Preface

More than forty years ago, Mark Mayo Boatner, III, then a forty-four-year-old lieutenant colonel in the United States Army, saw the need for an encyclopedia that focused on the military aspects of the American Revolution. He completed and published the fruits of his labor in 1966; it was an impressive achievement for one man, who distilled nearly two centuries of scholarship on the war into a single wide-ranging yet manageable volume of almost 1900 entries. The book immediately earned a respected place in the reference literature on the war, and came to be so well regarded that historians of the period referred to it simply as “Boatner.” Amid the many noteworthy books on the complex conflict that gave birth to the American nation, “Boatner” was the premier place to go for concise, accurate information on how the war was waged and won. Historians, of course, continued to investigate and write about the war, often with “Boatner” serving as an important reference and guide. Their efforts were spurred in part by the bicentennial events of 1975–1983, but they were also responding to evolving priorities and changing interests in the discipline of history. As more information on war making in colonial and revolutionary America was uncovered, and new questions were asked of familiar material, historians began to put together a more complete picture of what happened during the war, and understood more about why it happened, than had previously been the case. Because the literature on the American Revolution has burgeoned in the years since the original edition of “Boatner” was published, it is time to incorporate the information and new perspectives of that scholarship into an updated work that satisfies the needs and interests of the twenty-first-century reader.

The present volumes are a comprehensive revision of the original edition of Mark Boatner’s 1966 encyclopedia. All 1700 entries in the 2006 edition have been reviewed, and all but a small percentage have been comprehensively revised and augmented. Recent scholarship has been incorporated into the revised entries, as well as used to produce entirely new entries on subjects that had not been explored or contemplated forty years ago. These new subjects include “African Americans in the Revolution,” “Historiography,” “Iconography,” “Religion and the American Revolution,” “Continental Army, Social History” and “Violence,” among others. A new cluster of entries on mobilization in the colonies is also an original contribution to this edition. All entries are combined in a single alphabetical sequence, the plan Boatner employed in his original encyclopedia. This second edition is further enhanced by the addition of a thematic outline of entries, and a comprehensive updated bibliography. The purpose of the present volumes remains what it was in

1966: to provide a handy source for concise, accurate information on the military aspects of the American Revolution.

In addition to incorporating recent scholarship in revised and new entries, the present volumes differ from the original “Boatner” in another significant way. Where the 1966 encyclopedia was the product of the perspective and hard work of one person, these volumes are works of collective scholarship. Many historians have contributed their expertise to the present volumes, and their passion for and knowledge of their subjects is evident throughout, even as they write within the necessarily limited space of an encyclopedia entry. Every new entry ends with the name of its author, and every revised entry of substantial length ends with the name of the person who reviewed and revised it. (Shorter entries, typically definitions of military terms, mentions of physical locations, and alternate names for things and events known better by another name, as well as all cross references, do not carry an attribution, although all of them have been reviewed and revised where necessary.) The revisions undertaken to update the longer entries range widely in scope and substance. Many of these entries, including the biographical sketches on the most important leaders and all of the accounts of major battles and campaigns, have been rewritten in light of modern scholarship, and thus bear little resemblance to the original entry in the 1965 volume. All entries, of course, reflect the perspective of their authors or revisers; every effort has been made to ensure the accuracy of the factual information contained in each entry, but the interpretations and opinions are those of its author or reviser. Scholarship in history works that way: from the voices of many investigators, each with its own emphasis and point of view, come, eventually, a synthesis that allows us all to understand a bit more clearly what it was like to have lived and fought in a war that began more than 230 years ago.

It should be noted that the two volumes of the encyclopedia are part of a trilogy with the revised edition of Boatner’s *Landmarks of the American Revolution: A Guide to Locating and Knowing What Happened at the Sites of Independence*, originally published in 1973. The *Landmarks* book has been thoroughly updated in a process similar to that whereby the encyclopedia has been revised, and provides a comprehensive companion for the reader interested in the current state and accessibility of many of the sites mentioned in the encyclopedia.

As in all works of collective scholarship, the person whose name is on the masthead owes an incalculable debt to the many authors who have contributed their time and expertise to making this final product worthy of its pedigree and able to stand the test of time. Rather than single out a few, and thereby relegate the rest, I invite readers to thumb through the encyclopedia, to read with purpose or at leisure, and to note the name of the person whose words they have digested and from which they have learned a bit more about the conflict that defined the American nation. The names of all contributors are listed alphabetically in one group elsewhere in this front matter.

At the risk of seeming invidious, I would, however, wish to thank two individuals by name. Stephen Wasserstein is the editor at Thomson Gale in New York who contacted me about the possibility of updating Mark Boatner’s singular achievement. Stephen cheerfully put up with me, offered his counsel and assistance at every turn, and fully deserves the heartfelt thanks and appreciation I now offer him. These volumes owe their existence to him as much, or more, than anyone else.

The actual production of the volumes was in the capable hands of the Thomson Gale team at the company’s headquarters in Farmington Hills, Michigan. Stephen Cusack, project editor on the history team for the Macmillan and Scribner’s imprints, was the leader of the craftspeople who created the handsome volumes you now hold. In an age when cost-consciousness can be taken to extremes, he orchestrated a demonstration of how high quality can still be achieved on a tight budget.

Every author—and editor, too—owes a debt of gratitude to the family members who, in words that are as true as they are conventional, made it possible for me to undertake and

complete this project. In my case, those long-suffering—and endlessly supportive—individuals were my wife Joyce, our daughters Margaret and Caroline, and our canines Spenser, Emily and Daphne. It is also conventional, and accurate, for the editor to accept responsibility for whatever flaws might remain in the work. This I do so gladly, believing that it is more important to get scholarship that stimulates thinking into the hands of the reader, even if a few flaws remain.

OVERVIEW OF THE AMERICAN REVOLUTION

War remains the most complex task that any society can undertake. The decision to resort to politically sanctioned, purposeful armed violence generally arrives when a critical mass of a society's leaders wins the approval of enough of its politically active members so that war can be initiated and sustained with some prospect that the society will thereby earn a favorable outcome to whatever problem could not be resolved short of war. The decision that war is the only, or at least the best available, means to resolve a political problem is powerfully shaped by the character of the society. The makeup of that society, in turn, profoundly shapes how the war is imagined and waged. The course of the war—and no war ever resembles exactly what either side thought it would look like—exerts pressures and strains that can come to determine the structure and development of the societies involved. It therefore behooves us to investigate and understand how wars begin, are waged, and become part of the fabric and memory of our society. No war can be comprehended in isolation from the host of political, social, economic, geographic, and racial factors—to name but a few—that form the totality of a society. But it is possible to begin one's inquiry with the aspects of a conflict that involve the understanding and manipulation of armed violence, what might be called “military history.” As long as one remains mindful that war making is connected in a web with everything else in society, it is intellectually possible to focus on the armed struggle itself.

The term “American Revolution” encompasses far more than the military conflict between Great Britain and its continental North American colonies between 1775 and 1783. The full story of the American Revolution begins roughly in the middle of the eighteenth century, when the assumptions about the character and stability of the British Empire in North America, as we can see in retrospect, were more or less shared by British citizens living on both sides of the Atlantic Ocean. Over the next twenty-five years, circumstances, decisions, and events shredded those assumptions, to the point that open war broke out between the colonies and Britain in April 1775 and the colonies declared their political independence in July 1776. For eight years—the longest war in the history of the American nation until the Vietnam conflict—the men and women we know as “Patriots” created and used military and naval forces to defeat British attempts to re-establish the authority of the Crown over the colonies. The military aspects of that struggle, more accurately known as the War for American Independence, remain the focus of these volumes. The Revolution itself continued after the end of the war, as the victors continued their efforts to create new forms of governance that would be as widely accepted, and therefore as stable, as the ones they had once known under the British Empire. That process included the writing of a new federal constitution and the establishment of a working federal government, and culminated in the peaceful transition of power from one political party to another following the election of 1800.

Winning the War for American Independence was the indispensable prerequisite for the creation of an American nation. Had the British government managed to suppress the rebels in its North American colonies, the men we revere as the founding fathers would be known today as nothing more than the leaders of a failed insurrection, not the architects of a still-thriving experiment in republican government. Given the anger and antipathy eighteenth-century monarchies felt towards rebels, it is surely possible that some of the more prominent American rebels would have paid with their lives for challenging the established authority of the king-in-Parliament.

The outcome of the military conflict was, of course, not predestined. Each side faced a task of daunting, and in many ways unprecedented, complexity, but each side, too, had significant assets. The activists in the colonies, those who had concluded that British attempts to reform the empire amounted to unendurable intrusions on the rights and liberties of their societies, had to organize armed resistance to the most daunting array of military and naval power in their generation. The British government had to use its military and naval power judiciously in the trickiest of circumstances, using armed violence to restore political allegiance without completely alienating their subjects. At numerous points during the conflict, politicians and military commanders faced what we might call points of contingency, where the choices they made significantly shaped the options available thereafter.

Five crossroads stand out, battles that a traditional military historian might single out because the outcomes were unexpected, against the odds, and contributed significantly in shaping the conflict. The skirmishes outside Boston at Lexington and Concord on 19 April 1775 demonstrated to both the British and the Americans that the colonists, militarily unsophisticated by European standards, could and would fight effectively against well-trained British regular troops. Less than two months later, on 17 June, at the clash on the Charlestown peninsula that came to be called the battle of Bunker Hill, the British fumbled their best chance of demonstrating to the colonists the imbecility of their armed rebellion against the Crown. A year and a half later, at Trenton, New Jersey, on Christmas Day 1776, the rebellion that seemed to be in its last throes was plucked from the dustbin of history by America's greatest soldier, the aristocratic Virginia planter George Washington.

Having demonstrated that their rebellion would not crumble quickly, the Americans had to find a way to convert their resilience—their ability not to lose—into a way to win political independence. It appeared that the only solution lay overseas, in the hands of Britain's ancient enemy, France, and especially in its resurgent navy. The French king had already decided to turn covert French aid into open assistance, and thus to declare war on a Britain weakened by colonial rebellion, when the Americans captured a British army at Saratoga, in upstate New York, on 19 October 1777. Success in this subsidiary theater ratified the French decision to intervene, boosted American morale, and seemed to open the door to final victory. But it was four long years before the new partners could find the right opportunity to work together effectively. Forced by French intervention to find a new strategy to defeat the rebellion, the British tried to detach the Deep South from the rebel alliance. Meeting fierce local resistance, they turned their attention to Virginia in 1781. French naval assistance was the critical element in allowing the Americans to force the surrender of another British army at Yorktown on 21 October 1781. The war ended when Parliament accepted the fact that further efforts to recover the political allegiance of the colonies were a waste of time and money, especially since they were certain that Britain could readily maintain America in a continued state of economic dependency.

In the years since the original "Boatner" was published, historians have clarified this traditional military analysis and, more importantly, added to it a dimension not fully evident in 1966. Because we have come to recognize that "military history" includes so much more than just battles and leaders, our understanding of the war now begins with the mobilization of political support in the thirteen separate and distinct colonial societies of mainland British North America to resist British imperial intrusions and exactions, efforts the resisters demonized as British "tyranny." Once a sufficient number of resisters came to understand that their movement might one day have to field armed men capable of organizing a sustained and violent resistance, the colonial activists began to make preparations for that eventuality. They began to accumulate the physical means of resistance, including firearms and gunpowder, without adequate amounts of which no sustained or effective resistance would be possible.

More importantly, the leaders of the resistance had to sustain and expand popular support for their cause. They had to present an analysis of public events and proposals for a

course of action that would motivate a sufficiently large number of the politically aware adult white men in their societies to subscribe to a point of view that demanded action—violent if necessary—to reverse the erosion of their rights, liberties, and potential to capitalize on economic and social opportunities in the future. Some contemporaries—principally those who supported, or at least acquiesced in, the expansion of British authority—thought that men like Samuel Adams and Patrick Henry were nothing more than rabble-rousing demagogues who sought to lead the people away from their true allegiance, for reasons having more to do with personal profit and prestige than principled support for liberty. Some historians have agreed. Other historians have countered by suggesting that even men motivated by self-interest had to shape a message that would resonate with the widest possible audience, for without widespread support no resistance movement could hope to succeed, or, one day, field the number and quality of soldiers needed to oppose the well-trained army and well-manned ships that Britain could command. We now realize that the opponents of increased imperial control—the men and women often revered as “Patriots” and “founding fathers”—were not above using threats and intimidation to expand popular support and suppress pro-British dissenters. Our present understanding of how these societies mobilized for war combines an awareness of the mix of physical, social, economic, political, and emotional factors that motivate people, with an appreciation of the enormous complexity of the process of war making in an agricultural society, where the problems included the constant drain on society’s productive resources, the breathtaking expenses and financial expedients involved in raising and maintaining soldiers and sailors, and the debilitating uncertainty of not knowing how or when the conflict and the burden would end.

All of the complexity of this sort of war must be understood, moreover, in a premodern context. George Washington was a prominent member of the ruling Virginia oligarchy, a slave-holding plantation owner who believed he had a right to help direct the future of his society; he was not the precursor of the modern American general officer. Although he had more military (and combat) experience than any other American, he was not a professional soldier who had been trained to manipulate well-constructed armed forces along the lines suggested by the study of history and the principles of war. Nor was the Continental Army the direct ancestor of the modern United States Army (or the militia of the modern National Guard). Both forms of military organization were based, at least theoretically, on the model of a locally rooted, largely voluntary organization in which citizens undertook military service as part of their civic responsibilities, as it had been modified to suit local circumstances during the long series of imperial wars against French and Native American competitors since 1689. As the burden of service became increasingly difficult for men of some affluence to bear—meaning those who had a political stake in the outcome—societies willingly relegated more military service to younger, less affluent men, many of whom had fewer family ties to particular localities and could be induced to see the value of shouldering the burden of military service by the payment of financial incentives. The colonies had raised soldiers in this fashion during the Seven Years’ War that ended in 1763. In the same way, the rebels raised Continental forces that were able, ultimately, to meet the British on the field of battle on more or less equal terms. Together with much larger numbers of militiamen serving for brief periods, the rebels managed to field potent enough military organizations so that the British never managed to find a way to suppress the armed rebellion. By adapting and modifying their colonial military experience in a manner that remained more effective than efficient and in which the need to maintain popular support nearly always trumped the more strictly military demands of fighting the war, the American people won the chance to determine their own political destiny.

What is most remarkable about that process—what sets it apart from other examples of “people’s war” before and since, and makes it vital to study and understand—is that the leaders of the “people” managed to incorporate and sustain ideas of freedom, equality, and opportunity for an unprecedented number of adult white men in their societies; in the broadest sense, it does not make any practical difference if they did so because they felt

compelled to win popular support or because they believed fervently in the principles they espoused. That their idea of who was entitled to freedom, equality, and opportunity seems to us to be restricted and narrow ought not to earn them our disapprobation or lack of respect. It matters more that they imbedded in our language and our culture a set of ideals and principles, however imperfectly they implemented them, that have endured, and distinguish our society from much of the rest of the world. The essential account of how they got that chance, of how they won the war that enabled them to chart their own political and social future, is the story told in this encyclopedia.

Thematic Outline

This outline organizes the encyclopedia's 800 longest entries into twenty broad categories. All subsections are in alphabetical order except for the battles, which are organized chronologically.

To avoid repetition and for purposes of clarity, precedence is given to the area in which the biographical subject attained prominence during the Revolution; thus, George Clinton, who served as a soldier during the war, was most notable as governor of New York and is listed under political leaders. Foreign-born volunteers who fought with Continental forces are listed under "Continental Soldiers." No subject is listed more than once.

1. Political Concepts and Controversies
2. British Political Leaders
3. Patriot Political Leaders
4. British Officers, Army
5. British Officers, Navy
6. Continental Naval Officers
7. Continental Soldiers
8. Loyalist Leaders
9. French Officers
10. German Officers
11. Battles (in chronological order)
12. Naval Engagements
13. Wars, Campaigns, and Operations
14. Espionage and Military Controversies
15. Military Posts, Camps, and Fortifications

16. Military Terms and Organization
17. American Indians
18. Foreign Relations
19. Cultural and Intellectual Contexts
20. Economic, Technological, and Scientific Contexts

AACHEN, TREATY OF. 18 October 1748. Aachen is the German name for Aix-la-Chapelle.

SEE ALSO *Aix-la-Chapelle, Treaty of.*

ABATIS. An obstacle formed of trees felled toward the enemy.

ABENAKI. The Abenaki were a loose confederacy of Algonquin tribes located in what is now northern New England and the Canadian Maritime provinces. European contact brought a number of devastating plagues that reduced the population of the confederacy by an estimated three-fourths. After King Philip's War in 1676, the Abenaki absorbed most of the fleeing natives of southern New England. Allied with the French, who had a mission at Norridgewock on the Kennebec, the Abenaki resisted English expansion into northern New England, launching a number of preemptive raids against settlements. In 1722 Massachusetts declared war on the Abenaki. What is known as Dummer's War reached a climax when the New Englanders destroyed Norridgewock in 1724. The Kennebec, part of the Abenaki confederation, were dispersed, mainly into Canada, and their new capital was located on the St. Francis River near its junction with the St. Lawrence. A peace treaty was signed in 1727. The Penobscot, Passamaquoddy, and Malecite did not migrate, however, and in 1749 the former nation made peace with

the English. Some other Indians returned to Norridgewock, but this place was raided again in 1749; in 1754 its inhabitants returned to St. Francis. There they were attacked in 1759 by Robert Rogers, who burned their town and ended their participation in the Seven Years' War. The American Revolution divided the Abenaki. Most sided with the British, but the Penobscot and Passamaquoddy served with the rebels while the St. Francis and Micmac split between the two contenders. Massachusetts acknowledged the services of the Penobscot and Passamaquoddy by granting them reservations in northern Maine; the remaining Abenaki lost all claim to their lands within the new United States and sought refuge in Canada. The Abenaki are no longer even recognized by the U.S. government as existing.

ABERCROMBIE, JAMES. (?–1775). British officer. Brother of Ralph and Robert Abercrombie, he served with the Royal Highlanders in America, where he became experienced in forest warfare. He was aide-de-camp to his uncle, James Abercromby, and was later on Jeffery Amherst's staff. He reached the rank of lieutenant colonel in 1770. Abercrombie died on 28 June 1775 of wounds received in leading the grenadiers' assaults on Breed's Hill.

revised by John Oliphant

ABERCROMBY, JAMES. (1706–1781). British general. A laird's son from Banffshire in Scotland, he rose to colonel in the army in 1746. Through Newcastle's patronage, in 1756 he became Loudoun's second in command with the local rank of major general. He proved a solid subordinate. Becoming commander in chief himself in 1758, he unwisely attacked Ticonderoga without waiting for his artillery. Although removed from his command, he was promoted to lieutenant general in 1759 and general in 1772. In Parliament he supported the coercion of the American colonies. He died on 23 April 1781.

ABERCROMBY, SIR RALPH. (1734–1801). British army officer. Born in Clackmannanshire, Scotland, in October 1734, Ralph was the elder brother of Sir Robert Abercromby and of James Abercromby, who died of wounds received at Bunker Hill. He served in Germany in the Seven Years' War and was elected to Parliament in 1774. His insistence on voting according to his conscience and his opposition to the war in America seriously damaged his career prospects until 1793. An able commander with strong humanitarian principles, Abercromby was mortally wounded at Abu Qir Bay in Egypt in March 1801. His heroic death caught the public imagination, and his victory over the French army of occupation restored the reputation of the British army.

revised by John Oliphant

ABERCROMBY, SIR ROBERT. (c. 1740–1827). British army officer. Robert Abercromby was baptized at his family's Clackmannanshire estate in Scotland on 13 October 1740. He won a commission by his gallantry at Ticonderoga on 8 July 1758 and rose to captain in 1761. Promoted to major in 1772, he became lieutenant colonel of the Thirty-seventh Foot in 1773. Not sharing his brother Ralph's doubts about the American war, he served with distinction at Long Island in August 1776 and

at Brandywine and Germantown in September and October 1777, respectively. In 1778 he made an expedition to destroy shipping in the Delaware, took part in the action at Crooked Billet in May, and was wounded at Monmouth on 28 June. He sailed south with the Charleston expedition of 1780 and stayed to serve under Cornwallis, whom he impressed. In the early hours of 16 October 1781, he led a sortie from Yorktown that temporarily silenced six enemy guns.

After the war he followed his new patron, Cornwallis, to India, where he rose to major general in 1790 and was knighted in 1792. Despite Cornwallis's warning that the post was beyond Abercromby's competence, the latter was appointed commander in chief in 1793. Four years later, plagued by failing eyesight and his authority compromised by an officers' conspiracy, he was forced to return home. Promoted to lieutenant general later in the year and to full general in 1802, he died in Scotland in November 1827.

ABOVILLE, FRANÇOIS MARIE, COMTE D'. (1730–1817). French officer. Aboville began his military career in 1744 under an uncle who was an artillery officer. Distinguishing himself in the Seven Years' War, he was promoted to captain *en second* in 1759 and was made a chevalier in the Order of St. Louis in 1763. He became *chef de brigade* in 1776 and lieutenant general in 1778. Commander of French artillery in Rochambeau's force, his efforts at Yorktown led to a personal acknowledgment from Washington, which earned him the rank of brigadier of infantry on 5 December 1781. Promoted to brigadier general in 1788, he commanded artillery of the French army in the north under Rochambeau in 1792 and became lieutenant colonel that year. Retired in 1802, he was named grand officer of the Legion of Honor in 1804 and a hereditary peer four years later. He was confirmed a peer during the Bourbon restoration.

ACHARD DE BONVOULOIR ET LOYAUTÉ, JULIEN ALEXANDRE.

(1749–1783). French secret agent. Bonvouloir, a cadet of a noble Norman family, had settled in Saint Domingue in the early 1770s. Traveling in North America for the climate, he toured the colonies before the outbreak of war and met in Philadelphia with members of the first Continental Congress. Claiming to have gained valuable information about the Americans while there, he went to London and met French ambassador comte de Guines. On 8 September 1775 he returned to America with instructions from Guines to observe and to inform the Americans that the French had no intentions on Canada, wished them well, and would be glad if circumstances permitted their ships in French ports.

Masquerading as a merchant of Antwerp and instructed by Guines never to say the word “French,” he had three meetings with Benjamin Franklin and other members of the Congress’s Committee of Secret Correspondence. Although he denied any official connections and claimed that he was there only to explore the possibilities of making private deals to supply the Americans with munitions, the committee members sensed his real mission. This is apparent from the questions they submitted to him in writing: Could the gentleman inform them of the official French attitude toward the colonists, and if they were favorable, how could this be authenticated? How could they go about getting two qualified engineers? Would it be possible to get arms and other war supplies directly from France, paid for in American products, and would French ports be open for such an exchange?

Bonvouloir reported to his superiors on 28 December 1775 that he had maintained his pose as a private citizen and promised only that he would present their requests where they might be satisfied. Yet his meeting with the committee was complicated by the arrival of two actual French merchants, Pierre Penet and Emmanuel de Pliarne. They also offered arms to the Americans and implied they were acting on behalf of the French government. Penet reached France about the same time as Bonvouloir’s report. On 3 March 1776 Congress decided to act directly by naming Silas Deane its emissary to find out what he could do in France to obtain aid. This led to the establishment of Hortalez & Cie. The French feared that Bonvouloir was so transparent that he might embarrass the court officially. On 13 June 1776 Vergennes wrote to Guines: “I strongly hope M. de Bonvouloir has been sufficiently wise in undertaking his return voyage.” Not pleased

with Bonvouloir, Vergennes sent Guines the money the agent needed to get home, having exhausted his advance.

Bonvouloir returned to France in June 1777. Hoping to become an actual merchant, he returned to America, where the British captured him and imprisoned him at St. Augustine. He was released and returned to France in July 1778. There he received a commission as *lieutenant de frégate* on 10 July 1779, became a *lieutenant d’artillerie*, and on 30 September 1781 was made *aide-major* in the expeditionary corps in India. He died near Pondichéry.

ACLAND, JOHN DYKE. (1747–1778).

British army officer and politician. Acland, the elder son of Sir Thomas Acland, seventh baronet, was born in Somerset on 18 February 1747. He was educated at Eton (1763–1764) and University College Oxford (1765–1766) before embarking on the Grand Tour of Europe with Thomas Vivien. Another friend was Thomas Townshend, later Viscount Sydney, with whom he was painted by Sir Joshua Reynolds in *Young Archers*. He married Lady Christian Henrietta Caroline Fox-Strangways (1750–1815), known as Harriet, a daughter of Stephen Fox, first earl of Ilchester, on 7 January 1771. She too was painted by Reynolds, once with her mother as a little girl and again as a young married woman in 1771–1772. Her dowry included Pixton Park in Devon and Tetton, making Acland a very considerable landed gentleman.

In March 1774 he bought an ensign’s commission in the Thirty-third Foot and in October was elected member of Parliament for Callington in Cornwall. In Parliament he took a tough line on American questions, arguing against relinquishing the right to tax and declaring on 26 October that the choice was between ceding independence and war. This may have had as much to do with military ambitions as political opinions: an expanded army would

provide better chances of rapid promotion. Already a regular captain and a colonel of militia, he bought a major's commission in the Twentieth Foot and sailed for Canada with his wife in April 1776.

Acland, who served under both Sir Guy Carleton and General John Burgoyne, turned out a courageous soldier and his wife an extraordinary camp follower. She nursed him through a serious illness at Chambly and at Skenesboro and through his recovery from wounds sustained at Hubbardton, where on 7 July 1777 Burgoyne's advance guard surprised the American rear. As the British force prepared to cross the Hudson, the couple barely escaped from their burning tent after a pet dog knocked over a candle. On 2 October at Bemis Heights during the second battle of Saratoga, Acland was shot through both legs while leading a bayonet charge and left on the ground when his grenadiers had to retire. He would have been killed on the spot but for the young James Wilkinson, who had him removed to Poor's headquarters as a prisoner. When the news reached the British camp, Harriet immediately obtained Burgoyne's permission to join him. At sunset on 9 October, armed with a safe conduct addressed to General Horatio Gates, and accompanied by her maid, Acland's valet, and a chaplain, she set off downriver by boat. Crossing the Hudson after dark, she was challenged by two startled American sentries who refused to let her land until an officer, Henry Dearborn, appeared. She may have waited as long as eight or nine hours (according to Burgoyne) or as little as a few minutes. Harriet quickly persuaded Dearborn to take her to Gates, who in turn allowed her to nurse Acland. The couple were reunited in the early hours of 10 October.

Early in 1778 Acland gave his parole, and the couple returned to England. He was given a private audience (and warm praise) by George III before retiring to Pixton Park. At a dinner party in Devon he quarreled with a Lieutenant Lloyd, who may have sneered at the army's performance against the American rebels. Neither was wounded in the duel that followed on Bampton Down, but Acland caught a serious chill which led to a fever. Already in a weak condition, he failed to recover and died at Pixton Park on 22 November 1778.

ACTIVE CASE. Four captured Americans were among the crew of the sloop *Active* sailing from Jamaica to New York in August 1778. Unwilling to remain

prisoners in New York, the four, led by Gideon Olmstead of Connecticut, took over the sloop on the night of 6 September off the New Jersey coast. A Pennsylvania state navy brig and a privateer escorted the *Active* to Egg Harbor and claimed a share of her cargo as capture. At a trial before the Pennsylvania court of admiralty (George Ross presiding), the four sailors were awarded only one-fourth of the prize. Seeing an opportunity to make money, Benedict Arnold, Continental Army commander in Philadelphia, made a secret agreement with the four sailors that, in return for one-half interest in the cargo, he would advance funds for the appeal and would use his influence with Congress on their behalf. On 15 December 1778 the Committee of Appeals in the Continental Congress annulled the verdict of the admiralty court and ruled that the *Active* was the prize of Olmstead and his associates. It ordered the marshal of Philadelphia to sell the prize, pay \$280 in costs and charges, and turn the rest of the money over to Olmstead and the other three. But Judge Ross refused to yield, claiming that a court of appeals could not reverse a judge's ruling in a question of facts decided by a jury, and took possession of the £47,981 for which the cargo (not including the sloop) had been sold. Congress never challenged the order of the Pennsylvania admiralty court. Olmstead and his associates received their quarter share on 21 October 1779. The case dragged on for thirty years until in 1809 the United States Supreme Court ordered the state of Pennsylvania to pay the four sailors all that the Continental Congress had awarded them.

ADAMS, JOHN. (1735–1826). Lawyer, U.S. congressman, diplomat, signer of the Declaration of Independence, vice-president under Washington and second U.S. president. Massachusetts. John Adams was born in Braintree (now Quincy), Massachusetts, on 19 October 1735, and graduated from Harvard in 1755. Admitted to the Boston bar three years later, Adams slowly built up a law practice. In October 1764 he married Abigail Smith, daughter of Reverend William and Elizabeth Quincy Smith, which not only brought him a wife who proved a

John Adams. *The first vice president and second president of the United States in a painting by Charles Wilson Peale (c. 1791–94).*
NATIONAL ARCHIVES AND RECORDS ADMINISTRATION.

lively and worthy partner but also gave him wide connections with prominent Massachusetts families.

Soon after graduating from Harvard, Adams took an interest in local politics and started writing for the newspapers. The Stamp Act crisis brought him into prominence as the author of the resolutions of protest that were sent by his hometown to its representatives in the legislature and upon which other towns modelled their own protests. Adams joined with Jeremiah Gridley and James Otis in presenting Boston's memorial on the closing of the courts and started a long contest with Massachusetts' lieutenant governor, Thomas Hutchinson.

EARLY PROFESSIONAL LIFE

Early in 1768 Adams moved to Boston, where his enlarged legal practice promoted his rise to political prominence. In that same year he defended John Hancock on charges of smuggling. Given Hancock's guilt, Adams wisely based his defense on constitutional grounds, rejecting the validity of the law under which Hancock was charged because Massachusetts lacked representation in the English Parliament. Following the Boston "Massacre," of 5 March 1770, Adams joined Josiah Quincy in

successfully defending the British guard commander and his men against homicide charges. The patriot leadership supported Adams's actions not only because they demonstrated his commitment to equal justice, but also because Adams carefully steered inquiry away from the crowd's incitement of the soldiers. Unlike his radical cousin, Samuel Adams, John disapproved of the Stamp Act riots and other violence. Rather, he based his opposition to the mother country's coercive policy on strictly legal grounds.

In gratitude for his defense of British soldiers, the government offered Adams the post of advocate general in the Court of Admiralty, but Adams saw this offer as an attempt to break his association with the Patriot leaders and declined. Adams heartily approved of the Boston Tea Party, but continued to oppose mob violence. Although he saw that independence was a possibility, he dreaded its potential consequences. On 14 June 1774 he was chosen as a delegate to the first Continental Congress, and sat with each succeeding Congress through the election of 4 December 1777. In the First Congress he helped draft the declaration to the English king, as well as a declaration of rights.

In the Second Congress Adams unsuccessfully opposed further petitions to the king, and was largely responsible for George Washington's selection as commander in chief, a move calculated to draw Virginia into closer support of the revolution. Having come around to the conviction that independence was desirable, Adams seconded the independence resolution of Richard Henry Lee on 7 June 1776. Appointed to the committee that drafted the Declaration of Independence, Adams, who played a lesser role in the drafting of the document, was credited by Thomas Jefferson with getting the document approved by Congress. On 13 June Adams was placed on the newly created Board of War, where his duties were onerous but essential to the functioning of the Continental army: seeing to its provisioning, arming, and pay. Over the following year Adams served on ninety committees, more than any other member of Congress. He also devoted a great deal of time to the constant squabbling of officers for primacy in rank and promotion; worked assiduously to establish an American currency, secure foreign loans, and regulate prices; and took part in the putative Peace Conference on Staten Island, which convened on 11 September 1776.

DIPLOMATIC ENDEAVORS

Adams left Congress on 26 October 1777, never, as it turned out, to return. On 28 November he was elected to succeed Silas Deane as commissioner to France, and on 13 February 1778 he sailed for Bordeaux with his ten-year-old son, John Quincy Adams (who would become the sixth U.S. President). Adams did not like France, the French, or his fellow commissioners. In May he drafted a plan for reducing the squabbling commission to a single representative, eventually winning the approval of his

fellow commissioner and roommate, Benjamin Franklin, and he won the support of Congress as well. Adams's return to the United States was delayed until June 1779 so that he might accompany the French minister, Conrad Alexandre Gérard, across the Atlantic. Immediately upon his return to Massachusetts, Adams was named to represent Braintree in the convention called to draw up the state constitution. Adams played a vital role in the writing of this document, which reflected his doubts regarding unfettered democracy, and he institutionalized a powerful executive branch of the state's government.

In September 1779 Congress named Adams a minister plenipotentiary, charged with drawing up a treaty of peace and of commerce with Great Britain. Adams found himself on a very difficult mission, because the English initially would not negotiate and the French foreign minister, Charles Gravier, comte de Vergennes, loathed him. Benjamin Franklin wanted him removed from his diplomatic post, and Congress ignored Adams's communications. Frustrated, Adams spent much of the next two years in the Netherlands, where he gained Dutch recognition of American independence and a desperately needed loan that kept the American war effort alive.

Adams returned to Paris in October 1782 as part of a five-man commission that negotiated a peace treaty with Britain. This commission ignored Congress's instructions to follow the French lead, and as a result, on 30 November 1782, the peace negotiations produced a peace treaty that proved very favorable to the United States. The treaty was finally ratified by Congress on 3 September 1783.

As a fitting capstone to Adams's numerous and significant efforts on behalf of American independence, he was appointed the first U.S. minister to Great Britain in 1785. He was reluctantly received by George III. Adams returned to the United States in 1788, becoming the nation's first vice president. In March 1797, he was elected the nation's second president. Adams died on the fiftieth anniversary of the Declaration of Independence, in 1826.

ADAMS, SAMUEL. (1722–1803). Radical patriot, political agitator, master propagandist, Signer. Massachusetts. Born in Boston on 27 September 1722 to a wealthy real estate speculator and brewery owner, Adams

Samuel Adams. *The radical patriot, political agitator, and master propagandist Samuel Adams, shown here in a painting by John Singleton Copley (c. 1772), was described by Thomas Jefferson as "truly the Man of the Revolution."* NATIONAL ARCHIVES AND RECORDS ADMINISTRATION.

rose from relative obscurity in 1765 with the Stamp Act crisis, and fell from eminence as one of the chief figures of the Revolution when Congress got down to the business of constructive statesmanship after the Declaration of Independence in 1776. But during the decade that intervened, Samuel Adams was "truly the Man of the Revolution," as Thomas Jefferson called him.

Adams graduated from Harvard in 1740, and almost immediately went bankrupt on his first business venture. He then joined his father in the family brewery, which he inherited on his father's death in 1748. A short time later Samuel's mother died, and he found himself in possession of a considerable estate. Within ten years, however, he had dissipated this inheritance. Fortunately, his political activism earned him an appointment as Boston's tax collector, which position he held from 1756 to 1764. Adams proved as inept at tax collecting as at business, ending his tenure in office with £8,000 in arrears. With this record of failure in managing his own affairs, the 42-year-old Samuel Adams stepped onto the stage of history to manage the American Revolution.

Adams's failures did not hinder his political career, and he became the leading opponent of the elite running the Massachusetts government. In 1764 and 1765 Adams was selected to draft instructions to Boston's representatives, who were protesting British tax policies. In September 1765 he was elected to the State House and almost immediately wrote the legislature's response to a speech by Governor Francis Bernard. In this response, Adams formulated one of the key Patriot doctrines by insisting that only the people's representatives have a right to pass taxes.

Between 1766 and 1774 Adams became the leader of the State House in its ever increasing opposition to British rule. Adams led the successful effort to recall Governor Francis Bernard, and then aimed his political artillery at Lieutenant Governor Thomas Hutchinson. Adams organized the opposition against the Townshend Acts, helped form the Non-Importation Association of 1768, and drafted two famous "Circular Letters," one sent to the assemblies of other provinces and one which the "Convention" of the Patriot party held in Boston in 1768. Previously he had sparked the formation of the Sons of Liberty. As Thomas Hutchinson, the Royal Governor of Massachusetts, wrote: "I doubt whether there is a greater incendiary in the King's dominion."

Adams worked during the early 1770s to set up a Revolutionary organization. On 2 November 1772, the Boston Town Meeting, on his motion, appointed "a committee of correspondence . . . to state the rights of the Colonists and of this Province in particular, as men, as Christians, and as Subjects; and to communicate the same to the several towns and to the world." Adams had already written to the towns about this project; now he urged them to follow Boston's lead. In this matter he may be credited with initiating revolutionary government in Massachusetts and sowing the seed in the other colonies. His next triumph was the Boston Tea Party, 16 December 1773. Though Adams opposed the use of violence, he encouraged and may have helped organize the crowd that expressed their political frustration in an inventive act of violence against property. He took the lead in opposing the Intolerable Acts (1774). Learning that other colonies were unwilling to adopt nonintercourse measures independently, Adams concluded that an intercolonial congress was an "absolute necessity." On 17 June 1774 he moved that the Massachusetts House of Representatives appoint delegates to such a congress. This resolution was adopted, and he was chosen one of the five representatives. Unlike most members of the Continental Congress, Adams favored immediate independence. He proposed a confederation of colonies, supported the resolution that independent state governments be formed, and supported adoption of the Declaration of Independence.

Though Adams fell from a leadership position once independence was declared, he continued his active

involvement in the revolutionary cause. Most notably, he served on the overworked Board of War, chaired by his second cousin John Adams, from 1775 until he left Congress in 1781. Along the way, Adams became involved in a number of intrigues, often disrupting the work of Congress.

Adams left Congress concerned that the United States was on a path toward founding its own empire. His lifelong fear of centralized power led him to oppose the Constitution and kept him active in Massachusetts politics until 1797. After losing an election to serve in the new Congress in 1788, Adams became lieutenant governor in 1789, and governor upon John Hancock's death in 1793, serving until his retirement in 1797. Adams did not extend his support of radicalism to those who opposed the state government, calling for the execution of those who took part in Shays's Rebellion. Adams died in 1803.

ADDITIONAL CONTINENTAL REGIMENTS. The congressional resolution of 27 December 1776 authorized the raising of sixteen regiments "at large." These were not numbered but, except for the "German" Regiment, were known by the names of their colonels. The following information is from Heitman's *Historical Register* (1914).

Colonel David Forman assumed command of his regiment on 12 January 1777. The unit was never fully recruited, and on 1 July 1778 it was disbanded, its personnel going mainly to the New Jersey Line.

Colonel Nathaniel Gist commanded his regiment from 11 January 1777 to 1 January 1781, absorbing Grayson's regiment and Thruston's on 22 April 1779. (See below.)

Colonel William Grayson's regiment existed 11 January 1777–22 April 1779. (See Gist's regiment, above.)

Colonel Thomas Hartley commanded his regiment 1 January 1777–16 December 1778, at which time it became the Eleventh Pennsylvania.

Addressers

Colonel David Henley's regiment was formed 1 January 1777 and on 22 April 1779 was consolidated with Henry Jackson's regiment. (See below.)

Colonel Henry Jackson's regiment, 12 January 1777–23 July 1780, became the Sixteenth Massachusetts on the latter date.

Colonel William R. Lee's regiment, 1 January 1777–24 January 1778, was consolidated with Henry Jackson's regiment on the latter date.

Colonel William Malcolm's Regiment, 30 April 1777–22 April 1779, was consolidated with Spencer's regiment on 22 April 1779. (See below.)

Colonel John Patton's regiment, 11 January 1777–13 January 1779, was commanded by Lieutenant Colonel John Park after 3 February 1778 and (presumably) by Major Joseph Prowell to 13 January 1779. It then was broken up, part of its personnel going to the Eleventh Pennsylvania and the rest to the Delaware regiment.

Colonel Moses Rawlings' regiment was commanded by Rawlings from 12 January 1777 to 2 June 1779. Its lieutenant colonel has not been identified, if the regiment had one. Major Alexander Smith served with it from 11 September 1777 to 6 September 1780. No unit records have been found, and Heitman believes it never was fully organized. Originally raised in 1776 in Virginia and Maryland as Stephenson's Maryland and Virginia rifle regiment, it was reorganized in 1777 to become one of the "additional regiments."

Colonel Henry Sherburne's regiment was in existence 12 January 1777–1 January 1781.

Colonel Oliver Spencer's regiment was under his command during its existence, 15 January 1777–1 January 1781.

Colonel Charles M. Thruston's regiment appears not to have been fully organized. Thruston commanded it 15 January 1777–1 January 1778. Its other regimental officers are not known. On 22 April 1779 the unit was merged with Gist's regiment.

Colonel Seth Warner's regiment was organized under the 5 July 1776 resolve of Congress; not being attached to any state, it was regarded in 1777 as one of the sixteen "additional regiments." Warner commanded until 1 January 1781.

Colonel Samuel B. Webb commanded his regiment 1 January 1777–1 January 1781, on which date it was transferred to the Connecticut Line and designated the Third Connecticut.

The German Regiment or Battalion was organized under the congressional resolution of 25 May 1776. Raised in Maryland and Pennsylvania but having no state identity, it was considered one of the sixteen "additional regiments." It was commanded by Colonel Nicholas Haussegger from 17 July 1776 to 19 March 1777 and by Colonel (Baron) DeArendt from the latter date to 1 January 1781.

Unless otherwise noted, it has been assumed that the regiments ceased to exist on the date Heitman shows their colonel no longer in command. Only the German Battalion (or Regiment) was commanded by two colonels in succession.

ADDRESSERS. In May 1774 twenty-three citizens of Marblehead, Massachusetts, signed an address thanking Governor Thomas Hutchinson, who was retiring, for his services to the colony. Another one hundred subscribed to an address welcoming his replacement, General Thomas Gage, to Boston. Opponents of increased imperial control published the names of these "Addressers" in an effort to subject them to public scorn and ridicule. The radicals also singled out by name others, called "Protesters" and "Mandamus Councillors," as people they believed were lukewarm in the defense of the liberties of Massachusetts. This effort to isolate and intimidate potential supporters of royal authority was largely successful.

ADJUTANTS. From the time of the War of the Spanish Succession (1701–1714), the adjutants in the British army began to assume more important duties at both the regimental level and higher up the chain of command. The regimental adjutant was an all-purpose staff officer who managed the unit's paperwork and served in the field as a principal assistant to the regimental major, who was the operations officer. On higher staffs the adjutant stayed at the general's elbow and saw that orders were properly recorded and transmitted through the aides de camp; he was also charged with the supervision of outposts and with security. The adjutants "not only controlled the personnel administration of the units, but much of their prestige was attributable to the fact that they were the staff officers through whom most of the general orders were issued" (Hittle, p. 138). Armies had only one adjutant-general at a time; the officer holding the comparable post in other major field commands was known as a deputy

adjutant-general, and his immediate subordinate would be an assistant deputy adjutant-general.

As part of his preparations for the 1776 campaign, Sir William Howe appointed Lieutenant Colonel James Paterson of the Sixty-third Regiment as the first full adjutant general of British forces in North America, at Halifax on 18 April 1776. Paterson superceded, in rank and scope of authority, Major Stephen Kemble, who had acted as deputy adjutant-general of British forces in North America since 7 August 1772. But Kemble continued to superintend the paperwork of the army massing for the expedition against New York City (including for a time its German mercenaries). Sir Henry Clinton named his aide, Lieutenant Colonel Francis Rawdon-Hastings, as adjutant-general of the British army at New York on 15 June 1778. Kemble, whose only sister, Margaret, married Major General Thomas Gage, had served with the army at Boston and remained as deputy adjutant-general under Howe and his successor, Sir Henry Clinton, until 23 October 1779. Kemble was succeeded as deputy adjutant-general by Captain John André, Clinton's aide, now promoted to major, who had been running the British spy networks around New York City. André performed so well during the Charleston Campaign in the summer of 1780 that Clinton promoted him after returning to New York. Clinton also left in André's hands the responsibility of continuing to negotiate with Benedict Arnold. Adjutant General Baurmeister of the Hessian forces left the valuable *Journals* so often cited in accounts of the Revolution.

The Continental Army adopted the British staff system. Washington appointed Horatio Gates, the army's senior brigadier general, as its first adjutant-general on 17 June 1775, an indication of the importance the commander-in-chief attached to the post. Gates had experience in the British army as a staff officer, and he began the herculean task of bringing order to the army's paperwork, including gathering vital information about how many soldiers were present with the main army, how many were absent on other military or support missions, and how many were sick or otherwise unable to perform any military duty. When Gates stepped down in March 1776, he was succeeded by Colonel Joseph Reed, Washington's former military secretary and an important Patriot leader in Pennsylvania in his own right, who served through the 1776 campaign. Colonel Timothy Pickering of Massachusetts was adjutant-general for most of the 1777 campaign, and was followed by Alexander Scammell, colonel of the Third New Hampshire Regiment. Brigadier General Edward Hand of Pennsylvania was adjutant-general for the last three years of the war.

ADMIRALS, RANK OF. In the seventeenth century the British Royal Navy was divided into operating squadrons known as the Red, White, and Blue. These squadron names subsequently became formal terms for designating the seniority of flag officers, in the following order: admiral of the fleet (there was no admiral of the Red), admiral of the White, admiral of the Blue, vice-admiral of the Red, vice-admiral of the White, and so on, down to rear-admiral of the Blue. When a captain was promoted to flag rank for active service, he became a rear-admiral of the Blue; on promotion, he would rise to be a rear-admiral of the White, and so on up the list. Promotion to, and within, flag rank was almost always by seniority.

ADMIRALTY COURTS **SEE** *Vice-Admiralty Courts.*

ADMIRAL WARREN, THE **SEE** *Warren or White Horse Tavern, Pennsylvania.*

AFFLECK, SIR EDMUND. (1725–1788). Naval officer and baronet. Born into a Suffolk gentry family on 19 April 1725, Affleck served throughout the Seven Years' War though without opportunity for distinction. In the navy continuously after 1763, in 1778 he was promoted to captain of HMS *Bedford* with orders to join John Byron's squadron in its pursuit of the Toulon fleet to New York. Heavily damaged in a gale, the *Bedford* turned back, and Affleck next found himself in the Channel with Sir Charles Hardy during the invasion crisis of 1779. On 16 January 1780 he took a prominent part in George Brydges Rodney's "moonlight battle" off Cape St. Vincent during the relief of Gibraltar. In 1781 the *Bedford* was sent to reinforce Marriot Arbuthnot's squadron and was present, although without opportunity to become engaged, at the battle off Chesapeake Bay (16 March 1781). That summer he was a peace

commissioner at New York before rejoining the *Bedford* and sailing with Samuel Hood for the West Indies where, appointed commodore, he played a leading role in the defense of St. Kitts (26 January 1782). After Hood's squadron joined Rodney's fleet, Affleck distinguished himself at the battle of the Saints (Saints Passage), where he pierced the French line just as Rodney did elsewhere (12 April 1782). Affleck was rewarded with a baronetcy on 10 July and, on his return home in 1784, with promotion to rear-admiral of the Blue. Subsequently unemployed, he married twice and sat in the Commons for Colchester, where he had been elected in March 1782. He died on 19 November 1788.

Affleck's younger brother Philip (1725?–1799) was also a naval officer and served under Rodney in several West Indies actions, including the Saints. He rose to admiral of the White before his death on 21 December 1799.

AFRICAN AMERICANS IN THE REVOLUTION. Political and social turmoil in the decade before the American Revolution presented African Americans with opportunities and frustrations. As did their white counterparts, African Americans in the decade before the outbreak of the American Revolution in 1775 prepared for the conflict in disparate ways. In New England, where slavery was least common among the colonies, blacks prepared petitions seeking to take part in the Patriot cause against the British and later a significant proportion of them enrolled in state militias. In the mid-Atlantic, where legal restrictions in the system of small farm and urban slavery negated any chances for freedom, some blacks substituted for their masters in the state militias but more sided with the British. In the Upper and Lower South, African Americans seized upon the military and political splits within colonial society to gain freedom through self-emancipation and by siding with the British army. Blacks took part in the Revolutionary struggle throughout the war and played many different roles. Their eventual fate depended upon their location and on the final results of the war.

EMANCIPATION IN THE NORTH

Initial sightings of black Revolutionary activities occurred in New England. African Americans there took part in the riots against the Stamp Act, the tax on tea, and the street

clashes with British soldiers from 1765 into the mid-1770s. The first person killed at the Boston Massacre in 1770 was Crispus Attucks, a black man. But mob actions were not the only way by which blacks demonstrated their growing awareness of the political conflict between colony and crown. There were hopeful signs for African Americans in New England. Many felt heartened by the Somerset Decision of 1772, which barred taking enslaved blacks out of England and in effect gave enslaved people civil rights, and blacks were also inspired by the poetry of Phillis Wheatley. Reminding the Patriots and the royal governor of Massachusetts that blacks too expected greater liberty, a committee of slaves sent a number of petitions to Governor Hutchinson and the colonial legislature. The petitions compared the status of blacks with that of whites who had clamored about royal designs to enslave the colonists. Accordingly, the petitioners, calling themselves Free Africans, informed the governor that they aligned themselves with Patriot discontent and asked that slaves be given a free day each week to earn money to purchase themselves. Upon gaining freedom, the petitioners opined, blacks would be eager to return to Africa to enjoy their liberty.

Although Hutchinson refused to act upon these requests, blacks in the Northeast continued to send forth petitions seeking general emancipation, even during the war. These petitions, combined with Patriot comprehension that enslavement of blacks contradicted white demands for liberty, produced results in the northern states. During the American Revolution, the breakaway Vermont territory abolished slavery by constitutional amendment in 1777. Massachusetts and New Hampshire extinguished slavery by gradual emancipation. New England's black population contributed mightily to the Patriot cause. Militias and Continental army quotas were filled with black soldiers. The Connecticut line in particular included many black soldiers, while various militia units in Massachusetts had sizable black participation. Some had notable careers. The Belknap family of Brookline, Massachusetts, freed Peter Salem so that he might enlist in the Massachusetts militia. He joined Pompey of Braintree, Prince of Brookline, and Cato Wood of Arlington in the state militia. Peter Salem and Salem Poor saw action at the Battle of Bunker Hill. In Connecticut, black soldiers proclaimed their new status by forsaking derisive titles such as Caesar, Charity, and Cato and taking names such as Pomp Liberty, Cuff Freedom, and Primus Freeman.

MIDDLE-STATE UNREST

Patriot officers in New York and New Jersey were less open to black enlistments, although both allowed blacks to replace their masters in the military. In pre-Revolutionary years in Monmouth County, New Jersey, for example, masters worried about blacks roving about the countryside

at night. Members of the Society of Friends (Quakers) made other masters uneasy with their antislavery rhetoric. Blacks in Long Island and in New York City openly defied their masters and spoke freely of alliances with the British. As white society descended into open conflict, an upsurge of self-emancipated blacks simply left their masters. Added to the usual number of young men who ran away from bondage were women, some with children and at times entire extended families. They took with them clothing, tools, food, and money to help start their new lives. Using the rhetoric of the whites, one black man left his former master in Philadelphia, demanding “that freedom, justice, and protection to which I am entitled to by the laws of the state, although I am a Negro.” If whites regarded him as wrong, this man and other blacks were determined that the war prove him right.

DISCONTENT IN THE SOUTH

Tensions between masters and slaves rippled further south as the crisis between Britain and America unfolded. A young James Madison reported in 1775 that a number of blacks in Virginia had gathered together and elected a leader “should the British troops arrive.” His correspondent, the printer William Bradford of Philadelphia, responded by saying, “Your fear of insurrection being excited among the slaves seems too well founded,” and he told of his own fears about Pennsylvania. Around Charleston, South Carolina, blacks ran away with increasing frequency and began to form bands that patrolled the roads.

BLACK LOYALISTS

Two events in 1775 determined black participation in the Revolutionary conflict. In July 1775 General George Washington ended black enlistments in the American forces, though he did allow those already in service to remain. Washington was in part reacting to a plan by Edward Rutledge of South Carolina to expel all blacks from the armed forces. The American strategy in dealing with African Americans proved disastrous after 7 November 1775, when Lord Dunmore, the royal governor of Virginia, announced that he would guarantee freedom to any enslaved black or indentured servant willing to take up arms to put down “the present horrid rebellion.” Lord Dunmore’s Proclamation opened the floodgates, and thousands of enslaved blacks left their masters for freedom “inside the British lines.”

New York City was the destination of thousands of former slaves and self-proclaimed free people. Black Loyalists, as such people were known, comprised men, women, and children. Living in occupied New York City, they created the first true free black community in British North America. Enlivened by freedom, blacks formed significant parts of Anglican congregations, took

part in marriage and baptismal rituals, worked for wages at local breweries and factories, and held joyous Ethiopian balls where mixed race dancing was common. Black Loyalists felt so comfortable in their roles that they sent General Henry Clinton New Year’s greetings in 1780. A dream experienced by one Black Loyalist that year encapsulated their hopes. Murphy Stiel, a black Loyalist from North Carolina who relocated to New York, had a dream in which God told him to take a message to General Clinton, asking him to warn George Washington that the Patriots should lay down their arms and surrender. Patriots should then, according to this message, offer freedom to blacks or face a vengeful God.

Few blacks left such public pronouncements, but their numbers spoke loudly. Estimates of how many enslaved blacks left their southern masters in the wake of Dunmore’s Proclamation range from fifteen thousand to over one hundred thousand. Thomas Jefferson spoke of thirty thousand slaves leaving masters in Virginia, though he may have simply added zeroes to the thirty who abandoned him. Whatever the actual number, the responses by African Americans to Dunmore’s Proclamation and to those made by British commanders later in the war sustained the most sizable slave flight before the Civil War. Dunmore’s Proclamation insured black loyalties to the British as the most likely side to give them their liberty.

Joining the British and siding with the Americans were not the only fates for African Americans. Some lived in areas where conflict raged only briefly. Masters in a number of southern colonies and a few in the North sought to avoid problems by retreating far into the interior. For such whites and blacks, the war was avoidable and real choices waited until later. But for those who joined the British, Dunmore’s Proclamation was a clarion call of freedom.

Fighting for Britain. Following Dunmore’s Proclamation, insurgent blacks formed regiments under the leadership of British officers. The first was the Ethiopian Regiment that coalesced around Dunmore and saw action in various battles around Virginia in early 1776. Hampered by poor leadership and devastated by disease, the Ethiopian Regiment suffered sharp losses before about eight hundred members left by ship with Dunmore north to Staten Island to become incorporated into the British forces there. They joined several regiments of black guides and pioneers who served as pilots, spies, wagon masters, foragers, and infantrymen. The most elite groups, called the Black Brigade, consisted of active duty soldiers for the British. More loosely aligned were freelance marauders such as Colonel Tye of New Jersey.

Captain Tye. Tye, formerly Titus Corlies, left his master in Shrewsbury, New Jersey, right after Dunmore’s Proclamation. Vanishing from history for a short while,

Titus returned to his home area in 1777, fighting as Captain Tye in the Battle of Monmouth the following year. It was, however, in 1780 that he made his biggest impact. Starting in late March 1780, Tye commanded a “motley crew” of blacks and whites that raided Patriot homesteads in Monmouth, taking off cattle, silver plate, and significant numbers of prisoners to the British in New York City. He headed three such actions in June, in one of them capturing Barnes Smock, a leader of the county militia. Terrified, other Patriots in the county petitioned Governor William Livingston to declare martial law to help fend off Tye’s incursions.

After several more attacks over the summer, Tye attempted his greatest feat in September. Then he captured Josiah Huddy, a Patriot notorious for his summary executions of known Loyalists. After a gun battle lasting several hours, Tye and his men captured Huddy and began their return to New York. While crossing from Monmouth County and Staten Island, New York, Huddy jumped overboard and swam toward a nearby Patriot vessel. In the battle that followed Huddy escaped, though he was recaptured later, and Tye suffered a wound in his wrist that later worsened to lockjaw. He died several days later. Tye’s memory lived on for generations among white New Jerseyans, who viewed him with great respect, and into the twenty-first century among black residents of the state, some of who claim direct descent from him.

Not all blacks became as well known as Tye, but their contributions to the war effort were substantial. Following his treason, Benedict Arnold employed over three hundred black men to fortify Portsmouth, Virginia, in order to repulse Patriot efforts to retake the city. Others worked out of the Dismal Swamp between Virginia and North Carolina as freelancers who plundered the countryside. Their examples made enslaved people more assertive in dealing with masters, who at one point on the eastern shore of Maryland confiscated guns, swords, and bayonets from local slaves.

Gradually, Patriot militias had to disregard George Washington’s edict and enlist slaves and free blacks. The state of Maryland subjected free blacks to a draft and enlisted slaves. Delaware, Maryland, and Virginia permitted slave masters to send their bondmen as replacements. During invasions, Patriots and British commonly impressed slaves to serve as laborers digging entrenchments or as personal servants to officers and common soldiers. Black women followed both camps as laundry workers and domestic servants.

LIMITS OF BRITISH ASSISTANCE

Royal proclamations offering freedom to enslaved blacks did not mean the British were abolitionists. No attempt was made to enlist the slaves of Loyalists, and runaways

from Loyalist masters were routinely returned. In occupied New York, Philadelphia, and Charleston, British officers and colonial Loyalists maintained a brisk internal slave trade. Moreover, British commanders could be slippery about their promises. Lord Dunmore took a number of black Loyalists with him to Bermuda and then promptly sold them back into slavery. Lord Cornwallis abruptly abandoned thousands of blacks when he surrendered at Yorktown in 1781.

SERVING IN THE SOUTH

Despite the uncertainty of their British alliances, black Loyalists continued to join the army of the king. As the war moved south, blacks became important actors in a nasty civil war around Charleston, South Carolina, and Savannah, Georgia. Hearing rumors that they would “be all sett free on the arrival of the New Governor,” blacks began to leave their masters in mid-1775 with increasing frequency and assertiveness. One slave told his astonished master that he “will serve No Man and that he will be conquered or governed by no Man.” After that, the slave departed. Whites soon organized patrols around the streets of Charleston and established curfews. Violators were whipped and even hung for minor infractions.

Right after Dunmore’s Proclamation, several hundred runaways who had gathered on Sullivan’s Island in Charleston Harbor began raiding coastal plantations. Even after Patriots were able to defeat them, they attracted more recruits. More than in the North and Upper South, self-emancipated blacks in South Carolina and Georgia moved in sizable groups, often based upon kinship and friendship. David George, later a prominent black minister, recalled leaving his master with “fifty or more of my master’s people” who marched into freedom behind the king’s lines. Many then entered the British army either as guerillas, laborers, or domestics. Others seized insecure residences in the coastal cities and hired themselves out. Life there was dangerous, as kidnappers were ubiquitous and smallpox and malaria swept through Charleston several times in 1779 and 1780. As in New York, blacks enjoyed a new freedom, donning fashionable attire and holding Ethiopian balls, to which prominent white officers were invited. Former enslaved women in particular were noted for their freedom attire. Entrepreneurial blacks took control of deliveries of food and supplies to the British commissary in Charleston. Eventually, blacks controlled access to a number of waterways into Charleston and proved very difficult for Patriots to dislodge, even several years after the conflict had ended. After the British abandoned the Lower South, many black Loyalists decamped into Spanish Florida to join with Seminole Indians.

BLACKS IN THE SOUTHWEST

The Revolutionary War enhanced white conquest of Native American lands along the Gulf of Mexico and up the Mississippi River. Plantation masters along the coast and inland took their enslaved people to remote areas as far north as western Virginia and to what would become the Mississippi Territory. Nearly four hundred slaves from South Carolina arrived in the future Mississippi Territory in 1778 and were followed by others from the nascent free states whose masters sought more hospitable locales and from the West Indies, where some of the plantations were being downsized. The Revolutionary War spread west as Americans, British, and Spanish armies battled for power along the Mississippi River and the coastal region known as West Florida. The immediate winners were the Spanish, who controlled all of the Gulf Coast from Florida to New Orleans. Quickly, African Americans evacuated American plantations for freedom in the coastal region. They established a maroon colony at Gaillardville, north of New Orleans, that was led by James Malo, a fierce warrior and shrewd commander. Blacks also fought in units for the Spanish for a brief time, maroons and black Spanish soldiers, gaining their freedom by doing so, and thereby opening a tiny crack in the edifice of slavery. The booming economy of New Orleans offered enslaved blacks an opportunity to buy their own freedom under hiring agreements with their masters. Whites generally strove to control the conditions of self-purchase with a bias toward wives, mistresses, and the children of mixed love. But as freedom descended through the mother, this practice assured the liberty of future generations. Political changes put an end to many of these methods for gaining freedom. By the early 1800s, as white American society moved west and Spanish rule gave way to French and then to American, free blacks gave way to enslaved peoples.

PEACE NEGOTIATIONS

The black Loyalists were on the side of the war's losers. From the British surrender at Yorktown in 1781 until the Treaty of Paris ended the war two years later, black Loyalists continued to battle for their freedom. In General Guy Carleton they had an important ally. Blacks who left their masters along the Atlantic coast served the British army with valor and sacrifice. Eventually, thousands of them were rewarded when Carleton declared, during peace negotiations in 1783 with General George Washington, that he could not return blacks who had come into the British lines in response to royal proclamations. Washington, who viewed the blacks as stolen property, was astonished and angered. Carleton replied that to return them would dishonor the king's intentions. To

push the negotiations along, Carleton agreed to compile a list of blacks who had left New York, primarily for Nova Scotia and in lesser numbers to England and Germany. Carleton also agreed to a requirement that blacks prove that they had entered the British lines during or before 1782.

THE "BOOK OF NEGROES"

The list, the so-called Book of Negroes, contained three thousand names, including about fourteen hundred men, eight hundred women, and eight hundred children. They came from all over the colonies, with the greatest numbers coming from Virginia, South Carolina, and New York. Many had been at large fighting for the British since 1775. Some children were freeborn within the British lines of parents from different regions who had met during the conflict. There were women in far greater numbers than had ever been reported escaping from slavery during the colonial period. By the end of November 1783, the three thousand black Loyalists had left New York for Nova Scotia. About four thousand left from Savannah, Georgia, for uncertain fates in the British West Indies.

Their departure did not end the controversy over them. American slave masters felt cheated by the British, whom they regarded as slave thieves. For example, Thomas Jefferson, in his perennial negotiations with the London merchants to whom he owed money, exclaimed in 1786 that the slaves taken from him by Lord Cornwallis were worth far more than the debts he owed. The issue remained a sticking point in Anglo-American economic relations until after the War of 1812, during which several thousand more blacks fled their masters for freedom in Nova Scotia.

BLACKS IN POSTWAR CANADA

The black Loyalists in Nova Scotia found freedom but little prosperity. They attempted to establish a free black community composed of religious denominations and militia groups. They strove to work as farmers, fishermen, and town workers. In Nova Scotia, a black clergy emerged like a phoenix. Boston King, John Marrant, David George, Moses Wilkinson, and others made alliances with Methodist groups, while Stephen Bluke even owned a pew in the white Anglican Church in Halifax. Overall, black Loyalists were discontented in Nova Scotia. Encouraged by the migration of the so-called Black Poor from London to Sierra Leone in 1789, over one thousand Black Loyalists departed from Nova Scotia two years later to help create the nation of Sierra Leone. Their nation-building work was inspired by their experiences in the American Revolution.

POSTWAR NORTHERN BLACKS

If the black Loyalists had to travel the Atlantic Ocean to find freedom, they at least attained it within a lifetime. For those who stayed in North America, liberty came slowly. The tiny black populations of New England benefited from the extinction of slavery during the 1770s and 1780s. Pennsylvania abolished slavery in 1780. But New York and New Jersey, with the largest slave populations in the North, did not legislate gradual emancipation until 1799 and 1804, respectively. In both cases, black men born after 4 July of the year of enactment had to labor for their masters until they were twenty-five years of age, while black women were not freed until reaching the age of twenty-one. Facing such long terms, blacks in those states bargained with masters for shorter terms on the basis of good behavior and for cash payments based on work performance. Liberal whites joined blacks in freedom suits against masters who had reneged on promises of liberty, for example, after military service. Many more blacks simply left their masters for freedom in the cities. In the countryside, masters held tightly to slaves. A few years after the adoption of gradual emancipation there, masters from Bergen County petitioned the state legislature to repeal the act because it deprived them of property rights won in the American Revolution.

Whether legally or self-proclaimed free people, African Americans created genuine communities in northern cities. Centered on black churches that gradually created a black clerical leadership, the black communities featured burial and fraternal associations, vibrant neighborhoods of small entrepreneurs and artisans, and boardinghouse keepers. They created a new interpretation of history. In the early nineteenth century, black intellectuals such as Peter Williams, Jr. hailed the closure of the international slave trade. Sea captain Paul Cuffe owned his own vessel. Sail maker James Forten employed about thirty workmen and became the wealthiest black in Philadelphia. In each of the northern cities, a tiny but robust black middle class emerged and combined religion, work, opposition to slavery, and reverence for the meaning of the American Revolution as central components of their ideology. While middle-class blacks sought improved social and political conditions, northern cities were becoming the homes of a more hedonistic, apolitical, poorer class of blacks who, to the disdain of educated blacks, spent most of their money on clothing, drink, and gambling. Rising racist attitudes in the North focused on the latter group and lampooned the hopes of blacks intent upon self-improvement. In the rural areas around the cities, freedom meant little more than a change in the local registry. Free blacks there had difficulty obtaining loans for land, received low subsistence wages, and were oppressed by a white society that soon forgot the shared work of the past by assuming racist postures toward free

blacks. The latter often had to labor on white farms as cottagers, an early form of sharecropping.

POSTWAR SOUTHERN BLACKS

In the Upper South, a period of egalitarianism after the American Revolution sparked new feelings of liberty among many whites. Robert Carter III, the largest slave master in Virginia, felt the contradictions of revolution and servitude and freed several hundred bonded people. George Washington, the father of the nation, went through a number of personal crises before, in his will of September 1799, freeing his more than one hundred slaves at his death, which came two months later. Thomas Jefferson, on the other hand, though conflicted about the meaning of slavery, wrote in his *Notes on the State of Virginia* (1785) that blacks were inferior intellectually to whites and would be best served if they were returned to Africa. Gradually, Jefferson became more conservative on the issue of slavery and black capabilities. Despite his misgivings, the number of free blacks in Maryland and Virginia rose sharply in the years after the war, only to fall after the resurgence of slavery as an institution in the early nineteenth century.

The lives of free blacks in the cities of the Lower South were akin to those of their northern counterparts in many ways. Charleston's free people of color worked as artisans, peddlers, and domestics and formed independent churches. Lighter-skinned people of color formed a Brown Society to act as a social and political force. Similar groups operated in Savannah. The significant difference from the North was that free blacks in the South lived and worked in a slave society where little dissent was tolerated and in which servitude was the dynamic economic force. Whereas in the North, slavery was a declining system and the slave trade had been legally forbidden by the 1780s, South Carolina imported over one hundred thousand new slaves directly from Africa between 1788 and 1807, when a national ban on human trafficking took place. Quickly, Southerners learned to profit from an internal slave trade that moved enslaved blacks from the Upper South and regions along the Atlantic coast to the booming new white settlements from Georgia through Mississippi to Louisiana and Texas.

By 1810, then, blacks, abetted by white allies, had pushed through gradual abolition of slavery in the northern states. In the Upper South, revolutionary egalitarianism had cooled and Virginia, for example, demanded that free blacks leave the state. While converting much of their farmlands from tobacco to cereal production, the Chesapeake societies learned to profit by selling enslaved people to the expanding Lower South. As cotton plantations spread from South Carolina to Texas, slavery became entrenched in the region. Free blacks became more beleaguered and white southerners viewed slavery as a property

right protected by the American Revolution and the federal Constitution of 1787.

AFRICAN ARROWS. Flaming arrows were used to set fire to a defended place when it was too strong to be taken by assault. The term “African arrows” became current probably because a Indian bow, presumably of African origin or design, was used against Fort Motte, South Carolina, on 12 May 1781. The technique was employed then with well-publicized success by Francis Marion and Harry Lee. Flaming arrows were sometimes fired from muskets, as at the siege of Ninety Six from 22 May to 19 June 1781.

AIX-LA-CHAPELLE, TREATY OF.

18 October 1748. This treaty ended the War of the Austrian Succession. It represented a suspension of hostilities between rival European coalitions rather than a stable solution of serious problems. French victories on land in Europe balanced British successes at sea. Britain agreed to restore Louisbourg, captured by its New England colonies, for French withdrawal from the Low Countries. Maria Theresa was confirmed as empress of Austria, but British pressure forced Austria to concede Silesia to Prussia, souring Anglo-Austrian relations. French stature was enhanced, and Prussia was

enlarged, by Frederick II’s successful aggression against Austria. No solutions were found for Anglo-French imperial rivalries in India and North America, which continued to fester. The German name for the city is Aachen; thus this document is also called the Treaty of Aachen.

ALAMANCE, BATTLE OF THE.

16 May 1771. In an effort to use military force to suppress what he believed was a spreading insurrection by Regulators against law, order, and legal government in the Piedmont of North Carolina, Governor William Tryon raised over 1,000 militiamen, mostly in the Tidewater counties, and marched at their head from New Bern west toward Hillsborough, where he intended to link up with Hugh Waddell, who was leading a second column of 250 reluctant militiamen northeast from Salisbury. Tryon reached Hillsborough without opposition, but learned that Waddell had been confronted by large numbers of Regulators and had not advanced. On 11 May, Tryon’s force started toward Salisbury, and on 14 May it reached the Alamance River. The Regulators were camped five miles away. Although they numbered 2,000 men to Tryon’s 1,100 men, the Regulators had no single leader and no artillery, and many were unarmed. On 16 May Tryon formed his militiamen in two lines outside the Regulators’ encampment and demanded their submission. Still without proper leadership and divided among themselves as to whether they would do battle or merely make a show of resistance to gain concessions from the royal governor, the Regulators formed a crude line of defense. Tryon opened fire with his artillery (two brass cannon sent by General Thomas Gage from New York), ordered his infantry to advance, and after more than an hour of sporadic and uneven resistance drove the insurgents from the field in disorder. At least nine militiamen were killed, and a further sixty-one were wounded. The Regulators may have lost as many as twenty men killed; an unknown number were wounded.

ALBANY CONVENTION AND PLAN.

At the request of British authorities, delegates from seven colonies (New York, Maryland, Pennsylvania, Massachusetts, Rhode Island, Connecticut, and New Hampshire) convened at Albany, New York, from 19 June to 10 July 1754, to concert measures to defend the northern frontier, and especially to make a show of unity to counter French pressure on the Iroquois. The delegates agreed on a plan of union based on a model drawn up by Benjamin Franklin in 1751 and subsequently modified by Thomas Hutchinson. All colonies except Georgia and Nova Scotia were to be united under a president-general appointed and paid by the crown. Each colony would elect between two and seven representatives to a grand council, depending on how much each contributed to the general treasury. The grand council would act as a unicameral assembly, but its power to legislate was subject to the approval of both the president-general and the crown. The president-general and grand council were to have jurisdiction over Indian affairs, including new land purchases outside existing colonial boundaries. Neither the British government nor any individual colony found this plan of union acceptable. The rejection of the plan reinforced the idea that the colonies were incapable of acting together against a common enemy, but the convention did establish a precedent for later extra-institutional gatherings like the Stamp Act Congress and the first Continental Congress. The plan itself was a point of departure for later schemes for confederation.

ALEXANDER, MR SEE *Rankin, William*.

ALEXANDER, WILLIAM. (1726–1783). Continental officer and claimant to the title of Lord Stirling. William was the son of James Alexander (1691–1756), a prominent New York lawyer, and Mary Sprat Provoost, a merchant. Growing up in privileged circumstances, he received a good education from his father and private tutors and became a proficient mathematician and astronomer. He was associated with his mother in her mercantile business. In 1748, he married Sarah Livingston, daughter of Philip Livingston, thus securing a close connection with the wealthy and powerful Livingston family of New Jersey. At the start of the Seven Years' War, he joined the military staff of Governor William Shirley of Massachusetts as his secretary. In addition, he and some business partners were hired as army contractors during the Niagara campaign of 1755 and 1756. His connections with Shirley proved to be a liability when the governor failed as a military leader, for Alexander and his partners were accused of profiteering. In 1756 he accompanied Shirley to London, where he defended his mentor's reputation and fought successfully to clear his own name.

Alexander lived in Britain from 1757 to 1761, hobnobbing with land-owning gentlemen and spending money in pursuit of the lapsed Scots earldom of Stirling. He got the Scots lords to accept his claim to the title, but not their English counterparts. Undeterred by this rebuff, he assumed the title, and his American contemporaries thereafter called him lord Stirling. Upon his return to America, he gave up his previous occupation of merchant. Building an elegant country house near Basking Ridge, New Jersey, he lived there with his family in emulation of the English landed gentry. He dabbled in science, invested in iron mining, speculated in land, drank to excess, and squandered a fortune of more than £100,000. He served on the councils of New York and New Jersey and the Board of Proprietors of East Jersey. He also held the post of governor of King's College (later Columbia University). As tensions grew between America and Britain in the 1760s and 1770s, Alexander expressed pro-parliamentary views. On one occasion he even urged the Board of Trade to tighten its enforcement of navigation and tax laws in the colonies.

When the war with Britain began in 1775, however, Lord Stirling quickly declared for America and never wavered thereafter. The royal governors of New York (William Tryon) and New Jersey (William Franklin) removed him from their councils. He was appointed a member of the extralegal Council of Safety in New Jersey, and on 1 November 1775 was commissioned as a colonel of the First New Jersey Regiment. He assisted in the seizure of an armed British transport, the *Blue Mountain Valley*, on 25 January 1776, and was rewarded with promotion to brigadier general on 1 March.

Assuming command at New York City, he directed the construction of defensive works in preparation for a threatened British invasion. In April he welcomed General George Washington to the city, and soon developed a congenial association with the commander in chief. He confronted his first big test as a military leader on 27 August 1776, when Washington gave him command of the American right wing in the battle of Long Island. Through no fault of his own, his brigade was overwhelmed and he was captured.

Stirling was included in a prisoner exchange on 6 October 1776. Rejoining Washington's army on Manhattan, he was given command of another brigade. He operated in a semi-independent command over the next two weeks, retreating with the rest of the American army to White Plains, New York. There, on 28 October, he participated in a pitched battle before joining in a fighting withdrawal across New Jersey in November and December. At Trenton on 26 December he played a major role in the defeat of a Hessian garrison commanded by Colonel Johann Röll. On 19 February 1777 he was one of five American officers promoted to major general. He took up his post with his division near Metuchen, New Jersey, on 24 June. Two days later he was assaulted by a superior enemy force commanded by Lord Charles Cornwallis and was given a severe mauling before he extricated himself from his dangerously exposed position. Retaining Washington's confidence, he served in the Hudson Highlands for a short time before rejoining the main army and marching into Pennsylvania. He commanded well in the battle of Brandywine on 11 September, rushing his division to the support of John Sullivan when Sullivan was attacked near the Birmingham Meeting House. In the battle of Germantown on 4 October, Stirling's division was in the thick of the fight.

After spending the winter of 1777 and 1778 at Valley Forge, Stirling accompanied the American army in mid-June 1778 as it followed the British forces withdrawing from Philadelphia across New Jersey. In the battle of Monmouth on 28 June he played a key role in the American victory by deploying cannon to good effect in the third and final line of defense. For almost two hours, he cannonaded the enemy, with the British reciprocating in kind. Breaking up a British infantry advance, he then ordered his own men to assault the enemy's right flank. As the redcoats broke into flight, he wisely ordered his soldiers not to press the pursuit. From 4 July to 12 August he presided over the court martial of Charles Lee, who was subsequently suspended from the army for one year. In the summer of 1779 he assisted Major Henry Lee in the latter's brilliant assault on Paulus Hook, New Jersey. On January 14 and 15, 1780, he led a mismanaged, abortive raid on Staten Island during a period of cruelly cold weather. Later

that year he served on a board of general officers that inquired into the activities of John André.

Given an independent command at Albany in 1781, Stirling prepared to defend Fort Ticonderoga from a possible British attack. No attack materialized, and his duties were easy. He died of a virulent and painful attack of gout on 15 January 1783. Although not a brilliant soldier, he was loyal, trustworthy, reliable, and brave. His loss was mourned by Washington, his fellow officers, and his family.

ALFRED–GLASGOW ENCOUNTER.

6 April 1776. A five-ship Continental navy squadron under Esek Hopkins, returning from its successful Nassau raid with several prizes, was on its way to New London, Connecticut. Meanwhile, H.M. Frigate *Glasgow* (twenty-four guns) had recently become separated from a small British squadron operating in Rhode Island. She stumbled into the midst of the Continental squadron near Block Island between midnight and 1 A.M. In a remarkable action lasting all night, Captain Tyringham Howe handled the old *Glasgow* with great skill and great luck. Hopkins failed to coordinate the actions of the American squadron of converted merchantmen, whose crews were debilitated by disease. Instead of massing and overpowering the frigate, Hopkins let Howe fight a single-ship action against his flagship, the *Alfred* (twenty-four guns), which despite having the same number of guns was much lighter in construction. A lucky shot knocked out the *Alfred's* steering, letting the badly mauled *Glasgow* escape to Halifax.

Casualties were relatively light (the Americans lost twenty-four killed or wounded, the British admitted suffering only four), but both vessels needed major repairs. The fledgling Continental navy correctly interpreted the engagement as a failure and held a major

investigation to affix blame, effectively destroying Hopkins's reputation.

ALLEN, ETHAN. (1738–1789). American officer. New Hampshire (Vermont). Born on 10 January 1738 in Litchfield, Connecticut, Allen moved to the New Hampshire Grants in 1770. The next year he was named “colonel commandant” of the Green Mountain Boys, the volunteer militia that fought a largely bloodless conflict with New York for control of the region that became Vermont. In 1771 Governor Tryon of New York declared Allen an outlaw, placing a twenty-pound reward on his head, raised to one hundred pounds in March 1774. With the events at Lexington, Allen immediately linked the cause of the New Hampshire Grants with the American Revolutionary struggle, leading the force that took Ticonderoga on 10 May 1775. Within two days, Allen's forces captured control of Lake Champlain without loss of life. He was voted out of command of the Green Mountain Boys by the region's elders, who thought he operated too precipitously. Allen then joined the staff of General Richard Montgomery as a recruiter, enlisting Indians and Québécois to join the forces invading Canada. Operating ahead of Montgomery's invading army, he was captured after his premature attack on Montreal on 25 September 1775. Identified as the captor of Ticonderoga, Allen was sent in irons to England and lodged in Pendennis Castle. The government, fearing reprisals if it hung Allen, returned him to America, where he suffered notoriously harsh treatment at the hands of the British in Halifax and New York City. On 6 May 1778 he was exchanged for Lieutenant Colonel Archibald Campbell and reported to Washington at Valley Forge. On 14 May he was brevetted colonel in the Continental army.

Back in Vermont, Allen led the efforts to gain congressional recognition for the new state of Vermont. But Congress avoided getting involved in a dispute between New York and New Hampshire, especially as New York's Governor Clinton threatened to abandon the war effort should Vermont be admitted to the Union. Appointed major general of Vermont's militia in 1779, Allen launched a long and crafty political and diplomatic campaign to insure Vermont's independence, playing New York against New Hampshire and Congress against the British. The British recognized their opportunities for capitalizing on the situation in Vermont, and in July 1780 Allen received a letter from Beverley Robinson that

led to a correspondence between Allen and Canada's governor, General Frederick Haldimand.

By not hiding his negotiations with the British from Congress, Allen set himself up for charges of treason, but he maintained the autonomy of his state. As New York's passion for holding onto the region died down in 1784, Allen dropped his negotiations with the British. He used the upheaval of Shays's Rebellion in 1786 to persuade the New York elite of Vermont's reliability, rejecting offers to lead the Massachusetts uprising. Pushed by Alexander Hamilton, New York's legislature dropped its claims to Vermont, though Governor Clinton stalled its entry into the Union until 1791.

Allen's book about his captivity, *Narrative of Colonel Ethan Allen's Captivity* (1779), was a major success, apparently selling more copies than any book of the period with the exception of Paine's *Common Sense* (1776). Less successful, but more controversial, was Allen's *Reason the Only Oracle of Man* (1785), the first deistic work published by an American. Allen died while returning to his home in Colchester, Vermont, on 12 February 1789.

ALLEN, IRA. (1751–1814). Frontier leader. Born in Cornwall, Connecticut, on 1 May 1751, Allen joined his older brothers in settling in the New Hampshire Grants, a region contested by several provinces. With the crown recognizing New York's claim, New Hampshire's land grants appeared worthless. In 1773 Allen formed the Onion River Land Company to buy up the deeds to the Grants, relying on his brother and partner, Ethan Allen, to secure their value. Ira Allen was present at the capture of Fort Ticonderoga on 11 May 1775 and served as a lieutenant in the invasion of Canada. Returning to the Grants the following year, Allen played a leading role in the creation of the state of Vermont. With Ethan Allen a prisoner of the British until May 1778, Ira Allen organized the conventions that led to Vermont's declaration of

independence in January 1777; drafted the state's constitution with Thomas Chittenden, who became Vermont's first governor; and served as treasurer, surveyor general, member of the governor's council, and secretary to the governor, as well as Vermont's chief negotiator with the other states and the British in Canada. The power of the Allens declined with the success of their revolution as thousands of new settlers poured into Vermont. Ira Allen left the government in 1787 and devoted the rest of his life to personal finances. In 1791 his pledge of four thousand pounds persuaded the state legislature to charter the University of Vermont in Burlington. In succeeding years Allen fell progressively deeper in debt, and he fled the state in 1803, dying a pauper in Philadelphia on 15 January 1814.

ALLIANCE–SIBYL ENGAGEMENT.

10 March 1783. Captain John Barry sailed from Havana in the thirty-two-gun frigate *Alliance* accompanied by another Continental ship, the *Duc de Lauzun* (twenty guns) to deliver \$100,000 in specie to Congress. Several days later at dawn on 10 March they were sighted off the coast of Florida. Three British warships took up the pursuit: the frigates *Alarm* (thirty-two guns) and *Sibyl* (sometimes spelled *Sybil* in American accounts; twenty-eight guns), and the sixteen-gun sloop of war *Tobago*. The *Alliance*, the only Continental Navy vessel with copper sheathing, had great speed and was easily getting away when Barry saw that the British were overtaking the *Lauzun*. He turned to assist his smaller, slower, and clumsier consort. While Barry was instructing the *Lauzun* to jettison her guns and run for it, a fifty-gun French ship from Havana bore down on the scene. Four of the six vessels separated, leaving *Alliance* to engage in a frigate duel with the smaller *Sibyl*. After forty-five minutes the heavier guns of the *Alliance* reduced the *Sibyl* to a wreck barely able to break contact, and Barry resumed course for Philadelphia. This was the last naval action fought by the Continental navy.

ALSOP, JOHN. (1724–1794). Congressman. Connecticut and New York. Born in Middletown, Connecticut, Alsop moved to New York City with his brother and business partner, Richard, becoming a successful merchant. In 1770 he helped establish the New York Hospital Association, serving as its first governor until 1784. A member of the New York assembly and then the Provisional Congress, Alsop was selected as a representative to the Continental Congress (1774–1776). In addition to serving on the Committee of Safety that ran New York City before British occupation, Alsop made enormous efforts to acquire arms and ammunition for the Continental Congress. Despite his many contributions to the war effort, he opposed independence as cutting off any chance of reconciliation with the British. He resigned from Congress rather than opposing the movement toward independence. When the British occupied New York City he withdrew to Middletown until the war was over. He died in Newton, Long Island, on 22 November 1794. One son, Richard (1761–1815), was a member of the “Hartford Wits,” a group of poets centered in that city, and another, John (1776–1841), was also a poet. His daughter Mary married the politician Rufus King.

AMHERST, JEFFREY. (1717–1797). British general. Amherst was born on 29 January 1717 in Kent, England, one of four brothers. The Amherst family's neighbor at Knole, the duke of Dorset, gave young Jeffrey a place as a page and in 1731, through Sir John Ligonier, an ensigncy in the First Foot Guards. Thereafter, Ligonier continued to be Amherst's military patron. He was Ligonier's aide-de-camp during the war of the Austrian succession and saw action in Germany at Dettingen (1743), in Belgium at Fontenoy (1745) and in Holland at Rocoux (1746). He then became staff intelligence officer to the duke of Cumberland, with whom he served at Laffeld, in Germany, in 1747. He continued as Cumberland's protégé into the Seven Years' War (1756–1763). In 1756 he was promoted colonel of the Fifteenth Foot, was at Hastenbeck (Germany) with Cumberland the following year, and survived the disgrace of Cumberland's forced surrender in the Convention of Kloster Zeven. Afterward, Amherst stayed on in Europe as commissary to the German troops serving in the British army.

In 1758, this middle-ranking staff officer—who had never directed a battle—was chosen by William Pitt, then secretary of state for Britain, to be major general commanding an expedition against the French at Fort

Louisburg, in Canada. He had the advantage over James Abercromby and John Forbes, fellow British officers leading troops in the region, because Amherst was delivered by sea to a place where he could direct a conventional military operation, rather than having to slog through endless forest to a distant and far less glamorous objective. He made the most of his advantages. Supported by Admiral Edward Boscawen's naval squadron, and ably seconded by James Wolfe, Amherst safely landed his 14,000 men and opened a formal siege. Louisburg fell in seven weeks, a triumph that contrasted dramatically with Abercromby's blundering at Fort Ticonderoga, in New York. Pitt promptly sacked Abercromby and made Amherst commander in chief in his place. At the end of the year, as he settled into his new job, Amherst heard of Forbes's success at Fort Duquesne (near present day Pittsburg).

A tall thin man with a cold manner and formidable organizational powers, Amherst soothed the feelings of colonial officials and officers and carefully assembled the men and materials for a new campaign. In 1759 he personally led the force that took Fort Ticonderoga, while Wolfe attacked Quebec and John Prideaux's expedition took Fort Niagara. Amherst, the soul of caution, decided not to press on to Montreal that season, but on 8 September 1760 his converging columns forced Governor Phillippe de Rigaud Vaudreuil to surrender New France. Amherst's Achilles heel was his dislike and ignorance of Native Americans, many of whom were former allies of France. His insistence upon slashing spending on trade goods and presents to them convinced many of these groups that the British meant to exterminate them. The result was the outbreak of Pontiac's War in 1763, during which Amherst proposed to use biological warfare, and his recall to Britain before the end of the year. Nonetheless, he was named (absentee) governor of Virginia at the end of the war.

Amherst became a lieutenant general in 1765. In 1768 he was angered by being asked to resign his absentee governorship of Virginia so that the sinecure could be given to Lord Botecourt. At first the British government's opposition championed Amherst's cause, using his complaint in order to attack Pitt's ministry. The affair was ended by George III, who offered Amherst a peerage and a pension equivalent to his income as governor. Amherst rejected the pension but was promised other posts with adequate remuneration: in 1770 he became governor of Guernsey; in 1772 he was made lieutenant general of the ordnance; and in 1776 he was granted the title of baron.

In the early 1770s the new prime minister, Frederick North called on Amherst for advice as the American situation worsened. Although he fully supported the government's policies, Amherst declined an offer of the American military command in 1774 and another after the battle of Saratoga in 1777. Early in 1778 he was

appointed to the cabinet office of commander in chief, but was uncomfortable in the company of politicians. He had little to say, and could only with difficulty be induced to give reasons for his opinions. Consequently, although on the whole he opposed sending more troops across the Atlantic, he had little influence on the direction of the war. He was far more at home in the other dimension of his job, as commander of the home forces. He made careful plans to meet a Bourbon invasion, a real possibility by the summer of 1779, and acted firmly and properly in suppressing the anti-Catholic riots led by Lord George Gordon in 1780.

A political innocent, Amherst was surprised when the fall of the North ministry in 1782 was quickly followed by his own dismissal and replacement by Seymour Conway. In the House of Lords he voted against the peace proposals offered by William Petty, second earl of Shelburne, who was then Prime Minister of Britain. He also opposed the India Bill proposed by Charles James Fox, which was intended to give the Crown greater control over the administration of The East India company's administration of Bengal. Amherst eventually supported William Pitt the younger, after he became prime minister in December 1783.

Amherst was given a second peerage in 1788, and was recalled to be commander-in-chief at the outbreak of war in 1793. His age and taciturn nature worked against him, however, and two years later Pitt reluctantly replaced him with Prince Frederick, duke of York. Amherst became a field marshal in 1796 and died on 3 August 1797.

AMHERST, JEFFREY. (1752?–1815). British officer. Probably born in Warwickshire around 1752, this Jeffrey Amherst is no relation to the British commander in chief, Lord Jeffery Amherst. Amherst became an ensign in the Sixtieth Foot on 3 June 1771. With the local rank of major in 1781, he was aide de camp to General James Robertson and is mentioned in Henry Clinton's memoirs as the officer sent on the *Jupiter* from New York City (20 March 1781) with dispatches for Cornwallis. He was promoted to the regular rank of major in the Sixtieth Foot on 1 October 1782, transferred to the Tenth Foot on 8 August 1783, and reached the grade of major general on 1 January 1798. He died in 1815.

AMUSE. In the seventeenth and eighteenth centuries the usual sense of this word was "to divert the attention of" or "to mislead" (*Oxford Universal Dictionary on Historical Principles*, 1955). When a tactician of the period sent out a force to amuse the enemy his intentions were no more humorous than those of today's commander who plans a diversion.

Mark M. Boatner

AMUSETTE. A light field cannon invented by Marshal Maurice de Saxe (1696–1750). The word passed into the English language in 1761 (*Oxford Universal Dictionary*, 1955).

ANDRÉ, JOHN. (1750–1780). British army officer and spymaster. Son of a Genoese merchant settled in London, André was born on 2 May 1750 and educated at home, at St. Paul's School, and in Geneva before joining the family business. In December 1770 his fiancée suddenly ended their engagement, which may explain why early in 1771 he bought a lieutenant's commission in the Twenty-third Regiment. In 1772 he was granted leave to study mathematics in Göttingen but rejoined the army (as lieutenant in the Seventh Foot) in Quebec in 1774. André was captured when St. John's fort surrendered to the invading Americans on 2 November 1775, and he spent a year on parole in Pennsylvania before being released. In 1776 he was promoted to captain in the Twenty-sixth Foot and returned to Pennsylvania with Howe's invasion force the following year. He was at the Battles of Brandywine (11 September 1777), Paoli (21 September), and Germantown (4 October) and became aide-de-camp to Major General Sir Charles Grey in Philadelphia. There he proved himself both able and diligent. He took part in the overland withdrawal from the city in 1778 and fought at Monmouth (28 June). On Grey's recommendation he then became aide-de-camp to Sir Henry Clinton in New York. He participated in the Connecticut coast raid in September 1779 and on 23 October became a major and Clinton's deputy adjutant general. In both Philadelphia

and New York he took a leading part in putting on plays, wrote poetry, revealed a marked artistic talent, and was popular among Loyalist women. In Philadelphia he courted young Peggy Shippen, who afterwards married Benedict Arnold, only weeks before Arnold's first approach to the British.

As deputy adjutant general, André corresponded with Clinton's informers, spies, and potential defectors, the most important of whom was Arnold. This task was punctuated only by Clinton's Charleston expedition of 1780, in which André acted as full adjutant general. Back in New York, André judged it time to meet Arnold, and at a secret rendezvous on the night of 21 September, Arnold handed over the details of West Point's defenses. Unfortunately, André's transport, the sloop *Vulture*, was fired on and driven back down the Hudson. André, determined to get his prize home, took the enormous risk of disguising himself in civilian clothes, knowing that he could be executed as a spy. The gamble almost came off. André was in sight of British lines when he was arrested by three American militiamen. Taking them for Loyalists he did not show them Arnold's pass, whereupon they searched him and found the crucial papers hidden in his boots. Arnold heard the news just in time to flee to the British army, but his unfortunate handler was tried by court-martial as a spy. On 29 September he was sentenced to death by hanging. Despite Clinton's intervention, Washington would neither pardon André nor grant his petition to be shot as a soldier. André spent his last days sketching a portrait of Peggy Shippen and engaging the admiration of his captors. He died calmly on the gallows on 2 October 1780.

ANGELL, ISRAEL. (1740–1832). Continental officer. Born in Providence, Rhode Island, on 24 August 1740, Angell was a cooper living in Johnston, Rhode Island, at the beginning of the Revolution. Rushing to the siege of Boston, Angell became a major in Colonel Daniel Hitchcock's Rhode Island regiment and of the Eleventh Continental Regiment in January 1776. He was promoted to lieutenant colonel of the Second Rhode Island Regiment on 1 January 1777, and two weeks later was made colonel, seeing action at the Battles of Brandywine and Monmouth. His regiment won praise for its service at Red Bank, New Jersey, in October 1777.

Angell's reputation, though, rests largely on his performance at the Battle of Springfield, New Jersey, on 23 June 1780. General Nathanael Greene ordered Angell and Major Henry Lee to hold the bridges over the Rahway River against General Wilhelm Knyphausen's far superior force of five thousand British and German troops as long as possible. Angell took the brunt of the attack, and his regiment fought a notable holding action. Though forced to withdraw, the Americans inflicted such heavy losses on the enemy forces that they retreated after burning Springfield. General George Washington, who was present, and many military historians have held Angell's leadership during the Springfield battle to be one of the classic military actions of the Revolution. Angell retired in January 1781 when the two Rhode Island regiments were merged, returning to Johnston and his career as a cooper. He died on 4 May 1832 in Smithfield, Rhode Island, his service during the Revolution encompassing the only notable events in an otherwise routine life.

ANNA. Part of the Charleston Expedition in 1780, the British transport *Anna* (or *Ann*) was crippled by storms that began when the convoy was two days out of New York. She was taken in tow by the *Renown* (50 guns), but the cable broke and the *Anna* eventually drifted clear across the Atlantic to Cornwall. She was carrying Captain George Hanger's company of 120 Hessian and Anspach jägers, Captain John Althouse's sharpshooter company of the New York Volunteers, and (possibly) some thirty of Captain Johann Ewald's Hessian jägers who had been distributed among other ships when their transport, the *Pan*, was damaged before leaving New York.

ARBUTHNOT, MARRIOT. (1711–1794). British admiral. Arbuthnot, son of John Arbuthnot, was born in Weymouth. He entered the navy around 1727, passed for lieutenant in August 1739, and reached post rank in 1747. After service in the Seven Years' War, he became resident commissioner of the Halifax careening yards in 1775 and lieutenant governor of Nova Scotia on 20 April 1776. On 23 January 1778 he was promoted rear admiral and recalled to Britain, where he was made commander in chief of the North American squadron. On 25 August he reached New York.

His squadron had been much reduced following French entry into the war, and the choices Arbuthnot had to make were even more difficult than those confronted by Howe. In 1779, aware of the approach of comte d'Estaing from the West Indies but unsure of his target, he rightly stayed in the north to cover New York, Newport, and Halifax. In fact Estaing attacked Georgia, taking four British ships and supporting the unsuccessful American attempt on Savannah. Early in 1780 Arbuthnot successfully cooperated with Henry Clinton in the Charleston expedition. Afterward he concentrated his forces at Gardiners Bay at the northern tip of Long Island to bottle up Rochambeau's squadron in Newport, seized by the French in July. There was little else a purely naval force could do, and he rejected Clinton's vague plan for a combined offensive. At about

this time his relations with Clinton deteriorated to the point where they could hardly work together. In September, George Rodney—probably wisely—took it upon himself to come to Arbuthnot's support against an expected French onslaught from the West Indies. He then took the extraordinary step of insisting, as the senior admiral, on assuming command on Arbuthnot's station. He proceeded to interfere with Arbuthnot's patronage and dispositions, giving rise to the latter's complaint that Rodney's real interest was in prize money. Rodney was reprimanded by the earl of Sandwich, but the quarrel has too often been attributed to Arbuthnot's selfish pride. Worse still, when Rodney left in November he took with him all of Arbuthnot's frigates and most of his naval stores. Arbuthnot thus had caution thrust on him when he caught the escaped Newport squadron off Chesapeake Bay on 16 March. The action was disappointing; but by afterward entering the bay Arbuthnot effectively protected Benedict Arnold's force in Virginia. Plagued by ill health and fading eyesight, Arbuthnot resigned and sailed for Britain on 4 July. Retired on half-pay, he rose to rear admiral of the Blue by seniority before his death in London on 31 January 1794.

Arbuthnot may have been, as some contemporaries alleged, over-cautious, rude, quarrelsome, and too old for his job. On the other hand, he was zealous, strategically sensible, capable of energetic action, and generous to his captains. He had too few ships, and Clinton and Rodney were difficult colleagues. Although he was probably not the best choice for the North American command, his abysmal reputation is largely undeserved.

ARMAND, CHARLES *SEE* *Tuffin, Marquis de La Rouerie Armand-Charles.*

ARMED NEUTRALITY. Conceived and phrased by the Danes, proclaimed by Catherine the Great of Russia on 29 February 1780, and also subscribed to by Sweden and several other European nations, Armed Neutrality began as a response to specific British naval actions but became a long-lived principle of neutral rights. In order to enforce a blockade of its rebellious colonies, England claimed the right to inspect neutral ships at sea and seize contraband goods bound for America. In practice, this policy focused primarily on ships from the Netherlands. The Dutch island of St. Eustatius in the Caribbean was the center of their trade with the Americans. Goods from the American states bound for Europe were exchanged at St. Eustatius for Dutch and French military supplies, which were essential to the American war effort. Further alienating the British, Dutch ports offered a safe haven to American privateers and ships of the U.S. Navy. While the Americans, Spanish, and French had no problem with the Dutch trading with both sides in the war, the British found it an intolerable betrayal of the Treaty of Alliance of 1678. The British government was willing to allow the Dutch to carry non-military goods, but insisted that they cease supplying arms and ammunition to the Americans. In 1779 the Netherlands informed the British that they refused to limit their trade in any way. In response, the British announced their intention to put a stop to the shipment of military stores in Dutch ships through the English Channel, issuing what they thought was a fair warning. Again, the Dutch ignored the British and in January 1780, Commodore Fielding encountered a small Dutch fleet off Weymouth, England, and demanded to search the Dutch ships. When the Dutch commander, Count Byland, refused, Fielding fired upon the outgunned Dutch, who surrendered. In response, the Netherlands filed diplomatic protests. Catherine, seeing a major diplomatic opportunity to increase Russian influence, took a more proactive approach, announcing that her ships would resist all search efforts at sea. She then entered into a defensive treaty for the protection of neutral shipping in wartime with Denmark and Sweden and called upon the belligerents to accept the treaty's terms.

The principles of the treaty were: (1) that neutral vessels may navigate freely from port to port and along the coasts of the nations at war; (2) that the effects belonging to subjects of the said powers at war shall be free on board neutral vessels, with the exception of contraband merchandise (that is, "free ships make free goods"); (3) that as to the specification of contraband, the Empress Catherine holds to what is enumerated in the tenth and eleventh articles of her treaty of commerce (1766) with Great Britain, extending her obligations to all the powers at war (that treaty did not include naval stores or ships' timbers as contraband); (4) that to determine what constitutes a blockaded port, this

designation shall apply only to a port where the attacking power has stationed its vessels sufficiently near and in such a way as to render access thereto clearly dangerous; (5) and that these principles shall serve as a rule for proceedings and judgments as to the legality of prizes.

Spain and France immediately accepted these principles. Great Britain, which received the declaration of neutral rights from the Russian ambassador on 1 April 1780, could accept the first and third principles as a matter of policy but would not recognize them as "rights." To do so, the British ministers determined, would be to undermine their most effective military weapon, the blockade. They therefore decided on the course of publicly disregarding the Armed Neutrality while actually being very fearful of its consequences.

Since it was supposed to be the League of *Armed Neutrality*, Catherine announced the creation of an armed fleet to enforce the principles of neutrality and called on other nations to join. This fleet consisted of 84 Russian, Danish, and Swedish warships. Most of the nations of Europe eventually signed on, and even the United States attempted to join, despite being one of the belligerents in the war. When the Netherlands indicated a willingness to join the League, the British government decided that it was better to declare war on the Dutch than to have them enter into an alliance with the Russians. In November 1780 the States-General of the Netherlands voted to join the League. The British government felt they had to act before the Dutch officially joined the League, and so declared war on the Netherlands in December, hoping thereby to avoid dragging the rest of the League into the war. The British ministers, fearing that Russia might seize upon the pretext of the Dutch voting to join the League and enter the war as a Dutch ally, voted to offer Catherine the Mediterranean island of Minorca if she would side with them in the war. George III refused, however, to approve this deal, which ended up not mattering. The Dutch went ahead and signed onto the League at the beginning of 1781, but Catherine voided this treaty when she learned of the English declaration of war on the Dutch, nullifying their neutral status.

The British government acted quickly to take advantage of its war on the Dutch, directing Admiral George Rodney to attack St. Eustatius. Rodney's fleet seized the island, but in doing so, he became bogged down in the Caribbean and was unable to join the British fleet in the encounter with the French off the Chesapeake Capes, which led in turn to French victory and Cornwallis' surrender.

Catherine attempted in December 1780 to use the leverage of the League of Armed Neutrality to mediate an end to the Revolutionary War. France was initially interested in the offer and Britain agreed so long as Joseph II of Austria participated, but the tangle of negotiations soon broke down and events at Yorktown decisively terminated the effort at a mediated peace. Other than the unintended

consequence of Britain declaring war on the Netherlands, however, the League of Armed Neutrality accomplished so little that Tsarina Catherine called it an "Armed Nullity."

ARMSTRONG, JAMES (CAPTAIN).

Continental officer. North Carolina. Armstrong was a captain in the Second North Carolina on 1 September 1775, and colonel of the Eighth North Carolina on 26 November 1776. His unit was part of Lachlan McIntosh's brigade at Valley Forge in the winter of 1777–1778. He retired 1 June 1778. He later became colonel of a militia regiment and was wounded at Stono Ferry, South Carolina, on 20 June 1779.

Another James Armstrong was lieutenant of North Carolina Dragoons from October 1777 to January 1781. A third James Armstrong was from Pennsylvania and served in Lee's Legion.

ARMSTRONG, JAMES (QUARTER-

MASTER). (1748–1828). Continental officer. Pennsylvania. Born in Carlisle, Pennsylvania, on 29 August 1748, Armstrong was the son of John Armstrong, a member of the Continental Congress, and brother of John Armstrong, Jr., a future secretary of war. Armstrong attended the College of New Jersey (now Princeton) before studying medicine in Philadelphia. In 1769 he set up practice in Winchester, Virginia. Armstrong served as a medical officer and quartermaster of the Second Pennsylvania Battalion, starting on 20 February 1776. He was promoted to captain on 1 January 1779. The record is unclear, but he may have been captured at Dorchester, South Carolina, on 13 December 1781, remaining a

prisoner until the end of the war. It is certain that, after the war, Armstrong spent three years in England before returning to Carlisle in 1788. In addition to his medical practice, Armstrong served as a judge and represented his district in Congress from 1793 to 1795. In 1808 he accepted an appointment to the Cumberland County Court, holding that position until his death 6 May 1828.

ARMSTRONG, JOHN, JR. (1758–1843). American officer; prominent postwar politician. Pennsylvania. Armstrong was born in Carlisle, Pennsylvania, on 25 November 1758, the son of John Armstrong and brother of James Armstrong. He was in his second year at Princeton in 1776 when he volunteered for the Continental army. As aide-de-camp to General Hugh Mercer, he was present when that officer was mortally wounded (3 January 1777) at Princeton. He then served Gates in the same capacity until the end of the war. Gates sent Armstrong to recall Benedict Arnold during the Second Battle of Saratoga (7 October 1777).

Major Armstrong composed the Newburgh Addresses (1783) calling upon Congress to issue the back pay owed to the army. The Newburgh Addresses were seen by many as a threat of mutiny, and political enemies used Armstrong's authorship against him throughout the remainder of his life. After the Revolution he had a long political career. He served as adjutant general of the Pennsylvania militia and as a U. S. senator from 1800 to 1804, as well as a minister to France from 1804 to 1810. His career culminated in his becoming secretary of war under President Madison in January 1813. Blamed for the failure of the expedition against Montreal and for the British capture of Washington, he was forced to resign. He married Alida Livingston, the sister of Robert R. Livingston in 1789. He died 1 April 1843.

ARMSTRONG, JOHN, SR. (1717–1795). Continental brigadier general; major general. Ireland and Pennsylvania. Born in County Fermanagh, Ireland, on

13 October 1717, Armstrong crossed the Atlantic to Pennsylvania in the 1740s, becoming surveyor for the powerful Penn family. Elected to the Assembly in 1749, he became a key figure in the development of western Pennsylvania. During the Seven Years' War Armstrong persuaded the Assembly to establish its first forts in the west, which he commanded. He also led the 300-man force that destroyed the Delaware settlement at Kittanning, in Pennsylvania, on 8 September 1756, driving that nation out of the war. He was the senior Pennsylvania officer in Brigadier General John Forbes' expedition to Fort Duquesne in 1758. Colonel Armstrong also served in Pontiac's War (1763), fighting no battles but burning many Indian villages.

Although an elderly man and suffering from chronic rheumatism, he was named a Continental brigadier general on 1 March 1776. General Armstrong took part in the successful defense of Charleston in June 1776, but as a troop commander at Haddrell's Point, in South Carolina, he did not engage the enemy. During the New Jersey campaign he was useful to Washington in trying to "stir up the people" in his part of Pennsylvania (around Carlisle) and in establishing magazines. Dissatisfied with the promotion of junior officers over his head, Armstrong resigned on 4 April 1777 and the next day was appointed general of the state militia. At Brandywine (11 September 1777) he commanded the Pennsylvania militia posted at Pyle's Ford, a point where no enemy threat was expected and where none materialized. At Germantown (4 October 1777) he led the militia that constituted the right flank of George Washington's complicated attack and, although he made contact with the enemy, the battle was lost before his command became seriously engaged. He was named major general on 9 January 1778, and held this militia rank the rest of the war. After the Wyoming "massacre" (July 1778) he led part of the relief forces sent to the scene but again saw no action. A member of Congress from 1778 through 1789 and from 1787 through 1788, he also held many local public offices. He was the father of John and James Armstrong. He died 9 March 1795.

ARNOLD, BENEDICT. (1741–1801). General in the Continental and British armies, traitor. Connecticut. Great-grandson of a Rhode Island governor, Benedict Arnold was born in Norwich, Connecticut, on

Benedict Arnold. *The American general who became one of the most notorious traitors in American history, in an etching by H. B. Hall.* THE LIBRARY OF CONGRESS.

14 January 1741. He had to abandon his education after his father, an alcoholic merchant, went bankrupt. In March 1758, Arnold ran off to enlist in a New York company. He deserted the following year, but through his mother's efforts was not prosecuted. In March 1760 he enlisted again, served briefly in upper New York, and again deserted. He made his way home alone through the wilderness and completed his apprenticeship as a druggist. After the death of his parents, the twenty-one-year-old Arnold sold the family property and went with his sister, Hannah, to New Haven, Connecticut, where he opened a shop to sell drugs and books. He became a successful merchant and started sailing his own ships to the West Indies and Canada. One of his activities was horse-trading, a business which took him to Montreal and Quebec. Like others who had the opportunity, Arnold undoubtedly engaged in smuggling as well. In 1767 he married Margaret Mansfield and fathered three sons in five years.

CONTINENTAL ARMY CAMPAIGNS

In 1766 Arnold became leader of the New Haven Sons of Liberty and was active in local Patriot politics, though his violent personality colored his reputation. He fought at least two duels and gained a reputation as a spendthrift and

philanderer. Having been elected a captain of militia in December 1774, Arnold reacted quickly to the "Lexington alarm." When New Haven's town leaders refused to issue arms and munitions to Arnold's company, he led his men in a raid on the armory, then marched his newly armed men to Cambridge, Massachusetts.

Almost immediately upon his arrival in the Boston lines, Arnold talked the authorities into letting him lead a bold enterprise to capture Fort Ticonderoga. The Massachusetts authorities appointed him a militia colonel on 3 May, and he traveled north ahead of his troops. He arrived at the fort just in time to find another group, the Green Mountain Boys under Ethan Allen, about to launch their own attack. Arnold attempted to bully his way into command, but was rebuffed, although Allen did allow Arnold to participate in the capture of Ticonderoga, on 10 May 1775.

Using captured boats, Arnold raided St. Johns, Canada, on 17 May, and on 1 June he was instructed by Massachusetts authorities to take temporary command of all American forces on Lake Champlain. On 14 May, Massachusetts sent a committee with instructions to put all American troops in Arnold's area under the command of a leader from Connecticut. Arnold took violent exception to being superseded and, after withdrawing with a body of supporters to the captured vessels off Crown Point, he defied the order and threatened to arrest the committee. Insulted by a fellow officer, Arnold "took the liberty of breaking his head." Arnold was finally persuaded to abandon his mutiny, and on 5 July he returned to Cambridge to face accusations of mishandling the funds that had been entrusted to him for the expedition. The Massachusetts legislature eventually paid the official expenses Arnold had incurred. Meanwhile, Arnold's wife had died on 19 June.

Arnold next marched to Quebec through the Maine wilderness with 1,000 men, from 13 September to 9 November 1775, and this contributed to his reputation as the "whirlwind hero." Joining with General Richard Montgomery's army, which had come up the St. Lawrence River, Arnold acted bravely in the attack on Quebec, 31 December 1775, in which he was seriously wounded in the knee and Montgomery was killed. Arnold was appointed brigadier general on 10 January. After spending a terrible winter laying siege to Quebec, Arnold surrendered command of his pathetic little army to David Wooster in April 1776. With the arrival of British reinforcements, the Americans retreated to Montreal, ravaged by hunger and smallpox the whole way. In May, Arnold led an effort to release the prisoners taken in the actions at the Cedars shortly before the Americans retreated from Canada.

Over the next few months, Arnold built a small navy on Lake Champlain, even while facing a court martial for plundering. At Valcour Island, he led his small navy in a remarkable action of great strategic importance against a larger British force. Though defeated, Arnold delayed

the British advance sufficiently to prevent their moving further south to Ticonderoga.

POLITICAL PROBLEMS

During this period Arnold maintained good relations with his superiors, Phillip John Schuyler and Horatio Gates, but he clashed with three junior officers. Captain Jacobus Wynkoop of the navy had been sent by Schuyler to take charge of the fleet on Lake Champlain. When Wynkoop challenged Arnold's authority as senior commander, Arnold had him arrested and, with the backing of Gates, removed. Arnold charged Captain Moses Hazen with negligence in handling the stores evacuated from Montreal, but Arnold made himself so offensive to the court-martial that the latter acquitted Hazen and ordered Arnold arrested. Major John Brown proved to be a more tenacious enemy than either Wynkoop or Hazen, and embroiled Arnold in a series of inquiries that were never resolved.

Arnold, meanwhile, had joined George Washington in New Jersey. On 23 December 1776 he was sent to Providence, Rhode Island, to help Joseph Spencer plan an operation to oust the British from Newport, a place they had just occupied. While in New England he was outraged to learn that, on 19 February 1777, Congress had promoted five officers to major general, but had neglected to include Arnold's name on the promotion list. He wrote Washington that Congress must have intended this as "a very civil way of requesting my resignation." Washington, who had not been consulted on this list and who had the highest opinion of Arnold, urged him to remain in the service while he attempted to have the injustice righted. Arnold was frustrated in his efforts to raise troops and supplies for the Newport operation, incensed by the failure of federal authorities to recognize his military accomplishments to date, and worried about the neglected state of his personal affairs at New Haven.

During this period, Arnold has been described as "sulking in his tent like some rustic Achilles," but an opportunity suddenly arose for him to display his daring leadership. On 23 April 1777, the British launched the Danbury Raid, aimed at a key American supply depot in Connecticut. Arnold did not arrive in time to prevent the British from burning Danbury, but his 400-man militia inflicted heavy losses on the enemy as they retreated to the coast. Again a popular hero, Arnold was promoted to major general on 2 May, but this did not remove his principal grievance: he was still junior in rank to the five officers who had been promoted over him on 19 February.

John Brown, also a good man at pressing a grievance, had meanwhile renewed his offensive against Arnold. On 12 May he published a personal attack on Arnold that ended with the prophetic words: "Money is this man's god, and to get enough of it he would sacrifice his country."

Exactly a month later, after Arnold had reached Morristown, Washington wrote Congress asking that a committee investigate the matters Arnold wanted settled: his public accounts, Brown's charges, and his seniority. In Philadelphia on 20 May Arnold sent Congress Brown's handbill of 12 May and reiterated the request for an inquiry. The Board of War was given the latter duty and on 23 May, reported that Brown's charges were groundless. Some delegates still wanted an accounting for \$55,000 of the \$67,000 Congress had advanced him for operations in Canada, but Arnold was unavailable to respond; he was sent on 14 June to take charge of militia forces on the Delaware, where the enemy started their perplexing maneuvers that preceded the Philadelphia Campaign.

Arnold returned to resume his arguments with Congress, but the same day that he finally submitted his resignation—11 July 1777—Congress received Washington's request that he be assigned to command the militia of the Northern Department in opposing Burgoyne's Offensive. Arnold asked that his resignation be suspended and headed north. On 8 August a motion to backdate Arnold's commission to 19 February was defeated in Congress by sixteen votes to six.

Arnold's first assignment in the north was to lead the relief forces that ended British general Barry St. Leger's expedition. He sided with Schuyler in the factionalism that rent the northern army, and was almost immediately at odds with Gates when that general succeeded Schuyler. In the first and second battles of Saratoga, 19 September and 7 October, he played a prominent and controversial part in the American victories.

Seriously wounded in the second battle of Saratoga, Arnold was incapacitated for many months. But Congress again was forced to acknowledge his contribution to the cause: they officially thanked him, along with fellow officers Gates and Benjamin Lincoln for the defeat of Burgoyne, and on 29 November they resolved that Washington should adjust Arnold's date of rank. A new commission made him a major general as of 17 February 1777, which finally gave him seniority over the five officers whose promotions on 19 February had so rankled him. The slate of his grievances now virtually erased, Benedict Arnold entered a new phase of his career. Because his leg had not healed sufficiently for him to lead troops in the field, he was directed on 28 May 1778 to take command in Philadelphia when the expected British evacuation took place. On 19 June he was in the city.

DESCENT INTO DISGRACE

Since Philadelphia was the seat of the state as well as the federal government, Arnold had two sets of civil authorities over him. Furthermore, the city was divided into factions: returning Patriots, Loyalists and collaborators,

and neutralists. Any military commander in such a situation would have trouble, but few could have gotten into it any faster than Arnold. Almost from the start he was suspected of using his official position for personal speculation. He heightened suspicion and alienated townspeople in all walks of life by ostentatious living that exceeded his known means of legitimate income. Joseph Reed, president of the Pennsylvania Council and of the state, presented Congress with eight charges of misconduct against Arnold in February 1779. Arnold immediately demanded an investigation, which cleared him of most charges and referred the rest to a military court. The prosecution was handled by Colonel John Laurance, and Arnold took charge of his own defense.

Although documents brought to light long after the trial prove that Arnold's dishonesty as the military commander of Philadelphia was far worse than the state authorities suspected, the prosecution was unable to assemble adequate evidence to support its case. Hence, Colonel Laurance had to resort to such charges as "imposing menial offices upon the sons of freemen of this state." There was more substance to the other three charges that were presented at the trial, although proof was lacking.

After hearing Arnold argue his case with admirable skill, on 26 January 1780 the court came as close as possible to exonerating him without insulting his accusers. Two of the charges were dismissed entirely. These were the allegation of imposing "menial offices" and the charge that he had purchased goods for personal speculation during a period in which he ordered all shops in Philadelphia to be closed. However, the court found Arnold guilty of improperly issuing a pass for his ship, the *Charming Nancy*, to leave the city while other vessels were temporarily quarantined, and he was also convicted of using public wagons for private purposes. The sentence for these offenses, however, was merely a reprimand from the commander in chief. Still positively disposed to Arnold, Washington's reprimand was written almost as a commendation, but Arnold was nonetheless furious that he did not receive a complete acquittal.

TURNING TRAITOR

Arnold did not wait to finish his protracted battle with the Pennsylvania authorities before making the decision that launched him into the adventure for which he is known to history. On 8 April 1779 he had married 19-year-old Peggy Shippen, daughter of a prominent Philadelphia merchant and suspected Loyalist. The next month Arnold took the first step in turning traitor to the Continental cause.

Using his influence to gain command of West Point in August 1779, Arnold conspired to hand the post over to the British the following month. The plot was soon discovered, however, and Arnold fled West Point aboard the British ship, the *Vulture*, on 25 September 1780. The British made

good their promise to reward Arnold for his efforts in their behalf, despite his failure to deliver West Point. He was commissioned as a brigadier general of the British Army and given the perquisites (including a pension) associated with that rank. He was also awarded £6,315 in compensation for the property losses he incurred in coming over to the Loyalist side. In the spring of 1782, Peggy Arnold was additionally awarded a yearly pension of £500, and £100 per year was eventually given to each of her children.

The British authorities assigned Arnold a military command, and he started raising a legion comprised of Loyalists and American deserters. After escaping an attempt by Sergeant John Champe to kidnap him in New York, Arnold led raids against New London, Connecticut, and in Virginia. Nonetheless, the British officers in America did not welcome this provincial traitor as a companion in arms, and the high command did not trust him. Furthermore, his recruitment efforts proved unimpressive. Deserters and Loyalists were plentiful, but even though Arnold offered a bounty of three guineas gold and the same food, clothing, and pay as British regulars, by the end of a year he had attracted only 212 of the 900 men his legion required. Although he enjoyed some success as a British commander, Arnold found his reception in London, where he arrived in early 1782, frosty at best. While the king and his ministers consulted Arnold on American affairs, they did not offer him the field command to which he felt entitled, and even other Loyalists in exile scorned the famous traitor.

LATTER YEARS IN EXILE

In the following years, Arnold entered into a number of commercial schemes. In 1785 he established himself as a merchant-shipper at St. John, New Brunswick, and re-entered the West Indies trade. After some initial success and the birth of an illegitimate son, John Sage, Arnold's fortunes soon faltered: his business was destroyed by a fire in 1788 and he returned to London in 1791 to try his hand at other ventures. On 1 July 1792 he fought a duel with the Earl of Lauderdale, who had accurately impugned Arnold's character during a debate in the House of Lords. Arnold shot and missed; Lauderdale held his fire and agreed to apologize. During the war with France, Arnold served as a privateer. Captured, he spent some time in a French prison, but eventually escaped. Later he helped to put down the Martinique slave uprising, but he again found himself returning to London on the verge of bankruptcy. He spent the last few years of his life seeking further preferment from the British government.

Arnold remains a highly controversial figure. Most military historians find him one of the finest field commanders in the Revolution, a leader capable of inspiring his men to truly heroic actions. Yet his lack of discretion, reckless leadership, and aggressive personal behavior undermined his effectiveness and destroyed a promising career.

ARNOLD'S MARCH TO QUEBEC.

13 September–9 November 1775. The forces Congress had ordered to invade Canada were already advancing north along the Lake Champlain-Richelieu River corridor when General Washington took steps in late August 1775 to increase the invasion's chances for success by launching a second expedition against Canada from his army at Cambridge. The proposed route up the Kennebec River and down the Chaudière to Quebec was well known. British engineer John Montresor had mapped and described it in 1761, making it seem a feasible avenue of approach, and Colonel Jonathan Brewer of Massachusetts had proposed using it in May 1775 to threaten Quebec. Washington and Benedict Arnold were aware of its difficulties, especially in winter, but agreed that the risks were worth taking. With winter approaching, it was essential to organize the expedition quickly. On 21 August, Arnold spoke with Reuben Colburn, a Kennebec boatbuilder who happened to be in Cambridge, about furnishing two hundred light bateaux that could be carried across the many portages that turned the series of lakes and rivers into an invasion route. Having carefully weighed the risks, on 3 September, Washington gave Colburn orders to build the bateaux, and two days later he issued in his general orders a call for volunteers.

ORGANIZATION OF ARNOLD'S COMMAND

Arnold's force of about 1,100 men consisted of three components. Captain Daniel Morgan led three companies of riflemen, his own Virginians and the Pennsylvania companies of William Hendricks and Matthew Smith. Ten New England companies were divided into two battalions, the first led by Lieutenant Colonel Roger Enos and Major Return Jonathan Meigs, both from Connecticut, and including the companies of Thomas Williams, Henry Dearborn, Oliver Hanchet, William Goodrich, and a man

known only as Scott. The second battalion was led by Lieutenant Colonel Christopher Greene from Rhode Island and Major Timothy Bigelow from Massachusetts, with the companies of Samuel Ward Jr., Simeon Thayer, John Topham, Jonas Hubbard, and Samuel McCobb. A detachment of fifty artificers, led by Captain Colburn, joined the expedition on the Kennebec. The staff included surgeon Isaac Senter, a surgeon's mate and two assistants, two adjutants, brigade major Christian Febiger, two quartermasters, and chaplain Samuel Spring. Five men accompanied the expedition as volunteers: Aaron Burr, Matthias Ogden, Eleazer Oswald, Charles Porterfield, and John McGuire.

Although Washington's general orders specified that the volunteers should be "active woodsmen and well acquainted with batteaus," only the riflemen had experience in extended outdoor living; the New Englanders were mostly farmers with little knowledge of the wilderness or of boats. While all the riflemen were eager volunteers, Washington had taken the precaution to order a draft if a sufficient number of New Englanders did not volunteer; in the event, compulsion did not have to be invoked. Just before the expedition was to leave Cambridge, however, some men refused to march until Washington gave them a month's advance pay. And in a not uncommon display of intercolonial rivalries, the captains of the riflemen refused to serve under Greene, a Rhode Islander, forcing Arnold to keep the riflemen together in a single division.

THE DEPARTURE

The riflemen led the march from Cambridge on 11 September, with the last companies of the force departing two days later. At Newburyport on 19 September the men boarded eleven coastal sloops and schooners and reached Gardinerstown, on the Kennebec below Fort Western, three days later, where Arnold found two hundred bateaux waiting. For Colburn, who had had eighteen days to build the bateaux after receiving Washington's order on the 3rd, it was a remarkable achievement, but the boats suffered from the speed of their construction. Made of green lumber (the only material available), many were poorly constructed and smaller than specified. Arnold accepted the boats, having no alternative, and ordered another twenty to be built. Colburn had also assembled flour and meat for the expedition and was able to furnish information about the route. His two scouts, Getchell and Berry, had gone as far as the Dead River and returned with ominous news that the British appeared to expect an invasion from this direction.

On 24 September, two reconnaissance parties left Fort Western (later Augusta, Maine) and started up the Kennebec, followed on succeeding days by the riflemen, Greene with three companies, and Meigs with four companies. Arnold set out with two companies on the 29th,

followed by Enos with one company. The column took two days to cover the first eighteen miles to Fort Halifax. The first significant portage was at Ticonic Falls, where the four-hundred-pound bateaux and about sixty-five tons of matériel were carried half a mile. Then came Five Mile Ripples (or Falls), the dangerous half-mile approach to Skowhegan Falls, the falls themselves, the Bombazee Rips, and the three Norridgewock Falls. To this point, the expedition had passed through a region dotted with settlements where some supplies and assistance could be procured; thereafter, the route was through the wilderness until they were well down the Chaudière into Canada. Having spent three days passing Norridgewock Falls, repairing their badly battered boats, and finding many provisions already spoiled by water, on 9 October the column pushed on to Curritunk Falls, the next major portage. On 11 October, Arnold and an advance element reached the Great Carrying Place, where eight miles of portage and four miles of rowing across three ponds took the expedition to the Dead River (the west branch of the Kennebec). Thirty miles of rowing up the Dead River took the men to the four-mile carry across the Height of Land that separated the watersheds of the Kennebec and the Chaudière, and then to a treacherous stream that meandered through swamps to Lake Megantic.

For many days before reaching the Great Carrying Place, it was apparent that the expedition faced hazards that had not been foreseen. First, no experienced woodsman would have considered the route passable for bateaux, particularly in winter. Second, Arnold had miscalculated the length of his march and food was running out. Finally, the weather was against them: at the outset it had been cold enough to take a toll on men who spent days struggling in the water to manhandle the boats past obstacles in the rivers, but the temperature dropped further, and continuous, heavy rains started falling. On Dead River on 21 October they were struck by a hurricane of historic proportions that swelled the river from sixty to two hundred yards in width.

THE DEFECTION OF ENOS

Morgan's riflemen were continuously in the van, except for 16–17 October, when they allowed Greene's three companies to take the lead, perhaps in order to pilfer flour from the New Englanders; Arnold ordered Morgan to stay at the head of the column thereafter. Greene's men had to camp and await resupply from the provisions supposed to be with Enos's three companies, which were bringing up the rear. The four companies of Meigs's third division followed Morgan, but when Enos caught up with Greene on 25 October, Arnold ordered these two commanders to send on only those men who could be given fifteen days' provisions and to send back the sick. After a council of war on the 26th, Greene's men staggered on

toward Quebec with a meager two and a half barrels of flour from Enos's stocks, whereas Enos started to the rear with about three hundred men from his own division plus stragglers and the sick from the other divisions. They reached the settlement at Brunswick fifteen days later. On 1 December 1775 a court-martial acquitted Enos of the charge of "quitting his commanding officer without leave." In April 1776 Major General John Sullivan defended Enos on the grounds that Arnold and his seven hundred men could not have gone on without the provisions sent forward from the last division, and Brigadier General William Heath joined twenty-four other field officers in a testimonial that Enos deserved "applause rather than censure" (Freeman, vol. 3, p. 574n). But many of Enos's contemporaries judged his defection "cowardly." He left the Continental service in January 1776 and served thereafter in the Connecticut and Vermont militias.

ARNOLD STRUGGLES ON

Up the flooded Dead River, over four and a half miles of portage to Seven Mile Stream, the gaunt survivors then floundered through icy swamps to find Lake Megantic. When Arnold's main body assembled on the Chaudière on 31 October, they had only a few bateaux left, several having been wrecked in the dangerous rapids and falls of this last river. "Our greatest luxuries now consisted of a little water, stiffened with flour," wrote Senter on 1 November. They killed and ate Captain Dearborn's pet Newfoundland dog that had hitherto survived the hazards of the wilderness. "Nor did the shaving soap, pomatum, and even the lip salve, leather of their shoes, cartridge boxes, etc., share any better fate." Arnold forged ahead with an advance party to the Canadian settlements and sent back provisions that reached his men on 2 November.

At St. Mary's the expedition left the river and marched north to reach the St. Lawrence at Point Levis, opposite Quebec, on 9 November 1775. Within a day, the aggressive Arnold had found Indian canoes and dugouts, acquired supplies of flour, and had the men prepare scaling ladders. He was ready to cross the mile-wide St. Lawrence, which was full of British naval craft, but the attempt was delayed by a gale that lasted until the 13th. Owing to the shortage of boats, only three-quarters of the small force got across the first night. The rest crossed the second night, bringing the scaling ladders. Arnold led them onto the Plains of Abraham, but since the British were alert to the American presence, he wisely decided against attempting an assault on Quebec. In a truly remarkable operation, Arnold had started from Fort Western with 1,100 men and led them in 45 days across 350 miles of wilderness to arrive at the gates of Quebec in midwinter. There was enough fight left in the 675 survivors to push across the St. Lawrence and throw Quebec's 1,200 defenders into considerable consternation. But Arnold's force could

do no more than blockade Quebec from the land side until 2 December, when Brigadier General Richard Montgomery arrived from upriver with 300 better-supplied American troops, the remnant of the force that had invaded Canada via the Champlain-Richelieu route.

NUMBERS AND LOSSES

Justin Smith says 1,050 men left Cambridge, about 50 men (Colburn's carpenters) joined on the Kennebec, and Arnold drew clothing for 675 survivors on 5 December. Ward found it "incredible that no more than 55 were lost." (The original 1,100 men minus the 675 survivors, minus the 300 men with Enos, minus the 70 men evacuated from Dead River, would leave 55 men dead, deserted, or turned back as escorts with the invalids.) "It seems probable that the arrivals were not much more than half of the original party," according to Christopher Ward (p. 450n). The surviving journals, twenty of which were edited by Kenneth Roberts, give ample testimony to the hardships endured by the expedition, but historians have noted with some skepticism the ability of men to keep a record of their suffering. Ward has written: "Probably no other expedition of similar length made by so few men has produced so many contemporary records" (p. 448).

ARNOLD'S RAID IN VIRGINIA SEE *Virginia, Military Operations in.*

ARNOLD'S TREASON. May 1779–25 September 1780. Early in May 1779 Major General Benedict Arnold, then military commander at Philadelphia, decided to offer his services to the British. He sent for Joseph Stansbury, a Loyalist whose mild nature and cautious conduct had enabled him to continue living in the city, and said he was ready either to join the British outright or to undertake secret dealings. With the help of a New York City Loyalist, the Reverend Jonathan Odell, Stansbury met on 10 May with Captain (later Major) John André, an aide to General Sir Henry Clinton. The British accepted Arnold's offer and decided it would be best for him to remain in his post in the Continental army; meanwhile, secret channels were established for correspondence between Arnold and André through Stansbury. Arnold started sending information almost immediately. He used the code name "Moore" during most of the sixteen-month conspiracy.

The nineteen-year-old Peggy Shippen, whom the thirty-eight-year-old Arnold had married on 8 April 1779, was a partner in his treason from the beginning. There is no reason to believe, however, that she instigated it or that Arnold was won over by British agents. Arnold's defection came after a long series of perceived grievances coupled with a need for money.

Arnold initially demanded ten thousand pounds regardless of his specific service to the British. Clinton rejected this proposal, instead suggesting that Arnold accept a command in the British army. Negotiations broke down at this point but were revived in May 1780, when Arnold was involved in the drawn-out court-martial for his corruption in Philadelphia. Meanwhile, he had been working to get command of West Point, which Clinton had indicated the previous year was of particular interest to the British. On 15 June, Arnold opened communication with General Wilhelm Knyphausen, who was in temporary command at New York City. Though he had not yet received any promises from the British, Arnold began sending valuable information, including that French General Jean Rochambeau's expeditionary force was expected soon, this intelligence persuading Knyphausen to launch the Springfield, N.J., raid of June 1780. Upon Clinton's return, Arnold pressed him for an agreement on the price: he wanted ten thousand pounds and another ten thousand pounds should he successfully hand over West Point to the British, plus an annual pension of five hundred pounds. Clinton agreed to pay Arnold twenty thousand pounds if the British got possession of West Point, its garrison of three thousand men, its artillery, and its stores. He would not agree to Arnold's demand for ten thousand pounds "whether services are performed or not," nor to an annual pension, but he did promise that if the plot failed, he would not be "left a victim."

ARNOLD AT WEST POINT

Meanwhile, however, Arnold sent the British bits and pieces of information, including “innocent confidences” to his wife in Philadelphia, who relayed them through Stansbury to Odell to André. Since George Washington and Rochambeau were working out plans for an attack on New York City, this intelligence was extremely valuable. As late as 1 August, Arnold was slated to command a wing of the allied army in this campaign, but he pleaded physical disability (his three-year-old wound), and on 3 August, he received command of West Point. On 5 August, Arnold wrote the British from West Point that the departure of Continental troops had reduced the garrison to fifteen hundred Massachusetts militia and that these were “in want of tents, provisions and almost everything.”

Arnold's new command comprised not only West Point proper but also Stony Point and Verplanck's Point some ten miles to the south; the outpost at Fishkill somewhat less than the same distance to the north; and the infantry-cavalry force at North Castle, which was roughly the same distance east of Verplanck's. Even while setting out plans to strengthen these posts, Arnold began preparations for handing them over to the British. Instead of establishing headquarters at West Point, he selected the house of a Loyalist, Colonel Beverley Robinson, across the river. Over the objections of Colonel John Lamb, who commanded the West Point garrison, Arnold detached two hundred men from that place to cut wood under the direction of Colonel Udny Hay, who commanded at Fishkill; Lamb was particularly critical of this weakening of his force because he had already sent Hay two hundred militia for guard duty. Although Arnold did not take up or partially dismantle the chain across the Hudson that had been laid to block enemy ships, he accomplished this end merely by neglecting necessary repairs.

Arnold also set up a net of secret agents. He promptly established contact with Joshua Hett Smith, who lived a short distance below Kings Ferry in the country house of his brother, William, the royal chief justice of New York who was a refugee in New York City. Joshua was known as an active Whig, and while Robert Howe commanded at West Point, he had handled the latter's secret agents. Arnold met Smith in Philadelphia, and Howe may have suggested that Arnold use him for intelligence work. Smith offered the use of his home as an overnight stop for Peggy Arnold on her trips to visit her husband.

Arnold's intimacy with Smith was one of several factors that created a tense atmosphere in his military household. Colonel Richard Varick and Major David Franks did not conceal their disapproval of their chief's dealing with a man whose brother was a famous Loyalist; yet until the end they never suspected that Arnold was up to anything more dishonorable than profiteering. In fact,

Arnold was using profiteering as a cover plan for his business of treason.

In late August the conspirators worked out the following scheme: Colonel Robinson would request a meeting with Arnold ostensibly to discuss arrangements about the Loyalist's household property; John André would come along, and an opportunity would be found for him to discuss with Arnold plans for the surrender of West Point. Clinton's emissaries would use the armed sloop *Vulture*, which was regularly stationed at Spuyten Duyvil and occasionally sent boats up the Hudson on reconnaissance. After unsuccessful attempts to meet on 11 and 20 September, Smith was rowed to the *Vulture* before midnight on 21 September and returned with a certain “John Anderson” for a clandestine meeting between that person and Arnold. “Anderson,” of course, was John André. As far as Joshua Smith knew, however, he was a merchant who wore a British army officer's blouse under his blue topcoat as a pretense.

By the time Arnold and André had completed their conference in the woods (at about 4 A.M.), the men who had rowed André and Smith ashore had become suspicious and refused to make the return journey. André therefore went to Smith's house, about four miles away, to wait until the following night. At around dawn, however, Colonel James Livingston, who commanded American forces in this area, on his own initiative attacked the *Vulture* with two cannon he had moved to Tellers Point on the east shore. Arnold and André watched the shelling from a window of Smith's house, and after the battered *Vulture* finally managed to escape downstream, they decided that André would have to make his escape overland.

ANDRÉ'S ESCAPE ATTEMPT

André was getting in deeper and deeper. Although his going ashore under an assumed name was a risk he had accepted from the start, Clinton had prescribed that he would neither go in disguise nor enter the enemy lines, so that he not be deemed a spy if caught. Clinton also later insisted that he had ordered André not to carry any papers. But at Arnold's insistence, André was to travel through American lines carrying plans of the fortifications of West Point. According to André, Arnold made him put the papers between his stockings and his feet. Arnold prescribed that Smith act as guide, and he made out passes that would serve either for a boat trip to Dobbs Ferry—the route André expected to be followed—or to get “John Anderson” through the American guards at White Plains.

Arnold left in his barge to return to Robinson's house. Smith accompanied him to Stony Point and then returned to inform André that the overland route would be used. Whether this decision was on Smith's own initiative or on instructions from Arnold, the young British officer was surprised and alarmed, but he had no choice. Had Smith

Benedict Arnold. A two-faced figure representing Benedict Arnold is paraded through the streets of Philadelphia in this broadside published in 1780. THE GRANGER COLLECTION, NEW YORK.

known who “John Anderson” really was, he might have decided differently, for although the water route was actually no safer than the one overland, it had the essential advantage of not requiring that André remove his uniform. Smith and “Anderson” stopped for a drink with some officers at Stony Point, crossed Kings Ferry, visited Colonel Livingston at Verplanck’s, and stopped for the night near Crompond (about eight miles from the river). André had intended to ride straight on to White Plains, but a suspicious militia captain pointed out the dangers of meeting Loyalist partisans.

Before dawn on 23 September, André and Smith moved on. When they reached the vicinity of Pine’s Bridge over the Croton River, André was left to cover the remaining fifteen miles alone; he was now beyond the normal range of Patriot patrols (but had Arnold’s pass in case he did meet with any such patrols), and Smith did not want to run the risk of meeting a Loyalist patrol. At Pleasantville, André learned that rebel patrols were on the road ahead, so he turned toward Tarrytown. At about 9 or 10 A.M., he was stopped by three men at the bridge just outside the latter place. When he was challenged by John Paulding, Isaac Van Wart, and David Williams, André made the mistake of assuming they were Loyalists. He did not produce his pass until after they had decided to search him. These three men were volunteer militiamen operating under a recent New York law permitting them to claim property found on a captured enemy. While the loftiest of patriotic motives were subsequently attributed to their actions, their real interest probably was loot.

The prisoner was taken to North Castle, where Lieutenant Colonel John Jameson commanded American troops. Arnold had previously issued instructions that a

“John Anderson” might come into the lines from New York City and had ordered that this person be sent to his headquarters on the Hudson. Jameson was puzzled by the fact that “Anderson” had been brought to him from behind the lines, and also by the papers, which he subsequently characterized as being “of a very dangerous tendency.” The American outpost commander devised an interesting compromise decision: he sent the prisoner to Arnold, as called for by his instructions, but sent the papers to Washington, who was believed to be around Danbury en route to Peekskill.

Major Benjamin Tallmadge, head of Washington’s intelligence service, reached North Castle shortly after André’s departure. After speaking with Jameson, Tallmadge immediately suspected the truth. Although he could not talk Jameson out of reporting the capture to Arnold, Tallmadge did succeed in having “John Anderson” called back. When the latter returned to North Castle and learned that the incriminating papers had been sent to Washington, he revealed his true identity. André did not mention his connection with Arnold but wrote Washington that he had come between the lines to “meet a person who was to give me intelligence” and had subsequently been “betrayed . . . into the vile condition of an enemy in disguise within your posts.”

But Jameson’s messenger had not found Washington and returned to North Castle, only to be sent on to Robinson’s house, to which Washington was known to be traveling. Earlier in the day the other messenger, having returned with André, departed with Jameson’s report to Arnold. It was a race to see whether Washington or Arnold would get the word first, but for some reason neither messenger reached Robinson’s house until Monday morning, 25 September.

ARNOLD ESCAPES

On 25 September things happened fast. At about 9 A.M. two officers from Washington's party reached the Robinson house to say he would be late. Arnold received Jameson's first message while at breakfast. Arnold told the militia lieutenant who brought it not to say anything to the others and, without showing his alarm, went upstairs to give Peggy the bad news before he made his own escape. He was coming back downstairs when Franks informed him that Washington was about to arrive. Arnold ordered a horse, left word for Washington that he had urgent business at West Point, hurried to his barge, and started down the Hudson to the *Vulture*.

Washington arrived at about 10:30 A.M. with a party that included Lafayette, Henry Knox, and Alexander Hamilton. After eating breakfast, they were rowed over to West Point to inspect the works and meet Arnold. Franks then learned about the message from Jameson and the fact that the bearer had been ordered to keep quiet about it. Varick and Franks became suspicious but agreed that doubting their commander was "uncharitable and unwarranted," as Varick later explained. Even when they heard that Arnold had headed down the river and not across to West Point, they were not alarmed.

Peggy Arnold distracted the household's attention with a bizarre performance. She sent for Varick and hysterically accused him of ordering her child killed. Varick reported that she behaved like an insane woman, "her hair dishevelled and flowing about her neck" and too scantily dressed "to be seen even by gentlemen of the family." She fell on her knees, he said, "with prayers and entreaties to spare her innocent babe."

Washington returned to the Robinson house at 4 P.M., already beginning to have vague misgivings about Arnold's long absence, and saw the first set of papers forwarded by Jameson with a note that these had been found on a man called John Anderson. The documents included a summary of the army's strength, a report of the troops at West Point and vicinity, an estimate of the forces needed to garrison the defenses properly, a return of the ordnance on hand, the plan of artillery deployment in the event of an alarm, a copy of the minutes Washington had sent Arnold on an important council of war held 6 September, and a report by Arnold on the defects of the West Point defenses. Washington was then handed the letter identifying "Anderson" as John André. Told that Arnold had received a message at the breakfast table just before his sudden departure, Washington knew the worst. Although Arnold had more than six hours' head start, Washington sent a detachment under Hamilton's command down the Hudson in an effort to intercept the traitor. Before Hamilton could return from Verplanck's Point to confirm the traitor's escape, Washington was given a letter written by Arnold aboard the ship and sent

ashore under a flag. "Love to my country actuates my present conduct," said this astounding communication, which was the start of a long apologia. Peggy was "good and innocent as an angel," he lied, but added a truthful footnote saying that Varick, Franks, and Smith "are totally ignorant of any transactions of mine that they had reason to believe were injurious to the public."

Meanwhile, Washington had to see immediately to the defense of West Point, which was dangerously exposed to a possible British attack. He recalled all the detachments Arnold had sent from the post and ordered General Anthony Wayne to march as quickly as possible to reinforce West Point. Wayne acted with typical alacrity, rushing his veterans sixteen miles through the night in just four hours.

ANDRÉ'S FATE

With West Point secured, Washington ordered André brought under heavy guard to Robinson's house. He then ordered Colonel Livingston, commandant at Kings Ferry, brought to him for questioning, and Colonel Lamb was sent to command Livingston's important post. Livingston's innocence was quickly established. Meanwhile, Washington had no alternative but to tell Varick and Franks to consider themselves under house arrest, a precaution they accepted without resentment. Lieutenant Gouvion was sent to Fishkill to arrest Smith, who was found and hurried on to Robinson's house, where he arrived before 8 P.M. on 25 September. From this glib and voluble individual, Washington finally was able to get details from which he could see Arnold's conspiracy with some perspective. He realized that but for "a most providential interposition" that led to André's capture, Arnold would have delivered a vital American citadel to the enemy.

Major John André reached Robinson's house the morning of the 26th after a long night ride in the rain with a strong escort of dragoons commanded by Tallmadge. Washington declined to see André, but he did get the details of his capture and of the disagreement between Jameson and Tallmadge as to how this should be reported. André was then sent to West Point, taken by barge to Stony Point on the 28th, and imprisoned at Mabie's Tavern in Tappan. Smith accompanied him, but the two were not allowed to communicate.

On Friday, 29 September, a board of officers met to examine André as speedily as possible and consider the appropriate punishment. Nathanael Greene was president of the board that included Major Generals Alexander, Lafayette, Steuben, St. Clair, and Robert Howe and Brigadier Generals James Clinton, John Glover, Edward Hand, John Stark, Samuel Parsons, Henry Knox, and Jedediah Huntington. The only record of the trial is the abstract made by John Laurance. The board interrogated André and then examined letters from Beverley Robinson,

Arnold, and Sir Henry Clinton. The most damning testimony was André's honest admission that he could not pretend that he came ashore under a flag.

The letters, on the other hand, insisted that André had come ashore under a flag, had acted on Arnold's orders while within the American lines, and therefore could not be considered a spy subject to the usual penalty. "The unhappy prisoner gave us no trouble in calling witnesses," commented Steuben to an aide, "he confessed everything." After the single day's hearing, the board concluded that André's coming ashore "in a private and secret manner" and his subsequent movements behind the American lines "under a feigned name and in a disguised habit" made him a spy and that he should be executed. Washington ordered that André be hanged at 5 p.m. on 1 October. At about 1 p.m. of 1 October, Washington received Sir Henry Clinton's request for a delay until Major General James Robertson and two others could arrive "to give you a true state of facts." Although Washington suspected that Clinton had nothing to add to the case, he postponed the execution until noon of the next day. André appealed to Washington to be shot as a soldier and not hanged. But Washington could not grant this request, for as Washington told Congress, André was either a spy to be hanged or a prisoner of war who could not be executed. Any lessening of the sentence, Washington felt, would call the justice of his conviction into question. Washington, who not surprisingly felt personally betrayed by Arnold, an officer he had long favored, hoped to exchange André for Arnold. General Robertson, Clinton's emissary, met with General Greene but offered no extenuating facts, presenting instead what, in effect, was a plea that André be released as a personal favor to Clinton. He also dismissed out of hand the possible exchange of Arnold for André. He did hint, however, at retaliation if André was hanged.

John André was hanged before noon on 2 October. He was allowed to wear his full dress uniform and strode bravely to the scaffold. Major Tallmadge, who had become friendly with André, stood at his side "entirely overwhelmed with grief," he wrote, "that so gallant an officer and so accomplished a gentleman should come to such an ignominious end." Tallmadge, like most officers on either side of the conflict, blamed Arnold for André's death. André's last words were, "I pray you to bear me witness that I meet my fate like a brave man."

Arnold's treason had an immediate and dramatic impact on American public opinion. A patriotic revival competed with fears of further conspiracies and betrayal. Crowds dragged effigies of Arnold through the streets of nearly every American city and town. His name became, and remained, a byword for corruption and treason as well as a negative standard by which every other officer could measure his commitment to the cause. At the same time, suspicious rumors circulated about the reliability of any

The Unfortunate Death of Major André. John André, a young British officer and aid to General Henry Clinton, was hanged as a spy by the Americans in 1780. André's execution is depicted here in a 1783 engraving by John Goldar. THE LIBRARY OF CONGRESS.

officer with a connection to the Loyalists. The British, meanwhile, hoped that these rumors were accurate, trusting that Arnold was just the first of many American officers and officials who would regain their reason and return to obedience to the crown. Arnold, however, had few imitators.

Colonel Varick demanded a court of inquiry and on 2 November was unanimously cleared of any suspicion. Franks testified but was not himself suspected of any complicity. Although Philip Schuyler and Robert R. Livingston had used their influence to help Arnold get the assignment to West Point, neither was suspected of treason. Joshua Smith was acquitted by a court-martial but was subsequently imprisoned by state authorities. Those three dubious patriots, Paulding, Van Wart, and Williams, were each given the thanks of Congress, a silver medal, and an

annual pension of two hundred dollars in specie. When Paulding applied to Congress in 1817 for an increase, former Major Benjamin Tallmadge, then a member of the House of Representatives, presented evidence (based on his interrogation of André after the capture) that the heroes had been motivated by greed and not patriotism and had been more than compensated for their accidental contribution to the American cause.

ARTICLES OF CONFEDERATION.

Adopted by Congress 15 November 1777; ratified 1 March 1781. Proposed by Richard Henry Lee on 7 June 1776 when he offered his resolution for independence, the idea of confederation was then studied by a thirteen-member committee. A month later, on 12 July 1776, it presented the “Articles of Confederation and Perpetual Union” to Congress. Principally the work of John Dickinson, the articles proposed a loose union, in which the principal powers granted to Congress were exclusive authority to declare war and make peace, to conduct foreign relations, to provide central direction of the war effort, to resolve disputes among the states, and to provide for the disposal of western lands. After more than a year of intermittent debate, the thirteen articles were formally

adopted on 15 November 1777 and sent two days later to the states for ratification. Congress adopted the articles on the basis that states would pay their share of governmental expenses, especially for wartime expenditures, in proportion to their land area. Ratification was delayed by Maryland because it refused to act until states with western land claims (the so-called “three-sided states”) ceded those claims to the United States. Those lands would later be sold to pay off the national debt. Virginia yielded on 2 January 1781, Maryland signed on 27 February, and final ratification took place 1 March 1781. Ratification formally dissolved the Second Continental Congress, and on 2 March the delegates sat for the first time as “The United States in Congress Assembled.” By then, the extraordinary strain of the war effort had shown the need for a more powerful central government, especially in the matter of the power to levy taxes. The articles were obsolescent before they were ratified.

The United States were governed under the Articles of Confederation until the ratification of the Federal Constitution on 21 November 1788. On 10 October 1788 the last Congress under the Articles transacted its last business, and on 4 March 1789 the first Congress under the Constitution met in New York City.

ARTIFICERS. Artificers provided important logistical support for the field armies. There were two principal types of these soldier-craftsmen. Artillery artificers performed many of the functions of a modern ordnance department. These skilled artillery technicians and

laborers operated military depots and even accompanied troops in the field, performing vital services as gunsmiths, wheelwrights, and blacksmiths, among other crafts. Quartermaster artificers constructed fortifications and barracks when the army was stationary, and worked as wagonmasters and bateauxmen to make it mobile. Companies were scattered among the field armies and in depots across the states.

Separate companies and smaller detachments of artificers existed from the earliest days of the Revolution. No entire regiment ever took the field, although several schemes were put in place to organize the companies into regiments for administrative purposes. On 16 January 1777, Washington ordered Colonel Benjamin Flower to raise an artillery shop company (at York, Pennsylvania), a field support company, several depot companies, and a laboratory company to manufacture ammunition. The companies raised later that year by Colonel Jeduthan Baldwin were quartermaster artificers, eleven companies of which (mostly from Connecticut) were in service by 1779. Plans to “regiment” these units were never carried out, and an effort to form a regiment of both artillery and quartermaster artificers in 1781 also failed.

ARTILLERY OF THE EIGHTEENTH CENTURY. Gunpowder was invented in China and in widespread use in Europe by the end of the fourteenth century. It was used almost exclusively to provide the explosive force that enabled large, heavy, and cumbersome artillery pieces to propel large projectiles—initially stone, later cast iron—over relatively short distances. It took many improvements in the strength of metals and the explosive force of gunpowder to make it practical to field smaller and more mobile projectile weapons, the most important of which were crew-served small artillery pieces and the personal firearms of the foot and horse soldiers. A notable advance in artillery occurred in the first decade of the seventeenth century, when gun founders working for the Swedish king, Gustavus Adolphus (1594–1632), cast artillery tubes that were both sufficiently strong and

lightweight to be effective and mobile. Where artillery had once been limited to the slow rhythms of the attack and defense of fortifications, now it could be brought to the battlefield with often devastating effect. At Breitenfeld, in 1631, Gustavus proved the soundness of his ideas and marked the birth of true field artillery by using light guns to smash the Spanish infantry squares. Gunners remained civilian technicians until 1671, when Louis XIV of France raised the first artillery unit and established schools to teach his troops how best to use the weapons in the field. But French artillery officers did not receive military rank until 1732, and in some countries drivers were “contract civilians” as late as the 1790s.

In North America, where distances were enormous by European standards, there was no road network over which artillery pieces could be transported. Consequently, most artillery used during the Colonial Wars was waterborne, with its use concentrated in defensive fortifications and on warships at sea. Americans, for whom using artillery was a technical challenge and an almost unsupportable expense, displayed initiative and ingenuity when they turned French cannon captured in an outlying fortification against Louisburg in the siege of May–June 1745. True field artillery was used on only a handful of American battlefields down to 1775, and even then it amounted only to small artillery pieces being used mainly as antipersonnel weapons.

Americans began their war for independence with only the motley assortment of cannon (some thirteen different calibers), projectiles, and gunpowder that was in the hands of the colonial militia, plus the prospect of what they could capture from British forts and ships. The British sought to confiscate what little artillery the Americans had, because even the smallest artillery pieces could wreak havoc on soldiers standing shoulder-to-shoulder several ranks deep in the formations required by the linear tactics of the period. General Thomas Gage, for instance, ordered raids to Salem, Massachusetts, on 26 February 1775, and to Lexington and Concord on 19 April, to capture ordnance reported to be in the possession of the rebels. At the start of the war, Americans had no tubes of a sufficiently large size to be useful as siege guns, a significant handicap for the New England army facing off against the British in Boston. The ordnance stored at Fort Ticonderoga was thus of vital importance. In an isolated interior location and guarded by only a few British soldiers, it was relatively easy to take possession of. Once Henry Knox solved the problem of how to transport those heavy guns overland from Ticonderoga to the coast, Washington could begin to formulate the plan that drove the British from Boston. At Philadelphia as early as 1775 Americans tried to remedy their lack of artillery by casting cannon and making gun carriages, but their industrial infrastructure was insufficiently developed to make possible the rapid production of large numbers

of tubes. Some French field pieces—made surplus to French requirements by the development of the Gribeauval system—were brought to America during the war.

Britain's ability to supply its armies with artillery far outstripped the poor American efforts, and, moreover, the guns were delivered into the hands of officers and men who drew on a wellspring of experience and tradition in using these weapons. The Royal Regiment of Artillery provided trained gunners, whose officers were schooled in the science of their profession at the Royal Military Academy at Woolwich. Sir William Howe, for example, entered the battle of Long Island in August 1776 with three battalions of gunners and seventy-two guns, completely overmatching the inexperienced American artillerists. The British artillery hero of Minden, William Phillips, made effective use of his guns during Burgoyne's Offensive, particularly at Ticonderoga in July 1777, and at the first battle of Saratoga on 19 September 1777, proving that artillery could be moved by inland waterways well into the interior. The motto of British artillery was "Ubique" (Ubiquitous); British gunners lived up to it by bringing their guns into action at nearly every important battle of the war.

American gunners had to develop their own traditions from scratch. Richard Gridley, an American veteran of the last colonial wars who had made his reputation by laying the guns at the siege of Louisburg in 1745, was the first commander of American artillery, at the siege of Boston (19 May 1775). He was replaced on 17 November by portly, twenty-five-year-old Henry Knox, who had acquired his basic knowledge of artillery from the books he sold at his Boston bookstore and who gained practical experience by watching Gridley for six months. Knox made his reputation bringing the cannon from Ticonderoga to Boston and, during the next eight years, eventually as chief of artillery, did a remarkable job of turning the artillery from the slenderest beginnings into the most proficient American combat arm. American gunners generally well-served their pieces up to the limits of their sometimes shoddy equipment. Their success in keeping their powder dry and bringing their guns into action made a notable contribution to the crucial American victory at Trenton (26 December 1776). There was only one regiment of Continental artillery during 1775 and 1776, although several states raised artillery companies for local service. John Lamb and Alexander Hamilton, for example, began their military service in companies of artillery raised by New York State. The four numbered regiments of Continental artillery raised in the three-year army of 1777 folded together gunners from both of these sources. Colonel Charles Harrison (1st Regiment) had commanded the Virginia state artillery regiment. Colonel John Lamb (Second Regiment) had led a New York artillery company on the Canada invasion. Colonel John Crane (Third Regiment) had served under Gridley

and Knox at the siege of Boston. Colonel Thomas Proctor (4th Regiment) had been a major of the Pennsylvania Artillery Battalion during 1776. Colonel Benjamin Flower supervised a regiment of artillery artificers, operating as companies and smaller detachments, that provided vital technical support for the field artillery. As hostilities wound down, the four field regiments were consolidated into a "Corps of Artillery" under Colonel John Crane (17 June 1783 to 3 November 1783), and with Major Sebastian Bauman, the second in command, in charge until 20 June 1784. By its resolution of 4 June 1784 Congress reduced the army to eight privates guarding military stores, including the surviving artillery pieces, twenty-five at Fort Pitt, and fifty-five at West Point under a captain.

The guns themselves varied widely in size, weight of tube, weight of projectile, and purpose. There were three broad categories: guns, howitzers, and mortars. Guns were usually designated by weight of projectile, howitzers and mortars by width of bore. Almost all cannon used on the battlefield were made of brass, an expensive alloy but one that could be cast with greater reliability than iron. Guns threw solid, round shot (a kinetic energy projectile) over a relatively flat trajectory, with weight of projectiles ranging from three pounds to twenty-four pounds, although twelve-pounders were normally the heaviest in field service. Solid shot could knock down masonry walls, penetrate the sides of wooden ships, and mow down men standing in rank and file. In the early 1770s the British had developed sturdy, lightweight, three-pounder gun tubes, called grasshoppers, that could be broken down and transported on packhorses to increase their already extreme mobility. Howitzers and mortars generally threw hollow, explosive (chemical energy) projectiles at a higher arc and thus shorter range; they were developed for use in siege warfare, where the projectiles—"bombs" and "carcasses"—would go over the fortification wall and explode among the gunners sheltering behind the parapet. Howitzers, too, were field artillery, up to a bore diameter of about five and one-half inches. Both guns and howitzers could fire antipersonnel ammunition at close range, typically grape shot (a set of subcaliber solid shot stacked around a center pintle and held together with a rope net) and case shot (subcaliber scrap, musket balls, or slugs stacked in a tin cylinder). On the axle of the two-wheel gun carriage flanking the gun tube were "side boxes" holding several rounds of ready ammunition. Each tube was attached by the trail of its carriage to a limber, drawn by a team of horses, six or eight if available. (Oxen could haul heavier loads—Knox used oxen to bring the cannon from Ticonderoga to Boston—but they were too slow and vulnerable for battlefield service.)

On the battlefield itself, a crew of eight to ten cannoners manned drag ropes and trail spikes to

maneuver the guns into position, accomplished the intricate dance of loading gunpowder (mostly in bags of cloth or paper, but sometimes ladled loose down the barrel) and projectile down the muzzle of the piece, and set it in position to fire at the target. All artillery was muzzle-loading and smooth-bore. Aiming was an art, accomplished by peering down the length of the tube and quickly making a rough calculation that combined distance to the target, weather conditions, quality of powder, and weight of projectile. Traverse was accomplished by manually shifting the entire carriage; changes in elevation were done by inserting a triangular wooden block, called a quoin, under the rear of the barrel. The piece had to be re-aimed after each shot, since there were no recoil mechanisms to return it to its original position after firing. The maximum effective range of artillery—even large-caliber guns firing solid shot—was about 1,200 yards (a mile and a half), and with untrained gunners using imperfect weapons and ammunition the range was about 400 yards. Because aiming was so imprecise, gunners invariably tried to minimize range before opening fire. Rates of fire varied with the pace of operations and, of course, the skill of the gun crew. The maximum rate of about eight rounds an hour could not be long sustained, both because of crew fatigue and overheating of the barrel.

The impact of artillery on the outcome of the war is sometimes difficult to assess. Probably the greatest service was rendered by heavy guns during siege operations. British gunners scored a notable success in destroying the American defensive lines at Charleston, South Carolina, in May 1780, and American gunners demonstrated a high level of skill in siege operations at Yorktown in October 1781. The mere presence of heavy artillery could be as important as the actual operation of the guns: Washington forced the British to evacuate Boston in March 1776 without firing a shot from Dorchester Heights. Artillery could keep an enemy at bay, but inaccuracy at long range limited its impact. During the siege of Boston, the British delivered one cannonade at short range that inflicted only one slight casualty in the American lines. British gunners did succeed in damaging Roxbury, at a range of about a mile from their positions at Boston Neck. When they lobbed mortar shells into Cambridge, more than two miles away they did little damage owing to faulty ammunition and extreme range. Field artillery was almost always used for infantry support, and again its effectiveness depended on the skill and audacity of the gunners, the suitability of their pieces, and the quality of their supplies. Sometimes artillery pieces played an important direct role (as at Trenton); as often, the sound of one's own artillery must have been an enormous fillip for the infantrymen, regardless of the actual damage the guns inflicted on the enemy.

ASGILL, CHARLES. (1763–1823). British officer in the Huddy-Asgill affair. The only son of Sir Charles Asgill, first baronet and self-made banker, he became an ensign in the First Foot Guards on 27 February 1778. He became a lieutenant in the same regiment with the army rank of captain on 3 February 1781. Subsequently sent to America, Asgill was taken prisoner at Yorktown in October. On 3 May 1782 Washington ordered Moses Hazen to choose by lot a British captain for execution if Richard Lippincott, Captain Joshua Huddy's executioner, was not put to death. A British court-martial acquitted Lippincott on the ground that he was obeying the orders of the Board of Associated Loyalists; but when Clinton sent Washington the proceedings and his strongly worded disavowal of the execution of Huddy, Washington was partly mollified. However, Asgill was not finally released until his mother appealed to the French foreign minister, the comte de Vergennes, who—at the request of Louis XVI and Marie Antoinette—approached Washington. Washington then passed the French request to Congress, which on 7 November 1782 passed an act authorizing Asgill's release. He was then returned to Britain on parole.

Asgill succeeded to his father's baronetcy on 15 September 1788. After the outbreak of war in 1793,

he served in Flanders and Ireland and in staff posts before reaching the rank of full general on 4 June 1814.

ASHE, JOHN. (1720–1781). Politician and brigadier general in the militia. North Carolina. Born in North Carolina, perhaps in 1720, John Ashe served as an officer during the Seven Years' War. A member of the legislature from 1752 to 1775, Ashe was speaker of the house from 1762 to 1765. He played a conspicuous part in the Stamp Act crisis, twice leading mobs that prevented the distribution of the royal stamps. Siding with the government against the Regulator movement in North Carolina in 1771, he was an officer in Governor Tryon's army that defeated the Regulators at Alamance on 16 May 1771.

At the start of the civil war in the Carolinas that characterized the Revolution in the South, Ashe became a leader of the Sons of Liberty. He organized and drilled the Patriot militia of New Hanover County, and led a mob to enforce the boycott of British goods. On 17 July 1775, Ashe, Robert Howe, and Cornelius Harnett led the militia into Fort Johnston in a futile attempt to seize the royal Governor, Josiah Martin.

In Sept. 1775, the legislature selected Ashe's brother-in-law, James Moore, as colonel of the state militia by a single vote. Ashe, who had desired the post, raised his own company of troops and moved on the Loyalists of Cape Fear, North Carolina. His independent unit then joined the force that defeated the Loyalists at Moore's Creek Bridge on 9 February 1776. In consequence of these actions, the North Carolina Assembly appointed Ashe brigadier general on 23 April 1776, in command of the Wilmington district. At the beginning of 1779 he was ordered to Charleston to reinforce General Benjamin Lincoln. His militia was poorly armed, and when it was attacked at Briar Creek on 3 March 1779, his troops broke and ran, most without firing a shot. A court-martial severely censured Ashe for "want of sufficient vigilance," and North Carolina relieved him of his command. When the British overran his part of the Carolinas he went into hiding in the swamps. There, one of his slaves betrayed him to the enemy in 1781. Paroled by the British, Ashe

died on 24 October 1781 of smallpox while on his way home to rejoin his family.

ASSOCIATED LOYALISTS. The term "associated" or "association" was used by various Loyalist military organizations active during the war. During the siege of Boston, Timothy Ruggles, a major political figure in colonial Massachusetts and a veteran senior commander of Massachusetts' troops during the French and Indian War, called the several armed companies of Loyalist refugees he organized to help maintain order in the town the Loyal American Association. During the British occupation of Rhode Island, Colonel Edward Winslow Jr. formed the Loyal Associated Refugees to avenge losses and indignities suffered at the hands of the Patriots. The Refugees made several raids to Long Island and Nantucket, capturing vessels, cattle, and people, and they even tried to acquire the *Oliver Cromwell*, a Connecticut state navy ship captured by the Royal Navy, to promote their activities.

A better-known organization grew out of a meeting held in London on 29 May 1780, with Sir William Pepperrell as chairman and Joseph Galloway on the committee to draw up an address to the king. William Franklin, son of Benjamin Franklin, became the head of this organization in New York City, whose purpose, apart from revenge and plunder, was to give the Loyalists some sort of legitimate status in dealing with the British and American governments. On 30 June, Major General William Tryon, the commander of Provincial forces in America, supported the idea of tapping the military potential of Loyalists "who for various reasons will not enlist themselves soldiers, . . . many of whom are nevertheless willing to take up arms and contribute their aid for the suppression of the rebellion" (Van Doren, p. 236). In November 1780, Sir Henry Clinton, the British commander in chief in North America, authorized the Associated Loyalists to make war under their own officers, but he was unenthusiastic about the value of the group's activities and withheld some of the powers requested by its board. When Lord Cornwallis surrendered his army at Yorktown (19 October 1781), the Board of Associated Loyalists informed Clinton in great alarm that it considered that Loyalists had been "abandoned to the power of an inveterate, implacable enemy" (Clinton's words) by the tenth article of the capitulation, in which the Americans refused to promise that the Loyalist prisoners at Yorktown would not be punished for joining the British. Clinton was unable to give the board any satisfaction on this particular

matter, but its influence was sufficiently strong for him to feel obliged to direct that British commanders in the future would “pay the same attention . . . to the interests and security of the loyalists within their respective districts that they did to those of the King’s troops” (Clinton, p. 353). The involvement of the Associated Loyalists in the retaliatory murder of New Jersey militia captain Joshua Huddy (12 April 1782) led Clinton to deprive the group of all its powers, and in August 1782 Franklin left for England.

ASSOCIATION. Various “associations” were created after 1763 as a means of organizing and testing political strength. These groups were particularly important in helping the resistance movement expand and endure. American activists who opposed the imperial government’s attempt to increase its control over the colonies used associations to bring together like-minded citizens and to concert opposition within and among the colonies, as well as to intimidate those who might otherwise have supported the new British measures. People who subscribed to the goals of an association were known as “associators.”

Members of the recently dissolved Virginia House of Burgesses, led by George Washington, adopted on 18 May 1769 a voluntary nonimportation agreement banning British goods on which a duty was charged (except paper), slaves (after 1 November), and many European luxuries. A month later, on 22 June, the reconvened burgesses agreed that local committees would publish the names of those who had violated the agreement. On the same day, a Maryland provisional convention drew up an association that already had a provision for boycotting

those who would not make a similar compact. Other colonies and individual port towns followed suit.

The first Continental Congress adopted the Continental Association on 20 October 1774 as a response to the Coercive (Intolerable) Acts; it was modeled after the Virginia Association. After expressing loyalty and enumerating grievances, the document set out a framework the delegates hoped would pressure the imperial government to abandon the “ruinous system of colony administration” it had followed since 1763: “To obtain redress of these grievances which threaten destruction to the lives, liberty, and property of his Majesty’s subjects, in North America, we are of opinion, that a non-importation, non-consumption, and non-exportation agreement, faithfully adhered to, will prove the most speedy, effectual, and peaceable measure” (Jensen, *Documents*, p. 813). The nonimportation of “any goods, wares, or merchandise whatsoever” from Great Britain or Ireland was to take effect on 1 December 1774. The nonexportation of American products was delayed until 10 September 1775 to allow merchants in Britain and the West Indies time to exert pressure on Parliament. Congress threatened to discontinue the slave trade, more as an economic lever than as a moral stance, and urged Americans to practice “frugality, economy, and industry, and promote agriculture, arts, and the manufactures of this country, especially that of wool.” To promote a reformation of values and assert the virtuousness of its resistance, Congress also asked Americans to “discountenance and discourage every species of extravagance and dissipation, especially all horse-racing and all kinds of gaming,” and it recommended that mourning dress be scaled back to demonstrate both frugality and virtue. Congress wanted committees “chosen in every county, city, and town by those who are qualified to vote for representatives to the legislature . . . attentively to observe the conduct of all persons touching this Association” and expected the committees of correspondence in each colony to “inspect the entries of their custom houses” and inform each other of those who violated the agreement. By April 1775 some form of the Association was operating in twelve colonies; Georgia had adopted a modified version on 23 January 1775.

The Continental Association had an immediate and important impact. It has been estimated that the value of British goods imported into the colonies dropped by over 90 percent between 1774 and 1775. Desperate English merchants put pressure on Parliament to promote reconciliation with the colonies; they were worried not only by the decline in business, but also by the fact that if war broke out they would never collect the large sums owed them by American planters. Parliament did not comply because, in its opinion, the dispute with the colonies had gone beyond economic considerations to questions of authority and obedience. For Americans, the Association was “a major step in the development of revolutionary

political organizations.” Opponents of the imperial government generally controlled “the committees created in every community to enforce the Association” and used the Association to force Americans “to choose between support of the proposals of Congress and obedience to the laws of Parliament” (*ibid.*, p. 813).

Other associations of a different nature began to be organized in early 1775. Unlike those created for commercial retaliation, these promoted armed opposition to Britain.

ASSOCIATORS. Certain associations were military rather than political. The most famous was the volunteer military group called The Associators, founded on 21 November 1747 at Philadelphia by, among others, Benjamin Franklin. Created because the pacifist Quakers who controlled Pennsylvania’s government would not sanction a compulsory militia, the organization was as much an assertion of the rising political fortunes of non-Quakers as it was a military unit. The prominence of its founders, rather than any military necessity, won government recognition for the organization on 7 December. Officially organized on 29 December 1747 as the Associated Regiment of Foot of Philadelphia, the unit grew to five battalions in 1775 and was renamed the Associators of the City and Liberties of Philadelphia. These Philadelphia Associators were among the militia forces that reinforced Washington in the dark days of December 1776. The Associators were reorganized in 1777 as the Philadelphia Brigade of Militia under the command of John Cadwalader. On 11 April 1793 they were again reorganized, this time as volunteer infantry in the Pennsylvania militia.

ASSUMPTION. “Assumption” was the term applied to the economic policy proposed by Secretary of the Treasury Alexander Hamilton in his First Report on the

Public Credit, which he presented to Congress on 14 January 1790. Under this policy the new federal government would “assume” about \$25 million of debt that states had contracted during the War of Independence. State debts, along with about \$40 million owed by the former central government, would be converted into new federal government securities to be redeemed over the long term. Representatives from states that had undertaken often painful financial measures to retire their own debt had no interest in assuming part of the burden of their less fiscally responsible neighbors. At the same time, there was a controversy over the site for the national capital. Thomas Jefferson, then secretary of state, engineered a dinner meeting, probably on 20 June 1790, at which Hamilton and James Madison of Virginia, a state that had retired much of its war debt, agreed to a compromise. In return for Hamilton’s help in getting the federal capital moved to a site on the Potomac River (what is now Washington, D.C.), Madison, a leader in the House of Representatives, endorsed the assumption of debts the states could prove were contracted to prosecute the war. The entire plan was passed into law on 4 August 1790.

ATLANTIC CROSSING. Allowing for calms and storms, it normally took an eighteenth-century sailing vessel a month to cross from America to England and twice that time to return. (Westerly winds prevailed.) Four months would be a reasonable time for a British official to wait for a reply to a dispatch sent to America. Instances of faster communication can be cited, but on the other hand the last dispatches from Britain that General William Howe received in Boston before evacuating that place on 17 March 1776 were dated 22 October 1775. In the autumn of 1775, thirty-six unarmed supply ships were sent from Britain for Boston, but only thirteen arrived. The rest were either captured by American naval vessels and privateers or driven to the West Indies by the exceptionally bad weather that winter.

Arming the victuallers (provision ships) reduced losses from privateers to negligible amounts during the years 1776 to 1778. Gathering supply ships into convoys guarded by Royal Navy warships began in 1779 as a response to the threat posed by the French navy, and

very few major ships were lost thereafter, either to American privateers or French squadrons. But convoying increased the time of passage, since the convoy traveled at the speed of the slowest ship ("convoy speed"). A convoy that left Britain on 19 July 1779, for example, arrived at New York on 22 September. A second convoy left Ireland on 24 December and arrived at Charleston, South Carolina, only in early March 1780.

While the British army in America was victualled largely from Britain and Ireland, commanders of captured American ports, especially New York City, did all they could to obtain supplies from the surrounding countryside, an illicit trade (from the rebel point of view) that was never extinguished.

ATTAINDER, ACTS OF. Acts of attainder extinguished all of an individual's civil rights (and could encompass a death sentence) without a judicial trial, usually for the most heinous of behavior, especially treason. All of the American states passed laws that, to varying degrees, restricted the rights of Loyalists, abused or confiscated their property, and sent them into internal exile to reduce their military threat. Acts of attainder were used by states to confiscate Loyalist property and prevent Loyalists from receiving or transmitting property by inheritance. In some case, individual Loyalists were outlawed, which meant that not only could they not sue or testify in court but also that their lives were ipso facto forfeited. Article 1, section 9, of the federal Constitution provides that "No bill of attainder or ex post facto law shall be passed." Article 3, section 3, defines treason as "levying war" against the United States "or in adhering to their enemies, giving them aid and comfort," and, by implication, allows acts of attainder as punishment, with the caveat that "no attainder of treason shall work corruption of blood or forfeiture except during the life of the person attainted."

ATTUCKS, CRISPUS. (1723?–1770). Rebel leader. Massachusetts. Of mixed ancestry, Attucks may have been raised in the Natick Indian town of Mashpee. It is possible that he may have been a slave prior to 1770, by which time he was a free man and a sailor. A leader of the crowd that precipitated the so-called Boston Massacre, 5 March 1770, and the first killed, Attucks became a martyr to freedom in the eyes of most Bostonians and would become a symbol of African American heroism and participation in the Revolutionary struggle.

AUGUSTA, GEORGIA. 14–18 September 1780. Clarke's abortive attack. While Patrick Ferguson led Loyalist operations that culminated in his annihilation at Kings Mountain, Colonel Elijah Clarke and Lieutenant Colonel James McCall undertook to wipe out the important Loyalist stronghold at Augusta. McCall recruited only eighty of the five hundred men he hoped to get in the neighborhood of Ninety Six. In his home territory of Wilkes County, Georgia, Clarke assembled 350 men, and McCall joined forces with him at Soap Creek, forty miles northwest of Augusta. McCall received information that provided an added inducement for the poorly armed Patriots: a shipment of arms, ammunition, and other supplies had just arrived in Augusta intended for distribution to the Indians. Colonel Thomas Brown and British Lieutenant Colonel James Grierson commanded a Loyalist garrison of 150 men and some 50 Indian allies at Augusta.

In three columns the rebels approached their objective undetected on 14 September. The left column, under Major Samuel Taylor, surprised an Indian camp near Hawk's Creek and chased the Indians into the White House, a strongly fortified trading post a mile and one-half west of Augusta, where a company of King's Rangers was stationed. When Colonels Brown and Grierson left the town to join the battle at the White House, Clarke and McCall captured Forts Cornwallis and Grierson in Augusta. Leaving detachments to hold these forts, the

rebels concentrated their fire on the White House from 11 A.M. until darkness. The next day, 15 September, two guns from Fort Grierson were brought into action, but the only qualified artilleryman among the Patriots had been killed early in the day. Clarke's men cut off the enemy's water supply early on the 15th when they drove an Indian outpost from the river bank, and that night they stopped an attempt by fifty Indians to reinforce the garrison. But the rebels ran out of ammunition and could not hope to take the position by assault and Brown, although wounded early in the action and suffering severely from thirst, was not a man to give up—he even persuaded his men to save their urine to drink. On the morning of 18 September, Colonel John Harris Cruger appeared on the South Carolina side of the river with a Loyalist relief column from Ninety-Six. Clarke abandoned the siege at about 10 A.M. and headed west for the safety of the mountains.

The Patriots lost about sixty killed and wounded; many others deserted during the siege with plunder from the forts. The Loyalists hanged Captain Anthony Ashby of the South Carolina militia and twelve other prisoners on the stairway of the White House. Aside from twenty Indians killed, Loyalist losses are not known.

The failure of Clarke's force to accomplish its purpose caused an outburst of Loyalist vindictiveness in the region, and four hundred women and children were forced to flee with the three hundred survivors of Clarke's expedition toward North Carolina. Attempts by Ferguson to intercept this column figured prominently in the events preceding Kings Mountain on 7 October 1780.

AUGUSTA, GEORGIA. 22 May–5 June 1781. As the main rebel army moved against Ninety-Six, Lieutenant Colonel Harry Lee was detached with his Legion and the newly raised North Carolina militia of Major Pinketham Eaton to support the thirteen hundred militia of General Andrew Pickens and Colonel Elijah Clarke besieging Augusta since 16 April. Colonel Thomas Brown, with 330 Loyalist militia and 300 Creek Indians, were holding Fort Cornwallis on the northwest side of the town, 150 yards from the Savannah River, and the smaller post about half a mile west that was called Fort Grierson. In about the middle of May, Clarke had resumed command of the Georgia militia around Augusta, and a detachment of mountaineers under Isaac Shelby and Georgia troops under Patrick Carr had been sent by him to block a Loyalist relief column; at Walker's Bridge, on Briar Creek, Shelby and Carr stopped and

drove back a Loyalist relief force. This and other little successes encouraged Clarke to believe that Augusta could be taken by assault, and it was at this stage that General Nathanael Greene ordered Pickens and Lee to undertake this operation. Lee's capture of Fort Galphin on 21 May was an important preliminary action that deprived Brown of a considerable body of reserves (two Loyalist companies) and supplies.

Lee's cavalry, under Major Egleston, were the first to join the militia around Augusta. Egleston informed Brown that strong reinforcements were on the way from Greene's army and summoned the Loyalist commander to surrender; Brown refused. Lee's main body arrived on the morning of 23 May, and the rebels immediately surrounded Lieutenant Colonel James Grierson's fort, attacked from three sides, and captured it with little difficulty. When the eighty defenders tried to fight their way half a mile east to Fort Cornwallis, they were overwhelmed and brutally chopped up: thirty were killed and almost all the others wounded and captured. Captain Samuel Alexander of the Georgia militia murdered Grierson after he surrendered. Among the few rebel casualties at Fort Grierson was Major Eaton. An attempt by Brown to make a sortie in support of Grierson was checked by Lee.

Fort Cornwallis was a harder nut to crack. The only available artillery was a little three-pounder from Lee's Legion and an old iron five-pounder that Clarke had picked up. One of the two guns captured from Fort Grierson was later brought into action. Meanwhile, Lee and Pickens had to undertake regular approaches. On Lee's suggestion a Maham Tower was started. Brown tried to drive the builders off with fire from his two heaviest guns, and he launched two determined but unsuccessful sorties. He then secretly moved powder into a frame house that stood between the fort and the tower. But the house was prematurely blown up by the defenders without damage either to the tower or to the rebel troops.

On 31 May, Brown refused a second summons to surrender. That night a captured six-pounder from Fort Grierson was mounted in the tower, and the next morning the rebels started an effective cannon and small arms fire from it, the six-pounder knocking the two Loyalist cannon out of commission.

On 4 June the attackers were formed for the final assault when Brown agreed to consider a conditional surrender. After a day of negotiations the Loyalists laid down their arms and were marched off under Continental guard to be paroled in Savannah. A strong guard of regulars had to protect Brown from Grierson's fate. Lee marched with the prisoners to Ninety Six. Pickens followed later, but was then sent with Lee's cavalry to oppose the relief column led by General Francis Rawdon to Ninety Six.

The rebels lost about forty men during the siege. Fifty-two Loyalists were killed and 334 captured.

AUSTRIAN SUCCESSION, WAR OF

THE. 1740–1748. Frederick II (the Great), king of Prussia, rejected the Pragmatic Sanction, by which the Habsburg Emperor Charles VI of Austria decreed in 1713 that his territories should pass to his daughter Maria Theresa if he should have no male heir. When in fact Charles died in October 1740 without a male heir, Frederick laid claim to and invaded the Austrian province of Silesia in December 1740. A coalition of France, Spain, Saxony, and Sardinia, each coveting a portion of the Habsburg dominions, supported the Bavarian candidate for election as Holy Roman Emperor in 1741. Maria Theresa looked to Britain, Austria's traditional ally against France, for support. Britain managed to arrange a temporary peace between Austria and Prussia in July 1742, but Britain was drawn into the war because King George II was simultaneously elector of Hanover. Acting nominally in support of his Habsburg ally (but fully aware that France was the principal threat to both Britain and Hanover), George II led an Anglo-Dutch-Hanoverian force (the "Pragmatic Army") to victory over the French at Dettingen, 27 June 1743, the last time a British king personally led his troops in battle.

The French withdrew from German soil, and Britain formed an alliance with Austria and Sardinia to drive France and Spain from Italy. France, Spain, and Prussia formed a countervailing alliance. The French declaration of war against Britain on 31 March 1744 ended the absurd situation in which hostilities on land and at sea had taken place between powers nominally at peace. France supported the Stuart claimant to the British throne, which touched off the second Jacobite Rebellion ("the '45"), led by the Young Pretender. Although distracted at home, Britain continued to support an Anglo-Dutch-Austrian army in Flanders, led by the king's son, the duke of Cumberland. When Maurice de Saxe, marshal of France, defeated this army at Fontenoy on 11 May 1745, the French gained control of Flanders. By October,

Cumberland and his British troops were on their way to Scotland, where on 16 April 1746 they crushed the Jacobites at Culloden. Prussia withdrew from the alliance on 25 December 1745, when Maria Theresa agreed to let Frederick retain Silesia, a bargain that allowed Austria to drive the French and Spanish from northern Italy in 1746.

The European war evolved into a struggle for maritime and colonial supremacy and became interwoven with conflict in India and North America, where it was called King George's War. The so-called War of Jenkins' Ear had already erupted in 1739 over British commercial penetration of Spain's American empire, and the conflict continued in the Caribbean and on the mainland until 1742. Britain's New England colonies captured Louisburg in June 1745, the French took Madras in 1746, and Britain gained control of the seas.

The treaty of Aix-la-Chapelle, 18 October 1748, restored all conquests, including Louisburg, much to the disgust of colonial Americans. Prussia retained Silesia, the Dutch Republic regained its frontier fortresses in Flanders, the Pragmatic Sanction was guaranteed, Francis I (Maria Theresa's consort and coregent) was elected emperor of the Holy Roman Empire, and France agreed to expel the Young Pretender.

The war left an unstable situation in its wake and demonstrated how conflict in Europe could expand overseas. The next war involving these European powers would begin in North America and ignite the tinder the war of the Austrian succession had left strewn across Europe. The war is of interest also because many British and American officers who later served in the Revolution underwent their baptism of fire in this conflict.

B

BACKGROUND AND ORIGINS OF THE REVOLUTION.

The War of American Independence, waged between 1775 and 1783 by the inhabitants of thirteen of Britain's North American colonies to secure their political independence from the mother country, was the military phase of a larger movement called the American Revolution. The origins of the beliefs, attitudes, and values that eventually coalesced into resistance, rebellion, and revolution are found in three general areas: (1) the circumstances in which the colonies were founded, from 1607 (Virginia) through 1734 (Georgia); (2) the initial diversity and subsequent growth of those settlements into established societies; and (3) the ways in which Britain attempted to exercise control over its colonies, which alternated between neglect and scrutiny, and culminated in an attempt to assert its supremacy over what were, by the middle of the eighteenth century, mature and self-possessed societies.

Although the first colonies were intended to be money-making ventures for investors back in England, the lack of readily exploitable mineral or agricultural resources ensured that the men and women who immigrated to North America had to scramble to wrest a livelihood from an always daunting and often dangerous natural environment. Only in the Chesapeake (tobacco), and later in low-country South Carolina (indigo and rice), did the North American colonies produce commodities that could even approach the significance to the British economy of the sugar grown on islands in the Caribbean. But the exploitation of natural resources (forests, offshore fisheries, animals, and even members of its resident human population), held the promise of greater wealth for the

average person than he or she could hope to obtain elsewhere. This quest for individual aggrandizement in a land where resources were abundant and labor was scarce was a fundamental part of an emerging American identity.

The diversity of human inhabitants in the colonies far surpassed anything in Britain. The most numerous newcomers were English in culture, language, and political ideas, but the colonies also incorporated others of European heritage, including Dutch (in what became New York), Swedes (in the Delaware), Germans (mostly in Quaker Pennsylvania), and Scots-Irish (mostly in the frontier backcountry from Pennsylvania south). The native Americans who encountered these Europeans pressing inland from the coast were pushed aside or conquered; but the clash of cultures added new dimensions to American identity, as did the presence of enormous numbers of enslaved Africans, imported by the Europeans largely to meet the demand for agricultural labor in the Chesapeake and lower South.

Englishmen and -women dominated this unique mixing of cultures an ocean away from the mother country. The colonies were places of religious refuge and economic opportunity that, in large part because of their geographic isolation from England, developed their own ways of organizing their social and political relations and of governing themselves. The fact that colonization began during decades when ideas about the role and power of central government were in flux in England helped to make the colonists wary of strict supervision by the imperial government, and more receptive to seeing sinister motives in every attempt to bind the colonies more closely to the mother country.

Englishmen in England believed they had a right to regulate economic activity in the colonies for the benefit

of the mother country—a view known as mercantilism. Their primary goal was to make sure that the products of the colonial economies were carried to England in English ships, even if those products were intended for re-export to other places in Europe. Doing so would provide employment for English sailors, profits for English merchants, and customs revenue for the English king, all the while keeping these benefits out of the hands of England's European competitors. Beginning in 1651 various acts of Parliament, known as the Navigation Acts, sought to keep trade flowing in these channels, an effort that did not unduly restrict the natural currents of trade in the nascent colonial economies. The Board of Trade and the vice-admiralty courts were created in 1696, between two colonial wars, to ensure the supervision of trade, but their regulatory intrusiveness was minimal. Although there were some sharp differences about particular acts, and especially how they were being enforced, the period from 1721 to the middle of the eighteenth century has been called a period of "salutary neglect" in relations between the colonies and the mother country. By 1750 imperial officials began to lay plans for a stronger central administration of colonial affairs, a reasonable course of action for those who believed that the increasingly prosperous colonies existed for the benefit of the mother country, but one that ignored the growing awareness among the colonists that being English now meant something different for them than it did for Englishmen in England. The final two colonial wars dampened centripetal pressure, but the extent and scope of the victory over France in North America, evident by 1763, opened the gates for a flood of postponed ideas and mutual misperceptions.

In the short span of five years (1760–1765), relations soured between the imperial government and many members of the colonial oligarchy. The euphoria over the fall of New France (1760) and the capture of Havana (1762) gave way to colonial astonishment and perplexity at the imperial government's seemingly comprehensive and sinister tightening of the rules of empire. The Treaty of Paris (1763) left Britain the undisputed victor over a humiliated France and an impotent Spain, but British leaders were left to face several serious problems. They had to manage a national debt that had doubled owing to war-time expenditures (interest payments had increased tenfold) and integrate a new set of far-flung colonies into the existing empire. They lacked allies, since other nations resented Britain's ascendancy and were waiting for the opportunity to restore a balance of power in Europe and overseas. At home, government leaders were so consumed by local and parliamentary politics that formulating a consistent imperial policy proved to be difficult to achieve. George III, who had acceded to the throne in 1760 with the determination to "be a King," was a thoroughgoing Englishman who wanted

to make Britain's mixed government of king, lords, and commons work more effectively for the benefit of the nation. He played a more active role in parliamentary politics than had either his grandfather or great-grandfather, a circumstance that contributed to sharpening the contest for interest and influence. Far from being a well-organized conspiracy against the rights of the colonists, British colonial policy after 1763 was whipsawed among the more urgent needs of domestic political competition with an unpredictability that fatally decreased the ability of British politicians and American oligarchs to understand and appreciate each other's points of view.

The deterioration of relations was precipitated by a convergence of several factors. The downturn in the British economy in 1763 made critical the need to raise a revenue to pay the cost of running the expanded and more closely regulated empire. The Americans, however, were in a particularly unsympathetic mood. Economically, they had their own troubles in the form of a postwar depression. Militarily, elimination of the traditional French and Indian threat made them feel less dependent on British troops for protection, a dependence that had been one of the firmest ties between the colonies and the mother country. Politically, the colonial assemblies had expanded their authority and self-importance at the expense of royal government and imperial officials during the final French and Indian War (1755–1763). Most royal governors were political appointees, dominated by the colonial assemblies. Even if the governor was a capable politician, he faced the impossible task of trying to execute royal instructions through an elected colonial assembly that appointed many of the administrative officers, initiated all laws, made appropriations, and controlled the colonial purse strings, including payment of his own salary. The existence of these representative assemblies in all the colonies by 1775 was the institutional prerequisite for the formulation and concerted expression of political resistance to increased imperial control. Even if opposition was originally organized outside the assembly, the assembly was the recognized forum for the expression of the popular will.

Opponents of imperial regulation argued that the king's corrupt ministers were conspiring against colonial rights, in an effort to increase their power and profit. All the colonists had to do was to alert the king to the problem, the king would dismiss the evil ministers, and the system of mixed government would right itself. A significant number of colonists clung to the belief that, even if the ministers were corrupt and Parliament would not redress their complaints, the king would help them. When their cries fell on deaf ears, and the king supported his ministers and the notion of parliamentary supremacy, Americans realized that they had exhausted the resources of accepted legal and political arguments in their quarrel with the British government. They invoked "natural law"

to sustain their resistance and developed new political theories, the most important of which was to shift the locus of sovereignty in a state from the monarch to the people. The Declaration of Independence was the end product of that process, a statement of a revolution that had already taken place in the hearts and minds of a significant number of politically active Americans.

BAILEY, ANN HENNIS TROTTER. (1742–1825). Scout. Born in Liverpool, England, in 1742, Ann Hennis immigrated to Staunton, Virginia, in 1761, marrying Richard Trotter in 1765. In 1774 Trotter volunteered for service in Dunmore's War and was killed in the battle of Point Pleasant on 10 October 1774. Hennis then stepped into her husband's place, gaining a reputation as a tough scout. She served during the Revolution as a spy on the frontier, primarily in the Shenandoah Valley, reporting on the activities of Indians allied with or suspected of being sympathetic to the British. She also gained praise for recruiting men living on the frontier to join the American side of the conflict, if only by forming together in local militia companies. With the war's end, Hennis continued her service as a frontier scout. In 1785 she married John Bailey, who served at Fort Lee (later Charleston, West Virginia). They both continued to serve as scouts from that base. Ann Bailey, as she was now called, became widely known during the Indian siege of Fort Lee in 1791, when she rode through the Indian lines on her horse Liverpool and traveled one hundred miles to Fort Union for gunpowder, returning with the powder just three days after she left. Credited

with saving the fort, Bailey became a legendary figure on the frontier. Her services to the military ended with General Anthony Wayne's Treaty of Greenville in 1795. In 1817 she moved with her son to Gallipolis, Ohio, where she died on 22 November 1825.

BALDWIN, JEDUTHAN. (1732–1788). Continental officer. Massachusetts. Born in Woburn, Massachusetts, on 13 January 1732, Jeduthan Baldwin commanded a company in the Seven Years' War and served in the Massachusetts Provincial Congress from 1774 to 1775. He entered the Continental army on 16 March 1776 as an assistant engineer, holding the rank of captain. He was charged with constructing fortifications for the Boston Siege. His *Revolutionary Journal*, published in 1906, is a valuable source of details on that campaign. On 3 September 1776 he was promoted to colonel of the Engineers after having been active in constructing the defenses of New York City. The next year he worked with General Thaddeus Kosciuszko, under Brigadier General Arthur St. Clair's command, in the fortification of Ticonderoga, and in 1780 was associated with the same two men in constructing the works at West Point. In what presumably was a concurrent assignment, Baldwin raised several companies of quartermaster artificers. He died in Brookfield, Massachusetts, on 4 June 1788.

BALDWIN, LOAMMI. (1740–1807). Civil engineer, Continental officer. Massachusetts. Born in Woburn, Massachusetts on 21 January 1745, Baldwin worked as a cabinetmaker, walking to Cambridge with his friend Benjamin Thompson to attend lectures on mathematics and physics at Harvard. Progressing from surveyor, he had become a civil engineer by the time the war started. He became a major in the militia and was at Concord on 19 April 1775. Enlisting in the Continental army, Baldwin was promoted to lieutenant colonel in Samuel Gerrish's Massachusetts Regiment on 19 May,

becoming commander when Gerrish was cashiered 19 August. When the regiment was redesignated the Twenty-sixth Continental on 1 January 1776 and increased from eight to ten companies, Baldwin was promoted to the rank of colonel. He served through the siege of Boston, then went to New York with the main army. He saw action at Pell's Point, took part in the retreat to the Delaware, and led his regiment at Trenton on 26 December 1776. Because of continued ill health, he resigned on 31 December 1776.

After holding a number of political posts, including a position on the General Court from 1778 to 1779, Baldwin returned to a full-time pursuit of engineering. He was chief engineer of the Middlesex Canal, which joined the Charles and Merrimac Rivers, and served as director of this project from 1794 to 1804. The Middlesex was one of the first major canals in America, and Baldwin's work influenced future canal projects. A life-long autodidact, Baldwin received an honorary degree from Harvard in 1785. His interest in horticulture led him to develop the Baldwin apple. He died 20 October 1807. His son, Loammi Baldwin, Jr. (1780–1838), followed in his footsteps, becoming known as the "father of civil engineering in America."

BALFOUR, NISBET. (1743–1823). British army officer. Balfour was one of five sons of the laird of Dunbog, Fife, all of whom followed their father into the army. Nisbet became an ensign in the Fourth Regiment, called "The King's Own Foot" on 27 January 1761. By 1770 he was a captain, but he had never been in action when the war of American Independence broke out in 1775.

Balfour was badly wounded at Bunker Hill on 27 June 1775, but he recovered in time to fight in the New York campaign in the summer and autumn of 1776. Promoted to the rank of major, he was sent home with General William Howe's dispatches and his own gloomy appreciation of the progress of the war. His views were, however, ignored, and he was sent back to New York with orders to encourage greater energy on the part of the British generals. He took part in the Philadelphia campaign and became a lieutenant colonel in the Twenty-third Regiment in 1778. By October he was appreciably more optimistic about the war, arguing that a modest reinforcement would guarantee victory. At the end of the year he went home on sick leave

but returned in time to take part in Sir Henry Clinton's expedition against Charleston in 1780.

It was in the south that Balfour achieved prominence. When the British pushed inland to secure the South Carolina hinterland, he was given command of the key isolated post at Ninety-six, together with three battalions of Royal Provincials and some light infantry. From here he supported Patrick Ferguson's recruitment of 4,000 Loyalist militia. However, Balfour was acutely aware of the political dimension of what was a bitter civil war. He was sensitive to the need to conciliate as well as the need to secure territory, and like General Charles Cornwallis, he was highly critical of the behavior of some of the Loyalist troops. When in August Cornwallis prepared to move up country to join Francis Lord Rawdon for the Camden campaign, he summoned Balfour—technically Rawdon's senior—to take command in Charleston. It was Balfour who put down a rising in Rawdon's rear in the summer of 1781 and brought one of the rebel officers, Isaac Hayne, before a court of enquiry. Hayne, who had been released in 1780 on condition that he would no longer serve against the British, was condemned to death for breaking his parole.

After the war Balfour was promoted colonel, made aide de camp to George III, and served as a commissioner to adjudicate Loyalist compensation claims. In 1790 he was elected as the member for the Scottish seat of Wigton Burghs, which he held until 1796. From 1797 to 1802 he sat for Arundel, in Sussex. A loyal supporter of the younger William Pitt (prime minister of Britain from 1783 to 1801 and from 1804 to 1806), Balfour was promoted to major general in February 1793 and in 1794 he served in Flanders. He rose to lieutenant general in 1798 and general in 1803. He died on 10 October 1823.

BALME **SEE** *Mottin de La Balme, Augustin.*

BANCROFT, EDWARD. (1744–1820). Double agent, writer, inventor. Born at Westfield, Massachusetts on 9 January 1744, Bancroft led an

adventurous life as a sailor and colonist in Dutch Guiana before settling in London. Here he wrote on American subjects for the *Monthly Review* and published his *Essay on the Natural History of Guiana* (1769), which gained him a solid reputation as a naturalist. He also wrote the pro-American *Remarks on the Review of the Controversy between Great Britain and Her Colonies* (1769), and *Charles Wentworth* (1770), a novel attacking Christianity. Becoming acquainted with Benjamin Franklin in London, he served as Franklin's spy and later performed in the same role for another American diplomat, Silas Deane, whom he had known as a young man. He also gained the confidence of John Paul Jones. In December 1776 he began spying for the British, as well, assuming the name Edwards. His American friends never suspected Bancroft of his duplicity.

Paid £200, eventually increased to £1000 a year, and promised the post of Regius professor of divinity at King's (Columbia) College when New York was returned to British control, Bancroft was given the mission of spying on the American commissioners in Paris. His reports were sent to Paul Wentworth, another double agent, in London. Using his secret information, he also speculated financially based on war news such as General John Burgoyne's defeat and the start of the peace negotiations. The British government terminated Bancroft's services as a spy in 1784, ignoring his pleas that he could still be useful.

Bancroft lived a complicated double life. A successful doctor and scientist, he was elected to the Royal Society on Franklin's recommendation in 1773. As an inventor he made important discoveries in the field of textile dyes. His *Experimental Researches Concerning the Philosophy of Permanent Colours* was published in 1794. Yet, despite these accomplishments, Bancroft seemed compelled to intrigue. His treachery did not come to light until seventy years after his death on 8 September 1821. When a descendant, the British general William C. Bancroft, learned the truth, he burned all his grandfather's papers.

BARBÉ-MARBOIS, FRANÇOIS, MARQUIS DE. (1745–1837). French diplomat and politician. Son of a spice merchant, he became tutor to the children of the marshal de Castries. He was employed by the Ministry of Foreign Affairs in 1768 and served at Ratisbonne, Dresden, and Munich. He accompanied Luzerne to Philadelphia in 1779 as chargé d'affaires and secretary of legation. He was soon authorized to organize consulates throughout the American states. In an effort to gather information about each state, he sent questionnaires to prominent Americans. Jefferson later revised and

published his responses as his *Notes on the State of Virginia* (1785). Barbé-Marbois accompanied Lafayette during the latter's negotiations in 1784 with the Iroquois at Fort Stanwix to reconcile them with the Americans. During his stay in America, Marbois married Elizabeth Moore, the daughter of the president of Pennsylvania.

After his return to France, he was named intendant general of the French Leeward Islands in 1786. He served in several diplomatic positions under the revolutionary government. He was arrested after the coup d'état of 4 September 1797 and transported to French Guiana, but was freed in 1799 by Napoleon, under whom he advanced quickly in the bureaucracy. In 1803 he negotiated the Louisiana Purchase. During the Bourbon restoration, he was created a peer (4 June 1814) and accorded the rank of marquis in 1816. Noted for his malleability, he survived the vicissitudes of French politics under six governments.

BARBER, FRANCIS. (1750–1783). Continental officer. Born in Princeton, New Jersey, on 26 November 1750, Barber graduated from the College of New Jersey in 1767. Becoming a teacher, he numbered Alexander Hamilton among his students at the Elizabethtown Academy. Named a lieutenant in the militia on 22 January 1776, Barber immediately took part in the capture of the British supply ship *Blue Mountain Valley*. For his heroism, he was made major of the Third New Jersey Regiment on 26 January 1776 and was sent with his regiment to the Mohawk Valley. Promoted to lieutenant colonel on 26 November 1776, Barber led his regiment in harassing British forces during the winter and spring of 1777 and at the Battles of Brandywine (11 September 1777) and Germantown (4 October 1777). During the winter at Valley Forge, he served under General Friedrich von Steuben as one of

four subinspector generals responsible for training the troops. Wounded by a musket ball at the Battle of Monmouth in June 1778, Barber returned to duty by the end of the year, again harassing enemy positions in New Jersey. The following year his regiment took part in General John Sullivan's attack on the Iroquois. Barber was named deputy adjutant general of General Sullivan's Western Army on 26 May 1779 and was wounded at the Battle of Newton on 29 August 1779. Back in New Jersey, he took part in the battles at Connecticut Farms on 7 June 1780 and Springfield on 23 June 1780 before being named deputy adjutant general at West Point. In January 1781 he was placed in charge of the force that suppressed the mutiny of the New Jersey Brigade. Barber served under General Anthony Wayne at the Battle of Green Spring, near Williamsburg, Virginia, on 6 July 1781 and was aide-de-camp to Lafayette at Yorktown, where he was wounded with a bayonet in the attack of 14 October. Barber was made colonel of the Second New Jersey Regiment on 7 January 1783. On 11 February 1783 he died in a freak accident when a tree fell on him.

revised by Michael Bellesiles

BARCLAY, THOMAS. (1753–1830). Loyalist and British officer. Born in New York City on 12 October 1753, Barclay graduated from King's College in 1772 and studied law with John Jay before passing the bar in 1775. Driven from his home as a Loyalist, Barclay was commissioned a captain of the Loyal American Regiment in 1776. He was promoted to major the following year for his bravery in the capture of Forts Clinton and Montgomery. In 1779 the New York legislature found him guilty of treason and ordered the confiscation of his property. An officer in the Provincial Corps of Light Infantry, he served under General Alexander Leslie in Virginia in 1780 and under Lord Rawdon in South Carolina the following year. Volunteering to take dispatches to General Cornwallis later that year, he was captured by the French.

Paroled to New York City, Barclay joined the British evacuation in 1783, helping to resettle many Loyalists in Nova Scotia, where his regiment disbanded. Barclay was elected to the Nova Scotia assembly in 1785, serving as its speaker from 1789 to 1799. In 1793 he was made lieutenant colonel of the Royal Nova Scotia Regiment. Between 1796 and 1798 he served as the British member of the arbitration commission established by Jay's Treaty to determine the Maine-Canada border. In 1799 he received two thousand pounds for his losses during the Revolution from the Loyalist claims commission and was named British consul general in New York City. He remained in his home city the rest of his life, being occasionally

threatened by angry crowds in the long period of tension that led to the War of 1812, during which conflict he worked to effect prisoner exchanges. He resigned as consul in 1815 and devoted the next seven years to trying to settle the northeastern boundary between the United States and Canada. He died in New York City on 21 April 1830.

BARLOW, JOEL. (1754–1812). Diplomat and poet. Born in Redding, Connecticut, on 24 March 1754, Barlow studied at Moor's Indian School. He graduated in 1758 from Yale, where he had demonstrated his interest in poetry with his first publication, on the dreadful quality of college food. His commencement poem, *The Prospect of Peace*, earned considerable praise. Barlow served during the Revolution as chaplain of the Third Massachusetts Brigade. Throughout the war he persisted in writing poetry, most of which sounds stilted to modern ears.

At the war's end, Barlow opened a printing shop in Hartford and set about seeking patrons to support his writing. In 1787 he published his first epic poem, *The Vision of Columbus*, which made the entire history of the Americas a lead-up to the American Revolution, a perspective which continues to find great favor. Barlow's poem exerted enormous influence on the culture of the early Republic, if only in his elevation of Columbus to a central role in world history. His concluding prediction of the future greatness of the United States in every branch of human endeavor appealed enormously to the public's ego and guaranteed the poem's popularity.

Taking advantage of Barlow's sudden fame, the Scioto Associates, a company seeking to sell lands in the Ohio territory, named him its European agent and paid his expenses to Paris. Barlow proved less interested in selling land than in befriending the leading intellectuals there, from Thomas Paine and William Blake to Mary Wollstonecraft and Brissot de Warville (whom he translated). When the Scioto group collapsed in scandal the next year, Barlow was held blameless and stayed on in Europe as a journalist, reporting on the fall of the Bastille.

Meanwhile, his poetry crafted an interpretive vision of the past; *The Conspiracy of Kings* (1792), for instance, blaming the French Revolution on aristocratic corruption. In a series of pamphlets, Barlow defended the French Revolution against British accusations of approaching anarchy. Made an honorary citizen of France, Barlow

thought to run for public office in 1793. But with the execution of the king and the arrest of his friend Tom Paine (whose *Age of Reason* he saved from the police), Barlow abandoned politics for shipping, moving to Hamburg, where he became a wealthy merchant.

In 1796 the United States appointed him minister to Algiers, where he successfully arranged the release of more than one hundred American prisoners. Barlow returned to the United States in 1804, settling in Washington and returning to poetry. With his friend Robert Fulton he wrote an epic poem, *The Canal: A Poem on the Application of Physical Science to Political Economy*, which foresaw more greatness for America through the use of Fulton's steamships. In 1807 Barlow published his most famous poem, *The Columbiad*, an expanded version of his *Vision of Columbus* that devoted more attention to the American Revolution and the new nation's scientific promise, and that rejected Christianity as an outdated concept. Barlow returned to Europe in 1812 as special emissary from his friend President James Madison to Napoleon, whom he found fleeing Russia. Repulsed by what he saw, Barlow wrote his greatest poem, *Advice to a Raven in Russia*, which graphically described the frozen corpses, the hunger, the senseless destruction, and the death of revolutionary ideals. Barlow caught pneumonia and died on 26 December 1812 in Poland.

BARNEY, JOSHUA. (1759–1818). Naval officer. Born in Baltimore on 6 July 1759, Barney went to sea at the age of eleven, taking command of his first ship at fifteen. In October 1775 he enlisted in the Continental navy, serving on the *Hornet* and the *Wasp*. Serving with distinction in a number of engagements, he was commissioned a lieutenant and executive officer of the *Sachem* in June 1776. After again displaying heroism in battle, he was transferred to the *Andrea Doria*, which captured two British privateers in December; one of them was put under Barney's command. The British seized this ship and put Barney ashore at Charleston. By March he was back aboard the *Andrea Doria*, which took part in the defense of Philadelphia and was burned by the Americans to prevent its capture by General Howe's troops. Returning to Baltimore, Barney was given command of the new frigate *Virginia*, which ran aground as it attempted to elude the British blockade. After a brief period as a prisoner of war in

New York City, Barney became a privateer, making several successful voyages over the next three years. In October 1780, at the age of twenty-one, he returned to the navy as lieutenant of the *Saratoga*. The same month he was given command of a captured British privateer, which was quickly retaken by the British; Barney was then confined to Mill Prison in England. Escaping, Barney crossed the Atlantic and made his way to Philadelphia in March 1782. Given command of the Pennsylvania ship the *Hyder Ally*, Barney won a notable victory over the *General Monk* on 8 April 1782, the latter being renamed *General Washington*, with Barney in command until the war's end.

After the Revolution, Barney became a successful businessman and a supporter of the Constitution. In 1794 President Washington nominated him one of the six captains of the new navy, but Barney declined after learning he was ranked third on the list. After a few more years in trade, he took a position as commodore in the navy of revolutionary France, serving until 1802, when he returned to Baltimore. At the beginning of the War of 1812, he put to sea as captain of the privateer *Rossie*, capturing eighteen prizes valued at \$1.5 million in just three months. He spent the rest of the war commanding a small fleet charged with defending the Chesapeake from the British. When the British finally attacked in August 1814, Barney had to burn his ships, marching his men to meet the British at Bladensburg. In the ensuing battle, only Barney's 500 sailors and marines held their positions, the militia fleeing in panic all around them. In 1818 he decided to move to Kentucky but became sick on the way and died at Pittsburgh on 1 December.

BARRAS DE SAINT-LAURENT, JACQUES-MELCHIOR, COMTE DE.

(1719–1792?). French naval officer. Entering the Coast Guard in 1734, he later served in the Mediterranean and the Antilles. Barras was promoted to ensign (1742), ship's lieutenant (1754), and ship's captain (1762). Commander of the *Zélé* in Estaing's squadron in Rhode Island (1778) and Savannah (1779), he escorted the convoys between Saint Domingue and France. He returned to America in May 1781 to command the French squadron at Newport. Rochambeau and Barras were to meet Washington at Wethersfield, Connecticut, to discuss what might be done before François Grasse's arrival, but Arbuthnot

took up a station off Rhode Island, and Barras was unable to leave. He eventually cooperated with the allied armies, however, and safely entered the harbor of Yorktown on 10 September 1781, after the battle off the Chesapeake Capes on 5 September 1781, carrying the siege artillery of the French army. After Yorktown, Barras's squadron followed Grasse to the West Indies, ending the possibility that they might be used in a southern campaign. In 1782 he was promoted to lieutenant general and distinguished himself by capturing Montserrat. He returned to France ill in April 1782 and was awarded the Grand Cross of the Order of Saint-Louis in 1784. He was promoted to vice admiral in January 1792 but resigned shortly thereafter.

BARRÉ, ISAAC. (1726–1802). British officer and politician. Born in Dublin in 1726, Barré graduated from Trinity College in Dublin in 1745 and immediately entered the army as an ensign. During the unsuccessful attack on Rochefort in 1757 he won the high regard of James Wolfe as well as that of the colonel of his regiment, William Petty Fitzmaurice, Lord Shelburne. He was with Wolfe when the latter was killed at Quebec, Barré himself receiving a disfiguring wound when a bullet struck his cheek and remained lodged there. William Pitt turned down Barré's application for advancement in 1760, but later named him lieutenant colonel and placed him in command of the 106th Foot (infantry) from 1761 to 1763.

Through Shelburne's influence, Barré entered Parliament on 5 December 1761. Five days later he delivered a vehement speech against Pitt. On 7 February 1765 he blasted the proposal to tax the American colonists and referred to them as "sons of liberty." The Patriots adopted this name for the groups opposing the Stamp Act. Almost without rival as an opposition orator, he was a hero in America, a terror to the British government, and second only to John Wilkes in the unpopularity he incurred with George III. Wilkes-Barre, Pennsylvania, was named after these two. Barré continued his rhetorical barrage on the

government for the next ten years, becoming a close ally of Pitt's in the process. When news of Bunker Hill reached England, Barré accused the troops of misbehavior. When Shelburne became prime minister briefly in 1782, he made Barré treasurer of the navy, a very lucrative post. Barré went blind in about 1783, but remained in Parliament until forced out in 1790 after a disagreement with Shelburne. He died on 20 July 1802.

BARREN HILL, PENNSYLVANIA.

For a foreign volunteer, Marie-Joseph-Paul-Yves-Roch Gilbert du Motier, the Marquis de Lafayette, enjoyed extraordinarily rapid advancement in the American military establishment after arriving in America in June 1777. In mid-August the commander in chief, George Washington, could neither spell nor correctly pronounce his aristocratic name. Barely more than a month later, after Lafayette had performed bravely and resourcefully at Brandywine, an admiring Washington began drawing him into his inner circle of aides. The wounded Lafayette rehabilitated his leg in a hospital at Bethlehem and rejoined the Continental army in December. During the early part of the winter at Valley Forge in 1777–1778, Lafayette remained staunchly loyal to Washington through the weeks of institutional intrigue and personal recrimination within the Continental establishment that some historians have mislabeled the Conway Cabal.

What Lafayette did not receive from his commander and now his mentor—and which he wanted very badly both for reasons of personal honor and to gratify the yearnings of youth—was a field command leading troops in circumstances of combat or at least the potential for combat. The limited types of operational assignments available in the late fall and early winter, after Lafayette returned to camp and later at Valley Forge, involved small-unit patrolling and skirmishing of a nature poorly suited to whatever military skills the marquis may have possessed. Washington preferred Lafayette's presence at headquarters, and for the sake of his diplomatic value, he could not have afforded to have him killed or captured performing minor patrol duties.

In January 1778 the new Board of War, an administrative agency headed by Washington's rival, General Horatio Gates, pushed through the Congress a plan for a Continental invasion of Canada. Perhaps seeking to buffer the plan politically with a nomination from Washington's own suite, it recommended Lafayette to lead the expedition. Despite Lafayette's hearty distrust of Washington's

adversaries, he could not resist this opportunity for action and glory, nor could Washington refuse his protégé the opportunity. To Lafayette's great credit, when he reached Albany—the expedition's departure point—in mid-February, he recognized the folly of the very idea of a midwinter invasion, and he was gratified when the project was abandoned. Then he returned to Valley Forge, where he continued to champion Washington's interests and agenda.

DEFENDING THE PHILADELPHIA COUNTRYSIDE

Washington, meanwhile, found his tactical and strategic intentions for the winter increasingly pressured by events. Despite a preference of his generals to place the army in inland urban quarters for the winter, he had personally brokered the compromise decision for the army to remain in the field, in deference to the political sensibilities of the Revolutionary political bodies, especially the beleaguered state government of Pennsylvania. He arranged a division of responsibility for securing the Philadelphia countryside by which the Continental army assumed control of the territory west of the Schuylkill River to the Delaware River near Wilmington. The state government, meanwhile, promised to keep enough militia in the field to patrol the area east of the Schuylkill to the Delaware at Trenton, New Jersey. Even when the state's ability to meet this manpower commitment faltered, Washington resisted pressures to fill the territorial gap by expanding the sphere of army responsibility. Only when bold British and partisan guerilla raiding east of the Schuylkill in February threatened the army's supply line to the northern states during a severe provisions crisis did Washington reluctantly agree to make even modest increases in the small Continental security patrols already working east of the Schuylkill.

By the late spring, the complete collapse of American militia resistance and modest improvements in Continental strength and proficiency levels caused Washington to rethink this approach and to gradually increase the army's involvement in Philadelphia and Bucks Counties. General Howe, meanwhile, took advantage of American tactical disabilities in the field to send increasingly aggressive patrols of British and partisan raiders into the area to attack both military and civilian targets. In mid-May 1778, after the announcement and celebration of the new American alliance with France and during the transition in command in Philadelphia from the retiring William Howe to his successor, Henry Clinton, the British sent a party up the Delaware to attack rebel nautical facilities at Bordentown, New Jersey, and Bristol, Pennsylvania. Extensive damage was done to civilian property and morale in that area, and predictable demands emerged from the Pennsylvania government for the army to respond to the crisis.

LAFAYETTE'S COMMAND

Washington ordered Continental troops patrolling near the Schuylkill under the command of Brigadier General William Maxwell to move north toward Trenton to respond to the incursion. This mission expansion tore the Continental grip loose from the Schuylkill River, leaving a gap in the army's immediate security system near Valley Forge that could not be tolerated. On 18 May, Washington was finally able to gratify the thirst of the loyal and generally uncomplaining Lafayette for a field command. He ordered his protégé to lead an expedition of about twenty-two hundred troops across the Schuylkill to cover Maxwell's previous positions. He reminded Lafayette of the large size and importance of his detachment and warned him to move warily and to avoid being engaged by a major enemy force or being cut off from a retreat to the west side of the river.

The British quickly discovered the inexperienced Lafayette's presence in the area. They increased their routine patrols and intelligence activity to protect the *meschianza*, an elaborate festival that the officers planned to bid farewell to their departing commander, Howe. Late on the evening of 19 May, Clinton learned that Lafayette had taken a stationary post at Barren Hill, an elevated plateau just beyond Chestnut Hill, northwest of Germantown. Clinton sent a party of between five thousand and six thousand British regulars and Hessians under General James Grant to try to get beyond Lafayette's position and between it and Valley Forge. Early the next morning, the superseded Howe was given the honor of leading the main body of the army up the Germantown Road with the intention of trapping Lafayette between Howe's and Grant's forces. General Charles Gray was sent with a party of troops to intercept any retreat to alternate Schuylkill fords.

Lafayette, who had with him a group of Indian scouts, was alerted to the maneuver. He notified Washington and quickly made arrangements to withdraw across the Schuylkill by the one still-unobstructed road to Matson's Ford. Washington, mortified that his young aide had put him into this compromised position, prepared to lead most of the army to his rescue, risking the general action that he had carefully avoided for most of the previous year. Lafayette was accused by British sources of having "sacrific[ed] his rear guard" in his haste to retreat, and several soldiers were indeed drowned, otherwise killed, or captured in or near the river. Most British and Hessian memoirists blamed Grant for moving too slowly and for hesitating to spring the trap that they believed he had it in his hands to close. For Howe, the event—supplemented with whispered criticisms for the excesses of the *meschianza*—punctuated the overall failure of his strategy to that point. From a strictly military point of view, Barren Hill was not an important or even a very memorable event. One would not be able to say that, however, if Lafayette,

with nearly one-fifth of the Continental army, had been cut off and captured or if Washington had fought and lost an inadvisable general battle that day to rescue his spirited but headstrong aide.

Official American casualties were six men killed and about twelve captured. British losses in this action are not reliably known.

BARRY, JOHN. (1745?–1803). Continental naval officer. Ireland. Born in County Wexford, Ireland, perhaps in 1745, John Barry went to sea at an early age, settling in Philadelphia around 1760. Over the next decade he became a prosperous shipmaster and owner. Congress gave Barry command of the brig *Lexington* on 14 March 1776. After a brisk fight on 17 April 1776, Barry captured the British sloop *Edward*, winning the U.S. navy's first battle. Barry won further victories in 1776, seizing two more British ships in separate encounters and driving off a British attack off Cape May. Congress then awarded him command of the freshly built, thirty-two gun *Effingham*. While his ship was confined to the dock by a lack of supplies, Barry volunteered his services to General George Washington, taking cannon off of the *Effingham* for use as an artillery company in the battles of Trenton and Princeton. He then used smaller boats in a series of heroic actions against the British on the Delaware. However, the *Effingham* never saw action, because Barry burned it to prevent its capture when the British took Philadelphia in September 1777.

Barry next took command of the 32-gun *Raleigh*, which he had to run aground near Penobscot Bay after a gallant fight against two British frigates in September 1778. Two years later Barry gained command of the thirty-two gun *Alliance*, which was accounted the finest ship in the navy. He took many prizes with this ship before his epic battle with the *Atalanta* and *Trepassy*. Despite being outgunned, wounded, and lacking a wind upon which to escape, Barry refused to surrender. Instead, he battled back to take both British ships captive. Later in the year he took the Marquis

de Lafayette back to France. In the indecisive but well-conducted Alliance-Sybilie Engagement of January 1783, he fought the last important naval action of the war.

After the war, Barry fought for seamen's rights, made a significant voyage to China in 1789, and in 1794 was named senior captain of the U.S. navy. He had command of the forty-four gun *United States*, which served as his flagship during the so-called quasi-war with France from 1798 to 1799. He was in command when the *United States* fought and captured a notorious privateer, the *L'Amour de La Patrie*, near Martinique. He died in Philadelphia on 13 September 1803. Though not as dramatic as John Paul Jones, John Barry is accounted by many scholars to be the most important figure in the development of the U.S. navy.

BARTLETT, JOSIAH. (1729–1795). Signer, Massachusetts. Josiah Bartlett was born in Amesbury, Massachusetts, on 21 November 1729. After a classical education, he studied medicine at the age of sixteen, and in 1750 he began a medical practice in Kingston, New Hampshire. A successful doctor who introduced several medical reforms, he won election to the provincial assembly in 1765 and served as a member continuously. He held a civil commission as justice of the peace (1767) and a militia commission commanding a regiment (1770), but the royal government rescinded these appointments in 1775 in response to his open opposition to the Crown. In 1774 he served on the Committee of Correspondence and as a member of the first extralegal provincial congress, which selected him as a delegate to the Continental Congress. He was unable to accept this appointment, however, because he was occupied with the rebuilding of his house, which had recently been destroyed by a chimney fire. In 1775 he was again elected, and he served in Congress until 1777, when he resigned owing to poor health. He signed the Declaration of Independence in 1776. In August 1777 he was with General John Stark at Bennington, where he attended the sick and wounded. He held the rank of militia colonel from 1777 to 1779. He was re-elected to Congress in March 1778, where he signed the Articles of Confederation. He was the only medical practitioner to sign both the Declaration and the Articles. Worn out by work in Congress, Bartlett returned

home in late 1778. In 1782, he was named as an associate justice of the superior court, serving until his appointment as chief justice in January 1790. In February 1788 he served as delegate and president pro tem of New Hampshire's federal constitution ratification convention. In the spring of 1790 New Hampshire voters elected Bartlett to the office of chief executive (then called president), a position he won annually. In 1792 the amended state constitution changed the title to governor and Bartlett won another annual term. He retired in June 1794. He organized and was first president of the New Hampshire Medical Society in 1791, the year before he was given an honorary medical degree by Dartmouth College. Bartlett and his wife Mary (nee Bartlett), a cousin, had ten children, eight of whom lived into adulthood. Bartlett died of apoplexy in Kingston, New Hampshire, on 15 May 1795.

BARTON, WILLIAM. (1748–1831). Militia officer, captor of General Richard Prescott. Rhode Island. Born 26 May 1748, in Warren, Rhode Island, Barton was a hatter by trade. He became adjutant of William Richmond's Rhode Island Regiment on 3 August 1775. He was promoted to captain on 1 November, brigade major of the Rhode Island troops on 19 August 1776, and major of Joseph Stanton's Rhode Island State troops on 12 December 1776. Barton conceived the idea of capturing General Richard Prescott in order to exchange him for Charles Lee, who at this time was considered to be an asset to the American cause. Barton carefully and secretly planned the daring raid that accomplished this mission the night of 9 July, 1777. With forty volunteers from his regiment, he landed on the western shore of Rhode Island, then moved a mile inland. After silencing the guard on Prescott's billet, he captured the general and his aide-de-camp, Major William Barrington, and escaped with his prisoners. (This was the second time Prescott was captured, having been exchanged for General John Sullivan the previous year.)

Barton was commended by the Continental Congress by the passage of an act on 25 July 1777, in which he was extolled as “an elegant sword.” On 10 November 1777 he was promoted to lieutenant colonel, and on 24 December 1777 he was named a colonel in Stanton’s Regiment. In 1778 he was wounded while pursuing the British in their retreat from Warren, Rhode Island.

Although his state declined to appoint delegates to the Federal convention of 1787, Barton joined others in sending the convention a letter pledging their support of the Constitution, and in 1790 he was a member of Rhode Island’s state convention, which adopted Constitution. He was detained as a prisoner at an inn in Danville, Vermont, for fourteen years after refusing on principle to pay a judgment on a piece of land in Vermont, that he had bought or been granted by Congress. Word of the old hero’s plight came to the attention of the Marquis de Lafayette during a visit during 1824 and 1825. Lafayette personally paid the claim, and Barton returned to Rhode Island. He died in Providence on 22 October 1831.

BASKING RIDGE, NEW JERSEY.

13 December 1776. Charles Lee’s capture. Having finally decided to comply with Washington’s repeated orders to march south and join him, Major General Charles Lee had crossed the Hudson and had reached a point a few miles south of Morristown, New Jersey, by late afternoon on 12 December. The troops went into bivouac, but Lee chose to spend the night three miles from camp at the tavern of Widow White near Basking Ridge with a small group (including guards) of about twenty men. That same afternoon Charles Lord Cornwallis, thirty miles south at Pennington, New Jersey, sent Lieutenant Colonel William Harcourt with thirty of his light horse to locate the rebel force in his rear. Early on the 13th, after a halt at Hillsborough, Harcourt headed for Morristown. Four or five miles from Basking Ridge, a Loyalist gave them the location of Lee’s main body, and within a mile of Lee’s billet they captured two sentinels who, under threat, informed them that Lee was at the tavern with a small guard. Uncertain whether to credit this intelligence, Harcourt ordered Cornet Banastre Tarleton and two men to observe from a small hill; Tarleton soon sent back a prisoner who confirmed the information.

On the morning of the 13th, Lee had ordered his troops forward at about 8 o’clock but had delayed his own departure to do some paperwork. He had scarcely finished his famous “entre nous” (just between us) letter to Gates when, about 10 A.M., Harcourt’s patrol attacked from two sides. Lee’s surprised guard was routed with a loss of two killed and two wounded. After about fifteen minutes’ resistance, Lee came out to surrender to Harcourt, who had been his subordinate in Portugal, and was allowed to wait for a coat to be sent out. He then was carried off with one of his officers, the Sieur de Boisbertrand, who had received a sword wound on the head while trying to escape out the back door. Another French volunteer, Captain de Vernejoux, along with James Wilkinson, who had come with dispatches from Gates to Washington, and Lee’s aide Major William Bradford, escaped because the British did not search the house. Although Sullivan sent out a rescue party, Harcourt got his prisoner safely to Brunswick.

Except for the propaganda value of capturing one of the ranking Continental generals, the incident had little practical significance. Sullivan led the troops south in time to participate in the Battles of Trenton and Princeton, and it could be argued that keeping Lee out of everyone’s hair until the spring of 1778 actually improved the Continental army.

BASTION. A projection of a fortification that permits the defender to fire along the front of the main wall (or “curtain”).

SEE ALSO *Enfilade.*

Mark M. Boatner

BATEAU. A flat-bottomed boat with tapering ends, the bateau was a common type of vessel well adapted for American lakes and rivers. Bateaux could be built quickly from sawed boards and moved by oars, poles, or square sails. They were invaluable in moving men and equipment over inland rivers and lakes. The decision to use this type of craft for Arnold’s march to Quebec caused significant problems

not only because it was very cumbersome to guide through rapids and carry across portages, but also because the boats were poorly constructed of green lumber.

BATTALION. During the second half of the eighteenth century, the term “battalion” meant the basic active-service maneuver unit in the linear tactical system that dominated European land warfare. The standard battalion in the British army contained ten sub-units called companies which acted as coordinated fire units within the battalion command structure. The terms “battalion” and “regiment” were nearly synonymous in the British and American armies because most infantry “regiments” contained only one active-service “battalion.” Although the umbrella administrative structure of the “regiment” could manage two or more active-service battalions, that form of organization was not common. In the British army in 1775, there were 71 infantry battalions in 69 regiments; only the First (Royal Scots) Regiment of Foot (the Royal Regiment) and the Sixtieth (Royal American) Regiment of Foot had 2 battalions. During the war 34 regiments of foot were added, 3 of which, the Seventy-First (Fraser’s Highlanders), the Seventy-Third (MacLeod’s Highlanders), and the Eighty-Fourth (Royal Highland Emigrants), had a second battalion. Two more battalions of the Sixtieth were raised in 1775, and a second battalion of the Forty-Second (Royal Highlanders) in 1781, so that by 1783 the army had 111 infantry battalions in 103 regiments. (In the American army, the Second Canadian Regiment was the only multi-battalion regiment; its four battalions each had four companies.) Active-service horsed cavalry units were almost always called regiments and contained three, sometimes four, sub-units called troops that could maneuver independently if necessary.

In the standard infantry battalion/regiment in the British army, eight of the ten companies, called battalion companies, were uniform in structure, training, and purpose. The two remaining companies, one of grenadiers, the other of light infantry, were called flank companies because, in the standard linear battle formation of the period, they took station on either flank of the battalion companies. Both flank companies were elite formations, composed of men chosen for specific physical characteristics and trained to perform battle functions over and above what could be expected from a standard battalion company. The grenadier company was the senior flank company, and as such took its place of honor on the right of the battalion line. Grenadier companies had originally been formed, in the late

seventeenth century, of tall, strong soldiers who were trained to throw gunpowder-filled cast-iron spheres called grenades over fortifications. The light infantry company was composed of smaller, more agile men whose purpose was to skirmish ahead of the battalion line so as to break up advancing enemy formations and cushion their impact on the battalion line. Formed at the middle of the eighteenth century in response to both European and North American conditions, the light infantry companies, when in line, took station on the left of the battalion. It was common practice from midcentury to detach the flank companies and gather them into provisional elite battalions for special purposes, usually as the spearhead of the army.

The regiment in the British army was commanded by its colonel, usually a senior general officer who retained some of the perquisites and responsibilities of the prior age when the colonel owned the regiment and did not normally lead the regiment on active service. A battalion usually went to war under the command of the lieutenant colonel (literally “in place of the colonel”), but the demands placed on senior field officers was often so great that the major, the third-ranking field officer, was left in charge of the battalion. In the American army, which generally followed British organizational patterns, the colonel would be expected to lead the battalion himself. In 1781 the Continental Army abolished the rank of colonel and created in its place the rank of lieutenant colonel commandant (i.e., commanding) for battalion or regimental commanders. Prisoners were exchanged on the basis of actual rank; few or no colonels were in service in the British army in America.

Authorized strengths of battalions varied widely in the British and American armies. Companies in the prewar British army were set at 38 private soldiers each, which totaled, with officers, noncommissioned officers, and musicians, about 490 men in a battalion. In August 1775 company strength was raised to 56 privates, or about 680 men per battalion, and again in 1779 to 70 privates, or about 820 men per battalion. The strength of the Continental Army regiments for 1776 authorized by Congress on 4 November 1775 was about 720 men (76 privates in each of eight companies, plus officers, noncommissioned officers, and musicians), a structure reauthorized on 16 September 1776 for the 88-battalion army of 1777. Authorized strength dropped to about 580 men on 27 May 1778 (53 privates in each of ten companies), and rose to about 700 men on 3 October 1780 (64 privates in each of nine companies). The battalions in both armies were almost never recruited to full strength, and replacements were rare. For example, many of the American and British regiments at Yorktown numbered around 200 rank and file, and few had more than 600.

BATTLE OF THE KEGS. The British won control of the Delaware River in November 1777 and opened a water line of communications to the recently occupied city of Philadelphia. David Bushnell applied his inventive genius to creating floating mines (suspended below kegs and tied together with rope) that were designed to drift downriver into the British fleet, snag a vessel, and explode on contact. A daybreak attack with “a score of kegs or more” on 5 January 1778 was a failure (the British used cannon and small arms fire to detonate the mines), but it inspired Francis Hopkinson’s poem *The Battle of the Kegs*, in which the poet says the kegs looked like barrels used to transport “pickled herring.”

BAYLOR, GEORGE. (1752–1784). Aide-de-camp to Washington, Continental officer. Virginia. Coming from a prominent family of the Virginia gentry,

he was selected as aide-de-camp by Washington on 15 August 1775 and commissioned lieutenant colonel. Washington had been a close friend of Baylor’s father. Commended by Washington in a letter of 27 December 1776 to President Hancock, he carried the news of the victory at Trenton and a captured flag to Congress and was thanked by that body. Hancock wrote Washington recommending that he be promoted and given a horse. The gift horse came on 1 January 1777, the promotion on the 9th, and with the latter he assumed command of the Third Continental Dragoons. He was bayoneted through the lungs and captured in the Tappan massacre of 28 September 1778. After being exchanged he returned to duty, assuming command of the First Continental Dragoons on 9 November 1782 when the Third was merged with that unit. His cavalry troops served with the southern army from 1779 until the end of the war, although for a good part of that time, because of his wound, he was unable to resume his field command. He was breveted brigadier general on 30 September 1783 and died the next March at Bridgetown, Barbados, where he had gone in hopes of recovering from the wound received at Tappan.

revised by Harry M. Ward

BAYONETS AND BAYONET ATTACKS. The bayonet was the most common as well as the most important edged weapon in all armies during the War of Independence. Developed in France in the mid-seventeenth century to give infantrymen armed with muzzle-loading muskets an edged weapon to replace the pikes they had previously wielded, the first bayonet resembled a short knife or dagger. (The term reflects the bayonet’s apparent origins in the French cutlery center of Bayonne.) Because it was inserted in the muzzle of the firearm, it was called a plug bayonet and effectively turned musketeers into spearmen by preventing them from reloading. A modified bayonet was developed, again in France, and came into widespread use by the end of the seventeenth century. This weapon featured a four-inch socket that fitted over the muzzle of the firearm and carried a blade more than a foot in length that was offset about two inches out of the path of the projectile. Reloading a muzzle-loading firearm with a socket bayonet in place was still a cumbersome task, but it was a vast improvement over being disarmed by the plug bayonet. Several systems were developed to secure the socket bayonet, most of which used a lug attached at the front of the barrel to guide the socket into place. Most bayonets used a slotted socket and locking ring, or a socket in which two slots were

cut at right angles. The blades of most bayonets were triangular in cross section and designed for thrusting rather than cutting.

The bayonet played a vital role in the linear tactics of the period. The standard infantry firearm was a smooth-bore musket, with which a well-trained infantryman could average an initial rate of fire of about three or four rounds per minute—a rate that dropped rapidly thereafter. Thus there was an increasing amount of time between volleys during which he would not be ready to fire his weapon. On top of the problem of rate of fire, a musket could not deliver aimed fire at much more than fifty yards, meaning an enemy could close for hand-to-hand combat before the infantryman could load and fire to stop him. The bayonet made both attack and defense in close combat more effective, and provided a weapon that could still be used if one's musket misfired or gunpowder was damp. If one side had bayonets and the other did not, the impact of a charge by bayonet could be devastating. British infantrymen, armed with seventeen-inch bayonets, were said to pray for rain so they could close with the enemy without receiving any volley fire, confident that their proficiency with the bayonet would overwhelm the opponent. Americans initially suffered a severe shortage of bayonets, and the states scrambled to fill the void with various patterns, from the eighteen-inch bayonets of Massachusetts and Virginia to the fourteen-inch bayonets of Connecticut.

Bayonets were especially important in night attacks, when they were used to retain surprise and reduce the risk of firing into friendly units by mistake. Soldiers would load their muskets but were not permitted to prime them, to prevent the loss of surprise by premature firing; then, if necessary, the commander could order his troops to complete this last step and open fire. Another technique was to load the musket, put in the priming charge, close the firing pan, and remove the flint. Major General Charles ("No-flint") Grey used it in his surprise attacks on Continental units at Paoli, Pennsylvania, on 21 September 1777, and at Tappan, New Jersey, on 28 September 1778. On both occasions Grey was accused of allowing atrocities—largely, it seems, because his attacks succeeded.

BEATTY, JOHN. (1749–1826). Continental officer. Born in Warwick, Pennsylvania, on 19 December 1749, Beatty graduated from the College of New Jersey in 1769 and studied medicine with Dr. Benjamin Rush in Philadelphia, setting up his practice in Princeton in 1774. At the beginning of the Revolution, he and his three brothers enlisted in the Continental army. Commissioned a captain in the Fifth Pennsylvania Battalion in January 1776, Beatty led his troops to New York, where they built fortifications. Promoted to major and commander of the battalion, he and most of his troops were taken prisoner in the debacle at Fort Mifflin on 26 September 1776. After six months aboard one of the horrendous British prison ships at New York City, he spent a year paroled on Long Island, being exchanged in May 1778. Promoted to colonel and named commissary general for prisoners of war, Beatty found himself frustrated by a lack of support at every turn and worked informally with the British to improve the care of POWs. General Washington was outraged by these arrangements and ordered Beatty court-martialed in February 1780. Reprimanded by the court and by Washington, Beatty resigned his position in March and returned to Princeton.

His state had a different opinion of his services, and he was a member of the New Jersey state council from 1781 until the legislature elected him to the Continental Congress in November 1783, where he served until 1785. As a delegate to New Jersey's constitutional ratifying convention, Beatty supported the Constitution. He went on to serve as speaker of the state assembly in 1789–1790, as a member of Congress from 1792 to 1795, and as New Jersey's secretary of state from 1795 to 1805. He died at his home in Trenton on 30 April 1826.

Michael Bellesiles

BEAUFORT, SOUTH CAROLINA.

3 February 1779. When Generals Augustine Prevost and Benjamin Lincoln faced each other across the Savannah River at Purysburg, the British commander took advantage of his naval supremacy to direct a turning movement against Beaufort, on Port Royal Island in South Carolina. It lay thirty miles to Lincoln's rear and sixty miles south of Charleston.

Lincoln ordered General William Moultrie to turn out the militia to oppose this threat, and when Major William Gardiner approached with two hundred British troops, Moultrie was waiting at Beaufort with three hundred Charleston militia, twenty Continentals, and three cannon. Moultrie moved his forces out from the town to attack the British, who retreated to the cover of trees.

Beckwith, George

Moultrie ordered his own men into the cover of some other trees and the two sides fired on each other for a little over half an hour. Gardiner was handicapped by having his one cannon disabled early in the fight, but the rebels' ammunition ran out and Moultrie then ordered a withdrawal. When Moultrie realized that the British were also retreating, he ordered pursuit by his few mounted troops. The British escaped by boat to Savannah, and Moultrie moved south to join Lincoln.

American losses were eight killed and twenty-two wounded. British losses are unknown but assumed to have been heavy, given Gardiner's hasty retreat.

This little action discouraged the British from any further operations into South Carolina until the spring of 1779. Then, Prevost moved against Charleston on 11–12 May.

BECKWITH, GEORGE. (1753–1823). British army officer and colonial governor. George Beckwith was the second of four sons of John Beckwith, an officer in the Twentieth Foot Regiment, all of whom followed him into the army. George became an ensign in the Thirty-seventh Foot on 20 July 1771. He rose to lieutenant on 7 July 1775 and in October embarked for the war in America. He fought with distinction in the New York and New Jersey campaigns in 1776, leading the British advance into Elizabethtown and Brunswick. Promoted to the rank of captain on 4 December 1778, he became aide de camp to Wilhelm Knyphausen. During John André's absence with Sir Henry Clinton's 1780 Charleston expedition, Beckwith took over André's intelligence work, including his exploratory contacts with Benedict Arnold. When André returned, and after his capture and death in October 1780, Beckwith continued to assist with intelligence matters. Early in 1781 Beckwith helped the younger Oliver de Lancey to reorganize the

military service. He took part in Arnold's New London raid and was breveted major for his part in the storm of Fort Griswold on 6 September 1781. However, he continued to work in military intelligence until the end of the war, in this way attracting the attention of Sir Guy Carleton.

After the war Beckwith's regiment was stationed in Nova Scotia, and he became Carleton's aide-de-camp at a time when Britain had no ambassador in the United States. In 1787 Carleton, now Lord Dorchester, appointed Beckwith as his agent charged with supplementing the reports of the consuls, a post he held until 1791. Through Alexander Hamilton, Beckwith learned that many Americans favored conciliation with Britain, and for his services he was breveted lieutenant colonel on 10 November 1790. The Thirty-seventh Regiment had gone home in 1789, but Beckwith stayed on with Dorchester, being breveted colonel in 1795. In 1797 he became governor of Bermuda, moving to St. Vincent in 1804 and to Barbados in 1808. He was promoted to major general in 1798 and lieutenant general in 1805. In 1809 he took Martinique (for which he was knighted) and in 1810 captured Guadeloupe. He returned home in 1814, where he was made a full general and was commander in chief in Ireland from 1816 to 1820. He died in London on 20 March 1823.

BEDFORD, GUNNING. (1742–1797). Continental officer, governor of Delaware. Often confused with his cousin (see next article), he was a deputy quartermaster general, became lieutenant colonel of the Delaware Continentals, and was muster master general in 1776–1777. Wounded at the Battle of White Plains, he turned down higher command but continued to serve until 1781; he then returned to Delaware and entered politics, holding many offices. Elected governor in 1795, he died in office in September 1797.

BEDFORD, GUNNING. (1747–1812). Revolutionary statesman. Delaware. Calling himself Gunning Bedford Jr., perhaps to avoid being confused with his cousin (see preceding article), he was born in Philadelphia, was a classmate of James Madison at Princeton, studied law under Joseph Reed, and was admitted to the bar in 1774. He settled in Wilmington in 1783, becoming attorney general of Delaware the following year and holding that office until 1789. He was a delegate to Congress from 1783 to 1786, though he attended few sessions. In 1787 he attended the Constitutional Convention, signed the Constitution, and worked for its ratification at the Delaware convention in December. In 1789 Washington appointed him a judge for the Delaware district, an office he held until his death, 30 March 1812.

BEDFORD–FAIR HAVEN RAID, MASSACHUSETTS. 5–6 September 1778. Sir Henry Clinton's relief force—some five thousand troops on board seventy vessels—reached Newport on 1 September, but found that the Americans had escaped thirty-six hours earlier. The British sailed on to Boston, but saw no possibility of attacking the French fleet there. Clinton then headed back for New York, but detached Major General Charles ('No-flint') Grey to raid the Massachusetts coast. After capturing Fort Phoenix at the mouth of the Acushnet River, in a space of about eighteen hours Grey destroyed property in Bedford and Fair Haven. His men burned between seventy and a hundred vessels (including privateers and their prizes), almost forty warehouses, and many important naval supplies. The raiders then sailed on to Martha's Vineyard.

BELCHER, JONATHAN. (1682–1757). Merchant, colonial governor of Massachusetts and New Jersey. Born in Cambridge, Massachusetts, on 8 January 1682, Jonathan Belcher was raised in a prosperous family

that had important political and commercial connections. Graduating from Harvard in 1699, Belcher traveled in Europe before becoming a wealthy merchant in Boston. In 1705 he married Mary Partridge, daughter of New Hampshire Lieutenant Governor William Partridge.

After being elected to the Massachusetts Council eight times during the twelve years from 1718 to 1729, Belcher happened to be in England when Governor William Burnet died, and he was able to secure the governorship of Massachusetts and New Hampshire for himself. On 10 August 1730 he landed in Boston to take up his commission. His position was one that called for real genius, which Belcher lacked. He tried to walk the fence between royal and colonial interests, but repeatedly found himself embroiled in controversy. Among the conflicts that troubled his time in office was the Broad Arrow policy, which brought him into conflict with royal authority; the Land Bank, in which he supported his friends and family, who opposed the popular scheme; and the boundary dispute between Massachusetts and New Hampshire, in which he was accused of accepting a bribe. On 7 May 1741 the Board of Trade dismissed Belcher as governor of both provinces.

In 1744 Belcher went to England to argue his case, meeting with the Board of Trade, members of Parliament, and King George II. In 1747, perhaps just to get rid of him, the Crown appointed Belcher governor of New Jersey. He reached his new post in August 1747 and had a relatively tranquil tenure until his death on 31 August 1757, in Elizabethtown, New Jersey. He took a great interest in the founding of the College of New Jersey (Princeton) and left the college his library.

BELKNAP, JEREMY. (1744–1798). Congregational clergyman and historian. Author of the three-volume *History of New Hampshire*, which was published from 1784 through 1792. Jeremy Belknap had the advantage of firsthand knowledge of many events and personalities of the Revolution through his ministry in Dover, New Hampshire, from 1767 to 1786. He wrote that the Boston Port Bill gave sufficient cause for military action against the British. The Committee of Safety in 1775 appointed him military chaplain, but he declined owing to poor

health. He later appealed to former military leaders John Sullivan and Josiah Bartlett for financial aid to publish his historical volumes. His work shows thorough research and considerable literary skill. Belknap had a leading part in establishment of the Massachusetts Historical Society in 1791.

BEMIS HEIGHTS, NEW YORK. The bluff on the west side of the Hudson River, three miles north of the village of Stillwater, was named for Jotham Bemis, a local farmer and tavern keeper. The American Northern Army under Horatio Gates created field fortifications on its broad, thickly wooded plateau to block the advance of John Burgoyne's army. As Richard M. Ketchum notes, from the top of the bluff the Americans had "an unobstructed view for miles in almost every direction. Below it, the bottomland, cleared of trees, narrowed down into a defile no more than five or six hundred feet wide between the string of bluffs and the Hudson. Through this defile passed the only road to Albany on the west bank of the river" (*Saratoga*, pp. 337–348). The name of the bluff was attached to the second battle of Saratoga (9 October 1777), Burgoyne's failed final attempt to break through the barrier.

BENNINGTON FLAG SEE *Flag, American*.

BENNINGTON RAID. 6–16 August 1777. When Burgoyne's forces reached Fort Edward and Fort George on 29 July, two British weaknesses were already

apparent. The most obvious problem was logistical—it would be impossible to sustain the offensive with just the supplies that came from Canadian bases. Lines of communications were already 185 miles long and would grow as the army marched south. And, as they kept discovering without ever learning the lesson, the popular support promised by Loyalist leaders in exile did not materialize.

German General Baron Friedrich Riedesel proposed on 22 July that an expedition be sent by way of Castleton and Clarendon into the Connecticut Valley, where horses were reported to be available. Although other foraging was important, Burgoyne needed mounts for the 250 Brunswick dragoons then serving on foot and (more importantly) draft horses and oxen to help haul the wagons and artillery overland, since boats could no longer be used. On 31 July, Burgoyne gave Riedesel preliminary instructions to plan the raid, but in fact he ordered a much more ambitious expedition. Burgoyne's concept of the operation was based on the erroneous belief that Seth Warner had fallen back from Manchester to Bennington. He wanted the raid to push further south so that it would end closer to the main body as it moved toward Albany. The easy capture of Ticonderoga left Burgoyne confident in his regulars' invincibility. Riedesel, who had personally experienced the tough fighting at Hubbardton, was more cautious but was overruled.

Final instructions came on 10 August, when Riedesel briefed Lieutenant Colonel Friedrich Baum on the mission—proceed to Bennington, destroy the American magazine there, and collect horses and oxen. The move would also rally Loyalists and produce recruits to fill Lieutenant Colonel John Peters's Queen's Loyal Rangers. Because Baum spoke neither English nor French, several bilingual British officers accompanied the expedition as translators. The expedition was to start from the Hudson opposite Saratoga (the mouth of Batten Kill), move east to Arlington, follow the Batten Kill upstream to Manchester, and cross the mountains to Rockingham on the Connecticut River. After remaining there "as long as necessary," the foragers were to descend the river to Brattleboro and march west to Albany. Burgoyne expected the operation to take about two weeks.

Baum was field commander of Brunswick's Dragoon Regiment Prinz Ludwig. (Riedesel himself was its colonel, while the honorary chief was Prinz Ludwig Ernst of Braunschweig.) The regiment's four troops formed the nucleus of the expedition. Total strength assigned to the task force was about 800, of whom 374 were Germans (all Brunswickers except for about 30 Hesse Hanau artillerymen). The German strength can be further broken down as follows: 170 rank and file from the dragoons (70 were left behind); 100 infantrymen, most of them elite jägers or Breyman's grenadiers; and the gunners with two three-pounders. The only British regulars were Captain Alexander Fraser's company of about 50 marksmen.

Loyalists, Canadians, and Indians—about 100 of each—completed the force. Flaws in Burgoyne’s planning included the language barrier (and the related inability to “read” a situation by noticing subtle cultural points), overconfidence, and the use of the slow-moving dismounted dragoons and grenadiers on an operation that should have valued speed.

AMERICAN DISPOSITIONS

The fall of Ticonderoga and the Jane McCrea atrocity became sources for propaganda that aroused New England and New York. Furthermore, for nearly a century the people of southern New England had understood that their safety could best be insured by stopping attacks from Canada well to the north of Albany, especially since an invasion like Burgoyne’s could either go south along the Hudson or turn east to the Connecticut Valley. So they mobilized in strength.

New Hampshire turned to John Stark to lead its contingent. He was available, having angrily resigned his Continental commission in March and accepted a state brigadier general appointment (17 July) on the provision that his command remain independent of orders from Congress. Stark took only a week to raise about fifteen hundred men, and by the 30th he had started moving toward Manchester. Seth Warner’s Vermonters, in accordance with their last order at Hubbardton, “Scatter and meet me at Manchester,” were already there. Also on hand was Continental Major General Benjamin Lincoln, sparking a new crisis.

STARK’S INSUBORDINATION

Lincoln was sent to command the American forces being raised by New England in this region, and he had orders from General Philip Schuyler to have Stark’s brigade join the main body on the Hudson. Stark, who had resigned in part because Lincoln’s appointment came at the expense of his own seniority, objected. Lincoln handled the problem with remarkable skill. If Stark could not be commanded as a subordinate, some use might still be made of him and his independent brigade by treating him as an ally. Finding that Stark wished to cut in on Burgoyne’s left rear, Lincoln agreed to this plan and persuaded Schuyler to go along.

BAUM’S APPROACH

Fraser’s Advance Corps had moved eight miles from Fort Edward to Fort Miller on 9 August to give Baum a more advanced jumping-off point. On 11 August, Baum advanced from Fort Miller to the mouth of the Batten Kill, a march of only four miles. He wasted the 12th, but on the 13th pushed fifteen miles southeast to camp at New Cambridge. He also suffered his first casualty when a Loyalist was wounded in a small skirmish. On this same day Burgoyne started crossing the Hudson with his main body and headed for the battlefields of Saratoga.

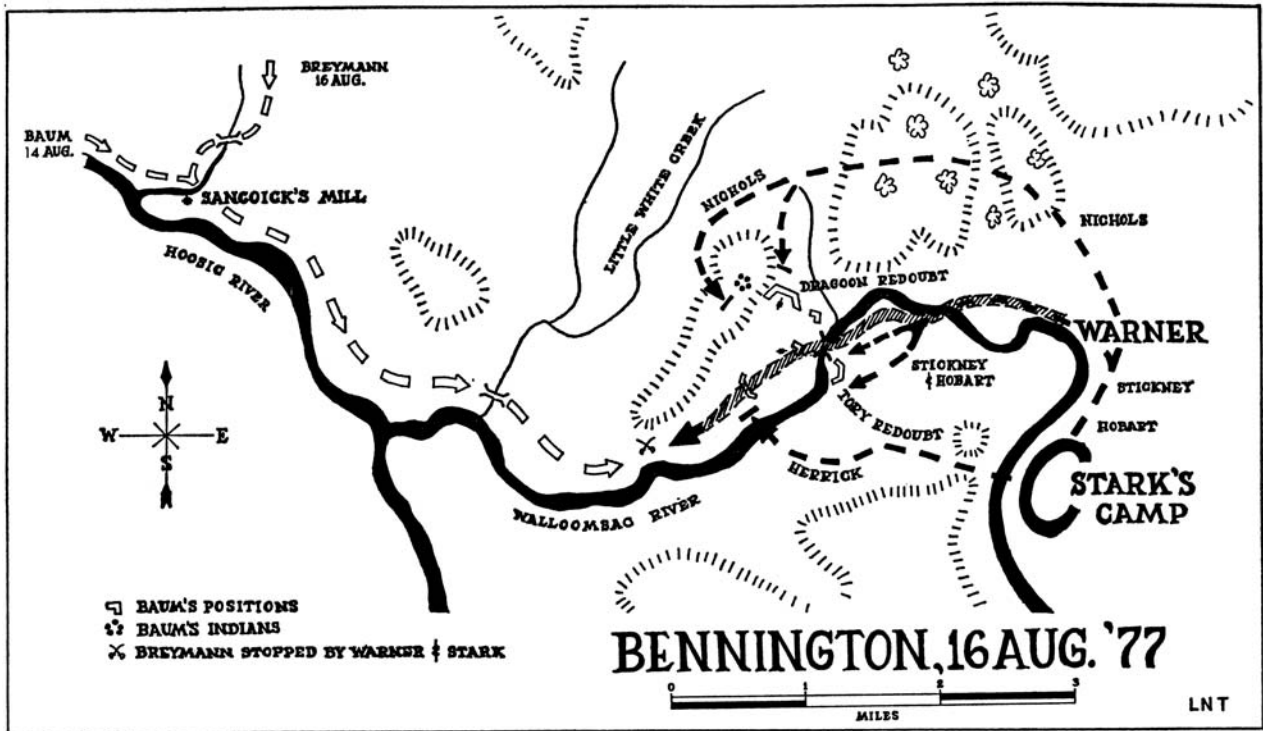

When Stark learned that Indians were in Cambridge, he sent two hundred men from Bennington, about eighteen road miles away, to check them. By evening Stark had learned that enemy regulars were approaching in strength behind the Indians, and he prepared to move with his brigade the next morning, the 14th. Simultaneously, he sent Warner word to move immediately from Manchester to Bennington, a distance of about twenty miles. The local militia also mobilized. Baum’s own scouts learned that Bennington was occupied by eighteen hundred militia, not four hundred, and he sent word back to Burgoyne, along with a promise to advance cautiously.

THE BATTLE OF BENNINGTON

Baum resumed his march about dawn on the 14th and after about two hours reached a mill known as Sancoick’s (at what was later North Hoosick), where the Little White Creek flows into the Walloomsac River. Colonel William Gregg, at the head of Stark’s two-hundred-man advance party, had spent the night there. As Baum approached, the men fired one volley and fell back. After detailing a small guard of Loyalists to guard the mill and its supplies and repairing a damaged bridge, Baum pushed on several more miles, following the course of the Walloomsac. About four miles from Bennington he found Stark waiting with his brigade. Stark had occupied commanding high ground overlooking the river; Baum could not maneuver around that blocking position, so he took up a defensive posture and sent another messenger back to Burgoyne requesting reinforcements. The rest of the 14th saw minor skirmishing between patrols. While no Germans fell, the Canadians, Loyalists, and Indians started losing men, and their morale began to drop.

Before darkness fell on the 14th, Baum committed three crucial errors. First, by asking for reinforcements to reach Bennington, he used wording that Burgoyne reasonably interpreted as good news (see below). Second, although he knew that he was outnumbered by more than two to one and was 25 miles from friendly forces, Baum did not withdraw. Finally, the way he occupied the ground invited defeat in detail. Because he still assumed that he would keep moving along the road towards Bennington, he placed 150 men (mostly Loyalists) on the American side of the river to protect a bridge. They erected a hasty breastwork later referred to as the Tory Redoubt on a small rise about 250 yards southeast of the crossing. Other men occupied cabins on both sides of the river, while the west side of the bridge was covered by 50 German infantrymen, about 25 British marksmen, and one three-pounder in hasty entrenchments.

Baum’s main position was on the hill overlooking the river crossing from further back on the west bank. In what became known as the Dragoon Redoubt were the dragoons, the other half of Captain Fraser’s British marksmen, and the second three-pounder; the two hundred rank and file at this

THE GALE GROUP.

position represented Baum's largest cohesive unit. Three other posts supported the two redoubts. To keep the Americans from infiltrating through an area on the right bank, which could not be seen from the Dagoon Redoubt, fifty jägers set up a strongpoint. A fifth position was located back along the road to Sancoick's Mill, about one thousand yards from the vital river crossing; here, fifty German infantrymen and some Tories were deployed in a field with the mission of guarding to the rear. The Indians were grouped on a plateau northwest of the dragoons.

REINFORCEMENTS

Burgoyne was awakened before dawn of the 15th with Baum's request for reinforcements. He saw nothing alarming in this and dispatched Lieutenant Colonel Heinrich Christoph Breymann with most of the rest of the Brunswick Advance Corps, probably about 650 officers and men. This included another contingent of Breymann's grenadier battalion, most of Major Ferdinand Albrecht Bärner's Chasseur Battalion, and another detachment of the Hesse-Hanau Artillery Company under Lieutenant Spangenburg with two English six-pounders. They covered about half the distance to Baum that day and stopped for the night in the woods.

Warner had gotten Stark's request for reinforcement on the 14th, but a considerable number of his men were off on

patrol, and he did not start for Bennington until the morning of the 15th. He had 350 men; although their speed was considerably better than Breymann's, and the distance about the same, they also were slowed by the rain. Warner joined Stark the evening of the 15th, and around midnight his troops camped about six miles (two hours' march) behind him. Other militia from Berkshire County, Massachusetts, followed. Neither side's reinforcements arrived in time to take part in the first phase of the battle of 16 August.

BAUM'S DEFEAT

The same rain that slowed the advance of the reinforcements also kept Stark from attacking on Friday, 15 August, since it would have neutralized his one tactical asset, musketry. But American reconnaissance patrols probed every part of Baum's perimeter and came back with accurate knowledge of his positions. They also picked off about thirty men, including two Indian leaders.

By daybreak on the 16th, Stark realized he now held a three to one advantage and decided to attack. Dividing his force into three columns, one to fix the center and the others to execute a double envelopment, he started forward about noon. Colonel Benjamin Nichols led two hundred men in the right arm of the pincers, marching four miles along the wooded high ground and taking up a position to hit the Dagoon Redoubt from the north. The

other enveloping force, three hundred strong under Colonel Samuel Herrick, forded the Walloomsac, swung south around the bridgehead by masking themselves behind a ridgeline, and then crossed back over to come up on Baum from the west. The third column advanced down the road using two hundred men to double envelop the Tory Redoubt (with Colonel David Hobart on the left and Colonel Thomas Stickney on the right). Another one hundred demonstrated against Baum's front.

Baum had been sending out small mounted patrols during the morning, and when the rain stopped around noon he could see parties of Americans leave Stark's bivouac from his exceptionally fine observation post in the Dragoon Redoubt. Tradition says that he had drawn the unfortunate conclusion that they were retreating, and that when small bodies of armed men later approached, he mistook them for Tories seeking protection. Surviving German sources do not support that assumption. What is certain is that somewhere around 1 P.M., portions of Baum's perimeter started taking heavy firing. The Indians and some of the Canadians and Loyalists broke and started to flee. One of the cannon fell silent as American snipers eliminated its crew. About 3 P.M. the fighting became general. Nichols and Herrick overran the main position from the north and west, while Hobart's and Stickney's men, having disposed of the Tory Redoubt, came in from the south and east. Stark moved out of the bivouac area with another twelve hundred or thirteen hundred troops to make the main effort down the Bennington Road. At this time or somewhat earlier he shouted to his men, "We'll beat them before night, or Molly Stark will be a widow." Baum's own redoubt held out until about 5 P.M., when ammunition started running out and he fell mortally wounded. Without his leadership, resistance collapsed. Those survivors who could escape started racing west for the safety of the relief column.

BREYMANN'S DEFEAT

The slow-moving German relief column had not started moving (due to the rain) until 9 A.M., and when it reached Sancoick's Mill about 4 in the afternoon, it found refugees from Baum's command, who gave widely disparate accounts of the situation. Although the Dragoon Redoubt was only four miles on a beeline from the mill, Breymann later reported that he heard no sound of firing; this was apparently a case of "acoustic shadow." The tired Germans resumed their march from the mill on the assumption that Baum was still holding out, and their flank patrols on the high ground left of the road drove off the small militia bands that attempted to stop their progress.

Stark's command was in a poor situation to meet this new threat: his men had scattered to chase fugitives or guard prisoners. But Warner's column (about three hundred men) took up pursuit as it came onto the battlefield

and made contact with Breymann about a mile beyond the ford, near the village later known as Walloomsac. He fell back at contact in order to occupy a better position on high ground. One of the Germans later talked of the opening of this phase of the fight as being a situation in which the relief column "ran into the fire at full speed." The Americans quickly realized that they outnumbered Breymann by four or five to one and began trying to work around his flanks and rear.

Although they might be called "fresh troops" in the sense that they had not yet done any serious fighting, the reinforcements of Breymann and Warner had experienced an exhausting march in oppressively hot, muggy weather. They nevertheless engaged with vigor, and Breymann actually advanced almost a mile. But then the tide turned as he started running low on ammunition and casualties started mounting. About sunset Breymann started a fighting withdrawal. He had to abandon both of his artillery pieces when all the horses fell but did bring off a large number of his wounded.

Wounded in the leg and with five bullet holes in his clothes, Breymann personally commanded the rear guard action that permitted two-thirds of his command to escape after dark. The ubiquitous Philip Skene also conducted himself bravely in this action. Stark wisely ordered his men to break contact and not attempt a pursuit after dark, when it would have been impossible to maintain any control and Americans would have been shooting each other.

NUMBERS AND LOSSES

Historians disagree on the American casualties in this running engagement, generally citing somewhere between 40 and 70 killed and wounded. The most reliable numbers, however, are the ones contained in Stark's official after-action report: 14 killed and 42 wounded. The raiders left 207 dead on the field, and about 700 prisoners (including 32 officers and staff) were taken. The dragoons bore the brunt of the fighting, but the Loyalists also paid a heavy price; the Indians had taken off early in the action and it appears that most of the British marksmen got away as well. Stark captured all four of the Germans' cannon plus a large array of other weapons and equipment.

SIGNIFICANCE

Tradition tends to magnify the remarkable American victory at Bennington. Clearly, the mission assigned by Burgoyne was too optimistic, and the composition of the task force in retrospect seems flawed. But it is a bit misleading to condemn Burgoyne and his subordinates for underestimating the size of the American forces massing at Bennington, since that judgment assumes that invading armies of that era had greater ability than they actually did to carry out effective military intelligence operations. Both columns of Germans

Bennington Battle Flag. *This American Revolutionary flag was reputedly flown at the Battle of Bennington on 16 August 1777.* THE GRANGER COLLECTION, NEW YORK.

fought quite well—they just erred in standing and fighting while they still had a chance to withdraw. The problem with criticism of that error is that had they known to do so, Burgoyne would have had to know that his own mission was impossible and that he should have begun retreating to Ticonderoga. The other traditional charge leveled against the German commanders is that Baum and Breymann failed to adapt their military thinking to the new military problem of fighting American irregulars. For example, historians often charge that Breymann did not really have to stop his column and dress ranks every fifteen minutes during their approach march. Unfortunately, given the nature of the Brunswick tables of organization, such a system preserved the order needed to be effective on the battlefield—it was a tactical decision that actually made great sense.

On the American side, most attention normally falls on Stark and Warner, both of whom tend to be identified as militia leaders. Actually, both were Continentals (Stark merely spending a few months in the militia out of the entire war) who happened to be charismatic leaders. Historians conditioned by Emory Upton's negative views of militia forces, views that influenced interpretations after the Civil War, have charged that Stark's plan of attack violated many principles of war and that he was lucky in finding an opponent who blundered more. Actually, he took advantage of his numbers and the terrain and (like Morgan at Cowpens) plotted tactics tailored to the abilities and personalities of his men. Congress recognized these

features when, on 7 October, it appointed him as a brigadier general as a reward for this victory. Lincoln earned a solid reputation as a general who could successfully work with militia based in large part on his handling of Stark, and that reputation would lead to his later appointment as commander of the Southern Department.

Bennington was a great boost to American morale at a time when one was needed, and it encouraged further militia mobilizations. On a more practical level, the losses significantly weakened Burgoyne's combatant strength in pure numbers, and qualitatively they did even more damage by stripping away the best of his German units. Coupled with the failure of St. Leger's expedition, Bennington helped set the stage for Saratoga.

BERKELEY, NORBORNE. (1717?–1770).

Royal governor of Virginia. Born in England, perhaps in 1717, Norborne Berkeley (who claimed the title of Baron de Botetourt) was a member of Parliament who requested a lucrative appointment from the Crown in order to make good his gambling debts. In 1768 he was appointed governor of Virginia. His tenure was notable for its ceremonial aspects. Determined to impress the colonists into submission, Botetourt arrived to take up his post in resplendent costume, borne in a magnificent coach pulled by a team of cream-white Hanoverian horses. When the House of Burgesses condemned Parliament's tax policies, Botetourt dissolved the assembly. The assembly responded by meeting in a tavern the next day and resolving to boycott English goods. At the election for a new assembly, Botetourt was frustrated to find that only those who supported him had failed to be re-elected. Switching to a policy of appeasement, Botetourt called on the colonial secretary, Willis Hill, the first lord of Hillsborough, to allow the colonies to tax themselves for Britain's benefit. He received the colonial secretary's promise that this would be permitted, but soon learned that Lord Hillsborough was lying to him. Outraged, Botetourt requested his own recall. Before he could be relieved of duty, Botetourt died in Williamsburg, Virginia, on 15 October 1770.

BERMUDA. A group of 20 inhabited islands totaling 21 square miles of land, Bermuda lies in the North Atlantic, midway between Nova Scotia and the West Indies, about 580 miles east of the North Carolina coast. Because Bermudans had little land on which to raise food, they were heavily dependent on provisions shipped from the North American colonies. They were particularly anxious when the Continental Congress enacted a program of nonexportation, to begin on 10 September 1775. A delegation of Bermudans arrived at Philadelphia in early July to see if a deal could be worked out. Recognizing that they could not openly defy the imperial government, the Bermudans were willing to curtail their trade in return for continued access to North American provisions. Recognizing, too, that many islanders sympathized with the mainlanders' struggle (only an estimated one-third of Bermudans were actively loyal to the crown), the delegation agreed in mid-July to allow the covert exportation of their local stock of gunpowder in return for food. The Bermudans returned home and, on 14 August, a group of islanders seized 112 barrels of gunpowder from the royal arsenal near St. George, on the main island. The gunpowder made its way to Philadelphia and Charleston, and in the autumn Congress approved the exportation of specified amounts of provisions.

Royal Governor James Bruere urgently asked for protection, and several detachments of troops were sent, but given the demands for manpower elsewhere, Bermuda was garrisoned in strength only from 1778, with companies of the Fifth-fifth Regiment of Foot and the Royal Garrison Battalion, a Loyalist unit. Bermuda served as a base for the Royal Navy and for Loyalist privateers, but the islands' continued economic dependence on the mainland nearly led to sanctions on the mercantile community.

BERNARD, SIR FRANCIS. (1712–1779).

Royal governor of New Jersey and Massachusetts. Born in Brightwell, England, on July 1712, Bernard studied law

and was admitted to the bar in 1737. His good friend, Viscount Barrington secured him an appointment as governor of New Jersey in 1758. Accounted a great success as governor, he was promoted in 1760 to governor of Massachusetts, which proved a less happy posting. His first error was to appoint Thomas Hutchinson, who was not a lawyer, to the office of chief justice in preference to James Otis. The Stamp Act crisis brought him into conflict with the province he governed, while the refusal of the colonial assembly to revoke its circular letter calling on the other colonies to join in resistance to the Townshend duties led to his dissolving the assembly and calling for British troops to restore order. After a number of his letters to the Colonial Secretary Lord Hillsborough containing unflattering characterizations of the people of Massachusetts were published by the *Boston Gazette* in April 1769, Bernard's legitimacy plummeted to the point that his own council called for his removal from office. The Crown agreed with the council's action, and on 1 August 1769, Bernard left Boston amid cheers from the crowd. The government consoled Bernard by making him a baronet. He died in Aylesbury on 16 June 1779.

BERTHIER, LOUIS ALEXANDRE. (1753–1815). French lieutenant in America, later marshal of France and chief of staff (actually used more as an adjutant general) to Napoleon. From childhood he worked with his father as a topographical engineer at French army headquarters. He served successively as a lieutenant (1770), as a captain in the Flanders Legion, then dragoons of Lorraine (1777). Attached to the Soissonais regiment, he arrived in Rhode Island in 1780, became a *sous-aide maréchal des logis*, and assisted in the siege of Yorktown. Upon his return to France he was attached to the general staff. He was later appointed adjutant general with the rank of colonel (1787). In the first days of the French Revolution, he was second in command of the Versailles National Guard and protected the royal family in the October days. He was suspended from his functions in 1792 but fought in the Vendée in 1793 and became general of division (1795); head of the general staff of the Army of the Alps, where he began his long association with Napoleon (1795); commanding general of that army (1798); minister of war

(1799); general of the reserve army (1800); minister of war again (1800); marshal of the empire and later vice constable of France (1804); and major general of the Grand Army (1814). He is remembered in American history for his journal and maps of the American campaign.

BIDDLE, CLEMENT. (1740–1814). Continental officer. Born in Philadelphia on 10 May 1740, Biddle entered his father's successful business as a young man and remained a merchant for his entire life except during the Revolution. In 1764 he organized a militia company to protect friendly Indians from the Paxton Boys. The following year he played a key role in promoting the nonimportation agreement, becoming a leader of the Patriot cause. He helped create the volunteer militia companies known as the Quaker Blues at the beginning of the Revolution. Congress appointed him lieutenant colonel of the volunteer Flying Camp on 8 July 1776. In November he became aide-de-camp to General Nathanael Greene, seeing action at several battles from Trenton—where he received the German officers' swords—to Monmouth. Congress appointed Biddle commissary general of forage in July 1777, a position he held until June 1780. During this period, Biddle and Greene entered into a business partnership that continued for many years after the war. Biddle resigned from the Continental army in October 1780. In November he was named marshal of the court of admiralty by the Pennsylvania Executive Council. In his new post, Biddle was responsible for selling captured enemy property. He was also named quartermaster and colonel of the Pennsylvania militia on 11 September 1781, holding that position until the war's end. Except for occasional duty as a judge on the court of common pleas and as U.S. marshal for Pennsylvania from 1789 to 1793, Biddle devoted the rest of his life to business. He died in Philadelphia on 14 July 1814.

BIDDLE, NICHOLAS. (1750–1778). Continental naval officer. Pennsylvania. Born in Philadelphia on 10 September 1750, Nicholas Biddle went to sea at the age of 13, was shipwrecked on one voyage, and joined the Royal Navy in 1770. Failing to get an assignment aboard a ship bound for polar exploration in 1773, Biddle gave up his naval commission and joined the expedition as a common seaman. On the subsequent exploration of the Arctic he made the acquaintance of Horatio Nelson, who also had sacrificed rank in the navy for this adventure.

Returning to America after this voyage, Biddle took the Patriot side and volunteered for duty. On 1 August 1775 he took charge of the Pennsylvania galley *Franklin* in the Delaware River defenses, but in December he became one of the first four captains of the Continental navy. Commanding the 14-gun *Andrea Doria*, which had a crew of 130, he took part in the naval operations led by Esek Hopkins in early 1776 that captured Forts Montague and Nassau in the Bahamas. After this, Biddle cruised in the North Atlantic, taking many supply ships whose cargoes were sent to General George Washington during the siege of Boston. In addition, he captured two armed transports carrying 400 Highlanders to Boston. He returned to Philadelphia with only five of his original crewmen, all the rest having been detached to man the captured ships. He replaced his original crew with volunteers taken from among his prisoners. Rewarded with command of the recently launched, 32-gun *Randolph*, Biddle was sent to the West Indies. There his prizes included the 20-gun *True Briton* and its convoy of three merchantmen, which he took into Charleston. He was held in that port for a time by the British blockade, but in February 1778 he sailed out with four small warships that had been fitted out by South Carolina and attached to him for operations.

Sighting a sail at 3 P.M. on 7 March 1778, Biddle made for it. Unfortunately it turned out to be the 64-gun British vessel, the *Yarmouth*, which destroyed the *Randolph* after a fierce twenty-minute action at close quarters. Biddle was wounded and so directed the battle from a chair on the quarterdeck. The *Randolph* blew up, and all but four of its 315 officers and men were lost.

BILLETING ACTS **SEE** *Quartering Acts.*

BILLINGSPOORT, NEW JERSEY. 30 September–1 October 1777. In 1776 the Continental Congress and the government of Pennsylvania selected Billingsport for the outermost belt of Philadelphia's Delaware River defenses. They emplaced a double line of chevaux-de-frise twelve miles below Cooper's Ferry (later Camden, New Jersey), protected by a large redoubt on the Gloucester County, New Jersey, side of the river. Thaddeus Kosciuszko had made the original plans, but Congress expanded on them in the early summer of 1777 on the advice of Major General Philippe Tronson du Coudray. Before construction could be finished, Washington reviewed the river defenses and decided to make Fort Mifflin, upstream, the focal point, leaving Billingsport to be manned by the New Jersey militia. On 26 September the British captured Philadelphia from the land side and turned their attention to clearing the Delaware River so that the city could be supplied; three days later Sir William Howe sent Lieutenant Colonel Thomas Stirling at the head of a task force (the Tenth and Forty-second Foot) to start the process. Stirling crossed from Chester to Raccoon Creek (later Swedesboro) on the New Jersey side and then swung north to attack the redoubt. Faced with a major attack supported by the Royal Navy, Colonel William Bradford's garrison of four hundred New Jersey and Pennsylvania militia spiked its guns and withdrew. On 1 October the British occupied the position and covered Captain Andrew Snape Hamond's naval element, which cut through the chevaux-de-frise.

BILLY (WILL THE TRAITOR). Slave and possible rebel. As is generally the case with American slaves, little is known of the life of Billy, also known as Will or William, except for a brief moment when he entered the

historical record on a charge of treason. Colonel John Tayloe of Richmond County, Virginia, claimed Billy as his property. On 2 April 1781, Billy, anxious to escape service to Tayloe, and several other slaves were arrested for planning to capture an armed ship in order to “wage war” on the state of Virginia. Billy’s actual plans are unknown, but they may have involved sailing to join the British in hopes of attaining freedom. At his trial he argued that he had been forced against his will onto the ship, and no evidence was produced at the trial to indicate that he had gone willingly. The court of Prince William County, however, rejected his defense and condemned him to death on 8 May. Justices Henry Lee and William Carr dissented from this three to two decision, pointing out that since Billy enjoyed none of the rights of citizenship, and thus did not owe allegiance to Virginia, he could not be guilty of treason. In May 1781 Governor Thomas Jefferson accepted the dissenting judges’ reasoning and granted a temporary reprieve, but he refused to make a final determination and asked the legislature to decide Billy’s fate. A joint resolution of Virginia’s house and senate on 14 June 1781 reprieved Billy from death and returned him to slavery. Nothing more is known of him.

Michael Bellesisles

BIOLOGICAL WARFARE. The history of warfare provides many examples of commanders who deliberately attempted to spread infectious disease in the camps of their enemies. The sophistication and effectiveness of the biological component of warfare has ranged from the relatively simple act of polluting water sources with the carcasses of dead animals and humans to the malicious distribution of smallpox-laden clothing into a susceptible population. Because it can be spread only through human-to-human contact and produces a horrifying set of symptoms with a high mortality rate, smallpox has the potential to be both manipulated by humans and highly destructive when introduced. Long before modern science was able to explain why smallpox spread so quickly and proved so deadly, humans knew enough about the disease to be able both to protect themselves and to facilitate its spread. Early in the eighteenth century, colonial Americans became aware of the practice of inoculation, a procedure whereby a small amount of infectious agent was deliberately introduced under the skin, producing a case of the disease that, for reasons that still cannot be fully explained, was significantly less deadly than if the individual had been infected via person-to-person contact. While it cannot be conclusively proven that outbreaks of smallpox during wartime in eighteenth-century North America were caused by human agency—the infection could have traveled via trade routes

and contacts that were a regular and normal part of the environment—it is possible to demonstrate that humans did intentionally want to spread smallpox among their enemies during this time.

THE CASE OF AMHERST

The best documented case of intent occurred during Pontiac’s War, when Major General Sir Jeffery Amherst, the British commander in chief in North America, wrote to Colonel Henry Bouquet on 7 July 1763 to ask: “Could it not be contrived to Send the *Small Pox* among those Disaffected Tribes of Indians [then laying siege to Fort Pitt]? We must, on this occasion, Use Every Stratagem in our power to Reduce them.” Bouquet agreed with Amherst’s suggestion in his reply of 13 July: “I will try to inoculate [sic] the Indians by means of [smallpox-infected] Blankets that may fall in their hands, taking care however not to get the disease myself.” Neither senior officer knew that Captain Simon Ecuver, the commander of Fort Pitt, and William Trent, a trader and land speculator then resident at the fort, had already put in motion the very plan that Amherst proposed. Elizabeth A. Fenn has written, “The eruption of epidemic smallpox in the Ohio country coincided closely with the distribution of infected articles by individuals at Fort Pitt. While blame for this outbreak cannot be placed squarely in the British camp, the circumstantial evidence is nevertheless suggestive” (*Biological Warfare*, p. 6).

WASHINGTON AND INOCULATION

Whether or not the British were guilty of spreading smallpox in 1763, senior American commanders were alive to the reality that American-born soldiers, living their lives in a disease environment where encounters with smallpox were episodic and deadly, were at significantly greater risk of falling prey to the disease than were their European-born opponents, who—besides having more exposure to the disease—were also regularly inoculated when recruited into military service. George Washington, who had survived his own encounter with smallpox on a voyage to Barbados in 1751, wrestled with the problem from the moment he arrived at Cambridge, Massachusetts, on 2 July 1775 to take command of the New England army besieging Boston. Rumors were rampant that Major General Thomas Gage, the British commander in chief in Boston, was trying to promote outbreaks of the disease in the American camps. Washington instituted measures to try to quarantine the disease but worried that, given the state of indiscipline in the army, his orders might not be followed. He considered inoculating the troops, but shrank from it because the army’s medical facilities were still too primitive to manage the procedure effectively and because it would put too many men out of combat for too long in the face of an active and opportunistic enemy. He made sure that the first American

troops entering Boston on 17 March 1776, after the British evacuation, were survivors of smallpox and thus had immunity against the disease.

The impact smallpox could have on an army was demonstrated vividly by the way it destroyed the American invasion of Canada in 1775–1776. American forces arrived outside the walls of Quebec in November 1775 and managed loosely to besiege the city over the ensuing winter and even to mount an unsuccessful assault on New Year’s Eve, despite being at the end of a tenuous supply line that stretched all the way back to Albany, New York. But when smallpox broke out among the troops in the spring—deliberately introduced, it was rumored, by Major General Sir Guy Carleton, the British commander in Canada—American morale crumbled. Abandoning dead and dying comrades along the roadside, the survivors fled up the St. Lawrence and then south toward Lake Champlain. Major General John Thomas, himself a medical doctor, eventually authorized inoculation, but it was too late; Thomas himself succumbed to smallpox at Fort Chambly on 2 June 1776.

Washington still vacillated about inoculating the army. In a letter to Horatio Gates of 5 February 1777 he admitted, “I am much at a loss what Step to take to prevent the spreading of the smallpox; should We Inoculate generally, the Enemy, knowing it, will certainly take advantage of our situation.” Literally overnight, he came to a decision. In the postscript he added the next morning, he told Gates: “Since writing the above, I have come to the Resoluto. of Inoculatg the Troops, and have given Orders to that purpose as well at Philada [Philadelphia] as here [Morristown, New Jersey]. This is the only effectual Method of putting a Period to the Disorder.” Inoculation became standard practice in the army for the remainder of the war. It was one of Washington’s most important decisions.

THE BRITISH AND SMALLPOX

Smallpox was epidemic across the North American continent from 1775 through 1782, so it is impossible to prove that the British deliberately used smallpox as a weapon. That some British senior officers saw smallpox as an added way to injure the rebels is beyond dispute, however. During the campaign in Virginia in 1781, thousands of African American slaves liberated themselves by joining the tail of the various British expeditions that crisscrossed the state that summer. African Americans were as likely to contract smallpox as any Americans, and soon the freedmen and freedwomen were being ravaged by disease. The British in truth did not have the resources to help them, but instead of trying, senior commanders turned them out, knowing full well that they might carry smallpox back to the rebels. From Portsmouth on 13 July, Major General Alexander Leslie told Charles Earl Cornwallis that “Above 700 Negroes are come down the

River in the Small Pox; I shall distribute them about the Rebell Plantations.” Cornwallis himself, as he sat his army down at Yorktown to await the relief that never came, expelled perhaps several thousand former slaves. American soldiers, at least, thought he did so to spread smallpox in the besieging army. According to the memoirs of Joseph Plumb Martin, “During the siege, we saw in the woods herds of Negroes which Lord Cornwallis (after he had inveigled them from their proprietors), in love and pity to them, had turned adrift, with no other recompense for their confidence in his humanity than the smallpox for their bounty and starvation and death for their wages.”

SMALLPOX’S IMPACT

While smallpox did influence the outcome of some campaigns, most notably the invasion of Canada in 1775–1776, it did not determine the outcome of the war. What it did do was increase human suffering, not just among the soldiers and camp followers, but in the communities to which the passage of armies and the return of veterans communicated the disease. Specific evidence is lacking, but it all probability smallpox killed more people during the war than died as a result of direct military action.

BLACK MINGO CREEK, SOUTH CAROLINA. 29 September 1780. To overawe rebels around Williamsburg, South Carolina, and to serve as an advance outpost for the recently completed British base at Georgetown, Colonel John Coming Ball and his forty-six Loyalists took a position near Shepherd's Ferry, about twenty miles north northwest of Georgetown. (This spot is near where South Carolina Highway 41 later crossed Black Mingo Creek.) Learning of this movement, Colonel Francis Marion (the "Swamp Fox") led his partisans south from Port's Ferry, hoping to make a surprise attack. A Loyalist sentinel heard horses crossing Willtown Bridge, a mile above Shepherd's, at about midnight, and Ball deployed for action, firing a volley that halted the Patriot advance. Though he had lost the element of surprise, Marion attacked with the dismounted troops on the right (west) flank under Major Hugh Horry, a small body of supernumerary officers under Captain Thomas Waites in the center to assault Dollard's Tavern (the "red house"), and a small mounted detachment to move east of Dollard's. Marion followed with a small reserve.

Ball had formed in the field through which Horry advanced rather than fight from the house as Marion expected, and the British colonel calmly held his fire until the rebels were within thirty yards. When his men did open up, they killed Captain George Logan, badly wounded Captain Henry Mouzon and Lieutenant John Scott, and started a disorderly retreat among Horry's troops. Captain John James kept his men under control, however, rallied those of Mouzon, and started a cautious advance. When Waites skirted the tavern and turned against the Loyalist right flank, the defenders began to lose heart and soon retreated. Although only fifty men were engaged on each side in an action that lasted but fifteen minutes, two rebels were killed and eight wounded, the Loyalists losing three dead and thirteen wounded, captured, or both. Along with a number of much needed firearms, Marion's booty included the fine sorrel gelding of the enemy commander, a horse the

Swamp Fox renamed Ball and rode for the remainder of the war.

BLACK RIVER SETTLEMENT SEE *Honduras*.

BLACKSTOCK'S, SOUTH CAROLINA. 20 November 1780. In the wake of rebel victories at King's Mountain, 7 October, and Fishdam Ford, 9 November, General Charles Cornwallis was determined to regain the initiative by securing the middle and upper regions of South Carolina. Certainly this step was essential to his plans for carrying out a second invasion of North Carolina. His first move was to call Lieutenant Colonel Banastre Tarleton back from the lower Peedee and to send Major Archibald MacArthur to secure Brierly's Ford on the Broad River. Campbell, with his First Battalion of the Seventy-first Regiment of Foot (Fraser's Highlanders) and the remaining men of James Wemyss' Sixty-third Foot, was to hold the ford until Tarleton could come up with his British Legion. When so combined, this force would then act against the body of rebel partisan militia said to be operating in the area under Brigadier General Thomas Sumter. Cornwallis was particularly concerned that rebel forces might try to take Ninety Six, a town that was the Loyalists' key backcountry stronghold, and his orders to Tarleton were to find and break up Sumter's band of partisans before they could do this or any other harm to the British cause.

It was this situation that led to the series of events that preceded the battle at Blackstock's Plantation. First, in accordance with his orders, Tarleton and his legion duly reached their objective of Brierly's Ford by forced marches the morning of 18 November. At that point they drew fire from a 150-man mounted force of rebels apparently sent to scout out just this sort of British move. Tarleton immediately crossed the river and set out in pursuit with his legion and the infantrymen of the Sixty-third, these last having been mounted on horses rounded up along the way.

The British pursuit changed things for Sumter. Reinforced by Georgia troops under Colonels Elijah Clarke and John Twiggs, he had until this moment intended to attack not Ninety-Six but a Tory post some

fifteen miles away on Little River and commanded by Colonel James Kirkland. But on the night of 19 November a British deserter entered Sumter's camp with the news that Tarleton had returned from the Peedee and was at that moment coming after the Americans with all speed. Sumter ordered a retreat toward the Tyger River. The British continued their pursuit through the morning and into the afternoon of 20 November. But their progress was too slow for the hard-riding Tarleton. Realizing that he could not, with his entire force of slow-moving foot soldiers, move swiftly enough to catch Sumter, Tarleton decided to push ahead with his fastest troops: the nearly two hundred legion dragoons and the eighty mounted infantrymen of the Sixty-third. The remaining infantry troops and the three-pounder gun and its crew were ordered to follow as quickly as they could.

Tarleton's idea of pushing ahead with the mounted elements paid off, with the British advanced guard soon catching up to the rebels' rear elements. But Sumter's main body had already reached Blackstock's Plantation and the ford on the Tyger River. Escape from Tarleton beckoned. The light was already failing, and, with the onset of darkness, Sumter would have every chance of getting his command safely across to the far side of the river. At this juncture a woman of the neighborhood who had observed the passage of Tarleton's column rode up with important news: Tarleton's, she told Sumter, was only a partial force. The British main body of infantry and artillery was still well to the rear of the mounted elements. Encouraged by this information and knowing that it was sure death to be caught by Bloody Tarleton, as he was known, while astride a river, Sumter decided to make a stand at Blackstock's.

He was favored by good defensive terrain. Although the river was to his rear, on Sumter's left, as he faced the oncoming British, was a hill on which five log houses of the plantation were located in an open field. There Sumter posted Colonel Henry Hampton and his riflemen, and the Georgia sharpshooters of Colonel John Twiggs were positioned along a rail fence extending from the houses to the woods on the left flank. On a wooded hill that rose to his right from the main road he deployed the troops of Colonels William Bratton, William Hill, James McCall, and Edward Taylor. Colonel Edward Lacey's mounted infantry screened the right flank, and Colonel Richard Winn was posted to the rear, along the Tyger, as a reserve.

When Tarleton closed up to this position with the legion cavalry and mounted infantry of the Sixty-third Regiment, he realized the Americans were too strong to attack with just his small numbers. He would have to wait until the rest of his force could come up. He therefore dismounted the Sixty-third and formed them on his right overlooking the creek that ran in front of Sumter's position. To the left of the road he formed his dragoons. "Gamecock" Sumter, though, had little intention of

standing idle with his far more numerous force while Tarleton's much smaller one gained its reinforcements. He moved to start the fight. Ordering Colonel Elijah Clarke to turn the enemy right with a hundred men and block the reinforcements that would be coming up the road, Sumter led Twiggs and four hundred men in an attack on the Sixty-third. The Americans crossed the creek and started up the hill against the redcoats, but delivered their fire too early. The British counterattacked and drove them back toward the houses of Blackstock's Plantation. As these eighty British regulars were engaged in the remarkable feat of pushing back a force five times their size, Sumter ordered Lacey to hit the British left flank and the legion dragoons posted there.

So busy were these in watching the infantry action on the other flank that Lacey was able to get within seventy-five yards of them undetected. His riflemen delivered a sudden fire that instantly dropped twenty enemy troopers out of the saddle. But just as quickly the British reacted, charging to drive Lacey back into the trees. Tarleton himself next led the dragoons in a wild, second charge. This one was in the direction of the log buildings of the plantation, from which Hampton's riflemen continued to pour forth a fire that had already mortally wounded the Sixty-third's battalion commander and stopped the redcoats cold. Tarleton's was less the unpromising tactic of a cavalry charge against riflemen firing from cover than a way of keeping Twiggs's men, who had rallied and reformed, from overrunning the remnants of the Sixty-third. The redcoats fell back in good order. Sumter, previously on the rebels' right flank with Lacey, at this point was riding back to the center of the line. A lucky shot from one of the Sixty-third's muskets struck him, penetrating his right shoulder, ripping along the shoulder blade, and chipping his backbone. Unable to speak and bleeding badly, Sumter had to be evacuated from the field on a makeshift litter carried between two horses. With Sumter down wounded, Twiggs assumed command.

Darkness had now fallen and both sides withdrew. Both sides claimed the victory. On the British side Tarleton had succeeded in his purpose of deflecting—for the moment—the threat of a rebel attack against Ninety six. His forces had dispersed the rebels and also inflicted wounds that were serious enough to keep Sumter out of action in the critical time ahead. On the other hand, Tarleton had taken losses the British could not afford. He had let the Americans pick the ground and circumstances of a fight. On the American side, Sumter's militiamen-partisans had repulsed a British attack and then, under cover of darkness, slipped away before the main body of Tarleton's column could come up to finish them off.

The Gamecock was indeed badly hurt, but within two and a half months he was back in the field (and lived to be ninety-eight, the last surviving general officer of the

American Revolutionary War). The arrival of the remainder of Tarleton's force permitted him to occupy the field and claim the victory. He pursued for two days after the fight at Blackstock's, eventually reaching the Pacolet River and picking up rebel stragglers and British fugitives from such recent clashes as Patrick Ferguson's defeat at King's Mountain and Wemyss' defeat at Fishdam Ford. Tarleton persisted in believing reports that Sumter was mortally wounded and that his force, disheartened from the intensity of the British pursuit, had given up and dispersed into small units. Tarleton returned to Brierly's Ford about 1 December. The next time he pushed a rebel force so hard that they turned at bay with their backs to a river would be at Cowpens, 17 January 1781.

CONCLUSIONS

The events both leading up to and following this action showed the ability of the rebels, who fought in the mounted infantry style of riding to the battle but fighting dismounted, to get away before their British pursuers could catch them. What made Blackstock's Plantation significant was that Sumter chose to turn and fight. The action there was arguably the Gamecock's greatest fight as a partisan leader. For the first time in the campaign in the South, rebel partisan militiamen—fighting alone, with no help from the Continental regulars of their own side—managed to repulse British redcoat regulars. The battle was also emblematic of what some historians have identified as the Americans' "strategy of erosion"—a strategy of wearing down the British by inflicting losses and inducing them to engage in exhausting, fruitless marches. The Sixty-third Foot, for example, a veteran regiment that had fought engagements from Long Island to Monmouth Court House and had been sent south, at the end of 1779, for the fighting in South Carolina, had steadily lost men through just such weary marching and fighting. It lost two promising junior officers to the rebels' rifles at Blackstock's, as well as Major John Money, the Sixty-third's energetic and highly regarded commander. These were losses that the British could not replace. The fight at Blackstock's was also a significant learning experience for American commanders in another key matter: how best to combat the ever-aggressive Tarleton. Blackstock's confirmed the view that Tarleton would pursue at any cost in order to cut off retreating rebel forces, especially when these might try to cross a river to safety. At Cowpens two months later, Brigadier General Daniel Morgan would make the British and Tarleton in particular pay for just such aggressiveness.

NUMBERS AND LOSSES

The British troops engaged at Blackstock's comprised the 80 regulars of the Sixty-third Foot and the 190 Loyalist provincial troops of Tarleton's British Legion. The total

number of British troops engaged in the battle thus amounted to 270 men. On the American side, Sumter's force comprised some 800 to 900 South Carolina militiamen plus an additional 100 Georgia militiamen. British losses amounted to 92 killed and 100 wounded (some accounts put the number of killed and wounded much lower), or somewhere between one-third and two-thirds of the force that Tarleton committed to the battle. Sumter's losses amounted to 3 killed and 5 wounded (one of them himself).

BLAINE, EPHRAIM. (?–1804). Continental commissary officer. Pennsylvania. According to Heitman's *Historical Register*, (1914), Blaine was commissary of the Eighth Pennsylvania, 17 October 1776; commissary of supplies, Continental Army, 1 April 1777; deputy commissary general of purchases, 6 August 1777; and commissary general of purchases, 1 January 1780–24 July 1782. Johnston's order of battle for the Yorktown campaign shows Colonel Blaine as commissary general. Heitman shows no military rank.

BLANCHARD, CLAUDE. (1742–1803). Chief commissary to Rochambeau. Blanchard's career began in 1761, when he served in the Ministry of War. Named commissary of wars in 1768, he was sent to Corsica for ten years. Rochambeau appointed him in March 1780 to his general staff as chief commissary. He arrived in Rhode Island in July 1781 and assisted in the Battle of Chesapeake Bay. Blanchard returned to France in January 1783. He was made a chevalier in the Order of Saint Louis (1788), elected commander of the National Guard of Arras (1789), and elected deputy for Pas-de-Calais to the Legislative Assembly (1791). He lost all posts as an "aristocrat" in 1794 but was appointed to the Army of Batavia after the Reign of Terror. His *Journal* of the French campaigns provides colorful details on the participants not found elsewhere.

BLAND, THEODORICK. (1742–1790). Continental officer. Virginia. Born in Prince George County, Virginia, to a wealthy plantation family, he was schooled in England between 1753 and 1763, where he graduated from the University of Edinburgh as a doctor of medicine and practiced in Virginia from 1764 until 1771, when bad health forced him to retire and become a planter. He was active in Patriot politics and was one of the twenty-four who removed the arms from the governor's palace in Williamsburg to the powder magazine on 24 June 1775. On 13 June 1776 he became captain of the First Troop of Light Dragoons, and on 4 December he was promoted to major of Light Dragoons. He subsequently became colonel of the First Continental Dragoons on 31 March 1777.

Bland commanded mounted troops in the New Jersey campaign and in the Philadelphia campaign. In the Battle of the Brandywine on 11 September 1777, he commanded light cavalry troops at Washington's disposal and was posted on the right (north) flank. Since he failed to gain timely knowledge of the enemy's main attack around this flank, he is largely to blame for the faulty intelligence that caused the American defeat. The main criticism of Bland

was not so much that the information was several hours too late, but that he had not properly reconnoitered the creek on Washington's right flank to inform the commander in chief that the enemy could ford it to make a tactical envelopment. "Light-Horse Harry" Lee was wrong in putting the entire blame on Bland, but he probably was justified in the judgment that "Colonel Bland was noble, sensible, honorable, and amiable; but never intended for the department of military intelligence."

On 5 November 1778, Washington gave Bland the mission of escorting the Convention Army from Connecticut to Virginia, and on 1 May 1779 Bland took command of the guard detail at Charlottesville, Virginia. In November 1779 he received permission to leave this post, where he had earned from the captive Major General William Phillips the nickname "Alexander the Great." Elected to the Continental Congress, he served for three years (1780–1783). Although an anti-nationalist, he supported both the incorporation of a national bank and an impost levy by Congress. Bland is credited with persuading the French minister to the United States, Chevalier de la Luzerne, to send a French naval squadron to the Chesapeake Bay region during Benedict Arnold's invasions of Virginia from December 1780 to the spring of 1781. Bland retired to his plantation, Farmingdale or Kippax, in Prince George County, which had been plundered during his absence by British raiders. In 1786 he was an unsuccessful candidate for governor against Edmund Randolph. He served in the House of Delegates from 1786 to 1788, voted against adoption of the federal Constitution in the Virginia Convention of 1788, and in that year was elected to the first U.S. House of Representatives. There he served until his death on 1 June 1790. He has been described as tall, handsome, suave, strictly honest, and of meager intellect.

BLANKETS. Blankets (including bed rugs and coverlets) comprised part of the allotment issued to Continental army, British, and German forces. Blankets were often troops' only covering in inclement weather and served as substitutes for coats in cold weather. They were also sometimes used in lieu of knapsacks for carrying extra clothing and other necessities. Seldom were sufficient

Bloody Backs

supplies of blankets on hand, despite efforts to obtain them via donations, impressments, and imports. Blankets were again scarce during the hard winter of 1779–1780, when the Board of War instigated a secret mission to purchase quantities from British-held New York. General George Washington was brought into the matter when New Jersey authorities discovered the plan and threatened to confiscate the shipment. As a result, Washington's troops were not issued the much-needed British blankets until late spring of 1780.

Made of wool, linen, or the mixed cloth linsey-woolsey, they came in a variety of colors and patterns. Most were white or off-white; striped and checked blankets were also common. Less frequently seen were black, yellow, blue, red, brown, orange, and green. A surviving example carried by an American private soldier in the war is a white 3-point blanket, 53 inches by 72 inches, with two and three-quarter-inch stripes of indigo blue (one at either end) and points of the same color. American-made blankets of the period were constructed from two pieces of material, domestic looms producing only narrow cloth, from 20 to 40 inches wide. British military blankets often were marked with a broad arrow or crown device and the initials 'G.R.'

BLUE LICKS, KENTUCKY. 19 August 1782. The British in Detroit sent out two expeditions in the summer of 1782 to press on the Virginia frontier. One group moved against Wheeling in July. The second force of Indians and Loyalists, under Captain William Caldwell and Simon Girty, collected at Chillicothe in early August to invade the Kentucky settlements; they planned to eliminate Bryan's Station and then move on to the Lexington settlements about five miles further southwest. They reached the vicinity undetected on the evening of the 14th and the next morning approached Bryan's Station. The defenders had been alerted the previous day by news of an ambush at Upper Blue Licks and were making military preparations to start a pursuit when the raiders attacked. The first assault failed, as did an attempted siege, and on the morning of the 18th, the raiders started a slow, deliberate withdrawal. A large party of frontiersmen assembled at Bryan's a few hours later and set off in pursuit. The next morning the leading party of 182 men caught up with an estimated 240 raiders near the Lower Blue Lick Springs on the Middle Fork of Licking River. Daniel Boone and other leaders advised waiting for a large reinforcement known to be on its way under General Benjamin Logan, but Major Hugh McGary foolishly touched off a disorganized charge. The Americans were caught in the deep ford by a superior force and in a few minutes were crushed. The Kentucky men fled after losing sixty-four killed and five captured.

BLUE MOUNTAIN VALLEY OFF SANDY HOOK, NEW JERSEY. 22–23 January 1776. When the Elizabethtown, New Jersey, Committee of Safety learned that a British transport had

been sighted off the coast, the committee ordered its capture. Elias Dayton and Colonel William Alexander (Lord Stirling) assembled a body of eighty volunteers from the town and a thirty-man detachment of Stirling's First New Jersey Regiment, which put off from the shore in four small boats (three shallops and a pilot boat). They came up with the British vessel about forty miles from Sandy Hook and approached it while all but a few men stayed hidden. The ship was the *Blue Mountain Valley*, a victualler that was one of a group of twenty-one merchantmen under a contract let in the fall of 1775 to the firm of Mure, Son and Atkinson to transport an emergency shipment of food and coal to the Boston garrison. The master, James Hamilton Dempster, mistook the approaching Americans for fishing vessels and allowed them to come alongside. The boarding party then poured through the hatches and easily took the surprised vessel on the 23rd.

Two months later, on 27 March, the Royal Navy got its revenge. Lieutenant Robertson set off at 10 P.M. from a point off Bedlow's Island with the ship's boats of the ship of the line *Asia* and frigate *Phoenix* and under cover of darkness rowed to Elizabethtown Point, where the *Blue Mountain Valley* and another captured vessel were moored. They burned the *Blue Mountain Valley* but recaptured the *Lady Gage*.

This otherwise minor occurrence took on great importance in propelling not only New Jersey but also New York City into active participation in the war. It also caused considerable consternation in British command circles and back in London and led to major policy changes prohibiting the use of transports sailing without naval escorts. That policy change helped to limit losses of vessels, but it also greatly complicated the Royal Navy's burden. Secondary sources disagree on the details, reflecting a squabble over credit among the participants.

Robert K. Wright Jr.

BLUE SAVANNAH, SOUTH CAROLINA. 4 September 1780. After his successful coup at Great Savannah, on 20 August, Colonel Francis Marion led his fifty-two mounted men swiftly east to escape pursuit and camped sixty miles away, at Ports Ferry on the Peedee River. Although he now was safe from attack from the west, where the British forces were located, danger developed to the northeast when Major Micajah Ganey called out his Loyalist militia and started down the Little Peedee early on 4 September. Although outnumbered nearly five to one, Marion marched to meet this threat. His advance guard under Major John James located and routed a forty-five-man advance guard under Ganey's personal leadership.

When Marion saw the remaining two hundred Loyalist militia under Captain Jesse Barefield, who had defected from the South Carolina Continentals, he retreated to the Blue Savannah swamp, circled to set up an ambush, and routed Barefield's men by a sudden charge. The Loyalists delivered one volley, wounding three men and killing two horses, before heading for the swamps. This success broke the spirit of the Loyalists east of the Peedee and brought sixty volunteers in to double Marion's strength.

Blue Savannah is about sixty miles east northeast of Great Savannah. This put it near Galivant's Ferry, established later.

BOARD OF WAR. 13 June 1776–7 February 1781. Congress spent much of the war trying to create an effective and efficient system to manage military affairs. Because the colonies did not quickly or easily relinquish control over their military resources, it was something of a miracle that Congress fielded credible, centrally directed armed forces, a success that was attributable largely to the urgent need to coordinate the military activity of what was, in effect, a coalition of thirteen separate states. It took Congress nearly two months, from 17 April to 15 June 1775, to take the obvious step of creating the office of commander in chief of its field forces and selecting George Washington for that responsibility. Although the delegates understood the weaknesses and delays inherent in the committee system, it took them even longer to work out how to allocate the executive authority for managing and overseeing an increasingly complex military system in wartime.

CREATING THE BOARD

Dissatisfied with the course of the war, particularly the problems plaguing the invasion of Canada, Congress began to consider alternatives to appointing ad hoc committees in January 1776, but it was not until 12 June 1776, while waiting for delegates from South Carolina and the middle colonies to get instructions on whether to support independence, that it resolved to establish "a board of war and ordnance, to consist of five members." It created the board the next day and elected as its members John Adams of Massachusetts (chairman), Edward Rutledge of South Carolina, Roger Sherman of Connecticut, Benjamin Harrison of Virginia, and James Wilson of Pennsylvania. The geographical distribution of the members reflected the need to give voice to the interests and agendas of the

principal states, the only feasible way of running a military alliance of sovereign states.

The care with which the board's duties were spelled out demonstrated Congress's wariness about delegating authority to an executive agent. It was authorized

to obtain and keep an alphabetical and accurate register of the names of all officers of the land forces in the service of the United Colonies; . . . [to] keep exact accounts of all the artillery, arms, ammunition, and warlike stores, belonging to the United Colonies, . . . [and] have the immediate care of all such . . . stores, as shall not be employed in actual service; [to] have the care of forwarding all dispatches from Congress to the colonies and armies, and all monies to be transmitted for the public service by order of Congress; [to] superintend the raising, fitting out, and dispatching of all such land forces as may be ordered for the service . . . ; [to] have the care and direction of all prisoners of war"; (Ford, ed., *Journals*, 5, pp. 434–435)

and to maintain all paperwork. Important extra duties also devolved on what was called the "war office," including "controlling troop movements and detaining suspected spies" (Ward, p. 2). And, in hope of remedying the indiscipline contributing to American military defeats, the Board drew up a revised set of articles of war for the next iteration of the Continental Army that was to be enlisted for three years from 1 January 1777. Congress adopted the revised articles on 20 September 1776.

The crush of detailed work almost overwhelmed the members. According to John Adams,

The duties of this board kept me in continual employment, not to say drudgery from this 12 of June 1776 till the eleventh of November 1777 when I left Congress forever. Not only my mornings and evenings were filled up with the crowd of business before the board, but a great part of my time in Congress was engaged in making, explaining, and justifying our reports and proceedings. . . . I don't believe there is one of them [lawyers in the United States] who goes through so much business . . . as I did for a year and a half nearly, that I was loaded with that office. Other gentlemen attended as they pleased, but as I was chairman . . . I must never be absent. (Adams, *Papers*, 3, p. 342.)

A NEW BOARD

By the end of 1776, Congress recognized the need to shift the day-to-day burden of managing the war effort from its members. On 26 December 1776, Congress—in a rump session at Baltimore, to which it had fled from the British army advancing on Philadelphia—advocated the creation of a new five-member board of war for "better conducting the executive business of Congress by boards composed of

persons, not members of Congress" (Ford, 6, pp. 1041–1042). Congress did not act on this idea until 18 July 1777, when it created a three-member Board of War, and did not elect the members until 7 November, in the midst of a disastrous campaign that again forced it to flee from Philadelphia (19 September), first to Lancaster, Pennsylvania, and on to York, Pennsylvania, by 30 September. Within ten days after electing the new board, Congress approved the Articles of Confederation and sent them to the states for the start of a ratification process that would take almost three years to complete (1 March 1781).

The members of the new board were experienced, capable individuals, but their ability to work in harness with Congress and General Washington was open to question. Thomas Mifflin was an important political leader in Pennsylvania, a former delegate to Congress, and a major general in the Continental army, but he had just resigned as quartermaster general (also on 7 November 1777) after a contentious tenure. Colonel Timothy Pickering of Massachusetts was then the adjutant general (and would continue in that post until 13 January 1778), and Lieutenant Colonel Robert H. Harrison of Maryland was Washington's headquarters secretary.

Because all three men were already engaged in important business, the new board was slow in organizing. On 21 November, Congress authorized "any two members" of the old board to act with "any one or more" of the new members until the new board could take up the reins of business (Ford, 9, p. 946). Although, on Mifflin's recommendation, Congress added two more members to the new Board on 24 November, the next day it continued the old Board "till such time as a quorum of the commissioners of the War Office shall attend" (Ford, 9, p. 960). On 27 November, Congress completed the membership of the new board. Again on Mifflin's recommendation, it elected Major General Horatio Gates, the victor of Saratoga who was then at the zenith of his reputation, as president of the board. It chose Joseph Trumbull of Connecticut, the former commissary general who had resigned in August 1777 under a cloud of controversy, to replace Harrison, who had declined the original appointment. Finally, it decided to continue in office the secretary of the old board, Richard Peters of Pennsylvania, who had "discharged the duties of an arduous and complicated department in its infant stage with honour to himself and much disinterestedness, and with fidelity and advantage to the public" (Ford, 9, p. 959).

THE CONWAY CABAL

All of this reorganization took place as Washington was coping with the problems of defending the Delaware River forts while trying to recruit, clothe, and feed his army. The reorganization was part of Congress's desire to exert closer control over the army and was fed in part by some dissatisfaction with Washington's performance. The Board of

War has been seen by some historians as the center of the so-called Conway Cabal, an effort to replace Washington with Gates, because Gates was its president and Mifflin, who had temporarily fallen out with the commander in chief, was its most important member.

Thomas Conway, a French soldier of Irish descent who had been openly contemptuous of Washington's leadership, submitted his resignation as the army's junior brigadier general to Congress on 14 November 1777, and the delegates referred it to the Board of War. The board did not act on Conway's resignation, but some delegates about this time advocated that Conway be appointed the army's inspector general. Support for Conway was a direct challenge to Washington, and it prompted the commander in chief to ask Congress to choose between them. Faced with this choice, few delegates were willing to back the erratic and arrogant Frenchman against Washington. Washington's sharp reminder of the central role he played in holding the army together resulted in the collapse of congressional criticism of his handling of the war. Gates curbed his ambition, and the Board of War's efforts to exercise greater control over strategy and operations were slowed. The board's advocacy of another invasion of Canada further proved that it was not the instrument to succeed Washington in overall direction of military operations.

REPLACING THE BOARD

Congress reorganized the board a final time on 29 October 1778, when it mandated a membership of three nondelegates and two delegates and set the quorum at three members. Thereafter, most of the Board's work involved ensuring that the armies were properly following the regulations of Congress. The work was undertaken by Pickering and Peters, who increasingly involved themselves in the minutiae of management and whose efforts were undercut in any event by the disastrous decline in the value of Continental currency, a failure wholly outside their control. Over the course of 1780, a year of stalemate and treason in the North and disaster in the South, Congress concluded that it had no choice but to create executive departments in which a single individual would be trusted with the power to manage a portion of the nation's business. Prompted by the same factors that induced Virginia and Maryland to acquiesce to the Articles of Confederation, Congress on 7 February 1781 created the office of the secretary of war to try to save the war effort from spiraling stagnation and ultimate defeat. Even then, Congress moved at a snail's pace and allowed events to shape its actions. It elected Major General Benjamin Lincoln as the first secretary of war only on 30 October 1781. The board continued to function until Lincoln accepted his appointment on 26 November.

While Congress ultimately streamlined and thereby improved the structure of its oversight of military affairs,

the choice of Lincoln to fill the office still reflected Congress's hesitancy about delegating too much authority to a single individual whose ambitions might exceed his respect for congressional control. Lincoln's primary qualification, beyond Washington's recommendation and his own experience in the field (culminating with his service as Washington's chief subordinate at Yorktown), was his willingness to obey Congress's orders to defend Charleston, South Carolina, in the spring of 1780, a decision that had led to the capture of the principal American army in the South.

BOMB. Albert Manucy explains that “the word ‘bomb’ comes to us from the French, who derived it from the Latin. . . . Today bomb is pronounced ‘balm,’ but in the early days it was commonly pronounced ‘bum.’” The modern equivalent of an eighteenth-century bomb is a high explosive (chemical energy) shell. “A bombshell was simply a hollow, cast-iron sphere. It had a single hole where the powder was funneled in, full, but not enough to pack too tightly when the fuse was driven in. . . . Bombs were not filled with powder very long before use, and fuses were not put into the projectile until the time of firing” (Manucy, pp. 65–67).

BONHOMME RICHARD–SERAPIS ENGAGEMENT.

23 Sept. 1779. At 2 p.m. P.M. on this day John Paul Jones sighted British merchantmen rounding Flamborough Head on the North Sea coast of Yorkshire. When Jones ordered his ship, the *Bonhomme Richard*, and the others in his squadron, *Alliance* (36 guns), *Pallas* (32 guns), and *Vengeance* (12 guns), to give chase, the British merchantmen fled and the convoy commander, Captain Richard Pearson, positioned his ship, the *Serapis* (40 guns) and her escort, the *Countess of Scarborough* (20 guns), between the attackers and their prey. At around 6:30 P.M., the *Serapis* and *Bonhomme Richard*, both flying British colors, came within hailing distance, and Pearson demanded that Jones identify his ship. Jones responded “The *Princess Royal*” but, seeing that Pearson was not fooled by his ruse, Jones ran up an American flag, and the two ships exchanged virtually simultaneous broadsides. For an hour the ships exchanged fire as each maneuvered to rake the other.

During the first or second broadside, two of Jones’s eighteen-pound cannons burst, putting the rest of the guns on the *Bonhomme Richard*’s lower deck out of commission. After the initial exchange of broadsides the *Serapis* moved ahead of her adversary and on the leeward side. Not being able to gain enough distance to cross in front of the *Bonhomme* and rake her with cannon fire, the *Serapis* lost headway in executing a turn and was rammed near the stern. Jones ordered his men to lash the ships together, and personally tied a loose forestay from the *Serapis* to the *Bonhomme Richard*’s foremast.

A desperate battle raged more than two hours longer. At one point, when the American ensign was shot away, British Captain Pearson is alleged to have hailed Jones asking, “Do you ask for quarter?” to which Jones is reputed to have replied with the immortal, “I have not yet begun to fight.” The fighting continued as the grapeshot from two nine-pound cannon and small arms fire from marines and sailors in the tops of the *Bonhomme Richard* swept clear the upper deck of the *Serapis*. Meanwhile, cannon fire from the *Serapis* blew huge holes through the *Bonhomme Richard* and turned its lower decks into a death house for American seamen. Neither side gained an overall advantage until an American grenade fell through a hatchway on the *Serapis* and ignited powder charges on the deck below, killing dozens of British sailors. Moments later the *Serapis*’s mainmast began to quiver, and Pearson, fearing destruction of his ship, finally struck his colors. Two days later it was the *Bonhomme Richard* that could not be saved, so Jones transferred his flag, surviving crewmen, and British prisoners to the *Serapis*. During the engagement the treacherous, if not yet mad, Pierre Landais had ordered his ship, the *Alliance*, to fire into the *Bonhomme Richard*, inflicting nearly as many casualties as did the British.

On October 3 1779, Jones sailed the jury-rigged *Serapis* into The Texel, in neutral Holland, accompanied by the *Alliance*, the *Pallas*, and the *Countess of Scarborough*, which the *Pallas* had taken while the *Bonhomme Richard* engaged the *Serapis*. During one of the hottest single-ship actions of the age of sail, each side suffered seventy to eighty men killed and an equal number of wounded. Years later, Midshipman Nathaniel Fanning recalled seeing “the dead lying in heaps [on the *Serapis*], the entrails of the dead scattered promiscuously around, [and] the blood over ones shoes.”

Hoping to use Jones’s victory to distract public opinion from the failed attempt to invade England, French officials lionized Jones. King Louis XVI knighted Jones and gave him a gold-hilted sword, and Benjamin Franklin capitalized on Jones’s fame to help mend strained Franco-American relations.

BONVOULOIR SEE *Achard de Bonvouloir, Julien*.

BOONE, DANIEL. (1734–1820). Frontiersman. Born in Berks County, Pennsylvania, on 2 November 1734, Daniel Boone moved with his family to Buffalo Lick, North Carolina, on the north fork of the Yadkin River, in 1751. Like Daniel Morgan, he accompanied Edward Braddock’s expedition as a teamster; escaping from the disaster of 9 July 1755. On this expedition he met John Findley, a hunter whose stories of the Kentucky wilderness fired him with a desire to visit this country. After failing to persuade his wife, Rebecca Bryan, to move to Florida, Boone undertook an extensive exploration through the Cumberland Gap into

the Kentucky territory starting in 1767. In 1773 he led a group of settlers west, but reluctantly turned back after two of his party, including his son James, were tortured and killed by Indians. In 1775, as an agent of the Transylvania Company, he led about thirty men to the site of what became Boonesborough, Kentucky, cutting the Wilderness Road as they went. After building a fort, Boone returned to North Carolina to get his family and twenty more men. This activity was in defiance of the Proclamation of 1763, and in their efforts to stop and drive back this invasion of settlers, the Cherokees and Shawnees started raids into what became known as the “dark and bloody ground.”

On 14 July 1776, Boone’s daughter, Jemima, and two other girls were captured by Indians. Boone led a group in pursuit, and three days later launched a surprise attack that killed an Indian and rescued the girls. Boone immediately became a famous figure on the frontier, and even drew attention in the east. When Kentucky became a county of Virginia in the fall of 1776, Boone was made a captain of the militia and was later promoted to major. In February 1778, he and thirty others were captured by Shawnees. The Shawnees needed new warriors to replace those lost in battle, and adopted Boone and sixteen other men, selling the remaining prisoners to the British in Detroit. When Boone learned of a planned attack on Boonesborough, he escaped, traveling the 150 miles back to Boonesborough in just four days.

One Indian leader, Blackfish, led 400 men against Boonesborough on 7 September 1778. With only forty men, Boone held the Indians off for eleven days, after which Blackfish finally gave up and retreated. Blackfish spent the first two days attempting to persuade Boone to negotiate the fort’s surrender. After failing to trick Boone into leaving the fort when the Indians could seize him, Blackfish tried burning and tunneling into the settlement before giving up and leaving the area. The next month Boone went east for a stay that was to last a year, but in October 1779 he returned with a new party of settlers. The following spring he started back east with \$20,000 collected from settlers for the purchase of land warrants, necessary because the state had repudiated the land titles that had been issued by the Transylvania Company, but he was robbed of the entire amount. He then moved to Boone’s Station. The same year, 1780, Kentucky was divided into three counties, and he was made lieutenant colonel of the Fayette County militia. In August 1782 his son Israel was killed during the American defeat at Blue Licks.

After holding a number of public offices, including representative in the Virginia assembly, Boone became embroiled in a series of ejectment suits by which he was to lose his large land holdings of nearly 100,000 acres. All his titles had been improperly filed, and in around 1798 he lost his last holding in the region he had done so much to develop. Meanwhile he had moved from Boone’s Station to Maysville in 1786, to Point Pleasant (in modern West

Virginia) in 1788, and to what now is Missouri in 1798 or 1799. His son Daniel had preceded him to Missouri, and Boone was given a large Spanish land grant of nearly 10,000 acres at the mouth of Femme Osage Creek. When the United States assumed title to this region, Boone’s land claims were declared void but, after many delays, Congress awarded him 850 acres for services rendered. Boone sold this land to pay off his debts. He died in Missouri on 26 September 1820.

Exaggeration of his exploits by early historians started with John Filson’s *The Discovery, Settlement, and Present State of Kentucke* (1784). The seven stanzas that Lord Byron devoted to him in *Don Juan* (1823) further helped to create a legend that made Boone one of the most famous pioneers in U.S. history.

BORDER WARFARE IN NEW YORK.

When the rebels declared independence in 1776, their new nation had to cope with a long British Canadian frontier to the north and several Indian nations to the west. This porous frontier was vulnerable to raids by British regulars, Loyalists, and Indians. After the failure of Burgoyne’s offensive from June to October 1777 and the supporting St. Leger’s expedition, military operations were reduced to raids and punitive expeditions. Detroit was the British base for attacks against the frontier settlements along the Ohio River and territory to the south, modern Kentucky bearing the brunt. Niagara and, to a lesser extent, Oswego were headquarters for British operations farther north, and from these locations numerous operations were conducted against the New York frontier.

War out of Niagara was directed toward Tryon County, New York, a vast territory whose western boundary was, in effect, the Iroquois frontier. The spine of Tryon County was the Mohawk Valley, and it was against the

settlements of this valley that Loyalist exiles directed their efforts. Guy and Sir John Johnson, John and Walter Butler, and the Mohawk Joseph Brant led the most effective and bloody of the Loyalist-Indian raids against the United States.

Burgoyne's surrender and St. Leger's retreat instilled a sense of security among the settlers along the northern frontier. The French alliance, which soon followed, furthered the illusion, as did the presence of Lafayette in Albany to organize a second Patriot invasion of Canada.

The Wyoming Massacre in Pennsylvania on 3–4 July 1778, south of the Mohawk River, was the first thunderbolt from Niagara. At the same time Joseph Brant was mobilizing an army in the vicinity of Unadilla, an Indian town on the Susquehanna about fifty miles from the main settlements of the Mohawk Valley, that would figure prominently in future operations. Despite the excellent intelligence furnished by James Deane, Philip Schuyler's secret agent, the Patriots were taken by surprise. Brant sacked Andrustown on 18 July, raided Minisink on 19–22 July, and returned to destroy German Flats on 13 September 1778. The Patriots retaliated by destroying Unadilla on 6–8 October. These were relatively minor actions in which much property was lost with no casualties being inflicted, but they led to the serious Patriot disaster at Cherry Valley on 11 November.

Sullivan's expedition from May to November 1779 was a savage American attempt to eliminate the Iroquois. After innumerable delays and having sacrificed all surprise, 4,000 Continental troops crashed into the wilderness, routed a Loyalist-Indian force at Newtown (also known as Chemung) on 29 August, burned 40 towns, and destroyed the Indian's crops—an estimated 160,000 bushels of corn—before they could be harvested. The winter of 1779–1780 was of record-breaking severity, and the Iroquois suffered greatly from a lack of shelter and food, as General John Sullivan had hoped. Nonetheless, far from achieving its real purpose, this punitive expedition brought on a furious reprisal in its turn.

OPERATIONS IN 1780

General Sullivan and New York's Governor George Clinton expected the Iroquois to sue for peace after the demonstration of U.S. power and the harsh winter. But the opposite proved to be the case. Supported by British regulars and Loyalists, the Iroquois attacked the Oneidas, who had tried to remain neutral; destroyed their settlements; and forced them back into the Mohawk Valley. Most of the Oneidas sought shelter around Schenectady, where they no longer served as a protective screen for New York against attacks from Oswegos and Niagaras. Indians captured the militia garrison at Skenesboro in March and Brant raided Harpersfield, a small town south of the Cherry Valley, on 2 April. He would also have attacked the Upper Fort of

Schoharie Valley but for the false information of a prisoner, Captain Alexander Harper, that this place was defended by three hundred Continentals. With nineteen prisoners, Brant's Indians and the Loyalists moved south to finish off Minisink around 4 April. Seven Indians attacked the blockhouse at Sacandaga on 3 April but were all killed. Several whites were killed and captured when seventy-nine Indians attacked Cherry Valley on 24 April. Though the Indians undertaking these raids were desperately hungry and poorly organized, they met little resistance.

JOHN JOHNSON'S FIRST RAID

With four hundred Loyalists and two hundred Indians, Sir John Johnson entered the Johnstown settlements undetected on the evening of 21 May. He had taken the Lake Champlain route to Crown Point and marched from there to the Sacandaga River. He detached Brant, who burned Caughnawaga, on the Mohawk River, at dawn of the 22nd, and other detachments killed, burned, and took prisoners in the valley. On 23 May, Johnson burned Johnstown and withdrew slowly to Mayfield, about eight miles to the northeast, with forty prisoners. Having given the Patriots every opportunity to attack him there, he withdrew on the 27th and continued slowly toward Crown Point with his booty, prisoners, and a number of "liberated" Loyalist families. Governor Clinton made a feeble attempt to cut him off at Ticonderoga.

With five hundred Loyalists and Indians, Joseph Brant sacked Canajoharie on 1–2 August 1780. Brant then moved with amazing swiftness into another theater of operations for the coup on the Ohio River known as Lochry's Defeat, and he subsequently returned to participate in Johnson's second raid into Tryon County in September. This operation aimed, as Governor Sir Frederick Haldimand explained to Lord George Germain, to divert Patriot forces away from any campaign planned by General James Clinton out of New York City as well as to evacuate Loyalist families suffering from Patriot outrages.

Leaving Oswego in September, Johnson moved toward Unadilla and picked up reinforcements under Brant and Cornplanter to bring his strength to between eight hundred and fifteen hundred. He also had artillery: two small mortars and a brass three-pounder. Johnson's approach was undetected, and he ravaged the Schoharie Valley during 15–17 October; destroyed all rebel property in the vicinity of Fort Hunter on 17 October; started up the Mohawk the next day, laying waste to everything on both sides of the river as far as Canajoharie; and camped that night near Palatine. Along the way Johnson recovered the family silver and papers hidden at Johnson Hall. The next morning he crossed the Mohawk at Keder's Rifts.

General Robert Van Rensselaer assembled between four hundred and five hundred militia in the lower

Mohawk and started in pursuit, while Governor George Clinton left Albany with a small force to catch up with him. While a detachment of fifty raiders headed for Fort Paris in Stone Arabia, Colonel John Brown sallied forth from that place to attack Johnson's main body on orders from Van Rensselaer, with the promise that the latter would arrive in time to support him. Near the ruined Fort Keyser, on 19 October Brown and about forty of his 130 men were killed and the rest routed after making a gallant attack against a superior force. Johnson ordered the burning of Stone Arabia after liberating any moveable goods. Van Rensselaer was too late to prevent the annihilation of Brown's force, but he was reinforced by 300 or 400 militia and sixty Oneidas under Colonel Lewis DuBois and brought Johnson to bay at Klock's Field on 19 October. The raiders made their escape via Lake Onondaga to Oswego.

Meanwhile, a second raiding party, which consisted of a detachment of the Fifty-third Regiment under an officer named Houghton, struck the upper Connecticut Valley and destroyed some houses at Royalton, Vermont. Another force, under Major Carleton, moved through Fort Anne, Fort Edward, and Fort George; attacked Ballston (a mere twelve miles from Schenectady); and threatened other settlements north of Albany.

In just five days, Johnson had inflicted as much damage as had General Sullivan in a month the previous year. The northern frontier was demoralized. Governor Clinton wrote Washington on 30 October:

The losses we have sustained by these different incursions of the enemy will be most severely felt; they have destroyed, on a moderate computation, 200 dwellings and 150,000 bushels of wheat. . . . The enemy to the northward continue in the neighborhood of Crown Point, and the inhabitants, in consequence of their apprehensions of danger, are removing from the northern parts of the state.

RAIDS OF 1781

The worst news Governor Clinton had to report in this same letter was that Sir John Johnson, Brant, and Walter Butler had escaped. In 1781 they returned. Brant, who had been wounded in the heel at Klock's Field, ranged the upper Mohawk Valley almost at will during the early months of the year. The Oneidas were no longer in their settlements to furnish a screen of protection, or at least of warning, and militia resistance had collapsed. War parties revisited German Flats, Cherry Valley was attacked in April, and two parties of the Second New York Continentals were captured while trying to take supplies to Fort Stanwix. The latter post was abandoned in May after being critically damaged by floods and fire. It might be said that a housing shortage existed, but life in the valley went on, and spirits soared when Colonel Marinus Willett

arrived late in June to assume command of the scattered frontier posts. With 400 men, Willett had the seemingly impossible mission of protecting some 5,000 settlers in an area of about 2,000 square miles—his posts at Ballston, Catskill, and Fort Herkimer (German Flats) forming a triangle of roughly that area. His "main body," if it can be dignified by that term, comprised 120 men at Canajoharie, where he established his headquarters. The rest of his puny force was parceled out among the far-flung settlements, though Willett had the creative idea of rotating his men between his four main posts to keep them alert and give the settlers an impression of action.

Willett did not have to wait much more than a week before the first challenge came. About 350 Indians led by John Doxtader surprised Currytown on 9 July, but the remarkable Willett annihilated this force the next day at Sharon Springs Swamp. Donald McDonald was defeated and killed by the heroic stand of a single family at Shell's Bush on 6 August. The British suffered further losses when the Indian and Loyalist force under Captain William Caldwell was defeated at Wawarsing on 22 August, and Lieutenant Solomon Woodworth was killed near Fort Plain on 7 September, when his party was ambushed.

FINAL OPERATIONS

In the fall of 1781, the U.S. Northern Department had alarming and confusing reports that one enemy column was approaching along Lake Champlain and another along Lake Oneida from Oswego. Although General William Heath had only 2,500 men to guard the Highlands against the threat from Sir Henry Clinton's force of 17,000 in New York City while Washington and Rochambeau marched south, he sent the New Hampshire Continentals and some artillery north on 13 October. The threat from Lake Champlain proved illusory on 24 October, when the smoke of burning buildings started rising in the Mohawk Valley. Major John Ross had left Oswego on the 16th with 700 men, 130 of whom were Indians. He struck the valley near Warrenbush (later Florida) and burned a seven-mile stretch to come within twelve miles of Schenectady on the 25th. Although he had not met any real resistance, Ross then started withdrawing. Failure of the Indians to turn out in the numbers expected, muddy roads, and certainty that the militia was gathering all around him persuaded Ross to return to Oswego. What Ross did not know was that Willett was in rapid pursuit with his small force. After joining up with militia units at Fort Hunter, Ross had 400 men. He caught up with the raiders and attacked at Johnstown on 25 October.

Darkness called a halt to this action, which had begun late in the day. Ross claimed to have gotten the better of it, and Willett's failure to start pursuit until the 28th tends to support that contention. But the British leader lost most of his head start when his guides were slow in finding a trail

north to the St. Lawrence, a route Ross had to choose because of the possibility that Willett might cut off a retreat to the boats left on Lake Oneida. After waiting for provisions, the rebels started pursuit on the evening of the 28th, marched twenty miles in a snowstorm on the 29th, and caught up at 8 o'clock the next morning. Ross kept up a running fight as his tired and famished Loyalists, British regulars, and Indians headed for West Canada Creek, where they hoped to make a stand. Walter Butler's rear guard had just crossed this sizable stream when Willett's vanguard arrived at 2 P.M. The action at Jerseyfield on 30 October was little more than a firefight across the ford, but when the enemy forces resumed their retreat, they left behind the dead body of Walter Butler, one of the most effective Loyalist soldiers on the northern frontier. After a pursuit of another twenty miles Willett called a halt, as his forces were exhausted and running low of provisions.

This was the last Loyalist attack on Tryon County. Indian raids continued in 1782, and a few prominent Patriots were abducted by Loyalists. The border warfare, however, had basically ended.

BOSTON CAMPAIGN. 19 April 1775–17 March 1776. Military actions in Massachusetts from the battles at Lexington and Concord on 19 April 1775 until the evacuation of Boston by the British Garrison on 17 March 1776 are sometimes grouped under the heading "the Boston Campaign." Operations during this period are covered in the entry on the Boston Siege.

BOSTON GARRISON. 1 October 1768–17 March 1776. The British imperial government had sent troops to Anglo-America on prior occasions to suppress disorder and support royal authority, but the dispatch of regular soldiers to Boston in the wake of the Townshend Acts raised an unprecedented set of thorny issues involving civil-military relations and the utility of using soldiers to enforce political obedience. The royal governor of Massachusetts, Francis Bernard, had long wanted regulars in Boston to counter the threats and intimidation the radicals were using to resist imperial control. He was reluctant to make a formal request for troops because he was unwilling to accept responsibility for a decision that was certain to exacerbate an already incendiary situation. He wanted Major General Thomas Gage, the British commander in chief in North America, to send troops on his own initiative, but Gage refused to act without orders from Britain or a request from the governor.

TROOPS SENT TO BOSTON

Five days after a Boston mob attacked the customs commissioners in the Liberty affair (10 June 1768), the terrified commissioners wrote to Gage, who was headquartered at New York City, and asked for protection. They also appealed directly to Colonel William Dalrymple, commander of the garrison at Halifax, the closest troops to Boston, and to Commodore Samuel Hood, the local Royal Navy commander. Gage ordered Dalrymple to alert two regiments, and asked Hood to ready transports, but he cautioned them not to act until Governor Bernard requested their aid. Bernard attempted to get Gage to send the troops on the pretext of a routine administrative movement to get better quarters for the regulars. Gage, quite properly, refused to comply with this subterfuge. In late August 1768 Gage received orders from London (dated 8 June) to send at least one regiment to Boston. News of the Liberty affair had reinforced the resolve of imperial leaders to use force. In a letter of 30 July, Gage was told that the 64th and 65th Regiments were to be sent from Ireland to Boston.

The British Landing in Boston. The arrival of British troops in Boston in the autumn of 1768 is depicted in this colored engraving, produced in 1770 by Paul Revere. HULTON ARCHIVE/GETTY IMAGES.

Transports carrying Dalrymple's force of 800 men (most of the Fourteenth and Twenty-ninth Regiments and an artillery company with five guns) sailed from Halifax on 19 September 1768, convoyed by a powerful Royal Navy squadron under Commodore Hood (a ship-of-the-line, seven frigates, and two tenders). This armada reached Boston Harbor on 28 September, and found a tense situation awaiting it. Some Boston radicals wanted to mobilize the town mob and forcibly resist the landing of the regulars from Halifax. The leaders in surrounding towns refused to support the radicals, and James Otis, Jr., who opposed mob violence, reminded them that the other colonies would probably condemn them if their actions started a war. Otis's views prevailed. On 1 October, when the regulars landed under the guns of the Royal Navy to establish a garrison that would be in Boston for seven and a half years, "they were greeted with cold silence rather than hot lead" (Alden, p. 163). The contingent from Ireland started arriving in mid-November, but a large portion of the Sixty-fifth Regiment, with its commander, Colonel Alexander Mackay, was driven off the coast by a storm. After taking refuge on Nevis, in the West Indies, it reached Boston on 30 April 1769.

The British had trouble procuring quarters and provisions for four regiments in Boston. Gage had sent an engineer, Captain John Montresor by land from New York City to assess the availability of quarters and to repair

the barracks at Castle William, the fort on an offshore island that guarded the harbor. Dalrymple and Bernard wanted to billet the Halifax regiments in town and quarter the regiments from Ireland at Castle William. But, in outright defiance of the requirements of the Quartering Act, Boston's leaders refused to provide quarters in town as long as the barracks on Castle Island were empty, and turned down all requests to furnish provisions. Gage reached Boston on 15 October, and in the next six weeks (before he returned to New York City on 24 November) he managed to arrange makeshift billets and find supplies.

The town permitted some of the troops to use Faneuil Hall temporarily, but the rest of the British troops had to camp on the Common. Gage and Bernard got reluctant authority from the provincial council to use the Manufactory Building, which belonged to the province, but this, too, caused unrest. Other persons had been authorized to use the building, and they sued to stop Gage and Bernard from evicting them. Gage then decided to rent property at the crown's expense. A Tory named James Murray had already made several buildings available (4 October). An adaptable patriot named William Molineux rented the army several warehouses on Wheelwright's Wharf (28 October) and a week later made available another building, as well. Part of the Irish contingent went to Castle Island and the rest was billeted in Boston.

Gage understood the seriousness of the problem he faced in Boston. He told Hillsborough on 26 September 1768 that the people of Boston had displayed “mutinous behavior” and that their actions had been “treasonable and desperate” (Carter, p. 196). His remedy was intelligent and, had it been implemented, was probably the best way Britain had of using military force as part of an integrated plan to quash the incipient rebellion in Boston:

I know of nothing that can so effectually quell the spirit of sedition, which has so long and so greatly prevailed here, and bring the people back to a sense of their duty, as speedy, vigorous, and unanimous measures taken in England to suppress it. Whereby the Americans shall plainly perceive, that it is the general and determined sense of the British nation, resolutely to support and maintain their rights, and to reduce them to their constitutional dependence, on the Mother Country. (Carter, p. 197)

In the event, imperial leaders did not follow Gage’s advice.

INCREASING TENSIONS

Colonel Dalrymple commanded the Boston garrison from its establishment on 1 October 1768 until Colonel John Pomeroy arrived in November with his Sixty-fourth Regiment. Mackay, who had the local rank of major general, succeeded to the garrison command when he arrived on 30 April 1769 with the portion of his Sixty-fifth Regiment that had taken refuge at Nevis. Pomeroy then went on leave. Mackay left Boston on 18 August 1769 for leave in Britain, and Dalrymple resumed command of the garrison. Before the end of July 1769, the Sixty-fourth and Sixty-fifth Regiments were transferred to Halifax, leaving only the Fourteenth and Twenty-ninth Regiments in Boston.

Reducing the garrison left enough troops in Boston to remind the town of its grievances, but too few to cow the radicals. Renewed agitation, some of which was directed by radical leaders like Samuel Adams, led to confrontation, the most serious of which was the Boston “Massacre” on 5 March 1770. Responding to threats from the radicals that the continued presence of British troops in Boston would lead to large-scale conflict, Governor Hutchinson and his council wanted Dalrymple to withdraw the Twenty-ninth Regiment to Castle William and keep the soldiers of the Fourteenth Regiment in their barracks. “Dalrymple, although he had only six hundred men fit for duty, suggested that a threatened insurrection was a powerful argument for keeping the troops in the town” (Alden, p. 176). But Dalrymple allowed himself to be persuaded by the civilian authorities, and thereby gave the radicals another demonstration of how threats and intimidation could trump the rule of law. The 29th

Regiment was ordered to New Jersey in April 1770, leaving only Dalrymple’s 14th Regiment at Boston. Two years later the 14th was relieved by Lieutenant Colonel Leslie’s 64th Regiment.

Gage returned to Boston on 17 May 1774 to implement the British government’s punitive policies against the city. What had heretofore been a “garrison” soon was built up to the largest British troop concentration in America. By early July 1774 Gage had brought in four regiments from Britain, one from New York, and a few artillerymen. In October, the 10th and 52nd Regiments arrived from Quebec, part of the 18th and the 47th arrived from New York, and two companies of the 65th came from Newfoundland. Excluding the 64th Regiment on Castle Island, this gave the British commander almost 3,000 troops stationed in Boston. On 12 December the warships *Asia* and *Boyne* arrived from Britain with about 400 Royal Marines that could also be used in land action.

MORE TROOPS ARRIVE

At the start of 1775 Gage had about 4,500 combat troops, including five artillery companies and 460 marines from ships that now included the *Scarborough* and *Somerset*, plus frigates, sloops, and many transports. By the middle of June his strength in rank and file (not including officers) has been estimated as between 6,340 and 6,716 troops. By the end of June 1775 the following foot regiments were in Boston or on the way: 4th, 5th, 10th, 23rd, 35th, 38th, 43rd, 47th, 49th, 52nd, 59th, 63rd, 64th (at Castle William), and 67th. An “incorporated corps,” consisting of three companies of the 18th Regiment, had come from New York in October 1774, along with two companies of the 65th Regiment from Newfoundland. Four more companies of the 65th arrived in the spring of 1774, at about the same time the contingent of marines was increased to 600 men. The 17th Light Dragoons, numbering fewer than 300 troopers and counting on picking up their horses in America, reached Boston late in May.

Even as the number of troops under his command increased, Gage grew more despondent about his ability to enforce imperial edicts in Massachusetts or even to keep the peace. When he sent 250 regulars on 1 September 1774 to bring 125 barrels of gunpowder belonging to the colony from Cambridge to Boston, he sparked an enormous outpouring of American minutemen and militia ready to resist by force of arms. Two days later, he began fortifying Boston Neck and building more barracks. On 26 February 1775, he sent Leslie with his 64th Regiment to confiscate cannon at Salem, but this display of armed force did not cow the increasingly self-confident and well-organized radicals. When he sent 900 men to seize military stores at Concord on 19 April 1775, the resistance of the countryside demonstrated the final failure of Britain’s attempt to use troops to secure the political obedience of

the colonies. The British garrison's principal attempt to break the American encirclement of Boston failed at Bunker Hill on 17 June 1775, and although reinforcements arrived during the remainder of the siege of Boston, no further major combat took place. When the British evacuated the city on 17 March 1776, their total strength in army and navy personnel was about 11,000 men.

revised by Harold E. Selesky

BOSTON MASSACRE. 5 March 1770. Increasing friction between British soldiers of the Boston Garrison and local citizens created conditions ripe for confrontation. On Friday, 2 March 1770, an exchange of insults between workmen and an off-duty soldier seeking employment at Grey's ropewalk led to a small riot. Tempers did not cool over the weekend, and by Monday evening, 5 March, bands of soldiers and civilians roamed the moonlit streets looking for trouble. About 9 P.M. a sentry of the Twenty-ninth Regiment at the Customs House in King Street was so taunted and menaced by a crowd of about sixty young men and boys that, fearing for his life, he loaded his musket and called for help from the nearby Main Guard. Captain Thomas Preston, the officer of the day, led a corporal and seven soldiers to rescue the sentry. Although the soldiers had fixed bayonets and eventually also loaded their muskets, the crowd continued to taunt and press in on them, apparently led by Crispus Attucks, a sailor of African and native American descent. Finally, one nervous soldier pulled his trigger and the rest followed. The British gunshots killed three men, including Attucks, and wounded eight others, two mortally. With the crowd stunned and the soldiers reloading and preparing to fire again, Preston ordered his men back to the Main Guard. No one in the crowd made any attempt to retaliate or to follow the soldiers.

The incident created an uproar in Boston, and it was only with great difficulty that imperial officials, including Governor Thomas Hutchinson, managed to quiet the town. Preston and his men were arrested and charged with murder, the Twenty-ninth Regiment was withdrawn to Castle William, and the Fourteenth Regiment was confined to barracks. The radicals claimed that the "massacre" was the inevitable result of having British troops garrisoned in a town of peace-loving citizens, and used the incident to demonstrate to other colonies the evils of increased imperial control. They turned the incident into a propaganda victory, greatly aided by Paul Revere's engraving, which depicted the soldiers as a group of leering, blood-thirsty killers firing into an innocent gathering of Boston citizens. Allegations that Samuel Adams provoked the entire incident to inflame the people and animate the resistance cannot be proven.

Because of fears that Captain Preston and his men could not get a fair trial in Boston, King George III expressed his willingness to pardon the men if they were convicted. But the trial (in late October 1770) turned into a shrewdly orchestrated demonstration of the rectitude of the radical cause. With the approbation of the radical leaders, three leading Boston attorneys (Robert Auchmuty, John Adams, and Josiah Quincy, Jr.) carefully picked a jury, emphasized the uncertainties in eyewitness testimony, and claimed the soldiers had fired in self-defense. They managed to get Preston and six soldiers acquitted of all charges. Two soldiers whom everyone agreed had fired their muskets were convicted of manslaughter, but they were released after pleading the benefit of clergy and being branded on the hand.

Patriot propaganda in 1770 viewed the five men killed in the "massacre" as martyrs to the cause of American liberty. Opinions in subsequent years have varied. When the Massachusetts General Assembly voted in 1887 to erect a memorial to the victims, members of the Massachusetts Historical Society protested, resolving that "nothing but a misapprehension of the event styled the 'Boston massacre' can lead to classifying these persons with those entitled to grateful recognition at the public expense" (Alden, p. 184). Whether the members objected more to memorializing riotous behavior or to the social standing of the victims is not known.

Boston Port Act

Zobel, Hiller B. *The Boston Massacre*. New York: W. W. Norton and Company, 1970.

revised by Harold E. Selesky

BOSTON PORT ACT. 1 June 1774. Parliament passed the Boston Port Act, one of the so-called Intolerable Acts, to shut down the port of Boston until restitution had been made to the British East India Company for the cost of the tea destroyed in the Boston Tea Party on 16 December 1773. With effect from 1 June 1774, the customs office in Massachusetts was moved to Salem, allowing commerce to continue but bypassing Boston. The act had the effect of rallying other colonies, notably Virginia, to the support of Massachusetts, and resulted indirectly in the call for the first Continental Congress to consider united measures of resistance.

BOSTON SIEGE. 19 April 1775–17 March 1776. By the evening of 19 April 1775, several thousand well-armed militiamen from Massachusetts had driven the British regulars sent to raid Lexington and Concord back into Boston and had invested the city. The opposing sides were in direct contact only at Boston Neck; Charlestown peninsula to the northeast and Dorchester peninsula to the southeast were occupied by neither side.

THE AMERICAN BUILDUP

The Massachusetts Provincial Congress had already taken steps to create and direct armed forces to resist the British. On 26 October 1774, the first Provincial Congress had urged the towns to take control of their militia companies, authorized the enlisting of minuteman companies, and established the Committee of Safety as its executive agent during recesses. The next day it appointed three general officers (Jedediah Preble, Artemas Ward, and Seth Pomeroy) to command the militia should it be called into active service. On 9 February 1775, the second

Congress had confirmed these arrangements and added two more general officers (John Thomas and William Heath). On 8 April “it resolved in general terms to raise and establish an army,” and in response to inquiries from Connecticut and Rhode Island, sent delegations to the assemblies in Connecticut, Rhode Island, and New Hampshire to acquaint them with its intention to raise an army and to ask them to contribute men and material to the projected army. Thus it was that Massachusetts was prepared both to respond effectively to the British raid on 19 April and thereafter rapidly to form an army to besiege Boston.

Starting on the evening of 19 April, the Committee of Safety, under the chairmanship of Dr. Joseph Warren, took the lead in bringing order out of the chaos left by the day’s events. The Provincial Congress reconvened on 22 April at Concord and immediately adjourned to Watertown, from where it formally put into motion on the 23rd the plans it had earlier laid for a provincial army. It recommended that 30,000 men be called to arms in New England, 13,600 of them to be raised immediately in Massachusetts. It confirmed Artemas Ward as commander in chief of the Massachusetts troops, headquartered at Cambridge, and named John Thomas to organize a force at Roxbury, facing the British earthworks on Boston Neck. The Massachusetts army took shape slowly, as the militiamen who had turned out on short notice on 19 April decided whether or not to enlist immediately, return home temporarily before enlisting, or return home permanently. More than half of the new army was composed of veterans of 19 April, led in most cases by the officers under whom they had turned out; the remainder were newly enlisted. Arranging companies into regiments also took time, and it was not until the third week of May that commissions were issued to confirm arrangements that had been in place, in some cases, for nearly a month. Ultimately, twenty-seven regiments formed, some as late as mid-July, with strengths varying from 475 to 700 men each.

The Rhode Island Assembly voted on 25 April to send a brigade of three regiments, fifteen hundred men under Nathanael Greene, to reinforce the siege. The Rhode Islanders arrived in late May and took station with Thomas in the camp at Jamaica Plains. The leaders of the New Hampshiremen who had turned out on 19 April and remained at Cambridge met on 26 April to advise the men to stay in service and place themselves under Colonel John Stark. The New Hampshire Congress voted on 20 May to set a quota of two thousand men and place Nathaniel Folsom in command, but he did not arrive in camp until 20 June. The two regiments under Stark were stationed at Medford and Charlestown Neck. The Connecticut General Assembly voted on 26 April to enlist six thousand men in six regiments and appointed David Wooster as its major general and Joseph Spencer

The Attack on Bunker's Hill and the Burning of Charlestown. *The June 1775 attack on Boston's Bunker Hill and the burning of nearby Charlestown is depicted in this engraving, first published around 1790 in Edward Barnard's History of England. THE LIBRARY OF CONGRESS.*

and Israel Putnam as brigadier generals. The regiments of Spencer and Putnam arrived in early May, joining Thomas and Ward respectively; eventually, four Connecticut regiments served at Boston.

By early June 1775, the "grand American army" in the camps around Boston numbered about 16,000 men, 11,500 from Massachusetts, 2,300 from Connecticut, 1,200 from New Hampshire, and 1,000 from Rhode Island. About one-third were stationed at Roxbury and Jamaica Plains under Thomas; the right wing included four thousand men from Massachusetts, Greene's Rhode Island regiments, most of Spencer's Connecticut regiment, and three or four artillery companies. The center, at Cambridge under Ward, comprised nine thousand men in fifteen Massachusetts regiments, four Massachusetts artillery companies under Major Samuel Gridley, Putnam's Connecticut regiment, and the rest of Spencer's. On the left were three companies of Samuel Gerrish's Massachusetts regiment at Chelsea, John Stark's New Hampshire Regiment (the largest in the army) at Medford, and James Reed's smaller New Hampshire Regiment near Charlestown Neck.

Although nearly all men carried a personal firearm, either their own or one supplied by their town or colony, this improvised army was short of all other matériel, particularly gunpowder. Ward was in direct command of all Massachusetts troops, who constituted the bulk of the "Boston army," and of the New Hampshire contingent, which had been directed to take orders from him. The Rhode Island and Connecticut contingents took formal orders only from their own officers at this time, but they cooperated effectively with Ward. After the Battle of Bunker Hill on 17 June, Connecticut put its troops under Ward's direct command.

For two and a half weeks after the British raid on Lexington and Concord, the Americans worked feverishly to organize their army and the British, stunned by the militia's spirit and prowess, wondered what to do next, especially how to keep themselves fed now that traditional sources of supply had been cut off. As early as 27 April, Warren advocated an attack on Boston, an impossibility given the disorganization of the American army at that time, but all of the New England commanders recognized the need to keep the men enthusiastic and focused on the

task at hand. Putnam was the first to help the American army shake off its lethargy. On 13 May he led his regiment on a grand excursion around Charlestown peninsula, in full view of the British army in Boston and the Royal Navy's warships floating offshore, in an effort to taunt the enemy and embolden his own army. Major General Thomas Gage, the British commander in chief in North America, launched his first foraging expedition, to Grape Island in Boston Harbor the next day, inaugurating a series of skirmishes and raids that soon encompassed all of the important islands in the harbor: Noodle's, Hog's, Pettick's and Deer's. Skirmishing also occurred at Boston Neck, where the lines were in contact.

THE BRITISH RESPONSE

A new phase in the Boston siege began on 25 May 1775, when British Major Generals William Howe, Henry Clinton, and John Burgoyne arrived in Boston with reinforcements for the Boston garrison. By mid-June the British had about sixty-five hundred rank and file stationed in a city of less than seventeen thousand people, Gage having allowed some civilians (mainly women and children) to flee to the American lines. Although Howe carried a dormant commission to replace Gage, all four senior British officers seem to have worked together on a plan to suppress the rebellion by force of arms. They decided, first, to strengthen their defenses by taking unoccupied Dorchester Heights, the key to the British position in Boston; should American artillery be placed on the heights, it could force the Royal Navy from the harbor. That accomplished, they planned to march out across Boston Neck and make for the American headquarters and supply depot at Cambridge, keeping their right flank close to water and confident that well-trained British regulars could brush aside any opposition the Americans might muster. Destruction of the laboriously accumulated supplies at Cambridge, especially the gunpowder, might not deal a death blow to the rebellion, but it would certainly cripple the rebels' ability to mount significant military resistance for the foreseeable future.

Before putting the plan in motion Gage, who had been ordered by London to proclaim martial law in Massachusetts but who also wanted to make a last effort to avoid an escalation of hostilities, issued on 12 June a manifesto that he had asked Burgoyne to draft. "Gentleman Johnny," as the Americans had derisively nicknamed him, thought he had a flair for literary expression. Addressing "the infatuated multitude, who have long suffered themselves to be conducted by certain well known incendiaries and traitors," Gage's proclamation (in Burgoyne's words) offered the king's pardon to all who would lay down their arms, except Samuel Adams and John Hancock. The document was met with derision on both sides of the Atlantic.

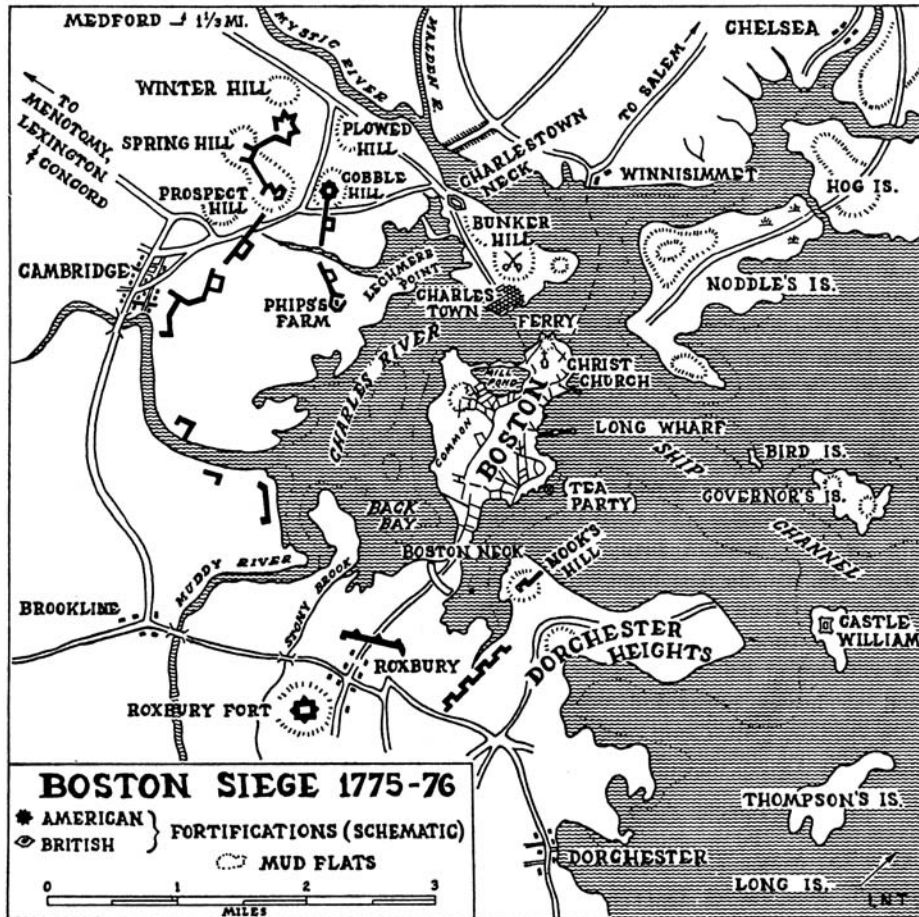

The Massachusetts Committee of Safety learned of the British plan on 13 June, five days before the operation was to take place, possibly because Burgoyne had boasted of the thrashing the Americans were about to receive, although information security was so extremely lax on both sides that the information might have come from multiple sources. The Americans ordered a countermove to fortify Charlestown peninsula, hoping to deflect British attention from the occupation of Dorchester Heights. The result was the Battle of Bunker Hill on 17 June, which left the British in possession of Charlestown peninsula, but at an unacceptable cost in both their own casualties and the enhancement of American morale.

A CONTINENTAL ARMY

Unknown to the combatants on Bunker Hill, the Continental Congress in Philadelphia had, three days earlier, voted to adopt the New England army besieging Boston as a "continental army" and had elected George Washington, one of the Virginia delegates, as its commander in chief. He took command at Cambridge on 2 July and did not like what he found. In his letter to John Hancock, the president of Congress, on 10 July, Washington made clear the army's deficiencies. Although he made sure to praise the efforts of the New Englanders, especially the Massachusetts Provincial Congress and the Connecticut commissary, Joseph Trumbull (the son of the Connecticut governor), he noted the too-great extent of the siege lines, the absence of engineers, the lack of adequate returns (making it impossible to know the true size of the army), the inadequate number of tents, the great deficiency in "necessary clothing" (especially among the Massachusetts troops), and the problems caused when Congress disregarded local seniority in appointing Continental general officers.

Two problems were of even greater concern. "Upon finding the Number of Men to fall so far short of the Establishment, and below all Expectations," Washington wrote, "I immediately called a Council of the general Officers whose opinion as to the Mode of filling up the regiments, and providing for the present Exigency, I have the Honour of inclosing." At the council of 9 July, the generals had recommended sending an officer from each of the Massachusetts companies to recruit in their home areas and "to apply to the provincial Congress of this Province for their assistance in procuring a temporary reinforcement." Washington was not sanguine about the outcome:

From the Number of Boys, [British] Deserters, and Negroes which have been listed in the Troops of this Province, I entertain some Doubts whether the Number required [the council had recommended a total of 22,000 men] can be raised here; and all the General Officers agree that no Dependance can be put on the Militia for a

THE GALE GROUP.

Continuance in Camp, or Regularity and Discipline during the short Time they may stay.

Congress had already (on 14 and 22 June) agreed to pay for a dozen companies of riflemen, to be raised on the Pennsylvania, Maryland, and Virginia frontiers and to be sent to reinforce the army around Boston as soon as possible. The first company arrived in late July and the remainder in August, the only reinforcements Washington received from outside New England.

Concern about the discipline of the militia led Washington to describe his greatest problem, the solution for which, he recognized, he bore principal responsibility:

It requires no Military Skill to judge of the Difficulty of introducing proper Discipline and Subordination into an Army while we have the Enemy in view, and are in daily Expectation of an Attack, but it is of so much Importance that every Effort will be made which Time and Circumstance will admit. In the mean Time, I have a sincere Pleasure in observing that there are Materials for a good Army, a great Number of

able-bodied Men, active [and] zealous in the Cause and of unquestionable Courage.

The problems Washington enumerated in July 1775 were to remain with him in one form or another throughout the war, along with a whole slew not yet as apparent. It was to the great credit of the commander in chief and his principal subordinates that the new Continental army remained an effective force through early December 1775.

Like Putnam, Washington had served as a senior officer during the French and Indian War, and he, too, understood the need to keep the men active and focused to keep discipline from deteriorating even further. Throughout the summer and fall, Washington worked on numerous plans to attack the British garrison in Boston. On 21 September, for example, he told Hancock that "The State of Inactivity, in which this Army has lain for some Time, by no Means corresponds with my Wishes[;] by some decisive stroke [I propose] to relieve my Country from the heavy Expence, its Subsistence must create." He thought a surprise attack

not “wholly impracticable, though hazardous.” When his generals rejected his idea, he assured Hancock by writing that “I cannot say that I have wholly laid it aside.”

Even though no attack ever materialized, each side was active in skirmishing against the other. Among the more noteworthy were the following encounters. On 21 July, Major Joseph Vose led Massachusetts troops on a raid to destroy the lighthouse on Great Brewster Island; Major Benjamin Tupper led another raid on 31 July to prevent the British from rebuilding it. Gage sent three men-of-war and six transports from Boston on 25 July to raid small islands in Long Island Sound (Block, Fisher’s, Gardiner’s, and Plumb); on 20 August he reported the capture of eighteen hundred sheep and more than one hundred oxen. Vice Admiral Samuel Graves, who had reached Boston on 1 July to enforce the blockade, sent a force to attack Falmouth, Maine, on 16–17 October. Pennsylvania riflemen and two Massachusetts regiments repulsed a foraging party sent to Lechmere’s Point on 9 November.

RAISING A NEW ARMY

By November 1775, Washington had seventeen thousand men, all of them reasonably well fed, housed, and healthy. But that was about to change. Because the enlistments of the Connecticut regiments expired on 10 December and those of the rest of the army were about to expire on 31 December, he faced the problem of raising another army in the midst of an ongoing siege. In this critical period, as Congress in Philadelphia debated about how to raise money and place-hunters sought personal advantage from the reorganization of the army, Washington “had to struggle with himself to keep his patience and his faith” (Freeman, p. 570).

Writing to Lieutenant Colonel Joseph Reed from Cambridge on 28 November 1775, Washington reported that:

We have been till this time Enlisting about 3500 men. To engage these I have been obliged to allow Furloughs as far as 50 Men a Regiment, and the Officers, I am perswaded, indulge as many more. The Connecticut Troops will not be prevail’d upon to stay longer than their term (saving those who have enlisted for the next Campaign, and mostly on Furlough), and such a dirty, mercenary Spirit pervades the whole, that I should not be at all surpris’d at any disaster that may happen. In short, after the last of this month our lines will be so weakened that the Minute Men and Militia must be call’d in for their defence; these being under no kind of Government themselves, will destroy the little subordination I have been labouring to establish[;] . . . could I have foreseen what I have, and am likely to experience, no consideration upon Earth should have induced me to accept this Command.

Five weeks later, he again unburdened himself to Reed:

Search the vast volumes of history through, and I much question whether a case similar to ours is to be found; to wit, to maintain a post against the flower of the British Troops for Six Months together, without [gunpowder], and at the end of them to have one Army disbanded and another to raise within the same distance of a Reinforced Enemy. . . . The same desire of retiring into a Chimney Corner siez’d the Troops of New Hampshire, Rhode Island, and Massachusetts (so soon as their time expired) as had Work’d upon those of Connecticut. . . . We are now left with a good deal less than half rais’d Regiments, and about 5000 militia who only stand Ingaged to the middle of this Month, when, according to custom, they will depart, let the necessity of their stay be never so urgent. Thus it is that for more than two Months past I have scarcely immerged from one difficulty before I have been plunged into another.

By 14 January 1776, only 8,212 of the 20,370 men authorized by Congress the preceding October had been enlisted, and only 5,582 men were present and fit for duty. Meanwhile, the five thousand Massachusetts militiamen called in to serve from 10 December would end their term on 15 January 1776. Over two thousand of Washington’s men lacked muskets, the rest had no more than ten rounds of ammunition each, and the Boston garrison was being reinforced. On 16 January, Washington prevailed on a council of war to accept his view that the British must be attacked before their further reinforcement in the spring made this completely impossible. A call was then made for thirteen militia regiments to serve during February and March to make such an operation possible. The next day Washington learned of the failure at Quebec, and Congress later detached three of the thirteen new militia regiments for service in Philip Schuyler’s Northern Department.

On 16 February, before all the new militia units had arrived, Washington proposed, again, to a council of war that the army launch a surprise attack against Boston over the ice of Back Bay; he estimated that the enemy now numbered only five thousand foot troops and believed his own sixteen thousand militia and Continentals had a rare opportunity for success. His generals opposed this plan on various grounds, principally that Washington had underestimated enemy strength and overestimated the offensive power of his own troops. They also insisted that no assault could be undertaken without an artillery preparation of several days; although Henry Knox’s “Noble Train of Artillery” had begun arriving at Framingham from Fort Ticonderoga, gunpowder was still in short supply. A less ambitious plan did, however, emerge from this meeting. The generals proposed that while an adequate supply of

gunpowder was being assembled, they should, meanwhile, seize some position that would draw the British out of Boston and into an attack on an objective the Americans would have had time to fortify. Although disappointed by the failure of his generals to endorse his assault plan (they were right; the ice lasted only a few days), Washington turned his attention to the plan they proposed. Thus was borne the operation that secured Dorchester Heights for the Americans on the night of 4–5 March 1776.

THE BRITISH EVACUATE

Since the summer of 1775, the British had considered moving their forces from Boston to the more central, and, they hoped, more loyal, area around New York City. After calling off an attack on American-held Dorchester Heights ordered for the night of 5–6 March, Howe decided on 7 March to evacuate Boston. The transports were loaded by 9 A.M. on 17 March. At 9 P.M. the Sixty-fourth Regiment blew up Castle William as it departed, the last group—out of a total of about eleven thousand British army and navy personnel and nearly one thousand Loyalists (including one hundred civil officials)—to leave Boston. The convoy remained in Nantasket Roads, five miles south of the city, until 27 March, when it sailed for Halifax rather than New York, as the Americans expected. By tacit agreement, the British, in return for being allowed to depart unmolested, did not burn Boston. There was a great deal of looting by departing soldiers and Loyalists, however. A New York Irish adventurer named Crean Bush was authorized by Howe to seize clothing and other supplies that might benefit the Americans, but his loot-laden brigantine *Elizabeth* was recaptured. The Loyalists were given vessels but were required to raise their own crews.

General Ward entered Boston on 17 March with five hundred men who had immunity to smallpox. Washington visited the town the next day, and the American main body entered on 20 March. The British had left sixty-nine cannon that could be salvaged by the American artillery, and thirty-one that were useless. Miscellaneous ordnance matériel, almost all the enemy's medical supplies, and—most surprisingly and welcome—three thousand blankets and much equipment were found on the wharves, a windfall resulting from Howe's lack of shipping capacity and the failure of subordinates to follow his orders to destroy matériel that could not be evacuated.

The eight-month siege had cost the Americans fewer than twenty men killed in action. Boston and the province of Massachusetts were free of British troops for the remainder of the war.

BOSTON TEA PARTY. 16 December 1773. The *Dartmouth*, the first of three ships carrying East India Company tea, arrived in Boston Harbor on 28 November 1773, and docked at Griffin's Wharf three days later. It was followed shortly thereafter by the *Eleanor* and the *Bruce*. While the agents to whom the tea had been consigned waited to see if the cargo could be landed safely, the Boston Committee of Correspondence organized several mass meetings to prevent any unloading. Governor Thomas Hutchinson refused to allow the ships to leave Boston. He seems to have assumed that, after twenty days when the law allowed customs officers to seize goods to pay the required duties (in this case, three pence per pound of tea as required by the Tea Act of 1773), the tea would be impounded, the agents would be able to pay the duty, and the principle of Parliament's right to collect revenue in the colonies would be upheld.

Hutchinson did not think that local Patriot leaders would destroy the East India Company's property. He was, therefore, surprised when, after a meeting at the Old South Meeting House on the evening of 16 December over which Samuel Adams presided, a crowd surrounded the wharf while a boarding party of

between 40 and 50 men, “dressed and whooping like Indians,” emptied 340 chests of tea into Boston harbor. In a notable display of controlled violence, the “Indians” destroyed nothing other than the tea and the chests in which it was contained. Although some people believed at the time that John Hancock had led the boarding party, the people who destroyed the tea have never been reliably identified. The East India Company never received restitution for its loss, valued at £9,000.

The “tea party” ratcheted up the level of confrontation between Britain and the colonies, and began a sequence of events that convinced activists across British North America that they had to cooperate more closely to resist what they believed to be imperial tyranny. In March 1774 Parliament retaliated for the “tea party” by passing the Boston Port Act, the first of the Intolerable Acts, which prohibited any ship from entering or leaving the port of Boston until restitution had been made for the cost of the tea and assurances had been given for payment of duties in the future. The activists reacted by calling the first Continental Congress to consider collective resistance.

BOUDINOT, ELIAS. (1740–1821). Jurist, commissary general of prisoners, president of the Continental Congress, director of the U.S. Mint, author. His Huguenot great-grandfather came to New York in 1687. The fourth Elias in a line, he studied law with Richard Stockton, his future brother-in-law and signer of the Declaration of Independence. Licensed to practice law in 1760, he moved to Elizabethtown, New Jersey, and became a prominent attorney (receiving an honorary LL.D. from Yale in 1790); he mentored young Alexander Hamilton. Conservative in his politics, he supported the colonial cause mainly by opposing the royal New Jersey government. When, on 11 June 1774, Boudinot became a member of the Committee of Correspondence for Essex County, he believed that some ties with England were necessary. But in March 1775 he urged the General Assembly’s approbation of delegates to the Continental Congress. He was in the Provincial Congress in 1775 and

sent gunpowder to Washington at Cambridge when the general’s supplies ran low.

On 1 April 1777 Washington asked him to be the first commissary general of prisoners and also to procure intelligence. Boudinot declined the job, but Washington “objected to the conduct of Gentlemen of the Country refusing to join him in his Arduous Struggle... That if Men of Character & influence would not come forward & join him in his Exertions, all would be lost. Affected by this address . . . I consented to accept” (Elias Boudinot, *Journal*, p. 9). On 6 June 1777, Congress approved him as commissary general of prisoners with the pay and rations of a colonel, backdated to 15 April, and two deputies. He was answerable to General Washington.

At that time some five thousand American prisoners were in British hands and had to be fed and clothed by the Americans. On a visit to New York in February 1778, Boudinot borrowed nearly twenty-seven thousand dollars on his own credit to clothe and feed fourteen hundred men. He overcame great difficulties to organize the care of prisoners, becoming particularly close to Washington during this time. Boudinot regarded the general with reverence and aided him in a number of ways, such as by resolving conflicts between Steuben and other officers. In the area of intelligence, on 4 December 1777 he procured information “that Genl Howe was coming out the Next Morning with 5000 Men” and passed it on in time for Washington to prepare for the enemy’s movement against the commander in chief’s position at Whitemarsh, Pennsylvania (*ibid.*, p. 50).

On 20 November 1777 he was elected to the Continental Congress but did not attend until July 1778. He also served terms from 1781 to 1783 and was named president on 4 November 1782. He was described by Eliphalet Dyer as “a Gentn of good Carracter, virtuous, & decent behavior.” On 15 April 1783 he signed the proclamation of the cessation of hostilities. On 24 June 1783 he ordered the removal of Congress to Princeton in order to avoid mutinous soldiers that the state of Pennsylvania refused to control. As president he signed resolutions of thanks to the departing French army, treaties with Sweden and France, and proclamations disbanding the Continental army and calling for public thanksgiving. He was also acting secretary of foreign affairs in 1783–1784. He presided over Congress at Princeton and on 26 August 1783 read a congratulatory address in which Washington was praised: “Your services have been essential in acquiring and establishing the freedom and independence of your country. They deserve the grateful acknowledgements of a free and independent Nation.”

Under the new Constitution, Boudinot served in the House of Representatives from 1789 to 1795 as a strong Federalist. After his retirement from Congress, he became the third director of the U.S. Mint in October 1795. He

resigned in July 1805. In 1790 he became the first counselor named by the U.S. Supreme Court. An extremely rich man, he retired to study biblical literature and, as a trustee of Princeton University (1772–1821), helped the school through financial troubles; in 1805 he spent three thousand dollars to found its cabinet of natural history. He authored four religious texts from 1801 to 1815 and helped found the American Bible Society, an institution he endowed and of which he served as president.

His sister married Richard Stockton, who was the father-in-law of Benjamin Rush. Elias married Stockton's sister Hannah in 1762, and his many letters to her are a wonderful testament to love and devotion. Described as "elegant . . . tall, handsome every way prepossessing," he combined good sense with benevolence (J. J. Boudinot, ed., vol. 1, pp. 23–24). His home in Elizabeth, New Jersey, is a National Historic Landmark. He is buried at St. Mary's Episcopal Churchyard in Burlington, New Jersey.

BOUGAINVILLE, LOUIS-ANTOINE

DE. (1729–1811). French explorer, Admiral. Born in Paris as the son of a notary, Bougainville early entered the Black Musketeers, published a book on integral calculus (1752), and became secretary of the French embassy in London (1756). During the Seven Years' War he was captain of dragoons and served as Montcalm's aide in Canada, where he assisted in the capture of Fort Oswego and Fort William Henry. He was promoted to colonel in 1759. In 1760 he defended Île-de-Noix at the mouth of Lake Champlain. After 1763 he was named a ship's captain in the navy; established a colony in the Falkland Islands for Acadians (1763–1765); and made the famous, two-year voyage of discovery around the world (1767–1769) that resulted in his book, *Voyage autour du monde* (Voyage around the world) (1771).

When France declared war against England in 1778, he commanded the *Guerrier* and later the *Languedoc* in d'Estaing's squadron at Rhode Island and Savannah. In 1779 he was promoted to commander of the squadron. He participated in the September 1781 action off the Virginia Capes. In January 1782, Bougainville captured Montserrat. At the Battle of the Saints in August 1782, aboard the *Auguste*, he rescued eight ships of his division but was accused by Grasse of misconduct and banished from the royal court. He was a member of the Royal Academy of Sciences, the Royal Naval Academy, and the London Royal Society and a knight of the Order of Saint Louis. During the French Revolution, he refused the post of minister of the navy but accepted in June 1792 the rank of vice admiral. He retired in 1793 to his estate in Brie. He became a member of the Institut de France in 1795. Napoleon appointed him senator, conferred upon him the title of count, and named him grand officer in the Legion of Honor.

BOUND BROOK, NEW JERSEY.

13 April 1777. While Sir William Howe's and George Washington's armies were still in winter quarters, much of northern New Jersey became a no-man's-land. Each side sent patrols and foraging parties into the area and sought to ambush the other side's parties. On one such occasion a British foraging expedition (built up to nearly eight thousand men) swept the area around Brunswick. While there it also attempted to cut off the American outpost at Bound

Bounties (Commercial)

Brook, seven miles up the Raritan. Charles Lord Cornwallis led a task force estimated at two thousand British and Germans that moved at night against Major General Benjamin Lincoln's camp. Total American strength was probably about five hundred men, mostly from the Eighth Pennsylvania and supported by three three-pounders from Proctor's artillery regiment (a state unit until becoming Continental in June) and some militia. Although surprised, Lincoln extricated most of his force, but enemy light horse captured the guns. Cornwallis withdrew before Greene arrived with reinforcements.

Knox estimated that the Americans lost six killed and twenty or thirty captured. The British do not appear to have lost anyone. While some suspected that a neighborhood farmer learned the password and gave it to the British, the primary blame for the surprise was put on the militia, which were supposed to be guarding the Raritan, which was fordable at almost every point. Lincoln and his men were considered to have acquitted themselves well. The incident prompted Washington to reduce the number and size of his outposts. Not only was this an effort to prevent further surprise attacks, but it also contributed to Washington's massing of forces to better counter the anticipated British offensive.

BOUNTIES (COMMERCIAL). As part of its policy of mercantilism, the British government paid premiums or bounties to encourage certain industries or production. The Act of 1705, for example, provided bounties on certain naval stores that were listed as enumerated articles. These bounties, except for that on hemp, which lapsed during the Seven Years' War, continued until 1774. Bounty payments on naval stores during these years totaled £1,438,702. Indigo bounties, paid chiefly to planters in Georgia and the Carolinas, amounted to more than £185,000 from 1748 to 1776.

BOUQUET, HENRY. (1719–1765). Swiss-born British army officer and military theorist. After a careful education Bouquet entered the Dutch service in 1736, and during the War of the Austrian Succession he fought for the Sardinians, probably learning something of light infantry tactics in the process. In 1748 he became captain commandant and lieutenant colonel of a Swiss Guards regiment being formed by the Prince of Orange to occupy fortresses being given up by the French. This brought him into pleasant contact with the British, and in 1756 to a lieutenant colonelcy in the new Royal American (60th) regiment being formed for service in North America. Bouquet, who seems already to have devoured numerous modern works on military theory, was particularly impressed by Count Turpin de Crisse's *Essai sur l'art de la Guerre* (1754) and went to America determined to apply its maxims to American conditions. After a brief period in South Carolina, where a French attack was expected, his battalion joined Forbes's expedition in Pennsylvania. Bouquet quickly realised Native Americans were far more dangerous than any European light infantry and analysed the principles behind their methods: attempt to surround the enemy, always adopt an open deployment, and always yield ground when attacked in force. Soon he was systematically training his battalion in counter-tactics devised by himself and enthusiastically pressing de Crisse's book upon his colleagues. He allowed the ambitious and plausible Grant to bounce him into authorising a reconnaissance in force, but was not responsible for the unauthorised attack which led to Grant's defeat and capture at Fort Duquesne. In Pontiac's War he relieved Fort Pitt after a hard-fought victory at Bush Run (5–6 August 1763) and went on to lead an expedition that forced the Shawnees and Delawares to make peace in 1764. He was then made brigadier general and given the command of all British troops in the southern colonies, but died in an epidemic at Pensacola in the autumn of 1765.

Bouquet's personal attitude to Native Americans is controversial: while he seems to have removed settlers from the upper Ohio in anticipation of the Proclamation of 1763, he did not dissent from Amherst's proposal to distribute smallpox-infected blankets at the start of Pontiac's War. However, his status as an important innovator and theorist of light infantry methods in closed country is beyond dispute. William Smith's account of Bouquet's Ohio campaigns was prepared with papers given to him by Bouquet and the second edition (1766) included a reflective appendix almost certainly by

Bouquet's pen. The light infantry methods pioneered by Bouquet and others, though neglected in the 1760s, were quickly revived and adapted in the War of American Independence, and had a permanent effect upon the tactics of the British army.

BOUQUET'S EXPEDITION OF 1764.

After relieving Fort Pitt in 1763 during Pontiac's War, Henry Bouquet's force of regulars was too small to subjugate the tribes in the Ohio Valley and to free their numerous white prisoners. Not until 1764 did the Pennsylvania Assembly vote an adequate force of provincials for the expedition. Virginia and Maryland flatly refused to contribute. On 5 August Bouquet reached Carlisle with the 1,000 Pennsylvania troops and a detachment of regulars from the Forty-third and Sixtieth Regiments. Within a week 200 provincials had deserted. On 17 September he reached Fort Pitt, having lost another 100 Pennsylvania troops, but Virginia had responded to his appeal and sent a body of woodsmen. After many delays, in early October he was able to leave Pittsburgh with 1,500 men. His cautious advance west some 100 miles to the Muskingum River, the heart of the Delaware and Shawnee country, was unopposed, and he was met by chiefs bringing eighteen white captives and suing for peace. Demanding that all prisoners be surrendered, he took hostages and moved south to the forks of the Muskingum and waited until another 200 prisoners were brought in. Making peace, he directed the Indians to go to Sir William Johnson to conclude treaty arrangements and returned to Pittsburgh with additional hostages to assure that the Indians delivered another 100 Shawnee captives and that they honored their obligation to make treaties with Johnson. The

Indians did both, and their threat to the frontier was temporarily ended. Bouquet's well-managed and successful campaign was in marked contrast to the failure of Bradstreet's Expedition of 1764.

BRADDOCK, EDWARD. (c. 1695–1755). British general. Edward Braddock, son of an officer of the same name, was baptised in London on 2 February 1695. In October 1710 he became an ensign in his father's regiment, the Coldstream Guards, and then rose slowly by the purchase of higher rank. By 1745 he was a lieutenant colonel, but almost certainly did not see action during the war of the Austrian Succession. In 1753 he became colonel of the Fourteenth Foot and was a popular acting governor of Gibraltar in 1753 and 1754. In April he was made major general. This was the man—solid, aging, inexperienced in action—who in the autumn was ordered to take two weak regiments to roll back the French in North America.

Braddock's tasks were to get the colonies to organize their own armed forces, co-ordinate a three-pronged offensive against recent French advances, and lead the thrust against Fort Duquesne himself. He arrived with the Forty-fourth and Forty-eighth Foot in Hampton, Virginia, on 20 February 1755 and immediately ran into difficulties. The colonies resisted cooperation, and he found it difficult to get provisions, transportation, and recruits for his own expedition. He attempted to recruit hundreds of Cherokees, only for Governor James Glen of South Carolina to step in and induce the warriors to stay at home. When Braddock's force finally assembled, it amounted to no more than 2,000 effective troops, many of them of indifferent quality. The army finally marched on 10 June, hacking its own road through the wilderness, but Braddock rapidly became alarmed at their slow progress. On 16 June he left about a third of his force under Thomas Dunbar, colonel of the Forty-eighth Foot, to follow with the baggage while Braddock himself pushed ahead with the main body.

Braddock's precautions against surprise were effective: the enemy was unable to harass his advance and decided not to attack him as he crossed the Monongahela River. The next day, however, a fateful slip in vigilance left a key hillock and adjacent ravines unsecured. While a French frontal attack was repulsed, hundreds of Indians were able to

stream down both flanks and pour deadly fire into the British column. The lack of light infantry training told as Braddock's orders to reform and advance against the foe in the woods were ignored. After three hours of vainly trying to stem the tide, Braddock was shot in the chest and the army fell back in disarray. On 13 July at Great Meadows, some sixty miles back, Braddock died.

The battle stimulated the development of new light infantry tactics for forest conditions which had a permanent, if uneven, effect on training of the British army. Braddock himself was awarded an undeserved share of the blame, and was caricatured as the archetypal, arrogant British martinet who refused to listen to American advice and had no idea of how to fight under American conditions. This travesty of the truth became widespread in America and had long-term effects upon the relations between colonists and the regular British army.

BRADSTREET'S CAPTURE OF FORT FRONTENAC. 27 August 1758. Seeking a victory in the aftermath of the disastrous British attack on Fort Carillon (Ticonderoga) on 7 July 1758, Major General James Abercromby ordered Lieutenant Colonel John Bradstreet to lead 3,100 provincial troops and bateaumen (armed transporters of military supplies who are also capable of offensive and defensive action) in a lightning raid to destroy Fort Frontenac (at Cataragui, now Kingston, Ontario). Located at the point where Lake Ontario flows into the St. Lawrence River, the fort controlled the French line of communications to their western posts, including Fort Duquesne (against which the expedition led by Brigadier General John Forbes was then advancing) and Fort Niagara. Bradstreet, who had been planning such a raid for two years, overcame significant logistical obstacles

to demonstrate that an Anglo-American force could move rapidly across long distances in the backcountry, even when encumbered with a small train of artillery. The force reached Oswego in mid-August and departed on the 22nd, rowing in bateaux and whaleboats along the shore of Lake Ontario before crossing to Cataract on the 25th. A few small cannon, placed in impromptu siege lines, compelled the garrison of perhaps 150 men to surrender on 27 August the key to French influence in the interior. After destroying the fort and its stock of supplies intended for posts farther west, Bradstreet's force was back at its starting point, the Oneida Carrying Place, by 13 September.

BRADSTREET'S EXPEDITION OF 1764.

As part of the delayed punitive action the British directed against participants in Pontiac's War, Colonel John Bradstreet left Niagara with 1,400 sickly British regulars and untrained American provincials in early August with orders from Major General Thomas Gage, British commander in chief in North America, to attack the Shawnees and Delawares. This was to be done in conjunction with Colonel Henry Bouquet's expedition from Fort Pitt and to continue on to Detroit. Near Presque Isle (later Erie, Pennsylvania), Bradstreet met ten Indians who claimed to be emissaries from the two tribes he was supposed to attack, and they duped him into concluding a peace treaty (12 August). He proceeded to Detroit, where he was only partially successful in his dealings with the Indians. The return voyage to Niagara, via Sandusky, Ohio, was badly managed. Bradstreet seriously overestimated the willingness of native Americans to submit to British control. Gage finally lost confidence in his leadership when Bradstreet disobeyed a direct order to attack the villages on the Scioto River, something Bradstreet knew to be logistically impossible. It was left to Bouquet's expedition to restore British prestige.

BRANDYWINE, PENNSYLVANIA.

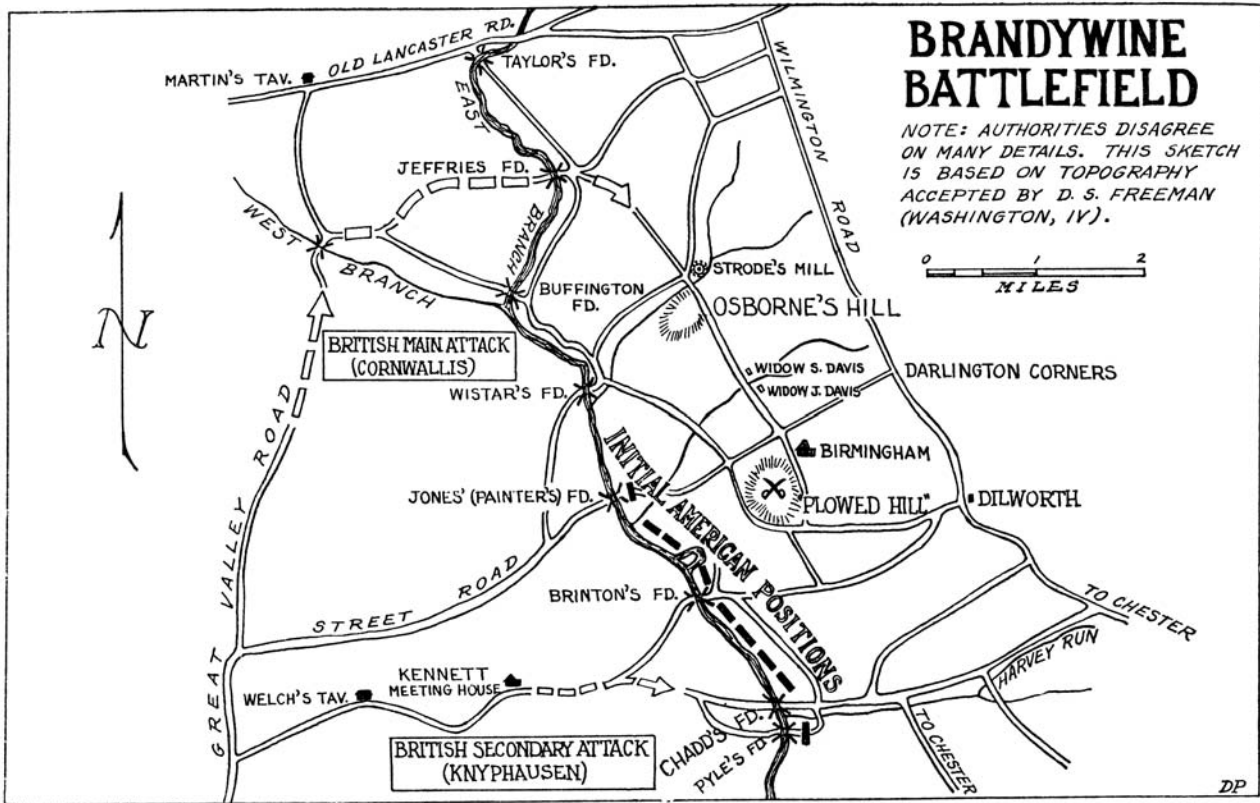

The Battle of Brandywine, on 11 September 1777, opened the British army's Philadelphia campaign with a major defeat for the American rebels. Nevertheless, some revolutionaries—both within, and to a lesser extent without, the Continental Army—saw in the character of the engagement limited signs of progress toward military parity with the enemy. The battle demonstrated the challenges soldiers on both sides faced trying to execute traditional strategic or tactical operations while surrounded by civilians of divided loyalties and diverse cultural characteristics in a charged revolutionary polity. It also shows us civilians beginning to teach themselves how to survive during warfare.

SIGNIFICANCE OF BRANDYWINE

The British commander in chief, William Howe, launched his effort to occupy and pacify Pennsylvania relatively late in 1777. On 25 August, about fourteen thousand British troops left warships at the navigable head of the Chesapeake Bay, near the modern town of Elkton, Maryland. After they were refreshed from five harrowing weeks at sea, they began cautiously probing toward Philadelphia, and more immediately, toward the positions of George Washington's main Continental army at Wilmington, Delaware. A sharp skirmish at Cooch's Bridge in Delaware on 3 September suggested Howe's intention to fight aggressively in 1777 after a tentative and ultimately costly end to the campaign the year before. Washington withdrew his force of about eleven thousand Continentals and some Pennsylvania militiamen into southern Chester County, Pennsylvania. He was determined not to let the Continental Congress be driven from Philadelphia for a second year in a row, but he also needed to protect critical fabrication and storage areas for Continental war materials and weapons in the upper Schuylkill River valley, above the town of Reading. The lower reaches of the Brandywine Creek represented a tactical and metaphorical fork in the road for that objective. If Howe's troops passed that obstacle unharmed, they would be able to campaign against either the American capital or against the Reading supply bases with relative ease.

DISPOSITIONS AND STRATEGIES

While the Brandywine was not a major, and certainly not a navigable, waterway, its flow was considerable enough to

THE GALE GROUP.

power a number of large “merchant” gristmills at Wilmington that ground fine flours for sale throughout the Caribbean and Mediterranean worlds. This trade had during the previous three generations turned southeastern Pennsylvania’s farmland into the “best poor man’s country in the world.” The Brandywine was fordable at a series of named sites between Wilmington and its division into eastern and western branches just southeast of the modern town of West Chester. On 10 September, Washington placed the main part of his army behind the Brandywine at Chads Ford. All outward appearances suggested that Howe—whose troops were camped six miles away at Kennett Square—would cross the Brandywine at Chads Ford. Washington attempted to reconnoitre the terrain in the Brandywine Valley, but he was later criticized for having an inadequate knowledge of its geographical complexities. His army was composed largely of new recruits, and services like intelligence—which required agents well-known to the commanders—were being belatedly rebuilt. Local civilians, especially the pacifist or neutral Quakers who dominated Chester County, were distrusted in American military camps. Pennsylvania’s own revolutionary government was in turmoil. It had been created in June and July of 1776, following the forcible overthrow of that colony’s provincial government. A year later its inexperienced leaders were still

struggling among themselves over power and constitutional authority. This made it a challenge for the state to fill its regular army quotas or even to keep its militia in the field. The same cultural factors that had tempted Howe to come to Pennsylvania to try to end the rebellion, therefore, confounded efforts by revolutionary civil and military leaders to fight an effective war on that terrain.

Washington established his headquarters in a farmhouse near Chads Ford. Behind the ford itself he installed the division commanded by his trusted subordinate, Nathaniel Greene of Rhode Island. Greene was joined there by General Benjamin Lincoln’s division, temporarily commanded in Lincoln’s absence by general Anthony Wayne. Wayne, a Pennsylvanian, lived in nearby Paoli. The inexperienced Pennsylvania militia guarded the left wing of Washington’s line at Pyle’s Ford, just south of Chads, a place not considered to be vulnerable to attack. The right wing was commanded by troops under general John Sullivan of New Hampshire. They concentrated at Brinton’s Ford; Jones’s Ford; Wistar’s Ford; and Buffington’s Ford, six miles to the north, which lay in the forks of the Brandywine. Washington’s informants the previous night had told him that there were no fordable places on the creek for twelve miles above the forks. To secure the right wing, Washington deployed small

mounted parties of regulars and militia who crossed the Brandywine to watch the countryside for British movements. These forces reported to Washington through Sullivan. Behind Greene and Sullivan, as reserve forces, respectively, were the divisions commanded by Adam Stephen of Virginia and by William Alexander, also known as Lord Stirling, of New Jersey. Washington kept an artillery corps at Chads Ford, and finally he sent skirmishing parties under General William Maxwell across the Brandywine to make contact with and report on the activities of approaching British forces there.

General Howe, at Kennett Square, hoped to execute a reversed version of the flanking maneuver he had employed to overwhelm the American forces at Brooklyn Heights on Long Island just over a year before. September mornings were often foggy in the region. Before dawn on 11 September, Howe sent between five thousand and seven thousand of his troops directly forward to Chads Ford under the command of the Hessian general, Wilhelm von Knyphausen. Knyphausen was instructed to make the appearance of preparations for a charge across the Brandywine to hold Washington's troops there. Meanwhile, Howe and his subordinate, general Charles Lord Cornwallis, with between seven thousand and nine thousand troops, marched to their left and headed upstream behind the creek, guided by local Loyalists and seeking unguarded fords. Howe had been informed that there were a pair of fords just above the forks of the creek.

Many later accounts of the battle suggested that Washington was again caught flatfooted by this maneuver, as he had been the previous year, and beaten for that reason. Actually, he both anticipated a possible flanking maneuver and even devised a plan to try to exploit it to his own advantage. If, as he thought, the nearest fords above Sullivan's positions were fifteen or more miles away, he could cross the Brandywine after Howe and Cornwallis departed and overwhelm Knyphausen's detachment before Howe could relieve him. At 8 A.M. Maxwell's troops engaged the forward elements of Knyphausen's force, and sharp clashes developed in obscured terrain. Maxwell was gradually driven back across the stream, but he reported, inaccurately, that his men had inflicted significant casualties on their opponent. After Knyphausen reached the Brandywine, artillery on both sides duelled noisily across the water for several hours, but the British made no concerted move to attack across the stream. The fog still lingered, and Washington could not tell whether he was facing all or just a part of the enemy's force.

WHERE WOULD HOWE ATTACK?

As the morning went on, the sun burned through and the day became very hot. Late in the morning, scouts began to report evidence of Howe's and Cornwallis's flanking maneuver through Sullivan, but the evidence was at best fragmentary

and contradictory. First Washington learned that a large body of redcoats had been observed marching north along the Brandywine toward the forks. His knowledge of particular fords and distances was partial and flawed, but Washington knew that if the British did cross the creek anywhere above Sullivan they would march against his right wing along a road that ran past the Birmingham Friends Meetinghouse. He ordered Stephen's and Stirling's reserve divisions to fall back and move toward that position to be ready to block such an attack. Then he ordered Greene's and Sullivan's divisions to cross the Brandywine to attack the diminished force that had presumably been left there by Howe.

The next intelligence reports confirmed the first ones, that at least five thousand British troops were marching toward the forks. This account named two fords immediately above that point, much closer than the twelve to fifteen miles previously believed. Almost immediately, however, Sullivan forwarded another report from Pennsylvania militia troops who said that they had scouted all morning but had seen no enemy troops above the forks. If this news was true, Washington realized, he risked sending a part of his army into battle with the whole of Howe's, with a treacherous watercourse at their rear. Confused by these contradictions, he countermanded his orders to Greene and Sullivan and ordered Stephen and Stirling to halt their march to Birmingham. Early in the afternoon, as Washington tried to reconcile his intelligence, the Howe and Cornwallis column crossed Jefferis' Ford over the east branch of the Brandywine and then rested for an hour, with only empty and hilly farmland between it and the American flank.

At about this time, a local farmer who called himself Thomas Cheney argued his way into Washington's presence with the news that Howe's column, in motion once again, was closing in on the unprepared Americans. Washington questioned the report, but confirmations of its basic tenor began to arrive quickly, and the commander in chief resumed preparations to defend his army on its right flank. Stephen and Stirling were ordered to resume their march toward Birmingham, and Sullivan—having been withdrawn from crossing the creek—was told to wheel around and join Stephen and Stirling. When he had formed a solid connection with them, Sullivan would assume command of the battlefield on the right flank. Washington decided to remain near Chads Ford, where he continued trying to piece together a coherent picture of the action as a whole.

THE BATTLE INTENSIFIES

Howe's and Cornwallis's troops had marched for seventeen miles since daybreak, and they took some time on Osborne's Hill to organize for the coming assault on the American wing. This delay gave Stephen and Stirling time to reach the area of the Birmingham Meetinghouse, where

Battle of the Brandywine. This 1898 illustration by Frederick Coffay Yohn shows a line of American infantry attempting to repel charging British troops during the Battle of Brandywine in Chadds Ford, Pennsylvania, in September 1777. THE LIBRARY OF CONGRESS.

they formed a strong line across the top of a hill facing Osborne's Hill, using the Quaker Meetinghouse itself as a strong point. Sullivan's march to the same place was more problematic. As his regiments appeared in the vale between Osborne's Hill and the hill behind Birmingham, Sullivan had difficulty locating the left wing of Stirling's impromptu line. He had to order the Americans to shift out of the way so that he could try to move his troops into the gap. While he was groping at this task, the British assault on the combined American position, which had begun at about 4:30 in the afternoon, intensified. Washington tried to assess the significance of the increasingly sharp small arms and artillery fire that he heard from the Birmingham area. At five o'clock he drafted a brief—and somewhat matter-of-fact and noncommittal, though vaguely hopeful—report on the action to Congress in Philadelphia.

As Sullivan's forces crumbled and Stephen's and Stirling's troops came under heavier pressure, Washington concluded that the attack on his army's right wing represented the main action of the day, and he decided to leave the skirmishing across Chads Ford to supervise the battle. Accompanied by a civilian guide, he rode as quickly as he could toward Birmingham. Before he could reach the meetinghouse,

Stephen's and Stirling's divisions began to break and retire toward yet another piece of high ground in their rear. Washington had also directed General Greene's division to abandon the front on the Brandywine and rush to reinforce the right wing. Those troops came at a dead run just behind the commander in chief. The hastily formed front carried out a surprisingly effective delaying action, and shadows were beginning to gather on the battlefield. Washington left Sullivan in operational command on this front and personally attended to calming and rallying the inexperienced American troops. He was accompanied by his young French volunteer aide, the Marquis de Lafayette, who this day earned the commander's ungrudging respect. Lafayette rode back and forth close to the front until he received a musket ball in the thigh. A concerned Washington ordered that he be escorted to a field hospital, anxiously proclaiming—as Lafayette later insisted in a memoir—that the young Frenchman was like his own son.

A FIGHTING RETREAT

The first elements of Greene's reinforcing units arrived near Dilworthtown, a village behind Birmingham

Meeting, just as the battered elements of the American line gave way. They had covered a distance of about four miles in nearly three-quarters of an hour. General George Weedon's brigade opened their line to allow the retreating Americans through and then closed ranks to receive the British attack. Greene's troops fought valiantly as darkness gathered, exhausting their ammunition and retiring repeatedly to seek new defensible positions. The American retreat was jeopardized by renewed action on the Brandywine itself. As predetermined with his commander in chief, General Knyphausen prepared to fall on the American front at Chads Ford as soon as it was weakened by the withdrawal of forces to sustain the flank defense. At about four P.M., the British artillery bombardment across the creek suddenly intensified. With Greene's troops away toward Birmingham, the responsibility for the creek front fell to Anthony Wayne, commanding General Lincoln's division in his absence. Knyphausen sent his forces across the ford, where they used their bayonets to intimidating effect to drive the Americans away from the creek. The rebels abandoned their valuable and hard-to-replace artillery pieces that had been used effectively since daybreak. Wayne's lines disintegrated, although individual pockets of men kept up a hot fire, slowing the advance and giving Washington time to organize the retreat of both the broken units from the Birmingham clash and those from the ford.

WHY AMERICANS ESCAPED DECIMATION

Darkness brought the engagement to a conclusion. If Washington was later criticized for his imprecise reconnaissance of the ground and for his troubled intelligence system early in the day, William Howe was predictably chastened for a lack of aggression in following up on a successful battle plan. The complaint was trite, and probably unjustified. Howe's conduct of the war since 1775 had long made it clear that he did not have a killer instinct or an ingrained disposition to crush a soundly defeated foe. There was as yet no developed mid-eighteenth-century doctrine about pursuing a broken foe and running him into the ground in conventional combat. It was also evident that Howe—and probably the vast majority of the British military establishment—did not really view American revolutionaries as being on the same moral plane as Scottish Jacobite rebels in 1715 or 1745 or as Irish warriors in the sixteenth and seventeenth centuries—that is, the Americans were not seen as savages to be exterminated if possible. Gaining solid footing beyond the Brandywine had probably guaranteed Howe the possession of Philadelphia whenever he wanted it. Beyond that objective, his plan was to break the rebellion and its military instruments piece by piece.

Howe's troops—especially those from Cornwallis's column—were exhausted by nightfall. In addition to the length of their march, many of the cavalymen were operating dismounted, as the loss of horses during the five-week sea voyage to the Chesapeake continued to take its toll. Also, Howe's commissary general, Daniel Weir, was obliged to begin feeding the army from the countryside after it entered Pennsylvania. His brother, Richard Lord Howe, was bringing the British fleet around into the Delaware River with its cargoes of provisions, expecting to meet the army at Philadelphia. Eighteenth-century doctrines of warfare also made the victors who controlled battlefields responsible for the immediate care of the wounded and the decent interment of the dead of both sides, as well as for the humane treatment of prisoners of war. On each of these fronts there was much work to be done. Casualties were heavy on both sides, and Americans were captured in growing bunches in the confusion of the day's end.

Washington's immediate duties were lightened by the realization that Howe could, and would, attend to the previous responsibilities. As soon as Knyphausen broke off his advance, Washington was able to shepherd the troops from the Brandywine front, together with those who had retreated from Birmingham and Dilworthtown, and to begin arranging for their retreat. The river port village of Chester, on the Delaware below Philadelphia, was designated as the initial rendezvous point for the stricken survivors of the battle. Washington himself reached that town at about midnight on the heels of most of his troops. His two previous messages of the day to Congress, from about noon and just after 5 P.M., respectively, had been either plainly optimistic or at least cautiously hopeful. By now it was clear that news of the late reverses would reach Philadelphia with stragglers and civilians, and in good conscience as well as self-interest, Washington owed his civilian superiors a candid official report. He felt too exhausted to draft one, however, and his aides-de-camp understandably wrangled over the disagreeable assignment.

At length, Adjutant General Timothy Pickering agreed to compose the message. That dour New Englander did not try to sugarcoat the bad news. The Americans had been "obliged to leave the enemy masters of the field," he acknowledged, before speculating that the British had paid a high price for this benefit in casualties. Washington read over the draft before he retired, and he insisted that the candor be leavened with at least an abstract expression of optimism. The American troops, Washington appended—probably accurately—were still "in good spirits," and he still hoped that "another time we shall compensate for the losses now sustained."

American casualties consisted of about 300 men killed, the same number wounded, and about 315 missing in action. The British lost 90 men killed, 448 wounded, and only a handful of missing.

CIVILIANS LEARN TO SURVIVE

The action of 11 September 1777 has other insights to disclose to modern observers. External constraints like terrain, heat, and sunlight had been critical to its outcome, but it should be remembered that Howe had chosen to campaign in Pennsylvania—at the risk, it turns out, of the entire British strategy for the year—on the hope of exploiting the good will of its population. Howe's far superior intelligence to that which Washington received suggested that his adviser, Joseph Galloway, was not completely wrong to promote that hope. But the civilian experience of the events of Brandywine was much more complex and subtle than any of the military professionals present that day would have acknowledged. Southeastern Pennsylvanians were as innocent as any late-colonial Americans of the costs and horrors of war, because Quaker political control of their colony had, until the late 1750s, kept it out of most imperial wars. Even the panic of late 1776 prior to Washington's Trenton reprisal had not changed that fact. Beginning with the red-coat and Hessian push into Chester County, however, and continuing for most of the following year, that innocence ended, and civilians had to accommodate themselves to calamity.

The day before the battle, Hessian Captain Johann von Ewald observed that local Quakers came to British camps "in crowds, and asked for protection." After the British victory, other civilians warned the British that the rebels were retreating toward Chester and effectively chided Howe for not pursuing them with more vigor. Other country people, less favorably disposed to the restoration of royal authority, abandoned their plantations, but foraging soldiers, especially Hessians, occasionally paid for their plunder with their lives at the hands of vindictive farmers. Most civilians neither fawned before nor ambushed soldiers, but rather scurried around trying to avoid getting caught between large groups of them. To their astonishment, many discovered that there were pockets within campaigns, and even on battlefields, where they could observe military actions in situations of remarkable intimacy with some degree of safety.

BRANT, JOSEPH. (1743–1807). Mohawk leader. Brant was born as Thayendanega at Cuyhoga to undistinguished Mohawk parents early in 1743. His father died when he was young, and his widowed mother took him back to her native Canajoharie in the Mohawk Valley, where he was baptized into the Church of England. After Catawbas killed her second husband, his mother married the hereditary chief, Brant Canagaraduncka (whose own father had visited London in 1710), from whom Joseph took his surname. His elder sister Molly became Sir William Johnson's mistress and Joseph consequently became Johnson's protégé.

During the Seven Years' War, young Brant fought against the French and their native allies, beginning at the tender age of thirteen at Lake George. In 1761, with the American war virtually over, Johnson sent Joseph and two other Mohawks to Moor's Indian Charity School in Lebanon, Connecticut, where he learned to speak, read, and write fluent English and studied Hebrew, Greek, Latin, and agriculture. He was supposed to complete his education and become a missionary but, for reasons that are still obscure, he returned to Canajoharie after only two years. In 1765 he married Neggen Aoghyatonghsera (Margaret) from a prominent Oneida family, a connection that significantly enhanced Joseph's own status.

RELIGIOUS CONVICTIONS

Despite his exposure at Lebanon to Wheelock's nonconformist influences, Brant clung to a devout Anglicanism blended with traditional Iroquois beliefs. He appears to have been a missionary's interpreter in 1763, and later he helped to translate several religious works, including parts of the Book of Common Prayer, into Mohawk. In 1768 Joseph and Molly gave land for the building of the Indian Castle mission church at the Mohawk Upper Castle. In 1773, two years after Margaret's death, Brant followed Mohawk custom by marrying her half sister. This was too much for the local Anglican priest, so the ceremony was performed by a German minister. The incident seems to have had no effect on Joseph's attachment to the Church of England, which appears to have been of political as well as religious importance. As the revolutionary crisis deepened and the New England Calvinist missionary, Samuel Kirkland, seduced the Oneidas and Tuscaroras to the American cause by offering an alternative belief system, so Anglicanism became all the more inseparable from the Mohawk alliance with the British.

SECURING BRITISH SUPPORT

Like some other Native leaders, Brant judged that unswerving loyalty to the crown might bring the Mohawks protection against unscrupulous land jobbers and intrusive settlers. He therefore joined the Mohawks who fought on the British side in Pontiac's War and worked as a guide and translator for the northern Indian department. In 1774, when Guy Johnson succeeded Sir William Johnson as Indian superintendent, Brant became his secretary. Joseph was not, however, above using violence when appeals to officialdom failed, as when he led twenty warriors against the notorious speculator, George Klock.

As the revolutionary conflict developed, most of the land speculators came to support the American cause, thus deepening Brant's conviction that the Six Nations must cleave to the British. In 1775 he went north with a Loyalist and Mohawk force to oppose the American advance on Montreal and was the Mohawk spokesman at a conference with Guy Carleton. Here Brant's principal concerns were partly met by Carleton's assurances that the Mohawks' lands would be safe and that Britain would compensate them for any losses during the war. He was even given a captain's commission. But experience had made Brant cautious, and late in 1775 he traveled to London to get Carleton's promises confirmed and to ask for redress for earlier illegal encroachments. In London, like earlier Native visitors, he was received at court, feted and entertained by members of the educated public (including James Boswell), painted (by George Romney), and made a kind of popular public spectacle. More importantly, he was given the guarantees he sought in return for Mohawk loyalty during the rebellion. Thus armed, Brant sailed for home in June 1776, used his musket in an encounter with an American privateer, and landed on Staten Island. He joined in military operations in New Jersey before returning home through American lines.

THE NEW YORK FRONTIER

Subsequently Brant, in conjunction with the Butlers at Fort Niagara, led many Loyalist-Indian raids upon the New York frontier. These operations had three objectives: to rescue the families of fled Iroquois and Loyalists; to defend the Iroquois country; and to prevent the rebel forces drawing supplies from the frontier farms of New York. No doubt Brant also saw the opportunity for personal distinction, but despite black propaganda to the contrary, he was not interested in slaughter and scalping for their own sake. He led the Indian contingent with St. Leger's expedition at the siege of Fort Stanwix and took part in John Butler's ambush of Herkimer's relief column at Oriskany on 6 August 1777. During the next year, while Butler was raiding the Wyoming Valley, Brant gathered a force of Indians and Loyalists at Unadilla on the Susquehanna. From there

he hit Andrustown on 18 July and German Flats on 13 September. Finally, after rebel forces destroyed Unadilla (6–8 October), he joined forces with Walter Butler to inflict a serious reverse upon the rebels at Cherry Valley on 11 November 1778. These actions attracted the admiration of the distant Lord George Germain, who sent Brant the king's commission as colonel.

Brant's raids provoked Sullivan's invasion of the Iroquois country in 1779. While this expedition was being prepared, Brant raided Minisink, a settlement on the Delaware, on the night of 19–20 July, perhaps to secure supplies for Butler or to draw off some of Sullivan's men. Two days later he cut off and destroyed a pursuing rebel force before retiring to help Butler resist Sullivan. On 12 August he inflicted some casualties in a minor skirmish with the rebels. At Newtown (29 August 1779), where an ambush similar to that at Oriskany failed and the rebel artillery panicked the Indians, Brant held enough of his warriors together to offer a desperate resistance against odds of five to one. He launched a counter-attack that almost destroyed a New Hampshire regiment before the Loyalists and Indians were forced to retreat. Sullivan's army then marched through the Iroquois country, burning towns and forcing most of the people to flee to Fort Niagara. Here they had to live in refugee camps, dependent upon British handouts.

But the Iroquois were not knocked out of the war: on the contrary, they struck back harder than ever. Brant himself raided Harpersfield and Minisink (2–4 April 1780) and destroyed the Canajoharie settlements (1–2 August). About 25 August he destroyed a one-hundred-strong rebel force on the Ohio before moving north again to join Sir John Johnson's raid on the Schoharie Valley. In early 1781 he repeatedly raided the upper Mohawk Valley until rebel resistance stiffened and British will to fight on withered away. By now the strain had caused a marked deterioration in Brant's character, and he had begun to take to drinking and brawling. The Treaty of Paris of 1783 seemed to him a cynical betrayal of the Iroquois. Nevertheless, he led a movement to resettle the Iroquois on the Grand River in British territory on the northern side of Lake Erie. By 1785 about one-third of the New York Iroquois were there and Brant had risen from being a predominantly Mohawk leader to being a leading figure in the Six Nations.

POST-REVOLUTIONARY EFFORTS

Brant now tried to construct a pan-Indian alliance while also attempting to obtain for the Iroquois full title to their Canadian lands and the compensation promised to the Mohawks in 1775 and 1776. He also hoped for promises of British military support for the nations of the northwest and Great Lakes against the United States. However, this support, without which Brant and other leaders felt unable

to act, was not forthcoming when the Americans attacked the northwestern nations in the years from 1787 to 1794. Consequently, the idea of a pan-Indian alliance collapsed and with it the aim of reuniting the Six Nations. Within the Canadian Iroquois, his political opponents may have tried to have him assassinated by his son Isaac, who died after a brawl with his father in 1795. Joseph himself, much weakened by drink and malaria, died in his bed at Burlington on Lake Ontario on 24 November 1807.

OF THE “MIDDLE GROUND”

Joseph Brant was an outstanding product of the “middle ground,” a term Richard White originally applied to the Great Lakes region but which some writers have used even when its relevance is limited. However, there is no doubt of its validity in connection with the Mohawks, and with Brant in particular. He lived in a world where he could be simultaneously hunter, trader, civil servant, and assistant missionary and in which both sides borrowed from the other in order to establish a mutually acceptable meeting place. His extraordinary intelligence and energy thrived in such an environment. If Brant was only temporarily successful in sustaining this middle ground, it was because the odds were stacked against him from the beginning.

BRANT, MOLLY. (c. 1736–1796). Loyalist. New York. The sister of the Mohawk leader Joseph Brant, she met Sir William Johnson, superintendent of Indian affairs, in 1759 and lived with him until his death in 1774. They had eight children together. Hers was an influential voice in persuading many in the Iroquois confederation to side with the British in the Revolution. Her message to Barry St. Leger of Nicholas Herkimer's expedition to Fort Stanwix made possible Brant's successful

ambush at Oriskany, 6 August 1777. Receiving an annual pension from the British government for her wartime services, Molly Brant settled with many other Loyalists in Kingston, Ontario, where she died 16 April 1796.

BRAXTON, CARTER. (1736–1797). Signer of the Declaration of Independence. Virginia. Son of a wealthy planter, Carter Braxton was born on 10 September 1736, on the family's plantation. He graduated from the College of William and Mary in 1756 and, after the death of his first wife in December 1757, he spent the next three years in England. In May 1761 he married Elizabeth Corbin, daughter of a British official, and started a fourteen-year tour as representative from King William County in the House of Burgesses (1761–1775) that was interrupted only by a short period when he served as county sheriff.

In the controversies that led to the break with England, Braxton wavered between his conservative instincts and political survival. He opposed the Virginia Resolves of 1765, but supported the non-importation agreements. He is credited with preventing bloodshed in the dispute between Governor Dunmore and Patrick Henry's militia over the seizure of colonial powder in the spring of 1775, and was appointed to the Committee of Safety after the governor fled. The following year the assembly selected him as a delegate to the Continental Congress, where he supported the resolution for independence and signed the Declaration of Independence, but there are few references to him in the *Journals of the Continental Congress*. Probably because of his conservative views and his wife's loyalism, he was not re-elected. His county, however, returned him to the House of Burgesses, where he served from 1776 to 1785. In 1785 he suffered a stroke and retired from public affairs. Braxton lost most of his wealth during the Revolution, dying in a rented Richmond house, 10 October 1797.

BRIAR CREEK, GEORGIA. 3 March 1779. As recruits flocked to General Benjamin Lincoln's camp at Purysburg, South Carolina, he made preparations to recover Georgia. Having already posted General Andrew Williamson across the Savannah River from Augusta with one thousand men, he ordered General John Ashe to join him with his fourteen hundred North Carolina militia and Colonel Samuel Elbert's one hundred Georgia Continentals. Ashe reached Williamson's post on the evening of 13 February, and the British evacuated Augusta that night. Crossing into Georgia on the 25th, Ashe descended the Savannah. At Briar Creek, on the morning of Saturday, 27 February, he found the bridge demolished; the creek in this area, close to its junction with the Savannah, ran through a deep swamp about three miles wide.

Ashe ordered the bridge rebuilt and also started work on a road to the Savannah so that General Griffith Rutherford and his North Carolina militia could reinforce him from Mathew's Bluff, South Carolina, about five miles to the east. However, his troops moved very slowly on these preparations.

Colonel Archibald Campbell interrupted his retreat at Hudson's Ferry, a fortified British outpost fifteen miles south of Briar Creek. General Augustine Prevost received intelligence that Ashe was stalled at Briar Creek and sent reinforcements to Hudson's Ferry with orders for a counterstroke to check the rebel advance. The plan was for Major William Macpherson's First Battalion of the Seventy-first Regiment, with a reinforcement of Loyalist militia and two cannon, to occupy the south bank of Briar Creek as a diversion. The general's younger brother, Lieutenant Mark Prevost, would execute a wide circuit westward and attack the American rear with his Second Battalion of the Seventy-first, Captain Sir James Baird's light infantry, three companies from the Sixtieth Regiment, a troop of mounted Loyalists, and 150 militia infantry—about 900 in all.

The American force against whom this surprise attack was directed comprised the brigade of General David Bryant, the light infantry of Lieutenant William Lytle, Colonel Elbert's Georgia Continentals, three small cannon, and two hundred mounted Georgia militia under Colonel Leonard Marbury. The latter unit was on Briar Creek when Ashe's troops arrived from the north.

In a remarkable fifty-mile march, Lieutenant Colonel Prevost crossed Briar Creek fifteen miles above the enemy

camp and was only eight miles to its rear when detected. Marbury's horsemen had picked up the enemy movement on the afternoon of 1 March, but the messenger was intercepted before he reached the American commander. Backed up against the swamp and with the bridge not yet finished, Ashe was faced with annihilation; yet he took no steps to meet the attack other than to form his troops in column with the Continentals out front.

The British deployed at a range of 150 yards. Elbert's regulars advanced on the British and fired two or three volleys before shifting left to mask the fire of the advancing New Bern Regiment. The Edenton Regiment also got off course and moved right so that a gap was created in the North Carolina militia line of battle. When the British capitalized on this error and rushed into the gap with fixed bayonets, the Halifax Regiment, on the left, broke without firing a shot, most throwing down their guns, and panic quickly spread through the other militia units. The Continentals held for some time but were finally surrounded by the British; Elbert and many of his men were captured. Ashe tried to rally his fleeing men, but they were too fast for him. The militia headed for the swamps and the Savannah River where many drowned, though large numbers escaped by swimming or crossing on crowded rafts.

In a brilliant little operation that restored their hold on Georgia, the British suffered only five killed and eleven wounded, despite the claims of Ebert and Perkins to having many marksmen in their ranks and having fired several volleys. The Americans lost between 150 and 200 killed or drowned and over 200 captured. Most of the surviving militia, who abandoned their guns and other military stores for the British to claim, did not stop running until they reached their homes. After the battle the British counted more than five hundred captured muskets.

The Patriots howled for Ashe's hide. He demanded a court-martial, which cleared him of cowardice but censured him for failing to take proper military precautions. Briar Creek was a staggering defeat that cost the Patriots heavily, setting the stage for the even greater catastrophe at Charleston the following year. As Page Smith has written, "The simple moral to be drawn from the Briar Creek disaster was that there is no real substitute for military training and experience" (*A New Age*, vol. 2, p. 1316).

BRIGADE. A military formation of two or more regiments, generally temporary, and commanded by a brigadier in the British army or a brigadier general in the American army. (During the Revolution the terms “regiment” and “battalion” were virtually synonymous.)

Mark M. Boatner

BRISTOL, RHODE ISLAND. 7 October 1775. A small British fleet of four warships, commanded by Captain James Wallace, was operating in Newport harbor. It appeared off Bristol on the afternoon of 7 October. Wallace sent an officer ashore to state that if a delegation did not come out to his ship the *Rose* within an hour to hear his demands he would open fire. William Bradford told Wallace’s emissary that it would be more fitting for Wallace to come ashore and make known his demands. About 8:00 P.M., in a pouring rain, the British started a bombardment that lasted an hour and a half and stopped only after Captain Simeon Potter had gone to the end of the wharf and hailed Wallace’s ship, asking that the town be given time to select a delegation to meet him. The British commander first asked for two hundred sheep and thirty cattle, but finally settled for forty sheep. A number of houses had been destroyed by the bombardment, mostly as a result of fire.

BRITISH GUIANA. The Dutch West India Company established settlements at Essequibo, Demerara, and Berbice between 1621 and 1657. British privateers took the first two of these in 1781, which were then captured by the French the following year and restored to the Netherlands in the peace treaty of 1783. The British again seized the colony that became British Guiana in 1803, holding it until its independence in 1966. Demerara is now Georgetown, capital of Guyana. Essequibo was located about fifty miles northwest, at the mouth of the Essequibo River.

revised by Michael Bellesiles

BRITISH LEGION. Before Sir Henry Clinton left Philadelphia in June 1778, he laid the foundation for “a legionary corps” of provincials, “the command of which

I gave to a Scottish nobleman, Lord [William] Cathcart,” then a captain in the Seventeenth Light Dragoons. Captain Richard Hovenden’s troop of Philadelphia Light Dragoons was the first unit subsumed in Cathcart’s Legion, also called the British Legion, followed by Captain Jacob James’s troop of Chester County Light Dragoons and then by Captain Charles Stewart’s Caledonian Volunteers and Captain David Kinloch’s Troop of Light Dragoons, both then recruiting in New York City. Thereafter, the legion recruited to its establishment of five companies of infantry and three troops of cavalry. Cathcart remained colonel of the legion throughout its existence, but the regiment won its enduring reputation under Banastre Tarleton, its lieutenant colonel from 1 August 1778.

The British Legion was one of the units of light troops, including the Queen’s Rangers and Emmerich’s Chasseurs, that skirmished with the Americans around New York City from late August 1778 until late December 1779, when it embarked for Charleston, South Carolina, as part of Sir Henry Clinton’s expedition. Despite having lost its horses on the passage from New York (Tarleton secured remounts on Port Royal Island), in the nine months between 12 April 1780 (at Monck’s Corner) and 17 January 1781 (at Cowpens), Tarleton’s Legion became the scourge of the Americans. Wearing a distinctive green uniform similar to that worn by other legions like John Graves Simcoe’s Queen’s Rangers and Henry (Light-Horse Harry) Lee’s Legion, the legionnaires won renown for the speed of their pursuit and their alleged bloodthirstiness in battle, an undeserved reputation that nonetheless contributed to the fear they aroused in their opponents. Although the legion performed with less success when Tarleton was not personally in command, as at Williamson’s Plantation (12 July), Wahab’s Plantation (21 September), and Charlotte, North Carolina (26 September), Tarleton’s own carelessness contributed significantly to his defeat at Cowpens. The legion was placed on the American Establishment on 7 March 1781 as the Fifth American Regiment; by that time, however, thanks to Cowpens, it consisted only of cavalry. The bulk of the legion’s horsemen continued to serve with Lord Cornwallis’s army in North Carolina (at Guilford Court House on 15 March 1781) and Virginia (Green Spring on 6 July 1781) before surrendering at Yorktown on 19 October. Survivors stationed at Charleston and New York were consolidated into the King’s American Dragoons, but the legion cavalry, as a formation, was placed nominally on the British Establishment on Christmas Day 1782. The last vestiges of the legion evacuated New York City for Nova Scotia about 15 September 1783 and were disbanded there on 10 October 1783.

BROAD ARROW. All royal property was marked with a figure in the shape of an arrowhead to signify that it belonged to the king. The broad arrow was inscribed on military materiel like cannon, muskets, kegs of gunpowder, and various accoutrements. It was also carved into white pine trees of twenty-four or more inches in diameter, found mostly in the forests of New Hampshire, because these tall, straight-grown, strong trees were needed for naval masts, as an alternative to obtaining them from the Baltic. The "Broad Arrow Policy" in the Naval Stores Act of 1729 reserved for the crown all such white pines growing on lands granted after 7 October 1692, when the restriction had been included in the regranted Massachusetts charter. A masting trade grew up around this resource, benefiting New Hampshire oligarchs and the Royal Navy but antagonizing settlers on the land.

BRODHEAD, DANIEL. (1736–1809).

Continental officer. Pennsylvania. Born in Albany, New York, on 17 September 1736, Brodhead served as deputy surveyor-general of Pennsylvania from 1773 to 1776. With news of the battle at Lexington, Brodhead led a company of volunteers to Boston, where he enlisted in the Continental Army. On 13 March 1776 he became a lieutenant colonel,

commanding the Second Battalion of Miles's Pennsylvania Rifle Battalion. At Long Island on 27 August 1776, his unit barely escaped annihilation. Transferred to the Third Pennsylvania Battalion on 25 September 1776, he was promoted to colonel and he was given command of the Eighth Pennsylvania Battalion on 12 March 1777. His regiment saw heavy action at Brunswick, Brandywine, Paoli, Germantown, and Whitemarsh. Early in 1778, George Washington ordered Brodhead's regiment to move from Valley Forge to Fort Pitt, where General Lachlan McIntosh sent them down the Ohio to build Fort McIntosh. After a dreadful winter at this base, Brodhead wrote to Washington, accusing McIntosh of gross incompetence. Washington agreed, and on 5 March 1779 he made Brodhead commander of the Western Department.

Brodhead's expedition against the Seneca and Delaware, which took place from 11 August to 14 September 1779, led to a treaty with the Delaware and won the thanks of Congress and Washington. Although he showed more energy than his predecessors, Brodhead was considered a martinet with a jealous, irascible temperament. His inability to cooperate with other commanders led Washington to remove him from his post. In the reorganization of 17 January 1781, Brodhead became commander of the Second Pennsylvania, which he led until 3 November 1783. He was breveted as a brigadier general in the Continental army on 30 September 1783 and returned to his farm in Pike County, Pennsylvania. In 1790 he was made surveyor-general of Pennsylvania, a position he held until his death in Milford, on 15 November 1809.

BRODHEAD'S EXPEDITION. 11 August–

14 September 1779. In conjunction with Sullivan's Expedition, Colonel Daniel Brodhead marched up the Allegheny valley from Pittsburgh with a force of six hundred men drawn primarily from his own Eighth Pennsylvania Regiment and attacked Seneca villages. During this operation he covered about four hundred miles, pushing to within fifty miles of the British outpost at Niagara, and destroyed ten villages and their crops. On 15 August, in the only military engagement of the expedition, his advance guard beat back a larger force of Indians.

BROOKLYN, BROOKLAND, BREUCKELEN, NEW YORK.

A Dutch settlement on the western tip of Long Island, organized into a town in 1646, four years after the settlement had become known as The Ferry. Its name evolved from the Dutch word meaning marshland. (There were numerous variations of the Dutch spelling.) The modern spelling, "Brooklyn," was not standardized until the end of the eighteenth century. "Brooklyn Heights" refers to the high ground close to the ferry where Washington established defensive lines on 27 August 1775 after the disaster of the Battle of Long Island. John Glover's Marbleheaders ferried Washington's army to safety from Brooklyn on the night of 29 August.

BROOKS, JOHN. (1752–1825). Continental officer. Born in Medford, Massachusetts, on 4 May 1752, Brooks studied medicine and set up his practice in Reading, Massachusetts. Elected captain in the militia in 1775, he led his forces in harassing the British on their retreat from Concord on 19 April 1775. Joining the troops gathered around Boston, he was promoted to major in May. His regiment was stationed alongside General Alexander McDougall's brigade on Chatterton's Hill during the Battle of White Plains on 28 October 1776, standing up before the main British attack. After the battle he was named lieutenant colonel of the Eighth Massachusetts Regiment. The following year his force was part of Benedict Arnold's relief effort to Fort Stanwix, and Brooks is credited with sending the mad Hon Yost Schuyler to give false information to the Indians that led to their retreat. He arrived with Arnold in time to see action at Freeman's Farm on 19 September 1777 and commanded the advance unit at Bemis Heights that on 7 October captured Breymann's redoubt, ensuring victory. His regiment was at Valley Forge in 1778, and he served as adjutant to General Charles Lee at Monmouth, testifying on Lee's behalf at the latter's court-martial. After serving on General Friedrich von Steuben's staff, Brooks became commander of the Seventh Massachusetts Regiment from November

1778 until June 1783. After the war, Brooks returned to Medford, serving in the assembly in 1785–1786, as major general in the militia during Shays's Rebellion, as delegate to the Massachusetts constitutional ratifying convention, as brigadier general in the U.S. Army from 1792 to 1796, as adjutant general of Massachusetts from 1812 to 1816, and as the nation's last Federalist governor from 1816 to 1823. He died at Medford on 1 March 1825.

BROTHER JONATHAN. As early as March 1776 the British used this term to designate Americans. Governor Jonathan Trumbull (the elder) of Connecticut was a key man in the support of Washington's army. Once, when coping with a particularly tough problem, Washington is alleged to have said, "We must consult Brother Jonathan." Legend has it that the expression spread as a generic term for Americans. The *Oxford English Dictionary* accepts this derivation of the term, which stood as the widely used generic name for the United States through the nineteenth century until replaced by "Uncle Sam."

BROWN, JOHN. (1744–1780). Patriot leader. Massachusetts. Born 19 October 1744 in Haverhill, Massachusetts, John Brown graduated from Yale in 1771 and was admitted to the bar in Tryon County, New York, the next year. In 1773 he settled in Pittsfield and became a prominent Patriot and member of the Committee of Correspondence. In February 1775 he volunteered for a mission to Montreal on behalf of the Boston Committee of Correspondence, with the dual purpose of evaluating Canadian sentiment toward the Revolution and of setting up a network of informers. He is one of several credited with the rather obvious thought that the Patriots should seize Ticonderoga. While traveling across New Hampshire on his way to Montreal, he had been struck by the strategic importance of the place, and, probably, its defenselessness at the time. On 29 March he reported to Adams and Warren in Boston, and he participated in the capture of Ticonderoga on 10 May 1775. Ethan Allen selected Brown to take the news of the victory to Congress.

Commissioned a major in Colonel James Easton's Regiment on 6 July, he conducted a reconnaissance into Canada during the period 24 July to 10 August and reported his findings to General Philip Schuyler at

Crown Point, New York. The degree to which Brown's scouting contributed to the advance of General Richard Montgomery's wing of the invasion of Canada is uncertain, but Brown figures prominently in all accounts of the operation. In September he notoriously abandoned Allen during the attack on Montreal, leading to the capture of Allen's entire force. The following month he played a significant part in the capture of Chambly, Quebec, on 19 October. Brown and Easton drove Allen McLean's Royal Highland Emigrants down the Sorel River to the St. Lawrence, and took over works that their foes had started at this strategic spot, capturing several tons of gunpowder.

During the Quebec siege, Brown's insubordination to Benedict Arnold would have resulted in his removal from the scene if General Montgomery had not intervened. Brown and Arnold clashed repeatedly over the next year, exchanging charges and calls for courts martial. Having been appointed lieutenant colonel of Colonel James Elmore's Connecticut Regiment on 1 August 1776, Brown took part in the fighting around Lake Champlain. He resigned in February 1777, citing his disagreements with Arnold as the cause. During General John Burgoyne's offensive, Brown returned to the field and took part in the Ticonderoga raid of 18 September 1777, surprising a British force and taking nearly 300 prisoners while freeing 100 Americans. After service at Bemis Heights, New York, Brown again returned to his law practice. Elected to the General Court in 1778, Brown became judge of the county court in February 1779. In the summer of 1780 he marched to the Mohawk Valley with the Massachusetts levies that were called out to oppose the Loyalist-Indian raids in the region. In an ambush near Fort Keyser on 19 October 1780, Brown and 45 of his men were killed.

BROWN, THOMAS. Southern Tory partisan leader. As a young man he reached Georgia after 1773 to take up five thousand acres near the confluence of the Broad and Savannah Rivers as an investment for his family of wealthy Yorkshire merchants. Rather than use black slaves, the Browns brought in about eighty-five indentured servants, most of them Orkney Islanders.

As a recent British immigrant in Georgia, he was naturally opposed to revolutionary agitation. Young

Brown made himself conspicuous by cleverly ridiculing the Whigs and their cause. For this he was tarred and feathered, publicly exposed on a cart, and forced to profess support of the Whigs. At the first opportunity he fled. In British East Florida, Brown started partisan operations and raised a body known variously as the East Florida or King's Rangers. He took part in the capture of Fort McIntosh, Georgia, in February 1777 and with the rank of lieutenant colonel led his regiment on raids in Georgia. In 1779 he was defeated by inferior forces near Waynesboro on two occasions. He took part in the defense of Savannah in October 1779. In 1780 he established himself at Augusta, ran the Whigs out of town, sequestered their property, and successfully defended this strategic town against the abortive attack of Elijah Clarke and James McCall in September 1780. The next year he repulsed a night attack by Colonel Harden but was forced to surrender after a heroic defense of Augusta from 22 May to 5 June 1781.

Popular hatred of this successful Tory leader was so great that a special guard had to be assigned to guarantee his rights as a prisoner of war. That he was not hanged as an outlaw was probably the result of the British threat to retaliate by hanging six Whigs. After his release he was colonel of the Queen's South Carolina Rangers and superintendent of Indian Affairs for the South. In the final defense of Savannah, his attempted sortie was defeated by Wayne's night bayonet attack.

Brown's forces then were dispersed, his South Carolina and Georgia properties were confiscated, and he took refuge in the Bahamas. He was given a land grant on St. Vincent in 1809 and died there in 1825.

His biographer, Edward J. Cashin, has observed that "in 1775, when . . . most Loyalists were inclined to maintain a prudent silence, Brown plunged boldly into the fray. . . . Whig spokesmen William Henry Drayton and William Tennent recognized Brown as their most implacable and dangerous opponent" (Cashin, p. 223). Though not the only advocate of the reconquest of Georgia in 1778, he was an early and vigorous advocate for it in the early stage of the southern campaign.

BROWN BESS. The term “brown bess” refers to various models of smooth-bore, muzzle-loading, flintlock muskets of .75 caliber (their diameter in inches) first issued to British troops in 1730. Before 1722, the colonels of each regiment contracted individually for the firearms issued to their soldiers. In an effort to remedy this lack of standardization, the Board of Ordnance established specifications to which all colonels were directed to adhere. The Board also established a new system of manufacture whereby lock mechanisms, barrels, and other metal parts were manufactured (generally in Birmingham), inspected, stored in the royal armory in the Tower of London, and issued as needed to London gunsmiths to assemble into complete muskets. Full production of muskets to the new pattern began in 1728, and the first Long Land Service Pattern 1730 muskets were issued two years later. The firearm had a forty-six-inch long-rounded barrel attached to the walnut stock by four pins and a screw through the tang, a wooden ramrod held beneath the barrel by four short brass cylinders called pipes, a lug at the muzzle of the barrel to hold a four-inch socket that carried a seventeen-inch bayonet; a flintlock firing mechanism with a lock plate shaped like a banana, and assorted furniture also made of brass.

The origin of the nickname “brown bess” for this firearm and successive models, first used in print in 1785, is obscure. “Brown” may derive from the acid-pickling process that gave the barrel a brown color. Or it may come from the natural dark brown color of the walnut stock; previously, the stocks of English muskets were painted black. “Bess” may refer to a different form of firearm previously used, or be the feminine counterpart of a pole arm called the “brownbill.” Or soldiers may have coined this term of affection to honor the only companion a fighting man ought, or could expect, to have.

Various modifications were made in successive models of the Land Service musket in 1742 and 1756, the most important of which was the introduction of the steel ramrod in 1756. Following the successful introduction of the Sea Service Pattern 1757 muskets that were manufactured with shorter barrels (thirty-seven inches and forty-two inches), the Board approved a new forty-two-inch-long barrel for the Short Land Service Pattern 1768 musket, first issued as the standard British infantry arm in 1769. Long land service muskets, which continued in limited production until 1790, were the principal firearms used by the British army in North America through 1777 and in Loyalist units until the end of the war. Without the one-pound, fourteen-inch bayonet, the land service musket weighed ten or eleven pounds. The round lead projectile remained standardized at .75 caliber throughout the life of the long land design. The bullet weighed about one ounce, or so that there were fourteen and one-half bullets to the pound. (The Land Service Pattern was copied by the East India Company for muskets to arm its troops in

India, with a barrel shortened to thirty-nine inches, but this weapon was not a true brown bess.)

A total of 218,000 land service muskets were manufactured in Britain over the course of the war. At least 100,000 more were made by contractors in Liège and various German cities after 1778, when Britain went to war against France and the demand for firearms increased dramatically.

BROWNE, MONTFORT. Governor of New Providence, the Bahamas, (1774–1780), he surrendered Fort Nassau to Commodore Esek Hopkins of the Continental navy on 3 March 1776 and was taken prisoner. Six months later he and Major Cortlandt Skinner were exchanged for General William Alexander. Made a brigadier general, Browne subsequently raised Browne’s Corps, known officially as the Prince of Wales Loyal American Volunteers. It saw action in the raid on Danbury and in Rhode Island.

BRUNSWICK, NEW JERSEY. 22 June 1777. Washington’s Main Army had passed through Brunswick (or more properly New Brunswick) during the retreat to the Delaware River the previous winter. General William Howe had turned it into one of his major garrison locations, with up to 7,800 troops occupying it. At the start of the Philadelphia Campaign, Howe determined to move to Philadelphia by sea rather than try a second time to advance through New Jersey. Accordingly he began falling back through Amboy to New York City and Staten Island. On 21 June Washington moved forward to harass the British and exploit any weakness. Initially he sought to have Major General John Sullivan with the Maryland Division make a feint toward Brunswick, while Brigadier General William

Maxwell worked his way onto the British western flank. On the morning of 22 June, he modified these orders and sent Major General Nathanael Greene with the First Virginia Division (two brigades) and a third brigade to push against Howe's rear elements while holding the bulk of the army in reserve. He also had Brigadier General Anthony Wayne's First Pennsylvania Brigade and Colonel Daniel Morgan's provisional Rifle Corps try to maneuver around the flank. Morgan made the first contact and drove the British across the bridge over the Raritan. The British and Hessian jägers promptly evacuated the two redoubts covering the bridge and headed down the road to Amboy. The Americans pursued as far as Piscataway before realizing that they were closing in on a major part of Howe's army. At this point they realized that they had gotten too far in front and fell back to Brunswick. The British continued on to Amboy, burning buildings along the way.

BULL, WILLIAM, II. (1710–1791). Acting royal governor of South Carolina and son of South Carolina's lieutenant governor, William Bull (1683–1755). William Bull II was born on 24 September 1710 on the family plantation outside of Charleston. He was the first native-born American to receive the Doctor of Medicine degree at the University of Leyden, in 1734. On his return to South Carolina he turned to agriculture and politics, serving many years in the legislature, including several as speaker, and gaining appointment as brigadier general of the militia in 1751. Becoming lieutenant governor in 1759, he was acting governor for a total of eight years, during the period from 1760 to 1775. He particularly distinguished himself in Indian affairs. Governor William Henry Lyttleton's refusal to follow Bull's counsel of moderation led in part to the Cherokee uprising in 1759.

While acting governor in 1761, Bull secured the outside support that led to the Cherokee expedition, led by James Grant, that temporarily subdued the Indians. He handled the Regulator crisis, from 1769 to 1771, with diplomacy and intelligence, avoiding the violence that disrupted North Carolina. During the critical years just before the Revolution, his sympathy for his fellow Carolinians came into conflict with his loyalty to Britain. In 1775 he was succeeded by Lord William Campbell, and although his extensive estates were not confiscated by the Patriots—whose respect and affection he had retained—Bull left Charleston with the British troops in 1782 and spent the remaining nine years of his life in London. He died there on 4 July 1791.

BULL'S FERRY, NEW JERSEY. 20–21 July 1780. On 20 July, General Washington detached Anthony Wayne with the First and Second Pennsylvania Brigade, four guns, and Stephen Moylan's Fourth Continental Light dragoons to destroy a stockaded blockhouse erected at Bull's Ferry, about four miles north of Hoboken. Although Sir Henry Clinton minimized its significance, arguing that only seventy Loyalists under Thomas Ward held "this trifling work" and used it as a base for woodcutting and for protection against "straggling parties of militia," it served as an important base for British logistical efforts to keep New York City. Washington hoped that Wayne's attack would provoke Clinton into sending a relief force from Manhattan which would then be ambushed. Wayne opened fire on the blockhouse the morning of 21 July, but it easily withstood the light field pieces. After an hour two regiments bravely tried to charge the stockade and were driven off with losses of fifteen men and three officers killed.

Clinton says that the bombardment inflicted twenty-one casualties and that the blockhouse was "perforated by at least 50 cannon shot." Without recognizing that they had avoided a trap, the British celebrated the incident as a stirring victory. John André composed a long, burlesque epic-ballad, "The Cow Chace," the last part of which appeared in *Rivington's Royal Gazette* the day André was captured. It begins:

To drive the kine one summer's morn,
The tanner took his way,

The calf shall rue that is unborn
The jumbling of that day.

And it ends:

And now I've closed my epic strain,
I Tremble as I show it,
Lest this same warrior-drover, Wayne,
Should ever catch the poet.

BUNKER HILL, MASSACHUSETTS.

17 June 1775. The Battle of Bunker Hill holds a special place in the history and mythology of the American Revolution. Along with Lexington, Valley Forge, and Yorktown, it epitomizes how Americans think about the War for American Independence. The victory by American citizen-soldiers over British professionals in this first set-piece battle of the war encouraged Americans to believe that military resistance to increased British imperial control (what the British called rebellion) was possible. It showed the British that they were in for a real fight.

For nearly two months after American militiamen had hounded the British back into Boston on 18 April 1775, neither side escalated the conflict. While each side postured and watched each other (and skirmished on islands in the harbor), neither the British nor the Americans occupied Charlestown Peninsula or Dorchester Peninsula, two projections of land that flanked Boston to the north and south. Both peninsulas were crowned with hills that overlooked the town, but Dorchester was the more important because artillery on Dorchester Heights could potentially command the harbor and make continued British possession of Boston untenable.

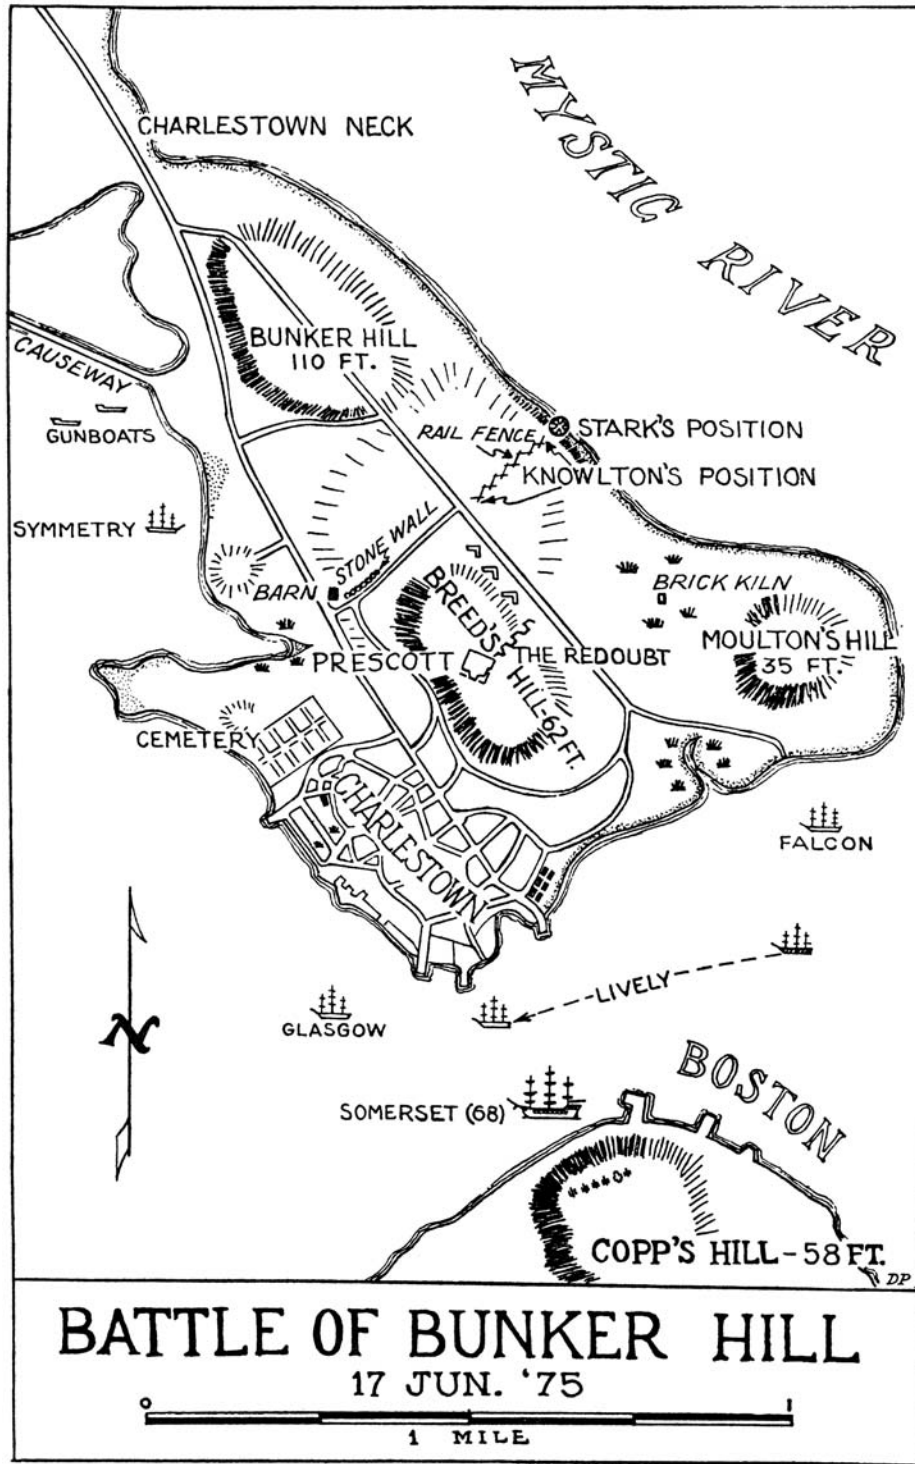

Within two weeks of the arrival of reinforcements on 25 May, Thomas Gage and his subordinates (Howe, Clinton, and Burgoyne) had devised a plan to secure Dorchester Heights (doing so would make it nearly impossible for the Americans to oust the British from Boston), raise the siege, and strike a heavy, perhaps fatal blow at the rebellion. The Massachusetts Committee of Safety, chaired by Dr. Joseph Warren, seems to have learned of the British plan on 13 June, apparently through careless talk by John Burgoyne, although intelligence security was so poor that the British could not have kept the preparation of the expedition hidden for long. To forestall the British plan,

which would begin with the occupation of Dorchester Heights on 18 June, the committee decided on 15 June to send troops to erect fortifications on Charlestown Peninsula. The committee may not have intended the occupation of the peninsula to be permanent—the first contingent was to be relieved after erecting the fortifications—but under Warren's aggressive leadership, it was willing to send troops into a cul-de-sac and offer battle to draw British attention away from Dorchester.

At 6 o'clock on the evening of 16 June, a motley group of New England provincial soldiers assembled on Cambridge Common to begin the operation. The force of fewer than twelve hundred men was composed of the Massachusetts regiments of William Prescott, James Frye (under Lieutenant Colonel James Brickett), and Ebenezer Bridge; a two-hundred-man party from Israel Putnam's Connecticut regiment (under Captain Thomas Knowlton); and Captain Samuel Gridley's Massachusetts artillery company of two guns and forty-nine men. The force, under the command of forty-nine-year-old Colonel Prescott, a veteran of the final French and Indian War, moved out at 9 P.M. under the cover of darkness.

At Charlestown Neck, Putnam met the column with wagons loaded with entrenching tools and fortification materials. After crossing the neck, Prescott sent Captain John Nutting's company of his own regiment and ten of Knowlton's men off to outpost Charlestown, which had been deserted by its inhabitants shortly after the siege began. Prescott and the main body climbed the gentle slope of Bunker Hill, and either on its summit or a few hundred yards across a saddle on an elevation closer to Boston that came to be called Breed's Hill, Prescott assembled his officers and, for the first time, told them of his orders to fortify the peninsula. While there may have been some grumbling among the officers and men about not being consulted before embarking on so risky a mission, the principal question before Prescott, Putnam, and Colonel Richard Gridley (the army's chief engineer on the basis of his experience during the colonial wars) was where to begin the fortifications. The lateness of the hour, the purpose of the mission, and the limited number of entrenching tools dictated that the work begin on Breed's Hill, with the intention, it seems, to dig in on Bunker Hill if and when time permitted.

The decision to begin fortifications on the forward elevation of Breed's Hill has been criticized for over two hundred years. It has been alleged, among other things, that the three commanders lost their way in the dark, that Breed's Hill was too vulnerable because it could be outflanked, and that Bunker Hill could have been made impregnable and offered at least equal strategic value. But the likelihood is that it was no mistake. All three men were experienced soldiers occupying ground with which they were familiar: Putnam had led his Connecticut regiment

THE GALE GROUP.

around the peninsula on 6 May; Prescott had traveled to Boston many times before the war as a delegate to the Massachusetts Assembly; and Gridley lived in Boston. When and if the captured cannon from Fort Ticonderoga

arrived (Knox would bring his "Noble Train of Artillery" into Cambridge only in mid-February 1776), they would be less effective on Charlestown Peninsula because it was further from the harbor, than on Dorchester Heights. To

draw British attention away from those vital heights, which they might also use as a springboard to advance on the storage depot at Cambridge to seize the supplies (especially gunpowder) without which the Americans could not have continued the fight, the Committee of Safety decided to dangle Prescott's force on the Charlestown Peninsula in a show of defiance and bravado.

It should be noted that no one exercised overall command of the American forces on 17 June. Prescott led the fight on Breed's Hill. Commanders of units that arrived later in the day inserted themselves along the slope of Breed's Hill that led toward the Mystic River, sometimes coordinated by Putnam, who seems to have spent much of his time on Bunker Hill urging American units forward. Artemas Ward, the commander of the New England army and a member of the Committee of Safety that had planned the operation, remained in Cambridge, trying to balance reinforcing the Charlestown position with the need to guard against any British attack on the American supply depot.

After Colonel Gridley traced out the shape of a redoubt on the summit of Breed's Hill, about forty-five-yards square, the soldiers started digging, using the excavated earth to create a parapet behind which they could shelter. It was a few minutes after midnight. Although British sentinels on ships in the Charles River and in Boston itself heard this pick and shovel work, reports of activity on the Charlestown Peninsula did not reach Gage until about 4 A.M. Shortly thereafter, when daybreak revealed the outlines of the redoubt, the British sloop *Lively* opened fire. In four hours of arduous work, the Americans had dug into the summit of Breed's Hill a well-designed earth fortification that was practically invulnerable to British artillery fire. In a foolhardy but effective show of bravery, Prescott walked the parapet to inspire his exhausted men to continue to dig as fast as they could.

BRITISH STRATEGY

Gage called a council of war to decide what to do about the unexpected American activity on the Charlestown Peninsula. Controversy has swirled around this meeting for almost as long as it has around the American decision to fortify Breed's Hill first. Clinton, who may have been the first senior British commander to learn that the rebels were digging in on Breed's Hill, urged Gage to attack the new rebel post quickly, before its defenses could be completed. Clinton advocated a two-pronged attack, Howe to lead a force against the front of the redoubt to hold the rebels in place while he led an amphibious force of five hundred men up the Mystic River and landed behind the Americans to cut off their retreat. Howe sensibly opposed this plan. A veteran of amphibious assaults at Louisbourg and Quebec during the final French and Indian War, he understood better than did Clinton the risks entailed in landing from the sea against enemy opposition. Besides, the original plan

(largely of his making) had encompassed more important objectives than snapping up a rebel force foolishly exposed on Charlestown Peninsula. He was willing to modify the plan to take advantage of rebel stupidity, but his ultimate objective was Cambridge. The troops would be in the field for several days—even now they were finishing the preparation of three days of rations—and hasty action might compromise efforts to achieve the larger goal.

Howe proposed a thoroughly intelligent course of action, which Gage adopted. Longboats from the Royal Navy ships in the harbor would land Howe with the main British force near Moulton's (or Morton's) Point, on the tip of Charlestown Peninsula. From Boston, Gage could see that the point was undefended, out of range of musket fire from the redoubt, and well placed to be supported by artillery fire from Royal Navy ships and the Copp's Hill battery at Boston. Although the troops would have to wade ashore, wet feet were preferable to landing dry-shod at the wharfs of Charlestown, where American troops might be waiting to play havoc with the debarkation. From there, Howe would seek to envelop the American left between Breed's Hill and the Mystic River (no earthworks yet extended toward the Mystic to guard that flank), while Brigadier General Robert Pigot, his second-in-command, feinted a frontal assault against the redoubt to fix its defenders in position. Since high water was needed for the landing, and high tide was not until 2 P.M., the debarkation was set to start at 1 P.M. This schedule gave Howe barely enough time to finish preparations for an extended expedition toward Cambridge; he later reported that it was "just possible" to accomplish, even "with the greatest exertion." It also gave the Americans several additional hours to improve their defenses and send up reinforcements.

The British commanders were seasoned professional soldiers, and their plan was basically sound; it would earn them high marks even by modern military standards. Strategically, the objective had not changed: get to Cambridge; destroy the rebels' military supplies; and deal the rebellion the hardest blow that arms could deliver. Operationally, the new plan scrapped the central feature of the old plan, taking Dorchester Heights to secure the fleet's anchorage, in favor of a gamble to shorten the distance to Cambridge while snapping up a badly positioned rebel force. The choice was not foolhardy; only in retrospect was it evident that they should have stuck to the original idea. Tactically, the British had every reason to expect overwhelming success. They would pin the defenders of the redoubt in place and envelop their open left flank. Even when American reinforcements arrived to defend that gap, there was every reason for Howe to remain confident in his plan, although the Americans had contrived to reduce the options he would have if anything went wrong with the initial assault. But what could go wrong? Speed in the assault would ensure that Howe's heavy right hook would

incur the fewest possible casualties while punching through hastily constructed field works defended by raw American troops liable to run like lightning at the sight of British bayonets bearing down on them. Given the poor marksmanship the Americans had displayed during the British retreat from Concord two months earlier, Howe had no reason to expect that a few experienced American officers would be able to make this rabble in arms wait until the British were in range and then deliver a disciplined, accurate, and sustained fire into his troops.

THE BRITISH LANDING

Part of the significance of the battle on Charlestown Peninsula derives from the fact that it played out so close to Boston. Tens of thousands of people saw or heard the action on that clear, hot June day, almost as though it was occurring in some vast amphitheater. Movement began around noon, when the British stepped up their bombardment of the American position. Firing at the redoubt were the sixty-eight gun ship of the line *Somerset*; two floating batteries; and the battery atop Copp's Hill in Boston, reinforced with four twenty-four-pounders. Firing on Charlestown Neck from the Charles River (to discourage reinforcement) were the frigate *Glasgow*; the armed transport *Symmetry*; and two floating batteries, each with one twelve-pounder. In direct support of the landing beaches were the sloops *Falcon* and *Lively* (which later moved to a position off Charlestown). Sailors from the fleet rowed the twenty-eight longboats that moved out from Boston's wharfs carrying fifteen hundred troops and twelve field guns (four light twelve-pounders, four five-and-one-half-inch howitzers, and four light six-pounders) (French, *First Year*, p. 232 n.). Howe's strike force comprised two ten-company composite battalions (one of light infantry, the other of grenadiers, composed of the elite flank companies detached from regiments in the Boston garrison) and the remaining battalion companies (eight each) of four infantry regiments (the Fifth, Thirty-eighth, Forty-third, and Fifty-second). The troops landed unopposed at about 1 P.M. and formed in three lines on Moulton's Hill.

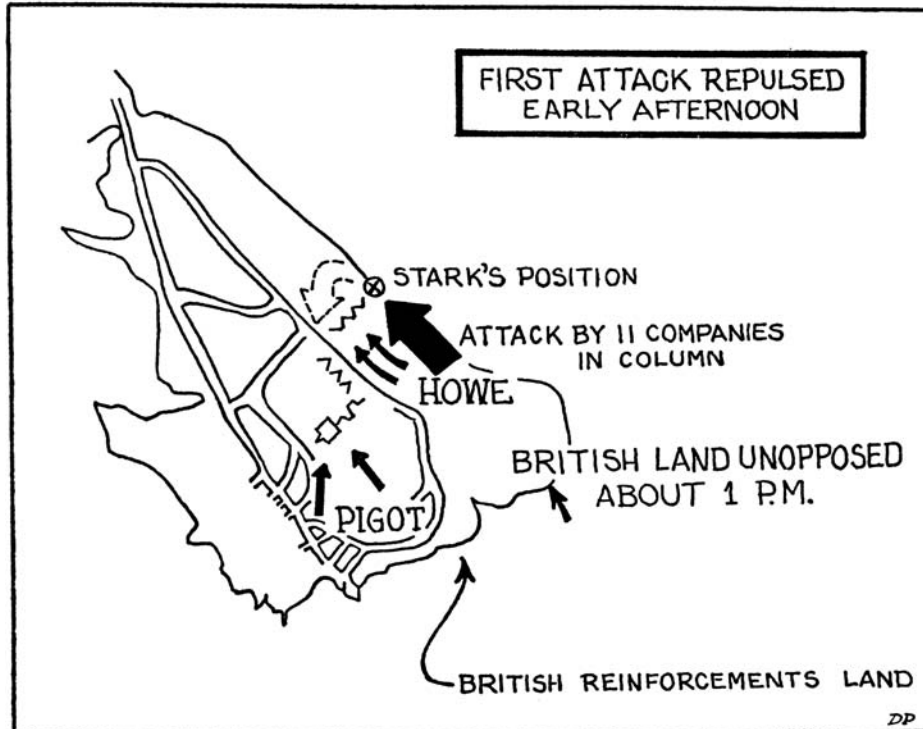

The moment Howe landed he saw that the Americans had used the preceding six hours to strengthen their left wing. He decided to delay his attack until the boats could return to Boston for additional troops. He pushed four light infantry companies forward off Moulton's Hill into a depression where they were protected from fire from the redoubt but where they could provide security for his beachhead. Pigot moved left to the base of Breed's Hill with the sixteen battalion companies of the Thirty-eighth and Forty-third Regiments. Before the reinforcements reached Howe, probably before 2 P.M., the battery on Copp's Hill fired "hot shot" and carcass into Charlestown to set fire to the abandoned buildings and drive out the snipers who had been harassing the British left. With the

arrival of six more flank companies, the eight battalion companies of the Forty-seventh Regiment and the ten companies of the First Marine Battalion (which landed between Moulton's Point and Charlestown, near where Pigot was already in position with the Thirty-eighth and Forty-third Regiments), Howe had almost twenty-three hundred men, almost all the operational troops that could be spared from Boston's garrison of sixty-four hundred men.

AMERICAN DISPOSITIONS

Recognizing the vulnerability of the redoubt, the Americans had constructed one hundred yards of breastwork that extended down the slope of Breed's Hill toward the Mystic River. The redoubt and breastwork were manned by Prescott's regiment and parts of the Massachusetts regiments of David Brewer, John Nixon, Benjamin Ruggles Woodbridge, Moses Little, and Ephraim Doolittle. When Prescott saw the British landing he ordered Knowlton to take his exhausted working party and "oppose them." Seeing the risks of advancing against the beachhead, Putnam ordered Knowlton's Connecticut men to take position along the line of a "rail fence" that lay to rear on the left flank of the redoubt. There, by dismantling one rail fence, placing it in front of a second made half of stone and the rest of rails, and filling the interval with earth, bushes, and newly cut hay that lay about in abundance, they gave the position a deceptively strong appearance. To cover the gap between the parallel lines of the breastwork and the rail fence, Colonel Gridley had some Massachusetts men hastily throw together, possibly also from fence rails, three small v-shaped outposts known as *flèches*. Finally, to the right of the redoubt, three companies (from the regiments of Doolittle, Joseph Reed, and Woodbridge) were retreating from the conflagration of Charlestown, while Nutting's company of Prescott's regiment and a few other troops waited in a cartway and in the shelter of a barn and a stone wall.

Although Prescott and Putnam repeatedly asked for reinforcements, Ward at Cambridge would not weaken his center until he knew that Howe's force was the only British threat of the day. Believing his left wing to be secure, he finally agreed to send forward the New Hampshire regiments of John Stark and James Reed from Medford. At the Neck, forty-seven-year-old Colonel Stark, a ranger captain in the final French and Indian War, found the way blocked by men of two Massachusetts regiments who were afraid to cross through the artillery fire laid down by the *Symmetry* and the floating batteries. He asked them to stand aside, and when they did, he led his and Reed's regiments across the Neck, walking through the barrage at a very deliberate pace. When one of his captains, Henry Dearborn, suggested "quickening the march of the regiment, that it might sooner be relieved of the galling crossfire," Stark "observed with great composure" that "one fresh man in action is worth ten fatigued ones." From the summit of

THE GALE GROUP.

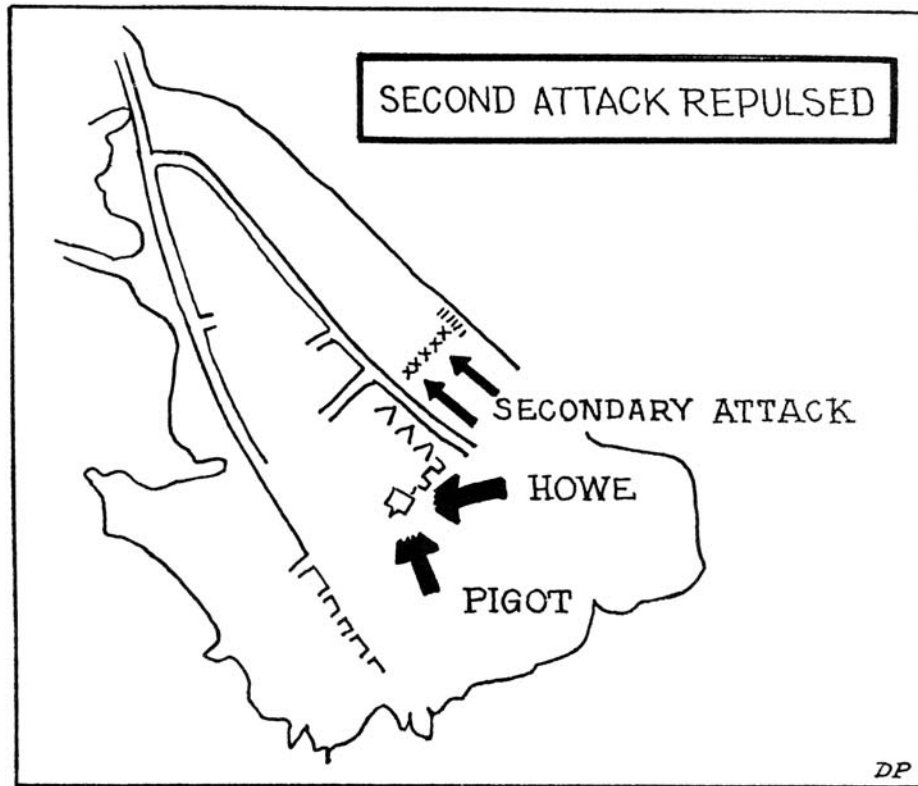

Bunker Hill, Stark saw that Knowlton's defenses at the rail fence were critically thin and led the two New Hampshire regiments to reinforce him. Once there, he spotted the remaining danger point and moved quickly to cover it: the rail fence extended only to a bluff on the riverbank, where the ground dropped off eight or nine feet to a narrow strip of beach, wide enough so that a British column could march along it in relative safety. Stark had his men build a breastwork with stones from adjacent walls and posted them three ranks deep to defend it. He remained to command the position and sent the rest of his regiment to reinforce Knowlton and Reed at the rail fence.

While Prescott, Knowlton, and Stark worked to organize the defenses around Breed's Hill, Israel Putnam was trying to put on the summit of Bunker Hill the men who had trickled up from the Neck or who had straggled back from the front lines to work constructing fortifications. Just before the first British attack, he was joined by two senior American leaders. Although both had been elected to the rank of major general in the Massachusetts army, neither had been officially commissioned, so both offered their services as volunteers. Sixty-nine-year-old Seth Pomeroy carried the musket he had made and carried to war at Louisbourg forty years earlier; he eventually joined Stark on the Mystic beach. Thirty-four-year-old Dr. Joseph Warren was president of the Massachusetts Provincial Congress, chairman of the Committee of Safety, and the

principal architect of both the Massachusetts army and the operation on Charlestown Peninsula. He joined Prescott in the redoubt on Breed's Hill.

FIRST ATTACK

According to the British plan, Pigot's left wing was to advance against the redoubt to hold its defenders in place while Howe's right wing enveloped the American left. With the grenadier companies in the front rank and the battalion companies of the Fifth and Fifty-second in the second rank, the bulk of Howe's force was to move toward the rail fence to engage the defenders' attention. (He ordered his six-pounders to advance ahead of the infantry, but this part of the plan failed when the gunners discovered that all the extra ammunition their negligent senior officer had sent over from Boston was for twelve-pounders. Boggy ground kept the guns from getting close enough to fire grapeshot effectively.) Everything depended on the eleven light infantry companies attacking in column along the narrow strip of beach that had caught Stark's eye. Howe was confident that their unstoppable charge would penetrate the American left, whereupon they would climb the bluff to hit the defenders of the rail fence from the rear and lead Howe's entire wing in an envelopment of the redoubt. Depending on how long it took to dispose of the rebels on the peninsula, the force would then regroup and head for Cambridge that evening or the next day.

THE GALE GROUP.

In the oppressive heat of early afternoon, the British light infantry moved rapidly in a column four abreast along the unobstructed beach toward Stark's line of nervous New Hampshiremen. The leading company (Royal Welch Fusiliers) had gotten to within fifty yards and had begun to charge with bayonets leveled and ready when Stark gave the order to fire. The men had been instructed to shoot low and to look for the gorgets that marked the officers. Their initial volley tore apart the head of the British column. Without hesitation the survivors of the leading company pressed forward, only to be cut down. The next two companies, the Fourth (King's Own) and Tenth (those of Lexington Common), charged in turn with incredible valor over the bodies of their dead and wounded comrades and with the reasonable expectation that they could come to grips with these farmers as they reloaded between volleys. But Stark had organized his men into three ranks, one of which was always ready to fire, so there was no lull between volleys. The men of the Fifty-second Regiment came forward, but their officers could not make them attack. When the light infantry was finally ordered to retire, ninety-six men lay dead on the beach.

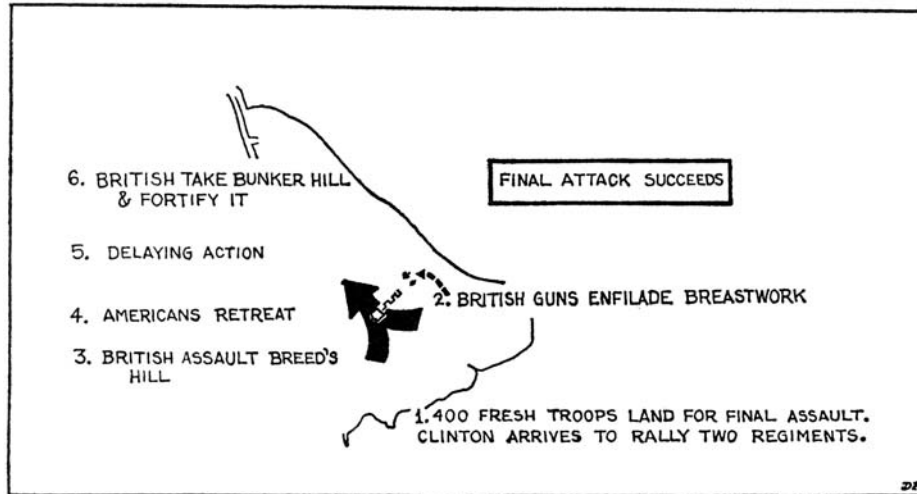

As his main effort collapsed in bloody failure, Howe was busy leading the attack on the rail fence. The grenadiers in the front rank came under heavy and accurate fire as they

moved across fences and walls on ground they had not reconnoitered. Again, the Americans held their fire until the enemy was within about fifty yards; here also they had been told to shoot low and to look for the officers. Aware of what was happening to the light infantry, the grenadiers paused to return the American fire instead of charging with the bayonet. This violation of their instructions not only was ineffective, but it caused the second line to mingle with the first. As fire from the fence continued to pour into the confused regulars, they finally dropped back to reorganize. Pigot's feint on the British left, which was never intended to develop into a frontal assault on the redoubt, also encountered effective musket fire and dropped back.

Putnam, who had been at the rail fence during this first attack, now rode back to Bunker Hill and to the Neck in a vain attempt to get volunteers to reinforce the front line. When he later explained to Prescott, "I could not drive the dogs," Prescott is alleged to have retorted that he "might have led them up."

SECOND ATTACK

Within fifteen minutes of the failure of the first attack, Howe launched a second attack. While Pigot again moved toward the redoubt and the surviving light infantrymen demonstrated against the rail fence, Howe sent a column

THE GALE GROUP.

into the gap between the redoubt and the rail fence, seeking now to envelop a smaller portion of the American position. Again the defenders held their fire until the British were a hundred feet away. The continuous crossfire from the redoubt, the breastwork, the three flèches, and the rail fence was even more murderous than before. When the men in the column spontaneously deployed into line, trading momentum and speed for a chance to fire back at their tormentors, the second attack collapsed in a failure as dismal as the first.

Although the Americans had suffered few casualties in defeating these two assaults, they were now running critically short of ammunition. Putnam continued his efforts to get reinforcements and resupply forward to Prescott, Knowlton, and Stark. Although he had frequently ridden across the Neck that day, many troops refused to brave the crossfire from the guns of the Royal Navy. When Colonel James Scammons was ordered from Lechmere Point to "the hill," he marched his regiment to Cobble Hill! When he finally crossed the Neck, he ordered a retreat before reaching the top of Bunker Hill. Colonel Samuel Gerrish and his Massachusetts regiment refused to leave the reverse slope of Bunker Hill, but Christian Febiger, his Danish-born adjutant, did lead some volunteers of the regiment into the battle. (Gerrish was later cashiered; Scammons was acquitted by a court-martial on the grounds that he had misunderstood his orders.) American field artillery was particularly ineffective. Six small field pieces, in three companies led by Captains Samuel Gridley (son of the engineer), Samuel Trevett, and John Callender, may have gotten into action, but the officers and men were too poorly drilled and insufficiently aggressive to make much of an impact. Both Gridley and Callender were dismissed from the service after the battle, although Callender later

redeemed himself as a volunteer in the ranks and had his commission restored. Trevett lost one gun on Bunker Hill but got the other forward to the fence and managed to bring it off during the retreat; his was the only gun the British did not capture (Ward, *War of the Revolution*, pp. 96–97).

FINAL ATTACK

Reinforced with four hundred fresh troops (the Sixty-third Regiment and the flank companies of the Second Marine Battalion), Howe organized a third assault. His men had made their first two assaults carrying between 100 and 125 pounds of equipment, including three days' rations, ammunition, and a blanket; musket and bayonet alone weighed fifteen pounds. Those attacks had been shattered. When Howe ordered his men to drop their knapsacks and other accoutrements, he abandoned all remnants of his original plan. He was now fighting to retain some honor for the British army and at least to oust the rebels from the peninsula. He would never get to Cambridge. Pigot and his relatively unhurt left wing would have to bear the brunt of the fight, assisted by Clinton, who had come across from Boston to rally the dazed survivors of earlier assaults that he had seen milling on the beach near Moulton's Point without discipline or orders.

The plan this time was to demonstrate against the rail fence while Pigot and Clinton tried to encircle the redoubt. The gunners, now with the proper ammunition, moved their fieldpieces forward to enfilade the breastwork from the left. They routed the defenders, some of whom retreated to the rear while others withdrew into the redoubt. The British infantry advanced in column until they were close enough to charge with the bayonet, suffering more devastating musket fire until they were within ten yards of the redoubt. The marines on the extreme left

The Death of General Warren at the Battle of Bunker Hill (1786). MAYER/CORBIS.

(toward Charlestown) were stopped by musket fire and, in violation of their instructions, stopped to shoot back. The Forty-seventh came up to steady the marines and resume the attack, but not before Major John Pitcairn of the marines was mortally wounded. As the rebels expended the last of their gunpowder and their musket fire petered out, the regulars swarmed into the redoubt from two sides, and for a few moments there was desperate hand-to-hand combat. Having few bayonets, the Americans met their assailants with rocks and clubbed muskets. Only thirty Americans were killed in the redoubt, but among them was Joseph Warren. Prescott fought his way out, parrying bayonets with his sword. Why Prescott, an experienced soldier, chose to keep his men in the redoubt to await the final assault remains a mystery. He knew they were almost out of ammunition and could not withstand a bayonet attack. It may be that Prescott effectively abdicated command to Warren, whose aggressiveness and inexperience led him to misjudge the situation. If so, he paid for that mistake with his life.

"The retreat was no rout," Burgoyne reported, having watched the battle from Boston. Lord Rawdon, who

commanded the grenadier company of the Fifth Regiment after Captain (later Lord) Harris was wounded, wrote home that the rebels "continued a running fight from one fence, or wall, to another, till we entirely drove them off the peninsula." As is commonly the case, the defenders sustained most of their casualties in the retreat. The exhausted regulars pursued only to Bunker Hill, where they stopped to organize a defense against any American counterattack.

NUMBERS AND LOSSES

American strength on the peninsula during the battle was probably in excess of three thousand men. Not more than half this number was in action at any one time, and perhaps a third took little or no part in the fighting. Total American casualties were said to number 441 men, of whom 140 were killed and 301 wounded; 30 of the latter were captured.

British strength was about twenty-five hundred men, including the four hundred who only took part in the final assault. Gage reported that the army suffered 1,054

casualties, about 40 percent of its strength. Returns totaled 19 officers and 207 men killed and 70 officers and 758 men wounded. Officer casualties were particularly heavy; of the British officer casualties in the twenty largest battles of the Revolution, one-eighth were killed and about one-sixth were wounded at Bunker Hill.

SIGNIFICANCE

The Battle of Bunker Hill rallied the colonies and banished any real hope of conciliation with Britain. Although many Americans at first thought the battle had been unnecessary and discreditable (they had been driven from the field), they soon realized that they had behaved well and that the British regulars were not invincible. They later came to regard the battle with pride. The British were forced to revise their opinions about the fighting abilities of the American rebels. According to Gage,

These people show a spirit and conduct against us they never showed against the French, and every body has judged of them from their former appearances and behavior when joined with the King's forces in the last war, which has lead many into great mistakes. They are now spirited up by a rage and enthusiasm as great as ever people were possessed of, and you must proceed in earnest or give the business up. . . . The loss we have sustained is greater than we can bear (*ibid.*, p. 134).

The secret of the defense of Breed's Hill, little realized even today, was the presence of American officers who had acquired military experience in the final French and Indian War. Gridley knew how to lay out and direct the construction of field fortifications. Prescott, Stark, Putnam, and Knowlton—to name them in approximate order of their importance in the battle—displayed the highest of leadership skills. Putnam knew the psychological value of breastworks. He is supposed to have commented that Americans were afraid of being shot in the legs but did not worry about their heads; protect their legs and they would fight forever. Prescott at the redoubt, Knowlton at the rail fence, and Stark along the beach also understood how to motivate and command American citizen-soldiers. These veteran officers exuded an air of confidence and calm control that kept the men from panicking when facing British artillery fire and then held them in position as the renowned and redoubtable British infantry advanced to point-blank range. Inspiring citizen-soldiers to behave in these ways was a remarkable feat of leadership.

BURGOYNE, JOHN. (1723–1792). British general, politician, and playwright. Born at Westminster on 4 February 1723, Burgoyne was educated at Westminster School and was commissioned into the third troop of Horse Guards in 1737. He sold out in 1741 but finally became a cornet in the First Dragoons in 1747. He became a lieutenant in 1745 and a captain in 1747. In 1751 he eloped with his friend's sister, Lady Charlotte Stanley, daughter of the earl of Derby. Burgoyne again sold his commission and traveled in France and Italy with his wife until 1755. The following year, reconciled with Lord Derby, he bought a commission in the Eleventh Dragoons. After distinguished service at St. Malo in 1758, he was promoted to lieutenant colonel and ordered to recruit the new Sixteenth Dragoons, one of the two light horse formations whose creation he had championed. In 1762, as a local brigadier general, he demonstrated exceptional light cavalry skills with a fifty-mile march culminating in a dawn charge at Valencia d'Alcantara. The city fell, a Spanish regiment was annihilated, and booty and numerous of prisoners were taken. More importantly, he secured the Tagus Valley, thus saving Lisbon from Spanish attack. Burgoyne ended the Seven Years' War as a full colonel and with recognition as a capable commander. "Gentleman Johnny" was also very popular among his men and wrote a manual for officers. In the late 1760s he made a tour of inspection of European armies and argued strongly for the creation of a superior British cavalry arm. In 1769 he became governor of Fort William in Scotland and a major general in 1772.

He was also active in politics. In 1761 he had been returned for Midhurst in Sussex. With a deep respect for parliamentary supremacy and convinced that basic

liberties were not at stake, he supported both the Stamp Act and the Declaratory Act. With the death of his patron in 1768, he lost Midhurst but contested Preston in Lord Derby's interest. The seat had generally returned Tories, not administration Whigs like Burgoyne, and the election was a violent one. Burgoyne went canvassing with a pair of pistols, the Tory mayor rejected over 600 of his votes on the grounds that they were not cast by freemen, and Burgoyne was only seated after appealing to Parliament itself. He was also fined one thousand pounds for his armed campaigning. In 1772 he chaired a committee that investigated Robert Clive's Indian fortune and two years later supported the Coercive Acts. Appealing for a military role in America, in 1775 he became the junior of the three major generals appointed to support Thomas Gage at Boston.

The characteristics Burgoyne would exhibit in America were already evident when he left London. He was essentially a cavalry man, addicted to danger, drama, and dash. His runaway marriage, his addiction to reckless gambling, amateur acting, and efforts as a playwright—his debut, *The Maid of the Oaks*, had appeared in 1774—all pointed in the same direction. When he reached Boston with the others in May 1775, Gage asked him to compose a last appeal to the rebellious colonists: the result was a florid, overwritten epistle to “the deluded multitude,” which probably did no good at all. Here was an officer for dramatic postures, not to mention bold schemes and risks, on a scale that only Charles Lord Cornwallis could rival. He was not a man in tune with William Howe and Henry Clinton's penchant for method and caution.

BURGOYNE'S PLAN FAILS

Boston meant an uncongenially passive role for Burgoyne: even at Bunker Hill, his participation was limited to providing artillery fire from across the water at Copp's Hill. He filled in the time by writing numerous letters home criticizing Gage and writing a farce, *The Siege of Boston*. At last he successfully applied for home leave and on reaching London in November presented Lord George Germain, the new secretary of state, with a memorandum entitled “Reflections on the War in America.” In this document he urged the seizure of New York City and an advance overland to Albany from Quebec via Lake Champlain. The idea was to isolate New England, still supposed to be the real seat of the rebellion, and to interrupt the American movement of supplies and men to and from the middle colonies. The underlying agenda was, of course, to provide Burgoyne with a glamorous independent command.

The New York City part of the idea was sound and appealed to Germain's own thinking. The city was centrally placed, had a good harbor, and gave access to a major inland waterway, the Hudson River. The Canada–Lake

Champlain end of the scheme, however, had just a spurious plausibility that could have convinced only someone who had never been there. Canada had to have serious reinforcements in any case to see off the American siege of Quebec. From there they might as well be used to invade New York along the line used, in reverse, by Abercromby and Amherst during the Seven Years' War. Looked at on a large-scale map, it appeared simple. Such an analysis, however, took insufficient account of the physical difficulties of the route or of the ease with which it could be blocked, at least temporarily, by enemy forts, troops, and flotillas. Finally, it failed to appreciate the fact that the main American communications could be more easily severed by securing the Hudson through a modest advance from New York City.

The immediate need was to reinforce Sir Guy Carleton against the American invasion that had confined him to Quebec. Germain, unaware that the real danger had passed, sent Burgoyne with ten thousand troops embarked in fifteen ships. They arrived in the St. Lawrence opposite Quebec in fifteen ships on 5 May 1776, enabling Carleton to lead a reconnaissance in force that routed the few remaining besiegers. Burgoyne served under Carleton in the expulsion of American forces from Canada, culminating in the destruction of the American flotilla at Valcour Island on Lake Champlain on 11–13 October. Carleton now judged it too late in the season to attack Ticonderoga and prudently withdrew from Crown Point. Disappointed, Burgoyne again returned to Britain to press his ideas on the ministry.

His memorandum to Lord North, “Thoughts for Conducting the War on the Side of Canada,” called for no less than eight thousand regulars and German mercenaries, two thousand Canadian laborers, and at least one thousand Indians. His own objective was to be either Albany or, preferably, Rhode Island via the Connecticut River. He also wanted St. Leger to provide a diversion on the Mohawk River. The orders actually sent out to both Howe and Burgoyne, however, made it perfectly clear that Burgoyne was to expect no direct help from Howe unless Washington himself moved against Burgoyne and that his objective was to be Albany, not Rhode Island or the Connecticut River. He was not given as many troops as he wanted—7,251 British and German regulars—and he was allowed to recruit only 150 Canadian workmen and 500 Indians. None of this caused Burgoyne, or anyone else, the least anxiety before he left London in March 1777. Everyone on the British side underestimated the numbers and effectiveness of the rebel militia that could be brought to bear in the upper Hudson wilderness. In Canada he found that Carleton had assembled a powerful flotilla on Lake Champlain but had not found adequate numbers of horses and wagons, a critical shortcoming for an army needing to draw almost all its supplies from

Canada. Recruitment of Indians, Canadians, and Loyalists had been disappointing. Even now it did not occur to Burgoyne that he might have bitten off more than he could chew.

At Saratoga on 7 October 1777 he found himself engulfed by American forces totaling over thirteen thousand and compelled to surrender. His opponent, Horatio Gates, agreed that the British army should be repatriated on condition that it did not serve again in North America.

ASSESSING BLAME

Although the Continental Congress failed to honor this convention, Burgoyne was allowed to go home on parole, where he met a barrage of criticism. When he arrived on 13 May 1778, the king refused either to see him or give him a court-martial. He lost his colonelcy of the Sixteenth Dragoons and the Fort William governorship; in Parliament, questions were raised about the surrendered army, and it was suggested that Burgoyne should be sent

back as a prisoner of war. His only supporters were the handful of Foxites, with their near-paranoid suspicion of executive power and urgent wish to embarrass the ministry.

Only now did Burgoyne begin to argue that he had absolutely inflexible instructions to reach Albany—so that the decision to persist rather than to retreat in good time had not been his to make—and had been given only half the troops he asked for. He also blamed Carleton for not supporting him properly and Howe for inattention to orders. He put this case quite ably to a parliamentary inquiry in 1779 and published it in *State of the Expedition from Canada* in 1780.

There is no doubt that Burgoyne was to some extent the author of his own misfortunes. There was something of the dashing cavalryman and gambler about his handling of the enterprise from beginning to end. A cautious, methodical general might have waited for more horses and better wagons, whereas Burgoyne was in the field within six weeks

of arriving in Canada. Where a prudent commander might have withdrawn, Burgoyne crossed the Hudson. His attempts to shift the blame onto others are deeply unappealing. Yet the basic strategic decision belonged to Germain and the ministry and would probably have been taken even without Burgoyne's lobbying. He was certainly not the only candidate for the command. Carleton was slow to find land transport and resigned out of pique at not being given the command in June 1777. Howe's decision not to push up the Hudson was his alone. The actual balance of blame is unclear, and pursuit of it is probably futile. More important was the near-universal underestimate of the scale of the rebellion and the decision to fight a backwoods campaign far from British naval support.

A MORE LIBERAL POLITICS

The experience drove Burgoyne's politics in a liberal direction. The soldier who had championed the Coercive Acts and itched to draw his sword against the rebels now joined Fox and Sheridan in opposition to the war. In 1782 the former champion of Westminster's supremacy voted for the Rockingham ministry's grant of legislative independence to the Irish Parliament. His reward was to be made commander in chief and privy councillor in Ireland (as well as a colonelcy), a post he kept under the Fox-North coalition but resigned after the younger Pitt came to power in December 1783. He used his pen to satirize the Pitt administration and, in keeping with his earlier attack on Clive and the East India Company corruption, in 1788 he took part in the prosecution of Warren Hastings. Later still he was to welcome the French Revolution.

LITERARY WORK

Burgoyne also resumed his literary career. *The Maid of the Oaks* had already been taken up and expanded by David Garrick; and turned into a modest Drury Lane success. He wrote a libretto for an opera and translated another, *Richard Coeur de Lion*, from the French. Neither was a popular triumph, but a comedy, *The Heiress*, was received as an incisive representation of contemporary upper-class society. It opened with thirty performances at Drury Lane, ran through ten editions in a year, and remained popular in Britain and Europe for fifty years.

His wife died in February 1776, and he never remarried. However, he began a long affair with a married actress, Susan Caulfield, by whom he had four children between 1782 and 1788. The four were brought up in Lord Derby's household, and the eldest became Field Marshal Sir John Fox Burgoyne (1782–1871).

John Burgoyne died suddenly on 4 June 1792, probably from the effects of gout, and was buried in Westminster Abbey on 13 August.

revised by John Oliphant

BURGOYNE'S OFFENSIVE. June–October 1777. The notion of a British invasion from Canada along the traditional Champlain-Hudson route was certainly not a novel idea. In 1775 fear of such a course of action prompted the American efforts to control Lake Champlain, and both General Thomas Gage and Lieutenant General Richard Howe mentioned it that year. In 1776 Sir Guy Carleton, commander of British forces in Quebec, attempted the move but ran out of time. On 13 December 1776 the king himself urged the ministry to undertake another offensive in 1777, and to have Lieutenant General John Burgoyne lead it instead of Carleton because he was more “energetic.” In February the government toyed with having Lieutenant General Henry Clinton and Burgoyne exchange places (both men were in England on leave for the winter), but in the end left matters as they had stood in 1776. Keeping in mind that Carleton exercised a completely separate command in Canada from Howe, and thus carried out independent operations, the ministry maintained overall coordination because no military action could be exercised without approval from one of the three secretaries of state. George Germain, the American Secretary and himself a former general, watched over both commanders but knew that the transatlantic communication problem mandated leaving the men on the ground the maximum amount of flexibility to adjust to changing conditions. The specifics of the northern part of the 1777 campaign that he finally approved came from Burgoyne's “Thoughts for

Conducting the War on the Side of Canada," submitted on 28 February.

After various meetings on 18 March Germain informed the king that instructions would be prepared for the various commanders to explain the objectives of the campaign, beginning with Burgoyne so that he could depart for Canada as soon as possible. He arrived in Quebec on 6 May on a frigate carrying Germain's orders to Carleton, followed by convoys bringing some reinforcements. Germain told Carleton to stay in Canada with a garrison of 3,770 troops, while Burgoyne led a two-pronged offensive southward. The main effort by some 7,000 men under Burgoyne himself would move south across Lake Champlain, capture the fortified complex at Ticonderoga, and push on to Albany. As a diversion, Barry St. Leger's offensive would move east along the Mohawk River with about 2,000 more. At Albany the two forces would unite, and at that point Burgoyne would come under Howe's orders. Howe's responsibilities were to conduct operations to facilitate Burgoyne's movement, not to make physical contact.

Controversy erupted the following winter as various generals tried to blame each other for the failure of the campaign, and their charges and countercharges have confused historians ever since. Older interpretations followed allegations made by Burgoyne's defense and concluded that the campaign was doomed when Howe opted to attack Philadelphia instead of moving up the Hudson River to Albany. Others blamed Germain for not giving specific orders to the various commanders directing step-by-step moves, and even alleged that bureaucratic sloppiness "lost" just such a memo. Both lines of reasoning were discredited by William Willcox in a 1962 *Journal of British Studies* article, "Too Many Cooks: British Planning Before Saratoga." In point of fact, none of the British military or civilian leaders felt that Burgoyne had any danger in moving as far as Albany; they also knew that Howe had ample forces in New York and Rhode Island to hold those bases and that he intended to try to bring Washington to decisive battle, and that he would probably need to attack Philadelphia to make that happen. What they all expected was that Howe would use part of his forces to pin down American troops near his own bases so that they could not move north to assist in opposing Burgoyne. Actions after Burgoyne arrived in Albany remained deliberately flexible because no one in the winter could predict how things would stand in the fall. Germain, Carleton, Howe, Clinton, and Burgoyne all knew that Burgoyne could either push southeast and coordinate with troops moving up from Rhode Island in a strike to break the heart of resistance in New England, or push south to meet an advance up the Hudson by New York-City based troops, severing New England from the other colonies, which London believed had substantial Loyalist sympathies and

would rally to the Crown in the aftermath of a string of victories.

PREPARATIONS IN CANADA

Carleton's excellent preparations during the winter of 1776–1777 and subsequent cooperation with his former subordinate enabled Burgoyne to start operations within six weeks of his arrival in Canada. Unlike the previous fall, Schuyler could not challenge the British for naval control of the lake. Carleton's British and German regulars came out of their winter quarters rested and well-equipped; most of the American regiments had been sent home to reorganize, and needed to undergo smallpox inoculation, draw uniforms and weapons, and then march back to the front. Major General Philip Schuyler had much greater difficulty moving his forces to their forward positions than Carleton did in assembling Burgoyne's army at St. Johns and then linking up with the squadron at Cumberland Head (now Plattsburgh, N.Y.). On 20 June a "splendid regatta" started south, reached Crown Point on 27 June, and approached Fort Ticonderoga on 30 June.

Burgoyne had well over 10,000 troops, seamen, and Indians under his command, and up to 1,000 noncombatant laborers or authorized camp followers complicating his logistics. Some 3,700 of the troops were British regulars and another 3,000 the contingents from Brunswick-Lunenburg and Hesse-Hanau. The flotilla included the larger armed craft as escorts and for gunfire support, over 20 gunboats, and about 800 bateaux needed to move troops and supplies. He also brought forward an extensive array of artillery with their gunners, including light and medium pieces as a field train to take on to Albany and heavier weapons to pound Ticonderoga into submission.

BRITISH ORDER OF BATTLE

Brigadier Simon Fraser led the Advance Corps, which had British and German components. Fraser himself led his own Twenty-fourth Foot and composite battalions of grenadier and light infantry battalions composed of the flank companies of the British regiments. Lieutenant Colonel Heinrich Breymann's comparable German force contained Chasseur Battalion von Barner (the four Brunswick light infantry companies and the single Brunswick jäger company) and his own battalion formed from the four Brunswick grenadier companies. Assorted Indians, Loyalists, and Canadian militia formations loosely operated with the Advance Corps.

Burgoyne's main body had a British ("Right") Wing and a German ("Left") Wing, each divided into two brigades. Major General William Phillips, an artillery officer, was made second in command so that he could command troops of the line (infantry and cavalry). Major General Friedrich von Riedesel led the wings. Henry Powell led the

First Brigade, James Hamilton the Second. On the German side, Colonel Johann Specht and Colonel Wilhelm von Gall led brigades of Germans.

The guns were manned by 250 British artillery regulars augmented by 150 men attached from the British infantry; direct support guns for the Germans came from the Hesse-Hanau artillery company. Unlike his other forces, the irregulars fell short of the numbers Burgoyne had expected. About 400 Indians followed some of the same French Canadian leaders who had led in the previous war. Only 100 or so Loyalist and 150 Canadian militia started with the expedition. More ominously, Burgoyne's forces had excellent transportation as long as they stuck to major waterways but came woefully underequipped with the wagons, carts, and horses necessary to move on land.

AMERICAN DISPOSITIONS

When the British began their advance Schuyler was still in the process of assembling his new forces and releasing the formations that had held the posts over the winter. Under the strategic dispositions designed by Washington at the start of the spring, Schuyler's Northern Department had half of the Massachusetts regiments (eight), all three of the New Hampshire regiments, and three of the five from New York, plus several miscellaneous units and a provisional battalion of artillery. Schuyler pushed the bulk of the men forward to the Ticonderoga complex under Major General Arthur St. Clair (probably 2,500–3,000 Continentals), where roughly 900 militia also assembled. Smaller detachments at Skenesboro, Fort Anne, Fort Edward, and Albany kept open the lines of communications. Schuyler also allocated several Continental regiments to defend the Mohawk Valley, basing most of them at Fort Stanwix but still counting on the militia from the upstate New York counties to carry the bulk of the burden in defending his flanks.

INITIAL OPERATIONS

After issuing Burgoyne's Proclamation and delivering a flamboyant speech to his Indians, "Gentleman Johnny" moved south and captured Ticonderoga on 2–5 July, with a speed and ease that badly shook American morale. Senior American officers knew that "the Gibraltar of America" really depended on control of Lake Champlain for its defense. They also understood that the original French fortifications sat on terrain that could not withstand an attack by any large force with the proper artillery; they had been working for over a year to try to turn the position into a complex (including Mount Independence on the opposite shore) but did not have anywhere near enough men to hold such long lines. Schuyler and St. Clair had been running a bluff,

and when Major General William Phillips found a dominating position for the British guns, St. Clair conducted a well-conceived night evacuation that saved the garrison and thereby gave Schuyler an army that could continue to fight another day. The detachment left to cover the departure, however, bungled their mission, and Burgoyne's seamen cut through the boom obstructing access to Lake George in far less time than the Americans thought. These factors cost St. Clair the head start time he needed to escape unmolested. There being no short road from Ticonderoga to Skenesboro, St. Clair led the largest part of his command on a forty-five-mile, roundabout route through Castleton; the rest with the guns, stores, and sick took the water route over Lake George. American mistakes and British vigor allowed the lead elements of the pursuit to catch up with the rear element on each line of retreat. The overland rearguard engaged at Hubbardton on 7 July; the other force at Skenesboro on 6 July and at Fort Anne on 7 July. St. Clair finally reached Fort Edward on 12 July.

OTHER FRONTS

By the time Howe sailed for Philadelphia on 23 July he knew that Burgoyne had captured Ticonderoga, which everyone had assumed would be the hardest part of the northern campaign. Howe therefore left Sir Henry Clinton in and around New York City with about 8,500 troops. Back in the spring Washington had designated two other concentration points for the American forces in addition to Schuyler's Northern Department. The bulk of the army gathered in northern New Jersey under Washington's direct command and formed the Main Army. A somewhat smaller element occupied the vital strategic position in the mountains astride the Hudson River and were designated as the Highlands Department. Howe's slow pace in starting the 1777 campaign puzzled the American leaders, in part because the British actions made no military sense. As time elapsed Burgoyne's movements and Howe's inaction led Washington to reinforce Schuyler. The remaining Massachusetts regiments (Nixon's and Glover's brigades) shifted up from Major General Israel Putnam's Highlands command; Colonel Daniel Morgan's riflemen were detached from the main army (then near Ramapo, N.J.); and the fiery Major General Benedict Arnold, just recovering from wounds, got orders to join Schuyler. At Washington's suggestion, Major General Benjamin Lincoln was ordered to the Vermont area to organize and command New England militia being assembled there. Governors of the New England colonies and New York were urged to fill their quotas of Continentals and to turn out their militia.

In St. Leger's Expedition, an unsuccessful diversion, St. Leger left Oswego, New York, on 26 July, reached Fort Stanwix with his main body on 3 August, and repulsed a

militia relief column at Oriskany on 6 August. But he started withdrawing on 22 August when Arnold led a Continental column from Schuyler's army into the Mohawk Valley. That column returned to Schuyler before any decisive battle occurred, making St. Leger's entire expedition ineffectual in furthering the British campaign plan.

BURGOYNE'S FIRST MISTAKE

In his "Thoughts," Burgoyne had stated an assumption that the Americans would have a sizable flotilla on Lake George that might bar use of this "most expeditious and most commodious route to Albany." In the same paper he also foresaw that along the alternate route overland from Skenesboro "considerable difficulties may be expected, as the narrow parts of the river [Wood Creek] may be easily choked up and rendered impassable, and at best there will be necessity for a great deal of land carriage for the artillery, provisions, etc., which can only be supplied from Canada." Despite inadequate transport and the lack of opposition on Lake George, however, Burgoyne still elected to take the alternate route, using Lake George only for the movement of supplies and heavy artillery. He later justified this decision on two grounds: since he needed all his boats to move supplies, he could not have reached Fort Edward with his army any faster via Lake George than by the route along Wood Creek; and, he said, falling back from Fort Anne after the skirmishes might have been construed as weakness by "enemies and friends." There is no substance to the legend that Loyalist Philip Skene talked him into the shorter land route with the personal motive of getting a road built between Skene's property and the Hudson.

As soon as Burgoyne stopped to regroup, Schuyler immediately launched a brilliant tactical operation. Schuyler correctly recognized that time was his ally in 1777, just as it had been in 1776. The British had to achieve victory before winter froze the lakes and cut their lines of communications, so he set about enhancing the obstructions nature had placed in Burgoyne's path to Fort Edward (on the Hudson). Schuyler sent 1,000 axmen to fell trees across Wood Creek and across the trails. They dug ditches to create additional quagmires in a region that was boggy to start with; they rolled boulders into the creek to obstruct boats and to cause overflows. It took the British twenty days to cover the twenty-two miles. They had to bridge at least forty deep ravines, and in one place constructed a two-mile causeway. On 29 July Burgoyne reached Fort Edward, and his supply column, commanded by General Phillips, took Fort George, fifteen miles to the northwest at the tip of Lake George. The murder of Jane McCrea had taken place on 27 July and was to have an unexpectedly great effect on subsequent operations.

It now became apparent that "the fatal defect in Burgoyne's plan was the inability to supply his army" (Greene, p. 109). From Fort Edward the British line of communications stretched 185 miles back to Montreal. The only other option for procuring food and fodder for the horses would have been to employ foragers. But the area north of Stillwater had very few inhabitants or farms, and Schuyler's men had made sure nothing of value remained to fall into British hands. The Bennington Raid, 6–16 August, prompted by Burgoyne's need for supplies, turned into a disaster that hastened his doom.

GATES SUCCEEDS SCHUYLER

Despite his shortcomings as a commander, Schuyler had scored successes that left Burgoyne no sound alternative but retreat. The virus of sectional factionalism finally led to Schuyler's being relieved, however, and Major General Horatio Gates arrived on 19 August to command the Northern Department. When he took over the department's main combat forces (about 4,000 men), they were camped at the junction of the Hudson and Mohawk Rivers, where supply was easiest. In addition to the detachments still working on the obstruction program, Gates inherited the large force under Arnold relieving Fort Stanwix to the west and the slightly smaller Bennington veterans thirty miles to the east. He also benefited from earlier calls to mobilize New York and New England militia; the need to assemble and organize those forces had taken time, but units were now starting to arrive, and more Continentals were on their way from the Highlands. Burgoyne probably could have saved his army by a prompt retreat. Oblivious of the growing danger, he continued on toward Albany. (Burgoyne would later claim that he had positive orders from Germain to march to that location, but no such orders had been issued.) Because Albany lay on the west side of the Hudson, and the river got wider as it flowed south, Burgoyne opted to cross to the west side near Saratoga. The problem of numbers and losses dogging the invaders since mid-July finally became critical here. If he kept heading south he would not have enough spare troops to guard the crossing site. So in order to keep going, Burgoyne chose to cut his own lines of communications with the lakes, built up thirty days' supplies to take with him, and counted on drawing supplies from Clinton in New York City after he reached Albany.

On 13 September, with about 6,000 rank and file, he started crossing to Saratoga, and two days later he dismantled his bridge of boats. All but fifty of his Indians had deserted by now, and Burgoyne was in the dark as to the enemy situation; Gates, on the other hand, was well informed. On 12 September the Americans had advanced north a short distance from Stillwater to occupy strong defensive terrain at Bemis Heights, where Arnold and

Thaddeus Kosciuszko, colonel of engineers in the Continental Army, had laid out the lines.

The First Battle of Saratoga, 19 September 1777, was fought around Freeman's Farm. The next day Burgoyne considered attacking Gates in full force. Simon Fraser argued that his grenadiers and light infantrymen, who would spearhead the attack, needed a day's rest, and Burgoyne decided to wait. The British were ready to attack on the twenty-first when Burgoyne received Clinton's letter of 12 September. Burgoyne had sent numbers of messengers in civilian clothing overland to New York, and since he had left Fort Miller had been calling on Clinton to come north in support. Clinton's letter was the first to reach Burgoyne, and in it Clinton offered to make a diversion against the Highlands. Burgoyne's misunderstanding of what Clinton proposed (and his own instructions from London stated) led him to conclude that he did not need to attack, but instead should await the outcome of Clinton's move. The same day, 21 September, the British heard sounds of rejoicing from the unseen American positions on Bemis Heights. A few days later they learned the noise was occasioned by news of John Brown's Ticonderoga Raid.

BURGOYNE DIGS IN

The invaders now entrenched the positions they had taken up on 20 September in preparation for the canceled attack. Facing south along the plateau between the Hudson and the North Branch (of Mill Creek) were the Germans of Riedesel's column (on the east) and Hamilton with four regiments. Outposts sat a few hundred yards in front of these positions. Continuing west, the line was manned by Fraser's Advance Corps. The British light infantry, under Alexander Balcarres, occupied the key terrain feature of Burgoyne's entire position: the salient at Freeman's Farm, where they built the fortification known as the Balcarres Redoubt. The Breyman's remnants of the German flank troops held another redoubt about 500 yards farther north, in effect creating as a refused flank (a tactical disposition in which the end of a line is bent backwards to prevent an enemy from taking the position from the side or rear). A handful of Canadians in stockaded cabins screened the intervening gap. Bateaux and stores were collected at the mouth of the Great Ravine (Wilbur's Basin) and a bridge of boats was constructed across the Hudson at this point. Three redoubts, one known as the Great Redoubt, were started on the high ground overlooking this area and about 600 yards west of the river's edge.

Burgoyne's strength had dwindled to about 5,000, and desertions were mounting. The troops had been on a diet of salt pork and flour for some time, and on 3 October their rations were reduced by one third. Horses were starving to death. To add to the misery, the Americans

harassed the invading forces continually. "I do not believe that either officer or soldier ever slept during that interval [20 September–7 October] without his cloaths, or that any general officer, or commander of a regiment, passed a single night without being upon his legs occasionally at different hours and constantly an hour before daylight," Burgoyne wrote.

THE AMERICAN SITUATION

The only change in the defenses of Bemis Heights was the fortification of the high ground half a mile west of the Neilson House, which Burgoyne had selected as his objective on 19 September. But in contrast to Burgoyne's, Gates's numbers had been growing at a steady rate. With Burgoyne no longer a threat to move east, Gates pulled Lincoln's militia from the Bennington area, and other militia arrived from New England and New York. By 4 October Gates had more than 7,000 troops; three days later he had 11,000. Thanks to Schuyler, Gates's ammunition had been replenished. Gates held all of his Continentals (about 3,000) and much of the militia in the fortified lines, but took advantage of the huge numbers of militia to send out combat patrols to attack British outposts all the way north to Ticonderoga and to maintain a counter-reconnaissance screen that left Burgoyne completely in the dark. Patriot morale soared.

BURGOYNE'S LAST EFFORT

On 4 October Burgoyne proposed a turning movement around the American west flank while 800 men remained behind to guard the supplies. His senior officers talked him out of this foolhardy plan. Riedesel then proposed a retreat to the vicinity of Fort Miller, where they could reestablish communications with Canada and await help from Clinton, but Burgoyne insisted on making one more attempt to accomplish his mission. This took the form of a reconnaissance in force to try to find out the actual strength of Gates's position and led to the Battle of Bemis Heights, or Second Battle of Saratoga, on 7 October.

His defeat in this action included the loss of Breyman's Redoubt. Without that bastion Burgoyne's entrenched position became untenable, and he withdrew, in good order, to the Great Redoubt and vicinity. The Americans occupied his former positions on 8 October, and Gates sent Brigadier General John Fellows with 1,300 militia to get astride the enemy's line of retreat to Saratoga. Fellows moved up the east side of the Hudson, forded the river to Saratoga, and encamped west of there. Brigadier General Jacob Bayley already had 2,000 more militia near Fort Edward. Gates's own need to resupply and feed his Continentals, the troops who had borne the brunt of the fight on 4 October, kept him from putting direct pressure on Burgoyne.

On the evening of 8 October, leaving campfires burning to deceive the enemy, Burgoyne started north. Lieutenant Colonel Nicholas Sutherland had moved out earlier with the Ninth and Forty-seventh Foot to reconnoiter the route, and he reported back that Fellows's camp was unguarded. Burgoyne refused to let Sutherland attack it, and at 2 a.m. the main body of Burgoyne's army stopped to rest three miles short of Fellows's; it did not reach Saratoga until late evening of 9 October. Its movements had been slowed by heavy rain and the need to keep abreast of the bateaux being rowed laboriously up the river. Burgoyne left his hospital behind with more than 300 sick and wounded. Tents and much of the remaining baggage had to be abandoned on the march when wagons could no longer be manhandled through the deepening mud. And to complete his misery, aggressive American patrols hanging on the rear and flanks snapped up all stragglers and many of the bateaux. Exhausted, the British dug in once again.

Gates finally started serious pursuit in the afternoon of 10 October, sometime near 4 p.m. His van watched the British rear guard withdraw across a creek after burning the Schuyler Mansion. Sutherland had started for Fort Edward from Saratoga on 10 October with the two regiments mentioned earlier, some Canadians, and a party of artificers to build a bridge across the Hudson for Burgoyne's retreat. When this movement was reported to Gates, he assumed that it was Burgoyne's main body. The morning of 11 October had a heavy fog. Hurrying up to crush what he thought was merely a rear guard north of the Fishkill, Gates called off the attack when John Glover picked up a British deserter who revealed the true situation. But that day the Americans captured most of the enemy's remaining bateaux, which deprived Burgoyne of his bridging equipment while simultaneously increasing Gates's capability for moving troops across the Hudson.

As Gates tightened the noose on 12 October, taking up positions on all sides except the north, Burgoyne

presented a council of war with five proposals: (1) Stand fast and await events (he still hoped Clinton's expedition would help him); (2) Attack; (3) Fight northward to Fort Edward, taking all guns and baggage; (4) Abandon the latter and slip away under cover of darkness; or, (5) Should Gates shift more strength westward (perhaps to cut them off), to strike south for Albany. Burgoyne, Phillips, and Hamilton inclined toward the fifth proposal, but Riedesel convinced them that only the fourth made sense. The way north was still open when this plan was adopted, but by 10 p.m., when Riedesel was ready to move, word came back that the operation was canceled. It turned out that the gap had been closed on the north by the arrival of John Stark's command. The Saratoga surrender, on 17 October 1777, was inevitable.

SIGNIFICANCE

For many years historians called this campaign the turning point of the Revolution because it led to the French Alliance. Although we now know that Louis XVI decided to enter the war before news of Burgoyne's capture reached him, Saratoga did bolster American morale at a time when the Philadelphia Campaign was giving it a beating. The losses effectively ended any further effort by the British to conduct major offensive operations from Canada (they even abandoned Ticonderoga). But perhaps the campaign's most important effects were political. Charges of blame and heated replies plagued London for years. The apparent contrast between a "militia" victory in the north and the failure of Washington's army of Continentals in the south led to the political machinations known as the Conway cabal.

BURGOYNE'S PROCLAMATION AT BOUQUET RIVER. 23–24 June 1777.

While camped at Bouquet River, forty miles north of Fort Ticonderoga (now Willsboro, New York), General John Burgoyne issued a bombastic proclamation intended to rally loyal Americans to his support and dishearten the rebels with threats of attack by his native American allies. The document was filled with the rhetorical excess for which Burgoyne was already well known and exposed him to ridicule from both sides of the Atlantic. At about the same time he was threatening to unleash native American warriors against the rebels, he spoke to those allies in an attempt to persuade them to fight humanely. Burgoyne's two efforts at military rhetoric display a set of unrealistic assumptions about the character of the struggle, the nature of war on the frontier, and the motives of native Americans that help to explain why his campaign ended in surrender at Saratoga.

After an introductory enumeration of his titles and a general comment on the justice of his cause, his political proclamation read:

To the eyes and ears of the temperate part of the public, and to the breasts of the suffering thousands [of Loyalists] in the Provinces, be the melancholy appeal, whether the present unnatural Rebellion has not been made a foundation for the compleatest system of tyranny that ever God, in his displeasure, suffered, for a time, to be exercised over a froward and stubborn generation. . . . Animated by these considerations, at the head of troops in the full power of health, discipline and valour, determined to strike where necessary, and anxious to spare where possible, I, by these presents, invite and exhort all persons, in all places where the progress of this army may point, and by the blessing of God I will extend it far, to maintain such a conduct as may justify me in protecting their lands, habitations and families. The intention of this address is to hold forth security,

not depredation to the country. To those whom spirit and principle may induce to partake [of] the glorious task of redeeming their countrymen from dungeons, and reestablishing the blessings of legal government I offer encouragement and employment. . . . The domestick, the industrious, the infirm and even the timid inhabitants I am desirous to protect, provided they remain quietly in their houses . . . , [and do not] directly or indirectly endeavour to obstruct the operations of the King's troops, or supply or assist those of the enemy. [Concluding with threats against those who continued in rebellion, he went on to say that] I have but to give stretch to the Indian forces under my direction, and they amount to thousands [400, actually], to overtake the hardened enemies of Great Britain and America . . . whenever they may lurk. (Quoted in Commager and Morris, *Spirit of 'Seventy-Six*, pp. 547–548)

Burgoyne addressed an assembly of chiefs and warriors by means of an interpreter on 24 June. Beginning with a why-we-fight exhortation, he then tried to lay down a few simple rules:

Persuaded that your magnanimity of character, joined to your principles of affection to the King, will give me fuller control over your minds than the military rank with which I am invested, I enjoin your most serious attention to the rules which I hereby proclaim for your invariable observation during the campaign. . . . I positively forbid bloodshed, when you are not opposed in arms. Aged men, women, children and prisoners must be held sacred from the knife or hatchet, even in the time of actual conflict. . . . In conformity and indulgence of your customs, which have affixed an idea of honor to such badges of victory, you shall be allowed to take the scalps of the dead when killed by your fire and in fair opposition; but on no account . . . are they to be taken from the wounded or even dying, and still less pardonable . . . will it be held to kill men in that condition on purpose. . . . Base, lurking assassins, incendiaries ravagers and plunderers of the country, to whatever army they may belong, shall be treated with less reserve. (Commager and Morris, pp. 545–547)

THE REACTIONS

After an initial flush of rage, Americans started laughing, and the more literate reached for their goose quills and foolscap. One of the most widely publicized of the many satirical retorts, attributed to Francis Hopkinson, included these lines:

I will let loose the dogs of Hell,
Ten thousand Indians who shall yell
They'll scalp your heads, and kick your shins,

And rip your —, and flay your skins,
And of your ears be nimble croppers,
And make your thumbs tobacco-stoppers.
If after all these loving warnings,
My wishes and my bowels' yearnings,
You shall remain as deaf as adder
Or grow with hostile rage the madder,
I swear by George and by St. Paul
I will exterminate you all.
(Quoted in Commager and Morris, *Spirit of 'Seventy-Six*, p. 550)

Another anonymous American commented, "General Burgoyne shone forth in all the tinsel splendour of enlightened absurdity" (Montross, p. 198). In England, Horace Walpole suggested that "the vaporing Burgoyne," "might compose a good liturgy for the use of the King's friends, who . . . have the same consciousness of Christianity, and . . . like him can reconcile the scalping knife with the Gospel" (quoted in Nickerson, *Turning Point*, p. 122). In the House of Commons, Edmund Burke evoked a picture of the keeper of the royal menagerie turning loose his charges with this admonition: "My gentle lions, my humane bears, my tenderhearted hyenas, go forth! But I exhort you as you are Christians and members of civil society, to take care not to hurt any man, woman or child" (Commager and Morris, p. 544).

BURKE, EDMUND. (1729/30–1797). Edmund Burke was born in Dublin, the son of a Catholic mother and a Protestant lawyer. He received a thorough intellectual training at a Quaker school in Baltimore (Ireland) from 1741 to 1744, and at Trinity College, Dublin, where he read law and graduated in 1748. In 1750 went on to the Middle Temple in London, intending to qualify for the Irish bar, but he became disenchanted with

the law and began instead to write. *A Vindication of Natural Society* (1756) was his first widely noticed work, and his *A Philosophical Enquiry into the Origin of our Ideas of the Sublime and Beautiful* also commanded admiration. With his friend William Burke, he contributed to *An Account of the European Settlements in America* (1757). From 1758 he was the editor of the new *Annual Register*, for which he was paid a handsome £100 per volume. In 1759, having a wife and young son to support, he became private secretary to the new chief secretary in Ireland and, in 1765, to the new prime minister, Lord Rockingham (Charles Watson-Wentworth). At the end of the year he was elected to Parliament and took his seat on 14 January 1766.

Burke entered parliament as an adherent of the Rockingham Whigs, and shared their belief that a secret court influence was subverting Parliament. In colonial matters he repeatedly made a distinction between Britain's undoubted right to tax and the expediency of letting the colonies look after themselves and create wealth for the empire. His speeches in support of the repeal of the Stamp Act and of the Declaratory Act were intelligent and much admired. He also coordinated the lobbying of merchants and manufacturers who stood to lose from a retaliatory American embargo on imports. This experience both confirmed his belief in extra-parliamentary politics and gave him experience in its organization. In 1767, having evaded an offer of office from William Pitt, the earl of Chatham, whom he thought intellectually bankrupt, he opposed the Townshend duties and the subsequent deployment of troops in Boston.

Up to 1773 these arguments carried some weight. However, the Boston Tea Party convinced almost all British politicians that it was time to stop giving way in the face of violent American blackmail. In these circumstances, even Burke found it difficult to oppose a carefully graded incremental process of coercion. The Coercive Acts of 1774, however, were sufficiently draconian to allow Burke and Rockingham to appear as champions of a saner, more generous course of conciliation. His two key speeches, "Taxation" (1774) and "Conciliation" (1775), argued powerfully for the repeal of the Acts and the abandonment in practice of parliament's constitutional right to tax. In Burke's view, both sides should focus less on rights and more upon mutual responsibilities and cooperation. These views did not go down well in Parliament, although their published versions (1775) earned him admirers among the wider public. The promulgation of the Declaration of Independence made it even more difficult to oppose the war in the American colonies, but Burke's preferred solution, secession from parliament, was only patchily observed by his colleagues, and the justification Burke offered to his electors, published as *A Letter to the Sheriffs of Bristol*, was rather lame.

When he returned to parliament, Burke lashed out at the employment of German mercenaries and Native irregulars by Englishmen against Englishmen. When the war began to go badly, and men blamed it on corruption and inefficiency, he sought reform in the shape of a public accounts committee. However, the government's position under the prime ministry of Lord North was almost unassailable until the battle of Yorktown, and it did not collapse until 1782.

Burke was paymaster to the forces in Rockingham's second ministry and, later, that of the duke of Portland. His continuing zeal for hunting out injustice and corruption in imperial affairs was evident in his contributions to Henry Fox's India Bill in 1783 and to the prosecution of Warren Hastings (1785–1794) for corruption. However, he was still no revolutionary and was steadily becoming more conservative. In 1790 he published his famous denunciation, *Reflections on the Revolution in France*, which was aimed at English radicals advocating sweeping reforms at home. This, along with other factors, caused a final rift with Fox and the publication of his *Appeal from the New to the Old Whigs* in 1791. By 1794 Burke was equating the prosecution of Hastings with the war on Jacobinism, and when Hastings was acquitted, Burke resigned his parliamentary seat. He died on 9 July 1797.

revised by John Oliphant

BURKE, THOMAS. (1747?–1783). Physician, lawyer, congressman, governor of North Carolina. Ireland, Virginia, and North Carolina. Born in County Galway, Ireland, sometime around 1747, Thomas Burke may have attended the University of Dublin. In about 1764 Burke immigrated to America, settling in Norfolk, Virginia, where he practiced medicine and gained a modest reputation as a poet and deist, having abandoned Catholicism. Switching to law, Burke became the attorney for the Transylvania Land Company. In 1772 he moved to Hillsboro, North Carolina, playing a prominent part in local politics of his region. He served in the provincial Congress from 1775 through 1776, where he was a key figure in persuading the legislature to support independence. A delegate to the Continental Congress from February 1777 to June 1781, Burke championed civil rights whenever they appeared menaced by military

power, and he was responsible for assuring that states be guaranteed any powers not specifically delegated by the Articles of Confederation to Congress.

Burke is famous in the history of the Continental Congress for his performance in April 1778. Disapproving of a proposed message of censure to George Washington, and seeing that his presence was necessary to make a quorum, he simply walked out of the hall in which the delegates were meeting, maintaining that he had no duty to attend an unreasonable assembly. When Congress attempted the next day to discipline him, Burke replied that he was responsible to his state and would not be tyrannized by a majority of Congress. Returning to North Carolina, he was exonerated by his constituents and re-elected. The irony is that even as he was defying the authority of Congress, he was defeated for re-election because he had favored the appointment of a Pennsylvania officer, Edward Hand, to take command of North Carolina's troops. The legislature changed its mind after he stood up to Congress.

Burke returned to Hillsboro at about the time that the southern region became the major theater of military operations. When the regulars under Generals Johann De Kalb and Horatio Gates moved through North Carolina, Burke led resistance to what many people considered to be the unwarranted demands of Continental officers for supplies. Meanwhile the well-fed North Carolina militia of Major General Richard Caswell marched uselessly around the state and refused to join the regulars until just before the Camden Campaign. In June 1781 Burke was elected Governor of North Carolina and vigorously undertook to stiffen the spine of his people; Burke had won on the political point of the primacy of civil authority over military, but the British regulars were chasing the ragged Continental troops across his state and the performance of the North Carolina militia had been sorry indeed.

David Fanning captured Governor Burke and his council in his raid on Hillsboro, on 12 September 1781. After being closely confined at Wilmington and then on Sullivan's Island in Charleston Harbor, Burke was paroled to James Island in November 1781. When told that he was being held hostage to guarantee the life of Fanning (should the latter be captured), Burke argued that his parole was no longer binding. He also claimed that he had been fired upon by Loyalists while at James Island. On the night of 16 January 1782, Burke escaped to Nathanael Greene's headquarters, and on the latter's advice informed British general Alexander Leslie that he would return if they guaranteed the terms of his parole, or that he would arrange a prisoner exchange. Receiving no reply from General Leslie, Burke returned to North Carolina and completed his term as governor. He refused to stand for re-election in the spring of 1782, and died on 2 December 1783 at his estate, "Tyaquin."

BURR, AARON. (1756–1836). Continental Army officer. Third vice president. New Jersey. Son of Aaron Burr, second president of the College of New Jersey (later Princeton) and grandson of Jonathan Edwards, the eminent theologian. Young Aaron was a bright, unruly child who was raised by his maternal uncle after the death of his parents. He graduated with distinction from the College of New Jersey at the age of sixteen, studied theology until 1774, and then undertook the study of the law.

As a captain on Arnold's march to Quebec, he proved himself to be an able soldier, and he survived the blast that killed Montgomery at the assault on Quebec. In the spring of 1776 Congress promoted him to major and appointed him to George Washington's staff, but he left headquarters at New York City after a few weeks because he and Washington had developed a mutual dislike and distrust. On 22 June, Burr became aide-de-camp to Israel Putnam, at which post he conducted himself admirably in the battle of Long Island and in the evacuation of New York City. On 4 January 1777 he was commissioned lieutenant colonel of Malcolm's additional Continental regiment. Stationed in Orange County, New York, the twenty-one-year-old Burr established a reputation for courage and good discipline. He commanded an outpost that protected the Continental Army's winter quarters at Valley Forge in 1777–1778, and although he may have sympathized with Washington's critics, he took no active role in the so-called Conway Cabal that winter. He led his regiment in the battle at Monmouth on 28 June 1778, where his regiment was mauled and both commander and men suffered from the extreme heat and humidity. He openly sided with Charles Lee in the subsequent controversy about the conduct of the battle. After Monmouth, Washington sent the regiment to Westchester County, New York, where Burr maintained his reputation for discipline and alert soldiering in the field. On 3 March 1779 he resigned his commission on grounds of ill health, a condition that had been exacerbated by his experience at Monmouth. It was not until the fall of the next year that he was well enough to resume the study of law.

Burr was admitted to the New York bar in 1782 and the next year moved to New York City, where he and Alexander Hamilton competed for preeminence. He was elected to the state assembly in 1784; appointed attorney general by Governor George Clinton in September 1789; and elected U.S. senator in 1791 over Philip Schuyler, Hamilton's father-in-law. He failed to win reelection in 1797, but won a seat in the state senate for the next two years. Thereafter, he built a strong Democratic-Republican Party organization in New York City that helped the party capture control of the state legislature in 1800, a success that secured him the second slot on the party ticket headed by Jefferson in the presidential election. Because presidential electors at that time did not vote separately for president and vice president, both Burr and Jefferson ended up with seventy-three electoral votes each. Hamilton threw his support to Jefferson, ensuring his election as president in the House of Representatives. As vice president, Burr presided over the Senate in a manner that won praise from both parties, but he was dropped from the ticket in 1804 and failed later that year to win election as New York governor, a defeat he again attributed to Hamilton's political enmity. Angry at the failure of his political career, Burr sought satisfaction by challenging Hamilton to a duel. The antagonists met at ten paces the morning of 11 July 1804 at Weehawken, New Jersey. Each man fired, and Hamilton fell mortally wounded. For the next three years, Burr pursued a quixotic—and treasonous—effort to separate the western states from the Union. Acquitted of treason on 1 September 1807, Burr fled to England. After returning in May 1812 he pursued the practice of law in New York City for the rest of his life.

BUSHNELL, DAVID. (1742–1826?). Inventor of the submarine. Connecticut. Born on 30 August 1740 in Saybrook, Connecticut, Bushnell attended Yale University from 1771 to 1775. While at college he demonstrated to skeptical instructors that gunpowder could be detonated under water. He subsequently built a

man-propelled submarine that he called the American Turtle, so named because the top-shaped craft of heavy oak beams was said to look like two turtle shells joined together, with the tail end pointed downward. The submarine was unsuccessfully tried in the waters around Boston, New York, New London, and Philadelphia during the years 1776 to 1778, but the American Turtle eventually proved that it could dive, travel and navigate under water, plant a large time-charge of powder against the hull of a ship, and surface.

The submarine never sank a warship, however, primarily because no adequately skillful operator was ever found. With Sergeant Ezra Lee of the Connecticut Line at the helm, the submarine unsuccessfully attacked Admiral Richard Howe's flagship, the *Eagle*, in New York Harbor in 1776. Two other attacks also failed. Giving up on his submarine, Bushnell switched to developing undersea mines, attempting to blow up the British vessel *Cerberus* off New London in the following year. The ship's captain saw the device, however, and cut the line that tethered it in place. The mine floated to a nearby schooner, where it exploded, killing three men. Bushnell contrived various other devices to harry British shipping, and his unsuccessful floating-mine attack on the British in Philadelphia in December 1777 inspired Francis Hopkinson's poem, "Battle of the Kegs."

Although the public mocked Bushnell's efforts, his inventions showed more promise than anyone realized. His technical qualifications were recognized by the army, and on 2 August 1779 he was commissioned as a captain-lieutenant of the newly organized Corps of Sappers and Miners. On 8 June 1781 he was promoted to captain of the Engineers, and on 4 June 1783 he was given command of the Corps of Engineers at West Point. When that body was disbanded, Bushnell was mustered out in November 1783. He sank into obscurity after the Revolution, taking on assumed names, teaching, and practicing medicine. His place of death is unknown, but it is thought that he died in 1826.

BUSHY RUN, PENNSYLVANIA. 5–6 August 1763. In this remarkable action, fought on a ridge dominated by higher ground twenty-six miles southeast of Fort Pitt, four hundred Highlanders, Royal Americans,

and rangers went against an unknown, but larger, number of native Americans, most of whom had participated in the siege of Fort Pitt. Colonel Henry Bouquet, the able Swiss officer, commanded the British force, and, although ambushed on 5 August, devised overnight a ruse whereby the next morning two of his companies seemed to abandon a portion of the defensive perimeter. Native American warriors rushed in to take advantage of the gap and were caught in a crossfire by the British. When Bouquet advanced with two more companies, the Indians fled in disorder and broke off the engagement.

BUSKIRK, ABRAHAM VAN. A doctor in Bergen County, New Jersey, Buskirk sided with the crown in the Revolution. He was lieutenant colonel of the New Jersey Volunteers in the Loyalist brigade of Cortlandt Skinner. His son was Lieutenant Jacob Van Buskirk, whose capture on Staten Island in November 1777 created a short-lived crisis for Washington as local Patriots attempted to try Van Buskirk for treason.

BUTE, JOHN STUART, THIRD EARL OF. (1713–1792). British prime minister. John Stuart was born in Edinburgh on 25 May 1713 and inherited his father's earldom on 23 January 1723. He was educated at Eton (1724–1728) and at Leiden, where he graduated in 1732. For some years he lived quietly on his estates, raising a family and studying botany.

When the Jacobite rebellion of 1745 began, Bute moved to London and two years later met Frederick, prince of Wales, father of the future George III. Bute was appointed tutor to young George, in whom he encouraged an abhorrence of "party." He became George's indispensable mentor, friend, and adviser.

On George III's accession to the throne in 1760, Bute became a privy councillor and, on 25 March 1761, secretary of state for the northern department. After Pitt's intemperate resignation on 5 October, Bute presided over the war effort. As first lord of the Treasury from 27 May 1762, he directed the negotiations that led to the Treaty of Paris in 1763. Unlike Pitt, he was alarmed by the size of the national debt, recognized the futility of trying to permanently cripple French sea power, and disliked subsidizing European allies. Consequently, although the French Empire in North America was destroyed, he restored Manila and some key West Indian conquests and gradually withdrew from the Prussian alliance. Again recognizing financial realities, to say nothing of known Bourbon plans for revenge, he also decided in principle to tax the American colonies in part payment for their own defense, a policy Grenville later put into practice.

Bute, whom historians used to deride, has become recognized as an able, idealistic, and patriotic prime minister. However, he had no following in the Commons, depending wholly upon favor at court. This provoked the established Whig elite to attack him as a corrupt apostle of royal absolutism and maker of a soft peace with the Bourbon powers, who favored only Scots aspirants to office. He was also falsely accused of owing his influence to an affair with Princess Augusta, the king's mother; demonstrators against the peace often carried a boot and petticoat on a gibbet. All this made him extremely unpopular, and Bute was insufficiently thick-skinned to ride out the storm. He resigned on 8 April 1763, but in August, Grenville refused to remain in office should the king continue to consult Bute in private. Bute withdrew from the court in September though he continued writing to the king until 1766, when his influence ended.

BUTLER, JOHN. (1728–1796). Loyalist leader. New York. Born in New London, Connecticut, he moved with his parents in 1742 to the Mohawk Valley, where his father, Captain Walter Butler, commanded at Fort Hunter and at Oswego. John Butler served as a captain in Sir William Johnson's expedition against Crown Point in 1755, under Abercromby at Ticonderoga, and under Bradstreet in the expedition against Fort Frontenac. He was Johnson's second in command in the capture of Fort Niagara, where he led the Indian forces. After the war, Butler settled in the Mohawk Valley, where he owned more than twenty-five thousand acres, making him the largest landowner in the region after Sir Guy Johnson. In 1772 he was made lieutenant colonel of militia.

He sided with the British at the beginning of the Revolution and was forced to flee his home in the Mohawk Valley with his son, Walter, the rest of his family being taken hostage by the Patriots and held until an exchange in 1780. Dispatched by the British to Niagara in November 1775, Butler managed Indian affairs in Canada as the deputy of Guy Johnson. Initially, Butler followed Governor Guy Carleton's orders to keep the Indians neutral, but by 1777 the British government had switched to a more aggressive policy of recruiting Indian warriors. By that time, Butler had established a network of agents throughout western New York and the Ohio Valley. In August he and Joseph Brant led the Indian and Loyalist forces at the Battle of Oriskany. After the failure of St. Leger's expedition, Butler, now a major, organized a Corps of Rangers from among the Loyalist refugees that became known as Butler's Rangers. He led these and additional forces in the remarkable raid to the Wyoming Valley. The Patriots responded to this and other raids with Sullivan's expedition, and in the only pitched battle of this campaign, Butler was defeated at Newtown on 29 August 1779. Early the next year Haldimand promoted him to lieutenant colonel and Butler's forces continued their operations on the frontier, which achieved Butler's goal of drawing Continental forces away from the major theaters of operation.

The state of New York confiscated Butler's property by the Act of Attainder of 22 October 1779. At the same time, Butler established a settlement of Loyalists on the Niagara Peninsula to grow food for the garrison. When Butler's Rangers were disbanded in 1784, the British

government gave him a pension and a five-hundred-acre land grant but refused to reimburse him for the loss of his thousands of acres in New York. Butler settled near Niagara and continued to serve as deputy superintendent of the Indian Department, also holding a number of local offices and commanding the area's militia. However, the enmity of Sir John Johnson prevented Butler from attaining office beyond his community. He died at Newark, Ontario, on 13 May 1796.

BUTLER, PERCIVAL. (1760–1821). Continental officer. Pennsylvania. Next to youngest of the Butler Brothers, he became second lieutenant of the Third Pennsylvania on 1 September 1777, was promoted to second lieutenant on 23 November 1777 and on 1 January 1783 transferred to the Second Pennsylvania. He fought with Morgan at Saratoga and with Wayne against Simcoe at Spencer's Tavern and took part in the siege of Yorktown. Serving to the end of the war, he moved to Kentucky and was adjutant general in the War of 1812.

BUTLER, RICHARD. (1743–1791). Continental officer. Ireland and Pennsylvania. One of the four Butler brothers of Pennsylvania who all served in the Revolutionary War. Richard Butler was born in Dublin on 1 April 1743. He was an ensign on Henry Bouquet's expedition of 1764. With his brother William, he subsequently became an Indian trader at Chillicothe, Ohio, and at Pittsburgh. He led a Pennsylvania company against Pittsburg during the dispute between Pennsylvania and Virginia that preceded Dunmore's War.

In 1775, Congress appointed him an Indian agent, in which capacity he was charged with securing the neutrality of a number of Native American nations. Commissioned a captain in the Second Pennsylvania Battalion on 5 June 1776, Butler was swiftly promoted to major of the Eighth

Pennsylvania Continental Regiment on 20 July. On 12 March 1777 he became lieutenant colonel of this regiment. He commanded the regiment at Bound Brook, New Jersey, on 13 April 1777. Joining Daniel Morgan's Riflemen in the spring, he took part in the battles around Saratoga, New York.

After Burgoyne's surrender, in October 1777, Butler returned to General George Washington's army as colonel of the Ninth Pennsylvania Battalion, leading this unit at the battle of Monmouth, 28 June 1778. Taking action against the British during the Tappan massacre, Butler's men got the better of a skirmish above Kings Bridge (Manhattan) on 30 September 1778. At Stony Point, 16 July 1779, Butler distinguished himself leading the Second Regiment of Anthony Wayne's Light Infantry Brigade.

During the mutiny of the Pennsylvania Line (January 1781), Richard and his brother William accompanied Wayne, who had become a close friend, to Princeton to negotiate with the mutineers; the latter insisting that they would only deal with the Butler brothers. In the reorganization of 17 January 1781, Butler took command of the Fifth Pennsylvania Battalion, which became part of Wayne's Light Infantry, and joined General Lafayette (Gilbert du Montier) in June 1781. He led the attack on John Graves Simcoe's troops at Spencer's Tavern, Virginia, on 26 June, and took part in the engagement at Green Spring, Virginia, on 6 July. In the siege of Yorktown he led the Second Pennsylvania Battalion of Wayne's Brigade in General Friedrich Wilhelm Augustus von Steuben's Division. After the surrender of General Charles Cornwallis, Richard Butler marched with Wayne to the Carolinas and subsequently into Georgia. Butler commanded the Third Pennsylvania Battalion from 1 July to 3 November 1783 and on 30 September of that year was brevetted with the rank of brigadier general.

After the war, Congress again appointed Butler an Indian commissioner. This time, Butler acted far more aggressively in negotiating a series of important boundary treaties during the years from 1784 to 1786. In the latter year he was made Superintendent of Indian Affairs for the Northern District. After Harmer's expedition of 1791 failed so disastrously to enforce these treaties, Butler, who had sat on the inquiry vindicating Harmer's conduct, was named Major General of U.S. Levies. Commanding the right wing of Arthur St. Clair's expedition against the Miami Indians, Butler was mortally wounded in the battle of 4 November 1791.

BUTLER, THOMAS, JR. (1754–1805).

Continental officer. Pennsylvania. One of the five sons of Thomas Butler, and the first to be born on American soil, he was studying law with Judge Wilson in Philadelphia when he joined the Continental army on 5 January 1776 as a first lieutenant in the Second Pennsylvania Battalion. On 4 October 1776 he was promoted to captain in the Third Pennsylvania Battalion. Butler fought in most of the major engagements of General George Washington's main army over the next four years, being congratulated by the commander in chief for rallying retreating soldiers after the battle at Brandywine, and winning thanks from General Anthony Wayne for covering the retreat of Richard Butler's regiment at Monmouth. Retiring from the army on 17 January 1781, he became a farmer in western Pennsylvania. In 1791 he rejoined the army as a major, commanding the Carlisle Battalion of Gibson's Regiment. He was twice wounded in the action of 4 November. The following year he was assigned to the Fourth Sub-Legion. He was promoted to lieutenant colonel on 1 July 1794 and took part in Wayne's western campaigns. He rose to the rank of colonel of the Second Infantry on 1 April 1802. He died on 7 September 1805 in New Orleans.

BUTLER, WALTER. (c. 1752–1781). Tory leader. New York. In his *War out of Niagara: Walter Butler and the Tory Rangers* (1933), the definitive work on Butler, author Harold Swiggett remarks:

There is an absorbing mystery about his life and character. The date of his birth is unknown [but almost certainly 1752, Swiggett says]. There is a legend of his marriage to a daughter of Catharine Montour, and another with a daughter of Sir William Johnson. . . . There is no physical description of him except in fiction. Letters about him in catalogues even of the Schuyler Papers, the Gates Papers, . . . and many other papers, are mysteriously

marked missing. . . . The histories have contented themselves with denouncing him as a bloody monster, but back of the histories in the primary material of the Revolution there is an amazing figure" (pp. 4–5).

A son of John Butler, he was raised in the Mohawk Valley. On 18 February 1768 he was commissioned an ensign in the militia regiment of which his father was lieutenant colonel. In 1770 Walter, whom Swiggett calls "the most brilliant young man in the Valley," went to study law in the office of Peter Silvester in Albany. When news of Bunker Hill reached the Mohawk Valley, the Butlers, Guy Johnson, and Joseph Brant left for Oswego, where they arrived 17 July 1775. Walter led a force of thirty Indians and rangers in an envelopment that defeated Ethan Allen at Montreal on 25 September 1775, and he took part in the action at the Cedars in May 1776.

As an ensign in the Eighth (King's) Regiment, he accompanied St. Leger's expedition, and after taking part in the Oriskany ambush, he volunteered for "one of the bravest and most audacious enterprises of the war" (Swiggett, p. 90). With about fifteen men he left the British camp around Fort Stanwix on 10 or 11 August and headed for German Flats with St. Leger's proclamation and the appeals of Sir John Johnson and John Butler for the inhabitants of the Mohawk Valley to join the Loyal cause. He was holding a midnight meeting at Shoemaker's House when militia troops of Colonel Weston, informed of his presence, surrounded the place and took him prisoner. On 21 August he was convicted of espionage and sentenced to hang. Marinus Willett signed the minutes as J. A., and Benedict Arnold, who was on his way to relieve Fort Stanwix, approved the sentence. Upon the intercession of various Continental officers, including Schuyler, Butler was reprieved and imprisoned in Albany. On 21 April 1778 he escaped from the house in which he apparently was living on parole. Down Lake Champlain to the St. Lawrence, Butler went first to Quebec and then to Niagara. His commission as captain had been signed on 20 December, while he was imprisoned at Albany.

The Cherry Valley massacre, on 11 November 1778, was Captain Butler's most notorious operation. In October 1781 he accompanied Ross's raid to the Mohawk and was killed at Jerseyfield (Canada Creek) on 30 October 1781. Swiggett, commenting on the various myths surrounding Butler's death, says that "there is a legend that Tories brought his body secretly to St. George's Church, Schenectady, and that he is buried there. It seems unlikely: wolves were closing in on the armies" (ibid., p. 243). That Butler begged for quarter and that an Oneida shouted "Sherry Valley quarter" just before killing him with a tomahawk has been shown by Swiggett to be "myth-making at its worst" (ibid., p. 251). Another fabrication, which even the *Dictionary of*

American Biography has perpetuated, was to give Butler a middle initial. He had no middle name, but Swiggett has theorized that "the infamous Walter N. Butler" sounded more villainous than "the infamous Walter Butler."

Was Butler a violent man whose pathological anger found outlet in frontier Revolutionary conflict? Cautiously, historians stress several structural considerations. One was generational. Butler's father, John, a veteran of the Seven Years' War, understood white-Native American politics, and in 1777 he mended his relations with the Mohawk leaders Joseph and Mary Brant. Butler saw Indian warriors as useful in controlling a chaotic situation, but could not grasp the idea of Indian allies fighting along side white Loyalists. For another, the Mohawks paid close attention to the style and authenticity of white Loyalist military leadership. "What young Butler lacked in experience," Graymont has observed, "he made up for in hauteur. The Indians were not impressed" (*Iroquois*, p. 190). What most magnified Butler's brutality was his refusal to share command of Indian fighters with Brant in the Cherry Valley massacre in 1778; terrorized white Patriot families credited Joseph Brant and thirty of his Mohawk braves with saving their lives.

BUTLER, WILLIAM. (?–1789). Continental officer. Ireland–Pennsylvania. William Butler and his brother Richard were born in Dublin before their family emigrated to Lancaster, Pennsylvania, where their other three brothers were born. After Henry Bouquet's expedition of 1764, the two elder Butler brothers were partners at Chillicothe and Pittsburgh in the Indian trade. On 5 January 1776 William was made captain in the Second Pennsylvania Battalion, and he advanced to major on 7 September 1776. He was promoted to lieutenant colonel of the Fourth Pennsylvania Battallion on 30 September 1776, and became aide-de-camp to General William Alexander on 7 May 1778. Five months later he led the raid that wiped out Indian settlements around Unadilla,

Butler, Zebulon

New York, and he published an account of that operation. When Sullivan's expedition withdrew toward Wyoming, Butler was detached (on 20 September 1779) to destroy Indian villages east of Cayuga Lake. He narrowly escaped death during the mutiny of the Pennsylvania Line in January 1781. In the military reorganization that followed the mutiny, Butler became commander of the new Fourth Pennsylvania Battalion. He retired on 1 January 1783 and died six years later.

BUTLER, ZEBULON. (1731–1795). Continental officer. Connecticut. Grandson of Lieutenant William Butler of Ipswich, Massachusetts, and son of John and Hannah Perkins Butler, he was born at Ipswich but moved with his parents to their new home in Lyme, Connecticut, in 1736. After owning one or more sloops engaged in the West Indian trade, he saw service in the French and Indian War, rising from ensign in 1757 to captain in 1760. He survived a shipwreck to arrive in time to participate in the siege of Havana in 1762. In 1769 he led the Connecticut settlers to the Wyoming Valley and continued as their leader in the Pennamite Wars. In July 1771 he forced the surrender of Pennsylvania troops in Fort Wyoming, and in December 1775 he drove back the Pennsylvania troops under Colonel William Plunkett sent by Governor John Penn to establish a military government in the valley. Meanwhile he had served as director of the Susquehanna Company, represented Westmoreland in the Connecticut assembly (1774–1776), and served (with Nathan Denison) as a justice of the peace.

When the war started he was commissioned colonel of militia and Denison became lieutenant colonel. On 1 January 1777 Butler became lieutenant colonel of the Third Connecticut Continental Regiment, and on 13 March 1778 he was promoted to colonel of the Second Connecticut. Home on leave, he participated in the defense of the valley, but his part in what became known as the Wyoming Valley Massacre was not particularly creditable. He returned as commander in the valley and remained there during Sullivan's expedition against the Iroquois in 1779. At the request of the Continental Congress, on 29 December 1780 Washington recalled Butler from Wyoming to reduce the friction there between the Connecticut and Pennsylvania elements. On 1 January 1781 he was transferred to the Fourth Connecticut. Assigned to West Point, he became colonel of the First Connecticut on 1 January 1783 and resigned on 3 June

1783. He died at Wilkes-Barre and was survived by his third wife.

BUTLER BROTHERS OF PENNSYLVANIA. The four eldest of the five sons of Thomas Butler served together as Continental officers in the Revolution, and three of the surviving four were together under General Arthur St. Clair in the Indian expedition of 1791. The two elder Butler brothers, William and Richard, were born in Dublin. In 1748 the family immigrated to America, settling in Cumberland County, Pennsylvania. Here, Thomas Jr. was born in 1754, Percival in 1760, and then Edward. All but the latter, who presumably was too young, became officers in the Continental Army, and much of the time they served in the same unit or adjacent ones. At Monmouth, Thomas commanded a company whose rearguard action saved the regiment commanded by his brother, Richard. William Butler died in 1789, but three of the four remaining brothers served together in the disastrous operations led by General St. Clair that ended in defeat on 4 November 1791. Richard, who commanded a wing of the army in which Thomas served as a major and Edward as a captain, was mortally wounded and evacuated to the center of St. Clair's camp, where he was soon joined by the seriously wounded Thomas. Before the retreat started, Edward arrived to remove his brothers, but could take only one. Richard insisted that the other brother be saved, and Edward succeeded in carrying Thomas to safety.

BUTLER–JOHNSON, ENMITY SEE *Johnson, Guy.*

BUTLER'S RANGERS. John Butler's success in leading a mixed force of Native American warriors and Loyalists at the Battle of Oriskany on 6 August 1777 so impressed Major General Sir Guy Carleton, the British commander in Canada, that on 15 September he authorized Butler to raise a corps of rangers. Initially only a single company, the corps had grown in strength to ten companies by 1781. Butler's Rangers launched many significant raids from their principal headquarters at Fort Niagara and kept a large part of the frontier in turmoil. Butler led two hundred rangers and three hundred Indians that devastated the Wyoming Valley in Pennsylvania on 3 July 1778. His son, Captain Walter Butler, led a similar raid that on 11 November dealt a heavy blow to Cherry Valley, New York. Responding to the calls for help from the frontier, Washington sent Major General John Sullivan in the summer of 1779 to destroy Fort Niagara, but his supply line became overextended before he could reach his objective. The rangers participated in retaliatory raids across the New York and Pennsylvania frontiers in 1780 and 1781; both years culminated in a major raid through the Mohawk Valley. In 1782 companies stationed at Detroit raided Sandusky in Ohio; Blue Licks in Kentucky (defeating Daniel Boone); and Wheeling, later in West Virginia. The corps was reduced to one company at Detroit on 24 June 1784, and that company was disbanded when it reached Fort Niagara on 16 July. Veteran rangers and their descendants served in the Canadian militia during the War of 1812.

BYNG, JOHN. (1704–1757). British admiral. The son of Viscount Torrington, a distinguished admiral and first lord of the admiralty, Byng went to sea in 1718

and took part in the battle of Cape Passaro. For almost forty years thereafter, despite war service from 1739 to 1748, he saw no serious action. Personally brave and a good seaman, but lacking battle experience, strategically timid, and prone to shift responsibility, Byng was undoubtedly the wrong man to be sent to relieve the Mediterranean island of Minorca in the spring of 1756. He was also unfortunate. The Admiralty sent him too late and with too few ships, and the governor of Gibraltar deliberately misled him. Although an indecisive battle on 20 May left Byng free to reach Fort St. Phillip, he induced a council of war to advise retreat to Gibraltar. Minorca fell soon after, and Byng was court-martialled. Acquitted of cowardice, he was convicted of negligence and shot on 14 March 1757. Contemporaries thought the verdict justified but the sentence excessive and probably politically motivated. The shadow of Byng therefore hung over the decisions of British admirals for some time.

BYRON, JOHN. (1723–1786). British admiral. Second son of the fourth baron Byron, and later father of the poet, George Gordon Byron, John Byron was born on 8 November 1723. He entered the navy in 1737 and later took part in Captain George Anson's voyage to the Pacific. Surviving shipwreck on the Chilean coast, he returned to Britain in 1746 to become a post-captain by the end of the year. In 1760 he demolished the fortifications at Louisburg (Nova Scotia) and destroyed nearby French shipping and stores. From 1764 to 1766 he circumnavigated of the globe. Governor of Newfoundland from 1769 to 1772, and a rear admiral from March 1775, he was promoted vice admiral on 29 January 1778. Almost at once he was confronted with an emergency: Charles Hector Theodat D'Estaing's naval squadron was preparing to sail from Toulon (France).

D'Estaing's destination might have been anywhere: Minorca, the English Channel (in conjunction with the Brest fleet), North America, the West Indies, or even India. It was impossible for the British fleet to cover all these destinations without being weak everywhere and taking serious risks in the Channel. Byron was therefore given a squadron with orders to pursue D'Estaing wherever he might go. In June, once it became clear that D'Estaing was heading for North America, Byron took his ships into the Atlantic, where they were scattered by gales. By the time he reached New York, D'Estaing had moved north to Rhode Island. After repairs, Byron set out to find him and was once again beset by storms. In December Byron heard that D'Estaing was in the West

Byron, John

Indies, but on the way south in pursuit, Byron ran into foul weather yet again.

On 6 January 1779 Byron reached St. Lucia, in the Caribbean, which recently had been taken by Rear Admiral Samuel Barrington and Major General James Grant for the British. With their support, Byron ably kept D'Estaing's counter-attack at bay. Afterwards, he and Grant wisely kept their ships and troops concentrated at St. Lucia, ready to respond in force to any move D'Estaing might make from Martinique. At last, in June 1779, Byron used his whole fleet to cover a homeward-bound convoy, probably in hopes of tempting D'Estaing out to attack exposed islands. If so, the plan went badly wrong: when Byron returned, the islands of St. Vincent and Grenada had fallen and De'Estaing had been substantially reinforced. After an indecisive action off Grenada on 6 July, a now ailing Byron left the fleet and sailed for

home. He was not employed again and died on 10 April 1786.

Nicknamed "Foul Weather Jack," Byron was the unluckiest of admirals. His failures in 1778 and 1779 illustrate not personal incompetence but the acute dilemmas facing an unprepared navy that was unable to be strong everywhere and not daring to seriously weaken its squadrons in home waters.

CADWALADER, JOHN. (1742–1786).

Militia general. Pennsylvania. Born on 10 January 1742 in Philadelphia, John Cadwalader was active in public affairs, a member of the Committee of Safety, captain of the city's "silk stocking" militia company, commanding officer of a city battalion and, in 1776, colonel of a Pennsylvania militia regiment. His militia figured in George Washington's plan for the attack on Trenton on 26 December 1776, but his troops were unable to cross the Delaware River south of Trenton until the battle was over.

Cadwalader's military intelligence materially contributed to Washington's success at Princeton. Although Washington offered him an appointment as a Continental brigadier general, Cadwalader declined in order to serve as a brigadier general of the Pennsylvania state militia from 5 April 1777 to the war's end. In the fall of 1777, at Washington's request, he organized militia on the eastern shore of Maryland. In 1778 he served as a volunteer at Brandywine and Germantown, and led a number of guerilla

operations against the British. On 4 July 1778 he fought a duel with General Thomas Conway, over the latter's insults to Washington, and shot Conway in the mouth. On 10 September 1778 Cadwalader was again offered a commission as Continental brigadier general, and again declined. After the war he moved to Maryland and became a state legislator. He died 10 February 1786 at the age of 43, leaving a large fortune to his heirs.

CALENDARS, OLD AND NEW STYLE.

The Julian (Old Style) Calendar was used in Great Britain and her colonies until 1752, when the Gregorian (New Style) finally was adopted. To adjust for overestimation of the solar year by eleven minutes and fourteen seconds, the Gregorian Calendar had added ten days to each year from 1582 through 1699, added eleven days to the succeeding years through 1751, and left eleven days out of 1752. Great Britain's decree made 14 September 1752 follow 2 September. Under the "O.S."—which is the customary abbreviation—the year usually began 25 March (vernal equinox).

Washington's birthday is 22 February 1732 N.S. but 11 February 1731 O.S.; the latter year sometimes is expressed as 1731–32 or 1731/1732. Unless otherwise stated, dates spanning the year 1752 are assumed to be New Style (see Appendix VI).

CAMBRAY-DIGNY, LOUIS ANTOINE JEAN BAPTISTE, CHEVALIER DE.

(1751–1822). Continental officer. France. From a Picardy family, he was born in Florence, Italy. An officer candidate in the French artillery in 1770, he was discharged (*réformé*) four years later for lack of a vacancy. Franklin wrote a strong letter on his behalf to Washington on 10 September 1777. Cambray-Digny arrived in North Carolina in February 1778 to improve coastal fortifications there. Governor Caswell recommended him to Congress for a commission, and Lafayette also endorsed him. On 13 June he was commissioned lieutenant colonel in Duportail's corps of engineers. During the Monmouth campaign he served with the main army. On 20 October 1778 Congress ordered him to Charleston but then sent him on temporary duty to Pittsburgh where, as Lachlan McIntosh's chief engineer, he directed construction of Fort McIntosh. On 2 February 1779 Congress ordered him to Maryland and North Carolina to gather military stores for the South. He reported to Lincoln on these activities and then took part in the defense of Charleston. In September the South Carolina legislature commended him for emergency constructions that thwarted Augustin-Prevost's May 1779 attack. Captured 12 May 1780 with Lincoln's army, he failed repeatedly to obtain Washington's intervention for an early parole in the summer of 1781 and again in the summer of 1782. He was finally exchanged on 26 November 1782.

On 30 October 1782 he was granted a year's leave in France and reached Brest in June 1783. He was breveted colonel in the Continental army on 2 May 1783 and honorably discharged on 15 November 1783. He served as a major of provincial troops and voted in 1789 for the bailliage of Montdidier. He retired to his chateau of Villers-aux-Érables in the Somme.

CAMDEN CAMPAIGN.

July–August 1780. On 12 May 1780, a force of about 1,400 Continentals under General Johann De Kalb was moving toward Charleston when that place surrendered. On 13 June Congress commissioned General Horatio Gates to command the Southern Department. With the collapse of American military resistance in the South, and with little prospect of assistance from the French Alliance, Congress hoped that Gates, the victor of Saratoga, would rally militia to stop the British in the South, as he was credited with having rallied them to defeat British General John Burgoyne. The commander in chief of the Continental army, General George Washington, did not approve of Gates's appointment. He considered Nathanael Greene better qualified, but Congress did not consult him on the matter. Charles Lee warned his friend Gates to "take care lest your Northern laurels turn to Southern willows."

THE FORCES ASSEMBLE

When Gates reached De Kalb's headquarters at Coxe's Mill, North Carolina, to take command on 25 July, he found a half-starved force of about 1,200 regulars. These were the remnants of the Delaware and Maryland Continentals and three small artillery companies who had survived the march southward, along with 120 survivors of Casimir Pulaski's Legion, now commanded by Charles Armand, who had recently joined De Kalb. Leaving the infantry under De Kalb's command and designating the entire body of troops "the grand army," Gates ordered that they prepare to march on a moment's notice. According to one participant, Colonel Otho Williams, whose contemporaneous narrative

appears as an appendix in William Johnson's *Sketches of the Life and Correspondence of Nathanael Greene*. "the latter order was a matter of great astonishment to those who knew the real situation of the troops. But all difficulties were removed by the general's assurances, that plentiful supplies of rum and rations were on the route."

A number of other American units were in the field, but two notable contingents did not appear. These were the cavalry units that Colonels William Washington and Anthony White were trying to build around the survivors of the engagements at Lenud's Ferry (May 5), and Monck's Corner (April 14), both in South Carolina. They had asked Gates's support in recruiting horsemen and offered to join him, but Gates refused to help and let it be known that he did not consider the Southern Theater good cavalry country.

Although British forces controlled Georgia and South Carolina, the situation of General Charles Cornwallis was far from rosy. Many of his 8,300 troops were sick, and he had twelve scattered posts to maintain in an area of about 10,000 square miles. He believed that an offensive into North Carolina was the only alternative to abandoning all this territory and concentrating at Charleston. To undertake this offensive, he had established a forward base at Camden with outposts at Hanging Rock, Rocky Mount, and Cheraw. However, he had not yet secured the necessary provisions, and when Gates advanced there were 800 hospital cases in Camden—men who would have to be abandoned if the place were not defended.

Partisan General Thomas Sumter, who had been operating in the region for only a short time, sent Kalb a report of Cornwallis's scattered dispositions shortly before Gates arrived. According to historians George F. Scheer and Hugh F. Ranking, it was "[p]robably on the strength of this letter, which set at seven hundred the total enemy strength in 'Camden and vicinity,' and encouraged by dreams of manna for his men and 'shoals of militia' gathering in North Carolina, Gates resolved to attack Camden" (p. 405).

Subordinates who knew the country recommended that "the grand army" circle westward through Salisbury, Charlotte, and the Catawba region, a route that would take them through fertile country where the natives were sympathetic. Gates insisted on taking a more direct route, fifty miles shorter but through an impoverished and Tory-infested region of pine barrens, sand hills, and swamps. The march started on 27 July, only two days after Gates took command. The sick and underfed troops took two weeks to cover 120 miles, although some days they marched eighteen miles. When the promised rum and rations did not appear, Gates assured them they would find abundant corn on the Pee Dee River. He was right, but the corn was still green, and soldiers who had been getting sick on green peaches now got sick on green corn instead. They were so desperate that some tried using hair powder to thicken the stew they concocted from lean woods cattle and green corn. Ironically, their route took them through the area where the

modern health resorts of Pinehurst and Southern Pines are located. Historian Sydney George Fisher comments that "the air. . . is dry and invigorating, but the troops of Gates needed more than air to sustain them" (vol. 2, p. 296).

After crossing the Pee Dee River at Mask's Ferry on 3 August, the Continentals were joined by 100 Virginia state troops, whom Lieutenant Colonel Charles Porterfield had managed to keep in the field after the surrender of Charleston, two and a half months earlier. Francis Marion, who had joined De Kalb earlier and had been detached to Cole's Bridge, rejoined the army with about twenty miserable-looking followers. As for these "men and boys, some white, some black," Colonel Otho Williams says "their appearance was in fact so burlesque, that it was with much difficulty the diversion of the regular soldiery was restrained by the officers."

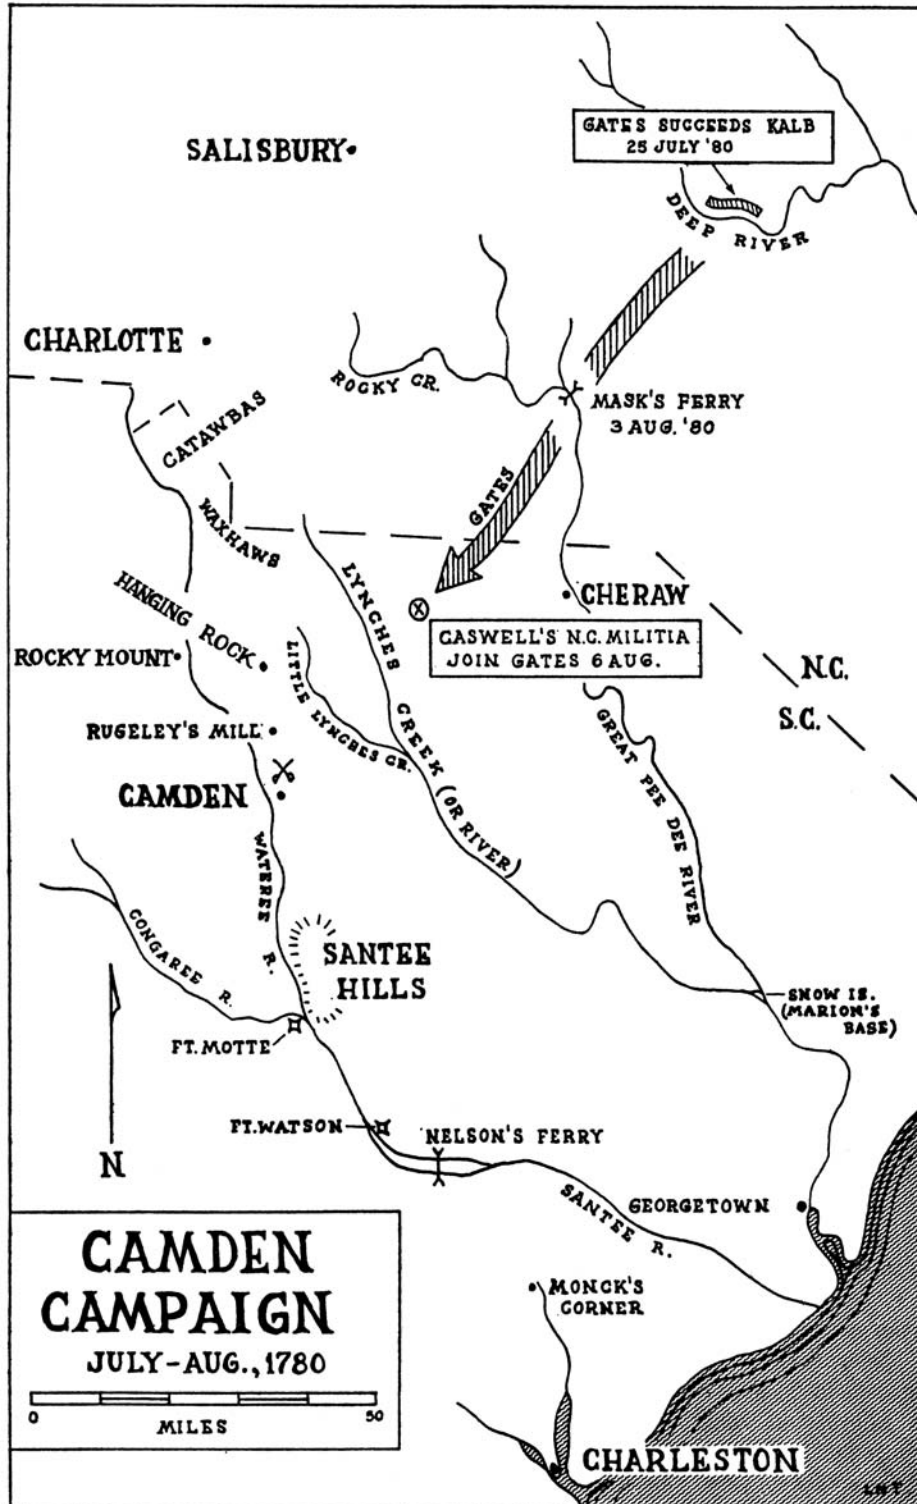

One reason why Gates may have chosen his much criticized line of operations was to increase his opportunities for drawing militia reinforcements to him. The designation of his force as "the grand army" tends to support this supposition. In any event, former Governor Richard Caswell was known to be hunting Tories with a body of 1,200 well-provisioned North Carolina militia, whom he commanded as a major general. De Kalb had called on Caswell to join him—with the ulterior motive of alleviating his own problems of subsistence—but the militia leader "offered excuses and held aloof" (Ward, p. 715).

On 5 August, however, Gates received a message from Caswell that he was about to attack a British outpost on Lynches Creek, and on the next day, Caswell's urgent appeal for help arrived. Gates was already headed for Caswell's camp when the second message arrived, but the episode brought the North Carolina militia into "the grand army." Although strength of the militia had been estimated originally at 1,200, it had now been reinforced to 2,100. The combined forces moved to Lynches Creek.

According to historian Christopher Ward:

What to do next might have puzzled an abler general than Horatio Gates. He could not stay where he was; there was no food there. If he turned to the left, Camden would be to his rear, cutting off any help from the north. If he turned to the right, to the flourishing settlements of the Waxhaws, a two or three days' march, he would seem to be retreating and the North Carolina militia would desert him. So, without any plan or purpose, he went blindly straight ahead. (p. 720-721)

He ordered his heavy baggage and camp followers back to Charlotte, but he lacked transportation to move the former, and the women and children refused to leave their "sponsors." Meanwhile, some edible corn and beef had been found to provide temporary relief of the famine of his troops.

THE GALE GROUP.

BRITISH REACTION

Young Lord Francis Rawdon, who co-commanded at Camden, had sent a series of messages to Cornwallis in Charleston warning him that 7,000 Americans were approaching his advance base. Although Rawdon saw the necessity for concentrating at Camden, “he dared not remove the garrisons from Hanging Rock and Rocky Mountain, lest Sumter should slip past him and either cut his communications with Charleston, or move rapidly westward and overwhelm his posts on the Broad River” (Fortescue, p. 316). Sumter attacked Rocky Mount on 1 August and Hanging Rock on 6 August with precisely this strategy in mind, and the British held the two outposts only after serious fighting.

About the time Gates’s Continentals crossed the Peedee River, at a point some twenty-five miles north of the post held by the Seventy-first Highlanders at Cheraw, Rawdon moved forward to delay the American advance. When Caswell’s North Carolina militia started acting as if they were going to attack his outpost on Lynches Creek, Rawdon threw them into disorder by feigning an attack, and then withdrew.

On 10 August Gates found Rawdon barring his advance across the bridge at Little Lynches Creek, 15 miles northeast of Camden. Although the British were badly outnumbered, they had a strong position overlooking a broad marsh through which the enemy would have to attack. British Lieutenant Colonel Banastre Tarleton commented that “by a forced march up the creek, [Gates] could have passed Lord Rawdon’s flank and reached Camden which would have been an easy conquest and a fatal blow to the British” (Ward, p. 913n). De Kalb is said to have suggested this maneuver. According to Robert Duncan Bass, “Gates wheeled his army to the right, forded the creek, and began a flanking movement” (p. 97). Gates may, therefore, have had a decisive action in mind, but he spoiled his chance by starting it in broad daylight and eliminating the essential element of surprise. Covered by Tarleton’s dragoons, Rawdon withdrew to Camden.

The last British troops had now been pulled back from Hanging Rock and Rocky Mount. Sumter followed and seized all crossings across the Wateree River as far down as Whitaker’s Ferry, five miles below Camden. Bass describes Sumter’s intentions as follows:

Trying to coordinate his movements with those of the main army, on August 12 he wrote General Gates. He suggested that a powerful corps be thrown behind Camden. For the second time he urged that a strong detachment be sent to the High Hills of Santee or to Nelson’s Ferry to cut the British supply route and to prevent their expected retreat toward Charleston. (p. 97)

Although Gates consistently exhibited a complete immunity to good advice during this campaign, this time he acted on Sumter’s suggestion. On 14 August, therefore, when his army had reached Rugeley’s Mill (Clermont, about twelve miles from Camden), Gates detached Lieutenant Colonel Thomas Woolford with 100 Maryland Continentals, a company of artillery with two guns, and 300 North Carolina militia to reinforce Sumter. The latter scored a bright little success at Wateree Ferry on 15 August, but contributed nothing to the campaign. Also about this time, Francis Marion was detached to take command of the Williamsburg militia at Witherspoon’s Ferry.

FROM BAD STRATEGY TO WORSE TACTICS

The American army at Rugeley’s Mill was reinforced on 14 August by 700 Virginia militia who had come south under General Edward Stevens. With 900 rank and file of De Kalb’s Delaware and Maryland Continentals, 120 mounted and foot troops of Armand’s Legion, Porterfield’s 100 Virginia light infantry, about 100 men and six guns in Colonel Charles Harrison’s Virginia artillery, the 1,800 North Carolina militia, and about 70 volunteer horsemen, Gates now had about 4,100 rank and file troops. Cornwallis thought he had 7,000, an understandable error inasmuch as Gates himself was under the same misapprehension. When Deputy Adjutant General Otho Williams showed Gates figures to prove that only 3,052 were present and fit for duty, Gates waved this information aside with the comment that “there are enough for our purpose.” De Kalb’s strength takes into account the detachment of 100 Maryland Continental troops. Six guns remained with Gates after two were sent to Sumter. De Kalb had started south with nineteen guns, but nine had been abandoned before he reached Coxe’s Mill, on Deep River in North Carolina, and two more had been left behind at Coxe’s Mill for want of horses to pull them.

Cornwallis reached Camden on the night of 13 August. By this time Rawdon had been reinforced by four light infantry companies from Ninety Six. According to Nathanael Greene, the morning report showed 122 officers and 2,117 men fit for duty. Many of his troops were well-seasoned regulars: three companies of the Twenty-third Regiment (282 rank and file), the Thirty-third (283 men), five companies of the Seventy-first (237 men). Others were high-quality Tory units brought from New York with Sir Henry Clinton: the Volunteers of Ireland (287) and Tarleton’s British Legion (289). There was a 17-man detachment of the Royal Artillery, a 26-man pioneer unit, and two North Carolina Tory regiments with a total strength of over 550. Although Cornwallis still believed himself outnumbered more than three to one, he decided to fight. Retreat would have meant the abandonment of 800 sick or injured men, a quantity of stores, and the surrender of all of South Carolina and Georgia

except for Charleston and Savannah. The decision to remain reveals the element of greatness in Cornwallis.

In a meeting on 15 August Gates announced that the army would make a night march to Saunders Creek, only five and one half miles from Camden, where a strong position could be prepared. This, he hoped, would pressure the British to abandon Camden or to attack Gates's position behind the creek on a high hill. His officers, who included eight generals, were too stunned by the prospect of maneuvering their columns of famished troops through the woods at night to voice their objections at this meeting; but the positive terms in which Gates read his orders to them clearly implied that he was not interested in their views. Colonel Williams did point out later that Gates was more than 100 percent wrong in his strength calculations, but Gates treated this observation dismissively, as a minor detail. When Armand learned that his mounted troops were to lead the column, he pointed out that cavalry was the wrong type of force for such a mission. But perhaps Gates was finally learning the value of cavalry, for Otho Williams noted that his orders were for Armand's horse to "not only . . . support the shock of the enemy's charge, but finally to rout them." Indeed, Cornwallis would likewise place Tarleton's cavalry out front of the British.

The true history of this battle has a touch that would be unacceptable in fiction. Some rations had been gathered to feed the troops a full meal before the attack, but there was still no rum. There was a supply of molasses, however, and Gates conceived the happy idea of issuing each man a gill of this delicacy as a substitute. The half-cooked meat and half-baked bread, followed by a mixture of molasses and cornmeal mush, had a gastrointestinal effect on the half-starved troops that would be funny if the tactical results had not been so serious. Again according to Otho Williams, the men were "breaking the ranks all night and were certainly much debilitated before the action commenced in the morning."

The Americans started down the road from Rugeley's Mill toward Camden at 10 P.M., with Armand in the lead. The night was sultry, the moon full, and the road showed up well in the dark. Flanking Armand at a distance of 200 yards, Porterfield's Virginia and John Armstrong's North Carolina militia advanced through the dark woods and swamps in single file on each side of the cavalry "point." Further back down the road came an infantry advance guard, followed by the Continentals, Caswell's North Carolina militia, Stevens's Virginia militia, and the baggage train under the escort of the volunteer horsemen.

By an uncanny coincidence, Cornwallis had left Camden at 10 P.M., and was marching along the same road toward Gates with a view to attacking him at Rugeley's Mill at daybreak. At about 2:30 on the morning

of 16 August the two forces met at a place called Parker's Old Field in Gum Swamp. The "point" of the British column, twenty mounted and twenty dismounted dragoons of the British Legion, charged and drove Armand's troops back in confusion, but the flank patrols closed in and drove back the British point. After a quarter of an hour the firing stopped on both sides.

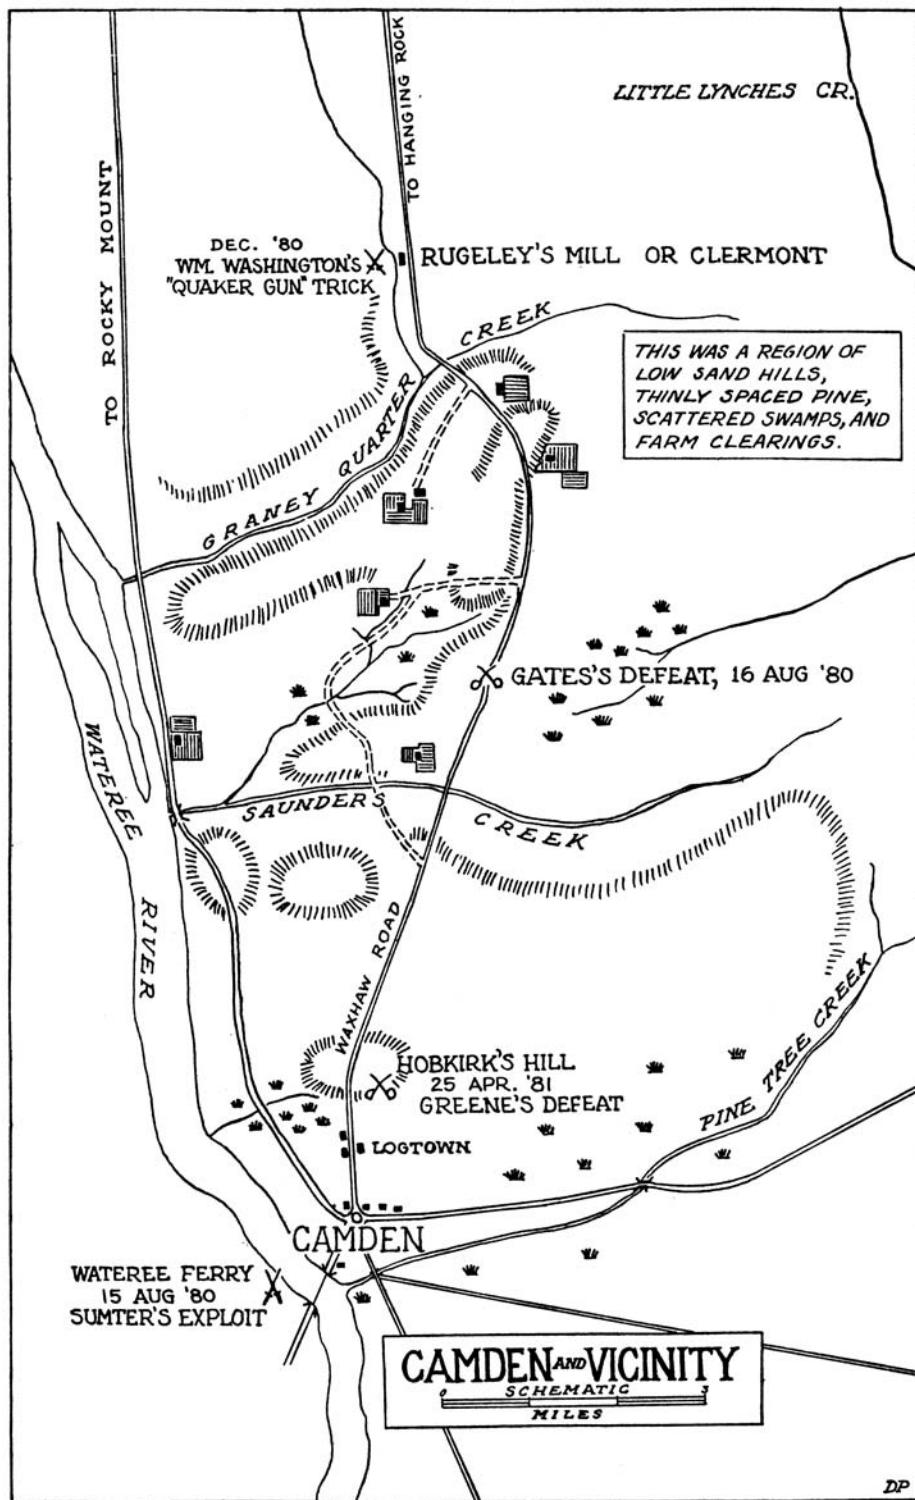

THE BATTLE OF CAMDEN, 16 AUGUST 1780

Gates called his officers together for a council of war. This time he appeared anxious to have their recommendations, for Otho Williams reports that he asked: "Gentlemen, what is best to be done?" There was a painful silence, from which historians have assumed that most of the officers favored a retreat but were unwilling to suggest it. It is also reasonable to assume that Gates hoped the council would recommend this course of action.

Williams notes that it was General Stevens who finally broke the silence, asking "Gentlemen, is it not too late *now* to do any thing but fight?" There are other versions that put Stevens' comment in more positive terms, but all agree generally that he was the only subordinate to say anything at the meeting. As a result, the officers got their men ready to fight.

The "meeting engagement" took place in a sandy area of widely spaced tall pines. Dense swamps narrowed the battlefield to 1,200 yards at the point where the columns collided, but this defile widened toward the north. Gates was favored by slightly higher ground, but his flanks would be "in the air" if he had to withdraw from the narrowest part of the defile. Cornwallis had the disadvantage of being less than a mile forward of Gum Swamp Creek. Despite the narrow front (which gave him no real opportunity for maneuver initially) and lack of depth to his position (which limited deployment of his reserves), believing himself to be outnumbered three to one, and knowing that the obstacle to his rear would make tactical defeat tantamount to annihilation, Cornwallis nonetheless calmly prepared to attack at dawn.

The British deployed in a line perpendicular to the road. On the extreme right, against the swamp, four companies of light infantry went into position. The Twenty-third (Royal Welch) and Lieutenant Colonel James Webster's Thirty-third Regiment extended this wing to the road. Webster commanded the entire wing. The Volunteers of Ireland were west of the road, then came the infantry of the British Legion, and the Royal North Carolina Tories extended to the swamp. Colonel Morgan Bryan's North Carolina Tory volunteers were in echelon to the left rear of this flank. Lord Rawdon commanded the left wing. The two small battalions (totaling five companies) of the Seventy-first Highlanders were to the rear, one battalion on each side of the road.

THE GALE GROUP.

Tarleton's cavalry was posted to the right of the road behind the Highlanders. The woods were so thick in this area that this cavalry reserve had to remain in column.

The American line was parallel to the enemy's. Unfortunately, Gates put his militia on his left, opposite the British regulars, and kept half his regulars in reserve. From east to west the American units were as follows: Stevens's Virginia militia was on the flank, with Armand's Legion to their rear; Caswell's North Carolina militia was toward the center of the line; and General Mordecai Gist's Second Maryland Brigade was west of the road, constituting the right wing. Gist's Brigade comprised the Second, Fourth, and Sixth Maryland Regiments, as well as the Delaware Regiment. The latter was closest to the road, and the militia unit to its east was Colonel Henry Dixon's North Carolina troops. De Kalb commanded the American right wing. The American line was so narrow that William Smallwood's First Maryland Brigade was placed astride the road to the rear as the reserve. The regiments of this brigade present were the First, Third, and Seventh Maryland Regiments. Thomas Woolford's Fifth Maryland Regiment was the Continental unit sent to reinforce Sumter. According to Otho Williams, the six guns of the First Virginia Artillery were posted in front of the American center, near the road. Other accounts and maps indicate they were not massed in the center, but rather that four were dispersed along the front and two on the road, with the First Maryland Brigade in the second line.

Although some skirmishing took place during the two hours between the time of contact and dawn, all this time must have been needed to form the opposing lines. Gates established his command post behind the First Maryland Brigade, and apparently had no plan other than to wait for Cornwallis to make the opening move. Colonel Williams had apparently come from Stevens's Brigade toward the artillery in front of the center when the British were reported advancing in line of columns. Artillery Captain Anthony Singleton told Williams he could see the British 200 yards away. Ordering Singleton to open fire, the adjutant general rode back behind the reserve brigade to inform Gates. Cannon were now firing on both sides, and smoke settled over the battlefield in a heavy fog. Williams suggested to Gates that Stevens move forward and attempt to hit the enemy while they were deploying from column into line of battle. Since the Virginians were already formed, Williams pointed out that "the effect might be fortunate, and first impressions were important." Gates agreed and ordered it done. Then he ordered the First Maryland Brigade forward in support of the militia. The American right also was ordered to advance.

Meanwhile, the enterprising adjutant general hurried to the left flank and Stevens led his brigade forward, but it was too late to hit the enemy right wing before they

deployed. Williams then went ahead with forty or fifty volunteers to disrupt the enemy's advance and weaken their impact on the V militia. The desired effect of this expedient, according to Williams, was not gained:

General Stevens, observing the enemy to rush on, put his men in mind of their bayonets; but the impetuosity with which they advanced, firing and huzzaing, threw the whole body of the militia into such a panic that they generally threw down their loaded arms and fled in the utmost consternation. The unworthy example of the Virginians was almost instantly followed by the North Carolinians; only a small part of the brigade commanded by Brigadier General Gregory made a short pause. A part of Dixon's regiment of that brigade, next in the line of the Second Maryland Brigade, fired two or three rounds of cartridge. But a great majority of the militia (at least two thirds of the army) fled without firing a shot. The writer avers it of his own knowledge, having seen and observed every part of the army, from left to right, during the action.

In his narrative of these events, Williams went on to describe the chaotic scene in greater detail:

He who has never seen the effect of a panic upon a multitude can have but an imperfect idea of such a thing. The best disciplined troops have been enervated and made cowards by it. Armies have been routed by it, even where no enemy appeared to furnish an excuse. Like electricity, it operates instantaneously—like sympathy, it is irresistible where it touches. But, in the present instance, its action was not universal. The regular troops, who had the keen edge of sensibility rubbed off by strict discipline and hard service, saw the confusion with but little emotion. They engaged seriously in the affair; and, notwithstanding some irregularity, which was created by the militia breaking pell mell through the second line, order was restored there—time enough to give the enemy a severe check, which abated the fury of their assault and obliged them to assume a more deliberate manner of acting.

The attack of the British right wing had been commanded by Lieutenant Colonel James Webster who, instead of pursuing the militia, had wheeled to roll up the exposed flank of the American right. Lord Rawdon had led the British left and forward when Webster's wing advanced, but the Continentals held their ground against repeated attacks, and even succeeded in pushing back the British right. Fog, dust, and smoke hung over the battlefield from the start of this action. The reduced visibility undoubtedly contributed to the panic of the militia, and it isolated the American right from the knowledge that they were now standing alone against the entire enemy army.

De Kalb was sufficiently hard pressed, however, to call for the reserve when his flank came under attack. Although the First Maryland Brigade had re-formed after the militia passed through them, General Smallwood had been swept away with the fugitives, so the (apparently omnipresent) Otho Williams assisted the regimental commanders to lead the First Brigade forward. They tried to bring the brigade up on the exposed flank of the Second Brigade, but the enemy held open a 200-yard gap between them. Cornwallis then turned Webster's regulars against the front of the reserve brigade.

Attempting to refuse their exposed left flank, the First Brigade ended up at a right angle to the Second Brigade. After being driven back twice and rallying twice, the Marylanders were driven from the field. Williams had meanwhile returned to the Second Brigade, where the British were closing in for hand-to-hand combat. Kalb had been unhorsed and was bleeding from several wounds, including a saber cut on the head, but the old Bavarian refused to quit or to retreat without orders from Gates. After leading a counterattack, which achieved a momentary success, the 58-year-old warrior fell mortally wounded, dying a prisoner in Camden three days later. Major George Hanger had led part of the Legion cavalry against the exposed flank of the American right, and Tarleton returned from his pursuit of the left wing to hit from the rear. The Battle of Camden was over and the pursuit began.

PURSUIT AND ITS PROBLEMS

Major Archibald Anderson, Colonel John Gunby, Lieutenant Colonel John Howard, and Captain Henry Dobson, all of Maryland, and Captain Robert Kirkwood of Delaware rallied about sixty men, who retreated as a unit. Other survivors, whether individually or in small groups, scattered in all directions. Tarleton's cavalry met some resistance at Rugeley's Mill from Armand and a few other officers who were trying to save the baggage train from American looters and send it north to safety. The British pushed on to Hanging Rock before the horses and men succumbed to exhaustion. Tarleton returned to Rugeley's late in the afternoon, and left the next morning to destroy Sumter's command at Fishing Creek on 18 August.

Gates, Caswell, and Smallwood were swept from the field with the first wave of fugitives. After abandoning hope of rallying at Rugeley's, Gates covered the remaining sixty miles to Charlotte, North Carolina, on the day of his defeat. A few troops assembled at Charlotte—the remains of Armand's Legion (whose unit had done no fighting at Camden but had momentarily stalled Tarleton at Rugeley's Mill), Smallwood with a handful of men, and Gist with two or three. Believing Charlotte

untenable, the wretched remnant of the army, accompanied by patriot refugees, 300 friendly Catawba Indians, and survivors of the battle at Waxhaws started the arduous trek through Salisbury to Hillsboro. Gates arrived there on 19 August, having covered 200 miles in three and a half days.

NUMBERS AND LOSSES

Casualty estimates for the American army vary tremendously. Christopher Ward states that of the 4,000 that had constituted "the grand army," only 700 reached Hillsboro. General Cornwallis, writing at the time, claimed that 800 to 900 Americans were killed and that 1,000 were captured. But Lieutenant Colonel H. L. Landers noted that these "numbers are so far from correct that they are valueless as a guide. The militia broke early in the day and scattered in so many directions upon their retreat that very few were made prisoners" (Landers, p. 62). According to Ward, the answer lies somewhere in between. He says:

It has been estimated that 650 of the Continentals were killed or captured, [all of ?] the wounded falling into the hands of the enemy. About 100 of the North Carolina militia were killed or wounded, and [an additional?] 300 were captured. Only 3 of the Virginians were wounded [and none captured?]. (p. 732)

Ward's numbers are valuable primarily in showing which units did the fighting. Only 1,000 Continental troops were on the field, and one battalion, Mordecai Gist's Second Maryland, was far more heavily engaged than the other. In addition, the Delawares on the east flank were under the heaviest pressure. Of the North Carolina militia, Dixon's regiment, which was deployed adjacent to the Delawares, was the only unit to put up any real resistance. Most of the North Carolina casualties must therefore have been in this unit.

Although the British had won a resounding victory, they paid dearly for it. The British lost 324 men: two officers and 66 men killed, eighteen officers and 238 men wounded, according to Fortescue. Most American writers accept the figures of Tarleton, which differ from Fortescue only in that he shows eleven fewer wounded—he puts these eleven in the category of "missing." While these figures sound low, they must be put into perspective. The Volunteers of Ireland suffered a 28 percent casualty rate, and the crack Thirty-third suffered an amazing 42 percent. Replacing these men would prove difficult.

Writing at the time, Captain John Marshall noted that "[n]ever was a victory more complete, or a defeat more total," and, as late as 1900, it was called "the most

disastrous defeat ever inflicted on an American army.” In England the victory appeared even greater, because Cornwallis repeated his mistaken assessment of American troop strength, putting the ratio of American to British forces at 5,000 to 2,000. (At times he portrayed the ratio as being even more skewed, claiming that his 2,000 troops were confronted by 7,000 American foes. Since Gates himself on the eve of battle thought he had 7,000, Cornwallis’s errors are excusable; they detract little from the magnitude of the triumph. In concept and execution the strategy and tactics of Cornwallis were first class. The performance of his troops and subordinate commanders, particularly Rawdon (before the battle), Webster (during the battle), and Tarleton (in the pursuit), was outstanding.

Gates, on the other hand, has been accused with considerable justice of making nearly every error possible. Scheer and Rankin summarize his defense neatly:

Civilians were quick to censure Gates, but few soldiers did; the harshest criticism leveled at him was not that he lost a battle but that he fought at all. Not many generals would have placed reliance on militia in the circumstances. (p. 411)

Nathanael Greene, successor to Gates in the Southern Department, wrote him that, after seeing the battlefield and reviewing Gates’s dispositions, attributed the Camden debacle to misfortune, rather than to blameable actions. However, Greene did consider the abandonment of Charlotte to have been entirely unnecessary and, in his opinion, the thing that alienated the Patriot public more than the defeat at Camden. A committee of Congress fully exonerated Gates of misconduct.

Following so closely after the American reverses at Savannah, Charleston, and Waxhaws, the engagements at Camden and Fishing Creek left the Patriots in what historian George Otto Trevelyan calls “a morass of trouble which seemed to have neither shore nor bottom” (vol. 5, p. 298). Cornwallis prepared for an invasion of North Carolina that promised to meet no resistance. Now that its own choices for leadership in the Southern Department (Benjamin Lincoln and Gates) had been eliminated, Congress let Washington pick the general who would be charged with salvaging what was left of the situation. Washington selected Nathanael Greene, but even before Greene’s southern campaign got under way, the tide was turned in favor of the American cause at Kings Mountain.

CAMPAIGN. A campaign is “a connected series of military operations forming a distinct stage in a war; originally, the time during which an army kept the field [*campagne*]” (*Webster’s Unabridged Dictionary*).

CAMPBELL, SIR ARCHIBALD. (1739–1791). British army officer and colonial governor. Born at Inverary, Campbell was educated at Glasgow University and the Royal Military Academy, Woolwich. He received a commission in the corps of engineers in 1758 and subsequently served with distinction in the West Indies. From 1768 to 1773 he was chief military engineer in Bengal, where he made a fortune from private ventures. The following year he was elected Member of Parliament for Stirling Boroughs, a seat he held until 1780.

In November 1775, with the rank of lieutenant colonel, he raised the Twenty-first Highlanders (Fraser Highlanders) and in May sailed with them to Boston for

his first service on the American mainland. Arriving in June, after the Americans had occupied the city, he was captured and held captive at Concord until exchanged for Ethan Allen and six other American prisoners in May 1778. Resuming command of his regiment, he was given eight battalions to reconquer Georgia, a task in which he displayed impressive talents as a commander. He took Savannah on 29 December and occupied Augusta on 29 January 1779 before handing over command of British troops in the southern colonies to major general Augustin Prevost. Returning home a popular hero and a newly promoted colonel, on 7 July he married Amelia Ramsay, daughter of the portraitist Allan Ramsay.

The following year he was made brigadier general with command of the royal troops in Jamaica. After a dispute with the governor about the use of his soldiers, Campbell was appointed governor as well as commander in chief for troops in Jamaica in 1782. In the face of probable Bourbon attack he reorganized the island's defenses, daring to use black militia for the purpose. He returned home in August 1784 and was knighted for his outstanding services on 30 September 1785.

His friendship with Henry Dundas led to his appointment as governor of Madras, where he arrived in April 1786. He was an energetic and conscientious administrator and earned Cornwallis's praise (and the East India Company's censure) for a treaty that settled the Nawab of Arcot's debts. He resigned in 1789 and returned home to be re-elected for Stirling Boroughs. He died in London on 31 March 1791 and was buried in Westminster Abbey.

CAMPBELL, JOHN SEE *Loudoun, John Campbell, fourth earl of.*

CAMPBELL, JOHN. (c. 1725–1806). British general. Born in Strachur, Scotland, Campbell entered the army in June 1745 as a lieutenant in Loudoun's Highlanders, then commanded by John Campbell, earl of Loudoun (the two men were not related). He served through the Second Jacobite Rebellion and took part in the Flanders campaign in 1747, after which he was promoted to captain. Appointed to the Forty-second Highlanders on 9 April 1756, Campbell was wounded

at Ticonderoga in 1758. On 11 July 1759 he became a major of the Seventeenth Foot, and was promoted to lieutenant colonel on 1 February 1762.; He commanded that regiment in the operations against Martinico and Havana in 1762. On 1 May 1773 he became lieutenant colonel of the Thirty-seventh Foot, and in 1776 he went to America with this regiment. During the Philadelphia campaign he was part of Sir Henry Clinton's force left in New York, and served as commander on Staten Island from 1777 to 1778. On 11 September 1777 he led a force that landed at Elizabethtown, New Jersey, with a dual mission. First, he hoped to create a diversion in favor of General William Howe's main army, which that day fought the Battle of Brandywine. He also planned to conduct a large-scale foraging operation through Newark. The raid netted some horses and livestock, which, according to General Clinton, "afforded a seasonable refreshment to the squadron and the army," but accomplished little more.

Around the end of November 1778, Clinton detached Lieutenant Colonel Archibald Campbell to take Savannah, Georgia, and General John Campbell to take command in West Florida. The latter was sent, at the suggestion of George Sackville (Lord Germain, then the British colonial secretary), with orders to capture New Orleans if Spain entered the war. On 19 February 1779 he was given the local rank of major general. Far from being able to execute the ambitious strategy proposed by Germain, who neglected the detail of sending him adequate means, Campbell was forced to surrender Pensacola to Spanish General Bernardo de Galvez on 9 May 1781. Exchanged almost immediately, Campbell was promoted to lieutenant general, and the rank was made permanent on 28 September 1787. Ten years later he was made a full general. He died in 1806.

CAMPBELL, JOHN. (1753–1784). British officer. Born on 7 December 1753 near Dumbarton, Scotland, Campbell was the son of Lord Stonefield and lady Grace Stuart, the daughter of John Stuart, the third earl of Bute. In 1771 he entered the army as an ensign in the Thirty-seventh Regiment. In 1774 he became a lieutenant in the Seventh Foot (also known as the Fusiliers). At the start of the Revolution, this regiment and the Twenty-sixth Foot, both of them under strength, were the only British regulars at the disposal of General Guy Carleton

for the defense of Canada. Campbell was captured at St. Jean early in the war. Soon exchanged, he was promoted to captain in the Seventy-first Highlanders on 2 December 1775, and on 30 December 1777 he became a major in the Seventy-first Highlanders. In 1780 he returned to England, and on 7 February 1781 was promoted to lieutenant colonel. He distinguished himself in India, where he commanded the famous defense of Mangalore from 23 May 1783 to 23 January 1784. At the conclusion of the battle, he surrendered his 856 survivors with the Honors of War. He died 23 March 1784 in Bombay.

CAMPBELL, LORD WILLIAM. (?–1778). Naval officer and last royal governor of South Carolina. The fourth son of the fourth duke of Argyll, William entered the navy, rising to post captain by 1762. In command of the *Nightingale* in 1763, he visited South Carolina and there married Sarah Izard, daughter of the wealthy Ralph Izard. The marriage, in a colony where Scots were already resented as condescending imperial agents and interlopers and which was preceded by Sarah's rejection of a local suitor, offended an already touchy colonial elite. Elected to Parliament in 1764, Campbell resigned in 1766 to accept the governorship of Nova Scotia. In 1773 he became governor of South Carolina, taking over the government from the long-serving lieutenant governor, William Bull, arriving in Charleston on 17 June 1775. Here he found royal authority in a state of collapse and attempted to enlist the help of frontier settlers and the Cherokee and Catawba nations. This policy was understandable but had to overcome conflicting grievances: the dissatisfaction of the settlers was based upon the virtual exclusion of the backcountry from local politics, while the Indians' dissatisfaction was based on their resentment of the expansion of frontier settlements. John Stuart, whom Campbell asked to conduct his Indian negotiations, saw the problem at once and offered to promote Native cooperation with Loyalists and to discourage indiscriminate Indian attacks.

When Campbell's plans were discovered, only the restraining hand of the moderates prevented the Charleston radicals from seizing him, and he was able to take refuge in HMS *Tamar* on 15 September 1775. He refused an invitation to return and threatened Charleston with the *Tamar's* guns until the battery at Fort Johnson forced the ship to leave. He retired to Jamaica before joining Sir Henry Clinton's expedition

against Charleston in June 1776, where he was wounded while commanding the lower gun deck in the *Bristol* during the bombardment of Sullivan's Island. He returned to Britain and died in Southampton, apparently of the long-term effects of his injury on 5 September 1778.

CAMPBELL, WILLIAM. (1745–1781). Patriot leader at Kings Mountain, Virginia. Born in Augusta County, Virginia in August 1745, Campbell led the local militia during Dunmore's War in 1774. At the start of the Revolution, Campbell raised a militia company. A few months later he was made a captain of the Continental First Virginia Regiment. In April 1776 he married Elizabeth Henry, the sister of Patrick Henry. He resigned his commission in October 1776. Thereafter he served as boundary commissioner in dealings with the Cherokees, rose to the rank of colonel in the militia, and was a delegate to the Virginia legislature. In 1779 and 1780 he led a partisan campaign against Loyalists, becoming known for his brutality as the "bloody tyrant of Washington County."

At the urging of Isaac Shelby, Campbell led 400 Virginia militia in the attack on Major Patrick Ferguson's Loyalists. Unable to agree upon a commander, the assembled volunteers elected Campbell "officer of the day," and he became the nominal leader of the composite force that won the important victory at Kings Mountain, South Carolina, on 7 October 1780. Campbell took part in the killing of Loyalists attempting to surrender.

A few weeks later Campbell marched his militia to join General Nathanael Greene, demonstrating courage and skill as a commander during the battles at Wetzell's Mill on 6 March 1781, and Guilford, North Carolina, on 15 March of that year. Rewarded with the rank of brigadier general by the Virginia assembly on 14 June 1781, Campbell next led his militia to reinforce General Lafayette's forces in Virginia. Campbell fell sick shortly thereafter and died at Rocky Mills, in Hanover County, Virginia, on 22 August 1781.

CAMP FEVER. Any epidemic fever occurring in camps, chiefly typhus.

Mark M. Boatner

CAMP FOLLOWERS. As American revolutionaries in 1775–1776 created the forces they needed to ensure success against British arms, they had to grapple with their hostility to regular armies. One part of their antagonism, other than the ideological, was a distaste for some of the baggage that accompanied established militaries. They did not disdain the matériel, that is, the arms, ammunition, food, shoes, and other supplies and equipment. Rather, it was the personnel they tended to despise. There were a number of reasons for that. One was the cultural baggage of British officers and soldiers: their mental maps of who were superiors and inferiors. Their conceptions of colonists as backward provincials and imperial servants infuriated the Americans. The Revolutionaries, in turn, perceived Britain's regular soldiers as myrmidons accompanied by nasty minions. The Americans were determined that the same could not be said of their own forces. This led them to tout reliance on militias rather than on an army and then, when that proved untenable, to celebrate their servicemen as citizen-soldiers. It also led them to discount their own camp followers even after they proved useful.

While American revolutionaries may have contemplated creating their own new model army, they actually—guided by General George Washington—consciously modeled the Continental Army upon European, and specifically British, forces. Those armies utilized civilian adjuncts—job-related followers who were employed by or engaged in sanctioned trade with the forces—for essential supplies and services. They also had family followers. Eighteenth-century militaries had such followers because of the kind of men who served, how long they served, and the nature of the service itself. At times they also had them because of refugee issues. The American army accumulated followers for the same reasons. It tried to minimize the numbers, impact, and dependency (both of the followers on the army and the army on followers) at various times, but ultimately the Continental army maintained its followers because the institution and its men, like the British army, needed them.

WIVES AND OTHER CAMP FOLLOWERS

British army officers generally came from the gentry while the soldiers came from the lower orders. While many young gentlemen bought a commission, served a short while, and then sold out, many others made the army a career. When those who did so married, their wives became the ladies of the regiment. Soldiers usually enlisted for life (although special circumstances could limit the term) and found that the military then exercised command over their choice and support of a spouse. A soldier had to have permission to marry if he wanted his wife to be recognized, that is, rationed and billeted, by the regiment. Permission was generally predicated upon a soldier's seniority and good service and the woman's behavior. When the army had to expand rapidly for war, it accepted wives in order to recruit their spouses. Rank and regulation thus affected the number and treatment of family followers.

Deployment determined whether spouses, children, and servants were true camp followers. While many British officers' wives maintained households in garrison towns, fewer actually accompanied their husbands when they shipped out for war. More soldiers' spouses would have probably embarked than actually did had it not been for regimental quotas determining how many wives could travel with the troops. The quotas varied, but they generally allowed up to six women per company (about one woman to every ten men in a typical company) and came with the caveat that such women would receive rations only in return for such services as nursing, washing, and cooking for the soldiers. Even so, once the army was on the move it picked up more followers, thus making a determination of the average ratio of followers to soldiers difficult (but apparently greater than one to ten). Some wives, concubines, and children remained with the regiments as officers' servants or simply snuck by. Others in the actual theaters of war, as in America, attached themselves to soldiers who encamped near their homes. Some of those American women followed the British drum for love, others for money.

Still other Americans accompanied the British army for security or opportunity or in loyalty. During the War for Independence refugees flocked to and then followed the British army starting with its evacuation of Boston in 1776. As American Revolutionaries tightened their control of communities through the use of patrolling militias, loyalty oaths, and confiscation of enemy property, more Loyalists fled to British lines. Some of those men either joined that army or Tory extramilitary organizations. Others served the British army in civilian capacities, as supply contractors or servants or the like. Such followers included African Americans. Most were fugitive slaves responding to words and actions (from Lord Dunmore's

Proclamation in November 1775 to the tactics used by British and Loyalist forces in Georgia and South Carolina from late 1779 onward), offering independence to those who would run away from rebellious masters and serve with the British forces. Others were “contraband” or were impressed into military labor. Whether black or white, acting as soldiers or servants, if their families followed, they had the task of trying to reestablish households within the limitations of camps and garrisons. Other women, some of those who had flirted and more with British officers and soldiers in Philadelphia and elsewhere, also ended up following the British army.

REGULATING CAMP FOLLOWERS

The British forces regulated their camp followers, whether they had been brought from England or acquired in America, so that they would be useful to the troops and not undermine health or discipline. Commanding officers issued numerous orders stating where accompanying women could go and what they were to do. They threatened punishment to those who stole, sold illegal liquor, or engaged in licentious activities (especially if they passed on sexually transmitted diseases). Noncompliance could result in the revocation of rationing or licenses for trade or in whipping and banishment.

The hired German forces did the same with the many women and children who accompanied them. In return for rations and permission to bunk with their men, the women were expected to obey orders and work and forage for their keep. Observers tended to describe them as dirty beasts of burden. The Baroness Frederika von Riedesel, who followed her husband, General Friedrich Riedesel, to America, was anything but that. She was an aristocrat who distinguished between ladies and women of the army.

The Continental Army also maintained distinctions among its female adjuncts. Premier among its ladies was Martha Washington. In the late months of 1775 she made the first of many treks to join her husband over the course of the war. She and other generals’ wives, such as Catharine Greene and Lucy Knox, generally stayed only so long as the troops remained in camp and their spouses had some time for socializing. Once the campaign commenced, these consorts generally, though not always immediately, returned home. Wives of more junior officers, if they came to camp at all, appear to have followed that example. There were, of course, exceptions, as some officers’ wives, like many soldiers’ spouses, stayed with the army throughout a campaign. If a man left a farm or business, the likelihood was that the family remained to carry on. Only those who had others to see to things had the time and resources to make visits to camp. On the other hand, those with nothing had little to lose in choosing to follow the army, and those who had already lost everything saw military encampments as refuges.

Some Canadians who fought at Quebec and formed the cores of the Continental Army’s First and Second Canadian regiments marched into exile in 1776. The wives and children of many of these men trudged south with them and stayed with the American army for the rest of the war. When the British took and held areas, such as New York City and later Charleston, families of men in or joining the Continental service with nowhere else to go set out for camp as well.

The Continental Army could not limit followers by enlisting only single men, forbidding soldiers to marry, or barring families from camp. Doing so would have resulted in even fewer men in the service. It did, however, try to manage the escalating numbers of followers. There appear to have been fewer of them in the early years of the war than later. That may have been due to the reliance on militia in the first year, the short-term enlistments of the men in the next, and other priorities in the army’s organization. By 1777 there were more mentions of women in regulations and ration lists. As the war widened and the Continental army became more of a regular army, it accumulated more of the baggage common to such forces. By 1781 such administrators as the adjutant general, secretary at war, and superintendent of finance wanted to regularize rationing of women, suggesting a ratio of one to every fifteen men. Washington disagreed, for—as he explained in 1783—that could actually have increased the number of women rationed. He thought it better to accept a surplus of women with some regiments rather than impose a uniform policy throughout the army. He had a point. Some regiments, especially those with men and families from British-occupied areas, did have more followers, but others had far fewer. Overall, based on limited returns and keeping in mind that numbers changed given the time, place, and unit, it appears that the number of adult women followers averaged out to approximately three percent, or one to every thirty men.

Accepting rations meant accepting regulations. As retainers (meaning those maintained or employed by the army), followers were subject to orders under the Articles of War. Continental army officers commonly directed when, where, and how followers were to travel with and work for the troops. Some orders directed followers to stay with the baggage and off the wagons. Others stipulated what washerwomen could charge for laundry and what male and female sutlers could charge for the liquor and other goods they sold. Such orders promised punishment for noncompliance. The same held true if a follower was found pilfering or plundering. Serious offenses could result in court-martial and banishment.

Although some followers were troublemakers, most proved useful to their respective armies in numerous ways. Peddlers provided both necessities and luxuries. Family

members and servants (black and white) cooked and cleaned for officers as well as soldiers. Some women volunteered for nursing duty, while others who were already followers found themselves essentially drafted for the task. Through all of these services, followers contributed to the cohesion and continuing operation of their forces. That proved especially important to the establishment of the army of the United States.

CANADA, CONGRESSIONAL COMMITTEE TO. March–June 1776. Realizing that the Canada invasion was failing politically as well as militarily, Congress decided early in 1776 to send a special committee to do what it could to win over the people. Benjamin Franklin, Samuel Chase, and Charles Carroll of Carrollton (not then a member of Congress) were selected. Carroll, a Catholic who had been educated in France, persuaded his cousin John Carroll, a priest, to accompany them. The group left Philadelphia on 25 March and, after a rigorous trip, reached Montreal on 29 April. Their mission a failure, they returned in early June with firsthand accounts of the "shocking mismanagement" of military operations.

CANADA IN THE REVOLUTION.

"Canada," as known in the twentieth and twenty-first centuries, did not exist as a nation at the time of the American Revolution. Its creation in the modern sense came in 1867, when the various colonies of British North America gradually came together to form the Canadian Confederation, the latest province to join being Newfoundland in 1949. During the American Revolution, the British possessions north of the so-called thirteen colonies were extensive in territory and sparsely populated. Each was a quite different entity from the others and each had its own government and laws. On the Atlantic seaboard were the colonies of Nova Scotia, Newfoundland, and the Island of St. John (later Prince Edward Island). On the continent, from the Gulf of St. Lawrence westward to past the Great Lakes, was Canada. North and west of Canada was Rupert's Land, the vast wilderness that was the Hudson's Bay Company's fur trade domain.

The largest and most important of these in 1775 was Canada, officially called the Province of Quebec after 1763. It was a province like no other in the British Empire because it had been the former northern part of New France and nearly all of its population of about eight-five thousand was of French ancestry except for two or three thousand newly arrived Britons and Americans. Nearly all were settled along the shores of the St. Lawrence and Richelieu Rivers. The fortress city of Quebec was the capital and port of entry. Montreal was the main business city and key to the fur trade that was so important to Canada's economy. Trois-Rivières (Three Rivers) was the next town of importance in the St. Lawrence Valley. There were no substantial settlements further west except for the town of Detroit, between Lakes Erie and Huron.

BRITISH RULE IN CANADA

Following the surrender of the last French troops to British forces at Montreal in September 1760 and the Treaty of Paris three years later, when France abandoned its North American colony, Britain found itself having to rule a rapidly expanding French population. A worse problem concerned the conciliation of the civil and religious rights of the Roman Catholic French Canadian population, guaranteed by the Treaty of Paris (1763), with those of the small Protestant British and American community that had just arrived. The latter claimed that only they should rule the country, with their own elected legislature reserved to Protestants, which was utterly unacceptable to the French Canadians who formed the overwhelming

majority of the population. As there was no likelihood of massive immigration from the British Isles, it was obvious that a satisfactory result, agreeable to the French Canadians, had to be found if the colony was to thrive. It was further understood that pushing French Canadians to revolt could be disastrous. Half of them were veterans of the late conflict and a rebellion would require a considerable British military effort to defeat.

The solution found was the Quebec Act of 1774, which basically satisfied no one. Unfortunately, the British-appointed governor, Guy Carleton, had misread French Canadians' social organization and fostered, through an appointed legislative council, a feudal-style society based on the powers of the gentry, or seigneurs, over farmers. The law was for the most part badly received by the British and Americans as it restored Canada's vast wilderness frontier and seemed more favorable to the French Canadians than to them. For their part, most ordinary French Canadians resented the extensive powers it gave to the church and the seigneurs, powers they had never enjoyed under the French royal government. Furthermore, although British subjects, they were still excluded from the public service or from obtaining military commissions in the regular forces because they were Catholics. However, it was a worthy effort and most in Canada looked to see how it would actually work and would adapt accordingly. The social climate was calm and there was no great discernable resentment against British authority, a very different situation than found in the thirteen American colonies.

Another concern for the British authorities in Canada was the vast expanse of the Great Lakes region and relations with aborigine nations there. Chief Pontiac's uprising during 1763–1764, while overrunning most of the western forts, had been defeated. This, however, left the new British overlords rather unsure about their future prospects in dealing with aborigines in the Great Lakes area. They wisely continued the policies of the French by maintaining garrisons in western forts such as Frontenac (later Kingston, Ontario), Niagara, and Michilimackinac while the British Indian Department, a political as well as a military organization, fostered good relations by diplomacy, gifts to the various nations, and a certain degree of protection from American settlers encroaching on native lands.

The military situation in Canada was quite stable at the eve of the American Revolution. In 1774 the 7th, 10th, 26th, and 52nd regiments, with Royal Artillery detachments, were in garrison in the St. Lawrence and Richelieu Valleys and the 8th was stationed at the Great Lakes. All were understrength and totaled about 1,700 officers and men. At this time, General Gage in Boston had overall military command in North America and, given the tense political climate in that city, instructed Governor Carleton to immediately send the 10th and 52nd there, which was

accordingly done. Excluding the garrisons on the Great Lakes, there were only about 800 regulars left in Canada by the spring of 1775. The Canadian militia, which was to be reorganized, listed about 18,000 men who on paper were able to bear arms. But this organization, excellent during the French regime, had been very neglected by suspicious British authorities so that it had become totally inefficient and was practically unarmed.

AMERICAN ATTACK

Unbeknown to Canada, tensions in Massachusetts had broken out into fighting between American Patriots and British troops in April 1775. On 10 May a bemused detachment of the Twenty-sixth Foot was captured at Fort Ticonderoga and Crown Point in New York by a party of Patriots led by Ethan Allen. The Americans had decided to invade Canada and, during the summer of 1775, General Richard Montgomery led an American army of some two thousand men up the Richelieu River valley. In September he laid siege to the fort at Saint-Jean (St. John), defended by a garrison of five hundred British troops and Canadian volunteers. Nearby Fort Chambly was easily captured on 20 October. The siege of Saint-Jean dragged on until 2 November, when its garrison surrendered after a resistance of fifty-five days. It was a disaster for Carleton, who was left with perhaps one hundred regulars to defend Canada. Montreal obviously could not be held, and the Americans entered the city on 12 November, just as Carleton was leaving it.

Carleton reached Quebec on 19 November and quickly organized its defenses to withstand a siege. He now knew that a second American army of about 700 men under the command of General Benedict Arnold had come up through Maine and was at Lévis, facing Quebec. On 3 December, Montgomery's army linked with Arnold's outside the city. Within its ramparts, Carleton only had about 110 regulars, mostly from the Seventh Foot and the Royal Marines, some 200 recruits of the newly raised Royal Highland Emigrants, 80 artificers, and 460 sailors. All able-bodied men in the city were organized into companies numbering about 320 British and 580 French Canadian militiamen. In all, the city had a garrison of about 1,700 men. The Americans staged a disastrous assault in a snowstorm on 31 December in which General Montgomery was killed, Arnold wounded, and some 400 Americans captured. The siege, now more like a blockade, dragged on until May 1776, when reinforcements arrived at Quebec from England. West of Montreal, a mixed party of the Eighth Foot, Indians, and Canadian militiamen beat an American force at Cedars. After a repressive occupation and, as a final act, trying unsuccessfully to set fire to the city on 15 June, the American army retired to the state of New York.

An important decision made by the British government back in July 1775 was to split North America in two commands. Thenceforth, the Canada command under Governor Carleton was a separate, independent command from that of General Gage's, the latter comprising the thirteen colonies, Nova Scotia, and the Island of St. John. One result was that Carleton now had the power to raise units without first asking General Gage. With hundreds of persecuted Americans who remained loyal to the crown now seeking refuge in Canada from their Patriot neighbors, a number of Loyalist units were raised, the most famous being the King's Royal Regiment of New York and Butler's Rangers. Together with the aborigines, most of whom took up arms with the British, these Loyalist units raided the Americans' frontiers from Canada until the end of the war.

FRENCH CANADIAN NEUTRALITY

While some French Canadians joined the Americans or fought for the British, the vast majority remained neutral during the Revolution. They saw the conflict as a fight between their old enemies, the British and Americans, who only fifteen years earlier had invaded and ravaged parts of their homeland. And they knew better than to believe the promises made by the American Continental Congress and the kings of Britain or France. Three companies of French Canadian militia were embodied under some duress in 1777; two were part of General Burgoyne's disastrous Saratoga campaign, and the other was at the unsuccessful siege of Fort Stanwix. A new and, to the French Canadians, generally positive element was the arrival of German regiments in British pay beginning in 1776. Their officers often spoke French, they had blue or white uniforms rather than the scorned red coats, and the German soldiers were generally seen as more open and friendly than the dour British. The British government certainly noted this, and the regular garrisons in the St. Lawrence and Richelieu Valleys were eventually largely German, some five thousand being on guard by 1782. In 1778 Carleton was replaced by Sir Frederick Haldiman, a Swiss soldier fluent in French. By then, the British knew they would never enlist the French Canadians, so they did all they could to keep them neutral, and in this they succeeded.

RESISTANCE IN NOVA SCOTIA

Nova Scotia was a small colony of seventeen thousand souls in 1775. With Halifax as the main base for the Royal Navy in the North Atlantic as well as an important staging point for the army and the colony's most important city, American autonomist ideas were not entertained for long. The most serious event was an attempt by about five hundred American patriots to capture Fort Cumberland (the former French Fort Beauséjour near

latter-day Aulac, New Brunswick) in November 1776. Some two hundred Loyalists of the Royal Fencible Americans Regiment garrisoned the fort with their families, many having been among the eleven hundred refugees recently evacuated from Boston. They resisted until relief arrived on 28 December and then chased back the Americans. Otherwise, American privateers, more intent on looting than the spread of liberty, would occasionally raid small coastal towns such as Charlottetown (Island of St. John) in 1775 or Liverpool (Nova Scotia) in 1778. Local provincial troops were consequently raised in Nova Scotia, the Island of St. John, and Newfoundland to assist the British regular garrisons.

FRENCH NAVAL ATTACK

One of the most spectacular, if least written about, events in Canada during the Revolution occurred in faraway Hudson's Bay during 1782. On 8 August, the employees of the Hudson's Bay Company at Fort Prince of Wales saw three sails on the horizon that, to their utter surprise and dismay, turned out to be a French 74-gun battleship with two frigates. A 250-man-strong detachment from the Armagnac and Auxerrois regiments landed and demanded the immediate surrender of the bastioned stone fort. They were commanded by count La Pérouse, a daring sailor who was to become one of the great explorers of the Pacific. The fort surrendered, as later did those of York Factory and Severn, and all were blown up. Although the British later made light of the raid, it must have been a painful loss, as no dividends were paid to the company's shareholders for the next two years.

As a whole, the American Revolution's effect on Canada was, except for the invasion of 1775–1776, relatively minor during the course of the conflict. The real impact came at war's end, when some forty thousand Loyalists arrived in the country and forever transformed it.

CANADA INVASION. August 1775–October 1776. Although Ticonderoga’s capture on 10 May 1775 opened the way for an American advance into Canada and Benedict Arnold warned the Continental Congress that the British were massing their forces at St. Johns, Congress did not respond with a decision to take offensive action until 27 June. Congress believed that the inhabitants of the “fourteenth colony” would join the resistance to the London authorities if only the occupying British garrison could be neutralized. Execution of the operation fell to Major General Philip Schuyler, who commanded the Continental army’s forces in the province of New York. Unfortunately, they consisted only of four infantry regiments and one company of artillery that New York was in the process of raising, two regiments on their way from Connecticut in response, and a handful of miscellaneous units. One of the latter was the regiment to be raised from the Green Mountain Boys in modern Vermont, and Congress had only authorized it four days earlier. When all of the units assembled, Congress thought that Schuyler would have about five thousand men. But he also had to protect New York City and create from scratch the support structure to sustain an army.

Fortunately, Schuyler’s considerable experience in the French and Indian War had been in the logistics of wilderness operations. So he set about creating the New York territorial department while dispatching his second in command, Brigadier General Richard Montgomery, to take charge at Lake Champlain. This decision, which would be repeated several times during 1775, played to the two men’s strength. Montgomery had retired from the British army a few years earlier and was an experienced combat veteran. After several false starts, he occupied Ile-aux-Noix on 4 September with twelve hundred raw troops and a small, heterogeneous fleet. Schuyler joined him there, but he had to go to the rear on the 16th when his health failed. Operations against strategic St. Johns from 5 September to 2 November 1775 dragged on much longer than the Americans expected. The fall of nearby Chambly on 18 October boosted morale. During this period Ethan Allen made his abortive attack on Montreal on 25 September. Although plagued with disciplinary problems, Montgomery pushed on to take Montreal on 13 November with only token resistance. Meanwhile, the start of Arnold’s march to Quebec on 13 September opened a second front in the campaign.

CARLETON’S DEFENSIVE PLAN

Lieutenant General Guy Carleton’s command in Canada reported directly to London and remained separate from that of Gage. He was also the civil governor of Canada, which had been transferred to Britain by the Treaty of

Paris in 1763. His policies leading up to the Quebec Act of 1774 had won support from wealthy French Canadians and from the Roman Catholic bishop; the eighty thousand or so other inhabitants remained skeptical. Since his “army” had only eight hundred or so regulars, and one-third of them were in the isolated fort on the Great Lakes, Carleton looked to the militia for assistance.

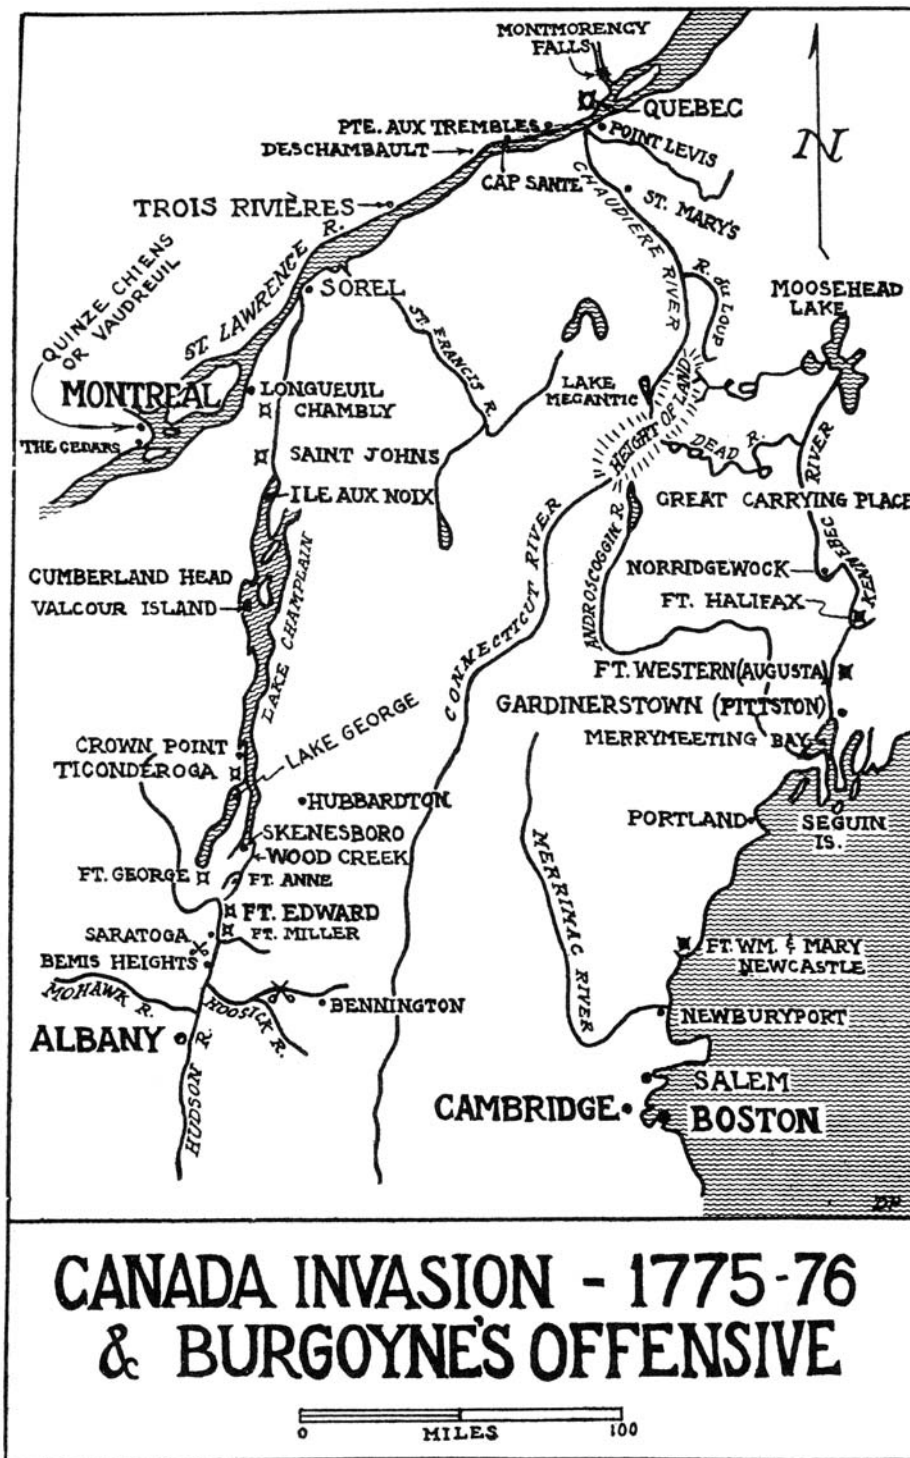

On 9 June 1775 Carleton had declared martial law, and on 6 September he issued an order to mobilize one-tenth of the militia in each parish. The farmers in most districts simply refused to obey the orders or follow the officers he had appointed. While the Americans struggled to organize an invasion, Carleton decided that his only hope of success would come if he concentrated as much strength as possible in the forward forts to give his deputy time to get the walled city of Quebec ready. He gambled that this strategy would string things out until the harsh Canadian winter stopped the Americans. Come spring, he knew, fresh troops would arrive from Britain. The stand at St. Johns cost him half of his regulars but won precious weeks. Carleton might have been more active in calling for support from the Indians, but like many other experienced officials, he knew that unleashing them would also harden American resolve.

SIEGE OF QUEBEC

The fall of Montreal (13 November) shifted the battlefield to Quebec. Arnold’s expedition reached the St. Lawrence opposite the city on 9 November; storms prevented him from crossing for several more days. During the interval, one last convoy made it upriver with about eighty Highland veterans to assist Lieutenant Governor Hector Cramahé. Carleton would arrive from the west on the 19th aboard an armed schooner with news that Montgomery’s American army was on the way.

Lieutenant Colonel Allen McLean, the commander of the newly arrived Royal Highland Emigrants, took over the day-to-day organization of the city’s defense. On paper, about 1,200 men were available, but that included 200 English-speaking and 300 French Canadian militia of dubious reliability, 37 marines, and 345 sailors brought ashore from the ships in the harbor. The advent of winter froze the St. Lawrence and enabled the British to leave skeleton crews on the frigate *Lizard* (twenty-eight guns), the sloop-of-war *Hunter* (sixteen guns), four smaller armed vessels, and two transports.

Arnold’s seven hundred men outside the walls could only set up a blockade on the land side; they lacked artillery and ammunition to do anything more. Arnold tried to bluff MacLean into surrender, but MacLean did not bite; instead, he burned houses near the walls that might provide the Americans cover and lobbed eighteen-pound shot out. Early on 19 November, Arnold fell back

to avoid an expected sortie. He stopped and camped at Pointe aux Trembles (modern Neuville), twenty miles up the river. Two weeks later, on 2 December, Montgomery arrived and assumed command. He brought only three

hundred more infantry, raising the American strength to about one thousand. But he had artillery and a good supply of ammunition, food, and—of much more immediate interest to Arnold's threadbare survivors of

the wilderness—a year's supply of British clothing captured from the Seventh and Twenty-sixth Foot.

On 5 December the Americans reoccupied positions outside the gates of Quebec. Although the defenders outnumbered him and had the further advantage of fortifications, Montgomery had to risk taking Quebec by assault before he lost many of his men upon expiration of their enlistments. This operation, on 31 December 1775 and 1 January 1776, resulted in a brave but costly defeat in which Montgomery was killed and Arnold badly wounded.

THE RETREAT

With about six hundred men—including Canadians and friendly Caughnawaga Indians—Arnold kept up the blockade and called for a veteran general and fresh troops to renew the attack. Brigadier General David Wooster was holding Montreal, Chambly, and St. Johns with fewer than six hundred men and had no troops to spare. (A British regiment was still in the Great Lakes region, and the Indian threat was ever present.) General Schuyler could offer no assistance from Albany, being occupied with Loyalist uprisings in the Mohawk Valley. Arnold's emissary, Edward Antil, continued on to Philadelphia, where Congress voted on 19 January 1776 to send reinforcements to Canada. Washington had only learned of the disaster two days earlier. Despite his own problems of holding together enough troops for the Boston siege, he proposed that seven hundred of the militia ordered to augment him be diverted to Canada. But he refused requests from Congress and Schuyler to detach Continentals until April, when the British had evacuated Boston and he shifted his own operations to New York City. Then he sent four of his regiments north.

Wooster joined Arnold at Quebec on 2 April and took command of a force that now numbered two thousand. Arnold, who had been promoted to brigadier general on 10 January but was still hobbled by his wound, went to take command at Montreal. When Major General John Thomas reached Quebec on 1 May, he assumed command of an army that had been built up to twenty-five hundred, only to be reduced by death, discharges, and desertions to nineteen hundred; more ominously, smallpox had appeared and not enough time remained to try inoculation, a preventive measure still feared by most Americans. During May, more units started flowing in from New Jersey, Pennsylvania, and New York and Brigadier General William Thompson had reached Fort George with the regiments from Washington (two thousand strong, including a company of riflemen and another of artificers). By the time they all assembled, almost seven thousand American troops would be in Canada. In addition, Congress sent a special committee, composed of Benjamin Franklin, Charles Carroll, and Samuel Chase,

that reached Montreal 29 April to try and persuade the Canadians to form a government and send delegates to Philadelphia.

Despite the apparent absurdity of their posture—500 effectives, on the end of a long line of communications, besieging a walled city of 5,000 inhabitants garrisoned by 1,600 armed men supported by 148 cannon and several ships—the Americans lasted through the winter. But when the spring thaw opened up the St. Lawrence, the inevitable British relief convoy arrived. Thomas got word that it was coming on 2 May but could do nothing about it and started moving forces upriver. Carleton had only a few of them land and on the 6th led nine hundred troops and four guns out of the city. Thomas's rear guard fell back but had to leave behind two hundred sick, cannon, supplies, and even headquarters records. Carleton did not pursue, but waited for the rest of the ships to work their way to Quebec. The reinforcements under Major General John Burgoyne brought Carleton's total to about thirteen thousand men, including forty-three hundred Germans from Brunswick and Hesse-Hanau.

The American retreat halted at Deschambault, forty miles up the St. Lawrence, to regroup. Thomas then fell back to Sorel (arriving on 17 May), having been harassed on the way by British marines and naval gunfire. To further complicate matters, smallpox reached epidemic proportions. Thomas died of the disease on 2 June, and Congress recalled Wooster four days later. Command passed to Major General John Sullivan on 1 June, when he reached St. Johns and found Thompson's column.

Although the Americans had suffered a humiliating setback at The Cedars, the arrival of fresh troops and adequate supplies raised expectations. But the dream of Canada joining the United Colonies ended in the defeat of this last field force at Trois Rivières on 8 June.

CARLETON'S COUNTEROFFENSIVE

Sullivan had no alternative but to order a retreat to Lake Champlain. He and the bulk of his troops (about twenty-five hundred) evacuated Sorel on 14 June; lead elements of the British convoy arrived an hour after his last bateau left. Arnold and the small Montreal garrison escaped across the river to Longueuil on 9 June and withdrew to St. Johns. He then took charge of the rear guard while crowded bateaux evacuated the rest of the troops and as much matériel as possible. The last of Sullivan's men reached Ile aux Noix on 19 June and were further crippled by an outbreak of what was probably dysentery. The last of the Americans straggled into Crown Point on 2 July, ten months after Montgomery had set out to liberate Canada. They left five thousand casualties in Canada; another three thousand were hospital cases, and the remaining five thousand were in bad shape. On 17 June,

Congress had ordered Major General Horatio Gates to take command of the troops in Canada. Since Schuyler was still at his headquarters in Albany and Sullivan was with the troops at Crown Point, there was a question as to which of these officers Gates was succeeding. On 8 July, Congress clarified its instructions, and Gates—who was junior in seniority—became Schuyler's second in command. Despite the objection of many subordinate officers, Schuyler, Gates, and Sullivan decided in a council of war at Crown Point on 5 July to abandon the extensive works at Crown Point and concentrate their defense at Ticonderoga, where logistical problems were easier to solve. More Continentals and a force of mobilized militia came up to bolster the defenses.

Carleton paused at St. Johns until 4 October in order to build a fleet. Despite his numerical advantage over Schuyler, he could not advance until he had built a fleet capable of winning control of Lake Champlain. The Americans understood that same vital point and raced to augment their own squadron. Arnold took command of the American vessels, which were manned by army troops, not by Continental navy seamen, and took up patrolling the north end of the lake. The squadrons clashed in the Battle of Valcour Island on 11 October 1776. Arnold and his men put up a game fight against a superior force and then slipped away under the cover of darkness. A running fight consumed the next two days as the British caught up with the American vessels one by one. Most beached before they could be captured, and the crews got away. The Americans lost control of the lake, but the decimated fleet had bought the same precious time that the defenders of St. Johns had won the previous fall. Carleton took a look at Fort Ticonderoga but withdrew when he realized that winter would come before he could break through.

SIGNIFICANCE

Time turned out to be the critical commodity in the Canadian campaign. In 1775 it ran out for the Americans; in 1776 it ran out for the British. In each case the defenders benefited from the fact that winter snow and ice trumped the transportation of the era.

It is interesting that many historians, including Lynn Montross in *Reluctant Rebels* (1950), tend to consider the Canada invasion as a useless frittering away of men, money, and supplies that could have been better used for defense. Others, including John Fortescue, see the seeds of Burgoyne's disaster at Saratoga in London's overconfidence brought about by Carleton's easy victories in 1776. Both are probably too harsh. Carleton received a knighthood for the defense of Quebec. And while Canada did not become the fourteenth state, the First and Second Canadian Regiments did become the equivalent of a fourteenth state line, and

after consolidation on 1 January 1781 they served until the end of the war, including participation at Yorktown.

CANADA INVASION (PLANNED).

1778. During the struggle for control of the Continental Army known as the Conway Cabal, the new Board of War planned to follow up on General John Burgoyne's defeat by launching an "irruption" (invasion) into Canada. The Board deliberately ignored Washington when making its decision and did not even tell him until late January 1778. On 22 January Congress approved the Board's decision and named Major General the marquis de Lafayette as the commander, with Brigadier General Thomas Conway as second-in-command. The Board felt that using both a Frenchman and an Irish veteran of the French army would attract support from the French Canadians, but it also assumed that Lafayette would be a mere figurehead and that Conway, its ally, would pull the strings. That assumption was a fatal mistake. Although Lafayette was young and had been only a captain in the French army, he came from the court nobility, unparalleled masters of intrigue and power politics. He promptly informed Congress that he would accept the command only if the orders were to come from Washington and General Johann De Kalb replace Conway, implying dire consequences if Congress did not comply. Not only would he go home, he would take all the other French volunteers with him, and inform his father-in-law (the duc d'Ayen) that the king should be urged to send no more aid. While the cabal quickly collapsed, Lafayette went to Albany to take charge

Canadian Regiment, First

of the operation. There he found that neither the supplies nor the troops had been assembled and that the invasion could not work because the British were prepared. On his recommendation, Congress canceled the operation.

CANADIAN REGIMENT, FIRST. On 20 November 1775, Brigadier General Richard Montgomery authorized James Livingston, a New-York-born merchant then living near Chambly, Quebec, to raise a force of Canadians for the Continental service. The unit was to consist of eight companies, but probably was never recruited to full strength. The Canadians participated in the assault on Quebec (31 December 1775, at St. John's Gate) but they did not distinguish themselves. Livingston led his remaining troops in the retreat from Canada, after which Congress gave him permission to recruit in New York, in part among pro-American refugees from Quebec. The regiment remained with the Northern army in 1776 and through 1777, participating in the battles of Saratoga in September and October of that year. Reorganized into five small companies in 1778, it served in the Hudson Highlands for two years, until 1 January 1781, when its remaining personnel were absorbed into Moses Hazen's Second Canadian Regiment and Livingston retired.

CANADIAN REGIMENT, SECOND. Massachusetts-born Moses Hazen was an effective and brutal captain of rangers during the final French and Indian war (1759–1760), after which he settled in Montreal. Not immediately pro-American at the outset of the Canada invasion, he soon chose the American side and, after serving at the siege of Quebec city, was sent to Philadelphia to persuade Congress to reinforce the

American army in Canada. Congress commissioned him as a colonel of the Second Canadian Regiment on 22 January 1776, and sent him back to Canada to recruit his regiment. The regiment, recruited first in Quebec and, after the American retreat, among Canadian refugees at Albany and Fishkill, New York, was organized on a unique scheme of four-battalions with five-companies-per-battalion scheme that echoed French practice. It fought at Staten Island, Brandywine, Germantown, and Yorktown, and earned a reputation for its staunch fighting qualities. Created by Congress independent of any state regimental line, and thereby deprived of any state's support, the regiment was nicknamed "Congress's Own" and "Hazen's Own." It absorbed James Livingston's small First Canadian Regiment in early 1781 and remained in service until the men were furloughed in June 1783. The regiment was formally disbanded in November 1783.

CANAJOHARIE SETTLEMENTS, NEW YORK. 1–2 August 1780. The principal fortification in this part of the Mohawk Valley was Fort Plank, a three-story blockhouse of heavy timbers surrounded by earthworks and located on a plain overlooking the village that became Fort Plain. On 6 June Colonel Peter Gansevoort occupied Fort Plank with his regiment in preparation for escorting supplies from there to Fort Stanwix (Fort Schuyler). Joseph Brant, whose presence in the area caused patriot authorities to prescribe special precautions, spread rumors that he intended not only to attack the convoy but also to attack Fort Stanwix. As a result, strength was drawn from the settlements and Fort Plank to reinforce Stanwix and protect the westbound convoy. Brant then entered Canajoharie unopposed from the east and destroyed fifty-three dwellings, an equal number of barns, a church, and a mill. His forces killed sixteen inhabitants who had not fled with the rest to Fort Plank, Fort Clyde, and other strong points, and captured fifty. An estimated three hundred head of livestock were killed or carried away. Because his object was pillage and destruction—after the model of John Sullivan's expedition—Brant did not waste his strength in attacking the forts. Canajoharie had been the home of Brant's mother when the Mohawk leader

controlled the region. It was also at this site, on June 30 1779, that the Patriots hanged Lieutenant Rolf Hare and Sergeant Gilbert Newbury of Butler's Rangers for their roles in the Cherry Valley massacre.

CANE CREEK, NORTH CAROLINA.

12 September 1780. In the Loyalist invasion of western North Carolina that preceded the Battle of Kings Mountain, Major Patrick Ferguson pushed some twenty-two miles north of Gilbert Town (later Rutherfordton), North Carolina. A skirmish with rebel militia at Cane Creek, near the home of Colonel John Walker, produced a few casualties before the rebels withdrew. Ferguson took about a dozen prisoners, whom he released on parole before he started the movements that led to his annihilation at Kings Mountain. By a strange coincidence another action took place almost exactly a year later at another Cane Creek in North Carolina (also known as Lindley's Mill) on 13 September 1781.

CANISTER. An artillery projectile consisting of a can (canister) packed with small round shot that scatter—shotgun fashion—when the projectile leaves the muzzle. It was used at close range against personnel. It should not be confused with grape or with shrapnel, a type of projectile in which the shot is scattered by a time fuse after the projectile leaves the gun.

CARLETON, CHRISTOPHER.

(c. 1743–1787). British officer. Nephew and brother-in-law of Sir Guy Carleton and the latter's aide-de-camp, Christopher Carleton became a lieutenant in the Thirty-first Foot on 29 July 1763. In 1771 he married Anne, daughter of the earl of Effingham, and sister of Sir Guy's wife.

Carleton was promoted to captain on 25 May 1772. After leading the initial movement of General John Burgoyne's offensive up Lake Champlain, Carleton was promoted to major of the Twenty-ninth Foot on 14 September 1777. The next year he was operating as a spy in the Mohawk Valley and led "Carleton's Raid," as it is known, down Lake Champlain. The raid was accounted a success for its destruction of some 100 structures. In addition, his men carried out the burning of crops and the slaughter of livestock that could have been used to support an American invasion of Canada. Carleton accomplished these ends in just three weeks.

Carleton led a raid that captured Fort George on 11 October 1780, then went on to attack Ballston, 12 miles north of Albany. These latter actions were carried out as a part of the so-called "border warfare" then being carried out. On 19 February 1783 he was promoted to lieutenant colonel. He died at Quebec in 1787.

CARLETON, GUY. (1724–1808). British general, governor of Canada, commander in chief at New York (May 1782 to December 1783). Born in Strabane, Ireland, Guy Carleton was a member of an old Anglo-Irish

Guy Carleton. *The British general and governor of Canada, in an engraving by Alexander Hays Ritchie. © CORBIS.*

family in the Protestant ascendancy. He is best remembered for his abilities as a general and statesman, and for his cold and aloof personality. Through family connections, he and his brothers, William and Thomas, gained valuable early political patronage from William Conolly, a member of the Irish parliament.

EARLY MILITARY CAREER

On 21 May 1741, Carleton enrolled as an ensign in the Twenty-fifth Regiment, known as Lord Rothes' regiment in honor of its colonel, Major General John Leslie, Earl of Rothes. He was promoted lieutenant in the same regiment on 1 May 1745. In 1747, during the War of the Austrian Succession, he served on the European continent as aide-de-camp to the duke of Cumberland and was involved in the fighting for Bergen op Zoom, in the Netherlands. He was commissioned a lieutenant in the First Foot Guards on 22 July 1751. In early 1753, upon the recommendation of his friend James Wolfe, he became military tutor of Charles Lennox, third duke of Richmond. He used the Duke's patronage to secure promotion to lieutenant colonel of the First Foot Guards on 18 June 1757.

In early 1758, Carleton was chosen by General Jeffery Amherst to join a military expedition against Louisbourg, on Cape Breton Island in New France. King George II

refused to confirm this appointment, however, because Carleton had made disparaging remarks about Hanoverian troops. Instead, Carleton spent the summer of 1758 as an aide-de-camp to Prince Ferdinand of Brunswick-Wolfenbüttel in central Europe. Also in 1758 he was chosen lieutenant colonel of the Seventy-second Regiment by its colonel, the duke of Richmond. In early 1759, when Wolfe organized his campaign against Quebec, Carleton was commissioned quartermaster general of the army, with the local rank of colonel. The king once again protested, but Wolfe finally prevailed upon the stubborn monarch to relent.

In the campaign, Carleton distinguished himself as quartermaster, military engineer, and commander of an elite corps of grenadiers. Fighting bravely in the battle of the Plains of Abraham on 14 September while leading his grenadiers, he was wounded in the head, and his friend Wolfe was killed. Carleton returned to England in November 1759. In March 1761 he served as local brigadier general in an expedition against Belle Isle, off the French coast, and was again wounded. Promoted to colonel on 19 February 1762, he joined the earl of Albemarle as quartermaster general in the conquest of Havana with the local rank of brigadier general. On 22 July he was wounded for the third time while leading a successful assault upon a Spanish fortification.

GOVERNOR OF QUEBEC

By the age of 38, Carleton had made an impressive military record, through shrewd use of patronage and because of his own martial abilities. He had served in three theaters of war, been wounded three times, held important ranks, and secured a permanent colonelcy. On 7 April 1766 he was appointed lieutenant governor of Quebec, although effectively he acted as governor from the outset, replacing the nominal governor, James Murray, who had been called home. Carleton was officially appointed governor on 12 April 1768. On 21 August 1766 he sailed into New York, where he consulted with General Thomas Gage, commander in chief of North America. He then traveled to Quebec, arriving on 22 September and taking the oath of office two days later. On 3 October he was appointed brigadier general in America. Immediately, Carleton asserted control over the members of his council and began governing more or less independently. When challenged in these actions, he was supported by his superiors in London: Henry Seymour Conway, secretary of state for the Southern Department; Charles Lennox, duke of Richmond, who succeeded Conway; and Lords Wills Hill, Viscount Hillsborough and William Legge, earl of Dartmouth.

As governor, Carleton paid particular attention to the fur trade, which was a staple of the Canadian economy. He battled without success to eliminate the fee system that was used to pay government officials, and he worked to improve

the defenses of Quebec. From the outset he befriended the French Canadians, protecting them, he declared, against English “commercial adventurers,” who had descended upon Quebec like a cloud of locusts. In 1767, when Parliament began studying plans for the reorganization of Quebec’s government, Carleton advocated retention of the French cultural and legal heritage in the St. Lawrence River valley. He returned to England in 1770 to present his views on these and other matters. On 12 April 1772 he was appointed colonel of the Forty-seventh Regiment, and on 12 May he was promoted to major general. He married Lady Mary Howard on 22 May 1772 and together they had eleven children. In 1774, Parliament enacted the Quebec Act, which incorporated most of Carleton’s recommendations. On 18 September 1774 he returned to Quebec, where he was greeted warmly by the populace.

THE AMERICAN WAR

Immediately, Carleton was confronted with growing discontents against Britain by the lower thirteen colonies, and had to face the possibility of an American invasion of his own province. Part of the discontent was due to the Americans’ hatred of the Quebec Act. Asked by General Gage to dispatch the Tenth and Fifty-second Regiments to Boston, he acquiesced, although he was left with only two regiments to defend Canada. He would rue his haste in the following year. He attempted to organize the old French citizens into militia units, but most of the *habitants* remained neutral. He refused to use Indian allies, considering native warriors to be unreliable in civilized warfare. In the fall of 1775, the anticipated American invasion came, with General Richard Montgomery seizing Montreal on 13 November. Carleton, who had established his headquarters in that city, was driven down the St. Lawrence River toward Quebec. In the meantime Benedict Arnold approached Quebec through Maine.

Carleton reached Quebec on 19 November, just before Arnold surrounded the city, and he prepared the citizens for a winter siege while awaiting reinforcements from Britain. On the evening of 31 December, he repulsed an American attempt to capture the city under cover of a blowing snowstorm from the northeast. Montgomery was killed, along with 51 of his fellow rebels; Arnold and 36 Americans were wounded; and 387 Americans fell into Carleton’s hands as prisoners.

Although the rebel army was reinforced and maintained the siege until spring, Carleton and his garrison were rescued on 6 May 1776 by the arrival of the expected troops from England. Carleton learned at that time that he had been promoted general in America on 1 January 1776. He began a campaign to drive the Americans from Canada, culminating in the successful battle of Trois Rivières on 8 June. His strategy was to allow the rebels to escape, and even to release prisoners of war, in hopes that

he might induce them to renew their loyalty to the Crown. Some of his officers thought this policy delusional. On 6 July 1776 he was given the Red Ribbon of a Knight of the Bath for his successful defense of Quebec.

After the Americans had escaped from Canada, Carleton lacked the necessary shipping to pursue them up Lake Champlain toward Fort Ticonderoga. Therefore, he paused for three months in the summer of 1776 to prepare a fleet for operations on Lake Champlain. He moved a number of small warships up the St. Lawrence and Richelieu Rivers, dismantled them, and then rebuilt them at St. Johns. He was promoted lieutenant general on 29 August 1776. On 5 October he sailed southward to engage an American flotilla commanded by Arnold. He attacked and destroyed the enemy vessels on 11 and 12 October at Valcour Bay, then pushed on toward Fort Ticonderoga. After reconnoitering that post on 27 October he decided that it was too strong to assault, and that the season was too far advanced to continue the campaign. Hence, he withdrew his army into Canada and began preparations for operations in the following summer.

Lord George Germain, who had been appointed colonial secretary on 10 November 1775, was dismayed when he heard of Carleton’s decision. Germain already believed that Carleton had mishandled the defense of Quebec and had been too lackadaisical in his pursuit of the rebels to Fort Ticonderoga. Hence, in early 1777, Germain appointed General John Burgoyne to replace Carleton as commander of British forces in Canada during the following year’s campaign. On 6 May 1777 Carleton welcomed the first ship of the year from England to Quebec, and learned of Burgoyne’s appointment. Hurt and angry, Carleton wrote Germain on 27 June, resigning as governor of Canada and asking to be relieved. His replacement, Lieutenant General Frederick Haldimand, did not arrive until 28 June 1778, so Carleton remained in Canada during Burgoyne’s operations in the summer of 1777. Following the instructions he received from the government, Carleton supported Burgoyne, and was not blamed by officials in London when Burgoyne was defeated at Saratoga on 17 October. Carleton returned home in July 1778.

On 18 February 1782 Carleton was appointed commander in chief in America, replacing Sir Henry Clinton. Lord Charles Cornwallis had surrendered at Yorktown on 19 October 1781, and the war against America was coming to an end. Because of his administrative experience, Carleton was selected by King George III to handle sensitive matters relating to the evacuation of British troops and Loyalists from the United States. Along with Admiral Robert Digby, he was appointed a peace commissioner. He accepted these commissions with the understanding that the government supported his intention to persuade

the Americans, even at this late date, to remain within the empire. He landed at New York on 6 May 1782, and immediately was embroiled in financial matters and acrimony between Loyalist and Patriot militias. He was dismayed in August to learn that Britain was granting independence to the United States. Angrily he attempted to resign his commission, but was persuaded to remain and effect the Loyalist and troop withdrawals. In the next few months, he dispatched 30,000 troops and 27,000 refugees from America. Many of the refugees went to Canada. He departed New York on 5 December 1783.

GOVERNOR OF QUEBEC AGAIN

In London, Carleton was feted by the king and politicians, and his advice was sought on how to accommodate the large influx of Loyalists into Canada. Following his suggestions, new provinces were created and a new office of governor-general was established. Baron Sydney, secretary of state for home affairs, wanted to appoint Carleton to the new post, but Carleton agreed to accept only if he were given a barony in return. After months of resistance, Sydney relented in September 1785. On 21 April 1786 Carleton was created first baron of Dorchester, and on 23 October he arrived in Quebec.

Carleton's second administration was not as successful as his first, for he was burdened with problems beyond his, or perhaps anyone's, ability to master. He continued to advocate the interests of the old French inhabitants, but he also sympathized with the new Loyalist community. Finally in 1791 he supported Parliament's division of Quebec into Lower Canada, largely French-speaking, and Upper Canada, mostly English-speaking. On leave in England from 1791 to 1793, he was promoted general on 12 October 1793.

Back in Quebec, Dorchester (as Carleton was now called) dealt successfully with problems caused by the French Revolution. He was less successful in his relations with John Graves Simcoe, lieutenant-governor of Upper Canada. He seemed to go out of his way to frustrate and anger Simcoe, his able subordinate, during the next few years. He also aggravated diplomatic and military tensions between Britain and the United States. Adopting a condescending and truculent tone toward the United States in 1794, he appeared to be trying to provoke an incident between Americans and Britain's Indian allies in the Northwest Territory. When the American government complained to London, Dorchester was mildly scolded by Thomas Dundas, the home secretary. Angrily, Dorchester requested permission to resign, and in May 1796 Robert Prescott replaced him. Dorchester sailed for England on 9 July, but was shipwrecked on Île de Anticosti, near the mouth of the St. Lawrence River. No one was killed or injured. Resuming his voyage, he reached home on 19 September.

A PROUD LEGACY

In his final years, Dorchester lived the life of a country gentleman, keeping up his interest in things military. In 1790 he had been appointed colonel of the Fifteenth Dragoons. On 18 March 1801 he became colonel of the Seventeenth Light Dragoons, and on 14 August 1803 colonel of the Fourth Dragoons. Upon his death on 10 November 1808, his wife carried out his wish to destroy all his personal papers.

A man of stern rectitude, Dorchester was intensely loyal to King and country. He vindicated the trust of his many supporters by performing bravely and excellently as a soldier. He also was a capable administrator, and as governor of Canada he laid the groundwork for a New French Canadian–Loyalist immigrant polity in British North America. Although he seemed to lose his grip on government in the 1780s, nevertheless his policies became a model for other British imperial governors. He was one of the great soldier-statesmen of early British Canada.

CARLETON, THOMAS. (1735?–1815). British army officer and colonial governor. Thomas Carleton, youngest brother to Sir Guy Carleton, was born

in Ireland. He became an ensign in the Twentieth Foot in 1753, lieutenant by 1756, and captain in 1759. He fought in Europe during the Seven Years' War and afterwards toured to watch other armies in action. By November 1775, during the war of American Independence, when he became quartermaster general to his brother Guy in Canada, he had been made a lieutenant colonel in the Nineteenth Foot.

Thomas was wounded at Valcour Island (in Lake Champlain) and led the Indian canoe-borne advance up Lake Champlain in September 1776. He remained in Canada after his brother's departure and became increasingly critical of the British government's handling of the war. In 1782 he was promoted to the rank of colonel and in 1784, after two others had declined it, he was appointed governor of New Brunswick, Ontario. He served there for nineteen years. He was made major general in 1793 and lieutenant general in 1803. He died in England on 2 February 1817.

CARLETON–GERMAIN FEUD. The personal animosity between Guy Carleton, governor of Canada, and George Sackville Germain, Britain's secretary of American affairs, began with Carleton's hostile testimony against Germain during the inquiry of the latter's conduct at the Battle of Minden of 1 August 1759. Their feud mattered, as Carleton and Germain held their posts for most of the Revolution. Carleton's failure to take Ticonderoga in the fall of 1776 turned the king against Carleton and led to John Burgoyne's appointment as commander of the expedition from Canada in 1777. Germain seized the opportunity to kill whatever chances Carleton might have had for further advancement, going so far as to attribute the Trenton disaster to Carleton's "supineness" in not attacking Ticonderoga. Carleton was so disgusted by the lack of support from the London government owing, as he saw it, to Germain's interference, that he resigned his position in 1778 and returned to England, where he could more effectively snipe at Germain. Despite constant derision from members of Parliament, Germain held on to his office until 1782. As Germain's reputation collapsed, Carleton's rose, being named commander-in-chief of British forces in North America on 2 March 1782. He acquitted himself well in directing the withdrawal of British troops from the United States and upon his return home in late 1783 received a very handsome annual pension of £1000.

CARRINGTON, EDWARD. (1748–1810). Continental officer, General Nathanael Greene's quartermaster general. Virginia. A man who deserves to be better remembered for his varied services in the Continental army, Edward Carrington was born in Goochland County, Virginia, on 11 February 1748, and served on its Patriot County Committee in 1775 and 1776. He was commissioned as a lieutenant colonel of artillery in Colonel Charles Harrison's First Continental Artillery Regiment when this unit was activated on 30 November 1776. Carrington distinguished himself at the battle of Monmouth, in May 1778, where his guns were posted with the left wing of General William Alexander (Lord Stirling), playing a crucial role in preventing an American defeat. In March 1780 he served with General Arthur St. Clair and Alexander Hamilton as commissioner for the exchange of prisoners. Carrington commanded the three batteries that marched south with de Kalb, along with other Virginia artillery units that had been sent earlier to reinforce Lincoln. When Colonel Harrison unexpectedly joined De Kalb in North Carolina he superseded Carrington.

When General Horatio Gates reached de Kalb's headquarters (25 July 1780), or soon thereafter, he sent Carrington on a reconnaissance mission along the Roanoke and Dan Rivers that proved of great value in General Nathanael Greene's ingenious campaign of maneuver against General Charles Cornwallis' army. General Henry Lee praised Carrington for performing his "duty with much intelligence."

Carrington rejoined the army just two days before its concentration at Guilford Court-House, 7 Feb. 1781, where he served both as an artillery commander and as Greene's quartermaster general. Lee again praised Carrington for a brilliant job: "[W]ithout a single dollar in the military chest . . . he contrived, by his method, his zeal, and his

indefatigable industry, to give promptitude to our movements, as well as accuracy and punctuality” (Lee, p. 250).

Carrington repeatedly served double duty as an active officer, joining Colonel Otho Williams’s rearguard action in delaying Cornwallis’s pursuit of Greene’s army, and personally supervising the crossing of the Dan River. Soon thereafter, Carrington brought forward the artillery and some much-needed provisions just in time for the battle of Hobkirk’s Hill, which took place on 25 April 1781. When Greene’s army withdrew into an area of prominent ridges known as the High Hills of Santee (South Carolina) in July 1781, he granted Carrington’s request to return to General George Washington’s army to succeed Colonel Thomas Proctor as commander of the Fourth Continental Artillery Regiment. Carrington commanded this artillery regiment during the Yorktown Campaign.

After the surrender of Cornwallis, Carrington reverted to his post of quartermaster general, having been passed over for promotion in the artillery. On Greene’s instructions, he went to Philadelphia to see Robert Morris about getting supplies for the southern army. In this assignment he was successful, and Morris made funds available to Greene for the purchase of food and clothing. Carrington rejoined Greene in the summer of 1782, and served as his quartermaster general until the end of the war.

The Virginia legislature selected Carrington as one of its representatives to the last Continental Congress, which met from 1786 to 1788, whereupon Washington appointed him to the post of federal marshal for the state of Virginia. Carrington was foreman of the jury that acquitted Aaron Burr of treason in 1807. He died almost exactly three years later, at the age of 61. Carrington’s organizational skills and his ability to acquire and move supplies and munitions kept Greene’s hard-pressed army in the field throughout the vital Southern campaign. Perhaps his epitaph should be the words of Nathanael Greene: “Nobody ever heard of a quartermaster, in history.”

CARROLL, CHARLES. (1737–1832). Signer. Maryland. Charles Carroll of Carrollton, as he called himself so as not to be confused with his father, was born on 19 September 1737 in Annapolis, Maryland. Carroll was sent to France in 1748 to be educated by the

Jesuits. Afterwards he studied law at Bourges, in France, and at London’s Middle Temple, returning to Maryland in 1765. He lived on his 10,000-acre estate, which he called Carrollton. A Catholic, he was prohibited by British law from professional participation in public life on account of his religion, but that prohibition did not keep Carroll quiet. His first disagreements with the Crown came over the tax that supported the Church of England and the laws which forbade Catholics their own schools and denied them the vote in Maryland. Carroll wrote a series of refutations of the government’s stand on the Established Church between January and July of 1773. He became known and respected in the colony as a result of this. In December 1774 he joined the committee of correspondence, and in 1775 he became a member of the committee of safety. He attended the revolutionary convention at Annapolis from December 1775 to January 1776, and was one of the commissioners to Canada. He sat in the Maryland convention in 1776 and was sent to the Continental Congress, where he was the only Catholic to sign the Declaration of Independence. A member of the Board of War, he continued in Congress until 1778. He was one of the writers of the conservative Maryland constitution of 1776, and was a member of its first senate. He was an ardent Federalist, although he did not accept election to the Constitutional Convention. He was elected as the first U.S. senator under the new Constitution (1789–1792) while serving continuously in the state senate until he resigned in 1800. Owning hundreds of slaves and between seventy and eighty thousand acres in Maryland, Pennsylvania, and New Jersey, Carroll was considered the wealthiest man in the United States when he died on 14 November 1832, the last surviving signer of the Declaration of Independence.

CARTER, JOHN CHAMPE. (1758–1826). Continental officer. Virginia. John Champe Carter held the rank of ensign of the Seventh Virginia

Carter Family of Virginia. THE GALE GROUP.

Regiment from 18 March 1776 until he resigned on 13 January 1777. On 30 October 1777 he became a captain of the First Continental Artillery. After the British took Charleston, Carter was part of the hasty retreat of those who were not included in the surrender of General Benjamin Lincoln. Carter was charged with not bringing his guns into action at Waxhaws, North Carolina, on 29 May 1780, when Colonel Banastre Tarleton caught up with and defeated the fleeing Americans. Taken prisoner at Waxhaws, Carter remained a prisoner until the end of the war. He became brevet major on 30 September 1783.

CARTRIDGE BOXES. Military smoothbore muskets were loaded using pre-packaged paper cartridges containing a powder charge and lead ball, or a ball with several smaller shot, known as "Buck Shott and Ball." To carry these cartridges, soldiers were issued a leather cartridge (cartouche) box or pouch, enclosing a wooden block pierced with holes in which ammunition was inserted. The terms "box" and "pouch" signified two different items. A box referred to a cartridge container worn on a waist belt, often only a wooden block with a simple leather covering. Cartridge pouches were carried on a belt worn over the left shoulder, hanging on the soldier's right hip. Pouches were usually more substantial than cartridge boxes and held more rounds. Tin cartridge canisters, watertight with a thirty-six-round capacity, were first issued to American troops in 1777 as a reserve container. From 1778 onwards, American tin canisters were often issued when leather pouches were unavailable.

The common campaign allotment was forty rounds of ammunition for Continental troops and sixty for British soldiers, with extra rounds carried in knapsacks or coat pockets. The several variants of cartridge box and pouch carried as few as nine rounds and as many as thirty-six. Beginning in 1778 the Continental army began making a "new model," also known as "new Constructed," pouch, a copy of the better-designed British twenty-nine-hole pouch.

Early war American cartridge pouches were notorious for their poor construction. The Battle of the Clouds

(White Horse Tavern) on 16 September 1777 was cut short by a severe storm: “the Violence of the Rain was so lasting that . . . the Rebels had not a single Cartridge in their Pouches but was Wet, the [British] Light Inf[antr]y Accoutrements being mostly Rebel were in the same Situation” (Journal, p. 37).

CASTLE WILLIAM. Castle William, named for King William III, was the fortification on Castle Island that was the principal inner defense of Boston Harbor. Garrisoned by a small company of provincial soldiers before the arrival of British troops in September 1768, it was demolished when the British evacuated Boston in March 1776. The site is no longer an island, having been connected to the town of Dorchester with landfill in the nineteenth century.

CASUALTY FIGURES. In land warfare of the eighteenth and nineteenth centuries, the ratio of wounded to killed in battle was about three or four to one. Figures that vary appreciably from this ratio are to be considered suspect: they stem either from deliberate falsification or from incomplete reporting. Bennington, Stony Point, and Monmouth are examples. Among those classified as “wounded” in most battle reports of the Revolutionary War were men who subsequently died of their wounds. Those reported “missing” included prisoners, deserters, unrecovered dead, and men—wounded and otherwise—who subsequently rejoined their unit.

CASWELL, RICHARD. (1729–1789). Congressman, governor of North Carolina, militia general. North Carolina. Born near Baltimore, Maryland, on 3 August 1729, Richard Caswell moved to Wake (which became Raleigh), North Carolina, when he was 17 and was, in turn, a surveyor and lawyer. Prior to the Revolution he held important political offices, including colonel of the New Bern militia, in which capacity he commanded a wing of William Tryon’s army in the defeat of the Regulators at the Alamance River in 1771. He also served as speaker of the North Carolina Assembly in 1770 and 1771. He led the force that defeated the Loyalists at Moores Creek Bridge on 27 February 1776. After this victory, the assembly appointed him to brigadier general. A delegate to the Continental Congress from 1774 to 1776, Caswell presided over the Provincial Congress, which drafted the state constitution in 1776, and was elected the first governor of the state, serving from 1777 to 1780 and 1785 to 1787. In between he was in the state senate, generally as the presiding officer. In 1780 he became the major general of the North Carolina militia. In this capacity he led his troops to a humiliating defeat at Camden, where they broke and ran. He also served without distinction during the Southern Campaigns of Greene. He gave better service as chairman of the Council Extraordinary, North Carolina’s board of war during Greene’s campaign. Suffering a stroke while presiding over the senate, he died on 10 November 1789.

CATAWBA FORD, SOUTH CAROLINA SEE *Fishing Creek, North Carolina*.

CATHCART, SIR WILLIAM SCHAW. (1755–1843). British army officer and politician. Cathcart, son of a distinguished diplomat, was born at Petersham in Surrey on 17 September 1755. He entered Eton College in 1766 and moved to St. Petersburg in 1768 when his father became ambassador to Russia. There he learned Russian and was tutored in classics by William Richardson, later a professor of humanities at the University of Glasgow. Returning to Scotland in 1773, he spent three years training for the bar privately and at

university in Dresden and Glasgow. He was admitted to the Faculty of Advocates in 1776 and in August succeeded his father as the tenth baron Cathcart. In June 1777, having been powerfully attracted to a military career, he rejected law and bought a cornetcy in the Seventh Dragoons. After initial training he obtained leave to serve with the Sixteenth Light Dragoons in America.

There he served as aide de camp first to Major General Sir Thomas Spencer Wilson, baronet, and then to Sir Henry Clinton. He accompanied Clinton's Hudson Highlands offensive and took part in the storming of Forts Clinton and Montgomery on 6 October 1777. In November he became a lieutenant and in December was made captain in the Seventeenth Light Dragoons. He served in Pennsylvania, where he was instructed to form the Caledonian Volunteers, and fought at Monmouth Court House on 28 June 1778. In 1778, as major commandant, he was ordered to expand the Caledonian Volunteers into a large provincial legion of six troops of cavalry and six infantry companies, known at first as Cathcart's Legion and then as the British Legion. After marrying Elizabeth Elliot, daughter of the lieutenant governor of New York, on 10 April 1779, he was additionally made major in the Thirty-eighth Foot, quartermaster general in America, and finally local lieutenant colonel. After recruiting in Savannah from December 1779 he joined Clinton's 1780 expedition against Charleston; he was very ill, and command of the legion seems in fact to have been exercised by Banastre Tarleton. Invalided back to New York in April, and asked to choose between his commands, he finally relinquished the legion and took up his duties with the Thirty-eighth. He commanded his regiment in Knyphausen's Springfield raid in June; by October his health had so deteriorated that he was sent home to Britain. He was warmly welcomed by George III, who made him captain and lieutenant colonel in the Coldstream Guards.

In 1788 he was elected as a Scottish representative peer to the House of Lords, where he became lord president of committees. In 1789 he became lieutenant colonel in the Twenty-ninth foot, succeeded to the colonelcy in 1792, and became a brigadier general in 1793, major general in 1794, and lieutenant general in 1801. He served on the continent under Lord Moira in 1794 and 1795, was commander in chief in Ireland from 1803, took over the northern European command in 1805, and became commander in chief in Scotland in 1806. In 1807 he commanded the land forces at the siege of Copenhagen and became a British peer. He spent the next five years on duty in Scotland. On 1 January 1812 he was made a full general and in July became ambassador to St. Petersburg, a post he held until 1820. After returning home as earl Cathcart in the British peerage, a title he had been awarded in 1814, he

occupied himself with family and estate matters as his interest in politics gradually waned. He died at Cartside, Renfrewshire, on 16 June 1843.

CATHCART'S LEGION SEE *British Legion.*

CAUCUS CLUB OF BOSTON. Boston politics was dominated after 1719 by a group of local leaders whose economic and social interests often conflicted with the royally appointed officials who led the province. The Caucus was led by Elisha Cook Jr. and included among its active members Deacon Samuel Adams, father of the politician Samuel Adams. Drawing its support from the artisans, small shopkeepers, mechanics (tradesmen), and shipyard workers of Boston's North End, the Caucus was America's first political machine. (The name "caucus" may be a corruption of "caulkers," the shipyard workers who lent their meeting place to Cooke's faction.) The younger Adams, already fascinated by politics, in 1747 helped found a group to debate and write about public affairs that its opponents nicknamed the Whipping Post Club. By 1763 he was a leader of the Caucus. Believing that the imperial government's restructuring of the empire after the final French and Indian war posed a mortal danger to the divinely sanctioned local government of Massachusetts, Adams rapidly became a significant figure in the resistance. As the imperial dispute merged with local politics, several groups grew out of the Caucus, including the Loyal Nine and the Boston Sons of Liberty. The Caucus met at the Green Dragon Tavern on Union Street, Boston, a building that has been called "Headquarters of the Revolution."

CAUGHNAWAGA. The Caughnawaga (Kahnawake) Indians are those Iroquois Indians who converted to Roman Catholicism, removed from the Iroquois homeland in upstate New York, and resettled in Canada during the seventeenth century. Caughnawaga was the name of the easternmost town of the Mohawks and a source of many of the original Canadian Iroquois. One of the first settlements of relocated Iroquois was at a Jesuit mission near Montreal, at a place the French called La Prairie. The Iroquois called it Caughnawaga (the more modern rendering is Kahnawake). The term “Caughnawaga Indians” can refer to the Iroquois community at Caughnawaga/Kahnawake or to the Canadian Iroquois generally. The Iroquois of Caughnawaga/Kahnawake proper were the Canadian Iroquois most directly affected by the American Revolution. They struggled to maintain neutrality during the Revolutionary War and were lobbied by both the British and Americans to join their respective sides.

Many captives taken during the colonial wars of the late seventeenth and early eighteenth centuries had been settled in Kahnawake by the French governing authorities. Thus the town of Kahnawake was home not only to Catholic Iroquois who had migrated to Canada in the seventeenth century but also many people of mixed English and Iroquois ancestry. The people of Kahnawake maintained ties with the Indians and Europeans of New England. Several Caughnawaga/Kahnawake Indians were attending Dartmouth College when war began in 1775. The Caughnawaga Indians rejected Canadian governor Guy Carleton’s offer to attack the Americans in 1775 and likewise refused to join Benedict Arnold’s assault on Quebec in the winter of 1775–1776. However, in 1776, at the urging of Ethan Allen, they successfully petitioned to British commanders at Montreal to release a group of Stockbridge Indians in the American service who had been captured and sentenced to death. Interestingly, in 1780 a delegation from Kahnawake visited the French Expeditionary Force of General Rochambeau in Rhode Island. The Caughnawaga/Kahnawake Indians did not join either side in the war, remaining both neutral and advocates for peace. The Kahnawake community has maintained itself through the modern era; the Mohawks of Kahnawake are a First Nation of Canada, making their home in the First Nations Reserve Kahnawake 14 on the St. Lawrence River south of Montreal.

CAUGHNAWAGA, NEW YORK. 22 May and 18 October 1780. A small settlement located in what is now the eastern part of Fonda in Montgomery County was one of several locations with this name. It had been established by Douw Fonda, whose home was probably the so-called Fort Caughnawaga. It was raided twice during 1780 by Loyalist and Indian forces controlled by Sir John Johnson. Fonda was killed when Joseph Brant surprised the settlement on the morning of 22 May and burned it to the ground. On 18 October Johnson passed through again and destroyed everything that had been built since the earlier visit. The more important Caughnawaga was the Christianized Mohawk settlement nine miles from Montreal.

CEDARS, THE. A small post called The Cedars was the Americans’ westernmost position on the St. Lawrence River, established in March 1776, forty-three miles upstream from Montreal. The garrison came from Bedel’s Regiment, a New Hampshire unit that began life in 1775 as a corps of rangers. Colonel Timothy Bedel commanded the post. By early May Captain George Forster, commanding Oswegatchie, had assembled several hundred western Indians and a contingent of the Eighth Foot and set out downriver. On 12 May Bedel learned in general terms about the British intentions, and set out to get reinforcements from Benedict Arnold, who commanded Montreal. Major Isaac Butterfield assumed command of the 300 Americans and 100 Canadians in the garrison. On 16 May, Major Henry Sherburne led a 140-

man relief column from Montreal; Arnold continued assembling additional forces. Two days later Butterfield surrendered without any real attempt at resistance. Sherburne did not learn of the surrender when he landed at Quinze Chiens, nine miles from The Cedars, on 20 May, and marched into an ambush about four miles from Butterfield's post. The relief column tried to fall back but got pinned down. They held out for forty minutes before surrendering. Two prisoners were executed that evening, and four or five were later tortured and killed by the Indians. Forster continued his advance to Quinze Chiens. On 26 May he skirmished with Arnold's second relief column (700 men). The next day he exchanged prisoners with Arnold, who had to honor an agreement made by Butterfield and started back to Oswegatchie. Arnold returned to Montreal.

Only a handful of men were killed or wounded on either side, and Forster's withdrawal left little permanent impact on the course of the campaign. But it did ruin reputations and lead to a series of inquiries and courts-marshal.

CELORON DE BLAINVILLE, PAUL-LOUIS. (1753–?). Canadian volunteer. Son of the celebrated French officer and explorer, Pierre-Joseph Celoron de Blainville (1693–1759), he was born at Detroit while his father commanded the garrison of Fort Pontchartrain. He became a gentleman cadet in the Rochefort regiment in 1774 and a *sous-lieutenant* in the Martinique regiment in 1775. On 16 October 1776 he volunteered for service in the American army and on 18 December became a lieutenant in James Livingston's First Canadian Regiment. At Schoharie, New York, until Burgoyne's offensive started, he marched under Arnold to the relief of Fort Stanwix and fought in Learned's brigade at Saratoga. In the second battle of Burgoyne's campaign on 7 October 1777, he received a bayonet wound in the leg and was hospitalized at Albany. Rejoining the regiment, he was with Varnum's brigade at Valley Forge and as part of this command was at Monmouth and Newport. On

29 July 1778 he became a chevalier in the Order of Saint Louis.

In 1779 Celoron became a captain in Pulaski's legion, a promotion that was the subject of complaint by Baron de Frey. He was engaged in combat at Charleston on 11 May 1779 and at Savannah, receiving a bullet wound to the head during the latter action on 9 October 1779. On 12 May 1780 he became a prisoner at Charleston and was exchanged on 26 November 1782. Congress retained him in the American service on 21 January 1782, but his resignation was accepted on 1 July 1782. Named *capitaine aide-major* in the French army, he served at Saint-Christophe and Guadeloupe until 1791. He emigrated to Trinidad in 1793. He became civil *sous-commissaire* of the National Guard of Abymes, Guadeloupe, on 20 June 1803 and *commissaire commandant* two years later. In 1807 he was *capitaine adjoint* on the general staff at Guadeloupe. His name was sometimes spelled "Seleron" or "Celoron."

CERBERUS. British Frigate. Reaching Boston on 25 May 1775, this British frigate was immortalized in the pasquinade posted soon thereafter in the town:

Behold the Cerberus the Atlantic plough,
Her precious cargo, Burgoyne, Clinton, Howe.
Bow, wow, wow!

The three gentlemen, it might be noted, were members of Parliament in addition to being general officers. The *Cerberus* was destroyed at Newport on 5 August 1778, in Suffren's attack. A year earlier it had been unsuccessfully attacked by the submarine of David Bushnell.

CHAMBLY, CANADA. 18 October 1775. During the siege of St. Johns, Major Joseph Stopford with eighty-eight officers and men of the Seventh Foot held Chambly, ten miles farther north. Although the place was of great strategic importance, Guy Carleton, governor of Quebec and commander of British forces in Canada, lacked the manpower to give it a larger garrison and felt that St. Johns would screen it. A large combat patrol led by Major John Brown had ambushed a supply train two miles from the fort on 17 September and then (after being reinforced) had driven an attempted sortie back into Chambly. There matters rested, with neither side able to amass enough strength to attempt anything. But on the night of 17 October, at the suggestion of pro-rebel Canadians, two American bateaux slipped past the defenses of St. Johns. They brought nine-pound guns, which altered the balance of power. Brown with fifty Americans and three hundred Canadians led by James Livingston surrounded the impressive-looking but thin-walled stone fort. The guns fired a few rounds that knocked holes, and Stopford promptly surrendered. In addition to the prisoners, the Americans captured 6 tons of gunpowder, 6,500 musket cartridges, 3 mortars, and 125 stand of arms, along with a large stock of food. Neither side had anyone killed or seriously injured. The fall of this garrison helped to seal St. Johns's fate, and the Seventh Foot's captured colors appear in the background of John Trumbull's painting of the signing of the Declaration of Independence.

CHAMPE, JOHN. (c. 1756–1798). Continental soldier who attempted to kidnap Benedict Arnold. Virginia. On 20 October, 1780, Washington directed Henry Lee to select volunteers from his legion to capture Benedict Arnold and also to check on intelligence that other high ranking American officers were dealing with the enemy. Lee picked John Champe, who was then serving as sergeant major in Lee's cavalry. Lee describes Champe as being of a "saturnine countenance, grave, thoughtful, and taciturn, of tried courage and inflexible perseverance." (Lee, p. 272.) Champe "deserted" at about 11 P.M. on the same day, and on 23 October he was accepted by the British as a bona fide deserter. He then joined the legion of Loyalists and deserters being raised by Arnold and learned enough about the latter's habits to make a plan to capture him. Meanwhile, he established communications with Lee, sending back word that he had found no evidence that other American officers were dealing with the enemy and informing Lee when the attempted abduction would take place.

Champe had learned that every night at about midnight, Arnold walked in the garden of his quarters, which were near the Hudson River. Having secretly loosened some fence pickets between this garden and an alley, Champe and one accomplice planned to grab and gag Arnold and hustle him to the river. A boat would be waiting there to take Arnold to Hoboken, New Jersey. Before the attempt could be made, however, Champe was ordered to embark with Arnold's legion for operations in Virginia. Sergeant Champe was unable to escape safely from the legion until Arnold had completed his raids in Virginia. Eventually effecting his escape, Champe rejoined Henry Lee in the Carolinas. Champe's comrades did not know until his return that his desertion to the Loyalist cause had been faked. Champe was rewarded and discharged from the service to protect him from British retaliation if he were captured. When Washington again became commander in chief in 1798 he proposed to commission Champe a captain, but he learned that Champe had recently died along the Monongahela River.

CHAMPLAIN, LAKE. Stretching 125 miles from north to south and varying in width between four hundred yards and fourteen miles, Lake Champlain was a

vital link in the strategic waterway between the Hudson and St. Lawrence River valleys. Ten miles of rapids in the Richelieu (or Sorel) River between St. Johns and Chambly bar navigation to the St. Lawrence, and five miles of swift, narrow channel bar navigation between Ticonderoga and Lake George. Crown Point and Fort Ticonderoga were scenes of battle during the colonial wars and the Revolution. St. Johns and Chambly also were military objectives during the Revolution. Valcour Island saw the important conflict between Champlain squadrons in 1776. Note that “up Lake Champlain” should be used in the sense of “upstream,” or south.

Mark M. Boatner

CHAMPLAIN SQUADRONS. 1775–1776. Control of the waters of Lake Champlain was key to the invasion of Canada from the south or of New York from the north. In 1775 all travel was on foot or waterborne. The only feasible route for a road between New York City and Montreal hugged the western shore of the lake so closely that it could be dominated by guns aboard lake vessels or cut by troops landed behind an army’s line of march from boats on the lake. There were few vessels of any size on the lake in 1775, and most that did exist were of the small, rowing type, with sails that could be used only when wind was from the rear. A flotilla of these craft would be at the mercy of a single armed sailing vessel. This explains the importance of the 10 May 1775 capture of a schooner belonging to the Loyalist Major, Philip Skene—renamed *Liberty* by the Americans—at Skenesboro at the southern end of the lake, and the use of the *Liberty* and two bateaux to capture a sloop renamed the *Enterprise* from the British at St. Johns at the northern end of the lake a week later.

After capturing the *Enterprise* the American commander, Benedict Arnold, returned to Fort Ticonderoga and devoted the summer of 1775 to building additional vessels. Meanwhile, the British dispatched four hundred troops to St. Johns and began construction of two large warships, each to mount from twelve to fourteen guns. Philip Schuyler, who had succeeded Arnold in command of U.S. forces in northern New York, returned to besiege St. Johns that fall. On 2 November, the British garrison surrendered and turned over to the Americans a large supply of naval stores, the newly completed schooner *Royal Savage*, and a sloop nearly ready for launching.

THE AMERICAN FLOTILLA

In the Canada invasion of 1775–1776, the Americans lost their entire St. Lawrence squadron. However, when they evacuated St. Johns on 18 June 1776, they still had the *Liberty*, *Enterprise*, and *Royal Savage*, which they had captured in 1775. The schooner *Revenge* was being built at Fort Ticonderoga, and from St. Johns the Americans evacuated frame timber to build the cutter *Lee* at Skenesboro. During the previous winter Schuyler had ordered that trees be felled; that abandoned sawmills at Ticonderoga, Crown Point, and Skenesboro be reopened; and that bateaux be constructed for the transport of men and supplies. At Skenesboro he ordered work begun on gundalows (vessels of from fifty to sixty feet in length, flat-bottomed with shallow drafts that mounted a single sail and carried a bow gun and two guns amidships) and galleys (larger vessels from 80 to 120 feet in length, with two lateen-rigged masts, and able to carry from ten to twelve guns).

The improvised boatyard at Skenesboro was worked by men from the ranks until thirty craftsmen were sent from Albany and another two hundred started arriving from Massachusetts, Connecticut, Rhode Island, and Philadelphia. To lure skilled craftsmen to Lake Champlain, each was promised a month’s pay in advance, one and one-half rations per day, and a day’s pay for every twenty miles traveled to reach Skenesboro. This was more than anyone in the Continental navy, save Commodore Esek Hopkins, earned. In July 1776, Schuyler named Benedict Arnold to replace Jacobus Wynkoop as commander of the American squadron on Lake Champlain. When Arnold reached Skenesboro on 23 July, he found as many as five hundred men at work, three gundalows finished, and two others nearing completion. Arnold delegated supervision of construction to Brigadier General David Waterbury and devoted his energies to obtaining critical naval supplies—spikes, nails, hawsers, anchors, canvas, paint, and caulking. He was aided in this endeavor, ironically, by the British blockade of New York and Philadelphia, which helped divert supplies to Lake Champlain because it cut off the frigates being built at those cities. Arnold’s driving leadership caused his fleet to be ready more than a month before the British.

When added to the schooners *Liberty*, *Revenge*, and *Royal Savage*, the sloop *Enterprise* and the cutter *Lee* that had been captured from the British, the newly constructed vessels—the row galleys *Congress*, *Trumbull*, and *Washington*, eight gundalows (*Boston*, *Connecticut*, *Jersey*, *New Haven*, *New York*, *Philadelphia*, *Providence*, and *Spitfires*), and numerous bateaux—gave Arnold a force the British could not ignore. Typical of the row galleys that would prove to be the most important American vessels, the *Washington* was seventy-two feet four inches on deck, twenty-foot beam, and six feet two inches in the hold, according to the Admiralty draught made after the British capture. The *Washington* mounted two

Chandelier

eighteen-pounders, two twelve-pounders, two nine-pounders, and four four-pounders in her broadside, with a two-pounder and eight swivel guns on the quarterdeck.

One of the Gundalows, the *Philadelphia*, was recovered in 1935 by T. F. Hagglund in a remarkably good state of preservation, and a description has been assembled. It was an open boat measuring fifty-three feet four inches, fifteen feet six inches beam, and three feet ten inches depth amidships; flat-bottomed; and rigged with two square sails on a single mast. The gundalows were all armed with a twelve-pounder in the bow and two nine-pounders amidships; they carried forty-five men and were equipped with oars (as were the galleys). Having no outside keels, although this was called for in Arnold's specifications, the gundalows could not sail into the wind; however, "with their relatively powerful rig [they] were very fast off the wind," says the historian Howard L. Chapelle (p. 113).

On 24 August, Arnold sailed from Crown Point with the eleven vessels that were ready. He was joined later by the galleys *Congress*, *Trumbull*, and *Washington* and the gundalows *New Jersey* and *Philadelphia* as they were completed. The *Gates* was not completed in time for the battle. The existence of another gundalow, the *Success*, has been referred to by some authors, but it is not named as a participant in the Battle of Valcour Island by any eyewitness.

THE BRITISH FLEET

Meanwhile, at St. Johns, the British assembled a squadron of similarly disparate vessels. A large gundalow, the *Convert*, was captured from the Americans as they withdrew southward in June 1776, renamed the *Loyal Convert*, moved around the rapids on the Richelieu River, and reassembled at St. Johns, as were the schooners *Maria*, also captured from the Americans; the *Carleton*, which had been brought in pieces from a dockyard in England; and last of all, the three-masted ship sloop *Inflexible*, which was not ready for service until 4 October. The most remarkable vessel in Carleton's fleet was the 422-ton "radeau," or sailing scow, built at St. Johns and named *Thunderer*. Carrying a three-hundred-man complement and two large howitzers, six twenty-four-pounders, and six twelve-pounders (manned during the battle of Valcour Island by the gunners of the Hanau Regiment), it was almost ninety-two feet long and over thirty-three feet in beam. The *Thunderer* had two masts (leading a contemporary British officer to call her a ketch), but being flat-bottomed, it could not work to windward and did not participate in the battle.

The British also moved several smaller boats past the rapids from the St. Lawrence: twenty gunboats each having one gun; four long boats with a field gun each; and twenty-four provision boats or bateaux—many received in frame from England. The *Maria*, with fourteen six-pounder guns, the *Loyal Convert*, with seven nine-pounders,

and the *Thunderer* did not get within effective range during the battle of Valcour Island. The *Inflexible* delivered a long-range fire with her eighteen twelve-pounders initially, then was finally able to get within point-blank range and discharge five broadsides, which completely silenced Arnold's guns and probably did most of the damage suffered by the American flotilla. Cannon in the fifteen to twenty gunboats that participated in the fight (Arnold estimated their number in those terms) varied in caliber from nine-pounders to twenty-four pounders.

At the start of Burgoyne's offensive in 1777, the British flotilla consisted of the British gunboats and sailing vessels of their 1776 squadron; the captured *Lee*, *New Jersey*, and *Washington*; a newly built sailing vessel, the *Royal George*; five provision ships (*Commissary*, *Receipt*, *Delivery*, *Ration*, and *Camel*); and ten transport bateaux. At Skenesboro on 6 July 1777, the last of the American squadron was burned by the departing rebels (*Revenge*, *Enterprise*, and *Gates*) or captured (*Trumbull* and *Liberty*).

CHARLES CITY COURT HOUSE, VIRGINIA. 8 January 1781. From Westover, where he had withdrawn after his raid on Richmond from 5–7 January, Benedict Arnold sent John Simcoe with forty mounted men on a reconnaissance toward Long Bridge on the Chickahominy. Simcoe learned from prisoners that General Thomas Nelson was near Charles

City Court House with a body of militia. An escaped slave guided the Rangers by a back route to the courthouse, where they surprised the guards in the dark and scattered some 150 militia. Two Americans were killed and a number captured; the rest fled to Nelson's camp a few miles away. Simcoe's losses, three wounded, were insignificant. Simcoe returned to Westover before dawn with his prisoners and a dozen captured horses.

revised by Robert K. Wright Jr.

CHARLESTON, SOUTH CAROLINA.

The first English settlement in South Carolina was established at Albemarle Point on the west bank of the Ashley River in 1670 and named Charles Town, in honor of King Charles II. The location proving to be undesirable, a new Charles Town was begun on the site of the present Charleston about 1672, and the seat of government was moved there in 1680. The name was changed to Charlestown about 1719 and Charleston in 1783. Hence, pedants are correct in calling the town "Charlestown" for the period of the American Revolution.

Mark M. Boatner

CHARLESTON EXPEDITION OF CLINTON IN 1776.

During the fall of 1775, even as the British situation in Massachusetts deteriorated, the Ministry started developing plans for a military expedition to the South, initially thinking only of sending arms. Rebel elements in Virginia, North Carolina, South Carolina, and Georgia drove all four governors to seek shelter on board warships, but their correspondence and the pleas of London merchants and others convinced the government by mid-October that Loyalists could restore authority with the assistance of a respectable force of regulars. The planning started by William Legge Dartmouth was continued by George Sackville Germain when he became American Secretary on 9 November.

The plan gradually evolved as London attempted to take advantage of changing circumstances and adjust to a wide array of mobilization and deployment problems. In final form the expedition consisted of seven infantry regiments from Ireland plus supporting artillery embarked in chartered transports sent from London and escorted by a Royal Navy squadron. All of the troops selected had already

been earmarked to reinforce either William Howe or Guy Carleton. Once the force restored order it would turn the southern colonies over to their governors and move on to join Howe. Charles Cornwallis led the troops, Commodore Sir Peter Parker the squadron. As London wanted, on 6 January Howe ordered Henry Clinton to meet the expedition at Cape Fear, North Carolina, and take command.

Clinton left Boston on 20 January with two light companies (from the Fourth and Forty-fourth), and a few officers who were to raise a body of Highland emigrants in North Carolina. His ships included the frigate *Mercury*, two transports, and a supply vessel. Stopping to confer with Governors Tryon (New York) and Dunmore (Virginia) along the way, he reached Cape Fear on 12 March where Governors William Campbell of South Carolina and Josiah Martin of North Carolina soon joined a growing flotilla.

Parker and Cornwallis should have left Cork in December but did not actually set out until 12 February, and then immediately ran into a storm that drove the convoy back to port. The second try at crossing the Atlantic ran into still more trouble from storms. The badly scattered vessels began trickling into the rendezvous on 19 April; the whole force was not collected at Cape Fear until 15 May. By that point premature Loyalist uprisings in both Carolinas had already gone down to defeat, most visibly at Moores Creek Bridge, North Carolina, 27 February.

Clinton saw no possibility of accomplishing his original mission in time to rejoin Howe for a spring offensive as originally planned. Wanting to do something, however, he favored operations in the Chesapeake, where small, easily maintained outposts might serve as bases for raids and as havens for Loyalists. But when Parker arrived he sent a naval reconnaissance toward Charleston, and on 26 May he talked Clinton into a more ambitious plan. Parker wanted to capture unfinished Fort Sullivan in Charleston harbor and use it as a base for a small garrison supported by a frigate or two before letting the main task force go north. As William Willcox comments, "Clinton surrendered his own scheme, apparently without protest, and fell in with this idea" (*Portrait of a General*, pp. 84–87). On 30 May the British task force crossed back over the bar and the next day sailed for Charleston.

AMERICAN PREPARATIONS

The defense of Charleston began with a wrangle over authority. The colony's Provincial Congress had raised four full-time regiments of state troops in 1775 and added two more in February 1776, but remained adamant that they were under the exclusive control of the colony. In early January the Continental Congress anticipated that the British might attack Charleston, among other potential targets in the south, and on 27 February it created a

separate Southern Department for Virginia, North Carolina, South Carolina, and Georgia. Major General Charles Lee received the command on 1 March and left New York City two days later. On 3 May Brigadier General John Armstrong arrived in Charleston, the first Continental officer to appear. He immediately learned of South Carolina's insistence on its independent status. It took Lee's negotiating skills (he and Brigadier General Robert Howe arrived 9 June) and the presence of the British expedition offshore to persuade them to accept a unified defense. This decision gave Lee their six regiments, plus the Eighth Virginia Regiment, Third North Carolina Regiment, and part of the Second North Carolina Regiment. Including mobilized militia the American total on the day of battle was more than 6,500 rank and file, although only a small percentage were actually engaged.

Charleston's colonial-era defenses had been refurbished and expanded, but the key element was a large bar that lay along on the low, sandy islands—Sullivan's Island on the north and James Island on the south—that formed the shore of the harbor. Once vessels worked their way over the bar, a difficult feat of seamanship, they had to pass one of the forts along the channels of the six-mile passage to the city proper. Fort Johnson, the older work on James Island, mounted twenty heavy guns, with a new twelve-gun battery as an outwork.

South Carolina had not begun building Fort Sullivan on the northern island of the same name until January 1776 as a square redoubt with bastions on each corner. It remained only half-done when the British attacked. A proper seacoast fort of the period should have had stone walls to withstand naval bombardment, but Colonel William Moultrie built with the only materials at hand: parallel walls of palmetto logs were put up, and the sixteen-foot space between them was filled with sand. Only the south and east walls and the two southernmost bastions were finished. They held emplacements for twenty-five guns that ranged in caliber from nine- to twenty-five-pound. The remaining half of the redoubt had been built to a height of only seven feet, so breastworks were erected and six twelve-pounders provided some protection to the rear. The northern tip of the island was three miles from the fort and separated from undefended Long Island (now Isle of Palms) by a narrow gap of water known as the Breach.

Although Moultrie spoke highly in his memoirs of the value of Lee's presence, it would appear that Lee did not have much confidence in the new fort. Moultrie wrote in his *Memoirs* that, "when he came to Sullivan's Island, he did not like that post at all; he said there was no way to retreat, that the garrison would be sacrificed: nay, he called it a 'slaughter pen,' and wished to withdraw the garrison and give up the post, but President Rutledge insisted it

should not be given up." Lee then ordered construction of a floating bridge to permit the garrison's escape across the mile-wide cove, but this improvised affair of planks and hogsheads would not support troops.

Moultrie himself was never "uneasy on not having a retreat because I never imagined that the enemy could force me to that necessity; I always considered myself as able to defend that post against the enemy. I had upwards of 300 riflemen, under Colonel Thompson, of his regiment, Colonel Clark, with 200 North-Carolina regulars, Colonel Horry, with 200 South-Carolina, and the Raccoon Company of riflemen, [plus] 50 militia at the point of the island behind the sand hills and myrtle bushes; I had also a small battery with one 18-pounder, and one brass field-piece, 6-pounder, at the same place, which entirely commanded the landing and could begin to fire upon them at 7 or 800 yards before they could attempt to land. Colonel Thompson had orders that if they could not stand the enemy they were to throw themselves into the fort, by which [time] I should have had upwards of 1000 men in a large strong fort, and General Armstrong in my rear with 1500 men, not more than one mile and a half off, with a small arm of the sea between us, that he could have crossed a body of men in boats to my assistance. This was exactly my situation. I therefore felt myself perfectly easy because I never calculated upon Sir Henry Clinton's numbers to be more than 3000 men." Moultrie notes that, in answer to Lee's question as to whether he could maintain the post, he replied, "Yes, I think I can," upon which they discussed it no further.

BRITISH PRELIMINARIES

The Clinton-Parker task force left Cape Fear on 31 May and reached the islands off Charleston the next day. Parker took his time and conducted a careful reconnaissance of the harbor mouth; much more time would be required to get the warships and transports across the bar. The British originally intended to overwhelm Charleston by immediate attack but now realized they would have to conduct more systematic operations. Parker agreed to commit his full force of warships to a bombardment of the fort; Clinton (with the concurrence of Cornwallis) agreed to land on Long Island (Isle of Palms). The troops would then support the naval force by crossing over to Sullivan's Island and hitting the fort from the rear.

Parker finished the naval part of the attack plan on 15 June, and Clinton landed most of his troops on undefended Long Island on 16–18 June. Much to his chagrin, Clinton discovered that his intelligence had made a huge error about the Breach and that it was too deep to be forded. He had only fifteen flatboats to attempt a ferrying operation, making that option unworkable. On 18 June Clinton sent Brigadier General Vaughan to Parker to suggest that the commodore take two regiments on board his ships to use in a direct landing at the end of the bombardment.

Plan for the British Attack on Fort Sullivan. This map, drawn by a British officer, details the British plan for the attack on Fort Sullivan in Charleston Harbor on 28 June 1776. THE LIBRARY OF CONGRESS, GEOGRAPHY AND MAP DIVISION.

Parker planned to attack on 23 June, but adverse winds made him delay for five days. During this period the Americans continued to improve the defenses on Sullivan’s Island.

THE ATTACK

On 28 June at 11 A.M. the British ships went into action. The bomb ketch *Thunder* opened fire at a range of a mile and a half with two mortars (a 13-inch and a 10-inch); she was supported by the *Friendship* (16 gun). The *Active* (28), *Bristol* (50), *Experiment* (50), and *Solebay* (28) anchored 400 to 800 yards south of the fort and opened fire. The *Actaeon* (28), *Sphynx* (20), and *Syren* (28) then formed a second line and started blasting away. After an hour the ships of the second line started moving to new positions west of the fort from which to enfilade its southern face

and also to threaten its access to the city. All three ran onto a shoal known as the Middle Ground and became sitting ducks for the American gunners at about the same time that the *Thunder’s* mortars broke down. After several hours the *Syren* and *Sphynx* got free but had to withdraw for repairs; the *Actaeon* could not be moved. Parker’s flag-ship, the *Bristol*, also suffered enormous damage when a cable was shot away and her stern swung toward the fort.

Moultrie had been visiting Thompson’s position on the northern end of Sullivan’s Island the morning of 28 June, and across the Breach he could see Clinton’s force manning boats as if for an assault. But when he saw Parker’s ships preparing to get under way he galloped the three miles back to Fort Sullivan and “ordered the long roll to beat.” That day the garrison consisted of about 425 men of Moultrie’s Second South Carolina Regiment and

Sergeant Jasper's Heroism. When the American flag fell during the attack on Fort Moultrie in 1776, Sergeant William Jasper went out through an embrasure to retrieve it, a heroic act depicted in this nineteenth-century engraving after a painting by J. A. Oertel.

twenty-two gunners. Although nervous at first, the defenders settled down and worked the fort's cannon with skill. Moultrie's only problem was insufficient powder.

As it turned out, the construction materials of Fort Sullivan had certain surprisingly good qualities: the spongy palmetto logs did not shatter and splinter like ordinary wood, and the sandy earth of the walls further cushioned the impact of cannon balls and mortar shells. Most of the American casualties resulted from the few shots that came through the embrasures. Despite the punishment the British naval gunners were taking, however, they manned their pieces well. "At one time, 3 or 4 of the men-of-war's broadsides struck the fort at the same instant," wrote Moultrie, and the merlons were given "such a tremor that I was apprehensive that a few more such would tumble them down." Despite the long range, the *Thunder* "threw her shells in a very good direction; most of them fell within the fort, but we had a morass in the middle that swallowed them up instantly, and those that fell in the sand and in and

about the fort were immediately buried so that very few of them burst amongst us."

Moultrie noted that Lee visited the fort during the action, pointed a few guns, and departed with the words, "Colonel, I see you are doing very well here. You have no occasion for me." He later wrote, as quoted by Moultrie: "The behaviour of the garrison, both men and officers, with Colonel Moultrie at their head, I confess astonished me. It was brave to the last degree. I had no idea that so much coolness and intrepidity could be displayed by a collection of raw recruits."

When a shot struck the flagstaff and the flag fell outside the fort, Sergeant William Jasper went out through an embrasure to retrieve it and put it back into view on an improvised staff. This was more than bravado, because disappearance of the flag could have signaled to the enemy as well as to the thousands of American civilian and soldier spectators that the fort had surrendered.

Presentation of Colors. *The wife of Colonel Barnard Elliott was reported to have presented in 1776 a set of embroidered flags to Colonel Moultrie and the soldiers who defended the fort on Sullivan's Island, a scene depicted in this nineteenth-century painting.* **PRESENTATION OF THE COLORS TO COL. W. MOULTRIE.** (OIL ON CANVAS) BY AMERICAN SCHOOL (19TH CENTURY); CHICAGO HISTORICAL SOCIETY, CHICAGO, IL / BRIDGEMAN ART LIBRARY.

The firing tapered off at sunset, and with the tide ebbing and his ammunition starting to run out, Parker told his ships to fall back at 9:00 P.M.—all but the marooned *Actaeon*, which was set on fire by her crew the next morning and abandoned.

As for Clinton's part in the action, he had ended up as a spectator, and with a rather poor seat at that. He had demonstrated toward the island and toward the mainland but could not risk crossing without naval covering fire. When he discovered the next morning what a beating the navy had taken, he could do nothing but make plans for a strategic retreat. His troops remained on Long Island three weeks before embarking (21 July) for New York. Only the *Solebay* accompanied the transports; Parker's other ships had to remain some time longer for repairs. Clinton's

troops reached Sandy Hook on 31 July and joined Howe on Staten Island for the New York Campaign.

LOSSES

Lee reported 10 Americans killed and 22 wounded in Fort Sullivan; Ward's figures are 12 killed, 5 died of wounds, and 20 wounded. Moultrie, the one person in a position to know for sure, gives no figures in his memoirs.

Only the Royal Navy lost men in the attack. According to Parker's official report (*Naval Documents*, 5:997–1002), British casualties amounted to 64 killed and 141 wounded, but he curiously omitted the *Actaeon's* losses from his accounting. *Experiment* and *Bristol* took most of the casualties and both ships' captains died from their wounds. Parker himself was slightly but painfully wounded.

SIGNIFICANCE

Until the late twentieth and early twenty-first centuries, this campaign attracted relatively little scholarly attention. Yet the battle was a humiliating defeat to the British that gave a critical boost to rebel morale. "Britain had worse defeats in the course of the war, but no more egregious fiasco," says Willcox. The southern colonies (which became states on 4 July) remained in rebel hands for three years before the British sent regulars again. During those three years Loyalists in Virginia, the Carolinas, and Georgia had to either leave the country or hide their feelings.

Although the entire British operation rested on a false belief in Loyalist strength, the king's military forces might have had some modest accomplishments if they had been able to get there sooner. The relatively small force Clinton took from Boston was incapable of doing much alone, but in combination with the 2,500 troops of Cornwallis and Parker's fleet it should have been possible to accomplish part of Clinton's mission. Most accounts blame one component or another for being dilatory. The truth was that the technical difficulties of mounting the expedition overwhelmed the British government's cumbersome administrative structure. The British fatally misjudged the harbor and fort conditions, and the Loyalists themselves displayed no common sense and rose prematurely. Their biggest defeat, at Moores Creek Bridge, had lingering effects during the second invasion.

Lord North, Germain, and the king found no fault with Clinton's conduct of the Charleston expedition and gave him private assurances to this effect. A controversy developed, however, when Sir Peter Parker's public letter to the Admiralty charged Clinton with failure to support the naval attack. The published version of Clinton's letter to the secretary of state was so abridged as to omit the portions that would have refuted Parker's contentions. The supersensitive Clinton was embittered by the government's unwillingness to make public their private assurances of his exoneration for the Charleston failure. In the autumn of 1776 his friends in the House of Commons vigorously attacked the government on this matter; upon his return to England in the spring of 1777 he was given the Order of the Bath to reestablish his prestige.

In a sense the Americans damaged themselves by winning such a lopsided victory. Political leaders in the Carolinas and Georgia misread the technicality that few "Continental" troops participated, and assumed that their militia resources and fortifications would be ample for their defense. Although they did raise (or turn over) Continentals, they never furnished them with adequate support or replacements. And they paid the price.

CHARLESTON EXPEDITION OF CLINTON IN 1780. Charleston (called Charles Town in 1780), South Carolina, the most significant port in the southern colonies and one of the wealthiest cities in America, played a role in British strategy throughout the war. Although the 1776 attempt on Sullivan's Island failed, Howe considered an expedition against Charleston in the winter of 1777–1778, and Prevost's feint in the spring of 1779 conceivably could have taken the city. Recognizing its economic and strategic significance, Clinton determined by August 1779 to make another attempt on Charleston.

Delayed by the French move north for operations against Savannah, preparations began in earnest in November 1779. The expeditionary force, numbering eighty-seven-hundred men, embarked from New York on 26 December 1779. The force was conveyed by a fleet of over one hundred transports and warships, commanded by Arbuthnot. Cooperation between the army and the Royal Navy would be critical to reducing Charleston, but the relationship between Clinton and Arbuthnot threatened its success from the start. Receiving word that French ships were wintering in Chesapeake Bay, Arbuthnot suggested attacking them before moving south. Clinton, aware of the Chesapeake region's importance to the rebel war effort, wished to take Charleston first and return to the mid-Atlantic theater later. Arbuthnot abandoned the idea of moving against

the French, but this difference of opinion foreshadowed future disagreements between the two commanders.

The winter of 1779–1780 was one of the worst of the eighteenth century, and severe storms buffeted the British fleet as it sailed toward the rendezvous point at Savannah. The weather damaged and sank ships; caused the loss of provisions, horses, and ordnance; and lengthened the voyage. A journey that normally lasted ten days took some vessels five weeks to complete.

THE LANDING IN SOUTH CAROLINA

Off Savannah, Clinton sent Brigadier General James Paterson ashore to make a feint toward Augusta, while Tarleton was sent to Beaufort to replace cavalry horses lost at sea. Clinton and Arbuthnot haggled over where to land the army, but the question was settled when the admiral sent Captain George Keith Elphinstone to handle the disembarkation. Elphinstone performed to Clinton's satisfaction throughout the Charleston operations.

Sailing into the North Edisto River on 11 February 1780, Elphinstone put ashore Clinton's grenadiers and light infantry that night on Simons (now Seabrook) Island, and the remaining troops landed the following day. Over the next several weeks, Clinton's army encamped on Johns Island, seizing Stono Ferry, and then crossed to James Island on 24 February 1780, where they established positions at Wappoo Bridge on Wappoo Cut and at Fort Johnson.

With the 1776 attempt on Sullivan's Island on his mind, Clinton moved cautiously against Charleston. He preferred the landing in the North Edisto River region because it put an appropriate distance between his army and the rebels in Charleston. The American general Benjamin Lincoln, who had learned of British intentions against the city from captured Royal Navy sailors, declined to sortie against the British, however, deciding instead to mass his force within Charleston's defenses. Rumors of a smallpox epidemic kept South Carolina militia from joining Lincoln, and he believed he lacked adequate numbers to attack the British on their march. He feared that if he sallied forth from the town, the British would attack it in his absence. Instead, he sent Brigadier General William Moultrie and Lieutenant Colonel Francis Marion to hold Bacon's Bridge on the Ashley River, while his cavalry harassed the British as they moved toward Charleston.

THE CROSSING OF CHARLESTON BAR

Clinton could advance no further until Arbuthnot crossed Charleston Bar, a large sandbank that ran from Sullivan's Island, above the harbor entrance, to Lighthouse Island several miles below it. The Bar represented a strong natural defensive obstacle to enemy warships since vessels could only cross it via a few shallow channels; the primary avenue

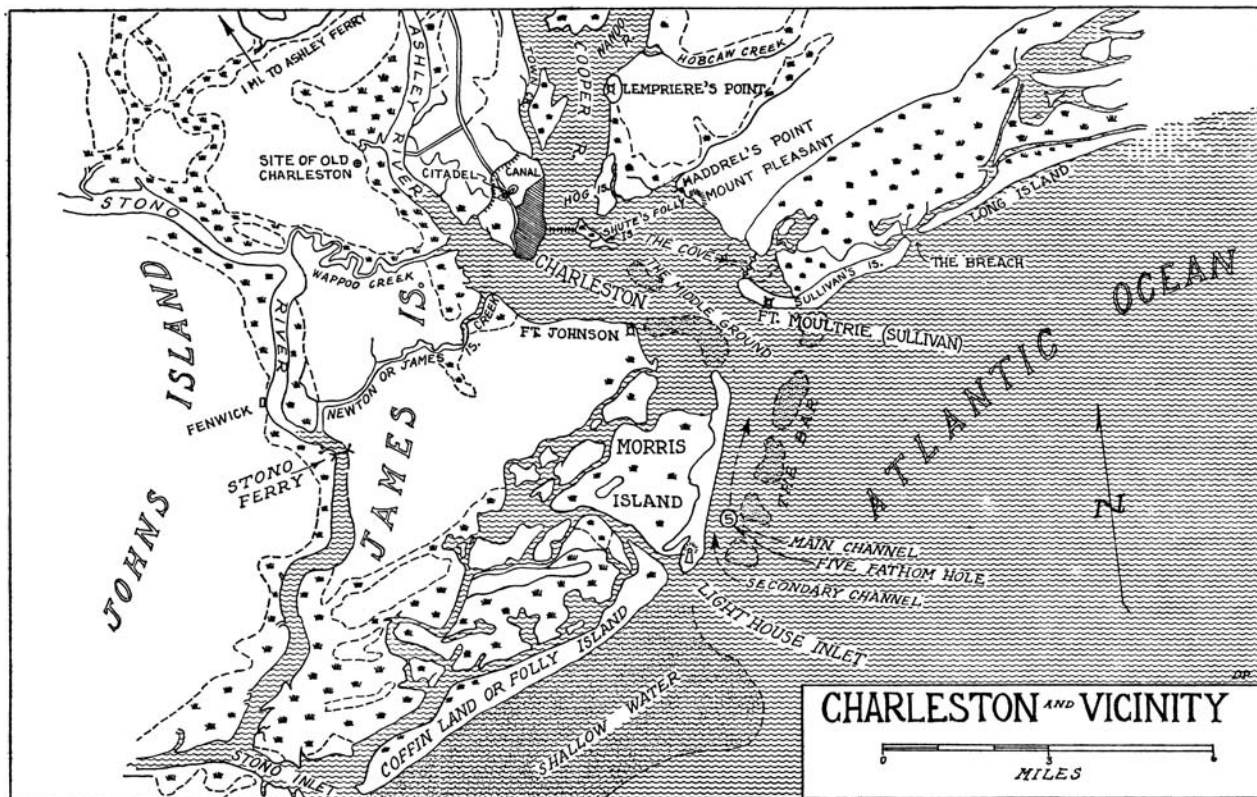

for larger ships, the Ship Channel, was only twenty feet deep at high tide. The British men of war drafted too deeply to clear this channel, and even the forty-four-gun ships would have to have stores and guns removed before they could sail through it.

Lincoln, recognizing the Bar's strategic importance, urged Commodore Abraham Whipple, who commanded American naval forces in Charleston, to take up a position to defend it. Lincoln argued for a station inside the Bar blocking the Ship Channel. By keeping the Royal Navy outside the harbor, he was confident that the Americans could limit the British to a landside assault on the town. The cautious Whipple, outclassed by Arbuthnot in number and size of warships and uncertain of the tricky currents in the waters surrounding the Bar, was reluctant to do so. Backed by his captains, he argued that his ships would be more effective acting in concert with Fort Moultrie on the southern end of Sullivan's Island. Lincoln was displeased, but he consented to a station near the fort.

Arbuthnot took advantage of this opportunity on 20 March 1780, crossing the Bar uncontested with the *Renown* (fifty guns), the *Roebuck* (forty-four guns), the *Romulus* (forty-four guns), four frigates, a sloop of war, and several smaller vessels. When Whipple recognized that the *Renown* was inside the Bar, he insisted to Lincoln that his vessels could not maintain their current station and asked that he be allowed to moor them in the Cooper River instead. Frustrated, Lincoln again consented to the change in position, and Whipple's forces were effectively removed from action for the remainder of the campaign. The *Renown's* ability to clear the Bar should not have surprised Whipple, since the British had sailed a fifty-gun ship over it for operations against Sullivan's Island in 1776. In any event, this failure to properly defend the Bar and harbor was a critical error in the American defense of Charleston. Whipple not only surrendered Charleston's key natural defensive obstacle without a fight, but he freed the Royal Navy to send more direct assistance to Clinton.

CLINTON MOVES TO CHARLESTON NECK

The crossing of the Bar enabled Arbuthnot to send boats and sailors to Clinton's army for the advance to Charleston. Clinton, meanwhile, ordered Paterson to join him from Georgia so they would have sufficient men to maintain the line of communication with James Island and the Royal Navy when the move was made to the Charleston Peninsula. As with the initial landing, Clinton wished to cross the Ashley River, where his troops would be least vulnerable to attack by the rebels. He chose Drayton Hall, thirteen miles from the city. There, on 29 March 1780, Royal Navy flatboats under Elphinstone carried them over the river. On the opposite

THE GALE GROUP.

bank, they met only a few scattered shots from American horsemen.

The following day, the British army advanced toward Charleston; in the vanguard were the light infantry and jägers, who would play a crucial role in the siege. Lincoln sent his own light troops, commanded by Lieutenant Colonel John Laurens, to reconnoiter and prevent the British from approaching the city too quickly. The two sides skirmished throughout the day before Laurens withdrew to the American lines, each side suffering a few casualties. Encamping two miles from the city, Clinton's army opened its siegeworks on Charleston Neck on the night of 1 April 1780, from eight hundred to one thousand yards from the American defenses.

On 8 April 1780, Arbuthnot in the *Roebuck* led the *Romulus*, the *Renown*, his frigates, the sloop of war *Sandwich*, and two transports past Fort Moultrie. Although a third transport was lost when it ran aground and some vessels received damage from the fort's guns, in ninety minutes Arbuthnot sailed his flotilla safely to the waters off Fort Johnson on James Island. There, they had an anchorage out of range of American guns in the city and on Sullivan's Island. The Royal Navy had now cut off Charleston by sea, and the British were in position to surround the garrison.

Clinton and Arbuthnot summoned the garrison on 10 April 1780. When Lincoln immediately rejected their demand for surrender, they pressed on with the siege, and their batteries on the neck opened on 13 April.

OPERATIONS AGAINST THE AMERICAN LINE OF COMMUNICATION

Clinton wished to completely invest Charleston. Securing the Cooper River and the region east of it would box in the Americans. Clinton sent a corps under Lieutenant Colonel James Webster across the Cooper while Arbuthnot, he hoped, would push ships into that river.

Reaching Goose Creek by 13 April, Webster detached Tarleton to attack the rebel cavalry. Lincoln had posted his cavalry, under Brigadier General Isaac Huger, outside Charleston to harass the British and keep open the line of communication with the South Carolina backcountry. Huger's force consisted of several regiments of horse, all commanded by Lieutenant Colonel William Washington, and a detachment of North Carolina militia. The cavalry arm was one of the few advantages that Lincoln held over Clinton at the outset of the campaign. Not only did the American cavalry outnumber the British, but many of the British dragoon horses had been lost on the stormy voyage from New York, and the mounts collected since were

inferior to those of the rebels. Tarleton ambushed the Americans at Biggin's Bridge near Moncks Corner on 14 April and inflicted a severe defeat on them. The British success opened the door to the region east of the Cooper River, providing the opportunity to cut off the garrison.

Reinforcements from New York arrived on 18 April, allowing Clinton to send additional troops east of the Cooper. He also appointed Cornwallis to command this strengthened corps. He anticipated that Cornwallis would block routes in and out of Charleston and cooperate with the Royal Navy when Arbuthnot brought vessels into the Cooper River. Arbuthnot, despite promises to Clinton, did not act vigorously to make such an attempt. Clinton became increasingly frustrated as no action was taken despite his pleas to the admiral. Arbuthnot was reluctant to risk ships for the endeavor. The Americans sank hulks in the main channel leading into the Cooper River to prevent British access, while the Hog Island Channel on the Mount Pleasant side, though open, was narrow and difficult to navigate. Lincoln's men, meanwhile, constructed a battery at Haddrell's Point specifically to cover the entrance to Hog Island Channel.

In addition to the Haddrell's Point battery, the Americans held Fort Moultrie and a strong redoubt at Lempriere's Point. Fort Moultrie's significance had lessened when the Royal Navy pushed into the harbor on 8 April, but Lempriere's, located near the confluence of the Wando and Cooper Rivers, kept open the door to the South Carolina backcountry, providing an avenue of escape for the American army. Although the British had a substantial force east of the Cooper, Cornwallis admitted that it would be relatively easy for an evacuating American force without cannon or baggage to slip by them.

Clinton feared that the garrison could escape via Lempriere's Point, but he believed it too formidable for Cornwallis to assault. Arbuthnot's foot-dragging made assistance from the Royal Navy doubtful. Commanded by Lieutenant Colonel Francois Malmedy, the position consisted of a redoubt with six eighteen-pounders and a number of smaller fieldpieces. With Malmedy were one hundred Continentals and two hundred North Carolina militia. Lincoln at one point sent Laurens and the light infantry to Lempriere's but withdrew them as the British pushed their siegeworks closer to the American defenses on the neck.

On 27 April, information reached Malmedy that Cornwallis was approaching his position at Lempriere's Point in force, and the French officer hastily spiked his guns and evacuated the garrison to Charleston. Ironically, Cornwallis was making no such move, having contented himself with patrolling the region east of the Cooper River to forestall an American escape. The Royal Navy took possession of the fort the next day.

Encouraged by Lincoln to leave Charleston to ensure the continuance of "civil authority" and to raise the backcountry militia, Governor John Rutledge had departed on 13 April. Although the loss of Lempriere's Point made it more difficult to approach the city, Lincoln still hoped that reinforcements could reach the garrison. Rutledge met with little success in South Carolina, but a detachment of Virginia Continentals under Colonel Abraham Buford was marching to assist the garrison. Moreover, the American cavalry, now commanded by Colonel Anthony Walton White, who arrived in the state with a few additional dragoons, had regrouped after the disaster at Moncks Corner.

White crossed the Santee River on 5 May; four miles north of Awendaw Bridge on the road leading to Charleston, they captured eighteen men from a British foraging party. Falling back toward the Santee the following day, White's cavalymen were ambushed by Tarleton at Lenud's Ferry. As Cornwallis accurately pointed out, "this stroke will have totally demolished their cavalry." The British now faced little threat outside the American siegeworks.

Despite close investment by the British, Lincoln and his officers resolved to continue the defense. Clinton rejected their request for much too generous terms on 21 April, and he now anxiously believed his troops would be forced to storm the rebel works. Arbuthnot, who had repeatedly ignored Clinton's requests to push vessels into the Cooper River, moved against Fort Moultrie, which he captured on 7 May. This success and the victory over the American cavalry at Lenud's Ferry gave the British commanders another opportunity to summon the garrison.

Making note of these defeats, Clinton and Arbuthnot again offered Lincoln an opportunity to surrender on 8 May. Virtually surrounded and with no hope of reinforcement, Lincoln acceded to negotiations. Talks broke down over the prisoner-of-war status of the American militia and the siege continued until 11 May, when Lincoln capitulated. The garrison marched out on 12 May.

ASSESSMENTS

The victory at Charleston was the greatest of the war for the British. They took possession of the most important city in the southern colonies and captured six thousand men, four hundred cannon, and over five thousand muskets with minimal losses. That is not to say the campaign had been easy. Vicious winter weather upset the expedition at the outset, the relationship between army and Royal Navy commanders was tenuous, and the British faced a determined enemy.

Much could have gone wrong. Had the American navy stopped Arbuthnot at Charleston Bar as Lincoln

hoped, it is doubtful that operations would have continued. The cautious Arbuthnot, who had lost a man of war to a sandbar off Savannah early in the expedition, might have balked at further attempts had he lost additional vessels or faced greater enemy resistance. Cooperation between land and sea forces was critical for success. One branch of service could not have succeeded at Charleston without the other. Likewise, had Lincoln taken the initiative and escaped into the backcountry, his army would have provided a rallying point for the state's numerous militia, who would soon have harassed Cornwallis when his troops pushed inland. More skillful handling of the American cavalry and the retention of Lempriere's Point, meanwhile, could have prevented the British from cutting off the city east of the Cooper River and kept open communication with the South Carolina backcountry.

The British avoided these calamities, however, and celebrated the victory. Clinton believed that he had conquered both Carolinas with the capture of the city, but as Cornwallis found, the provinces were far from conquered. Although a tremendous victory for the British, the Charleston expedition, in kicking off major operations in the South (those in Georgia notwithstanding), set them on a road that led to Yorktown just seventeen months later.

NUMBERS AND LOSSES

Clinton departed New York with 8,700 men. A small contingent of these were blown so far off course that they never reached Savannah, and others remained in Georgia. Clinton utilized the remainder in operations against Charleston. The 18 April reinforcement from New York City added 2,600 troops. By the end of the campaign the British army operating against Charleston numbered 10,100 men. Returns showed 76 men killed and 189 wounded from the landing in the North Edisto to the close of the siege.

American strength is more difficult to gauge, since the makeup of Lincoln's army fluctuated throughout the campaign. On the eve of the British landing in South Carolina, Lincoln reported 1,400 Continental infantry and cavalry fit for duty plus 2,250 militia. Many of the North Carolina militia returned home prior to the commencement of the siege, however. Washington sent Lincoln the North Carolina brigade and Virginia line from the main army, but each numbered only just over 700 men by the time they reached Charleston. Clinton reported to Germain that they captured 6,618 men (including 1,000 sailors who had come ashore from rebel ships), but Lincoln's total force was probably closer to 6,000. A July 1780 return of prisoners, which makes allowances for soldiers who joined the British ranks, shows far fewer Continentals accounted for than noted at the end of the siege. Lincoln reported 89 men killed and 138 wounded during the siege. These figures do not include 15 killed and 18 wounded at

Moncks Corner and 41 killed and wounded at Lenud's Ferry.

With regard to naval forces, Arbuthnot initially commanded five ships of the line, a fifty-gun ship, two forty-fours, four frigates, and two sloops of war. One ship of the line, the *Defiance*, was destroyed in a storm off Savannah. British naval personnel numbered forty-five hundred men. Operations against Charleston cost the Royal Navy twenty-three killed and twenty-eight wounded.

Whipple brought with him to Charleston three frigates of the Continental Navy and a sloop of war. Of the frigates, the *Queen of France* was in such poor shape that she was sunk to block the channel between Charleston and Shutes Folly. The South Carolina state navy contributed a frigate, two French transports that had been converted into warships, two brigs, and several smaller vessels. A number of these shared the same fate as the *Queen of France*. The Royal Navy captured those not sunk.

CHARLESTON RAID OF PREVOST.

11–12 May 1779. Shortly after he replaced Robert Howe as commander of the Southern Department in December 1778, Major General Benjamin Lincoln resolved to drive the British from Georgia. Reinforced by militia in spring 1779, he devised a plan to march up the Savannah River, cross to Augusta, and move into the Georgia backcountry. Leaving twelve hundred men under Brigadier General William Moultrie at Black Swamp and Purisburgh, Lincoln arrived at Augusta on 29 April 1779 with four thousand men, including the bulk of his Continentals.

Rather than chase Lincoln, Major General Augustine Prevost determined to move into South Carolina to compel the American commander to abandon the Georgia enterprise and to collect supplies for his army. He crossed the Savannah River with a force of three thousand men. Outnumbered, Moultrie retreated toward Charleston, destroying bridges over the numerous rivers on his route. As the Americans fell back, Lieutenant Colonel John Laurens skirmished with the British briefly, and—unwisely in Moultrie’s opinion—at Coosawhatchie on 3 May, but Moultrie successfully reached Charleston on 7 May. He was joined there by a force of militia brought into the city by Governor John Rutledge and Pulaski’s Legion, which had arrived from Washington’s army.

The ease with which his army advanced and the persuasions of South Carolina Loyalists convinced Prevost to move against Charleston. His vanguard, commanded by his brother, Lieutenant Colonel Marc Prevost, crossed the Ashley River on 11 May and marched toward the city. Brigadier General Pulaski, who had arrived only days before, sallied out to meet them with his Legion cavalry and infantry and a few militia. Pulaski intended to draw the British into an ambush, but this stratagem failed when some of his troops, hiding behind a breastwork, showed themselves too soon. Prevost’s men drove off Pulaski, inflicting severe casualties on his detachment.

The arrival of the British force outside Charleston threw the inhabitants into a panic. The mistaken belief that enemy troops were immediately outside the gates the night of 11 May caused a general fire of musketry and artillery all along the lines and resulted in the killing or wounding of thirteen Americans who were attempting to fill a gap in the abatis. Among those killed was Major Benjamin Huger. Despite the apprehensions of many in

the garrison, Moultrie was confident that they could hold out against the British. He had at least thirty-two hundred men protected by earthworks against Prevost’s three thousand. Moreover, Moultrie had written Lincoln repeatedly since the British crossed the Savannah, and he expected the latter’s return at any moment. Others in the town were not so sanguine, however. Reports had reached Charleston that put British numbers at from seven thousand to eight thousand; Governor Rutledge was among those who accepted these greatly exaggerated figures.

Rutledge and the South Carolina Privy Council urged Moultrie to send a letter to the enemy asking what terms would be granted if the Americans capitulated. Prevost had given his brother, Lieutenant Colonel Prevost, the authority to summon the town. The latter responded to the Americans that any of the garrison who did not accept the king’s peace and protection would be considered prisoners of war.

Despite the concerns of Rutledge and the Privy Council, Moultrie and his officers argued vehemently that they should hold out. The civilian officials prevailed, however, and they had Moultrie send a proposal to Prevost that offered South Carolina’s neutrality in exchange for the security of Charleston. The question of whether the state would belong to the United States or Great Britain at the end of the war would be determined by the peace treaty.

When the message was sent to Lieutenant Colonel Prevost on 12 May, he replied that he had not come in a legislative capacity and that his business was with General Moultrie as military commander and not with Governor Rutledge. The receipt of these words in Charleston spurred Moultrie to take charge. Meeting with his officers, the governor, and the Privy Council, he asserted that they would “fight it out.” The truce at an end, he immediately issued orders to the men on the lines to prepare to defend the city.

On the following morning, 13 May, the garrison discovered, with great surprise, that the British had withdrawn. Pulaski attempted to pursue the retreating force, but he found that it had safely reached James Island southwest of Charleston.

By 6 May, Lincoln was rushing back down the Savannah River to relieve Charleston. The British intercepted a letter indicating his return, which influenced Prevost’s decision to withdraw. His lack of siege artillery and a cooperating naval force also swayed him. Prevost probably could not have taken Charleston with the means he had available, but he gambled in summoning the town in the same way he gambled in moving into South Carolina rather than opposing Lincoln in the Georgia backcountry. The roll of the dice of crossing the Savannah into South Carolina paid off in that Lincoln was compelled to abandon the expedition against Georgia.

Given this success, Prevost's failure to take Charleston mattered little.

Some South Carolinians, meanwhile, harshly criticized Lincoln for going into Georgia and leaving the state undefended. Lincoln was sensitive to these comments and requested permission to resign. The Continental Congress accepted his request, but Moultrie and Rutledge convinced him to stay. With the controversy fresh in his mind, Lincoln, for better or for worse, would keep his troops in the city when the British returned in 1780.

After remaining on James Island several days, Prevost moved his army to Johns Island and fell back to the Beaufort area beginning 16 June. Lincoln attacked his rear guard at Stono Ferry on 20 June in a bloody defeat for the Americans that brought a close to the campaign.

CHARLESTON SIEGE OF 1780. The six-week British siege of Charleston represented the longest formal siege of the war. It was also the largest military operation in South Carolina.

AMERICAN DEFENSES

Charleston lies on a peninsula at the confluence of the Ashley and Cooper Rivers, which meet to form its harbor. With fewer soldiers than the British, Major General Benjamin Lincoln elected to concentrate the bulk of his troops in defense works just outside the town. The focal point of the American fortifications was a tabby and masonry hornwork that lay astride the main road into the city. Late in the siege, Lincoln's engineers enclosed this hornwork to form a "citadel" and constructed two covering redoubts, one on each flank.

In front of the hornwork, the main defense line, a parapet interspersed with redans and batteries ran across Charleston Neck from the Ashley River on the left to the Cooper River on the right. Before the parapet was a double-picketed ditch and, beyond that, two rows of abatis. The outer defense consisted of a canal, or wet ditch, eighteen feet across and from six to eight feet deep, fed by a tidal creek on the Cooper River. The canal extended across the peninsula stopping short of the Ashley. The Americans could control the depth of the canal by means of a dam with sluices on the Cooper. The main line

inclined forward on the American right to protect the dam, and an advanced redoubt covered the canal on the left. Chevaux de frise were sunk in the tidal creeks, which cut into the neck, and filled gaps in the line. Wolf traps, holes with stakes in their floors, lay between the canal and main defense line.

The Americans had constructed an effective defense in depth. To take Charleston, the British would have to force the city's surrender, or alternatively they would have to clear the canal, fight through lines of abatis and chevaux de frise, avoid falling into the wolf traps, struggle through the double-picketed ditch, and then scramble up the parapet, all under fire from rebel soldiers. Even then the Americans would be in possession of the hornwork and supporting redoubts.

THE FORCES ENGAGED

Manning his fortifications, Lincoln had twenty-seven hundred Continentals and two thousand militia. The Continentals included those of South Carolina, North Carolina, and a detachment of Virginians. Shortly after the siege began, an additional seven hundred Virginia Continentals arrived in Charleston, and one thousand sailors from the Continental and South Carolina navies came ashore to serve in the lines.

At the outset of the siege, Clinton's army of 7,500 men consisted of two battalions of light infantry; two battalions of British grenadiers; four battalions of Hessian grenadiers; the 7th, 23rd, 33rd, 63rd, 64th, and 71st Regiments of Foot; a detachment of the Royal Artillery; Regiment von Huyn; a detachment of jägers; and the British Legion (Cathcart's), American Volunteers (Ferguson's Corps), New York Volunteers, North Carolina Volunteers, and South Carolina Royalists. Most had embarked at New York, but a number of the provincial units had marched from Savannah with Paterson. On 18 April a reinforcement arrived from New York, consisting of the 42nd Regiment (Black Watch), Regiment von Dittfurth, the Queen's Rangers, the Prince of Wales Regiment (Brown's Corps), and the Volunteers of Ireland. This gave Clinton another 2,600 men.

THE FIRST PARALLEL

On the night of 1 April 1780, Clinton sent out fifteen hundred laborers and an equivalent number as a covering party to begin the first parallel. By the following morning, the British had constructed three redoubts, connected by a trench, from eight hundred to a thousand yards from the Charleston defenses. The Americans were shocked that the British had moved so quickly. Still hauling guns into position, they fired from thirty to forty cannon shots at the new earthworks throughout the day.

Major James Moncrief planned six fortifications for the first parallel, anchored on the left by a battery to be constructed on Hampstead Hill, a small rise overlooking the otherwise flat terrain before the city. British troops seized this high ground on the Cooper River on the night of 3 April and established the battery. Recognizing the position's significance, Clinton expected a sortie against it. Lincoln sent the Continental sloop of war *Ranger* up the Cooper to bombard the work. *Ranger* scored a number of hits on it, but British artillerymen further upriver used a howitzer and twenty-four-pounder to drive the vessel off. Lincoln planned an assault against the fortification but demurred when he realized the British had enclosed it.

American artillery harassed British working parties daily as they pressed on with the first parallel. From 4–5 April alone, rebel cannon threw 573 shots at the besiegers. Although causing little damage and few casualties, the bombardment unnerved British laborers. To relieve the pressure, Clinton had a battery west of the Ashley River and galleys posted in the Ashley fired into the town. This action terrorized civilians but did little to check the American guns. On 7 April an expected reinforcement of seven hundred Virginia Continentals arrived to further bolster the garrison.

While the army had successfully blockaded Charleston on the neck, Clinton wished to invest Charleston completely. Arbuthnot's ships had lain anchor in Five Fathom Hole since crossing the bar on 20 March. On 8 April 1780, Arbuthnot in the *Roebuck* (forty-four guns) led the *Romulus* (forty-four guns), the *Renown* (fifty guns), four frigates, the sloop of war *Sandwich*, and two transports past Fort Moultrie. Although a third transport ran aground and had to be abandoned, the other vessels received only minor damage and anchored safely near British-held Fort Johnson on James Island. The Royal Navy now controlled the harbor.

Arbuthnot went ashore to consult with Clinton, and the two commanders agreed to summon the garrison even though batteries in the first parallel were incomplete. Major Crosby delivered the message on 10 April. Without consulting his officers, Lincoln responded that sixty days had passed since British intentions were known, which had given him time to abandon the city, but that he intended to hold it to the last extremity.

THE AMERICAN SITUATION

Lincoln called a council of war on the morning of 13 April to discuss the critical situation of the garrison. He outlined to his senior officers the unfavorable state of their troops, provisions, stores, and artillery. His engineers, meanwhile, had little faith in their defensive works. Brigadier General Lachlan McIntosh argued that they should at least evacuate the Continentals from Charleston. The meeting was

interrupted, however, by the opening of the British batteries in the first parallel.

Throughout the day and into the night, British guns bombarded the American lines and the city. Lincoln's artillerymen returned the favor, and the two sides dueled until midnight. Never before had Charleston seen such a cannonade. The battery on Hampstead Hill propelled hot shot into the town, starting several fires, and there were a number civilian casualties. Artillery firing continued almost daily for the next four weeks.

Before the first parallel was completed, British working parties commenced an approach toward a second parallel. They had constructed a battery 150 yards in front of the left of the first parallel on 9 April, connected to the parallel by a trench. From this position, they pushed forward to a second parallel just 750 feet from the American canal. When American batteries and riflemen directed their fire against laborers in this vicinity, the British began a new approach from the right of the first parallel. They excavated another section of the second parallel at the head of this sap and connected the two sections on 17 April. Ignoring the method espoused by Vauban, Moncrief had his men dig the approaches directly at the enemy lines, rather than in a zigzag fashion, which allowed the Americans to fire down the length of the saps.

Tarleton's victory at Moncks Corner on 14 April and the subsequent British advance into the region east of the Cooper threatened the garrison's access to the South Carolina backcountry. The besieging army's progress on the neck, meanwhile, was evident. On 20 April, Lincoln convened another council of war to weigh options. Once again describing the gloomy state of affairs, he asked the officers what measures they should pursue under the circumstances. With a British force east of the Cooper, evacuation through that region was still possible but now more difficult. Still, General McIntosh thought it the best course of action. Others, led by Colonel Laumoy, a French engineer, argued for offering terms of capitulation.

When Lieutenant Governor Christopher Gadsden, chief civilian official in Charleston, entered, Lincoln allowed him to participate in the council. Gadsden insisted they postpone further discussion until he consulted the Privy Council. When they reconvened, Gadsden returned with Benjamin Cattell, Thomas Ferguson, Richard Hutson, and David Ramsay of the Privy Council. Gadsden browbeat the officers, insisting that "the militia were willing to live on rice alone" rather than surrender and even "old women . . . traveled the streets without fear or dread" of British shot. Ferguson was more direct. He noticed that the army had collected boats, ostensibly for the purpose of evacuating the city. Ferguson asserted that if the Continentals attempted to withdraw from the town, he would open the gates for the British and assist them in attacking Lincoln's soldiers as

they boarded the boats. Under this pressure, Lincoln and his officers abandoned the idea of escaping the city.

The following day, 21 April, the council of war determined to offer honorable terms of capitulation. The terms Lincoln put forth were unrealistic, however, including articles allowing all American troops and ships to withdraw unmolested from the city. After a brief truce, Clinton and Arbuthnot rejected the proposal.

CLOSING IN ON CHARLESTON

While strengthening and constructing batteries in the second parallel, British working parties pressed on toward a third. The third parallel, when completed, consisted of two unconnected sections. On the British left, engineers extended the parallel toward the dam that allowed the defenders to control the water depth in the canal.

As the British advanced their approaches and parallels, the garrison offered stiff resistance, and American solid shot, grapeshot, and small arms took their toll. Work slowed after completion of the second parallel because of the increasing proximity to the Charleston lines. Still, the Americans had thus far failed to sortie against the besieging army. This inactivity may have caught the British off guard when two hundred South Carolina and Virginia Continentals, led by Lieutenant Colonel William Henderson, attacked the third parallel shortly before daybreak on 24 April. A heavy fire from the second parallel eventually compelled Henderson to retreat, but not before his detachment had killed or wounded eight men and captured twelve. American losses were Captain Thomas Moultrie killed and two wounded.

The sortie's impact extended to the next evening. When nervous American sentries fired muskets into the darkness, artillery and small arms erupted from the garrison. Assuming another sortie was under way, British and Hessian soldiers in the third parallel bolted for the rear. Troops posted in the second parallel mistook the retreating soldiers for advancing rebels and opened up on them. Before the officers discovered what had happened, at least twenty men had been killed or wounded. Beginning on 27 April, the Americans placed burning barrels of turpentine before their lines each night, illuminating the space between the armies and ensuring there would be no further sorties or false alarms.

When Brigadier General Duportail arrived in Charleston on 24 April, he offered a grim assessment of the American defenses. He asserted that the works were untenable and advised an evacuation. Duportail had missed the council of war on 20 April and was unfamiliar with the prevailing political considerations. Hence, Lincoln called another council on 26 April. The officers concluded unanimously that the British force east of the Cooper River and the civil authority's opposition made

such a move impracticable. Any possibility of escape ended the next evening when Colonel Malmedy abandoned Lempriere's Point, gateway to the backcountry.

By 1 May, British working parties had pushed a sap to the canal and opened a trench to begin draining it. The wet ditch was emptied by 6 May, and the British had thereby breached the first layer of the American defenses. The primary battery in the third parallel, meanwhile, played on the hornwork. The area between the lines became a no-man's-land, and both sides reported increased casualties as the siege dragged on. Artillery pounded fortifications, and riflemen on both sides targeted individual soldiers. The Hessian jägers were particularly effective in this duel, directing their fire at the American embrasures and preventing artillerymen from manning their guns in daylight. On 24 April, a jäger shot and killed Colonel Richard Parker, the highest-ranking officer to die in the siege, when he peered over the parapet.

As his men toiled in the trenches, Clinton worried that the rebels would not capitulate and that his men would have to storm their fortifications. The American situation was becoming more precarious, however. The presence of Cornwallis's force east of the Cooper and the loss of Lempriere's Point made it nearly impossible to transport large quantities of supplies into the town. The garrison possessed sufficient rice stores to last several weeks, but meat was becoming scarce. On 4 May the meat ration was reduced to six ounces per man, and four days later an officer reported that no meat was being issued. Another officer noted that the British taunted them by firing into the town shells charged with rice and sugar. Parties of soldiers sent among the civilians to locate surplus food turned up little.

NEGOTIATIONS

The loss of Fort Moultrie to the Royal Navy on 7 May was a serious blow to morale in the city. This success and Tarleton's victory at Lenud's Ferry once again gave Clinton the opportunity to summon the garrison. On the morning of 8 May, Clinton sent a message to Lincoln suggesting that he capitulate. A truce extended into the next day as councils of war were called, options discussed, and messages sent back and forth.

Negotiations broke down over the status of the militia in the event of surrender. Clinton easily accepted Lincoln's offer of the Continentals as prisoners of war, but the American commander also proposed that the militia be allowed to return to their homes. Clinton acknowledged that they could do so but only as prisoners of war on parole. He also objected to other issues involving the citizens of Charleston, and he did not believe the Americans worthy of the honors of war. He rejected Lincoln's stipulation that the defenders march out of their works with shouldered arms, drums beating, and

colors flying. He maintained that when the rebel army delivered up its arms, their colors were to be cased and their drums were not to beat a British march.

Lincoln would not accept Clinton's changes and talks ended. Shortly after nine P.M. on 9 May, American soldiers gave three cheers and their batteries commenced firing. The two sides furiously cannonaded each other throughout the night and into the next day. British artillerymen sent 469 rounds of solid shot and 345 shells into the rebel works and the city, the largest twenty-four-hour total during the siege.

American defiance proved short-lived, however. Lincoln received several petitions from the militia in garrison which indicated that they understood that negotiations with Clinton and Arbuthnot had broken down over their status as prisoners of war on parole. The militiamen now informed Lincoln that terms proposed by the British commanders were acceptable to them. Moreover, Lieutenant Governor Gadsden wrote him on 11 May advising the same. Lincoln called a final council of war; with the exception of General Duportail, the council voted to accede to British terms.

At two P.M. on 12 May, two companies of British grenadiers took possession of the hornwork, while the remainder of the army lined the canal and second parallel. The Continentals marched out through the gate of the hornwork with colors cased and drums playing the *Turk's March*. A detachment of light infantry and jägers met them midway between the gate and the canal to receive their arms. The militia paraded later in the day within the works. Once the Continentals had grounded arms, grenadiers hoisted the British flag above the works, and the Royal Artillery fired a twenty-one-gun salute. The British had achieved their greatest victory of the war.

CONCLUSIONS

Clinton had conducted a classic eighteenth-century siege, proceeding cautiously and methodically against Charleston. He would have done it no other way. Interestingly, Lincoln's engineers, including Duportail, had little faith in the American fortifications; the British, on the other hand, considered them formidable. Consequently, Clinton took no chances. This strategy may not have succeeded had he faced a commander willing to risk an escape.

Lincoln received harsh criticism from some for not withdrawing from Charleston. As can be seen from his deference to civilian officials during the siege, Lincoln very much understood that the success of the Revolution depended upon the support of the people. He was sensitive to criticism that he had left Charleston undefended when Prevost marched on the city. He would not let that happen again. In explaining his actions during the campaign to Washington, he noted that prior to the defeat at Moncks

Corner, his army could not have retreated "with honor" or the city been abandoned "with propriety." Both phrases suggest Lincoln was concerned with public opinion. He determined very early in the campaign to defend Charleston and keep the bulk of his force in the city. Unfortunately, Commodore Whipple's inept use of the sea arm, the cavalry's defeat at Moncks Corner, and the abandonment of Lempriere's Point meant that the British could encircle his army. With no real reinforcement reaching the city following the Virginians, Lincoln was doomed.

The nature of operations in South Carolina would have changed dramatically had Lincoln escaped. Eager to return to New York and move forward with operations in the Chesapeake, was Clinton prepared to pursue the Americans into the backcountry? Would the South Carolina militia who had not come in to Charleston have rallied to support Lincoln? Although Lincoln was not Greene, it seems safe to say that British forces would have faced a hornet's nest in the South. With Royal Navy support, the British army could capture coastal cities such as Newport, New York, Savannah, and Charleston fairly easily. It was in the interior that they could not prevail.

CHARLESTOWN, MASSACHUSETTS. 17 June 1775. Located on the peninsula opposite Boston, Charlestown was settled in 1630 and in 1775 had a population of 2,700 people. All but about 200 had evacuated the town when the siege of Boston started, and those remaining seem to have fled before the battle of Bunker Hill on 17 June 1775. Parties of American soldiers, including detachments sent by Colonel William Prescott from his regiment at the redoubt on top of Breed's Hill, used the abandoned dwellings of Charlestown as cover from which to fire on the British left wing commanded by Brigadier General Robert Pigot. Samuel Graves, the vice admiral in command of the Royal Navy's North American squadron, commented:

The General [William Howe] observing the mischief his left wing sustained by the fire from Charles Town, the Admiral [Samuel Graves] asked him if he wished the place burned, and being answered yes, he immediately sent to the ships to fire red hot balls (which had been prepared with that view), and also to [the Royal Navy-manned] Cope [Copp's] Hill battery [at Boston] to desire they would throw carcasses into the town, and thereby it was instantly set on fire in many places, and the enemy quickly forced from that station. (French, p. 231)

Americans called this justifiable action an atrocity and pilloried Howe for burning the town. Charlestown was rebuilt after the British evacuated Boston in March 1776.

CHARLOTTE, NORTH CAROLINA. 26 September 1780. Cornwallis moved the largest of his three columns toward this village of twenty homes and a courthouse. Colonel William Davie was waiting to challenge him with twenty dragoons posted behind a stone wall near the courthouse and the rest of his command along Steel Creek road, in front of the stone wall. Major George Davidson commanded two companies of mounted riflemen, about seventy men, and Major Joseph Graham had a small body of Mecklenburg militia.

After being surprised by Davie at Wahab's Plantation on 21 September, Major George Hanger led the reinforced British Legion as an advance guard. When the rebel position was discovered at Charlotte, Hanger—eager for revenge—sent his infantry forward to clear the rebels from the fences along the road, and he himself led the cavalry charge against the twenty dismounted dragoons. Both elements of this ill-conceived attack were stopped by fire and driven back. At this point the British light infantry under Lieutenant Colonel James Webster arrived and forced the rebels to leave their fences along the road and fall back to defensive positions to the east of the town. Hanger and Webster renewed the attack and Davie ordered a retreat to Salisbury. The Legion cavalry pursued vigorously for several miles, a task more to its taste.

Each side lost about five killed and a dozen wounded. Davie did an excellent job of holding up Cornwallis's advance and withdrawing his forces under fire.

Davie, his small force of some 150 men augmented by nearly 1,000 militia under General Jethro Sumner, harassed the British at every turn, picking off foraging parties, attacking convoys from Camden, and—by intercepting messengers—keeping Cornwallis virtually without news of Ferguson's operations. Learning of the latter's defeat at Kings Mountain, Cornwallis abandoned his plans for a winter offensive into North Carolina and left Charlotte on the evening of 14 October to start his retreat to Winnsboro, South Carolina.

CHARLOTTESVILLE RAID, VIR-

GINIA. 4 June 1781. Learning from a dispatch captured on 1 June that Governor Thomas Jefferson and the legislature were meeting at this place, 60 miles west of his camp on the North Anna, Charles Lord Cornwallis sent Banastre Tarleton with a picked raiding force to scatter the legislators and capture the author of the Declaration of Independence, while John Simcoe led a second raid against the supply depot at Point of Fork. Cornwallis hoped that the two blows would land simultaneously. Departing before dawn on 3 June, Tarleton took with him 180 troopers of his Legion and the Seventeenth Light Dragoons plus a reinforcement of 70 mounted infantrymen from the Twenty-third (Royal Welch Fusiliers) under Captain Forbes Champaigne. His raiding party had a greater distance to traverse, so it was entirely mounted on horseback. However, Captain John Jouett of the Virginia militia spotted Tarleton's column the afternoon of the 3rd and got ahead of the raiders that night to spread the alarm. Having reached Louisa Court House at 11 P.M., Tarleton resumed his march at 2 A.M. on the 4th. Before dawn he captured and destroyed 12 wagons loaded with weapons and clothing for Greene's army. Six miles from his objective he split his force in two. One column rode to Belvoir, the home of John Walker, where Captain David Kinlock captured his cousin, Francis Kinlock, a member of Congress. Tarleton led the other column to Castle Hill, the home of Dr. Thomas Walker, where he captured a number of prominent Patriots.

While Tarleton was at Castle Hill, where he let his men rest an hour and have breakfast, Jouett reached Monticello. Jefferson's guests that morning included the speaker and other members of the assembly, who promptly departed for Staunton in the Shenandoah Valley on the other side of the mountains. A detachment of dragoons under Captain Kenneth McLeod entered the house less than ten minutes after Jefferson left it. Monticello was not damaged. Meanwhile, the other raiders had routed a militia guard at the ford of the Rivanna and charged into Charlottesville. It would appear that the three or four members of the legislature captured on this raid were those taken at Belvoir and Castle Hill, and that

none were bagged in town. Tarleton destroyed one thousand new muskets, four hundred barrels of powder, some military clothing, and several hogsheads of tobacco before moving with his prisoners to join Cornwallis about 9 June at Elk Hill, some thirty miles southeast of Charlottesville.

CHASE, SAMUEL. (1741–1811). Signer.

Maryland. Born 17 April 1741, in Somerset County, Maryland, Samuel Chase was admitted to the bar in 1761. He became a prominent lawyer and sat in the colonial and then state legislature from 1764 to 1788, where he earned a reputation for extreme independence. He even supported the regulation of ministerial salaries, which reduced his father's income by half. Chase resisted the Stamp Act and, as a member of the Sons of Liberty, publicly affirmed his own participation in the looting of public offices, destroying stamps and burning the collector in effigy. In the Continental Congress of 1774 to 1778, he was also a member of the Maryland committee of safety, the first Maryland convention, and the Committee of Correspondence. He advocated a total trade embargo of England, favored confederation, and supported George Washington in the face of congressional intrigues. Chase was sent on the unsuccessful Canadian mission. In 1778 he attempted, with others, to corner the flour market, using congressional information about the arrival of the French fleet. Alexander Hamilton exposed this corruption, temporarily ending Chase's political career. In 1783 the governor of Maryland sent Chase to England to recover state funds invested in the Bank of England before the war. He failed in this mission. In 1786 he moved from Annapolis to Baltimore and, in 1788, he became chief judge of the new criminal court. A member of the state convention that adopted the Federal Constitution in 1788, he opposed its ratification. After serving as chief of the Maryland general court, he was named to the U.S. Supreme Court in 1796. In 1804, he was impeached by the House of Representatives but was acquitted by the Senate. He continued on the bench until his death on 19 June 1811.

CHASSEURS. Certain light infantry troops were known as Jägers in the German army and as chasseurs in the French and British army. Even the Germans, however, used the term “chasseurs” for those Jägers who were part of a regiment, as opposed to those who were in von Wurmb’s Jäger Corps.

CHASTELLUX, FRANÇOIS-JEAN DE BEAUVOIR, CHEVALIER DE. (1734–1788). (Later marquis de.) French officer and writer. The grandson of Chancellor Aguesseau, Chastellux entered the army as *lieutenant en second* in the Auvergne Regiment on 23 March 1747, was promoted to captain on 20 May 1754, and became a colonel of the Chastellux Regiment at the age of twenty-one. Aide-major general of the Army of the Lower Rhine (1757), he became colonel of the Regiment of La Marche (1759) and then the Regiment of Guyenne (1761). Brigadier in 1769, he served in 1778 in the Army of Broglie on the coast and was promoted to *maréchal de camp* on 1 March 1780. Sent to America as major general under Rochambeau, he was helpful as an English translator. He remained in Newport until the start of the Yorktown campaign, stayed in Virginia until the summer of 1782, marched back with the French army to New England, relinquished his post as *maréchal de camp*, went to Philadelphia, and sailed from Annapolis early in January 1783. Named inspector general in 1782, he took the title of marquis upon the death of his brother in 1784. He became divisional inspector in Normandy on 1 April 1788 but died suddenly of a fever.

Chastellux’s larger reputation lies in his work as a literary and philosophical figure. In 1772 he wrote his famous essay *On Public Happiness*. He also wrote for the *Encyclopédie*. Chastellux was elected to the French Academy in 1775. His visit across several states provided material for a book, *Travels in North America*. Howard C. Rice Jr., translator of an English edition of *Travels*, wrote of Chastellux: “He was equally at ease in staff conferences,

in the drawing rooms of Philadelphia or Boston, and in roadside taverns” (vol. 1, pg. 16).

CHATHAM, WILLIAM PITT, FIRST EARL OF. (1708–1778). Prime minister. Pitt was born in Westminster on 15 November 1708, grandson of a wealthy merchant and ex-governor of Madras who had acquired the family fortune. He was educated at Eton (1719–1726), Trinity College Oxford (1727), and Utrecht (from 1728). As a younger son he had to make his own career, and in 1731 he was bought a £1,000 commission in Cobham’s regiment of horse. In 1733–1734 he took an attenuated grand tour of France and Switzerland, and in February 1735 he was elected to the House of Commons for the family pocket borough of Old Sarum, becoming one of “Cobham’s Cubs.” This group was closely associated with Frederick, Prince of Wales, who was at odds with his father George II, and whose home at Leicester House was a focus for opposition politics. The connection cost Pitt his cornetcy in May 1736. But he did not regularly take part in debates in the Commons and in 1742 failed to obtain a place in the ministry of John Carteret (Earl Granville). From about this time, however, he argued vehemently against financial and military support for the Hapsburg monarchy and Hanover, contending that vital British interests were being sacrificed for “a despicable electorate.” Although he moderated his language in 1744, it is hardly surprising that George II’s opposition kept him out of office until he became paymaster general in May 1746.

In the autumn of 1755 Pitt was dismissed from the paymastership for attacking the King’s new treaties with Prussia and Hesse-Cassel. In opposition, Pitt continued to argue that Britain should concentrate on naval and colonial objectives, rather than waste resources on alliances meant to defend Hanover. The loss of Minorca to a French invasion in 1756, followed by further disasters in India and North America gravely weakened the duke of Newcastle’s ministry and seemed to justify Pitt’s

criticisms. The king had to accept Pitt as secretary of state for the southern department (an office which gave him effective control of the war) with the duke of Devonshire as nominal prime minister. However, George II's confidence came at a price: once in office Pitt promised new support for Prussia in addition to a greater effort in America. Although dismissed in April 1757, he was able to forge a new alliance with Newcastle (who replaced Devonshire as prime minister) and resumed office on 29 June. The spectacular military successes of 1759–1760 were followed by plans for a pre-emptive strike against Spain. The last alarmed his cabinet colleagues, and in October 1761 Pitt resigned rather than give way.

Pitt attacked the Peace of Paris as far too moderate, given the scale of his own military successes. But his opposition to the Stamp Act seems to have been genuine. Unlike most contemporaries, Pitt argued that, because America was not represented in the Commons, Parliament had no right to levy internal taxes. Unlike George Grenville, who was far more prescient on this issue, he thought that Americans could raise no fundamental objection to external duties intended to regulate trade within the navigation system. Like almost everyone else, he thought that such powers were fundamental to Britain's prosperity and, even more important, to her naval power and security. The enthusiasm with which Americans greeted news of his speeches was therefore partly misplaced. Pitt never really resolved the paradox of standing up for American liberties on one hand while insisting on parliamentary supremacy on the other.

On 6 July 1766 Pitt was asked to form a new administration, but by accepting a peerage as earl of Chatham he seriously weakened his influence over his old power base, the Commons. The cabinet, distracted by the affairs of the East India Company and Chatham's ill health, was slow to work out specific policies toward America. Then, in January 1767, with Pitt ill at Bath, Charles Townshend denounced the distinction between internal and external taxes, effectively rebelling against the prime minister. The government's following in the Commons disintegrated, and Chatham returned to London only in time to hand over the leadership to Augustus Grafton.

Ill and isolated for two years, he returned to politics in 1769 to form an opposition alliance with the followers of Rockingham (Charles Watson-Wentworth). Rockingham opposed confrontation in America (in 1766 his short-lived ministry had carried the repeal of the Stamp Act with Pitt's support) which he associated with an imaginary court plot to subvert the constitution. However, age and infirmity had made Chatham both inflexible and autocratic, and he had nothing constructive to say about the fast-changing position in America. His speech on the Coercive (or Intolerable) Acts was muddled, and not until January

and February 1775 did he put forward coherent proposals. By now he was prepared to offer "concessions" to the Americans (his old talk of rights had vanished) in return for acknowledgment of ultimate parliamentary sovereignty. His position differed from Lord North's only in the scale of the concessions he was prepared to offer. Again disabled by illness, he took little part in politics during the first part of the War of Independence. In May and November 1777, alarmed by the likely Franco-American alliance, he argued strongly for an early and generous peace and for the futility of a war conquest. At the same time he set himself firmly against independence as a natural right and broke with the Rockinghamites in 1778. On 7 April he made a rambling speech on the issue of independence, then collapsed and was carried out of the House of Lords. It was his last exit: he died at Hayes on 11 May.

Pitt had little effect on American affairs after his resignation in 1761. His second administration did little to grapple with the problems of American resistance, and his insistence on the distinction between internal and external taxes was myopic at best. His initial apparent sympathy with the Stamp Act rioters concealed a conviction, which hardened as time went on, that Britain's great-power status depended on the subordination of her colonies. His reputation depends more on the legend generated by his unmatched oratory and by the sheer scale of his accomplishments during the Seven Years' War.

CHEROKEE. The Cherokee Indians were one the largest and most powerful Indian nations in eighteenth-century eastern North America. They inhabited a strategically important region in the southern part of the Appalachian Mountains, within the boundaries of the modern states of North Carolina, South Carolina, Georgia, and Tennessee. During the American Revolution, most of the Cherokee initially fought against the United States.

The Cherokee inhabited the southern Appalachian Mountains since before the period of European contact. The Cherokee entered into sustained interaction with the British in the late seventeenth century, after the founding of the colony of South Carolina in the 1670s. The Cherokees' political relations with the British were formalized in 1730, with the intervention of adventurer Sir Alexander Cuming, who anointed chief Moitoi of Tellico (a region in present-day Tennessee) as the "Emperor of the Cherokees." While Cherokee politics had no institution of emperor, Cuming did escort a number of Cherokee leaders, including a respected warrior named Attakullakulla, to London. From this point forward, the bulk of the Cherokees' commercial and diplomatic interactions would be conducted with the British, through South Carolina. Relations between the British and the Cherokee were generally cordial, although a brief Anglo-Cherokee War (1759–1761) arose during the Seven Years War after Cherokee warriors returning from service against the French killed some Virginia farmers' livestock. Tensions between the settlers and the Cherokees erupted into a full-scale conflict. After Cherokee warriors captured the British post of Fort Loudon, British regulars invaded the Cherokee country. Order was reestablished in large part due to the diplomacy of Attakullakulla.

After the Seven Years War, Cherokee-British relations were shepherded by the British Indian Superintendent for the Southern Department, John Stuart. In 1763, at Augusta, Stuart brought representatives of all of the southeastern tribes

together to reestablish commercial and diplomatic relations. The South Carolinian settlers' desire for land cessions from the Cherokee increased during the 1760s and 1770s. Cherokee leaders Oconostota and Attakullakulla supported land sales to British settlers, but with the outbreak of the American Revolution, they turned away from the colonists and supported the British side. John Stuart cautioned the Cherokees against openly challenging the American Revolutionaries, and older leaders like Attakullakulla agreed. However, tensions between frontier white settlers and the eastern Cherokees continued to increase. Younger Cherokee men, led by Attakullakulla's son, Dragging Canoe, seized on the opportunity offered by the Revolution to defend their lands, and joined with the Shawnee in attacks on American settlements that had been erected inside traditional Cherokee lands. In retaliation for these attacks, expeditions from all of the southern states—Virginia, North Carolina, South Carolina, and Georgia—invaded the Cherokee country in the summer of 1776. The Americans destroyed many Cherokee towns, and large numbers of Cherokees became refugees, fleeing to the western side of the Appalachians and into the Creek nation. After the Cherokee homelands had been devastated, the older chiefs made peace agreements with each of the American states in early 1777. The price of peace was, as always, land.

The remainder of the American Revolution saw the Cherokees divided. The peacemaking faction remained neutral, while other Cherokees hoped for more robust British support. With his trade connections to Britain largely cut, there was little material aid that agent John Stuart could provide the Cherokees. By the end of the Revolutionary War, the Cherokee were dealing with the Americans. Under the leadership of Old Tassel, and with the advice of war-woman Nancy Ward, in November 1785 the Cherokee signed the Treaty of Hopewell with commissioners who had been appointed by the Continental Congress. This was the Cherokees' first treaty with the new United States. The Treaty of Hopewell established a boundary line between the Cherokees and Anglo-American settlers that was a compromise of sorts—it confirmed the large land cession the Cherokee had made in 1776–1777, but it did not give white land speculators and settlers everything they wanted. The treaty did acknowledge American victory in the Revolution and American sovereignty over eastern North America, and it committed the Cherokee to exclusive trading relations with the American government. Of course, Hopewell was not the last word in Cherokee-American relations. Pressure by American settlers and land speculators would continue into the early 1830s when, in the aftermath of the Cherokee Nation's landmark Supreme Court cases and the (what most consider) fraudulent Treaty of New Echota (1835) forced on the Cherokee by the Andrew Jackson administration, the Cherokee were forcibly removed to Oklahoma.

CHEROKEE EXPEDITION OF JAMES GRANT.

1761. In 1759 the long-standing friendship between the Cherokee nation and South Carolina deteriorated badly as the result of friction during John Forbes's 1758 campaign and a number of murders by frontiersmen of Indians as they returned home. Governor William Lyttleton averted trouble for a time, but individual acts of violence finally led to an eruption of open hostilities in January 1760. Before being promoted to governor of Jamaica, Lyttleton began raising troops and asked neighboring colonies as well as Jeffery Amherst, governor general of British North America, to send forces. Colonel Archibald Montgomery arrived in April with over 1,300 regulars (from the First Foot and Highlanders of his own Seventy-seventh Foot) and pushed up to the town of Ninety Six. Montgomery scored early successes in June by burning the so-called Lower Towns, but when he tried to penetrate into the wilderness the Cherokee dealt him a stinging defeat at Echoe on 27 June. As a result the regulars headed back to New York, leaving the isolated outpost of Fort Loudon to its fate.

In 1761 Amherst sent the competent Lieutenant Colonel James Grant back to Charleston with regulars from the First, Seventeenth, and Twenty-second Foot and some Mohawk and Stockbridge scouts. South Carolina contributed a provincial regiment commanded by Lieutenant Colonel Henry Laurens, rangers, allied Catawbas and Chickasaws, and a well-organized logistical train. On 18 May this force, about 2,800 strong, reached Ninety-Six prepared for a lengthy wilderness campaign. On 10 June the Cherokee again ambushed the column near Echoe and tried to repeat their successful tactics of concentrating on the pack train. But Grant was a much tougher opponent than Montgomery, and the action turned into a hard-fought battle lasting six hours. The British and colonials held their ground, suffering a dozen killed and fifty-two wounded; the Cherokee may have had

as many as twice the casualties, but more importantly they expended nearly all of their ammunition. As a result they were unable to offer further resistance as Grant spent nearly a month systematically burning the fifteen Middle Towns and destroying 1,500 acres of crops. With a Virginia column in the Holston Valley and threatening the Overhill Towns, Chief Attakullakulla ("Little Carpenter") opened peace negotiations.

The Cherokee never really recovered from this blow. The campaign also had an influence on the Revolutionary War by providing important military experience to many of the men who would become South Carolina's military and political leaders: Henry Laurens, Francis Marion, William Moultrie, Andrew Williamson, Isaac Huger, and Andrew Pickens.

CHEROKEE WAR OF 1776.

As the Revolutionary War began, the British attempted to restrain the Cherokee from attacking the backcountry settlements while keeping them loyal to England. In June, however, combined Cherokee and Loyalist forces attacked settlements in South Carolina and Tennessee. Quickly, the colonial governments of South Carolina, Georgia, North Carolina, and Virginia organized retaliatory expeditions. Colonel Samuel Jack was in the field by July, burning Cherokee villages in northern Georgia. In August, Colonel Andrew Williamson, with 1,800 troops and some Catawba scouts, marched into northwestern South Carolina, burning

more Cherokee villages as they went. From South Carolina, Williamson pushed into western North Carolina to rendezvous with General Griffith Rutherford.

Rutherford left Davidson's Fort (present day Old Fort, North Carolina) on 1 September with some 2,500 North Carolina militia and drove west through rugged Appalachian country to the Middle Cherokee villages along the Little Tennessee River. Not finding Williamson, Rutherford split his force, leaving 800 at Nuquassee (now Franklin, North Carolina). With the rest he marched further west to attack the Valley towns. Williamson eventually found Rutherford's reserve and, taking a different route west, rendezvoused with Rutherford at Hiwassee (now Murphy, North Carolina). Having burned all the villages along their routes, they returned home. A third column of 2,000 Virginia and North Carolina militia, under Colonel William Christian came down the Holston River from the north (Over Mountain Men territory) and burned out the Overhill Cherokee. Dispirited, and realizing the British would provide little assistance, the Indians started suing for peace. In the treaties of Dewitt's Corner, South Carolina, signed on 20 May 1777 with South Carolina and Georgia, and of the Long Island of Holston, in modern Tennessee, signed on 20 July 1777, the Cherokee ceded all their lands east of the Blue Ridge and dropped their claims to land north of the Nolachucky River. Some moved west to continue the struggle against white settlement and expansion.

revised by Steven D. Smith

CHERRY VALLEY MASSACRE, NEW YORK. 11 November 1778. In the spring of 1778 Major John Butler, who directed Loyalist activities from Niagara, planned to disrupt the northern frontier as a strategic diversion from General Sir Henry Clinton's plans to move up the Hudson River valley. Toward this end, Butler led an expedition that ended in the Wyoming Valley Massacre in Pennsylvania on 3–4 July. His son, Walter Butler, was given command of

another Loyalist force that joined Joseph Brant's Indians for an attack in Cherry Valley.

In addition to distracting the Patriots, this campaign sought to secure British bases in the west. The Mohawk Valley settlements formed a salient that stretched toward Loyalist-held Fort Oswego and along the northern boundary of Iroquois territory. (See map "Mohawk Valley,") From his base at Unadilla, Joseph Brant raided settlements including German Flats on 13 September 1778. Patriots retaliated by destroying Unadilla on 8 October. A successful counterstroke now against Cherry Valley would relieve the pressure on Unadilla while setting the stage for operations against the Schoharie Valley and Canajoharie. The Loyalists might then move against Fort Stanwix (later Fort Schuyler) and regain the homes from which they had been forced to flee.

By the time Walter Butler and his Rangers reached the theater of operations, however, Patriot forces had returned to ravaged Wyoming and moved up the Susquehanna. In October, therefore, young Butler waited in his camp at Chemung, near Tioga, for this threat to subside, with plans to join forces with Brant at Oquago (later Windsor). While it is not clear why Butler delayed his attack so long, knowing that the Patriots would have more time to prepare their defenses, one reason might be that he had to make sure of his line of retreat through Tioga. It was also the case that it took time to persuade his Indian allies that it was in their interest to join the campaign.

CHERRY VALLEY'S DEFENSES

In the summer of 1740 a John Lindsay left New York City and established the first farm in the isolated valley to which he subsequently gave the name Cherry Valley. During the next ten years not more than four families joined Lindsay, but cordial relations were established with the Mohawks and, since this nation remained generally loyal to the British, the settlement survived the Seven Years' War unscathed. Early in 1775 they associated themselves with the Patriot faction and the next summer raised a company of rangers under the command of Captain Robert M'Kean. When this unit was ordered away, the Cherry Valley settlers started petitioning for troops. The New York Provincial Congress responded to their appeal of 1 July 1776 by sending a company of rangers under Captain Richard Winn. The house of Colonel Samuel Campbell was fortified and enclosed to form a place where the inhabitants could gather for safety. Since Joseph Brant assembled a considerable number of warriors around Oquago (sixty miles southwest) and appeared in Unadilla during the summer of 1777, military law was established in the Cherry Valley and most of the inhabitants gathered around Campbell's house. They responded to General Nicholas Herkimer's call to meet St. Leger's expedition but arrived too late for the Battle of Oriskany.

In the spring of 1778 Colonel Campbell joined Lafayette at Johnstown, explained the exposed position of the valley, and convinced him of the need for a fort there.

Meanwhile, the inhabitants of Cherry Valley returned to their stockade at Campbell's while waiting for the new fort to be built. Refugees came in from Unadilla and other settlements. Brant's forces remained active in the vicinity, snapping up a few prisoners and forcing the inhabitants to form armed parties to work their farms. Colonel Ichabod Alden arrived in July with his Seventh Massachusetts, numbering about 250 men, to take command. Alden has been much criticized as a poor officer, and his men had no experience of frontier warfare. Ironically, Colonel Peter Gansevoort had sought the assignment of garrisoning Cherry Valley with his regiment, the defenders of Fort Stanwix, but Alden was given the post.

James Deane, Schuyler's chief spy, had been sending in accurate intelligence of Loyalist-Indian activities and intentions. It was hoped that a Seneca chief called Great Tree, who returned to his people after spending some time in Washington's headquarters, would prevail on the Iroquois to cancel their plans for war against the frontier, but Deane reported in October that Great Tree had changed heart after hearing rumors of a planned invasion of Iroquois territory by Patriot forces. On 6 November a warning was sent to Alden from Stanwix: information had been received from friendly Indians of a "great meeting of Indians and Tories" on the Chemung (Tioga) River, at which Walter Butler was present and where the decision had been made to attack Cherry Valley. Alden sent his thanks, but made no further defensive arrangements.

THE LOYALIST-INDIAN ATTACK

The settlers got wind of this recent advisory from Fort Stanwix and asked to move into the new fort, or at least to store their valuables there. But Alden refused, assuring them that the intelligence was probably wrong and that the presence of their property in Fort Alden would tempt his soldiers to pilfer it. He did, however, send out reconnaissance parties. The members of the one that scouted down the Susquehanna were captured the morning of 10 November as they slept around their fire. Based on information from the prisoners that the rebel officers were billeted outside the fort, Butler and Brant planned their attack. On the night of 10–11 November, several inches of snow fell, and the next morning a thick haze and rain concealed the raiders' approach on the sleeping settlement.

The plan was first to hit the houses in which the officers were known to be billeted and then to attack the fort. At 11 A.M. the Loyalists and Indians were approaching their objective when a farmer rode by on his way to the fort. The Indians fired and wounded him but he escaped to spread the alarm. While the Rangers stopped to check

their firearms, an advance party of Senecas raced ahead to attack the Wells house, four hundred yards from the fort, where Alden was billeted with Lieutenant Colonel William Stacey and a headquarters company of 20 or 40 men. Alden ran for the fort but was killed well short of reaching it. Stacey was captured and several other officers and men were killed. The fort closed its gates and held out for the next several hours, Brant and Butler withdrawing at 3:30 P.M.

Turning from the fort to the homes scattered nearby, the raiders found six of the forty homes occupied. The Patriot prisoners held Butler responsible for the murder of some two dozen civilians while crediting Brant with preventing the killing of women and children.

Captain John McDonnell led a sortie from the fort that saved many settlers who had taken refuge in the woods. The raiders withdrew with seventy-one prisoners, most of whom were released the next day. On the morning of the 12th, having camped near Cherry Valley, Butler started his long retreat to Niagara. Since his mother and wife, as well as the wives of several Loyalist officers, were prisoners in Albany, Butler kept two women and their seven children as hostages. (Colonel Campbell's wife and four children as well as Mrs. James Moore and three daughters.) He also took with him just over twenty slaves, who certainly welcomed their liberation.

COMMENT

From a military viewpoint the Cherry Valley raid was a brilliant coup executed in the face of great difficulties. Its success was due largely to incompetent rebel leadership, which largely explains why American accounts prefer to dwell on the horrific aspects of the battle.

The Cherry Valley Massacre became another symbol of Loyalist-Indian barbarity, further feeding the cycle of violence against noncombatants. Just as the Mohawks were responding to the attack on Unadilla in moving against Cherry Valley, so the Patriots now retaliated by launching Sullivan's expedition against the Iroquois from May to November 1779. It was supported by Brodhead's expedition and Clark's western operations.

CHESAPEAKE BAY. By 1780, the Chesapeake Bay and its tributaries, lancing deep into the American countryside, seemed to fix the attention of Sir Henry Clinton, commander of the army that was attempting to subjugate Britain's thirteen rebellious colonies. Immediately following the conflict's eruption, skirmishes ashore and afloat had dotted the region, while a major British amphibious force raided the bay for two weeks with near impunity in 1779. As Clinton's southern campaign developed, especially following the capture of Charleston, South Carolina, the need for a deepwater port midway between the northern bastion of New York and the newly captured city seemed obvious. If such a port could serve as an enclave for recruiting local Tories, raiding rebel farms and plantations, or even regaining control of the colony, so much the better.

In late October 1780, the Royal Navy landed Major General Alexander Leslie and 2,500 men on the Elizabeth River with orders to establish a fortified harbor after raiding as far inland as Petersburg and Richmond, sites of major rebel supply depots. Leslie, finding virtually no support from local Loyalists, opted to seize the harbor at Portsmouth, Virginia, and to begin raiding only after fortifying it as his base. Before his entrenchments could be completed, General Charles Cornwallis, directly commanding British operations in the south, ordered Leslie to the Cape Fear region of North Carolina and then to Charleston to serve as a garrison force. By late November, the British presence in the Chesapeake Bay evaporated. Somewhat frustrated by Cornwallis's decision, Clinton immediately began planning another expedition to the region, issuing orders which would lead to the first of two major naval engagements and, eventually, to a world turned upside down.

PRELUDE TO BATTLE

On 11 July 1780, a French squadron of seven ships of the line, transports carrying around five thousand French soldiers, and supporting vessels anchored at Newport, Rhode Island. It posed little immediate threat to Clinton's strongly defended base at New York. Vice Admiral Marriot Arbuthnot, commanding the British fleet, did not fear to engage the French at sea, especially after reinforcements under Rear Admiral Thomas Graves arrived hard on the heels of the enemy force. The inherent strength of the British defensive positions at New York and the numerical superiority of Arbuthnot's ships of the line eliminated an immediate tactical threat, but the strategic location of Newport, with its difficult-to-blockade approaches, threatened to allow French interference with other British operations, especially in the south.

In truth, a quick amphibious assault against the French position may well have resulted in the utter

destruction of the French forces, but their arrival found Clinton and Arbuthnot in the midst of an ongoing dispute over prize money dating to the capture of Charleston. Bitter feeling plagued their relationship, and neither was willing to give ground or full support to the other. In September, Admiral Sir George Rodney brought in the bulk of his fleet from the West Indies to avoid the hurricane season in the Caribbean. This worsened the rivalry, because Rodney refused to support either man and further alienated Arbuthnot by claiming overall naval command while in New York. Despite the tremendous naval superiority in American waters gained by Rodney's arrival, nothing had been accomplished by the time his fleet sailed back to the West Indies in mid-November except the stripping of spars, cables, and naval stores from New York.

With the departure of Rodney and the apparent return of Georgia and South Carolina to British control, Clinton determined to establish a permanent presence in Virginia. Brigadier General Benedict Arnold, late of the Continental army, landed at Westover, on the Chesapeake, on 4 January 1781. Within a matter of days, his forces had burned most of Richmond, Virginia, along with cannon foundries, supply depots, and anything else of value in the region. He then moved to Portsmouth, settling into the lines begun by Leslie the previous year. In late January, Arnold requested an additional 2,000 men, bringing his detachment to more than 3,500, for defense against the numerous rebels gathering around Portsmouth and to keep a raiding force active in the region. If he could not be reinforced, he suggested withdrawal to New York.

The danger posed by the French lodgment at Newport became evident in late January, when the 64-gun *Eveille* and two frigates escaped British blockaders. Graves, commanding the squadron on blockade, dispatched three ships of the line in pursuit. Caught by a harsh winter storm, the seventy-four gun HMS *Bedford* lost its masts, while HMS *Culloden*, another seventy-four gun ship, drove ashore on Long Island. Through heroic efforts its masts and rigging were saved to refit *Bedford*. The sixty-four gun HMS *America* was damaged in spars and hull and eventually returned to its anchorage. Meanwhile, the French raiders reached the Chesapeake, capturing a few merchantmen and the fourth-rate, 44-gun HMS *Romulus*. Without troops, however, the French could accomplish little against Arnold before returning to Newport.

Yet, the raid set forces in motion. The loss of *Culloden* and the addition of *Romulus* to the French squadron gave its commander, Captain Charles-Rene-Dominique Gochet Destouches (serving as commodore of the squadron since the loss of his admiral to fever), equality in hulls, if not in armament. It also encouraged General George Washington to dispatch Major General Marquis de Lafayette to the Chesapeake with 1,200 Continentals.

THE GALE GROUP.

By 3 March Lafayette's force rested on the Elk River, waiting hopefully for French naval transport to arrive. Meanwhile, as Arbuthnot worked feverishly to repair his ships from the same dockyard that had been stripped a few months previously by Rodney's vessels, Clinton organized men and transports to reinforce Arnold. Captain Destouches worked just as feverishly, cramming 1,120 soldiers with their equipment and supplies aboard his warships.

Destouches and his squadron—seven ships of the line, the fourth-rate *Romulus*, the sixty-four gun *Fantasque* armed en flute and two frigates—sailed on 8 March. Their disappearance was discovered by the British the following day. Arbuthnot's squadron—seven ships of the line, the fourth-rate *Adamant*, and three frigates—completed its repairs and upped anchor on 12 March. Clinton's transports, filled with over 2,000 men and their supplies and escorted by eight warships, followed on 20 March.

THE ENGAGEMENT

Heavy seas, strong wind, and variable visibility marked 16 March 1781 in the Atlantic waters off the entrance to Chesapeake Bay. Around 0600 hours, the frigate *Iris*, covering the rear of the British squadron, signaled the presence of the French force astern. The coppered bottoms of the British ships, which retarded the growth of weed and other sea life that could reduce ship speed, had allowed them to outpace the French ships, many of which lacked this maritime innovation. With the wind from the west, Arbuthnot immediately maneuvered to seek the weather gauge (a ship standing between the wind and an enemy ship is said to have the weather gauge, because it can determine the pace of the subsequent engagement). By 7 A.M., both squadrons had moved from their loose sailing formations to lines of battle (see table).

In each squadron's case, the line of battle would stretch for a mile on a day when visibility often fell

below that distance. As to the lesser ships in the action, *Iris* maintained watch over the French, while Arbuthnot stationed his remaining frigates as repeaters (flag officers often stationed ships too small to stand in the line of battle on the side of the squadron away from the enemy in order to repeat flag hoists to the squadron). The French frigates apparently covered the *Fantasque* during the action. As usual in such affairs, all stood clear of enemy broadsides that could shatter or sink them in an instant.

Initially, Destouches, his ability to work or fight his ships impaired by the soldiers crowding their decks, sought to avoid action by fleeing northeastward. As the faster British fleet steadily reduced his lead and the wind began to veer to the north then to the northeast, Destouches surrendered to the inevitable and wore his ships to face the British. By noon both fleets bore southeastward, with the French holding the weather gauge and *Robust* rapidly drawing abreast of *Romulus*.

Usually, holding the weather gauge provided a strong advantage. However, with heavy seas and strong winds, as on 16 March, a ship heeling to the wind buried its lower-deck gunports on the leeward side (the side away from the wind) in the waves, rendering those guns unusable. Destouches, realizing that the weather gauge merely increased British superiority in guns, decided to surrender it to the enemy. At 1:30 P.M. hours he ordered his ships to wear in succession around the head of the British line to a roughly westerly course. Arbuthnot, his line already extended from the morning's maneuvers, wore his ships as well and gained the weather gauge at the price of losing his advantage in number of guns. By 1400 hours, both fleets sailed a parallel course toward the entrance to the Chesapeake Bay. Arbuthnot kept his signal for "Line Ahead" flying, (a flag hoist instructing all ships to sail in a single column) apparently waiting for the ships at the rear of his line to resume station and intervals before hoisting "Engage the Enemy Closely."

But shortly after 2. P.M., and for reasons unknown, Captain Phillips Cosby steered his *Robust* directly toward the *Neptune*. As French fire concentrated on the *Robust*, the *Europe* and *Prudent* turned out of line to support it. Very quickly, the British flagship and the *London* entered the fray as well, clouds of smoke obscuring ships and signals. Unfortunately, Arbuthnot neglected to change his signal flag, and the remaining three British vessels, unaware of his desires, maintained their current course rather than closing in on the French rear.

Five British and eight French ships fought a chaotic battle inside the great cloud of smoke arising from their broadsides. British ships tended to fire at an enemy's hull, reducing their foe's firepower and weakening the ship's crew for eventual boarding. French doctrine called for the destruction of an enemy's rigging and masts, allowing French captains to eventually achieve a raking position, thus forcing the surrender of a drifting hulk. In this engagement, the upper-deck guns of Arbuthnot's ships fired with telling effect, as evidenced by the steady flow of blood from the scuppers of *Conquerant*, but French practice triumphed as the *Robust*, *Europe*, and *Prudent* soon drifted from the action with their rigging, spars, and even masts shot away.

Less than an hour after the first shot, Destouches decided to preserve his squadron and broke off southward. Arbuthnot, with damage to spars and sails on the *Royal Oak* and *London* almost as severe as that of his three lead ships, could not pursue. Instead he limped into Chesapeake Bay, securing it for the reinforcement convoy's eventual arrival.

CONCLUSIONS

Although Destouches clearly outperformed Arbuthnot in what came to be known as the battle of Cape Henry, he failed to secure the Chesapeake Bay for the Franco-American cause. Yet, Destouches's decision to abandon the action even after his maneuvers and British confusion provided a decided advantage is understandable. His ships, though in no danger of foundering, had been roughly handled by British broadsides. A continuation of the action may have resulted in a major victory, but the French navy lacked a dockyard in North America to repair damage to the squadron, much less any prizes captured. A Pyrrhic victory would have left the reduced and damaged French squadron blockaded, whether at an anchorage in the Chesapeake or at Newport. The soldiers packed between the decks of the French ships also weighed heavily on Destouches's mind. A protracted battle would have seen even more of them dead, perhaps in their hundreds, when delivering those same troops actually formed the core of his mission.

By denying the Chesapeake to the French, Arbuthnot won a tactical victory despite his poor performance in the battle. An admiral exists to control squadron and fleet

operations. By failing to engage his entire fleet against the French line, Arbuthnot came very close to defeat. Even so, his tactical victory contributed to a strategic fallacy. By securing the Chesapeake, Arbuthnot validated Clinton's enclave strategy. That validation ultimately led directly to the British defeat at Yorktown, wherein another British fleet failed to gain control of the bay. In the final analysis, neither side lost ships during the engagement. The British suffered 30 killed and 73 wounded. The French, because of crowded conditions and the British concentration on hull damage, lost 72 killed and 112 wounded.

CHESAPEAKE CAPES. 5 September 1781. On 4 January 1781 Brigadier General Benedict Arnold, awarded his position in the British Army for betraying the American cause at West Point, landed with some 1,500 troops at Westover, Virginia, on the shores of Chesapeake Bay. After raiding rebel depots and towns, he established control of Portsmouth as a deep-water port for the Royal

Table 1. THE GALE GROUP.

Navy in furtherance of British commander in chief Sir Henry Clinton's southern campaign. On 16 March 1781 a British squadron under Vice Admiral Marriot Arbuthnot met a French squadron of similar size under Commodore Sochet des Touches off Cape Henry. Hours of maneuvering led to a brief though violent exchange of broadsides in which the French achieved an apparent tactical advantage. Des Touches, however, chose to withdraw rather than further risk his ships and men, leaving Arbuthnot in control of the entrance to the Chesapeake.

Meanwhile, General Charles Cornwallis, commanding the British field army in the Carolinas, won a Pyrrhic victory against the American army of Major General Nathanael Greene at Guilford Courthouse, North Carolina. Cornwallis, with supplies depleted and hundreds of wounded in tow, made for the British enclave at Wilmington, North Carolina. Once supplied and reinforced with the few men that could be spared from that garrison, Cornwallis opted to abandon the attritional campaign in the Carolinas for Virginia. Exactly what he hoped to accomplish in Virginia is unclear, though his absence did allow Patriot forces to reestablish control of the interior of the Carolinas.

By the end of May, over seven thousand regular and Loyalist forces worked to build new fortifications at the deep-water port of Yorktown, Cornwallis having abandoned Portsmouth as indefensible. For the British army in North America, ports meant safe havens: time and again the Royal Navy protected communications and logistics as well as evacuating troops from losing positions. Arbuthnot's apparent victory over des Touches in March merely strengthened that belief. Yet General George Washington, commanding the Continental Army investing New York, studied his maps and envisioned the British position at Yorktown as a vast trap, awaiting only a concentration of American and French troops and a brief period of naval superiority to cinch a war-ending victory.

PRELUDE TO BATTLE

In truth, the threads leading to the Battle of the Capes are as complex a weave as any of the massive cables used by ships of that era. At their core rests the British southern campaign, beginning with the successful siege and capture of Charleston, South Carolina, in 1780. This opened the door for Clinton's subordinate, Cornwallis, to begin the pacification of the Carolinas, an effort that seemed to yield

initial success, thus encouraging the establishment of an enclave at Portsmouth, Virginia. Meanwhile, French entry into the war saw a French squadron sheltering at Newport, Rhode Island. Inferior in both guns and hulls to the British squadron based in New York, it elicited little respect from the Royal Navy. Then, Washington's plan to eliminate the Virginia enclave together with a brief parity in hulls between French and British squadrons led to the near-run battle off Cape Henry. Had des Touches persevered, the British position at Portsmouth may have been forced to surrender, ending the Virginia campaign and penning Cornwallis in the Carolinas. But he did not, and both battered naval squadrons eventually returned to their respective home bases, more than willing to play a waiting game while repairing. In July Arbuthnot, complaining of his health, returned to England, relieved by Rear Admiral Thomas Graves, his second-in-command at Cape Henry. About the same time, des Touches resumed his role as ship's captain, replaced as commodore by a new arrival from France, the comte de Barras. Both sides awaited reinforcements, knowing that the upcoming hurricane season would bring the fleets operating in the West Indies northward; but only Barras knew with certainty that the coming campaign would center on the mouth of the Chesapeake Bay.

Strangely enough, two of the key threads leading to this battle originated far from Yorktown and Chesapeake Bay, at St. Eustatius in the Leeward Islands and in the French port of Brest. Since 1632 St. Eustatius had been a thorn in the British side whenever war visited the New World. Claimed in that year by the Dutch, the port became a commercial center of the West Indies, especially for smugglers seeking to avoid British maritime law and duties. Since the outbreak of the American rebellion, ship after ship from the wayward colonies had unloaded tobacco, rice, indigo, lumber, and other products, returning to their home ports with weapons, ammunition, specie, or other cargoes necessary to continue resistance against the British.

On 2 February 1781 Admiral Sir George Rodney took advantage of Great Britain's recent declaration of war on Holland to lead a fleet of fourteen ships of the line, five lesser warships, and three thousand troops against the harbor. The defenders, one ship of the line, and a gaggle of smaller vessels supported by less than one hundred troops, immediately surrendered, and into the hands of the commander of all British naval forces in the region fell quite possibly the single richest prize in the Indies. Rodney, sick of body and with his mind burdened by mounting debt at home, could not resist the loot of easy wealth. Over the next months, he focused almost exclusively on securing his share of the prize money, even to the point of shifting the dispositions of ships to protect the convoy bearing this wealth to England, a convoy that Rodney soon followed home.

Rodney's fixation on personal gain came at a very bad time for the British efforts in America. On 22 March Rear Admiral de Grasse, the comte de Grasse, sailed from Brest, France, with a large fleet of warships escorting 150 merchantmen to the West Indies. Rodney, with some intelligence of expected French reinforcement to the theater even before de Grasse left port, ordered his chief subordinate, the newly minted Rear Admiral Sir Samuel Hood, into a defensive posture in mid-February. In company with Rear Admiral Francis S. Drake, Hood cruised with eighteen ships of the line to windward of French-held Martinique, site of Front Royal, the largest French base in the Leeward Islands and the obvious landfall for the expected enemy fleet. By mid-March, they had nothing to show for their efforts other than some two thousand men suffering from scurvy.

Rodney, believing that the French had sought another destination, then shifted Hood's squadrons to the leeward side of Martinique to serve as a covering force for a weakly escorted convoy of over a hundred prizes and transports loaded with the loot of St. Eustatius and bound for England. Hood obeyed under protest, fearing that he would be unable to bring the expected French fleet to a decisive action before it could reach Front Royal. On 29 April, de Grasse and twenty ships of the line escorted the merchantmen from Brest into Front Royal after a sharp skirmish with Hood and Drake. Having abandoned the windward position at Rodney's orders, the British admirals could not close the range in time to prevent de Grasse from reaching safe haven.

Over the next weeks, de Grasse led or dispatched detachments to threaten British holdings in the West Indies. Thwarted at St. Lucia, de Grasse managed to capture Tobago. In early July the French admiral and his entire fleet sailed from Martinique, escorting the annual convoy of merchantmen bound for France on the first stage of its journey. With the convoy safely on its way, de Grasse anchored in the harbor of Cap François on Hispaniola. There he received a packet from General comte de Rochambeau, commanding the French army supporting Washington and the rebellion. Because the admiral would need to leave the West Indies during the hurricane season, the general urged de Grasse to find men, artillery, and money, then make his first landfall at the Chesapeake Capes. There he would join a Franco-American land force to isolate and destroy the British army under Cornwallis. Moving expeditiously, de Grasse gathered over three thousand men, artillery and siege artillery, and a large sum of money from local resources. His fleet, over twenty ships strong, then sailed for the Chesapeake on 3 August 1781.

Two days earlier, Rodney, seeking healthier climes and no doubt desirous to put his financial affairs in order, had sailed for England with three ships of the line

and a large convoy of merchantmen. Before leaving, Rodney ordered Hood to sail for New York, looking into both the Chesapeake and the Delaware Bays on the way. Hood, with Drake joining at the last moment, sailed from Antigua on 10 August. His fleet, however, had dwindled to a mere fourteen ships of the line because of detachments and worn vessels. On 25 August Hood arrived at the Chesapeake. Thanks to their coppered bottoms, the British had outsailed the French. Failing to find de Grasse in either of the American bays, Hood arrived at New York on 28 August and anchored off Sandy Hook.

Refusing to waste time on getting his ships over the bar and into New York harbor, Hood had himself rowed ashore to meet with Rear Admiral Graves, freshly returned from a three-week cruise to intercept a rumored French squadron off Boston. Graves, senior in rank to both Hood and Drake by over a year, automatically inherited command of the combined squadrons. Pressured by the aggressive Hood and the recently garnered knowledge that de Barras had sailed from Newport with all of his warships and a large convoy carrying men and siege equipment on 25 August, Graves moved his ships across the bar to join the West Indies squadrons as quickly as adverse winds allowed. On 31 August the combined squadrons set course of the Chesapeake, arriving on 5 September only to discover de Grasse at anchor inside the capes.

De Grasse had reached the Chesapeake Bay on 30 August, surprising and capturing one British frigate while another frigate and smaller craft fled up the York River. Anchoring his main fleet in Lynnhaven Roads, de Grasse dispatched his lighter vessels to interdict both the York and James Rivers while three ships of the line directly blockaded Yorktown, effectively isolating Cornwallis in his entrenchments as de Grasse's ships' boats began landing their contingents of infantry and artillery. Then, around 8:00 A.M. on 5 September, a French frigate signaled that a fleet had appeared outside the bay—a fleet with far too many warships to be the expected Barras.

THE ENGAGEMENT

The nineteen ships of the line, a fifty-gun ship too small to stand in the line of battle, seven frigates, and a single fireship composing Graves's fleet were in less than tiptop condition as it closed the Virginia Capes at 9:30 A.M. on 5 September. Though all were fully crewed and coppered, many badly needed refits, none more so than HMS *Terrible*, already pumping to stay afloat before the first cannon fired. A certain degree of rot also appeared at the command level where the aggressive Hood, having led most of the ships in the fleet from the West Indies, seemed to resent Graves's command of the combined squadrons. Graves, apparently seeking to reconcile his admirals, relied on command councils for decision making rather than firmly taking control of the fleet himself. And, in the

haste to leave New York, Graves failed to issue standing orders for signaling. This meant that, though using similar signals, the officers in the West Indies squadrons and those in Graves's New York squadron may well have interpreted them differently.

De Grasse's twenty-four available ships may have been in better overall physical condition than those of their enemy, but de Grasse had problems of his own. His ships, anchored in the best positions to unload their human cargoes, did not hold the best positions for a stationary defense. Furthermore, around fifteen hundred crewmen, including some ninety officers, were away in small craft or on detached duty supporting the landing force; thus virtually every ship would enter battle short-handed. Finally, the combination of fouled bottoms from their months at sea and an incoming tide meant it would be some hours before he could leave the bay to challenge his attackers.

Fortunately, the British approached slowly. Graves ordered the line of battle to form not until 11:00 A.M. At almost the same time, the tide having turned, de Grasse ordered his captains to slip their cables, leaving them attached to buoys for later recovery, and exit the Chesapeake at best speed while forming the line of battle on the fly. By 2:00 P.M., Graves, pushed by a north-northeast wind and thus possessing the weather gauge, could clearly see the disordered line of the French some three miles clear of the capes. He also made an accurate count of de Grasse's fleet. Although at that time there was a possibility of isolating and destroying the French van, the five-ship superiority of the enemy may well have nullified the loss of the van ships and allowed the French to still defeat Graves's fleet. Rather than risk a devastating loss that would guarantee the eventual fall of all British positions in the rebellious colonies, Graves opted for the strict linear engagement mandated by the *Fighting Instructions*, near sacred to Britain's Admiralty for many years. At 2:15 P.M., he ordered the fleet to wear to an easterly course that would parallel the French line.

The major ships engaged at the Battle of the Chesapeake are listed in order of initial engagement in table on page 207.

At 2:30 P.M. Graves ordered his van to steer more to starboard, thus edging closer to the French line. Several signals followed urging the rear squadron to make more sail and close the remainder of the fleet. At 3:46 P.M., Graves flew two signals, one to maintain the line ahead and the other to close and engage their opposite number in the enemy line. At 4:05 P.M., the second ship in the British line, HMS *Intrepid*, opened fire. Within minutes the van and centers of both fleets were hotly engaged. For almost two hours, these ships exchanged fire. Yet Hood, commanding the rear of the British force, never closed the enemy, justifying his failure to support Graves's center

with a misunderstanding of the signals. Graves, himself, felt that Hood's hanging back stopped the French from using their numeric advantage to penetrate and overwhelm the rear of the British fleet. In truth, a close engagement by Hood would most likely have simply increased damage and casualties without reaching a decision for either side.

By 1630, the fighting ended. Both sides had suffered heavy damage aloft, but the five leading ships of the British line had taken the worst of the damage, the *Terrible* barely managing to remain afloat. Over the next four days the two fleets, in roughly parallel columns, continued to sail eastward into the Atlantic. De Grasse saw no need to renew the action and was more than happy to keep Graves at sea while Barras and his transports entered the Chesapeake. Even after that, de Grasse had merely to keep the British out of the bay with his superior force to enable a strategic victory ashore against Cornwallis. Finally, late on 9 September de Grasse decided to end the game and turned his fleet for the Chesapeake, returning on the morning of 11 September to find Barras safely at anchor.

Graves declined to interfere with de Grasse's maneuvers. On 10 September he ordered the scuttling of the waterlogged *Terrible*, and three days later he received word from a frigate that de Grasse had joined Barras in the Chesapeake. With no hope of defeating that combined fleet, he ordered the British squadrons to return to New York. Heroic efforts saw the fleet repaired and reinforced to twenty-five ships of the line by 19 October. Yet Graves's new fleet sailed too late. Cornwallis surrendered on that same day, making any return engagement at the Chesapeake pointless.

CONCLUSIONS

The failure of Graves to secure any form of victory at the Battle of the Chesapeake Capes can be directly and immediately traced to Admiral Rodney. His fixation on personal wealth led to Hood's failure to engage de Grasse closely with a relatively equal force when the French fleet first appeared at Martinique in April—the best, perhaps only, chance to disrupt French naval activities in the Americas. Rodney compounded the problem by dissipating his ships to convoys (especially those of personal interest) throughout the West Indies, leaving a vastly inferior squadron to pursue de Grasse to the Chesapeake. Had de Grasse engaged Hood before reinforcement by Graves, say at the mouth of the Chesapeake or in Delaware Bay, it is difficult to see Hood escaping without severe losses. Nor could Hood have secured the Chesapeake by anchoring there on 25 August. The French could simply have blockaded his forces, then used fireships, cutting out expeditions, or even quickly established shore batteries to further weaken the outnumbered British before an overwhelming final assault. This is a moot point, however, as Rodney's orders prevented Hood from lingering in the Chesapeake.

Once Graves assumed control of the fleet, he had very little chance to free the Chesapeake of French shipping. An immediate attack on the French van certainly offered little guarantee of victory, and reengagement on any day between 5 and 10 September would only have increased the cumulative damage to both fleets—a game of attrition that the outnumbered British could not win. The same goes for Hood's failure to engage on 5 September. Commitment of the rear squadron offered little chance of victory and much chance of increased losses.

The Royal Navy's failure at the Chesapeake Capes, no matter the reason, sealed the doom of Cornwallis and his army. This second surrender of a major British army in the colonies destroyed the Grenville Ministry, and led directly to freedom for the rebellious colonies.

NUMBERS AND LOSSES

Nineteen British ships of the line engaged twenty-four French ships of the line at the Battle of the Chesapeake Capes. Smaller ships supported both sides. The British lost one ship, HMS *Terrible*, which was scuttled, and a frigate, HMS *Iris*, captured after the action of 5 September. British casualties numbered 90 killed and 246 wounded, as well as the crew of the *Iris* captured. The French lost no ships and reported total losses of slightly over 200 men (some estimates place this as high as 400 men).

CHEVAL DE FRISE. A portable obstacle used to stop cavalry, form road blocks, close gaps in fortifications, and so on, it was formed of large beams traversed by pointed spikes. A submarine version, whose invention was attributed to Benjamin Franklin and which differed considerably in design, consisted of a heavy timber frame bristling with iron-tipped spikes; sunk on the bottom of a river, it could rip the hull of a vessel. Franklin's obstacles were used in the Delaware below Philadelphia and in the Hudson below West Point. Usually employed in the plural, the term "chevaux de frise" means "horses of Friesland," the province in North Holland where they first were employed, apparently during the Dutch War for Independence of 1568–1648.

CHEVALIER. Many French volunteers came to America with this title, or were later awarded it, by virtue of being decorated with the Order of St. Louis. John Paul Jones was given the French Cross of the Institution of Military Merit in 1781, which entitled its holder to be addressed as "chevalier."

Mark M. Boatner

CHICKASAW. The Chickasaw Indians were an important eighteenth-century Indian nation that inhabited the lower Mississippi Valley, on the borderlands between British North America (later the United States) and Spanish Louisiana. In the eighteenth century, Chickasaw settlement was concentrated in the northern part of modern-day state of Mississippi, although their settlements also ranged into modern-day Tennessee and Alabama and some Chickasaw located villages among other Indian nations, such as the Creeks. The Chickasaw sided with the British and against both the Spanish and the United States during the War of the American Revolution.

The Chickasaw spoke a Muskogean language and lived in the region from the period before European contact. The people subsisted on an economy that combined agriculture and hunting and lived in established, named towns. European observers recorded eighteen different Chickasaw towns in the early eighteenth century, but by the middle of that century only ten named towns were recorded. English traders made contact with the Chickasaw in the 1680s, and the Chickasaw generally remained allied with the British throughout the years of the American Revolution.

The Chickasaw often attacked their French-allied neighbors, the Illinois and the Choctaw, and, with the Creeks, openly attacked the French garrison at Mobile during Queen Anne's War (1702–1712). The Chickasaw continued hostilities toward other French-allied Indians throughout the 1740s. The Chickasaw fought alongside the British forces in the Seven Years War. Their alliance with the British was reaffirmed by the negotiations of Indian Agent John Stuart at the Augusta Conference of 1763. Stuart sent a succession of deputies to the Chickasaw villages, which helped keep them loyal to the British during Pontiac's rebellion (1763–1766), and this same policy preserved the Chickasaw-British alliance during the Revolutionary war, albeit on their own terms.

The Chickasaw directed their hostility primarily against the Spanish government in Louisiana, which was under the command of Governor Bernardo de Galvez. As the Revolutionary War drew to a close, the Spanish and American governments competed for access to trade with the Chickasaw, with the Americans finally winning out. Chickasaw leaders signed the Treaty of Hopewell (1786) with the United States. In the early national period, the Chickasaw pursued a variety of strategies to cope with the expansion of American power, most often signing treaties that ceded progressively greater amounts of the lands they had claimed in the eighteenth century. The Chickasaw were removed west of the Mississippi River in accordance with the Treaty of Pontotoc (1832), which was signed after the passage of the Indian Removal Act (1830).

CHILLICOTHE, OHIO. The Chillicothe division of the Shawnee always called their principal town (capital) Chillicothe. In the eighteenth century three separate places were known at various times as Chillicothe, and all were destroyed by whites. In 1774 Chillicothe on Paint Creek near its junction with the Scioto River, close to the site of today's Chillicothe, Ohio, was attacked by the forces of Virginia's royal governor, John Murray, the earl of Dunmore, during Dunmore's War. This town lasted until 1787, when it was destroyed by Kentuckians. Chillicothe on the Little Miami River was where Daniel Boone was held prisoner in 1778. George Rogers Clark destroyed this town on 6 August 1780. Chillicothe on the (Great) Miami River was originally called Piqua and was burned by Clark on 8 August 1780. Renamed Chillicothe, it was again destroyed by Clark on 10 November 1782. The modern city on this site was named Piqua in 1823.

CHOISEUL, ETIENNE-FRANÇOIS, COMTE DE STAINVILLE. (1719–1785). (Later duc de Choiseul [pronounced shwa zearl].) French soldier and diplomat. Son of the marshal generally known as Plessis-Praslin, he entered the army and rose to the grade of lieutenant general. Choiseul entered the diplomatic service and advanced rapidly through ability and the sponsorship of the royal mistress, madame de Pompadour. As ambassador at Vienna in 1757, he started negotiations that led to the marriage of Marie Antoinette to the future Louis XVI. In 1758 he was awarded the title of duc de Choiseul. As minister of foreign affairs from 1758 to 1770, minister of war from 1761 to 1770, and minister of the navy from 1761 to 1766, he brought about the Family Compact (1761) and conducted a covert diplomatic system known as the Secret du Roi. Although he came to power too late to save France from humiliation in the Seven Years' War (1756–1763), he started rebuilding the army and navy. Foreseeing the opportunity for France to profit from inflaming differences between England and its American colonies, he sent secret observers (including De Kalb) to

America after 1764 and expanded the spy service in England. As the result of conflicting reports from his agents, he had concluded by 1770 that open disruption was not imminent. Another major Bourbon power, Spain, was also struggling at this time. Choiseul undertook to support it in its conflict with England over the Falkland Islands, hoping for a war in which it could defeat England. His failure to promote this policy to Louis XV and the other ministers brought about his political downfall on 24 December 1770.

In disgrace at his estate Chanteloup from 1770 to 1774, he finally obtained the intervention of Marie Antoinette with Louis XVI to return to court, but the king received him coldly, and he returned to his estate. Financial difficulties plagued him in his final years, and he died near ruin.

CHRISTOPHE, HENRY, KING OF HAITI. (c. 1757–1767–1820). Christophe, king of Haiti (1811–1820), supposedly took part in the attack against Savannah on 9 October 1779. Frances Heitman claims he was in the legion commanded by Fontanges. Hubert Cole, however, suggests that he may have fought either as a free infantryman or as an enslaved orderly for a French officer.

CHURCH, BENJAMIN. (1734–1778?). Informer. Massachusetts. Born at Newport, Rhode Island, on 24 August 1734, Church graduated from

Harvard College in 1754. After studying medicine under Dr. Joseph Pynchon, he went to the London Medical College, returning in 1759 with an English wife, Sarah Hill.

A talented man, Church quickly became one of Boston's leading doctors and was also well-known for his speaking and writing abilities as a member of the Patriots' Committee of Correspondence. On 6 March 1770 he accompanied those who officially protested the Boston Massacre, and the deposition he made after examining the body of Crispus Attucks was printed with other Patriot propaganda. In 1773 the town meeting selected Church to deliver the commemoration on the anniversary of the Massacre, in which he attacked British rule.

At the time of his election to the Provincial Congress in 1774, Paul Revere began to suspect Church of feeding information to Governor Thomas Hutchinson. On 22 April 1775, three days after the fighting at Lexington and Concord, he went to Boston on the pretext of getting medicines and claimed to have been captured and taken before General Gage. Most Patriot leaders accepted his story, and on 25 July 1775 Congress appointed Dr. Church chief physician to the Continental army at Cambridge. Meanwhile, Church had given Gage more than a month's advance notice that the Americans intended to fortify the Charlestown and Dorchester peninsulas, and he informed the British of business being conducted by the Provincial Congress.

Church proved a poor administrator. An investigation into his performance cleared him of misconduct, but he sought to resign on 20 September only to be dissuaded by Washington, who was desperate for capable doctors. The treason of Church came to light just a few days later, when Nathanael Greene brought Washington a coded letter that had been picked up in Newport when Church's mistress attempted to deliver it to a British officer there. Church was arrested on 29 September and his papers seized. Joseph Reed's search of his papers revealed nothing except that somebody—possibly Benjamin Thompson—had culled them just before Reed's arrival. The mysterious letter of 22 July was deciphered by two amateur cryptologists working independently, the Reverend West and Colonel Elisha Porter, and proved to be an intelligence report. In it Church told of his activities, described the strength and strategic plans of American forces, and mentioned the Patriot plan for commissioning privateers. After giving elaborate instructions for sending a reply, Church's letter ended: "Make use of every precaution or I perish."

Washington presided over a council of war on 3–4 October. Church insisted that he was just attempting to confuse the enemy, correctly stating that much of his information was false. The inquiry concluded that Church was guilty of communicating with the enemy,

but Washington and his generals found that the articles of war did not provide for any sentence more severe than cashiering, forfeiture of two months' pay, or thirty-nine lashes. Church was confined at Cambridge while Washington awaited instructions from Congress. On 27 October the Massachusetts legislature heard his case, and on 2 November expelled him from that body. On congressional orders he was then transferred under guard to the jail in Norwich, Connecticut. Church petitioned Congress in January 1776 for mitigation of his close confinement, which had brought on severe asthma. The delegates directed Governor Trumbull to move the prisoner to a more healthful place, but on 13 May they received another petition from the Norwich jail that showed he was still there and, according to the certificate of three doctors, in dangerously bad health. Since the British had by then evacuated Boston, Congress gave him permission to return to his home, where he was to remain under house arrest. However, after a mob attacked his home, he was moved to the Boston jail. In June 1777, General William Howe attempted to arrange an exchange for Church, but Congress refused. On 9 January 1778, the Massachusetts legislature finally decided to allow Church to leave, ordering him placed aboard the sloop *Welcome*, which was bound for the island of Martinique. The ship vanished in a violent storm.

CINCINNATI, SOCIETY OF THE.

In May 1783, when the Continental army was about to be disbanded, General Henry Knox obtained Washington's approval for a plan to form a society of officers. At a meeting on 10 May in Newburgh, New York, with General Friedrich von Steuben presiding, Knox, Edward Hand, Jedediah Huntington, and Samuel Shaw were selected to draw up final plans for the organization, and three days later their constitution was adopted at a meeting of officers held at Steuben's headquarters. "To perpetuate . . . as well the remembrance of this vast event [the Revolution], as the mutual friendships . . . formed," read the second paragraph:

the officers of the American army do hereby, in the most solemn manner, associate, constitute and combine themselves into one Society of Friends, to endure so long as they shall endure, or any of

their eldest male posterity, and in failure thereof, the collateral branches, who may be judged worthy of becoming its supporters and members.

Initially, the organization was limited to army officers, though naval officers were soon included. The founders named themselves after "that illustrious Roman, Lucius Quintus Cincinnatus," who twice was called from his farm to save Rome (in 458 and 439 B.C.) and who twice returned to his plow when the crisis was past. The society's stated purposes were "to preserve . . . those exalted rights and liberties of human nature," to promote national unity and honor, to perpetuate the brotherhood of American officers, to help those officers and their families who might need assistance, and to seek pensions from Congress. Other paragraphs of the constitution dealt with the establishment of state societies, election of officers, and frequency of meetings and prescribed that each officer would contribute one month's pay for a welfare fund.

The constitution also dealt with the creation of a badge. The "order" of the Cincinnati, designed by Pierre L'Enfant, was the size of a silver dollar, emblazoned with a bald eagle, suspended by a dark blue ribbon edged with white to symbolize the alliance with France.

Washington was not an organizer of the society, but on 19 June 1783 he agreed to become its president. He was succeeded on his death by Alexander Hamilton, after whom the following original members held the office until their death: Charles Cotesworth Pinckney, Thomas Pinckney, Aaron Ogden, Morgan Lewis, and William Popham. The latter was followed by Henry Alexander Scammell Dearborn, son of Henry Dearborn, who served from 1848 until his death in 1851. Hamilton Fish, son of Nicholas Fish, was president from 1854 to 1893. At about this time most of the state societies died out for lack of heirs, but the general organization was revived in 1902. In 1960 there were about 2,000 members in the United States and 150 in France.

There was a good deal of opposition to the society's formation, particularly to the wearing of a distinctive badge. Thomas Jefferson, Benjamin Franklin, John Adams, Sam Adams, and many other Patriot leaders charged the Cincinnati with attempting to create an aristocratic order that would eventually threaten republican values. They believed that by excluding enlisted men, the officers perpetuated class antagonism in the ranks of the Revolutionary veterans. Although the Cincinnati turned out to be a fairly innocuous fraternal organization, hostility to it increased over the next twenty years. Rhode Island disfranchised its members, a committee of the Massachusetts legislature investigated it, and Supreme Court justice Aedanus Burke of South Carolina attacked the order in a pamphlet that was translated and published by Count Mirabeau under his own name. The Tammany societies of New York City,

Philadelphia, and other major urban centers were founded partly in opposition to the Cincinnati.

The French branch was extremely vigorous, Mirabeau's pirated pamphlet in no way slowing the rush of army and naval applicants. The eagle and blue ribbon are said to have been the only "foreign decoration" permitted to be worn by French subjects in the court of Louis XVI. But the republicanism of the French Revolution led to the disbanding of the French Cincinnati in 1792.

CLAPP'S MILLS, NORTH CAROLINA.

2 March 1781. During the period of maneuvering that preceded the Battle of Guilford Court House, British and American patrols collided on 2 March near Clapp's Mills on the Haw River. Lieutenant Colonel Henry Lee does not mention this brisk skirmish in his memoirs, but both Nathanael Greene and Charles Cornwallis mentioned it in their reports. The American force consisted of Lee's Second Partisan Corps reinforced by elements of Colonel Otho Holland Williams's light corps and some North Carolina and Virginia militia. Lieutenant Colonel Banastre Tarleton led the British light troops with Colonel James Webster's brigade in support. Lee used the militia as a screening force; when they started taking casualties they became convinced that they were being "sacrificed" to protect the Continentals and fell back. Tarleton did not pursue because he feared running into Greene's main body. Casualties were light on both sides, and the skirmish had little tactical significance. It and a second skirmish at Wetzell's Mills on 6 March did, however, lead to deteriorating morale among the North Carolina militia, which had a real impact on the rest of the spring campaign.

CLARK, ABRAHAM. (1726–1794). Signer. New Jersey. After a general education he became a surveyor, a lawyer, and—informally—a settler of land disputes. He was known variously as "Congress Abraham" and "The Poor Man's Lawyer." He was high sheriff of Essex County and clerk of the colonial assembly under the crown. In December 1774 he was a member of the Committee of Safety and sat in the New Jersey Provincial Congress in May 1775 before going to the Continental Congress on 22 June 1776. He signed the Declaration of Independence and served in the Congress continuously until 1789, except for the single year in between the three-year term limits. In 1786 he attended the Annapolis Convention and in 1782–1787 sat in the New Jersey legislature. He was chosen a delegate to the Constitutional Convention in 1787, but poor health prevented his attendance. He opposed the Constitution until the Bill of Rights was added and favored legislation on behalf of the poor, including support for paper money and debtor relief. He became a Jeffersonian Republican. He was a member of the 1789 commission to settle the states' accounts with the United States and sat in Congress from 1791 until his death in 1794 from sunstroke.

CLARK, GEORGE ROGERS. (1752–1818). Officer in the Virginia militia. Born near Charlottesville, Virginia, on 19 November 1752, George Rogers Clark had little formal education when he started studying surveying at the age of 19. He read widely in history and geography, however, and his letters indicate a sharp intellectual curiosity. Starting in June 1772, Clark made several journeys by flatboat from Pittsburgh, traveling down the Ohio River and finally staking claim to some

land at the new community of Fish Creek, 130 miles below Pittsburgh. Clark took part in Dunmore's War in 1774 as a militia captain, and then surveyed land on the Kentucky River for the Ohio Company.

With the beginning of the Revolution, Clark returned to Virginia to raise arms and ammunition for the western settlers. He anticipated a war against the Indians, whose land the settlers were in the process of stealing. It took Clark a year to acquire the munitions and to transport them west. During that time several Indian nations, including the Miami, Wyandot, and Shawnee, were themselves negotiating with the British for military support in an effort to reclaim their lands from the white settlers. Governor Patrick Henry commissioned Clark as a major and placed him in charge of the defense of the Kentucky settlements. Clark developed a bold plan of attack against the British military bases in the region. In 1777, Clark again traveled to Virginia to request aid. Governor Henry enthusiastically supported Clark's plan, covering its expenses and promoting Clark to lieutenant colonel.

In 1778 Clark recruited 175 men in the Pittsburgh area, without bothering to inform them of their mission. In June this small force took flatboats down the Ohio River to the mouth of the Tennessee River and then struck overland for Vincennes, where he planned to capture a British outpost. The surprise was complete, for both parties. When Clark roused the astonished outpost's commander from his bed, he discovered, to his chagrin, that his prisoner was French, and that there were no British at the outpost. Though the French were allies to the Patriot cause, Clark left a company under the command of Captain Leonard Helm at Vincennes and headed for Kaskaskia, on the Mississippi River. Clark found no British troops there, either.

Meanwhile, in the fall of 1778, the lieutenant governor of Canada, Henry Hamilton, led a small group of Canadian militia, British regular army forces, and Indians against Vincennes, taking the post by surprise and without loss of life. Hamilton sent his regular army troops back to Detroit and settled in for the winter. In January 1779, Clark recruited the French militia at Kaskaskia to join him at Vincennes. He attacked on the night of 25 February, opening fire on the garrison as they came running out of the blockhouse. Hamilton surrendered and was sent as a prisoner to Virginia. With this quick victory, Clark claimed control of the northwest territory for the United States.

In 1781 Clark went to Richmond, Virginia, to garner Governor Thomas Jefferson's support for an attack on Detroit. Their conversations were interrupted by General Benedict Arnold's raid, which sent them both fleeing for safety. Arnold burned several buildings, one of which contained Clark's vouchers for his military campaigns. Virginia never made good on these debts.

After the war, Clark served for a number of years on the board that supervised the allocation of the 150,000 acres north of the Ohio River across from Louisville that Virginia had granted for Clark's veterans. He also served with Richard Butler and Samuel Holden Parsons on the commission that concluded the treaty at Fort McIntosh in January 1786. In this treaty, the Indians acknowledged U.S. sovereignty over some of the western territory ceded by Great Britain. In 1786 Virginia and Kentucky charged the Indians living along the Wabash (Piankashaw, Shawnee, and others) with breaking various treaty promises and asked Clark to lead a punitive expedition. This mission failed when the Kentucky troops mutinied, charging Clark with ineptness. Clark returned to Vincennes with his Virginia troops and established a garrison there. Back in Kentucky he found it necessary to defend himself from both creditors and political enemies intent on ruining his public standing. Clark then entered onto a number of ambitious schemes, including a plan to establish a colony in Spain's Louisiana Territory and an expedition to take possession of disputed lands between the Yazoo River and Natchez, which President George Washington stopped.

More or less desperate, Clark accepted a commission as general in the French army, and set out to attack the Spanish territories west of the Mississippi River. The United States government demanded that he surrender this commission, and he was forced to take refuge in St. Louis, Missouri. In 1803 he built a cabin at Clarksville, on the Indiana side of the Ohio River, near the falls. Here he ran a grist mill until a stroke and the amputation of his right leg forced him to move to his sister's home near Louisville in 1809. He died and was buried there nine years later. His younger brother, William Clark, would gain fame as one of the leaders of the Lewis and Clark Expedition.

CLARK, THOMAS. (?–1792). Continental officer. North Carolina. Elected to the office of major of the First North Carolina Regiment on 1 September 1775, Thomas Clark became lieutenant colonel of the First North Carolina Continental Regiment on 10 April

1776. He commanded this unit on Sullivan's Island during the defense of Charleston in 1776. He became colonel of the regiment on 5 February 1777. Given the commonness of the surname, it is occasionally difficult to distinguish one Colonel Clark from another in accounts of the Revolutionary War. It is likely that this Thomas Clark led the North Carolina Continentals at Monmouth on 28 June 1778, and that he took his regiment to reinforce General Benjamin Lincoln at Charleston, arriving 3 March 1780, just in time to surrender to the British on 12 May. An officer called Lieutenant Colonel Clark is also identified as having been at Kettle Creek, Georgia, on 14 February 1779. Clark was brevetted brigadier general on 30 September 1783 and died on 25 December 1792.

CLARKE, ALURED. (1744–1832). British officer. Born on 24 November 1744, Alured Clarke became an ensign in the 50th Foot in 1759. After seeing service in Germany, he was promoted to lieutenant on 10 May 1760, and then became captain of the Fifty-second Foot on 30 December 1763. In 1767 he transferred to the Fifth Foot, stationed in Ireland. He was made major of the Fifty-fifth Foot in 1771, and then colonel in 1775. He and his regiment sailed from Ireland to America the following year. In March 1777 he took command of the Seventh Fusiliers, which had recently been sent to New York from Canada, and held this commission until he succeeded General John Burgoyne as muster master-general of the German forces. He commanded British forces in Georgia from May 1780 until their withdrawal in July 1782.

Clarke was lieutenant governor of Jamaica from 1783 until 1791, when King George III made him lieutenant-governor of the new province of Lower Canada and commander of British forces in North America. In 1795, Clarke, now a major general, commanded a reinforcement that was sent to India with orders to rendezvous with General James Craig for an attack on the Dutch colony at the Cape of Good Hope. After the Dutch surrendered, on 14 September, he continued on to Bengal, where he was promoted to lieutenant-general and made commander in chief until his return to England in 1801. In 1830 Clarke and Sir Samuel Hulse, the two oldest generals in the army, were made field marshals. Clarke died on 16 September 1832.

CLARKE, ELIJAH. (c. 1733–1742–1799). Patriot militia commander, adventurer. North Carolina and Georgia. Born in Edgecombe County, North Carolina, probably of Scottish-Irish stock, Elijah Clarke moved with his family to Wilkes County (to the so-called “ceded lands”), Georgia, by 1773. Initially opposed to anti-British activities, he soon joined the militia and eventually became an important partisan leader during the war.

Modern authorities spell his name “Clark,” the style in which he signed it, at least in later life, but he is “Clarke” in traditional accounts. A militia captain, Clarke fought Cherokee and Creek war parties along Georgia’s frontier during 1776–1777. Promoted to lieutenant colonel in the state troops in early 1778 and wounded at Alligator Creek, Florida on 30 June 1778, Clarke had his finest hour at Kettle Creek, Georgia, on 14 February 1779. After leading his troops in three skirmishes in South Carolina in August 1780, (at Green Spring, Wofford’s Iron Works, and Musgrove’s Mill), and having been wounded in the last two, Elijah Clarke made his foolish attack on Augusta, Georgia, between 14 and 18 September 1780. Some authorities also credit him with action at Fishdam Ford. He was at Blackstocks, South Carolina, on 20 November 1780, and back at Augusta from 22 May to 5 June 1781. In early 1782 he led the Georgia militia as they assisted Continental General Anthony Wayne in pushing the British back to Savannah.

In recognition of his war services Clarke was granted an estate, and he fraudulently acquired several thousand additional acres from bounty certificates. Clarke led state militia during numerous Indian crises but when the U.S. government reduced military aid to the frontier and cancelled an invasion of the Creek nation, he resigned his post. In an effort to bring security to the frontier himself, Clarke formed and led several volunteer armies on various missions of his own design. Governor Mathews and President Washington stopped his 1794 attempt to invade East Florida. Clarke then led his volunteers and their families into the disputed Oconee territory where they established the short lived Trans-Oconee Republic before returning to Georgia. In 1795 Clarke attempted to organize a revolt along the Florida border but dispersed his men when faced with U.S. and Spanish forces. His proposal to organize a defense of East Florida from a possible British invasion was turned down by French and Spanish officials. He lost much of his property to debts incurred by these schemes. Despite all, he died a popular hero in 1799.

CLAY, JOSEPH. (1741–1804). Merchant, politician. Born in Beverly, Yorkshire, England, Clay moved to Savannah in 1760 to join his uncle, James Habersham. A respected and successful merchant and planter, Clay served his state in a number of capacities throughout the war and afterwards.

Clay became involved in the revolutionary movement in 1774. He participated in Georgia’s first two provincial congresses and served on the council of safety in 1775. At the council’s direction he appraised and took an inventory of Savannah property in March 1776, prior to the defense of the capital against British ships seeking rice. He opposed the state constitution of 1777 as too radical and expressed his concern that people of little experience were assuming positions of authority in the state for economic gain alone. Henry Laurens, a friend of Clay’s and a member of the Continental Congress for South Carolina, relied on him for information regarding Georgia, which often went unrepresented in the Congress. He asked Clay to become deputy paymaster general for the Continental army in Georgia. Clay reluctantly agreed and eventually held this position for South Carolina as well.

Clay worked in this capacity until the end of the war. His job was difficult, for there was often no Continental money available either to pay the soldiers or purchase supplies. He felt his reputation as a trustworthy gentleman was in danger of being destroyed through nonpayment of debt accrued by the army under his name and so borrowed money to keep the army’s credit, and thus his own, sound. Although his position disqualified him from public office, he served as a member of the short-lived supreme executive council formed in Augusta during July 1779. He became well-known to Continental Generals Benjamin Lincoln and Nathanael Greene, among other prominent individuals in the war effort. His contact with these men served to bolster Georgia’s reputation and make the state’s many difficulties better understood. In June 1781 Greene sent him to Augusta to assist in the formation of the institutions of state government, which settlers in the

backcountry had been without for over a year. While never in a combat role, Clay traveled with the troops and earned the respect of militia Colonel James Jackson for his ability to share in their danger and hardship.

It took Clay a long time to close his government books after the war, and this delay hurt his business activities. Additionally, many could not pay him the debts they owed, and he in turn found it hard to pay off British creditors. He had moved his family out of state in 1779, abandoning his holdings when the British reoccupied Georgia. As the British evacuated the state in 1782, he purchased nearly four thousand acres of land from confiscated estates. The income from these and other holdings carried him through the next few years. He served the state as treasurer (1782), justice of his county (1783), and member of the assembly. He also participated in the successful campaign to modify Georgia's constitution of 1777.

CLERKE, SIR FRANCIS CARR. (1748–1777). British officer. Clerke (the surname is pronounced “Clark”) became an ensign in the Third Foot Guards on 3 January 1770 and was promoted to captain on 26 July 1775. As General John Burgoyne’s aide-de-camp, he was mortally wounded by Timothy Murphy in battle at Bemis Heights on 7 October 1777 while delivering the orders to withdraw. He died that same night in the tent of General Horatio Gates. His orders were not received, leading to further losses by the British. His letters home from the campaign are notably well written and useful to scholars of the Revolutionary War.

CLEVELAND, BENJAMIN. (1738–1806). Patriot, militia leader. North Carolina. Born near Bull Run, Virginia, he moved with relatives to the portion of the North Carolina frontier that became Wilkes County.

About twenty-one years old at this time, uneducated and with a fondness for gambling and horse racing, he developed into a frontiersman. On 1 September 1775 he became ensign in the Second North Carolina Line. He participated in the rout of Scottish Loyalists at Moores Creek Bridge in February 1776. The next summer he was a scout on the western frontier, and that fall he served under General Griffith Rutherford in the Cherokee War of 1776. He was promoted to captain after this campaign (23 November 1776) and saw the country where he was later to settle. In 1777 he served at Carter’s Fort and the Long Island of Holston. The next year he retired from the Second North Carolina on 1 June and in August was made colonel of the militia; he also became justice of the Wilkes County court when the county was organized, having been chairman of the Surry County Committee of Safety. In 1778 he was elected to the North Carolina House of Commons.

In 1780 he turned out to crush the Tories at Ramseur’s Mill on 20 June but apparently was with the force led by his old commander, General Rutherford, and therefore saw no actual fighting. Four months later, however, he led 350 men south to take part in the battle of Kings Mountain on 7 October 1780. Cleveland is said to have been the man most responsible for the decision to hang nine prisoners after the battle.

“Cleveland’s Bull Dogs” had a reputation along the Upper Yadkin for brutality and inhumanity as Tory hunters that was unmatched by David Fanning on the other side. As a “justice” he was a fast man with the rope. Prisoners were convicted and executed by order of drum-head court-martials. In 1781 he was captured by Tories but soon rescued.

After a title dispute Cleveland lost his plantation, so he moved to what is now Oconee County at the western tip of South Carolina. He became a justice of the region. General Andrew Pickens is among those who have testified that the uneducated, grossly fat Patriot hero normally slept through the court proceedings—he became highly annoyed at legal arguments and technicalities. Having reached the incredible weight of 450 pounds, he died at the breakfast table when in his sixty-ninth year.

CLINTON, GEORGE. (1739–1812). First governor of the state of New York; Continental general. New York. Born in Little Britain, New York, on 26 July 1739, Clinton left home in 1757 to serve on a privateer. Returning home in 1760, he joined the militia company commanded by his brother, James Clinton, and took part in the capture of Montreal. After studying and practicing law for a few years, he entered the New York provincial assembly in 1768, where he became the rival of Philip Schuyler as a leader of the radical minority. In 1775 he was sent to the Second Continental Congress, but lost the opportunity of signing the Declaration of Independence because Washington ordered him to take charge of the defenses of the Hudson Highlands in July 1776. After being commissioned as a brigadier general of militia on 25 March 1777, he was also appointed a brigadier general of the Continental Army. The British threat to the Highlands did not develop until October 1777, but his defenses failed to stop Sir Henry Clinton's expedition or avert the burning of Kingston. On 20 April 1777, Clinton became the first governor of New York under the new state constitution, winning election to six consecutive terms. After General John Burgoyne's surrender in October 1777, fighting in New York state was restricted to border warfare, which forced Clinton to devote most of his energies to repelling the raids mounted by Loyalist and Indian forces from Canada. Clinton's firm opposition to Vermont's independence, which extended to twice threatening to take New York out of the war if Congress recognized Vermont, prevented coordinated defensive actions. Clinton insisted that the state of Vermont was in fact the northeastern counties of New York and he would not compromise or budge on the state's sovereign rights to these lands. On 30 September 1783 he was given the brevet rank of major general in the Continental army.

Clinton strongly opposed the federal Constitution, fearing that it would undermine New York's economic authority and his personal power within the state. Clinton published his anti-federalist views in seven "Cato" letters (so called because he signed them using the name of that Roman statesman). His reasoning made use of the French philosopher, Charles de Secondat, Baron de Montesquieu's insistence that republics survive only if they are geographically small in scope. Alexander Hamilton responded to Clinton with a series of letters signed "Caesar," and, more significantly, by completely out-maneuvering the governor at the state ratifying convention in June 1788. Clinton's opposition to the Constitution almost cost him the election in 1789. In 1792 he stole the election by having his agents throw out the results from three counties. Clinton refused to run for office again in 1795 because he recognized that his defeat at the hands of John Jay was inevitable, but he allied himself with the powerful and rich Livingston family and

Aaron Burr to win the governorship in 1800, moving on to serve two terms as vice president of the United States from 1805 to 1812, under Presidents Thomas Jefferson and James Madison. He died in office on 20 April 1812.

CLINTON, HENRY. (1730–1795). British commander in chief, 1778–1782. Clinton was born on 16 April 1730 to a naval officer who was related by marriage to the first duke of Newcastle. In 1741 Newcastle obtained for Clinton's father promotion to admiral and the governorship of New York, where the family lived from 1743. Young Clinton became a lieutenant in an independent company at New York in 1745, served at Louisburg the same year, and eventually rose to captain lieutenant. In 1748 he requested leave to go to France and probably traveled there (perhaps studying military science) from 1749 to 1751, when he returned to Britain. Through Newcastle's patronage he became a lieutenant in the Coldstream Guards (Second Foot Guards) on 1 November 1751, later rising to captain and aide de camp to Sir John Ligonier. On 6 April 1758 he became lieutenant colonel in the First Foot Guards and two years later saw his first actions at Korlach and Kloster Kamp. He became a colonel on 24 June 1762. Wounded at Johannsburg in Hesse on 30 August, he was invalided home. He was now established as a capable and experienced officer and a student of his profession. In 1766 he became colonel of the Twelfth Foot. Next year he married Harriet Carter (d. 1772) and went with his new regiment for a tour of duty at Gibraltar. In 1772 he was promoted to major general and began a political career as a member of Parliament in the Newcastle interest. In 1774 he was an observer of the Russo-Turkish war and on 1 February accepted the post of Gage's third in command in North America.

AT BOSTON AND CHARLESTON

On 25 May he reached Boston equipped with considerable and varied military experience, theoretical knowledge, and a generally sound tactical and strategic sense. Unfortunately, he combined these qualities with two

Henry Clinton. *The commander of the British Army in North America during the American Revolution, in a portrait (c. 1758) attributed to M. L. Saunders. COURTESY OF THE DIRECTOR, NATIONAL ARMY MUSEUM, LONDON/BRIDGEMAN ART LIBRARY.*

paradoxical characteristics: a deeply ingrained diffidence (particularly when in command) and a tendency to press his ideas on his superiors with tactless assertiveness. He presented Thomas Gage with a workable plan for taking Dorchester Heights but failed to get it adopted, perhaps because he failed to advocate it firmly, perhaps because he tried too hard. At Bunker Hill he disobeyed William Howe's orders in order to join one of the attacking columns and play a significant part in the eventual victory, but he worried for months afterwards that he might be reprimanded.

The Charleston expedition of 1776, his first experience of high independent command, was hamstrung by the ministry's overestimate of the strength of the southern Loyalists and by the logistical problems that beset all other British generals in North America. By the time his convoy reached the Cape Fear River on 12 March, the North Carolina Loyalists had already been defeated at Moores Creek Bridge. His promised reinforcements under Sir Peter Parker and Charles Lord Cornwallis were late in arriving from Cork, so that Clinton's force was not wholly assembled until the end of May. By then Clinton had decided that it was too late to do more than set up a

raiding base in the Chesapeake before rejoining Howe for the attack on New York. However, he let Parker talk him into a combined assault on Fort Sullivan in Charleston Harbor, an attack that went fatally wrong when three of Parker's frigates ran aground and Clinton was unable to get his boats into the harbor at all. The results were a heavy boost to rebel morale, a three-week pause before re-embarkation was possible, and failure to reach Howe until perilously late in the season. None of that failure can fairly be attributed to Clinton's leadership, although Parker found it convenient to blame the army afterwards.

NEW YORK

Now a local full general, Clinton probably planned as well as executed Howe's brilliant turning movement at Long Island on 27 August 1776. Clinton was later very critical of Howe's slowness and caution in his New York and New Jersey operations, especially the failure to cut off Washington inside New York City. At the time, however, he was full of the need to avoid even the mildest reverse that might encourage the rebels and undermine the red-coats' qualitative and moral advantage. After capturing Newport, Rhode Island, he asked to go home on a winter's leave, but this may not have been provoked wholly or even predominantly by his disapproval of Howe. His request, and his intention to resign, was perhaps motivated more by the way Germain seemed to have absorbed Parker's version of the Charleston fiasco.

Germain, unwilling to lose an able commander, was conciliatory, arranged for him to be knighted for Rhode Island (even though the Order of the Bath was full), and obtained for him the rank of lieutenant general on the regular establishment. He was even considered for the command of the Canadian expedition eventually given to Burgoyne.

Clinton's feelings about the Howe brothers' 1777 strategy were certainly not those of a bold, imaginative subordinate chaffing at the slowness of an overcautious commander in chief. If anything, the roles were reversed. Clinton, left behind to protect New York and, if possible, cooperate with Burgoyne, feared that Washington might evade Howe and descend upon his garrison in overwhelming force. Throughout August he sat still, making no attempt to press up the Hudson. By early September it was clear that Washington had swallowed Howe's bait and would be busy in Pennsylvania; Burgoyne, on the other hand, was asking for help, and Clinton himself was expecting substantial reinforcements from Britain. The reinforcements did not arrive until 24 September and Clinton did not begin to push upstream until 3 October. By 7 October he had forced his way through the American fortifications. However, although Burgoyne's senior, and

although Burgoyne specifically asked him for instructions, Clinton would not accept the responsibility of coordinating the two armies. By 8 October he had nearly overcome the American fortifications in the Highlands but did not press on in force to Albany. Whether he could have reached there is doubtful: the Second Battle of Saratoga had been fought the day before and a small probing force under Vaughan and Wallace was still forty-five miles from Albany when it found the way blocked by around sixty-five hundred Americans. That was on 16 October, the day before Burgoyne finally surrendered. Howe's order to withdraw from the Highlands and send reinforcements to Pennsylvania came too late to affect the outcome. However, as Clinton was acutely aware, it did entail abandoning control of the lower Hudson, and with it the prospect of a base large enough to furnish adequate essential supplies.

CLINTON'S FRUSTRATIONS AS COMMANDER

By the end of the 1777 campaign, Clinton was again ready to resign, but the home government responded by making him commander in chief in place of Howe. Like Howe, he had to carry out a strategy devised in London while trying to keep his regulars intact for the final, decisive battle. With French entry into the war in 1778, his long transatlantic communications were all the more fragile, with the added danger that the French might at any time secure local superiority at sea. That certainly made him cautious, but as we have seen, he had been wary even in 1776. He was appalled when in May—just as he took over from Howe—he received orders to detach five thousand of his precious soldiers to the unhealthy West Indies for an attack on St. Lucia. Worse, to free these men he was to give up hard-won Philadelphia and with it the confidence of the Pennsylvania Loyalists. Worse, he was to send an expedition to Georgia to exploit the supposed great numbers of southern Loyalists. In short, he was asked to carry out a plan at least as ambitious as that of 1777 with far fewer and even more dangerously dispersed troops.

At first he was thrown onto the defensive. After failing to trap Lafayette at Barren Hill, Pennsylvania (20 May 1778), he had to evacuate Philadelphia by land (fighting the Battle of Monmouth on the way) to avoid a reported approaching French squadron. When he reached New York he found Estaing already threatening the harbor. It was November before the French fleet had gone and the St. Lucia detachment was safely away. Once the coast was literally clear, Clinton carried out the next part of his orders by sending three thousand men to Georgia. When Savannah fell in December 1778, Clinton wanted to exploit his success by attacking Charleston. But like Howe, he had to wait for the reinforcements that would

allow him to do so without dangerously weakening New York. Meanwhile, he sent a raid to the Chesapeake and tried to lure Washington into a decisive battle by again thrusting up the Hudson to take Stony Point and Verplanck's Point on 1 June 1779. This move severed the Americans' most important east-west communications and promised to establish that vital supply base. In July, while he waited for Washington to react, Clinton launched the Connecticut coast raid.

To his frustration, he then received orders to send two thousand men to Canada. The reinforcements from Britain came in August—too late and riddled with sickness—just as Clinton heard of another French squadron about to descend on New York. He prudently concentrated his forces in New York, calling in his advanced Hudson posts as well as the Rhode Island garrison. As it turned out, the French and the Americans combined against Savannah, not New York. These events have been used to represent Clinton as a hopelessly indecisive commander, but in truth he was the victim of lack of numbers, French intervention, the intractable problem of transatlantic logistics, and a flawed strategy devised by a ministry three thousand miles away.

CLINTON AND CORNWALLIS

February 1780 found him before Charleston, where he had unexpectedly trapped Lincoln's army. Prudently preserving his troops by conducting a slow, regular siege, he finally took the city's surrender on 10 May and left Cornwallis behind to complete the conquest of South Carolina. Above all, Cornwallis was not to attempt anything against North Carolina or Virginia that might imperil South Carolina and Georgia. Clinton had no intention of risking anything more until he had at least ten thousand additional troops and a certainty that the French would not once again seize local naval supremacy. There is evidence that the cautious Clinton already found it hard to work with his more dashing subordinate and with the touchy Admiral Marriot Arbuthnot. With Cornwallis now too far away to control easily and with little influence at home, Clinton suddenly found his cautious strategy undermined by the ministry's enthusiasm for Cornwallis's bold aggression.

Now Clinton's natural diffidence let him down. When Cornwallis invaded North Carolina and demanded reinforcements, Clinton sent detachment after detachment to the Chesapeake. By May 1781 around three-fifths of his regulars were in the South. Worse, when in the same month he found that Cornwallis had invaded Virginia without his consent, Clinton allowed him to stay where he was instead of ordering him back to South Carolina by sea. Knowing that a powerful French fleet could soon threaten British troops in the Chesapeake, Clinton decided to withdraw most of the forces there to New York. Yet when Cornwallis challenged these

orders, and in the face of Germain's order (soon to be countermanded) to make no withdrawals, Clinton backed down and allowed Cornwallis to establish himself a base at Yorktown. Germain had already thought better of his decision, but by the time his countermanding instruction arrived, it was too late: as Clinton had feared, the French had taken control of the Chesapeake and Cornwallis had been forced to surrender. While Clinton's hesitation and lack of confidence was a contributory factor, the fault lay with the faulty strategy imposed from London three years before, Cornwallis's reckless insubordination, and Germain's endorsement of that insubordination.

However, Clinton, not Cornwallis, became the scapegoat for Yorktown. He resigned and stayed in America only long enough to hand over his command to Guy Carleton on 5 May 1782. He then returned to Britain to find that the king would not reward his service as commander in chief and that he was widely held responsible for Yorktown—and, indeed, for the entire British failure in North America. In the general election of 1784, having quarrelled with his patron, the second duke of Newcastle, he even lost his seat in Parliament. He spent most of his remaining years trying to rescue some shreds of reputation. He was returned to Parliament in 1790 and promoted to full general in October 1793. In July 1794 he was appointed governor of Gibraltar but died before taking up this post on 23 December 1795.

ASSESSMENT

Clinton may have had a complicated personality, and he may at times have failed to assert his authority. Above all, however, he was placed in an impossible situation. The ministry insisted on directing a war from thousands of miles away when it would have been better to leave the commander in chief to get on with his job. Orders arrived late and caused confusion. Above all, the war was conducted from beginning to end on false premises: that there were huge numbers of would-be active Loyalists and that their greatest concentration was in the South. That led ministers to weaken gravely Clinton's army and to order its fatal dispersal in the face of enemies now powerful at sea. Much of his apparent dithering, like Howe's, was due to the late arrival of men and supplies that could only come from across the Atlantic. Clinton was an intelligent and able commander, and it is difficult to see how anyone in his position could have done more. Those who accuse Clinton of excessive caution as commander in chief should reflect upon where recklessness led Burgoyne and Cornwallis.

CLINTON, JAMES. (1736–1812). Continental general. New York. Born on 9 August 1736 in Little Britain, New York, James Clinton served as a militia captain in the expedition under John Bradstreet that took Fort Frontenac on 27 August 1758. He remained in the provincial army on frontier duty until 1763. At the beginning of the Revolution, Clinton was a lieutenant colonel with the Ulster County militia regiment. A delegate to the New York provincial congress of May 1775, he was named a colonel of the Third New York Continental Regiment on 30 June, and accompanied General Richard Montgomery's column of the Canada invasion to Quebec, taking part in the Battle of Quebec. On 8 March 1776 he was named colonel in the Second New York Regiment, and on 9 August Congress made him a brigadier general. In this capacity he joined his brother, George Clinton, in supervising the construction of defenses along the Hudson River.

Serving under his brother in the Highlands, James escaped from Fort Montgomery with a bayonet wound when it and Fort Clinton were captured by Sir Henry Clinton's expedition in October 1777. James Clinton was placed in command of the northern department, with headquarters in Albany, on 20 November 1778, holding that post until 25 June 1781. Upon taking command he launched a series of attacks against the Loyalists in Tryon County, and then led one of the two forces that constituted General John Sullivan's expedition against the Iroquois from May to November 1779. After burning more than forty Indian towns and winning its only battle against the Indians, at Newton, this expedition pushed westward to the Genesee River but ultimately returned without having dealt the decisive defeat

to the Indians that General George Washington had desired. In 1781 Clinton and his brigade participated in the Yorktown campaign. He was brevetted major general on 30 September 1783.

A member of New York's ratifying convention, Clinton opposed the federal Constitution because it lacked a bill of rights. His son, De Witt Clinton, (1769–1828), would later be governor of New York and the Federalist Party candidate for President in 1812. James Clinton spent most of his last years overseeing his farm, and died in Little Britain on 22 December 1812.

revised by Michael Bellesiles

CLINTON–CORNWALLIS CONTROVERSY. Whether Sir Henry Clinton, as British commander in chief in North America, or Charles Earl Cornwallis, as commander of the British army in the South, was more responsible for the British defeat at Yorktown, and thus in America, led to a controversy that began in 1781 and ended only with Clinton's death in 1795. Cornwallis claimed that he had received from Clinton positive orders to entrench at Yorktown and await relief by sea. The energy and enterprise that Cornwallis had shown throughout the war in the South was not in evidence at that critical point. Clinton in late 1779 had made the decision to divide the British army in North America between New York and Charleston, South Carolina, and thus staked the survival of the army on the ability of the Royal Navy to maintain control of the sea lanes along the North American littoral. But he had not ordered Cornwallis to move north from South Carolina, first to North Carolina, and then to Virginia. And he had not positively ordered Cornwallis to sit down at Yorktown and await rescue. In truth, the Royal Navy had let down both army commanders. Its central administration at London had not put enough ships in commission, so that it was reduced to sending squadrons to follow the French across the Atlantic instead of blockading the French fleet in its harbors. Thomas Graves, its commander in North America, did not act aggressively with the ships he did have, and so he forfeited the only possible way he had to make up the deficiency. Clinton and Cornwallis could have, together, fixed the blame where it belonged, on the navy, but long-standing personal animosities led them to accuse each other of negligence.

Clinton opened the controversy while still at New York, publishing a pamphlet of his correspondence with Cornwallis before the end of 1781. He published a longer narrative shortly after he arrived home in 1782. Cornwallis responded with an answer to Clinton's narrative, and Clinton shot back with observations on the answer. An anonymous Cornwallis supporter then replied by pointing out alleged errors in Clinton's narrative. The controversy continued to simmer for another dozen years, but Cornwallis, the more astute politician, was already the victor where it counted, in the corridors of power. He went on to reap further glory and enhance his reputation as governor-general in India; Clinton never held another command.

CLINTON'S EXPEDITION. Clinton's expedition to the Highlands during 3–22 October 1777 (in support of Burgoyne's offensive). Sir Henry Clinton was left to defend the New York City area with about four thousand regulars and three thousand Loyalists when Howe sailed south on 23 July 1777. Clinton objected strongly to Howe's strategy, arguing that he was leaving all strategic decisions in George Washington's hands. Howe did not specifically direct that Clinton do anything to assist Burgoyne, and his letter of 17 July to Burgoyne said merely that Clinton was in command around New York City and should "act as occurrences direct." Howe's letters to Clinton spoke vaguely about his "acting offensively," and on 30 July he wrote Clinton, "If you can make any diversion in favor of General Burgoyne's approaching Albany, I need not point out the utility of such a measure."

During August, with Clinton convinced that Washington would attack New York City and Burgoyne confident of his own self-sufficiency, there was no question of military cooperation between them. In September, however, Burgoyne began calling on Clinton for help. By this time Clinton felt capable of giving some assistance as he expected sizable reinforcements from England and Washington appeared intent on battling Howe

in Pennsylvania. On 12 September, Clinton proposed attacking Fort Montgomery on the Hudson just north of Peekskill in hopes of drawing U.S. troops away from Burgoyne's army. Burgoyne got this letter on 21 September, two days after the First Battle of Saratoga, causing him to delay an attack that might well have succeeded in opening the road to Albany. Burgoyne wrote Clinton that "an attack or even the menace of an attack upon Fort Montgomery must be of great use, as it will draw away great part of their force. . . . Do it, my dear friend, directly." On 28 September, Burgoyne asked Clinton to instruct him whether to attack or retreat and said he would not have given up his line of communications to the lakes had he not been counting on finding British forces in Albany. Clinton responded in the third person that "Sir H. Clinton cannot presume to give any orders to General Burgoyne," thus further confounding the nearly paralyzed Burgoyne.

AMERICAN DISPOSITIONS

Major General Israel Putnam commanded the strategic region known as the Highlands of the Hudson River starting in May 1777. His strength had been reduced by the detachment of troops to other fronts, and at the time of Clinton's offensive he had only twelve hundred Continentals, most of whom were at Fort Independence, and four hundred militia around Peekskill; one hundred of the latter were unarmed and, "what is worse," wrote Putnam on 16 September, "it would be damned unsafe to trust them." On the west shore of the Hudson, four miles northwest of Fort Independence as the crow flies, about six hundred poorly equipped militia and a few Continentals held the two forts that were Clinton's objective.

Fort Montgomery, under the command of Colonel John Lamb, was well situated but uncompleted. Fort Clinton, named for New York's governor, George Clinton, was commanded by his brother, Brigadier General James Clinton. The mouth of Popolopen Creek was about 120 feet below Clinton and the two forts were separated by its deep gorge.

Clinton was the stronger fort, although smaller, and had to be taken if the British wished to hold Fort Montgomery. Approaches to the forts from the land side were through rugged defiles that could be easily defended. A system of obstructions, including so-called chevaux de frise, were strengthened by a log boom and a great iron chain that blocked the river below Fort Montgomery. Upstream from the boom was a flotilla comprising the frigates *Congress* and *Montgomery*, a sloop, and two galleys. West Point, about five miles north, was not fortified at this time, and the unfinished Fort Constitution, opposite West Point, did not figure significantly in this operation.

THE BRITISH STRATEGY

About 24 September, Clinton received reinforcements from England that brought his strength in regulars to 2,700 British and 4,200 Germans. On 3 October he moved north with 3,000 troops organized into three divisions. The evening of the 5th he landed troops at Verplanck's Point, on the east shore across the Hudson from Stony Point, and routed a small rebel outpost. Putnam hastily withdrew four miles from Peekskill into the hills and ordered reinforcements from Forts Montgomery and Clinton to join him, which was precisely what Sir Henry had intended to achieve by this initial diversion. Leaving 1,000 troops at Verplanck's to deceive Putnam further, the British commander landed near Stony Point the next morning under cover of a thick fog. Despite cumbersome uniforms and equipment that weighed 60 pounds and more, the troops followed their Loyalist guide, Brom Springster, quickly up a steep trail, through an 850-foot-high pass called The Timp, and down to a trail junction at Doodletown, within two and a half miles of Fort Clinton. Here, at about 10 A.M., they made contact with an American patrol and drove it back. Henry Clinton then sent 900 men around Bear Mountain to cross the creek and attack Fort Montgomery from the rear (west); the rest waited to give the encircling column time to make its difficult seven-mile circuit before attacking Fort Clinton from the south.

The forts were now commanded by Governor George Clinton, who hurried south from a meeting of the New York legislature at Esopus (later Kingston). He established his headquarters in Fort Montgomery. Washington had recommended outposting The Timp, but others—including Greene and Knox—argued that rough terrain ruled out the possibility of an enemy's using this route; the strategic point was therefore undefended. Scouts posted south of the Dunderberg informed Governor Clinton of the British landing at Stony Point, and he dispatched the thirty-man patrol that the enemy met at Doodletown. A second delaying force was driven back from the same area, although the fifty Continentals under Lieutenant Colonel Jacobus Bruyn and fifty militia under Lieutenant Colonel James McLarey conducted themselves creditably. Captain John Fenno left Fort Montgomery with sixty men to meet the column coming around Bear Mountain. Reinforced with a gun and forty more men, he took up a strong delaying position along the rugged side of the creek, about a mile from the fort, and forced the enemy to deploy. When threatened with being outflanked, the Americans spiked their gun and dropped back to another gun that Captain Lamb had run forward. Fenno was captured. When the second delaying position was threatened with envelopment, the defenders spiked the second gun and retreated to the fort.

Plan for the Attacks on Forts Clinton and Montgomery. This map, published in London in 1784, outlines the British plan for the storming in October 1777 of Fort Clinton and Fort Montgomery in New York. THE LIBRARY OF CONGRESS, GEOGRAPHY AND MAP DIVISION.

THE ASSAULT

After landing early and moving rapidly across difficult terrain, the British were not ready for a simultaneous attack by both columns until 4:30 p.m. After the customary summons to surrender and the heroic refusal, the action started. Opposite Fort Montgomery was the advance guard of Lieutenant Colonel Archibald Campbell that had led the advance from Stony Point and had then made a difficult seven-mile march to get into position. From left (north) to right were the Fifty-second Regiment, a group of New York Volunteers, Colonel Beverley Robinson's Loyal Americans (four hundred strong), Emmerich's Hessian jägers, and the Fifty-seventh Regiment. Campbell was killed in the attack, and his men, enraged by his death, the rigors of their march, and the intense heat of the day, at first refused to give quarter. Some of the defenders were, however, spared, and others escaped north or east across the river. Governor Clinton was among the latter.

Fort Clinton's main defenses were oriented southward to cover a 400-yard-wide strip of relatively flat ground between what is now called Hessian Lake and the drop-off to the river. An abatis and 10 cannon covered this approach. Since there was little opportunity to maneuver and no artillery support, the British commander committed the bulk of his forces to a frontal attack from the south. In the first wave were the 7th and 26th Regiments and a company of Anspach grenadiers. They were followed by the battalion companies of the 26th, a dismounted troop of the 17th Light Dragoons, and some Hessian chasseurs. The battalion companies of the 7th and a German battalion followed in support. The 63rd Regiment circled west of Hessian Lake to attack from the northwest. In the best tradition of European regulars, Clinton's troops pushed forward through the abatis and the enemy's fire to claw their way into Fort Clinton. The British and Germans lost some 40 killed with 150 wounded, while American casualties numbered near 300, with 260 taken prisoner. The Americans also lost 67 guns and a significant quantity of stores and had to burn their flotilla when it could not escape north against the wind.

On 7 October the British broke through the boom and routed the small garrison at Fort Constitution. Putnam then abandoned his position at Fort Independence. The royal governor of New York, William Tryon, wanted to move on to Albany, but Clinton felt he would be walking into a trap. On 8 October, Clinton wrote Burgoyne, "I sincerely hope this little success of ours may facilitate your operations."

In fact, however, these little victories made no difference to Burgoyne, who lost the Second Battle of Saratoga on 7 October. In response to repeated appeals from Burgoyne, Clinton sent General Sir John Vaughan with seventeen hundred men, supported by a flotilla under Sir

James Wallace, with orders to render what assistance he could. Vaughan and Wallace picked their way through the chevaux de frise on 15 October and anchored that night near Esopus. The next day they burned the town and moved upstream to Livingston's Manor, about forty-five miles from Albany. Putnam now commanded some sixty-five hundred men blocking Vaughan's progress, and the latter's pilots refused to take his forces further upriver between the guns the Americans had placed on either side of the Hudson. Clinton received orders from Howe to abandon his gains in the Highlands and send reinforcements to Pennsylvania. On 22 October, Clinton wrote Vaughan to withdraw and the British returned to New York City.

This operation of Clinton's, although skillfully conducted, was no direct threat to the Americans around Saratoga. Nonetheless, it caused Gates considerable anxiety and raised Burgoyne's hopes, the former helping to explain the American generosity regarding the terms of the Saratoga Convention. Although exonerated at a court-martial for his conduct, Putnam never again received a field command. After Clinton's withdrawal, the Americans began construction of Fortress West Point to defend the Hudson River.

CLYMER, GEORGE. (1739–1813). Signer. Pennsylvania. Born in Philadelphia on 16 March 1739,

George Clymer was orphaned in 1746. He nonetheless grew up to be very well connected. He was reared by his uncle, a friend of Benjamin Franklin, who left him his business and fortune. Clymer further extended his social connections by marrying Elizabeth Meredith, the daughter of a wealthy Quaker merchant.

By the outbreak of the Revolution, Clymer was one of the three richest men in Philadelphia. He was an early Patriot and captain of a volunteer company in General John Cadwalader's brigade. In 1773 he was chairman of the "Philadelphia Tea Party," forcing the resignation of all merchants named by the British to sell tea, and he went on to serve on the city's Committee of Safety. On 29 July 1775 Congress appointed Clymer and Michael Hillegas to serve as U.S. treasurers. Clymer put his personal fortune behind independence, converting all his specie to Continental currency and subscribing to a loan, both of which proved to be costly decisions. On 20 July 1776 Clymer became one of five congressional delegates named by his state to replace those who would not sign the Declaration of Independence, adding his signature to that document on behalf of Pennsylvania. In Congress he served on the critical Board of War, giving special attention to reforming the army's medical and commissary departments. On 26 September 1776 he was named to inspect the northern army at Ticonderoga and advocated increasing General George Washington's powers. He was re-elected to Congress on 12 March 1777, but was defeated for re-election on 14 September. After the British took Philadelphia, they sacked his house. In 1777 he was named a commissioner to treat with the Indians near Fort Pitt. In 1780 he was one of the founders of the Philadelphia Bank, which was formed to supply the army. He was also re-elected to the Continental Congress (1780–1782). A member of the federal Constitutional Convention and a firm supporter of the Constitution, Clymer was elected to the first Congress but declined to stand for re-election in 1791. Shortly thereafter, Washington, then serving as president, named Clymer collector of the duty on spirits, where his heavy-handed methods helped spark the Whiskey Rebellion. In 1796 he helped negotiate the Treaty of Coleraine with the Creek Indians. He was vice-president of the Pennsylvania Agricultural Society and president of the Academy of Fine Arts and the Philadelphia Bank until his death on 23 January 1813.

COCHRAN, JOHN. (1730–1807). Last medical director of the Continental Army. Pennsylvania. Born on 1 September 1730 in Sadsbury, Pennsylvania, John Cochran entered British service as a surgeon's mate during the Seven Years' War. Cochran saw a great deal of action, taking part in the battle of Fort Oswego in 1756, Colonel John Bradstreet's capture of Fort Frontenac in 1758, the British defeat at Fort Ticonderoga in 1758, and General Jeffrey Amherst's campaign up Lake Champlain in 1760. By war's end Cochran was a specialist not only in the treatment of wounds, but also in inoculation. Having made friends with Philip Schuyler during the war, Cochran settled in and married Philip's sister, Gertrude Schuyler. In 1762 he moved to New Brunswick, New Jersey, and helped found the New Jersey Medical Society in 1766, becoming its president in 1769. With the outbreak of the Revolution, Cochran volunteered. He was present with General George Washington during the crossing of the Delaware and at winter quarters in Morristown. He also collaborated with William Shippen, Jr. in preparing the plans that were used to reorganize the army medical department after 14 February 1777. On 11 April 1777 he was named physician and surgeon general of the Middle Department, and on 6 October 1780 he became chief physician and surgeon for the army. Among the hundreds of serious wounds he treated were those of General Lafayette (Joseph Paul Yves Roche Gilbert du Motier) at the Battle of Brandywine and Benedict Arnold at Saratoga. Following the traitor Benjamin Church and the Philadelphia doctors John Morgan and William Shippen, on 17 January 1781 he ascended to the top position in the army's medical department and served to the end of the war. In this position he was able to correct many of the inefficiencies he so vehemently deplored.

After the war Cochran settled in New York City, and in 1790 President George Washington had him appointed commissioner of loans. After suffering a paralytic stroke in 1795 he retired to Palatine, New York, where he died on 6 April 1807.

COERCIVE ACTS SEE *Intolerable (or Coercive) Acts*.

COFFIN, ISAAC. (1759–1839). British admiral. Massachusetts. Born in Boston on 16 May 1759, Coffin entered the Royal Navy at the age of fourteen. With the outbreak of the Revolution, Coffin remained in the British navy, being promoted to lieutenant in 1778 and placed in command of the cutter *Placentia*. He was court-martialed the following year for wrecking a ship under his command but was acquitted. After taking part in Rodney's victory off Saints Passage in April 1782, Coffin was promoted to captain and given command of the *Shrewsbury* (seventy-four guns). He was court-martialed for disobedience and contempt after refusing to accept three young officers appointed by Rodney to his ship, but once again he was acquitted. After having his naval rank suspended for listing nonexistent sailors, he joined the Brabant patriots of Flanders in their fight against Austria. His naval rank was restored in 1790, but he was removed from active duty in 1794 after being incapacitated by injuries incurred while rescuing a sailor who had fallen overboard. For the next decade he held a number of land-based posts, regularly getting in disputes with his superiors but earning promotion nonetheless. In 1804 he was knighted and made rear admiral, retiring with his promotion to vice admiral in 1808. By 1814 he had become full admiral. He served in Parliament from 1818 to 1826. Coffin maintained a deep and public interest in the country of his birth, repeatedly crossing the Atlantic to visit the United States, sending English racehorses to improve the breed, and importing plants and commercial fish (the turbot) to the United States. In May 1827 he established the Coffin School at Nantucket. Coffin died in Cheltenham on 23 July 1839.

COFFIN, JOHN. (1756–1838). Loyalist officer. Massachusetts. Elder brother of Sir Isaac, he went to sea as a small boy and at the age of eighteen had been given command of a ship. On 15 June 1775 he reached Boston with a shipload of British troops. Two days later he ferried these soldiers over for the Battle of Bunker Hill, took part in the fighting on land, and for his gallant conduct was given a battlefield commission. After serving successively as ensign and lieutenant, he was

promised command of four hundred Loyalists on the condition that he recruit them in New York. Going to New York City after the evacuation of Boston (15 March 1776), he raised and assumed command of the mounted rifle force known as the Orange Rangers and led them in the Battle of Long Island. In 1778 he transferred into the New York Volunteers. The same year he went to the South, where he raised a corps of mounted troops in Georgia. Coffin took part in the action at St. Lucia (December 1778) and Briar Creek (3 March 1779). He is said to have distinguished himself in the action at Savannah (presumably in October 1779). He is also said to have been in the Battle of Camden on 16 August 1780. At Hobkirk's Hill on 25 April 1781, his gallant attempt to capture the American guns was beaten off, and he subsequently was routed by the cavalry of William Washington.

Captain Coffin particularly distinguished himself at Eutaw Springs on 8 September 1781. The Patriots are said to have offered a reward of ten thousand dollars for his head. Whether or not the story is true, Coffin appears to have believed it: after the battle of 8 September 1781, he left the main British army and fought his way to Charleston. He subsequently served under Cornwallis at Yorktown but escaped the surrender there and returned to Charleston, the home of his fiancée, Ann Mathews of St. Johns Island. When the British evacuated Charleston he went to New York City. On 25 December 1782, Carleton promoted him to major in the King's American Regiment, and at about this time Cornwallis presented him with a sword for his services.

Before the British evacuation of New York City, Major Coffin went to New Brunswick (Canada), where he was joined by his young wife and four slaves. Only twenty-seven years old, he started clearing his lands and eventually developed a valuable estate of six thousand acres about twelve miles from St. John. He remained in the British army on half pay, rose steadily in rank, and became a full general on 12 August 1819. Meanwhile, he was a successful member of the assembly and raised three sons, who had active military careers in various parts of the empire and helped establish a century-long pattern of United Empire Loyalist military professionalism. When Coffin died on 12 June 1838, he was the oldest general in the British service.

Another John Coffin, an uncle of the above, constructed the defenses that stopped Montgomery's column in the assault on Quebec on 31 December 1775.

COLERAINE, FOURTH BARONSEE *Hanger, George; Tarleton, Banastre.***COLLIER, SIR GEORGE.** (1738–1795).

British naval officer. Born in London on 11 May 1738, Collier entered the navy in 1751 and became a lieutenant on 3 July 1754. After service at home and in the East Indies, he rose to post-captain. On 3 September 1763 he married Christina Gwyn only to divorce her nine years later. In the years prior to the War of American Independence this sensitive, cultured, short, muscular dynamo of a man not only held a series of naval commands but also successfully adapted a version of “Beauty and the Beast” for the Drury Lane stage.

In 1775 he was sent to America on a special mission, the nature of which is still unknown, but for which he was knighted on 27 January 1776. On 20 May he sailed in the frigate *Rainbow* (forty-four guns) for the American station, where Richard Lord Howe appointed him senior naval officer at Halifax. On 8 July he captured the large, newly built American frigate *Hancock*, which was taken into the Royal Navy as *Isis*. In August he preempted a planned rebel strike at Nova Scotia by destroying the stores the rebels had accumulated at Machias, and went on to burn about thirty of their ships.

In February 1779 he was ordered to New York to succeed Rear Admiral James Gambier in command of the North American station. On 4 April he was appointed commodore and hoisted his broad pennant in *Raisonné* (sixty-four guns). Despite the depletion of his squadron to reinforce the West Indies, Collier at once persuaded Henry Clinton to mount a combined operation in the Chesapeake. Sailing with two thousand soldiers under Major General Edward Mathew, Collier reached Hampton Roads on 9 May, took Fort Nelson, and subsequently burned or captured vast quantities of naval stores and at least 137 ships. On 30 May, having returned to New York, Collier took ships up the Hudson River to support Clinton’s operations against Stony Point and Verplancks. Not content with all this activity, he agreed to personally accompany the Connecticut coast raid in July. From the coast of Connecticut he moved north to bottle up and destroy the rebel flotilla attacking Francis MacLean’s Penobscot base in Maine. On returning to New York, Collier found that the inevitable had happened: Vice Admiral Marriot Arbuthnot had arrived to be a permanent replacement for Gambier. Put out, but most certainly not surprised, Collier sailed for home in the frigate *Daphne*, reaching Portsmouth on 27 November. Shortly afterward he vented his dissatisfaction by claiming

that the war in America could not be won with the methods and men currently employed.

He was not long ashore. Early in 1780 he was given *Canada* (seventy-four guns) in the Channel Fleet. In her he took part in Darby’s timely relief of Gibraltar, and on the return voyage captured the Spanish forty-four-gun frigate *Leocadia*. But on his return home he resigned his command. There is no evidence that he was personally at odds with the earl of Sandwich but there seems to have been some incident, perhaps a failed application for patronage, which gave him a grievance against government.

On 19 July 1781 he married Elizabeth Fryer, by whom he had six children. In 1784 he was elected to Parliament for Honiton and in 1786 aroused the Pitt ministry’s ire by opposing its attempt to give the Prince of Wales only limited powers should a Regency become necessary. Rightly or wrongly, Collier later maintained that this stance delayed his advancement to flag rank. He was certainly unemployed until the Nootka Sound crisis in 1790, when he was given *St. George* and ordered to prepare her for a flag officer. Angered by being again passed over, Collier, with the approval of fellow officers, complained to the Admiralty and the order was revoked. However, Collier still did not get his flag, and when the crisis passed *St. George* was paid off. (When a ship reached the end of its commission the ship’s company was paid off; they were no longer employed.) He had to wait until a new war loomed before becoming rear admiral of the *White* on 1 February 1793, followed by promotion to vice admiral of the *Blue* on 4 July 1794. In January 1795 he was made commander in chief at the Nore, only for his health to compel resignation within weeks. He died in London on 6 April 1795, still embittered by his belief that his brilliant few months of independent command in America had not received due recognition.

COLOMB, PIERRE. (1754–?). French volunteer. Born at Nîmes, the son of a silk merchant, he entered the *gendarmes de la garde* on 8 December 1766 and served until 15 December 1775. He traveled from Cádiz, Spain, to Charleston, South Carolina, in 1777. He then moved to Georgia, where he was appointed a lieutenant in the Continental Dragoons in 1778. He served in the expedition against Florida and was later promoted to captain.

His father sought Henry Laurens's intervention to encourage him to return to France or become a merchant in America. Colomb was captured on 29 December 1778 in the defense of Savannah and mistreated both by his captor, Colonel Archibald Campbell, and during his imprisonment aboard the *Whitby* on the Georgia coast. In March 1779 Prevost ordered his parole. Though he was authorized to return to France to be exchanged, this did not occur immediately. Instead he applied to the Congress's Board of War for promotion to the rank of major, which Congress rejected on 7 August 1779. He returned to France in the autumn of 1779 and began a series of failed appeals to Franklin for preferment, claiming to have been promoted to major the last day of his American service.

Serving in the French army during the French Revolution as colonel of the Second Dragoons (July 1792), Colomb was named brigadier general for the Army of the North in April 1793. He ceased his functions in April 1794 and retired in 1795. In 1817 he was still alive at Lyon. Colomb is often confused with Lafayette's aide-de-camp, Louis Saint Ange, Chevalier Morel La Colombe.

COLONIAL WARS. 1565–1760. Competition among European imperial powers increased the scale and scope of conflict in North America. Since the outcomes of the European conflicts created the circumstances within which the American Revolution and the War of American Independence occurred, it is useful to summarize the wars in eastern North America before 1775 as part of the background of the events that occurred thereafter. Many of the people, places, events, and issues that were prominent during the last stages of the colonial wars also played important roles in the Revolution.

EARLY CONFLICTS

All European imperial powers—Spain, France, England (Britain after 1701), and the Netherlands (until 1664)—sought or were compelled to insinuate themselves into the relationships that had existed among Native American tribes before their arrival. As they worked to impose their own agenda on the land, the Europeans courted Native allies who could help them learn how to survive in the new environment and perhaps even provide support against hostile tribes.

The Spanish founded the first enduring European settlement on the eastern shore of North America at St. Augustine in Florida in 1565, and they exterminated their local French competitors at Fort Caroline the next year. The French established their first enduring settlements in the St. Lawrence Valley, at Quebec in 1609 and Montreal in 1611. The English were latecomers in the race for settlements on the mainland, establishing an evanescent presence on the Outer Banks of what would become North Carolina in 1585 before managing (barely) to survive at Jamestown in Virginia after 1607. Nearly every European who came to the New World did so to make money. Even the English men and women who emigrated to New England beginning in 1620 to create religiously based communities also searched for economic opportunity.

For the Spanish, St. Augustine was the northeastern outpost of their larger colonies in Central and South America, important principally to prevent competitors from establishing themselves too close to the routes that the treasure fleets took home to Spain. To create a hinterland to supply and support their relatively small coastal communities, they had founded by 1655 about forty missions in the interior and were making considerable progress in converting some twenty-five thousand Indians.

Frenchmen going to the New World were interested primarily in developing commercial outposts from which they could exploit the fur trade. From their initial settlements in the St. Lawrence Valley, they pushed inland through the Great Lakes, where they excelled in exploration and in establishing relations with Native Americans.

Champlain Fights the Iroquois. The French explorer Samuel de Champlain and his Algonquin and Huron allies clashed with Iroquois in upstate New York. The French, who were armed with muskets, promptly overpowered the Iroquois in this nineteenth-century engraving. NATIONAL LIBRARY OF CANADA.

Their most important competitor was a league of five tribes, known most commonly as the Iroquois, whose core towns stretched from the Hudson Valley in the east almost to the Niagara River in the west. To counter this league, the most powerful military force in eastern North America, the French allied with the Algonquins, Montaignais, and Hurons. The Iroquois drove back French outposts during 1642–1653, but the French had responded in sufficient strength by 1666 to make the league sue for peace. After the sieur de la Salle reached the mouth of the Mississippi in 1683, the French claimed the entire region west of the Alleghenies to the Mississippi River. They called it Louisiana.

France and England also clashed in other areas of eastern North America. The French established a colony in Acadia, beginning at Port Royal in 1610, but it was destroyed by the English in 1613. In 1621 England granted Acadia to Sir William Alexander, which led to open hostilities with the French in 1627. The English privateers Alexander and David Kirke captured Quebec in 1629, but that key post, along with Acadia, was returned to the French by treaty in 1632. Competition for fish and furs led New Englanders to capture Acadia in 1654; they held the region until it was returned to France

in 1670. The English also established trading posts on the shore of James Bay in 1668 to divert the fur trade from the St. Lawrence, but the French captured three of the five posts in 1686, severely impeding the operations of the Hudson's Bay Company.

IMPERIAL WAR

The ambitions of Louis XIV brought Roman Catholic France into conflict with a Protestant coalition led by England's king and queen, William III and Mary II. In Europe, the war to curb French expansionism was known as the War of the League of Augsburg (1689–1697); its American extension was called King William's War. Hostilities started on Hudson Bay and in the Mohawk Valley. In the winter of 1690, the governor of New France, Louis de Buade, comte de Frontenac, launched three raids by the French and their Abenaki and Caughnawaga allies on New England and New York border settlements and attacked the Iroquois on the western frontier. The continued French alliance with Native American tribes was bitterly resented by British Americans, which contributed to their willingness to overextend their resources to destroy New France in one blow.

After William Phips led a New England force to capture Port Royal in the early spring of 1690, the northern British colonies collaborated on a two-pronged attack on Quebec. Phips led a Massachusetts expedition up the St. Lawrence to besiege the key to New France, while a combined Connecticut–New York expedition struggled north along the Lake Champlain corridor to Montreal. Time and logistics, along with desperate French resistance, eventually stopped both expeditions. In subsequent years the French recaptured Port Royal and the remaining English posts on Hudson Bay, while the English recaptured their James Bay posts. The Treaty of Ryswick (1697) restored all conquests, leaving the French free to continue their expansion in Louisiana. They established a series of posts, beginning with Cahokia (near modern East St. Louis) and Fort Maurepas on Biloxi Bay in 1699, and followed up with Mackinac in 1700, Detroit in 1701, Fort Louis on the Mobile River in 1702, and Kaskaskia in 1703.

Louis XIV's ambition to win the Spanish throne for his nephew led to the War of the Spanish Succession (1701–1714) in Europe. The American extension was called Queen Anne's War (1702–1713), after Mary's sister and William's successor. After years of exhausting war, the Iroquois in 1701 concluded a truce with New France that left the French and their Native American allies free to raid British settlements in Maine and Massachusetts. Benjamin Church retaliated by leading a New England expedition that destroyed two French villages in Acadia. In Newfoundland, the French and Indians took St. John in 1708 and established control of the eastern coast. After two failures, New England colonists, with British naval support, captured Port Royal in 1710. Then, in 1711, as the war wound down in Europe, Britain uncharacteristically invested heavily in a colonial campaign. It sent ten ships of the line under Rear Admiral Sir Hovenden Walker with six thousand regular troops in thirty transports under Brigadier General John Hill to Boston, carrying a total of eleven thousand soldiers and sailors. It was the largest British expedition to North America before the French and Indian War and was intended to ascend the St. Lawrence to Quebec while an expedition of colonial troops marched overland against Montreal. The entire campaign fell apart when, on 22 August, part of Walker's fleet was caught on a dead lee shore in the Gulf of St. Lawrence; nearly nine hundred men drowned.

Spanish threats to Carolina's southern frontier led the Carolinians to mount an overly ambitious attack on St. Augustine in 1702. Lacking the artillery to reduce Castillo de San Marcos, the force of Carolinians and Indians sacked the surrounding town and withdrew. Seeking to reestablish their credibility with their own Native allies, the Carolinians sent a force into the

Appalachee in 1704 that destroyed all but one of the fourteen Spanish missions there. The unwillingness of the Choctaws to allow the Carolinians to pass through their territory ensured that Carolina's schemes to attack French settlements along the Gulf of Mexico never got off the ground. The Treaty of Utrecht in 1713 gave Britain the Hudson Bay area; Newfoundland; Acadia; St. Christopher in the West Indies; and with typical European ethnocentrism, the Iroquois country. France retained Cape Breton Island and islands in the Gulf of St. Lawrence. An agreement with Spain, called the *asiento*, allowed the British South Sea Company to ship forty-eight hundred Negro slaves a year to the Spanish colonies for thirty years, along with one trading vessel a year.

BETWEEN WARS

For twenty-five years after the end of Queen Anne's War, the French tried to rebuild and consolidate their position in North America. They began building the powerful fortress of Louisburg on Cape Breton Island in 1720 to protect their fishing interests and to provide a naval harbor on the Atlantic. They began Fort Niagara in 1726 to help protect the trade route across Lakes Ontario and Erie and to promote their influence among the Iroquois. Between 1715 and 1731 they built Forts Miami, Ouiatenon (or Ouiataon), and Vincennes, in modern-day Indiana, to cover the route from Lake Erie via the Maumee and Wabash Rivers to the Mississippi. And, finally, they built a fort at Crown Point on Lake Champlain in 1731 to push south the outer defenses of Montreal. The British colonies were growing rapidly, but they were less aggressive in shrinking and fortifying the zone of Native American influence that still separated them in most places from the French. The British built Fort Oswego on the south shore of Lake Ontario in 1725, to which Niagara, about 125 miles due west, was the counterweight, but the age of relentless expansion into Indian lands was only just beginning.

On the Carolina frontier, the expansion of settlements along the coast south of Charleston brought on a war in which the Yamassee and Lower Creeks regained control of all the area west of the Savannah River. The Carolinians managed, with the aid of the Cherokees, to defeat the Yamasseees in 1716 and thereby also to reduce the Creek threat to their frontier. They built forts at Port Royal and the present site of Columbia, on the Santee River, for protection against the Indians, and despite Spanish protests, more forts on the Altamaha, Savannah, and Santee Rivers between 1716 and 1721. Thirteen months of hostilities between Britain and Spain in 1727–1728 gave the Carolinians a pretext to invade Spanish Florida and destroy a Yamassee refugee village near St. Augustine. The British position was significantly strengthened in 1732, when James Oglethorpe founded

Georgia, with its southern boundary on the Savannah and Altamaha Rivers, one of the primary purposes of which was to serve as a buffer against the Spanish. To defend his southern frontier, Oglethorpe by 1739 had established forts on the islands of St. Simons, St. Andrew, Cumberland, and Amelia and inland at Augusta and Okfuskee on the Talapoosa River, in what is now Alabama.

RENEWED CONFLICT

British violations of the trade agreements with the Spanish in the Caribbean led to seizures of British ships and the rough handling of her seamen. In 1739, a Captain Robert Jenkins claimed that the Spanish had cut off his ear eight years earlier as punishment for what he assured Parliament was nothing but legal trading, and he publicly displayed the severed part to “prove” Spanish brutality. Vice Admiral Edward Vernon, a former commander of the Jamaica station who advocated armed aggression against the Spanish colonies, sailed again for the West Indies in July 1739, three months before a reluctant Parliament declared war against Spain on 19 October in the so-called War of Jenkins’ Ear (1739–1742). Vernon attacked Spanish possessions in the Caribbean, winning acclaim at home for his capture of Porto Bello on 22 November 1739, but he was recalled after the failure of combined land and sea attacks on Cartagena on the Spanish Main (April 1741) and on Santiago, on the southern coast of Cuba (by December). Roughly thirty-six hundred men recruited in the North American colonies served as part of the eighty-five-hundred man army under Major General Thomas Wentworth. George Washington’s half-brother, Lawrence, served as a captain in the colonial regiment and named his estate Mount Vernon in the admiral’s honor. In North America, Oglethorpe—with Virginia, Georgia, and Carolina troops—invaded Florida in 1740. The expedition captured two Spanish forts on the St. Johns River, besieged St. Augustine for more than a month, and withdrew only when the Spanish threatened its rear. The British crushed a Spanish counterattack at the Battle of Bloody Swamp on St. Simon’s Island, Georgia, in 1742, and Oglethorpe’s second attack on St. Augustine, in 1743, also failed.

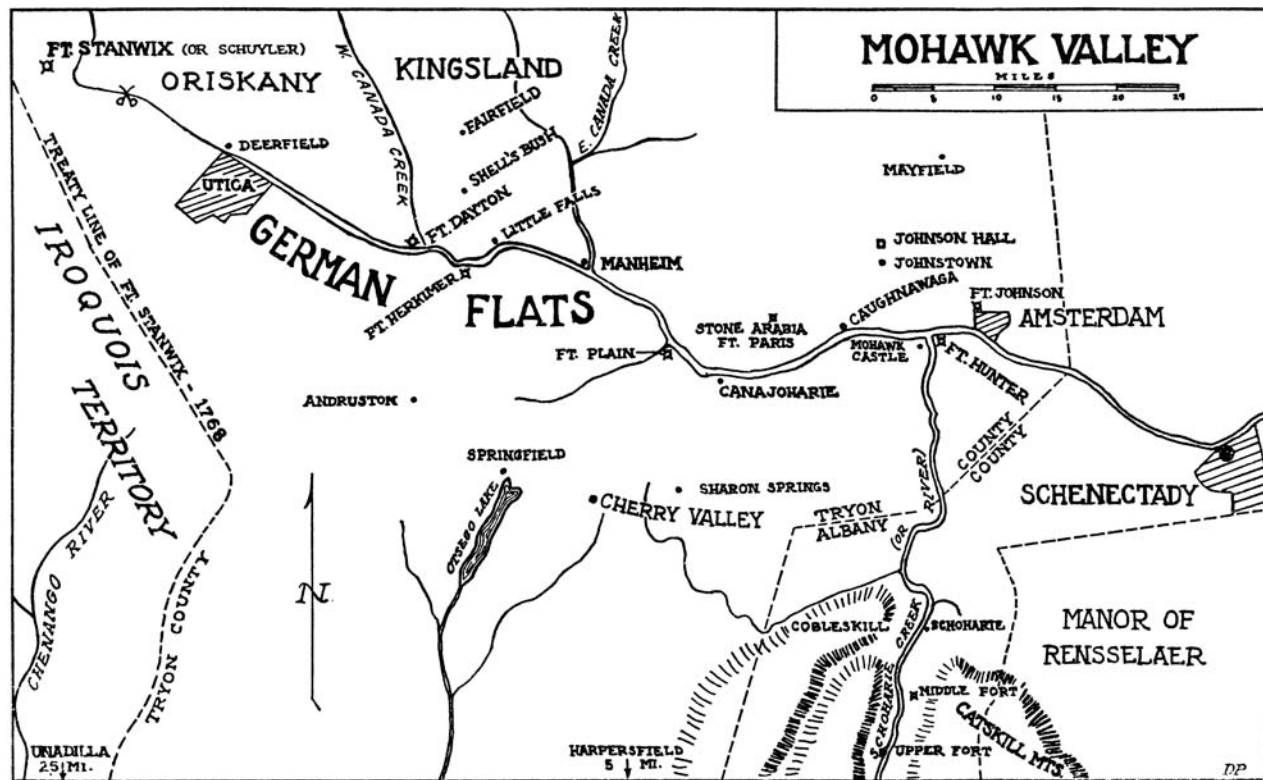

Frederick II of Prussia began a new round of European wars in December 1740, when he invaded Silesia to begin the War of the Austrian Succession (1740–1748); the war pitted Britain and Austria against France and Prussia. The North American extension of this conflict, called King George’s War (1744–1748) after George II, overlapped the War of Jenkins’s Ear. Operations in the northern British colonies were not pressed vigorously at the outset. In 1744 the French and their Native American allies raided along the Maine frontier and attacked, but failed to capture, Annapolis

(formerly Port Royal) in Nova Scotia. William Johnson instigated Iroquois attacks on the French, who retaliated by burning Saratoga (1744) and raiding Albany (1745). Thanks to the initiative and energy of William Shirley, the governor of Massachusetts, a New England army led by William Pepperrell and supported by a British squadron under Sir Peter Warren, captured Louisburg on 16 June 1745 after a six-week siege. It was New England’s greatest military success. A follow-up expedition against Quebec and Montreal planned for 1746, modeled on the attacks in 1690 and 1711, was cancelled when the British government diverted the essential Royal Navy squadron to attack more important targets in European waters. The Treaty of Aix-la-Chapelle in 1748 restored all conquests to all parties, including Louisburg to the French, a display of the British government’s disregard for colonial achievements and interests that greatly embittered many New Englanders. In 1749 the British sent twenty-five hundred soldiers and settlers to found Halifax as a counterweight to the restored French fortress.

THE OHIO VALLEY

Creation of the Ohio Company and the increased penetration of Pennsylvania traders into the upper Ohio Valley in the late 1740s led the French to take a series of steps to protect their route to the Ohio and assert their claims in the area. They established a mission on the St. Lawrence near modern Ogdensburg, New York, to woo the Iroquois from the British, and they founded Fort Rouille (later York, afterward Toronto, Ontario) on the north shore of Lake Ontario to siphon trade from the British post at Oswego. Further west, they built another post at the Niagara portage to augment Fort Niagara and also strengthened Detroit. In 1749 the governor of Canada sent Céloron de Blainville (1693–1759) with 215 Frenchmen and some Indians to remind Native Americans in the Ohio Valley of their allegiance to the French. In 1752 Charles de Langlade captured the colonial trading post of Pickawillany on the Miami River (modern Piqua, Ohio) and killed all its defenders. In 1753 Ange de Menneville, marquis de Duquesne, the new governor of Canada, sent expeditions to build Fort Presque Isle (near Erie, Pennsylvania) and Fort Le Boeuf (modern Waterford, Pennsylvania) and to capture and expel the garrison of John Frazier’s trading post at Venango (modern Franklin, Pennsylvania). The French line of operations from Canada into the Ohio Valley extended from Fort Presque Isle on Lake Erie across a fifteen-mile portage to Fort Le Boeuf on French Creek, and thence by water to the Allegheny River at Venango and so on to the Ohio River.

Governor Robert Dinwiddie of Virginia was alarmed by the increase in French activity in the Ohio Valley, both

THE GALE GROUP.

because it seemed to threaten the Virginia frontier and because its success would foreclose lucrative speculation in Ohio lands. The governor sent twenty-one-year-old George Washington to warn the French to withdraw from the Ohio Valley because Britain claimed it as part of the Virginia colony. When Washington reached Fort Le Boeuf, he was told politely but clearly that the French were in the area to stay.

In January 1754 Dinwiddie sent a militia company to build a fort at the Forks of the Ohio (modern Pittsburgh). On 17 April, a five-hundred-man French force captured the half-completed fort, allowed the Virginians to withdraw, and then built Fort Duquesne on the site. Anticipating the need for military force, the Virginia House of Burgesses had already authorized a small regiment of thirteen hundred frontiersmen under Colonel Joshua Fry, with Washington as lieutenant colonel and second-in-command. Washington, on the way to the Forks with sixty men, met the fort builders on their way home. After sending for reinforcements, Washington pushed his force forward; on 7 May it reached a clearing on the Cumberland Road known as Great Meadows, about ten miles east of what is modern Uniontown, Pennsylvania. While camped there, Washington learned that a small French force was approaching. In a controversial

surprise attack on the morning of 27 May, Washington's men killed the enemy commander (Ensign Joseph Coulon de Villiers Jumonville) along with nine others and took twenty-one prisoners.

Returning to their camp, the Virginians strengthened it, named it Fort Necessity, and waited for the rest of the regiment to come up. Washington, who had assumed command of the regiment on the death of Colonel Fry on 31 May 1754, was joined in early June by the rest of the Virginians and Captain James Mackay's Independent Company of South Carolina, a unit of about one hundred regulars. On 3 July, Fort Necessity was attacked by about five hundred French and four hundred Indians. Washington was compelled to surrender after a long-range exchange of musketry that caused few casualties but which exposed the fact that his position was untenable. The next day, the French allowed Washington's force to withdraw with the honors of war to its base at Wills Creek (later Cumberland, Maryland), fifty miles away.

THE FRENCH AND INDIAN WAR

Washington's encounter with the French in the Ohio Valley was the spark that ignited the fourth (and final)

imperial war in North America. The British government were increasingly concerned about so-called French encroachments on lands its colonies claimed along the frontier, and it had already asked the seven northern colonies (from New Hampshire to Maryland) to appoint delegates to meet at Albany, New York, to concert measures to defend the frontier. The request was an extension of a traditional idea: with the exception of the Walker expedition in 1711, the British had always tried to defend the colonies on the cheap by tapping colonial resources, especially manpower, to do the job. When the Albany Convention (19 June–10 July 1754) failed to create a workable model for intercolonial cooperation, the British decided by the end of October 1754 to up the ante in order to repair the damage done by the disaster at Fort Necessity. The government agreed to send Major General Edward Braddock to Virginia as commander in chief in America and gave him two understrength regiments from the Irish establishment, Colonel Peter Halkett's Forty-fourth Regiment and Colonel Thomas Dunbar's Forty-eighth Regiment, both of which were to be recruited to full strength in Maryland and Virginia. Braddock was ordered to execute the central part of a four-part strategy designed to push back the French. He would lead the expedition that would oust the French from Fort Duquesne; Governor William Shirley of Massachusetts would lead provincial soldiers against Fort Niagara; William Johnson of New York, appointed as Britain's superintendent of the Iroquois, would lead his new charges and some provincials against Crown Point; and Colonels Robert Monckton and John Winslow would lead a largely provincial force against Fort Beauséjour on the Chignecto Isthmus in Nova Scotia. Braddock, capable but overconfident, marched his fourteen hundred British regulars and eleven hundred provincials out of Fort Cumberland on 29 May. George Washington was one of his three aides. Horatio Gates commanded a New York independent company that guarded the pioneers, and Adam Stephen led the rearguard of Virginia provincials.

Having achieved the not inconsiderable accomplishment of getting his army over the Appalachian Mountains into the Ohio Valley, Braddock was about eight miles from Fort Duquesne when, on 9 July 1755, a force of 250 French and 650 Indians surprised, stopped, and surrounded his advance guard of 400 regulars under Lieutenant Colonel Thomas Gage, driving it back in confusion onto the main body of the army. Firing from behind trees, the French and Indians cut down the British regulars as they tried to restore their formations and move forward into open country. The regulars, bewildered and frightened by the unorthodox forest fighting, even shot down some of their colonial allies, who—like the enemy—were fighting from the cover of trees. Braddock, trying to rally his troops, had five horses shot from under

him before he fell mortally wounded. In the three-hour fight, 63 out of 86 British officers were killed or wounded and 914 out of 1,373 soldiers were hit. The French lost only 43 men in all.

The Battle of the Monongahela (also known as Braddock's Defeat), together with the abandonment of the Niagara expedition for logistical reasons, ruined British strategy for 1755. Only in Nova Scotia, where Monckton and Winslow captured Fort Beauséjour on 19 June 1755 with a force of two thousand New Englanders and a few British, did things go according to plan.

The remaining expedition, against Crown Point, was late in getting started and in addition faced logistical difficulties. William Johnson managed to get his force of thirty-five hundred New England provincials and four hundred Indians to the southern tip of Lake George by early September, where the troops constructed Fort William Henry to secure their communications. When Johnson learned on 8 September that a body of French and Indians under Jean-Armand, baron de Dieskau, was behind him, he sent a one-thousand-man reconnaissance-in-force under Colonel Ephraim Williams of Massachusetts to reestablish contact with Fort Edward on the Hudson. The French and Indians ambushed and decimated Williams's force but botched the pursuit. The remaining provincials in the hastily fortified Lake George camp were able to beat off fierce attacks by Dieskau's two hundred French regulars. When several hundred French and Indians returned to the scene of the earlier ambush, they were surprised and routed by a scouting party from Fort Edward that threw the enemy dead into what was thereafter known as Bloody Pond. The shock of combat, the losses incurred, the shortage of provisions, and the lateness of the season produced dissension among the ill-disciplined provincial troops, the reasons a reluctant Johnson gave for being unable to advance on Crown Point. The French constructed Fort Carillon at Ticonderoga, the point where Lake George flowed into Lake Champlain.

Britain formally declared war on France on 15 May 1756; a rapprochement between France and Austria meant that Britain was now compelled to ally with Prussia, a fact of significant European consequence but one which had little impact on the war in North America. Louis Joseph, marquis de Montcalm, (1712–1759), reached Canada with reinforcements on 11 May to take command of the French forces, and John Campbell, the earl of Loudoun, reached New York on 23 July to command the British and provincials. Montcalm used his head start to strike first, at Oswego, which he took after a short siege on 14 August. Loudoun spent the rest of the campaigning season shoring up the defense of the New York frontier.

into a means of stalemating France in Europe while leaving Britain free to use its naval superiority to ship thousands of regulars to North America and strip France of its colonies. While this strategy was highly successful, it was also enormously expensive, especially when Pitt decided to subsidize the raising of provincial soldiers to give British armies an even greater numerical edge over their opponents. Pitt's decision to spare no expense created a huge debt that was a crucial element in prompting British politicians to reorganize the empire after the war to make its administration self-supporting. Proposals to reorganize the empire, in turn, prompted colonial Americans to begin rethinking the value of remaining in the empire.

Pitt expanded the resources Britain was willing to devote to making war in North America, but he did not change the basic strategy of rolling up the appendages of French power before striking at its heart. He recalled Loudoun and replaced him with Major General James Abercromby, who was also named to lead the expedition against Fort Carillon on Lake Champlain. Against the objections of George II, Pitt forced the promotion to major general of Colonel Jeffery Amherst—over the heads of what Pitt considered to be Amherst's mediocre superiors—to command the expedition against Louisburg. Brigadier General John Forbes was given command of the third expedition of 1758, which sought to avenge Braddock by taking Fort Duquesne.

Two of the three expeditions achieved their objectives. Amherst's fourteen thousand regulars, supported by a slightly larger naval force under Admiral Edward Boscawen, forced the strategic fortress to surrender on 26 July 1758. Brigadier General James Wolfe distinguished himself in establishing a beachhead in the difficult amphibious operation that preceded the seven-week siege. Forbes's expedition was a logistical masterpiece. The two thousand regulars and five thousand provincials cut a new road across the mountains and forced the French to evacuate Fort Duquesne on 25 November. Then they immediately set out to create the much larger Fort Pitt. Abercromby himself was less fortunate. Pitt had assigned the highly regarded Lord George Howe, the eldest brother of Richard and William Howe, as his second-in-command, but when Howe was killed in a skirmish on 6 July, Abercromby could find no better alternative than to shatter his sixteen-thousand-man expedition in a hopeless frontal attack on 8 July against the breastworks Montcalm had erected about a mile to the west of Fort Carillon. Colonel John Bradstreet's capture on 27 August of Fort Frontenac, on the north shore of Lake Ontario near where the lake flows into the St. Lawrence, crippled the ability of the French to supply their western forts and native allies and did a great deal to restore the morale of Abercromby's army. Bradstreet's success also demonstrated how vulnerable New France was to fast-moving raiders who could

sever supply lines at a fraction of the cost of a full-scale expedition. But this success could not save Abercromby, who was recalled on 9 November.

Pitt planned a three-pronged offensive against Canada in 1759 that was designed to capitalize on success and redeem failure. He sent an amphibious expedition under Rear Admiral Charles Saunders and Major General James Wolfe to ascend the St. Lawrence and take Quebec. He had Amherst promoted to commander in chief and named him personally to lead the most difficult operation, the capture of Ticonderoga and Crown Point. Out west, Pitt sent Brigadier General John Prideaux to split Canada from Louisiana by taking Fort Niagara and then, retracing his steps, returning to Oswego and on down the St. Lawrence at least as far as La Galette (modern Ogdensburg, New York).

With fewer than seven thousand men, Amherst started north up Lake George on 22 July 1759. When he approached Ticonderoga, the French withdrew their main body of twenty-five-hundred men and two days later, on 26 July, the four-hundred-man rear guard withdrew after blowing up the fort. The French then destroyed Fort Frederick at Crown Point before the British could reach it. Amherst spent August reconstructing the works at Crown Point, establishing control of Lake Champlain, and putting through a road to the Connecticut River. Although Prideaux was killed on 20 July when he stepped in front of a mortar as it was being fired, his successor, Sir William Johnson, brought the siege to a successful conclusion on 24 July. Amherst sent Gage to take command of this column of two thousand British regulars and Johnson's one hundred Indians, but through an excess of caution, Gage did not leave Oswego.

THE FALL OF CANADA

Saunders's fleet, with Wolfe's nine thousand soldiers on board, left Louisburg on 4 June 1759 and began ascending the St. Lawrence on 16 June. In a remarkable feat of navigation on an often treacherous river from which the French had removed all markers and buoys, the fleet reached Île d'Orléans, downstream from Quebec, on 28 June and began disembarking the troops. The British established two additional camps by mid-July, on the north shore of the river east of where the Montmorenci River cascaded into the St. Lawrence, and at Point Levis, across the river from the city. Wolfe had great difficulty in finding a way to crack the French defenses: his camps did not encircle the city, and the bombardment of Quebec's lower town was showy but ineffective. Montcalm, in charge of the French defenses, easily repulsed Wolfe's principal attack, a frontal assault across the tidal flat beneath Montmorenci Falls, six miles northeast of the city, on 31 July, inflicting significant casualties on the British attackers. By early August, Wolfe was reduced to having his light troops ravage

everything that stood on both banks of the river for miles downstream, but even this cruelty did not draw the French out of their trenches. As the days of August passed, Saunders became increasingly worried about his ships becoming locked in place when winter froze the river.

Out of alternatives and against the advice of his three senior subordinates, Wolfe chose to gamble on having Saunders float the bulk of his army upstream on the tide and seek to land at some point above Quebec. He learned from Captain Robert Stobo, a Virginian whom Washington had surrendered as a hostage at Fort Mifflin in 1754 and who had been a prisoner in Quebec before escaping in the spring of 1759, that a path led from the river at L'Anse au Foulon up the face of the cliff to the Plains of Abraham. Starting at dark on 12 September, Colonel William Howe led his light infantry up the path from what would soon be renamed Wolfe's Cove. By dawn, forty-five hundred British troops were on the plateau, a mile and a half from the western walls of Quebec. Wolfe had placed his troops in an untenable position, without artillery to batter down the walls, between the walls and French forces rapidly approaching from their rear and without sufficient supplies to sustain themselves for more than a day.

Montcalm should have left Wolfe to twist in the wind, watching as his troops were gradually but inexorably ground down and facing the unenviable choice of assaulting the French positions or trying to withdraw to the river. Instead, in one of the worst decisions ever made by a military commander, Montcalm gave Wolfe exactly what the British commander wanted: a stand-up, open field fight using traditional European linear tactics (for the first time in North America) between Wolfe's superbly disciplined regulars and his own ragtag combination of French regulars and Canadian militia. Without waiting for three thousand reinforcements to arrive from Cap Rouge, on the eastern side of the city, Montcalm sallied forth with forty-five hundred men. His gallant but foolhardy attack, unsupported by artillery, was repulsed with a loss of two hundred French killed and twelve hundred wounded; the British lost only sixty killed and six hundred wounded. Both Wolfe and Montcalm were mortally wounded, the British commander dying in a blaze of glory at the very moment that his ridiculous gamble succeeded and the French commander living long enough to know that he had lost Quebec. The city surrendered on 18 September 1759.

The final conquest of Canada required one further campaign to complete. In the spring of 1760, Amherst personally took command of Gage's eleven-thousand-man force that had bogged down at Oswego and sent Colonel William Haviland with thirty-five-hundred men to reduce French defenses on Île aux Noix at the northern end of Lake Champlain and to push into the St. Lawrence Valley

from the south. Brigadier General James Murray, Wolfe's successor at Quebec, had narrowly escaped losing Wolfe's great prize to a resurgent French force of seven thousand men under François-Gaston, chevalier de Levis, at Ste. Foy, six miles from the walls of the city, on 28 April. Badly beaten, Murray retreated to Quebec and was saved from disaster only because the first ship to reach the city up the still partly frozen St. Lawrence that spring (12 May) wore the Union Jack, not the fleurs-de-lis. Murray thereupon began organizing an advance up the St. Lawrence toward Montreal, where he arrived with twenty-five hundred men in late August. In a rare example of a successful "strategic concentration," the three widely separated British columns massed at Montreal almost simultaneously, Haviland arriving on the evening of 6 September and Amherst the next morning.

With no hope of succor from France, Pierre de Rigaud, marquis de Vaudreuil, the governor of New France, surrendered Montreal unconditionally on 8 September 1760; it was crowded with refugees, the militia had deserted, and the twenty-four hundred French regulars had no chance of holding off the British. In the wake of his surrender, all of Canada passed into British hands. Major Robert Rogers, the famous ranger captain, led the principal force that traveled west, accepting the capitulation of Detroit and the other surviving French posts on the Great Lakes in 1760–1761. British attempts to replace French influence in the vast area west and southwest of Niagara helped to create a situation that many Native Americans found intolerable and which led to the outbreak of Pontiac's War in the summer of 1763.

Spain entered the war belatedly as an ally of France, fearing that a British victory would jeopardize its New World possessions. Anticipating this move, Britain declared war on Spain on 2 January 1762 and quickly moved to take advantage of Spanish weaknesses. A British amphibious expedition had already taken the French sugar island of Guadeloupe, in the West Indies, in the spring of 1759; another expedition had taken the rest of the French islands (Martinique, St. Lucia, Grenada, and St. Vincent) by early March 1762. Britain followed up these successes by sending George Keppel, earl of Albemarle, with a strong force to attack Havana, Spain's most important city in the Caribbean. On 7 June 1762, twelve thousand regular troops from Britain and elsewhere in the West Indies began landing in Cuba and invested the city. Another four thousand regulars and provincials arrived from North America in late July. Havana capitulated on 13 August after a siege of two months, but disease ruined the invading army. At least half of the British and colonial troops sent to Havana died during and immediately after the siege, a tragic loss that Amherst had to keep in mind when planning the redeployment of forces to control the newly expanded North American empire. The two-

thousand-man expedition, led by Brigadier General William Draper, that captured Manila on 5 October was, by contrast, relatively disease free. The British retained neither Havana nor Manila after the war. Both were returned to Spain, and by the treaty of San Ildefonso of 3 November 1762, France compensated Spain for its losses in the war by ceding all territory west of the Mississippi River and New Orleans itself to Spanish control. The preliminaries of the Treaty of Paris were also signed on 3 November, effectively ending a conflict that had reached around the globe; the Definitive Treaty was implemented on 10 February 1763.

CONSEQUENCES OF VICTORY

Thanks to the unparalleled worldwide reach of its naval, military, and economic power, Britain emerged from the war in 1763 in an unprecedented position of dominance among its traditional competitors. But success brought new problems and exacerbated some old ones. Nearly everyone recognized that the perturbation in the European balance of power was only a temporary condition. France, especially, was left angry and humiliated, brimming with a new determination to rebuild its army and navy and find a way to exact revenge on its ancient enemy. Pitt's willingness to spare no expense in waging and winning the war had doubled the British national debt, a hard reality that made his successors extremely sensitive to the costs of running the enlarged empire. In some ways, Britain's reach had exceeded its grasp; the return of Havana and Manila to Spanish control reflected an understanding that the nation had neither the desire nor the resources to control Cuba and the Philippines.

Britain won its greatest territorial and psychological advantages in North America, which appeared to be the culmination of a long-sought goal. The conquest of Canada united the colonists with the mother country as never before in an exuberant celebration of the elimination of the French threat. But the way in which the war had been conducted also widened important fissures that would quickly turn jubilation into contention. Friction among the colonies, and between the colonies and Britain, had been common throughout the entire span of imperial wars. The colonies were always reluctant to lose control over their internal affairs by cooperating too closely with their neighbors, even when military necessity seemed to mandate a joint effort. They continually claimed they did not have the financial resources to participate more fully in military action, close to the truth in an agricultural economy with little ability to generate large amounts of liquid capital rapidly. In the early years of the French and Indian War, several colonies even continued to trade with the French West Indies because that was, they claimed, the only way they could acquire the money to prosecute the war against Canada. The imperial government had a

different perspective on the behavior of the colonies, becoming increasingly frustrated by their lack of intercolonial cooperation; their failure to meet demands for men, money, and supplies as promptly or as fully as British generals required; and especially, their persistence in trading with the enemy.

Confrontations over most of these problems had been muted or postponed by the pressing need to defeat the French and, especially, by Pitt's liberality with Parliament's gold. Pitt had treated the colonies more as allies than as subordinates, and the victories of Wolfe and Amherst in 1759 and 1760 were seen in America more as capstones on a alliance than as the prelude to a more closely regulated empire. The disappointment and bewilderment felt by many colonists when Parliament tightened the screws, started raising taxes, and began putting them in their place were enhanced because expectations had been so different. Resistance to these measures found fertile ground in part because large numbers of colonists had been exposed to British attitudes and practices for the first time when they enlisted in the provincial regiments raised to reinforce the regulars. Many were offended by the supercilious attitude of regular officers; the brutality of regular discipline (compared with their own far less rigid version); and in particular, the vast social gulf that separated officers from the men. Memories of how British commanders had scorned and mismanaged colonial volunteers in various campaigns—for example, Walker and Hill at Boston in 1711, Vernon and Wentworth at Cartagena in 1742, Braddock on his way to the Monongahela in 1755, Loudoun in 1756 and 1757, Abercromby at Ticonderoga in 1758, and Amherst thereafter—contributed to making it apparent to many colonists that the British were now, by 1765, a different people than they were, with different attitudes, behaviors, and aspirations. A rethinking of the imperial relationship was inevitable, although independence was perhaps not.

COLUMN, COLUMN OF FILES SEE Formations.

COMBAHEE FERRY, SOUTH CAROLINA. 27 August 1782. Also known as the battle at Chehaw Point. During the final stage of operations, the light brigade of General Mordecai Gist, which had been organized to oppose British attempts to forage for their besieged garrison of Charleston, was ordered from Stono Ferry to attack the enemy force on the south side of the Combahee (about forty miles southwest of Charleston). Around Combahee Ferry the British had about eighteen sailing craft of various sizes, three hundred regulars, and two hundred Loyalists. Gist placed a howitzer at Chehaw Point, twelve miles below the ferry, to cut off any retreat downriver. When Gist learned that the enemy planned to move down the river under cover of darkness, he ordered Colonel

John Laurens to march quickly to Chehaw Point with his infantry element of the light brigade (comprising Lee's infantry, the two remaining companies of Delaware Continentals, one hundred men from other Continental units, and the dismounted dragoons of the Third Virginia). The British in their turn learned of Laurens's advance; they then landed three hundred men on the north bank above Chehaw Point and formed an ambush in the tall grass. Marching straight into this trap, Laurens was killed and twenty of his men wounded. The American advance guard fell back on the rest of Gist's advancing column, and the British followed. Gist was unable to drive the enemy from the line it then formed in the woods, since his cavalry could not operate in the rough, wooded terrain and the American infantry lacked the strength for a successful attack without cavalry support. (The cavalry element of Gist's light brigade, which was commanded by Colonel George Baylor, was drawn from Lee's Legion and the Third and Fourth Virginia.) The enemy withdrew without loss and continued its foraging. Gist later attacked two armed galleys at Port Royal Ferry, capturing one and driving off the other. His corps then rejoined the main army.

COMMANDER IN CHIEF'S GUARD.

Officially The Commander-in-Chief's Guard but commonly called The Life Guard, it was organized in 1776 at the beginning of the New York Campaign. With a strength of 180 men, it was first commanded by Captain Caleb Gibbs of Rhode Island, whose appointment to this post was 12 March 1776. Other officers of the bodyguard were Henry P. Livingston, William Colfax (who succeeded Gibbs as commanding officer toward the end of 1779) and Benjamin Goymes. During the winter of 1779–80 the strength of the unit was increased to 250, the next spring it dropped back to 180, and in 1783 it numbered 64 enlisted men. Despite its impressive unit designation and its important mission, "Washington's Life Guard" appears to have been nothing more than what today would be called a headquarters security detachment.

COMMAND ON SEE On Command.

COMMISSARIES OF THE CONTINENTAL ARMY *SEE* *Supply of the Continental Army*.

COMMITTEE OF SECRET CORRESPONDENCE. In anticipation of foreign contacts, if not alliances, on 29 November 1775 the Continental Congress appointed a five-man Committee of Correspondence—soon renamed the Committee of Secret Correspondence—“for the sole purpose of Corresponding with our friends in Great Britain, Ireland and other parts of the world.” The original members were John Dickinson, Benjamin Franklin, Benjamin Harrison, John Jay, and Thomas Johnson. James Lovell joined later, becoming an influential and hardworking member, and on 30 January 1776 Robert Morris, chairman of another panel called the Secret Committee, was made a member. The new committee marked the beginning of the United States diplomatic relations with other nations.

Arthur Lee was the committee’s first correspondent in Europe, followed by Charles Frederic William Dumas, a student of international law residing in The Hague, Netherlands. After meetings with Achard de Bonvouloir, the committee decided on 3 March 1776 to send an agent to France, in the guise of a merchant, to investigate the possibilities of French aid and political support. Silas Deane was selected by the Continental Congress for the assignment. A diplomatic commission to France consisting of Franklin, Deane, and Arthur Lee was appointed by Congress in September 1776.

Since the functions of the two congressional committees soon become entangled, the Committee of Secret Correspondence was renamed the Committee on Foreign Affairs (17 April 1777), and the Secret Committee became the Committee of Commerce (5 July 1777). Thomas Paine became paid secretary of the Committee on Foreign Affairs in April 1777, and this body thereafter directed American diplomacy. In the furor surrounding the recall of Deane and the investigation of Hortalez & Cie, a company that funneled French aid to the United States, Paine made public use of confidential documents whose revelation embarrassed the French government, and on 8 January 1779 he resigned under pressure. As with most congressional committees, the work undertaken usually depended on the energy of a single member. By 1779 it was James Lovell who fulfilled this role for the Committee on Foreign Affairs, as he well knew, writing Arthur Lee to complain about his crushing administrative load: “there really is no such Thing as a Com’ttee of foreign affairs existing—no Secretary or Clerk—further than that I persevere to be the one and the other.”

The following year Congress appointed Lovell, James Duane, and William C. Houston to investigate the problems of the committee. Their report was made in the summer of 1780 but not considered by Congress until December, and on 6 January 1781 that body agreed to replace the Committee on Foreign Affairs with a secretary of foreign affairs. The first man to hold this office was Robert R. Livingston, who was elected on 10 August. Livingston resigned in June 1783, and the office remained vacant until John Jay returned from Europe in July 1784. Jay was succeeded on 22 March 1790 by Thomas Jefferson, who became the first secretary of state under the new Constitution.

COMMITTEES OF CORRESPONDENCE. It was common for colonial legislatures to create a standing committee to correspond with the colony’s agent in London when the legislature was not in session. In response to rumors about the court of inquiry convened to investigate the *Gaspee* affair of 1772 (in which rebellious American colonists set fire to a British revenue cutter off the Rhode Island coast), the Virginia House of Burgesses voted on 12 March 1773 to establish a standing committee of correspondence “to keep up and maintain a correspondence and communication with our sister colonies” and “to obtain the most early and authentic intelligence of all such acts and resolutions of the British Parliament, or proceedings of administration, as many relate to or affect the British colonies in America.” On 28 May, the Massachusetts House of Representatives endorsed the Virginia proposal, established its own committee, and sent a circular letter to the other colonies recommending that they, too, establish such committees. All complied.

COMMUNICATION TIME. One month was the normal sailing time from North America to England and two months was normal for the westward voyage. News of the Boston Port Bill, which passed the House of Commons on 25 March 1774 and received the royal assent on 31 March, reached Boston by a fast ship on 10 May. Paul Revere, with frequent changes of horses, rode 350 miles to Philadelphia in six days with the news. Six to nine days were required for a letter from Boston to reach New York City by ordinary postal service, and it took almost a month for a letter to go from New Hampshire to Georgia. General Thomas Gage's report on the fighting at Lexington and Concord on 19 April 1775 was placed aboard ship (the *Sukey*) on 22 April and reached London on 10 June, a passage of fifty days. The American version left four days after Gage's, in the *Quero*, and arrived twelve days earlier because the Massachusetts leaders sent the ship in ballast. In late 1781 Congress did not learn of the battle of Eutaw Springs for five weeks. During the Yorktown Campaign, waterborne communications between Sir Henry Clinton at New York City and Charles Lord Cornwallis on the Peninsula in Virginia, not much more than 300 straight-line miles, took eight days. The time involved in communicating decisions could cause problems. For example, a letter from George Germain, dated at London on 2 May 1781, reached Clinton at New York City with instructions that made it necessary for Clinton to countermand the orders he had sent to Cornwallis and that had been received on 26 June. In a fast-moving strategic situation, the British commander in chief in North America might receive counter orders from London before he received their original orders.

CONGRESS. The term "congress" was used in colonial America to denote an intercolonial gathering at which colonial leaders discussed significant issues of mutual interest. Some were sanctioned by the imperial government (the Albany Congress in 1754 was called to restructure colonial resources for the defense of the New York frontier against the French), but most were extralegal meetings called to discuss how to achieve a coordinated response to imperial intrusions and exactions. The term helped to legitimize the gatherings as a genuine expression of the desires and interests of the politically active men in each colony. The most important congress in this period was called to determine how to respond to the Stamp Act (the Stamp Act Congress of October 1765); it provided the model for the Continental Congress of September 1774. The principal value of a congress was to provide a forum in which colonial leaders met each other, lived and ate together, and took each other's measure as they discussed the issues at hand. That these politically savvy delegates were able to debate critical and divisive issues, with the like-minded building consensus and agreeing on a course of action, was akin to a political miracle and a major reason why the resistance coalesced, evolved, won the war, and erected a workable federal government under the Constitution.

CONGRESS–SAVAGE ENGAGEMENT. 6 September 1781. In 1781 the privateer *Congress*, an especially large thirty-two-gun frigate, was completed in Philadelphia for a group of merchants. On 6 September of that year the Royal Navy's fourteen-gun sloop *Savage* was cruising off Charleston. Captain Charles Stirling, encountering the *Congress*, made a fatal error of identification and engaged, only to discover that he was badly outgunned by the American ship. A four-hour running battle ensued before Captain George Geddes battered

the sloop into submission. The *Congress* then headed home for repairs. The *Savage* was recaptured later in the year by the twenty-eight-gun British frigate *Solebay*.

CONNECTICUT, MOBILIZATION

IN. Connecticut had several reasons for enthusiastically embracing the revolutionary movement that led to independence from Great Britain. The unrestrained fertility of the colony's women and the extensive agriculture practiced by its men had exhausted Connecticut's usable lands by 1750. After midcentury the colony had begun exporting people. The formation of the Susquehanna Company to settle disputed territory in north-central Pennsylvania reflected the problem, although many Connecticut migrants preferred eastern New York and Vermont to the Upper Susquehanna River valley. Establishing families in an unsettled wilderness required capital. Parliamentary subsidies during the Seven Years' War filled the gap created by interruptions in Connecticut's overseas commerce. The mother country offered to pay for colonial manpower and supplies, and Connecticut's government passed this windfall along in the form of the bounties it offered volunteers. The colony's young men eagerly joined the expeditionary forces marching against Canada in expectation of acquiring enough capital to establish families of their own in lands secured from the French.

Connecticut was not alone in being militarized by the Seven Years' War, but it was the only colony with overlapping claims to northern Pennsylvania. That made it especially reluctant to obey British restrictions on westward settlement at the conclusion of the conflict. Pennsylvania's Quaker leadership had failed to support the war effort the way Connecticut's had, fostering the assumption that Pennsylvania would be at a disadvantage in defending its title. Even if Britain declined to recognize Connecticut's superior military value, the colony expected to be more than a match for Pennsylvania on the ground, especially if and when the imperial connection dissolved.

Connecticut's religious identity reinforced its economic interest in revolution. The colony had begun as part of the Puritan migration that also settled Massachusetts. By the end of the seventeenth century, both colonies had made provision for the public support of their Congregational clergy. Connecticut reacted to the turmoil accompanying the rapid expansion of settlement

within its eastern half after King Philip's War (1675–1676) by developing a Presbyterian version of Congregationalism known as the Saybrook Platform (1708). But she joined Massachusetts in regarding the Church of England as a threat after the English church began using its missionaries to subvert New England's Congregational establishments. The Congregational clergy feared the next step would be the appointment of an American bishop, since some Anglican clergy in the colonies publicly favored such a measure. The Baptists, together with other dissenters from the Congregational establishment, shared this fear, ensuring that most of Connecticut's people would heed their religious leaders in opposing any expansion of British authority over them. The Church of England's clergy and communicants felt differently, but the only area of Connecticut where they constituted a significant presence was along the western border shared with New York.

After 1763 fewer anxieties about independence clouded Connecticut's response to Parliament's efforts to regulate the colonies' trade and raise a revenue from them than elsewhere in British North America. Connecticut's peripheral relationship to its more strategically located neighbors reinforced its rebellious disposition. The colony had won access to the larger Atlantic economy as an exporter of meat and timber to the West Indies. But it lacked any of the gateway ports that had emerged during the colonial period to facilitate the exchange of American surpluses for European imports. Initially, Boston had served as the central gateway for the rest of the continent; around 1750, however, Philadelphia replaced Boston. Those with an eye to the future could see that New York possessed assets that eventually would allow it to rival Philadelphia. And even Rhode Island had Newport, favored by the Royal Navy because it was largely ice-free. Connecticut's only deepwater port, New London, had a limited hinterland. Though New Haven, Hartford, and Middletown emerged as local commercial centers, the colony remained dependent on New York, Boston, and Newport for its European imports.

Occupying the economic and strategic periphery seemed advantageous as the imperial crisis developed. Responsibility for the nonimportation movement of 1768–1770 that resisted the Townshend duties fell on the gateway ports. When Britain replied with measures designed to subvert the solidarity of local merchants' associations, Connecticut's leaders observed from the sidelines, drawing two conclusions from the spectacle. They construed the lengths to which Britain was prepared to go in combating nonimportation as a symptom of weakness. And they assumed that any showdown with the mother country would take place around the continent's principal ports rather than in Connecticut. In 1769 the colony's government quietly extended its jurisdiction over the

disputed Susquehannah lands. The action reflected a determination on the part of the leadership to press the colony's claim and the confident expectation that should independence materialize, possession would constitute nine-tenths of the law.

THE INITIAL MOBILIZATION

Connecticut responded almost as vigorously as Massachusetts to the Lexington and Concord alarms that initiated the Revolutionary War. Israel Putnam dropped everything upon hearing the news and hastened to Cambridge, Massachusetts, where a makeshift army was assembling. Several thousand of his fellow colonists were not far behind, though most soon turned back because of the lack of supplies. But Connecticut subsequently complied with the Continental Congress's call for six regiments totaling six thousand men to serve until the end of 1775, embodying its full complement of men in less than a month.

News of the fighting in Massachusetts caught few by surprise. The Boston Port Act, followed by the Medford powder raid of 1 September 1774 had sent the message that Britain preferred coercion to conciliation. The British government had also replaced the Massachusetts charter of 1692 with a more centralized form of government headed by General Thomas Gage. Massachusetts responded with a Provincial Congress that began assuming the functions of government. The first Continental Congress's sponsorship of a continental nonimportation agreement persuaded no one close to Boston that an armed showdown could be avoided. Connecticut's farmers planted a bumper crop of winter wheat in September 1774. Since they had long before abandoned exporting wheat, we can infer they were anticipating an army's demand for bread during the following year. Their foresight paid off when Washington chose Joseph Trumbull as the first commissary general of the Continental army.

Most of Connecticut's population saw only economic advantage in a struggle they expected would be decided quickly somewhere else. The British force in Boston clearly was too weak to subdue New England, let alone the entire continent. Once Britain understood the realities on the ground, many expected her to offer acceptable terms. If, instead, Britain chose to pursue a military contest, the mother country would be limited to one major offensive now that it was deprived of the economic support formerly derived from its American colonies.

After the British had been driven from Boston early in 1776, however, Connecticut learned that the largest expeditionary force ever mounted from Europe was on its way to America. Some must have had second thoughts about their initial commitment to the contest. But they still expected the coming campaign would decide the issue, and Connecticut immediately doubled the number of

regiments it placed under Continental command. Later it committed most of its western militia to the defense of New York. The results proved to be far from reassuring, and not just because the British experienced little difficulty in pushing Washington's forces off Long Island and Manhattan and chasing them through Westchester County. Washington's refusal after the Battle of White Plains to deploy troops in Connecticut's defense proved as disturbing as the visible superiority of British arms. Instead, he withdrew his dwindling army to New Jersey to cover Philadelphia, which was the seat of Congress, and to get access to grain surpluses that Connecticut had failed to produce in 1776. Left to defend itself, the newly independent state began to understand that being on the periphery could also be disadvantageous.

The Danbury raid in April 1777 increased Connecticut's misgivings. The British marched a force of eighteen hundred men twenty-three miles inland to destroy a Continental depot and escaped with minimal casualties after spending three full days in the state. By then it was too late to turn back. When the Congress asked Connecticut to raise eight regiments for three-years service or the duration of the war, the legislature turned to the towns. Local civil authorities cooperated with the local militia to raise the quotas of men assigned them through a combination of arm-twisting and enhanced incentives. Though the state did produce over four thousand men for the "permanent" army, compliance was incomplete and the regiments assembled much more slowly than in 1775 or 1776.

Nonetheless, Connecticut still behaved as if it was part of the revolutionary vanguard despite having to raise additional state regiments to provide for the defense of its coastline. In the early autumn of 1777, the northwestern militia responded vigorously to Horatio Gates's summons to assist in forcing Burgoyne's surrender at Saratoga. The government also sponsored several military expeditions against Long Island and British-held Newport. None proved successful, but news that France had recognized the independence of the United States and entered into an alliance with the new nation offered hope that the next campaign would be the last.

TRANSITIONING TO A WAR OF ATTRITION

Rather than heralding victory, the campaign of 1778 demonstrated two unpleasant truths: the continent was in for a long war, and those who had stood on the periphery were no longer immune to the vicissitudes hitherto visited on the strategic centers. Connecticut had received a foretaste of its changing circumstances early in 1777 when the commissary general, Joseph Trumbull, was replaced by a prominent Maryland merchant, William Buchanan. Buchanan seemed better positioned to provide the army with bread until British General William Howe disrupted

Maryland and Delaware's grain region by striking at Philadelphia through the Chesapeake. Congress then turned back to Jeremiah Wadsworth, a Trumbull lieutenant during 1775–1776 from Hartford. Wadsworth managed to provide for the army during the campaign of 1778, but at the cost of bankrupting the continent.

Wadsworth's appointment has mistakenly led some to conclude that Connecticut was the "provision state." During the late colonial period, New England had specialized in producing livestock surpluses, and many of the cattle sustaining the army were procured by a network of Wadsworth's Connecticut agents, if not directly from it. But barreled salt pork rather than cattle had been the state's prewar specialty and would have better suited the army's needs had salt been available. Cattle had to substitute for pork because pigs could not be walked to camp. When it came to bread, providing for the limited mobilization of 1775 had left the state exhausted. Connecticut's principal contribution to the revolutionary movement was political commitment, though even that eroded as a prolonged war of attrition converted the state's peripheral position into a military liability.

While Connecticut lacked sufficient strategic significance to have the continent contribute to its defense, it remained an attractive prey for British commanders contemplating diversionary operations, as with Benedict Arnold's assault in 1781 on New London, and for ruffian Loyalists seeking plunder. After the Danbury raid, regular British forces did not return to the state until 1779, when Commodore George Collier attacked New Haven, Fairfield, and Norwalk between 5 July and 12 July and burned the latter two towns. However, Connecticut suffered as much from an abortive effort to dislodge the British from Newport during 1778 as it subsequently did from direct enemy action.

Cooperating with the French taxed the continent's resources to a point where an irreversible, downward spiral in the value of the continental currency ensued. The collapse of the currency affected Connecticut more than other states because it had contributed disproportionately to the early phase of the struggle and would now be repaid in devaluated coin, if at all. Provisioning the army raised for the Newport operation, together with Burgoyne's surrendered army near Boston, and the refit of a French expeditionary force, exhausted New England's grain supplies. Wheat bread became a luxury few could afford; most of the population was forced to subsist on grains they fed their stock. An extraordinarily harsh winter in 1779–1780 then substantially reduced the region's supply of animals.

LIVING WITH A WAR OF ATTRITION

Repeated adverse turns of fortune depressed the morale of the civilian population, producing widespread war

weariness that had adverse political and military repercussions. At the end of 1779, Connecticut faced the task of replacing its three-year recruits for the army who had enlisted during 1777. By then the currency had lost almost all value as an inducement while frontier violence, together with the title dispute, prevented Connecticut from offering land bounties in the Susquehanna region. That left the state with no option but to divide the militia into as many units as men to be raised and to require each class to produce a recruit. The classes usually did so by raising a purse large enough to attract a volunteer. Though a class could also use force, coercion made bad soldiers. Eventually the legislature defined classes by the amount of property they possessed rather than the number of adult males they contained. But buying volunteers invited bounty jumping and the sellers' market that recruits enjoyed made it difficult to get them for more than one year. Connecticut was not alone in the obstacles it encountered in maintaining its Continental regiments. But by contributing to the progressive shrinkage of the army, the state surrendered its former vanguard identity.

Connecticut was unique in another, unenviable respect. The state had a 120-mile shoreline, most of which fronted on the protected waters of Long Island Sound. After the fall of New York City in 1776, Long Island fell under Britain's sway. That meant the island, never more than eighteen miles away, provided an ideal base for raiding Connecticut's coast. Though there had been some partisan raiding during 1777 and 1778, it was confined to refugees trying to survive. That began to change with the May 1779 kidnap of Gold Selleck Silliman from his home outside Fairfield. Silliman commanded the state's southwestern militia, and his abduction could be seen as preparation for Collier's incursions two months later. In 1780 Britain formally embodied a paramilitary organization known as the Associated Loyalists to raid the shoreline. An orgy of kidnapping and plundering ensued. Those living in the no-man's lands of New York and New Jersey suffered similar depredations from Loyalist ruffians. But Connecticut's extensive coastline made its exposure more widespread than theirs. Trying to defend the state against this threat competed directly with efforts to maintain Connecticut's Continental regiments. There were insufficient resources to go around, in part because the state's Continental regiments were being used by Washington to defend New York and New Jersey. Connecticut's small navy proved better at sponsoring retaliatory strikes than at intercepting Loyalist raiders on the Sound.

Long Island also provided a base from which the British launched an illicit trade with Connecticut's coastal population. Trade proved to be a more productive way of extracting provisions than plundering, because after five years of being cut off from European and West Indian

commodities, Connecticut's people craved overseas imports. British textiles and hardware now commanded a barter price in provisions unthinkable in peacetime. The state had no choice but to oppose this trade, since unhindered, it might have won the people's allegiance back to the crown. But Connecticut's political system proved as inadequate to the task as its military system was in defending the state against the Associated Loyalists. This time the legislature devolved principal responsibility for resisting the illicit trade onto individuals. Those making a citizen's arrest of an illicit trader were entitled to half the value of the goods seized. But that hardly solved the problem, because the enemy retaliated by plundering anyone who apprehended Loyalist partisans. The legislature authorized coastal communities to compile lists of the disaffected in their midst from whose property Patriot victims could be compensated. But this remedy proved more effective in dividing coastal communities among themselves than in halting the raiding and illicit trade.

The pressures that the illicit trade exerted on the state's coastal communities reverberated throughout Connecticut's political structure in debilitating ways. Most dramatically the state's governor, Jonathan Trumbull, began to be whispered out of office by rumors that he was trading with the British. The rumors originated with kidnap victims who were shown trunks of British goods—allegedly consigned to Trumbull—by their captors in New York. Though Trumbull was the only state governor to serve throughout the entire Revolutionary War, during the last three years of the conflict he was elected by the legislature rather than the people. At a less obvious level, the inability of the state to defend its coastline and secure itself against illicit traders created tensions within the legislature between the representatives of towns near the coast and the interior towns.

ADJUSTING TO PEACE

At the end of the war Connecticut was demoralized and exhausted. One measure of that exhaustion was the state's decreasing ability to raise money. Connecticut's revenue derived from direct taxes laid on male polls over eighteen years of age and the assessed value of lands and improvements. In the course of the war, the state's grand list declined dramatically because of enemy depredations along the coast and the migration of polls elsewhere. During the last years of the conflict, the state's tax collections fell hopelessly into arrears, precluding any reduction in taxes with the peace. Instead, Connecticut found itself having to service the substantial state debt it had contracted during the initial phase of the Revolution, quite independently of the demands Congress continued to make on it.

Connecticut's situation contrasted dramatically with neighboring New York's. Though New York had been less

forward in joining the Revolution and had spent most of the war with three-fifths of its population under enemy occupation, it had emerged from the conflict with a much smaller state debt because the Continental army had defended the Hudson River. With peace, most of the foreign imports desired by Connecticut came through New York burdened by its impost. New York could tax Connecticut without fear of retaliation. A continental impost, such as the one Congress had been asking the states for since 1781, provided the obvious remedy. It would bear less perceptibly on a war-weary people, since only those who chose to purchase the dutied goods would pay. A continental impost would also preclude the states from competing against each other for this preferred resource, thus maximizing its yield. Connecticut's true interest lay in a stronger central government empowered to impose such a tax, but persuading its traumatized people of the wisdom of such a course posed a major challenge for its less than triumphant leadership.

At the end of the war, Jonathan Trumbull retired as governor. His replacement, Matthew Griswold, could do little to check the hostility a long war had built up against Connecticut's Revolutionary leaders. Popular dissatisfaction took many forms, from resisting the resettlement of Loyalists, entitled to return under the terms of the peace treaty, to opposing Congress's commutation of the Continental officers' half pay for life to full pay for five years. The latter issue provided the pretense for the Middletown Convention of 1783, which met twice in an effort to challenge the leadership's hold on the council, or upper house of the legislature, that had veto power over the lower house. The effort failed, but just barely. The state's leadership was less successful in persuading the lower house to adopt realistic fiscal policies that would reestablish the state's credit or in preventing the popular branch from favoring state creditors over federal creditors. It did not help that Congress had pronounced judgment against Connecticut's Susquehannah claims in 1782.

Eventually, those who possessed a continental vision of the state's problems triumphed. At the last minute the Connecticut legislature appointed three delegates to attend the Philadelphia Convention of 1787, which framed the federal Constitution. The compromise proposed by Connecticut's delegates then proved critical in securing the agreement of the Convention to the new form of government. And Connecticut's ratifying convention endorsed the Convention's handiwork without significant opposition. But none of these developments would have occurred had it not been for the specter of anarchy raised by Shays's Rebellion in nearby Massachusetts.

The traumatic memory of the Revolution bred reservations about republicanism among Connecticut's Federalist leaders. It shaped their orientation to the wars of the French Revolution, predisposing them to favor

good relations with Britain at the expense of bad relations with republican France, even to the point of waging a limited war against France. After the turn of the century, these leaders helped subvert the national government's attempt to parry pressure from the belligerent powers through commercial measures. When their actions left their domestic opponents with no alternative to war with Britain besides capitulation, Connecticut's government was so bent on avoiding a repetition of the revolutionary debacle that it withheld the state's militia from federal command. In 1814–1815 it even hosted a New England Convention in Hartford that concerted quasi-treasonable measures. Though Connecticut's people eventually repudiated those responsible for these actions, the state abandoned its former revolutionary identity, preferring instead to settle for being a land of "steady habits."

CONNECTICUT COAST RAID. July 1779. George Germain's 8 March 1778 instructions to Sir Henry Clinton establishing the "southern strategy" also directed him to use the forces remaining in the north to carry out amphibious raids on American ports in order to disrupt commerce. The following year, after the expedition that set up Stony Point as a forward outpost returned to New York City, Clinton turned his attention to Long Island Sound. In addition to the goal of destroying merchant ships and docks, Clinton hoped to stop raiders using small craft from harassing Long Island and to increase the political pressure placed on Washington by states seeking more Continental troops to defend their coasts. Major General William Tryon, the royal governor of New York, received command of a task force which he assembled at the end of June. Part of the force came from the garrison just withdrawn from Rhode Island and were still on their transports. Embarkation of the rest began on 29 June and lasted until 3 July, with the task force sailing the next morning. Commodore Collier used a frigate as his flagship and picked the three other escorts because they could operate close inshore: a sloop, a brig, and a galley. The expedition arrived off New Haven the night of 4 July and landed without opposition the next morning.

Tryon assigned the task of capturing the town of New Haven to Brigadier General George Garth and gave him two infantry regiments (Seventh and Fifty-fourth Foot), the four flank companies of the Guards Brigade, a jäger detachment, and four guns. About 150 militia, and some Yale students who volunteered, skirmished briefly and then removed the planks from a bridge across West River. Garth detoured along Milford Hill to the Derby Road. Although the British suffered some casualties—their adjutant, Major Campbell, was mortally wounded—they entered New Haven shortly after noon.

East Haven was the initial objective of the second column led personally by Tryon. His units were the Twenty-third Foot (Royal Welch Fusiliers), the Landgrave Regiment (Hesse-Cassel), the King's American Regiment

(Loyalists), and two guns. Tryon had to wait for the boats that landed Garth's division, but he met only token resistance. Carrying out the destruction of shipping and public facilities took all of 6 June, but on the next day the two columns united at East Haven and re-embarked.

Fairfield, some twenty miles southwest of New Haven, formed the next target, and was occupied on 8 June. Outmatched, the local militia could only fall back and content themselves with random sniping. The civilian inhabitants had fled, and the invaders got out of control in the empty village. Heavy looting took place, and then fires burned 83 homes, 54 barns, 47 storehouses, 2 schools, 2 churches, the jail, and the courthouse. The landing force then camped for the night before returning to the transports.

Green's Farms suffered the same fate on 9 July, Norwalk on 11 July. About 30 buildings went up in smoke at the former; 130 homes, 87 barns, 22 stores, and 17 shops at the latter. In between Tryon regrouped on the far side of Long Island Sound at Huntington, on Long Island, and was back there preparing to hit another town when Clinton ordered him back to New York.

NUMBERS AND LOSSES

Tryon's force consisted of about 2,600 troops, British, German and Loyalist, and all of them were experienced. They suffered over 100 casualties, about half of which were in the four companies of the Guards. Tryon officially reported 26 killed, 90 wounded, and 32 missing. American militia losses were insignificant, but property damage was enormous.

SIGNIFICANCE

Because Washington refused to swallow the bait and detach forces from the Highlands, the raid had no immediate military importance. On the other hand the sheer destruction and targeting of homes and other structures that could not be considered military objectives raised a firestorm of indignation. Instead of terrorizing the inhabitants, the raid strengthened resolve, and not just in Connecticut. It also marked the practical end to Tryon's combat service. The raid has attracted very little attention from historians.

CONNECTICUT LINE. Connecticut's Line benefited from the fact that alone of all the colonies, Connecticut did not have to change its existing government—it retained its Assembly rather than having to form a provincial congress, and its elected governor had been one of the leaders of the Revolutionary movement. Furthermore, because its own borders had been secure for a hundred years, Connecticut's military role throughout the eighteenth century had been to mobilize troops for distant service. This tradition and experience served Connecticut well in 1775, when it swiftly raised eight regiments and dispatched five of them to the siege at Boston and three to help in the invasion of Canada. The first six regiments were authorized on 27 April and became part of the Continental Army on 14 June. Two more were added in July and recruited as Continentals.

On 1 January 1776 the five Connecticut regiments at Boston reenlisted as the 10th, 17th, 19th, 20th and 22d Continental Regiments, with minor reshuffling of some of the companies. The 10th, 17th, and 22d disbanded on 31 December 1776 at Peekskill, New York; the 19th and 20th participated in the Trenton and Princeton campaign and extended their service until 15 February 1777 before disbanding at Morristown, New Jersey. The troops in Canada followed a different path—hardly a surprise given the confused state of the invasion. Two (the 4th and 5th Connecticut Regiments) disbanded in December 1775, whereas the 1st extended its enlistments until 1 April 1776 before disbanding. However, the veterans played an important role in forming two new regiments: Elmore's Regiment assembled in Canada on 15 April, and Burrall's Regiment assembled in Connecticut on 18 January, then moved north. Elmore's unit disbanded on 10 May 1777, while in garrison at Fort Schuyler in the Mohawk Valley. Burrall's disbanded at Ticonderoga on 19 January 1777. One other regiment, led by Andrew Ward, was formed in the summer of 1776 and deployed for the defense of New York City. It disbanded at Morristown on 14 May 1777.

The “88-Battalion Resolve” of 16 September 1776 gave Connecticut a quota of eight infantry regiments for 1777, and all were newly-organized in the winter and spring, but each included a majority of veterans. The state also raised (Samuel B.) Webb’s Additional Continental Regiment, and it was formally taken into the line on 24 July 1780 as the Ninth Connecticut Regiment. Because Webb’s troops had been issued captured British uniforms when they were assembled, the regiment had a great deal of success intercepting messengers and Loyalist recruiters in the Hudson Highlands, and was known as the “Decoy Regiment.” The quota dropped on 1 January 1781 to five regiments through consolidations and renumbering, and then, on 1 January 1783, it was reduced to three. Two of those were furloughed on 15 June 1783 when the men serving duration enlistments went home. The remaining men became the Connecticut Regiment and remained in service until 15 November, when the line officially ceased to exist.

Connecticut also furnished other units to the Continental army that were never part of the line. These included the Second Continental Light Dragoons; half of Sherburne’s Additional Continental Regiment; part of the Second Continental Artillery. In addition, Connecticut raised two Westmoreland Independent Companies, named for a county in the Wyoming Valley, which was part of Connecticut until 1783.

CONNOLLY, JOHN. (c. 1745–c. 1798). Loyalist conspirator. Born in Lancaster County, Pennsylvania, about 1745, Connolly became a doctor and settled in Pittsburgh, where he made the acquaintance of George Washington. Connolly had been granted land by Virginia, and with a view to making a fortune in land speculation, he sided against his native province to become the agent of Lord Dunmore, the royal governor of Virginia. In this capacity he had a large part in instigating Dunmore’s War in 1774. In April 1775 he was captain and commandant of the Virginia militia at Pittsburgh, but at the outbreak of the Revolution he was, because of his unconcealed Loyalist convictions, forced by the local Patriots to leave. In August he joined Dunmore aboard a British warship off Portsmouth, Virginia. Two weeks later he carried Dunmore’s dispatches to General Thomas Gage in Boston, and after ten days at the latter place, he returned with Gage’s approval for an ambitious plan to reclaim Virginia for the king. Dr. Connolly’s scheme was for him to return to the frontier, raise a regiment of Loyalists, equip an expedition at Detroit, and launch an offensive that would capture Pittsburgh and Alexandria before joining up with Dunmore for the reconquest of Virginia.

For this mission Connolly was made lieutenant colonel on 5 November. With eighteen sheets of instructions from Dunmore cleverly concealed in hollow sticks used to carry his baggage, Connolly and two fellow conspirators—Allan Cameron and J. F. D. Smyth—were taken prisoner in Frederick County, Maryland, after a servant informed on them. The hidden papers were not found, but another document compromised part of their plan. To save themselves from mob justice, they acknowledged their British commissions. Before they could be sent to Philadelphia, Smyth escaped from their Maryland prison with letters from Connolly. He was recaptured and imprisoned in Philadelphia on 18 January 1776, fifteen days after the other two had reached that city.

Congress rejected Connolly’s plea to be treated as a prisoner of war and kept him in prison in Philadelphia until the end of 1776, when he was moved to Baltimore. Finally exchanged in October 1780, he went to New York and then returned to Pittsburgh in a failed effort to organize a Loyalist uprising. In June 1781 General Henry Clinton sent him to serve under Cornwallis in Virginia. Three months later Connolly was recaptured and again imprisoned in Philadelphia. He was released in March 1782 on the promise that he would go to England. Connolly appears to have gone to Nova Scotia instead and moved around the frontier region for the next several years.

CONSIDERATIONS ON THE NATURE AND EXTENT OF THE LEGISLATIVE AUTHORITY OF THE BRITISH PARLIAMENT. 1774.

An updated version of a pamphlet John Wilson had originally written in 1768, *Considerations on the Nature and Extent of the Legislative Authority of the British Parliament* was a publication that advocated the central tenet of Wilson's political philosophy: "All power is derived from the people." The pamphlet affirmed Wilson's support for the idea of direct representation, and thereby rejected the notion that the interests of the colonies could be represented in Parliament by non-residents. Wilson believed that Parliament had no legislative authority over the colonies, who were united with Britain only through the person of the monarch. Even then, Wilson argued, the king's prerogative power could be vetoed by the colonial assemblies. While his ideas were an important step in the rejection of parliamentary authority, Wilson shied away from dissolving the connection with the king and clung to a hope of reconciliation well into 1776. Yet, as a delegate to the Second Continental Congress, when the die was cast, he voted for independence and signed the Declaration of Independence.

CONTINENTAL ARMY, DRAFT.

Revolutionary American military forces drafted men throughout the conflict. At the most elementary level, state militias divided their contingent into classes of from fifteen to twenty men, then called out (drafted) one or several of a county's classes for service ranging from weeks to months. Having served the allotted time, the men

returned to their homes. Similarly, Continental regiments were occasionally augmented with state militia drafts, usually each county class providing a draftee, volunteer, or substitute in place of a drafted man.

In 1777 Connecticut passed a statute that set recruiting quotas for selected towns, met by "detaching" (drafting) men from the local militia to serve ten months as Continental soldiers. That October a Virginia measure called for counties to provide an allotment of one-year militia levies to augment Continental regiments. A draft lottery was to be held in February 1778, and the chosen men were to travel north by 31 March.

Congress authorized the first comprehensive Continental army draft in a February 1778 recruiting act. Covering eleven of thirteen states (excepting South Carolina and Georgia), the legislation called for the enactment of a nine-month levy, or an effective alternative, to fill recruiting quotas. Maryland, Massachusetts, New Jersey, New York, and North Carolina instituted a levy, and as a result they garnered substantial numbers of men for the 1778–1779 campaigns.

In February 1780 the Board of War reiterated General George Washington's 1778 recommendation of a long-term draft. The result was a one-time, six-month levy that produced lackluster results in all but a few states. (Massachusetts was the sole exception, garnering substantial numbers of levies each year from 1780 through 1782.) In consequence, beginning in 1779 and continuing to 1783, army strength steadily diminished. A limited draft was also instituted in Virginia and North Carolina in 1781, adding numbers of troops to those states' efforts to counter invading British forces.

American militia and Continental conscription mirrored the reality of the Civil War system (1863–1865), when volunteers and substitutes outnumbered draftees. Large numbers of serving Revolutionary militia were (paid) volunteers substituting for men whose class had been called up, and predominant numbers of men gleaned through the 1778 and 1780 Continental army drafts were in fact also volunteers or substitutes who stepped forward because of monetary inducement.

CONTINENTAL ARMY, ORGANIZATION. The military forces of revolutionaries during the War of American Independence fell into three categories. Each of the thirteen states maintained a militia organized for local defense. These militias provided basic military training to the adult male population and formed a pool from which mobilizations could be drawn. Longer-serving regulars, called state troops, also remained under the control of the state governments. The third force, the full-time soldiers of the Continental army, served exclusively at the national level under the authority of the Continental Congress. It was this latter group which carried the main battlefield burden of the war.

ESTABLISHMENT OF A NATIONAL ARMY

The Continental Congress created its national army on 14 June 1775 when, in an action deliberately glossed over in its journals for security reasons, it transferred to its own control the four existing colony armies of New England and a similar force that was being created by New York. The same action also directed the recruitment of companies of riflemen in Pennsylvania, Maryland, and Virginia to provide for broader participation. With this step Congress accepted the responsibility to pay and feed the men, commission the officers, and establish a disciplinary framework. On 15 June it named George Washington as the “General and Commander in Chief” of this army, and thereafter created other general officers, as well as logistical and other administrative support structures, a process which would continue to be refined and improved throughout the war.

The original military forces assembled in 1775 were intended to maintain the siege of Boston to neutralize occupying British troops, to protect New York City from possible naval attack, and to occupy the traditional Lake Champlain route to prevent an invasion by the British garrison in Canada. Following the precedent set by the provincials of the French and Indian Wars, these first soldiers were recruited only to serve for a single year.

At the end of 1775 Congress, in coordination with the army’s leaders, set about reenlisting the regiments for a second year. Washington’s main forces around Boston completed the task with reasonable smoothness, and he sought to foster a sense of nationalism by having the regiments stop using the names of their colonies; for example, the Third Connecticut Regiment of 1775 reorganized under the new designation of Twentieth Continental Regiment. Reorganization on the northern front followed a more chaotic path, because of the difficulties associated with active involvement in an invasion of Canada. During the course of 1775 and 1776, all of the other colonies raised regiments which became part of the Continental Army, as did the rebellious inhabitants of

Canada, which was to have been the fourteenth member of the Continental Congress. Some of those units started as state troops and then transferred to Congressional control; others were formed explicitly at the request of Congress.

Serious battlefield reverses came during 1776, in the face of the British attempt to crush the rebellion by deploying huge forces of regulars (including Germans) from Europe. This reality led the American political leaders to declare independence and then to reconsider their policy of relying solely upon a relatively small Continental Army whose troops enlisted for a single year and which was supported by large militia mobilizations. On 16 September 1776 Congress passed legislation known as the “88-Battalion Resolve” which endorsed a new strategy. Hereafter the Continentals would enlist for the duration of the war (or at least three years) and would be numerous enough to carry the burden of formal battle with minimal assistance. The December 1776 crisis led to supplemental legislation that increased the authorized force to the equivalent of about 120 regiments. Five were to be artillery, four to be light dragoons, and the rest infantry; Washington’s 1776 experiment with dropping state names from regimental titles ended, because it had proved to be unpopular with the men.

BASIC ARMY ORGANIZATION

The 1777 Continental Army represented the largest American regular force at every point in the war. The infantry quota consisted of the thirteen states’ contingents, which were called the “State Lines,” and the two-regiment Canadian force, which was also treated as if it were a state line. The primary purpose of the ‘line’ arrangement was to provide a fair mechanism for officer promotions. Up to the grade of captain, an officer rose by seniority within his regiment, whereas field-grade officers (majors, lieutenant colonels, and colonels) had seniority within the entire state line. General officer promotions were handled independently, by Congress, which considered seniority on a national basis.

The light dragoons and the artillery (except for the regiment in South Carolina) were also managed as if they were lines. Some other units remained outside the basic system, however. A few of the older infantry regiments, which were not tied to a specific state, were called Extra Continental Regiments and had a complex administrative structure. Sixteen other infantry regiments authorized in the December 1776 resolve were called Additional Continental Regiments and were managed by Washington himself. These were allocated recruiting areas in an effort to adjust the initial act’s quotas to a more realistic apportionment. Only fourteen of them ever actually formed, and several of them failed to achieve full strength. Washington also treated the Additional as a line.

Congress continued to approve some specialist units after the spring of 1777—for example, two maintenance regiments, a regiment to guard prisoner-of-war facilities, several mixed infantry-cavalry units called legions or partisan corps, and some company-sized formations. But as the 1777 campaign came to a close, the main focus was to keep up the existing troop strength. This problem was never solved, and thereafter the army reluctantly carried out periodic consolidations of regiments in order to sustain combat formations that were capable of fighting.

Major reorganizations took place on 1 January 1781 and 1 January 1783. Once peace negotiations reached a preliminary treaty, Congress directed Washington to begin releasing as many men as possible, granting them furloughs instead of discharges in the event that the regiments had to reassemble if fighting erupted again. On 23 December 1783 Washington returned his commission to Congress, marking the end of the basic demobilization process. The last regiment of the Continental Army mustered out at West Point, New York, in June 1784, to be replaced by a peacetime United States Army.

THE STRUCTURE OF THE REGIMENTS

The fundamental organization in the Continental Army was the regiment. It consisted of a command and staff element and a number of companies. Regiments were normally commanded by a colonel, who was assisted by a lieutenant colonel and a major. Companies were commanded by a captain and his subordinate lieutenants, ensigns or cornets (for mounted units). Regimental staffs usually had: an adjutant, who was assisted by a sergeant major for administration; a quartermaster and a quartermaster sergeant for logistics; a paymaster; a surgeon and his deputy, the surgeon's mate; a drum major and fife major, who were responsible for communications and did not function as a musical band. Early in the war, each regiment also had a chaplain. The typical regiment contained eight companies in the first half of the war and nine in the second half, although numbers could range as high as ten or as low as six.

At full strength, an eight-company infantry regiment would contain about 728 officers and men, and a company would have 90 officers and men. In combat, the regiment would normally be tactically organized as a battalion, with the eight companies that formed the line of battle each being called a platoon. Later in the war, larger units might fight as two battalions, with companies fighting as two platoons. This formation was a reflection of the tactical limitations of the smooth-bore musket. Unlike modern warfare, the private did not fire and move with freedom—inaccuracy, a slow rate of fire, and short range mandated that the platoon all fire at one time, as if it were a giant shotgun. By the time a platoon had completed the

reloading process, seven other platoons would have fired. Therefore, using eight platoons allowed a battalion to maintain continuous combat.

Having a regiment act as a single battalion and a company act as a single platoon eliminated confusion during an engagement. The Continentals differed from contemporary Europeans by putting more emphasis on gunfire than on bayonet charges, and had their soldiers stand in formations only two men deep. Europeans used three ranks to achieve more stability, but since the men in the back rank couldn't shoot effectively, they wasted a third of their manpower. When Congress added the ninth company in 1778, it specified that the new addition would be a light infantry force that was to be employed as skirmishers or detached to form elite attack battalions with the light companies of other regiments.

From the beginning, the Continental Army grouped several regiments together as a brigade, commanded by a brigadier general. Several brigades formed a division under a major general. Starting in the Trenton-Princeton campaign, however, Washington started treating the brigade as a combined-arms team that was held together on a long-term basis to improve teamwork. These new brigades usually contained four infantry regiments, one artillery company, and a small support staff. Washington felt that such an organization could fight independently when dispersed to protect larger portions of the countryside and yet it still could concentrate rapidly when needed for major battles. In a set-piece battle, the army would move into position by marching in columns, and then it would deploy into lines. The northern armies under Washington and his subordinates normally used two lines of brigades and a smaller third line as a reserve. In the southern campaign, Nathaniel Greene and Daniel Morgan had much smaller forces of Continentals and employed them only as the third line, placing militia in the first two lines but using them more to wear down the British than to stand and fight at close quarters.

TACTICAL DOCTRINE

The remaining piece of the Continental Army's system consisted of its tactical doctrine, and took shape slowly. When the original units formed in each state, they tended to rely on British practice, since most of the leaders had gained their combat experience in the French and Indian Wars. Like the British, the early Continentals left decisions about which specific drill manual to use to the regimental commanders or to the state governments. By 1777 this decision rested with the brigade commanders. While most chose to use the then-current British manual, which was issued in 1764, enough variations in application existed to make it hard to maneuver the army—different units moved at different speeds and with different commands.

Washington knew that this variation was a problem, but he could not address it until the winter of 1777–1778, the first time when he did not have to concentrate his attention on issues of reorganization. He turned to a foreign volunteer, Friedrich Steuben from Prussia, to put together a standard system. Steuben created a simple yet highly efficient set of drills and maneuvers based on new ideas circulating in the French army and drawing inspiration from the flexibility of the ancient Roman legions. This was the set of concepts that Washington had learned during the French and Indian War from the innovative British general, John Forbes. Steuben personally taught his ideas at Valley Forge, where he became the Inspector General, and then a team of subordinates spread out to disseminate them to the other parts of the army. In the fall of 1778, a board of generals reviewed that year's campaign and decided that the program had been successful. Washington then had Steuben prepare a written version, which was published in 1779 as *Regulations for the Order and Discipline of the Army, Part I*. Called the Blue Book because of the color of its cover, this slender volume became the Army's first field manual, and dealt with battlefield tactics, not drill and ceremonies.

Robert K. Wright Jr.

CONTINENTAL ARMY, SOCIAL HISTORY. "Continental Army" were the "regulars" of the American army, as distinguished from the state militias. The Continental army was created in June 1775 when Congress raised companies of riflemen, made George Washington commander in chief, took over the Boston "army," and started naming generals for Continental commissions.

EARLY CONGRESSIONAL ORGANIZING EFFORTS

When Washington assumed command at Boston on 3 July, he found 17,000 militiamen whose enlistments would expire before the end of the year. A congressional committee visited Boston and consulted Washington and the colonies of Massachusetts, Connecticut, Rhode Island, and New Hampshire on the best way of maintaining a regular army; the committee concluded that this force should number at least 20,370 men organized into 26 battalions of 8 companies each, exclusive of artillery and riflemen. (Cavalry was out of the question.) Congress apportioned these battalions among the colonies as follows: Massachusetts, 16; Connecticut, 5; Rhode Island, 2; and New Hampshire, 3. By mid-November fewer than 1,000 had enlisted, and a month later there were only

about 6,000. Washington therefore had to call for militia to serve from 10 December to 15 January.

During this first year Congress authorized the raising of Continental troops in other colonies, and about 27,500 men were reported as being in its pay in 1775. An additional 10,000 militia were put in the field by Virginia, North Carolina, South Carolina, and Georgia.

On 1 January 1776, 27 Continental regiments of infantry were raised for the year. The 1st Continental Infantry was from Pennsylvania (and was merely a reorganization, under the same commander, of Thompson's Pennsylvania Rifle Battalion). The 2nd, 5th, and 8th Continental Infantry were from New Hampshire. The 3rd, 4th, 6th, 7th, 12th through 16th, 18th, 21st, and 23rd through 27th were from Massachusetts. The 9th and 11th were from Rhode Island, and the 10th, 17th, 19th, 20th, and 22nd Continental Infantry were from Connecticut. It would be more precise

to say these regiments were "designated" rather than "raised": they were militia units that had existed in 1775 but that were now given Continental numbers; in almost all instances they retained the same organization and the same commander. On 15 July, Congress authorized Georgia to raise two infantry regiments and two artillery companies in Virginia, North Carolina, and South Carolina to serve until the end of 1777.

On 16 September the delegates resolved that 88 battalions (regiments) be enlisted as soon as possible to serve "during the present war," and they asked states to furnish the following numbers of battalions: New Hampshire, 3; Massachusetts, 15; Rhode Island, 2; Connecticut, 8; New York, 4; New Jersey, 4; Pennsylvania, 12; Delaware, 1; Maryland, 8; Virginia, 15; North Carolina, 9; South Carolina, 6; and Georgia, 1. The Boston phase of the war had ended and the delegates were now faced with British threats against Charleston and New York. Furthermore, they had recently received a letter in which Washington gave his considered opinion that the militia had done the cause more harm than good. Congress now was trying to raise a serious army to which states would contribute in accordance with their populations. A \$20 bounty was offered to every enlisted man who would engage for the duration, and land bounties were offered, varying from 500 acres for a colonel to 100 acres for a noncommissioned officer or private.

The 16 Additional Continental Regiments were authorized on 27 December 1776, on which date the delegates also resolved that 2,040 artillery (in three battalions) and 3,000 cavalry (or dragoons) be raised. Fewer than half the Continentals actually were raised, and the overall strength of regulars and militia in 1777 was 68,720, a drop of 20,931 from the strength in 1776. In 1778 the Continental figures dropped another 2,000 and the militia decreased 15,000 (due to lack of enemy activity).

RECRUITMENT OF SOLDIERS

Despite the enticements of a bounty and land warrants, recruitment was slow. Additionally, although there was some regional variation, the evidence indicates that those men who did answer the recruiter's call came from lower social and economic backgrounds. Many of the soldiers who were property owners or sons of property owners returned home after the first enthusiasm for war passed. They were replaced first by laboring men from the same communities and then by transient poor. By 1777 a number of states had instituted a draft in order to meet their troop quotas. Some, such as Maryland, offered an additional bounty payment of clothes and shoes over and above the Continental bounty, and these bounties together provided a considerable inducement for society's poorest men. Draft legislation of the states also reached out to those who lived on the edges of society. Maryland wanted "such disaffected persons that were arrested or hereafter

shall be arrested” to be signed up. South Carolina, in 1779, wanted “vagrants and idle disorderly persons” to be recruited. In 1778 North Carolina decided that a term in the Continental army was to be the punishment if a man failed to turn out for militia service, and it was also the punishment for those who harbored Continental deserters.

Those with financial resources who wanted to avoid service could hire a substitute. There was no disgrace in either hiring one or serving as one. The price was privately negotiated between the draftee and the substitute. Details about how much was paid to substitutes is largely anecdotal, but some substitutes reported being paid a small amount of money, perhaps equal to a few weeks pay, while others, perhaps facing a desperate or prosperous draftee, were able to exploit the situation and bargain for land. However, substitution did not always involve a financial transaction. It was also a mechanism used by families to shift the burden of service among themselves. For example, a younger son might go to allow a drafted father or older brother to stay at home, and in those cases it is unlikely any money would change hands.

Some of the men recruited either directly or as substitutes were African Americans. Perhaps as many as five thousand black men served in the Continental army. Initially, George Washington had been reluctant to allow black men to serve, although a significant number were already part of the forces around Boston when he arrived there in June 1775. The commander in chief and other military leaders were afraid that the presence in the army of black men would discourage white enlistment. However, later that year, with enlistments sluggish from all regions, free blacks already in the army were invited to reenlist. In 1777, when the Continental Congress fixed new troop quotas, most northern states allowed blacks to serve, and Connecticut and Rhode Island offered freedom to slaves in exchange for service. In fact, the following year Rhode Island organized two separate African American battalions, but everywhere else African American servicemen were integrated into existing units from places as far south as North Carolina. Outside New England, some slaves gained their freedom by serving as substitutes for their masters or others.

Additionally, a significant number of soldiers were foreign born. Data on this are hard to come by but towards the end of the war, 40 percent of one Maryland regiment was foreign born. However, it is possible that this was a distortion. Following the defeat of the British at Yorktown in 1781, perhaps citizens had felt free not to renew their enlistments, so that percentage of foreigners may not have been so high earlier in the war. However, even in 1776, one South Carolina regiment recognized its significant cohort of Irish soldiers by giving them a day off for St. Patrick’s Day.

RECRUITMENT OF OFFICERS

Officers were somewhat easier to find; in fact, more men wanted to be officers than could be accommodated, although many lacked the necessary skills. Following the British tradition, an officer was a gentleman, and plenty of colonial young men aspired to be both. Washington was not impressed by the quality of men he met who wanted to become officers. In a letter to Congress in September 1776, he argued that only “Gentlemen of Character” should be engaged. He felt officers should be the social superiors of the men they led to solidify and enforce military discipline. Wealthy or prominent men found it easy to secure commissions. Men of less obvious social worth spent a lot of time jockeying for position and recognition both in trying to get their commissions and in trying to get promoted once they were in the army.

In contrast to the British army, in which young gentlemen could buy a junior officer’s commission from a regimental commander, an officer leaving a regiment, or a commission broker, Continental commissions were given out by Congress and state legislatures. Congress appointed

men to the rank of general, but field grade officers, colonels and below, were appointed by the state assemblies in the state in which a regiment was raised. A commission at any level, then, could only be obtained by having influential friends who might recommend a man for a particular commission. One study of a sample of the New Jersey officer corps shows that 84 percent of them came from the wealthiest third of the community and 32 percent from the richest tenth.

With a lot at stake in terms of any possible promotion, many officers were consumed with their own advancement. A particularly difficult issue for all to deal with was seniority. Matters such as whether earlier service as a militia officer or as an officer with state troops counted toward Continental service when being considered for promotion led to much wrangling and politicking. Still, despite the anxieties thus aroused, the army provided literate men of modest means an opportunity to expand their horizons. It exposed them to a larger community and provided them with opportunities for leadership, and officers therefore jealously guarded all their privileges of rank.

CONGRESS'S LATER ORGANIZING EFFORTS

The reorganization of 29 March 1779 called for a regular force of 80 Continental regiments, the 1776 quotas (see above) being changed as follows: New York was to furnish 5, an increase of 1; New Jersey to furnish 1, a decrease of 1; Pennsylvania to furnish 11, one fewer than previously; Virginia, 11, four less than before; and North Carolina, 6, 3 fewer than before. All other states retained their old quotas.

In the last years of the war, from 1781 to 1783, the authorized strength of the Continental army was reduced to 58 battalions. Massachusetts and Virginia were assigned 11 each; Pennsylvania 9; Connecticut, 6; Maryland, 5; North Carolina, 4; New York, 3; New Hampshire, New Jersey, and South Carolina, 2 each; and Rhode Island, Delaware, and Georgia, 1 each. These were supposed to be 576-man battalions, as compared with the 522-man battalions for the previous years, but fewer than half of the required 33,408 Continentals actually showed up during these last years of the war.

TROOPS FURNISHED

Without allowance for the fact that many men served two, three, and even four terms in the American army and were therefore counted several times, the following figures are a basis for estimating how many men fought for American independence. The numbers for the Continental army were estimated by Colonel John Pierce of Connecticut, the army's paymaster general, and the Treasury accountants; the numbers for the militia were estimated by

Militia Estimates

State	Continental Army	Militia	Total
New Hampshire	12,497	4,000	16,497
Massachusetts	67,907	20,000	87,907
Rhode Island	5,908	4,000	9,908
Connecticut	31,939	9,000	40,939
New York	17,781	10,000	27,781
New Jersey	10,726	7,000	17,726
Pennsylvania	25,678	10,000	35,678
Delaware	2,386	1,000	3,386
Maryland	13,912	9,000	22,912
Virginia	26,678	30,000	56,678
North Carolina	7,263	13,000	20,263
South Carolina	6,417	20,000	26,417
Georgia	2,679	8,000	10,679
Totals	231,771	145,000	376,771

THE GALE GROUP.

Francis B. Heitman (see table). Heitman estimates that this total, 376,771, should be reduced to not more than 250,000 in view of the multiple enlistments (Heitman, p. 691).

The largest number of troops raised by Congress during any year of the war was 89,600 men in 1776; 42,700 of these were militia. The largest force Washington ever commanded in the field was under 17,000 regulars and militia, and in his finest campaign, that of Trenton and Princeton, he had only 4,000 regulars and militia. The greatest strength of the Continental army, in November 1778, was about 35,000.

BECOMING A PROFESSIONAL ARMY

By the end of the war, both officers and men had developed a degree of professionalism that Washington could only have dreamt about in 1775. Soldiers serving for longer terms were better trained and some were seasoned veterans. Officers, too, who were not bound to a particular length of service and who could resign their commissions at will were also gaining experience. Some of the improvement came from military manuals borrowed from the British army and quickly reprinted in the colonies when the fighting started. Some was a result of the training by the Prussian officer Baron Friedrich von Steuben, who had arrived at Valley Forge in 1778. He produced his own military manual, *Regulations for the Order and Discipline of the Troops of the United States*, which was widely available by 1779. He is most famous for having taught soldiers how to drill and maneuver, thus improving battlefield performance, but he also taught officers what might later be called managerial skills. His own and the other military manuals taught officers how to organize a camp, how to conduct an inspection, and how to deal with insubordination; Steuben even offered a sample worksheet for

organizing guard duty rotations. With these instructions, years of practice, and the example of veteran officers, the army gained in confidence and skill.

Paradoxically, another factor that helped create esprit de corps was the increasing isolation that many in the army felt from the civilian community. Continuing supply problems, interruptions in pay, and payment in depreciating currency were grievances that united officers and enlisted men and made both feel forgotten by the civilian world around them. Whether men served for political reasons, for the money, or for adventure or from a desire to get away from an unhappy home, a bad apprenticeship, indentured servitude, or even slavery, army life offered camaraderie, community, and the chance to be part of something larger than oneself. All these factors helped make the men an effective fighting force.

THE POSTWAR REGULAR ARMY

The British evacuated New York on 17 November 1783, Washington resigned as commander in chief on 22 December 1783, and at the start of the next year the American nation of four million people had an army of seven hundred rank and file. They constituted Colonel Henry Jackson's Continental or First American Regiment. On 2 June 1784 Congress abolished the Continental army except for eighty privates, "with a proportionable number of officers, no officers . . . above the grade of captain," to guard the stores at Fort Pitt, West Point, and other magazines. What was left, under the command of Captain John Doughty at West Point, was the vestige of Alexander Hamilton's Provincial Company of New York Artillery. Hence, only one unit of the modern American army, the one whose lineage can be traced to Hamilton's Battery, dates from the American Revolution.

On 3 June 1784, the day after abolishing Jackson's regiment, Congress recreated a force of seven hundred rank and file. This force was successively increased and decreased as crises arose and were met: these included British refusal to abandon their military posts in the Old Northwest; Shays's Rebellion; Indian troubles with the Miamis; and the Whiskey Rebellion of 1794.

THE VETERANS

In 1783, as the Continental army disbanded, its officers organized the Society of the Cincinnati. The organization celebrated the officers' accomplishments and the value of an orderly society. It also lobbied for the interests of its members, making sure that they received the pensions they had been promised and appropriate national recognition. Soldiers, in contrast, did not form any associations but simply drifted back into civilian life. Workingmen's clubs or associations were a phenomenon of a later era. This generation of veterans scattered and some, many years

later, did not know anyone who had served with them. They were also largely forgotten by the public until after the war of 1812. Then, in a spirit of national celebration and an era of budget surpluses, they were awarded pensions, at first need-based and then service-based, and the appreciation of a grateful nation.

CONTINENTAL CONGRESS. One of the most serious weaknesses the colonists faced at the outset of their war with Britain was the lack of a central government. Individual colonies (soon to become states) were fortunate in having a long tradition of local government rooted in the supremacy of the locally elected legislature. Although there was no lack of savvy politicians, the relations among the thirteen colonies were marked by a long history of jealousy. One of the surprises of the Revolution was Americans' ability to unite politically. The Albany Congress of 1754 and the Stamp Act

THE GALE GROUP.

Congress of 1765 gave politically active colonists a foretaste of how to work together and of how to achieve the consensus that made “congressional” action possible.

As protest mounted against the Intolerable Acts of 1774, the first of many calls for an intercolonial congress came from Providence (17 May), Philadelphia (21 May), and New York City (23 May). Radicals in Boston had asked the other colonies to join in an immediate nonimportation agreement, but when they saw this hope was not to be achieved they fell in with the movement for a meeting. The Boston leaders framed a Solemn League and Covenant, which was a form of nonimportation agreement, and twelve days later, on 17 June, the Massachusetts House of Representatives proposed that a congress be held in Philadelphia in September. By 25 August twelve colonies (all except Georgia) had named delegates.

FIRST CONTINENTAL CONGRESS

Fifty-six delegates from twelve colonies met for the first time at Carpenter’s Hall, Philadelphia, on 5 September 1774. Peyton Randolph of Virginia was elected president and Charles Thomson of Pennsylvania, although not a delegate, was named secretary. (The congress was never really “continental,” since the other British North American colonies—Canada, Nova Scotia, and the two Floridas—did not join the rebellion.)

According to the notes of James Duane of New York, “the first question debated was whether the Congress should vote by colonies and what weight each colony should have in the determination.” Patrick Henry of Virginia, who said “he conceived himself not a Virginian but an American,” thought that “one of the greatest mischiefs to society was an unequal representation,” and advocated “such a system as would give each colony a just weight in our deliberations in proportion to its

opulence and number of inhabitants, [and] its exports and imports.” Because such a system would favor larger, more populous colonies, Samuel Ward of Rhode Island “insisted that every colony should have an equal vote” and argued “that we came if necessary to make a sacrifice of our all and that the weakest colony by such a sacrifice would suffer as much as the greatest.” The matter was resolved in favor of giving each colony a single vote when it was realized that “the delegates from the several colonies were unprepared with materials to settle that equality”—that is, no one had an objective count of any colony’s population or wealth (Smith, vol. 1, p. 31).

Word of the British seizure of colonial powder stored at Charlestown, Massachusetts (the Powder Alarm), arrived on 6 September. This news helped the radicals build a consensus in favor of resolute action that led Congress to endorse the Suffolk Resolves (17 September) and defeat Galloway’s Plan of Union (28 September 1774). In a set of declarations, the First Congress subsequently denounced the Intolerable Acts, the Quebec Act, all of the revenue measures imposed since 1763, the extension of vice-admiralty courts in the colonies, the dissolution of colonial assemblies, and the peacetime stationing of regular soldiers in colonial towns. Thirteen parliamentary acts since 1763 were declared unconstitutional, and the delegates pledged to support economic sanctions until these acts were repealed. Ten resolutions set forth the rights of the colonists as they saw them. They signed the Continental Association (a complete suspension of trade) on 20 October, prepared addresses to the king and to the British and American people, and agreed to reconvene on 10 May 1775 if their grievances had not been redressed. They adjourned on 26 October.

SECOND CONTINENTAL CONGRESS

On 10 May 1775 the delegates met at the State House (later Independence Hall) in Philadelphia and reelected the same president and secretary. On 24 May Randolph withdrew, and John Hancock was elected president of Congress. Still without an official representative from Georgia, the delegates took a score of actions that amounted to the de facto assumption of the rights and responsibilities of an independent state. They resolved that the colonies be put in a state of military readiness (15 May); adopted an address to the Canadians asking them to join the resistance (29 May); resolved to raise ten companies of riflemen in Pennsylvania, Maryland, and Virginia to support the New England army besieging Boston; agreed to pay for the New England army (thus adopting it as a “continental army”); named a committee to draft rules for the administration of the army (all on 14 June); elected George Washington, a delegate from Virginia, as commander in chief of the Continental Army (15 June); elected four major generals (Artemas

Ward, Charles Lee, Philip Schuyler, and Israel Putnam); elected eight brigadier generals (Seth Pomeroy, William Heath, John Thomas, David Wooster, Joseph Spencer, John Sullivan, Richard Montgomery, and Nathanael Greene); elected Gates to be adjutant general and voted \$2 million in bills of credit to finance the war (all on 22 June); and adopted articles of war on 30 June.

As events continued to cascade toward full-scale war (the New England army fought its only battle, at Bunker Hill on 17 June, not knowing it had become a “continental army” three days earlier), Congress assumed more powers that made it look like a government. The delegates made a last-ditch effort to patch up the quarrel by approving the Olive Branch Petition on 5 July, one of several important papers drafted by the conservative John Dickinson, and the next day promulgated a “Declaration of the Causes and Necessities of Taking Up Arms,” the joint work of Dickinson and Thomas Jefferson, to explain to the people of Britain and America why armed resistance was now necessary. On 15 July they voted to waive those provisions of the Continental Association that might slow the importation of war supplies, and on 31 July they rejected Lord North’s plan for reconciliation as too little, too late. They appointed commissioners to treat with the Indians (19 July) and established a postal department (26 July) with Benjamin Franklin as head. On 2 August 1775 the Second Congress adjourned.

The Second Continental Congress reconvened on 12 September 1775, this time with delegations from all thirteen colonies present. Learning on 9 November that George III had on 23 August proclaimed the colonies to be in revolt (thereby rejecting the Olive Branch Petition), on 6 December Congress replied with a statement of continued allegiance to the king but not to Parliament. A continental navy was authorized on 13 October, and on 14 December a Marine Committee to oversee it was appointed. On 29 November the delegates appointed the Committee of Secret Correspondence to conduct relations with foreign governments (a precursor of the modern State Department). The movement toward independence was spurred by Thomas Paine, who published his pamphlet *Common Sense* on 10 January 1776. Across the late winter and spring of 1776, leaders in the various colonies took actions that made them, in all but name, independent states. On 15 May 1776 the de facto Virginia state government authorized its delegate, Richard Henry Lee, to take the initiative in acknowledging what was already the reality on the ground in the states and in Congress. On 7 June Lee introduced the resolution that led to the Declaration of Independence. The delegates voted to declare independence on 2 July, and on 4 July promulgated their final bill of indictment against the imperial government and George III, in which they explained to the world why independence was their only possible course of action.

MANAGEMENT OF THE WAR AND OTHER BUSINESS

Managing all aspects of a war of unprecedented complexity always absorbed the bulk of the delegates’ time and attention. Sometimes action was delayed or deferred by the need to build consensus. Particularly difficult issues might have to be addressed by the entire Congress, which resolved itself into a Committee of the Whole, but the delegates did a remarkable amount of business through an evolving sequence of committees and boards. Although the system was not particularly efficient, it was effective in keeping the war effort up and running. Many of the congressional initiatives were ambitious. In late March 1776 the delegates sent a special committee to Canada to explain the political purpose behind the invasion and to salvage support for a campaign that was rapidly failing. On 12 June they appointed a Committee to Prepare Treaties with European countries. On 17 September they adopted the report of this committee and on 23 December authorized its three commissioners (Silas Deane, Benjamin Franklin, and Arthur Lee) to borrow money for their operations.

Congress could do little to influence active military operations, and during 1776 it watched as its armies triumphed at Charleston and Boston, failed in Canada and at Long Island, saw New York City fall into British hands, received increasingly discouraging reports in connection with the New York campaign, fought the overtures resulting from the Peace Commission of the Howes, were cheered by the delay Benedict Arnold bought by his victory at Valcour Island, and on 12 December ran for the safety of Baltimore as the British success in the New Jersey campaign threatened Philadelphia. It granted Washington extraordinary authority (“dictatorial” powers) during this crisis; some joked nervously that 1777 promised to be the “Year of the Hangman.” Robert Morris remained in Philadelphia, and on 21 December 1776 Congress formally appointed him, George Clymer, and George Walton as its “executive committee.”

At Baltimore the three-story brick house of Henry Fite was the meeting place of the twenty to twenty-five members of Congress who showed up for business, fewer than half the number that had decided the great issues in 1775 and 1776. The members continued to plan for the future. They resolved on 30 December 1776 to send commissioners to Austria, Prussia, Spain, and Tuscany. (William Lee of Virginia was assigned the first two posts on 9 May; Franklin covered the Spanish post, in addition to France, from 1 January 1777 until Arthur Lee of Virginia was named to succeed him at Madrid on 1 May; Ralph Izard of South Carolina was assigned to Tuscany on 7 May.)

Back at Philadelphia on 4 March 1777, Congress reconstituted the Committee of Secret Correspondence as the Committee on Foreign Affairs (17 April 1777),

Assembly Room in Independence Hall. In 1776 the delegates of the Continental Congress adopted the Declaration of Independence in this room at the Pennsylvania State House (later Independence Hall) in Philadelphia. © DAVE BARTRUFF/CORBIS.

passed the Flag Resolution creating the Stars and Stripes (14 June), and on 19 September fled the city again. Howe's threat to Philadelphia was more effective this time, and Congress was forced to flee, first to Lancaster and then to York, Pennsylvania (30 September). The so-called Conway Cabal that challenged Washington's leadership, the problems of Burgoyne's Convention Army, and Lafayette's abortive "irruption into Canada" were among the important military matters that occupied the talents of the delegates during the winter of Valley Forge. Congress also sent a committee to confer with Washington about reorganizing the army, an effort that complemented the efforts of Steuben to complete the transformation of the Continental Army into an effective, professional military force. Congress adopted, finally, the Articles of Confederation on 15 November 1777, and with the French alliance a reality on 8 January 1778, it ratified the implementing treaties on 4 May. With some hope on the horizon, Congress was better able to fend off the peace commission of the earl of Carlisle after June 1778.

During the last years of the war, Congress coped with a wide range of problems. Perhaps the most serious was the

collapse of the economy, caused in part by trying to pay for a protracted war with too much continental currency and not enough taxing authority. The military situation continued to raise more immediate issues. British success in the south after May 1780 seemed to herald the reestablishment of royal government in the former southern colonies. The American effort slowly recovered over the summer of 1780, with Congressional approval of Washington's pick to command the theater (Nathanael Greene, on 14 October 1780) one of the milestones along the way. British raids in Virginia (most seriously after December 1780) were damaging, but marked the beginning of the end of Britain's strategy to recover the South. Washington, with the indispensable aid of French soldiers and sailors, managed to capture Britain's last field army at Yorktown in October 1781, but that crucial victory was not easily achieved. The American military effort had seemed to be crumbling from within following the revelation of Benedict Arnold's treason (25 September 1780) and the mutiny of the Pennsylvania Line (early January 1781), but Washington's leadership helped to hold the army together.

Presidents of the Continental Congress

President	Elected
Peyton Randolph of Virginia	5 September 1774
Henry Middleton of South Carolina	22 October 1774
Peyton Randolph of Virginia	10 May 1775
John Hancock of Massachusetts	24 May 1775
Henry Laurens of South Carolina	1 November 1777
John Jay of New York	10 December 1778
Samuel Huntington of Connecticut	28 September 1779
Thomas McKean of Delaware	10 July 1781
John Hanson of Maryland	5 November 1781
Elias Boudinot of New Jersey	4 November 1782
Thomas Mifflin of Pennsylvania	3 November 1783
Richard Henry Lee of Virginia	30 November 1784
John Hancock of Massachusetts	23 November 1785 (did not serve)
Nathaniel Gorham of Massachusetts	6 June 1786
Arthur St. Clair of Pennsylvania	2 February 1787
Cyrus Griffin of Virginia	22 January 1788

As noted in the article on the Continental Congress, the so-called *Continental Congress* ceased to exist on 2 March 1781, at which time it became "The United States in Congress Assembled."

THE GALE GROUP.

The way Congress did business also matured and changed during these years, most notably in 1781. Under the crushing pressure of events, Congress authorized the creation of four executive departments, foreign affairs on 10 January and finance, war, and marine on 7 February. This essential step helped to streamline the daily working of government by lifting a great deal of the burden of clerical and routine duties from Congress as a whole. On 1 March 1781 Congress acknowledged that Maryland had ratified the Articles of Confederation, the last state to do so. Strictly speaking, the Second Continental Congress ceased to exist on that day; the delegates met the next day as "the United States in Congress Assembled." Congress also began the tortuous negotiations for a final peace settlement. It began by setting minimum conditions as early as February 1780, appointed peace commissioners in June 1781, and ratified the proposed text of the Treaty of Paris on 15 April 1783.

On 24 June 1783 Congress again demonstrated its strategic mobility by fleeing to Princeton when some three hundred Continental soldiers marched in to demand their rights. Remaining at Princeton until 3 November, it reconvened at Annapolis on 26 November under a plan calling for alternate sessions there and at Trenton. The day before, the British had evacuated New York City, thereby implementing some of the final provisions of the peace treaty. At the end of December the Continental Army ceased to exist, and Congress, and the nation, faced for the first time the challenges of the postwar era of reconstruction and recovery.

The first federal Congress met on 4 March 1789 in New York City and began regular sessions on 6 April. The new federal city of Washington, District of Columbia, became the seat of Congress when the second session of the sixth U.S. Congress met there on 17 November 1800.

SUMMING UP

Over the course of fifteen years (5 September 1774 to 3 March 1789), 435 delegates to Congress were elected by the states. Only 80 percent of those elected (342) actually served in Congress, some for only a few weeks or months. The number of delegates that served during the nine years of military mobilization and actual fighting (5 September 1774 to 31 December 1783) was smaller still: only 245 men, or 70 percent of the total of 342 who served. Turnover in membership was rapid and continuity in office (and thus the amount of experience members could accumulate in running the business of the new nation) was limited to a handful of delegates who were willing and able to make the personal and financial sacrifice needed to attend Congress on a regular basis. In *Reluctant Rebels*, the military historian Lynn Montross notes that, "before the war ended, more than half of the members were fated to have their property looted or destroyed. Others were to be imprisoned or driven into hiding by man hunts, and even their families would not escape persecution" (p. 131). The record of military service compiled by the members of Congress "has probably never been bettered by any other parliament of history. Of the 342 men elected during the fifteen years, 134 bore arms in either the militia or the Continental army. One was killed in action, twelve seriously wounded, and twenty-three taken prisoners in combat." Given that a majority of the delegates were in their forties or older, "the valor of Congress needs no apologies" (*Reluctant Rebels*, pp. 190–191).

ASSESSMENT

Congress received some harsh criticisms from contemporaries, including from some of its own members, and subsequent historians have echoed this assessment. It certainly displayed inefficiency and dithered over decisions that might have been more palatable if made more quickly. It saw its share of badly run committees, ill-conceived experiments in organization and oversight, and poorly timed meddling in the responsibilities of its field commanders, most notably Washington himself. Petty political infighting and rivalries were all too common, based as much on personal dislikes as on principled differences about policy. Behavior that can only be called corrupt was also in evidence. In all of these things, the Continental Congress was similar to American legislative bodies before and since.

Against these criticisms, a slew of achievements can be entered on the positive side of the ledger. The mere fact that Congress existed and functioned at all was a significant milestone. All of the men who served in this new experiment in political organization had knowledge of or had served in the legislative assemblies of their individual colonies and states. Overcoming the provincialism and parochialism of those assemblies, legislative bodies that jealously guarded their prerogatives and power not only from the imperial government but also from each other, was no small achievement. Few men as yet agreed with Patrick Henry's assertion that they owed their primary allegiance to "America" (in Henry's case, too, rhetoric exceeded reality). In everything Congress did, consensus had to be built before unanimity could be achieved, and, without unanimity on all major issues, the British might readily break the rebellion into fragments. Because the nature of their resistance to imperial authority had schooled them to be extremely suspicious of power in all its forms, the delegates undertook management of continental affairs as a collective exercise, unwilling to concentrate power in the hands of one man or a few under all but the worst circumstances. Only in the blackest days of the war did the rump Congress give Washington, himself a member of the Virginia oligarchy and a former delegate to Congress, the authority to act without congressional approval of major decisions. When the crisis passed (due largely to Washington's leadership), Congress was a bit more solicitous of the realities of field command; but it never relinquished its desire to oversee the minutia of military organization, appointments, movements, and operations that would today be left in the hands of the military professionals. Washington continually chafed at the conflicting tugs of congressional oversight, indecision, misunderstandings, and downright meddling. But because he was one of them he never disavowed the fundamental principle of civilian control of the military, vested in the hands of the delegates to Congress.

Gradually, the delegates' understanding of the nature of government began to evolve, as they realized, under the intense and unrelenting pressure of running a war far longer than anyone had anticipated, that, if declaring independence had been an act of unprecedented courage that required genius and faith, erecting a working government required the talent, integrity, and energy to slog through the unrelenting demands of daily business. The erection of four executive departments in early 1781 was an important milestone on the road to rebuilding the sort of faith in extralocal government that the imperial crisis had shattered.

Given the circumstances in which it was created, Congress, although inefficient, was also remarkably effective. As the historian John Richard Alden, in *The American Revolution*, observes:

The Congress declared the independence of the United States; appointed the commander in chief and higher officers of the Continental army; established the American navy and the marine corps; formed a diplomatic service; negotiated treaties with European nations and Indian tribes; organized a postal service; issued currency; and borrowed money. It even gave advice to the colony-states with respect to the making of their constitutions; and it drew up the Articles of Confederation. . . . It was created in emergency, endowed with uncertain authority, and plagued by rapid changes in personnel. Hence it exhibited obvious defects lacking or less conspicuous in long- and well-established legislatures. . . . [But Congress's] record, when the difficulties to be faced are taken into account, is splendid rather than dismal. (pp. 166–169)

CONTINENTAL CURRENCY. The colonies had no choice but to fund their armed resistance to increased British imperial control by issuing large amounts of paper money. They had had extensive, and largely successful, experience with this form of currency finance during the French and Indian War and chose to ignore the fact that a large part of that success was due to imperial restrictions on their currencies and Parliament's reimbursement (in specie) of much of their wartime expenditures. On 22 June 1775, the Continental Congress voted to issue two million dollars in bills of credit, an amount that turned out to be merely a down payment on the spiraling costs of a war that lasted longer than anyone could have imagined in 1775. For five years, Congress authorized ever-increasing amounts of paper money to meet the urgent demands of American forces for sustenance, clothing, pay, transportation, and every sort of military equipment, until the total, near the end of 1779, reached the unprecedented sum of \$241,500,000.

The delegates were fully aware that unsecured paper money would inflate rapidly, but they were also aware that, until all states approved the Articles of Confederation (adopted by Congress on 15 November 1777 but not ratified until 1 March 1781), they were members of what was, legally, nothing more than a forum for consultation among sovereign allies. Because

Congress had no source of revenue apart from recommending that the states provide the means for redeeming Continental currency, this paper money in effect had little or no real backing. The states themselves had issued over fifty-four million dollars in their own paper money by the end of 1779, and there was little money remaining to support the supposedly common currency. Add to these circumstances the fact that the British were engaged in a large-scale effort to counterfeit Continental currency (the full dimensions of which are unknown), it was inevitable that the value of paper money would decline.

While the value of Continental currency varied considerably from place to place, by the end of 1777 in Philadelphia, it took nearly four dollars in paper money to buy one dollar in specie. Despite a burst of optimism about the French alliance in the summer of 1778, by the end of that year it took nearly eight dollars in Continental currency to buy one dollar in specie. Despite limited efforts to redeem and retire Continental currency after 1778 (including the heavily counterfeited 20 May 1777 and 11 April 1778 emissions) and some attempts to enforce laws mandating the acceptance of the currency at par value, Continental currency collapsed in 1781. By the start of the year, depreciation had reached 75 to 1 in most states, 100 to 1 in Philadelphia, 110 to 1 in Maryland, and 210 to 1 in North Carolina. In May the currency collapsed, and the phrase “not worth a Continental” became synonymous with worthless. Two months later only hard money was used in the marketplace.

Depreciation wiped out roughly \$226 million in Continental currency, worth \$40 million in specie. The noted economic historian E. James Ferguson has stated:

The loss was carried by the people of the nation as money depreciated in their hands—a process sometimes considered as a form of taxation in rough proportion to ability to pay. Eventually the dead mass of currency was drawn in by the states. A good part of it was scattered or destroyed, and in 1790 only about \$6,000,000 remained in the hands of individuals. (*Power of the Purse*, p. 67)

Under the funding act of 1790, the old Continental emissions were exchanged for bonds at the rate of 100 to 1.

Ferguson summarized the importance of paper money for the success of the war in these words:

Paper money provided the sinews of war in the first five years of the Revolution. . . . The burden was borne at home; indeed, currency finance sustained the war and survived in an attenuated form until the moment of victory. Only after the French and American forces captured Cornwallis at Yorktown did foreign loans and state payments become important. (*Ibid.*, p. 44).

CONVENTION ARMY. The surrender of Major General John Burgoyne’s army at Saratoga on 17 October 1777 was by a convention negotiated with Burgoyne by Major General Horatio Gates. Hence the prisoners became known as the Convention Army. According to a return (a classified listing of men present across several categories) prepared by Lieutenant Colonel James Wilkinson, the deputy adjutant general of the Northern Department, they totaled 4,991 people (2,139 British, 2,022 Germans, and 830 Canadians). The agreement was that they would lay down their arms, march to Boston, and take ship to Britain with the promise to serve no more in North America during the war. Almost immediately, a controversy broke out that kept the convention

from being honored as well as the Convention Army from being returned to Britain. Each side charged the other with perfidy. Congress wanted to evade the terms of the convention because, although the prisoners would be shipped back to Europe, they would free an equal number of soldiers from other duties for service in North America or the Caribbean.

The prisoners were marched under armed escort to Cambridge, Massachusetts, where the first delay was caused by Sir William Howe's attempt to have them shipped home from a port in British hands, meaning either Newport or New York. The Americans seized on this demand as evidence that Howe intended to keep them to reinforce his own army. While waiting for the British transports to arrive at Boston, Burgoyne gave Congress additional grounds for delaying implementing the convention. In a letter to Gates complaining that his officers had not been furnished with the quarters they had a right to expect, he used the unfortunate phrase, "the public faith is broke." Congress had already appointed a committee to furnish reasons to justify a delay in ratifying and implementing the convention. The first reason it offered was that, because Burgoyne's 5,000 troops had turned in only 648 cartridge boxes, they had not surrendered all their arms. Now, if Burgoyne charged that "the public faith is broke," he might be building a case for invalidating the convention. Congress therefore suspended the embarkation until it got "a distinct and explicit ratification of the convention. . . by the court of Great Britain."

When the transports arrived off Boston late in December 1777, they were not permitted to enter. Finally, when the king sent orders to Sir Henry Clinton (Howe's successor as commander-in-chief) to ratify the convention, Congress took the position that the orders might be a forgery; it wanted a witness to swear he had seen the king sign them. Burgoyne and two of his staff officers were permitted to leave for England on 5 April 1778, but the rest of the Convention Army finished the war as prisoners. After a year in Massachusetts, first in the towns around Boston and then at Rutland, in January and February 1779 the troops were marched through Connecticut, New York, New Jersey, Pennsylvania, and Maryland to Charlottesville, Virginia. This twelve-week trek was made in the dead of winter and on starvation rations, an ordeal Baroness Riedesel, wife of Major General Friedrich von Riedesel, endured with her three daughters. Many Germans deserted as the column passed through German-speaking parts of Pennsylvania, an action their guards did little to inhibit.

After another year, the remaining Convention troops were moved to Winchester, Virginia, and then to Frederick, Maryland. In the summer of 1781 they were moved north on the approach of Cornwallis to prevent their rescue by Banastre Tarleton and John Graves Simcoe; some went to Easton, Pennsylvania, and others back to

Rutland. By the end of the war their numbers had been reduced by death, desertion, paroles, and exchange to about half the original 5,000. Although the majority returned home, a few stayed in America.

American historians generally agree that Congress did not live up to the bargain Gates had struck, and some believe that its behavior impugned the honor of the new nation. But the stain was not exclusively on the escutcheon of Congress. Among the papers of Henry Clinton at the William L. Clements Library at the University of Michigan, which were not generally available to historians until the 1930s, is a letter of 16 November 1777 from Howe to Burgoyne in which "Howe revealed his intention of diverting to New York the homeward-bound transports and exchanging the Convention troops for American prisoners" (Wallace, p. 168).

CONWAY, THOMAS. (1733–1795). Continental general. Son and grandson of Irish officers in the French service, he was born in County Kerry, Ireland, taken to France at the age of six, and educated there. He became *lieutenant en second* in the Irish regiment of Clare on 16 December 1747 and was promoted to captain on 25 March 1765. On 9 July 1769 he was promoted to major in the regiment of Aquitaine. On 9 November 1772 he was promoted to colonel.

He left France on 14 December 1776 with a letter of introduction dated 30 November from Silas Deane and reached Morristown on 8 May 1777. Washington was favorably impressed and sent Conway to Congress with an unusually commendatory letter. On 13 May he was elected brigadier general and was assigned to Sullivan's division. In the operations from the Brandywine to Germantown, he greatly impressed Sullivan. The group associated with the "Conway Cabal" was most usually accused of trying to undercut Washington's reputation,

especially among members of Congress, in favor of General Gates. On 14 December 1777, despite Washington's assertion that Conway's "merit . . . exists more in his own imagination than in reality," he was promoted over the heads of twenty-three other brigadiers to major general and inspector general. After the "cabal" collapsed, Lafayette refused to accept Conway as second in command for his projected expedition into Canada. Conway nevertheless joined Lafayette in a subordinate position to de Kalb, who had been appointed Lafayette's second in command, and continued his intrigues to get a separate command. On 23 March 1778 Congress directed Conway to put himself under McDougall's orders at Peekskill. On 22 April he wrote Congress a critical letter about its failure to give him a command, and he again raised the threat of resignation. Congress had by this time turned against him, and his resignation was accepted on 28 April. Conway, having heard that offensive words were said about him by Pennsylvania militia General John Cadwalader, challenged him to a duel on 4 July that resulted in an injury to Conway's cheekbone.

Conway returned to the French army and on 1 March 1780 he was named brigadier general of infantry; on 3 March 1781 he became colonel of the Pondichéry Regiment, and on 1 January 1784 was named *maréchal de camp*. Governor general of French forces in India as of 9 March 1787, he was elevated to governor general of all French forces beyond Cape of Good Hope on 14 April 1789. On 29 July 1790 he left the French service. In March 1792 the émigré princes gave him command of a projected army for southern France, which never developed. He became commander of the Sixth Regiment of the Irish brigade in the service of England in October 1794 but died shortly thereafter.

CONWAY CABAL. Winter 1777–1778. The name of Major General Thomas Conway has improperly been given to a secret movement by which the New England faction of Congress was trying to regain their lost leadership of the Revolution. The disasters suffered by the army under George Washington left many Patriots with reason to suspect that the Virginian was not up to the task assigned him, particularly when his failures were contrasted with the success of Major General Horatio Gates at Saratoga. Although there were many individual expressions of dissatisfaction, as in Conway's private letters to a number of other officers, certain politicians apparently got together to organize what could properly be called a cabal. The best-known leaders of this shadowy movement were Samuel Adams, Richard Henry Lee, Thomas Mifflin, and Dr. Benjamin Rush. Their cautious approach was to drop hints and suggestions in influential circles and to circulate an anonymous paper called "Thoughts of a Freeman." The latter was not only a formal attack on Washington's ability but also on his popularity. "The people of America have been guilty of idolatry in making a man their God," it said, borrowing a phrase from a letter of John Adams (quoted in Page Smith, *A New Age Now Begins*, vol. 2, p. 1020). But the leaders of the cabal wanted to find out how deeply rooted this popularity of Washington really was before they made a serious move to effect his ouster. What they did not know was that the President of Congress, Henry Laurens, was reporting on these machinations to his son John, a member of Washington's staff. It is probable that the elder Laurens knew that his son would pass on the substance of these letters to Washington, as he did.

Into this situation rushed Thomas Conway, a French officer of Irish birth who was one of Silas Deane's recruits to the American cause. After participating in the battles of Brandywine and Germantown as a brigadier general, Conway became critical of Washington's leadership. Conway also began pestering Congress with requests that he be promoted, even though Conway was the most junior of twenty-four brigadier generals in the American service at this time.

The sequence of events culminating in the controversy known as "Conway's cabal" may be said to have started the night of 28 October when the ever-conniving James Wilkinson, aide-de-camp to General Gates, passed on to Major William McWilliams, aide-de-camp to General Lord Stirling (William Alexander), a certain tidbit of headquarters gossip. General Conway, Wilkinson said, had written General Gates: "Heaven has been determined to save your country; or a weak General and bad Councillors would have ruined it" (Smith, vol. 2, p. 1022). Stirling immediately sent this information on to Washington.

What shocked Washington most was not the disparaging remark but the evidence that two of his subordinates

were in collusion to discredit him. Washington assumed that Gates had charged Wilkinson with passing on this information, which is unlikely. Washington's only action was to send Conway a brief note reporting what he had heard.

Conway immediately wrote back to protest that there was nothing improper in his conduct. Apparently sensing Washington's suspicion of collusion, he said he had written Gates on 9 or 10 October to congratulate him on his Saratoga victory; he admitted that his previously voiced criticisms of American military methods may have been in this letter but denied using the expression "weak general." Conway added that he was willing to have his original letter shown to Washington.

The affair might have ended on 14 November, when Conway sent Congress his resignation. As reasons he mentioned the criticism he had received in requesting promotion, but he particularly cited the promotion to major general of Johann de Kalb, who was Conway's junior in the French army. Congress did not act on the resignation but sent it to the Board of War. The latter was in the process of reorganization, but Thomas Mifflin was already its most powerful member and Gates soon became its president. During the delay in acting on Conway's resignation, some congressmen began to support a proposal that an inspector general be appointed for the army. On 13 December Congress adopted this proposal, and shortly thereafter Conway was given the post with the grade of major general. Washington viewed this development with disgust, and he knew that Conway's promotion would be strongly resented by the twenty-three brigadier generals who were senior to him. (Conway's promotion, incidentally, was "on the staff," so he had no command authority over the brigadiers who held their rank "in the line"; but this mollified the latter little if at all.) The new inspector general visited Valley Forge winter quarters and was received with icy civility. When Washington sent an officer to ask Conway how he intended to go about his new duties, the latter answered on 29 December with a general outline of his plans and then volunteered that, if Washington preferred, Conway would be delighted to return to France, where he had some business that needed his attention.

An interchange of letters followed in which Washington calmly and formally told Conway that, although the brigadiers were determined to protest his promotion, he (Washington) would always respect the decisions of Congress. The French officer then proceeded to impale himself on his own pen. Conway wrote:

The general and universal merit which you wish every promoted officer might be endowed with is a rare gift. We know but the great Frederick in Europe and the great Washington in this continent. I certainly never was so rash as to pretend to such a prodigious height. However, sir, by the

complexion of your letter and by the reception you have honored me with since my arrival, I perceive that I have not the happiness of being agreeable to your Excellency and that I can expect no support in fulfilling the laborious duty of an Inspector General. (Smith, vol. 2, pp. 1023–1024).

Quite apart from his anger at the Frenchman's hypocrisy in pretending a sincere parallel between him and Frederick, Washington was infuriated by Conway's accusation that Washington would not support him in the execution of his inspector general duties and by Conway's charge that he had not been properly received. On 2 January Washington forwarded this correspondence to Congress with a straightforward statement of his position that, though "my feelings will not permit me to make professions of friendship to a man I deem my enemy," he had every intention of working with Conway in the fulfillment of his duties (Smith, vol. 2, p. 1024).

Meanwhile there were developments resulting from Wilkinson's report of Conway's remark about "a weak General." Conway had seen Wilkinson and gotten a denial that the aide had uttered the exact words relayed to Washington. When Conway reported the occurrence to Mifflin, the latter was aghast at this breach of secrecy and wrote Gates to be more careful about his papers. Gates, in turn, was much disturbed, but he thought he saw a way of capitalizing on the blunder. He decided that Alexander Hamilton, Washington's aide, had taken advantage of being left alone in Gates's room during a recent visit and had secretly copied a letter; Gates believed he could use this to disgrace Washington and Hamilton. On 8 December, therefore, Gates wrote to Washington in feigned alarm: Conway's letters to him had been "stealingly copied"; having no reason to suspect any member of his own headquarters, he thought Washington could render "a very important service, by detecting a wretch who may betray me, and capially injure the very operations" that Washington himself was directing (Smith, vol. 2, p. 1024). Since he did not know whether Washington's note to Conway was based on information from an army source or from a congressman, Gates said he was reporting the matter to Washington and Congress simultaneously.

Gates had hoisted himself on his own petard. He learned from Washington that the information had come from Gates's own aide, and he got this news in a letter sent through Congress. Wilkinson had succeeded up to this point in shifting suspicion to Lieutenant Colonel Robert Troup, another aide to Gates and the officer who had carried the trouble-making letter from Conway. When Gates learned the truth about the leak and dressed Wilkinson down, Wilkinson challenged his commander to a duel, but the two men were reconciled before it took place.

Congressmen who had championed Gates as a possible successor to Washington were now faced with the two sets of correspondence Washington had sent them to review, which discredited both Gates and Conway while demonstrating Washington's professional conduct. At the same time, nine brigadier generals joined in a "memorial" to Congress protesting the promotion of Conway, and several colonels were preparing a similar paper objecting to Wilkinson's brevet promotion to brigadier for bringing Congress the news of Saratoga. Congress was in a difficult position for having promoted a pair of scoundrels.

On 19 January Gates reached York with the original of the famous letter, and Conway thought his position had been strengthened by this proof that he had not written the sentence Wilkinson had passed on to Stirling's aide. Conway put up a show of wanting to have the letter published, yet neither he nor Gates offered to let Washington see it. President Henry Laurens was not offered a look either; but after reading a copy secured from another source he wrote a friend that, although Wilkinson's quote was not verbatim, Conway's original was "ten times worse in every way" (Smith, vol. 2, p. 1025). Both Gates and Conway maintained in subsequent correspondence with Washington that the letter was harmless, but neither offered to send him a copy.

The attack on Washington had failed completely. Congress sent Gates, Conway, and Mifflin back to the army, and those rival authorities, the Board of War and the office of inspector general, ceased to represent any significant threat to Washington's position as commander in chief. Washington was able to establish a harmonious working relationship with Gates. Mifflin and Conway soon were taken completely off his hands.

COMMENTS

Historians disagree as to whether any real cabal actually existed. The consensus is that the ambitions of Gates and Conway matched dissatisfactions and concerns within Congress. Many members of Congress, even such supporters of Washington as John Adams, had their confidence shaken by the repeated British victories in the Pennsylvania campaign of 1777. They also feared the growing public adoration of Washington, despite these defeats, and hoped to protect civilian control of the military against what they saw as an incipient Caesarism and possible military dictatorship. They had no real cause for these latter fears, as Washington always adhered to a strict respect for civilian authorities, no matter how ineffectual and inept. After Conway was thoroughly discredited by his own clownishness, these rumblings that Washington should be replaced were calmed, though misunderstandings and disputes would certainly persist.

Much of this controversy must hinge on the question of when the normal opposition to any leader reaches the state of organization necessary to qualify it as a "cabal." It should be borne in mind, however, that Washington undoubtedly thought there was a cabal, regardless of what subsequent scholarship has concluded, and his reactions must be judged accordingly. One thing certain—and ironic—is that Thomas Conway's main contribution to the affair remembered as "Conway's cabal" was to wreck it.

CONYNGHAM, GUSTAVUS. (1747–1819). American naval officer known as the "Dunkirk Pirate." Ireland. Born in County Donegal, Ireland, in 1747, Gustavus Conyngham emigrated to Philadelphia in 1763 and entered the service of his cousin, Redmond Conyngham, who had founded a shipping house there in 1745. In September 1775 Gustavus sailed for Europe as master of the brig *Charming Peggy*. This was intended as a "powder cruise." Picking up a cargo of flax seed at Londonderry, along with Irish registration, he intended to return with a load of war supplies critically needed in the American colonies. At Dunkirk he took on a load of powder and, having been warned by French friends, unloaded it just in time to frustrate a search demanded by the local British consul, Andrew Frazer. He managed to pick up more war supplies off the Dutch island of Texel, but Frazer got word of this through a deserter while Conyngham was becalmed in Nieuport Canal. The British got permission from the Dutch to put a guard aboard the *Charming Nancy* and Conyngham was stranded in Europe.

On 1 March 1777 the American commissioners in Paris appointed Conyngham to command the lugger *Surprise*, which was owned partly by Congress and partly by William Hodge, a Philadelphia merchant responsible for finding ships and officers for the American navy. On 3 May Conyngham captured the British packet *Prince of Orange*. On his way back to Dunkirk he snapped up the

brig *Joseph* as well, and returned to Dunkirk just one week after his original departure with two valuable ships as prizes. The British ambassador in Paris, Lord Stormont (David Murray, second Earl of Mansfield), raised an uproar over this raid, which he called piracy, by an American ship fitted out in a French port. The red-faced comte de Vergennes (Charles Gravier) had no alternative but to order the arrest of Conyngham and his crew. Soon released, Conyngham was commissioned a captain in the Continental navy and given command of the *Revenge*. On 16 July 1777 he sailed on the first of the cruises into British waters that were to earn him the epithet "The Dunkirk Pirate." In a period of two months he raided the North Sea and the Baltic, circumnavigated the British Isles, and went safely into the Spanish port at Cap Ferrol. In this audacious venture into British home waters he took many prizes, terrified the coastal towns, and sent maritime insurance rates soaring. After destroying or capturing nearly twenty ships in just two months, Conyngham had become, in the words of Silas Deane, "the terror of all the eastern coast of England and Scotland."

In 1778 Conyngham used Spanish ports with great success, claiming another forty ships, until British pressure caused the Spanish to become less hospitable. Conyngham moved to the West Indies, took two valuable British privateers off St. Eustatius, and reached Philadelphia on 21 February 1779 with a cargo of military supplies. In eighteen months he had taken sixty prizes. On 27 April 1779 he was captured off New York City by the British naval vessel *Galatea* while sailing as a privateer aboard the *Revenge*, which had been bought by some Philadelphia merchants and converted to this new role. In view of his odious reputation, the British subjected him to unusually severe treatment, first in Pendennis Castle, Falmouth, and later in Mill Prison, Plymouth. On his third attempt, on 3 November 1779, he escaped with fifty other prisoners by digging out. He reached Texel and joined John Paul Jones aboard the *Alliance*, transferring shortly thereafter to the *Experiment*. On 17 March 1780 Conyngham was again captured by the British and sent back to Mill Prison. Here he remained a year before he was included in a prisoner exchange.

After the war Conyngham returned to the merchant service. He failed in his efforts to re-enter the navy and to get compensation from the government for his war services. He died in Philadelphia on 27 November 1819.

COOCH'S BRIDGE. 3 September 1777. To harass the advance of General William Howe from Head of Elk, Maryland, Maxwell's light infantry took up a position near Cooch's Bridge, Delaware, (sometimes called Iron Hill) on Christiana Creek about five miles northeast of Elkton, Maryland. On 2 September, Washington warned William Maxwell that the enemy would move in his direction the next day. About 9 o'clock the morning of the 3rd, Maxwell's pickets opened fire on the advance guard of Cornwallis's "grand division." Lieutenant Ludwig von Wurmb, commanding the leading element of jägers, brought his amusettes into action and then drove the Americans back by an envelopment and bayonet attack against their right. Maxwell was forced out of several delaying positions. The British light infantry came forward to support the Germans, and although the Americans delivered several close, well-directed fires, the running fight degenerated into flight. The Americans fell back on Washington's main body on White Clay Creek, some four miles north of Cooch's Bridge.

Carl Leopold Baurmeister, a Hessian officer, said the Americans left thirty dead, including five officers, but evacuated their wounded. The historian Christopher Ward accepts this figure, but he also mentions that other contemporary estimates ranged from Montresor's figure of twenty American dead left on the field to Marshall's estimate of forty American killed and wounded. Enemy losses were three killed and twenty wounded according to Montresor, or thirty killed and wounded according to Robertson.

The relatively minor skirmish gained notoriety from being the largest fight of the war to take place in Delaware, and because it is claimed to be one of the first places where the recently adopted Stars and Stripes flew in battle.

COPLEY, JOHN SINGLETON. (1738–1815). American painter. Massachusetts. Born in Boston on 3 July 1738, John Singleton Copley established himself as a professional portrait and pastel painter as a teenager. An exhibition of his painting “Boy with the Squirrel” in England in 1766 made him known in that country, gained him election to the Society of Artists, and earned him the support of fellow artists, including Benjamin West and Joshua Reynolds. Copley seems to have been in sympathy with the Patriot cause but was too engrossed in his art to let himself be diverted by politics. His father-in-law, Richard Clarke (1711–1795), was the merchant to whom was consigned the merchandise that figured in the Boston Tea Party, and Copley’s in-laws were all Loyalists, so in June 1774 the artist yielded to a long-standing desire to further his training in Europe and went to London. Here he met Sir Joshua Reynolds, visited the Royal Academy, was received by Governor Thomas Hutchinson and other Bostonians-in-exile, and then undertook a tour through Italy. On his return to London he was joined by his wife and children, and they soon established what was to be their permanent home on Hanover Square.

In the fashion of the times he painted historical scenes as well as portraits, and his “Death of the Earl of Chatham” was his most successful venture into that field. Copley presented it in the first-ever London exhibition of a single painting. During the Revolution he painted portraits of Loyalists, British officers and politicians, English gentry, and the children of King George III. Copley did not return to the United States, dying in London on 9 September 1815.

CORAM, LONG ISLAND, NEW YORK SEE *Fort George, Long Island, New York*.

CORBIN, MARGARET COCHRAN. (1752–1800?). American heroine. Pennsylvania. Born on

12 November 1752 in western Pennsylvania, Cochran (birth name) was four years old when her father was killed by Indians and her mother taken captive. Raised by an uncle, she married John Corbin, a Virginian, in 1772. Her husband, serving in the First Company of the Pennsylvania Artillery, was mortally wounded at Fort Washington on 16 November 1776. In the midst of the battle, Margaret Corbin stepped forward to take over his duties as matross on a small cannon, assisting the gunner with loading, firing, and sponging down the gun. While helping to keep the cannon in action she was severely wounded. One arm was nearly severed and a breast was mangled by grapeshot. Taken prisoner, Corbin was moved with other casualties to Philadelphia, where she was paroled and later assigned to the Invalid Corps. On 29 June 1779 the Executive Council of Pennsylvania granted her \$30 for immediate needs, which was the extent of their generosity. On 6 July 1779 Congress voted her a suit of clothes and allotted her half-pay for as long as she remained disabled. In 1781 the Invalid Regiment was moved to West Point, where Corbin stayed until she was mustered out in April 1783. Staying in the area, Corbin became a subject of steady complaint from the officers at West Point, who found her obnoxious as a hard-drinking, impoverished, and demanding veteran. She died around 1800 and is buried at West Point.

CORNPLANTER. (1732?–1836). Seneca chief. New York. Born at Conewaugus (now Avon, New York) in about 1732, Cornplanter was the son of John Abeel, an Albany trader, and a Seneca woman named Gahhononeh. Raised by his mother, Cornplanter may have been present at General Edward Braddock’s defeat in the French and Indian War in 1755. He and his uncle Guyasuta argued for the neutrality of the Iroquois Confederation, but by 1777 he seems to have come around to siding with the British in the war. As the war chief of the Seneca, Cornplanter played a key role in the siege of Fort Stanwix in 1777, defeating the New York militia at Oriskany, although he suffered heavy losses and the siege ultimately failed. Cornplanter led the Seneca in joining with the Loyalists in their devastating attacks on the Wyoming and Cherry Valleys in 1778, as well as helping

to defeat the American invasion of the Delaware country at Wyalusing. The following year he joined the British in another successful attack on the Susquehanna Valley. He and his allies were finally defeated by General John Sullivan's force at the battle of Newtown, on 28 August 1779. His participation in Indian treaties between 1784 and 1802, in which large areas were conveyed to the United States, made him so unpopular with his tribe that, for a time, his life was in danger. In 1790 he visited General George Washington to present Indian grievances. The following year he moved to a farm on the banks of the Allegheny, given to him by Pennsylvania in gratitude for his help in negotiating peace treaties. Cornplanter died there on 18 February 1836.

CORNSTALK. (1720?–1777). Shawnee chief. Hokolesskwa, as he was named, was a friend of the Moravians and played a role in the 1764 peace talks with Colonel Henry Bouquet. He commanded the Indians in their bold attack on Point Pleasant in Dunmore's War, 1774. An advocate of Indian neutrality in the Revolution, Cornstalk went to Point Pleasant in October 1777 to determine if U.S. troops intended to attack the Shawnee. Captain Matthew Arbuckle took him hostage, and the militia in the fort murdered Cornstalk, his son, and two other Indians, touching off a wave of warfare by the Shawnee that did not cease until 1794.

CORNWALLIS, CHARLES. (1738–1805). First marquess Cornwallis, British general and governor general of India. Charles Cornwallis was born in London on 31 December 1738. He was at Eton in 1753 and matriculated at Clare College, Cambridge, at Easter 1756. However, he chose the army over the university. On 8 December 1756 he obtained an ensign's commission in the First Foot Guards and in 1757 took leave to travel in

Charles Cornwallis. *The British general and nobleman, in a portrait (c. 1792) by John Smart.* © FITZWILLIAM MUSEUM, UNIVERSITY OF CAMBRIDGE, UK/BRIDGEMAN ART LIBRARY.

Europe with a Prussian officer companion and study at the Turin military academy. He broke off his tour to join Prince Ferdinand of Brunswick, to whose army his regiment had been assigned. He was aide-de-camp to the marquess of Granby, served at Minden in 1759, and in August became a captain in the Eighty-fifth Foot. In June 1761 he became lieutenant colonel of the Twelfth Foot, and he distinguished himself at Kirch Denkern on 15 July. In 1762 he was at Wilhelmstadt and Lutterberg. By the end of the Seven Years' War he was known as an experienced and able soldier, albeit one who had never held high command.

He had been member of Parliament for the family pocket borough of Eye in Suffolk since 1760 and moved to the House of Lords on the death of his father, the first earl Cornwallis, in 1762. Ever wary of executive power, he allied with the Rockingham Whigs and supported John Wilkes. In 1765 he voted against the Stamp Act and, when Rockingham came to power later that year, he was rewarded by being made aide-de-camp to the king and a lord of the bedchamber. He supported the repeal of the Stamp Act and a bill banning general warrants in 1766 but voted against the Declaratory Act. A close friend and former comrade in arms of Shelburne, in 1766 he

obtained from the Chatham ministry the post of chief justice in eyre south of the Trent. In 1769 he exchanged this post for the vice treasurership of Ireland; in 1770 he joined the Privy Council, and in 1771 he became constable of the Tower of London. In short, while he was too principled to be a successful politician, his integrity had the respect of the king and of others who disliked his views on America.

He was also beginning to find domesticity more attractive than active political life or high military command. On 14 July 1768 he married Jemima Tulkiens (1747–1779). They had two children, Mary (1769–1857) and Charles (1774–1823). Thus, when war broke out in America, his sense of duty to the crown had to be weighed against his family life as well as his objections to the way the American question had been handled.

ARRIVAL IN AMERICA

However, his views did not extend to sanctioning rebellion, and in the end, duty came before family. When war broke out in 1775, he at once sought military employment and was promoted to major general. He sailed from Cork in charge of ten regiments on 12 February 1776 under the escort of a squadron commanded by Sir Peter Parker. Their orders were to meet Henry Clinton at the Cape Fear River and from there to take action against the southern colonies, which the ministry wrongly supposed to harbor sufficient Loyalists to make the restoration of royal authority relatively easy. They were then to move north to reinforce Howe in New York. On top of the misconception about the southern Loyalists, the plan assumed that there would be time to reach Howe early in the campaigning season and made no allowance for Cornwallis's and Parker's late arrival. In fact, their last ship did not anchor at Cape Fear until 31 May. By then the southern Loyalists had been defeated and were unable to make contact with the expedition. After a failed attempt on Charleston, the combined force rejoined Howe on Staten Island in August, having succeeded only in delaying the assault on New York until dangerously late in the season.

NEW YORK AND NEW JERSEY

Before the month was out, Cornwallis was in action. He and Clinton led the troops that landed on Long Island on 22 August, and during the battle of the 27th he commanded the reserve division that swept through Jamaica Pass in the wake of Clinton's men. Later he blocked the retreat of the Americans' right wing and repelled their successive attempts to break through. He led the Kips Bay assault on 15 September, took part in the attack on Fort Washington, and on 18 November narrowly missed capturing the fleeing garrison of Fort Lee. He then led the

pursuit of Washington across New Jersey, through pouring rain along roads deep in mud. Forced to rest his exhausted troops at New Brunswick on the Raritan, he reached the Delaware to find Washington safely across, no boats on the British side, and winter closing in. Even Cornwallis, ever a bold and aggressive commander, could not contemplate a winter campaign in such conditions.

Cornwallis had supported Howe's slowness and caution throughout the 1776 campaign and approved of Howe's decision on 13 December to go into winter quarters. But he did not want to draw right back to the Raritan as Howe wanted. Now Cornwallis's bold streak came to the fore as he persuaded his chief to leave outposts along the Delaware with a supporting base twenty-five miles back at New Brunswick. His argument had some merit in it. Politically, the presence of British troops would encourage New Jersey Loyalists to commit themselves openly. Militarily, the risk of a major American counter-offensive was miniscule, and logistically the wider area of occupation could furnish supplies that would otherwise have to come from Britain.

Where Cornwallis and Howe went wrong was in supposing that Washington would not launch winter raids against one or more of the Delaware posts and destroy them in detail—as he soon did at Trenton and Princeton. Cornwallis's embarrassment was compounded by his failure on 22 January 1777 to trap Washington after he had pinned him against the river at Trenton, a rare tactical failure that may have obscured his partial responsibility for the strategic error. The consequences were grave. The rebel army had been encouraged at the very moment it seemed about to disintegrate. The British army retired to the safer line of the Raritan, abandoning the local Loyalists, encouraging the rebels, and losing much of the supply base Howe and Cornwallis had hoped to establish. The royal army at New York was to be dependent on transatlantic convoys for everything from flints to firewood for the remainder of the war.

For the rest of the winter and into the spring, Cornwallis was engaged in minor skirmishes around New Brunswick. After a short period of home leave he returned to take part in the abortive attempt to lure Washington into battle at Short Hills (26 June 1777). Having witnessed the failure to engage the American army in New Jersey, Cornwallis approved of Howe's plan to attack Philadelphia, and on 27 September he distinguished himself in leading the enveloping movement at Brandywine. He occupied Philadelphia, brought three battalions to reinforce Howe at Germantown on 4 October, forced the evacuation of Fort Mercer on 21 November, and had a brush with Washington's van at Matson's Ford on 11 December. With the end of

Surrender of Lord Cornwallis at Yorktown (1820). British troops under General Cornwallis surrendered to American forces on 19 October 1781, in Yorktown, Virginia, an event dramatized in this painting by John Trumbull. NATIONAL ARCHIVES AND RECORDS ADMINISTRATION.

the campaigning season he was allowed to go home on leave.

SOUTH CAROLINA AND GEORGIA

He returned to Philadelphia in the spring of 1778 as a lieutenant general and Clinton's second in command and prospective successor. On 28 June he took a leading role in repelling the American army at Monmouth, personally leading the counterattack on Nathanael Greene's men. In December 1778 he again went on leave, this time to attend his dying wife. He returned at the end of 1779 in time to take part in the planning and execution of the expedition against Charleston. With the surrender of the city on 12 May 1780, he was left behind to secure Georgia and South Carolina. He was not to launch any northward offensive that might imperil this primary task. Cornwallis's subsequent operations, culminating in the overwhelming victory over Gates's superior numbers at Camden on 16 August, wrecked almost all American resistance. Cornwallis raised thousands of Loyalist militia

and began to reorganize South Carolina into the American supply base the British army had lacked since 1775.

He had not, however, removed the danger of partisan action, as illustrated by Patrick Ferguson's disaster at King's Mountain on 7 October, nor the possibility of renewed invasion from North Carolina. The Loyalist militia seemed more intent on settling old scores than on providing security, and its soldiers struck Cornwallis as little more than disorderly "banditti." He argued that the answer was to keep up the momentum of success by overrunning both North Carolina and Virginia. He could then link up with Clinton on the Chesapeake and launch a joint attack on the middle colonies. By contrast, sitting still would allow the enemy to recover, expose his South Carolina posts and logistical base to attrition, and hand the initiative to the Americans. Pleading that Clinton was too distant to direct his operations, he obtained permission to correspond directly with London and used that consent to persuade the ministry to back his strategy.

SURRENDER IN VIRGINIA

King's Mountain temporarily deflected him from his expedition to secure his rear, and a sober consideration of his resources might have led him to do the same after Cowpens on 17 January 1781. Instead he invaded North Carolina, chased Greene all the way to the Dan without catching him, and scored an indecisive victory at Guilford Courthouse on 15 March. He then retired to Wilmington on the Cape Fear River, where he could be supplied by sea. But instead of staying there, or—better still—retreating to South Carolina, he struck into Virginia. When Clinton found out, he was displeased but accepted the *fait accompli*; subsequently, however, he demanded three thousand men to help defend New York. Cornwallis, who thought that success in Virginia was worth even the loss of New York, was dismayed. Deciding that he could not sustain himself in the Yorktown Peninsula with a depleted force, Cornwallis retired across the James River, inflicting a defeat on Lafayette at Green Spring on 6 July. At the last moment Clinton, under direct orders from Germain, allowed him to keep all his men and ordered him to set up a base at Old Point Comfort, incorporating Yorktown if it would strengthen the main position. Thus Clinton's weakness and Germain's interference bought Cornwallis back into the Yorktown Peninsula, where he would be trapped.

Cornwallis, deciding that Old Point Comfort would be hard to defend, confined himself to Yorktown and Gloucester, just across the York River. By 22 August he was in position and looking for reinforcement by sea. Thanks to De Grasse's occupation of Chesapeake Bay, it never came. When Graves approached the Bay in September, he found the French fleet and decided to fight De Grasse on the open sea. When Barras arrived, De Grasse became so strong that Graves could not hope to dislodge him. Washington and Lafayette joined hands on 14 October and proceeded to batter their way into Cornwallis's defenses. On 19 October 1781, seeing his position no longer defensible and with no hope of rescue by sea, Cornwallis surrendered.

THE IMPACT OF YORKTOWN

Yorktown did not end Britain's capacity to carry on the war. Only around five thousand men were lost there, and the main British army in America was still intact at New York. The French navy's local superiority was only temporary. The real blow was struck at London's willingness to carry on. The North ministry was forced out of office in 1782 and the new Rockingham administration began peace talks in Paris. Not all the responsibility belonged to Cornwallis: Yorktown followed from the ministry's dispersal of force in the face of a potentially more numerous enemy and its faulty assumption about the strength of

Loyalist support in the South. However, the Americans were at the end of their tether in 1781 and a more cautious commander might not only have saved his army but witnessed a British triumph. Cornwallis took great care of his men and was popular amongst them; on the battlefield he was formidable. Unfortunately, he combined these qualities with a bold, imaginative, and fatally flawed strategic sense.

GOVERNOR GENERAL OF INDIA

Yet Cornwallis, unlike Burgoyne after Saratoga, was hardly blamed at all. Allowed home on parole, he was offered (and refused) the governor generalship of India in May 1782. Shortly afterwards he was formally exchanged for Henry Laurens. He resigned as constable of the Tower after his friend Shelburne lost office in December 1783 but soon resumed the post's purely military duties. He rejected Pitt's and Dundas's renewed offer of India in 1784, but they approached him yet again when a vacancy occurred in 1785. Cornwallis was attracted, but mindful of the problems brought by divided command in America and probably aware of where weak central control had left Warren Hastings, he insisted on being empowered to override his council and being commander in chief. These requests being granted, Cornwallis accepted in February 1786.

In his seven years' tenure, Cornwallis attacked widespread corruption (though at the cost of weakening Indian participation in administration), separated the administrative and commercial wings of the company's service, and began to Anglicize the Bengal law courts and legal system. In 1791–1792 he demonstrated his logistical and tactical skills in the war against Tipu Sultan of Mysore but wisely avoided totally destroying his principality.

LORD LIEUTENANT OF IRELAND

After his Indian term expired in 1793, Cornwallis became master of the ordnance with a seat in the cabinet (1795) and lord lieutenant of Ireland (1797). Arriving in the wake of the great rebellion, he was determined to create peace within Ireland and encourage Irish acceptance of British rule. The key, as he saw it, was Catholic emancipation, and the great obstacle was the implacable opposition of the Protestant establishment to Catholic domination of the Irish Parliament. He therefore wanted to abolish the Irish Parliament and replace it with representation at Westminster—a solution acceptable to Catholics only if it came with emancipation. Consequently, he was very unhappy with Pitt's refusal explicitly to include emancipation in the Act of Union (1800) and also with the corrupt practices needed to

persuade the Irish assembly to vote itself out of existence. In 1805 he returned to India as governor general and died there on 5 October 1805.

CORPORAL PUNISHMENT. Like their civilian counterparts, military authorities feared the spread of insubordination and resistance from persons at the lower levels of society. The infliction of punishment preserved order. Enlisted men in the Continental Army not only suffered deprivations and hardships, but they also were subject to brutal corporal punishment. Officers, like the gentleman class in civilian society, did not receive corporal punishment; instead they were liable to correction by means of reprimand, fines, imprisonment, or dismissal from the army.

Americans became inured to physically brutal penalties under military authority during the French and Indian

War. Provincials serving with British regulars were put under all the severities of the British Articles of War, which sanctioned various forms of physical correction and floggings up to as many as one thousand stripes. At the beginning of the American Revolution, however, the military codes governing the colony and then state militias, and also the initial Articles of War invoked by the Continental Congress, were lenient in comparison to their British counterpart. The Congressional Articles of War of 30 June 1775 replicated the Massachusetts military code of April 1775; no death penalty was provided for desertion, mutiny, sedition, and treason, and flogging could not exceed the amount stated in the Bible—thirty-nine lashes. George Washington, as commander in chief, successfully prodded Congress to enact a sterner Articles of War, and on 20 September 1776 a new such document expanded the number of offenses meriting the death penalty to sixteen and set the limit of lashes per offense to one hundred. Washington tried in vain to persuade Congress to increase the number of lashes; he argued that there was too wide a gap in the maximum penalty of either a hundred lashes or death. Of course, there was a way to go beyond the restriction: for especially nefarious culprits, courts-martial ordered a hundred lashes for each count charged against a soldier.

Although corporal punishment of soldiers in the Continental Army did not reflect substantially the widespread use of torture by the British, various odd forms of physical correction were employed by the Americans, mostly in regard to crimes of less than maximum severity. For drunkenness, soldiers wore the “clog” (or log): they were shackled to a segment of wood weighing twenty to thirty pounds, which was dragged around wherever they went. A variation was to wear a three pound clog around one’s neck. Also reserved for minor offenses was “the cage,” a wooden structure in which a culprit, fed only bread and water, remained standing for up to thirty-six hours. This punishment seems to have been similar to the British army’s whirligig, in which a person stood and was whirled around.

Other than simple flogging, three means of correction induced great injury and pain. For the wooden horse, carried over from British practice, two boards were nailed together to form an inverted V. This device was given four wooden legs, and pieces of wood designating a horse’s head and a tail were attached to either end. The culprit was straddled over the sharp ridge, with hands tied behind and feet weighted down. The wooden horse was moved along, with vibrations causing pain and ruptures. Some persons undergoing this penalty were emasculated. Because of bodily injury, the use of the wooden horse was discontinued after the beginning phase of the war.

Corporal Punishment

Picketing, a punishment that appears to have been confined to cavalry and artillery units, often accompanied a flogging. The victim had his wrist tied to the top of an upright pole, and a heel rested on a sharp peg driven into the ground. The prisoner had to shift his weight to either his wrist or his heel, which in some instances was penetrated entirely by the peg. Because of the possibility of causing the permanent disability of a soldier, this punishment was seldom used by the Continental Army.

Running the gauntlet, a punishment chiefly for desertion, was used throughout the war, though infrequently. Eventually Washington refused to approve such punishment because it exceeded the number of lashes allowed by Congress and also left a prisoner disabled or even dead. However, American commanders outside the main army were apt to permit courts-martial to inflict running the gauntlet. A soldier running the gauntlet might have to pass through all of a brigade or even, in the rarest of situations, through the whole army. The victim was stripped to the waist and then compelled to proceed through parallel lines of soldiers, his progress being impeded by a sergeant going on ahead, moving backward, pointing a bayonet at the culprit's chest, thereby allowing soldiers, yielding hickory sticks, to make blows well laid on. A sufferer of this punishment was soon, in the words of a contemporary, "in one general gore of blood."

Flogging was the preferred correction, for trivial as well as major offenses. Although sentences for the same crimes varied, usually because of extenuating circumstances, patterns did emerge. For example, repeatedly being drunk brought twenty lashes; not cleaning arms, twenty-five; stealing the shirt of a soldier, fifty; and one hundred or death for desertion, plundering, or sleeping on duty. A man accused of the plundering of civilians might be summarily whipped. Stragglers could be whipped on the spot if they could not explain their absence from their unit. Flogging was a frequent occurrence at camp, sometimes occurring as many as ten times a day. Most of the punishments were inflicted at the regimental level, during morning or evening roll calls, or at guard mounting on the parade ground. The victim, stripped to the waist, was tied to a tree or post, called the "adjutant's daughter." Troops of his regiment (or, rarely, his brigade) witnessed the ordeal from a hollow square or parallel line formation. The punishment was under the direction of the regimental adjutant or, sometimes, the provost marshal. Regimental drummers and fifers—in cavalry units, the trumpeter—performed the whipping.

The preferred instrument for flogging, the cat-o'-nine-tails, consisted of nine knotted cords attached to a handle. Before fifty lashes could be delivered, the back of the victim "would be all out and like jell." Frequently

punishment was stretched over several days, "in which case the wounds are in a state of inflammation and the terror of the punishment is greatly aggravated." Usually the victim was given a lead bullet to chew on. A former drummer in the American army, Samuel Dewees, recalled that upon completion of a whipping, the victim was untied and laid down with his face to the ground, and then pack salt was strewed over his back. His comrades then took a small paddle-board and "patted" it down, beating it thus into the gashes, and then laid him by for awhile until he recovered a little. Cruel as it seems, the salt was actually a form of mercy, as it cleansed the wounds and enabled them to heal (Hanna, *Dewees*, p. 203).

Corporal punishment in the American Revolutionary army did not have the desired effect of making for a more disciplined body of troops. It did not reduce the rate of desertion; in fact, camp brutality undoubtedly was one of the factors that impelled men to desert. Moreover, the cruelty affected recruitment. As Lieutenant Colonel David Cobb of a Massachusetts regiment said, "the Continental officers are so cruel and severe" that "men can never be got to serve under 'em."

In the officer corps no protest mounted against corporal punishment. General Daniel Morgan, who did not resort to it, was close to being a lone exception; Dr. James Thacher, an army surgeon, spoke out against it; and Dr. Benjamin Rush, for a while Physician General of the middle department of the army, after the war, stated that corporal punishment "increased propensities to crimes" and that "a man who has lost his character at a whipping post, had nothing valuable to lose in society." The civilian population voiced little demand for army correctional reform. This lack of concern is attributable to the existence of physical punishment in civilian life for persons deemed to be of a lower class; a realization that a large number of soldiers were riffraff and therefore needed stringent discipline; and the belief that only a well-ordered army could win the war. Only toward the end of the war did Washington express any qualms about the use of corporal punishment. He had never shown any sympathy for soldiers being punished, being concerned only that the punishment fit the crime. In general orders of 12 November 1782, Washington noted that to "reclaim" soldiers "who are not lost to all sense of virtue and military Pride," different "modes of punishment may be introduced which by awakening the feelings of honor will have a better influence than corporal."

CORPS OF INVALIDS. The British army had long organized companies of men who were unfit for active service into garrison companies to guard fortifications and stores. On 21 April 1777 the Board of War recommended the creation of an eight-company Corps of Invalids, with a view to making use of veterans who were unfit for further field duty but still capable of limited service. Congress approved the recommendation on 20 June and named Colonel Lewis Nicola as commander of the Corps. Congress also directed the Corps to provide a "school for young gentlemen previous to their being appointed to the marching regiments," but this role was never actually performed. Nicola began recruiting in Philadelphia during the summer of 1777, and eventually established detachments at Boston and West Point, where the Corps performed the valuable service of manning the fortifications and guarding the stores at those locations. The Corps was disbanded between April 1783 and December 1784 at West Point. The states retained partial control over their men in the Corps, but never gave them a high priority.

COUNCIL OF WAR. During wartime a commander might call together a formal assembly of senior subordinates to advise him about significant issues facing the army, usually in some sort of operational emergency. The members of such a council of war would be asked to express their opinions, sometimes in writing, about several proposed courses of action. No commander was obliged to accept a majority opinion of his subordinates. However, he would disregard their opinion only for what he thought were good and sufficient reasons, as he assumed that the subordinates knew in greater detail whether the soldiers in their commands would obey any orders he cared to give. The fact that a commander called a council of war was not considered evidence of indecision on his part. In fact, it would normally be seen as a prudent management style by both the highly stratified British army as well as by the less hierarchical American army. A commander might be accused of contempt for the judgment of his subordinates if he did not make them party to major decisions; it was to his benefit both to solicit subordinates' ideas and to instruct officers in the rationale for a particular course of action.

Sometimes decisions weighed in council involved cultural norms as well as strictly military matters, as when repeated councils of war convinced John Burgoyne that he could not renege on his decision to surrender once he had made the offer to Horatio Gates at Saratoga. Washington used councils to sound out his principal subordinates about the state of the army, and more than once at the start of his tenure at the siege of Boston was told that his proposals were too bold and would not be carried out by the soldiers. Always reluctant to admit defeat, Washington could allow himself to be persuaded by a council of war that it was more prudent to retreat and live to fight another day, as when his subordinates voted ten to three on 12 September 1776 to evacuate Manhattan Island south of Fort Washington. A commander could also use a council of war like a modern "committee solution" to dilute his own responsibility for decisions that events might prove incorrect or hasty, as when Burgoyne canvassed his subordinates about how to escape the American trap at Saratoga. Like most modern well-run committee meetings, a council of war could be used to ratify decisions a commander had already made or, less honorably, to give retrospective cover for decisions for which a commander wanted to evade responsibility. When a council of war met to consider whether the column commanded by Lieutenant Colonel Roger Enos in Benedict Arnold's march to Quebec should turn back, Enos is said to have covered his own reputation by voting against the retreat after first assuring himself that the majority would vote the other way.

COWANS FORD, NORTH CAROLINA. 1 February 1781. Cowans was a private ford a few miles downstream from Beattie's on the Catawba River, which was almost five hundred yards wide at this point with a swift current. About midstream the ford split. The wagon ford continued straight ahead while the shallower horse ford turned south at a forty-five-degree angle, passed over the corner of a small island, and hit the shore several hundred yards below the exit from the wagon ford. General Nathanael Greene sent General William L. Davidson and more than six hundred North Carolina militia to prevent Cornwallis from crossing the Catawba at this point from the west to the east. (Greene was as yet unaware that General James Webster and Lieutenant Colonel Banastre Tarleton had already crossed the river at Beattie's Ford.) Davidson posted the largest portion of his force to cover the exit of the horse ford, with just a small outpost at the wagon ford, and stationed his mounted troops on a small hill a few hundred yards behind the river.

Cornwallis's advance unit, the Light Infantry of the Guards, commanded by General Charles O'Hara, attempted to force the crossing on 1 February. Their guide, a supposed Loyalist named Dick Beal, led the British into midstream and then deserted without telling them about the two exits. The Guards pushed straight ahead on the wagon ford, although they were under fire and men were being swept away by the current. O'Hara himself was thrown into the water when his horses fell. But the error turned out to be fortunate, for the bulk of Davidson's men could not fire on the British from their position at the horse ford. The Guards established a firm bridgehead on the eastern shore before Davidson could bring reinforcements from the position downstream. Davidson was attempting to rally his men to a new defensive position when he was killed. The militia scattered, and the action ended in American defeat. Tarleton pushed on later that day to rout other militia forces that were assembling at Tarrant's Tavern.

COWBOYS AND SKINNERS. The names "cowboys" and "skinnners" were applied to marauders operating in the Neutral Ground around New York City from 1776 until the end of the war. Although the names were loosely applied to all lawless bands and individuals, including those of no political affiliation, the cowboys were generally considered to be Loyalists and the skinnners rebels. The cowboys' main occupation was stealing cattle and selling them to the British garrison in New York City. The skinnners tried to stop the cowboys. Both groups also provided intelligence information about the activities of the other side.

COWPENS, SOUTH CAROLINA. 17 January 1781. Earl Cornwallis learned in late December 1780 that Brigadier General Daniel Morgan was operating against Ninety Six with a force of dragoons and light infantry. In response, he dispatched Lieutenant Colonel Banastre Tarleton to protect Ninety Six and then drive Morgan from South Carolina. Morgan already had a well-deserved reputation for his audacity at Quebec and for leading riflemen at Saratoga. His presence in the main British force's rear with sizeable force presented a very real threat to British plans for a winter advance into North Carolina. Cornwallis could not start north until Morgan's threat was eliminated.

Cornwallis knew that the Continental Southern Army, under Major General Nathanael Greene, was at least one hundred miles away from Morgan, and that his own British force lay between them. With a numerical

superiority of two to one located between Greene and Morgan, Cornwallis saw an opportunity to destroy Morgan. Tarleton proposed moving toward Ninety Six with his legion and other troops. He would protect the post and either destroy Morgan or drive him toward Kings Mountain. At the same time, Cornwallis was to move from Winnsboro and cut off Morgan's escape route in case he eluded Tarleton.

After five days' rapid march, Tarleton made a surprise river crossing that caused Morgan to evacuate his temporary Burr's Mill camp early on 16 January. Morgan had already ordered South Carolina militia under Colonel Andrew Pickens to withdraw to the northwest toward a road junction called the Cowpens. As they did so, they cleared readily available supplies from the route that Tarleton's pursuing British had to follow.

Morgan had officers with him who lived nearby and knew the country intimately. The Cowpens road junction was utilized repeatedly by both sides during the last seven months' campaigning because it provided access to river fords and a good campsite and was well-known to any arriving reinforcements.

By midafternoon on 16 January 1781, Morgan reached the crossroads and conducted a reconnaissance. He first planned for a battle in case he was attacked, but later opted to force a fight on Tarleton. The Cowpens had the obvious advantages of forage and of being easy for the militia reinforcements to find. Morgan sent word to Pickens and other militia leaders to meet at the Cowpens. Morgan also ordered an available cattle herd slaughtered to feed his men.

THE BATTLEFIELD

Approaching the crossroads from the south, the British would follow the Green River Road through a tree-dotted flat area clear of underbrush that rose gradually for about five hundred yards to a "military crest." About seventy yards farther north was a geographical (or true) crest some seventy feet in total elevation. About five hundred yards behind this, across a grassy swale, was another crest just south of the intersecting road leading southwest toward the Pacolet River and northeast toward the Broad River. As the British proceeded up the road, tree cover increased slightly, but there was very little underbrush, the result of innumerable campfires since the preceding August. There were at least three springs on each side of the road. These fed into boggy ground where thick stands of cane grew; these constricted the battlefields and, later, protected American flanks.

Morgan's troops included three hundred Continental infantry from Delaware, Maryland, and Virginia under Lieutenant Colonel John Eager Howard of Maryland. Lieutenant Colonel William Washington of Virginia led

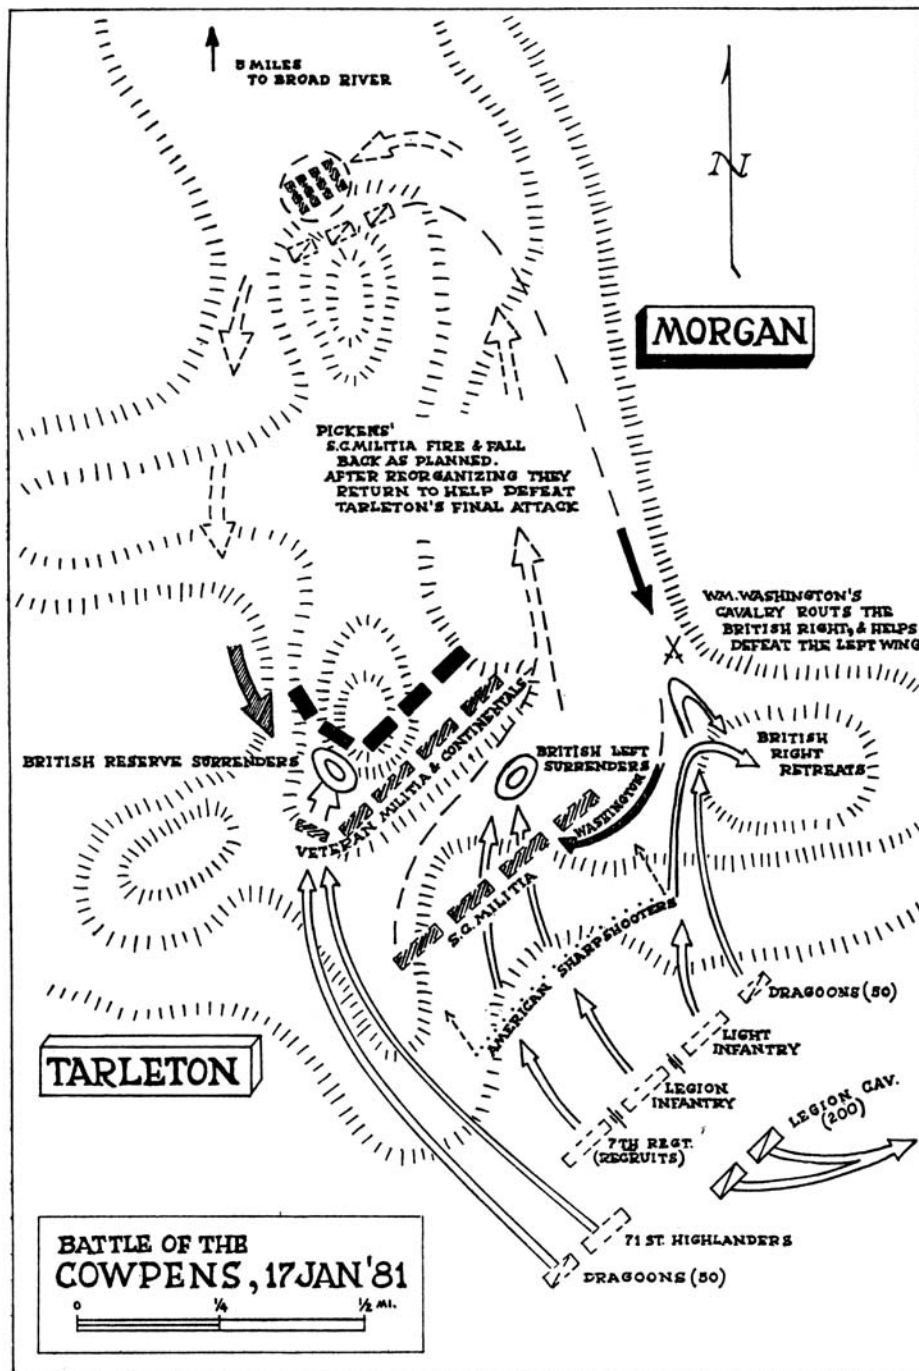

some seventy-two Continental light dragoons. There were state troops from South Carolina and Virginia, some of whom arrived just before the fighting began. There were also Virginia, North Carolina, South Carolina, and Georgia militia, many of whom were riflemen.

Over the night of 16–17 January, Morgan spent a great deal of time telling his officers what was expected of them. As more troops came in, he decided he would fight and went through the process again. Morgan carefully instructed the officers where to position their men when final deployments were made. A forward skirmish line with over 150 picked riflemen from both Carolinas and Georgia would take position on the southernmost rising ground. On the American right, the terrain was steeper and faced low, boggy ground. Major Charles McDowell of North Carolina commanded at least five militia companies from that state on this (western) side. On the left, Captain Samuel Hammond commanded South Carolina state troops and three small companies of Georgia militia. All these skirmishers were to fire and withdraw after forcing the British to deploy. Hopefully, they would then take up positions in the main militia line.

The second line, comprising most of the South Carolina militia and reinforced by the skirmishers, was commanded by Colonel Andrew Pickens of South Carolina. His men were placed north of the military crest and slightly below it, some 150 yards behind the skirmish line. This reverse slope defense offered some concealment. Pickens's militia brigade contained four battalions and numbered well over eight hundred men; Tarleton later claimed some one thousand men were positioned here. The militiamen were told to fire twice at close range, aiming for British officers and sergeants. When the enemy got close enough for a bayonet charge, the second line was to withdraw through the third line. Here they could reassemble behind the third line's bayonets.

The third, or main, battle line was 125 yards forward of the northern geographical crest and 150 yards down the slight grade behind the second line. Commanded by Howard, about 300 Continental infantrymen formed the main opposition for Tarleton. Four Delaware and Maryland Continental companies were in the center. Three companies of Virginia militiamen formed a battalion to their left under Major Francis Triplett. On the right, another Virginia battalion was posted under Major Edmund Tate. This battalion was an odd composition because, from right to left, there was a Virginia Continental company, a Virginia state troops company, and an Augusta County militia. Attached to each flank were small companies (about twenty-five men in each) of North Carolina militiamen. The third line had approximately 550 to 600 men covering a front of 220 yards.

The reserve consisted of Washington's 72 Continental light dragoons, Georgia major James McCall's 45 mounted

THE GALE GROUP.

South Carolina state troops dragoons, another 45 horsemen armed only with sabers, and some volunteer dragoons. The mounted men were posted about 150 yards behind the third line slightly behind the high ground.

Long after the battle, many men related that Morgan had challenged his militiamen to fire two shots. He reminded them of what the British and Tories had done

to their property and their kinfolk. He may have shown the scars of the famous flogging he had taken from the British years ago, but no one mentioned him doing so. Less dramatic, but probably more important, Morgan sent his men into battle fed and rested. Long before the British completed their exhausting twelve-mile march to the battlefield, the Americans were in position and waiting.

TARLETON'S APPROACH

Giving his men little sleep, Tarleton beat reveille at 2 A.M. and left camp at 3 A.M. The British marched northward led by three light infantry companies. Behind them came the British Legion infantry, the Seventh Regiment of Foot, the Seventy-first Regiment (Fraser's Highlanders), a Royal Artillery detachment with two 3-pounder cannon, 50 troopers of the Seventeenth Light Dragoons, and the British Legion cavalry. A company of about 25 men under a local Tory, Captain John Chesney, was also present, serving as guides. Total strength was over 1,150. The 250 infantry and over 250 dragoons of his British Legion, the 50 men of the Seventeenth Light Dragoons, 25 artillerymen, and over 249 Highlanders of the Seventy-first Regiment's First Battalion, and a light infantry battalion of over 135 men were veteran troops. The Seventh Regiment's 177 enlisted men were recruits originally destined to garrison Ninety Six. The guarded baggage wagons followed as rapidly as they could.

Many authors have accepted uncritically Morgan's figure of eight hundred men, claiming that Tarleton had numerical superiority. To explain the victory, these partisans have suggested that Morgan's men were better than the British forces because the militiamen were veterans of partisan, backcountry warfare and superb shots. More recent research, using pension records, suggests that Tarleton's statement that the Americans had more men than he is supported.

Feeling their way cautiously for over two hours, the advance guard still reached Thicketty Creek an hour before dawn, sunrise on 17 January coming at about 7:36 A.M. Tarleton sent forward a cavalry that soon made contact with an American patrol commanded by Captain Joshua Inman. At least one prisoner was taken, a Continental dragoon sergeant whose horse had been shot down. Learning Morgan's camp was within three miles, Tarleton sent Captain David Ogilvie forward with two troops to reinforce the advance guard and feel out the American position. At about 6:45 A.M., Ogilvie rode out of the woods bordering the southern extremity of the Cowpens. The noise of moving men trying to be quiet alerted the troopers that a sizeable force was immediately ahead. Meanwhile, Tarleton interviewed the prisoner and learned in no uncertain terms that Morgan was intending to fight. Ogilvie's report, coupled with the new intelligence, forced a dilemma on Tarleton. Was the force ahead only a rear guard covering a retreat or was it Morgan's whole force? The situation was critical for Tarleton because he knew American reinforcements were coming to Morgan while his own force would get no larger.

Although his troops had just marched some twelve miles over difficult, wet terrain in darkness, Tarleton wasted no time getting ready to attack. Chesney's guides

briefed him accurately on this well-known spot. He shifted his leading troops into a line east of the road about four hundred yards in front of the first American position. Then, with orders to drive in the skirmishers, the men advanced about three hundred yards and began forcing the riflemen back. After passing the boggy ground in front of McDowell's position, he deployed for a frontal assault.

From left to right he placed the Seventh Regiment west of the road. East of the road, he posted the Legion infantry and the light infantry. One three-pounder went into action in the road, the other in the middle of the Seventh Regiment. On each flank, Tarleton posted fifty horsemen, the Seventeenth Light Dragoons troop was on the right, Ogilvie's Troop on the left. A scattering fire among the Seventh Regiment broke out, probably because its commander, Major Timothy Newmarsh, was wounded, but with this exception the line moved forward with good discipline. Waiting as a reserve in the left rear of the Seventh Regiment were Fraser's Highlanders. The British Legion dragoons took a position on the road to take advantage of any opportunities.

As the British advanced and then deployed, the first-line skirmishers drifted rearward, taking positions on Pickens's flanks. They continued firing as the British advanced at a trot. When the range closed within fifty yards, ten-man groups of sharpshooters slightly in advance opened fire on the British leaders and then ran back to the ranks. This was not just an attempt at attrition; these men were tempting the British to fire while still beyond effective range. After the British advanced another ten yards, the militia battalions began firing volleys. Reinforced by the riflemen from the first line, the aimed rifle fire was devastating. Over half the British casualties occurred during this phase of the action, and about 40 percent of the officers went down. The four militia battalions got off five volleys but only one had time to fire twice. The disciplined British infantry kept coming because they had been trained to assault militia riflemen immediately rather than engage in a gun fight. The militia broke ranks and ran back, passing through the main line where openings had been left for their passage; then the main line closed up to present a solid front.

After driving back the militia line, Tarleton reformed his infantry and resumed the attack. Howard's line opened up with steady volley fire once the British infantry was in range. The British were checked but not stopped. Firing volleys at a distance well under forty yards, Tarleton commented that "the fire on both sides was well supported and produced much slaughter." This firefight lasted less than ten minutes.

Trying to break the stalemate after only a minute or two of volley firing, Tarleton ordered up the Seventy-first and sent the flanking dragoons to envelop the Americans. The Seventeenth Light Dragoons charged past the American left, passing through the flankers and falling upon the reforming militia. The surprise was so total

Cowpens National Battlefield. A restored cabin dating from the 1830s sits on the grounds of Cowpens National Battlefield in South Carolina. © WILLIAM A. BAKE/CORBIS.

that one man later reported the fifty or so men as four hundred. They were counterattacked by Washington and McCall, who outnumbered them four to one at the point of contact. The British dragoons fled after one-third were struck down.

Major Arthur McArthur was already moving the Seventy-first Regiment forward to envelop the American right, following behind Ogilvie's dragoons. They were delayed by McDowell's North Carolina militia, who slowed them for perhaps three minutes. As the Highlanders overran the militia, Howard ordered his right company, Captain Andrew Wallace's Virginia Continentals, to change front to meet the new threat—a tactic known as "refusing a flank." Wallace's company started the maneuver but did not complete the evolution. They were ordered rearward to sort themselves out. Further confusion ensued because the Highlanders fired a volley at precisely the right time, killing the commander of the next company on the third line. His replacement did not know what had been ordered and so ordered the company off the line. Each adjacent unit then withdrew, and the entire Continental line started rearwards, but in good order, reloading as it

went. To make the best of a movement that could not be stopped, and seeing that it might be a good idea, after all, to extricate his entire line from a bad situation, Howard decided to continue withdrawing to a new position.

Morgan rode up in alarm but Howard reassured him, and Morgan went off to mark a spot where the Continentals would halt, turn about, and fire. The Scots rushed forward in a loose formation, followed by the other British units. As the American infantry moved back, Washington, reforming after dispatching the Seventeenth Light Dragoons, now ordered his men against Ogilvie on the American right. Wheeling about, he rode back through the British, scattering the legion dragoons. Washington sent word to Morgan that the British had lost unit cohesion and that they were running like a mob.

As the first Continental companies reached their new position; Howard ordered them to face about and fire. The British, charging in pursuit, were within fifteen yards when the Continentals turned, fired from the hip, and charged with the bayonet. At about the same time, Washington and McCall hit the Highlanders' left flank and rear. The surprise fire and bayonet charge proved too

much for troops who had lived the last week on low rations and little sleep, had then completed a four hour march over wet roads, had attacked a good half mile, and now supposed victory was at hand. Suddenly hit by the surprise volley of buck and ball at less than fifteen yards, those men still on their feet were splattered with blood and gore. The Scots were seized with an “unaccountable panic” and fled. The Highlanders tried to rally after a short distance but Pickens’s militia appeared on their flank and rear, firing at long range. With most officers killed or wounded, the Highlanders gave up. The Americans continued the pursuit and those infantrymen who tried to stand were overwhelmed. The American leadership acted quickly to keep their men from exacting “Tarleton’s Quarter.”

Tarleton did not quit. He rode back and ordered the British Legion dragoons forward in a counterattack he thought might win the day, or at least save the artillery. The dragoons rode off and left a frustrated Tarleton behind. The handful of British artillerymen went down fighting as they were overwhelmed by Howard’s infantrymen. All were killed or wounded defending the guns.

Some forty men of the Seventeenth Dragoons and fourteen officers rallied around Tarleton as he rushed to save the guns. Tarleton and his small force were driven back as Washington followed in hot pursuit. Washington was well in advance when three British officers turned back for a dramatic finale. In the first exchange, Washington’s saber was broken. His opponent was shot by a “little waiter” (or orderly). An American sergeant major then wounded the third officer. This celebrated encounter was later romanticized by a fanciful painting; Howard summed it up by saying that one British officer was thought to be Tarleton. In retrospect, it is most likely the three officers were subordinates, including at least one from the Seventeenth Light Dragoons.

Retreating, Tarleton came upon his wagon train and found the guards had fled. American militia dragoons were already looting the wagons. Tarleton’s men drove off the Americans, burned what little they could, and rode for the main British camp. After rounding up some two hundred dragoons, Tarleton crossed the Broad River and reached Cornwallis on 18 January.

Morgan wasted no time. Leaving local militia behind to take care of the dead and wounded, he gathered what booty he could use and marched the prisoners off the battlefield before noon. Reaching the north side of the Broad River six miles away, he crossed and then camped to allow his detachments and stragglers to catch up.

NUMBERS AND LOSSES

Less than an hour’s fighting cost the British over 100 killed and 200 wounded. All those reported wounded were captured, and at least an additional 600 unwounded

were taken prisoner. Officer casualties are confusing, but at least ten were killed and another 29 captured. Sixty african americans accompanying the baggage were also captured; they were distributed under receipt to various militia officers, including two to Morgan. The booty included 100 dragoon horses, 800 muskets, 35 wagons, the colors of the Seventh Regiment, a traveling forge, and the British music (the fifes, drums, and trumpets of the British were kept as trophies). American losses were 24 killed and 104 wounded.

COMMENTS AND CONTROVERSIES

The Battle of Cowpens destroyed Cornwallis’s light infantry. To recapture them, he embarked on a pursuit of Morgan, and then Greene, that almost destroyed his main force. Another consequence was that it raised patriot morale, just as Greene had ordered when he sent Morgan west to “spirit up the people.”

Tarleton’s reputation did not suffer greatly. He was still a feared opponent until captured at Yorktown. Until then, he continued to conduct slashing raids against the Americans. Cornwallis officially exonerated Tarleton, but the Seventy-first refused to serve with him again.

Morgan’s Cowpens victory is a classic, the best American tactical demonstration of the war. Morgan combined his own charismatic leadership skills with superb junior officers (Howard and Washington, in particular, but the captains under them were also outstanding, especially Delaware’s Robert Kirkwood). He got the most out of a potentially disastrous mix of Continentals, state troops, and militia who had all suffered at British hands.

Morgan certainly used an unusual deployment to maximize his own men’s weapons while taking advantage of a British tendency to fire high. By utilizing a reverse slope defense, Morgan placed the British against a lightning skyline and firing downhill, leaving them to overshoot. The reverse slope also concealed many Americans from Tarleton. The progressively stronger American lines depleted British morale and stamina as the Americans forced their opponents to attack them head-on, because each line was covered by springs, boggy ground, and canebrakes. Even with more men than Tarleton and with all his other advantages, Morgan was lucky, but winners tend to make their own breaks and take advantage of situations as they develop.

While Howard’s infantrymen stood fast, exchanging volleys with the British, Washington obeyed his orders to take advantage of opportunities. The American dragoons achieved mass against each British flank attack in succession. They simply overwhelmed their opponents. Using shorter interior lines, the American dragoons were able to defeat both British mounted thrusts in detail, then attack down the battlefield to ensure the rout.

Like many other backcountry battles during 1780 and 1781, Cowpens was over fairly quickly. In some accounts, it could be interpreted as lasting less than thirty-five minutes. The rapidity of troop movements and the sudden collapse are reflected in the casualty totals. As with other short, vicious fights, the loser suffered greatly compared to the winner. While the Americans could replace most of their losses, the British could not. In order to retake his men, Cornwallis overstretched his supply lines and marched his army into the ground. As events played out, Cowpens was one step on the road to Yorktown.

CRAIG, JAMES HENRY. (1748–1812). British officer and colonial governor. James Craig was born in Gibraltar in 1748, the son of Hew Craig, a Scots judge in the fortress. Gazetted ensign in the Thirtieth Foot in 1763 when he was fifteen, he was allowed to attend military schools in Europe before joining his regiment. Promoted lieutenant in the Forty-seventh Foot in 1769, Craig returned to Gibraltar where in 1770 he became aide de camp to the governor, Colonel Robert Boyd. He was promoted captain on 14 March 1771. In 1774 he accompanied his regiment to America, where in 1775 he became involved in the War of American Independence.

Seriously wounded at the taking of Bunker Hill in June 1775, he was moved to Canada. Here he took a significant part in turning back the last American attempt to sustain a foothold on the St. Lawrence at Trois Rivières on 8 June 1776. Afterward he participated in Guy Carleton's advance to Ticonderoga. In 1777 he was with Burgoyne when he took Ticonderoga and was wounded during the discomfiture of the American rearguard at Hubbardton on 7 July. At Freeman's Farm (the first battle of Saratoga), he so distinguished himself that he was sent home with General John Burgoyne's dispatches and in December 1777 was rewarded with a majority in the

new Eight-second Foot under Colonel Francis MacLean. He returned with his new regiment to America, where he served at first in Nova Scotia. In June and July 1779 he took part in MacLean's Penobscot expedition to Maine and in the defeat of the American force sent to dislodge him. In 1780 he commanded four companies of the Eight-second sent from New York on 16 October with Alexander Leslie's diversionary expedition to the Chesapeake. The force reached Charleston, South Carolina, in December.

As General Cornwallis prepared to strike deep into North Carolina, Craig was sent to seize Wilmington, which offered a convenient supply port closer to his line of operations than was Charleston. With about 450 regulars Craig took the place, almost without resistance, on 1 February 1781 and held it for two weeks. During this time he generated so much Loyalist support that the rebels afterward found it impossible to raise troops or supplies in the area. After the battle at Guilford Courthouse, Cornwallis retired on Wilmington and marched thence to Virginia, leaving Craig to hold the town and conduct raids against American targets. In July he commissioned the formidable partisan David Fanning to raise and lead local Loyalist forces, while Craig conducted a number of skillful hit-and-run operations of his own, including that on New Bern in early August. He evacuated the town on 18 November to avoid being cut off by the American regulars Arthur St. Clair was taking south to reinforce Nathanael Greene. Reaching Charleston, he was posted on Johns Island, which he held until the end of hostilities. He was promoted lieutenant colonel in the Sixteenth Regiment before he left America.

After the war he was sent with the Sixteenth to Ireland, where in 1790 he was promoted colonel. He traveled in Europe to study Prussian military methods and became the first regimental commander to adopt David Dundas's new drill method. In 1794 he served with the duke of York in the Netherlands, first as adjutant general and from 3 October as a major general. In 1795 he commanded the first landing against the Dutch at the Cape of Good Hope and held out until the main army arrived. After the Dutch surrender on 14 September he was appointed military governor and remained at the Cape until 1797. In that year he was recalled and knighted prior to taking up a divisional command in Bengal, where he prevented a mutiny. He was promoted lieutenant general on 1 January 1801, and returned to England in 1802 to command in the eastern district. In March 1805, though ailing, he was promoted a local full general and sent with seven thousand troops to cooperate with Russian and local forces in the Kingdom of Naples. After Austerlitz he sensibly retired to Sicily, where in March 1806 bad health obliged him to hand over to general John Stuart. On 29 August 1807 he became captain general and governor in chief of British North America, an office beset by factional rivalry within the Canadas and by a

growing American threat without. He improved the defenses of Upper and Lower Canada and, while his political activities met with mixed success, he laid the foundations for the French Canadian loyalty that helped to defeat the American invasion of 1812. Compelled to resign by his deteriorating health, he left North America in June 1811. Promoted full general on New Year's Day, he died in London on 12 January 1812.

CRAIK, JAMES. (1730–1814). Chief physician and surgeon of the Continental army. Scotland. Born near Dumfries, Scotland, James Craik was the illegitimate son of a member of the British Parliament. The family's gardener was the father of John Paul Jones. Craik studied medicine at Edinburgh and then joined the British Army, serving in the West Indies. In 1751 he quit the army and moved first to Norfolk and then Winchester, Virginia. He was physician at the fort of Winchester, and on 7 March 1754 he became the surgeon of Colonel John Fry's Regiment. The next year he was with General George Washington at Great Meadows, tended the mortally wounded Edward Braddock after the latter's defeat, and he became Washington's chief medical officer when the latter became commander in chief of the Virginia forces on 14 August 1755. Thereafter Craik was closely associated with Washington, accompanying him on a trip to the interior in 1770 and becoming senior medical officer in 1777 of the military district bounded by the Hudson and Potomac Rivers. He organized the hospitals for the comte de Rochambeau's expeditionary force, became chief hospital physician of the Continental Army on 6 October 1780, and chief physician and surgeon of the army on 3 March 1781. He warned Washington of the "Conway Cabal," naming Thomas Mifflin as a conspirator. Craik was present at the surrender at Yorktown and served in the army until 23 December 1783. That same year he helped to create the Society of the Cincinnati. He then moved to Alexandria, Virginia, to be near his friend Washington, accompanying him on his western journey in 1784. He returned to the army briefly as its physician-general on 19 July 1798 during the French war crisis. He attended Washington in the

latter's final illness, and is often blamed with hastening Washington's death. He died in Alexandria on 6 February 1814.

CRANE, JOHN. (1744–1805). Continental officer. Massachusetts. Born in Braintree, Massachusetts, on 7 December 1744, John Crane served in the Seven Years' War, enlisting to fill his father's place at the age of 15. After the war he became a housewright. He was one of Boston's Sons of Liberty and took part in the Boston Tea Party. During that action, a tea chest fell on Crane as he was working in the hold, knocking him unconscious. Believing he was dead, his companions nearly buried him, but he revived before they could complete the task and later recovered. The next year, 1774, he moved to Providence because business in Boston was at a standstill. As a captain in Richard Gridley's regiment of Massachusetts artillery he took part in the siege of Boston (3 May 1775). Meanwhile, he was active in skirmishes at the Neck (near Marblehead), and on 8 July he led a successful attack against an advance post. On 10 December 1775 he was named the first major in Henry Knox's Continental regiment. He was wounded in the foot on 14 September 1776 while shelling a man-of-war in the East River. On 1 January 1777 he was named a colonel in the Third Artillery. After raising this regiment he was mentioned for his service in John Sullivan's operations at Newport and in the defense of Fort Mifflin (Red Bank), New Jersey. On 17 June 1783 he took over from General Knox as the commander of the Continental artillery. On 30 September he was brevetted brigadier general, resigning on 3 November 1783. After the war he went into the lumber business, but failed at this enterprise. He moved to a 200-acre land grant at Whiting, Maine, which he had received in recognition of his war service. In 1790 he became a judge in the court of common pleas, holding that position until his death on 21 August 1805.

CRAWFORD, WILLIAM. (1732–1782). Continental officer. Virginia and Pennsylvania. Born in what became Berkeley County, West Virginia, in the northern part of the Shenandoah Valley, William Crawford's long association with George Washington started when the latter came to the frontier in 1749 to survey the vast holdings of Lord Fairfax. Washington and Crawford, both surveyors and land speculators, became friends during their exploration of Virginia's western claims. They both volunteered to serve during General Edward Braddock's expedition against Fort Duquesne in 1755, Crawford being commissioned an ensign. He was promoted to captain of the Virginia volunteers, serving under Washington in the 1758 campaign led by General John Forbes.

BEFORE THE REVOLUTION

After the Seven Years' War ended, Crawford and Washington continued their land speculation in the western area claimed by Virginia and Pennsylvania. Following brief service in Pontiac's War, Crawford and his slaves built a cabin in 1765 at Stewart's Crossing (near modern Connellsville, Pennsylvania), about 35 miles southeast of Pittsburgh, and cleared nearly 400 acres. Joined by his wife and three children in the spring of 1766, Crawford established himself as an Indian trader, surveyor, and farmer. In 1770 Washington again visited Crawford, and from 13 October to 25 November the two men traveled extensively through the Ohio Valley, claiming prime tracts of land for their families. Washington referred to his lands, which totalled more than 40,000 acres as "the first choice" and "the cream of the country."

In May 1774, during Dunmore's War, Crawford was commissioned captain. On 8 May 1774 he wrote Washington that he was starting for Fort Pitt with 100 men, and on 20 September, having meanwhile been promoted to major and given command of 500 men, he wrote Washington that he was leaving that day from Fort Pitt with the first division of Virginia troops for a rendezvous with Dunmore's second division near the mouth of the Hocking River, where he had previously selected some fine bottom land for Washington. During the operations that followed, Crawford destroyed two of the three Mingo villages near the site of Steubenville. He built Fort Fincastle at Wheeling, rescued several white captives, and took fourteen Indians prisoner.

Crawford took both sides in the boundary dispute between Pennsylvania and Virginia. In 1770 he was appointed justice for what then was Cumberland County, Virginia, where his home was located. When Governor John Penn designated this region part of Bedford County, Pennsylvania, on 9 March 1771,

Crawford and Arthur St. Clair were among the local leaders who were appointed justices of the peace. Regarding Crawford, St. Clair wrote Governor Penn on 22 July 1774:

Captain Crawford, the president of our court, seems to be the most active Virginia officer in their service. He is now down the river at the head of a number of men, which is his second expedition. How is it possible for a man to serve two colonies in direct antagonism to each other at the same time? (Anderson, citing Washington–Irvine Corresp., p. 114)

THE REVOLUTION AND BEYOND

This border dispute was temporarily put aside with the advent of the Revolution, and Crawford became a prominent member of the Committee of Defense organized at Pittsburgh after a meeting on 16 May 1775. When Crawford offered his services to the Council of Safety in Philadelphia they were not accepted, but Virginia authorities welcomed his offer. He was appointed lieutenant colonel of the Fifth Virginia Regiment in early 1776. He quickly recruited troops, and on 11 October 1776 the Continental Congress appointed him colonel of the Seventh Virginia Regiment, backdating this commission to 14 August 1776.

Colonel Crawford, now in his mid-40s, led his regiment in the battles of Long Island, Trenton, and Princeton. During the Philadelphia campaign, Crawford commanded a detached company of scouts that saw action at the battles of Brandywine and Germantown, receiving praise from his fellow officers for his bravery. In November 1777 the Continental Congress asked that Washington send Crawford to serve under General Edward Hand at Pittsburgh as commander of regulars and militia in the Western Department. Crawford visited New York briefly to get instructions from Congress, then returned to the frontier. In the spring of 1778 he built Fort Crawford (so named by General Hand), and in May he took command of the new Virginia regiment that General Lachlan McIntosh had raised. McIntosh succeeded Hand in August 1778, and the next month Crawford's command included the troops at Fort Pitt, the militia raised on the frontier, and those from other parts of Virginia. Crawford was present at Fort Pitt when several Delaware leaders, including Captain Pipe (Hopocan, a Delaware chief), signed a peace treaty with the United States.

Meanwhile, Crawford had an important part in the establishment of Forts McIntosh and Laurens, and he commanded Fort Crawford. George Rogers Clark invited him to take part in his western operations of

1778, but Crawford did not feel he could leave his other duties and declined. When Forts Laurens and McIntosh were abandoned in August 1779, the Indians pushed their raids deeper into the white settlements of the Ohio country. Crawford led a number of small punitive expeditions in retaliation. In 1779 he also took part in Colonel Daniel Brodhead's expedition. The next year he visited Congress and succeeded in getting badly needed increases in appropriations for further western operations.

Crawford had long advocated an offensive against the Sandusky region, but it was not until 1782 that renewed Loyalist and Indian actions stirred the settlers and Congress into organizing such an expedition. Now 50 years old and the veteran of many battles with the Indians, Colonel Crawford quickly volunteered to serve, accepting command of a group of volunteers.

When the assembled U.S. forces met on the Ohio, Crawford was elected to command the expedition. Crawford's force of 468 men found only deserted villages as they moved through Indian country. Running short of supplies, Crawford had already decided to turn back when the Indians attacked. In what is known as Crawford's Defeat, 4–5 June 1782, the Americans were roundly defeated and retreated in a disorganized fashion under cover of night. Crawford and the expedition's surgeon, Dr. John Knight, became separated, eventually joining up with a few other stragglers. On 7 June the party was surprised by a body of Delawares. Crawford, for some reason, ordered his party not to fire. The others escaped, but Crawford and Knight were captured and taken about half a mile to the Indian camp, where they found John McKinley, formerly an officer of the 13th Virginia Regiment, and eight other prisoners. On 10 June the captives and their 17 guards started marching toward the town of the Wyandot chief Dunquat (also known as the Half-King), on the Upper Sandusky, 33 miles away. On the morning of 11 June, Captain William Caldwell, who had commanded in the action of 4–5 June, reached Half King's Town with the Delaware chiefs, Captain Pipe and Wingenund. The Christian Delawares of Gnadenhutten had been the victims of a brutal massacre at the hands of the Pennsylvania militia under Colonel David Williamson in March 1782. Many Delawares demanded retribution. Captain Pipe, who knew Crawford well, personally painted the prisoners black as a sign of his condemnation. On their way to the Delaware village on the Tymochtee Creek, the Indians killed all the prisoners except Crawford and Knight.

CRAWFORD'S DEATH

Crawford was tortured to death on 11 June 1782. Dr. Knight later published an eyewitness account of the

torture. According to Dr. Knight, Crawford was stripped and the two prisoners were beaten with sticks and fists. The colonel's hands were bound behind him and a rope was run from his wrists to the foot of a post, leaving enough slack for him to circle the post once or twice and return. Dr. Knight was bound and held a few yards away. Captain Pipe then made an inflammatory speech, referring to the Gnadenhutten massacre, after which the Indians fired at least 70 charges of powder into the naked prisoner's body. They then closed in on him and apparently cut off his ears, since Knight saw blood running down both sides of Crawford's head after the Indians cleared away. Three or four Indians at a time then ringed the post and prodded the captive with the burning ends of hickory poles, forcing him to move back and forth at the end of his rope. Indian women scooped up live coals and threw them in Crawford's path until the post was ringed with embers and bits of burning wood. At this point Crawford begged to be shot but was refused. Knight estimated that this phase of the torture lasted almost two hours before the victim fell face down in the embers. According to Knight, Crawford was then scalped, and the trophy was held to the doctor's face with the shout "Here is your great captain."

Knight either escaped or was allowed to escape a few days later. He wandered for three weeks before stumbling into Fort Pitt on 4 July. His story of Crawford's torture quickly became famous through the United States, arousing outrage and further hatred of the Indians.

CRAWFORD'S DEFEAT. 4–5 June 1782. William Crawford had long advocated an expedition to the Upper Sandusky region, where Loyalists and Indians

rallied for their raids against the Pennsylvania-Virginia frontier. After reluctantly agreeing to accept the leadership of this expedition—which he felt was about three years too late insofar as his personal participation was concerned—Colonel Crawford left his home on 18 May and rode to Fort Pitt for final instructions from General William Irvine. Irvine ordered Crawford to destroy the Wyandot and Shawnee towns “with fire and sword” in order to “give ease and safety to the inhabitants of this country.” At Mingo Bottom, about three miles below modern Steubenville, Ohio, Crawford assembled his forces. In the election of officers Crawford received 235 votes to become commander of the 480 volunteers. Major David Williamson, who received 230 votes, became second in command. Other field majors, in order of rank, were Thomas Gaddis, John McClelland, and a Major Brinton. The brigadier major was Daniel Leet. In addition to the guides—Thomas Nicholson, John Slover, and Jonathan Zane—Crawford recruited Dr. John Knight as surgeon, who left a valuable narrative of the expedition, as well as General Irvine’s aide-de-camp, Lieutenant John Rose (actually the Baron von Rosenthal, the only Russian to fight with the Americans during the Revolution); John Crawford, the colonel’s only son; Major William Harrison of the famous Virginia Harrisons, who was the colonel’s son-in-law; and William Crawford, his nephew.

Although Crawford planned his expedition well, he could not maintain its secrecy, because his men persisted in firing off their muskets without cause and contrary to repeated orders. They also tended to skip guard duty. Lieutenant Rose called this little army an “undaunted party of Clodhoppers,” and was confident that they were marching to disaster, shadowed by the Indians.

Crawford’s force moved quickly, covering the first 60 miles in four days, and they arrived at the abandoned Moravian settlements where the Gnadenhutzen Massacre had taken place less than a month earlier. By 3 June, when they camped near the site of modern Wyandot, Ohio, Crawford’s army was running short of supplies and morale plummeted. The next day they reached Sandusky Old Town, about three miles southeast of modern Upper Sandusky, and found that the Indian village was deserted. About three and a half miles northeast of Upper Sandusky, in a grove situated on high ground rising from the Sandusky Plain (a place later called Battle Island) the American scouts under the command of Lieutenant Rose made contact with a sizable enemy force.

The enemy was commanded by Captain William Caldwell of Butler’s Rangers, who had about 100 Rangers from Detroit and, initially, 200 Indians. The

Indian forces were led by Captain Pipe and Wingeneund of the Delawares, the Wyandot chief Zhaus-sho-toh, and Simon Girty, Alexander McKee, and Mathew Elliott.

A two-day skirmish took place, both sides keeping their distance and firing at long range. Crawford lost five killed and 19 wounded on the first day. Caldwell reported one Ranger, the interpreter Francis Le Vellier, and four Indians killed; and three Rangers (including himself, shot through both legs) and eight Indians wounded in the two-day action. On the afternoon of the second day the Americans realized why Caldwell had been holding back from a general engagement: he had been waiting for reinforcements. A detachment of Rangers arrived from Detroit with two field pieces (probably the light-weight, brass, three-pounders known as grasshoppers) and a mortar. About 140 Shawnees and several other Indians had also arrived and were working around the flanks and rear of Crawford’s forces. At about 9 P.M. the Indians started withdrawing, but this movement turned into a panic as small arms and artillery fire cut into them. Discipline collapsed as small units and individuals took off in several directions. Most of the Americans got through the encircling Indians, but some were cut off and annihilated. Major McClelland, leading the advance guard, was fatally wounded.

At about 2 P.M. the next day, 6 June, Crawford turned and made a stand about five miles from the site of modern Bucyrus, near Olentangy Creek. Lieutenant Rose reported a loss of three Americans killed and eight wounded in a one-hour action. Major Williamson led most of the volunteers safely to Mingo Bottom, where they arrived on 13 June. Crawford’s capture and horrible death were widely reported at the time. Dr. Knight, Major William Harrison, and young William Crawford were also captured and tortured to death.

CREEKS. The Creek, or Muscogee, Indians were one of the largest and most powerful Indian nations in eighteenth-century eastern North America, inhabiting an expansive region within the modern borders of the states of Georgia and Alabama. The majority of the Creeks either allied with Great Britain or tried to remain neutral during the American Revolution.

The Creeks were a confederation of various Native American communities that came together in the seventeenth century following the post-contact collapse of the Mississippian chiefdoms—notably the Coosa and the Alabama—that had dominated the North American southeast through the last phase of the prehistoric period. The villages of the Creek Confederacy retained a measure of ethnic diversity from the Mississippian period, but Creek communities had become increasingly united by the mid-eighteenth century. Still, individual Creek towns retained a good deal of political autonomy, and it was for this reason that Creek loyalties during the American Revolution were generally divided.

Geographically, the Creek Confederacy was divided between the Upper Creeks and Lower Creeks. The towns of the Upper Creeks lay inside modern Alabama along the Alabama River and its forks, the Coosa and Tallapoosa. The Lower Creeks existed primarily along the Chattahoochee River, within both modern Georgia and Alabama.

Like many Native peoples of the Eastern Woodlands, the Creeks subsisted through a combination of agriculture, hunting, and fishing. Generally, Creek subsistence labor was divided along gendered lines, with men hunting and fishing and women engaged in agriculture. The Creeks traded deerskins with various European agents for a variety of trade goods, including textiles, firearms, metal goods, and liquor. From the midpoint of the Seven Years' War, the Creeks' trading relationships were directed by John Stuart, the British Indian Superintendent for the southern colonies. Stuart brought the Creeks—and all of the Indian peoples of the Southeast—into formal alliance with Britain at the Treaty of Augusta (1763). Under Stuart's direction, an increasing number of British traders came to reside in the Creek country. Many British traders intermarried with the Creeks, producing a generation of mixed Creek-British offspring. Among the most famous of these traders was Scot Lachlan McGillivray, whose son, Alexander McGillivray, became wealthy from his father's position in the Creek-British trade and garnered prestige through his mother's clan status to become one of the Creeks' most powerful leaders. By the early 1780s, McGillivray had succeeded Emistesigo as the principal war chief of the Creek nation. Both Emistesigo and McGillivray persuaded most Creek

villages to remain allied with British during the American Revolution.

However, the American Revolution weakened the monopoly of political and commercial power the British had built within the Creek nation under John Stuart's direction. From New Orleans, Spanish forces under Bernardo de Gálvez invaded the Floridas and took the ports of Mobile (1780) and Pensacola (1781). Many Creek towns began to trade with the Spanish rather than the British. At the end of the American Revolution, the Floridas passed back into Spanish control. The majority of the Creeks now traded with British mercantile firms that were granted licenses by the Spanish government. At the same time, Revolutionary leaders in Georgia and South Carolina cultivated relations with several Creek towns. The leaders of two Creek towns, Hoboithle Micco and Neha Micco, signed land cession treaties with the state of Georgia in 1783, 1785, and 1786. In 1790 Alexander McGillivray himself signed the Treaty of New York with the United States. The Creek nation's leadership looked to the new federal government to help it resist encroachments by settlers from Georgia.

Although tied by trading relationships to the British exclusively before the American Revolution, the Creek nation adapted to the changing geopolitical realities brought about by the war and its aftermath. In subsequent years, though, the Creeks fared less well under the United States. Creek warriors known as the Red Sticks were defeated by General Andrew Jackson during the War of 1812 (at the Battle of Horseshoe Bend in 1814). And although many Creeks continued to live within Alabama and Georgia after the War of 1812, they lost more and more lands to the U.S. government and were forcibly removed to Oklahoma in 1836. The sovereign Muscogee (Creek) Nation has continued to exist into the twenty-first century within the state of Oklahoma, spanning eleven counties, with its Council House in the town of Okmulgee.

Leonard J. Sadosky

CRESAP, MICHAEL. (1742–1775). Border leader and Continental officer. Maryland. Born in Old Town, Maryland, on 29 June 1742, Michael Cresap was the son of the famous pioneer, Thomas Cresap (c. 1702–c. 1790). Michael failed as a merchant, and in early 1774 moved west to Wheeling. Almost as soon as he arrived, in April 1774, he heard rumors of Indian wars breaking out to the north. Panicking, Cresap and his neighbors attacked, killed, and scalped two Indians who were working for a local merchant. They then killed some passing Shawnee. Logan, a Mingo chief, blamed this group for massacring his family, leading many to hold Cresap responsible for starting Dunmore's War. Although Logan's accusation has been discredited, it has nonetheless given Cresap a place in history. The actual murderer of Logan's family was a man named Jacob Greathouse.

After his two attacks on unsuspecting Indians, Cresap fled back to Old Town, returning with a large group of settlers after Dunmore had restored peace to the frontier. With the beginning of the Revolution, Cresap was named captain of the First Company of the Maryland Rifles. He marched his company 550 miles in 22 days to become the first southern unit to join General George Washington's forces surrounding Boston. Two months later (about 15 October) he was forced by illness to give up his command, and on 17 October 1775 he died in New York City.

CRITICAL TERRAIN. An esoteric term used by modern students of tactics and strategy, it is applied to

any natural or man-made feature whose control would give either opponent a marked advantage. In many instances, critical terrain is immediately apparent, as at Kings Bridge, New York. Less obvious features, however, were Dorchester Heights in Boston, Mount Defiance at Ticonderoga in July 1777, and the ford (or bridge) at Bennington.

CROMOT DU BOURG, MARIE FRANÇOIS JOSEPH MAXIME, BARON DE. (1756–1836). French officer. Born at Versailles, he volunteered in 1768 for the Regiment of Dragoons of La Rochefoucauld. He received the rank of Second Lieutenant in the dragoons of the comte de Provence (later Louis XVIII) in 1770. He received command of a company in 1774. He was Rochambeau's aide from 26 March to 18 November 1781 and left a valuable journal of the campaign.

In 1783 Bourg was promoted to major on the general staff of the army and later to lieutenant colonel (1787) and colonel (1788). He resigned his command on 18 October 1790 and joined the emigré army, serving as aide-de-camp to the comte de Provence from 1792 to 1796. In 1815 the former comte, now King Louis XVIII, gave him the honorary rank of *maréchal de camp* with a pension.

CROMPO HILL SEE *Compo Hill*.

CROOKED BILLET, PENNSYLVANIA. 1 May 1778. When the British occupied winter quarters in Philadelphia, Washington set up a cordon of detachments around the city in an attempt to restrict the flow of supplies to the enemy. One of those outposts was at Crooked Billet

in the central part of Bucks County, north-northeast of Philadelphia. Brigadier General John Lacey (a former Continental Army captain) had responsibility for the sector in the spring of 1778 with a military force that fluctuated wildly from week to week but that in late April probably amounted to less than a hundred men. Major John Graves Simcoe worked with Lieutenant Colonel Nisbet Balfour (General Howe's aide charged with intelligence activities) to develop a plan to hit the militia while they were vulnerable as a new rotation of men came into camp. On 30 April Simcoe set out on a twenty-five-mile march with the Queen's Rangers to take Crooked Billet from the rear while a large light infantry force (partly mounted) under Lieutenant Colonel Robert Abercromby set up near Horsham Meeting House. They intended to push any survivors of Simcoe's dawn attack into Abercromby's ambush. Fortunately for Lacey, the two British elements failed to time the attack properly, and an alert militia sentry gave the warning before the trap was sprung. Lacey withdrew through some woods, and his men broke into small parties, most getting away although losing their baggage. Simcoe claimed that he killed fifty or sixty at the cost of a few wounded; Lacey reported about half as many casualties.

CROSSWICKS, NEW JERSEY. Eight miles southeast of Trenton and three and a half miles east of Bordentown, this town figured slightly in the Battle of Trenton in December 1776 and the Monmouth campaign of June 1777, as opposing forces moved through the town. An action took place on 23 June 1778 at a point on Crosswicks Creek, four miles from Trenton, where the British encountered difficulty in rebuilding a drawbridge. The horse of Elias Dayton of the Third New Jersey was killed there.

CROTON RIVER, NEW YORK. 14 May 1781. Advancing through the "Neutral Ground" from

their base in southern Westchester County under cover of darkness, the Third Battalion of James De Lancey's Brigade of Loyalists crossed the Croton River. Near sunrise, they surprised an outpost of the Rhode Island Regiment just after the night sentries had come back to quarters. Washington's standing instructions to the forces manning these forward lines stressed that they were never to remain in the same camp two nights in a row because Loyalist sympathizers could pass detailed information to the British very quickly. Colonel Christopher Greene, a brave and otherwise competent officer, ignored the rules and paid for it with his life. Major Ebenezer Flagg and about a dozen others were killed and about thirty captured. The Loyalists appear to have suffered insignificant losses. The fight's military significance is minor, but public opinion was inflamed by allegations that Greene's body was mutilated.

CROWN POINT, NEW YORK. About a dozen miles north of Ticonderoga on the west shore of Lake Champlain, Crown Point was the scene of a battle between the French explorer Samuel de Champlain and the Iroquois in 1609 that marked the beginning of a century and a half of hostility. In 1735 the French began constructing Fort St. Frédéric as a permanent stone fortification and completed the main works about 1740. It replaced a temporary post established four years earlier on the east shore at Pointe de la Chevelure (later called Chimney Point). A colonial expedition in 1755 was stopped short of the point, and in response the French constructed the much larger Fort Carillon (Ticonderoga), which blocked other English expeditions until 1759. That year General Jeffery Amherst forced the French to evacuate both positions and blow up the works. He then set about building a new fort two hundred yards south of the site of Fort Frédéric that was three times the size of Ticonderoga; but with the peace of 1763 it had only a caretaker garrison. During a fire in April 1773 the magazine exploded, causing extensive damage, and the British moved most of the men and guns to Ticonderoga.

On 12 May 1775 Ethan Allen sent an expedition under Seth Warner, his second-in-command, to capture Crown Point. The nine enlisted soldiers (and their ten dependents) promptly surrendered. It became a logistical staging point during the American invasion of Canada and a forward base for Guy Carleton's counteroffensive in October and November of 1776.

In late June 1777 the forces of Burgoyne's offensive moved through Crown Point on their way south but never made it a significant base. In October, after Burgoyne's surrender, the detachment fell back to St. John's as part of the evacuation of the entire Lake Champlain–Lake George lines of communications. For the rest of the war it was visited only by patrols.

CROWSFEET. Properly known as caltrops, crowsfeet are small metal spikes cast so that their four points form a tetrahedron. According to Captain George Smith's *Military Dictionary*, a caltrop is "a piece of iron having four points, all disposed in a triangular form, so that three of them always rest upon the ground and the fourth stands upwards in a perpendicular direction. Each point is three or four inches long." Dropped at random, their shape ensures that they will always have one point straight up. They are of ancient origin, developed to be scattered in the path of cavalry. In modern war, they can still be used as a passive device to puncture pneumatic tires. When the British evacuated Boston by sea in 1776 they sprinkled caltrops of a different design on the last mile of the road from Roxbury into the city to slow the American advance. According to James Thacher, "the implement consists of an iron ball armed with four sharp points about one inch in length, so formed that which way soever it may fall one point still lies upwards to pierce the feet of horses or men."

CRUGER, JOHN HARRIS. (1738–1807). Tory officer. New York scion of the Cruger family. Like his father before him, he was a member of the New York

city council. He later became its mayor and by the start of the Revolution was its chamberlain. A son-in-law of Oliver De Lancey (the elder), he was given command of one of the Loyalist battalions raised by him and went south with the expedition of Lieutenant Colonel Archibald Campbell that captured Savannah, 29 December 1778. It was the First Battalion that Cruger commanded. Posted at Fort Sunbury, he was recalled to take part in the defense of Savannah on 9 October 1779, where he held a redoubt on the southern side of the perimeter against the poorly managed secondary attack of General Isaac Huger. He is mentioned several times in this article on Savannah and is quoted on the low caliber of American troops engaged. Captured at Belfast, Georgia, in June 1780, he was soon exchanged for John ("Come and Take It") McIntosh. He then succeeded Nisbet Balfour around mid-August as commander of the Tory stronghold at Ninety-Six, and led the relief column from this place that relieved the siege of Augusta, 14–18 Sept. 1780.

He then distinguished himself in commanding the defense of Ninety Six, 22 May–19 June 1781, the operation for which he was justly praised for his vigilance and gallantry by Clinton. Joining the main British army in the South, he was commended for his conduct and gallantry at Eutaw Springs, 8 September 1781. Speaking of the defenses of Charleston as organized the end of 1781, Baurmeister reported that "Colonel Cruger and 350 men are posted at the Stono; Colonel Stewart is in command of six battalions of British and provincials posted . . . across the narrowest part of the Neck." This assignment of Cruger, a Provincial officer, to one of the two defensive sectors is evidence of the high regard the British commander had for him and his troops.

Cruger's property having been confiscated, he went to England after the war and died in London.

CULLODEN MOOR, SCOTLAND.

16 April 1746. In a bloody defeat at the hands of William, duke of Cumberland, the forces of the Young Pretender (Charles Edward) were destroyed. This ended The 1745, or the Second Jacobite Rebellion. Hundreds of Highlanders sought refuge in North Carolina, and many established themselves around Cross Creek (later

Fayetteville). There is reason to believe that the oath to the crown taken after Culloden is what kept so many of these refugees loyal during the American Revolution. Culloden was repeated on a minor scale at Moores Creek Bridge in North Carolina on 27 February 1776 and at Kettle Creek, Georgia, on 14 February 1779.

SEE ALSO *Kettle Creek, Georgia; Moores Creek Bridge.*

Mark M. Boatner

CUNNINGHAM, "BLOODY BILL."

(c. 1748–c. 1787). Loyalist partisan. Born in South Carolina, Cunningham enlisted in the Patriot militia in 1775 but was court-martialed and whipped. Changing sides, he raised a company of Loyalist cavalry that became known as the Bloody Scout, operating in Georgia and the Carolinas. He gained notoriety for his personal ferocity in a number of skirmishes, although his unit did not take part in any major military encounters. It is thought that he settled in Charleston after the war, where he apparently died in 1787.

CUNNINGHAM, GUSTAVUS SEE *Conyngham Gustavus.*

CUNNINGHAM, ROBERT. (1739–1813). Loyalist leader. Ireland. Settling near Ninety Six, South Carolina, in 1769, Robert Cunningham became a judge. He opposed the Revolutionary movement, and in 1775 he was imprisoned in Charleston. After his release he raised Loyalist militias and joined the British forces in 1780. Made a brigadier general of Loyalist forces and given command of the garrison at Charleston, Cunningham took part in Hammond's Store Raid, but saw little other action. The South Carolina legislature confiscated his estate in 1782 and refused him permission to remain in the state. Given a generous allowance by the British government, Cunningham settled at Nassau, where he died on 9 February 1813.

CUNNINGHAM, WILLIAM. (1738?–1799?). British provost marshal. Ireland. Little is known of Cunningham prior to his arrival in New York City in 1774. For a while, he was engaged in breaking horses and giving riding lessons. On 6 March 1775 he was beaten at a public meeting for offering a blessing in the name of King George III. Forced to take refuge in Boston, he was made provost marshal with the rank of captain by General Thomas Gage. Responsible for disciplining troops and taking care of prisoners of war, Cunningham became notorious on both sides in the Revolution for his cruelty and brutality. In 1778 he had charge of the prisons in Philadelphia, and later those in New York City. Cunningham was accused of withholding food from prisoners to the point of starvation, and of beating prisoners to death. It is certain that hundreds of American prisoners of war died because of their ill treatment at his hands. The publication of Ethan Allen's popular *Narrative of Colonel Ethan Allen's Captivity* in 1779 made Cunningham notorious throughout America. Little is known of his later life, but there was a long-standing rumor (no longer believed to be credible) that he was hanged in London on 10 August 1791 for a charge of forgery. There is some evidence that he was still alive in 1799 and running a prison in Gloucester.

CURRENCY SEE *Continental Currency; Currency Act; Money in the Eighteenth Century.*

CURRENCY ACT OF 1764. 19 April 1764. One of a set of measures designed by George Grenville to tighten Britain's control over the empire, the Currency Act prohibited all colonies from issuing any paper money as legal tender and from extending the time period over which their outstanding paper money would be paid off and retired. Intended primarily to prevent the colonies from paying debts in Britain with depreciated paper money, the act also created a shortage of paper money, which had been the principal form of circulating currency in the colonies, at a time when the Sugar Act, another of Grenville's measures, cut off the supply of specie formerly

acquired in trade with the West Indies. Parliament later tried to ameliorate some of these negative consequences by allowing colonies south of New England to issue a limited amount of paper money. This compromise was too late to assuage colonial anger against the imperial government.

CUSTOMS COMMISSIONERS. The Navigation Act of 1673 established customs commissioners in the American colonies. Under the jurisdiction of the Treasury Board (not the Board of Trade), they supervised the activities of collectors, searchers, and surveyors of customs. The chief customs commissioners held their posts as sinecures, living in England and delegating the collection of customs to poorly paid agents in the colonies, who made mutually beneficial arrangements with local merchants. The imperial government did not closely monitor the customs system before the final French and Indian war (1759–1760), preferring to accommodate

interests and promote trade rather than strictly enforce the Navigation Acts. This policy came to be known informally as “salutary neglect.”

Anger at the extent of colonial evasion of customs duties, which was highlighted during the war, and the post-war need to raise revenue in North America led to a re-invigoration of the system by means of the Townshend Acts of 1767. It has been estimated that, before 1767, goods worth £700,000 a year were smuggled into the colonies. In contrast, about £2,000 worth of duties were collected on the goods that were legally imported, at a cost of collection amounting to more than £8,000 a year. The Townshend Acts did result in greater revenue—between 1768 and 1774 the American customs brought in an average of £30,000 a year at an annual cost of £13,000—but in addition to generating resentment among merchants, this policy exposed the entire arrangement of colonial dependency on the mother country to charges of corruption.

The central element in the revised system was a new, five-man American Board of Commissioners of the Customs, established at Boston in November 1767. The board was directly responsible to the Treasury Board, but had authority to rule without consulting it. Oliver M. Dickerson called the activities of the commissioners “customs racketeering,” and Edmund S. Morgan agreed that “they richly deserve the epithet.” Morgan described the corrupt practices thus:

[The commissioners] were a rapacious band of bureaucrats who brought to their task an irrepressible greed and a vindictive malice that could not fail to aggravate the antagonism not only against themselves but also against the Parliament that sent them. . . . In the complicated provisions of the Sugar Act it was easy to find technicalities on the basis of which a ship could be seized. The commissioners used these technicalities in a deliberately capricious manner to trap colonial merchants. Their favorite method was to follow a lax procedure for a time and then, suddenly shifting to a strict one, seize all vessels that were following the practice hitherto had been allowed. By playing fast and loose with the law in this way, they could catch the merchants unawares and bring in fabulous sums. (Morgan, pp. 37–38)

The offending vessel and cargo were sold. One third of the proceeds went to the British treasury, a third to the governor of the colony, and a third to the customs officers who made the seizure. The practice of the customs commissioners provoked the *Liberty* Affair on 10 June 1768, in which a sloop owned by John Hancock, presuming the lax procedures were in effect, attempted to land at Boston without declaring the totality of its cargo. When the customs agent refused, violence erupted, and the ship was ultimately seized. One of the warships sent to support

them was involved in the *Gaspée* Affair, in which the armed revenue schooner *Gaspée* was burned to the waterline by angry American colonists. The actions of the customs commissioners contributed significantly to the colonists' sense that the imperial government was engaged in a conspiracy against their liberty.

D

DALLING, JOHN. (c. 1731–1798). British general and governor of Jamaica. John Dalling was born in Suffolk around 1731 and entered the army in 1747. A major in the Twenty-eighth Foot by 1757, he served under John Campbell Loudoun at Louisburg in 1758 and Quebec in 1759. Taking command of the Forty-third Regiment in 1761, he fought in the West Indies and at the capture of Havana in 1762. He was then posted to Jamaica, where he was made lieutenant governor in about 1768. Upon Sir Basil Keith's death in August 1777, Dalling was promoted major general and confirmed as governor. In 1779 a successful expedition to the Bay of Honduras tempted him to conquer a route to the Pacific via Lake Nicaragua in 1780. Although this expedition was ruined by disease, Dalling persisted in feeding in reinforcements, most of whom died. He was unable to save Mobile in March 1780 and Pensacola in May 1781, partly for lack of transports. Dismissed by the end of the year, he never held another independent command, though he rose to general in 1796. He died at Clifton, near Bristol, on 16 January 1798.

revised by John Oliphant

DALRYMPLE, JOHN. (1749–1821). British officer. Born in Edinburgh on 24 September 1749, John Dalrymple was the eldest son of the fifth Earl of Stair.

Made a captain in the 87th Regiment, which was raised in July 1779, Dalrymple served with distinction under Benedict Arnold in the New London raid of 6 September 1781. He was sent to London with dispatches by General Henry Clinton shortly thereafter. On 5 January 1782 he was appointed minister plenipotentiary to Poland. During the period 5 August 1785 to 1788 he held the same post in Berlin. In 1789 he succeeded his father to the peerage as the sixth earl of Stair and died in London on 1 June 1821.

revised by Michael Bellesiles

DALRYMPLE, WILLIAM. (?–1807). British general. Garrison commander at Halifax with the Fourteenth Foot, Lieutenant Colonel Dalrymple was ordered south to occupy Boston in 1768. Arriving on 1 October with the Fourteenth and Twenty-ninth Foot, he remained in command in the city until 1772, when he was relieved by Alexander Leslie and the Sixty-fourth. His task was a thankless one, the soldiers having no police powers without the consent of the local magistrates, consent that was not forthcoming. The tension reached a climax in the incident on 5 March 1770 that was quickly inflated into the so-called Boston Massacre. Though the “massacre” was followed by a shocked reaction against the radical mob, Boston remained an unpleasant posting long after Dalrymple's departure.

During the New York campaign he was in command of Howe's fortified base on Staten Island. At the end of the

year, his regiment was broken up and used as drafts for other units, while Dalrymple himself left with Cornwallis for Britain. He may have commanded the Seventy-ninth when it was raised in Liverpool and sent to Jamaica in 1778. Later in the year he took Germain's dispatches from London to Clinton in Charleston, arriving as a brigadier general on 10 May 1780. Clinton promptly made him quartermaster general with the local rank of major general in succession to Cathcart, Erskine's temporary replacement. In the autumn, Clinton sent him back to Germain with an oral ultimatum: unless Arbuthnot was recalled, he (Clinton) would resign. Dalrymple returned to Clinton in New York in 1781 without clear answer from Germain, and he took part in the councils of war during the Yorktown campaign. He became a major general on the regular establishment in November 1782 and later rose to full general. Despite his high rank, his role in the war was minor.

DANBURY RAID, CONNECTICUT.

23–28 April 1777. After the successful Peekskill raid, in New York on 23 March 1777, General Howe sent Major General William Tryon (the royal governor of New York) to destroy the more important rebel depot at Danbury. The 2,000-man force was composed of the 4th, 5th, 23d, 27th, 44th, and 64th Foot; 300 men of the newly formed Prince of Wales's Volunteers (Loyalists); a dozen light dragoons; and six artillery pieces. Generals James Agnew and William Erskine accompanied Tryon. Escorted by two sloops of war, the expedition left New York on 23 April and landed near Norwalk, Connecticut, on the evening of the 25th. The next day they marched 23 miles unopposed and started burning Danbury at 3 P.M. The 150 Continentals stationed in the area had removed a small quantity of stores, but by the next morning the British had destroyed 19 dwellings and 22 barns and storehouses, together with provisions, clothing, and almost 1,700 tents.

Militia meanwhile assembled under Brigadier General Gold S. Silliman and started forward to harass the British as they withdrew. Continental Generals Benedict Arnold and David Wooster joined the pursuit

with still more men at Redding, and the hunt was on. About 11 A.M. on the 27th, serious attacks began as the retreating column started slowing down because of rain. As in the retreat from Concord, the return trip to the safety of the ships in Long Island Sound became a living hell. Arnold maneuvered around to try blocking Tryon's van, while Wooster pressed against the rear until falling mortally wounded on the 28th. Wisely observing the principle of returning by a different route, the British withdrew through Ridgefield, where they halted for a few hours' rest around midnight.

Arnold and Silliman, meanwhile, had established a barricade astride the narrow road at Saugatuck Bridge. By the time Tryon approached in the rain in midmorning, the blocking force of five hundred men included three field pieces from Lamb's Second Continental Artillery Regiment under Lieutenant Colonel Eleazer Oswald, while five hundred more men, now under Colonel Huntington, pressed against the rear guard. When his column drew fire, Tryon sent detachments out to envelop both enemy flanks, and Agnew brought enfilade fire to bear on the barricade from the American left. The fighting became general about 11 A.M. It took nearly an hour before the sheer weight of numbers pushed the Americans back. Arnold ordered a withdrawal, and he himself was fired on at a range of thirty yards by an enemy platoon that cut the road behind him. When his horse was killed under him, Arnold managed to escape after shooting a Tory who rushed forward demanding his surrender.

The Americans tried a second time to block the retreat, but a Loyalist guided Tryon's column to Compo Hill, where it could set up a secure perimeter. Erskine led four hundred men in a successful "spoiling attack" that enabled the raiders to embark in safety. Alexander McDougall was actually on the way from Peekskill with a strong Continental force to complete Tryon's destruction when he learned of the embarkation.

Although the Connecticut militia failed to prevent the raid, no one except later historians expected them to be able to stop such a strong column. More to the point, the citizen-soldiers, stiffened by some Continentals and under charismatic leaders, came close to annihilating the raiders after the damage to Danbury had been done.

The British in fact learned their lesson. While the raid was annoying, the material destroyed did not justify their losses nor was it worth the risk. This raid was the last the British attempted during the war against a target so far inland. As long as Washington kept his depots out of the reach of amphibious raids, he knew that the militia and the states' local defense troops could provide adequate security. Danbury provided him with convincing proof to cite to politicians when arguing that he needed to keep the Continentals concentrated.

Tryon and his officers deserve great credit for avoiding another Lexington and Concord. Arnold and Wooster showed splendid leadership, as did Colonel John Lamb, whose three guns made a valiant attempt to break up Erskine's bayonet attack. Congress finally recognized Arnold's service and made him a major general within a week (later predating his commission to give him seniority over the five officers promoted over his head; on 20 May, Congress gave him a horse, "properly caparisoned . . . as a token of their approbation of his gallant conduct . . . in which General Arnold had one horse killed under him and another wounded" (Heitman, *Historical Register of Officers* . . .).

American casualties were probably about 80 (not the 400 claimed by the British). Wooster died; this was the second (of three) times that Arnold would be shot in the same leg. Howe officially reported losses of 26 killed, 116 wounded, and 29 missing—about a 10 percent loss rate.

"DARK AND BLOODY GROUND."

The region that became the states of Kentucky, West Virginia, and Ohio was known by this lugubrious name even before the Indians started fighting back the encroachment of white settlers. Called "dark" probably because of its heavy forests, it was a favorite hunting territory of several native peoples, including the Delawares, Shawnees, Hurons, and Miamis. This region became bloodier when British-American settlers and U.S. forces invaded the Indians' territory.

DARTMOUTH, WILLIAM LEGGE, EARL OF.

(1731–1801). William Legge, second earl of Dartmouth, was a politician who served as president of the Board of Trade and secretary of state for the colonies. His father having died soon after he was born, he succeeded to the earldom in 1750; consequently he never sat in the House of Commons. Legge grew up with his stepbrother Frederick North, the future prime minister, and they remained lifelong friends. But for a long time Legge seemed more interested in evangelical religion than in politics. By 1757 he and his wife were committed supporters of the Methodists John and Charles Wesley, George Whitefield, and the Countess of Huntingdon (Selina Hastings). Only in 1765 did he accept office as president of the Board of Trade under Rockingham. Confronted with the consequences of the Stamp Act (of which he disapproved), he quickly decided that although Parliament was supreme, colonial grievances could and should be accommodated. Thus he strongly approved of both the repeal of the Stamp Act and of coupling it with the Declaratory Act affirming Parliament's right to tax.

Legge resigned after the Rockingham ministry collapsed in 1766 and returned to his religious preoccupations. During this time he was a supporter of Moor's Charity School, founded by Eleazar Wheelock around 1750 in Connecticut mainly for the education of Indians; the school relocated to New Hampshire and was renamed Dartmouth College in his honor in 1769. He used his patronage to secure ordination and preferment for John Newton and to support other evangelicals. In 1767, when a politician would have been preoccupied with the Townshend Duties, Dartmouth was more concerned with whether he should succeed the ailing Countess of Huntingdon in her religious role.

In January 1771 he refused North's first offer of a cabinet post, but by the following year the prime minister was looking around for a secretary of state who would cause less division in the cabinet than did the incumbent, the earl of Hillsborough. He also wanted someone whom the Americans would find acceptable. With Benjamin Franklin's recommendation in hand, North at last persuaded Dartmouth to accept the post in the summer of 1772.

Dartmouth inherited three problems from his predecessor: resolution of the *Gaspée* affair; the extent and rate of western expansion; and the issue of representative government in Quebec. He never really came to grips with the first two, and he did not bring the Quebec Bill before parliament until 2 May 1774, almost five months after news of the Boston Tea Party had reached London.

Dartmouth's reaction was predictable: the colonists must pay the legally imposed tea duty. He supported the four coercive laws of 2 June 1774, although he did not initiate them. By an unfortunate association of timing, the Quebec Act (22 June) became associated with these laws as the Intolerable Acts. Yet he did not believe that the underlying differences were beyond reconciliation. He forwarded Franklin's idea of a commission to negotiate with American delegates but was humiliated when George III proved to be downright hostile; within the cabinet even North was lukewarm at best. Fighting began in April 1775, and in November he resigned to become Lord Privy Seal. Although he remained in office until 1782, he took no part in policy making. He died at Blackheath on 15 July 1801 and was buried in Holy Trinity Minorities on 3 August.

Dartmouth was universally admired for his integrity and lack of personal ambition. But, as contemporaries on both sides of the Atlantic observed, he was ill-suited to practical policy making and to the rough and tumble of professional politics. His very virtues prevented him from seeing when compromise had become impossible. He was certainly not the man to direct operations in the War of American Independence.

DAVIDSON, GEORGE. (c. 1748–1815). Continental and militia officer. North Carolina. A captain in the First North Carolina Regiment starting 1 September 1775, he resigned on 5 February 1777 and became a major of militia, seeing action at Ramseur's Mill and Wahab's Plantation in 1780.

SEE ALSO *Wahab's Plantation, North Carolina.*

revised by Michael Bellesiles

DAVIDSON, WILLIAM LEE. (1746?–1781). Militia general. North Carolina. Born in Lancaster County, Pennsylvania, probably in 1746, Davidson's family moved to Rowan County, North Carolina, in 1748. After serving on the county Committee of Safety from 1774 to 1776, he served with the militia in the operations against Loyalists in South Carolina. Appointed major of the Fourth North Carolina Regiment on 15 April 1776, he went north under Colonel Francis Nash to take part in the New Jersey campaign. For gallant conduct in the battle of Germantown on 4 October 1777, he was promoted to lieutenant colonel of the Fifth North Carolina Regiment, with which he endured the winter at Valley Forge. On 1 June 1778 he was transferred to the Third North Carolina Regiment, and on 9 June 1779 to the First North Carolina Regiment. In November 1779 the North Carolina Continentals were sent to the Southern theater of war. Having stopped to visit his family, he arrived too late to join his regiment in the Charleston defenses and therefore avoided becoming a prisoner of war when General Benjamin Lincoln surrendered.

Having lost his regiment, Davidson was given command of a battalion of 300 light infantry in the Patriot force rallied by Governor (General) Griffith Rutherford for the operation that ended with the Loyalist defeat at Ramseur's Mill, North Carolina, 20 June 1780. Davidson proved effective in harassing British forces. In the summer of 1780 he was severely wounded in an engagement with Loyalists near Colson's Mill, on the Yadkin River; a musket ball passed through his body and he was out of action for eight weeks. With the capture of General Rutherford at Camden in August, Davidson was promoted to brigadier general of the state troops and given command of the Salisbury district.

Two weeks after arriving to take command of the Southern theater of operations, General Nathanael Greene ordered Daniel Morgan to march south from Charlotte and join the North Carolina militia led by Davidson for operations between the Broad and Pacolet Rivers. Around 25 December 1780, Davidson joined Morgan in his camp on the Pacolet, bringing with him 150 men. Two weeks later, on 31 January 1781, he was directed by Greene to rally the unenthusiastic North Carolina militia for service in guarding the fords of the Catawba after the withdrawal of the main army. He went off on a recruiting drive and thus did not see action at the battle of Cowpens (17 January 1781). Davidson was killed at Cowans Ford on 1 February 1781, while engaged on his recruiting mission, and with him died Greene's hope of militia assistance.

DAVIE, WILLIAM RICHARDSON.

(1756–1820). Patriot officer, commissary general of the Southern army under General Nathanael Greene, governor of North Carolina. Born in Egremont, England, on 20 June 1756, Davie was taken by his father to the Waxhaws settlement in South Carolina in 1763 to be adopted by his maternal uncle, William Richardson, a Presbyterian clergyman. In 1776 Davie graduated from Princeton with first honors, and settled in Salisbury, North Carolina, to study law. He served in the militia for three months under General Allen Jones in 1777 and 1778. In 1779, as a captain of militia, he led operations against the Loyalists in North Carolina. Promoted to major, he raised a troop of cavalry and joined General Casimir Pulaski's division. He was seriously wounded at Stono Ferry, South Carolina, on 20 June 1779. Early the next year, after a slow recovery, he raised another troop of cavalry and operated north of Waxhaws Creek, sometimes with Thomas Sumter, in the bloody partisan warfare that followed the surrender of Charleston. He particularly distinguished himself at Hanging Rock during the engagement there on 6 August 1780. After this he received a promotion to colonel. After the Patriot defeat at Camden he is credited with using his little command, in contradiction to the orders of General Horatio Gates, to save valuable supplies. He scored a bold success at Wahab's Plantation on 21 September, and then, with only 20 men, brought General Charles Cornwallis and his entire army to a temporary halt at Charlotte, North Carolina, on 26 September 1780. When the British withdrew into South Carolina, Davie harassed their flanks and rear.

Having proved himself to be an exceptional commander, Davie was bitterly disappointed when Greene singled him out to be his commissary general. When Davie protested that he knew nothing of money and accounts, Greene said, "Don't concern yourself. There is no money and hence no accounts." Despite overwhelming difficulties and an acute distaste for the work, Davie measured up to Greene's expectations. In 1782 he settled at Halifax, North Carolina, and married Sarah Jones, the wealthy daughter of his former commander and the niece of Willie Jones. He had been licensed to practice law in 1780, and became a prominent lawyer. He represented Halifax in the legislature

from 1786 to 1798, was a delegate to the Constitutional Convention in 1787, was an ardent Federalist, and was largely responsible for the establishment and organization of the University of North Carolina. He became commander of the state's troops in 1797 and brigadier general in the U.S. army during the crisis of 1798–1800. He became governor of North Carolina in 1798, and was peace commissioner to France the next year. Defeated for election to Congress in 1803, Davie left politics and retired to his plantation, "Tivoli," in Lancaster County, South Carolina, where he died on 5 November 1820.

DAYTON, ELIAS. (1737–1807). Continental general. New Jersey. A native of Elizabethtown, apprenticed as a mechanic, he joined the Jersey Blues, became a lieutenant on 19 March 1756, and served at various stations on the New York frontier. He rose to the rank of captain. In Elizabethtown he established a general store, became a member of the committee of safety (6 December 1774), and was named one of four Essex County muster-masters on 26 October 1775. In January 1776 (on the 10th or 18th) he became colonel of the Third New Jersey Continentals, and that month he took part in the capture of the British supply ship, *Blue Mountain Valley*. Leading his regiment to Albany in May 1776, he rebuilt Fort Stanwix and constructed Fort Dayton at Herkimer. He

saw some action against the Indians before rejoining the main army at Morristown in March 1777. He took part in the skirmishes at Bound Brook and Staten Island (presumably those of 13 April and 22 August) before engaging in the Battles of Brandywine (11 September) and Germantown (4 October). After spending the winter at Valley Forge (in William Maxwell's brigade), he led his regiment in the Monmouth campaign (June 1778) and then performed coastal outpost duty in New Jersey. He joined Sullivan's expedition against the Iroquois in Maxwell's Brigade in 1779 and was credited with the destruction of Runonvea, near Big Flats, on 31 August 1779. Dayton and his son Jonathan refused to sign the semipolitical endorsement that Sullivan secured from his officers.

Back in his home state to rejoin the main army under Washington, Dayton figured prominently in delaying and stopping General William Knyphausen's Springfield Raid (7–23 June 1780). During this and previous operations he served close to his home, Elizabethtown, and in marked contrast to such Patriots as John Cadwalader and Philemon Dickinson, he not only remained with the Continental army rather than resign to become a militia general, but also declined election to Congress. After General Maxwell's resignation in July 1780, Dayton became the acting commander of the New Jersey Brigade for the remainder of the war. During the mutiny of the New Jersey Line in January 1781, Dayton showed skill in handling disgruntled troops under his command. In the reorganization of 1 January 1781, Dayton left the Third New Jersey to become commander of the Second New Jersey. Dayton led the New Jersey troops in the Yorktown campaign. On Washington's insistence he was appointed brigadier general on 7 January 1783.

After returning to his business in Elizabethtown he became a leading citizen, state legislator, and major general of militia; he was also in the Continental Congress in 1787–1788. A personal friend of Washington, he is said to have borne him a physical resemblance.

DAYTON, JONATHAN. (1760–1824). Continental officer. New Jersey. The son of Elias Dayton, he graduated from the college at Princeton in 1776; joined his father's regiment, the Third New Jersey, as an ensign on 7 February; and became regimental paymaster on 26 August 1776 and lieutenant on 1 January 1777. Captain-lieutenant beginning 7 April 1779, he became aide-de-camp to General John Sullivan on 1 May (during Sullivan's Expedition) and captain on 30 March 1780. Captured by a British raiding party at Elizabethtown (his home) on 5 October, he was exchanged at an unknown date. In the reorganization of 1 January 1781, he became a member of his father's Second New Jersey. At Yorktown, his regiment was in his father's brigade of Lincoln's division. Leaving the Continental Army on 3 November 1783, he served as a New Jersey legislator, was chosen a delegate to the federal Constitutional Convention in 1787, and became speaker of the New Jersey assembly in 1790. He was a U.S. representative for three terms ending on 3 March 1799 and a U.S. senator from then until 1805. He was arrested on charges of being involved in the conspiracy of Aaron Burr (1805) but not brought to trial.

DEANE, SILAS. (1737–1789). Continental congressman, first American diplomat abroad. Connecticut. The son of a blacksmith, Silas Deane was born in Groton, Connecticut, on 24 December 1737 and graduated from Yale in 1758. Moving to Wethersfield, Deane taught school and studied law, gaining admission to the bar in 1763. Deane rose quickly to prominence, aided by a pair of advantageous marriages. In 1763 he wed a well-to-do widow, Mehitabel Webb, in 1763. She died in 1767, and two years later Deane married Elizabeth Ebbets, the granddaughter of former Governor Gordon Saltonstall. Deane became active in the Susquehannah Company, which sought the expansion of Connecticut into the western territories through energetic land speculation. First elected to the General Assembly in 1768, Deane became a leader of the Patriot movement in Connecticut, serving as secretary of the colony's Committee of Correspondence, and was selected to serve in the first Continental Congress in 1774. The following year, Congress appointed Deane to the committee organizing the American navy. Deane gained added renown for his support of Ethan Allen's capture of Fort Ticonderoga.

Deane proved less popular in his home state. According to Deane's friend, Governor Jonathan Trumbull, the

assembly did not trust Deane, and so refused to re-elect him to Congress. Deane, who had aligned himself with the commercial interests of New York and Philadelphia, had entered into a number of deals with a wily financier, Robert Morris, and so he stayed on in Philadelphia. The visit of Achard de Bonvouloir to Philadelphia late in 1775 led Congress's Secret Committee, charged with acquiring munitions from abroad, to decide that an agent should be sent to France to explore the possibilities of military assistance. They awarded this assignment to Deane, even though he did not speak French, and offered him a five percent commission on all goods he acquired during the assignment. Seeing his opportunity, Deane entered into a number of secret partnerships with various merchants and political leaders hoping to profit from supplying the new Continental Army. As Deane said, he was "involved in one scheme and adventure after another, so as to keep my mind in constant agitation."

As luck would have it, Congress instructed him to arrange a meeting in Paris with his old friend, Edward Bancroft. Deane did so, passing American and French secrets to Bancroft with a view to making their fortune in trade, purchasing supplies for Congress, and engaging in land speculation and many other forms of profiteering and double dealing. What Deane did not know, and what the world did not learn until sixty years after Bancroft's death, was that Bancroft was a double agent serving the British.

Deane sailed for Europe in April 1776 with instructions from two separate Congressional committees, both of them secret. For the Commercial Committee, he was one of five merchants authorized to buy American produce with Congressional funds, to ship this merchandise abroad, and to bring back supplies needed by the colonies; Deane was the European agent for this traffic. The second committee, called the Secret Committee, instructed Deane to buy clothing and equipment for 25,000 men and to purchase artillery and munitions. He was to do this on credit, if possible. He also was to explore the possibilities of French recognition and an alliance.

Hortalez & Cie was the first fruit of Deane's efforts. French Foreign Minister Charles Gravier, comte de Vergennes, acting through his agent Pierre Beaumarchais, created Roderigue Hortalez and Company to secretly funnel munitions and other supplies to the Americans. Although details of this secret operation were passed promptly to Lord Stormont (David Murray) in Paris and to the British authorities in London, Deane and Bancroft withheld critical information about shipments in which they had a stake. Thus, vital supplies continued to flow to America. Congress had directed Deane to take Arthur Lee into his confidence, but Deane did not do so, turning Lee into a bitter enemy of Deane's. Lee

also, accurately as it turned out, accused Bancroft of being a spy.

The matter of foreigners in the American army brings up the name of Silas Deane most frequently in the pages of military history. As early as 2 December 1775, Congress had asked the Secret Committee to find four "able and skillful engineers" for the Continental army, but Deane went far beyond his authority in making contracts with foreign officers who wanted Continental commissions. He had no qualifications for sorting out the real soldiers from the mere opportunists, but went right ahead and sent a stream of ambitious European officers to Philadelphia. Some of these officers were extremely competent, most notably the self-proclaimed Baron Johann de Kalb and the Marquis de Lafayette (Gilbert du Montier), but most barely rose above the level of blowhards. Henry Laurens was to write later that Deane apparently "would not say nay to any Frenchman who called himself Count or Chevalier" and solicited a high commission in the American army.

In September 1776 Congress appointed Benjamin Franklin and Arthur Lee to form a committee with Deane to continue the mission originally entrusted to Deane alone. This led to the French Alliance, which Congress ratified on 4 May 1778, and ended Deane's diplomatic mission. Recalled ostensibly to report to Congress on affairs in Europe, but actually to answer charges raised by Lee, he stirred up a lively controversy that is an important part of the story of Hortalez & Cie. Deane also was attacked at this time for showing poor judgment in letting so many foreign adventurers come to America.

After two years in America, Deane returned to Europe as a private citizen to pursue a series of nefarious affairs with Bancroft. In 1781, he wrote to friends in America of his failing confidence in the cause of Independence and advocated an accommodation with Britain. He sent these through Bancroft, who showed them to the British authorities. With a view to giving these letters more credence, and helping their own cause, the British pretended that Deane's letters had been intercepted, and they were published in *Rivington's Gazette* at about the time General Charles Cornwallis surrendered. Now accused of treason in addition to the older charges of profiteering, dishonest financial methods, and incompetence, Deane became an exile. Bankrupt, sick in spirit and in body, he lived for a short time in Ghent and for a few years in England. He died at the start of a voyage to Canada, on 23 September 1789. His reputation was cleared to some degree when Congress voted his heirs \$37,000 in 1842 as partial restitution for his war expenses. At this time the audit of his accounts that had been made under Arthur Lee's direction was called "a gross injustice to Silas Deane." Despite his

personal corruption, Deane had done an invaluable service to the American cause by helping to transport thousands of firearms and tons of powder for use by U.S. forces.

DEARBORN, HENRY. (1751–1829). Continental officer, later secretary of war. New Hampshire. Descended from a native of Exeter, England, who came to America in 1639, Henry was born on 23 February 1751 in North Hampton, New Hampshire. He studied medicine with Dr. Hall Jackson in Portsmouth and started practicing at Nottingham in 1772 before he organized and was elected captain of a militia company. After learning of the fighting at Lexington and Concord, he led sixty of his men to Cambridge, Massachusetts, where his company became part of Colonel John Stark's Regiment. Dearborn distinguished himself as part of the latter's command at Bunker Hill. Commanding a company of musketeers in Arnold's march to Quebec, he became sick and had to be left behind on the Chaudière River. He rejoined in time, however, to be captured at Quebec on 31 December 1775. Held for a while in the city, he was paroled in May 1776 but not exchanged until 10 March 1777. On 19 March he was appointed major of Alexander Scammell's Third New Hampshire Regiment (with rank from 8 November 1776), and he fought at Ticonderoga and the First Battle of Saratoga on 19 September 1777. On the latter date he was promoted to lieutenant colonel.

After spending the winter of 1777–1778 at Valley Forge in Enoch Poor's brigade, Dearborn took part in the Battle of Monmouth in June. The next summer found him in Sullivan's expedition against the Iroquois setting out from Easton, Pennsylvania. On 19 June 1781, Quartermaster General Timothy Pickering requested that Washington appoint Dearborn to be his (Pickering's) assistant, and the request was granted. While serving in this capacity during the Yorktown campaign, he had the sad duty of writing home that his former commander, Colonel Scammell, had been killed.

Serving in the Continental army until 21 March 1783, he settled in Kennebec County, in the Maine district of Massachusetts, where he rose to major general of militia and, in 1790, U.S. marshal for the district. He was a Republican congressman from 1793 to 1797. Dearborn

was secretary of war during Jefferson's eight years as president (1801–1809). On 27 January 1812 President Madison made him the senior major general with command of what was expected to be the critical theater, the sector between the Niagara River and the New England coast.

History has generally judged Dearborn and his successor, William Eustis, to be incompetent secretaries of war. As a field commander, Dearborn was more conspicuously incompetent, and the American defeats of 1812 and 1813 in the War of 1812 were largely due to his lack of strategic sense and vigor. Morgan Lewis succeeded him in the summer of 1813 as field commander, but further evidence of Dearborn's incompetence being revealed by subsequent American defeats, he was relieved of command on 6 July 1813. His request for a court of inquiry being unheeded because officials were busy trying to salvage the mess he had created, Dearborn was given command of New York City. He was later made president of the court-martial that tried and condemned General William Hull for his defeat at Detroit, which was ironic, since it was Dearborn's inept strategy that had enabled the British to concentrate their entire force against Hull at Detroit.

In March 1815 James Madison surprisingly nominated Dearborn for secretary of war. In the ensuing uproar Madison withdrew his name, but not before the Senate rejected him. He was honorably discharged from the army on 15 June 1815.

During Monroe's administration, Dearborn was minister to Portugal from 1822 to 1824. He returned at his own request and retired to Roxbury, where he died on 6 June 1829.

DEBBIEG, HUGH. (1732–1810). British officer. Born in 1732. Debbieg's birthplace is unknown. After graduating from Woolwich Royal Military

Academy in 1746, he entered the Royal Artillery, serving in the unsuccessful Point L'Orient campaign that same year as part of the War of the Austrian Succession. He won the attention of the duke of Cumberland for his gallantry at the Battle of Val on 2 July 1747 and gained promotion. After the end of the war, he served as an engineer in Britain, purchasing a lieutenancy in the Thirty-seventh Foot on 1 September 1756. He served in America during the Seven Years' War starting in May 1758, becoming General James Wolfe's assistant quartermaster general at the siege of Louisbourg and continuing in that position through the Battle of Quebec, where he was at Wolfe's side at his death. He was promoted to captain in the Royal Engineers on 17 March 1759. He spent the next two years overseeing the construction of Halifax's defenses and taking part in the campaign against the French in Newfoundland in 1762.

Over the next several years Debbieg undertook a number of important assignments, including a secret mission for Admiral Richard Howe to examine French and Spanish coastal defenses, for which he received a lifetime pension and was brevetted major on 23 July 1772. But he accused Howe of renegeing on a promise to hold open the position of senior engineer in North America for him. As a consequence, Debbieg refused to serve in America in 1775, even when offered the position of chief engineer in Canada. He finally received the preferment he believed he deserved in 1777, being brevetted lieutenant colonel and then, in May 1778, becoming chief engineer on Jeffrey Amherst's staff. As such, he oversaw operations of the Royal Engineers for the rest of the war. Along the way he designed military bridges, an improved pontoon, and machinery for defending a breach. During the Gordon Riots of June 1780 in England, Debbieg organized the defense of public buildings, personally leading the defense of the Bank of England. On 20 November 1782 he was promoted to colonel of the Royal Engineers. With the exception of Amherst, Debbieg got along better with his subordinates than his superiors, leading the latter often to ignore his advice during the American Revolution. He came into almost immediate contention with the duke of Richmond when the latter took control of the ordnance office in March 1782. Debbieg was reprimanded and punished by courts-martial for insubordination in 1784 and 1789. Despite his many quarrels with Prime Minister Pitt, Debbieg was promoted to major general on 12 October 1793, lieutenant general on 1 January 1798, and general on 25 September 1803. Debbieg died at his home in London on 27 May 1810.

Michael Bellesiles

DE BORRE SEE *Preudhomme de Borre, Philippe Hubert.*

DECLARATION OF INDEPENDENCE. 4 July 1776. Momentum in favor of the idea of independence was building during the winter and spring of 1776. Thomas Paine's pamphlet *Common Sense*, published on 10 January 1776 and widely read, increased popular acceptance of severing political ties to Britain. Several states had already expressed sentiments that amounted to independence, but Congress was more cautious. The Virginia convention forced the issue on 15 May 1776 by instructing its delegates to offer in Congress a resolution declaring the colonies to be independent. The Virginia delegates laid the resolution before Congress on 27 May, at the same time that the North Carolina delegates indicated that they had instructions to vote for independence. The next eleven days were spent in building a consensus in Congress. Then, on 7 June, Richard Henry Lee, a delegate from Virginia, offered the following resolution: "Resolved, that these United Colonies are, and of right ought to be, free and independent states, that they are absolved from all allegiance to the British Crown, and that all political connection between them and the state of Great Britain is, and ought to be, totally dissolved."

Following two days of debate, on 11 June 1776 Congress postponed consideration of the resolution for three weeks (to allow wavering delegates to get instructions from home) and simultaneously appointed a "Committee of Five" to draft a statement that would present to the world the case for independence. Four committee members—Benjamin Franklin of Pennsylvania, John Adams of Massachusetts, Roger Sherman of Connecticut, and Robert R. Livingston of New York—delegated the fifth, Thomas Jefferson of Virginia, to prepare a draft declaration. Although only thirty-three years old, Jefferson had a reputation for political writing that made him a logical candidate to be the drafter. Perhaps more to the point, of the five delegates he was the one least busy with other congressional business. The document about which so much historical fuss has been made was regarded as nothing more than routine work at the time.

Congress reconvened on 1 July to consider Lee's resolution. Voting by colonies, the resolution received nine affirmative votes. Pennsylvania and South Carolina voted in the negative, New York abstained, and Delaware's two delegates deadlocked. Taking advantage of Edward Rutledge's intimation that South Carolina might change sides, the advocates of independence, who dearly desired unanimity on such an important measure, agreed to retake the vote the next day.

The Declaration of Independence, 4 July 1776. John Trumbull's painting (c. 1817) of the Assembly Room in Pennsylvania's State House (now Independence Hall) in Philadelphia on 4 July 1776, shows Thomas Jefferson standing at the center, surrounded by (left to right) John Adams, Roger Sherman, Robert Livingston, and Benjamin Franklin. They face John Hancock, who sits at the right. © FRANCIS G. MAYER/CORBIS.

The events of 2 July demonstrated the lengths to which advocates of independence would go to achieve unanimity. John Adams worked tirelessly to sway his colleagues, leading the difficult battle for greater consensus. Under the influence of Rutledge, South Carolina now joined the majority. Two conservative Pennsylvania delegates—Robert Morris and John Dickinson—deliberately absented themselves, allowing the remaining delegates to vote three-two in favor. And, most dramatically, Caesar Rodney, alerted by Thomas McKean that his vote would be needed to break Delaware's deadlock, rode eighty miles through the night in a thunderstorm from Dover, Delaware, to cast his tie-breaking vote for independence. The final tally was twelve votes for independence, with the New York delegates still awaiting instructions from their newly elected assembly back home.

With Lee's resolution approved, Congress now turned to Jefferson's draft Declaration, which Franklin and Adams had changed slightly. Jefferson drew on many sources in constructing his draft; as James Madison later commented, "The object was to assert, not to discover

truths." In general, his words reflected the influence of political philosophers beginning with the English revolution of the mid-seventeenth century, including most notably ideas found in John Locke's writings from the late seventeenth century. That cache of notions about the proper role of government, and especially what to do when an established government became abusive or tyrannical, had become a common element in American political discourse since the start of the imperial crisis, and would have made ready sense to politically aware people who were active in government at the local and colony level. Jefferson's phraseology suggests that he had before him on his drafting table a copy of the preamble he had written for the recently adopted Virginia state constitution of 1776 and copies of the first three sections of George Mason's Declaration of Rights. The introductory sections of his draft of the Declaration asserted that independence was now an unavoidable step, an action based on principles that his readers would readily understand as "self-evident." When the established government had engaged in "a long train of abuses and usurpations," it

was the right of a people “to throw off such government, and to provide new guards for their future security.” The bulk of the Declaration provided the particulars needed to indict and convict George III of tyranny, and asserted that all means of redress short of independence had been denied. In words that echoed Lee’s resolution of 7 June, the Declaration concluded that “these United Colonies are, and of right ought to be, free and independent states.” Modern scholarship has demonstrated that, although the Declaration retained much of Jefferson’s literary style, linguistic cadence, and political thinking, because the draft was edited by Congress as a committee of the whole the Declaration deserves to be regarded as the product of the collective wisdom of delegates from all the colonies, who labored into the late afternoon of 4 July to produce and approve the final document.

The committee had the Declaration printed at the shop of John Dunlap, Congress’s official printer, on the night of 4–5 July, for distribution to the army, state assemblies, conventions, and committees of safety. The printed document was headed, “In Congress, July 4, 1776. A Declaration by the representatives of the United States of America in General Congress assembled,” and entered into the journal of Congress under the date 4 July, a circumstance that gave rise to the legend that the Declaration was signed on 4 July. (John Trumbull’s painting in the Capitol rotunda, *The Signing of the Declaration of Independence*, also propagates this error.) Its first public reading occurred on 8 July, when Colonel John Nixon was appointed by the sheriff of Philadelphia to read the Declaration on the steps of the Statehouse. Congress received news on 11 July that the New York convention had voted for independence two days earlier. On 19 July it ordered the Declaration to be engrossed (written out on parchment in a large, clear hand, by Timothy Matlock, an assistant to Charles Thomson, the secretary of Congress) as “The unanimous declaration of the thirteen United States of America.” The engrossed copy was ready on 2 August, when it was signed by all fifty delegates present (six delegates signed later). After John Hancock had signed as president of Congress, the New Hampshire delegates began the list of signatures below and to the right of the text. The other delegates followed in geographical order from north to south, in six columns that went from right to left across the parchment. The Georgia delegates signed last.

The significance of the Declaration, which merely gave official notice of the course on which the states and Congress had already embarked, was to destroy any lingering possibility of conciliation and to make it possible for foreign powers to ally themselves with the new nation.

DECLARATION OF RIGHTS AND GRIEVANCES SEE *Stamp Act.*

DECLARATION OF THE CAUSES AND NECESSITIES OF TAKING UP ARMS.

6 July 1775. The Declaration was one of several addresses issued by Congress to justify the necessity of armed resistance. On 23 June Congress appointed a committee consisting of John Rutledge, William Livingston, Benjamin Franklin, John Jay, and Thomas Johnson to draw up an address for George Washington to read to the Continental Army besieging Boston. The draft was debated on 24 June and postponed on 26 June. Congress then added John Dickinson and Thomas Jefferson to the committee. The second draft was the joint work of Dickinson and Jefferson. Congress adopted that draft on 6 July, the day after accepting Dickinson’s Olive Branch Petition.

The heart of the document is in these lines:

We are reduced to the alternative of choosing an unconditional submission to the tyranny of irritated ministers, or resistance by force. The latter is our choice. We have counted the cost of

this contest, and find nothing so dreadful as voluntary slavery. . . . Our cause is just. Our union is perfect. Our internal resources are great, and, if necessary, foreign assistance is undoubtedly attainable. . . . With hearts fortified with these animating reflections, we most solemnly, before God and the world, declare, that, exerting the utmost energy of those powers, which our beneficent Creator hath graciously bestowed upon us, the arms we have been compelled by our enemies to assume, we will, in defiance of every hazard, with unabating firmness and perseverance, employ them for the preservation of our liberties; being with one mind resolved to die freemen rather than to live slaves.

DECLARATORY ACT. 18 March 1766. On the day it repealed the Stamp Act of 1765, Britain’s Parliament asserted its authority to make laws binding the American colonies “in all cases whatsoever,” using the same general language as in the Irish Declaratory Act of 1719. One of the most important influences in persuading Parliament to repeal the Stamp Act had been the masterful performance of Benjamin Franklin in his testimony before the House of Commons on 13 February 1766, the thrust of which had been that Americans objected only to “internal” taxes, but not to taxes on trade. Franklin’s testimony was disingenuous at best (historian Edmund S. Morgan calls it “a dangerous piece of deception with unfortunate aftereffects”), since Franklin knew that most colonists drew no such distinction.

The prime minister, the Marquis of Rockingham, who favored repeal of the Stamp Act because he believed it was unsound policy, knew that repeal would have to be accompanied by some declaration that would assuage Parliament’s anger at American defiance of its authority. William Pitt had already introduced a resolution that, in demanding repeal of the Stamp Act, simultaneously “proposed that Parliament assert its sovereignty over the colonies in ‘every point of legislation whatsoever.’” Rockingham made use of the distinction introduced by Franklin and supported by Pitt that Americans objected only to internal taxes. In the Declaratory Act, he asserted

Parliament’s right to make laws and statutes binding the colonists “in all cases whatsoever” without specifically stating whether or not those cases included the right to tax. Members of Parliament were persuaded that Americans objected only to internal taxes and believed that the Declaratory Act included the right of Parliament to tax the colonists. The misunderstandings embodied in the Declaratory Act were an important element in eroding an accurate understanding of the imperial crisis on both sides of the Atlantic.

DE COUDRAY SEE *Tronson du Coudray, Philippe Charles Jean Baptiste.*

DEFEAT IN DETAIL. In the correct military sense—in the twenty-first as well as in the eighteenth century—this term means “the defeat in turn of the separated parts of a force.” To avoid “defeat in detail,” a commander keeps all his units within “supporting distance” of each other.

Mark M. Boatner

DE FERMOY SEE *Fermoy, Matthias Alexis de Roche.*

DEFILADE. A person or thing protected by a natural or man-made barrier—a rise in the ground, or mounded earth—is said to be in defilade. In modern military parlance, this is “cover,” as opposed to “concealment.”

Mark M. Boatner

DE HAAS, JOHN PHILIP. (1735–1786). Continental general. Pennsylvania. Born in Holland, John Philip De Haas came to America with his parents around 1737 and settled in Lancaster, Pennsylvania. De Haas was an ensign in the Provincial Battalion of Pennsylvania in December 1757 and was stationed on the Susquehanna River. He accompanied General John Forbes's expedition to Fort Duquesne the next year, served throughout the rest of the Seven Years' War, and during Pontiac's War took part in Colonel Henry Bouquet's victory at Bushy Run in August 1763. During the period from 1765 to 1779, he was a local magistrate and engaged in the iron industry of Lancaster County. In 1775 he raised a militia company, was named major of the Pennsylvania Provincials, and on 25 October 1776 was appointed a colonel of the First Pennsylvania Battalion. He led this unit to Canada and is credited with saving Benedict Arnold from possible capture at Lachine by arriving with four companies to drive off an enemy column. During the retreat from Canada he operated between Montreal and Sorel during the month of June 1776, before joining the final withdrawal to Ticonderoga.

De Haas's First Pennsylvania Battalion formed the nucleus of the Second Pennsylvania Continentals, of which he was named colonel on 25 October 1776. He was appointed brigadier general on 21 February 1777, but hesitated so long in acknowledging his promotion that General George Washington wrote in June to ask if he was still in the army. It appears that he was not, for De Haas does not appear in the service records from 1777 until his official retirement on 3 November 1783, except for being brevetted as a major general on 30 September 1780. It is possible that, during the intervening years, he was in unofficial retirement because no brigade could be found for him to command. In 1779 he moved to Philadelphia, where he died in 1786.

DE KALB, JOHANN. (1721–1780). Continental general. Born in Hüttendorf, Bavaria, on 19 June 1721, de Kalb, the son of Bavarian peasants, became known in America as "Baron de Kalb." He appeared as a lieutenant (1 September 1743) in a French infantry regiment under the name of Jean de Kalb. He subsequently fought in the army of the great Marshal Saxe (Hermann Maurice, comte

de Saxe), served through the War of the Austrian Succession (1740–1748), was promoted to major in 1756, and distinguished himself in the Seven Years' War (1756–1763). Meanwhile he had become an assiduous student of languages and mathematics in addition to strictly military subjects. In 1764 he married a wealthy heiress whose fortune enabled him to retire from the army and settle near Paris. During the first four months of 1768 he traveled in America as a secret agent for the French Secretary of State (Etienne François, Duke of Choiseul) to report on the colonists' feelings toward Great Britain. Upon his return, de Kalb found that Choiseul no longer cared about America, and his mission proved useless.

The accession of Louis XVI brought the comte de Broglie (Charles François) back into influence and de Kalb, who had served in the latter's corps, returned to the army. He served under Broglie in the Metz garrison, and on 6 November 1776 was commissioned brigadier general. By this time he had decided to seek his military fortune in America, and he received permission to go as a volunteer. Silas Deane drew up one of his contracts, and de Kalb sailed on 20 April 1777 with the Marquis de Lafayette (Marie-Joseph-Paul-Roche-Yves-Gilbert-du-Motier). Although Congress made satisfactory arrangements for the wealthy and influential young marquis, they saw no way of accommodating the bogus baron. De Kalb threatened a civil suit for breach of contract and was about to return to France when, on 15 September, he was voted a commission as major general. After some hesitation about accepting it, he joined General George Washington early in November and spent the winter at Valley Forge. In the spring of 1778 he was named as Lafayette's second in command for the proposed invasion of Canada.

Not until two years later did de Kalb finally receive an assignment commensurate with his rank. On 3 April 1780 he was ordered to the relief of Charleston with the Maryland and Delaware Continentals. On 25 July he surrendered command to General Horatio Gates, but remained with the southern army at the head of his division. Gates ignored the professionally sound advice of de Kalb, leading the army to annihilation in the Camden campaign. In the battle of 16 August, de Kalb fell bleeding from 11 wounds, dying three days later.

DE LA BALME SEE *Mottin de La Balme, Augustin.*

DE LANCEY, JAMES. (1747–1802). Loyalist. Born in West Farms, New York, on 6 September 1747, De Lancey was appointed to the family's traditional position of sheriff of Westchester County in 1770, holding it until 1775, when he took the Loyalist side in the Revolution. Confined to his home, De Lancey fled to the British on Long Island in the summer 1776. When the royalist governor, William Tryon, appointed De Lancey commander of the Loyalist Westchester County militia in March 1777, the latter seized the initiative and formed the Westchester Refugees, popularly known as "De Lancey's Cowboys" for their seizure of Patriot cattle. Though he did not officially become commander until 1780 when he was promoted to colonel, De Lancey led the Refugees on a long guerrilla campaign out of their base at King's Bridge, which is credited with keeping the British in New York City supplied with food. De Lancey was captured by a Patriot unit in December 1777, being held on parole in Hartford until exchanged in 1778. He claimed to have taken five hundred Patriots used in exchange for Loyalist captives. Westchester County was contested ground, with a number of atrocities committed by each side, most famously the Loyalists' shooting of Colonel Christopher Greene on 14 May 1781 after he had surrendered. New York confiscated De Lancey's property in October 1779, and he left the state shortly after resigning his commission on 3 April 1783. He settled in Annapolis County, Nova Scotia, where he was elected to the assembly in 1790 and served on the council from 1794 to 1801. He died at home on 2 May 1804.

DE LANCEY, OLIVER. (1718–1785). (The elder.) Senior Loyalist officer in America. New York. Born 16 September 1718 in New York, De Lancey was the youngest son of Etienne De Lancey, who came to New York in 1686 after the revocation of the Edict of Nantes, and of Anne van Cortlandt. In 1742 De Lancey married Phila Franks, a Jew from New York City. A successful merchant and landowner, he and his brother James (1703–1760) built the family party into a position of

power in New York provincial politics, constantly finding themselves in conflict with the royal governor. Despite his aristocratic status, De Lancey became popular among the working class of New York City and campaigned easily among its members. He served during the Seven Years' War as one of New York's paymasters and raised and led volunteers to Fort Ticonderoga in 1758. When his brother James died in 1760, De Lancey became head of the family's political faction, serving on the governor's council for the next fifteen years. In 1769 he formed an alliance with the Sons of Liberty, leading his party to victory over the Livingston faction in an election marked by demonstrations and the intimidation of voters. In 1773 De Lancey reached the apex of his power, being named commanding colonel of the Southern Military District. Almost immediately thereafter his relationship with the Sons of Liberty soured as the latter's demands turned more radical. Over the next year New York's political factions traded places, with the Livingstons allying with the Patriots while the De Lancey faction became identified with Governor William Tryon.

De Lancey fled New York City on 20 June 1776, joining the British forces. General William Howe promoted De Lancey to brigadier general, making him the highest-ranking officer in the British forces. Oliver raised a brigade of fifteen hundred Loyalists who were generally known as De Lancey's New York Volunteers. Two of these battalions served in the South with distinction and the third remained throughout the war on Long Island, as did De Lancey himself. On 26 November 1777 a Patriot raiding party destroyed De Lancey's mansion on the Hudson River near Greenwich Village. He was included in New York's Act of Attainder of 1779, and his property was confiscated. Leaving New York City with the British in 1783, De Lancey received a pension and £23,446 from the crown to cover his claimed losses of £78,016. He and his wife settled in Beverley, England, where he died on 27 October 1785.

DE LANCEY, OLIVER. (1749–1822). (The younger.) British officer, Clinton's adjutant general. Of the powerful New York family led by his father (see preceding entry), young Oliver was born in New York City, educated in England, and in 1766 he entered the British army as cornet of the Fourteenth Dragoons. In

May 1773 he became captain in the Seventeenth Dragoons, in which he remained for forty-nine years and succeeded the first duke of Newcastle as its colonel in 1795. Preceding his regiment to America in 1774 to secure remounts and arrange accommodations, he joined them on their arrival in Boston on 24 May 1775. His mounted detachment led the British turning movement at Long Island and assured its success by capturing the American patrol at Jamaica Pass. He took part in the action at Jamaica, Long Island, on 28 August 1776 and in an affidavit of Lieutenant Robert Troup, not made public until 1846, was accused of striking the wounded Brigadier General Nathaniel Woodhull after his surrender. More valid testimony indicates that De Lancey saved the general—who was a kinsman—after a trooper had inflicted the wounds from which he eventually died. After serving with his regiment in Pennsylvania and New Jersey on 3 June 1778, De Lancey was promoted to major and given the post of deputy quartermaster general in the Charleston expedition of Clinton. He succeeded John André as Clinton's adjunct general in 1780 and, in this capacity, reorganized the secret service in the North. During the mutiny of the Pennsylvania Line, in January 1781, he initiated various schemes to exploit the situation, but he had no success. In May 1781 he became the adjunct general of the British army in America and was promoted to lieutenant colonel. After the fighting ended he was head of a commission to settle accounts of the war.

De Lancey became barrackmaster general of the British army, an office he held for ten years. In 1794 he was promoted to major general, and in 1812 he became a full general. For many years he represented Maidstone in Parliament. He died a bachelor at the home of his sister Charlotte, who had married Sir David Dundas, commander in chief of the British army after the duke of York.

John Oliphant

DE LANCEY'S BRIGADE. Oliver De Lancey (the elder) was authorized in September 1776 to raise a Provincial brigade of three battalions to fight alongside the British. The Third Battalion, under Gabriel Ludlow, remained in the New York garrison throughout the war. The two others, commanded by John Harris Cruger and George Brewerton, were sent south in late November 1778 as part of Lieutenant Colonel Archibald Campbell's expedition against Savannah, Georgia, and

helped defend the city from the Franco-American counter-attack in September–October 1779. Both battalions remained at Savannah when Sir Henry Clinton took Charleston, South Carolina, in May 1780. Thereafter, the First Battalion participated in the long campaign to help pacify the interior of South Carolina, notably in the defense of the post at Ninety Six from 22 May to 18 June 1781. Withdrawn into the defensive perimeter around Charleston, it helped defeat the Americans at the Battle of Eutaw Springs on 8 September 1781. Consolidated with the Second Battalion, the First Battalion evacuated Charleston in December 1782. Back in New York, it joined the Third Battalion in garrison on the western end of Long Island. The bulk of the brigade evacuated New York for New Brunswick in early September 1783 and was discharged on 19 October.

DELAWARE. The Delaware, or Lenape, Indians were a strategically significant Indian nation that, during the middle of the eighteenth century, inhabited a region constituting the western part of modern-day Pennsylvania and most of modern-day Ohio. Many communities of Delawares allied with the United States during the American Revolution, while others maintained neutrality, and some sided with the British. The Delaware were signatories to the first Indian treaty signed under the Continental Congress (1778), and also were victims of

one of the bloodiest massacres of American Indian civilians by American troops, at Gnadenhutten, Ohio (1782).

At the time of significant and sustained European contact in the seventeenth century, the Delaware inhabited the entire Delaware River Valley, in the modern-day states of Pennsylvania, New Jersey, and New York. The Delaware inhabited villages of a few hundred people each, and their population at contact has been estimated to be between 8,000 and 12,000 people. While having a shared culture, the Delaware spoke two different languages, Munsee and Unami.

As white settlement in the Jerseys and Pennsylvania expanded, the Delaware were pushed westward in the Susquehanna Valley, and eventually settled west of the Alleghenies. Cordial relations between the Delaware and the government of Pennsylvania soured during the eighteenth century, beginning with the controversial Walking Purchase of 1737, which ceded Indian lands along the Delaware River to white settlers, with the extent of the land ceded to be measured as the distance a man could walk in a day and a half. Relations further deteriorated with the anti-Indian violence of the Paxton Boys Riots (1764), which resulted in the massacre of a Conestoga Indian village. Pennsylvania was also the base of operations of the Church of the United Brethren, or Moravian Church, a German pietist sect. The Moravians were active in proselytizing among the Delawares, and took in hundreds of converts during the middle decades of the eighteenth century. The Moravian Delawares, also often known as the Moravian Indians, adopted European modes of subsistence and culture, and lived in separate villages, apart from other Delawares and Anglo-Americans.

By the start of the American Revolution, most Delawares, both Moravian and non-Moravian, had relocated into the trans-Allegheny region, living in modern-day western Pennsylvania and Ohio. It was in this region and this time period that the Delawares came together in new villages, increasing their political power. Four important chiefs guided the Delawares—Captain Pipe, the head of the Wolf clan; Captain Johnny, head of the Turkey clan; and Netawatwees, or Newcomer, head of the Turtle clan. Newcomer died in 1776, and his grandson Gelelemend, or Killbuck, became head of the Turtle clan in his place. Another leader, named White Eyes held the position of war chief in the Turtle clan. Like many other Indian nations of the eastern woodlands, Delaware political organization was diffuse, with chiefs exerting power through persuasion rather than through command.

As was the case with the Iroquois, both the Americans and the British initially pushed for the Delaware to remain neutral during the early phases of the American Revolution. The Continental Congress created three Indian departments on 12 July 1775, and the Delaware fell under the control of the Middle Department. Indian

trader and land speculator George Morgan was appointed chief Indian commissioner of the Middle Department. Morgan organized several treaty conferences at Pittsburgh (1776, 1777, 1778), in which the Delaware were participants. Morgan's diplomacy, in concert with the efforts of Moravian missionaries David Zeisberger and John Heckewelder, kept most Delawares sympathetic with the American cause, in contrast with most of the Indians of the Great Lakes basin and Ohio Valley, who sided with the British. The Delaware signed a formal treaty of alliance with the United States at Fort Pitt on 17 September 1778. The treaty was the first formal treaty the United States government made with an Indian nation. Article VI of the Treaty held out the possibility of the Delaware eventually forming a state and being admitted as an equal member to American union, with membership in the Continental Congress. This provision, obviously, was never acted on by Congress.

The alliance between the United States and the Delawares proved fragile, and eventually collapsed. While Killbuck and White Eyes were strongly devoted to the American cause, the other Delaware leaders were not. Most Delawares wanted to remain neutral and disapproved of the Fort Pitt treaty, because they felt it tied them too strongly to the United States. Worried that too many Delawares were leaning toward the British side, Colonel Daniel Brodhead, then the commander at Fort Pitt, led an attack against the main Delaware neutralist settlement at Coshocton in 1780. Complicating matters was the fact that, while the American military leadership in the Middle Department was committed to maintaining some sort of alliance with the Delawares, the American settlers in the region were not.

Settler communities consistently initiated violence against their (mostly Delaware) Indian neighbors. White Eyes was murdered by American settlers. In the spring of 1782, Pennsylvania settlers attacked Killbuck's settlement near Pittsburgh, and also attacked and destroyed the Moravian Delaware village of Gnadenhutten, murdering almost a hundred of the villagers. Like many other Indians during the American Revolution, the Delawares emerged from the war divided, weakened, and generally suspicious of the new United States. The Delaware participated in the pan-Indian resistance movement of the 1790s, which culminated in the Treaty of Greenville. Between the 1810s and 1830s, most Delawares were removed to reservations west of the Mississippi River.

DELAWARE CONTINENTALS. On 9 December 1775, Congress assigned Delaware a quota of one regiment to raise for the Continental army in 1776. Organized on 19 January 1776 under Colonel John Haslet, an Ulster-born physician from Kent County, this was the only regiment furnished by Delaware during the war. The regiment was well trained by its adjutant, a former British captain, and well uniformed in blue coats faced and lined with red, white waistcoats, buckskin breeches, white woolen stockings, black gaiters, and peaked black hats that were smaller versions of British grenadier hats. After obtaining "lately imported" English muskets from Philadelphia in July, it marched in August to join Washington's army at New York City. Among "the best uniformed and equipped [regiments] in the army of 1776," it was also one of the few armed with bayonets (Lefferts, p. 26).

The regiment fought for the first time at Long Island on 27 August 1776 and saw hard service with the main army over the next two years in brigades with Maryland, Pennsylvania, and Virginia regiments. Major Thomas McDonough was wounded at Long Island and did not return. Lieutenant Colonel Gunning Bedford was wounded at White Plains on 28 October 1776 and left the regiment in January 1777. Haslet himself was killed at Princeton on 3 January 1777. David Hall, a lawyer from Lewes, succeeded Haslet and was seriously wounded at Germantown on 4 October 1777. Lieutenant Colonel Charles Pope, who had been wounded at Mamaroneck on 21 October 1776, led the regiment until he resigned on 13 December 1779. Having recouped some of its strength by recruiting, especially at Wilmington over the winter of 1777–1778, the regiment was transferred on 5 April 1780 to the Southern Department along with the Maryland Line. It marched south under Lieutenant Colonel Joseph Vaughan and Major John Patten and suffered heavily at Camden under Horatio Gates on 16 August 1780. There both field officers were taken prisoner; they remained on parole to the end of the war.

Camden reduced the regiment to two ninety-six-man companies under Captains Robert Kirkwood and Peter

Jaquett. Both units fought with distinction during the remainder of Nathanael Greene's southern campaign, usually with the remnants of the Maryland Line. Back in Delaware by early 1783, the companies were furloughed at Christiana Bridge on 17 January. The regiment was formally disbanded on 15 November.

DELAWARE LINE. The smallest of the state lines (military forces) belonged to Delaware, the smallest state. On 9 December 1775 the Continental Congress authorized a single regiment to serve for a year, and the state government recruited it in early 1776, with John Haslett as colonel. Some of the companies saw their first action on the shores of Delaware Bay by capturing a boat from the Royal navy frigate, the HMS *Roebuck*. The regiment achieved a higher level of training than many other units because its adjutant was a former British captain. It went to New York City and gained fame during the defensive battles in that campaign.

The regiment reenlisted for the duration of the war in 1777, now under the command of Colonel David Hall. The regiment continued to perform well in the main army, initially serving in the Maryland Division and then, in 1778, in a Virginia division. It rejoined the Marylanders in 1779 and accompanied them south in the spring of 1780. It was shattered in the battle of Camden, with only enough men remaining to form two companies. Those companies stayed in action through Nathanael Greene's campaign, with the other officers returning home. New recruiting enabled two more companies to join General George Washington for the siege of Yorktown, and then went to Greene to relieve the two veteran companies. The last of the regiment went on furlough in early 1783, and formally disbanded on 15 November of that year.

DEMONT, WILLIAM. American traitor. Pennsylvania. Born in England, Demont settled in Pennsylvania before the Revolution. Commissioned ensign in the Fifth Pennsylvania Battalion on 6 January 1776, he became regimental adjunct to Colonel Robert Magaw, commander of Fort Washington, on 29 September. He deserted on the night of 2–3 November 1776 to the camp of Earl Percy at McGown’s Pass in Manhattan, taking with him complete information on Fort Washington’s defenses. Shortly after the fall of fort to the British, Magaw and other American officers learned of Demont’s treason; Washington, however, kept the incident quiet for fear of

its impact on morale. Dement traveled with General William Howe’s army until 1780, when he went to England to press his claims for some sort of reward. Though he had done the British great service in turning over the plans to Fort Washington, as late as 1792 Dement was still attempting to gain recompense for his losses during the Revolution. The government awarded him sixty pounds.

DENISON, NATHAN. (1740–1809). Militia officer. Connecticut. A native of New London, he was a well-educated man who became one of the early Connecticut settlers of the Wyoming Valley and was active in its affairs. In 1774 he and Zebulon Butler became justices of the peace of the newly established town of Westmoreland. In 1777 Denison was made lieutenant colonel of the Connecticut militia, and later in the year he was promoted to colonel, a grade he held until 1780. He commanded troops in the Wyoming Valley Massacre in July 1778 and figured prominently in that action. After the war he held several important posts under the authority of Pennsylvania. He died on 25 January 1809 at the age of sixty-eight.

DE PEYSTER, ABRAHAM. (1753–1799). Loyalist officer. New York. Member of a wealthy New York family and nephew of Arent Schuyler De Peyster, Abraham De Peyster was born in New York City. Siding with the British, in December 1776 he was commissioned captain in the Fourth (King’s) American Regiment, also called the King’s American Rangers, serving through the

rest of the war. Second in command of Loyalist forces at the Battle of Kings Mountain, South Carolina, on 7 October 1780, De Peyster succeeded Patrick Ferguson as commander after the latter's death and was forced by the hopelessness of the situation to surrender his force. Wounded and taken prisoner, he was exchanged the following year and returned to New York City, though he saw no further action. In 1783 he was retired at half pay as a captain and settled at St. John, New Brunswick, where he became treasurer of the province. He died there on 19 February 1798.

His brothers Frederick and James also were Loyalist officers. The former distinguished himself during Clinton's expedition to the Highlands in the attack on Fort Montgomery.

DE PEYSTER, ARENT SCHUYLER.

(1736–1832). Loyalist officer. New York. Born to a powerful family on 27 June 1736 in New York City, De Peyster went to England in 1751. He enlisted on 13 April 1755 with an ensign's commission in Major General William Shirley's Fiftieth Foot, becoming a lieutenant in Sir William Pepperrell's Fifty-first Foot on 10 June. During the Seven Years' War he served under his uncle, Peter Schuyler (1710–1762), along the northern frontier, being taken prisoner at Oswego on 14 August 1756. Exchanged the following year, he transferred to the Eighth Foot and saw duty in Germany. Promoted to captain, De Peyster was stationed in Montreal from 1768 until 1774, when he was made commandant of Michilimackinac. There he played a key role in negotiating a peace between the Sioux and Ojibwas.

With the start of the Revolution, De Peyster successfully won the support of several Indian nations, sending volunteers to serve with Generals Guy Carleton and John Burgoyne. He was promoted to major on 6 May 1777. In 1779 he was put in command at Detroit, where he again won many Indians over to the British side and organized attacks on the Kentucky settlements. In 1783 he was promoted to lieutenant colonel of the Eighth Foot and given command at Niagara. In 1785 he returned to England as commander at Plymouth. In 1793 he sold his commission and retired to Dumfries, Scotland, where in 1795 he commanded the Dumfries Volunteers. An original member of his command was Robert Burns, who wrote a poem titled *Epistle to Colonel De Peyster*. The following year De

Peyster again retired, devoting himself to poetry. He died in Dumfries on 26 November 1832. He was an uncle of Abraham De Peyster.

DESPARD, EDWARD MARCUS.

(1751–1803). British army officer and revolutionary. Edward Marcus Despard, a younger brother of John Despard, was born in Ireland on 6 March 1751. He entered the army with an ensign's commission in 1766. He was later stationed at Jamaica where he was promoted to lieutenant in 1772 and proved to have considerable ability as a military engineer. With Horatio Nelson, he survived the disastrous San Juan expedition in 1779 and was promoted captain the following year. In 1781 he became the governor of British possessions in the Gulf of Honduras and in 1782 was involved in the Black River expedition. In 1786 he became the British superintendent in Honduras, where he proved a clumsy and authoritarian administrator and was removed in 1790.

Angry at not receiving compensation, he drifted towards the revolutionary United Irishmen and United Britons. By 1798, when he was arrested, he was working with a French agent to coordinate risings throughout Britain with a French invasion. Released in March 1801, he retired to the family estate in Ireland; a year later, however, he was back in London organizing a rising by Irish laborers and disaffected guardsmen and liaising with French spies. Arrested in November, he was tried and—despite Nelson's character evidence—condemned to death. With six fellow conspirators, he was hanged at the Surrey county gaol, Newington, on 21 February 1803, and his corpse was decapitated.

DESPARD, JOHN. (1743/4–1829). British army officer and colonial governor. The elder brother of Edward Marcus Despard, he entered the Twelfth Foot as an ensign in 1760. He saw action in Germany, and was promoted to lieutenant on 12 July 1762. Placed on half pay in 1763, he accepted a lieutenantancy in the Seventh Foot (Royal Fusiliers) in 1767 and went with his regiment to Quebec in 1773. Taken prisoner at the surrender of

St. Johns (on the Richelieu River) on 2 November 1775, he was exchanged in December 1776 and joined William Howe's army at New York. Promoted to captain on 25 March, Despard took part in the capture of Fort Montgomery in New York during October. Subsequently promoted to major, in 1778 he organized Rawdon's new corps, the Volunteers of Ireland. He then served as deputy adjutant general on Clinton's Charleston expedition of 1780 and with Cornwallis's army until Yorktown in 1781. Promoted to colonel in August 1795 and major general in 1798, he was governor of Cape Breton from 1800 to 1807 and rose to full general in 1814. Altogether he served in twenty-four engagements and suffered three shipwrecks.

DESTOUCHES, CHARLES-RENÉ-DOMINIQUE SOCHET, CHEVALIER. (1727–1794). French admiral. Born in Luçon, he joined the navy in 1743, becoming lieutenant in 1756, commander in 1765, and ship's captain in 1767. On 27 July 1779 he participated in the Battle of Ouessant. Succeeding Admiral Ternay as commander of the French squadron at Newport after the admiral's death in December 1780, he quickly dispatched a cutter to protect coastal traffic in the New London area. He also sent a force southward to support Lafayette in Virginia. After the action off Chesapeake Bay on 16 March 1781, he returned to Newport, carrying back the British frigate *Romulus*. Governor Hancock of Massachusetts asked him to undertake a combined operation against Fort Penobscot, but it was cancelled in April when Washington expressed misgivings. Destouches was succeeded by Admiral Barras in May 1781. The former served on the *Neptune* during the Yorktown siege and participated in the capture of Saint-Christophe (February 1782) but was taken prisoner with his superiors by Rodney on 12 April 1782. He was awarded the rank of squadron commander in 1784 and promoted to rear admiral January 1792, but he soon retired. He was arrested in 1793 but was freed by the royalist army at the point of his trial.

DICKERT RIFLE. Many writers have referred to a "Deckhard rifle" carried by the "Over Mountain Men" at Kings Mountain. The weapon was actually a long rifle made by Jacob Dickert of Lancaster, Pennsylvania. The non-existent "Deckhard" may be a phonetic rendering of "Dickert" or "Deckert." Many weapons, not just the Dickert rifle, are mistakenly identified by the name of the lockmaker; another well-known example is the Golcher (or Goulcher) rifle, named for G. Golcher of Kentucky.

DICKINSON, JOHN. (1732–1808). American political theorist. Born on 8 November 1732 in Talbot County, Maryland, John Dickinson studied law for three years before going to London for another three years of study at the Temple (1753–1757). Returning to Philadelphia, he was admitted to the bar and quickly became a prominent lawyer. In October 1760 he was elected to the assembly of the lower counties of Delaware, where his family owned property, becoming speaker of that body. In 1762, after losing re-election in Delaware, he was elected representative from Philadelphia to the Pennsylvania legislature. Here his conservative views threw him into the role of leading the unpopular Proprietary Party in opposition to Benjamin Franklin,

who wanted a royal government. Dickinson won this battle and Franklin lost his bid for re-election. A vigorous opponent of the Stamp Act, Dickinson attended the congress of 1765 and is credited with doing most of the work on the "Declaration of Rights and Grievances." In an essay published in 1765 entitled "The Late Regulations Respecting the British Colonies . . . Considered," Dickinson advocated enlisting the aid of British merchants to secure the repeal of the Sugar and Stamp Acts. His *Letters from a Farmer in Pennsylvania* (1768), which called for peaceful resistance to the arbitrary government of the British Parliament, had a major impact on political thought in England as well as America.

In 1771 Dickinson drew up the first "Petition to the King," which won unanimous acceptance from the assembly, but he fell in popular estimation by condemning the often violent approach of the New England radicals. In 1774 he disapproved of any more assistance to Boston beyond sending an expression of sympathy. He epitomized the conservative Patriot viewpoint in his "Essay on the Constitutional Power of Great Britain over the Colonies in America," which urged caution in America's resistance to British authority. The Pennsylvania assembly selected Dickinson as a delegate to the first Continental Congress, drafting their "Petition to the King" and "Address to the People of Quebec," in which they sought Canadian support.

Made chairman of a Committee of Safety and Defense on 23 June 1775, Dickinson held this position a year. He also became a colonel of the first battalion raised in Philadelphia. In the Second Continental Congress he continued to advocate peaceful methods. He wrote the "Olive Branch Petition," adopted 5 July 1775 over the furious objections of New England delegates, and crafted the final version of the "Declaration of the Causes and Necessity of taking up Arms." He voted against the Declaration of Independence, insisting that a peaceful settlement was still possible and believing that the colonies lacked the central government and the support of allies needed for a successful war. Nonetheless, he headed the committee that drafted the Articles of Confederation, and led his regiment to Elizabethtown to combat the British. Dissatisfied by the direction events were taking, he quit both the assembly and Congress and moved to Delaware. He served as a private in the Delaware militia during the Philadelphia campaign, and in October 1777 he was made a brigadier general of militia.

Dickinson returned to Congress in February 1779 as a delegate from Delaware, but he resigned in the fall. In 1781 he became president of the Supreme Executive Council of Delaware, and when he returned to live in Philadelphia he held the same office in Pennsylvania from 1782 to 1785. In 1787 he was a delegate from

Delaware to the convention that framed the federal Constitution, and the next year he published nine letters, signed "Fabius," urging its adoption. In 1791, Dickinson was a delegate to and president of the Delaware constitutional convention. He then served in the assembly until he resigned because of ill health in 1793. During his last 15 years he held no public office, but in 1797 he published fourteen letters advocating friendship with France. He died on 14 February 1808.

DICKINSON, PHILEMON. (1739–1809). Militia general. Born on 5 April 1739 in Talbot County, Maryland, Philemon Dickinson moved to Philadelphia in 1757 to attend the College of Philadelphia. He then studied law with his brother John, but quit to oversee the family estate in Trenton, New Jersey. In July 1775 he was named a colonel of the Hunterdon County militia, and on 19 October became brigadier general of the New Jersey militia. In 1776 he was elected to the New Jersey provincial congress. Present at the Battle of Trenton on 26 December 1776, he ordered the artillery to shell his own house, which the British were using as a command post. A great deal of his personal property was destroyed in the battle. That same month, Dickinson became embroiled in a political controversy when a letter from his brother John advising him to refuse Continental currency and resign his commission became public.

While General George Washington occupied winter quarters at Morristown, Dickinson led one of the raids that seriously jeopardized British attempts to get provisions. He marched 400 untrained troops through a waist-deep river to surprise and defeat a large foraging party near Somerset Courthouse, New Jersey (20–22 January 1777). On 15 February 1777 he resigned his commission as militia brigadier general, but on 6 June he was named major general and commander in chief of the New Jersey militia, a post he retained until the end of the war. During the Philadelphia campaign (June to December 1777), he and David Forman were in the field with militia detachments, but Washington was unable to draw Dickinson's

command to the main army for the battle of Germantown (4 October). On 27 November he took part in an attack on Staten Island. On 9 May 1778 he led the militia in repulsing Major John Maitland's attack on Trenton. During the Monmouth campaign (June–July 1778) Dickinson's militia performed usefully in destroying roads and bridges to retard the British retreat across New Jersey and provided important intelligence. On 4 July 1778 he stood as second for his cousin, John Cadwalader, in the latter's duel with Thomas Conway. When General Wilhelm Knyphausen undertook his raid on Springfield, (7–23 June 1780), Dickinson and his militia performed a valuable service by acting as a delaying force, and they fought well at the battle of Springfield, New Jersey.

Starting in 1778, Dickinson ran for governor of New Jersey against William Livingston three times, losing each election. From 1782 to 1783, while his brother John was president of Delaware, Philemon served as a delegate to Congress from that state. In 1783 and 1784 he was vice president of the New Jersey State Council. In 1785 he, Robert Morris, and Philip Schuyler constituted a commission to select the site for the national capital. He was defeated by William Paterson as a candidate for U.S. senator in 1789, but served the unexpired term, 1790 to 1793, when Paterson left the Senate to become governor. Though raised a Quaker and married to one, Dickinson owned slaves and defended the institution, getting into an extended and heated debate with his brother when the latter insisted that he free his slaves. Dickinson died at his Trenton estate on 4 February 1809.

DIGBY, ROBERT. (1732–1814). British naval officer. Digby went to sea in 1744 and became a lieutenant in 1752, a captain in 1755. During the Seven Years' War he served at Rochefort (1757), the capture of Gorée (1758) and Quiberon Bay (1759), and in the Mediterranean. On 27 July 1778 he commanded *Ramillies* (seventy-four guns) at the battle of Ushant,

and on 19 March 1779 he was promoted rear admiral of the *Blue*. During the critical summer of 1779 he was second in command to Sir Charles Hardy in the Channel Fleet, and he performed the same role under George B. Rodney during his relief of Gibraltar. It was at this time that he became governor of the king's son, Prince William Henry, who first went to sea in Digby's *Royal George*. Digby continued as second in the Channel Fleet in 1780–1781 and took part in Darby's relief of Gibraltar. In 1781 he relieved Thomas Graves as commander in chief in North America and generously allowed Samuel Hood to take most of his ships of the line to the West Indies. Hereafter the North American station was quiet until the end of the war; Digby returned home in 1783. In 1784 he married Mrs. Jauncy, Andrew Elliot's daughter. In 1787 he rose to vice admiral and in 1794 to admiral. He died on 25 February 1814.

DIPLOMACY OF THE AMERICAN REVOLUTION.

European exploration and colonization of the New World led to the Colonial Wars, and the political settlements that followed these conflicts must be considered the background of the diplomacy during and after the American Revolution. In simplest terms, British diplomacy during the Revolution amounted to little more than the attempt to maintain European neutrality while the "revolting colonists" were brought back into line. The Americans, on the other hand, needed European support to win. France and Spain, the major powers on the Continent, looked on England's misfortune in America as their opportunity to reshape the balance of power in Europe and in the world.

In the period following the Seven Years' War, two French foreign ministers, Choiseul and later Vergennes, anticipated conflicts between the American colonists and the British and sought to exploit them for French advantage. As the war of words between the colonies and England escalated into actions, George III issued a proclamation in October 1774 forbidding the sale of munitions to the colonies. In the spring of 1775 Parliament passed a series of acts that prohibited altogether foreign trade with the colonies except for those considered safe—Georgia, North Carolina, Delaware, and New York. In August George III declared the colonies to be in rebellion and those participating as traitors. The colonies under restraint (especially Rhode Island, Connecticut, Maryland, and

Virginia) began the search for arms and ammunition from foreign sources such as the West Indies. Working through local merchants, they identified and established contacts with sympathetic foreign officials in the Caribbean and in Europe.

Congress on 18 September 1775 established a committee, similar to the state organizations, called the Secret Committee of Trade (later known as the Secret Committee) to negotiate contracts for imports of gunpowder and munitions. Original members of the committee included, among others, Benjamin Franklin, Silas Deane, Robert R. Livingston, and Robert Morris. When Morris's business firm received contracts through the committee, congressional factions led by the Adamses and Lees complained. Divisions between the Adams-Lee Junto and the Morris faction, two small but powerful minorities in the Continental Congress, continued to fragment congressional policy on foreign relations. As Neil Storch has concluded, this strife increased until 1779 when it included numerically only fifteen to forty percent of the delegates, but those small groups constituted a significant portion of the divided leadership. The Adams-Lee Junto included among others: Samuel Adams, John Adams, William Whipple, James Lovell, Arthur Lee, Francis Lightfoot Lee, Richard Henry Lee, Henry Laurens, and James Searle. The Morris faction included among others: Robert Morris, John Dickinson, James Duane, John Jay, Robert R. Livingston, Gouverneur Morris, Meriwether Smith, Thomas Burke, William Henry Drayton, and William Paca. Thus the factionalism present in Congress became a fundamental element of American foreign policy. Another secret committee, the Committee of Secret Correspondence, was established on 29 November 1775 "for corresponding with our friends in . . . other parts of the world." Its members included, among others, Franklin, John Jay, and later Robert Morris. The two secret committees combined their efforts and objectives to send Deane to France.

Deane had been an active Connecticut merchant, and as a member of the Continental Congress he had spoken out in the debate over trade policy for America in favor of seeking it actively abroad. From July to December 1776, he alone represented Congress in France. There he assumed the role of a merchant openly buying goods, while privately seeking the favor of the French government. In a secret meeting with Vergennes, Deane was given assurance that as a private merchant he could conduct business in France and that the French government was in possession of older model weapons (see the article on Jean Baptiste de Gribeauval) that were still serviceable. Vergennes recommended him to Pierre-Augustin Beaumarchais, the author of comedies who was also engaged in commerce. Soon the two had made arrangements for significant arms shipments to America. Early in December many French officers began to approach

Deane for service in the American army. Perhaps seeking to play to public opinion in France as well as to provide experienced officers for the American army, Deane provided commissions for many highly placed officers.

In September 1776 the Continental Congress appointed Franklin and Arthur Lee to join Deane as a committee (or, as they became known, the "commissioners") to perform the mission originally entrusted to Deane alone. Though not "trained" diplomats, Franklin and Lee had served earlier as colonial agents in England and had become accomplished negotiators and propagandists. Their skills strengthened the American presence in France. Franklin, as the more colorful and charming figure, of course became the topic of greatest public interest. Lee, without set duties and accused of English associations, dissociated himself from the others. Ironically it was Franklin and Deane who were unwittingly providing information for covert English agents such as Edward Bancroft. By early February 1777, Franklin, Deane, and Lee became concerned at their lack of timely news and further instructions from the Congress. So in February they agreed to exceed their earlier instructions. Given that little was happening in France, the three decided that Lee should venture off to Spain and Deane to the Netherlands. In February 1777 Lee went to Spain, where the embarrassment of his presence forced the officially neutral government to offer him private assurances of money and supplies through Diego de Gardoqui.

William Carmichael, an affluent student in London, had been recruited by Lee to carry dispatches for him. When he appeared in Paris, he shifted loyalties to Deane to establish business and diplomatic contacts with the Netherlands and Prussia. Congress meanwhile in May 1777, under the influence of the John Adams-Arthur Lee junto, had appointed Lee commissioner to Spain as well as renewed him as a commissioner to France; William Lee commissioner to Prussia and the Holy Roman Empire (Austria); and Ralph Izard commissioner to Tuscany (Italy). Before news of these Congressional appointments reached France, Arthur Lee proposed in April 1777 that Carmichael accompany him to Prussia. Carmichael—now associated with Deane—refused unless awarded official status, which the commissioners declined to grant. This magnified the growing rift among Deane, Franklin, and the Lees. In addition, Deane and Franklin refused to inform Lee of negotiations during his absence or to provide him with access to their files. Complaining to the French of his treatment, Arthur Lee set off for Berlin and Vienna on 15 May. Contrary to his experiences in Spain, Lee found his advances stymied in both capitals. When he returned to Paris to find his brother William arrived from London, Lee also discovered that his fellow commissioners were not keeping systematic financial accounts and were indiscreet in the security of sensitive documents. The acrimony increased. In October and November, Arthur

Lee wrote to his congressional allies calling for an overhaul of America's agency in Europe and a separation of diplomats from commercial agents; he also suggested that the commercial activities of Beaumarchais were in fact gifts of the French government.

On 27 November Deane suggested to Franklin and Lee that they threaten France with an ultimatum. If it would not agree to a commercial treaty, they would open negotiations with the British. The two rejected Deane's proposal. Shortly thereafter news arrived in France that General John Burgoyne had surrendered his army to the Americans at Saratoga. One prominent American historian, Jonathan Dull, suggests that news of Saratoga had little to do with the French decision to negotiate treaties with the Americans. He suggests that French planners had already projected that spring 1778 would be the date to begin hostilities against the British. On the other hand, noted English historians John Hardman and Munro Price suggest that changes in Bavarian politics may have opened the way for the redirection of French attention (and resources) to America. Serious negotiations on a treaty began on 8 January 1778. The French representative agreed to American proposals and responded with a counteroffer of a commercial treaty and a military alliance treaty. The texts of both were approved and signed on 6 February, and Louis XVI formally received the American commissioners at Versailles on 20 March. Although the British ambassador quickly withdrew from France, there was no major combat between England and France until 16 June, when a naval encounter served as the formal cause for mutual proclamations of war between the two major powers.

As a last effort to trump the alliance in America, Lord North pressed two bills through Parliament. One offered the Americans repeal of the Coercive Acts and freedom from taxation; the other established a commission to negotiate peace with the Americans under the nominal leadership of the earl of Carlisle. Congress dismissed the proposals. The French minister to the newly recognized United States, Conrad-Alexandre Gérard, arrived near Philadelphia on 11 July 1778 with the recently recalled American commissioner Deane and a French fleet commanded by comte d'Estaing. To equalize diplomatic representation, the Congress dissolved the commission in September and appointed Franklin as its minister plenipotentiary.

France now turned to Spain to secure its commitment to the war and thereby achieve clear naval superiority over England. Spain's price for such a commitment was a series of objectives crowned by a combined invasion of England. The treaty of Aranjuez, establishing a Franco-Spanish alliance, was signed on 12 April 1779. By its terms Spain promised not to undertake a separate peace with England and to acknowledge that France would conclude no peace short of American independence. As a result of disease and

bad weather, the projected invasions in 1779 and 1781 failed, but they distracted critical English naval forces from American waters. An English attempt to negotiate with the Spanish through envoy Richard Cumberland also failed.

Congress's next step was to balance its diplomatic representation overseas. Congress kept Franklin as minister to France, selected from the "radicals" John Adams as peace commissioner, chose from the "moderates" John Jay as minister to Spain, and the nonaligned former president of Congress Henry Laurens as minister to the Netherlands. Arthur Lee and William Lee were recalled to America. During 1781 Congress appointed a peace commission composed of Franklin, Jay, Adams, Laurens, and Thomas Jefferson (who declined) and instructed them to undertake no treaty without consulting with the French government. With the success of the Yorktown campaign, American prospects for a serious English negotiation blossomed.

When the British government under Lord North fell in March 1782 and was replaced by the Opposition under Lord Rockingham, there were deep divisions within the new government about how to handle the Americans. The English negotiators Richard Oswald and Thomas Grenville took different approaches with Franklin, the remaining American representative in Paris. Adams had gone to the Netherlands to work out the terms of a treaty of amity and commerce. John Jay did not return to Paris until late June. Henry Laurens had been captured on the Atlantic and upon his release from English imprisonment declined to serve. Separate English negotiations with Franklin and with Vergennes were both stalemated. With the death of Rockingham in June 1782, George III named the earl of Shelburne as head of the cabinet. By the end of July Shelburne offered the Americans independence. However, Franklin, owing to illness, had been forced to withdraw from the negotiations. Jay, having entered the negotiations late, hesitated to agree until the British negotiator's instructions included the offer of independence. He was also suspicious of a separate French-British deal. He sent Benjamin Vaughan to England with an offer for America to withdraw from the French alliance.

In October Franklin, Adams, and Laurens joined the negotiations, and all reached an agreement with the British diplomats on 30 November. The British would acknowledge American independence and withdraw all their troops, and accept America's boundary demands, its fishing rights off Newfoundland, and its right to navigation on the Mississippi River. In turn, the Americans would honor their British debts and Congress would urge the states to treat the Loyalists fairly. Yet ambiguities in these terms would lead the British to delay a full troop withdrawal from the frontier until 1794 by the terms of Jay's Treaty. Although the French were somewhat surprised by the British concessions the Americans had obtained, they

were pleased that this achievement would put additional pressure on the Spanish to comply without having reached their primary goal of retaking Gibraltar. On 20 January 1783 a preliminary peace treaty was signed by the Americans, French, and Spanish and on behalf of the Netherlands. However, by February a new problem had arisen. The House of Commons rejected the proposal.

With the rejection of the preliminaries, Shelburne resigned as chief minister and was replaced by a coalition government led by Lord North and Charles James Fox. A wave of anti-American feeling swept through England, resulting in the passage of an act excluding Americans from trade with the British West Indies. Despite this, the new government held on to the old treaty concessions, and a final treaty along the same terms was signed at Paris on 3 September 1783, the same day as the French and Spanish treaties were signed. A final British treaty with the Dutch followed on 20 May 1784. For all its military, political, and economic weaknesses, America had emerged at the end of the war victorious in its major objective: political and diplomatic independence. In time, with a new constitution it would move to overcome those weaknesses.

The standard general authority on the diplomacy of the American Revolution is Jonathan R. Dull. The best authority on French relations with the Continental Congress is William C. Stinchcombe.

DIRECTION. When a military writer speaks of going down a body of water, he means in the direction of flow. Burgoyne's offensive, for example, advanced up Lake Champlain from Canada to New York. No difficulty is encountered in the case of streams that run from north to south, as does the Hudson, but frequent errors are made as a result of thinking that north always means up, as it does on the conventional map. The left bank of a stream is the one on an observer's left as he or she faces downstream. The left flank of a formation is the left side as its members face the enemy; unless the enemy is retreating, his left flank is on the side of your right flank.

Mark M. Boatner

DISALLOWANCE. There were many steps involved in the formal process of enacting legislation in the royal colonies of British North America. The popularly elected assemblies initiated laws, which the royal governor could veto. Laws passed by the assembly that received the governor's assent were sent to the Board of Trade for review. The Board then recommended to the Privy Council the "allowance" of the legislation if, in its opinion, it did not deviate from imperial policy, and recommended "disallowance" in other cases. The Privy Council submitted final recommendations to the king.

While perhaps as many as 95 percent of all laws eventually received royal assent, a process which could take up to a dozen years, the governor initially and the Board of Trade at the center of the empire always were alert to disallow laws that adversely affected the interests of British merchants. Laws that enhanced the stature and authority of local assemblies were more favorably received during the time of "salutary neglect" (when enforcement of trade policy was left intentionally lax), on the theory that the delegation of power and responsibility promoted an accommodation of interests whereby everyone would benefit. Wartime brought increasing strains in relations between governors and assemblies, especially about raising money and men for military purposes; local elites were not above using emergencies to extract concessions from the governors that would have been unthinkable in peacetime. The assemblies could evade some measure of disallowance by passing these laws as temporary acts.

DISPLAY. The modern tactical term is "deploy," which dates from 1796.

DOBBS FERRY. About fifteen miles below Kings Ferry and less than ten miles north of Kings Bridge, this was an important crossing site on the Hudson. During most of the war this ferry was too close to the British defenses of New York City for the Americans to use, so Kings Ferry—covered by Stony Point and the works at Verplancks Point—became the crossing that both sides sought to control.

DONOP, CARL EMIL KURT VON. (1740–1777). Hessian officer. At Long Island he commanded the body of Hessian grenadiers and jäegers (light infantrymen, from the German word meaning "hunter") engaged in the center of the line. After the pursuit of General George Washington's army to the Delaware, Colonel von Donop was relieved by Colonel Johann Gottlieb Rall as commander of the Trenton garrison on 14 December 1776 and was given overall responsibility for the chain of outposts along the Delaware. He was overruled by General William Howe when he advocated a concentration of his forces at Trenton. Howe directed him to occupy Bordentown and Burlington, both in New Jersey, to protect Loyalists of the region, but Donop withdrew from the latter place when its mayor informed him it would be shelled by American naval vessels from the river if the Hessians remained. He stationed the Forty-second Foot ("Black Watch") and one of his grenadier battalions at Black Horse (now Columbus), and moved the rest of his command to the vicinity of Bordentown.

After the annihilation of Rall's force at Trenton on 26 December, Donop wisely withdrew to Princeton, where he ordered the construction of two small redoubts to cover the approach from Stony Brook. He was mortally wounded in the attack on Fort Mercer (Red Bank), New Jersey, on 22 October 1777, and died three days later.

DOOLY, JOHN. (1735 or 1740–1780). Militia officer and partisan leader. Born in Wilkes County, North Carolina, he was in the Ninety Six district of South Carolina with extended family by 1765 and moved his family to Wilkes County, Georgia, in 1773. There, he acquired land where he maintained a mill, fort, ferry, and plantation and became a deputy surveyor. Initially opposed to anti-British activities, Dooly soon joined the militia and served in a variety of leadership positions.

Commissioned captain of his local militia company in December 1775, in 1776 he became captain of the Twelfth Troop of the Georgia Continental Regiment of Horse.

During the fall of 1777 he resigned his commission under threat of court-martial because he had taken an Indian peace delegation hostage in retaliation for his brother Thomas's death by a Creek war party. He served Wilkes County in the assembly and as its first sheriff during 1777–1778, assumed command of the county militia battalion in 1778, and was elected to that position the following winter.

The British reoccupied Georgia in late 1778, and when troops led by Lieutenant Colonel Archibald Campbell came into the backcountry in January 1779, Dooly, his subordinate, Lieutenant Elijah Clarke and one hundred volunteers fled to South Carolina. Bolstered by South Carolina militia under Colonel Andrew Pickens, they returned to Georgia and on 14 February 1779 defeated Loyalist forces at Kettle Creek. In March, Pickens and Dooly and their militias defeated a large number of Indians attempting to reach the British, but they arrived too late to assist General John Ashe at Briar Creek.

With the British now out of the backcountry, rebel leaders formed a temporary government. Dooly served not only as a member of but also as attorney for this government and as colonel-commandant of the militia. Writing to Colonel Samuel Elbert, captured by the British at Briar Creek, he explained that trying to recruit in the backcountry was difficult because rebel plundering raids turned the settlers from the rebel cause toward the British. Dooly and his militia joined General Benjamin Lincoln's army at the unsuccessful siege of Savannah in the fall of 1779. This defeat eliminated any hope of external support for Georgia's rebel government.

John Dooly and others now formed partisan bands to fight the British in Georgia. A strong leader, he attracted men on both a political and military level, and they rode without pay, supplies, or a specified term of service. After the British captured Charleston in May 1780, they allowed rebel militiamen to return to their homes as prisoners of war on parole. Dooly and four hundred of his men returned to the backcountry and surrendered to Lieutenant Colonel Thomas Brown on 5 June 1780. That summer Dooly was assassinated, probably by Loyalist militia Captain William Corker and several others, an incident that has figured in folk legend. Dooly's two sons were each awarded five hundred acres by the state government at the end of the war.

DORCHESTER, BARON. (1724–1808). The title of Sir Guy Carleton, governor general of British North America, from 21 August 1786.

SEE ALSO *Carleton, Guy*.

DORCHESTER, SOUTH CAROLINA.

1 December 1781. After recuperating from the hard-fought Battle of Eutaw Springs of 8 September, General Nathanael Greene left the High Hills on 8 November. Major John Doyle (often confused with his brother, Lieutenant Colonel Welbore Doyle, of the Irish Volunteers), in temporary command of British forces while Lieutenant Colonel Alexander Stewart recovered from a wound, had resumed operations, and a Loyalist uprising had been inspired by David Fanning's daring Hillsboro raid on 13 September. Doyle withdrew to Goose Creek Bridge as Greene approached. Greene then decided to try to cut off the post of Dorchester on the Ashley River, fifteen miles northwest of Charleston. This place was held by 850 men, and Greene moved against them with 200 Maryland and Virginia Continentals and 200 cavalry. The rest of the American army, under Colonel Otho Williams, marched to the Round O plantation, but when the British identified Greene in the column approaching Dorchester, they assumed that his entire army was following. There were cavalry skirmishes and a clash between the American advance guard and a reconnaissance force from Dorchester, but the enemy did not attempt to defend the post. Destroying their stores and throwing their guns into the river, they withdrew to within five miles of Charleston. Stewart returned to take command, and he recruited and armed African American troops in anticipation of an attack on Charleston. The Americans went into camp at Round O. Another indecisive skirmish occurred at Dorchester on 29 December 1781.

DORCHESTER HEIGHTS, MASSACHUSETTS.

2–27 March 1776. As American soldiers began the siege of Boston in the days after the first clashes at Lexington and Concord (19 April 1775), they did not establish positions on either the Charlestown peninsula, across the Charles River from Boston, or the Dorchester peninsula, which extended into Boston Harbor from the southeast. Both areas remained in the

Dorchester Heights Monument. *A white marble tower, dedicated in 1902, stands on the site where American forces built fortifications from which they drove the British from Boston in March 1776.* © JOSEPH SOHM; CHROMOSOHM INC./CORBIS.

no-man's-land between the opposing armies until early June, when, to forestall a British expedition against Cambridge, the Massachusetts Committee of Safety directed its forces to occupy both locations. Massachusetts Major General John Thomas was reluctant to comply, knowing the weakness of the troops under his command at Roxbury, and in the event, only Charlestown peninsula was fortified, action that led directly to the Battle of Bunker Hill.

The Dorchester peninsula remained unoccupied for the rest of the year, but it continued to play a significant role in the calculations of both sides. Indeed, the Committee of Safety understood that artillery placed on the heights near the end of the peninsula would make Boston Harbor untenable for the British as early as May 1775, when it endorsed Benedict Arnold's idea to acquire the requisite cannon from Fort Ticonderoga. The British generals in Boston also understood the importance of the heights, but after Bunker Hill they thought their army would be spread too thinly if they tried to hold it.

The stalemate began to dissolve as Colonel Henry Knox's "Noble Train of Artillery" wended its way from Fort Ticonderoga to Cambridge. General Washington had arrived at Cambridge on 2 July 1775, and ever since he had been building up the American army's stocks of gunpowder, without which the cannon would be useless. Now, with the arrival of the artillery at Cambridge in late January, and the pressing need to take some offensive action before the arrival of British reinforcements in the spring, Washington held a council of war on 16 February 1776 to discuss the matter with his generals. Although he believed the army capable of assaulting Boston, his generals did not share that opinion, and they proposed instead that the Americans seize some position and force the enemy to attack. Dorchester Heights was the obvious choice. As finally worked out, the plan was for this high ground to be fortified in the course of a single night, as had been done at Bunker Hill. Because the frozen ground made quick pick-and-shovel work impossible, Rufus Putnam proposed that the army construct fortifications aboveground by the use of prefabricated parts. Heavy timber frames (called chandeliers) were assembled, and gabions, fascines, and bales of hay were made up to fit into them. Barrels to be filled with earth were prepared to be placed around the works, where they would give the fortification an appearance of strength and also could be rolled down the steep, bare slopes into the ranks of attacking forces. Abatis would be constructed from orchards adjoining the heights.

A secondary attack across Back Bay to turn the defenses of Boston Neck was also planned should the British attack the fortifications on Dorchester Heights. For this operation, Major General Israel Putnam would lead the division of John Sullivan and Nathanael Greene: four thousand men in forty-five bateaux, supported by two floating batteries. As a diversion, American guns would start a heavy bombardment on 2 March and continue nightly through 4–5 March, when the fortifications were to be built.

The main operation was commanded by John Thomas (then a Continental brigadier general), who moved out the night of 4 March with a work detail of 1,200 men, a covering force of 800 men, and a train of 360 ox carts to move the heavy fortification materials. Conditions were ideal: the air was mild, a bright moon gave light by which to work, and a ground haze obstructed enemy observation from Boston and Castle William. Although the artillery drowned out much of the noise of shovels, picks, and axes on the hill, a British officer detected the work at 10 P.M. and reported it to Brigadier General Francis Smith. That venerable regular officer, who had shown himself to be mentally and physically slow at Lexington and Concord, did nothing. By daylight the Americans had completed their work unmolested:

a fresh fatigue party had reported at 3 A.M.; the ox carts had made two trips; and reinforcements, including five rifle companies, had arrived to man the two small forts.

The American movement took Major General William Howe, the British commander in chief in Boston, by surprise. He had sent troops to raid and reconnoiter Dorchester Heights on 14 February, and when they found no American activity, he seems to have let his attention lapse. Now he may have overestimated the American accomplishment. After the works became visible, he reported to London that the Americans must have employed at least twelve thousand men to raise them. A British engineer estimated that up to twenty thousand men were involved. Still, Howe needed to act quickly, since the Royal Navy would have to pull its ships out of the harbor if the American positions were not soon eliminated. Because a bombardment was unlikely to dislodge the rebels (British gunners would have difficulty hitting men firing from behind fortifications on heights above them), Howe planned a night attack with twenty-two hundred men under Major General Valentine Jones to take Dorchester Heights with the bayonet and push on into the American lines at Roxbury, if possible. At a council of war around 7 P.M., shortly before Jones's troops were to move out, Howe and his generals agreed that the attack should be called off. Howe had already decided that Boston was a cul-de-sac and that his best chance of suppressing the rebellion required him to change his base to New York. He refused to sacrifice troops he would soon need elsewhere on what amounted to a rear-guard action. A few hours later, over the night of 5–6 March, a severe storm struck, and Howe informed his troops in general orders the next day that he had canceled the operation due to adverse weather conditions. On 7 March he began issuing orders for the evacuation of Boston.

The Americans attempted to extend their Dorchester Heights position by occupying and fortifying Nook's Hill on the night of 9 March, but they were driven off with the loss of five men dead by artillery fire. Washington and his army had demonstrated (to themselves as well as to the British) that they could strike quickly, with stealth and cleverness, but in the end the principal operational result was to speed up the British timetable for withdrawal.

DORMANT COMMISSION. One that became effective in a certain contingency. German generals in America were senior to the second-ranking British generals, and one would have become commander in chief had anything incapacitated General Howe or his successor, Clinton, in the spring of 1776. Therefore, Clinton was given a dormant commission as a full general in America to take effect if Howe could no longer command (thus blocking Heister); when Clinton succeeded Howe, Cornwallis was given a dormant commission that would make him senior to Knyphausen if Clinton were incapacitated. When Clinton sent Benedict Arnold to conduct his Virginia raid (December 1780), he secretly furnished Dundas and Simcoe with dormant commissions authorizing one of these trusted British officers to take command "in case of the death or incapacity" of Arnold.

Mark M. Boatner

DRAGOON. A mounted infantryman who, strictly speaking, rode his horse into battle but dismounted to fight, as opposed to a cavalryman, who was supposed to fight on horseback. He got this name from the primitive firearm, called a "dragon" because flame came from its mouth, with which the original dragoons were armed. Since dragoons could fight on horseback and cavalry could fight dismounted, the two names generally were used synonymously.

Mark M. Boatner

DRAYTON, WILLIAM HENRY. (1742–1779). Patriot leader. Born in St. Andrew Parish, South Carolina, in September 1742, Drayton was born to privilege and married great wealth. Educated in England from 1753 to 1763, he was ordered home by his father before he finished his Oxford degree. Elected to the assembly in 1765, he supported Parliament's power to pass the Stamp Act and was defeated for reelection. In 1769 he wrote a notorious article in the *South Carolina Gazette* opposing the nonimportation agreement and found himself ostracized and unable to sell his crops. He went to England, where he promoted himself as a loyal supporter of the crown. Drayton published *The Letters of Freeman* in 1771, which earned him appointment to the South Carolina council with his father and brought him back to Charleston. But Drayton had further ambitions that were consistently foiled by the crown, which appointed Englishmen to the posts he desired. His efforts to steal

144,000 acres from the Catawbas were halted by John Stuart, the superintendent of Indian affairs. Abruptly, Drayton began to see the flaws in the English political system, and in August 1774 he published *A Letter from Freeman*, asserting American rights and castigating the Coercive Acts as despotic. He recommended that the first Continental Congress set up an independent American legislature subject only to the king. In response, the governor suspended Drayton from the council in March 1775.

Suddenly one of the most radical men in Charleston, Drayton quickly became an important Patriot leader. Elected to the Provincial Congress in 1775, he served on a number of important committees and on the Council of Safety, led the crowd that seized the armory and other government offices that same year, negotiated a truce with Loyalist leaders on 16 September 1775, and was elected president of the Provincial Congress. In the latter position he worked to develop a South Carolina navy and personally orchestrated the attacks against the British ships in Charleston Harbor. On 6 February 1776 he called on the Provincial Congress to declare independence from Britain. When the South Carolina Congress passed a constitution the following month, Drayton was named a member of the state council and the assembly and also became chief justice, thus holding a leadership position in all three branches of government. In 1778 he became president of South Carolina; played a prominent role in drafting a new constitution; and was elected to Congress, where he served on more than eighty committees in the next seventeen months. Drayton's primary goals in Congress were protecting southern interests, which is to say slavery, and resisting efforts at reconciliation with Britain. He also began work on a history of the Revolution, which was cut short by his death of typhus in Philadelphia 3 September 1779.

DUANE, JAMES. (1733–1797). Patriot statesman, jurist. New York. Born on 6 February 1733 in New York City, James Duane was admitted to the bar in August 1754, and soon had a large, highly successful practice. In Revolutionary politics he was conservative, and after his election to the Continental Congress (4 July 1774) he worked for conciliation with Britain. As a member of the

committee to draft a statement of the rights of Americans, he did much to moderate its tone. He seconded Joseph Galloway's Plan of Union on the grounds that the British Parliament did have the right to regulate colonial trade, but he signed the non-importation agreement (20 October 1774) even though he felt it went too far. Re-elected to the Continental Congress, he was one of the strongest opponents of the movement toward Independence.

Serving as a delegate from 1774 to 1779, and again from 1781 to 1783, Duane was on a large number of committees, and his most important work was done in the fields of finance and Indian affairs. He assisted in making the final draft of the Articles of Confederation (adopted 15 November 1777 by the delegates). Inevitably, his loyalty to the Revolution was challenged and, in the summer of 1781, the press raised charges of which he was cleared only after John Jay and other influential colleagues stepped forth to defend him. When New York City was evacuated by the British, Duane entered the city as a member of Governor George Clinton's council. On 4 February 1784 he was appointed mayor, an office he held until September 1789, when President George Washington appointed him the first federal judge of the New York district. In March 1794 he retired from public life because of bad health, but continued to be active in land development. As a lawyer he had represented New Yorkers in private suits involving the boundary dispute with Vermont. Prior to 1765 he had carried out colonizing projects on his large Mohawk Valley holdings, and his interest in this undertaking continued. Duane attended the Poughkeepsie ratification convention of 1788 as a supporter of the Constitution. He died in Schenectady, New York, on 1 February 1797.

DUBUYSSON DES HAYS, CHARLES-FRANÇOIS, VICOMTE. (1752–1786). Continental officer. Of noble French birth, he became an artillery officer candidate (*aspirant*) in 1768 and *sous lieutenant* in the Noailles cavalry regiment in 1772 and was discharged (*reformé*) in 1776. He accompanied Lafayette to America and then from Charleston to Philadelphia in 1777. On 4 October 1777 he was appointed major in the Continental army and assigned as aide-de-camp to De Kalb.

On 11 February 1778 he was promoted to lieutenant colonel, subject to his having command only over Canadian troops raised in Canada. Because of his abrasiveness with members of Congress in his application, Laurens advised De Kalb to tell him that “hurry & urgency . . . are exceedingly disgusting to a deliberative body.” On 16 August 1780 he suffered serious wounds at Camden and was captured. North Carolina awarded him an honorary rank of brigadier general by virtue of his conduct. As a prisoner on parole in Philadelphia, he repeatedly sought Washington’s intervention in advancing his exchange to return to France, but Washington repeatedly declined, claiming his release out of proper order would interfere with the public good. On 4 September 1781 Congress commended him and authorized his return to France. He was honorably discharged on 1 January 1782. He became a chevalier in the Order of Saint Louis in 1785.

DUCHÉ, JACOB. (1738–1798). Chaplain of Congress. Pennsylvania. Son and namesake of a former mayor of Philadelphia, Duché was born in that city on 31 January 1738. He graduated from the first class of the College of Philadelphia in 1757, spent the next year at Cambridge, and returned with the orders of an Anglican minister. Rector of two churches, he became a popular preacher and respected essayist. In 1759 he had married Elizabeth, sister of his friend and classmate Francis Hopkinson. In 1774 the first Continental Congress named Duché its chaplain after his sermon at its first session moved many members to tears. Though he had initially supported independence, he came to believe it was a grave error and resigned his position in October 1776, asking that his \$150 salary be used for the relief of widows and children of Pennsylvania officers. A year later he wrote Washington a long letter urging him to give up the hopeless struggle and to use force if necessary to see that Congress revoked the Declaration of Independence. Washington promptly forwarded the astounding letter to the delegates at York.

The letter, which damned the Continental Congress as a collection of “Bankrupts, attorneys, men of desperate fortunes” and the Continental army as made up of “undisciplined men and officers, many of whom have been taken from the lowest of the people, without principle, without courage,” was widely circulated and published in Rivington’s *Royal Gazette* on 29 November 1777 (Van Doren, *Secret History*, pp. 40–41). Duché found himself cursed by Patriots as a traitor and sailed in December 1777 for England, where he became a popular preacher, published two volumes of sermons, and in 1782 was named secretary and chaplain of the Asylum for Female Orphans in Lambeth Parish. The state of Pennsylvania confiscated his property but left his family enough money to join him. In 1783 Duché read the Swedish philosopher Emanuel Swedenborg and almost immediately became his leading English exponent. In 1792 Pennsylvania repealed its exclusion law that had denied Loyalists the right to return to the state. Duché and his family immediately sailed to Philadelphia, where he lived until his death on 3 January 1798.

DU COUDRAY SEE *Tronson du Coudray, Philippe Charles Jean Baptiste*.

DUER, WILLIAM. (1743–1799). Congressman, speculator, militia officer. England and New York. Born in Devonshire, England, on 18 March 1743, William Duer was the third son of a wealthy owner of large plantations in Antigua and Dominica. He was educated at Eton, commissioned in the army, and went to India as aide-de-camp to (Robert) Lord Clive in 1764. Unable to stand the climate, Duer returned to England, and in 1768 visited New York to buy timber on contract for the navy. In this connection he met Philip Schuyler, and on the latter’s advice bought large timber tracts above Saratoga. In 1773 he settled his affairs in England and established himself in New York. Aligning himself with the moderate Patriots at the start of the Revolution, Duer was elected to the Provincial Congress, which offered him a commission as a militia colonel. He turned down the offer but became more active in politics, serving as a delegate to the state Constitutional Convention, where he helped draft New York’s constitution. He also sat on the Committee of

Duke of Cumberland's Regiment

Safety and Committee on Conspiracies that targeted Loyalists. In 1777 he was appointed a judge on the court of common pleas, which post he held for ten years, and was selected a delegate to the Continental Congress from 1777 to 1778, where he sat on numerous committees and gained the respect of Congressional leaders.

Duer became wealthy from varied financial and commercial ventures, mostly involving the trade in military supplies, and he never hesitated to make use of inside information and political connections. In March 1786 he was appointed secretary to the Board of the Treasury. The next year he was the principal organizer of the Scioto Company, which became connected with the Ohio Company of Associates. In September 1789 Duer became assistant secretary of the new Treasury Department under his friend, Alexander Hamilton, but six months later he resigned, after he was discovered to be taking advantage of his situation to speculate in stocks and bonds. After engaging in large-scale speculations in New England lands and in other business ventures, he attempted to corner the government bonds market. When Duer could not meet his creditors' demands, he was arrested for debt on 23 March 1792 and imprisoned, setting off the first financial panic in the new nation's history. Except for a short period in 1797 he remained in jail until his death on 7 May 1799.

DUKE OF CUMBERLAND'S REGIMENT. On 17 November 1780, John Dalling, the governor of Jamaica, wrote to Charles, Earl Cornwallis, at Charleston, South Carolina, proposing to raise a regiment from among the Continental army prisoners captured at the siege of Charleston (12 May 1780) and the Battle of Camden (16 August 1780). The bearer of the letter was Lord Charles Montagu, who, Dalling proposed, would command the regiment of five one-hundred-man companies as its lieutenant colonel commandant. The effort was successful, and the regiment was sent to Jamaica in August 1781. The Loyal American Rangers were absorbed into the regiment after the death of their commander in January 1783. As late as 27 May 1783, British and Provincial soldiers convicted of crimes like desertion, robbery, and even murder were sent from New York City to Jamaica

for service in the regiment. It was disbanded on 24 August 1783, and the men allowed to settle in Nova Scotia.

DULANY, DANIEL. (1722–1797). Lawyer, political leader. Maryland. Born in Annapolis, Maryland, on 28 June 1722, Dulany was schooled at Eton, Cambridge, and Middle Temple, and in 1747 was admitted to the Maryland bar. On the eve of the Revolution he was recognized by his political enemy, Charles Carroll, as "indisputably the best lawyer on this continent," but Carroll's son, Charles Carroll of Carrollton, found him simply "bizarre." Dulany entered the legislature in 1751, became a member of the Governor's Council in 1757, was commissary general from 1759 to 1761, and was secretary of the province from 1761 to 1774. After passage of the Stamp Act, he wrote a pamphlet entitled *Considerations on the Propriety of Imposing Taxes in the British Colonies, for the Purpose of Raising a Revenue, by Act of Parliament* (1765). Dulany argued that the theory of virtual representation did not apply to the colonies because members of the British Parliament were not affected by measures that might hurt America. He went on to say that, since the colonies were not represented and could not be, they could not be taxed. This thesis was more subtle than the mere charge that "taxation without representation is tyranny," for Dulany based his position on English law rather than a flat assertion of right. He also advocated that the colonists manufacture their own goods as a means of achieving economic independence and ending England's exploitation of the Americans. Dulany was no radical, however, and at the outbreak of the Revolution, fearing anarchy, he retired to Hunting Ridge, near Baltimore, remaining loyal to Britain but proclaiming his neutrality. His family divided over the Revolution, one son becoming a Loyalist, the other a Patriot. Half of his property was confiscated in 1781, while he was on a brief visit to England. He lived the rest of his life in Baltimore, where he died 17 March 1797.

DUNBAR, MOSES. (1746–1777). Loyalist. Born in Wallingford, Connecticut, on 14 June 1746, Dunbar was the son of a Congregationalist minister. In 1764 he married Phebe Jerome and broke with his family and church, joining the Church of England in Bristol, Connecticut. This congregation was primarily Loyalist, and Dunbar—influenced by the ministers James Scovil and James Nicholas—sided with the crown in the accelerating political crisis. With the start of the Revolution, both his and his wife’s families divided politically. Two of her brothers died fighting on the Patriot side, while two other brothers were arrested for Loyalist activities. Dunbar based his loyalty to the crown on his religious faith, insisting that since George III was head of the church, he owed a sacred allegiance to the king. Dunbar found himself regularly harassed for his religious and political views, being set upon by a mob in 1776 and imprisoned in New Haven. Upon his release from jail, he went to Long Island and enlisted as a captain in the British army. In 1777 he began recruiting men for the army in New York and Connecticut. Arrested by Patriot authorities, he was jailed in Hartford and tried as a traitor under Connecticut’s Treason Act of 1776. The state’s supreme court found him guilty of illegal recruiting and sentenced him to death. Aided by Elisha Wadsworth, Dunbar escaped on 19 March 1777 but was recaptured the same day and immediately hanged, becoming the first person executed by the state of Connecticut for the crime of treason.

Michael Bellesiles

DUNDAS, THOMAS. (1750–1794). British army officer and politician. Dundas was born on 30 June 1750 into an old family of minor Scottish gentry. His father was a businessman and the member of Parliament for Orkney and Shetland. Educated at Edinburgh high school, Dundas obtained a cornetcy in the First Dragoon Guards on 25 April 1766. On 26 May 1769 he bought a captaincy in the Sixty-third Foot and

in 1771, in absentia, succeeded to his father’s parliamentary constituency. He continued to serve in Ireland with the Sixty-third until it sailed from Cork in April 1775 as part of the first reinforcement for the army in Boston.

On 20 January 1776 Dundas purchased a majority in the Sixty-fifth Foot in Halifax. Soon after, part of the regiment was drafted to other units, and the remainder, including Dundas, was sent home to recruit. On 27 December 1777 his influential uncle obtained for him the lieutenant colonelcy of a new regiment, the Eightieth, being raised by the corporation of Edinburgh. He sailed for America with the Eightieth in March 1779, in a convoy escorted by Marriot Arbuthnot’s squadron, and won praise for undertaking menial tasks when typhus swept through his ship, decimating the troops and crew. Dundas himself was taken ashore desperately ill in New York on 25 August. Recovering, he embarked on Clinton’s 1780 Charleston expedition. He was at Charleston when the city surrendered in May 1780 and subsequently served under General Charles Cornwallis. At the beginning of 1781 he joined John Simcoe on Benedict Arnold’s Chesapeake expedition, both officers carrying secret dormant commissions empowering them to take command should Arnold fall. On 6 July, at Green Spring, South Carolina, where Cornwallis narrowly failed to trap Anthony Wayne and Marquis de Lafayette, Dundas led the brigade that formed the British left wing. At Yorktown he commanded the detachment at Gloucester, across the river, and was one of the two commissioners who arranged the terms of surrender.

On 20 November 1782 he was breveted colonel and on 5 April 1784, when the Eightieth was disbanded at Edinburgh, Dundas went on half-pay. On 9 May he married. He was in Canada dealing with Loyalist compensation claims from 1785 to 1788. He lost his seat in Parliament in 1790, and in 1793, promoted major general, he sailed with Charles Grey’s expedition to the West Indies. In Barbados he trained six elite battalions in the light infantry tactics he had learned in America. He played a key role in Grey’s operations in the French Windward Islands in from February to April 1794 and was appointed governor of Guadeloupe. He died there of yellow fever on 3 June, not knowing that he had already been awarded his long-coveted colonelcy of the Sixty-eighth foot.

DUNMORE'S (OR CRESAP'S) WAR.

1774. The spread of white settlement into the Ohio Valley after the end of the final French and Indian War led in 1774 to the outbreak of a full-scale war. Chronic tensions were inflamed by a series of atrocities committed by white settlers. On 27 April, Captain Michael Cresap's party killed one Indian and captured another at Logan's Camp, also known as Baker's Cabin, thirty-five miles west of Pittsburgh near the junction of Yellow Creek and the Ohio River. Three days later, Daniel Greathouse lured a group of Indians into an "entertainment" and then murdered six of them. The Mingo chief Logan, heretofore a friend of the whites, lost a brother and a sister in what came to be known as the Baker's Cabin Massacre. He and two dozen warriors raided western Pennsylvania and took thirteen white scalps in retaliation. Although this revenge satisfied him, the Shawnees went to war. Captain John Connolly, commander of Fort Pitt (as well as the agent of Virginia's royal governor, John Murray, the earl of Dunmore), began retaliating against Indians in the vicinity in response to their recent attacks against settlers.

On 10 June Dunmore called out the militia of south-west Virginia. He seemed to welcome hostilities between whites and Indians as a diversion from the long-standing conflict between Pennsylvania and Virginia interests in this disputed territory. Early in August, Major Angus McDonald raided Shawnee villages on the Muskingum River (100 miles from Pittsburgh). The next month Dunmore started down the Ohio River with almost two thousand militia and ordered Colonel Andrew Lewis to lead another column of over a thousand militia down the Kanawha River to join forces with him deep in Indian territory. The Shawnee chief Cornstalk mobilized a thousand Shawnee, Miami, Wyandot (Huron), and Ottawa to attack Lewis before Dunmore was within supporting distance. The Indians were defeated after several hours of intense fighting in a major engagement on 10 October at the mouth of the Kanawha near Point Pleasant. Indian resistance collapsed, and the two columns linked up near the site of modern Chillicothe, Ohio. Despite Logan's refusal to join in the peace talks, Cornstalk met with Dunmore and hostilities ended. The tribes agreed to give up all lands east and south of the Ohio, the first time Indians in the Ohio Valley relinquished some of their land.

DURHAM BOATS. Developed to carry iron ore, grain, whiskey, and other bulk freight between Philadelphia and the northern counties of New Jersey, they ranged between forty and sixty feet in length, were eight feet wide, and drew only twenty inches of water when fully loaded. The largest could carry fifteen tons. They could be sailed or poled. William S. Stryker describes them as being "like large canoes, . . . usually painted black, pointed at each end, and manned by four or five men" (*Battles of Trenton and Princeton*, p. 129). Washington used them in his attack on Trenton on 26 December 1776.

DUTCH PARTICIPATION IN THE AMERICAN REVOLUTION. Born of a long struggle against Hapsburg Spain, the Dutch Republic began its independent life as the world's premier commercial nation. Wielding a vast colonial empire and maintaining maritime connections with virtually the

entire world, the seven United Provinces also manifested themselves as a political power in the seventeenth century. After a decline—mostly relative rather than absolute—during the last quarter of the century, the country gradually reduced its participation in the international political arena. This disengagement was accentuated by the decision to opt for neutrality in the Seven Years' War, a measure that paid dividends in international commerce without undermining the longstanding and mutually beneficial relationship with Great Britain.

Dutch involvement in the American War of Independence effectively ended the comfortable position into which the republic had maneuvered itself. Building on close contacts with American colleagues that had developed in previous decades, Dutch merchants began sending war material to ports and out-of-the-way anchorages in North America as early as 1774. In August of that year, an Amsterdam firm shipped gunpowder to the revolutionaries, and two months later three American ships were reportedly moored in Amsterdam harbor, their holds filled with gunpowder, cannonballs, and firearms. Such shipments provoked English enmity and led the Dutch Estates General in turn to placate their neighbors by formally forbidding consignments of materials of war from both metropolitan Dutch ports and the Dutch Caribbean islands. London's wrath, however, grew stronger as the 1770s advanced, in particular following the outbreak of the Anglo-French war in the summer of 1778, a few months after King Louis XVI had recognized the American rebels. What disturbed London was that the Dutch persevered in their neutrality. Fearing that Dutch merchants would use their neutrality to ship naval stores from the Baltic to France, the British government put pressure on the Dutch Estates General to voluntarily give up the right to transport naval stores, even though that right had been explicitly recognized by an Anglo-Dutch treaty. When it did not receive a satisfactory reply, Britain responded to what it perceived as Dutch aid to the French enemy by launching attacks on Dutch shipping.

At this juncture, Britain started complaining about alleged subversive transactions organized from Dutch islands in the Caribbean. Although the Dutch presence in the Americas in the eighteenth century bore little resemblance to the short-lived empire encompassing New Netherland and northern Brazil that flourished a century earlier, the Dutch colonies mirrored the mother country in that they were small but commercially significant. Cash crop production did not count for much in the insular Dutch Caribbean, but trade all the more. Two colonies stood out in activities that were more often than not illegal: St. Eustatius in the Leeward Islands and Curaçao off the coast of Venezuela. St. Eustatius's location was the better of the two. This tiny Caribbean island (twenty-one square kilometers, or one-quarter the size of

Manhattan), nicknamed the "Golden Rock," benefited from official Dutch neutrality in the fight between the thirteen colonies and their mother country, absorbing cash crops from Britain's mainland and island possessions, and sending large amounts of military stores to the North American rebels.

At least four thousand barrels of gunpowder left St. Eustatius in the first half of 1775 alone, and by the end of the year, daily shipments of Dutch and French gunpowder arrived in North America from St. Eustatius's Orange Bay. Many more were to follow in the years ahead. Adding insult to injury, the Dutch saluted the Grand Union flag in November 1776, when the brigantine *Andrew Doria* arrived in Orange Bay, which in British eyes was tantamount to recognizing the rebel states's independence. Even before that incident became a bone of contention, the British government had taken measures to stop Dutch supplies to St. Eustatius. In 1775 two warships were sent to cruise off the Dutch island of Texel, the home port from which dozens of ships left for the Golden Rock every year. Meanwhile St. Eustatius's governor, Johannes de Graaff, steadfastly denied any wrongdoing on the part of the colonists, producing falsified documents showing that ships had not been fitted out on the island but in Boston or Philadelphia, or that the ammunition seized by British privateers was not consigned to the rebels. In reality, de Graaff did not deny entry to any American vessel. The scale of supplies (military stores and consumables) from St. Eustatius to the rebels is suggested by the punitive expedition carried out by Britain in the summer of 1777. Fifty-four ships were seized on the outward or return voyage between the Netherlands and St. Eustatius.

In the fall of 1780, the British government exploited a document that fell in its lap, seemingly exposing the full extent of Dutch metropolitan collaboration with the North Americans. Although the copy of the treaty signed between the American diplomat Henry Laurens—the first United States envoy to the United Provinces, a Dutch banker, and one of Amsterdam's burgomasters—was merely a draft, England raised a hue and cry over Amsterdam's apparent collaboration with the colonies. Another complaint concerned the refusal of the Estates of Holland and the Dutch Estates General to turn over to Britain John Paul Jones, who had arrived in the Netherlands in late 1779, shortly after defeating a British naval force. War between the two neighbors now became a distinct possibility, a war that would hit two birds with one stone, so the British reasoning went. Joseph Yorke, the British ambassador to The Hague, convinced his superiors in London that war would restore to power the House of Orange, as it had on previous occasions. Hostilities became inevitable after the Dutch Estates General joined Russia, Denmark, and Sweden in the League of Armed

Dutch Participation in the American Revolution

Neutrality on 10 December 1780. Ten days later Britain declared war. The war, to which the Dutch at the time referred as the American war, was an entirely maritime affair. It went off miserably for the Dutch. In a show of strength, British cruisers and privateers seized scores of Dutch ships in European waters and the Indian Ocean, paralyzing Dutch overseas trade. Several fortified Dutch ports in India and Ceylon, three Dutch colonies in Guiana, and almost all Dutch forts and lodges in West Africa also fell into British hands, and scores of Dutch East Indiamen were seized, but nowhere was British reprisal so ruthless and detrimental as in St. Eustatius. After the island surrendered to a British naval force led by Admiral George Rodney in February 1781, the invaders settled old scores by confiscating cash, ships, and other property. Rodney's timing was bad. It has been speculated that the expedition to St. Eustatius played into the hands of the American Revolution by allowing the French fleet under squadron commander comte de Grasse to sail to Virginia. That fleet would soon contribute to the victory at Yorktown.

EDEN, ROBERT. (1741–1784). Royal governor of Maryland. Born in Durham, in England, on 14 September 1741, Eden married Caroline Calvert, the sister of Lord Baltimore, in 1765. Three years later he was commissioned to serve as governor of Maryland. With his wife and two sons he reached Annapolis on 5 June 1769 and immediately proved himself to be admirably suited for his difficult post. His first important official act was to prorogue the General Assembly before it could protest passage of the Townshend Acts. He skillfully attempted to steer a middle course between the demands of the colonists and what they saw as the coercive policies of the government. His authority effectively ended with the convening of the Maryland Convention in June 1774, yet incredibly Eden remained governor even after the Revolution started. Although his reports went to great pains to explain the viewpoint of the colonists, in April 1776 a letter from Eden to George Sackville Germain was intercepted and interpreted to mean that the governor was an enemy of the people. The Maryland Council of Safety considered the charges

groundless and refused to act on a resolution of the Continental Congress that Eden be arrested. However, the Convention ordered him out of the country in May 1776 after learning that the government had ordered Eden to support the British armed forces in America. He left Annapolis on 26 June 1776 and returned to England. On 10 September 1776 he was made a baronet for his service. When the war ended he returned to Maryland to recover some property, and died at Annapolis on 2 September 1784.

EDEN, WILLIAM. (1744–1814). British diplomat, penal reformer, and politician. Educated at Durham School, Eton College, and Christ Church, Oxford, he was called to the bar in 1768. His *Principles of Penal Law* (1771) argued for fewer capital offenses and for the reform of offenders as against punishment. He became undersecretary in the Northern Department in 1772, and in 1774 he was elected to Parliament. The interruption of transportation to America in 1775 allowed him to introduce bills for the reform of the prison hulks and the creation of penitentiaries. He was appointed to the Board of Trade in 1776, and in 1778 North chose him for the peace commission led by Eden's Oxford friend, lord Carlisle. Although for

Eden it was a professional blind alley, his *Four Letters to the Earl of Carlisle* (1779) strongly defended the principle of negotiation. He was chief secretary of Ireland when Carlisle was lord lieutenant (1780–1782) and went on to be a distinguished diplomat. Created baron Auckland on his retirement in 1793, he continued to be a force in British politics until 1807. He died on 28 May 1814.

EGGLESTON, JOSEPH. (1754–1811). Continental officer. Virginia. Born in Virginia, Joseph Eggleston joined the Continental army soon after graduating from William and Mary, becoming paymaster in the Continental Dragoons in March 1777, and resigning this post 18 November 1777. On 21 April 1778 he became lieutenant and paymaster of Henry Lee's Dragoons, and on 5 September 1779 he advanced to the rank of captain. Captured at Elizabethtown, New Jersey, on 25 January 1780, he was included in a prisoner exchange and joined Lee's Legion for operations in the South. His performance was outstanding at Guilford, Augusta (May–June 1781), and Eutaw Springs. Having been promoted to major in 1781, he served in this grade until the end of the war. He then was a member of the Virginia legislature for several years and a congressman from 3 December 1798 to 3 March 1801. He died in Virginia in 1811.

ELBERT, SAMUEL. (c. 1740–1788). Continental general. Born in either Savannah, Georgia or Prince William Parish, South Carolina to a Baptist clergyman, Samuel Elbert was orphaned as a young child. He became a very prosperous merchant and West Indies trader, and made his home in Georgia. He served in the colonial militia, forming the Georgia Grenadiers in 1772. Having been a Son of Liberty and member of the first local Council of Safety (June 1775), he was commissioned a lieutenant

colonel of the First Georgia Continentals on 7 January 1776. After serving under Lachlan McIntosh he was made a colonel of the Second Georgia Continentals on 5 July 1776 and in May of the following year he commanded the Continental troops on the abortive expedition against eastern Florida. He made a successful landing on Amelia Island, but the heat, lack of supplies, and loss of surprise led him to abandon plans to attack the mainland. Elbert succeeded McIntosh as commander of Continental troops in Georgia and was accepted by Georgia's factionalized leadership. He attempted to train his forces, who found him approachable and concerned with their morale. After General Robert Howe arrived to take command in Georgia and undertook an invasion of eastern Florida, Elbert led 300 men and three galleys to capture Fort Oglethorpe in Frederica, near the mouth of the Altamaha River. Recalled to Georgia to help in the defense of Savannah in December 1778, he unsuccessfully urged that the main defense be made on Brewton's Hill. At Briar Creek, Georgia, on 3 March 1779, his 100 regulars put up about the only real resistance before the American force was routed. Elbert was wounded and captured. Some historians claim that he was wounded and captured a second time, on 12 May 1780, but this is incorrect. Included in a prisoner exchange in June 1781, he commanded a brigade at Yorktown. He was breveted as a brigadier general in the Continental army on 3 November 1783. After the war he became Governor of Georgia and a major general in the militia.

ELIZABETHTOWN, NEW JERSEY.

On 6 January 1777, at the end of the New Jersey campaign, General Sir William Howe ordered the British garrison of the outpost at what is now Elizabethtown, New Jersey, to fall back to Amboy. American combat patrols pressured the retreat and had an engagement with a detachment of the Waldeck Regiment (a unit serving the British). Due to its strategic location, the town was the site of a number of other skirmishes during the war, especially in early 1777, in what came to be known as the "Forage War," during which

American forces harassed British and Hessian troops as they scoured the countryside for crops and other supplies.

ELIZABETHTOWN–NEWARK–

PASSAIC RAID. 12–21 September 1777. General Henry Clinton sent two thousand British, German, and Loyalist troops into New Jersey at three different places on 12 September to conduct foraging operations. Brigadier John Campbell landed at Elizabethtown and swept north; Major General John Vaughan landed at Fort Lee and headed west toward Slotterdam; and a much smaller element came ashore below Tappan and swept south. On 13 September they linked up and engaged in day-long skirmishing along the Passaic River. American forces from the Hudson Highlands came south in reaction under the command of Brigadier General Alexander McDougall, and in a series of small clashes between patrols they established that Clinton was merely on a raid. The British returned to New York on 21 September with only a small amount of livestock.

Robert K. Wright Jr.

ELLERY, WILLIAM. (1727–1820). Signer. Rhode Island. Born in Newport, Rhode Island, on 22 December 1727, William Ellery graduated from Harvard in 1747 and went to work for his father, a wealthy merchant. With his father's death in 1764, Ellery turned to politics and law. He joined the Sons of Liberty that year and entered the bar in 1769. An early advocate of colonial rights, he was sent to the Continental Congress in May 1776. Ellery sat in Congress continuously until 1786, with the exceptions of 1780 and 1782. He served on many committees and specialized in naval and commercial matters. During the British occupation of Rhode Island, his house was burned and his

property sacked. He was named chief justice of the Rhode Island superior court but never took his seat, feeling himself more valuable in Congress. He was commissioner of the Continental Loan Office for Rhode Island (18 April 1786–1 January 1790) and, from 1790 until his death on 15 February 1820, collector of the port of Newport.

ELLIOT, JOHN. (1732–1808). British naval officer. Son of the Lord Chief Justice of Scotland, John Eliot was born in April 1732. Eliot entered the British navy in 1740. In April 1777, Commodore Elliot was given command of the *Trident* (sixty-four guns) with orders to carry the Peace Commission of Carlisle to New York. Arriving early in June, he served during the next two months as second-in-command to Admiral (Lord) William Howe, and he was one of the naval officers later named by General Henry Clinton as an acceptable successor to Howe. Returning to England and given command of the *Edgar* (seventy-four guns), he sailed with Admiral George Rodney on 29 December 1779 for the relief of Gibraltar and played a distinguished part in the action off Cape Vincent (on the Saint Lawrence River) on 16 January 1780. During the next two years, he commanded the *Edgar* in the Channel Fleet. During the period from 1786 to 1789 he was governor of Newfoundland. On 16 April 1795 he was promoted to admiral, but because of ill health had no further naval service. He died in Roxburghshire, England, on 20 September 1808.

ELLIOTT, MATHEW. (1739–1814). Loyalist Indian Agent. Born in County Donegal, Ireland, Mathew Elliott moved to America in 1761 and came to western Pennsylvania, where he established himself in the Indian trade. During the French and Indian War (1754–1763), he enlisted in the military and served as a scout and messenger for Henry Bouquet in 1763. In 1764 he accompanied Bouquet's expedition to the Muskingum River, in what is now eastern Ohio.

In 1765 Elliott returned to the fur trade. Using Pittsburgh as his base, he spent the next ten years trading with the Ohio Country Indian nations living in the Muskingum, Tuscarawas, and Scioto River Valleys.

When the Revolutionary War began, Elliott seemingly supported the Patriot cause. In July 1775 he supplied information concerning the British garrison at Detroit to Continental authorities, and in 1776 he conducted several councils with the Ohio Country Indians at the request of Pittsburgh officials, urging them to remain neutral during the war. But his close affiliation with Alexander McKee, the British Indian Department commissary at Fort Pitt, with whom Elliott shared a long and abiding friendship, caused local Patriots to question his true sympathies. After Patriot officials threatened McKee with arrest in March 1778, Elliott, McKee, Simon Girty, and several others fled Pittsburgh for Detroit.

Henry Hamilton, the British lieutenant governor of Detroit, did not trust Elliott, and Hamilton relegated him to menial tasks until his loyalties could be ascertained. Elliott served as a scout during Hamilton's 1778 expedition to Vincennes. The distrustful Hamilton's capture by George Rogers Clark in February 1779 removed a significant obstacle to Elliott's advancement, and thereafter he served the Crown ably in a number of raids throughout the Ohio Valley.

In 1779, Elliott and a party of Native American allies ambushed a party of Americans escorting gunpowder to Fort Pitt. In 1780 he accompanied Alexander McKee and Captain Henry Bird on an expedition against (Isaac) Ruddell's and (Joseph) Martin's Stations in Kentucky. In 1781, he evicted Moravian missionaries and their Delaware congregations who were suspected of aiding the Americans from Ohio. In 1782, he assisted in defeating an American army led by William Crawford near Upper Sandusky, Ohio, led an expedition with William Caldwell against (William) Bryant's Station in Kentucky, and helped defeat Kentucky irregulars at the Battle of Blue Licks.

Elliott remained with the Indian Department following the war. In 1796, he was appointed superintendent of Indian affairs. During the War of 1812, he participated in numerous actions along the Detroit frontier.

ELLIS, WELBORE. (1713–1802). British statesman. Son of the noted Bishop of Meath, he graduated from Oxford in 1736. He entered Parliament in 1741, holding a seat until 1794, making him the longest-serving member of the House in the eighteenth century. He was appointed a lord of the Admiralty in 1747 and served until 1755. On 17 December 1762 he succeeded Charles Townshend as secretary at war, opposed sending more troops to America, and resigned in 1765. In 1776 he spoke out against receiving any papers from Congress. The following year he became treasurer of the Royal Navy. On 11 February 1782 he succeeded George Sackville Germain as secretary of state, but the next month he resigned when the Rockingham ministry came in. He was created first Baron Mendip on 13 August 1794.

ELPHINSTONE, GEORGE KEITH. (1746–1823). Viscount Keith, British naval officer and politician. George Keith Elphinstone, fourth son of the tenth Lord Elphinstone, was born near Stirling in Scotland, on 7 January 1746. He entered the navy in November 1761 and saw action in North American waters before moving to the Mediterranean in 1763. A voyage to China in 1767–1768 in his brother's Indiaman may have given him a modest financial independence. He was made lieutenant in 1770, commander in 1772, and post-captain in 1775.

In 1775 Elphinstone escorted a convoy to Newfoundland, and in 1776 he sailed in *Perseus* (twenty guns) with a convoy bound for New York. For three years, apart from four months in the West Indies, he harassed privateers and blockade runners, and assisted operations in support of the army. In September 1779 he took the French *Therèse* (twenty guns) off Charleston. In 1780 he was responsible for the transports on Clinton's Charleston expedition, winning Clinton's enthusiastic praise. When the city fell on 7 May, Elphinstone was sent home with Marriot Arbuthnot's despatches. Given *Warwick* (fifty guns), in January 1781 he took the Dutch *Rotterdam* (fifty guns) without losing a single man. In February he was returned to Parliament as a Whig, and on 27 March

he again sailed for North America with a convoy. In September his ship was with the squadron that caught a French convoy off the Delaware. In November 1782, in poor health, he sailed for home.

Elphinstone returned to active service in 1793. He took part in Hood's occupation of Toulon and later supervised the evacuation. Knighted and promoted rear admiral in 1794, he served with distinction until 1815, rising to admiral of the *Red*, becoming Baron Keith in 1803 and Viscount Keith in 1814, and supervising Bonaparte's initial captivity in 1815. He died on 10 March 1823.

EMMERICK'S CHASSEURS. In August 1777, Sir Henry Clinton authorized Captain Andreas Emmerick, an experienced jäger officer from Hesse-Hanau who had briefly led the Guides and Pioneers in December 1776, to raise a company of one hundred rifle-armed marksmen from the Provincial regiments in New York City. Operating with a company of bayonet-armed infantrymen in support, the Chasseurs distinguished themselves in Clinton's campaign in the Hudson Highlands in October 1777. Having proved its effectiveness, the corps was expanded in 1778 to a small legion of riflemen, light infantrymen, and light dragoons, with Emmerick as its lieutenant colonel. By 1779 the corps was on the verge of mutiny, and Clinton disbanded it. The rifle company under Captain John Althouse became part of the New York Volunteers, and with other light troops aboard the transport *Anna*, was blown across the Atlantic while on the way to Charleston in 1780.

ENGINEERS. In western Europe, military engineering had been raised to a high art by Sebastien le Prestre de Vauban (1633–1707), a marshal of France who, along with his disciples and competitors, was involved in endless rounds of digging siege lines to capture important fortresses and building ground-hugging protective walls to prevent their own creations from being seized. (Military engineering in eighteenth-century armies often combined the skills of the artilleryman and the engineer.) In North America, where distances were greater and resources far less, there were far fewer examples of the engineer's art. Louisburg and Quebec (both French-built) were the only true fortresses (towns surrounded by defensive walls) on the continent, and permanent works of stone or brick of any sort were uncommon. In 1773, a questionnaire from the secretary of state for the American colonies, the earl of Dartmouth, to all colonial governors revealed the lack of fortifications: "Not one fort now," answered Virginia and New Jersey. A "quite ruinous" stone castle was reported by New Hampshire, and Pennsylvania had a half-finished fort in the Delaware to ward off pirates. Boston's Castle William was in ill repair, and only a few batteries at other Massachusetts ports were in existence. Georgia had four forts. New York had a fort and batteries at the mouth of the Hudson and forts at Albany and Schenectady, but none was properly equipped with cannon or adequately supplied.

LIMITATIONS OF AMERICAN FORTIFICATIONS

Military engineering in North America normally involved erecting small, temporary defensive structures—earthwork batteries at vulnerable points along the Atlantic coast as well as palisaded outposts along the interior frontier—and creating even less permanent field fortifications to give some advantage on the battlefield. Americans placed a largely unwarranted faith in the ability of batteries made of earth and timber to control coastal waterways. For example, Fort Washington, on the north end of Manhattan Island, and its companion, Fort Lee, on the New Jersey Palisades, were constructed to prevent British warships from ascending the Hudson River, a function they were unable to perform. On the other hand, Fort Moultrie—a palmetto-log battery on Sullivan's Island at the mouth of Charleston Harbor in

South Carolina—was able to resist heavy artillery fire from British warships on 28 June 1776, a key factor in the American success there. The redoubt on the summit of Breed's Hill, on the Charlestown peninsula, was laid out and erected over the night of 16–17 June 1775 and played an important role, along with even flimsier field fortifications at the rail fence and along the Mystic River beach, in helping the Americans resist British assault. All of these positions were designed by men who had limited experience as military engineers and the bulk of whose knowledge came from books.

The first chief engineers of the Continental army were self-taught Americans. Colonel Richard Gridley had had a principal role in the siege of Louisbourg in 1745 and was responsible for laying out the siege works around Boston in 1775, but his advanced age limited his active service thereafter. Colonel Rufus Putnam eventually received the post on 5 August 1776, in part as a recognition of his efforts to help lay out the defenses on Manhattan Island and Long Island that summer.

EUROPEAN ENGINEERS AID AMERICA

Congress, recognizing the lack of engineering competence in the American forces, requested Benjamin Franklin, the American envoy to France, to recruit engineers formally trained in European methods. In December 1776 Franklin conveyed the request to the French minister of war, who allowed four French engineers—Louis le Begue de Presle Duportail, Louis de Shaix La Radière, Jean Baptiste de Gouvion, and Jean Baptiste Joseph de Laumoy—to volunteer for service in America. Duportail became chief of engineers on 22 July 1777 and continued in that post until 10 October 1783. He was Washington's chief engineer at the siege of Yorktown, where he worked closely and effectively with his artillery counterpart, Henry Knox, and his former colleagues in the French expeditionary force.

A good example of the variety of tasks undertaken by American engineers is found in the career of another foreigner whose engineering ability contributed greatly to American victory. Thaddeus Kosciuszko, who had also been trained at the French school of artillery and military engineering at Mézières, arrived at Philadelphia on 30 August 1776, where he worked on the forts guarding the Delaware River. Congress sent him to the Northern Department in early May 1777, where his advice on the vulnerability of Fort Mifflin went unheeded. Thereafter, he directed the efforts that impeded the southward march of Major General John Burgoyne's invading army, selected the bluffs on the west side of the Hudson south of Saratoga (Bemis Heights) as the best place to stop Burgoyne, and laid out the field fortifications that made the American position well-nigh

invulnerable. From March 1778 to June 1780, he superintended the continuing construction of the defenses at West Point in the Hudson Highlands, the so-called "key of the continent" that was perhaps the greatest achievement of American engineers during the war. Arriving in the South after the disaster at Camden, he served as Nathanael Greene's chief engineer for the rest of the war. He was successful in managing the army's transport but was criticized for his conduct of the unsuccessful siege of Ninety Six, South Carolina, from 22 May to 19 June 1781.

BRITISH DEFENSES

The British army was generally well served by its engineers. Captain John Montresor helped to fortify Boston after 19 April 1775 and served as chief engineer in the 1776 campaign against New York. During Parliament's inquiry into the conduct of Sir William Howe in America, Montresor testified that the fortification on the main American line at Brooklyn "could not be taken by assault, but by approaches, as they were rather fortresses than redoubts." Since Montresor undoubtedly knew better—he had examined the works after the American evacuation—his opinion seems to reflect loyalty to his former chief rather than objective field engineering. Lieutenant William Twiss, Burgoyne's chief engineer, saw that Fort Mifflin was overlooked by Sugar Loaf Hill and directed the placement of artillery on the summit of the latter that forced the Americans to evacuate. Captain Lieutenant James Moncrieff, Sir Henry Clinton's favorite engineer, directed the successful defense of Savannah, Georgia, in October 1779 and managed the successful siege of Charleston, South Carolina, from March to May 1780. A day after Charleston fell on 12 May, Clinton wrote to George Germain, the secretary of state for the American colonies, that Moncrieff "conducted the siege with so much judgment, intrepidity, and laborious attention, I wish to render a tribute of the highest applause and most permanent gratitude" (Curtis, *Organization*, p. 9). British defenses at New York City were so strong in August 1781 that Washington had to abandon all thought of an assault and instead turned his attention to the Chesapeake, where Charles Earl Cornwallis's engineers were less successful in preparing defenses at Yorktown.

Cartographers in military service are known as topographical engineers. On 19 July 1777, Washington recommended that Congress appoint Robert Erskine to direct mapmaking services for the main army.

"ENGLAND" AND "ENGLISH." Strictly speaking, England is that part of the British Isles excluding Wales, Scotland, and Ireland, the inhabitants of which cannot properly be called "Englishmen." The modern meaning of Britain derives from the union of England (and Wales) with Scotland in 1701. "British" forces in the War of American Independence were an amalgam of English, Scottish, Irish, Loyalists (Tories), Native Americans (Indians), and Germans (Hessians).

ENOS, ROGER. (1729–1808). Continental officer. Connecticut. Born in Simsbury, Connecticut, Roger Enos served with colonial troops in 1759, and in 1764 had become a captain in Israel Putnam's regiment. He took part in the Havana campaign of 1762, and ten years later went on the commission sent by Connecticut to look at land in the Mississippi Valley that had been granted to veterans. Promoted to major of the Second Connecticut Regiment on 1 May 1775, he was promoted to lieutenant colonel on 1 July of that year. He commanded a battalion in Arnold's March to Quebec, and on 1 December was court-martialed for "quitting without

leave," because he had turned back from that march with his 300 men and their supplies. Although honorably acquitted, he left the Continental service on 10 December 1775. He subsequently became colonel of the Sixteenth Connecticut Militia, resigned 18 January 1776, but was colonel of another regiment from 1777 through 1779. In March 1781 he settled in Enosburg, Vermont, and that year he was appointed brigadier general in command of all Vermont militia. He was promoted to state major general in 1787, and held this post until his resignation in 1791.

revised by Michael Bellesiles

ENUMERATED ARTICLES. As part of British mercantilism reflected in the Navigation Acts and Trade Acts, certain colonial products that were allowed to be exported from the place of origin only to England or one of her colonies were "enumerated." The Navigation Act of 1660 put sugar, tobacco, indigo, cotton, ginger, and certain dyewoods on the list. In 1705 the list was expanded to include rice, molasses, and naval stores; furthermore, the colonists were given bounties for production of these articles. In 1721 the enumerated list included beaver skins, furs, and copper. The Sugar Act of 1764 enumerated hides and skins, pot and pearl ashes, iron, lumber, whale fins, and raw silk. In 1767 it was decreed that all nonenumerated goods destined for any part of Europe north of Cape Finisterre be shipped through England, but only a small percentage of colonial exports were affected.

SEE ALSO *Mercantilism; Naval Stores*.

Mark M. Boatner

ENVELOPMENT. An attack directed against the enemy's flank—or flanks, in the case of a double envelopment. It should not be confused with the "turning movement," although the latter is commonly known also as a "strategic envelopment."

SEE ALSO *Turning Movement*.

Mark M. Boatner

EPAULEMENT. Coming from the French word for “shoulder” (*épaule*), this was the shoulder of a bastion, or in another sense, an outwork for flank protection.

SEE ALSO *Bastion*.

EPINE OR DES EPINIERS SEE *L'Épine*, *Augustin François*.

ERSKINE, ROBERT. (1735–1780). Map-maker of the Continental army. A native of Scotland, after studying at the University of Edinburgh he went to London, where the treachery of a business partner got him seriously in debt. Escaping a jail sentence because of his excellent character and innocence in the affair, he continued his studies, and for his work in the field of hydraulic engineering he became a fellow of the Royal Society (F.R.S.) in 1771. He reached New York City on 5 June 1771 as the representative of a British capitalist who had invested in the American Iron Company, which was mining and manufacturing at Ringwood in the upper part of Passaic County, New Jersey. He soon became a supporter of the Patriot cause and in the summer of 1775 organized his employees into a military company. Erskine was made a captain in the Bergen County militia, and his men were exempted from compulsory service in other units.

Washington met Erskine early in the war and, learning that this able engineer and F.R.S. was well acquainted with the region west of the Hudson, offered him the position of “geographer and surveyor-general to the Continental Army.” On 27 July 1777 Erskine was commissioned “Geographer and Surveyor to the Army of the United States.”

In three years of zealous work, Erskine produced maps that contributed significantly to Washington’s operations, despite their numerous inconsistencies in scale and errors in distance and orientation. Among the prized possessions of the Pierpont Morgan Library in New York City is an engraved copy, with annotations believed to be in Washington’s hand, of “A Map of part of the States of New-York and New-Jersey: Laid down, chiefly from Actual Surveys, received from the Right Honble Ld Stirling and others, and Deliniated for the use of His Excely Genl. Washington, by Robt. Erskine F.R.S. 1777.”

During the war, Erskine’s iron works factory at Ringwood manufactured items used by the American army. He also designed and produced the *chevaux-de-frise*

(chains) that were placed in the Hudson River to deter passage of British ships.

Erskine died on 2 October 1780 of a respiratory illness contracted during his fieldwork. In his military journal entry for 25 January 1781, Dr. James Thacher, who was accompanying General Robert Howe’s force from the Hudson Highlands to put down the mutiny of the New Jersey Line, wrote of the excellent accommodations given to Howe and his field officers in Pompton “at the house of Mrs. Erskine, the amiable widow of the late respectable geographer of our army.”

Erskine’s papers are held by the New Jersey Historical Society. Records of the quartermaster general contain numerous references to Erskine and his works. His original maps are in the possession of the New York Historical Society Library.

ERSKINE, WILLIAM. (1728–1795). British general. Born in England 1728, William Erskine entered the Scots Greys in 1743, became a cornet at Fontenoy (1745) and, later, a major in the Fifteenth Light Dragoons in March 1759. He served with great credit in Germany. In 1762 he became a lieutenant colonel, and the next year, after presenting George III with 16 stands of colors captured by his regiment at Emsdorf, Germany, he was made a knight banneret. As a brigadier general he commanded a brigade in the battle of Long Island on 27 August 1776, and the next night surprised an American detachment at Jamaica. In April 1777 he was William Tryon’s second in command during the Connecticut coast raid. Sir Henry Clinton made Erskine his quartermaster general, in which capacity he also led troops during the Monmouth campaign, and during the winter of 1778–1779, Erskine commanded the eastern district of Long Island. When Clinton moved up the Hudson River in November 1778 in an attempt to intercept the Convention Army, which was reported to be moving to Virginia, Erskine commanded five infantry battalions and a cavalry squadron, but the expedition returned to New York City after getting as far as Kings Ferry. In summer, 1779 he turned over his duties as quartermaster general to Major Duncan Drummond and sailed for London.

He had been made colonel of the Eightieth Regiment in 1777, was promoted to major general in 1779, lieutenant general in 1787, and became a baronet in June 1791. During the Flanders campaign of 1793 to 1795, he was second in command to the Duke of York. He died on 9 March 1795.

ESTAING, CHARLES HECTOR THÉODAT, COMTE D'. (1729–1794).

French admiral. Estaing's given names on his birth certificate were Charles-Henri, those on his marriage certificate were Jean-Baptiste Charles, those recorded by the French navy were Charles-Henri Théodat, and those of the French National Library were Charles-Hector. Born in the château of Ruvel in Auvergne, he entered the second company of the king's Musketeers of the royal household. In that capacity he served in the Flanders campaign of 1744–1745 in the War of Austrian Succession. In 1746 he married the daughter of the Maréchal de Chateaurenault. Later that year upon his father's death, he succeeded to the title of comte and the family fortune. In 1748 he was commissioned a colonel by the king and fought at the siege of Maastricht. He was sent to England in 1755 to assist French ambassador de Mirepoix. In that capacity he prepared memoranda promoting the causes of a strong navy and colonial defense.

In 1755 Estaing's request for service with Montcalm in Canada was denied. Instead, he was promoted the following year to brigadier. In 1757 he was awarded the Croix de Saint-Louis and left for India. At the siege of Madras in 1758, he was captured and later paroled. He conceived several operations against the English in south-east Asia that brought him to the king's attention, and he

was promoted to maréchal de Camp in February 1761. On his return to France he was captured by the English, who considered him as having violated his parole. Estaing was taken to Plymouth, badly treated, and released in 1762 with a letter from Lord Egremont, the English secretary of state for the Southern Department, to the duc de Choiseul complaining of his conduct. He was promoted to lieutenant general of the army after his return to France and appointed to head a squadron against Brazil three months later. However, the signing of peace preliminaries halted the project. Estaing's career now turned to colonial administration.

In late 1763 Estaing was appointed governor of the French Leeward Islands. There he found the colonial rule lax and incurred the hostility of locals when he sought to reestablish royal control. He wrote, "I would rather fight some enemy a hundred years than these contemptible people for a quarter of an hour." In 1766 he requested his recall on the grounds of ill health and left Saint Domingue. In 1767, having reached the minimum required age, the king conferred on Estaing the Order of the Holy Spirit. He was appointed naval commandant at the important port of Brest in 1772 and vice admiral of French naval operations in Asia and America in February 1777. Estaing sailed from Toulon with a squadron on 13 April 1778, arriving in American waters by July.

Following Howe's fleet near New York from 11–22 July, he was forced to break off pursuit for lack of water. A landing at Newport was stymied first by delays of American forces and later by the bad state of French vessels. Estaing's offer to debark troops at Boston was rebuffed by Congress, though it passed a motion on 18 October endorsing his actions.

On 4 November he sailed for the West Indies after abandoning plans for an amphibious Franco-American expedition against Halifax and Newfoundland. Admiral Barrington frustrated Estaing's attempt to retake Santa Lucia, but the French admiral succeeded in capturing St. Vincent and Grenada. He also forced Admiral Byron to withdraw from an effort to relieve Grenada. On 6 July 1779 Estaing and Byron fought a drawn battle, but when the latter retired to St. Christopher, the Frenchman would not use his superior forces to attack him in the roadstead. Estaing was not sure whether to attack Jamaica or sail for North America. Unsure of English strength on the island and with Spain now in the war, Estaing received a series of appeals from South Carolinians fearing an assault from the British General Prevost in Savannah. He decided to attack the latter and set sail on 16 August. The squadron dropped anchor off the Georgia coast on 1 September, encountering a violent and damaging storm.

At Savannah on 9 October 1779, Estaing attempted a surprise assault on the western fortifications, but deserters had alerted the English, who repelled the combined

American-French force with heavy casualties. Estaing was wounded in an arm and leg. The French vessels divided up, and d'Estaing sailed to France. He arrived there in December just in time to enjoy the celebrations for his victory at Grenada. In July 1780 Estaing was sent to Cadiz to command a joint French-Spanish amphibious expedition. Its object was set in October 1782 as Jamaica, but the signing of the Peace Preliminaries on 20 January 1783 ended the project for him and his second-in-command, Lafayette.

Estaing suffered from the ill will of the new naval minister, Castries, who denied him further rewards. Yet he was rewarded by the state of Georgia in 1785 with citizenship and twenty thousand acres near the Oconee River and granted special privileges by the king of Spain. In 1784 he was named president of the French section of the Society of the Cincinnati. In 1785 he became governor of the province of Touraine, and in 1787 was appointed to the Assembly of Notables. In September 1789 the officers elected him commandant of the Versailles National Guard, which post he held until his resignation in favor of Lafayette in October. In May 1792 the National Assembly issued a decree naming Estaing admiral. Although in favor of national reforms, he remained loyal to the royal family. Estaing was arrested by the Committee of General Safety of the French Convention on 22 November 1793, interrogated on 29 March 1794, and condemned and executed on 28 April 1794.

Estaing, a sometime poet and litterateur, wrote in 1790 an "Aperçu hasardé sur les colonies." He followed it in 1791 by a play he styled a tragedy of circumstances titled *Les Thermopyles*, which prophetically contained the line: "Go tell Sparta that we are dead here for obeying his laws."

ETHIOPIAN REGIMENT. John Murray, the fourth earl of Dunmore, the royal governor of Virginia in 1775, gave this name to the unit of runaway slaves he created to help him fight the armed forces of the Virginia Convention. Perhaps three hundred of these former slaves accompanied Dunmore's little army when it was evacuated to New York from Gwynn's Island in the Chesapeake in July 1776. The unit was disbanded shortly thereafter.

ETHIS DE CORNY, LOUIS DOMINIQUE. (1736–1790). French commissary officer.

After completing his law studies, he returned in 1754 to his birthplace, Metz, as an attorney. Under the name of Ethis de Novéant, he served from 1757 to 1762 as a cadet in the corps of war commissaries. He became secretary to the intendant of Franche-Comté in 1762 and later commissary of provincial war in Brittany and Normandy. He corresponded with Voltaire in the 1760s. In 1772 he purchased a position with the war commissary and served in that post from 1779 to 1780 under marshal de Vaux. As commissary of war he was sent to America with Lafayette when the latter returned in the spring of 1780, his assignment being to make preparations for Rochambeau's expeditionary force. On 5 June he received the rank of lieutenant colonel (later colonel) of American cavalry without command to facilitate his mission. He briefly returned to France in February 1781, supposedly because of bad health. Louis XVI named him principal commissary of war in June 1781. Washington commended him for his conduct at Yorktown. He left American service on 1 January 1782, became commissary of war of the Regiment of Swiss Guards (1784), and was appointed royal *procureur général* for the city of Paris in 1785. In 1787 he became a chevalier in the Order of Saint Louis. Corny supported Jefferson's efforts as minister to France, including the purchase of American flour and wheat by the City of Paris in 1788. He was an active supporter of the French Revolution in its early days yet eventually lost his fortune in it. William Short claimed that a resulting mental and emotional crisis led to his death.

EUTAW SPRINGS, SOUTH CAROLINA.

8 September 1781. After Ninety Six, Major General Nathanael Greene spent over a month in the High Hills of the Santee resting his army while drilling Continental and militia infantry in battalion-level firing. His cavalry augmented partisan activity as the British were kept off balance and denied current knowledge of American movement and intentions. As September arrived, Greene began to move toward the main British force protecting Charleston by slow, easy marches to allow more men to join him and deceive the British. Sufficiently reinforced, he surprised the British army under Lieutenant Colonel Alexander Stewart at Eutaw Springs near Nelson's Ferry on the Santee River.

Leaving his overnight camp at Burdell's Tavern at 4 A.M. on 8 August, Greene moved toward Eutaw Springs, only seven miles away. The marching column was arranged to allow immediate deployment in planned battle lines, so there was a surprising number of militia near the front. Lieutenant Colonel John Henderson led the column with his detachment of seventy-three South Carolina state troops, its subunits commanded by Lieutenant Colonels Ezekiel Polk and Hugh Middleton, and Lieutenant Colonel Henry "Light-Horse Harry" Lee's Partisan Legion. Colonel Francis Marion, who joined Greene on 7 September after a four-hundred-mile march, followed with his partisans, Colonel Francis Malmédy's militia, the Marquis de Malmédy's two North Carolina militia regiments, and General Andrew Pickens's two South Carolina militia regiments. Each Carolina brigade had an eastern and a western regiment. Local companies were raised, largely by respected leaders in the vicinity, then consolidated and marched to the main army. The western troops were led by western officers, the eastern troops by officers from their region. They followed very different routes to join Greene.

Next in the column came General Jethro Sumner with three small North Carolina Continental battalions under Lieutenant Colonel John Baptiste Ashe and Majors John Armstrong and Reading Blount. An understrength Virginia Continental brigade under Lieutenant Colonel Richard Campbell followed. Its two battalions were led by Major Smith Snead and Captain Thomas Edmonds. Colonel Otho Holland Williams's Maryland Continental Brigade, with two battalions commanded by Lieutenant Colonel John Eager Howard and Major Henry Hardman, were further to the rear. Lieutenant Colonel William Washington's Third Continental Light Dragoons and Captain Robert Kirkwood's Delaware infantry company brought up the rear. The American artillery had two three-pounders under Captain-Lieutenant William Gaines and two six-pounders commanded by Maryland captain William Browne in the column. After the initial contact,

Gaines would be sent to the advanced party with a guard of North Carolina Continentals. Greene had about twenty-two-hundred men in this force.

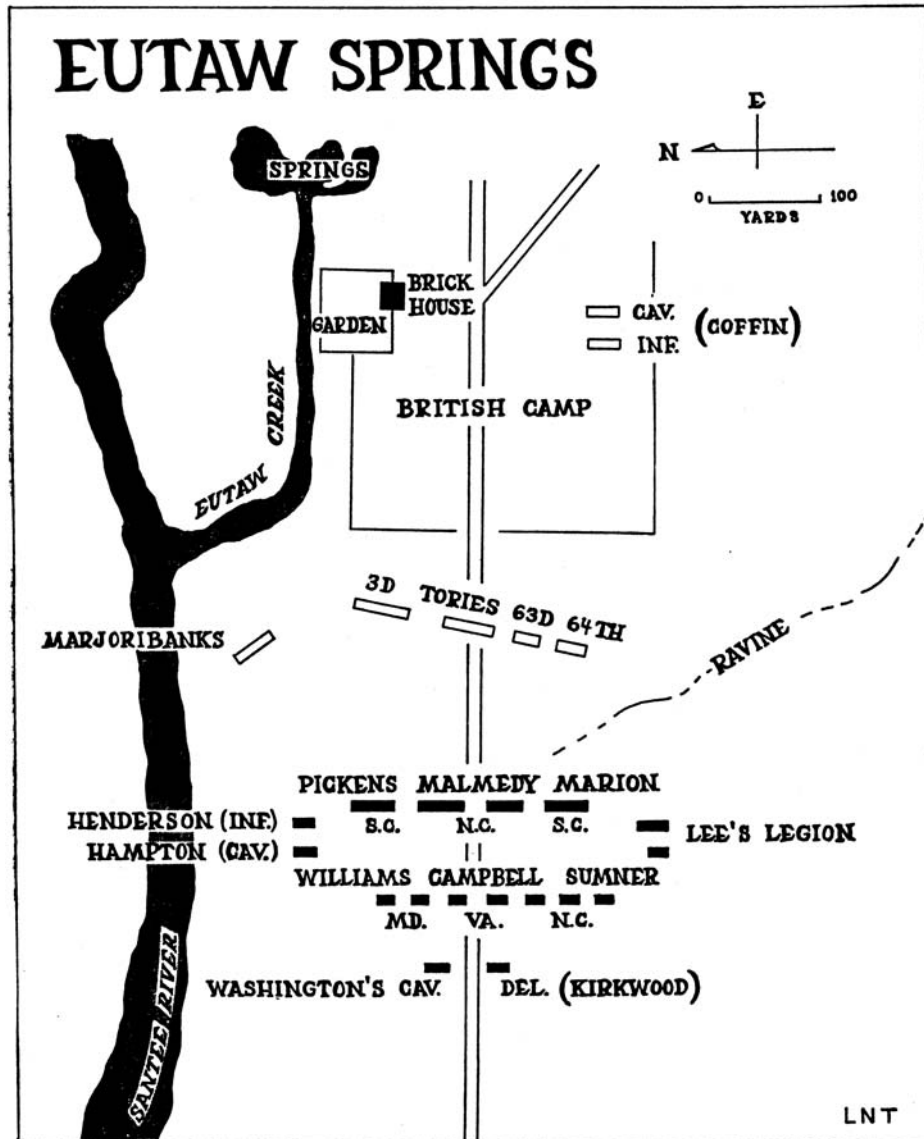

Stewart had between eighteen hundred and twenty-two hundred effectives. Flank companies of the Third, Nineteenth, and Thirtieth Regiments constituted Major John Marjoribanks's "flank battalion," with some three hundred men. The line regiments included the recently arrived Third Foot, the "Buffs," as well as the understrength Sixty-third and Sixty-fourth Foot, Colonel John Harris Cruger's New York and New Jersey Provincials, and Major John Coffin's South Carolina horsemen. Stewart's artillery included two six-pounders, one four-pounder, a three-pounder, and at least one swivel gun.

THE PRELIMINARY BOUTS

Stewart had been sending out foraging parties around dawn to dig sweet potatoes. On 8 September the detail was drawn from Marjoribanks's battalion and the Buffs. Unarmed, and with a small guard, the foragers left camp about 5 A.M. An hour later, two North Carolina deserters were brought to Stewart with a story that Greene was approaching with 4,000 men. Stewart reported that Major John Coffin was already reconnoitering in the direction from which Greene would approach with 140 infantrymen and 50 cavalry, but other accounts suggest Coffin went out after the deserters were interrogated. Coffin made contact about four miles from Stewart's camp around 8 A.M.

Major John Armstrong, commanding a party of North Carolina vedettes, reported Coffin's approach to Henderson, who promptly set up a hasty ambush. When Coffin's dragoons incautiously pursued Armstrong, they came under small arms fire from both flanks and then were enveloped by the legion cavalry under Major Joseph Egleston as Captain Michael Rudolph led the legion infantry in a bayonet charge. Coffin escaped with his cavalry to warn Stewart, but four or five of his infantry were killed and about forty, including their captain, were captured. In the follow-up to this encounter, many of the foraging party were also taken prisoner. Numbers vary from one hundred to as many as four hundred, but whatever the total, this loss was an attrition of British strength at a crucial time.

The initial contact caused Greene to deploy into his planned fighting formations well over three miles from the actual battlefield. Since Stewart sent out a delaying force, this was not necessarily wrong. The delaying party actually executed an ambush on the American advance some two miles from the British camp, slowing the approach. Although the British advance party was driven off by the South Carolina state troops, Greene's men were forced to move cautiously through the woods, creating difficulties in maintaining their linear formations.

THE GALE GROUP.

After sending out the force to delay Greene, Stewart deployed on even ground west of his camp. Major John Marjoribanks's light infantry and grenadiers were posted in a blackjack thicket some distance beyond the British right flank. Cruger commanded the main line. The infantry was arranged with the Third Foot on the right; then Cruger's New Jersey and New York Provincials; and the Sixty-fourth, Eighty-fourth, and Sixty-third Foot spread south across the River Road. The Sixty-third and Sixty-fourth Provincials were worn down by the summer's hard campaigning and were much reduced in strength. Coffin's horse and foot troops were posted as a reserve. Major Henry Sheridan of Cruger's Provincials was ordered to occupy Roche's brick

house and hold it should the Americans break through. While there was a ravine beyond the British left and the Santee River beyond its right, both flanks were largely unprotected. The two armies are shown as the main battle commenced just west of Roche's Plantation.

PHASE I: GREENE'S MILITIA ATTACK

Shortly after 9 A.M., heavy firing began as the militia advanced against the British line. The first American attack line, under General Francis Marion, was Carolina militia with Malmedy's North Carolina Brigade flanked by the two South Carolina regiments. In generalized terms, Marion commanded the left, Malmedy the center, and General

Andrew Pickens the right segments of the first line. Gaines's guns went out of action, one disabled, the other damaged by enemy fire, after a short exchange that silenced one British gun. The militia performed admirably, firing seventeen volleys before retiring. Lee tried to turn the enemy left but was fought off by the Sixty-third Foot.

**PHASE II: BRITISH COUNTERATTACK
ROUTES THE MILITIA**

With both flanks in the air, unprotected by terrain features, and concerned that American dragoons would turn his flanks, Stewart held back, in part because he saw that Greene's line was largely militia. For some reason, the British left advanced and was followed by the remainder of the line. As the militia infantry gave way, Lee's legion stood its ground against the Sixty-third, and the South Carolina state troops held off the Third Regiment. Greene responded adroitly to the new situation by ordering General Jethro Sumner's North Carolina Continentals forward to take over from the militia.

The North Carolina Continentals were composed of voluntary enlistees, plus men forcibly drafted because they had allegedly fled at Guilford Courthouse. Some of these men had been in continuous service since March. Most had been subjected to intense training in the last month but about one hundred additional men had arrived only the night before. The North Carolina Continentals were led by outstanding officers with considerable combat experience. Although the men were relatively inexperienced, Sumner drove the British back to their original positions and began forcing them rearward.

PHASE III: SUMNER IS DRIVEN BACK

Stewart now committed his reserve. Coffin's cavalymen took position to protect the left flank against the threat posed by Lee's dragoons; his infantry reinforced the faltering front line. Heavy fighting continued on both flanks as the opposing commanders were occupied with restoring their centers. The American left faltered momentarily when Henderson was wounded, but

Hampton rallied them to push back the Buffs and take one hundred prisoners. Lee's legion held the right without undue pressure.

After fighting so well, Sumner's Continental infantry—weakened because all of its field grade officers and many of its captains were wounded—were finally forced back by the reinforced British center. A shortage of ammunition also contributed to their giving way.

When the British advanced to create a new breakthrough, Greene sent the Maryland and Virginia Continentals of Colonel Otho Williams and Lieutenant Colonel Richard Campbell forward. The Continentals advanced with muskets at the trail and delivered their first volley at forty yards, then followed up with a bayonet charge. Almost simultaneously, Captain Michael Rudolph led the infantry of Lee's legion against the vulnerable British left flank. The left half of Stewart's line collapsed and retreated in confusion through their camp. The Buffs obstinately held a short time against Lieutenant Colonel John Eager Howard's Second Maryland Regiment, but they were driven back after a bayonet fight that left the dead "transfixed by each other's bayonets."

PHASE IV: STEWART'S STRONGPOINTS HOLD

Despite the collapse, Marjoribanks's flank battalion still held the blackjack thicket on the British right. Washington's cavalymen could not penetrate the thicket, and when they wheeled to bypass it by going nearer the river, nearly all the officers were shot down by a volley from Marjoribanks's position. Washington was bayoneted and captured when his horse was shot. Colonel Wade Hampton rallied the Continental dragoons and then charged together with his South Carolina horse. The attack was repulsed with heavy losses.

Even with the British right holding off the American horsemen, Greene's men were doing well until they found food and liquor in Stewart's camp. Both Continentals and militiamen took advantage of the opportunity and the attack broke down except for Howard's Second Maryland.

Greene's loss of effective control can now be seen in the unsuccessful attempt to drive Coffin from the field. Greene was personally directing the fighting on the left, while Lee was directing his legion infantry on the right. When Lee realized that defeating Coffin's cavalry would eliminate Stewart's mobile reserve, he wanted to send his legion cavalry against the British left. When he sent for Egleston and prepared to lead the legion cavalry forward, Lee found Egleston had already been committed on the left flank. Hampton finally attacked Coffin and drove the Loyalist horsemen back, but when Hampton pursued up the road, he was exposed to fire from Marjoribanks's second position in the palisaded garden next to the brick house and driven back.

PHASE V: MARJORIBANKS'S COUNTERATTACKS

With the British infantry line collapsing, Sheridan had moved his men into the Roche Plantation's house. This brick structure was a natural fortification that could not be taken if resolutely defended. Kirkwood's Delaware and some legion infantry nearly got through the door before Sheridan's Loyalists could secure it. Captain Lawrence Manning, who commanded Lee's infantry at this point, used a British officer as a shield while withdrawing from the yard. Others did likewise since many British soldiers had been unable to get inside the house because the American pursuit was so rapid.

Four six-pounders, two American and two just-captured British guns, were brought up to break down the door but were placed too near the house. The gunners were shot down by British musket and swivel gun fire. The British began rallying around Sheridan's strong point. Some entered the house from the rear while others took position behind the garden palisades. Marjoribanks now led his flank battalion in a gallant sally that captured the American artillery. Continuing their counterattack, his men engaged Second Maryland elements as Howard, personally leading Captain Edward Oldham's company, attempted to slow the advance but was wounded. Marjoribanks was mortally wounded as the sortie fought its way through the British camp, but his counterattack changed the fortunes of the day. Other British troops reinforced his battalion and the battle was soon over as Greene opted to retire rather than risk destruction of his command.

NUMBERS AND LOSSES

As for detailed estimates of numbers, Greene had some 1,256 Continental infantrymen, and another 300 Continental dragoons and light infantry under Lee, Washington, and Kirkwood. At the very least, there were over 200 North Carolina and 300 South Carolina militia, plus Marion's 200 militia and 73 South Carolina state troops, serving as infantry. Marion brought 40 horsemen, who augmented the South Carolina state troops cavalry, numbering seventy-two. Of this approximate total of 2,400, some 200 were detached as baggage guards at Howell's Ferry on the Congaree. Component strengths of the British force included some 280 men in Marjoriebanks's flank battalion and 300 in the Third Foot, while the Sixty-third (96), Sixty-fourth (180) and Eighty-fourth (82) were well understrength. Cruger's three battalions of Provincials numbered approximately 180 men. The South Carolina Royalists numbered approximately 70 cavalry and 100 infantry. Most of Stewart's troops were British regulars. Cruger's Tories were veterans and of the caliber of regulars. Only Coffin's troops were relatively inexperienced militia, and they had seen hard duty since early April.

Approximately 2,200 Americans were engaged and suffered over 500 casualties (139 killed, 375 wounded, and 8 missing, a total of 522). Officers took heavy losses as 60 were killed or wounded. Of the seven Continental officers commanding infantry regiments, only two emerged unscathed. Richard Campbell was among the dead. Militia leaders Pickens and Henderson were wounded. In the enlisted ranks, at least two North Carolina Continental companies reported over 90 percent of their men as casualties.

The British suffered very high proportionate losses. Starting with approximately 1,900 effectives, they lost 693, according to official returns. Stewart, wounded himself, reported 85 officers and men were killed, 351 wounded, and 257 missing. There is some question about British prisoner numbers; much of it centers on the foraging party losses.

COMMENTS

Eutaw Springs, the last major engagement in the Deep South, was one of the hardest-fought actions of the Revolution. Troops on both sides fought exceptionally well, and there is little fault to be found with the tactical performance of either commander. Greene scored a fine tactical surprise and followed through well to exploit it. Stewart recovered promptly and made an excellent deployment, particularly in assigning Marjoriebanks's flank battalion and preparing to defend the brick house. An even fight until the Americans reached the British camp and were distracted by plunder, the British outfought the Americans after that, rallying repeatedly to retake their position and drive them off. On a day marked by gallantry, John Marjoriebanks was conspicuous and, as with other field grade officers on both sides, he paid the price.

For the fourth time, Greene failed to win a battle in the South, but he won the campaign. The British army was so weakened by losses at Eutaw Springs that it withdrew toward Charleston. With the British holding only Charleston and Savannah, the South was nearly regained after sixteen months of occupation. Confined to a narrow coastal belt, it could not adequately supply itself and would evacuate the South in 1782.

Part of Greene's success in this campaign was due to his interdiction of virtually all British intelligence prior to the battle. Camped only seven miles from the Continentals, Stewart did not know their proximity until two deserters informed him on the morning of the engagement. These men may have been deserters, or they may have been sent ahead to frighten Stewart by reporting an excessively large American force. In either case, Greene's approach was a surprise.

EVACUATION DAY. 25 November 1783. The departure of British troops from New York City on this date was coordinated with the city's reoccupation by the remnants of the Continental Army. Major General Henry Knox directed the operation. Colonel Henry Jackson, the senior infantry officer still in service, was in immediate command of the two infantry regiments (Colonel Joseph Vose and Lieutenant Colonel William Hull), two artillery companies (Major Sebastian Bauman), and militia troop of horse (Captain John Stakes) that composed the 800-man force. The last British ships sailed from the harbor on 4 December. The term applies uniquely to New York City because it was the last city to be evacuated by the British under the terms of the Treaty of Paris (3 September 1783).

EWALD, JOHANN VON. (1744–1813). Hessian officer. Germany. Born in Kassel, Germany, in 1744, Ewald, the son of a bookseller, entered the Hessian army at the age of 16, taking part in the closing campaigns of the Seven Years' War. He lost his left eye in a duel in 1770. Having studied military engineering in Kassel, he published a book on military tactics in 1774 and was made captain of the Leibjäger, an unusual promotion for a commoner. As commander of the Second (jäger) Company, a unit rented by the British for service in the Revolution, he reached New Rochelle, New York, on 22 October 1776, and was in action the next day against a force of American riflemen. His unit constituted the advance guard at Monmouth and Brandywine, Ewald earning special commendation from Sir William

Exchange of Prisoners

Howe. He was conspicuous in the Charleston expedition of Henry Clinton in 1780 and, in his diary, left a valuable record of this operation. He surrendered at Yorktown, and almost died of dysentery while on parole on Long Island. He returned to Kassel in May 1784, waited four years in vain for a promotion he would not receive because of his "lowly birth," and then became a lieutenant colonel commanding a jäger corps in Denmark. He reorganized the corps, was elevated to the Danish nobility, and was a major general in 1802. Commanding forces in Holstein, again in Germany, he skirmished with French forces under Marshalls Joachim Murat and Nicholas Soult in an effort to maintain the neutrality of Denmark against the wishes of Napoleon Bonaparte. He was made a lieutenant general in 1807 after taking part in the assault on Stralsund, Germany. He died six years later, after a brief illness.

EXCHANGE OF PRISONERS. At the time of the Revolution (and for another century), it was normal to parole prisoners of war and then arrange for their exchange. As a rule only officers could be exchanged. Exchange of "other ranks" was not favored by American civil or military authorities because the emaciated American prisoner often did not live long after his release from a British jail; this meant that the enemy stood to gain from the practice. Little is known about how many prisoners were taken during the war and even less about how many were exchanged, but the following "tariff" was worked out in December 1779 on the basis of how many privates were equivalent to various ranks. A sergeant could be exchanged for 2 privates; a second sergeant or ensign, 4; a first lieutenant, 6; a captain, 16; a major, 28; a lieutenant colonel, 72; a colonel, 100; a brigadier general, 200; a major general, 372; a lieutenant general, 1,044.

F

FACTIONALISM IN AMERICA DURING THE REVOLUTION.

Throughout the Revolution, America was split into hostile factions on the grounds of race, religion, social and economic interests, and politics, making it impossible to speak in sweeping generalities about “Americans.” In many instances factionalism amounted to regionalism— New Englanders opposing New Yorkers, northerners finding little cause for compatibility with southerners, Tidewater elites competing with those living inland, and nearly everyone looking askance at Rhode Islanders as a home to all sorts of to all sorts of wild and fuzzy ideas about tolerance. Boundary disputes were at the base of animosities between colonies, particularly New York and New Hampshire (and much of the rest of New England) over the region that became Vermont. The Wyoming Valley was the scene of conflict before and after the Revolution, and Pennsylvania struggled with Virginia for control of what became western Pennsylvania, particularly Pittsburgh. There were also specific regional animosities; for instance, people living on New England’s northern frontier despised the merchants of Albany for selling guns and ammunition to the Indians.

The white population of the colonies was predominantly Anglo-Saxon, the New Englanders being particularly proud to trace their ancestry in America back more than one hundred years. Considering themselves members of founding families, they often held newer immigrant groups, such as the Scots-Irish, Germans, and Huguenots, in contempt. Many of these newer arrivals gravitated toward the frontier, where they soon had economic as well as ethnic and religious differences with the older settlements. Settlers in western Pennsylvania came to feel ignored by the province’s

Quaker oligarchy, and they were denied proportional representation in the legislature. The same held for the western counties of all the southern states, even after the drafting of constitutions during the Revolution. Class divisions also became evident during the war, as many farmers and artisans favored paper currency and schemes such as the land bank, only to be frustrated by the wealthy oligarchs who preferred specie or hard money. Such class divisions often had deeper roots, the memory of the Regulator troubles in the Carolinas and the rent riots in New York and New Jersey often determining political allegiances during the Revolution. Just because these factions often shared a commitment to American independence did not mean that they united in concerted opposition to a common foe. Often they were looking beyond the victory over Great Britain, recognizing that the structuring of government and society during the Revolution could have significant long-term consequences.

Complicating these divisions further were the sharp political divisions aroused by the Revolution. Though historians have been unable to determine with great precision the number of those committed to independence and of those who sought to retain British rule, it seems fair to say that at least one-fifth of the colonies’ white population remained loyal to the crown. Even Patriots were keenly divided between those with a more conservative vision who feared that the Revolution might unleash an excess of democracy and radicals who hoped to attain precisely that end. What the former particularly feared was that the rhetoric of revolution might extend to the enslaved people of America, who accounted for between one-fourth and one-third of the new nation’s total population. For slaves, it was the British and not the Patriots who offered freedom. Similarly, the other often-forgotten

portion of America's population, the Indians, understood that a British victory would help to preserve their lands.

While most of these problems persisted after the war against Britain had been won, some of these divisions especially plagued the efforts of Patriot leaders to attain unity during the Revolution. New England leaders, who dominated the period of resistance to British measures from 1763 to 1775, realized that they needed the support of other colonies, particularly Virginia, if the Revolution were to succeed. Hence, they went to considerable lengths to avoid giving the impression that they wanted to dominate either Congress or the Continental army.

Although the necessity of appointing generals with an eye to equitable state representation resulted in the elevation of many incompetents to positions of military leadership, these were often pushed into assignments where they could not do too much harm to the cause. Only in the Northern Department did factionalism seriously jeopardize military operations. There, the New England–New York antagonisms soon became evident. As commander in chief of this department, General Philip Schuyler did not receive the wholehearted support of the New England colonies during the Canada invasion. He encountered a lack of cooperation that verged on treason in his opposition to Burgoyne's offensive, and it was pressure from the New England delegates in Congress that led to his replacement by Horatio Gates. Regionalism loomed large in the American effort against the Bennington raid and in several other frontier battles. It also figured in the so-called Conway Cabal. Class conflict underlay much of the animosity of the common soldier for Congress in the last years of the war, fueling mutinies, resistance to orders, and declining morale. In this context, Washington deserved special credit for balancing many of these factions and holding his army together until 1783.

FALMOUTH, MASSACHUSETTS.

(now Portland, Maine), 18 October 1775. The increasing effectiveness of American privateers was a source of frustration for the British vice admiral Samuel Graves. Within army circles, moreover, criticism of the Royal Navy's inactivity was mounting. As a result, the navy decided to carry out punitive raids on New England seaports. One such expedition was led by Lieutenant Henry Mowat against the coastline north of Boston all the way to what is now Maine. On 6 October Graves ordered Mowat to take command of a small squadron to "lay waste burn and destroy such Seaport Towns as are accessible to his Majesty's Ships," with specific instructions stating that "My Design is to chastize Marblehead, Salem, Newbury, Port Cape Anne Harbour, Portsmouth, Ipswich, Saco, Falmouth in Casco Bay, and particularly Mechias." Mowat had been employed prior to the start of hostilities in cruising along that coastline with the party of Royal Engineers carrying out the first full survey of the region, and so was an ideal selection. His task force consisted of his own armed vessel *Canceaux* (schooner-rigged and armed with six guns), which had been his "survey sloop"; Lieutenant John De la Touche's smaller but better-armed schooner *Halifax* (sixteen guns), which had just been purchased in Nova Scotia to replace a wrecked schooner of the same name; the armed transport *Symetry* (eighteen guns, with a crew primarily transferred from warships); the sloop *Spitfire* (a vessel under army control); and a 100-man detachment of marines and artillerymen under Captain-Lieutenant Forster of the Royal Marines embarked on the *Symetry* and *Spitfire*. Preparations were completed that same day, and the force stood out to sea on 8 October. Forster had first explored the possibility of attacking settlements on Cape Ann but decided that it was too strong for the force at his disposal.

On 16 October Mowat reached the area of Falmouth and moved into the harbor the following afternoon. The next morning the squadron opened fire on the port at 9:40 and kept on firing until 5:00 P.M. At 3:00 P.M. Mowat sent a landing party ashore to set fire to some buildings that had

escaped the bombardment, and it returned an hour later after skirmishing with the Cumberland County militia; by 8:00 that evening the entire task force had moved back to a safe distance offshore. Mowat claimed to have destroyed the entire town (the Americans said 139 homes and 278 other structures burned) and to have burned eleven vessels and removed two others as prizes. But because he had warned the inhabitants on 16 October, the civilians had evacuated the town and none were injured.

Mowat arrived back at Boston on November with his squadron and four prizes. He reported suffering two wounded—a marine and Midshipman Larkin of the *Canceaux*. Other than infuriating the Americans, the expedition accomplished nothing of military significance. The uproar led Lord George Germain to order General William Howe to conduct an official court of inquiry in May 1776, which, unsurprisingly, found no misconduct.

FANNING, DAVID. (1755–1825). Tory partisan. Virginia and South Carolina. Although details of his origin are obscure, David Fanning was probably born at Beech Swamp, Amelia County, Virginia, and was the son of David Fanning. Having run away from a harsh master to whom he was apprenticed, the younger David was an Indian trader among the Catawba in South Carolina in the years just before the Revolution. Although he said he was only nineteen years old in 1775, he also claims to have owned one thousand acres in Virginia and two slaves. Another detail of his prewar life that may have influenced his character was a disfiguring scalp disease known as scald head; this was so offensive during his childhood that he was not allowed to eat with other people, and when he outgrew this childhood disease it left his scalp so disfigured that he always wore a silk cap. In the early stages of the split with England, he sided with the Patriots but changed sides when he was robbed of his Indian trade and a considerable quantity of goods by a gang whose members called themselves Whigs.

A sympathetic picture of Fanning is presented by Robert O. DeMond in his *Loyalists of North Carolina during the Revolution* (1940). According to DeMond, Fanning resided in South Carolina when the war started and was

a sergeant in the same militia company as Thomas Brown when it split into Whig and Tory factions in May 1775. Having signed a paper in favor of the king at that time, he returned to his home on Reburn Creek and for the next six years—during which time he apparently received his “training” under “Bloody Bill” Cunningham, a notorious Tory partisan—he was in and out of Patriot prisons. Captured and paroled in January 1776, recaptured and imprisoned on 25 June, he escaped, was recaptured, tried for treason, and acquitted but charged three hundred pounds for court expenses. This life continued, according to his own account, for another five years. The place of his confinement usually was at Ninety Six.

On 5 July 1781 he was commissioned colonel by Major James Craig, British commandant at Wilmington, North Carolina, and for the next ten months he led his guerrillas in a number of remarkable actions. It is of this brief and final phase of his career that DeMond writes: “Probably no friend of the [British] government during the entire war accomplished more for the British, and certainly none received less credit.” While Colonel Benjamin Cleveland, one of the Kings Mountain heroes, led his vigilante Patriot bands along the Upper Yadkin, Fanning undertook the same role on Deep River, some thirty miles northeast. His most impressive operation was the Hillsboro raid on 12 September 1781. Bloody retaliatory warfare continued after regular military operations had ended in the South. Fanning apparently outclassed his opposition, but when he met rebel peace overtures with the request that his followers not be required to oppose the king during the remainder of the war, the civil authorities became arrogant. “There is no resting place for a Tory’s foot upon the earth,” said a Colonel Balfour (*ibid.*). Fanning subsequently sacked Balfour’s plantation and killed him. The Tory leader got the upper hand in the region and continued to raid, but he also continued efforts to arrange an armistice. He was married in the spring of 1782 and on 7 May entered a truce area on the lower Peedee. He settled in East Florida when Charleston was evacuated and went to Halifax in September 1784 after Britain ceded East Florida to Spain. He was elected to the provincial parliament of New Brunswick and served from 1791 until January 1801, when he was expelled for some unknown crime. For the latter he was condemned to death but pardoned. Fanning moved to Digby, Nova Scotia, and became colonel of militia. He died at Digby in 1825. His tombstone says he was seventy years old at that time.

In requesting compensation from the crown, Fanning claimed to have led thirty-six skirmishes in North Carolina and four in South Carolina, commanding bands that varied in strength between 100 and 950 men. For all this, he was allowed the grand sum of sixty pounds. Colonel Fanning’s *Narrative* was written in 1790 and first published (in Richmond, with an introduction by J. H. Wheeler) in

1861. The fifty-page manuscript was subsequently reprinted several times. DeMond calls the *Narrative* “the best contemporary account of the Loyalists for the latter period of the war.”

Craig’s appointment of Fanning as commander of the North Carolina Loyal Militia came at a historic juncture in British operations in the Carolinas. For the first time, the British had learned how to wage irregular warfare against the Americans. According to the historian John S. Watterson, Fanning employed new tactics and discipline to use in a war of “quickness, mobility, deception, and improvisation” that Governor Burke and General Greene found, in the short run, impossible to counter. Had the French fleet not cut Cornwallis’s supply lines to New York in September 1781, the Craig-Fanning offensive in North Carolina in 1781 might well have helped to shift the strategic balance in the southern campaign in 1782.

FANNING, EDMUND. (1739–1818). Loyalist leader. New York. Born on Long Island on 24 April 1739 and graduated with honors from Yale in 1757, he moved to Hillsboro, North Carolina, and was admitted to the local bar in 1762. He rose quickly to local prominence, serving in the assembly and becoming a colonel of militia and a favorite of Governor William Tryon, as well as the storm center of the subsequent Regulator movement. Among the frontier settlements of western North Carolina, Fanning emerged as the symbol of the corruption and political dominance of the eastern elite.

On 8 April 1768 the Regulators fired shots into Fanning’s house. In May he arrested two of their leaders but prudently released them when the mob threatened to raid the jail. A show of force by Tryon restored order temporarily, but violence again flared up, and in the

election of 1769 Fanning lost his seat in the assembly. Tryon then created the borough of Hillsboro to give Fanning a safe seat. On 24 September 1770 a mob of Regulators broke up the session of the superior court at Hillsboro, dragged Fanning from the courthouse, and whipped him. The next day they ran him out of town and destroyed the fine house they maintained he had built from money extorted in official fees.

After the Battle of Alamance put a finish to the Regulator movement, Fanning followed Tryon to his new post as governor of New York in 1771 and became his private secretary. Although unable to get compensation from the North Carolina legislature for the loss of his property, Fanning received a number of large land grants in the Mohawk Valley and the Green Mountains, as well as several lucrative offices in New York before the war, among them the post of surveyor general in 1774. That same year Oxford University awarded him an honorary law doctorate. An ardent Loyalist when the Revolution broke out, he raised Fanning’s Regiment, officially known as the King’s American Regiment but also called the Associated Refugees. He was given the rank of colonel in 1776. Fanning’s Regiment earned a reputation for fierce fighting and the cruel treatment of prisoners as they conducted a series of coastal raids against New England. In 1779 he captured New Haven but ordered his men not to burn the town for fear of damaging Yale.

Twice wounded during the war and all of his property confiscated, Fanning moved to Nova Scotia in 1783. Fanning placed the worth of his land at more than £17,000 and requested full compensation; he received £4,447. In September 1783 he became councillor and lieutenant governor of that province, and in 1786 he assumed the office of lieutenant governor of Prince Edward Island (at that time called St. John’s Island). However, his predecessor, Walter Patterson, who was to return to London to answer charges of corruption, refused to give up his office and leave the island until 1788, creating a political controversy that lasted the rest of his term in office. Meanwhile, Fanning had been made a colonel in the British army in December 1782, and in April 1808 he was promoted to full general. His resignation as lieutenant governor was effective in July 1805. In 1813 he moved to London, where he died on 28 February 1818.

FANNING, NATHANIEL. (1755–1805). American privateer. Little is known of Fanning’s early years, except that he went to sea at a young age. In 1778

he was on his third voyage aboard the *Angelica*, a privateer, when he was captured and held for 13 months in Forton Prison near Portsmouth, England. After being exchanged he became midshipman and private secretary to John Paul Jones on the *Bonhomme Richard*. Highly commended by Jones for promotion, Fanning served with him on the *Ariel* until December 1780, when he and most of the ship's other officers refused to remain under Jones's command, rejecting what they saw as his excess cruelty toward his crew. In 1781 he was captured aboard a French privateer and spent another six weeks in prison. Early the next year he became a French citizen, commanded French privateers, was twice held prisoner by the British for short periods, and briefly accepted a commission in the French navy. At the war's end he gave up this commission, however, and returned to America. Having married in 1784, he apparently was a merchant seaman until he accepted a lieutenant's commission in the U.S. Navy on 5 December 1804. Ten months later he died of yellow fever while commanding the naval station at Charleston.

FARMER'S LETTERS. Constitutional objections to the Townshend Acts were presented in fourteen essays by John Dickinson that appeared from 5 November 1767 to January 1768 in the *Pennsylvania Chronicle*. Collectively, they were entitled *Letters from a Farmer in*

Pennsylvania to Inhabitants of the British Colonies. Dickinson argued that Parliament had no right to tax the colonies solely for revenue but had authority only to regulate trade, even if this resulted incidentally in revenue. He also called suspension of the New York Assembly a blow to colonial liberties. In pamphlet form the letters circulated widely in England and America.

FAWCETT, SIR WILLIAM. (1727–1804). British officer. Born in Halifax, England, on 30 April 1727, Fawcett enlisted in the army in 1748, serving first as an ensign in the Thirty-third Foot before joining the Third Foot Guards on 26 January 1751, a regiment with which he remained until 1779. Fluent in French and German, he began in 1754 to translate foreign military manuals for use by the British army. Fawcett's editions became the essential works studied by most British officers at the time. In 1757 he purchased the rank of lieutenant and the following year went to Germany as aid-de-camp to General Granville Elliot and then the marquess of Granby. Fawcett brought the news of the 1760 victory at Warburg to George II, receiving the rank of lieutenant colonel as a reward on 25 November 1760. Granby named Fawcett adjutant general in 1766, leading to a number of additional positions, including lieutenant governor of Pendennis Castle in 1770, brevet colonel on 25 May 1772, and governor of Gravesend in 1776. In 1775 he traveled through Germany negotiating the treaties that rented troops for use in America. His son William, also of the Third Guards, was made aide-de-camp to the Hessian contingent. Fawcett was promoted to major general on 29 August 1777 and to lieutenant general on 20 November 1782. He then set about completely restructuring the training methods of the British army in response to the harsh lessons learned during the American Revolution and is generally credited with preparing the military for the challenges of the long war with

France. He was made a knight of the Bath in 1786 and full general on 14 May 1796, retiring in 1799. He died at his home in Westminster on 22 March 1804.

FEBIGER, CHRISTIAN ("OLD DENMARK"). (1746–1796). Continental officer. Denmark and Virginia. Born at Fåborg, Denmark, in 1746, Febiger had a military education before joining the staff of his uncle, the governor of the Danish island of Santa Cruz, in the West Indies. In 1772 Febiger visited the American colonies, traveling from Cape Fear, North Carolina, to the Penobscot River, and the next year entered the lumber, fish, and horse business in Boston. When the Revolution began he joined Colonel Jacob Gerrish's Massachusetts Regiment on 28 April 1775, becoming adjutant on 19 May, and rendering valuable service at Bunker Hill on 17 June 1775. He was brigadier major during Arnold's March to Quebec, which occurred from September to November 1775, and was captured in the attack on Quebec from 31 December to 1 January. In September 1776 he went to New York with the other prisoners and was exchanged in January 1777.

Joining Daniel Morgan's Eleventh Virginia on 13 November 1776 as lieutenant colonel, Febiger fought at the Brandywine on 11 September 1777, and was promoted to colonel immediately thereafter. He was on Greene's right at Germantown on 4 October, and on 9 October 1777 took command of the Second Virginia Regiment. After he demonstrated skill in provisioning the troops at Valley Forge, General George Washington placed Febiger in charge of a brigade, which Febiger then led at Monmouth. Afterwards, Febiger commanded a regiment in General Anthony Wayne's daring night-time storming of Stony Point on 16 July 1779. Leading the attack, he was among the first over the ramparts and personally captured the British commander, taking charge after Wayne was wounded.

In August 1780 Febiger was stationed in Philadelphia with the mission of forwarding arms and supplies to the south, a duty at which he proved highly effective. He went to Virginia the next spring, assisted Morgan in quelling a Loyalist uprising in Hampshire County, served as a recruiting officer, commanded a body of newly raised Virginia Continentals under the Marquis de Lafayette, and was present at Yorktown when the British surrendered. Febiger was an effective advocate for the use of

martial music to improve morale, and is often given credit for persuading Washington of its value. He retired on 1 January 1783, was brevetted brigadier general on 30 September 1783, settled in Philadelphia, went into business, was treasurer of Pennsylvania from 1789 until his death on 20 September 1796.

FELTMAN, WILLIAM. Continental officer, diarist. Pennsylvania. Of interest for his diary, which Freeman calls a "most useful source," he became an ensign in the Tenth Pennsylvania on 4 December 1776 and on 13 January 1777 was promoted to second lieutenant of Captain Jacob Weaver's Independent Company guarding prisoners at Lancaster. On 30 October 1777 he advanced to first lieutenant. Weaver's company was transferred to the Tenth Pennsylvania on 17 January 1777 and to the First Pennsylvania on 1 January 1781. Feltman was captured at Green Spring, Virginia, on 6 July 1781 and resigned on 21 April 1782. Feltman's military journal is an immensely valuable source, describing army life while he was serving with General Anthony Wayne's Pennsylvanians during the Virginia campaign.

FENCIBLES. Short for "defensibles," the term was applied to regular troops enlisted for service in Great Britain only, with special exemption from being drafted. There were "fencible infantry" as well as land, river, and sea fencibles in 1796 and perhaps earlier.

Mark M. Boatner

FERGUSON, PATRICK. (1744–1780). British army officer. Born of Scots parents, Ferguson was educated at a private military academy in London before taking up a cornetcy in the Royal North British Dragoons (the Scots Greys) on 12 July 1759. He served in one German campaign before being struck down by an illness that kept him out of the service until he became a captain in the Seventieth Foot on 1 September 1768. His career in the 1770s is still obscure, although he is said to have served in the West Indies in 1772–1773. In March 1776 he submitted to the adjutant general a design for a breech-loading rifle that he was allowed to patent on 2 December, even though his proposal contained nothing new and his particular mechanism had been patented in England as early as 1721. One hundred breech-loaders were made in Birmingham for a trial corps of picked men under Ferguson's command.

The new unit reached New York on 24 May 1777 and on 26 June fought in its first action at Short Hills (later Metuchen), New Jersey. Having adopted the green uniform usual for rifle companies, they took part in the Philadelphia campaign, landing at Turkey Point, Maryland, on 24 August. Working alongside British and Hessian light infantry, Ferguson's men ejected Maxwell's light infantry from its delaying position at Cooch's Bridge (later Iron Hill) on 3 September. Other skirmishes and hard marching followed, so that by the time Ferguson reached the Brandywine Creek he had only twenty-eight effectives. At about this time, according to his own account, he declined to shoot an American officer in the back and expressed no regrets when the officer turned out to be Washington. Ferguson's men then took part in the secondary British assault at Chadd's Ford late in the afternoon of 11 September. During this action a ball shattered his right elbow and permanently crippled his arm.

On the next day, Howe judged the Ferguson rifle to have failed and disbanded the corps. Despite its initial accuracy and high rate of fire and dependability in wet weather, the weapon could rarely get away ten shots before fouling jammed its breech mechanism. Fouling also quickly and progressively affected the weapon's accuracy, and the positioning of the mechanism made the wooden stock hopelessly fragile. All the known surviving Fergusons have crudely repaired stocks, suggesting that most broke before they were withdrawn and stored in New York in the summer of 1778. Howe could hardly have been jealous of such an invention, as is sometimes alleged. While he may have been piqued by the way Ferguson's unit was foisted upon him in the first place, his decision had irrefutable military justification.

While his arm healed, Ferguson was switched to military intelligence, a role in which Clinton valued him as highly as John André. From time to time Ferguson led raiding parties against isolated rebel targets,

the best known of which was at Little Egg Harbor, New Jersey, on 4–5 October 1778. From July to November 1779 he was governor of Stony Point, and his appointment as major in the Seventy-first was officially announced on 25 October. While at Stony Point he began to recruit his own unit of 150 Loyalist rangers known as Ferguson's Scottish Corps or the American Volunteers. On 1 December he was made lieutenant colonel in America, but news of this promotion reached the colonies only after his death.

His new corps, brigaded with other light infantry units, went on the Carolina campaign of 1780, joining the army outside Charleston on 11 January. Sent with Banastre Tarleton to cut the rebel communications with the city, Ferguson took part in the successful action at Monck's Corner on 14 April. Thereafter, he operated independently on the north bank of the Cooper River until Charleston fell on 12 May. On 22 May, Ferguson was made inspector of militia for both Carolinas, raised over four thousand men near Ninety Six, and formed his own southern militia corps of about three hundred out of them. These men fought a series of skirmishes with rebel militia, with some success.

When Cornwallis began his northern march in September 1780, Ferguson—perhaps overconfident, perhaps wrongly thinking that support was at hand—allowed his force of Loyalist militia to become dangerously isolated. He seems to have underestimated, or simply not known, the size of the rebel forces in the vicinity. Cornwallis, ill and resentful of Clinton's favoritism towards Ferguson, had only Tarleton's force available, and Tarleton was down with malaria and unable to move for days. Whatever the exact truth, Ferguson decided to fight on an open hilltop at Kings Mountain, South Carolina, on 5 October 1780. It was a curious and fatal choice for the master of irregular warfare. The sides of the mountain were steep and tree-clad, giving excellent cover to the attackers, and Ferguson failed to build field fortifications. Despite three heroic bayonet charges, his 1,018 Loyalists were rapidly shot to pieces and Ferguson himself was killed. He was just thirty-six years old.

Patrick Ferguson was an intelligent, humane, and dedicated officer. Although his famous rifle turned out to have fatal defects, his interest in new weapons was at one with his keen and inventive use of light infantry and irregular tactics. He was one of the most able officers on either side in the War of American Independence.

FERGUSON RIFLE *SEE* *Ferguson, Patrick*.

FERMOY, MATTHIAS ALEXIS DE ROCHE. Continental general. Born in Martinique about 1737, he reached America in 1776 claiming to be a French colonel of engineers and wearing the Croix de St. Louis (and the title of chevalier). Commissioned brigadier general on 5 November 1776, he commanded a brigade in the attack on Trenton on 26 December 1776. Starting out at the head of General John Sullivan's division as part of the right wing, he subsequently was moved behind Nathanael Greene's division and sent with Adam Stephen to block the enemy's retreat toward Princeton, New Jersey. He and Stephen met the Hessians with small arms fire while other American forces completed the encirclement and forced the enemy's surrender.

In the next phase of the New Jersey campaign, Fermoy unaccountably left his post as commander of a large force whose mission was to delay the expected enemy advance on Trenton from Princeton. Sent north in March 1777 to oppose General John Burgoyne's offensive, Fermoy was given command of Fort Independence over General George Washington's protest. Contrary to General Arthur St. Clair's orders, Fermoy set fire to the fort when he abandoned it on the morning of 6 July 1777, alerting the British of the American retreat.

After persistent efforts to win promotion from Congress were rebuffed, Fermoy resigned on 31 January 1778 and was awarded \$800 to go back to the West Indies. Nothing further is known of Fermoy.

FERSEN, HANS AXEL. (1755–1810). (Count von.) Swedish nobleman, French officer in America. Son of a famous Swedish soldier who had served in France before becoming a field marshal in Sweden, Fersen had been a captain in the Swedish service. He became *mestre de camp* in the French army on 20 January

1780. He was an aide-de-camp with Rochambeau in America, but at the siege of Yorktown he served as second colonel of the Deux-Ponts Regiment. He participated in the Swedish army's 1788 campaign against Russia. In 1791, Fersen organized the French royal family's flight to Varennes. He returned to Paris in February 1782 but was unable to organize another escape attempt. In the Swedish army he became a major general (1792), lieutenant general (1800), and grand marshal (1801). Accused by unfounded popular suspicion of having poisoned Prince Christian August in 1810, he was killed by an angry mob on the day of the funeral. Fersen's letters on the French expedition in America provide a variable barometer of the changing staff opinion on many things, including their commander.

FEU DE JOIE. Literally, a "fire of joy"—William Heath spelled it "feu-de-joy"—this was a form of public, military celebration in which musket fire was timed so as to progress from one man to another, producing a continuous roar. According to the *Oxford Universal Dictionary on Historical Principles*, this was the sense of the term in 1801, but as early as 1771 "feu de joie" meant a bonfire in the literal as well as the figurative sense.

Mark M. Boatner

FILMS OF THE AMERICAN REVOLUTION. Whether set in the ancient Mediterranean or a galaxy far away, war has provided one of the great themes of feature films. In American history the Civil War, the two twentieth-century world wars, and Vietnam all have inspired films of the highest level of achievement, both in terms of cinema and the popular reconstruction of the American past. The Revolutionary War is at least a partial exception. It has generated perhaps ten feature films of note, from D. W. Griffith’s *America* (1924) to Robert Emmerich’s *The Patriot* (2000). Most have serious flaws, whether artistic, historical, or both. Like virtually all historical fiction, they are as much concerned with issues current at the time of their own making as with recreating the verifiable past.

America has not attracted as much attention as Griffith’s first great feature, *The Birth of a Nation* (1915), or his attempt to make up for that film’s vicious racism, *Intolerance* (1916). That is unfortunate, because it deserves wider attention within his body of work. Its budget was enormous for the day (\$950,000), and its production values were high. Griffith never balked at large themes, and the film includes recreations of Lexington and Concord, the Declaration of Independence, and the Continental Army’s bleak winter at Valley Forge. It employs the spectacular sets, battalions of extras, and color-washed film stock that

were Griffith’s hallmarks. But, setting a precedent that subsequent productions would follow, the film centers its treatment of the whole Revolution on a family melodrama, involving an ordinary Patriot man and an aristocratic woman. Here, as in films to come, the interplay of class and sex is complicated by the Loyalist leanings of the woman’s father.

John Ford considered the process and the meaning of American history throughout a career that stretched from the silents to the sixties. He turned to the Revolution in 1939 with *Drums Along the Mohawk*, starring Henry Fonda and Claudette Colbert, based on Walter D. Edmonds’s novel of the same name (1936). Edmonds had researched the revolutionary Mohawk Valley carefully, and his long tale depicted a biracial society tearing itself apart. Ford had high production values, including expensive Technicolor and location work in Idaho, but *Drums* was no *Gone with the Wind*. His best meditations on American history (*Stagecoach* [1939], *My Darling Clementine* [1946], *The Searchers* [1956]) emerged as he expanded skimpy stories. With *Drums* his problem was to condense a very large text to normal feature length.

The result is a film framed in terms of a “natural” conflict between Indians and settlers. Britain is hardly mentioned. The Indians are manipulated by a villainous Loyalist (John Carradine), whose place as the only significant white on their side is balanced by the one Indian among the whites (Chief Big Tree). In an echo of the Griffith film, Gil Martin (Fonda) is an ordinary man who has married a rich woman, Lana (Colbert). She has followed him to the frontier and must learn the frontier’s ways; in the process, they experience a profound exchange of roles. The film deals with battle twice. The first time, Gil describes its horrors to Lana as she tends his wounds. His tale is loosely based on the Patriots’ ambush by a force of British, Loyalists, and natives at Oriskany in 1777. The second battle is a siege of a fort. Ford realized it in starkly sexual terms of white women threatened with rape, and it ends as Continental troops “literally run” to the rescue.

A year later Frank Lloyd directed Cary Grant in *The Howards of Virginia*. Critic Pauline Kael described the urbane, English-born Grant’s performance as Matt Howard, a buckskin-clad surveyor who marries an aristocratic woman, as “really bad.” Matt Howard joins the revolutionary struggle, which, as in *Drums*, is shown in terms of frontier conflict—though Lloyd puts more stress than does Ford on the clash of Loyalists and Patriots among whites. Footage from *Drums Along the Mohawk*, including battle sequences, was used in 1956 in *Mohawk*, directed by Kurt Neumann. That film’s one merit is that it renders its native characters as complex and divided, rather than as faceless forest horrors.

Walt Disney’s production of *Johnny Tremain* (1957), based on the novel by Esther Forbes, was made for Disney’s

mid-twentieth-century family audience. Director Robert Stevenson clearly had a low budget, and most of the film was shot on the Disney lot under warm Southern California skies. But allowing for those constraints and for a certain degree of melodrama, the film does a remarkably thorough, if pedestrian, job of showing the revolutionary crisis in Boston. In this it holds true to Forbes's intention to provide an introduction to the Revolution for young readers.

Like Walter Edmonds, Forbes had done her historical homework. The film does give a good sense of tiny, crowded eighteenth-century Boston, of the events leading up to the destruction of the East India Company's tea in December 1773, of Paul Revere's ride to warn that the regulars were marching to Concord the following April, and of the battle that followed. It also gives windy speeches to some Patriot leaders and renders British General Thomas Gage (Ralph Clanton) as more a victim of bureaucracy than a villain in his own right. The villain, instead, is a pompous Loyalist merchant, an uncle of the title character. Johnny (Hal Stalmaster) rejects his uncle along with his family's inherited wealth and reactionary politics. As the Patriot army's campfires ring besieged Boston, Gage has almost the last word, admitting that an idea, not mere rebelliousness, has driven his opponents to war.

Hugh Hudson's *Revolution* (1986) is *Johnny Tremain*'s direct opposite in almost all respects. Hudson had established himself as a major director with *Chariots of Fire* (1981). Working with a huge budget, he chose to do location work in Britain, reasoning that the hungry look of ordinary English people under Prime Minister Margaret Thatcher would show something of the suffering of Americans under George III. The idea was intriguing, but it failed. One reason is the locations. The English sky and trees and fields simply do not look at all like America. A major battle sequence shows a British armada invading New York City in 1776. Much of the battle takes place in a field yellow with ripe rape (canola), a sight familiar to any summer traveler in England but unknown on the American east coast. The sequence completely misses the near-entrapment of the American troops on Brooklyn Heights and Washington's brilliant nighttime withdrawal to Manhattan. The film closes with the siege of Lord Cornwallis's emplacement at Yorktown, which it presents as simply a melee. Once again, there are problems of location, with the final shots taking place at the bottom of a steep, rocky cliff. Nothing of the sort exists on the shores of Chesapeake Bay. In between there is a long sequence at Valley Forge, which the film shows as a fort defending itself against British raiders rather than as the winter encampment that it actually was.

Revolution also uses the device of a rich young woman (Nastassja Kinski) falling in love with a poor man (Al Pacino). Her father is a double-dealing business

man, looking for profit on both sides, but she emerges as a fiery Patriot. The film reprises several devices from *Drums Along the Mohawk*. One is to have her listen to his tale of combat when she finds him wounded after the first battle. Another is to dress her in a soldier's blue coat and make her an active participant in the action at Valley Forge, where she appears to be killed by British troops as she is driving a wagon laden with wounded soldiers. Several coincidences later, Pacino's character finds her alive.

Hudson's own Labor Party sympathies are apparent. At worst, this leads to a caricature of the British forces. Soldiers in the ranks, represented by a loutish sergeant major (Donald Sutherland), are brutal. Officers are not just aristocratic but effete, to the point of outright camp. Pacino's male lead enters the film completely without knowledge or motivation. That could be forgiven for the youthful Johnny Tremain in the Disney production, whose function is to introduce issues to young, naïve viewers. But for an adult in 1776, such ignorance is unbelievable. But despite these flaws, Hudson's approach has merits. The happy, totally unlikely union of the Kinski and Pacino characters takes place not in the midst of sunshine-soaked triumph but under a cloud of bitter realization of the price of revolution and the problems to come. Patriot soldiers realize that speculators have cheated them out of what they had been promised. Emergent racism is evident among the victorious white Americans against both native peoples and African-Americans. Pacino's final voice-over is optimistic, but the final images and sounds give reason to doubt.

Emmerich's *The Patriot* is equally lavish and equally flawed. Unlike *Revolution*, the location work is right. The film is set in South Carolina and was shot there as well. The two major sequences of formal battle, based on the conflicts at Camden (1781) and Guilford Court House (1782), are very well done, though the film is no better than *Johnny Tremain* at showing massed musket fire and bayonet charges. We learn under the opening credits that it is autumn of 1776 and shortly afterward that independence has not been declared. Like Pacino's Tom Dodd in *Revolution*, Mel Gibson's Benjamin Martin is given no motivation for joining the Revolution, until his own son is killed when he encounters British wrath. Then Martin turns into a fury, modeled loosely on the "Swamp Fox" guerrilla leader, Francis Marion.

In another predictably antiphonal pairing, Gibson's Ben Martin finds his opposite number in Colonel William Tavington (Jason Isaacs), who is based on the historic cavalry commander Banastre Tarleton. The film perfectly captures Tavington's image, derived from Sir Joshua Reynolds's portrait of Tarleton. But Tavington is pure villain, and British reviewers were rightly outraged that

The Patriot. In Roland Emmerich's 2000 film about the American Revolution, Mel Gibson's Benjamin Martin (center) is not motivated to join to the war effort until his own son has a fatal encounter with the British. THE KOBAL COLLECTION.

in the film he perpetrates an atrocity against civilians that Tarleton never committed.

All of these films at least touch on the issue of race, but *The Patriot* makes a great deal of it. Unfortunately, it simply denies historical fact. Martin is a member of the South Carolina elite, but he owns no slaves. The partisan fighters who gather around Martin later in the film welcome and respect Occam (Jay Arlen Jones), a black man who joins them and wins his freedom. They find refuge in a slave maroon community, which never would have welcomed whites. At the end Occam leads the rebuilding of Martin's ravaged house. The film ignores the historical record: that revolutionary white Carolinians stoutly resisted the Revolution's opening to black freedom, that they kept the slave trade going into the nineteenth century, and that their progeny would lead the secession movement in 1861 so as to protect slavery.

Mary Silliman's War, made for PBS in 1994, is worlds apart from Hollywood films like *The Patriot*. Based on a scholarly biography, by Joy Day Buel and Richard V. Buel Jr., of an elite Connecticut woman whose husband, Brigadier General Gold Selleck Silliman, was kidnapped

by Loyalists, it shows how war came to one Revolutionary community. Without grand, heroic charges or powerful sound effects, the film gives a strong sense of a community at odds with itself, of how British regular soldiers dealt with civilians, and of how living through the war changed one woman and her world.

Both dramatically and historically, the small-scale, small-screen film depicts the Revolution well. But the subject still awaits a good, mass-viewer treatment that does not do violence to the Revolution's history.

FINANCES OF THE REVOLUTION.

Since hatred of imperial taxes was one of the main reasons why the colonists undertook to defend their rights by force of arms in the first place, Congress and the states had had to be wary of taxing the people to pay for the war effort. Yet war making was ruinously expensive, and some method of sustaining the armed struggle had to be found. On 22 June 1775, eight days after adopting the New England army around Boston as a continental army, Congress voted to issue \$2 million in bills of credit, the beginning of a stream of currency finance that reached \$241.5 million by the end of 1779. The colonies had issued paper money to help pay their expenses during the French and Indian War, but the money had been backed by taxation and the reimbursement of expenditures by Parliament, neither of which was now possible. Congress was reduced to asking the states for contributions, but with the states issuing their own unbacked paper money, there were few funds left to support the continental emissions. Everyone knew the currency would depreciate. With expenses estimated as high as \$20 million in specie annually, the longer the war lasted, the faster the value would bleed from paper money. The British initiated a significant counterfeiting program to help cheapen the currency, but it was the continuing stalemate, even after the French entered the war in February 1778, that accelerated the devaluation. Although currency finance carried the war through its critical early years, when the currency began to collapse in 1779, it seemed to many that the Revolution was running out of time.

As the central financing of the war stalled, Congress stepped up reliance on borrowing money from wealthier Americans (about \$60 million in Loan Office Certificates) and allowing agents of the quartermaster and commissary departments to impress needed supplies, giving in return Certificates of Indebtedness (a minimum of \$95 million in ten states). It also shifted a significant burden to the states, who were not themselves in very good financial shape. Nine states agreed to be responsible for paying the wages of their Continental troops in 1781 and 1782, but the soldiers themselves received virtually nothing, a dangerous way to deal with troops, some of whom, in the New Jersey and Pennsylvania Lines, had already mutinied over arrears in pay in January 1781. A plan floated on 18 March 1780 to revalue Continental currency at 40 to 1 by declaring forty dollars of old Continental currency worth one dollar in specie had failed by the end of the year.

In May 1781 the Continental currency collapsed, taking with it, via depreciation, \$226 million in debts, in effect a tax levied on those who had held on to the paper. Foreseeing this collapse, Congress had reorganized and rationalized its executive departments in late 1780 and early 1781, steps it had not had the political will, or the

financial pressure, to take earlier. On 20 February 1781, Robert Morris—perhaps the wealthiest, and certainly one of the most astute, merchants in America—accepted the job of superintendent of finance.

Morris's principal goal was to establish a sound financial footing for the central government. He streamlined the administration of army supply by relying on, and promptly paying, private contractors, rather than operating through layers of government agents who paid for goods with promissory notes. He created two new series of paper money—the so-called Morris's notes, backed by his own assets, and notes issued by the Bank of North America that he persuaded Congress to charter—to restore confidence in bills of credit. He consolidated the existing debts into a single central debt and wanted Congress to fund it with taxes imposed by the central government. All of his measures were made possible by the fact that the war was winding down, American political independence was assured, the size of the Continental army was shrinking, and no large-scale military operations were necessary after the surrender of Cornwallis at Yorktown in October 1781.

The history of American war finance is the story of the leaders of a coalition's constituent partners learning to work together to pay for a war of unprecedented scope and complexity—and therefore, cost—in a society where the instruments of financial manipulation were underdeveloped and the aversion of the people to taxation was enormous. Given these circumstances, it is probably more appropriate to emphasize their successes rather than their failures and to remember that they did manage to establish the political independence of their confederation.

FIRE CAKE. Flour and water baked in thin cakes on hot stones.

FISH DAM FORD, SOUTH CAROLINA. 9 November 1780. Hearing that newly promoted General Thomas Sumter was camped with three hundred men at Moore's Mill, only thirty miles northwest of the main British army at Winnsboro, General Charles Cornwallis gave Major James Wemyss authority to go after him with his one hundred mounted infantry of the Sixty-third Regiment and forty horsemen from Tarleton's British Legion. The plan was to surprise the rebels in a night attack at Moore's Mill, but Sumter had unexpectedly moved five miles south to Fish Dam Ford. Finding the first camp empty, Wemyss pushed on, reaching the new encampment at dawn. The British dragoons charged into the camp with Wemyss at their head. The rebels responded quickly, opening fire. Wemyss was shot and fell from his saddle with a broken arm and a wounded knee. At this point the Sixty-third

arrived in the camp, dismounted, and fired upon the Patriots, who fled into the nearby woods from where they returned fire on the British. Not knowing that Cornwallis had given Wemyss specific instructions not to misuse Tarleton's cavalry by employing them at night, young Lieutenant John Stark led a mounted charge down the road and into Sumter's bivouac, where they were silhouetted against the campfires and badly shot up. With the battle becoming ever more chaotic, both sides withdrew.

Meanwhile, five dragoons who had been given the mission of getting Sumter dead or alive were led to Sumter's tent by a Loyalist named Sealy. As two dragoons entered the front of his tent, Sumter slipped out the back and spent the night hiding under a bank of the nearby Broad River. Stark left Wemyss and the other twenty-two wounded British soldiers at the plantation's farmhouse under a flag of truce and returned to Winnsboro. When Sumter ventured back to his camp about noon—the British sergeant in charge of the wounded said no rebels were seen until two hours after sunrise—he took the paroles of the wounded. Major Wemyss had in his pocket a list of the men he had hanged and the houses he had burned in the punitive raid up the Peedee to Cheraw, but Sumter threw the list in the fire after glancing at it.

Although Cornwallis says Sumter had about three hundred militia and "banditti" (that is to say, noble partisans) at Moore's Mill, it is likely that the number at Fish Dam Ford was more like two hundred men. The unit commanders who rallied the Patriot militia in the absence of Sumter were Colonel Thomas Taylor and Colonel Richard Winn. The British attacked with 150 men, losing from ten to fifteen men killed and twenty-three wounded while the rebels lost five or six dead and a dozen wounded.

The rebels counted Fish Dam Ford a great success and morale soared. As Cornwallis reported to Sir Henry Clinton, "The enemy on this event cried 'Victory,' and the whole country came in fast to join Sumter." Alarmed for the safety of Ninety Six, the British commander recalled Tarleton and sent Major Archibald McArthur with his First Battalion of the Seventy-first Highlanders and the Sixty-third Regiment to guard Brierly's Ford on the Broad River. Tarleton reached this place on 18 November, and his efforts to trap Sumter led to the action at Blackstocks, South Carolina on 20 November 1780.

FISHING CREEK, NORTH CAROLINA. 18 August 1780. After the defeat of General Horatio Gates at Camden on 16 August, Captain Nathaniel Martin and two dragoons rode to warn Colonel Thomas Sumter of the disaster and to arrange a rendezvous near Charlotte. Loaded down with the booty and prisoners taken around Wateree Ferry on 15 August, Sumter and Captain Stevens Woolford's detachment marched day and night in an effort to escape. Cornwallis, meanwhile, had moved with his main body to Rugeley's Mill (Clermont). By the time Lieutenant Colonel Banastre Tarleton returned to this place late on the 16th from his pursuit to Hanging Rock, Cornwallis had picked up information of Sumter's location and ordered Tarleton to pursue him the next morning.

With 350 men and one cannon, Tarleton started up the east side of the Wateree early on 17 August. By late afternoon he had learned that his quarry was across the river on a parallel course. Reaching the ferry at Rocky Mount around dusk, Tarleton saw enemy campfires about a mile west of the river, and he bivouacked without fires in the hope that Sumter intended to cross the river and could be attacked while in this vulnerable position. When his scouts reported the next morning that the Americans were continuing up the west side, Tarleton crossed the Wateree and followed Sumter, undetected, to Fishing Creek. Reaching this point, some forty miles from Camden, at about noon, Tarleton's foot troops said they were unable to continue. Tarleton pushed forward with one hundred dragoons and sixty infantry, the latter riding double with the horsemen. After another five miles, two of Sumter's scouts were cut down after they had fired and killed one man of the enemy advance guard. Pressing forward, Tarleton found Sumter's troops resting with their arms stacked, unaware they were being pursued. Tarleton reported that some of the rebel militia were bathing in the creek and that many were drunk from alcohol they had seized from the British. Tarleton made a hasty deployment and charged. When Sumter, who had been sleeping, woke up in the scene of general confusion, he indulged in no heroics but, rather, saved his own skin by leaping coatless astride an unsaddled horse; two days later he rode into Major Davie's camp. Some of his men rallied to defend themselves from behind the wagons, killing Captain Charles Campbell, who had burned Sumter's house and launched the latter on his not always glorious career.

With a loss of 16 killed and wounded, Tarleton killed or wounded 150 Americans, captured 300, released 200 British and Loyalist prisoners, and recaptured 44 wagons full of supplies. Tarleton's reputation soared with reports of this coup. Only 350 of Sumter's 800 troops escaped. In writing of this battle, Colonel Henry Lee thought that it again proved that no reliance could be placed on the militia, which demonstrated a "fatal neglect of duty. . . .

The pursuance of that system [militia] must weaken the best resources of the state, by throwing away the lives of its citizens" (Smith, vol. 2, p. 1420).

FLAG, AMERICAN. Until the outbreak of the Revolution, when Americans flew a flag, they used the British Union Flag, which was proclaimed by King James I in 1606 (and was superseded by the Union Jack in 1801). A number of flags were flown in the first two years of the Revolution, including the green flag of the Green Mountain Boys with its fourteen oddly shaped stars on a blue background and the Cambridge Flag flown at Washington's headquarters at Cambridge, Massachusetts, with thirteen red and white stripes and the united crosses of St. George and St. Andrew, which was a modification of the British Meteor Flag. Other early flags include the Bunker Hill flag, the Gadsden or South Carolina Rattlesnake flag ("Don't Tread on Me"), the New England Pine Tree Flag ("An Appeal to Heaven"), and the Crescent Flag of South Carolina.

On 14 June 1777 Congress passed the Flag Resolution, which specified that there be thirteen stripes, red and white alternately, with thirteen white stars in a blue field "representing a new constellation." This left considerable latitude to flag makers as to the type of stars, their arrangement, and the arrangement of the stripes.

The Bennington Flag is believed by many authorities to be the first Stars and Stripes-style flag flown by ground forces. Said to have been carried or present at the Battle of Bennington in Vermont during August 1777, its field—nine stripes wide—had an arch of eleven seven-pointed stars over the numerals "76" and had two more stars in the top corners of the field. The top and bottom stripes were white rather than red. Another early use of the Stars and Stripes came at Cooch's Bridge, Delaware, on 3 September 1777.

The famous story about the first Stars and Stripes flag being made by Betsy Ross at the request of George Washington, Robert Morris, and George Ross is based on a family tradition first made public by her grandson, William Canby, in March 1870. Although Betsy Ross is known to have made flags, there is no evidence from her time that she made one along the pattern of the Stars and Stripes.

FLANK COMPANIES. Each battalion of the British army included a light infantry company and a grenadier company; they were known as “flank companies” and were made up of the best soldiers in the battalion. During field operations they normally were pooled to form special corps of light infantry and grenadiers. The remaining eight companies were called the “battalion companies.” The American army never formed grenadier companies but did have light infantry.

FLANKING POSITION. A form of defense in which the defender takes up a position so located that the enemy will expose his flanks or line of communications if he continues his advance. Rarely found in combat, a good flanking position must have these characteristics: strong defensive terrain; protection for one’s own line of communication; and the possibility of sallying forth to attack the enemy should he try to ignore the position and continue his advance. The defender also must have sufficient strength so that the attacker cannot contain him with part of his force and continue on to his original objective.

Mark M. Boatner

FLÈCHE. A small earthwork shaped like an arrowhead or V and open to the rear.

FLEURY SEE *Teissèdre de Fleury, François Louis*.

FLORA, WILLIAM. Continental soldier. The son of Virginia free blacks, Flora’s birth and early life

remain unknown. In 1775 he joined the Second Virginia Regiment under the command of Colonel William Woodford. At the Battle of Great Bridge in December 1775 the regiment confronted Lord Dunmore’s Loyalist, British, and “Ethiopian” troops, the latter being slaves who won their freedom by joining Dunmore’s forces. On the morning of 9 December, Flora was on guard duty on the bridge over the Elizabeth River when the British attacked. The other sentinels fled in panic, but Flora stood his ground, firing, it was reported, eight times on the advancing enemy before he retreated to the Patriot breastworks. After Dunmore’s retreat, Flora won praise for his heroism and then vanished from the records until 1781, when he was present at the Battle of Yorktown. Following the British surrender, Flora returned to Portsmouth, Virginia, where he ran a cartage business and livery stable. In 1784 he became the first black person known to own land in Portsmouth. He married a slave woman and purchased her freedom after Virginia altered its manumission laws in 1782. During the war scare following the attack of the British warship *Leopard* upon the U.S. ship *Chesapeake* in 1807, Flora volunteered for duty but his services were not required. In 1818 he and other Virginia veterans of the Revolution received a land grant of one hundred acres each in Ohio, which is the last historical reference to this hero of the Revolution.

FLOWER, SAMUEL. Continental officer. Massachusetts. Commissioned second lieutenant of

Danielson's Massachusetts regiment, May 1775 to December 1775, became captain in Third Massachusetts on 1 January 1777, resigned on 9 February 1780, and was major of the Massachusetts militia in 1782 .

Mark M. Boatner

FLOYD, WILLIAM. (1734–1821). Signer. New York. Born in Brookhaven, New York, on 17 December 1734, William Floyd was active in local politics prior to the Revolution. Elected to the Continental Congress, in which he served until 1783, he became colonel of the Suffolk County militia on 5 September 1775. He and his family fled before the British in 1776, and his farm was seized as rebel property. From 1777 to 1783, he was New York state senator by appointment rather than election, for his district was occupied by the British. Though he spent most of the war living with his wife's family in Connecticut, he served on the New York Council of Safety and continued to represent New York in Congress. His most notable service in that body was on the Committee of Secret Correspondence. He was elected to state senate, where he served from 1784 to 1788 and in 1787 and 1789 was a member of the council of appointment. He sat in the first U.S. Congress (1789 to 1791), but lost his re-election bid. In 1801 he attended the New York constitutional convention. Two years later he moved his family to the town of Western, New York, on the Mohawk River, where he died 4 August 1821.

FLYING CAMP. July–November 1776. When the British evacuated Boston in March 1776, the Americans were faced with the need to defend widely scattered areas where the enemy might strike next. Part of their solution was the establishment of a “flying camp,” the term being a literal translation of the French *camp volant*, which, in the military terminology of the day, meant a mobile, strategic reserve. Washington met with Congress and with specially appointed committees between 24 May and 4 June 1776 to discuss plans for future military action. One decision was that Delaware, Maryland, and Pennsylvania would furnish until December 1776 a total of ten thousand men from their militias to constitute a flying camp that, unlike the militia, could be ordered to go where it was needed. Congressional

authorization came on 3 June, Hugh Mercer was designated commander, and the newly appointed brigadier general reported to New York City on 3 July to assume his duties with much energy. Men arrived slowly, however, and they all lacked training; by 25 July, Mercer had only three thousand men in eastern New Jersey, mostly at Perth Amboy. When Washington called for two thousand men to assist in the fortification of New York City, Mercer was hard put to find this number of reliable soldiers.

Units of the Flying Camp were stationed from Amboy to Long Island before and after the British attacked there on 27 August 1776. Elements of five battalions of the Pennsylvania Flying Camp fought well at Long Island, as did several companies of the Maryland Flying Camp at Harlem Heights (16 September). The Flying Camp's most notable exploit was participating in the gallant defense of Fort Washington on 16 November, where four Pennsylvania battalions were overwhelmed and captured by the British and Hessian assault. Most of the two to three thousand men who followed Washington and Greene out of Fort Lee on 18 November were from the Flying Camp. On 30 November the Flying Camp came to an end when its final two thousand enlistments expired, although few soldiers actually remained in the field by that point. Washington was disappointed by the small number that had reported to Mercer's camp at Amboy in late November.

The Flying Camp was plagued throughout its short existence by the same lack of organization, supply, and training that afflicted Continental army and other state units. Nevertheless, it was a worthwhile attempt to tap the militia to create a ready source of reinforcements for the field army. The pace of operations in the second half of 1776 around New York City was too rapid to allow it time to prepare adequately for active service.

FONTANGES, FRANÇOIS, VICOMTE

DE. (1740–1826). French major general. Born at the Château de la Fauconnière at Gannat, he became a lieutenant in the Poitou Regiment in 1756. He fought in Germany and was promoted to captain in 1758. In 1775 he transferred to the Regiment of Cap Français in Saint Domingue, where he was promoted to lieutenant colonel in 1778. In 1777 he became a chevalier in the Order of Saint Louis. In July 1779 he was named major general of the troops of debarkation for Estaing's assault on Savannah, where he was seriously wounded in October 1779. He returned to Saint Domingue as major general of militia in 1780, was promoted to lieutenant colonel in the Regiment of Cap Français in October 1780, and subsequently was elevated to colonel in 1784 and *maréchal de camp* in 1789. He resigned on 18 April 1790 because of differences with the colonial assembly. He arrived in England in 1795. In 1811 he returned to France and became a lieutenant general on 13 August 1814. During the Restoration in France, he was made commander in the Order of Saint Louis.

FONTENOY, BATTLE OF. 11 May 1745.

Fontenoy was a small village on a narrow plain two miles southeast of the fortress of Tournai on the banks of the Scheldt in Flanders. It gave its name to a decisive action in the War of the Austrian Succession (1740–1748), when a French army under Maurice de Saxe, marshal of France, defeated an Anglo-Dutch-Hanoverian army under the duke of Cumberland, son of George II. Although funneled into a restricted battleground, Cumberland sent forward a compact mass of some 15,000 infantry to break the French center. The column, eventually one huge square, was built around six battalions of superbly disciplined British infantry that advanced at a deliberate cadence to ensure their battle lines remained properly aligned. As the British

moved through the French crossfire and came within musket range (thirty paces) of the enemy's lines, Lord Charles Hay, captain of the First Company of the First Battalion of the First Foot Guards, stepped forward and, it is reported, in effect invited the French to fire first. Hay was not being excessively gallant or merely quixotic. In the world of linear tactics, the side that fired first exposed itself to an enemy riposte while it desperately tried to reload. The surviving soldiers on the side that received the fire had a few precious seconds to launch a bayonet charge against their temporarily defenseless foe, or to advance closer and deliver their own volley fire. According to all the British accounts, the less-well-disciplined French did fire first, and the famously well-disciplined British struck back with a series of volleys by companies, a rain of fire that brought down between 600 and 800 Frenchmen. Although the episode is one of the most famous and dramatic in this period (equaled, perhaps, only by a similar display of British discipline under fire at Minden fourteen years later), the allied infantry was later forced to retreat under intense pressure, leaving Saxe victorious and in possession of Flanders. Among those who saw action at Fontenoy were Thomas Gage, George Sackville (later George Germain, who distinguished himself as a regimental commander), James Grant, Robert Monckton, and Philip Skene, all of whom figured in the American Revolution.

FORBES'S EXPEDITION TO FORT DUQUESNE.

1758. A major operation of the French and Indian War, the American phase of the Seven Years' War. As part of the Pitt ministry's new approach to the global struggle for supremacy against Britain's traditional Franco-Spanish Bourbon enemies, the crown had committed major assets to North America. The strategic river junction later named Pittsburgh (in his honor) became a critical objective. The second expedition—Braddock's was the first—is of interest here primarily because of the many participants who went on to play key roles in the Revolutionary War. General John Forbes gathered a force of over sixty-five hundred British regulars and Pennsylvania, Virginia, and Maryland colonials to eliminate Fort Duquesne and end French penetration of the Ohio Valley. Regulars of Lieutenant Colonel Henry Bouquet's Sixtieth (Royal American) Foot and of the newly raised Seventy-seventh (Montgomery) Foot formed the heart of the strike force—the former consisting mostly of Germans and German-speaking Swiss, the latter of Scottish Highlanders. While British policy relegated many of the provincials to support and labor roles, others were given combat assignments. Future Continental army generals serving under Forbes included John Armstrong, Hugh Mercer, Adam Stephen, Andrew Lewis, and George Weedon. Colonel George Washington served as one of the four brigade commanders, the highest rank attained by any American in the war.

Both Pennsylvania and Virginia claimed the lands around the Forks of the Ohio (modern Pittsburgh) and colonial politicians expended considerable energy competing against each other to convince the imperial authorities to pursue policies that would further their ambitions. Much to the chagrin of the Virginians, Forbes chose not to follow the old Braddock Road but instead pushed west from Bedford, Pennsylvania, along a path thereafter known as the Forbes Road.

While this decision would have long-term impact on territorial jurisdiction, Forbes's greater impact came from his unique contributions to American military theory. A student of the classics (he had originally trained to be a doctor), the Scot carefully studied Roman success against the Gauls for lessons in how to operate in wilderness conditions. Forbes, like the French theoreticians Turpin de Crisse and the comte de Saxe, found inspiration in the writings of Julius Caesar. Forbes and his second in command, Bouquet, realized that regular troops' discipline would overwhelm the Indians if they could be brought into close combat, and that the regulars could accomplish that task by replicating the flexibility of the Roman legions. They especially saw careful logistical preparations and moving in 360-degree defensive formations as keys to success. Washington took this lesson to heart, and in 1779 John Sullivan replicated the tactics in his campaign against the Iroquois in the Mohawk Valley.

After spending the summer of 1758 laying that groundwork and finding Indian allies, the expedition started forward. Forbes refused to quit when the advance party under Major James Grant made a tactical error and was defeated on 21 September. The main body fought off a furious attack by French and Indians on 12 October at Loyal Hannon (Ligonier). Forbes paused here during a period of bad weather to improve the road and bring up supplies. On 12 November, however, Bouquet learned from three prisoners that the French garrison was in desperate straits—Bradstreet's capture of Fort Frontenac had isolated Duquesne, and the Indians were deserting—and resumed the advance. Faced with inevitable defeat, the French garrison destroyed Fort Duquesne and Bouquet took possession on 25 November 1758.

Forbes Road, constructed at tremendous effort between Bedford and Pittsburgh for this expedition, was used for the next thirty years not only as a military line of communications, but also for a stream of settlers. In later centuries, U.S. Route 30 has followed roughly the same trace.

FORMATIONS. When soldiers stand shoulder to shoulder facing the front, they are formed in a rank or a line; when they stand one behind the other they constitute a file. Two or more files make a column; two or more ranks (or single lines) are also called a line. (The term "column" is most commonly used in the sense just defined, although men can also be in a "column of (single) files" or "Indian file.")

Linear tactics—as opposed to the massed formations of the Greek Phalanx of ancient times and the Spanish Square that was doomed by field artillery—evolved with the advent of effective muskets. A “line of columns,” was used in the Franco-American attack on Savannah on 9 October 1779.

FORT ANDERSON, SOUTH CAROLINA.

Also called Thicketty Fort.

SEE ALSO *Thicketty Fort, South Carolina.*

FORT ANNE, NEW YORK. 8 July 1777. Although General John Burgoyne captured Skenesboro, New York, on 6 July, he failed to trap the defenders. On 7 July, Lieutenant John Hill led his Ninth Foot in pursuit while two other regiments consolidated their hold on the former naval base. The British traversed the 12 miles of rugged road towards Fort Anne and camped a mile from it. Hill had failed to catch Colonel Pierce Long’s 150-man rear guard, but he did pick off several boats of invalids, camp followers, and others straggling in Wood Creek. His pickets also had an intense 4-hour skirmish with strong American patrols as evening fell. Shortly after dawn on the 8th an American spy posing as a deserter appeared in Hill’s camp with the story that 1,000 troops held Fort Anne. Since Hill’s force only numbered 190, and he did not feel able to either attack or safely retreat in the face of such odds, he decided to stand fast and call for reinforcement. The “deserter” then escaped to Fort Anne and reported on the British weakness. Meanwhile, heavy rains slowed the movement of the relief column and reduced visibility to almost nothing.

Colonel Henry van Rensselaer had, in fact, reached the fort with four hundred New York militia, and at 10:30 he sallied forth with Long’s New Hampshire Continentals to annihilate Hill. The detachment abandoned its camp along Wood Creek and took refuge atop a steep, five-hundred-foot ridge, where it set up an all-around defense. Hill and his men fought off their adversaries for two hours. When their ammunition was running low and they were being attacked from all sides, an Indian war whoop was heard from the north. The Americans—who also were low on ammunition—assumed that it signaled the arrival of Burgoyne’s reinforcements from Skenesboro, broke off the engagement, burned Fort Anne, and retreated to Fort Edward. It turned out that the “reinforcements” consisted of one deputy

quartermaster general, Captain John Money; when his Indians had refused to follow him into the action, he had advanced alone with a borrowed war whoop. In this confusing little action the British lost twenty-two casualties, including three officers; the Americans probably suffered less. While both sides claimed victory, the edge went to Long, since the check ended effective British pursuit of his column.

FORT CORNWALLIS SEE *Augusta, Georgia (14–18 September 1780).*

FORT CUMBERLAND, NOVA SCOTIA. 7–29 November 1776. With from 14,000 to 15,000 New Englanders living in Nova Scotia at the beginning of the Revolution, there was much talk in that province of joining the insurrection of the other colonies. However, the British garrison at Halifax and the presence of warships served as a powerful deterrent. Early in 1776 a Scot named John Allen and an emigrant from Massachusetts named Jonathan Eddy (a veteran of the French and Indian War) led a movement to secure control of the province from the British. Although Washington and Congress could not promise support, Massachusetts agreed to supply whatever force the rebels could muster. Allen visited Massachusetts to make plans for the insurrection and returned to Sackville with a small body of men, including Indians, who captured the small outpost at Shepody. Although only 180 men assembled at Machias, the rebel leaders decided to attempt the capture of Fort Cumberland (formerly Beauséjour and near modern Amherst). On 7 November they got possession of a sloop anchored near the fort, gaining much-needed supplies, and on the 10th, Eddy sent the enemy commander a summons to surrender.

Fort Cumberland was held by the Royal Fencible Americans under the command of Colonel Joseph Goreham. The besiegers realized that Goreham could expect prompt support from Halifax and that their time was therefore limited. The summons having been refused, Eddy launched attacks on 13 and 22 November, but both failed. A company of the Royal Highland Emigrants and two companies of marines then arrived from Halifax. A British sortie on 29 November broke the siege, but bad weather and lack of proper clothing prevented Goreham from pursuing the insurgents. Instead, the British commander decided on a policy of reconciliation, offering a conditional pardon to the rebels. More than one hundred men surrendered their weapons and expressed regret for

having participated in the operation. Although Eddy and Allen continued their efforts, the British established Fort Howe at the mouth of the St. John, checking further rebel action in the Maritimes.

FORT DAYTON, NEW YORK. The site of Fort Dayton, built in 1776 by New Jersey troops of Colonel Elias Dayton, is marked in the present-day village of Herkimer, New York. The Palatines settled the area, calling it German Flats, in 1722, about two miles west of Fort Herkimer Church. Presumably on the site of the dilapidated blockhouse left from the Seven Years' War, the fortified stone house was the point of departure for the ill-fated march to Oriskany in August 1777. Fort Dayton figured in the action at nearby Shell's Bush exactly four years later. The site is marked by a heroic bronze statue in Myers Park depicting the desperate defense of this position at Oriskany.

FORT GALPHIN, SOUTH CAROLINA. 21 May 1781. When Colonel Henry Lee moved from Fort Granby to link up with the militia forces of General Andrew Pickens besieging Augusta, he learned that a quantity of British supplies were temporarily stored at Fort Galphin, a small stockade twelve miles below Augusta that was the home of George Galphin, the deputy superintendent of Indian affairs, and garrisoned by two companies of infantry. These supplies were the annual king's present to his loyal Indians. Mounting some of his Legion infantry double behind a select group of cavalymen, Lee made a forced march and reached his objective on the afternoon of the 21st. Lee had part of his force make a feint against the position from one direction, and when the defenders sallied forth, Major John Rudolph rushed in from the other side with a detachment of Legion infantry. The nearly two hundred Loyalist defenders surrendered without a fight, and Lee captured the fort and its supplies, which included blankets, clothing, small arms, ammunition, medical stores, and provisions, all of which the rebels needed. Having lost only one man to heat prostration in this coup de main against a strong point, Lee withdrew.

FORT GEORGE, FLORIDA SEE *Pensacola, Florida.*

FORT GEORGE, LONG ISLAND, NEW YORK. 21–23 November 1780. During the period of British occupation of New York City, western Long Island Sound was the scene of a unique form of raiding known as "whaleboat warfare." Patriot and Loyalist parties both used large rowboats, easily hidden in the rocky coves lining the coast, to carry out such attacks. In the afternoon of 21 November, Major Benjamin Tallmadge put eighty dismounted troopers of the Second Continental Light Dragoons in eight boats. Crossing from Fairfield, Connecticut, they landed on Long Island at 9 P.M. at Old

Man's Harbor (later Mt. Sinai Harbor). Tallmadge's objective was Fort St. George at Mastic on Long Island's south shore. Loyalist refugees from Rhode Island had recently occupied the manor house of General John Smith on Smith's Point in Great South Bay, erecting a triangular stockade as a base for wood-cutting operations and as a depot for Suffolk County. Bad weather forced Tallmadge to remain hidden for twenty-four hours, but he surprised and easily captured Fort St. George at dawn on the 23rd. He not only eliminated that objective, but on the return trip to his hidden boats, he personally led twelve men to Coram, where they destroyed three hundred tons of hay collected for the British army. Tallmadge reached Fairfield in the early evening with fifty-four prisoners. The raid also cost the Loyalists seven killed or wounded; only one of Tallmadge's dragoons was wounded. Tallmadge's coup drew official recognition from both Washington and Congress.

Robert K. Wright Jr.

FORT GEORGE (MANHATTAN). Fort George, in Manhattan, was the position defended by Colonel William Baxter at the northern end of Laurel Hill. It consisted merely of field fortifications (a pair of fleches) during the battle for Fort Washington on 17 November 1776. In this vicinity, the British subsequently built Fort George as part of their Fort Knyphausen (formerly Fort Washington) defenses. Similarly, Moses Rawlings's redoubt, at the northern end of Mount Washington, was replaced by the British with Fort Tryon.

FORT GEORGE (NEW YORK CITY). On the site of Fort Amsterdam, this was the principal fortification in New York City on the eve of the Revolution and was not garrisoned at the start of the Stamp Act Crisis. Fort George and the nearby Grand Battery were located near what is now known in New York City as "The Battery."

Mark M. Boatner

FORT GRANBY, SOUTH CAROLINA.

15 May 1781. This British post, on the southern bank of the Congaree River near modern Columbia, was held by 340 men under Maryland Loyalist Major Andrew Maxwell. The garrison included sixty German dragoons, the rest being Loyalists primarily of Maxwell's Prince of Wales Regiment. Although this was a strong post protected by abatis, earthworks, and palisades, Colonel Henry Lee knew Maxwell and thought him a coward more interested in plunder than in the military arts. Lee therefore planned a quick attack, leaving Fort Motte on 13 May and reaching the woods west of the fort the following night, where he emplaced a six-pound gun. When the fog cleared the next morning, Lee fired the cannon and his Legion infantry moved forward to deliver a musket fire on Maxwell's pickets. When summoned to surrender, Maxwell agreed to do so if he and his men could keep their plunder and if the garrison could withdraw to Charleston as prisoners of war until exchanged. Knowing that Colonel Francis Rawdon might arrive at any minute to save the fort, Lee agreed, with the condition that all horses fit for public service be surrendered. The Germans objected, and negotiations were suspended.

When Lee received word from Captain James Armstrong, who had been screening in the direction of Camden with a small cavalry force, that Rawdon was across the Santee at Nelson's Ferry and was approaching Fort Motte, Lee agreed to Maxwell's terms. The capitulation was signed before noon of the 15th, and Maxwell moved off with two wagons full of his personal plunder. Without the loss of a man—on either side—the rebels gained possession of an important post along with a considerable supply of ammunition, some salt and liquor, two cannon, and the garrison's weapons. Lee's good sense in handling this situation is expressed in Napoleon's Maxim 46: "The keys of a fortress are well worth the freedom of the garrison..."

FORT HUNTER, NEW YORK. In the Mohawk Valley at the mouth of Schoharie Creek, the old Fort Hunter of the French and Indian War was torn down at the start of the Revolution but was rebuilt and often garrisoned.

Mark M. Boatner

FORT INDEPENDENCE FIASCO, NEW YORK.

17–25 January 1777. On 5 January, immediately following the rebel victories at Trenton and Princeton, Washington wrote to William Heath in the Hudson Highlands:

The enemy are in great Consternation; and as the Pannick affords us a favorable oppertunity to drive them out of the Jerseys . . . you Should move down towards New york with a Considerable force as if you had a design upon the city—that being an object of great importance, the enemy will be reduced to the necessity of withdrawing a Considerable part of their force from the Jerseys if not the whole to Secure the city.

After spending ten days mobilizing militia forces to augment his Continental garrison in the Hudson Highlands, Heath took up an arc of positions across Westchester County. On the night of 17–18 January he launched three columns toward Kings Bridge, intending to converge simultaneously on the enemy's outposts at dawn. Lincoln's command moved from Tarrytown on the Albany road; the forces of Wooster and Parsons advanced from New Rochelle and East Chester; and the center column, comprising the militia of John Scott, marched from a point below White Plains. At first the plan worked smoothly, all columns arriving on schedule, and Heath's troops overran the outposts at Valentine's Hill, Van Courtland's, Williams's, and the Negro Fort. The rebels closed up to Fort Independence (in the Valentine's Hill area just north of Spuyten Duyvil), and Heath summoned the German commander to surrender. The enemy opened fire with artillery that Heath had not suspected the other side possessed. Instead of driving in to take the fort, Heath took a more cautious approach consistent with his mission of conducting a feint. Several days of ineffective cannonading and maneuvering followed. On the 19th, Heath ordered an attempted envelopment across the frozen creek to cut off the Hessian battalion at Kings

Bridge the next morning. On the 20th, he canceled it when warming weather melted the ice. The British sallied forth early on the 25th in the direction of Delancey's Mills and routed the rebel screening force, then pushed on to Valentine's. On 29 January the signs of an approaching blizzard convinced Heath and his generals to end the campaign.

The British crowed about the affair and historians ever since have accepted their viewpoint, one of them calling the operation a "seriocomical affair" (Freeman IV, p. 384). In point of fact, Heath performed his assigned task, distracting Howe from Washington's activity in New Jersey.

FORT JOHNSTON, NORTH CAROLINA. Guarding the mouth of the Cape Fear River and located some ten miles below Brunswick, North Carolina, Fort Johnston was built by the British between 1748 and 1764 primarily as a defense against privateers. Named for Governor Gabriel Johnston, it figured in the Stamp Act Crisis, when British naval Captain Jacob Lobb spiked its guns to keep them from being used by the aroused patriots. Governor William Tryon was unable to prevent the citizens from occupying the fort in February 1766, after Lobb had refused to give him armed support. The post became badly deteriorated. Governor Josiah Martin fled to it on 2 June 1775, and on 18 July he escaped to a British warship when the patriots occupied the fort in an attempt to capture him. The fort was burned at this time in the first

overt act of defiance of the American Revolution in North Carolina. A new Fort Johnston was built by the United States from 1794 to 1809. This fort was seized by the Confederates in 1862 and used during the Civil War.

FORT KEYSER, NEW YORK. 18 October 1780. Johannes Keyse built a stone house in Stone Arabia in 1750. The house was fortified by local militia in 1776. Colonel John Brown held Fort Paris in Stone Arabia, in New York's Mohawk River Valley, with 130 Massachusetts militia when Sir John Johnson approached. On news of the destruction of Schoharie, 15–17 October, General Robert Van Rensselaer assembled militia and moved up the Mohawk Valley behind Johnson. In obedience to Van Rensselaer's order and with the assurance that Van Rensselaer would arrive in time to strike the enemy's rear, Brown sallied forth to attack a force ten times the size of his own. Near the ruins of Fort Keyser, he was killed with a third of his men; the rest were routed before the promised support arrived. Johnson destroyed Stone Arabia before he was brought to bay at Klock's Field late in the afternoon of 19 October. The building was abandoned after the war and torn down in the 1840s.

revised by Robert K. Wright Jr.

FORT LAURENS, OHIO. November 1778–August 1779. Located near modern Bolivar and subsequently a state historical site, this was the first U.S. fort established in what became the state of Ohio. Work was started after the twelve-hundred-man expedition under General Lachlan McIntosh reached the spot on 21 November 1778. Their march having taken far longer than expected and with no supplies having yet reached Fort McIntosh, seventy miles to the east, the proposed invasion of Indian territory in the direction of Detroit was abandoned. Instead, McIntosh decided to establish the isolated post of Fort Laurens on the west bank of the Tuscarawas River and hold it with a small garrison through the winter, using it as a jumping-off place for an offensive in the spring of 1779.

Fort Laurens was planned by a regular army engineer—possibly Louis Cambray-Digny—and garrisoned by 150 men of the Thirteenth Virginia under John Gibson. McIntosh's troops withdrew on 9 December, before work was completed, and it was not until late December that Gibson was able to report that his post was tenable, though it was far from secure. Short of provisions, Gibson negotiated with friendly Delawares at Coshocton to buy cattle. A detachment under Samuel Sample, an assistant quartermaster, was attacked on its way to get these cattle, losing one man. At the end of January 1779, Captain John Clark of the Eighth Pennsylvania was returning from Fort Laurens to Fort McIntosh with a sergeant and fourteen men when they were attacked three miles from Fort Laurens by seventeen Mingo Indians led by the renegade Simon Girty; there was a loss of two killed, four wounded, and one man captured. Further attempts to supply the garrison were unsuccessful, and by the middle of February the food situation was critical. On 23 February, nineteen men sent to cut wood were attacked, with two captured and the rest killed within sight of the fort.

Shortly thereafter, the fort was besieged by a force composed primarily of Wyandots and Mingo. Their numbers were variously reported as being from 180 to almost 300, though Gibson thought he faced more than 800 warriors. After 15 days, with his garrison nearly out of food, the Indians, who also lacked food, proposed to lift the siege in exchange for a barrel of flour and some meat. Assuring the Indians that he had rations to spare, Gibson promptly agreed, and the siege was soon lifted.

On 3 March 1779, General McIntosh received a message from Gibson informing him of the situation. On 19 March a force of some two hundred militia and over three hundred Continentals left Fort McIntosh and covered the seventy miles to Fort Laurens in four days to find the siege lifted. A celebratory volley fired by the garrison stampeded the pack train, causing the loss of some horses and supplies and ending the epic on a note of comic opera. The defenders had been living for almost a week on raw hides and such roots as they could find in the area. A council of war decided against McIntosh's plan for continuing the advance toward the Sandusky region. Major Frederick Vernon was left to hold Fort Laurens with 106 rank and file of the Eighth Pennsylvania and was given less than sixty days' supply of food. On 28 March 1779, soon after the departure of McIntosh's column, Indians reappeared and attacked a forty-man woodcutting party, killing two men. By the middle of May, Vernon had to order most of his garrison to return to the east because of a lack of provisions. By the end of the month, with its twenty-five-man garrison on the verge of starvation, Captain Robert Beall of the Ninth Virginia reached Fort Laurens with supplies. In late June, Lieutenant Colonel John Campbell reinforced the garrison with seventy-five well-supplied men and assumed command.

Colonel Daniel Brodhead succeeded McIntosh as commander of the Western Department in March 1779. He soon realized that Fort Laurens was untenable, and on 16 July he informed Campbell that the post would be abandoned as soon as horses could be sent to evacuate the stores. The fort was vacated early in August 1779, but not before two more Americans had been killed in the immediate vicinity. Planning to return at some point, Campbell did not destroy Fort Laurens, which remained intact until demolished after the war.

FORT LEE, NEW JERSEY. 20 November 1776. Captured by the British. Fort Lee, originally Fort Constitution, was renamed for Washington's second-in-command, Major General Charles Lee. Along with Fort Washington it was built in August 1776 to cover a line of

sunken obstructions in the Hudson River (underneath today's George Washington Bridge) and thus bar the movement of British ships. The British ran their ships up the Hudson on several occasions and proved that these forts were not up to the task. The British captured Fort Washington on 16 November 1776, after which Fort Lee became their next target.

Moving with uncharacteristic speed, General William Howe sent Charles Cornwallis across the Hudson the morning of 20 November to take Fort Lee. (Some accounts give 18 November as the date). Crossing in the rain, with between 4,000 and 6,000 troops, Cornwallis landed at Closter (modern Alpine), New Jersey, six miles (by road) above Fort Lee. Cornwallis marched his troops south to capture the fort and the troops garrisoned there. It was not known until 1963 who had led Cornwallis up the hazardous trail at Closter, in his attempt to trap the Americans. Then Richard P. McCormick, professor of history at Rutgers University found a memorandum in the British Public Records Office stating that Major John Aldington was the man. McCormick's findings were published in the 21 November 1963 edition of the *New York Times*.

Surprise and the opportunity to capture the garrison of Fort Lee were lost when news of the British landing at Closter was brought to the Americans. Scholars disagree about who provided the warning. Some claim it was the work of a British deserter, others say it was an American civilian. The latter position is supported by hearsay evidence provided in a manuscript currently archived in the Princeton University library citing a British ensign, Thomas Glyn, on the subject. Still other sources claim that the British movement was reported by "an American officer on patrol."

Warned of this movement, the Americans evacuated their troops but left a considerable amount of valuable equipment. The British found 200 or 300 tents still standing and pots still boiling. Twelve drunken Americans were captured in the fort, and about 150 other prisoners were taken in the vicinity. Nathanael Greene had returned to the fort about two hours after the main body's departure and had rounded up several hundred stragglers, many of whom were drunk on the abandoned stocks of a sutler (merchant) who had fled with the garrison troops. Although the Americans managed to evacuate stocks of gunpowder, they left behind 1,000 barrels of flour, all their entrenching tools, about 50 cannon, and their baggage. By sacrificing this matériel, however, Washington succeeded in leading 2,000 troops from the fort to safety before the British could seize the only bridge across the Hackensack River.

FORT MCINTOSH, GEORGIA. 2–4 February 1777. As the rebels got the upper hand in Georgia at the end of 1776, Loyalist refugees gathered in East Florida, where Governor Patrick Tonyn was actively organizing militia and fitting out privateers. Here Lieutenant Colonel Thomas Brown assembled his Florida Rangers and led them on raids from a base on the St. Marys River (the boundary between Florida and Georgia). The Loyalists attacked Fort McIntosh, a small, bastioned stockade about one hundred feet square on the left bank of the Satilla River in southeastern Georgia. The fifty-man garrison of Captain Richard Winn surrendered after two days, and all of them were paroled except for two officers who were taken to St. Augustine as hostages.

FORT MERCER, NEW JERSEY. (Red Bank, Gloucester Co.) 22 October–21 November 1777. As part of the system of Delaware River forts, a triple row of chevaux de frise extended between and was covered by Fort Mifflin, Pennsylvania, and Fort Mercer, New Jersey. Fort Mercer was a large earthwork with most of its cannon aimed at the river, but it was nevertheless protected on the land side by a substantial ditch and abatis. Colonel Christopher Greene commanded a garrison of about six hundred from his own First and Colonel Israel Angell's Second Rhode Island Regiments and Captain Jotham Drury's company of Crane's Continental artillery regiment. New Jersey militia reinforced the garrison, but not in the numbers expected. When Major Thomas-Antoine du Plessis, chevalier de Mauduit, arrived, Greene listened to the expert and made a very significant change: the fort was too extensive for the size of the garrison, so a new, interior wall was built that cut off the northern wing but which could not be seen from the outside.

On 21 October 1777 Howe sent Colonel Karl Emil Ulrich Donop from Philadelphia with two thousand Hessians to capture the fort, correctly assuming that it was far more vulnerable to attack from the rear than to ships trying to force their way north. Donop was not a member of the nobility, but he was a very experienced soldier who commanded the brigade made up of the Hesse-Cassel grenadiers and served as the colonel in chief of the Jäger Corps. For this mission he had three of his grenadier battalions (named for their commanders, Lieutenant Colonels Otto von Linsingen, Georg von Lengerke and Friedrich von Minnigerode); four foot companies of jägers plus a dozen more from the corps' mounted troop; an infantry regiment (Musketeer Regiment von Mirbach commanded by

Colonel Justus Block); and an artillery detachment with two British medium guns and eight three-pounders. All three of the grenadier battalions, however, were worn out by the campaign and probably were down to only about three hundred effectives each. Mirbach was better off but considered to be a lower quality unit than the elite grenadiers; also, its intelligence on the state of the fort and garrison was several weeks out of date.

After crossing the river and camping at Haddonfield, New Jersey, Donop started about 4 o'clock on the morning of the 22nd, and after being delayed by a destroyed bridge, approached the fort about one o'clock that afternoon. Deploying to cut the fort off and moving up the last two miles consumed three more hours, but at 4 P.M. an officer was sent to demand surrender, threatening "no quarter" if Greene did not surrender. The Americans refused to capitulate.

The Germans had both of their flanks anchored on the Delaware River, with Lengerke and the artillery as the right flank, Mirbach in the center (east), and Linsing as the left (south) flank. Minnigerode and bulk of the jägers acted as a reserve and then moved forward to hit the north face. Each assault unit carried bundles of fascines to throw in the ditch. Donop's columns advanced at double time in an effort to minimize the casualties from the Americans' artillery and three supporting galleys firing from the river. Minnigerode on the right, Mirbach in the center, and Linsing on the left all made it into the ditch. Minnigerode also got into the fort, where the Germans later said American resistance stiffened. In reality, that column had only pushed aside a screening force on the abandoned outer works and then ran head-on into du Plessis's unsuspected new wall; the other two columns failed to clear the ditch because their sections of wall were fully manned.

The first assault stopped cold in the face of heavy, accurate fire that cut down many of the officers. A second try ended almost immediately as more officers fell. Forty minutes after it started the survivors retreated, with Lengercke's relatively unscathed battalion covering the retreat route. Greene lacked the manpower to pursue. Lieutenant Colonel Von Linsingen late on the 23rd led the remnants into Philadelphia, where the three assault units went into barracks "for they could not possibly do service very soon" because of their losses (Muenchhausen, p. 41).

EVACUATION

The defenders of Fort Mifflin were forced to abandon their post on the night of 15–16 November, which made Fort Mercer untenable. As Cornwallis approached with two thousand men for another assault, Greene pulled out of Fort Mercer the night of 20–21 November. The Howe brothers finally had a line of supply open so that they could hold on to Philadelphia.

NUMBERS AND LOSSES

The attack on Fort Mercer left Donop mortally wounded (hit in the hip by a musket ball, he died on 25 October); 22 other officers were killed or wounded, including all four battalion or regimental commanders. The official Hessian report gave total Hessian losses as 371, but that is probably understated a bit; the true numbers of killed, wounded, or captured should be about 400, which would be about one-third of the men engaged. The Americans lost only 32 killed or wounded.

SIGNIFICANCE

While Greene and the other defenders greatly respected the heroism displayed by Donop and his men, the fight had very little impact on the outcome or pace of the campaign. But it did have a huge impact on the role of the Germans for the rest of the war. The historian Rodney Atwood has written, "Redbank marks a turning point for the Hessian corps in America. If Trenton destroyed the myth of Hessian invincibility, Redbank shattered the physical reality. Their best troops had suffered devastating losses . . . Redbank, not Trenton, killed Hessian enthusiasm for the American War" (pp. 128–129).

FORT MIFFLIN, PENNSYLVANIA.

23 September–16 November 1777. Located opposite Fort Mercer (Red Bank, Gloucester County, New Jersey) on Mud Island, Fort Mifflin anchored the American defenses of the Delaware River and protected the final band of obstructions (chevaux de frise) and

the anchorage of the Continental-state naval squadron. In concert with Fort Mercer and the squadron, Washington hoped the forts could keep the river sealed and thus force the British to evacuate Philadelphia by choking off the flow of supplies. Continental regulars took over the responsibility for the fort from Pennsylvania on 23 September. A 450-man garrison consisted of detachments rotated in and out during the course of the siege. The first commandant, Colonel Henry baron d'Arendt of the army's German Battalion, fell ill from overwork and passed command to Maryland's Lieutenant Colonel Samuel S. Smith. Both men worked feverishly with two French volunteers, Major Thomas-Antoine du Plessis, chevalier de Mauduit, and Major François Teisseydre, marquis de Fleury, to augment the fortifications as the British began clearing the river.

Americans assumed that nearby Province and Carpenter's Islands, which had been flooded earlier in the summer, were too marshy for enemy artillery use, and concentrated their efforts on the threat posed by warships approaching upstream. On 23 October, the day after Donop's unsuccessful attack on Fort Mercer, the guns of Fort Mifflin, a mobile battery on the riverbank, and the American squadron achieved the war's greatest triumph over the Royal Navy when they pummeled six men-of-war trying to work upstream. The sixty-four-gun ship of the line *Augusta* and the sixteen-gun sloop of war *Merlin* ran aground and were destroyed, the former by accident and the latter by its own crew to prevent capture. But that was the last bright moment for the Americans.

Loyalists headed by Joseph Galloway told Howe where to find suitable sites on Province and Carpenter's for siege batteries, and on 5 October a detachment crossed to Province to begin construction. Despite a number of American nighttime raids, the British were able to open fire from four of them on 15 October; more batteries followed over the following weeks, and at about 7:30 on the morning of 10 November, the full complement started reducing the earth and timber fort to rubble. On 15 November, Admiral Howe brought up HM Armed Ship *Vigilant*, a specialized shore bombardment vessel mounting fourteen heavy twenty-four-pounders but with a shallow draft, to take up a position raking the defenders. A wounded Lieutenant Colonel Samuel Smith was evacuated and Major Simeon Thayer succeeded in command of Fort Mifflin. By nightfall the fort had no guns left in working order and no walls capable of defense, so Thayer evacuated the survivors to Fort Mercer. Showing remarkable tenacity, the Americans had stuck to their guns despite 250 casualties. It is highly significant that Smith would reprise these same tactics in 1814 as a militia major general when he successfully defended Baltimore.

FORT MOTTE, SOUTH CAROLINA. 12 May 1781. Fort Mott was a key British outpost in South Carolina that was captured through the cooperative efforts of Lieutenant Colonel Henry "Light Horse Harry" Lee's legion of cavalry and infantry and Colonel Francis Marion's band of South Carolina partisans. Recognizing the importance of the back-country guerrilla war to American hopes for victory, the commander in the South, Major General Nathanael Greene, had sent Lee—father of Civil War Confederate general Robert E. Lee—to reinforce Marion. Fort Motte was a strategic point because it was located where the Congaree and Wateree Rivers join to form the Santee River. The fort served as the principal depot on the British line of communications between Charleston and the interior. The position comprised the large mansion of a widow, Mrs. Rebecca Brewton Motte, which had been commandeered by the British against her will. The mansion's defenses were strengthened by the addition of a stockade, ditch, and abatis (a fortification made of felled brush and trees). It was held by British Lieutenant Donald McPherson with 150 British and Hessian infantry and a small detachment of dragoons who had been passing through from Charleston with dispatches destined for Camden.

Lee and Marion had just successfully completed their maneuvers against Fort Watson and, on 8 May, started regular approaches against Fort Motte. Lee's forces numbered 100 cavalry and nearly the same number of infantry. Marion's partisan force amounted to just over 100 men. A surrender summons sent to the fort's commander on 10 May was refused. That evening the rebels received information that Colonel Francis, Lord Rawdon was retreating toward Fort Motte from Camden. British beacon fires spotted during the morning and evening of 11 May encouraged the defenders and told the attackers they would have to take the place quickly or abandon the operation.

Lee conceived the idea of setting fire to the Motte mansion by firing flaming arrows onto the shingle roof, which was dry after a period of sunny weather. Mrs. Motte, who had been displaced by the British when they took over her home, was now living in the nearby farmhouse from which Lee and Marion were directing their siege. When she was informed that this decision had reluctantly been made, she not only accepted the fact but produced a fine Indian bow and bundle of arrows. The morning of 12 May, Dr. Irvine of Lee's Legion advanced with a flag to inform McPherson that Rawdon was not yet across the Santee River and to request his surrender. The British commander again refused. By noon the rebel trench was within range and Private Nathan Savage of Marion's Brigade dropped two flaming arrows onto the roof of the mansion. When enemy soldiers tried to extinguish the flames, they were driven off the roof by the Americans' artillery and rifle fire. The British showed a white flag, the fire was put out, and the garrison surrendered at 1 P.M. Only Marion's partisan forces suffered losses during the siege: a Lieutenant Cruger and a Sergeant McDonald. No others were killed on either side of the confrontation.

Mrs. Motte, ever the lady of the plantation, provided a splendid dinner for the officers of both sides. Greene arrived on the evening of the surrender, having been worried about completing this operation before Rawdon could intervene. He returned to his camp after ordering Lee to go on to take Fort Granby and sending Marion to take Georgetown.

The capture of Fort Motte showed the ability of the rebels to capture British outposts or any key point along the lines of communications. It also showed the wisdom of Greene's strategy of combining conventional forces (the Continental troopers of Lee's Legion) with irregular forces (Marion's partisans) in order to achieve an effect greater than either kind of force by itself could have achieved.

FORT NELSON (VIRGINIA). 10 May 1779. The Matthews-Collier raid started offensive operations against Portsmouth by landing about a thousand men at the mouth of the Elizabeth River and moving on the town and its defensive Fort Nelson. The Virginians could not resist because they had only a hundred men from the State Artillery Regiment under Major Thomas Matthews in garrison. Matthews spiked his guns and withdrew up the South Branch of the river with his stock of ammunition, but left his colors flying on the fort as a gesture of defiance. The British pursued him until the garrison reached the safety of the Dismal Swamp. A court of inquiry held at Williamsburg on 4 June exonerated Matthews of any charges of misconduct.

FORT SAINT JOSEPH, MICHIGAN.

January 1781. The French built this fort in 1697, turning it over to the British in 1763. That same year Pontiac captured the post, which was returned to the British at the end of that war. The British did not garrison it again until the Revolution. After the British offensive against St. Louis, 26 May 1780, the Spanish sent a force against Detroit. With about sixty militia and sixty Indians, Captain Eugenio Pourré surprised Fort St. Joseph in January 1781, and the British garrison surrendered immediately. Holding the place only twenty-four hours, the Spaniards subsequently claimed the valleys of the St. Joseph and Illinois Rivers "by right of conquest" (Ward, p. 862).

FORT STANWIX, NEW YORK.

Located at the head of navigation of the Mohawk and at the portage between that river and Wood Creek, which led to Oswego, this place was astride the main route between Canada and the Mohawk Valley. Here, on the site of present-day Rome, New York, the French had built a fort to protect their trade with the Indians. The British had built Fort Stanwix in the same area in 1758. This fort fell into disrepair after 1763, but in June 1776 a detachment of Continental troops under Elias Dayton started rebuilding it. For a time it was called Fort Schuyler, in honor of General Philip Schuyler, and is therefore occasionally confused with an older Fort Schuyler built during the Seven Years' War and named for one of Schuyler's uncles. The new Fort Schuyler, which most people persisted in calling Fort Stanwix, figured prominently in Barry St. Leger's expedition.

FORT STANWIX, TREATY OF.

5 November 1768. At a council attended by over two thousand Indians and presided over by Sir William Johnson, the Iroquois gave up their claims to lands southeast of a line running from Fort Stanwix (later Rome, New York) to Fort Pitt (later Pittsburgh, Pennsylvania), and thence along the southern bank of the Ohio River to the mouth of the Tennessee (Cherokee) River. The treaty replaced the temporary proclamation line of 1763 with a "permanent" boundary between white settlements and Indian hunting grounds,

and opened vast tracts along the frontiers of New York, Pennsylvania, and Virginia to white land speculators and settlers. Because Iroquois claims to these lands were specious, and no one thought it important to consult the actual inhabitants of the lands in question, the treaty amounted to a huge land grab to feed the rapacious appetite of whites for western lands.

FORT WASHINGTON, NEW YORK. Captured by the British on 16 November 1776. After Washington's forces slipped away into the hills north of White Plains at the end of October, Major General William Howe gave up the chase and turned south to complete his conquest of Manhattan. Howe had pried Washington out of northern Manhattan by landing behind him in Westchester; Washington, against his better judgment, had left behind twelve hundred men at Fort Washington.

WASHINGTON AND GREENE'S INDECISION

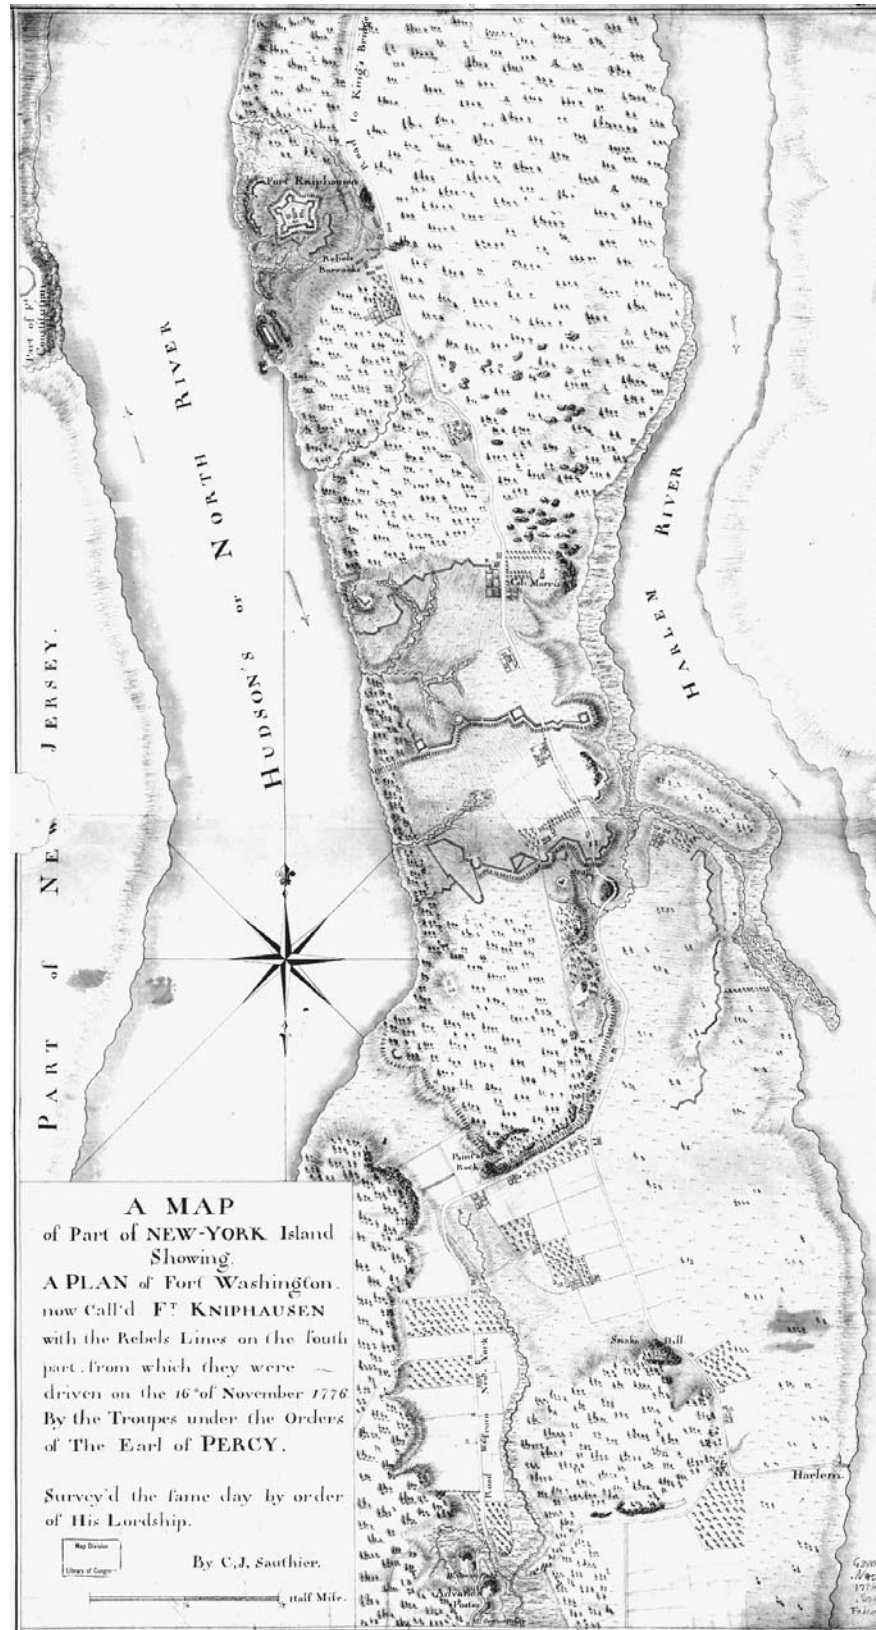

To retain Fort Washington, now isolated in enemy territory, the Americans needed to control the adjacent areas of northern Manhattan. They had to hold both Mount Washington, on which the fort was built—a long, narrow elevation running north-south along the Hudson—and Laurel Hill, parallel to it, along the Harlem River. To the south, the defensive lines on Harlem Heights were also critical, as was the Kings Bridge at the northern tip of the island. Defending the five-mile perimeter around this entire area would require from eight thousand to ten thousand troops. Major General Nathanael Greene was in charge of Fort Lee and its garrison of thirty-five hundred men as well as Fort Washington, where he gradually increased the garrison from twelve hundred to twenty-eight hundred men. He wrote to Washington on 31 October that twenty-eight hundred was far too many if they intended to hold only the fort itself—which could accommodate only half that number—and far too few if they hoped to defend the entire northern end of Manhattan.

Greene believed the fort alone could be defended successfully, but he continued to enlarge the garrison, apparently hoping that Washington would choose to contest the whole area and send more troops. However, since the crossfire from Fort Lee and Fort Washington and the sunken obstructions that Major General Israel Putnam had arranged to be placed in the river between them had failed to stop British ships from sailing upriver, Washington was inclined to abandon Fort Washington altogether. On 8 November he wrote to Greene that Fort Washington was not worth the risk involved in holding it since it did not serve its intended purpose. Nonetheless, he deferred to Greene about evacuating the fort since he was “on the spot” and therefore the best judge of the situation.

Greene conceded that the sunken obstructions had not worked but insisted that the fort was still an asset and that the men could be evacuated across the Hudson if need be. The fort's large supply of war matériel would be a more difficult matter, Greene admitted, but even that, he felt confident, could be removed expeditiously. The commander of the garrison, Colonel Robert Magaw of the Fifth Pennsylvania Battalion, believed he could fend off the British until the end of December.

AMERICAN DISPOSITIONS

The final result of the indecisive exchange between Washington and Greene during the first week of November was Magaw's deployment of twenty-nine hundred men to defend a perimeter nearly five miles long—a job for which Greene knew he needed ten thousand troops. Facing south, Lieutenant Colonel Lambert Cadwalader—

Plan of Fort Washington. This map shows a part of New York Island with the plan of Fort Washington, “now Call’d Ft. Kniphausen,” and the positions from which the “rebels” were driven on 16 November 1776, by troops commanded by Lord Percy. It was surveyed by Claude Joseph Sauthier on the same day as the attack. THE LIBRARY OF CONGRESS, GEOGRAPHY AND MAP DIVISION.

with his own Third Pennsylvania Battalion, Magaw's Fifth Pennsylvania Battalion, some broken companies of Colonel Samuel Miles's Pennsylvania State Rifle Regiment, and other battalions, mostly from Pennsylvania—defended the three lines of trenches and redoubts on Harlem Heights. Meanwhile, Colonel William Baxter's Pennsylvania regiment along with those of Colonels Michael Swope, Frederick Watts, and William Montgomery, all from the Pennsylvania Flying Camp, were stationed at the northern end of Laurel Hill, overlooking the Harlem River. Most of Laurel Hill—the mile and one-half below Baxter's position—was left undefended. Half a mile north of Fort Washington, a redoubt at the northern end of Mount Washington held a battalion of Maryland and Virginia riflemen led by Colonel Moses Rawlings. Magaw, at Fort Washington, commanded all of the outlying units, which had orders to retreat within the walls of the fort if necessary.

Washington and his generals expected an attack on Fort Washington but remained distracted by Howe's other strategic options. They worried that he might seize the Hudson Highlands or cross the river and march through New Jersey to capture Philadelphia. Meanwhile, on 5 November, Howe moved his forces west from White Plains toward Dobbs Ferry on the Hudson and then slowly headed south to besiege Fort Washington with eight thousand men. Howe was also armed with the plans for the fort, along with information about the works and the garrison provided by Magaw's adjutant, Ensign William Demont, who had deserted on 1 November.

WEAKNESSES OF FORT WASHINGTON

While Fort Washington occupied a naturally commanding position, the structure itself had many weaknesses that made it unfit for withstanding a concerted attack, much less a prolonged siege. It was easily accessible only from the gradual southern slope of the hill, the other three slopes being steep and rugged. However, the pentagonal fort, enclosing four acres of ground, was a simple earthwork, the interior exposed to the sky and without proper barracks or magazines for ammunition; water had to be drawn from the Hudson, 230 feet below, because the fort had no well. The ground in back of the fort was high enough that the enemy could fire over the walls. Aside from the small redoubt that Rawlings occupied, the fort had neither outworks nor an adequate ditch around it to fend off attacks.

HOWE DEMANDS SURRENDER

On 15 November the adjutant general of Howe's army, James Paterson, and several other mounted officers approached Fort Washington with a white flag and a drummer "beating a parley" to demand its surrender

within two hours, threatening death to all those captured if Magaw refused. Magaw sent a note to Greene at Fort Lee and, without waiting for a reply, answered the British that, "actuated by the most glorious cause that mankind ever fought in," he was "determined to defend this post to the last extremity." Greene instructed Magaw not to surrender, and he alerted Washington at his new headquarters at Hackensack, New Jersey. Greene then crossed the Hudson to Fort Washington.

Arriving at Fort Lee at 9 P.M., Washington set out to join Greene on the New York side. Generals Putnam and Greene were on their way back and met Washington halfway across the river, where they assured him that morale was high at the fort and that the troops would put up a good fight. The generals convinced Washington to return to New Jersey. Howe had given the Americans a day and a night from the ultimatum to evacuate the fort; early the next morning, on 16 November, his forces closed in.

THE BATTLE BEGINS

General Knyphausen had received an affirmative answer when he asked Howe for the privilege of making the main attack with only Hessian troops. Knyphausen's two columns were each led by twenty jägers and forty grenadiers and included a grenadier battalion (Kohler), Hessian regiments (under Rall, Lossberg, Wutgenau, Knyphausen, Hunyn, and Bunau), and the Waldeck regiment. In the predawn darkness, they marched southward across the Kings Bridge towards Mount Washington. The Hessians assaulted Rawlings's redoubt and drove his men back to Fort Washington. Meanwhile, to the east, another three thousand troops under Brigadier General Edward Mathew and Major General Charles Earl Cornwallis were to come down the Harlem River on flatboats, land at the foot of Laurel Hill, and storm Baxter's position. Mathew, commander of the brigade of Guards in America, led two battalions of light infantry and two battalions of his guards, while Cornwallis led two battalions of guards and the Thirty-third Regiment as reinforcement. From the south, Lord Percy's two thousand troops, including some Hessians, were to overrun the Harlem lines. To confuse and possibly trap Cadwalader's men in the Harlem lines, Howe planned a fourth prong: the Forty-second Highlander regiment under Colonel Thomas Sterling was to cross the Harlem River and land at the southern end of Laurel Hill, just above the American lines.

The battle began at 7 A.M. with a massive two-hour cannonade from British guns on the east side of the Harlem River, across from Laurel Hill, and from the frigate *Pearl* in the Hudson to confuse the Americans as to where the main attack on the fort would be made. In order to synchronize the attacks on three fronts, Howe had Knyphausen withdraw the Hessians when they were nearly

halfway up Mount Washington, because Mathew and Cornwallis were not yet in position at Laurel Hill, having been delayed by the tides. To the south, Percy's units had begun driving the Americans out of their trenches on Harlem Heights when he too was ordered to stop and wait in the woods until Mathew and Cornwallis landed.

Generals Washington, Putnam, Greene, and Hugh Mercer came over from Fort Lee and examined the battlefield. Despite the danger, they proceeded all the way across to the grounds of the Morris house. Washington declined when each general offered to remain on the battlefield and insisted that they all return with him to Fort Lee. Fifteen minutes later, the British captured the ground where they had stood.

ATTACKS FROM EAST AND NORTH

Flatboats carrying the two brigades of British troops finally came down the Harlem River at 11 A.M. and deposited Generals Mathew and Cornwallis with their men on the Manhattan shore at the northern end of Laurel Hill. With artillery support from the other side of the river, the British scrambled up the steep, wooded slope and overwhelmed the Americans. A British officer killed Colonel Baxter, and the militia fled westward to Fort Washington.

The Hessians, with ten field pieces in tow, resumed their assault on the northern end of Mount Washington. Unable to stand in many places because the slopes were so steep, they had to pull themselves up by grabbing onto bushes. America's first battlefield heroine, Margaret Corbin, took her husband's place at his cannon when he was killed and aimed so accurately that the Hessians focused their fire on her. A severe wound from grapeshot in her shoulder finally took her out of the action.

Pressing forward under the hail of grapeshot and bullets from above, the Hessians climbed over logs with sharpened branches that the Americans had placed in their path. Colonel Johann Rall's regiment attacked from the west, while Knyphausen attacked the east side of the hill, placing himself in the thick of the battle to urge his men forward. After two hours the Americans—their rifles clogged with gunpowder residue—retreated to Fort Washington. Rall's troops, close on their heels, positioned themselves behind a storehouse one hundred yards from the fort.

PERCY'S AND STERLING'S ATTACKS

On Harlem Heights, Percy had resumed his attack, and General Howe ordered the fourth prong, under Colonel Sterling, to cross the Harlem River and block Cadwalader's retreat. When Sterling's Highlanders landed on the Manhattan shore just below the Morris mansion, Magaw sent a warning to Cadwalader, and together they sent 250 men to oppose the landing. The Americans inflicted scores of casualties, but the 800 Highlanders,

backed up by cannon fire from the opposite side of the river, climbed the steep slope up from the water's edge and took 170 prisoners. Nonetheless, Cadwalader's main force reached a wooded area just south of Mount Washington, where it was able to fend off the Highlanders. Following a narrow road along the Hudson, Cadwalader then brought his men up the gentle southern slope to the fort.

SURRENDER OF FORT WASHINGTON

When the Americans crossed the open ground on the flat crest of Mount Washington and approached the fort's entrance, Rall ordered his grenadiers forward to attack them. The Hessians sprang from behind the storehouse just to the north and, in the ensuing melee, trapped some Americans against the wall of the fort while driving the others inside. Rall sent an English-speaking captain to demand the surrender of the fort, giving Magaw just thirty minutes but promising that every man would be able to keep his personal possessions. With about 2,800 men crowded into a fort designed for half that number, a British bombardment would have meant the slaughter of everyone inside, but Magaw, encouraged by a note from Washington, tried to rally the men to defend the walls.

Rall, however, refused to be kept waiting. After Knyphausen came up with the other Hessian column soon after Rall, Magaw surrendered his sword to him; 230 American officers and 2,600 soldiers were marched out of the fort and brought down to the city, where they began their long ordeal of captivity in the city's jails and churches and on prison ships. The Americans lost 59 killed and 96 wounded, while the loss of matériel at Fort Washington, combined with that at Fort Lee four days later, amounted to 146 cannon, 12,000 shot and shell, 2,800 muskets, and 400,000 cartridges, along with tents and entrenching tools. On 16 November the British lost 77 killed and 374 wounded—mostly Hessians.

FORT WATSON, SOUTH CAROLINA.

15–23 April 1781. The taking of Fort Watson marked the first step in Major General Nathanael Greene’s plan to retake a string of British outposts in South Carolina. The successful capture of the fort on 23 April was made possible by Major General Charles Lord Cornwallis’s decision not to return to South Carolina following his Pyrrhic victory at Guilford Courthouse, North Carolina. Greene initially chose to pursue Cornwallis as the British commander moved toward Wilmington, North Carolina. At length, however, Greene turned from his pursuit of Cornwallis to march instead toward Camden, South Carolina. As he did so, he detached Lieutenant Colonel Henry “Light Horse Harry” Lee and his infantry-cavalry forces to screen against a possible movement of Cornwallis from the direction of Wilmington. Should this threat not materialize, Lee was to join forces with Colonel Francis Marion and capture Fort Watson. With Captain Oldham’s company of Maryland regulars, and a small piece of artillery, Lee and his “Legion” joined Marion on 14 April. The next evening they invested Fort Watson. Total forces under Lee’s overall leadership numbered approximately 300 men.

Fort Watson was a key link in the British line of communications from Charleston, 60 miles to the southeast. It was named after British Lieutenant Colonel John Watson, of the Third Regiment of Foot (The Buffs), who was somewhere in the area with a large Tory force, chasing after Marion. Fort Watson was a small but strong stockade, surrounded by three rings of abatis (fortifications made of felled trees), and located atop an ancient Indian mound. The mound and its British fort were on the edge of Scott’s Lake, part of the Santee River, and effectively in command of the surrounding bare plain. It was between 30 and 50 feet high. In Lieutenant Colonel Watson’s absence, Lieutenant James McKay commanded its small garrison of 80 regulars and 40 Loyalists.

Lee and Marion opened their effort against Fort Watson with the customary demand for surrender. When this was refused, the rebels seized the fort’s water supply point on the lake. The defenders next dug a well and ran a trench that filled it from the lake. The score was then even. Without siege artillery, however, and with the danger that Lieutenant Colonel Watson might return at any moment to relieve McKay, the situation looked bad

for the attackers. Major Hezekiah Maham of Marion’s partisans then suggested building a type of tower that was thereafter known by his name and used in other sieges. This was a prefabricated log crib, rectangular in plan, on which a protected platform was built from which riflemen could deliver plunging fire into the fort. It took five days to cut, trim, and notch the logs, but on the dark night of 22 April Maham’s tower was carried to within range of the fort. By dawn a company of riflemen started delivering a deadly drizzle of aimed shots into the stockade. At the same time two assault parties attacked the abatis, one composed of militia under Ensign Johnson and another of Lee’s Legion infantry. Unable to defend the stockade without exposing themselves to fire from Maham’s tower, the garrison had to surrender. The rebels were thus able to take the fort before Lieutenant Colonel Watson could arrive with a British relief force. Total rebel losses amounted to two killed and six wounded.

Fort Watson was the first British fort to be captured in South Carolina, and showed the pattern of Greene’s plans to take outposts or any other key point along the British lines of communication. The specific advantage gained was that its capture had the effect of isolating Greene’s target, Camden. It showed as well the effectiveness of Greene’s practice of combining conventional forces (the troopers of Lee’s Legion) with irregular forces (the partisans of Marion’s band) in order to achieve an effect greater than either kind of force by itself could have achieved. Finally the Americans demonstrated no little ingenuity in the manner of devising and employing a “Maham’s tower” as a tactical expedient.

FORT WILLIAM AND MARY, NEW HAMPSHIRE.

14–15 December 1774. Fort William and Mary guarded the mouth of the harbor at Portsmouth, New Hampshire. Alerted by a message from the Boston Committee of Correspondence (carried by Paul Revere on 13 December 1774) that Major General Thomas Gage was planning to reinforce the fort and secure its munitions, Samuel Cutts and his colleagues on

the Portsmouth Committee of Correspondence decided to forestall Gage and remove the gunpowder from the custody of the single officer and five men who guarded it. On the afternoon of Wednesday, 14 December 1774, four hundred men carted away about one hundred barrels of gunpowder and shipped it up the Piscataqua River to safety in Durham. The next day a party of men from Durham led by John Sullivan marched to Portsmouth and with local help again took control of the fort, removed the lighter cannon and all the small arms, and sequestered them with the gunpowder in Durham. The munitions proved invaluable in arming New Hampshiremen in 1775.

FORT WILLIAM HENRY (FORT GEORGE), NEW YORK. 1755–1780.

William Johnson started construction of Fort William Henry, at the southern tip of Lake George, after his victory over the French on 8 September 1755. Montcalm, the commander of French troops in North America, besieged the place on 4 August 1757, and on 9 August its garrison of about 2,200 men was surrendered by Lieutenant Colonel George Munro. The French-allied Indians violated the surrender terms and started taking trophies and murdering prisoners. Munro reached Fort Edward, on the Hudson River, with 1,400 survivors. For the overall strategic situation at this time, see the entry “Colonial Wars.”

Fort George was built about a mile southeast of the ruins of Fort William Henry (which Montcalm destroyed). It served as the northern link of the overland route from Lake George to Fort Edward thirteen miles to the south on the Hudson River. Though by 1777 it was little more than a ruin, Fort George became an important British base during Burgoyne’s offensive. General William Phillips occupied the place on 29 July 1777, and the British abandoned it after the Saratoga surrender. It was recaptured by the British on 11 October 1780 but not held.

FOUQUET. Nicholas Fouquet and his son Marc (or Mark) accompanied Coudray from France in 1777 as bearers of commissions from Silas Deane. Nicholas held a commission as a captain-bombier and Marc as a lieutenant. Congress begrudgingly approved their commissions on 7 November 1777 but offered to facilitate their return to France by covering their expenses. As experts in the production of gunpowder, they offered a counterproposal, and so the Board of War employed them in 1778 to make powder and inspect powder magazines.

FOX, CHARLES JAMES. (1749–1806).

British politician. Fox was born in London on 24 January 1749, the second son of the politician Henry

Charles James Fox. *The British statesman and supporter of the American cause, in a 1781 engraving.* THE LIBRARY OF CONGRESS.

Fox (later first baron Holland) and Caroline Lennox, daughter of the second duke of Richmond. Closely attached to his father and two brothers, Fox was brought up virtually without restraints, a background that is said to explain his later colorful lifestyle and his inability to provide firm leadership to others. Fox was educated, by his own choice, at a school in Wandsworth and (from June 1758) at Eton, where he began long friendships with a circle he called “the Gang” and that included Lord Carlisle. He also established a reputation as an able classical scholar. In 1763 he left school for a sojourn in Paris, where Henry Fox encouraged his fourteen-year-old son to gamble heavily and arranged for him to lose his virginity. It is hardly surprising that soon after his return to Eton in the autumn of 1764 young Fox was asked to leave. He went straight on to Oxford, where he enjoyed mathematics and classics, but was too ill disciplined to stay for a degree. His learning was then continued by another visit to Paris in the spring of 1765 and by a long grand tour through France, Switzerland, and Italy. On this journey he encountered numerous women, as well as Edward Gibbon, Voltaire, the duc d’Orleans, and Lafayette.

He began his political life as his beloved father’s ally and protégé and therefore no friend of the Whigs, who had

never forgiven Henry for accepting office under Lord Bute. In 1768, when he was nineteen and legally too young to be elected, Charles James entered Parliament as member for Midhurst in Sussex, a seat purchased by his father. Predictably he took up against the Rockinghamites and supported the ministries of Grafton and North. He supported the attempts to punish John Wilkes for defying Parliament over the Middlesex election and had no particular objection to either ministry’s American policies until 1774. He got on well with North and in February 1770 became a lord of Admiralty at the age of twenty-one. His move toward a more radical stance came out of family considerations, not political principle.

The first problem was the Royal Marriages Act of 1772, which required the immediate descendants of royalty to obtain the sovereign’s consent before marrying. As Fox’s mother was a direct descendant of Charles II, and especially as hers had been a runaway marriage, Fox may have felt it reflected on his own legitimacy. In 1753 Henry, for rather similar reasons, had opposed the earl of Hardwicke’s marriage act against clandestine marriages. Now, on 15 February Charles James resigned from the Admiralty in protest. In December he was found a place on the Treasury board, only to resign that office in February 1774 after the North ministry failed to raise the Holland barony to an earldom. These flimsy, even capricious, grounds for the laying down of public office marked him down as a man who could not, for the moment at least, be taken very seriously.

Excluded from office by his own actions, from 1774 Fox drifted into the orbit of the Rockingham Whigs. This drift was not purely political opportunism; and it was very slow. One reason was a growing mutual dislike between himself and George III, who disapproved of Fox’s libertine habits. Under the tutelage of Edmund Burke, Fox gradually came to share the Whig delusion that George was deliberately moving toward a royal absolutism. Fox now saw his friend North as the weak, possibly unwitting or unwilling, instrument of George’s designs. Though still looking over his shoulder at fresh opportunities for office, Fox found himself publicly advocating more frequent elections and a wider franchise, ideas that in private he found only mildly appealing.

What really swung Fox into opposition was the approach of the War of American Independence, which from the first he feared would be a long and probably unsuccessful contest. In April 1774 he spoke and voted against the Coercive Acts and was not surprised when violence followed. As early as 1776 Fox began to think American independence better than a costly and humiliating war. He attacked the earl of Sandwich and Lord George Germain for incompetence and gradually began to associate the Americans with himself as fellow victims of George III: from there it was only a short step to perceiving

a trans-Atlantic royal plot against liberty. As ever, Fox's changing opinions were shaped by personal contacts. He exchanged letters with Thomas Jefferson and met Benjamin Franklin in Paris in the winter of 1776–1777. General John Burgoyne, one of his high-living gambling cronies, wrote to him from America between 1775 and 1777. His brilliant speeches marked him as the leader of opposition to the war in the Commons, and in 1782 he concerted the moves that brought down North's government.

Fox now became foreign secretary in the short-lived Rockingham administration. It was not a happy experience. Fox found it nigh impossible to work with the earl of Shelburne, the home secretary, and, predictably, suspected George III of using the Lord Chancellor and Shelburne to frustrate the Paris peace negotiations. Fox's chief negotiator in Paris, Thomas Grenville, certainly met with obstruction from Shelburne's man Richard Oswald. Fox had already decided to resign when Rockingham's death on 1 July 1782 put an end to the ministry. The new Shelburne ministry negotiated separate treaties with France and the United States, but at a price, which allowed Fox and North to combine forces to bring Shelburne down in February 1783. The Fox-North coalition (March–December 1783) was later vilified as a cynical union of convenience between sworn enemies, but at the time it was accepted as a partnership of men who had worked well together in the past and still held each other in high regard. They had no choice but to accept the peace terms they had just censured; the alternative was to restart the fighting, a political if not a military impossibility. They fell when George III intervened to have Fox's India bill defeated in the Lords, thus providing him with an excuse to sack his ministers and bring in the younger William Pitt.

Fox, already paranoid about royal plotting, was appalled at the king's behavior and blocked every ministerial measure he could until the election of 1784 gave Pitt a comfortable majority. Thereafter British politics resolved into a duel between the two. In 1788 Fox opened the prosecution of Warren Hastings as a means of protest against the king's destruction of his own India bill. He supported the prince regent's claims during the Regency crisis of 1788–1789 because he was at odds with George III. He opposed the war against revolutionary and Napoleonic France on the grounds that even a perverted liberty was preferable to a coalition of despots—particularly a coalition joined by George III and Pitt. His illusion that he could patch up a peace by chatting with his friend Talleyrand was rudely shattered when he became foreign secretary in the “ministry of all the talents” in January 1806, and only his death on 13 September saved him from total humiliation.

Fox's politics were always conditioned by family considerations, friendships, and his overwhelming distrust of

George III, and his support for the American Revolution was based on expediency rather than principle. He was never a radical or convinced parliamentary reformer, and whatever political ideals he possessed did not run deep. His great oratory, unlike the younger Pitt's, was of an essentially destructive kind. These were hardly the qualifications of a great minister, but perhaps Fox's greatest talent lay elsewhere: as the supreme opposition spokesman of his age.

FRANCISCO, PETER. (1760?–1832). War hero. Possibly Portugal and Virginia. Put ashore from a strange ship and abandoned near the present Hopewell,

Virginia, when he was about four years old, Peter was reared by Judge Anthony Winston, an uncle of Patrick Henry. The boy's true name and origin are not known. He grew into a 6-foot, 6-inch giant and joined the 10th Virginia Regiment at the age of 15. He was wounded at the Brandywine (September 1777) and met the Marquis de Lafayette when they were both receiving medical treatment. After fighting at Germantown and Fort Mifflin, he re-enlisted and was seriously wounded by a musketball at Monmouth on 28 June 1778. He was one of the twenty-man, forlorn hope of a troop led by Lieutenant James Gibbons at Stony Point on 16 July 1779, and one of the four who reached the final objective. Despite a bayonet slash across the abdomen received in this action, he also took part in the assault on Paulus Hook, slightly more than a month later, and is credited with splitting the skulls of two grenadiers. At the expiration of his second enlistment he joined the militia regiment of Colonel William Mayo. In the rout at Camden, South Carolina, on 16 August 1780, he is said to have carried off a 1,000-pound cannon to prevent its capture, and to have rescued Colonel Mayo after he was taken prisoner. Francisco then joined the mounted troop of Captain (Thomas?) Watkins and took part in the subsequent guerrilla operations of Colonel William Washington's dragoons. At Guilford, North Carolina, on 15 March 1781, he was twice wounded by bayonet while charging at the head of Nathanael Greene's counterattack.

Found lying among the dead at Guilford, Francisco was rescued by a Quaker. He recovered and volunteered as a scout in the operations against British raiders in Virginia. At a place called Ward's Tavern he was surrounded by nine of General Banastre Tarleton's dragoons, but managed by ruse and by single combat to fight his way out, leaving at least two of the enemy dead. He took part in the siege of Yorktown.

After the war he served for many years as sergeant at arms in the Virginia House of Delegates. In 1824 he accompanied Lafayette on a tour of the state. He died in Richmond in 1832.

FRANKLIN, BENJAMIN. (1706–1790). American statesman. Signer. Massachusetts and Pennsylvania. At the start of the Revolution, Franklin

Benjamin Franklin. *The American statesman, scientist, inventor, and writer in a 1778 portrait by Joseph-Siffred Duplessis.* THE LIBRARY OF CONGRESS.

was almost 70 years old. He had an international reputation as a scientist, inventor, writer, and editor, to mention but some of his achievements. Yet in the last fifteen years of his life, Franklin played as prominent a role in attaining and securing American independence as anyone.

Born in Boston on 6 January 1706, Franklin attended school only a short time before going to work, first in his father's tallow shop and then in his brother's printshop. After breaking with his brother in 1723, Franklin quit his indenture and fled to Philadelphia. Within six years he owned the *Pennsylvania Gazette*. In 1730 he moved in with, but did not marry, Deborah Read, with whom he had several children.

Poor Richard's Almanack began appearing in 1732, and was edited by Franklin until 1757. He edited the *Gazette* until 1748. The Junto, a debating club he founded in 1727, became the American Philosophical Society in 1743. He established a circulating library (1731), Philadelphia's first fire company (1736), and an academy (1751) that was the nucleus of what eventually became the University of Pennsylvania. Pennsylvania having no militia, Franklin led a group of citizens in creating the

“Philadelphia Associators.” Turning down an officer’s rank in this militia, Franklin insisted on serving as a private soldier, which only enhanced his reputation with the anti-Quaker party. In the scientific field, which gained him fame abroad, he invented the woodstove that still bears his name (1742) and conducted a series of significant experiments into the nature of electricity.

Franklin served as clerk of the Pennsylvania Assembly from 1736 to 1751, was a member of that body from 1751 to 1764, deputy postmaster at Philadelphia from 1737 to 1753, and, with William Hunter, was postmaster general of the colonies from 1753 to 1774. He attended the Albany Convention of 1754 and submitted his famous plan of union. He served as agent for Pennsylvania from 1757 to 1762, and renewed his service from 1764 to 1775. He served in the same capacity for Georgia from 1768 to 1774, and for Massachusetts from 1770 to 1774.

Preceded by his scientific reputation, Franklin enjoyed a warm welcome in England and on the Continent. He was accompanied to London by his son, William. William became a Loyalist who would earn appointment as New Jersey’s last royal governor. Benjamin Franklin moved in the opposite political direction from his son, becoming the prime representative in Britain for the Patriot position. Instrumental in securing repeal of the Stamp Act (1766), Franklin met regularly with sympathetic British politicians to argue the American cause, wrote dozens of pamphlets and newspaper articles, and endured a highly unusual grilling before the entire House of Commons in 1766. When it was suggested by a Member of Parliament that troops might be needed to deal with the American uprising, Franklin replied, “They will not find a rebellion; they may indeed make one.” He was publicly censured in England in 1774 for his part in the Hutchinson letters affair and dismissed shortly thereafter as postmaster general by the British government.

Franklin returned to Philadelphia in May 1775, just in time for the start of the military conflict with Britain. He was immediately chosen as a member of the Second Continental Congress, was appointed the first Postmaster General (1775–1776), and was one of the three men sent to Canada by Congress in 1776. He helped draft the Declaration of Independence, and was a signer of that document. In September 1776, Congress appointed Franklin, along with Arthur Lee and Silas Deane, to negotiate a treaty with the French.

Already known for his scientific works, Franklin arrived in Paris in December 1776 and was lionized by the public. Although the government could not openly receive him as an official American representative, the foreign minister, the comte de Vergennes, singled Franklin out as the only one of the three with whom he would deal, so the chief burden of negotiations with the French government fell on him. His popularity did much

to expedite secret aid and to bring about the French alliance. The former went a long way toward arming the Continental army and bringing about the American victory at Saratoga, which in turn effected the goal of alliance. Franklin worked tirelessly for the American cause, securing munitions and arranging vital loans for the American states; acquiring ships for the new U.S. navy and securing them safe harbors in European ports; issuing letters of marque for American privateers; negotiating for humane treatment of American prisoners of war and effecting prisoner exchanges; and heading up an extensive, though not always effective intelligence network, while pouring forth a stream of propaganda. All the while, he was charming his way through the European elite. Meanwhile he suffered the “magisterial snubbings and rebukes” of the psychotic Arthur Lee, but got along well enough with the third commissioner, Silas Deane.

By September 1778, Congress realized its mistake in having appointed three commissioners to France. It made Franklin the sole plenipotentiary. On 8 June 1781 Franklin was named one of three American commissioners for peace negotiations, in which he played the major role. Probably no American has ever been as successful in the conduct of diplomatic affairs.

On 26 December 1783, Franklin reminded Congress of their promise to recall him after the peace was made (the treaty had been signed 3 September), but he did not get his authority to leave until 2 May 1785. Finally reaching Philadelphia in September 1785, Franklin was elected president of the Pennsylvania Executive Council, which office he held until 1788. He was a member of the Constitutional Convention that met in Philadelphia in May 1787; and although none of his cardinal ideas was adopted—for instance, he favored a single chamber and an executive board—he made a considerable contribution in bringing about the necessary compromises among the delegates. He did not like the way the Constitution was finally worded, but urged its unanimous adoption. “The older I grow, the more apt I am to doubt my own judgment,” he said with the whimsy that had ironed out other controversies of the convention. He asked the others to join him in doubting a little of their own infallibility and “to make manifest our unanimity, put his name to the instrument.” Unlike most people, Franklin became more radical as he grew older. By the time of the Constitutional Convention, he was calling for the establishment of a humane American criminal justice system and urging the extension of the logic of the Revolution to women and blacks, calling for an end of slavery and legal rights for women. Though often ignored at home, he inspired reformers in Europe and South America. After his death on 17 April 1790, the French Assembly

voted a three-day mourning period. The U.S. Senate rejected a similar proposal.

FRANKLIN, WILLIAM. (1731–1813). Royal governor of New Jersey, Tory leader. Pennsylvania-New Jersey. An illegitimate son of Benjamin Franklin, probably by his common-law wife, Deborah Read, he joined the company of Virginia troops raised by Beverley Robinson in 1746 for the expedition against Canada and at the age of about fifteen he rose to the grade of captain. For almost thirty years afterward, he was closely associated with his father as comptroller of the general post office from 1754 to 1756, clerk of the Pennsylvania provincial assembly, and as his father's companion in 1757 when the latter went to England as colonial agent for Pennsylvania and New Jersey. Will, as his father called him, was "a tall proper Youth, and much of a Beau." He studied at the Middle Temple, was admitted to the bar, traveled with his father, and aided him with his scientific investigations. Having become acquainted with the earl of Bute, he was appointed governor of New Jersey in 1763 through the latter's influence. This unsolicited honor may have been given with a view to winning Benjamin Franklin over to the British side.

William Franklin's tenure in the governorship started successfully. His adherence to the royal cause at the start of the Revolution appears to have been prompted by nothing more complicated than a sense of duty to the government that appointed him. In this he was estranged from his father, who after failing in all arguments to win him over, characterized William as "a thorough government man." On 15 June 1776 the Provincial Congress of New Jersey declared him an enemy and ordered his arrest. After severe treatment as a prisoner at East Windsor, Connecticut, he went to New York City in October 1778 after being exchanged for John McKinley, the Patriot president of Delaware. Franklin became president

of the Associated Loyalists, which was deprived by Clinton of its powers after the Huddy–Asgill Affair in 1782. After Captain Lippincott was acquitted, blame for the killing of Huddy was transferred to William Franklin and some of the other directors of the Associated Loyalists. Franklin left for England in August 1782. He was allowed a relatively paltry eighteen hundred pounds for the loss of his estate and was given a life pension of eight hundred pounds a year. His first wife, whom he had married in England in 1762, died while he was a prisoner in Connecticut, having never been allowed to visit him there. In the family tradition, William sired an illegitimate son, William Temple Franklin, who became his grandfather Benjamin's secretary in Paris and later edited the works of the great man.

Franklin's career was a tragic paradox. As royal governor he was flexible, moderate, and resourceful, but as president of the Board of Associated Loyalists in the New York garrison town from 1778 and 1782, he tried without much success to smooth relations between Loyalist exiles trapped in the city and British commanders, first Clinton and then Carleton. To have been a stabilizing influence in the New York garrison town as the British military effort moved inexorably toward defeat would have required his father's guile.

FRANKS, DAVID SALISBURY. (1742–1793). Major and aide-de-camp to Benedict Arnold. Canada and Pennsylvania. Born in Philadelphia on 27 March 1742, David Salisbury Franks was the son of a Jewish merchant who moved to Quebec after the end of the Seven Years' War, settling in Montreal in 1774. At the start of the Revolution, he had risen to the position of president of the Montreal Shearith Israel Congregation. He denounced King George III over the Quebec Act, which failed to recognize the civic rights of Jews. For expressing these views, Franks was imprisoned in May 1775, although he was released after two weeks. When the Americans captured Montreal on 13 November 1775, Franks supported their cause with loans and denounced his father as a Loyalist. The following year, General David

Wooster made Franks the paymaster of the American garrison. When the Americans retreated from Montreal, Franks went with them.

Franks joined the Continental army in Albany, seeing action at Saratoga. Because he could speak French, he was made liaison to Admiral Valerie d'Estaing in 1778. In July he was promoted to major and became a member of Benedict Arnold's staff in Philadelphia. Franks testified on Arnold's behalf at his court-martial for corruption in May 1779, afterwards transferring to General Benjamin Lincoln's staff in Charleston. In July 1780 he returned to Arnold's staff at West Point. When Arnold defected in September, Franks was suspected of complicity and subjected to two courts of inquiry, both of which attested to his innocence. General George Washington issued a personal commendation after the second verdict in November 1780. In 1781 Franks resigned as a lieutenant colonel and devoted the next six years to serving the United States as a diplomat, making numerous trips to Europe. Congress sent him to Paris in 1784 with the ratification of the peace treaty, and the next year he acted for a short time as vice consul at Marseilles before returning to the United States. In 1786 Franks played an important role in drafting the Morocco trade agreement. In 1789 he failed in an attempt to be made consul general in France and returned to business, becoming assistant cashier of the Bank of North America in 1791. He died in the Philadelphia yellow fever epidemic on 7 October 1793.

FRASER, SIMON. (1726–1782). Colonel of the Fraser Highlanders. In 1745 Fraser's father, the eleventh Lord Lovat, recalled him from his legal studies at St. Andrews University to lead clan Fraser in the Jacobite rebellion. His distinct reluctance—he ran away at Falkirk and missed the battle of Culloden—may explain his release from military service in 1747 and his pardon in 1750.

Fraser completed his studies and practised law in Scotland and, later, in London. In 1757 he was permitted to raise a battalion, the Sixty-third Foot (which was renumbered as the Seventy-eighth in 1759). This battalion was the first to be known as Fraser's Highlanders, which Fraser led in the action at Louisburg (1758). Wounded in a skirmish near Beaumont (Canada) on 26 July 1759,

Fraser missed both the failed attack at the Montmorency River and the battle on the Plains of Abraham, both of which were part of the attack on Quebec. In 1760 he led a brigade, was wounded again at St. Foy on 28 April, and took part in the advance on Montreal later that year.

In 1761 Fraser was elected to Parliament, for Invernessshire. Next year he took an expedition to Portugal, where he became a temporary major general in the Portuguese service and may have risen to lieutenant general by 1768. Meanwhile, in 1763, his regiment had been disbanded. In 1772 he became a major general in the British army, and on 25 October 1775 he was authorized to raise a new two-battalion Highland regiment, the Seventy-first, which became known as Fraser's Highlanders. This regiment later served with distinction in the War of American Independence. Fraser, though promoted lieutenant general on 29 August 1777, was not offered an active command and spent the war in parliament. He died in London on 8 February 1782.

FRASER, SIMON. (1729–1777). British general. The youngest son of Hugh Fraser of Balnain, Scotland, Fraser seems to have begun his military career in the Dutch service. In 1747 he was wounded while with the Scots brigade at Bergen-op-Zoom, in the Netherlands. However, on 31 January 1755 he was commissioned as a lieutenant in the new British Sixty-second Regiment (later the Sixtieth Regiment), also known as the Royal Americans. Two years later Fraser moved as captain-lieutenant to the Seventy-eighth Foot, which came to be known as Fraser's Highlanders. After service at Louisburg in 1758, he was commissioned captain (22 April 1759) and fought at the capture of Quebec.

Fraser then served in Germany, being made brevet major on Ferdinand of Brunswick's staff on 15 March 1761, and later leading a light infantry unit known as Fraser's Chasseurs in a number of actions. He became a major in the Twenty-fourth Foot on 8 April 1762, afterwards serving in Gibraltar and Ireland and being promoted lieutenant colonel in 1768. In 1770 he was made Irish quartermaster general. During these years Fraser introduced his regiment to new infantry tactics pioneered by General James Wolfe, and made friends with John Burgoyne and William Phillips.

On 28 May 1776 Fraser and his regiment arrived in Canada with Burgoyne's reinforcements for Sir Guy Carleton, and was at once given a brigade on the south bank of the St. Lawrence River. He successfully

defended Trois Rivières on 8 June and pursued the fleeing enemy until ordered to halt. Two days later Carleton made him a local brigadier general with orders to take command of the British advance guard and, if possible, cut off the fleeing Americans. During the summer he protected the flotilla Carleton was building at the fort on Lake Champlain, and after Valcour Island (11–13 October 1776) his force was advanced to Chimney Rock, twelve miles from Ticonderoga (New York). In June 1777 he took command of Burgoyne's advance guard and helped to capture Fort Ticonderoga, and on 7 July his troops defeated the American rear-guard at Hubbardton, Vermont, albeit with heavy losses. At Freeman's Farm (New York) on 19 September, during the first battle of Saratoga, he led one assault on Daniel Morgan's riflemen. On 7 October he was leading another attack when he was shot, possibly by the rebel sniper Timothy Murphy. Though nursed through the night by Baroness Riedesel (wife of Baron Friedrich Adolphus Riedesel), Fraser died at eight the following morning.

FRASER, SIMON. (1737/8–1813). British army officer. Simon Fraser was born in 1737 or 1738 in the Scottish Highlands. He was the son of a tacksman, which is a Scottish term designating an individual who has been granted the use of a plot of land (called a tack), usually in return for services to the clan leader. Fraser became an ensign in Fraser's Highlanders, the Seventy-eighth Foot, on 21 July 1757, and was promoted lieutenant on 21 September 1759. During the Seven Years' War, Fraser served in Canada at Louisburg (1758), Quebec (1759), St. Foy, and at the surrender of Montreal (1760). In 1765 he joined his patron, General Simon Fraser, in the Portuguese army, and in 1775 became senior captain in the new Fraser's Highlanders, the Seventy-first Foot. During the War of American Independence, Fraser lost an eye during the well-executed British raid on Danbury, Connecticut (23–28 April 1777) and fought at Brandywine, Germantown, and Monmouth. Promoted major in October 1778, he was deputy quartermaster general to the Georgia expedition, to both Charles Cornwallis and Francis Rawdon-Hastings in South Carolina and, in 1782 and 1783, in Jamaica. He served as a major general in Portugal (1796–1801) and as a lieutenant general in home postings from 1803. He died on 21 May 1813.

FRASER'S HIGHLANDERS. Two regiments known by this name, both raised by Simon Fraser (1726–1782), were conspicuous in America during the French and Indian War and during the Revolution. The first was raised in 1757, numbered as the Seventy-eighth Regiment of Foot on 1 June 1758, and was disbanded in December 1763 at Quebec.

Recognizing that the British army in America would need reinforcements following the slaughter at Bunker Hill, Simon Fraser raised at Inverness, Stirling, and Glasgow a regiment of two battalions. Officially the Seventy-first Regiment of Foot (Fraser Highlanders) from 25 October 1775, the unit sailed from Scotland for Boston at the end of April 1776, not knowing that Boston had fallen into Patriot hands on 17 March 1776. Two transports were captured at sea, one of them carrying a company of the Seventy-first and the other a company of the Forty-second Regiment of Foot (Royal Highland Regiment). Four more transports were captured off the Massachusetts coast in mid-June. Among the prisoners was Lieutenant Colonel Archibald Campbell, whose transport was taken in Boston Harbor; he was exchanged two years later for Ethan Allen. Replacement companies were raised in Scotland by September 1779 and arrived safely in America.

The First Battalion and the remainder of the Second Battalion arrived at Staten Island in July 1776 and took part in the Battle of Long Island on 27 August, being the first ashore on the 24th. They were with the force that cut off the retreat of rebel Major General William Alexander (Lord Stirling) in the final phase of the battle. The Highlanders fought at Fort Washington, New York (16 November 1776), Brandywine, Pennsylvania (11 September 1777), and Billingsport, New Jersey (9 October 1777). The Third Battalion of the Seventy-first was created in May 1777 and was sent in 1779 to garrison Newfoundland.

The two original battalions were the core of the expedition sent south under Lieutenant Colonel Archibald Campbell in December 1778. The Highlanders helped to capture Savannah on 29 December 1778; occupied Augusta from 29 January to 13 February 1779; fought at Briar Creek, Georgia, on 3 March; and helped defend Savannah against the Franco-American counterattack in September. After receiving 150 replacements, they joined Sir Henry Clinton's expedition against Charleston, South Carolina. They took part in the final siege operations and remained with the field army under Lord Cornwallis. Under Major

Archibald McArthur, the First Battalion distinguished itself before most of it was captured at the Battle of Cowpens on 17 January 1781; the Second Battalion was with Cornwallis until the final surrender at Yorktown. The remainder of the First Battalion went from Charleston to Halifax, Nova Scotia, in November 1782, and then returned to Scotland, where it was disbanded in 1786. The members of the Second Battalion were among the prisoners exchanged in 1783; the Highlanders returned to Scotland and were disbanded at Stirling on 3 October.

FRAUNCES TAVERN, NEW YORK CITY. Site of Washington's farewell to his officers, 4 December 1783. In 1762 Samuel Fraunces purchased this private residence, built in 1719, and opened a popular tavern. Preserved in the restored Fraunces Tavern at Pearl and Broad Streets is the historic Long Room that was the scene of Washington's farewell to his officers on Thursday, 4 December 1783, the day the British fleet sailed from New York Harbor.

Soon after noon Washington arrived to find the small group of officers who had entered the city on 25 November and all others who had been assembled on short notice for the occasion. Washington took a wine glass, as if to toast his fellow officers. "With a heart full of love and gratitude, I now take leave of you," Washington said. "I most devotedly wish that your later days may be as prosperous and happy as your former ones have been glorious and honorable." Gripped with an emotion that threatened to overwhelm the small assemblage, they mumbled a confused answer and drank their wine before Washington, blind with tears, continued:

"I cannot come to each of you, but shall be obliged if each of you will come and take me by the hand." Henry Knox stepped forward as the senior officer present. Impulsively, Washington put his arms around his chief of artillery and, now weeping openly, kissed him. This description comes from a letter by Benjamin Tallmadge, who reported that "tears of deep sensibility filled every eye" as "every officer in the room marched up, kissed, and parted with his general in chief." For Tallmadge, the notion "that we should see this face no more in this world seemed to me utterly insupportable." After he had embraced the last officer, Washington raised his arm in silent farewell and left the tavern. Joined by New York governor George Clinton and the city council, Washington, in his finest blue and buff uniform, passed through ranks of light infantry and walked to Whitehall. The wharf was crowded as Washington approached, climbed into a barge, and headed for Paulus Hook, accompanied by General Friedrich von Steuben. From there he proceeded by way of Philadelphia to Annapolis to surrender his commission to Congress (23 December 1783).

When Washington was president, the government rented the tavern to house the offices of the Departments of War, Treasury, and Foreign Affairs. In 1904 the Sons of the Revolution in the state of New York bought and restored the tavern, which is now a museum.

FREEMAN'S FARM, BATTLE OF.

The Battle of Freeman's Farm is an alternate name for the first Battle of Saratoga, 19 September 1777, which opened in the roughly twelve-acre clearing that had once been the farm of John Freeman. Freeman had sold the farm to Isaac Leggett and gone north to join Burgoyne's invasion force. Leggett, also a Loyalist, was not present on the day of the battle.

FRENCH ALLIANCE. (Ratified by Congress 4 May 1778.) The origins of the Americans' relationship with France had long before the Revolution been established as a part of the English mind-set, based on the traditional rivalry of the two great nations. The English and Americans had been taught to despise the government, religion, and culture of France. France was the object of colonial hatred and suspicion in the years preceding the Revolution, when the French and Indian War was remembered for the outrages against frontier settlements of the English colonies. The French in turn saw the English as arrogant, heretical, and money driven and as having upset the world balance of power, relative peace, and stability set by the Peace of Utrecht (1713) through their power grab in the Treaty of Paris (1763). Yet despite a continuing rhetoric of hostility, the Americans had continued to conduct clandestine, illegal trade with continental France and the French West Indies.

Believing that much of English power derived from the commercial advantages of its colonial possessions in North America, the French government sent observers to study conditions in these colonies after 1763. Among these were Kalb and later Achard de Bonvouloir.

SECRET FRENCH AID

When open combat started in America, the French could not risk a formal alliance with the colonists until they were certain the latter were really seeking independence and were capable of gaining military victories to achieve it. Otherwise, the French feared, they might find themselves at war with a British army and navy no longer engaged in or scattered across North America. The advisers of young Louis XVI believed that he would do best by first delaying war until the French army and navy were ready for combat and then forcing England to overextend itself in a transatlantic war; meanwhile, France would send the rebels secret aid.

In March 1776 the Continental Congress sent Silas Deane as its agent to France, and two months later Hortalez & Cie was in business. Soon Benjamin Franklin and Arthur Lee arrived in France to complete the "Commission" (as the American delegation was known) that would pursue a formal French Alliance. Once there, they busily engaged themselves in securing experienced French officers to serve in America, negotiating contracts for the purchase of munitions and other needed war supplies from French merchants, supporting American privateers in the eastern Atlantic, and seeking to establish formal ties with the French government. At the same time, that government

found itself in the quandary of trying to encourage the Americans informally without overly alarming the British.

FORMATION OF THE ALLIANCE

On 17 December 1777, having learned of the Saratoga victory and impressed by the spirit shown by Washington at Germantown, French authorities told the American commissioners in Paris that France had decided to recognize American independence. On 8 January 1778 Vergennes informed the envoys that France was ready to make an alliance. The treaties were signed on 6 February, and Louis formally received the commissioners on 20 March. On 4 May, Congress ratified the two treaties: a treaty of amity and commerce (recognizing independence) and a treaty of alliance to become effective in the event of war between France and England. On 13 March, the French ambassador at London informed the British of these treaties and the British ambassador was immediately recalled from France. Spain offered to mediate, but the war started on 17 June when Admiral Keppel, leading twenty ships on a cruise out of Portsmouth, fell in with two French frigates and fired his guns to bring them to.

The Peace Commission of Carlisle was prompted by an urgent desire on the part of the British to settle the dispute in America before France could throw her tremendous potential into the conflict. French entry into the war, followed by the Spanish Alliance a year later, meant that the decisive international theater now was the sea.

MILITARY VICTORY FOLLOWS DEFEATS

News of the French Alliance inspired such overconfidence among Americans in the beginning that it may eventually have resulted in a negative effect. A large fleet under Admiral d'Estaing left Toulon on 13 April 1778 and made an incredibly slow crossing of eighty-seven days that enabled the British fleet to withdraw from the Chesapeake. D'Estaing failed successively at New York during 11–22 July and Newport during 29 July–31 August 1778, abandoned plans for an amphibious offensive against Halifax and Newfoundland, and headed for the West Indies. The disastrous Franco-American attack on Savannah on 9 October 1779 was another setback. Early in 1780 the French government warned the Americans that they must do more for themselves, and in April, Congress responded by ordering Kalb south with a small force of regulars around whom, it was hoped, the militia would rally. This led indirectly to the loss at Camden on 16 August 1780. The French, who had been planning a direct assault against the British Isles until the autumn of 1779, decided soon thereafter to send a French army to North America.

The arrival of Rochambeau's expeditionary force at Newport on 11 July 1780 marked the beginning of a new and decisive phase of Franco-American military cooperation. A series of British strategic blunders, the decision of Admiral de Grasse to move his large French fleet north from the West Indies to support the allied armies of Rochambeau and Washington, and the skillful operations of Lafayette in Virginia contributed to the victorious Yorktown campaign and the end of British military power in America.

FRENCH CONSULS AND TRADE

The treaty of alliance of 1778 had given the United States a free hand to conquer Canada and Bermuda; France was at liberty to take the British West Indies. Both countries agreed to respect the other's territorial gains in these areas, and neither was to conclude a treaty with Britain without the other's consent. France's motive in the war, therefore, was to regain its former preeminence by reducing English power through American independence; it was not in the war for any significant increase of its overseas possessions. Yet in addition to helping the Americans gain their independence, France had also hoped to make significant commercial inroads into American markets, and it began by establishing a series of consular agents throughout the states. These appointments included a consul at Philadelphia (1778); a consul at Boston (1779); a consul for New York, New Jersey, and Connecticut (1783); a vice-consul at Savannah (1783); a vice-consul for Virginia (1784); a consul at Charleston (1784); and a vice-consul at Portsmouth, New Hampshire (1785). However, the efforts to completely supplant British trade largely failed in the postwar years.

The best study on the impact of the French alliance on American domestic politics during the war is William C. Stinchcombe's *The American Revolution and the French Alliance* (1969). He discusses the relationships between the French minister Conrad Alexandre Gérard and his successor, Anne César de La Luzerne, with the American military command, the members of the Continental Congress, and various state officials. Of special interest are the chapters dealing with French propaganda efforts among the American media to promote the alliance.

FRENCH AND INDIAN WAR.

Although this term can be used literally to mean all four of the conflicts between the British and French colonists in North America between 1689 and 1763 (King William's War, Queen Anne's War, King George's War, and the final French and Indian war), the term applies more precisely to the last of the colonial wars (1756–1763), which in Europe is called the Seven Years' War. The historian Lawrence Henry Gipson rechristened the final French and Indian war "the Great War for the Empire," but that name is not in common usage.

SEE ALSO *Colonial Wars.*

revised by Harold E. Selesky

FRENCH COVERT AID. As the dispute between England and its colonies escalated into actions, French officials anticipated conflicts between the American colonists and the British, and they sought to exploit the situation to their own advantage. The French

provided informal and, to some extent, covert support for the American cause in several ways. First, through opening up their West Indian islands to American vessels, they provided an immediate market for American wheat, tobacco, salted fish, and indigo. This, in turn, provided money with which the colonists were able to purchase munitions. Second, in both the Caribbean and off the French coast, they unofficially offered safe harbors for American privateers that were marauding British shipping and capturing British cargoes. Finally, the French provided loans and subsidies to assist the Americans in sustaining their war-making ability. France's major concern was that, should their support become publicly known, it would serve as a justifiable cause for the English to declare war on France at a time when the French were still unprepared for combat. The result was that the French were required to maintain a delicate balance between 1775 and 1778, providing enough supplies to keep the Americans in the field without provoking the English government to declare war.

In October 1774 conflict between England and its colonies had led George III to forbid the sale of munitions to the colonies. By spring 1775 the British Parliament prohibited the colonies from foreign trade altogether, except for those colonies that the government considered safe: Georgia, North Carolina, Delaware, and New York. In August George III declared the colonies to be in a state of rebellion and charged that those who participated in the rebellion were traitors.

INITIAL FRENCH OVERTURES

To assess the level of discontent in America, the French foreign minister, Charles Gravier, comte de Vergennes had dispatched Achard de Bonvouloir to visit the colonies. While in Philadelphia in December 1775, Bonvouloir met with members of the Committee of Secret Correspondence, who inquired whether France would sell munitions to the Americans. His conversations convinced him that French support of the American cause would be worthwhile. When Vergennes received Bonvouloir's report, he presented Louis XVI with a memorandum titled "Considerations," proposing that France provide the Americans with secret aid to sustain their efforts.

In May 1776 Louis XVI approved an investment of one million livres to enable the Americans to purchase arms. To provide cover for the investment, Pierre Augustin Caron de Beaumarchais was selected to set up a company, Roderique Hortalez & Cie, which would use the money to purchase obsolete arms from government arsenals to sell to the American Congress on credit. Congressional representative Silas Deane arrived in Paris in July 1776 and quickly became involved with Beaumarchais in the enterprise. The two agreed to a contract for the exchange of American tobacco and other goods in return for munitions.

Beaumarchais had worked hard to convince Deane of his close relationship with the French government, and this later led many in Congress to conclude that he was merely a conduit for French gifts, a situation that would have tragic financial results for Beaumarchais and his descendants. Soon another French financier, Jacques Donatien Leray de Chaumont, also came forward to offer Deane one million livres credit for the purchase of supplies, which Deane immediately accepted.

By December, Beaumarchais's initial cargo of war supplies in the *Amphitrite* was exposed in the *London Chronicle*, and the "secret" became public knowledge. The English ambassador to France, David Murray, the seventh Viscount of Stormont, complained about French involvement in the colonies, and Vergennes was forced to issue orders halting the ship. However, it had already set sail before the orders arrived.

Having received instructions to enlist engineers, Deane also recruited experienced French officers for the Continental army, signing so many commissions that he soon created a crisis for the Congress as to which commissions to honor. In December 1776, Deane was joined by Benjamin Franklin and Arthur Lee, who also pressed the French government for further concessions.

THE SCRAMBLE FOR MUNITIONS

Despite the actions of the Continental Congress, the states began to fear that they would not be able to defend themselves from British military and naval force. A number of states, especially Rhode Island, Connecticut, Maryland, and Virginia, decided to act individually in the search for arms and ammunition from foreign sources such as the West Indies. Often using the contacts of American shippers and merchants, they identified and established covert relations with sympathetic foreign merchants and officials in the Caribbean and in Europe.

On 15 July the Continental Congress passed a resolution suggested by Benjamin Franklin that allowed a nine-month period during which ships returning to America with cargoes of military supplies would be exempt from the prohibitions on foreign trade. During the summer of 1775, Pennsylvania, New York, Massachusetts, and Rhode Island sent ships to the West Indies to obtain munitions. On 18 September 1775 Congress created a the Secret Committee of Trade (later simply known as the Secret Committee) to negotiate contracts for the importation of gunpowder and munitions. During the winter of 1775–1776, New York and Rhode Island planned and executed voyages to the Dutch and the French West Indies to obtain war supplies. In August 1776 Georgia sent Oliver Bowen and Pierre Emmanuel de la Plaigne to Saint Domingue, and in the following November Virginia appointed Raleigh Colston as its agent

in Saint Domingue, all in order to secure the material needed for the war.

AMERICAN DIPLOMACY AND FINANCE

On 18 May 1776, the Continental Congress instructed the Committee of Secret Correspondence to send a representative to the French West Indies to purchase munitions. They selected as the committee's secretary Philadelphian William Bingham, whose father had been a merchant in the West Indian trade and who had undertaken a business tour of Europe in 1773. Under the cover of a private merchant he went to Martinique, met its governor-general, comte Robert d'Argout, and began to purchase muskets and bayonets. He was also given the informal duty of promoting the American cause and keeping Americans in France informed of events back home.

Upon his arrival in Martinique, Bingham met Richard Harrison, the agent for Virginia and Maryland. In the autumn of 1776, while awaiting the appearance in the islands of arms shipments from the Hortalez & Cie, Bingham began loading vessels with molasses and shipping them to America to generate income for the committee's benefit. By the spring of 1777, vessels began to reach Martinique from France. Bingham split the cargoes for transport to America among several smaller ships. Throughout 1777 he received shipments of arms, powder, tents, cloth, and medicines from Nantes and Bordeaux. Yet he received no return cargoes from the Committee to pay for these supplies. Finally, on 16 April 1778, Congress authorized him to draw funds from the Paris-based commissioners (Deane, Franklin, and Lee) to cover his bills. In May Bingham received news of the signing of the treaties with France neither through the commissioners in France nor from Congress but from reading a newspaper from the island of Dominica.

THE ROLE OF PRIVATEERING

The second field of covert French continental and West Indian assistance was through their support for American privateers. The purpose of these privateers was twofold. First, their capture of English merchant vessels provided cargoes with which to fund the purchase of much-needed munitions. Second, they created a disruption of English commerce.

The capture of British merchant vessels by privateers began as soon as Franklin arrived in France. On the Atlantic crossing, Franklin's ship, *The Reprisal*, captured two merchant vessels. The Americans sold them in French ports by falsifying their papers. Vergennes complained, but the Americans continued their privateering activities. When Captain Lambert Wickes captured eighteen prizes in June 1777 and brought them into French ports, he brought the situation to a crisis.

In August 1777 and with the support of King George III, Lord North, who was then Britain's prime minister, sent a special envoy to Versailles to threaten war if Wickes's squadron was not expelled from French ports. A few weeks later, the American squadron set sail for America. Facing French anger and a lack of resources, the American commissioners to France found that their financial situation was deteriorating rapidly. By November, however, Vergennes came to the commissioners' aid by advising them not to worry about paying for the supplies they had purchased from Hortalez & Cie. Thus began Arthur Lee's belief that the loans from Beaumarchais were, in fact, gifts. In early November Vergennes informed the commissioners that France would provide an additional three million livres to sustain them. Shortly afterward, news arrived of the American successes in the battle of Saratoga. The new year brought with it an alliance and further aid, but this time the French were willing to cement their formal alliance with the Americans.

American use of privateers in the West Indies was also significant, but it was not as threatening to peace as it was with the ships that were marauding the shipping lanes that lay directly off the French and English coasts. Early during the Revolution, Bingham and Harrison had jointly financed privateers that were working in the West Indies. Lord Stormont complained to Vergennes in autumn 1776: "At Martinico in particular the Privateers of the Rebels had been furnished with everything they wanted . . ., with as much willingness, and alacrity, as if they had been subjects of France." The American commissioners to France reported by 6 February 1777 that insurance rates for English vessels sailing in the West Indies were higher than at any time during the Seven Years' War. "This mode of exerting our force against them should be pushed with vigour. It is that in which we can most sensibly hurt them." (Stevens, *Facsimiles* 14, no. 1392; Franklin, *Papers*, 23: p. 287)

Stormont's complaints to Vergennes continued into the middle of 1777; now he added that the privateering vessels had crews who spoke French and had French papers. In response to Stormont's complaints, Vergennes finally announced that the governor of Martinique, d'Argout, would be replaced by François Claude Amour du Chariol, Marquis de Bouillé, and the minister of the navy and colonies, Antoine Gabriel de Sartine, decreed that the sale of prizes in French colonial territories was forbidden. Despite these actions the new governor of Martinique continued to allow American privateers to enter French continental and colonial ports on the flimsiest excuse. By December 1777, the French were in fact providing the protection of French warships until American vessels were safely out of harbor. In response, Stormont claimed that Martinique was engaging in war-like acts.

The efforts of the French government to sustain the American cause were never truly unknown to the English government, which maintained an extensive spy system in France. Whenever French support became especially obvious or painful to the British, they issued diplomatic complaints and threats which the French were obliged to address, even if only to issue formal orders that were informally ignored. The French sought to maintain a delicate balance, whereas the Americans were pressing for every advantage. As a result of the aid channelled to the Americans through the French West Indies, through their often contradictory but generally supportive treatment of American privateers, and finally through their financial assistance by way of supposedly private commercial ventures such as Hortalez & Cie, the French were able to keep American forces supplied until 1778, by which time the French military and naval forces were prepared for the possibility of combat with the British and a formal alliance could at last be concluded.

FRENEAU, PHILIP MORIN. (1752–1832). Poet, mariner, journalist. New Jersey. Born on 2 January 1752 in New York City, Freneau graduated from Princeton in 1771. His first major poem, "The Rising Glory of America," was read at the graduation ceremony. At the outbreak of the Revolution he penned several pamphlets and patriotic poems, as well as eight political satires within a period of a few months, among them "General Gage's Soliloquy" and "General Gage's Confession." After teaching school, studying law, and some excursions into journalism, he became secretary to a prominent planter on Santa Cruz in the Danish West Indies. During his two years there, Freneau became an opponent of slavery and wrote what are considered his most significant poems: "Santa Cruz," "The Jamaica Funeral," and "The House of Night." These poems placed Freneau among the pioneers of the romantic movement in poetry.

Returning to America in July 1778, Freneau enlisted as a private in the New Jersey militia's first regiment, gaining promotion to sergeant. He built and commanded the privateer *Aurora* in 1779. After several escapes from British cruisers, he was captured on 25 May 1780 and imprisoned aboard the *Scorpion* in the Hudson. After six weeks of horrendous ill treatment, he was released. His experiences inspired two poems, "The Hessian Doctor" and "The British Prison-Ship: A Poem, in Four Cantos." During the three years after his release in 1781 he was employed in the Philadelphia Post Office, where he had the leisure to turn out a steady stream of poetry for the *Freeman's Journal*, which he occasionally co-edited. In nearly a hundred poems he blasted the Loyalists, satirized the British, and glorified the Patriots.

In 1784 Freneau returned to sea as the captain of a brig, surviving shipwrecks and hurricanes, and writing magnificent poems about these experiences. In 1790 he married and became editor of the New York *Daily Advertiser*. The following year, at the insistence of his college roommate, James Madison, he became editor of the *National Gazette* in Philadelphia. In both efforts he was highly successful; his passionately democratic journalism was lauded by Thomas Jefferson, who credited him with saving the country from monarchy, but bitterly criticized by George Washington, who called him “that rascal Freneau.” On 26 October 1793 the *National Gazette* was suspended for lack of funds and because of the yellow fever epidemic. Freneau edited three more papers over the next three years before quitting journalism and returning to the sea as captain of the *John*. Like most poets, Freneau spent most of his life on the border of poverty. On 19 December 1832 he died in a snowstorm while trying to find his way home from the country store.

FRONTAL ATTACK. Although often used in the literal sense of an attack on the enemy's front (as opposed to an envelopment or turning movement), in the precise meaning used by military writers it is an attack wherein the available forces are equally distributed and strike the enemy all along its front.

SEE ALSO *Envelopment; Turning Movement*.

FRYE, JOSEPH. (1712–1794). Colonial Wars veteran, Continental general. Massachusetts (Maine). Born on 19 March 1712 in Andover, Massachusetts, Fraye served as an ensign in Hale's Fifth Massachusetts

Regiment, took part in the capture of Louisburg in February 1745, and was a lieutenant colonel in John Winslow's Kennebec expedition in 1754. He spent the following year burning the houses of the dispossessed people of Acadia. He served under Lieutenant Colonel George Munroe when this officer was surrounded near Fort William Henry and forced to surrender on 9 August 1757 to General Marquis de Montcalm. Frye escaped after killing his Indian guard, making his way to Fort Edward. Under the terms of the British surrender of Fort William Henry, he was placed on parole for 18 months. After this, from March 1759 to the end of 1760, he was commander at Fort Cumberland (near modern Amherst, Nova Scotia).

On 3 March 1762, in response to his petitioning, he was granted a township in Maine, and in 1770 he moved there and opened a store in Fryeburg. On 21 June 1775 he was named to the post of major general of the Massachusetts militia and served in this capacity for about three months, before being appointed a brigadier general of the Continental army on 10 January 1776. On 23 April of that year he resigned for ill health, to use the popular euphemism. In fact, the aged warrior was useless to General George Washington, who wrote Joseph Reed that Frye “has not, and I doubt will not, do much service to the cause; at present he keeps his room and talks learnedly of emetics, cathartics, &c. For my own part, I see nothing but a declining life that matters [to?] him.” (Freeman, vol. 4, p. 41). He returned to Fryeburg, where he died on 25 July 1794.

FUSILS AND FUSILIERS. During the seventeenth century a light flintlock musket or fusil was developed for artillery guards, and a special type of light infantry called fusiliers was created. Like the grenadiers, they continued to exist as elite units after their original mission had disappeared. Until a few years before the American Revolution, the spontoon was carried by infantry officers; it then was replaced by the fusil, although some were carried during the Revolution (for example, at Trenton).

GADSDEN, CHRISTOPHER. (1724–1805). Merchant, Revolutionary statesman, Continental general. South Carolina. Born in Charleston, South Carolina, on 16 February 1724, Christopher Gadsden inherited a considerable estate in 1741, and spent the next 25 years making himself richer. With the Stamp Act of 1765, he became the acknowledged leader of the South Carolina radicals, organizing the Sons of Liberty and attending the Stamp Act Congress. He sat in the first Continental Congress (1774). Colonel of the First South Carolina Regiment at the beginning of the Revolution, Gadsden returned to Congress in June 1775, where he served on the Navy Committee and designed the famous “Don’t Tread On Me” flag for Commodore Esek Hopkins. He returned to South Carolina in January 1776 to lead his regiment in the defense of Charleston. In February he startled friend and foe by proposing to the provincial congress that they move for independence. Commanding Fort Johnson in June, he had a good view of the British attack on William Moultrie’s palmetto fort, but was not otherwise engaged in defeating Sir Henry Clinton’s Charleston expedition (1776). Congress made him a brigadier general in the Continental army on 16 September 1776.

Over the next three years, Gadsden was involved mostly in state politics. In debates over the state’s new constitution in 1778, Gadsden and William Henry Drayton demanded the disestablishment of the church and the election of senators by popular vote. John Rutledge led the conservatives in a political counterattack that eliminated Gadsden’s political influence, even though he was elected the first vice president of South Carolina. Dispute over the command of Continental troops in the state led Gadsden to resign his commission and resulted in a duel with Robert Howe that injured neither party.

Taken prisoner by the British at Charleston on 12 May 1780, he was closely confined for 10 months in St. Augustine before being exchanged. Elected governor in 1782, he declined the post on grounds of age and ill health, but sat for two more years in the assembly. Here he was one of the few who opposed the confiscation of Loyalist property. He supported adoption of the Constitution and became a Federalist. He died in Charleston on 28 August 1805.

Thomas Gage. *The Massachusetts governor and British general, in a portrait (c. 1768) by John Singleton Copley.* © YALE CENTER FOR BRITISH ART, PAUL MELLON COLLECTION/ BRIDGEMAN ART LIBRARY.

GAGE, THOMAS. (1719 or 1720–1787). British general and colonial governor. The second son of an Irish peer and Sussex gentleman, Thomas Gage was born late in 1719 or early in 1720, probably in Wye, Gloucestershire. Although the family had long been Roman Catholic, his father had converted to Anglicanism in 1715 (which allowed him to become member of Parliament for Tewkesbury in 1721) and his sons were brought up in that faith. Lord Hervey described young Thomas's father as "a petulant, silly, busy, meddling, profligate fellow," while Lord Wharton promised to pay his debts "when Lady Gage grows chaste." With such parents Thomas did well to develop a character noted for honesty, generosity, and decency.

From 1728 to 1736 he was at Westminster School, where he became acquainted with Francis Bernard, John Burgoyne, William Legge (Lord Dartmouth), George and Richard Howe, and George Sackville, later Lord George Germain. In 1741 he obtained a lieutenancy in the Forty-eighth Foot (Cholmondeley's) and by 1743 was a captain. He was aide-de-camp to William Anne Keppel, Lord Albemarle, at Fontenoy in 1745 and fought at Culloden in 1746 before returning to the Netherlands for the

campaigns of 1747 and 1748. After the War of the Austrian Succession ended, having purchased the rank of major in 1748, he served in Ireland with the Fifty-fifth Foot (soon renumbered the Forty-fourth) and became its lieutenant colonel on 2 March 1751.

In late 1754 the Forty-fourth was ordered to America as part of Edward Braddock's expedition against Fort Duquesne at the forks of the Ohio River. Braddock's soldiers were unused to forest warfare, he had few native scouts and he was short of time. Nevertheless he took effective measures to screen his front and flanks, and Gage, in charge of the advance guard, was careful and systematic. Yet Gage's one slip was fatal: his failure on 9 July 1755 to secure a commanding hillock led to the humiliating defeat at the Monongahela River. Braddock and Gage's colonel, Peter Hackett, were killed, and Gage, who displayed great courage, stubbornness, and coolness under fire, was slightly wounded. Gage took command of the regiment when Hackett fell, but afterward was not allowed to succeed to the colonelcy. He was second in command of an unsuccessful expedition to the Mohawk River in 1756 and in 1757 served with Lord Loudoun's abortive attempt on Louisburg.

Braddock's defeat had demonstrated the need for infantry properly trained in light infantry tactics, and in this need Gage saw his chance to achieve his long-coveted colonelcy. In December 1757 he was allowed to form a light infantry regiment, the Eightieth Foot, the first specifically light infantry battalion in the British army. Although even John Forbes, who commanded the successful 1758 expedition to capture Fort Duquesne, thought it a "most flagrant jobb," designed more to advance Gage's career than the army's efficiency, this was a mould-breaking move. From the first the Eightieth was intended to provide a better-disciplined and more reliable alternative to North American rangers; at least five of the Eightieth's first ensigns had learned their business under Robert Rogers. Woodland-trained infantry rapidly became a major arm of the British army in North America.

Unfortunately for Gage, his new command did not produce the expected opportunities for distinction. He was wounded again at Ticonderoga in 1758 while leading James Abercromby's advance guard. The following year, promoted brigadier general, he was sent to replace brigadier general John Prideaux in command of the British forces on Lake Ontario. Ordered to advance down the St. Lawrence toward Montreal, and so relieve the pressure on James Wolfe at Quebec, Gage decided that the French forces in his path were too strong for him to challenge. Jeffery Amherst was displeased, and in the final advance on Montreal Gage found himself in charge of the rearguard. Gage, however, was unlucky rather than incompetent: he was a popular officer and widely regarded as able, conscientious, and brave.

Promoted major general in 1761, he was the military governor of Montreal from 1760 until 1763. Here he proved himself as an administrator, becoming popular for his sensitive dealings with the French inhabitants and British settlers, while keeping his soldiery under strict control. When the outbreak of Pontiac's War discredited Amherst's Indian policy and sent him home in disgrace, Gage became the acting British commander in chief throughout North America. He took up his new duties in New York on 16 November and in November 1764 his tenure was confirmed.

In many ways he was an excellent choice. His attitude to Indians was ambivalent rather than (as in Amherst's case) contemptuous. It is true that on the ground his frontier policy was curiously passive, allowing provincial and local interests to nibble away at the principle of a fixed boundary line and a regulated adequate supply of trade goods; yet he never forgot the lessons of Pontiac's War, and much of his correspondence concerned questions of Indian policy. He was honest and tactful with colonists and managed his army effectively. Through his marriage in 1758 to Margaret Kemble of Brunswick, New Jersey, he had access to an important, if limited, circle of American contacts. More clearly than anyone else, he recognized the deteriorating, possibly hopeless, political situation in America. He also saw the utter inadequacy of the small garrisons he was able to put into New York and Philadelphia to deal with revolt; even the withdrawal from all but three of the western posts in 1768, and the garrisoning of Boston, would make little difference. On the other hand, he was curiously reticent about his insights in his official correspondence, although his private letters to his friend Lord Barrington, the secretary at war, reveal a deep disquiet. Though privately angry at American affronts to royal authority from 1765 onward, his principal aim was to stay out of the conflict.

He let his habitual caution drop after he went home on leave in 1773. In February 1774 George III consulted him about the proper response to the Boston Tea Party. The king understood him to recommend resolute action, though later Gage claimed he had been misunderstood. Perhaps he was misled by ministerial promises of adequate troops. Whatever really happened, Gage soon found himself with the governorship of Massachusetts and orders to enforce the Coercive Acts. In fact he quickly discovered that his writ did not run farther than Boston itself and that in the countryside thousands of militia were preparing to resist. Now at last he informed the home government that military action was out of the question, only to be overruled. On 14 April he received an unequivocal order from Dartmouth, the colonial secretary, to seize the principal leaders of the rebellion.

Gage knew perfectly well that any such attempt outside Boston was beyond his powers, but he could not

completely ignore his instructions. However, a swift strike against a strictly limited military objective might succeed and even satisfy London. He chose as his target Concord, a town only twenty miles away, where the militia were known to be collecting arms and stores. At the same time he wanted to keep most of his soldiers in reserve in Boston. He employed sixteen companies of grenadiers and light infantry—probably enough for safety but only a small proportion of his total force—and equipped them lightly for rapid movement. He tried (unsuccessfully) to keep the movement secret and gave the command to an officer unlikely to do anything rash. The expedition got under way at dusk on 18 April, but its purpose had already leaked out, perhaps betrayed by Gage's own wife. Next day Gage's forces skirmished with local militia at Lexington and marched on to Concord to destroy the stores. After a sharp battle with militia the column marched back, harassed all the way and suffering 30 percent casualties, until it met a relief column led by Lord Percy. No significant American leaders had been taken, and the long-feared general revolt was now a reality. By 19 April Gage found himself besieged in Boston.

On 25 May three major generals—William Howe, Henry Clinton, and John Burgoyne—arrived with reinforcements, which brought Gage's force to 6,500 men. This, however, was little more than a third of the force assembled outside the city. All Gage could do was to couple his declaration of martial law—again, in obedience to orders—with a last-ditch effort at conciliation. His proclamation, drawn up for him in extravagant language by the literary Burgoyne, offered a royal pardon to all who would lay down their arms, Samuel Adams and John Hancock excepted. When this failed Gage planned to seize Dorchester Heights, from which point artillery could command the outer harbor, making the city untenable to a garrison dependent on seaborne supplies and succor. However, he was forestalled. On 13 June, five days before the operation was to begin, the Americans learned of the British plan, and on the night of 16–17 June they moved to fortify the Charlestown peninsula on the other side of the harbor. The position was too far away to threaten the main anchorage, and in retrospect Gage might have been better off ignoring it and occupying Dorchester Heights as planned.

At the time, however, the Americans' move seemed to demand a response. Perhaps, too, Gage sensed from the arrival of the three major generals that the ministry meant to replace him: he needed to demonstrate speed and aggression and to score a dramatic success. Gage and his subordinate generals considered a landing on Charlestown Neck, behind the enemy position, but rejected it because of the state of the tides. That, combined with Gage's limited knowledge of his opponents' dispositions and powers of resistance, dictated a landing by Howe and

2,500 men at undefended Moulton's Point. From there Howe could combine a frontal attack with an envelopment between Breed's Hill and the Mystic River. Neither Gage nor Howe could have known that the ragged Americans, once behind their field fortifications on the hilltops, would fight with as much determination as they did. It cost the regulars three assaults and well over 1,000 casualties before they carried the American works. Between the losses and the need to garrison the captured hills, Dorchester Heights were effectively forgotten until March, when their occupation by George Washington forced Howe to evacuate the city.

Gage, being the man on the spot, was about to suffer for the truth of his own predictions. At the very time he was attacking Bunker Hill, Germain was beginning the process of dislodging him for showing insufficient energy and enthusiasm. On 25 September he was ordered home, although he was not formally deprived of the post of commander in chief until 18 April 1776. He handed over to William Howe on 10 October 1775 and arrived in London on 14 November. Thereafter he was punished by neglect. Although he remained the official governor of Massachusetts and kept his military rank, his income was sharply reduced. He was finally appointed to Amherst's staff in April 1781 and briefly given the task of organizing the Kent militia to resist French invasion. Only the fall of the North ministry allowed his promotion to full general on 20 November 1782. By then his health was in serious decline, and he died at his home at Portland Place, London, on 2 April 1787. He was buried at Firlie Place, Sussex, the family home.

Gage has never quite shaken off his reputation as the slow, blundering commander in chief responsible for the military humiliations of 1775. The truth, of course, is that the North ministry consistently failed to recognize the scale of the American rebellion, and saw Massachusetts as the heart of the trouble whereas in fact resistance infected every colony from Georgia to New Hampshire. Within Massachusetts, the trouble appeared to be primarily in Boston, not throughout the countryside. Consequently, the North administration ignored Gage's pleas to the contrary, gave him far too few troops, and ordered him to do too much with them. Gage must be partly to blame for not speaking up clearly and persistently long before 1774. Although he may have relied too much on a small, unrepresentative, lofty circle of American contacts—mainly his wife's wider family who, unlike that good lady, had little sympathy for the rebellion—he was well aware of the dangers. It is true that he did not keep up early friendly contacts with men such as Benjamin Franklin and Washington, whom he met on Braddock's expedition, but given the length of time concerned and the subsequent lack of contact, a cooling was perhaps inevitable. In any case, his principal task was military, not political, and the fundamental error was not his.

Although he had little or no opportunity to prove himself a brilliant field commander, his military decisions in 1775 were fundamentally sound, with the sole and serious exception of the failure to occupy Dorchester Heights. From first to last Gage was the unluckiest of officers.

GIAULT OR GAYAULT **SEE** *Boisbertrand, Rene Etienne Henri de Vic Gayout de.*

GALLOWAY, JOSEPH. (1731–1803). Prominent Loyalist. Maryland. A leading Philadelphia lawyer and vice president of the American Philosophical Society (1769–1775), he was a close friend of Franklin, who left his papers and letter books with him for protection when he went to England in 1764. Galloway sat in the Pennsylvania assembly from 1757 to 1774 and was speaker from 1766 to 1774. Galloway was an able colonial politician, and he never failed to advance the interests of his province and his class, that of the aristocratic merchants. He was in favor of changing the colonial government from the proprietary to the royal form and was an active Tory in the early part of the war. While in the first Continental Congress in 1774, he wrote a *Plan of a Proposed Union between Great Britain and the Colonies*. It was first accepted but later rejected. Galloway refused to be a delegate for the second Congress in 1775. That year he wrote *A Candid Examination of the Mutual Claims of Great Britain and the Colonies: With a Plan of Accommodation on Constitutional Principles*, in which he castigated the Continental Congress. His essentially conservative stand coupled with a rather cold and unsympathetic nature

made him extremely unpopular and, fearful of the Philadelphia mob, he retired to his country home, where Franklin tried unsuccessfully to change his Loyalist views.

Galloway joined Howe in the British advance through New Jersey in December 1776. Subsequently, he served with consummate skill as overlord of civil government in Philadelphia and southeastern Pennsylvania during the British occupation from the autumn of 1777 to the early summer of 1778. He withdrew with the British and the next year went to England, where he remained for the rest of his life. In 1779 he was examined by the House of Commons on the British conduct of the war, and he charged Lord Howe with incompetence. He also published pamphlets on this subject. He continued to explore the possibilities of a reconciliation of the colonies with the crown based on a written constitution and believed that America would be better off with a continued connection with the mother country. The Pennsylvania assembly in 1788 charged Galloway with high treason and ordered the sale of his estates. His petition to return in 1793 was rejected. He wrote a number of books and pamphlets, among them *Letters to a Nobleman, on the Conduct of the War in the Middle Colonies, 1779* (1779), *Historical and Political Reflections on the American Rebellion* (1780), and *Cool Thoughts on the Consequences to Great Britain of American Independence*. (1780).

As an exile in London, he brought all of his vengeful pettiness to the campaign to saddle Sir William Howe with blame for the British failure to crush the Revolution. Galloway thereby help ensconce in power a North ministry increasingly dependent on a false appraisal of the conflict in North America.

GALLOWAY'S PLAN OF UNION.

28 September 1774. Joseph Galloway, a Pennsylvania delegate to the first Continental Congress, proposed solving the imperial crisis by asking Parliament to give the American colonies more control over their internal affairs, an arrangement akin to the dominion status Britain would grant to Canada in the nineteenth century. Galloway

wanted to create an intercolonial legislature, called a grand council, whose members would be chosen by each colony for a three-year term. The council would have authority to regulate commercial, civil, criminal, and police affairs when more than one colony was involved. The council would be chaired by a royally appointed president-general, who would serve at the king's pleasure and who could veto its acts. Although Galloway would allow either the council or Parliament to initiate legislation affecting the colonies, and required that both bodies approve such measures before they took effect, he clearly intended for the council to be "an inferior and distinct branch of the British legislature" (Jensen, p. 812). He argued that "in every government . . . there must be a supreme legislature" (p. 810); for him, it was Parliament. The plan drew the support of conservative delegates who saw it as a means of offsetting Congress's vote on 17 September to endorse the more militant Suffolk Resolves. The plan was defeated by a single vote, six colonies to five. Had it been adopted, the course of the resistance to imperial authority would have been significantly altered.

GALVAN, WILLIAM. Volunteer from Dominica. He arrived in South Carolina with munitions from Beaumarchais, for which the state was held liable. He served as a lieutenant in the Second South Carolina Regiment in 1777 but resigned when he was not allowed to furlough northward for military action. On 19 March, Congress rejected his request to raise an independent corps. It also rejected on 3 April his request to be sub-inspector of a battalion of blacks to be raised in the South and on 28 December turned down his application for lieutenant colonel. Congress finally relented in January 1780 to commission him as major and employ him as an inspector. Luzerne intervened with Washington on his behalf and the latter ordered him to Cape Henry in May to await the possible arrival of the French fleet. He returned to serve in Lafayette's light infantry in September 1780. Lafayette was initially satisfied with Galvan but soon found him "very unpopular among officers" (Lafayette, *Papers*, 3:27). Washington removed him for "bad health" and Lafayette sent him to obtain artillery for the Virginia campaign of the spring of 1781.

Galvan received a commendation from Lafayette for his actions at the Battle of Green Spring on 6 July 1781. On 14 July, Lafayette gave Galvan permission, for reasons of ill health, to return to the main army. He later served as a member of the court-martial trying Major General Robert Howe in December 1781, and Washington signed a certificate of service for him on 31 December 1781. He committed suicide on 24 July 1782 because of a romantic rejection by an American widow.

GÁLVEZ, BERNARDO DE. (1746–1786). (Visconde de.) Governor of Spanish Louisiana and Florida. Born in Macharaviaya, Spain, of a prominent family at the royal court, he served as a lieutenant against the Portuguese (1762); was promoted to captain and served in New Spain against the Apaches (1769–1770) before being stationed in Algiers (1775); and was promoted to lieutenant colonel, serving at the military school at Ávila. He became acting governor and intendant of Louisiana in January 1777. During the next two years, before Spain's entry into the war, he attempted to weaken the British in his area. He supported the Patriot supply agent Oliver Pollock by providing sanctuary for James Willing in his raids on British West Florida and by seizing British ships that had been engaged in a profitable

contraband trade. When Spain entered the war, Gálvez took military action. In 1779 he captured the British river posts of Manchac, Baton Rouge, and Natchez. He took Mobile on 14 March 1780 and forced the surrender of Pensacola during 8–10 May 1781.

He returned to Spain in 1783–1784 to consult on future Spanish policy in the Floridas and the Louisiana territory. Promoted to major general, given his title of nobility, and appointed captain-general of Louisiana and the Floridas, he returned to America and had a prominent part in subsequent diplomatic negotiations with the United States. He became captain-general of Cuba and in 1786 he succeeded his father as viceroy of New Spain while retaining his previous posts. Only a few months after his fortieth birthday, he became ill of a fever and died in Tacubaya, Mexico.

GAMBIER, JAMES. (1723–1789). British admiral. Gambier, the grandson of a Huguenot refugee, became a naval lieutenant in 1743, a captain in 1747, and served at Louisburg (1758), Guadeloupe, Martinique, and Quiberon Bay (1759). In 1770 he was the commodore commanding the North American station, after which he held administrative posts. Rising to rear admiral in 1778, he was Richard Lord Howe's second in command at New York, where he supervised refitting and repairs. He was commander in chief from Howe's departure until John Byron arrived on 1 October, and from Byron's departure until Thomas Graves took over in 1779. Before he sailed for home on 6 April, Gambier had shown his inability to cope with a senior wartime command. He rose to vice admiral in 1782 and was commander in chief at Jamaica in 1783–1784. He died at Bath on 8 January 1789. Admiral Lord Gambier was his nephew.

GAMBIER, JAMES, BARON. (1756–1833). British admiral and evangelist. Nephew of James Gambier and son of the lieutenant governor of the Bahamas, Gambier was born in New Providence (modern Nassau) on 13 October 1756. He went to sea at an early age and on 12 February 1777 became a lieutenant on the American station. In 1778 he was in command of the bomb ketch *Thunder* when it was captured by Estaing. Promptly exchanged, on 9 October he was made post in the *Raleigh* (thirty-two guns). In her he took several prizes, participated in the May 1779 expedition to relieve Jersey, and in May 1780 was present at the fall of Charleston. He served in the French wars of 1793–1815, being awarded a peerage in 1807 and rising to admiral of the fleet in 1830. A devout Anglican evangelical, he zealously cared for the spiritual needs of his crews and in retirement became first president of the Church Missionary Society.

GANSEVOORT, PETER. (1749–1812). Continental officer. New York. Born in Albany, New York, in 1749, Gansevoort became major of the Second New York Regiment on 30 June 1775 and was with Montgomery’s wing of the Canada invasion; he was present at the victory at St. Jean and the defeat at Quebec. On 19 March 1776 he was promoted to lieutenant colonel and placed in command of Fort George. He became colonel of the Third New York on 21 November 1776 and subsequently distinguished himself in the defense of Fort Stanwix (or Fort Schuyler) against St. Leger’s expedition in June–September 1777. For this he not only received the thanks of Congress but most thoroughly deserved them.

Temporarily in command at Albany in October 1777, Gansevoort returned to Fort Stanwix, which he

commanded until November 1778. From there, Washington ordered him on to Schenectady. The following year, Gansevoort conducted a number of small expeditions against pro-British Indians.

He was the commander of the Saratoga garrison from the fall of 1780 into the following year. On 26 March 1781 he was appointed brigadier general of militia and retired from service, being promoted to major general of militia the following year. In the ensuing twenty years he devoted himself to the lumber business in Saratoga County, New York. In 1790 he became sheriff of Albany. In 1802 Jefferson appointed him military agent for the Northern Department, which mostly involved the movement of supplies. On 15 February 1809 he was commissioned brigadier general in the U.S. Army with responsibility for reviewing courts-martial sentences. In 1811 he presided at the court-martial that found General James Wilkinson innocent of treason. He died at home on 2 July 1812.

GARTH, GEORGE. (1738?–1819). British general. The son of John Garth, a member of Parliament, he entered the First Regiment of Footguards in September 1755 and was made colonel in February 1779. As a “local” brigadier general he commanded a division in the Connecticut Coast Raid, July 1779, and was second-in-command to Governor William Tryon. Sailing from New York to take command in Georgia, he was captured by the French in October 1779. After being exchanged he was promoted to major general in 1782 and served in the West Indies. He became a full general in 1801.

GASPÉE AFFAIR. 9 June 1772. The armed revenue schooner *Gaspée*, stationed in Narragansett Bay, Rhode Island, to support the customs commissioners, was attacked and burned on the night of 9 June 1772 after having run aground on what is now called Gaspée Point,

seven miles below Providence, while chasing another vessel. Despite a £500 reward offered for information, the British were never able to uncover sufficient evidence to try the culprits. The sixty-four attackers had been organized by John Brown and led by Abraham Whipple.

Another British vessel named the *Gaspée* was an armed brigantine. Isaac Coffin served aboard her, under Lieutenant William Hunter, in 1773. An ensign and twelve marines of her complement took part in the unsuccessful defense of St. Johns, Quebec, in September–November 1775, and became prisoners there. The ship was seized by the Americans after the fall of Montreal on 13 November.

GATES, HORATIO. (1728–1806). Continental general. England. Horatio Gates was the son of Robert Gates, a Thames waterman, and Dorothy Reeve, housekeeper of Peregrine Osborne, second Duke of Leeds. Gates' godfather, Horace Walpole, was only eleven years old when he assumed this responsibility. Following the duke's death, Robert and Dorothy Gates entered the service of Charles Powlett, third Duke of Bolton, at Greenwich. Through Bolton's patronage, Robert Gates was appointed tidesman in the customs service, and later became surveyor of customs at Greenwich. In 1745, Bolton purchased for young Horatio Gates a commission as ensign in the Twentieth Regiment. In the same year, Gates was appointed a lieutenant in a regiment that Bolton was privately raising. Although he lost this position when Bolton's regiment was reduced in 1746, he was able to return to his ensigncy in the Twentieth Regiment. During the War of the Austrian Succession, he served as regimental adjutant in Germany. In November 1748, following the treaty of Aix-la-Chapelle, he was placed on half pay. Seeking new employment, he volunteered in 1749 to serve as an aide-de-camp to Colonel Edward Cornwallis, governor of Nova Scotia. He helped establish the naval base at Halifax and secured appointment as captain-lieutenant in Colonel Hugh Warburton's Forty-fifth Regiment. In the summer of 1750, he was promoted to the rank of captain.

THE SEVEN YEARS' WAR

Facing slight prospects for further advancement at Halifax, Gates returned to England in January 1754. On 13 September, with the assistance of Cornwallis, he sold his captaincy in the Forty-fifth Regiment and purchased a captain's commission in the Fourth Independent

Horatio Gates. Continental General Horatio Gates was outspokenly in favor of a decentralized republican government for his new country. He is depicted here in a portrait (c. 1782) by James Peale, after a painting by Charles Willson Peale. NATIONAL PORTRAIT GALLERY, SMITHSONIAN INSTITUTION/ART RESOURCE, NY.

Company of Foot, doing duty in New York. He returned to Nova Scotia, where, on 20 October 1754, he married Elizabeth Phillips. They had one child, a son named Robert. Upon the outbreak of the Seven Years' War in 1755, Gates and his company joined Major General Edward Braddock's army in Pennsylvania. Gates was with Braddock on 9 July 1755, when Braddock's army was ambushed near Fort Duquesne. Badly wounded, Gates spent a few months recuperating at Lancaster, and then Philadelphia. In December he sailed with his company to New York, and in the summer of 1756 took the field in the Mohawk Valley. For the next two years he did garrison duty on the New York frontier.

In 1759, with the assistance of his mentor, Edward Cornwallis, Gates was appointed brigade major to Brigadier General John Stanwix, commandant at Fort Pitt (formerly Fort Duquesne). When Brigadier General Robert Monckton replaced Stanwix in May 1760, Gates was appointed Monckton's brigade major. On 20 May 1761 Monckton was appointed governor of New York, and Gates accompanied him to his new post. During the summer and fall, Gates assisted Monckton in organizing an expedition

against the French West Indian island of Martinique. In February 1762 the island's key bastion of Fort Royal capitulated, and although Gates had not taken part in the fighting, Monckton gave him the honor of carrying the news to England. On 24 April Gates was promoted major in his old regiment, the 45th, now commanded by Edward Boscawen and still posted in Nova Scotia. He attempted without success to become adjutant general or quartermaster general under Sir Jeffery Amherst in New York.

When the Seven Years' War ended in 1763, Gates began a frustrating decade of thwarted ambition and declining morale. Losing his patrons, he had difficulty advancing in the peacetime army. On 8 November 1764 he was promoted major of the Sixtieth, or Royal American, Regiment, stationed in Quebec. After maneuvering without success to secure promotion to lieutenant colonel, he exchanged his major's commission in the Royal Americans for a majority on half pay in the Seventy-fourth Regiment. In despair, he resigned from the army on 10 March 1769, and sought consolation in drinking and gambling. Overcoming these vices, he flirted with Methodism and embraced radical politics. While in New York, he was befriended by liberal young men of the Whig Club, and he now socialized with "friends of America" in England such as Monckton, Benjamin Franklin, and Charles Lee. Soon he was being called a "red hot Republican." Although this characterization was not entirely accurate, he soon was contemplating a move to America. In August 1772 he brought his family to Virginia, and in March 1773 bought a plantation of 659 acres in the lower Shenandoah Valley, near Shepherdstown. Naming his new home "Traveller's Rest," he settled into a life of substantial middle-class comfort. His only public duties were justice of the peace and lieutenant colonel of Virginia militia.

THE WAR FOR AMERICA

Over the next two years, Gates took no active part in the escalating quarrel between Britain and her colonies. However, he grandiosely asserted in public that he was willing to risk his life to preserve the liberty of the Western world. The Continental Congress, desperate for officers to command its army at Boston in 1775, was aware of Gates's politics and reputation in military administration. Hence, on 17 June, the legislators appointed him adjutant general with the rank of brigadier general. He joined General George Washington at Cambridge on 9 July, and in the following months worked diligently to bring order and discipline to the fledgling Continental Army. While at Boston, he became a vocal advocate of militia armies, believing that America's citizen-soldiers would overcome martial deficiencies through high political motivation. He argued in favor of a cautious, defensive strategy, which he believed was adapted to the militiamen's willingness to

fight so long as they were ensconced behind fortifications. He also was outspokenly in favor of independence from Britain and adoption of a decentralized republican government for his new country. An ambitious man, he cultivated friendships with influential New England congressmen such as John Adams, who agreed with his politics and might advance his military career. After the British evacuated Boston in March 1776, he accompanied Washington to New York.

On 16 May 1776, with the assistance of his friends in Congress, Gates was promoted major general, and a month later was given command of an American army that had invaded Canada the year before. Upon his arrival at Albany to assume his new command, he was dismayed to learn that his army had retreated from Canada into New York, where Major General Philip Schuyler was in charge. Since both generals asserted control over these troops, they agreed that Congress must clarify the command problem—which it did in favor of Schuyler on 8 July. Gates accepted this decision with scant grace, but was somewhat mollified when Schuyler appointed him commander of American troops at Fort Ticonderoga. During the summer and fall of 1776, Gates worked in close harmony with Schuyler and Benedict Arnold to repel a thrust from Canada by Major General Guy Carleton up Lake Champlain toward Fort Ticonderoga. On 2 December he led six hundred Continentals to Washington's assistance on the Delaware River. Falling ill, he left the army and traveled to Philadelphia, where he took command of American troops for the winter.
