Negotiations in September and October of 1784 at Fort Stanwix helped determine how the peace settlement would affect the Iroquois League. Commissioners from the Continental Congress and from the state of New York called representatives from the Iroquois League formally to bring peace to the region. In September 1784, a delegation from the state of New York, led by Governor George Clinton, offered all members of the Iroquois League the opportunity to return

to New York if they would consent to a large sale of lands, at which every Iroquois leader balked. In October 1784 the congressional commissioners met with a smaller number of Iroquois leaders. The commissioners did not ask for a large land sale, but only a confirmation of previous lands sold as well as recognition that the Treaty of Paris had marked out all of the British-allied Iroquois as defeated and conquered peoples, thus giving the Americans rights to any Iroquois lands in the future. The Iroquois leaders present signed the Treaty of Fort Stanwix in order to sign a treaty with Congress and ward off New York, but they would protest American claims to land under so-called “conquest theory” throughout the 1780s.

The Treaties of Paris and Fort Stanwix served to divide the Iroquois League. Many members of the Iroquois League followed Mohawk Joseph Brant to Canada. Governor Frederick Haldimand had given Brant a large grant of land along the Grand River (in modern-day Ontario), where a First Nations Reserve continues to exist in the twenty-first century. The nations of the Iroquois also continue to inhabit reservations in New York and elsewhere in the United States.

IRVINE, JAMES. (1735–1819). Continental officer. Born in Philadelphia on 4 August 1735, Irvine was a hatter who joined the militia in 1760, rising quickly to the rank of captain in 1763. During Pontiac's Rebellion, he

took part in Colonel Henry Bouquet's expedition of 1764. Elected a delegate to the Pennsylvania Provincial Congress in 1775, Irvine resigned to accept a commission as lieutenant colonel in the Continental army. After service in Virginia, he joined General Richard Montgomery's invasion of Canada in November 1775. Disappointed with his failure to gain promotion to general he resigned from the army in June 1777 to become brigadier general of the Pennsylvania militia, commanding it at the Battle of Germantown in October. It was Irvine and General William Alexander who advised Washington, contrary to the wishes of the other senior officers, that the army should spend the winter together in a single location at Valley Forge.

When General William Howe led his army out of Philadelphia on 5 December 1777 in an effort to lure Washington into battle, Irvine and six hundred Pennsylvania militia were ordered to determine the enemy's strength. At Chestnut Hill they discovered most of the British army advancing; the militia then fled, leaving Irvine, who had been wounded, a prisoner of the British. He was not exchanged until 1781, receiving the rank of major general of militia and a small pension from Pennsylvania the following year. He was also elected to the state's Executive Council in 1782, becoming its vice president in 1784. After serving a single term in the assembly, Irvine quit politics in 1786. He died in Philadelphia on 28 April 1819.

Michael Bellesiles

IRVINE, WILLIAM. (1741–1804). Continental general. Ireland and Pennsylvania. Born in County Fermanagh, Ireland, on 3 November 1741, Irvine was briefly in the British army but resigned after arguing with a superior officer. He studied medicine at Dublin University and served as a naval surgeon during the Seven Years' War. In 1764 he settled in Carlisle, Pennsylvania, establishing a medical practice there. Siding with the Patriots, he attended the Provincial Congress of 1774 in Philadelphia. On 9 January 1776 he was commissioned a colonel in the Sixth Pennsylvania Regiment, and joined General John Thomas's forces for the invasion of Canada. Captured at Trois Rivières, Canada, on 8 June, he was paroled on 3 August but was not exchanged until 6 May 1778, almost three years later. Almost immediately after his return, he led troops at the battle of Monmouth (New Jersey), on 28 June 1778. In July he sat on the court-martial of Charles Lee, who was convicted of dereliction of duty at Monmouth. On 12 May 1779 he was appointed brigadier general and given command of the Second Brigade of General Anthony Wayne's Pennsylvania Line.

He took part in the unsuccessful operations against Staten Island on 14–15 January and Bull’s Ferry, New Jersey, on 21–22 July 1780.

After failing to raise new troops in Pennsylvania, Irvine was made commander of the western military department on September 1781. When he arrived at Fort Pitt in November, he found that the garrison consisted of 200 regulars. In his estimation, this was too few to take the field. Irvine called for volunteers to launch an attack on the Indians, which led to the massacre of innocent Moravian Indians at Gnaddenhutten (in present-day Ohio) on 8 March 1782. This crime was followed by William Crawford’s disastrous expedition in June. Leaving Fort Pitt on 1 October 1783, Irvine resigned from the army on 3 November. In 1785 he was appointed agent to purchase lands for distribution to Pennsylvania veterans. He recommended purchase of the “triangle” that gave Pennsylvania an outlet on Lake Erie. He was a congressman from 1786 to 1788 and from 1793 to 1795. He was involved in the Whiskey Rebellion, first as a commissioner and then as commander of the state militia. During the French war scare of 1798 he again commanded Pennsylvania troops. He moved from Carlisle to Philadelphia, and in March 1801 was appointed superintendent of military stores there. He died of cholera in Philadelphia on 29 July 1804.

IZARD, RALPH. (1742–1804). American diplomat, U.S. Senator. South Carolina. Born on 23 January 1742 near Charleston, South Carolina, Izard was the son

of a wealthy planter. Sent to school in England when he was 12, Izard graduated from Cambridge in 1761, and returned to South Carolina in 1764. In 1769 he left America with his wife, Alice De Lancey, and lived in Europe for the next decade, where they became the patrons of the American painter John Singleton Copley. The Izards were living in London when the Revolution broke out. Though his wife’s family was Loyalist, Izard reluctantly sided with the Americans. In the fall of 1776 they moved to Paris, where Izard assisted Alexander Gillon to raise funds to purchase warships for the United States.

On 7 May 1777, Congress appointed Izard commissioner to Tuscany. The only problem was that the latter state had no intention of receiving the representative of a would-be state they had not yet recognized. Unable to do anything constructive in the diplomatic field, Izard teamed up with his good friends Arthur and William Lee in an attempt to mar the work of Benjamin Franklin. The Lees and Izard felt that they should handle the negotiations with the French government rather than the plebian Franklin, whom they did not trust. However, Franklin outmaneuvered them and Congress recalled Izard in June 1779. As soon as he reached Philadelphia, however, he discovered that Congress had passed a resolution approving his conduct on 9 August 1780.

In 1782 he was elected to the Continental Congress, and he served until 1783. He declined to run for governor of South Carolina, but served in the legislature and in 1789 was elected to the U.S. Senate. He was president pro tempore in the Third Congress. In 1795 he retired from public life. Two years later he was invalidated by a stroke. He died 30 May 1804.

J

JACKSON, HENRY. (1747–1809). Continental officer. Massachusetts. Born in Boston, before the war Henry Jackson was an officer in the First Corps of Cadets, an elite militia unit that was disbanded during the British occupation. After the British left Boston, six former Cadet officers, including John Hancock and Henry Jackson, organized the Boston Independent Company. The Massachusetts General Court commissioned its officers on 7 December 1776. Because of the company’s elite, voluntary status, Hancock, its nominal leader, was commissioned as colonel, and Henry Jackson, the actual commander, was commissioned as lieutenant colonel.

Jackson led the company on an alarm to Newport, Rhode Island, in mid-April 1777. Commissioned as colonel of one of the sixteen Additional Continental Regiments as from 12 January 1777, he raised the regiment by recruiting around Boston in the spring and summer. With the main army during the Monmouth campaign, he led the regiment back to New England for operations against Newport in 1778 and 1779. On 9 April 1779, the regiment was consolidated with three other understrength Additional Continental Regiments (David Henley’s, William Lee’s, and Henry Sherburne’s), with Jackson continuing in command. Returning to the main army in November 1779, the regiment helped to oppose the Springfield Raid in New Jersey in June 1780.

The unit was redesignated the Sixteenth Massachusetts Regiment on 24 July 1780 and consolidated into the reorganized Massachusetts Line on 1 January 1781. Jackson assumed command of the Ninth Massachusetts and then, on the further consolidation of the Line, of the Fourth Massachusetts on 1 January 1783. He was breveted brigadier general on 30 September, and on 3 November

1783 he became colonel of the First American Regiment. On Evacuation Day, 25 November 1783, he was the “senior infantry officer present” and commanded the 800-man column that marched into New York City. Jackson continued in command of the First American (the only infantry regiment in the American army after the Continental army was disbanded on 31 December 1783) until 20 June 1784, at which time the American standing army was reduced to eighty men. After the war he was major general of the Massachusetts militia (1792–1796), U.S. agent supervising the building of the frigate *Constitution* in 1797, and business agent for his close friend, Henry Knox, especially concerning Knox’s land holdings in Maine.

revised by Harold E. Selesky

JACKSON, JAMES. (1757–1806). Soldier, lawyer, politician. Born in Moreton-Hampstead, Devonshire, England, Jackson came to Georgia in 1772. There he read law and served throughout the war, leading militia units and partisan bands.

As a teenager, Jackson participated in the Patriot capture of the powder magazine in Savannah in May 1775 and became captain of the volunteer Light Infantry by March 1776. He resigned this command in 1778 but was appointed brigade major to the Georgia militia and saw action near the East Florida border that November. In

late December he participated in the defense of Savannah, and when the British captured the town, he escaped into South Carolina. His commission expired in late 1778, and he marched as a common soldier under General William Moultrie for a time, apparently joining troops in northern Georgia and western South Carolina in 1779. He participated in the siege of Savannah during the fall of 1779. In March 1780 he was reappointed brigade major of the Georgia militia and killed Lieutenant Governor George Wells in a duel. In May, as a result of the capture of Charleston by the British, Georgia rebel government officials fled into the Carolinas and Jackson went with them.

For the next year he led militia in the Carolinas, seeing action at Blackstocks (1780) and Cowpens (1781), where he acted as brigade major for Lieutenant Colonel Andrew Pickens. He continued to serve under Pickens in North and South Carolina, eventually returning to Georgia as a partisan leader. He participated in the siege and capture of Augusta during the spring of 1781. He was appointed commandant of Augusta and, at the suggestion of General Nathanael Greene, the newly formed state government awarded him a commission as lieutenant colonel and ordered him to form the Georgia State Legion in August 1781. That fall, as British forces pulled back towards Savannah, Jackson captured Ebenezer and the Great Ogeechee Ferry. Jackson and his legion joined General Anthony Wayne's troops in January 1782, serving as the advance guard. When the British completed their evacuation of Savannah on the afternoon of 11 July 1782, Jackson had the honor of receiving the keys to the town and, at the head of his troops, entered through the western gate.

In 1784 the assembly commissioned him colonel of the First or Chatham County Regiment. In 1786 Jackson became brigadier general of the Georgia state militia and in 1792 became major general of the militia. He became a uniting political figure in Georgia, serving thirteen years in the legislature, three years as governor (1798–1801), two years in Congress (1789–1791), and eight years in the U.S. Senate (1793–1795, 1801–1806). Described as short in stature with prominent features and large blue eyes, James Jackson was pugnacious, engaging in at least twenty-three duels and many street brawls. He was also apparently as courageous in politics as on the battlefield, for he became one of the first Republicans in Congress, exposed the Yazoo land fraud, and created Georgia's first true political party.

JACKSON, MICHAEL. (1734–1801). Continental officer. Massachusetts. Born in Newton, Massachusetts, Michael Jackson served as a second lieutenant in Colonel Richard Gridley's provincial regiment in 1756 during the final French and Indian war. The next summer, his father gave him a slaughterhouse and tannery, but he went to war again as a lieutenant in 1761 and 1762. Promoted to captain, he led his minuteman company in the pursuit of the British from Lexington and Concord on 19 April 1775. The Massachusetts Committee of Safety commissioned him major of Colonel Thomas Gardner's Regiment on 2 June 1775. He was wounded at Bunker Hill on 17 June. He was named lieutenant colonel of the Sixteenth Continental Regiment for 1776 on 1 January and was wounded on 23 or 24 September in the attack on Montresor's Island in New York.

On 1 January 1777 he was commissioned colonel of the Eighth Massachusetts Regiment. After recruiting the regiment, he marched with it on 6 July 1777 to join Horatio Gates for the Saratoga campaign. In the first consolidation of the Massachusetts Line, on 1 January 1781, he retained command of the Eighth and, although complaining that his wounds rendered him "almost unfit for service," he was transferred as colonel to the Third Massachusetts in the next consolidation (12 June 1783). He was breveted brigadier general on 30 September, and on 3 November 1783 he left the army to return to his occupation as a tanner at Newton, Massachusetts. Five brothers and five of his sons were also in the Continental army.

JACKSON, ROBERT. (1750?–1827). British medical officer. This interesting, if not important, individual was born at Stonebyres, Scotland, around 1750. He spent a little time at Edinburgh University, but learned his trade as a doctor's apprentice in Jamaica, where he worked from 1774 to 1778. In the latter year, disgusted with slavery, he moved to New York. There he became a surgeon's mate in the 71st Highlanders. His unit joined the Southern campaign, with Jackson present for several battles until he was taken prisoner at Cowpens, on 17 January 1781. General Daniel Morgan was so impressed with Jackson that he reportedly released him without bothering with parole.

Jackson officially became a doctor at Leyden in 1785, establishing his practice in Stockton-on-Tees, in Yorkshire, England. In 1793 he launched a personal crusade to reform the corrupt medical service of the British Army. After adventures that included six months in jail for caning the surgeon general, he broke the monopoly of the College of

Physicians over medical appointments in the army through the personal intervention of the Duke of York. He served the British military until 1815 and died on 6 April 1827.

revised by Michael Bellesiles

JACKSON'S REGIMENT. Henry Jackson of Massachusetts was appointed to command one of the sixteen "Additional Continental Regiments" authorized by Congress on 12 January 1777 as part of the army it wanted to raise for three years of service (or the duration of the war). Organized in the spring and summer of 1777 at Boston, the regiment consisted of seven companies, one of the more fully recruited of the additional regiments. On 9 April 1779 it was consolidated with two other additional continental regiments raised in Massachusetts, Colonel William Lee's, which had been raised in the eastern counties of the state, and Colonel David Henley's, which had been raised in eastern Massachusetts and southern New Hampshire. Now a full regiment of nine companies, it was incorporated into the Massachusetts Line on 18 July 1780 and redesignated the Sixteenth Massachusetts Regiment on 24 July. The regiment was disbanded at New Windsor, New York, in the Hudson Highlands, at the end of its enlistment on 1 January 1781.

Because most of the infantrymen remaining in the Continental army were from Massachusetts, on 23 October 1783 Henry Jackson was authorized to combine them into a single regiment, known both as Jackson's Regiment and the First American Regiment. Disbanded on 20 June 1784, it was the last infantry regiment in the Continental army.

JÄGERS (JAEGERS). Jägers (literally "huntsmen") were a form of light infantry that had their origin in the companies raised by Frederick II of Prussia to counter Austrian mobile light forces called Croats during the War of

the Austrian Succession. They were recruited from foresters and gamekeepers, expert marksmen armed with rifles who knew how to use terrain and cover to best advantage; some were mounted for greater mobility. The French followed suit in 1759 and formed a corps of chasseurs (also, literally, "huntsmen"). One jäger company from Hesse-Cassel went to America with Major General Leopold von Heister in August 1776, and a second (under Captain Johann Ewald) went with Major General Wilhelm von Knyphausen in October 1776. They proved to be so useful in America that, by a special treaty in December 1777, Hesse-Cassel raised its jäger establishment from 260 to 1,067 men, although it is not likely that more than 700 effectives actually were raised. In the summer of 1777 all the Hesse-Cassel and Anspach-Bayreuth jägers, about 600 men, were put under the command of Lieutenant Colonel Ludwig von Wurmb to form the Feld Jäger Corps, which served with the main British army at New York City and in the South. The jägers seldom operated as a single unit but generally were detached for such special missions as reconnaissance, headquarters security, advance guards, and to occupy the front trenches at sieges to snipe at the American defenses. Four companies of jägers from Hesse-Hanau and one from Brunswick served with Major General John Burgoyne's expedition from Canada in 1777.

The term "chasseurs" generally was applied to those jägers who served as part of German regiments, as opposed to those gathered together in the Jäger Corps of von Wurmb. A Brunswick chasseur battalion under Lieutenant Colonel von Barner (four companies plus the Brunswick jäger company) formed an important component of Burgoyne's light troops in 1777. And 120 to 200 regimental chasseurs from Hesse-Cassel were formed into a company under Captain George Hanger for the Charleston campaign of 1780. They were among the unlucky passengers on board the *Anna*, which was blown across the Atlantic to England.

Because of their uniforms the jägers were called green-coats. Green remains the traditional uniform color of modern regiments of European (including British) armies who trace their lineage to these light infantry organizations of the eighteenth century.

JAIL FEVER. A virulent type of typhus fever that developed when men were confined to close quarters, such as in jails or troop transports. The term was first used in 1753.

Mark M. Boatner

JAMAICA (BROOKLAND), NEW YORK. 28 August 1776. The American defeat at Long Island on 27 August resulted in the isolation of a militia force of barely one hundred men under Brigadier General Nathaniel Woodhull, who had been posted on the eastern end of the island with the mission of protecting the inhabitants and driving cattle out of the enemy's reach. Woodhull moved to his headquarters at Jamaica, where he awaited orders and reinforcements. On the night of 28 August, Sir William Erskine led elements of the Seventeenth Light Dragoons and the Seventy-first Highlanders—about 700 troops—in an operation that surprised Woodhull and many of his men at Carpenter's House, Jamaica. Woodhull died as a result of ill treatment in captivity, and through his death became a hero and martyr to the Revolutionary cause.

JAMAICA (WEST INDIES). Jamaica was one thousand miles to windward of the principal British and French possessions in the Caribbean. It unquestionably was the largest and richest British possession in the Caribbean, and its capture ranked as Spain's primary objective in the New World. Only sixteen thousand white colonists occupied the island, barely enough to maintain control over the sugar plantations' restive slaves and to deal with hostile Maroons in the mountainous interior. As with other island possessions, Jamaica's planters and British merchants lobbied in London to have large forces of regular troops and Royal Navy vessels sent out, but they used their control of the colony's assembly to oppose spending local money for defense. While the Royal Navy's squadron commander based in Port Royal had the responsibility to protect West Florida, his army counterpart had no connection with Pensacola or Mobile. On the other hand, Governor John Dalling aggressively sought to use Jamaica for operations against Honduras and Nicaragua.

Until Spain entered the conflict upon declaring war with Britain in 1779, Jamaica's role was that of naval base (it had only about five hundred troops in garrison), principally focused on intercepting American trade in the Caribbean and protecting its own semi-annual commercial convoys from privateers. But 1779 changed the picture dramatically, and the North ministry began dispatching large reinforcements to protect the island. The climate, however, had a devastating effect on Europeans. Between 1 August and 31 December 1780, the seven and a half battalions at Jamaica lost eleven hundred men dead, and half of the remaining three thousand were sick. Dalling looked to the southern colonies, where conditions matched Jamaican weather, as a source of troops better suited to defend the island and operate along the coast of the Spanish Main. Although unable to obtain Loyalists, he did get permission to recruit a unit from the American prisoners captured in the fall of Charleston by promising that they would only serve against the Spanish.

JAQUETT, PETER. (1754–1834). Continental officer. Delaware. Born at his family home of Long Hook Farm near Wilmington, Delaware, 6 April 1754, Jaquett was an ensign of the Delaware Regiment as of 17 January 1776. He was promoted to second lieutenant on 27 November 1776, first lieutenant on 1 December 1776, and captain on 5 April 1777, seeing action at Princeton. He may have been captured at Camden on 16 August 1780, standing beside Johann de Kalb. Promoted to brevet major on 30 September 1783, Jaquett served until the end of the war, returned home, and died there 5 May 1834.

JASPER, WILLIAM. (1750?–1779). Patriot hero. South Carolina. Born in South Carolina around

1750, William Jasper enlisted on 7 July 1775 in Francis Marion's Company for service in William Moultrie's Regiment. During the defense of Charleston in 1776 he braved enemy artillery to replace the flag that had been shot from the parapet of Fort Sullivan (later Fort Moultrie). Given a sword by Governor John Rutledge, he declined a commission, insisting that he was not well enough educated to be an officer. As a roving scout under Moultrie, Marion, and Benjamin Lincoln, successively, he gathered valuable information on British activities. He was killed while planting the colors of the Second South Carolina Regiment on the Spring Hill redoubt in the assault on Savannah on 9 October 1779.

JAY, JOHN. (1745–1829). Statesman, diplomat. New York. Born New York City on 12 December 1745, Jay graduated from King's College (now Columbia) in 1764, was admitted four years later to the bar, and became a successful New York City lawyer. Marriage in 1774 to Sarah, daughter of William Livingston of New Jersey, further extended his family connections. When the Revolution started he supported the Patriot cause, although with moderation. He became a member of the New York City Committee of Correspondence and served in the first and Second Continental Congresses. Although he was opposed to independence in the beginning, and had returned to office in the state legislation when the Declaration of Independence came up for a vote, he nevertheless became ardent in his dedication to the new United States. He helped to get cannon for General George Washington's army, set up a spy ring, and chaired the committee dedicated to battling Loyalists in New York. He guided the formulation of the 1777 state constitution, and served as Chief Justice of New York from 3 May of that year until 1779. Re-elected to Congress in December 1778, he became president of that body on the 10th and held this post until he was named minister to Spain, on 27 September 1779. Meanwhile, he had been elected colonel of the state militia in 1775, but had no military service in the field.

Spain's attitude toward the American Revolution was such that Jay had no chance of getting that country's recognition of the United States, even though it had declared war on Britain. Arriving at Cadiz with his wife on 22 January 1780 and remaining in the country two years, Jay accomplished little more than raising a small loan and getting the Spanish to keep up their secret assistance in war supplies. On 23 June 1782 Jay reached Paris

to take part in the Peace Negotiations. He shared John Adams's suspicion of Charles Gravier, Comte de Vergennes, and helped Adams convince Benjamin Franklin to sign preliminary articles of peace with the British without awaiting French concurrence.

On 24 July 1784 Jay reached New York, having declined the post of minister to London, and found he had been drafted for the post of Secretary of Foreign Affairs. Jay held this post until Thomas Jefferson became the first Secretary of State, on 22 March 1790. His most vexatious problems during this period stemmed from British and Spanish refusal to withdraw their garrisons from territory claimed by the United States. The impotence of the American Confederation weakened Jay's hand, and he became one of the strongest advocates of a strong federal government. He wrote five of the Federalist Papers, blaming ill health for keeping him from contributing more.

Becoming the first Chief Justice of the United States on 4 March 1789 (but serving as ad interim Secretary of State until Jefferson arrived to be sworn in on 22 March 1790), he sat during the first five years during which the Supreme Court's procedures were formed. While Chief Justice he was sent in the summer of 1794 to arrange a peaceful settlement of controversies with Great Britain that threatened war, leading to the politically divisive Jay's Treaty.

Jay had been defeated by George Clinton in 1792 for the governorship of New York, even though Jay got more votes. He returned from England in 1795 to find himself elected, and he served six years (two terms). His administration was conservative and upright, but no great issues arose to challenge it.

Republican strength assured Jay's defeat for governor in 1800, and he declined to run for re-election. His mind set on retirement, he also refused Adams's offer of reappointment as Chief Justice. Jay spent his last twenty-eight years in complete retirement on his 800-acre property at Bedford, Westchester County, New York, where he died on 17 May 1829.

JAY'S TREATY. 19 November 1794. For a decade after the end of the American Revolution, Britain refused to honor those articles of the Peace Treaty of 1783 calling for its withdrawal of troops from posts in the Northwest that now fell within U.S. territory. Britain's justification was based on the U.S. failure to comply with articles four and five of the treaty which called for payment of pre-Revolutionary War debts to British merchants and reimbursement to Loyalists for property confiscated by the states. The two countries made a number of threatening gestures toward one another after the British Orders in Council of 8 June and 6 November 1793 resulted in the seizure of American ships and crews. President Washington sent John Jay, the chief justice of the United States and author of Washington's Neutrality Proclamation of 1793, to negotiate a treaty with Britain. The Treaty of London, or Jay's Treaty, as it is generally known, was signed on 19 November 1794. The British government agreed to withdraw from all its posts in the Northwest territories by 1 June 1796. The debts were to be referred to joint commissions (British claims of \$2,664,000 were settled on 8 January 1802), as were the problems of the Northeast boundary and compensation for illegal seizures (\$10,345,200, paid by 1802). Various trade agreements were made, but there was no reference to Loyalist claims, the slaves "stolen" by the British during the war, the impressment of American sailors under the Orders in Council, or to allegations that the British incited Indians to make war on the United States. Nor would Britain acknowledge the neutral rights of the United States.

Although Jay had triumphed in getting important concessions and had restored amicable relations that permitted the resumption of trade that was essential for the success of Hamilton's fiscal system, his treaty aroused a popular uproar from many elements whose own interests had been violated or ignored. Southern planters wanted compensation for those slaves who had fled to freedom with the British, and Virginia owed most of the debt that the joint commissions were to settle. Northern shipping and commercial interests were antagonized by the treaty's limitations on their trade with the West Indies, while western settlers wanted a final solution to "the Indian problem." Thomas Jefferson and James Madison denounced the treaty and preferred commercial retaliation against Britain as a means of attaining better terms, even though an embargo would hurt the U.S. economy more than it would the British. After long and bitter debate, the Senate finally ratified the treaty on 24 June 1795 with the stipulation that the article dealing with the West Indies trade be renegotiated. Although Washington had considered the treaty unsatisfactory, he established an important precedent by asserting executive prerogative and refusing the House of Representatives' request of 24 March 1796 for Jay's papers relating to the treaty. The House initially

attempted to block the treaty by denying appropriations, but on 30 April 1796 it approved the requisite funds. One important consequence of Jay's Treaty was to activate and clarify the two factions in Congress into the Federalist and Democratic Republican Parties.

JEFFERSON, THOMAS. (1743–1826). Virginia legislator, wartime governor, diplomat, author of the Declaration of Independence, third president of the United States. Thomas Jefferson was born on 13 April 1743 in Albemarle County, the son of Peter Jefferson, a farmer and surveyor, and Jane Randolph, a member of one of Virginia's most prominent families. Peter Jefferson died in 1759, leaving his son about five thousand acres. To this inheritance Thomas Jefferson added eleven thousand acres acquired through his wife, Martha Wayles Skelton, whom he married on 1 January 1772. The latter estate brought with it the heavy indebtedness of his father-in-law, which Jefferson struggled unsuccessfully over a lifetime to extinguish. Although he expressed reservations about the institution of slavery and proposed legislation in Congress to prohibit it in the western territories, Jefferson showed little compunction about slavery. At one time possessing 185 slaves (50 of his own, and 135 belonging to his wife), he did free a few of them toward the end of his life. Jefferson received his elementary education at a plantation school, graduated from the College of William and Mary, read law with George Wythe, was admitted to the bar in 1767, and practiced as an attorney until 1774.

After serving as justice of the peace and parish vestryman, Jefferson was elected to the House of Burgesses in 1769. He served in every succeeding assembly and convention of his province until he was elected to the Continental Congress in 1775. His *Summary View of the Rights of America*, written initially for the benefit of delegates to the First Virginia Convention in 1774 and printed as a pamphlet in the same year, was widely read. This direct attack on the crown did not find much approval at the time, but it placed Jefferson among the leaders of the Revolution. In England his pamphlet was somewhat

modified, probably by Edmund Burke, and widely circulated by friends of America. Cutting at the common root of allegiance, emigration, and colonization—shunning the indirect approach of blaming the ministry for the king's errors—Jefferson's awakening call maintained that:

the relation between Great Britain and these colonies was exactly the same as that of England and Scotland after the accession of James and until the Union (1707): and that our emigration to this country gave England no more rights over us than the emigration of the Danes and Saxons gave to the present authorities of their mother country over England.

The pamphlet ignored the claim that the mother country had protected the colonies during the colonial wars and maintained that since the earlier support had been only with a view to commercial return it could be repaid in trade privileges.

Taking his seat in the Continental Congress in June 1775, Jefferson drafted several appeals that were rejected as being too anti-British at a time when hope of conciliation still existed. After hostilities had broken out at Lexington and Concord, he and John Dickinson wrote the Congressional Resolution justifying armed resistance: "A Declaration of the Causes and Necessities of Taking Up Arms" (6 July 1775).

Following his absence from 28 December 1775 until 14 May 1776—he was called home for personal reasons and was appointed commander of Albemarle militia on 26 September—Jefferson was named by Congress on 11 June 1776 to a committee to draft a declaration of independence. Although changes were made by John Adams and Benjamin Franklin, who, along with Roger Sherman and Robert R. Livingston, were the other committee members, and some by Congress, the Declaration remained essentially his.

Although reelected to Congress, Jefferson felt that his presence was more valuable in Virginia, where he wanted to take part in revising the state's laws. He surrendered his seat in Congress, declined election as a commissioner to serve in Paris with Franklin and Silas Deane, and entered the House of Delegates on 7 October 1776. The four corners of Jefferson's frame for republican government were: abolition of landholding in fee-tail (inheritance limited to a particular class of heirs); abolition of primogeniture; separation of church and state; and a system of public education. Elected to the board of five men to revise the laws of Virginia, Jefferson, George Wythe, and Edmund Pendleton were the only ones to serve to the end. On 18 June 1778 they submitted 126 bills, at least 100 of which were ultimately enacted in substance. Jefferson's education bills failed almost entirely; by 1786 his other three ideals had been achieved.

As a legislator, despite concern for greater equality and democracy, Jefferson showed little regard for protection of civil liberties. His reputation is tarnished by his role in the case of Josiah Philips. Jefferson drew up and introduced in the House of Delegates a bill of attainder against Philips, who as the head of a Tory band in the southeastern counties of Virginia robbed citizens and allegedly committed at least one murder. The bill of attainder, becoming law on 30 May 1778, called for apprehending Philips and putting him to death without legal process. Philips did not surrender during a grace period. Rather than the bill of attainder being invoked, Philip and several associates, when caught, were tried and convicted in a court, not for treason or murder, but for theft of some felt hats and twine. Even many years after this episode, Jefferson insisted that the hanging of Philips under a bill of attainder would have been justified on grounds of expediency during wartime.

On 1 June 1779 Jefferson succeeded Patrick Henry as governor. He was reelected for another single term (1780–1781). As wartime governor Jefferson had little executive authority to compel prosecution of the war effort. He lacked veto power. Fortunately, however, Virginia had a state office for military administration, headed by a commissioner of war (first George Muter and then the very able William Davies). Jefferson as governor had responsibility for activating militia as a home guard, which he found difficult to achieve given the rapid mobility of enemy armies invading his state.

During Jefferson's governorship, four British armies invaded Virginia: General Alexander Leslie's incursion into the Tidewater area, approaching near Williamsburg, from 20 October to 22 November 1780 (Leslie withdrew to take his army to join forces with Cornwallis in the Carolinas); General Benedict Arnold's invasion, beginning December 30, a lightning strike at Richmond on 4 and 5 January 1781; General William Phillips, also invading central Virginia, in April and May 1781; and Cornwallis leaving North Carolina for Virginia in May 1781 and continuing in the state until the siege of Yorktown. Jefferson came in for criticism for being dilatory and lacking in initiative and boldness, particularly in his responses to the Arnold invasion, during which the governor was unable to protect from destruction much of the military stores and documents at the capital. An effort in the legislature to conduct an inquiry into Jefferson's actions during the Arnold invasion failed, and instead he was thanked for his endeavors. Ironically General Phillips, before returning to Virginia with an army, had been one of the prisoners of war (from the British surrender at Saratoga) interned at barracks near Charlottesville and had frequently, along with other captured British officers, been a guest of Jefferson. As governor, Jefferson promoted the western expeditions of George Rogers Clark. Jefferson

faced criticism for temporarily holding a prisoner of Clark's—Henry Hamilton, the "Hair Buyer" governor of Detroit—in a dungeon of the Williamsburg jail and in irons.

Jefferson was chased from his home at Monticello on 4 June 1781, one day after his term as governor expired, by the British Lieutenant Colonel Banastre Tarleton and his dragoons. Jefferson's successor, Thomas Nelson, did not assume office until 12 June. Jefferson, frustrated by his experiences in public life, intended to enjoy private pursuits. During a brief retirement he wrote *Notes on the State of Virginia*, a compendium of useful information about Virginia presented in response to queries posed to Jefferson by François Marbois, the French minister to America; this work was first published in Paris in 1785.

The death on 6 September 1782 of his beloved wife, Martha, brought Jefferson out of his retirement. (Only three of their six children survived Martha, and only two, Martha and Mary, reached maturity.) On 12 November 1782 Jefferson was appointed peace commissioner, but negotiations progressed so that his presence was unnecessary before he could sail for France, and the appointment was withdrawn. Elected to Congress, Jefferson served November 1783 to May 1784, being a member of almost every important committee. Among the thirty or more state papers he drafted, Americans should be particularly grateful for his "Notes on the Establishment of a Money Unit," which spared the New World the absurdity of English pounds, shillings, and pence. In his report of 22 March 1784, second only to the Declaration of Independence among his state papers, Jefferson set down practically all the features of the epoch-making Ordinance of 1787, which provided government for the Northwest territory.

On 6 August 1784 Jefferson reached Paris to assist Franklin and John Adams in drawing up treaties of commerce, instructions for which he had himself drafted. In 1785 he succeeded Franklin as minister to France. With the assistance of the Marquis de Lafayette he achieved some commercial concessions. He negotiated a commercial treaty with Prussia in 1785. Early the next year he joined Adams in London to negotiate a similar treaty, but their efforts failed. In October 1789 Jefferson sailed for America on leave of absence to settle private business and to take home his two daughters. With some reluctance he accepted Washington's appointment as secretary of state, being sworn in on 22 March 1790. Jefferson subsequently served as vice president and two terms as the third U.S. president; his Democratic-Republicans opened the way for a two-party system by providing an alternative to the Federalists.

Always intellectually curious, Jefferson pursued a lifetime of scientific studies. In particular he excelled as an architect, helping to bring neoclassicism to America. He

designed his mansion at Monticello, near Charlottesville, moving into his new home in 1772, and was also the architect for other Virginia houses. Jefferson, with the help of Charles-Louis Clérissieu, provided the plans for the new state capitol in Richmond, replicating an extant Roman temple, the *Maison Carrée*, in Nîmes, France; the legislature moved to this edifice in 1788.

Thomas Jefferson died on the fiftieth anniversary of the Declaration of Independence, a few hours before John Adams. He wrote his own epitaph, in which he asked to be remembered for only three things: "Here was buried/ Thomas Jefferson/Author of the Declaration of American Independence/of the Statute of Virginia for religious freedom/and Father of the University of Virginia."

JENKINS'S EAR, THE WAR OF. 1739–1742. After a quarter-century of relative peace, imperial competition in the West Indies broke out into open war in October 1739, eight years after Spanish coast guards had intercepted and searched a ship commanded by Captain Robert Jenkins, officially on a return voyage from Jamaica but thought by the Spanish to be engaging in

illegal trade with their ports. The coast guard searched Jenkins's ship, tied him to the mainmast, and removed part of an ear, which Jenkins thereafter carried with him in a box, eager to show everyone (including Parliament in March 1738) this tangible evidence of Spanish cruelty. Jenkins's story helped to stir up anti-Spanish and pro-war sentiment throughout the country and was used as part of the justification for a war that George II, important political interests, and a large part of the mercantile community wanted to wage for glory, aggrandizement, and economic advantage.

The war opened well when, in December 1739, Vice Admiral Edward Vernon captured and ransomed Porto Bello on the Spanish Main. But an expedition against Cartagena in 1740, in which soldiers recruited in the colonies composed a substantial part of the land force, was destroyed by hesitant leadership, effective Spanish resistance, and rampant disease. The conflict thereafter merged into the larger and more important War of the Austrian Succession.

JERSEYFIELD, NEW YORK. 30 October 1781. After the action at Johnstown, New York, on 25 October, Colonel Marinus Willett moved to German Flats on 27 October in an attempt to cut the raiders off from their boats (which were at Oneida Creek). After assembling about four hundred men and sixty friendly Oneidas, he started his pursuit the evening of 28 October. He caught up with a hunting party from Major John Ross's column in the morning of 30 October and scattered it. Late in the afternoon the pursuit engaged Major Walter Butler, who made a stand with the rear guard at Canada Creek. The battlefield is between modern Ohio City and Russia, New York, probably at the ford known as Hess's Rift. The brief firefight ended when Butler was killed, but the delay allowed the main

body to escape. Willett made one last attempt to catch up and then turned back rather than risk wearing his men out.

JERSEY PRISON SHIP **SEE** *Prisons and Prison Ships.*

JOHNS ISLAND, SOUTH CAROLINA. 28–29 December 1781. When Major James H. Craig evacuated Wilmington in November 1781, he was posted with some additional infantry and cavalry on Johns Island, near Charleston. The main American army was now located at Pompon on the Stono River, opposite Craig's position. Lieutenant Colonel Henry Lee conceived an intricate plan of attacking Johns Island. It was to take advantage of the fact that on one or two nights of the month, the tide was low enough for troops to ford the Wapoo River, which separated the island from the mainland. The project was assigned to Lee and Colonel John Laurens. Detachments of Continental troops reinforced Lee's Legion to about seven hundred. Lee's column crossed according to plan but had to be recalled and the operation abandoned when a second column, under Major James Hamilton, got lost and arrived too late to ford the river.

revised by Michael Bellesiles

JOHNS ISLAND, SOUTH CAROLINA. 4 November 1782. In leading a successful attack against a British foraging party in the vicinity of this island, Captain William Wilmot of the Second Maryland Continentals was killed. Wilmot thus has the dubious honor of being one of, if not the last, soldier killed in the American Revolution.

JOHNSON, GUY. (c. 1740–1788). Loyalist leader, Indian superintendent. Born in County Meath, Ireland, Johnson immigrated to Boston in 1756 and immediately found his way to the Mohawk Valley, where Sir William Johnson, whom Guy claimed to be his uncle, served as superintendent of Indian affairs. The elder Johnson found work for Guy as his secretary. In the campaign of 1759–1760, he commanded a ranger company under Amherst. In 1762 he became Sir William's deputy for Indian affairs, gaining in that post the confidence of his superior as well as that of the Indians. In 1763 he married Sir William's daughter, Mary, and established a residence, named Guy Hall, near Amsterdam. During the period from 1773 to 1775, he was in the New York assembly and served as militia colonel and adjutant general. In 1774 he succeeded Sir William as superintendent of Indian affairs on the order of General Thomas Gage.

Guy worked to win the Indians to the British side in the conflict that appeared imminent, and in the Council of Oswego during July 1775, he signed up all but two of the Iroquois nations. Forced out of the Mohawk Valley by hostile Patriots, Johnson went to Montreal, accompanied by some Indians and 220 other Loyalists, and offered his services to Governor Guy Carleton. He helped for a time in the defense of St. Johns, but when John Campbell arrived as the new superintendent of Indian affairs, Johnson left for England in November 1775 to press his claim to the position. Accompanied by Joseph Brant, Johnson was unable to regain his office but accepted the position of superintendent of the Iroquois Confederacy. He reached New York City in the summer of 1776, expecting Burgoyne's campaign the following year to open the way up the Hudson and to Montreal. With the failure of Burgoyne's campaign, Johnson decided to stay on in New York City, leaving relations with the Iroquois in the hands of his brother-in-law, Daniel Claus, in Montreal and John Butler at Niagara throughout the critical intervening years of the war. He did, however, manage the John Street Theater, performing in some of its plays. Given that his alleged purpose was to coordinate operations of the main British army with those of the Indians and Loyalists in Canada and the frontier, his long stay in New York City amounted to dereliction of duty.

In the fall of 1779 Johnson moved his headquarters to Niagara, directing a series of raids against the frontier that destroyed large quantities of foodstuffs intended for the Continental forces and driving thousands of settlers east. He also provided for all the Iroquois driven from their homes by the Patriot raids of 1779, earning a reprimand from Governor Frederick Haldimand for spending British funds in a profligate fashion.

In 1783 Johnson resigned his office, being succeeded as Indian superintendent by Sir John Johnson. Guy

Johnson returned to England to press his claim for recompense for property confiscated by the state of New York. He died in London on 5 March 1788.

JOHNSON, HENRY. (1748–1835). British officer. Born near Dublin on 1 January 1748, Johnson was commissioned an ensign in the Twenty-eighth Foot Regiment on 19 February 1761. He was made a captain in 1763, and served primarily in the West Indies until 1775. At that time he went to America as a major with the Twenty-eighth Foot, and was assigned to one of the provisional battalions of light infantry during the next three years. On 8 October 1778 he was appointed lieutenant colonel of the Seventeenth Foot Regiment, and was captured with his garrison at Stony Point, New York, on 16 July 1779. He was court-martialed for this defeat, but was acquitted and given command of the Seventeenth Regiment in subsequent operations in Virginia and the Carolinas. After the war he was posted in Nova Scotia and Newfoundland, still as commanding officer of the Seventeenth Foot Regiment. From 1793 until 1798 he was inspector-general of recruiting for the English establishment in Ireland. On 5 June 1798 he was given command of 3,000 troops for the defense of New Ross, in Ireland, and in successfully accomplishing his mission he is credited with fighting the hardest action of the Irish rebellion. He was made colonel of the Eighty-first Regiment in 1798, and promoted to lieutenant general the next year, and of Ross Castle in 1801. He was promoted to full general in 1808, and was created a baronet on 1 December 1818. He died in Bath on 18 March 1835.

JOHNSON, SIR JOHN. (1741–1830). Loyalist leader. New York. Born on 5 November 1741 near Amsterdam, New York, Johnson was the son of Sir William Johnson and one of his servants, Catherine Weissenberg. When only thirteen years old, he served

under his father's command in the battle at Lake George. He also served later in the expeditions to Niagara and Detroit, attaining the rank of captain of militia. He also accompanied his father on his various conferences with the Indians. After seeing service in Pontiac's War he visited England in 1765, where he was knighted. On the death of his father in 1774, he inherited his baronetcy, nearly two hundred thousand acres of land; his father's residence, Johnson Hall; and his father's post as major general of militia. When news of Bunker Hill sent other prominent Mohawk Valley Loyalists flying north into Canada, Johnson remain behind as his wife, Mary Watts, was expecting a child. He entered into correspondence with Governor Tryon in regard to the possibility of organizing the settlers of the valley for the Loyalist cause. In January 1776 the Continental Congress, having learned that munitions were pouring into Johnson Hall, ordered Gen. Philip Schuyler to stop Johnson's warlike preparations. Johnson had mustered some two hundred Highlanders and, during the winter, had started fortifying Johnson Hall. Schuyler and Johnson initially reached an agreement aimed at avoiding violence under which Johnson consented to disarm his supporters and was placed on parole. In May, learning that he was about to be arrested, Johnson broke parole and fled with a large number of his tenants to Canada. Lady Johnson, again pregnant, was taken to Albany as a hostage.

On reaching Montreal, Johnson was commissioned lieutenant colonel and authorized to raise the body of rangers that became known as the Royal Greens. He participated without personal distinction in St. Leger's expedition but commanded the force that defeated the Patriots at Oriskany on 6 August 1777. In 1778 and 1780 he led successful raids into Tryon County. In the autumn of 1779 he was at Niagara and Oswego, engaged in Indian affairs. In September 1781 he commanded a column that was supposed to advance up Lake Champlain to the Hudson while another advanced from Oswego, but this offensive petered out around Lake George.

Johnson then went to England and returned with a commission as brigadier general and another as successor to his brother-in-law, Guy Johnson, as superintendent of Indian affairs. He held the latter position until his death. Settling in Montreal, Johnson devoted his energies to taking care of Loyalist refugees and championing the claims of Britain's Indian allies. He served on the Legislative Council of Quebec from 1786 to 1791 and of Lower Canada, as it was renamed, from 1796 to 1800, meanwhile rebuilding his personal estate to include more than 130,000 acres. He died in Montreal on 4 January 1830.

JOHNSON, SIR WILLIAM. (c. 1715–1774). British Superintendent of Indian Affairs. William Johnson was born at Smithtown, near Dunshoughlin, in County Meath, Ireland, probably in 1715. By 1736 he was handling some business for his uncle, Sir Peter Warren, and by about 1738 he had emigrated, with twelve families of tenants, to manage Warren's Mohawk River estate in North America. In 1739 he began living with Catherine Weisenburg, a runaway German servant girl whom he may have married and who bore him three children. Perhaps even before Catherine died in 1759, he had begun a liaison with his housekeeper, the sister of Joseph Brant, a prominent Mohawk leader, who gave him eight more sons and daughters. By 1743 he had made Warren's estate an economic success and moved to his own thousand-acre property and a house he called Fort Johnson. In 1745 he became a justice of the peace, and the following year he began his career as a frontier diplomat.

Johnson's complex economic and personal ties with the Mohawks made him the ideal agent for repairing New York's relations with the Iroquois after the outbreak of formal war with France in 1744. The Confederacy, in a key position between New France and the northern British colonies, had long been enemies of the French, but over the past twenty years had come to resent British traders who cut them out of their role as middle-men in the Indian trades to the north and west. Governor George Johnson of New York, fearing that the Iroquois might join the French, gave William Johnson a colonel's commission and effectively made him New York's Indian agent. Known as *Warraghiyagey* ("he who does much business"), he re-established some British influence among the Six Nations, and, by espousing the Iroquois system of alliances and treaties called the Covenant Chain tried indirectly to exploit the suzerainty they claimed, but did not in fact possess, over neighboring regions. He resigned in 1750 when New York refused to repay part of his considerable diplomatic expenses.

In 1755 Johnson was reappointed Indian agent under Major General Edward Braddock and charged with leading 2,000 provincial troops and 200 Indians against Fort St Frédéric (Crown Point, New York). On the way there, he won the battle of Lake George (8 September), where he was wounded. Although he was unable to push on to Crown Point, his success looked dramatic against the background of Braddock's defeat on

the Ohio River, and he was rewarded with a baronetcy. In 1756, when the Crown needed to appoint two officials to coordinate Indian policy in the north and south respectively, Johnson became Superintendent of Indian Affairs for the Southern Department. In that role, although he could not bring all the Iroquois over to the British side, he raised substantial Native American forces and took a leading part in defending the northern colonial frontier.

In 1759, when Brigadier General John Prideaux (who led one of Britain's four divisions in North America) was killed in action near Fort Niagara, Johnson took command of the expedition that captured Fort Niagara on 25 July. When New France fell, Johnson was aware of the need to cultivate and reassure the Ohio and Great Lakes Indians so recently under French influence. He opposed General Jeffery Amherst's ill-informed and myopic policy of cutting back supplies of gifts and trade goods and ignoring traditional diplomatic protocol. Even after Pontiac's War (1763–1766) erupted, Johnson was able to preserve the neutrality of nearly all the Iroquois, and later, as the British gained the upper hand, he helped to restore peace. His 1766 treaty with Pontiac was of key importance.

In succeeding years Johnson advocated firm, defined boundaries, as sketched out in the proclamation of 1763, which was intended to keep white settlers from further encroachments on Indian land. Johnson also favored tight control over Indian trade to prevent fraud and exploitation. Although his activities were mixed with self-serving land deals, he was meticulous in settling disputes through traditional diplomatic forms and spared no expense in the distribution of gifts. In 1768 he negotiated the Treaty of Fort Stanwix which shifted the boundary for settler expansion to the west, and so opened up most of modern West Virginia and Kentucky, and provided a fixed boundary that safeguarded the Native lands to the north and west. This policy would not have been possible except as an imperial scheme, for the individual colonies would hardly have countenanced a bar to further westward expansion. Yet those same colonies, already aroused by what seemed like unjust imperial taxation, were not about to accept imperial regulation of any of their inland frontiers. A land scramble between settlers from Virginia and Pennsylvania followed immediately upon the signing of the treaty, and boundary violations were frequent. Moreover, the treaty rested on the Iroquois' claim to land they did not occupy, so the boundary was unacceptable to the Cherokees and Shawnees who lived there. In 1772 a Virginia-Shawnee conflict over Ohio lands erupted and seemed likely to spread to New York. This became known as Lord Dunmore's War, named for the governor of Virginia, John Murray, fourth Earl of Dunmore. Though seriously ill, Johnson urgently summoned a

council to Johnson Hall, the baronial hall he had built in 1762, where he tried to address Iroquois grievances. On 11 July, after four days of negotiations, he suddenly collapsed and died.

JOHNSTONE, GEORGE. (1730–1787). British naval officer. Born in Dumfriesshire, England, in 1730, Johnstone joined the navy in 1744, gaining a reputation for bravery in King George's War. He became a lieutenant in 1749, but left the navy until called back in 1755. He became governor of Western Florida from 1763 to 1767, and was then elected to Parliament in 1768, where he became a thorn in the government's side. A gross public insult to George Sackville Germain resulted in a bloodless duel in December 1770. His conduct as member of the Peace Commission of Carlisle in 1778, wherein he repeatedly attempted to bribe influential Americans, led the American Congress to resolve on 11 August that it could not honorably deal with him any longer, and he resigned on the 26th.

Despite his lack of professional qualification for high command in the navy and his continued opposition to the government, on 6 May 1779 Johnstone accepted command of a small squadron for service off the Portuguese coast. In 1781, after operating off the Cape of Good Hope and scoring some successes, he retired on half pay and returned to Parliament. Having been violent in his attacks on Admiral Richard, Earl Howe in 1779, he now turned on Edward Clive, Earl of Powis, and the conduct of affairs in India. In 1783 he became a director of the East India Company. About two years later he became an invalid and passed unlamented from the public scene, dying at Bristol on 24 May 1787.

JOHNSTOWN, NEW YORK. 25 October 1781. In the afternoon of 24 October word reached Colonel Marinus Willett at Fort Rensselaer that a large enemy force was twenty miles away at Warrensbush. Willett assembled his state troops and immediately set out in pursuit, calling on the militia to follow. After marching all night he reached Fort Hunter and learned that the raiders had crossed the Mohawk River and proceeded to Johnstown. A captured straggler provided intelligence that the enemy force consisted of about 800 troops and 120 Indians under Major John Ross and Major Walter Butler. Willett immediately crossed the river as well with 416 men and moved up to within two miles of Johnstown. The raiders were unaware of his approach and had scattered to kill local farmers' cattle. Knowing that he was outnumbered, Willett immediately attacked in the hopes of defeating Ross's party in detail. He advanced directly toward the largest concentration of the British while sending a flanking column under Major Aaron Rowley to take them in the rear. Willett's tired men suddenly panicked and retreated, abandoning their one field piece. A disaster was averted when Rowley's militia and Massachusetts levies struck. The fight lasted until after dark, when Ross broke contact and fell back. Willett spent the night collecting the wounded and reported taking about fifty prisoners while losing forty of his own men. Both sides claimed a victory. Willett lacked solid information about Ross's route and waited for several days before taking further action. Their next engagement was at Jerseyfield on 30 October.

JONES, ALLEN. (1739–1807). Militia general and politician. North Carolina. Allen Jones was born in Surry County, Virginia, on 24 December 1739. He was the elder brother of the more famous Willie Jones. He

went to study at Eton, in England, and on his return to North Carolina he became prominent in politics. In 1771 he assisted Governor William Tryon in operations against the Regulators. In 1776 he was appointed brigadier general for the militia of the Halifax district, and in 1778 he protested on legal grounds the sending of North Carolina militia to South Carolina. A state senator from 1777 to 1779, he was a delegate to the Continental Congress in 1779 and 1780. Unlike his brother, he favored ratification of the federal Constitution.

A large property holder, owning 177 slaves in 1790, he was politically conservative and opposed the confiscation of Loyalists' property after the war. On 14 November 1807 he died at his home, "Mount Gallant," which was across the Roanoke River from "The Grove" owned by his brother.

JONES, JOHN PAUL. (1747–1792). American naval hero. Scotland. Born in Kirkcudbrightshire, on the Solway Firth, John Paul was the son of the gardener at Arbigland, which was the estate of William Craik (father of Dr. James Craik). After receiving a rudimentary education at the Kirkbean Parish school, young John Paul crossed the Solway in 1761 to become apprentice to a shipowner in Whitehaven. On his first voyage he visited his elder brother, William, who was a tailor in Fredericksburg, Virginia. The young mariner was released early from his apprenticeship because his employer went bankrupt, and he shipped aboard a slave ship. Trading between the Guinea coast and Jamaica, he became first mate on another slaver at the age of 19.

THE PRE-WAR YEARS

In 1768 John Paul left the slave trade and booked passage for England, having become dissatisfied with this livelihood. On the way home he took command of the ship when both the captain and the mate died of fever. He brought the ship in safely, and as a reward the owners signed him as captain of one of their merchantmen, the *John of Dumfries*. He made two voyages to the West Indies between 1768 and 1770. During the second voyage he flogged the ship's carpenter for neglect of duty, and a few weeks later this man died at sea onboard a vessel bound for London. When John Paul returned to Kirkcudbright, he was charged with murder by the man's father. He was imprisoned in the town jail briefly, but was later released on bail, and subsequently was cleared of the charge.

John Paul returned to the West Indies trade and established a partnership with a merchant-planter in Tobago. In

John Paul Jones. *The American naval hero, portrayed in a bust (1781) by the French sculptor Jean-Antoine Houdon.* © BURSTEIN COLLECTION/CORBIS.

1773, while commanding the *Betsy of London*, he killed a local man who was the ringleader of his mutinous crew. Although the victim was reported to have impaled himself by rushing into John Paul's sword, John Paul apparently feared the effect adverse public opinion on his chances in a civil court. On the advice of friends, he returned, incognito, to the continent of America, and remained there until a court-martial could be assembled to try the case.

When the Revolution started, John Paul was living in America without employment and reduced to depending upon the charity of friends. Meanwhile he had assumed the surname of Jones—apparently, the name was chosen for no more complicated reason than its obvious merit in concealing his identity. There is a story that the name was selected in gratitude for the hospitality he received at the home of Allen and Willie Jones, but this is supported by nothing more substantial than the traditions of the latter family. During July or August 1775, John Paul Jones went to Philadelphia and was employed in fitting out the *Alfred*,

the first naval ship bought by Congress. He also became friendly with two influential congressional delegates who were prominent in organizing the Continental navy: Robert Morris of Pennsylvania, and Joseph Hewes of North Carolina.

EARLY EXPLOITS IN THE WAR

Jones got into the navy very much the same way a certain equally unprepossessing and politically unimportant individual named Ulysses S. Grant got into the Union army almost a century later—both had congressmen who felt obliged to see that their constituencies received a share of the military commissions being given out. Delegate Hewes of North Carolina insisted that one of the naval lieutenantcies go to a Southerner, and thanks to him the little Scot, who technically was a Virginian but who also had North Carolina connections, was commissioned on 7 December 1775 as the senior first lieutenant.

Jones was first offered command of the sloop *Providence*, but he rejected the offer, preferring to serve instead aboard the *Alfred*, commanded by Dudley Saltonstall, in the belief that he could learn from the experience. Lieutenant Jones sailed in the expedition that captured the British vessel, the *Nassau*, but had no opportunity to distinguish himself. When he was again offered command of the *Providence* in May 1776 he accepted with alacrity, and immediately began to earn a reputation for success that was to have no equal in the Continental navy. A small fleet soon was placed under his command and he was promoted to captain. In a single cruise of the *Providence* he took sixteen prizes and destroyed British fishing boats and facilities at Canso and Ile Madame, Nova Scotia.

When Congress established the relative rankings of naval captains on 10 October 1776, however, they placed Jones at eighteenth. Already unpopular with many of the unremembered Yankee captains who were senior to him on this list, Jones did not suffer this political slight in silence. Congress had recognized his professional abilities, however, and promoted him to command of the *Alfred*, with which he captured the armed transport *Mellish* and its cargo of winter uniforms on 12 November 1776, and took seven other prizes as well. On 14 June 1777 Congress gave him command of sloop *Ranger* and ordered him to sail to Europe, where he was to take command of the *Indien*, which Congress had commissioned to be built at Amsterdam. Jones reached France in December 1777 to find that the frigate was being transferred to France by the American commissioners in Paris.

On 10 April 1778 Jones sailed from Brest in the *Ranger* with a crew of about 140 men and armed with eighteen six-pounders and six swivel guns. Heading for the home waters of his youth, he raided Whitehaven, off the

British coast, on 27–28 April. He then made an unsuccessful attempt to kidnap the Earl of Selkirk, planning to use him as a hostage to assure the proper treatment of American prisoners. The earl was away from home, however, and thus escaped capture. Crossing the Irish Sea to Carrickfergus, Jones captured the British sloop *Drake* in a brilliant one-hour action in which Jones lost eight killed and wounded to the enemy's forty or more casualties. On 8 May he returned to Brest with seven prizes and numerous prisoners to show for his twenty-eight days at sea. His cruise had spread consternation along a considerable portion of the English coast and it marked the start of his international fame.

The French, whose war with England was about to start, hailed Jones as a hero, and the authorities called him to Paris in June for consultation on ways of employing naval forces against England. On 4 February 1779 he was informed that the old East Indiaman *Duras* (with 40 guns) was placed under his command for joint army and navy operations against enemy ports. The Marquis de Lafayette was to command the army element; Jones the naval, but the plans were ultimately abandoned. By the end of the summer, however, the French had fitted out a small fleet of five naval vessels and two privateers for Jones. Benjamin Franklin's *Poor Richard's Almanac* was enjoying a vogue in France at the time that Jones was refitting the *Duras*, and since he was greatly indebted to Franklin for support, Jones renamed his flagship the *Bonhomme Richard*.

THE SERAPIS AND ITS AFTERMATH

With the American flag flying over a makeshift flotilla financed by France, and with most of the ships commanded by French officers resentful of his authority, Jones put to sea from L'Orient on 14 August 1779. Sailing clockwise around the British Isles, up the west coast of Ireland, around Scotland, and to the coast of Yorkshire, Jones captured seventeen ships and made an unsuccessful attempt to capture the port of Leith and hold it to ransom. He then won an engagement with the *Serapis* on 23 September 1779. In this demonstration of superior seamanship and indomitable fighting spirit, John Paul Jones became a great naval hero.

On 3 Oct. he reached the Texel, Holland, having left the crippled *Richard* at sea. (She sank on 25 September.) The British ambassador, in compliance with orders from King George III, demanded that the Dutch seize the ships and crews that Jones had captured, naming Jones a pirate, a rebel, and a criminal. After many difficulties arising from Holland's neutrality, Jones had to turn everything but the *Alliance* over to the French government. He sailed aboard the *Alliance* in December, evaded the British fleet, and reached L'Orient on 10 February 1780 after cruising in the Channel and searching for prizes as far south as Corunna, Spain.

Now occupied primarily with refitting the *Alliance* for his return to America, Jones visited Paris in April 1779 to raise the prize money needed to pay his disgruntled crew. While he was absent from L'Orient, however, he lost his last chance to command a fighting vessel when the mad Pierre de Landais succeeded in resuming command of the *Alliance*. In December 1780 Jones sailed for America as captain of the *Ariel*, which the French had loaned to America for the transportation of military supplies. The crossing was enlivened by Jones's capture of the British ship *Triumph*, but his prize ultimately escaped. In addition, he was forced to suppress a conspiracy among the English members of his crew.

THE ANTICLIMAX

After being abroad for more than three years, Jones reached Philadelphia on 18 February 1781. Senior officers, namely Captains Thomas Read and James Nicholson, blocked a resolution of Congress to make Jones a rear admiral, but on 26 June Congress gave him command of the largest ship of the Continental navy, the *America* (seventy-six guns), which was then under construction at Portsmouth, New Hampshire. After more than a year's frustration in constructing this vessel, Jones saw the *America* turned over to the French.

The best Jones was able to do thereafter was to get permission to sail aboard the flagship of the Marquis Vaudreuil, and he left with the French fleet from Boston for a four-month cruise in the West Indies. After the Continental navy was disbanded, Jones got authority to return to Europe as agent to collect prize money due the United States as the result of his operations during the war. His mission was successful, although payment was slow. Jones returned to the United States for the last time in the summer of 1787, and on 16 October Congress voted him the only gold medal awarded to an officer of the Continental navy.

Early the next year he accepted an offer from Catharine the Great to serve in the Russian navy against the Turks. On 29 May 1788 he raised his flag on a squadron in the Black Sea, but although he played a key role in naval operations that cleared the way for capture of the Turkish fortress at Ochkov, his position in the Russian service was undermined by a jealous French adventurer, Prince Nassau-Siegen. After he rejected Prince Potemkin's offer of command of the Sevastopol fleet, Jones was forced into idleness and returned to St. Petersburg. There he fell victim to a malicious rumor that he had violated a young girl. In September 1789 he left St. Petersburg with nothing but bitterness and the Order of St. Anne to show for his Russian experience.

Although only a few months past his forty-fifth birthday at this time, Jones's health was bad. He spent his last

two years in Paris. Though no longer a popular hero, he had comfortable accommodations and the respect of leaders of the French Revolution. When he died, on 18 July 1792, the French National Assembly took charge of his funeral. Jones did not live long enough to know that, shortly before his death, President George Washington and Secretary of State Thomas Jefferson had signed commissions appointing him as a diplomatic agent to treat with the ruler (*bey*) of Algiers for the release of captive Americans.

In 1845 a movement was started to bring Jones's body back to the United States, but his relatives in Scotland blocked it a few years later. In 1899 General Horace Porter, Ambassador in Paris, started a systematic search for his burial site in the old St. Louis cemetery for foreign Protestants (which had been covered by houses). After six years effort, Porter wired back the news that the body of Jones had been found. In 1905 the remains were escorted to America by a naval squadron, and in 1913 they were placed in a \$75,000 tomb in the crypt of the naval academy at Annapolis.

IMPLICATIONS OF A HERO'S LIFE

Superficially, John Paul Jones was a Scottish adventurer, an ex-slaver turned pirate (in the eyes of the British) who used the American Revolution as an opportunity to get a job. He himself said that "I have drawn my Sword in the present generous Struggle for the right of Men; yet I am not in Arms as an American, nor am I in pursuit of Riches . . . I profess myself a Citizen of the World." There is no reason to doubt him more than others of his era, such as Patrick Henry, who expressed similar sentiments. Like many of his contemporaries, he undoubtedly sought fame and glory as well.

Having accepted a commission in the Continental navy, Jones performed his duties with complete political loyalty to the American cause, despite personal disappointments and lack of opportunity to give his remarkable leadership abilities a full test. Nineteenth century Americans saw him as a self-made man, a brave commander who remained cool when battle raged, and the greatest naval hero of the American Revolution. At the turn of the twentieth century, biographers began to emphasize the plans that Jones proposed for the young navy, along with his efforts to increase his professional knowledge, both of which are seen as characteristics of the modern, professional naval officer corps.

The American navy that hails this bachelor as its father would call him a "mustang," and would be happy to have more of his type around in wartime. Archetype of the combat leader, Jones did not look the part. He was short (under 5 feet 7 inches), thin, and homely. Midshipman Nathaniel Fanning, Jones's secretary, described him as being "rather round shouldered, with a visage fierce and

warlike, and wore the appearance of great application to study, which he was fond of." The naval hero is the subject of one of sculptor Jean-Antoine Houdon's finest busts (1780). If this work and Jones's combat record did not assure him of immortality, one of the sayings attributed to him most assuredly has. His stirring remark, "I've just begun to fight" is mentioned in only one participant's account of the *Bonhomme Richard-Serapis* action, but it characterizes the man's combat record. In the words of the inscription on his tomb, "He gave our navy its earliest traditions of heroism and victory."

JONES, THOMAS. (1731–1792). Loyalist historian. New York. Born into a prominent New York family on 30 April 1731 at Fort Neck, Long Island, Jones graduated from Yale in 1750, studied law with his father and Joseph Murray, and set himself up as an attorney in 1755. He became clerk of the Queens County court of common pleas in 1757 and married Anne, daughter of New York's Chief Justice James De Lancey, in 1762. In 1765 he had his residence, Mount Pitt, built on the highest point of land on lower Manhattan, between the Bowery and the East River. One of the finest residences and estates on Manhattan, it was the site of Jones's Hill Fort when Charles Lee organized the defenses of New York City.

In 1773 he succeeded his father, David (1699–1775), as a judge of the provincial supreme court. As a loyal crown official and wealthy man, he was a natural enemy of the Patriots. On 27 June 1776 he was arrested at his home by the New York Committee of Safety. The New York Provincial Congress released him on parole to reappear before it on reasonable notice. On 11 August, Washington

ordered the arrest of all Loyalists likely to aid the British, and Jones was again arrested. Charged with disaffection, he was a prisoner in Connecticut until paroled in December 1776 by Governor Trumbull. He returned to his family's home at Fort Neck and avoided politics.

On 6 November 1779 his house was suddenly entered by a Patriot force under Captain Daniel Hawley of Connecticut. Jones was seized with a view to exchanging him for General Gold Selleck Silliman, a Yale classmate and friend of Jones who had been captured in his home six months earlier by Loyalist raiders. Jones spent the next several months as a sullen guest of Mary Silliman. The exchange was effected in April 1780, shortly after a New York Act of Attainder had confiscated all his property. The next year Jones and his family went to Bath, England, where Jones recovered from injuries received in a sleigh accident in Connecticut. He remained in England, bitter over the outcome of the Revolution and blaming both Britain and America for the destruction of his life and the empire. He settled in Hoddesdon, Hertfordshire, in 1783 and began work on a history of the Revolution, one of the few to give the Loyalist perspective. He finished his history in 1788, but it was not published until 1879, when the New-York Historical Society acquired it from Edward Floyd De Lancey, a distant descendant of Jones's. Jones died in Hoddesdon on 25 July 1792.

JONES, WILLIE. (1741–1801). Patriot leader. North Carolina. Younger brother of Allen Jones, Willie (pronounced "Wylie") Jones was born in Northampton County, North Carolina, on 25 May 1741. He studied at Eton and traveled in Europe before returning, in 1760, to become a prominent South Carolina political figure. First elected to the assembly in 1767, Willie was an aide to Governor William Tryon in the Alamance operations against the Regulators. He rose to the position of leader of the democratic element in his state, dominating the legislature, and serving as president of the state's Committee of Public Safety in 1776. He shaped the North Carolina constitution of 1776. In 1780 he was elected to the Continental Congress and served a year, insisting that the end of the war meant the end of a need for the Congress. Fundamentally opposed to the Constitution, he led the movement against it in his state,

and withdrew from public life in 1789 rather than alter his political position. He died in Raleigh, North Carolina, on 18 June 1801.

JUMEL, STEPHEN. (1754–1832). Wine merchant. France. From a family of Bordeaux merchants, Stephen Jumel appeared in New York City in 1795, having been driven from his coffee plantation in Haiti by the slave insurrection of 1790. He amassed a fortune in the wine business and married his longtime mistress Betsey (“Eliza”) Bowen in 1804. In 1810 he bought her the Roger Morris house, which had briefly been General George Washington’s headquarters during the action at Harlem Heights during the Revolutionary War. The house, now known as the Morris-Jumel Mansion, is a museum today. Unable to engineer Betsey’s acceptance into New York society, Jumel and his wife went to Paris in 1815. Betsey returned to New York in 1826 with a power of attorney that she used to take over her husband’s fortune. He returned in 1828 and died in 1832 after falling from a wagon. On 1 July 1833 his widow married Aaron Burr.

JUNGKENN, FRIEDRICH CHRISTIAN ARNOLD. (1732–1806). Also known as Baron von Münzer von Mohrenstamm. Minister of State for Hesse-Kassel, 1780–1789. Born into a very old family of the lesser German nobility, he entered a Prussian infantry regiment commanded by a cousin, and was an ensign at the age of 21. After a brilliant military career in the Prussian and Hessian services, he reached the rank of major general, and in 1779 was a member of the council of the Landgrave of Hesse-Cassel, who for some time had been bargaining with the British on the matter of furnishing soldiers for service in America. In 1780 he succeeded Baron Martin Ernst von Schlieffen as minister of state (which included the duties of minister of war). The next year he was commissioned as a lieutenant general.

JUNIUS. “Junius” was the pen name of an unknown British writer who launched political attacks on the duke of Grafton, the duke of Bedford, and George III and defended the popular cause of John Wilkes. His most notable series appeared in the London *Public Advertiser* between January 1769 and January 1772. The writer has never been identified, but he was clearly a Whig of the Chatham-Grenville faction with access to secret government matters. There is evidence, from handwriting and political outlook, that Junius was Sir Philip Francis (1740–1818), first clerk in the War Office when the series started.

KEMBLE, PETER. (1704–1789). New Jersey Loyalist. Born in Smyrna of an English father who was a merchant in Turkey and a Greek mother, he was well educated in England before settling in New Jersey around 1730 to become a prosperous, respected, and politically prominent citizen. He was connected by marriage to the Schuylers, De Lanceys, and Van Cortlandts, and the seven children of this union included Stephen and Margaret Kemble, the latter the wife of Thomas Gage. Kemble's home in Brunswick was a stopping place for distinguished travelers between Philadelphia and New York. About 1765 he built the manor near Morristown that was used by Washington's army during the winter quarters of 1779–1780 and 1780–1781. During this time the old Loyalist was treated with the utmost respect by Washington, who had known him before the war. He died at his home in 1789.

KEMBLE, STEPHEN. (1730–1822). British officer and Loyalist. New Jersey. Son of Peter Kemble, he was commissioned ensign in the regiment being raised by Colonel Thomas Gage in May 1757. On 8 December 1758 he became that officer's brother-in-law when Gage married Margaret Kemble. After taking part in the siege of Havana in 1762, Stephen Kemble went to Montreal as aide-de-camp to Gage and was promoted to captain in 1765. In 1772, through Gage's influence, Kemble became a major and deputy adjutant general, and was put in charge of the intelligence service. In 1773–1774 Kemble was in England with the Gages. After Gage's recall from Boston in 1775, Kemble remained in that city as deputy adjutant general to Generals William Howe and Henry Clinton. When Arnold's treason began, Clinton was anxious to have John André take over Kemble's duties as head of intelligence, helping to arrange the promotions that allowed André to pay Kemble three hundred pounds for vacating the post. Kemble resigned on 16 September 1779. Meanwhile, Gage arranged an appointment for Kemble as lieutenant colonel in the Sixtieth Regiment, and he was ordered from New York to join his unit in the West Indies, winning promotion to colonel in 1782 as a result of his services in Nicaragua. In 1793 he returned to England as deputy judge advocate of the army. He retired from the military in 1805 and returned to New Jersey, where he died on 20 December 1822.

KENTON, SIMON. (1755–1836). Frontiersman. Virginia. Born in Fauquier County, Virginia, on 3 April 1755, Simon Kenton fled across the Allegheny Mountains when he was 16, believing he had beaten to death the boy who had married his girlfriend. Under the assumed name of Samuel Butler he hunted, explored, and fought Indians along the Ohio River. He acted as a secret agent in Dunmore's War in 1774, and as a scout he got to know Simon Girty and Daniel Boone. He joined George Rogers Clark and took part in the capture of Kaskaskia and Vincennes in 1778. He accompanied three expeditions against the Shawnee encampment at Chillicothe: Boone's in 1779 and Clark's in 1780 and 1782. After the first of these, Kenton was captured by Indians, sentenced to death, saved by Girty, again condemned, saved once more through the efforts of John

Logan (Tachnedorus, a Native-American leader), and sent to Detroit as a prisoner. He escaped in July 1779. Learning that his boyhood "victim" was alive, he resumed his family name and returned to Virginia. In 1783 he brought his family to settle at Kenton's Station, Kentucky. From 1786 to 1794 he led a group of scouts and spies known as Kenton's Boys, serving with General Anthony Wayne's army in the campaigns of 1793–1794. He moved to Ohio in 1810, constantly acquiring large land holdings, but through ignorance of the law he ended up destitute in his last years. Saved from poverty by a pension from Ohio in 1827, he died in Zanesfield, Ohio, on 29 April 1836.

KENTUCKY RAID OF BIRD. May–August 1780. (Ruddle's and Martin's Stations) In late spring 1780 the British on the Great Lakes launched two attacks into the Mississippi Valley. One moved against the Spanish post at St. Louis. The other, led by Captain Henry Bird of the Eighth Foot, left Detroit in April to raid Kentucky. Bird's long-range expedition involved 150 whites; several hundred Indians; and, unusual for wilderness operations, six guns. Moving across Lake Erie and then along the Maumee–(Great) Miami River route to the Ohio, he gained additional Indian supporters until the total force approached one thousand. Bird had wanted to strike Fort Nelson (Louisville), but his allies insisted instead on moving up the Licking River to its fork near modern Falmouth, Kentucky, so that they could hit the less-well-defended interior settlements. Their first target, Ruddle's Station, was a simple stockade defended only by the local inhabitants. They held off the Indians, but when Bird brought up his cannon, the station had to surrender. The raiders had a similarly easy time of it with Martin's Station a few miles away. After destroying outlying farms, Bird withdrew with 350 prisoners and significant amounts of plunder, reaching Detroit on 4 August. Bird's raid altered George Rogers Clark's plans for 1780, diverting him from moving against Detroit so that he could carry out punitive strikes against the Indians.

KETTLE CREEK, GEORGIA. 14 February 1779. Loyalist defeat. Encouraged by Lieutenant Colonel Archibald Campbell's capture of Savannah on 29 December 1778 and his advance on Augusta, Colonel James Boyd raised a force of 350 Loyalists from his base at Spartanburg, South Carolina, and marched toward Augusta. On the way they were joined by 250 Loyalists from North Carolina commanded by John Moore.

Campbell took Augusta on 29 January and, leaving a Loyalist garrison under Thomas Brown, started establishing posts in western Georgia. There were skirmishes about thirty miles up the Savannah River from Augusta between Patriot Colonel John Dooley and three hundred Loyalists under Colonel McGirth and Major John Hamilton. Dooley had crossed the river and then been driven back into South Carolina by Hamilton when Colonel Andrew Pickens joined him with reinforcements that brought their total strength up to about 350. Pickens assumed command of the combined forces and on 10 February crossed the Savannah at Cowen's Ferry to attack Hamilton. The latter was besieged at Robert Carr's Fort (or Fort Cars) and was in bad straits when Pickens learned of Boyd's approach. The rebels considered Boyd bigger game than Hamilton and started after him. Pickens recrossed the Savannah near Fort Charlotte (close to the junction of the Broad and Savannah Rivers). Learning of his approach, Boyd—who was moving due west toward the Savannah from Ninety Six—headed for the crossing of the river at Cherokee Ford, ten miles north of Fort Charlotte. Here he was stopped by eight men with two swivel guns in a redoubt, but he moved five miles upstream, crossed on rafts, and continued toward Augusta.

Pickens moved upstream on the South Carolina side to cross the Savannah behind Boyd and then followed him down the Georgia side. Oblivious that he was being followed, Boyd crossed the Broad near its junction with the Savannah on the morning of the 13th and camped that night on the north side of Kettle Creek atop a rocky hill. He sent his prisoners on to Augusta, unaware that the British had just abandoned the town earlier that same day. On the morning of the 14th, while Boyd's horses

were turned out to graze and his men were slaughtering cattle, the rebels attacked. Pickens led his troops in a direct assault on the rocky hill where Boyd had his camp, while Dooly and Clarke attacked the camp across the creek from the left and right sides respectively. Disobeying orders, Pickens's advance guard fired on the Loyalist sentries. Alerted to the attack, the Loyalist pickets fired and fell back into camp. Although his troops were in the greatest disorder, Boyd pulled them together and put up a fight that lasted nearly an hour. But Boyd was shot and killed, and the fighting broke into firefights between small groups, much of it in the nearby swamp. The Loyalists lost forty killed and wounded and seventy captured, the Patriots nine killed and twenty-three wounded. The Loyalist prisoners were taken to Ninety Six and tried for treason. Five were hanged there and two more were taken to North Carolina to be hanged; the remainder were pardoned.

Of Boyd's nearly 700 men, 270 reached British lines and were integrated into the North and South Carolina Royal Volunteers. Pickens's strength is generally given as between three hundred and five hundred. His victory prevented any serious rallying of Loyalists in the South for another year and encouraged Patriot militia to flock into General Benjamin Lincoln's camp at Purysburg, leading the latter to undertake his counteroffensive to liberate Georgia.

KING'S AMERICAN REGIMENT OF FOOT. This Provincial regiment was raised by Edmund Fanning, a protégé of Governor William Tryon, in Westchester County and on Long Island, New

York, beginning in December 1776. With other elements of the New York garrison, it took part in Sir Henry Clinton's expedition up the Hudson in early October 1777, capturing Verplanck's Point, New York, on 5 October. In July 1778 it was sent to Rhode Island, where it distinguished itself in the Battle of Quaker Hill on 29 August 1778. Back at New York in mid-June 1779, it was immediately attached to Tryon's force, which was sent to raid the coastal towns of New Haven, Fairfield, and Norwalk, Connecticut. It garrisoned Stony Point and Lloyd's Neck until sent in October 1780 as part of Major General Alexander Leslie's raid on Virginia. From there it was sent on to South Carolina, reaching Charleston on 16 December and sent into garrison at Georgetown. It again fought with distinction at Hobkirk's Hill on 25 April 1781 and was thereafter sent to reinforce Savannah, Georgia. The bulk of the regiment returned to Charleston when Savannah was evacuated in July 1782 and then to New York when Charleston was evacuated in December. Having been placed on the American Establishment as the fourth American Regiment on 7 March 1781, it was elevated to the British Establishment on Christmas Day 1782. Evacuated from New York to New Brunswick in early September 1783, it was disbanded on 10 October.

KINGS BRIDGE, NEW YORK. The point at which the Post Road crossed Spuyten Duyvil Creek—which separated Manhattan from the Bronx—Kings Bridge was strategically important in the New York campaign and subsequently in the British defense of New York City. It was an objective of American forces under Major General Lincoln in the operations against

Manhattan at the start of the Yorktown campaign in July 1781. The name is also variously spelled King's Bridge and Kingsbridge.

SEE ALSO *Yorktown Campaign; Yorktown, Siege of.*

Mark M. Boatner

KINGS FERRY, NEW YORK. About twenty-five miles north of New York City and half that distance south of West Point, this Hudson River crossing was between Stony Point (on the west bank) and Verplanck's Point. It was strategically important as the southernmost crossing site that the Americans could safely use while the British held New York City.

Mark M. Boatner

KINGS MOUNTAIN, SOUTH CAROLINA. 7 October 1780. Central to the British strategy of shifting the war to the South was the conviction, deeply held by Whitehall's planners, that the two Carolinas and Georgia offered a large and untapped reserve of Loyalists. There needed only the introduction of British forces to bring such men flocking to the King's standard. So mobilized, the Loyalists—just as the British had hoped since the beginning of the war and at each new place they came to—would become a substantial element of the crown's military effort. The raising of Loyalist forces in the form of militia and quasi-regular provincial units could only improve the odds for the British, becoming, perhaps, the deciding factor in the war. At the least, after five years of struggle, new numbers of Loyalist troops would prove useful at a point when the ranks of the British army's regulars were spread from North America and the Caribbean back to the Old World and out to India. Loyalist militiamen and provincials would operate alongside the redcoats, garrison key outposts, and assist in the overall pacification effort.

To this end, after the fall of Charleston (12 May 1780), Sir Henry Clinton appointed Major Patrick Ferguson of the Seventy-first Foot (Fraser's Highlanders) to the position of Inspector of Militia in the Southern Provinces. This appointment placed Ferguson in charge of any Loyalist forces to be raised. It would also, when the invasion of North Carolina came to be contemplated, place him in charge of the western wing of the army commanded by Major General Charles Lord Cornwallis following Clinton's departure for New York. Assisted by Major George Hanger (until 6 August, when the latter assumed the position of second-in-command to Banastre

Tarleton), Ferguson proceeded into the backcountry of South Carolina, that region where the British believed that Loyalists were particularly concentrated. He soon raised some four thousand Loyalist militiamen in the vicinity of Ninety Six, reckoned by both sides the Tories' backcountry stronghold. Ferguson next started pushing north, intending to extend operations that had every appearance of fulfilling British hopes for the potential of the Loyalists. In this same period the Tory leaders Morgan Bryan and John Moore were able, in the Catawba District near the border of the two Carolinas, to bring into the field an additional fifteen hundred men. These Loyalist efforts to raise militia forces were, however, matched by ones on the rebel side, and the rebels extended theirs over a wide area indeed. As Thomas ("Gamecock") Sumter commenced his partisan operations in South Carolina and Colonel Charles McDowell his in North Carolina, a call for assistance was sent to the far side of the Blue Ridge Mountains, to the settlements containing the so-called Over Mountain Men. Recently beleaguered by British-supported Indian attack, these frontiersmen were located in farms and outposts scattered along the valleys of the Holston, Nolichucky, and Watauga rivers in what is now Tennessee. While the Over Mountain Men prepared to answer the call for assistance and the various forces on the two sides continued to form up, a series of raids and skirmishes ensued in the region between the Catawba and Ninety Six. (The principal ones are covered in "Military Operations in the Southern Theater," and only those connected with activities leading to the Battle of Kings Mountain are mentioned here.)

Soon joining Charles McDowell were Colonel Isaac Shelby, with an initial detachment of some six hundred Over Mountain Men, and Colonel Elijah Clarke of Georgia, leading a combined force of Georgia and Carolina militia. Shelby captured Thicketty Fort, South Carolina, on 30 July. Then, on 8 August, in two minor engagements around Wofford's Iron Works (Cedar Springs, also referred to as Old Iron Works), Clarke and Shelby gained no advantage, but soon handed the Loyalists a sharp defeat at Musgrove's Mill on 18 August. They were considering an attack against Ninety Six, about thirty miles away, when news of Horatio Gates's defeat at Camden, on 16 August, prompted them to beat a hasty retreat lest the British forces trap them and bring them to battle. Indeed Ferguson, with his newly raised Tory militiamen, got to within thirty minutes' march of them as they fell back, only to be stopped by a message recalling him to Camden. It was upon reaching that point that Ferguson was briefed by Cornwallis regarding the forthcoming invasion of North Carolina.

Cornwallis's plan was to lead the main portion of his field army north from Camden to Charlotte and Salisbury, a line of march selected because it ran through an area in which the strongest rebel resistance was expected.

Cornwallis was also aware that additional concentrations of Loyalists were located around Cross Creek (now Fayetteville) on the Cape Fear River, over a hundred miles east of Charlotte. The main idea of his plan was thus to effect a link-up of the various Loyalist elements. Certainly there were strong groupings of Loyalists west of the Catawba and in what was then Tryon County, North Carolina. By this northward movement with his main force Cornwallis expected to gain control of a key corridor. He reckoned that joining up the two Loyalist sections to each other would make it possible to establish control over the rest of North Carolina.

Ferguson had previously penetrated as far as Gilbert Town, just across the line from South Carolina, and believed that he had sufficient Loyalist support in the region to dominate it. Cornwallis therefore authorized him to move with an independent force into this area. The British commander, however, had enough misgivings about the plan to express them in a letter to Clinton: "Ferguson is to move into Tryon County with some militia, whom he says he is sure he can depend upon for doing their duty; but I am sorry to say that his own experience, as well as that of every other officer, is totally against him."

This concern notwithstanding, on 8 September Cornwallis marched north with his main body east of the Wateree, and with Tarleton's Legion, reinforced by one gun and a body of light infantry, on the western side of the river. His objective was Charlotte, with Hillsborough to follow. Two weeks into their march, the British ran into resistance. First surprising and then defeating the westernmost British force, Colonel William Davie and a militia force drawn from both Carolinas next fell back to contest Cornwallis's capture of Charlotte, 26 September. The army then stopped to wait for Ferguson to join them from the west. It was from this point in their operations that the British plan for mobilizing the Loyalists began to unravel.

On 7 September Ferguson and a detachment of his force—wearing the red coats of the British army, newly issued, and equipped with muskets and bayonets—crossed into North Carolina and proceeded on to Gilbert Town. His earlier assessment of the locals' Loyalist leanings appeared correct, as many of them came in to take the British oath of allegiance. That not a few of them may have done so as a temporary expedient to protect their property little dissuaded Ferguson from his course. On 10 September he withdrew south to rejoin his main body in an attempt to intercept Clarke, who was leading an expedition against Augusta, Georgia (14–18 September), and whom the British next expected to withdraw into North Carolina. By 23 September Ferguson was back in Gilbert Town, having meanwhile moved about twenty-two miles northwest of the town to Old Fort, near the source of the Catawba in the Blue Ridge Mountains.

Ferguson now boldly announced that the rebellion was finished in his area. Yet trouble was brewing. Before withdrawing on 10 September, he had paroled one Samuel Phillips, a captured rebel, and sent him across the Blue Ridge with a warning to Shelby, the Over Mountain Men's commander. Ferguson's message was brutally simple. If the rebels did not "desist from their opposition to the British arms, and take protection under his standard, he would march his army over the mountains, hang their leaders, and lay their country waste with fire and sword." For the Over Mountain Men, having already decided they needed to go after Ferguson before he could come over the mountains to pursue them, this message could only serve to accelerate their efforts. Moreover, the rebel leaders, although many of their men had had to scatter and were suffering from malnutrition, were considerably advanced in their plans for raising a force from both sides of the mountains. Calls had gone out in all directions for volunteers to rally and stop the invaders. Shelby, meeting with Colonel John Sevier, another Over Mountain leader, made final preparations. Indeed the two men pledged themselves to cover the money taken from the public treasury in order to finance the operations they were about to undertake. Sending out a final call for men, they appealed to Colonel Arthur Campbell in Virginia and Colonels Charles McDowell and Benjamin Cleveland along the North Carolina border. The rendezvous for these various groups was set for 25 September at Sycamore Shoals, on the Watauga River near modern Elizabethton, Tennessee.

More than a thousand men showed up, most of them mounted and carrying the long-barreled rifle of the American frontier. Arthur Campbell's brother-in-law, Colonel William Campbell, so tall and powerfully built he was regarded as a giant, came with four hundred Virginians. Sevier and Shelby arrived with their own groups of Over Mountain Men, and there were as well the little groups of friends and relatives who had gathered to see them off. To send a force back across the mountains to fight Ferguson was risky in the extreme. Some of the Over Mountain Men had to be left behind to defend against Indian attacks, a scourge from which the settlements had already greatly suffered.

All told, the Over Mountain Men made up less than half of the force marching against Ferguson, contradicting a frequently encountered claim that the expedition principally or even solely comprised frontiersmen from Tennessee. In fact, once the Over Mountain Men were joined by several hundred South Carolinians as well as additional North Carolina and Virginia men, the overall force comprised men from up and down the mountains as well as over them.

That said, the Over Mountain portion of the force, leaving its Sycamore Shoals rendezvous on 26 September,

the next day plowed through deep snow on the crest of the mountains. On 30 September they reached McDowell's Plantation at Quaker Meadow (near modern Morgantown, North Carolina), where Charles McDowell's 160-man Burke County militia was assembling. While taking a day's rest after a difficult ninety-mile march, they were joined by Colonel Benjamin Cleveland and Major Joseph Winston, who brought 350 North Carolina militia from the upper Yadkin (Wilkes and Surry Counties of North Carolina). They also learned that Colonel James Williams was raising forces to join them farther south. As they continued toward Gilbert Town, where Ferguson was reported still to be, on 1 October the expedition leaders sent Charles McDowell to confer with Gates, the American commander in the South, in Hillsboro. McDowell's mission was to ask that Gates assign either Daniel Morgan or William Davidson to command them. Meanwhile, having gotten their senior militia officer off the scene, on 2 October they elected William Campbell temporary commander of the combined forces. Major Joseph McDowell assumed command of his brother's regiment.

FERGUSON RETREATS

Meanwhile, on 27 September Ferguson started withdrawing south from Gilbert Town. Agents had by now informed him of the rebels' approach. To what extent this news alarmed him will never be known for certain; it is, however, known that days earlier he had received a message from Lieutenant Colonel John Cruger, British commander at Ninety Six, that Elijah Clarke's forces were on the move. Cruger reported that Clarke and his Georgians might be heading north from Augusta to reinforce this new rebel expedition. On Green River, on 30 September, Ferguson encountered James Crawford and Samuel Chambers, two rebels who had deserted to join the British. From them he gained further information about the expedition, and he sent urgent requests to Cornwallis and Cruger for reinforcements. On 1 October Ferguson turned east toward Charlotte. His purpose in taking this new direction was to deceive the rebels, who would expect him to continue south toward Ninety Six. From Tate's Plantation on Buffalo Creek, ten miles west of Kings Mountain, Ferguson wrote Cornwallis on 5 October: "I am on my march towards you, by a road leading from Cherokee Ford, north of Kings Mountain. Three or four hundred good soldiers, part dragoons, would finish this business. [Something] must be done soon. This is their last push in this quarter and they are extremely desolate and [c]owed."

At this point Ferguson, like Cornwallis, was still not concerned as to his situation. Certainly he had marched only four miles on 2 October, having apparently decided there was no chance of cutting off Clarke. On 6 October he wrote Cornwallis again, stating that he had stopped his

retreat and was planning to make a stand. "I arrived to day at Kings Mountain," his message said, "& have taken a post where I do not think I can be forced by a stronger enemy than that against us." What he did not know when he made this decision was that the British could send him no support. Cruger had written Cornwallis that he did not have enough men to garrison Ninety Six properly, much less to send reinforcements to Ferguson. Tarleton had been desperately ill with malaria the past two weeks. Then, after leading the Legion into Charlotte, his second-in-command, Hanger, had succumbed to the same disease. Moreover, Cornwallis was himself by now incapacitated by a "feverish cold." On 6 October he responded to Ferguson's message of the preceding day by writing that "Tarleton shall pass at some of the upper Fords, and clear the Country; [but] for the present both he and his Corps want a few days rest."

The rebel force—Over Mountain Men, North and South Carolinians, Virginians, all—entered Gilbert Town on 3 October. Next, fooled by Ferguson's change of direction, they lost his trail at Denard's Ford on the Broad River. The night of 4 October they camped at this place, where Ferguson himself had camped three nights before. On 5 October the rebels camped twelve miles farther south, at Alexander's Ford on Green River, where Ferguson had stopped five nights earlier. The next day they picked up the scent, however, and marched twenty-one miles to Cowpens. Colonel James Williams, who had been raising militia from both Carolinas since the previous month, joined the expedition at Cowpens with about four hundred men; his subordinate leaders were William Hill, Edward Lacey, James Hawthorne, Frederick Hambright, William Chronicle, and William Graham. Another reason why Ferguson's change of route might have deceived the rebels was that some of Williams's South Carolinians wanted Campbell's army to keep pushing south and desist from their move against Ferguson; attacking Ninety Six would aid in protecting the property of Patriots in that region from the Loyalists.

When a scout named Joseph Kerr confirmed previous reports of Ferguson's location, nine hundred of "the best horsemen" immediately started forward at 8:00 P.M. on the evening of 6 October. The less-well-mounted horsemen and those on foot were left behind to follow as fast as possible. Speed was everything; the rebels knew that Ferguson had gone to ground, and they were hungry for the kill.

Their enemy's decision to make a stand is a mystery, since he undoubtedly could have retreated to the safety of Cornwallis's main army at Charlotte, some thirty miles away. Ferguson did not know that Cornwallis was unable to send him any appreciable amount of assistance beyond one detachment; aside from that, probably the best explanation for Ferguson's decision is that he thought he had

found a position where he could defeat a large rebel force in battle. He had trained his force to fight in the British manner, with reliance on musket fire and closing with the bayonet on the enemy. The spot he chose to put this technique to the test was a rocky, relatively treeless ridge with steep, heavily wooded, boulder-strewn slopes. It was shaped roughly like a human footprint that pointed to the northeast. Rising 60 feet above the surrounding country, it varied in width between 120 and 60 yards. The slopes were so rugged that Ferguson was content to rely on nature's gifts; he made no effort to improve his position by field fortifications. Next, while he made preparations to defend the entire perimeter of the ridge, he established his camp in parade ground fashion on the broad, northeastern portion. He also sent out about two hundred men to gather forage from the surrounding area. These men would therefore be absent on the morning of the battle, leaving his available strength on Kings Mountain at eight hundred militia and one hundred picked men drawn from the Kings American Rangers, the Queen's Rangers, and the New Jersey Volunteers. These three comprised provincial units made up of Americans, just as was the case with Ferguson's newly raised South Carolina Loyalist militia force. The only man on either side during the battle who was not American would prove to be Patrick Ferguson himself. Thus it is somewhat amusing to see the subsequent action referred to as a battle between "the British" and "the Americans"—it was far more a civil-war encounter fought between Americans.

Having marched all night and all the next morning through rough country—not to mention the preceding movement to Cowpens—the attackers began to lose the fine edge of their enthusiasm by noon of 7 October. It had rained during the night, and a light drizzle kept up after daylight. About noon Shelby had to veto the proposal that the expedition halt for a rest. Interest quickened, however, when they captured two enemy scouts and a messenger. The prisoners confirmed Ferguson's position and furnished an interesting detail that was disseminated through the ranks: the enemy leader could be identified by a checkered shirt, perhaps in a Scottish tartan pattern, worn over his uniform. The rebels also knew that Ferguson could be spotted by a crippled right arm, his elbow having been shattered by an American musket ball at Brandywine three years before.

They had by now followed Ferguson's route to the vicinity of Tate's Plantation near Buffalo Creek. Expecting to find enemy outposts to detect or contest their crossing of the Broad River, they detoured south to Cherokee Ford about two and a half miles below Tate's. They then followed the Ridge Road past present-day Antioch Church, thence north to a point on the modern state boundary some four miles west-northwest of Kings Mountain, and then toward their objective. About a mile away they

halted, hitched their horses, and broke up into four columns. These began moving toward positions, previously assigned, around the ridge. So skillfully was the approach conducted—or so lax Ferguson's security measures—that Shelby's column was within a quarter-mile of the ridge before Loyalist sentries fired their first shots. Ferguson was completely surprised.

For his part, Shelby refused to let his men return fire until they had worked their way well up the slope. Campbell was meanwhile closing in from the opposite side. So also were the other forces moving, Indian fashion, into position. (See map.) The weakness of Ferguson's planning now became apparent: rather than constituting an obstacle to the attackers, the trees, boulders, and ravines on the slopes furnished ideal terrain for their infiltration tactics. Ferguson, the man who had devoted so much effort to introducing the rifle into the British army—who had invented the first true military, as opposed to hunting, rifle, and who was regarded as the best marksman in that army—had made another fatal error: he had decided to defend Kings Mountain with the bayonet-and-volley fire tactics of British regulars. First he sent his men in a bayonet charge against Shelby, who gave ground but whose Over Mountain Men thinned the Loyalist ranks as they fell back. Meanwhile, Campbell's Virginians made their way up the opposite side of the ridge and attacked. "Here they are, boys!" shouted their leader. "Shout like hell and fight like devils." The air was filled, in addition to the crack of long rifles and the ragged musket fire of the Loyalists, by the frontiersmen's yells that were probably the counterpart to the Confederate Yell of eight decades later. In all this the Loyalists tried to charge Virginians just as they had Shelby's Over Mountain Men. These, too, like their comrades, dropped back, firing and inflicting casualties as they did so. Soon Sevier's men reached the crest, and the Loyalists found themselves being pushed back from the "heel" and across the "arch" by the combined forces of three rebel columns. This in turn pushed them back toward the other rebel forces. Ferguson galloped from one threatened point to the next, signaling the attack with a silver whistle that he carried and trying to rally his beleaguered Loyalists. Soon, though, he was having to cut down white flags that started to appear. By the time the defenders had been driven back to their camp area, where Ferguson had hoped to make a successful stand, they found themselves in the open and surrounded by riflemen firing almost at pistol range. When Ferguson suddenly tried to break through the rebel lines with a few officers, he was shot from the saddle. A certain Robert Young claimed that his personal hunting rifle, "Sweet Lips," brought down Ferguson, but there were at least seven other bullets in the dying chieftain.

Captain Abraham de Peyster, a Loyalist officer, stepped forward to take command of the hopeless

situation. From the disorganized mass huddled around the wagons there came shots from those who tried to fight back and white flags from those who tried to surrender. De Peyster finally put up a flag; only with great difficulty did Shelby and Campbell finally stop the rebel firing.

As in other "massacres" (Haw River, Paoli, and Waxhaws, for example), it is hard to determine where the battle ended and the butchery began. The official report of the battle says benignly that after De Peyster's flag went up, the rebels immediately ceased firing and the enemy laid down their arms, most of which were loaded. Another account says that either the surrendered men or some returning foragers fired a shot that mortally wounded Colonel James Williams, and that Campbell then ordered the riflemen around him to shoot into the prisoners; a young officer is quoted as saying, "We killed near a hundred of them and hardly could be restrained from killing the whole." Unquestionably, atrocities were committed by the rebels, but the most balanced version, between the two extremes mentioned above, appears to be the following explanation by Shelby:

It was some time before a complete cessation of the firing on our part could be effected. Our men who had been scattered in the battle were continually coming up and continued to fire, without comprehending in the heat of the moment what had happened; and some who had heard that at Buford's defeat [Waxhaws], the British had refused quarters . . . were willing to follow that bad example.

The action had lasted about an hour. On Sunday, 8 October, the victors left their camp on the battlefield and headed for Gilbert Town. Here thirty prisoners were tried and convicted by an impromptu court. Of these, twelve were condemned to death and nine were actually hanged. These last appear to have been individuals who had been conspicuously brutal in their prosecution of the Loyalist effort in the backcountry's civil war. The other prisoners were entrusted to Cleveland's command and marched to Hillsboro. The rest of the militia army broke up and went home.

CONCLUSIONS

The fight at Kings Mountain in an instant dealt a fatal blow to British hopes for mobilizing and employing a substantial force of Loyalists in the Carolinas. There would be no outpouring of Loyalists after Kings Mountain. Subsequent efforts by Cornwallis to rally men of Loyalist persuasion to his camp would prove a failure. The British might later attempt to reorganize remnants of various Loyalist militia and provincial units into new forces, but these efforts enjoyed little success. Kings

Mountain effectively cowed backcountry Loyalists into submission, just as they had been cowed into submission by rebel actions in the first part of the war and prior to the introduction of British forces in strength into the region. The battle was thus a death knell for a major component of the British strategy for shifting the war to the South: the idea of raising a powerful force of Loyalists that could tip the balance as well as playing a key role in the pacification effort. The results were far-reaching indeed. Sir Henry Clinton called Kings Mountain “the first link of a chain of evils that followed each other in regular succession until they at last ended in the total loss of America.” The battle was, with the other partisan actions and the complete tactical defeat achieved against British regular forces at Cowpens three months later, the turning point of the war in the South. Certainly Kings Mountain shifted forever the balance of rebel-Loyalist armed support in favor of the rebel cause, and it made Cornwallis withdraw into South Carolina (Winnsboro) and delay his new offensive into North Carolina by three months. Ultimately, it enabled Nathanael Greene, immediately upon assuming command of the American army in the South (3 December 1780), to gain time for rebuilding that army and indeed to seize the initiative—and keep it—until the successful conclusion of his southern campaigns.

The rebel commanders—a particularly able and seasoned body of men—demonstrated a striking ability to assemble men from both sides of the mountains and, in a matter of weeks, concentrate them against a potent British threat. Individual differences in point of view yielded quickly to unity of command. The various bands of rebel riflemen acted as a highly mobile force of mounted infantry. They rode their horses to the battle but fought dismounted, where their marksmanship and woodcraft skills were at a premium. British infantry—to include Ferguson’s corps of South Carolina Loyalist militia—lacked the mobility to keep up with their mounted opponents; and Cornwallis had insufficient numbers of cavalry to chase down the rebels or to screen his movements. Cornwallis and Ferguson were both able tacticians. It is thus difficult to account for Cornwallis’s failure to come to Ferguson’s aid—except, of course, for the fact that Ferguson never expressly sent his commander a message stating that he was in peril. Indeed, two days before the battle, he had reported to Cornwallis that the rebels thereabouts appeared cowed. The British error was in misreading the depth and extent of rebel strength—and that rebel commanders could so quickly bring to bear an overwhelming force against Ferguson. That officer, out of hubris or perhaps a misguided faith that he could defeat the rebels at a kind of warfare in which they had gained much recent experience against both Indians and Loyalists, apparently regarded his position as a defensible one. He failed to fortify that position, however, and, trusting in the light-

infantry tactics in which he had trained his Loyalists, looked to draw the rebels into a fight he believed he could win. As Henry “Light Horse Harry” Lee put it, Ferguson had tried to defend a position that was “more assailable by the rifle than defensible by the bayonet.” For this miscalculation Ferguson paid with his life.

NUMBERS AND LOSSES

The rebel commanders brought some 900 men to the foot of Kings Mountain in the mid-afternoon of 7 October. These were the best-mounted of the rebel force; additional rebel forces numbering some 500 to 800 men had been left behind at Cowpens in order to hasten the pace of the march on Ferguson’s position. In a battle that lasted approximately an hour, the rebels lost 28 killed and 64 wounded. Ferguson’s force is estimated at 1,018, a figure that, if correct, includes the foraging party that probably returned toward the end of the battle. Losses on the British side amounted to 157 killed (including, of course, Ferguson), 163 wounded, and 698 marched off as prisoners of war. Of this last group, most managed to escape on the march toward Hillsboro or shortly thereafter, the rebels being less skilled in security measures than in handling their rifles. Most accounts agree that the rebels captured some 1,400 individual weapons. A possible explanation for this number of muskets being greater than the number of killed or captured Loyalists is that Ferguson may have carried extra stands of arms for the purpose of equipping new recruits along the way.

KING'S ROYAL REGIMENT OF NEW YORK. Sir John Johnson, the son of Sir William Johnson, inherited some of his father's position and responsibilities in the Mohawk Valley and with the Iroquois in 1774. Able to fend off the rebels for over a year after the start of hostilities, he was forced to flee his home with two hundred followers on 20 May 1776. On 19 June, Major General Guy Carleton, the governor of Quebec, gave Johnson authority to raise two Provincial battalions. He immediately began recruiting at Chambly, Quebec, principally from among his followers and other refugees for a unit that would be known officially as the King's Royal Regiment of New York, and unofficially as Sir John Johnson's Corps, the King's Royal Yorkers, and from the color of their uniforms, the Royal Greens. The Royal Yorkers sent 133 men with Colonel Barry St. Leger's expedition through the Mohawk Valley in 1777. (Another company was with John Burgoyne's invasion forces in the Lake Champlain Valley.) Fifty-five men of the Royal Yorkers' light company formed the blocking force at the ambush at Oriskany (6 August 1777), and a further seventy men marched from the siege lines around Fort Stanwix later that afternoon, reversing their green coats to confuse the Americans militiamen and gain a momentary advantage.

Over the next four years, the Royal Yorkers spent much of their time and effort in preparing to defend Canada against another rebel invasion. Although their leaders were hostile to each other, the Royal Yorkers also participated with Butler's Rangers in the raids launched from Fort Niagara against the New York frontier. But because few in Canada quickly recognized that Major General John Sullivan's expedition posed a major threat, the Royal Yorkers arrived too late to contest the ravaging of Iroquois lands in August and September 1779. They took part (with Butler's Rangers) in Sir John Johnson's first raid into the Mohawk Valley in the autumn of 1780,

fighting at Klock's Field on 19 October. Four companies were with Walter Butler when he raided the Mohawk Valley in 1781, and they took part in the final action, at Jerseyfield on 30 October 1781, when Walter Butler was killed. Hostilities came to an end in the Mohawk Valley in the summer of 1782. The First Battalion was disbanded on 24 December 1783, the Second in June 1784; many veterans settled with their families in the western part of Quebec province.

KINGSTON, NEW YORK. In a sequel to Clinton's Expedition, General Sir John Vaughan sailed up the Hudson after the British captured Forts Clinton and Montgomery and on 16 October 1777 burned the town of Kingston. He encountered no resistance and inflicted no casualties. This action caused concern in patriot circles that British forces under General Sir Henry Clinton might advance on Albany, but Vaughan's pilots refused to take their ships farther up the river.

KIPS BAY, NEW YORK. 15 September 1776. Despite Major General Henry Clinton's advice to land in Westchester County and cut off an American retreat over the Kings Bridge, Major General Henry Howe decided to land at Kips Bay (at the foot of modern East Thirty-fourth Street in Manhattan) to avoid both the dangerous waters at Hell Gate, at the northern end of the East River, and the American fort at Horn's Hook (at the foot of modern East Eighty-ninth Street), where he had initially hoped to land. By having his ships fire on Horn's Hook prior to the invasion and then shifting the landing site to Kips Bay, Howe also gained the element of surprise. On the night of 14 September, four ships sailed southward to support the landing. Eighty-four flatboats, galleys, and bateaux had been concealed in Newtown Creek, directly across the river from Kips Bay.

AMERICAN DISPOSITIONS

Washington's forces were abandoning New York City and retreating up the Manhattan Island. Most of his units were spread thin along the fourteen and one-half miles of the island's length and so were ill-prepared to meet a British invasion, while thirty-five hundred troops remained in the city, removing supplies and heavy artillery. Washington transferred his headquarters that evening to the Morris house, on Harlem Heights in northern Manhattan, giving him a commanding view of Horn's Hook and the village of Nieuw Haarlem, where he expected the British to land. Washington had neglected Kips Bay, another likely place for the invasion because its deep water would allow ships to sail in close to the shore. Also, a large meadow adjacent to the cove provided an excellent landing area. Nonetheless, when the British ships arrived that night, only raw recruits were on hand to confront them from a hastily dug ditch along the bank of the river. Joseph Plumb Martin, then a sixteen-year-old among the "new levies" from Connecticut, recalled that "every half-hour, [American sentinels] passed the watchword to each other, 'All is well.' I heard the British on board their shipping answer, 'We will alter your tune before tomorrow night.' And they were as good as their word for once" (Martin, *Narrative*, p. 30).

NAVAL BOMBARDMENT

By dawn on the fifteenth, the four ships had anchored within one hundred yards of the shore, their combined broadsides bristling with more than eighty cannons. However, the first bombardment came from Admiral Richard Lord Howe's ships on the Hudson River; these ships created a distraction by sailing northward at about 7 A.M., firing whole broadsides into New York City. Then, at 10 A.M., the flotilla emerged from Newtown Creek, carrying four thousand men, and formed a line in the middle of the East River. The men's red uniforms looked

to Martin "like a large clover field in full bloom" as the British ships waited for the tide to change. A little before 11 A.M., the ships began a massive, hour-long bombardment. With cannon balls flying overhead but inflicting few casualties, American officers nonetheless gave the order to retreat, and the British and Hessian troops, emerging from a blanket of white smoke created by the bombardment, came ashore unopposed.

THE CHAOTIC AMERICAN RETREAT

Panic spread among the American troops along the entire shore, and they fled inland to the Post Road. Four miles to the north, Washington heard the bombardment and sped to the scene on horseback with his aides. To the south, in New York City, Major General Israel Putnam heard the British guns and dispatched an entire brigade and three additional regiments to reinforce the troops at the site of the invasion. Confusion reigned among the American forces as troops heading in opposite directions passed each other on the Post Road, some fleeing and others rushing toward the action at Kips Bay.

Washington arrived just north of Inclenberg, the high ground overlooking the landing site, shortly before it was seized by the first wave of British and Hessian troops under Clinton. Washington and his aides tried in vain to organize the fleeing militia into a defensive line (at modern Fifth Avenue and Forty-second Street). "Take the walls!" Washington shouted. "Take the cornfield!" (Johnston, p. 93). The Hessians and British light infantry marched up from Kips Bay, and the panic that had seized the militia quickly spread to the troops dispatched by Putnam, who also threw down their guns and fled. A few Americans who tried to surrender were bayoneted and shot by the Hessians. Washington was reportedly so "distressed and enraged" by the flight of his troops that he "drew his sword and snapped his pistols, to check them" (Stokes, vol. 5, p.1014). For his own safety, Washington's aides seized the reins of his horse and led him away.

THE AMERICAN ESCAPE

After conferring with Washington on horseback, Putnam rode down to the city to rescue the thirty-five hundred remaining troops before the British could cut them off. The men formed a column two miles long and at 4 P.M. embarked on a forced march up the west side of Manhattan in the late summer heat, guided by Putnam and his young aide, Major Aaron Burr, who knew the terrain. Between 2 and 5 P.M., General Howe looked out over Kips Bay from the top of Inclenberg as nine thousand more troops completed their landing. At the estate of Robert Murray on Inclenberg (the modern Murray Hill neighborhood), Mary Murray and two of her daughters entertained Howe and his generals with cakes and

Madeira, giving rise to the myth that the women deliberately delayed the British and saved the American column from destruction. Not until 5 P.M. did a Hessian brigade march south on the Post Road to secure the territory between the beachhead and the city, while Admiral Howe dispatched one hundred marines in small boats to raise the flag in the city itself. General Howe's main force headed north on the Post Road, where American riflemen in front of McGowan's Pass inadvertently deflected them westward (across modern Central Park). However, Putnam's force had just marched past the intersection where the British appeared, and only the last man in the entire American column was killed. The rest reached the safety of Harlem Heights that night.

KIRKWOOD, ROBERT. (1730–1791). Continental officer. Delaware. Born in New Castle County, Delaware, in 1730, Kirkwood was commissioned lieutenant of the Delaware Regiment on 17 January 1776 and fought with them at Long Island, Trenton, and Princeton. Promoted to captain on 1 December 1776, he led his company in all the important actions in the campaigns in New Jersey and Pennsylvania in 1777 and 1778. In 1780 he went south with General Horatio Gates. The Delaware Regiment lost ten officers in the battle of Camden, and the unit was reorganized into two 96-man companies commanded by the senior remaining captains, Kirkwood and Peter Jaquett. Attached to General Henry Lee's light infantry, these units performed brilliantly throughout Nathanael Greene's southern campaign.

Kirkwood distinguished himself at Cowpens, Guilford, Hobkirk's Hill, and Eutaw Springs. On 30 September 1783 he was brevetted as a major. He moved to Ohio after the war. He was commissioned captain in the Second U.S. Infantry, on 4 March 1791, and was killed in action on 4 November of that year.

KLOCK'S FIELD, NEW YORK.

19 October 1780. Sir John Johnson had carried out a systematic attack on the Schoharie Valley, 16–18 October 1780, as part of a deliberate effort to drive the frontier back to Schenectady. On 19 October he continued toward Stone Arabia, and at 10:00 A.M. defeated 150 militiamen under Colonel John Brown near Fort Keyser. In the meantime Brigadier General Robert Van Rensselaer had mobilized the Albany County militia and set out in pursuit, with Governor George Clinton (a former Continental Army general) following behind with additional men. At Fort Hunter Colonel Pieter Vrooman joined Van Rensselaer with all of his Fifteenth Albany County Regiment (the inhabitants of the Schoharie Valley) that could be assembled. The militia paused on reaching the village of Sprakers, where they heard the sounds of Brown's defeat. Van Rensselaer did not cross the Mohawk at that point but instead had his men continue on almost to Fort Plain, where he left them to confer with the governor. When he returned he discovered that the men had improvised a bridge from baggage wagons and successfully crossed to the north bank.

Johnson had systematically destroyed Stone Arabia after defeating Brown and then started a slow march east with all his booty, heading toward St. Johnsville. Van Rensselaer could move faster, and he caught up with the rear guard late in the day. Left with no choice but to stand and fight, Johnson threw up a hasty breastwork on the eastern edge of St. Johnsville at a place known as Klock's Field (or Fox's Mills). His force consisted of about five hundred Loyalists from his own Royal Regiment of New York (the Royal Greens) and Lieutenant Colonel John Butler's Rangers, some British regulars, a detachment of Hesse-Hanau jägers, three small fieldpieces, a pair of light mortars, and a force of Indians (mostly Mohawks and Senecas)—somewhere between eight hundred and fifteen hundred men. He employed the jägers and Indians in the woods on his left flank and held the earthwork with the Loyalists.

Knowing that sunset was near, Van Rensselaer launched his attack immediately. Colonel Morgan Lewis commanded the vanguard. The main line had Colonel Abraham Cuyler on the left and Colonel Lewis Dubois

(the former commander of the Fifth New York Regiment) on the right. Sixty pro-American Oneidas screened the right flank. The engaged American force numbered about 850 men. It quickly flushed the Indians and jägers out of the woods and sent them fleeing toward the river, accompanied by Johnson and Joseph Brant, who was wounded in the heel. The majority of the raiders, left without leaders, were surrounded and pinned against the Mohawk River. At this point, to the total astonishment of his defeated enemy, Van Rensselaer decided to break contact and fell back three miles to camp securely in Palatine.

During the night Johnson's survivors set off for Onondaga, where they had left their boats. Two parties of Americans set out in pursuit on the morning of 20 October but failed to catch up, although scouts got close enough to see the last of the raiders embark. The main body headed back to Albany and a rancorous court-martial of their general (who was acquitted).

The operation is significant not so much for the destruction or casualties, which were minimal on both sides, but rather for the sheer size of the contending forces. Johnson's force turned out to be too large to sustain itself and overwhelmed its rudimentary logistics. On the other hand, Governor Clinton told Washington that this raid destroyed more than 150,000 bushels of grain and 200 homes, and deprived the Continental Army in the Hudson Highlands of food for the coming winter.

KNAPSACKS AND THE SOLDIERS' BURDEN. The individual soldier's load was burdensome in the best of times. British troops carried as much as sixty pounds of equipment and a Continental soldier's usual load was about forty to fifty pounds. Standard campaign gear consisted of a musket, cartridge pouch, forty to sixty cartridges, bayonet and carriage, haversack with two to four days' bread and meat rations (one day's ration weighed approximately two and one-quarter pounds), canteen, blanket, and a knapsack or blanket sling containing extra clothing and other personal necessities. Shared between each mess squad of five or six men were a tin or sheet-iron camp kettle and wooden bowl, along with one or several tomahawks or hatchets. Tent poles were carried only rarely, tentage never.

The standard British knapsack consisted of two large pockets, with a small slit enclosure between, suspended from two shoulder straps. The Continental army copied that design, but used other styles as well. The manufacturer of a single-strap, "new Invented napsack and haversack" in February 1776 claimed it had been adopted by Pennsylvania, New Jersey, and Virginia troops. If true, the model likely saw only limited service. A 1781 Continental army return listed 10,350 linen knapsacks (painted and unpainted) and 323 made of "Goat Skin"; the British army more often used the latter material.

British forces often carried blanket slings (tumplines), consisting of a blanket rolled and tied around a single woven linen strap, slung over one shoulder. In 1777, Fortieth Regiment soldiers were issued a linen wallet, placed inside to hold their belongings. Captain William Leslie of the Seventeenth Regiment noted in 1776: "My whole stock consists of two shirts 2 pr of shoes, 2 Handkerchiefs half of which I use, the other half I carry in my Blanket, like a Pedlars Pack" (Cohen, "Captain William Leslie's 'Paths of Glory,'" p. 63).

Blanket rolls, much used in the American Civil War (1861–1865), saw some use in the Revolution. J. Hector St. John de Crèvecoeur described "six militiamen with linsey-woolsey blankets tied from the right shoulder to the left arm" (St. John de Crèvecoeur, *Letters*, p. 488).

KNOWLTON, THOMAS. (1740–1776). Continental officer. Connecticut. Born at West Boxford, Massachusetts, Knowlton moved to Ashford, Connecticut, with his family. First enlisting as a private in Colonel Phineas Lyman's Connecticut provincial regiment in 1757, Knowlton rose to the rank of second lieutenant by the last campaign of the final French and Indian War (1762), when he took part in the siege of Havana. As a militia captain at Ashford, Connecticut, he led his company to Boston for ten days' service after the Lexington alarm. The General Assembly appointed him captain of the fifth company of Israel Putnam's Third Connecticut Regiment on 1 May 1775. He distinguished himself when Colonel William Prescott sent him with two hundred men to help defend the rail fence at the battle of Bunker Hill on 17 June. Promoted to major of the

Knox, Henry

Twentieth Continental Regiment of the reorganized Continental army on 1 January 1776, he led a daring raid into Charlestown, Massachusetts, on 8 January, burning enemy quarters and taking five prisoners. He marched with his regiment to New York City in April and was promoted to lieutenant colonel on 12 August. Although the regiment was stationed in New Jersey, Knowlton reached Long Island with a hundred men the day before the battle (27 August) and was posted at Flatbush Pass. In early September he was ordered to form a small body of rangers for use as skirmishers. Knowlton chose 130 to 140 rangers, mostly from among men he knew in the Connecticut regiments, and led them into their first action, an attempt on 16 September to stop British light infantry from pursuing American forces fleeing north up Manhattan Island. In the ensuing action at Harlem Heights, Knowlton was mortally wounded. In General Orders the next day, Washington lamented the loss of “the gallant and brave Colonel Knowlton, who would have been an honor to any country” (Twohig, p. 320).

KNOX, HENRY. (1750–1806). Continental general and chief of artillery. Massachusetts. Born at Boston on 25 July 1750 and apprenticed to a bookseller after the death of his father, Knox showed an interest in military matters from an early age. He joined the elite local artillery company at the age of eighteen; opened the London Book-Store in 1771, where he read the military books he stocked for the British officers of the Boston garrison, and became second in command of another elite militia company, the Boston Grenadier Corps, in 1772. In July 1773 he lost the third and fourth fingers of his left hand when a fowling piece burst during a hunting trip. On 16 June 1774, despite her parents' objections, he married Lucy Flucker, the daughter of Thomas Flucker, the provincial secretary of Massachusetts. By 1775 he was a beefy young man with a maimed hand earning a good living as the proprietor of a popular bookstore in Boston. He was also a devoted defender of colonial rights, starting from the time he had witnessed the Boston Massacre (5 March

Henry Knox. *The Continental general and America's first secretary of war, in a portrait (c. 1873) by Charles Peale Polk, after an original by Charles Willson Peale.* NATIONAL PORTRAIT GALLERY, SMITHSONIAN INSTITUTION/ART RESOURCE, NY.

1770) and tried to restrain the British guard commander from firing into the mob.

LEADING THE CONTINENTAL ARTILLERY

Henry and Lucy Knox fled Boston in June 1775, leaving behind his livelihood and her family; Lucy carried through the British lines sewn into her petticoat the sword Henry would carry throughout the war. Knox served as a volunteer on the staff of Artemas Ward during the Battle of Bunker Hill and the start of the Boston siege. He favorably impressed Washington at their first meeting on 5 July 1775. Five months later, on 17 November, Washington appointed the “portly, genial, and enterprising” twenty-five-year-old military amateur as colonel of the (virtually nonexistent) Continental Regiment of Artillery and assigned him the task of bringing to Boston the artillery pieces that lay at Fort Ticonderoga in upstate New York. Knox's achievement gave Washington the means to force the British to evacuate Boston in March 1776.

After laying out the defenses for vulnerable points along the coast in Connecticut and Rhode Island, Knox joined Washington at New York City. He and his gunners rendered valuable service at the Battle of Long Island

(27 August 1776), in the subsequent retreat through New York and New Jersey, and at Trenton and Princeton. The ability of Knox's gunners to bring their pieces into action at Trenton on the morning of 26 December 1776, in the midst of heavy rain and sleet, was a notable achievement. On 27 December 1776 Knox was appointed brigadier general. Aware of the need to begin creating an armaments infrastructure to support the armed struggle, Knox spent the winter of 1776–1777 at Springfield, Massachusetts, establishing workshops and an arsenal while the main army was in winter quarters at Morristown, New Jersey. The arrival of Tronson de Coudray in May 1777 threatened Knox's position as chief of artillery, but Congress found an interim solution until the arrogant foreigner drowned in the Schuylkill River, mourned by no one. Knox's gunners performed well at Brandywine (11 September 1777) and Germantown (4 October), although Knox's advice at Germantown to reduce the Chew House before continuing the advance may have lost Washington a fleeting opportunity for greater success. During the Conway Cabal, Knox was unwaveringly loyal to Washington.

By the spring of 1778 the Continental field artillery had developed from a makeshift organization of inadequate weapons and inexperienced men into a combat arm that very nearly met Washington's needs. Of Knox's achievement, Douglas S. Freeman has written: "if he acquired slowly the fine points of the employment of artillery, he quickly developed high skill in dealing with men. His administration of his arm of the service was quiet and was marred by few jealousies on the part of his subordinates" (*Washington*, 4, p. 131).

Knox continued to merit Washington's high opinion of him throughout the rest of the war. Knox performed particularly well at the Battle of Monmouth (28 June 1778) and the siege of Yorktown (October 1781), where he placed the cannon that forced Cornwallis to surrender. Knox was appointed major general on 22 March 1782, with rank from 15 November 1781. He took command of West Point on 29 August 1782 and took the lead in creating the Society of the Cincinnati in May 1783 at Newburgh; he served as the society's first secretary-general. He succeeded Washington as commander in chief of the rump Continental army on 23 December 1783 and remained in command of its small successor force until 20 June 1784.

AFTER THE REVOLUTION

Returning for a short time to private life in Boston, he became secretary of war under the Confederation on 8 March 1785, where his duties were mainly clerical in an army that numbered less than one thousand men. He advocated national academies to train officers for the army and navy and the establishment of a national militia system, but Congress approved neither proposal. He retained

his post until 28 December 1794, from 12 September 1789 as head of an executive department under the federal Constitution. Knox was the only high officeholder under the Confederation to be continued in office. Initially an ally of secretary of the Treasury Alexander Hamilton, who had been one of his artillery captains at Trenton, he was angered by his former subordinate's arrogance and high-handedness. His own efforts as secretary bore fruit in the authorization of six frigates to defend American commerce against the Barbary pirates and in the victory Anthony Wayne won over a Native American coalition at Fallen Timbers on 20 August 1794. Knox's luxurious habits and extravagant entertaining earned him the title "Philadelphia nabob," and along with some unfortunate land speculations in Maine with William Duer, starting in 1791, brought him money problems. When war loomed with France in 1798, he was deeply hurt when Washington, appointed by President John Adams to command the provisional army, nominated him to be the third major general, after Alexander Hamilton and Charles Cotesworth Pinckney; Knox refused and never wrote to Washington again. Knox died prematurely on 25 October 1806 at the age of fifty-six at Thomaston, Maine, when a chicken bone lodged in his intestines.

Knox possessed significant administrative abilities, loyalty to his chief and the cause, and a sanguine outlook that made him a major figure in the winning of American independence. His service in the Continental army was crucial: he "rendered to Washington the most valuable assistance of any of the general officers of the revolutionary war" (Harry M. Ward in ANB). Washington's close friend and confidant for nearly a quarter century, Knox had a deserved pride in his extensive public service, but he also displayed human shortcomings and faults. He could storm and threaten resignation like any brigadier general when Congress promoted other officers over his head. He was a large man—he weighed 280 pounds by 1783—and lived a contented married life with the "lively and meddlesome but amiable" Mrs. Knox, who weighed 250 pounds and bore him twelve children (only three of whom lived to adulthood).

KNOX'S "NOBLE TRAIN OF ARTILLERY." The New England army that besieged Boston after 19 April 1775 lacked the heavy artillery that could force the British to evacuate the town. Various people realized that the best source from which to acquire such guns was Fort Ticonderoga, New York, a lightly manned outpost on Lake Champlain. A group of Americans led by Ethan Allen and Benedict Arnold (who was acting under authority from the Massachusetts Committee of Safety) captured the fort on 10 May. The next problem was how to move the guns to the siege lines around Boston. Henry Knox proposed a plan to George Washington, and, on 16 November 1775, the general ordered the stout twenty-five-year-old Knox to carry it out. Leaving Cambridge a few days later with his brother and a servant, Knox reached Fort Ticonderoga on 5 December. Apparently in conjunction with Philip Schuyler, commanding the Northern Department, Knox selected fifty-nine artillery pieces (forty-three heavy brass and iron guns, six cohorn mortars, eight siege mortars, and two howitzers) for transport. The pieces were dragged to the fort dock, put on a small gundalow for the short sail to the portage road that led to Lake George, unloaded and dragged by ox team across the portage, loaded onto a scow, a pettiauger, and a batteau, and sailed south to Fort George at the head of the lake. They all arrived by the middle of December. On 12 December, Knox arranged for the construction of forty-two "good strong sleds that will each be able to carry a long cannon clear from dragging on the ground and which will weigh 5400 pounds each." He also hired eighty yoke of oxen to drag the sleds to Springfield, Massachusetts, where he would procure new teams to drag them to Framingham. Fortunately for Knox, the weather turned cold and snowy, freezing roads and streams, thus making it possible for the oxen to drag the sleds with some degree of efficiency. The nearly 300 miles of difficult terrain were covered with a speed that surprised even the impatient and ambitious Knox. From Fort George the sleds went south through Fort Edward, Saratoga, Albany, Kinderhook, and Claverack, and were then hauled east through the steep grades and heavy snows of the Berkshires to Framingham, twenty miles west of

Cambridge. They arrived on 24 January and were parked temporarily; John Adams counted and examined fifty-two cannon. Three of the large, thirteen-inch (bore diameter) siege mortars, including one named the "Old Sow," weighed a ton each. Total weight of the guns and mortars was 119,900 pounds, and the convoy included 2,300 pounds of lead and a barrel of the excellent Ticonderoga flints.

The Americans were able to end the siege of Boston by emplacing many of these heavy guns on Dorchester Heights in early March 1776, an outcome that would not have been possible without the artillery from Ticonderoga. Knox himself called these weapons "a noble train of artillery."

KNYPHAUSEN, WILHELM, BARON VON. (1716–1800). German commander in chief after Leopold Philipp von Heister. Knyphausen entered the Prussian army in 1734 and became a general in 1775. Having been placed in command of the second division of the German troops that were sent for service in America, Knyphausen sailed from Bremen, reaching New York Harbor on 18 October 1776, with 3,997 Hessians and 670 Waldeckers (mercenaries of Germanic descent), and a company of jägers (light infantry). In the same convoy were 3,400 British recruits. The Germans were sent on by water to New Rochelle, and with this base secured, General William Howe continued his pursuit of General George Washington north toward White Plains. General von Heister, the senior German officer in America at the time, led the Hessians at White Plains, New York, on 28 October 1776. Knyphausen led his forces into combat at Fort Mifflin, New York, on 16 November 1776, where the Germans claimed the honor of making the

main attack and where they sustained 330 casualties in heavy fighting, whereas the British lost 122 men.

Disagreements between General Howe and the elderly von Heister, aggravated by the German disaster at Trenton, New Jersey, on 26 December 1776 (where the black uniformed “Regiment Knyphausen” was captured with two others), led to von Heister’s recall in 1777. Knyphausen remained as commander in chief of the German troops in America for the remainder of the war. In addition, his seniority made him the successor of the British commander in chief as well, which would give him command over all British forces in America. To forestall this outcome, special precautions regarding so-called “dormant commissions” were adopted by the London authorities.

During the Philadelphia campaign, Knyphausen commanded one of the two divisions of Howe’s army. He led this force at Brandywine, where his mission was to make Washington believe the main attack was against Chadd’s Ford while General Charles Cornwallis led the other division in a strategic envelopment. His forces were not engaged to any significant degree at Germantown. In the Monmouth campaign he commanded the column that escorted Clinton’s baggage train across New Jersey, and only a body of his grenadiers saw any action on 28 June. Germans deserted in large numbers while the invading army was in Pennsylvania and New Jersey. As many as 440 of them left during the Monmouth campaign alone.

Three months later, Knyphausen led 3,000 men up the east side of the Hudson River in the large-scale foraging expedition that led to the Tappan massacre, but his forces were not involved in that affair. For the remainder of the war he was based in New York, where he commanded during General Henry Clinton’s absence in the Charleston Campaign of 1780. Knyphausen led the Springfield raid into New Jersey in June 1780. As the most senior officer in British service in North America after Clinton, Knyphausen would have taken command had Clinton followed Cornwallis’s request to come to his aid in the Chesapeake. Clinton used Knyphausen’s poor health to justify hesitating to respond to this summons from Cornwallis. Knyphausen returned to Germany in 1782. Before his death in 1800 he was given the post of military governor of Kassel.

KOSCIUSZKO, THADDEUS ANDRZEJ BONAWENTURA. (1746–1817). Continental officer. Poland. Born on his family’s estate

Thaddeus Kosciuszko. *The Polish-born Continental officer and military engineer whose selection and fortification of the Saratoga battlefield made possible the American victory that marked the turning point of the war.* HULTON ARCHIVE/GETTY IMAGES.

near Kosów, Poland, on 12 February 1746, Kosciuszko graduated from the Royal Military School at Warsaw, 1769. As a captain, he was sent to the school of artillery and military engineering at Mézières, France. Returning to Poland, which had just been partially partitioned, in 1774, he found little opportunity for advancing his career, and after an unfortunate love affair he returned to France. With a loan from his brother to pay his passage to America, he reached Philadelphia in August 1776, and in due course the Pennsylvania Committee of Defense employed him to assist in planning the Delaware River forts. This initial assignment gained him a commission from Congress as a colonel of engineers on 18 October 1776. He joined General Horatio Gates at Ticonderoga, and played an important role in stopping General John Burgoyne’s offensive. Kosciuszko’s selection and fortification of the Saratoga battlefield made possible the American victory that marked the turning point of the war.

From March 1778 until June 1780, Kosciuszko was engaged in planning and building the defenses of West Point, a place of utmost strategic importance. By this time, he and Gates had become close friends. Invited to become the chief engineer of the Southern Department, he arrived after Gates’s defeat at Camden but remained to serve under General Nathanael Greene. He was assigned the mission of exploring the Catawba River Valley and was

in charge of transportation during Greene's dramatic race to the Dan River. Kosciuszko's design of wagons with detachable wheels was particularly inspired. In the siege of Ninety-Six, South Carolina, from 22 May to 19 June 1781, Kosciuszko got a costly lesson in the art of practical military engineering, making two mistakes that may well have caused this operation to fail. First, he placed his siege works too close to the British fortifications, and second, he persuaded Greene to attack the British at their strongest point. During the remainder of his service in the southern region, there was more opportunity for him to show his ability as a cavalry leader than as an engineer. In the spring of 1783 he went north with Greene, and in October he was brevetted brigadier general.

In July 1784 he left New York and returned through Paris to Poland. After four years in rural retirement he became a major general in the Polish army, in October 1789. In the spring of 1792 he fought a gallant but futile campaign against the Russian invaders, which earned him promotion to lieutenant general, before his king ended Polish resistance. He and other Polish generals emigrated to Leipzig, and Kosciuszko later went to Paris to enlist the support of the French revolutionary government. The Jacobins withheld French assistance, so Kosciuszko returned to his homeland to lead a noble but unsuccessful

uprising against the Russians and Prussians. Defeated and captured in October 1794, but with his country no longer in existence, Kosciuszko was freed after two years, and in August 1797 arrived in Philadelphia. Congress gave him \$20,000 and 500 acres in Ohio. In May 1798 he left America and went to Paris, where Napoleon earnestly sought his military assistance. Napoleon, however, would not meet Kosciuszko's terms—the promise to support the restoration of Poland. For the rest of his life, Kosciuszko strove for this goal, but without success. Before his death he emancipated his serfs. Money from the sale of his Ohio land was used to establish the Colored School at Newark, New Jersey. He died in Switzerland on 15 October 1817.

LA CORNE SEE *St. Luc de La Corne, Pierre.*

LAFAYETTE, JAMES. (1748?–1830). Continental spy. Since he was born a slave, little is known of Lafayette's early life other than that William Armistead of New Kent County, Virginia, claimed him as property. In 1781 Armistead was a Richmond commissary supplying Continental forces. When the marquis de Lafayette moved south to battle the British under General Charles Cornwallis, he put out a quiet call for spies. James Armistead, as he was then known, won his owner's consent to volunteer, hoping his service might win him freedom. Taking a job as a forager with the British at Portsmouth, Virginia, James moved between the two armies, carrying information to Lafayette. When the British promised him freedom for spying on the Americans, James became a double agent, supplying Cornwallis with false information while keeping Lafayette apprised of British movements. It was the slave James who informed the Americans that Cornwallis intended to fortify Yorktown and wait there for the fleet to extricate his forces, allowing the French and Americans to trap the British force.

Despite his valuable aid in winning the Revolution, James did not receive the reward he expected: after Cornwallis's surrender, William Armistead reclaimed his slave. In 1786 Armistead finally came around to supporting James's petition for freedom as long as he, Armistead, received recompense. Armed with a letter from Lafayette praising his courage, James won a hearing from the

Virginia legislature, which paid Armistead for James's freedom in January 1787. James took the last name of Lafayette, staying in New Kent County and becoming a slave owner himself. In 1816 he received a small pension from the state and in 1824 was recognized in the crowd at Yorktown by Lafayette and warmly greeted. James Lafayette died at his home on 9 August 1830.

LAFAYETTE, MARQUIS DE. (1757–1834). (Marie Joseph Paul Yves Roch Gilbert du Motier de Lafayette.) Continental general. Before his second birthday he lost his father, a colonel of grenadiers killed at Minden. His mother died before he was thirteen years old, and Lafayette was a wealthy orphan when his grandfather died a few weeks later. When he was age sixteen he married his cousin, Marie Adrienne Françoise de Noailles, and thus strengthened his alliance with one of the most powerful families of France. He had entered the Royal Army as a musketeer on 9 April 1771, was promoted to second lieutenant in the Noailles Regiment on 7 April 1773, and promoted to captain on 19 May 1774. While serving at Metz, he attended a dinner on

8 August 1775 at which the duke of Gloucester expressed some candid and sympathetic views on the course being pursued by the American insurgents. Motivated by his interest in the American cause, he made plans to join the Americans. Knowing that his family and the king would disapprove of his action, he confided in the Comte de Broglie, who introduced him to Johann De Kalb. The latter, already seeking service in America, became a sort of guardian, and after many delays they sailed for America with written agreements from Silas Deane that they would be commissioned major generals. With a party of other soldiers, they landed near Georgetown, South Carolina, on 13 June 1777, and were in Philadelphia six weeks later. Their reception by Congress was chilly, but after Lafayette offered to serve at his own expense and start as a volunteer, Congress on 31 July commissioned him a major general without command. The next day he met Washington, and the American cause acquired a valuable, if enigmatic, asset.

WASHINGTON'S CONCERNS

Washington was at first irritated by Lafayette's expressions of availability for a field command. At the Battle of Brandywine, on 11 September 1777, the ardent volunteer helped check the enemy's advance and was wounded in the left thigh and evacuated to the Moravians' care in Bethlehem. After two months of recuperation, he rejoined the army at White Marsh (after the Battle of Germantown). On 25 November he led a reconnaissance force of Greene's division against the position of Cornwallis at Gloucester, New Jersey, and with three hundred men got the better of a skirmish with a superior force of Hessians. Lafayette's effectiveness in battle complicated Washington's quandry. On 1 November, Washington wrote to Henry Laurens:

I feel myself in a delicate situation. . . . He is extremely solicitous of having a command equal to his rank. . . . It appears to me, from a consideration of his illustrious and important connections, the attachment which he has manifested for our cause, and the consequences which his return in disgust might produce, that it will be advisable to gratify his wishes. . . . Besides, he is sensible, discreet in his manners, has made great proficiency in our language, and from the disposition he discovered at the battle of Brandywine possesses a large share of bravery and military ardor. (Washington, *Papers*, 12, p. 81).

These comments explain more than first meets the eye about Washington's initial hesitations, his change of mind, and later his concerns about Congress's reaction to conferring a command on a foreigner as well as Lafayette's true role in the Revolution.

A FIELD COMMANDER

On 1 December 1777, Congress voted him command of a division of Virginia light troops. After sharing the hardships of Valley Forge and proving himself one of Washington's most stalwart supporters in the so-called Conway Cabal, he went to Albany to lead the proposed Canada invasion of 1778. Returning to Valley Forge in April 1778 after that frustrating experience, he was involved in the action at Barren Hill, Pennsylvania, on 20 May. He then figured prominently in the Monmouth campaign in June. Washington gave him command of the two veteran brigades engaged at Newport in July and August 1778, where he had a prominent part in salvaging the wreck of the first Franco-American venture. When the Peace Commission of Carlisle issued a manifesto questioning France's motives in the alliance, Lafayette challenged Carlisle to a duel, which Carlisle sought to avoid. Washington and Estaing succeeded in urging Lafayette to withdraw from pressing the matter.

TO FRANCE AND BACK

With France's entry into the war in the spring of 1778, Lafayette sought permission from Congress for a leave to return to France, resolve his relations with the king, and "be any way useful" to America. Congress concurred on 21 October and added a letter of recommendation to Louis XVI on Lafayette's behalf. He sailed on 11 January 1779 (his departure having been delayed by a fever), reached Paris a month later, and after a week of "political quarantine" to purge himself of disobedience in defying the royal will in leaving France, he was given a hero's welcome. He was received with favor at court; appointed colonel of dragoons; and, in presenting an accurate picture of affairs in America, won the confidence of Vergennes. Although Lafayette failed to get approval for many of the schemes he advocated—an invasion of England, Ireland, or Canada; hiring part of the Swedish navy for service in America; floating a large loan in Holland—he was successful in endorsing the proposal to send a French expeditionary force to serve under Washington.

On 28 April 1780 he landed at Boston. Rochambeau reached Newport in July, and with Washington's wholehearted support, Lafayette sought to serve as intermediary in working out plans for allied cooperation. When Benedict Arnold's raid in Virginia forced Washington to send regulars there, he selected Lafayette as commander of this detachment. In his Virginia military operations, Lafayette proved himself an effective strategist in eluding the efforts of Cornwallis's larger force to "trap the boy," and at Green Spring on 6 July 1781, he showed ability as a tactician. When Rochambeau and Washington moved south for the Yorktown campaign, Lafayette was given command of the light division for the final action against Cornwallis.

RETURNING HOME

He sailed for home in December 1781 and reached France with lavish commendations from Congress to Louis XVI and instructions to the U.S. ministers in France to confer with him and avail themselves of his assistance. Congress made the *Alliance* available for his crossing. Upon his return to France, Lafayette was promoted to the rank of *maréchal de camp*, effective 19 October 1781. In Europe, along with Estaing, he was assembling an army of twenty-four thousand French and Spanish troops at Cádiz for operations against the British when the word of the treaty arrived. He received the Cross of the Order of Saint Louis in 1783.

PROMOTING FRANCO-AMERICAN RELATIONS

In the last half of 1784 he revisited America at Washington's invitation and promoted the cause of a stronger American union. After 1783 he was of great assistance to

various American causes in Europe, working tirelessly for improved Franco-American relations by, among other things, seeking expanded commercial relations between France and America, encouraging Greene and Knox to have their sons educated in France, supporting the Society of Cincinnati, and—especially—aiding Jefferson's mission as minister to France. In 1786 Lafayette's bust (a gift from the state of Virginia) was placed in the Paris City Hall, a signal distinction for a living Frenchman.

THE FRENCH REVOLUTION

In 1787 he was a member of the Assembly of Notables; in 1789 he represented the nobility of Auvergne in the Estates General. On 11 July he submitted a draft for the Declaration of the Rights of Mankind and the Citizen. On 17 July 1789 he was named commander of the newly established Paris National Guard, a post he kept until autumn 1791, when France completed its written constitution. Having been promoted to lieutenant general on 30 June 1791, he returned to active duty as commander of the Army of the Center on 14 December 1791, when France feared the outbreak of war. The collapse of the monarchy in August 1792 led to his arrest by the Jacobins and his decision to flee to America on 19 August, but he was taken and imprisoned by the Austrians and Prussians in a series of locations until his release in 1797. In March 1800 he returned to France to find his fortune destroyed. He acknowledged Napoleon but declined his offers of a senatorship, the Legion of Honor, and the post of minister to the United States. He also declined President Jefferson's offer in 1805 to become governor of Louisiana.

LATER YEARS

During this period and until 1818 he kept out of politics, cultivating his lands at La Grange, forty-three miles from Paris. He then sat in the Chamber of Deputies until 1824, and in that year accepted the invitation of President Monroe to visit the United States. During the visit, Lafayette was warmly welcomed in every state of the Union, and everywhere Revolutionary War veterans hurried to his side. Of those with whom he had served, he often remembered their names and those of their families. He sailed back for France on 8 September 1825 with a renewed commitment to international causes that he conceived as based on the principles of the American Revolution. Louis-Philippe's assurances of a monarchy "with republican institutions" in the July Revolution of 1830 convinced him to accept the title of commander of the French National Guard until December 1830. Thereafter he continued as a major figure in the opposition until his death. His residences in Paris and in the countryside (La Grange) were the destination for many American visitors during the remainder of his life.

Lafayette spent an estimated \$200,000 of his personal fortune in support of the American Revolution. In 1794 Congress voted him some \$24,500 to cover the salary he had declined during the Revolution, and in 1803 and 1825 that body granted him lands in Louisiana and Florida.

LAKE GEORGE, NEW YORK. About thirty-five miles long and varying in width between one and three miles, Lake George is connected with Lake Champlain by a swift, narrow channel at Ticonderoga. Because the smaller lake is about 240 feet higher than Lake Champlain, this five-mile channel is not navigable; a portage of about three miles, on the northeast tip of Lake George, was used in the eighteenth century. General John Burgoyne has been criticized for not using this route

during his campaign of 1777. Diamond Island in Lake George was the scene of action in the Ticonderoga Raid, September 1777.

LAKE GEORGE, NEW YORK. 8 September 1755. In the spring of 1755, the British imperial government adopted a two-pronged strategy designed to remove French “encroachments” from lands the British colonies claimed in the interior of North America. The southern prong of the strategy was Braddock’s expedition against Fort Duquesne in the Ohio valley. The northern prong involved two expeditions, one against Fort Niagara (via Oswego on Lake Ontario), and the other against Fort St. Frederic, located at the narrows of Lake Champlain.

Logistical bottlenecks crippled the expedition against Niagara (the British never got beyond Oswego). Facing similar obstacles a second force, made up of 3,000 New England and New York provincials and 300 allied native Americans (mostly Mohawks), and led by William Johnson of New York, reached the head of Lac St. Sacrament (renamed Lake George) only in late August 1755. While Johnson dithered about moving across the lake so late in the year, a counter-expedition led by Jean-Armand Dieskau, New France’s senior military commander, advanced south from Fort St. Frederic with 200 French regulars, 600 Canadian militia, and 700 native American allies. By 7 September, Dieskau was between Johnson and the Hudson River.

The next day, a thousand Massachusetts and Connecticut provincials and Mohawks reconnoitering south from Lake George were roughly handled in an ambush the provincials called the Bloody Morning Scout. When Dieskau followed up with an assault against the hastily fortified provincial camp on the shore of Lake George, his regulars suffered a sharp defeat. Dieskau himself was wounded and captured. Later in the afternoon, a small force of New Hampshire provincials advanced along the track from the Hudson River to Lake George. It came upon some exhausted French and Canadians near a pond in the forest and took revenge for the morning losses in a skirmish known as Bloody Pond. Johnson claimed victory, but he chose not to advance any further. With Braddock’s earlier defeat at Fort Duquesne, the British strategy of 1755 lay in shambles.

LAKE GEORGE, NEW YORK SEE *Ticonderoga Raid.*

LA LUZERNE, ANNE-CÉSAR DE. (1741–1791). (Chevalier de, later Marquis.) Second French minister to the United States. He joined the regiment of French Guards in 1754 and served as a special envoy to the elector of Bavaria from 1777 to 1778. As successor to Gérard, he reached Philadelphia with his secretary, Marbois, after a leisurely overland trip from Boston in the fall of 1779. Luzerne had his credentials and a draft of his address to Congress sent in advance on 4 November. He redrafted it for American tastes and presented it on November 17 to near universal acclaim. In a similar fashion he revealed an astute understanding of American sensitivities and quickly became a major political force in American affairs. When Maryland was persistently blocking ratification of the Articles of Confederation, La Luzerne brought that state into line by suggesting that the French naval forces they were requesting in the Chesapeake for protection against the British would not be possible unless Maryland ratified the Articles. Maryland ratified in February 1781. He was named *maréchal de camp* in December 1781. The minister plenipotentiary remained in America until the summer of 1784. Chevalier of the Order of Saint Louis, he was made a marquis in 1785. He served as ambassador to Great Britain from 1788 until his death in 1791.

LAMB, JOHN. (1735–1800). Continental Artillery colonel. New York. Born in New York City, 1 January 1735, Lamb was the son of Anthony Lamb, an accomplice of the famous burglar Jack Sheppard, who had been banished to the colonies in 1724. John Lamb was a good writer and fluent speaker who became a popular leader during the Stamp Act Crisis in 1765, leading the Sons of Liberty and the Committee of Correspondence for the next decade. He led crowd actions against the Stamp Act and the New York Restraining Act of 1767. He was arrested in December 1769 for denouncing the New York Assembly after it had complied with the Quartering Act but was quickly freed. On learning of the events of Lexington and Concord, he and Isaac Sears seized the customs house and British munitions and prevented vessels from leaving New York Harbor.

On 30 July 1775 he was commissioned captain of the Independent Company of New York Artillery. At the head of these regulars he joined Richard Montgomery's column of the Canada Invasion. Active in the operations against St. Johns, Lamb aroused the displeasure of Montgomery, who found the artillery captain brave and intelligent but a troublemaker. Lamb accompanied Benedict Arnold's column in the attack on Quebec, 31 December 1775, a battle in which he was so seriously wounded that he lost an eye and in which he was captured. Paroled 2 August 1776, he was named adjutant general and commandant of Artillery in the Northern Department but was inactive because of his parole. After Congress promoted him to colonel on 1 January 1777, Lamb was exchanged and joined the Continental Army at Morristown. During the Danbury Raid, April 1777, he was wounded at Campo Hill (28 April) in a gallant but unsuccessful attempt with three guns to break up an enemy bayonet attack.

In the reorganization of the Continental Army in early 1778, Lamb joined in the general protestation over adjustment of seniority. In 1779 and 1780 he was artillery commander at West Point, and he commanded the post at the time of Arnold's treason.

Colonel Lamb led his Second Regiment south as part of Knox's Brigade for the Yorktown Campaign. He and his lieutenant colonel, Ebenezer Stevens, won particular praise from Henry Knox for their performance during the siege. Lamb was breveted brigadier general on 30 September 1783.

Elected to the New York Assembly in 1783, he quit the following year to become customs collector for the Port of New York. He became an active opponent of the proposed federal constitution, to the extent that his house was threatened by a Federalist mob. Lamb promptly fortified his home. After ratification Washington appointed him to the collectorship at New York. A few years later, a clerk embezzled a large amount of money. Lamb took full responsibility, selling his property to cover the loss. He resigned his post in 1797 and died in poverty, 31 May 1800. The Lamb Papers are held by the New York Historical Society.

LANDAIS, PIERRE DE. (c. 1731–1820). French naval officer. Of a noble but impoverished Norman family, he entered the navy as a volunteer in 1745. In 1762 he was wounded in action and for a short time was a British prisoner. He accompanied Bougainville on his voyage of discovery around the world from 1766 to 1769. In 1775 he was discharged from the service. On 1 March 1777 Deane gave him a captain's commission and command of a merchantman loaded with supplies for America. He arrived at Portsmouth, New Hampshire, on 1 December after a mutiny. Congress later gave him twelve thousand livres for those services in 1779. In 1778 he applied for a command in the Continental navy, but the Marine Committee refused. On 9 May, Congress continued him as captain and six weeks later placed him on the *Alliance*. Samuel Adams considered him "highly esteemed" by the committee. On 15 October he was naturalized as a citizen of Massachusetts. The *Alliance* sailed on 11 January 1779 with Lafayette on board. Again there was an attempted mutiny, but the *Alliance* arrived in Brest on 6 February.

In April 1779 Franklin changed the destination of the *Alliance* and ordered Landais to join the squadron of John Paul Jones. Jones and Landais appear to have taken an instant dislike to each other. During the *Bonhomme Richard–Serapis* engagement on 23 September 1779, Landais unaccountably attacked Jones's ship and

continued to fire on it until the battle ended. On their personal rivalry, Franklin refused to judge and turned the matter over to Congress, but he gave command of the *Alliance* to Jones. Landais claimed that Franklin had no authority to do so. In the absence of Jones from the seaport of Lorient, Arthur Lee, who was returning to America aboard the *Alliance*, named Landais captain of the ship so that the voyage could proceed. Twice the crew mutinied, and the ship was placed under the command of the ranking lieutenant. When it arrived in Boston, naval authorities held a court of inquiry, found Landais guilty, and removed him from the service. In 1782 Congress rejected a report from a committee that he be paid \$2,178.18 to settle his claims for pay, subsistence, and expenses.

On his return to Revolutionary France, Landais was given command of a warship at Brest (1 July 1792). A naval division was put under his command. On 1 January 1793 he was promoted to vice admiral and during that month took part in operations against Cagliari, Sardinia. The following spring he operated off the coast of Brittany (around Belle Île). Mutinies among the crews of Morard de Galles's fleet forced Landais to put into Brest. His commission was revoked on 26 October 1793. In November 1797 he returned to New York. From that time on he pressed his claims for prizes captured by the *Alliance* in 1779. In 1806 Congress paid him four thousand dollars. A bill for his further relief failed in the Senate in 1815. He spent his remaining years impoverished in New York City.

LANGDON, JOHN. (1741–1819). Patriot merchant and politician. New Hampshire. Born at Portsmouth, New Hampshire, on 26 June 1741, John Langdon had become a wealthy merchant and shipbuilder resentful of British commercial and civil policies by the early 1770s. He served on the Portsmouth Committee of Correspondence, and in December 1774 he took part in the raid on Fort William and Mary in Portsmouth Harbor. Elected to the legislature in 1775, he served as speaker of the house in the New Hampshire Provincial Congress from 1776 to 1782. That body elected him to the Continental Congress for 1775–1776. On 25 June 1776 Congress named him agent for prizes in New Hampshire, which required him to relinquish his seat at the Continental Congress and return home. He quickly saw the possibilities of naval operations against British shipping, and built several vessels for the government. Among these ships were the *Raleigh*, the first ship to be completed and set sail for the American navy, and the *Ranger*, which was commanded by John Paul Jones. In 1777 he pressured the legislature to appoint and fund John Stark to command a unit to resist General John Burgoyne's invasion through Vermont. Langdon himself led a company of militia which was present at Burgoyne's surrender in Saratoga, and he commanded troops under John Sullivan at Newport in 1778. Having served as president of the state from 1785 to 1787 and from 1788 to 1789, he won election by the legislature to the first U.S. Senate. He served in the Senate from 1789 to 1801, then returned to serve as governor of New Hampshire from 1805 to 1812. He declined later offers of public service. His wife Elizabeth (Sherburne) died in 1813, and he died in Portsmouth 18 September 1819. He was brother to Woodbury Langdon.

LANGDON, WOODBURY. (1738?–1805). Patriot merchant, congressman. New Hampshire. Elder brother of John Langdon, Woodbury also acquired wealth before the Revolution but, unlike his brother, took

the conservative side. He kept Portsmouth, New Hampshire, out of the nonimportation agreement of 1769, but was nevertheless elected to the Provincial Congress in 1775. At the outbreak of war, Langdon went to England on financial business. He returned in the summer of 1777 to New York City, where the British insisted he stay. By the end of 1777 he had escaped back to New Hampshire. The legislature elected him to Congress in 1779, but he refused to attend longer than one year. He served as a justice on the superior court from 1782, but was impeached in 1790 for not attending to duty. The electorate rejected his candidacy for a congressional seat in 1796 and 1797. He was married to Sarah, neé Sherburne. He died on 13 January 1805 in Portsmouth.

LANGLADE, CHARLES MICHEL DE. (1729–1801?). Indian leader. Canada. Born in 1729 near what became Mackinaw City, Michigan, Langlade was the son of a French trader nobleman and an Ottawa woman and was educated by Jesuits. As a boy of ten years old, he joined an Ottawa war party led by his uncle, Nissowaquet, against the Chickasaw. By 1750 he was a cadet in the French colonial troops, and by 1760 he had risen to the grade of lieutenant. Leading his first expedition in June 1752, he drove the Miami Indians and five British traders from Pickawillany (near modern Piqua, Ohio). During the Seven Years' War he was an active leader of Indian auxiliaries. He claimed credit for setting up the ambush in which Braddock was killed in 1755. Two years later he defeated Rogers's Rangers and a large force of Pennsylvania and New Jersey militia led by Colonel John Parker. Taking part in the attack on Fort William Henry, Langlade failed to restrain his Indian forces from slaughtering the British prisoners. Escaping from the fall of Quebec in 1759, he went to Montreal, which he again left before its capture by the British, and returned to Michilimackinac. As second in command of this post, he surrendered it when the commandant deserted the garrison, and Langlade transferred his allegiance to the British.

After supporting the British effectively in Pontiac's War, Langlade established a new home at Green Bay, where he and his father had long had a trading post. Promoted to captain at the beginning of the Revolution, he supported British operations led by Carleton and Burgoyne. After most of Burgoyne's Indian allies left following the capture of Ticonderoga, Langlade persuaded his one hundred Ottawa to stick it out through the Battle of Bennington, when they too returned home. Back in the west, he and his followers opposed the American and Spanish advances into the Old Northwest.

After the war Langlade was granted lands in Canada for his services. He continued his trading activities at Green Bay, where he died, perhaps in 1801.

LAST MILITARY ACTIONS OF THE REVOLUTION.

Several battles are claimed as the last of the American Revolution: Blue Licks, 19 August 1782; Wheeling, 10–11 September 1782; and Johns Island, South Carolina, 4 November 1782. Additionally, a battle between some militia led by John Siever and the Chickamauga Cherokee at Lookout Mountain (near modern Chattanooga) on 20 September 1782 is often called the last military action of the Revolution.

LAUMOY, JEAN-BAPTISTE-JOSEPH, CHEVALIER DE. (1750–1832).

Continental officer. France. The son of an infantry captain who was made a chevalier in the Order of Saint Louis, Jean Baptiste became a second lieutenant at the school of military engineering at Mezières in 1768, and in 1770 he was appointed engineer and first lieutenant. On 1 January 1777 he became a captain and was promoted to major on 1 February through Duportail's efforts. On 13 February Laumoy was awarded the rank of lieutenant colonel by Deane and Franklin, and soon thereafter he left for America via Saint Domingue. He arrived in the early autumn of 1777 and on 17 November was commissioned colonel of engineers. His first action was with Lafayette at Gloucester, New Jersey, on 25 November, after which he went to Valley Forge. Ordered south on 8 February 1779, he was wounded at Stono Ferry on 20 June and taken prisoner at Charleston on 12 May 1780. Washington opposed Duportail's efforts to have him exchanged out of regular order. He was finally exchanged on 26 November 1782, breveted brigadier general on 30 September 1783, and honorably discharged on 10 October.

As *aide maréchal général des logis* from June 1783, he returned to France in December. Made a chevalier in the Order of St. Louis, he took a command in Saint Domingue in July 1785 and at Martinique in February 1789. Promoted to *maréchal de camp* in August 1791, he was made head of Lafayette's general staff in the army

of the Center on 20 April 1792 and fled with him on 19 August after the Jacobin triumph.

Laumoy escaped to America, living around Philadelphia until he was removed from the émigré list. He then returned to France. Unable to secure a military appointment, he officially retired from the army in 1811. Washington complimented Laumoy on his American service and suggested in 1799 that all American officers should in the future have engineering training like him.

LAURANCE, JOHN. (1750–1810). Judge advocate general of the Continental army. New York. Born near Falmouth, England, in 1750, he moved to New York City in 1767; was admitted to the bar in 1772; and about two years later married Elizabeth, daughter of Alexander McDougall. When the province started raising Continental regiments, he became a second lieutenant in the Fourth New York on 1 August 1775 and took part in the Canada invasion. On the promotion of his father-in-law, Laurance became his aide-de-camp and paymaster. On 11 April 1777 he succeeded William Tudor as judge advocate general on Washington's staff, holding this post until he resigned from the army on 3 June 1782. In his capacity of judge advocate general, he prosecuted the cases of Benedict Arnold and John André, winning commendation from the Continental Congress and leaving the service as a major.

After the war he was active in law and politics. He was a delegate to Congress (1785–1787); served in the state senate (1788–1790); enthusiastically supported the federal Constitution; and on its ratification became the first U.S. representative from New York City, serving in 1789–1793. He was judge of the U.S. district court for the following two years. A Federalist Party supporter, on 8

November 1796 he succeeded his friend Rufus King in the U.S. Senate, resigning this post in August 1800. He died in New York on 11 November 1810.

LAURENS, HENRY. (1724–1792). Continental Congress president. South Carolina. Born in Charleston, South Carolina, on 24 February 1724, Laurens was clerk first in a Charleston counting house and then in London. Returning to South Carolina, he became a wealthy man, acting as an agent for English land investors. In 1763 Laurens became disgusted that his fortune came from selling and exploiting the labor of slaves, and he quit the slave trade entirely, often expressing his repugnance for the institution. His son John Laurens became an advocate for manumission during the Revolution, but Henry Laurens continued to own slaves the rest of his life, holding title to some 300 people at the time of his death. The popular *Memoirs* of Lauren's daughter Martha (1759–1811), wife of the historian David Ramsay, recorded the family's struggle with the guilt of the slave trade. The Stamp Act made him an avid although not radical agitator; he wrote several pamphlets against the customs service. Retiring from business, he returned to England in 1771, after the death of his wife, to supervise his sons' education and to travel. In 1774 he was one of thirty-eight Americans in England signing a petition to Parliament against the Boston Port Bill, and he returned to America the same year.

Sent to the Provincial Congress in 1775, he was president of both it and the Council of Safety. The following year he helped draft the state's constitution and became vice president of South Carolina. He was active in the defense of Charleston in June 1776 and worked to prevent civil war in the Carolinas. In 1777 he was sent to the Continental Congress and was elected its president on 1 November 1777, succeeding John Hancock. During his term, Congress was split by bitterness and factions, and Laurens was not always nonpartisan, siding occasionally with the Adams-Lee group. He helped suspend the Saratoga Convention on 8 January 1778 and exposed part of the so-called Conway Cabal, strongly supporting Washington. In the Lee-Deane dispute, he was extremely unfair toward Silas Deane, which led to the failure of his motion to suspend hearings until Congress could hold an investigation. Insulted, Laurens resigned the presidency on 9 December 1778, though he stayed in Congress until November 1779. Selected to negotiate a treaty of friendship and commerce with Holland and to arrange for a

ten-million-dollar loan, Laurens left Philadelphia on 13 August 1780 on the brig *Mercury*. The vessel was captured by the British off Newfoundland on 3 September. Laurens threw his official papers overboard, but the British recovered them. One of the captured documents was used by the British as a pretext for declaring war on the Dutch.

After being examined by the Privy Council, Laurens was confined in the Tower of London on 6 October “on suspicion of high treason.” Held almost fifteen months, under conditions so severe at times that his health was seriously impaired, he twice refused a pardon in return for serving the British. In two petitions to British authorities, however, he justified his own role in the American Revolution in terms that some patriots considered unduly subservient. On 31 December 1781 he was finally released on heavy bail (put up by Richard Oswald), thanks to the efforts of Franklin and Edmund Burke, and exchanged for Cornwallis in April 1782. Named one of the commissioners to handle peace negotiations, Laurens reached Paris only two days before the preliminary peace articles were signed. Despite his eleventh-hour arrival, Laurens was useful to the peace commissioners on several points of the treaty. He immediately returned to England to discuss commercial matters with government officials. On 3 August 1784 he was back in New York, and shortly thereafter he reported to Congress on his mission. His final years in public life had not been happy: his health had been broken; his son had been killed in action in the closing phase of the war; and he had suffered enormous property losses. He returned to Charleston early in 1785 and retired to his plantation, Mepkin, on the Cooper River some thirty miles above the city. He died on 8 December 1792 and, as stipulated in his will, was cremated, in what was one of the first instances of this practice in America outside of some Indian cultures.

LAURENS, JOHN. (1754–1782). Continental officer. South Carolina. The son of Henry Laurens, he was educated in England and Geneva and returned to the colonies in 1777. He was Washington’s volunteer aide from September 1777 to March 1779 and September to November 1781, serving often as secretary and translator.

He fought at Brandywine on 11 September 1777 and was wounded at Germantown on 4 October 1777 and at Monmouth on 28 June 1778. On 23 December 1778 he shot General Charles Lee in a duel. He was named lieutenant colonel on 29 March 1779 after having declined a similar commission voted him by Congress on 5 November 1778. In 1779 he was elected to the South Carolina assembly but withdrew from it when the British invaded the state. Joining General Moultrie’s militia, he fought at Charleston against Augustine Prevost and was wounded at Coosashatchie Pass. At Savannah he led the light infantry. He was at Charleston during Clinton’s siege and was captured, paroled, and exchanged. Congress sent him to France in the spring of 1781, when he was twenty-six years old, to help Franklin arrange for more money and supplies. He received the Thanks of Congress for his success in this and then returned to the field. Laurens planned to raise Continental troops in South Carolina and Georgia from the slave population, with the project financed by himself, but the legislature of the two states rejected the enterprise. At Yorktown, he captured a redoubt and, with the Viscount de Noailles, negotiated the surrender with Cornwallis. (The latter was constable of the Tower of London, where the elder Laurens was imprisoned and was exchanged for him.) Young Laurens returned to the South and was killed at Combahee Ferry, South Carolina, on 27 August 1782.

LAUZUN, ARMAND LOUIS DE GONTAUT, DUC DE BIRON. (1747–1793). French officer. Lauzun was an ensign in the French Guards when he entered service in 1761, and was promoted to lieutenant in 1764, then to captain in 1767. He took part in the campaign against Corsica in 1769 and was made a chevalier in the Order of St. Louis. He was promoted to colonel of the Royal Legion (1774), lieutenant mestre de camp of the Royal-Dragoons Regiment (1776), colonel of the Corps of Foreign Volunteers in the navy (1778), and brigadier of the Dragoons.

In 1779 Lauzun commanded an expedition that seized Senegal. In 1780 he was appointed colonel of a Legion of Foreign Volunteers in Rochambeau's army (led by Jean Baptist Donatien de Vimeur, Comte du Rochambeau). Created by royal ordinance of 5 March 1780 and known as "Lauzun's Legion," it was composed of German, Polish, and Irish recruits. Lauzun routed General Banastre Tarleton at Gloucester Neck (Virginia) on 3 October 1781; and was commended by the Virginia delegation to the Congress. Lauzun was selected to carry news of the Yorktown victory to France, but on his return to America his ship was almost captured by a British vessel. Rochambeau handed over the French command in America to Lauzun. General George Washington was impressed by his "politeness, zeal and attention" and complimented him repeatedly. In fact, Washington had hoped that Lauzun would serve in the American peacetime army after the war, but he was recalled to France in 1783 and promoted to mestre de camp. In 1788 he became commander of a cavalry brigade. He served in 1789 as a deputy of the nobles of Le Quercy to the Estates General, was promoted to lieutenant general in 1792, to commander in chief of the army of the Rhine (9 July), the army of Italy (25 December), and the army of the Coasts of La Rochelle (15 May 1793). He was arrested and condemned on 30 December and executed the following day. His name appears on the south side of the Arc de Triomphe. His memoirs are frequently cited by historians of the American Revolution.

LAWSON, ROBERT. American officer. Virginia. After serving as major in the Fourth Virginia from 13 February 1776, lieutenant colonel after 13 August 1776, and colonel after 19 August 1777, he resigned 17 December 1777 and subsequently saw action at Guilford and in the Yorktown campaign as a brigadier general of the Virginia militia.

LEAGUE OF AUGSBURG, WAR OF THE. William of Orange, stadtholder of The Netherlands, deposed his father-in-law, James II, as king of England in 1688, and became William III. The new king was the leader of a coalition intended to curb the ambition of France's Louis XIV to dominate Europe. The North American extension of the war to restore the European balance of power was called in the British colonies "King William's War" (1689–1697).

LEAGUE OF NEUTRALS SEE *Armed Neutrality*.

LEARNED, EBENEZER. (1728–1801). Continental general. Massachusetts. Born on 18 April 1728 at Oxford, Massachusetts, Learned was a captain in 1756 in Colonel Timothy Ruggles's provincial regiment during the final French and Indian War. A farmer and innkeeper, he later led the revolutionary movement in his hometown. In 1774 and 1775 he was a delegate to the Massachusetts Provincial Congress. Colonel of a Worcester county regiment of minutemen, he led his men to Cambridge on 19 April 1775 and two days later was assigned to the right wing of the Boston army. He returned home on 24 April but on 20 May was commissioned colonel of one of the Massachusetts regiments raised for eight months of service at the siege of Boston. During the battle of Bunker Hill (17 June 1775) his men held the lines at Roxbury and, although they came under desultory fire, were not otherwise engaged. He was named colonel of the Third Continental Regiment (1 January 1776) in the reorganized Continental Army, and on 8 March began to serve as an intermediary between William Howe and George Washington in negotiating the British evacuation of Boston. About 11:00 A.M. on Sunday, 17 March, he unbarred the gates on the main road with his own hands and, because Washington was worried about disease in the dirty and crowded town, marched into Boston at the head of five hundred men who had either survived smallpox or been inoculated against it. His regiment was then assigned to operate whaleboats in Boston Harbor to watch the British fleet before it sailed away.

He resigned on 2 May 1776 because of poor health, but on 4 April 1777 he returned to duty when Congress appointed him a brigadier general. Assigned to command

a brigade of Massachusetts Continental regiments in the Northern Department (Second, Eighth and Ninth Regiments), he collected militia at Forts Edward and Anne and assisted in the evacuation of stores from Ticonderoga before its occupation by Burgoyne (July 1777). He accompanied Arnold in the move to Fort Stanwix that ended Barry St. Leger's expedition, and returned to Horatio Gates's army on 31 August. His Fourth Massachusetts Brigade, reinforced by the First New York and two battalions of New Hampshire militia, was posted on the left wing of the American defenses at Bemis Heights. At Freeman's Farm on 19 September, during the first Battle of Saratoga, much of the brigade lost its way in the dense woods and was not heavily engaged. At Bemis Heights on 7 October, during the second Battle of Saratoga, Benedict Arnold usurped command and led it to flank Breymann's redoubt, whose loss helped seal Burgoyne's fate.

Along with the other New England brigades, Learned moved south to rejoin the main army after Burgoyne's surrender, marching part of the way as escort for the Convention army, as the captive British force was termed. But the winter at Valley Forge proved too debilitating, and Learned again resigned for physical disability on 24 March 1778. He was elected to the convention that adopted the Massachusetts state constitution of 1780 and served as a judge in Worcester County. In 1783 he was a member of the state legislature. In 1786 he supported the Massachusetts government against Daniel Shays's rebels, although this brought him into conflict with his family and neighbors and exposed him to serious personal danger. He died at Oxford on 1 April 1801.

LE BÈGUE DE PRESLE DUPORTAIL, LOUIS. (1743–1802). Continental general and chief engineer. France. Born at Pithiviers, he was the son of a nobleman who was a *conseiller du roi*. He became a student at the engineering school at Mézières in 1762 but was dismissed for one year. In 1765 he was accepted as *ingénieur ordinaire* and promoted to captain in 1773. On 25 January 1777 he was given leave with the grade of lieutenant colonel to "take care of personal business" (*vaquer à ses affaires particulières*).

Duportail undertook extended negotiations with Franklin and Deane that resulted in a commission in

the Continental army on 13 February 1777. On 8 July, Congress approved his appointment and on 22 July gave him seniority over all engineers previously appointed. On 17 November, Congress named him brigadier general and chief of engineers. Having joined the main army at Morristown, he took part in the Philadelphia campaign. One of his first major assignments was to work on the Delaware River forts, which brought him into conflict with Coudray. He remained with Washington at Valley Forge in 1777–1778 and during the Monmouth campaign of June 1778. Lafayette became impressed with his abilities and called him "one of the best and most honest officers upon this continent." On 29 June 1778 he was sent to work on the defenses of Philadelphia, and in 1779 he served in the Hudson Highlands. In March 1780 he was put under Lincoln's orders but arrived at Charleston too late to play any significant role in the defense of that city. Becoming a prisoner on 12 May 1780, he was exchanged in October 1780 and rejoined Washington in time to play a vital part in the Yorktown campaign.

On 11 May 1779 his title was changed to commandant of the Corps of Engineers and Sappers and Miners. Washington personally commended him for his siege work in the attacks at Yorktown. On 16 November 1781 Duportail was promoted to major general, and on 10 October 1783 he was given leave to resign from the American service with a strong congressional commendation of his "distinguished merit." A memorandum he had prepared on the need for American fortifications was judged by Congress "sound and just." Meanwhile, in the French service Duportail had been made lieutenant colonel attached to the infantry, and on 13 June 1783 he became a French brigadier general of infantry. In 1787 he was authorized to instruct the army of Naples, and he became *maréchal de camp* in 1788. From November 1790 to December 1791, Duportail served as minister of war. In 1792 he was promoted to lieutenant general and given command of the twenty-first military division at Moulins. His politics being suspect, Duportail escaped in 1794 to America, where he became head of the Corps of Engineers. Only after Napoleon's rise to power was his name removed from the émigré list. In 1802 he died at sea while returning to France.

Duportail's services were invaluable to the American cause. He was one of the few foreign officers who genuinely impressed Washington. "I shall ever retain a grateful sense of the aids I have derived from your knowledge and advice to me," Washington wrote.

LECHMERE POINT, MASSACHU-

SETTS. 9 November 1775. Lechmere Point (later East Cambridge) extended into Boston Harbor about three-quarters of a mile from the American lines at Prospect Hill; at high tide, it was surrounded by water. On 9 November 1775, nine companies of British light infantry and one hundred grenadiers landed at the point during a very high tide to seize cattle needed for the Boston garrison. Thinking that this incursion might be more than a foraging raid, Colonel William Thompson counterattacked with his Pennsylvania riflemen, and Colonel Benjamin Woodbridge supported Thompson with part of his Massachusetts regiment and part of Colonel John Paterson's Massachusetts regiment. Despite two feet of icy water covering the causeway to what was now in effect an island, the riflemen advanced resolutely, but the British withdrew with ten cattle before the Americans could close with them. Although Washington commended the action in his general orders of 10 November, he later concluded (30 November) that reports of it had been colored; his troops had merely driven off some foragers, and this by musket fire from the safe range of four hundred yards. Only two Americans were wounded.

LEE, ARTHUR. (1740–1792). American diplomat, troublemaker. Virginia. Arthur was the youngest of the four famous sons of Thomas Lee and the last of his eleven children. He was about ten years old when he came under the guardianship of his eldest brother, Philip Ludwell, on the death of their father.

IN ENGLISH POLITICS

Young Arthur was sent to Eton, where he spent most of the 1750s. He went on to the University of Edinburgh,

where he studied science, literature, and medicine and took his M.D. degree in 1764. Lee returned to Virginia in 1766 and began practicing medicine in Williamsburg, but he soon caught the Revolutionary fever and lost interest in medicine. In 1768 he returned to London with the intention to study law at the Middle Temple, taking along his brother William to set up business. While in Virginia, he had been made a fellow of the Royal Society in 1766, and once back in England he was named to the Society of Arts and Agriculture. He mingled with London's intellectual elite and frequented the city's cultural events. More importantly, Arthur and William became deeply involved in English politics and associated with the flamboyant John Wilkes, who later called Arthur his "*first and best friend*" (Potts, p. 59). Arthur had a fling at political writing prior to his return to England in 1768, turning out ten "Monitor's Letters" with the purpose of supplementing the "Farmer's Letters" of John Dickinson. Although some Revolutionary leaders (including Jefferson) were unimpressed by these, others thought highly of them; one of the latter was Samuel Adams, who helped Arthur win an appointment in 1770 as London agent of Massachusetts. The diatribes of "Junius," the anonymous Whig political writer of the 1760s, inspired Lee to emulation, and he produced a series of letters signed "Junius Americanus."

Lee joined the petitionary movement that grew out of the Middlesex elections which made Wilkes a national idol and was responsible for a clause in the famous Middlesex Petition protesting against Parliament that drew attention to the "similarity of injustices suffered in England and in America" (*ibid.*, p. 64). In seven years his literary contributions included at least "nine pamphlets, 170 essays, 17 petitions, and 50 anonymous letters in the press" (*ibid.*, p. 71).

BEAUMARCHAIS AND FRENCH AID

At the house of Wilkes in 1775, Arthur Lee met the playwright Beaumarchais. "Arthur Lee was ambitious, impetuous, witty, talkative, and fond of scheming and intriguing," a biographer of the remarkable Frenchman has commented. "In short, he possessed all the good qualities and defects that would please a man like Beaumarchais" (Lemaître, pp. 177–178). The two were soon holding long, confidential conversations, and the seed of secret French aid was sowed. The fruit was Beaumarchais's Hortalez et Cie, a business front. Arthur Lee was furious at being left out of something he had helped start, and his reaction was to accuse everybody concerned of being dishonest, including Benjamin Franklin.

A DIPLOMAT IN EUROPE

Arthur is primarily remembered for the Deane-Lee controversy, but for its origins as a marplot it is necessary to

go back to the year 1775, when in November he was asked by the Secret Committee of Congress to be its correspondent in London. In October 1776 he was appointed to join Silas Deane and Benjamin Franklin in Paris to bring about the French alliance. Reaching Paris at the end of December, he was prevailed upon by the two other commissioners to see what might be done in Spain. Going there in February 1777, he was able to get substantial aid from the government through the intermediary of a commercial concern but was not allowed to enter Madrid. A stay in Berlin from May to July was fruitless. Returning to Paris, where there was nothing constructive for him to do, he nosed further into the secret aid business—which Franklin was letting Deane handle by himself—and on 4 October 1777 Lee wrote Samuel Adams and brother Richard Henry Lee that he should be made sole minister to France.

Congress in May 1777 appointed brother William commissioner to Berlin and Austria and Ralph Izard to the court of Tuscany. They spent most of their time in Paris, however, where they joined Arthur in carping against Franklin and Deane. The French alliance nevertheless came about, but the fiscal accounts were in shambles and Lee accused Deane of illegal profiteering. Deane eventually was recalled on the basis of Lee's charges of malfeasance and was ruined. The sordid controversy also made Lee persona non grata with the Comte de Vergennes, and Congress recalled him in September 1779. (William Lee and Izard had been dismissed in June, leaving "the old doctor" the sole commissioner in Paris.)

BACK IN AMERICA

Returning to America in September 1780, Lee was elected to the Virginia House of Delegates in 1781 and to the Continental Congress for the next three years (1782–1784). Harvard awarded him an honorary degree and the American Academy of Arts and Sciences in Boston elected him a member based on his scientific paper on lightning strikes. In Congress he served on numerous committees, mostly related to Congress's financial and trade policies, and continued to lambaste fellow revolutionaries, but to little effect. Congress made him a commissioner to the Northwest Indians, and he was one of those who negotiated the treaties of Fort Stanwix (22 October 1784) and Fort McIntosh (21 January 1785); fellow commissioners described Lee giving a "most spirited grand speech" that produced a "very good effect" on the negotiations (Potts, pp. 268–272). In July 1785 Congress appointed him to the treasury board (a post he held until the new government was inaugurated), where he became so frustrated at its ineffectual efforts that he declared the "Confederation is crumbling to pieces" (*ibid.*, p. 273). The last thing he found to be against was the Constitution, opposing it because it lacked a declaration of rights. Although Lee courted a number of women,

he never married, and he lived his last few years as a gentleman farmer on his estate, Lansdowne.

Beginning near the end of the twentieth century, the characterization of Lee as abrasive, contentious, morbidly suspicious, and cantankerous was tempered by the realization that he articulated well the “goals, values, and world view” shared by a majority of the American revolutionaries (*ibid.*, pp. 281–282).

LEE, CHARLES. (1731–1782). Continental general, soldier of fortune. England-Virginia. He was educated at schools in England and Switzerland, entering his father's regiment as an ensign in 1746 while still enrolled as a student. About 1748 he joined the Forty-fourth Foot, where he was able to purchase a lieutenant's commission in May 1751. He was on Braddock's expedition (1755) and then went to the Mohawk Valley where he purchased a captain's commission (1756). Adopted by the Mohawks and given the name of Ounewaterika (Boiling Water), he “married” the daughter of a Seneca chief; Lee's Indian wife bore him two children. During Abercromby's attack on Ticonderoga (7 July 1758) he was badly wounded, but he rejoined his regiment for the capture of Niagara and Montreal. He spent the winter of 1760–1761 in England. On 10 August 1761 he was appointed major of the 103rd Regiment and the next year served with real distinction under Burgoyne in Portugal, advancing to major and serving with the local rank of lieutenant colonel. He was retired on half pay in November 1763 when his regiment was disbanded. In 1765 Lee became a soldier of fortune in the Polish army, where he came to be on intimate terms with King Stanislaus Poniatowski. He was promoted to major general in 1767. The next two years he spent in England, where he devoted his time to horses and criticism of the government. He returned to

Charles Lee. The Continental general and soldier of fortune, in an engraving by Robert Pollard, published in England in 1780.
THE LIBRARY OF CONGRESS.

Poland in 1769, fought against the Turks, and was invalided home the next year.

POSSIBILITIES IN AMERICA

In 1773 he went to America, where he immediately aligned himself with the revolutionary element. Scouting great possibilities for personal advancement, he urged Patriot leaders to raise an army, and in May 1774 he started buying an estate in Berkeley County, Virginia (later West Virginia), “with the specific motive of recommending himself, as a landowner, to the Continental Congress” (Van Doren, p. 30). Lee already had speculated in land, holding patents to twenty thousand acres in both New York and East Florida and ten thousand more on Prince Edward Island.

The half-pay British lieutenant colonel (promoted in 1772) not only had military experience but was a good pamphleteer and an articulate speaker. Many influential Americans came to look on him as a valuable acquisition, and when Congress appointed him major general on 17 June 1775, he was subordinate only to Washington and Artemas Ward. Since acceptance of this commission would lead to confiscation of his English estates and

because he had not yet paid for his property in Virginia, Lee waited until Congress promised compensation for his property losses before he wrote British authorities about discontinuing his half pay.

SERVICE IN NORTH AND SOUTH

After serving in the Boston siege, where “his dirty habits and obscenity gave offense” but where he was “endured for what he was supposed to know,” Lee was detached in January 1776 and directed to raise volunteers in Connecticut for the defense of New York City (Freeman, vol. 3, p. 373b). He reached the city on 4 February, having been delayed while laid up with the gout. On the 17th he was ordered by Congress to succeed Philip Schuyler in the northern department, but on 1 March a counterorder sent him to command the southern department.

On 7 October 1776 Lee was back in Philadelphia. He had received the thanks of Congress on 20 July for his service at Charleston, and on his return to the city Congress advanced him thirty thousand dollars to pay for his Virginia property. He reached Washington’s army in time for the Battle of White Plains in New York on 28 October and was left at Peekskill with some of the best American troops when the main army went south for the New Jersey campaign. When Washington called for him to rejoin the main army on the retreat to the Delaware, Lee reacted in such a way as to raise suspicion that he hoped for Washington’s defeat so that he could be appointed to succeed him. On 24 November 1776, Lee wrote a letter to Washington’s secretary, Joseph Reed, sharply criticizing Washington as indecisive, which Washington innocently opened by mistake. Although Washington’s reaction insofar as Reed was concerned was one of personal hurt rather than official outrage, he realized he would have to be on guard against the “fickle” Englishman. On 9 December, Lee wrote William Heath that in his opinion, Washington really did not need his support on the Delaware and went on to say: “I am in the hopes here [at Morristown] to reconquer (if I may so express myself) the Jerseys.” He had just penned and dispatched to Gates the famous letter that said, “entre nous a certain great man is damnably deficient” when he was captured at Basking Ridge on 13 December 1776.

PRISON AND COURT-MARTIAL

Germain ordered Lee returned to England for trial as a deserter, but Howe—who thought Lee had resigned his half pay before joining the enemy—did not comply. As a prisoner in New York, Lee conducted himself in such a way as to be accused of treason. What he really hoped to accomplish, however, was a peaceful settlement of the war; he was no Benedict Arnold. On 29 March 1777 he submitted his plan for ending the rebellion by an offensive that would “unhinge the organization of the American

resistance” by gaining control of the middle colonies—Maryland, Pennsylvania, and Virginia (Anderson, pp. 221–222). The British apparently paid little attention to the strategic advice of this former officer.

Exchanged in April 1778, Lee complained to Congress about the promotion of others while he was a prisoner, and on 20 May he was greeted at Valley Forge by officers still unaware of his double-dealing. In the Monmouth campaign of June 1778 he had his first test as a field commander, and in the opinion of most observers he failed it miserably. Washington sternly reprimanded him on the battlefield but otherwise was willing to let the matter rest; Lee himself, however, his “vanity grievously wounded” and his abilities and even courage questioned, angrily defended his own part and “inveighed against Washington’s tactics” (ibid., pp. 228–229). Casting prudence to the wind, he wrote an impertinent letter to Washington demanding a court of inquiry at the same time that Generals Anthony Wayne and Charles Scott reported that Lee’s actions on the field had been highly improper. Thus, the resulting Lee court-martial was brought on not by his performance in the battle but by his conduct afterward.

The charges of “disobedience of orders,” “misbehaviour before the enemy . . . by making an unnecessary, disorderly, and shameful retreat,” and “disrespect to the commander in chief” astonished and outraged Lee, and despite a valiant effort to defend himself, he was found guilty and sentenced to be suspended from army command for one year (ibid., pp. 228–239). During his trial he cast aspersions that nearly led to a duel with Wilhelm Steuben. After his “Vindication” appeared in the *Pennsylvania Packet* of 3 December 1778, he was called out and slightly wounded by Colonel John Laurens; the wound was enough to keep him from accepting a challenge from Wayne. By July 1779 he was back at his estate in the Shenandoah, where he “bred horses, enjoyed the company of his dogs, and attempted farming” (Fisher, vol. 2, p. 194). When his year of suspension from command expired, Lee heard a rumor that Congress intended to dismiss him. Although it is doubtful that such an action was under serious contemplation, the letter he addressed to the delegates on this matter was so offensive that on 10 January 1780 Congress did in fact dismiss him from the service. Two days later he left his home and moved to Philadelphia, where he died in 1782.

A MAN OF CONTRADICTIONS

“An enigma Lee was—and still is,” wrote Douglas S. Freeman in 1951, the same year John R. Alden published *General Charles Lee: Traitor or Patriot?*, a study that completely revised the image of this strange but able and much-maligned man. Although Alden wrote that Lee’s “personality remains partly cloaked in mystery,” he reveals much about his subject. Lee was a man of contrasts,

Alden wrote. For example, he was capable of “fervent friendships, and vast hatreds”; “neither ascetic nor saintly”; “vain and ambitious” but conscious of his shortcomings; “enamored of money, but careless about it.” As an intellectual he anticipated Tom Paine but fell short of Edmund Burke, yet he “displayed frequent flashes of brilliance” (pp. 305–306).

LEE, CHARLES. (1758–1815). Officer in Virginia navy. Virginia. Brother of “Light-Horse Harry” and Richard Bland Lee, Charles Lee was born at Leesylvania and entered the College of New Jersey (later Princeton) in 1770, receiving his bachelor of arts degree in 1775. There he was commended for “application and genius.” From 1777 to 1789 he appears to have served as a “naval officer of the South Potomac,” after which he became customs collector at Alexandria, serving to April 1793. From 1793 to 1795 Lee represented Fairfax County in the Virginia General Assembly. He handled much of Washington’s legal work after the Revolution, and Washington chose him to replace Edmund Randolph as U.S. attorney general in November 1795, a post he held until 1801. He was named judge of one of the new circuit courts by President Adams, serving as one of the so-called “midnight judges” until Congress in 1802 repealed the Judiciary Act under which he had been appointed. With the fall of the Federalists his political life ended, and he

went into private law practice. (He had been admitted to the bar in June 1794.) A friend of John Marshall, he frequently appeared before the Supreme Court and took part in *Marbury v. Madison* (1803). He was a defense lawyer in the impeachment of Judge Chase (1805) and in the trial of Aaron Burr (1807). Lee spent the last years of his life at his home near Warrenton in Fauquier County.

LEE, FRANCIS LIGHTFOOT. (1734–1797). Member of Congress, Signer. Virginia. One of the famous four brothers of the Lee family, he was tutored at Stratford, the family home, and then left to settle at Coton, a Loudoun County estate he inherited from his father. For ten years starting in 1758, he represented Loudoun in the House of Burgesses. In 1769 he married Rebecca Tayloe and settled at Menokin, a home built for the newlyweds by Tayloe’s father in Richmond County, where the Tayloe family was influential. He represented that county in the Burgesses from 1769 to 1776, taking a bold and effective part in colonial resistance to the Stamp Act and in subsequent measures of defiance to the mother country. He attended the Virginia Convention in 1774, and in 1775 he was elected to the Continental Congress to fill the place of Patrick Henry, serving to 1779. While in Congress he served on numerous committees and became one of the signers of the Declaration of Independence. Although Lee was fiercely patriotic and considered by his brothers to be their superior in matters of political judgment, he was by nature reticent and he tended to avoid public recognition. A niece later described Lee as the “sweetest of all the Lee race.” After leaving Congress, Lee served in the Virginia Senate.

LEE, HENRY. (1756–1818). (“Light-Horse Harry”), Continental cavalry leader. Virginia. Born at Leesylvania and graduating from the College of New Jersey (later Princeton) at the age of seventeen, he was

admitted to the Middle Temple and was about to leave for England when the war changed his plans. In June 1776 he was commissioned a captain in Theodorick Bland's regiment of Virginia cavalry. In 1777 his company was attached to the First Continental Dragoons and joined Washington's army in New Jersey. At this time Washington was engaged in the perplexing spring maneuvers preceding the Philadelphia campaign and badly needed cavalry for reconnaissance. Although only twenty-one years old at the time, Captain Lee favorably impressed Washington with his soldierly qualities, and they established a close, lifelong friendship. Lee's fine defense of the Spread Eagle Tavern (five miles south and slightly east of Valley Forge) on 20 January 1778 was the immediate cause of a resolution of Congress on 7 April that referred to him as a "brave and prudent officer." The resolution promoted him to major commandant and authorized him to enlarge his corps with two troops of horse. The further addition of three infantry companies in October 1779 resulted in the creation of Lee's Legion, one of the elite units of the war, which under Lee's leadership fought brilliantly in the South.

After the war Lee served in the Virginia House of Delegates, the Confederation Congress, the Virginia ratifying convention, and the U.S. Congress and held the office of governor of Virginia. His eulogy of Washington included the famous words, "First in War, First in Peace, and First in the Hearts of His Countrymen." The father of Confederate general Robert E. Lee, he spent the last years of his life in poor health and poverty.

LEE, RICHARD BLAND. (1761–1827). Statesman. This member of the famous Lee family of Virginia, born at Leesylvania, was too young to play any part in the Revolutionary War. He represented Loudoun County in the House of Delegates from 1784 to 1788 and again in 1796, taking a strong Federalist stance. In 1789 he was elected to the first U.S. Congress, where he played a determining role in a major compromise. By changing his

stand as an opponent to Hamilton's plan for federal assumption of state debt, Lee (and a fellow representative from Virginia, Alexander White) got Hamilton's consent to establishing the national capital on the Potomac. Lee left Congress in 1795 and lived on his farm until 1815, when he moved to the District of Columbia. There, he served as a commissioner of war claims and as a judge of the Orphans' Court.

LEE, RICHARD HENRY. (1732–1794). Member of Congress, Orator, Signer. Virginia. Eldest of the four famous sons of Thomas Lee, he attended England's Wakefield Academy from 1748 to 1751, touring the Continent before returning to the Lee home of Stratford in Virginia in 1752. His career in politics began on a minor note as a justice of the peace in his home county of Westmoreland in 1756; the next year he followed the path of his ancestors to the House of Burgesses, where he became heavily involved in supplying the militia. He also married in 1757, taking his wife, Anne Aylette (d.1768), to Stratford. They remained there until 1763, when Lee established Chantilly-on-the-Potomac, the estate where he would raise nine children and live for the remainder of his life. During those years he began to play a prominent role in the Patriot politics that led to the break with England. He allied with Patrick Henry, with whom he remained close politically and personally for the rest of his life. He coauthored the important Westmoreland Resolves during the Stamp Act crisis, and in 1768 he proposed setting up committees of correspondence. From then to 1773 he kept up his political activity while simultaneously engaging in a profitable tobacco-shipping business with his brother William, who was in London. In 1774 he attended the Virginia Convention.

In the Continental Congress (1774–1780), Lee quickly formed a lasting friendship with John and Sam Adams; he favored strong measures in dealing with the mother country and was one of the first to advocate a direct attack on the king, rather than the ministry, as the oppressor of the colonies. He saw independence primarily as a prerequisite to the essential winning of foreign support, and he had an important part in getting his state to send Congress resolutions on behalf of independence, foreign alliances, and confederation. Having touched off the movement toward independence, Lee left Philadelphia on 13 June 1776 without taking any part in the subsequent drafting of the Declaration of Independence. He subsequently became a Signer, however. His service on eighteen different

committees in his first three months as a delegate gives an indication of his tireless efforts in Congress.

In the late 1770s he took a leading part in convincing fellow Virginians that their sacrifice of claims to western lands was necessary if a confederation were to be achieved. With his brother Arthur he became deeply involved in the controversy with Silas Deane. In May 1779 he was forced by ill health, resulting from arduous work, to resign from Congress, but he came back in 1784 and was elected president of that body; he sat in Congress again in 1787. Meanwhile, despite bad health, he sat in the state House of Delegates. He led opposition to adoption of the Constitution, feeling that the lack of a bill of rights and other features of the document gave the federal government powers that could be abused. Patrick Henry, who shared Lee's objections, was instrumental in getting him elected to the new U.S. Senate, where Lee worked toward amending the Constitution. His principal propositions found their place in the first ten amendments.

In October 1792 he again resigned on grounds of health. A little more than two years later he died at Chantilly, the home he had established around 1757 near the family seat, Stratford.

In addition to politics, Lee ventured into western land speculation, forming with Washington and his brothers the Mississippi Land Company. He was also one of the most outspoken opponents of slavery in the eighteenth century, advocating "liberty and freedom" for Africans by 1759.

LEE, WILLIAM. (1739–1795). American merchant, diplomat, troublemaker. Virginia. Only sixteen months older than his brother Arthur, William was closely associated with him in Europe after 1768. In the 1760s William learned the mercantile trade from his elder brother Philip ("Colonel Phil") Ludwell Lee at Stratford and served as secretary for the land speculation venture, the Mississippi Company. On 7 March 1769, soon after reaching London, he married his wealthy cousin Hannah

Philippa Ludwell (d. 1784); later she was the heiress of Green Spring, the Ludwell family seat in Virginia. The next year William partnered in the tobacco trade with Stephen Sayre and the Dennys De Berdts (father and son). With Sayre and Arthur Lee, he became involved in British politics as a supporter of John Wilkes. Both Sayre and William became sheriffs of London (1773), and William soon after became an alderman of the City of London (1775), the only American ever elected to that office. William ran unsuccessfully for Parliament in 1774.

Early in 1777 the commercial committee of Congress, which included Robert Morris and William's brother, Richard Henry Lee, named William and Morris's brother, Thomas Morris, joint commercial agents to handle Congress's business in Europe. In June 1777 William went to France, where to his chagrin he discovered the financial accounts of Congress's agents in disarray and the lines of authority hopelessly confused. Before long, in a series of letters sent back to the states, William and brother Arthur began questioning Silas Deane's financial dealings on behalf of Congress and even Deane's loyalty. Deane's employment of the clever British spy Edward Bancroft seemed to lend credence to their charges, and eventually Congress recalled Deane and held an official inquiry into his actions. In May 1777 Congress appointed William commissioner to Prussia and Austria, but neither power had any idea of recognizing the United States at that time and William was not permitted to visit either capital.

The Lee brothers and Ralph Izard had been rebuffed in their diplomatic assignments, so they stayed in Paris and tried to justify their existence. Their constant complaining tended to undermine Deane and Franklin and led to much animosity among all the parties. Consequences of the resulting controversy included the elimination of William Lee and Izard from their posts in June 1779 and the recall of Arthur Lee three months later.

Meanwhile, however, William Lee had taken a step that led to war between England and Holland. Unable to gain entrée to the Prussian and Austrian courts, he took it on himself to see what he could do in Holland. With a minor Dutch official, John De Neufville, he framed a draft treaty of commerce, and although the Dutch gave no indication of interest in it, Lee proudly sent his draft to Congress. When Henry Laurens was sent to the Netherlands in the summer of 1780 to get a treaty and a loan, the Lees gave him William's "treaty" as a model. Laurens was captured by the British at sea. The historian Helen Augur has written that "Whitehall believed, or chose to believe, William Lee's . . . treaty genuine, and immediately declared war on Holland." (Augur, p. 322)

William lived in Brussels for four years after losing his official status. In September 1783 he retired to Green Spring and died after several years of almost total blindness.

LEE COURT-MARTIAL. 4 July–12 August 1778. Although Washington apparently had no intention of making an official issue of Charles Lee's poor performance at Monmouth on 28 June 1778, Lee sent Washington a letter on 30 June (misdated 1 July) that complained about the "very singular expressions" the commander in chief had addressed to him on the field, accused Washington of "cruel injustice" based on misinformation, and demanded "some reparation for the injury committed." Washington flared up at these personal reflections and promised Lee an official hearing. But Lee would not let it go at that and became even more reckless in two more letters written the same day (the first of these misdaded 28 June), one of which accused Washington of being influenced against Lee by "some of those dirty earwigs who will forever insinuate themselves near persons in high office" (Smith, vol. 2, p. 1103). In response to Lee's request for an immediate court-martial, Washington informed him the same day that he was under arrest and that charges were forthcoming. General William Alexander was named president of the court that convened at Brunswick on 2 July, just five days after the Battle of Monmouth. The court brought three charges: (1) disobedience of orders in not attacking the enemy on 28 June, as instructed; (2) misbehavior before the enemy on the same day by making an unnecessary, disorderly, and shameful retreat; and (3) disrespect to the commander in chief in the letters Lee addressed to Washington.

The trial is of interest in revealing Lee's conduct at Monmouth. Though numerous witnesses testified that Lee demonstrated personal courage in the battle, the testimony of John Laurens and Alexander Hamilton established that Lee did not follow orders in moving to make contact, while testimony from William Maxwell, Charles Scott, and Anthony Wayne showed that Lee had no control over the ensuing action. Lee conducted his own defense but with little skill, doing nothing in cross-examination to discredit the evidence submitted against him. The court, which had moved with the army to Paramus, ended its hearing on 9 August and three days later found Lee guilty of all charges. It sentenced him to suspension from command for twelve

months. On 16 August, Washington forwarded the case to Congress without comment for its review, but that body did not start its discussions until 23 October. Lee, meanwhile, went to Philadelphia, where he attempted to win support for his exoneration. On 5 December, Congress voted 15 to 7 to confirm the sentence.

Many of Lee's contemporaries and later scholars felt that, while the first two charges lacked credence, Lee's conduct after the battle bordered on lunacy. Lee's foolish pen brought on the trial and also ruined his excellent chances of having Congress disapprove the sentence of the court. In Philadelphia, Lee made the error of defending himself less than he abused Washington. Lee forced Congress to choose between him and Washington; it sided with the latter.

LEE FAMILY OF VIRGINIA. "From the landing of the first Lee in 1640 to the rise of the Confederacy in 1861, there were few crises that did not find Lees in the foremost ranks" (Hendrick, *Lees of Virginia*). The founder of the family in America was an Englishman named Richard (c. 1613–1664), who had arrived in Virginia by 1640. He became a large-scale tobacco planter and landowner and held numerous public offices. By his wife Ann Constable, he fathered at least ten children. Their son Richard (II) (1647–1714) married Letitia Corbin (or Lettice Corbyn); they had five sons and a daughter. The eldest, Richard (III), became a London merchant, but his three children returned to Virginia. Philip went to Maryland and left many descendants there. Francis died a bachelor. The daughter married William H. Fitzhugh of Ravenwood, and her descendants married back into the Lee family (hence Fitzhugh Lee [1835–1905], nephew of Robert E. Lee.)

But the branches of the Lee family most famous in history are those established by Thomas and Henry, the fourth and fifth sons. The genealogical table shows, in abbreviated form, the relationships of the various Lees who figured in the Revolution. "Light-Horse Harry" Lee's marriage to his cousin Matilda Lee, heiress of Stratford,

Lee Family of Virginia. THE GALE GROUP.

connected the two branches of the family. Ironically, once the Leesylvania branch inherited the home of the Stratford branch, the former proceeded to lose it through the poor business sense of "Light-Horse Harry"; his failure to manage the estate properly, plus his unfortunate land speculations, led to abandonment of Stratford in 1811—a few years after Robert E. Lee was born there—and its sale in 1828 for a paltry eleven thousand dollars.

The two branches of the Lee family also were connected through the Ludwells of Green Spring. A family of German origin that settled in England, the Ludwells had been established for three generations in America before the third Philip Ludwell died in 1767 and the male line became extinct. The first Philip in America was governor of the Carolinas (1691–1693); he later settled in Virginia and married the widow of Governor Sir William Berkeley (d. 1677). Their son Philip (II) inherited the plantation where the battle of Green Spring was fought between Lafayette and Cornwallis in July 1781. Philip (III) married a Grimes and so did his sister Lucy. The third child of Philip (II), Hannah Ludwell, married Thomas Lee of Stratford.

Now things begin to get more complicated because the Lucy just mentioned had a daughter named Lucy Grymes, who married Henry Lee (II) of Leesylvania. Hence the mothers of the two branches were aunt and niece. Another link through the Ludwells was even more involved: William Lee of the Stratford branch married the daughter and co-heiress of Philip Ludwell III, Hannah Phillippa Ludwell (his mother's niece) and inherited Green Spring. On top of all this, the immigrant founder Richard Lee had served as Governor Berkeley's secretary

William Lee of Stratford worked out the family pedigree in 1771, and Robert E. Lee used this material for his biographical sketch of "Light-Horse Harry" in his edition of the latter's *Memoirs* (1870). The accompanying diagram is based on William Lee's genealogical information with corrections from *Dictionary of American Biography* and Douglas S. Freeman's *R. E. Lee* (4 vols., 1937–1940). The Lees were connected through the Carter family and the Randolph family with many other distinguished Americans.

revised by Frank E. Grizzard Jr.

LEE'S LEGION. Lee's Legion had its origins in Washington's recommendations to Congress of 11 October 1780. Washington wrote, "Tho' in general I dislike independent corps, I think a partizan corps with an army useful in many respects," referring to such duties as reconnaissance, skirmishing with enemy light forces, and general camp and march security (Fitzpatrick, *Writings*, 20, p. 163). He went on to recommend the creation of two

of these highly mobile, mixed units of infantry and cavalry and nominated Charles Armand and Henry Lee to command them. On 21 October, Congress accepted Washington's recommendations. It promoted Major Henry ("Light-Horse Harry") Lee of Virginia to lieutenant colonel and transformed his corps of four mounted troops of partisan light dragoons into a legion of six fifty-man troops, three mounted and three dismounted (the equivalent of light infantry). Lee carefully selected his officers and men from other units of the army, "the officers with reference only to their talents . . . , and the men by a proportionable selection from the troops of each State enlisted for three years or for the war" (Lee, *Memoirs*, pp. 17, 29–30). When the unit reported to Major General Nathanael Greene on 8 January 1781 at the southern army's camp on the Peedee River in South Carolina, the Legion numbered 100 horse and 180 foot.

Lee and his green-coated Legion rendered important service in the South. They earned accolades from their contemporaries (and respect from their opponents) for their ability to move fast and hit hard, and gave Greene a disciplined, well-equipped, and well-mounted force that could operate either with the main army or with the less well-endowed militias of Andrew Pickens, Thomas Sumter, and Francis Marion. Historians have also been impressed. According to the editors of the Greene papers, "Lee performed brilliantly in the South. As Nathanael Greene's most trusted subordinate, he enjoyed great autonomy" (Showman, *Greene Papers*, 6, p. 431). The structure and personnel of the Legion enabled Lee to use his talent as a leader of light troops to best effect. The Legion was disbanded at Winchester, Virginia, on 15 November 1783.

Mark M. Boatner

LEGION. In the eighteenth century (and later), a "legion" was a unit composed of infantry and mounted troops. Two were Henry Lee's Legion and Tarleton's British Legion. Other legions of the American army were led by Pulaski and Tuffin in succession and by William Washington. Benedict Arnold's Tory organization was called the American Legion, and this name was applied also to the legions of Tuffin, Pulaski, and Henry Lee.

Mark M. Boatner

L'ENFANT, PIERRE-CHARLES. (1754–1825). Continental officer, architect. France. Son of a painter at the Gobelins factory, he was born in Paris and educated as an architect and engineer. Beginning in 1771 he was a student at the Royal Academy of Painting and Sculpture, where he learned to draw battle scenes and fortifications. To protect him on his Atlantic passage, he was given a commission as lieutenant of colonial troops before signing a contract with Silas Deane that guaranteed him the rank of engineer lieutenant in the American army with rank from 1 December 1776. He went to America with Coudray in September 1777. L'Enfant's contract with Deane was honored by Congress, and he spent the winter at Valley Forge. On 18 February 1778 he was promoted to captain of engineers and attached to the staff of Steuben.

Since stagnation of the war in the North left little prospect of action, L'Enfant arranged a transfer to the South, where he served in the light infantry under John Laurens. Now acting as an infantry officer, he received a serious gunshot wound while leading the advance of the American column against Savannah on 9 October 1779. Left on the field, he was recovered by friendly forces and taken to Charleston for a slow recuperation. He was bedridden as late as January 1780 and at the time of the British landing was still using a crutch. Replacing an American major who was more severely wounded than he, L'Enfant took an active part in the defense of the city. He became a prisoner when the garrison surrendered on 12 May 1780 and was not released until January 1782, when Rochambeau intervened to have him exchanged for Captain Van Eyden.

He returned to Philadelphia and on 2 May 1783 was breveted major. A few weeks later he received a French pension of three hundred livres and was promoted to captain in the French provincial forces. During July and August he accompanied Steuben on his unsuccessful mission to Canada. On 10 June 1783 he transmitted to the Society of the Cincinnati his design for a medal. He left for France in October bearing letters from Washington regarding the Order of the Cincinnati along with his designs for the diploma and insignia. He left American service on 1 January 1784 but settled in Philadelphia.

L'Enfant did several portraits of Washington, designed pavilions and other trappings for military and civic pageants around the city of New York, added adornments to St. Paul's Chapel (1786–1788), and converted the old New York City Hall into Federal Hall when the government was temporarily established in that city. In 1791 he submitted the basic concept for the capital city of Washington. In such a complex undertaking, L'Enfant soon found himself embroiled in continuous controversies. On 28 February 1792 he resigned, writing to Washington:

From a full conviction of the impossibility to effect the intended establishment, while struggling under various difficulties that continually must occur, and which would as certainly prove insurmountable, to late to remedy their ill-consequences; at the same time fearing that by my continuance, you might indulge a fallacious hope of success, by which in the end you must have been deceived, under these impressions do I renounce all concern in it. (Caemmerer, *Life*, p. 213)

Yet he did not leave before he had established the city's fundamental character. In 1792 he was engaged to lay out the city of Paterson, New Jersey, but the next year he was dismissed because of a lack of funds for the project. In 1794 the federal government gave him the job of rebuilding Fort Mifflin, below Philadelphia, and some portions were executed, but again lack of finances did not allow him to complete his plan and little work was done under his supervision.

L'Enfant spent most of his time from 1800 to 1810 trying to obtain payment for his plan of Washington. Although Congress voted him two grants of money and offered him in 1812 the post of engineering professor at West Point, L'Enfant declared himself not suited to teaching. In 1814 he was engaged to undertake a reconstruction of Fort Washington but failed to produce a plan. After that he became a houseguest of the Digges family in Prince George's County, Maryland, until his death. He was buried at the foot of a tree on the Digges estate. In 1909 his body was moved from its grave and reburied at Arlington, Virginia.

LENUD'S FERRY, SOUTH CAROLINA.

6 May 1780. After the American defeat at Monck's Corner, South Carolina, on 14 April, the survivors of this action and some fresh cavalry troops from the North gathered at several places on the Santee River. On 5 May Colonel Anthony Walton White crossed the river at Dupui's Ferry and the next morning captured an officer and seventeen light infantrymen at a plantation belonging to the Loyalist Colonel Elias Ball, four miles from Awendaw Bridge. White then headed for Lenud's (often spelled "Lenew's" or "Laneau's") Ferry on the Santee where Colonel Abraham Buford was located with 350 men of his Third Virginia Continental Regiment and a small body of Colonel William Washington's horse. Buford had reached this point in his march to reinforce Charleston, forty miles away, when he learned of the town's surrender and was ordered by Huger to withdraw to Hillsborough, North Carolina.

That same day Tarleton, by coincidence, was moving north with 150 dragoons to reconnoiter Lenud's Ferry. Encountering Colonel Ball, who provided intelligence of the earlier action, he pushed forward with great expedition and about 3 P.M. attacked White at the ferry as he was about to join Buford. There was no contest: White's troopers were surprised by the sudden charge, and Buford's men were standing around the ferry unprepared for action. Tarleton reported 5 American officers and 36 men killed or wounded and 7 officers and 60 dragoons captured. He also claims to have taken all the rebel horses. The British prisoners, who were being ferried across the Santee, freed themselves by pushing their guards overboard in the midst of the action. Tarleton lost 2 men and 4 horses, but an additional 20 horses perished from fatigue on their return to camp. Colonels White and Washington and Major John

L'Epine, Augustin François

Jameson joined those who escaped by swimming the river; a number were drowned in the attempt. Buford met Tarleton next at Waxhaws on 29 May.

L'EPINE, AUGUSTIN FRANÇOIS.

(?–1782?). (also known as des Epiniers or des Epinieres). French volunteer. A nephew of Beaumarchais, he claimed to be a captain in the French service and received a commission from Silas Deane on 5 December 1776. He traveled from Nantes on the *Mercure* with his commission and a stock of his uncle's works for sale in America. Congress hesitatingly approved his commission as a captain on 21 August 1777, and he was sent to Washington's army. He served with Lafayette in Albany during preparations for the aborted Canadian expedition.

Congress promoted him to major on 2 February 1778 "in consideration of the services rendered by his uncle" and his own effectiveness. Laurens wrote to Duponceau that this promotion may have been too hasty. He was aide-de-camp to de Kalb and then to Steuben. On 4 December 1778, Congress granted him a leave of absence for six months to Europe, but since he was unable to leave, he requested and received an extension on 24 September 1779. He was caught in the indecision of whether to choose his military career or his business, because Beaumarchais's American agent Francy had gone to France. Despite Steuben's better judgment, he promised L'Epine in the spring of 1780 that he would save his place as aide.

Unsuccessful in his commercial mission and military career, he appears to have returned to France, to the displeasure of his uncle and the scorn of friends. It appears that after several attempts at suicide, L'Epine finally succeeded.

LESLIE, ALEXANDER. (c. 1740–1794).

British general. A descendant of the earl of Leven, Leslie was lieutenant colonel of the Sixty-fourth Foot at Halifax before being sent to Boston. He commanded the raid intended to destroy a reported artillery depot at Salem, Massachusetts, on 26 February 1775. Confronted by a raised drawbridge, growing numbers of armed militia, and abusive crowds, Leslie could have anticipated Lexington then and there. However, he avoided an armed clash with admirable coolness and restraint, eventually accepting a compromise which allowed him to cross the bridge and immediately march back again without doing any damage. The only casualty was a local militiaman who, having smashed in the last boat on the river, had bared his breast to the troops and received a slight bayonet wound. Leslie was a brigadier general of light infantry at Long Island and Kips Bay and was in command of the British outposts in the fighting at Harlem Heights—the skirmish that significantly bolstered American morale—on 16 September 1776. At White Plains he found a ford across the Bronx River and led two regiments in an unsuccessful bayonet attack on Chatterton's Hill. At Maidenhead on 3 January 1777, his brigade failed to detect Washington's night march on Princeton by a route about three miles away.

In 1780, now a major general, Leslie was ordered by Clinton to the Chesapeake to meet, or at least act as a diversion in favor of, Cornwallis's thrust north into Virginia. Landing at Portsmouth, he received orders from Rawdon, the acting commander while Cornwallis was ill with fever, to bring his twenty-five hundred men to Charleston. Landing there on 16 December, he did not reach Camden until 4 January 1781; his slowness indirectly delayed Cornwallis's reinforcements for Tarleton, so contributing to the Cowpens debacle. Five days later he received orders to join Cornwallis at Winnsboro for the

invasion of North Carolina; he arrived just as Tarleton appeared with the survivors of Cowpens. On 1 February, Leslie and O'Hara were almost drowned at Cowan's Ford on the Catawba when the floodwaters swept their horses downstream. Leslie was in command of the British right at the beginning of the attack at Guilford Courthouse on 15 March and joined O'Hara for the final phase. In July, his health now deteriorating, Leslie was sent back to Charleston and thence to New York. Instead of sending him back on 28 August, as intended, Clinton kept him at headquarters, where he took part in the councils of war during the Yorktown campaign. He finally sailed for Charleston in October to take command in the southern theater after Cornwallis's surrender. Arriving at Charleston on 8 November, he quickly saw that he must limit his operations to hanging onto the city. Exercising the discretion given him by Clinton, he had the Savannah garrison evacuated by sea on 11 July 1782. He left Charleston on 14 December 1782.

Leslie's service was solid rather than distinguished. He was courageous and persistent, and his refusal to be drawn into combat at Salem was commendable. On the other hand, his carelessness at Maidenhead and his slow march to Camden both had serious consequences for the British cause.

LEWIS, ANDREW. (1720–1781). Continental general. Ireland and Virginia. Born in County Donegal, Ireland, on 9 October 1720, Lewis and his family were among the first white settlers of Augusta County, Virginia, in 1732. He became a lieutenant of the Augusta County militia and a justice of the peace, and he built up a considerable fortune. In 1754 he was with General George Washington at the surrender of Fort Necessity. The next year he was part of Braddock's expedition against Fort Duquesne during the French and Indian Wars, but Lewis was not present at Braddock's defeat. He then commanded the Sandy Creek expedition against the Indians in 1756, during which most of his unit deserted. As part of Forbes's expedition to Fort Duquesne in 1758 he was captured on or about 21 September 1758 with Major

(later Major General) James Grant. Upon his capture he was sent to Montreal. After his release, Lewis participated in important negotiations with the Indians, including the Treaty of Fort Stanwix, which was signed in 1768.

In 1774 Lewis commanded 1,000 men in Dunmore's War and won the decisive victory at Point Pleasant on 10 October of that year. His brother, Charles, was killed in this battle. Lewis was appointed a brigadier general of the Continental army on 1 March 1776. He took command of the forces at Williamsburg, Virginia, and at Gwynn Island on 8–10 July he commanded the action that drove Loyalist Governor John Dunmore out of Virginia. When the promotion list of 19 February 1777 was announced, Lewis thought he deserved an appointment as major general, and resigned on 15 April 1777 for being passed over. He continued to serve in the Virginia militia, however, and also served on Thomas Jefferson's executive council until 26 September 1781, when he died.

Andrew's brother, Thomas (1718–1790), was in the House of Burgesses and in the state conventions that ratified the federal Constitution. Another brother, William (1724–1811), served with him in the colonial wars, rose from lieutenant of the First Virginia Regiment (2 October 1775) to major of the Tenth Virginia Regiment (12 May 1779). William was captured on 12 May 1780 at Charleston, South Carolina, and was a prisoner when the war ended. Andrew's third brother, Charles, was killed under Andrew's command in 1774.

LEWIS, FRANCIS. (1713–1802). Signer. Wales and New York. Born 21 March 1713 in Llandaff, Wales, Francis Lewis was orphaned while very young and raised by relatives. Among those responsible for his upbringing was an uncle who was the dean of St. Paul's in London. Lewis attended Westminster School before going into business in London. In 1738 he came to America and established mercantile houses in New York and Philadelphia. He made several trading voyages to Russia, Europe, and Africa, was twice shipwrecked. Nonetheless, he saw his affairs prosper. In 1756, when he was voluntarily serving as aide-de-camp and clothing contractor for Colonel James Mercer's troops at Oswego, he was captured by Indians and sent to Montreal and then to France. He was then included in a prisoner exchange,

and received a land grant from the British Crown as compensation for his services.

In 1765, a rich man, he retired to Long Island, New York. In 1771, he returned briefly to London to establish his son in business, then went back to Long Island to devote himself to public affairs. He became increasingly involved with Revolutionary activities, and in 1774 was sent to the Provincial Congress. In the Continental Congress that ran from May 1775 to November 1779, he signed the Declaration of Independence. In the fall of 1776, the British destroyed his Long Island house and imprisoned his wife. She was finally exchanged in return for two female Loyalist prisoners, on the personal order of General George Washington, but her health was ruined by her ordeal. She died in 1779. In Congress, Lewis was active on the Marine, Commercial, and Secret committees. From 1779 to 1781 he was one of the Board of Admiralty's commissioners. He died on 31 December 1802 in New York City.

LEWIS, MORGAN. (1754–1844). Continental officer. New York. Born in New York City on 16 October 1754, Morgan Lewis was the son of Francis Lewis. After graduating from Princeton in 1773, he studied law with John Jay, and joined the army the summer of 1775. He was captain of a New York militia company at Cambridge, and was promoted to major when his unit became the Second New York Continentals in 1775. The following year he was named colonel and deputy quartermaster general of the Northern army. He was General Horatio Gates's chief of staff at Ticonderoga and Saratoga (19 September 1777), where he accepted the British surrender. He led the advance at Klock's Field on 19 October 1780.

After the war, Lewis returned to the law, passing the bar in 1783. He was elected to the New York Assembly in 1789, the same year that his volunteer militia company escorted the newly elected George Washington to his presidential inauguration. Lewis's marriage in 1779 to Robert R. Livingston's daughter, Gertrude, allied him with the Antifederalist and Republican parties, and he had a successful political career that led to his being elected governor of New York in 1804, beating Aaron Burr. Unable to cope with New York power politics, however, he was soundly defeated by his former supporters in a reelection bid in 1807. During the War of 1812 he served as

brigadier general and quartermaster general of the army. He was promoted to major general on 2 March 1813 and served on the Niagara frontier. From 1813 to 1815 he commanded the New York City area. He died on 7 April 1844, in New York City.

LEXINGTON AND CONCORD.

19 April 1775. Because opposition to increased imperial control was turning more violent in Boston, culminating in the Boston Tea Party (16 December 1773), the imperial government decided to reorganize the government of the Province of Massachusetts Bay. As part of a series of measures—the so-called Coercive, or Intolerable, Acts—it closed the port of Boston until restitution was made for the destruction of the East India Company's tea (the Boston Port Act of 31 March 1774); revoked several provisions of the Massachusetts Charter of 1692 to give the royal governor greater power (the Massachusetts Government Act of 20 May 1774); and appointed Major General Thomas Gage, commander in chief of the British army in North America, as royal governor to enforce the acts. Gage arrived at Boston in May 1774 and quickly moved to Salem, where he had been instructed to establish the new seat of royal government in an effort to diminish the importance of Boston and punish the commercial activity of its radical merchants. Although assistance from other colonies kept the people of Boston supplied with foodstuffs and other essentials, normal business was at a standstill after 1 June 1774, when the Port Act went into effect.

PRELIMINARY RESPONSES

Opponents of increased imperial control responded in a variety of ways. They reminded supporters of the crown that shutting down the port of Boston hurt them too, and agitated for a return to the regular channels of imperial commerce. As Gage tried to put in place the restructured government, activists across Massachusetts (especially in Worcester and Berkshire Counties) took steps to keep government in the hands of local leaders who opposed the new measures, and out of the hands of those leaders willing to support Gage.

When the governor tried to terminate the meeting of the Assembly on 17 June, its delegates continued to meet illegally. They called for an intercolonial congress to

concert resistance, to meet at Philadelphia in early September, and named five of their number as delegates. When Gage called a new Assembly for October, the delegates privately met and adjourned to Concord, where they resolved themselves into the Massachusetts Provincial Congress. This was an extra-legal body that effectively governed all of Massachusetts outside Boston. Gage moved back to Boston, in large part to keep closer tabs on his opponents, and abandoned his attempts to enforce the Intolerable Acts outside that city itself.

Over the winter of 1774–1775, the Provincial Congress and its executive arm, the Committee of Safety, assembled the requisite means to resist the imperial government by force of arms, if that became necessary. Because many militia units remained under the command of men who might be reluctant to fight British troops, it created a parallel military structure led by committed activists, and directed them to organize and drill units of volunteers (the minutemen) that would be ready to respond literally at a moment's notice to British incursions. Local activists, with or without the endorsement of the Provincial Congress, endeavored to take control of military stores at Boston and Charlestown, encouraged the seizure of stores in Rhode Island (at Fort Island and New Castle), and arranged to accumulate stores at Concord and Worcester. A network of Committees of Correspondence connected local activists with the Provincial Congress, which itself communicated regularly with activists in other colonies in an effort to ensure that Massachusetts would not be left alone to face British anger. All in all, however, the effort to terrorize those who wanted to remain loyal to the Crown was successful.

GOVERNOR GAGE REACTS

In response to the rising likelihood of armed rebellion, Gage increased the Boston garrison to about 3,500 soldiers and fortified Boston Neck. British troops managed to confiscate gunpowder and firearms from militia depots at Charlestown and Cambridge, but these efforts served mainly to confirm the worst fears of the activists, who responded to the march on Cambridge on 1 September 1774 with the so-called Powder Alarm, a veritable dress rehearsal of their minuteman-based military system. When a reluctant Gage tried again to confiscate military supplies (several old cannon said to be stored at Salem) on 26 February 1775, the expedition failed in ways that increased the confidence of activists that they could mount a successful armed resistance.

Imperial officials, determined to bring Boston and the rest of the province to heel, decided to increase the Boston garrison to 10,000 men, and proposed more coercive acts. Most significantly, they refused to believe they faced a serious rebellion in America. William Legge, who was

the second earl of Dartmouth and secretary of state for the American colonies, told Gage on 27 January 1775 that “the outrages which have been committed were . . . merely the act of a tumultuous rabble, without the appearance of general concert. . . that could render them formidable to a regular force led forth in support of law and government.” To Gage’s claim that it would take 20,000 men to reconquer New England, Dartmouth replied “that such a force cannot be collected without augmenting our army in general to a war-establishment” and asserted that “I am unwilling to believe that matters are as yet come to that issue.” With only 12,000 regular infantry available in all of Britain, an aggressive optimism was the imperial government’s only real option. Some officials in London even suggested that Gage lacked the decisiveness and resolve to deal with the situation.

For several weeks, Gage had been planning an expedition to seize the military supplies at Concord, where his well-organized system of spies and informers told him the activists had gathered an important cache of munitions. He had already sent small groups of regulars marching through the countryside as far as Watertown on several occasions, in part to improve their physical condition and in part to accustom everyone to the idea that it was normal for them to do so. He chose Concord, twenty miles from Boston, as his target because, although it was more than twice as far away as Watertown, it was closer than the other cache at Worcester. He hoped that Concord’s proximity would make render its stores more vulnerable to seizure.

Aware that such action would further enflame the activists, Gage was in a difficult position. He was being pressured to take strong action, but lacked the military means at hand to make that action decisive. London would hold him responsible if he failed to act, and blame him if his actions exacerbated the situation. On 14 April 1775, he received instructions from London which strongly suggested that he should arrest the leaders of the Massachusetts Provincial Congress. The adjournment of that body the next day removed the possibility of seizing the activist leaders in one swoop, but, knowing London’s desires, Gage decided on a gamble: he hoped that a quick raid on Concord might stun the activists and deprive them of some of their means to fight. His choice was the best military option among an increasingly unpalatable set of alternatives.

THE STAGE IS SET

Gage set his plan in motion on 15 April, a Saturday, when he ordered the “flank companies” (grenadiers and light infantry) of nine of the ten complete regiments of foot in the Boston garrison (the Fourth, Fifth, Tenth, Twenty-third, Thirty-eighth, Forty-third, Forty-seventh, Fifty-second, and Fifty-ninth Regiments) to be relieved from their normal duties, allegedly to learn new drill formations. To these eighteen companies he added the grenadiers of

the Eighteenth Regiment, and two companies of marines. Thus he fielded a total of nearly 900 men in twenty-one companies, about forty men in each company. He named Lieutenant Colonel Francis Smith of the Tenth Regiment to command the expedition. Although an older, heavy-set man, overweight and unfit for arduous service, Smith was “known to be an officer of prudence, moderation, and maturity” (Fischer, p. 85). Marine Major John Pitcairn was named second-in-command. Pitcairn was “a seasoned veteran and general favorite, popular with Whigs as well as Tories” (French, *Concord*, p. 71), the type of man Gage wanted with Smith on a mission that would call for a cool head and good judgment. Smith put Pitcairn in charge of the six light infantry companies that comprised his advance guard. It was a combination of commander and soldiers who had never worked together before, a circumstance whose implications would become clear on Lexington green. Gage also called upon the skills of Hugh, Earl Percy, who was perhaps the best officer in the garrison. Percy was ordered to lead any reserves that might be needed to assist Smith’s forces. The troops themselves were not told where they were going, and elaborate measures were prescribed to assemble them after dark on 18 April.

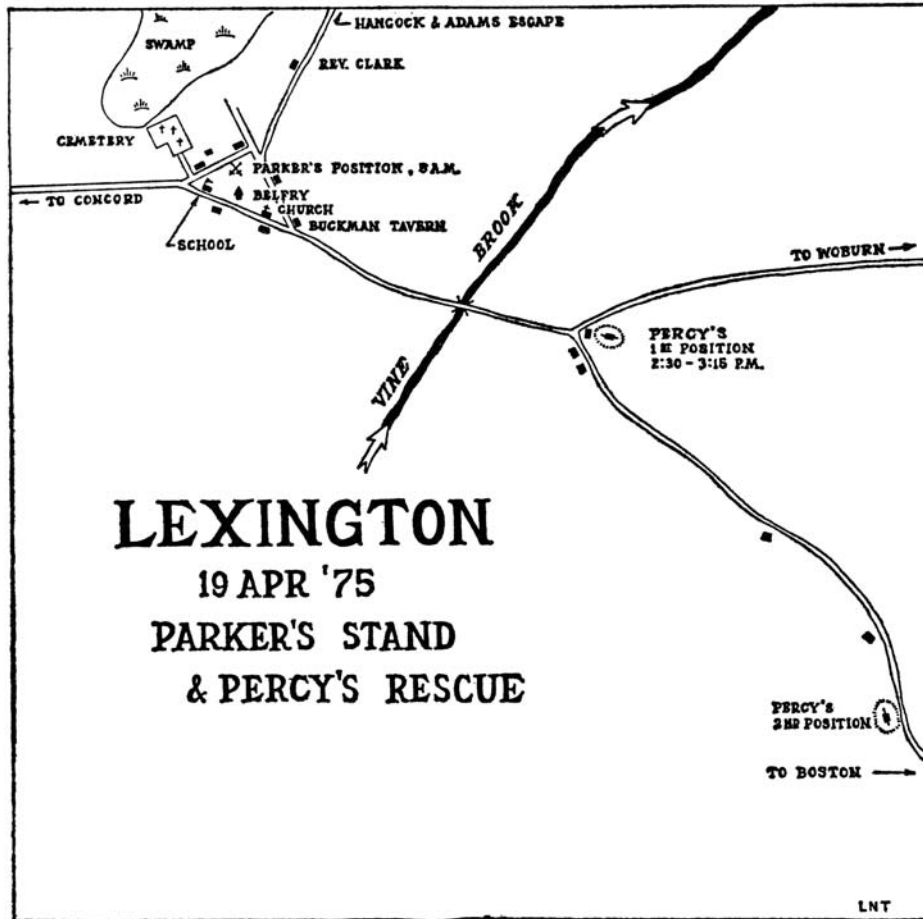

Gage knew it was impossible to conceal preparations for an expedition from the various bands of townsmen organized by the activists to patrol the city and watch for suspicious troop activity. At about midnight on 15–16 April, for instance, the activists knew that boats which had earlier been gathered from naval vessels in the harbor for repair on shore had been returned to their ships. However, Gage did try to keep secret the exact target of the expedition by limiting knowledge of the plan to only a few officers. According to one tradition, Gage did not even tell Smith until the last minute that his objective was Concord. Ironically, these efforts contributed to delaying the assembly of the expedition, and ultimately proved futile. By the evening of 18 April, the Boston activists had further indications of the British move, and where it was headed. A soldier told the townsman with whom he was billeted that the troops were about to march. Another soldier was left word to fall out at 8 P.M. on Boston Common with a day’s provisions and thirty-six rounds of ammunition. Several people saw another soldier in field dress in a store. After dark on the 18th, just after being told of the expedition by Gage, Percy overheard loiterers on the Common talking about a suspected British attempt to seize the stores at Concord. Gage was shocked when Percy reported this information back to him a few minutes later, since he claimed to have told only one person other than Percy that Smith’s objective was Concord. Doctor Joseph Warren, a principal leader of the activists, may even have had the target confirmed by a highly placed spy, Gage’s own American-born wife, Margaret Kemble Gage, although this allegation remains controversial among historians.

Although Gage knew his plan was compromised, he believed it was too late to revoke Smith’s orders. He understood that the activists would quickly alert the countryside of British movements, and by noon on 18 April he had dispatched a group of twenty officers and sergeants to patrol the roads ahead of the expedition to catch rebel couriers and thus limit the speed with which the news was spread. He also understood that Smith might encounter armed resistance, and he did not underestimate the strength and power it might demonstrate. His assignment of Percy to provide support shows that he knew Smith might need help later in the day. According to Fischer, “his mistake in judgment was not about the probability of resistance, or the motives, tactics, and fighting skills of the New England militia, but about the quality of leadership among them” (p. 86). His written orders to Smith—the document that initiated the train of events that turned the occasionally violent resistance against increased imperial control into open armed rebellion—read as follows:

A Quantity of Ammunition and Provision together with a Number of Cannon and small Arms having been collected at Concord for the avowed Purpose of asserting a Rebellion against His Majesty’s Government, You will march with the Corps of Grenadiers and Light Infantry put under your Command with the utmost expedition and secrecy to Concord, where you will seize and destroy all the Artillery and Ammunition, provisions, Tents, Small Arms, and all military stores whatever (*Paul Revere’s Ride*, p. 85).

PAUL REVERE’S RIDE

On Sunday, 16 April, Dr. Joseph Warren sent Paul Revere to warn John Hancock and Samuel Adams in Lexington that Gage might be sending troops to arrest them. Returning from this mission, Revere arranged with Colonel William Conant and other activist leaders in Charlestown that he would flash the “one if by land, two if by sea” signal from Boston to alert them of British intentions, as a back-up in case no courier was able to escape the town. At about 10 P.M. on 18 April, Warren sent for William Dawes and Paul Revere, and instructed them to take the latest information—that the British were going to move the next day—to Hancock and Adams. Warren first dispatched Dawes, a Boston tanner who had proven to be a resourceful courier on previous occasions, by way of Boston Neck, where Dawes managed to talk his way through the British lines. When Revere got his orders, he arranged with two friends, Captain John Pulling and Robert Newman (the sexton), to show the lantern signal from the steeple of Christ Church, commonly called Old North Church, the tallest point in Boston’s North End. Joshua Bentley and Thomas Richardson then rowed Revere across the Charles River to Charlestown just as

THE GALE GROUP.

the moon was rising. There, Revere checked in with Conant, secured a horse (according to tradition, Deacon John Larkin's mare, Brown Beauty, a fine New England saddlehorse), and pounded across Charlestown Neck at about 11 P.M. It was now bright moonlight. Revere had been warned in Charlestown that British mounted patrols were on the roads ahead.

Cantering west down the Lexington road, Revere saw two mounted men, whom he quickly determined were British officers. Galloping north to escape pursuit, he turned west again through Mystic (now Medford) and Menotomy, a round-about route that, unbeknown to Revere, allowed him to escape the roving British patrols. After alerting the captain of the minutemen in Medford, Revere spread the alarm along the Lexington road. He arrived about midnight at the house of the Reverend Jonas Clark in Lexington, where Hancock and Adams had been guests for almost a month while the Massachusetts Provincial Congress met in Concord. Revere was surprised to find the house guarded. Earlier in the evening, Solomon Brown had returned to

Lexington from Boston and told William Munroe, orderly sergeant of the Lexington minutemen, of seeing nine armed British officers on the road. Munroe turned out eight of his men to stand guard on Clark's house, and Hancock sent Brown with two others to alert Concord.

Dawes reached Lexington about half an hour after Revere, having covered a route almost four miles longer. Revere and Dawes continued on to Concord, and between 1 and 2 A.M. were halfway there when they ran into a British patrol of eight officers and several men. Revere was captured after attempting to get away, and was held in custody with Solomon Brown, his two men, and a fourth individual who turned out to be an innocent peddler—all of whom had been arrested previously. Dawes escaped back to Lexington. Dr. Samuel Prescott, who had joined Revere and Dawes as they left Lexington, escaped to alert Concord. Revere told the British he had alerted the countryside and that 500 militiamen would soon be in Lexington. He also fabricated the story that Smith's column had been delayed. Major Edward Mitchel, who commanded the British patrol, was taken in by Revere's

yarn. The prisoners were held until the patrol neared Lexington and heard the alarm guns.

Mitchel's patrol had questioned the Lexington prisoners about Hancock and Adams, and may have had discretionary orders to capture these two leaders as well. If so, they abandoned the plan when they realized the countryside was alerted and that Smith's column was delayed. The British released the prisoners, after taking their horses, and moved to make contact with Smith. When Hancock and Adams got Revere's first warning, Hancock had insisted he would fall out with the Lexington militia and fight, but when Revere returned to Clark's house with news of the British patrol, Hancock was finally persuaded to escape, instead. Revere accompanied Hancock and Adams a few miles on the road to Woburn, from whence they would leave later in the day for Philadelphia, where the Second Continental Congress was to meet in May. Revere got back to Lexington at sunrise to witness the encounter between the Lexington militiamen and the British column.

SMITH'S ADVANCE

The grenadier and light infantry companies formed on Boston Common at dusk on 18 April. In the pitch darkness before moonrise (9:30 P.M.), they marched with utmost caution to a point near the west side of modern Park Square. Here they were met by the ships' boats and rowed, with muffled oars, across the Charles River to Lechmere Point. The distance by water—the "sea" of Henry Wadsworth Longfellow's poem about Paul Revere's ride—was at least a mile and a quarter. The British landed at what was then Phips's Farm, later Lechmere Farm and Point, now East Cambridge (the landscape of Revolutionary landmarks in Boston's Back Bay has been obliterated by filling and construction). Between 11 P.M. and midnight the troops waded ashore to wait, cold and miserable, for about two hours while extra provisions were landed and distributed. Since they were already carrying rations, most of the troops threw away those for which they had been delayed for two vital hours. It was between 1 and 2 A.M. when Smith finally got his column marching, starting them off through a waist deep ford to avoid the noise of crossing a plank bridge.

By the time he reached Menotomy, about 3 A.M., Smith had ample evidence that his advance was expected. According to Gage's report, Smith called his officers together during a halt and issued orders not to fire unless fired upon. Soon thereafter, apparently dissatisfied with the speed of his column, Smith ordered Pitcairn ahead with the six light companies of the advance guard to secure the bridges at Concord. Then, having additional evidence that the countryside was alarmed, he sent word of this development back to Gage and requested reinforcements.

As it turned out, his call for help was the soundest tactical decision he made all day.

Leading Pitcairn's advance guard was a smaller body known in modern military parlance as a "point." These men moved as stealthily as possible, keeping to the sides of the road and taking cover when they spotted anything suspicious. In this manner they soon scooped up the scouts sent out from Lexington to bring word of their approach. They were waiting in the shadows to grab the fourth, Thaddeus Brown, when Brown's horse detected them and refused to be ridden into the trap. Brown finally read his horse's warning, turned, and clattered into Lexington at about 4:30 A.M. to tell Captain John Parker that the British were half a mile away. Pitcairn, meanwhile, had made contact with Mitchel's patrol and had been told Revere's story about the entire countryside being alerted (which was true) and the presence of 500 militiamen in Lexington (which was not). Pitcairn slowed his advance to let Smith's column close up on him a little more.

LEXINGTON

Captain John Parker, a veteran of the final French and Indian war, had turned out his militia company, some 130 men, on Lexington green at about midnight. There, everyone consulted together about what to do when the British arrived. According to Parker's affidavit on 25 April, they "concluded not to be discovered, nor meddle, or make with said regular troops, if they should approach, unless they should insult or molest us." They were not going to hide, but would stand as free men in passive (if armed) protest as the British passed by. Parker's choice of verbs indicate that the militiamen had decided not to try to stop the British, and to engage in armed resistance only if they were attacked. Their decision paralleled the response other militia companies had displayed on prior occasions when the British had marched through the countryside. After about an hour, with that decision made and the report of one scout that there was no evidence of the British on the road to Cambridge, Parker dismissed his men with orders to reassemble at the beating of a drum. Many militiamen repaired to Buckman's Tavern, on the east side of the green, to ward off the effects of a cold night in the company of their fellows and, probably, with the application of some alcohol.

At about 4:30 A.M., when Thaddeus Brown arrived with news that the British column was little over a mile away from Lexington, Parker directed his drummer, William Diamond, to beat the long roll of the call to arms. Some militiamen found that they needed more ammunition and went off to the meeting house, where the town's supply of gunpowder was kept, to get more of this essential commodity. In a disposition taken in 1826, Sylvanus Wood (who attended the assembly that night) reported that only thirty-eight men were present. He knew how many were

“Stand Your Ground.” This stone monument on Lexington Green is inscribed with the famous words that Captain John Parker delivered to American minutemen on 19 April 1775: “Stand your ground. Don’t fire unless fired upon. But if they mean to have a war, let it begin here.” © DAVID MUENCH/CORBIS.

assembled because, he said, he had walked from one end to the other of their single line and counted them all. Although more men continued to arrive, there were probably no more than sixty or seventy men assembled in two ranks on the north side of Lexington’s triangular green that morning. Perhaps some militiamen had opposed the company’s decision to stand in the open while the British marched by, or perhaps they had rethought their willingness to do so during the time they spent at Buckman’s. As the company regathered, Parker ordered his men to load their muskets. Even though they had resolved not to fire unless fired upon, the fact that Parker had them load their muskets indicates that he, at least, was pessimistic about their chances of avoiding a fight.

Several horsemen encountered Pitcairn’s advance guard (less than 250 men) at the outskirts of Lexington.

Officers in the van reported to Pitcairn that one of the horsemen had fired on the column. Whether or not that was actually the case, Pitcairn took no chances and immediately ordered his men to load their muskets. Thus, when the British came in sight of Parker’s militiamen at about 5 A.M., just as the sun was beginning to rise, both sides were primed and ready to react with deadly force. As the British came to the edge of the green, Jesse Adair, the marine lieutenant to whom Pitcairn had given command of the van, saw that to take the left fork and march along the southwest side of the green on the road to Concord would leave armed provincials whose intentions were unknown on the right flank as the light infantry companies marched passed. Adair decided that this situation was unacceptable, and directed the three leading light infantry companies to take the right fork, the road to Bedford, that took them

toward the militia. When Pitcairn arrived at the fork a moment later he ordered the rest of the column to the left, and stopped the third of the three companies that had followed Adair. But the two forward companies (the light infantry of the Fourth and Tenth Regiments) marched on, increasing their pace to the quick march. About seventy yards from the militiamen, they deployed from march column into battle line, an evolution that called for men in the rear to run forward to form three parallel lines. Trained to shout and huzza as they ran into position, we may suppose that on this brisk morning, after a miserable night march, the regulars may have put a little more zest than usual into this shouting and huzza-ing. The vigor of their cries is much commented on in American accounts of the day.

As the British companies formed up, Parker ordered his men to stand fast, but some of them started drifting away, preferring to seek shelter and a better firing position, rather than continue to stand in the open. David H. Fischer quotes William Munro as swearing (in 1822) that Parker said: "Stand your ground! Don't fire unless fired upon! But if they want to have a war let it begin here!" Not quite by accident, but also without deliberate intent on either side to start a war, the two bodies of men faced each other in a suspended instant.

Pitcairn and several other mounted officers galloped from the Concord road toward the left (west) flank of the two platoons of the Tenth Regiment, which had formed a battle line. He had two tasks to accomplish. First, he had to re-establish control over the two companies Adair had placed opposite the militiamen. Undoubtedly confident that the light infantrymen would not fire without orders, he faced a much more difficult second task: to induce or compel the militiamen to lay down their arms, and thus defuse the confrontation. Parker saw that, in a matter of moments, the situation would spiral into a deadly standoff his men had no chance of winning, perhaps not even of surviving, if they stayed where they were. He ordered his men to disperse without firing, but some of the militiamen may not have heard Parker's order.

Most of the militiamen were moving away when a single shot was heard or the flash in the firing pan of a musket was seen. Several shots seemed to follow. A mounted British officer (almost certainly not Pitcairn) may have fired his pistol and shouted "Fire!" Hearing or seeing what they believed were shots fired at them, some light infantrymen fired at the militiamen. Then the rest of the two companies delivered a volley at Parker's dispersing men, at a range of between sixty and seventy yards. They must have fired high, however, for the volley inflicted no casualties. They reloaded by rote, as they had been trained to do, and fired again. The second volley killed one militiaman and wounded others, including Jonas Parker (John Parker's cousin). Jonas Parker stood his gun and tried to

reload, but when the British closed in he was bayoneted. Probably not more than eight Americans shot back during this exchange. The firing was over in a matter of minutes, leaving eight Americans dead (only two where the militia company had formed, the rest as they dispersed) and ten wounded. Jonathan Harrington, mortally wounded, died at the doorstep of his own house, steps from the green, as his wife and family looked on. Only one redcoat was hurt, receiving a slight leg wound. Pitcairn's horse had two light wounds.

At roughly the moment the firing ceased, Lieutenant Colonel Smith arrived on the Lexington green with the main column. He was greeted by the sight of soldiers running about under no officer's command, amid clouds of gray gunpowder smoke and the bodies of wounded and dying militiamen. Smith ordered a drummer to beat the call to arms, and the soldiers slowly responded and fell into line. Perhaps within half an hour, they were marching away down the road toward Concord, six miles away. They now knew that all surprise had been lost and that untold numbers of militiamen from surrounding towns were converging on the column.

WHO FIRED FIRST?

Fully aware of the enormous implications of the Lexington fight, the Massachusetts Provincial Congress on 22 April appointed a committee to take depositions from all the participants and spectators they could find. Elbridge Gerry was chairman, and Colonel James Barrett of Concord was a member. The whole purpose of the Lexington depositions was to establish that Parker's men were dispersing when the British fired the first shot—proof, in American eyes, that the British started the war. The committee's report downplayed—indeed concealed—the fact that the Americans had returned fire, to the point where the men of Concord claimed the honor of firing "the shot heard 'round the world." The depositions taken in 1825 were designed to prove that the men of Lexington had fired back.

Ever since the event itself, controversy has swirled around the question of who fired first. The truth may never be known for certain, but it seems likely that neither the men in Parker's line nor the rank and file light infantrymen were guilty. Historian Allen French has found no real evidence that the British fired first. According to him, "If the first shot came from some young or reckless or irresponsible man, it seems right to believe that he was not among the Americans, who for months had been told, even by their ministers, that they were not to fire first" (*Concord*, p. 111).

Pitcairn's account of the affair at Lexington has come down through Ezra Stiles, then a minister in Newport, Rhode Island, and later president of Yale College. An American by the name of John Brown talked with

Pitcairn about the matter while Brown was a prisoner in Boston awaiting exchange. Brown passed Pitcairn's account on to Deputy Governor Darius Sessions of Rhode Island, who relayed it to Stiles.

According to Stiles:

[Pitcairn] does not say that he saw the Colonists fire first. . . . He expressly says he did not see who fired first; and yet believed the Peasants began. His account is this—that riding up to them he ordered them to disperse; which they not doing instantly, he turned about to order his Troops so to draw out as to surround and disarm them. As he turned he saw a Gun in a Peasant's hand from behind a Wall, flash in the pan without going off; and instantly or very soon 2 or 3 Guns went off by which he found his horse wounded and also a man near him wounded. These Guns he did not see, but believing they could not come from his own people, doubted not and so asserted that they came from our people; and that thus they began the Attack. The Impetuosity of the King's Troops were [sic] such that a promiscuous, uncommanded but general Fire took place, which Pitcairn could not prevent; tho' he struck his staff or Sword downwards with all Earnestness as the signal to forbear or cease firing (quoted in Dexter, *Literary Diary*, I, pp. 604–605).

Stiles concluded that although Pitcairn was innocent of firing the first shot himself and innocent of ordering his men to fire, he was deceived as to the origin of the first shots. Pitcairn's official report, unknown to historians until the twentieth century, said specifically that the firing started when a militiaman's musket flashed in the pan, and shots followed from other militiamen who were not on the green.

In 1925, Harold Murdock offered a hypothesis, sometimes still repeated, that Samuel Adams persuaded John Parker to adopt a provocative position on Lexington green that almost guaranteed a fight. Another historian, Arthur Tourtellot, offered support for this Machiavellian interpretation in 1959. Tourtellot cited the Gage papers, brought to the William L. Clements Library in 1930, which contains letters from Dr. Benjamin Church, a member of the Provincial Congress, who was in a traitorous correspondence with the British general. Church's letters suggest that Samuel Adams sought to make martyrs of the men who fell in the Lexington confrontation because support for the Patriot cause was fading. Hearing the British volleys from two miles away, Samuel Adams is reported to have said to Hancock as they continued their escape, "What a glorious morning this is!" Apparently thinking that Hancock mistook his comment for a weather report, Adams added, "I mean for America." A more plausible interpretation comes from David Fischer:

It is possible that one of these first shots was fired deliberately, either from an emotion of the moment, or a cold-blooded intention to create an incident. More likely, there was an accident. . . . Many weapons at Lexington, both British and American, were worn and defective. An accident might well have occurred on either side. If so, it was an accident that had been waiting to happen" (p. 194).

CONCORD

Samuel Prescott had brought the alarm to Concord between 1 and 2 A.M. The town's three companies of militiamen and the alarm company of old men and boys were soon reinforced by a company from Lincoln, bringing to about 150 men the strength of the colonists who turned out under arms. While a patrol went toward Lexington to verify Prescott's report that the British were coming, the others busied themselves concealing or evacuating the military supplies that had not already been removed the preceding day.

The British column approached Concord about 7 A.M. Militiamen who had taken position on a ridge outside the village were flushed by Pitcairn's flank patrols without a shot being fired on either side. Colonel James Barrett, the 64-year-old local militia commander, had been overseeing the removal or concealment of supplies that had been stored on his farm a few miles beyond Concord. When he returned to the center of town, he ordered his men to withdraw across North Bridge to a ridge overlooking the river and to await reinforcements.

Smith sent one light infantry company to secure South Bridge, and sent seven toward North Bridge. Three of those companies were left at or near the bridge while Captain Lawrence Parsons led the other four to search Barrett's Farm, where the British had been correctly informed most of the rebel supplies were kept. Meanwhile, the grenadiers searched in Concord. Since most of the supplies had been evacuated or hidden, the regulars found little at either location. Apart from stealing the Bible from the town meetinghouse and cutting down the liberty pole, the British troops conducted themselves properly at both places.

American forces on the high ground above North Bridge had grown to 300 or 400 men as reinforcements arrived. They could see smoke rising from the village and, although the British had themselves put out fires they had started in the courthouse and in a blacksmith shop, the militiamen suspected the regulars were burning the town. On orders from Barrett and with instructions not to fire first, they loaded their muskets and started moving toward the bridge.

Captain Walter Laurie's light infantry company of the Forty-third Regiment, numbering about thirty-five men, had been apprehensively watching the militia force

Old North Bridge. Concord's Old North Bridge, where colonial minutemen fought British soldiers on 19 April 1775. The reconstructed bridge is now part of Minute Man National Historic Park. © KEVIN FLEMING/CORBIS.

on the hill increase in size. As the Americans advanced to the music of fifes and drums, the light infantry companies of the Fourth and Tenth Regiments dropped back from more advanced positions to join Laurie at the bridge. Laurie, with a total of about 115 men, sent back to Concord for reinforcements. The Americans halted momentarily on the last rise overlooking the "rude bridge that arched the flood," then Major John Buttrick led his minutemen forward against "the flower of the King's army," as the flank companies were known.

The light infantrymen guarding North Bridge had already shown a propensity to fire without orders at Lexington (about which fight the Concord militia knew little at this time), and now three soldiers again fired without orders, followed by a ragged volley from those, crowded together on the bridge, who could bring their muskets to bear. The minutemen advanced steadily and, fifty yards from the bridge, returned fire with such accuracy that it drove the regulars back in disorder. In this three-minute exchange, the British had three killed and eight wounded, and the Americans lost two killed (Isaac Davis, captain of the Acton minuteman company, and one of his men) and three wounded. As the light infantrymen

fled back to the center of Concord town, they passed two companies of grenadiers, led forward personally by Lieutenant Colonel Smith, who was anxious about the safety of Parsons's four companies returning from Barrett's Farm. Smith made no attempt to retake the bridge to cover Parsons' retreat. Nor did the American militiamen, now divided on either side of the Concord River, make any move to stop the British companies from marching past their front. All the British companies were back in Concord from North Bridge by 11:30 A.M. By noon, Smith had his column in motion on the road back to Boston.

When Parsons's four companies recrossed North Bridge, unopposed, they passed a dying British soldier who appeared to have been mutilated. A young militiaman who crossed the bridge alone after the skirmish had, for some reason, struck a seriously wounded British soldier in the head with an ax or hatchet. Although some writers have tried to explain this senseless act by assuming the boy was half-witted, that does not appear to have been the case. This episode was the basis of reports that the Americans were guilty of atrocities. Gage reported that the soldier had been "scalped, his Head much mangled, and his ears cut off" while still alive. Parsons's men brought the story back

to the rest of Smith's command, and they passed it on to Percy's relief column. The spread of this report helps to account for the ruthlessness many redcoats displayed during the retreat.

MERIAM'S CORNER TO LEXINGTON

The British covered the first mile from Concord without difficulty, but at Meriam's Corner they started running a sixteen-mile gauntlet of fire. The militiamen who had fought at North Bridge had moved north and east across fields to this point, where reinforcements from other villages were converging. As the regulars crowded across a narrow bridge over a small stream, they came under fire at a range of less than 150 yards.

Some Americans fought as individuals, sniping from the cover of walls, hedges, trees, and buildings, but many fought in groups under the direction of senior militia officers. Light infantry flank patrols worked hard to keep individuals out of point-blank range, killing a good many snipers who were careless about their rear, and trapping and annihilating small contingents of Americans. However, the regulars, tired and low on ammunition, could not prevent larger groups of militiamen from firing from within 100 yards. After plowing through at least three ambushes, the regulars knew they were in serious trouble. At Fiske Hill, where they tried unsuccessfully to rally, Pitcairn's horse threw its rider and charged into the American lines with the major's pistols still in their saddle holsters. Colonel Smith was wounded in this action.

PERCY TO THE RESCUE

On the evening of the 18th, Gage had alerted thirty-three-year-old Hugh, Earl Percy for a possible mission to reinforce Smith. Before Gage went to bed on the night of 18–19 April he sent orders for Percy's First Brigade to be ready to move at 4 A.M. But the brigade major was not in his quarters when this order was delivered, and his servant forgot to give it to him when he did get home. At 5 A.M., with Percy's men snug in their bunks, Smith's request for reinforcement arrived. An hour later, most of Percy's brigade had been paraded. At 7 A.M. there were inquiries as to why the marines had not shown up, and it was discovered that their orders had been delivered to Major Pitcairn's quarters! After having lost five hours, Percy finally moved out at 9 A.M.

Percy's force numbered about 1,400 men—the battalion companies of the Fourth, Twenty-third, and Forty-seventh Regiments, plus 460 marines organized into ten companies—accompanied by two six-pound cannon. Crossing Boston Neck, the relief column marched through Roxbury and toward Cambridge. The countryside was ominously deserted. At the Charles River bridge they were slowed briefly because the rebels had removed

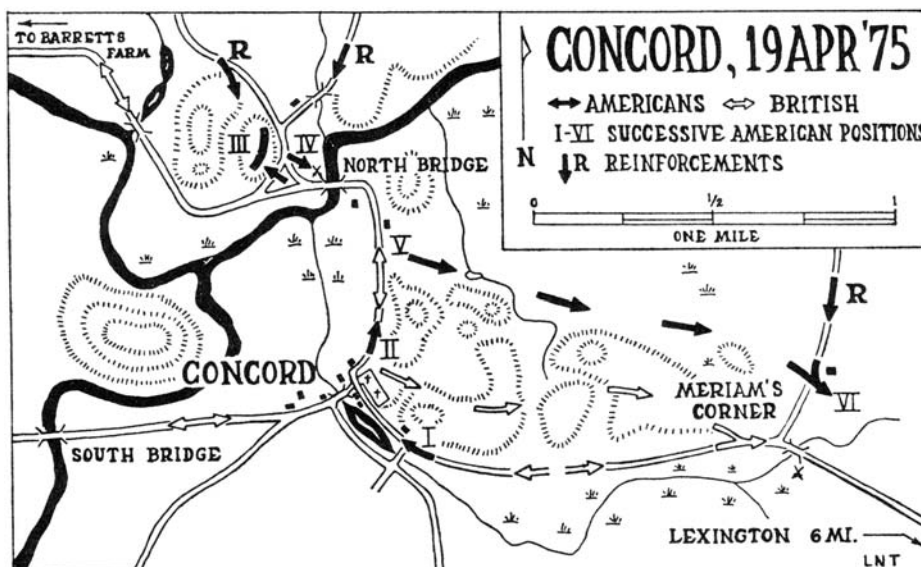

the planks, but since these were neatly stacked on the opposite shore the foot soldiers simply crossed on the stringers and replaced enough of the planking for all but the supply train to continue the march. (The two supply wagons and their twelve-man guard were ambushed and captured before they could catch up.) Moving through deserted Cambridge, the relief expedition was unable to get any news of Smith's detachment until it reached Menotomy. Soon the men could hear the firing. Reaching Lexington at about 2:30 P.M., Percy deployed his troops to cover the arrival of Smith's force.

A few minutes later the light infantrymen and grenadiers staggered exhausted into Percy's ranks. The two six-pounders opened fire and scattered the militiamen who had been following just out of musket range to capture stragglers and wounded redcoats. Rebels who took shelter in the meetinghouse were routed by a cannon shot through that edifice. Some regulars took off in pursuit, but were stopped by the swampy ground northwest of the common, behind which the militia had withdrawn. At about 3:15 P.M. Percy got Smith's tired troops back on their feet and resumed the retreat.

Although William Heath, the senior military officer appointed by the Provincial Congress ("Our General"), was now on the scene, a lack of leadership and an absence of tactical cohesion, combined with fatigue, lack of ammunition, and an unwillingness to push the fighting too far kept the American irregulars from putting enough pressure on the rear of the enemy column to slow it down while others circled ahead to cut off its route of retreat, a maneuver that might have prevented the British force from reaching the Charlestown peninsula and the safety of Boston. While a military opportunity may have been lost, such an action would have complicated the political situation, for the American rebels might have had to deal with perhaps as many as 1,800 captured British regulars.

The running fight from Lexington followed the same pattern as before: as the Americans sniped from behind cover and fired in larger bodies from longer range, the British light infantry patrolled the flanks, and the rest of the column struggled along the road. Close fighting in Menotomy resulted in forty casualties on each side. The regulars, enraged by the "cowardly" rebel tactics of firing from cover, broke into houses along the road, killed all males they could find, and looted and burned the buildings.

Approaching Cambridge, where the Americans had gathered to cut him off, Percy executed a skilful feint to indicate a return to Boston by the overland route via Boston Neck that his force had taken that morning. However, he moved instead toward Charlestown. He was twice more brought to bay, at what is now Somerville and again at Prospect Hill. Dusk was falling when his exhausted troops crossed the neck onto Charlestown peninsula and reached the protection of the

THE GALE GROUP.

guns of the Royal Navy ships that were anchored in the harbor. The Americans did not pursue, but fanned out to invest the British and start the siege of Boston.

NUMBERS AND LOSSES

Although more than 20,000 men were paid for turning out on the Lexington alarm, Frank Coburn has calculated that only 3,760 Americans engaged in the day's fighting at one time or another (*Battle of April 19, 1775*, p. 161); Christopher Ward has further reduced the figure by arguing that "perhaps not more than half that number [fought] at any one time" (p. 50). No one knows for certain how many Americans actively participated at any one point in the Lexington alarm, since fresh militia units were continually arriving, while others were dropping out after exhausting themselves and their ammunition.

American fatalities totalled 50 men, some killed outright, while others died later of their wounds. Another 40 men were wounded, and 5 men were reported missing. According to Gage's official return, the British lost one officer and 64 men, whereas 15 officers and 165 men were wounded, and one officer and 26 men were missing, for a total of 272 casualties or 15 percent out of 1,800 men. Ward calculates that "only one [American] bullet out of 300 found its mark. . . [and] only one [militia] man out of 15 hit anybody" (p. 50). Fischer argues that the "heavy expenditure of shot and powder at long range was part of a highly effective solution to the difficult tactical problem of fighting Regular infantry with militia," and notes that the "ratio of rounds fired to men hit was even higher on the British side than the American" (p. 408).

SIGNIFICANCE

The events at Lexington and Concord marked the transition from intellectual to armed rebellion. The British were unpleasantly surprised by the accurate and sustained musket fire offered by the militiamen, who were relentless in harrying the redcoat column. Both sides understood that the militiamen had displayed greater military skills at many levels than the British, at least, had thought possible.

Politically, the day furnished such abundant evidence of British perfidy that opponents of increased imperial control were able to mobilize enormous popular support against Britain. Fast couriers delivered to other colonies an account that was weighted in favor of the Patriot cause. Israel Bissel left Watertown, six miles west of Boston, at 10:00 on the morning of 19 April with a message from the Committee of Safety to "All Friends of American Liberty" telling of the Lexington affair and the march of Percy's column. He spread the word across Connecticut, and by 23 April was in New York. He continued across New Jersey to carry his message to Philadelphia. A more complete dispatch reached New York on 25 April, and was relayed by express riders who traveled night and day to reach Baltimore by the evening of 27 April, Annapolis by the morning of 28 April, Edentown, North Carolina, on 4 May, and Charlestown, South Carolina, on 10 May.

The American version of the day's events, complete with the depositions of eyewitnesses, reached Britain twelve days before Gage's official report, which arrived on 10 June. Gage had dispatched his report four days ahead of the American letter to "The Inhabitants of Great Britain," but the rebel leaders, aware of the value

of having their story told first, sent their letter by the swiftest ship available, which make a faster passage.

LEXINGTON OF THE SEA **SEE** *Machias, Maine.*

LIBERTY AFFAIR. 10 June 1768. The customs officials in Boston had a long-standing grudge against John Hancock, a prosperous merchant who displayed an open contempt toward them but whose careful observance of the laws gave them no opportunity to prosecute him. In one incident two minor customs officers went below decks on one of his ships, where they had no right to be, and he ejected them by force; the attorney general of the province ruled that he was within his rights. Later, his sloop *Liberty* reached Boston from Madeira with twenty-five casks of wine on 9 May 1768, paid the duty, and started taking on a cargo of tar and whale oil. The law required that Hancock give bond for the new cargo before loading it, but the customs commissioners had sanctioned the practice of delaying the bond until a ship cleared the port. The commissioners then initiated several actions, which, though legally justifiable and within their authority, seem to have been motivated by a desire to get even with Hancock. In addition to attempting to secure condemnation of the tar and whale oil for early loading, the commissioners learned from an informant that Hancock had landed more wine than the amount for which he had paid duty, and was thus guilty of smuggling. The commissioners ordered Joseph Harrison, the collector of the port of Boston, to seize the sloop as a preliminary to suing for her condemnation in the local vice-admiralty court. Harrison and Benjamin Hallowell, the comptroller of the port, boarded the *Liberty* on 10 June and seized her by inscribing the broad arrow, the mark of the king's property, on the mainmast.

Thus far, the proceeding was legal and not opposed. But then Hallowell had the sloop, with a wharf official held prisoner in her cabin, towed a quarter-mile to rest under the guns of the fifty-gun frigate *Romney*, whose captain, John Corner, had made himself odious in Boston by his vigorous enforcement of impressment. Moving the sloop from the wharf prompted the Boston mob to gather. Members of the mob assaulted customs officials on the wharf and in the town, and demonstrated around their homes in such a manner that the officials fled for safety to Castle William, from where the commissioners reported to London that the province was in a state of insurrection. The incident led the British authorities to order British troops to Boston, a step they had tried to avoid. On 1 October 1768, two regiments of regulars arrived, inevitably increasing friction with the local inhabitants and setting the stage for the escalation of violence on 5 March 1770 called the Boston Massacre.

LIBERTY BELL. The bell that would become the Liberty Bell was ordered by the Pennsylvania assembly in 1752 from London’s Whitechapel Foundry. The inscription, in two lines around its circumference, read: “By order of the Assembly of the Province of Pensylvania for the State house in the City of Phila 1752” and “Proclaim Liberty thro’ all the Land to all the Inhabitants thereof. — Levit. XXV.10.” It arrived at Philadelphia in August 1752 and cracked upon testing. It was recast in Philadelphia and hung in the steeple of the State House in June 1753. The 2,080-pound bell, over five feet tall, was rung on many occasions during the imperial crisis, sometimes muffled if the news was considered to be a blow to American liberties. Tradition says that it rang out on 8 July 1776 after the Declaration of Independence was read on the steps of the State House, but given the decrepit state of the steeple, there is reason to doubt the tradition. Because the British were about to occupy Philadelphia, the bell was taken down on 23 September 1777 and carried to Allentown, Pennsylvania. It was brought back on 27 June 1778 but not re-hung for seven years, until a new steeple was constructed in 1785. Rung on many special occasions over the next half century, it seems to have begun to crack sometime in 1835. The final damage, a two-foot-long zigzag crack which silenced it, occurred in 1846 when it was rung on Washington’s birthday. The first documented use of the name “Liberty Bell” occurred in 1839 in William Lloyd Garrison’s anti-slavery newspaper, *The Liberator*.

LIBERTY STREET JAIL *SEE Prisons and Prison Ships.*

LIBERTY TREES AND POLES. At dawn on 14 August 1765, two effigies were discovered hanging from the branches of the largest of a group of elms in an enclosure where Orange and Essex Streets of Boston converged (later Washington and Essex). One effigy was Andrew Oliver, the Massachusetts native who had agreed to distribute stamps and collect the taxes due under the terms of the Stamp Act. The other effigy was the Devil peeking from a huge boot, a derogatory reference to the earl of Bute, one of the principal advisers to the young King George III, whom Boston radicals blamed for the Stamp Act. The elm tree, already some 120 years old, thus made its professional debut as the original Liberty Tree. Opponents of the Stamp Act rapidly adorned and designated as “liberty trees” prominent trees in the public spaces of other towns throughout the colonies. The Boston tree was cut down by British soldiers in 1775 and yielded fourteen cords of firewood. A “liberty pole” was later erected on the spot.

Radicals in towns that lacked appropriate trees erected liberty poles. One of the best known was erected by the Sons of Liberty at Golden Hill in New York City in 1765 as a location where the Sons and their supporters could meet to agitate for repeal of the Stamp Act. They were so outraged when a group of off-duty soldiers sawed down the liberty pole on 16 January 1766 that a two-day riot ensued.

Liberty trees and poles could also be invested with considerable numerological significance. When the Massachusetts Assembly voted 92 to 17 not to rescind a circular letter to the other colonies in which it advocated resistance to the Townshend Acts, liberty trees were said to have ninety-two branches and the stubs of 17 others. The famous Issue No. 45 of John Wilkes’s magazine, *The North Briton*, that advocated resistance to tyranny inspired ninety-two Sons of Liberty to raise a forty-five-foot-tall liberty pole.

LIGHT-HOUSE ISLAND (NEAR BOSTON), MASSACHUSETTS *SEE See Great Brewster Island, Massachusetts.*

LIGHT-HOUSE ISLAND, NEW YORK. Another name for Governor’s Island, in New York harbor.

LIGHT-HOUSE ISLAND, SOUTH CAROLINA. Opposite the main ship channel into Charleston Harbor, this island was the middle portion of a feature known collectively as Morris Island. The lighthouse for which it was named was built in 1767 and is still in place, though it went out of service in 1962. The southern of the three islands making up this feature was called Coffin Land.

revised by Michael Bellesiles

LIGHT INFANTRY. The term “light infantry” denotes infantrymen whose equipment and armament were modified (reduced in weight and made less cumbersome) to give them maximum mobility for their primary role as skirmishers in front of the main line of the regiment. Like their peers in the battalion and grenadier companies, soldiers in the light infantry company were trained to stand shoulder-to-shoulder in a line two or three ranks deep and deliver the volley fire that made linear tactics so effective, and to form up into deeper and narrower columns to assault an enemy with the bayonet. But the light infantryman also had other duties. While the men in the battalion and grenadier companies formed up in line, the light infantrymen would move forward to fight in open order, using speed, agility, and concealment in the terrain to direct an aimed, harassing fire against the enemy line or column, to inflict casualties and sow disorganization before the enemy came into musket range of the line. Light infantrymen had to be fit and agile, with the self-confidence and self-discipline to fight alone or in small groups away from the comfort and security of the line. Because they might also be out of sight of their noncommissioned officers, company officers had to have confidence that the light infantrymen would perform as skirmishers with little supervision and would not take the opportunity to desert.

Light infantry was created to support a system of linear tactics. The need for such troops was recognized across Europe, from the Austrians who faced swarms of Turkish skirmishers in battles on their eastern marches, to the British who had to adapt to war in the Scottish Highlands and the wilderness of North America. Light infantry companies became standard in most European armies during the third quarter of the eighteenth century. In the British army, where they were formed permanently from 1771, their elite status earned them the designation, along with the grenadiers, as flank companies, and entitled them to a position of honor on the left of the regiment when it was drawn up in line (the taller, more imposing grenadiers, as the senior company, took station on the right of the line). Many British officers had gained

experience with light infantry in North America, including Thomas Gage, who raised the Eightieth Regiment of Light Armed Foot in mid-1758; Henri Bouquet, who fought successfully against Native American warriors on the Pennsylvania frontier; and William Howe, who led an ad hoc light infantry battalion at the battle of Quebec (13 September 1759).

Thanks in large part to the special light infantry training camp Howe conducted at Salisbury during August and September 1774, from the very beginning of the Revolution the British used light infantry with great effect as shock troops and skirmishers. It was a common practice for the British army in America to detach the flank companies from each of the regiments present and form them into ad hoc battalions that could be used for especially important or arduous service. At Bunker Hill on 17 June 1775, for example, Howe sent a column of ten light infantry companies down the Mystic River beach in his best opportunity to outflank the rebels. For the New York campaign in 1776, he organized a brigade of four battalions of light infantry companies (and another of four battalions of grenadier companies) to spearhead his army. Charles Lord Cornwallis in particular distinguished himself in the early campaigns as commander of the light infantry corps.

Light infantrymen could also function as rangers (the American term) who acted independently and in advance of the army or participated in the partisan-style “war of posts” between armies. As the war continued, the British main army filled its need for skirmishers by relying on both the Jäger (hunter) companies that came to America as part of the German auxiliary contingents, and certain Loyalist units led by British officers, the most famous of whom was Lieutenant Colonel John Graves Simcoe of the Queen’s Rangers.

American light infantry served most prominently with Washington’s main army, where it evolved from the six companies of Pennsylvania and Virginia riflemen that joined the Continental Army at Cambridge in July 1775 into the light infantry corps organized annually. By 1779 the corps became the elite striking force of the American army. The American light infantry combined two traditions. The riflemen embodied a tradition of adapting the skills honed in fighting native Americans on the frontier to the needs of a European-style army, whereas the corps of light infantry paralleled the British practice of creating elite battalions within an army. Various units of riflemen served with the main army at New York City in 1776, but the first unit created by Washington to function as skirmishers was a small ad hoc ranger battalion formed in early September under Lieutenant Colonel Thomas Knowlton of Connecticut. Early in June 1777 Washington ordered Colonel Daniel Morgan of Virginia to form a corps of five hundred riflemen from among Virginia, Pennsylvania, and Maryland riflemen already enlisted in the army.

Morgan's riflemen worked hard for two months screening the main army against British maneuvers in northern New Jersey, while simultaneously trying to determine from his actions the plans Howe had for the 1777 campaign. When Washington sent Morgan and his Corps of Rangers to the Northern army in mid-August to help counter the white and Indian skirmishers supporting Burgoyne's invasion, he wasted little time in creating a new force of light infantry for the main army. On 28 August he ordered that a hundred men be drafted from each of the army's seven brigades. Two days later he placed the formation under the command of Brigadier William Maxwell of New Jersey and gave it the mission of skirmishing in front of Howe's advance from Head of Elk.

After Morgan returned from Saratoga with his rifle corps on 18 November 1777, Washington decided to institutionalize light infantry in the Continental Army. Based on his recommendations to a committee that visited Valley Forge during the winter of 1777–1778, on 27 May 1778 Congress decreed that each eight-company infantry regiment would add a ninth company of light infantry, to be kept up to strength by transfers from the other companies, regardless of how under-strength the rest of the regiment became. Aware that creating light infantry in this manner drew the best soldiers away from battalion companies that might otherwise rely on them to improve the bearing and performance of the entire regiment, Washington balanced this concern against the often pressing need to form an elite corps of light infantry for special missions. Circumstances over the next four years prompted him to detach the bulk of these light infantry companies from their regiments to form a Corps of Light Infantry at some point during the campaigning season, but he always returned them to their institutional and administrative home for the winter.

Major operations ended in 1778 with the battle of Monmouth Courthouse on 28 June. After positioning the main army in the Hudson Highlands to watch the British army now concentrated at New York City, Washington reformed the corps of light infantry on 8 August. "For the safety and ease of the army and to be in greater readiness to attack and repel the enemy," he directed that "a Corps of Light Infantry composed of the best, most hardy and active marksmen and commanded by good partizan officers be draughted from the several brigades, to be commanded by Brigadier General [Charles] Scott [of Virginia]" (Washington, p. 300). For the next three months, Scott and his four battalions actively patrolled the zone between the two armies. When Scott went home on furlough in mid-November, Colonel David Henley, one of his battalion commanders, took over command of the corps until it was disbanded on 1 December. The value Washington placed on the light infantry in an emergency was shown on 4 December, when information that

a British fleet was ascending the Hudson led him to recall the companies and place them under Brigadier General Anthony Wayne of Pennsylvania. They were released again on 4 December when no attack materialized.

The light infantry corps was reformed in June 1779 under Wayne, again with four battalions. It distinguished itself at the attack on Stony Point on 16 July, the pinnacle of American light infantry, and was disbanded after 28 December 1779.

The light infantry corps for the campaign of 1780 was ordered into existence on 16 July and embodied in two three-battalion brigades on 1 August. Initially commanded by Major General Arthur St. Clair, it was led by Major General the marquis de Lafayette from 8 August 1780 until it was disbanded on 26 November 1780. The corps had little opportunity to distinguish itself during a year of relative inactivity in the North.

The light infantry corps for 1781 was reconstituted early in the year (1 February) because of the need to send reinforcements to Virginia to operate against the traitor Benedict Arnold's incursion into that state. Lafayette led twelve hundred light infantry, in three battalions, south in mid-February and reached Head of Elk, Maryland, on 3 March, where he waited to see if a French squadron from Newport could prevent the British from reinforcing Arnold. Despite French failure, Lafayette resumed his southward progress on 4 April and reached Richmond on the evening of 29 April. The three light infantry battalions participated in the summer's campaign in Virginia and were joined on 26 September by two more battalions, part of Washington's force that had left the Hudson Highlands on 20 August. Lafayette remained in command of what was now a light infantry division of two brigades, the flower of the Continental Army, and took part in the operations that culminated in the surrender of Cornwallis's army at Yorktown on 19 October 1781. The light infantry battalion led by Lieutenant Colonel Alexander Hamilton particularly distinguished itself in the assault on Redoubt No. 10 on 14 October. The companies returned to their regiments after Washington's army returned to the Highlands in early December. No separate corps of light infantry appear to have been formed during 1782 or 1783.

LILLINGTON, JOHN ALEXANDER. (1725?–1786). Militia officer. North Carolina. Born in Barbados around 1725, Alexander Lillington was the son of a British officer. His family emigrated to North Carolina in 1734. Apparently he was a wealthy and elderly man when the Revolution started, but he sided from the first with the Patriots. He served on the Wilmington Council of Safety, became a colonel of the militia, and led a force of 150 minutemen from Wilmington in the important victory over the Loyalists at Moores Creek Bridge, North Carolina, on 27 February 1776. On 15 April 1776 he was commissioned as a colonel of the

Sixth North Carolina Regiment, but on 16 May 1776 he resigned and served throughout the rest of the war as a militia brigadier general. He and his son, Colonel John Lillington, took part in General Horatio Gates's ill-fated Camden campaign, probably as part of the fleet-footed North Carolina militia force commanded by Lillington's friend and neighbor, Richard Caswell. After the war he returned to his estate, where he died in 1786.

LINCOLN, BENJAMIN. (1733–1810). Continental Army general. Massachusetts. Born at Hingham, Massachusetts, on 24 January 1733, Benjamin Lincoln came from a long-established (since 1632) and locally distinguished family. His father was a maltster, farmer, representative to the General Court, and militia colonel. Although he had only a common school education, he learned to write well; his wartime dispatches showed a good command of the written word. He was chosen town clerk in 1757, justice of the peace in 1762, and became a moderately prosperous farmer. He was appointed adjutant of his father's Suffolk county militia regiment in July 1755, major in 1763, and lieutenant colonel in January 1772. Believing that British policies threatened the "peace, liberty, and safety" of the colonies, he became a strong supporter of "the present struggle against Great Britain" (as quoted by Paul D. Nelson in his article on Lincoln in *American National Biography*, 1999). He served in the General Court (1772–1774), on the Hingham committee of correspondence, and in the Massachusetts Provincial Congress (1774–1775), where he made an important contribution in helping to reorganize the militia and purge Loyalist officers. He marched with his regiment of minutemen on 19 April 1775 but arrived after the fighting had ended.

Lincoln's career during the first year and a half of the war differed from that of other Continental Army general officers in that he devoted his service to his province, not the continent. The Massachusetts Provincial Congress appointed him muster master of its forces on 4 May 1775 and elected him its acting president for the last week of its session in July 1775. But when he met Washington at Cambridge on 3 July 1775, Lincoln's military rank was only that of lieutenant colonel of militia. For the next eighteen months he remained a state militia officer, rising to brigadier general on 8 February 1776 and to major general on 8 May 1776. On 2 August 1776 he was given command of Massachusetts troops around Boston, and in September he commanded the militia

regiments detached to reinforce the defenses of New York City. He fought ably in command of the American right wing in the battle of White Plains on 28 October, which did much to secure Washington's friendship and good opinion of his abilities. In a letter to Congress on 22 January 1777, Washington recommended him as "an excellent officer, and worthy of your notice in the Continental Line." Congress reacted promptly and appointed Lincoln one of five major generals on 19 February 1777, leapfrogging this late-blooming militia general, whose main assignment had been training state troops, over several Continental Army brigadier generals; one of them was Benedict Arnold, who complained until Congress eventually restored his seniority over Lincoln.

As a militia general Lincoln had commanded troops in William Heath's mismanaged diversion against Fort Independence, New York, 17–18 January 1777. Soon thereafter he joined Washington at Morristown with militia reinforcements. At Bound Brook, New Jersey, on 13 April 1777 his advance detachment was surprised by the enemy; he barely escaped capture but managed to extricate his command without serious loss. When Washington saw that the British were probably moving from New York by water to attack Philadelphia, he ordered Lincoln's and Adam Stephen's division to march south toward the Delaware (24 April). But Washington also had to watch the progress of Burgoyne's invasion, and on 24 July he ordered Lincoln to join Philip Schuyler's Northern army and assume command of the New England militia forming east of the Hudson. This mission presented Lincoln with a real test when he arrived to find the militia being commanded by John Stark, who refused to recognize the authority of Congress. Lincoln handled the situation with great tact and helped to get Stark into a position where he could effectively oppose the Bennington raid of August 1777. After directing the fruitful raid on Fort Ticonderoga, which disrupted Burgoyne's supply lines, Lincoln moved his militia to reinforce Gates in the defensive position on Bemis Heights. All his troops arrived by 29 September, although too late for the first Battle of Saratoga (19 September). During the second Battle of Saratoga, 7 October, Lincoln commanded the right wing of the American defenses and saw no action. Leading a small force forward the next day, he received a severe wound in his right ankle from which he never completely recovered. He spent the next ten months convalescing at Hingham.

Rejoining Washington in August 1778, he offered to resign during the controversy Arnold had created over promotions but was prevailed on to remain in the service. On 25 September Congress appointed him commander of the Southern Department, a decision on which Washington was not consulted but of which he approved. Detained ten days in Philadelphia by Congress, he reached Charleston on 4 December 1778, too late to play any part in preventing

the British capture of Savannah on 29 December. (His subsequent actions in Georgia and South Carolina are covered in the entry on the Southern Theater.)

He was paroled after surrendering Charleston on 12 May 1780, but his arrival in Philadelphia was delayed for various reasons until July. He asked for a court of inquiry, but none was appointed and no charges were brought against him. Back on the farm at Hingham, Lincoln waited until November to be exchanged for British major general William Phillips, captured at Saratoga in October 1777. That winter Lincoln raised recruits and gathered supplies in his home state, and received an honorary master of arts degree from Harvard College. He spent the next summer in command of troops in the vicinity of New York City. Because of Lincoln's seniority Washington picked him to lead the American element of the allied army that marched south for the Yorktown campaign. Lincoln commanded the American right wing at the siege of Yorktown and presided over the surrender of Charles Cornwallis on 20 October 1781; Washington accorded him that honor as his senior major general, not to compensate for his surrender at Charleston.

Hoping to take advantage of his administrative abilities, Congress appointed him secretary of war on 30 October 1781, a post he held for two years until the peace treaty was signed. In a resolution of 29 October 1783, Congress told him that it entertained "a high sense of his perseverance, fortitude, activity, fidelity, and capacity in the execution of the office of secretary of war, which important trust he has discharged to their entire satisfaction." Historians have echoed that judgment. He was also elected the first president of the Massachusetts Society of the Cincinnati, a post he held until his death.

He returned to Hingham and almost ruined himself by speculating in land in Maine. In January 1787 he was appointed to lead militia troops against Shays's Rebellion. He defeated the insurgents in battle at Springfield on 27 January, and after a famous night march (2–3 February) captured at Petersham the 150 survivors of Shays's band, whom he then treated with moderation and compassion. He subsequently headed a commission that traveled through western Massachusetts listening to citizen complaints, a demonstration of conciliation that did much to tamp the fires of insurgency. In 1788 he served in the convention to ratify the federal Constitution and worked effectively to achieve that end. That same year he was elected lieutenant governor of Massachusetts, but he lost a reelection bid in 1789. His appointment as collector of the port of Boston in 1789 helped him out of straitened circumstances; he held the post until his political foes forced him to resign on 1 March 1809. He was a federal commissioner to negotiate boundary treaties with the Creek Indians in 1789 and with Indians in the Ohio Valley in 1793. As a member of the American Academy

of Arts and Sciences and of the Massachusetts Historical Society, he wrote papers on such diverse topics as the migration of fish, the soil and climate of Maine, and "The Religious State of the Eastern Counties." He died at Hingham, in the house in which he had been born, on 9 May 1810. Lincoln's papers are held by the Massachusetts Historical Society in Boston.

LINDLEY'S MILL *SEE Hillsboro Raid, North Carolina.*

LINE. In the linear tactics that dominated land warfare in western Europe in the eighteenth century, the term "line" denoted a row of soldiers standing shoulder to shoulder across the front of a formation. The formation might be two, three, or occasionally more lines deep, but its width was always greater than its depth, making it difficult to maneuver on the battlefield. The tactical value of the line was its ability to bring the maximum number of individual firearms to bear on the enemy without sacrificing too much of the compactness needed to retain command and control on a battlefield. The line won or lost the battle by the disciplined delivery of sustained volley fire. The term "column," on the other hand, denoted a formation whose front was narrow, but whose depth was relatively great; columns

could maneuver more readily on the battlefield and had the capability of punching a hole through a line whose fire discipline was poor.

"Line" also came to mean an army's established, more or less permanent units. In the British army, the "line" meant the numbered units of infantry and cavalry that made up the bulk of the standing forces, not including the units of guards that made up the monarch's household establishment. In the American army, the term was used to distinguish between regiments authorized by Congress and raised for Continental service, and the state and militia units under the control of the state governments, thus making the terms "Continental Army" and "Continental Line" nearly synonymous. Beginning in 1777, nearly all Continental Army units were part of a state's "Line," as in the "Massachusetts Line" or the "Virginia Line." Most officers in both armies held a commission in the line, meaning they were members of the active combat arms; officers commissioned "on the staff" were part of a different hierarchy.

In naval warfare, a "line of battle" denoted a group of large wooden ships whose carriage guns were mounted in broadside, sailing stem to stern so as to bring their batteries to bear on a similarly armed and arranged group of enemy vessels sailing on a parallel or converging course. The pinnacle of naval tactics was to bring the maximum number of broadside guns to bear on the head of the enemy's line, thereby concentrating an artillery crossfire on a few ships that could not respond effectively because they could not fire their guns ahead. This maneuver was called "crossing the T." A "ship of the line [of battle]" designated a warship that was large enough to take part in the main action; in the eighteenth century this meant a warship carrying seventy-four or more heavy guns.

LITTLE EGG HARBOR, NEW JERSEY. 5–7 October 1778. In the autumn of 1778 Sir Henry Clinton returned to New Jersey by way of conducting a series of major foraging operations. Concurrently, he worked with the Royal Navy to plan a raid to knock out a troublesome privateers' nest a few miles north of modern Atlantic City. On 30 September, Captain Henry Collins put to sea with a task force consisting of his year-old *Zebra* (fourteen guns), four other sloops of war, a brig, and several galleys. The army contingent consisted of three hundred men from the Seventieth Foot and the New Jersey Provincials (Skinner's Brigade), led by Captain Patrick Ferguson. Other than a handful of local militiamen, the only American force in the area was Pulaski's Legion. This combined arms team had been organized in Baltimore during the late spring and summer and consisted of one troop of lancers, two troops of dragoons, one company of riflemen, and two companies of light infantry. Most of the officers were foreign volunteers, and a substantial number of the men were German deserters.

The British arrived offshore on 5 October, and over the course of the next two days they destroyed ten large vessels and assorted storehouses, saltworks, and shipyards as far as twenty miles up the Mullica River. After Ferguson's raiders had embarked in their boats, seven of Pulaski's horsemen appeared and asked to speak to him. Their leader turned out to be Charles Juliat, who had deserted from the Hesse-Cassel Landgraf Regiment in Rhode Island and been appointed by Congress as a volunteer in the Pulaski's Legion. In exchange for a pardon, they guided Ferguson to Pulaski's camp during the night. About 4 A.M. the raiders charged into three houses and killed about fifty of the infantry contingent, mostly by bayonet. Pulaski arrived with the dragoons who had been posted in a second camp, rallied the infantry survivors, and drove Ferguson back to his boats in some confusion and with the loss of several men captured.

The Americans raised the charge of massacre, and the victors of this coup offered the usual denials. Most historians disagree on the date of the action, with estimates ranging between 5 October and 15 October. The action forced Washington to send the legion back from the front to be rebuilt; Collins lost the *Zebra* during the return voyage to New York when it ran aground in a storm. Juliat did not profit from his treason—he remained ostracized by the Hessians.

LIVINGSTON, HENRY BEEKMAN. (1750–1831). Continental officer. New York. Son of Robert R. Livingston, he raised a company and was named captain of the Fourth New York Regiment on 28 June 1775. As aide-de-camp he went with his brother-in-law, General Richard Montgomery, to Quebec from July to December 1775. For his part in the capture of Chambly, he was given a sword of honor by the Continental Congress on 12 December 1775. In February 1776 he became aide-de-camp to Philip Schuyler, and on 21 November of that year he was made colonel of the Fourth New York Regiment. He played a decisive part in the battle of Monmouth on 28 June 1778. In the battle of Rhode Island on 29 August 1778, he and Lieutenant Colonel John Laurens commanded the two columns of light troops that first attacked the oncoming British force. Nathanael Greene commended him for his performance in the battle. He resigned from the army on 13 January 1779. After the Revolution he oversaw the family estate and was active in the Society of the Cincinnati.

LIVINGSTON, HENRY BROCKHOLST. (1757–1823). Continental officer. New York. Born in New York City on 25 November 1757, Henry Brockholst was the son of William Livingston. Brockholst, as he was generally known, graduated from Princeton in 1774 and entered the army in 1775 as captain and aide-de-camp to General Philip Schuyler. In December 1775 he was named major of the Third New York Regiment, and then became aide-de-camp to General Arthur St. Clair on 8 March 1776. A deep admirer of Benedict Arnold, Livingston was present at the Saratoga campaign as a member of Arnold's staff. He was promoted to lieutenant colonel after the battle.

Livingston won praise from General Nathanael Greene for his performance at the battle of Newport on 29 August 1778. In 1779 he took a twelve-month leave of absence to serve as private secretary to his brother-in-law, John Jay, during Jay's mission to Spain. Livingston was captured by the British on his return trip in 1782. Jailed in New York City, he was freed almost immediately on the order of Sir Guy Carleton and sent home on parole. He then went to Albany to study law and was admitted to the bar in 1783. He became a highly successful lawyer and an anti-Federalist. In 1802 he was named to the state supreme court, was co-founder of the New York Historical Society in 1805, and in 1808 helped organize the state's public school system. In 1807 he became associate justice of the U.S. Supreme Court, which he served on until his death in Washington, D.C., on 18 March 1823.

LIVINGSTON, JAMES. (1747–1832). Continental officer. Canada. Born on 27 March 1747, James Livingston was the grandnephew of the powerful Robert Livingston. Though he did not finish college, James became a lawyer by studying with William Smith Jr. in New York City before settling in Montreal sometime in the late 1760s. When the Revolution started, James and his brothers Richard and Abraham joined General Richard Montgomery's forces invading Canada. James recruited over two hundred Canadians and led them in the operations around Chambly on 18 October 1775. On 20

November this unit was designated the First Canadian Regiment, and he was named its colonel. After the disastrous attack on Quebec, in which his forces fled at the beginning, he joined the retreat back to New York. On 8 January 1776, Congress gave him permission to recruit troops in New York. They served under Arnold in the relief of Fort Stanwix and the two Battles of Saratoga.

As commander of the garrisons around Kings Ferry, he figured prominently in the events surrounding Arnold's treason. His firing on the *Vulture* indirectly resulted in Arnold's exposure. Washington was suspicious of Livingston's loyalty. In the reorganization of 1780, Livingston's unit was eliminated and he resigned on 1 January 1781.

Livingston was in the state assembly in 1784–1787 and 1789–1791. He died in Schuylerville, New York, on 29 November 1832.

LIVINGSTON, PHILIP. (1716–1778). Signer. New York. Born in Albany, New York, on 15 January 1716, Philip Livingston graduated from Yale in 1737 and became an importer in New York City. He grew wealthy from trade and as a privateer during the wars against the French and entered enthusiastically into the civic life of the city. He contributed to the establishment of Columbia (then King's College) and gave a chair of divinity at Yale. He helped organize the New York Society Library in 1754, and also participated in founding the St. Andrew's Society, the New York Chamber of Commerce, and the New York Hospital. He was elected a city alderman and served from 1754 to 1763. He was also elected to the provincial assembly, serving from 1758 to 1769, serving as speaker of the assembly during the last two years of his tenure.

An early opponent of British policies toward the colonies, he wrote the assembly's petition opposing imperial taxes in 1764 and was a delegate to the Stamp Act Congress in 1765. A moderate Whig, he disapproved of the rioting attributed to the Sons of Liberty. He was defeated for re-election in 1769. He opposed the Intolerable Acts and sat in the Continental Congress from September 1774 until his death on 12 June 1778 in York, Pennsylvania. He was an active member of the Secret Committee that sought to arm the American forces, as well as the Marine Committee and the Committee on Provisioning. Though not present for the debates on the Declaration of Independence, he signed it in August 1776. John Adams describes him as a conservative, saying

Livingston, Richard

“[he] is a great, rough rapid mortal. There is no holding any conversation with him. He blusters away; says if England should turn us adrift, we should instantly go to civil wars among ourselves.”

LIVINGSTON, RICHARD. (1743–1786). Continental officer. Canada. A brother of James Livingston, he was lieutenant colonel of the latter's First Canadian Regiment from 18 December 1775 until 2 November 1779. Richard was captured at Fort Montgomery on 6 October 1777. He resigned his commission on 2 November 1779.

LIVINGSTON, ROBERT R. (1746–1813). Statesman, diplomat. New York. Scion of the distinguished Livingston Family, Livingston was born in New York City on 27 November 1746. After graduating from King's College (now Columbia University) in 1765 he studied law, was admitted in 1770 to the bar, and for a short time was in practice together with his college classmate and relative by marriage, John Jay. In 1773 Governor William Tryon named him recorder of the city of New York, but two years later he lost this post because of his Patriot leanings. He immediately was elected to the Continental Congress and was a delegate during the periods 1775–1776, 1779–1781, and 1784–1785. He was on the committee that drafted the Declaration of Independence, but although he felt that independence was both desirable and inevitable he did not think that the time had yet come. Accordingly, Livingston was one of the principal advocates of postponing the issue. He did not vote for the Declaration of Independence, and when the time for signing came he was absent. It should be pointed out, however, that New York did not decide until 9 July that its delegates should vote for independence, and Livingston had left for New York on the 15th

of that month to sit in the newly elected state convention. He also served on a secret committee organizing the defense of the Hudson River and on New York's Committee of Safety. In 1777 he and John Jay worked to craft a conservative state constitution. The convention appointed Livingston the state's chancellor, or chief justice, a position he filled until 1801.

Even while holding these state offices, Livingston remained active in the Continental Congress, working hard and ably on many important committees. In August 1781 Congress elected Livingston secretary of the newly created Department of Foreign Affairs. An ardent nationalist, he supported the Constitution at the New York ratifying convention and administered the oath of office to President George Washington in 1789. Feeling that the new government failed to recognize his services with appropriate patronage, he changed sides and took many of his relatives with him into the Republican camp around 1791. He helped Aaron Burr defeat Philip Schuyler for the U.S. Senate, and disagreed with Alexander Hamilton's financial plans, particularly the matter of "Assumption." A leading opponent of Jay's Treaty, in 1795 he published, under the name of "Cato," his *Examination of the Treaty*. In 1801 he accepted Thomas Jefferson's nomination as minister to France, having previously declined to become Secretary of the Navy. Negotiating the Louisiana Purchase, was, in his view, the greatest accomplishment of his life. Resigning his ministerial post in the autumn of 1804, he retired to the family estate, which was known as "Clermont."

Livingston was the founding president of the American Academy of Fine Arts in 1801. He also played a vital role in the development of the steamboat. While in Paris he had given technical and financial aid that made the experiments of Robert Fulton possible. In 1807, Fulton's invention, the *Clermont*, made the journey from New York City to Albany, becoming the first practical steamboat. Livingston died at home on 26 February 1813.

LIVINGSTON, WILLIAM. (1723–1790). Congressman, governor of New York. Born in November 1723 in Albany, New York, William Livingston graduated from Yale in 1741 at the head of

Livingston Family of New York. THE GALE GROUP.

his class. He then studied law under James Alexander, gaining admission to the bar in 1745. From early on he was a Presbyterian reformer who argued for religious diversity, which put him at odds with most of his family connections. He routinely opposed projects sponsored by the Anglican faction in New York, such as the establishment of King's College (now Columbia University), and this brought him into dispute with the De Lanceys, a leading Anglican family. This opposition led to the formation of the Livingston and De Lancey factions in provincial politics.

Holding few political offices, Livingston preferred to work behind the scenes. By 1758 his party had wrested control of the assembly from the DeLanceys, and he became the acknowledged leader in the resistance to Crown interference in provincial affairs. When his patrician companions became alarmed at the riots inspired by the Sons of Liberty, Livingston tried to reconcile the Sons and their more radical allies to a temporizing position. This was completely unsuccessful,

and by 1769 the DeLanceys had regained control of the assembly.

Dispirited by his political defeats, Livingston moved in May 1772 to his country house "Liberty Hall" near Elizabethtown, New Jersey. He quickly became a member of the local committee of correspondence and was sent by New Jersey to the first Continental Congress, serving until 5 June 1776. On that date, he took command of the state's militia as brigadier general and resigned on 31 August 1776 upon his election as the state's first governor. He held this post for fourteen trying and violent years. George Washington held Livingston to be the most reliable governor during the Revolution, doing the most to mobilize his state and aid the Continental army. Livingston was a bitter enemy of the Loyalists, who returned the sentiment by attempted to assassinate him on several occasions. Extremely popular with the common people, Livingston worked to redistribute Loyalist land to the poor and was an early opponent of slavery. He attended the Constitutional

Livingston Family of New York

Convention in 1787 and was influential in its ratification in his state on 25 July 1790.

LIVINGSTON FAMILY OF NEW YORK. The founder of the family in America was the son of a vigorous Scottish minister, John Livingston, who in 1663 took his family to Rotterdam. Here young Robert Livingston became as fluent in Dutch as he was in English, and when he appeared in Albany in 1674, the year the colony of New York passed from Dutch to English control, he quickly became a success in that hybrid society. His marriage in 1679 to Alida Schuyler, widow of Nicholas Van Rensselaer and sister of Peter Schuyler, brought him social connections with two of the most important families in the province. He established the 160,000-acre manor of Livingston on the east side of the Hudson below Albany (in the present counties of Dutchess and Columbia), and left it to his son Philip. His younger son, Robert, received 13,000 acres at an estate called Clermont. These two sons and their descendants built on the fame and fortune of their father to become a dominant force in New York and beyond.

LIVIVS, PETER. (1739–1795). Canadian jurist. Born in Lisbon, Portugal, on 12 July 1739, he settled in New Hampshire in 1763. The following year Livius was given an honorary master of arts degree by Harvard in return for a large donation of books. He was appointed to the governor’s council in 1765 and was made a judge of the court of common pleas in 1768. In the latter position he came into conflict with Governor Benning Wentworth, who found him too sympathetic to the Patriots and finally succeeded in removing him from the bench in 1772. Livius went to England to defend himself and to regain his seat as a judge. He failed in this effort, but in response to a gift, gained admission to the Royal Society, studied law at the Middle Temple, and received an honorary degree from Oxford University.

Finally winning the ear of Lord Dartmouth, the secretary of state for the American colonies, Livius was appointed to the vice-admiralty court in Montreal. He arrived in Quebec just in time to see service during the siege. In August 1776 he was made chief justice of Quebec and appointed to the council. Without official approval, he wrote General John Sullivan suggesting that Sullivan switch to the British side and help in capturing New Hampshire. Publication of this letter proved an embarrassment to the British and led to the confiscation of all Livius’s property by the New Hampshire legislature. Over the next year Livius’s relations with Governor Guy Carleton became increasingly bitter as the chief justice called for the introduction of habeas corpus into Quebec, which was allowed for in the governor’s instructions. On 1 May 1778, Carleton summarily dismissed him from the bench. Livius again went to England to regain a judgeship, persuading the Privy Council to restore him to the bench in March 1779. But he refused to go to Quebec until receiving assurances that he would not once more be removed from office, assurances the Privy Council would not give. As a consequence, he was removed from office in 1786 without having left England. He died near Brighton on 23 July 1795.

LLOYD'S NECK, LONG ISLAND, NEW YORK. 5 September 1779. With 150 dismounted dragoons, Major Benjamin Tallmadge left Shippan Point, near Stamford, Connecticut, and surprised 500 Tories at this place (due south of Stamford). He returned before dawn on the 6th with most of the garrison as prisoners and without having lost a man.

Mark M. Boatner

LOCHRY'S DEFEAT, OHIO RIVER.

24 August 1781. In 1781 Virginia state Brigadier General George Rogers Clark assembled four hundred of his men at Wheeling and started down the Ohio River, hoping to capture Detroit. Most Pennsylvanians were reluctant to participate in the operation and suspected that it was merely an effort by Virginia to extend its claims on disputed lands. Colonel Archibald Lochry, who commanded the Westmoreland County militia, was an exception, and on 23 June he set about collecting a detachment to join Clark. Clark headed for Kaskaskia on 8 August and the next day sent instructions back to Lochry to join him there. Meanwhile Joseph Brant, who earlier had been fighting Colonel Marinus Willett in the Mohawk Valley, was now sent from Detroit with a mixed force of Indians and Loyalists to intercept Clark. Lochry sent a small party ahead of his 107-man force to ask Clark to wait until he could catch up.

Brant reached the Ohio River near the mouth of the Big Miami with his thirty-man vanguard just as the last of Clark's boats were passing out of sight, but in time to capture Lochry's messengers. Another sixty Indians arrived to join Brant before Lochry approached on 24 August. Using the information and one of the captives as a decoy, Brant set up an ambush. Although numbers were about equal, the Pennsylvanians were caught completely by surprise. The Americans had five officers and thirty-six privates killed, twelve officers and forty-eight privates captured. Some of the prisoners, including Lochry, were killed, but at least half eventually returned to Pennsylvania.

LOGAN. (1725?–1780). Indian leader in British service. Soyechtowa was probably born at the village of Shamokin, Pennsylvania, in 1725. He was the son of an Oneida chief named Shikellamy. As a young man he took the name of a close friend of his father's, James Logan (1674–1751), who was secretary to William Penn. Sometime in the 1760s Logan led his family and some followers to the upper Ohio River, where they settled outside the authority of the Iroquois Confederacy. In this new location, Logan's people became known as Mingoos. Unfortunately for these Indians, they lived in an area claimed by both Pennsylvania and Virginia. The latter state tried to make good on its claim by instigating an Indian war, assuming that the settlers would turn to the more bellicose province of Virginia for protection, rather than to the more pacifist Pennsylvania.

In the resulting conflict, known as Dunmore's War, 1774, a group of whites led by Michael Cresap attacked the Mingoos, even though they had a long history of friendship with the settlers. Thirteen unarmed Mingoos were killed. The massacre started the desired war, with Logan proving a particularly relentless enemy, taking at least 13 scalps in retribution. Logan's powerfully defiant response to Dunmore's eventual call for peace was made famous by Thomas Jefferson in his *Notes on the State of Virginia* (first published in Paris in 1787, reprinted in the United States at various times, beginning in 1800):

I appeal to any white man to say if ever he entered Logan's cabin hungry, and he gave him not meat; if he ever came cold and naked and he clothed him not. During the last long and bloody war [the Seven Years' War], Logan remained quiet in his cabin, an advocate for peace. Such was my love for the whites, that my countrymen as they passed, said "Logan is the friend of white men." I had even thought to live with you, but for the injuries of one man, Colonel Cresap, who the last spring, in cold blood and unprovoked, murdered all the relations of Logan, not sparing even my women and children. There runs not a drop of my blood in the veins of any living creature. This called on me for revenge. I have sought it; I have killed many; I have fully glutted my vengeance. For my country, I rejoice at the beams of peace. But do not harbor a thought that mine is the joy of fear. Logan never felt fear. He will not turn on his heel to save his life. Who is there to mourn for Logan? Not one!

The authenticity of Logan's message remains hotly contested.

When the Revolution started, Logan was fifty years old and treating his despair with alcohol. He sided with the British, but his role in the war was limited to his part in saving the life of Simon Kenton. He managed this by

London Trading

prevailing on a Canadian trader named Peter Druyer to ransom the condemned frontiersman and turn him over to the British at Detroit. A year later, in 1780, Logan was killed by a nephew during an argument.

LONDON TRADING. As soon as the British captured New York City in September 1776, they sought to renew the coastal trade that had helped to provision the city during colonial times. Procuring provision locally would reduce the strain on their trans-Atlantic logistical lifelines, and would have the added benefit of reminding Americans that the consumer goods they had learned to enjoy could still be best obtained from British sources. "London trading," as this brisk business was called, thus simultaneously helped to sustain the British forces and to tempt Americans to return to the empire. Writing in the mid-1800s about this trade, Benson J. Lossing remarks: "From almost every inlet from New London [Connecticut] to Shrewsbury (New Jersey), light boats, freighted with provisions, darted across to the islands [Staten and Long Islands], or to British vessels anchored in the channels" (*Pictorial Field Book*, v.2, p. 851). The Americans responded by trying to interdict the trade, an effort that led to the phenomenon known as "whaleboat warfare," in which Adam Hyler was prominent.

LONG ISLAND, NEW YORK. 10 December 1777. During the course of 1777 Brigadier General Samuel Holden Parsons launched three different raids on Loyalist strongholds on eastern Long Island. Sag Harbor was successfully attacked in May, Setauket unsuccessfully in August. The final effort came in December on the heels of Burgoyne's surrender and the British withdrawal from the Hudson Highlands. Colonel Samuel B. Webb (a former aide of Washington) embarked about four hundred men, mostly from his own Additional Continental Regiment, on the Connecticut state navy's six-gun sloop *Schuyler* (Lieutenant John Kerr) and three other vessels and set out on 9 December from Norwalk, Connecticut, to attack Setauket. During the night the vessels became separated by rough seas, and the *Schuyler* was spotted at dawn off Old Man's Harbor by the Royal Navy's sloop of war *Falcon* (sixteen guns; Lieutenant Harry Harmood). The *Schuyler* tried to run ashore but was grounded two hundred yards out and had to surrender. Webb and sixty-four other men were captured; Lieutenant Kerr and four others escaped.

LONG ISLAND, NEW YORK, BATTLE OF. 27 August 1776. The Battle of

THE GALE GROUP.

Long Island, known since the late twentieth century as the Battle of Brooklyn, was the largest engagement of the American Revolution, in which nearly twenty thousand British troops, including Scottish and Hessian auxiliaries, supported by an armada of thirty warships, took to the field against nine thousand Americans. Brooklyn in 1776 was the name of a township and a village in Kings County. The modern name for the battle specifies its location on western Long Island while conveying that the battle unfolded across the entire area of the modern borough of Brooklyn.

Strictly speaking, the Battle of Brooklyn was also the first battle in U.S. history, because it occurred just eight weeks after the Continental Congress had issued the Declaration of Independence, on 4 July. Despite the efforts of Walt Whitman and other Long Island natives to enshrine the battle as a sacred milestone on the road to American independence, these distinctions—first battle, largest battle—are little known to the general public. The American defeat on Long Island and the series of retreats that constituted the New York campaign have tended to be overshadowed by clear-cut victories in the canonical story of the Revolution.

The Battle of Brooklyn revealed the inexperience of George Washington and his generals, their inability to deploy troops effectively on a large scale and to anticipate, interpret, and counter the enemy's tactics. After

losing the battle, they were forced to flee Brooklyn Heights, the key piece of ground overlooking and commanding New York, America's second largest city, which soon had to be abandoned to the British. Nonetheless, the battle that threatened to end the American Revolution at a stroke was neither the catastrophic American defeat nor the resounding British victory it might have been. Moreover, Major General William Howe's decision to engage the Americans on Long Island—instead of cutting them off by seizing the Kings Bridge at the northern tip of Manhattan—was “a grave mistake of strategy” (Keegan, p.164). This mistake set the pattern for the rest of the fighting in New York: the Americans escaped several British attempts to encircle them and enough of the army survived to carry on the war for seven more years.

INVASION OF LONG ISLAND

Having arrived in New York from Halifax at the end of June 1776 and established his base on Staten Island, the British commander in chief, Major General William Howe, spent much of the summer amassing an invasion force of twenty-four thousand ground troops, about one-third of them Hessian auxiliaries under Major General Leopold Philip von Heister, and building wooden landing craft with hinged, flat bows that became ramps for amphibious operations. Colonel Edward Hand's Pennsylvania

riflemen, patrolling the Long Island shore, were the first to detect the preparations for the British assault. "At least fourteen sail of transports, some of them crowded with men, now under sail, and more, from the noise, are hoisting anchor," Hand reported on the afternoon of 21 August.

Between 9 A.M. and noon the following day, Vice Admiral Richard Lord Howe, the general's brother and co-commander in chief, stood on the deck of his flagship, the *Eagle*, supervising the invasion—the landing of fifteen thousand troops on the shore of Gravesend Bay. A corps of four thousand troops under Major Generals Henry Clinton and Charles Lord Cornwallis was the first to wade ashore, while successive waves of landing craft swept in behind them, depositing more men, baggage, supplies, wagons, horses, and forty pieces of artillery on Long Island. Admiral Howe's secretary described the operation, involving a flotilla of more than four hundred vessels on a clear, bright morning, as "one of the finest & most picturesque Scenes that the Imagination can fancy or the eye behold."

The frigates *Phoenix*, *Rose*, and *Greyhound* aimed their broadsides at the shore, while two bomb vessels, *Carcass* and *Thunder*, also stood by, equipped with mortars that could pitch explosive shells in a high arc over the invasion force and onto the shore. Rather than contest the landing, Hand and his three hundred riflemen fell back to the wooded ridge called Gowanus Heights, where the Americans intended to make their stand. General Howe's army encamped in an eight-mile arc, occupying southern Kings County in a line roughly parallel to the American positions on Gowanus Heights to the north.

AMERICAN DEFENSES

Cornwallis was sent forward with a substantial detachment of men and six fieldpieces to seize the village of Flatbush and probe the Flatbush Pass, the center of the Americans' outer line of defense on Gowanus Heights. The inner line was two miles to the north, a chain of forts, redoubts, and connecting trenches that sealed off the Brooklyn Heights peninsula, protecting the vital ground where American artillery commanded New York City, just across the East River. To attack the American fortifications at the base of the peninsula, the British would have to go through one of the four passes where roads crossed Gowanus Heights through its natural depressions—from west to east, the Martense Lane, Flatbush, Bedford, and Jamaica passes.

Major General Charles Lee had called for the construction of forts on Brooklyn Heights, and after his departure for Charleston in March, Major General Nathanael Greene had cordoned off the peninsula to protect those forts from the rear. Major General John

Sullivan, who succeeded Greene when he fell ill with camp fever on 15 August, realized that Gowanus Heights offered the Americans a tremendous advantage, an opportunity to ambush the more powerful British army. Sullivan stationed eight hundred men at each of the three westernmost passes, where they cut down trees for roadblocks, threw up breastworks, and mounted artillery. However, Sullivan neglected to fortify the more distant Jamaica Pass, a ravine four miles from the Brooklyn Heights defenses on the far end of the American left wing.

WASHINGTON SUSPECTS A FEINT

On the morning of 22 August, Washington received reports at his headquarters in Manhattan that eight thousand British troops had landed on Long Island, a figure probably based on the assumption that Cornwallis's detachment was the entire invasion force. Since reports from Staten Island the night before had predicted an attack with twenty thousand men "on Long Island and up the North River," Washington assumed the landing of the eight thousand on Long Island was a feint and that the remaining twelve thousand troops were still on transports, ready to land at the Kings Bridge and move south to take New York City. Washington assumed that Howe would try to cut him off from the mainland by seizing the Kings Bridge along with the Freebridge, Manhattan's only links to the mainland, across the Harlem River. Accordingly, Washington sent only six regiments to reinforce Sullivan on Long Island. Sullivan's troops spent a sleepless night on the 22nd, bracing for an attack that never came.

Howe's second-in-command, General Henry Clinton, had strongly urged him to land in lower Westchester County or northern Manhattan to trap the Americans, but Howe had several reasons for taking Long Island first. Most important, Howe intended to drive the Americans off Brooklyn Heights and prevent a repetition of the events in Boston, where American artillery placed on Dorchester Heights had forced the British to abandon the city. Second, while New York City would house the occupying army, Long Island's farms would feed its men and horses. Finally, Howe expected strong Loyalist support when his forces arrived in Kings and Queens Counties.

Much to Washington's consternation, on 23 August his troops provoked ongoing skirmishing on Long Island, which he considered a waste of ammunition and a distraction that might mask the beginning of the enemy's main offensive. American troops stationed in the Flatbush Pass attacked the Hessian guards posted just north of Cornwallis's camp in Flatbush village. The Americans drove the Hessian sentries back toward the village, burned several houses where they had established outposts, and dragged at least one corpse back to the hills as evidence of

contact with these German auxiliaries, whose fearsome reputation preceded them. In the afternoon, the Forty-second Scottish Highlanders brought up two cannon from the village and mounted them on a breastwork across the Flatbush Road, and an exchange of artillery fire lasted for the rest of the day. All of this activity at the center of the American line on Gowanus Heights would indeed prove to be a distraction and would help conceal British intentions.

Washington began taking daily trips to Long Island in order to assess the situation. Still suspecting that the Gravesend landing was a diversion, he moved a thousand men from the Kings Bridge about halfway down the west side of Manhattan with orders to fend off a possible British landing at Bloomingdale village and remain ready to move forward to Brooklyn or back to the Kings Bridge. The arrival of new militia units from Connecticut prompted Washington to send four more regiments to Sullivan on Long Island, but with the proviso that they had to return immediately if Admiral Howe's fleet sailed up to attack the city. Admiral Howe's ships had been trying to enter the East River and bombard the Brooklyn Heights forts, but the wind was against them. The ships had succeeded only in trading cannon fire with the battery at Red Hook, which guarded the Buttermilk Channel between Governors Island and the Brooklyn shore.

On 25 August, the British landed some forty-three hundred Hessians under General von Heister on Long Island, bringing Howe's troop strength to nearly twenty-thousand. Washington no longer doubted that "they mean to land the Main Body of their Army on Long Island, and make their grand push there," and he sent over six more regiments from Manhattan, bringing the American total to almost nine thousand troops (Manders, p. 36). However, most of Washington's regiments were reduced by camp fever to about three-quarters of their full strength, and Howe's troops outnumbered the Americans by more than two to one. The three thousand American troops stationed outside the lines, on Gowanus Heights, were outnumbered by almost seven to one.

With nearly half the army concentrated on Long Island, Washington granted Major General Israel Putnam's request to assume command there. Putnam, as one of the original five major generals appointed by Congress and Washington's highest-ranking subordinate in New York, was entitled to the post. Washington took the command away from Sullivan but adopted his plan to ambush the British at Gowanus Heights as the main strategy for the coming battle. Washington ordered Putnam to deploy his best units to stop the British at the passes and keep them from ever reaching the fortifications across the neck of the peninsula.

THE AMERICANS' LEFT WING VULNERABLE

Putnam directed the entire Long Island operation from his headquarters inside the American lines on Brooklyn Heights. His orders called for about eight hundred men at each of the three western passes and three hundred more in the woods just north of Gowanus Creek, protecting the gap between Red Hook and the western end of the American lines. On 26 August, the eve of the battle, Brigadier General Samuel Holden Parsons was in overall command of the Gowanus Heights deployments. Major General William Alexander, known as Lord Stirling because of his claim to a lapsed Scottish peerage, commanded the American right wing—the Gowanus Road and Martense Lane Pass. Sullivan was in charge of the left and center, which included the Bedford and Flatbush passes.

On the American left wing, in the east, Colonel Samuel Miles patrolled the ridge between the Bedford and Jamaica passes with two battalions of Pennsylvania riflemen. According to Parsons, Miles was "to watch the motion of the enemy on that part, with orders to keep a party constantly reconnoitering to and across the Jamaica Road." Along this six-mile ridge, from one end of Gowanus Heights to the other, "sentinels were so placed as to keep a constant communication between the three guards on the three roads" (Johnston, p. 35).

Miles learned from his scouts that large numbers of British troops were concealed to the south, in particular a contingent at Flatlands (the easternmost village occupied by the British) that could easily march through the Jamaica Pass. Miles also noted that Cornwallis had moved all of his troops out of Flatbush to Flatlands and replaced them with Hessians, revealing that the principal attack would not be at the center, as expected, but farther east. According to Miles, he informed Sullivan of the situation, but nothing was done. For his part, Sullivan pleaded a lack of troops and claimed his own warnings about the Jamaica Pass were ignored by his superiors. He resorted to spending a large sum of his own money, he wrote, to have five officers on horseback patrol the pass at night. Sullivan ordered his scouts to gallop back and alert Miles if the British arrived at the Jamaica Pass. Miles and his riflemen, facing south on the ridge, were to turn east to the Jamaica Road and stall the British advance until more troops could be shifted to that sector.

The lack of cavalry stemmed in part from Washington's decision to turn away a unit from Connecticut because he did not want the burden of feeding its four hundred horses, and the men refused to serve without them. To Washington's annoyance, the cavalry from Kings County was busy helping Brigadier General Nathaniel Woodhull, the commander of the Queens and Suffolk County militias, with a last-minute effort to drive

THE GALE GROUP.

all the remaining horses, cattle, and sheep on western Long Island east to Hempstead Plains away from the British army. Washington had warned New York's revolutionary government, the Provincial Congress, to complete this task earlier in the summer.

Washington came over from Manhattan to inspect the lines on Long Island with an entourage including Putnam, Sullivan, and other officers on the evening of 26 August, but he failed to put enough men on the left flank. It remains unclear whether or not Washington fully inspected and approved the disposition of the troops on Gowanus Heights before he returned to Manhattan on the evening of the 26th. In any event, Washington and his generals' "want of experience to move upon a large scale," which he had confessed in a letter to Congress in June, clearly affected his appraisal of the situation. The reshuffling of British troops at Flatbush was clearly visible through spyglasses and signaled a flanking maneuver to the east, but Washington merely concluded that the enemy "would in a little time make a general attack."

THE BRITISH NIGHT MARCH

The British plan to seize the Jamaica Pass was the work of General Clinton, whose views generally were not well received at headquarters. Howe, as commander in chief, would ultimately bear full responsibility for the bold, risky proposals of his second-in-command and therefore resented his zealous persistence. Howe had ignored

Clinton's advice about landing at the Kings Bridge, and the two men had not been on speaking terms since their arrival on Long Island. Clinton—who knew Long Island well, since he had grown up in New York when his father was the royal governor—refreshed his memory with an extensive reconnaissance mission on the 24th. On the 25th, Clinton offered Howe, through an intermediary, a plan to encircle the Americans on Gowanus Heights by marching at night through the Jamaica Pass. British forces in front of the ridge were to distract the Americans from the flanking column and then press forward in earnest when the encirclement was complete.

Since a British column of more than ten thousand troops would have to travel six miles through enemy territory in the pitch dark, an ambush seemed likely, and Major General James Grant preferred simply to smash his way through the nearby passes. He had fought in America during the French and Indian War and had recently declared in Parliament that with a mere five thousand troops he could march the entire length of the continent and the rebels would be helpless to stop him. General Howe initially agreed with Grant. However, on the 26th, Oliver De Lancey, a New York Loyalist, convinced Howe that with the help of local guides, the mission would succeed. Howe ordered Clinton to go ahead with his plan that evening.

At 8 P.M. on the 26th, a column of about four thousand troops led by Clinton and Cornwallis left

Flatlands with fourteen pieces of field artillery in tow. Clinton left campfires burning and assigned an entire regiment to make ordinary campground sounds in order to mask his intentions and the noise of the advance corps. The British remained on edge during the entire march but encountered no resistance. General Woodhull and his militia had been driving cattle only hours earlier in some fields along Clinton's route and might have spoiled his plans, but they were two miles to the east, along the county line, by the time the British passed that point.

At about 2 A.M. the column approached the Jamaica Pass, and Clinton sent forward a detachment that captured the five mounted officers posted there by Sullivan. Still wary of an ambush at the pass, Clinton seized the local tavern and forced its owner, William Howard, to guide a British patrol across the ridge by a footpath that would allow them to inspect the Jamaica Pass without going through it. At dawn, after the patrol had arrived at the Jamaica Road on the far side of the ridge, Clinton sent his whole force forward to occupy the pass itself.

Two hours later, Clinton was joined by General Howe and an additional six thousand troops. Howe had left Flatlands at midnight, leading a column that stretched for two miles, slowly hauling supplies and fourteen more cannon, but the Americans did not ambush him, either. By capturing civilians and American scouts along their path, the British had silenced them and preserved the element of surprise. The tired soldiers rested briefly, ate a cold breakfast, and set off on the final leg of the grueling march, along the Jamaica Road to the village of Bedford.

DIVERSION ON BRITISH LEFT

Clinton's plan called for General Grant, on the British left wing, and General von Heister at Flatbush in the center, to distract the Americans from the movements of the British flanking column at the Jamaica Pass. During the night, Grant had proceeded up the Gowanus Road toward the Martense Lane Pass with five thousand troops, including two companies of Long Island Tories. At 11 P.M. Edward Hand's riflemen fired on two of Grant's scouts, who had stopped to sample the watermelons growing near the Red Lion Inn at the junction of the Gowanus Road and the Martense Lane Pass. The scouts retreated, and Grant restrained his troops, preferring to hang back and monitor the American position at the inn for the next few hours. Hand's seasoned riflemen were relieved just after midnight, having been on duty for four days straight, and units of new Pennsylvania levies—untested militia—took their place. At about two 2 A.M., when Clinton's advance corps arrived near Howard's House, Grant sent three hundred troops forward to storm the Martense Lane Pass. Major Edward Burd was captured along with a

few of his men, while most of the militia fled up the Gowanus Road.

Burd had managed to dispatch messengers to alert General Putnam, who soon had his troops ready for battle in the trenches and redoubts across the neck of the peninsula. Using signal lights on Brooklyn Heights, Putnam also alerted Washington to come over from Manhattan. Putnam then rode down from Brooklyn Heights to Lord Stirling's camp, next to Nicholas Vechte's farmhouse south of Gowanus Creek. Arriving at about 3 A.M., Putnam called on Stirling to assemble his best units, fend off Grant, and secure the right wing. Stirling marshaled some two thousand men, including troops from Delaware and Pennsylvania along with Colonel William Smallwood's elite Maryland regiment, which was well-trained and -equipped and highly motivated.

General Parsons reached the American right wing ahead of Stirling, however. He found that the British had already come through the woods and were descending the north side of the ridge, apparently marching straight for the neck of the peninsula. Gathering twenty of his fleeing men, Parsons posted them on a hill half a mile in front of the British. Stirling arrived with reinforcements, including a battalion of raw recruits from Pennsylvania under Colonel Samuel Atlee, which quickly occupied a forward position on the left side of a narrow stretch in the road. With the bulk of his men, Stirling formed a line on a piece of high ground behind Atlee. Atlee's unit took the brunt of Grant's fire and lost one man before retreating to a wooded hill on the left, taking up a position flanked by Parsons on one side and the Delaware Continentals, led by Colonel John Haslet, on the other. At around 7 A.M., an American artillery company arrived with two fieldpieces.

Grant drew his forces up in several lines as well, making this the first time during the revolution that the Americans faced the British in regular battle formation in the open field, with only hedges and trees to provide cover. In this sense, the Battle of Brooklyn was the first pitched battle of the war. Unlike Lexington and Concord and Bunker Hill, in Brooklyn the Americans did not have the benefit of fortifications or even stone walls. Grant's and Stirling's lines stretched for a quarter of a mile, and—just as Clinton intended—the Americans became convinced that the main British attack would be along the Gowanus Road.

When Grant sent troops forward to attack Stirling's right, the Americans held their ground and opened fire with the two fieldpieces, which drove the British back to their lines. Grant then launched a steady artillery barrage, but the Americans stood firm, despite gruesome casualties. Stirling reportedly told his men about the boast Grant had made in parliament the previous year and exhorted them to show the Englishman he could not even get as far

THE GALE GROUP.

as the millponds behind them with his five thousand men. Unaware of the British flanking column, the Americans on the right wing believed they were fending off the enemy's main thrust.

General Von Heister had agreed to dispatch some Hessian troops westward from Flatbush to link up with Grant, who sent a detachment to look for them. Stirling immediately detected their attempt to join forces and turn his left flank. He ordered Parsons and Atlee to seize the high ground on his left, where they fought off three attacks while losing only a handful of men and inflicting on the British the highest losses in killed and wounded sustained by either side in any sector of the battle. Six miles to the east, however, on the British right wing, the plan to turn the left flank of the entire American army was proceeding smoothly.

HOWE SPRINGS HIS TRAP

Clinton and Howe had marched their column of ten thousand troops through the Jamaica Pass and along the turnpike, reaching the village of Bedford at 9 A.M. The exhausting night march had been well worth the trouble. The British had arrived, apparently undetected, behind the Americans' left and center and were ready to attack. Howe fired two cannon, announcing his arrival to Grant and von Heister on the south side of the ridge and signaling that their function as decoys had ended; they were now to press their attacks in earnest.

The British flanking column had not gone completely undetected. Colonel Miles, guarding the ridge just east of Bedford Pass, was alerted to the British advance along the Jamaica Road by his scouts, and at 7 A.M. he had begun marching east toward the pass with five hundred of his men. Because he was in the woods and the British were on the road, however, Miles passed the front of their column without seeing it and encountered the rear instead. By the time Miles's warning reached Putnam by messenger, Howe's column had arrived at Bedford. The British discovered Miles in the woods before he could retreat, and he was taken prisoner with half of his men while the other half fled back to the forts on the peninsula. The sight of Miles's scattered, fleeing men sowed panic in the American guards at the Bedford Road and further to the west. As the British advanced from the east, more American troops ran for the safety of the fortified lines on Brooklyn Heights. The inner line of defense rapidly became the only one.

Before the British reached the Bedford Pass, the Continentals stationed there had pulled back. Hearing von Heister's artillery in front of them and Howe's signal guns in the rear, they decided not to wait for the trap to close. At the same time, General Sullivan and his men retreated from the Flatbush Pass, and the American center disintegrated. Units from the two passes mingled as they dashed to safety, trying to outrun the British troops dispatched by Cornwallis from the crossroads at Bedford.

THE GALE GROUP.

village. While most of the Americans escaped, some were captured by the British and others were bayoneted by the Hessians, who refused their surrender. The Hessians had been warned that the Americans intended to give them no quarter, according to one British officer, which prompted them to take no prisoners. However, Sullivan, who had stayed behind to ensure an orderly retreat, was captured unharmed in a cornfield by three Hessian grenadiers, suggesting that such lurid tales were exaggerated.

HOWE DECLINES PURSUIT

With hundreds of rebel troops racing through the woods and fields and across Gowanus Creek to reach the forts on the peninsula, and with Cornwallis's grenadiers chasing them right up to the walls, Howe might have won a monumental victory—and probably the war—had he given his troops free rein to storm the American lines. Instead, he repeatedly ordered them to pull back. “Had they been permitted to go on it is my opinion they would have carried the redoubt,” Howe recalled in his official account of the battle:

but as it was apparent that the lines must have been ours at a very cheap rate by regular approaches, I would not risk the loss that might have been sustained in the assault and ordered them back to a hollow way in the front of the works out of the reach of the musketry.

Perhaps because he couldn't bear a repeat of Bunker Hill—where, a year earlier, Americans had held a lightly fortified position and killed or wounded more than one

thousand British troops in a single day—Howe preferred to dig trenches and proceed with a formal siege. Moreover, his troops were exhausted, having marched all night and fought half the morning.

Clinton had disobeyed Howe's orders by allowing Major General John Vaughan and his grenadiers to pursue the fleeing rebels. Howe ordered them to pull back, and Vaughan “stormed with rage” at the lost opportunity. Clinton had hoped the grenadiers would march all the way down the Jamaica Road to the Brooklyn ferry, at which point, “everything on the island must have been ours.” Clinton speculated further that “the entire loss of that army” would have had severe consequences for the American cause “in that early stage of the rebellion.” Clinton's modern biographer, William B. Willcox, was more direct: “Howe lost as good a chance as Britain ever had of winning the war at a stroke” (Clinton, p. 44).

FINAL ACTION: RIGHT WING

With the battle in the center concluded by about 11 A.M., all that remained for the British was to defeat Stirling's forces on the American right, where they remained strongly positioned in the woods near the Gowanus Road. Their position was growing weaker every minute. While Grant pinned the Americans down with an ongoing exchange of artillery fire, von Heister closed in on their left and Cornwallis moved toward their rear. Sensing from the sounds of the battle to the east and the arrival of the Hessians that a trap was closing, Stirling managed to

disengage from Grant, and the crest of the hill temporarily concealed the American retreat.

However, Cornwallis's forces had seized the Vechte farmhouse and were blocking the only escape route over dry land. With Grant closing in on what was now his rear, Stirling ordered his troops to plunge into the marsh on their left and make their way across Gowanus Creek, which was about eighty yards wide along this stretch. The incoming tide created a swift current, and more than a few of the soldiers did not know how to swim.

To shield the fleeing troops from Cornwallis's advance, Stirling took about 250 of his best-trained troops, the Marylanders, and attacked the Vechte farmhouse, where the British had installed themselves and their artillery. The Marylanders formed ranks, charged Cornwallis's position, and fell back into the surrounding woods several times. Major Mordechai Gist recalled that Stirling "encouraged and animated our young soldiers with almost invincible resolution."

Washington and his generals witnessed this sacrificial rearguard action from the Cobble Hill Fort, on a small hill inside the American fortified lines. Washington had remained in New York City until midmorning to contend with a possible attack by part of Admiral Howe's fleet, which had moved up toward the mouth of the East River. With the wind blowing from the north, Washington eventually felt certain the ships would not be able to enter the river, and he had crossed over to Long Island. Tradition holds that when Washington beheld the heroism of Stirling and the Marylanders, he exclaimed with a mixture of admiration and sorrow: "What brave fellows I must lose this day!"

Hopelessly outnumbered and facing a storm of bullets and artillery fire, Gist and Stirling ordered the Marylanders to disperse and save themselves. Gist and eight others escaped across the creek; Stirling, unable to escape, found a way to at least deny the boastful General Grant the satisfaction of capturing him—by surrendering himself to General von Heister. Most of the Marylanders were captured and many were killed in the act of saving hundreds of other Americans: the bulk of the American right wing escaped into the marsh and across Gowanus Creek. After Stirling had disengaged from Grant's forces, Parsons and Atlee found themselves isolated on their hill at the eastern end the line. Retreating from Grant, they were cut off by Cornwallis and could not get to Gowanus Creek. Their men dispersed into the woods and with Atlee, most became prisoners. Parsons hid in a swamp with seven of his men and later reached Brooklyn Heights.

On the evening of 27 August, Washington expected the British to launch a full-scale attack on the fortified lines across the neck of the peninsula. He walked among the troops, alternating between words of encouragement and warnings that any man who abandoned his post

would be shot. At regular intervals along the lines, 120 American grenadiers stood ready with slow matches burning and a half-dozen grenades each in their bags. The British did not attack. Instead, as the sun set and the Americans scanned the plateau, they saw Howe's forces pitch their white tents a mile and a half away and retire for some much needed rest.

SIGNIFICANCE

The Battle of Brooklyn was a disheartening defeat for the Americans, and the failure to secure the Jamaica Pass became the focus of acrimonious debate. "I think the hills might have been well maintained with 5000 men," Brigadier General John Morin Scott wrote to John Jay. "I fear their natural strength was our bane by lulling us into a state of security and enabling the enemy to steal a march on us." General Parsons was more specific in apportioning blame: "I still am of the opinion," Parsons wrote, "if our guards on the West road and Colonel Miles on the East End of the hills had done their duty, the enemy would not have passed those important heights, without such very great loss as would have obliged them to abandon any further enterprise on the Island." Extending this argument, had the Americans held the ridge, and with it Brooklyn Heights, the British might have been forced to leave New York, just as they had been driven out of Boston by the guns on Dorchester Heights. Even the commander in chief was denounced by the rank and file after the disastrous battle: "Would to Heaven General Lee was here, is the language of officers and men," wrote Delaware's Colonel John Haslet.

While these mutual recriminations between the general officers and their subordinates signaled the onset of a severe morale crisis in Washington's army, Howe's incomplete victory on 27 August sowed the seeds of discontent in the British ranks. Had he and his column continued along the Jamaica Road instead of stopping at Bedford and firing the signal guns, Howe probably would have surrounded the American outer lines and cut off every escape route back to Brooklyn Heights. Had he been willing to storm the Brooklyn fortifications when the Americans had initially been routed, he might well have overrun Washington's army. As it was, the bulk of the American forces remained intact inside the Brooklyn Heights defenses.

Howe's official explanation for not storming the lines—that he was protecting his troops—may have been offered to conceal another motive: his reluctance to wipe out the American army. William and Richard Howe's older brother, George, had been killed in the French and Indian War while leading Massachusetts troops, and the younger brothers remained grateful for a marble monument to him in Westminster Abbey funded by the Massachusetts government. Spurred by this bond of friendship with the Americans, Admiral Howe had

convinced the British government to empower him and General Howe not only as co-commanders in chief, but as peace commissioners authorized to negotiate with the rebels. General Howe's restraint at the end of the battle and in the rest of the New York campaign soon suggested to observers at the time on both sides of the Atlantic that he hoped to cow the Americans—not crush them—into submission.

After an army major brought news of Howe's triumph on Long Island to London several weeks later, all of Britain was ecstatic, expecting a prompt end to the war. King George III conferred a knighthood, the Order of Bath, on the commander in chief, henceforth to be known as Sir William. However, the full significance of the battle did not become apparent for several months. By the time the same messenger returned to America in mid-December with reports of British euphoria, the worst repercussions of Howe's failure to win a total victory on Long Island were at hand. The remnants of the American army that slipped through Howe's fingers on Long Island struck back at Trenton and Princeton in late December, reviving the American cause and proving that textbook tactical victories and the conquest of cities were no substitute for capturing or crushing the rebel army.

NUMBERS AND LOSSES

Howe reported only 61 killed, 267 wounded, and 31 taken prisoner or missing during the Battle of Brooklyn. Even with the Hessian losses—2 killed and 26 wounded—which were routinely excluded from the British figures, all of Howe's forces, by their own accounting, suffered fewer than four hundred casualties. Given the number of Americans who eventually left Long Island after the battle, British estimates of the number of Americans killed or captured—from thirty-three hundred up to four thousand—were clearly exaggerated. Washington initially put his losses at “seven hundred to a thousand killed and taken” and later settled on the figure of eight hundred casualties, “more than three fourths of which were taken prisoners.” Modern authorities agree that Washington was not far off the mark: American losses, they conclude, were close to nine hundred prisoners taken and about two hundred men killed or wounded. The Battle of Brooklyn was not the scene of large-scale slaughter, and while the Americans lost a large number of men as prisoners, the British appear to have suffered a greater loss of men killed and wounded.

LONG ISLAND, NEW YORK, EVACUATION OF. American evacuation 29–30 August 1776. After the battle of Long Island, on 27 August, the British started formal siege operations against Brooklyn Heights. The north wind that had kept their ships out of the East River on the day of the battle continued to blow, and General George Washington brought reinforcements over from New York City. On the afternoon of 28 August a cold rain began to fall on ground that was already water-soaked, and the demoralized, ill-equipped American troops suffered severely.

The appearance of a redoubt within 600 yards of the American left confirmed Washington's earlier suspicion that the British general, William Howe, was taking his time and did not intend to make an immediate assault on the Brooklyn defenses. Nonetheless, Washington had to cope with the enemy's capability of attacking New York City with fresh troops from Staten Island, as well as the possibility that Howe might trap the Americans by having his ships in Long Island Sound land troops in lower Westchester County to seize the Kings Bridge. After a council of war on the afternoon of 29 August, with unanimous support from his generals, Washington

decided to abandon Long Island and regroup his forces on Manhattan Island.

That morning he had ordered General William Heath and his assistant quartermaster general, Hugh Hughes, to assemble all available boats and move them to the East River by dark. The boats reached Brooklyn Ferry at dusk to supplement the much larger number of boats that the Americans had been using for weeks to move men and supplies across the river. Some accounts imply that only the “miraculous” assembly of boats by Heath and Hughes made the evacuation possible. One historian, Charles Francis Adams, pointed out that Washington was not such an “utter military simpleton” as to “put himself and his army into a most dangerous position depending wholly, or in chief, on some suddenly improvised means of extrication. . . . The mass of what [transportation] was required had already long before been provided” (Adams, p. 42).

To withdraw secretly from Brooklyn Heights and move almost 10,000 inexperienced and demoralized troops across the East River was a military operation to try the skill and courage of veterans. Dusk fell at 7:30, General Alexander McDougall began the embarkation at 8 p.m., and the transfer of troops went well for the first hour. Then the tide reversed direction, flowing south, and the steady wind from the northeast suddenly picked up speed. The American sailboats were nearly swept down to the harbor and the waiting British fleet. The grueling retreat continued with only rowboats until 11 p.m., when the wind began to blow from the southwest. For the next several hours, the water was calm and, as Adams reports, “the boats passed to and fro, favored by a light west breeze, and loaded to the gunwale” (Adams, p. 47).

The only hitch that reportedly took place on Brooklyn Heights occurred when some troops reached the waterfront before their turn to embark and had to be marched back to their posts. This has been dismissed by Douglas Southall Freeman, author of the seven-volume study *George Washington*. However, there was something more to this episode, which might have been fatal. At about 2 a.m. Major Alexander Scammell, then acting as Washington’s aide-de-camp, reported with orders to General Thomas Mifflin, who was commanding the covering force on Brooklyn Heights. (This force was comprised of John Haslet’s Delawares, the remnants of William Smallwood’s Marylanders, John Shee’s and Robert Magaw’s Pennsylvanians, and John Chester’s Connecticut Battalion.) Scammell told Mifflin that his boats were waiting and that Washington wanted him to move immediately to the ferry. Thinking this order premature, Mifflin told Scammell he must be mistaken. Scammell maintained that he was repeating his instructions and that, furthermore, he had already passed them on to other elements of the covering force, which

were then executing them. Mifflin therefore called in the outposts and started moving his troops toward the ferry. When they were well on their way to the landing they met Washington, who accused them of deserting their posts.

“Good God! General Mifflin,” Washington is reported to have said, “I am afraid you have ruined us by so unseasonably withdrawing.”

“I did it by your order,” Mifflin replied.

When it became apparent that Scammell had made a serious mistake, the covering force moved back to their positions, which had been abandoned for nearly an hour. The British were peacefully ignorant of these nocturnal activities. At about 4 a.m. a small British patrol peered into the abandoned forward positions, and half an hour later these were occupied by Howe’s troops. The American rear guard was still at Brooklyn Ferry when the day began to dawn at 4:30 a.m., but a dense fog settled to cover their withdrawal. Among the last to leave was Washington. The evacuation was achieved with the loss of only three stragglers (who had stayed behind to plunder) and five heavy cannon (which could not be manhandled through the hub-deep mud). All other men, artillery, supplies, and horses were safe in New York City by 7 a.m., having been evacuated in eleven hours.

John Glover and Israel Hutchinson’s regiments of Massachusetts fishermen and sailors distinguished themselves in handling the boats that shuttled across the river. There is no report of even a single collision, swamping, or upset, and not one life was lost.

According to Christopher Ward, writing of this event, “Both Howe’s attack [of 27 August] and Washington’s retreat were masterpieces of planning and execution, and each was successful because of the mistakes of the other principal” (Ward, p. 236).

LONG ISLAND OF HOLSTON.

Located on the South Branch of the Holston River at Kingsport, Tennessee, this Long Island figures in the

earliest maps of the “over mountain” settlements. The island was an ancient Cherokee meeting ground and was the site of several treaty signings. One such significant treaty signing brought an end to the Cherokee War of 1776. In that year, Cherokee Chief Dragging Canoe was defeated by American militia at the battle of Long Island Flats. Because of the name of the battle, some sources place the conflict on Long Island itself, whereas, in fact, the Long Island Flats were located across the river, in modern Kingsport. The treaty ending the conflict with the Cherokee, however, was signed on Long Island in 1777.

LONG ISLAND SOUND. With Long Island to the south and Connecticut to the north, the Sound—one hundred miles by twenty miles—figured not only in such regular military operations as Tryon’s Danbury raid, the Connecticut coast raid, and Arnold’s New London raid, but also in the partisan activities known as “whaleboat warfare.”

LONGUEUIL, CANADA. Located on the south bank of the St. Lawrence opposite Montreal, this town and La Prairie, ten miles south, were the two main approaches to Montreal from the south. Ethan Allen and John Brown arrived here during Montgomery’s siege of St. Johns and subsequently launched their abortive attack on Montreal on 25 September 1775, in which Brown changed his mind and left Allen unsupported. The main action at Longueuil was on 30 October 1775, when Sir Guy Carleton assembled a force of nearly eight hundred and attempted to relieve St. Johns. The British expedition comprised some of Allan MacLean’s newly raised Royal Highland Emigrants; sixty men of the Royal Fusiliers; a large contingent of Caughnawaga Indians; and mostly Canadian volunteers, both French and English. One contingent of Caughnawagas was led by the notorious St. Luc. The river crossing was

contested by Seth Warner’s Green Mountain Regiment and the Second New York, supported by a four-pounder. Artillery and musket fire drove back the main attacking force. MacLean tried to make a secondary crossing upstream but turned back when he found the site well defended.

When Benedict Arnold led the American garrison out of Montreal after the collapse of the Canada invasion in the summer of 1776, he crossed with his three hundred men to Longueuil. Hotly pursued by Carleton’s forces, he retreated to St. Johns.

LORING, JOSHUA. (1744–1789). Loyalist, commissary of prisoners. Massachusetts. Born in Roxbury, Massachusetts, on 1 November 1744, Loring was the son of a British naval officer and privateer of the same name who was one of General Gage’s mandamus councillors. The younger Loring served in the British army for four years. He sold his lieutenant’s commission in 1768 and settled in Boston, having been named to the sinecure of deputy surveyor of the King’s Woods by New Hampshire Governor John Wentworth. Loring sided with the crown during the lead-up to the Revolution, placing such confidence in Britain’s ability to crush the rebellion that he paid five hundred pounds for the office of Suffolk County sheriff in 1775. In March 1776 he left Boston with the British, first for Halifax and then New York, where in early 1777, General William Howe named Loring commissary of prisoners. This remunerative office was undoubtedly obtained through the influence of his unfaithful wife, Elizabeth, who was having a very public affair with General Howe.

The Narrative of Colonel Ethan Allen, published in 1779, made Loring a byword in America for corruption and cruelty. Both British and American officials suspected Loring of profiting excessively from his office, British general James Robertson charging him with billing the government for rations for dead prisoners. Others defended Loring as acting in a professional manner. Returning to England in 1782, Loring sought recompense from the government for the loss of 20,000 acres and property worth over a £1,000; he received £830. He spent the last years of his life in Englefield, Berkshire, where he died on 18 September 1789.

LOUDOUN, JOHN CAMPBELL, FOURTH EARL OF. (1705–1782). British general. He entered the army as a cornet in 1727 and succeeded to his title in 1731. He was at Dettingen (1743) and fought against the Jacobites in 1745–1746. In 1755 he reached the rank of major general and in 1756 became titular governor of Virginia, colonel in chief of the new Sixtieth Foot (the Royal Americans) and commander in chief of the British forces in North America. He reached New York on 23 July with a commission urging the wholehearted cooperation of the colonial authorities but found himself confronted with disunity and lack of enthusiasm for the war. Finding provincial soldiers demoralized by defeat and unwilling to accept his authority, he resolved the problem with a mixture of personal tact and a monopoly on munitions. He was less successful with the reluctant colonial governments: his heated insistence on their submission to his commission was entirely understandable but only caused colonial assemblies to fear the imposition of military rule. Militarily, Loudoun was unable to restore the battered reputation of the regular army. His expedition against Louisburg had to be abandoned when the navy was unable to secure local maritime superiority. While he was away Montcalm descended on Fort William Henry and destroyed it. However, Loudoun laid the administrative and logistical foundations for future victory, establishing an efficient commissariat, stockpiles of supplies, and a proper system of supply wagons and boats. Just as significantly, he began the process of creating light infantry units operating with Indian allies. Yet, despite these unobtrusive but critical advances, the spectacular military failures—due partly to meddling by William Pitt—were laid wholly at Loudoun’s door. He was recalled in December 1757.

LOUISBURG, CANADA. Erected at enormous expense by the French beginning in 1720, this powerful fortress on the eastern shore of Cape Breton

Island was second only to Quebec City in importance during the French regime. It guarded the approaches to the St. Lawrence and was the center of the cod fisheries. Captured in June 1745 by a force of New England colonists led by William Pepperrell, with the support of a British squadron under Peter Warren, it was returned to France by the Treaty of Aix-la-Chapelle in 1748, to the intense resentment of the British colonists. A British expeditionary force under Jeffery Amherst recaptured it in July 1758. The English spelling is Louisburg, but some writers favor Louisbourg, the French spelling.

LOUIS XVI IN THE AMERICAN REVOLUTION. Louis XVI came to the French throne in 1774 at age nineteen with a determination to reestablish France’s position as the premier monarchy of Europe; regain the monarch’s authority as “most Christian majesty”; and overcome France’s disastrous losses to England in the Seven Years’ War, albeit with a hesitation to undertake outright warfare. Turgot, his comptroller-general of finances from 1774 to 1776, was initially a restraining influence on the more aggressive plans of foreign minister Vergennes. Louis, however, convinced by Vergennes that Anglo-American reconciliation might threaten its valuable West Indies colonies, decided to assist the Americans minimally. His goals were to exhaust the English and to keep the Americans involved in their differences with England, providing a small amount of aid that would keep them engaged in the conflict without developing American resentment toward the French.

Louis hesitated to commit to formal alliance and American independence until news of Germantown and Saratoga in 1777 led him to fear Anglo-America rapprochement. The alliance treaties followed quickly in March 1778, and with them openly declared conflict. Congress responded by proclaiming Louis “defender of the rights of mankind.” Louis’s support of the Americans was part of a larger strategic policy in which France sought to determine the balance of power partly by becoming a commercial and diplomatic patron of weaker monarchies and republics, including the United States, the Netherlands, Switzerland, and some independent German states. The resulting financial burdens were compounded by the global extent of the war from 1778 to 1783 and the refinance of France’s existing debt. Unable to reform

France's financial system, Louis begrudgingly accepted a series of political reforms in the 1780s that put him between irreconcilable domestic forces. Yet without Louis's assistance—first through secret aid like that funneled through Hortalez & Cie, and later through open aid under the French alliance—it is doubtful the Americans could have won.

LOVELL, JAMES. (1737–1814). Continental Congressman. Massachusetts. Born in Boston on 31 October 1737, James Lovell graduated from Harvard in 1756, having become an accomplished linguist and mathematician. He became an instructor under his father (John Lovell) in the South Grammar (now Boston Latin) School. During these years his reputation as an orator increased, and in 1771 he was chosen to deliver the first commemorative speech on the Boston Massacre. This widely reprinted speech made him a well known Patriot figure. The school was closed by the British on 19 April 1775, even though the senior Lovell was a Loyalist.

James Lovell was arrested for spying on 27 June 1775 and was confined in the Provost's Prison. When the British evacuated Boston in March 1776, they took Lovell with them to Halifax, where he shared a cell with Ethan Allen. Lovell was exchanged for Colonel Philip Skene in November 1776 and returned to a welcoming Boston. A few days later, he was sent to the Continental Congress, taking his seat on 4 February 1777 and serving until April 1782. Lovell worked nearly as hard in Congress as his cousin, John Adams, serving on numerous committees and editing the *Journals of the Congress* for publication. He conducted very important work on the Committee for Foreign Affairs, including developing the cipher used by

American agents abroad and acted as Congress's French translator. In addition, he played an active role in practically all the controversies of the Congress, including the Deane affair, in which Silas Deane faced charges ranging from profiteering to treason, and the Conway cabal, in which a group of Continental officers sought to replace Washington as commander in chief. A fervid admirer of General Horatio Gates, Lovell was a sarcastic critic of General George Washington. He took Gates's side in his quarrel with General Philip Schuyler, and encouraged Gates to deal directly with Congress, going over Washington's head. A scandal over indiscreet letters to Abigail Adams and a possible affair with his landlady led Lovell to resign from Congress in 1782. He returned to Boston to serve as receiver of Continental taxes. He became customs collector for the state in 1788, and in 1789 was appointed naval officer for Boston and Charlestown. His son was also named James Lovell, and served as a Continental officer. The senior James Lovell died in Windham, Maine, on 14 July 1814.

LOVELL, JAMES, JR. (1758–1850). Continental officer. Massachusetts. Son of James Lovell, he graduated from Harvard in 1776 and became an ensign in Henry Lee's Continental Regiment, 25 May 1777. Named regimental adjutant on 10 May 1778, he transferred to Henry Jackson's Massachusetts Regiment on 22 April 1779 as adjutant. In March 1780 he transferred to Lee's Battalion of Light Dragoons and was adjutant until the end of the war.

LOVELL, JOHN. (1710–1778). Loyalist. Massachusetts. Born in Boston on 1 April 1710, Lovell graduated from Harvard in 1728 and became an usher of the South Grammar (later Boston Latin) School the next year. In 1734 he was named headmaster and continued in this post until the British military authorities closed

Loyal American Rangers

the school on 19 April 1775. Over the years he taught many boys who would later become leaders of the Revolutionary struggle, including Samuel Adams, Robert Treat Paine, John Hancock, and Henry Knox. When the British withdrew to Nova Scotia in March 1776, he chose loyalty to the crown and followed them to Halifax, where he died two years later. His son James, who chose the other side, was held prisoner there briefly by the British in 1776.

LOYAL AMERICAN RANGERS.

Raised in New York by Major William Odell in late 1780 from among Continental army prisoners and deserters, this Provincial regiment was sent to Jamaica in January 1781. It was to be sent to help defend Pensacola, but that town surrendered to the Spanish on 9 May before the regiment arrived. A detachment was later sent to raid Black River, Honduras, in August 1782. After Odell's death on 6 January 1783, the regiment was merged with the duke of Cumberland's regiment.

LOYAL AMERICANS. This Provincial regiment was raised by Beverley Robinson in New York City in the spring of 1777. It was recruited largely from among his tenants and followers, who had fled from his estates in the Hudson Valley. It took part in Sir Henry Clinton's expedition to the Highlands, where Robinson led it with distinction in the capture of Fort Montgomery on 6 October 1777. A detachment was part of the garrison that was surprised and captured at Stony Point, New York, on 16 July 1779. The regiment went from New York to Virginia with Benedict Arnold on 20 December 1780, returning in June 1781, and it went with Arnold again to raid New London, Connecticut, on 6 September. It evacuated to Nova Scotia in 1783, where it was disbanded.

LOYALISTS. Histories of the Loyalists fall into two groups. The first and older tradition, flourishing from the Revolution itself until the World War II, considered them to have been a force unto themselves, a phalanx of conservative colonists committed to values of order, subordination, and imperial ambition who bravely stood athwart the libertarian, egalitarian, middle-class aspirations of their Patriot antagonists. Since 1945, historians of the Loyalists have situated them within, rather than athwart, the Revolution, recognizing that with a few notable exceptions, the so-called Tories were in fact Whiggish in their understanding of the British Constitution and reluctantly unwilling to embrace actual independence under republican government when those realities descended on them sometime between 1774 and 1777.

Generations of nineteenth-century American schoolchildren were taught that if anything during the American Revolution was lower than a British regular or a Hessian it was a Tory or Loyalist. What good could possibly be said about a native-born American who sided with the British? With the publication of Claude H. Van Tyne's *Loyalists in the American Revolution* in 1902, a revisionist trend got under way that tended to glorify Loyalists as honorable people victimized by diabolical mobs. This tendency was epitomized in the works of Kenneth Roberts, particularly in *Oliver Wiswell* (1940). The truth lies somewhere in between; this article will not presume to say just where but, rather, will attempt to outline the views of historical authorities.

CHARACTERIZING THE TORIES

Here, for a starter, is the statement of Canadian historian Henry Smith Williams:

It is but truth to say the loyalists . . . were the makers of Canada. They were an army of leaders.

Loyalist Uniform Button. This button, decorated with a crown and the letters RP (Royal Provincials), adorned a uniform worn by a North Carolina Loyalist who served King George III during the American Revolution. © TED SPIEGEL/CORBIS.

The most influential judges, the most distinguished lawyers, the most capable and prominent physicians, the most highly educated clergy, the members of the council of various colonies, the crown officials, the people of culture and social distinction—these . . . were the loyalists. Canada owes deep gratitude to her southern kinsmen, who thus, from Maine to Georgia, picked out their choicest spirits, and sent them forth to people our northern wilds. (Steele, *American Campaigns*, p. 12).

Van Tyne gives an interesting breakdown of the categories of Tories before the arrival of Gage in Boston: (1) officeholders, whose income was at stake; (2) “those gregarious persons whose friends were among the official class”; (3) Anglican clergymen, many of whom had motives similar to those of the crown officials; (4) “conservative people of all classes, who glided easily in the old channels”; (5) “dynastic” Tories who believed in kings; (6) “legality” Tories who thought Parliament had a right to tax; (7) religious Tories, whose dogma was “Fear God and honor the King”; and (8) “factional” Tories whose action

was determined by family friends and old political animosities. The De Lanceys in New York became Loyalists because Livingstons were Whigs. Christopher Sower in Pennsylvania embraced the opposition primarily because the Patriot leadership of his region represented the critics of his family and religious sect. The antipathy of the Otises toward British authority stemmed from a personal animosity toward Governor Bernard.

Yet the Loyalists showed a peculiar inability to organize. “It is not far wrong to say that a genuine Loyalist party did not exist in the colonies until the commercial war failed and the real war began,” Van Tyne has said. (*War of Independence*, p. 22n). “Instead,” he has written, “of taking part in the colonial politics, they withdrew, in many cases, and looked frowningly on while rebellion advanced by leaps and bounds” (*Loyalists*, p. 87).

WHERE TORY STRENGTH LAY

Surprisingly, the greatest Loyalist strength appears to have been in the frontier regions. Colonel Rankin headed a

movement in Pennsylvania and adjacent areas. The border warfare in New York and the civil war that raged in the southern theater are other examples. Organized Tory resistance was promptly squelched in Virginia when the fighting started; farther south the rebels also got the upper hand initially, but subsequent Tory uprisings were serious.

In the north, the Loyalists first acted as associated bands but then enlisted by the thousands in the British army. H. E. Egerton has written:

New York alone furnished about 15,000 to the British Army and over 8,000 Loyalist militia. All of the other colonies furnished about as many more, so that we may safely say that 50,000 soldiers, either regular or militia, were drawn into the service of Great Britain from her American sympathizers. Tories formed no inconsiderable part of Burgoyne's army. Even when they did not join, their known presence in large numbers among the inhabitants of the region prevented the Americans from leaving their homes to join the American army. The British forces were also greatly helped in the matter of supplies by the Tory inhabitants (*Causes and Character*, p. 178).

"New York supplied more recruits to George III than to George Washington," Crane Brinton has written. "It has been estimated that perhaps only one third of the colonists actively backed the Revolution" (p. 317). The Tories may be correct in claiming to have had more long-term troops in service than the rebels after 1778, Lynn Montross has written in *Rag Tag, and Bobtail* (1952). This was because the British could equip them. Although no fewer than sixty-nine Loyalist regiments were organized to the extent of seeking volunteers, at least twenty-one of these actually took the field with an average strength of several hundred men each.

LOYALIST IMPACT ON STRATEGY

The Loyalists had an interesting effect on British strategic planners, who tended to anticipate more support than existed in regions of America where they had not yet operated. When Tory support failed to materialize in New England, the British expected to find it in New York and shifted military operations there. Simultaneously, they got drawn into the Charleston expedition of Clinton in 1776. The hope of Loyalist assistance had a part in luring them into the unfortunate Bennington raid. Ferguson's defeat at Kings Mountain also stemmed from this fallacy. Another effect of the Loyalists was in restricting British strategic movement when they became burdened with Loyalists who had to be evacuated or protected. One reason why Sir William Howe went from Boston to Halifax rather than directly to New York was that he had to evacuate Tories from Boston. A reason that Howe permitted himself to get overextended in the winter of 1776 was because he had to

outpost Trenton, Bordentown, Princeton, and Brunswick to protect the Tories of New Jersey. The isolated post of Ninety-Six, South Carolina, had to be garrisoned (by a northern Tory unit) for the protection of loyal inhabitants of the region. The two most brilliant American victories, Trenton and Cowpens, can be traced indirectly to the need for the British to overextend themselves to protect Loyalists.

REPRESSION OF TORIES

Persecution of the Loyalists started with mob action by the Sons of Liberty and continued throughout the Revolution. Matthew Steele has stated that "while liberty-loving pamphleteers were writing about the 'rights of man,' thousands of our patriotic ancestors were subjecting innocent, but loyal, persons to every sort of indignity and torture. . . . There was absolutely no freedom of the press or tongue, save for those that expressed opinions against the government" (p. 12). Test laws and statutes confiscating Tory property were passed. Perhaps forty thousand Loyalists were expelled from the states. New York made \$3.6 million from the sale of confiscated property, and Maryland collected over \$2 million. When the British evacuated New York City in 1783, they took out seven thousand Tories, and the estimated total of those who left America during the Revolution is almost one hundred thousand. In July 1783 the British government established a commission that examined 4,118 claims before it finished in 1790, having allotted almost £3.3 million to compensate loyal Americans for their losses.

LOYALISTS IN THE AMERICAN REVOLUTION.

At every point during the American Revolution, Loyalists spotted and exploited serious weaknesses in the movement for American independence. To these bold challenges, Patriots responded with some of their most creative, resourceful, stalwart—and in the long run, successful—exertions.

Loyalist remonstrance and Patriot countermeasures began amid the earliest and most authentically revolutionary action by representatives of the people. Beginning during the Stamp Act crisis of 1765 and continuing into the Townshend duties upheaval, 1768 to 1769, spokesmen for colonial liberty backed up words of protests with deeds of resistance, specifically boycotts of commerce with Britain. Repeal of the Stamp Act seemed to validate this political strategy, although popular leaders had no way of knowing that the trade boycott had little influence on Parliament and that it was in fact the unenforceability of a law opposed by angry mobs that forced the British to back down.

The Townshend duties boycotts, four years later, collapsed amid acrimony when loyal colonists, so-called Tories, publicized secretive importations of British goods by the very Whig merchants who had boasted of their defiance of British taxation of imperial trade. Thus, when the first Continental Congress devised a program of economic warfare beginning on 1 December 1774 with nonimportation, and continuing into nonexportation and nonconsumption of British goods in 1775, Congress added the provision that enforcement of this grandly titled “Continental Association” would be the sole responsibility of “local committees.”

Local committees, elected by voice vote of spontaneous gatherings, came into being within weeks. The newly elected committees invariably repaired to nearby taverns to discuss in a public setting how they should proceed to enforce the trade boycott. The committeemen knew that neither posting guards nor investigating suspicious sounds in darkened coastal waters were likely to be any more effective against violators than such tactics had been against colonial smugglers who for decades had brought French molasses or Dutch tea into North America. Smuggling had not been so much a criminal matter as a means for colonial merchants to protect themselves from the most arbitrary

and damaging of British mercantile interference in colonial economic life. Vice Admiralty judges often acquitted accused smugglers tried on the basis of inconclusive evidence, and in such cases merchants and vindicated ship owners recovered their losses by suing customs agents for civil damages in provincial courts with sympathetic juries.

The Committees of Inspection or Safety elected in the closing weeks of 1774 were determined not to be put on the defensive. They invited the public to send them the names of potential supporters of the crown; then the Committees summoned these suspects to testify as to their fidelity to the cause of American liberty. The great majority of those accused of harboring Tory sentiments pleaded with committeemen that they stood side by side with their Whig neighbors in opposing the Coercive Acts of 1774 and earlier British measures to tax Americans and extend the power of the British to regulate and discipline her colonial subjects. Committees of Safety usually warned these hapless victims of revolutionary justice to behave inoffensively, and when in doubt required that these “persons inimical to the liberties of America” post bond to guarantee their good behavior for the duration of the conflict. Serious potential violators of the Continental Association generally refused to appear before Committees of Safety; at the risk of their property and livelihoods they slipped into Boston in 1774–1775 or into New York after September 1776.

A handful of foolhardy Tories stood up to inquisitorial committeemen. One Anglican cleric who refused an order to read aloud the Declaration of Independence demanded, “What is my crime? Is it those connections [to God and the Church of England] I cannot dissolve?” Reverend Jacob Bailey, speaking before the Pownalboro, Massachusetts, Committee of Safety, answered his own question: “I am criminal only for choosing to suffer a penalty . . . to an order of council [i.e., a patriot Committee] than to feel the eternal reproaches of a guilty conscience.” Committeemen found declarations of that kind difficult to answer. Fortunately for their peace of mind, such ethical clarity in Loyalist testimony was exceptional. A more common response was that of Enoch Bartlett, in Haverhill, Massachusetts: “As my comfort does so much depend on the regard and good will of the people among whom I live, I hereby give under my hand that I will not sell tea or act any public [manner] contrary to the minds of the people.”

No one, not even the delegates to the first Continental Congress, anticipated that revolutionary committees would spring to life in every coastal and many inland communities, but they did. By the early summer of 1775, there were approximately seven thousand committeemen in the rebellious colonies. They became the infrastructure of the revolutionary movement in 1775 until new state governments came into existence in 1776 and

1777. By that time thousands of Loyalists had fled to the protection of the British army.

Newly elected legislatures confiscated the property these Loyalists left behind and declared the departed king's friends guilty of treason. With these legislative enactments, patriot governments grappled with the questions of who was a subject of the king and what was the difference between a subject and a citizen? Those questions were the heart of *Respublica v. Chapman*, a case that reached the Pennsylvania Supreme Court in 1781. Chief Justice Thomas McKean recognized that every inhabitant of an American state had had a right to choose, over a reasonable period of time, whether to declare allegiance to the Revolution or to adhere to the crown. For Pennsylvanians, he ruled that permissible interval of choice began on 14 May 1776 (the date that Congress annulled the Penn Charter) and 11 February 1777 (when the state legislature enacted a treason statute making allegiance and protection reciprocal). At the time that the defendant, Samuel Chapman, departed from Pennsylvania to join the British Legion on 26 December 1776, McKean instructed the jury, "Pennsylvania was not a nation at war with another nation, but a country in a state of *civil war*."

McKean's ruling had widespread consequences. State governments were already discovering that they had neither the resources nor the political will to prosecute thousands of Loyalists. Prosecutors often reduced criminal charges from treason to the lesser offense of misprision of treason. Loyalist defendants turned the law on its head simply by injecting issues of conscience into legal proceedings. When the Pennsylvania member of the Schwenkfelder sect of German pietists, young George Kriebel, refused to report for militia duty because warfare violated his conscience, the judge disallowed his excuse because German pietists were not strict pacifists in the same sense as were Quakers. They simply consulted God's direction on a day-to-day basis and assumed that God took a dim view of human warfare and civil commotion. Kriebel's father, George Kriebel Sr., created an uproar in court by interrupting proceedings to tell the judge that his son could not bear arms in the Revolution because God had not yet decided which side should enjoy divine favor by allowing either the British or the Americans to win a decisive victory.

There were thousands of George Kriebels. Recognizing the significance of the undecideds, the historian John Shy in 1965 suggested in a memorandum to the Pentagon that, in its early stages, the Vietnam War was an insurgency rather than a conventional conflict. As Shy explained to Defense department officials seeking historical guidance, insurgencies had been "triangular conflicts" where noncombatants in the middle comprised a great floating mass of humanity whom organized armies strived to overawe, coerce, intimidate, or inspire as circumstances required. On the heels of Shy's report, two historians

independently calculated that 18 percent of the colonial populace were Loyalists in arms or Loyalist partisans actively supporting the insurgency (a fluctuating 15 to 20 percent of the white population). Probably twice that number (30 to 40 percent) were Continental soldiers or militia or civilians voting in elections, paying taxes, and actively supporting the cause of independence. These estimates indicated that neutralists averse to both sides comprised a pool of 40 to 55 percent of British North American society.

This triangularity had important implications for British and American commanders. First, the Revolution could count on fiscal, military, and moral support from less than half of the populace at any given moment. "Congress," one Continental officer dourly observed, "have left it in the power of the states to starve the Army at pleasure." Until 1778 Congress paid for the war by printing Continental currency, allowing it to depreciate in value and inflation to set Congress's and the army's purchasing power. When this string ran out, Congress turned responsibility for financing the war over to the states. By 1781 the states had exhausted their resources and their taxing authority, and army commissary officers resorted to confiscation of needed supplies, albeit papered over with reimbursement promissory notes collectable after the war ended. By July 1781 this expedient was nearly exhausted. When the French fleet sailed toward the Chesapeake, and Washington and Rochambeau prepared to move their armies for an assault on Yorktown, Washington knew it would be the last military operation he could sustain. Nothing fed Loyalist hopes as much as these reports of fiscal chaos—certain proof that the rebellion was about to collapse if only the British army moved aggressively to crush the uprising. What Loyalist impatience with British military lassitude could not admit was that British offensive operations caused more disorder than Loyalist Provincial Corps following in the rear could mop up effectively.

A second implication of military triangularity took hold in the garrison towns occupied for varying periods of time by the British army: Boston (1774–1776); Norfolk (1775–1776); New York (1776–1783); Newport (1776–1778); Philadelphia (1777–1778); Savannah (1778–1782); Charleston (1780–1782); and Wilmington, North Carolina (1781), as well as bases in loyal Canadian and Floridian colonies: Quebec (1776–1783), St. Augustine (1775–1784), and Pensacola (1775–1784). Except for Savannah, a showcase for reconciliation, all of the garrison towns in rebellious colonies were under martial law. They were awash in money, spent by the British army and navy; crowded with Loyalist exiles from the Patriot-occupied mainland; filled with intrigue, paranoia, and desperation; and they served as staging areas for British offensive operations. News filtering outward from

the garrison towns painted a picture of British corruption and military uncertainty, whereas the information flowing from revolutionary America into the garrison towns emphasized inflation, civil unrest, and the demagoguery of Patriot politicians. Neither side in the war possessed a realistic understanding of the other.

Finally, military triangularity reflected racial triangularity. At the outset of the war, hardliners in the War Office proposed putting the fear of God into settlers of the colonial frontier by instigating Indian attacks against frontier farms and settlements. Only with the most strenuous efforts did Board of Trade professionals, the Superintendents of Indian Affairs, deter this ill-advised tactic. However, white Patriots were not so easily dissuaded. Patriot forces in the southern colonies staged preemptive raids against Cherokee, Creek, and Seminole villages, driving adult males into the forest and destroying the food supply for the women, children, and the aged who stayed behind. In 1779 the Northern Department of the Continental army, commanded by General John Sullivan, swept through pro-British Mohawk Indian villages in New York state, inflicting the same counter-revolutionary terror.

Of the half million slaves in the American colonies, 10 percent secured their own freedom during the revolutionary upheaval. The institution of slavery atrophied in the northern colonies. Lord Dunmore's Ethiopian Regiment enticed more than eight hundred Virginia slaves to rally to the king's standard. Chesapeake region runaways found employment in merchant marine vessels sailing from middle colony ports. Some Carolina and Georgia low-country slaves formed maroon communities in the interior. When the British evacuated Charleston and Savannah in November 1782, they took with them, into continued years of bondage in the West Indies, the slave property of Loyalist planters. When the British evacuated New York thirteen months later, they carried to an uncertain freedom in Nova Scotia and later Sierra Leone between five hundred and a thousand former slaves who were now free black dockyard workers.

General Cornwallis's surrender at Yorktown did not decimate British military power. General Guy Carleton, commander of British forces in Canada since 1776, succeeded Henry Clinton as commander of British forces in North America in 1782. From his headquarters in New York City, Carleton observed the Loyalist populace in the largest British garrison town. Throughout 1781 the New York City Loyalists—sobered by British military reverses in the Carolinas—filled garrison town newspapers with realistic assessments of the condition of the empire. In sharp contrast to their shrill vindictiveness during the early years of the war, many loyal New Yorkers now calmly faced the prospect of British defeat. In newspaper essays and in coffeehouse conversations, Loyalists in all of the

garrison towns, especially New York, pondered their fate in the event of British defeat and abandonment. They anticipated that their old Patriot neighbors would disagree about how noncombatant crown supporters should be treated, and they took heart when patriot leaders Aedanus Burke, in South Carolina in 1782, and Alexander Hamilton, in New York two years later, declared that America could not afford the luxury of civic vengeance and argued powerfully that conciliation of internal foes was a defining mark of a civilized nation.

Carleton thereupon drafted recommendations for peacemaking in America based on Loyalist hopes and Patriot weaknesses. General Washington did not possess the military strength, and Congress did not have the political will, to drive the British from the Savannah, Charleston, and Savannah garrison towns. Carleton advised the newly formed ministry led by the Earl of Shelburne ministry in England—known for its sympathy with colonial grievances in the late 1760s—to sit tight and let political disunity and economic troubles in the American states begin to work to the advantage of the empire. At the very least, he predicted, the Americans might be willing to concede a symbolic connection to the British crown in return for British evacuation of the garrison towns and normal diplomatic relations. Carleton's advice arrived too late; Shelburne and his successor, Lord Rockingham, had already conceded independence in negotiations with John Adams, Benjamin Franklin, and John Jay.

In return for outright independence, and recognition of the Mississippi River as the western boundary of the new nation, the American negotiators promised that Congress would "earnestly recommend" that the states cease confiscation of Loyalist property and that British creditors could sue in American courts to recover prerevolutionary debts. And while the Mississippi River as a western boundary included vast stretches of the northwest territories from which American forces had not dislodged the British, peace terms said nothing about the status of the river itself. European powers, along with many American Loyalists, assumed that the Mississippi Valley would become an international zone of commercial, military, and diplomatic penetration for decades to come. Two gifted and opportunistic Loyalists, Alexander McGillivray and William Augustus Bowles, both acculturated Creek Indians, positioned the Creeks to be the regional middlemen providing military security and commercial alliances for British and European operatives along the Gulf Coast and lower Mississippi. The Napoleonic Wars brought this geopolitical adventure to naught. To pay for his invasion of Russia, Napoleon sold all of the land drained by the western tributaries of the Mississippi to the United States in 1803; to prevent Napoleon from building a fleet in low-country shipyards capable of driving the British navy from

the world's oceans, Britain withdrew its garrisons at Fort Detroit and Fort Niagara, abandoning Indian allies and a commercial foothold in the upper Mississippi Valley.

In a final irony, the widows and children of wealthy Loyalist exiles returned to New York and Boston in the 1780s, 1790s, and early 1800s to reclaim family property. Federalist lawyers and judges were unwilling to suppose that the wife of a Loyalist, even a Loyalist traitor to the United States, could have “a mind” and “will of her own.” “Can we believe,” Judge Theodore Sedgewick asked rhetorically, “that a wife, for so respecting the general understanding of her husband as to submit her opinions to his on a subject so all-important as this, should lose her own property and forfeit the inheritance of her children?”

When, however, Florence Cooke, the wife of a Loyalist mechanic in Charleston, South Carolina, returned to the state, with husband in tow, she petitioned the legislature to understand that her husband had not been well “versed in publick troubles,” lacked the force of personality “to do any political good or harm,” and at the very worst “he might have said an idle thing” in criticism of the Revolution. “The change . . . in Charles Town,” by which she meant nothing less than the Revolution itself, had been “too powerful for his situation and circumstances to withstand.” Even if technically guilty of a crime, she declared, he would now throw himself on the mercy of the court. As the lawyer who drafted her petition confidently predicted, “she pledges that she will exert all the ascendancy of a wife & friend to make him a good man and a useful citizen.”

Where a large estate and the interests of the aristocracy in upholding the patriarchal authority of husbands were at stake, a Loyalist widow returned from exile, in the eyes of the law, possessed no “mind of her own”; but in South Carolina, less than a month after British evacuation, a skilled mechanic who could maintain winches and carts essential to loading and unloading ships and thereby restore the economy was welcome. And if, in the bargain, his strong-willed spouse, declaring her “affection for the independence and freedom of her country,” vouchsafed her husband's political rehabilitation, then this couple constituted a civic asset.

In 1784 Congress sent John Adams to represent the United States at the Court of St. James. Attending the London theater, Adams ran into an old friend, Loyalist exile Jonathan Sewall. They spoke warmly about the days of their youth when, as young lawyers in the early 1760s, Sewall had advised a hesitant Adams to represent Boston in the Massachusetts House of Representatives—to become a popular tribune of the people because that was a service lawyers could provide their society. As a social newcomer, Adams could risk political contamination, whereas he, Sewall, seeking to rehabilitate a famous family fallen on hard times, could not take such a chance and had no choice but to become a supporter of the crown and—if

push came to shove—a loyal defender of the imperial status quo. Both men silently remembered Sewall's fateful advice to Adams and Sewall's painful dilemma.

That night, Sewall wrote in his diary how unsuited Adams was to the courtly life of diplomacy. He was too earnest and serious, too full of Enlightenment knowledge about trade and geopolitics, too inept at flattery and flirting, and not nearly cynical enough. Adams came away in a pensive mood, reflecting with utter sadness on Sewall's pact with the devil of imperial preferment, the waste of a promising young intellect, the blighting of a generous temperament.

LOYAL NINE. An offshoot of the Caucus Club that evolved into the active leadership of the Sons of Liberty, the Loyal Nine operated behind the scenes to connect the upper-class resistance to increased imperial regulation with the artisans, shopkeepers, sailors, and young toughs who provided the manpower and muscle of the movement. Coalescing in the summer of 1765 as part of the opposition to the Stamp Act, the Nine had connections running up and down Boston society. Samuel Adams was not a member of the Nine, but he maintained close ties with them, as did Joseph Warren. The Nine were, according to historian John

C. Miller: John Avery (a distiller, Harvard College classmate of Joseph Warren, and secretary of the group), John Smith (a brazier), Thomas Crafts (a painter), Benjamin Edes (printer of the *Boston Gazette*), Stephen Cleverly (a brazier), Thomas Chase (a distiller), Joseph Field (a ship captain), George Trott (a jeweler), and Henry Bass (a cousin of Samuel Adams). Captain Henry Welles may also have been a member.

LUDLOW, GABRIEL. (1736–1808). Loyalist. Born on Long Island, New York, on 16 April 1736 to a wealthy merchant family, Ludlow, whose brother George sat on New York's supreme court, became governor of King's College in 1760. In 1775 he was appointed colonel of the Queens County militia and became immediately embroiled in revolutionary politics. At the beginning of the Revolution, the Ludlow brothers sought to unite the Loyalists to contest the Patriots for control of Long Island, but they realized that that the latter had the upper hand. The Ludlows and most other Long Island Loyalists went into hiding, emerging a year later, in 1776, when the British landed. Gabriel Ludlow recruited and commanded seven hundred men who were formed into the Third Battalion of Oliver De Lancey's New York Volunteers. He spent the rest of the war defending Long Island from Patriot raiding parties and entertaining British officers and officials. In 1779 the New York state assembly declared Ludlow a traitor and confiscated his estate, though it was not able to claim most of Ludlow's property until after the war. Ludlow left with the British in 1783, spending the next year in London lobbying for recompense for his personal losses of £2,500 (he received £1,450) and for the creation of New Brunswick as a Loyalist province. Ludlow crossed to New Brunswick in 1784, having been appointed a member of its council. The following year he was named judge of the vice admiralty court and mayor of St. John. Over the ensuing years he became one of the province's most prosperous merchants and political

leaders, as well as brigadier general of militia. He died at his home on 12 February 1808.

LUDLOW, GEORGE. (1734–1808). Loyalist. Born on Long Island, New York, in 1734 to a wealthy merchant family, Ludlow was a respected attorney when he was appointed to the New York council in 1768; the following year he became a member of the supreme court. Though not politically active, he joined his brother Gabriel in attempting to organize Long Island's Loyalists at the start of the Revolution, spending a year in hiding until the British landed in August 1776. After General William Howe's victory over Washington, Ludlow returned to the reconstituted provincial supreme court, which met in British-occupied New York City. When William Smith was appointed chief justice in 1778, Ludlow felt personally slighted and resigned from the court. In 1779 the New York state assembly declared Ludlow a traitor and confiscated his estate. In 1780 James Robertson, the royal governor, appointed him to the lucrative positions of master of the rolls and superintendent of the Long Island police. Ludlow made the most of his offices, charging high fees and dispensing rough justice. As a consequence, he alienated much of the Long Island population and cost the British a great deal of support. Other Loyalists charged Ludlow and Robertson with engaging in smuggling, though the validity of these charges remains uncertain. It is evident that Ludlow made a great deal of money in the three years he was known as "the tyrant of Long Island."

Ludlow left with the British in 1783 and spent the next year in London seeking recompense for the £7,000 he claimed to have lost in the Revolution (he received £2,500) and joining his brother in lobbying for the creation of New Brunswick as a Loyalist province. In 1784 Ludlow was appointed to the New Brunswick council and chief justice of the supreme court, holding those offices until his death in Fredericton, New Brunswick, on 13 November 1808.

LYNCH, CHARLES. (1736–1796). Militia officer, possible source of the phrase “lynch law.” Virginia. Born somewhere in Virginia in 1736, Charles Lynch was elected a justice of the peace in 1767 and expelled from his Quaker meeting for taking the oath of office. Entering the House of Burgesses in 1769, he retained his seat until the Revolution. He signed the Williamsburg protests against taxation in 1769 and 1774, attended the state constitutional convention in 1776, sat in the House of Delegates until 1778, and raised troops. On 24 February 1778 he was made a colonel of militia. In 1780 he led the militia in an extra-legal campaign in southwest Virginia, holding drumhead (informal and extra-legal) courts and punishing Loyalists, slaves, and striking Welch miners with whippings and forced service in the Continental army. Many scholars argue that these actions inspired the phrase “lynch law,” though others credit Captain William Lynch (no relation) of Pittsylvania, Virginia, with giving his name to organized extra-legal violence in 1780.

At the end of 1782 the Virginia assembly declared Charles Lynch’s actions legitimate. In the spring of 1781 he led a regiment of 200 Virginia riflemen south to reinforce Nathanael Greene. Many of his men were ex-Continentalists whose enlistments had expired. With the elite Delaware Continentalists of Captain Robert H. Kirkwood, his volunteers formed the infantry of William Washington’s new legion. At Guilford Courthouse, on 15 March 1781, Lynch and Kirkwood held the right flank of Greene’s first line, performing well in the battle. Lynch’s men remained with Greene in the Carolinas until General Charles Cornwallis surrendered at Yorktown. Lynch returned to his duties as justice of the peace, and later served inconspicuously in the state senate between May 1784 and December 1789. Lynch died at his home in Campbell County, Virginia, on 29 October 1796.

LYNCH, THOMAS. (1727–1776). Continental Congressman. South Carolina. Born in South

Carolina in 1727, Thomas Lynch inherited large land holdings and considerable wealth. He sat in the provincial assembly almost every year from 1752 until 1774. A delegate to the Stamp Act Congress of 1765, he was sent to the first Continental Congress in 1774. There he opposed importation of British goods but remained open to negotiation. He was re-elected to Congress, but a stroke in early 1776 cut short his political career. His only son, Thomas Jr., was sent to Congress to aid him, and together they started home, but a second stroke in Annapolis killed him in December 1776.

LYNCH, THOMAS, JR. (1749–1779). Signer. South Carolina. Born in Winyah, South Carolina, on 5 August 1749, Thomas Lynch Jr. was sent at 12 to England, to study at Eton, Cambridge, and in the Middle Temple. He returned home in 1772. He decided not to practice law, and his father, Thomas Lynch Sr., concurred, having himself decided that his son should enter public life. While running his North Santee plantation, a gift from his father, Thomas Jr. became influential in Patriot circles. In 1774–1776, he sat in the provincial congress and, also in 1776, was on the state constitutional committee and in the first general assembly. On 12 June 1775 he was named a captain in the First South Carolina Regiment, caught a bilious fever while recruiting his company, was left in permanently poor health, and never commanded the company. On 23 March 1776, he was sent by the general assembly to the Continental Congress as an additional delegate to assist his ailing father, who had suffered a paralytic stroke. However, his own health was too feeble to allow him to participate actively in the Congress, although he voted for and signed the Declaration of Independence. In the fall of 1776, ailing father and son started south, but the elder Lynch died in Maryland, near Annapolis, and the younger reached home seriously ill. In late 1779, in hopes of finding a better climate, he sailed with his wife for the south of France. Their ship was never heard from, and is presumed to have been lost at sea with all hands.

MACHIAS, MAINE. 12 June 1775. On 2 June 1775 the British schooner *Margaretta* (four guns) entered the port of Machias, in the province of Maine, with two sloops (*Polly* and *Unity*) to get lumber for the British garrison in Boston. Determined to prevent the British from accomplishing their mission, local Patriots conceived a plan to capture the enemy officers while they were in church on 11 June. But Midshipman James Moore, commander of the *Margaretta*, and some of his officers escaped through the windows of the church and regained their ship. A hastily organized pursuit by about forty volunteers under Jeremiah O'Brien and Joseph Wheaton resulted in capture of the *Unity* on Sunday and of the *Margaretta* the next day (12 June). A considerable chase had ended with a brisk skirmish in which seven men were killed or wounded on each side. Midshipman Moore was among the dead. O'Brien became the first naval hero on the Patriot side, and the action is generally considered to be the first naval engagement of the war.

O'Brien was given command of the *Unity*, which was armed with guns from the captured schooner and renamed the *Machias Liberty*. A few weeks later he captured the British naval schooner *Diligent* and her tender off Machias without a shot, and, under his command, the two schooners became the first ships of the Massachusetts navy.

MACLEAN, ALLAN. (1725–1798). British army officer. Born at Torloisk on the Isle of Mull, Scotland, MacLean was a Jacobite officer in the rising of 1745–1746 and afterward took service in the Scots brigade in the Dutch Republic. Wounded and captured with Francis MacLean at Bergen-op-Zoom, he was at once paroled and exchanged in 1748. In 1750 he took advantage of George II's amnesty to Scots rebels to return home. Now apparently reconciled to the Hanoverian regime, he became a lieutenant in the new Sixtieth Foot (Royal Americans) on 8 January 1756. He was wounded at Ticonderoga in 1758, promoted captain-lieutenant on 27 July, and on 16 January 1759 transferred to a New York independent company with the rank of captain. He was wounded again at Niagara later in the year and took part in the capture of Quebec. Returning to Scotland in 1761, he raised the 144th Regiment of Royal Highland Volunteers and served as major-commandant in America until it was disbanded in 1763. Now on half-pay, he was granted land on St. John (now Prince Edward) Island but did not live there, for he married in Westminster, London, in 1771. He was restored to full pay by promotion to lieutenant colonel by brevet on 25 May 1772.

On June 1775 MacLean was commissioned to raise a provincial regiment, the Royal Highland Emigrants, which he recruited mostly from veterans settled on

Prince Edward Island. His officers were nearly all MacLeans from Mull or Morvern. When the Americans invaded Canada in the autumn, he marched from Quebec to reinforce Governor Guy Carleton at Montreal, and later attempted unsuccessfully to relieve St. Johns. Learning of Benedict Arnold's appearance opposite Quebec, he made a forced march with about eighty men, arriving at Quebec on 13 November, six days ahead of Carleton. Appointed second in command, he repulsed the final American attack on 31 December with heavy losses. On 6 May 1776, when General John Burgoyne's reinforcements arrived, MacLean led a sortie that routed the few remaining besiegers. He then remained in Quebec to feed reinforcements through to Carleton as he completed the expulsion of the American forces. That summer MacLean visited Britain, in the vain hope that the government would honor a promise to make his regiment permanent. Returning to Canada in 1777, he was made military governor of Montreal and a local brigadier general. In late September he reinforced Fort Ticonderoga, and in October, after the Saratoga disaster, he fell back to a defensive position at St. Johns. He was at Quebec in the winter of 1778, where he organized amateur theatricals. In 1779 his regiment was at last made permanent as the Eighty-fourth Foot, but it was Henry Clinton, not MacLean, who became its colonel. In 1781 he was posted to Niagara and became colonel by brevet on 17 November 1782. He returned to Britain in 1783, retired the following year, and settled in London, where he died on 18 February 1797.

MACLEAN, FRANCIS. (1718–1781). British officer. Commissioned as an ensign in the Cameronians in 1738 and promoted in 1742, Francis MacLean resigned in 1745 to join the Clan Maclean Battalion of the Jacobite army as a lieutenant. He became a fugitive after the battle of Culloden, in which insurgents challenged the rule of the British king. He joined the Dutch army, but resigned his Dutch commission in 1750, when he rejoined the British army and purchased a lieutenancy in the forty-second ("Black Watch") Regiment two years later. As a captain of this regiment he fought in Canada and the West Indies before taking part in the capture of Belle Isle, off Brittany, in 1761.

Having distinguished himself in Portugal during the years from 1762 to 1778, he was ordered back to England,

promoted to brigadier general, and sent to Canada as governor of Halifax. After routing the Patriots who mounted the Penobscot expedition, a naval assault that took place from July to August 1779, MacLean returned to Halifax, where he died on 4 May 1781.

MADISON, JAMES. (1751–1836). Continental congressman, fourth president of the United States. Virginia. Born on 5 March 1751 in King George County, Virginia, James Madison received his bachelor's degree from the College of New Jersey (later Princeton University) in 1771 and remained another year for further study. An early advocate of religious toleration, Madison also favored being prepared to defend Virginia's civil liberties by force of arms. He was elected to the Orange County committee of safety on 22 December 1774, but there is no proof that he wrote its enthusiastic response of 19 May 1775 to Patrick Henry's call for arming the militia. On 25 April 1776 he was chosen as a delegate to the fifth Virginia convention. Although the twenty-five-year-old Madison held a militia commission as colonel, he was "too slightly built (5'6" [tall], thin, with light blue eyes and dark brown hair) and too frail (subject to fits of a sort of epilepsy) to take the field" (*Revolutionary Virginia*, 1, p. 471). He served on the committee that framed the

state constitution and bill of rights and proposed an amendment declaring that “all men are equally entitled to the full and free exercise” of religion. A member of the first assembly under the new constitution, he was not reelected in 1777 because he refused to canvass or buy drinks for votes. In November 1777, however, the assembly elected him to the governor’s council, and two years later it elected him to the Continental Congress.

Taking his seat on 20 March 1780, he served in Congress until November 1783, where he “acquired a continental reputation for his mastery of legislative business” and was “soon regarded as the most effective member of the Congress” (Lance Banning in ANB). He supported efforts by Robert Morris to reform the department of finance and advocated levying duties on foreign imports to raise a national revenue. In September 1783 he worked out an agreement by which Virginia agree to cede its claims to the territory north of the Ohio River (thus creating a national domain) and, by suggesting that five slaves be considered the equivalent of three free persons, he broke a deadlock about how to use population figures to calculate state contributions to the central government.

His most important contribution to the new nation was his work in framing the federal Constitution at the Philadelphia Convention in 1787. Madison wrote twenty-nine numbers of *The Federalist* urging ratification of the document, and then he drafted its first ten amendments (the Bill of Rights) and guided them through the House of Representatives, in which he sat as majority leader until 1797. He was Jefferson’s secretary of state (1801–1809) and twice won the presidency, serving from 1809 to 1817. But the disgraceful performance of an unprepared and disunited country in the War of 1812 cost him popularity. He retired to his country home, Montpelier, after his presidency and spent the rest of his life as a country gentleman. He died at Montpelier on 28 June 1836.

Dolley Payne Todd, a widow, was introduced to Madison by Aaron Burr, and they were married in 1794. Almost twenty years younger than her husband, Dolley was friendly and tactful and had a remarkable memory. She was extremely popular and earned a reputation as an effective Washington hostess. Fleeing from the British invaders of Washington in August 1814, she saved many state papers and the Gilbert Stuart portrait of George Washington. After her husband’s death she moved into a house on Lafayette Square, opposite the White House. She died on 12 July 1849 at Washington, D.C.

MAHAM, HEZEKIAH. (1739–1789). Militia officer. South Carolina. Born in St. Stephen’s Parish, South Carolina, on 26 June 1739, Hezekiah Maham was active in Patriot politics and had been a member of the First South Carolina Provincial Congress before becoming a captain in Isaac Huger’s First South Carolina Rifle Regiment in 1776. He took part in the unsuccessful defense of Savannah on 29 December 1778, and the action at Stono Ferry on 29 June 1779, before becoming a major of the State Dragoons. In 1780 he was promoted to lieutenant colonel, and the next year he became colonel of an independent dragoon regiment. The siege tower known by his name was first used in the capture of Fort Watson on April 1781. Maham took part in the actions at Quinby Bridge on 17 July 1781 and Fair Lawn on 27 November 1781, in addition to many smaller, independent operations. While home on sick leave, he was captured in August 1782 and paroled, seeing no further combat. He died in 1789.

MAITLAND, JOHN. (?–1779). British army officer. Eighth son of the earl of Lauderdale, he had been a lieutenant colonel of marines and member of Parliament for Haddington before appointment as lieutenant colonel of the First Battalion of a Highland regiment, the Seventy-first Foot, on 14 October 1778. He was with Archibald Campbell at the fall of Savannah on 29 December. In command of Prevost’s rearguard when he retreated from Charleston, Maitland won the action at Stono Ferry (20 June 1779) before withdrawing to Port Royal Island (Beaufort). Although already ill with malaria, he then made an epic eighty-mile withdrawal by swamps and waterways, evading French blockaders and American troops to join Prevost at Savannah. He died a few days

Malcolm's Regiment

after the repulse of the Franco-American assault on 9 October 1779.

MALMÉDY, MARQUIS DE. Continental officer. He appears to have descended from an Irish family named Gray that settled in France. As a *sous lieutenant* of cavalry in the French army, Malmédy reached America in 1776 from Martinique and was breveted major in the Continental army on 19 September of that year. In December 1776 he was made chief engineer and director of defense works in the Rhode Island militia with the rank of brigadier general, largely on a recommendation of Charles Lee that included the warning, "You must excuse his heat of temper at times."

On 10 May 1777, two months after his services to Rhode Island were terminated by the arrival of Continental officers, he was given the Continental commission of colonel. Malmédy wrote to Washington complaining that this rank was beneath his merit and his former grade. In a blistering reply, Washington expressed his astonishment that the former lieutenant did not feel Congress had recognized his service in commissioning him a colonel. When Gates requested Malmédy's transfer to his forces, Washington replied that he was "glad" to approve the transfer.

Malmédy commanded a light infantry company on one flank of the American force at Stono Ferry, South Carolina, on 20 June 1779. After Gates's defeat at Camden, Malmédy was accused of spreading "poison" about Greene and calling for his dismissal. Before the Battle of Ninety Six, Greene sent him to the North Carolina legislature to obtain supplies and militia, a task with which he had difficulty. At Eutaw Springs, South

Carolina, on 8 September 1781, Malmédy commanded the North Carolina militia, for which Greene commended his "great gallantry and good conduct" on the battlefield.

After refusing to carry dispatches to the governor of North Carolina, Malmédy appears to have been killed in a duel in November 1781. On 13 March 1782, Robert Morris directed the paymaster to pay \$3,025 to his estate. Malmady, Malmedy, and Malmédy-Gray are variations of his name.

MAMARONECK, NEW YORK. Raid of 22 October 1776. During the American withdrawal from Pell's Point and Harlem Heights to White Plains, New York, the village of Mamaroneck was abandoned by the Americans—unjustifiably, in General George Washington's view. The area was then occupied by Major Robert Rogers and his notorious "Queen's American Rangers," an aggressive band of Loyalists who had been attacking local militia companies and raiding supply depots. They formed a detached camp of about 500 men near the British right wing at New Rochelle. Colonel John Haslet was selected to lead his Delaware Regiment, reinforced by certain Virginia and Maryland companies to a total strength of 750, in a raid against Mamaroneck. With accurate information about Rogers's dispositions, Haslet started out near White Plains, marched some five miles, slipped undetected past the British flank, and silenced the single sentinel who covered the approach to Rogers's bivouac. During the day, however, Rogers had realized the possibilities of surprise along this route and had posted sixty men between the lone sentinel and his main camp. Haslet's advance guard stumbled on this unsuspected force, and a melee ensued. The enemy added to the confusion by echoing the cry, "Surrender, you Tory dogs! Surrender!" The Americans managed to capture thirty-six prisoners,

sixty muskets, sixty highly prized blankets, and a pair of colors, all of which they evacuated safely. Rogers's main camp forced the raiders to withdraw after an exchange of fire. American casualties were three killed and twelve wounded; there is no record of enemy losses. The incident boosted American morale.

MANCHAC POST (FORT BUTE).

Bayou Manchac or the Iberville River was the northern boundary of the Spanish Isle of Orleans and provided a water route from the Mississippi east into the Amite River and through Lakes Maurepas, Pontchartrain, and Borgne into the Gulf of Mexico. Pierre Le Moyne, Sieur d'Iberville, used this route when he returned in 1699 from his exploration up the Mississippi to the mouth of the Red River. Because the Treaty of Paris in 1763 left the Isle of Orleans in Spanish hands (ceded by France in 1762), this route was of vital importance as an outlet for British navigation from the upper Mississippi. At the mouth of the Manchac–Iberville stream, on the Mississippi, the British established Fort Bute or Manchac Post in 1763. From then until its capture by Governor Bernardo de Gálvez on 7 September 1779, it was an important military and trading post. The Battle of Fort Bute, as it is often called, was the opening salvo in Spain's war on Britain in North America. Even though a hurricane had destroyed much of Gálvez's fleet on 15 August, the governor quickly assembled a small army of regulars and Acadian and Spanish militia, and led them on a brutal eleven-day march through the bayou. The Spanish attack caught the garrison completely by surprise, as they were unaware that Spain and Britain were at war.

MANDAMUS COUNCILLORS. The Massachusetts Government Act of 20 May 1774 (also called the Massachusetts Regulating Act), one of the

Intolerable Acts, prescribed that effective 1 August the Massachusetts Council, the upper house of the legislature, would no longer be elected by a joint vote of the incoming members of the House of Representatives and the outgoing members of the Council (as provided for in the Charter of 1692). Rather, it would be appointed by the governor on a "royal writ of mandamus." The thirty-six men appointed by Governor Thomas Gage, only two of whom had been among the twenty-eight councillors elected previously, became marked men, their names being published by the radical press along with the "Addressers" and "Protesters." Only twenty-five of the thirty-six accepted the position, and nine of them soon resigned. Six of the remaining councillors lived in Boston, where they were protected, up to a point, by the British army. Of the final ten who lived elsewhere, all were driven into exile in Boston. After John Murray, a long-time representative from Rutland, had fled to Boston, a group of neighbors, men who had voted for him since 1751, told his son that his house would be destroyed if he did not resign. A mob of four thousand armed men forced Thomas Oliver to resign. Old Israel Williams of Hatfield tried to hide in his chimney when a mob came calling, but he was smoked out when the doors were closed and a fire started indoors. These episodes of intimidation and violence demonstrate the power of the resistance movement to force a renunciation of those traditional leaders who tried to remain loyal to Britain.

MANLEY, JOHN. (1732?–1793). American naval officer. Massachusetts. John Manley may have been born in Torquay, England, perhaps in 1732, and may have served in the British navy. It is known that Manley was living in Boston in the late 1750s and was the captain of a merchant ship. He was selected by General George Washington to command one of the vessels in the “navy” being organized in the fall of 1775 to operate against British supply vessels. As captain of the armed schooner, *Lee*, he left Plymouth on 4 November 1775, but his first three captures were all returned to their owners. Toward the end of the month he made the first important capture of the war, when he took the *Nancy* and its shipment of 2,000 muskets and other munitions in the entrance to Boston harbor, within sight of its escort. The next month he took several other prizes and was hailed as a naval hero. In January 1776 Washington named him commander of his “navy.” Congress confirmed Manley as a captain in the new Continental navy on 17 April 1776. With his flag aboard the thirty-two-gun *Hancock*, he made several successful cruises. On 8 June he and the *Boston* captured the twenty-eight-gun frigate *Fox*, but on 7 July he and his prize were taken off Halifax by the forty-four-gun *Rainbow*, which was commanded by Sir George Collier. Even though the Americans out-gunned the British, the commander of the *Boston*, Captain Hector McNeill, who loathed Manley, refused to come to the *Hancock*’s aid. After being confined on a prison ship in New York Harbor, Manley was exchanged in March 1778. A court-martial acquitted him of losing his ship, but McNeill was suspended from the navy.

With no suitable new command awaiting him, Manley went to sea as a privateer, and in the fall of 1778 made a successful cruise in the *Marlborough*. Early in 1779, as captain of the *Cumberland*, he was captured by the *Pomona* near Barbados. Escaping from prison, he was captured again while making his second cruise in the *Jason*, and spent two years in Old Mill Prison, England, before being exchanged. In September 1782 he took command of the *Hague*, one of two frigates remaining in the Continental navy. (The other was Commodore John Barry’s *Alliance*.) Manley’s last cruise, in the West Indies, was marked by a brilliant escape from a British ship of the line (seventy-four guns) and by his capture of the *Baille* in January 1783. This conferred upon him the distinction of closing the regular maritime operations of the United States in the Revolution: The man who took the first important prize of the war also took the last one captured by a Continental ship. He died in Boston on 12 February 1793.

MANUFACTURING IN AMERICA.

American industry had not developed sufficiently by the time of the Revolution to be able to supply the rebel armies with the means to resist increased imperial control, and few of the shortcomings in the supply of manufactured goods were remedied during the war. The limited American industrial base was overwhelmed by the sudden, sharp, and continuing spike in demand for clothing, weapons, shelter, munitions, and the whole host of other things required to sustain the war effort. Enlisting men into military service meant that manpower was being reallocated away from manufacturing, and this phenomenon, plus the often extreme dislocation caused by active military operations, ensured that Americans remained dependent on foreign, especially French, sources of supply until 1783.

Before the war, the British imperial government had discouraged the development of manufacturing in the colonies, preferring to use them as sources of raw materials and markets for finished goods. Because the cost of land in the colonies was relatively low and the cost of labor relatively high, those colonists who managed to accumulate risk capital generally invested it in acquiring land rather than in establishing manufactories. A notable exception was the shipbuilding industry: by 1760 a third of all British tonnage was American-built. In the ten years up to 1775, 25,000 tons a year were turned out, at costs that were 20 to 50 percent lower than in Europe, thanks largely to the widespread local availability of timber and naval stores.

The manufacture of iron goods provides an example of the handicaps under which American industry labored. Iron manufacturing actually expanded rapidly before the war, despite restrictions in 1750 and 1757 under the Navigation Acts, because the demand was so high. In 1775 the colonies produced 15 percent of the world’s

iron, but imperial legislation inhibited the development of the sorts of workshops needed to turn bar iron into finished products. Imported iron goods were cheaper than nearly anything that could be produced domestically, including such simple items as iron nails. Efforts were made at the outset of the war to expand the capacity to manufacture metal goods, and to produce war materiel. By late 1775, the foundries of Philadelphia were casting cannon of bronze and iron, but they ceased these operations after a few years. Salisbury Furnace, in northwest Connecticut, also started casting cannon in 1775, but it, too, had almost ceased to operate by 1778. Technical knowledge was undeveloped, and the homemade products were inferior and more expensive than cannon imported from France.

American gunsmiths were among the finest craftsmen of individual firearms in the world and although, for example, more than 4,000 stand of arms were made in Pennsylvania over the winter of 1775–1776, they did not develop the mass production techniques needed to meet the extraordinary demand for small arms during the war. The arsenal at Springfield, Massachusetts, established in 1778, was so poorly managed that, in 1780, the Board of War recommended it be abandoned. A new United States arsenal was established at Springfield only in 1794.

Gunpowder was the single most important manufactured commodity necessary to wage an armed struggle, and the American armies never had enough of it. Six powder mills in Pennsylvania managed to produce several thousand pounds of powder a week by 1776, but a general shortage of saltpeter and sulfur, plus a lack of technical knowledge, frustrated this and other local efforts. American gunpowder was considered to be inferior in quality, and more expensive, than gunpowder manufactured in, and imported from, Europe. The Continental Congress and individual states bent every effort to acquire gunpowder and other munitions from overseas suppliers, especially in France, and managed to import directly or via the West Indies sufficient quantities to sustain the war effort through 1775 and 1776. The clandestine activities of Pierre Caron de Beaumarchais and his front company of Hortalez et Cie began to have an impact on army supplies in 1777. Once France openly allied with the rebels in February 1778, a steady stream of clothing and munitions made its way to American ports, where it faced the further problems involved in transporting the material to the American armies. The relative abundance and low cost of French supplies further dampened American efforts to supply war materiel for themselves. For example, lead mines in Virginia were abandoned early in the war, in part because importing lead from France was cheaper.

Textiles were another area of critical shortage. Women made linen at home, but the colonies had little wool for winter clothing and blankets. Canvas was needed

for tents and sails, but demand rose so rapidly that supplies could not keep up. Canvas already in use for awnings and sails was remanufactured to provide tents and idle ships were eyed for the cloth in their sails. Pre-war efforts to pressure the imperial government to reverse its policies by refusing to import British manufactures had given an impetus to weaving, but the industry had not developed sufficiently to supply clothes for soldiers whose constant activity created a continual need for resupply.

Non-importation had also given an impetus to shoemakers, and during the war the Americans tried to manage the problem of turning the hides of cattle slaughtered for the army into shoes. A commissary of hides was appointed in 1777 to organize and oversee this task, but the results were unsatisfactory. The pressure to produce more shoes, a soldier's most indispensable article of clothing, led to shortcuts in the tanning process and in sewing shoes. The result was uncomfortable footwear that lacked durability.

Manufacturing enterprises in colonial America tended to be concentrated in towns and cities, where markets attracted the largest numbers of artisans and skilled workers. Philadelphia, for example, was a center for the production of hats, shoes, stockings, earthenware, cordage, and soap. Market pressures also created areas of specialized manufacturing. Lancaster, Pennsylvania, was a center of woolen and linen weaving as well as gunsmithing. Lynn, Massachusetts, was known for its concentration of families that produced shoes. Other enterprises, especially the production of raw metals, were located in areas, mostly rural, where the required resources were grouped closely together. The Brown family of Providence, Rhode Island, for example, established an iron furnace at Hope, on the Pawtuxet River, where ore, wood for conversion to charcoal, limestone, and water power were all readily available.

MARINE COMMITTEE. Formally established by Congress on 14 December 1775 with thirteen members, one from each colony, the Marine Committee was the immediate successor of the Naval Committee as Congress’s agent for directing naval affairs. Its most important accomplishment was probably its first: sponsorship of a Rhode Island proposal to create an actual navy, made up of thirteen purpose-built warships rather than a passel of converted merchantmen. Plagued by a constant turnover in membership, it struggled to build the land-based infrastructure of administration needed to support ships at sea. Unable to exercise effective control over its far-flung agents, especially the Navy Board of the Eastern Department at Boston, and enmeshed in an accounting nightmare of cost overruns and unclear expenditures, it failed on three successive occasions in the spring of 1779 to reach a quorum. It took the Congress the rest of the year to decide what to do, but finally in December the delegates decided to replace it with a Board of Admiralty, consisting of two delegates and three commissioners who were not members of Congress.

MARINES. One theory as to the origin of “marines” as a distinct category of troops stems from the requirement in the early eighteenth century to protect British officers on shipboard from their “pressed” crews (men who had been, in essence, kidnapped and forced to serve on ships—a common recruitment method in use at the time). The marines, in this circumstance, were a species of seaborne military police. But there also was a requirement for crack troops who could constitute landing parties, boarding parties, and deliver musket fire from the rigging in close sea fights.

British marines made up a considerable portion of the Boston Garrison. Although they did not accompany the British column to Lexington and Concord on 19 April 1775, a marine officer, Major John Pitcairn, was second-in-command of this force and figured prominently in the day’s historic events. Two battalions of British marines took part in the assault on Bunker Hill, where Pitcairn was mortally wounded. British and French marines figured in subsequent land operations in America and in practically all sea battles. When determining force strength, the rule of thumb was one marine assigned on board a ship for each gun.

The first American use of marines can be traced to the War of Jenkins’s Ear (1739–1843, fought in retaliation for an act of Spanish torture against a British privateer). At that time, an American regiment of marines was raised in 1740. Commanded by Colonel William Gooch of Virginia and officially identified as the Sixty-First Foot, “Gooch’s Marines” were raised in the colonies and fought creditably in the West Indies. American marines served on board privateers during the French and Indian War (1754–1763), and were sometimes known as “gentlemen sailors.”

On 10 November 1775 the Second Continental Congress resolved that two battalions of American marines be raised. Established as a package deal offered by the Committee on Nova Scotia, the two battalions were designed to be used as an amphibious landing force, for a projected naval expedition against British facilities at Halifax. In December, officers assembled their marines as the Continental navy put together its first squadron. On 3 January 1776, the fleet sailed from Philadelphia. With hopes of gaining powder for Washington's beleaguered army before Boston, 230 marines and fifty seamen landed on the island of New Providence two months later. The island's two forts were captured and all military stores and ordnance on the island were removed.

The first Continental marine detachment on record, however, was the seventeen-man group under Lieutenant James Watson that served on board the sloop *Enterprise* from 3 May 1775. Although originally from Connecticut, on 10 June they came under control of the Continental Congress when the delegates voted themselves the control of all forces on Lake Champlain. This marine force later took part in the battle of Valcour Island, 11–13 October 1776.

Throughout the remainder of the war, marines continued to serve on board Continental ships, and in one instance, with the Continental army during the battles of Trenton and Princeton, both in New Jersey. The concept of an independent corps of marines quickly disappeared, but their "amphibious" nature did not. In October 1777, marines executed a landing off Billingsport, New Jersey, and evacuated the besieged American garrison. In January the following year, marines captured and briefly held the island of New Providence for a second time.

A company of marines under Captain James Willing left Fort Pitt on 10 January 1778 in the armed boat *Rattletrap* for an expedition to New Orleans, and on 3 February the company took part in the capture of two French trading vessels near Kaskaskia. Along the lower Mississippi, Willing's marines raided Loyalist settlements in an attempt to wrest control of the river. The company reached New Orleans, where Willing remained, but a portion returned to Kaskaskia, Illinois, under the command of Captain Robert George and enlisted in a new artillery company. This unit participated in George Rogers Clark's operations against the Indians. The remainder later took part in the abortive attempt to seize Mobile, in British controlled West Florida.

The major marine amphibious effort came in July 1779. A joint force made up of New England militia and state troops, along with the Continental navy force engaged in an expedition to seize a British fort that had been established at Penobscot Bay, Massachusetts (now a part of Maine). Although the intervention of a superior British squadron prevented the successful accomplishment

of the assigned mission, the force of slightly more than 300 Continental and state marines performed admirably. They also took part in the unsuccessful defense of Charleston in 1780. On the high seas they were in practically every battle involving privateers and ships of the state navies, as well as those battles in which ships of the Continental navy were engaged. Marines served under John Paul Jones in his raids on Whitehaven, England, and St. Mary's Isle, Scotland, and were with him in the *Bonhomme Richard-Serapis* engagement on 23 September 1779.

James Fenimore Cooper has written:

At no period of the naval history of the world, is it probable that Marines were more important than during the War of the Revolution. In many instances they preserved the vessels to the country, by suppressing the turbulence of ill-assorted crews [in accordance with what was mentioned at the beginning of this article as their original purpose], and the effect of their fire . . . has usually been singularly creditable to their steadiness and discipline.

The navy and marines ceased to exist in 1783 and were not revived until 1794, when American merchant ships were attacked by the corsairs of the Barbary Coast of Northern Africa. The need to protect American shipping led to the revival of the navy, and by the spring of 1798 there were marines on board the ships that had been completed to address this emergency. On 11 July 1798 the U.S. Marine Corps became an individual service within the American navy.

MARION, FRANCIS. (1732–1795). Southern partisan leader who came to be known as the "Swamp Fox." South Carolina. The grandson of Huguenots who came to South Carolina in 1690, Marion has been described as being "not larger than a New England lobster, and might easily enough have been put into a quart pot" (Bass, pp. 6, 11). He was a frail child with badly formed knees and ankles. When he was about six years old

Francis Marion. *Marion, a wily partisan leader from South Carolina, became known as the "Swamp Fox."* © BETTMANN/CORBIS

his family moved from St. John's Parish (in modern Berkeley County, astride the Cooper River) to the vicinity of Georgetown. He was reared under modest circumstances and received a country school education. After surviving a shipwreck at the age of sixteen, he settled down to the life of a farmer on the family property.

In 1761 he was a lieutenant in the militia company of Captain William Moultrie that took part in the Cherokee Expedition led by Colonel James Grant. In his first experience under fire, Marion was selected to lead an attack to clear an Indian force from a critical defile, and despite sustaining twenty-one casualties in his party of thirty men, he accomplished the mission. His performance having been witnessed by important South Carolina men, he rose to a position of respect in his community. In 1773 he was able to buy Pond Bluff plantation on the Santee River, four miles below Eutaw Springs. In 1775 he was a delegate to the South Carolina Provincial Congress, and on 17 June was named a captain in Moultrie's Second South Carolina Regiment. He took part in the bloodless operations that drove the royal governor from South Carolina, and on 10 February 1776 he was at Charleston, ready to take part in the fortification of the harbor. On 22 February he was promoted to the rank of major (although some scholars date his promotion to 14 November 1775).

In the defense of Charleston, 28 June 1776, Major Marion commanded the heavy guns on the left side of Fort Sullivan (later Fort Moultrie), and tradition has it that he

fired the last shot of the engagement. On 23 November (again, there is some disagreement of the date) he became a lieutenant colonel, and on 23 September 1778 he took command of the regiment. Owing to a new congressional policy of keeping regimental commanders in the grade of lieutenant colonel, (to simplify the matter of prisoner exchange, which was done on a grade-for-grade basis), his title was lieutenant colonel, commandant of the Second South Carolina Regiment. Military operations in the Southern theater had been limited up until this time, and monotony increased the problems of commanders. Marion, however, established high standards of discipline. At Savannah, on 9 October 1779, he led his regiment in a gallant but unsuccessful assault.

When General Benjamin Lincoln returned to Charleston, Marion commanded the three regiments left at Sheldon, South Carolina. On 19 March 1780 he resumed command of his own regiment at Charleston. When the city was surrendered on 12 May, he is said to have had a lucky break that saved him from capture. Soon after his arrival in the city, the austere little Huguenot attended a dinner party given by Moultrie's adjutant general, Captain Alexander McQueen. According to historian Benson J. Lossing, "the host, determined that all of his guests should drink his wine freely, locked the door to prevent their departure. Marion would not submit to this act of "social tyranny," and leaped from a second story window to the ground. His ankle was broken, and before communication toward the Santee was closed he was carried to his residence, in St. John's parish, on a litter." (p. 769)

With all organized resistance in the South soon destroyed, Marion and a few followers joined General Johann De Kalb at Coxe's Mill on Deep River in North Carolina. He was sent to Cole's Bridge, but rejoined the American force about 3 August as it moved into South Carolina under General Horatio Gates. He was received unenthusiastically by the regulars in that force. When the Williamsburg district militia petitioned Gates for a Continental officer, Gates chose Marion, who left the Continentals around 14–15 August. Thus Marion avoided being involved in disaster at Camden. After the action at Great Savannah on 20 August, in which he rescued 147 Continentals that had been captured at Camden, Marion then led his 52 men in an audacious ambush that scattered 250 militia under Major Ganey near Blue Savannah on 4 September. Marion then retreated into North Carolina and camped at White Marsh, but returned to South Carolina, routed the Tory outpost of Colonel Ball at Black Mingo Creek on 29 September, and broke up a Tory uprising at Tearcoat Swamp on 26 October 1780.

After the British disaster at Kings Mountain (7 October), Marion's operations were of such concern to General Charles Cornwallis that he gave General Benastre Tarleton permission to take most of his legion

off in an attempt to eliminate this guerrilla menace. While Tarleton was gone, General Thomas Sumter's operations at Fishdam Ford (9 November) were so successful that Cornwallis sent an urgent order for Tarleton's return to the vicinity of Winnsboro. "Come, my boys! Let us go back, and we will find the Gamecock [as Sumter was known]," Tarleton is reported to have said after trailing Marion for seven hours through 26 miles of swamp. "But as for this damned old fox, the devil himself could not catch him!" (Rankin, p. 113) Unsuccessful in an attack on Georgetown on 15 November, Marion skirmished with a British column at Halfway Swamp on 12–13 December 1780, and then established a camp on Snow's Island. This "island" was a low ridge, five miles long and two miles wide, that was protected by the Peedee River on the east, Lynches River on the north, and Clark's Creek on the south and west. It is traditionally believed to have been the Swamp Fox's favorite base. Here he now organized "Marion's Brigade."

Nathanael Greene's southern campaigns were now under way, but after teaming up briefly with Lee's Legion for the raid against Georgetown on 24 January 1781, Marion was left to his own devices for another three months. In February 1781, Thomas Sumter started an expedition into Marion's district, and called on the Swamp Fox to join him. The two partisan leaders did not succeed in uniting, and as Sumter withdrew the British undertook a serious campaign to wipe out Marion's guerrillas.

Lieutenant Colonel John W. T. Watson was detached with a force of Tories "for the purpose of dispersing the plunderers that infested the eastern frontier." Since Watson was lieutenant colonel of the Third Foot Guards, some writers have assumed that he led this crack regiment, but Watson himself states that Rawdon (Sir Francis Rawdon-Hastings, a British commander) gave him a detachment of the Sixty-fourth Foot Brigade in addition to the Tories of Major John Harrison's Regiment. Marion checked Watson at Wiboo Swamp and blocked his drive toward Kingstree at Lower Bridge. Marion caught Watson as he crossed the Sampit River on the way to the British base at Georgetown. In the confrontation, Watson's horse and about twenty of his men were killed. "I have never seen such shooting before in my life," said Watson, but he complained that Marion "would not fight like a gentleman or a Christian." This battle successfully drove the British out of Marion's district.

While Marion was scoring this remarkable success, however, the enemy achieved one that was equally brilliant: Colonel Welbore Doyle found and destroyed Marion's base at Snow's Island. Hugh Horry led the pursuit of Doyle's New York Volunteers, and Marion followed with the rest of his command. After Horry had shot down nine and captured sixteen, and after two casualties were inflicted on the enemy rear guard at

Witherspoon's Ferry, Colonel Doyle destroyed his own baggage to speed his rush to Camden. It was not Marion's pursuit that prompted this sudden speed, but a message from Rawdon that Greene's army was again approaching Camden. Marion made contact with Henry Lee's Legion at Black River on 14 April, but only eighty partisans now remained with him. The rest had gone home. Nevertheless, Marion and Lee operated together during April and May 1781 to capture Fort Watson and Fort Motte, two critical outposts that protected British supply lines between Charleston and Camden.

Marion occupied Georgetown on 28 May, and then moved farther south to support the attacks on Augusta and Ninety Six. Lieutenant Colonel Alexander Stewart cleverly eluded Marion's attempt to block his move from Charleston to reinforce Rawdon at Orangeburg.

While Greene's main body was recuperating in the Santee Hills, Marion came under the orders of Sumter and took part in an unfortunate action at Quinby Bridge, 17 July. Marion had such sufficient doubts regarding Sumter's leadership that he had avoided service under "the Gamecock." These doubts were realized in this poorly managed and costly skirmish. Marion then raced off to win a skirmish at Parker's Ferry. The date of this skirmish is in question, and many sources give 13 August as the date. However, a letter from Marion to Nathanael Greene gives the date as 30 August. After the skirmish, Marion rejoined Greene to command the militia forces of North and South Carolina, including his own brigade, at Eutaw Springs on 8 September. It was due largely to Marion's personal influence on the field that Greene could tell Congress, "the militia gained much honor by their firmness," and could write Steuben, "such conduct would have graced the veterans of the Great King of Prussia."

Elected to the state senate, Marion was at Jacksonboro for the General Assembly, beginning on 8 January 1782, but his brigade was given the mission of protecting the area. On 10 January he wrote Colonel Peter Horry and asked him to assume command, but on 24 February Marion had to take leave from his urgent political duties and rush back to take over. There was jealousy between Horry and Colonel Hezekiah Maham, who commanded the brigade's dragoons, prompting these officers to find one pretext after another to turn their responsibilities over to subordinates. At this critical moment, Colonel Benjamin Thompson led a 700-man expedition from Charleston, crossed the Cooper River on 23 February, and scattered Marion's divided forces. He rallied the remnants and directed a counterattack, but poor execution on the part of some of his untrained horsemen led to another reverse near Wambaw Bridge, about forty miles northeast of Charleston. Marion withdrew to his old camp at Cantey's Plantation (near Murray's Ferry), much demoralized by this sorry performance. The next summer

found Marion again assigned the mission of patrolling east of the Cooper River. At Fair Lawn, on 29 August 1782, he ambushed a force of 200 dragoons under Major Thomas Fraser, who had been sent from Charleston to surprise him. Captain Gavin Witherspoon's reconnaissance party led the enemy into a trap that cost Fraser twenty men. The British captured an ammunition wagon, however, and Marion was forced to retreat for lack of powder. He had fought his last action.

When the war ended, Marion was appointed commandant of Fort Johnson, a sinecure that brought £500 a year and compensated him somewhat for having lost virtually all his personal property during the Revolution. He was re-elected to the state senate in 1782 and 1784, and sat in the state's constitutional convention in 1790. Also in 1790 Marion left his post at Fort Johnson, and in 1791 he was elected to fill an unexpired term in the state senate. Meanwhile, in 1786, he married Mary Esther Videau, a wealthy spinster cousin about his own age. He died on 27 February 1795 at the age of about 63.

The "Marion Legend" has long obscured the history of his life, and the principal villain is Parson Weems, who also invented much of the "Washington Legend." Weems rewrote a manuscript on Marion's life that Peter Horry had drafted, taking some liberties with the details. After reading the Weems's book, Horry wrote him in despair: "Most certainly 'tis not my history, but your romance." William James, who joined Marion at the age of 15, wrote a simple biographical sketch of his idol, and William Gilmore Simms fashioned this into another fantasy. Historian Robert D. Bass gives this summary of the "Swamp Fox":

He was neither a Robin Hood nor a Chevalier Bayard. He was a moody, introverted, semiliterate genius who rose from private to Brigadier General through an intuitive grasp of strategy and tactics, personal bravery, devotion to duty, and worship of liberty. . . . By nature Marion was gentle, kind, and humane. Yet his orders, orderly books, battle reports, and personal letters reveal another side of his character. He shot pickets, retaliated from ambush, failed to honor flags of truce, and knowingly violated international law. He could forgive the Tories, and yet he could court-martial his closest friend. (p. 4)

Unlike Thomas Sumter, Marion could subordinate himself to higher military authority and fit his partisan operations into the over-all strategy of leaders like Nathanael Greene. While most famous as a guerrilla, he had the military standards of a regular soldier.

MARION'S BRIGADE. After being named brigadier general of the South Carolina militia in December 1780, Marion was given command of all regiments east of the Santee, Wateree, and Catawba Rivers. The brigade's composition changed frequently, but began with the cavalry under the command of Colonel Peter Horry and was comprised of troops under Major Lemuel Benson and Captains John Baxter, John Postell, Daniel Conyers, and James McCauley. Lieutenant Colonel Hugh Horry (Peter's brother) commanded the foot regiment, while Colonel Adam McDonald was on parole. Companies were headed by Major John James and Captains John James, James Postell, and James Witherspoon. Colonel Hugh Ervin was Marion's second in command. Serving as aides de camp were Captains John Milton, Lewis Ogier, and Thomas Elliott, the latter handling the semiliterate commander's correspondence. An estimated 2,500 men served at one time or another in the brigade.

MARJORIBANKS, JOHN. (1757–1781). British officer, hero of Eutaw Springs. Commissioned as an ensign on 24 May 1749, John Marjoribanks became a lieutenant in the Scotch-Dutch Brigade on 21 October

1749. He was promoted to lieutenant in the Nineteenth Foot Brigade on 22 September 1757, and was wounded in the siege of Belle Isle (1761), after which he was promoted to captain of the 108th Foot Brigade. On 2 April 1762 he returned to the Nineteenth Foot as captain-lieutenant, was advanced to captain on 15 June 1763, to brevet-major on 29 August 1777, and to major on 17 November 1780. From December 1779 to June 1780 he commanded a light infantry company at Kilkenny, Ireland. Sent to reinforce General Henry Clinton in the South, Marjoribanks and his regiment arrived at Charleston on 4 June 1781, and marched with Lord Francis Rawdon-Hastings to the relief of Ninety Six. As commander of the flank battalion he was mortally wounded at Eutaw Springs on 8 September, and died 23 October 1781.

MARKSMANSHIP. Military marksmanship during the eighteenth century was tailored to the requirements of linear tactics. Measured against the norms that began to be developed at the end of the nineteenth century, marksmanship in line regiments during the Revolution ranged from very bad to almost nonexistent. Specialized units armed with rifled muskets were a partial exception, but even here the ratio of hits to shots fired was low by modern standards. Historian Christopher Ward calculated that at Lexington and Concord (19 April 1775), “only one American bullet out of 300 found its mark . . . [and] only one [militia]man out of 15 hit anybody” (p. 50). At Wetzell’s Mills, North Carolina, on 6 March 1781, twenty-five expert riflemen, all of them veterans of the action at Kings Mountain, in South Carolina, fired from relatively close range at the gallant British Lieutenant Colonel James Webster as he led his troops on horseback across a ford they were covering. Eight or nine of these riflemen even succeeded in firing twice, and Webster was not hit once.

British regulars were not taught to aim, because in the case of linear tactics, the volume of fire was more important than its accuracy. Indeed, their Long Land Service musket (the Brown Bess) did not have a rear sight and had only the bayonet lug for a front sight. An American, captured at Fort Washington (16 November 1776), reported that not fewer than ten muskets were fired at his group within a range of forty to fifty yards, some at within twenty yards, and he was alive to give this critique: “I observed that they took no aim, and the moment of presenting and firing was the same” (Curtis, p. 19). Given

that the weight of the musket was concentrated in its barrel, firing by volleys was prone to shooting both over and under the nominal target. Soldiers might hold the barrel too high with their left hand at the start of a fire fight, thereby sending their projectile over the target, while fatigue later in the encounter might cause them to let the barrel droop, causing the projectile to hit the ground in front of the target.

It is also worth remembering that eighteenth-century firearms were based on a double-ignition principle. The striking of flint on steel produced the sparks that ignited the powder in the priming pan, which then communicated part of the explosion through the touch hole to the main charge in the barrel. Many things could go wrong to interrupt the sequence. Wet weather could so dampen gunpowder that only about one shot in four could even be fired. Flints had to be held tightly and at the right angle in the jaws of the lock, and their utility could deteriorate quickly. Whereas a good American flint could be used to fire sixty rounds without resharping, a British flint was good for only six.

Legends abound about American marksmanship. Perhaps the tallest of the tall tales was reported on 1 October 1774 by John Andrews, a Boston resident, and is quoted by the historians Henry S. Commager and Richard B. Morris:

It’s common for the [British] soldiers to fire at a target fixed in the stream at the bottom of the common. A countryman stood by a few days ago, and laughed very heartily at the whole regiment’s firing, and not one being able to hit it. The officer observed him, and asked why he laughed. . . . “I laugh to see how awkward they fire. Why, I’ll be bount I hit it ten times running” (*Spirit of ’76*, p. 30).

The British officer then challenged the boastful American to prove his ability, whereupon the American, who carefully loaded the musket offered by the officer, hit the target three consecutive times. Andrews’ narrative continues:

He took aim, and the ball went as exact in the middle as possible. The officers as well as soldiers stared, and thought the Devil was in the man. “Why,” says the countryman, “I’ll tell you naow. I have got a boy at home that will toss up an apple and shoot out all the seeds as it’s coming down” (*Spirit of ’76*, p. 30).

The rifle shot that mortally wounded Brigadier General Simon Fraser at the battle of Freeman’s Farm (First Battle of Saratoga, 19 September 1777) apparently was one of a dozen shots fired from a range of perhaps a quarter of a mile. Daniel Morgan, commander of an ad hoc unit of riflemen, sent as many as twelve of the men

he considered his best shots into the tree canopy, to gain them elevation and a clear field of fire. One of them—in the nineteenth century the credit was lodged with Timothy Murphy—managed to hit an average-size man riding a horse 440 yards away. It seems reasonable to conclude that this success was as much a matter of luck as of skill.

MARRINER, WILLIAM. Whaleboat guerrilla. New Jersey. Natives of New Brunswick, he and Adam Hyler operated in small boats between Egg Harbor (near modern Atlantic City, New Jersey) and Staten Island to prey on British and Loyalist vessels. Captain Marriner was a prisoner on Long Island; after being exchanged he returned to capture his captor, a Major Sherbrook. He also captured the Loyalist Simon Cortelyou from his house on Long Island. Marriner was particularly busy in 1780, famously capturing two British ships on successive days in August.

MARSHALL, JOHN. (1755–1835). Continental army officer, fourth chief justice of the U.S. Supreme Court. Virginia. Marshall first saw action as an officer in the Culpeper minutemen in the operations that drove Lord Dunmore, the royal governor, from Virginia at Great Bridge on 9 December 1775 and at Norfolk on 1 January 1776. On 30 July 1776 he became a first lieutenant in the Third Virginia Continental Regiment. He was promoted to captain lieutenant in the Fifteenth Virginia in December, with rank retroactive to 31 July 1776. On 20 November 1777 Marshall was appointed deputy judge advocate, and on 1 July 1778 he was promoted to captain. On 14 September 1778 he transferred to the Seventh Virginia, and on 12 February 1781 he retired from the army. He fought at Brandywine, Germantown, Monmouth, and Stony Point and also survived the winter at Valley Forge, where he said he served “with brave men from different states who were risking life and everything valuable in a common cause.”

In the spring and summer of 1780 he attended a course of law lectures given at the College of William and Mary by Professor George Wythe, Jefferson’s mentor, and on 28 August 1780 he was admitted to the Virginia bar. In 1783 he moved to Richmond from the frontier region where he had been reared and quickly became a successful lawyer. He was a member of the Virginia assembly (1782–1791 and 1795–1797), a delegate to the state convention that ratified the federal Constitution, and a member of the XYZ mission to France (1797–1798). He was a Federalist congressman from 1799 to 1800 and succeeded Timothy Pickering as secretary of state in May 1800. President John Adams nominated him to succeed Chief Justice Ellsworth of the U.S. Supreme Court, a position he accepted on 4 February 1801. During the next thirty-four years, the Court under his leadership became “the preeminent guardian and interpreter of the Constitution . . . and arbiter of conflicts arising from the clash of federal and state sovereignties” (Charles F. Hobson in ANB). His five-volume *Life of Washington* was published between 1804 and 1807.

MARTHA'S VINEYARD RAID. 10–11 September 1778. After his Bedford–Fair Haven Raid in Massachusetts, on 6 September, Major General Charles Grey descended on the island of Martha's Vineyard to continue the British policy of harassing the New England coast. He landed at Holmes's Hole (Vineyard Haven), confiscated the militia's weapons, and wrecked its salt works. By destroying the vessels he found, Grey seriously hurt the island's whaling industry. His expedition also confiscated thousands of sheep and several hundred cattle to feed the garrison of New York.

MARTIN, JOHN. (1730?–1786). Soldier, politician. Born in Rhode Island, Martin moved to Georgia with his brother James in 1767. He served in a number of public offices, beginning in 1775 as a delegate from the town and district of Savannah to the first Provincial Congress and then on the Council of Safety. This was followed by election to public office for Chatham County as sheriff (1778–1779), justice of the peace (1781), and member of the assembly (1782). In the military he served as first lieutenant, then captain, of the Seventh Company of the Georgia Continental Battalion (1776); lieutenant colonel of the First Battalion, First Regiment (1777); town major of Savannah (1778); and lieutenant colonel, Chatham County (1781). In October 1781 he was appointed commissary in charge of military stores and elected governor in January 1782.

Continental General Nathanael Greene sent General Anthony Wayne and his forces into Georgia that month, and Martin saw to it that the rebel militia and civil government cooperated as fully as possible. Martin and Greene had met in the vicinity of the Congaree River in South Carolina, probably in 1781, and each left a favorable impression on the other. Martin did his best to get militia into the field and supplies to the troops, but this was difficult to achieve due to near-famine conditions. While offering attractive bounties for joining the militia, Martin gave precedence to the planting of crops. He also located food supplies in neighboring states for the commissary to distribute to needy civilians. As Wayne, along with supporting militia, closed in on the British in Savannah, Martin moved the seat of government out of the backcountry. The British evacuated Savannah in July 1782, and the state government was reestablished there for the first time since 1778.

Martin's administrative abilities and understanding of human nature enabled him to guide Georgia on its

first steps toward rebuilding its shattered infrastructure. Violence did not end with the departure of the British, and Martin expressed his determination to end plundering. He used former raiders and the limited militia forces available to curb widespread outlaw activities and to locate badly needed slaves, horses, and cattle hidden by plundering gangs. Martin gained East Florida Governor Patrick Tonyn's cooperation in curtailing crossborder plundering activities. While he was unsuccessful in getting the General Assembly to adopt a lenient attitude toward Loyalists and the confiscation of their property, Martin correctly anticipated that it would eventually do so. The board of commissioners he established to manage confiscated property remained active for forty years.

Martin served as state treasurer in 1783–1784, and in early 1783 he was appointed a commissioner to meet with Creek and Cherokee Indians; he did not attend, however. Although little is known of his private life, he mentioned that his family was dependent upon food from the commissary during 1782, and he married Mary Deborah Spencer in December 1783. Martin died during January 1786 while traveling west for the recovery of his health.

Leslie Hall

MARTIN, JOSIAH. (1737–1786). Royal governor of North Carolina, British officer. Born in Dublin, Ireland, on 23 April 1737, Josiah Martin entered the army in 1757. He saw action on Martinique and Guadeloupe, and took part in the Canadian campaign, rising in rank to lieutenant colonel of the 22d Foot Regiment. In 1761 he married his cousin, Elizabeth Martin, of "Rockhall" on Long Island. In 1764 he joined the Sixty-eighth Regiment on Antigua, where he stayed until bad health forced him to sell his commission as lieutenant colonel in 1769. Aided by family connections, he was commissioned the royal governor of North Carolina in 1770, succeeding William Tryon. He took up his new office at New Bern on 12 August 1771.

Arriving shortly after Tryon had forcefully put down the Regulators, Martin faced a number of difficult obstacles. He was immediately embroiled in a losing battle on matters of taxation, the "foreign attachment issue" when the legislature insisted on the right of North Carolina creditors to seize the property of British debtors, and other local matters. Since he could not reconcile the demands of the assembly with his instructions from the Crown, Governor Martin saw the colony's juridical system collapse even before he was faced with the local Patriot movement that started in 1774. He had the unfortunate impression that he could muster sufficient Loyalist strength to hold his province, and in March 1775 he urged General Thomas Gage to send him arms and ammunition. As the Patriot militia gathered around him, Martin sent his family off to New York, and on 31 May 1775 he himself fled to the safety of Fort Johnston, on Cape Fear, in South Carolina. On 18 July he boarded the *H.M.S. Cruizer*, just a jump ahead of capture.

Martin's incorrect evaluation of the local situation, coupled with that of other royal governors-in-exile, led the British to send Henry Clinton's ill-fated expedition to Charleston in 1776 and helped bring about the abortive Loyalist uprising that was crushed at Moores Creek Bridge on 27 February 1776.

After watching the Charleston fiasco in June, Martin went to his wife's home on Long Island. In 1779 he returned to Charleston with Clinton and served creditably as a volunteer under General Charles Cornwallis in the Carolinas in 1780 and 1781, taking part in the battles of Camden and Guilford. Again bothered by ill health, he left Cornwallis at Wilmington in April 1781, and after a visit to Long Island he sailed to London. He drew his salary as governor until October 1783 and was compensated for the loss of his property in North Carolina. He died in London on 13 April 1786.

MARTIN'S STATION, KENTUCKY.

Because Kentucky was part of Virginia during the Revolution, it may be said that two places existed in the Old Dominion called Martin's Station. The more famous was on the Wilderness Road in the western tip of modern

Virginia and within twenty miles of Cumberland Gap. The other Martin's Station, named for John Martin, was captured and destroyed by British and Indian forces in the Kentucky Raid of Bird in June 1780.

MARYLAND, MOBILIZATION IN.

Because of its proprietary government, the movement towards independence in Maryland involved opposition to the Calvert family's control of the colony as well as increasing discontent with parliamentary policies regarding imperial governance. By 1773 the last vestiges of proprietary support had disappeared in the General Assembly and control of Maryland's local and colonial government increasingly fell to extralegal county meetings, committees of observation, provincial conventions, and a council of safety. The mobilization for such "out-of-door" politics required the traditional gentry-led, antiproprietary leadership to negotiate an often treacherous path through the forests of reaction, moderation, and radicalism.

For example, the enforcement of the Continental Congress's Articles of Association required coercion of those loyal to the crown. Coercion sometimes required the use of force; often this force came from crowd mobilization by some of the most radical leaders. For instance, when one Annapolis merchant attempted to unload tea from the brigantine *Peggy Stewart* in October 1774, a mass meeting dominated by militiamen defied conservative advice and forced the merchant to burn not only the tea but the ship carrying it. The arson of the *Perry Stewart* was so radical that the historian Arthur M. Schlesinger Sr. commented that "Annapolis had out-Bostoned Boston" (*Colonial Merchants*, p. 392).

As in other colonies, the Maryland Convention reacted adversely to the Intolerable Acts, and in February 1775 it issued an "Association of Freemen of Maryland." This document required the signature of each citizen to support the colonial cause or be disarmed. Those not signing and posting a bond for good behavior were to be imprisoned. While many Loyalists voluntarily left the colony, others were forced to leave as local committees of observation became increasingly more radical.

By the next summer, the February association was no longer sufficient, and a second document, "Association of Freemen of Maryland, July 26, 1775," pledged military and financial support against British armed forces in American to back the common colonial quest "for the lives, liberties and properties of the subjects in the united colonies." While the proprietary governor, Robert Eden,

tried valiantly to preserve a nominal “hold on the Helm of Government,” he feared he would be unable to steer a course that would avoid “those Shoals, which all here must sooner or later . . . be shipwreck’d upon.” He lost his symbolic control of the ship of state when the council of safety allowed him to escape in April 1776.

REVOLUTIONARY MILITIA

As Governor Eden became a mere figurehead, the real power devolved to the extralegal agencies. The Maryland Convention that met in December 1774 created a rudimentary military force when it resolved that “a well regulated militia, composed of the gentlemen, freeholders, and other freemen, is the natural strength and the only stable security of a free government.” The convention then argued that the creation of a militia relieved the British government of the necessity of taxing colonials for the maintenance of “any standing army (ever dangerous to liberty) in this province.” It then disbanded the largely moribund colonial militia system and created a new militia under its direction. The governor lost to the convention his power to appoint officers and to direct the deployment of the militia. Soon volunteer militia companies appeared throughout the province, each electing its own officers. But these companies needed funds to purchase arms and ammunition and local Patriots began demanding “voluntary contributions” from all citizens for their support, in effect, taxation without official sanction. This effort sparked considerable controversy between those supporting the resistance to the crown and those opposing it. With the outbreak of hostilities in Massachusetts in April 1775, the situation became grave, and greater organization was required.

Not only did the convention face the possibility of military opposition from the British, it also found the militia companies becoming an enforcement arm of the increasingly more radical county committees of observation. A third threat emerged when Governor Lord Dunmore of Virginia offered freedom to slaves and indentured servants who joined him in opposition to the revolutionary movement. This required the regularization of the military structure of the province to defend against a possible social upheaval. The July–August convention called again for every able-bodied freeman to enroll in the common militia and declared that every eight companies constituted a battalion. These units constituted a strategic reserve. The more active component was forty companies of minutemen with twenty-nine Western Shore companies organized into three battalions and with eleven independent companies on the Eastern Shore. The convention armed the minutemen companies with provincial weapons. For both the common militia and minuteman battalions, the convention assumed the right to commission the field grade command and staff officers rather than have them elected, as were company officers.

But legal structure and reality differed greatly. By the time of the December 1775–January 1776 meeting of the convention, it had become apparent that reorganization was necessary. This time the convention disbanded the minutemen units and created a force of regular Maryland troops consisting of a battalion and seven independent companies of infantry plus two batteries of artillery. The regular battalion contained eight infantry companies and one light infantry company and was stationed at Annapolis and Baltimore. The convention posted two of the regular companies on the southern Western Shore and the remaining five on the Eastern Shore. These regular troops numbered only two thousand under the command of Colonel William Smallwood, with all of the officers commissioned by the convention rather than by election. Its leadership included some of the most ardent advocates of American rights; Smallwood, his regimental lieutenant colonel, and four of his captains were also members of the convention. This unit became the basis of the famous Maryland Line, one of General George Washington’s most famous Continental army fighting units. Its reputation for gallantry is the reason Maryland calls itself the “Old Line State.”

The remaining common militia units became one of the most important and, at least early in the independence movement, most radical elements in the revolutionary era. The pressure to enforce the universality of militia service brought tensions between those with Loyalist, neutral, and religious objections to joining and those who felt it was necessary to present a united front against British tyranny. Revolutionary leaders learned to accept those with traditional religious pacifist orientations, such as the Quakers and German pietistic sects. Dealing with Anglicans, Methodists, and Baptists who objected to this particular war and often had Loyalist leanings proved a more difficult problem. Nonetheless, the revolutionaries gradually obligated most white adult males to military service and with it the semblance of treason to the British Crown.

The militia units became the enforcement arm of the revolutionary movement. They forced individuals to observe the importation and exportation policies of the Continental Congress; those who did not obey were subject to punishment or banishment. They enforced the ordinances of the revolutionary conventions and later of the state government. They maintained order throughout most of the state with the exception of the lower Eastern Shore. The militia became the police force of the new state government and legitimized it in the eyes of residents who had to obey state laws and officials. From its ranks, the state’s Continental Line recruited replacements. Because Maryland was never occupied by British soldiers, the militiamen never had to counter regular soldiers. But because the state’s Chesapeake coastline was constantly threatened by British and Loyalist raids, eventually most

white adult males took up arms merely to protect themselves from raiders who made little distinction in their activities between the persons and property of Loyalists, neutrals, or Revolutionaries.

During 1775–1776 a few militia regiments called for far more dramatic social and political change than the more traditional antiproprietary leadership thought necessary. Perhaps the most dramatic representation of the radical position was that of the Anne Arundel militia resolves of July 1776, which urged the adoption of a new state constitution with universal white manhood suffrage, a plural executive, an annually elected legislature, elected county officers, real estate instead of poll taxes, and low fees for officials. These resolves also called for the election of all militia officers, including those of field grade and general ranks, and opposed the creation of standing armies. While these ideals were too radical for the long-established leadership to incorporate into the constitution of 1776, they demonstrated how the requirement to mobilize a militia system dramatized a desire for a more egalitarian social and political order. The historian Ronald Hoffman has argued that the members of the traditional elite “sacrificed principle for power” in order to overcome “the disequilibrating social forces unleashed by the revolutionary movement” and thereby preserved their leadership status from those they considered to be egalitarian demagogues (*Spirit of Dissension*, pp. 3, 222).

The greatest military crisis in the state’s history came in 1777, when Admiral Richard Lord Howe brought into Chesapeake Bay 267 sail, including 26 men-of-war, and General Sir William Howe’s army. Many militia units did not muster, while those that did often were without arms, gunpowder, or shot. There was more bravado than bravery among those assembled to defend Annapolis and Baltimore, but fortunately the admiral headed for the Head of Elk, where he disembarked his brother’s army for its assault on the Continental army in Pennsylvania. For the next several months Royal Navy vessels and Loyalist privateers created considerable alarm but did little damage along the Chesapeake coast. More dangerous were Loyalist uprisings on the Delmarva Peninsula during late 1777 and the first half of 1778. With the British army ensconced in Philadelphia and Royal Navy ships in the Chesapeake, militia units failed to muster and Loyalists openly flaunted their political preferences. The most significant event was an insurrection in Queen Anne’s County led by a romantic figure named Cheney “China” Clow in the spring of 1778. Brigadier General William Smallwood led the suppression effort that forced Clow and his followers into the Eastern Shore swamps, where they hid out but did little damage for several years.

For most of the war, ground operations of Loyalists were centered in the lower Eastern Shore and the Potomac River. In many respects the militia became more efficient

as it devised means to react quickly upon learning of the approach of the enemy, to move threatened livestock and foodstuffs inland, to operate under the command of a county lieutenant who coordinated local defenses, and to incorporate returning Continental army veterans into leadership positions. For instance, Charles County’s lieutenant was Colonel Francis Ware, a distinguished veteran of the Maryland Line’s campaigns of 1775–1776, whose leadership contributed significantly to the defense of the Lower Potomac Valley. Success in these activities involved coordination of local militia regiments with state naval vessels.

NAVAL OPERATIONS

Because the people of Maryland and Virginia depended so much on the Chesapeake for their livelihoods and the bay presented an inviting avenue for British and Loyalist incursions along the vulnerable coastline, the colony’s Patriot leadership provided naval as well as ground forces. In 1775 Maryland created its own navy by converting a merchant ship into the *Defence*, carrying eighteen six-pounder and two four-pounder cannon. Its mission was to escort merchant vessels past Lord Dunmore’s outpost at Norfolk and to clear enemy raiders from the Chesapeake Bay. Commanded by James Nicholson, she drove off the British sixteen-gun sloop-of-war *Otter* on 9 March 1776. When Nicholson became a Continental navy captain, command of the *Defence* went to Captain George Cook, formerly of the Royal Navy, who took her on a successful Atlantic cruise until November. The vessel remained inactive until it served as a state-owned merchantman sailing to France in 1778–1779. Sold to a Baltimore merchant in 1779, the *Defence* concluded its wartime career carrying supplies to the French navy in the West Indies.

Besides James Nicholson, who became the Continental navy’s senior officer, Maryland furnished a number of leading officers in the continental service; these included such distinguished commanders as Lambert Wicks and Joshua Barney. To man their vessels, hundreds of the state’s sons served in the junior officer and enlisted ranks.

Far more damaging to the enemy than the state’s Continental navy contributions were the efforts of her privateers. From Baltimore there sailed 250 privateers, and other ports provided more vessels that crippled British commercial shipping from the Irish Sea to the Caribbean. By 1778 over 559 captures were recorded by the state’s daring seamen, who found themselves amply rewarded for the risks they took. Often these efforts were combined with the transportation of foodstuffs to the French West Indies. However, the profits to owners, officers, and crew were such that privateering adversely affected recruitment for the Continental army and Continental navy.

One of the most famous of these privateers was the brig *Sturdy Beggar*, owned by a group of Baltimore merchants, whose Caribbean exploits in 1776–1777 resulted in several notable captures, including a merchant vessel from Senegal containing gold dust, ivory, and over four hundred slaves that sold in Hispaniola for over twenty thousand pounds. Before she sank in a storm, *Sturdy Beggar* earned an infamous reputation among British merchantmen. The naval historian William James Morgan concluded, however, that “American privateers were a festering and annoying thorn in the British Lion’s paw, but they were in no manner the decisive factor in the outcome of the war” (Morgan, “American Privateering,” p. 86).

Besides these private enterprises, the state found itself involved in thwarting Royal Navy and Loyalist forays along the shores of the Chesapeake Bay. In June 1776 the council of safety let contracts for the construction of seven row galleys. While the exact dimensions of these vessels are unknown, they probably had a keel length of eighty-one feet but drew only eight feet of water. Problems procuring cordage, sailcloth, anchors, guns, and other items delayed the completion of five of these vessels in late 1777. As a result, they were unable to counter Vice Admiral Richard Lord Howe’s incursion into the bay the summer of 1777. But for the next two years these vessels escorted merchant vessels and troop convoys, hindered smuggling, served as police boats, and transported war matériel. Usually armed with between two and four eighteen-pounders and ten to fourteen four-pounders, these small vessels combined with those of Virginia were able to keep the bay mostly under Patriot control until early 1780. At that time Maryland sold the galleys. Shortly thereafter, the British returned to the lower bay area and depredations along Maryland’s bay shore resumed.

Throughout the war Loyalism flourished on the Eastern Shore, particularly in Dorchester, Worcester, and Somerset Counties. Whenever British warships appeared, small Loyalist craft joined them and conducted raids against Patriot leaders, magazines, tobacco warehouses, military supplies, naval and commercial vessels, and private property. One such raid came in 1779, when Commodore Sir George Collier conducted an expedition into the lower bay that brought with it the plundering of accompanying privateers. Operating out of the islands on Tangier Sound, armed Loyalist barges grew bolder after British army units occupied the James River and Norfolk area in 1780. They were navigated by knowledgeable local watermen. “Commodore” Joseph Wheland commanded four armed barges that raided in St. Mary’s, Dorchester, and Somerset Counties. This plundering activity continued well into 1783, long after Lord Cornwallis’s surrender at Yorktown.

To counter these activities, the Maryland leadership had to rebuild the state’s naval forces. In the autumn of

1780 the General Assembly enacted the Bay Defence Act, and the state began gradually to build a series of barges for shoal water operations. This pace was too deliberate for those on the lower Eastern Shore, and privately built barges with crews of approximately twenty-five men soon began operating in local defensive operations. Small squadrons commanded by local commodores such as Zedekiah Walley and Thomas Grason appeared in 1781. Since the British navy operated in the bay at this time, Grason found it difficult to recruit men for his four-barge squadron, but he boldly undertook to counter a five-barge Loyalist force in the Tangier Islands on 10 May 1781 and lost his life and flagship in the process.

French naval dominance of the bay in the late summer and fall of 1781 curtailed Loyalist operations. During this time the state mobilized every possible water craft to transport the Continental and French armies from the north end of the bay to the encampment near Yorktown. The Yorktown victory did not end the Loyalist-Patriot struggle in the central Chesapeake Bay; instead, it seems to have intensified in 1782. A Virginia Loyalist named James Kidd, with seven barges and a galley, engaged Commodore Walley’s Maryland squadron near Tangier Island. The subsequent Battle of the Barges or of Crager’s Strait on 30 November 1782 was the bloodiest naval engagement of the Revolution in Maryland. The Loyalists drove off the Americans, killed Commodore Walley, and captured his flagship. The victory emboldened the Loyalists for months thereafter. The state’s final naval activity of the war was a successful raid by army Captain John Lynn against a Loyalist base on Devil’s Island (later Deal’s Island) on 21 March 1783.

CONTINENTAL ARMY UNITS

The regular Maryland troops of the December 1775 convention became part of the Continental army in the summer of 1776 as the 1st and 2nd Maryland Regiments. They participated in the defense of New York City, New Jersey, and Philadelphia during the 1776–1777 campaigns. In 1777 the 3rd, 5th, and 7th Maryland Regiments joined the Continental army, and along with the 1st Regiment became part of the 1st Maryland Brigade. The 4th and 6th Maryland Regiments became part of the 2nd Maryland Brigade along with the 2nd Regiment. Collectively known as the Maryland Line, these brigades fought in the 1777 and 1778 campaigns in New Jersey and Pennsylvania and remained part of the main army until the spring of 1780, when they were reassigned to the Southern Department and served in the Carolinas for the remainder of the war. All the Maryland regiments were reorganized in 1779 to consist of nine companies. William Smallwood eventually became a major general in the Continental army and commanded the Marylanders for most of the war.

Recruitment remained a constant problem as losses to battle, disease, accident, and desertion depleted the ranks. For instance, in the winter of 1777–1778, the Maryland and Delaware brigades stayed in Wilmington, Delaware, where they recruited replacements. Losses in the Southern Campaign, especially after the Battle of Camden, forced General Nathanael Greene to refill the 1st and 2nd Regiments from a provisional brigade created from the remnants of the Maryland and Delaware Lines. He disbanded the 6th and 7th Regiments. The 3rd, 4th, and 5th Regiments returned as cadre units to Maryland and recruited slowly. Eventually, they returned to the Southern Department—the 5th in February 1781, the 3rd in August, and the 4th in September. The latter two participated in the Yorktown siege. Another recruitment effort came during the winter of 1781–1782 and included bounties that the state hoped would entice enlistments and which in fact secured 308 new men. The battle honors of these seven regiments are now perpetuated in the 175th Infantry of the Maryland National Guard.

LOYALIST UNITS

From 1775 to the end of the war, Maryland's mobilization efforts also included a number of Loyalist units, mostly from the Eastern Shore. During the British occupation of Philadelphia, General Howe commissioned James Chalmers lieutenant colonel of the Maryland Loyalist Battalion. It recruited over three hundred men for a unit that participated in the 1778 New Jersey campaign and spent most of the war in Pensacola, Florida. More than half its men were lost to disease, death, and desertion, and the Spanish captured its remnants at Pensacola in 1781. Only fifty survivors received grants in New Brunswick, Canada, after the war was over.

By far the largest number of Loyalists fought in irregular militia and naval units in the wetlands and islands of the Eastern Shore, where they cooperated with Loyalists from southern Delaware and Virginia's Eastern Shore to harass the Revolutionaries and to support British forces in the area. Attempts to eradicate them by both Continental army and Maryland militia forces never completely achieved their goal, and the Loyalists continued their hit-and-run tactics until 1783.

THE YORKTOWN CAMPAIGN

Continental army Brigadier General Mordecai Gist was in Baltimore when word was received that the Continental and French armies were coming to the Chesapeake. Gist immediately organized the owners and captains of vessels in the harbor to go to the Head of Elk to carry arriving units, ordnance, and supplies for movement to Yorktown. Soon more vessels sailed northward to engage in a massive transportation effort. Governor Thomas Sim Lee ordered

a mobilization of militia units from across the Western Shore to march to Annapolis and Baltimore and assist in the effort. John Calhoun and Henry Hollingsworth, commissary generals of the Western and Eastern Shores respectively, worked under great stress to provide foodstuffs, supplies, and forage for the allied armies. After delivering the initial shipments to Yorktown, Maryland vessels returned to Georgetown, Annapolis, Baltimore, Head of Elk, and Eastern Shore ports for new cargoes for the allied forces. Gist found that the prospect of victory encouraged enlistments in the Maryland Line, which he took to Yorktown. George Washington later wrote that the supplies provided by the state were "so liberal, that they remove every apprehension of Want."

The war severely damaged Maryland's tobacco-centered economy, but it stimulated a variety of industrial activities, including the production of guns and gunpowder, iron, blankets and other textiles, shoes, saddles, and harnesses and the agricultural production of cereal grains and livestock. Rural Frederick County also found itself providing guards and food for the thousands of prisoners of war that were brought there following victories from Trenton to Yorktown. In Baltimore, water-powered enterprises dyed and carded wool; made linen, paper, and hardware; and ground flour. Baltimore shipyards build the continental cruisers *Hornet*, *Wasp*, and *Virginia*, plus a host of privateers. Like the rest of the fledgling Republic, the state found inflation eroding the financial situation of many of its citizens. The financial cost of the war created considerable stress in state politics from the late 1770s until the ratification of the Constitution in 1789.

SUMMARY

Because it was never invaded, Maryland's mobilization effort primarily consisted of providing a manpower base for important elements of the Continental army, the Continental navy, and privateer naval forces. Its militia served to keep Loyalism to a minimum except in the lower Eastern Shore, and its agricultural and industrial output made important contributions to the war effort. While its Loyalist battalion served the British army well, it was the partisan bands of Loyalists on the Eastern Shore that proved a pacification problem throughout the war.

MARYLAND LINE. The Maryland Line, despite its significant combat performances from Long Island in 1776 through the southern campaigns of Horatio Gates and Nathanael Greene, is one of the least understood of the state lines in the Revolutionary War. It started on 1 January 1776 as full-time state troops authorized by the Maryland Convention—a single regiment plus seven independent infantry companies (there were also two artillery companies). The Continental rifle companies raised in 1775 were organized under the supervision of the Frederick County Committee of Safety, not the Convention. In the summer of 1776 the Congress created two Extra Continental Regiments—the Maryland and Virginia Rifle Regiment and the German Battalion—and Maryland furnished half of each of these. The riflemen, the German Battalion, and the artillery companies furnished by Maryland to the war effort were not formally a part of the Maryland Line. The state also agreed to send four volunteer militia battalions to the Flying Camp (a flying camp was a unit specifically intended to operate swiftly in response to a threat; it was the era's equivalent of today's "mobile strike force").

The Maryland Line in the Continental army appeared on 17 August 1776, when Congress assigned a quota of two infantry regiments to Maryland and the state troops changed their status without creating a second command and staff element for the independent companies. The expanded quota assigned for 1777 called for eight regiments. Careful groundwork by a visiting committee on 10 December 1776 assigned the officers who were in charge of raising the companies called for by the quota. The old regiment reenlisted as the First Maryland Regiment and the independent companies as the Second; the Third through Seventh Regiments were built around the rest of the veterans of the 1776 campaign. The cadre for the Third Regiment came from some of the regulars, but the others drew from the four flying camp battalions. Maryland refused to form an eighth regiment, arguing that its contributions to the two extra Continental Regiments counted as a whole additional regiment. This issue remained a bone of contention until 1781.

The Maryland Line served as a two-brigade division (with one outside regiment filling the hole left by the "missing" Eighth) and marched south to reinforce Charleston in 1780 with the Delaware Regiment. The division did not arrive before the city fell, but formed the heart of the replacement southern army of Major General Horatio Gates. On 15 July 1780 at Deep River, North Carolina, Major General Johann De Kalb issued division orders that temporarily reorganized the division for better combat efficiency into a single brigade of four full battalions, and sent the surplus officers home to recruit, planning to resume the official configuration when the replacements arrived. The First

and Seventh Regiments formed the First Battalion, led by Lieutenant Colonel Peter Adams. The Second Maryland and the Delaware Regiment formed the Second Battalion, under Lieutenant Colonel Benjamin Ford. The Third and Fifth Regiments formed the Third Battalion, under Colonel John Gunby. The Fourth and Sixth Regiments formed the Fourth Battalion under Colonel Williams.

At Camden the brigade fought brilliantly, but suffered heavy losses. This led to a second provisional reorganization at Hillsboro, North Carolina, on 3 September 1780. The survivors now formed a single, full-strength regiment commanded by Colonel Otho Holland Williams and deploying as two four-company battalions plus a light company. Officially the Maryland Line dropped to five regiments on 1 January 1781, but in reality the two battalions were reconstituted as the First and Second Maryland Regiments, which fought under Major General Nathaniel Greene. When replacements arrived in February 1781, these troops were used to nominally reconstitute the Fifth Regiment. In practice they formed a company that served in combat as attachments to the First and Second Regiments. The Third and Fourth Regiments reorganized later in the year in Maryland, and served in the Yorktown campaign before heading south. In 1782 and 1783, as the British evacuated the south, Greene sent the Marylanders home in stages, with the last of the Line disbanding on 15 November 1783.

MASON, GEORGE. (1725–1792). American statesman, constitutionalist. Virginia. Born in Stafford County, Virginia, in 1725, George Mason was the son of a wealthy planter. He became well known as the master of Gunston Hall, built on the Potomac River below Alexandria between 1755 and 1758, which was accounted one of the finest buildings in colonial Virginia. For several reasons, his important role in the years preceding the Revolution were played off stage: he valued his privacy, suffered from chronic ill health, his wife died early in 1773, and he had nine children. He sat in the House of Burgesses from 1758 to 1761, served as Treasurer of Ohio County in 1752, and came to know every powerful man in the Chesapeake region over the ensuing twenty years.

In 1769 he drafted the nonimportation agreement introduced in the assembly by his friend and neighbor, George Washington. He did likewise with the Fairfax resolves of 18 July 1774. In July 1775 he succeeded Washington in the Virginia convention. He was immediately elected to the Committee of Safety that took over the powers vacated by John Murray Dunmore. As a member of the May 1776 convention, he framed the Virginia Bill of Rights and Constitution. This piece of writing had wide influence: Thomas Jefferson drew on it in drafting the first part of the Declaration of Independence; it was copied by many states; it was the basis for the first ten amendments to the U.S. Constitution; and it even had influence in the French Revolution. Mason's state constitution was also a remarkably successful pioneering effort. He was involved with the revision of state laws and with disestablishment. He was on the committee that authorized the Western operations of George Rogers Clark, and he received Clark's full report.

A believer in states' rights, Mason was one of three of the forty-two delegates to the Constitutional Convention of 1787 in Philadelphia who refused to sign the final draft. (The others were Gerry and Edmund Randolph.) His views were expressed in "Objections to This Constitution of Government," which was widely read and influenced the structure of other anti-federalist writings. He attended the Virginia ratifying convention, where he and Patrick Henry almost succeeded in defeating the Constitution. Mason never reconciled to the new form of government, even after the passage of the Bill of Rights. He died at Gunston Hall on 7 October 1792.

MASONRY IN AMERICA. Early in the seventeenth century, a society of London stone workers started admitting honorary members as “accepted masons” and initiating them into their secret signs and legendary history. By the early 1730s, lodges affiliated with the grand lodge of London had formed in the colonies. The Philadelphia lodge lasted only five years but was revived in 1749 by Benjamin Franklin. In Boston, the original lodge flourished and another was organized in 1756. They included such men as James Otis, Joseph Warren, and Paul Revere, part of a self-selected group based on shared values rather than on wealth or prestige. Men became Masons for a variety of reasons, “including status enhancement, social mobility, camaraderie, civic-mindedness, the satisfaction of mastering a ritual, or curiosity about the occult” (York). Their belief in the brotherhood of man happened to coincide with the spirit of the American Revolution. Many prominent Revolutionaries therefore happened to be Masons, and the secret nature of their meetings lent itself to radical politics. Washington was initiated in Fredericksburg, Virginia, in 1752, took the oath of office as president of the United States on his Masonic bible, and used a Masonic trowel to lay the cornerstone of the Capitol building.

The historian Neil L. York has stated: “It is doubtful whether Freemasons *qua* Freemasons played a significant role in the American Revolution, even as their members joined the Revolutionary movement or stayed loyal to Britain. Masonry as an institution did not figure in the eventual revolt; even so, the ideas and values of Masons may have played a role, along with other beliefs that historians have traditionally linked to the Revolutionary cause.”

MASSACHUSETTS, MOBILIZATION IN. When Britain forced France to concede its colonies in North America in 1763, Americans were jubilant

and proud. While basking in victory, Britain determined to reduce its war debt and to rationalize its expanded colonial holdings. By 1775, Americans’ political views had shifted diametrically from taking pride in the British empire to making war against Britain as a result of the headlong conflict between British policies and the colonial experience of political and economic autonomy.

POLITICIZATION

British decisions to limit settlement in the Ohio Valley (Proclamation Line, 1763) frustrated land-hungry colonists. The Sugar Act (1764) and the Stamp Tax (1765) struck at the pocketbooks of colonists across the board. The Sons of Liberty organized to promote street protests that prevented the Stamp Act from going into effect. Parliament repealed the Stamp Act in 1766, but simultaneously claimed its right to “make laws and statutes of sufficient force and validity to bind the colonies and people of America, in all cases whatsoever” (Declaratory Act). They followed up with a series of new taxes on imported goods (Townsend Revenue Act), and attitudes both in America and Britain hardened over who would control colonial policy. What seemed reasonable to Parliament was perceived by Americans as an assault on their traditional constitutional rights.

Massachusetts leaders like Samuel Adams and James Otis turned the new British policies into public debates. In response to British-imposed taxes, women joined men in boycotting British goods. Radical polemicists inundated Massachusetts with political broadsides and pamphlets that drew increasing numbers of ordinary citizens into imperial politics. However, many Americans were reluctant to side with radical critics of Britain. Some Massachusetts merchants with ties to London, office holders, royal appointees, and others with an affinity for Britain, felt that the economic and political interests of the colonies were best served by remaining within the empire. Others, like Massachusetts-born Governor Thomas Hutchinson and stamp distributor Andrew Oliver, considered the rebellious faction as “rabble” who threatened social stability.

British authorities responded to the harassment of royal officials by stationing troops in Boston in 1768, and tensions between Bostonians and British troops flared sporadically into violence (Boston Massacre, 1770). In 1772, Boston political radicals (Whigs) led by Samuel Adams formed the first Committee of Correspondence after a dispute over control of judges’ salaries. Their litany of complaints addressed royal tax policies, tax collectors, the quartering of troops, judicial jurisdictions, the independence of colonial assemblies, restrictions of colonial manufacturers, and a controversial British proposal for an American episcopate. New Englanders saw expansion of

the Church of England as a direct attack on their congregations. The Committee of Correspondence framed its campaign as a defense of their traditional rights as Englishmen to stimulate popular political debate. Local committees quickly dominated local governance and put pressure on Loyalist sympathizers (Tories). Still, many Americans remained reluctant to disavow Loyalty to the crown, blaming Parliament or other political officials for the ills that had befallen the colonies.

When Parliament passed the Tea Act (1773) granting exclusive distribution to the failing East India Company, public protest ignited, culminating in the destruction at Boston harbor of British-owned tea (Boston Tea Party, 1773). Outraged British authorities determined to punish the people of Massachusetts and the port of Boston with the passage of the Intolerable (Coercive) Acts in 1774. Key provisions of the Intolerable Acts closed the port and suspended local government. Massachusetts activists were poised to respond. They met across the state in county conventions and vowed to defend their liberties and to prepare for armed resistance, if necessary.

In August 1774, royal Governor General Thomas Gage learned that county conventions were meeting to challenge his administration of British policy. Berkshire County was first, but nearly every county quickly followed, to discuss how to respond to what they saw as a royal *coup d'état*. After the Worcester County convention in September 1774, 6,000 militiamen assembled on Worcester common to prevent royally appointed judges from opening the courts. Additionally, the Worcester convention voted a series of resolves that rounded out its "revolution" by taking control of the militia. All militia officers with royal appointments were ordered to publicly resign, and the towns were ordered to select new officers. General Gage wrote Lord Dartmouth (William Legge) in London that "the Flames of sedition had spread universally throughout the Country beyond Conception."

The county resolutions demonstrate a convergence of thought rather than simply a top-down inculcation of revolutionary discourse. Popular political activism conjoined with continuous missteps by the British imperial government to produce a cautious consensus among the people of Massachusetts, expressed as concern with "the dangerous and alarming situation of public affairs," and they determined to adopt a course that would "promote the true interest of his majesty, and the peace, welfare, and prosperity of the province." The Massachusetts Provincial Congress continued to meet, despite being banned, and ordered that tax collections be withheld from the royal collector, Harrison Gray. Having taken control of local government, the militia, and tax revenue, Massachusetts colonists decided to arm themselves.

In October 1774, the Provincial Congress drew up a shopping list for some £20,000 of arms, including 5,000 muskets and bayonets, five tons of lead musket-balls, some twenty field pieces, and thirty tons of shot. "Apprehensive of the most fatal consequences" resulting from Britain's warlike preparations, subversions of constitutional rights, and endangerment of "lives, liberties, and properties," the Congress resolved that there ought to be a provincial Committee of Safety responsible for monitoring threats and mustering the militia in defense of the province. New militia officers filled the spots vacated by discredited Loyalists.

Additionally, the Massachusetts Provincial Congress ordered the formation of armed companies comprising "fifty privates who shall equip and hold themselves in readiness, on the shortest notice from the said committee of safety, to march." These "minutemen" were to be rapid response teams, ready to defend against any British incursions into the countryside. While riding through Massachusetts, Ezra Stiles noted that "at every house Women & Children [were] making Cartridges, running Bullets, making Wallets, baking Biscuit, crying and bemoaning, and at the same time animating their Husbands and Sons to fight for their Liberties" (Stiles, 1901, p. 180).

The Bostonians in Distress. This mezzotint, attributed to Philip Dawe and published in London in 1774, depicts the plight of Boston residents after the passage of the Intolerable Acts. Bostonians are shown in a cage suspended from the liberty tree, which is surrounded by British cannons, soldiers, and warships. The men feeding the encaged Bostonians represent colonists who sent supplies to the city during the crisis. NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

THE MILITIA TRADITION

Once a decision was reached to arm its citizens, Massachusetts set out to reinvigorate its militia, which, John Adams wrote, was one of the cornerstones of colonial society. In the seventeenth century the New England militia was a ubiquitous institution that obligated every free, white, adult male from sixteen to sixty, with few exceptions, to serve in defense of his local community. In the eighteenth century, local militias were not, for the most part, a significant fighting force, and they served primarily as a manpower pool for military service in the eighteenth-century British-French imperial wars.

According to the militia tradition, independent-minded colonial recruits enlisted for a fixed time with set pay rates, specified rations, and strict geographic limits. Expedition service was a voluntary contract, while local militia duty was a civic obligation. The French-Indian War (1756–1763) was an important training ground for the generation of American colonists who fought in the Revolution. American governments and merchants had gained experience in meeting the logistical demands of armies. Most importantly, the imperial expeditionary

experience provided a traditional model for meeting emergencies and staffing long-term expeditionary forces.

THE REVOLUTION, EARLY STAGES

When tensions between the royal governor and the people of Massachusetts erupted in open hostilities at Lexington and Concord on 19 April 1775, thousands of Massachusetts militia surrounded the British garrison in Boston. Local militias immediately swept through their locales to neutralize potentially dangerous Loyalists. However, no sooner had the Americans caged up a powerful British army in Boston than the minutemen citizen-soldiers began to return to their farms and spring planting, leaving provincial commanders without enough troops to fortify their lines. The minute companies were only provisioned for fourteen days and were not prepared for a long siege. This first exodus of troops exemplifies a pattern of the ebb and flow of manpower into and out of the American armies that characterized mobilization throughout the eight-year war.

Massachusetts quickly called for an army of 30,000 to maintain the siege at Boston. Enlistments were to last for eight months, on the model of the earlier colonial expeditionary forces. Recruiting efforts were slow, not because of a lack of enthusiasm, but because of the prevailing belief in volunteerism, in limited contractual obligations, and in short-term service. Racial attitudes also slowed enlistment. In May 1775, the Committee of Safety in Massachusetts ordered that “no slaves be admitted into this army upon any consideration whatever,” despite the presence of a number of African Americans already serving in militia companies.

In June 1775, the Continental Congress agreed to nationalize the military effort and take responsibility for the Massachusetts army, selecting Virginian Colonel George Washington as commander in chief. The army of 15,000 soldiers that Washington inherited upon his arrival in Massachusetts was an amateur enterprise by every measure except magnitude. The American army was short of everything but manpower, and its most critical shortage was of arms and ammunition. Enough Massachusetts citizen-soldiers had turned out to deter a major counteroffensive by the British. However, the first year of the war caught Americans in the contradiction of committing themselves more deeply to a full-scale war, while maintaining that they were only fighting for the restoration of their rights as Englishmen.

When the opening hostilities did not produce reconciliation with Britain, American leaders had to prepare for a long-term struggle. In the fall of 1775, Congress approved a plan for a “Continental Army” that would constitute a stable and truly national military. The decision was made to recruit men for one year of duty, a compromise between Washington’s desire for professional

troops and public resistance to a standing army. Year-round soldiering was not part of traditional colonial military experience, and long enlistments hindered recruiting. American mobilization survived the rotation of troops because local militia companies turned out to fill the gaps while regiments were being reformed.

The first year of the Revolution provided a stark contrast between citizen-soldiers and professional European troops, as raw American recruits had to learn military skills and regulations in the field. This accounts in part for the unpredictable performance of American troops, but over time, as soldiers rotated in and out of service, the pool of experienced manpower grew. General Washington celebrated the survival of the colonial army at the end of its first year: "To maintain a post within musket shot of the Enemy for six months together, without powder, and at the same time to disband one Army and recruit another within that distance of twenty odd British regiments is more than probably ever was attempted" (Fitzpatrick, vol. 4, 1970, p. 208).

In the second year of fighting, the war was transformed from a fight to preserve the traditional rights of Englishmen to a war for political independence from Britain, and Massachusetts mobilization developed the procedures it would employ for the rest of the war. Mobilization began with Continental Congress requisitions to the state for troops and materials. State officials divided the quotas for recruits according to county populations, and then spread the quota among the towns, where the ultimate responsibility fell for maintaining the stream of recruits. Town records show improvised and modified incentives for each call for troops, as wary Yankees negotiated the best possible contract for their military services. Towns tailored their contracts to the changing marketplace for manpower, offering the most for longer term Continental enlistments and less for short-term militia calls. The bounties were reduced for service in New England and increased for out-of-state postings.

RECRUITMENT, ENLISTMENT, AND THE DRAFT

When sufficient recruits were not forthcoming, Massachusetts employed drafts, but in the Revolution a draft had a different meaning than it does in modern America. The modern draft brings the full power of the federal government to bear directly upon individuals, whereas recruiting in the Revolution left it to the towns to best determine how to raise troops. There was considerable room for negotiation in the context of local government. Not everyone was expected to serve personally, but everyone had a civic obligation to help the town meet its quotas.

The first "draft" in Massachusetts took place on 11 July 1776, the last in March 1782. Towns divided the

taxpayer list or the militia roll into "classes" or small groups of from eight or ten up to twenty individuals. Each "class" would then be responsible for producing one enlistee. Individuals in the class often pooled their resources to sweeten the official state or national bounties to entice a recruit. Failure to comply invited penalties that included fines, but in Massachusetts, social pressure was more important and effective than any coercive power, because the drafts were conducted by local officials dealing with their neighbors. In fact, social pressure was the only really effective leverage available, because fines were not easily collected. General Charles Lee once said that Americans would only fight if they wanted to; they could not be forcibly marched off to war.

The absence of coercive power to enforce conscription meant that the transitions of army personnel were unnerving to the officers who contended with a professional British opponent. Each year, after negotiations, Massachusetts men turned out to fill the ranks, but people generally felt that the military obligation ought to be widely shared among all of the able-bodied men. Despite a degree of uncertainty, the continued flow of recruits demonstrates that the recruiting processes, though decentralized and market-based, remained reasonably effective. Civil authorities in Massachusetts towns maintained sufficient credibility and popular support to sustain the flow of men and materials to the army. When recruiting was slow, the militia could be called to fill the shortfalls that typically occurred during the winter months, when regular enlistments expired and new recruits were forming replacement regiments.

In the second year of fighting, Washington pressed for longer enlistments to build a professional army capable of standing up to the British regulars. However, Americans were suspicious of establishing a professional army. They worried about the expense of a standing army, and popular republican rhetoric touted the superiority of the American citizen-soldier over European mercenaries. Despite these reservations, in late 1776 Congress called for a new establishment of eighty-eight battalions (regiments) to serve for three years or "during the war." The task remained to win over the sentiments of potential recruits. In the early months of 1777, the American army sent many junior officers like Lieutenant Henry Sewall to their home towns across Massachusetts to enroll recruits for the new three-year terms in the Continental army. In support of Congress, the Massachusetts General Court issued a resolve "demanding 1/7 part of the Militia to engage for 3 Years in the Continental Service." This call for troops was read in meeting houses across the state, but young men accustomed to the militia tradition of short term engagements were leery of the new call for multi-year tours of duty. To meet the new quotas, many towns

ordered a draft. The minutes of a town meeting in Northampton in April 1777 illustrate the process:

The Town then voted that the Officers of the several Companies of the Militia within this Town should be directed to ascertain the number of men that are still wanting in their respective companies and [divide] them in so many classes as there are men wanting . . . and enjoin it upon each of those Classes to procure one good effective man to engage in the Continental Service. (Holbrook, microfiche 138, nos. 24, 72)

Draftees would be paid the thirty pounds bounty by the town committee.

Even as Washington slowly built a national army, the Massachusetts militia continued to play a critical role. The British surrender at Saratoga in 1777 was arguably one of the war's most pivotal moments, and it was accomplished by an American army reinforced by a large number of militia from Massachusetts. In addition to vigorous militia recruiting, Massachusetts mobilization produced robust levels of recruits for the Continental lines and state regiments. Throughout a steady barrage of calls for recruits and materials in 1777, Massachusetts produced increasing numbers of troops serving for longer terms than before, and the cumulative effect of that upswing carried forward into subsequent years.

THE REVOLUTION, LATER YEARS

In 1778 and 1779 Massachusetts mobilization produced recruits in an uneven stream to the Continental Army, while simultaneously providing state militia to the Rhode Island campaign and the Penobscot Expedition. Meeting the quotas of 1778–1779 required almost continual recruiting in Massachusetts. Requisitions came at a rate of two, three, or four per month, and Massachusetts towns faced increasing difficulty meeting their quotas as the pool of men who had not already served grew ever smaller. Participation rates gradually diminished as the main British threats moved southward in 1779, and the main theaters of operation became more remote from Massachusetts.

The ongoing calls for troops were matched by continuous calls for shoes, blankets, beef, and all manner of things that are the lifeline of an army in the field. Massachusetts found it increasingly difficult to meet the calls for supplies as the wartime economy deteriorated. In Plymouth and Salem, the fishing and merchant vessels lay perishing at the wharves, according to observers, and the men went off to the army or aboard privateers, leaving the local economy and their families in dire straits. Nonetheless, Massachusetts towns repeatedly agreed to fulfill requisitions for the army and to subsidize soldiers' families at home.

During 1780s about half of the Massachusetts soldiers that had been mobilized were serving on active duty with the Continental Army in New York, the remainder in New England. They engaged in constant, small-scale fighting along the coast from New Jersey to Maine. In response to a Congressional request, Massachusetts called for 4,240 recruits to fill Continental vacancies in December 1780. This act authorized towns to classify their inhabitants and increased fines for shortages to £128 per man. The turnout was slow, but steady. Even after the American victory at Yorktown, the British still had two large armies in the field, at New York and in the South, and troop requisitions continued. Massachusetts was called to provide 1,500 Continental recruits on 1 March 1782. Bounties were increased, but deflation exacerbated a difficult situation. Active-duty pay had become nearly worthless. Depreciation so reduced the value of the currency that the town of Beverly offered a recruiting bounty consisting of a hundred pounds of beef, coffee, and sugar, ten bushels of corn, and fifty pounds of cotton.

SOCIAL AND ECONOMIC FACTORS

In the final analysis, the decentralized character of patriot organization was less efficient than the imperial bureaucracy, but the effectiveness of the Massachusetts mobilization lay in the fact that decisions to support the war were ultimately made locally. Younger men took the brunt of service in later years, as families adjusted to the necessity of long term service. Recruits who lived in regions with the worst economic disruption, like Salem, turned to the Continental army to make a living. African Americans and Native Americans strengthened their claims to freedom and citizenship through military service.

Mobilization tapped young men seeking excitement, those with ambition, and others who were attracted by the incentives and promise of army pay during a period of economic disruption. Some rural debtors saw the war as a chance to redistribute power in a legal system that seemed to privilege merchants and bankers. But the strength of the Massachusetts mobilization derived from the sense of Massachusetts soldiers that they had "Something more at Stake than fighting for six Pence per Day." Many were stirred by the rhetoric of liberty, which warned that they must fight or become "hewers of wood and drawers of water to British lords and bishops." Washington never assembled a professional army in parity with that of the British empire, but he was successful, nonetheless, and his success was due, in part, to the fact that Massachusetts primarily mobilized the sons of the Yankee farmers, seamen, and merchants who served as citizens, not as hired mercenaries. In a sense, the successes and shortcomings of the mobilization in Massachusetts amounted to an ongoing popular referendum on the war itself.

The Massachusetts mobilization tapped recruits from across the social spectrum of their communities. A large proportion of them had strong social and economic ties to their communities, through marriage, kinship, and economic stakes in their towns. There were complaints of inferior quality troops, like those voiced by General “Mad Anthony” Wayne, who remonstrated that one-third of his troops were “Negroes, Indians, and Children,” but empirical evidence indicates that most Massachusetts soldiers who mobilized were yeoman farmers or their sons. The patterns of enlistments among Massachusetts soldiers in Continental, state, and local militia suggest that the multi-tiered mobilization system of local militia, state regiments, and the Continental army was suited to Massachusetts. Soldiers served at different times in different units—local, state, or Continental—depending on circumstances in their own lives and in the fortunes of the war. Mobilization was most successful with limited-term enlistments, in the militia tradition, and with the wide distribution of the obligations of military service among the adult male population.

AFTER THE WAR

As the war wound down in 1783, the new United States set a precedent that would last until World War II, that is, as soon as the fighting was over, the army was dismantled. Besides the deep-rooted suspicion of standing armies, the economic demands of maintaining an army had become almost unbearable during the latter years of the war. As early as March 1780, Massachusetts General William Heath reported that the people in the western counties were overwrought by taxes and were calling conventions, reminiscent of those of 1774, to discuss how to attack the problem.

While the state’s war debt and currency policies were the underlying causes of irritation, western Massachusetts farmers felt that the burden fell disproportionately upon them. The discontinuance of wartime paper money meant taxes and debts had to be paid in sterling currency while prices were falling for farm commodities. However, the problem was exacerbated by the fact that farmers had benefited from high commodity prices during the war and had taken on imprudent levels of debt. Battles between farmers and tax collectors became common, and servicing debts during a period of deflation was nearly impossible. The first explosion came in February 1782, when a Hampshire County convention determined to close the county court in order to end foreclosure proceedings. Samuel Adams went out to Hampshire in the summer of 1782 in an unsuccessful attempt to quiet the protests. More than sixty Hampshire County soldiers turned out in June 1782, not on alarm to meet the British, but to defend the new state government against irate citizens, pitting veterans against veterans who felt

the government was not considering their interests. The protesters were dispersed, but the underlying problems were not resolved. Within a few years, Continental Army veteran Captain Daniel Shays came out of the hills to lead a larger insurrection of disgruntled farmers. This event so unsettled the Massachusetts elite that they joined the call for a constitutional convention in 1787.

MASSACHUSETTS CIRCULAR LETTER. 11 February 1768. To inform the other twelve colonies of the steps taken by the Massachusetts General Court to oppose the Townshend Revenue Act, this letter, drafted by James Otis and Samuel Adams, was approved on 11 February 1768 and sent to the speakers of the assemblies in the other British colonies in North America. It denounced the act as "taxation without representation," reasserted that Americans could never be represented in Parliament, attacked British moves to make colonial governors and judges independent of colonial assemblies, and invited proposals for concerted resistance.

Governor Francis Bernard dissolved the Massachusetts General Court on 4 March 1768 on the grounds that the circular letter was seditious. Before other colonial governors received a message from the earl of Hillsborough, (the new secretary of state for the American colonies), dated 21 April, asking them to prevent their assemblies from endorsing the letter, Virginia (14 April), New Jersey (6 May), and Connecticut (10 June) had already voted to support the Massachusetts position. After Hillsborough's letter arrived, eight more colonies joined in questioning the right of Parliament to levy taxes of any kind in the colonies. The New York assembly, the last to act, adopted in December a resolution urging the repeal of the Townshend Act.

Meanwhile, Adams, Otis, and Joseph Hawley led the majority in the Massachusetts House of Representatives that on 30 June 1768 voted ninety-two to seventeen against rescinding the letter. "The Massachusetts 92" became, like issue No. 45 of John Wilkes's *North Briton*, an emblem of resistance to tyrannical government. Governor Bernard dissolved the new General Court on 1 July. The seventeen "Rescinders" were publicly vilified and physically intimidated by the Sons of Liberty, and five lost their seats in the election of May 1769.

MASSACHUSETTS LINE. Massachusetts furnished more regiments to the Continental Army than any other state, and the story of its line is the most complex. Although the Provincial Congress was in the process of planning a "Constitutional Army" to keep watch over the royal forces in Boston in early 1775, the fighting at Lexington and Concord caught it by surprise. Minutemen and militia had already set up siege lines around the port by the time that the Committee of Safety began to take charge, on 21 April 1775. The Committee voted to enlist 8,000 of those men and organize them into regiments subject to approval when the Provincial Congress reassembled. Two months later, on 14 June, when the Continental Congress adopted the existing forces as the Continental army, the colony still was unable to give precise information on exactly what units existed and how many men they contained. As it turned out, they had created twenty-three infantry regiments and one of artillery. These carried the names of their colonels. Massachusetts also furnished Henry Knox's Artillery Regiment and the First Continental Artillery, neither of which were part of the Massachusetts Line.

On 1 January 1776 the reorganized and reenlisted infantrymen became Sixteen of the numbered Continental Regiments: 3d, 4th, 6th, 7th, 12th, 13th, 14th, 15th, 16th, 18th, 21st, 23d, 24th, 25th, 26th, and 27th. The 1777 quota established by the Continental Congress dropped to fifteen regiments, mostly by consolidating and reorganizing existing units. The old Twelfth and Fourteenth Regiments disbanded and four new units were formed, again drawing heavily on veterans. In marked contrast to the other states, the Massachusetts units did not take numbers until 1 August 1779, as the army attempted to sort out competing claims to seniority. The quota fell to ten regiments in 1781, to eight on 1 January 1783, and to four on 15 June of that year, when the men who had enlisted for the duration of the war were sent home on furlough. On 3 November 1783 the entire infantry contingent of the Continental Army dropped to the 500 Massachusetts men of Jackson's Continental Regiment in garrison at West Point. That unit went home on 20 June 1784.

Because Boston had been under British occupation when Massachusetts raised its forces in 1775 and 1776, its population had not been given the responsibility for forming any units. Individuals who had escaped from

the city served, but only as individuals. When the 1777 reorganization took place, the absence of existing Boston units meant that it was again omitted. But since the city was now free and had made substantial progress in its recovery, General George Washington remedied the omission by allocating three additional Continental Regiments to Massachusetts officers, with the expectation that they would concentrate their recruiting efforts in Boston. Henley's, Henry Jackson's and Lee's had trouble reaching full strength, forming only five, seven, and six companies respectively. They formed a provisional group which joined the main army in 1777, leaving recruiters behind. Late in October the provisional formation broke up and its troops were assigned to Jackson's and Lee's units, while the men still in Boston became Henley's. On 9 April 1779 Washington amalgamated the three units under Jackson. On 24 July 1780 the state adopted Jackson's unit and it joined the line as the Sixteenth Massachusetts Regiment.

MASSACHUSETTS PROVINCIAL CONGRESS.

1774. The Massachusetts Government Act of 20 May 1774 virtually annulled the Massachusetts Charter of 1692. It stripped the General Assembly (the lower house of the General Court) of its charter right to elect the Council (the upper house) and prescribed that, effective 1 August, members of the Council would be appointed by the king and hold office at his pleasure. In accordance with the king's orders, Major General Thomas Gage (the royal governor of Massachusetts as well as the British commander in chief in North America) moved the seat of the Massachusetts government to Salem, where on 17 June the Assembly met under protest against its removal from Boston. After locking the door to prevent Gage's order to dissolve the legislature from taking effect, the Assembly proposed that a congress of delegates from all the continental North American colonies be held at Philadelphia in early September 1774 to concert a collective response to these violations of self-government. The Assembly promptly elected five delegates to represent Massachusetts.

A few weeks later Gage appointed thirty-six members to the Governor's Council, the so-called mandamus councillors because they were appointed by a writ of mandamus. Eleven immediately declined to serve, and the others came under such public pressure that they were forced to take refuge in Boston. On 1 September, the same day he sent 250 soldiers to seize government gunpowder from the Cambridge powder house, Gage called for the Council and General Assembly to meet together in a General Court at Salem on 5 October. Dismayed by the enormous turnout of armed citizens who responded to his seizure of the powder, and unable in the subsequent days to find a means to quiet the province, Gage on 28 September withdrew the

summons because he realized that his fugitive councillors would not be permitted to attend. Opponents of the Government Act chose to assume that Gage had no right to cancel his call for the Assembly to meet, so a majority of towns around the colony elected delegates to that body, who were seated at Salem on the announced date, 5 October. Gage made it a point not to appear, and after two days the delegates adjourned to Concord, where on 11 October they organized themselves into a provincial congress and elected John Hancock as president of this extralegal body. The Provincial Congress thereafter operated as the government of all Massachusetts outside British-controlled Boston.

MATHEW, EDWARD. (1729–1805). British general. He entered the Coldstream Guards (Second Foot Guards) as an ensign in 1746 and in 1775 rose to colonel and aide-de-camp to George III. He went to North America as a brigadier general in 1776 and led a brigade of guards at Kips Bay on Manhattan on 15 September. At the taking of Fort Washington he led the two light infantry battalions that secured a foothold for Cornwallis's troops below Laurel Hill. He was promoted major general in America in 1778 and on the general establishment in 1779. In May of that year he made a dramatically successful raid on the Virginia coast with Admiral George Collier. In 1780 he led a brigade during Knyphausen's Springfield raid and commanded the turning movement across Vauxhall Bridge on 23 June. He returned to Britain later in the year and became

commander in chief in the West Indies in November. He rose to full general in 1797.

MATHEWS, GEORGE. (1739–1812). Continental officer, postwar governor of Georgia. Virginia and Georgia. Born in Augusta County, Virginia, George Mathews was the son of an Irish immigrant. He led a volunteer company against the Indians when he was twenty-two, and took part in the battle at Point Pleasant (in what is now West Virginia) on 10 October 1774. He became a lieutenant colonel of the Ninth Virginia Regiment on 4 March 1776, and was promoted to colonel on 10 February 1777. With this unit he fought at the Brandywine, and led the regiment in a deep penetration at Germantown, Pennsylvania, on 4 October 1777, where he and most of the Ninth Virginians were surrounded and captured. Mathews is said to have received nine bayonet wounds. After spending several months on a prison ship in New York Harbor, he was exchanged on 5 December 1781. On his release he joined Nathanael Greene's army in the south as a colonel in the Third Virginia Regiment led by Abraham Buford. He was breveted as a brigadier general on 30 September 1782.

By 1785 Mathews had moved his family to Georgia. He became a brigadier general of the militia, was elected governor in 1787, represented the state in Congress from 1789 to 1791, and again served as governor from 1793 to 1796. During the latter period he opposed the trans-Oconee adventures of Elijah Clarke and signed the notorious Yazoo Act, which authorized the sale of millions of acres of Georgia land to land speculating companies for ridiculously low prices. In 1798 President Adams nominated him as the first governor of the Mississippi Territory, but within a month his name was withdrawn because of dubious new land speculations and for suspected complicity in the Blount conspiracy, which sought to help British interests gain a foothold in Spanish-held territory in what is now Louisiana.

Mathews then became involved in highly questionable activities whose aim was to draw the then Spanish-held territories of east and west Florida into the United States. His technique was ahead of the times—he sought

first to stir up an insurrection of the English-speaking element, then to support these insurrectionists with recruits from Georgia, and finally to bring in “volunteers” from U.S. regular army units. Although the local military commander put a stop to that last part of the plan, the “insurgents” nonetheless rose up and, on 17 March 1812, they declared their independence of Spain. With the insurgents and Georgia volunteers, Mathews took formal possession of Fernandina on 18 March in the name of the United States, and by June was within sight of St. Augustine. Secretary of State James Monroe finally stepped in to repudiate Mathews and bring his adventure to a halt. Mathews was on his way to defend himself before the federal government when he died at Augusta, Georgia, in 1812.

Mark M. Boatner

MATSON'S FORD, PENNSYLVANIA.

11 December 1777. After Howe's sortie toward Whitemarsh from 5 to 8 December, Cornwallis was sent from Philadelphia with thirty-five hundred men and almost all the dragoons and mounted jägers to forage along the south bank of the Schuylkill. He left the night of 10–11 December—at 3 A.M., according to André. By coincidence, Washington started from Whitemarsh toward Valley Forge winter quarters on the 11th, and his leading elements clashed with the foragers at the Gulph, near Matson's Ford (modern West Conshohocken, Pennsylvania) just after crossing the Schuylkill. The

American vanguard withdrew, destroying its makeshift bridge of wagons and planks. The raiders returned to Philadelphia the evening of the 12th with two thousand sheep and cattle (Baurmeister, *Journals*, p. 139). Washington's army stayed on the north bank through the 13th, remained in the vicinity of the Gulph until the 19th, and then moved to Valley Forge.

MAWHOOD, CHARLES. (?–1780).

British officer. Cornet in the First Dragoons from 13 August 1752 and lieutenant from 8 November 1756, he became captain-lieutenant in the Fifteenth Light Dragoons on 20 March 1759, captain in the Eighteenth Light Dragoons on 6 December 1759, major in the Third Foot (Bufs) on 17 May 1763, and lieutenant of the Nineteenth Foot on 17 June 1767. On 26 October 1775 he became lieutenant colonel of the Seventeenth Foot, a unit that had been sent to America prior to August of that year (Fortescue, vol. 3, p. 173 n.). He led British forces at Princeton on 3 January 1777, Quinton's Bridge on 18 March 1778, and Hancock's Bridge on 21 March 1778. Having been appointed colonel of the Seventy-second Regiment (Manchester Volunteers) on 16 December 1777, he died on 29 August 1780, shortly after joining his regiment at Gibraltar.

MAXWELL, WILLIAM. (1733–1793).

Continental general. Ireland-New Jersey. Coming to America with his Scots-Irish parents around 1747, Maxwell received a very ordinary education as a farm boy

in what became Warren County. At the age of twenty-five, during the French and Indian War, he became an ensign in Colonel John Johnston's New Jersey Regiment and subsequently a lieutenant in the New Jersey Regiment of Colonel Peter Schuyler. On 8 July 1758 he and his fellow New Jersey Blues were ensconced in the rear guard of General James Abercromby's expeditionary force in its futile, bloody assault on Fort Ticonderoga.

Leaving the army in 1760, Maxwell entered British military service as a civilian post commissary and was stationed at frontier forts of New York and the Great Lakes area, ranging from Schenectady to Detroit. From 1766 to 1773 Maxwell dispensed provisions for two companies of the Royal (Sixtieth) American Regiment at Fort Michimackinac. Maxwell managed to hold his own among the rough-hewn, carefree troops at Michimackinac. When most of the Sixtieth was transferred to the West Indies, Maxwell returned to New Jersey to work his parents' farm. He soon became a leader in the Revolutionary movement.

"Scotch Willie" was a tall, ruddy-faced, stalwart man who spoke with a Scottish brogue. He was a member of the New Jersey Provincial Congresses of May and October 1775 and in August of that year became chairman of the Sussex county committee of safety. On 8 November he was commissioned colonel and raised the Second New Jersey Regiment. In February 1776 he marched north with five full companies and joined the American force invading Canada just as it began its retreat. He had charge of the rear guard of American troops as it skirmished with the enemy. Maxwell commanded his regiment in the disaster at Trois Rivières on 8 June and was one of those who, the next month, opposed abandonment of Crown Point. He complained to Congress when Arthur St. Clair was promoted ahead of him on 9 August. On 23 October he was appointed brigadier general. He returned to his home state about the time that the British turned to chase Washington's army across the Delaware. Maxwell had the assignment of clearing boats from the Delaware River so that the British could not use them. In command of four new regiments of New Jersey Continentals, on 21 December, Maxwell was sent by Washington to take charge of the militia at Morristown. A few days later, after the American success at Trenton, Maxwell got Washington's appeal for a diversionary effort against the British flank to speed the enemy's withdrawal from New Jersey, but he was not able to accomplish anything worthwhile.

Maxwell became the first commander of the light infantry corps, which was initially formed to oppose the advance of the enemy on Philadelphia. His troops bravely engaged the British van on 3 September 1777 at Cooch's Bridge (Iron Hill). At the Battle of Brandywine on 11 September 1777, Maxwell's light infantry harassed lead units of the British army as he and his men conducted a retrograde movement back across the Brandywine.

A principal critic of Maxwell at this time was one of the light infantrymen, Major William Heth, a veteran of Morgan's Rifles, who wrote his former commander on 2 October that since the enemy's landing at Head of Elk, "Maxwell's Corps 'twas expected would do great things—we had opportunities—and any body but an old-woman, would have availed themselves of them—He is to be sure—a Damnd bitch of a General."

At the Battle of Germantown on 4 October 1777, the New Jersey Continentals suffered heavy casualties as they unsuccessfully stormed the Benjamin Chew house. After this battle Maxwell stood a court-martial, charged generally with misconduct and excessive drinking. On 4 November he was given what the historian Douglas Freeman has called "something of a Scotch verdict" (Freeman, vol. 4, p. 535). He was not exonerated, but the charges were not proved. During the winter at Valley Forge, Maxwell's brigade comprised the First, Second, Third, and Fourth New Jersey Regiments.

On 7 May 1778 Maxwell was ordered to Mount Holly, New Jersey, as Washington coped with the complex strategic problems preceding the Monmouth campaign. Maxwell figured prominently in the maneuvers that followed and in the Battle of Monmouth on 28 June. He testified at Lee's court-martial that the accused was so out of touch with the tactical situation in the initial phase of the battle that he did not know on which wing Maxwell's brigade was located.

In July 1778 Maxwell guarded the New Jersey coast opposite Staten Island, and he continued with this mission until the next year, when he led his brigade in Sullivan's expedition against the Iroquois. He returned to New Jersey and opposed General Wilhelm Knyphausen's Springfield raid on 7 and 23 June 1780. For reasons unknown, but certainly relating to a cabal of New Jersey officers from the Elizabethtown area, Maxwell was pressured into resigning from the army in July 1780; upon reflection he tried to withdraw his resignation, but Congress accepted it. Maxwell was elected to the New Jersey assembly for one term in 1783. He took over the ownership and management of his parents' farm (just south of Phillipsburg, New Jersey; the farmhouse is extant). Maxwell never married. He died suddenly while visiting the farm of his neighbor, Colonel Charles Stewart.

Maxwell was one of Washington's most reliable generals. Although regarded as a bit of a comical character, he performed brilliantly whenever he was given command responsibility in the field.

MAXWELL'S LIGHT INFANTRY.

Having detached Colonel Daniel Morgan and his Corps of Rangers to the Northern Army to help defeat the white and native American skirmishers supporting Burgoyne's invasion, Washington on 28 August 1777 ordered the creation of a new formation to take its place. He directed that each of his seven brigades detach 9 officers and 108 enlisted men to form an elite corps of light infantry, and two days later placed this 800-man force under the command of Brigadier General William Maxwell of New Jersey. Washington ordered Maxwell to skirmish in front of Sir William Howe's army as it advanced from Head of Elk, Maryland, toward Philadelphia. On 2 September Washington sent Colonel Charles Armand's four-company partisan corps to join the light infantry and ordered Maxwell to?

Be prepared to give them [the British] as much trouble as you possibly can. You should keep small parties upon every road that you may be sure of the one they take, and always be careful to keep rather upon their left flank, because they cannot in that case cut you off from out main body (Washington, *Papers*, Vol. 11, pp. 127–128).

The light infantry men fought their first action at Cooch's Bridge, Pennsylvania, on 3 September 1777, but ran out of ammunition and, lacking bayonets, were forced to retreat by a British bayonet charge. They were part of Major General Benjamin Lincoln's division at the battle of Brandywine (11 September 1777), initially posted on the enemy side of Brandywine Creek, and then helped to defend Chadd's Ford. They covered the retreat of the main body of Washington's army, collecting stragglers and the wounded. The corps was disbanded on 25 September, and Maxwell resumed command of the New Jersey Brigade. Reconstituted by 28 September, although now with only 450 men, it was held in reserve during the battle of Germantown on 4 October 1777 and was permanently disbanded shortly thereafter. Maxwell was later acquitted by a court-martial of charges brought by a senior subordinate, Lieutenant Colonel William Heth of Virginia, that he had been drunk at Brandywine.

MCALLISTER, ARCHIBALD. (?–1781).

Continental officer. Maryland. A lieutenant in the Maryland battalion of the Flying Camp in July 1776, he became an ensign in the Second Maryland Continentals on 10 December, was promoted to second lieutenant of the First Maryland on 17 April 1777, and became first lieutenant on 27 May 1778. With Michael Rudolph, he was breveted captain on 24 September 1779 for their "military caution so happily combined with daring activity" at Paulus Hook, in the words of the congressional resolution. He died on 16 January 1781 (The name is also spelled McCallister).

MCCREA ATROCITY. Daughter of a New Jersey Presbyterian minister, Jane McCrea (also known as Jenny) lived with a brother who had settled along the Hudson River about halfway between Saratoga and Fort Edward. She was engaged to Lieutenant David Jones, a Loyalist with Burgoyne's invading army. When her brother moved to Albany in early 1777, McCrea went to Fort Edward with the hope of meeting her fiancé when the invaders arrived. She was taken in as a guest by the elderly Mrs. McNeil, a cousin of British General Simon Fraser. On 27 July 1777 a band of Burgoyne's Indians reached abandoned Fort Edward, two days ahead of the main body of the British army. Taking the two women, they started back to Fort Ann, where the army had its headquarters at the time. They arrived with Mrs. McNeil and a scalp that was promptly identified by Jones as that of his fiancée, Jane McCrea. The most generally accepted version of her death is that she had been shot, scalped, and stripped of her clothing after her drunken captors had gotten into an altercation as to which should be her guard.

Burgoyne was put in a difficult position. If he disciplined the murderer he risked losing his Indian allies; but doing nothing would be condoning the murder. Burgoyne chose to pardon the murderer and deliver a lecture to his allies on the need to show restraint in warfare. The lecture did not go over well, and most of the Indians left Burgoyne's camp.

General Horatio Gates wrote Burgoyne personally, holding him responsible for the murder. Burgoyne wrote back in a lame attempt to defend his pardoning of the murderer as "more efficacious than an execution to prevent similar mischiefs."

The Patriots skillfully exploited this atrocity to whip up popular indignation against the invaders. Ironically, the murder of this Loyalist woman became a very effective recruiting tool for the United States. Washington wrote militia officers throughout New England urging them to turn out to save their own wives and daughters from a fate similar to McCrea's. The story spread with remarkable rapidity. Newspapers in every state published it as a dire warning of the fate that faced all American women if the British won. The first fruit of this propaganda campaign came at Bennington, where an unexpectedly large and effective body of militia turned out and annihilated a detachment from Burgoyne's army. Militiamen continued to gather, and they proved a major factor in the ultimate defeat of Burgoyne. The story of Jenny McCrea's murder, as improved by American propagandists, played a large part in mustering this mushroom army.

MCCULLOCH'S LEAP. After bringing reinforcements to Wheeling on 1 September 1777, Major Samuel McCulloch (or McCulloch) was separated from his men and pursued by Indians. He later claimed to have escaped by riding his horse down an almost vertical, 150-foot precipice to the bank of Wheeling Creek and across the stream to safety. How much of this descent was free fall and how much of it was a perilous slide is uncertain. Although Benson J. Lossing speaks of a "momentous leap," he calls the cliff "almost perpendicular" and says the horse and rider "reached the foot of the bluff" and then "dashed through the creek," making good his escape.

MCDONALD, DONALD. A major in the British army at the outbreak of the Revolution, this elderly veteran of Culloden saw action at Bunker Hill before being appointed by General Gage to recruit Loyalists in North Carolina. Promoted to brigadier general of militia, he figured prominently in the Loyalist defeat at Moores Creek Bridge, 27 February 1776, was paroled and later exchanged in Philadelphia. Continuing to serve until the end of the Revolution, he died shortly thereafter in London. American accounts generally spell his name as given above, but he himself signed as MacDonald.

SEE ALSO *Moores Creek Bridge*.

revised by Michael Bellesiles

MCDONALD, FLORA. (1722–1790). Jacobite and Tory heroine. As a schoolgirl, Flora McDonald (her name is also often spelled MacDonald) helped Charles Edward Stuart (known in history as "Bonnie

Prince Charlie" and "the Young Pretender") escape to the Isle of Skye in June 1746, after the battle of Culloden. Captured, tried as a traitor to the British Crown, and imprisoned in the Tower of London, MacDonald was eventually released after the story of her exploit aroused national admiration. She even was presented in court, and when George II asked why she had helped an enemy of the kingdom she replied, "It was no more than I would have done for your majesty, had you been in like situation." This simple answer epitomized the "defense" that won her life and freedom.

Four years later, on 6 November 1750, Flora married Allan McDonald (a kinsman). In August 1774 she went with him and their children to join the colony of Highlanders that had settled in North Carolina. Here she did much to rally the Scots to the standard of Donald McDonald, who commanded Loyalist forces at the Battle of Moores Creek. Her husband, who had become a Tory brigadier general, was captured at Moores Creek Bridge on 27 February 1776 and sent to Halifax, Virginia. On his advice, Flora returned to Scotland in 1779, and he followed later. Two of their sons were lost with the French warship, the *Ville de Paris*, on 12 April 1782, when its commander, Francois Joseph Paul Grasse surrendered the ship. Flora is buried on the Isle of Skye.

MCDUGALL, ALEXANDER. (1732–1786). Continental general. Scotland and New York. Born at Islay, of the Inner Hebrides Islands, in 1732, McDougall came to America with his family at the age of six, and they settled in New York City. McDougall commanded two privateers during the Seven Years' War (1756–1763), the *Barrington* and *Tiger*. Having accumulated sufficient capital, he set up a store in New York City, became a successful merchant, and undertook to educate himself. With the Stamp Act of 1765, he emerged as one of the most prominent radical leaders in New York.

In 1769 he wrote under the pseudonym "A Son of Liberty" the popular pamphlet, "To the Betrayed Inhabitants of the City and Colony of New-York." The New York assembly declared this document libelous and ordered McDougall's arrest on 8 February 1770. Refusing to give bail, he was thrown into prison and became famous

as "the John Wilkes of America." (Wilkes was a newspaper publisher in England who was famous for his attacks on the king and the Parliament.) Imprisoned for 162 days, McDougall was never convicted of a crime, and the government finally had to release him. Organizing the opposition to the Tea Act, he presided over the "meeting in the Fields" on 6 July 1774 that proclaimed the people's willingness to resist the Coercive Acts of Parliament. In addition, he served in the provincial congress of 1774–1775.

With the outbreak of the Revolution, McDougall became actively involved in the New York City militia, becoming its commanding colonel. Commissioned colonel of the First New York Regiment on 30 June 1776, he was appointed brigadier general on 9 August, just before the start of the New York campaign. He took part in the battles of White Plains (28 October 1776) and Germantown (4 October 1777), but rendered his most important service in the Hudson Highlands, where he was the commanding general during much of the war. Having been appointed a Continental major general on 20 October 1777, he succeeded Benedict Arnold as commander at West Point in 1780. He represented New York in the Continental Congress of 1781–1782, declined appointment as minister of marines in 1781, was court-martialed in 1782 for insubordination to William Heath and reprimanded, and twice headed delegations of officers to discuss pay problems with Congress, in 1780 and 1782.

McDougall retired from the Continental army on 3 November 1783, as served as state senator (1783–1786) and in Congress (1784–1785). The man who had roused rabble in his youth grew conservative with age, becoming an ally of Alexander Hamilton and the first president of the Bank of New York. He died in New York City on 9 June 1786.

MCGOWN'S PASS, NEW YORK. McGown's Pass (also spelled McGowan's Pass) is a defile located at the northeast corner of modern Central Park, where the Post Road ran between two steep hills before winding down a steep grade to Harlem Plains. This terrain feature was one of British General William Howe's objectives after landing at Kips Bay on 15 September 1776.

William Smallwood's First Maryland Regiment, much reduced by losses suffered at the battle of Long Island, was posted in front of the pass that day to stall the British advance. The Marylanders had orders to fall back to the pass and ambush the British there. Instead, the Marylanders inadvertently deflected the British toward a column of Americans escaping up the west side of Manhattan. The pass was held by Lord Hugh Percy when the main British force moved toward White Plains. Here the traitor William Demont entered the British lines, and it was from this position that Percy started his attack on Fort Washington, on 16 November 1776.

MCINTOSH, JOHN. (1755–1826). Continental officer. Georgia. A nephew of Lachlan McIntosh and born in McIntosh County, Georgia, John McIntosh was an officer of the Georgia Line in 1775 and on 7 January 1776 became a captain in the First Georgia Regiment. On 1 April 1778 he was promoted to lieutenant colonel and commandant of the Third Georgia Regiment. In his *Historical Register of the Continental Army* (1893), the military historian Francis B. Heitman identifies McIntosh by the nickname “Come and take it,” a phrase included in his reply of 25 November 1778 to the demand of Colonel Lewis V. Fuser that McIntosh surrender Fort Morris (Georgia, near Sunbury) with the honors of war. He was not present at the British capture of Sunbury on 9 January 1779, but was taken prisoner at Briar Creek, 3 March 1779, and was exchanged in the fall of 1780 (possibly early September) for John Harris Cruger, who had been captured in June 1780. After returning from captivity, McIntosh served to the end of the war.

Moving to Florida after the war, McIntosh settled on St. Johns River. There he was suddenly arrested by Spanish troops and imprisoned at St. Augustine on suspicion of illegal activities against the government. He then was held for a year in Morro Castle, Havana. After his release, McIntosh is credited with further acts against the Spanish in Florida, including his participation in a successful attack on a fort near Jacksonville, on the shores of the St. John's River. Some historians also suggest that, during the last months of the War of 1812, he was a major general of militia at Mobile, Alabama, but this is not confirmed in Heitman's *Register*.

MCINTOSH, LACHLAN. (1725 or 1727–1806). Continental general. Scotland and Georgia. Born at Inverness, Scotland, Lachlan McIntosh came to Georgia with his parents in 1736, shortly after James Oglethorpe established that colony, and settled at the place later named Darien. Little is known of his life prior to 1775. One historian, Benson Lossing, suggests that his father was taken as a prisoner to St. Augustine when Lachlan was 13 years old. In 1748 Lachlan went to Charleston, South Carolina where he is said to have become a friend of Henry Laurens, a future signer of the Declaration of Independence. It is believed that McIntosh lived in Laurens's home, and that he became a clerk in Laurens's counting house. Lossing further suggests that, when he returned home from Charleston, he became a surveyor and “was considered the handsomest man in Georgia.”

In July 1775 McIntosh appeared in Savannah as a member of the Georgia Provincial Congress. On 7 January 1776 McIntosh became a colonel in a Georgia battalion that later was augmented and incorporated into the Continental army. On 16 September 1776 he was promoted to brigadier general. A pragmatist, McIntosh tried to defend Georgia from its many enemies with his few and ill-supplied troops. In March 1776 he organized the defense of Savannah from British naval vessels, with little support from citizens or civil authority. In August 1776 he raided northern East Florida, breaking up the Loyalist settlements north of St. Johns River, but had to pull back across the Altamaha River in October. Fort McIntosh, the southernmost rebel fort and named for him, surrendered to the British and was burned by them in February 1777. McIntosh's recommendation to Washington that a large force should defend Georgia went unheeded.

McIntosh also requested clarification regarding whether civil or Continental authority held control of the military. While the question went unanswered in the abstract, it was dramatically played out in Georgia.

Beginning in late 1776 and lasting throughout the war, the radical faction, which supported state control over the military, campaigned vigorously to discredit General McIntosh, in part by declaring that he and various family members were Tories. In late 1776 they accused his brother William of conniving with the enemy and forced him to resign his commission. Button Gwinnett, leader of the radical faction, became president of Georgia in March 1777, and arrested another McIntosh brother, George, on suspicion of treason. Neither McIntosh nor Gwinnett would relinquish authority during the subsequent military expedition to invade East Florida, which failed as a result. They fought a duel, and Gwinnett died of his wounds. The radical faction circulated a petition to have McIntosh removed from the state. Prior to any formal action by the assembly, McIntosh was ordered to report to General George Washington for reassignment.

In December 1777 McIntosh joined the army under Washington at Valley Forge and was placed in charge of the North Carolina Brigade. He then inspected military hospitals in Pennsylvania and New Jersey and in May 1778 was placed in command of the Western Department with headquarters at Fort Pitt (now Pittsburg). He established Fort McIntosh and Fort Laurens (both in Ohio), despite encountering factionalism and lack of cooperation. Back in Georgia by July 1779, McIntosh assumed command of both the Continental and militia forces in the state, and radicals launched a renewed effort to discredit him. His wife and children were trapped in Savannah as siege preparations began in September 1779 and his request that all women and children be allowed to leave the town was denied, first by the British and then by the French and rebels.

McIntosh led Benjamin Lincoln's march from Charleston to make contact with Admiral Charles Hector Theodat Estaing, urging the latter to attack promptly (which he did not do), and commanding the First and Fifth South Carolina Regiments, along with some Georgia militia, in the second echelon of the attack. During November 1779, George Walton requested that the Continental Congress remove McIntosh from command. In February 1780 Congress did so, and McIntosh was informed while he was serving in the defense of Charleston. He became a prisoner of war on 12 May 1780, when Lincoln surrendered Charleston. He was released during the summer of 1781 and went to Philadelphia, where the Continental Congress cleared him of all charges in July.

McIntosh returned to Georgia in 1783, "incredibly poor," as he put it. In February 1783 the Georgia assembly declared Walton's 1779 accusations against him to be unjust. This did not inhibit Walton's appointment as Chief Justice of the state, however. McIntosh's son, Captain William McIntosh, publicly horsewhipped Walton after his first session in court. McIntosh was

brevetted as a major general in 1784. He never recovered financially from the war and took little part in public life.

McKEAN, THOMAS. (1734–1817). Signer. Delaware and Pennsylvania. Born in Chester County, Pennsylvania, on 19 March 1734, Thomas McKean studied law with his cousin, David Finney, in Delaware, and set up a prosperous practice in Pennsylvania, Delaware, and New Jersey. Living mostly in Delaware until 1773, he served as deputy attorney-general in 1756, clerk of the assembly from 1757 to 1759, and in the assembly from 1762 to 1779. He was speaker of the assembly in both 1772 and 1779. In 1762 he helped Caesar Rodney revise the state assembly laws. Becoming increasingly outspoken against British rule, McKean was one of the more radical members of the Stamp Act Congress of 1765. As justice of the court of common pleas and quarter sessions, he ordered the use of unstamped paper. As speaker of the assembly he led the movement in December 1772 for a colonial congress.

McKean entered the first Continental Congress in 1774 as a delegate from Delaware. In the Second Continental Congress he advocated reconciliation with England until early 1776, then started working for independence, serving on the vital Secret Committee. Although still a member of the Delaware delegation, he was influential in swaying opinion in Pennsylvania toward independence. When his vote for the resolution for independence was tied with that of fellow delegate George Reed, McKean's initiative brought Caesar Rodney, the third Delaware representative, racing back to cast the decisive vote.

Exactly when he became a signer of the Declaration of Independence is uncertain. Returning to Delaware,

McKean led a battalion of Philadelphia Associators (a militia unit) to Perth Amboy to reinforce General George Washington's hard-pressed army on 2 August 1776. He then went to Dover, where he helped frame the first constitution of Delaware. Failing re-election to Congress—he did not sit during the period from December 1776 to January 1778—McKean became speaker of the Delaware Assembly. For two months of 1777 he was acting president of the state. During the period from 1777 to 1799 he also was chief justice of Pennsylvania, but he remained politically active in Delaware and was re-elected to Congress from that state.

On 10 July 1781 he was elected president of Congress, serving in Congress until 1783. In 1787 he sat in the Pennsylvania constitutional ratification convention, where he supported the Constitution. He drew many protests in Pennsylvania from those who felt he should not hold so many important and conflicting political jobs. In 1792 the Federalist foreign policy drove him to the other party, and in 1799 he was elected governor of Pennsylvania as a Jeffersonian. He served three tumultuous terms, being frequently accused of nepotism, constitutional violation, and other abuses of the office. McKean died in Philadelphia on 24 June 1817.

McKEE, ALEXANDER. (1735?–1799). Loyalist Indian agent. Born on the western Pennsylvania frontier, Alexander McKee was the son of fur trader Thomas McKee and a Shawnee mother. He served with British forces during the French and Indian War (1754–1763), acting as a scout during General John Forbes's expedition to the forks of the Ohio River and taking part in James Grant's ill-fated attack against Fort Duquesne in September 1758.

Resigning from the military in 1759, McKee remained at Fort Pitt to act as George Croghan's assistant at the garrison's Indian trading post. In 1766, Sir William Johnson, superintendent of the British Indian Department, named McKee to the post of Indian commissary for Fort Pitt and charged him with the responsibility of regulating the fur trade with tribes throughout the Ohio Valley. In 1769, he married a Shawnee woman living in western

Ohio. By the early 1770s his career had brought him land, wealth, and influence both among Native peoples and British officials.

After the beginning of the Revolution, McKee remained in Pittsburgh and discretely aided British interests within the region. Publicly, however, he disavowed his affiliation with the Crown in an attempt to protect his substantial economic assets in the Upper Ohio Valley and to provide a measure of personal protection in what was becoming an increasingly hostile environment. Threatened with arrest, assault, and death by area Patriots in March 1778, he joined Matthew Elliott, Simon Girty, and several others in fleeing Pittsburgh for British-held Detroit.

In June 1778, Henry Hamilton, the British lieutenant governor of Detroit, commissioned McKee as a captain in the British Indian Department. McKee spent the remainder of the conflict cementing the Crown's alliance with the region's Indian nations and participating in raids against Patriot settlements throughout the Ohio Valley. He accompanied Hamilton in an expedition against Vincennes in late 1778. In 1780 he led successful attacks against (Joseph) Martin's and (Isaac) Ruddell's Stations in Kentucky, and in 1781 participated in the defeat of Colonel William Crawford near Upper Sandusky. In 1782 he commanded an expedition against (William) Bryant's Station in Kentucky and defeated Kentucky irregulars at the Battle of Blue Licks. At the war's conclusion, he held a series of councils with the Ohio Country Indian nations, at which he convinced them to accept the terms of the 1783 Treaty of Paris.

Following the war, he remained active in the Indian Department. At the time of his death he held the position of deputy superintendent general and inspector for Indian affairs for Upper and Lower Canada.

McKINLY, JOHN. (1721–1796). President of Delaware. Ireland and Delaware. Born in Ireland on 24 February 1721, McKinly moved to Wilmington, Delaware, in the 1740s. He practiced medicine and was

active in local civil and militia affairs. He served as sheriff (1757–1759) and was twelve times elected chief Burgess of the borough of Wilmington, between 1759 and 1776. In October 1771 he was elected to the colonial assembly, two years later he became a member of the assembly's five-man standing Committee of Correspondence, and he had a part in the major events leading to his state's joining the Continental Association (28 November 1774). He served as chairman of the Committee of Vigilance, and was charged with the enforcement of that Committee's rulings.

In September 1775 he became president of the Delaware Council of Safety and brigadier general of the New Castle County militia. The following year he was elected speaker of the new House of Representatives. In February 1777 McKinly was chosen president and commander in chief of Delaware for a term of three years. When the British occupied Wilmington on the night of 12–13 September 1777, shortly after the battle of Brandywine (11 September), they took McKinly prisoner and evacuated him to Philadelphia after the capture of that city. When the British left Philadelphia, they took him to New York City, where he was paroled in August 1778. Having gone to Philadelphia to get agreement of the Continental Congress, he was exchanged for William Franklin, former Royal governor of New Jersey, and in September he was free to resume his medical practice in Wilmington. McKinly took no further part in public life, refusing his election to the Continental Congress in 1784. He died in Wilmington, Delaware, on 31 August 1796.

McLANE, ALLEN. (1746–1829). Continental Army officer. Delaware. McLane was born in Philadelphia, the son of Allan McLeane, a leather breeches maker who had come to America in 1738 from Scotland. In 1767–1769 young Allen traveled to Europe and visited cousins in Scotland. By 1770 he had settled at Smyrna, Delaware. In July 1775 he changed his name to McLane “to avoid confusion with that renegade Scot serving the Hanoverian King,” a reference to Allan MacLean, who had just reached Canada to recruit his Royal Highland Emigrants. His father died about this time, leaving Allan property worth more than fifteen thousand dollars.

After fighting as a volunteer at Great Bridge, Virginia, on 9 December 1775 and at Norfolk on 1 January 1776, McLane served with Washington's army in New York as lieutenant and adjutant of Caesar Rodney's militia regiment. At Long Island on 27 August 1776, he captured a British patrol. After fighting at White Plains on 28 October, he was with the rear guard in the retreat across New Jersey, took part in the attack on Trenton, and was promoted for gallantry at Princeton on 3 January 1777. He was promoted to captain in Colonel John Patton's Additional Continental Regiment in early 1777. After seeing action at Cooch's Bridge and the Brandywine on 3 and 11 September 1777, he was detached to raise in Delaware his own company of about one hundred men, to which task he dedicated his personal fortune.

After serving as advance guard for Washington's main column at Germantown on 4 October 1777, McLane on 7 November was given the mission of screening the army as it prepared to take up winter quarters at Valley Forge. On 3 December he warned Washington of a large-scale sortie from Philadelphia, intelligence that contributed to the Continental Army's successful defense of its concentration around White Marsh a few days later. McLane's company harassed enemy convoys and foraging parties so successfully during the winter that they earned the nickname of “market stoppers.” During January and February 1778 his men gathered livestock in Delaware and the Eastern Shore of Maryland to supply Valley Forge and Smallwood's command at Wilmington. Rejoining the main army with 100 to 150 mounted men, he resumed his reconnaissance missions, reinforced on occasion by 50 Oneida Indian scouts. As the Mischianza was breaking up in Philadelphia, around dawn of 19 May, his company, supported by a company of dragoons, brought many a red-eyed redcoat running to repel an “attack” he simulated by galloping along the enemy's outpost line dropping iron pots full of gunpowder and scrap metal. The next night his scouts detected the movement to surprise Lafayette at Barren Hill, a piece of good outpost work that saved a large portion of the army from ambush. On 8 June he himself narrowly escaped an ambush. He may well have been the first American to reenter Philadelphia when the British evacuated the city ten days later. He apparently had an instinctive dislike for Benedict Arnold; soon after Arnold took command in Philadelphia, McLane went to Washington to expose Arnold's profiteering. For his pains he received a rebuke from Washington.

During the Monmouth Campaign of June–July 1778, McLane's company operated with Dickinson's militia, and he claimed to have lost only four men killed in taking more than three hundred stragglers. The company was attached to Henry Lee's new “Partisan Corps” on 13 July 1779. Under Lee's command he had an important role in the events leading up to Wayne's capture of Stony

Mecklenburg Declaration of Independence

Point on 16 July, and he figured prominently in Lee's raid on Paulus Hook on 19 August 1779. McLane envied Lee, however, and Washington solved the problem by sending McLane to reinforce Lincoln at Charleston. Fortunate in not reaching the city in time to be captured, he came under Steuben's command and was promoted to major.

Early in June 1781 he left Philadelphia carrying dispatches that urged de Grasse to come from the West Indies to support Washington and Rochambeau. On the return voyage he commanded the marine company on the privateer *Congress* (twenty-four guns) during its capture of the British sloop of war *Savage* (sixteen guns). During the Yorktown campaign he scouted New York City from Long Island to keep Washington informed on the essential point of whether the British were detaching strength to reinforce Cornwallis. He retired on 9 November 1782, a brevet major.

His personal fortune gone, McLane entered a mercantile venture with Robert Morris. In 1789 Washington named him the first federal marshal for Delaware and in 1797 made him collector for the port of Wilmington, a post he retained for the rest of his life. He commanded the defenses of Wilmington during the War of 1812, observed the British capture of Washington, and commented that with the three hundred men he had led at Paulus Hook he could have saved the capital.

MECKLENBURG DECLARATION OF INDEPENDENCE. On 31 May 1775 a committee met at Charlotte, Mecklenburg County, North Carolina, and drew up twenty resolutions for the North Carolina delegation to present to the Continental Congress. They stated—among other things—that all laws and commissions derived from royal or Parliamentary authority were suspended and that all legislative or executive power henceforth should come

from the Provisional Congress of each colony under the Continental Congress. Although adopted, the resolutions never were presented to Congress. In 1819 the *Raleigh Register* printed what was claimed to be a document that the Charlotte committeemen had adopted on 20 May 1775, in which they declared themselves “a free and independent people” and which contained other phrases later made famous in the Declaration of Independence.

Before his death in 1826, Thomas Jefferson rejected the “Mecklenburg Declaration of Independence” as spurious. Nonetheless, for many years it was believed, primarily by people in North Carolina, that the Mecklenburg document had inspired the real Declaration of Independence. No written copy of the document was found until 1847, when a copy of a Charleston newspaper of 16 June 1775 was discovered to contain the full text of the twenty resolutions adopted 31 May 1775. The word “independence” was not mentioned. The explanation appears to be this: The records of the 31 May proceedings were destroyed by a fire in 1800; the version printed in 1819 was from memory—including that of the North Carolina iron manufacturer Joseph Graham, who had been fifteen years old at the time—and was embellished with phrases taken from the real Declaration of Independence. All evidence to the contrary has not prevented people from insisting on the veracity of the fraudulent document and posting it on web sites. These two documents, the real Resolves of 31 May and the contrived “Declaration” of 20 May, and their dates are often confused. For instance, the state of North Carolina still features the date of the fictional document on its seal and flag.

MEDALS. During the nine years of the War for Independence, Congress voted to award eight medals to officers of the Continental army in recognition of significant accomplishments on the battlefield. The first was given to George Washington to commemorate the taking of Boston in March 1776. The next went to Horatio Gates for the capture of Burgoyne's army at Saratoga in October 1777. Four were awarded in 1779 for victories that were not of the same significance as Boston or Saratoga. Brigadier General Anthony Wayne, Colonel Walter

Stewart, and Lieutenant Colonel François Teissedre de Fleury received medals for the capture of Stony Point on 16 July 1779, and Major Henry Lee received a medal for the raid on Paulus Hook on 19 August 1779. The last two congressional medals were awarded to Brigadier General Daniel Morgan and Colonel John Eager Howard for the victory at Cowpens on 17 January 1781, a success that provided a significant fillip to the morale of American troops in the South.

MEDICAL PRACTICE DURING THE REVOLUTION.

On both sides in the American Revolution, many more soldiers died from disease than in combat, and many more died from wounds than were killed outright. The most feared killer in North America at this time was smallpox, which played a critical role in defeating the American invasion of Canada. As a result of that disaster Washington instituted a requirement in the winter of 1776–1777 requiring all new recruits to undergo inoculation for that disease before reporting to the army. This was one of the first instances, worldwide, of that now-common practice. Other diseases swept through eighteenth-century army camps, including diphtheria, dysentery, malaria, measles, and even scurvy. Surgery was primitive, and because microbes and sterilization were not yet understood, those who survived the shock and the bleeding risked lethal infections.

Armies at the time of the Revolution provided a surgeon and surgeon’s mates at the regimental level and a more extensive medical staff charged with operating hospitals—both fixed ones at major bases and field hospitals that accompanied forces on military operations. The regimental personnel provided battlefield triage and critical care; the hospitals conducted long-term treatment with a staff of trained medical personnel (physicians, the lower-status surgeons, and apothecaries) supplemented by civilians employed as nurses, orderlies, cooks, and individuals performing any other appropriate support functions. Most combat medical care came after the shooting stopped. The regimental quartermaster would search for the wounded using the regiment’s fifers and drummers as stretcher-bearers. Naval vessels of any size also carried a surgeon and sometimes an assistant; large squadrons, or more commonly their bases, would also have hospital ships, which were most often converted obsolete warships.

British military medical practices were quite conventional and operated with the disadvantage that all supplies and replacement personnel had to come three thousand miles from the British Isles. The Hesse-Cassel contingent of Germans also had its own medical staff that operated a hospital; the smaller German forces had much more modest provisions. All of the German regiments had a slightly different arrangement than those of the British or Americans. They would have a surgeon for the regiment but provided a surgeon’s mate (*Feldscher*) for each company, although this individual had far less training than his Anglo-American counterparts.

Within the Continental Army treatment tended to be easier because inoculation centers and hospitals could be placed almost anywhere except on the immediate front lines. The army had a much more difficult time creating an effective and efficient medical administration. The colonies had excellent doctors, including some who had trained in London and Edinburgh. Although in many ways the American doctors were more skillful than the Royal Army’s, they lacked infrastructure and a logistical system that could provide specialized medicines. The Continental Congress also had trouble finding a proper head for its medical program. The first choice was Benjamin Church of Massachusetts, who turned out to be a British spy. John Morgan succeeded Church; although a good doctor and administrator, he had an abrasive personality and made so many enemies that he had to be relieved. The third head, William Shippen Jr., was also relieved, a victim of professional back-stabbing. Both of those men were Philadelphians. Benjamin Rush, like his two predecessors a Philadelphian, became mixed up in political intrigue and also had to be jettisoned. On 17 January 1781 Congress appointed John Cochran of New Jersey, a veteran of the French and Indian War, and in him finally found a competent head who served until the end of the war. The head of the Continental Army medical department carried the title of director general.

MEETING ENGAGEMENT. The term “meeting engagement” is applied to a battle that takes place before either side can execute its planned attack or defense. Normally, both sides are still moving part of their forces toward the battlefield while other troops are already engaged in combat. Such encounters hold enormous potential for the side that can better understand what is happening on a fluid battlefield and can better direct forces to take advantage of often fleeting opportunities for success. The encounters at Princeton (3 January 1777) and at Monmouth (28 June 1778) are good examples of meeting engagements in America’s War for Independence.

revised by Harold E. Selesky

MEIGS, RETURN JONATHAN. (1740–1823). Continental officer. Connecticut. Son of a hatter named Return Meigs, Return Jonathan Meigs was born in Middletown, Connecticut, and became a merchant in his hometown. Elected lieutenant of his local militia company (in the Sixth Militia Regiment) in October 1772, he won promotion to captain in October 1774 and led the company to Boston, where it served for eight days after the Lexington alarm. Appointed major of the Second Connecticut Regiment on 1 May 1775, he served over the summer at the siege of Boston and in

September volunteered as second-in-command of Lieutenant Colonel Roger Enos’s battalion in Arnold’s march to Quebec. Meigs continued with part of the battalion after Enos turned back. He was captured after scaling the walls of Quebec on 31 December 1775. Paroled in May 1776, he returned to Connecticut in July and was formally exchanged on 10 January 1777. On 22 February he became lieutenant colonel of Colonel Henry Sherburne’s Additional Continental Regiment.

Meigs is famous for his brilliant Sag Harbor raid in New York on 23 May 1777, for which Congress voted him an “elegant sword.” On 10 September he was appointed colonel of the Sixth Connecticut (“Leather Cap”) Regiment, and during the summer and fall of 1777 he led it in the principal actions along the Hudson. He headed a composite regiment of Connecticut light infantry at Stony Point on 16 July 1779. Washington sent him a personal note of thanks for his part in stopping the Mutiny of the Connecticut Line on 25 May 1780, and his regiment was one of the first sent to reinforce the Hudson Highlands when Arnold’s treason was discovered in September. He retired on 1 January 1781, when the Connecticut Line was consolidated and reduced.

Becoming interested in western lands, he secured an appointment as one of the Ohio Company’s surveyors. In April 1788 he led a small party of settlers that founded the town of Marietta at the mouth of the Muskingum River on the Ohio. An important leader in early Ohio, in 1801 he was also appointed agent to the Cherokee. Known for trying to deal firmly but fairly with Native Americans, he endeavored to get the best deal he could for the tribes while promoting their acculturation and acceptance of white settlement. He died of pneumonia at the age of eighty-two in 1823. His son and namesake became governor of Ohio, U.S. senator, and postmaster general.

revised by Harold E. Selesky

MERCANTILISM. Mercantilism is the name for a set of beliefs that developed in Europe in the sixteenth century about how the components of society could best be organized to promote the public good. Developed in

policies, regulations, and laws through the eighteenth century, mercantilism was intended to support the nation-states of western Europe by channeling private economic behavior for the benefit of the state. A form of economic nationalism, it found expression in efforts by governments to regulate trade and commerce, maintain a favorable balance of trade, develop agriculture and manufacturing, keep up a strong merchant marine, establish colonies for the enrichment of the mother country, create monopolies in foreign trade, and accumulate gold and silver (on the premise that specie alone is wealth). There was no single set of policies advocated by all states, just a sense that the accumulation of wealth and prosperity was a zero-sum game in which ad hoc measures ought to be taken to keep one's own advantage from slipping away to a foreign competitor.

According to the tenets of mercantilism, colonies existed primarily to furnish the mother country with commodities (gold, silver, raw materials) and markets that could not be obtained at home or were too expensive to obtain from competitors. In various statutes, rulings, and proclamations over more than a century, from the first Navigation Act in 1651 to the set of regulations and taxes imposed after the French and Indian War, the imperial government in London tried to translate the broad precepts of mercantilism into effective policy. For most of that time, these policies were more or less benign, even beneficial, because they guaranteed markets for colonial goods, offered some protection against foreign competitors, and did not greatly conflict with what might be called the natural flow of commerce. But policies that might have been appropriate for infant colonial economies seemed much less so, to the colonists, as their economic activity grew in size, complexity, and ambition. Mercantilism, considered as a set of beliefs, did not cause the colonists to rebel. It would be more appropriate to say that a too-rigid adherence by successive imperial politicians to policies that seemed to privilege the British economy caused a growing number of colonists to rethink the value of their relationship with the mother country and to perceive in its actions much they came to regard as tyrannical.

MERCER, HUGH. (1725?–1777). Continental general. Scotland, Pennsylvania, and Virginia. Born in Aberdeen, Scotland, perhaps in 1725, Hugh Mercer was educated as a doctor at the University of Aberdeen (1740–1744) and was in the surgeons' corps of Prince Charles Edward in 1745. After the battle of Culloden he emigrated to America, settling near what is now Mercersburg, Pennsylvania. He became a captain in the Pennsylvania Regiment during the Seven Years' War, and may have been present at Major General Edward Braddock's defeat by the Indians at the Monongahela River (near modern Pittsburgh). He took part in the expedition against the Indian settlement at Kittanning, Pennsylvania (September 1756) and was promoted to lieutenant colonel of the militia. Then, after General John Forbes's expedition to Fort Duquesne (1758), he was promoted to colonel of the Third Battalion on 23 April 1759, and was made commandant of Fort Pitt.

During these frontier operations, Mercer met George Washington, and it may have been at Washington's suggestion that Mercer moved to Fredericksburg, Virginia, where he opened an apothecary shop. On 12 September 1775 he was elected colonel of the minutemen in four counties. Having narrowly lost out to Patrick Henry for command of the First Virginia Regiment, the fifty-year-old doctor was commissioned colonel of the Third Virginia Regiment on 13 February 1776. Appointed brigadier general of the Continental army on 5 June, he was put in command of the flying camp, comprised of mobile militia forces. He led a column at Trenton, New Jersey, and is one of several officers credited in contemporary accounts with suggesting the strategy leading to the triumph at Princeton, New Jersey, on 3 January 1777. Mortally wounded in this action, he died on 11 January of that same year.

METHODISTS. The military conflict of the Revolutionary era dramatically reshaped the Methodist movement in America, from a small missionary wing of the Church of England to a rising evangelical power. But this transformation had little to do with the compatibility of Anglican John Wesley's version of Christianity with the American struggle for independence. Rather, the formation of what was to become the largest denomination in the United States on the eve of the Civil War emerged from the lessons that American Methodists drew from their wartime sufferings, and from their leaders' ability to seize opportunities.

THE PROBLEM OF LOYALISM

On the eve of Lexington and Concord in April 1775, the Methodists in America were comprised of a small band of traveling preachers, led by minister John Wesley's Scottish deputy, Thomas Rankin, and a little over 3,000 adherents. Although Methodist converts first immigrated to New York and Maryland in the early 1760s, Wesley's itinerants had arrived only in 1769, in the midst of the Patriot movement. Rankin was known to the American Whigs primarily as a critic of American slavery, and the Methodists' mission to recruit free people and slaves did not win them friends in the Patriot leadership. Congregationalists and Presbyterians, who still adhered to the Calvinist doctrine of predestination and among whom many favored the American cause, condemned the Methodists for teaching that individuals possessed free will to achieve, or conversely to fall away from, Christian rebirth. The ordained ministers of the Church of England considered Wesley's itinerants to be uneducated upstarts with too great an insistence on the equality of all believers. Whether or not the Methodists had a future in America depended on their English founder's willingness to send over more British preachers. Wesley, an old man and concerned with his legacy in Britain, had other priorities.

American resistance to Parliamentary measures was largely ignored by the rank-and-file itinerants, instructed by their leaders to avoid political conflicts. But as American resistance gathered steam in the mid-1770s, Wesley boldly attacked the Patriots in a series of royalist pamphlets. The first, titled *A Calm Address to Our American Colonies* and published in 1775, borrowed from a pamphlet by Samuel Johnson, asserted that the colonists were "descendants of men who either had no votes, or resigned them by emigration." It was further argued that the American Whigs had been duped by enemies of the monarchy—the former Puritans of New England—aiming to erect "their dear [Puritan] Commonwealth upon its ruins."

The outbreak of war with Britain placed Wesley's American followers in an inevitably difficult position.

Although a small cohort of the preachers were Americans—generally under the guidance of a maverick Irish itinerant, Robert Strawbridge—most were British and several were overtly Loyalist. Noteworthy among the latter was Thomas Webb, an aging veteran of the French and Indian War and popular preacher in New Jersey. Webb maintained a correspondence with William Legge, the second earl of Dartmouth, Secretary for the Colonies, and a Methodist patron in Britain. In this correspondence, Webb claimed to have provided the British command with intelligence on General George Washington's attack on Trenton on 26 December 1776. Webb's activities, which included gathering information on American military movements in Baltimore County, prompted at least one Maryland official to report that the Methodists used religious recruitment to mask their conspiracy against the American cause. Webb was ultimately arrested and sent into exile.

In 1777, several other Methodists, including British itinerant Martin Rodda in Maryland and American Tory Cheney Clow in Delaware, raised armed forces against the Americans. Other British preachers proselytized among the regulars in British-occupied New York. But most, including Thomas Rankin, returned to Britain. Of the more than sixty preachers recruited by the Wesleys between 1773 and 1777, only twenty-eight, or fewer than half, were still traveling through the colonies in 1778. Of Wesley's formally licensed preachers, only one, Francis Asbury, remained in Patriot territory.

PATRIOT SENTIMENT AND THE MISSIONARY CAUSE

The Loyalist reputation of the Methodists was tempered by the number of adherents who supported the Patriots. Marylanders Samuel Owings Jr., Richard Dallam, and Jesse Hollingsworth served the Patriot military in varying capacities. Owings was a colonel in the Soldier's Delight Battalion of Militia in Baltimore County; Dallam served in the Harford County Rifles; and Hollingsworth was a privateer. In New Jersey, John Fitch, who later invented the steamboat, as well as James Sterling and Thomas Ware were all prominent Methodist Patriots. Fitch served time on a British prison ship in New York harbor. Undoubtedly, many more examples have escaped the historical record.

Many American Methodists, furthermore, struggled less about taking sides than about the proper role of Christian missionaries, especially since recruitment to the itinerancy was a relatively simple process that did not require ordination. Preacher John Littlejohn complained of being fatherless and friendless because he was not a Patriot volunteer, but he believed the American cause was blessed by God. Marylander Joseph Everett's conversion transformed him from a Whig and active militiaman into a pacifist itinerant, but he did

America's First Methodist Episcopal Church (c. 1768). This church in New York, seen here in an engraving by Joseph B. Smith, was reputedly the first Methodist Episcopal Church in America. © MUSEUM OF THE CITY OF NEW YORK/CORBIS

not become a Loyalist in the process. Preacher Jesse Lee refused to bear arms, but served as a wagon driver for the Continental army in North Carolina. Thomas Ware came to view warfare as a worldly distraction, but he was nonetheless a war veteran.

Beginning in 1776, American itinerants in New Jersey and Maryland nonetheless faced prosecution for non-adherence to militia drafts, and many were subject to mob violence. State loyalty oaths in Maryland, Delaware, and Pennsylvania restricted the preachers' mobility. For example, the Maryland Act for the Better Security of Government, passed in December 1777, required an oath or affirmation of allegiance to the state government, and barred non-compliers from many activities, including preaching. The itinerants objected to the form of the oath and many were indicted—twenty alone in October 1778—for preaching without having taken the oath. Several served jail sentences or paid substantial fines. A number of the American command, particularly General William Smallwood, repeated the charge that the itinerants were a threat to the common cause.

A TRANSFORMATION OF PERCEPTION

As the war continued into the late 1770s and early 1780s, courts in the upper Chesapeake Valley faced numerous cases involving religious pacifists drawn from among the Quakers, Mennonites, and Moravians, as well as the Methodists. This led to the practical need to ease up on prosecutions. Instead, hostility to the Methodist itinerants came from other quarters. Throughout the war, the preachers had persisted in recruiting African Americans, laborers, and women, single and married, into their movement, with or without the permission of their masters or husbands. This was perceived as a threat to the order and authority of households and plantations, which was feared by customary authorities everywhere, but especially in the South. Freeborn Garrettson and Philip Gatch, both of Maryland, left vivid descriptions of their trials in the face of mob violence during the war. Garrettson was persecuted, in part, for his strong opposition to slaveholding; and Gatch for converting one man's wife, for which he was treated to a tarring that blinded him in one eye.

Despite these inauspicious circumstances, the conflict with Britain would ultimately serve the American Methodists well. By 1782, the year the war ended, close to 12,000 Americans, especially in Delaware, Maryland, and Virginia, had joined the movement, four times as many as at the start of the war. Judging by later numbers, African Americans probably comprised from 10 to 15 percent of this followership, and made up a great proportion of audiences who attended Methodist preaching without creating formal societies.

This slow but impressive success would ultimately explode after 1800, for essentially two reasons. One was that the war had seriously undermined the Anglican presence in America, particularly in the Middle Atlantic and southern states, where the Methodists were most active. The Church of England was a rising power in the colonies, but nearly 40 percent of its American clergy were Loyalists and few Anglican churches were still functioning north of Delaware shortly after independence. The declining condition of the Church of England—once the proud ecclesiastical elite of the colonies—prompted Robert Strawbridge's followers to meet in Fluvanna, Virginia in 1777. During this meeting they formed themselves into an informal presbytery with powers to administer baptism and communion—the powers heretofore restricted to an ordained clergy. Francis Asbury strongly opposed this unorthodox move, but the Methodists soon moved into the Anglican vacuum. Wesley's postwar emissary, Thomas Coke, persuaded Asbury and the Americans to form the Methodist Episcopal Church in Baltimore in December 1784. In a sermon delivered on 27 December 1784 (and printed in Baltimore the following year), Coke proclaimed that the Revolution had struck off the "intolerable fetters" that tied the Methodists to the Anglicans and had "broken the anti-christian union which before subsisted between Church and State." The Anglicans' decline meant the Methodists' rise.

The second more comprehensive reason for Methodist success was the nature of the audience attracted by their egalitarian message—women, African Americans, and other laboring-class men—many of whom were outsiders to the revolutionary leadership. They joined Methodist churches run largely by professionals—middling merchants, and assorted industrial capitalists in the cities, and farmer gentry in the countryside and on the western frontier. But the opportunities to rise in these churches and especially in the ministry were very great. There seemed to be few people unaffected by the Methodist message, and many were as drawn to it as the Patriots had been to republican virtue.

In time the Methodists would claim as close a tie to the founding conflict of the United States as any other denomination, and would lose the memory of their low reputation during the war. But without the solidarity that their wartime sufferings provided, and the conditions that

the war itself created, the Methodists might have become one missionary agency among the many. Instead, in the eighty years following the Revolutionary war, they outpaced all other Protestant churches in popularity and geographical expanse and became a dominant force in American culture and society.

M'FINGAL. Published in 1782, *M'Fingal* is the eponymous name of the pseudo-Scottish poet in the mock epic poem by John Trumbull. Written in the satiric style of the seventeenth-century English versifier Samuel Butler, the author of *Hudibras*, this crude but effective epigrammatic form was a popular vehicle in America for political commentary at the time of the Revolution. Condemned in Britain, the poem was very popular in the United States in celebrating the struggle for independence.

MIDDLETON, ARTHUR. (1743–1787).

Signer. South Carolina. Born on the South Carolina estate of his wealthy father, Henry Middleton, in 1743, Arthur Middleton, like so many of his class in the South, was educated in England. After two years of travel in Europe he returned to South Carolina in 1763 and married the daughter of Walter Izard. In 1765 he was elected to the state House of Representatives, where he sat for many years. He was elected to the South Carolina Provincial Congress of 1775, and served on the Committee of Safety. He took his father's seat in the Continental Congress in 1776, signed the Declaration of Independence, and was a delegate again in 1777. In 1778 he declined the governorship. After taking an active part in the defense of Charleston, he became a prisoner on 12 May 1780 and was sent to St. Augustine. Exchanged in July 1781, he returned to Congress for two more years. With the war's end he refused another term in Congress. He returned to "Middleton Place," his estate on the Ashley River, near Charleston, inherited from his mother in 1771 and partially destroyed by the British in 1780. He died there 1 January 1787.

MIDDLETON, HENRY. (1717–1784).

Second president of the Continental Congress. South Carolina. Born in 1717 on his father's plantation near Charlestown, South Carolina, Henry Middleton would become one of the largest land- and slave-owners in the state. He was educated in England and elected to the state assembly shortly after his return, serving as speaker in 1747 and 1754. In 1755 he became commissioner of Indian affairs. He sat on the state council until he resigned in 1770 to become leader of the opposition. Sent to the first Continental Congress, he succeeded Peyton

Randolph as president on 22 October 1774, and held this office until the re-election of Randolph on 10 May 1775. He also was president of the South Carolina Provincial Congress from 1775 to 1776. An advocate of reconciliation, he refused re-election to the Continental Congress in February 1776, when the radicals seemed to gain control. He was succeeded by his son, Arthur. Although a member of the Council of Safety after 16 November 1775, and active in state affairs until General Henry Clinton's invasion of the South in the spring of 1780. At that point, he came to feel that the Patriot cause was hopeless. After the fall of Charleston, he sought and received the protection of the British, but did not suffer property loss as a consequence. He died in Charleston, South Carolina, on 13 June 1784.

MIDDLETON FAMILY OF SOUTH CAROLINA.

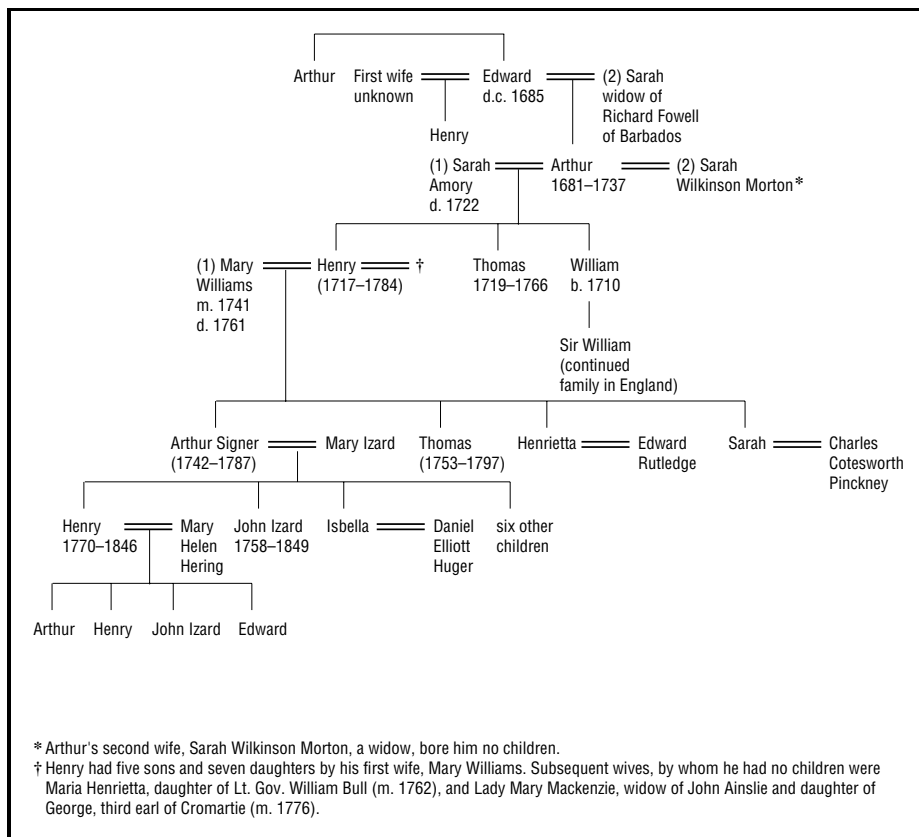

The Middletons were among the dozen or so families that controlled South Carolina during the eighteenth century. As was the case throughout the colonies, the imperial crisis divided families. Henry Middleton (1717–1784) represented South Carolina in the Continental Congress (and served as its president from 22 October 1774 to 10 May 1775), but resigned in February 1776 because he disagreed with the drift toward independence. His eldest son, Arthur Middleton (1742–1787), was an early supporter of a total break with Britain, and, as a delegate to Congress from 26 February 1776, he voted for independence. Although Henry accepted British protection after the fall of Charleston, his estates were neither confiscated nor amerced, in part because of his son's prominence in the Patriot cause but also because he had lent the state over 100,000 pounds.

Middleton Family of South Carolina. THE GALE GROUP

MIFFLIN, THOMAS. (1744–1800). Continental general, politician. Pennsylvania. Born in Philadelphia of Quaker parents on 10 January 1744, Mifflin graduated from the College of Philadelphia in 1760 and entered a business partnership with his brother before entering politics. He was in the Pennsylvania Provincial Assembly in 1772 and 1773, one of the most radical members of the Continental Congress in 1774, and an ardent Whig in the Pennsylvania House of Representatives until 1775. In the early stages of the war he was active in recruiting and training troops, which led his Quaker meeting to expel him. He was elected major of a volunteer company of troops. On 4 July he became one of General George Washington's aides-de-camp, and on 14 August he became quartermaster general. He was promoted to colonel on 22 December, brigadier general on 16 May 1776, and major general on 19 February 1777. Mifflin had been exceptionally valuable as a soldier-politician, famous for enhancing troop morale with his speeches. But his tenure as quartermaster general was marked by controversy and charges of corruption and inefficiency. He resigned that post in October 1777. Blamed for the sufferings during the Valley Forge Winter Quarters and closely linked with

the Conway cabal that sought to dismiss George Washington, Mifflin resigned from the army in August 1778.

Despite its many suspicions regarding Mifflin's conduct, Congress appointed him as one of the commissioners charged with reorganizing the military in 1780. He was a delegate to Congress from 1782 to 1784. He was elected president of that body in 1783 and received Washington's resignation of his military commission (December 23, 1783). Continuing an active career in state and national politics, Mifflin attended the 1787 Constitutional Convention, supporting the federal Constitution. He presided over the Pennsylvania constitutional convention of 1790, served as governor of Pennsylvania from 1790 to 1799, and personally commanded the militia to put down the Whiskey insurrection of 1794. Mifflin remained remarkably inconsistent in his politics, inspiring profound anger from his many political opponents; yet he kept winning elections. He died at Lancaster, Pennsylvania, on 20 January 1800.

Mark M. Boatner

MILITARY JUSTICE. Military justice during the Revolutionary War played an important role in making the military subordinate to civilian authority and in making soldiers out of ordinary citizens. For the soldiers, military law not only enforced discipline on the field of battle and in camp but also enforced the respect for rank necessary for military discipline. In developing the policies and practices of military justice, officers, soldiers, and policy makers drew on their experience of observing the British army, the experiences of organizing militia and colonial troops for imperial wars, and accepted civilian practices. They established a system of military justice that through courts-martial and corporal and capital punishment helped make the Continental army into an effective fighting force.

THE COLONIAL TRADITION

When the colonists came to North America, they brought a distrust of standing armies with them from Britain. A standing army is one that exists at all times, not just when there is war with an external enemy. Many British people thought that a standing army was a potential threat to liberty because when it was not engaged in fighting an enemy, it might be used by a monarch against the citizens. In British law, one of the important ways that a standing army was kept under civilian control was to require soldiers to surrender some civil rights when they enlisted. Soldiers were brought to trial very quickly; they could receive a capital sentence handed down with only a two-thirds majority rather than the unanimous verdict needed in civilian life; and most importantly, they lost the right to a jury trial. They became subject to courts-martial, where

the presiding panel was both judge and jury. And, finally, soldiers could be sentenced to corporal punishments much more brutal than anything a civilian court was likely to hand down.

The colonists adapted these practices in organizing their local militias and the provincial troops that they raised to fight alongside the British in imperial wars. Militia regulations usually avoided corporal punishment since many militiamen were taxpayers and voters, so instead offenders were punished by fines. But in those colonies where slaves, indentured servants, or apprentices were allowed to serve, corporal punishment was used, as those men had no money.

For their provincial armies, colonial governments felt that service in faraway places for long periods of time and often involving large numbers of poor men meant that sentences had to be tougher. Most colonies used punishments that reflected their civilian practices and held to a maximum punishment of thirty-nine lashes. The thirty-nine-lash limit came from the biblical injunction in Deuteronomy, "Forty stripes he may give him, and not exceed," (Deut. 25:3) and in Paul's Second Letter to the Corinthians. In the latter Paul noted "Of the Jews five times received I forty stripes save one" (2 Cor. 11:24). Therefore, most civilian courts held to the thirty-nine-lash limit, occasionally going over it for multiple offenders. New England colonial assemblies followed this practice for their provincial armies, but some southern colonies, such as Virginia, allowed more severe punishments. In 1757, during the Seven Years' War, the British decided that all provincial troops would come under British military law when they were operating with the British army. From that date on, colonial troops came under a system many saw as barbaric.

The British Army used the lash freely, supplemented by a wide range of other punishments, such as running the gauntlet. There was no limit to lash sentences, which were commonly for more than seven hundred lashes and sometimes as high as fifteen hundred. For these sentences prisoners would be lashed in installments. Colonists were appalled, and even some British officers had come to question the usefulness of these sentences. Consequently, some colonial officers did what they could to prevent their men from being subject to British military justice.

By the time the Revolutionary War began in 1775, then, colonists had gained a great deal of experience with writing articles of war, the codes that laid out military regulations. Naturally, in the first weeks colonial assemblies quickly produced legislation that looked very much like the codes they had written for their provincial armies. Massachusetts passed its legislation first, setting up the usual courts-martial system but limiting the number of lashes to thirty-nine. In the preamble, the assembly indicated it was avoiding the "severe articles and rules (except

in capital cases) and cruel punishments as are usually practised in standing armies,” hoping instead that soldiers and officers would obey the rules for “their own honor and the public good.” The Rhode Island, Connecticut, and New Hampshire assemblies quickly passed articles modeled on those of Massachusetts, and so did the Continental Congress when it organized the Continental Army in June 1775.

THE CONTINENTAL ARMY

The Continental Congress accepted that the way to subordinate the army to civilian authority was that its servicemen had to surrender some civil liberties. The first judge advocate general, William Tudor, a Boston lawyer and a friend and former clerk of John Adams, stated that “When a man assumes a Soldier, he lays aside the Citizen, & must be content to submit to a temporary relinquishment of some of his civil Rights” (“Remarks on the Rules”). It quickly became clear to some in Congress, to Washington and other military leaders, and to Tudor that the thirty-nine-lash limit was too lenient and that the army needed harsher punishments if it was to become a disciplined body.

The first changes to the Continental articles of war came in November 1775 when sedition, mutiny, giving information to the enemy, and desertion were made capital offenses. Massachusetts’ objections to “cruel punishments” soon disappeared. In the summer of 1776, as the army faced a string of military setbacks, Congress set to work revising the articles and Tudor, on behalf of Washington and others, lobbied Congress for change. On 20 September 1776, Congress passed new articles of war. The legislation was modeled closely on the British articles of war but limited the number of lashes to one hundred.

For New England soldiers, the new legislation was a radical departure from previous military practice. For the first year of the war, courts-martial sentencing New England soldiers had rested heavily on fining, shaming punishments such as having to walk around camp wearing humiliating signs, and lash sentences well below the thirty-nine-lash limit. By the end of the year, once the new regulations had been distributed and officially read to the assembled troops, one-hundred-lash sentences became common and shaming punishments, although still occasionally used, became much less frequent.

A different kind of transition took place for the troops from South Carolina. The South Carolina assembly had decided to adopt the British articles to regulate its troops from the beginning of the conflict. Courts-martial had handed down sentences as high as eight hundred lashes, and although most of these had been partially remitted

and lesser sentences given, punishments were usually well above one hundred lashes. South Carolina was very different from New England, which was a collection of homogeneous societies where for the first year of the war at least, men of property served as ordinary soldiers. With a large slave population and a small wealthy planter class, South Carolina had some difficulty finding soldiers for its forces. Young planters competed for the officer corps but soldiers were poor farmers, laborers, and recent immigrants. The legislature saw these as men in need of a firm hand and so adopted harsh punishments. For these soldiers, when their regiments were transferred into the Continental army, the new Continental articles meant their conditions of service became less harsh as one hundred lashes quickly became their standard punishment, too.

The articles of September 1776 stood without alteration for the duration of the war. There was only one other serious attempt to try to change them. In 1781, after the mutiny of the Pennsylvania line, Washington asked Congress for the lash limit to be increased to five hundred. The lower limit, Washington felt, forced court-martial panels to hand down too many death sentences. Although a congressional committee recommended the change to the higher number, it was voted down in Congress. The one-hundred-lash limit stayed.

The fast acceptance of the 1776 articles and the regularizing of court-martial practices was part of a number of changes within the army. That fall, Congress reorganized the army and allowed for longer terms of enlistment that enabled soldiers to develop a greater sense of professionalism. Some states introduced drafts in 1777 that drew many poorer men into the army, men who accepted their subordinate status more readily. The skills of soldiers and officers improved, especially after the arrival of Baron Von Steuben in 1778 to help in training. A standardized and predictable system of military justice was a critical part of these changes.

MILITIA PUNISHMENTS

Men in the militia continued to be largely free from corporal punishments. In the September 1776 articles of war, Congress tried to make the militia subject to harsher punishments when it was “joined, or acting in conjunction with” the Continental Army. However, there was a provision that court-martial panels could only be made up of officers from the militia corps with which the offender served, so in practice, little changed. Courts-martial were few and sentences other than fines were rare. When a lash sentence was given, it was to someone who was an outsider to the community, such as a transient or a recently arrived immigrant who might be serving as a substitute.

THE DEATH PENALTY

The death penalty was widely used in the military, most commonly for desertion. It was also used for mutiny, aiding the enemy, or leaving the field of battle without authority, but these were rare cases compared to the number of sentences for desertion from camp or on the march. All executions were carried out in front of all troops in the area so they could be suitably awed by military authority and threatened by what their own fate would be if they transgressed. However, reprieves were common. Washington used the death penalty sparingly. His soldiers were mostly volunteers who served for short terms. His goal was to instill discipline but not to appear so brutal that punishment actually encouraged further desertions or that men declined to reenlist when their terms were up. At the most, no more than 30 percent of capital sentences were carried out and possibly much less.

A DISCIPLINED ARMY

Central to military justice was the hierarchy of army life. Only officers, who were by legal definition gentlemen, sat on court-martial panels, yet it was mostly soldiers who stood charged before them with crimes. Thus, the panel members were not peers of the accused. Only soldiers were ever subject to corporal punishment. When officers were convicted of crimes, their punishments ranged from a private reprimand to being cashiered, or dismissed, from the service. When corporal punishment was inflicted, it was carried out by other soldiers supervised by officers. An important part of military regulations was that soldiers had to show appropriate deference to officers, saluting them and otherwise being respectful to them. Courts-martial were critical in forcing soldiers into habits of respect.

Courts-martial were busiest and handed down their most severe sentences when the army was in a difficult position, for example, during the bad winter at Valley Forge or on the disastrous expedition to Florida in 1778, when too many unhappy soldiers were deserting. But more commonly, military justice was concerned with the discipline of camp life, and panels focused their attention on soldiers' drunkenness, sleeping on duty, and petty theft.

Colonists blended military traditions, civilian practices, and experience to create an effective fighting force. The system of military justice established during the Revolutionary War continued with only minor revisions until after World War II, when Congress passed the Uniform Code of Military Justice in 1950.

MILITARY MANUALS. Scores of military manuals were used, and useful, during the Revolutionary War. Among the works popular with both armies were Humphrey Bland's *Treatise of Military Discipline* (8th ed., 1759), comte Lancelot Turpin de Crisse's *Essay on the Art of War* (1761), and Campbell Dalrymple's *Military Essay* (1761). The hodgepodge of American officers in particular sought direction. Hessian Captain Johann Ewald was impressed by the variety of publications found in American officers' captured knapsacks, writing in December 1777,

when we examined the haversack of the enemy, which contained only two shirts, we also found the most excellent military books translated into their language. For example, Turpin, Jenny, Grandmaison, La Croix, Tielke's *Field Engineer*, and the *Instructions* of the great Frederick to his generals I have found more than one hundred times. Moreover, several of their officers had designed excellent small handbooks and distributed them. . . . I have exhorted our gentlemen many times to read and emulate these people, who only two years before were hunters, lawyers, physicians, clergymen, tradesmen, innkeepers, shoemakers, and tailors. (Edwald, p. 108)

The single most important American work was Major General Friedrich Wilhelm von Steuben's standardized manual of discipline, introduced in the spring of 1778 and published in 1779. Steuben's system did not appreciably simplify the largely ornamental manual of arms, but did introduce set marching rates and uniform tactical formations, for the first time allowing Continental regiments to work as a unified battlefield force.

British forces were fortunate in beginning the conflict with a uniform set of regulations, Edward Harvey's *Manual Exercise as Ordered by His Majesty in 1764*, a treatise that provided a single rule book on which all

crown regiments based field organization, formations, and maneuvers. Another influential work was the never-published system of light infantry drill introduced by General Sir William Howe at the Salisbury, England, training camp in late summer 1774. Howe's drill was an expansion of General George Townshend's "Rules and Orders for the Discipline of the Light Infantry Companies in His Majesty's Army in Ireland" (1772). The lessons instilled at Salisbury had a profound effect on the conduct of the American war.

MILITIA IN THE NORTH. The opening shots of the Revolutionary War brought the local colonial militia into the spotlight, forcing the local militiamen into a combat role against the army of their king. However, even as these local civilians took up arms, they also shouldered other responsibilities that would prove critical to the overall success of the American rebels in this war against the British Empire. Militia soldiers were used not only to fight alongside the Continental soldiers and to serve as partisans in a guerrilla war throughout the northern states; they also served the local political needs of the rebel Whig leaders, spy on enemy activities, act as enforcers for political leaders, round up enemies of the state, and generally do whatever task had to be done when there was no one else available to do it. The militia proved to be versatile and adaptive in this revolutionary war fought throughout the northern states.

SOCIAL CONTROL

The months following Lexington and Concord saw the militia emerge quickly as a ready source of social control for the emerging rebel governments in the northern colonies. Even as Whig committees and conventions passed regulations to restrain and punish colonists who remained

loyal to the British government, the politicians turned to the local militia forces to enforce them. Anyone speaking out against the Whig-controlled colonies became targets of Whig militia forces. Also targeted were those who provided information or supplies to the British forces stationed along the coast, notably in New York City and Boston. Local militia forces were well organized and prepared to fulfill this vital role in the opening months of the war, whereas the British authorities did not make full use of pro-British Loyalists, who were less numerous and more scattered throughout the northern colonies. Local committees, backed by the armed might of the Whig-controlled militia, were able to intimidate the Loyalists, forcing many to take oaths of allegiance to the newly forming Whig governments and imprisoning and exiling those who refused. This form of social and political control was directed by local and colonial authorities.

Loyalist leaders faced a serious danger posed by the local Whig militia. One of the most notorious Whig militiamen in the early war was Isaac Sears of New York. Contrary to General George Washington's orders, Sears attempted unsuccessfully to kidnap New York's royal governor, William Tryon, in August 1775. In November 1775 Sears entered New York City with about eighty volunteers, took the Loyalist James Rivington's press, and then disarmed some Loyalists in Westchester County. In New Jersey, militiamen held the royal governor, William Franklin, a prisoner in February 1776; later, in the summer of 1776, New Jersey militiamen arrested Franklin and sent him to prison in Connecticut, where he stayed until his release in 1778.

In general, Washington fully supported efforts to suppress the Loyalist population in the northern colonies. Militia forces were used to suppress Loyalist threats, especially around New York City, in the spring and summer of 1776. The arrival of the British forces in July and August 1776 increased the threat from internal anti-revolutionary resistance and thus led to increased use of Whig militia to maintain control of the Loyalist population in the area. New York established a secret committee to counter any Loyalists who tried to influence people to support the British or resist the new Whig government. Militia soldiers were responsible for seizing anyone accused of treason against the newly formed United States, and they tried to prevent all communication between British forces on the coast and Loyalists in the interior.

Throughout the middle states, in particular, militia forces were used to disarm suspect people because of a heightened fear that they might try to join the British forces in the area. Dealing with such threats often took precedence over filling recruitment needs for the Continental army. For example, in the summer of 1776 New Jersey's Provincial Convention excused the militia of Loyalist-infested Monmouth County from providing its

quota to fulfill a request from the Continental Congress. Washington at times even supported militia activities against Loyalists with detachments of the Continental army. At other times, he released militiamen from the army to return to their home counties in order to suppress Loyalist activities.

The movement of suspected people was monitored by militia troops. Connecticut required people to have certified passes to travel throughout the state, and militia soldiers inspected these passes. This helped prevent Loyalists from forming larger forces and also helped prevent them from sending intelligence and supplies to the British forces stationed nearby.

At times, the local need to control dangerous people took precedence over the military needs of the army. In September 1776, as Washington fought desperately to hold Manhattan Island and prevent British landings along the coast, the New York Convention refused to call out all of the militia from the southern counties of the state because of the large number of Loyalists and slaves in the area. Connecticut also retained militia units for internal control and defense during the summer and autumn. Washington understood these local needs and accepted these actions. In fact, he would at times detach militia units to help suppress Loyalists. In October 1776 he sent a detachment of Massachusetts militia from Manhattan Island to help the New York Convention stop an anticipated Loyalist uprising along the Hudson River. As his army retreated across New Jersey in November 1776, Washington detached a regiment of New Jersey militia to go to Monmouth County to prevent a threatened Loyalist insurrection. Washington even allowed his scouts, both Continentals and militia, to plunder Loyalists and keep the plunder as a reward for their service, but by 1777 Washington had stopped this practice. He preferred to leave it up to the state governments to deal with Loyalists and their property.

The presence of the large British force in New York City heightened fears of Loyalist trouble, so the state government created the Committee for Detecting Conspiracies and authorized it to use militia forces as necessary to prevent hostile uprisings within the state. Other states had similar committees, which used militia troops to maintain a watch on suspected people within their states.

Ultimately, once the Whigs had established control of the state governments in 1776, the militia became the main policing force for these new governments. For the rest of the war, they used militia detachments to hunt down suspected Loyalists. Militiamen were especially active in performing this duty during the lulls in the active campaign seasons of the main armies. For example, in the spring of 1777 New York militia troops scoured the region known as the Highlands and the area between the

American and British lines for Loyalists, breaking up Loyalist bands and generally trying to intimidate those hostile to the United States. In fact, throughout the early war years in particular, the state governments had to carefully balance the needs of the war itself with the need to maintain internal control, including the suppression of Loyalist dangers. Fortunately for the war effort, the governments of the northern states proved very good at maintaining this balance, making militia forces available for the field even while retaining others at home in the state to keep the peace.

The internal threat from Loyalists had largely ended by 1778. States like New York and New Jersey had recurring problems near the British stronghold of New York City, but elsewhere throughout the northern states, the threat of Loyalist uprisings had mostly ended by then. Monmouth County, New Jersey, and the Neutral Ground in New York between the American and British armies remained the only places that faced any kind of threat from Loyalists. The threat in Monmouth, however, remained so intense that as late as November 1779, Washington sent a detachment of Continental soldiers into Monmouth to support the local militia in its endeavors to suppress the remaining Loyalist danger. As the militiamen went home, more Continentals were sent into the county to control the population. Thus, Washington understood the critical need to prevent any Loyalist uprising to gain any foothold within the states and had learned to use regular soldiers from the Continental Army when necessary to support the militia in this vital work.

The other area that remained a dangerous zone right until the end was Westchester County, New York, along with western Fairfield County, Connecticut, the site of the infamous Neutral Ground. As soon as the British army occupied New York City in September 1776, the area around it became a scene of constant raids, larceny, and brutality. Much of it was loosely connected to the armies and the campaigns, but the presence of numerous Loyalists made it imperative for the state government to suppress them. Loyalists raided, took livestock, and forced inhabitants to flee the area. Sometimes these raids were intended to help the British, but often they were made just for the sake of plunder and revenge. The New York government, headed by Governor George Clinton, maintained a constant presence of Whig militia in Westchester County until the end of the war. By 1781, as with Monmouth County, Washington began to increase the Continental presence to relieve the exhausted militia forces, which had stood guard for the previous five years.

Militiamen not only helped hunt dangerous persons, but also helped escort endangered people from areas about to be overrun by the enemy. This duty became especially important on eastern Long Island after the British landed

and captured Brooklyn in late August 1776. Even as some militiamen skirmished with the British forces advancing eastward across Long Island, others helped move people, goods, and livestock across Long Island Sound to Connecticut.

The Highlands of New York, situated along the Hudson River north of New York City, also contained many lawless bands. The Committee for Detecting Conspiracies sent militiamen into the area to hunt down these robbers, but with little success. Only the end of the war, and with it the loss of the British market in New York City, brought an end to these outlaws' careers.

BALANCING THE MILITIA'S DUTIES

Another balancing act that the state and national leadership had to maintain in relation to the militia was the very real need for the militiamen to be available for farming. During the spring planting season and the late summer and autumn harvest season, these men were needed to produce the food necessary to feed not only the army, but also the civilian population. Washington and his generals learned early in the war that to call out the militia in the spring or late summer was usually an exercise in frustration, and if the militia was in the field when these key farming seasons arrived, they tended to melt away quickly. By the latter years of the war, Washington often planned his militia requests by the season, and at critical times in the agricultural cycle he expected the militiamen to turn out only in a military emergency. State governments also understood the vital logistical significance of planting and harvesting and therefore allowed units, or at least parts of them, to go home when farming needs called. When Washington tried to coordinate as large a force as possible to meet with expected French forces later in the war, he would hold off calling out the militia until after spring planting, or if some militia were already mustered and it became clear the French were late or would not arrive, he would release them for the harvest.

In addition, Washington had to learn to respect the local needs that the state governments had for their militia. As he did when he released militia units to suppress Loyalist activity, he also had to learn to leave militia available for the other duties so critical within the states. He did, in fact, learn this after the 1776 campaign. In 1776, when he tried to draw out every available militiaman from the neighboring states, Washington found the state governments reluctant to part with all of their internal strength; he also found that the militia soldiers were reluctant to leave their homes undefended from enemy soldiers and internal dangers and that they also hated to leave their farms untended. Washington quickly became aware that the militia worked best when left for local duties, military and nonmilitary alike. Over the years, he and the other army generals learned to use the militia for reinforcements

sparingly, leaving them available for all of the local duties so vital to securing the states.

The militia of New Jersey provided another service to the army outside of the latter's campaigns. In January 1781 the Pennsylvania Continentals mutinied, and Washington feared that British leaders might try to induce the mutineers to join the British in New York City. Governor William Livingston of New Jersey immediately ordered General Philemon Dickinson, the commander of the eastern New Jersey militia, to station militia detachments along all of the roads between the Pennsylvanians' camp in Trenton and Staten Island. Thus, the militia not only guarded against any move by the mutineers toward the British but helped prevent the British from contacting the Pennsylvania troops. Fortunately for the Continental army, this mutiny ended calmly, but it was followed almost immediately by a mutiny of the New Jersey Continentals. When these new mutineers learned that a substantial force of New Jersey militia had already assembled nearby, they returned to their barracks. Thus, the New Jersey militia helped avert two major crises in the early months of 1781.

LATE WAR DUTIES

As the war drew toward a close in 1782–1783, the militia began to take on new roles, even as it continued to perform some of its traditional functions. Militiamen continued to guard areas such as the Neutral Ground, trying to stop plundering and raids by outlaws loyal to neither side. Efforts by the British commanders in New York City, Washington, and New York's Governor Clinton to stop the brutal raids of Whig and Loyalist forces against each other proved only partially successful. Occasional raids occurred throughout the summer of 1782 as partisan soldiers from both sides captured and plundered each other. As late as the early spring of 1783, Whig militia launched attacks on Loyalist bases, including the key one at Morrisania, New York.

Finally, in April 1783, orders for a cease-fire were issued from the British and American headquarters. As the war came to an end, the state militia began to make the transition to a peacetime role. In Connecticut, for example, militiamen remained on guard in southwestern Connecticut to protect equipment and defensive works, mainly from plundering by local inhabitants. Throughout the summer, militiamen guarded forts along the coast to prevent people living nearby from stealing supplies and hardware. Three men stood guard in New London as of September 1783, and their officers asked to be relieved because the locals not only kept stealing state property but also threatened to blow up the fort along with its men. Even after the British evacuated New York City in November 1783, militia officers were authorized by the Connecticut state

legislature to enlist men to continue to stand guard, no longer against British or Loyalist threats, but against dangers posed by local inhabitants.

Meanwhile, in Westchester County, the New York state government found it could not immediately regain control of the dangerous and volatile situation caused by lawless bands. As the British and American armies contracted their lines, the Neutral Ground was unguarded by soldiers from either side, thus leaving the door open for an escalation of raids and plundering by the bands that infested the area. Governor Clinton wanted to reestablish civilian control as quickly as possible, and so naturally he turned to the militia of the area to help him achieve this important purpose. Washington, understanding the importance of a swift and peaceful transition from civil war to civilian government, sent a Continental detachment to support the New York militia in the area. Despite the best efforts by the British commander, General Sir Guy Carleton, Washington, and Governor Clinton, the outlaws in the area continued to raid. These plunderers clearly worked for neither side, but only for themselves. A clear example was Captain Isaac Honeywell and his group of fifty men, who refused to obey commands from Governor Clinton to stop all activities. Such activities by Honeywell's and a few other bands continued throughout the summer of 1783, even as New York militia moved into the area to hunt them down and protect local political authority.

Committees began to emerge, especially along the war-torn coastal areas, that used militiamen to hunt down and harass Loyalists in the area. As a result, an increased number of Loyalists asked General Carleton for permission to leave with the British army, which in turn delayed the British withdrawal from New York, which in a vicious cycle delayed efforts to reestablish civilian control of the affected areas.

A similar situation existed in Monmouth County, New Jersey, where local militia formed a Committee of Retaliation to control the Loyalist element in the county as the war drew to an end. The committee had control of the local sheriffs and courts and thus could treat inhabitants pretty much as it pleased. The committee's men plundered people accused of being Loyalists and made sure they never won any local election. Others were jailed only on the basis of a simple accusation. Former Brigadier General David Forman was one of the leaders of this committee. Complaints against it were numerous but largely ignored.

Such activities were at their worst in Westchester County. The New York government set up commissioners to deal with the area's Loyalists, who were allowed to leave with a minimal share of their possessions. These commissioners used local militia to force Loyalists who resisted into leaving. In the process, many pro-British Americans received brutal treatment and lost most if not all of their

goods, and some were prevented from getting to their homes and families. Honeywell was one of the most notorious of these commissioners, brutalizing many Loyalists, some of whom simply fled to the British army in New York City. Governor Clinton sent in other militia to try to establish some control, and Washington even sent in some light infantry from the army to help. By late summer, Washington reported that some order had finally been established.

Finally, the British army completed its evacuation of New York City in November 1783, and when George Washington and George Clinton rode triumphantly into the city, they arrived with an escort of Westchester Light Dragoons. Thus, the militia of the state of New York provided the honor guard for the moment of victory.

Questions existed then and have persisted concerning the efficiency of the militia in its many combat roles during the war. However, there is little doubt that the local militia of the northern states proved very effective in its primary role of protecting the states from internal dangers posed by the pro-British Loyalists. Whig militia suppressed the Loyalists from the start, and British sympathizers never gained a real foothold within the states. As the war progressed, the need to suppress Loyalists declined, but right until the end of the war, and even into the postwar period, militiamen prevented Loyalists from ever posing any real threat to Whig control of the northern states. Another vital aspect of the success of the war in the North was the cooperation between Washington and the state governments. The commander in chief understood the very real needs of the state governments to maintain internal control, and not only did he release or avoid calling the militia when it was needed elsewhere, but he also proved increasingly willing to detach Continental forces to support the militia in its efforts to suppress dangers.

MINDEN, BATTLE OF. 1 August 1759. Britain sent an expeditionary force to the continent in August 1758 as part of an Anglo-Hanoverian-Prussian army to defend George II's beloved electorate of Hanover against France. The decisive action took place a year later on the plain outside the Westphalian fortress of Minden, for which the battle was named. Six British infantry battalions, three of which had been part of the column at Fontenoy fourteen years earlier, advanced by mistake from the allied center toward the French lines. Although exposed on three sides, this force—reinforced by three Hanoverian battalions and supported by the superb allied field artillery—shattered more than fifty squadrons of French cavalry and thirty-one battalions of French infantry sent against it in a display of controlled fire discipline (rolling volleys by platoons) of which there were few peers in the eighteenth century. With a gaping hole torn in their center, the French retreated and never menaced Hanover again for the remainder of the war. Controversy swirled around the battle because the senior British officer present, George Sackville (later George Germain), was alleged to have disobeyed the orders of the army commander, Ferdinand, duke of Brunswick, to bring his right wing cavalry to the timely support of the advancing infantry. A cloud hung over Sackville for the rest of his life, including during his service as principal architect of the military response to the American rebellion. Many other veterans of the battle also played prominent roles in the war of American independence. Among those who distinguished themselves at Minden were William Phillips (commander of the artillery), Friedrich von Riedesel, Charles Grey, and Hugh Percy. The father of the marquis de Lafayette was killed leading the Touraine Regiment, which subsequently took part in the Yorktown Campaign.

MINISINK, NEW YORK. 19–22 July 1779. While the Patriots were slowly preparing for Sullivan's expedition against the Iroquois, the Mohawk chief Joseph Brant led a force of Indians and Loyalists down the Delaware from Oquaga. Leaving his main body at Grassy Brook on the east bank of the Delaware, he moved on with sixty Indians and twenty-seven Loyalists to surprise the village of Minisink on the night of 19–20 July.

This village was about twenty-five miles east of Grassy Brook and ten miles northwest of Goshen. Brant entered the sleeping village and had several fires started before the inhabitants awoke to their danger. Making no effort to man their "paltry stockade-fort," they took to the hills. The raiders were bent on booty and destruction, and therefore let most of the settlers escape. Brant reported that four scalps and three prisoners were taken. After looting and burning the fort, mill, and twelve houses and doing their best to damage the crops and drive off the livestock, the raiders retraced their route toward Grassy Brook.

Word of the raid reached Lieutenant Colonel (also Dr.) Benjamin Tusten in Goshen the next day. In answer to his call, 149 militia reported for duty at Minisink. Tusten argued against pursuing the renowned Brant, but the inexperienced militia was swayed by Major Samuel Meeker, who mounted his horse, drew forth his sword, and shouted: "Let the brave men follow me; the cowards may stay behind!" Their manhood challenged, most of the men moved forward, giving Tusten little choice but to join in. The small force followed Brant's trail for seventeen miles before camping for the night.

The next morning, 22 July, Colonel John Hathorn joined them with a few men of his Warwick regiment and, being senior to Tusten, he assumed command. They covered only a few miles before coming upon the recently occupied camp of the enemy. The number of still-smoking fires in the campsite indicated a larger force than the Patriot militia might prudently challenge. Again Tusten counseled caution but was ignored. Captain

Bezaleel Tyler led the advance party but was almost immediately shot by an unseen Indian, a clear indication that Brant knew he was being pursued. But Hathorn pressed forward, catching sight of Brant crossing the Delaware near the mouth of the Lackawaxen. Hathorn planned to ambush Brant, but the latter doubled back behind the Americans, ambushing them in turn.

After a few shots had been exchanged, Brant claimed, he walked forward to tell his enemy it was cut off and to offer quarter. His answer was a shot that hit his belt and that, but for this good luck, might well have been fatal. Early in the hard-fought contest, Brant executed a skillful maneuver that cut off one-third of the militia force. The rest were surrounded, with Brant holding the high ground, patiently firing the occasional shot at the militiamen as they wasted their ammunition in ineffective fire. Around dusk, when the defenders were low on ammunition, Brant noticed that a rebel who held one corner of the position had been taken out of action. His attack penetrated this weak spot, organized resistance collapsed, and a massacre started. Tusten was killed with 17 wounded that he had been tending. Several men were shot as they tried to swim the Delaware. Of the 170 militia, only 30 returned home, while Brant's smaller force suffered only a few casualties. The monument to this battle erected in Goshen lists the names of 45 of those killed in the battle. Hathorn was on hand to lay the monument's cornerstone in 1822.

Brant's raid may have been intended as a strategic diversion to draw rebel forces away from Clinton and Sullivan in order to delay preparations for Sullivan's expedition. Alternatively, Brant may have been seeking provisions in striking at Minisink. He had no intention of doing battle with the militia, which foolishly insisted on pursuing one of the best frontier fighters of the Revolution.

MINUTEMEN. The term *minutemen* denotes members of the militia who volunteered to be ready to turn out for active service at literally a moment's notice. While the need to spring instantly into arms existed from the earliest days of settlement, in Massachusetts at least, the term *minnit men* seems to have been used first in 1756, during the French and Indian War. In the months before the outbreak of hostilities with Britain, volunteer military organizations with this mandate sprang up in all the colonies, although not all of these units were institutionally distinct from the militia.

The term *minuteman* is most closely associated with the units that appeared in Massachusetts in the wake of the Powder Alarm of 1 September 1774. As a means of eliminating supporters of royal government from the existing militia organizations, the Worcester County Convention called on 6 September for the resignations of all officers in the three county regiments and for the town militia companies to elect new officers. The town companies were rearranged to form seven new regiments, and new field officers were elected and instructed to organize one-third of the men in each new regiment to be ready to assemble under arms on a minute's notice. On 21 September 1774, this rapid-response portion of the militia was specifically referred to as "minutemen." The Massachusetts Provincial Congress, meeting in October, found that the militia in other counties were adopting the same system, and on 26 October it directed that this reorganization be completed across the colony.

Over the next six months, the process of purging royal supporters and creating new minuteman companies was undertaken with a mixture of urgency and deliberateness. The transition had not been completed by mid-April 1775, but enough had been accomplished so that the opponents of royal government were in firm command of the dual system of militia and minutemen when the regulars marched out of Boston on the night of 18 April. The men who stood in Captain John Parker's company on Lexington green on the morning of 19 April 1775 were true minutemen, and minuteman companies from surrounding towns led the attack at Concord Bridge later in the day. While the minutemen fulfilled the function for which they had been created, the bulk of the Massachusetts citizen-soldiers who turned out on 19 April were enrolled in ordinary or "common" militia companies. Once in the field, there was little to distinguish minuteman from militiaman, although the parallel command structure did have to be sorted out during active combat. When the Provincial Congress a few days later authorized the creation of volunteer companies enlisted for eight months of service (to the end of December 1775), the separate structure of minuteman companies and regiments was allowed to lapse. Men who had served in the minuteman and militia companies on 19 April formed the backbone

of the “eight-months’ army,” demonstrating once again their willingness to undertake the defense of their rights by force of arms.

On 18 July 1775, Congress recommended that other colonies organize units of minutemen for short terms of service, and Maryland, North Carolina, New Hampshire, and Connecticut are known to have complied. The creation of separate minuteman companies was generally replaced by designating a rotating portion of the existing militia companies as the first responders.

MIRÓ, ESTEBAN RODRÍGUEZ. (1744–1795). Spanish officer and governor. Born in Reus, Spain, in 1744, Miró served during the Seven Years’ War in the Zamora Regiment, taking part in the invasion of Portugal in 1762. After the war he transferred to the Corona Regiment as a lieutenant, serving in Mexico into the early 1770s. After taking part in the unsuccessful attack on Algiers in 1775, he attended the Avila Military Academy. In 1778 he went to Louisiana as second in command of the Fixed Louisiana Infantry and was brevetted lieutenant colonel. When Spain declared war on Britain, Miró acted as aide-de-camp to Governor Bernardo de Gálvez in the campaigns that seized British garrisons in West Florida: Manchac and Baton Rouge in 1779, Mobile in 1780, and Pensacola in 1781. In the latter year Miró was promoted to colonel and made commander of his regiment the following year. In January 1782 he became acting governor of Louisiana and West Florida, being named governor in August 1785 and intendant in 1788. After the Revolution, Miró’s primary responsibility was keeping the new American Republic out of Spanish territory. In addition to negotiating two treaties clarifying

their mutual boundaries, he subsidized Indian nations to resist U.S. attacks, supplying them with arms through British firms, and built a series of forts along the Mississippi. After closing the Mississippi River to the Americans in 1784, Miró had to contend with several invasion threats, most notably from Georgia in 1785. Lacking sufficient troops for the protection of Louisiana, he funded the wild schemes of Lieutenant Colonel James Wilkinson, the former Continental officer and adventurer, who came to New Orleans in 1787. Miró resigned on 30 December 1791 and returned to Spain. With the war against France in 1793, Miró returned to duty as a field marshal, dying while on the front on 4 June 1795.

MISCHIANZA, PHILADELPHIA.

18 May 1778. Also known as “Howe’s Farewell Party,” this extravaganza was organized and directed by Captain John André and Captain Oliver De Lancey to mark General William Howe’s departure as commander in chief of the British army in America. The *Mischianza*, which is an Italian term for a medley or mixture of different forms of entertainment, featured a grand regatta of decorated barges, gun salutes, a mock tournament between the Knights of the Blended Roses and the Burning Mountain, a banquet, fireworks, and a concluding exhibition in which an allegorical Fame saluted Howe with the words, “Thy laurels shall never fade.” Loyalist American girls graced the event, and soldiers participated as silk-clad pages. The hosts sent 750 invitations, and the affair lasted from 4 P.M. to 4 A.M. A London firm is said to have sold 12,000 pounds’ worth of silk, laces, and other fine materials for use in the event. Not everyone in the city was impressed. In her diary, Elizabeth Drinker, an affluent Philadelphia Quaker, dismissed these displays of excess as just so many “scenes of Folly and Vanity.” André wrote a long account of the party that was published in the *Annual Register for 1778* and can be found in *The Spirit of Seventy-Six*, edited by Henry Steele Commager and Richard B. Morris.

MOBILE. 14 March 1780. Captured by the Spanish. Considered a satellite of Jamaica's defense, the unhealthy British post at Mobile was garrisoned by three hundred men. It was captured after a brief siege by Bernardo de Gálvez, the governor of Louisiana, with a small force supported by a single armed vessel. Pensacola was saved by the intervention of a British squadron but fell the next year.

MOLLY PITCHER LEGEND. The term "Molly Pitcher" seems to have been applied generically to the women—soldiers' wives or other camp followers—who carried pitchers of water to thirsty soldiers on the battlefield. The name "Molly Pitcher" came to be applied in the nineteenth century to two women whose husbands served in the American army. Margaret Corbin helped man an artillery piece after her husband, a gunner, was killed at the Battle of Fort Mifflin (16 September 1776). The name is more often associated with Mary Hays McCauley, a stout, strong Irish woman from Carlisle, Pennsylvania, who helped man a cannon in Captain Francis Proctor's company of the Fourth Continental Artillery at the Battle of Monmouth (28 June 1778). In his memoirs, published in 1830, Joseph Plumb Martin recorded his eyewitness account of the woman we know as Molly Pitcher:

A woman whose husband belonged to the artillery and who was then attached to a piece in the engagement, attended with her husband at the piece the whole time. While in the act of reaching [for] a cartridge and having one of her feet as far before the other as she could step, a cannon shot from the enemy passed directly between her legs without doing any other damage than carrying away all the lower part of her petticoat. Looking at it with apparent unconcern, she observed that it was lucky it did not pass a little higher, for in that case it might have carried away something else, and continued her occupation.

Mary McCauley died in 1832.

MONCK'S CORNER, SOUTH CAROLINA.

14 April 1780. During the Charleston expedition of 1780, Clinton sent Lieutenant Colonel James Webster, with Tarleton's cavalry, to threaten the American line of communication east of the Cooper River. Tarleton moved with his legion and Ferguson's corps toward Monck's Corner on the evening of 13 April. A captured slave revealed complete information about Huger's dispositions and served as guide. About 3 A.M. the British made contact, routed the Continental cavalry posted in front of Biggin's Bridge, and then scattered the militia posted to the rear near Biggin's Church. Tarleton's troops temporarily captured Lieutenant Colonel William Washington, but he escaped in the darkness. Lieutenant Colonel Webster arrived on the 15th with two regiments to consolidate Tarleton's gains, and the rebel line of communications to Charleston was seriously hindered. Tarleton commented that his surprise was made easier by Huger's faulty tactical dispositions: not only had he failed

to send out patrols to detect and delay an enemy's approach, but he had used mounted troops to screen the bridgehead instead of employing foot troops on this mission.

Huger's command consisted of militia (many of them without arms) and from three hundred to five hundred Continental cavalry. The latter comprised remnants of the regiments of Baylor, Bland, Horry, and Moylan, plus what was left of Pulaski's legion (under Major Vernier, who was mortally wounded).

American losses were fifteen killed and eighteen wounded. Including the wounded, sixty-three men were captured along with ninety-eight dragoon horses and forty-two wagons loaded with food, clothing, cavalry equipment, and ammunition. The defeat prevented the Patriot cavalry from actively opposing the British for several weeks. Tarleton reported one officer and two of his men wounded and five horses killed and wounded.

MONCK'S CORNER, SOUTH CAROLINA. 27 November 1781. A British logistical base lay a few miles east of the village of Monck's Corner at Fair Lawn Plantation on the Cooper River, guarded by a small redoubt. A British field hospital was located in the brick mansion. On 27 November Brigadier General Francis Marion raided the base with about six hundred men. The fifty defenders of the redoubt under Captain Murdock McLean refused to surrender, but the hospital was captured and the doctors and ambulatory wounded taken away as prisoners; the others were left behind on parole. Soon afterward the mansion caught fire and burned to the ground.

MONCKTON, HENRY. (1740–1778). British officer. Fourth son of John Monckton, the first Viscount Galway, and brother of Robert Monckton, he commanded the Forty-Fifth Foot, known as the Sherwood Foresters, from 25 July 1771. He led this unit as part of

Henry Clinton's right wing in the battle of Long Island. As commander of the Second Battalion of grenadiers, he was wounded and captured at Monmouth, 28 June 1778, dying from his wounds a few hours later.

MONCKTON, ROBERT. (1726–1782). British army officer and colonial governor. Second son of the first viscount Galway and his wife, Lady Elizabeth Manners, who was the daughter of the second duke of Rutland, Monckton was educated at Westminster School from 1737. He entered the Third Foot Guards as an ensign in 1741. He fought in Germany and the Netherlands during the War of the Austrian Succession, including the battles of Dettingen (1743) and Fontenoy (1745). He became a captain in the Thirty-fourth Foot in 1744, major in 1747, and lieutenant colonel in the Forty-seventh Foot in 1751. In the latter year he was also elected to Parliament.

In 1752 he joined the Forty-seventh in Nova Scotia. He was commander of Fort Lawrence on the Bay of Fundy before becoming a member of the provincial council at Halifax in August 1753. A little later he pacified some rioting German settlers without bloodshed. On 21 August 1754 he became lieutenant governor of Annapolis Royal, and in Boston that winter he helped to plan the northern prong of the British offensive for 1755: a surprise attack on the French forts dominating the isthmus between the peninsula of Nova Scotia and the mainland. While Edward Braddock was defeated and William Shirley and William Johnson failed, Monckton at the head of 2,000 Massachusetts volunteers and 280 regulars, took Forts Beauséjour and Gaspereau with hardly a shot fired. The success emboldened Governor Charles Lawrence to demand an oath of allegiance from the French Acadians, who had passively or actively resisted British rule since 1713. Monckton had the still controversial duty of rounding up 1,100 of those who refused and deporting them for dispersal among the mainland colonies. In December he became lieutenant governor at Halifax and on 20 December 1757 colonel commandant of the Second Battalion of the Sixtieth Foot, the Royal Americans. Toward the end of 1758 he destroyed French settlements on the St. Johns River, and in 1759 he was James Wolfe's second in command during the Quebec campaign. Badly wounded in the battle on the Plains of Abraham, he became colonel of the Seventeenth Foot on 24 October. In 1760 he was sent to Philadelphia to command the troops in the south; in February 1761 he was promoted

major general, and in March he became governor of New York. In 1762 he led the successful assault on Martinique before returning to New York in June. Twelve months later he sailed for England, where in 1770 he was promoted lieutenant general. In 1769 he lost heavily on East India Company stock, making him desperate for further military employment. In 1773 his application to be commander in chief in India was refused, but his sympathies obliged him to decline a consolation offer of the same post in America. He died in London on 21 May 1782.

MONCRIEFF, JAMES. (1744–1793). British military engineer and army officer. Born in Fife, Scotland, James Moncrieff trained at the Royal Military Academy, Woolwich, from 11 March 1759 to 28 January 1762, when he was appointed to the post of practitioner engineer with the rank of ensign. He served at the siege of Havana, where he joined the One-hundredth Foot and was wounded. When the One-hundredth was disbanded in 1763, Moncrieff transferred to the Royal Engineers, afterwards serving mainly in the West Indies and mainland North America. He was promoted sub-engineer and lieutenant on 4 December 1770 and to captain on 10 January 1776. He probably served in the New York campaign, and in 1777 built across the Raritan River a bridge that was sufficiently unusual for a model to be kept at Woolwich. He may have been briefly captured by American raiders on Long Island early in 1778, but at Brandywine he led the Fourth Foot Regiment across Chadd's Ford in the wake of the Seventy-first Regiment, Ferguson's Riflemen (named for their commander, Major Patrick Ferguson), and the Queen's Rangers. The following month Moncrieff was commended for his part in capturing an American warship, the *Delaware*.

It was, however, in the southern campaigns that Moncrieff became famous. He accompanied Andre Prevost's expedition to Savannah, Georgia, and participated in the abortive attack on Charleston, South Carolina, in May 1779. When Prevost fell back to Savannah, Moncrieff was with the rearguard that was left on James Island under John Maitland's command. On 20 June Moncrieff took part in the successful action at Stono Ferry, and personally captured an ammunition wagon, while in pursuit of the fleeing enemy. Arriving in Savannah, he energetically devised and built the defensive works that enabled Prevost to repulse an attack led by Benjamin Lincoln and Charles

Hector Theodat D'Estaing on 9 October. He was brevetted major on 27 December, and remained at Savannah until the arrival of Henry Clinton's Charleston expedition in February 1780. At the siege of Charleston, it was the steady approach of his works and batteries, built with the aid of huge mantelets (protective screens) shipped from New York, that compelled Lincoln to surrender on 12 May. Moncrieff remained in Charleston as chief engineer, now with particular responsibility for its defenses. Brevetted lieutenant colonel on 7 September 1780, he settled into Charleston society and was elected president of the St. Andrew's Society in 1781.

Moncrieff's works were built by hundreds of African (slave) laborers. Moncrieff was keenly aware of the Crown's responsibility for their welfare, and even suggested forming a brigade of black soldiers. It may have been he who organized the evacuation of about 800 slaves when the British left the city on 14 December 1782. The Americans called this theft, and accused Moncrieff of profiteering by sending 200 of them to his own plantations in Florida.

After the war Moncrieff was chiefly employed in southern England, becoming quartermaster general on 14 July, but he had to wait until 18 November 1790 to be promoted colonel in the army. On 25 February 1793, Moncrieff's extraordinary expertise and achievements brought him the post of quartermaster general (and unofficial chief engineer) to the duke of York's expedition to the Austrian Netherlands. Moncrieff, a regimental lieutenant colonel Moncrieff distinguished himself at the successful sieges of Valenciennes and Mons, but was mortally wounded during a French sortie from Dunkirk on 6 September. He died the following day, and was buried with full honors at Ostend on 10 September 1793.

MONEY OF THE EIGHTEENTH CENTURY. A chronic shortage of specie existed in the British colonies before 1775. The colonies mined no precious metals and, because the cost of imports always exceeded the value of exports, most of the specie that flowed into the colonies flowed back out to Britain to pay for imported goods. Efforts to create a circulating

Continental Dollar. *This American coin, issued in 1776, was probably minted in New York City. Although its exact denomination is uncertain, its value is surmised to have been one dollar.* THE GRANGER COLLECTION, NEW YORK

currency were closely regulated by Britain, so the colonists were compelled to use readily available commodities like tobacco as substitutes and to maintain complicated accounts of book debts. Britain also discouraged colonial efforts to coin money, like the crude silver pieces minted in Massachusetts between 1652 and 1682, the best-known of which was the Pine Tree shilling, about the size of a modern quarter.

In the absence of locally minted coins, many different coins minted by the imperial powers circulated in the British colonies. The value of these coins was based on intrinsic value, fineness, and weight, the latter being affected by wear and sometimes by clipping or other forms of mutilation. Spanish coins, most of them minted in the New World, eventually predominated, especially the Spanish milled dollar or piece of eight, a silver coin about the size of a modern silver dollar.

Paper money was produced in the colonies for the first time in 1690, when Massachusetts printed twenty-shilling bills of credit to pay for the expedition against Canada. Britain monitored the paper bills of credit issued thereafter by the colonies, most closely in New England, an effort that generally kept the depreciation of the currency under reasonable control. It has been estimated that the money

supply in 1775 amounted to over twelve million dollars, about four million in paper currency and the rest, perhaps as much as ten million dollars, in specie.

After 1775 the high demand for all metals and the flood of new paper currency combined to drive specie out of circulation. The only coins minted during the war were the Continental dollars of 1776 (six thousand in pewter, many fewer in brass and silver) and a handful of Massachusetts and New Hampshire patterns; the new nation relied almost entirely on various forms of paper money as its circulating currency until 1780, when specie became more plentiful. Shortly after the Articles of Confederation took effect on 1 March 1781, Robert Morris, the superintendent of finance, began to make plans to establish a mint, an authority given to Congress by Article 9. However, by the time he had the plan in place in August 1783, the end of the war, the scarcity of silver bullion, and the need to economize on congressional expenses combined to scuttle the project. The first dollar coins were issued by the United States in 1794, modeled on the Spanish dollar.

Money accounts in the colonies were almost always kept in pounds, shillings, and pence: twelve pence to a shilling and twenty shillings (240 pence) to a pound.

Money reckoned in “pounds sterling,” in values tied to specie by the British government, was always worth more than any of the local currencies, which were also denominated in pounds, shillings, and pence and whose value against sterling fluctuated widely across the colonies. In the late colonial period, a British pound sterling had a value of one pound 6 shillings 89 pence (320 pence) in Massachusetts, one pound 13 shillings 4 pence (400 pence) in Pennsylvania, and one pound 15 shillings 7 pence (427 pence) in New York. Maryland issued the first paper money denominated in dollars in 1767. When Congress authorized the emission of three million dollars on 22 June 1775, it made the paper money payable in Spanish milled dollars; a Spanish dollar was worth roughly 4 shillings 6 pence in sterling, 6 shillings in Massachusetts, 7 shillings 6 pence in Pennsylvania, and 8 shillings in New York. In his report to Congress (2 September 1776) on the value of the coins in circulation relative to the Spanish milled dollar, Thomas Jefferson was the first to use a decimal notation, and he continued to be an advocate of the system. On 6 July 1785, while Jefferson was in Paris as minister to France, Congress adopted his decimal system, with the dollar as the standard unit.

MONMOUTH, NEW JERSEY. The Battle of Monmouth, on 28 June 1778, was one of the most complex, least decisive, and ultimately most controversial actions fought by the Continental army during the Revolution. It implicated the reputation of George

Washington, the army’s commander in chief; it ended the military career of Washington’s principal subordinate commander, Charles Lee; and in many respects it ended both the middle period of the war and major campaigning in the northern states. Understanding the dynamics of the battle is impossible without considering the state of the Revolution itself in the early summer of 1778.

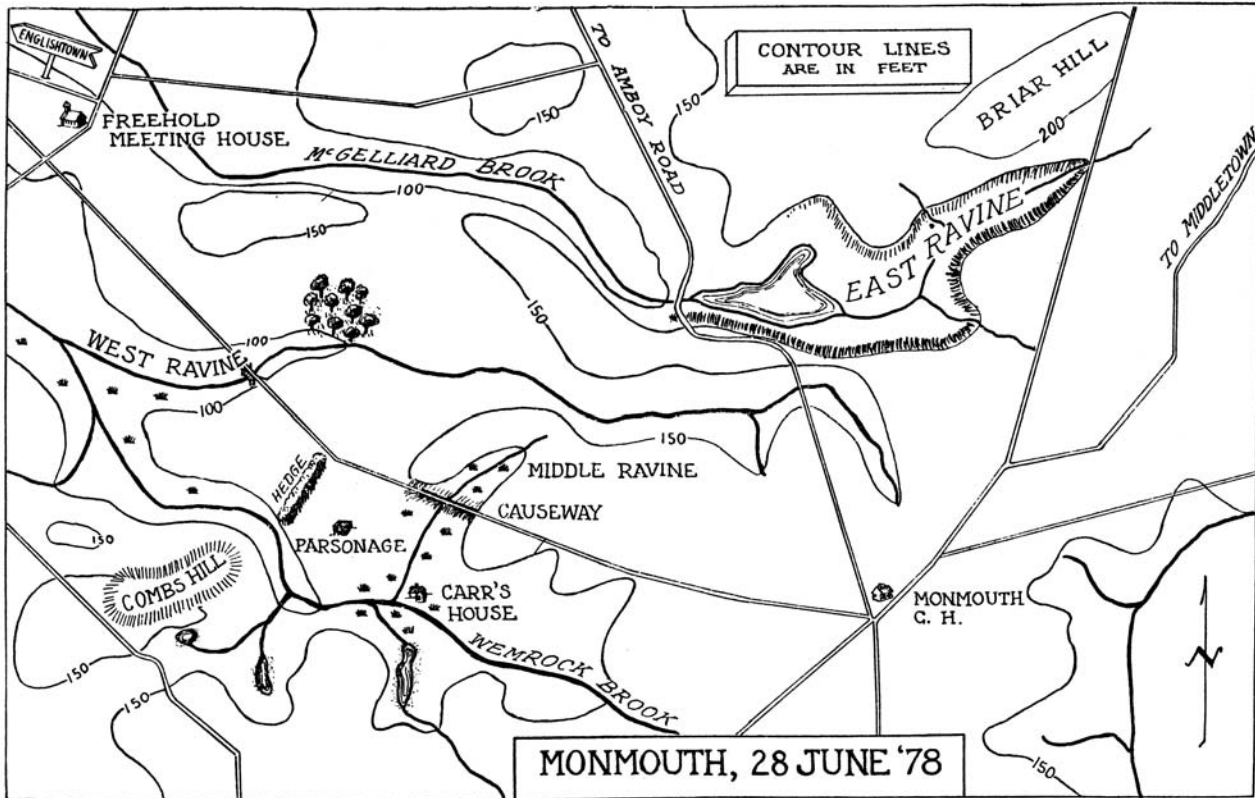

THE BATTLE’S CONTEXT

The Valley Forge winter ended neither with a bang nor with a whimper, but rather with a frenetic flurry of activity as both sides adjusted to the fact that a war for independence had become entangled with—or even subsumed by—a world war between Great Britain and France. The announcement in early May 1778 of the February treaties of alliance and commerce between France and the United States provided the occasion for a demonstration at Valley Forge of the new drilling skills of the American army after six weeks of intensive training under the Prussian volunteer, Friedrich Steuben. Whether or not the army’s capacity to march, whirl, and display on the camp’s Grand Parade ground would reflect or predict its ability to perform better in harsh combat conditions than it had the previous year at Brandywine and Germantown was not known. Whether its next battle, at Monmouth seven weeks later, meaningfully tested that question, is a matter of debate among modern historians. The view expressed below is that it did not.

The entry of France into the war meant that Britain would reduce its levels of material involvement in the North American colonies, first in order to protect its even more vital economic interests in the West Indies sugar islands, which were sure to be a focus of naval activity, and second in order to guard against invasion across the English Channel. On the North American continent, military resources would be deployed more selectively. New York City would remain the British headquarters. Major detachments would be made to the Caribbean and to East and West Florida. The British army would intensify its search for a soft or vulnerable location where enthusiastic civilian support of the king would multiply the return on military investment. Pennsylvania had clearly not proved to be such a place during and after the 1777 campaign. In practice, British land campaigning would be pulled toward the one remaining area where this theory had not been tested: the southern plantation states. There, land troops could also cooperate more easily and supportively with British naval forces operating nearby, in and around the Caribbean Basin.

MARCHING THROUGH NEW JERSEY

The new British commander in chief, Henry Clinton, arrived in Philadelphia in early May to take command of

THE GALE GROUP

the army from William Howe. He had been directed by the War Office to detach troops to the southern theaters from that place. Operating within a reasonable window of command discretion, however, he decided that such a delicate operation could best be performed from New York rather than Philadelphia. He therefore began preparing the army for withdrawal from Pennsylvania. When the large and influential Delaware Valley Loyalist community, whose members had risked their fortunes for the crown, resisted being abandoned by the redcoats, Clinton knew that he would have to offer its members passage to New York. This would encumber Lord Howe's fleet and require the British army to march back overland to New York.

Washington and his commanders knew that Philadelphia would be evacuated soon. During the spring he canvassed his generals on a range of options, from attacking Philadelphia, to transferring the "seat of war" to New York, to letting the British initiate the campaign. The generals split on these alternatives and Washington himself chose to wait and see. By early June the decision made itself. The British accelerated their preparations to retreat to New York while the Americans concentrated on building up their forces, making logistical preparations

for the new campaign, and pressing Steuben's training program to the maximum possible extent.

Clinton began loading his ships and ferrying troops and equipment across the Delaware to New Jersey after 11 June. Washington's logistical officers responded by plotting out routes toward the Delaware above Trenton and from there toward the Hudson, and by stocking supply depots along those routes. On 16 June, Washington issued orders for the army's march toward three river crossing points between Coryell's Ferry and Easton. The news two days later that the British had evacuated Philadelphia triggered a race toward the north. The British force of about ten thousand men (many of the German troops were sent with the fleet) marched in two parallel columns north through New Jersey along the Delaware River toward Allentown, southeast of Trenton. They were encumbered by a large baggage train, which—with the columns themselves—stretched awkwardly for almost twelve miles. The weather was hot and the roads were badly worn. Washington's troops left Valley Forge, continuing to display their ability to march very quickly, something that they had done the previous summer and fall, long before Steuben began to train them. Lightly encumbered by baggage, they reached and crossed the

Delaware before Clinton's force reached the bend in that river below Trenton. When Washington reassembled his army in Hopewell, New Jersey, he decided that it might be appropriate to go on the offensive. A council of war on 24 June split on the matter. A majority of generals, led by Charles Lee, argued for at most a cautious engagement with rear elements of Clinton's force but for avoiding a general engagement. A smaller number, articulated by Nathanael Greene and Anthony Wayne, wanted more aggressive measures. Washington favored the latter position but held his counsel.

Clinton's scouts kept him aware of the shadowy presence of this Continental escort, and—feeling pressured by it—he abandoned plans to march straight across the waist of New Jersey to New Brunswick and Perth Amboy, and from there across Staten Island toward New York City. Instead, Clinton bent his march northeast toward Sandy Hook, in Monmouth County, from where the army would have to be ferried up the harbor to the tip of Manhattan Island. This course took the British army through an alternating landscape of farmland and barrens or wetlands, with the latter increasing as it approached the Atlantic coast. The roads became increasingly sandy. The army, now marching as a single column rather than two, spread over an even longer stretch of terrain. Soldiers in woolen uniforms began to feel the effects of an early summer heat wave.

The Americans were moving due east from Princeton through Cranbury, closing on the left rear flank of the British army. Clinton sent much of his baggage, and the units in which he had the least confidence—consisting of about four thousand troops—to the front of his column, under the command of the German general, Wilhelm Knyphausen. He commanded the main body of the army itself, numbering about six thousand men, from the center, and dispatched Lord Cornwallis to the rear of the column to guard against sniping attacks. He intended to have Knyphausen march rapidly toward Middletown and then to Sandy Hook. Cornwallis would move more leisurely, while Clinton himself would lag in the middle in order to be able to support Cornwallis if his tempting presence drew the Americans into a general engagement. Clinton's main responsibility was to get his army back into headquarters unharmed and quickly enough to make the strategic detachments ordered by the War Department. But he had no objection to an opportunity to bloody his adversary on the way there if Washington was willing to fight it out.

THE BATTLE SETTING

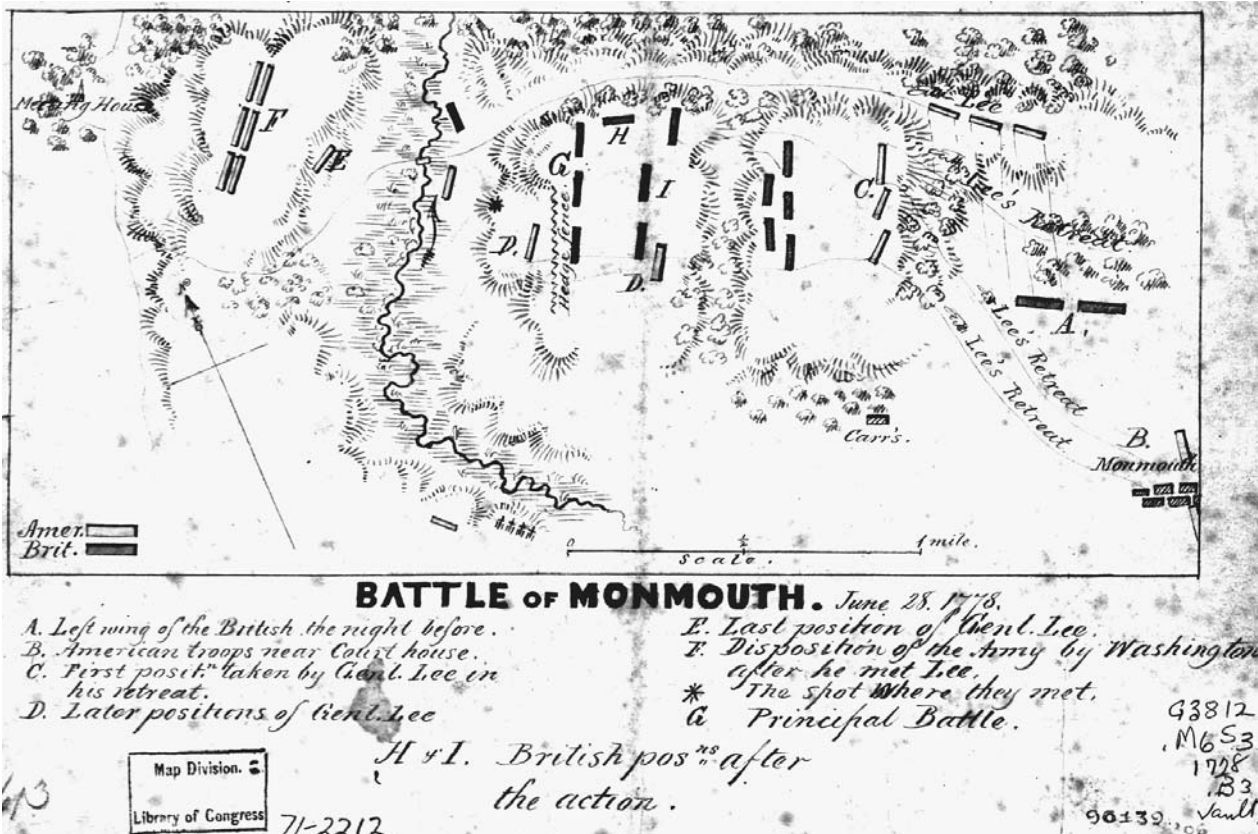

On 25 June, Washington decided to send forward a probing detachment of about fifteen hundred men to see if Cornwallis's rear guard might be roughed up. He offered

command of the detachment, as a matter of protocol, to General Lee, but Lee—having counseled against aggressive tactics and considering the projected probe to be at best a paltry maneuver—refused the assignment. Washington then gave his protégé, the Marquis de Lafayette, the command of the enterprise. As an evolving series of decisions increased the number of troops committed to the enterprise to twenty-five hundred, and then to four thousand men, Lee reconsidered the matter and claimed the right to command it as a prerogative of his rank as second-in-command of the army as a whole. Washington may have thought better about allowing a dissenter against offensive action to undertake the project, but he again deferred to Lee's entitlement as a matter of military custom. By late in the day on the 27th, the detachment had been increased again to about five thousand men.

On that day the British rested at a sandy crossroads village called Monmouth Court House, where the seat of the county government and its judicial bodies sat. The courthouse lay at the intersection of five roads that converged from all directions across central northeastern New Jersey. A small stream called Wemrock Brook, and its several branches, carved the countryside into a series of ravines—designated the West, Middle, and East Ravines—interspersed with piney woods and marshy lowlands. Washington did no more—indeed, he did considerably less—than he had done the day before the Battle of Brandywine nine months earlier, to survey the ground that might be fought over. If he had developed an overly complex tactical plan for the attack at Germantown, now he obviated that difficulty by developing no particular plan at all. Rather, he directed Lee and his subordinate officers, the Marquis de Lafayette, and Generals Anthony Wayne, William Maxwell, and Charles Scott, to push ahead of the main American force and to make contact the next day with rear units of Clinton's army. If they could precipitate a significant engagement without becoming overwhelmed, they should do that. Washington promised to be following nearby with the main body of the army, close enough to the action to reinforce Lee and his commanders whenever necessary.

EARLY AMERICAN RETREAT

In the middle of the night on 27 June, Clinton sent Knyphausen and his segment of the army forward toward Middletown with the baggage train. Clinton followed with the rest of the army toward daybreak on the 28th. Washington had almost immediate notice of the movement and he ordered Lee to engage the enemy as soon as possible. Some of Lee's skirmishers clashed briefly and inconclusively with Knyphausen's force beyond the sleeping village, but they broke off the chase. Lee then brought his main body of troops up and formed a line along the road between the courthouse and the East Ravine to the

Monmouth Battle Plan. This map, drawn in 1778, shows the position of troops before the Battle in Monmouth in New Jersey on 28 June 1778. THE LIBRARY OF CONGRESS, GEOGRAPHY AND MAP DIVISION

northwest. Clinton waited until Knyphausen's troops and wagons were well under way and then ordered Cornwallis to turn around and march back to Monmouth to receive Lee's force. Lee's improvised arrangement of units was struggling to maintain its shape as more and more British troops arrived on the battlefield against it. His efforts to shift regiments from one location to another as the clash grew were counterproductive. It soon became clear that generals such as Lafayette and Wayne, who had advocated engaging the British in councils of war, were less than confident under the direction of Lee, who had not. The confusion communicated itself to ordinary soldiers as an invitation to panic, and groups of men began to withdraw in search of safer positions. Lee decided that he had little ability to protect his force as a whole, especially against mounted redcoats, who could maneuver easily in sand and swamps while exhausted American infantrymen were all but helpless there. Lee tried to retract his troops toward the second ravine, but the retreat quickly became a general one.

Washington, meanwhile, pursuant to his promise to Lee and the other commanders the previous evening, was hurrying his main body of troops toward Monmouth

Court House to support what he hoped would become a decisively successful action. He expressed puzzlement when initial indications that the battle had been joined were followed by silence as the retreat began. Lee, Wayne, and Lafayette heroically struggled with some success to reform their units and to stop the withdrawal, but stragglers from the various divisions moved to the west. By ones and twos, and then by small groups, these individuals came into Washington's line of vision as he hurried toward the village. He incredulously and angrily queried several of these parties, not wanting to believe, and then not understanding, as evidence mounted of an action going badly wrong.

Washington finally encountered Lee himself near the West Ravine. He heatedly demanded an explanation of the situation from Lee, who took several minutes even to become coherent. Lee believed that he had creditably extracted his force from imminent disaster stemming from intelligence problems and insubordinate assistants, complicated by Clinton's unexpected willingness to commit a large part of his force to repel an attack on his rear guard. He professed incredulity that, instead of being congratulated, he was subjected to an impromptu cross-

examination. When Washington expressed angry dissatisfaction with Lee's explanations, perhaps inevitably, the latter reminded his commander that he had urged against instigating a general action. This rightly caused Washington to exclaim that orders were orders, whatever the recipient may have thought about their soundness, and, inevitably, to wonder why Lee had accepted the command of the detachment in the first place if he was opposed to its mission.

Both men then remembered that a battle was raging around them, and Washington, as was his custom, moved forward toward the fighting to try to restore order. At Brandywine the previous year, he had done the same thing, except that he had then worked toward the rear of the Birmingham Meeting clash. At Monmouth he headed forward toward the point of action. Before he moved out, Washington ordered Nathanael Greene, who was in the main section of the army that had arrived with Washington, to move his division to the right onto a hill to try to cover the battlefield. Greene took several artillery units with him and scrambled onto the elevation.

THE AMERICANS REGROUP

Washington then learned that Cornwallis, after allowing the Americans to retreat in front of him with relatively little pressure, had begun to advance, hoping to turn the withdrawal into a rout like the one at Germantown. The redcoats were less than fifteen minutes away, moving between the East and Middle Ravines. Washington assumed that the British would continue their march toward Middletown and Sandy Hook after repelling Lee's probe, rather than continue the action. The news that he was mistaken portended a long and difficult afternoon. His aides found an officer from the New Jersey line who was familiar with the ground in the area and who suggested that it could be defended. Washington ordered that the most stricken and heat-exhausted of the retreating troops should be taken into the woods in the immediate rear to be cooled, calmed, and refreshed. Of the remaining units in the forward group, Anthony Wayne's appeared to be the most intact. Washington sought to use it to anchor a holding action until he could bring the fresh troops that he had brought forward into play. He ordered several broken regiments to merge temporarily into a new one and placed them behind a hedgerow near the West Ravine. Wayne would nominally command the holding action. Washington and Charles Lee achieved a sort of impromptu battlefield détente when the commander in chief asked, and his subordinate agreed, that Lee assume command of the rear guard supporting Wayne's troops. Nathanael Greene's force—including some artillery—which had shifted to the American right, overlooked the scene from an elevation known as Comb's Hill. Henry Knox, the commander of the Continental artillery forces,

took the rest of his gunmen to an elevation on the left side of the American line, which also commanded the impending clash.

Before these positions could be consolidated the advancing redcoats, displaying the wall of bayonets that were famously presumed to terrorize less seasoned and less disciplined troops, reached the front and fell on the Americans. General Clinton also brought up mounted troops—another element in which the British had a clear technical superiority to the revolutionaries. These cavalry charged into the Continental line. The fighting became fierce in the late afternoon heat. The Americans at first seemed to buckle under the pressure but then regrouped and resisted furiously. Gradually and grudgingly, the Continentals yielded control of the West Ravine, but Lee's reserves absorbed some of the pressure and prevented the American line from breaking down. At this point the American artillery, advantageously positioned on the heights on both sides of the battlefield, emerged as a decisive element. Greene's units and Knox's force fired from close range into both sides of the British advance, and redcoat casualties mounted sharply. Clinton's heavy guns attempted to suppress the American fire, but they were firing from the plain onto small rises on either side and were unable to accomplish their objective. The general slope of the ground meant that the British were mostly fighting uphill, even when they moved forward.

Clinton made several more almost desperate efforts to throw enough strength at the American line to break it and thereby to secure the ground beyond the ravine, but in every case the advances were driven back with heavy casualties on both sides. After 5 P.M., with considerable daylight remaining barely a week past the summer solstice, there were indications that the British attack was ebbing. Washington was tempted to resume the role of the aggressor and to try to drive the British from the battlefield, but with the continuing heat, the need to attend to casualties, and a sense of the army's long-term interests, he declined to do so. Clinton withdrew his army to Monmouth Court House and camped overnight. As William Howe had done at Brandywine, Washington camped on the battlefield, claiming one of the main technical criteria of victory. He planned to resume the action in the morning, but the British rose early and marched toward Sandy Hook, from where they were ferried into New York City.

WHO WON?

While both sides claimed victory in the engagement, they implicitly did so on the basis of different assessments of what the battle had been about and what their objectives for it were. For the first time in a year and one-half—since Trenton and Princeton—the Americans could make a plausible claim to be called the victors in a significant armywide confrontation. Their casualties were somewhat

Molly Pitcher. *Mary Hays McCauley, better known as Molly Pitcher, carried pitchers of water to American troops and helped operate a cannon during the Battle of Monmouth in June 1778. Nineteenth-century engraving.* THE LIBRARY OF CONGRESS

fewer than those of the British (see below); they slept on the core part of the battlefield while the enemy pulled back and then withdrew altogether; and they measurably improved their confidence in terms of being able to hold their own in the face of enemy fire. Still, the battle itself was a hybrid or even a mongrelized event, and the British had a plausible case to make as well. General Clinton was trying to get his awkward train of men and equipment back to New York City, and he did so expeditiously, after fighting off a concerted rebel effort to disrupt his march. From the British perspective, a rebel insurgency had morphed into a more familiar Atlantic and even a global war against an enemy that they knew well how to fight. They were determined to embrace that reality, and Monmouth did nothing to prevent that end.

POST-ACTION CONTROVERSY

The outcome at Monmouth at first split and then solidified the American command structure. Although Washington and Charles Lee patched up their confront-

ation and worked together on the battlefield to extract the army from danger, Lee could not contain his anger. He had expected to be praised for doing just that with the forward elements when he met Washington behind the Middle Ravine on June 28, and he was amazed to be criticized instead. Several days of brooding enlarged this hurt into the sense that he had actually delivered Clinton's and Cornwallis's rear guard into Washington's hands on advantageous terrain, and that he was thus significantly responsible for any success. Washington could brook neither of these claims, especially since they were delivered to him in several impetuous and curt letters, which implied that Lee hoped to defend his honor in an administrative proceeding. Washington was more than willing to give him that opportunity. On 30 June he had Lee formally arrested in preparation for a court-martial. He charged Lee with disobedience of his orders for failing to attack the enemy, of "misbehavior" for "making an unnecessary, disorderly, and shameful retreat," and finally with displaying disrespect to himself in the course of their post-battle correspondence.

To address these charges here would be to re-describe the battle and is not really necessary. Historians generally agree that Lee was innocent of the first two charges but unquestionably guilty of the third. The strategic and political needs of the Continental establishment itself, and of its military institutions, cannot be separated from an account of the post-action controversy. Washington had withstood what he and his partisans believed to have been a winter-long effort by his enemies—represented principally by General Thomas Conway—to undermine his position and supplant him from his command. He had made significant strides in shaping the army that he himself called “new” the previous summer into a credible long-term military instrument. The Revolution had been irrevocably transformed by the reality of French diplomatic recognition and material assistance and by the fact of the new international war.

How these circumstances would impact the battlefield was not clear, but the commander in chief’s impregnable control of the army had to be reaffirmed. Washington’s officer corps had overwhelmingly rallied around him at Valley Forge, despite some inevitable carping and complaint. The court-martial staff was drawn from that corps, and Lee’s fate was sealed: he was convicted on all three of Washington’s charges. Congress confirmed the result, although it modified some of the specific language of the decree and softened the penalty. Lee was suspended from his commission in late 1778 and—after continuing to protest bitterly his innocence—dismissed from the army two years later. He died in 1782 in obscurity and became a temporary scapegoat for the Revolution’s travails. If not for the disgrace in 1780 of Benedict Arnold—who spent the week of Monmouth reestablishing Revolutionary control in Philadelphia as its temporary military governor—Lee might have become the great scapegoat of the war itself.

ASSESSING STEUBEN’S IMPACT

As it had after another engagement in central New Jersey eighteen months before—the Battle of Princeton—the Continental army veered northwest from Monmouth Court House in a relatively exuberant mood. If it had not earned an unequivocal victory, it had at least showed its mettle and resourcefulness. It is doubtful that Monmouth provides, as some scholars have claimed, the “proof of the forge,” convincing evidence of the transformational character of the army’s stoic virtue on the Schuylkill River and of Friedrich Steuben’s professional training of its members. The battle was too idiosyncratic in its structure and cadence to constitute such a test. The Continentals showed much of the willingness to attack a stronger force that they had done at Germantown the year before. When that attack quickly unravelled—whether

because of the ineptness of Lee or the impulsiveness of his immediate subordinates—the privates showed the same ability to regroup under hot fire that they had done at Brandywine. Once Washington reestablished a stable front line, they withstood repeated charges from some of Clinton’s best units in a way that may well suggest general improvements over the preceding ten months. This probably reflects, however, the contributions of Continental artillery forces, which seized advantageous high ground on either side of the West Ravine, and whose members repeatedly fired devastating volleys into the flanks of the British attackers during the last hours of the battle. If so, it should be noted that these skillful, fractious individualists were less involved in Steuben’s training exercises at Valley Forge than perhaps any other parts of the army.

After Monmouth, the army did little if any organizationwide campaigning in the North for the rest of the war. Washington marched his force to White Plains, New York, east of the Hudson River. After surveying its condition, he gradually distributed it along a broad crescent running from Fairfield, Connecticut, to Westchester County, New York, then stretching across the Hudson at the Highlands and finally curving south and east across the New York-New Jersey border to an anchor on the Atlantic near New Brunswick and Perth Amboy. The “lessons” of Valley Forge that Washington applied between 1778 and 1783 reflected the value of maintaining an alert but loose grip around an entrenched, urban enemy headquarters.

The patrolling and skirmishing that the army did in support of this modest but critical mission depended less on Steuben’s manual of arms and close-order drill than on a pride in military professionalism and a commitment to the principles of civilian supremacy and republican liberty. The impromptu Continental march to Yorktown and the 1781 siege there, as well as the use of elements from the northern army in the chaotic southern campaigns of 1778–1781, may reinforce Monmouth’s role in demonstrating the army’s conventional combat prowess imbibed at Valley Forge. But if this is the case, that point remains to be demonstrated.

CASUALTIES

These are more highly disputed and indeterminable than for most Revolutionary war actions. The Americans suffered at least 106 men killed, 161 wounded, and 95 missing, some of whom undoubtedly died, probably of the heat, and were buried in the woods near the battlefield. The British admitted losses of 177 killed, 170 wounded, and 64 missing. Again, heat-related deaths were considerable on both sides and may not have been included in official totals.

MONROE, JAMES. (1758–1831). Continental army officer and fifth president of the United States. Virginia. Born in Westmoreland County, Virginia, on 28 April 1758, Monroe was the son of a modestly prosperous family. He entered the College of William and Mary in 1774 but left on 28 September 1775 to enlist as a second lieutenant in Colonel Hugh Mercer's Third Virginia Regiment. He volunteered to accompany Thomas Knowlton and his rangers in attempting to encircle the British light infantry at Harlem Heights on 16 September 1776. Monroe also fought at White Plains (28 October) and at Trenton (26 December), where he helped to lead the vanguard and was seriously wounded. He was promoted to major on 20 November 1777 and named aide-de-camp to William Alexander (Lord Stirling). He fought at Brandywine, Germantown, and Monmouth before resigning on 20 November 1778.

In 1780 Monroe began studying law under Thomas Jefferson, then governor of Virginia, and stayed with him until 1783. He was elected to the House of Burgesses in 1782 and later sat in the Confederation Congress (1783–1786). In 1786 he married Elizabeth Kortwright, the daughter of a New York City merchant who was a Loyalist officer. He was a member of the state convention that ratified the Constitution and was a prominent anti-Federalist. He served as a U.S. Senator (1790–1794), minister to France (1794–1796), governor of Virginia (1799–1802 and 1811), negotiator for the Louisiana Purchase (1803), minister to Great Britain (1803–1807), secretary of state (1811–1817), secretary of war (1814–1815), and president (1817–1825). The most notable accomplishments during his two terms as president were in foreign affairs, including the acquisition of Florida and the promulgation of the Monroe Doctrine (2 December 1823).

MONTGOMERY, RICHARD. (1738–1775). Continental general. Ireland and New York. Richard Montgomery was born in Swords, Ireland, on 2 December 1738. The son of an Irish member of Parliament, he became an ensign in the Seventeenth Foot in 1756. Going to Canada the next year (1757), he took part in the siege of Louisburg (1758), was promoted to lieutenant, and served under Jeffery Amherst in the successful operations against Ticonderoga, Crown Point, and Montreal. Meanwhile, he became regimental adjutant in 1760. In the West Indies he was at the capture of Martinique and Havana (1762), becoming a captain by the end of those actions. Returning to Great Britain, he became a friend of Edmund Burke and Charles James Fox, two prominent Whig politicians of the time, and was greatly influenced by their liberal views. Disgusted with the British patronage system and his failure to advance further in the army, he sold his commission on 6 April 1772 and emigrated to America, settling on a 67-acre farm he had bought at Kings Bridge, New York. Having married Janet Livingston, the daughter of Robert R. Livingston, Montgomery became quickly involved in American politics and was elected a delegate to New York's first provincial congress in May 1775. He accepted a commission as Continental brigadier general on 22 June 1775.

Leaving his young wife and their new home near Rhinebeck (her estate), Montgomery went north to become second in command to General Philip Schuyler in the invasion of Canada in 1775 and 1776. With Schuyler soon evacuated for illness, Montgomery showed real military ability in leading an offensive into Canada, despite the poor quality of troops and subordinate leaders at his disposal and the logistical problems he faced. After taking St. Johns on 5 September–2 November 1775, and Montreal shortly afterwards, he pushed on to make the unsuccessful attack on Quebec (31 December–1 January 1776). He was killed in the latter action, never knowing that Congress had made him a major general on 9 December 1775. In death, Montgomery became a hero and martyr to the cause of American independence.

MONTMORENCI FALLS, CANADA.

31 July 1759. On the north shore of the St. Lawrence River below these falls, a few miles east of Quebec City, Major General James Wolfe tried to penetrate the French defenses. His lack of success prolonged the siege of Quebec and ultimately persuaded him to undertake the gamble of threatening Quebec from the bluffs west of the city, on the Plains of Abraham.

MONTOUR FAMILY. Elizabeth Catherine “Madam” Montour was born at Trois-Rivières, Quebec, in 1667, the daughter of Pierre Couc dit Lafleur and his Algonquian wife, Marie Miteouamigoukoue. Her family was involved in the Indian trade, which is how she met Roland Montour, a Seneca, whom she married, spending the rest of her life among the Iroquois. Madam Montour, as she was widely known, was employed as an interpreter by New York’s governor, Robert Hunter, and served in the same capacity for the Iroquois on many occasions. Her first husband was killed in the early 1720s, apparently while fighting the Catawba in South Carolina. In 1727 she married Carondowana, an Oneida chief. She died near the town named in her honor, Montoursville, Pennsylvania, in 1753.

Madam Montour’s son, Andrew, also known as Sattelihu, was an accomplished linguist, serving as an interpreter at many conferences between colonial governments and Indians. He received a captain’s commission from Virginia in 1754 and served as a guide for British and allied Indians during the Seven Years’ War, being present at both Fort Necessity and Braddock’s defeat.

Pennsylvania rewarded him with two land grants. He died in 1772.

Andrew Montour's son, John, also served as an interpreter for the British and the American colonists. During the Revolution he led a company of Delaware Indians allied to the rebels.

Madam Montour's niece, "French Margaret," married an Indian and had daughters named Catherine and Esther. The latter married a ruling chief and lived near Tioga. She may have taken part in the Wyoming Valley Massacre and was accused of murdering prisoners.

MONTREAL. 25 September 1775. Ethan Allen's abortive attack. When Richard Montgomery started his siege of St. Johns (now St-Jean, Quebec), he sent Ethan Allen ahead to recruit Canadians along the Richelieu River for the American army. John Brown went toward La Prairie with the same purpose while Canadians James Livingston and Jeremy Duggan also started assembling men around Chambly and Pointe Olivier. Allen discovered widespread opposition among the farmers to Governor Guy Carleton's efforts to mobilize the Canadian militia; he decided to try taking Montréal, which was virtually undefended owing to the governor's decision to concentrate his regulars at the border. Although the colony's fate seemed to be hanging in the balance, Allen could not find enough men willing to attack immediately. He turned back briefly to join forces with Brown and Duggan and developed a plan to capture the city. Allen would cross the St. Lawrence with his 110 men (30 Americans and 80 Canadians) at Longueuil below Montreal while Brown with 200 crossed upstream at La Prairie; the two forces would then attack simultaneously.

Allen and Duggan began crossing at 10 P.M. on 24 September, but he had to shuttle the men over in canoes. By dawn on the next day, Allen's band was in the village of Longue-Pointe, but Brown had not been able to get across. Allen was immediately detected, and the inhabitants of the city shut its gates, buying time for the surprised Carleton to organize his defenses. Encouraged by the support he was receiving from the population, Carleton sallied out with a polyglot force: 34 regulars from the Twenty-Sixth Foot, 20 staff members of the Indian Department, 80 English-speaking Canadians, 120 French-speaking Canadians, and a half-dozen Indians. At the approach of this force, most of Allen's Canadians melted away. The dozen or so left, plus the Americans, tried to set up a defense at Ruisseau-des-Soeurs but were quickly overwhelmed.

Carleton lost 3 killed and 2 wounded; Allen and 35 of his band were captured and 5 were killed.

This quixotic escapade had an impact far beyond the tiny numbers involved. It shored up British morale, encouraged the northern Indians, and kept most Canadians sitting on the fence. It also left Carleton free and gave Quebec City time to prepare its own defenses.

MONTREAL. 13 November 1775. Occupied by Americans. The fall of St. Johns on 2 November left Montreal open to capture. Brigadier General Richard Montgomery sent an advance detachment of Americans and Canadians toward Sorel the next day, and they brushed aside light resistance; Montgomery followed with his main body two days later. The first of Montgomery's men crossed the St. Lawrence River and landed upstream from Montreal on 11 November. Governor Guy Carleton had only about a hundred troops and a few militia, so during the night of 12–13 November he spiked his cannon and embarked on a few small vessels; in the morning of 13 November the citizens opened the gates of the city to the Americans. The garrison's retreat was turned back twice by blocking positions set up at Sorel. Carleton escaped on 19 November by disguising himself as a Canadian and reached Quebec the next day on the armed scow *Fell*. Brigadier Richard Prescott and the bulk of the garrison surrendered on 20 November along with their collection of small vessels headed by the six-gun brig *Gaspée*.

MONTRESOR, JAMES GABRIEL. (1702–1776). Military engineer in the colonial wars. Son of a naturalized Huguenot immigrant, Montresor entered the Royal Artillery in 1724 and over the next thirty years

served as a surveyor and military engineer at Minorca and Gibraltar, where he became chief engineer in 1746. In 1754 he was appointed Braddock's chief engineer, but because of ill health did not arrive in Virginia until after the debacle at the Monongahela. Thereafter, he supervised the construction or repair of most of the forts on the New York frontier as director of engineers and lieutenant colonel after 4 January 1758 and served under Amherst in the 1759 campaign. Plagued by ill health, he was allowed to return on leave to England in the spring of 1760. John Montresor was a son of his first marriage.

SEE ALSO *Montresor, John*.

revised by Harold E. Selesky

MONTRESOR, JOHN. (1736–1799). British military engineer. Born at Gibraltar, the son of James Gabriel Montresor, John Montresor went to America ahead of his father in 1754 and, appointed an additional engineer by Edward Braddock, was wounded at the Monongahela on (9 July 1755). He then served on the New York frontier and took part in the earl of Loudoun's so-called Cabbage Planting Expedition to Halifax, Nova Scotia, in 1757. He served under Jeffrey Amherst at the capture of Louisburg (1758), James Wolfe at the siege of Quebec (1759), and James Murray in the final conquest of Canada in 1760. During most of this time he specialized in scouting missions and dispatch carrying. In 1761 he explored the route up the Kennebec River in Maine that was later used by Benedict Arnold in his march to Quebec.

At the start of Pontiac's uprising, Lieutenant Montresor was sent from New York City with letters for the commander at Detroit. Delayed at Niagara for almost a month awaiting passage, he sailed on 26 August 1763 with provisions and a seventeen-man detachment of the Seventeenth Regiment commanded by Captain Edward Hope. Shipwrecked two days later, Montresor fortified the temporary camp and enabled the survivors and a one-hundred-man reinforcement that arrived on 2 September to beat off Indian attacks that lasted from dawn to dusk on 3 September. Finally reaching Detroit, he stayed there until 20 November 1763, when he left with Robert Rogers (the famous ranger) and a large detachment to return to Niagara. The next year he fortified the portage at the latter place and went with John Bradstreet to Detroit, where he improved the defenses.

He returned from England in 1766 as a captain lieutenant and barrackmaster. During the next few years he worked on fortifications or barracks at New York City, Boston, Philadelphia, and the Bahamas. Montresor surveyed the boundary line between New York and

New Jersey in 1769, and in 1772 he bought what was later called Randall's Island in the East River and lived there with his wife and family.

Montresor saw considerable service during the first three years of the War of American Independence. He was present at Lexington and Concord (19 April 1775) and laid out a redoubt on Bunker Hill to cover the retreat of the British to Boston that General Thomas Gage ordered abandoned later that day. He fought in the Battle of Bunker Hill on 17 June to regain the position Gage had let slip away two months earlier. Montresor was appointed chief engineer in America on 10 December 1775 and promoted to captain on 10 January 1776. He blew up Castle William, at the mouth of Boston harbor, when the British evacuated in March. He served as an aide to William Howe at the Battle of Long Island (27 August 1776), directed the artillery at the Battle of Brandywine (11 September 1777), and was present at the Battle of Germantown (4 October 1777). He supervised the construction of the British defenses around Philadelphia in the fall of 1777 and directed the attack on the Delaware River forts. (He had begun the fort on Mud Island, renamed Fort Mifflin, in 1771.) He organized the *Mischianza*, an elaborate entertainment held on 18 May 1778 at Philadelphia to honor Howe on the eve of his return to Britain. He fought under Sir Henry Clinton, Howe's successor, at Monmouth (28 June 1778), but his ties to Howe seem to have incurred him the displeasure of Clinton, who praised James Moncrieff as "an engineer who understood his business" but did not mention John Montresor once in his memoirs. Montresor returned to England later that year and retired from the army. He died in debtor's prison at Maidstone on 26 June 1799.

MONTRESOR'S ISLAND, NEW YORK. Owned by John Montresor from 1772 until the British evacuation of New York in November 1783, Montresor's Island (now called Randall's Island) lies at the mouth of the Harlem River. It was occupied by the British on 10 September 1776. "From that well-chosen advance post," comments the historian Douglas Southall Freeman, "they could land either on the plains of Harlem, south of

Kings Bridge, or on the Morrisania estate, whence they could flank the position at Kings Bridge by a march of six or seven miles" (vol. IV, p. 187). Up until this time it had been used by the Americans as an isolation area for troops inoculated with smallpox. Learning from two deserters that the island was lightly held, General William Heath got General George Washington's authority to retake it. Lieutenant Colonel Michael Jackson of the Sixteenth Massachusetts Continental Infantry led 240 men in an attempt to surprise the outpost at dawn on 23 September (some sources give 24 September as the date of this action).

An American sentinel near the mouth of Harlem Creek had not been informed of this operation and fired at the friendly force as it passed on the way to Montresor's Island. Jackson landed about dawn with three field officers and men from the first boat. When the British guard attacked, the men in the other two boats pulled away instead of landing to join their leaders. In the withdrawal, about fourteen Americans were killed, wounded, or captured. Major Thomas Henly, General Heath's aide-de-camp, who had insisted on accompanying the attack, was killed as he re-entered the boat. Jackson was wounded by a musket ball in the leg. Freeman notes: "The delinquents in the other boats were arrested, and tried by court-martial, and one of the Captains cashiered" (vol. IV, pp. 73–76).

MOODY, JAMES. (1744–1809). Loyalist spy. Born in Little Egg Harbor, New Jersey, on 31 December 1744, Moody settled as a farmer in Knowlton. He demonstrated no interest in politics until 1777, when he refused to swear allegiance to the state's revolutionary government. After being beaten by members of the local committee of safety, he was fired upon by the Knowlton militia near his house. All the shots missed, however, and Moody fled to the British lines, where he enlisted in the New Jersey Volunteers. He took part in numerous raids behind enemy lines to gather information, destroy arms depots, seize foodstuffs, capture Patriot officers and officials, and recruit Loyalists. Moody gained a reputation as being very good at these tasks and was credited with enlisting five hundred men to the Loyalist cause in 1777 alone. On 17 July 1780 he was returning to British lines at Bull's Ferry, New Jersey, when it came under a Patriot attack in

which he was captured. Imprisoned at West Point under inhumane conditions, he was transferred to Washington's camp for trial as a spy, making a bold escape on 21 September. Back in New York City, he was promoted to lieutenant. A trap was set for Moody in May 1781, and he was surprised by seventy militiamen. They opened fire and demonstrated their marksmanship when all of them missed. In his last raid that November, Moody attempted to steal congressional papers in Philadelphia but was betrayed. Moody escaped, but his brother was captured and executed.

In 1782 he went to London, where he wrote a popular account of his experiences. The crown awarded him an annual pension of £100, in addition to £1,608 to cover his losses. In 1785 Moody settled in Sissiboo, Nova Scotia, where he became a successful builder, local official, colonel of militia, and representative in the assembly from 1793 to 1806. He died in Sissiboo on 6 April 1809.

MOORE, ALFRED. (1755–1810). Continental officer, jurist. North Carolina. Born in New Hanover County, North Carolina, on 21 May 1755, Moore was the son of Judge Maurice Moore, with whom he studied law. He was licensed to practice in 1775, and on 1 September 1775 he became a captain in the First North Carolina Regiment, which was commanded by his uncle, James Moore. He took part in the Moores Creek Bridge campaign in February 1776 and the defense of Charleston in June. On 8 March 1777 he resigned his commission, but he continued to serve as a colonel of militia. In this capacity he was active in harassing the British based at Wilmington, Delaware, through much of 1781. The British plundered and burned his plantation in Brunswick County, North Carolina, in retribution. Moore joined the pursuit of General Charles Cornwallis's army into Virginia, and was present for the surrender at Yorktown in October 1781.

Elected attorney general of North Carolina on 3 May 1782, Moore served with distinction until 1791. He then went on to become a successful criminal lawyer. President John Adams appointed him an associate justice of the U.S. Supreme Court in December 1799. In 1804 he had to

resign because of poor health. He died at his estate on 15 October 1810.

MOORE, JAMES. (1737–1777). Continental general. North Carolina. Born in New Hanover County, North Carolina, in 1737, Moore served in the Seven Years' War as a captain. For a year he was commandant of Fort Johnston at the mouth of the Cape Fear River. In provincial politics he sat in the House of Commons from 1764 to 1771 and in 1773. He actively opposed enforcement of the Stamp Act in 1765 and became a Son of Liberty at that time. During the troubles with the Regulators (an ad hoc organization of private citizens who took law enforcement in their own hands) he sided with the eastern oligarchy and the established government. He served as an artillery colonel in Governor William Tryon's expedition of 1768 and in the battle of Alamance, in North Carolina, on 16 May 1771.

Moore played a prominent role in driving Governor Josiah Martin from the province, being the first to sign the circular letter calling for the first Revolutionary Provincial Congress, which was held in New Bern in August 1774. He represented his county (New Hanover) at the Third Provincial Congress, which met on 20 August 1775 at Hillsboro. On 1 September he was selected by this body to command the First North Carolina Continental Regiment. In this capacity he directed the campaign that ended with the important victory at Moore's Creek Bridge on 27 February 1776.

Appointed brigadier general by Congress on 1 March 1776, he was made commander in chief of the Patriot forces in North Carolina. During the defense of Charleston that year, Moore had the relatively inactive role of observing a small British fleet in the Cape Fear River. On 29 November he was ordered to Charleston, where he remained until February 1777. On 5 February he was ordered north to join General George Washington. He died suddenly at Wilmington, North Carolina, where his command had been delayed by lack of money for supplies, on 15 April 1777.

MOORE, MAURICE. (1735–1777). North Carolina jurist and Patriot. North Carolina. Born in New Hanover County, North Carolina, Maurice Moore was the brother of General James Moore, brother-in-law of General John Ashe, and father of Justice Alfred Moore. He became a prominent politician at a young age, entering the assembly in 1757, where he sat nearly every year until 1774. His support of the royal government led to his appointment to Governor William Tryon's council in 1760 (he served a year) and to an associate judgeship. His pamphlet attacking the Stamp Act on the grounds that there was no American representation in Parliament led to his suspension as judge, but he was reinstated in 1768 and served until the court ceased to function in 1772.

Although he initially sympathized with the Regulators, Moore served as a colonel in Tryon's expedition against them in 1768 and was a judge in the Regulator trials of 1768 and 1771 (after the battle of Alamance). Having become bitterly hated by the Regulators, he switched sides again, becoming their champion and calling for leniency. In the Revolutionary politics that led to war with Great Britain, Moore served on important committees of the Third Provincial Congress in 1775, but was considered to be too conservative to become a leader. His brother's victory over the Loyalists at Moore's Creek Bridge destroyed all chances for the course he advocated: reconciliation on the basis of political conditions in 1763. Although elected to the Fifth Provincial Congress of November 1776, he did not attend. Equally suspected by both Patriots and Loyalists, Moore retired from politics and died early in 1777 at his home in Brunswick.

MOORE'S CREEK BRIDGE. 27 February 1776. Reports of Lexington and Concord so fanned the flames of revolution in North Carolina that within a few months the royal governor, Josiah Martin, fled; the so-called Mecklenburg Declaration of Independence was adopted; a provincial congress was organized; and North Carolina raised two Continental regiments.

In spite of this revolutionary progress, North Carolina was deeply divided. In part, these divisions were the legacy of the recent Regulator conflict, but there was strong

Loyalist sentiment as well as numerous advocates of neutrality. Those supporting the crown included a variety of groups across the entire colony. Some had been Piedmont Regulators; others were Tidewater planters or Highland Scots along the Cape Fear River. They were united only by their opposition to the revolt, and in some cases, opposition was created by antipathy toward the rebellion's leadership. Quakers and German Pietists, wanting nothing to do with either side's politics, sought only to be left alone. Perhaps only 30 percent actively supported the Whig cause. The Provincial Congress had little or no success in winning over the lukewarm and disaffected, but the Loyalists were not united initially. Their inertia enabled North Carolina to assist Virginia and South Carolina and be ready when the Loyalists finally began active opposition.

TORY PLANS AND WHIG RESPONSE

General Henry Clinton's Charleston expedition in 1776 was prompted largely by Martin's assurance, supported by other refugee governors and planters, that the South could be retained if a military force were present to support the Loyalists. Dartmouth approved Clinton's strategic diversion; Lord Germain endorsed it despite the protests of Generals Edward Harvey and William Howe. When Martin learned that reinforcements to augment Clinton's expedition would leave Ireland on 1 December 1775, he made plans for a coordinated Loyalist uprising in North Carolina. Included in his plans were instructions to the Loyalists to have their troops at Brunswick Town on 15 February.

In the meantime, General Thomas Gage sent Lieutenant Colonel Donald McDonald and Captain Donald McLeod to North Carolina to recruit for the Royal Highland Emigrant Regiment. Arriving in Cross Creek (later Fayetteville), the two officers, Allen McDonald, and other Highland Scots raised the royal standard at Cross Creek on 5 February 1775, calling for armed supporters to assemble. Because of his reputation as a veteran of Culloden and the work of others, including the legendary Flora McDonald, one thousand Highland Scots had gathered by 18 February. Most were recent immigrants motivated not so much by loyalty to George III as by their dislike for the Lowlanders and Ulstermen so prominent in the rebel camp. Another five hundred men, including former Regulators, joined McDonald at Cross Creek.

In the absence of Colonel Robert Howe's Second North Carolina Regiment, Colonel James Moore's First North Carolina Continentals, about 650 men and five guns, formed the nucleus of the force that marched from Wilmington and camped about twelve miles south of Cross Creek at Rockfish Creek on 15 February. On the 18th Moore was joined by Colonel Alexander Lillington's 150 Wilmington minutemen, Colonel James Kenan's 200

Duplin County militia, and John Ashe's 100 Volunteer Independent Rangers.

About this time, McDonald sent Moore a copy of Governor Martin's proclamation and a letter calling on Whigs to join the royalist colors. After a delay in sending an express message to Colonel Richard Caswell, who was approaching from New Bern with eight hundred Partisan Rangers, Moore sent McDonald the Test Oath with the suggestion that bloodshed be avoided by the Loyalists joining the Whigs.

GATHERING AT MOORES CREEK

By this time McDonald knew the enemy was gathering around him. He decided to avoid a general engagement and march to the coast. His route was generally east across the Cape Fear and South Rivers, thence southeast toward Wilmington. Moore had to withdraw along the Cape Fear River and then intercept McDonald's march. When Caswell reported that he was between the Black River and Moore's Creek, and that the Loyalists had crossed the former, Moore sent word to stop the Tories at Moore's Creek Bridge, about eighteen miles above Wilmington. He asked Caswell to meet him there if possible, otherwise to follow the enemy toward that place.

Lillington and Ashe reached Moore's Creek on the 25th. Caswell arrived the next day and threw up earthworks on the enemy (or west) side of the narrow but deep stream. He later abandoned the west camp and joined Lillington and Ashe on the east side, where a breastwork had been erected. After removing some of the bridge flooring, leaving a gap where the enemy could cross only on the log stringers, the one thousand Whigs deployed to cover the bridge. If subsequent Tory accounts are to be believed, the Whigs also greased the stringers. Through the chilly night of 26–27 February, they rested on their arms. Lillington seems to deserve most of the credit for the preparations at the bridge and for the subsequent action. Moore, at Elizabethtown blocking the route to Cape Fear, did not arrive until after the battle.

The Tories had been advancing for three days through rough, swampy terrain, and late on 26 February they camped six miles from the bridge. After scouts reported the enemy occupying a position on the west bank of Moore's Creek (see above), the Loyalists resumed their advance at 1 A.M. McDonald had become ill on 26 February, and command passed to Donald McLeod, now promoted to lieutenant colonel of the North Carolina Loyalist militia. Captain John Campbell led the advance guard of eighty picked Scots armed only with claymores; fourteen hundred men made up the main body, and three hundred riflemen brought up the rear. A shortage of arms meant that only about five hundred men were equipped for combat.

THE FIGHTING

The Tories intended to surprise the Whigs camped on the west bank. On entering the camp, they found it abandoned. This led the Tories to believe that their crossing would be unchallenged. As they formed into a battle line before crossing the bridge, rifle shots were fired near the bridge. Campbell's advance guard, accompanied by a few others, including McLeod, immediately went out onto the bridge, shouting "King George and Broadwords!" Once across, they moved up the road at a rush. Whig infantry and two artillery pieces opened fire at a range of thirty yards from behind breastworks, and the Tory attack was shattered. McLeod and Campbell were killed with several of their men within a few paces of their objective. Others were hit on the bridge or simply fell into the deep stream and drowned.

The Whigs then counterattacked. Some rushed forward to replace planks on the bridge and pursue the panic-stricken Tories. A small detachment forded the creek, pushed through the swamp, and hit the enemy rear.

Moore had directed the Second and Fourth North Carolina Regiments, under Lieutenant Colonels Alexander Martin and James Thackston, to occupy Cross Creek, and their presence undoubtedly accounts for the numerous prisoners and weapons taken after the battle. General McDonald, several other officers, and 850 men were taken prisoner. The booty included £15,000 in specie, 13 wagons, 1,500 rifles, 350 muskets, and 150 swords and dirks. This haul came not only from prisoners but also from known and suspected Tories in the region. The prisoners were jailed and their property was subjected to looting and burning, forcing many Highlanders to flee the province.

About thirty Tories were killed or wounded in the brief action at the bridge. Moore estimated total enemy casualties in killed, wounded, or drowned as about fifty. Only two defenders were hit, and one, John Grady, died on 2 March.

COMMENT

While Moore, Lillington, and Caswell deserve praise, as do the North Carolina political leaders responsible for raising their armed forces, the king's representatives failed him at all levels of planning and execution. Governor Josiah Martin was overoptimistic about Loyalist support and premature in calling it out. The Charleston expedition, delayed by late arrival of the fleet, was doomed to failure because local support had been defeated. McLeod went forward without knowing what lay in front of them. The east bank breastworks were not only across the road, but paralleled it. McLeod appears to have run into a classic ambush and paid the price. At least nine bullets and some twenty-four shot

struck him down, evidence the Whigs were firing buck and ball, and at very short range.

The Halifax Resolves were adopted on 12 April 1776 by North Carolina's Provincial Congress, and exactly a month later, Sir Henry Clinton declared North Carolina in a state of rebellion. Lord Cornwallis landed from Clinton's fleet at Brunswick Town and ravaged the area. Colonel Robert Howe's plantation was virtually destroyed and Brunswick Town burned, but North Carolina was spared further British military operations for almost five more years. The delay bought by the Whig victory at Moores Creek Bridge gave the new North Carolina state government time to solidify its hold over the populace and build the infrastructure that would support the revolt.

MORAVIAN SETTLEMENTS. Count Nicolaus Ludwig Zinzendorf (1700–1760) helped revive the evangelical sect of Protestants called Moravians after giving a group of them refuge on his Saxon estate in 1722. He looked to the New World as a place where the Moravians could escape persecution and exercise their missionary zeal. Bishop Augustus Gottlieb Spangenberg (1704–1792) reached Georgia in 1735 with a few Swiss colonists, and thirty other Moravians later followed. In 1741 the Moravians established Nazareth and Bethlehem, Pennsylvania, as a communistic society. That year Count Zinzendorf arrived in America with hopes of uniting all German Protestants in Pennsylvania. Despite many Protestants' suspicious attitude toward his pacifist and generous theology, which included an opposition to slavery, Zinzendorf exerted an important influence on ecclesiastical affairs in the colonies. His daughter Benigna organized what would become the Moravian College in Bethlehem.

As Zinzendorf left, Spangenberg, the newly appointed bishop of the North American Moravians, returned. In 1749 he was removed from his office in

disputes over church politics but, because of mismanagement by his successor, was reinstated in 1751. He led a party of Bethlehem Moravians south to find a new home, and in August 1753 they purchased 100,000 acres from Lord Granville in North Carolina, where they established what was known as the Wachovia: the towns of Betharaba (Dutch Fort), Bethania, Friedberg, Friedland, Hope, and Salem. The latter is now part of Winston-Salem. Spangenberg's new settlements were organized under a plan of family life, as opposed to communistic labor, and became the Moravian center of the South. The North Carolina Moravian towns were trade centers that served much of the South. They suffered from robberies by highwayman during the war.

As a result of immigration, the Moravian population of Pennsylvania swelled to 2,500 people by 1775. The Moravians were more active than any other religious body in conducting missionary work among the Indians, enjoying particular success among the Mahicans and Delawares, hundreds of whom converted to Christianity. Their converts were given special protection by the government of Pennsylvania, which promised their security from attacks by both white settlers and non-Christian Indians, though that status did not save them from attacks by frontier militia during the Seven Years' War and the American Revolution.

As pacifists, the Moravians generally attempted to avoid the American Revolution, though many served in non-combatant roles with the Patriot side. In December 1776 George Washington appropriated the Brothers' House (the residence for single men) in the Bethlehem community for use as a military hospital. By the time the hospital was moved from this site in April 1778, more than 1,000 Continental soldiers were treated, with many Moravians offering their services. The Moravians worked hard to protect Christian Indians from the war's violence, with mixed results. A few missionaries, most famously David Zeisberger, served as translators and even intelligence agents for the Patriots. Like the Quakers, the Moravians were persecuted for their pacifism. Finding greater security in isolation, the Moravians withdrew further into their communities at Bethlehem and Salem, as the Revolution put a halt to many of their missionary activities.

MORGAN, DANIEL. (1735?–1802). Continental general. New Jersey, Pennsylvania, and Virginia. Morgan's place and year of birth are uncertain. After quarreling with his father, a Welch immigrant, Morgan

moved to the Shenandoah Valley in 1753, working as a farm laborer and teamster. In 1755 he joined Edward Braddock's expedition as a teamster, where he was punished with a life-threatening 500 stripes for knocking down a British officer who had hit him with a sword. After Braddock's defeat, Morgan helped to evacuate the wounded and hauled supplies to frontier posts. In 1758 Morgan became an ensign. While carrying dispatches to Winchester he was struck by an Indian bullet that passed through his neck and his mouth. He lost all the teeth on one side of his face. In 1762 he took possession of a small grant near Winchester, Virginia, and moved in with Abigail Curry, whom he married ten years later. The next year he served as a lieutenant in Pontiac's War, and he took part in Dunmore's War (1774). In between, he prospered as a farmer and slave owner.

Commissioned a captain of one of the two Virginia rifle companies on 22 June 1775, he enlisted the prescribed 96 men in the next ten days, and led them the 600 miles to the Boston lines without losing a man.

Morgan's company volunteered to join Benedict Arnold in his march to Quebec, which occurred from September to November 1775. In the disastrous assault on Quebec, 31 December, Morgan took command from the wounded Arnold and drove on with magnificent élan until subordinates prevailed on him to make a decision that probably was fatal to the enterprise. A prisoner in Quebec until the next summer, he returned on parole and was included in a prisoner exchange in January 1777. Commissioned a colonel of the Eleventh Virginia Regiment by Congress, Morgan joined Washington's main army a few months later. After serving with distinction in the New Jersey operations of 1777, Morgan was selected by Washington to lead 500 riflemen personally selected by the commanding general. This unit was known as "the Corps of Rangers." Washington then ordered this corps, the only rifle unit in the American army, to join the campaign against General John Burgoyne.

Morgan and his riflemen played a decisive role in winning the two battles of Saratoga, which occurred on 19 September and 7 October 1777, decimating the British in both instances. Morgan immediately led his corps back to Washington's main army, arriving in time to skirmish several times with British troops in December 1777. While in winter quarters at Valley Forge, Morgan's Eleventh Virginia Regiment was brigaded with the Seventh Virginia Regiment under the command of Brigadier General William Woodford. Morgan was not engaged in the battle of Monmouth on 28 June 1778, but he did conduct a preliminary harassment and a vigorous pursuit after that action.

Morgan took an extended furlough from the army on 18 July 1779, after Anthony Wayne rather than Morgan was chosen to command a new light infantry brigade. Congress ordered him in June 1780 to report to Horatio Gates in the southern theater of operations, but he declined to comply. He took this action in protest, since Congress apparently did not value his services highly enough to accompany its call with the restoration of his relative rank, much less make him a general. When Morgan learned of the disaster at Camden, however, he rejoined the army regardless of rank. On 2 October he was given command of a corps of light troops that had been organized by Gates. On 13 October Congress at last appointed him brigadier general, and when Nathanael Greene succeeded Gates he confirmed the assignment of Morgan as commander of the elite corps.

At Cowpens, South Carolina, on 17 January 1781, Morgan displayed tactical genius in feigning a rout before turning on Lieutenant Colonel Banastre "Butcher" Tarleton's legion and winning a battle that is considered a classic. Morgan then, and wisely, started running again. Soon after linking up with the main body under Greene,

Morgan, riddled with disease, took a leave of absence (10 February 1781).

Morgan was deaf, at first, to appeals to support the Marquis de Lafayette in halting British raids in Virginia, although he did arrive after the real danger was over. Back on the frontier, the old warrior's aches and pains—arthritis, rheumatism, and sciatica, according to different accounts—did not prevent an active life in diverse enterprises. As a major general, Morgan led the Virginia militia into Pennsylvania during the Whiskey Rebellion of 1794, encountering no opposition. He ran unsuccessfully for Congress as a Federalist in 1795, and was elected in 1797. Ill health forced Morgan's decision not to seek re-election. He retired to Winchester, the old teamster now a major landowner, and died there in 1802.

MORGAN, JOHN. (1735–1789). Medical director of the Continental army. Pennsylvania. Born in Philadelphia, Pennsylvania, on 16 October 1735, Morgan graduated with the first class of the College of Philadelphia (now the University of Pennsylvania) in 1757. Almost immediately he enlisted as a lieutenant and surgeon for the provincial troops during the Seven Years' War. In 1760 he undertook a period of study abroad, during which he enjoyed a very successful education in London and Edinburgh. His studies culminated in his election to the Royal College of Physicians and to the Royal Society in 1765. He returned to Philadelphia that year, and played a key role in establishing a medical school at his alma mater, becoming its first professor. In doing so, he acted without consulting other Philadelphia physicians, and thus made a bitter enemy of William Shippen, Jr.

On 17 October 1775 the Continental Congress elected Morgan to be the director-general of hospitals and physician-in-chief of the American army. Joining the army at Cambridge and accompanying it later to New York, he worked skillfully to achieve an efficient organization of his service but, in so doing, made so many enemies that, on 9 October 1776, he was demoted, his directorship being reduced to only those hospitals east of the Hudson River. On 9 January 1777 he was removed even from this reduced authority without explanation and replaced by his old Philadelphia rival, Shippen. Embittered, Morgan published "A Vindication" in 1777,

making the inevitable charges of Congressional meddling and the plotting of “a mean and invidious set of men” to remove him. Although he was cleared of any misconduct by Congress in 1779, he considered himself disgraced and withdrew from public life, except to bring charges of fraud against Shippen, who was court-martialed in 1781 and forced to resign. Morgan died in Philadelphia on 15 October 1789.

Mark M. Boatner

MORRIS, GOUVERNEUR. (1752–1816). American statesman. New York. Born on 30 January 1752 in the manor house at Morrisania (now the Bronx), Gouverneur Morris was reared as a cultured provincial aristocrat and the son of a judge of the court of vice-admiralty. His mother, Sarah Gouverneur, was the daughter of the speaker of the New York Assembly.

Morris graduated from King’s College (now Columbia) in 1768, studied under William Smith, later chief justice of New York, and was admitted to the bar at the age of 19, in 1771. He soon built up a successful practice in New York City. As a member of the landed aristocracy, he naturally had misgivings about revolution. Although his half-brothers, Lewis and Richard, were Patriots, his mother was a Loyalist and his half-brother, Staats Morris, was a general in the British army. Gouverneur Morris nevertheless adhered to the Patriot cause when it appeared that war was inevitable, despite expressing fears, in 1774, that this would bring “the domination of a riotous mob.” In 1775 he was elected to the New York Provincial Congress, where he proposed a plan for a Continental paper currency that was adopted by the Continental Congress. Over the next two years he promoted a strong central government, with representatives selected from electoral districts rather than states.

With John Jay and Robert L. Livingston, he drafted the constitution under which New York was governed for the next 50 years. Responsible for the constitution’s conservative franchise-property qualification, Morris surprised many contemporaries with his consistent and impassioned opposition to slavery. He strongly supported General Philip Schuyler and, with Jay, attempted to prevent Schuyler from being superseded by Horatio Gates. Elected to Congress in October 1777, the youthful Morris was interested primarily in financial, military, and diplomatic matters. He drafted many important documents, including the diplomatic instructions for Benjamin Franklin and, later, for the peace commissioners. One of his most dramatic actions came in the official response to the Britain’s conciliatory Carlisle Commission of 1778. Morris called for the United States to be “an Assylum to mankind. America shall receive to her bosom and comfort and cheer the oppressed, the miserable, and the poor of every nation and of every clime.” He visited Valley Forge early in 1778, and returned to Philadelphia committed to military reforms, and was a firm supporter of General George Washington.

Defeated for re-election to Congress because he refused to enlist congressional support for the claims of New York in the dispute over Vermont, Morris transferred his citizenship to Pennsylvania and set up his home and law practice in Philadelphia. Pursuing an early interest in currency and credit, he contributed a brilliant series of financial articles to the *Pennsylvania Packet* from February to April 1780, under the pen name “An American.” This brought him an invitation to serve as assistant to Robert Morris (the “financier of the Revolution,” no relation to Gouverneur) in 1781. He held this post until 1785, while Robert Morris performed his remarkable feat of keeping the United States solvent. Gouverneur Morris worked out a decimal system of coinage later perfected by Thomas Jefferson and Alexander Hamilton that spared America the miserable pounds, shillings, and pence of the mother country. That same year he put forth a proposal for a Bank of North America, which Congress chartered in December 1781 and funded with a large French loan.

By a narrow majority, the Pennsylvania Assembly chose Morris as one of its delegates to the Constitutional Convention of 1787. An opponent of democracy—“Give the votes to the people who have no property and they will sell them to the rich,” he said—Morris worked at the Convention to craft a conservative constitution that would respect private property, except for ownership of slaves, and which would foster a strong central government. Morris was almost responsible for the collapse of the Convention when he demanded that they take a stand against the spread of slavery. He lost this battle to the supposed compromise of the three-fifths clause, but put aside his doubts in support of the finished document. Now

only 35, Morris abandoned his political career and returned to Morrisania, which he had bought from his elder half-brother, but soon went to Europe (in 1789) as agent for Robert Morris and other business associates.

Early in 1792, Washington appointed Morris to the post of minister to France. Morris openly supported the monarchy and feared the consequences of the revolution, which did not endear him to most French. In 1794, in retaliation for the American dismissal of its envoy to the United States (Edmund Charles "Citizen" Genet), the French government requested that Washington recall Morris, which he did. Morris went from Paris to London and attempted to persuade Britain's prime minister, William Pitt, to invade France.

After another four years traveling through Europe, Morris returned to the United States in 1798. In April 1800 he had what he called in his diary "the misfortune" to be elected a Federalist senator to fill an unexpired term. With the Jeffersonians in control of the legislature, Morris was not re-elected and in 1802 again retired to Morrisania, spending the last thirteen years of his life there. In 1810 he joined with De Witt Clinton in proposing the construction of the Erie Canal, serving as chairman of the board of canal commissioners from 1810 to 1816. By 1814 he had lost all hope that the United States could survive, and proposed that New York and New England secede and form a separate country.

MORRIS, LEWIS. (1726–1798). Signer, militia general. New York. Born at the family manor of Morrisania in Westchester County, New York, on 8 April 1726, Morris attended Yale College. He left Yale in 1746, before he finished his degree, and assisted his father in the management of the extensive family estates. On the death of his father in 1762, Lewis Morris became the third and last lord of the family manor. Now, for the first time, he showed an interest in politics. After a single term in the provincial assembly in 1769, and finding that few of his Westchester County constituents endorsed his anti-British sentiments, he succeeded in organizing that minority. Despite opposition from the powerful families of the area—the De Lanceys, Pells, and Philippses—he succeeded in having a meeting called on 28 March 1775 to select the county's deputies to the

provincial convention in New York City. Morris was named chairman of the eight-man delegation elected by his faction. At the convention Morris was elected a delegate to the Continental Congress, an honor he had enthusiastically sought.

Taking his seat on 15 May 1775, and remaining a delegate for two years, Morris served on committees to decide what posts should be defended in New York, to acquire military stores and munitions, and to deal with Indian affairs. On 7 June 1776 he was appointed brigadier general of the Westchester County militia, and was on leave of absence from Congress when the Declaration of Independence was approved. Later in 1776 he returned to Philadelphia and became a signer of that document. He took part in the New York campaign of 1776, when the forces of General William Howe chased George Washington and his troops right through the Morris family manor and the rest of Westchester. For the remainder of the war, Morris retained his militia rank but his services appear to have been valued by the state more in the civil domain. He was county judge in Westchester from 1777 to 1778, and served intermittently in the upper house of the state legislature between 1777 and 1790.

At the end of the war he retired as a major general of militia and restored Morrisania, which had been the scene of skirmishes on 5 August 1779, 22 January 1781, and 4 March 1782. Morris was at the Poughkeepsie ratification convention in 1788, where he supported the adoption of the federal Constitution that his half-brother, Gouverneur Morris, had helped to draft. He died at his estate on 22 January 1798.

MORRIS, ROBERT. (1734–1806). Merchant and congressman, called the "Financier of the Revolution." Pennsylvania. Robert Morris was born in Liverpool, England, on 20 January 1735. At the age of thirteen he came to America with his father and went to work in the Philadelphia mercantile house of Charles Willing. By 1754 he had become a partner. Three years later, with Charles's son Thomas, he formed Willing and Morris, a firm that with its successors held a leading position in American trade for the next thirty-nine years. His first public political act was to sign the nonimportation

Robert Morris. *The “Financier of the American Revolution” and a signer of the Declaration of Independence, in a portrait (c. 1782) by Charles Willson Peale.* PENNSYLVANIA ACADEMY OF FINE ARTS, PHILADELPHIA, PA/BRIDGEMAN ART LIBRARY

agreement of 1765; thereafter, he served on many committees formed to resist increased imperial control. After the shooting started in April 1775, Morris became a leading figure in the Patriot cause. On 30 June 1775 the assembly named him to the Pennsylvania Council of Safety, where his commercial talents were immediately put to use; when Franklin was absent, Morris ran the council.

VITAL WORK IN CONGRESS

Elected to the Second Continental Congress in November 1775, he quickly became a member of several important congressional committees, including the Secret Committee of Trade, “Congress’s war department,” where he succeeded his partner, Willing. Among many other activities, he personally arranged for the procurement of vessels, munitions, and naval armament in November 1775 and drew up the instruction for Silas Deane in February 1776, all the while continuing to tend to the commercial affairs of Willing and Morris. In performing his valuable official services he remained a businessman, collecting his broker’s commissions and

overlooking no opportunity to make a profit. While he made great profits, largely because of his ability, he also took huge risks in accomplishing the financial missions assigned by Congress and the Pennsylvania authorities, a fact that was understood and accepted by his colleagues. According to John Adams, in a letter to Horatio Gates on 27 April 1776:

I think he has a masterly Understanding, an open Temper and an honest Heart: and if he does not always vote for What you and I should think proper, it is because he thinks that a large Body of People remains, who are not yet of his Mind. He has vast designs in the mercantile Way. And no doubt pursues mercantile Ends, which are always gain; but he is an excellent Member of our Body. (Taylor, *Adams Papers*, 4, p. 148)

Morris thought the movement toward independence in 1776 was premature. He abstained from voting on the Declaration of Independence in July, but when he saw it was the will of the majority, he signed the document in August 1776. When Congress fled to Baltimore in December 1776, Morris remained in Philadelphia to carry out the work of the Secret Committee and on 21 December was designated by Congress along with George Clymer and George Walton as its executive committee. As Washington prepared the desperate strategy that was to end with his brilliant riposte at Trenton and Princeton, it was Morris who furnished him the necessary backing of the civil authority of the country. Simultaneously looking after the commercial interests of his firm—which may have been an important reason why he did not flee to Baltimore—Morris bore a tremendous personal burden at this critical period of American history and carried it off without a stumble.

In March 1778 Morris signed the Articles of Confederation. From August to 1 November 1778, the expiration of his term, he was chairman of Congress’s Committee on Finance. Ineligible for reelection under the terms of the new state constitution of Pennsylvania, Morris was immediately elected to the Pennsylvania assembly and took his seat on 6 November.

TAINTED BY SCANDAL

The burden of his dual public and private role had already begun to take its toll. During the winter of 1777–1778, the misconduct of Thomas Morris, a younger half-brother for whom Robert had secured appointment as commercial agent in France, precipitated a temporary misunderstanding between Morris and the American commissioners in Paris, Silas Deane and Benjamin Franklin. The controversy that followed the recall of Deane involved Morris after January 1779, when Thomas Paine attacked Morris and Deane in the press and Henry Laurens, then

president of Congress, charged Willing and Morris with fraud in the management of the covert operations of Hortalez et Cie that sent vital military supplies across the Atlantic. An investigation exonerated both Hortalez et Cie and Willing and Morris, but public opinion—led by opponents who resented his success—began to turn against Morris. He was denied reelection to Congress in November 1779, although a year later he regained his seat in the Pennsylvania assembly, where he served until June 1781. In these years, he was acknowledged as the leading merchant in America and probably its wealthiest citizen.

SUPERINTENDENT OF FINANCE

Meanwhile, the financial underpinning of the Revolution had collapsed. On the nomination of Hamilton, Congress on 20 February 1781 named Morris superintendent of finance, a unique office established to salvage what appeared to be a near-total loss of confidence in the fiscal management of the Confederation government. Insisting first that Congress permit him to continue his personal business and that he be allowed to control the personnel of his department, Morris accepted the post on 14 May. He had always been opposed to the carefree and financially irresponsible procedures that had led to the collapse of the Continental currency, including the price controls and legal pressure designed to make people accept worthless paper money at par value. With the government nearly insolvent, Morris, according to the historian Clarence L. Ver Steeg:

believed that the public credit of the Confederation could be revived only by utilizing private credit. He took steps to achieve two goals: in the short term to provide the military with supplies to win the war; and, more important, in the long term to introduce a comprehensive national financial program to strengthen the Confederation politically. (Ver Steeg, ANB)

He persuaded Congress to charter the Bank of North America (and used its bank notes to pay urgent expenses, especially pay and supplies for the Continental army), pledged his own personal credit to the government (and issued “Morris’s notes” to supplement the public credit), and extolled the virtues of funding the public debt by means of a permanent national revenue. The message he sent to Congress about funding on 29 July 1782 has been called “the most important single American state paper on public credit written prior to 1790,” but the scheme failed when Rhode Island and Virginia rejected the impost that would have provided the revenue stream.

Relying on various economies in purchasing and administration, his own Morris’s notes, some financial sleight of hand, and the loan of two hundred thousand

dollars in specie from France, he financed the Yorktown campaign, which so foreclosed British military options to regain her colonies that it broke Britain’s will to continue the fight. Morris endured a torrent of criticism, especially because he contracted for the public as many debts during his two years in office as there had been before his advent. Since the states still refused to accept their obligations and furnish the revenue needed for a viable currency, Congress remained impotent. In despair and disgust, Morris submitted his resignation on 24 January 1783, part of a plan to shock the states into action that included foreknowledge of the effort undertaken by Gouverneur Morris (no relation) and Alexander Hamilton to foment unrest in the Continental army as a pressure tactic. Washington quashed this so-called Newburgh conspiracy in March. But since nobody stepped forth to take Morris’s job, in May he was prevailed upon to retain his office and eventually found the funds—with the help of a Dutch loan secured by John Adams—to pay and demobilize the army by the end of the year. Morris finally resigned his office in September 1784.

FINANCIAL DOWNFALL

Convinced of the need for a strong central government, he served in the Constitutional Convention in 1787 and actively supported the Federalists thereafter. He declined Washington’s offer to be the first secretary of the treasury (he recommended Hamilton instead) but served in the Senate from 1789 through 1795. His financial downfall came because he overextended himself in land speculation. In February 1798 he was hauled off for over three and a half years in debtors’ prison. Released on 26 August 1801 under terms of the Federal Bankruptcy Act of 1800, he lived his last five years in a small house in Philadelphia, supported by the annuity Gouverneur Morris had secured for his wife. He died on 8 May 1806.

MORRIS, ROBERT HUNTER. (1713?–1764). Chief justice of New Jersey, governor of Pennsylvania. Born at the family manor in Westchester County, New York, perhaps in 1713, Robert Morris was the second son of the wealthy and powerful Lewis Morris, first lord of the manor of Morrisania. When Lewis Morris became governor of New Jersey in 1738 he made his son, Robert, chief justice of that state. In this capacity, Robert Morris belligerently supported his father's defense of the royal prerogative. In the 1740s he was the most active member of the East Jersey Board of Proprietors, which sought to throw settlers off their lands and led to a decade of controversy in New Jersey. Morris went to London in 1749 to make the case for using British troops to put down the riots. While in London he became close to the Penn family. In 1754 Thomas Penn, proprietor of Pennsylvania, appointed Morris deputy governor of that state. Morris immediately came into conflict with the Quaker-dominated legislature, which refused to allow a militia or to approve military funding. They also failed to pay Morris a salary, leading to his resignation in 1756. He returned to his job as chief justice in New Jersey, a position he had held even while in Britain and Pennsylvania for nearly seven years. He continued as chief justice until his death on 27 January 1764, after a wild night with a minister's wife. He never married, but had at least three children. One of these, Robert Morris (c. 1745–1815), inherited most of his large estate and was chief justice of the New Jersey Supreme Court from 1777 to 1779.

MORRIS, ROGER. (1727–1794). British officer and Loyalist. Born in Yorkshire, England, on 28 January 1727, Morris served at the Battles of Falkirk and Culloden and then in Flanders as a captain of the Forty-eighth Regiment. In 1755 he went to America as General Edward Braddock's aide-de-camp and was wounded in the disastrous expedition against Fort Duquesne on 9 July 1755. After purchasing the rank of major in the Thirty-fifth Regiment on 16 February 1758, Morris served at the siege of Louisbourg, the capture and defense of Quebec, the siege of Montreal, and as aide-de-camp to Generals Thomas Gage and Jeffrey Amherst. In May 1760 he was promoted to lieutenant colonel of the Forty-seventh Regiment. Having married Mary Philipse, one of the wealthiest women in America, in 1758, Morris sold his commission in 1764 and settled in New York City, becoming a member of the colony's royal council. With the outbreak of the Revolution, Morris went to England, returning in December 1777, when the British restored the council under Governor James Robertson. Morris again served on the council, was given the rank of colonel, and from January 1779 until the end of the war was inspector of refugee claims. The New York legislature confiscated Morris's property, worth an estimated quarter-million pounds in October 1777. Morris left New York City with the British army. Back in London, he petitioned the government for £68,384, which he claimed was the value of property lost in the Revolution; the government awarded him £12,205. He and his family settled in York, where he died on 13 September 1794.

Michael Bellesiles

MORRISANIA, NEW YORK. Actions at. Located in what now is the South Bronx, Morrisania was the ancestral home of the Morris family. It first experienced the war by being on the British route of advance to White Plains during the New York Campaign. Thereafter it became a key point in the British defensive lines and a frequent camp location for Loyalist forces. The three most serious skirmishes there occurred on 5 August 1779, 22 January 1781, and 4 March 1782. Only the second of these is mentioned in most accounts of the war. In a bold raid that pushed more than three miles within the British lines, Lieutenant Colonel William Hull of Parsons's Connecticut Brigade attacked the quarters of the Third Battalion of De Lancey's Loyalist Brigade. He burned barracks and the ponton bridge over the Harlem River, destroyed a great store of forage, and at the price of twenty-five casualties withdrew with fifty-two prisoners, some horses, and some cattle. At daybreak on 23 January, Lieutenant Colonel James De Lancey and his Refugee

Morris Family of New York. THE GALE GROUP

troops contested the rebels' retreat as far as Williams's bridge, which was defended on the far side by Patriot troops. The Refugees then fell back.

In the maneuvers of July 1781 preceding the Yorktown Campaign, the duc de Lauzun proposed another attack on De Lancey's battalion, but when the element of surprise was compromised the plan was canceled.

MORRIS FAMILY OF NEW YORK.

The founder of the family in America was Richard Morris (1616-1672), a veteran of Cromwell's army, who became a merchant in Barbados and married the wealthy Sarah Pole. With his brother Lewis (1601-1691), he bought 500 acres in New York just north of the Harlem River, then known as Bronck's land (now the Bronx). Richard and Sarah Morris died there in 1672, only two years after the purchase, and their infant son, Lewis (1671-1746), was adopted by his uncle Lewis. Lewis Morris (1601-1691)

built the Bronx estate to almost 2,000 acres and also acquired 3,500 acres in Monmouth County, New Jersey, all of which he passed on to his nephew and ward in 1691. In May 1697 the New York estate became the manor of Morrisania. Richard and Sarah's son Lewis (1671-1746) then became first lord of the manor, a title that passed to his son Lewis (1698-1762), the second lord, who passed it on to his son, Lewis Morris (1726-1798), the third (and last) lord of the manor and a Signer. Lewis the Signer's brother Staats Long (1728-1800) served in the British army, although not in America during the Revolution. Another brother, Richard (1730-1810), was chief justice of the supreme court of the state of New York. And his half-brother, Gouverneur Morris (1752-1816), was a delegate to the Continental Congress, a close associate of Robert Morris, the so-called "Financier of the Revolution" (who was no kin), one of the architects of the Constitution, and minister plenipotentiary to France. Lewis the second lord's brother, Robert Hunter Morris (c.1714-1764), was chief justice of New Jersey and governor of Pennsylvania, and his illegitimate son Robert (c.1745-1815) became chief justice of the state of New Jersey in 1777.

MORRISTOWN WINTER QUARTERS, NEW JERSEY. 6 January–28 May 1777. After his operations at Trenton and Princeton, Washington established winter quarters at Morristown. Although he first considered this to be merely a temporary location, the merits of the place became more apparent as circumstances required him to prolong his stay. Several ranges of hills protected his army from the enemy, whose winter quarters were around New York City, thirty miles away. Morristown, though a small town of some fifty houses, was centrally located with respect to the British main outposts at Newark, Perth Amboy, and Brunswick (later New Brunswick), and it constituted a sort of flanking position from which Washington could threaten an enemy move up the Hudson or through New Jersey toward Philadelphia. Morristown was also in the center of an important agricultural region, which not only gave Washington access to important resources but also denied them to the enemy, and the place was close to the forges and furnaces of Hibernia, Mount Hope, Ringwood, and Charlottenburg.

While coping with the eternal problems of recruiting, reorganization, and logistics, Washington undertook a bold medical program of inoculating his troops and the neighborhood civilians against smallpox, which initially helped to spread the disease to those who had not been inoculated. Though his army shrank by a high rate of desertion to just over three thousand men, Washington kept up a vigorous patrol activity against the enemy in New Jersey. By the time General Howe bestirred himself and resumed operations in May 1777, Washington's army had been built up to over eight thousand effectives and was reasonably well supplied. Washington and his army returned to Morristown for the horrific winter of 1779–1780.

revised by Michael Bellesiles

MORRISTOWN WINTER QUARTERS, NEW JERSEY. 1 December 1779–22 June 1780. As 1779 dragged to a close without major military

operations in the North, and after Admiral Charles EStaing failed to appear off Sandy Hook with his powerful French force, Washington decided on 30 November that the main army would go into winter quarters just outside Morristown, New Jersey. The weather turned bitterly cold and most units were faced with a hard march to reach Morristown. Units started arriving the first week in December, and the last arrived at the end of that month. Four Massachusetts brigades were left in the Highlands; Poor's brigade and most of the cavalry units were sent to Danbury, Connecticut, with the mission of guarding the coastal towns on Long Island Sound; and the North Carolina brigade and Pawley's New York state troops were posted with Lee's dragoons around Suffern, New York.

The winter quarters of 1779–1780 became an ordeal of almost unbelievable suffering because of the record-breaking cold. As desertions rose and his army declined to around ten thousand men, Washington wrote the governors of all the states on 16 December, "The situation of the Army with respect to supplies is beyond description alarming" (Washington, Series 3c, Letterbox 3). With his men already on half rations, conditions were about to get worse. The commissariat again broke down and the troops at Morristown faced death from cold and starvation. At least the army had the experience of previous winter encampments to draw on, and the soldiers built an extensive "log-house city," consuming about six hundred acres of woodland. Soldier huts had a standard floor plan of about fourteen by fifteen feet and accommodated twelve men; they were about six and one-half feet high at the eaves, with wooden bunks, a fireplace at one end, and a door at the other. Construction was of notched logs, and chinks of clay sealed the walls. Windows apparently were not cut until spring. The huts were in rows of eight, three or four rows to a regiment. Officers' cabins were larger and less crowded. Parade grounds and company streets were laid out at regular intervals. Most of the men were able to move into huts before the end of December, but it was another six weeks before all the officers were accommodated.

Jockey Hollow was the name of the site about three miles southwest of Morristown where most of the army was camped—here were seven infantry brigades: Hand's New York, the First and Second Maryland, the First and Second Connecticut, and the First and Second Pennsylvania; The three Virginia brigades (Muhlenberg's, Scott's, and Woodford's), Stark's brigade; and the New Jersey brigade occupied separate camps within a mile of Jockey Hollow. Knox's artillery brigade and the gun park were about a mile west of Morristown. "On the Lines" were detachments at Princeton, Brunswick, Perth Amboy, Rahway, Westfield, Springfield, Paramus, and other outposts. These detachments, totaling from two hundred to two thousand at different times, were periodically relieved.

The severity of the winter limited military operations during the first months of 1780, but it also made possible the remarkable (although unsuccessful) Staten Island expedition of Alexander on 14–15 January. The action at Young's House in New York on 3 February was a British attempt to annihilate a unit "on the Lines." The British operations around Springfield, New Jersey, from 7 June to 23 June heralded the start of the 1780 campaign in the North.

MORTAR. So named because of its resemblance to pharmacist's mortar, a military mortar is a short gun used for firing projectiles at a high angle. It is most suitable for lobbing projectiles over walls of fortifications and over high ground that would mask the target from weapons having a flatter trajectory or for firing from and into heavy woods. There were gigantic siege mortars and diminutive coehorns or royals.

Mark M. Boatner

MORTON, JOHN. (1725?–1777). Signer. Pennsylvania. Born in Tinicum, Pennsylvania, perhaps in 1725, Morton was elected to the Provincial Assembly in 1756, serving nearly every year until 1776, the last two as speaker. Meanwhile he had been justice of the peace for Chester (now Delaware) County, and served as judge on several courts. He attended the Stamp Act Congress in 1765 and was in the Continental Congress from 1774 to early in 1777. He played a critical role in organizing Pennsylvania's first militia in 1775. An advocate of independence, he joined with Benjamin Franklin and James Wilson to give the Pennsylvania delegation a majority of one in voting for the Declaration of Independence, and he was one of those who signed that document. He was

chairman of the Committee of the Whole that adopted the Articles of Confederation, which were ratified after his death. After an extended illness, he died at his home in Tinicum, Pennsylvania, on 1 April 1777.

MOTTIN DE LA BALME, AUGUSTIN.

(1736–1780). French volunteer. Though of noble ancestry, he was the son of a bourgeois father and a mother who was the daughter of a *conseiller du roi*. He entered the Scottish company of Gendarmerie in 1757 and became quartermaster with the rank of cavalry captain in 1765. Having been employed at the school of horsemanship, he wrote two books on the cavalry. Deane wrote to Congress recommending him in October 1776, but La Balme was unable to get out of France. He approached Franklin in December about an American command. Masquerading as a doctor, he embarked at Bordeaux with two other officers on 15 February 1777 carrying Franklin's introduction of 20 January 1777. It recommended him as an able cavalry officer who might be valuable in forming that branch of service.

On 26 May 1777 La Balme was commissioned lieutenant colonel of cavalry in the Continental army. Continuing to promote himself among the members of Congress, he presented copies of his two books to John Adams in June. On 8 July he was promoted to colonel and inspector general of cavalry, but he submitted his resignation to Congress on 3 October because Pulaski had been preferred to command the cavalry. La Balme proposed to Henry Laurens a Canadian project for exciting a "revolution," which Laurens referred to the Board of War. When it finally recommended an "irruption... into Canada," it was to be under the command of Lafayette; Congress approved the proposal on 22 January 1778. On 13 February 1778 Congress accepted his resignation with "no farther occasion for his services." Henry Laurens complained to his son John—perhaps tongue in cheek—that La Balme had not left him any books.

In 1778 La Balme received authority from Gates in 1778 to take part in the operations around Albany. He organized a bureau twenty-eight miles from Philadelphia and issued manifestos in French, English, and German calling for volunteers to join the cause of liberty.

On 13 May 1779 he left Boston with others to rally support in the frontier settlement of Machias. Arriving on the 19th, he established contact with Indians who traded at the village and was warmly received by the former subjects of the French king. Because of events described in connection with the Penobscot expedition, La Balme's timing was unfortunate. He organized a body of Indians and marched toward the British, but their force was crushed by superior numbers. La Balme was captured, but he escaped or was exchanged.

In reply to his 5 March 1780 request, Washington declined to give him a certificate of service. The commander in chief had earlier complained that La Balme never entered into his inspector duties. James Lovell on 17 April 1780 returned copies of La Balme's European letters of recommendation to him, adding his regrets that "America did not longer than seven months enjoy the benefits of your exertions as inspector general." On 27 June 1780 he was at Pittsburgh, and for the next three months he conducted recruiting operations in the direction of Vincennes, Cahokia, and Kaskaskia. With about one hundred French and American volunteers, he started on his own an advance through Kaskaskia toward Detroit. La Balme was killed on 5 November 1780 by Indians under the orders of Little Turtle. About forty of his men died in the massacre.

MOULTRIE, JOHN. (1729–1798). Loyalist lieutenant governor of East Florida. South Carolina-Florida. Born in Charleston, South Carolina, on 18 January 1729, Moultrie in 1749 became the first American to graduate from Edinburgh with a medical degree. His thesis was the first study of yellow fever in North America and became the standard work on the subject for a century. Returning to Charleston in 1749, he established a practice that he abandoned in 1753 upon marrying the wealthy Dorothy Morton, who died four years later. Entering the assembly in 1761, Moultrie held a number of offices, including posts in the militia. In 1760 he became a major in the Provincial Regiment, joining the following year in the Cherokee expedition of Grant, in which Moultrie was responsible for the garrison of Ninety Six. After he took the side of Lieutenant Colonel James Grant in his dispute with Colonel Thomas Middleton, Moultrie became a favorite of Grant.

When Grant established the government of East Florida in 1763, he named Moultrie to the council, where he served as president from 1765 to 1771. Moultrie took up fourteen thousand acres in land grants, built a mansion called Bella Vista near St. Augustine, and when he succeeded Grant as acting lieutenant governor in 1771 (Grant was invalided home and arranged for Moultrie's appointment to become permanent), he sold his South Carolina properties and moved his two hundred slaves to Florida. He immediately entered into a sharp political dispute with Chief Justice William Drayton, who promoted the creation of a legislature in Florida. Moultrie preferred executive rule, especially as he was the chief executive until the arrival of the new governor, Colonel Patrick Tonyn, on 1 March 1774. Moultrie sided with the British during the Revolution and helped organize the militia, of which he was colonel. In July 1784, when England handed Florida over to Spain, he sailed to England and three years later was awarded about forty-five hundred pounds for his war losses, slightly more than half of his claim. He settled in Shropshire, where he died on 19 March 1798. Three brothers, Alexander, Thomas, and William, were Patriot soldiers.

MOULTRIE, WILLIAM. (1730–1805). Continental general. South Carolina. Born in Charleston, South Carolina, on 23 November 1730, Moultrie was a member of the Commons House through most of the 1750s. Appointed captain in the militia on 16 September 1760, he took part in Lieutenant Colonel James Grant's expedition against the Cherokee in 1761. He remained active in the militia, rising to colonel in 1774, and served in the South Carolina Provincial Congresses of 1775–1776. On 17 June 1775 he became colonel of the Second South Carolina Regiment, leading a notorious raid in November against an encampment of escaped slaves on Sullivan's Island that resulted in the slaughter of fifty people. Against the Charleston expedition of Clinton in June 1776, he became a national hero in his defense of the palmetto and sand fort that was renamed in his honor. He was appointed a Continental brigadier general on 16 September 1777 but had no opportunity for significant field operations until after the British capture of Savannah on 29 December 1778. During Lincoln's operations in the southern theater, Moultrie was employed in a semi-independent role. He commanded the successful action at Beaufort, South Carolina, on 3 February 1779. When General Augustin Prevost pushed through his screening force and threatened Charleston on 11–12 May, Moultrie helped organize the defenses of the city. He was criticized for failing to act aggressively at Port Royal on 3 February 1779 and Stono Ferry on 20 June 1779, allowing the British to get away in each instance.

When Charleston fell to the British in May 1780, Moultrie became a prisoner of war, spending almost two years in the British prison at Haddrell's Point, South Carolina. He was freed as part of the exchange for General Burgoyne in February 1782, and on 15 October he became a Continental major general—the last officer appointed to that grade—but the fighting was over. In 1783 he sat in the South Carolina House of Representatives and the next year was lieutenant governor. He served two terms as governor (1785–1787 and 1792–1794). He was a federalist member of the state ratifying convention in 1788. He died at Northampton, South Carolina, on 27 September 1805.

MOYLAN, STEPHEN. (1737–1811). Continental officer. Ireland and Pennsylvania. Born in Cork in 1737, Moylan was the son of a prosperous Catholic merchant. Following in his father's trade, he too became a widely traveled merchant before settling in Philadelphia in 1768. On the recommendation of a friend, John Dickinson, he became muster-master general of the Continental army on 11 August 1775. He joined General George Washington at Cambridge, where his duties included the fitting-out of privateers. On 5 March 1776 he became secretary to Washington, and on 5 June Congress elected him quartermaster general, with the rank of colonel. He succeeded Thomas Mifflin in this new post.

Moylan was not successful as quartermaster general, although it must be pointed out that his difficulties were virtually insurmountable. Washington blamed him for failing to get more of the army's matériel away from Long Island and New York City during the American army's retreat in the summer of 1776. Moylan resigned as quartermaster general on 28 September 1776, and Mifflin was reappointed to the post. Moylan remained on Washington's staff as a volunteer, however, and served with distinction in the victory at Princeton on 3 January 1777. He responded to a request from Washington to raise

a mounted regiment, which started as a Pennsylvania volunteer unit, the First Pennsylvania Cavalry Regiment. This later became the Fourth Continental Dragoons. Moylan was commissioned colonel of this unit on 5 January, an assignment he held for the rest of the war.

Casimir Pulaski's appointment as over-all cavalry commander on 21 September 1777 raised problems of cooperation that came to a head in the next month. Acquitted of court-martial charges pressed by Pulaski in October, Moylan spent the winter at Valley Forge and became temporary commander of the four mounted regiments when Pulaski resigned this post in March 1778. For the next three years he served on the Hudson River and in Connecticut, taking part in the battle of Monmouth on 28 June 1778. He also participated in Anthony Wayne's expedition to Bull's Ferry, New Jersey in July 1780 and the Southern campaign of 1780 and 1781. After Charles Cornwallis surrendered in the name of the British forces, Moylan's health forced him to return to Philadelphia. He was brevetted as a brigadier general on 3 November 1783, the date he left the army. After the war Moylan again became a merchant. Washington appointed him commissioner of loans in Philadelphia in 1793. He died in Philadelphia on 11 April, 1811.

MUHLENBERG, JOHN PETER GABRIEL. (1746–1807). Lutheran clergyman, Continental general, politician. Pennsylvania and Virginia. Born 1 October 1746 in Trappe, Pennsylvania, Muhlenberg was sent by his father, a Lutheran missionary, to Halle, Germany, at the age of sixteen to be educated. It was hoped that he would become a minister. Instead, he was apprenticed to a grocer in Lübeck. After three years of misery, Muhlenberg ran away and in 1766 joined the 60th Foot ("Royal Americans"). As secretary to one of the regiment's officers, he traveled to Philadelphia and was discharged in 1767. He studied theology and became an assistant to his father.

In 1772 he moved to Woodstock, Virginia, to be pastor of the large colony of German immigrants in the Shenandoah Valley. That same year he went to England, and on 23 April 1772 was ordained by the bishop of

London. Back in the Shenandoah Valley, he soon emerged as a leader of his community, being elected to the House of Burgesses in 1774. He became associated with the Patriot cause and was elected chair of the Dunmore County Committee of Correspondence and Safety. In March 1775 he became a member of the Virginia Convention, and on 12 January 1776 he accepted their appointment as a militia colonel charged with raising a regiment. He preached a famous final sermon back in Woodstock. "There is a time for all things," he said, taking his text from Ecclesiastes 3:1, "a time to preach and a time to pray; but there is also a time to fight, and that time has now come." At this point he supposedly threw aside his robes to reveal his militia uniform, ordered the drums to beat for recruits, and enlisted most of the adult males in his congregation into the Eighth Virginia, which was better known as the "German Regiment." Marching south, the regiment helped repel General Henry Clinton's Charleston expedition in 1776. Afterwards, they continued into Georgia, where disease eventually forced the unit to return to Virginia.

Muhlenberg was appointed brigadier general on 21 February 1777, and his brigade saw action as part of General Nathanael Greene's division at the battle of the Brandywine River, on 11 September 1777. At Germantown, on 4 October 1777, "the Parson-General," as he was known, led his brigade in a deep penetration of the enemy's line, and then fought his way back as superior enemy forces tried to cut him off.

After the winter at Valley Forge, Muhlenberg, William Woodford, and George Weedon, became engaged in the patriot pastime of fighting over primacy of rank. At Monmouth, on 28 June 1778, Muhlenberg commanded the second line of Greene's right wing, which was not engaged until the final phase of the battle. Later in 1778 Muhlenberg was assigned to Israel Putnam's division on the Hudson River, and he commanded the division during the winter while Putnam was absent. After winter quarters at Middlebrook, Muhlenberg commanded a 300-man reserve during Anthony Wayne's assault on Stony Point on 16 July 1779. In December he was sent by General George Washington to take command in Virginia, but it was March 1780 before he reached Richmond. During this delay, caused by snows of the exceptional winter, Friedrich Steuben was given chief command in Virginia, and Muhlenberg became his second. He was involved in the unsuccessful attempt to keep William Phillips and Benedict Arnold from destroying supplies in Petersburg on 25 April 1781. He and Weedon then worked to assemble Virginia militia units and continued to command troops on the south bank of the James River. In the final operations against General Charles Cornwallis, Muhlenberg commanded a brigade in the light infantry division led by the Marquis de Lafayette and again in the assault on Redoubt Number Ten during the Yorktown campaign.

Brevetted a major general on 30 September 1783, Muhlenberg retired on 3 November, settled his affairs at Woodstock, and moved to Philadelphia. Among the Pennsylvania Germans, he now was a hero second only to Washington, and a political career lay before him. In 1784 he was elected to the Supreme Executive Council of Pennsylvania, and during the period 1785–1788 he was vice president of the state under Benjamin Franklin. He was influential in the early adoption of the Constitution in the state, and both he and his brother, Frederick, were elected representatives to the first Congress. Defeated for re-election, he returned to Congress in 1793–1795 and 1799–1801. On 18 February 1801 he was elected senator, but resigned a month later to become supervisor of revenue in Philadelphia. From 1802 until his death five years later he was collector of customs in the city. He died at his home at Gray's Ferry, Pennsylvania, on 1 October 1807.

MURPHY, TIMOTHY. (1751–1818). War hero. Pennsylvania. A legendary Continental rifleman, perhaps the most famous marksman of the Revolution, Murphy was born near the Delaware Water Gap in 1751. As a young man he settled in the Wyoming Valley of Pennsylvania. On 29 June 1775, he and his brother John were mustered into Captain John Lowdon's Northumberland County militia company.

Murphy served in the Boston siege, at Long Island, and in the New Jersey campaign. In the summer of 1777 he was one of 250 picked riflemen sent north under Morgan to oppose Burgoyne. Murphy is generally credited with shooting Sir Francis Clerke and General Simon Fraser in the Second Battle of Saratoga on 7 October 1777, although no contemporary account validates this claim. Many unverifiable legends circulate around Murphy, such as his ability to hit a target at three hundred yards and the claim that he used a double-barreled rifle that is not known to have existed during the Revolution.

Murphy was at Valley Forge. He did not take part in the Battle of Monmouth but the next day, on 29 June 1778, he, his constant companion David Elerson, and two other riflemen captured the elaborate coach of a British general. Moving north with three companies of Morgan's Riflemen to the Mohawk Valley, Murphy tracked down and killed the notorious Christopher

Service. He took part in the action at Unadilla in October 1778 in the pursuit of the raiders who had sacked Cherry Valley and also participated in Sullivan's expedition. When his enlistment with Morgan's Riflemen expired in late 1779, Murphy enrolled in Captain Jacob Hager's company of Peter Vrooman's Albany County militia (Fifteenth Regiment). Scouting with militia captain Alexander Harper in the Delaware County forest during the spring of 1780, he was captured by Indians and taken toward Oquago. During the night he and another captive freed each other's bonds and methodically knifed ten sleeping Indians before making their escape.

During the action at Schoharie Valley on 15–19 October 1780, Murphy famously fired on British officers attempting to surrender. Early in 1781 he reenlisted in the Continental army and served in the Pennsylvania Line under General Anthony Wayne and was present at Yorktown. After the war he returned to the Wyoming Valley and became active in local politics. He died in 1818.

MURRAY, DAVID SEE *Stormont, David Murray, Seventh Viscount.*

MURRAY, JOHN. Royal governor of Virginia. Son of the third earl of Dunmore, John Murray succeeded his father to become the fourth earl of Dunmore in 1756, and it is by this name that he is best known. He was an army officer from 1749 to 1760, when he resigned his commission. He was elected in 1761 as one of sixteen Scottish peers to sit in Parliament. He supported Lord North for the office of prime minister, and in 1770, when Lord North took that office, Dunmore was named governor of New York by Wills Hill, the earl of Hillsborough, who was the colonial secretary at the time.

Arriving in New York on 19 October 1770, Dunmore readily accepted and participated in the provincial aristocracy's thirst for land speculation. Eleven months later he was promoted to governor of Virginia, Britain's most important mainland colony, to succeed Governor Norborne Berkeley, baron de Botetourt, who had died

on 15 October 1770. Dunmore arrived at Williamsburg in September 1771, and was initially popular with Virginia's land-hungry aristocrats, including George Washington. The House of Burgesses even named the new frontier counties of Dunmore and Fincastle (another of his titles) in his honor.

When the Shawnee, beset by land-hungry whites from Pennsylvania and Virginia, precipitated a conflict, Dunmore responded by raising the western militia and taking the field himself to subdue the tribe and lay claim to their lands. When Colonel Andrew Lewis defeated the Shawnee at Point Pleasant on 10 October 1774, Dunmore reached the zenith of his popularity in the colony, a fact which was reflected by his naming his eleventh child Virginia in January 1775.

Attention paid to frontier matters diverted Dunmore from a rising tide of opposition to imperial control in Virginia. The first discordant note was struck in 1773, when Dunmore dissolved the House of Burgesses after it proposed forming a committee of correspondence. He did the same thing the next year when the burgesses set a day of mourning over the Boston Port Bill. While he was away on the frontier in 1774, the first Virginia Convention embargoed British trade, began to make preparations for armed resistance, and sent delegates to the first Continental Congress. Dunmore thought the unrest was the work of a few troublemakers and took measures in the spring of 1775 that shattered his reputation with Virginians, making him arguably the most reviled of all the royal governors.

On 21 April Dunmore seized the gunpowder in the Williamsburg magazine, threatened to raise the slaves against those who protested this action, and broke completely with the House of Burgesses on 1 June 1775 over Lord North's peace proposal. He and his family fled to the safety of a British warship on 8 June. With a small fleet, he eventually gathered in the strongly Loyalist Norfolk area a force composed of sailors, marines, and a few companies of the Fourteenth Regiment of Foot. He also began to recruit the Queen's Own Royal Regiment and the Ethiopian Regiment, made up of runaway slaves. With this amphibious force, he raided the area around the tidewater through the fall, but the presence of runaway slaves as soldiers in his force was inflammatory to nearly every white Virginian. On 14 November 1775 he issued his Emancipation Proclamation which, by offering freedom to military-age male slaves who left their rebel masters to join him, destroyed his appeal with the rebel aristocrats.

Overconfidence led to Dunmore's defeat by Colonel William Woodford at Great Bridge, Virginia, on 9 December 1775, after which Dunmore withdrew to his ships. An attempt to retake part of the town on 1 January 1776 led to its destruction, for which Dunmore was blamed. Sir Henry Clinton made contact with Dunmore in February, but Clinton was on his way to Charlestown,

South Carolina, and left no reinforcements. By May 1776 Dunmore had to withdraw to Gwynn Island, from which he was driven in July. He raided up the Chesapeake River to the Potomac before sailing for New York with a force that included the 300 soldiers of the Ethiopian Regiment. He shortly returned to Britain. He again sat as a Scottish peer in Parliament before being named governor of the Bahamas from 1786 to 1796. He died at Ramsgate, Kent, on 25 February 1809.

MURRAY HILL MYTH. Historians have contended that after his landing at Kips Bay on 15 September 1776, Sir Henry Clinton could have moved promptly across the island of Manhattan, a mere three thousand yards, and captured a large portion of the American army. The story of Mary Murray first appeared in Dr. James Thacher's *A Military Journal during the American Revolutionary War* (2d ed., 1827) and seemed so plausible that other writers picked it up. After the landing the American militia fled in panic, isolating General Israel Putnam's thirty-five hundred Continentals. At this point Mrs. Murray, a Quaker and wife of the merchant Robert Murray, invited General William Howe and Governor William Tryon (and in some versions, General Clinton as well) in for some wine and cakes. Apparently the British army ground to a halt while their commanders enjoyed Mrs. Murray's Madeira and witty conversation, and Putnam's troops made good their escape. As Thacher wrote in his journal on 20 September 1776, "It has since become a common saying among our officers that Mrs. Murray saved this part of the American army."

Historians disagree about these events. Almost all early American scholars from Benson Lossing to George Bancroft to John Fiske accepted the story without question. Most contemporary popular histories of the Revolution also repeat the story as fact. More careful scholars, such as Samuel Willard Crompton, argue that the evidence leaves little doubt that Mary Murray entertained the British commanders at her house on Murray

Hill, but that these refreshments in no way stopped the British army from performing its duties. Putnam's escape has more to do with the American's evasive skills and with the realities of securing the ground after a successful landing. There is absolutely no evidence that Mary Murray, whose husband had Loyalist leanings, had any ulterior motive.

MUSGRAVE, THOMAS. (1738–1812). British officer. Born on 26 November 1738 at Hayton Castle, Cumberland, Musgrave entered the army in 1754 as an ensign in the Third (“Buffs”) Regiment. After serving in the Sixty-fourth Regiment and being brevetted as a major in 1772, he joined the Fortieth Foot Regiment and came to America with this unit in 1776, gaining promotion to lieutenant colonel after the battle of Long Island on 28 August 1776. Commanding the Fortieth in the Philadelphia campaign, he distinguished himself in the defense of the Chew House at Germantown on 4 October 1777. The next year he accompanied General James Grant's expedition to St. Lucia as quartermaster general. Invalided home, he was made a colonel and aide-de-camp to the King in 1782. In this same year he returned to America as a brigadier general to serve as the last British commandant of New York City. He then went to India, was promoted to major general in 1790, to lieutenant general in 1797, and to full general in 1802. He died at his London home on 31 December 1812.

MUSGROVE'S MILL, SOUTH CAROLINA. 18 August 1780. In the skirmishing that preceded the Battle of Kings Mountain, Lieutenant Colonels Elijah Clarke, Isaac Shelby, and James Williams combined their two hundred volunteers from Georgia, the Watauga settlements, and South Carolina, respectively, sharing the command between them. They attempted a surprise attack against the Loyalists at the rear of Major Patrick

Ferguson's main force. They launched their assault at Musgrove's Mill on the Enoree River. But the surprise failed and Ferguson turned on them. The rebels took up a defensive position and repulsed an attack in which they claimed to have killed sixty-three Loyalists, wounded ninety, and captured seventy, with a loss of only four rebels killed and eight wounded. If these figures are accurate, they make this one of the most one-sided battles of the Revolution.

SEE ALSO *Kings Mountain, South Carolina.*

revised by Michael Bellesiles

MUSIC, MILITARY. Military music was essential to the Revolutionary armies, contributing greatly to discipline and order both in camp and on the battlefield. Specialized drum and fife signals called musicians or officers to assemble and detachments to gather wood or informed the men when it was time to receive rations. Music provided a cadence to regulate the marching rate, and transmitted or supplemented officers' commands in battle.

MUSICALLY REGULATED ACTIVITIES

George Washington early on recognized the value of well-trained musicians, as indicated in his 4 June 1777 general orders: “The music of the army being in general very bad; it is expected, that the drum and fife Majors exert themselves to improve it. . . . Nothing is more agreeable, and ornamental, than good music; every officer, for the credit of his corps, should take care to provide it.” He then outlined the musically regulated daily routine. “The *revelle* to be beaten at day-break—the *troop* at 8 o'clock in the morning, and *retreat* at sunset.” Two days later he ordered, “The morning gun at day-break to be a signal for the *revelle*; and the evening gun at sun-set a signal for the *retreat*.” To these calls can be added the end of day “tap-too,” when “all lights must be put out at 9 o'Clock in the evening, and every man to his tent.”

The routine was altered for an army on the move, General Washington giving details on 16 August 1777:

1. When the army is to march, the General (and not the *Revelle*) is to beat in the morning.
2. At the beating of the General, the officers and soldiers are to dress and prepare themselves for the march, packing up and loading their baggage.
3. At the beating of the troop, they are to strike all their tents and put them in the wagons.

The Spirit of '76 (1875) by Archibald Willard. During battles of the American Revolution, musicians playing fifes and drums helped transmit messages from commanders. The music also helped bolster soldiers' morale. LANDOV

4. At least a quarter of an hour before the time appointed for marching, the rummings are to beat a march, upon which the troops are to march out and form at the head of their encampment. . . . Precisely at the hour appointed for marching, the drummers beat the march a second time, at that part of the line from which the march is to be made . . . upon which the troops face or wheel . . . and instantly begin the march.

Further orders, tinged with criticism, were issued for the march through Philadelphia later the same month:

The drums and fifes of each brigade are to be collected in the center of it; and a tune for the quick step played, but with such moderation, that the men may step to it with ease; and without *dancing* along, or totally disregarding the music, as too often has been the case.

Whatever the musical quality, the daily schedule often changed to fit situational needs.

Several works have discussed battlefield drum signals, most notably Raoul Camus's *Military Music of the American Revolution* (1976), but there is much yet to be learned on their practical use. William Windham's *Plan of*

Discipline for the Use of the Norfolk Militia (1768) provided twenty drum commands for everything from "Fix bayonets, marching" to "Form Battalion!" Other manuals followed suit. In actuality, battle and maneuver signals varied. During Major General John Sullivan's expedition against the Iroquois in 1779, orders for 4 August stipulated signals for marching in files, advancing by sections and platoons, closing columns, and displaying into line. By comparison, Major General Friedrich Wilhelm de Steuben's *Regulations* (1779) gives only three different signals for marching forces: the "Front to halt," "the Front to advance quicker," and "to march slower." In 1780 British Captain John Peebles of the Forty-second Regiment noted the "General Rules for Manouvring the Batt[alio]n. by the Commanding Officer," appended to which are "Signals by Drum":

1. *Preparative* to begin firing by Companies, which is to go on as fast as each is loaded till the first part of the General when not a shot more is ever to be fired.
2. *Grenad[ie]rs March* to advance in Line.
3. *Point of War* to Charge.
4. *To Arms* to form the Batt[alio]n. (whether advancing or Retreating in Column) upon the leading division.
5. *Double flam* to halt Upon the word forward, in forming, the Divisions to run up in Order.

HORNS

Another instrument, the bugle horn (also called the French, hunting, or German post-horn) was commonly used by light and mounted troops. Horns were especially associated with the British light infantry. Massachusetts Lieutenant Joseph Hodgekins wrote of the Battle of Harlem Heights (16 September 1776), "The Enemy Halted Back of an hill and Blood [blowed] a french Horn which whas for a Reinforcement." Xavier della Gatta's painting, *The Battle of Germantown* (1782), shows a horn-blowing musician at the head of two files of British light infantry, and the song "A Soldier" (1778) begins with the lines:

Hark! hark! the bugle's lofty sound
Which makes the woods and rocks around
Repeat the martial strain,
Proclaims the light-arm'd British troops.

It is uncertain when American light troops first used horns, but during the Monmouth campaign in June 1778, New York Lieutenant Bernardus Swartwout noted,

- [25 June] The Horn blowed (a substitute for a drum in the [light] Infantry corps) we marched about four miles . . .

- [26 June] At the sound of the horn we marched eight miles and halted.

Bands of music, playing orchestral instruments, were also present with some units, serving a largely ornamental purpose. Most British regiments had their own bands at one time or another, several surrendering at Saratoga and Yorktown. Only a few Continental units followed suit, most notably the Third and Fourth Artillery, Second Virginia, and Webb's Additional Regiments.

Proficient field musicians (drummers, fifers, and for light troops and cavalry, buglers) were hard to find. That was because they were expected to learn many tunes, from popular melodies like "Roslyn Castle" to practical beats such as "Water Call" or "Roast Beef."

UNIFORMS

Recognizing musicians' special duties, efforts were made to provide them with regimental coats with reversed colors based on European practice. In May 1777 the Continental clothier general informed Colonel Elias Dayton of the Third New Jersey that "there is 395 Blue coats faced red on the road from Boston . . . which I design to furnish your regmt. . . I have also . . . sent you 12 Red Coats fac'd with blue of the clothing taken from the enemy for your drums & fifes." This variation was not always possible, as some units wore un-dyed linen hunting shirts, while in the autumn of 1778 Washington's army was issued French-made coats of blue or brown with red facings, with no distinction for musicians.

MUSICIANS' AGE AND EXPERIENCES

Because of their responsibilities, musicians were relatively mature, in the Continental army on average 18.5 years (the average age for drummers was 19 years, for fifers 17). Youthful musicians were sometimes kept out of harm's way. Drummer James Holmes of the Eleventh Pennsylvania Regiment, 13 years old when he joined in 1778, stated "he was not in Any engagements not being permitted by his Captain, [and] on account of his Youth was generally ordered to the rear." Younger and smaller musicians were more likely to play the fife, with some fifers changing to the drum as they matured. In 1782 Congress decided to take new musicians from the ranks, causing some difficulty, as a Tenth Massachusetts officer testified, "we want three Drummers and two Fifers but at present can find but one Fifer and two Drummers who have natural Geniuses for music . . . they are men of small stature and I believe will answer the purpose."

Musicians sometimes experienced duty-related hardships. Revolutionary fifer Samuel Dewees also served in the Fries Rebellion of 1799. Sent to recruit troops in Northampton, Pennsylvania, he stayed "two or three days . . . I had played the fife so much at this place,

I began to spit blood. . . . By the aid of the Doctor's medicine and the kind nursing treatment . . . I was restored to health again in a few days and able to play the fife as usual." Fifer Swain Parsel of the Third New Jersey Regiment had a similar experience. He "enlisted in the beginning of [1776] . . . as a fifer for one year." Reenlisting in the same regiment, "the practice of fifing being injurious to his health, he entered the ranks as a private soldier."

MEMENTOS OF SERVICE

Prospective pensioner John McElroy of the Eleventh Pennsylvania had a unique story to tell, stating in his pension deposition, "As to my ocupation I have none being nearly blind by reason of my eyes being nearly destroyed by the accidental bursting of cartriges in the year 1779 at Sunbury Pennsylvania." Despite his injury McElroy was appointed fife major in 1780. John McElroy and Aaron Thompson of the Third New Jersey both retained mementos of their military service well after the war. The former wrote in 1820 that "I have my old Fife and knapsack yet," while a friend of Thompson noted after his death that he "had heard him [Thompson], often say so, and mention, the fact of his, having mutilated his fife in order to prevent its being stolen and that he might preserve it, as a relic, of his services in that Struggle."

MUSKETS AND MUSKETRY. The principal infantry projectile weapon of the eighteenth century was the muzzle-loading flintlock musket. Using a complex double-ignition system, this smoothbore firearm threw a lead ball weighing about an ounce and up to three-quarters of an inch in diameter with an accuracy and rate of fire that suited the linear tactics used by western European armies and their colonial descendants in this period. Personal firearms had been introduced on a mass scale in the sixteenth century and incorporated into the linear tactical formations that were then dominated by thrusting and cutting weapons. As incremental improvements in the technology of firing the weapon were developed (the manner of igniting the gunpowder went from using a slow-burning match to striking flint on steel), firearms gradually replaced pikes and pole arms. The most common firearm, and the prototype of most other military firearms of the period, was the British army's famous Long Land Service musket, colloquially known as the Brown Bess.

Authors writing after the development of rifled military firearms have denigrated the musket for its inaccuracy at ranges much above fifty yards. By modern standards, it certainly was an imprecise weapon. But it is also true that the smoothbore musket was deeply intertwined with the history and technology of infantry combat of the period, as well as with social attitudes about who should fight and how they should be organized to succeed in battle. Rather than viewing the smoothbore musket as the ineffective precursor of subsequent improvements, it should be recognized as the most effective infantry combat weapon of its day, both influencing and being influenced by contemporary infantry tactics, an integral part of how societies and their leaders went about achieving the ultimate goal of prevailing on the battlefield.

DEPLOYMENT AND DISCIPLINE

The smoothbore musket was designed to be fired on command in massed volleys by soldiers standing upright shoulder to shoulder in lines several ranks deep. Volley fire could be based on groups as small as a platoon (say, at full strength, perhaps twenty-five men) or as large as a battalion, in numbers approaching a thousand men. Recognizing that bringing the maximum number of muskets to bear was the best way to impose one's will on the

enemy, beginning in the seventeenth-century commanders gradually thinned down their lines from the eight or ten men deep appropriate for combat with pikes and pole arms to three ranks. The first rank of musketeers, with bayonets fixed, would kneel before firing and might remain in that position without reloading, partly because it was difficult to reload a muzzle-loading musket while on one knee and partly to offer with their bayonets protection for their colleagues against a charge by cavalry or infantry. At the same time, the men in the second and third lines would stand and fire, the third line firing in the gaps—next to the shoulders—of the men in the second line. In a well-organized, full-strength battalion, commanders might reserve another line of “file closers,” drawn up at a short distance behind the third line, men who would step up when soldiers on the firing line fell wounded or killed. The British army was generally better trained than its European competitors in firing volleys by platoons, a more flexible tactic that gave fire all along the face of a battalion while ensuring that a portion of the soldiers were always loaded and ready to fire against any unexpected approach by the enemy.

At a range of fifty yards, volleys fired by soldiers arrayed in line would lay down a pattern of fire—more like that from a shotgun than from a precision firearm—that could have a devastating impact on a group of enemy soldiers similarly arranged. The key to success in battle was creating a larger volume of continuous fire than your enemy could produce. If a projectile struck a soldier, its low muzzle velocity meant that it would splay and produce an exit wound far larger than its point of entry. Firing as fast as one could reload in the general direction of the enemy line produced a hail of bullets that could unnerve a foe, almost regardless of how many projectiles actually struck home. No soldier would consciously want to take the chance of being hit; only the most rigorous inculcation of discipline could allow a soldier to suspend rational thought, as it were, and to keep reloading and firing in the hope that, if enough of his colleagues did the same thing, they might overmatch the enemy's musketry and simultaneously be safe against a bayonet charge from opponents who were, after all, only fifty yards away, perhaps obscured behind the cloud of gun smoke that hid them from observation.

ACCURACY OF FIRE

Accuracy, in the sense of aiming at a particular individual soldier on the opposite side and actually hitting your target, was not a significant part of the system of linear tactics. George Hanger remembered that:

A soldier's musket, if not exceedingly ill-bored (as many of them are), will strike the figure of a man

at eighty yards; it may even at 100; but a soldier must be very unfortunate indeed who shall be wounded by a common musket at 150 yards, provided his antagonist aims at him. . . . I do maintain . . . that no man was ever killed at 200 yards, by a common soldier's musket, by the person who aimed at him. (Peterson, p. 163)

Greater accuracy at longer ranges was, of course, possible. Gunsmiths had long understood that cutting slightly twisting grooves along the interior length of a gun barrel would impart spin to a projectile that had been wedged tightly enough on top of the powder charge that it deformed slightly when the powder exploded, thus enabling it to grip the lands (as the grooves were called) and go spinning down the barrel. The projectile had enough velocity to be effective at a range of up to three hundred yards. Riflemen were superior to musketeers on certain special missions but were no match in a linear battle because of their slow rate of fire and because their rifles lacked bayonets. Their marksmanship was less astounding than claimed at the time or than is popularly assumed.

RATE OF FIRE

The primary aim of military discipline was to produce soldiers who could endure the enormous physical and psychological strain that was part of fighting in a line, while simultaneously performing properly and efficiently the dozen or so motions necessary to reload their muskets. Constant practice was essential in giving the soldier the confidence and experience to fire and reload faster than an opponent who was going through the same motions trying to kill or incapacitate him. An average soldier might be able to fire two rounds a minute, while a nimble and well-trained man might be able to get off as many as four or five shots, meaning that he took only twelve to fifteen seconds to reload. (It was alleged, by Prussians no doubt, that Frederick II's troops could fire six rounds per minute, a remarkable figure that accomplished its objective if it induced nervous Austrians, Russians, and Frenchmen to glance about for a line of retreat even before coming within range of the rapid-fire Prussians.) In battle, speed in reloading was, according to the historian Harold L. Peterson, "everything. Speed for the defending force to pour as many bullets into the attacking force as possible; speed for the attacking force to close with its adversary before it had been too severely decimated to have sufficient strength to carry the position" with the bayonet (*Arms and Armor*, pp. 160, 162).

High rates of fire were possible only because the musket was designed to have enough windage (the gap between the spherical projectile and the inside of the barrel) so that the bullet essentially fell into place at the bottom of the barrel. Ramrods (thin, wooden, dowel-like

sticks) were carried by every musketeer and used to tamp the bullet tightly against the powder charge in the barrel, thereby creating a tighter seal that maximized the propulsive force exerted on the bullet. The first volley in any battle always tended to be the most effective because soldiers would take time before going into action to load and carefully ram the first round in place, time they would not have to seal the second and subsequent rounds. If tactical circumstances required the soldier to fix his foot-long bayonet on the end of the muzzle of his firearm (held in place by a lug that doubled as the only aiming device the weapon possessed), then reloading would become a more complex process. It was said that one of the marks of a battalion that had been in a stiff firefight was the scraped and bloody knuckles of soldiers forced to reload with bayonets fixed.

IMPEDIMENTS TO EFFECTIVE USE

A rate of fire of even two rounds a minute was bound to decline quickly in battle. Black powder, the only available propellant, combusted incompletely and left a residue that clogged the touch hole (the vent whereby the explosion of the priming powder in the pan, ignited by the striking of flint on steel, communicated itself to the main charge in the barrel). The flints themselves were held precariously in a set of steel jaws called a cock or a hammer; the soldier had to tighten a small screw to clamp the flint in the proper position, with enough of an edge exposed so that it would produce a shower of sparks when the soldier pulled the trigger that released the spring which snapped it down against the steel (also called the frizzen or the battery). Flints were fragile and susceptible to cracking and flaking. They would have to be replaced if broken, or reset if misaligned; we can only begin to imagine how difficult that process must have been in the heat of battle.

Even when the charge was properly loaded in the gun barrel and the flint was held firm and ready in the jaws of the hammer, a whole host of things could still go wrong that would prevent the soldier from using his weapon effectively. Black powder is hygroscopic, so even the smallest amount of moisture would destroy its explosive potential; a rainstorm in the middle of a battle would turn the contest into a bayonet fight. Moreover, its constituent ingredients separate and settle out over time and with motion, a characteristic seen more often when gunpowder was stored or transported in large wooden barrels. If, while loading, the soldier placed too little powder in the priming pan, failed to close the steel tightly over the pan, or did not examine and, if necessary, clean the touch hole, the initial explosion of powder would not ignite the main charge, a phenomenon known as "flash in the pan." The soldier would be left with a live charge in the barrel and a number of equally bad choices about how to fix the problem. A fumble-fingered soldier might not successfully extract

the ramrod in time with his colleagues and, in order to maintain volley fire, be compelled to present arms and fire away his ramrod. The hammer normally rested in the ready position, where a notch on its sear exerted minimal tension on the spring while the musket was being loaded. Before firing, the soldier had to pull the hammer back to the point where a second sear engaged and exerted the maximum tension on the leaf spring so that when released by the trigger, it would snap forward with maximum force against the steel, a position called “full cock.” At any point once the musket was loaded, the hammer might jump free from the ready position and strike the steel with enough force so that the weapon fired; this sequence of accidents became known as “going off at half-cock.”

It is also worth remembering that fatigue played a role in reducing the effectiveness of the men who wielded the smoothbore musket. On a hot summer day in western Europe, soldiers dressed in wool coats would quickly begin to slow down and wear out as they constantly loaded and fired their weapons. If the air were still, they would soon be breathing an unhealthy amount of gun smoke. Even if water were available, there might be no time for the soldier to slake his thirst or rinse from his mouth the taste and grit of the gunpowder he ingested in the process of ripping open cartridges with his teeth. Finally, the musket was so barrel-heavy that fatigue might cause the soldier to lower the barrel to the point where his bullets struck the ground in front of his line rather than flying in a slow arc to impact on the enemy line.

TACTICS FOR VICTORY

The pinnacle of smoothbore-musket-based linear tactics was to coordinate an advance on the enemy so as to maximize the impact of one’s musketry. With muskets loaded and bayonets fixed, the attackers moved forward, keeping their alignment, knowing that until within one hundred yards they were relatively safe from enemy musketry. Their officers tried to exert leadership and impose discipline so that they could induce the men to hold their fire. The object was to receive the enemy’s first volley, absorb the losses, and continue advancing to a point so close to the enemy’s line that one’s own first volley produced many casualties, enough to make the enemy break and run. The British army brought to North America a reputation for battlefield success earned by the repeated application of these tactics, most notably against the French. When, for example, British and French commanders at the Battle of Fontenoy on 11 May 1745 invited each other to fire first, they were shrewdly trying to gain an advantage, not being naively gallant. French discipline broke first, and the British survivors methodically annihilated their opponent with coolly delivered volley fire.

The symbiosis between smoothbore musketry and linear tactics produced battles in western Europe that were

complex ballets of coordinated motion. Every man on the field had a specific part in the dance, from the soldier with the courage to stand in line and the training to reload until disabled by bullets or fatigue, up the chain of command to officers who had to judge the right moment to maneuver the appropriate units over suitable ground to engage an enemy with the best chance of winning the fight. Even though most of the men in the ranks were illiterate, unhealthy, and destined for a cruel fate, they were not unthinking cogs in some aristocratic machine. Battle was a far cry from being a clash of faceless automatons marching soullessly toward the cauldron of fire created by an inept tactical system.

AMERICAN MUSKETRY

At the start of the hostilities with Britain, many influential American leaders, including George Washington, wanted to create a “continental army” based on European-style smoothbore muskets and linear tactics. Their desire was in large part the product of political and ideological calculations. They wanted to prove to their oppressors that they were a civilized people fighting for its rights and therefore worthy of respect, not a bunch of dirty, savage rebels taking potshots at their betters from behind trees because they were afraid to stand and fight. They recognized, too, that a European-style army was their best chance of winning a clear-cut victory that might shorten the war, reduce the enormous costs involved, and minimize the disruption and strain war would inevitably impose on American society.

But Americans could never create an exact duplicate of the British army. It took long enlistments and intensive training to make men proficient in linear tactics, and Americans were generally disinclined to undertake either. Instead, they created a hybrid version of war making, a version that combined elements of linear tactics with the experience they had gained over the course of a century and a half confronting Native Americans and European competitors. In general, they tried to avoid open-field, stand-up fights against British regulars early in the war because they understood they were unprepared to fight in that fashion. They largely succeeded in dodging that sort of combat, in part because the British army’s vision of war making based on linear tactics did not offer it any easy ways of forcing a reluctant opponent to fight. As hostilities continued, American units gradually gained experience and began to venture into more stand-up fights, as at Saratoga in September and October 1777. At Valley Forge over the winter of 1777–1778, Friedrich Steuben began the process of regularizing, standardizing, and installing a stripped-down system of linear tactics for the Continental army. The improved performance of Washington’s army at the Battle of Monmouth Courthouse on 28 June 1778 demonstrated that American regular units were approaching a large-scale parity with the British army in America.

The colonists had no capacity to manufacture large numbers of new muskets in 1775. They began the war with a hodgepodge of firearms, mostly leftovers from shipments Britain had sent to arm provincial soldiers during the colonial wars, some still in government storage, but most in the hands of the men who had taken them to war. Privately owned guns from a variety of sources were a significant component of the firearms used before 1777. Many were remanufactured from parts salvaged from worn out or discarded muskets, including—in New England and New York—the recycling of weapons acquired in war and trade from Canada. Captured British arms were also part of the mix, whether sequestered from local royal sources (as in the raid on Fort William and Mary at Portsmouth, New Hampshire, on 14–15 December 1777) or captured by privateers from supply ships intended for British garrisons. The supply of firearms did not always meet the demand, and the pace of operations and the carelessness of American soldiers imposed a further drain on the number of serviceable muskets. Both the states and the Continental Congress immediately saw the need to acquire more firearms and did what they could to encourage local manufacture. Early in the war, committees of safety let contracts to local gunsmiths to produce muskets of a standard size and caliber; in the age before manufactured parts were interchangeable, all muskets were still the products of skilled craftsmen. There were centers of production across the colonies, including Harvard, Massachusetts, Goshen, Connecticut, Trenton, New Jersey, and Philadelphia, where the committee of safety led by Benjamin Franklin contracted for muskets from local gunsmiths in July 1775. That same month, Virginia established its own state arms manufactory at Fredericksburg. Congress later established its own Continental firearms factory at Lancaster, Pennsylvania, along with a shop that produced gunlocks in Trenton.

Despite herculean efforts to ramp up domestic manufacture, the demand for firearms could not have been met without supplies purchased from overseas. Individual states sent agents to Europe to purchase muskets, gunpowder, flints, and lead; the fruits of their efforts were smuggled into the colonies, mostly through the Dutch West Indies island of St. Eustatius. Congress itself sent Silas Deane of Connecticut to France in March 1776 with instructions to solicit clothing and arms for twenty-five thousand men. In May, France decided to supply military material to the colonies under the guise of the fictitious trading company Hortalez & Cie, run by Pierre-Augustin Caron de Beaumarchais. Eventually, over 100,000 high-quality French military muskets were sent to the Americans, firearms that provided a critical boost in the fighting power of the rebel armies. For example, thirty-seven thousand stand arrived at Portsmouth, New Hampshire, in the spring of 1777, many of which armed

the troops that stopped Burgoyne's army at Saratoga. The victory at Saratoga, in turn, was crucial in prompting France to enter into a treaty of alliance with the United States 6 February 1778, after which French supplies could flow openly across the Atlantic. The French muskets, of .69 caliber, were largely a combination of the 1766 model and upgrades of earlier models undertaken between 1768 and 1773. They were produced at the three royal arms manufactories of St. Etienne, Maubeuge, and Charleville, the last named becoming the common designation for all French muskets. The French model 1766 was chosen as the design for the first muskets produced in the United States after the war, the model 1795.

MUTINY ACT OF 1765 **SEE** *Quartering Acts*.

MUTINY OF GORNELL. April 1782. Inadequate supplies and other administrative grievances, combined with a lack of military activity, produced considerable discontent in Major General Nathanael Greene's southern army in October 1781. When these same conditions reappeared in the spring of 1782, the Pennsylvania

Mutiny of Griffin

battalions that had marched south under Brigadier General Anthony Wayne after Yorktown became the most agitated, still feeling lingering resentment from their previous mutiny. Before this trouble could spread to the Maryland troops, Greene determined to crack down, especially as he suspected British agents to be at work. Greene arrested the ringleader, a Sergeant Gornell, and tried him in a court-martial. On 23 April he was executed, ending the disturbance. The historian Carl Van Doren has identified him as George Goznall of the Second Pennsylvania Regiment.

MUTINY OF HICKEY. June 1776. On 15 June 1776, when General George Washington was in New York City and Governor William Tryon was a refugee aboard a British ship in the harbor, Thomas Hickey and another Continental soldier were brought before the Provincial Congress on the charge of passing counterfeit currency. Both men were members of Washington's Life Guard, a special military unit. In jail, Hickey bragged openly about being part of a conspiracy to turn against the Americans as soon as the British army arrived. Another prisoner, who had conversed with both Hickey and the soldier who had been arrested with him, informed the authorities. The plot allegedly involved blowing up American powder magazines, setting fire to New York City, spiking the cannons, destroying the Kings Bridge, and assassinating Washington. The extent of the conspiracy was so magnified and propagandized, however, that the facts were never known for certain.

It seems to have been established at Hickey's trial that Governor Tryon had been sending money to Gilbert Forbes, a gunsmith on Broadway, to recruit men for the king. The money was passed by Mayor David Mathews of New York, who had authority to visit Tryon and who claimed he did not know the purpose of the money. There was no proof that Tryon was counterfeiting money on

shipboard, or that he had offered land bounties to stimulate recruiting. Nor could it be proved that as many as 700 men had signed up for the plot, much less that the plans included the assassination of Washington and other leaders.

John Jay headed the committee that investigated the affair for the New York authorities. Only Hickey was tried, but 13 others, including Forbes and Mathews, were imprisoned in Connecticut. They all escaped or were sent back to New York before they could be given a hearing. Hickey was convicted of mutiny and sedition by a court-martial on 26 June 1776, and two days later was hanged on the Common in the presence of 20,000 spectators. It was the first military execution of the American Revolution. The main result of the affair was to further blacken the name of "Loyalist."

MUTINY OF THE CONNECTICUT LINE.

25 May 1780. While in quarters at Basking Ridge, New Jersey, near Morristown, the Eighth Connecticut Regiment turned out about dusk on 25 May to protest a lack of food. There were no ringleaders in this spontaneous event, which spread to the Third, Fourth, and Sixth Connecticut Regiments as well. Colonel Walter Stewart of Pennsylvania mediated a settlement and the troops returned to their huts, although Colonel R. J. Meigs, acting brigade commander, had been accidentally bayoneted in the side. The historian Carl Van Doren has said, "The whole affair was soon over and afterwards disregarded" (*Mutiny*, pp. 22–23).

MUTINY OF THE FIRST NEW YORK REGIMENT.

June 1780. Thirty-one men of the First New York Regiment deserted from Fort

Schuyler (Stanwix) in early June 1780. Lieutenant Abraham Hardenbergh led a party of Oneidas in pursuit to prevent the deserters from joining the British. The fugitives were caught while in the process of crossing a river, and thirteen were shot. According to Carl Van Doren, “This is perhaps the only time in the history of the American Army when an officer used Indians to kill white soldiers” (*Mutiny in January*, p. 20).

MUTINY OF THE MASSACHUSETTS LINE.

1 January 1780. William Heath wrote in his memoirs: “Early in the morning about 100 soldiers belonging to the Massachusetts regiments [of the West Point garrison] . . . marched off with intent to go home: they were pursued and brought back: some of them were punished; the greater part of them pardoned.” Once back in quarters the individual cases were reviewed, and some of the men received their discharges. As would be the case again a year later, the cause of the problem was a difference of opinion on the meaning of the phrase—regarding length of service—“three years or the duration.”

MUTINY OF THE NEW JERSEY LINE.

20–27 January 1781. The two regiments of the reorganized New Jersey Brigade were in winter quarters at Pompton, New Jersey, with a small detachment at Suffern, New York, when the Mutiny of the Pennsylvania Line started on 1 January. Brigadier General Anthony Wayne ordered part of the brigade south, and they eventually camped at Chatham under the command of Elias Dayton. The portion of the brigade remaining at Pompton was commanded by Colonel Israel Shreve. Having the same complaints as the Pennsylvania regulars, men of the Jersey Brigade followed developments of the

Pennsylvania mutiny with avid attention. Even after New Jersey granted its men some of the benefits won by the Pennsylvania troops, a mutiny broke out on 20 January at Pompton. In many ways it seemed a small-scale repetition of the recently concluded performance. Several hundred men left their camp at Pompton and headed for Chatham. Shreve trailed them, just as Wayne had followed the Pennsylvanians. Dayton managed to disperse much of his detachment before the Pompton mutineers arrived on 21 January, so only a few recruits were acquired at Chatham. After two disorderly days the Pompton group agreed to follow Shreve back to camp, and the men were promised pardon if they subsequently behaved.

Washington, meanwhile, learned of the new disorder the evening of 21 January and ordered Major General William Heath in the Highlands to make five or six hundred good troops available to stamp it out. He placed Major General Robert Howe in command of the operation and told him to enforce unconditional submission. After a hard march through deep snow the troops from around West Point reached Ringwood, New Jersey, on 25 January. Here they were joined by other reliable units and by three guns. Washington arrived at midnight the next night and Howe led his command forward an hour later.

The troops at Pompton, eight miles away, became disorderly again soon after their return from Chatham. They obeyed some officers but not others. Sergeants George Grant, Jonathan Nichols, and John Minthorn had been the nominal leaders of the original uprising (although they apparently were forced by their men into assuming leadership); Sergeants David Gilmore (or Gilmour) and John Tuttle were the most conspicuous agitators of the later disorders.

With some well-founded doubts about whether his Massachusetts, Connecticut, and New Hampshire troops would do their duty, Howe surrounded the Pompton encampment before daylight on 27 January. With the three cannon in plain view of the huts, Howe sent in word for the mutineers to assemble without arms. After some hesitation they complied.

Officers of the New Jersey Brigade submitted the names of the worst offenders and from these candidates selected one from each regiment (including a veteran of the Third New Jersey, which had been disbanded on 1 January in the reorganization). Grant, Gilmore, and Tuttle were named, tried on the spot, and sentenced to be shot immediately. The latter two were executed by a firing party formed by twelve other mutineers who had been named as prominent offenders. Grant was reprieved at the last minute; Van Doren comments that “it is tempting to guess that he may have been privately told by Shreve not to worry over the trial and sentence” (*Mutiny*

in *January*, p. 223). A journal kept by a contemporary, Dr. Thacher, who saw the trials and executions, gives no indication that he suspected Grant's case was rigged.

MUTINY OF THE PENNSYLVANIA LINE. 1–10 January 1781. Inactivity during winter quarters, plus accumulated grievances about food, clothing, quarters, pay, bounties, and terms of enlistment, finally led the Pennsylvania Continentals to mutiny on 1 January 1781. Many of these troops had enlisted "for three years or during the war"; they contended that the phrase "whichever comes first" was implied and that their contracts were now fulfilled. Almost nothing is known for certain about how this mutiny was organized—the mutineers kept no written records and none of them wrote of the event afterward. The names of only two leaders are known for sure: William Bowzar, secretary of the twelve-man Board of Sergeants that represented the mutineers, and Daniel Connell, who signed the Board's final communication. A man named Williams—probably John Williams—was president of the Board of Sergeants, but does not appear to have been the real leader or organizer of the revolt.

THE MUTINY BEGINS

The ten disaffected infantry regiments and the artillery regiment of General Anthony Wayne's Pennsylvania Line were encamped near Morristown, New Jersey, where they occupied huts built during the previous winter at Jockey Hollow (also known as Mount Kemble). The total strength in officers and men was about 2,500. The mutiny started about 10 P.M. the evening of 1 January, when soldiers emerged from their huts under arms and with field equipment, captured the guns and ammunition, and assembled to march away. Initially, fewer than half the men participated, and probably not more than 1,500 eventually joined the march. During a confused hour before they left camp, the mutineers resisted the efforts and the eloquence of Wayne and about 100 officers to stop

them. They did this with a remarkable lack of violence, offering with the simple argument that the officers could do nothing to settle their grievances—they intended to present these directly to Congress in Philadelphia.

Lieutenant Francis White and Captain Samuel Tolbert were shot (not fatally) while trying to keep their men from moving to the assembly area. Captain Adam Bettin was mortally wounded by a soldier who was chasing Lieutenant Colonel William Butler (of the Fourth Pennsylvania Regiment) and who mistook Bettin for Butler. One man was killed accidentally by a fellow mutineer who, unknown to the other, had replaced the regular guard on the captured magazine. These are the only identified casualties, although it is hard to believe that there were not others.

When Wayne rode onto the scene with several field officers he was unable to restore order, but according to one participant, Lieutenant Enos Reeves, the men stated "it was not their intention to hurt or disturb an officer of the Line, two or three individuals excepted." The majority of the troops were reluctant to join the mutiny. The Second Pennsylvania Regiment of Colonel Walter Stewart was forced at bayonet point to go along. Captain Thomas Campbell turned out part of the Fourth Pennsylvania Regiment and attempted to recapture the artillery, but his men would not carry through with the attack. The Fifth (Colonel Francis Johnston) and Ninth (Colonel Richard Butler) Regiments occupied huts some distance from the others, and joined only after being threatened with the cannon. Other men hid as mutineers ran from hut to hut gathering supporters. At 11 P.M. the column marched away to camp at Vealtown (Bernardsville), New Jersey, four miles distant, to await stragglers before resuming their advance toward Philadelphia the next morning.

Wayne had long feared a mutiny, and had urged higher authority to do something about the legitimate grievances of his troops, but he was surprised by the events that had just taken place. Powerless to stop the marchers, and not a bit sure they did not intend to go over to the enemy—or that the British would not strike at this critical time—Wayne prepared to follow his men and try to restore order. He was accompanied by Colonels Walter Stewart and Richard Butler. Before the dawn of 2 January, however, Wayne wrote out "what he called an order but what was a request and a promise":

Agreeably [sic] to the proposition of a very large proportion of the worthy soldiery last evening, General Wayne hereby desires the noncommissioned officers and privates to appoint one man from each regiment, to represent their grievances to the General, who on the sacred honor of a gentleman and a soldier does hereby solemnly promise to exert every power to obtain immediate

redress of those grievances; and he further plights that honor that no man shall receive the least injury on account of the part they have taken on the occasion.

The mutineers entered Princeton in the late afternoon or evening of 3 January, took control of this village of some 70 houses, and prepared to wait there until Congress responded to the appeals they had sent forward to Philadelphia. The Board of Sergeants established themselves in the ruins of Nassau Hall and the men pitched tents south of the College. The sergeants had sent back a delegation to confer with Wayne, who was following at a safe distance, but they would not halt their advance on Princeton to let him address the troops. The sergeants had also furnished Wayne with a personal guard, and when the general and his colonels took up quarters in a tavern near Nassau Hall on 3 January they had some doubts as to whether this guard was a mark of respect or indicated that they were hostages.

PRELIMINARIES AT PRINCETON

During Thursday, 4 January, Wayne and the colonels negotiated with the Board, and later in the day Wayne sent word to the state authorities—the Council of Pennsylvania—that somebody should come and consult with the mutineers. Congress and the Pennsylvania Council, both sitting in what is now Independence Hall, had learned on 3 January of the alarming developments at Morristown. That afternoon Congress appointed a committee to deal with the Pennsylvania Council on the mutiny. When the Council received Wayne's letter on Friday, it met with the committee of Congress and decided to send Joseph Reed, President of the Pennsylvania Council and therefore of the state, and General James Potter, a militia officer and Council member. The three original members of the Congressional committee—General John Sullivan, the Reverend John Witherspoon, and John Mathews—were now augmented by Samuel John Atlee and Theodorick Bland. Reed and Potter left Philadelphia late Friday afternoon with an escort of twenty light horsemen from the famous city troop, and entered Trenton by noon the next day (6 January). Sullivan's committee (less Mathews, who stayed in Philadelphia) reached Trenton after dark on 6 January and stayed there during the negotiations. Captain Samuel Morris, with the rest of his Philadelphia Light Horse, accompanied them.

Meanwhile, the Board of Sergeants had had a number of visitors in Princeton on 4 January. Major General Arthur St. Clair, senior officer of the Pennsylvania Line; the Marquis de Lafayette; and Lieutenant Colonel John Laurens were in Philadelphia on 3 January when the newly created Congressional committee decided that some officers should go see what could be done about the mutiny.

These three were received by the Board of Sergeants and talked to Wayne, but the Board then told them to leave—the sergeants preferred to continue their negotiations through Wayne, Butler, and Stewart. On this same day, Colonel Thomas Craig approached with eighty armed officers from Morristown and sent word to Wayne of his coming. The officers were not allowed to enter Princeton, and they sat out the subsequent negotiations at Pennington, nine miles away. Some members of the New Jersey legislature also showed up on 4 January from Trenton, but they were not allowed to enter Princeton.

General George Washington, the commander in chief, got his first news of the mutiny about noon on 3 January. Located at New Windsor with the main portion of the army, he was too far away to exert much influence on subsequent events, and as it turned out, Wayne on his own initiative was following almost precisely the course Washington advocated. Washington's letter of 3 January, received by Wayne on 7 January, recommended that Wayne stay with his troubled men, that he not attempt force, and that he try to have the mutineers move south of the Delaware River. Washington disagreed with Wayne's proposal that Congress leave Philadelphia in order to avoid the mutineers, but this point turned out to be academic once Congress decided to stay. Washington had made preparations to ride south, but changed his mind at 7 A.M. on 4 January when he realized he could not arrive in time and that he had the more important task of keeping the mutiny from spreading through the rest of the army. The sympathy of the troops was with the mutineers, particularly since the latter had shown such good discipline in pressing their demands and displayed no disposition to deal with the enemy. Nonetheless, civil and military authorities went ahead with plans to surround Princeton with militia and regulars.

British headquarters in New York City had learned of the mutiny before Washington, and Sir Henry Clinton promptly sought a means of exploiting the situation. He alerted troops for a possible march into New Jersey and started looking for emissaries to offer the mutineers pardon, payment of the money owed them by Congress, and the privilege of declining military service if they would come over to the British.

REED REPRESENTS THE CONGRESS

Many agencies were concerned with the mutiny, but Joseph Reed promptly assumed the key role. Although General Potter stayed by Reed's side, Potter contributed nothing but an occasional signature. The Congressional committee (Sullivan, Witherspoon, and Mathews) may be regarded as a rubber stamp that waited in Trenton to approve Reed's solution. Washington was virtually out of the picture. St. Clair sat at Morristown, in command of the troops who had not joined the mutiny, and muttered

about using force. So, probably, did the eighty officers who had left the government's bed and board to live at their own expense at Pennington.

Reed did not go straight to Princeton where, for all he knew, Wayne and the colonels were prisoners and his own safety would be uncertain; he undertook a line of action designed to remind the anonymous sergeants of his personal dignity and their lack of status. Reed started a correspondence with Wayne, but wrote with the expectation that these letters would be read by the sergeants. When he received a letter from Sergeant Bowzar assuring him safe conduct—for several days the Board was not convinced that President Reed had really been sent to deal with them—Reed played dumb and, in a letter to Wayne wrote: "I have received a letter from Mr. Bowzar, who signs as secretary but does not say to whom." Reed very well knew "to whom" Bowzar was secretary, but he wanted to avoid even tacit recognition of the Board and to stress that Wayne was still their lawful commander.

Reed and Potter had ridden on to Maidenhead (now Lawrenceville, four miles south-west of Princeton) on Saturday evening and they now proposed that Wayne meet them there. After the sergeants were made to understand that Reed's reluctance to enter Princeton was due to their inhospitality toward St. Clair, Wayne sent word he would meet Reed at Maidenhead Sunday morning. Reed returned to Trenton, where the Committee (which arrived that evening) gave him final guidance.

A significant development took place during the night. Clinton's emissaries—John Mason and a guide named James Ogden—got into Princeton and presented the enemy's proposals to Sergeant Williams. The latter promptly slapped them under guard and delivered them to Wayne at 4 A.M. Reed was riding to Maidenhead Sunday morning when he met the prisoners being escorted to Trenton. Any suspicion that the mutineers were flirting with the enemy was now dispelled. Taking the prisoners with him, Reed rode on to Maidenhead, met Wayne, and accepted the latter's recommendation that they proceed to Princeton. Meanwhile, just as Wayne, Reed, and their parties were leaving Maidenhead, a message came from the Board of Sergeants asking that the captive emissaries be returned to their custody. Apparently the mutineers had figured, on second thought, that they would be in a better bargaining position if they held these two men.

The mutineers were formed along the post road to honor Reed's arrival at about 3 P.M. In this unreal situation Reed took the salutes of sergeants, who stood before their men in the positions normally occupied by officers, and he returned the salutes ("though much against my inclination"). The artillery was drawn up to fire a salute, but Reed or Wayne managed to stop this rendering of honors, on the ground that it might alarm the countryside.

NEGOTIATIONS BEGIN

The first order of business in Princeton on that Sunday afternoon was what to do with Mason and Ogden. Van Doren writes that "Reed and the officers were plainly much afraid that the British would land and the mutineers either join them, or refuse to fight, or try to drive some bargain before they fought" (p. 127). Most of the sergeants favored Wayne's proposal that the men be promptly executed as spies, but Williams, who was a British deserter, and another sergeant of the same antecedence blocked this solution. Williams had the novel idea of sending the men back to Clinton "with a taunting message." Reed objected to this pointless suggestion and proposed a compromise that was adopted: the sergeants would hold the prisoners subject to Reed's call, and their disposition would be decided later. Meanwhile there was fresh intelligence of an enemy move from Staten Island into New Jersey, and there was now no time to waste in settling the mutiny.

A good deal of preliminary work had already been done between Wayne and the sergeants. The Committee of Congress had instructed Reed to honor Wayne's promise of total amnesty, and they agreed that the men should not be considered traitors unless they were considering deserting to the enemy or refused to compromise on terms for settling the mutiny. It had also been decided in Trenton that men who had enlisted for three years or for the war should be discharged if they had served three years and had not re-enlisted. Men who had voluntarily enlisted or re-enlisted for the war were not, however, to be released.

At the Sunday night conference in Princeton, the sergeants advanced a single proposal that embodied the wishes of the men who had the longest service and who represented the strongest of several factions in their camp. This proposal was:

That all and every such men as was enlisted in the years 1776 and 1777 and received the bounty of twenty dollars, shall be without any delay discharged and all the arrears of pay and clothing to be paid unto them immediately when discharged; with respect to the depreciation of pay the State to give them sufficient certificates and security for such sums as they shall become due.

Reed could not agree to this proposal, because it would permit the release of men specifically precluded by the guidance he had received from the Committee of Congress. Although this proposal was undoubtedly phrased to release some men not honestly entitled to discharge, the sergeants proceeded to open the eyes of the President of Pennsylvania—and, to a lesser extent, those of their commanding officer of the Line—to certain sharp and dishonest practices that military officers had employed in enlisting them. In short, according to Van Doren, "the enlistment papers did not tell all the truth of what had happened" (p. 128).

The sergeants showed much difference of opinion among themselves. They were incapable of drafting a new set of compromise proposals, they had doubts about getting the men to accept such proposals if drafted, and Sergeant Williams was not the man to unify their demands. In order to have some basis for working out a solution. Reed undertook to write up a document which, Van Doren reports, “promised as much as he thought he could perform and as little as he thought the men would accept.” (p. 130) After some minor alterations by Wayne, Reed’s proposals were generally as follows: no man would be held beyond the time for which he freely and voluntarily enlisted; a commission would decide on disputed terms of enlistment; if enlistment papers were not promptly produced by official custodians, the soldier’s oath on the matter would be accepted; and back pay, adjustment for depreciation, and clothing shortages would be taken care of as soon as possible.

RESOLUTION OF THE MUTINY

On Monday, 8 January, the mutineers announced their general acceptance of Reed’s proposals, and on the next morning they marched to Trenton for final negotiations. That evening, the Board of Sergeants had a long conference with the Committee of Congress. On the morning of 10 January Reed informed the sergeants that, since they had accepted his proposals and these would now go into effect, he would like the spies surrendered as evidence of the mutineers’ willingness to abide by their agreement. The Board countered with a demand that the mutineers remain together under arms until final arrangements were completed. Reed refused to accept this condition and asked for a final answer within two hours. Within the time limit the Board agreed to give up the prisoners and to turn in their weapons. This communication came “Signed by the Board in the absence of the President, [by] Daniel Connell, Member.” Van Doren comments that Williams and Bowzar may actually have been absent, or they may have been unwilling to sign this paper. John Mason and James Ogden, Clinton’s emissaries, were convicted on 10 January of spying and were hanged the next morning. Mason was a hard character with a long record as a criminal Loyalist. Ogden is known in history only as Mason’s guide.

Putting the settlement into effect involved resolving a number of knotty problems and took several weeks. On 29 January, however, Wayne wrote Washington that the task was completed. About 1,250 infantrymen and 67 artillerymen were discharged; nearly 1,150 remained. Enlistment papers had been gathered quickly and most of them clearly committed the men for the duration of the war, but the commissioners discharged men of the first five infantry regiments and most of the artillery by 21 January without waiting for the papers, and many men got away on false

oaths. There was talk of bringing action against these perjured soldiers, but the State decided against this because it was finding it impossible to raise the money to fulfill its own part of the bargain. A high percentage of the discharged men subsequently re-enlisted, and all the Pennsylvania Line—mutineers and others—were furloughed until 15 March, with instructions to rendezvous at various places in accordance with a reorganization plan that originally had been scheduled for 1 January. This plan, which went into effect on 17 January, eliminated the Seventh through Eleventh Pennsylvania Regiments and deployed the others as follows: the First and Second were placed under Daniel Brodhead and Walter Stewart at Philadelphia; the Third, under Thomas Craig, at Reading; the Fourth, under William Butler, at Carlisle; the Fifth, under Richard Butler, at York; and the Sixth, under Richard Humpton, at Lancaster. Only recruiting sergeants and musicians were not given furloughs.

Other soldiers with the same grievances as the Pennsylvania Line had followed these developments with keen interest. The mutiny of the New Jersey Line, which took place between 20 and 25 January, was the most significant result. Wayne was preparing to lead the Second, Fifth, and Sixth Pennsylvania Regiments to join Lafayette when a small-scale mutiny flared up in York, Pennsylvania. As a result of this action, six men were convicted and four of them executed on 22 May.

MUTINY ON PROSPECT HILL.

10 September 1775. Cambridge, Massachusetts. Riflemen from Pennsylvania and Virginia served effectively at the siege of Boston, but their ill discipline in camp was a constant cause of concern to those responsible for military law and order. The worst incident, on Sunday, 10 September, reached the dangerous depths of mutiny. Such behavior had to be suppressed before other riflemen decided they, too, could disobey army regulations. When the adjutant of Colonel William Thompson’s Pennsylvania Rifle Battalion, Lieutenant David Ziegler, confined a

sergeant for “neglect of duty and murmuring,” members of the sergeant’s company threatened to release him (*Pennsylvania Archives*, second series, 10, p. 8). As Ziegler reported his action to the colonel and lieutenant colonel, the men made good on their threat. The officers seized the malefactor and sent him to the main guard in Cambridge. Some men of Captain James Ross’s notably ill-disciplined company from Lancaster County swore to release him and, joined by men of other companies, a group of thirty-two riflemen headed for the jail with loaded weapons. The guard detail was strengthened to five hundred men, and several Rhode Island regiments were turned out under arms for what could have been the biggest brawl of the Boston siege. The mutineers had gone about half a mile when they were confronted on Prospect Hill by General Washington, along with Charles Lee and Nathanael Greene. Washington ordered the mutineers to ground their arms, which they did “immediately” (*ibid.*, 10, p. 9). Another Pennsylvania rifle company (Captain George Nagel’s men from Berks County) surrounded the subdued riflemen and marched them back to camp, backed up by two New England regiments.

In a court-martial on 12 September, of which Colonel John Nixon of Massachusetts was president, thirty-three men were convicted of disobedient and mutinous behavior. Since a draconian sentence ran the risk of reigniting and spreading the mutiny, the court was content with fining each mutineer twenty shillings. The ringleader, John Leaman, got the additional punishment of six days’ imprisonment. The riflemen did not threaten to spring him, but they continued to be a disciplinary problem throughout the siege.

MYTHS AND MISCONCEPTIONS.

The historical record does not always supply sufficient evidence from which to build unassailable conclusions about what happened in the past. Even when the evidence

is abundant, different people may, in good faith, interpret it in different ways. Because all historical scholarship is a form of argument in which the interpreter emphasizes certain facts and points of view to build a case for his or her particular conclusions, it is easy to see how the history of so complex an event as the American Revolution offers a fertile field for nearly endless revision.

In the decades since the end of the war, historians have combed through the evidence and examined again and again what we think we know about people and events, and in the process they have corrected many misconceptions and altered many interpretations. Sometimes a closer look was all that was needed. Examples abound. The noble titles “Lord Stirling” (William Alexander), “Baron von” Steuben, and “Baron de” Kalb were all bestowed by those individuals on themselves. Early commentators elevated the resolves adopted by a committee at Charlotte, North Carolina, in May 1775 into a “Mecklenburg [County] Declaration of Independence.” Americans celebrate the 4th of July as Independence Day, even though the Declaration of Independence was adopted, not signed, on the 4th.

Other misconceptions arise out of undocumented assertions that we, after all, cannot say definitively are not true. It just sounds better if Ethan Allen demanded the surrender of Fort Ticonderoga with the ringing phrase “in the name of the Great Jehovah and the Continental Congress,” or if John Parker declared on Lexington green that “if they [the British] want war, let it begin here!” Some stories are so appealing that we want them to be true, like the heroism of Molly Pitcher, the devotion of Betsy Ross, or the intrigue of the silver bullets of Ticonderoga. Other stories fit our preconceptions, like Washington’s alleged temper tantrums at Kips Bay and Monmouth or the idea that he almost won at Germantown. Many misconceptions arise from the opinions some contemporaries used to smear the reputations of particular individuals. Both Walter Butler and Simon Girty were accused of atrocities at places where they were not present. William Howe was allegedly a libertine whose indiscretions caused him to lose the war (the Murray Hill Myth). Benedict Arnold was clearly a black-hearted traitor (the Arnold Legend). His treason, for Americans the most discordant note in the entire symphony of the founding of the Republic, has led to questions about whether Arnold or Gates deserves credit for the victory over Burgoyne at the Second Battle of Saratoga and over the role played by Peggy Shippen Arnold in her husband’s defection.

It is worthwhile to distinguish misconceptions from myths. Myths may or may not have a firmer grounding in the evidence than misconceptions, but they almost always gain a wider currency because they reflect or support some idea that is fundamental to how a society

views, understands, and even defines itself. Perhaps the best example of this phenomenon in the Revolution is the myth of the militia. Americans wanted to believe that they were virtuous men fighting in the righteous cause of resisting British tyranny. Rather than relying on an odious standing army like their oppressors, Americans were free men who turned out to protect their rights. No matter that they might lack formal military training, Americans believed that, as citizen-soldiers, they had had the determination and ingenuity to win through to victory, a point of view that minimized the crucial contributions made by both the Continental army and their French allies.

The nineteenth century saw the apogee of this attitude. On 4 July 1837 the people of Concord dedicated a memorial obelisk on the site where their ancestors had stood against the British on 19 April 1775. Ralph Waldo Emerson solemnized the occasion with his "Concord Hymn," in words that entered our language and still fill Americans with pride and awe:

By the rude bridge that arched the flood,
Their flag to April's breeze unfurled,
Here once the embattled farmers stood
And fired the shot heard round the world.

Thirty-eight years later, on the centennial of the fight at Concord Bridge, the townspeople unveiled the great visual symbol of how Americans remembered their Revolution. The bronze statue, the *Minuteman*, was the first landmark in the distinguished career of the then twenty-five-year-old sculptor Daniel Chester French. (His final contribution to the American pantheon would be the statue of Abraham Lincoln sitting as the centerpiece of the Lincoln Memorial.). The *Minuteman* immediately took its place alongside the Liberty Bell among the icons of the Revolution. Dressed in civilian clothes, the handsome young farmer stands forthrightly in his field, one hand on his plow, the other clutching the musket he is about to use to defend his land and his liberty. So powerful was the moment captured by French that the *Minuteman* came in the twentieth century to embody all the virtues of American citizen-soldiers in the fights against fascism and communism. So powerful, too, was the legacy of French's evocation that historians have been working to place it in its proper context ever since.

N

NANCY CAPTURE. 28 November 1775. On 8 September H.M. Frigate *Phoenix* departed England escorting a convoy of victuallers and two ordnance transports to Boston. The convoy was scattered by storms as it made its way across the Atlantic, and the frigate reached Boston on 9 November to report that one of the transports, the brigantine Nancy, was missing. Acting on information possibly sent by Arthur Lee, Washington alerted his small squadron of cruisers to be on the watch. One of those vessels, the 74-ton schooner *Lee* (formerly the *Two Brothers*) had recently been fitted out with six small cannon in Marblehead by John Glover and on 28 October she was officially commissioned under the command of Captain John Manley with a crew made up of seamen detached from Washington's infantry regiments. At dusk on 28 November Manley captured the much larger (250-ton) but unarmed *Nancy*.

This was the first important prize taken by the Americans, and Washington sent reinforcements to Cape Ann to secure her. She yielded 2,000 muskets, 100,000 flints, 30,000 round shot, 30 tons of musket shot, and a 13-inch brass mortar weighing over 2,700 pounds. The latter entered into American service and was dubbed "*Congress*" in a joyous mock christening ceremony. The materiel taken from the *Nancy* provided significant logistical support for the ordnance-starved Continental Army.

While this event is not mentioned in many general accounts of the Revolution, Major General William Howe immediately wrote to the Ministry to warn them that the capture gave the Americans the ability to set Boston on fire if they chose to exercise it. (Naval Documents, 2:1251–1252.) Although not technically a navy victory, this capture was the highlight of the Americans' first efforts

at sea and gave an important impetus to the establishment of the Continental Navy. More importantly, the loss shocked the British government and brought a major change in policy requiring the Admiralty to provide escorts for all Ordnance Department shipments, and for all ordnance vessels hereafter to be armed and capable of self-defense.

NANTASKET POINT, MASSACHUSETTS SEE *Great Brewster Island, Massachusetts.*

NANTASKET ROAD, MASSACHUSETTS. 17 and 19 May 1776. When the British evacuated Boston, they left behind a small naval force in Nantasket Road (the point where vessels entering Boston Harbor from the open sea would assemble to await favorable tides) to protect transports and merchantmen known to be coming from Europe from interception by Washington's squadron or privateers. On 17 May, Captain James Mugford, in the sixty-ton schooner *Franklin* (sixty), captured the three-hundred-ton ordnance ship *Hope*, which was bringing a cargo that included one thousand carbines and fifteen hundred barrels of gunpowder from Ireland in sight of British warships. Two days later, while cruising in company with the tiny privateer *Lady Washington* (seven men), Mugford ran aground near

Point Shirley. Eager for revenge, the British sent about two hundred men in a dozen or so small boats to attack her after darkness fell. After a half-hour fight in which the only American casualty was Mugford, who was killed, the battered British withdrew. Americans estimated that the enemy suffered forty or fifty killed or wounded. The British would lose several troop transports before the Americans constructed a heavy battery that chased the Royal Navy off.

NASH, ABNER. (1740–1786). War governor of North Carolina. North Carolina and Virginia. Born in Amelia County, Virginia, around 1740, Abner Nash became an attorney and served in the Virginia legislature from 1761 to 1762. He then moved to Halifax, North Carolina, with his brother Francis Nash in 1762. Elected to the North Carolina Assembly in 1764, 1765, and from 1770 to 1771, Nash married the widow of Governor Arthur Dobbs. He sued the estate of the governor for his wife's property in a case that eventually set the assembly against the royal governor and accelerated the controversy with the Crown. Following the death of his wife in 1771, Nash moved to New Bern, serving in Tryon's forces as a major of militia at the battle at Alamance on 16 May 1771. The following year he became a leader of the Patriot cause, helping to drive Governor Martin out of North Carolina. He served in the Provincial Congress and on the provincial council from 1774 to 1776.

After helping to write North Carolina's constitution, Nash was elected the first speaker of the House of Commons in 1777, moving up to the state senate in 1779, where he was again elected speaker. In the spring of 1780, as his state became a theater of active military operations, Nash was elected governor. While he was energetic, he chafed under the constitutional weaknesses of his office and then objected to what he considered to be unconstitutional acts by the Assembly in appointing Richard Caswell as commander of the militia, in establishing a board of war and, subsequently, in creating a council extraordinary with powers that undermined his own. The Loyalist uprising of 1781 led to the temporary dissolution of the state's government, as well as to the burning of Nash's home during Major James Craig's raid on New Bern in August 1781. Declining a second term, Nash returned to the House of Commons in 1782, 1784, and 1785. He declined election to Congress in 1778, but accepted in 1782, 1783, and 1785. However, he did not attend a single session in these last two years. Elected again in 1786, Nash decided to attend Congress, but died in New York City on 2 December 1786.

NASH, FRANCIS. (1742–1777). Continental general. Virginia and North Carolina. Born in Amelia County, Virginia, 1742, Nash moved to Halifax, North Carolina, with his brother Abner Nash in 1762, where he became a merchant and attorney. In 1763 he became clerk of the court of pleas and quarter sessions. He was representative from Orange County to the House of Commons in 1764, 1765, and 1771, and for Hillsboro from 1773 to 1775. He became a target of the Regulators, ad hoc groups in North and South Carolina who resisted what they saw as the biased legal system of the coastal elite. The Regulators charged Nash with taking excessive fees for his services.

Nash served in William Tryon's forces as a captain of militia at the battle at Alamance on 16 May 1771. As the Revolution approached, he identified himself with the Patriots. He was elected to the second and third provisional congresses of North Carolina in April and August 1775, and on 1 September was named lieutenant colonel of the First North Carolina Continentals. He was promoted to colonel on 10 April 1776, became brigadier general on 5 February 1777, was ordered to raise troops in western North Carolina, and joined General George Washington for the Philadelphia campaign. He commanded a brigade in Nathanael Greene's division at the battle of the Brandywine on 11 September, but did not reach Plowed Hill in time to see action. At Germantown on 4 October 1777, his thigh was broken by a cannon ball as he led his North Carolina brigade into action from the reserve. He died on 7 October, 1777.

NASSAU, BAHAMAS. 3–4 March 1776. In the first major operation of the Continental Navy, Commodore Esek Hopkins sailed from Delaware Bay on 18 February 1776. Acting on intelligence that the British had a large amount of materiel stored on the island of New Providence in the Bahamas, but no troops to protect them,

Congress sent the squadron to seize them. The Americans assembled at nearby Abacco, transferring all their marines to the sloop *Providence* and two captured local fishing sloops. Early in the afternoon of 3 March, Captain Samuel Nicholas, senior marine officer, led 250 men ashore and quickly captured Fort Montagu after token resistance. During the night Governor Montfort Browne removed most of the gunpowder stored in Fort Nassau, the other defensive work, and moved it to the Royal Navy's schooner *St. John* and a merchant sloop, and sent them off to St. Augustine. On 4 March the Americans moved on to secure Fort Nassau and the rest of the stores. Over the next two weeks the squadron loaded sixteen mortars, fifty-two cannon, and a large amount of ammunition. It sailed for home on 16 March with Governor Browne and two other prisoners.

NASSAU RAID OF RATHBUN. 27–30 January 1778. Marines and seamen from Captain John Peck Rathbun's twelve-gun sloop *Providence* rowed ashore and landed on New Providence Island in the Bahamas at midnight on 27 January. Under the command of Marine Captain John Trevett, they marched overland and seized Fort Nassau in the dark. Reinforced by liberated prisoners of war, Trevett proceeded to capture five anchored vessels before the sloop could overcome adverse winds and enter the harbor. The Americans then dismantled Fort Montagu. Rathbun loaded sixteen hundred pounds of captured gunpowder, spiked the guns of the forts, and departed late on 30 January. This raid is considered to mark the first time that the Stars and Stripes flew over a foreign fortification.

NAVAL COMMITTEE. On Friday, 13 October 1775, the Continental Congress resolved, “after some debate,” that two ships, one a “swift sailing vessel, to carry ten carriage guns, and a proportionable number of swivels, with eighty men,” the other of fourteen carriage guns, “be fitted, with all possible dispatch . . . to cruize eastward, for intercepting such transports as may be laden with warlike stores and other supplies for our enemies, and for other purposes as the Congress shall direct” (Clark, pp. 441–442). It then appointed three of its members as a committee to procure the two vessels: Silas Deane of Connecticut, John Langdon of New Hampshire, and Christopher Gadsden of South Carolina. On 30 October, Congress resolved to procure two additional, larger vessels, one of twenty guns and another of thirty-six guns, “to be employed for the protection and defence of the United Colonies” (Clark p. 647). It added four new members to the committee: John Adams of Massachusetts (who had been a constant advocate of creating a Continental navy), Stephen Hopkins of Rhode Island, Joseph Hewes of North Carolina, and Richard Henry Lee of Virginia. During the day the committee members attended sessions of Congress and, every evening at six o'clock, met in a rented room in the Tun Tavern on the Philadelphia waterfront “in order,” as Adams wrote, “to dispatch this business with all possible celerity” (Butterfield, p. 345). They accomplished an amazing amount of work in a matter of weeks—what Adams later called “the pleasantest part of my labours for the four years I spent in Congress” (Butterfield, p. 202). On 14 December, Congress established a standing Marine Committee, which took over, and expanded on, the functions of the Naval Committee.

NAVAL OPERATIONS, BRITISH.

In the eighteenth century the Royal Navy was Britain's principal instrument of foreign policy. It was a powerful, complex, and ponderous institution. More than two centuries of war had dramatically increased its technological sophistication, on the one hand, and had burdened it with dogmatic tradition, on the other. The Royal Navy's warships made their sixteenth-century ancestors look like ornate toys. But the tactical and strategic thinking that governed those ships' behavior had stagnated for several generations.

The great event of naval history was the sea battle, and the professional bible of the British admiral was a document called the Fighting Instructions, which told him how to bring about such an event. The opposing fleets would form themselves into long, straight "lines of battle" and spend a grisly afternoon slamming cannonballs into each other, giving one side decisive victory and turning some admiral into a national hero. That, at least, was how the navy, the government, and the public perceived British naval history. The truth was considerably different.

In 1775 Britain had spent thirty-one of the preceding ninety years at war with France. During that period the fleet action on the classical model—two parallel lines of battle exchanging broadsides with decisive results—had never taken place. When rival fleets did encounter each other, things seldom went according to the Fighting Instructions. Either the French would withdraw to leeward, a land mass would intrude at an awkward point, or the British formation would fall apart. The blame usually would be attributed to either French cowardice or some British admiral's ineptitude. Few in the British naval establishment considered the possibility that their concepts of strategy and tactics might be flawed. Still fewer bothered to consider how an eighteenth-century navy could suppress a revolution.

The administration of the Royal Navy was presided over by the lords of the Admiralty, headed by John, fourth earl of Sandwich. When word reached the Admiralty office (in late May 1775, five weeks after the fact) that the Revolutionary War had started, they had to confront an unusual problem: how best to employ the world's largest navy against an enemy that had no navy at all. The two obvious answers were, first, for the navy to collaborate with the army in amphibious operations, and second, to set up a naval blockade of the rebellious colonies. The Admiralty instructed its senior officer in North America, Vice Admiral Samuel Graves, to carry out those two tasks.

Both sorts of operation turned out to be more complex than expected. Graves never had enough ships at his disposal to hinder colonial trade significantly. He did launch one amphibious raid, on the village of Falmouth in northern Massachusetts (later Maine), on 18 October 1775, but the incident turned into a public relations disaster without accomplishing anything of military consequence.

THE HOWES

In 1776 Vice Admiral Richard Lord Howe and his brother, General William Howe, took over the British command in North America. With the largest combined military and naval force Britain had ever sent overseas at their disposal, they were expected to end the Revolution by means of brute force. General Howe was to capture New York City, and Admiral Howe was to clamp a blockade on all the ports of the colonies and destroy the rebels' economic capacity.

Historians have been unable to figure out why the Howe brothers failed. One scholar, Ira Gruber, has suggested that the Howes' fascination with diplomacy led to their downfall. They had insisted on being named commissioners of the peace, with authority to negotiate a treaty on almost any terms (except American independence). According to Gruber, the Howes were so determined to resolve the conflict peaceably that they sacrificed several military opportunities to win it. The admiral, for instance, ordered his warships to seize only those merchant ships that could be identified with certainty as carrying cargoes to support the rebel military effort. Peaceable merchantmen that were carrying merchandise to loyal businessmen were not to be molested, and the colonial fishing fleet was allowed to carry on business as usual.

The scarcity of Howe papers makes it impossible to prove or disprove Gruber's theory, but in any case the British blockade never achieved the government's objectives. Howe constantly begged his superiors to send him more ships. Like every other naval officer in every war, he never got as many ships as he thought he needed. Even if it had been carried out with the vigor Sandwich wanted, though, the blockade probably would have been too porous to undermine the rebel war effort.

In the campaign of 1777, the Royal Navy got another key assignment: transporting a large segment of the army from New York to some point within striking range of the colonies' largest city, Philadelphia. The initial plan was to approach it via Delaware Bay, but the rebels had established an elaborate series of defenses and obstructions in its mouth. The Howes therefore decided to take their fleet to Philadelphia by way of Chesapeake Bay.

The voyage up the Chesapeake was skillfully executed but, even by eighteenth-century standards, depressingly slow. By the time the army landed at the northern end of the bay it was late August. General Howe made relatively quick work of taking Philadelphia, but in the meantime, some two hundred miles to the north, the British army that General John Burgoyne's army had brought down from Canada was expiring. On 17 October 1777 Burgoyne surrendered at Saratoga.

FRANCE ENTERS THE WAR

When France declared war on Britain on 13 March 1778, the fundamental nature of the conflict changed. For its first three years it had been a relatively small-scale fight between a rebellious element of a colonial society and an imperial government. Henceforth it would have to be perceived as the latest in the series of dynastic struggles that had dominated Europe for generations. North America had become one theater in a world war.

It would be, to a large extent, a naval war, and the various offices along Whitehall initially tried to fight it by adopting the same strategy that had won the last one. Tradition and experience suggested that the naval effort should be centered on Europe, with naval squadrons blockading the French fleets in their Atlantic and Mediterranean bases. Smaller British forces could be sent off to conduct limited offensives against the French possessions in the East and West Indies and to foil any enemy thrust that might develop.

Four days after the French declaration of war, the Admiralty sent Lord Howe a secret dispatch: "We judge it necessary . . . to acquaint your Lordship that the object of the War being now changed, and the Contest in America being a secondary consideration, the principal object must be the distressing [of] France and defending His Majesty's own possessions against Hostile Attempts." The British war effort in North America was to become strictly defensive. The bulk of the Royal Navy would return to the role in which it was most comfortable: fighting the French (and, eventually, the Spanish as well) in European waters.

EARLY BRITISH-FRENCH SKIRMISHING

On 23 July 1778 a British fleet encountered a French fleet off the island of Ushant, near the mouth of the English Channel. The ensuing battle, like most such affairs, was indecisive; its chief consequence was a feud between two British admirals, Augustus Keppel and Sir Hugh Palliser.

Another British force, commanded by Admiral Sir Charles Hardy, spent the following summer glowering sullenly at a combined French and Spanish squadron under the comte d'Orvilliers. Hardy, suffering from advanced age, ill health, and a remarkable lack of energy, made little effort to bring his enemy to action, and d'Orvilliers eventually decided to return to port. No Franco-Spanish invasion ever materialized.

In the western hemisphere both the British and the French had to operate in two distinct but interrelated theaters: North America and the West Indies. For the rest of the war the navies played an intricate game of chess on two overlapping boards, with the lucrative sugar islands as the stakes. It was a strange, complicated war, with armies fighting repeatedly over the same real estate and navies transporting the armies, escorting and pursuing

convoys, and occasionally fighting battles that ended before either admiral could claim victory. All participants had to pay heed to one inescapable fact of nature: between August and November of each year the war must take an intermission. No sane naval officer tried to navigate in the Caribbean during the hurricane season.

The first move was made by a French admiral, the comte d'Estaing. In July 1778 d'Estaing brought twelve ships-of-the-line to New York. Lord Howe, though outnumbered and outgunned, defended the harbor so skillfully that d'Estaing retreated. He then proceeded to Narragansett Bay and made a half-hearted attempt to seize control of Rhode Island. Howe followed him, and the two fleets were on the verge of fighting a battle in Long Island Sound when a storm came up and separated them. D'Estaing then withdrew to Boston.

The Admiralty had dispatched a squadron under Vice Admiral John Byron in pursuit of d'Estaing. After one of the most difficult crossings on record, Byron arrived at New York in September 1778. Lord Howe, disgusted and enervated by the turn the war in North America had taken, resigned his command and sailed for England. A few weeks later D'Estaing, having repaired the storm damage his ships had suffered, decided, in accordance with his orders, to take his fleet to the West Indies. Byron followed.

SHIFT TO THE SOUTH

The command of the Royal Navy's forces in North America thereupon fell onto the shoulders of the unimpressive Vice Admiral James Gambier. He happened to be on hand when, during the winter of 1778–1779, the British military effort began to shift in the direction it would take for the remainder of the war. The government was concerned about the safety of the southern colonies. If, as expected, Spain were to enter the war, its bases in the Caribbean and at New Orleans would be excellent staging areas for an attack on Georgia or the Carolinas.

On 29 December 1778 a naval squadron under Commodore Hyde Parker the Younger landed a force of Hessians, Loyalists, and Scottish Highlanders on the coast of Georgia. The army commander, Lieutenant Colonel Archibald Campbell, promptly took the city of Savannah and made himself master of Georgia, thereby returning one of the thirteen colonies to British rule.

To command in the "secondary" theater of North America, the Admiralty next selected Vice Admiral Marriot Arbuthnot, an officer of limited experience, ill health, and advanced age. His tenure in command was characterized by frequent accusations of ineptitude and his colossal feud with his army counterpart, General Sir Henry Clinton. Arbuthnot seems to have found Clinton an irritating and uncooperative colleague;

Clinton concluded that Arbuthnot was incompetent and either out of his mind or hopelessly senile.

The two did manage to collaborate effectively in one of the most important British victories of the war: the capture of Charleston, South Carolina. By this time the Royal Navy had worked out most of the problems involved in landing an army on a hostile shore. The siege of Charleston took more than four months, but the city's surrender, on 12 May 1780, gave the British a major base of operations in the southern colonies.

TERNAY AND DES TOUCHES

In the meantime another squadron of French ships-of-the-line, commanded by the chevalier de Ternay, was sailing for North America. When intelligence of that development reached London, the Admiralty placed six ships-of-the-line under the command of Rear Admiral Thomas Graves. As Byron had chased d'Estaing, Graves was to chase Ternay.

Ternay was hardly a dynamic officer, but his arrival in North America had far-reaching consequences. His seven French ships-of-the-line anchored in the harbor of Newport, Rhode Island—which the British had evacuated—on 10 July 1780, landed six thousand troops under the comte de Rochambeau.

Arbuthnot, with the newly arrived Graves as his second in command, spent eight months sailing back and forth in Long Island Sound, keeping Ternay's ships under blockade. Ternay himself died of an undiagnosed fever shortly before Christmas. His successor was Commodore Souchet des Touches, a younger man of considerable ability. On 8 March 1781 des Touches took his squadron to sea, carrying a detachment of Rochambeau's army. The French objective was Chesapeake Bay, where des Touches intended to land the troops and attack a British force under the newly recruited Brigadier General Benedict Arnold.

Arbuthnot caught up with des Touches off the mouth of the Chesapeake on 16 March 1781. The ensuing Battle of Cape Henry was typical of its species: a murky affair of dirty weather, misinterpreted signal flags, and missed opportunities. Des Touches was a skilled officer who did not want to fight—the most difficult sort of adversary to defeat. At the end of the day Arbuthnot was in possession of the battlefield, but the French fleet sailed back toward Rhode Island with minimal damage.

THE WEST INDIES

The powerful British battle fleet stationed in the West Indies was known as the Leeward Islands Squadron. From 1779 onward it was commanded by Britain's foremost naval hero of the day, Admiral Sir George Rodney. On 3 February 1781, having been informed that the States

General of Holland had entered the war on the American side, Rodney seized the Dutch island of St. Eustatius. The capture of that tiny but wealthy island set into motion a series of naval events that led directly to American independence.

The two officers in charge of British naval affairs at the most crucial juncture of the naval war were thrust into the historical limelight by accident. On 4 July 1781 Admiral Arbuthnot sailed for England, turning the North American Squadron over to Thomas Graves. On 1 August, Rodney, having spent the past six months snapping up and condemning merchant ships that had sailed into his arms at St. Eustatius, also departed for home—largely because, with the St. Eustatius prize money due to land in his bank account, his financial affairs demanded his attention. Rodney took three ships-of-the-line with him and sent another to Jamaica for repairs. He left the remainder of the Leeward Islands Squadron under the command of Rear Admiral Sir Samuel Hood.

The French naval force in the Caribbean consisted of twenty-four ships-of-the-line commanded by the comte de Grasse. Rodney's departure coincided with the beginning of the hurricane season. Calculating that de Grasse might take some of his ships to North America, Rodney ordered Hood to look for them.

CHESAPEAKE BAY

Hood, not a man to loiter while his enemy was on the move, made his way up the American coast as rapidly as he could. He paused briefly at the mouth of Chesapeake Bay, where seven thousand troops under Charles Lord Cornwallis were establishing a post at the mouth of the York River. Seeing no sign of de Grasse, Hood continued on to New York. Arriving there on 28 August, he introduced himself to Graves and told him that a French fleet was operating somewhere off the coast.

Hood was junior to Graves, so when the two combined their forces, the latter was in command. Their nineteen ships-of-the-line sailed from New York on 31 August and headed south, intending to find de Grasse and fight a battle with him. The British arrived off the Chesapeake Capes on 5 September 1781 to find that de Grasse's entire fleet was anchored just inside the bay.

The Battle of the Chesapeake was one of the most important naval actions in history. Tactically, it was remarkable only in that the British tactical system worked even less efficiently than usual. The opposing fleets arranged themselves into more-or-less parallel lines of battle, intent on deciding the outcome with their great guns. The ships in the British van grappled with their French opposite numbers in accordance with the Fighting Instructions, but the rear division, under Hood's command, failed to become engaged. Afterward,

Graves claimed Hood had ignored a signal ordering his division into action; Hood claimed Graves had flown an incomprehensible combination of signal flags.

The outcome of the battle was tactically indecisive but strategically crucial. Several ships on both sides were damaged; one British ship had to be scuttled. The fleets remained in sight of each other for four days, drifting gradually away from the Chesapeake as their crews worked to repair the damage.

On the morning of 10 September the French vanished. Graves sent frigates to look for them and discovered that de Grasse had anchored his fleet in a powerful position blocking entrance to the bay. Having fought a traditional battle to a draw and seeing no likelihood of winning another one, Graves took his fleet back to New York.

While Graves, Hood, and de Grasse were fighting the Battle of the Chesapeake, the Franco-American army under George Washington and the comte de Rochambeau was marching headlong to the southward. Its target was Cornwallis's little army, which had dug in around the village of Yorktown.

Graves and General Clinton worked up an elaborate plan to break the siege of Yorktown. On 19 October 1781 the biggest British naval force ever seen in North American waters sailed from New York. Embarked on board the warships were more than seven thousand troops. Clinton and Graves intended to force their way through de Grasse's fleet, land the troops at Yorktown, and relieve Cornwallis. It was a desperate scheme but, if nothing else, the War of American Independence would end with an epic sea and land action.

The great battle, however, never took place. On the same day the fleet sailed from New York, Cornwallis surrendered.

BATTLE OF THE SAINTES

On the morning of 12 April 1782, near a West Indies archipelago called the Saintes, Rodney caught up with de Grasse. The two commanders arranged their fleets in the standard lines of battle. A stroke of luck, however, kept the Battle of the Saintes from becoming one more in the list of indecisive eighteenth-century sea fights. A gap appeared in the French line, and several of Rodney's ships went through it to assault a section of the French formation from both sides simultaneously. By sunset, five French ships-of-the-line had surrendered.

FAILED STRATEGIES AND TACTICS

Rodney's victory gave British diplomats a powerful card to play during the peace negotiations, ensuring that Britain would keep its possessions in the West Indies. The Saintes also obscured, temporarily, the fact that the Royal Navy had lost one of the great naval wars of the eighteenth

century. Some of the reasons had to do with ineptitude and bad luck. Others were rooted deep in the British military and naval establishment.

Neither the earl of Sandwich, Lord George Germain, nor anyone else in the British government ever produced a coherent scheme for fighting the naval war. In its early stages the Revolution presented problems that the most original naval thinking probably would have been unable to solve. But from 1778 onward, the Royal Navy was fighting the war it had been built to fight, and it found that conflict just as difficult to win.

The administration's decision to treat the American theater as secondary seemed a shrewd and dynamic move. The government failed to realize, however, that such decisions could not be taken unilaterally. The French made North America a center of their military effort because that was the only theater where their alliance with the United States could benefit them. The British let the French take the naval initiative in North America and failed, until the fact had been brought to their attention in the most brutal manner imaginable, to realize that giving up that initiative might mean losing the colonies.

The Admiralty relied on what may be called the "detachment theory," assuming that if the two belligerents had about the same number of ships-of-the-line in the same hemisphere, things would eventually work out in Britain's favor. Such thinking ignored the realities of naval warfare. Fleets moved fast and communications were slow. After the enemy had been handed the opportunity to take the offensive, the only effective way to frustrate him was to defend every place at which he might strike, and that was impossible. To chase him in the hope of catching him before he struck anywhere was to invite disaster. The Battle of the Chesapeake was the product of personality clashes, coincidences, and remarkable international cooperation between the Americans and the French. But it would not have taken a great strategic brain to figure out that something of the sort was bound to happen eventually.

Eight years of fighting failed to persuade the government to establish a clearly defined, understandable chain of command. Sir George Rodney's assertion that one general and one admiral should command in America and the West Indies fell on deaf ears. Furthermore, no one seems to have suggested that either the admiral or the general in North America be directed to take orders from the other. Asking two individuals whose professional reputations were in constant jeopardy to collaborate harmoniously under outdated orders that came from three thousand miles away was asking the near impossible.

The British land and naval commanders suffered from a misconception of how this particular war worked. William Howe and Henry Clinton tried to win it by occupying geographic objectives, thereby avoiding the

decisive battlefield encounter with Washington's army that probably offered the best chance of British victory. In Europe that strategy might have made sense, but neither the generals, the admirals, nor their superiors in London realized a basic truth about the War of American Independence: there was no geographic objective that the rebels could not afford to lose. During the course of the war the British army, with the Royal Navy's assistance, took, and held for some prolonged period, every major city in the colonies. Yet the war continued—and the longer it continued, the harder it was for the British to win.

While the generals were looking for ways to occupy real estate without fighting battles, the admirals were searching for the opportunity to fight sea battles. A century after the Revolution, Alfred Thayer Mahan, the most influential of naval philosophers, articulated the theory that the sea battle was the centerpiece of naval warfare. The British admirals of the eighteenth century, though they never voiced such a doctrine as coherently as Mahan did, probably had some notion that destroying the French fleet would let them get on with the business of suppressing the Revolution. But in the war's early stages the Royal Navy's command of the sea had been uncontested, and Britain had found the commodity almost useless. Little if any evidence suggests that a British victory in a naval battle with the French would have prevented, or even significantly delayed, American independence.

In any case, British doctrine almost guaranteed that no such victory would take place. The Royal Navy, like most of its European counterparts, operated on the basis of tactical theories based on the uniquely simple strategic realities of the Anglo-Dutch Wars. The War of American Independence established that those theories would not work in any other context. The concept of the line of battle was predicated on the assumption that the opposing admirals would have identical strategic objectives and would try to fight a battle as a means of achieving them. In the wars between Britain and France that situation rarely, if ever, existed. The basic naval tactic of European navies, the line of battle, was successful in making defeat unlikely. Richard Howe, Marriot Arbuthnot, and Thomas Graves merely committed the standard sin of their generation in failing to realize that the line of battle also made victory almost impossible.

Asking a navy to suppress a revolution was like asking a whale to catch a bird: the excess of force was ludicrous but the inevitable outcome was frustration. The War of American Independence subjected the Royal Navy's human and material resources to demands that they simply could not meet. The navy was asked to meet French and Spanish invasion threats, defend Gibraltar and India, maintain supply lines between England and the West Indies, protect British commerce from privateers and cruisers—and simultaneously help the army fight a war

in North America. Until the last moment the war hung in the balance, for the rebel military effort had problems of its own. Whether the British could have won the war is debatable. But it is reasonable to suspect that a final British victory would have occurred not because of the Royal Navy but in spite of it.

John A. Tilley

NAVAL OPERATIONS, FRENCH.

One of the prime factors in the defeat of Great Britain, and thus of the establishment of the United States of America as an independent nation, was the remarkable military role played by the French navy during the conflict. Traditionally the underdog since the 1690s when pitted against Britain's Royal Navy, France's navy defied the British against the odds and was often successful between 1778 and 1783.

REVITALIZING THE FLEET

This transformation of the French navy from a relatively moribund force in 1760 to a vigorous and aggressive entity by 1778 was not achieved overnight. It was a process that had started in the final years of the Seven Years' War (1756–1763), during which the French fleet had been rendered incapable of seriously challenging the British enemy. The loss of substantial naval power, leading to the loss of overseas territories and trade as well as a metropolitan coastline open to naval raids, provoked a strong reaction in France for the navy's rehabilitation. The whole country rallied to the idea, and even before the Seven Years' War had ended, money was being raised by public subscriptions to build ships-of-the-line, mostly of seventy-four guns. This is how such ships as the seventy-four-gun *Le Marseillais*, the seventy-four-gun *Bourgogne*, and the ninety-gun *Ville de Paris* were financed; they were named after the donating cities or provinces. The new vessels, especially the seventy-four-gun ships, were remarkably fast and sturdy, with well-designed gun decks allowing a maximum of firepower. The gunners were relentlessly trained and became very proficient.

During this era, the duc de Choiseul came to power as prime minister, holding the portfolios of the ministries of war, foreign affairs, and the navy. The energetic Choiseul was given wide authority in these desperate times, and he used them fully. Naval budgets rose sharply, while incompetent officers were retired in favor of younger men with fresh ideas. The education of officer-cadets and officers was considerably expanded, and examinations for proficiency were introduced. The organization of officers was transformed by a series of orders in 1765 that checked the powers of the administrative officers "of the quill pen" in favor of the fighting officers "of the sword," who now had the last word when it came to resources and supplies for combat vessels. Engineers had also become something of a power in the officers' structure, and they were now told to design the best ships possible for the fighting fleet officers. Transformations came to naval bases as well. Brest now became the primary base with thirty ships-of-the-line, while the main bases of Toulon and Rochefort got twelve each. Lorient was added in 1770. Secondary bases at Bayonne, Marseille, and Bordeaux were activated. In

1768, a base in Corsica was added to counter the British at Minorca. Overseas, naval bases at Martinique, Haiti, and Mauritius formed part of the French navy's network.

Choiseul lost power in 1770, and for a few years the navy was in something of a limbo, but this situation was temporary. The appointment of Antoine de Sartine as minister in 1774 brought a new round of reforms and fostered the fleet's capacity and fighting spirit. Now technically equal to or better than anything afloat, its main and largely unsolvable problem was a shortage of sailors to man what was becoming a truly large fleet. The impact of this shortage included a reduction in the number of training cruises the squadrons could undertake.

THE WAR STARTS

The outbreak of the American Revolution in 1775 quickly raised tensions between France and Britain, with many Frenchmen itching to avenge the humiliations of the Seven Years' War. The fleet was obviously going to be at the forefront of an eventual conflict, and preparations were accordingly made. The naval budget shot up from 47 million French pounds in 1776 to 125 million two years later. This time, France was putting in substantial money to match its ambitions. The American victory at Saratoga in October 1777 had a great impact in France, and it was now a question of when the break with Britain would come, particularly after the Treaty of Alliance between France and the United States was made in February 1778.

As it turned out, the break came off the coast of Brittany in a naval engagement on 17 June 1778 between the French frigate *La Belle-Poule* and the British frigate *Arethusa*, detached from Admiral Keppel's squadron and sent to keep an eye on Brest. After a ferocious fight, both damaged ships went back to their bases and claimed victory, but the real victory went to the French. The *Belle-Poule* had not been struck, and it became a symbolic embodiment of the fleet's new fighting spirit. Thousands lined the walls of Brest, cheering her wildly as she proudly entered the harbor. Before long, all of France was cheering her. After this first action of the new war against Britain, King Louis XVI on 10 July ordered his fleet to give chase to the British. It was a declaration of war.

In July 1778 the French navy had fifty-two ships-of-the-line in commission against the British Royal Navy's sixty-six. At the time, some thirty French ships were deployed on France's Atlantic coast, five in the Mediterranean, twelve en route to America, and two in the Indian Ocean. The British had thirty-one ships in Britain, nineteen in America (including five in the West Indies), two in the Indian Ocean, one off St. Helena, and only one in the Mediterranean. France also had some thirty frigates. The French navy then had about 75,000 sailors led by some 1,300 officers while the Royal Navy

had about 85,000 officers and men. Two years later, the French navy stood at seventy-nine ships-of-the-line, eighty-six frigates, and one hundred and seventy-four lesser vessels. A tremendous effort had raised the budget to 155 million, but the Royal Navy had grown as well, to ninety five ships-of-the-line. The French were therefore numerically weaker, but the British had to detach many ships overseas, including along the North American coast. It was not quite an even match, but if France deployed its squadrons wisely, it stood a chance of some success.

Leadership was the unknown factor in the French navy. Would the new admirals be able to hold their own against Britain's renowned flag officers? Certainly, ministers such as Choiseul and de Sartine spared no effort to find talent and intelligence, wherever it was. Too often in the past, the French flag officers had been seen as too cautious and conservative, so that tactical initiative sometimes escaped their grasp. A new generation of "fighting" officers was required to counter the more conservative elements in the fleet. One way to do this was to seek brilliant officers in the army and entice them into the navy. Louis-Antoine de Bougainville and the count d'Estaing had been brought in this way by Choiseul. There were also talented officers commissioned within the navy who despaired of the ambient conservatism in tactical theory and whose innovative spirit had to be channeled. An example was Pierre André de Suffren. His aggressive stance previously had largely benefited the Order of Malta's navy; now, however, he was given a decent command in his own French navy. Also, not all of the older able officers were excluded from senior commands. The comte d'Orvilliers was sixty-eight years old in 1778; the comte de Guichen was sixty-six. They were shrewd masters of maneuvers, and their experience was valued.

EARLY FRENCH SUCCESSES

D'Orvilliers led the Brest fleet of twenty-seven ships that met, on 27 July 1778, Admiral Keppel's thirty Royal Navy ships off the Île de Ouessant (Ushant) off Brittany. The action was inconclusive, and both sides claimed victory, but the French had more grounds to be pleased. The British squadron had certainly not vanquished the French; rather, it had met an opponent that had badly damaged many of its ships thanks to remarkably good shooting. D'Orvilliers had not destroyed the British but had kept his position. This was very bad news for the British, whose control of the French coast now vanished and who now had to protect the English Channel at all cost.

Meanwhile, Admiral Estaing had sailed with twelve ships-of-the-line for North America. His squadron's arrival in August 1778 at Newport, Rhode Island, brought a palpable sign to the Americans that they now had a

powerful ally. After some inconclusive engagements with elements of Admiral William Howe's fleet, Estaing sailed for the West Indies. There, the aggressive governor general of Martinique, the marquis de Bouillé, had already captured Dominica from the British. During the following years, this daring and brilliant officer, who would later be all but forgotten, masterminded the conquest of most of the British Leeward and Windward Islands, often personally taking part in the assaults. De Bouillé was an ideal officer for working with a fleet commander, as he understood combined operations perfectly. It seems, however, that Estaing was less proficient in this area, and in November things were rather bungled at St. Lucia, to Bouillé's considerable disappointment.

The naval campaigns of 1779 got off to a brilliant start for the French in the West Indies, with Bouillé's and Estaing's assault on Grenada on July 3 and the repulse of Admiral Byron's relieving British squadron three days later. The island of St. Vincent had already fallen in late June. Estaing then sailed for Haiti, picked up troops there, and landed them for a joint operation with the Americans against Savannah, Georgia, in October. The siege failed, however, and Estaing, who was badly wounded in the attempt, finally sailed for Europe. Elsewhere, a small squadron under the comte de Vaudreuil had captured the British forts on the coast of Senegal.

THE SPANISH AGENDA

Meanwhile, Spain had declared war on Britain on 16 June 1779. This brought the world's third largest navy into the conflict, which gave the allies on paper a comfortable superiority of some ninety ships-of-the-line over the Royal Navy. However, the Spanish navy's strategic objectives were historically quite different than those of the French or the British. Spain's fleet was far more concerned with protection, notably for the safety of the treasure convoys from America, than with fast movements and elaborate maneuvers. Spanish ships were therefore built as floating fortresses and were thus slower than other vessels of their class. As a result, Spanish navy officers tended to be cautious and did not have a truly aggressive stance or doctrine. The courts of France and Spain had hatched a plan for a combined Hispano-French fleet of sixty-six ships-of-the-line to take control of the English Channel and land a French army in England. Overall command was given to Spanish Admiral de Cordoba with French Admiral d'Orvilliers as second-in-command. The British Isles certainly feared an invasion that summer, but nothing went according to plan for the allies. Besides operational difficulties, bad weather set in. And the reinforced Royal Navy home fleet was not about to be swept away from the Channel. The invasion plan was finally abandoned and the joint fleet went back into Brest in late September.

BATTLES OF 1780–1783

In February 1780 Admiral Guichen sailed for the West Indies; in April and May, his twenty-two ships fought inconclusive engagements with Admiral Rodney's twenty-one ships. On 12 July, Admiral de Ternay with seven ships arrived at Newport and landed General Rochambeau with a French army of five thousand men to assist the Americans. The French squadron stayed on the New England coast to counter British naval movements. In Europe, de Cordoba and d'Orvilliers captured a British convoy of some sixty supply ships intended for America on 9 August. In October the portfolio of minister of the navy passed from de Sartines to the marquis de Castries. He also proved to be a most able administrator.

In March 1781 a small squadron of five ships under Admiral Suffren sailed for the Indian Ocean. On 16 April he attacked and damaged a Royal Navy squadron of six ships moored at La Praya in the Cape Verde Island, thus preventing an attack on the Dutch Cape Colony. (The Netherlands had declared war on Britain the previous year.) There were great plans for joint operations with the Spanish in the Mediterranean for 1781. Minorca and Gibraltar, the latter under siege since 1779, were still British. De Guichen's twenty-four ships joined de Cordoba's twenty-two ships and landed Spanish and

French troops on Minorca in August. The island finally capitulated in early February 1782, eliminating the British presence in the western Mediterranean. Only Gibraltar would remain British as the Spanish repeatedly failed to thwart the Royal Navy's supply convoys. America was not neglected, and the comte de Grasse now assumed command of the West Indies fleet. On 2 June he landed troops that captured Tobago. In July he sailed from Martinique and, after a stop in Haiti to embark three thousand troops, arrived in Chesapeake Bay in late August. There, the French squadron that had sailed down from New England reinforced his fleet. On 5 September, Admiral Graves arrived in the area with nineteen ships and was quite surprised to find a large French squadron of twenty-four ships there. In the ensuing Battle of the Virginia Capes, de Grasse drove Graves off, and the fate of the British army in Yorktown, besieged by Washington and Rochambeau's troops, was sealed. The place surrendered on 19 October.

The year 1782 started with a French assault on St. Kitts, which capitulated on 13 February, leading to the surrender of Nevis and Montserrat. In Versailles and Madrid, a joint attack on Jamaica was planned. The Spanish fleet at Havana would join de Grasse's squadron at Haiti and there embark some seven thousand French and Spanish troops to invade the British island. The

British naval forces simply had to prevent the junction and, on 12 April, Admiral Rodney's ships intercepted de Grasse's fleet off the Saints archipelago in the Windward Islands. In the ensuing battle, four French ships and Admiral de Grasse were captured and the expedition to Jamaica cancelled as a result. Rodney's victory, hailed as a triumph by countless British historians, was not a major setback to the French. Since de Grasse was not a popular commander, some did not regret his loss, and most of his fleet actually made its junction with Admiral Salcedo's fifteen Spanish ships-of-the-line. By the end of the year, more French ships had arrived in the West Indies to replace the losses.

During the last year of the war, the most notable actions occurred in the Indian Ocean. There, Suffren fought a series of engagements that revealed his great innovative talent in naval tactics. Had his battle orders been fully obeyed by his conservative captains, it is likely that the British would have been beaten. By June 1783, he nevertheless had pushed back Admiral Hughes's squadron and landed a French army in southern India to assist Indian princes against the British. The arrival of a frigate from Europe bearing news of the peace treaty stopped the hostilities and probably saved the British from defeat.

As it was, Suffren came back to France in triumph, rightly acknowledged as the country's best admiral. The war had been won, American independence had been secured, and France's navy had regained the nation's place as a redoubtable world power.

NAVAL OPERATIONS, STRATEGIC OVERVIEW.

In theory, Britain's Royal Navy should have been the key to crushing the American Revolution. It was the most powerful navy in the history of the world; the American colonies were so disposed along the coast and so divided by estuaries and navigable rivers as to make all regions accessible to sea power; and the rebelling colonies lacked the resources necessary for constructing a navy capable of contending with that of the mother country. Yet the Royal Navy did not win the war, and even before 1778, when France sent ships to support the colonies, the British failed to exploit an advantage that should have been decisive. As a result, the naval battles of the Revolution were secondary in strategic importance to the land operations, which British strategists expected to produce a quick victory early in the war. Meanwhile, privateering was exploited by the colonists, to their great advantage.

In 1775 Britain's Royal Navy had 131 ships of the line and 139 craft of other classes. By 1783 this total of 270 had been swelled to 468, of which about 100—mainly frigates and lighter vessels—were committed in America. In quality, however, the British navy was in an incredibly bad state. Many of the ships had been reduced by neglect to virtual wrecks, many of its officers and men were substandard, and debts incurred while fighting the French and Indian War had led to cuts in government spending, which left the Royal Navy without a supply of seasoned timber for ship construction.

Those ships which the navy could send to North American waters in 1775 and 1776 were employed mostly in rendering assistance to Royal governors and supporting army operations, rather than in blockading the American coast. During the summer of 1776, Royal Navy vessels were involved in evacuating army troops from Boston and supporting expeditions against Quebec, New York City, and the Carolinas. The next year they supported the campaign against Philadelphia. This left colonial ports open to receive assistance from other European nations (particularly France) and to export commodities to pay for munitions and interest on loans. That the Royal navy could have blockaded the American coast to economically strangle the rebellion is demonstrated the success of its blockade of the coast between Cape Cod and Delaware Bay during the winter of 1776–1777, a time when it was not needed to support the army.

“WASHINGTON’S NAVY”

An action off Machias, in Maine, in May 1775, has been called the first naval engagement of the war, although this is stretching the point somewhat. A few months later, during the Boston Siege, General George Washington organized a flotilla of six schooners and a brigantine to prey on enemy supply ships. He had the double purpose of depriving the enemy of cargoes and of getting critically needed supplies for his own forces.

On 2 September 1775 he commissioned the *Hannah*, which has been called America’s first war vessel. (The *Machias Liberty*, rechristened after the action of May 1775, could probably be called the first war vessel in the service of an American state.) Washington’s little navy took thirty-five prizes, with cargoes valued at over \$600,000, before it was absorbed into the Continental navy. Captain John Manley made the most important capture when he took the *Nancy*, on about 27 August 1775.

THE CONTINENTAL NAVY

“What think you of an American Fleet?” asked John Adams in a letter of 19 Oct. 1775 to James Warren. “I don’t mean 100 ships of the Line,” he went on to say, but suggested instead that the colonists should be able to create a small force that could do something. The idea was popular with the New England delegates and opposed by others, but by the end of the month Congress had authorized four armed vessels and, on 30 October, it appointed John Adams and six others to constitute a Naval Committee. On 10 November the Marines were born, and on 23 November Congress considered John Adams’s draft of “rules for the government of the American navy,” based on those of the British. On 25 November Congress passed the resolutions that established the American navy.

Naval affairs were controlled thereafter by various bodies designated by Congress. Until December 1779 a Marine Committee of thirteen members, one from each colony, was responsible. The Board of Admiralty was then established, to comprise three private citizens and two members of Congress. After 1781 the administration was handled by Robert Morris, Director of Finance, as an addition to his normal duties. Subordinate boards in Boston and Philadelphia were also established.

Esek Hopkins was appointed commander in chief of this fleet of eight vessels purchased and assembled at Philadelphia by the end of the year. The largest were the merchant vessels *Alfred* and *Columbus*, which had been converted into frigates of 24 and 20 guns. Others were the brigs *Andrea Doria* and *Cabot* with fourteen six-pound guns apiece, and the *Providence* (twelve guns), *Hornet* (ten guns), and the *Wasp* and *Fly*, each with eight guns. The captains, in order of seniority, were Dudley Saltonstall, Abraham

Whipple, Nicholas Biddle, and John B. Hopkins. Heading the list of lieutenants was John Paul Jones.

Ice-bound in the Delaware for several weeks after all other preparations were completed, the American navy put to sea on 17 February 1776. Congress had given Esek Hopkins orders to clear the Chesapeake Bay of Lord Dunmore’s fleet, drive the British from the Carolina coasts, and then run the Royal Navy away from Rhode Island—obviously an overly ambitious set of orders for a force of only eight ships mounting 110 guns. At the time, the British had seventy-eight ships with over 2,000 guns in American waters. But Hopkins took advantage of a discretionary clause in his orders that authorized him to use his judgment in adopting whatever other course of action appeared to be more promising.

Hopkins sailed directly to the Bahamas, where he captured Nassau on 3–4 March. Returning to the American coast, he took a British armed schooner and a brig before the unfortunate encounter occurred between his flagship, the *Alfred*, and the British vessel, the *Glasgow*, which occurred on 6 April. The American ships put into New London and then went to Providence, Rhode Island. As a result of the 6 April action, Esek Hopkins was through as commander in chief of the Continental navy. A court-martial convicted Captain John Hazard of cowardice, and John Paul Jones succeeded him as commander of Hazard’s ship, the *Providence*. Although he was placed behind seventeen other captains on the seniority list established by Congress in October 1776, Jones promptly established himself as the top American naval commander. During the last six months of 1776 he captured or destroyed five transports, two ships, six schooners, seven brigantines, a sloop, and a sixteen-gun privateer. Most valuable of these prizes was the armed transport *Mellish*, which carried a cargo of winter uniforms and other supplies intended for Quebec, on 12 November 1776. Further naval operations occurring during the first two years of the war occurred on Lake Champlain, including the action at Valcour Island in October 1776.

Naval supremacy was the cornerstone of British strategy in America during the years 1776–1777. It enabled them to evacuate Boston in March 1776, and to mass a large army on Staten Island for the New York campaign after dispatching Henry Clinton’s expedition to Charleston. This superiority made the Hudson River a line of operations, while confronting Washington with the problems of defending against an amphibious attack toward Philadelphia and such southern ports as Charleston, South Carolina, and Savannah, Georgia.

OPERATIONS IN EUROPEAN WATERS

The Franco-American alliance, negotiated in February 1778 was scheduled to take effect should war break out

between France and Britain, which it did in June of that year. This event significantly altered the strategic situation by shifting the balance of naval forces in the war. In 1778 France had seventy-nine ships of the line in service compared to the Royal navy's seventy-three. This gap widened further after Spain, which had forty-nine ships of the line, entered the war as an ally of France (although not of the United States) on 21 June 1779. With the widening of the war, operations could be anticipated on a worldwide basis, much like those of the Seven Years' War, which had recently concluded.

Prior to this time, naval operations had been limited almost exclusively to American waters, although a few American warships had appeared in the Atlantic off Europe. Continental ships were tasked with conveying American diplomats to Europe, and, during the first of such voyage, Captain Lambert Wickes took as prizes two British merchantmen while delivering Benjamin Franklin to France (26 October–4 December 1776). After landing Franklin at Auray, Wickes cruised the English Channel, taking five more prizes. Joined by ships commanded by Captains Henry Johnson and Samuel Nicholson, Wickes, aboard the *Reprisal*, circumnavigated Ireland clockwise and, in the Irish Sea, took captive eight merchantmen and destroyed another ten. Six months later Gustavus Conyngham, in command of the lugger *Surprise* (owned in part by the American government), carried two British ships into Dunkirk. He returned to sea with a commission in the Continental navy and, in a two-month cruise, took additional prizes before shifting his base of operations to Spain. He then crossed the Atlantic to the Caribbean in 1778. Meanwhile, John Paul Jones had arrived in France in command of the *Ranger*.

Open war between Britain and France was precipitated by the clash off Ushant, an island off Brittany, on 27 July 1778. French Admiral Louis Guillouet, comte d'Orvilliers, put to sea on 8 July with plans to intercept homebound British convoys. British Admiral Augustus Viscount Keppel weighed anchor the next day with orders to protect the convoys. The fleets sighted one another on 23 July and, after extended maneuvering, passed on opposite tacks and exchanged broadsides before the French eluded the British and returned to port. For the next year France sent fleets to America while working to lure Spain into active involvement in the war.

When Britain rejected Spain's 3 April 1779 ultimatum that it cede Gibraltar in return for Spanish neutrality in the war, Spain began conducting joint naval operations with the French in May, and, a month later, formally entered the war. Mustering a superior number of warships in the eastern Atlantic, the French and Spanish laid siege to Gibraltar from 21 June 1779 to 6 February 1783, and planned a joint invasion of the Isle of Wight. The invasion was so ill-managed that it disintegrated before a single

soldier reached English soil. The Royal Navy was able to slip enough supply vessels through the Franco-Spanish blockade of Gibraltar to keep its defenders provisioned. On 16 January 1780, Admiral George B. Rodney, in command of a convoy en route to Gibraltar, defeated a squadron under the command of Spanish Admiral Juan Langara, sinking one ship, driving two to destruction on shoals, and capturing four before resupplying Gibraltar. After capturing Minorca in the Mediterranean (5 February 1782), the allies launched an assault on Gibraltar on 13–14 September 1782, but were rebuffed. The British garrison held out until it was reinforced and resupplied by a fleet commanded by Admiral Richard Howe.

During 1780 Britain's naval position eroded further when Russia formed the League of Armed Neutrality, and war broke out with the Netherlands on 20 December 1780. The following spring, Admiral Pierre André de Suffren, in command of a French fleet en route to reinforce the Dutch colony at the Cape of Good Hope, sailed into Porto Praya in the Cape Verde Islands. There, on 16 April 1781, he found a British squadron commanded by Commodore George Johnston at anchor, and, disregarding Portuguese neutrality, attacked and crippled the British expedition which was also bound for the Cape.

The British naval position remained precarious in American waters during 1781, but it improved in Europe during the summer. On 5 August 1781, Admiral Sir Hyde Parker defeated a Dutch squadron commanded by Admiral Johann A. Zoutman in the battle of Dogger Bank, off the Northumberland coast. Four months later Admiral Richard Kempenfelt defeated a French squadron commanded by Admiral Luc Urbain Bouëxic, comte de Guichen, at the second battle of Ushant (12 December 1781), capturing fifteen of the twenty merchantmen de Guichen was attempting to convoy to the West Indies. From that point forward, British leaders could feel confident of their position in European waters and direct the majority of their naval resources to American waters, where they regained control of the Caribbean in the battle of the Saints, 9–12 April 1782.

FRENCH FLEET IN AMERICAN WATERS

French naval operations were no more conclusive off North America until 1781. Even before a formal declaration of war between England, France dispatched Admiral Charles, comte d'Estaing and a large French fleet to America with orders to support Continental army operations. The result was a heart-breaking series of failures. After taking eighty-seven days to cross the Atlantic, d'Estaing arrived too late to bottle up the British fleet in the Chesapeake, was too timid to attack Admiral Richard Howe's fleet at New York, 11–22 July, failed at Newport on 29 July–31 August, and abandoned a proposed attack on Newfoundland, before sailing for the West Indies in

November. There he did some damage to the British, but failed to gain any real advantage. In September and October 1779, he returned to North America, but refused to remain off Savannah long enough to force the surrender of the British garrison that had captured the city on 29 December 1778. In 1780 France shifted its primary naval attention to the West Indies. Without a French fleet on the American coast, Henry Clinton was free to launch his expedition against Charleston, which resulted in the scuttling of the *Queen of France* and the capture of the *Ranger*, *Providence*, and *Boston*, all of which were taken into the Royal Navy.

Alarmed by the French capture of St. Vincent and Grenada in June and July, Britain dispatched a fleet to the Caribbean under the command of Admiral Sir George Rodney in late 1779. His fleet duelled indecisively with that of comte de Guichen in 1780 and 1781 and sought to counter the capture of Mobile and Pensacola by Spanish forces led by Benardo de Gálvez. Though inconclusive in the Caribbean, naval operations set the stage for the decisive American victory in the war, when the French fleet of Admiral François Joseph, comte de Grasse, sailed north from the West Indies to participate in the Yorktown campaign of 1781.

OPERATIONS IN THE INDIAN OCEAN

After attacking the British at Praya, Suffren continued on to Ile de France in the Indian Ocean, arriving in October 1781. On 7 December he weighed anchor for India and captured the HMS *Hannibal* (18 Jan 1782), which was also en route to India. When Commodore Thomas, comte d'Orves died, Suffren succeeded him as commander of all eighteen French warships in the Indian Ocean.

Learning of the Dutch entry into the war, Admiral Sir Edward Hughes seized the Dutch port of Trincomalee to prevent its use by the French fleet (5–11 January 1782). Determined to seize a base for his fleet that was nearer to India than Ile de France, Suffren sought battle with Hughes, who had eleven warships. Over the next eighteen months, Suffren and Hughes fought a series of engagements, off Sadras (17 February), Provedien (12 April), Negapatam (6 July), and Trincomalee (3 September). No ships were lost by either side, but Suffren kept the British on the defensive. This allowed Suffren to land troops and support France's ally, Hyder Ali, who had captured the British-held Cuddalore (4 April 1782). Suffren also was able to seize the anchorage at Trincomalee on 30 August 1782. Its position in India threatened, Britain sent reinforcements to Hughes, including five ships of the line, bringing his forces to eighteen by the spring of 1783. Suffren received three additional ships of the line by March. The fleets

fought another inconclusive battle off Cuddalore on 23 April 1783 before news arrived of the war's end.

AMERICAN NAVAL BATTLES

While Britain and France focused on European waters during 1779, on the West Indies between 1780 and 1782, and the Indian Ocean during 1782 and 1783, the five remaining Continental navy vessels, *Trumbull*, *Deane*, *Alliance*, *Confederacy*, and *Saratoga*, were able to get to sea. Captain James Nicholson took command of the *Trumbull* in September 1779, and fit the frigate out for sea over the winter. In the spring he cruised the American coast from Boston to New York to drive off British privateers. On 2 June 1780, he engaged the British ship, the *Watt*, in a battle that was second in severity only to that between the *Bonhomme Richard* and *Serapis* of the previous fall. The following summer, Nicholson was forced to strike his colors in the engagement with the *Iris* on 8 August 1781.

During the same period the *Deane*, *Confederacy*, and *Saratoga* cruised the Caribbean before taking on military stores and escorting a convoy carrying additional stores for the Continental army. On 18 March 1781 the *Saratoga* sank when caught in a sudden gale three days out of Cape François, Hispaniola. A month later two British warships captured the *Confederacy* off the Virginia Capes. Only the *Deane* reached port safely, arriving in Boston. In late 1782 the *Deane* sailed to the West Indies, where it eluded capture by at least four British warships which thought that they had cornered John Manley and the *Deane* off Martinique in January 1783.

Among Continental Navy vessels, only the *Alliance* and *Deane* enjoyed significant success during the closing years of the war. When Silas Deane's loyalty came under suspicion, the *Deane* was renamed the *Hague*, set sail for the West Indies under the command John Manley, and captured the *Baille* in January 1783. More illustrious was the career of the *Alliance*. On 29 May 1781, it forced the British brigs *Trepassy* and *Atalanta* to strike their colors. It also fought the war's final naval engagement (excepting some privateering exploits) when, under the command of John Barry, it fought the *Sybilie* off the coast of Florida in March 1783.

Meanwhile, state navy vessels scored their two greatest oceanic victories. A frigate from the Massachusetts navy won a memorable victory in the *Protector–Duff* engagement of 9 June 1780. Two years later the Pennsylvania navy sloop-of-war, *Hyder Ally*, captured the British brig *General Monk* after a fierce half hour battle off Delaware Bay on 8 April 1782.

In summary, the raid on Nassau on March 1776, was virtually the only planned major operation of the Continental navy. A total of fifty-three ships served in

John Paul Jones Engages the Serapis. American naval officer John Paul Jones became a great hero when on 23 September 1779, he commanded the *Bonhomme Richard* in a daring battle at sea against the British *Serapis*. © BETTMANN/CORBIS

the Continental fleet. Of the 13 original frigates, only four were at sea by 1777, and only two (Barry's *Alliance* and Manley's *Hague*) were in action in 1783. Lack of resources kept the rebels from getting to sea anything larger than a frigate, and privateering proved to be a more formidable enemy than the British navy.

Whereas the Continental and state navies did not commission more than a hundred ships during the war, the British increased their navy from 270 to 468 ships, 174 of which carried sixty or more guns. The American frigates nevertheless sank or captured almost 200 British vessels. Privateers cost the British another 600 ships. The Royal Navy performed miserably under a succession of incompetent admirals and an inept ministry. In 1783, however, the British navy rebounded from adversity, and its successes in the West Indies, European waters, and India enabled Britain to stiffen its terms of peace with America and to convince France and Spain that the war should end.

NAVAL STORES. The term “naval stores” refers to various items, materials, and substances that were essential to building, maintaining, and operating the wooden sailing ships that made up the navies and merchant fleets of the world from ancient times. Many products were derived from pine trees in the southern colonies, including resin, tar, pitch, and turpentine, and were valued for their ability

to help ships withstand salt water. The term also included other items, like the masts and spars made from the tall white pines growing in the interior of New England and cordage made of hemp; it sometimes included certain types of insect-resistant timbers from which durable hulls could be constructed. At the turn of the twenty-first century, much of the world's supply of pine-based naval stores comes from the American Southeast, but before the establishment of Britain's North American colonies, western Europe's principal source for these substances, and for the tall, straight pine trees needed for a ship's masts, was the Baltic region. Naval stores were so important to Britain's naval and maritime strength that in 1704 they were designated enumerated commodities that the colonies could send only to the mother country.

NELSON, HORATIO. (1758–1805). British admiral and naval hero. Nelson first went to sea in 1770 in a ship commanded by his uncle, and passed for lieutenant on 9 April 1777. In the West Indies in 1778 he was taken up by Peter Parker, who took him into his flagship, gave him the brig *Badger* in 1778, and in 1779 appointed him to a post ship, the frigate *Hinchinbrook*. His first experiences of action came in the expedition to Nicaragua, where disease nearly killed him. In 1783 he unsuccessfully attacked the French garrison of Turk's Island in the Bahamas.

NELSON, THOMAS. (1739–1789). Patriot, Signer, militia general, governor of Virginia. Born in Yorktown, Virginia, on 26 December 1738, Nelson was the son of the wealthy merchant, planter, and council member known as “President (William) Nelson.” Thomas Nelson was educated in England, spending three years at Cambridge. Returning to Yorktown in 1761, he immediately found a place in the House of Burgesses and as a colonel of militia with the assistance of his father. In 1764 he took his place on the King's Council. On his father's death in 1772, Nelson inherited 20,000 acres and 400 slaves, although his style of living kept him perpetually in debt. Remaining in the Burgesses through this period, Nelson became steadily more political. By 1774 he was calling for a boycott of all British goods and led a local tea

party. When state regiments were organized in July 1775, Nelson became a colonel in the Second Virginia Regiment. He resigned this commission later in the year when he was elected to fill the vacant seat of George Washington in the Continental Congress. The new Virginia delegate played a leading role in getting his state to support independence, and he signed the Declaration of Independence. In May 1777 a sudden and serious illness forced his resignation from Congress. In 1779 he was re-elected, but after a few months he again had to resign because of asthma.

Nelson was appointed brigadier general and commander of Virginia's state forces in August 1777. When Congress called for volunteer units, he raised a cavalry troop largely at his own expense. He led them to Philadelphia, but they were disbanded when Congress decided they could not be supported financially. In 1779 the British started a series of devastating raids in Virginia, and Nelson took the leading part in organizing militia resistance. On 12 June 1781 he was elected governor to succeed the militarily inept Thomas Jefferson, and he was given emergency powers by the frightened refugees of the raid on Charlottesville.

During the six months of his governorship, Nelson was virtually a military dictator. He struggled to raise the men and supplies needed to support the Marquis de Lafayette's 1781 expedition to secure Virginia, and when Washington and the comte de Rochambeau (Jean Baptiste Donatien de Vimeur) marched south, the governor-general was in the field to join them for the kill, even directing artillery fire against his own house to support the military effort. In November 1781 he resigned his commission, again because of illness aggravated by asthma.

Nelson had signed off on huge loans during the Revolution in order to arm and equip Virginia's forces. The legislature refused to reimburse Nelson for any of the extensive debts he had accrued in the state's service. Nelson devoted the rest of his life attempting to pay off his creditors. He died at his plantation in Hanover County, Virginia, on 4 January 1789.

NELSON, WILLIAM, JR. (1756?–1813). Continental officer. Virginia. Of the Nelson family, he graduated from William and Mary in 1776 and returned

as professor of law from 1803 until his death ten years later. He was a militia private in 1775 and on 29 February 1776 became a major in the Seventh Virginia Continentals. He was promoted to lieutenant colonel on 7 Oct. 1776. He resigned his commission on 25 October 1777. He and his brother Robert were captured by Tarleton in June 1781 during the Charlottesville raid but were immediately released on parole. He admitted that he preferred reading to either the practice of law or overseeing his plantations and investments, and excelled only at reading.

NELSON FAMILY OF VIRGINIA.

“Scotch Tom” Nelson (1677–1745) came to Virginia from Penrith, a town on the English side of the Scottish border that then was part of Scotland. Around 1700 he settled at Yorktown, Virginia, and became a wealthy merchant, slave trader, and landholder. His son Thomas (c. 1716–1782) was defeated by Patrick Henry in the first election for governor under the new constitution of Virginia (29 June 1776). Known as “Secretary Nelson,” being secretary of the governor's council for thirty years, his elder brother was “President” William Nelson (1711–1772), who was in the Virginia Council from 1744 until his death, president of that body for many years, and ex officio acting governor from the death of Botetourt to the arrival of Dunmore (October 1770–August 1771). Between them, these two brothers dominated the government of pre-Revolutionary Virginia. William's eldest son, Thomas Nelson Jr., was a signer of the Declaration of Independence. Two others, Robert and William Nelson Jr. also achieved some eminence.

NEUTRAL GROUND OF NEW YORK.

1776–1783. The term applies, narrowly, to the territory east of the Hudson River between the British positions around New York City (on Manhattan Island at Kings Bridge, where the Boston Post Road crossed the Harlem River) north to the American positions in the southern part of the Highlands of the Hudson. Extending roughly thirty miles north and south, it

included most of The Bronx and Westchester County. A broader definition extends the term to include the entire wedge of land beginning at the northern end of Manhattan Island and fanning out north up the Hudson River and northeast along Long Island Sound toward Connecticut.

There was nothing “neutral” about the Neutral Ground. The term meant that neither side had the capacity to control what happened in this region. Each side could deploy sufficient forces to obtain a temporary superiority, but both were too close to the main forces of the enemy to linger for too long in the Neutral Ground. The modern equivalent would be the no-man’s-land between the established positions of two rival armies. Civilians found it extremely difficult to live in the area, since parties from both sides continually raided and ravaged their farms and possessions.

Conditions similar to those existing in the Neutral Ground also afflicted New Jersey from the Amboys and New Brunswick north through the Hackensack Valley into southern Orange County, New York, on the west side of the Hudson River, but the term “neutral ground” did not normally include this region.

revised by Harold E. Selesky

NEUVILLE. Two French brothers incorrectly identified in American works as the chevalier de la Neuville and Noirmont de la Neuville should properly be identified by the family name of Penot Lombart. They are most properly identified as Louis Pierre Penot Lombart, chevalier de La Neuville, and Rene-Hippolyte Penot Lombart de Noirmont de la Neuville.

NEVILLE, JOHN. (1731–1803). Continental officer. Virginia. Born in Prince William County, Virginia, in 1731, Neville took part in Braddock’s expedition to capture Fort Duquesne in 1755, during the French and Indian Wars (1689–1763). He then settled near Winchester, where he became sheriff. He later bought large tracts of land near Pittsburgh and became joint holder of an additional 1,000 acres as a reward for his military service. In August 1775 the Virginia Committee of Safety ordered him to occupy Fort Pitt, and he was commandant of that frontier post for the next year. Commissioned as a lieutenant colonel of the Twelfth

Virginians on 12 November 1776, Neville fought with General George Washington’s army at Trenton, Princeton, and Germantown. On 11 December 1777 he became a colonel of the Eighth Virginians and led them in the Monmouth campaign. Transferred to the Fourth Virginians on 14 September 1778, he was brevetted as a brigadier general on 30 September 1783.

Neville’s land became part of Pennsylvania after the war. He was appointed to the position of U.S. Inspector of Excise (in addition to the other offices he held), and became the primary target of the Whiskey Rebellion of 1794. Crowd actions halted his tax collecting, burned his house, and drove him into temporary exile, but he returned with the federal force that put down the rebellion. He died at his estate on Montour’s Island, near Pittsburgh, on 29 July, 1803.

NEVILLE, PRESLEY. (1756–1818). Continental officer. Son of John Neville, Presley Neville was born in Pittsburgh and graduated from the College of Philadelphia in 1775. On 9 November 1776 he became a lieutenant in the Twelfth Virginia Regiment (of which his father was lieutenant colonel), and transferred to the Eighth Virginia Regiment on 14 September 1778. In that same year he served as aide-de-camp to the Marquis de Lafayette with the temporary grade of manor. On 21 October 1778 he became brevet lieutenant colonel. On 10 May 1779 he was given the regular rank of captain, and on 12 May 1780 he was captured at Charleston. He was included in a prisoner exchange a year later. After this he became brigade inspector and was elected to the state assembly. He married a daughter of Daniel Morgan, and from 1792 until his death in 1818 he was a merchant in Pittsburgh.

NEW BERN, NORTH CAROLINA. August 1781. On 1 August, Major James Craig led 250 British regulars and 80 Loyalists north from Wilmington on a punitive expedition. Reinforced en route by another three

hundred Loyalists, he destroyed rebel plantations along his seventy-five-mile march to New Bern; entered that town on 19 August; destroyed property; and returned to Wilmington, meanwhile burning additional Whig plantations. Craig also liberated several scores of slaves along the way.

NEW BRUNSWICK, NEW JERSEY.

The town was generally known as Brunswick during the Revolution, although both names were used. The original settlement was called Inian's [sic] Ferry and was home to the Lenape people. General William Howe's troops seized the city in their sweep through New Jersey in December 1776, creating panic in Philadelphia.

NEWBURGH ADDRESSES.

10 and 12 March 1783. Angered that their pay was several months in arrears and that Congress consistently opposed pensions for members of the Continental army, a number of officers began planning what verged on a coup. They were spurred on by some members of Congress and also by Robert Morris, the superintendent of finance, who hoped to use the crisis to increase national power, and especially to levy taxes. Early in January 1783 a delegation of officers sent Congress a memorial listing officer grievances. Major General Alexander McDougall headed the committee of senior officers that formulated this document and took it to Philadelphia. The prime organizer of the movement, however, was Colonel Walter Stewart, who argued that the officers should act in concert to insist that Congress promptly pay all that had been promised them. It is not clear how far the officers were willing to go to win their demands, but there were rumors of marching on Philadelphia and seizing power.

Washington supported the monetary claims of his officers and often called on Congress to make good on its promises. Washington was aware of the increasing discontent among his officers but suspected nothing ominous until 10 March, when he was handed a written call for a meeting of general and field officers the next day and was also given a copy of the fiery and rhetorical appeal subsequently known as the first Newburgh address. The anonymous document proposed that the officers inform Congress that unless their demands were met, they would refuse to disband when the war ended, and that if the war

should continue, they would "retire to some unsettled country" and leave Congress without an army. In General Orders of 11 March, Washington denounced the "irregular invitation" and the "disorderly proceedings" and directed that representatives of all regiments meet on 15 March to decide how "to attain the just and important object in view." A second anonymous address appeared on 12 March, expressing the crafty view that the language of Washington's General Orders made him party to the complaints. Deeply worried, the commander in chief reported developments to Congress. He realized that he would also have to step forward at the meeting of the 15th and do all within his power to keep his officers from going further with their movement.

What followed was one of the most dramatic moments of the Revolution. Visibly agitated, Washington appeared before a tense group of officers on 15 March and read them a statement he had prepared, probably with the help of Jonathan Trumbull Jr. Commenting that the anonymous addresses showed a good literary style, he criticized them for the implication that the civil authorities were guilty of "premeditated injustice." He denounced the alternatives proposed in the first address and entreated his officers to not take "any measures which, viewed in the calm light of reason, will lessen the dignity and sully the glory you have hitherto maintained." He warned that the Revolution itself was at stake, with the threat of civil war looming before them. Climaxing his appeal with a call for them to once more show their greater patriotism in the face of adversity, Washington assured them that by trusting in the American people to do right, "you will, by the dignity of your conduct, afford occasion for Posterity to say, when speaking of the glorious example you have exhibited to Mankind, 'had this day been wanting, the World have never seen the last state of perfection to which human nature is capable of attaining'" (Fitzpatrick, ed., 26, pp. 226–227).

Not quite sure that he had convinced his officers that Congress meant well toward them, Washington took from his pocket a letter from Virginia delegate Joseph Jones, who had written of the financial problems with which Congress had to cope before it could meet the just claims of the officers. After stumbling over the closely written letter, Washington stopped to get out his glasses "and begged the indulgence of his audience while he put them on, observing at the same time that he had grown grey in their service and now found himself growing blind" (Smith, 2, p. 1770). The assembled officers were deeply moved by these simple and sincere remarks, and by the time Washington left the meeting a few minutes later, the conspiracy was dead. Against mild opposition from Timothy Pickering, the meeting voted Washington its thanks and, without dissent, expressed its confidence in the justice of Congress and repudiated the anonymous addresses issued in the officers' names.

Washington never knew the entire history of these addresses, which were the work of General Horatio Gates's aide-de-camp, Major John Armstrong Jr. They were copied by Gates's friend, Captain Christopher Richmond, and distributed by Major William Barber. Armstrong and others considered reviving the movement in April 1783, but they abandoned their plans when Armstrong came to believe they had been revealed to Washington.

In his handling of this incident, Washington demonstrated firm leadership and set the stage for the peaceful demobilization of the Continental Army. Congress remained weak and unable to pay its soldiers as it had promised.

NEWCASTLE, THOMAS PELHAM

HOLLES, DUKE OF. (1793–1768). British statesman. A privy councillor from 1717, in 1724 Newcastle became one of Robert Walpole's secretaries of state. From the start he understood the need for a European ally, preferably the Hapsburg monarchy, in order to offset a move by France, possibly in alliance with Spain, against an isolated Britain. In 1754–1756, when he was prime minister, he failed to anticipate Maria Theresa's move toward France and found himself committed to Prussia instead. The initial disasters of the Seven Years' War drove him from office in 1756. However, once William Pitt recognized the necessity of Newcastle's "continental" policy, Newcastle returned as nominal prime minister in 1757. Later, especially after Pitt's resignation in 1761, Newcastle shared Lord Bute's alarm at the spiraling national debt; but, to avoid future diplomatic isolation, he opposed the government's desertion of Prussia. Obligated to resign in May 1762, he found his influence gravely weakened, and he was unable to work with Pitt in opposition. Apart from a few months

as lord privy seal in 1765, his days in office were over. Perhaps his last significant act was to support both repeal of the Stamp Act and the Declaratory Act, and to persuade George III that Rockingham's conciliation policy was correct.

Historians used to portray Newcastle as a comically inept politician who owed his prominence entirely to his great wealth and parliamentary interest. However, toward the end of the twentieth century a more balanced picture emerged: Newcastle may have lacked the judgment and confidence of a prime minister, but he had diligence, skill with people, a good grasp of detail, and energetic (if not always coherent) oratory. Above all, he consistently worked to avoid the very isolation that proved so calamitous during the War of American Independence.

NEW HAMPSHIRE, MOBILIZATION

IN. After much careful research in the 1930s, the New Hampshire historian Richard Francis Upton concluded that mobilization there seems to have begun spontaneously in the winter of 1774–1775. As early as 28 May 1773 the New Hampshire legislative assembly had established a Standing Committee of Correspondence in response to the circular letter sent from the Virginia Committee of Correspondence. New Hampshire's Royal Governor John Wentworth promptly adjourned the assembly. It met again on 7 April 1774 and formed another Committee of Correspondence on 28 May.

Wentworth again adjourned it until 8 June, at which time he dissolved the assembly, not calling for it to reconvene until 4 May 1775. In keeping with suggestions from other states, New Hampshire's legislative leaders called an extralegal meeting of the assembly for 21 July 1774 to elect delegates to a general congress scheduled to convene in Philadelphia on 1 September 1774. This New Hampshire Assembly, the first of New Hampshire's five Provincial Congresses, selected Nathaniel Folsom and John Sullivan, a Durham lawyer, to attend the general congress but adjourned without establishing any military organization outside of the existing militia. Counties had held their own political organization but likewise had avoided any formal military development.

New Hampshire citizens had been affected by the Stamp Act, the Intolerable Acts, and the attempts to tax tea, but until 1775 few thought in terms of military retaliation against the mother country. Early in December 1774 the New Hampshire Committee of Correspondence sent around a written appeal to each town urging participation in the Continental Association, an effort led by the Continental Congress to limit trade with Britain. There is no record that any town rejected the association.

In Philadelphia, in the fall of 1774, the Continental Congress met but established no military. As the royal government tightened its control, several New Hampshire leaders worried about the potential need for arms and ammunition. To secure munitions, a force put together by John Langdon and John Sullivan slipped into British Fort William and Mary in Portsmouth Harbor on the night of 14 December 1774 and took gunpowder from the seven troopers that guarded it. Upon news of the battles at Lexington and Concord in neighboring Massachusetts, New Hampshire began its mobilization efforts in earnest. New Hampshire's Fourth Provincial Congress, meeting on 17 May 1775, with 133 delegates attending, ignored the royal government at Portsmouth and established a tax to raise funds, created a post office to enhance communication, and voted to raise a force of two thousand men ages fifteen to fifty, to be organized into three regiments, for six months' service. The mobilization was achieved in three weeks' time—a notable feat for a small province with a population estimated at 100,000, larger only than Georgia, Delaware, and Rhode Island.

Yet armed forces were already part of New Hampshire's heritage. Militia units stood in nearly every town. Under colonial law each male inhabitant between the ages of sixteen and sixty was required to maintain arms and ammunition, and each town had to provide its militia with gunpowder, lead, and flints. The frontiers to the north and west had required continuous observation. Calls to the General Court (the legislature) for men, arms, and gunpowder had come continuously from those

regions as settlements and towns encroached on territory that had been traditionally home to the Abenakis and other Indian tribes. In addition, having seen New Hampshire thrive under the lengthy administration of Governor Benning Wentworth (from 1741 to 1767), and having a generally good relationship with his nephew and successor, Governor John Wentworth, many residents had taken part in the Louisbourg campaigns of the 1740s and 1750s, and many, including John Stark and Robert Rogers, had played significant roles in helping the British control French aggression during the French and Indian War in the 1750s.

The two thousand New Hampshire men mobilized for the war effort included those who had already gone individually or in small groups to aid Massachusetts following Lexington and Concord. These men were designated as part of the First New Hampshire Regiment to be under the command of Colonel John Stark of Dunbarton. The Third Provincial Congress on 21 April 1775 appointed Colonel Nathaniel Folsom of Exeter to the rank of brigadier general with the charge to coordinate and command those troops. In late June, as part of its mobilization for a possibly extended conflict, the Fourth Provincial Congress made Folsom a major general. The Second and Third New Hampshire Regiments were created on 24 May 1775 and placed under the command of Colonel Enoch Poor of Exeter and Colonel James Reed of Fitzwilliam. Both Poor and Reed, having earned military respect through command of their local militia, were in positions to inspire men to join the ranks.

While these developments were taking place in Exeter, John Sullivan, serving as a delegate to the Continental Congress in Philadelphia, was exhibiting great personal presence and passionate opposition to Parliament. Sullivan had displayed military skill in 1774 while commanding militia forces as well as in the raid on Fort William and Mary, and was well-respected at home. In Congress, Sullivan vociferously opposed what he considered to be Parliament's oppression, calling the Quebec Act Britain's most dangerous. On 22 June 1775 Congress appointed him a brigadier general under George Washington, and on 27 June he joined Washington at Cambridge.

When the new rebel army, under the overall command of General Artemas Ward, encountered its first major contest, on 17 June, at Bunker Hill and Breed's Hill, New Hampshire regiments played a vital role. Although Colonel James Reed was ill, his troops displayed the knowledge and extensive training that Reed had given them. Under the command of John Stark, and in unison with Stark's First Regiment, Reed's men manned their places along the famous "rail fence" and valiantly defended their positions by remaining steady and firing low.

The Committee of Safety, chaired by Meshech Weare, loomed large in New Hampshire's war efforts.

Established by the Provincial Congress on 26 May 1775, the Committee's charge was to fill the gap left by the absence of a chief executive and thus to execute policy efficiently, secretly, and speedily. The Committee entertained questions, correspondence, petitions, and visitors. During the war it heard arguments, made thousands of recommendations and executive decisions, oversaw security measures, solved disputes, directed military activity, and regulated trade. The Committee's most important power, according to Upton, was the authority it held over a network of local committees of safety.

In addition to the three infantry regiments authorized and formed in 1775, the state sanctioned Bedel's Regiment of Rangers, authorized on 26 May 1775 to be commanded by Captain Timothy Bedell of Grafton County; Long's Regiment, authorized in May 1776 and formed by Pierce Long at New Castle; and Whitcomb's Rangers, authorized 15 October 1776 and attached as an element of the Northern Department. Bedel had begun to form his regiment in January 1776 near Plymouth, to take part in the Canada Expedition then in progress. Men signing on were to get a bounty of forty shillings plus one month's pay as authorized by the Continental Congress. Officers were to receive two months pay plus bounty. Bedel's unit was disbanded on 1 January 1777 in Coos County, Long's in July 1777 in New York, and Whitcomb's on 1 January 1781 at Coos County. One goal that neither the Committee of Safety nor the General Court could meet was the formation of an artillery regiment. There simply were not enough artillery volunteers or supplies. In fact, following the evacuation of the British from Boston in March 1776, the New Hampshire Committee of Safety dispatched Captain Titus Salter of Portsmouth to regain the artillery that had been lent to the Continental Army. He was to return with the cannon, balls, supplies, and an engineer to operate the artillery. Salter reported in April that he had seen four cannon belonging to New Hampshire, with balls and supplies, but that he could not find any engineer who would return with him.

All three of New Hampshire's regular infantry regiments went through several organizational alterations between the Northern Department and the Main Army of George Washington. The original Third Regiment, formed under Reed, was disbanded on 1 January 1781 at Continental Village, New York. The Second Regiment, originally under Poor, was consolidated with the New Hampshire Regiment (the original First Regiment) on 22 June 1783, and the original First Regiment was disbanded as the New Hampshire Regiment on 1 January 1784.

As the war progressed, victories, assignments to meet specific needs, and individual characteristics of officers all helped spur on generally slow recruitment. A sufficient number of men agreed to join the expedition to Canada in

late fall of 1776, but others felt the need to return to their farms and families. By the end of 1776 they were ready to return home, and most did so. Following the victories at Trenton and Princeton, recruitment again generally filled quotas imposed by the state on the towns. When it became generally known that the British planned to send General John Burgoyne's army from Canada over Lake Champlain to Albany and then to merge with its army in New York City to cut off New England, in the summer of 1777, New Hampshire men stepped forward. This was to bring the conflict to New Hampshire's backyard. John Stark, though upset at being passed over by the Continental Congress for a generalship, as a state general was able to raise an entire regiment inside of several weeks, owing largely to his personal power of persuasion. Stark's men slowed Burgoyne's advance at Bennington and finally brought him to captivity at Saratoga.

In 1778 men went to serve in Rhode Island with the mission of protecting New England from invasion. Similarly, in 1779, when John Sullivan led off his expedition from Easton, Pennsylvania, young New Hampshire recruits, were present, including Colonel Enoch Poor's Second New Hampshire Regiment. The brusque Sullivan and the trusted Poor led them to victory over the Six Nations in western Pennsylvania and New York.

Mobilization meant guarding the coasts, the port, and commercial traffic to the state. The Continental Congress authorized the building of thirteen navy ships, one of which the Naval Committee assigned to New Hampshire. John Langdon, who owned a shipyard in Portsmouth, contracted to build New Hampshire's ship. So efficient was the project that the *Raleigh* resulted as the first of the thirteen to be built and put into service. (Today the building of the ship is the central symbol on New Hampshire's state flag.) Congress authorized two more ships during the war to be built in New Hampshire—the *Ranger*, which sailed under John Paul Jones, and the *America*.

The war proved a burden for many and was not borne cheerfully. Those who sent husbands or sons suffered from loss of their presence on the farm or in the shop. Numerous petitions to the legislature, for two decades after the war, asked for disability relief or reimbursement of expenses for a wide variety of wounds, losses, and general expenses. During the war and into the 1780s, everyone felt the effects of devalued currency, leading to a clamor for issuance of state paper money. Individuals pelted the legislature with demands for unpaid wages, compensation for lost time and production on farms, reimbursements for medical costs, pensions due but never received, and satisfaction of claims for disabilities from wounds and lost limbs. As late as June 1792, Thomas How, a farmer in Barrington, was seeking wages and bounty payment due for service in the Second

Regiment during 1777. His petition, one of many, refers to having returned from the “horrors of war” only to be forgotten and overlooked.

Mobilization delayed the adoption of a new state constitution. The January 1776 Plan, hailed today as the first American written constitution, was intended to be very temporary. Not until 1779 did policy makers put a proposal before the people, who then voted it down. The people then rejected another in 1781, and another in 1782, before adopting one in October of 1783 that took effect with the opening of the legislative session on 2 June 1784. Among other articles, it established a state senate of twelve popularly elected members, thus creating a true bicameral legislature. The constitution retained the Executive Council, still very active in 2005, as a form of restraint on the executive and the legislative branches.

New Hampshire was the ninth (thus the operative) state to ratify the proposed Federal Constitution on 21 June 1788. As a United States senator, John Langdon held the Bible on which Washington took his oath of office as President of the United States.

NEW HAMPSHIRE LINE. New Hampshire mobilized volunteers to participate in the siege of Boston as soon as news arrived of the fighting at Lexington and Concord, but did not take formal action until the Provincial Congress met on 17 May 1775. Three days later it voted to form 2,000 men into a brigade of three

infantry regiments, using most of the volunteers at Boston for the first and completing the two others by new recruiting. The colonels of the regiments were John Stark (for the First New Hampshire Regiment), Enoch Poor (for the Second), and James Reed (for the Third). Nathaniel Folsom was the brigadier general. In 1776 they reenlisted respectively as the Fifth, Eighth, and Second Continental Regiments, respectively, reverting to their old state numerical designations in 1777. The Third Regiment disbanded on 1 January 1781. On 1 March 1783 the First became the New Hampshire Regiment, while the Second was reduced to the New Hampshire Battalion. Those two units were merged on 22 June 1783 as a five-company battalion and disbanded on 1 January 1784 at New Windsor, New York. In addition to the formal New Hampshire Line, the state also furnished three other infantry units to the Continental army. These were employed primarily on the northern frontier: Bedel’s Regiment (which operated as rangers) in 1775–1776; Long’s Regiment (1776–1777); and Whitcomb’s Rangers (1776–1780).

NEW JERSEY, MOBILIZATION IN. In war, as in real estate, location can be everything. During the war for American Independence, location determined that New Jersey would be one of the most active—if not *the* most active—theaters of operations. Situated between the chief British garrison in New York and the de facto

rebel capital in Philadelphia, New Jersey became the contested middle ground. Between 1775 and 1783, the state witnessed some 600 large and small (mostly small) actions, including naval engagements fought on the state's rivers or off its long coastline. Military affairs became part of the state's routine. Morristown (often called the "military capital of the Revolution") emerged as a critical base area, and the main contingent of the Continental army spent more time in New Jersey than in any other the state, including the winters of 1777 (Morristown), 1778–1779 (Middlebrook), and 1779–1780 (Morristown again, the bitterest winter of the war). For soldiers and civilians alike, conflict, or the threat of conflict, was a virtual constant in most parts of the state.

Yet New Jersey was not originally a hotbed of revolutionary sentiment. In fact, through the early 1770s, most residents were generally content to remain within the empire. New Jersey was a small colony of no more than 120,000 people, and it lacked urban centers or significant commercial communities to feel the sting of British mercantilist policies. Without claims to western lands, New Jersey also remained calm in the face of the Proclamation of 1763, which curtailed settlement beyond the established colonial frontier. Nor did the colony have a redcoat garrison, the source of so much friction in Massachusetts and New York. Indeed, New Jersey had gotten along rather well with the British regulars quartered there during the French and Indian War—army payrolls and contracts were boons to the local economy. Even the Stamp Act crisis found the colonial legislature reticent to mount a protest. Although local political officials ultimately agreed to participate, they initially declined to send delegates to the Stamp Act Congress. A large Quaker population shrank from conflict with Britain; and in any case, with much of the colony's economic prosperity dependent on its larger neighbors, New York and Pennsylvania, New Jersey Patriots would have been largely powerless had the two more influential colonies not acted first.

Opponents of the British government gained traction, however, as protests broadened in the other colonies. There was considerable anger in New Jersey over British opposition to the colony's effort to issue its own currency, a measure dear to New Jersey's largely agricultural populace; and local Patriots did join the inter-colonial protests against the Tea Act. As in the other colonies, an informal Whig political infrastructure gradually supplanted or took over established local and provincial governments, and by 1775 the Whigs effectively controlled New Jersey. Still, sentiment for outright independence remained muted. While a small number of New Jersey volunteers marched north to join the rebel army besieging Boston, Patriots did not oust the royal governor, William Franklin, until June 1776. The definitive break with the empire came only in

July, when a new state constitution finally declared New Jersey independent.

It remained for New Jersey to defend its newly proclaimed independence. Until the contest ended in 1783, the state struggled to mobilize its human and material resources and to coordinate its war effort with the other rebellious states and the Continental Congress. It was never easy, as manpower was always in short supply and New Jersey lacked any significant manufacturing or financial base. But efforts to maintain the fight were sustained, and sometimes imaginative, even if results were uneven.

MILITARY STRUCTURE

New Jersey troops served in three legally distinct military organizations: the militia, which served rotating tours of duty of short duration, and which could be called out at any time in emergency situations; "state troops," raised for long-term duty within the state; and New Jersey's Continental regiments. In addition to these formal organizations, however, Jerseymen also bore arms in ad hoc, irregular outfits, in an active privateer fleet, and in Continental battalions raised under direct Congressional authority. Over the course of the war, many men saw action in several of these guises.

The formal militia structure emerged from what was left of the colonial militia (purged of Tory personnel) and units raised on private or local authority, mostly during the spring of 1775. The first militia law (June 1775) called for the enrollment of all men between the ages of 16 and 50 into companies of about eighty men each. They were to elect their company officers, who in turn elected regimental officers. Companies were based on townships, and it was not uncommon to find ten or fewer family names comprising the bulk of a militia company. Companies reported to county-based regiments. Many subsequent laws attempted to improve militia effectiveness through experiments with "minute" companies, unit boundary changes, and brigade organizations. Throughout the war, however, most militia operations were local, and regional commanders had a great deal of autonomy. Regimental efforts were of limited scale and duration, and the brigades were never effective.

Whatever its organizational limitations, the New Jersey militia became a potent force. True, it performed poorly during the early stages of the British invasion of 1776, famously evoking Commander-in-Chief George Washington's wrath. But it quickly rebounded and played a major role in the revival of Whig military fortunes in late 1776 and early 1777. While there was never the level of militia participation that Patriot leaders desired, enough men came out to keep the local troops functional. Over the course of the war, the militia made any British moves into the New Jersey interior dangerous; and the militias proved

invaluable in suppressing the Tories, guarding regional crops and supplies, providing local security and intelligence, and, buttressed by Continentals, fighting in occasional large-scale actions (such as Monmouth in 1778 and Springfield in 1780). Certainly the British came to dread the incessant harassment by local rebels that occurred during operations in New Jersey; and in the end, the lack of any tight, statewide legal or command structure made little difference in militia effectiveness.

From time to time, New Jersey also raised “state troops.” There were units recruited for longer-term duty than the militia—generally six or nine months—during periods of particular need or when the state was unable to persuade Continental commanders to post regulars in New Jersey. These troops took on in-state assignments, usually the guarding of sensitive coastal locations or along the northwestern frontier, and in positions across from British-occupied New York. Three artillery companies (of sixty-four men each) were raised over 1776 and 1777, while a more ambitious effort tried to field 2700 infantry between November 1776 and April 1777. Subsequent legislation kept various bodies of state troops in the field through the end of 1782, by which time every county had at least one company assigned to it. In effect, these troops were state regulars, and many of them saw considerable action in conjunction with Continental and militia forces.

However, most New Jersey troops who served as regulars did so in the Continental line. In the autumn of 1775, Congress asked New Jersey to raise two battalions, with a third requested in April 1776. These men were to serve for a year, and with enthusiasm for the cause high, the state enlisted approximately 2,000 men relatively quickly. Some companies, recruited by their company commanders and other junior officers, were filled within days. Despite supply shortages, they deployed to the northern theater of operations, where two of the regiments suffered cruelly in the debacle of the Canadian invasion. The last of these Continentals returned home by February 1777, and a core of the veterans reenlisted. However, many others, discouraged by hard service in 1776—including major losses to disease—had had enough and were lost to the Patriot effort.

New Jersey recruited a “Second Establishment” beginning in late 1776 (although enlistments did not begin in earnest until early 1777). This time, Congress asked the state for four regiments, for a total of 2,720 men of all ranks. These soldiers would be enlisted for three years or the duration (in other words, “for the war”). Of the requested number, however, the state could raise only 1,586, and only three of the regiments maintained reasonable strength levels. With the ranks thin, Congress reduced the New Jersey quota to three regiments in 1779, with an official roster of 1,566 officers and men. But the actual tally for the New Jersey Brigade (for most of the war, the

regiments served as a brigade under Brigadier General William Maxwell) rarely exceeded 1,200 men. Indeed, in 1781, Congress allowed the consolidation of the New Jersey Brigade into two regiments, the total strength of which generally remained below 700 men. Jerseymen also served in regiments raised directly under Congressional authority (the “sixteen additional regiments” and artillery and other units outside of the New Jersey Brigade). But throughout the war, New Jersey Patriots complained that the manpower quotas requested of their state were simply more than the small state could field.

RECRUITING

There was some validity to such complaints, as the realities of recruiting and maintaining troop strength actually were daunting. New Jersey’s human resources were too limited to maintain a large militia, the state troops, government functions, the farming economy, and Continental battalions. Of the state’s 120,000 residents, probably fewer than 25,000 were men of military age. But of these, some 6,000 were Quakers and thus lost to the recruiting pool; and a conservative estimate indicates that another 3,200 were lost to the Tories, including about 1,900 Jerseymen who served as Loyalist regulars (the balance were variously organized “refugees” raiding their home state out of New York, “Pine Robbers” in southern New Jersey, or other local irregulars). The privateer fleet drained additional manpower, and the state granted exemptions to teachers, elected officials, iron workers, express riders, and various government employees. In all, at least 10,000 men were not available for any sort of military duty. The remaining manpower (probably around 14,000 individuals, not much more) had to be shared with agriculture. New Jersey’s rich farms were not only vital to the state economy, but also a critical source of military food and forage (and thus hotly contested by the rival armies). Heavy calls on the state militia could be economically disruptive, and thus highly unpopular.

Thus, even as New Jersey complained about the number of men it was to levy, there still was general agreement that the use of regular troops seemed the most efficient use of the state’s limited human resources. Washington, of course, as well as many other Patriots, preferred regular Continentals for practical military reasons. Regulars were enlisted for a minimum of three years, better trained and disciplined, and lacked qualms about long-term operations in distant theaters. But (no doubt to spur Continental enlistments) Washington and other senior commanders also pointed out that a stable force of regulars would reduce the necessity for many militia call-ups. New Jersey’s governor, William Livingston, agreed, arguing for the “superiority” of a policy that recruited men the economy needed least as regulars—implying the poor

and rootless— and leaving “the more industrious farmer” to his husbandry.

This is essentially what New Jersey tried to do as it recruited the Second Establishment. Significantly, recruiting operations changed. Formerly, officers recruited their own units. There was thus no central recruiting service to forward new men to the Continental battalions. But by late 1776, most officers could not be spared off the lines for recruiting purposes. Although Washington sent officers on this duty whenever he could, Congress asked the states to put recruiting on a firmer institutional footing. In October 1777, the New Jersey legislature designated the counties as recruiting districts, and assigned two civilian recruiting officers (although some of them may have been militia officers) to each. The law also allowed extra recruiters for locales where recruiting seemed especially promising. The effects of this system were uncertain. Continental officers still recruited Jerseymen personally when they could; and by 1780, each New Jersey battalion also assigned an officer to full-time recruiting duty in the state. The recruiting districts probably helped, but they neither replaced personal recruiting by unit commanders nor ended manpower shortages.

The fiscal aspects of recruiting were important as well. Perhaps the most expensive (and best publicized) aspects of recruiting were bounty monies. A Congressional bounty of January 1777, allowing each soldier \$20, a clothing allotment, and a hundred acres after the war (for men who served for the duration), proved too little to attract enough men. Consequently, states, and even towns, offered supplemental enticements. New Jersey towns never issued bounties, but by 1778 the state was offering recruits \$40, a blanket, clothing, and—if they enlisted by October 1778—a regimental coat and more clothes. In 1779, this increased to \$250 above the Continental bounty. At this juncture, Washington and Congress feared dissension between veterans and new recruits enlisted under the more lucrative state bounties. The states, however, still went their own ways, and in 1780 New Jersey even increased its bounty to \$1,000, with subsequent increases to adjust for inflation. Recruiting personnel also received bounties. In 1779, New Jersey gave recruiters \$20 a man, a sum increased in 1780 to \$200. In 1781, payments were made in specie, also to compensate for inflation. Although not mentioned in the laws, noncommissioned personnel also received bounties for signing up recruits. In addition, the state provided funds to support recruits until they reached their units, and even paid \$16 per man to the muster master who swore them into the army.

Obviously, any funding shortage imperiled recruiting. Whenever it could, New Jersey turned to Congress to pay recruiting bills; but this aid was never sufficient or punctual, and the state often had to use its own resources.

In 1778 and 1781 the legislature enacted loans to cover recruiting costs. Some New Jersey Patriots became so distressed with the high costs of raising men, and so incensed with Congress for failing to reimburse the state, that they threatened to halt recruiting operations. It was an empty threat, but indicative of the strain that recruiting placed on the state.

ALTERNATIVES TO REGULAR RECRUITMENT

Even with the inducements of bounties, however, it became clear that voluntary enlistments would never fill the New Jersey Brigade. The alternative was conscription, and the idea was not new. During the French and Indian War, Quaker opposition had prevented New Jersey from drafting militiamen for long-term duty. Yet other states had; and as early as 1776, Washington had suggested that New Jersey implement a draft to meet its Continental manpower quotas. Initially, the state balked, but in April 1778, faced with a dire recruiting shortfall, the legislature acted.

The new law divided the militia regiments into “classes” of eighteen men. Upon a full regimental muster, commissioners were to explain the recruiting laws and bounties, and then allow each class ten days to present a volunteer or substitute to serve nine months in the New Jersey Brigade. If, after ten days, a class did not present a recruit, one of the men in the class would be drafted by lot, and he then had five days to report for duty, find a substitute, or pay a \$300 fine. Over April and May, the militia sent hundreds of draftees and substitutes to the army in consequence of this law, and New Jersey raised more Continentals in 1778 than in any other year. This success, however, was countered by popular distaste for the draft, and the law was allowed to lapse. A draft for six months of duty, passed in 1780, was less successful; after this, New Jersey simply lived with troop shortages and a small New Jersey Brigade for the rest of the conflict.

It is worth noting that not all recruiting activity took place within the formal recruiting structure, or within established regulations. In January, 1777, Washington issued recruiting regulations calling for freemen between seventeen and fifty years old, excluding enemy deserters and Tories. New Jersey, however, was never so particular. The state immediately decided it could not rely solely on “freeman volunteers,” and in April 1777, it acted on a Congressional suggestion to exempt any two militiamen from duty if they found a Continental substitute. The legislature also asked persons otherwise exempted to hire substitutes and made provisions for enlisting indentured servants. Nor did New Jersey demand only “freemen.” Any “able . . . bodied and effective volunteers” were sufficient. The use of servants and other substitutes

demonstrated less a commitment to a yeoman soldiery ideal than to filling the ranks with anyone available.

In fact, with scant manpower among New Jersey Patriots, the state turned a blind eye to virtually all of Washington's recruiting prohibitions. Enemy deserters appeared frequently in New Jersey ranks, especially as the war dragged on and recruiting became harder. Tories served as Continentals as well. Men accused of Loyalism frequently received a choice of punishment, including hanging, or enlisting in the New Jersey line. In one dramatic incident, the state Council of Safety condemned seventy-five Tories at Morristown and hanged two as an example to the others—who promptly joined the Continental Army. Petty criminals often received similar treatment. There is no complete documentation of the number of Tories and felons compelled into the New Jersey ranks, but available records attest to over two hundred, hardly an insignificant number given the manpower needs of the day.

Yet the mobilization effort was more successful than recruiting difficulties and the thin rosters of the New Jersey Continentals indicated. Accurate numbers are unavailable, but by the end of the conflict, something under 4,000 Jerseymen had served in Continental ranks, while another 10,000 (more or less) saw duty with the militia, state troops, or in supply or other capacities with some military organization. No doubt some men were counted more than once in these tallies (such as those militiamen who also served a tour in the New Jersey Brigade as draftees). In addition, there is evidence that men from neighboring states and even some foreigners served in New Jersey ranks. Even so, given the limited manpower pool—recalling here the losses to Quaker pacifism, loyalism, official exemptions, and other causes—the state did quite well in exploiting its human resources; in fact, it came close to using every available man.

MANPOWER: WHO SERVED?

The social profile of the New Jersey regulars reflected a recruiting effort that, as Governor Livingston put it, tried to leave farmers to their fields and put the least prosperous into the rank and file. A majority of the troops were young; more than 54 percent were twenty-two years old or younger, while over 73 percent were no more than twenty-seven. Most also came from the lowest socio-economic strata. Of the soldiers carried on state tax rolls, fully 90 percent came from the poorest two-thirds of the population, while 61 percent came from the poorest third of taxpayers. Probably some 60 percent of the regulars owned nothing of consequence at all. In a state where 30 percent of the populace owned at least 100 acres of land, only 9 percent of the Continentals could say the same. Many of these men were poor by virtue of youth—they

simply were too young to have established themselves, or to have inherited property, before enlisting. But there is no doubt that New Jersey regulars tended toward the lowest rungs of the state's economic ladder. For many of these men, the bounties of 100 acres must have seemed quite appealing.

In marked contrast to the enlisted men, New Jersey officers were well-to-do. Eighty-four percent came from the wealthiest third of society, and almost 32 percent from the upper tenth. The officer corps also held proportionately more of the largest farms than either the enlisted ranks or the general population. Indeed, just over 31 percent of the officers used slave labor on their farms. While there were some poorer officers, few (if any) advanced beyond captain. The New Jersey officers, then, represented the state's traditional social elite; and in the eighteenth century, it was normal for military elites to derive from social elites.

None of this is to argue that the enlisted New Jersey Continentals were essentially a coerced force. Far from it: they served for a variety of reasons, some with a genuine enthusiasm for the cause. Most rendered faithful service, often under appalling conditions, in a war they could have avoided. But most also left little enough behind them when they enlisted, and with only shallow roots in society, the Continental Army offered (at least at this stage of their lives) more than the civilian world.

WAR MATERIEL

New Jersey also mobilized its material resources, although beyond agriculture these were quite limited. Significantly, there was no pre-war armaments industry at all. The militia and the first Continental regiments had to rely on privately-owned weapons and munitions, supplemented by purchases from out of state. In 1776, the state initially could arm only two of its Continental regiments. Weapons shortages delayed the march of the third considerably. But maintaining even such arms as New Jersey could find was difficult, because the state lacked enough skilled gunsmiths and blacksmiths. The most prominent gunsmith was Ebenezer Cowell, whose shop in Trenton manufactured gunlocks under a contract with the Continental Congress. But the invasion of 1776 drove him out of Trenton, and he transferred his operations to Pennsylvania for the rest of the war. The events of 1776 also displaced other Patriot blacksmiths and gunsmiths, which seriously disrupted local production of war materiel. Some blacksmiths were able to produce limited numbers of bayonets, ram rods, and other accoutrements, and a trickle of gun repairs continued. Yet the number of guns and parts produced were small, and New Jersey troops were largely dependent on imported arms throughout the war.

Gunpowder was a problem as well. New Jersey had essential deposits of sulfur and saltpeter, and Patriot authorities provided incentives for production of these commodities. But the state had no powder mill. Responding to a Congressional plea, the New Jersey Provincial Congress loaned Colonel Jacob Ford Jr. the funds to construct a mill in Morristown. Ford was in production by August 1776, and the powder mill operated through at least 1779 (the records are obscure thereafter). Production was sometimes impressive—up to 750 pounds of powder per week—but the Morristown mill was the only one established in New Jersey. Consequently, the state's over-all contribution to patriot gunpowder supplies was never great. Nevertheless, at a time when American munitions manufacturing was in its infancy, and when munitions were in demand, for a vital period Morristown remained a steady source of crucial powder supply.

The only major industrial success was in iron. The state was rich in ore, and small-scale production had begun in the late colonial period. By 1775, New Jersey had seventeen furnaces producing pig iron and twenty-two forges capable of producing wrought iron—from which blacksmiths could produce tools, blades, and other implements. The furnaces also could turn out shot and, as war production geared up, cannon. During the conflict, the British destroyed or otherwise halted production at some of these facilities. In 1778, for example, royal troops wrecked important iron works at Bordentown and Mount Holly, which never went back into service. But twelve of the furnaces and seventeen forges remained safely in Patriot hands. The most productive works lay north of Morristown at Hibernia, Mount Hope, and other locations in Morris and Bergen Counties.

Iron production also faced problems. Interruptions in mining could disrupt the furnaces, and skilled labor was always at a premium. Ironmasters used anyone helpful as workers. Hessian and British deserters, and some prisoners, worked at furnaces and forges, and the state agreed to exempt skilled ironworkers from militia duty in order to assist production. Inflation and other fiscal challenges also threatened operations, but iron production managed to expand over the course of the war. In 1777 alone, the Hibernia furnace produced some 120 tons of shot for the army, and was successfully casting and boring cannons. New Jersey production—or American production generally—never made the Patriot military self-sufficient in iron weapons or munitions, but in this area, at least, a domestic industry made dramatic strides.

THE IMPACT OF MOBILIZATION AND WAR

New Jersey began to mobilize in the spring of 1775 and remained on a war footing for eight years. The duration of the war, coupled with the virtually constant military

presence in the state, left a varied legacy. There was considerable physical damage. Some towns, such as Connecticut Farms and Springfield, suffered major battle damage, pillaging, and wanton destruction. Churches and public buildings along the various British lines of march suffered as well, with Presbyterian churches singled out for particular British wrath. Private homes also were targets, and hundreds of farms lost fences, livestock, and crops to pillaging or hungry soldiers in both armies. Bergen and Middlesex Counties were especially hard hit during 1776, and foraging in 1777 led to damage and theft on farms across central New Jersey. Well over 600 farms, buildings, or other private properties were plundered, damaged, or destroyed in Middlesex County alone. Despite pleas for help, there was little the financially-strapped state—New Jersey government debts totaled some \$750,000—could do for these communities and individuals. Indeed, the state felt it had to raise taxes to meet its obligations, and New Jersey property owners faced some of the stiffest tax bills that any generation in the state would see down to the Civil War.

There was considerable social dislocation as well. Thousands of Tories had been driven into exile, and their estates often were seized and sold off by the state. The vast majority never returned to New Jersey. Major real estate interests, notably the East Jersey Board of Proprietors, ended the war with their business affairs in disarray. Renters had not made payments, business records were scattered or lost, and some prominent proprietors had fled with the British. Moreover, demobilization had sent most troops home only with promissory notes, and most of these men found few immediate prospects in the civilian economy. Hundreds of war widows and orphans had little access to public support, which was small enough anyway, and had only meager private resources to sustain them.

Somewhat perversely, however, agriculture prospered in the final two years of the struggle. Without any major battles, the occasional skirmishes did not prevent a flourishing if illegal trade between New Jersey farmers and the British garrison in New York City. This commerce brought welcome consumer goods as well as specie into the state, relieving some of the hardships of the war years. But a major economic downturn followed the departure of the British in 1783, and farmers, like almost everyone else, were hard pressed to pay taxes and to make ends meet. Even the iron industry suffered before resuming normal production by 1787. Merchants, hoping to develop international trade out of New Jersey ports, lacked capital and trading connections, and retreated largely into local or coastal commerce.

The distress was general across New Jersey, but the state showed considerable ingenuity in dealing with the situation. A series of fiscal measures, including paper

money issued against landed security, gave the state a stable currency and allowed debtors to pay their bills with public securities. While refusing further financial support to the Congress, New Jersey did assume payment of the interest on Continental debts held by its citizens, and it implemented a special tax to pay arrears due New Jersey soldiers and military suppliers. By 1787, the state's fiscal house was generally in order, most war-related damage had been repaired, and the post-war economic slump was passing. Given New Jersey's location as a chief military theater, the impact of the war could have been much worse, and the state's problems in the so-called "critical period" were more political (especially in its relations with the larger states and the Confederation) than economic or social.

NEW JERSEY BRIGADE. Early in the war, training and unit cohesiveness was difficult for many Continental brigades, there being no comprehensive program in place for a uniform system of tactical formations and field maneuver. This matter, therefore, was left to individual division or brigade commanders. Added to

this was the matter of brigade subunits' detached service and the absorption of troops from disbanded units. Despite recruiting shortfalls and desertion, some continuity was achieved at the company and regimental level, with a core of veteran soldiers remaining, many of whom served side by side with the same comrades and officers for the entire war. This leavening of old soldiers was important. In New Jersey, for example, the brigade's composite regiments were augmented by short-term drafts and volunteers in 1778 and 1780, or as companies swelled with soldiers from the disbanded Jersey regiments from 1779 onwards. The advent of Major General Wilhelm Friedrich von Steuben's uniform system of maneuver in 1778 (published in spring 1779) further alleviated the problem of attaining and maintaining cohesive tactical units.

The New Jersey Brigade, originally comprising the First through Fourth Regiments, first served as such beginning in May 1777, and until 1780 was commanded by Brigadier General William Maxwell. Following the 1776 campaign, when three regiments served their single-year enlistment in Canada and New York, four New Jersey regiments were authorized in 1777, all the men signing on for three years or the war's duration. Two others, Forman's and Spencer's Additional Regiments, recruited all or a portion of their men in New Jersey, the latter's unofficial title being the Fifth, later the Fourth, New Jersey. In 1779 Forman's regiment was absorbed by Spencer's, that unit serving with the Jersey Brigade beginning in 1779 until its men were dispersed among the two remaining Jersey regiments in January 1781. As the conflict went on, the numbered Jersey regiments were reduced: in 1779 to three regiments; in 1781 to two; and in the war's final year, one regiment and one battalion.

The brigade served together at the Battles of Short Hills, Brandywine, Germantown, Monmouth, Connecticut Farms, Springfield, and Yorktown and in Major John Sullivan's expedition in 1779 against the Iroquois. The First and Third Regiments fought at Staten Island in August 1777, while the New Jersey Light Companies served with the Marquis de Lafayette's Light Division in 1780 and went with Lafayette to Virginia in the spring and summer of 1781.

NEW JERSEY CAMPAIGN. November 1776–January 1777. After the Battle of White Plains on 28 October 1776, Washington set up three principal concentrations of forces to enable him to block British efforts in case Sir William Howe tried to move east, north, or southwest. Washington would keep one large part of the army (7,000) in New Jersey, using Fort Lee as his base; Major General Charles Lee would keep a similar force (7,000 of the best troops) in Westchester County to block an advance into New England; and Major General William Heath would use the smallest of the pieces (4,000) to protect the Hudson Highlands forts and lines of communications between Washington and Lee. A small force remained on the northern tip of Manhattan, but it was to be withdrawn to New Jersey.

The balance of that plan collapsed when Howe suddenly shifted his troops and captured Fort Washington, New York, on 16 November 1776 and Fort Lee, New Jersey, on the 18th. Washington was forced to retreat to Newark, opening a gap between his troops and the other contingents. As the British maintained pursuit and forced him to keep falling back, the chances of being able to use the coordinated action upon which the original disposition depended gradually evaporated.

As early as 10 November, after the Battle of White Plains and before loss of the Hudson River forts, Washington had written Lee: "If the enemy should remove the whole, or the greatest part of their force, to the west side of Hudson river, I have no doubt of your following with all possible dispatch, leaving the militia and invalids to cover the frontiers of Connecticut in case of need." On 20 November, Washington suggested that Lee cross the river and there await further orders. The next day Washington reiterated that Lee should make this move, unless "some new event should occur, or some more cogent reason present itself." Lee's inaction has led to speculations that he was deliberately jeopardizing the American cause by allowing the British to defeat the forces under Washington's personal command so that Congress would make him commander in chief, but there is no proof to support this charge. Lee had not received a specific order, and he still thought that his force would be more effective east of the Hudson. Instead of going himself, he tried to order Heath to send two thousand of his garrison to Washington, arguing that Heath was closer and could get reinforcements to Washington sooner. Heath, however, had direct orders from Washington not to weaken his defenses of the strategic river crossings under any circumstances, and so he refused Lee.

Howe did not move against Heath and clear the lower Hudson because the onset of winter would limit naval support and make it too hard to retain any gains; the notion of cooperating with British forces from Canada had not been part of anyone's plans for the year. He

also saw no value in trying to invade New England because the region was too strongly behind the Revolution; the plan for the year had called for isolating it and slowly wearing down the will to resist by bringing the other colonies back into the fold. Nor did Howe see any realistic chance to move against Philadelphia with his entire force, knowing that he still had to consolidate his hold on New York and its environs and that it was too late in the year to risk the long overland movement that would be involved. Instead, he began preparations to go into winter quarters.

The Royal Navy did not consider New York to be a suitable port in cold weather, an opinion that modern Americans find extremely hard to understand. Admiral Richard Howe and his captains felt that Newport, Rhode Island, was a far better winter anchorage, and William Howe agreed to get it for them. General Henry Clinton left New York with six thousand troops on 1 December and sailed through Long Island Sound, landing and securing Newport on the 7th without any casualties.

WASHINGTON RETREATS

As part of his plan to establish winter quarters, Howe wanted to gain space and access to forage by placing part of the British forces in New Jersey. He sent Cornwallis from Fort Lee with instructions to push Washington beyond Brunswick; Cornwallis boasted that he would catch Washington as a hunter bags a fox. Washington started his withdrawal on 21 November to avoid being trapped east of the Passaic River and reached Newark on the 22nd. There he paused and regrouped by sending the sick to safety at Morristown and detaching other troops to stamp out the first hints of a Loyalist uprising near Monmouth; other officers were sent to assemble all the boats on the Delaware River. Meanwhile, Congress searched the Philadelphia area for additional forces to send to his aid, mobilizing three battalions of the city's Associator infantry under Colonel Lambert Cadwalader and Captain Samuel Morris's City Troop of light horse and giving orders to Captain Thomas Forrest's company of full-time state artillery to go with them. Washington withdrew from Newark on the 28th in two columns, keeping ahead of the British vanguard. The Americans followed two different routes to Brunswick, and from there they crossed the Raritan River just ahead of the jägers leading Cornwallis's advance. The pursuit had failed to catch Washington, and now Cornwallis's exhausted men had to stop and rest.

On 1 December the enlistments of the Flying Camp's militia regiments officially expired and most of the remaining members headed home, further reducing Washington's effectives. That same day the British began pushing across the Raritan but were held at bay by an aggressive rear guard that included Captain Alexander

Hamilton's company of New York artillery. On the 2nd, Washington reached Princeton and directed Brigadier General William Alexander (Lord Stirling) to remain with his and Brigadier General Adam Stephen's brigades (fourteen hundred men from Virginia and Delaware). Their mission was to buy time for the rest of the army to cross over the Delaware River to safety on the Pennsylvania side. While men and supplies ferried across using the boats assembled earlier, Washington started reinforcing Stirling's group. On the 6th, however, Howe joined Cornwallis at Brunswick with several more brigades of British and Hesse-Cassel regulars and then advanced to Princeton the next day. Stirling did not engage, but fell slowly back as ordered, and by the end of the afternoon of the 7th, most of the men had safely crossed using Beatty's ferry and the Trenton ferry. The rear guard crossed early on the 8th, just as the leading British patrols entered Trenton. Cornwallis wasted a day unsuccessfully searching for boats to use in getting his troops across.

For his part, Washington deployed his men along a twenty-five-mile front and began moving supplies forward from Philadelphia to refit the exhausted regiments. The right was opposite Burlington, New Jersey, and the center rested near the Pennsylvania side of McKonkey's Ferry (the New Jersey end later became Taylorsville). Having missed his fox, Cornwallis got permission to stop at the Delaware, and he began to establish winter garrisons in New Jersey. On 13 December, the day Lee was captured at Basking Ridge, Howe announced that the year's campaign had ended. The preceding day Congress had resolved to move from Philadelphia to Baltimore. Howe believed the campaign had come to an end. While older authors (depending heavily on allegations made by disgruntled Loyalists after the war) have accused Howe of being lazy or of "pulling his punches" in order to try to find a way to end the war through negotiations, the simple fact is that he had accomplished as much as the weak British logistical system would allow. He and Clinton had favored contracting the occupied zone to a line between Brunswick and Newark, but Cornwallis persuaded him to hold a greater area. Howe established forward garrisons at Bordentown, Pennington, and Trenton, with a larger base twenty-five miles to the rear at Brunswick. The rationale for this expanded area was that every square mile held encouraged Loyalist support and deprived Washington of recruits; the British felt there were only minimal risks to the more extended lines of communications.

WASHINGTON STRIKES BACK

Washington was not as badly off as American mythology depicts. The retreat through New Jersey had been executed with precision, exploiting the superior land mobility of the American forces to carefully stay out of range of the

British. Detachments assembled in the hills to the west of the British supply lines during the withdrawal, creating a potential for future attacks on rear areas. Washington's defensive positions along the bend of the Delaware River provided access to the logistical support of the depots in Philadelphia. And during the month of December, reinforcements began arriving. Militia detachments came from New Jersey; Colonel John Cadwalader came up with one thousand Philadelphia Associators; several new Continental regiments came up from recruiting areas, including the German Battalion that Congress released from garrison duty in Philadelphia; and veteran troops from other commands in the north worked their way around the British. On the 20th, Sullivan (who took command when Lee was captured) joined with two thousand of the men originally left on the east side of the Hudson, and Brigadier General Benedict Arnold was a day's march behind with seven more regiments from the Lake Champlain front. Also on the 20th, Brigadier General Alexander McDougall reached Morristown with three regiments of Continentals from Heath's forces to reinforce seven hundred New Jersey militia. Washington sent Brigadier General William Maxwell, a native of the area, to take command and begin harassing British supply trains. And Thomas Paine's first number of *The Crisis* was beginning to have a major impact on military and civilian morale.

By Christmas, Washington had some seven thousand officers and men under his immediate command capable of offensive action. More militia, stiffened by another brigade of Continentals, guarded positions further downstream but still close enough to cooperate. Washington also knew that the enlistments of many of the Continentals would expire on 31 December, and his officers began making passionate appeals for them to volunteer to stay another six weeks until the new recruits could arrive. But Washington wanted to use the veterans before year's end while he knew they would be available, and so he issued orders for a blow against the scattered British garrisons. On Christmas night his main force crossed the ice-choked Delaware and defeated the Hessians at Trenton, New Jersey, on 26 December 1776.

When the last of the Americans returned to the Pennsylvania side of the Delaware at daylight on 27 December, Washington watched the British reaction. The Bordentown garrison (another Hesse-Cassel brigade) immediately fell back to Princeton, policing up the Trenton survivors on the way. Cadwalader crossed back over to the east bank at midday and began probing towards Burlington to develop better intelligence. He reached Burlington that night and started receiving additional militia coming up from Philadelphia. As intelligence started to flow, Washington began to contemplate another offensive blow—this time a spoiling attack.

Battle of Princeton (1786). *This painting by William Mercer is a dramatic illustration of the battle between troops led by Washington and Cornwallis in Princeton, New Jersey, on 3 January 1777.* © ATWATER KENT MUSEUM OF PHILADELPHIA/BRIDGEMAN ART LIBRARY

THE PRINCETON CAMPAIGN BEGINS

On 30 December, Washington—having regrouped, received new supplies, and moved the prisoners to the rear—started back across the Delaware. The Americans reoccupied Trenton and sent patrols forward. The next evening copies of the congressional resolutions that granted Washington dictatorial powers reached Trenton. Although his numbers had been somewhat reduced by expired enlistments and detachments left in Pennsylvania, Washington still had over six thousand men available, thanks to the two thousand militia reinforcements. He also knew that the British had moved more troops into New Jersey and had them on the way to Princeton. When those forces arrived he would be outnumbered by several thousand. So he ordered Cadwalader and Mifflin to join him with their militia forces. He also sent a covering force to delay the expected enemy approach from Princeton.

This covering force was made up of the riflemen from Colonel Edward Hand's First Continental Regiment, Colonel Nicholas Haussegger's German Battalion, and Colonel Charles Scott with the Fourth, Fifth, and Sixth Virginia Regiments, reinforced by the six cannon of

Forrest's artillery company. On 1 January they were in position along Five Mile Run (later Little Shabbakunk Creek), and on the next day, while Cadwalader's units were still arriving at Trenton, the British appeared on the road from Princeton. Brigadier General Matthias de Roche-Fermoy, the American commander, inexplicably left the advanced position for Trenton, but Hand took over and conducted the delaying action with great skill. Five times the Americans caught the approaching column and forced the enemy to deploy, taking advantage of every creek and defile. Sometimes it was only fire from pickets, other times it was a more substantial blocking party, as at Five Mile Run and Big Shabbakunk Creek. Each time Cornwallis's men had to deploy for a coordinated attack, wasting valuable daylight. Hand then dropped back in good order and with few casualties. Half a mile north of Trenton at Stockton Hollow, the Americans made another stand, this time from woods behind a ravine. Once again the British had to deploy from column into line in the slush of open fields, where they were particularly vulnerable to Hand's riflemen and Forrest's guns, and to bring up artillery. The covering force, supported by other troops, then continued its delaying action through the

town at about 4 P.M. and finally reached the main line Washington had set up south of Assunpink Creek. At about sunset, Cornwallis's larger force faced some sixty-eight hundred men in a very strong defensive position, and in the twilight—around 4:45–5:00 P.M.—he launched a series of probing attacks on the various fords. The Americans held firm and shattered a series of attempts by Hessian grenadiers and British infantry to storm the bridge. Washington had achieved his vitally important purpose of delaying a coordinated attack on his main position during daylight, and in this Second Battle of Trenton probably inflicted 365 casualties at relatively small cost. The American units conducted themselves well, and Washington's defensive battle was brilliantly managed.

However, the Americans were in a bad spot: they were outnumbered; vulnerable to being enveloped or pounded by artillery on 3 January; and lacked the boats to fall back across the Delaware. Thanks to the Americans' domination of the reconnaissance-counter-reconnaissance contest, Washington knew that another course of action was open. It was risky and unorthodox, but it caught Cornwallis flat-footed. Patrols had determined that the back roads were open and that Princeton and Brunswick in the British rear were vulnerable. Leaving his campfires burning, Washington slipped out of his positions during the night to execute the brilliant strategic envelopment that led to the Battle of Princeton on 3 January.

The American army then went into winter quarters at Morristown, New Jersey. On 4–6 January, other American contingents attacked patrols near Springfield, and the confused British evacuated Elizabethtown.

SIGNIFICANCE

In a whirlwind campaign that Frederick the Great at the time called a masterpiece and that the historian Howard H. Peckham has called "The Nine Days' Wonder," Washington had driven Howe from all his posts in New Jersey except Amboy and Brunswick. Although five thousand British remained in each of the latter places, they presented no strategic threat. American morale bounded upwards; New Jersey Loyalists who had revealed themselves had to flee. The time and space bought by a cadre of veteran Continentals and their supporting militia enabled the new, larger Continental army of 1777 to recruit and come forward.

Howe's failures in this campaign resulted from an understandable overconfidence based on the earlier success in taking New York. He might have shown more caution had he considered the strong fights put up by various Continental formations on Long Island, Harlem Heights, and Pell's Point, but that is more apparent in hindsight than it was in December 1776. Conventional

thinking by the winter garrison commander, especially Colonel Rall, gave Washington his opening, and the Virginian took full advantage of it. Cornwallis, an aggressive commander, reacted as he often would during this war by trying to force a decisive action on a more mobile opponent, ignoring critical logistics. During the spring the "forage war" in New Jersey would gradually convince Howe that an overland move against Philadelphia in 1777 simply was not feasible.

NEW JERSEY LINE. New Jersey was one of the states which raised its line in response to a request from the Continental Congress. On 9 October 1775 the Congress asked for two regiments, which the New Jersey Provincial Congress agreed to organize on the 26th of that month. These were the First New Jersey Regiment, raised in East Jersey (the northeastern part of the colony), and the Second, raised in West Jersey. On 8 January 1776 Congress directed the Second Regiment to move as soon as possible to support the invasion of Canada, and two days later approved raising a third regiment. During February the First Regiment started deploying to New York City, and the Third followed as soon as it was formed. Both later moved up to the Northern

Department. In 1777 the Congress increased the state's quota to four regiments by reenlisting the three existing ones and forming one more. Declining manpower led to the disbanding of the Fourth New Jersey Regiment on 7 February 1779, incorporating its members into the remaining three to bring them up to strength. In 1781 the quota again dropped, calling for two regiments that were formed using the same process. Finally, on 1 March 1783, the First Regiment became the New Jersey Regiment, and the Second Regiment shrank to become the four-company New Jersey Battalion. Both units were furloughed on 6 June of that year and were formally disbanded on 15 November 1783. One other infantry regiment was recruited primarily in New Jersey in 1777. This was Spencer's Additional Continental Regiment, which was often called the Fifth New Jersey Regiment, particularly after absorbing New Jersey men from Forman's and Malcolm's Additional Regiments in 1779), but it was never part of the New Jersey Line. The state also furnished several artillery companies and a company of light dragoons to the Continental army.

NEW JERSEY VOLUNTEERS. Cortlandt Skinner, the last royal attorney general of New Jersey, was commissioned a brigadier general of Provincial forces on 4 September 1776, authorized to raise a brigade of six battalions from among the numerous New Jersey Loyalists already organized and organizing to fight the rebels.

Although none of the battalions reached its authorized strength of five hundred men each, the New Jersey Volunteers was the largest single Provincial unit raised during the war.

The First and Second Battalions were part of the force that chased Washington as he retreated from Fort Lee, New Jersey, in December 1776, and were successful in raising recruits, especially in Monmouth County. Headquartered at New Brunswick, New Jersey, after Washington's victories at Trenton (26 December 1776) and Princeton (3 January 1777), they retired to Staten Island when William Howe withdrew his forces from New Jersey in June 1777 as a prelude to the Philadelphia campaign. The Second Battalion was converted to artillery on 30 April 1777, accompanied Howe to Philadelphia, fought at Monmouth (28 June 1778), was reconverted to infantry in November 1779, sent into garrison at Lloyd's Neck and Sandy Hook, and disbanded in June 1781.

The five other battalions continued to mount forays into New Jersey from their base on Staten Island, and although initially surprised by rebel Major General John Sullivan's counterraid on 22 August 1777, they managed to defeat the raiders, the Fourth Battalion distinguishing itself in action against the New Jersey Continentals. The number of battalions was reduced to four on 25 April 1778, when the Fifth merged with the First and the Sixth merged with the Third. In late November 1778, the Third Battalion was sent south as part of Lieutenant Colonel Archibald Campbell's expedition to capture Savannah, Georgia (29 December 1778), beginning a long association with the First Battalion of Delancey's Brigade. It extended through the defense of Savannah against Franco-American attack (9 October 1779) and the defense of Ninety Six, South Carolina (May–June 1781), against Nathanael Greene, culminating at the hard-fought battle of Eutaw Springs (8 September 1781), where the Third Battalion suffered 40 percent of its strength killed, wounded, and missing. (It returned to New York in January 1783, after the evacuation of Charleston). The battalions also contributed drafts to two temporary units raised from among the Provincial regiments for service in the south: Major Patrick Ferguson's corps, American Volunteers, that was captured at Kings Mountain (7 October 1780), and the Provincial Light Infantry Battalion that operated in the South from December 1780 until its last battle, at Eutaw Springs.

Back north, a detachment of the Fourth Battalion helped defend Paulus Hook against Henry Lee on 19 August 1779, and the First and Fourth Battalions participated in Baron von Knyphausen's raid on Springfield, New Jersey, during June 1780. The Fourth (renumbered the Third after the disbanding of the Second Battalion) was part of Benedict Arnold's force that raided New London, Connecticut, on 6 September 1781. The

two battalions were together at Newtown, Long Island, by the summer of 1782 and—joined by the Third (by then the Second) Battalion from Charleston—sailed on 3 September 1783 from New York for New Brunswick, where they were disbanded on 10 October.

Cortland Skinner rarely led his brigade on active operations. Most of his time was spent coordinating the gathering of intelligence in New Jersey from his base on Staten Island.

NEW LONDON RAID, CONNECTICUT. 6 September 1781. As a diversion to draw strength from the allied army marching south for the Yorktown Campaign, Benedict Arnold proposed another amphibious raid on the Connecticut coast. New London became the target because it was the state's most active port, held important stores, and was in easy striking distance (135 miles). In addition, Arnold knew it well because he had been born and raised nearby. The town was on the west bank of the Thames River and about three miles from its mouth. A mile below New London and on the same side of the river was a small work called Fort Trumbull; oriented for protection of the harbor and virtually defenseless from the land side, it was occupied by twenty-four state troops under Captain Adam Shapley. Across the river was Fort Griswold (on Groton Heights), a more substantial square fortification with stone walls, fraised ditch, and outworks. Lieutenant Colonel William Ledyard commanded here with a 140-man garrison drawn from the local militia.

Arnold intended a night attack, but the adverse wind held him offshore until 9 A.M. on 6 September. He landed at 10 A.M. on the west bank with the Thirty-eighth Foot, two Loyalist regiments (the Loyal Americans and the American Legion), a detachment of jägers, and some guns. Major Edmund Eyre landed on the other side of the river with the Fortieth and Fifty-fourth Foot, the Third Battalion of New Jersey Volunteers, a jäger detachment, and artillery.

Captain Millett was detached from Arnold's column with four companies of the Thirty-eighth (subsequently joined by Captain Frink's Loyalist company) to take Fort Trumbull. Captain Shapley delivered one volley of grape and musketry, spiked his eight guns, and crossed to reinforce Ledyard at Fort Griswold. Arnold pushed on to New London, sweeping aside minor resistance at "Fort Nonsense" and a couple of points along the road. In New London local Loyalists helped carry out the destruction of public buildings and storehouses, but damage spread to private property as well. After the war an investigation estimated the value at almost a half-million dollars, including a significant number of dwellings that had not been legitimate military targets. About a dozen ships were destroyed, but fifteen escaped up the river. Patriot propagandists accused Arnold of viewing the scene with the satisfaction of a Nero, but he claimed his men made every effort to put out the fires that started accidentally.

Fort Griswold, meanwhile, put up fierce resistance for forty minutes and threw back several attacks. Eyre fell mortally wounded in the first assault, and Major Montgomery was killed as he mounted the parapet. As the British finally overran the fort, Ledyard attempted to surrender, but was stabbed with his own sword and then bayoneted to death.

Governor Trumbull reported American losses at Fort Griswold as 70 to 80 killed, all but 3 of them after the surrender. Arnold reported that he found 85 dead and 60 wounded, most of them mortally, in the fort. He also stated that he took 70 prisoners, not including seriously wounded who were left behind on parole. Total American losses (including those on the west bank) were about 240. Arnold admitted his own casualties as 48 men killed and 145 wounded, which testifies to the stubborn defense of Fort Griswold.

This was the last large action in the North during the Revolution. It contributed nothing to the British war effort, and it further blackened Arnold's name—although the evidence does not support propagandists' allegations that he deliberately carried out an atrocity.

NEW ORLEANS. A source of Spanish military aid. When the British naval blockade cut off normal routes of American supply from Europe, the colonists turned to Spanish New Orleans as well as the Dutch and French West Indies. Although the Spanish were careful to avoid war with Great Britain, they had much to gain by furnishing supplies to the rebels, not the least of which was the weakening of their British competitor. Oliver Pollock was invaluable as the intermediary between American agents and the Spanish authorities starting in 1776, and the rebels were able to purchase weapons, ammunition, blankets, and such critical medical supplies as quinine. These supplies were moved up the Mississippi under the Spanish flag, which got them safely past British posts above New Orleans. Under the governorship of Bernardo de Gálvez, who succeeded Luis de Unzaga in 1777, the support became even more significant. Spanish supplies sent by Gálvez made George Rogers Clark's campaign in the Northwest possible. French entry into the war opened the Atlantic routes of supply in 1778, and the Spanish alliance in 1779 eliminated the need for secrecy in the river trade, which by then had diminished in importance.

NEWPORT, RHODE ISLAND. 29 July–31 August 1778. Franco-American failure. In December 1776 General Sir Henry Clinton was sent from New York to occupy Newport, which the Royal Navy considered a superior winter anchorage to New York. By the summer of 1778 the British had already survived two American efforts to oust them and had developed a significant network of defensive fortifications. In June 1778 the 3,000-man garrison under Major General Robert Pigot included four Hesse-Cassel regiments, three British regiments, and one Loyalist regiment, along with a detachment of artillery. On 15 July, following

the evacuation of Philadelphia, a reinforcement convoy landed an additional 2,000 men, including one British regiment, two Anspach-Bayreuth regiments, and another Loyalist regiment. Meanwhile the Americans had begun massing an assault force at Providence under Major General John Sullivan. These troops included about a thousand Continentals and a variety of militia and state troops that had been maintaining a loose cordon. When it became apparent that the task force of Admiral Charles comte d'Estaing could not participate in an attack on New York because of British ships stationed inside Sandy Hook, Congress proposed an attack on Pigot at Newport.

In preparation for a combined operation that held such promise Washington called on the New England states to mobilize 5,000 New England men. He also sent Sullivan the veteran Continental brigades of James Varnum and John Glover and two additional major generals with special backgrounds: the Frenchman the Marquis de Lafayette and Nathanael Greene, a Rhode Island native. Although it took a long time to assemble the militia and volunteers, they eventually gave Sullivan an army of about 10,000 by early August. In accordance with Washington's instructions to provide stiffening to the volunteers, he mixed the militia and Continental units to organize two divisions, one under Greene and the other under Lafayette. D'Estaing had an impressive fleet and several thousand troops serving as ships' garrisons that he could put ashore for land operations.

The French fleet reached Rhode Island (Point Judith) on 29 July and established contact with the American army. Despite the tone of exaggerated compliment to Sullivan in d'Estaing's early communications, there was friction between the two allied leaders from the start. And unlike the situation with Lieutenant General comte de Rochambeau's later expedition, the two forces this time had no appreciation for each other and no common tactical doctrine. D'Estaing had expected everything to be ready when he appeared and was not impressed by Sullivan's preparations: "We found that the troops were still at home," d'Estaing wrote in his report of 5 November (quoted in Dearden, *Rhode Island Campaign*, p. 48). He mistook Varnum's and Glover's Continental brigades for militia and complained that the Americans did not have water and provisions ready for his ships when they arrived.

While Sullivan collected the boats needed to move the troops from the mainland the French started isolating the British. On 30 July two frigates and a brigantine moved into the East Passage, and the Royal Navy's crews had to destroy the sloop of war *Kingsfisher* and the galleys *Alarm* and *Spitfire* to prevent their capture. On 5 August three ships of the line in the West Passage moved around the northern tip of Conanicut Island and caught another portion of the British garrison's squadron by surprise, forcing the crews to destroy the frigates *Cerberus*, *Juno*,

Orpheus, and *Lark* and the galley *Pigot*. Other vessels were scuttled over a period of days to form underwater obstructions blocking approaches to the Newport harbor. The grounded sailors now took up positions manning defensive batteries in the British lines.

Despite misgivings, d'Estaing agreed to Sullivan's concept of operations. On 8 August his ships would enter the Middle Passage, running past the British defenses. The next night (9–10 August) Sullivan's troops would cross from Tiverton to the northeast tip of Rhode Island and prepare to attack south. Early on 10 August the French were to land as many men as possible on the west side of the island, opposite the Americans, and bombard the enemy fortifications from the water; the combined ground forces would then assault. The French moved up the Middle Passage according to plan on 8 August, forcing the British to scuttle their last two warships, the frigate *Flora* and the sloop *Falcon*, and destroy the last of the transports.

Then the trouble started. Shortly after dark Pigot withdrew his units on the north end of the island and concentrated all 6,700 men at the main defensive lines. In the morning of 9 August Sullivan wrote to d'Estaing confirming the plan to carry out the invasion as planned on 10 August. But at 8 A.M. Sullivan confirmed reports from British deserters and realized that Pigot had fallen back, so he immediately crossed over to occupy the northern works before the enemy could return. When d'Estaing learned of the landing, only an hour after he had received the earlier message, many of the French officers were offended by what they interpreted to be a breach of military etiquette—the Americans landing ahead of the French, and without prior notification. In spite of this, d'Estaing began preparing to land his own troops when about noon a large fleet was detected offshore.

At 3 P.M. a scouting frigate confirmed that the ships were those of Howe's fleet from New York. Admiral d'Estaing now had to make a decision: continue on with the invasion as planned, or stand out to sea with his warships to deal with the new problem. Given the size advantage of his force, he could easily have duplicated Howe's earlier feat at Sandy Hook and denied the British any chance to come to Pigot's aid.

NAVAL ACTION OFF NEWPORT, 10–12 AUGUST 1778

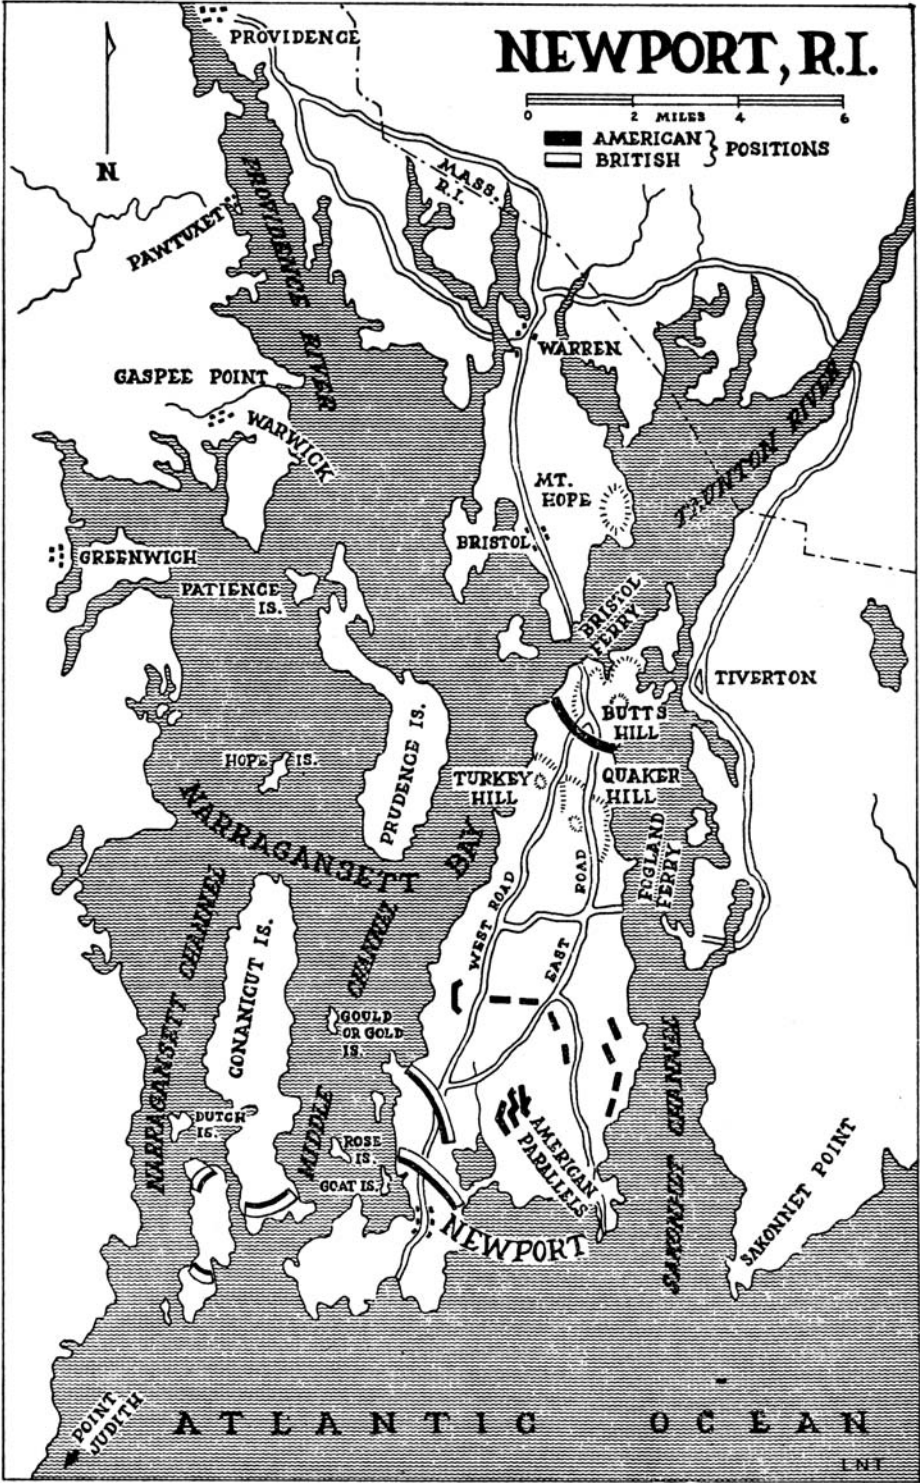

Since the standoff at Sandy Hook, Admiral Lord Richard Howe had received two additional ships of the line (one from the squadron under Admiral John Byron sent out from England to offset d'Estaing) and two fifty-gun ships. Howe was bothered by adverse winds, but finally sailed from Sandy Hook on 6 August with a squadron of seven ships of the line, five fifties (which could be pressed into fighting in the line), seven frigates, two bomb ketches, three

smaller warships, and four galleys; the Twenty-third Foot (Royal Welch Fusiliers) embarked to augment his marines. On 9 August, while Howe anchored off Point Judith, the southerly wind held the French in position, but during the night it shifted to the north. About 8:00 A.M. on 10 August, d'Estaing stood out to sea to give battle with a squadron of eleven ships of the line, one fifty, and four frigates. When Howe detected this movement he detached one of his frigates to escort the smaller craft back to New York and took the main body (including the fireships) out to sea. Knowing that he was outnumbered, and more importantly that he was outgunned (both in numbers and in size) by the larger French ships, he retreated to the south.

For the rest of that day and the next Howe maneuvered, trying to gain the weather gauge, which was the only condition under which he could even think about engaging in line of battle. That night the weather deteriorated, and heavy seas and gale-force winds scattered both fleets and inflicted considerable damage before blowing out on 13 August. Howe was left with one fifty, four frigates, and an armed ship still sailing in company; the rest were limping back to Sandy Hook for repairs. However, as the day ended two of the other British fifties—*Renown* and *Preston*—fell in with two of the large but badly damaged French ships of the line. The eighty-gun flagship *Languedoc* had lost all of her masts in the storm and was virtually defenseless; the seventy-four-gun *Marseillois* had only one of her masts left, drastically reducing her maneuverability. The British pounded both vessels until darkness fell but were driven off by other French ships the next morning when they sought to resume the battle. Three days later, on 19 August, another fifty, the *Isis*, fought for an hour and a half with the seventy-four-gun *César* twenty leagues from Sandy Hook before the two battered antagonists separated. Howe finally rejoined the rest of his squadron at New York on 18 August, while d'Estaing returned to Rhode Island on 20 August to take stock of his condition. On the night of 21–22 August, knowing that Byron could arrive at any time and shift the balance of power, d'Estaing sailed off to carry out repairs at Boston.

THE AMERICANS CARRY ON

The land forces continued their contest while the fleets were gone. The handful of French frigates left in harbor gave the Allies total control of the coastal waters, so Sullivan continued bringing his troops across to the island and, after the storm cleared, on 15 August pushed south to camp two miles from the outer line of Pigot's fortifications. These works stretched 1,372 yards across the island and were held by 1,900 men. They posed a formidable challenge, so Sullivan started the approach trenches for a formal siege. He concentrated on the eastern side of the line, apparently leaving the other side for the French as in the original plan.

THE GALE GROUP

The steady massing of forces left Pigot increasingly worried. Despite the strong natural advantages of the terrain he held, he knew that control of the sea would leave him vulnerable to flank or rear attacks and subject to being starved into surrender. D'Estaing's reappearance on 20 August further eroded British morale. The pendulum quickly swung the other way when the French departed for Boston. The volunteers and militia started melting away while infuriated American officers made heated comments that would poison diplomatic relations. Sullivan kept his positions for several days in the hopes that something positive might happen but quietly started moving supplies and heavy equipment back to the mainland. Information from Washington alerted Sullivan that Howe and Clinton were assembling a strong relief force in New York, and when three British frigates arrived he correctly concluded that the task force would soon follow. At 8:00 P.M. on 28 August Sullivan started slowly withdrawing his remaining 5,000–6,000 men.

BATTLE OF RHODE ISLAND, 29 AUGUST

The Americans halted at 3 A.M. in the vicinity of Butts Hill, where there were some covering earthworks. They were twelve miles north of Newport. Glover's brigade held the left (east) end of the line; Colonel Christopher Greene commanded a brigade in the center with Brigadier General Ezekiel Cornell's brigade on his right; on the west end was Varnum's brigade. Detachments protected both coasts back to Bristol Ferry, while a skirmish line stood in front. Pigot detected the withdrawal at first light and decided to harass the Americans. About 6:30 he sent forward three columns, with covering parties, but retained over half of his strength in the fortifications as a precaution. Major General Richard Prescott moved in the center with the Thirty-eighth and Fifty-fourth Foot; Brigadier Francis Smith went up the east road with the Twenty-second and Forty-third Foot plus the flank companies of the Thirty-eighth and Fifty-fourth. Major General Friedrich Wilhelm von Lossburg took the west road with the two Anspach-Bayreuth regiments led by Captain Wilhelm von der Malsburg's and Captain August Christian Noltenius's Hesse-Cassel chasseur companies. A half-hour later the chasseurs collided with Lieutenant Colonel John Laurens's skirmish force and the battle began. Moments later Smith on the other side of the island, who had not put out flankers or an advance guard, walked into a trap set by Colonel Henry Beekman Livingston's covering force.

The firing made it clear to Pigot that Smith was in a significant fight, and he started feeding in reinforcements. He ordered Prescott to send him the Fifty-Fourth while Pigot sent up the Loyalists of the Prince of Wales's Volunteers. He also pushed up the Hesse-Cassel Huyn Regiment and Fanning's Kings American Regiment to

Lossburg. The covering parties fell back to the main American line, fighting all the way, and the British formed a line of battle on Turkey and Quaker Hills.

Before all of the supporting forces had come up, Smith launched an attack on the east that Glover stopped cold. The British supporting artillery then entered the fight about 9 A.M. and action settled back down to sporadic skirmishing. Four British ships moved up into position off the western shore and at 10 A.M. opened fire on the American right. With this support Pigot shifted his main effort to envelop Sullivan's right. Lossburg's troops charged the First Rhode Island Regiment holding the key redoubt but were driven back twice. Meanwhile some heavy American guns chased the ships back to a position off the British flank. Between 2 and 3 P.M. Lossburg made a third try and after some initial success was pushed back by Nathanael Greene's counterattack. When the American force on that wing of increased about 1,500 men, Greene moved forward towards Turkey Hill. At this point Sullivan called Greene off rather than risk a defeat. Both sides kept up sporadic fire until dark.

Pigot sent back to Newport for additional artillery, and Sullivan made a show of preparing to receive his attack, but neither commander wanted to bring on a decisive battle. During the night of 30–31 August, however, the Americans successfully executed the difficult operation of evacuating the island. Most of the troops crossed to Tiverton. A smaller number of troops crossed to Bristol, where the heavy baggage and stores had been sent earlier. Clinton reached Newport the morning of 1 September with 5,000 troops, bringing the campaign to an end. Sullivan's army discharged the bulk of the militia, and the Continentals moved to Providence. On the way back to New York, Clinton detached Major General Charles Grey for operations in Massachusetts (the Bedford–Fair Haven Raid, 6 September, and Martha's Vineyard raid, 10–11 September 1778).

NUMBERS AND LOSSES

American losses were 30 killed, 137 wounded, and 44 missing on 29 August. Pigot reported his casualties officially as 38 killed, 210 wounded, and 44 missing—most of the casualties among the German units. One Anspacher thought the true total was closer to 400.

SIGNIFICANCE

From a military standpoint neither side gained any significant advantage from the attack on Newport. Howe survived until Byron's arrival restored British control of the seas. Pigot (unlike Cornwallis in 1781) hung on until relief arrived, but the British had seen how tenuous their hold was, and within a year would voluntarily evacuate the

outpost. The need to mount a rescue operation delayed Clinton from complying with the Ministry's orders to transfer forces to the Caribbean and initiate a "southern strategy," but did not cause any fatal harm.

Perhaps the worst damage came in the rift that opened between the Americans and the French. Popular anger erupted in Boston while d'Estaing was repairing his ships. On 5 September the young chevalier de Saint Sauveur was mortally wounded when he tried to stop a Boston mob from pilfering a bakery established by the fleet in the town. Three or four French sailors were killed at Charlestown in another riot. Finally the Massachusetts House of Delegates resolved to erect a monument over Saint Sauveur's grave. Preceded by the failure outside New York, 11–22 July 1778, and followed by the fiasco at Savannah, 9 October 1779, d'Estaing's performance at Newport did not bode well. But on 10 July 1780 a new French expedition, commanded by a much more diplomatic general, Rochambeau, landed in Newport and restored harmony, making the Yorktown campaign possible.

NEWTOWN, NEW YORK. 29 August 1779. In a move known as Sullivan's Expedition, Major General John Sullivan left Tioga on 26 August with 4,000 troops and advanced slowly up the left (east) bank of the Chemung River. Major John Butler, a Loyalist who had been watching Sullivan's buildup from Genesee, moved to join his son Walter fourteen miles from Tioga. Together

they then pushed on with 250 Loyalists and 15 men of the British Eighth Foot and reinforced the 800 Indians and Loyalists under Joseph Brant near the destroyed village of Chemung. Against John Butler's judgment—the Indians insisted on making a stand—these forces prepared an elaborate ambush near Newtown, about six miles southeast of modern Elmira. A camouflaged log breastwork along a ridge parallel to the river had its left side anchored by a steep hill and right protected by a defile. The plan was not particularly original: throw Sullivan's column into confusion by surprise fire from the flank and then charge both ends. Brant and Captain John McDonnell (a Loyalist who had been with Brant at Cherry Valley) commanded the Indians and some Loyalists on the right, which was the least vulnerable sector. The left, under Walter Butler, and the center, under John Butler, contained mostly Loyalists and the sprinkling of regulars.

About 11 A.M. the advance guard of Sullivan's column approached the location. Alert members from the Rifle Corps spotted the trap. This warning let Sullivan halt the column and organize an attack. Major James Parr with his three companies of riflemen were attached to Enoch Poor's Brigade, and Poor was directed to envelop the enemy left. James Clinton's Division was to follow in support. The light howitzers and field pieces were to provide enfilade fire support.

In a well-managed maneuver through difficult terrain and against sporadic musket fire, Poor led his column onto the steep hill the Butlers had expected to protect their flank. The New Englanders charged with the bayonet, and the artillery opened up about the same time. According to John Butler, "the shells bursting beyond us made the Indians imagine the enemy had got their artillery around us and so startled and confused them that great part of them ran off."

Brant held a larger Indian force together, however, and put up a stiff fight against the much larger number of Continental veterans. Colonel John Reid's Second New Hampshire Regiment, on the right of Poor's Brigade, was hit on three sides by a savage counterattack but got prompt support from the Third New Hampshire Regiment and two of Clinton's New York regiments. Meanwhile, the brigades of Hand and Maxwell worked their way along the river and got on the enemy's right flank. The defenders, now at risk of annihilation, managed to break contact and retreat safely to Nanticoke, five miles away. Some of Sullivan's troops pursued less than half that distance.

NUMBERS AND LOSSES

The American losses were only 3 killed and 33 wounded. Sullivan reported to Congress that the total loss on the campaign only amounted to 40. Butler admitted the loss of 5 killed or captured and 3 wounded, and while these are

probably well under the true numbers, they could not have been too great.

SIGNIFICANCE

Newtown is an example of the flexibility of the tactical system implemented by Washington and Steuben since the majority of the infantrymen engaged here were not from the frontier. The enemy certainly had made blunders (that is, electing to fight at Newtown and failing to withdraw as soon as it became apparent that the ambush had failed) and Sullivan did hold a four-to-one superiority, but critics have charged that Sullivan failed because he did not pursue aggressively. This charge is faulty—he correctly chose to remain focused on the primary objectives of the campaign and followed Washington’s instructions to avoid needless risk.

NEW YORK. 11–22 July 1778. D’Estaing at the bar. On 8 July the comte d’Estaing reached the Delaware Capes after taking eighty-seven days to cross the Atlantic from Toulon. Three days earlier the British fleet had completed ferrying Clinton’s army from the vicinity of Sandy Hook at the heights of Navesink, where they had marched after evacuating Philadelphia. Although the slow passage of the French fleet across the Atlantic had saved the British fleet from being trapped in the Delaware, Admiral Richard Howe’s problem now was to protect his fleet in New York Harbor against a superior force. D’Estaing’s problem, on the other hand, was to get ships drawing twenty-seven feet across a bar where there were no more than twenty-one feet of water at low tide.

D’Estaing wasted no time off the Delaware when he saw there was no enemy fleet to engage and no promise of making contact with Washington. He had many sick aboard and was low on water and provisions, so on 9 July he sailed north to New York, reaching Sandy Hook on the 11th after capturing a number of British supply vessels. At Sandy Hook the American pilot who had come aboard off the Delaware reneged on his promise to take the fleet inside the Hook. It was not until 16 July that John

Laurens reached the fleet to establish liaison between d’Estaing and Washington. Laurens informed d’Estaing of the near impossibility of crossing the bar into New York Harbor for an attack on the British.

After days at anchor off the treacherous coast while the best available pilots were consulted, d’Estaing was told they could take his ships in only if a strong northeast wind coincided with a spring tide. Ignorant of the deeper draft of the French ships, Sir Henry Clinton considered abandoning New York before the expected attack. But on 20 July the French admiral decided to leave New York and follow Washington’s suggestion of a combined French and American operation against the British at Newport, Rhode Island.

Many military historians have been critical of d’Estaing for failing to chance crossing the bar into New York Harbor, insisting that a bolder commander might have won the Revolution by trapping the British in New York. Others agree with d’Estaing in thinking that such an effort would have been foolhardy and have led to the destruction of the French fleet.

The French Alliance was off to a bad start. Until Rochambeau arrived in America, it would deteriorate further.

NEW YORK, MOBILIZATION IN.

New York was one of the major theaters of the War of Independence, and it endured hard conflict longer than any other state. Perhaps its people suffered worst of all from war’s destruction. The war struck New Yorkers like none in their past, and no New Yorker escaped it. How it came to them and how they joined in it began a redefinition of what it meant to be a New Yorker, of how New York’s people dealt with each other, and even of the boundaries within which they lived.

There is no adequate account of how New Yorkers came to join the Continental Army and the revolutionary militia. We know little about how their previous lives fed into military service and have only fragmentary information about how they mustered for service, what they did on duty, and how they met their needs for food, shelter, and weapons. This entry summarizes what we do know.

Conflict had played an important role in shaping colonial New York. The Dutch founders had waged war against the Indians of the Hudson Valley. The Five Haudenosaunee Nations (the French called them the Iroquois) had fought the French and other Indians, in

good part to control the trade in beaver pelts; these wars continued after the English conquered Nieuw Amsterdam and Beverwyck in 1664 and renamed them New York and Albany. By the end of the seventeenth century, the Iroquois were exhausted. In the “Grand Settlement” of 1702 they promised neutrality to the French and, to placate their English allies, deeded over a hunting ground they did not possess, sprawling across the Niagara Peninsula to Detroit and perhaps beyond. Even after the outbreak of the final Anglo-French war for empire in 1755, the Iroquois tried to play off the Europeans; but with the defeat of the French the Iroquois were no longer able to balance the European powers. Although some Senecas joined in Pontiac’s Rebellion in 1763 to drive the British back, most Iroquois understood that warfare on their own against the Europeans was futile.

Although the line of settlement was pushed in, until 1761 farmers and artisans prospered—and merchants got rich—by supplying the foodstuffs and goods that fed and equipped the British soldiers and sailors who flowed through New York City to the war fronts north and west of Albany. Seventy-five New York City privateers preyed on French shipping, and some of their captains and owners also got rich. But the end of wartime procurement brought economic depression. Profits sank and jobs became scarce. City people suffered, whereas mixed-crop farmers in the Hudson and Mohawk Valleys could alter what they planted and survive.

Peace allowed settlement to spread into the territory between Lake Champlain and the Connecticut River, but new opportunities raised new issues. Although the Privy Council awarded title to the region to New York in 1764—it was also claimed by New Hampshire and Massachusetts—it could not prevent Connecticut migrants from entering the region. In the Hudson Valley, New Englanders pushing westward joined with long-term tenants to protest against economic conditions on estates in the valley, and in some cases the estates’ very existence. In 1766 tenants from Westchester County north to Albany rose in protest. The royal governor had to dispatch British troops, accompanied by light artillery, from New York City to quell the insurrection.

All of these issues—Indian-white relations, postwar economic woes, uncertain land boundaries, a quasi-feudal land system, and the irritating presence of British troops—shaped the ways New Yorkers confronted the imperial crisis between 1765 and 1775. In New York City the combination of British troops and economic doldrums proved volatile. Two garrison companies had been stationed in the city since the conquest in 1664, but after 1763 the garrison rose to several regiments. Off-duty soldiers chopped down the Liberty Poles raised by radical New Yorkers and brawled with civilians in taverns. Even worse, they competed with local residents for scarce jobs.

In January 1770 the rage spilled out into fights on the city’s streets, but no shots were fired; a similar situation in Boston led two months later to the Boston Massacre. Like the residents of Boston, many ordinary people in New York City disliked the “lobsterbacks” and were just as ready to organize to protest their presence, although many of their leaders tagged behind.

Massachusetts was ready to resist when the imperial government punished Boston for the “destruction of the tea” at the Boston Tea Party. New Yorkers were slower, but they did follow. During 1774 and early 1775 committees of correspondence (the “Fifty-One”) and inspection (the “Sixty”) formed in New York City to exchange information and to enforce the Continental Association. The First Continental Congress wanted committees of inspection everywhere, but they appeared only in a few places in New York: at Rye in Westchester County in August 1774; at Albany over the winter; at Kingston in December; and at New Windsor in Ulster County not until March 1775. The committee of Palatine District, in the upper Mohawk Valley, met in secret for fear of the power of Sir William Johnson’s family. These committees made no bid to overthrow colonial and royal institutions, as did their Massachusetts counterparts in the late summer and autumn of 1774.

Governor William Tryon remained popular (though New Yorkers loathed Lieutenant Governor Cadwallader Colden, who stood in while Tryon journeyed to England). The provincial assembly made laws, the mayors and city councils in New York and Albany continued to pass ordinances, and the courts stayed open. A few zealots, such as the radical leaders Isaac Sears and Alexander McDougall, wanted to go farther, but they knew they could not. McDougall was “sure . . . that we shall be the last of the provinces to the northward of Georgia, that will appeal to the sword.” James Duane, his reluctant fellow patriot, agreed in principle: “It seems to be agreed here that every pacific and persuasive Expedient ought to be tried before a Recourse to Arms can be justified.” New Yorkers were not ready for war, and despite the hot temper of some in the city, most of the province’s people had no desire for confrontation. Many Americans outside the province scorned New York’s apparent timidity.

Yet observant people could see that New Yorkers were not timid. They remembered the ferocious, destructive protests that had nullified the Stamp Act in 1765–1766 and the subsequent brawls with the garrison soldiers. In New York City a “committee of mechanics” took shape and bought its own meeting place. Outside the city, branches of the Sons of Liberty sprang up. During the crisis of 1773–1774 over East India Company tea, the zealous McDougall horrified the cautious William Smith Jr. by suggesting that “we prevent the landing [of the tea] and kill the Gov[ernor]. and the council.” It was dark humor, but like all joking it

New Yorkers Defend a Liberty Pole. In New York City, the combination of British troops and economic doldrums proved volatile. Off-duty soldiers brawled with civilians in taverns and chopped down Liberty Poles raised by radical New Yorkers. © BETTMANN/CORBIS

had a kernel of truth. While New Englanders were preparing for war, New Yorkers were donating goods and labor to support them. New Yorkers even destroyed a small tea cargo themselves in April 1774 when the ship *London* tried to bring some in secretly.

New Yorkers as a whole were not in a state of readiness to resist British authority in 1775. The closest they came was in New York City, but even there the likes of Duane did not want to make preparations. The likes of McDougall did not yet dare. Reluctant or bold, they understood that New York did not have and could not yet have anything like the province wide organization and the growing consciousness that Boston's leaders had fostered since well before the tea crisis. They understood that their province was far more heterogeneous, far more complex than the Yankee colonies. No amount of preparation could have mobilized New York's diverse people at the same time, at least in the same direction. But McDougall had predicted in 1774 to William Cooper of Massachusetts that "the attack of the Troops on your People" might make his fellows "fly to arms." The news from Lexington proved him right.

This was the moment that New York City radical leaders and Sons of Liberty like Isaac Sears and Alexander McDougall had been waiting for; it was the moment that cooler heads like James Duane and John Jay anticipated without relish; and it was also the moment that William Smith, who wanted desperately to remain neutral, and outright loyalists like King's College president Myles Cooper had foreseen with dread. When the news of the fighting in Massachusetts reached New York City on 23 April 1775, Sears seized the initiative. Organizing other Sons of Liberty and the "negroes, boys, sailors, and pickpockets," as well as many hard-working laborers and artisans, he led a march on the city armory, broke in, and handed out its contents. Another crowd stopped a sloop from sailing for Boston with provisions for the British troops there. Events cascaded. On 6 June, Marinus Willett, who would become a colonel in the Continental Army, led a group that seized the firearms of British soldiers who were being taken on shipboard to prevent them from deserting. As late as July it seemed to one

observer that “all authority, power, and government . . . is in the hands of the lower class of people.”

But crowd action was not enough. New York City replaced its 60-member committee of observation and inspection with a 100-member committee of safety. Albany’s half-secret committee published a call for meetings in every town in Albany county, “to take the sense of the citizens.” The result was the creation of a 153-member committee of “safety, protection, and correspondence,” empowered to “transact all such measures . . . as may tend to the welfare of the American cause.” Committees took shape in the other counties as well. Building on a short-lived Provincial Convention, elections for the new committees also chose delegates to the first of four Provincial Congresses. Congresses and committees alike began to drain power from the old institutions. On 3 May 1775 Albany’s new committee of safety organized a “strict and strong watch, well armed and under proper discipline,” and called on townsmen to form militia companies. Five days later New York City’s Committee of One Hundred ordered that all known opponents of the movement be stripped of their firearms. It too was organizing militia companies, urging them to start training and secure munitions and supplies. But British troops remained in the city, and the sixty-four-gun ship *Asia* lay at anchor off lower Manhattan. Not wanting a confrontation, or the damage that would result if the *Asia* fired on the town, radical leaders agreed that the British army and the navy should continue to receive supplies. As a precaution, the Provincial Congress resolved that the militia be “in constant readiness” to repel any attempt to take over and restore the old government’s full power.

New York was passing through a situation of “dual power,” as two sets of institutions, one dying and the other emerging, and their incumbents vied for control. Such a situation is at the very heart of a political revolution. At the end of 1775, when Governor Tryon dissolved the assembly and called an election for its successor, the first congress also dissolved and called an election of its own. Tryon’s goal was to stop the revolutionary movement. The congress’s goal was to “awe a corrupt Assembly . . . from interfering with political subjects.” The new assembly that Tryon hoped for never met. When the new provincial congress did assemble, there was no “official” institution to compete with it. In 1775 New York, like the other provinces, followed Massachusetts in preparing seriously for armed conflict, each at its own pace but in the same direction. Although the outbreak of fighting had provoked a sharp, if short-lived, burst of anger among New Yorkers, even loyalists-to-be, New Yorkers mobilized for conflict not as a united people but rather with the prospect of deep division.

Governor Tryon returned to New York from England on 25 June, the same day Washington passed through the

city on his way to take command in Boston. Tryon wisely stayed on shipboard to avoid the celebrations for Washington, and both men received warm welcomes. Nonetheless, British authority was eroding. For his own safety Tryon retreated to the *Asia* and then to the merchant vessel *Duchess of Gordon*. In a nighttime operation on 22 August, with the approval of the Provincial Congress, the Sons of Liberty began removing cannon that had been stored for shipment at the Battery. The *Asia* did fire, including one full broadside at 3 A.M. The gunners aimed only at the storage site of the cannon and, despite the terrifying noise, the city suffered little damage. The next day the tenuous truce returned, but the balance of power had shifted a bit: the rebels now controlled twenty-one pieces of heavy artillery.

At the same time, the Provincial Congress was organizing four regiments to meet New York’s quota of Continental Army troops. Each regiment was raised in a particular part of the colony, with the officers, who raised soldiers to earn their rank, reflecting the prevailing political sentiments of their region. The First Regiment was raised in New York City and County, with a strong cadre of officers with military experience in the final French and Indian war or in the city’s elite militia battalions. The Second Regiment came from northern New York, from the city of Albany north through Albany and Charlotte Counties toward Canada, Tryon County (the Mohawk Valley), and Cumberland County (the Hampshire Grants, later the State of Vermont); it had a strong Dutch influence. The Third Regiment was raised mainly in the Hudson Valley between Albany and New York City, on the west side in Ulster and Orange Counties and on the east side in Dutchess County; a company from Suffolk County on Long Island completed the regiment. The Fourth Regiment came from the counties around New York City: southern Dutchess, Westchester, King’s (Brooklyn), Queen’s, and Richmond (Staten Island).

Enlistment records and the pension applications of elderly veterans that are preserved in the National Archives give us a glimpse of the men who joined and how they served in the war. The median age of 286 noncommissioned officers and men in the Third Regiment, for example, was 23 years (the average was 25 years). In height, they averaged over 5 feet, 8 1/2 inches tall; 70 percent had a fair complexion, sixteen were pockmarked, and one had a harelip. Three-quarters were born in the colonies (54 percent in New York itself); Irish were the majority of the foreign-born. Half described themselves as laborers, less than 10 percent were farmers, and the rest were artisans of some sort, mostly weavers and shoemakers.

We know more about New Yorkers’ scramble for officer commissions. The Continental Congress recognized New York’s importance by allocating it several general officer appointments. The senior appointee was Major

General Philip Schuyler, a grandee landlord from Albany County, but the English-born and professionally trained Brigadier General Richard Montgomery was probably the most talented officer; he died in the assault on Quebec on 31 December 1775. In subsequent years, the former radical leader Alexander McDougall and the Ulster County brothers George and James Clinton received Continental commissions. James Clinton led one wing of the American army that ravaged Iroquois country in 1779 and opened the way for the ruthless destruction of Iroquois power after the war. Most of the generals associated with New York campaigns—including Washington; Arthur St. Clair at Ticonderoga; John Stark at Bennington; Horatio Gates, Benedict Arnold, and Benjamin Lincoln at Saratoga; John Sullivan on the 1779 Iroquois campaign; and Anthony Wayne in the Hudson Highlands—were not New York-born.

The unpretentious George Clinton, who held both militia and Continental commissions as a brigadier general, became the first commander of the state militia at the age of thirty-six. He proved more popular than Schuyler with New York's soldiers, and their votes gave him the state governorship in 1777. County and local notables scrambled for lesser rank, in both the Continental Army and the militia. After the war, scarcely a legislator or judge could not call himself general, colonel, major, or at least captain. Most militia officers provided important, if unremarkable, service. A few gained wider renown. Nicholas Herkimer was perhaps the most famous militia general. A local notable in the Mohawk Valley, he won election to the new state legislature. He won enduring military fame by helping to turn back St. Leger's expedition in 1777. Although British troops, their Loyalist allies, and pro-British Iroquois trapped his force of Tryon County militiamen in a ravine at Oriskany on 6 August and inflicted heavy casualties, including mortally wounding Herkimer himself, the expedition itself was crippled.

For militiamen, the first stage in commitment was to sign a voluntary "military association," or else face the contempt of neighbors. But not everybody joined in. Even in the heated atmosphere of the spring of 1775, the prosperous, mostly Dutch people of Richmond, King's, and Queen's Counties wanted nothing to do with the revolutionary movement. Efforts to organize committees and militia units among them came to virtually nothing. Continental general Charles Lee moved troops into Queen's County in January 1776, disarmed its open Loyalists, and arrested eighteen leaders. Still, its people would not support the patriots: 462 of them signed Lee's oath that they would not actively aid the British, and 340 more swore that they had surrendered all their firearms, but with no promises about future conduct. After the British arrived in August, more than 1,300 men signed a congratulatory address to the conquerors. Such men

joined royalist militia units, raiding across Long Island Sound into Westchester County and Connecticut. But as with the patriot militia, we know far too little about them.

Serious "disaffection" appeared upstate as well. One in eight of the potential militiamen in Orange County refused the military association, more than half of them from just one town, Haverstraw. About the same proportion refused in Ulster, the next county to the north on the west bank of the Hudson. In Westchester, Dutchess, and Albany Counties, thousands refused and were stripped of their firearms. A clandestine meeting late in 1776 on the Helderberg Escarpment west of Albany shows such men, mostly tenant farmers from the Manor of Rensselaerswyck, making up their minds. Thanks to a spy from the revolutionary committee, we know that one of them, a recent Scottish immigrant named John Commons, put the question. Supporters of Congress should leave, he said; the king's friends should stay. But Commons did not "know who was right." Until the end of the war patriot militiamen and the "Commissioners for Detecting and Defeating Conspiracies" worked hard to keep these "disaffected" under control.

The most enduring and most fiercely fought problems erupted in the upper Mohawk Valley, where white settlement melded into Indian country. There was no simple demarcation. The Mohawks were fragmented and surrounded by whites, with whom they often worshipped, prayed, and intermarried. Farther west, white land grants and settlements pressed in on the Oneidas. The situation of the Onondagas, Cayugas, and Senecas seemed safer, but whites were firmly emplaced at Oswego and Niagara. At war's outbreak the Haudenosaunee "great league" still held the Iroquois together, but on religious terms that allowed them to maintain peace among themselves, not as a political unit that would let them act together in wartime. Their other pan-tribal institution was the "Covenant Chain," in which the Six Nations were the central links binding other Indians, separate British colonies, and the distant crown. But the crown's hold on the colonies was shaking. Would the chain still reach to London? Would it stop in Albany, where New York leaders were reviving their earlier primacy in Iroquois affairs? Or would it end now at Congress, in Philadelphia?

The white Mohawk Valley was fragmented too. Until his death late in 1774, Sir William Johnson was a great lord in all but formal title of nobility. He treated the largely Scottish Catholic tenant laborers on his enormous estate well, supplying needs and forgiving debts. He controlled assembly elections and decided who would be sheriff or judge. He had good relations with most of the Iroquois, particularly the Mohawks and the Senecas. These relations did not extend to many of the Oneidas, who did not think Johnson would help them protect their land. Knowing they needed a white ally, they looked to

Samuel Kirkland, a pro-American, New England-born Presbyterian minister who had promised never to acquire an acre of their land. Yet the baronet did not own the whole valley. German and English settlers were moving in, resentful of his power, envious of his great landholdings, and casting covetous eyes on Indian land.

Johnson's heirs intended to keep the power and influence the baronet had acquired. Perhaps they did not learn about the secret committee that formed in 1774; but after Lexington there was no hiding. In June 1775 the committee called an open-air militia election. Sir John Johnson chanced to be passing and broke into the meeting, flailing his horsewhip at the candidate for captain. Another contretemps the next month saw five hundred of his armed tenants face down an equal number of insurgents at his own house, Johnson Hall. Leaders from Albany arranged a truce, but it did not last. Western New York and the Six Nations country were embarking on years of bitter warfare that would devastate the Indian and white communities alike. At the war's end the destruction of Iroquois power and grabbing of Iroquois property would surge, regardless

of what side the Indians chose, as New York assumed its modern shape. But this was not a race war. There were Indians and whites on both sides: Mohawks and Oneidas, Scots and Germans, tenants and freeholders chose for their own reasons.

Where they could, African Americans chose sides for their own reasons too, particularly after British commander Sir Henry Clinton promised freedom to slaves of rebels who would join him. Slavery was beginning to crumble; black men enlisted, fought, and won freedom on both sides. Still, white New Yorkers were among the slowest of all northerners to wake up to the great contradiction between the Revolution's claim that all men are created equal and the harsh reality that white men imposed on black people. At the war's end Patriots would try to reclaim slaves who had rallied to Sir Henry. The British refused in as many cases as they could.

Women in New York also had choices to make. They felt the same patriotic desires and pressures for action that led women elsewhere into open politics. Some ended their marriages rather than accept their husbands' political

decisions. In 1778 and 1779 Hudson Valley women joined crowds that sought to set prices on necessary goods, sometimes with soldiers' protection. Cross-dressing soldier Deborah Sampson saw combat as "Robert Shurtleff" on New York ground. Throughout revolutionary America, women learned that bearing the burden of supporting the war on the home front on their own, with their men sometimes far away, transformed them.

In the Green Mountains, Yankee migrants turned "revolutionary outlaws" nullified New York authority by the early 1770s, closing courts, breaking jails, horsewhipping officials, and driving out New York settlers. Lexington and Concord brought a brief reconciliation. Ethan Allen, leader of the Green Mountain Boys, joined Benedict Arnold to seize decrepit Fort Ticonderoga and its valuable artillery. Condemned to death by name in a New York statute of 1774, Allen appeared before the Provincial Congress and accepted its commission as colonel. Late in 1776 his followers realized that they could grasp their own independence, if they were bold. To New York they became "revolted subjects" living in the "pretended state" of Vermont. But New York needed them. When his army bogged down in the upper Hudson Valley north of Albany in the late summer of 1777, General John Burgoyne sent a

raiding party of German troops toward Bennington. Green Mountain Boys and New Hampshire militia met the raid; some pretended to be Loyalists and led the Germans into a bloody trap. The expedition's failure helped to guarantee that Burgoyne's army would not reach Albany, where it intended to link up with other British troops coming down the Mohawk Valley and up the Hudson.

Burgoyne's southward advance from Montreal toward Albany was the second (of two) great military tests of mobilized New York. The first had been Washington's futile defense of New York City and successful retreat from it a year earlier, in 1776. Both the battle for New York and the battles around Saratoga were national efforts, with the Continental Army at the center. The American commander at Saratoga was British-born Horatio Gates, who lived in Virginia. Gates had replaced New York's Schuyler both because Schuyler had endorsed his subordinate's decision to abandon Fort Ticonderoga rather than try to block Burgoyne and because ordinary troops disliked him. Schuyler did, however, initiate a scorched-earth strategy along Burgoyne's route south from Lake Champlain, which succeeded in its goal of delaying the British, isolating them from their supplies, and weakening them to the point that Gates could defeat them.

New Yorkers by themselves could not have raised sufficient troops for either campaign. Regiments from other states made up the bulk of the American forces at both New York City in 1776 and Saratoga in 1777. Continental soldiers from the fishing ports of Massachusetts ferried much of Washington's army from Long Island to safety on Manhattan Island in August 1776. Beginning in the late summer of 1777, New Englanders were foremost among the militia who swelled Gates's army to the point that it vastly outnumbered the invaders. Despite a wave of panic as Burgoyne advanced south, New Yorkers did turn out at Saratoga in large numbers, where their presence tipped the scales even though they engaged in little fighting. When 1,800 Albany County militiamen joined the American force it helped to convince the British that their cause was hopeless. So stripped was the Hudson Valley during the Saratoga crisis that there was no resistance to a small British expedition that burned and ravaged as far north as Kingston, in a vain effort to support Burgoyne.

New Yorkers of all sorts remained mobilized for five years after Saratoga. Continentals and patriot militiamen faced down Loyalists and raiders both in the Iroquois borderlands and in Westchester County around New York City. Even after Cornwallis surrendered at Yorktown in October 1781, the rump of the Continental Army remained camped at Newburgh, expecting a final battle for New York City itself that never came. Like the story of how New Yorkers entered the Revolutionary War, the story of how they endured the war and, eventually, left it behind remains to be explored more fully.

NEW YORK ASSEMBLY SUSPENDED. 1767–1769. On 13 December 1765, Major General Thomas Gage, the British commander in chief in North America, asked Governor Henry Moore to request the New York assembly to make provisions for complying with the Quartering Act. The assembly refused full compliance in January 1766, contending that because more regular troops were stationed at New York City (Gage's headquarters) than in any other colony, New York was being unfairly burdened by the act. On 13 June 1766, Moore again informed the assembly that provisions should be made for quartering more regular troops expected to arrive at New York City. On the 19th the assembly again refused full compliance, pleading insufficient financial resources. A period of mounting tension led to a clash between soldiers and citizens on 11 August. When the assembly refused for a third time to support the Quartering Act (15 December), the governor prorogued it (19 December). On 15 June 1767 the king gave his assent to Charles Townshend's act suspending the legislative powers of the New York assembly, effective from 1 October until such time as it complied with the Quartering Act. About the same time, the assembly finally voted some funds for troop support, and the governor used this as a basis for not carrying out the suspension. Although the assembly was never suspended, the willingness of the imperial government to take this drastic step showed the colonists the extent to which the mother country was ready to browbeat them into submission.

When the Board of Trade reviewed the matter in May 1768, it ruled that the acts of the New York assembly after 1 October 1767 were invalid. After a new assembly was dissolved for failure to cooperate, a

third one, elected in January 1769, made the required provisions for quartering in December 1769 when it voted an appropriation of two thousand pounds. The radicals considered this compliance a betrayal by the assembly, and the ensuing friction between soldiers and citizens culminated in the “battle” of Golden Hill on 19 January 1770.

NEW YORK CAMPAIGN. In a letter of 6 January 1776, John Adams directed George Washington’s attention to New York, to the “vast Importance of that City, Province, and the [Hudson] River which is in it.” New York, Adams wrote, was “the Nexus of the Northern and Southern Colonies, as a kind of Key to the whole Continent . . . a Passage to Canada, to the Great Lakes, and to all the Indian Nations. No Effort to Secure it ought to be omitted.” Besieged in Boston—a peninsula with a very narrow neck—the British were keenly aware of New York City’s strategic advantages. Located at the center of the Atlantic seaboard and at the mouth of a deep, navigable river penetrating some three hundred miles northward towards Fort Ticonderoga, New York, was the portal to the Lake Champlain-Lake George-Hudson River axis, a water highway used to transport invading armies to and from Canada during the French and Indian War.

Stung by their defeats at Lexington, Concord, and Bunker Hill, the British by August 1775 had devised a new grand strategy. By having one army seize New York City and march northward to rendezvous at Albany with a second force coming down from Canada, the British intended to divide the colonies along the line of the Hudson River. The American struggle for independence was expected to collapse if New England could be isolated

from other cockpits of the rebellion in the mid-Atlantic and southern provinces. The British were forced to retreat from Boston to Halifax when the Americans placed artillery on Dorchester Heights. Departing on 17 March 1776, they planned to regroup and follow the advice of Lord George Germain, soon to become secretary of state for the American colonies, to deliver a “decisive blow” at New York.

AMERICAN DEFENSES

Washington, who remained in Boston with the army in case the British retreat was merely a feint, had dispatched his second in command, Major General Charles Lee, to recruit volunteers in Connecticut and begin the work of fortifying New York City. Arriving on 4 February, Lee concluded that the city, covering less than a square mile at the southern tip of Manhattan, would ultimately be captured by the British because their powerful navy would dominate the surrounding waterways. Nonetheless, with forts and trenches in and around the city and barricades at every street corner, Lee hoped to inflict heavy losses on the invaders by drawing them into protracted urban warfare.

Lee’s plan also focused on sealing off both ends of the East River with sunken obstructions and shore batteries and controlling Brooklyn Heights, which would secure Manhattan’s entire east side while enabling the Americans to command the city with their artillery, as they had done from Dorchester Heights outside Boston. However, Lee’s plan failed to capitalize on two choke points: the channel at Sandy Hook, which was the only entrance to the Lower Bay from the Atlantic, and the Narrows between Staten Island and western Long Island leading to the Upper Bay. A combination of shore batteries and artillery mounted on floating platforms might have taken a heavy toll on the British fleet passing single file through these straits, but these recommendations from at least one New York resident and from Congress were never implemented.

Nonetheless, John Adams and other members of the Continental Congress were so pleased with the work Lee had begun that he was sent to perform similar service in Charleston, South Carolina. This faith in Lee’s abilities stemmed in part from the congressmen’s own lack of military experience. Moreover, they ultimately concurred with Lee’s assessment of the situation: they could not hope to mount a successful defense of the New York archipelago against the world’s greatest naval power, but they calculated that the second largest city in America (after Philadelphia) should not be handed over without a fight. To do so would depress American morale, pushing tenuous supporters of the Revolution and neutrals into the Loyalist camp.

AMERICAN DISPOSITIONS

When Lee departed on 7 March, Brigadier General William Alexander, known as Lord Stirling because of his claim to a Scottish peerage, assumed command in New York and supervised the construction of the forts. Ten days later, when the British evacuated Boston, Washington was convinced they were headed for New York and began sending his best units down to the city. New York was “a post of infinite importance both to them and us,” Washington wrote, “and much depends on priority of possession.” The brigades of Thompson, Heath, Sullivan, Greene, and Spencer traveled over muddy roads and by boat from Connecticut, reaching New York by early April, followed by Major General Israel Putnam, who imposed martial law in the city and commanded the army until Washington arrived on 13 April.

Washington reorganized the army into four brigades under Heath, Spencer, Stirling, and Greene, assigning the first three to complete the defenses on Manhattan and sending Greene to Long Island. With nineteen thousand troops present and fit for duty, Washington spread them out in a thin defensive line broken by two rivers and stretching from the New Jersey shore in the west and eastward through northern Manhattan, New York City, Governors Island, and onto Long Island.

In addition to the many miles of shoreline where the British might land to capture New York City, the threat of an invasion from Canada also diluted Washington’s forces. Following orders from Congress, Washington in May dispatched ten regiments under Thompson and Sullivan to reinforce the American invasion of Canada, led by Major General John Thomas, whose forces continued to besiege Quebec. Congress hoped to secure the northern border with a fourteenth colony in Canada; Britain’s two-pronged strategy meant that Washington had to fight for both ends of the Champlain-Hudson corridor at once.

LORD HOWE’S PEACE INITIATIVE

On the other hand, the American expedition in Canada forced the British commander in chief, Major General William Howe, to divert troops from Halifax to the St. Lawrence River, which delayed his departure for New York until June 1776. During the last week of June, Howe and his fleet of 130 ships—the largest ever seen in North America—sailed past Sandy Hook and arrived in the Lower Bay. On 2 July, the day Congress voted for independence, Howe’s forces sailed unopposed through the Narrows and landed on Staten Island.

On 12 July, with a strong wind blowing from the south, the British sent two ships, the *Phoenix* and *Rose*, up the Hudson to test the American defenses. American shore batteries blazed away but did little more than damage the rigging on the warships. The American

guns were not powerful enough, the river was too wide at its mouth, and with the wind at their backs the British vessels were too swift. The British captains celebrated by breaking out the claret and punch while they proceeded up the river as far as Tarrytown, thirty miles north of New York City. For the Americans, it was a distressing start to the New York campaign. The British had demonstrated that they could enter the Hudson both to control the river and to arm the Loyalists along its banks, while interrupting American communications and supply lines leading down from Albany to New York City. The British also stood a good chance of destroying several American frigates then under construction further upriver.

That same evening, Vice Admiral Richard Lord Howe, the general’s brother and co-commander in chief, arrived from England after an arduous Atlantic crossing and protracted negotiations in London with George Germain, the American secretary who finally conferred the title of peace commissioner on both brothers. Having lost their older brother, George, who was killed in 1758 while leading Massachusetts troops in the French and Indian War, Richard and William Howe were deeply grateful for the creation of a monument to him in Westminster Abbey funded by the Massachusetts government, and they considered Americans their friends and countrymen. The Howe brothers hoped an overwhelming show of force in New York would bring the Americans to the negotiating table and end the rebellion without further bloodshed.

General William Howe greeted his brother and informed him of the Declaration of Independence; the Americans had dug in and were prepared to fight. Nonetheless, on the following day, 13 July, Admiral Richard Howe proceeded with his peace initiative. He issued a proclamation offering to pardon any colonists who would return to the fold and help reestablish the royal governments in America. Admiral Howe also dispatched letters to this effect to each of the colonial governors, leaving them unsealed so that couriers would report their contents to the Continental Congress. Thus began the Howe brothers’ attempt to wield the olive branch in one hand and the sword in the other, a strategy that would punctuate the New York campaign over the next several months and significantly shape its outcome.

Without acknowledging Washington’s rank as the commander in chief of a national army, on 13 July, Admiral Howe addressed a letter to him proposing a face-to-face meeting. When a British naval officer attempted to deliver the letter the following day under a flag of truce, Washington’s aides rejected the overture, insisting that he be addressed in writing by his proper title. On the third attempt, the messenger verbally requested a meeting between “His Excellency General

Washington” and the adjutant general of the British army, and it was duly arranged for 20 July.

Washington received Admiral Howe’s envoy at his headquarters but spurned the idea that Americans should seek pardons from the British and retreat from the defense of their natural rights. Knowing that the British did not recognize the legitimacy of the Continental Congress, he nonetheless directed Admiral Howe to that body as the proper authority for conducting negotiations. In the meantime, Howe’s letters to the governors had reached Congress as he had expected, and the members decided to publish them immediately in order to expose what they viewed as a hollow peace offer and to dispel any impression among Americans that Congress was intransigent.

BRITISH DELAYS AND BUILDUP

Thwarted in his diplomatic initiative, Admiral Howe was ready to try force, but General Howe, despite the passage of three weeks since the arrival of the British fleet in New York, insisted on delaying the campaign further. Displaying the caution that would mark his conduct throughout the battle for New York, Howe decided to wait for reinforcements and for camp equipment, including kettles and canteens his troops would need in the summer heat.

On 1 August, Major General Henry Clinton and his subordinate, Major General Lord Charles Cornwallis, returned to New York with three thousand troops aboard the battered British fleet. The fleet had not overcome the fortifications designed by Charles Lee and so had failed to capture Charleston at the end of June. General Howe had been eager to put some distance between himself and Clinton, his second in command, after they quarreled over tactics at Bunker Hill a year earlier. Clinton’s return after failing in his first independent command did not improve their relationship.
