GROSSLAGE HERRENBERG

The southeastern end of this *Grosslage* abuts the western edge of the Rheingau, but all of the *Einzellagen* are located in the north, between Dörscheid and Kaub, just downstream from Bacharach on the opposite bank.

GROSSLAGE LAHNTAL

There are no outstanding villages, vineyards, estates, or growers in this *Grosslage*, which has been in a state of decline for years.

GROSSLAGE LORELEYFELSEN

Some fine Riesling vineyards set amid dramatic scenery that includes the famous “Loreley” rock.

GROSSLAGE MARKSBURG

The vineyards on the Mittelrhein side of Koblenz have mostly been overtaken by urban sprawl, but one of the best remains in the *Ortsteil* of Ehrenbreitstein. The others in this *Grosslage* are located to the north and south of the city. There is a natural similarity between these wines and those of the lower Mosel.

GROSSLAGE PETERSBERG

The same area as *Bereich* Siebengebirge. There are no outstanding villages, vineyards, estates, or growers, although good wines are made in the Drachenfels vineyard of Königswinter.

GROSSLAGE SCHLOSS REICHENSTEIN

There are no outstanding villages, vineyards, estates, or growers in this *Grosslage* that faces the Rheingau across the river and neighbors the Nahe to the south, but good wines are made in the village of Niederheimbach, especially the vineyard of Froher Weingarten.

GROSSLAGE SCHLOSS SCHÖNBURG

The reputation of the fine Riesling vineyards in this *Grosslage* rests on two growers.

ENGELHÖLL

✓ **Vineyard Bernstein Grower** *Lanius-Knab*
OBERWESEL
✓ **Vineyard Römerkrug Growers** *Goswin Lambrich*

GROSSLAGE SCHLOSS STAHLECK

There is perhaps more potential here, in the south-facing vineyards that belong to tributaries of the Rhine, than in the east-facing vineyards on the great river itself. Yet it is wines from Hahn and Posten at Bacharach, with both easterly and southerly aspects, that excel.

BACHARACH

✓ **Vineyard Hahn Grower** *Toni Jost-Habnenhof* • **Vineyard Kloster Fürstental Grower** *Ratzenberger* • **Vineyard Posten Grower** *Fritz Bastian* • **Vineyard Wolfshöhle Grower** *Ratzenberger*

SIEBENGEIRG

A single-*Grosslage Bereich* covering the vineyards of Königswinter Siebengebirge.

CERTIFIED ORGANIC PRODUCERS

Dr. Randolph Kauer (Bacharach-Steeg)

Hof Wildeck (Urbach); Joachim Scherer (Manubach)

MOSEL

The greatest Rieslings grown along the Mosel River have an excruciating, but delightful, acidity that can only be relieved through a knife-edge balance of sweetness. Unlike in the warmer Rhine regions, the Riesling grape is at its best here in hot vintages.

IF ANY GRAPE IS INTRINSICALLY RACY, it is the vigorous Riesling; and if any region can be singled out for emphasizing this raciness, it must be Mosel. Grown on the steepest, slaty slopes, Riesling combines a relatively high acidity with an irrefutable suggestion of lightness and elegance. But a fine Mosel is never thin, as these wines have surprisingly high extract levels that, together with the acidity, intensify the characteristics of flavor.

In even the hottest vintages, the best *Auslesen* and *Beerenauslesen* remain racy, while those from the other regions appear fat and overblown by contrast. Even the most modest wines retain a freshness and vitality in sunblessed years that will be lacking in those from the warmer regions.

THE GOOD DOCTOR

There are many great vineyards in this region, but none so famous as the legendary Bernkasteler Doctor, which produces Germany's most expensive wine. The story is that Boemund II, Archbishop of Trier in the 14th century, was so ill that his doctors could do nothing for him. A winegrower from Bernkastel recommended the restorative powers of the wine from his vineyard. Boemund drank some, made a miraculous recovery, and declared "The best doctor grows in this vineyard in Bernkastel." More recently, the Doctor vineyard has been the subject of a lengthy court case. The original vineyard comprised 3½ acres (1.35 hectares), but in 1971 the new German wine law proscribed a ban on all vineyards of less than 12½ acres (5 hectares). The authorities planned to expand the Doctor almost equally to the

	Doctor (ex-Graben)	J. Lauerburg ⅓ acre (0.13 ha)
	Doctor (Original)	Deinhard 2⅓ acres (1.06 ha)
	Doctor (ex-Badstube)	Dr. H. Thanisch 4⅓ acres (1.81 ha)
	Alte Badstube am Doctorberg	Hl Geist-Armenspende or Holy Spirit Charity Fund ⅓ acre (0.26 ha)

THE BERNKASTELER DOCTOR VINEYARD TODAY

The red outline encloses the area of the original vineyard (yellow) and those areas finally adopted in 1984 (light and medium green). The area excluded in 1984 is pink.

west (into the *Einzellage* Graben) and to the east (into an area classified merely as *Grosslage* Badstube). This enabled 13 different producers to make and sell Bernkasteler Doctor, whereas only three owners of the true Doctor vineyards had existed before. It is not surprising that the owners of the original Doctor vineyard felt strongly enough to take their objections to court. The case continued until finally, in 1984, after an exhaustive study had

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

This region follows the Mosel River, as it meanders for 150 miles (250 km) from Koblenz south to the border with France. It includes the vineyards of two major tributaries, the Saar and the Ruwer, that flow into the Mosel from the south.

CLIMATE

The moderate rainfall and rapid warming of the steep and protective valley sides provide ideal conditions for vines to flourish and produce grapes with high acidity, even when late harvested.

ASPECT

The Mosel has more loops and bends than any other German river, and most of the vines grow at an altitude of between 330 and 1,150 feet (100 and 350 meters). This valley provides slopes of every aspect, with many that are spectacularly steep, boasting gradients as high as 70 degrees.

SOIL

Soils in this region vary from sandstone, shell-limestone, and red marl in the upper Mosel, to Devon slate in the middle Mosel, Saar, and Ruwer, and clay slate and gray stony soil in the lower Mosel. Alluvial sand and gravel soils are also found in lower sites. Classic Riesling sites are slaty; the Elbling prefers limestone.

VITICULTURE AND VINIFICATION

Many of the greatest German wines come from the highest and steepest

vineyards in this area, most of which are situated in the upper reaches of the valleys. In these notoriously difficult sites, each vine has to be tied to its own eight-foot wooden stake, and the slate soil that is washed down to the bottom of the slope by the winter rains has to be carried back up every year. Tending the vines is thus unavoidably labor-intensive and this, combined with a longer winter than experienced elsewhere in Germany, accounts for the higher prices asked for fine Mosel wines. The early onset of winter causes fermentation to take place at cool temperatures, and when the wines are bottled early they retain more carbonic gas, which emphasizes the crisp, steely character of the Riesling grape. There are about 13,750 growers owning very small plots of land. The regional cooperative in Bernkastel-Kues alone processes one-fifth of the entire crop, but much is sold on to the commercial wineries, which sell 60 percent of the total wine produced, whereas the cooperatives sell just 13 percent and this figure is declining. On the other hand, growers and estates account for 28 percent of sales, and are increasing their share.

GRAPE VARIETIES

Primary varieties: Müller-Thurgau, Riesling
Secondary varieties: Auxerrois, Bacchus, Elbling, Kerner, Optima, Ortega, Spätburgunder

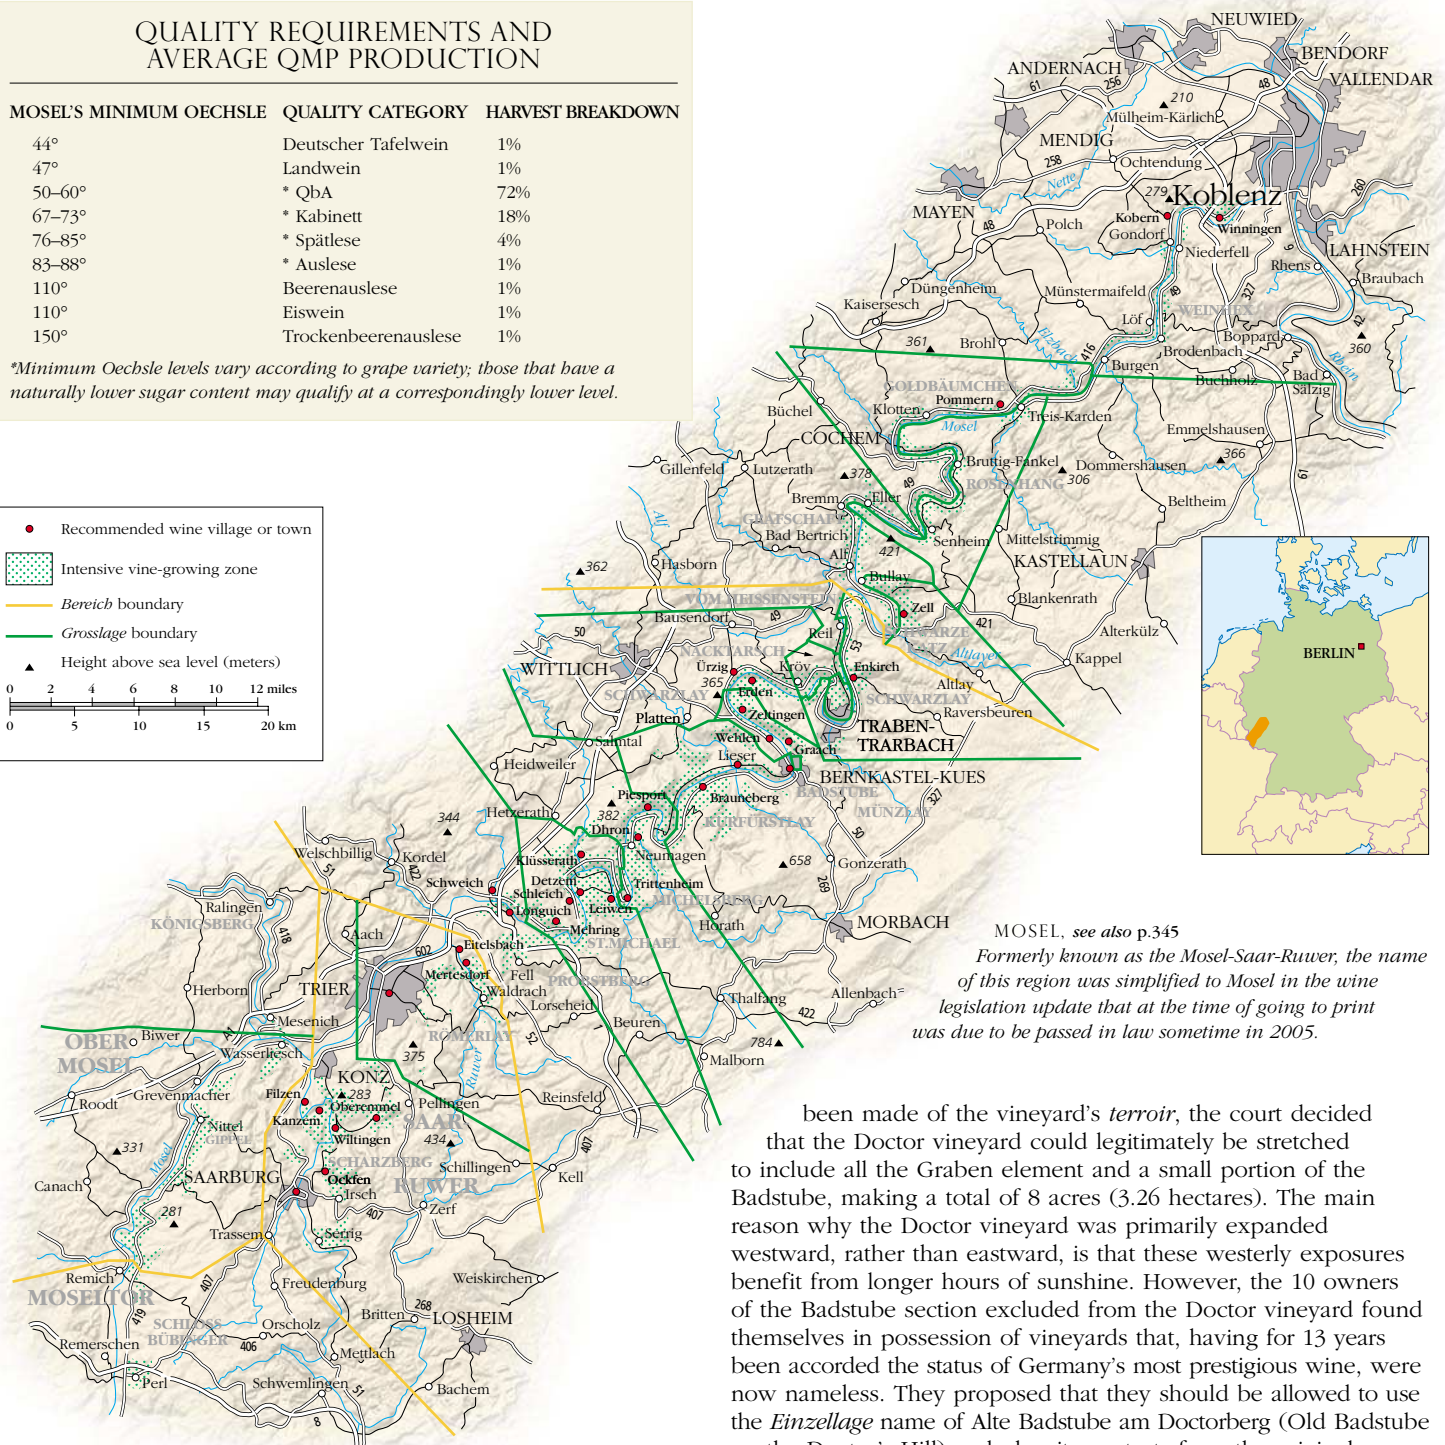

BERNKASTEL FROM THE DOCTOR VINEYARD

Bernkasteler Doctor wines are some of Germany's most prestigious and expensive. Bernkastel lies in the *Badstube* *Grosslage*.

QUALITY REQUIREMENTS AND AVERAGE QMP PRODUCTION

MOSEL'S MINIMUM OECHSLE	QUALITY CATEGORY	HARVEST BREAKDOWN
44°	Deutscher Tafelwein	1%
47°	Landwein	1%
50–60°	* QbA	72%
67–73°	* Kabinett	18%
76–85°	* Spätlese	4%
83–88°	* Auslese	1%
110°	Beerenauslese	1%
110°	Eiswein	1%
150°	Trockenbeerenauslese	1%

*Minimum Oechsle levels vary according to grape variety; those that have a naturally lower sugar content may qualify at a correspondingly lower level.

MOSEL, *see also* p.345
 Formerly known as the Mosel-Saar-Ruwer, the name of this region was simplified to Mosel in the wine legislation update that at the time of going to print was due to be passed in law sometime in 2005.

THE REGION AT A GLANCE

<p>Area under vine 25,079 acres or 10,149 ha (decreasing)</p> <p>Average yield 395 cases/acre or 90 hl/ha (decreasing)</p> <p>Red wine 2% (increasing)</p> <p>White wine 98% (decreasing)</p> <p>Dry & semidry wine 15% Trocken, 11% Halbtrocken</p>	<p>Most important grape varieties 55% Riesling (increasing), 18% Müller-Thurgau (decreasing), 8% Elbling (decreasing), 7% Kerner (decreasing), 12% Others</p> <p>Infrastructure Bereiche 6; Grosslagen 19; Einzellagen 523</p> <p>Note <i>The vineyards of Mosel straddle 192 Gemeinden (communes), the names of which may appear on the label.</i></p>
--	---

been made of the vineyard's *terroir*, the court decided that the Doctor vineyard could legitimately be stretched to include all the Graben element and a small portion of the Badstube, making a total of 8 acres (3.26 hectares). The main reason why the Doctor vineyard was primarily expanded westward, rather than eastward, is that these westerly exposures benefit from longer hours of sunshine. However, the 10 owners of the Badstube section excluded from the Doctor vineyard found themselves in possession of vineyards that, having for 13 years been accorded the status of Germany's most prestigious wine, were now nameless. They proposed that they should be allowed to use the *Einzellage* name of Alte Badstube am Doctorberg (Old Badstube on the Doctor's Hill) and, despite protests from the original owners, this was accepted by officials.

Not only was the expansion of the *terroir* open to question in this case, but the general directive that a single vineyard should be of a stipulated minimum size was sheer folly and illustrative of one of the fundamental flaws in the 1971 German wine law (*see also* p.346). It would have been much more effective to have amended the law to allow any genuine vineyard name the right to appear in small print on a label, and to establish a register of perhaps 100 or more (but certainly not 2,600) truly great vineyards that would have the right to appear on the label in a dominant size of print with an appropriate designation of elevated status. If the greatest German wines could trade on a reputation similar to that of the finest wines of France, the Mosel would probably have more "grands crus" than any other region, although the Rheingau would give it a good fight.

THE APPELLATIONS OF MOSEL

BEREICH BERNKASTEL

This covers the entire Mittelmosel, encompassing all of the river's most famous villages and towns, and most of its best vineyards. Much wine is sold under this *Bereich* appellation, but unfortunately most of it is disappointing.

GROSSLAGE BADSTUBE

Badstube must be the grandest *Grosslage* in Germany, encompassing as it does the most famous of all *Einzellagen*, the Doctor vineyard, as well as the almost equally well-known Lay, the superb Graben, and six other good sites. The quality of even the surplus wine from such great vineyards is so high that it is practically impossible to find poor Badstube, and the *Grosslage* wines are especially good in relatively poor years when grapes from the Doctor vineyard fail to achieve *Kabinett* level and are included in these blends.

GROSSLAGE BLEND

- ✓ **Grower** *Selbach-Oster*

BERNKASTEL

- ✓ **Vineyard Doctor Growers** *Wwe. Dr. H. Thanisch-Erben Thanisch, Wegeler-Gutsbaus Bernkastel* • **Vineyard Alte Badstube am Doctorberg Grower** *Dr. Pauly-Bergweiler/Peter Nicolay* • **Vineyard Lay Growers** *Dr. Loosen*

GROSSLAGE KURFÜRSTLAY

This includes the lesser wines of Bernkastel and the superior wines of Brauneberg, the best of which come from the fabulous vineyards on the south-southeast-facing Juffer hill that rises from the river opposite the village of Brauneberg. Its wines are remarkably racy considering their exceptional fullness of body and some prefer them to those of the Doctor, although I find it impossible to choose, and delight in their differences.

BRAUNEBERG

- ✓ **Vineyard Juffer Growers** *Max Ferd Richter* • **Vineyard Juffer Sonnenubr Growers** *Fritz Haag, Reichsgraf von Kesselstatt, Schloss Lieser, Max Ferd Richter, Paulinsbof* • **Vineyard Mandelgraben Grower** *Markus Molitor*

MÜHLHEIM

- ✓ **Vineyard Helenenkloster Grower** *Max Ferd Richter*

WINTRICH

- ✓ **Vineyard Obligsberg Grower** *Reinhold Haart*

GROSSLAGE MICHELBERG

There are some great wines made in the village of Piesport in the Michelsberg *Grosslage*, but the thin, characterless Piesporter Michelsberg is not one of them. It is a *Grosslage* wine that comes not from steep, slaty slopes such as Goldtröpfchen or Domherr, but from very high-yielding, flat, alluvial land. No great grower would contemplate cultivating such fertile soil, the low-quality wines of which have unfairly debased the Piesporter village name to such a degree that its wine in the industry has become known as *Piss-pot*. The great wines of Trittenheim have not had to suffer from such great indignities, and the village of Dhron especially should not be forgotten for its produce.

PIESPORT

- ✓ **Vineyard Domberr Growers** *Kurt Hain, Reinhold Haart* • **Vineyard Goldtröpfchen Growers** *Reinhold Haart, Kurt Hain, Grans-Fassian, Weller-Lehnert, Sankt Urbans-Hof, Vereinigte Hospitien* • **Vineyard Treppchen Grower** *Weller-Lehnert*

TRITTENHEIM

GROSSLAGE MÜNZLAY

The three villages in this *Grosslage* may lack the fame of Bernkastel and the popularity of Piesport, but they possess truly superb Mosel vineyards and boast an incomparable number of great growers and estates.

GRAACH

- ✓ **Vineyard Domprobst Growers** *Kees-Kieren, S. A. Prüm, Willi Schaefer, Philipps-Eckstein, Dr. Weins-Prüm* • **Vineyard Himmelreich Growers** *Kees-Kieren, Markus Molitor (red), J. J. Prüm, S. A. Prüm, Max Ferd Richter, Selbach-Oster, Weins-Prüm, Philipps-Eckstein* • **Vineyard Josephsbof Grower** *Reichsgraf von Kesselstatt*

WEHLEN

- ✓ **Vineyard Sonnenubr Growers** *Dr. Loosen, J. J. Prüm, S. A. Prüm, Dr. Weins-Prüm, Wegeler-Gutsbaus Bernkastel*

ZELTINGEN

- ✓ **Vineyard Sonnenubr Growers** *Markus Molitor, Selbach-Oster* • **Vineyard Himmelreich Grower** *Selbach-Oster*

GROSSLAGE NACKTARSCH

The labels of this *Grosslage* are collectors' items because of the naked bottoms featured on many of them—reflecting not only the name but also the quality of most of the wine.

GROSSLAGE PROBSTBERG

There are no outstanding villages or vineyards, except at Longuic and Sweich, that face each other at the confluence with the Ruwer at Eitelsbach.

GROSSLAGE ST. MICHAEL

Popular but generally overrated wines come from Klüsserath these days, although the wonderful wines of Kirsten and Franz-Josef Regnery are bringing back the glory days. Detzem, Mehring, and Schleich all have good potential, but it is Leiwen that truly excels, especially in its steepest and sunniest vineyards of Laurentiuslay and Klostergarten, which stretch up above the village, exposing their superb southwesterly aspect.

KLÜSSERATH

- ✓ **Vineyard Bruderschaft Growers** *Kirsten, Franz-Josef Regnery*

LEIWEN

- ✓ **Vineyard Klostergarten Growers** *Heinz Schmitt, St. Urbansbof, Josef Rosch, Carl Loewen* • **Vineyard Laurentiuslay Growers** *Carl Loewen, Grans-Fassian, Josef Rosch*

MEHRING

- ✓ **Vineyard Blattenberg Grower** *Heinz Schmitt*

GROSSLAGE SCHWARZLAY

Erden and Ürzig are two of the Mittelmosel's most underrated villages. Their spectacular vineyards cling to clifflike slopes in defiance of gravity and are capable of producing rich, racy wines of rapierlike acidity, stunning intensity, and immaculate style.

BURG

- ✓ **Vineyard Wendelstück Grower** *Paul Knod*

ENKIRCH

- ✓ **Vineyard Batterieberg Grower** *Immich-Batterieberg* • **Vineyard Steffensberg Grower** *Immich-Batterieberg*

ERDEN

- ✓ **Vineyard Treppchen Growers** *Jos Christoffel Jun, Job Jos Christoffel Erben, Stephan Ehlen, Dr. Loosen, Mönchbof-Robert Eymael, Dr. Weins-Prüm, Kees-Kieren, Andreas Schmitges, Klaus Lotz* • **Vineyard Prälat Growers** *Dr. Loosen, Mönchbof-Robert Eymael, Dr. Pauly Bergweiler/Peter Nicolay, Andreas Schmitges*

TRARBACH

- ✓ **Vineyard Schlossberg (red) Grower** *Markus Molitor*

ÜRZIG

- ✓ **Vineyard Würzgarten Growers** *J. J. Christoffel Erben, Jos Christoffel Jun, Dr. Loosen, Merkelbach, Mönchbof-Robert Eymael*

WOLF

- ✓ **Vineyard Goldgrube Grower Vollenweider**

GROSSLAGE
VOM HEISSEN STEIN

There are two growers who excel in this otherwise modest *Grosslage*.

PÜNDERICH

- ✓ **Vineyard Marienburg Grower Clemens Busch** ☉

REIL

- ✓ **Vineyard Goldlay Grower Paul Knod**

BEREICH BURG
COCHEM

Formerly Bereich Zell, this covers the lower Mosel and is generally regarded as an area of unexciting wines, yet there are some good ones to be found.

GROSSLAGE GOLDBÄUMCHEN

There are few outstanding villages, vineyards, or growers in this *Grosslage*, although good wines are made in the village of Eller at Pommern.

GROSSLAGE GRAFSCHAFT

Good wines are made in the villages of Alf and Bullay, but the Riesling of Neef stands out from the rest.

GROSSLAGE ROSENHANG

This is a promising *Grosslage*, which winds along the right bank of the Mosel downstream from *Grosslage* Schwarze Katz.

GROSSLAGE SCHWARZE KATZ

The village of Zell has some good *Einzellagen*, with officially classified slopes that can make fine and aromatic Riesling, but it is best known for its *Grosslage* label that carries the famous Schwarze Katz “Black Cat” logo. In 1863, three merchants from Aachen were selecting wines in cellar in Zell, but could not decide which of three casks to buy. When the grower tried to take a second sample of one of the wines, his black cat leaped on to the barrel, arched its back, and hissed. The merchants thought that the cat was perhaps defending the best wine, thus purchased it, returning each year for what they dubbed the “Schwarze Katz” wine. As this story spread, so it became customary for other producers in Zell to label their best wines with the insignia of the black cat, but since Merl and Kaimt have been merged with Zell, it has become merely a blended *Grosslage* wine.

GROSSLAGE WEINHEX

This *Grosslage* extends over both banks of the Mosel and into the suburbs of Koblenz, encompassing some very steep slopes planted entirely with Riesling. Three growers coax some world-class Riesling from this tourist-unfashionable end of the river.

WINNINGEN

- ✓ **Vineyard Ublen Growers Heymann-Löwenstein, Knebel, Freiberr von Heddersdorf • Vineyard Rötigen Growers Knebel, Freiberr von Heddersdorf, Heymann-Löwenstein**

PREMIUM WHITES WITHOUT VINEYARD
DESIGNATION

- ✓ **Growers Heymann-Löwenstein** (Schieferterrassen, von blauem Schiefer)

BEREICH MOSELTOR

This is the most southerly *Bereich* on the Mosel. It encompasses the upper reaches of the river that flows from its source in the Vosges mountains of France through Luxembourg and into Germany, hence the name Moseltor or “Mosel gate.” Its wines are very light and acidic, and of little significance except to the *Sekt* houses.

GROSSLAGE
SCHLOSS BÜBINGER

Haven of the less than heavenly Elbling. While colleagues across the river in Luxembourg earn a good living out of wine and tourism, the acidic Elbling wines of this *Grosslage* do not make it easy for its growers to survive.

BEREICH OBERMOSEL

The Obermosel, or Upper Mosel, runs parallel to the Luxembourg border and is planted mostly with Elbling. The wines are thin, acidic, and mostly made into *Sekt*.

GROSSLAGE GIPFEL

No outstanding villages, vineyards, or growers, although respectable wines are made in the village of Nittel.

GROSSLAGE KÖNIGSBERG

No outstanding villages, vineyards, or growers.

BEREICH RUWERTAL

The northern half of the former Bereich Saar-Ruwer.

GROSSLAGE RÖMERLAY

This covers the vineyards of the Ruwer and incorporates the ancient Roman city of Trier, as well as a few scattered plots on the Mosel, including one on the left bank facing Trier. The Ruwer is much the smaller of the two tributaries, yet it has its share of exceptional vineyards owned by gifted growers who make very aromatic, vital wines that are as racy as any on the Mosel, but not quite as biting as those of the Saar. The quality is high and few wines are seen under the *Grosslage* appellation.

EITELSBACH

- ✓ **Vineyard Karthäuserhofberg Grower Karthäuserhof**

KASEL

- ✓ **Vineyard Kehrnel Growers Karlsruhle • Vineyard Nieschen Growers Erben von Beulwitz, Reichsgraf von Kesselstatt,**

Karlsruhle

LORENZHOF

- ✓ **Non-Einzellage wines • Grower Karlsruhle**

MERTESDORF

- ✓ **Vineyard Maximin Grünhäuser Abtsberg Grower Gutsverwaltung von Schubert-Maximin Grünhaus**

BEREICH SAAR

The southern half of the former Bereich Saar-Ruwer.

GROSSLAGE SCHARZBERG

This covers the Saar and a small section of the Mosel between Konz and Trier to the north. These wines are so racy that they are positively biting and steely in their youth, but they age gracefully, harmonizing into exquisitely piquant flavors. Very modest Saar wines can be too thin and unripe to enjoy, but *Kabinett* and higher predicates from great growers are almost sure to please. Unlike the Ruwer's Römerlay, this *Grosslage* appellation is often used.

KANZEM

- ✓ **Vineyard Altenberg Grower Von Otbegraven • Johann Peter Reinert**

OBEREMMEL

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

The region balloons out from between Rheinhessen and Mittelrhein around the Nahe River, which runs parallel to, and 25 miles (40 kilometers) southeast of, the Mosel.

CLIMATE

A temperate, sunny climate with adequate rainfall and no frosts. Local conditions are influenced by the Soonwald forest to the northeast and heat-retaining, rocky hills to the east. Protected south-facing vineyards enjoy microclimates that are almost Mediterranean.

ASPECT

Vineyards are found on both the gentle and steep slopes of the Nahe and its hinterland of many small tributary river valleys. Vines grow at altitudes of between 330 and 985 feet (100 and 300 meters).

SOIL

Diverse soils ranging from quartzite and slate along the lower reaches to porphyry (hard rock poor in lime), melaphyry (hard rock rich in lime), and colored sandstone in the middle and upper reaches. Near Bad Kreuznach, weathered

clay, sandstone, limestone, loess, and loam soil may also be found. The greatest Riesling wines grow on sandstone.

VITICULTURE AND VINIFICATION

Since the mid-1960s, cultivation of Riesling and Silvaner has declined by 20 and 15 percent respectively, yet Riesling is still the most widely planted variety, accounting for some 26 percent of the Nahe's vineyards. This is due to the increased cultivation of crosses such as Kerner, Scheurebe, and Bacchus. In the cellar, methods

remain traditional but very efficient, with technically up-to-date cooperatives processing just 20 percent of the crop. As much as 40 percent of all Nahe wine is processed by small growers who sell directly to passing customers, with the remaining 40 percent belonging to the traditional industrial and export houses.

GRAPE VARIETIES

Primary varieties: Müller-Thurgau, Riesling, Silvaner
Secondary varieties: Bacchus, Faberrebe, Kerner, Scheurebe, Ruländer, Weissburgunder

THE APPELLATIONS OF THE NAHE

BEREICH NAHETAL

This region-wide *Bereich* replaces the former *Bereich* of Kreuznach, which covered the area once called Untere Nahe, or Lower Nahe, and Schlossböckelheim, which is the most famous.

GROSSLAGE BURGWEG

Not to be confused with the *Grosslagen* of the same name in the Rheingau and Franken, this Burgweg produces the Nahe's greatest range of fine Riesling wines. For many years Schlossböckelheimer Kupfergrube was regarded as the best of all, but today the Oberhäuser Brücke gets most of the rave reviews.

NIEDERHAUSEN

- ✓ **Vineyard Hermannsböble Grower Hermann Dönnhoff, Gutsverwaltung Niederhausen-Schlossböckelheim • Vineyard Hermannsberg Growers Gutsverwaltung Niederhausen-Schlossböckelheim**

NORHEIM

- ✓ **Vineyard Kirschbeck Grower Dr. Crusius, Hermann Dönnhoff • Vineyard Kafels Grower Staatsweingut Bad Kreuznach**

OBERHAUSEN

- ✓ **Vineyard Brücke Grower Hermann Dönnhoff**

SCHLOSSBÖCKELHEIM

- ✓ **Vineyard Kupfergrube Grower Gutsverwaltung Niederhausen-Schlossböckelheim, Hermann Dönnhoff • Vineyard Felsenberg Grower Dr. Crusius, Hermann Dönnhoff**

TRAISEN

- ✓ **Vineyard Bastei Grower Dr. Crusius • Vineyard Rotenfels Grower Dr. Crusius**

GROSSLAGE KRONENBERG

This is not a branded beer, but one of the best *Grosslagen* in the Nahe, although all its finest wines, invariably Rieslings with a magical blend of perfumed fragrance and soft yet racy acidity, carry *Einzellage* names.

BAD KREUZNACH

- ✓ **Vineyard Paradies Grower Korrell-Johannesbof • Vineyard St. Martin Grower Korrell-Johannesbof**

GROSSLAGE PARADIESGARTEN

This *Grosslage* consists of many scattered vineyards of very variable quality. Aside from Oberndorf, all its finest wines come from the very eastern edge of the Nahe. One grower, Emrich-Schönleber, has raised the Rieslings of Monzingen from relative obscurity to cult status.

MEDDERSHEIM

- ✓ **Vineyard Rheingrafenberg Grower Hexamer**

MONZINGEN

- ✓ **Vineyard Frühlingsplätzchen Grower Emrich-Schönleber • Vineyard Halenberg Grower Emrich-Schönleber, Schäfer-Fröblich**

SOBERNHEIM

- ✓ **Vineyard Marbach Grower Hexamer**

GROSSLAGE PFARRGARTEN

Although the *Grosslage* of Pfarrgarten is relatively small, it is intensively cultivated. *Grosslage* Pfarrgarten lies west and slightly north of Bad Kreuznach. Wallhausen wines are the best.

WALLHAUSEN

- ✓ **Vineyard Johannisberg Grower Prinz zu Salm • Vineyard Felsenack Grower Prinz zu Salm**

GROSSLAGE ROSENGARTEN

The true, original, and famous Rudesheimer Rosengarten is a great Rheingau Riesling from an *Einzellage* called Rosengarten. The Nahe version may be honest enough, but it is not particularly special, being merely a modest *Grosslage* wine and, in all probability, a blend of Müller-Thurgau and Silvaner.

BOCKENAU

- ✓ **Vineyard Felsenack Grower Schäfer-Fröblich**

ROXHEIM

- ✓ **Vineyard Berg Grower Prinz zu Salm**

GROSSLAGE SCHLOSSKAPELLE

In this *Grosslage* there are a number of attractive, good-quality wines from Münster-Sarnsheim and Dorsheim that are excellent value. In addition to some full and rich Riesling, the Weisser and Grauer Burgunder are also making a name for themselves.

DORSHEIM

- ✓ **Vineyard Burgberg Grower Schlossgut Diel • Vineyard Goldloch Grower Schlossgut Diel, J. B. Schäfer • Vineyard Pittermännchen Grower J. B. Schäfer, Schlossgut Diel**

LAUBENHEIM

- ✓ **Vineyard Karthäuser Grower Tesch • Vineyard St. Remigiusberg Grower Tesch**

WINDESHEIM

- ✓ **Vineyard Rosenberg Grower Rudolf Sinß (red) Non-Einzellagewein Grower Lindenhof (red)**

MÜNSTER (-SARMSHEIM)

- ✓ **Vineyard Dautenplänzer Growers Göttelmann • Kruger-Rumpff • Vineyard Rheinberg Grower Göttelmann • Vineyard Pittersberg Grower Kruger-Rumpff • Non-Einzellagen wine Kruger-Rumpff**

GROSSLAGE SONNENBORN

Sonnenborn is a one-village *Grosslage* and at least one grower in Langenlonsheim produces some interesting and fulsome wines.

LANGENLONSHEIM

- ✓ **Vineyard Löhrer Berg Growers Tesch**

OTHER CERTIFIED ORGANIC WINEMAKERS

Biodynamic

THE RHEINGAU

There can be no doubt that Riesling, the king of Germany's grapes, is more at home in and around the village of Johannisberg in the Rheingau than anywhere else in the world. Nowhere else can it produce such lush, juicy-ripe wines with distinctive, silky-smooth peach fruit.

MANY COUNTRIES OF THE WORLD use the synonym "Johannisberg Riesling" to distinguish the true Riesling grape variety from the many false and inferior Rieslings that claim the name. There can be no doubt that the Riesling grape luxuriates on this single sun-blessed slope of the Johannisberg vineyard in a most unique way.

Even at QbA level, the relaxed and confident style of a good Rheingau wine will leave a soft, satisfying, and elegant taste of peaches in the mouth. This gradually merges into a youthful, honeyed character that has nothing to do with *Edelfäule* (botrytis,

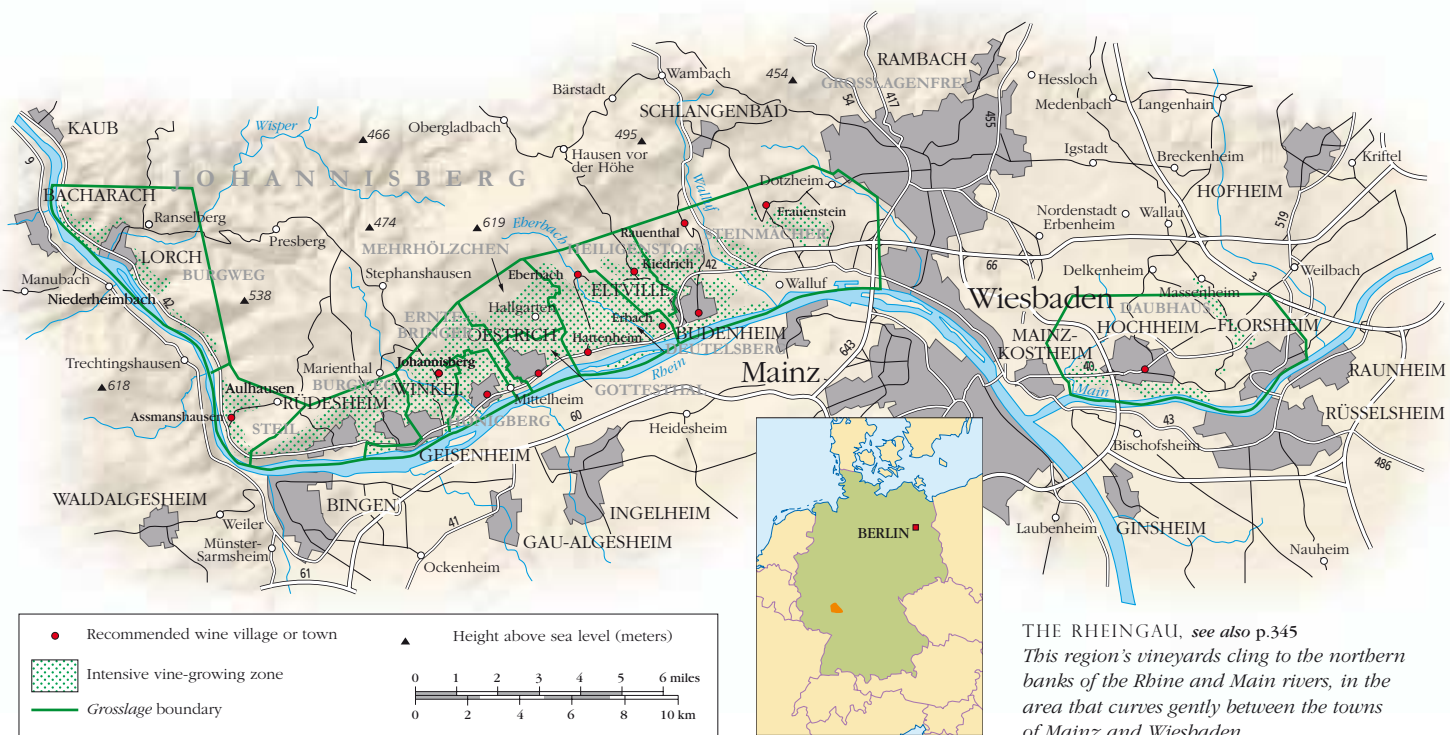

VITICULTURE IN THE RHEINGAU
Just under 80 percent of the vines are Riesling, and it is here that Riesling has historically ripened to such perfection that the wines have a juicy peachiness.

or noble rot), overripeness, or bottle-aging. One can prefer other stylistic renditions of the Riesling grape, but it is impossible to find finer, more graceful examples.

THE RHEINGAU'S INITIAL CHARTA FOR QUALITY
 In the midst of the excitement generated by Germany's new *trocken* wines, it became evident to various top Rheingau estates that most of the wines exported were bulk blended and of low commercial quality. Since these properties had traditionally produced naturally drier wines, they believed that a continuance

THE REGION AT A GLANCE

<p>Area under vine 8,125 acres or 3,129 ha (decreasing)</p> <p>Average yield 295 cases/acre or 67 hl/ha (increasing)</p> <p>Red wine 12% (increasing)</p> <p>White wine 88% (decreasing)</p> <p>Dry & semidry wine 66% Trocken, 22% Halbtrocken</p>	<p>Most important grape varieties 79% Riesling (decreasing), 12% Spätburgunder (increasing), 2% Müller-Thurgau (decreasing), 7% Others</p> <p>Infrastructure <i>Bereich 1; Grosslagen 10; Einzellagen 118</i></p> <p>Note The vineyards of Rheingau straddle 28 <i>Gemeinden</i> (communes), the names of which may appear on the label.</p>
--	---

THE RHEINGAU, *see also* p.345
This region's vineyards cling to the northern banks of the Rhine and Main rivers, in the area that curves gently between the towns of Mainz and Wiesbaden.

QUALITY REQUIREMENTS AND AVERAGE QMP PRODUCTION

RHEINGAU'S MINIMUM OECHSLE QUALITY CATEGORY HARVEST BREAKDOWN

44°	Deutscher Tafelwein	0.5%
53°	Landwein	0.5%
57–60°	* QbA	70%
73–80°	* Kabinett	20%
85–95°	* Spätlese	5%
95–105°	* Auslese	1%
125°	Beerenauslese	1%
125°	Eiswein	1%
150°	Trockenbeerenauslese	1%

*Minimum Oechsle levels vary according to grape variety; those that have a naturally lower sugar content may qualify at a correspondingly lower level.

of poor *trocken* wines could damage their own image, so they banded together to protect it. In 1983, the Association of Charta (pronounced “karta”) Estates was launched to “further the classic Rheingau Riesling style, to upgrade the quality of Rheingau wines, and to make them unique among wines from other growing areas.” Although this could not have succeeded without the active support of almost all the best Rheingau producers, the engine that relentlessly drove the Charta organization was, until his untimely death, Georg Breuer. Under his direction, Charta became the antithesis of any official quality-control system, as it aspired to the highest possible quality, rather than succumbing to the lowest

common denominator. When first drawn up, the Charta’s rules were uncommonly stiff; yet every few years, Breuer would tighten the ratchet a bit more by issuing even tougher rules.

TROCKEN WINES

One in every five bottles of German wine is *trocken*, or dry, but many of these are thin and short. The intrinsically riper grapes grown by the Rheingau’s Charta estates produce a fatter, fuller style of wine that adapts naturally to the *trocken* style, especially with food; but *trocken* wines produced in other regions have come on in leaps and bounds since the early 1990s. They are now well balanced, with an elegance that was missing from even the best of the best in the late 1980s. Due to the botrytis found in *Spätlese* and *Auslese* grapes used, they also possess a level of youthful complexity that is seldom encountered in other wines. They are very accessible when young, but rarely improve after their first flush of youth.

SCHLOSS VOLLRADS
This famous wine schloss was built circa 1300 by the Knights of Greiffenclau.

THE CHARTA RULES

I have tasted many Charta wines and am convinced that they are indeed superior to other Rheingau wines. It must be emphasized, however, that it is only dry styles that are subject to the Charta organization’s regulations—great QmP Rheingau wines of sweet styles from *Auslese* upward are not affected. A Charta wine may be recognized by the traditional tall, slim, brown bottle typical of the Rheingau region and by the distinctive “Charta capsule” consisting of a Romanesque double-arch on a white background. There is also a label on the back with the same insignia.

Charta wines are examined organoleptically (using only the senses of taste, smell, and sight) before and after bottling. There is a second examination to check the authenticity of the original sample. Wines destined to receive the Charta imprimatur must be accompanied by official analysis documents and must also satisfy certain criteria laid down by the Association of Charta Estates, as follows:

The wines that are submitted for examination must be made in a “dry” style and conform to the following:

- 100 percent own-estate production
- 100 percent Riesling grapes
- Grapes handpicked by *tries*
- Minimum of 12 percent potential alcohol
- Maximum production of 50 hl/ha (220 cases/acre)
- No *Prädikat* may be mentioned*

The wines must have the true characteristics of a Riesling, of the specific vintage, and of the vineyard where the grapes were grown.

Registration has to be made four weeks prior to the date of examination, indicating the vintage and category.

*Older vintages of *Prädikat* wines may be encountered. These will not have been produced according to the above rules if only for the simple reason that they have not been made in a dry style, but they will have undergone the same exhaustive tasting and, if selected, become “Charta Designated,” rather than “Charta Approved.”

Charta bottle

As a control, normal wines of comparable location and category are tasted blind alongside wines submitted for examination. Charta wines have to surpass the quality of these standard wines in each of the required aspects. The wines provided for the second tasting, as well as being a control, have to be accompanied by the analysis of the AP number (see p.346). The results of these tests are lodged with the association and can be used in the eventuality of any subsequent claim that a member is passing off an inferior wine as a Charta wine.

Charta capsule

Back label

CAPSULE AND BACK LABEL

All wines that have passed the Charta examination are sealed with a capsule bearing the organization’s logo consisting of a Romanesque double-arch that also appears on the back label.

CHARTA BOTTLE

Originally all bottles were embossed with the Charta logo similar to the example here. However, the cost of embossing proved prohibitive for some of the smaller producers, and it is now optional.

BERG SCHLOSSBERG VINEYARDS, RÜDESHEIM

These south-facing vineyards on the slopes of Berg Schlossberg are blessed with perfect exposure to the sun's rays.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

The Rheingau is a compact region only 22 miles (36 kilometers) long, situated on the northern banks of the Rhine and Main rivers between Bingen and Mainz.

CLIMATE

Vines are protected from cold by the tempering effect of the rivers and the shelter provided by the Taunus Mountains. The region receives above-average hours of sunshine during the growth period of May to October.

ASPECT

The vines grow at an altitude of 330 to 985 feet (100 to 300 meters) on a superb, fully south-facing slope.

SOIL

Quartzite and weathered slate-stone in the higher situated sites produce the greatest Riesling, while loam, loess, various types of clay, and sandy gravel soils of the lower vineyards give a fuller, more robust style. The blue phyllite-slate around

Assmannshausen is traditionally thought to favor the Spätburgunder.

VITICULTURE AND VINIFICATION

In contrast to other German regions, the Rheingau consists of a large number of independent wine estates (500 odd) in a relatively compact area. There are approximately 2,600 private growers, many of whom make and market their own wines, while others supply the region's 10 cooperatives. The Riesling grape variety represents almost 80 percent of the vines cultivated and it is traditional in this region to vinify all but the sweetest wines in a drier style than would be used in other regions. Assmannshausen is famous for its red wine, one of Germany's best.

GRAPE VARIETIES

Primary varieties: Riesling
Secondary varieties: Ehrenfelser, Kerner, Müller-Thurgau, Silvaner, Spätburgunder, Weissburgunder

THE CHARTA'S NEW CLASSIFIED VINEYARD WINES

Look out for Charta *Einzellage* wines with a black bottom border bearing not one but three Romanesque double-arches on the front label. This is verification that the wine comes not from the grossly inflated official *Einzellagen*, but from the original, authentic site, which Charta has called *Erstes Gewächs* or First Growths. They must conform to the same rules

(i.e., dry style with no mention of *Prädikat*), although new regulations to cover botrytis and even Spätburgunder *Erstes Gewächs* are under study. The difference between official and authentic *Einzellage* size can be, as you can see, quite enormous. In fact, the 1971 German wine law is nothing less than the promotion of legalized fraud on a massive and widespread scale.

THE APPELLATIONS OF THE RHEINGAU

BEREICH JOHANNISBERG

This *Bereich* covers the entire Rheingau. Trading off the famous village of Johannisberg, situated behind Schloss Johannisberg, lesser wines sell well under it. However, some producers have started using *Grosslage* names on labels and because they do not use the word “*Grosslage*,” this implies the wine might be from one specific site, and perhaps of better quality.

GROSSLAGE BURGWEG

This is the westernmost *Grosslage*. If a wine bears its name on the label and clearly shows “Riesling,” it may well be good, but it will not in any way compare with Burgweg’s superb *Einzellage* wines that are produced by the great estates or small growers.

GEISENHEIM

- ✓ Vineyard *Rotenberg* Grower *Wegeler-Gutsbaus Oestrich*

RÜDESHEIM

- ✓ Vineyard *Berg Rosenack* Grower *Josef Leitz, August Kessler* • Vineyard *Berg Rotlland* Growers *Georg Breuer, Johannishof, Josef Leitz, Wegeler-Gutsbaus Oestrich* • Vineyard *Berg Schlossberg* Growers *Georg Breuer, August Kessler* (red and white), *Josef Leitz* • Vineyard *Bischofsberg* Growers *Georg Breuer, August Kessler* • Premium Red Wine Blends Growers *Breuer* (Spätburgunder “S”)

GROSSLAGE DAUBHAUS

The best vines of Daubhaus, which is the most easterly *Grosslage* in *Bereich* Johannisberg, grow in just one tiny, isolated, but excellent strip at Hochheim. The wines are firm and full, but do not quite match the elegance of the Rheingau’s very best.

HOCHHEIM

- ✓ Vineyard *Domdechany* Grower *Domdechant Werner’sches Weingut* • Vineyard *Kirchenstück* Grower *Domdechant Werner’sches Weingut, Franz Künstler* • Vineyard *Hölle* Growers *Franz Künstler* • Vineyard *Reichstal* Grower *Franz Künstler* (red)

WICKER

- ✓ Vineyard *Mönchsgewann* Grower *Joachim Flick*

GROSSLAGE DEUTELSBERG

Grosslage Deutelsberg encompasses the great Erbach vineyards as well as the rather underrated wines of Hattenheim, which have great strength and longevity. It also includes the famous Kloster Eberbach and Mariannenua Island vineyard, where there is a little Chardonnay grown.

HATTENHEIM

- ✓ Vineyard *Pfaffenberg* Grower *Domäne Schloss Schönborn* • Vineyard *Wisselbrunnen* Growers *Josef Spreitzer, Hans Lang, Schloss Reinbartsbausen*

GROSSLAGE ERNTEBRINGER

The most often-seen of the Rheingau’s *Grosslagen*, *Erntebringer* is also its best, although not comparable to the *Einzellagen*, particularly the legendary Schloss Johannisberg and the grossly underrated Klaus.

GEISENHEIM

- ✓ Vineyard *Klaus* Grower *Prinz von Hessen*
- #### JOHANNISBERG
- ✓ Vineyard *Hölle* Grower *Johannishof* • Vineyard *Schloss Johannisberg* Grower *Schloss Johannisberg* • Vineyard *Klaus* Growers *Prinz von Hessen*

WINKEL

- ✓ Vineyard *Hasensprung* Grower *Prinz von Hessen* • Vineyard *Schloss Vollrads* Grower *Schloss Vollrads*

GROSSLAGE GOTTESTHAL

It is strange that this *Grosslage*, sandwiched between the superb Deutelsberg and Honigberg, should be disappointing in the wines it produces. However, some excellent, long-lived Riesling can be found.

OESTRICH

- ✓ Vineyard *Lenchen* Growers *Wegeler-Gutsbaus Oestrich, Peter Jakob Kühn, Josef Spreitzer*

GROSSLAGE HEILIGENSTOCK

The best product of this small *Grosslage* is the fabulous, peach-and-honey Riesling of Kiedrich, often culminating in some of the world’s most noble sweet wines. The *Grosslage* wine can also be good.

KIEDRICH

- ✓ Vineyard *Gräfenberg* Grower *Robert Weil*

GROSSLAGE HONIGBERG

Wines of great vitality, finesse; all the elegant, mouthwatering, peachy fruit, and youthful honey you could expect from top Rheingau wines.

ERBACH

- ✓ Vineyard *Hobenrain* Grower *Jakob Jung* • Vineyard *Marcobrunn* Growers *Schloss Schönborn* • Schloss *Reinbartsbausen* • Vineyard *Michelmark* Grower *Jakob Jung* • Vineyard *Steinmorgen* Grower *Heinz Nikolai* • Vineyard *Schlossberg* Grower *Schloss Reinbartsbausen*

WINKEL

- ✓ Vineyard *Hasensprung* Growers *Prinz von Hessen* • Vineyard *Jesuitengarten* Growers *Prinz von Hessen, J. Wegeler Erben*

GROSSLAGE MEHRHÖLZCHEN

The *Grosslage* of Mehrhölzchen, on higher, steeper slopes than the rest of the Rheingau, is tucked up beneath the Taunus hills. The area is planted almost entirely with Riesling, and the wine is fat, almost heavy. It is sometimes full of fruit, displaying a unique spicy aroma.

HALLGARTEN

- ✓ Vineyard *Jungfer* Grower *Prinz*

GROSSLAGE STEIL

The tiny *Grosslage* of Steil divides the *Grosslage* of Burgweg. Steil is famous for the red wines of Assmannshausen. These are soft and delicate, and have a pure varietal style, but possess neither the body nor the tannin one is accustomed to finding to some degree in any red wine, whatever its grape variety or provenance. The majority of the vineyards in *Grosslage* Steil are situated on steep, southwest-facing slopes, but those of Hölleberg, which notably produce the best wine, are situated on a tiny, south-facing tributary.

ASSMANNSHAUSEN

- ✓ Vineyard *Hölleberg* Growers *August Kessler* (red), *Staatsweingüter Assmannshausen, Robert König* (red), *Weingut Krone* (red)

GROSSLAGE STEINMÄCHER

The vineyards of *Grosslage* Steinmächer are less intensively cultivated than those situated in the main body of the Rheingau’s vine-growing area, but this does not mean that the wines they produce are in any way less impressive.

WALLUF

- ✓ Vineyard *Walkenberg* Grower *J. B. Becker*

RHEINHESSEN

Rheinhesen is the most heavily cultivated of all Germany's Qualitätswein regions. The diversity of its soils and grape varieties makes it impossible to convey a uniform impression of its wines. Riesling is planted in just eight percent of its vineyards. These vineyards produce cheap, unpretentious wines, ranging from mild Silvaner to aromatic Müller-Thurgau, but some truly fine wines are to be found.

RHEINHESSEN IS INDISPUTABLY LINKED with the ubiquitous Liebfraumilch. This is partly because the area is responsible for producing one in every two bottles, partly because of the famous Liebfraumilch-Kirchenstück in Worms, where the Liebfraumilch story began; and partly because Sichel & Co. brews up perhaps the most famous Liebfraumilch ("Blue Nun") in sleepy Alzey. Nierstein carries a similar stigma to that of Liebfraumilch in the minds of many experienced drinkers,

FACTORS AFFECTING TASTE AND QUALITY

-  **LOCATION**
This region is situated between the towns of Bingen, Mainz, and Worms, immediately south of the Rheingau.
-  **CLIMATE**
Rheinhesen enjoys a temperate climate and is protected from cold winds by the Taunus hills to the north and the Odenwald forest to the east. Vineyards that slope down to the river are protected by the Rhine terrace itself.
-  **ASPECT**
On the river slopes of the Rhine Terrace vines grow on east- and southeast-facing slopes at an altitude of between 330 and 660 feet (100 and 200 meters), while those in Rheinhesen's hinterland are found at various heights and with every possible aspect.
-  **SOIL**
Mainly loess deposited during interglacial sandstorms, but also limestone, sandy-marl, quartzite, porphyry-sand, and silty-clay. Riesling growers favor heavier marl soil, except near Bingen, where there is an outcropping of quartzite-slate. A red, slaty-sandy clay soil known as *rotliegendes* is found on the best, steep riverfront vineyards of Nackenheim and Nierstein.
-  **VITICULTURE AND VINIFICATION**
Due to the large number of part-time growers, much of the wine is made from vast vineyard yields and bulk-blended into cheap generic wines such as Bereich Nierstein, and, of course, Liebfraumilch. At the other extreme, small quantities of some fine wines are produced on the best estates.
-  **GRAPE VARIETIES**
Primary varieties: Müller-Thurgau, Silvaner, Riesling
Secondary varieties: Bacchus, Faberrebe, Huxelrebe, Kerner, Morio-Muskat, Portugieser, Scheurebe

due to the huge quantities of the cheap Bereich Nierstein and Niersteiner Gutes Domtal that flood the market and which downgrade the reputation of the high-quality Niersteiner *Einzellagen*.

THE RHINE TERRACE

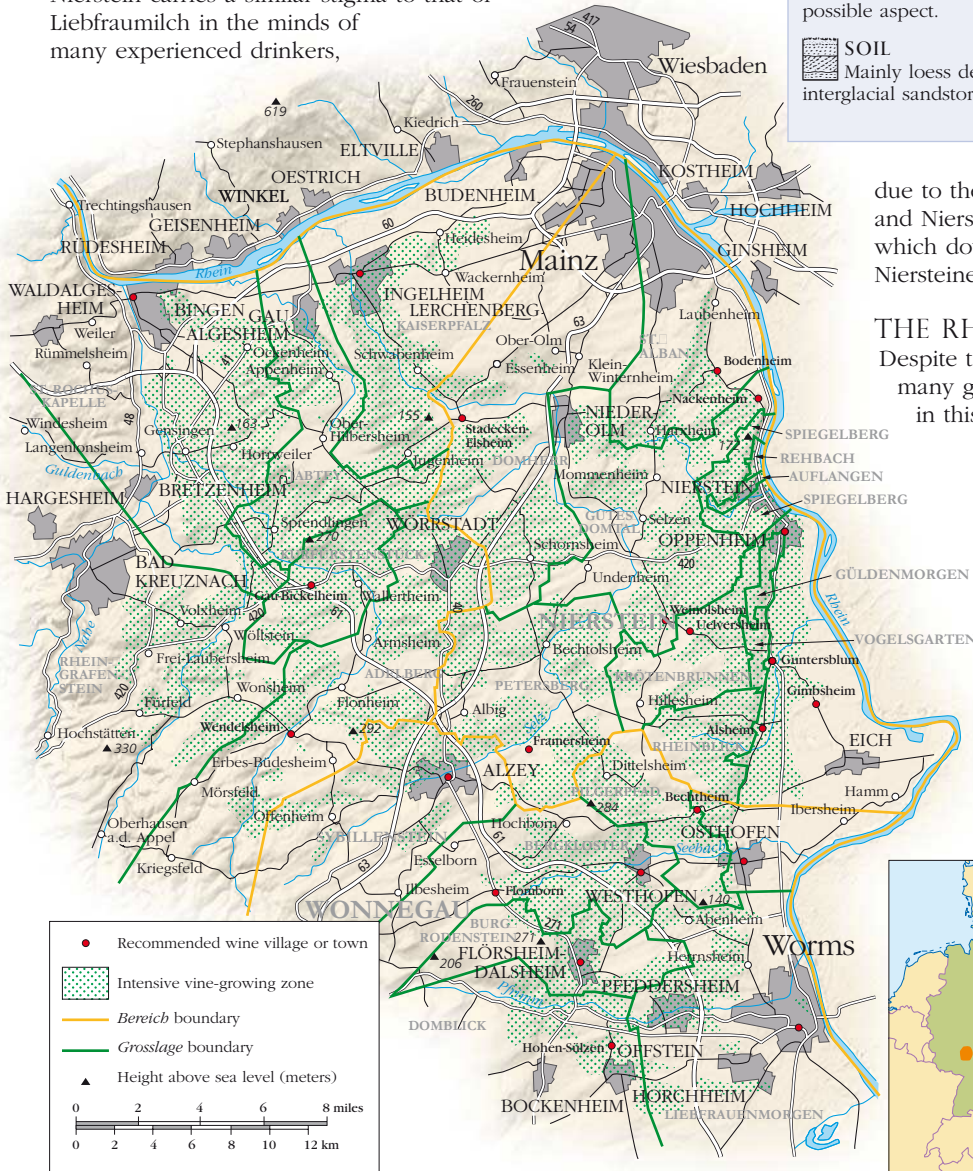

Despite the high volume of indifferent wines, there are many great growers and estates producing good wine in this region. If you are looking for an initial increase

RHINE TERRACE VINEYARDS AT NIERSTEIN
Nierstein is one of the nine member villages of the "Rhein Terrasse" group, which offers good-value, quality wines. New grape crosses are a feature of this area.

RHEINHESSEN, see also p.345
One of Germany's largest regions in terms of acres under vine, this is an area of great variety where several different grapes are grown.

in quality for a modest price, look out for the “Rhein Terrasse” sticker on bottles of Rheinhessen wine.

The Rhine Terrace comprises nine villages on the slopes that descend from Rheinhessen’s plateau to the Rhine River. These villages and their *Grosslagen* are as follows: Bodenheim in the St. Alban *Grosslage*; Nackenheim in the Gutes Domtal *Grosslage*; Nierstein, which is shared by the *Grosslagen* of Gutes Domtal, Spiegelberg, Rehbach, and Auflangen; Oppenheim in the *Grosslagen* of Gùldenmorgen and Krötenbrunnen; Dienheim, also in the Krötenbrunnen *Grosslage*; Guntersblum and Ludwigshöhe, both of which are in the Krötenbrunnen and Vogelsgarten *Grosslagen*; and Alsheim and Mattenheim, in the *Grosslage* of Rheinblick.

LIEBFRAUMLACH COUNTRY IN THE SPRING

The village of Grau-Heppenheim, near Alzey, the home of Blue Nun, in the large Petersberg *Grosslage*.

	Note The vineyards of Rheinhessen straddle 167 <i>Gemeinden</i> (communes), the names of which may appear on the label.

THE APPELLATIONS OF RHEINHESSEN

BEREICH BINGEN

Abutting the Nahe region to the west and separated by the Rhine from the Rheingau to the north, Bereich Bingen is the smallest of Rheinhessen’s three *Bereiche* and the least important in terms of both the quantity and quality of the wine produced.

GROSSLAGE ABTEY

The *Grosslage* of Abtey does not have any outstanding villages, vineyards, or growers, although good-quality wines are produced in the village of St. Johann.

GROSSLAGE ADELBERG

Some good value wines can be found in the small town of Wörrstadt, but in terms of quality no vineyards or growers stand out.

GROSSLAGE KAISERPFALZ

Kaiserpfalz is a *Grosslage* consisting mainly of Bingen and Mainz, with vineyards facing to both the east and west. This *Grosslage* produces some of the region’s most promising red wines from the Portugieser and Spätburgunder grapes. The village of Ingelheim is one of the places that claim to be the birthplace of the emperor Charlemagne.

INGELHEIM

✓ **Vineyard Steinacker Grower Arndt F. Werner** (red and white)

GROSSLAGE KURFÜRSTENSTÜCK

Gau-Bickelheim is the home of Rheinhessen’s huge central cooperative, but it has been the good growers or excellent *Staatsdomäne* from the *Einzellage* of Kapelle that have produced superior wines in the past.

GROSSLAGE RHEINGRAFENSTEIN

Some exciting efforts from a new shooting star demonstrate the potential of this *Grosslage*.

SIEFERSHEIM

✓ **Vineyard Heerkretz Grower Wagner-Stempel • Vineyard Höllberg Grower Wagner-Stempel • Premium Red Wine Blend Grower Wagner-Stempel** (Spätburgunder “R”)

GROSSLAGE SANKT ROCHUSKAPELLE

Bingen is often thought to belong more to the Nahe region than to Rheinhessen, but 14 of its

18 *Einzellagen* belong to this Rheinhessen *Grosslage*, which is among the best in *Bereich* Bingen.

HORRWEILER

✓ **Vineyard Gewürzgärtchen Grower Huf-Doll**

BEREICH NIERSTEIN

Although this is a famous *Bereich* with many superb sites and great growers, most wines sold under its label include some of the most dull, characterless, and lackluster in all of Germany. Wine enthusiasts will find it best to choose the great *Einzellagen* and leave these *Grosslage* products alone.

GROSSLAGE AUFLANGEN

This is the best of the three *Grosslagen* that encompass some parts of Nierstein (the other two are Rehbach and Spiegelberg). Its vineyard area actually begins in the center of the town, then stretches west to include the south- and southeast-facing vineyards of the tiny tributary of the Rhine that flows through Schwabsburg, and then north to the Kranzberg, which overlooks the Rhine itself.

NIERSTEIN

- ✓ **Vineyard Oelberg Growers Heyl zu Herrnsheim** • St. Antony, Seebriich

GROSSLAGE DOMHERR

Once forming ecclesiastical vineyards (Domherr means "Canon of the Cathedral") this *Grosslage* has good vineyards on steep slopes, but there are few outstanding growers.

GROSSLAGE GÜLDENMORGEN

Güldenmorgen was once a fine-quality *Einzellage* belonging to Oppenheim, but now encompasses three villages. The best wines come from the Sackträger site. Please note that although the village of Uelversheim is clearly situated in the *Grosslage* of Krotenbrunnen, the eastern tail end of its vineyards actually overlaps Güldenmorgen.

OPPENHEIM

- ✓ **Vineyard Sackträger Grower Manz**
• Kübling-Gillot

GROSSLAGE GUTES DOMTAL

This district covers a vast area of Rhine hinterland behind the better *Grosslagen* of Nierstein. Although it encompasses 15 villages, most is sold under the ubiquitous Niersteiner Gutes Domtal (sometimes Domthal) name. Much is decidedly inferior and cheapens the reputation of Nierstein's truly great wines. The most famous village is Dexheim, because of its so-called Doktor, named after the old spelling of the great Bernkasteler Doctor vineyard. But neither Dexheim generally, nor Dexheimer Doktor specifically, warrant the attention.

WEINOLSHEIM

- ✓ **Vineyard Kehr Grower Manz**

GROSSLAGE KRÖTENBRUNNEN

This district encompasses those parts of Oppenheim's vineyards that are not included in the *Grosslage* Güldenmorgen, and the wide-ranging vineyards of Guntersblum.

GROSSLAGE PETERSBERG

This *Grosslage* lies behind Gutes Domtal and is wedged between the *Bereiche* of Bingen and Wonnegau. Although large, this *Grosslage* has few, if any, exciting sites or growers.

GROSSLAGE REHBACH

Rehbach is one of the greatest *Grosslagen* in Rheinhessen, consisting of a long, thin strip of very steep terraced slopes overlooking the Rhine, just north of Nierstein. Riesling wines produced by these vineyards are aromatic, intense, and delightfully mellow, yet have a definite raciness on the finish.

NIERSTEIN

- ✓ **Vineyard Hipping Growers Georg Albrecht Schneider, St. Antony** • **Vineyard Pettenthal Growers Heyl zu Herrnsheim** • St. Antony, Gunderloch, Kübling-Gillot

GROSSLAGE RHEINBLICK

This district produces better-than-average *Grosslage* wines.

GROSSLAGE ST. ALBAN

Named after the St. Alban monastery, which once owned most of the land in this underrated *Grosslage* situated between Mainz and Nierstein.

The *Einzellage* wines have fine, positive character and usually represent excellent value for money.

GROSSLAGE SPIEGELBERG

The largest of Nierstein's riverside districts, its vineyards stretch to the north and south of both the famous town and the *Grosslage* Auflangen. Ignore the ubiquitous, mild, and neutral-flavored *Grosslagen* wines and choose the wines of the finer *Einzellagen* that are situated between Nierstein and Oppenheim.

NACKENHEIM

- ✓ **Vineyard Rothenberg Grower Gunderloch**

GROSSLAGE VOGELSGARTEN

This is not, in fact, one of the best Rheinhessen districts, although Weingut Ohnacker makes fine, rich, sometimes powerful wines that are well worth seeking out.

BEREICH WONNEGAU

The least-known of Rheinhessen's three *Bereiche*, Wonnegau contains the world-famous (although not world-class) Liebfrauenstift *Einzellage*, which had the rather dubious honor of giving birth to Liebfraumilch. Wonnegau means "province of great joy."

GROSSLAGE BERGKLOSTER

Some of Germany's top dry Riesling comes from Westhofen.

WESTHOFEN

- ✓ **Vineyard Aulerde Grower Wittmann** • **Vineyard Morstein Grower Wittmann, Gerhard Gutzler** (red), **Keller** • **Vineyard Kirchspiel Grower Wittmann K. F. Groebe**
• **Premium red wine blends Growers Gerhard Gutzler** ("GS" *barrique*)

GROSSLAGE BURG RODENSTEIN

A large proportion of the wines made in the *Grosslage* Burg Rodenstein district are sold under its *Grosslage* name. Most of it is well above average quality, although not in the same class as its best *Einzellage* wines. Since the mid-1990s Keller has been considered by many critics to be Germany's top wine estate.

DAHLSHEIM (an Ortsteil of Flörsheim-Dalsheim)

- ✓ **Vineyard Hubacker Grower Keller**

Vineyard Bürgel (red) **Growers Keller Non-Einzellage Premium White Grower Keller** (G-Max, varietals)

NIEDERFLÖRSHEIM (an Ortsteil of Flörsheim-Dalsheim)

- ✓ **Vineyard Frauenberg Growers Scherner-Kleinbanns**

GROSSLAGE DOMBLICK

There are few outstanding growers here, although good wines are made in the village of Monsheim, and the *Grosslage* label usually offers sound value.

MONSHEIM

- ✓ **Vineyard Silberberg Grower Keller** (Flörsheim-Dalsheim)

OFFSTEIN

- ✓ **Non-Einzellage Premium Red Grower Georg Jakob Keth**

GROSSLAGE GOTTESHILFE

A tiny district encompassing the excellent wine village of Bechtheim. Very little wine is seen on export markets under the *Grosslage* label.

BECHTHEIM

- ✓ **Vineyard Geyersberg Grower Riedenbacher Hof-Spiess** (red)

GROSSLAGE LIEBFRAUENMORGEN

This familiar sounding *Grosslage* includes the famous Liebfrauenstift-Kirchenstück vineyard in Worms, the birthplace of Liebfraumilch.

WORMS

- ✓ **Vineyard Liebfrauenstift-Kirchenstück Grower Gerhard Gutzler**

GROSSLAGE PILGERPFAD

This *Grosslage* stretches from the lesser vineyards of Bechtheim to the large Petersberg district in Bereich Nierstein.

GROSSLAGE SYBILLENSTEIN

There are no outstanding villages, vineyards, or growers in this *Grosslage*, although some valid efforts with Silvaner can be reported from the Kappellenberg vineyard. Alzey is the location of Sichel & Co., master blenders of "Blue Nun" Liebfraumilch.

WEINHEIM

- ✓ **Vineyard Kapellenberg Grower Meiser**

THE PFALZ

Germany's rising star, the Pfalz, or Rheinpfalz, as it was called until recently, has always been capable of producing world-class wines, but it has only just started doing so on any widespread scale. The best winemakers of the Pfalz now tend to make rich, powerful, spicy wines that are more reminiscent of Alsace than those of Alsace's mirror image, Baden.

RARE PHYSICAL EVIDENCE of ancient German wines exists in the Pfalz at the wine museum in Speyer. Here, a glass amphora contains genuine, golden 1,600-year-old wine, made by the Romans. By the 12th century, the Bishop of Speyer owned the best vineyards in the Pfalz and they remained the property of the Church until acquired by Napoleon.

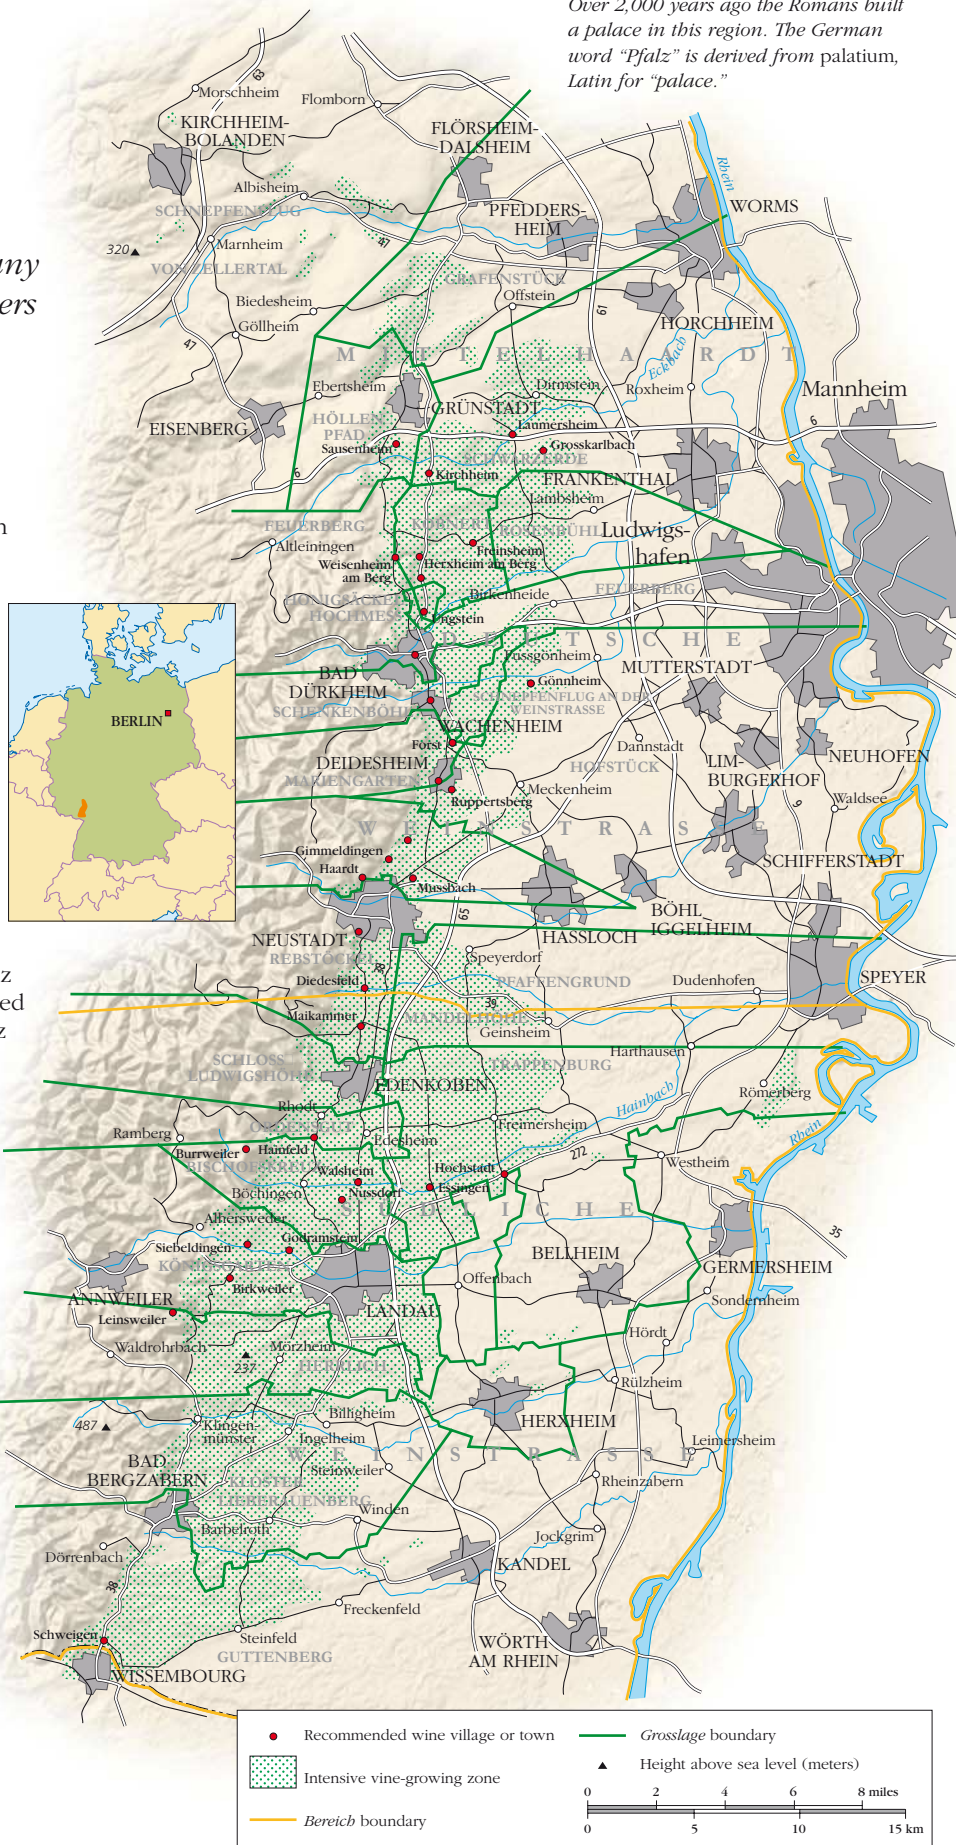

After the great Corsican emperor somewhat reluctantly left the region, the socioeconomic composition of the Pfalz changed dramatically and irrevocably. With the restructuring came a considerably less monopolistic form of land ownership.

THE PFALZ TODAY

Sometimes referred to as the Palatinate, the Pfalz covers 50 miles (80 kilometers) of the sun-blessed vineyards of the Haardt Mountains and the Pfalz forest. It has some 25,000 smallholders, each of whom works less than about two-and-a-half acres (one hectare) on average; most are part-time. Many sell their grapes to cooperatives, who process about 25 percent of the Pfalz's output. There is, however, still a minority of estates that have larger land-holdings. The vast

THE PFALZ, see also p.345

Over 2,000 years ago the Romans built a palace in this region. The German word "Pfalz" is derived from palatium, Latin for "palace."

THE REGION AT A GLANCE

Area under vine 54,967 acres or 22,244 ha (decreasing)	Most important grape varieties 21% Riesling (static), 15% Müller-Thurgau (decreasing), 11% Portugieser (increasing), 10% Dornfelder (increasing), 8% Kerner (decreasing), 5% Silvaner (decreasing), 5% Spätburgunder (increasing), 25% Others
Average yield 440 cases/acre or 102 hl/ha (increasing)	Infrastructure Bereiche 2; Grosslagen 25; Einzellagen 335
Red wine 21% (increasing)	Note: The vineyards straddle 170 communities, the names of which may appear on the label.
White wine 79% (decreasing)	
Dry & semidry wine 46% Trocken, 16% Halbtrocken	

numbers of growers, grapes, soil types, and microclimates combine to create a diversity of wine styles, from close to half of all Liebfraumilch produced (Rheinhessen accounts for most of the other half) to a wealth of expressive pure varietals. This region yields more wine than any other in Germany, and it is the smallest growers who make it such a great one.

QUALITY REQUIREMENTS AND AVERAGE QMP PRODUCTION

PFALZ'S MINIMUM OECHSLE	QUALITY CATEGORY	HARVEST BREAKDOWN
44°	Deutscher Tafelwein	1%
50–53°	Landwein	0.5%
60–62°	* QbA	70%
73–76°	* Kabinett	19.5%

120°	Eiswein	1%
150°	Trockenbeerenauslese	1%

*Minimum Oechsle levels vary according to grape variety; those that have a naturally lower sugar content may qualify at a correspondingly lower level.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
The second-largest German wine region, stretching 50 miles (80 km) from Rheinhessen to Alsace, bounded by the Rhine on the east and Haardt Mountains on the west.

CLIMATE
The Pfalz is the sunniest and driest wine-producing region in Germany, sheltered by the Haardt Mountains and Donnersberg hills.

ASPECT
Vineyards are sited mainly on flat land or gentle slopes, at an altitude of between 330 and 820 feet (100 and 250 meters).

SOIL
Although loam is prevalent, it is often interspersed with a wide range of other soils, from loess, sand, and weathered sandstone to widely dispersed "islands" of limestone, granite, porphyry, and clayish slate.

VITICULTURE AND VINIFICATION
The Pfalz vies with Rheinhessen as the largest wine producer among Germany's wine regions. The leading estates have a relatively high proportion of Riesling in their vineyards and produce wines of the very highest quality, although specialty Gewürztraminers and Muskatellers can be extraordinarily good when vinified dry. One-third of Pfalz wine is sold directly to consumers, and half is marketed through large commercial wineries and two dozen or so cooperatives.

GRAPE VARIETIES
Primary varieties: Müller-Thurgau, Riesling
Secondary varieties: Bacchus, Dornfelder, Gewürztraminer, Huxelrebe, Kerner, Morio-Muskat, Muskateller, Portugieser, Ruländer, Scheurebe, Silvaner, Spätburgunder

THE APPELLATIONS OF THE PFALZ

Note In the Pfalz wine region, each *Grosslage* can be prefixed only by a specified village name. The village name has been listed here under the name of the *Grosslage*.

BEREICH MITTELHAARDT-DEUTSCHE WEINSTRASSE

The quality of wines from this *Bereich* is so high, few are sold as anything less than *Einzellagen*.

GROSSLAGE FEUERBERG

Bad Dürkheim

A versatile *Grosslage*, producing a wide range of wines from full, spicy Gewürztraminers to soft, velvety Spätburgunders.

BAD DÜRKHEIM

✓ **Premium Red Wine Blends:** Grower *Egon Schmitt* (Taurus, Thur, Duca XI)

ELLERSTADT

✓ **Vineyard Kirchenstück** Grower *Klaus Schneider* (also red and white *cuvées*)

GROSSLAGE GRAFENSTÜCK

Producer *Ludi Neiss* stands out with some excellent Spätburgunder and Frühburgunder.

KINDENHEIM

✓ **Non-Einzellagen red wines:** Grower *Ludi Neiss*

MÜHLHEIM

✓ **Vineyard Sonnenburg** Grower *Matthias Gaul*

GROSSLAGE HOCHMESS

Bad Dürkheim

This is a small, but high-performance *Grosslage*. It includes the best vineyards of Bad Dürkheim,

although some fine wines are also produced within the boundaries of the two neighboring *Grosslagen* of Feuerberg and Schenkenböhl. The attractive wines of *Grosslage Hochmess* display a perfect harmony of full flavor and flowery fragrance.

BAD DÜRKHEIM

✓ **Vineyard Michelsberg** Growers *Karl Schaefer* • **Vineyard Spielberg** Growers *Karl Schaefer*

GROSSLAGE HOFSTÜCK

Deidesheim

Grosslage Hofstück produces homogeneous, noble, and elegant wines. The outstanding quality of these wines owes a great deal to the vineyard's favorable soil conditions.

DEIDESHEIM

✓ **Vineyard Nonnenstück** Growers *Bürklin-Wolf, Reichsrat Von Bubl*

RUPPERTSBERG

✓ **Vineyard Gaisböhl** Grower *Bürklin-Wolf* • **Vineyard Reiterpfad** Growers *Bassermann-Jordan, Bergdolt, A. Christmann, Dr. Deinhard, Bürklin-Wolf*

GROSSLAGE HÖLLENPFAD

Grünstadt

Produces a range of wines that are full and substantial in body but lack finesse.

GROSSLAGE HONIGSÄCKEL

Ungstein

This is a small *Grosslage* composed of varied soil and making full-bodied wines of intense flavor, especially Scheurebe.

UNGSTEIN

✓ **Vineyard Herrenberg** Grower *Pfeffingen-Fuhrmann-Eymael* • **Vineyard Weilberg** Grower *Pfeffingen-Fuhrmann-Eymael*

GROSSLAGE KOBNERT

Kallstadt

A single vineyard prior to the 1971 wine law, this is now a *Grosslage*, but a very good one.

KALLSTADT

✓ **Vineyard Saumagen** Growers *Koehler-Ruprecht, Koehler-Ruprecht* (Philippi), *Landshaus Kronenberg-Familie Bender*

GROSSLAGE MARIENGARTEN

Forst an der Weinstrasse

Nowhere in the Pfalz can Riesling wines of such incomparable finesse and intensity be found.

DEIDESHEIM

✓ **Vineyard Kalkofen** Growers *Dr. Deinhard* • **Bassermann-Jordan, Bürklin-Wolf** • **Vineyard Kieselberg** Growers *Josef Biffar, Georg Mosbacher* • **Vineyard Herrgottsacker** Grower *Dr. Deinhard* • **Vineyard Leimböhl** Grower *Bassermann-Jordan* • **Vineyard Hobenmorgen** Growers *Bassermann-Jordan, Bürklin-Wolf, A. Christmann* • **Vineyard Langenmorgen** Grower *Dr. Deinhard*

FORST

✓ **Vineyard Freundstück** Grower *Georg Mosbacher* • **Vineyard Ungebeuer** Growers *Bassermann-Jordan, J. L. Wolf, Lucasbof, Georg Mosbacher, Eugen Müller, Dr. Deinhard* • **Vineyard Jesuitengarten** Growers *Bassermann-Jordan, von Bubl, Bürklin-Wolf, Dr. Deinhard* • **Vineyard Kirchenstück** Grower *Bassermann-Jordan, Bürklin-Wolf* • **Vineyard Pechstein** Growers *Bassermann-Jordan, von Bubl, Bürklin-Wolf, J. L. Wolf*

WACHENHEIM

✓ **Vineyard Gerümpel** Growers *Bürklin-Wolf, Karl Schaefer, Josef Biffar, J. L. Wolf* • **Vineyard Goldbächel** Growers *Josef Biffar, Bürklin-Wolf* • **Vineyard Rehbächel** Grower *Bürklin-Wolf*

GROSSLAGE MEERSPINNE

Neustadt-Gimmeldingen

These climatically pampered vineyards, on the sheltered slopes of the Haardt Mountains, produce some of the very finest Pfalz wines.

GIMMELDINGEN

- ✓ **Vineyard Mandelgarten Growers A. Christmann, Müller-Catoir • Vineyard Schlüssel Growers Müller-Catoir**

HAARDT

- ✓ **Vineyard Bürgergarten Grower Müller-Catoir • Vineyard Herrenletten Growers Müller-Catoir • Vineyard Mandelring Growers Müller-Catoir**

KÖNIGSBACH

- ✓ **Vineyard Idig Growers A. Christmann (red and white) • Vineyard Ölberg Grower A. Christmann (red)**

MUSSBACH

- ✓ **Vineyard Eselsbaut Grower Müller-Catoir • A. Christmann (red)**

NEUSTADT

- ✓ **Vineyard Mönchgarten Grower Müller-Catoir**

GROSSLAGE PFAFFENGRUND

Neustadt-Diedesfeld

This is not an exceptional *Grosslage*.

DUTTWEILER

- ✓ **Vineyard Kalkberg Grower Bergdolt (red and white)**

GROSSLAGE REBSTÖCKEL

Neustadt-Diedesfeld

No outstanding villages, vineyards, or growers.

GROSSLAGE ROSENBUHL

Freinsheim

No outstanding villages, vineyards, or growers.

GROSSLAGE SCHENKENBÖHL

Wachenheim

The third *Grosslage* to share the vineyards of Bad Dürkheim.

WACHENHEIM

- ✓ **Vineyard Königswingert Grower Emil Zimmermann**

GROSSLAGE SCHNEPFENFLUG AN DER WEINSTRASSE

Forst an der Weinstrasse

Except for a small part of Forst's vineyards (the rest belong to *Grosslage Mariengarten*), few outstanding growers are to be found here.

FORST

- ✓ **Vineyard Stift Grower Georg Mosbacher**

GROSSLAGE SCHNEPFENFLUG VOM ZELLERTAL

Zell

No outstanding villages, vineyards, or growers.

GROSSLAGE SCHWARZERDE

Kirchheim

Mediocre Silvaner-based wines are standard here, but there are a couple of excellent growers in obscure villages that offer good value.

DIRMSTEIN

- ✓ **Vineyard Mandelpfad Grower Knipser**

GROSSKARLBACH

- ✓ **Vineyards Burgweg (red and white)**

Grower Knipser

LAUMERSHEIM

- ✓ **Vineyards Kirschgarten (red) Grower Knipser, Philipp Kubn**

BEREICH SÜDLICHE WEINSTRASSE

Dominated by rather dull and neutral Müller-Thurgau, but younger winemakers are beginning to excel.

GROSSLAGE BISCHOFSKREUZ

Walsheim

Improving quality.

BURRWEILER

- ✓ **Vineyard Schlossgarten Grower Herbert Messmer**

WALSHEIM

- ✓ **Vineyard Silberberg Grower Karl Pfaffmann**

GROSSLAGE GUTTENBERG

Schweigen

When is a German wine not German? When it's grown in France, of course, where 321 acres (130 ha) of Schweigen's "sovereign" vineyards are located. Every year the growers pick their grapes in France and trundle across the border to vinify them. Weird as it might sound, the grapes are German if pressed in Germany, but French if pressed in France! The *terroir* of this *Grosslage* is most suited to the Burgunder varieties and Gewürztraminer, reflecting the area's northern extension of the Alsace vineyards.

SCHWEIGEN

- ✓ **Vineyard Sonnenberg Growers Friedrich Becker (red and white), Bernhart (red and white) • Premium Red Wine Blend Grower Friedrich Becker (Tafelwein Reserve)**

GROSSLAGE HERRLICH

Eschbach

An area easily capable of producing good QmP wines. The *Auslese* can be astonishingly cheap.

LEINSWEILER

- ✓ **Vineyard Sonnenberg Grower Siegrist • Non-Einzellagen red and white wines Grower Siegrist**

GROSSLAGE KLOSTER LIEBFRAUENBERG

Bad Bergzabern

One grower is beginning to break the mold.

PLEISWEILER-OBERHOFEN

- ✓ **Premium red wine Grower Wilker (Frühburgunder)**

GROSSLAGE KÖNIGSGARTEN

Godramstein

This *Grosslage* consists of some excellent wine villages and several talented winemakers.

ALBERSWEILER

- ✓ **Vineyard Latt Grower Ökonomierat Rebholz BIRKWEILER**

- ✓ **Vineyard Kastanienbusch Growers Ökonomierat Rebholz, Dr. Webrheim (red and white) • Vineyard Mandelberg Growers Schneider, Albersweiler (red), Dr. Webrheim GODRAMSTEIN**

- ✓ **Vineyard Münzberg Growers Münzberg Vineyard Schlangenpfißf Grower Münzberg SIEBELDINGEN**

- ✓ **Vineyard Im Sonnenschein Growers Ökonomierat Rebholz (red and white), Wilbelmschhof (red and white) • Premium Red Wine Blend Grower Ökonomierat Rebholz (Tradition)**

GROSSLAGE MANDELHÖHE

Maikammer

Some pleasant, attractive Rieslings.

KIRRWEILER

- ✓ **Vineyard Mandelberg Grower Bergdolt MAIKAMMER**

- ✓ **Vineyard Heiligenberg Grower Ullrichshof-Familie Faubel • Vineyard Kapellenberg Grower Ullrichshof-Familie Faubel**

GROSSLAGE ORDENSGUT

Edesheim

Rising red wine star!

HAINFELD

- ✓ **Vineyard Kapelle Grower Gerhard Klein Premium red wines Grower Gerhard Klein ("B," "S," Theatrum Vinum "R")**

GROSSLAGE SCHLOSS LUDWIGSHÖHE

Edenkoben

No outstanding villages, vineyards, or growers.

GROSSLAGE TRAPPENBERG

Hochstadt

Few outstanding vineyards in this *Grosslage*.

ESSINGEN

- ✓ **Non-Einzellagen wines: Grower Weingut Frey & Soebne**

THE HESSISCHE BERGSTRASSE

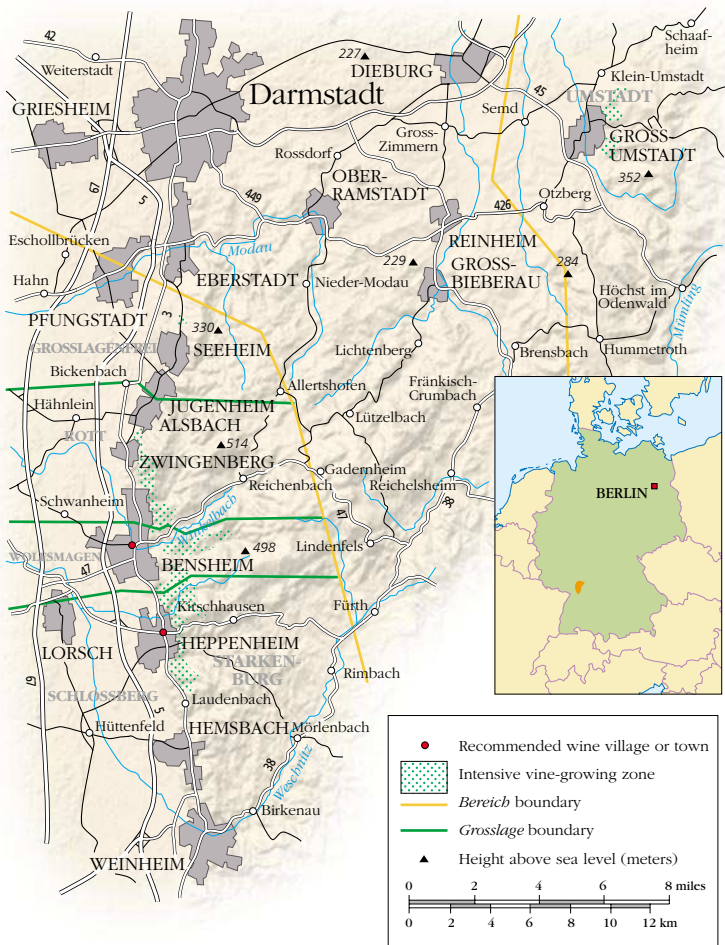

Situated between the Rheinhessen and Franken, the northern tip of Baden's vineyards is the Hessische Bergstrasse. This is the smallest and least-known of Germany's Qualitätswein regions, and its fruity wines are marked by a pronounced earthy acidity, with almost 60 percent made in a dry style.

THIS REGION CORRESPONDS to the northern section of the old Roman *strata montana*, or "mountain road," hence Bergstrasse. This ancient trade route ran from Darmstadt to Wiesloch, which is south of Heidelberg in what is now the Baden region. The Romans brought viticulture to this area, but without the monasteries, which developed, spread, and maintained the vineyards throughout the medieval period, the tradition of winemaking would have ceased long ago.

The vineyards of the Hessische Bergstrasse are dotted among orchards in a strip of foothills along the western edge of Odenwald. Protected by the Odenwald, the fragrance of fruit trees in full bloom hangs noticeably over these hills in springtime. Indeed, Odenwald's forested mountains offer such effective protection that the sun-trap vineyards of Bensheim boast the

UNTERHAMBACH
A vineyard above Unterhambach, where small-scale winemaking is the norm. The cooperative in nearby Heppenheim receives 70 percent of the region's grapes.

THE HESSISCHE BERGSTRASSE, see also p.345
This area is called the "spring garden," because of the early flowering of its fruit and almond orchards, between which vineyards are planted.

THE REGION AT A GLANCE

<p>Area under vine 1,087 acres or 440 ha (decreasing)</p> <p>Average yield 315 cases/acre or 72 hl/ha (static)</p> <p>Red wine 8% (increasing)</p> <p>White wine 92% (decreasing)</p> <p>Dry & semidry wine 58% Trocken, 29% Halbtrocken</p>	<p>Most important grape varieties 53% Riesling (decreasing), 10% Müller-Thurgau (decreasing), 8% Grauburgunder (increasing), 29% Others</p> <p>Infrastructure Bereiche 2 Grosslagen 3 Einzellagen 22</p> <p>Note The vineyards of the Hessische Bergstrasse straddle 10 <i>Gemeinden</i> (communes), the names of which may appear on the label.</p>
---	---

highest annual mean temperatures in Germany. This exceptional heat is, of course, relative to Germany's cool northern climate, and the wines produced here have an excellent level of acidity, but there is a definite peachiness to the finest Rieslings, which is an indication of their ripeness. The Hessische Bergstrasse is planted with a relatively high proportion of Riesling, particularly in the *Bereich* Starkenburg, where the best wines are grown.

The vines, which grow on relatively rich soils, produce very fruity wines that have a typical and easily recognized, earthy acidity, with a style that is richer than most Rheinhessen wines and more reminiscent of a somewhat rustic Rheingau. The Müller-Thurgau is not Germany's best, but it can be fragrant; the Silvaner lacks the assertive character found in Franken to the east; but the Gewürztraminer can have a fine, subdued style.

The vineyards are farmed by more than 1,000 individual growers with the average-sized plot being barely more than four-fifths of an acre (one-third of a hectare). Most of these growers are part-timers who tend their plots on the weekends. This helps to explain the anonymity of the area's wines, and this will remain until a number of large, quality-minded estates are established.

GRONAU HESSISCHE BERGSTRASSE
Looking down the south-facing slopes of the Hemsburg vineyard toward Gronau, an *Ortsteil* of Bensheim.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
Between Darmstadt and Heppenheim, beside the Odenwald Mountains, with the Rhine to the west and the Main to the north.

CLIMATE
The vineyards on the southern slopes of the valleys flanking the Bergstrasse benefit from an average temperature of over 48°F (9°C). Combined with an annual rainfall of 30 inches (75.5 centimeters), this produces ideal conditions. Bensheim is supposed to be the hottest place in Germany.

ASPECT
The best vineyards are generally on southwest-facing slopes in the *grosslagen* of Schlossberg and Wolfsmagen (particularly Kalkgasse in Bensheim and Centericht in Heppenheim). The terrain is more one of hilly hinterland than steep valleys.

SOIL
Most of the soil consists of varying amounts of light, finely structured loess and basalt.

VITICULTURE AND VINIFICATION

The vineyards are not contiguous, but are planted rather haphazardly, sometimes on old-established terraces among orchards. Although a great many individuals grow grapes, more than half the crop is processed by the regional cooperative in Heppenheim. Müller-Thurgau is giving way to Grauburgunder, and almost 60 percent of the total wines produced in this region are technically dry (*trocken*). The State Wine Domain in Bensheim is the region's largest vineyard owner, but given the small size of this region, almost all of its wines are consumed locally.

GRAPE VARIETIES

Primary varieties: Müller-Thurgau, Riesling
Secondary varieties: Ehrenfelser, Gewürztraminer, Grauburgunder, Kerner, Ruländer, Scheurebe, Silvaner, Weissburgunder

THE APPELLATIONS OF THE HESSISCHE BERGSTRASSE

BEREICH STARKENBURG

This is the larger of this region's *Bereiche*, and the best in terms of quality. Riesling is planted in most of its vineyards.

GROSSLAGE ROTT

The largest of Starkenburg's three *Grosslagen*, this includes the northern section of Bensheim, one of the region's two best communes. The finest wine comes from its south-facing Herrwingert vineyard.

GROSSLAGE SCHLOSSBERG

This *Grosslage* covers part of Bensheim and three villages to the south, with Heppenheim the most highly rated. A unique peachiness is

associated with the sun-drenched Stemmler and Centericht vineyards.

HEPPENHEIM

✓ **Vineyard** *Centericht Grower Staatsweingut Bergstrasse*

GROSSLAGE WOLFSMAGEN

This includes the southern section of Bensheim with the two *Ortsteile* of Zell and Gronau.

BENSHEIM

✓ **Vineyard** *Kalkgasse Grower Staatsweingut Bergstrasse, Weingut der Stadt Bensheim*

BEREICH UMSTADT

There are no remarkable villages, vineyards, or *Grosslagen* in this *Bereich*.

ZELL VINEYARD
Vineyard in the *Streichling Einzellage* at Zell, near Bensheim, Hessen.

FRANKEN

Classic Franconian Silvaner wine is distinctly dry with an earthy or smoky aroma and is bottled in the traditional flask-shaped Bocksbeutel. In this region, the Silvaner grape variety has, to a certain extent, given way to Müller-Thurgau, among others, although this trend is now being reversed.

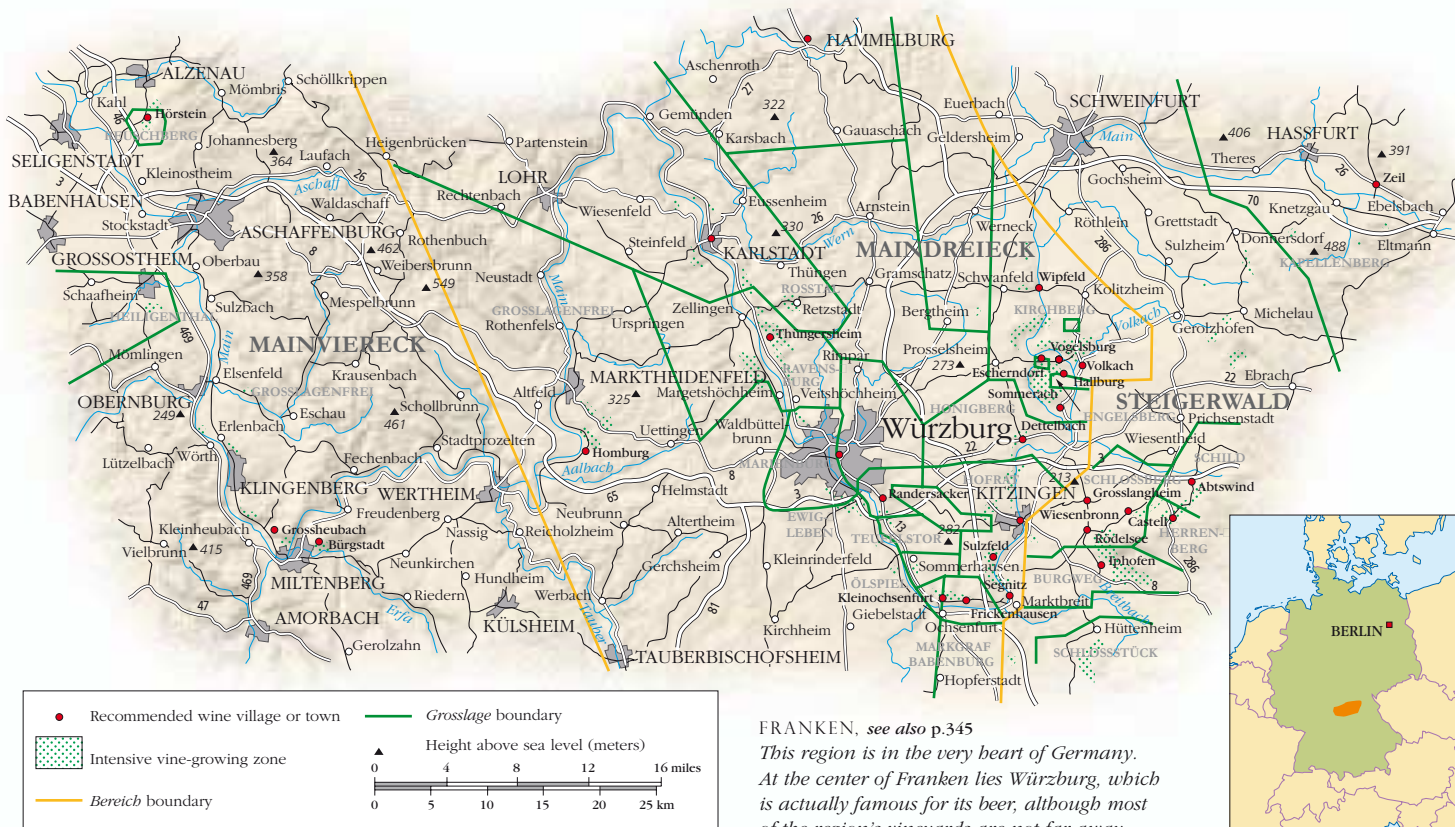

THERE IS ALMOST twice as much land under vine in Franken as there is in the Rheingau, for instance, but the vineyards are scattered over a far greater area and they are interspersed with meadows and forests. Franken is also a beer-producing region, and many say that more pleasure can be had from a Stein of

INTERIOR OF THE RESIDENZ, WÜRZBURG

Note: The vineyards of Franken straddle 125 *Gemeinden* (communes), the names of which may appear on labels.

THE CELLAR AT THE RESIDENZ, WÜRZBURG

The magnificent cellar under the Baroque Residency at Würzburg has been state run since 1803.

Würzburger beer than from a glass of Würzburger Stein, Franken's most famous wine. Exported wine invariably comes from the better estates and it is relatively expensive, particularly if bottled in the traditional *Bocksbeutel*.

Wines made from this region's Silvaner grape have a full taste and an earthy bite, sometimes attaining smoky complexity, making it far more interesting than most examples of this variety. However, my favorite Franconian wine is Riesling, because,

although it accounts for less than 3 percent of the vines grown and often fails to ripen here, it can be made into exceptional wines in sunny years. Rieslaner (Riesling x Silvaner cross), Bacchus, and Kerner are all successful, particularly as QmP, although it is rare to find a wine above *Auslese* level.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
Situated in Bavaria, Franken is the most northeasterly of the wine regions of former West Germany.

CLIMATE
The most continental climate of Germany's wine regions, with dry warm summers and cold winters. Severe frosts affect yields.

ASPECT
Many vineyards face south and are located on the slopes of the valleys of the Main and its

tributaries, as well as on sheltered sites of the Steigerwald.

SOIL
Franken's three *Bereiche* have different soil structures: Mainviereck has predominantly weathered colored sandstone; Maindreieck limestone with clay and loess; and Steigerwald, weathered red marl.

VITICULTURE AND VINIFICATION
The classic Franconian vine, the Silvaner, has become less widely

planted than the Müller-Thurgau, although the pendulum has started to swing back the other way. Rieslaner is something of a local specialty. Franken wines generally are usually drier than most in Germany and accompany food well. There are 6,000 growers, allowing for a great range of styles, although 40 percent of the wines are processed by the regional cooperative in Kitzingen and smaller cooperatives. Exports are insignificant, with four out of

every five bottles of Franken wine consumed within a 150 mile radius of where they were produced.

GRAPE VARIETIES
Primary varieties: Müller-Thurgau, Silvaner
Secondary varieties: Bacchus, Kerner, Ortega, Perle, Rieslaner, Riesling, Scheurebe, Spätburgunder, Traminer

THE APPELLATIONS OF
FRANKEN

Note In Franken, certain *Grosslagen* can be prefixed only by a specified village name, which is listed immediately beneath the relevant *Grosslage* name.

BEREICH
MAINDREIECK

Most of the vineyards in this *Bereich* are in the vicinity of Würzburg. Grapes grown on the limestone soils can produce exceptional wines.

GROSSLAGE BURG
Hammelburg

Robust, earthy Silvaners and the lighter, fragrant Müller-Thurgaus are the main attractions.

GROSSLAGE ENGELSBERG

A new *Grosslage*, God forbid, encompassing part of two *Einzellagen* formerly in the

Grosslage Kirchberg, the Sommeracher vineyards of Katzenkopf and Rosenberg.

SOMMERACH

✓ **Vineyard Katzenkopf Grower** Glaser-Himmelstoss

GROSSLAGE EWIG LEBEN

This *Grosslage* contains the greatest concentration of fine vineyards in Franken and some fine wines are available under its generic designation. Ewig Leben has the advantage of a particularly favorable microclimate, which helps create wines of a rare harmony. Rieslings from this area possess an original natural charm complemented by a bouquet often reminiscent of peaches.

RANDERSACKER

✓ **Vineyard Sonnenstuhl Growers** Schmitt's Kinder; *Schloss Sommerhausen* • **Vineyard Marsberg Growers** Schmitt's Kinder

GROSSLAGE HOFRAT

Kitzingen

This is one of Franken's few relatively large *Grosslagen*, where the *Einzellagen* seldom excel, except for the vineyards on the lazy bend of the Main River north and south of Sulzfeld.

SULZFELD

✓ **Vineyard Cyriakusberg Grower** Zebnthof Theo Luckert

GROSSLAGE HONIGBERG

In this *Grosslage* there are no particularly outstanding villages, vineyards, or growers, although a few good wines are made in the village of Dettelbach.

GROSSLAGE KIRCHBERG

Volkach

Grosslage Kirchberg contains some of the finest vineyards in all of Franken. After years of mediocrity the full potential offered by the land is now being realized by a number of growers.

ESCHERNDORF

- ✓ Vineyard *Fürstenberg* Grower *Horst Sauer*
- Vineyard *Lump* Growers *Juliuspital, Horst Sauer, Egon Schäffer, Rainer Sauer*

NORDHEIM

- ✓ Vineyard *Vögelein* Growers *Waldemar Braun, Glaser-Himmelstoss*

VOLKACH

- ✓ Vineyard *Karhäuser* Grower *Rudolf Fürst* (red) • *Juliuspital*

GROSSLAGE MARIENBERG

This has been created as a new *Grosslage* for the previously *Grosslagenfrei* vineyards north and west of Würzburg.

WÜRZBURG

- ✓ Vineyard *Stein* Growers *Am Stein-Ludwig Knoll, Bürgerspital Würzburg, Juliuspital Würzburg* • Vineyard *Innere Leiste* Growers *Juliuspital, Am Stein-Ludwig Knoll* • Vineyard *Abtsleite* Growers *Juliuspital Würzburg* • **Red and White Premium Blends** Grower *Am Stein-Ludwig Knoll* (Montonia)

GROSSLAGE MARKGRAF BABENBERG

There are no outstanding villages, vineyards, or growers in this *Grosslage* although some very good wines are made in Frickenhausen.

GROSSLAGE OELSPIEL

This *Grosslage's* main feature is a fine strip of vineyards on the right bank of the Main, southeast of Würzburg. Schloss Sommerhausen has emerged as the district's leading producer.

SOMMERHAUSEN

- ✓ Vineyard *Steinbach* Growers *Schloss Sommerhausen*

GROSSLAGE RAVENSBURG

Thüngersheim

Grosslage Ravensburg is situated downstream from Franken's best vineyards, but some of the wines here can still be quite attractive.

GROSSLAGE ROSSTAL

Karlstadt

One grower who has shown promise in this otherwise lackluster *Grosslage* is the Weingut Am Stein in Stetten.

STETTEN

- ✓ Vineyard *Stein* Grower *Am Stein-Ludwig Knoll*

GROSSLAGE TEUFELSTOR

The *Grosslage* of Teufelstor is a continuation of Ewig Leben, but the quality of the wines it produces is not as good.

EIBELSTADT

- ✓ Vineyard *Kapellenberg* Grower *Schloss Sommerhausen*

GROSSLAGENFREI

Many vineyards in this *Bereich* are *Grosslagenfrei* (composed of individual *Einzellagen* that are not grouped under any *Grosslagen*).

HOMBURG

- ✓ Vineyard *Kallmuth* Grower *Fürst Löwenstein*

BEREICH MAINVIERECK

Mainviereck is the smallest of the *Bereiche*, as well as being the most westerly, and the wines it produces are modest.

GROSSLAGE HEILIGENTHAL

This *Grosslage* comprises one village, Grosseheim, with just two *Einzellagen*, most vineyards in the area being *Grosslagenfrei*.

GROSSLAGE REUSCHBERG

This *Grosslage* comprises one village, Hörstein, and just two *Einzellagen*, most vineyards in the area being *Grosslagenfrei*.

GROSSLAGENFREI

Most of Mainviereck's vineyards are *Grosslagenfrei* (individual *Einzellagen* not grouped under any *Grosslage*). Standards have been rising over the past two decades and there is potential for excellent red wines on sites featuring red sandstone soils.

BÜRGSTADT

- ✓ Vineyard *Centgrafenberg* Grower *Rudolf Fürst*

BEREICH

STEIGERWALD

The distinctive, earthy character of Franconian wine is evident in *Bereich* Steigerwald, where heavier soils result in fuller-bodied wines.

GROSSLAGE BURGWEG

This *Grosslage* contains one of Franken's greatest wine villages, Iphofen.

IPHOFEN

- ✓ Vineyard *Julius-Echter Berg* Growers *Johann Ruck, Hans Wirsching, Juliuspital Würzburg* • Vineyard *Kalb* Grower *Hans Wirsching* • Vineyard *Kronsberg* Grower *Hans Wirsching*

GROSSLAGE HERRENBERG

There are a number of south-facing vineyards in Herrenberg, yet it is the northwest-facing ones in Castell that yield the exceptional wines.

CASTELL

- ✓ Vineyard *Kugelspiel* Grower *Castellsches Domänenamt* • Vineyard *Schlossberg* Grower *Castellsches Domänenamt* ☉

GROSSLAGE KAPELLENBERG

There are no outstanding villages, vineyards, or growers in Grosslage Kapellenberg, although a number of good wines are often produced in the village of Zeil.

GROSSLAGE SCHILD

This *Grosslage* has no outstanding villages, vineyards, or growers, although good wines are made in the village of Abtswind.

GROSSLAGE SCHLOSSBERG

Underrated, with excellent, sheltered vineyards.

RÖDELSEE

- ✓ Vineyard *Schwanleite* Grower *Johann Ruck*

GROSSLAGE SCHLOSSTÜCK

No outstanding villages, vineyards, or growers, although good wines are made in Ippesheim.

WÜRTTEMBERG

Württemberg is not well known as a wine region, principally because the wines produced in the area (a light red wine and a rosé called “Schillerwein”) are not styles that are much in demand outside the region itself.

WÜRTTEMBERG IS GERMANY’S red-wine-producing region. But this is not red wine as most non-German wine drinkers would perceive it. Black grape varieties grow in over half the vineyards in Württemberg, and half of these are planted with Trollinger, a grape that produces a light, fresh, and grapey wine with none of the body, tannin, or other characteristics associated with a true red wine. The most concentrated Trollinger wines are made between Heilbronn and Winnenden, just northeast of Stuttgart, but they do not compare with reds produced in nearby Baden.

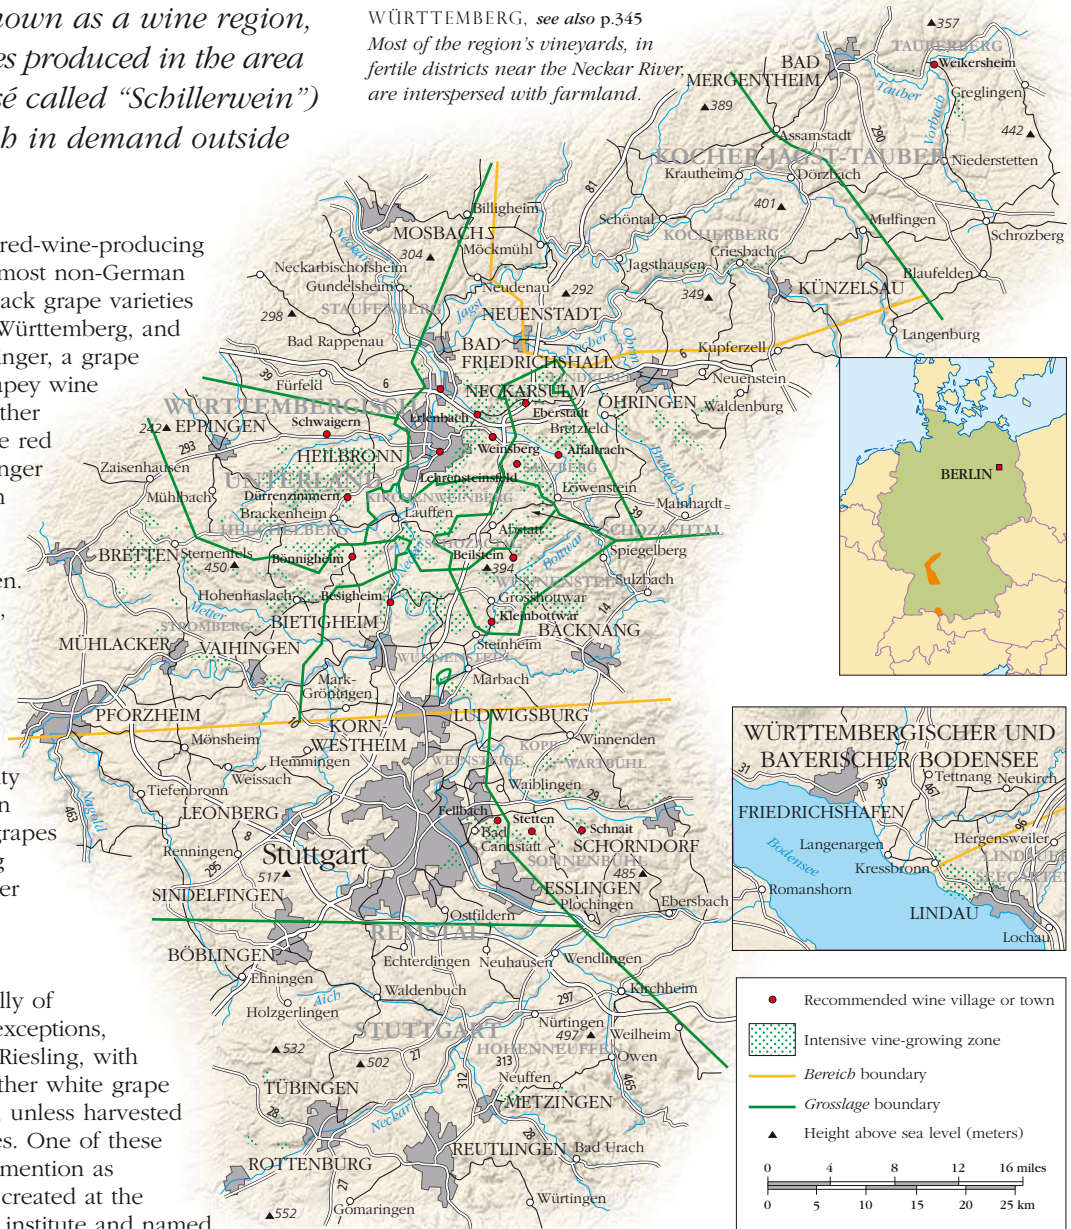

Red Lemberger is enjoyed locally, but until recently it produced unimpressive neutral-flavored wines. A few growers have begun to get more out of this variety, but it is never going to make waves.

The rosé Schillerwein is a specialty and usually has more character than red wines made from other black grapes grown here, such as Schwarzriesling (Pinot Meunier), which makes a better white wine than red or rosé.

WHITE WINES

White Württemberg wines are usually of modest quality, although there are exceptions, such as robust, intensely flavoured Riesling, with pronounced acidity. The region’s other white grape varieties make very ordinary wines, unless harvested at one of the higher QmP categories. One of these white grapes—Kerner—deserves a mention as this Trollinger x Riesling cross was created at the Württemberg Weinsberg viticultural institute and named after the local 19th-century doctor and poet Justinus Kerner.

WÜRTTEMBERG, see also p.345
 Most of the region’s vineyards, in fertile districts near the Neckar River, are interspersed with farmland.

THE REGION AT A GLANCE

Area under vine 27,264 acres or 11,033 ha (decreasing)	Most important grape varieties 23% Trollinger (increasing), 21% Riesling (decreasing), 17% Schwarzriesling (increasing), 11% Lemberger (increasing), 7% Spätburgunder (increasing), 5% Kerner (decreasing), 16% Others

**Minimum Oechsle levels vary according to grape variety; those that have a naturally lower sugar content may qualify at a correspondingly lower level.*

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
Württemberg is situated between Frankfurt to the north and Lake Constance to the south.

CLIMATE
Sheltered by the Black Forest to the west and the hilly Swabian Alb to the east, this area has an especially warm growing season.

ASPECT
Vineyards are widely scattered either side of the Neckar River.

SOIL
Soils vary, but red marl, clay, loess, keuper and loam dominate, with scatterings of shell-limestone in the Neckar Valley area. Topsoils are deep and well drained, producing full wines with a firm acidity.

VITICULTURE AND VINIFICATION
Most of Württemberg's 16,500 growers own tiny plots and tend them part-time, taking their grapes to the cooperatives for processing. Most of the production is consumed locally. Trollinger has overtaken Riesling as the leading grape, while Lemberger and Spätburgunder are the fastest expanding. Another major

variety, Schwarzriesling, is the same as Pinot Meunier. Over half the wine is made in *halbtrocken* style.

GRAPE VARIETIES
Primary varieties: Lemberger, Riesling, Schwarzriesling, Trollinger
Secondary varieties: Kerner, Müller-Thurgau, Pinot Meunier, Portugieser, Ruländer, Silvaner, Spätburgunder

THE APPELLATIONS OF
WÜRTTEMBERGBEREICH BAYERISCHER

BADEN

Often described as Germany's southernmost wine-producing region, Baden is not so much one region as a hodgepodge of politically diverse districts that once produced wine in the now defunct Grand Duchy of Baden.

THE MOST NORTHERLY SECTION OF BADEN is parallel with the Mosel, bridging Franconia and Württemberg, while south from Baden-Baden, the vineyards are the mirror-image of Alsace across the border, and three pockets of vines on the shores of Bodensee are almost the most southerly in Germany; that dubious honor goes to Württemberg's nearby *Grosslage* of Lindauer Seegarten.

This variation of geographical, geological, and climatic conditions produces a wide range of wines, from mild Silvaner, through light, spicy Gutedel, to the full-bodied Ruländer, the attractive pink-colored Weissherbst, a specialty of the region, and

BADEN, *see also* p.345
The vineyards of this huge wine-producing region are mostly spread along a strip extending beside the western boundary of the Black Forest, between it and the border with France. Inset (right) is the northerly area of the Bereich of Tauberfranken, while inset (above) is the Grosslage of Vulkanfelsen, which has been magnified to reveal all the recommended wine villages of this first-class wine district.

RIESCHEN VINEYARD

The old and new castles above the Rieschen vineyard, on the north shore of the Bodensee at Meersburg.

a good deal of Germany's best red wines. If, however, anything can be said to be the mark of a Baden wine it must be a certain warmth, roundness, and mellowness.

Baden is considered to be one of Germany's newest wine regions, yet by 1800 it had become its largest, possessing more than 66,700 acres (27,000 hectares) of vines, almost twice the amount grown today. Ironically, it was when Germany acquired a wealthy and viticulturally prolific Alsace in 1871, as one of the spoils of the Franco-Prussian War, that Baden's vineyards began to decline. The downward trend continued, despite the formation of the Baden Wine Growers' Association, founded by the priest and winemaker Heinrich Hansjakob in Hagnau in 1881. Even after the return of Alsace to French sovereignty in 1918, Baden's wine production continued to decline, primarily through lack of investment. In the 1920s wine production was adversely affected by inheritance laws that split Baden's vineyards into smaller and smaller units. By 1950, with barely 14,800 acres (6,000 hectares) of vines, Baden's wine industry was at its lowest ebb.

The eventual resurgence of Baden's wine industry began in 1952 with the formation of the Zentralkellerei Kaiserstuhler Winzergenossenschaften (Central Winery of Kaiserstuhl), which two years later expanded into the Zentralkellerei Badischer Winzergenossenschaften (Central Winery of Baden), or ZBW for short. ZBW built a \$120 million vinification and storage plant at Breisach that helped to raise quality standards throughout the

BODENSEE (LAKE CONSTANCE)

These vines are in the south of Baden, at Meersburg, the best village of the Sonnenufer Grosslage, with some of the most southerly vineyards in Germany.

region and adopted an aggressive marketing policy on the domestic scene. Baden established itself as Germany's third-largest wine producing region, yet its wines were virtually unknown outside the country until ZBW made a serious effort to export its products in the early 1980s. Sadly, Baden is now a victim of its own success, for ZBW, which accounts for some 90 percent of the region's output, has established such a clear-cut identity for its wines that Baden is generally perceived to produce one style of well-made, but rather basic, characterless wine. The truth is that while this one style represents the bulk of ZBW's, and thus Baden's, production, both ZBW and the region's independent producers have a wealth of other wines that are seldom seen or spoken about outside their locality. It is now time for ZBW to turn its marketing expertise to the relatively small number of very high-quality wines within its region, and promote them as independent wine estates for the benefit of all.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

The longest *Anbaugebiete*, Baden stretches for approximately 250 miles (400 km), from Franken in the north, past Württemberg and the Badische Bergstrasse to Bodensee, or Lake Constance, some of Germany's most southerly vineyards.

CLIMATE

Compared with the rest of Germany, the bulk of Baden's vineyards have a sunny and warm climate, due in part to the shelter afforded by the Black Forest and the Odenwald Mountains.

ASPECT

Most vineyards are on level or gently sloping ground. Some, however, are to be found higher up the hillsides, and these avoid the frosts of the valley floors.

SOIL

Baden's soils are rich and fertile, varying from heat-retaining gravel near Lake Constance, through limestone, clay, marl, loam, granite, and loess deposits to limestone and keuper, a sandy-marl, in the Kraichgau and Taubergrund. Volcanic bedrock forms the main subsoil structure throughout most of the region.

VITICULTURE AND VINIFICATION

The relatively flat and fertile vineyards of this region are easily mechanized. Although the geographical spread and variety of soils has led to a large number of different, traditional styles of wine, they are overshadowed by the mild and neutrally fruity, bulk-produced Baden QbA marketed by ZBW. More than 90 percent of the winemaking in Baden is conducted by its 54 cooperatives, but there are several independent and top-quality estates among the region's 26,000 growers. Spätburgunder has now officially taken over from Müller-Thurgau as Baden's most important grape, and more than half the wines produced from all varieties in this region are made in a dry or *trocken* style. A specialty that is unique to Baden is Badisch Rotgold, a soft, delicately-flavored rosé made from pressing Ruländer and Spätburgunder grapes together.

GRAPE VARIETIES

Primary varieties: Müller-Thurgau, Ruländer, Spätburgunder
Secondary varieties: Gutedel, Kerner, Nobling, Riesling, Silvaner, Traminer, Weissburgunder

THE APPELLATIONS OF BADEN

BEREICH BADISCHE BERGSTRASSE- KRAICHGAU

This *Bereich* has four *Grosslagen*, two in the Badische Bergstrasse, north and south of Heidelberg, and two in the Kraichgau, a larger but sparsely cultivated area farther south. Only one *Grosslage*, Stiftsberg, in the Kraichgau, has any reputation at all. Half the *Bereich* is planted with Müller-Thurgau grapes, but it makes mostly dull and lackluster wine. When successful, the best wines are Ruländer and Riesling.

GROSSLAGE HOHENBERG

In this *Grosslage* there are no outstanding villages, vineyards, or growers, although good wines are made in the village of Weingarten.

GROSSLAGE MANNABERG

This *Grosslage* is situated just southeast of Mannheim and it encompasses the historic university town of Heidelberg, which has some fine steep vineyard slopes overlooking the Neckar River.

HEIDELBERG

- ✓ **Vineyard Herrenberg** (red and white)
Grower Seeger/Leimen • **Premium red wine blends: Grower Seeger** (Leimen—"R," "S," "RR")

GROSSLAGE RITTERSBERG

There are no outstanding villages, vineyards, or growers here, although good wines are made in the villages of Leutershausen, Lützelsachen, Schriesheim, and Weinheim.

GROSSLAGE STIFTSBERG

Situated in the Kraichgau, this is the *Bereich's* most successful *Grosslage*. Nearly half of its vineyards are classified as "steep," which officially means sloping at more than 20 degrees, and this contributes to the extreme fruitiness of the Ruländer and the relatively racy character of the Riesling.

SULZFELD

- ✓ **Non-Einzellagen premium red: Growers Burg Ravensburg**

BEREICH BODENSEE

In the Hochrhein of Bodensee, or the Upper Rhine of Bodensee (known in English as Lake

Constance), the wines are not great, but can be very acceptable. They range from the fruity and lively Müller-Thurgau to Rotwein and Weissherbst, both produced from Spätburgunder.

GROSSLAGE SONNENUFER

The steep sides of Lake Constance around Meersburg are the most spectacular vineyards here. The brothers Aufricht have brought a new dimension to the wines of this district, taking over the lead from Winzerverein Meersburg, Germany's first state domain (since 1802).

MEERSBURG

- ✓ **Vineyard Sängeralde** **Grower Aufricht**

BEREICH BREISGAU

Strangely, the old city of Breisach is not part of the *Bereich* that takes its name; it is, in fact, situated in the *Bereich* of Kaiserstuhl-Tuniberg to the south. The wines of *Bereich* Breisgau have narrowed the gap on the better-known Kaiserstuhl-Tuniberg, with fruity, off-dry Müller-Thurgau balanced by some excellent Weissburgunder, Grauburgunder, and Spätburgunder.

GROSSLAGE BURG LICHTENECK

Besides those of the villages recommended below, good wines are also made in Altdorf.

MALTERDINGEN

- ✓ **Vineyard Bienenberg** **Grower Bernhard Huber** • **Premium red wine blends: Grower Bernhard Huber** (R, S, Alte Reben)

GROSSLAGE BURG ZÄHRINGEN

There are no outstanding villages, vineyards, or growers in this *Grosslage*, although good wines are made in the village of Glottental.

GROSSLAGE SCHUTTER-LINDENBERG

There are no outstanding villages, vineyards, or growers in this *Grosslage*, although good wines are made in the village of Friesenheim.

BEREICH KAISERSTUHL

Formerly part of Kaiserstuhl-Tuniberg, this *Bereich* is dominated by the extinct volcano of Kaiserstuhl, whose immaculate slopes are textbook examples of *Flurbereinigung* (growing vines in rows up and down slopes).

In this, Germany's warmest and driest *Bereich*, there are microclimates that favor

certain sites protected by the volcano. Some of Baden's best wines come from these *Einzellagen*, although most of the wine is sold under the *Bereich* name, usually with the grape name attached; *Bereich* Kaiserstuhl Müller-Thurgau dominates. But it is the very full white Ruländer and the assertive Weissherbst Ruländer that made the reputation of the *Bereich*. Some fine, rich Spätburgunder wines enhance this reputation.

GROSSLAGE VULKANFELSEN

Vulkanfelsen is the largest and most successful of the two *Grosslagen* that belonged to the now defunct Kaiserstuhl-Tuniberg. As its name implies (Vulkanfelsen means volcano rock), it covers the superior, high volcanic vineyards of the Kaiserstuhl mound itself. Above all else, it is the full, fiery intensity of Ruländer wines from the Kaiserstuhl that give this district its reputation.

ACHKARREN

- ✓ **Vineyard Schlossberg** **Growers Dr. Heger** (red and white), **Michel** (red and white) • **Non-Einzellagen Premium red and white wines** **Grower Jobner** (S)

BURKHEIM

- ✓ **Vineyard Feuerberg** **Grower Bercher** (red and white), **Winzergenossenschaft Burkheim**

ENDINGEN

- ✓ **Grower Reinhold und Cornelia Schneider**

IHRINGEN

- ✓ **Vineyard Winklerberg** **Growers Dr. Heger** (red and white), **Stigler**

- ✓ **Vineyard Limburg** **Grower Bercher** • **Vineyard Rote Halde** **Grower Winzergenossenschaft Sasbach**

SCHELINGEN

- ✓ **Vineyard Kirchberg** **Grower Schätzle**

BEREICH MARKGRÄFLERLAND

This is the second-most important *Bereich* in Baden. The principal grape variety is, unusually, Gutedel, which makes a light, dryish, and neutral wine that benefits from a slight spritz and can

be most attractive when very youthful. Other prominent varieties include Nobling, an up-and-coming cross between Gutedel and Silvaner that makes a more characterful wine than the light Müller-Thurgau. The latter can be attractive nevertheless. Spätburgunder can be full and successful, and Gewürztraminer also fares well.

GROSSLAGE ATILAFELSEN

Not enough is made of the potential for good wines at this small volcanic outcrop of the Tuniberg.

GROSSLAGE BURG NEUENFELS

The vast majority of vineyards in this *Grosslage* are on steep ground. These vineyards make some of Germany's most delicious Gutedel, although the greatest potential lies in the Burgunder varieties.

BADENWEILER

- ✓ **Vineyard Römerberg Grower**
Winzergenossenschaft Britzingen

LAUFEN

- ✓ **Non-Einzellagen wines: Grower**
Schlumberger (red and white)

MAUCHEN

- ✓ **Vineyard Sonnenstück Grower** *Lämmlin-Schindler* ☉ • **Vineyard Frauenberg**
Grower Lämmlin-Schindler

GROSSLAGE LORETTOBERG

A cooperative, a part-time asparagus grower and a Chardonnay specialist have brought some credibility to a long-underestimated *Grosslage*.

PPAFFENWEILER

- ✓ **Vineyard Oberdürrenberg Grower**
Winzergenossenschaft Pfaffenweiler

SCHERZINGEN

- ✓ **Vineyard Batzenberg Grower** *Heinemann*
SCHLATT

- ✓ **Vineyard Maltesergarten Grower** *Martin Wassmer* (red and white)

GROSSLAGE VOGTEI RÖTTELN

Although much wine is sold under this *Grosslage*, its exceptional vineyards are known for Gutedel and, to a lesser extent, Spätburgunder.

BEREICH ORTENAU

Sheltered by the Black Forest, the two *Grosslagen* in this *Bereich* produce some of Baden's greatest wines. They are generally full, fruity, and often very spicy. The Riesling, known locally as Klingelberger, is extremely fine for such a powerful and spicy variation of this normally racy variety. Müller-Thurgau is particularly good and full, and a successful Ruländer-Spätburgunder blend called Badisch Rotgold is also produced. Confusingly, the Gewürztraminer is often called Clevner, which is usually a synonym for Pinot Blanc.

GROSSLAGE FÜRSTENECK

This *Grosslage* sports some of Baden's finest estates. The range of grape varieties is greater here than anywhere else within Baden and the wines include Rieslings that range from firm and spicy to fine and delicate; powerful Gewürztraminer; some of Germany's best Müller-Thurgau; and some extraordinary Gutedel. Many of the wines are made in increasingly drier styles, although some estates are famous for their sweeter, late-harvested products.

DURBACH

- ✓ **Vineyard Schloss Grobl Grower** *Gräflich Wolff Metternich'sches Weingut* • **Vineyard Schlossberg Growers** *Gräflich Wolff Metternich'sches Weingut* • **Vineyard Plauelrain Growers** *Andreas Laible, Durbacher Winzergenossenschaft*

ORTENBERG

- ✓ **Non-Einzellagen wines: Grower** *Schloss Ortenberg*

GROSSLAGE SCHLOSS RODECK

For many years Schloss Neuweier was the undisputed number one in this *Grosslage*, but a Dutch newcomer has propelled himself to the forefront of developments with Spätburgunder in *barriques*.

BÜHL

- ✓ **Non-Einzellagen premium red wines**
Grower Duijn

NEUWEIER

- ✓ **Vineyard Mauerberg Grower** *Schloss Neuweier* • **Vineyard Schlossberg Grower**
Schloss Neuweier

BEREICH TAUBERFRANKEN

The most northerly of Baden's vineyards, *Bereich Tauberfranken* bridges Franken and Württemberg. The wines have a similar style to those produced in both regions. If anything, the crisp, dry, aromatic, and slightly earthy Müller-Thurgau and Silvaner wines bear more resemblance to Franken wines rather than to Württemberg wines. Only that part of the *Bereich* outside Franken itself is allowed to use Franken's famous *Bocksbeutel* bottle.

GROSSLAGE TAUBERKLINGE

As well as at Reicholzheim, good wines are also made in the villages of Beckstein, Königshofen, and Tauberbischofsheim.

REICHHOLZHEIM

- ✓ **Vineyard First Grower** *Konrad Schlör*

BEREICH TUNIBERG

Formerly part of Kaiserstuhl-Tuniberg, this *Bereich* is to the south of the mighty Kaiserstuhl and it is the far less awesome sight of the Tuniberg, another volcanic outcrop, that provides the only other topographical and viticultural relief. The Tuniberg's steeper, west-facing slopes are cultivated, but neither its reputation nor its bulk can match those of Kaiserstuhl's fabulous recommendations above.

SAALE-UNSTRUT AND SACHSEN

These two eastern outposts of viticulture are the most northerly in Germany. Even though their terraced vineyards are being renovated and replanted, and modern vinification facilities installed, their wines can never be more than a tourist curiosity.

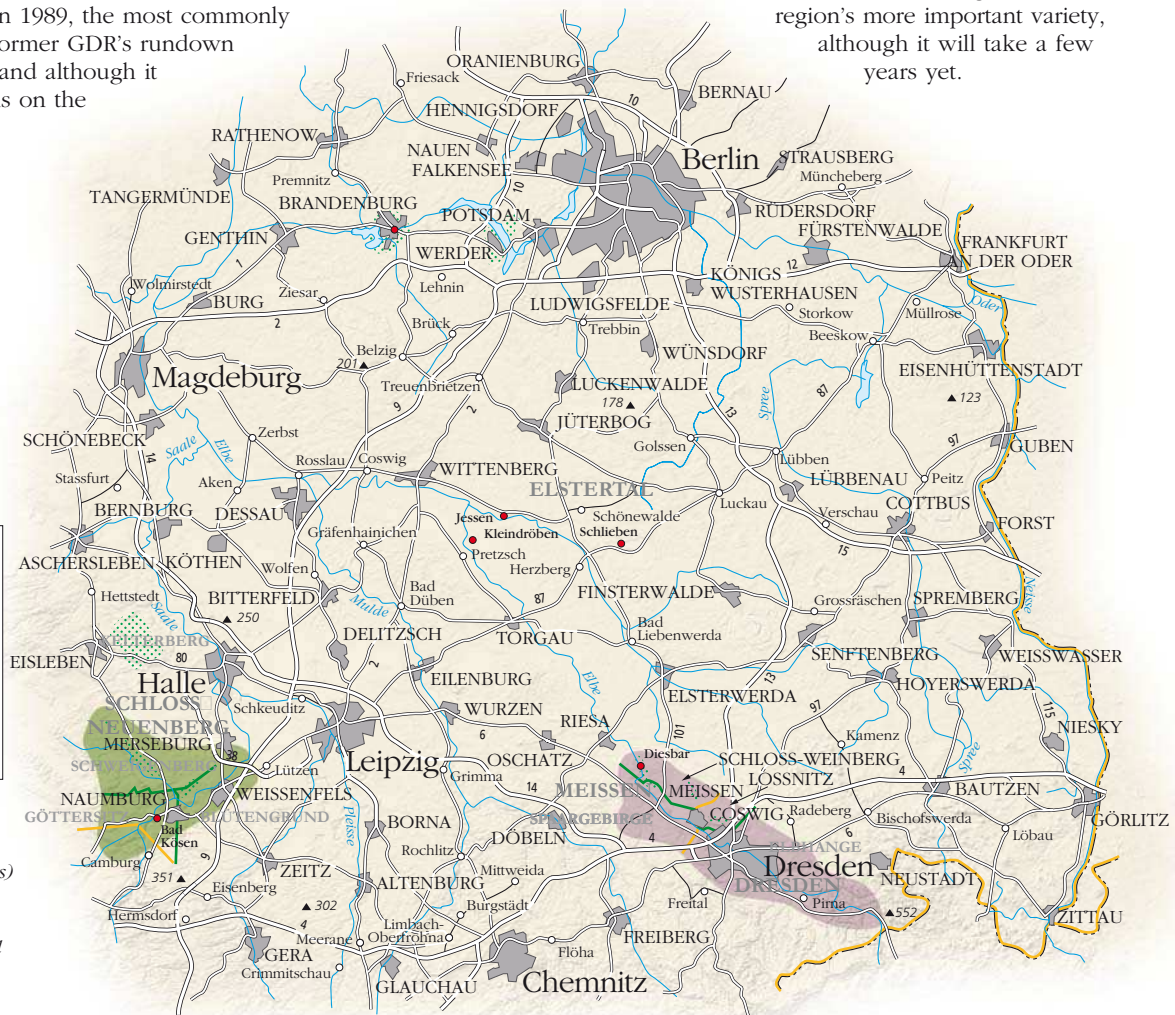

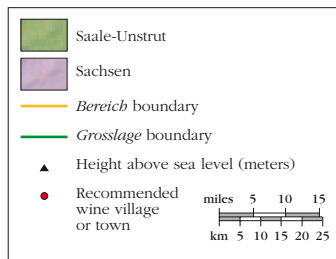

PARADOXICALLY THIS LIMITATION may be the saving grace for the wines of Saale-Unstrut and Sachsen because they are far too small and rustically structured to stand any chance of competing with the large volumes of cheap plonk churned out by cooperatives in Germany's more intensively cultivated wine regions. Furthermore, as Meissen and Dresden are lucrative tourist areas, the wines must adhere to a certain standard if they are to satisfy tourists with far more sophisticated palates than those who consumed them under former GDR mismanagement. Most of the vineyards are between Dresden and Diesbar-Seußlitz, with a few vineyards that have been restored on the southern outskirts of Dresden itself. The state-owned cellars in historic Schloss Wackerbarth in Radebeul and the region's oldest (and privately owned) estate at Schloss Proschwitz are Sachsen's largest estates. The largest estate in Saale-Unstrut is Kloster Pforta, which was named after the 12th-century monastery between Bad Kösen and Naumburg.

THE FUTURE—VARIETAL EVOLUTION

When Germany was reunified in 1989, the most commonly cultivated grape variety in the former GDR's rundown vineyards was Müller-Thurgau, and although it remains an important grape, it is on the

THE REGION AT A GLANCE	
Area under vine 2,656 acres or 1,075 ha (increasing)	Most important grape varieties 25% Müller-Thurgau (decreasing), 14% Weissburgunder (increasing), 7% Riesling (increasing), 6% Silvaner (decreasing), 48% Others
Average yield 185 cases/acre or 42 hl/ha (decreasing)	Infrastructure <i>Bereiche</i> 5; <i>Grosslagen</i> 8; <i>Einzellagen</i> 35
Red wine 14% (increasing)	Note The vineyards of Saale-Unstrut and Sachsen straddle 63 <i>Gemeinden</i> (communes), the names of which may appear on the label.
White wine 86% (decreasing)	
Dry & semi-dry wine 86% Trocken, 10% Halbtrocken	

decline, and its days must be numbered. Riesling has increased from five to seven percent of the vines grown, but it is Germany's greatest variety, thus more will be planted, if only for the sake of national pride. The area is, however, more suited to the full, rich, and distinctively earthy wine produced by Silvaner and, perhaps surprisingly for such a northerly, frost-prone region, also to red wine grape varieties. But of all the varieties to choose from, who would have predicted the rise of Weissburgunder when the Berlin Wall came down? Very few, I think, but it is the best placed to succeed Müller-Thurgau as this region's more important variety, although it will take a few years yet.

SAALE-UNSTRUT AND SACHSEN, see also p.345
More than 2,500 acres (1,000 hectares) of vines grow in these areas, formerly part of East Germany. Production is centered in Bad Kösen, Freyburg, and near the confluence of the Saale and Unstrut rivers at Naumburg.

FACTORS AFFECTING TASTE AND QUALITY

<p> LOCATION The most northerly wine regions in Germany, Saale-Unstrut is equidistant between Berlin and the Franken region, while Sachsen is about 80 miles (128 kilometers) east, around Dresden, close to the border with the Czech Republic.</p>	<p> ASPECT Vineyards are on south and southeast facing valley slopes, but much of the terracing has deteriorated under Communist rule and the current reconstruction will take some time to complete.</p>	<p> SOIL Limestone and a tiny amount of sandstone in Saale-Unstrut, with loam and loess over granite and volcanic subsoils in most of Sachsen, and weathered granite and gneiss on its steepest slopes.</p>	<p> GRAPE VARIETIES Primary varieties: Müller-Thurgau, Weissburgunder Secondary varieties: Bacchus, Dornfelder, Elbling, Gewürztraminer, Grauburgunder, Gutedel, Kerner, Morio-Muscat, Portugieser</p>
<p> CLIMATE Despite their northerly position, the continental climate ensures high summer temperatures. However, winters are long and very cold, resulting in a short and dry growing season compared with other German regions. Spring and fall frosts are a particular danger, often cutting yields by 20–70 percent in Saale-Unstrut and as much as 90 percent in Sachsen.</p>	<p> VITICULTURE AND VINIFICATION Many of the small parcels are planted on steep, labor-intensive stone terraces, most of which are cultivated by part-time growers who deliver their crop to Saale-Unstrut's regional cooperative in Freyburg or Sachsen's regional cooperative in Meissen. Yields were very low prior to reunification, but although production has since increased, yields remain very low due to the northerly situation. There are problems such as decimation of production by fierce attacks of frost, decaying terracing, dead vines, and rustic production methods, but it would be a pity if old vines were replaced and if the hardy but highest-yielding characterless crosses were introduced in place of classic varieties. Weissburgunder and Riesling are the fastest expanding grape varieties. Mostly</p>	<p>dry wines are produced, with only four percent of the production sweeter than <i>Halbtrocken</i>, and as much as 86 percent sold as <i>Trocken</i>.</p>	

THE APPELLATIONS OF
SAALE-UNSTRUT AND SACHSEN

ANBAUGEBIET SAALE-UNSTRUT

Wines have been produced in this area for nearly 1,000 years, but it took the GDR less than 50 years to erase these once-well-known names from the memory of wine drinkers. This region comprises two *Bereiche*, and Müller-Thurgau is the most important grape variety. It accounts for some 35 percent of the vines planted and black grapes account for some 10 percent.

BEREICH SCHLOSSNEUENBURG

By far the largest of Saale-Unstrut's two *Bereiche*, Schloss Neuenburg encompasses all but a tiny section in the very south of the Saale-Unstrut region, plus the island of vines just west of Halle.

GROSSLAGE BLÜTENGRUND

Some respectable wines have appeared on the market under the designation of this *Grosslage*.

GROSSLAGE GÖTTERSITZ

Previous expectations in this *Grosslage* have not been quite fulfilled.

NAUMBURG

✓ **Vineyard Steinmeister Grower Gussek**

GROSSLAGE KELTERBERG

No outstanding villages, vineyards, or growers.

GROSSLAGE SCHWEIGENBERG

Two growers have made this the most respected *Grosslage* of the Saale-Unstrut region.

FREYBURG

✓ **Vineyard Edelacker Grower Pawis**

KARSDORF

✓ **Vineyard Hohe Gräte Grower Weingut Lützendorf**

BEREICH THÜRINGEN

The southern tip of the Saale-Unstrut region does not contain any *Grosslagen*, just two *Einzellagen*, one in Grossheringen, the other in Bad Sulza.

BEREICHEFREI AND GROSSLAGENFREI MARK BRANDEBURG

Mark Brandenburg covers the vineyards around Werder, from which no outstanding wines have so far been made.

ANBAUGEBIET SACHSEN

Incorporating Dresden and Meissen, this *Aubaugbiet* produces wines that are grown along the Elbe River (Sachsen was formerly known as Elbthal). The area is even more prone to frost damage than Saale-Unstrut, with Riesling relatively more important (13 percent as opposed to Saale-Unstrut's 5 percent). The quantity of black grapes is minuscule.

BEREICH DRESDEN

This *Bereich* covers most of the southern half of Sachsen.

GROSSLAGE ELBHÄNGE

Continuous efforts have finally paid off for one grower in this otherwise unremarkable *Grosslage*.

PILLNITZ

✓ **Vineyard Königlicher Weinberg Grower Klaus Zimmerling**

GROSSLAGE LÖSSNITZ

There are no outstanding villages or vineyards, and no remarkable growers to be recommended in this *Grosslage*.

BEREICH ELSTERTAL

This is a *Bereich* consisting of three villages at the southern end of Sachsen. There are relatively few vines and, so far, no village has produced any outstanding wines.

BEREICH MEISSEN

The northern end of the Sachsen region, Meissen itself will always be more well known for the porcelain it once produced than its wine. This area, however, did have something of a name for producing fine wine at the beginning of the 19th century. Wine drinkers can only wait and see if there is sufficient potential for that reputation to be recaptured sometime in the future.

GROSSLAGE SCHLOSS-WEINBERG

North of Meissen, some decent wines can come from a bend in the Elbe at Diesbar-Seußlitz where the vineyards face south.

SEUSSLITZ

✓ **Vineyard Heinrichsburg Grower Schloss Proschwitz**

GROSSLAGE SPAARGEBIRGE

Substantial investments have helped to bring at least one estate's shine back to this *Grosslage*.

PROSCHWITZ

✓ **Vineyard Schloss Proschwitz Grower Schloss Proschwitz**

CERTIFIED ORGANIC PRODUCERS

Organic
Hof Loessnitz (Dresden)

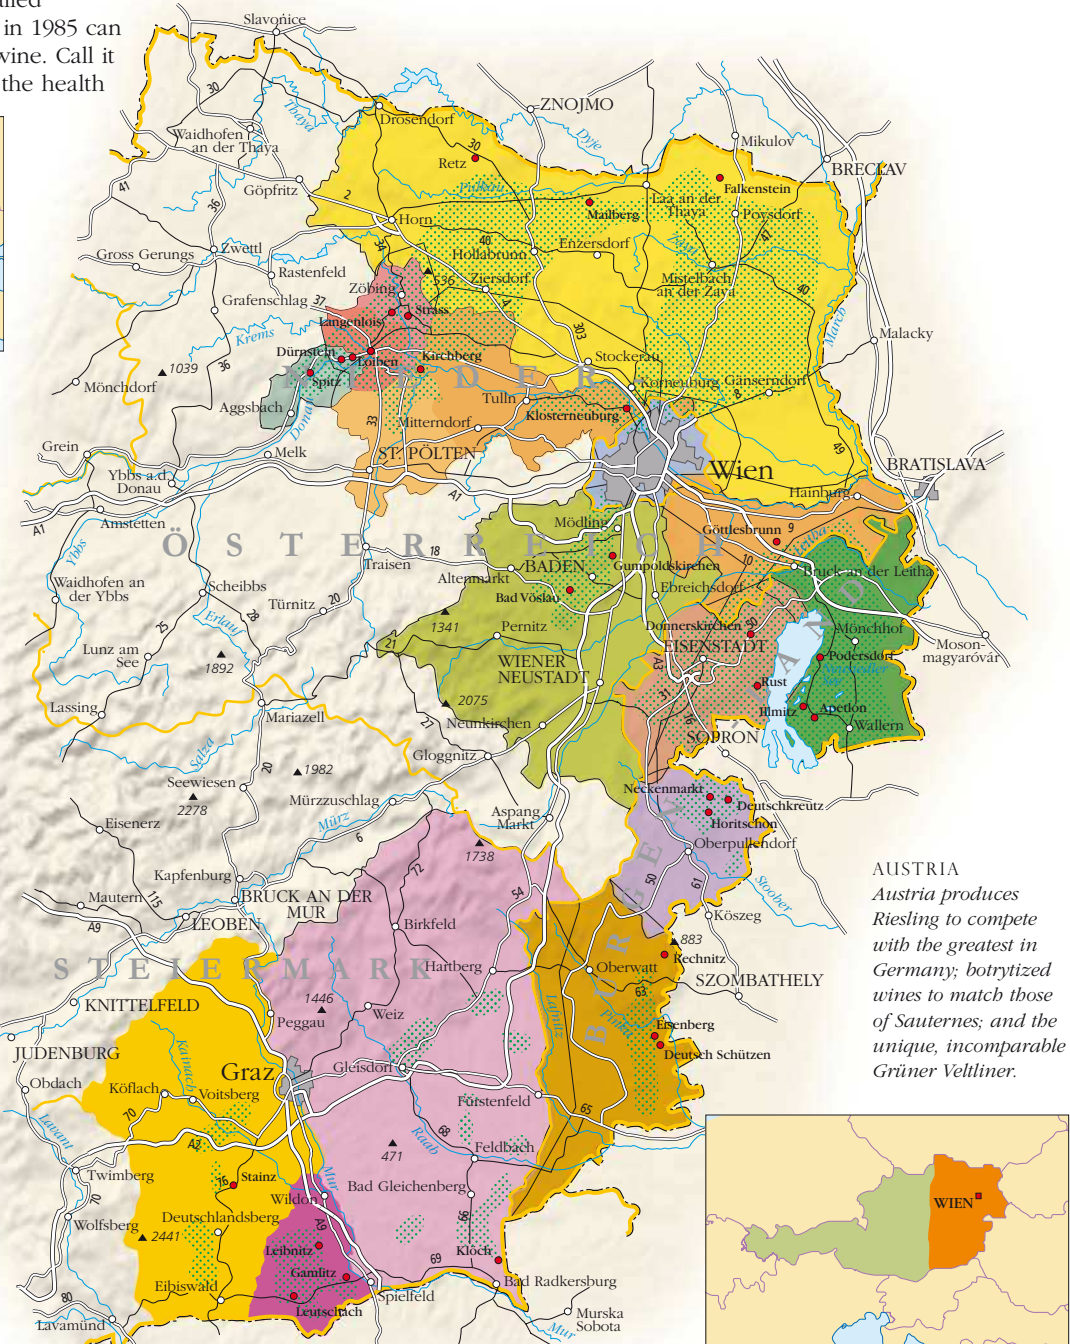

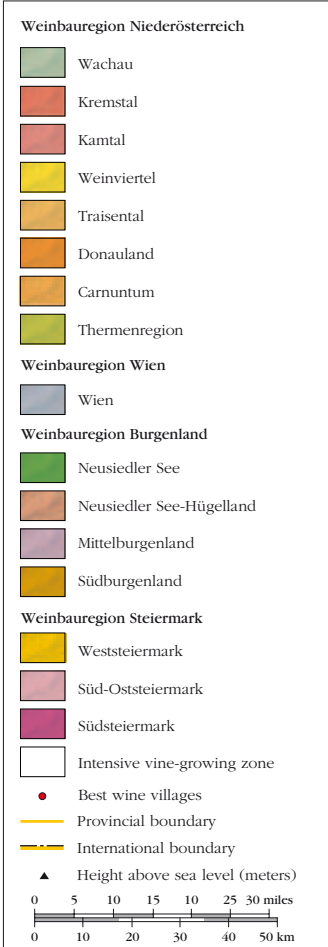

AUSTRIA

Austria used to be seen as a winemaking clone of Germany, but over the past decade, Austria has slowly but surely begun to establish its own unique wine identity, and it now produces some exceptionally fine red wines.

IN THE LATE 1970S, Austrian wine production increased as domestic consumption declined, resulting in the largest wine lake outside the EC. Austria's wine industry was designed chiefly for exports to Germany, traditionally its only significant customer. After a succession of bumper harvests in both Germany and Austria, sales to Germany dried up, but overproduction in Austria continued. With hindsight, the so-called "antifreeze" scandal that took place in 1985 can be seen as a godsend for Austrian wine. Call it a scam or a scandal, but it was not the health

RECENT AUSTRIAN VINTAGES

- 2003 Best red wines for a decade, and great dry whites too, although sweet wines lack finesse.
- 2002 Fabulous white wines in the south, and great reds from all over. Good sweet wines, but not special.
- 2001 Some very good reds and sweet wines, but the dry whites stand out.
- 2000 Terrible flooding hit the south. This is a year of big reds, and truly great dry whites.
- 1999 Beautiful sweet wines, but the greatest ever dry white vintage.

AUSTRIA produces Riesling to compete with the greatest in Germany; botrytized wines to match those of Sauternes; and the unique, incomparable Grüner Veltliner.

THE WACHAU

Much of Austria is very picturesque, making it a popular vacation destination; here the lush vineyards complement this typical Lower Austrian landscape.

scare it was made out to be. It did, however, have the effect of putting the Austrian government under enormous pressure to tighten up controls, with the result that Austria now has the most strictly controlled, safest wine industry in the world.

WHAT WAS THE ANTI-FREEZE SCANDAL?

In 1985, a handful of Austria's 40,000 wine producers used diethylene glycol to sweeten their wines artificially. The media throughout the world claimed that Austrian wines had been poisoned with antifreeze, but it was not antifreeze, of course (ethylene glycol is). Diethylene glycol is, in fact, less toxic than alcohol, so adding it actually made the wines less poisonous.

AUSTRIA VERSUS GERMANY

Both countries operate wine regimes that base levels of quality on degrees of ripeness by measuring the amount of sugar found in the grapes at the time of harvest. As in Germany, Austrian wines range from *Tafelwein*, through *Qualitätswein*, to *Trockenbeerenauslese*. The overview below shows that most Austrian wines conform to higher minimum standards than their German counterparts. More significant, however, is the fact that the minimum level for each category is rigid, so it has a distinctive style. This gives the consumer a clear idea of what to expect, whereas a German category varies according to the variety of grape and its area of origin. In Germany, only experience can reveal that a Mosel *Auslese*, for example, tastes no sweeter than a *Spätlese* from other regions. Also, *Süßreserve* is not allowed for any *Prädikat* wines, whereas in Germany this is permitted for *Kabinett*.

MINIMUM OECHSLE LEVELS

QUALITY CATEGORY	AUSTRIA	GERMANY
Tafelwein	63°	44–50°
Landwein	63°	47–55°
Qualitätswein	73°	50–72°
Kabinett	83.5°	67–85°
Spätlese	94°	76–95°
Auslese	105°	83–105°
Beerenauslese	127°	110–128°
Eiswein	127°	110–128°
Ausbruch	138°	N/A
Trockenbeerenauslese	156°	150–154°

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

The vineyards are in the east of the country, north and south of Vienna, bordering the Czech Republic, Hungary, and Yugoslavia.

CLIMATE

The climate is warm, dry, and continental, with annual rainfall between 23 to 31 inches (57 and 77 centimeters). The hottest and driest area is Burgenland, where in the warm falls, mists rising from the Neusiedlersee help promote *Botrytis cinerea* (the “noble rot” beloved by winegrowers).

ASPECT

Vines are grown on all types of land, from the plains of the Danube to its valley sides—which are often very steep and terraced—and from the hilly Burgenland to the slopes of mountainous Styria.

SOIL

Soils vary from generally stony schist, limestone, and gravel (though occasionally loamy) in the north, through predominantly sandy soils on the shores of the Neusiedlersee in Burgenland, to mainly clay with some volcanic soils in Styria.

VITICULTURE AND VINIFICATION

Not surprisingly, Austria's methods are similar to those of Germany,

but, although modern techniques have been introduced here, far more Austrian wine is produced by traditional methods than is the case in Germany. More than 85 percent of the country's vines are cultivated by the Lenz Moser system. This is a method of training vines to twice their normal height, thereby achieving a comparatively higher ratio of quality to cost, by enabling the use of mechanized harvesting. This system brought fame to its Austrian inventor, Lenz Moser, and has been adopted by at least one grower in most winemaking countries. Harvesting is traditionally accomplished in *tries*, particularly on steeper slopes and for sweeter styles.

GRAPE VARIETIES

Blauberger, Blauer Portugieser, Blauer Wildbacher, Blaufränkisch, Bouviertraube, Cabernet Franc, Cabernet Sauvignon, Chardonnay, Frühroter Veltliner (*syn.* Malvasia), Furmint, Gewürztraminer, Goldburger, Grüner Veltliner, Pinot Blanc, Pinot Noir, Merlot, Müller-Thurgau, Muskateller, Muskatottonel, Neuburger, Pinot Gris, Roter Veltliner, Rotgipfler, Sauvignon Blanc, Scheurebe, St. Laurent, Silvaner, Trollinger, Riesling, Welschriesling, Zierfandler, Zweigelt

THE MODERN WINE TRADE

Enthusiasts have always known that Austria produces some of the greatest botrytized wines in the world, yet just how electrifying these wines can be became clear when Willy Opitz, one of the smallest, but truly greatest, dessert wine producers, took the trouble to tour world markets and speak to people about his products.

Over the past few years, Austria has produced Cabernet Sauvignon and Chardonnay to a very high standard, and even St. Laurent, an obscure local variety of grape, has proved to be quite stunning. What Austria must do now is to promote its greatest Riesling wines, which can compare with the best from Germany, and export its top Grüner Veltliner, and keep pushing these wines onto the international markets.

AUSBRUCH—A RELIC OF THE AUSTRO-HUNGARIAN EMPIRE

Ausbruch is a still-popular style of wine that harks back to the days of the Austro-Hungarian Empire (and is also still produced in Hungary). At 138° *Oechsle* (see left), *Ausbruch* falls between the sweetness levels of *Beerenauslese* (127°) and *Trockenbeerenauslese* (156°). In terms of character, however, *Ausbruch* should be totally different from either a *Beerenauslese* or *Trockenbeerenauslese*. The name means “to break up”; the wine is made traditionally from the richest and sweetest botrytized grapes that are so shriveled and dried-out that to press them is virtually impossible without first moistening the mass (breaking it up) with a more liquescent juice (the regulation stipulates *Spätlese* quality). A true *Ausbruch* is overwhelmed by an intensely raisiny aroma and flavor that may be even more botrytized than a *Trockenbeerenauslese*, yet the wine itself need not necessarily be as rich.

THE WINE STYLES OF AUSTRIA

BLAUBURGER

RED A Blauer Portugieser/Blaufränkisch cross that produces a well-colored wine of little distinction, but tends to improve in bottle.

🕒 1–3 years

🍷 *Weingut Schützenhof Fam Korpe • Willi Opitz*

BLAUER PORTUGIESE

RED This used to be Austria's most widely planted black grape variety and is still commonly found in Lower Austria, particularly Paulkautal, Retz, and the Thermen region, where it makes a light-bodied but well-colored red wine with a mild flavor, hinting of violets.

🕒 1–2 years

🍷 *Johann Gipsberg • H. V. Reinisch*

BLAUER WILDBACHER

RED/ROSÉ Otherwise known as Schilcher, this variety traditionally produces a light, dry, crisp, and fruity, pale rosé wine.

🕒 1–2 years

🍷 *E. & M. Müller*

BLAUFRÄNKISCH

RED Known as Lemberger in Germany and Kékfrankos in Hungary, this variety is popular in Neusiedlersee-Hügelland Burgenland, where it produces tart, fruity wine with good tannin and an underlying hint of cherries and spice. The best examples of Blaufränkisch are fat and sometimes given time in oak.

🕒 2–4 years

🍷 *Weingut Gessellmann (Creitzer) • Feiler-Artinger • Weingut Fam Iglar • Weingut H. und M. Krutzler*

BOUVIER

WHITE An early-ripening table grape that has a low natural acidity and is often used for high-quality *Prädikatswein*.

🕒 1–3 year (*Qualitätswein*), 2–8 years (*Prädikatswein*)

🍷 *Willi Opitz*

CABERNET SAUVIGNON

RED Very little of this variety used to be grown in Austria. Until 1982 the only commercial cultivation of Cabernet Sauvignon was by Schlumberger at Bad Vöslau. Then Lenz Moser received special permission to cultivate 6 acres (2.5 hectares) at Mailberg, and the first Cabernet Sauvignon was grown in 1986 in Lower Austria. Today, everyone seems to be growing Cabernet Sauvignon.

🕒 5–6 years (*Qualitätswein*), 10–15 years (*Prädikatswein*)

🍷 *Lenz Moser (Siegendorf Prestige) • Weingut Fam Iglar • Weingut Gessellmann*

CHARDONNAY

WHITE Also known in Austria as Feinburgunder, this grape variety has been grown for decades in Styria, where it is known as Morillon. Cultivation of this grape has risen rapidly since the early 1990s, producing some fat, rich wines.

🕒 2–5 years

🍷 *Weingut Bründlmayer (Kabinett) • Juris-Stiegelmar (Classic) • H. V. Reinisch • Andreas Schafner • Weingut Gottfried Schellmann • Weingut Tement*

FRÜHROTER VELTLINER

WHITE Sometimes labeled Malvasia, this dry Frühroter Veltliner has more alcohol and body than Austria's most widely grown white wine, Grüner Veltliner.

🕒 1–2 years

🍷 *Weingut Leth*

FURMINT

WHITE This is a rarely encountered Hungarian dry, medium- to full-bodied, rich, and fruity varietal that does well at Rust in Burgenland.

🕒 3–5 years

🍷 *Weinbau Ladislaus und Robert Wenzel*

GEWÜRZTRAMINER

WHITE Usually labeled Traminer or Roter Traminer, the wines from this variety range from light and floral to intensely aromatic. They may be dry or have one of various shades of sweetness. They are the fullest, richest, and most pungent of *Trockenbeerenauslesen*.

🕒 3–6 years

🍷 *Weingut Rheinhold Polz • Andreas Schafner (Traminer)*

GOLDBURGER

WHITE This is a Welschriesling/Orangetraube cross that produces white wines that are used for blending purposes.

🕒 1–3 years

GRÜNER VELTLINER

WHITE The Danube is the best area for great Grüner Veltliner, the finest examples of which have a fiery flavor that delivers a burning sensation reminiscent of freshly ground pepper. It certainly is not the bland *vin ordinaire* made by this grape in virtually every other area.

🕒 1–4 years (*Qualitätswein*), 3–10 years (*Prädikatswein*)

🍷 *Weingut Bründlmayer (Langenloiser Berg Vogelsang Kabinett, Ried Lamm, Spätlese Trocken) • Freie Weingärtner Wachau (Weissenkirchner Achleiten "Smaragd") • Graf Hardegg (Dreikreuzen Kabinett, Maximilian Kabinett) • Weingut Hirtzberger (Rotes Tor "Smaragd," Spitzer Honifogl)*

• *Lenz Moser* (Knights of Malta) • *Weingut Mantlerhof* (older vintages) • *Meternich-Sandor* (Princess) • *Weingut Franz Prager* • *Weingut Wieninger* (Ried Herrenholz)

JUBLINÄ UMSREBE

WHITE A Blauer Portugieser/Blaufränkisch cross, this is allowed for *Prädikatswein* only, as its mild character is transformed by botrytis.

🕒 3–7 years

MERLOT

RED Small amounts are grown in Krems, Mailberg, and Furth in Lower Austria, plus in a few scattered plots in Burgenland. This variety has potential in Austria, as it can produce richly colored red wines with soft, spicy-juicy fruit, but has been underexploited until quite recently.

🕒 1–3 years (*Qualitätswein*), 3–5 years (*Prädikatswein*)

🍷 *Hofkellerei des Fürsten von Liechtenstein* (Herrenbaumgärtner Spätlese)

MÜLLER-THURGAU

WHITE Often labeled as Riesling x Silvaner, this is Austria's second most prolific grape variety. Austrian exporters should realize the value of Müller-Thurgau for adding fat to their Grüner Veltliners, most of which do not have the bite found in the best examples and lack a depth of fruit—outside Austria, the international taste is for a less peppery and more fruity style. The best of Austria's pure varietal Müller-Thurgaus have a fine, spicy character that is superior to the average German version.

🕒 1–2 years

🍷 *Weingut Hirtzberger • Weingut Schützenhof Fam Korper*

MUSKATELLER

WHITE This is an underexploited variety that makes some of Burgenland's best *Prädikatswein* and excels in the sheltered sites of Styria.

🕒 1–3 years (*Qualitätswein*), 2–10 years (*Prädikatswein*)

🍷 *Weingut Leth • Weinhof Platzer • Weinbau Ladislaus und Robert Wenzel*

MUSKAT-OTTONEL

WHITE Less weighty than the Muskateller, the Muskat-Ottonel variety has more immediate aromatic appeal and is best drunk when young.

🕒 2–4 years

🍷 *Willi Opitz*

NEUBURGER

WHITE An Austrian variety that excels on chalky soil, making full-bodied wines with a typically nutty flavor in all categories of sweetness.

🕒 2–4 years (*Qualitätswein*), 3–8 years (*Prädikatswein*)

🍷 *Dip-Ing Kasl Alpart • H. V. Reinisch*

PINOT BLANC

WHITE Often called Klevner or Weisser Burgunder, this produces a fresh, light-bodied, easy-to-drink wine at lower quality levels. In exceptional years, it can develop a fine spiciness in the upper *Prädikatswein* categories.

🕒 2–4 years (*Qualitätswein*), 3–8 years (*Prädikatswein*)

🍷 *Weingut Skoff* (Kabinett)

PINOT GRIS

WHITE Sold in Austria as Ruländer or Grauer Burgunder, this is a fuller, spicier version of Pinot Blanc, but it has a typical nutty richness.

🕒 2–4 years (*Qualitätswein*), 3–8 years (*Prädikatswein*)

🍷 *Weingut Tement*

PINOT NOIR

RED Labeled Blauer Burgunder, Blauer Spätburgunder, or Blauburgunder in different parts of Austria, the wines are often disappointing, although there are a few growers that excel.

🕒 1–3 years

🍷 *Weingut Bründlmayer* • *Johann Gipsberg* • *Juris-Stiegelmar* • *H. V. Reinisch*

RIESLING

WHITE In Austria the wines from this grape should be sold as Weissler Riesling or Rheinriesling, in order to distinguish it from Welschriesling. Wachau and Kremser Riesling can be compared with fine German examples.

🕒 2–6 years (*Qualitätswein*), 4–12 years (*Prädikatswein*)

🍷 *Weingut Bründlmayer* (Spätlese) • *Freie Weingärtner Wachau* (Weissenkirchner Achleiten “Federspiel” and “Smaragd”) • *Weingut Hirtzberger* (Spitzer Steinterrassen “Federspiel”) • *Hofkellerei des Fürsten von Liechtenstein* (Spätlese) • *Weingut Thierry-Weber* (Kremser Sandgrube)

ROTER VELTLINER

WHITE This grape makes a rather neutral white wine that is usually blended in light, dry styles.

🕒 1–3 years

ROTGIPFLER

WHITE This makes a robust, full-bodied, spicy wine of not dissimilar character to the Zierfandler, which is often made into a dry style, although the semisweet Rotgipfler of Gumpoldskirchen may be the most famous rendition of this grape.

🕒 3–7 years

🍷 *Weinbau Franz Kurz* • *Weingut Hoffer* • *Weingut Gottfried Schellmann*

ST. LAURENT

RED This variety typically produces a light, mild-flavored wine of quaffing character. St. Laurent is thought to be related to Pinot Noir, and it has to be said that some producers can craft lovely, velvety wines of Pinot-like quality and style.

🕒 1–3 years

🍷 *Weingut Gessellmann* • *Johann Gipsberg* • *Weingut Umathum* (Vom Stein)

SAUVIGNON BLANC

WHITE Called Muskat-Silvaner (or occasionally Weissler Sauvignon), this variety grown in Styria normally makes an austere, dry style, but can excel at the higher levels of *Prädikatswein*.

🕒 2–4 years (*Qualitätswein*), 4–10 years (*Prädikatswein*)

🍷 *Weingut Fam Kollwentz* (Römerhof) • *Weingut* • *Rheinhold Polz* • *Weingut Skoff* (Gamlitz Eckberg Edel Kabinett) • *Weingut Tement*

SCHEUREBE

WHITE This is not very pleasant at *Qualitätswein* level, but develops a beautiful aromatic character at higher levels of *Prädikatswein*.

🕒 2–4 years

🍷 *Weingut Gessellmann* • *Willi Opitz*

SILVANER

WHITE Seldom seen, tomato-tasting varietal.

🕒 1–2 years

🍷 *Weingut Sonnhof Josef Jurtschitsch*

WELSCHRIESLING

WHITE Austria's third most prolific variety, making very ordinary dry wines, but can be rich and stylish at upper levels of *Prädikatswein*.

🕒 1–3 years (*Qualitätswein*), 2–8 years (*Prädikatswein*)

🍷 *Weingut Bründlmayer* • *Willi Opitz* • *Weinbof Platzer* • *Weingut Tement*

ZIERFANDLER

WHITE Also known as Spätrot, this variety makes full-bodied and well-flavored dry wine.

🕒 2–6 years

🍷 *Weinbau Franz Kurz* • *Weingut Hoffer* • *Weingut Gottfried Schellmann*

ZWEIGELT

RED Another mild red wine variety, Zweigelt is sometimes given the name Blauer Zweigelt or Rotburger. The best examples have a structure that is suited to food, with big, peppery fruit, but the norm is rather light and lackluster.

🕒 1–3 years

🍷 *Johann Gipsberg* • *Weingut Walter Glatzer* (Dornovoge) • *Weingut Maria Magdalena Romer* (Schweizerreid)

BLENDED RED

The finest of these blended reds are usually oak-aged in new *barriques* and Cabernet-Sauvignon-based for backbone, with Blaufränkisch, St. Laurent, and sometimes Zweigelt added for fruit and softness.

🕒 2–8 years

🍷 *Weingut Gessellmann* (Opus Eximium) • *Weingut Iglar* (*Cuvée Vulcano*) • *Weingut Josef Pöckl* (Admiral) • *H. V. Reinisch* (Cabernet-Merlot) • *Schlossweingut Malteser Ritterorden* (Cabernet Sauvignon-Merlot) • *Weingut Umathum* (Ried Hallebühl Cuvée Rot)

BLENDED WHITE

Cheap, commercial white wine blends are commonly found in Austria, whereas finer examples of the blender's art are thin on the ground. However, Franz Mayer produces an intriguing blend of Grüner Veltliner, Müller-Thurgau, Riesling, Silvaner, and Zierfandler.

🍷 *Weingut Franz Mayer* (Grinzinger Reisenberg)

BOTTLE-FERMENTED SPARKLING

Austria's best-known sparkling wine is the bottle-fermented Schlumberge, produced in Vienna, but it seldom excels in quality.

🍷 *Weinbof Platzer* (Pinot Cuvée)

THE APPELLATIONS OF

AUSTRIA

BURGENLAND

Austria's easternmost region is also its warmest. It consistently provides overripe grapes, almost guaranteeing a substantial production of *Prädikatswein* each year. The Mittelburgenland and Südburgenland are Austria's most important red wine areas, with black varieties accounting for some 75 percent of the vines cultivated.

MITTELBURGENLAND

Mittelburgenland was originally part of the old Rust-Neusiedlersee, but it is physically separated from the Neusiedlersee by the Sopron wine area of Hungary. Mittelburgenland wines are more *passerillage* than botrytized in character. This is a red wine district, with some 75 percent of the production coming from varieties such as Blaufränkisch and Zweigelt. The wines from this region do not have the body, tannin, and

acidity balance that is associated with even the most modest red wines.

✓ *Villages Deutschkreuz* • *Horitschon* • *Neckenmarkt*

Growers *Johann Heinrich* • *Iglar* • *Weninger*

NEUSIEDLERSEE

These vineyards and those of Neusiedlersee-Hügelland are within the area of influence of Neusiedlersee, a vast, shallow pan of water barely 6½ feet (2 meters) deep. Its microclimate produces more botrytized grapes than any other wine area in the world.

✓ *Villages Apetlon* • *Frauenkirchen* • *Gols* • *Illmitz* • *Podersdorf*

Growers *Juris* • *Heinrich* • *Alois Kracher* • *Willi Opitz* • *Umathum* • *Velich*

NEUSIEDLERSEE-HÜGELLAND

The western side of Neusiedlersee produces a similar range of wines to those on the eastern side, although more red wine is produced here, and this is also the home of *Ausbruch* wines.

✓ *Villages Donnerskirchen* • *Grosshöflein* • *Rust*

Growers *Feiler-Artinger* • *Kollwentz* • *Schandl* • *Schröck* • *Triebaumner* • *Wenzel*

SÜDBURGENLAND

The red wines, mainly Blaufränkisch, are generally uninspiring. Some surprisingly fine *Prädikatswein* from the modest Welschriesling are also made.

✓ *Villages Deutsch Schützen* • *Eisenberg* • *Rechnitz*

Grower *Krutzler*

KÄRNTEN

The wines of Kärnten are confined to a small area immediately to the west of Weststeiermark, comprising a few vineyards scattered between the towns of Klagenfurt and St. Andrä (not the St. Andrä in Südsteiermark). Red, white, Schilcher, and Bergwein wines of modest quality are produced and sold by one or two small firms.

NIEDERÖSTERREICH

This is Austria's premier dry wine region. It is famous for its peppery Grüner Veltliners and the elegance of its Rieslings. Top Rieslings can be light and airy in their youth, but they attain a richness after a few years in bottle and they can achieve a fine, racy balance comparable to that of some of the best German Rieslings. *Kabinett* is the style that dominates the classic wines of this region, although *Spätlese* and, occasionally, *Auslese* wines are made in the hottest years.

CARNUNTUM

Part of Donauland-Carnuntum until 1994, this appellation consists of vineyards on the banks of the Danube, and its hinterland, between Vienna and the Slovakian border. Although a mixed cast of white grapes dominate (with Chardonnay and Grüner Veltliner standing out), red wines have proved most successful, resulting in more black varieties being planted.

✓ Village *Göttelsbrunn*

Growers *Glatzer • Markowitsch • Pitnauer*

DONAULAND

Donauland, or land of the Danube, houses the world's oldest viticultural college at Klosterneuburg. Best for Grüner Veltliner.

✓ Villages *Kirchberg • Klosterneuburg*

• *Wagram*

Growers *Josef Bauer • Leth • Ott • Söllner*

KAMTAL

North of Kremstal, this region produces some of Austria's finest Riesling, and is the home to some of the country's most gifted, innovative, and expressive winemakers.

✓ Villages *Langenlois • Strass*

Growers *Brandl • Bründlmayer*

• *Jurtschitsch Sonnnhof • Schloss Gobelsburg*

KREMSTAL

Part of the old Kamtal-Donauland region, this relatively small area north and south of a short stretch of the Danube was singled out in 1994, due to the fame of Kremis, which is renowned for its high-quality Grüner Veltliner. Some good Rieslings are also produced. Zweigelt can do well, and there are occasional international varietal highlights from Chardonnay, Cabernet Sauvignon, and even Pinot Noir.

✓ Village *Krems*

Growers *Angerer • Buchegger • Mantler • Nigl • Salomon*

THERMENREGION

Named after the hot springs, Thermenregion is also, coincidentally, one of Austria's warmest regions. Wines produced are both red and white, with the Blauer Portugieser and Neuburger grape varieties dominating. Zierfandler and Rotgipfler are specialties of Gumpoldskirchen.

✓ Villages *Bad Vöslau • Gumpoldskirchen*

Growers *Alphart • Hartl • Reinisch*

• *Andreas Schafner • Gottfried Schellmann*

TRAISENTAL

Formerly the southwestern half of Donauland, Traisental achieved independence as a regional appellation in 1994.

✓ Village *Hertzogenburg*

Grower *Neumayer*

WACHAU

Lower Austria's top-performing district, Wachau makes many fine varietals, including Grüner Veltliner, the most important, and Riesling, definitely the best.

✓ Villages *Durnstein • Loiben • Spitz*

Growers *Alzinger • Donabaum • Gritsch*

• *Hirtzberger • Höllmüller • Knoll • Jamek*

• *Lagler • Nikolaihof • Picbler • Franz*

• *Prager • Wess*

WEINVIERTEL

This large area combines two former districts of Retz (the hinterland of Kamtal and Donauland) and Falkenstein, which is a totally separate area north of Vienna. Both extend northwards to the border with the Czech Republic. Some reds but mostly white wines are made here. Although few could be said to have any class, they are well made, drinkable, and represent great value for money.

✓ Villages *Falkenstein • Mailberg • Retz*

Growers *Graf Hardegg • Pfaffl • Malteser*

• *Ritterorden*

OBERÖSTERREICH

This is a large region to the west of the Wachau, but with just 210 acres (85 hectares) of vineyards in the vicinity of Linz. To my knowledge, all the wines are sold under the Weinbauer brand in a *gasthof* at Hofkirchen.

STYRIA or STEIERMARK

Situated in the southeastern corner of Austria, this region has a high level of rainfall interspersed with exceptional levels of sunshine and warmth. The region makes red and very dry white wines and, although few particularly fine-quality wines are encountered, there are many interesting local specialties. The most famous is Schilcher. Made from the obscure Blauer Wildbacher grape, Schilcher is a sort of blush-wine that results from the briefest maceration on the grape skins. There are three wine districts in this region.

SÜD-OSTSTEIERMARK

The Müller-Thurgau and Welschriesling are surprisingly successful in the Süd-Oststeiermark,

and the Gewürztraminer can be the most expressive in Austria. Gräflisch Stügkh'sches is the oldest, best-known, and most traditional producer, but the wines of Manfred Platzer are more expressive.

✓ Village *Kloch*

Growers *Neumeister • Platzer • Winkler-Hermaden*

SÜDSTEIERMARK

The very best wines of this area have Styria's naturally high acidity, but this is combined with delicate and pure fruit flavors, making for exceptional finesse, particularly in varieties such as Gewürztraminer, Chardonnay (known locally as Morillon), and Riesling.

✓ Villages *Gamlitz • Leibnitz • Leutschach*

Growers *Gross • Matz • Polz • Sattler*

• *Skoff • Tement*

WESTSTEIERMARK

Made of some 70 percent Schilcherwein, Zwiebelschilcher is an onionskin-colored Schilcher, which is grown on the slopes above Stainz. Another specialty is Sauvignon Blanc, known locally as Muskat-Silvaner, a somewhat mystifying synonym since the searingly dry wines it produces in these vineyards (and elsewhere for that matter) have absolutely no hint of either Muskat or Silvaner, and the parentage of the Sauvignon Blanc vine has, of course, no connection with either of these grape varieties.

✓ Village *Stainz*

Growers *Müller*

TIROL

The Zirler Weinhof produces some 1,500 cases (135 hectoliters) of very ordinary wine from less than 4 acres (just 1.5 hectares) of Müller-Thurgau, Blauer Portugieser, and Zweigelt at Zirl. This might seem an unlikely place to plant a vineyard, if not for the fact that it is conveniently placed on the tourist route to the popular resort of Seefeld.

VIENNA or WIEN

Until Madrid recently revived its ancient appellation, Vienna was the only capital city in Europe to have its own winegrowing region. Most of the wines are sold by the pitcher as Wiener Heuriger, in the city's many bars called Heurigen (also known as Buschenschanken). The wine is less than one year old when sold. As much as 28 percent is blended, but pure varieties of classic grapes are on the increase. There are no inner districts, but there are several wine villages within the city limits, of which the most famous is Grinzing.

✓ Growers *Franz Mayer • Wieninger*

VORARLBERG

Vorarlberg is the westernmost region of Austria. It used to boast 247 acres (100 hectares) of vines, but only 15 acres (6 hectares) exist today, strung out between Bregenz, on Lake Constance (Bodensee), and Frastanz, which is close to Liechtenstein. The quality of the wine produced here is unremarkably ordinary, and there are only about half a dozen growers who sell their wines commercially.

SWITZERLAND

At their best, Swiss wines are as fresh and clean as the Alpine air. Although many grape varieties are cultivated in Switzerland, the most famous grape grown here is the Chasselas. In France this variety is perceived as a table grape, yet the Swiss make it into a light, dry, spritzzy, and delicately delicious wine that is the perfect partner to the Swiss cheese fondue.

THE CHASSELAS CAN BE FOUND under the guise of the Dorin in the Vaud region, the Perlan in Geneva, and, most famous of all, the Fendant in the Valais. However, although this country's most popular grape variety represents 40 percent of the vines cultivated, nearly half of all Swiss wine produced is, rather surprisingly, red.

There is, in fact, as much as 27 percent Pinot Noir, 14 percent Gamay, and, nowhere near as important, but very much on the increase, Merlot, which currently accounts for 6 percent, leaving all the other varieties just 13 percent of the vineyards.

The quality of Swiss wines has certainly improved over the last decade, but yields have always been much too high in general (350 cases per acre/80 hectoliters per hectare on average, with some cantons producing as much as 530 cases per acre/120 hectoliters per hectare) for Switzerland to achieve a serious international reputation as a quality wine-producing country.

SWITZERLAND

Switzerland is divided into three basic areas: French-speaking, German-speaking, and Italian-speaking. Some of the wine-producing cantons cross these "international" boundaries and possess alternative names, with most vineyards concentrated around the country's lakes and rivers.

RECENT SWISS VINTAGES

2003 A great year, particularly for red wines. The best wines overall since 2000, although the exceptionally hot weather did cause some problems for less experienced winemakers.

2002 An excellent vintage that is probably more consistent across the regions, grape varieties, and wine styles than 2003, but without as many high spots.

2001 An elegant Riesling vintage. Good Pinot Blanc and *Vin du Glacier*.

2000 Possibly the greatest Swiss vintage ever.

1999 A variable vintage, with Italian-speaking Switzerland; Grisons (Grigioni in Italian; Graubünden in German); and Ticino producing the best wines, and Geneva the worst. Some good reds from Vaud and Valais, but unexciting whites.

Producers who keep their yields low make some splendid wines, but, unfortunately, they are at present too few to change the reputation of the country as a whole. The accepted wisdom on this issue is that the value of the Swiss franc and the high cost of living inevitably makes these wines expensive in international terms, especially the very best wines. Since the Swiss drink twice as much wine as they can produce and are conditioned to high prices, there is no need to export and little incentive, therefore, to develop better-value wines. Price aside, the finest Swiss whites can be delightful, and the best reds are getting deeper and more velvety by the vintage.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

Situated between the south of Germany, north of Italy, and the central-east French border.

CLIMATE

Continental Alpine conditions prevail, with local variations due to altitude, the tempering influence of lakes, and the sheltering effects of the various mountain ranges. An Alpine wind called the Foehn raises, rather than lowers, temperatures in some valleys. Rainfall is relatively low, and a number of areas, such as the Valais in the south, are very dry indeed. Spring frosts are a perennial threat in most areas.

ASPECT

Vines are grown in areas ranging from valley floors and lake

shores to the steep Alpine foothill sites, which have an average altitude of 2,460 feet (750 meters), although just south of Visp, they reach nearly 3,940 feet (1,200 meters) and are reputedly the highest vineyards in Europe. The best sites are found on south-facing slopes, which maximize exposure to sun, and where the incline is too steep to encourage high yields.

SOIL

Mostly a glacial moraine (scree) of decomposed slate and schist, often with limestone over sedimented bedrock of limestone, clay, and sand. In the Vaud, Dézaley is famous for its “pudding stones.” Chablais has limestone and marl, and Ollon and Bex both benefit from gypsum deposits.

VITICULTURE AND VINIFICATION

Terracing is required on the steeper sites, and so too is irrigation (with mountain water) in dry areas such as the Valais. Most vineyard work is labor-intensive, except in a few more gently sloping vineyards such as those around Lake Geneva (Lac Léman), where mechanical harvesting is practical. Careful vinification produces remarkably high yields. The last three decades have seen a growth in the production of red wine in what is generally a white-wine-dominated region.

GRAPE VARIETIES

Aligoté, Amigne, Ancellotta, Bacchus, Bonarda, Bondola, Cabernet Franc, Cabernet Sauvignon, Chardonnay, Charmont, Chasselas

(*syn.* Dorin, Fendant, Gutedel, Perlan), Chenin Blanc, Completer, Cornalin (*syn.* Landroter), Diolinoir, Doral, Elbling (*syn.* Rauschling), Freisa, Freishamer (*syn.* Freiburger), Gamaret, Gamay, Gewürztraminer (*syn.* Païen), Gouais (*syn.* Gwäss), Himbertscha, Humagne Blanc, Humagne Rouge, Kerner, Lafnetscha (possibly the same variety as Completer), Malbec, Marsanne (*syn.* Ermitage), Merlot, Müller-Thurgau (*syn.* Riesling x Sylvaner), Muscat à Petits Grains, Petite Arvine, Pinot Blanc, Pinot Gris (*syn.* Malvoisie, Ruländer), Pinot Noir (*syn.* Blauburgunder, Clevner), Rèze, Riesling, Sauvignon Blanc, Seibel (*syn.* Plantet), Sémillon, Seyval Blanc, Sylvaner (*syn.* Silvaner), Syrah, Traminer (*syn.* Heida, Païen, Savagnin).

THE APPELLATIONS OF SWITZERLAND

Note Under the federal appellation system, all cantons have the right to their own appellation and each winemaking village within each canton can register its own appellation. Geneva was the first canton to comply in 1988, followed by Valais in 1991, Neuchâtel in 1993, and Vaud in 1995. Along with these village appellations, each canton may also designate generic district and stylistic appellations, the number of which is increasing all the time.

FRENCH-SPEAKING SWITZERLAND

Cantons *Fribourg, Gea, Jura, Neuchâtel, Valais, Vaud*

District appellations *Vully* (part in Fribourg, part in Neuchâtel); *Arve-et-Lac, Arve-et-Rhône, Mandement* (Geneva); *Bonvillars, Chablais, La Côte, Côtes de l'Orbe, Lavaux* (Vaud)

French-speaking Switzerland represents only 16 percent of the country by area, yet manages to boast more than 80 percent of its vineyards. Two-thirds of the wines are white, with Chasselas accounting for 90 percent, while the Pinot Noir and Gamay together represent 99 percent of the black grapes planted. Valais is the longest-established, most famous, and by far the most intensively cultivated of Switzerland's cantons, with vineyards stretching along 30 miles (50 kilometers) of the Rhône, from Lac Léman (Lake Geneva) to Brig (in the German-speaking sector). The Valais canton accounts for more than one-third of the country's wines, and even its lowliest wine villages are at least as good as the best villages of other Swiss cantons. The Vaud canton encompasses almost one-quarter of Switzerland's vineyards, which makes it the second most intensively cultivated canton in the country. The village of Salgesch is a fast-rising star for red wines—everything from elegant Pinot Noir to muscular Syrah.

GERMAN-SPEAKING SWITZERLAND

Cantons *Aargau, Basel, Bern, Graubünden* (part), *St.-Gallen, Schwyz, Schaffhausen, Thurgau*

District appellations *Bielsee, Oberland* (Bern); *Bündner Herrschaft* (Graubünden); *Oberland,*

Rheinthal (St.-Gallen); *Klettgau* (Schaffhausen); *Thurtal, Untersee* (Thurgau); *Flaachtal, Limmattal, Rafzerfelder, Züricher Unterland, Weinland* (Zürich)

By far the largest of the three cultural divisions, German-speaking Switzerland (eastern Switzerland) covers almost two-thirds of the country, yet encompasses only one-sixth of its total viticultural area. Aargau is best known for its red wines, but also produces off-dry, light, fragrant white wines of low alcohol content. Basel is a producer of white wine only. Although some rather thin and mean red wines are produced in Bern, the majority of grapes grown are white and produce wines that are fragrant and lively, with refreshing acidity. In Graubünden vineyards on the upper reaches of the Rhine, the Pinot Noir ripens well and provides wines made from it with comparatively good color and body. Saint-Gallen also encompasses the upper reaches of the Rhine and produces mostly red wine. The southern fringes of Graubünden fall within the Italian-speaking sector of Switzerland, where the canton is referred to locally as Grigioni. The vines of Schaffhausen grow within sight of the famous falls of the Rhine. Thurgau is, of course, home of the famous Dr. Müller, who left his mark on world viticulture with his prolific Müller-Thurgau cross, and inevitably the grape grows there, although more than 50 percent of the vines are Pinot Noir and the fruity wine that grape produces is far superior. Zürich is the most important canton in German-speaking Switzerland, but it produces some of the most expensive, least impressive wines in the entire country, although Pinot Noir grown on sheltered slopes with a good exposure to the sun can produce attractive fruity wines.

ITALIAN-SPEAKING SWITZERLAND

Cantons *Ticino*, *Grigioni* (part)
District appellations *Misox* (Grigioni); *Sopraceneri*, *Sottoceneri* (Ticino)

Italian-speaking Switzerland consists of the cantons of Ticino (also known as Tessin) and the southern fringes of Graubünden (known in Italian as Grigioni) and more than 80 percent of the vineyards are planted with the Merlot grape

variety. Merlot del Ticino is consistently one of the best wines produced in Switzerland. Labor costs are nowhere near as high as they are in the rest of the country, which also makes Merlot del Ticino the least expensive of Switzerland's finest wines.

✓ **Village** *Misox* (Grigioni)

Growers *Adriano Kaufmann* • *Agriloro*, *Carlo Tamborini* • *Christian Zündel* • *Huber Vini* • *Johanniterkeller* • *Luigi Zanini* • *Tamborini* • *Werner Stucky*

THE WINE STYLES OF SWITZERLAND

AMIGNE

WHITE Old Valais variety mostly grown at Vétroz, the Amigne usually makes a full, rustic, smooth, dry white, although Germanier-Balavaud makes a sweet, luscious, late-harvest style.

🕒 1–2 years

🍷 *Cave de la Madelaine/André Fontannaz* • *Germanier-Balavaud* (Mitis)

ARVINE

WHITE Another old Valais variety that makes an even richer, dry white, with a distinctive grapefruit character and good acidity. The Petite Arvine (to distinguish it from the lesser-quality Grosse Arvine) adapts well to late-harvest styles and is highly regarded by Swiss wine lovers in both dry and sweet styles.

🕒 1–3 years

🍷 *François et Dominique Giroud* • *Jean-Yves Crettenand* • *René Favre*

BONDOLA

RED An indigenous grape producing rustic reds on its own, Bondola is at its best in a wine called Nostrano, in which it is blended with Bonarda, Freisa, and other local varieties.

BONVILLARS

WHITE Restricted to Chasselas grown around Lac de Neuchâtel in the villages of Côtes de l'Orbe and Vully, Bonvillars is lighter and more delicate and lively than Vaud wines of this variety grown farther south.

🍷 *C. V. Bonvillars* (Vin des Croisés)

CABERNET SAUVIGNON

RED A relatively new variety that does well in the Chablais district and Ticino, both pure and blended.

🕒 2–6 years

🍷 *Christine & Stéphanie Delarze-Baud* • *Pierre-Alain Meylan*

CHARDONNAY

WHITE Just what the world needs, another Chardonnay, and at Swiss prices! However, the very best are worth a try.

🕒 1–4 years

🍷 *Caves Cidis* • *Gilles & Joell Cina* • *Johanniterkeller* • *Kuntzer & Fils* • *Peter Graf*

CHASSELAS

WHITE Called Fendant in the Valais, Dorin in the Vaud, and Perlan in Geneva, this is the most

important Swiss grape variety and can be nicely flavored, often having a charming *pétillance*. When grown on light, sandy soils it may have a lime-tree blossom aroma. The grape is sensitive to soil, with different characteristics depending on whether the soil is limestone, flint, gypsum, marl, schist, or whatever. Although it is possible to find relatively full, potentially long-lived wines from this variety, it is a wine best enjoyed young.

🕒 1–3 years

🍷 *Henri Badoux* (Cuvée Prestige) • *Louis Bovard*

CLASSIC RED BLEND

RED Although Ticino grows Switzerland's best Merlot and up-and-coming Cabernet Sauvignon, it also makes the best Bordeaux-style blends.

🕒 3–10 years

🍷 *Huber Vini* (Montagna Magica)

COMPLETER

WHITE The Completer is rare grape variety of ancient origin that makes a fascinating, rich, *Auslese*-style of wine from scattered plots found in Graubünden.

🕒 3–7 years

🍷 *Adolf Boner* • *Peter & Rosi Hermann*

CORNALIN

RED Most vines of this indigenous Swiss variety are very old, and restricted to the Valais, where they make dark, powerful red wines that are rich and concentrated, with a full, spicy complexity.

🕒 3–7 years

🍷 *Denis Mercier* • *Maurice Zufferey*

DÔLE

RED A light red comprised of at least 50 percent Pinot Noir plus up to 50 percent Gamay, Dôle is the Swiss (Valais) equivalent of Burgundy's Passetoutgrains.

🕒 1–3 years

🍷 *Dubuis et Rudaz*

DÔLE BLANCHE

WHITE The *blanc de noirs* version is popular, but does not carry its own appellation.

ERMITAGE

WHITE A synonym for the Marsanne used in the Valais, where it makes a delicately rich, dry white wine that is often aged too long in bottle by its aficionados.

🕒 1–4 years

🍷 *Adrian Mathier* • *Marie-Thérèse Chappaz*

FENDANT

WHITE This Chasselas synonym is used in the Valais, where it produces a fleshy-styled, dry white wine, the best of which can have a flinty, lime-tree-blossom aroma and a crisp, minerality of fruit. Ideal with cheese fondue.

🕒 1–3 years

🍷 *Adrian Mathier* • *Dubuis et Rudaz* • *Frédéric Dumoulin* (L'Orpailleur) • *Raphaël Vergère*

GAMAY

RED Until recently, this Beaujolais grape rarely made red wines of distinction in its pure varietal form, and was much more successful when blended with Pinot Noir (*see Dôle*).

🕒 1–3 years

🍷 *Gérald Besse* • *Madeleine et Jean-Yves Mabillard-Fuchs*

GEWÜRZTRAMINER

WHITE Rarely encountered.

🕒 1–5 years

🍷 *Dominique Passaquay* (Passerillé) • *Maurice Dupraz*

HEIDA

WHITE Fresh, lightly aromatic, dry and off-dry wine made from the Savagnin (Traminer) grape.

🕒 1–2 years

🍷 *Chanton*

HUMAGNE BLANC

WHITE The Humagne Blanc is a wine with a relatively high iron content, which could be the reason it used to be given to babies, although it is probable that the dear little things cried when allowed to suck on Humagne Blanc. It has a green bean or capsicum aroma, hints of exotic

fruit on the palate, and a touch of bitterness on the finish.

HUMAGNE ROUGE

RED An old Valais variety, this dark-skinned grape hails from Italy's Valle d'Aosta and makes big, rich, rustic reds that traditionally go well with feathered game.

🕒 1–4 years

🍷 *Jean-René Germaner*

JOHANNISBERG

WHITE This is not the Johannisberg Riesling, but the official synonym for Sylvaner in the Valais, where it is supposedly musky, although they are usually sappy and savory with some sweetness.

🕒 Upon purchase

🍷 *Adrian Mathier • Albert Mathier & Söhne*
• *Claudy Clavier • Domaine du Mont d'Or*
• *François et Dominique Giroud*

LA CÔTE

RED & WHITE Grown exclusively at La Côte (which encompasses the villages of Aubonne, Begnins, Bursinel, Coteau de Vincy, Féchy, Luins, Mont-sur-Rolle, Morges, Nyon, Perroy, and Vinze, as well as La Côte itself), where the Chasselas grape is at its most floral and aromatic, and fruity reds are often blended from two or more varieties, including Gamay, Gamaret, and Garanoir.

🕒 1–2 years

🍷 *Caves Cidis* (Gamaret/Garanoir/Gamay, Garanoir) • *Philippe Rossier* (Aubonne Merlot)

LAVAUUX

WHITE Grown exclusively at Lavaux (which encompasses the villages of Calamin, Chardonne, Dézaley, Epresses, Lutry, Saint-Saphorin, Vevey-Montreux, and Villette, as well as Lavaux itself), the Chasselas is at its softest yet fullest.

🕒 1–2 years

MERLOT DEL TICINO

RED The Merlot grape accounts for more than 80 percent of the vines planted in Italian-speaking Switzerland, where it produces red wines that range from young and light-bodied to fuller, better-colored wines that have a nice varietal perfume and are often aged in *barriques*. The VITI classification on a bottle of Merlot del Ticino used to be seen as a guarantee of superior quality, but now merely indicates the wine has had one year's aging before being bottled.

🕒 2–4 years (lighter styles), 3–10 years (*barrique* wines)

🍷 *Adriano Kaufmann • Carlo Tamborini*
• *Christian Zündel • Huber Vini • Luigi Zanini • Werner Stucky*

MÜLLER-THURGAU

WHITE This most prolific (supposedly) *Riesling*/*Sylvaner* cross was created in 1882 by Dr. Hermann Müller, who hailed from the canton of Thurgau, hence the name, which makes it rather ironic that the Swiss should call this grape *Riesling* x *Sylvaner* rather than by the name that honors its Swiss origins! However, the mild, grapey wine this variety produces even in its home canton is no more exciting than it is elsewhere, although relatively superior examples are produced in Aargau.

🕒 1–2 years

🍷 *Schlossgut Bachtobel/Hans Ulrich Kesselring*

MUSCAT

WHITE The Muscat à Petits Grains is traditionally grown in the Valais, in small quantities. It makes wines of very light body, with the grape's unmistakable varietal flowery aroma. Some interesting late-harvest styles are beginning to emerge.

🕒 2–4 years

🍷 *Cave Emery* (Grains Nobles de la Saint Nicolas—Séduction) • *Domaine des Muses*
• *Stéphane Clavier* (Coteaux de Sierre)

NOSTRANO

RED This used to be an inexpensive blend of *vin ordinaire* quality, produced from grapes that failed to reach appellation standard, but now it has its own official classification and the quality has certainly improved. Nostrano means “our” and literally refers to the local varieties used, as opposed to American hybrids.

OEIL DE PERDRIX

ROSÉ Oeil de Perdrix, which literally means “partridge eye,” is a French term for pale, dry rosé wines made from free-run Pinot Noir.

🕒 Upon purchase

🍷 *Alain Gerber • Cave de Champ de Clos*

PERLAN

WHITE In the canton of Geneva the Chasselas makes a slightly spritzzy flowery wine that is sold as Perlan. Geneva must be mentioned on the label, or a village name: L'Allondon, Bardonnex, Dardagny, Jussy, Lully, Peissy, Russin, or Satigny.

PINOT BLANC

WHITE Recently planted, fashionable variety, but few wines stand out.

🕒 1–3 years

🍷 *Domaine des Abeilles d'Or • Domaine Saint-Raphaël*

PINOT GRIS

WHITE This famous Alsace grape is becoming quite fashionable in Switzerland, where it makes more of a Pinot Grigio style, with some very successful *vendange tardive* emerging.

🕒 1–3 years

🍷 *Cave Saint-Pierre • Caves du Château d'Auvergnier* (Vendange Tardive) • *Domaine E. de Montmollin Fils* (Vendange Tardive)
• *Schlossgut Bachtobel/Hans Ulrich Kesselring • Urs Pircher Stadtberg* (Egfsauer Stadtberger)

PINOT NOIR

RED In a country like Switzerland, which adores Burgundy, it is not surprising that top producers make some of Switzerland's most serious wines with this grape variety—well colored, velvety, with soft, cherry fruit and a touch of oak. Although this wine is sold as Blauburgunder in German-speaking Switzerland, and Pinot Nero in Italian-speaking Switzerland, there are moves toward harmonizing under the internationally recognizable Pinot Noir name.

🕒 3–6 years (up to 10 years in exceptional cases)

🍷 *Agriloro • Caves Fernand Cina • Christian Hermann • Daniel & Martha Gantenbein*
• *Georg & Ruth Fromm • Peter Wegelin*
• *Weingut am Worrenberg*

RÄUSCHLING

WHITE This rarely seen variety is in decline and is now found only along the shore of Lake Zurich, where it is appreciated for its very fresh scents and fine acidity.

🕒 Upon purchase

🍷 *Weingut Picher*

RIESLING

WHITE Aside from exceptional botrytized wines, Swiss Riesling does not have the quality or varietal intensity of Germany or Austria.

SALVAGNIN

WHITE A light, supple red-wine blend of Pinot Noir and Gamay, this is the Vaud's equivalent of the more famous Dôle.

🕒 1–3 years

🍷 *Jean-Pierre Walther*

SÜSSDRUCK

ROSÉ A soft, fresh, dry rosé produced in eastern Switzerland from free-run Pinot Noir.

SYRAH

RED This grape is at home in the heat and exposure of the northern Côtes du Rhône, and in Valais the Rhône River is as northerly as it gets. Peppery black fruits distinguish these fast-improving, increasingly fashionable wines.

🕒 3–10 years

🍷 *Antoine et Christophe Bétrisey • Caves Fernand Cina • Domaine des Graves*
• *Dubuis et Rudaz • François et Dominique Giroud • J. & P. Testuz* (Les Oenocrates)
• *Jean-René Germaner • Roger Burgdorfer* (Diable) • *Romain Papilloud*

VIN DE PAIN

WHITE A fresh, gently aromatic, dry white wine made from the Traminer in the Valais.

VIN DU GLACIER

Valais

Although Switzerland's equivalent of Germany's Eiswein tends to be oxidative, this rare product does have its enthusiastic followers.

CERTIFIED ORGANIC PRODUCERS

Ca di Ciser (Mergoscia)
Domaine de Beaudon (Fully)
Liesch-Hiestand (Malans)

The WINES of
NORTHWESTERN
EUROPE

IF ENGLISH WINE COMES AS A SURPRISE TO SOME, then the thought of commercial vineyards in Belgium, the Netherlands, and even on a Danish island north of Poland will beggar belief—yet they exist. Their scope will always be limited because of the combination of northerly latitude and the uncertain climatic effect of the northern Atlantic. However, sparkling wines produced by Nyetimber and Ridgeview demonstrate that world-class quality can be achieved in England. The success enjoyed by these producers has encouraged the English wine industry to focus its efforts on perfecting sparkling wines, and other countries in northwestern Europe would be well advised to follow this lead.

VINEYARDS IN THE WINTER, SURREY, BRITISH ISLES
While winters can sometimes be cold, vineyards in southeastern England generally enjoy a relatively mild climate and soil types that range from clay to chalk.

THE BRITISH ISLES

The future of British wine literally is sparkling. Forget the Müller-Thurgau, Seyval Blanc, and other odd-sounding French hybrids and German crosses that have provided local consumers with mostly forgettable wines. Nyetimber and Ridgeview are world-class sparkling wine producers, and as such represent a blueprint for all quality-conscious English and Welsh winemakers.

ANY ENGLISH OR WELSH VINEYARD owner who does not have the courage to grow more popular grape varieties will eventually be doomed. This country's winemaking efforts are destined to remain a cottage industry, but this is not because England and Wales lack serious or successful producers, rather it is due to two simple facts: British vineyards are a very recent phenomenon and Britain is a densely populated island. It will always be difficult to find suitable land for vineyards, so the potential growth of English and Welsh wine is severely limited. Furthermore, if any *grand cru* sites ever existed, they would be under concrete or asphalt today. It is a bit like starting up the French wine industry from scratch in a country half the size and twice as densely populated with a severely unfavorable climate.

ANCIENT BRITONS

Winemaking in Britain is not new, but dates back to 43 CE, when every important villa had a garden of vines. It was not until 1995, however, when a 20-acre (8-hectare) Roman vineyard was excavated at Wollaston in Northamptonshire, that the true scale of this early viticulture was realized. The Domesday Book reveals the existence of some 40 vineyards of significance during the reign of William the Conqueror, and by medieval times, the number had risen to 300, most of which were run by monks. The Black Death took its toll in the mid-14th century and, almost 200 years later, the dissolution of the monasteries virtually brought an end to English winemaking. Aside from a couple of vineyards in the mid-18th century and two more in the late 19th century, winemaking on a commercial scale was almost non-existent until Hambledon was established in 1951. English vineyards began to boom in the late 1960s and peaked in the early 1970s. Since then, almost 500 have been planted, although just over 300 survive today, and only 109 of these have their own winery.

THE DELL ON DENBIES, DORKING, SURREY
Set amid Surrey countryside, Denbies Estate is the largest winery in Great Britain, surrounded by more than 250 acres (100 hectares) of vineyards.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

Most of the vineyards are located in England and Wales, south of a line drawn through Birmingham and the Wash.

CLIMATE

Great Britain is at the northerly extreme of climates suitable for the vine, but the warm Gulf Stream tempers the weather sufficiently to make viticulture possible. Rainfall is relatively high and conditions vary greatly from year to year, making harvests somewhat unreliable. High winds can be a problem, but winter frosts are less troublesome than in many wine regions.

ASPECT

Vines are planted on all types of land, but the best sites are usually sheltered, south-facing slopes with the consequent microclimate advantages that can be crucial for wine production in this marginal viticultural region.

SOIL

Vines are grown on a wide variety of different soils ranging from granite through limestone, chalk, and gravel to clay.

VITICULTURE AND VINIFICATION

The commonly encountered high-trained vine systems indicate that many vineyards are poorly sited in frost-prone areas. Vigor is also a problem, as sap bypasses the fruit to produce an excessively luxuriant

canopy of leaves, resulting in unnecessarily small grape clusters, delayed ripening, and overly herbaceous flavors. This problem is exacerbated by the use of rootstocks that actually promote vigor, but the New World influence that has already had its effect on English winemaking techniques will hopefully encourage the introduction of low-vigor rootstock. Although the British climate is least favorable for growing black grapes, an increasing amount of red and rosé has been produced since the early 1990s, but bottle-fermented sparkling wine is clearly the most up-and-coming of all the English wine styles.

GRAPE VARIETIES

Primary varieties: Bacchus, Chardonnay, Dornfelder, Pinot Noir, Regent, Rondo, Seyval Blanc
Secondary varieties: Auxerrois, Blauburger, Blauer Portugieser, Cabernet Sauvignon, Cascade, Chasselas, Dunkelfelder, Ehrenfelser, Faberebe (*syn* Faber), Findling, Gagarin Blue, Gamay, Gewürztraminer, Gutenborner, Huxelrebe, Kanzler, Kerner, Kernling, Léon Millot, Madeleine Angevine, Müller-Thurgau, Optima, Ortega, Perle, Pinot Blanc, Pinot Gris, Pinot Meunier, Regner, Reichensteiner, Riesling, Sauvignon Blanc, Scheurebe, Schönburger, Seibel, Siegerrebe, Triomphe d'Alsace, Wrotham Pinot, Würzer, Zweigeltrebe

Few vineyards in the UK can reasonably expect more than an average of 1,440 degree-days Fahrenheit (800 degree-days Celsius), which is well below the accepted minimum for winemaking of 1,800 degree-days Fahrenheit (1,000 degree-days Celsius), so even the best-situated vineyards risked failure when they were first established. Some vineyards were unsuccessful, but those in existence today have proved the theoretical minimum conditions to be just that—theoretical.

FUTURE TRENDS

Although English wine will remain forever a cottage industry, this does not mean it cannot earn a reputation for quality. High duty rates do mean, however, that it is difficult for the smallest vineyards, which have the highest overheads, to establish sales of a new product. Initially, this problem was overcome by contract winemaking, with virtually all the oldest and largest vineyards providing a service for small vineyards where a winery was not a viable option. Since the early 1990s, however, cooperative groups have formed to produce large volumes of relatively inexpensive wines by blending wines from their members, all of whom also make and market their own single-vineyard products.

The next step in the development of English wine is to rid the country of most of its crosses and hybrids. This has nothing to do with the European ban on hybrid grapes or the ill-informed view that they are somehow intrinsically inferior. Indeed, exceptionally

fine wines can on occasions be made from some hybrids, and it is relatively easy to make passable wines from such grapes. On the other hand, in a country such as this, it is hard to make decent wines from *vinifera* varieties, and the winemaker is severely punished for every mistake. No, the reason why these funny grapes with funny names must go is because they have a negative impact on most serious wine consumers. Wine drinkers are attracted to classic varieties and even willing to dabble with more obscure *vinifera* grapes, particularly when indigenous to the wine-producing area of origin, but they either do not understand hybrids or find them a turn-off. As for German crosses, how can producers expect to establish an English or Welsh wine reputation with names like Reichensteiner or Siegerrebe?

English vineyard owners should learn from Ontario, British Columbia, and New England in the United States, all of which faced climatic hazards at least as great as those in the British Isles. They were seen as a joke, the hicks of the wine world, by consumers of fine wine. Only when they started growing *vinifera* varieties did they gain respect. Owners of vineyards in climatically challenged regions must learn the unpleasant truth: that it is not possible to build a serious reputation on hybrid grapes. There is only one consistently high-quality product of a hybrid grape and that is Canada's Icewine, and the lesson to be learned there is that it has built its reputation on the connotation of the word Icewine. It would never have been sold on Vidal, the hybrid name.

HERE COMES THE CAVALRY!

It took two Americans, Stuart and Sandy Moss, the original owners of Nyetimber, to shake the English out of their lethargy. The Mosses were the true pioneers. They had a crazy ambition to make a top-quality English fizz from classic Champagne varieties, but when they sought "expert" advice, they were told that there was no way that Chardonnay would ripen in the English climate, and Pinot Noir would simply rot. With no such thing as an indigenous grape variety in Britain, they were advised to play

RECENT BRITISH VINTAGES

2003 The greatest potential vintage since that other Year of the Drought, 1976, but, this time around, English winemakers certainly had the experience to take full advantage of the conditions. This year not only produced the best reds, but also some of the finest dry white and sparkling wines.

2002 A very good all-around vintage.

2001 In general, wines were above average in quality, with white wines performing better than reds.

2000 A fairly average-quality vintage, with white wines performing the best.

1999 Above-average quality, with both red and white wines performing well.

it safe and plant hardy hybrids. This was never an option for the Mosses, who knew it would be impossible to establish a worthwhile reputation with grapes that are not even taken seriously by the majority of wine drinkers in Britain, let alone on major international markets. They stopped listening to the English, most of whom were trained at Geisenheim, where many of the crosses occupying English vineyards originated, and did the unthinkable—they asked the French for help. The *champenois* arrived, examined the soil, advised which clones should be planted and how they should be trained, and they helped make the wine. Within 18 months of the first release, Nyetimber had created such a stir that it was chosen for the Queen's Golden Anniversary lunch. Certainly proof that bottle-fermented sparkling wine represents Britain's greatest potential for quality, especially in southeastern England, where even the chalk subsoil is exactly the same as that found in the Champagne region.

THE WINE REGIONS OF THE BRITISH ISLES

Regional characteristics have not yet been established in the wine regions of the British Isles, and I am not sure that they ever will be, but it is very difficult to build up a proper spatial awareness of where English vineyards are located without first breaking them down into a small number of workable areas.

The following regions are all officially recognized by the United Kingdom Vineyard Association, or UKVA (which took over from the English Vineyard Association in 1996) and it would help if more vineyard owners were to utilize these regions on their labels in addition to a more specific location. Until they do, British consumers will be less informed about their own wines than they are about those of France or Australia.

EAST ANGLIA

Bedfordshire, Cambridgeshire, Essex, Hertfordshire, Norfolk, Suffolk

The flattest and most exposed of all the regions, East Anglia is subject to bitterly cold easterly and northeasterly winds, but has fertile soils, which can encourage significantly higher yields than in some areas of England. Quite often this has the effect of trading off quality for an attempt to preserve consistency.

MERCIA

Cheshire, Derbyshire, Lancashire, Leicestershire, Lincolnshire, Northamptonshire, Nottinghamshire, Rutland, Shropshire, Staffordshire, Warwickshire, West Midlands, West Yorkshire

This is a very large and naturally diverse region, with vineyards planted both on flat ground and slopes, with soils ranging from light sand to heavy clay. About the only common factor is Madeleine Angevine, which seems to be the most reliable variety. At the time of writing, another ten vineyards have been planted, but are not yet in production.

SOUTHEAST

East and West Sussex, Kent, Surrey

This region covers the "Garden of England," which probably says it all. It is not as wet as the West Country, and milder than East Anglia, but not as warm as Thames and Chiltern. Soils range from clay to chalk. The latter forms the same basin that creates the chalk cliffs at Dover and goes under the Channel to rise in Champagne.

SOUTHWEST

Bristol, Cornwall, Devon, Gloucestershire, Herefordshire, Isles of Scilly, Republic of Ireland, Somerset, South Wales, Worcestershire

Geographically the largest region, with vineyards as far apart as Cornwall, where the Gulf Stream has its greatest effect, but there is also a tendency to wet weather, and North Wales, which takes the brunt of weather systems from the Atlantic. Although prevailing westerly winds make conditions difficult in the west of Cornwall and Wales, the region is generally milder than the east coast. The topography of the region ranges from mountainous to flat, with some areas below sea level. Soils vary tremendously from limestone through shale, clay, and peat to granite.

THAMES AND CHILTERN

Berkshire, Buckinghamshire, Oxfordshire

This large area is the warmest of all the regions, and most vineyards are located on slopes of moisture-retaining soils. There are also many aquifers in the area, which prevent stress during drought conditions.

WESSEX

Channel Islands, Dorset, Hampshire, Isle of Wight, Wiltshire

The major factor linking these counties together is the interesting pattern of isotherms that form south of the Isle of Wight and provide a more temperate climate than the surrounding regions.

THE WINE PRODUCERS OF THE BRITISH ISLES

1 ADGESTONE

Adgestone, Isle of Wight (Wessex)
Estate-bottled wines from a south-facing chalk slope that was first planted in 1962.

2 ASTLEY

Stourport on Severn, Worcestershire (Southwest)

An award-winning vineyard established in 1979 by Jonty Daniels and Janet Baldwin.

✓ *Classic white blend* (Dry Reserve) • *Late Harvest*

3 BEARSTED

Beardsted, Kent (Southeast)

Small boutique winery with 4 acres planted in the late 1980s by former research chemist John Gibson.

✓ *Sparkling* (Brut Vintage)

4 BEAULIEU

Nr Brockenhurst, Hampshire (Wessex)
This enthusiastic, aristocratic venture has been running since 1958.

5 BEECHES HILL

Upton Bishop, Herefordshire (Southwest)

Established in 1991, Beeches Hill grows Madeleine Angevine and Seyval Blanc grapes, but the wines are made by Three Choirs.

6 BIDDENDEN

Biddenden, Kent (Southeast)

A former orchard on a gentle south-facing slope in a shallow, sheltered valley, Biddenden is principally known for its Ortega. Wines produced in part or whole from grapes grown elsewhere are sold under the Gribble Bridge label.

✓ *Ortega* • *Rosé* (Gribble Bridge) • *Sparkling* (Gribble Bridge Vintage)

7 BINFIELD

Wokingham, Berkshire (Thames and Chiltern)

A dry white wine and a light red are produced here, but the emphasis is on a fizz under the Champion label, which is linked to the Bob Champion Cancer Fund, a charity that receives a percentage of the price of every bottle sold.

8 BOOKERS

Bolney, Sussex (Southeast)

The first vines were planted in 1973, but initially the Pratt family sold their grapes, and only started making their own wine in 1983, with red wine unusually accounting for as much as half the output.

✓ *Classic red blend* (Dark Harvest)

9 BOTHY

Frilford Health, Oxfordshire (Thames and Chiltern)

The most successful wine produced by new owners Sian and Richard Liwicki is their Oxford Dry. Although from a typically English hodgepodge of grape varieties, it is a refreshing dry white that anyone partial to Sauvignon Blanc would enjoy.

✓ *Oxford Dry*

10 BOZE DOWN

Whitchurch-on-Thames, Oxfordshire (Thames and Chiltern)

Established in 1985 by Dick and Sandra Conn, Boze Down Vineyard lies on the sheltered southern slopes of the Chiltern Hills overlooking the Thames River between Reading and Oxford.

✓ *Classic white blend* (Skippetts)

11 BOW-IN-THE-CLOUD

Malmesbury, Wiltshire (Wessex)

Bow-in-the-Cloud vineyard was planted in 1992 and has been producing wine since 1995. Pure varietal wines are sold under the Arkadian label, while blends are sold under the Cloud Nine label.

12 BREAKY BOTTOM

Northtease, Sussex (Southeast)

Peter Hall used to release his Seyval-based fizz far too young, but now he is running the risk of holding on to them for too long. The two *cuvées* below are best to buy and drink when Hall offers them at 5–6 years of age.

✓ *Müller-Thurgau* • *Seyval Blanc* • *Sparkling* (Cuvée Maman Mercier, Cuvée Remy Alexandre)

13 CAMEL VALLEY

Nanstellon, Cornwall (Southwest)

Former RAF pilot Bob Lindo gave up the high life for the more down-to-earth task of working the soil on the sunny slopes of the Camel River valley, midway between the Atlantic and Channel coasts. Local celebrity chef Rick Stein so enjoyed eating Lindo's Reichensteiner grapes off the vine that he renamed the variety "Ricksteiner" on his television program. Cornwall Brut is a rather too easy to drink sparkling wine with a potted history of Christopher Merret on the back label.

✓ *Bacchus* • *Seyval Blanc* • *Pinot Noir* • *Sparkling* (Cornwall Brut)

14 CANTERBURY CHOICE

Ash, Kent (Southeast)

The label under which the wines from Barnsole Vineyard are sold.

✓ *Dry Reserve* • *Pilgrim's Harvest*

15 CARR TAYLOR

Westfield, Sussex (Southeast)

Established in 1971 by David and Linda Carr Taylor, with Alexander Carr Taylor the second-generation winemaker.

✓ *Reichensteiner* (Alexis)

16 CHATEAU LE CATILLON

Jersey, Channel Islands (Wessex)

Chateau le Catillon has been bought by La Mare.

17 CHIDDINGSTONE

Chiddingstone, Kent (Southeast)

This vineyard was established by the late Dudley Quirk, whose two sons run Chiddingstone today.

18 CHILFORD HUNDRED

Linton, Cambridgeshire (East Anglia)

This large vineyard was established in 1972, but it did not produce its first sparkling wine until 1994.

✓ *Sparkling* (Aluric de Norsehide)

19 CHILTERN VALLEY

Hambledon, Oxfordshire (Thames and Chiltern)

Also known as Luxters, because owner David Ealand established his winery on the site of Old Luxters pig farm. Has produced some interesting wines in the past, although they have a lower profile these days.

20 COACH HOUSE

Romsey, Hampshire (Wessex)

This vineyard is owned by Roger Marchbank, who is better known as the chairman of UKVA, and cannot be accused of using his position to promote his wine, as I have never tasted Coach House wine, and seldom heard mention of it!

21 COURT LANE

Alesford, Hampshire (Wessex)

Stephen Flook must have broken a record when he took 12 years to plant just over one acre of vines.

22 DANEbury

Stockbridge, Hampshire (Wessex)

Anne Bishop named her fizz Cossack after the controversial winner of the 1847 Derby.

23 DAVENPORT

Rotherfield, East Sussex & Horsmonden, Kent (Southeast)

Will Davenport is a graduate of Roseworthy College in Australia, and has worked for wineries in Alsace, California, and South Australia before setting up in England in 1990. He has a still wine vineyard at Horsmonden in Kent, but his Rotherfield vineyard is primarily for

sparkling wine. Planted in 1993 with Pinot Noir and Auxerrois, Davenport's Rotherfield vineyard came into production in 1997. His 1999 Limney Brut was brilliant, and the 2000 almost as good, suggesting that Davenport will soon be a third force to reckon with in the establishment of world-class English wine from a dedicated sparkling wine estate, following in the footsteps of Nyetimber and Ridgeview.

✓ *Limney Brut* • *Limney Fumé* • *Red wine* (Pinot Noir)

24 DENBIES WINE ESTATE

Dorking, Surrey (Southeast)

With 265 acres (106 hectares) of vines, Denbies Wine Estate is the largest English vineyard. Its Tesco-looking winery is also designed and equipped to receive tourists by the bus-load; consequently Denbies is also the most visited of English vineyards. Capable of producing award-winning wines, but not consistent throughout the range.

✓ *Rosé* (Rose Hill)

25 EGLANTINE

Costock, Nottinghamshire (Mercia)

Readers might think that Tony Skuriat's vineyard is northerly enough, without deliberately freezing his grapes, but this is how he produces his award-winning wine North Star.

✓ *Dessert wine* (North Star)

26 FAWLEY

Henley-on-Thames, Oxfordshire (Thames and Chiltern)

Nick and Wendy Sargent are just beginning to establish a reputation for Bacchus.

✓ *Bacchus*

27 GIFFORD'S HALL

Hartest, Suffolk (East Anglia)

John and Jeanie Kemp claim to tread their grapes, and they also produce a variety of homemade liqueurs, but Gifford's Hall was up for sale in 2004.

28 GREAT STOCKS

Stock, Essex (East Anglia)

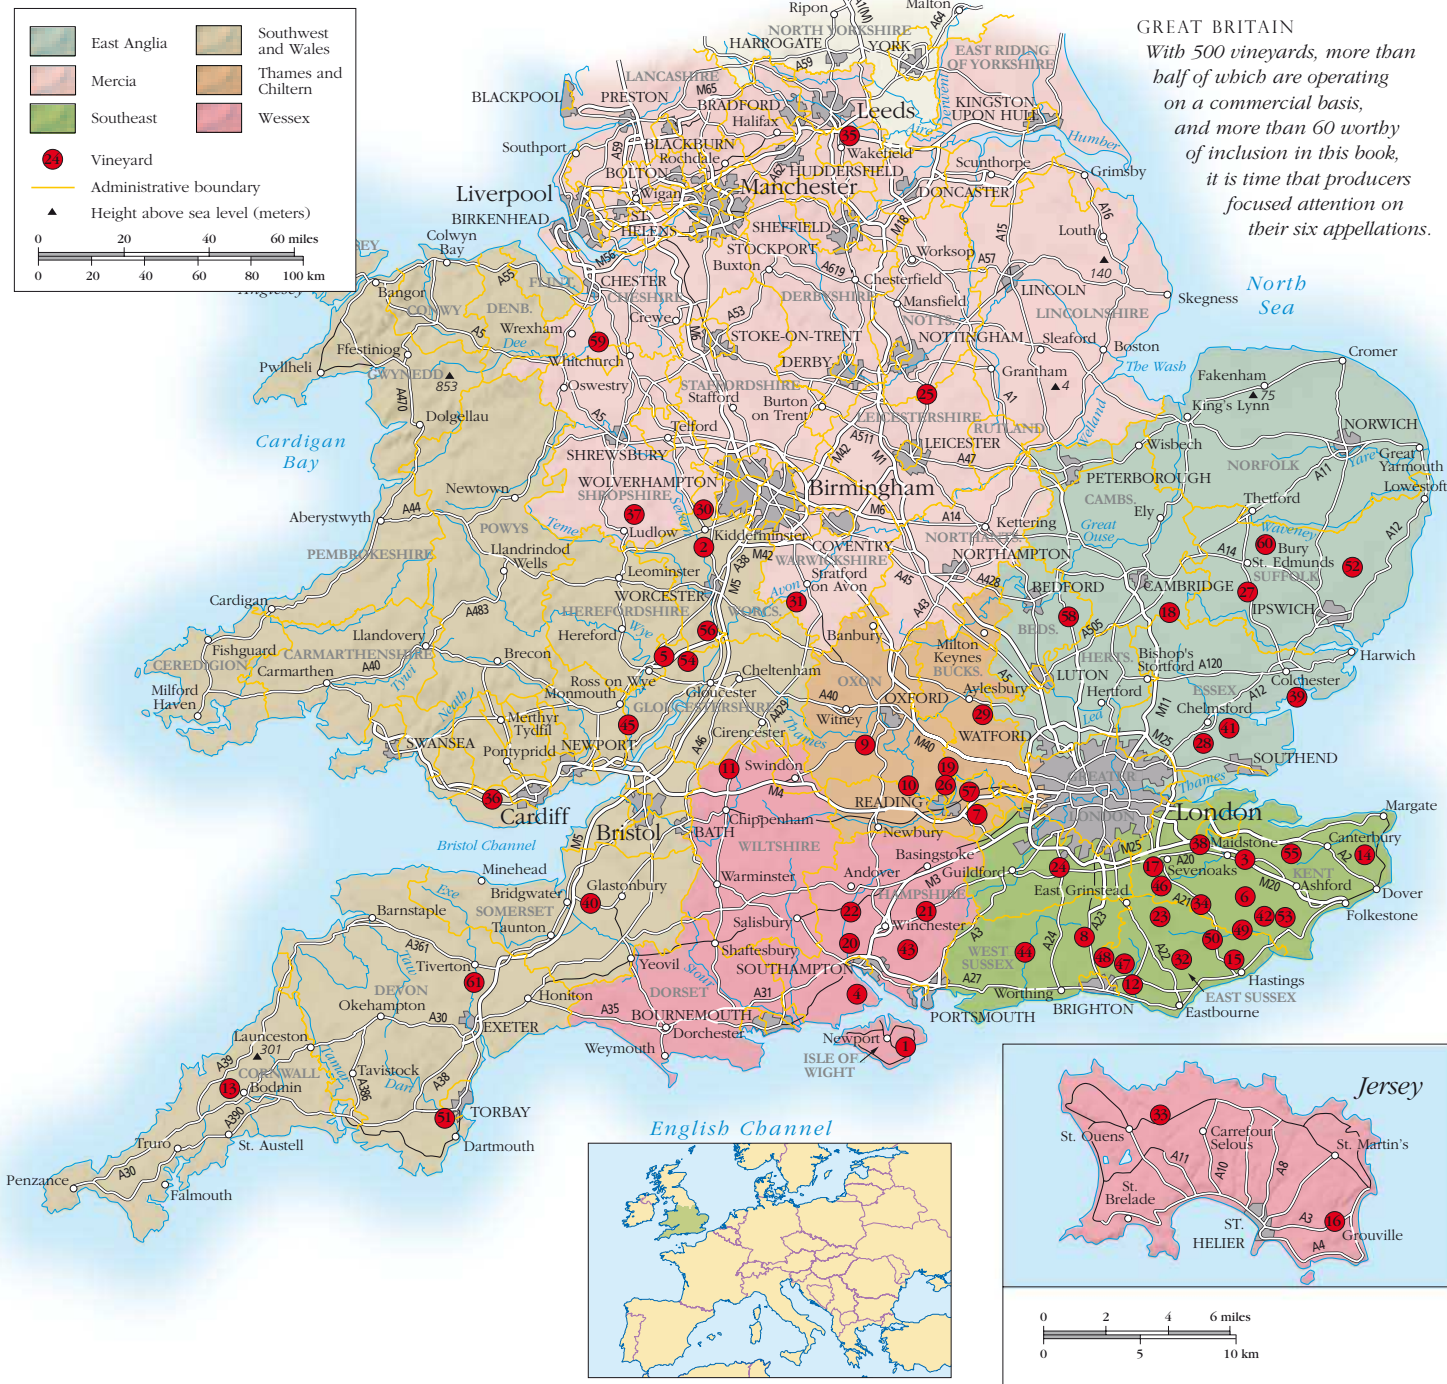

This vineyard was established between 1993 and 1999 by Brian and Gillian Barnard, who are hoping that Rondo will provide good red wine.

29 HALE VALLEY

Boddington, Buckinghamshire (Thames and Chiltern)

Sparkling wine has been Antony and Carol Chapman's most successful wine so far.

✓ *Sparkling* (Brut Vintage)

GREAT BRITAIN
 With 500 vineyards, more than half of which are operating on a commercial basis, and more than 60 worthy of inclusion in this book, it is time that producers focused attention on their six appellations.

30 HALFPENNY GREEN
 Halfpenny Green, Staffordshire (Mercia)
 ★●

Just over 22 acres (9 hectares) were planted between 1983 and 1991, then a winery was built in 1994. As with most northerly English vineyards, Madeleine Angevine has proved the most reliable variety.
 ✓ Classic white blend (Penny Black) • Huxelrebe • Madeleine Angevine

31 HEART OF ENGLAND
 Welford-on-Avon, Warwickshire (Mercia)
 ★●

David Stanley planted this vineyard in "Shakespeare Country" in 1995

but did not achieve his first commercial harvest until 2000.
 ✓ Classic red blend (Oberon)

32 HIDDEN SPRINGS
 Horsham, Sussex (Southeast)
 ★●

Although Martyn Doubleday and Chris Cammel make some trophy-winning wines, devotees would kill for Hidden Springs Art Deco labels, even if they put nothing inside the bottles!

✓ Classic red blend (Dark Fields) • Classic white blend (Decadence) • Rosé (Sussex Sunset) • Sparkling wine (Vintage Brut)

33 LA MARE
 Jersey, Channel Islands (Wessex)
 ★●

The Channel Islands' first vineyard and the only one open to visitors, La Mare now also owns Chateau le Catillon. Also produces a Norman-style cider and has installed a small Calvados pot still for apple brandy.
 ✓ Classic white blend (Domaine de La Mare) • Sparkling wine (Brut, Lily)

34 LAMBERHURST
 Lamberhurst, Kent (Southeast)
 ★●

Merged with Chapel Down in 2001 to form English Wines Plc.
 ✓ Classic white blend (Fumé)

35 LEVENTHORPE VINEYARD
 Woodlesford, West Yorkshire (Mercia)

Established by chemist-turned-winemaker George Bowden in 1986, Leventhorpe vineyard is just a stone's throw away from the historic stately home of Temple Newsome. This is the country's most northerly vineyard and it is no mere curiosity, since it crops ripe grapes every year, and has its own winery.

36 LLANERCH VINEYARD
 Hensol, Vale of Glamorgan, Wales (Southwest)
 ★●

Wines are sold under the Cariatid label. The fizz is improving.

✓ *Classic white blend* (Cariad Celtic Dry) • *Sparkling* (Cariad Blush)

37 LUDLOW VINEYARD

Clee St. Margaret, Shropshire (Mercia)
★

An up-and-coming, new vineyard, Ludlow might have struck it lucky with 2003 as its inaugural vintage, but it was an impressive start nonetheless. Clee Moonlight is a blend of Madeleine Angevine, Seyval, and Phoenix with a slight hint of oak. Only 200 bottles were made.

✓ *Clee Moonlight*

38 MEOPHAM

Wrotham, Kent (Southeast)

Part organic production, including an organic medium-sweet Pinot Noir.

39 MERSEA

Mersea Island, Essex (East Anglia)

On an island 9 miles (15 kilometers) south of Colchester, halfway between West Mersea and East Mersea, this vineyard and winery also boasts a microbrewery.

40 MOORLYNCH

Bridgwater, Somerset (Southwest)

This vineyard is located on a sunny south-facing hillside that has, surprisingly for England, a somewhat dry microclimate. Owner-winemaker Peter Farmer's most successful wine so far has been his 1996 Vintage Reserve Brut sparkling wine.

41 NEW HALL

Purleigh, Essex (East Anglia)

Established by the Greenwood family in 1969, this 91-acre (37-hectare) vineyard is one of the oldest and largest English wine producers, and the first to be planted in Essex.

42 NEW WAVE WINES

Tenterden, Kent (Southeast)

★

One of the country's four largest wine producers, this company was formed in early 2001, when Chapel Down Wines at Tenterden Vineyard merged with Lamberhurst Vineyard. Also referred to as English Wines Plc, the multi-award-winning New Wave Wines still has the feel of a large and expanding winery that is finding its way, which indeed it is, but the quality and consistency has greatly improved since the merger. Improvements continue under Owen Elias, who was named Winemaker of the Year in 2002 and 2003.

✓ *Bacchus* (Curious Grape)
• *Ortega* (Curious Grape)
• *Pinot Blanc* (Curious Grape)
• *Pinot Noir* (Curious Grape)
• *Schönburger* (Curious Grape)
• *Sparkling* (Chapel Down Pinot Reserve)

43 NORTHBROOK SPRINGS

Bishop Waltham, Hampshire (Wessex)

Owner-winemaker Brian Cable Young has made some good-value fizz and noble rot dessert wines in the past.

44 NYETIMBER

Pulborough, Sussex (Southeast)

★

Established in 1988 by American couple Stuart and Sandy Moss, who achieved their ambition of creating a world-class English sparkling wine, and sold it on to English songwriter Andy Hill, who appears to be every bit as serious about maintaining the very highest of standards. The secret here is not so much the determination or money that have been put into the project (although both help greatly), but the topography of the vineyard, which has not changed since Nyetimber was mentioned in the Domesday Book. The vineyard is south-facing, with a modest slope, which acts as a frost drop, allowing the vines to be trained close to the ground and in a high density of 2,500 per acre (6,200 per hectare). Nyetimber makes classic sparkling wine from traditional Champagne varieties (Chardonnay, Pinot Noir, and Pinot Meunier), which have exceptional longevity, and show remarkable finesse.

✓ *Entire range*

45 PARVA FARM

Tintern, Monmouthshire, Wales (Southwest)

★

Emerging Pinot Noir potential from steep vineyards set within a working farm environment with sheep, cattle, and ponies.

✓ *Pinot Noir*

46 PENSURST

Penshurst, Kent (Southeast)

First planted in 1972 on a south-facing slope, the first crop was promising, and some excellent wines have been produced here. The picturesque label is charming and very English, except for the hidden kangaroo!

47 PLUMPTON COLLEGE

Plumpton, East Sussex (Southeast)

The only educational facility in the UK to provide courses in all aspects of wine, Plumpton College also possesses a well-equipped, commercial winery.

48 RIDGEVIEW ESTATE

Ditchling, Sussex (Southeast)

★

Owned by Christine and Mike Roberts, this 16-acre (6-hectare) vineyard did not come into full production until 1997, yet quickly started snapping at the heels of Nyetimber for the English sparkling wine crown, and some *cuvées* are superior. In honor of Christopher Merret, the first person to document the process that eventually became known as the traditional method, all Ridgeview wines are marketed as "Cuvée Merret," a name the Roberts have registered. Furthermore, to maintain Merret's association with London, each style of "Cuvée Merret" is named after an area of London.

✓ *Entire range*

49 SANDHURST VINEYARDS

Sandhurst, Kent (Southeast)

A 25-acre (10-hectare) vineyard established in 1988 by the Nicholas family on Hoads Farm.

50 SEDLESCOMBE

Robertsbridge, Sussex (Southeast)

○

In 1994 Sedlescombe became Britain's first organic vineyard, and in this rain-swept country, there have not been many brave enough to follow.

✓ *Classic white blend* (Dry White)

51 SHARPHAM

Asprington, Devon (Southwest)

★

Sharpham makes and markets wine from Beenleigh Manor Vineyard in Harbertonford, which was Britain's first "real" red wine in the 1980s. Since then, it has become a multi-award-winning wine.

✓ *Classic red blend* (Beenleigh)

• *Classic white blend* (Dart Valley Reserve) • *Madeleine Angevine* (Barrel Fermented Dry) • *Pinot Noir*

52 SHAWSGATE

Framlingham, Suffolk (East Anglia)

★

One intriguing offer from this vineyard, which was established in 1973, is the chance to rent a row of vines, from which wine will be made for you—because they are "your" vines, the wine will be tax-free!

✓ *Rosé*

53 TENTERDEN

Tenterden, Kent (Southeast)

★

Originally planted and owned by Stephen Skelton, Tenterden is now the home of New Wave Wines, as well as one of its better labels.

✓ *Classic white blend* (Tenterden Estate)

54 THREE CHOIRS

Newent, Gloucestershire (Southwest)

★

One of the country's four largest wine producers, Three Choirs has always had potential, but was disappointing until the 2002/03 vintages.

✓ *Bacchus* (Estate Reserve)
• *Desert* (Estate Reserve Noble Rot) • *Siegerrebe* (Estate Reserve)

55 THROWLEY

Throwley, Kent (Southeast)

★

A southwest-facing slope of the North Downs that is developing a reputation for Ortega.

✓ *Ortega* (Reserve)

56 TILTRIDGE

Upton-on-Severn, Worcestershire (Southwest)

★

Peter and Sandy Barker have not been very successful with their Elgar

sparkling wine, the grapes for which obviously have more potential for still wines.

✓ *Schönburger* (Cello) • *Seyval* (Oaked)

57 VALLEY VINEYARDS

Stanlake Park, Berkshire (Thames and Chiltern)

★

Owner Jon Leighton and his business partner, Australian-trained winemaker John Worontschak, have done much to put a fresh, affordable face on the reputation of English wine.

✓ *Classic white blend* (Fumé)

• *Rosé* (Pinot Blush)
• *Schönburger* (Hinton Grove)
• *Sparkling* (Ascot Brut, Heritage Rose)

58 WARDEN ABBEY

Biggleswade, Bedfordshire (East Anglia)

Established in 1986 by Jane Whitbread at the Abbey of Warden, which was founded by Cistercian monks in 1135 as the "daughter abbey" to Rievaulx Abbey in Yorkshire.

✓ *Bacchus*

59 WORTHENBURY

Worthenbury, Wrexham, Wales (Southwest)

The most northerly cultivation of Chardonnay, Pinot Noir, and Sauvignon Blanc, the grapes have to be trucked 170 to 260 miles (272 to 420 kilometers) (depending on the destination winery) to be vinified.

✓ *Classic white blend* (Chardonnay/Sauvignon)

60 WYKEN

Stanton, Suffolk (East Anglia)

Established in 1988, Carla and Ken Carlisle have been winning awards for their Bacchus since the inaugural 1991 vintage.

✓ *Bacchus*

61 YEARLSTONE

Bickleigh, Devon (Southwest)

Originally established by the late, lamented Gillian Pearkes, who planted her first vineyard in 1963 at the age of 18, and whose pioneering book *Growing Grapes in Britain* (1969) was used as a blueprint by many of today's vineyards. Yearlstone vineyard in the Exe Valley was taken over by Roger White, a BBC presenter, when Pearkes died in 1993.

✓ *Classic white blend* (Number 5)
• *Avalon* (Pennard) • *Carter's Vineyards* (Colchester)

OTHER CERTIFIED ORGANIC PRODUCERS

Avalon (Pennard)
Carter's Vineyards (Colchester)

THE WINE STYLES OF THE BRITISH ISLES

AUXERROIS

This grape variety is capable of producing fresh, creamy-rich wine that adapts well to oak and can also be a useful blending component for classic bottle-fermented sparkling wine.

BACCHUS

Fat and grapey with rich, Muscatlike fruit when ripe, this grape provides high sugar levels even in cool climates, making it one of Great Britain's more successful German crosses. It does, however, develop an intensely herbaceous, elderflower style in cooler years and is downright catty when unripe.

🍷 *Camel Valley* • *New Wave* (Curious Grape)

CABERNET

Grown with Merlot in plastic tunnels at Beenleigh, this has promised deep, plummy fruit but has always been ruined during vinification.

CHARDONNAY

Mostly planted for sparkling wine, but some still wine versions are beginning to emerge. Winemakers need to look to Champagne for the best clones (95, 96, 75, and 121) and to New Zealand for advice on how to handle this variety in a maritime-influenced growing environment.

🍷 *Nyetimber* (Premier Cuvée)

EHRENFELSER

Penshurst specializes in this grape, which is the darling of British Columbia in Canada, but to my mind it performs much better in Kent, where in warm years it is soft and ripe with a Riesling-like peach-stone intensity that develops well.

GAMAY

The climate in Great Britain might not have the warmth to make good red wine from this grape, but if Thames Valley's effort in 1992 (Clocktower Gamay) was not an anomaly, it could well be one of the most useful grapes for bottle-fermented sparkling wine.

HUXELREBE

Easy-going fruit that sometimes has a herbaceous-grapefruit bite and can become elderflower-tasting or catty in poor years.

KERNER

More aromatic in Great Britain than in Germany, where it was developed, Kerner is unsuitable for oak and is often grown for its late budding (thus frost avoidance) and high sugar level.

MADELEINE ANGEVINE

This grape has a light, floral aroma and after-perfume, and can have apricot fruit, but often fights against an elderflower pungency.

🍷 *Halfpenny Green* • *Sbarpham* (Barrel Fermented Dry)

MÜLLER-THURGAU

Müller-Thurgau is a typically German style that can become elderflower-tasting or catty, although wines of real flavor are possible.

🍷 *Breaky Bottom*

ORTEGA

Fat and jammy when ripe, becoming herbaceous in cooler years, with an elderflower, white currant character when unripe.

🍷 *Biddenden* • *New Wave* (Curious Grape) • *Throwley*

PINOT BLANC

Can be delicious, easy-drinking, and reminiscent of what Alsace does with this variety.

🍷 *New Wave* (Curious Grape)

PINOT GRIS

England's Pinot Gris is not the spiciest in the world, but it does offer richer fruit per ounce of acidity than either Pinot Blanc or Chardonnay. It can be successfully oaked, although the best-known example, Denbies 1995 Special Release, was over-oaked and would have been better if blended with another variety.

PINOT NOIR

Some vineyard owners fear that English weather and this variety's susceptibility to rot will not mix, but those growers who have chosen the right clone (115, 114, 779, and 927) have been successful. In a good year, this grape is capable of making an elegant English red with a very attractive cherry and raspberry flavor. In less ripe years, color extraction can be a problem, and a school of thought reckons that such grapes should be used for sparkling wine, but Pinot Noir that cannot produce a light red will not make good fizz, and would be better used making off-dry, New World-style *blanc de noirs*.

🍷 *Hidden Springs* (Dark Fields) • *New Wave* (Curious Grape) • *Parva Farm* (Rosé)

REICHENSTEINER

Appreciated by growers for its resistance to rot and by winemakers for its high sugar levels, but its neutral character is seldom enjoyed by wine enthusiasts, although exceptions exist.

SCHÖNBURGER

Soft and peachy when ripe, good examples should have at least a light spiciness. There is nothing worse than a dry Schönburger from a cool year, when it smells like a tomcat's spray.

🍷 *New Wave* (Curious Grape) • *Valley Vineyards* (Hinton Grove)

SEYVAL BLANC

Relatively neutral and capable of oak-aging, but classic English style is crisp and unoaked, with a grassy-elderflower intensity that is very tangy and almost Sauvignonlike, although unlike

Sauvignon, good Seyval ages well in bottle. However, it can be catty with less ripeness.

🍷 *Breaky Bottom* • *Camel Blanc*

SIEGERREBE

A Madeleine Angevine/Gewürztraminer cross that can produce fat wines with tangy fruit.

🍷 *Three Choirs* (Estate Reserve)

TRIOMPHE

Triomphe is a red-wine hybrid with a hint of foxiness on the aftertaste, but this can be hidden in a clever blend.

OTHER STYLES

BOTRYTIS *or* LATE-HARVEST

There's no doubt that the UK can guarantee sufficiently damp mornings to encourage rot, but it requires a strong burn-off from mid-morning sun for two weeks to encourage noble rot, which is not that common. When it occurs, however, these wines can have a stunning piquance of mouthwatering fruit and acidity.

🍷 *Three Choirs* (Estate Reserve Noble Rot)

BOTTLE-FERMENTED SPARKLING WINE

The best wines use nonaromatic varieties, preferably classic Champagne grapes. Nyetimber has shown that these varieties can succeed.

🍷 *Nyetimber* • *Ridgeview*

CLASSIC RED BLENDS

Most English red wines are light and insubstantial, but New World influence has encouraged softer, more upfront, fruity styles.

🍷 *Sbarpham* (Beenleigh) • *Hidden Springs* (Dark Fields)

CLASSIC WHITE BLENDS

One way to ignore the funny-sounding grape names of hybrids and crosses is to blend them into a wine sold under a proprietary label.

🍷 *Hidden Springs* (Decadence) • *Sbarpham* (Dart Valley Reserve) • *Valley Vineyards* (Fumé)

OAKED WHITES

As in the US, some producers have adopted the term *fumé* to indicate oak-aging. Marginal climatic conditions produce wines of leaner structure than those of Europe or the New World, thus oak can easily overwhelm, and winemakers tend to restrain its use. Normally only nonaromatic varieties such as Seyval Blanc are oaked.

🍷 *New Wave Wines* (Curious Grape Ortega) • *Sbarpham* (Madeleine Angevine Barrel Fermented Dry) • *Valley Vineyards* (Fumé)

ROSÉ

Although the British climate makes it difficult to produce a true red wine year in and year out, the viticultural fringe should be ideal for making crisp, ultrafresh, off-dry rosés and a few vineyards are beginning to realize the potential.

🍷 *Denbies* (Rose Hill) • *Hidden Springs* (Sussex Sunset) • *Valley Vineyards* (Pinot Blush)

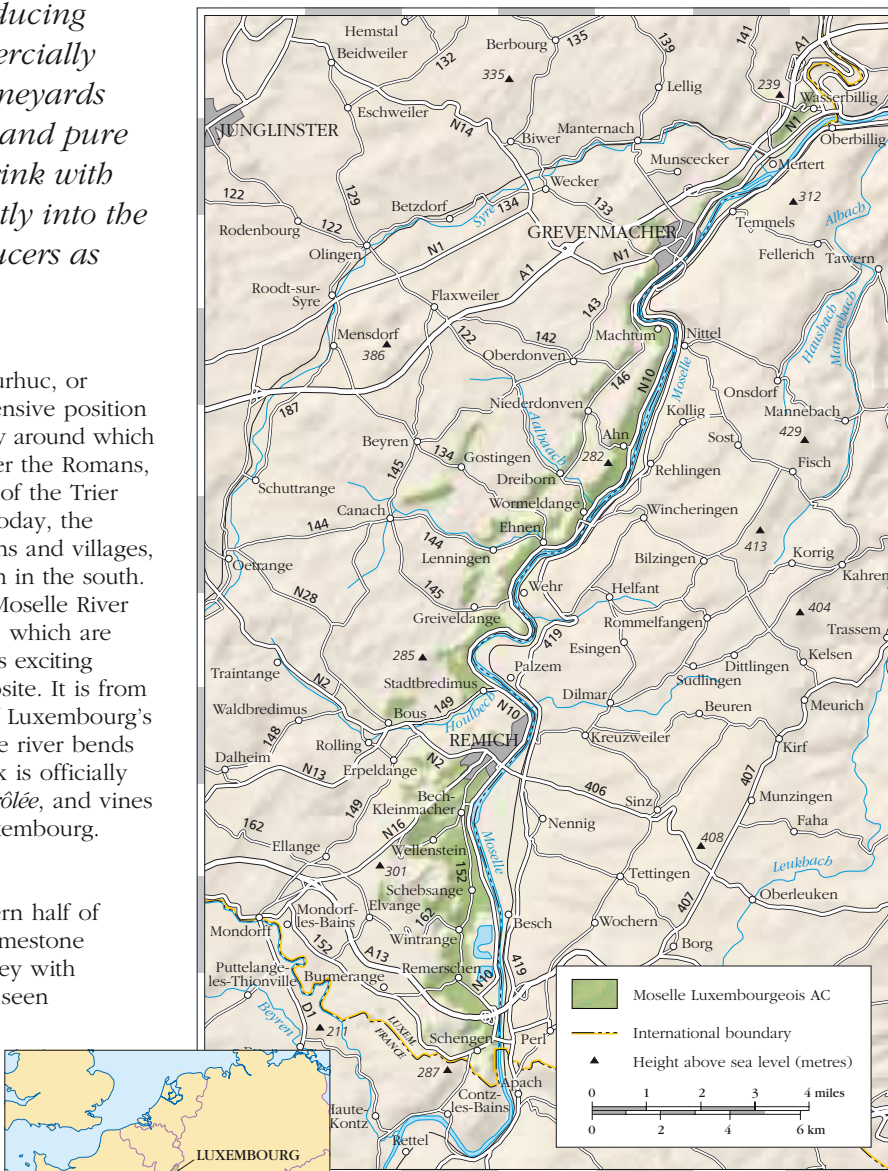

LUXEMBOURG

A small but varietally diverse wine-producing country on the northern cusp of commercially viable viticulture, Luxembourg's best vineyards consistently produce wonderfully fresh and pure dry white wines that are delicious to drink with food or without, and they fit conveniently into the niche vacated by so many Alsace producers as they make sweeter and sweeter wines.

LUXEMBOURG DERIVES ITS NAME from Lucilinburhuc, or “Little Fortress,” which is the Saxon name for a defensive position originally built by the Romans on a rocky promontory around which the city of Luxembourg was destined to grow. Under the Romans, this area held no geopolitical identity, but was part of the Trier region, where vines were grown 2,000 years ago. Today, the vineyards are scattered around and between 28 towns and villages, stretching from Wasserbillig in the north to Schengen in the south. This viticultural area is the mirror image across the Moselle River of the German *Bereiche* of Obermosel and Moseltor, which are located on the right bank, and generally produce less exciting wines than those from Luxembourg's vineyards opposite. It is from the German side of the river that the topography of Luxembourg's vineyards can best be observed, especially when the river bends north and south. This strip of the Moselle's left bank is officially designated *Appellation Moselle Luxembourgeoise Contrôlée*, and vines are not allowed to be planted anywhere else in Luxembourg.

TERROIR?

These vineyards are at their narrowest in the northern half of Luxembourg's Moselle valley, where the dolomite limestone subsoil has resisted erosion, leaving a narrower valley with steeper slopes. This pinkish-brown bedrock can be seen overhanging the old Caves St. Martin—now owned by the firm of Gales—which were carved out of the dolomite in 1919–21. Going south from Remich, much softer marly and clayey soils dominate; consequently, the area has been prone to erosion, which has widened the valley, leaving a softer landscape of gently rolling hills. It is said in Luxembourg itself that the wines in the south are soft, mellow, and best drunk young, whereas those in the north are crisper and finer, requiring

LUXEMBOURG

A country united by other tongues: French is used by its government and courts, with most newspapers published in German, leaving the national dialect with no official role.

THE LIEUX-DITS—LUXEMBOURG'S BEST-KEPT SECRET

The *lieux-dits* represent Luxembourg's richest source of fine, expressive wines, and a joint project between the Institut Viti-Vinicole (IVV) and the German Weather Institute could be this country's key to international success. This project is identifying the best areas in each *lieu-dit* according to meteorological criteria (rain, sunshine, heat, etc.), which some believe could be the basis of a future *grand cru*-type classification. Weather is an infinitely better way of discerning which parts of a vineyard (rather than vineyards *per se*) should be classified than the French system. The French claim to isolate an individual *terroir* by its geological homogeneity compared with the surrounding area within a historically established

named site. As the relatively recent classification of Alsace's *grands crus* illustrates, not only does the geological homogeneity fly out of the window in the process, but so does the extent of the historically established named site. As growers on the periphery of a historically established named site realize the premium that can be demanded by a wine with *grand cru* on the label, they ask, “If his plot is going to be classified *grand cru*, why not mine?” And, of course, once they are allowed, their own neighbors—who were previously separated by unclassified land—want in. Thus it was that *grands crus* like Brand in Turckheim grew from less than 7 acres to almost 143! Such corrupt behavior would kill Luxembourg's

fledgling reputation. This is the one area where the IVV needs a firm hand. Its hardest task will be to establish in law the true historical boundary of every *lieu-dit*, after which the meteorological data cannot be argued with—growers cannot claim to have more or less rain, sunshine, or heat than the records show. So it should be possible, not merely to use this data to classify *grands crus*, but also to subdivide each *lieu-dit* so that, for example, parts of the *lieu-dit* of Greiveldange Fels are officially designated Greiveldange Fels *grand cru* and Greiveldange Fels *premier cru*, while the rest remains Greiveldange Fels *lieu-dit* plain and simple, albeit a single-vineyard wine in its own right.

RECENT LUXEMBOURG VINTAGES

2003 The hottest year on record produced very ripe grapes with unnecessarily low acidity due to high yields. Luxembourg was allowed to acidify for the first time ever, although a few top growers with relatively low yields were rewarded by vines that naturally yielded grapes that did not require acidification. If any year can produce decent Gewürztraminer (which does not need acidifying) and Pinot Noir, this is it. Probably not the best year for Luxembourg's typically refreshing styles of Pinot Blanc, Pinot Gris, and Auxerrois, but it should produce exceptional *vendanges tardives*, *vins de pailles*, and *vins de glaces*.

2002 A very good vintage indeed for all styles and varieties other than Gewürztraminer and Pinot Noir.

2001 An elegant Riesling vintage. Very good Pinot Blanc, too, and *vin de glace*.

2000 A dire vintage due to heavy rains and subsequent rot, although there were exceptions, such as Schumacher-Knepper Riesling Grand Premier Cru.

1999 Above-average, easy-drinking vintage, plus some interesting *vendanges tardives*.

more time in bottle, but I have found little evidence of this in the wines. If yields averaged 176 cases per acre rather than the current greedy 528, provenance might become a factor in determining two contrasting styles of wine, but the differences that exist at the moment are more likely to be due to the stylistic preference of individual growers.

LUXEMBOURG: THE NEW ALSACE?

Although this country has a tiny, emerging production of *vendange tardive*, *vin de glace*, and *vin de paille*, it will take a decade or more for any producer to establish a lasting reputation like that of Hugel's Riesling Vendange Tardive. Luxembourg certainly has nothing to compare with great dry wines like those of Trimbach's Clos Ste-Hûne, or any producers with reputations that come near those of Zind-Humbrecht, Weinbach, or Deiss. And there are wines such as Gewürztraminer and Pinot Noir at which Luxembourg will never be successful in anything other than heat-wave years like 2003. But what Luxembourg does have is what Alsace no longer offers, and that is a large range of uncomplicated, refreshing, easy-drinking, fine-quality varietal wines that consumers know to be dry without asking. This country's wines were boring in the 1980s, but underwent a quiet revolution in the 1990s, and have been attracting disenfranchised Alsace consumers since the turn of the century. The consistency in quality is already remarkable.

LUXEMBOURG'S GRAPE VARIETIES

Based on 2002 statistics

Growers not to exceed a maximum yield of 616 cases/acre for Elbling and Rivaner, 528 cases/acre for all the other varieties, but since average yields for four varieties exceed these parameters, the law is obviously being flouted on a wide scale.

VARIETY	ACRES	% VINES	CASE/ACRE	CASES	% OF WINES
Rivaner	1,016.70	31.4%	621.30	631,676	37.32%
Auxerrois	423.14	13.1%	504.26	213,373	12.61%
Riesling	417.63	12.9%	431.32	180,132	10.64%
Pinot Gris	411.70	12.7%	419.11	172,548	10.19%
Elbling	353.28	10.9%	648.69	229,169	13.54%
Pinot Blanc	338.29	10.5%	511.92	173,177	10.23%
Pinot Noir	201.72	6.2%	356.19	71,851	4.25%
Gewürztraminer	35.44	1.1%	287.07	10,174	0.60%
Chardonnay	29.07	0.9%	348.84	10,141	0.60%
Others (Gamay, Muscat)	6.47	0.2%	54.38	352	0.02%
TOTAL	3,233.44	100.0%	523.47*	1,692,593	100.00%

* Average yield

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

A 26-mile (42-kilometer) strip of land along the country's southeastern flank, where 3,200 acres (1,300 hectares) of vines grow on the left bank of the Moselle River, overlooking the southernmost section of Germany's Mosel region.

CLIMATE

A modified continental climate with mild winters and cool summers, the rainiest months coinciding with ripening and harvest. Frost can be dangerous, reducing yields by 80 percent on rare occasions, but rain and cold temperatures at flowering more commonly reduce yields.

ASPECT

Going south from Remich, the valley widens, facilitating the growth of vines. Going north from Remich, it narrows and the slopes become steeper. More than 1,000 acres (400 hectares) of vines are grown on slopes of above 30 percent incline.

SOIL

Marly and clayey in the south, with pinkish-brown dolomite limestone in the north.

VITICULTURE AND VINIFICATION

Luxembourg's vineyards have undergone a restructuring, replacing traditional terracing with wider-spaced, vertically sloping rows. Called *remembrement*, this started in Wormeldange in 1970 and is nearly complete. Most vines are trained using a single Guyot system, though some are trained using the Trierer Rebenrad. Average yields are much too high (3,170 gallons/acre), but individual producers prune for smaller yields. There is a closed-shop system of 60 wine producers, including 6 commercial shippers and 6 cooperatives. Some *barriques* are used, and a number of traditional producers have large, old oak *fûdres*, but stainless-steel predominates, and the new *crémant* facility of Caves Gales at Ellange-Gare is state of the art.

GRAPE VARIETIES

Primary varieties: Auxerrois, Elbling, Pinot Blanc, Pinot Gris, Riesling, Rivaner
Secondary varieties: Chardonnay, Gamay, Gewürztraminer, Muscat, Pinot Noir

APPELLATION MOSELLE LUXEMBOURGOISE CONTRÔLÉE

There is just one appellation, and all *Appellation Contrôlée* wines must carry a state-controlled Marque Nationale mini-label. To get the Marque Nationale, wines are submitted to the Institut Vitivinicole (IVV) for chemical analysis and a blind-tasting test. The basic Marque Nationale is open to all varieties and styles, and is awarded to any wine scoring 12–13.9 points (out of 20) from the IVV tasting panel. For most grape varieties, a wine scoring 16–17.9 points is classified as a *premier cru*, while a wine scoring 18–20 points is deemed a *grand premier cru*. Any wine achieving fewer than 12 points is declassified into *vin de table*. This is a significant selection process, with as many as 32 percent of the wines submitted declassified.

Classifying a wine as a *cru* (growth) of any sort on the basis of tasting, regardless of whether the wine comes from a single site, is irrational

and contrary to the spirit of the European Union's wine regime. There are only two logical options: either all wines submitted must be the product of a *lieu-dit* (named site) or the designation should be altered to something like *premier vin* and *grand premier vin*. The latter would make it possible to reserve the terms *premier cru* and *grand cru* for any future classifications for the existing *lieux-dits* (see box).

If a Rivaner scores 14–15.9 points, it is designated as a *vin classé*, the highest classification any wine from this grape can achieve. The Elbling, Pinot Noir, and Crémant de Luxembourg may aspire to no more than the basic appellation. This is more nonsense, although it should be noted that, as with the *premier cru* and *grand premier cru* misnomers, these practices date from times when even French wine regions like Alsace were

blending *grands crus* and unfairly discriminating against wines because of the varietal content, rather than intrinsic quality. Things moved on in the world of wine, and the IVV's tasting panel needs to recalibrate its palate to modern standards. Many *premier cru* wines are no more than basic in quality, and even some of *grand premier cru* are little better. They might have stood out against other Luxembourg wines in the 1980s, but such standards do not apply today. I have tasted some groundbreaking wines that have failed to pass even the basic appellation, being rejected on stylistic grounds. The IVV is repeating the mistakes made by French and German official tasting panels, which denied the appellation to many of the most forward-thinking winemakers, resulting in an annihilation of their exports by New World rivals. Luxembourg cannot afford to follow suit.

THE WINE STYLES OF LUXEMBOURG

ÄISWÄIN

See Vin de Glace

AUXERROIS

Minimum natural ripeness (2003):
63° Oechsle (8%ABV)

Maximum yield:528 cases/acre.

One of Luxembourg's most successful grape varieties, which is amazing considering that its yield is second only to the rampant Rivaner. Yet Auxerrois ranks with the best you can find in the Haut-Rhin. Some producers leave a little residual sugar in these wines, but essentially they are light, dry, and delicious to drink.

1–2 years

☞ *Aly Dubr* (Wormeldange Koepchen)
• *Max-Labr et Fils* (Wormeldange Heiligenhäuschen) • *Pundel-Hoffeld* (Machtum Alwengert) • *R Kobll-Leuck* (Ehnen Ehnerberg) • *Vinsmoselle Caves de Stadtbredimus* (Stadtbredimus Primerberg)

CHARDONNAY

Minimum natural ripeness (2003):
63° Oechsle (8%ABV)

Maximum yield:528 cases/acre.

The clones planted are 95 and 96, which are good for both still and sparkling wines, although 96 fares better at the latter, and this far north, growers should really be trying 75 and 121. Everyone who had this variety told me that their Chardonnay had been planted for sparkling wine, yet they all just happened to be making a still wine from it, none of which was any better than a Belgian Chardonnay (Clermont, Genoels-Elderen, and others). A certain warmth is required to make premium-quality Chardonnay, and Luxembourg just does not have this on any regular basis. If decent-quality, non-sparkling Chardonnay is extremely rare in Champagne, what chance does Luxembourg have?

1–2 years

☞ *Gales* (Coteaux de Stadtbredimus)

ELBLING

Minimum natural ripeness (2003):
57° Oechsle (7%ABV)

Maximum yield:616 cases/acre.

Traditionally grown as low-quality, low-tax fodder for Germany's *Sekt* industry, Elbling typically provides a neutral-flavored, high-acid wine. I once thought that it might be interesting to look out for the odd wine made from low-yield Elbling, but gave up when it became patently clear that no such thing exists.

GEWÜRZTRAMINER

Minimum natural ripeness (2003):
63° Oechsle (8%ABV)

Maximum yield:528 cases/acre.

This grape is not as abundant as it is in Alsace, and it lacks the gravitas and broader notes found in the latter region's truly classic examples. The significantly lower level of ripeness reduces the availability of spice-laden terpenes, while its lower alcohol content (3 to 4 percent lower) gives an entirely different, much lighter, less viscous, mouthfeel. If anyone in Luxembourg is really serious about this grape, it must be grown on the very best, south-facing sites that have been traditionally reserved for Riesling, with yields halved, and harvested as late as possible.

1–2 years

☞ *Charles Decker* (Remerschen Kreitzberg)
• *Domaine Matbis Bastian* (Domaine et Tradition) • *Schmit-Fobl* (Ahn Goellebour)

PINOT BLANC

Minimum natural ripeness (2003):
63° Oechsle (8%ABV)

Maximum yield:528 cases/acre.

The crystal-clear, refreshing, light, dry and fruity, entry-level wine for any half-serious Luxembourg wine drinker. The sooner that plantings of Rivaner and Elbling are reduced to a statistical insignificance, the sooner that Auxerrois will be the entry-level wine for all consumers, with Pinot Blanc the flagship, and the better Luxembourg's wine reputation will be.

1–2 years

☞ *Cep d'Or* (Stadtbredimus Goldberg)
• *Domaine Gales* (Domaine et Tradition)
• *Domaine Gales* (Bech-Macher Rëtschelt)
• *Häremillen* (Wormeldange Weinbour)
• *Mathes* (Wormeldange Mohrberg) • *Matbis Bastian* (Coteau de Remich) • *Pundel-Hoffeld* (Machtum Gëllebour) • *R Kobll-Leuck* (Ehnen Rousemen) • *Schram & Fils* (Bech-Kleinmacher Falkenberg) • *Schumacher-Lebal* (Wormeldange Heiligenhäuschen)

PINOT GRIS

Minimum natural ripeness (2003):
63° Oechsle (8%ABV)

Maximum yield:528 cases/acre.

Luxembourg's Pinot Gris has none of the spice found in Alsace, and is simply a slightly richer, equally delicious version of Pinot Blanc—everything Italy's Pinot Grigio should be, yet seldom is. It is probably impossible for Pinot Gris to ripen sufficiently in Luxembourg's climate to create enough terpenes in the grape's skin for these to develop into spicy bottle-aromas.

PINOT NOIR

Minimum natural ripeness (2003):
63° Oechsle (8%ABV)

Maximum yield:528 cases/acre.

The clones planted are 115 and 114, which are good, but also 375, which is not (overcropper, low quality, poor varietal character), and this far north, growers should be trying 779 and 927. I tasted nothing interesting from 2002, which was a riper than normal vintage. The wines have a certain sour-cherry varietal character, but lack fruit, structure, finesse, and complexity. If nothing special is produced from the 2003 vintage, then they should give up on Pinot Noir as a red varietal wine (although it would make a useful sparkling wine component).

RIESLING

Minimum natural ripeness (2003):
63° Oechsle (8%ABV)

Maximum yield:528 cases/acre.

This is Luxembourg's finest potential wine, but most Riesling growers are not realizing this potential. In such a northern, Atlantic-influenced area, it is madness to average almost 440 cases per acre. It is widely understood that Riesling can be successfully cultivated only on fully south-facing sites in Luxembourg, yet the growers throw away the potential of the country's greatest sites by squeezing every last drop from the vines. They should be aiming for 12 to 13 percent alcohol without chaptalization, but they are averaging barely 9 percent. Luxembourg Riesling is dry, and if some are surprisingly good, it should not be taken as vindication of such ridiculously high yields. If all Riesling vines grown on the best slopes of Luxembourg's finest *lieux-dits* were cropped at a maximum of 154 cases per acre, this country would have an international reputation for some very special wines. Riesling is tailor-made for Luxembourg: it adores cold October nights and is the only grape that can continue ripening at 54°F (Pinot and Gewürztraminer stop at 64°F). A few specialists are producing excellent wines at reduced yields, but even they need to crop lower and, unlike in Alsace, there is no danger inducing such overripe grapes that the wines will become sweet.

RIVANER

Minimum natural ripeness (2003):
57° Oechsle (7%ABV)

Maximum yield:616 cases/acre.

Also known as Müller-Thurgau. Although this ubiquitous grape accounts for almost one-third of all the vines growing in Luxembourg today, it

is definitely on the decline. Twenty years ago, every other bottle of wine produced in the Grand Duchy was made from Rivaner. This grape is grown at very high yields and turned into a sweetish, Liebfraumilch-type wine, making it Luxembourg's least interesting variety, but one that enjoys high-volume sales. Rivaner prices are low, and the popularity of this style of wine extends beyond the domestic market to Belgium, where it accounts for more than half of global exports of Vins Moselle Luxembourgoise. As long as the cultivated area of this variety continues to decline, there seems little point in getting high-minded about its yield. It will eventually bottom-out, and lowering yield will hardly produce a noticeably finer quality of wine.

☞ Upon purchase

☞ *Aly Duhr* (Sélection Ahn Hohfels)

OTHER GRAPE VARIETIES

Minimum natural ripeness (2003):
63° Oechsle (8%ABV)

Maximum yield: 528 cases/acre.

Gamay did not impress me, although the three Muscats demonstrated that it might be worth persevering with this variety, especially Charles Decker's Muscat Ottonel (deliciously creamy 2001, and evocatively strawberry 1997).

☞ 1–4 years

☞ *Charles Decker* (Muscat Ottonel, Remerschen Kreitzberg)

OTHER STYLES

CRÉMANT DE LUXEMBOURG

Maximum yield: 528 cases/acre.

Champagne—real Champagne—was in fact produced in Luxembourg by Mercier from 1886 up to almost the beginning of World War II.

During this time, Mercier was known as “Champagne Mercier, Epernay-Luxembourg,” and both establishments were famous for being completely powered by 19th-century electricity. Today, of course, Champagne is a prohibited term, and the Crémant de Luxembourg appellation was created as part of the deal with Champagne not to use the term *méthode champenoise*. Curiously, it gets lumped in with French Crémant appellations (Alsace, Bordeaux, Bourgogne, Die, Jura, Limoux, Loire, and Luxembourg) at the annual Concours des Crémants. Most Crémant de Luxembourg encountered outside the country is boring, but the general standard is much higher, primarily because it is much fresher, and these sparkling wines are a delight to drink young. The style is fresh, soft, and elegant, with good acids providing a crisp, fruity finish. The only exception is Domaine Alice Hartmann Brut, which is crammed full of flavor and character, perhaps at the expense of finesse, and could be criticized for being too big and too oaky, but has to be admired, and is currently Luxembourg's greatest sparkling wine. However, it's a style that I would not like to see more than two or three other producers emulate, as Luxembourg is more naturally attuned to the Gales style of freshness and finesse. Whereas Crémant de Luxembourg must be made exclusively from grapes grown within the appellation Moselle Luxembourgoise, readers should be aware that any Luxembourg wines labelled Vin Mousseux, Vin Pétillant, Perlwein, or sold as “boissons effervescents à base de vin” may be blended from imported grapes, juice, or wine.

☞ 1–2 years

☞ *Domaine Alice Hartmann* (Brut) • *Gales* (Heritage) • *Gales* (Jubilée) • *Gales* (Cuvée Premier Rosé) • *Vinsmoselle* (Poll-Fabaire Cuvée Art Collection)

VENDANGE TARDIVE

Only Auxerrois, Pinot Blanc, Pinot Gris, Riesling, and Gewürztraminer are authorized. The minimum ripeness level of 243 grams per liter (220 for Riesling) of natural sugar content, is as tough as the *vendange tardive* law introduced in Alsace in 1984, and raising ripeness levels is more difficult in Luxembourg's colder, more northerly climate. Alsace raised the bar in 2001 (to 235–257 grams per liter), and Luxembourg should do likewise, confident in the knowledge that its vineyards are nothing like the suntraps in Alsace, thus the Grand Duchy will never be in danger of losing its primary crop of dry wine grapes. Vendange Tardive is a new, emerging category of wine, and too many of the wines are noticeably high VA, with a bitter finish. This will change, as producers get used to the style. Some, like Domaine Thill Frères, already are.

☞ 1–8 years

☞ *Domaine Thill* (Château de Shengen Riesling)

VIN DE GLACE OR ÄISWÄIN

Only Pinot Blanc, Pinot Gris, and Riesling are authorized. The minimum ripeness level is 292 grams per liter of natural sugar content. Luxembourg would seem to be more climatically adept at *vin de glace* than *vendange tardive*, but it is a style that generally attracts a high VA level and the Grand Duchy is no exception.

☞ 1–8 years

☞ *Charles Decker* • *Domaine Gales*

VIN DE PAILLE

Only Auxerrois, Pinot Blanc, Pinot Gris, and Gewürztraminer are authorized. The minimum ripeness level is 317 grams per liter of natural sugar. Only one outstanding example so far.

☞ 1–8 years

☞ *Caves Sunnen-Hoffmann* (Auxerrois)

THE APPELLATIONS OF LUXEMBOURG

Due to the varying usage of all three languages (Luxembourgish, German, French, and sometimes Dutch/Low German), spellings of some villages and *lieux-dits* can vary. The most common variations are shown below. To list all the villages and all the *lieux-dits* in use today in all languages, not to mention the odd variant in each language, would confuse more than it would inform. It is obvious that Luxembourg must clean up its labelling act, obliging everyone to use the same nomenclature, and most observers would agree that Luxembourgish should be the dialect of choice.

AHN

Lieux-dits Palmberg, Vogelsang, Elterberg, Hohfels/Houfels, Göllebour, Pietert, Nussbaum

Warmer vineyards enable Gewürztraminer to succeed in exceptionally hot years. It is said that Luxembourg's first Traminer and Muscat vines were grown here at the beginning of the 20th century. Also good for Pinot Gris, Auxerrois, Riesling, and occasionally Crémant de Luxembourg. Domaine Viticole Mme Aly Duhr & Fils is the most famous producer here, but I have been at least as pleased by Schmit-Fohl,

followed by Steinmetz-Duhr. Other Ahn wines that have impressed me on occasions have been Clos du Rochers (Bernard-Massard) and Jean Ley-Schartz.

BECH-KLEINMACHER

Lieux-dits Enschnberg, Jongeberg, Falkenberg, Naumberg, Fuusslach, Gaalgeberg, Brauneberg, Gottesgóf, Kurschels, Rëtschelt

Two villages, Bech and Macher, merged 100 years or so ago, when they built a communal church. Just two producers resident in the town (Krier-Bisenius and Schram et Fils), but growers sell most grapes to the cooperative at Wellenstein and Caves Gales for their sparkling wine (they also grow their own grapes here). Naumberg has been the most successful *lieu-dit* in my tasting, with fine Pinot Gris from Krier Welbes and the cooperative at Wellenstein. Schram makes a very good Pinot Blanc on both Falkenberg and Kurschells.

BOUS

Lieux-dits Johannisberg, Fels

Just one local producer (Caves Beissel) and nothing outstanding so far.

EHNEN

Lieux-dits Kelterberg, Meschtschberg, Ebnerberg/Einerberg, Rousemen, Bromelt, Wousselt

Ehnen is one of the prettiest villages on the Luxembourg wine route. I have enjoyed wines from Jean Linden-Heinisch and M Köhll-Reuland. Pinot Gris and Auxerrois fare well, with Mesteschberg and Kelterberg among the most successful *lieux-dits*.

ELLINGEN/ELLANGE

Lieux-dits None

Two very good producers are located here, Caves Gales and Krier Welbes, but no *monocru* wines produced. Growers either deliver their grapes to the cooperative or sell them to one of the six commercial wineries.

ELVANGE/ELVINGEN

Lieux-dits None

No producers are located here. Although there is one grower who owns three plots within this village that are delimited for the production of

Appellation Moselle Luxembourgeoise Contrôlée, and have been exploited in the recent past, there are no vines growing here at the moment.

ERPELDINGEN

Lieux-dits None

No producers are located here. Growers either deliver to the cooperative or sell to one of the six commercial wineries.

GOSTINGEN

Lieux-dits Bocksberg, Häreberg

Just one local producer (Caves Fernand Rhein) and nothing outstanding so far.

GREIVELDANGE/ GREIWELDIGEN

Lieux-dits Hutte/Hëtt, Dieffert, Herrenberg/Häreberg, Hätermillen

The village is one mile from the Moselle, but the vineyards extend down to the river's banks. Of the two local producers, Beck-Franck and Stronck-Pinnel, the latter makes one of Greiveldange's best Rieslings from the Hëtt *lieu-dit*, while the former makes better wines from other villages. However, most of the growers belong to the village cooperative, and Vinsmoselle makes most of the best wines here, especially Dieffert Pinot Gris and Herrenberg Auxerrois.

GREVENMACHER

Lieux-dits Fels, Rosenberg/Rouseberg, Leitschberg/Leiteschberg, Pietert, Groaerd/Groärd

The best-known producer here is Bernard Massard, one of Luxembourg's truly international exporters. The Fels *lieu-dit* is for Riesling, Leitschberg, and Pietert for Pinot Blanc. Steinmetz-Jungers, Vinsmoselle's Caves de Grevenmacher, and Fédération Viticole make the finest local wines.

LENNINGEN

Lieux-dits Häreberg

Just one local producer (Caves Fernand Rhein) and nothing outstanding so far.

MACHTUM

Lieux-dits Alwengert, Hobenfels, Ongkâf, Goellebour/Göllebour, Widdem

Matchum is supposedly known for its Ongkâf Riesling, but it produces better Pinot Gris, and to be truthful, Göllebour vies with Ongkâf as the top *lieu-dit* in the village. Matchum also makes good Pinot Blanc. The Riesling is good, but no better than Auxerrois and, in hotter years, Gewürztraminer. The two local producers, Jean Schlink-Hoffeld and Pundel-Hoffeld, are both very good, with Vinsmoselle and Cep d'Or the best producers from outside the village.

MERTERT

Lieux-dits Bocksberg, Herrenberg/Häreberg

The best *lieu-dit* in this ugly, industrial port is Herrenberg, which thankfully is closer to Wasserbillig. Pinot Gris is Herrenberg's most successful variety, with Häremillen and the local Vinsmoselle Caves de Grevenmacher the top-performing producers.

MONDORF

Lieux-dits None

No producers are located here. Growers either deliver to the cooperative or sell to one of the six commercial wineries.

NIEDERDONVEN

Lieux-dits Fels, Gölleberg, Diedenacker

No producers are located here. Growers either deliver to the cooperative or sell to one of the six commercial wineries.

OBER-WORMELDINGEN

Lieux-dits None

No producers are located here. Growers either deliver to the cooperative or sell to one of the six commercial wineries.

OBERDONVEN

Lieux-dits None

No producers are located here. Growers either deliver to the cooperative or sell to one of the six commercial wineries.

REMERSCHEN

Lieux-dits Jongeberg, Kräitchen, Kreitzberg, Rodernberg/Roudeberg, Reidt

Charles Decker is the award-winning producer here; many of his medals are for wines that were denied the most lowly appellation, having been rejected by the IVV. In the best years, Decker can produce good Muscat Ottonel and Gewürztraminer on the Kreitzberg *lieu-dit*, while Krier Frères has made good Riesling on Jongeberg.

REMICH

Lieux-dits Fels, Goldberg, Gaalberg, Héluéngert, Hôpertsbour, Primerberg, Scheuerberg

Primerberg is the most important *lieu-dit* here, and Riesling its best variety, with Krier Frères and Mathis Bastian the top producers, but this vineyard also makes fine Pinot Blanc and Auxerrois (St Remy Desom), and Pinot Gris (Gales). Overall Remich is most successful for Pinot Blanc, with Mathis Bastian (Coteau de Remich) and Krier Frères (Hôpertsbour) both vying with St. Remy Desom.

ROLLING

Lieux-dits None

No producers are located here. Growers either deliver to the cooperative or sell to one of the six commercial wineries.

ROSPORT

Lieux-dits None

Everyone in the Luxembourg wine trade will tell you that Wasserbillig is the very northern limit of *Appellation Moselle Luxembourgeois Controlée*, yet I found these vines seven miles further north, and they are officially within the delimited region, even though they are not on the Moselle or even in its hinterland, but located on a tributary called the Sauer.

SCHENGEN

Lieux-dits Fels, Markusberg

Although Fels Riesling is supposed to be best known, this most southerly of Luxembourg's wine villages is definitely Pinot country (Blanc and Gris), with Vinsmoselle dominating, though A Gloden & Fils also makes some fine wines.

SCHWEBSINGEN/ SCHWEBSANGE

Lieux-dits Letscheberg, Steilberg, Heberg, Kolteschberg

Supposedly good for Gewürztraminer, but I have yet to confirm that. The best *lieu-dit* is

Kolteschberg, where Vinsmoselle Caves de Wellenstein and Laurent & Benoît Kox produce some good Pinot Gris and Riesling.

STADTBREDIMUS

Lieux-dits Primerberg, Goldberg, Dieffert, Fels

Only Wormeldingen produces more top-quality Luxembourg wines than Stadtbredimus. Most of the best come from Vinsmoselle Caves de Stadtbredimus and Cep d'Or, but some also from Gales and Laurent & Benoît Kox. The largest *lieu-dit* is the Primerberg, but Dieffert and Fels are the best, producing some of the finest Rieslings in the country. Pinot Gris is the second best variety in Stadtbredimus, and Primerberg, Goldberg, and Fels the most successful *lieu-dit* for this grape.

WASSERBILLIG

Lieux-dits Bocksberg, Häreberg

Supposedly the most northerly of Luxembourg's main drag of vineyards, but not strictly so (see Rosport).

WELLENSTEIN

Lieux-dits Foulschette, Kurschels, Veilchenberg, Roetcbelt, Brauneberg, Knipp, St Annaberg

Kurschels stands out as the best *lieu-dit*, and the best *lieu-dit* for Riesling. Foulschette is the second-best *lieu-dit*, and the best *lieu-dit* for Pinot Gris. Krier Welbes and Gales are the top producers in this region, followed closely by Mathis Bastian and Vinsmoselle (Série Limitée Art).

WINTRANGE/WINTRINGEN

Lieux-dits Hommelsberg, Felsberg

Felsberg is the best-known *lieu-dit*, with its statue of St. Donatus crowning the hill, where Pinot Gris and Riesling are supposed to be among the best in Luxembourg, although I have tasted only one wine that matches up to that sort of reputation (and that is Vinsmoselle Caves de Remerschen Riesling Grand Premier Cru Wintrange Felsberg).

WORMELDANGE/ WORMELDINGEN

Lieux-dits Elterberg, Heiligenbäuschen, Koepchen/Köppchen, Moorberg, Nidert, Nussbaum, Péteschwengert, Pietert, Weinbour, Wousselt

Wormeldingen is the superstar of Luxembourg's wine villages, Koepchen its greatest *lieu-dit*, Domaine Alice Hartmann its best producer, and Riesling its king of grapes. Domaine Alice Hartmann is by no means the only top producer making wines from this village. I have also been impressed by Wormeldingen wines from Aly Duhr, Fédération Viticole, Häremillen, Jean Schlink-Hoffeld, Mathes, Pundel-Hoffeld, Schumacher-Lethal, St. Remy Desom, Steinmetz-Jungers, and Vinsmoselle Caves de Wormeldange. I have tasted some good Pinot Gris, Pinot Blanc, and Auxerrois from these producers, but with one exception (Aly Duhr), they have all been from other *lieux-dits*. If I have learned anything about the wines of Luxembourg, it is that the best parts of Koepchen produce the country's finest Riesling, and it would be a great shame to plant this *terroir* with any other variety.

OTHER WINEMAKING COUNTRIES OF NORTHWESTERN EUROPE

In the northern hemisphere, the farther north a vine grows, the fewer hours of daylight it receives and the greater the angle at which the sunlight is spread out, thus the longer it takes to ripen grapes. Factor in the wet, windy, and uncertain climes of the Atlantic, and it may seem surprising that these countries do in fact manage to produce wine.

THERE ARE ONLY TWO WAYS of looking at these frontier wine countries—outside looking in or inside looking out.

Those with a purely quality-oriented perspective and who are fascinated by expressive wines would be highly sceptical of the value of planting vineyards in the south of England, let alone in Belgium and even farther north. They would argue that growing conditions are less favorable in Belgium than in the Pas de Calais, and more tricky in Ireland than Finistère—and they would be right. They would point out that there are no vines growing in the Pas de Calais or in Finistère, and that the French would think anyone who suggested planting them there out of their mind—and they would be right.

However, if you are on the inside looking out, you probably think, why not? Such is the attitude that makes this page in the encyclopedia possible. Irrational, unnecessary, and half-crazy, almost certainly, but nevertheless possible.

BELGIUM

Appellations: *Côtes de Sambres et Meuse VQPRD, Hagelandse or Hageland VQPRD, Haspengouwse or Hespaye VQPRD, Vin de Pays des Flandres, Vin de Pays du Walloon*

In Belgium, winegrowing dates back to Roman times. Today, over 250 acres (100 hectares) of vineyards are cultivated by more than

A VINEYARD IN LIECHTENSTEIN

The Prince of Liechtenstein's vineyards in Vaduz, the capital of this tiny European principality.

100 growers. Most of these growers are part-time or hobbyists, although there are around 20 who could be described as commercial to one extent or another.

Chardonnay has proved most successful, even if the best wines are too oaky and decidedly international in style. Müller-Thurgau, Auxerrois, and Pinots (Blanc, Gris, and Noir) are also grown, but some observers believe that the hardier crosses such as Optima, Kerner, and Würzer actually produce superior wines in Belgium. The Hagling-Bio estate in Hageland is organic.

✓ *Genoels-Elderen* (Chardonnay Goud), *Peter Colemont* (Chardonnay Clos d Opleeuw)

DENMARK

Amazingly, there are 62 acres (25 hectares) of vines in this country. Even more amazingly, the European Union has limited growth to no more than 245 acres (99 hectares). There are nine commercial producers, the oldest of which is Domain Aalgaard, which was established in 1975. Chateau Lille Gadegard produced its first vintage in 2003 on Bornholm, a Danish island in Eastsee, to the north of Poland.

IRELAND

Better suited to stout and whisky, Ireland had absolutely no winemaking history when, in 1972, Michael O'Callaghan planted Müller-Thurgau vines at Mallow in County Cork. O'Callaghan has just over 2.5 acres (1 hectare) of exclusively Reichensteiner vines nowadays, and his wine is sold exclusively in the restaurant of his country house hotel, Longueville House. Just 3 miles (5 kilometers) away from Mallow is another Irish vineyard, called Blackwater Valley, where owner Dr. Christopher has 12 acres (5 hectares), growing Reichensteiner, Madeleine Angevine, and Seyval Blanc. Another venture, West Waterford Vineyards at Cappoquin, was not in production at the time of writing.

LIECHTENSTEIN

Located between Germany and Switzerland, Liechtenstein is a tiny principality of 62 square miles (160 square kilometers), with just 37 acres (15 hectares) of planted vines. They are primarily Pinot Noir and Chardonnay varieties, and are mostly owned by the Crown Prince through his private winery, the Hofkellerei Fürsten von Liechtenstein.

NETHERLANDS

Although the Netherlands is north of Belgium, and therefore would seem an even more unlikely location for growing vines, almost all of its vines grow east of Maastricht, so they are actually located further south than the Belgian vineyards of Brabant. There are over 100 growers farming 124 acres (50 hectares) of vines, primarily consisting of Riesling, Müller-Thurgau, Auxerrois, and the inevitable German crosses.

✓ *Apostelboeve* (Riesling)

SWEDEN

Two vineyards have been established recently in the Skåne region of southern Sweden: the Kullabygden Vingård near Helsingborg in 2000 and the Nangijala Vingård near Malmö in 2001. No pesticides or fungicides are used in these vineyards. The first crop of grapes was in 2003, when 85 gallons of red wine, and 21 gallons of mixed dry white, sweet white, and sparkling white wine were produced.

The WINES of
SOUTHEASTERN
EUROPE

ALMOST ALL THE COUNTRIES IN Southeastern Europe have the capacity to become major players in the global wine market, but Hungary has the lead and, probably, the most potential of all. It has the lead because Tokaji is already regarded as one of the world's greatest classic wines and because its government had been dabbling in a mixed-market economy long before the collapse of Communism, whereas the other countries in the Eastern Bloc and former USSR were—and still are—struggling. Tokaji gives Hungary instant status in the wine world and this attracts international investors, but the role of a botrytized wine is very small in the scheme of things. Red wine is Hungary's future, and it has a long way to go in honing regional styles and developing markets for this wine. Indeed, all the countries in this region should be exploiting their red wine potential, as their various *terroirs* are better suited to it than to white wine, whatever they happen to be making at the moment.

4,750-GALLON BARRELS IN SUHINDOL WINERY, BULGARIA

The Suhindol Winery started the Bulgarian wine bandwagon rolling in the mid-1970s with cheap but reliable Cabernet Sauvignon.

BULGARIA

Once the most dependable wine-producing state in Eastern Europe, Bulgaria was fashionable in the West for its cheap Cabernet Sauvignon as early as 1975, but by the mid-1990s, this country was no longer a consistent source of reliable quality. The privatization of the industry has not been as successful as hoped, partly due to an inefficiently large number of tiny plots that have been mismanaged, and partly because arguments over their ownership have dragged on while the vines have been left to wither. Some foreign investment has helped, but more is needed to buy up thousands of these ailing vineyards and consolidate them into a smaller number of larger, well-maintained estates. Unfortunately, much of the investment already at work has gone into faux New World brand names such as Blueridge and Stork Nest. Such Anglicized names undermine Bulgaria's identity and do nothing for its reputation, whatever the quality of the individual wines.

ALTHOUGH BULGARIANS HAVE been cultivating vines for more than 3,000 years, winemaking came to a halt when the Turks imposed Muslim rule between 1396 and 1878. It was not until 1918 that winemaking began again in earnest, and it was only in the 1970s that the Bulgarians made any real effort to export their wines. Bizarrely, it was PepsiCo who started this export drive. The company wanted to open up sales of its cola and, not interested in Bulgarian currency, needed something marketable in exchange. Wine seemed a good idea, so PepsiCo supplied the Sliven Winery with expertise from UC Davis to bring the domestic product up to modern standards. During the mid-1970s, the economic depression that was affecting most Western countries meant that consumers were on the look-out for cheaper alternatives to Bordeaux, and Bulgaria was suddenly in a position to oblige, thanks to PepsiCo.

EXPORTING WINE

Cabernet Sauvignon from Bulgaria's Suhindol region was not simply cheap in the 1970s, it was extraordinarily well made, had

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

Located in the center of the Balkan Peninsula, Bulgaria's eastern border is formed by the Black Sea, while its neighbors to the north, west, and south are respectively Romania, Serbia/Macedonia, and Greece/Turkey.

CLIMATE

The climate is warm continental, although it is cooler in the north and more temperate toward the east due to the influence of the Black Sea. Annual rainfall averages between 19 and 38 inches (47 and 95 centimeters).

ASPECT

Vines are grown largely on the flat valley floors and coastal plains.

SOIL

Predominantly fertile alluvium in the valleys, with dark-gray and brown forest soils in the northern region, and rich, black carbonate soils in the southern region, becoming sandy in the vineyards of the southeast coastal area.

VITICULTURE AND VINIFICATION

Most vineyards are concentrated in the valleys of the Danube and Maritsa Rivers. The disruption of privatization has not been a positive factor for Bulgaria, whose vineyards are highly fractured, with many that are poorly maintained. The wineries are comparatively well equipped, and vinification methods have been updated; there is a state-of-the-art facility at Sliven (Blueridge).

GRAPE VARIETIES

Primary varieties: Cabernet Sauvignon, Gamza, Mavrud, Merlot, Pamid, Rkatsiteli, Red Misket, Ugni Blanc, Welschriesling
Secondary varieties: Aligoté, Bolgar, Cabernet Franc, Chardonnay, Dimiat, Fetjaska, Gamay, Mavrud, Melnik (also called Shiroka Melnishka loza), Muskat Ottonel, Pinot Gris, Pinot Noir, Rubin (Nebbiolo x Syrah), Sylvaner, Syrah, Riesling, Sauvignon Blanc, Tamianka, Traminer

a deep color, full body, soft fruit, rich blackcurrant varietal flavor, and just a hint of wood-aging on the finish.

Spurred on by the success of Cabernet Sauvignon, Bulgaria soon became the world's fourth-largest exporter of wine, and state subsidies ensured that prices remained attractive. For many years, Bulgarian wine was well known for its consistency and value for money, but Gorbachov's alcohol reforms in the mid-1980s resulted in the uprooting of many vineyards, which was the first factor to have a detrimental effect on quality. Ironically, the second factor was democracy, as this was the precursor to privatization, which denied many of the largest former state-owned wineries some of their best sources of grapes. The result has been a rather mixed bag, as some wineries have gone completely private, while most remain local cooperatives, and a large number of private growers have put their products (grapes now, but surely single-vineyard wines in the future) on the market for the very first time. In 1991, Domaine Boyar in Sofia became the first private wine company to be established in Bulgaria since 1947, and this has put it one step ahead of the rest in terms of sourcing by enabling it to forge links with ten of the best wineries in the country.

VINOPROIZUODITEL Wine producer

RECENT BULGARIAN VINTAGES

- 2003 An excellent red and white wine vintage yielded very ripe grapes with relatively high acidity levels.
- 2002 Poor-quality vintage for both red and white wines.
- 2001 A variable year in which well-maintained vineyards in cooler areas produced some exceptional red wines, but the vines' metabolism shut down in hotter areas and in poorly maintained vineyards.
- 2000 Excellent-quality reds.
- 1999 Variable quality, although some good-quality wines were made in the best-maintained vineyards.

There are other good producers in Bulgaria, of course, and, although many more dull wines exist than before, and handling of oak by some wineries has been very clumsy indeed, there has also been much progress. The introduction of young, unvatting Cabernet and Merlot at the behest of a certain British supermarket group has shown what these wines can be like if bottled before the first flush of wonderfully fresh fruit is lost in vat. For all those who still like a lot of oak, some of the top Reserve wines are very good indeed. And huge strides have been made in white winemaking, thanks to Australian flying winemakers.

This internationalization of Bulgarian wine was already well underway before Domaine Boyar launched its Blueridge export brand. Blueridge was designed to lull supermarket shoppers into a false sense of New World security; as they scanned the shelves, consumers would not realize that they had strayed out of familiar territory. The new Blueridge Winery in Sliven cost over 5 million euros in 1999, but it has contributed nothing to the world's awareness of Bulgarian wine. Its balance sheets might look fine now, but ultimately the value of its wines and the profitability of its operation will depend on the public's perception of its geographical origin. If its Anglicized abomination of a name is kept and customers continue to have their attention diverted from the wine's true origin, Blueridge might as well move to India, where costs are even cheaper, and make wines from imported

NEW LAWS

On November 14, 2000, the Association of Producers and Merchants of Wines and Spirits of Bulgaria (APMWSB) was disbanded and, in line with the new Bulgarian Wine Law, its role was transferred to the newly established National Vineyard and Wine Chamber (NVWC), which is aligned with European Union structures, and is designed to facilitate European integration in 2007, if economic and other factors are met. The new Bulgarian Wine Law has been described by its opponents in Bulgaria as "French law" and, not unreasonably, they claim that a more flexible law would enable them to compete with New World rivals. By flexible, they do not mean anything underhand or corner-cutting, simply the sort of "truth in labelling" philosophy that their New World opponents tend to adopt. If a Bulgarian wine states that it is from a particular grape grown in a specific area, then that is what should be in the bottle. Eminently sensible, but if Bulgaria is to be a part of the European Union, then it must obey its wine regime, which is indeed very much based on French wine law at present. Once in the Union, Bulgarians can argue for fundamental changes to the pan-European wine regime until they are blue in the face. That will be their right. And they will discover that it is a very minor cog in a vast machine called the Common Agricultural Policy, which itself has such a history of corruption and kick-backs that there are far too many vested interests, both open and shadowy, to have a hope in hell of changing, as so many other, far more powerful, countries have found out.

grape concentrate. Domaine Boyar's Blueridge is not alone in its Westernization of Bulgarian wine. In 2003, a group of Australian investors purchased the Svichtov Winery and renamed it Stork Nest. The Australians are performing miracles in the vineyard, but doing nothing to promote Bulgarian wine *per se*.

It is about time that Bulgarians realize there is a difference between international input and internationalization. Thanks to international input, there is absolutely no doubt that Bulgaria can make world-class wines, but its winemakers must look to their roots. There is no reason to forsake international varieties such as Cabernet Sauvignon and Merlot, but they should also experiment intensively with indigenous varieties. The obvious strategy would

be to work with clones of Gamza, Mavrud, and Melnik, all easy enough to pronounce on export markets, planting them in the best *terroirs*, at high densities, pruning them to ultra-low yields to remove the leafy character, and building these grapes into Bulgaria's flagship wines. Utilizing the same practices, other intrinsically Bulgarian grapes could rise above their current reputation. For example, is Pamid the simple, light-bodied variety we imagine it to be, or is that merely the result of high-yield production? The new governing body, the National Vineyard and Wine Chamber, should use its honeymoon period to institute strong measures to combat the deterioration of Bulgaria's vineyards. A three-year ban, perhaps, on grapes from poorly maintained vineyards being allowed

in any wine other than an anonymous table wine. The threat of such a severe reduction in earnings would either force real changes in vineyard practices, or the sale of vineyards to more quality-conscious estates. Ironically, although too many vineyards are allowed to produce very high yields, poor standards of vineyard maintenance has reduced overall output, and some wineries are operating at less than half capacity. When vines are not looked after properly and allowed to bear a greater burden of fruit, they become vulnerable to climatic excesses and diseases throughout the growing season. However, above all, Bulgarians must take back their individuality, treating the use of New World technology as a means to carve out a unique Bulgarian identity.

THE APPELLATIONS OF BULGARIA

Note Bulgaria's quality wines are divided into two categories: wines of Declared Geographical Origin, or DGOs, which carry subregional, district, town, or village appellations, and *Controliran* wines, the highest-quality category, which have to be made from specified grape varieties grown in certain DGOs.

EASTERN REGION (TSCHERNOMORSKI RAION)

DGO regions *Burgas, Razgrad, Targovishte, Tolbubin*

DGO villages *Ajtos, Bjala, Dragoevo, Euxinograd, Kabelskovo, Kavarna, Kamen Brjag, Kubrat, Medovetz, Pliska, Pomorie, Popovo, Preslav, Prosenik, Provadija, Sabla/Shabla, Shumen/Sumen, Siliistra, Tutraken, Zarev Dol*

Controliran wines *Jujen Briag* (South Coast), *Khan Krum, Kravevo, Novi Pazar, Varna*

This region accounts for 30 percent of Bulgaria's vineyards and includes four regional DGOs. The Schumen district has long been noted for white wines, particularly those from Khan Krum, but it was only recently that they rose to international standards, thanks to Australian expertise. Other well-known Schumen Chardonnays come from Novi Pazar and Preslav. Preslav now makes good, gluggy Chardonnay-Sauvignon blends. Khan Krum is also known for its Riesling and Dimiat, which has become very fresh and tangy. South Coast Rosé is an off-dry Cabernet Sauvignon blush wine from Burgas, an underrated district that produces many inexpensive yet very drinkable Country Wines.

☞ Aligoté, Bolgar, Cabernet Sauvignon, Chardonnay, Dimiat, Gewürztraminer (*syn* Traminer), Pamid, Rkatsiteli, Red Misket, Riesling (*syn* Rheinriesling), Sauvignon Blanc, Tamianka, Ugni Blanc, Varneski Misket, Welschriesling (*syn* Italian Riesling)

✓ *Domaine Boyar • Pomorie • Shumen • Targovishte*

NORTHERN REGION (DUNAVSKA RAUNINA)

DGO regions *Pleven, Vidin*

DGO districts *Aleksandrovo, Bjala, Bjala Cerkva, Bjala Slatina, Dimca, Dve Mogili, Dolni Dâbnik, Elena, Kamen, Komarevo, Krivodol, Leuski, Lom, Magura, Mihajlovgrad, Nikopol, Orabovo, Polski Trâmbes, Resen, Rupci, Sevlievo, Strakika, Trojan, Varbovka, Vraca*

Controliran wines *Lyaskovetz, Lositza, Novo Selo, Pavlikeni, Russe, Subindol, Svichtov*

This region accounts for 35 percent of Bulgaria's vineyards, encompassing two subregional DGOs. Suhindol's reputation is based on Bulgaria's best-selling Cabernet Sauvignon, but two others from the district are worth trying: the grapey-oaky Gamza, which is a *Controliran* wine, and the interesting, soft-textured Merlot-Gamza blend, which is of equal quality but only a DGO. Russe has produced gorgeously fruity, so-called "unvatted" reds and, under the guidance of winemaker Kym Milne, Lyaskovetz is now making easy-drinking, inexpensive blended whites.

☞ Cabernet Sauvignon, Chardonnay, Gamza, Gamay, Muskat Ottonel, Pinot Noir, Red Misket, Rkatsiteli, Sauvignon Blanc, Traminer, Vrachanski Misket

✓ *Stork Nest* (formerly Svichtov winery) • *Maxima • Tellish* (Merlot)

SOUTHERN REGION (THRAKIISKA NIZINA)

DGO regions *Çirpan/Çirpan, Dolinata na Maritza, Haskovo, Iambol, Pazardzik, Plovdiv, Stara Zagora, Strandja*

DGO villages *Blatec, Brestovica, Brezovo, Dalboki, Elhovo, Gavrilovo, Granit, Kalugerovo, Korten, Liubimec, Nova Zagora, Perustica, Septemvri, Sivacevo, Svoboda, Vetren, Vinogradec, Zlatovrah*

Controliran wines *Assenovgrad, Brestnik, Oriachovitza, Sakar, Stambolovo*

This region accounts for 22 percent of Bulgaria's vineyards and encompasses eight regional DGOs. Assenovgrad is justly famous for its dark, dry, plummy-spicy Mavrud wine, which can age well for 10 or more years. Plovdiv makes fine, firm, blackcurranty Cabernet Sauvignon, as does Stara Zagora, a district that boasts a superb Cabernet Sauvignon-Merlot *Controliran* wine from Oriachovitza. Oriachovitza also makes a classy Cabernet Sauvignon Reserve. From the Strandja region comes Sakar Mountain Cabernet, one of the first wines to establish a reputation on export markets, although it is the Merlot from this area that has *Controliran* status. East of Stara Zagora is Iambol, which produces a very rich Cabernet Sauvignon Reserve in which the oak can take on a spicy-caramel complexity, while in the southeast, Elhovo churns out a much cheaper Cabernet with obvious coconutty aromas that should suit budget-conscious oak-lovers. Bessa Valley is an exciting joint venture between the Damianitza Winery, Count von Neipperg of Pomerol fame, French oenologist Mark Dworkin, and a couple of investors, who are building a Bordeaux-type

wine estate with over 250 acres (100 hectares) of grapes (Malbec, Merlot, Petit Verdot, and Syrah).

☞ Aligoté, Cabernet Sauvignon, Dimiat, Gamay, Malbec, Mavrud, Merlot, Pamid, Petit Vardot, Pinot Noir, Red Misket, Sauvignon Blanc, Syrah

✓ *Assenovgrad • Bessa Valley • Domaine Saker • Ententa • Haskovo • Iambol • Korten • Oriachovitza • Todoroff* (Terres) • *Yamanties* (King Leo, Parallel 41)

SOUTHWESTERN REGION (JOLINAKA NA STRUMA)

DGO regions *Blagoevgrad, Kjustendil, Molina Dolina, Petric*

DGO villages *Bobosevo, Damjanica, Melnik, Sandanski*

Controliran wines *Harsovo*

This region accounts for 6 percent of Bulgaria's vineyards and includes four regional DGOs. The most famous wine is Melnik, which is generally well-colored, rich, and warm, and may be tannic or soft, depending on how it is made. Damianitza Melnik is very smooth and rich. No Mans Land is pure Cabernet Sauvignon. Re Dark is aptly named for a dense-colored, super-premium wine made from Merlot. Uniquato is made from a unique early-ripening clone of Melnik known locally as Shiroka Melnishka Loza.

☞ Cabernet Sauvignon, Chardonnay, Melnik, Merlot, Shiroka Melnishka Loza, Tamianka

✓ *Damianitza* (No Man's Land, Re Dark, Uniquato) • *Santa Sarab Estate*

SUB-BALKAN REGION (PODBALANSKI RAION)

DGO regions *Sliven*

DGO villages *Banja, Cernica, Hissar, Karnobat, Kasanlak, Pâderevo, Stralza Controliran wines Karlovo, Rozova Dolina* (Rose Valley), *Slaviantzi, Sungurlare*

This region accounts for 7 percent of vineyards and encompasses one regional DGO. The Rozova Domina Misket is made in the Karlovo district, and Sungurlare Misket in Slaviantzi. Both are light-golden, floral-scented, musky wines. Sliven makes one of the world's cheapest Merlot blends, using Pinot Noir to add a touch of elegance to what is a very gluggy wine indeed.

☞ Cabernet Sauvignon, Chardonnay, Merlot, Red Misket, Riesling, Ugni Blanc

✓ *Blueridge • Slaviantzi • VINI*

HUNGARY

Although potentially the most exciting winemaking country among the former Iron Curtain states, and despite there being a quality-focused movement afoot in some quarters, Hungary has a long way to go if it is to become a serious world player. Even in Tokaj, undisputably one of the greatest botrytis regions in the world, improvements since the collapse of Communism have been sporadic, despite the example set by foreign investors, and local hero István Szepsy. If every wine producer in every region was as gifted and as committed as Szepsy, Hungary would be the greatest wine-producing country in the world. Perhaps the Hungarian government should give Szepsy prime sites in every single wine region in the country?

WHEN DEMOCRACY ARRIVED in 1989, Hungary had a clear advantage over other former Eastern Bloc countries because even under Communist rule, it had long been dabbling with a mixed economy. Exploiting this to the full, the transition from a centrally planned economy to a market-driven one has been relatively smooth, with the private sector now accounting for more than 80 percent of Hungary's economic output, and foreign investment totaling in excess of \$23 billion. This provides most Hungarian industries with the economic success and stability required to attract further investment to expand and improve, but although

DID YOU KNOW?

- Tokaj is the place, Tokaji is the wine, and Tokay is the old, Anglicized spelling, which is no longer used.
- *Szamorodni* is Polish, not Hungarian, for "the way it comes" and indicates a wine to which *aszú* (overripe grapes for sweetening) has not been added.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
Hungary is sandwiched between Austria and Romania, north of Yugoslavia, in the Carpathian basin south of Slovakia.

CLIMATE
Generally a continental climate, with some Mediterranean influence in the southern wine districts. The annual mean temperature is 51°F (10.5°C), with an average rainfall of 23 inches (60 centimeters). In the Carpathian foothills of Tokaj, in northeastern Hungary, long misty autumns encourage botrytis.

ASPECT
Almost half of the country's vines are grown on the Great Plain, where the land is flat or gently undulating river plains. The rest of the country is hilly.

SOIL
Slate, basalt, clay, and loess in the west, through the sandy soils of

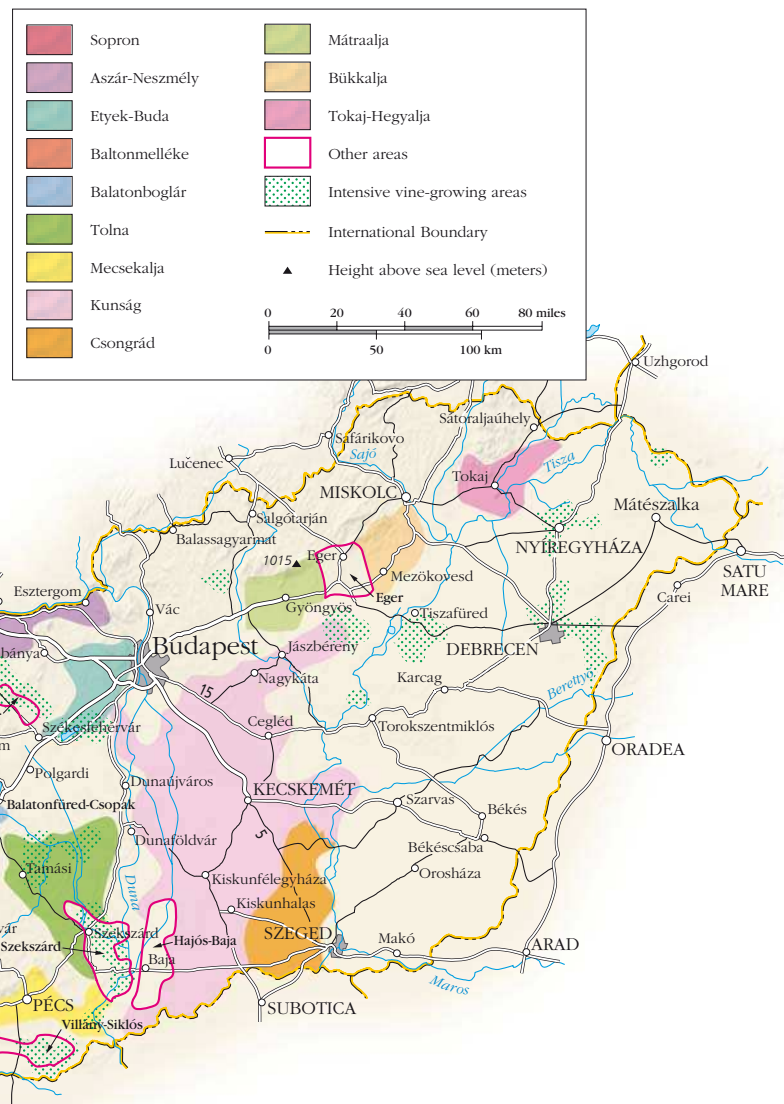

the Great Plain, to the clay, loess, and volcanic rock in the northeast, and volcanic, slate, and sandy soils in the south.

VITICULTURE AND VINIFICATION
Tokaji necessitates the harvesting and sorting of botrytized grapes. Otherwise, all Hungarian red and white wines are produced using standard vinification techniques, with no exceptional practices. However, a steady modernization of winemaking facilities has taken place since the 1990s.

GRAPE VARIETIES
Cabernet Franc, Cabernet Sauvignon, Chardonnay, Ezerjő, Furmint, Hárslevelű, Irsai Olivér, Kadarka, Kékfrankos (Limberger), Kékporto (Portugieser), Leányka, Olaszrizling (Welschriesling), Pinot Blanc, Pinot Gris, Sauvignon Blanc, Trami (Traminer), Zweigelt

HUNGARY

A country that has great potential for red wine, although this is overshadowed by the history and fame of Tokaji, one of the world's classic botrytized wines.

THE DANGER OF INTERNATIONALIZED BRANDS

As with other former Eastern Bloc wine-producing countries, Hungary has more than its fair share of Anglicized brand names, each of which has been concocted to attract Western wine consumers who might not otherwise consider buying Hungarian wines, but should feel comfortable with the New World style of labelling. Whatever reputation the likes of Chapel Hill and Hilltop (including Riverview and Woodcutters White) earn, they do nothing to establish an identity for Hungarian wines, except perhaps the wrong one.

the wine industry has enjoyed some foreign investment, it has not expanded and improved across the board. Why? Because finance alone cannot create a range of fine wines. It takes quality-conscious growers and inspirational winemakers, something that Hungary does not appear to have in any great number at the moment. It is probably a symptom of the country's past, and it might take a complete generation born in and bred under the ideals of a free, democratic state to nurture the sort of spirit needed to make something as decadent as fine wine. Certainly, there is no one who comes within a mile of István Szepsy's genius for winemaking. My suggestion, in the introduction, that the Hungarian government should give him prime sites in every single wine region in the country was only partly in jest. It would at least demonstrate the quality that is ultimately possible in each wine region, and that would attract foreign investors to those parts of the country.

INVESTMENT IN TOKAJ

The first area that received investment was Tokaj. This is understandable, as Tokaji is the only classic wine of authentic historical reputation in all Eastern Europe. Hugh Johnson and the Australian-trained, Anglo-Danish maestro winemaker Peter Vinding-Diers (no longer involved) purchased the Royal Tokaji Wine Company in Mád and 156 acres (63 hectares) of vineyards. Interestingly, the Royal Tokaji vineyards have never been state-owned (all other investors have been forced to buy vineyards from Borkombinat, the State Wine Farm), and almost 60 percent are classified (dating back to 1700), including three first growths (Nyulászó, Szt Tamas, and Betsek) and one second growth (Bírsalmas). After this dynamic duo came a number of others:

- **Chateau Dereszla** Established in 1992 by CANA (France), but bought by the d'Aulan family (former owners of Champagne Piper-Heidsieck) in 1999, Chateau Dereszla has 37 acres (15 hectares) in Henye, and 49 acres (20 hectares) in Csirke, processing another 370 acres (150 hectares) of bought-in grapes.

TOKAJI TABLE

Pre-1991 criteria are provided because many vintages from that era are still available on primary (retail) and secondary (auction) markets.

WINE STYLE	PRE-1991 WINE ACT		POST-1991/7 WINE ACT		
	RESIDUAL SUGAR	MINIMUM AGING IN WOOD	ALCOHOL	RESIDUAL SUGAR	MINIMUM AGING IN WOOD

Aszú 3 puttonyos	60–90 g/l	3 years	N/A	60 g/l	2 years
Aszú 4 puttonyos	90–120 g/l	4 years	N/A	90 g/l	2 years
Aszú 5 puttonyos	120–150 g/l	5 years	N/A	120 g/l	2 years
Aszú 6 puttonyos	150–180 g/l	6 years	N/A	150 g/l	2 years
Aszúesszencia (7–8 puttonyos)	200–240 g/l	7–8 years	N/A	180 g/l	2 years
Esszencia or Natúresszencia	N/A	N/A	N/A	250 g/l	2 years

Notes

¹ Aging in wood allowed, and normal practice, but no prescribed minimum.

² Aszú 2 puttonyos is allowed, but for some reason has not been made since 1938.

- **Disznókő** A new winery built by AXA, the most prominent French investor, led at the time by the redoubtable Jean-Michel Cazes, who purchased 320 acres (130 hectares) of vineyards.
- **Királyudvar** A joint venture funded by Philippine-born American businessman Anthony Hwang, with the winemaking talents of István Szepsy, who is also involved with Hwang in the purchase of Huet in the Loire. This renovated historic winery owns 222 acres (90 hectares) spread over 12 vineyards, mostly in Heyne, Lapis, and Danczka.
- **Chateau Megyer** Purchased in 2000 by Jean-Louis Laborde of Chateau Pajzos, Chateau Megyer comprises 193 acres (78 hectares) of vineyards.
- **Chateau Pajzos** Established in 1991 as a French-funded joint venture between Jean-Louis Laborde and the late Jean-Michel Arcaute, with Michel Rolland consulting. Chateau Pajzos owns 198 acres (80 hectares) of vineyards.
- **Tokaj Classic** A joint venture between Hungarian and German investors, Tokaj Classic was established in 1998, and consists of just over 17 acres (7 hectares) of vineyards, mostly in Betsek.
- **Tokaj Oremus** Spanish-owned by the famous Vega Sicilia, Tokaj Oremus own 272 acres (110 hectares) of vineyards, mostly in Mandúlas, Kútpatka, Budaház, Heyne, Máriássy, and Deák.

HUNGARIAN LABEL LANGUAGE

ASZTALI BOR Table wine, the lowest quality of wine.

ASZÚ Overripe grapes for sweetening Tokaji, equivalent of German *Auslese* BOR Wine

RECENT HUNGARIAN VINTAGES

2003 An outstanding vintage for Tokaji and red wines, Hungary also produced its best ever white wines, even better than the 2002s, although mostly for ready drinking.

2002 A good, but not great, year for Tokaji. Some of Hungary's best dry white wines were produced.

2001 Very difficult year for Tokaji, but with average to above-average quality for other wines.

2000 A brilliant vintage for all styles.

1999 Excellent for Tokaji and ripe reds.

The one thing these investors have in common is a change in the methods used to produce Tokaji. It was suggested that the French were intent on making Sauternes in Hungary, and this rankled local pride, with some critics wondering “whether Tokaji should not legitimately remain an oxidative wine.” Old-style Tokaji was not, however, merely oxidative; it was deliberately oxidized. The only possible comparison is sherry and *vin jaune*, since they are the only wines that are deliberately left in part-filled barrels to oxidize, as Tokaji producers did in the Communist era. However, sherry and *vin jaune* casks are part-filled for a purpose: the ullage allows for the growth of *flor*, a froth of rare yeast that is responsible for the particular character and style of those wines. In the Tokaji process, there is no guarantee of *flor* and thus no justification for exposing the wine to the air—in which it merely oxidizes.

Tokaji old and new

It would be wrong to divide old and new style between Hungarian and foreign producers. Firstly, old style is only as old as the Communist era. There is no evidence of half-filled casks in the 19th century; this practice is not mentioned in the meticulously detailed *Tokaj-Hegyaljai Album* (1867). Secondly, not all foreign-funded ventures are successful at the new style. Some have not gone the full distance—or they have old-style stocks they are gradually disposing of by fractional blending. Even those who went the full distance reined back on new style in the 1990s, when too many of their wines were refused the Tokaji appellation because of lack of typicity. And it is wrong to suggest that only foreign winemakers pioneered new-wave Tokaji. The first and the best by far was István Szepsy. No one has ever made Tokaji with the purity, precision, and finesse that Szepsy can manage.

So what is the difference between the so-called new and old styles? Most importantly, it is no longer a requirement to leave Tokaji Aszú in barrels for up to a decade with at least one-third air-space. This is still permitted for those who believe that oxidation is Tokaji's most essential character, but it is no longer obligatory. However, fortification was banned, even for those who persist with the old style. Fortification was common practice when Hungary was part of the Eastern Bloc (as was pasteurization), but the Communists cannot be blamed, as it was originally a late 19th-century “innovation,” and officially recognized in law in 1936. Two years is the minimum aging period in wood under the new law, but although there is a lot of new or relatively new oak in use today, it has not so much been a conscious move as a necessity to replace ancient, leaking, and often diseased wood.

The other major change that has occurred since the decentralization of Tokaji cellars is the emergence of two fundamentally different, but mutually admirable, production philosophies—those who make wine based on a single estate (the Bordeaux concept), and those who make single-vineyard wines, which might or might not belong to the winery in question (the Burgundian route).

The official tasting committees should have changed their decision-making process after the 1991 Wine Act, or at least by the

changes introduced in 1997, but they had difficulty shaking off the old ways. A number of new wineries were frustrated as their more pristine products were rejected throughout the 1990s for their lack of typicity (i.e., no “sherrylike” character). After a decade of stylistic debate, the authorities caught up with the times in 2000.

How Tokaji is made today

As with all great sweet wines, Tokaji owes its quality and character to semidried, extremely rich grapes (Furmint and Hárslevelű) that have been affected by *Botrytis cinerea*, or “noble rot.” These shriveled grapes, called *aszú* (pronounced “ossu”) are put into a wooden hod called a *puttony* for six to eight days, and under their own weight a highly concentrated, thick, syrupy juice slowly drains out of holes at the bottom of the container into glass vessels called balloons. This is pure Esszencia, also called *nectar*. Each *puttony* holds 50 lb (25 kilograms) of *aszú* grapes but yields only a quarter of a pint (0.2 liters) of pure Esszencia. After the Esszencia has been removed, the *puttony* of *aszú* grapes is kneaded into a paste and added to a 36-gallon cask called a *gönc*, or a stainless-steel vat, of unfermented must or dry base wine. This is made from a blend of nonbotrytized Furmint and Hárslevelű grapes (though wines labelled Muskotály Aszú contain 100 percent Muskotály grapes). The sweetness of the wine depended upon how many *puttonyos* (plural of *puttony*) were added to the must or dry base wine, and wines are still marketed with *puttonyos* designations.

Tokaji Aszúesszencia is the equivalent of at least seven *puttonyos*, whereas Esszencia or Natúresszencia is pure Esszencia, and is the closest thing to the legendary drink of the tsars. It is so rich in sugar (up to 850 grams per liter) that it requires a special strain of yeast to ferment it, and even then it can take many decades to reach 5 or 6 percent of alcohol. Until privatization, it was made only for sweetening, and even now it is extremely rare and expensive (Oremus 1997 Esszencia was over \$750 per bottle in 2005). I will never forget the first pure Esszencia, back in the days of Communist rule, at the state cellars at Tolcsva. It had been fermenting for 13 years, yet had achieved less than 2 percent of alcohol. With 640 grams of residual sugar per liter, it poured like oil, and had the most incredible bouquet, like the scent of a fresh rose in full morning bloom. It was intensely sweet and very grapey, but with a clean, almost crisp, finish thanks to an astonishing 38 grams per liter of acidity.

BEYOND TOKAJI

Hungary is generally recognized as a potentially exciting red wine country, yet only 25 percent of its vineyards are planted with black grapes. One of Hungary's biggest problems is that its flagship wine, Tokaji, is an intensely sweet wine, and it is very difficult to promote any winemaking region on the back of a wine that is consumed very occasionally by a tiny minority of consumers. It will be essential, therefore, for the industry to concentrate its efforts on improving, experimenting with, and expanding the quality and styles of wines of Eger, Villány, Hajós-Baja, Szekszárd, and Sopron, the areas where the greatest red wine promise exists.

IMPERIAL TOKAJI

The most famous wine is Imperial Tokaji, an elixir so prized by the tsars of Russia that they maintained a detachment of Cossacks solely for the purpose of escorting convoys of the precious liquid from Hungary to the royal cellars at St. Petersburg. Reputed to last at least three hundred years, it must surely have been considered an elixir of eternal youth. Until World War II, Fukier, the ancient wine merchants of Warsaw, had 328 bottles of Tokaji 1606 but, to my knowledge, none has emerged at auction since 1945. What is sold today as Tokaji Aszú and Tokaji Aszúesszencia does not have quite the same character, but can still be great wine.

THE APPELLATIONS OF HUNGARY

ASZÁR-NESZMÉLY

Area under vine: 3,460 acres

Subregions *Aszár, Neszmély*

Winemaking traditions date back to the Middle Ages. Vineyards were cultivated along the lines of large estates as from the 18th century, with the famous Esterházi Csákvári estate considered to be a model vineyard and cellars in the 19th century. Most soils are loess-based. The climate is milder than the surrounding Great Plains area, with less risk of spring and fall frost. Mostly fresh, fragrant, lively white wines. The internationally known Hilltops winery produces over 50 different wines every year in Neszmély.

☞ Chardonnay, Cserszegi Fűszeres, Királylányka, Irsai Olivér, Olaszrizling, Pinot Gris, Sauvignon Blanc, Szürkebarát

✓ *Hilltops* (Cserszegi Fűszeres, Riverview Cabernet Sauvignon, Virgin Vintage Chardonnay, Virgin Vintage Sauvignon Blanc)

BADACSONY

Area under vine: 4,000 acres

With its south-facing volcanic slopes on the northerly shores of Lake Balaton, Europe's largest lake, Badacsony is noted for its own indigenous grape called Kéknyelű. This increasingly rare white variety has excellent potential for full-bodied white wines, with a fiery palate, fine acids, and an intensive, aromatic bouquet, but often produces a disappointing quality.

☞ Kékfrankos, Kéknyelű, Olaszrizling, Szürkebarát

✓ *Szent Orbán Pince* (Szőlősgyőröki Olaszrizling) • *Szeremley* (Kéknyelű, Szürkebarát, Tihanyi Kékfrankos)

BALATONBOGLÁR

Area under vine: 6,400 acres

Subregions *Csáfordi, Szentgyörgyvári, and Muravidéki*

The winemaking potential of Lake Balaton's south shore was seldom fulfilled until the early 1990s, when Australian flying winemaker Kym Milne started producing extremely rich, oak-aged Chardonnay at the Balatonboglár Winery under the Chapel Hill label. With Master of Wine Milne still in charge, ably assisted by Kiwi Clive Hartnell, and fellow Australian Richard Smart advising in the vineyard, the quality at Chapel Hill has strengthened in the 2000s. Other products from the Balatonboglár Winery are far less exciting, and some producers churn out a lot of very second-rate wines, particularly in the semisweet Olaszrizling category.

☞ Chardonnay, Cserszegi Fűszeres, Kékfrankos, Királylányka, Merlot, Olaszrizling, Rizlingszilváni, Szürkebarát, Sauvignon Blanc

✓ *Chapel Hill* (Chardonnay, Chardonnay-Pinot Noir Brut, Merlot, plus entire Winemaker's Selection and Single Vineyard Selection ranges) • *Ottó Léglí* (Szőlőskislaki Barrique Chardonnay)

BALATONFELVIDÉK

Area under vine: 6,200 acres

Subregions *Cserszeg, Kál, Balatonederics-Lesence*

With its hot, sunny, Mediterranean climate, and the extraordinary beauty of this area, it is no surprise that so many artists have set up home here. The best wines are full-bodied, with a fine fragrance and crisp acidity.

☞ Chardonnay, Olaszrizling, Szürkebarát

BALATONFÜRED-CSOPAK

Area under vine: 4,200 acres

Sub-regions *Balatonfüred, Csopak, Zánka*

On the northern shore of Lake Balaton, viticulture and winemaking have prospered here since Roman times. The wines are full-bodied yet fragrant, with fine acidity.

☞ Cabernet Sauvignon, Chardonnay, Merlot, Olaszrizling, Rizlingszilváni, Tramini

✓ *Isván Jásdi* (Csopaki Olaszrizling)

BALATONMELLÉKE

Area under vine: 5,400 acres

Subregions *Balatonmellék, Muravidéki*

On the eastern and northeastern flank of Lake Balaton. The Zalla hills are known for their so-called harrow-cellars, made in the 19th century from timbers and plastered inside and out with clay. The Balatonmelléke, with its brown forest soils and mild, wet climate, has been revived as a wine region as recently as 1998.

☞ Chardonnay, Kékfrankos, Müller-Thurgau, Olaszrizling, Oportó, Rizlingszilváni, Tramini, Zöld Veltelini (Veltliner), Zweigelt

✓ *László Bussay* (Csörnyeföldi Szürkebarát)

BÜKKALJA

Area under vine: 2,400 acres

Grown on the southern and southwestern slopes of the Bükk Mountains, where Kékfrankos and Leányka are the major varieties, but produce wines that are lighter than those of neighboring Eger. As in Eger and Tokaj further east, cellars have long been hewn out of rhyolite-tuffa rock, with more than 1,000 such cellars carved out of the slopes of Avas.

☞ Cserszegi Fűszeres, Kékfrankos, Olaszrizling, Leányka

CSONGRÁD

Area under vine: 4,600 acres

Sub-regions *Csongrád, Kistelek, Mórabalom, Pusttamérges*

This Great Plain wine region is the warmest and sunniest part of the country during the vegetation period of the vine. Principally, the red and rosé wines are renowned. The white wines of the region contain moderate acids and are rich in fragrance and aroma. The red wines are characterized by richness in coloring agents, pleasant acerbité, and excellent aroma.

☞ Kadarka, Kékfrankos, Olaszrizling, Zweigelt

EGER

Area under vine: 7,900 acres

Subregions *Debrő, Eger*

Located halfway between Budapest and Tokaj is Eger, a region famous for the legend of Egri Bikavér, or "Bull's Blood of Eger." The story dates from 1552, when the fortress of Eger, fiercely defended by István Dobó and his Magyars, was besieged by the numerically superior force of the Turkish army, led by Ali Pasha. It is said that, throughout the battle, the Magyars drank copious quantities of the local wine and that when the Turks saw the beards of their ferocious enemies stained red with wine, they ran in terror, thinking that all Magyars gained their strength by drinking the blood of bulls. Hence the name of this wine was born. Other regions produce Bikavér, but Egri Bikavér is the Bull's Blood that is most famously associated with the legend. It was never a pretentious wine, but it was traditionally a robust, Kadarka-based red of firm structure and fiery flavor. Since the early 1980s, however, Bull's Blood has been notoriously variable in both quality and character, as indeed has its varietal composition, with Kékfrankos now the most dominant grape, and others such as Cabernet Franc, Cabernet Sauvignon, Kékportó, and Merlot playing minor roles. Hungary will never earn a reputation for the depth and breadth of its wines until the quality and consistency of its second most famous wine is something to write home about. Egri Bormives Céh, a group of quality-conscious Bikavér producers, are trying to raise standards, but they have had trouble with the largest producers of the most mediocre Egri Bikavér.

Leányka can make a decent gold-colored, medium-sweet white wine, but it is too soft and understated to grab the headlines, and Eger is really red wine country. The successes here with Merlot and Cabernet Sauvignon, even Pinot Noir, should encourage producers to explore their own red wine grapes. Before his untimely death in February 2005, Tibor Gál was the best local producer. He teamed up with Antinori to produce good-value, international-style wines under the GIA label, but his own wines—especially his single-vineyard Pinot Noirs and Bikavér Reserve—were superior.

☞ Cabernet Franc, Cabernet Sauvignon, Kékfrankos, Kékportó, Leányka, Merlot, Olaszrizling

✓ *GIA* (Bikavér, Cabernet Sauvignon, Chardonnay) • *István Balla* (Barrique Olaszrizling) • *József Hagymási* (Cabernet Sauvignon) • *Thummerer* (Bikavér, Kékfrankos, Vili Papa Cuvee) • *Tibor Gál* (Bikavér) • *Béla Vincze* (Cabernet Franc)

ETYEK-BUDA

Area under vine: 4,400 acres

Subregions *Etyek, Buda*

Etyek-Buda is supposedly Hungary's sparkling wine region, but the quality of its largest producer, Törley, leaves much to be desired, and more vineyards are moving over to still, dry white wines from individual estates, but since this region overlaps the prettier, hilly half of Budapest, it receives a lot of attention. The vines grow on a black loess soil over a limestone base, in a dry, sunny, but windy climate.

☞ Chardonnay, Királyleányka, Olaszrizling, Pinot Blanc, Pinot Gris, Sauvignon Blanc

✓ *Nyakasbegy* (Budai Chardonnay)

HAJÓS-BOAJA

Area under vine: 3,500 acres

Subregions *Hajós, Baja*

The white wines of this Great Plains region are rich in fragrance and aroma, while the reds rival the highly ranked wines produced in hilly regions.

☞ Cabernet Franc, Cabernet Sauvignon, Kadarka, Kékfrankos, Merlot, Olaszrizling, Riesling

KUNSAĞ

Area under vine: 63,300 acres

Subregions *Bácska, Cegléd, Dunamente, Izsák, Jászság, Kecskemét-Kiskunfélegyháza, Kiskőrös, Kiskunhalas-Kiskunmajsa, Monor, Tiszamente*

This Great Plain wine region is the largest wine region in Hungary. The wines of this region can be rich in fragrance and flavors. Some good Kadarka.

☞ Ezerjő, Csereszegi Fűszeres, Kékfrankos, Olaszrizling

MÁTRAALJA

Area under vine: 18,000 acres

At Gyöngyös, the first truly excellent Hungarian dry white wine was produced in the early 1980s, and no prizes for guessing that it was made from Chardonnay. But it was essential to demonstrate what could be done with grapes of a certain quality and the right technology. That particular Chardonnay steadily improved until 1995, when it jumped up another notch in quality, and Sauvignon Blanc can be almost as successful, but nowadays, winemakers are looking at achieving at least the same general quality with local varieties, such as Chardonnay, Hárslevelű, and Muskotály.

☞ Chardonnay, Hárslevelű, Kékfrankos, Müller-Thurgau, Muscat Ottonel, Muskotály, Olaszrizling, Tramini, Rizlingszilváni, Zweigelt

MECSEKALJA

Area under vine: 1,200 acres

Sub-regions *Pécs, Szigetvár, Versend*

Vineyards here scattered over more than 50 miles (80 kilometers) of warm slopes around the historic city of Pécs, which has long been noted for Olaszrizling, although the traditional Furmint and Cifandli vines are giving way to international varieties.

☞ Cabernet Franc, Cabernet Sauvignon, Chardonnay, Cifandli, Furmint, Merlot, Olaszrizling, Pinot Noir, Riesling, Rizlingszilváni, Sauvignon Blanc

✓ *Ebner Andreas* (Cosmo Cuvée)

MÓR

Area under vine: 2,200 acres

Ezerjő is the best grape variety suited to this region, where it makes one of Hungary's most distinctive dry white wines.

☞ Ezerjő, Leányka, Olaszrizling, Rizlingszilváni, Tramini

PANNONHALMA-SOKORÓALJA

Area under vine: 1,600 acres

Subregions *Pannonhalma, Sokoróalja*

Viticulture here dates back to 996, when Benedictine monks settled on Saint Martin Mountain, and established Hungary's first monastery at Pannonhalma. Hungary's first document mentioning vinegrowing is the deed of foundation of the Pannonhalma Monastery. The fresh, crisp, varietally pure Pannonhalmi Sauvignon Blanc from Szöllősi Mihály Pricészette winery is the best dry Hungarian white wine I have tasted.

☞ Chardonnay, Csereszegi Fűszeres, Irsai Olivér, Királyleányka, Müller-Thurgau, Olaszrizling, Riesling, Tramini

✓ *Szöllősi Mihály Pricészette* (Sauvignon Blanc)

SOMLÓ

Area under vine: 1,200 acres

Subregions *Kissomlyó-Sághegy, Somló*

This is the smallest wine region of Hungary. Its wines are fiery, with a heavy, masculine character, and they have high acid and alcohol content. The long aging in wooden barrels produces a fine, elegant harmony of fragrance, taste, and aroma. According to popular memory, in the imperial court of Vienna, the newlyweds drank Somló wines on their wedding night to promote the birth of a male heir to the throne.

☞ Chardonnay, Furmint, Hárslevelű, Juhfark, Olaszrizling, Tramini

✓ *Béla Fekete* (Chardonnay) • *József Laposa* (Bazalt Borház Olaszrizling)

SOPRON

Area under vine: 3,400 acres

Subregions *Kőszeg, Sopron*

One of the most ancient wine regions of Hungary, the Sopron lies on the foothills of the Alps in the northwestern corner of the country. For centuries, the city of Sopron itself enjoyed thriving trade and, surprisingly, until the 18th century Sopron was reputedly the largest wine-trading center in central Europe. Sopron is a potentially fine wine region, where the Kékfrankos grape is most famous, although the quality in the vineyard and the bottle could and should be significantly superior to the light, everyday-drinking wines that are commonplace in this region. Although essentially a red wine region, Sopron does also produce some interesting whites.

☞ Cabernet Franc, Kékfrankos, Leányka, Sauvignon Blanc, Zöld Veltelini, Zweigelt

✓ *Franz Weninger* (Kékfrankos, Merlot, Rosé, Syrah) • *Hilltop* (Soproni Sauvignon Blanc)

SZEKSZÁRD

Area under vine: 4,700 acres

The Szekszárd vineyards have been noted for their wines since Roman times and for red wines since the 15th century. In this sunny wine region with its greater Mediterranean influence, excellent red wines can be produced,

which are known for their velvety texture, and often show more elegance than the red wines of Villány. The Szekszárdi Bikavér (Bull's Blood of Szekszárd) is ranked outstandingly high. The indigenous Kadarka variety gives excellent flavored, deep red wine, plus a local speciality, Nemes Kadar, made from botrytized grapes. Very good Kékfrankos, Cabernet Sauvignon, and some stunning Merlot are also produced.

☞ Cabernet Sauvignon, Kadarka, Kékfrankos, Merlot, Olaszrizling, Rizlingszilváni

✓ *Dűzsi Tamás* (Kékfrankos Rozé) • *Péter Vida* (Cabernet Franc-Merlot) • *Szent Gaál Kastély* (Merlot) • *Takler Pince* (Cabernet Sauvignon Selection, Primarius Merlot, Regnum Monarchia Gold Selection) • *Vesztergombi* (Cabernet Sauvignon)

TOKAJ-HEGYALJA

Area under vine: 13,000 acres

Subregions *Tokaj, Hegyalja*

For full details about the classic sweet wines and other styles of wine produced in Tokaj, please see the main text on pp416–417.

☞ Furmint, Hárslevelű, Sárga Muskotály, Zeta (formerly Oremus)

✓ *Arvay és Társa* • *Borok Üri* • *István Szepsy* • *Királyudvar* • *Oremus* • *Pajzos*

TOLNA

Area under vine: 5,300 acres

Subregions *Tamási, Tolna, Völgyseg*

Although Tolna became a wine region in its own right as recently as 1998, winemaking traditions go back centuries, and were strengthened in the 16th century, when the area was settled by Germans.

☞ Chardonnay, Grüner Veltliner, Kadarka, Kékfrankos, Müller-Thurgau, Olaszrizling

VILLÁNY-SIKLÓS

Area under vine: 4,000 acres

Subregions *Villány, Siklós*

Vines have been growing here since this region was part of the Roman province of Pannonia. In Villány, the more Mediterranean climate produces some of Hungary's best red wines, including dark, spicy Kadarka and more velvety Bordeaux varieties. The red wine potential of Villány is probably the greatest of all of the 22 Hungarian wine regions. At the time of writing, a new two-tier appellation system called Hungarian District Controllatus (HDC for short), created for and by Villány, was due to be in place as from the 2005 vintage. HDC will have two superior quality levels, Classic and Premium, with stricter maximum yields and quality controls that will be monitored by a committee. Some growers in Villány still train their vines to a single pole, instead of along wires, which is four times as labor-intensive, and yields are reduced to as little as 413 or 550 cases per acre, rather than the normal 1,650. The wines of Siklós are white and fiery, including those that have been produced from late-harvested grapes, although they are more *passerillé* in style than botrytized.

☞ Cabernet Sauvignon, Cabernet Franc, Kékporto, Olaszrizling, Hárslevelű, Zweigelt

✓ *Attila Gere* (Kopár Villanyi Cuvée, Merlot Solus) • *Gere Tamás Pincészet* (Gere Tamás Cuvée) • *Tiffán* (Villányi Cuvée) • *Vjlyan Pincészet* (Kadarka, Merlot, Zweigelt)

ROMANIA

Romania has at least as much potential as any other Eastern European winemaking country. It has a growing reputation for Pinot Noir, particularly from the Dealul Mare region, but has received a fraction of the foreign investment that Hungary has enjoyed, and needs both financial and technical expertise to compete internationally.

THE BIGGEST PROBLEM IN ROMANIA has been a lack of consistency. Since the early 1990s, we have seen flashes of promise—from exciting Gewürztraminer from Transylvania to deep, dark, brooding Cabernet Sauvignon from Dealul Mare, only to see some of these wines followed up by vintages of barely *vin de table* quality. Only a handful of wineries have received significant foreign investment and expertise, and it is no coincidence that they generally make the best wines in Romania today.

MORE IMPORTANT THAN RUSSIA

Viticulture and winemaking is an old tradition in Romania, dating back 4,000 years. In Europe, only France, Italy, Spain, and Germany are bigger wine-producing countries. Romania is significantly more important than Hungary or Russia in winemaking terms. As in Bulgaria, there was a massive planting program in the 1960s, when the country was geared up to supply Comecon states with bulk-blending fodder, but most wine today is purchased and consumed on the home market. After the fall of Ceausescu in December 1989, the area under vine increased, going against the trend of other Eastern Bloc wine-producing countries. However, much of the replanting saw *vinifera* varieties being replaced with

LOW-TECH VINEYARDS

Rickety pergolas providing support for vines and old thatched-roofed buildings reflect the conditions that most of Romania's agricultural industry has survived on since medieval times.

hybrids, as the new private owners did not know how to look after their vineyards—or if they did, they could not care less—and hybrids are much hardier, yielding the highest volumes for the least effort. This expansion continued until 1995, when it started to decline. Both new planting and the replanting of old vineyards now represent less than two percent of the total area under vine, with a staggering amount of land planted with hybrids (estimates vary

ROMANIA

The main winemaking areas in Romania are scattered throughout the country: in the Carpathian foothills, on the plateau lands of Dobruđa, and on the plains.

RECENT ROMANIAN VINTAGES

2003 Severely reduced yields, due to spring frosts and summer droughts, but excellent quality, especially in reds.

2002 Variable quality; mostly average to poor, with the excellent white wines of Transilvania the exception.

2001 Generally good quality.

2000 A great year across the country for both red and white wines.

1999 A very good year for red wines, and not bad for whites, although most should have been consumed before now.

wildly between the official 75,000 acres and external observers' 297,500 acres). Furthermore, despite privatization, almost 23 percent of the vineyards still belong to the Romanian state. There are now eight wine regions encompassing 37 winegrowing districts, and vineyard registration is slowly coming into operation in preparation for Romania's EU membership in 2007–2010. The two largest wine-producing regions, Moldova and Mutenia, together account for more than 60 percent of all Romanian wines.

THE FUTURE

Despite the difficulties of the past and accession to the EU, which will present the growers with as many problems as solutions, Romania has an excellent future—if it can be grasped. According to pre-membership agreements between Romania and the EU, all hybrids must be removed by 2014; although, on past experience, this will no doubt be extended. And extended. And extended. Far more important than replanting hybrid vines with *vinifera* is to ensure that only the best vineyards are replanted and that an emphasis is put on growing the best indigenous varieties, such as those of the Fetească family: Fetească Albă, Fetească Neagră, and Reglă. Other potentially interesting local varieties include Băbească, Busuioaca, Francusa, Galbenă, Grasă, and Tâmaioasă. Most wines currently produced from these grapes are a bit rustic, but they do show promise. Once the clones are sorted out; the vines are grown in the best-suited sites, at low yields; and skilful winemakers are employed to hone the style of the wines they produce, there will be no stopping Romania taking its rightful place in the world of wine.

NEW VINEYARDS IN DEALUL MARE

A vineyard is staked out, waiting to support new vine growth in the Dealul Mare district of Mutenia.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

The main wine-producing areas in Romania spread from Iași in the northeast of the country down through the Carpathian foothills to the Danube river.

CLIMATE

A continental climate, with hot summers and cold winters, which are tempered only in the southeast by the Black Sea.

ASPECT

Vines are grown on all types of land—from the plains through the plateau land of Dobrudja to the slopes of the foothills of the Carpathian Mountains.

SOIL

A wide variety of soil types, including the generally sandy-alluvial plains and the stony, hillside soils of Banat; the limestone of

Dobrudja; the oolitic limestone of Mutenia's Pietroasele vineyards; and the stony fringes of the Carpathian Mountains.

VITICULTURE AND VINIFICATION

Although some modernization of facilities has taken place since the 1990s, and a few new wineries have been established, at least half the wines are produced in antiquated conditions, and almost two-thirds must be made from hybrids, whatever the official statistics state.

GRAPE VARIETIES

Hybrids plus Băbească, Băbească Neagră, Cabernet Sauvignon, Fetească Albă, Fetească Neagră, Fetească Reglă, Galbenă, Grasă, Merlot, Pinot Gris, Pinot Noir, Riesling, Tâmaioasă, Welschriesling

THE APPELLATIONS OF ROMANIA

BANAT

Wine districts *Buzias, Dealul Tirohului, Moldova Noua, Receaș, Teremia*

Although Banat is one of the better known wine regions in Romania—and has been since the 1980s—it is the smallest by a large margin, representing less than two percent of the country's vineyards. The sandy plain of the Teremia district is best known for its large production of eminently drinkable white wines, while the mountain slopes of Receaș-Tirol produce Valea Lunga, a pleasant, light-bodied red wine.

☞ Cabernet Sauvignon, Cadarca, Fetească Regală, Merlot, Mustoasă, Pinot Noir, Riesling

✓ *Receaș*

CRIȘANA

Wine districts *Minis-Maderat*

Formerly part of the Banat region, the hilly Minis-Maderat area provides excellent, inexpensive reds from Cadarca, Pinot Noir, Cabernet Sauvignon, and Merlot grapes grown on stony terraces.

☞ Cabernet Sauvignon, Cadarca, Fetească Regală, Merlot, Mustoasă, Pinot Noir, Riesling

DOBRUDJA

Wine districts *Babadag, Istria, Murfatlar, Saricia-Niculitel*

Murfatlar is the most important and oldest winemaking district in Dobrudja (or Dobrogea), with well-organized vineyards on hills close to the Black Sea and an experimental state research station that has introduced many classic western varieties. Once reliant on the region's prestigious past, the wines used to be too old, oxidized, and heavy, but they are beginning to receive the attention they deserve now that they are clean and well balanced; the lovely, late-picked, softly sweet, and stylish Gewürztraminer is a good example of this style.

☞ Cabernet Sauvignon, Chardonnay, Gewürztraminer, Muscat Ottonel, Pinot Gris, Pinot Noir, Riesling

✓ *The Carpathian Winery • Murfatlar (Ferma Noua, Trei Hectare)*

MARAMURES

Wine districts *Diosig, Silvania, Valea lui Mibai*

A breathtakingly wild and beautiful mountainous area full of rather strange but friendly people living a folksy, arts-and-crafts life in a place that time forgot. Maramures is a white-wine-only region. Diosig produces acidic wines that are ideal for brandy distillation.

☞ Burgund Mare, Cabernet Sauvignon, Cadarca, Fetească Regală, Merlot, Muscat Ottonel, Pinot Noir, Welschrieling

MOLDOVA

Wine districts *Catchiest, Cotesti, Cotnari, Dealurile Bujorului, Dealurile Moldovei, Husi, Iași, Ivesti, Nicoresti, Odobesti, Panciu, Zeletin*

The vineyards of Odobesti surrounding the industrial town of Focsani produce quantities of rather ordinary red and white wine. There are, however, exceptions: Cotesti, for example, has a good reputation for Pinot Noir and Merlot, while Nicoresti is known for its full-colored,

spicy red wine produced from the Băbească grape. The vineyards of Cotnari are the most famous in Romania; their reputation dates back to the 15th century. The wine is a rich dessert wine, not unlike Tokaji but not as complex. The Bucium hills of Visan and Doi Peri overlook the city of Iași and the cool conditions are reflected in Cabernet Sauvignon wines that have crisp, leafy characteristics.

☞ Băbească, Cabernet Sauvignon, Fetească Albă, Fetească Neagră, Grasă, Merlot, Pinot Noir, Welschriesling

MUTENIA

Wine districts *Dealul Mare, Dealurile Suzaului, Pietroasele*

Dealul Mare is located to the north of Bucharest, stretching across the lower, southeast-facing slopes of the Carpathian Mountains. It is famous for Pinot Noir, Cabernet Sauvignon, and Merlot. There is a small area of chalky soil within this district that has a special microclimate best suited to the production of sweet white wines with fine, balancing acidity. It is here that the vineyards of Pietroasele are located. The area's Tămăioasă or "Frankincense" grape is a Muscat-related variety that makes a lusciously sweet, gold-colored wine of very expressive quality. One of the most remarkable Romanian wines I have tasted was a beautiful, botrytized rosé

Edelbeerenlese version of the normally lackluster Fetească Neagră grape.

☞ Băbească Neagră, Cabernet Sauvignon, Fetească Neagră, Fetească Regală, Galbenă, Merlot, Pinot Gris, Pinot Noir, Riesling, Tămăioasă

✓ *Prabova Valley (Cabernet Sauvignon, Merlot)*
• *SERVE* (Cuvée Charlotte, Terra Romana)
• *Vinarte* (Castel Bolovanu, Villa Zorilor)

OLTENIA

Wine districts *Drăgasăni, Plaiurile Drincei, Podguria Dagilor, Sadova Corabia, Samburesti/Simburesti, Severinului, Segarcea, Stefănești, Vanju Mare*

Simburesti in the Drăgasăni district produces Oltenia's best reds. It is also known for a full, dry red wine from the Fetească Neagră grape, as well as for Cabernet Sauvignon. The Segarcea district also produces red wines. The Pinot Noir produced here is good, although it is not as well known as the Cabernet Sauvignon. Interesting sweet wines are found on the west side of the River Oltul.

☞ Cabernet Sauvignon, Fetească Neagră, Fetească Regală, Muscat Ottonel, Pinot Noir, Riesling, Sauvignon Blanc, Tămăioasă

TRANSILVANIA

Wine districts *Aiud, Albă, Iulia-Aiud, Bistrita, Lecbinta, Sebes-Apold, Tarnave*

Of all the winegrowing regions of Romania, Transilvania is perhaps the most exciting. The crisp fruit and good acidity of its white wines lies somewhere between the styles of Alsace and South Tyrol. The steep Tarnave vineyards produce good-quality white wines with more than just a hint of Germanic style and delicacy. Not surprisingly, German settlers in Transilvania introduced many of their own grape varieties to the region. The native Fetească grape is also successful.

☞ Fetească Albă, Fetească Regală, Muscat Ottonel, Pinot Gris, Riesling, Sauvignon Blanc, Traminer, Welschriesling

✓ *Carl Reb • Vinarte (Terasse Danubiane)*

SLOVAKIA AND THE CZECH REPUBLIC

Slovakia has twice as much area under vine as the Czech Republic, even though it is much smaller. However, Slovakia's vineyards are in a state of decline, and the Czech Republic is rightly better known for its beer than its wine.

ALTHOUGH THE FIRST VINES were planted in Moravia (now part of the Czech Republic) by the Romans as early as the third century CE, and winemaking in Slovakia is supposed to date back 3,000 years, none of the wines from anywhere encompassed by the borders of these countries today has ever gained sufficient repute to warrant significant exports, let alone worldwide fame. And, as with the rest of the former Eastern Bloc wine-producing countries, the period of centralized processing under Communist rule obscured whatever local reputations there were and cast a gray shadow over any individual efforts, as the vineyards were replanted high and wide for mass production.

SLOVAKIA

Most Slovakian wine is classified as lowly table wine, which would be a good thing if this were the result of a quality-conscious culling of the total production to produce stunning quality top wines, but that is not the case—the wines are naturally of a dismal quality. Potentially the quality of Slovakian wine is greater than that of the Czech Republic, but the decline in the state of the Slovakian wine industry is greater, so it will be an even tougher job to turn around. More than 85 percent of Slovakian wine is white, with Müller-Thurgau, Ryzlink Vlašský (Welschriesling), and Veltínske Zelené (Grüner Veltliner) together accounting for over 60 percent of all the vines growing in this country. Sparkling wines have been made since 1825 at Sered and are still marketed under the “Hubert” brand, but quality is not high.

CZECH AND SLOVAK LABEL LANGUAGE

BIELE VÍNO White wine	SLÁMOVÉ VÍNO Literally a “straw wine,” which not only must have a natural alcoholic potential of at least 16%, but, for 3 months prior to being pressed, must also be stored on straw or reeds or hung in a well-aired place
ČERVENÉ VÍNO Red wine	STOLNÍ VÍNO Table wine, the lowest quality; must have a natural alcoholic potential of 5.5–8%
DEZERTNÉ KORENENÉ VÍNO Aromatized dessert wine	ŠUCHÉ Dry
DEZERTNÉ VÍNO Dessert wine	ŠUMIVÉ VÍNO Sparkling wine
DIA Suitable for diabetics (in other words, sugar-free)	VÍNA S PŘÍVLASTKEM A wine of appellation, thus the equivalent of a French AOC
JAKOSTNÍ VÍNO The equivalent of a <i>vin de pays</i> ; must have a natural alcoholic potential of 8–11%	VINÁRSKYCH ZÁVODOV Wine producer
KABINET Equivalent to the German term Kabinett; must have a natural alcoholic potential of 11–12%	VÍNO Wine
LEDOVÉ VÍNO The equivalent of Eiswein, which not only must have a natural alcoholic potential of at least 16%, but the grapes must be picked at below 21°F and must remain frozen throughout pressing	VÝBĚR A wine predicated by selection; must have a natural alcoholic potential of at least 14%
ODRODOVÉ VÍNA Grape variety	VÝBĚR Z HROZNŮ A wine predicated by selection of individual grapes; must have a natural alcoholic potential of at least 16%
OBSAH CUKRU Sugar content	ZVÝŠKOVYM CUKROM Residual sugar
POLOSLADKÉ Semi-sweet	
POZDNÍ SBĚR Literally “late harvest;” must have a natural alcoholic potential of 12–14%	
RUŽOVÉ VÍNO Rosé wine	
SLADKÉ Sweet	

CZECH VINES

A vineyard at Ratiskovice, near Hodonin in the Czech Republic.

The most intriguing wine from this country is Slovakian Tokaji, produced in the small part of the world-famous district that falls within Slovak borders. The same grapes are grown as in the rest of the Tokaji-producing region (Furmint, Hárslevelű, and Muscat), and the wine is supposedly made in a very similar style to the great Hungarian version. In truth they do not compare, but there is no reason why, with properly maintained vineyards, adequately equipped producers of Slovakian Tokaji should not compete with their famous neighbors. With a little imagination, this wine has the potential to be so lucrative that it must surely be the door-opener for that much-needed foreign investment.

THE CZECH REPUBLIC

Most Czech wines are produced in Moravia, where the majority of the vineyards are located. The two major areas of production are Hustopěče-Hodonin on the Morava River and Znojmo-Mikulov on the Dyje River. Around 80 percent of all the wine produced is white, with a good level of winemaking expertise for light, elegant, and aromatically fresh whites. Although the climate does not generally suit red-wine production, some interesting reds (such as the Cabernet Sauvignon from Pavlovice) are produced. Sparkling wines are made in the towns of Mikulov and Bzenec by *cuve close* and continuous methods. Since the 1995 Czech Wine Law was introduced, wines are categorized according to the grapes' sugar contents: effectively table wine, *vin de pays*, and AOC equivalents, followed by German-style predicated wines: Kabinet, Pozdní sběr, Výběr z hroznů, Výběr z bobulí, Ledová vína, and Slámová vína (see label language, p423).

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

The Czech Republic is an inland central European country north of Austria and its vines are mostly located in Moravia. There are also vineyards in Bohemia, mainly to the north and northeast of Prague. Slovakia is located south of Moravia.

CLIMATE

Generally a continental climate with occasional maritime influences from the Atlantic. In the Czech Republic, Moravia is significantly sunnier (1,760 hours) than Bohemia (1,450 hours), but Slovakia is even more favorable (2,000 hours), with less precipitation.

ASPECT

In the Czech Republic, vines are grown on rolling hills in Bohemia, and on mountain foothills in Moravia. Generally steeper and hillier in Slovakia.

SOIL

The primarily loess topsoils found in most Czech vineyards cover the acidic crystalline slate of the Bohemian Massif, the exception being in the Bohemian limestone basin around Prague. Sandy or rocky soils, with scattered alluvial deposits, dominate Slovakia.

VITICULTURE AND

VINIFICATION

Although some modernization of facilities has taken place in the

Czech Republic since the 1990s, and a few new wineries have been set up, at least half the production occurs under antiquated conditions, and far too much wine is made from hybrids for the country to be able to build a reputation. While the situation in Slovakia is worse, the potential quality is greater.

GRAPE VARIETIES

Slovakian Primary Grape varieties: Chardonnay, Devín, Frankovka Modrá (Limberger), Ryzlink Vlašský (Welschriesling), Sauvignon Blanc, Svätovavrinecké (St-Laurent), Veltlínske Zelene (Grüner Veltliner)

Slovakian Secondary Grape varieties: Cabernet Sauvignon, Dievčie Hrozno, Furmint, Lipovina (Hárslevelű), Rulandské Bílé (Pinot Blanc), Ryzlink Rýnsky (Riesling), Silvánske Zelené (Sylvaner)

Czech Primary Grape varieties: Frankovka (Limberger), Müller-Thurgau, Rulandské Bílé (Pinot Blanc), Ryzlink Rýnsky (Riesling), Ryzlink Vlašský (Welschriesling), Veltlínské Červene (Roter Veltliner), Svätovavrinecké (St-Laurent)

Czech Secondary Grape varieties: André, Chardonnay, Modrý Portugal (Portugieser), Muskat Moravské, Neuburské (Neuburger), Rulandské Modrý (Pinot Noir), Rulandské Šedé (Pinot Gris), Sauvignon Blanc, Tramín (Savagnin), Zweigeltrebe

RECENT CZECH VINTAGES

2003 The best Czech vintage in living memory. Also excellent in Slovakia, particularly for reds and late-harvest whites.

2002 Variable quality, with some good white wines in the Czech Republic, but rain during the harvest affected some Slovak wines.

2001 Extremely variable; careful selection required.

2000 Very good for reds and late-harvest whites in Slovakia.

1999 Some elegant wines produced in both the Czech Republic and Slovakia.

THE APPELLATIONS OF

SLOVAKIA AND THE CZECH REPUBLIC

SLOVAKIA

JUŽNOSLOVENSKÁ

Internal regions: Dunajskostredský, Galantský, Hurbanovský, Komárňanský, Palárikovský, Šamorínský, Strekovský, Stúrovský

The Južnoslovenská or Southern Slovak region is warm and sunny; rich clay soils encourage late-harvest whites and well-colored reds.

☞ Cabernet Franc, Cabernet Sauvignon, Frankovka Modrá, Muškát Moravský, Ryzlink Rýnsky, Rulandské, Rulandské

Bílé, Rulandské Modré, Tramín Červný (Red Traminer)

✓ Chateau Belá • Karpatská Perla • Vlna-Masaryk

MALOKARPATSKÁ

Internal regions: Bratislavský, Dolanský, Hlovecký, Modranský, Orešanský, Pezinský, Skalický, Stupavský, Trnavský, Vrbovský, Záborský

The Malokarpatská or "Little Carpathian" region has a winemaking tradition of almost 3,000 years. Riesling from Limbach has the greatest reputation,

followed by Modrý Portugal (Blauer Portugieser) from Oresany.

☞ Chardonnay, Modrý Portugal, Veltlínske Zelene, Ryzlink Rýnsky, Ryzlink Vlašský

✓ Karpatská Perla • Mrva & Stanko

NITRANSKÁ

Internal regions: Nitranský, Pukanský, Radošinský, Štátský, Tekovský, Vrábelský, Želiezovský, Žitavský, Zlatomoravský

This region produces a mixed bag of red and white, dry and sweet, still, and sparkling wines.

☼ Cabernet Sauvignon, Frankovka Modrá, Müller-Thurgau, Pálava, Ryzlink Vlašský, Rulandské Modré, Svätovavřinecké, Veltínske Zelene

✓ *Mrva & Stanke • Vinanza*

STREDOSLOVENSKÁ

Internal regions: *Fíl'akovský, Gemerský, Hotiansky, Ipeľ'ský, Modrokamenský, Tornaľ'ský, Vinický*

In the Stredoslovenská, otherwise known simply as the Central Slovakian wine region, Tramín is considered to be the best variety.

☼ Cabernet Sauvignon, Chardonnay, Ryzlink Vlašský, Svätovavřinecké, Tramín, Veltínske Zelene

✓ *Mrva & Stanke*

TOKAJSKÁ

This tiny region is surrounded on three sides by the Východoslovenská region, and on one by the Tokaj region in Hungary. Slovakian Tokajské is made from the same varieties as Hungarian Tokaji (Furmint, Lipovina, or Hárslevelű, and Muškát Žltý or Sárğa Muskotály). Wines made from other varieties are not sold as Tokajské.

☼ Devín, Furmint, Lipovina, Muškát Žltý, Rulandské Bílé, Tramín Červený (Red Traminer)

✓ *J. & J. Ostrožovič*

VÝCHODOSLOVENSKÁ

Internal regions: *Kráľ'ovskochľmecký, Michalovský, Moldavský, Sobranský*

The heavy clay soils of the Východoslovenská, or Eastern Slovakian, wine region are mostly thought to be suitable for white grapes, although red wines are made.

☼ Frankovka Modrá, Müller-Thurgau, Ryzlink Vlašský, Svätovavřinecké, Tramín, Veltínske Zelene

THE CZECH REPUBLIC

BRNĚNSKÁ

With two basic soil types, white grapes are mostly grown on lighter sandy soils, with black grapes grown on gravelly soils. Dolní Kounice is the most important wine town.

☼ Frankovka, Modrý Portugal, Müller-Thurgau, Muskat Moravské, Pálava, Svätovavřinecké, Tramín, Veltínske Zelene

BZENECKÁ

Orechov, Bzenec, Polesovice, and Vracov are the most important wine villages in Bzenecká, the Czech Republic's smallest wine region. Clayey, sandy, and gravelly soils predominate. The local specialty is Bzenecká Lipká, made from Ryzlink Rýnsky. Olsava and Vitra are new varieties created by Cultivation Station at Polesovice.

☼ Frankovka, Muskat Moravské, Olsava, Rulandské Bílé, Ryzlink Rýnsky, Svätovavřinecké, Veltínske Zelene, Vitra

ČÁSLAVSKÁ

A small enclave of vines growing at the foot of the Kutna Hora Mountain.

☼ Modrý Portugal, Müller-Thurgau, Svätovavřinecké, Sylvanske Zelene

KYJOVSKÁ

The best wines are made from vines grown at Vresovice, on south-facing slopes, at 1,800 feet

in altitude; the grapes produced in this region have a pronounced acidity.

☼ Müller-Thurgau, Svätovavřinecké, Veltínske Zelene

MĚLNICKÁ

The largest wine region in Bohemia, Mělnická has a certain reputation for oak-aged reds, but produces better Chardonnay.

☼ Chardonnay, Rulandské Bílé, Rulandské Modré, Rulandské Šedé, Ryzlink Rýnsky, Svätovavřinecké, Zweigeltrebe

MIKULOVSKÁ

With 6,180 acres (2,500 hectares) under vine, Mikulovská is the largest wine region in the country. Most wines produced are white, with the best coming from limestone soils, although sandy and marly soils are also quite common. The new Pálava variety (Tramin x Müller-Thurgau) was developed here.

☼ Chardonnay, Müller-Thurgau, Neuburské, Pálava, Ryzlink Vlašský, Silvánske Zelené, Tramín, Veltínske Zelene

✓ *Sklepy • Tanzberg*

MOSTECKÁ

This region has an extremely dry climate and volcanic (basalt) soils. A significant portion of the wine is traditionally produced under strictly Kosher conditions.

☼ Müller-Thurgau, Ryzlink Rýnsky, Svätovavřinecké, Zweigeltrebe

MUTĚNICKÁ

The vines grow on various clayey, sandy soils, with the best on calcareous clay. Although Mutěnická encompasses 14 communes, almost 90 percent of the vineyards are located in Cejkovice, where the vines have pronounced acidity. Most of the rest of the vines are located in Mutěnice, the location of Moravia's premier viticultural research station.

☼ Frankovka, Müller-Thurgau, Ryzlink Vlašský, Svätovavřinecké, Veltínske Zelene

PODLUŽÍ

The vines grow in mineral-deficient clayey, sandy, and gravelly soils on frost-prone sites in this small region bordering Austria and Slovakia. The best wines are made from Veltínske Zelene and originate in the clayey soils of Prušánsky.

☼ Frankovka, Rulandské Bílé, Rulandské Šedé, Ryzlink Rýnsky, Ryzlink Vlašský, Svätovavřinecké, Veltínske Zelene, Zweigeltrebe

PRAŽSKÁ (PRAGUE)

Although this is the smallest region in the Czech Republic, Prague used to be the largest wine-producing town in Bohemia in centuries past. Modrý Portugal is the most widely planted variety, but the best wines are made from Riesling and Pinot Blanc, while colder, less-suitable sites are planted with Kerner and Müller-Thurgau.

☼ Chardonnay, Modrý Portugal, Müller-Thurgau, Muskat Moravské, Rulandské Šedé, Ryzlink Rýnsky, Tramín, Svätovavřinecké, Zweigeltrebe

ROUDNICKÁ

Once famous for Sylvaner, Roudnická now grows a considerable amount of Müller-Thurgau, and has had some success with red wines produced on the valley slopes, with gold medal Rulandské Modré (Pinot Noir) giving short-lived hope in the mid-1990s. Most vines are grown on a marly limestone and chalk plateau, covered by loess and gravelly sand, near the Elbe river.

☼ Modrý Portugal, Müller-Thurgau, Rulandské Modré, Svätovavřinecké

STRÁZNICKÁ

The vineyards in this region are located on the heavy clay slopes of the Bílé Karpaty, where red wines can be hard. Growers therefore mainly grow white-wine varieties.

☼ Müller-Thurgau, Rulandské Šedé, Veltínske Zelene

USHERSKOHRADIŠŤSKÁ

Vines grow on the banks of the Morava river and in its hinterland, on sandy and gravelly sand slopes of Chirby and Bílé Karpaty. Primarily white wines.

☼ Müller-Thurgau, Rulandské Šedé

VELKOPAVLOVICKÁ

The best wines are made from Neuburské and Veltínske Zelene grown in the north of Velkopavlovická, the Czech Republic's second-largest wine region (5,810 acres/2,350 hectares).

☼ Frankovka, Modrý Portugal, Müller-Thurgau, Neuburské, Ryzlink Vlašský, Veltínske Zelene

✓ *Vinum*

ZERNOSECKÁ

Typical of Bohemia's sporadic viticultural character today, Zernošecká has just 16 wine producers (owning in total just 175 acres of vineyards spread over five wine villages), whereas the village of Litoměřice alone was once surrounded by more than 1,235 acres (500 hectares) of vines.

☼ Müller-Thurgau, Rulandské Bílé, Rulandské Modré, Ryzlink Rýnsky, Svätovavřinecké

ZNOJEMSKÁ

This region's best wines come from Znojmo, which is not so much a city as two cities in one. Znojmo resides above its own underground city, comprising 19mi of interconnecting catacombs.

☼ Müller-Thurgau, Ryzlink Rýnsky, Sauvignon Blanc, Veltínske Zelene

✓ *Znovín*

THE WESTERN BALKANS

Few regions in the world have undergone so much political turmoil and human tragedy over such a relatively short period as the Western Balkans. Until the early 1990s, the entire region was supposedly just one country—Yugoslavia. However, Yugoslavia comprised at least seven one-time sovereign nations and was populated by five ethnic groups.

FOLLOWING THE DEATH OF TITO, and the general collapse of Communism, it was inevitable that this artificial edifice would start to unravel, and the powder-keg of centuries of resentment would one day explode into bloody conflict. In these more peaceful times, newly independent countries at least have a chance to establish their own wine reputations. The fact that Slovenia, which for the most part avoided the skirmishes of war, is already competing on the world market with its wines should encourage other states that they could be equally successful once their wine industries return to their peacetime potential.

ALBANIA

Winemaking in Albania dates back to pre-Roman times. However, since most Albanians are Muslim, wine production has not been of great importance in recent historical terms, and, under a xenophobic Communist government for 46 years, there were

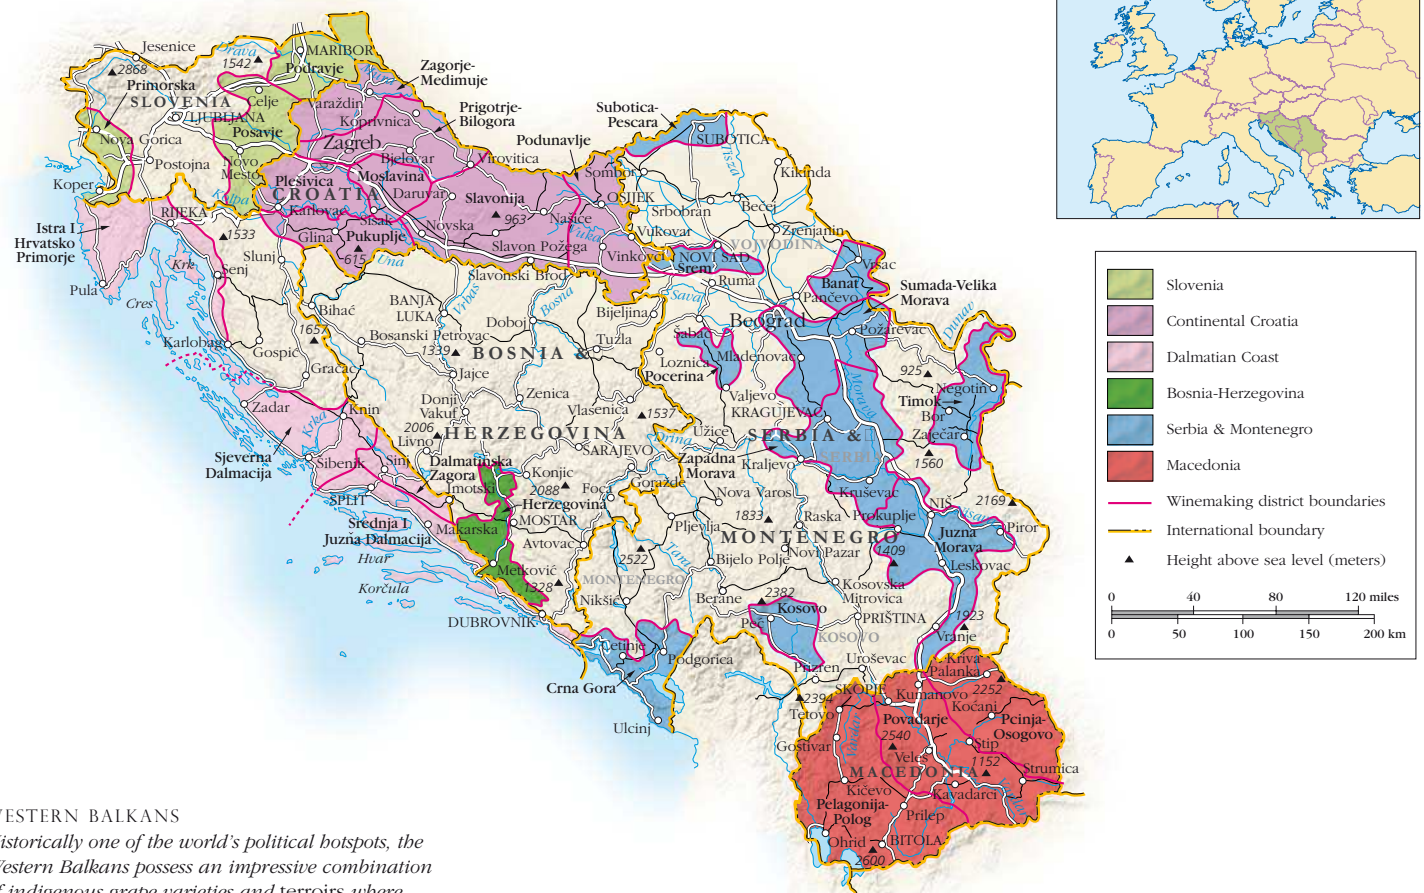

no exports. Thus the potential for this country's wine industry has been severely restricted. Since democracy was established between 1990 and 1992, successive governments have sought viticultural expert advice from the West, but the area under vine in Albania is now less than 14,800 acres (6,000 hectares), which is actually less than one-fifth of the area that was planted under Communist rule. Only a small fraction of vines are grown for wine, and they are located around the capital of Tirana, and in five surrounding districts: Durres, Berät, Korcë, Skoder, and Lushnje. Although well-known varieties such as Cabernet Franc, Mavrud, Merlot, and Welschriesling are to be found, indigenous varieties such as Shesh i Zi, Shesh i Barhe, and Kalmet (otherwise known as Kadarka) represent almost 60 percent of all Albanian vines, and three other local grapes (Vlosh, Serine, and Debine) account for most of the rest.

BOSNIA-HERZEGOVINA

Vines are restricted to the south, in the Brotnjo hills around Mostar, where the climate and rocky soil favor two indigenous varieties, Zilavka for white wine and Blatina for red. There are currently 3,460 acres (1,400 hectares) planted. Other significant varieties grown are Bena, Dobrogostina, Krkoshia, Podbil, and Rkaciteli for white wines, and Alicante Bouschet, Cabernet Sauvignon, Gamay, Merlot, Plavka, Trnjak, and Vranac for reds.

CROATIA

Prior to hostilities, Croatia was one of the two most prosperous states in Yugoslavia. Although it is today in a relatively stable

condition, many vineyards were destroyed during the worst upheavals of the Croatian war, when one million landmines were sown, and it will take until 2020 to clear them all. Massive replanting programs created new vineyards in the late 1990s. There are two main regions: Continental Croatia and the Dalmatian Coast. Watch out for the emergence of this wine country as it rides tail-winds of Dalmatia's newly found fame as home of the Zinfandel grape (which was originally known as Crljenak Kastelanski).

Inland Croatia

More than 90 percent of the production is white wine, with over half of the vineyards planted with Graševina (Welschriesling). Of the few black grape varieties, Frankova (Lemberger) is probably the most important. Other grapes grown here include Chardonnay, Gewürztraminer, Muscat Ottonel, Riesling, Traminer, and Sauvignon Blanc.

Coastal Croatia

White wine is also important here, accounting for no less than 70 percent of total production. The grape varieties grown are more diverse, with Malvasia the most widely planted, yet accounting for less than 10 percent of the vineyards. Other grape varieties include Debit-Grk (Ugni Blanc), Marastina, Plavač Mali, Pošip (Furmint), Vugava (Viognier), and Zlahtina (Chasselas). New plantations in this region include Cabernet Sauvignon and Merlot, and there have been serious attempts to revive Crljenak Kastelanski (Zinfandel).

♣✓ *Grgić Vina Winery*

MACEDONIA

Following the secession of Slovenia and Croatia in 1991, Macedonia received full international recognition in 1993. The grape varieties grown in this country include Grenache, Kadarka, Kratošija, Plovdivina, Prokupac, Temjanika, and Vranac. Phylloxera, which devastated European vineyards in the late 19th century, did not reach Macedonia until 1912.

The most popular Macedonian wine is Kratošija, which is a deep-colored red made from native Vranac and Kratošija varieties. It has a distinctive taste and aroma, full body, and a smooth flavor. It is bottled in its second year, when the bouquet is at its fullest, and is best drunk when very young. Prokupac and Kadarka make interesting reds, Belan produces a neutral white Grenache wine, and Temjanika an aromatic white.

SERBIA AND MONTENEGRO

Although the Federal Army made abortive attempts to put down independence in Slovenia and Croatia, and supported the Bosnian Serbs, it did not fight any battles on its home ground until the Kosovo conflict. Most Serbian vineyards thus remain unaffected. There are four major viticultural regions: Kosovo, Vojvodina, Montenegro, and Serbia itself.

Kosovo

Although part of Serbia, Kosovo is governed by the United Nations Interim Administration Mission, and this is set to continue until its future status has been confirmed by the international community. Until the conflict, the Rahovic winery had a lucrative contract to supply the German Racker group with over 5–7 million gallons of light red Kosovar wine, which was sold under the Amsfelder brand, but due to the uncertain political situation, production was transferred elsewhere. In these more peaceful times, Kosovo finds itself with a substantial wine industry, but no ready market.

Montenegro

There are three winegrowing districts in Montenegro: Crnogorsko, Titogradski, and Primorje. The main grape varieties grown here

DALMATIAN VINES PROTECTED BY DRY-STONE WALLS, CROATIA
Many vineyards built on the stony coastal hillsides of Croatia are protected by low dry-stone walls. These walls are painstakingly constructed by peasant farmers to protect low-growing vines from the cold north winds and to keep them cool in the heat of summer. Without such techniques, it would be impossible to cultivate this difficult ground.

are Kratošija, Krstač, Merlot, and Vranac. The best-known vineyards of this region are those that are located on the terraced southern slopes of Lake Skadar. The Vranac and Merlot wines can be good, but Montenegro is better known for its grape brandy than for its wine.

Serbia

I think that the best potential here is for Cabernet Sauvignon and Merlot when grown in Južna Morava and, possibly, Timok, but the best level of quality currently being achieved is by producers of the snappy, fresh Sauvignon Blanc from Kruševac in Zapadna Morava.

♣✓ *Rubin* (Sauvignon Blanc)

Vojvodina (Voivodina)

North of Serbia, bordering Croatia, Hungary, and Romania, the vines grown include Ezerjő, Graševina (Welschriesling), Kadarka, Merlot, Riesling, Sauvignon Blanc, Sémillon, and Traminer. The Traminer is a more interesting alternative and the soft, fruity Merlot a good buy for red-wine drinkers.

SLOVENIA

By far the wealthiest part of former Yugoslavia, with per capita income close to that of Austria, Slovenia is the rising star among the winemaking countries of the Western Balkans.

Inland Slovenia (Kontinentalna Slovenija)

Squeezed between Austria, Hungary, and Croatia are two winegrowing districts, each comprising several smaller areas: Podravina (Bela Krajina, Haloze, Lutomer-Ororske, Maribor, Prekmurje, Radgona-Kapela, Slovenske) and Posavina (Belakrajina, Bizeljsko-Sremic, Dolenjska, Smarje-Vrstajin).

♣✓ *Curin* (Sauvignon) • *Meranovo* (Sauvignon) • *Jožef Prus* (Ledeno Vino Renski Rizling)

Coastal Slovenia (Primorska Slovenija)

This region is close to the Italian border and consists of four winegrowing districts: Brda, Karst, Koper, and Vipava. The climate of Coastal Slovenia is of a mild Mediterranean type, except in Vipava and Briški Okoliš, which come under the moderating influence of the Alps.

♣✓ *Movia* (Veliko Belo) • *Simčič* (Teodor Rdeče Reserve) • *Stojan Ščučrek* (Stara Brajda—white) • *Vipava* (Lathieri Sauvignon Zemono)

THE BLACK AND CASPIAN SEAS

Although Russia is the largest wine-producing country in this region, the wines of Moldova are better known internationally, while the legendary wines of Krym in the Ukraine boast the most illustrious history.

GEORGIA AND ARMENIA have at least equivalent winemaking potential as these countries, but they are at the back of the line when it comes to heavy-duty international investment, and that is what it will take to upgrade the wine industries in this region. Without a radical overhaul of the technologies deployed in the vineyards and wineries, none of these countries will be able to produce wines of export quality.

ARMENIA

At the height of the Soviet Union's hegemony, Armenia's vineyards covered 90,150 acres (36,500 hectares), but this declined following the collapse of Communism, and by 2003 amounted to just 29,650 acres (12,000 hectares). More than 200 grape varieties are grown here, many of them indigenous, but only 30 are wine grapes, and these include Adisi, Anait, Areni, Azateni, Dmak, Garan, Kahet, Karmrayut, Megrabuir, Mskhali, Muscat (various), Nerkeni, Rkatsiteli, Tokun, and Voskeat. The Ararat Valley is the most important winegrowing region, claiming up to 60 percent of the country's vineyards, but as with Armenian wine in general, most of the production is distilled. High-strength table wines and strong dessert wines are made, but grape brandy is this country's most important alcoholic product.

AZERBAIJAN

Official statistics for the area under vine are notoriously inaccurate, having gone from 447,000 acres (181,000 hectares) in 1990 to less than 29,650 acres (12,000 hectares) in 2001. In 2004 the French Castel Group was hired to consult on expanding these vineyards, in the hope of exporting an improved quality of Azerbaijan wine to Russia. Azerbaijan has yet to resolve its conflict with Armenia over the largely Armenian-populated Azerbaijani Nagorno-Karabakh enclave, where vines are also planted.

GEORGIA

Georgia has one of the oldest winemaking traditions in the world. There is evidence that the first vines could have spread from here or, at least, been preserved in this area during the last major ice age. Georgia has numerous valleys, each with its own favorable microclimate, and it is said that they contain 1,000 indigenous grape varieties. This should one day propel this country to the forefront of the East European wine scene, but isolated pockets of enthusiasm have yet to be translated into a solid range of quality wines on the shelf.

KAZAKHSTAN

This is the country made famous by Borat, a character played by British comic genius Sacha Baron Cohen, who claims that in Kazakhstan, wine is made from horses' urine! The wine is not in fact that bad, but if any Kazakh entrepreneur decided to sell a wine labelled "Horses' Urine" (not too far away from the New Zealand "Cat's Pee"), they would probably double their country's exports overnight. The largest concentration of Kazakhstan's vineyards is in the extreme east, between Chimkent and Alma-Ata, in the foothills of the Tien Shan Mountains.

MOLDOVA

A small country the size of Belgium, Moldova is, in fact, an extension of Romania's Moldova and, historically, the two parts were one. There are six winemaking districts: Pucari, Balti, Ialoveni, Stauceni, Hincesti, Romanesti, and Cricova.

Pucari is 100 miles (160 kilometers) south of the capital in the heart of red wine country. Negru de Pucari is a deep-colored and firm-structured red wine blended from Cabernet Sauvignon and Saperavi; Purpuruu de Pucari is a softer Pinot-Merlot blend; and Rosu de Pucari is a dark rosé made from Cabernet Sauvignon, Merlot, and Malbec. Romanesti's vineyards lie 30 miles (50 kilometers) farther north. Romanesti was named after the Romanov Tzar Alexander I, who restarted the Moldovan wine industry by establishing his own winery here. Vines include Aligoté, Cabernet Sauvignon, Malbec, Merlot, Pinot Noir, and Rkatsiteli, but it is the Bordeaux varieties that tend to fare best.

Halfway between Kishinev and Romanesti is Cricova, where unremarkable and often faulty sparkling wines are made in the most remarkable and elaborate underground city. Its entrance is a massive pair of steel doors in a rock face, through which the largest eighteen-wheelers can drive, winding their way 262 feet (80 meters) below the surface, where a city has been hewn out of solid rock. Its size corresponds to the area covered by 25 villages on the surface and it is serviced by 40 miles (65 kilometers) of underground roads, complete with stop lights and road signs. In addition to these roads, there are 75 miles (120 kilometers) of galleries, which almost equals the entire storage capacity of the Champagne region of France. Why, I asked myself, is this workplace equipped with opulent reception halls, a dining room the like of which I have not seen anywhere else during the Eastern Bloc era, and a cellar containing priceless old vintages of Mouton Rothschild, Latour, Romanée-Conti, and so on? I had absolutely no doubts that this was where the Politburo would head in a nuclear exchange.

♣ *AurVin* (Firebird) • *Cricova-Acorex* • *Dioysis Mereni*

RUSSIA

Climate is something of an obstacle to vinegrowing in Russia, as winters are generally very cold indeed, often -22°F (-30°C), and the vines in many regions have to be buried in the earth to survive the bitterly cold months. Summers are very hot and dry and, but for the tempering effect of the Black and Caspian Seas, climatic conditions would probably be impossible for viticulture. There are five major winegrowing districts in Russia: Checheno-Ingush, Dagestan, Krasnodar, Rostov-na-Donu, and Stavropol, with grape varieties that include Aligoté, Cabernet, Muscatel, Pinot Gris, Pinot Noir, Plechistik, Pukhljakovsky, Rizling, Rkatsiteli, Sylvaner, and Tsimlyansky. In general, Russian producers concentrate on white and sparkling wines in the north and west, and red in the south and east.

In the mid-1950s, a system that has become known as the "Russian Continuous Flow Method" was developed for producing sparkling wine cheaply, easily, and quickly by a natural second fermentation. Krasnodar's most reputable vineyards are on southwest-facing coastal slopes overlooking the Black Sea. Abrau is known for its dry Rizling (Riesling), Cabernet, and Durso sparkling wine. Anapa, just along the coast to the north, also makes Rizling, while down the coast at Gelendzhik, Aligoté is the local specialty. To the east of Krasnodar and north of the Caucasus, Stavropol is known for its dry Rizling and Silvaner, as well as the Muscatel Praskoveiski dessert wines. Other dessert wines include the spicy Mountain Flower; and Rostov-na-Donu, located around the confluence of the rivers Don and Kan and the Taganrogskiy Zaliv estuary, is famous for its rich Ruby of the Don dessert wines. Plechistik is a grape variety that is used to lend backbone to Tsimlyansky and, throughout the state, it also makes decent, dry red wines.

On the east-facing slopes of the Caucasus Mountains, overlooking the Caspian Sea, are the vineyards of the Republic of Dagestan. This is a black grape area that is known for the full body and flavor of its dry red wines; the best come from Derbent in the south. Checheno-Ingush is another republic with vineyards on the Caucasus, but these are found inland, along its northern slopes, to the southeast of Stavropol. Most of the wines produced in this area are of the port type.

♣ *Château le Grand Vostock*

UKRAINE

As viticulture represents one-fifth of this recently re-established nation's agricultural economy, it will be instrumental in building up overseas trade. This is necessary to replace Ukraine's trade with Russia, upon which it is still dependent. The state's wine industry is mainly concerned with producing still white wines, although red wines and white sparkling wines are also produced in the Crimea, and dessert wines are a local specialty. Crimea (Krym) is the peninsula that encloses the Sea of Azov. Sparkling "Krim" is a traditional method wine made in five styles, from Brut through to Sweet, and in a semi-sweet red version. The grapes used include Chardonnay, Pinot Noir, Rizling, Aligoté, and Cabernet. The wines are coarse, and the traditional addition of brandy does not help, but the Brut and Demi-Sec Red are widely available on export markets and sell on novelty value. The Ruby of Crimea, which is a blend of Saperavi, Matrassa, Aleatika, Cabernet, and Malbec, is a robust, rustic, full-bodied red that is quite commonly encountered in various countries.

Nikolayev-Kherson, just northeast of Crimea, and Odessa, near the Moldova state border, produce various white, sparkling, and dessert wines. The best known local wines are dry white wines such as Perlina Stepu, Tropjanda Zakarpatja, and Oksamit Ukrainy.

That this region is capable of not merely good but great wines of exceptional longevity is beyond doubt. In 1990, David Molyneux-Berry MW brought back some extraordinary wines for auction at Sotheby's in London. These came from the famous Massandra cellars, which were built on the outskirts of Yalta in the Crimea for the Russian imperial court at the end of the 19th century. This was not a winery, merely an aging facility acting as the central hub to a complex of 25 satellite wineries. The wineries were in the surrounding hills of Krymskiye Gory, where the vineyards were located, thus the grapes did not have to be transported, and almost every ounce of their potential quality was retained. This would be an ambitious project even by today's standards.

The wines Molyneux-Berry showed at a pre-auction tasting were nothing less than sensational. The Massandra Collection, as it has become known, consisted of fortified wines and I do not mean to be disparaging when I say that their maker deliberately mimicked classic styles such as Madeira, port, and so on. How could you put down a 1932 white-port-style wine that had more class, fragrance, and finesse at almost 60 years old than anything white and fortified that has ever been made in Oporto? The 1940 was let down by a spicity nose, but I would not keep a genuine white port five years, let alone 50, and it blew away the 1932 on the palate anyway. The 1929 Muscat had as much toffee, caramel, and exotic fruit as the best Australian Muscats, but a balance that undeniably placed it in the northern hemisphere. The best Massandra wines I tasted that day were both Madeiras, a 1937 and a 1922 (No.31), but although I would like to see such wines made again (fortified wines are still made, but not of comparable quality), I do not for one moment suggest that the entire Crimea should be turned over to the production of classic-quality fortified wines. What I do mean, however, is that great wines can be made in the Ukraine, in certain parts, given the right vines, yield, and proper winemaking expertise.

The WINES of
THE EASTERN
MEDITERRANEAN

WHEN THIS ENCYCLOPEDIA WAS FIRST PUBLISHED IN 1988, you could count the recommended wine producers in Greece on the fingers of one hand. There was general despair at how the first civilization to develop viticulture and winemaking could be reduced to such a pathetic state. Now it is one of Europe's most exciting wine-producing countries and, with thousands of unidentified ancient grape varieties preserved in its nurseries, it should be able to delight and surprise wine lovers for centuries to come. Turkey has the potential to rival Greece, but its political and religious constraints will not allow that to happen in our lifetime. The two most up-and-coming wine-producing countries are Lebanon and Israel; wines from here have flourished since the new millennium, as new boutique wineries have started to blossom—quite miraculously, all things considered. There is even improvement in the quality of Egyptian wine, not that it could have become much worse!

VINEYARDS ON THE ISLAND OF CEPHALONIA, GREECE
The wines of origin produced in this appellation range from fresh and fruity dry whites to sweet red liqueur wines.

GREECE

The speed with which the best boutique wineries in this country have turned around the reputation of Greek wines is nothing less than breathtaking. And the future promises to be even better, as they start experimenting with more than 300 untested, but possibly very exciting, indigenous grapes.

THIS IS GOOD NEWS, of course, but it used to be so easy when friends went to Greece for a vacation and asked what they should drink—"If it hasn't got Boutaris, Tsantalis, or Porto Carras on the label," I would say, "don't drink it. And if it's Retsina, pour it down the toilet as a pine disinfectant." While wines from these three producers are still worth drinking, there are now a lot of new boutique wineries to watch out for—and even most of the cooperatives, once the scourge of the Greek wine industry, are making clean, drinkable wines these days. Mind you, Retsina is still more useful as a disinfectant!

ANCIENT GREEK WINES

Between the 13th and 11th centuries BCE, long before a single vine existed in what are now the most famous wine regions of the world, Greek viticulture was at its peak and, along with wheat and olives, was of fundamental importance to the economy. The classic wines of ancient Greece were great wines indeed, relative to their era, and worthy of note in the writings of Hippocrates, Homer, Plato, Pliny, Virgil, and many others. Sources such as these show how sophisticated the viticulture at that time was. Vines were trained in parallel rows, just as they are today, with care taken to ensure proper spacing between each plant, and at least six different methods of pruning and training were employed, depending upon the variety of grape, type of soil, and strength of the wind.

The Greeks taught the Romans all they knew about viticulture, and the Romans took this knowledge to France, Germany, and other parts of the Empire. Wine was the economic foundation of Greek civilization, but with the decline of this civilization went the famous wines of antiquity, and Greek wines now represent a mere two percent of the nation's gross national product.

GREEK WINE TODAY

Over 15 years ago, in the first edition of this encyclopedia, I told a story about the occasion on which I asked Yannis Boutaris, then one of the country's few decent wine producers, why Greek wines were invariably oxidized, maderized, or sometimes just plain bad. Boutaris stretched, raised a gentle smile, and replied that most Greeks actually liked oxidized wines—and that if most Greek producers made fresh, clean wines, they would not be able to sell them on the domestic market and would have to export them. He doubted this would work because most foreigners considered Greek wines to be either dross or Retsina, so no one would buy them.

He was probably right: Greek wines have improved so much over the last decade, yet exports have made little progress. Consumption in Greece has declined sharply, as is the trend in other European countries, as younger consumers refuse the oxidized products their fathers still guzzle; instead they drink less, but better, wine. In such circumstances, the only way the Greek wine industry has survived an influx of new producers has been by reducing production, which, with the help of EU grants to uproot vineyards, is down a third in the last ten years.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

Greece is located halfway between southern Italy and Turkey. Vines grow throughout the mainland and its many islands, but most are in Macedonia and Peloponnisos.

CLIMATE

Mild winters followed by subtropical summers, during which the heat in many vineyards is tempered by sea breezes called *meltemi* and they are bathed in around 3,000 hours of sunshine. Extremes are mountain vineyards in Macedonia, where grapes sometimes fail to ripen, and on Crete, where the summer brings 5 months of intense heat and drought.

ASPECT

Vines grow on all types of land, from flat coastal sites on the mainland, through rolling hills and river valleys, to mountain slopes. The best sites are north-facing (to avoid the sun) slopes up to 2,000 ft (610 meters) above sea level.

SOIL

Mainland soils are mostly limestone, while those on the islands are rocky and volcanic.

VITICULTURE AND VINIFICATION

The Greek cooperatives have long been in possession of thermostatically controlled stainless-steel vats as well as other modern equipment, but they have only started to take advantage of this technology since the mid-1990s. The majority of the best Greek wines on the market today are made by small, high-tech, boutique wineries.

GRAPE VARIETIES

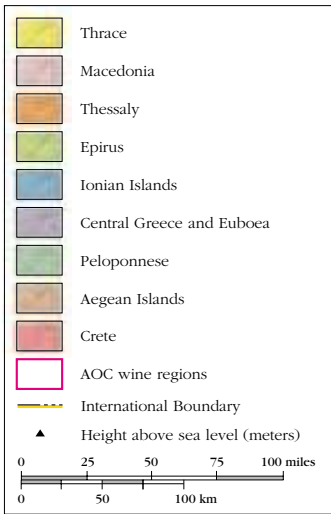

Primary varieties: Agiorgitiko, Assyritiko, Liatiko, Limnio, Malvasia, Mandelaria, Mavrodaphne, Muscat (various subvarieties), Rhoditis, Robola, Xynomavro
Secondary varieties: Cabernet Franc, Cabernet Sauvignon, Chardonnay, Syrah

It was the shipping magnate and multimillionaire John Carras who established the first boutique winery, with the ambition of making the best wine in Greece. Not a great ambition in those days, but he believed that Greek viticulture could recapture its former glory. He built the winery quite close to his luxurious Porto Carras vacation complex on Sithonia, the middle prong of the three peninsulas that jut into the Aegean Sea from the Macedonian mainland. With advice from Professor Émile Peynaud, Carras surrounded the hilly terrain of his winery with 142 acres (350 hectares) of vineyards, including a large proportion of Bordeaux

HARVEST TIME

Harvesting the vineyards of Domaine Porto Carras, which were bulldozed out of the slopes of Sithonia, the middle prong of Halkidiki's three peninsulas.

GREECE

The mainland areas and islands that form modern-day Greece provide a plethora of wine regions. Cooler northern regions produce the best wines, while the island of Samos produces great sweet wines.

varieties. When Peynaud said that some of the hills were in the wrong place or not the right shape, Carras ordered bulldozers to rectify the problem. The first vintage was 1972, but the Greek winemaker made mistakes and was fired; Peynaud poured away most of the wine. The few barrels he retained were mixed with the next vintage, which was processed by Evangelos Gerovassiliou, who had trained in Bordeaux as one of Peynaud's oenology students.

Château Porto Carras became a legend and Gerovassiliou made the wine for many years. He has also set up his own boutique winery, which is equally excellent, and he is involving himself in other quality-led ventures. Other newcomers include Nicholas Cosmetatos of Cephalonia, who was one of the first Greeks to wonder why his fellow countrymen drank oxidized wines.

 Union, the vintage on the label should mean that
 at least 85 percent of the wine comes from the
 year indicated.

RECENT GREEK VINTAGES

2003 A very good year that was unblemished by the heatwave that enveloped much of the rest of Europe. It was significantly hotter, and hotter for much longer, in the UK than in Greece, but the tempered conditions here produced beautifully ripe fruit for both red and white wines. Nemea and Amynteo are the stand-outs.

2002 A variable year, with white wines generally faring better than reds, and the up-and-coming regions of Drama, Kavala, and Epanomi excelling.

2001 An excellent year for red and white wines, with Crete and the islands performing exceptionally well. Other stand-outs include Naoussa and Nemea.

2000 A very good year for white wines, but a truly great vintage for reds. Consistent across the country.

1999 A variable year in which the whites have the edge.

Perhaps understandably, his first wine, Gentilini, started out so clean it was clinical, but it has moved on to become one of the country's finest, zippiest whites. Squeaky-cleanliness was a problem for Calligas, too, but its top white, Château Calligas, has been fatter since the early 1990s and this has been lifted by a nifty touch of residual gas. In recent years, numerous small wineries of exceptional talent have cropped up. Some have been around for a while, others are very new, but the best of these include names such as Aidarinis, Antonopoulou, Castanioti, Chrisohoou, Emery, Hatzimichali, Château Lazaridi, Mercouri, Oenoforos, Papaioannou, Château Pegasus, Semeli, Sigalas, and Skouras, with many others, no doubt, waiting in the wings.

RETSINA—BOON OR BURDEN?

Retsina is wine (usually white) to which pine resin is added during fermentation. This practice dates back to antiquity, when wine was stored in jars and amphorae. As they were not airtight, the wines rapidly deteriorated. In the course of time, people learned to seal the jars with a mixture of plaster and resin and the wines lasted longer. This increased longevity was attributed to the

antiseptic effect of resin, the aroma and flavor of which quickly tainted the stored wine. It was, of course, a false assumption, but in the absence of Pasteur's discoveries (then some twenty-five centuries in the future), it appeared to be supported by the fact that the more resinous the wine, the less it deteriorated. Within a short time, the resin was being added directly to the wine and the only difference between modern and ancient Retsina is that the resin is now added directly to the wine during fermentation, rather than after. The best Retsina is said to come from three areas, Attica, Evia, and Viota, and the best resin, which must be from the Alep or Aleppo pine, comes from Attica.

Strictly speaking, Retsina is not wine. It would be if its pine character were the result of maturation in pine casks, but having pine resin added makes it an aromatized wine, like vermouth. In the first edition, I joked about the possibility of a wine matured in pine casks, but I have since discovered on La Palma "Tea Wine," which is exactly that. Insignificant in volume—and oddity though it is—if it can be done in the Canary Islands, why not in Greece?

DOMAINE PORTO CARRAS

Looking out across the blue waters of the Aegean to the fishing village of Maramas from the vineyards of Domaine Porto Carras, which also consists of a luxurious leisure and sports complex.

THE APPELLATIONS OF GREECE

AO = Appellation of Origin

TA = Traditional Appellation

TI = Topikos Inos (Regional Wine, similar to the French *vin de pays*)

AMYNDEO AO *or* AMYNTAION AO

Macedonia

One of the most exciting, up-and-coming wine regions in Greece, Amyndeo is also the most northerly of this country's appellations, with vines growing at an altitude of 2,046 to 2,343 feet (620 to 710 meters). Until relatively recently, virtually all the output has been from the Amyntaion cooperative, and although the quality has been sporadic, the occasional gem has given hope of what might be. That hope has now been realized by the brilliant, *terroir*-driven Alpha Estate, which planted 11 international and indigenous grape varieties in the late 1990s, using the latest partial rootzone drying techniques and low yields to produce some beautifully structured wines. Most of

these wines are not pure Xinomavro, thus cannot claim the Amyndeo appellation, but they are all outstanding. The non-appellation reds are particularly impressive, although I have a feeling that the wines released so far offer only an inkling of the quality that is to come. Yannis Boutaris is also trying hard at the Vegoritiss winery, established in 1997.

☞ Xinomavro

☞ 2–12 years (non-AO whites 1–3 years)

☑ Alpha Estate (Unfiltered Xinomavro)

ANCHIALOS AO *or* ANHIALOS AO

Thessaly

This is a medium-bodied, dry white wine from the Nea Anchialos area on the Gulf of Pagassitikos near Volos. The local cooperative wine is clean, though unexciting. Babatzim wines are clean, acceptable, and improving.

☞ Savatiano, Rhoditis, Sykiotis

☞ 1–2 years

ARCHANES AO *or* ARHĀNES AO

Crete

The local cooperative makes the usual range of clean but unexceptional table wines, including a very ordinary red under the Archānes appellation. Vangelis Lidakis's non-appellation blend of Kotsifáli and Cabernet is the stand-out in this region.

☞ Kotsifáli, Mandilariá

☞ 2–7 years

☑ Boutari (Domaine Fantaxometochi) • Vangelis Lidakis

CÔTES DE MELITON AO *or* PLAYIES MELITONA AO

Macedonia

This appellation covers the red, white, and rosé wines of Sithonia, the middle of Halkidiki's three peninsulas, and was established by Domaine Porto Carras, the brainchild of the late

John Carras. Although secondary to the tourist resort of Porto Carras, the winery was profitable, whereas the tourist resort swallowed all the money, eventually bankrupting both ventures, which were sold to the Technical Olympic group in 2000. In the early 1980s, Domaine Porto Carras and, in particular, its flagship Château Porto Carras, became the first Greek wines of modern times to establish a truly international reputation. This was thanks to the aspirations of John Carras, which urged him to hire Bordeaux consultant Professor Peynaud, and Peynaud's choice of his ex-pupil Evangelos Gerovassiliou (see Epanomi TI, below) as winemaker. With the exception of the rich, classy Syrah, the Domaine wines are generally light, and are best enjoyed young, whereas the top-of-the-range Château Porto Carras has always been a rich-flavored, full-bodied, deep-colored red wine of true *vin-de-garde* quality.

Assyrtico, Athiri, Cabernet Franc, Cabernet Sauvignon, Cinsault, Grenache, Linnio, Petite Sirah, Rhoditis, Sauvignon Blanc, Savatiano, Ugni Blanc, Xinomavro

1–2 years (Château Porto Carras: 5–8 years for lighter vintages; 10–20 years for bigger)

✓ *Domaine Porto Carras*

DAFNÉS AO

Crete

Douloufakis is the best-known producer of these red wines, which may be dry or sweet.

✓ *Liatico*

DRAMA TI

Macedonia

Huddled between the Falakro, Menekio, and Peggio mountains, this regional appellation is grabbing attention primarily due to the huge investment in two of its wineries—Domaine Constantin Lazaridi (also known as Kosta or Kostas Lazaridis) at Adriani and Château Niko Lazaridi (also known as Nico or Nicos Lazaridis) at Agora—and the excellent, sometimes superb, wines that they have produced. But they are by no means the only excellent producers in this exciting new area.

Agiorgitiko, Assyrtico, Cabernet Sauvignon, Chardonnay, Linnio, Merlot, Rhoditis, Sauvignon Blanc, Sémillon, Ugni Blanc

2–7 years (red), 1–2 years (white)

✓ *Kostas Lazaridis* (Cava Amethystos) • *Château Nico Lazaridi* (Maghiko Vuono red & white) • *Paulidis* (Assyrtiko) • *Wine Art Estate* (Idisma Drios Merlot, Techni Alipias Chardonnay and roze)

EPANOMI TI

Macedonia

This wine region has been put on the map single-handedly by Evangelos Gerovassiliou, the winemaker who made the first great Greek wine of modern times: Château Porto Carras. Gerovassiliou planted experimental vines on his family's property in 1981, while still working for Domaine Porto Carras, and has had no formal relationship with that winery since the Carras family relinquished ownership (see Côtes de Meliton) in 1999. The low, hilly land of Epanomi might not be the greatest place in Greece to grow wine grapes, but under Gerovassiliou, it definitely produces some of the country's greatest wines, both red and—particularly—white. The outstanding red is Syrah, while excellent whites include Fumé,

Malagousia, and Viognier, but all Domaine Gerovassiliou wines come highly recommended.

✓ Negoska, Xinomavro

3–8 years

✓ *Gerovassiliou*

GOUMENISSA AO

Macedonia

A light-bodied red wine from the Goumenissa district, northeast of Naoussa. Usually a wine of good fruit and a certain elegance, the best undergo a light maturation in cask and can be relatively rich in flavor.

✓ Negoska, Xinomavro

3–8 years

✓ *Aidarini* • *Boutari* (Filliria)

KEFALONIA AO or CEPHALONIA AO

Ionian Islands

There are three wines of origin in this appellation: Kefalonia or Robola of Kefalonia, Mavrodaphne of Kefalonia, and Muscat of Kefalonia. Kefalonia or Robola of Kefalonia is a dry white wine that can be fresh and floral, with an almost racy nose and a tangy, lightly rich, delicate-lemon fruity flavor. In the past, this wine has all too often been spoiled by sloppy winemaking, but most producers have cleaned up their act. The Mavrodaphne of Kefalonia is a sweet red liqueur wine similar in character to the Mavrodaphne of Patras (but not quite in the same class), while Muscat of Kefalonia is one of the lesser-known, sweet liqueur wines from the Muscat grape. Gentilini's non-appellation Syrah is probably the best single wine produced here.

✓ Mavrodaphne, Muscat Blanc à Petits Grains, Robola

1–2 years (Robola), 1–10 years (Mavrodaphne), upon purchase (Muscat), 2–7 years (Syrah)

✓ *Gentilini*

KRANIA TI

Thessaly

Dimitrios Katsaros produces a godlike Cabernet-Merlot blend and a very good, improving Chardonnay from vines growing on the slopes of Mount Olympus.

✓ Cabernet Sauvignon, Chardonnay, Merlot

2–7 years (reds), 2–4 years (whites)

✓ *Katsaros*

LIMNOS AO or LEMNOS AO

The Aegean

There are two wines of origin produced in this appellation: Limnos and Muscat of Limnos. Limnos is an unfortified Muscat wine that may be made in dry, off-dry, and semi-sweet styles. It is usually soft and flowery, with an attractive Muscat aroma, followed by clean fruit. Muscat of Limnos is a superior liqueur Muscat wine that is richer and sweeter than Patras, though not in the class of Samos. So-called Muscat of Limnos Grand Cru is its sweetest style.

Upon purchase

✓ *Limnos Cooperative* • *Tsantali*

MANTINIÁ AO

Peloponnese

This is a dry white wine from mountain vineyards in the center of the Peloponnese. The vines grow at an altitude of 2,130 feet (650

meters) and there are some very fresh, young wines with nice, lively fruit. Tselepos's non-appellation wines, such as Vareli, Cabernet-Merlot blend, and Merlot, are at least as good as its Mantinia.

Minimum of 85% Moschophilero, plus optional Aspróudes

Upon purchase

✓ *Antonopoulos* • *Cambas* • *Spyropoulos* • *Tselepos*

MESSENIKOLA AO

Peloponnese

This appellation was introduced in 1994, but has not exactly taken off. The primary variety, Mavro Messenikola, is grown at between 825 and 990 feet (250 and 300 meters).

70% Mavro Messenikola, 30% Carignane and Syrah

NAOUSSA AO

Macedonia

These generally reliable wines are grown west of Thessalonika, at a height of 1,150 feet (350 meters) on the southeastern slopes of Mount Velia. Although I give only rock-solid recommendations, I cautiously suggest that almost any Naoussa could be worth the gamble; the growers took a pride in their wine long before their peers did elsewhere. Good Naoussa is well-colored, rich, and aromatic, with heaps of spicy fruit and a long finish. Great Naoussa is world class. Yannis Boutaris's Kyr-Yanni is one of Naoussa's greatest, up-and-coming wineries, and his Yanakohori—a Xinomavro-Merlot blend—is at least as good as his excellent Xinomavro Ramnistas.

Xinomavro

4–15 years

✓ *Chrisoboou* • *Dalamaras* • *Karydas* • *Kyr-Yanni* (Xinomavro Ramnistas)

NEMEA AO

Peloponnese

This is a relatively reliable appellation and there is a local pride similar to that in Naoussa. Grown in the Corinth district at an altitude of between 820 and 2,620 feet (250 and 800 meters), the Agiorgitiko grape provides a deep-colored, full, and spicy red wine that can be spoiled by dried-out fruit, or by a lack of fruit. Known locally as the Blood of Hercules, because his blood was shed when he killed the Nemean lion, this wine has been produced for 2,500 years. Kokotos's *vins de pays* under his Château Semeli label are even better than his Semeli Nemea, and Skouras's Megas Oenos (see Other Wines, p436) is at least as classy as its Nemea.

Agiorgitiko

5–20 years

✓ *Gaia* (Estate) • *Kokotos* (Semeli) • *Kourtakis* (Kouros) • *Papaioannou* (Palea Klimata) • *Parparoussis* (Epilegmenos) • *Skouras* (Aghiorgitiko, Grande Cuvée)

PANGEON TI

Macedonia

This regional wine area is south of Drama, in an ocean-influenced, mountainous microclimate, the elevation and weather of which result in a significantly longer growing season. Pangeon was effectively discovered and established by Vassilis Tsaktsaris and Evangelos Gerovassiliou (see Côtes de Meliton AO and Epanomi TI), who started

planting their vineyard at Kokkinohori as recently as 1999. Pangeon promises an even more exciting quality than Drama.

🍷 Agiorgitiko, Cabernet Sauvignon, Chardonnay, Merlot, Sémillon, Syrah

🕒 3–8 years

📖 *Biblia Chora*

PAROS AO

The Cyclades

This is a deep-colored, light-bodied red wine from the Mandilaria grape, which I have tasted only once. My notes record a very strange, but difficult to describe, taste. A rich, dry, white wine from the Monemvassia grape (which some believe to be the original Malvasia), is also produced, but I have not tasted it.

🍷 *Mandilaria, Monemvassia*

PATRAS AO

Peloponnese

There are four different wines of origin produced in this appellation in the hilly hinterland of Patras in the Peloponnese: Patras, Mavrodaphne of Patras, Muscat of Patras, and Muscat Rion of Patras. Patras plain and simple is a light, dry white wine made exclusively from the Rhoditis grape. These wines were once dull and flabby, but are now clean and crisp, although seldom excite, with Antonopoulos's Alepou about as good as it gets (and nowhere near the quality of its non-appellation Cabernet-Nea Dris; see Other Wines, below). Mavrodaphne of Patras is a rich, sweet, red liqueur wine with a velvety smooth, sweet-oak finish. Often compared to a Recioto della Valpolicella, a good Mavrodaphne is in my opinion far better, although it does have a similar raisiny-sherry oxidative aroma. One delightful aspect of this wine is that it can be drunk with equal pleasure when it is either young and fruity or smooth and mature. Muscat of Patras is a gold-colored, sweet, liqueur Muscat wine that can be delicious in its typically raisiny way, as can the Muscat Rion (or Rio) of Patras, which comes from Rion/Rio in Patras.

🍷 Mavrodaphne, Muscat Blanc à Petits Grains, Rhoditis

🕒 1–2 years (Patras), 1–20 years (Mavrodaphne), upon purchase (Muscat)

📖 **Patras Antonopoulos** (Adoli Ghis) • *Oenoforos* (Asproliithi) **Muscat of Patras Achaia Clauss** (Collector Series) **Muscat Rion (or Rio) of Patras Parparoussis**

PEZA AO

Crete

The white wines are made from the Vilána grape and lack crispness, and the red wines, which are made from the Kotsifáli and Mandilaria grapes, are usually dried-out and could be fresher.

🍷 Kotsifali, Mandilaria, Vilána

RAPSANI AO

Thessaly

Uninspiring dry red wines from flat, uninspiring land in the vicinity of Mount Olympus.

🍷 Krasáto, Stavrotó, Xinomavro

RETSINA TA

Central Greece

Although rosé is not unknown, Retšina is almost invariably white, with 85 percent of the blend

coming from the Savatiano grape. It may be blended from various areas or can have a specific, usually superior, origin, but in every case, Retšina carries the unique Traditional Appellation. This designation recognizes the ancient practice of resinating wine and the EU has confined its use to Greece.

There are degrees of resination, ranging from relatively light to heavy, and the quality of the pine resin itself can range from poor to fine; the better-quality pine resin makes better-quality Retšina. Despite its penetrating aroma and flavor, pine resin cannot hide a tired, flabby, oxidized, or simply bad wine. Personally, I do not like Retšina, but I have to admit that the aroma of fine pine resin is refreshing and I also agree that this aromatized wine has a useful cutting quality when drunk with oily Greek food.

🍷 Rhoditis, Savatiano

🕒 As young and as fresh as possible

📖 **Appellations Attica • Evia • Thebes • Viota Brands Gaia** (Ritinitis Nobilis)

RODOS AO or RHODES AO

The Dodecanese

Reds are 100 percent Mandilaria, whites are 100 percent Athiri; neither of which has so far amounted to much. The best wines are the sweet, golden, liqueur Muscat, the best of which are on a par with the Muscat of Patras. Other non-appellation wines produced on this island include the *méthode champenoise* wines of CAIR, the local cooperative, but they are rather coarse with an overly assertive mousse.

🍷 Amorgiano (aka Mandilaria), Athiri, Muscat Blanc à Petits Grains, Trani Muscat

🕒 Upon purchase

📖 **CAIR** (Muscat of Rhodes)

SAMOS AO

The Aegean

One of the great sweet wines of the world, the local cooperative's Samos, Samos Grand Cru, Samos Nectar, and Samos Anthemis, in order of increasing complexity and sweetness, are all superb, perfectly-balanced, rich, and mellifluous wines. The cooperative also produces a deliciously dry and fresh non-appellation version called Doryssa, and two that are off-dry: Samena and Samena Gold, which are both as clean as a whistle with a

delightful orange flower-water aroma and delicate fruit.

🍷 Muscat Blanc à Petits Grains

🕒 Upon purchase

📖 **Cambas • Samos cooperative**

SANTORINI AO

The Cyclades

This full-bodied, dry white wine can have an intriguing combination of high natural alcohol and a high acidity level. Sweet *vin de liqueur*, *vin doux naturel*, and *vin de paille* styles are also produced. Sigalas makes the best quality, most complete range within this appellation.

🍷 Aidani, Assyrtiko

🕒 2–5 years

📖 **Boutaris** (Nyhteri) • *Gaia* (Thalassitis) • *Kostas Antoniou* (Vareli, Vinsanto) • *Sigalas* (Bareli)

SITIA AO

Crete

The red wines in this appellation can be dry or sweet, fortified or not. White wines must be dry and cannot be fortified. They have traditionally been somewhat rustic in character, but the Sitia cooperative has improved out of all recognition, and Yannis Economou has been working hard since the mid-1990s to bring some elegance and finesse to his wines.

🍷 80% Liatiko plus 20% Mandilaria (reds), minimum 70% Vilána plus optional Thrapstathiri (whites)

📖 **Economou • Sitia cooperative**

ZITSA AO

Epirus

Dry and semi-sweet, slightly spritzzy, clean, and fruity white wine from six villages around Zitsa, northwest of Ioánnina, where the vines grow at an altitude of 1,970 feet (600 meters). Most of this appellation's production is processed by the cooperative.

🍷 Debina

🕒 Upon purchase

OTHER WINES

Some of the country's best wines do not claim any of the above appellations.

RED

📖 **Alpha Estate** (Ktima Alpha) • *Antonopoulos* (Cabernet Nea-Drís) • *Boutaris* (Grande Reserve) • *Calligas* (Nostos) • *Evbaris* (Estate Red, Merlot) • *Hatzimichali* (Cava) • *Mercouri* (Antaris, Cava) • *Parparoussis* (Oenofilos) • *Skouras* (Mega Oenos) • *Tsantalis* (Merlot) • *Tselepos* (Kokkinomylos Merlot) • *Voyatzis* (Erythros)

WHITE

📖 **Alpha Estate** (Ktima Alpha, Sauvignon Blanc) • *Antonopoulos* (Chardonnay) • *Chrisoboou* (Prekniárikó) • *Gentilini* (Fumé) • *Oenoforos* (Asproliithi, Lagorthis) • *Papaioannou* (Chardonnay) • *Tsantali* (Ampelonas) • *Voyatzi* (Malvasia)

DRY ROSÉ

📖 **Emery** (Granrosé) • *Gentilini* (Rosé) • *Oenoforos* (Esperitis)

SPARKLING WHITE

📖 **Spiroloulos** (Oude Panos) • *Tselepos* (Villa Amalia)

THE LEVANT

In 1988, when this encyclopedia was first published, I wrote that aside from two wineries in Lebanon and one in Israel, “fine wine is nonexistent in the Levant.” Who would have thought that after all the bloody troubles those two war-torn countries have been through since, we would find such growth, diversification, and exhilarating promise in the wines from Lebanon and Israel as we do today? But we do, and, essentially, this is down to the boom in boutique wineries in these two countries over the past decade.

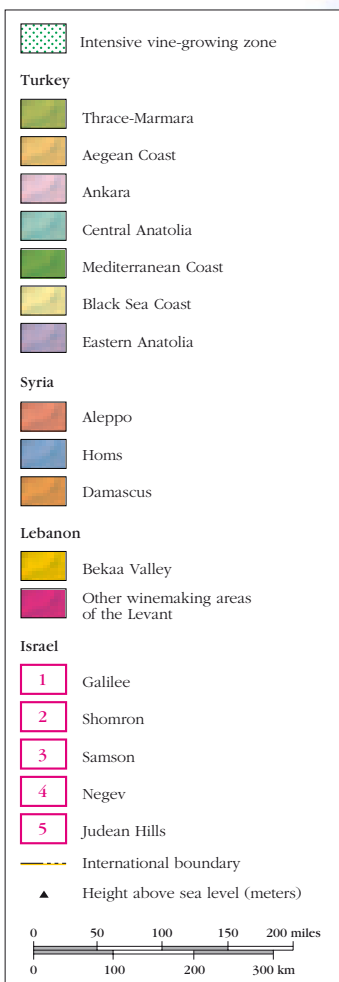

WINE WAS FIRST PRODUCED in Mesopotamia (an area roughly equivalent to modern-day Iraq) circa 4000 BCE. In recent times, most vineyards throughout this region have been used for the production of table grapes, raisins, and currants. The 1960s were a golden age for Lebanese wine and, indeed, Lebanon in general, but the outside world did not really know anything about wines from the Levant until the early 1980s. It was the success of Serge Hochar at Château Musar in Lebanon that drew our attention to the wine potential of this region. In the 1960s, Hochar’s wines had been the favorite of certain French colonial officers, attracting them away from Château Ksara, their previous Lebanese favorite; but 1979 was the seminal year, as it was then that he showed his wines at the Bristol Wine Fair in England. In the late 1980s, Yarden put Israel on the wine map, but it was not until the early 2000s that more than a hundred boutique wineries gave these two pioneering Levant wine-producing countries real credibility.

CYPRUS

Wine districts: *Marathassa Afames, Pitsilia, Maberas Mountains, Troödos Mountains, Mesaoria*

Total area under vine: *4,520 acres (18,300 hectares)*

Wines have been made on this beautiful island for at least 4,000

years and Cyprus's historically famous wine, Commanderie St John, is one of a handful that claim to be the world's oldest wine. It can be traced back to 1191, when Richard the Lionheart, King of England, acquired the island during the Crusades. He subsequently sold it to the Order of the Knights of the Temple, who established themselves as Commanderies and later became known as the Knights of the Order of St. John. Commanderie St John is a *solera*-matured, sweet dessert wine, which is made from a blend of black and white grapes that have been left in the sun for between 10 and 15 days after the harvest to shrivel and concentrate the grape sugars. It used to be rich and luscious with a fine, toasty fullness, but there is nothing special about the wine produced today. Those privileged enough to taste rarities dating back to the turn of the 20th century will recognize just how great these wines once were.

In recent years, early harvesting, temperature-controlled stainless-steel vats, and various modern vinification techniques have revolutionized Cypriot winemaking, producing much lighter, cleaner, and crisper wines. The large cooperative producers are cutting down the time taken to get the harvest to the winery, delays which were detrimental to the quality of their wines at one time. KEO, the island's largest and most advanced winery, is making the greatest strides toward improving quality, while the emergence of small, independent wineries since the early 1990s is only just beginning to offer consumers real choice.

✓ *Fikardos* (Achillas, Chardonnay Xilogeiro) • *K & K Vasilikon* (Ayios Onoufrios, Xynisteri) • *KEO* (Domaine d'Ahera, Fino, Heritage, Othello, Rosella)

EGYPT

Wine district: *Abu Hummus*

Total area under vine: 165,490 acres (67,000 hectares)

When traveling to the Nile Delta, it has always been advisable to refuse the ice, and until very recently, the same advice should also have applied to the foul-tasting Egyptian wine. This was not only because of poor winemaking, but also due to the temperature of the storage facility at the sole winery, Gianaclis, which was a mind-boggling 104°F (40°C). The Gianaclis Winery was offered for privatization by the Egyptian government in 1999, and the successful bidder was the Al-Ahram Beverages Company (ABC), which in theory had a virtual monopoly on both wine and (far more importantly) beer, but had no time to enjoy this before it was challenged by the El Gouna Beverages Company. Although Egyptian wine has not been of sufficient quality to export, and attracts a 100 percent tax on the domestic market, foreign imports face a 300 percent tax, thus sales to tourists are potentially very lucrative. El Gouna started up in 1999, and immediately began to undercut ABC's prices, marketing its products so aggressively that it quickly captured 15 percent of domestic beer sales and 40 percent of domestic wine sales. ABC could not compete, so it took over El Gouna in 2001, and the fat profits from its monopoly of the tourist drinks trade attracted its own take-over by the Dutch brewing group Heineken.

The good news is that ABC began to plant classic grape varieties and to modernize the winemaking facilities from the moment it took over Gianaclis. The bad news is that the government has withdrawn start-up incentives offered to both ABC and El Gouna, and as long as there is no competition, there is little incentive to improve quality beyond a basic, acceptable, clean product. And just how authentic is Egyptian wine, in any case, when there are tales of the Gianaclis Winery buying in 200 tons of (mainly) Cinsault and Cabernet Sauvignon grapes from Lebanon in 2004?

ISRAEL

Wine districts: *Galilee/Galil, Shomron/Samaria, Samson/Shimshon, Judean Hills, Negev*

Total area under vine: 14,820 acres (6,000 hectares)

Over the last five years, we have seen a raft of small, independent wineries come on stream, forcing the biggest producers, notably Golan Heights (Yarden), Carmel (including the new Yatir winery), and Barkan, constantly to raise their game. This

boutique boom started in the 1990s, and by the turn of the new millennium, there were 70 or so small new wineries on the scene, but by 2005 this had increased to no fewer than 140. Yet, paradoxically, while this is the most exciting time ever for the quality and diversity of Israeli wines, it is also financially the most precarious period in the wine industry's history, with huge losses incurred by a number of wineries, large and small. However, a series of sell-outs and mergers should see the Israeli wine industry settle down over the next five years.

✓ *Castel* (Grand Vin) • *Chateau Golan* (Eliad, Merlot, Syrah) • *Flam* (Cabernet Sauvignon Reserve) • *Yarden* (Cabernet Sauvignon, Cabernet Sauvignon Elrom Vineyard, Katzrin Red, Merlot Ortel Vineyard) • *Yatir* (Forest)

JORDAN

Wine district: *Amman-Zarquu*

Total area under vine: 9,880 acres (4,000 hectares)

A country where the vine once flourished, Jordan's fast-diminishing vineyards now cover barely more than one-quarter of the area they did as recently as the late 1990s, and only a small percentage of these vines produce wine, averaging just 67,000 cases (6,000 hectoliters) a year. Jordanians are not wine drinkers, preferring Arrack, the aniseed-flavored spirit ubiquitous in the Levant.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

Technically, the Levant comprises the countries along the eastern Mediterranean shores, which for practical reasons this encyclopedia has extended northwest to Turkey, southwest to Egypt, east to Jordan, and this necessitates that Cyprus is also included.

CLIMATE

Hot and dry for the most part, with a minority of cooler microclimates due to their proximity to the Mediterranean, or high altitude. Vines in Lebanon's Bekaa Valley receive an amazing 300 days of sunshine per year and no rain during the harvest.

ASPECT

Vines grow on all types of land from coastal plains to higher mountain slopes.

SOIL

Soils vary greatly from volcanic origin on Cyprus, through the alluvial river and sandy coastal plains to the Bekaa Valley's gravel over limestone.

VITICULTURE AND

VINIFICATION

Better-quality vineyards are being planted on higher mountain slopes,

grapes are being harvested at lower sugar levels, and the resulting wines are being fermented at cooler temperatures, with increasing use of new French oak for top-of-the-range wines.

GRAPE VARIETIES

Cypriot Grape Varieties:

Cabernet Sauvignon, Chardonnay, Grenache, Maratheftiko, Mavro, Ophthalmo, Xineisteri

Israeli Grape Varieties:

Cabernet Franc, Cabernet Sauvignon, Carignan, Chardonnay, Colombard, Merlot, Riesling, Sauvignon Blanc
Note The Argaman, an Israeli *Souzao* x *Carignan* cross of disappointing quality, is being removed

Lebanese Grape Varieties:

Cabernet Sauvignon, Carignan, Chardonnay, Chasselas, Cinsault, Clairette, Gamay, Grenache, Muscat (various), Obaideh, Pinot Noir, Riesling, Sémillon, Syrah, Ugni Blanc

Turkish Grape Varieties:

Adakarasi, Ak Dimitrit, Alicante Bouschet, Beylerce, Boğazkere, Burdur Dimriti, Cabernet Sauvignon, Calkarasi, Carignan, Clairette, Dökülgen, Emir, Gamay, Kalecik Karasi, Misket, Narince, Oküzgözü, Semillon, Sultaniye

LEBANON

Wine district: *Bekaa Valley*

Total area under vine: *37,000 acres (15,000 hectares)*

Although Lebanon's vineyards have shrunk from 66,690 acres (27,000 hectares) since the mid-1990s, the vines used for winemaking are on the increase. Only 10 percent of Lebanon's vineyards are used for wine, and they are mostly confined to the Bekaa Valley, where there is a ten-fold potential for expansion. The Bekaa Valley was put on the wine map by Serge Hochar, owner of Château Musar, during the 15-year civil war when he had to contend with Syrian tanks, Israeli jets, and all sorts of militia to get his grapes from the vineyards to his winery. At one time, Musar and Lebanese wine were synonymous, but its high volatile-acidity (VA) style makes Musar a yesterday wine. I have read that Hochar reduced VA levels in 1995, yet when tasting with him in 2001, he admitted that he has actually given instructions that the wines must have high minimum VA levels! The Hochar second wine is said to be new-style, but it is still old-style and fails to impress. It would be sad if Serge Hochar, who has been such a great ambassador for Lebanese wine, learns the hard way that reputations do not last forever and are easier to lose than gain. In the meantime, there are a number of more modern producers, with numerous new ventures in the pipeline.

✓ *Chateau Belle-Vue* (La Renaissance) • *Chateau Kefraya* (Chateau Kefraya, Comte de M) • *Chateau Ksara* (Chardonnay, Cuvee de Printemps, Vin Gris) • *Clos St. Thomas* (Chateau St. Thomas) • *Massaya* (Selection) • *Wardy* (Private Selection)

SYRIA

Wine districts: *Aleppo, Homs, Damascus*

Total area under vine: *185,250 acres (75,000 hectares)*

In ancient times, wine was second only to olives in terms of agricultural production in Syria. However, since Muslims now account for 90 percent of the country's population, the vines planted are mostly used for table grapes, raisins, and currants, with wine production rarely exceeding 90,000 cases (8,000 hectoliters) a year. The above-mentioned winegrowing districts are located on lower mountain slopes.

It was, apparently, French troops stationed in the country during World War II who were the catalyst for the wine industry that does exist today—because the French, being French, demanded wine. And if you want to taste Syrian wines, visit France, where an increasing number of Syrian-made “Lebanese” wines are finding their way onto Lebanese and North African restaurant wine lists!

TURKEY

Wine districts: *Thrace-Marmara, Ankara, Mediterranean Coast, Black Sea Coast, Central Anatolia, Central-South Anatolia, East Anatolia*

Total area under vine: *1,383,200 acres (560,000 hectares)*

This country has the fourth-largest area under vine in the world (after Spain, Italy, and France), but because its population is predominantly Muslim, most vines produce table grapes, raisins, or currants. Just 2.5 percent of Turkish vineyards produce wine. Perhaps surprisingly, there are over 100 wineries in Turkey, but their wines are generally flabby, too alcoholic, heavy, over-sulfured, and all too often oxidized. The best known are Trakya (dry white Sémillon from Thrace), Trakya Kirmisi (a red blend of native grapes that also comes from Thrace), and the amusingly named Duo Hosbag (red Gamay, from Thrace) and Buzbag (red wine made from native grapes grown in southeast Anatolia), but

RECENT LEVANT VINTAGES

2003 Excellent reds and good whites produced in Lebanon, which benefited from a wet winter, providing water reserves, and a dry harvest. Israeli vines also benefited from an abundance of winter rain, and Israel was even more successful than Lebanon for both reds and whites.

2002 Another excellent year for Lebanon, particularly the reds, but below-average quality and quantity in Israel, where the best wines are merely early drinking.

2001 Below average in quality for Lebanese wines, although reds are better than whites. Above average in Israel, with reds also having the edge over whites.

2000 Good to average quality in Lebanon, good to very good in Israel, where whites were slightly more successful than reds.

1999 A truly great vintage for Lebanon, especially for red wines, but only above average in Israel.

despite local fame, these wines should be avoided. The right varieties in well-selected sites could have a much greater potential in Turkey than the same grapes grown in either Lebanon or Israel, and with sufficient investment, technology, and passion, Turkey could even compete with Greece in terms of quality. There has been some investment since the second half of the 1990s, but media claims in early 2005 that Turkish wine production had enjoyed a “20 percent year-on-year growth” over the previous 10 years were a case of gross exaggeration. The latest reliable statistics available at the time of writing show a 27 percent decline between 1996 and 2001.

Political and religious considerations make significant foreign investment unlikely in the near future. However, it is worth noting that the best Turkish wine boasting any track record is Villa Doluca, and until the firm of Doluca was founded in 1926 by Nihat Kutman, the entire wine industry in this country was non-Muslim. Obviously, the religious dimension is not the brick wall that some might think. Kutman's son, Davis-trained Ahmet Kutman, teamed up with his old school buddy Güven Nil to establish Sarafin, a project involving the establishment of Sauvignon Blanc, Chardonnay, Cabernet Sauvignon, and Merlot vineyards at Saroz Bay on the Gallipoli Peninsula. That these wines have set new standards in Turkish winemaking is just a hint of what might lie in store.

✓ *Doluca* (Kav, Villa Doluca) • *Sarafin* (Chardonnay, Merlot)

CYPRIOT VINEYARDS

One of the island's thriving winemaking areas is located in the foothills of the Troödos Mountains.

The WINES of
THE AFRICAS

THE OLD WORLD MEETS THE NEW WORLD on the African continent, although they are thousands of miles apart. There is no interest, let alone excitement, in the former French colonies of Algeria, Morocco, or Tunisia. The wine industries in these increasingly fundamentalist Islamic countries face difficult times, but if they can survive, there is certainly potential and it is only a matter of time before a flock of flying winemakers arrives to exploit it. If and when this happens, our perception of North African wine could change profoundly. There are a number of commercial wineries on Madagascar and a few curiosities found in Ethiopia, Kenya, Namibia, and Tanzania. The French even have a *vins de pays* on the island of Réunion. But the class act in Africa is, of course, South African wine. We saw its exports soar in the Mandela years, but that was merely filling the void created by its isolation under apartheid. Sales of South African wine in the second half of the 1990s were little more than an international expression of solidarity with the new Rainbow State. Since 2000, however, a technological revolution has transformed the quality and diversity of Cape wine, putting this country on a firm footing as a New World player that is second to none.

FRANSCHOEK VALLEY IN THE PAARL REGION, SOUTH AFRICA
*An aerial view of vineyards that are higher and steeper than most
of the Paarl region, and well suited to red wines.*

SOUTH AFRICA

As export markets opened up in the mid-1990s, so the quality of South African wine started to blossom, but by the turn of the millennium it had gone into overdrive, as new vineyards got on board, and winemakers grasped every opportunity to hone their skills in the full glare of international attention. Some observers have called on South Africa to focus its attention on those varieties it grows best, but this country has only just come in from the cold, and the next couple of decades will see plenty of experimentation.

AT FIRST, BETTER QUALITY simply meant stricter selection and, where appropriate, a massive investment in new oak, but an increasing amount of South Africa's growing export income has been plowed into the industry's Vine Improvement Programme (VIP). Phase one of VIP concentrates on clonal selection and rootstock improvement, while phase two analyzes the suitability to specific *terroirs* of various combinations of the clones and rootstocks the plan develops. It is so ambitious that the project will probably never end, but after such a lengthy period of international isolation it was essential to revitalize the country's vineyards. However, VIP has already manifested itself in wines of richer varietal character and greater complexity than ever before, and South Africa, which was once 10 years behind the rest of the world, is now at the forefront of viticultural research.

IN THE BEGINNING

Virtually all South Africa's vineyards are found within 100 miles (160 kilometers) of Cape Town. The first vines were planted in 1655 and the wines were not, by all accounts, particularly successful. Simon van der Stel, who arrived in 1679, complained about the "revolting sourness" of the local wines. He proceeded to remedy the situation by founding Constantia, the most illustrious wine farm in the country's history (this has since split into three properties: Groot Constantia, Klein Constantia, and Buitenverwachting).

RECENT SOUTH AFRICAN VINTAGES

2004 An excellent vintage for both reds and whites, due to a long, drawn-out ripening period, providing ripe grapes with exceptional extract and acidity. However, the delayed maturity of early-ripening varieties meant that they were picked at the same time as some late-ripening varieties, which caused a congestion in many wineries.

2003 Very good quality across the board, with some standout reds, but some late-ripening varieties proved difficult.

2002 A vintage of variable quality that succeeded in separating the wheat from the chaff, as the most carefully tended vineyards produced winning wines.

2001 Some great wines, both red and white. However, others from this vintage are just good to very good, and far too many are rather big and alcoholic.

2000 The third in a trio of fiercely hot and dry vintages, in which those producers with water dams that did not run dry made good, but alcoholic, red wines.

Three centuries of winemaking

The arrival of French Huguenots, with their viticultural and winemaking expertise, greatly improved the quality of Cape wines, and by the early 1700s they were beginning to be held in high esteem. When French Revolutionary forces entered the Netherlands in 1806, the British occupied the Cape and, cut off from supplies of French wines, began exporting South African wines to the many corners of their empire, enhancing the wines' growing reputation there.

By 1859, the export of Cape wines to Britain alone had reached 1 million gallons (45,000 hectoliters) per year. However, in Britain, Richard Cobden (the "apostle of the free market") and William Gladstone secretly negotiated a commercial treaty with the French that had a devastating effect on this wine industry. In 1860, Cape wine exports fell to 22,000 hectoliters; the next year this dropped to 5,700 hectoliters; and by 1865 as little as 4,200 hectoliters were being exported.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

South Africa is on the southernmost tip of the African continent.

CLIMATE

The climate is generally mild Mediterranean, but coastal areas have a much higher rainfall and are cooler than inland parts in spring and fall. All coastal areas are cooled by sea breezes chilled by the icy Benguela current from Antarctica. The coolest, Constantia, like Stellenbosch, rates as low Region III. Klein Karoo, Tulbagh, Olifants River, and parts of Paarl (Dal Josaphat) are the hottest, falling between high Region IV and low Region V (see p.470).

ASPECT

Most vines are cultivated flat on gently undulating valley floors. More recently, higher slopes have been increasingly cultivated and Klein Constantia, Thelema Mountain Vineyard, Bellingham, and Boschendal all have very steep vineyards.

SOIL

Soils range from gravel and heavy loams of sandstone, shale, and granitic origin on the coastal plain, to the deep alluvial, sandy, and lime-rich, red-shale soils of Klein Karoo and other river valleys.

VITICULTURE AND VINIFICATION

Contrary to popular belief, Cape vineyards sometimes fail even to ripen their grapes, although there are, of course, many hot areas where vines may suffer from heat-stress and grapes can quickly overripen. Irrigation is often necessary in Robertson, Worcester, and Vredendal, where successful cultivation depends on the

availability of water. Where the heat factor is critical, some estates may conduct the harvest at night, under floodlight. South Africa has a history of overproduction, due to having too great an area under vine, too little emphasis on high-quality varieties, poor clones, and undesirably high yields, but is quickly upgrading its vineyards, and is now at the forefront of research on new clones and rootstock. Yields are also being lowered to appeal to export markets. Until the early 1990s, estates were slow to cultivate higher, cooler slopes, but this has changed, especially with emergence of a new breed of winery that buys in from single vineyards, often over a large area. There is a trend for each estate or winery to develop one "flagship" wine, usually a classic red blend.

GRAPE VARIETIES

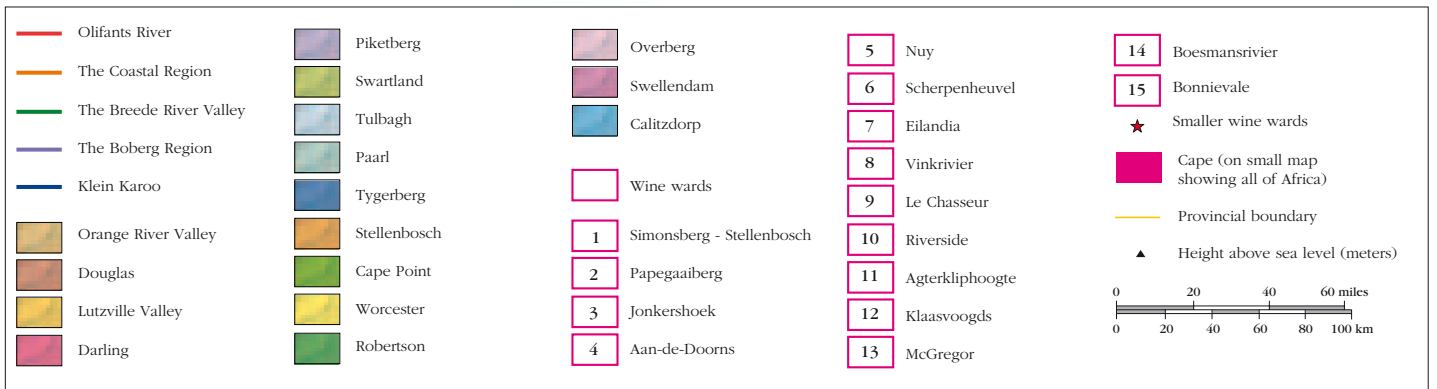

Primary varieties: Cabernet Franc, Cabernet Sauvignon, Chardonnay, Chenin Blanc (*syn.* Steen), Cinsault, Colombard, Crouchen, Merlot, Muscat à Petit Grains (*syn.* White Muscadel), Muscat d'Alexandrie (*syn.* Hanepoot), Pinot Noir, Pinotage, Riesling (*syn.* Rhine Riesling, Weisser Riesling), Ruby Cabernet, Sauvignon Blanc, Sémillon, Syrah (*syn.* Shiraz)

Secondary varieties: Barbera, Bukettraube, Carignan, Chenel (*syn.* Chenin Blanc x Trebbiano), Emerald Riesling, Fernão Pires, Gamay, Gewürztraminer, Grenache (*syn.* Rooi Grenache), Hárslevelű, Malbec, Mourvèdre, Muscat Rosé à Petit Grains (*syn.* Red Muscadel), Nebbiolo, Petit Verdot, Pinot Gris, Sangiovese, Souzão, Tinta Barocca, Touriga Nacional, Ugni Blanc, Viognier, Zinfandel

SOUTH AFRICA

The Cape area, which produces the vast majority of South Africa's wines, has an ideal climate for viticulture. However, heat stress can be a problem in some areas, and irrigation may be crucial. Most quality wine areas lie in the Coastal and Breede River Valley Wine of Origin regions, but other outlying districts are also interesting.

A time of struggle for South African wine

Despite this setback to the wine industry, production was not checked. In fact, the large influx of immigrants, attracted by the discovery of gold and diamonds in the late 19th century, prompted a rapid expansion of vineyards in anticipation of a vastly increased demand. This increase in demand was realized, but the sudden wealth of these immigrants sparked off the Boer War, and sales of wine decreased at home and abroad. Yet unsellable wine continued to be made.

In 1905, the Cape government encouraged the formation of cooperatives, but nothing constructive was done either to reduce production or stimulate demand. Thus, when the *Koöperatiewe Wijnbouwers Vereniging*, or KWV, as it is now known, was formed in 1918 with government-backed powers, its decision to distill half the country's annual wine production into brandy immediately and very effectively improved the quality of Cape wines. Its policy of blending the rest of the surplus into marketable export products did no less than save the South African wine industry.

NEW AREAS AND BETTER WINES

Stellenbosch and Paarl are traditionally viewed as the country's two greatest wine districts. With the establishment of Hamilton Russell's top-performing vineyard at Hermanus, however, the Walker Bay area of Overberg to the southeast is now seen by many as potentially as fine for winemaking. Although there are just two wine estates in Hermanus at the moment, Elgin has developed into another startlingly good wine area. Elgin is the

Cape's apple-growing capital, and, as Washington State in the United States quickly learned, wherever apple growers choose to go, fine-quality wine grapes will follow. With Neil Ellis currently sourcing excellent Sauvignon Blanc from Elgin, this area is certainly another feather in Overberg's cap. Most surprising of all is the even more recent establishment of Buitenverwachting and Klein Constantia, in 1985 and 1986 respectively, for these two estates have completed the cycle of exploration and development in South Africa's winelands. Constantia, once merely the site of an historic wine, is now one of the most exciting white wine areas in all South Africa. Outside of the mainstream vineyard regions, Mossel Bay in the extreme east of the Cape district is a potentially fine wine area, offering great hopes for aromatic white wine varieties such as Riesling and Sauvignon Blanc—some even think Pinot Noir will do well there.

In 1995, South African wine estates were allowed for the first time to buy in grapes from other areas; these were not to blend with their own grapes, but to enable them to extend their range by offering single-vineyard wines from other locations. Thus, instead of struggling to produce, for instance, Sauvignon Blanc in red wine territory (because customers demand the style), an estate may now source these grapes from a more ideal *terroir*, dig up their own Sauvignon vines, and replant with more suitable varieties. This should lead to a certain polarizing of varieties in the areas where each performs best, which ties in with the second phase of the Vine Improvement Programme, and the results can only be good for the future of South African wine.

SOUTH AFRICAN LABEL LANGUAGE

Although an increasing number of South African wine labels are in English or in English and Afrikaans, Afrikaans-only terms may be found on labels.

CAPE DATED TAWNY PORT Wine of a single year which must have the character of a tawny port, and the label must include the year of vintage, the words "matured in wood" and the words "Tawny Port".

CAPE LATE BOTTLED VINTAGE (LBV) PORT Should be a port-style of a single year of quality, be dark and full-bodied with signs of going tawny in color. The main label could indicate the year of bottling as well as the vintage, and the description "Late Bottled Vintage" or "LBV" must appear on the label. The port will be aged for three to six years, of which at least two years in oak, before bottling.

CAPE RUBY PORT A blend of young, full-bodied, round, and fruity port-style wine. Components could be aged in wood for up to three years, depending on the size of wood used, but no components should be aged for less than six months. The average age should not be less than one year.

CAPE TAWNY PORT A blend of wine that has been wood matured, this port-style wine must be amber/orange (tawny) in color and must have acquired a smooth, light, slightly nutty flavor. Blending of white and red Port for tawny port is not allowed.

CAPE VINTAGE PORT A port-style wine from one harvest, dark and full-bodied, aged in wood of any size. The words "Vintage Port" and date of vintage may appear on the label.

CAPE VINTAGE RESERVE PORT A port-style wine from one harvest, produced in a year of recognized quality, with exceptional organoleptic characteristics, dark and full-bodied, with very fine aroma and

palate. The producer can be assisted by a tasting panel set up by the Association. The wine must preferably be aged for an average of at least one year or more in wood of any size. The wine must be sold exclusively in glass. The words "Vintage Reserve Port" and date of vintage must appear on the label.

CAPE WHITE PORT Made from a non-Muscat white cultivar, aged in wood of any size for a minimum period of six months.

CULTIVAR Cultivar derives from a shortened form of "cultivated variety" and is the South African term for grape variety.

EDEL LAAT-OES Noble late harvest. Botrytized grapes must be used for this style, which must have a minimum of 50 grams of residual sugar per liter.

EDELKEUR This literally means "noble rot."

FORTIFIED WINE, LIQUEUR WINE This style of wine must have an alcoholic strength of no less than 16.5 percent by volume and no more than 22 percent. This category includes port and sherry, plus such uniquely South African wines as Jerepigo or Jerepiko.

GEBOTTEL IN... Bottled in...

GEKWEK EN GEMAAK OP... Grown and made on... (i.e., but not bottled on).

GEKWEK, GEMAAK EN GEBOTTEL OP... Grown, made, and bottled on... (i.e., estate-bottled).

GEPRODUSER EN GEBOTTEL IN... Produced and bottled in...

GEPRODUSER EN GEBOTTEL IN DIE REPUBLIEK VAN SUD-AFRICA Produced and bottled in the Republic of South Africa.

GRAPE VARIETY A wine must contain at least 75 percent of the grape variety or varieties indicated (85 percent for exported wines).

JEREPIGO OR JEREPIKO A very sweet liqueur wine with at least 160 grams per liter of residual sugar. Jerepigo Muscadel is very popular among old-timers and heavy drinkers.

KOÖPERATIEWE, KÖPERATIEVE, KOÖPERASIE, KOÖPERATIEF Cooperative.

LAAT-OES Late harvest, with natural alcoholic strength of at least 10 percent and 10–30 grams of residual sugar per liter.

LANDGOEDWYN Estate wine.

MÉTHODE CAP CLASSIQUE A general term that is used to describe a bottle-fermented sparkling wine.

MOSKONFYT Concentrated grape paste.

OESJAAR Vintage.

ORIGIN OF THE WINE (WO) The Wine of Origin (or *Wyn van Oorsprong*) is South Africa's equivalent of *Appellation d'Origine Contrôlée*. WO wines must be 100 percent from the appellation area indicated.

SEMI-SOET The Afrikaans term for "semisweet."

SPESIALE LAAT-OES Special late harvest. This usually, but not necessarily, implies that some botrytized grapes have been used; there is a minimum natural alcoholic strength of 10 percent by volume, and between 20 and 50 grams per liter of residual sugar.

STEIN A semisweet style of wine that is normally Chenin-based.

VINTAGE A vintage must contain at least 75 percent of the year indicated or 85 percent for exported wines (the balance must come from either the preceding or succeeding vintage).

WYN VAN OORSPRONG (WO) Dutch for Wine of Origin, South Africa's equivalent of *Appellation d'Origine Contrôlée*. WO wines must be 100 percent from the appellation area indicated.

Pinotage and the “Cape Blend”

There are those who think that a “Cape Blend” with an obligatory Pinotage component should become the flagship of South Africa’s export drive in the 21st century. And then there are those who are less than enamored with the Cape’s adopted grape. It might be possible to play down this grape’s typically high-toned, estery character and, in particular, iron out its high acetate (often incorrectly referred to as acetone) content with appropriate vinification techniques. And if it is cultivated on the Cape’s higher slopes, it should be possible to utilize extended hang-time to harvest Pinotage on tannin ripeness without running the risk of producing wines that are big and cumbersome, with too much alcohol. In this way, Pinotage does not have to have its rough edges, green tannins, or the banana and nail-polish aroma of acetate-laden fruit. But, as its detractors inside South Africa point out, they will still be left with a rustic 1920s cross that has not attracted anyone to plant the variety widely anywhere else in the world—there are 232 acres (94 hectares) in New Zealand, but that is as good as it gets, because outside of that country it is found only in the US, Canada, and Germany, where it is grown in such minuscule quantities that there are no official statistics.

Is Pinotage as bad as it is made out to be, and are they right not to want South Africa’s reputation to depend on a blend that

THELEMA MOUNTAIN VINEYARDS

These beautifully tended vineyards on the Simonsberg in Stellenbosch belong to Thelema Mountain, one of South Africa’s youngest and most exciting wineries.

must contain this grape? Yes and no. Of course, Pinotage has a poor track record, otherwise South Africa’s Pinotage diehards would be right, and the rest of the world wrong, but blending it is a good idea. Pinotage is a good team player. With the right support, it is better at improving some blends than intrinsically finer grapes would be. We can see this in everything from sparkling wine *cuvées*, such as Villiera Tradition Brut, to some of South Africa’s most stunning classic red blends, including Flagstone Dragon, Kaapzicht Steyler Vision, and Meinert Synchronicity. And who knows, perhaps they will make a prince out of this pauper’s grape in the process. It is not as if there are absolutely no fine-quality pure Pinotage wines. Although I am a declared sceptic when it comes to this variety, you will find a number of excellent Pinotage wines listed on the following pages. And in my humble opinion, most Pinotage vineyards are on the wrong sites, so these successes must be encouraging. Diverting the bulk of this variety’s production into blends while truly objective winemakers trial Pinotage on higher, cooler slopes for longer hang-times, to ripen its notoriously harsh tannins without increasing alcohol levels, can only be good for the long-term reputation of the Cape’s own cultivar.

THE APPELLATIONS OF SOUTH AFRICA

Note Wine wards are the most specific type of WO (Wine of Origin) appellation. One or more WO wards may be contained in a larger WO district, and one or more WO districts may be contained in a WO region.

BOBERG WO

Wine districts Paarl WO, Tulbagh WO

This regional WO is restricted to fortified wine except for the Paarl and Tulbagh districts.

BREEDER RIVER VALLEY WO

Wine districts Robertson WO, Swellendam WO, Worcester WO

Wine wards Agterklipboogte WO, Bonnievale WO, Boesmansrivier WO, Eilandia WO, Hoopsrivier WO, Klaasvoogds WO, Le Chasseur WO, McGregor WO, Vinkrivier WO, Aan-de-Doorns WO, Goudini

WO, Nuy WO, Scherpenbeuel WO, Slanghoek WO, Buffeljags WO, Stormsvlei WO

The vineyards in this region, situated east of the Drakenstein Mountains, depend on irrigation, and mostly produce white or fortified wines. Although Robertson is known as “the valley of vines and roses,” its hot climate relegated this region to largely bulk-produced wine until the emergence of fine-wine hotspots on its lime-rich soils. It now has a number of top-performing estates with well-established reputations for white wines, particularly Chardonnay and sparkling wines, and an emerging one for reds, including several up-and-coming Syrahs. Swellendam is just east of Robertson, in an area where few wineries and vineyards exist, although it is suited to Muscadell and other fortified wines, and plantations of Chenin Blanc

can be found. Worcester is on the western edge of Little Karoo, adjoining the eastern border of Paarl, in the Breede River catchment area, which is intensively cultivated with vines. The hot climate is tempered in the west by high rainfall, while in the east rainfall is very low, with soils that are derived from Table Mountain sandstone and the fertile red shale of Little Karoo. Although there are some good wine estates in Worcester, including the excellent Bergsig, the real stars of this district are the high-performing cooperatives (Du Toitskloof, Goudini, and Nuy), which make exceptionally fine white and fortified wines.

CEDERBERG WO

This up-and-coming ward comprises the Cederberg Wilderness Area, which lies within

the Cape's famous "fynbos" region, one of the world's six floral kingdoms, an outlying area just east of the southern part of the Olifants River region. Cederberg Cellars (formerly a cooperative, but now owned by the Nieuwoudt family) is one of the South African wine industry's fastest-rising superstars, with vineyards planted at an altitude of 3,300 feet (1,000 meters), the highest in the country, producing a raft of recently award-winning wines, including a coveted Veritas Double Gold.

COASTAL REGION WO

Wine districts *Cape Point WO, Darling WO, Paarl WO, Stellenbosch WO, Swartland WO, Tulbagh WO, Tygerberg WO*

Wine wards *Bottelary WO, Constantia WO, Devon Valley WO, Durbanville WO, Franschhoek Valley WO, Groenekloof WO, Jonkershoek Valley WO, Paardeberg WO, Papegaaiberg WO, Philadelphia WO, Riebeeckberg WO, Simonsberg-Paarl WO, Simonsberg-Stellenbosch WO, Voor Malmesbury WO, Wellington WO*

The most frequently encountered appellation, the Coastal Region comprises two external wards (Constantia WO and Durbanville WO) in addition to the above seven districts and their wards. Cape Point is a challenging new cool-climate district on the western and southern slopes of the Cape Peninsula that has demonstrated its potential for white wines, although the jury is still out for its red. Darling was part of Swartland, but its vineyards, particularly in the higher Groenkloof area, are too good not to have their own appellation. The Paarl district embraces the fertile Berg River valley and vineyards surrounding the towns of Franschhoek, Wellington, and Paarl itself. The vineyards are located on three main types of soil: granite in the Paarl district, Table Mountain sandstone along the Berg River, and Malmesbury slate to the north. The climate is Mediterranean, with wet winters and hot, dry summers. Average annual rainfall is about 26 inches (65 centimeters), but this declines toward the northwest of the district. Although this used to be a white-wine area, it is now more of a red-wine area, with high-lying vineyards that are well suited to the production of fine-quality reds. The Stellenbosch district is located between False Bay to the south and Paarl to the north. This is where the greatest concentration of South Africa's finest wine estates have traditionally been situated. There are three types of soil: granite-based in the east (considered best for red wines), Table Mountain sandstone in the west (favored for white wines), and alluvial soils around the Eerste River. With warm, dry summers, cool, moist winters, and an average annual rainfall of 20 inches (50 centimeters), irrigation is usually unnecessary, except in some situations at the height of the summer season. Helderberg is the current hot spot. The Swartland district replaced Malmesbury WO. Of the vast area covered by Swartland, most is arable land, with viticulture being

confined to the southern section around Darling, Malmesbury, and Riebeeck. The soils are Table Mountain sandstone and Malmesbury slate, and the rainfall is light, at around 9 inches (24 centimeters), which makes irrigation generally necessary, although some vineyards surprisingly manage without it. Within the Swartland district, Philadelphia is the latest, most exciting wine ward to emerge, with the reds from Havana Hills grabbing the headlines. Tulbagh is bordered to the south by the Riversonderend Mountains and to the north by Langeberg Range. Soil, climate, and topography are – for the most part – similar to those of the Karoo, although somewhat more temperate. Readers may not have heard of the Tygerberg district, but most will know Meerendal Estate, which sits on the southeastern slopes of the Tygerberg, where rich, red soils combine with moderated temperatures and airflow from the cool summer winds to provide the vines with an excellent growing environment. The vineyards of Constantia are situated on the eastern, red-granitic slopes of Constantia Mountain, south of Cape Town. Bordered by sea on two sides, the climate is very moderate, of Mediterranean character, but it is quite wet, with up to 47 inches (120 centimeters) of annual rainfall. Durbanville is located in the lowlands of the Tygerberg hills and, although the rainfall is less than half that of Constantia, the deep, well-weathered, red, granite-based soils have a particularly good water retention, and the vines are cooled and dried by the sea breezes coming in from Table Bay.

KLEIN KAROO WO

Wine districts *Calitzdorp WO*

Wine wards *Montagu WO, Outeniqua WO, Tradouw WO, Upper Langkloof WO*

This appellation is a long, narrow strip that stretches from Montagu in the west to De Rust in the east. The vineyards require irrigation to survive the hot and arid climate. The famous red, shale-based Karoo soil and the deep alluvium closer to the various rivers are very fertile and are well suited to growing grapes to make the Jerepigo, Muscadell, and other dessert wines for which this area is well known. Calitzdorp is a semi-arid desert region, with summer temperatures of up to 104°F (40°C). These temperatures are moderated by afternoon sea breezes and cool nights, providing a beneficial diurnal effect of ensuring better acidity levels than would otherwise be found in such a hot climate. Calitzdorp's Boplass Estate is famous for its port-style fortified wines, and is arguably South Africa's finest producer of such wines.

NORTHERN CAPE

Wine districts *Douglas WO*

Wine wards *Hartswater WO, Lower Orange WO, Rietrivier (Free State) WO*

Formerly known as Orange River, this region encompasses Hartswater, South Africa's northernmost viticultural area, which is 50 miles (80 kilometers) north of Kimberley, encompassing the town of Jan Kempdorp, which was formerly known as Andalusia. Northern Cape is totally divorced from the rest of the country's vineyards. No fine wines as such are produced in this region, but there are good fortified wines and an improving quality of good-value, fruity varietal wines being made at Hartswater Wine Cellar, Landzicht, Oranjerivier Wine Cellars, and Douglas Winery.

OLIFANTS RIVER

Wine districts *Citrusdal Mountain WO, Citrusdal Valley, Lutzville Valley WO*

Wine wards *Bamboes Bay, Koekenaap WO, Piekeniersloof WO, Spruitdrift WO, Vredendal WO*

The vines in this long, narrow district grow on sandstone or lime-rich alluvial soil. The climate is hot and dry, with rainfall averaging just 10 inches (26 centimeters) per year and decreasing closer to the coast. This is a large region where you will find few wineries, but two of those wineries are huge. Westcorp's Vredendal is South Africa's largest wine producer, and Lutzville, the country's second-largest winery, is now bigger than KWV, Fleur du Cap, and Nederburg, the former colossi of the Cape wine industry, put together.

OVERBERG WO

Wine districts *Douglas WO, Walker Bay WO*

Wine wards *Elgin WO, Elim WO, Kleinrivier WO*

Overberg WO replaced Caledon WO, and consists of a huge, recently cultivated area southeast of Paarl and Stellenbosch. Fifteen years ago, there was only one estate here, Hamilton Russell Vineyards in Walker Bay, but this was obviously one of South Africa's most potentially exciting wine districts. Walker Bay is now one of the hottest spots on South Africa's wine map. Hottest meaning coolest, of course. This is considered the benchmark district for South Africa's Chardonnay and Pinot Noir, Hamilton Russell's success having attracted several highly reputed wineries to set up here, the highest flyers of which include Bartho Eksteen, Bouchard Finlayson, Newton Johnson, Sumaridge, and Whalehaven. Many more wineries are, at the time of writing, about to begin production in both areas.

PICKETBERG

Wine wards *none*

This large district lies between Swartland and Tulbagh to the south and Olifants River district to the north. With very hot temperatures and annual rainfall as low as 7 inches (17.5 centimeters) in places, it is really not suited to viticulture, yet is starting to produce some interesting fruit.

WESTERN CAPE WO

A vast multi-regional appellation covering all South African WO appellations except Northern Cape WO.

OTHER ISOLATED WINE AREAS

Wine wards *Ceres WO, Herbertsdale WO, Prince Albert Valley WO, Ruitersbosch WO, Swartberg WO*

Ceres is located just east of the Tulbagh WO; Herbertsdale is 28 miles (45 kilometers) northwest of the potentially exciting Mossel Bay area, just south of the Klein Karoo, and contains two wineries, Die Poort and Nietverloren; Prince Albert Valley is a 12-mile- (20-kilometer-) long valley at the foot of the Swartberg Mountain Nature Reserve, north of Klein Karoo, in an area previously better known for its olives than for its wine, although it has attracted considerable investments recently, including the Dutch-funded Bergwater Winery, which is irrigated by pure mountain water; Boplass produce wines under the Ruitersbosch; and Swartberg is a promising wine ward that overlooks Prince Albert Valley.

THE WINE STYLES OF SOUTH AFRICA

CABERNET SAUVIGNON

Traditional, firm, assertive styles are made here, but the trend is toward more up-front wines driven by ripe, juicy *cassis* fruit with cedary, spicy-vanilla oak complexity. New-wave wines are often enjoyable when young, but some also develop in bottle. Cabernet blends rank as one of South Africa's finest red wine styles. Other constituents are usually Cabernet Franc and Merlot, but may include Malbec, or, in the case of Boschendal Lanoy, even a dash of Shiraz (Shiraz-dominated blends are dealt with below).

🕒 3–7 years (modern style), 5–10 years (traditional style, exceptional modern style)

🍷 *Boekenhoutskloof* • *Cederberg* (V Generations) • *Kanonkop* • *Le Riche* (Reserve) • *Morgenhof* (Reserve) • *Neil Ellis* (Jonkershoek) • *Rustenberg* (Peter Barlow) • *Thelema* • *De Trafford* • *Vergelegen*

CHARDONNAY

Although this is South Africa's most improved varietal, it was originally so bland that it could only get better. The trouble was that as soon as new oak became widely available for the first time, many winemakers went over the top, producing heavy, overwooded Chardonnays. These wines also suffered from poor raw material, but this situation improved with clonal selection and matching this variety to more suitable *terroirs*. The best oaked Chardonnays are often barrel-fermented, rather than just oak-aged, with just a kiss of creamy new oak, although some less refined, if just as lip-smacking, wines dominated by yummy, coconuty-oak are also to be found. The top unoaked Chardonnays are very pure and exquisitely balanced, and they often belie their hot-climate origins.

🕒 1–3 years (unoaked), 1–5 years (oaked)

🍷 *Bouchard Finlayson* (Kaaimeansgat, Missionvale) • *Durbanville Hills* (Rhinofields) • *Eikendal Vineyards* • *Hamilton Russell* • *Jordan* • *Mulderbosch* (Barrel Fermented) • *Rustenberg* (Five Soldiers) • *Thelema* (Ed's Reserve) • *Vergelegen* (Reserve) • *De Wetshof* (Bataleur)

CHENIN BLANC

Not so long ago this grape covered almost one-third of South Africa's vineyards. Yields were very high, producing wines that were generally off-dry to semisweet and considered cheap and cheerful for their day. Now it accounts for just over 17 percent, and most of the wines produced are still cheap, but although the

quality is generally the same, "cheerful" translates more as "dull, boring, and mediocre" by today's standards. In recent years, as this country's wines have come on by leaps and bounds, there has been much hype about the special quality of South African Chenin Blanc, and very little fulfillment in the bottle. It should be possible for the best sites of oldest vines to produce bone-dry wines of greater intensity than commonly found in the Loire, but truly special Chenin Blanc, such as Jean Daneel's Signature (I am thinking of the 2003 here), are few and far between.

🕒 Upon purchase

🍷 *Avontuur* (Barrel Select) • *Boland* • *Cederberg* (V Generations) • *Fort Simon Estate* (Barrel Fermented) • *Jean Daneel* (Signature) • *Kanu* (Wooded) • *Ken Forrester* • *Old Vines* • *Spice Route* • *Villiera*

MERLOT

Pure and blended

Cape winemakers are following in California's footsteps, having started with pure Cabernet Sauvignon, they then moved on to Cabernet blends and then pure Merlot wines. Cape Merlot is often spoiled by green tannins, but the best have a persistence of flavor that belies their softness. This softness can be anything from the simple, fruit-driven delight of, say, a Veenwouden Merlot to the very classy, silky smoothness of Du Plessis Havana Hills.

🕒 2–5 years

🍷 *Avondale* (Les Pleurs) • *Du Preez* (Reserve) • *Havana Hills* (Bisweni) • *KWV* (Cathedral Cellar) • *Morgenhof* (Reserve) • *Overgaauw* • *Spice Route* (Flagship) • *Thelema* (Reserve) • *De Trafford* • *Vergelegen*

PINOT NOIR

South Africa is not likely to challenge Burgundy or, for that matter, California, Oregon, or New Zealand when it comes to this fussy variety, but a few highly talented winemakers are crafting some elegant exceptions.

🕒 2–5 years

🍷 *Bouchard Finlayson* (Galpin Peak Tête de Cuvée) • *Cabrière* (Haut Cabrière) • *Flagstone* (The Poetry Collection) • *Glen Carlou* • *Hamilton Russell* • *Meerlust* • *Newton Johnson*

PINOTAGE

This Cinsault x Pinot Noir cross is to South Africa what Zinfandel is to California and Shiraz to Australia. Or at least it should be. The problem is that it does not have half the potential of either of the other two grapes, but if anyone has the audacity to criticize this grape on its home turf, the South Africans become very touchy indeed. Yet, even after all these years, this country's winemakers still seem to be in a bit of a quandary about how it should be produced and that, if nothing else, puts Pinotage in the same league as Zinfandel because the Americans produce a hodgepodge of styles from that grape too. South African Pinotage can be found in all shades between the big, baked, earthy brews with volatile aromas, to the Beaujolais look-alikes with a touch of bubble-gummy oak. The trend for the best wines seems to be leaning toward the bigger styles, but too many are overly big or spoiled by green phenolics. Although the development of this cross was supposed to provide Burgundy-like elegance in the baking-hot vineyards of North Africa, the genes have transmitted more Cinsault than Pinot Noir. This is not a bad thing, as South Africa produces some fine wines from authentic Pinot Noir grapes anyway, and old-vine Cinsault can be interesting in its own right. However, rather than baking-hot vineyards, I would like to see Pinotage grown in places like Cederberg, where the altitude can draw out the hang-time, resulting in full physiological (tannin) ripeness without the high levels of sugar found in top examples of this grape today.

🕒 Upon purchase

🍷 *Bellevue Estate* (PK Morkel) • *Clos Malverne* (Basket pressed) • *Diemersfontein* (Carpe Diem) • *Graham Beck* (The Old Road) • *Kaapzicht* (Steytler) • *KWV* (Cathedral Cellar) • *Morgenhof* • *Môreson* • *Neil Ellis* (Stellenbosch) • *Thelema*

RIESLING

Unless produced in a late-harvest or botrytized style, Riesling in South Africa just does not seem to have the fruit-acidity elegance I expect from this variety, but I find that I am similarly picky about Riesling throughout most of the New World. Others find far more satisfaction in these wines than I do, so perhaps I am being too harsh in my judgment, but where we do agree, I think, is on the exceptional style and quality of the wines below.

🍷 *De Wetshof* (Rhine Riesling) • *Klein Constantia* (Rhine Riesling) • *Thelema* (Rhine Riesling)

SAUVIGNON BLANC

This is not this country's most successful varietal, despite the number of recommendations that are listed below. Their success is, however, disproportionate to the intrinsic quality Sauvignon

that has established in South Africa. The reason for this is that much of the industry seems to be committed to trying every which way in order to master this grape variety and, although the results show there are many overachievers out there, I had to drink my way through a sea of dross to find them. There are too many overherbaceous wines from those who are trying too hard with this varietal, and a great many dull wines from those who are jumping on the Sauvignon bandwagon.

Most of these wines will never hold a candle to your average New Zealand Sauvignon Blanc, although if there is such a thing as South Africa's answer to Marlborough, it could be Elgin. Note that "Fumé Blanc" or "Blanc Fumé" is used for barrel-fermented or oak-aged Sauvignon Blanc; Le Bonheur is the one exception to this, and honors the term's original French meaning, which is simply a synonym for the grape variety.

☞ Upon purchase

- ☞ *Bellevue* (Morkel) • *Boschendal* (Jean de Long) • *Cederberg* • *Mulderbusch* • *Neil Ellis* (Groenekloof) • *Nitida Cellars* (Club Select) • *Springfield* (Life from Stone) • *Steenberg* (Reserve) • *Vergelegen* (Schaapenburg Reserve) • *Villiera* (Traditional Bush Vine)

SÉMILLON

Sémillon has great potential in South Africa, where it can produce rich yet refined wines on to which skilled winemakers can graft a lovely leesy complexity. However, the number of recommendations below is meager because few producers take the potential of this grape seriously. If the industry applied half the effort to this variety that they have to Sauvignon Blanc, Sémillon would quickly become one of South Africa's most fashionable wines.

☞ 18 months to 5 years

- ☞ *Boekenboutsloof* • *Boschendal* (Jean de Long) • *Constantia Uitsig* (Reserve) • *Fairview* (Oom Page) • *Ribk's* • *Nitida* • *Steenberg* • *Stellenzicht* (Reserve)

SYRAH

Pure and blended

Syrah is planted far less widely than in Australia, but it is South Africa's second-fastest-expanding red wine variety. It has come from virtually nothing in the 1990s to equal-sixth most widely planted black grape, placing it on a par with the Cape's beloved Pinotage, and not only do the best examples knock the socks off the best Pinotage, but they can give most Australian Shiraz a run for their money. This must now be regarded as South Africa's most exciting red wine variety.

☞ 2–8 years

- ☞ *Avondale* (Les Pleurs) • *Boekenboutsloof* • *Cederberg* (Shiraz) • *Fairview* (Solitude) • *Graham Beck* (The Ridge) • *Rust en Vrede* (Shiraz) • *Sentinel* • *Stellenbosch* (Genesis Shiraz) • *Stellenzicht* • *Vergelegen* (Shiraz)

OTHER REDS

This section lists the best examples I have found of South Africa's less frequently encountered red wine varietals, some of which will no doubt become more widely established in this country one day.

- ☞ *Barbera Altydgedacht*

Cabernet Franc *Bellingham* (Spitz)

- *Bellingham* (Maverick) • *Fairview*
- *Spier* (Private Collection)

OTHER WINE STYLES

CAP CLASSIQUE

This is South Africa's own term for "traditional method." Sparkling wine is generally less exciting here than in most other New World countries, which is probably due to the longer learning curve these wines demand. Most are merely in the fruity-fizz category, and only those recommended below show promise of anything more serious, but we could well see a revolution for sparkling wines as we have for Chardonnay. Two wines that should be represented below are Graham Beck's Synergy (a 70 percent Pinot Noir *cuvée* that I previewed in 2003, but have never seen on sale, although it is one of the two greatest sparkling wines produced in this country) and Graham Beck's Sparkling Pinotage (which was discontinued after the first release was not understood locally).

☞ Upon purchase

- ☞ *Graham Beck* (Blanc de Blancs) • *J. C. Le Roux* (Pinot Noir) • *Twee Jonge Gezellen* (Private Vintners Limited Release Pinot Noir) • *Villiera* (Brut Natural Chardonnay)

CLASSIC RED BLENDS

These blends, particularly the Bordeaux-style red blends, are gradually establishing a solid superiority over their pure varietal counterparts in this country.

☞ 3–10 years

- ☞ *De Toren* (Fusion V) • *Grangeburst* (Nikela) • *Havanah Hills* (Du Plessis Reserve) • *Kanonkop* (Paul Sauer) • *Meerlust* (Rubicon) • *Morgenhof* (Première Sélection) • *Rust en Vrede* (Estate Wine) • *Rustenberg* (John X Merriman) • *Vergelegen* (Vergelegen V) • *Warwick* (Trilogy)

CLASSIC WHITE BLENDS

This category encompasses white wine blends that are made from too many permutations of grapes to be able to record them all here. However, Sémillon, Chardonnay, Chenin Blanc, and Sauvignon Blanc are the most commonly featured grape varieties.

☞ Mostly upon purchase (exceptional examples 2–3 years)

☞ *Constantia Uitsig* (Sémillon-Sauvignon Blanc)

- *Dornier* (Donatus White) • *Hamilton Russell* (Chardonnay-Sauvignon Blanc) • *Stellenbosch* (VVS) • *Vergelegen* (Vergelegen White) • *Zevenwacht* (Tin Mine White)

FORTIFIED WINES

Other high-performance fortified wine styles include red and white Muscadel, which is often called Hanepoot when made from Muscat d'Alexandrie (also in red and white styles). Jerepigo (or Jerepiko) is the South African equivalent of *vin de liqueur*, in which grape spirit is added to grape juice before fermentation can begin (as opposed to *vin doux naturel*, in which the grape spirit is added after fermentation has achieved an alcohol level of between 5 and 8 percent). Red styles range in color from cherry-bright to orange-gold and grow lighter with age, whereas white styles deepen with age (venerable vintages of both styles can become indistinguishable if they both assume an old-gold hue). Authentic port is made only in the Douro Valley of northern Portugal, but port-type fortified wines are made the world over, and South Africa has proved itself to be particularly adept at this style.

- ☞ **Red** *Boplass* (Red Muscadel) • *Nuy* (Red Muscadel) • *Du Preez* (Hanepoot) • *Du Toitskloof* (Hanepoot Jerepigo) • *KWV* (White Muscadel) • *Rietvallis* (Muscadel 1908) • **White** *De Wetshof* (Muscadel) • *Jonkbeer* (Muscatheer Family Reserve Muscat de Frontignan) • *KWV* (Red Muscadel) • *Monis* (Muscadel) • *Nuy* (White Muscadel) • **Port** *Allesverloren* • *Axebill* (Vintage) *Boplaas* (Vintage Reserve) • *KWV* (Tawny) • *Monis* (Very Old Tawny) • *Overgaauw* (Cape Vintage Reserve) • *Vergenoegd* (Old Cape Colony Vintage Port)

LATE HARVEST

There are various categories of this style: Late Harvest must contain between 10 and 30 grams per liter of residual sugar; Special Late Harvest contains between 20 and 50 grams and usually, but not necessarily, implies that some botrytized grapes have been used; Noble Late Harvest contains a minimum of 50 grams of residual sugar, from botrytized grapes. Other naturally sweet, unfortified, non-botrytis dessert-style wines exist, including such marvelous oddities as Klein Constantia's Vin de Constance and Boschendal's Vin d'Or. All these styles will be seductive as soon as they are released, yet most will gain complexity over a great period of time.

☞ Upon release and up to 20 years for Late Harvest; possibly 50 years or more for richer styles

- ☞ *Boekenboutsloof* (Noble Late Harvest Sémillon) • *Fleur du Cap* (Noble Late Harvest Riesling) • *Ken Forrester* (T Noble) • *Robertson Winery* (Wide River Reserve) • *Vergelegen* (Sémillon Noble Late Harvest) • *De Wetshof* (Edeloes) • **Other unfortified dessert wines** *Fairview* (La Beryl Blanc) • *Klein Constantia* (Vin de Constance) • *Signal Hill* (Mathilde Aszú 6 Puttonyos) • *Signal Hill* (Vin de Glacière) • *Signal Hill* (Vin de l'Empereur)

SPARKLING WINES

THE WINE PRODUCERS OF SOUTH AFRICA

AGUSTA

Franschhoek

★★★

One of Franschhoek's newest and finest wineries.

- ✓ *Cabernet Sauvignon*
• *Chardonnay*

ALLESVERLOREN

Swartland

★★★

Traditionally one of the Cape's greatest port producers, the latest generation owner-winemaker Danie Malan has stepped up a gear over the last few years.

- ✓ *Cabernet Sauvignon* •
Fortified (Port) • *Syrah*
(Shiraz) • *Tinta Barocca*

ALTO

Stellenbosch

★★★

All it took to turn around this estate was a new viticultural consultant (Professor Eban Archer), a replanting program, a new winemaker since 2000, and a new winemaking consultant (Pascal Chatonnet).

- ✓ *Cabernet Sauvignon* • *Classic red blend* (Alto Estate) •
Syrah (Shiraz)

ALTYDGEDACHT

Durbanville

★

This property is owned by John and Oliver Parker, who learned their winemaking skills in California and New Zealand. Barbera and Tintoretto (a Barbera-Shiraz blend) are the most interesting wines here.

- ✓ *Barbera* • *Pinotage* • *Syrah*
(Shiraz)

ASARA

Stellenbosch

★★★

I might have tasted these wines before now, but although in existence since 1970, this is the first time I have noticed Asara.

- ✓ *Cabernet Sauvignon* •
Chardonnay • *Classic red blend* (Bell Tower, Cape Blend, Carillon) • *Late Harvest* (Noble Late Harvest Chenin Blanc) • *Syrah* (Shiraz)

L'AVENIR

Stellenbosch

★★★

This property has shot to fame since François Naudé became the winemaker in 1992. The style is creamy, rich and accessible, yet not without considerable complexity in some of the wines.

- ✓ *Cabernet Sauvignon*
• *Chardonnay* • *Chenin Blanc*

- *Classic red blend* (Black Label Reserve) • *Fortified* (Cape Port) • *Pinotage*

AVONDALE

Stellenbosch

◎★★

One of South Africa's few organic producers, Avondale has shown that organic wines from this country can be award-winners from almost the very start. The first vintage here was 1999, and the 2000 classic red blend won a double gold at the Veritas Awards.

- ✓ *Cabernet Sauvignon* • *Classic red blend* (Avondale) • *Merlot* (Les Pleurs) • *Sauvignon Blanc* • *Syrah* (Les Pleurs)

AVONTUUR

Stellenbosch

★★★

This is the winery that gave the world pink Chardonnay. Avontuur wines used to be very much in the quaffing style, but now include a number of very serious wines.

- ✓ *Chardonnay* (Luna de Miel)
• *Chenin Blanc* (Barrel Select)
• *Classic red blend* (Baccarat)

BACKSBERG

Paarl

★★★

This estate is owned by Michael Back and it produces some of South Africa's most consistent and classy wines, combining richness, finesse, and complexity with great success.

- ✓ *Chardonnay* (Babylons Toren)
• *Classic red blend* (Babylons Toren Cabernet Sauvignon Merlot, Klein Babylons Toren)
• *Viognier* (Babylons Toren)

BARTHO EKSTEEN

Walker Bay

★★★

One of the fast-rising stars of the up-and-coming Walker Bay district.

- ✓ *Sauvignon Blanc* • *Syrah*
(Shiraz)

GRAHAM BECK

Robertson & Franschhoek

★★★

Graham Beck's senior winemaker is Pieter Ferreira, one of South Africa's top sparkling winemakers. This fact was confirmed at the Diners Club Winemaker Awards in 2004, its Cap Classique year, when Ferreira received the much coveted Winemaker Award. But he's a genius with other styles too. Charles Hopkins is the brilliant winemaker at Graham Beck's Franschhoek winery.

- ✓ *Classic red blend* (The Joshua, The William) • *Pinotage* (The Old Road) • *Sparkling wine* (Blanc de Blancs, Brut Rosé) • *Syrah* (Shiraz, The Ridge Syrah)

BELLEVUE ESTATE

Stellenbosch

★★★

Long-time grape farmers, the Morkel family released the first wines under its own label as recently as the 1999 vintage. These wines have enjoyed a resounding success.

- ✓ *Classic red blend* (Tumara)
• *Malbec* (Limited Release)
• *Pinotage* (P. K. Morkel)
• *Sauvignon Blanc* (Morkel)
• *Syrah* (Shiraz)

BELLINGHAM

Paarl

★★★

Owned by Graham Beck, Bellingham is a totally separate, stand-alone operation that makes some pretty remarkable wines.

- ✓ *Cabernet Franc* (Spitz) •
Cabernet Sauvignon (Maverick)
• *Chardonnay* (Spitz) •
Chenin Blanc (Maverick) •
Merlot (Spitz) • *Syrah*
(Founder's Shiraz, Maverick Syrah) • *Viognier* (Maverick)

BILTON

Stellenbosch

★★★

Another name to watch, Mark Bilton established this operation on the Helderberg with his first vintage in 1998.

- ✓ *Cabernet Sauvignon* • *Merlot* •
Syrah (Shiraz)

BLAAUWKLIIPPEN

Stellenbosch

★

These days Blaauwklippen seems a rather traditional winery, yet it was a pioneer of maturation in new oak, and one of the Cape's first great innovators. If you thought that Zinfandel was relatively new to South Africa, you should think again—Blaauwklippen has been making it since the 1970s.

- ✓ *Cabernet Sauvignon* (Vineyard Selection) • *Zinfandel* (Vineyard Selection)

BOEKENHOUTSKLOOF

Franschhoek

★★★

This rapidly rising star continues to make good. Entry-level wines are also sold under the Porcupine Ridge label, with the Syrah punching well above its weight.

- ✓ *Cabernet Sauvignon* • *Classic red blend* (The Chocolate Box)
• *Late Harvest* (Noble Late Harvest Sémillon) • *Syrah*
• *Sémillon*

BOLAND WINE CELLAR

Paarl

★★★

This former cooperative has greatly improved since going private.

- ✓ *Cabernet Sauvignon* (No. 1 Reserve) • *Chardonnay* (No. 1 Reserve) • *Chenin Blanc* • *Fortified* (Red Muscadel) • *Pinotage* (Winemaker's Selection) •
Syrah (Shiraz No. 1 Reserve)

BOPLAAS

Klein Karoo

★★★

Lurking in a large range of commercially acceptable products are a number of extremely fine fortified wines, including one, the Vintage Reserve Port, one of South Africa's very greatest "ports."

- ✓ *Fortified* (Cape Tawny Port, Red Muscadel, Vintage Reserve Port)

BOSCHENDAL

Paarl

★

Although this large producer is best known as the Cape's pioneering traditional method producer, Boschendal Estate also makes a large range of still wines, many of which, particularly the reds, are much more exciting than the sparkling ones.

- ✓ *Cabernet Sauvignon*
• *Chardonnay* (Reserve)
• *Merlot* • *Sauvignon Blanc* (Jean de Long) • *Sémillon* (Jean de Long) • *Sparkling* (Boschendal Brut) • *Syrah*

BOUCHARD-FINLAYSONOverberg
★★★

This small, deluxe enterprise was started by Hamilton Russell's winemaker Peter Finlayson, who was joined by Paul Bouchard from Burgundy. In 2001, however, controlling interest in the winery was taken over by Bea and Stanley Tollman. Bouchard remains a partner and Finlayson continues as winemaker. Finlayson is a bit of a gentle giant, and his wines reflect that, building quietly in the mouth to a remarkable elegance and depth of flavor. Galpin Peak Pinot Noir and Galpin Peak Tête de Cuvée Pinot Noir are the standouts here.

- ✓ *Chardonnay* (Kaaimansgat, Missionvale, Sans Barrique)
- *Classic red blend* (Hannibal)
 - *Pinot Noir*

J. P. BREDELLStellenbosch
★★

This "port" specialist has always made varietal wines, but these have improved of late, particularly the Merlot.

- ✓ *Fortified* (Port: Late Bottled Vintage, Cape Vintage Reserve)
- *Merlot*

BUITENVERWACHTINGConstantia
★★

Part of the historical Constantia estate, Buitenverwaching was renovated and replanted in the 1970s. It produced its first vintage in 1985, and was already showing promise by 1988. Throughout the 1990s it has been outstanding in virtually every style produced.

- ✓ *Cabernet Sauvignon*
- *Chardonnay* • *Classic red blend* (Christine) • *Late Harvest* (Rhine Riesling Noble Late Harvest) • *Merlot*
 - *Sauvignon Blanc*

CABRIÈREPaarl
★★

This estate belongs to Achim von Arnim, formerly the winemaker at Boschendal, and, not surprisingly, he has carved out his initial reputation by specializing in Cap Classique, but also produces a very good Pinot Noir.

- ✓ *Sparkling wine* (Pierre Jourdan: Blanc de Blancs, Brut, Cuvée Belle Rose, Cuvée Reserve)
- *Pinot Noir* (Haut Cabrière)

CEDERBERGCederberg
★★

South Africa's highest-altitude vineyards produce wines of great length and finesse, rather than heavy in weight and alcohol.

- ✓ *Cabernet Sauvignon* •

Chenin Blanc • *Classic red blend* (Cederberger) • *Sauvignon Blanc*

CLOOFDarling
★★

Too big for me, but these massively structured, high-alcohol wines are highly regarded award-winners within South Africa.

- ✓ *Pinotage* • *Syrah* (Crucible Shiraz)

CLOS MALVERNEStellenbosch
★★

Noted for its deep-colored, powerful, slow-developing wines.

- ✓ *Cabernet Sauvignon* • *Classic red blend* (Auret Cape Blend, Cabernet Sauvignon Pinotage Cape Blend, Cabernet Sauvignon Shiraz) • *Pinotage* (Reserve)

PAUL CLIVERElgin
★★

Pioneering Elgin wines from the first vintage in 1997.

- ✓ *Cabernet Sauvignon*
- *Chardonnay* • *Late Harvest* (Weisser Riesling Noble Late Harvest) • *Pinot Noir*
 - *Riesling* (Weisser Riesling)

CONSTANTIA UITSIGConstantia
★★

Owned by Dave and Marlene McCay, Constantia Uitsig makes some of South Africa's most lush red wines.

- ✓ *Chardonnay* (Reserve)
- *Classic red blend* (Cabernet Sauvignon-Merlot)
 - *Classic white blend* (Sémillon-Sauvignon Blanc) • *Sémillon* (Reserve)

CORDOBAStellenbosch
★★

These high mountain vineyards produce some of South Africa's

finest reds, showing great length and finesse.

- ✓ *Classic red blend* (Crescendo)
- *Merlot*

JEAN DANEELNapier
★★

A promising start for the former Morgenhof winemaker, who has just started releasing small volumes of exceptionally expressive wines from his own winery.

- ✓ *Chenin Blanc* (Signature)
- *Classic red blend* (Cabernet Sauvignon-Merlot)

DARLING CELLARSDarling
★★

Abé Beukes produces increasingly fine wines at this former cooperative, although the alcohol levels can be alarmingly high.

- ✓ *Cabernet Sauvignon* (Onyx)
- *Classic red blend* (Onyx Croon) • *Late Harvest* (Noble Late Harvest Chenin Blanc)
 - *Pinotage* (Onyx) • *Syrah* (DC Black Granite Shiraz)

DELAIREStellenbosch
★★

Established by John Platter, South Africa's best-known wine writer; has since changed hands a couple of times. Delaire seems most consistent with Bordeaux-style blends and scintillating botrytized Riesling.

- ✓ *Chardonnay* • *Desert* (Edeloes)

DELHEIMStellenbosch
★★

Always good value, but until recently the quality is more good than great, and more consistent than outstanding. In recent years, however, Delheim has shown a dramatic improvement in quality.

- ✓ *Cabernet Sauvignon* (Grand Reserve) • *Merlot* • *Late Harvest* (Edelspatz) • *Syrah* (Vera Cruz Estate Shiraz)

DEVON HILLSStellenbosch
★★

An up-and-coming winery, Devon Hills was established in 1997, with Erhard Roux taking over as winemaker in 2002.

- ✓ *Classic red blend* (Blue Bird)
- *Syrah* (Shiraz)

DIEMERSDALDurbanville
★★

Although the 14 percent-plus alcoholic strength of these wines is not unusual for a premium South African producer, the surprisingly elegant style is.

✓ *Cabernet Sauvignon*

- *Chardonnay* • *Classic red blend* (Private Collection)
- *Pinotage*

DIEMERSFONTEINWellington
★★

Full-throttle Pinotage in the style adored by South Africans.

- ✓ *Pinotage* (Carpe Diem)

DISTELL

Caledon

Created in 2000 by the merger of Stellenbosch Farmers' Winery (SFW) and Distillers Corporation, bringing together Fleur du Cap and Nederburg (two competing, high-quality wine brands), making this South Africa's largest wine and spirit group. Another excellent-value brand owned by Distell is Zonnenbloem. It also owns the good-value Drosdy-Hof wines; the successful, fast-selling sparkling wines of J. C. Le Roux; and the award-winning fortified wines of Monis. Chateau Libertas is viewed as one of the Cape's largest-volume, "quality" red wines, and figures prominently in the turnover of this group. Distell has sole ownership of Plaisir de Merle, its flagship wine estate, and joint ownership of Durbanville Hills, Hill & Dale, and Tukululu (a black empowerment project). Five wine estates owned jointly with German industrialist Hans Schreiber—through Lusan Holdings—are Alto, Le Bonheur, Neethlingshof, Stellenzicht, and Uityk. Recently launched good-value brands, which are essentially export-oriented but also available on the home market, include African Skies, Obikwa, Oracle, Table Mountain, and Two Oceans. Other good-value Distell brands include Grünberger, Kupferberger Auslese, and Ship Sherry. And there are dozens of decent, if run-of-the-mill, commercial wine brands, including Autumn Harvest, Capenheimer, Cellar Cask, Graça, Grand Mousseux, Kellerprinz, Oom Tas, Overmeer Cellars, Sedgewick's, Tassenberg, and Taverna. Jacobsdal and Theuniskraal are often associated with Distell, but are both privately owned estates, with Distell merely providing exclusive distribution.

DORNIERPaarl
★★

Dornier shows astonishing quality and consistency for a winery whose first vintage was 2002.

- ✓ *Classic red blend* (Donatus)
- *Classic white blend* (Donatus White)

DURBANVILLE HILLSDurbanville
★★

Apparently, it is so cold during the harvest that the Durbanville Hills pickers have to wear thick woolen

sweaters. No doubt this is the explanation for the excellent, bracing quality of the white wines at this up-and-coming joint venture between Distell and seven leading Durbanville growers.

- ✓ *Chardonnay* (Rhinofields)
 - *Classic red blend* (Caapmans Cabernet Sauvignon-Merlot)
 - *Sauvignon Blanc*

EIKENDAL

Stellenbosch

★★

This Swiss-owned producer is perhaps best known on export markets for its blockbuster Chardonnay, but it actually produces finer reds, and even manages to make a fine-quality Cinsault-dominated blend. Its second wines are made under the Duc de Berry label.

- ✓ *Cabernet Sauvignon* (Reserve)
 - *Chardonnay* • *Classic red blend* (Classique, Rossini)
 - *Sémillon*

NEIL ELLIS

Stellenbosch

★★

The Cape's first and foremost winemaker-négociant, Ellis's uncanny skill in sourcing grapes from cutting-edge viticultural areas, and equal expertise in crafting some of South Africa's classiest wines from them, has sparked off a whole raft of wineries that buy in from selected vineyards.

- ✓ *Cabernet Sauvignon* (Stellenbosch, Jonkershoek)
 - *Classic red blend* (Cabernet Sauvignon-Merlot)
 - *Chardonnay* (Aenigma, Elgin) • *Pinotage* (Stellenbosch) • *Sauvignon Blanc* (Groenekloof) • *Syrab* (Jonkershoek Shiraz)

FAIRVIEW

Paarl

★★★

This estate is run by Charles Back, one of the most innovative wine producers in South Africa, offering a large and constantly expanding range of wine styles. The poorest wines here are good, and the best are sensational.

- ✓ *Cagignan* (Pegleg)
 - *Chardonnay* (Akkerbos)
 - *Classic red blend* (Caldera)
 - *Desert* (La Beryl Blanc)
 - *Pinotage* (Primo)
 - *Sauvignon Blanc* • *Sémillon* (Oom Pagel) • *Shiraz* (Cyril Back, Solitude) • *Viognier*

FLAGSTONE

Somerset West

★★

Owner-winemaker Bruce Jack was quick off the block with a stunning quality range of wines from his first vintage in 1999. A master at classic red blends.

- ✓ *Cabernet Sauvignon* (Berrio)

- *Classic red blend* (Bowwood, Dragon Tree, Foundation Longitude, Mary Le Bon)
- *Pinot Noir* (The Poetry Collection) • *Ruby Cabernet* (Ruby in the Dust)
- *Sauvignon Blanc* (Berrio)

FLEUR DU CAP

Stellenbosch

★★★

Made and marketed by the Bergkelder at Stellenbosch, Fleur du Cap has established a high standard of quality for its basic wines, but has reinvented itself with spectacular success with its "Unfiltered" range.

- ✓ *Cabernet Sauvignon* (Unfiltered) • *Chardonnay* (Unfiltered) • *Chenin Blanc* • *Classic white blend* (Unfiltered Viognier-Chardonnay-Sauvignon Blanc-Sémillon)
- *Late Harvest* (Noble Riesling)
- *Merlot* (Unfiltered)
- *Sauvignon* (Unfiltered Limited Release) • *Sémillon* (Unfiltered)

KEN FORRESTER

Stellenbosch

★★

This property dates back to 1689, when the farm was called Zandberg, and by 1692 some 12,000 vines had been planted. But the first wine in modern times was produced in 1994, when owners Ken and Teresa Forrester pressed a small quantity of Sauvignon Blanc grapes to produce a Blanc Fumé. They also own the wonderful restaurant opposite the vineyard called 96 Winery Road.

- ✓ *Chenin Blanc* • *Classic red blend* (Gypsy) • *Late Harvest* (T Noble)

FORT SIMON

Stellenbosch

★★

Since its first vintage in 1998, Fort Simon Estate has impressed with the elegance of its wines.

- ✓ *Chardonnay* • *Chenin Blanc* (*Barrel Fermented*)

THE FOUNDRY

Stellenbosch

★★

Although made at Meerlust, this is the private label of Chris Williams and his business partner James Reid of Kumala fame. In 2004 Chris Williams took over from the legendary Giorgio Dalla Cia, as Meerlust's winemaker, and brought The Foundry label with him.

- ✓ *Classic red blend* (Double Barrel) • *Syrab*

GLEN CARLOU

Paarl

★★

Donal Hess of The Hess Collection in Napa was the co-owner, until he bought out David Finlayson. Finlayson remains as winemaker, continuing to produce some of South Africa's finest Chardonnay.

- ✓ *Chardonnay* • *Classic red blend* (Grand Classique) • *Pinot Noir* • *Syrab*

GOEDE HOOP

Stellenbosch

★★

Under owner Pieter Bestbier, this former Bergkelder estate offers an expanded range of wines of improving quality.

- ✓ *Cabernet Sauvignon* • *Classic red blend* (Merlot-Cabernet Sauvignon)

GRANGEHURST

Stellenbosch

★★

One of the new breed of winemakers who source grapes from various other growers, Grangehurst makes exciting, well-crafted, elegant yet substantive wines.

- ✓ *Cabernet Sauvignon* (Chairman's Reserve) • *Classic red blend* (Cabernet Sauvignon-Merlot, Nikela) • *Pinotage*

GROOT CONSTANTIA

Constantia

★★

This property is part of the original Constantia farm, the oldest and most famous of Cape estates, and is currently being run with passion and great skill.

- ✓ *Classic red blend* (Gouverneurs Reserve) • *Merlot* (Gouverneurs) • *Syrab* (Gouverneurs Shiraz)

HAMILTON RUSSELL

Overberg

★★★

Established by Tim Hamilton Russell, this was once Africa's most southerly vineyard. Now there are many this far south and some farther still. No expense was spared to ensure that this would become one of the finest wineries in the Cape, and winemaker Peter Finlayson helped make that dream come true. Finlayson left to establish his own winery, Bouchard-Finlayson (which is just next door), but his replacement, Kevin Grant, continued to make some of the Cape's most spell-binding Burgundian varietals. Hannes Storm became the new winemaker at the Hamilton Russell vineyard in 2004.

- ✓ *Chardonnay* • *Pinot Noir*

HARTENBERG

Stellenbosch

★★

Some stunning wines, but what a pity they ripped out the Zinfandel!

- ✓ *Cabernet Sauvignon*
 - *Chardonnay* • *Merlot*
 - *Syrab* (Shiraz)

HAVANA HILLS

Philadelphia

★★

The winery that has single-handedly established the reputation of the new Philadelphia wine ward for top-performing red wines.

- ✓ *Cabernet Sauvignon* (Du Plessis Reserve) • *Classic red blend* (Du Plessis Reserve) • *Merlot* (Du Plessis Reserve) • *Shiraz* (Du Plessis Reserve)

HILLCREST

Durbanville

★★★

The Hillcrest estate's first vintage was as recent as 2002, yet the deftly sculptured wines scream out for attention.

- ✓ *Classic red blend* (Merlot-Cabernet Sauvignon) • *Sauvignon Blanc*

JONKHEER

Stellenbosch

★★★

The Madonna of the Cape wine industry, Jonkheer was established as long ago as 1912, and was known as Jonkheer Boere Wynmakery, when they were known for semisweet white wines called Edelweiss, but they have not only economized their trading name, but have also reinvented their wines, which are exemplary by any standards.

- ✓ *Chardonnay* (Dead Frogge, Family Reserve) • *Classic red Blend* (Cobblers Hill) • *Fortified* (Bakenskop White Muscadel, Muscatheer Family Reserve Muscat de Frontignan)

JORDAN

Stellenbosch

★★

This property is now a Cape front-ranker, especially for Cobblers Hill classic red wine blend (a three-barrel selection called Jordan Sophia is sold exclusively at the CWG Auction), but its primary reputation is for rich and vibrant white wines.

- ✓ *Chardonnay* (Nine Yards) • *Classic red Blend* (Cobblers Hill) • *Sauvignon Blanc* • *Merlot*

KAAPZICHT

Stellenbosch

★★★

Established in 1984, Kaapzicht Estate has only just awoken to provide a number of exciting wines

in recent years. Although the Pinotage is usually a big wine, it is so well balanced that it belies its 15 percent something of alcohol.

- ✓ *Cabernet Sauvignon* • *Classic red blend* (Steytler Vision)
• *Pinotage* (Steytler) • *Shiraz*

KANONKOP
Stellenbosch

★★

Winemaker Beyers Truter is generally considered to be one of the greatest Stellenbosch red wine exponents, and more specifically the king of Pinotage.

- ✓ *Cabernet Sauvignon* • *Classic red blend* (Paul Sauer)
• *Pinotage*

KANU
Stellenbosch

★★★

Delightful, easy-drinking, good-value standard range, and serious to stunning Limited Release wines from this winery that has captured much attention since it was established in 1998.

- ✓ *Cabernet Sauvignon* (Limited Release) • *Chardonnay* (Limited Release) • *Chenin Blanc* (Wooded) • *Classic red blend* (Keystone) • *Merlot* (Limited Release)

KLEIN CONSTANTIA

Constantia
★★

This property was part of Simon van der Stel's original Constantia Estate, but after centuries of neglect it was replanted as recently as 1982. Note that Vin de Constance is not a botrytis wine, nor is it fortified; it is supposedly a faithful replication of the famous Constantia of old.

- ✓ *Cabernet Sauvignon (Reserve)*
• *Desert* (Vin de Constance)
• *Late Harvest* (Noble Late Harvest Sauvignon Blanc)
• *Riesling* (Rhine Riesling)
• *Sauvignon Blanc*

KLEINE ZALZE
Stellenbosch

★★

This former Gilbeys property was purchased by Kobus Basson and Jan Malan in 1996, since when its wines have been put on the map and its reputation has been rising fast.

- ✓ *Cabernet Sauvignon* (Barrel Mated) • *Chardonnay* (Barrel Fermented) • *Merlot* (Barrel Mated, Cellar Selection)

KWV
Paarl

★★★

This was a super-sized cooperative that controlled the entire South African wine industry until 1995, when it was stripped of its legislative powers, and privatized. Extraordinary as it might seem to external observers, KWV wines

were not allowed to be sold in South Africa itself. However, with legal and structural changes, this was due to change in 2001, although certain obstacles prevented these wines from reaching the shelf locally until 2004. As it turned out, 2004 was a year when the KWV hit the headlines for reasons its management would rather forget—it was discovered that two of its winemakers had added illegal (but harmless) flavorants to two Sauvignon Blanc wines (2004 Laborie and 2004 KWV Reserve). They were dismissed, and 16,000 gallons (60,000 liters) of wine had to be destroyed. Looking on the bright side, the quality and value of KWV wines (especially in the Cathedral Cellar and Reserve ranges) have never been higher, and if such trickery were to occur anywhere else in South Africa, the one thing we can be sure about is that it will not be at KWV. There are just too many official eyes looking at everything it does.

- ✓ *Cabernet Sauvignon* (Cathedral Cellar, KWV Reserve, Labourie)
• *Chardonnay* (Cathedral Cellar) • *Classic red blend* (Cathedral Cellar Triptych)
• *Classic white blend* (Robert's Rock Chardonnay-Sémillon) • *Fortified* (Tawny Port, Vintage Port, Vintage Red Muscadel) • *Merlot* (Cathedral Cellar, KWV Reserve) • *Pinotage* (Cathedral Cellar)
• *Sauvignon Blanc* (Labourie, KWV Reserve) • *Syrab* (Cathedral Cellar Shiraz, Labourie Cabernet Merlot Reserve, Labourie Jean Taillefert)

LAIBACH
Stellenbosch

★

This farm was called Good Success until it was purchased by Swiss-based German businessman Friedrich Laibach, who built a new cellar and bottled these wines for the first time in 1997. Almost 15 percent of the Laibach vineyard is farmed organically.

- ✓ *Classic red blend* (Friedrich Laibach, The Ladybird) ☉
• *Pinotage*

LANDSKROON

Paarl
★★★

This is a very large estate at 148 acres (600 hectares), of which 74 acres (300 hectares) are under vine.

- ✓ *Cabernet Sauvignon* • *Port*
• *Shiraz* (Paul de Villiers)

LONGRIDGE WINERY

Stellenbosch
★★

Longridge Winery is now part of the Australian wine group Winecorp, which also owns Savanha and Spier. Longridge constitutes one of the largest of the Cape's quality-oriented producers.

- ✓ *Cabernet Sauvignon*
• *Chardonnay* • *Merlot*
• *Pinotage*

LOUISVALE

Stellenbosch

★

Louisvale offers a solid range of well-made wines, but is best known for its big, leesy Chardonnay.

- ✓ *Chardonnay* • *Classic red blend* (Dominique)

MEERLUST

Stellenbosch

★★★

For more than 30 years this has been one of the Cape's most consistent wine estates. Meerlust is owned by the Myburgh family, who have been assisted from the very start by the visionary winemaker Giorgio Dalla Cia. Dalla Cia retired in 2004, handing over to Chris Williams, who worked with Michel Rolland, and was Dalla Cia's assistant winemaker between 1995 and 2000, when he set up The Foundry. All wines produced are among the very best in the country for their particular styles, but with eighth generation Hannes Myburgh in overall charge, and such a talented, inquisitive new winemaker at the helm, Meerlust is set to go from top gear into overdrive.

- ✓ *Chardonnay* • *Classic red blend* (Rubicon) • *Merlot*
• *Pinot Noir*

MEINERT

Stellenbosch

★★

Since 1997, Ken Forrester's winemaking partner Martin Meinert has made some splendid wines under his own label.

- ✓ *Classic red blend* (Devon Crest, Synchronicity) • *Merlot*

MIDDELVLEI

Stellenbosch

★

This estate made its reputation with Pinotage, but has recently been producing stunning Syrah.

- ✓ *Pinotage* • *Syrab* (Shiraz)

MONIS

Paarl

★★★

This famous old Cape fortified brand belongs to Distell (see separate entry).

- ✓ *Fortified* (Cream Sherry, Muscadel, Very Old Tawny Port)

MOOIPLAAS

Stellenbosch

★★★

After making and selling wine in bulk for 30 years, the owners started selling wines under their Mooiplaas label in 1995.

- ✓ *Cabernet Sauvignon*
• *Pinotage* • *Syrab* (Shiraz)

MORESON

Stellenbosch

★★

Acquired by Richard Friedmann in 1985, this estate initially developed a reputation for its white wines, although it is its reds that have shone out in recent vintages.

- ✓ *Cabernet Sauvignon*
• *Chardonnay* (Premium)
• *Classic red blend* (Magia)
• *Pinotage* • *Sauvignon Blanc*

MORGENHOF

Stellenbosch

★★★

This historic wine estate is owned by Anne Cointreau-Huchon, whose *cognaçais* family own Champagne Gosset. Morgenhof makes some truly stylish wines, with excellent-value entry-level wines sold under the Fantail label. I have not tasted New Cap Classique, but I would be surprised and disappointed if it is not one of the country's best.

- ✓ *Cabernet Sauvignon* (Reserve)
• *Chardonnay* • *Classic red blend* (Première Sélection)
• *Merlot* (Reserve) • *Pinotage*
• *Sauvignon Blanc*

MORGENSTER

Stellenbosch

★★

Another new name to watch, Morgenster was established in 1993, but did not produce any wine under its own label until the 1998 vintage. Morgenster grows just four Bordeaux varieties (Merlot, Cabernet Sauvignon, Cabernet Franc, and Petit Verdot), and specializes in classic red blends. Pierre Lurton consults.

- ✓ *Classic red blend* (Lourens River Valley, Morgenster)

LA MOTTE

Paarl

★★★

Owned by Hanneli Koegelenberg, the daughter of Anton Rupert, the second richest man in South Africa, La Motte's wines have been made by Edmund Terblanche since 2001.

- ✓ *Classic red blend* (Shiraz-Viogner) • *Syrab* (Shiraz)

MULDERBOSCH

Stellenbosch

★★

These are top-flight wines from superbly sited mountain vineyards, with moves toward organic viticulture, and crafted by skillful winemaking.

- ✓ *Chardonnay* • *Chenin Blanc* (Steen-op-Hout) • *Classic red blend* (Beta Centauri, Faithful Hound) • *Sauvignon Blanc*

MURATIE

Stellenbosch

★★

Owned by the Melck family, which has made some brilliant wines since 2000. Guillaume Nell is the new winemaker since 2003.

✓ *Cabernet Sauvignon* • *Classic red blend* (Anselma) • *Fortified* (Cape Vintage) • *Syrab* (Shiraz)

NEDERBURG

Stellenbosch

★★★

Owned by Distell. As with Fleur du Cap, the consistency is remarkable for such a commercial range, on top of which the quality improves with each year. The entire 20-plus range of Private Bin wines sold exclusively at the annual Nederburg Auction is recommended, but they become available only should a retailer successfully bid for a lot, and later decide to market them.

✓ *Cabernet Sauvignon* (Private Bin) • *Classic red blend* (Edelrood) • *Classic red blend* (Prelude) • *Late Harvest* (Noble Late Harvest) • *Sauvignon Blanc* (Private Bin) • *Shiraz* (Private Bin)

NEETHLINGSHOF

Stellenbosch

★★★

Owned by Lusan Holdings, this vineyard's wines have greatly improved in quality since the 1990s.

✓ *Cabernet Franc* (Lord Neethlingshof) • *Cabernet Sauvignon* (Lord Neethlingshof) • *Chardonnay* (Lord Neethlingshof) • *Classic red blend* (Cape Blend, Lord Neethlingshof Laurentius) • *Late Harvest* (Weisser Riesling Noble Late Harvest) • *Syrab* (Shiraz)

NELSON

Paarl

★★

Established in 1993 by the Nelson family, this estate has moved up a gear since the new millennium.

✓ *Classic red blend* (Cabernet Sauvignon-Merlot) • *Chardonnay* • *Syrab* (Shiraz)

NEWTON JOHNSON

Walker Bay

★★★

One of the brightest new stars in the exciting Walker Bay wine scene.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Classic red blend* (Shiraz-Mourvèdre) • *Pinot Noir* • *Sauvignon Blanc*

NITIDA CELLARS

Durbanville

★★★

Small, up-and-coming boutique in the Durbanville Kloof, where there is a distinct intensity to the wines.

✓ *Cabernet Sauvignon* • *Sauvignon Blanc* • *Sémillon*

NUY WINE CELLAR

Worcester

★★

South Africa's best cooperative has a more private-sounding name these

days, but the secret of its success is the same—it selects just 3 percent of the 10,000 tons processed every year to sell under its own label.

✓ *Colombard* (Dry) • *Fortified* (Red Muscadel, White Muscadel)

THE OBSERVATORY

Malmesbury

★★

The Lubbe family has made an indelible impact with minuscule releases from vines growing on the slopes of the Paardeberg.

✓ *Classic red blend* (Carignan-Syrab) • *Syrab*

OLD VINES

Rosebank

★★★

South Africa's only women's empowerment winery, Old Vines was established in 1995 by mother and daughter, Irina von Holdt and Françoise Botha, whose primary goal is to raise awareness of Chenin Blanc as the Cape's white-wine flagbearer.

✓ *Chenin Blanc*

L'ORMARINS

Paarl

★★

Restored by the late Toni Rupert, son of Anton Rupert. With virtually unlimited finance at his disposal, Toni quickly established L'Ormarins at the very top of Cape winemaking. L'Ormarins is now owned by Toni's brother, Johann.

✓ *Cabernet Sauvignon* • *Classic red blend* (Optima) • *Merlot*

OVERGAAUW

Stellenbosch

★★

This is a technically superior operation that produces exciting wines. With lots of class and very little sulfur dioxide, Overgaauw has been a pioneering wine estate for a quarter of a century.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Classic red blend* (Shiraz-Cabernet Sauvignon, Tria Corda) • *Fortified* (Cape Vintage, Cape Vintage Reserve) • *Merlot*

PLAISIR DE MERLE

Stellenbosch

★★

Grapes from Plaisir de Merle formed the heart of many Nederburg wines until 1993, when with the help of consultant Paul Pontallier of Château Margaux, owner-winemaker Niel Bester launched a range of estate-bottled wines that are worthy of Distell's flagship domaine.

✓ *Classic red blend* (Grand Plaisir) • *Merlot* • *Sauvignon Blanc*

DU PREEZE

Goudini

★★★

An up-and-coming new star from an unlikely part of the Breede River

Valley, with less expensive wines sold under Rockfields and Dry Creek labels.

✓ *Classic red blend* (Polla's Red) • *Fortified* (Hanepoot) • *Merlot* (Reserve) • *Petit Verdot* (Hendrik Lodewyk)

REMHOOGTE

Stellenbosch

★★

A rapidly improving winery whose inaugural vintage was 1995. Michel Rolland consults.

✓ *Classic red blend* (Bonne Nouvelle)

RHEBOKSLOOF

Paarl

★★

My my, how the quality here has rocketed since the late 1990s.

✓ *Cabernet Sauvignon* • *Chardonnay* (Grand Reserve) • *Classic red blend* (Cabernet Sauvignon-Merlot)

LE RICHE

Stellenbosch

★★

The first vintage was 1997 for this small, up-and-coming winery that has focused on making a limited range of highly polished reds.

✓ *Cabernet Sauvignon* • *Cabernet Sauvignon-Merlot*

RIETVALLEI

Robertson

★

Classic Muscadel.

✓ *Chardonnay* • *Fortified* (Muscadel 1908, Red Muscadel) • *Syrab* (Shiraz)

RIJK'S PRIVATE CELLAR

Tulbagh

★★

Fast-rising, potential star winery, Rijk's inaugural vintage was as recent as 2000.

✓ *Classic red blend* (Bravado) • *Sémillon*

ROBERTSON WINERY

Robertson

★★★

For a cooperative that could be relied upon for little more than fortified wine, the Robertson Winery has developed an exciting range of

modern, finely honed table wines, and these have been on a roll since the early 2000s.

✓ *Chardonnay* (Kings River) • *Classic red blend* (No. 1 Constitution Road) • *Late Harvest* (Wide River Reserve) • *Syrab* (Wolfskloof Shiraz)

J. C. LE ROUX

Stellenbosch

★

This Bergkelder label was originally used exclusively for sparkling wines, but various still wines have since been added.

✓ *Sparkling* (Pinot Noir)

RUIDERA

Robertson

★★

With his first vintage as recent as 2001, owner-winemaker Teddy Hall has rapidly established a broad and convincing reputation as one of the names to watch in the future of South African wine, particularly for Chenin Blanc.

✓ *Cabernet Sauvignon* • *Chenin Blanc* • *Late Harvest* (Noble Late Harvest Chenin Blanc) • *Syrab*

RUUST EN VREDE

Stellenbosch

★

Owned by Jannie Engelbrecht, a former Springbok, who produces only wines he likes to drink—rich, red, dense, well balanced, and not sold until they are ready.

✓ *Cabernet Sauvignon* • *Classic red blend* (Estate Wine) • *Merlot* • *Syrab* (Shiraz)

RUSTENBERG

Stellenbosch

★★★

Once heralded as the very best of South Africa's top growths, the quality at Rustenberg Estate faltered in the early 1990s, only for it to be picked up as from the 1996 vintage, and pushed higher than it has ever been. Rustenberg Estate is now under the direct control of Simon Barlow, who installed a brand new winery and has done everything necessary to ensure that Rustenberg's reputation remains impeccable. Wines sold under the entry-level Brampton label sometimes rival Rustenberg at its best.

✓ *Cabernet Sauvignon* (Peter Barlow) • *Chardonnay* (Five Soldiers, Stellenbosch) • *Classic red blend* (John X Merriman) • *Late Harvest* (QF)

SAXENBURG

Stellenbosch

★★

This Swiss-owned winery has been a rising star for wines of increasingly high quality and complexity since the late 1990s.

- ✓ *Cabernet Sauvignon* (Private Collection) • *Chardonnay* (Private Collection) • *Classic red blend* (Gwendolyn, Manuel) • *Merlot* (Private Collection) • *Pinotage* (Private Collection) • *Sauvignon Blanc* (Private Collection) • *Syrah* (Shiraz Select)

SEIDELBERG

Paarl
★★

Brilliant wines since the early 2000s.

- ✓ *Classic red blend* (Un Deux Trois) • *Fortified* (Red Muscadel) • *Merlot* (Roland's Reserve) • *Syrah* (Roland's Reserve)

SENTINEL

Stellenbosch
★★

Established by Rob Coppoolse, Walter Finlayson, and Viv Grater in 1995, the quality of these wines really began to take off with the 2002 vintage.

- ✓ *Merlot* • *Pinotage* • *Syrah* (Shiraz)

SIGNAL HILL

Stellenbosch
★★

Jean-Vincent Ridon is in the process of planting a vineyard on Signal Hill, next to Table Mountain, by renting every square inch he can find. Until these vines come on stream, he buys in grapes to produce a mostly splendid range of wines.

- ✓ *Chardonnay* (Corsaire)
• *Classic red blend* (Frans Malan, Tiara) • *Desert* (Mathilde Azú 6 Puttonyos, Vin de Glacière, Vin de l'Empereur) • *Grenache Blanc* • *Late Harvest* (Muscat d'Alexandrie Noble Late Harvest) • *Petit Verdot* • *Pinotage* (Malwenn) • *Sparkling* (Kaapse Vonkel) • *Syrah* (Merindol)

SIMONSIG

Stellenbosch
★★

This winery has a huge production, and its wines range from the

sensational down to pretty standard stuff, with an increasing proportion of the former.

- ✓ *Classic red blend* (Frans Malan, Tiara) • *Late Harvest* (Vin de Liza) • *Petit Verdot* (Auction Reserve) • *Sparkling* (Kaapse Vonkel) • *Syrah* (Merindol)

SPICE ROUTE

Malmesbury
★★

This estate was originally owned by a consortium of Charles Back, Jabulani Ntshangase, John Platter, and Gyles Webb, but it is now solely owned by Back. Spice Route excels at red wines, and its signature style is typically deep, dark, rich, and spicy, with masses of black fruit. Its Flagship Syrah is still one of the best I have tasted from South Africa.

- ✓ *Chenin Blanc* • *Classic red blend* (Malabar) • *Merlot* (Flagship) • *Syrah* (Flagship)

SPIER

Stellenbosch
★★

A winery has been added to this deluxe, classy hotel complex, which Winecorp originally established in 1976. The first vintage to be produced here was in 1996. The very best wines are sold under Spier's Private Collection label (which is considerably better quality than is found among most of their basic range).

- ✓ *Cabernet Sauvignon* (Private Collection) • *Chenin Blanc* (Private Collection) • *Late Harvest* (Noble Late Harvest) • *Merlot* (Private Collection) • *Pinotage* • *Sauvignon Blanc* (Private Collection) • *Viognier* (Private Collection)

SPRINGFIELD

Robertson
★★★

Owner-winemaker Abrie Bruwer is considered a bit of an eccentric in his own country, but virtually all of his practices merely represent an organic approach, with even a touch of biodynamics, to farming and winemaking.

- ✓ *Cabernet Sauvignon* (Méthode Ancienne, Whole Berry) • *Chardonnay* (Méthode Ancienne, Wild Yeast) • *Classic red blend* (The Work of Time) • *Sauvignon Blanc* (Life From Stone)

STARK-CONDÉ

Stellenbosch
★★

Condé wines are named after the winemaker José Conde, and are single-vineyard wines made from Stark-Condé's best blocks. Stark wines are named after Franciska Stark, the late family matriarch, and are blended from more than one of Stark-Condé's vineyard blocks; given the same hand treatment as the Condé wines, they differ simply by being blends of multiple vineyard blocks.

- ✓ *Cabernet Sauvignon* (Condé, Stark) • *Shiraz* (Stark)

STEENBERG

Constantia
★★

From small quantities of gorgeously fresh Sauvignon Blanc to a fabulous range of stunning wines in a myriad of styles, including the country's best *Sémillon*.

- ✓ *Classic red blend* (Catharina)
• *Nebbiolo* • *Sauvignon Blanc* • *Sémillon*

STELLENBOSCH

Stellenbosch
★★★

The Eersterivier Vineyards and Helderberg cooperatives consolidated with Bottelary, Hoelenhof, and Welmoed to become Stellenbosch. They then reinvented themselves as a private cellar by converting their members into shareholders.

- ✓ *Cabernet Sauvignon* (Genesis)
• *Chardonnay* (Genesis)
• *Classic red blend* (Kumkani Merlot-Cabernet Franc)
• *Classic white blend* (Kumkani VVS) • *Merlot* (Genesis)
• *Syrah* (Genesis Shiraz)
• *Sauvignon Blanc* (Kumkani)

STELLENZICHT

Stellenbosch
★★

Under the same ownership as Neethlingshof, Stellenzicht's mountain vineyards produce some of the finest new arrivals on the South African fine-wine scene.

- ✓ *Classic red blend* (Stellenzicht)
• *Sémillon* (Reserve) • *Syrah*

THABANI

KwaZulu-Natal
②

Despite promises of black empowerment, this is the first and only wholly black-owned (Jabulani Ntshangase and Trevor Steyn) wine company in South Africa. This is definitely a name to watch, not because of any condescending, pseudo-liberal hype, but because of Jabulani Ntshangase, a mover and shaker in every sense. Once met, never forgotten, Ntshangase was one of the original partners in Spice Route, and I will be extremely surprised if Thabani does not rival that operation when its soon-to-be-built boutique winery is in operation.

THELEMA MOUNTAIN

Stellenbosch
★★★

Under the steady hand of owner-winemaker Gyles Webb, Thelema Mountain has become one of the country's most exciting producers, producing stunningly rich, refined, and complex wines.

- ✓ *Cabernet Sauvignon*
• *Cabernet Sauvignon-Merlot*
• *Chardonnay* • *Merlot*
• *Pinotage* • *Riesling* (Rhine Riesling) • *Sauvignon Blanc*
• *Syrah* (Shiraz)

DU TOITSKLOOF WINERY

Worcester
★①

The Du Toitskloof Winery, a cooperative, has a long record of award-winning table wines and now produces top-flight dessert wines.

- ✓ *Fortified* (Hanepoot Jerepigo, Red Muscadel)

DE TOREN

Stellenbosch
★★

Although this winery's first vintage was as recent as 1999, it already has a cult following for its stunningly successful Fusion V, a classic blend of five varieties (Cabernet Sauvignon, Cabernet Franc, Merlot, Malbec, and Petit Verdot).

- ✓ *Classic red blend* (Diversity Beta, Fusion V)

DE TRAFFORD

Stellenbosch
★★

This ultrasmall boutique winery has established a reputation for beautifully crafted Cabernet, with whispers in the wind of things to come, including serious, *barrique*-fermented Chenin Blanc.

- ✓ *Cabernet Sauvignon* • *Merlot*

TUKULU

Groenkloof
★★★①

This is a black empowerment joint venture with Distell, which will divest itself of its shareholding as the start-up capital is repaid through the sale of grapes in about 12 years' time (from 1998, its date of establishment).

- ✓ *Chenin Blanc* • *Pinotage*

TWEE JONGEGEZELLEN

Tulbagh
★★①

Having endured horrendous bottle quality problems, Nicky Krone's

Krone Borealis is back on track, particularly because he is now giving it greater bottle-age. His greatest Cap Classique wine is, however, Private Vintners Limited Release 1995 Pinot Noir.

✓ *Sparkling wine* (Krone Borealis, Private Vintners Limited Release)

VEENWOUIDEN

Paarl
★★★

This boutique winery enjoyed its first vintage in 1993. Since then it has built up a compact range of increasingly fine quality.

✓ *Chardonnay* (Special Reserve)
• *Classic red blend* (Classic, Vivat Bacchus) • *Merlot*
• *Veenwouden* (Cabernet blend)

VERGELEGEN

Stellenbosch
★★★

This immaculately restored, historic wine estate must be everyone's choice as the leading South African wine producer, thanks to the meticulous efforts of its winemaker André van Rensburg.

✓ *Cabernet Sauvignon*
• *Chardonnay* • *Classic red blend* (Vergelegen, Vergelegen V) • *Merlot* • *Sauvignon Blanc* • *Syrah* (Shiraz)

VERGENOEGD

Stellenbosch
★★★

Owner-winemaker John Faure has gradually focused the quality of these wines since the 1990s.

✓ *Cabernet Sauvignon* • *Classic red blend* (Vergenoegd)
• *Fortified* (Old Cape Colony Vintage Port) • *Merlot* • *Syrah* (Shiraz)

VILLAFONTÉ

Paarl-Simonsberg
★★★

This is a brand-new joint venture between winemaking guru Zelma Long, viticulturist Phillip Freese, Warwick Estate's Mike Ratcliffe, and Bartholomew Broadbent, the American wine merchant son of Michael Broadbent. Villafonté is taken from the name *villafontes*, the gray, sandy soil on the property, which its owners believe to have a significant impact on the flavor profile and development of their wines. The vineyards are in Paarl-Simonsberg district, on the northern side of the Simonsberg Mountains, and planted in high density with four Bordeaux varieties (Cabernet Franc, Cabernet Sauvignon, Malbec, and Merlot). All of the farming is performed with four-wheel-drive motorcycles to reduce soil compaction. Series C is Cabernet Sauvignon-based, whereas Series M is Merlot-based.

✓ *Classic red blend* (Series C, Series M)

VILLIERA

Paarl
★★★

Villiera Estate was a rapidly rising star when the first edition of this encyclopedia was published 17 years ago, and it is now a well-established producer by current Cape wine standards.

✓ *Chenin Blanc* • *Classic red blend* (Monro) • *Classic white blend* (Down to Earth) • *Late Harvest* (Chenin Blanc Noble Late Harvest) • *Sparkling* (Brut Natural Chardonnay, Monro Brut, Tradition Brut, Tradition Rosé) • *Sauvignon Blanc* (Traditional Bush Vine)

WARWICK

Stellenbosch
★★★

Michael Ratcliffe is doing a masterly job of filling his father's shoes, following Stan Ratcliffe's untimely death. Innovations include moving away from some varieties into the classic red "flagship" blend, and holding back five cases of every wine for rerelease five years later. I can't help wondering why other wineries around the world do not hold back limited quantities like this, particularly for those wines in the range that tend to sell out well before their prime.

✓ *Cabernet Franc* • *Chardonnay*
• *Classic red blend* (Three Cape Ladies, Trilogy)

WATERFORD

Stellenbosch
★★★

The first Waterford vintage was in 1998, and already this winery promises to be one of South Africa's star wineries.

✓ *Cabernet Sauvignon*
• *Chardonnay* • *Classic red blend* (Cape Winemaker's Guild Blend) • *Syrah* (Kevin Arnold Shiraz)

WELGEMEEND

Paarl
★★★

A small, high-quality red wine specialist that was established in the 1970s, Welgemeend was one of the first boutique wineries in South

Africa. The winemakers at Welgemeend are aiming more for finesse and length than they are for alcohol and weight.

✓ *Classic red blend* (Douelle, Estate Reserve, Pinotage Shiraz)

WELTEVREDE

Robertson
★★★

Weltevrede means "well satisfied," which I am glad to say is still an apt description of anyone who has sampled the wines.

✓ *Chardonnay* (Poet's Prayer)
• *Riesling* (Rhine Riesling)
• *Sauvignon Blanc* (The Travelling Stone)

DE WETSHOF

Robertson
★★★

Quite how Danie de Wet can make such exquisite Chardonnay wines when you can cook an egg on the rocks in his vineyard is a mystery; such mysteries are part of the eternal fascination that wine holds for enthusiasts.

✓ *Riesling* (Rhine Riesling)
• *Chardonnay* • *Fortified* (Muscadel) • *Edeles* (botrytis)

THE WINERY

Stellenbosch
★★★

With partners from the Rhône, Barossa, and the Cape, The Winery has crafted some of South Africa's most stylish wines since its inception in 1998.

✓ *Cabernet Sauvignon* (Vinum)
• *Chardonnay* (Radford Dale)
• *Chenin Blanc* (Vinum)
• *Classic red blend* (Radford Dale Gravity) • *Merlot* (Radford Dale) • *Syrah* (Radford Dale Shiraz)

WOOLWORTHS

No fixed region
★★★

Readers should be aware that Woolworths in South Africa does not have any of the connotations of the Woolworths chain of stores in the US. This winery produces wines that are stylish and generally good value. Much of the extraordinary in Woolworths' range can be attributed to Allan Mullins, who is one of this country's good guys, and possessor of a gifted palate. In addition to those wines recommended below, the Limited Release range can stand out, but the producer for each wine tends to change more often than those in other ranges. There is also a decent-quality organic range of wines here.

✓ *Cabernet Sauvignon*
• *Chardonnay* (Limestone Hill, Reserve, Signature) • *Chenin Blanc* (Barrel) • *Classic red blend* (Cabernet Sauvignon-Merlot Reserve, Signature Cabernet Sauvignon) • *Pinotage*

(Reserve) • *Sauvignon Blanc* (Reserve) • *Sparkling wine* (Vintage Reserve Brut) • *Syrah* (Groenkloof Shiraz)

YONDER HILL

Stellenbosch
★★★

Yonder Hill produces a couple of beautifully crafted wines made from grapes grown in mountain vineyards on the Helderberg. The name of its classic red blend, iNanda, is Zulu for "beautiful place."

✓ *Classic red blend* (iNanda)
• *Merlot*

ZANDVLIET

Robertson
★★★

Zandvliet is famous for its Syrah, and its new Hill of Eon wine is certainly the best yet. Astonvale is its second label.

✓ *Shiraz*

ZEVENWACHT

Stellenbosch
★★★

Zevenwacht grew rapidly in the 1980s, making wines that were fresh, frank, and aromatic, but perhaps not all that exciting. Recently, however, there have been considerable improvements in quality, and these wines can represent great value.

✓ *Classic white blend* (Tin Mine White) • *Merlot* • *Sauvignon Blanc* • *Syrah*

ZONNEBLOEM

No fixed region
★★★

Although Zonnebloem, Distell's upmarket range, has always been strong on reds, they have noticeably more "oomph" in recent vintages, and even the Chardonnay has become quite exciting.

✓ *Cabernet Sauvignon*
• *Chardonnay* • *Classic red blend* (Lauréat) • *Merlot*
• *Pinotage* • *Syrah* (Shiraz)
• *Rozendal* (Stellenbosch)
• *Stellar Winery* (Olifants River)

OTHER CERTIFIED ORGANIC WINE PRODUCERS

Rozendal (Stellenbosch)
Stellar Winery (Olifants River)

NORTH AFRICA

The wine industries of Algeria, Morocco, and Tunisia, and the appellation systems within which they work, are all based on the structure left behind by the colonial French. Although some good wines can be found, and a trickle of foreign investment exists, the development of wine industries in these countries has been held back by their governments, which do not promote alcohol in Islamic states. Furthermore, their laws do not allow direct sales by wineries to the public, making wine tourism impossible, cutting out an important source of revenue and feedback.

CULTIVATION OF THE VINE flourished in Algeria, Morocco, and Tunisia as far back as 1000 BC, and winemaking was firmly established by at least the 6th century BC. Under French rule, North Africa was one of the most important winemaking regions

BERBER WOMEN WORKING IN A TUNISIAN VINEYARD
The best and most reliable AOC wines in Tunisia are Muscats, although rosé enjoyed an ephemeral fashion just after World War II.

AVERAGE ANNUAL PRODUCTION

COUNTRY	VINEYARDS	VINEYARDS	WINE		MAJOR GRAPE VARIETIES
	TOTAL	WINE GRAPES	PRODUCTION		
	Acres	Acres	Cases	Hectoliters	
Algeria	40,000	10,000	5.0m	450,000	Alicante Bouschet, Carignan, Cinsault, Grenache, Muscat d'Alexandria
Morocco	20,000	4,000	3.3m	300,000	Alicante Bouschet, Cabernet Sauvignon, Carignan, Cinsault, Grenache
Tunisia	10,000	6,000	4.6m	412,000	Alicante Bouschet, Carignan, Cinsault, Grenache, Sangiovese

NORTH AFRICA
 Morocco, Algeria, and Tunisia
 are all wine-producing countries.
 Most vineyards are concentrated
 along the coastal belts.

in the world. Yet today it is difficult to see how the quality of wine can progress in any of these countries, where wine production is at best tolerated, and even that level of forbearance is often undermined by government officials who would personally like to see a total ban.

ALGERIA

Wine districts of the *Département* of Oran *Coteaux de Mascara, Coteaux de Tlemcen, Monts du Tessala, Mostaganem, Mostaganem-Kenenda, Oued-Imbert*

Wine districts of the *Département* of Alger *Aïn-Bessem-Bouïra, Coteaux du Zaccar, Coteau de Médéa, Dabra*

Other wine areas of note *Alicante d'Oranie, Fontaine du Genie, Khayyam, Montagne des Lions, Nadim, Trappe*

In 1830, Algeria became the first North African country to be colonized by the French, which gave it a head start in viticulture over other North African countries. Algeria has always dominated North African viticulture in terms of quantity, if not quality. The demise of the country's wine industry after it gained independence in 1962 made it clear that cynical remarks about the use of its wine in bolstering Burgundies were true, but the ironic fact is that both the Algerian and the Burgundian wines benefited from being blended together. It was not the best Burgundies that were enhanced with dark Algerian red, but the poorest, thinnest, and least attractive wines. After the blending, they were not Burgundian in character, but were superior to the original Burgundy. By 1938 the Algerian wine

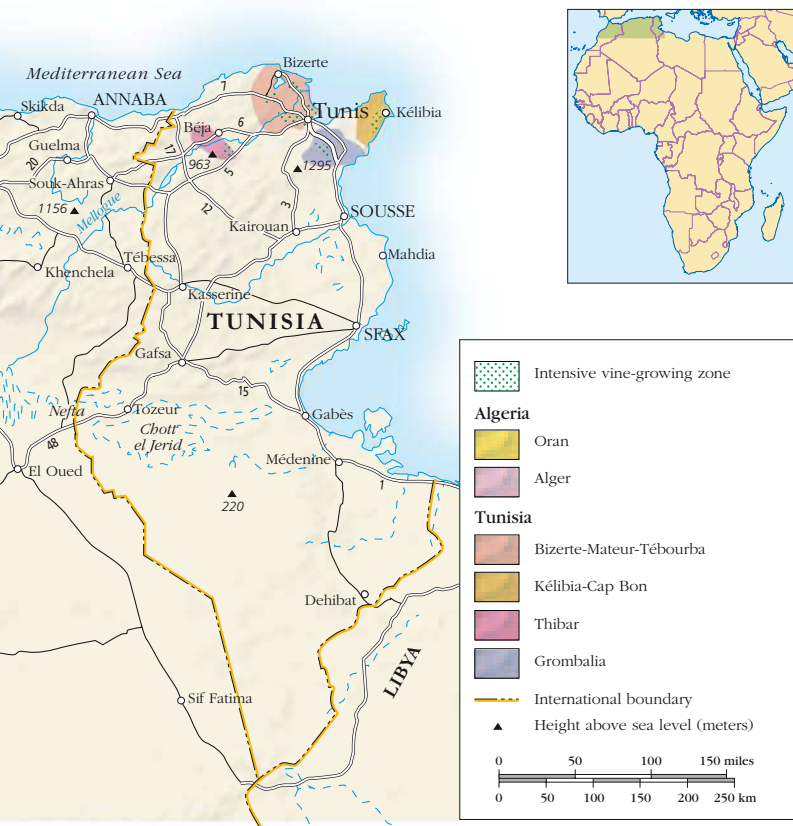

KHEMIS MILIANA, ALGERIA
Gently undulating vineyards south of Cherchell in the Alger region, just west of Haut-Dabra district.

industry had reached a peak of 988,000 acres (400,000 hectares) and 244 million cases (22 million hectoliters). Since independence, these vineyards have shrunk, and the number of wineries has plummeted from more than 3,000 to fewer than 50. Algeria has never known phylloxera, thus its varieties retain their own rootstock. Of the few reds that can honestly be recommended, the best are from Château Tellagh in Coteaux de Médéa and Cave de Bourkika in Coteaux de Mascara. Other wineries that produce reasonably good wine include: Coteaux de Mascara (Domaine El Bordj, Domaine Mamounia, Domaine Beni Chougrane); Coteaux de Tlemcen (Domaine de Sebra); Coteaux du Zaccar (Chateau Romain); and Dahra (Domaine de Khadra). Algeria has dropped further behind its wine-producing neighbors, but with the recent involvement of Jabulani Ntshangase, South Africa's only black winery owner (Thabani), and a real mover and shaker, it could be a sign that the future might be brighter than anticipated.

MOROCCO

Wine districts *Berkane, Boufekrane, El Jadida, Les Coteaux de l'Atlas, Meknès-Fez, Mjat, Rabat-Casablanca, Marrakech, Sidi-Slimane, Skbirate*

Wines were made here during Roman times, but after more than 1,000 years of Muslim rule, viticulture died out. In 1912, however, most of Morocco came under either French or Spanish control (with an international zone encompassing Tangiers) and it once more became an active winemaking country. When Morocco gained independence in 1956, the new government introduced a quality-control regime similar to the French AOC (*Appellation d'Origine Contrôlée*) system and, in 1973, it nationalized the wine industry. However, few wines carry the official *Appellation d'Origine Garantie* designation. In 1998, the first *Appellation d'Origine Contrôlée* was created, Les Coteaux de l'Atlas, encompassing the districts of Sidi-Slimane, Mjat, and Boufekrane, on the cool slopes of the Atlas Mountains, where

OLD MUSCAT VINES

Vineyards at Bizerte in the Bizerte-Mateur-Tébourba region at the northern tip of Tunisia.

the lime-rich clayey soils over dry, siliceous subsoil is particularly suitable for viticulture. Here we find Cabernet Sauvignon, Chardonnay, Merlot, and Syrah growing, and the wines produced by Les Celliers de Meknès, particularly the classic red blend, are the finest that Morocco currently has to offer. The country's more traditional wines are made from Carignan, Cinsault, and Grenache, usually in a pale rosé style, and often sold as *vin gris*. These can be pleasant when served chilled, but the best of even the traditional wines are red, and the most successful of these are also produced by Les Celliers de Meknès, but sold under the Les Trois Domaines label. Owned by Reda Zniber, who is regarded as something of a “godfather” in Morocco, Les Celliers de Meknès produces 90 percent of the country's wine, and most of it is at least drinkable. Or it is when it leaves the cellars. Most is sold

on the home market, and much of this is at undeservingly high prices, to tourists who are not willing to pay the even more exorbitant prices demanded for heavily taxed imported wines. Poor storage conditions inevitably spoil both Moroccan and imported wines. Moroccans themselves do drink wine, although there is a notable discrepancy between international per capita consumption figures (one quart) and Morocco's own religiously sensitive official estimation (zero!).

TUNISIA

Wine districts *Grombalia, Bizerte-Mateur-Tébourba, Kélibia-Cap Bon, Thibar*

Wines were first made around the Carthage area in Punic times, but production was forbidden for 1,000 years under Muslim rule. After French colonization in 1881, viticulture resumed, and by Tunisian independence in 1955, the foundations of a thriving wine industry had been laid. At this time two basic appellations had been established—*Vin Supérieur de Tunisie*, for table wines, and *Appellation Contrôlée Vin Muscat de Tunisie*, for liqueur Muscat. These designations did not, however, incorporate any controls to safeguard origin, and in 1957 the government introduced a classification system that established four levels as follows: *Vins de Consommation Courante*, *Vins Supérieurs*, *Vins de Qualité Supérieure*, and *Appellation d'Origine Contrôlée*.

The best traditional Tunisian wines are those made from the Muscat grape, ranging from the lusciously sweet, rich, and viscous Vin de Muscat de Tunisie, to fresh, delicate, dry Muscats such as the Muscat de Kelibia. There are also a small number of good red wines, such as Château Feriani, Domaine Karim, and Royal Tardi, with Carignan and Cinsault the most important black grape varieties. The finest new-wave wines are made by the partly German-owned Domaine Magon, which is working proficiently with Cabernet Sauvignon, Merlot, Pinot Noir, and Syrah. There is also encouraging news of progress from research scientist Amor Jaziri, who produces organic wines under the Almorly label, from his 35-acre (14-hectare) vineyard near Jedeida.

OTHER WINEMAKING COUNTRIES OF AFRICA

ETHIOPIA

Grape-growing in Ethiopia? In fact, viticulture has existed here for many centuries. This country converted to Christianity in the 4th century, and locally grown Communion wine has been used by the Ethiopian Orthodox Church since at least the 12th century. So entrenched is grape-growing in Ethiopian history that it has entered the language as a specific term. Ethiopians distinguish three altitude-defined climatic zones: *dega*, *wayna-dega*, and *kola*. *Dega* means “cold” and indicates areas that are higher than 8,200 feet (2,500 meters) above sea level. *Kola* means “hot place,” and applies to areas below 5,900 feet (1,800 meters). *Wayna-dega* literally means “grape elevation,” or “place where you grow grapes,” and refers to areas between 5,900 and 8,200 feet (1,800 and 2,500 meters) in height.

Ethiopia's largest vineyard is located at Awash, 100 miles (160 kilometers) east of Addis Ababa, in the Harar province, where some 74 acres (30 hectares) of Aleatico, Barbera, Chenin Blanc, Grenache, Petit Sirah, and Ugni Blanc are grown. There are also 185 acres (75 hectares) of so-called “local” varieties, including Debulbul Attere, Key Dubbi, Nech Debulbul, and Tiku

Weyn. There are two harvests each year, and the grapes are trucked to the Awash Winery in the outskirts of Addis Ababa, where reasonable-quality red and white wines are produced. The most commonly encountered wines are Axumite (sweetish white), Crystals (dry white), Dukam (red), and Gouder (Ethiopia's best red, from the Gouder vineyard, 84 miles (135 kilometers) west of Addis Ababa). However, the Awash Winery is located next to the Awash River, which irrigates the Awash vineyards 100 miles (160 kilometers) downstream, and in 1998 researchers from the University of Turku found the Awash River to be polluted downstream from the winery's own effluent discharge, but not upstream. This situation will have to be rectified before any serious thoughts of export can be entertained, as will its practice of using rehydrated imported raisins in some of the wines. Currently, the most exported wine is made from honey, not grapes. Called *Tej*, it is made all over the country, and is much more famous than its grape-based counterparts. The Awash Winery exports *Tej* to Sweden and the US, but Ethiopia is not really wine country, whether from honey or grapes. It is coffee country, to the point of giving the world the name itself—the province of Kaffa was the etymological origin of the word “coffee.”

KENYA

Lake Naivasha Vineyards are located on volcanic soils beside Lake Naivasha, situated 6,200 feet (1,900 meters) above sea level in the Rift Valley. The Rift Valley is the Flower Garden of Africa, the blooms of which are flown to florists all over the world. In fact, you can grow absolutely anything here, and grow it twice a year too. You can certainly grow grapes, as John and Elli D'Olier did between 1982 and 1992, with cuttings they brought back from California. They ripped out most of the vines in 1992 when overnight hikes in local taxes made Kenyan wine economically unviable, making just the odd wine for home consumption, only

to replant in earnest in 2002. The economics are not much better now than they were in 1992, but the d'Oliers just cannot give up on the idea of Kenyan wine.

Richard Leakey is famous for finding a 2.5-million-year-old human skull in Kenya, but he is also one of this country's newest winemakers. He might have lost both legs below the knee in a plane crash, and have only one kidney (and that the gift of Philip Leakey, his younger brother and sometime political foe), but this anthropologist, paleontologist, bruised politician, great African patriot, and tireless warrior against the ivory trade is still game for a new challenge. Leakey is not the sort of person to settle for Kenyan Carignan or Cardinal, but who would have thought that he, or anyone else in this country, could set their sights on Pinot Noir, the Holy Grail of winemaking? Well Leakey has, and by 2001 he had succeeded in cropping Pinot Noir at his Ol Choro Onyore vineyard in Ngong, and putting it (and Sauvignon Blanc) in bottle.

MADAGASCAR

Affectionately known as “Mad” to Anglo-Saxon inhabitants of the African continent, Madagascans have been growing grapes and making wine since the 19th century. Most of the vines growing on the island today are hybrids. With not a little tongue in cheek, John and Erica Platter write in *Africa Uncorked* (2002) that Stéphane Chan Foa Tong’s sparkling Grand Cru d’Antsirabe is “Unquestionably the best sparkling wine in all Madagascar. Probably the finest Couderc Blanc *méthode champenoise* in the world!” and certainly it seems better than his still wines. The clean and decent, but hardly exciting, wines of Clos Malaza in the Ambatomena area are generally agreed by the locals to be the best that Madagascar currently produces, from 74 acres (30 hectares) of well-trained Chambourcin, Couderc Blanc, Petit Bouchet, Villardin, Varousset, and Villard Noir vines. From an outsider’s point of view, the Chan brothers in Ambalavao produce more promising wine under the Côte de Fiana appellation (their best wine is sold as an exclusivity under the Tsara be label). Domaine Manomisoa is also known as Soavita Estate, and even more confusingly, its best wine is sold as Château Verger. Other wines are produced under the following labels: Clos de la Marombly (from the Masina Maria monastery, near Fiana) and Lazan’i Betsileo (a small cooperative in Fiana). Nothing really stands out among these wines, but with better grape varieties growing at altitude on the drier, eastern side of the island, and pruned to yield less than half the current average crop, Madagascar does have the potential to produce very much more interesting wines.

MAURITIUS

Beware Mauritian-looking wine sold under the Oxenham label, which is made from imported grape concentrate. While there is nothing wrong with that, the fact should be made clear.

NAMIBIA

Commercial Namibian wine is a very recent phenomenon, dating back to 1994, when Helmuth Kluge established Kristall Kellerei at Omaruru, on the periphery of the Namib desert. All wines are clean and well made, with fresh, zesty Colombar the best.

RÉUNION

This African island is, believe it or not, the most far-flung of all French wines areas: Vin de Pays de Cilaos. Created as recently as 2004, the *vin de pays* regulations forced the removal of the hybrids that used to grow here. Hybrids are still the mainstay of viticulture on Madagascar, which arguably offers greater potential, but the performance of the classic *vinifera* varieties growing on Réunion (Chenin Blanc, Pinot Noir, and Malbec) could well change the mind of those “Mad” people. There are plans to plant Gros Manseng, Pinotage, Syrah, and Verdelho. The styles produced are red, white, rosé, and, because the tendency is for grapes to overripen rather too easily, Moelleux. The only wine producer currently is the local cooperative, Chais du Cilaos, which harvested just 28 tons of grapes in 2004. The vines grow at an altitude of 3,930 feet (1,200 meters) on volcanic soil, cropping in January. The wines are fresh, crisp, and well-made, fermented in new, temperature-controlled, stainless-steel vats.

TANZANIA

There is only one winery, Tanganyika Vineyards, in Tanzania but two harvests a year, producing a decent, but not exciting, Chenin Blanc, and a Makutupora red and white.

ZIMBABWE

Although the first production of wine began in the early 1950s under the labels of Worringham and Lorraine, these semisweet wines were made from table grapes. It was not until UDI that this most beautiful country in Africa gave birth to a

truly commercial wine industry. During the mid-1960s, when sanctions bit deep, and anything that could be produced locally was produced locally, Rhodesian farmers grew the grapes to make the wines they could no longer import. In the 1990s, many low-quality grape varieties were ripped up, and replaced by classic *vinifera*, with drip irrigation. The grape varieties grown in Zimbabwe today include Buketraube, Cabernet Sauvignon, Cinsault, Clairette Blanche, Colombar, Chenin Blanc, Cruchen, Gewürztraminer, Merlot, Pinotage, Pinot Noir, Riesling, Ruby Cabernet, Sauvignon Blanc, and Seneca (*Lignan Blanc* x *Ontario* hybrid), but many wine farms have been occupied by “war vets.” Worringham still exists, both as a wine farm (111 acres; 45 hectares) and as a brand, and is owned by African Distillers (also known as Stapleford Wines), but other familiar wine names from the early days, such as Philips and Monis, no longer exist, having been absorbed by the Mukuyu Winery. Export brands such as Flame Lily, which made an ephemeral appearance on the UK market, have also fallen by the wayside. Meadows Estate used to be a shining example of cutting-edge viticulture in the 1980s, growing Gewürztraminer, Riesling, Chardonnay, and Pinot Noir, but it is a rose farm now, although Mukuyu still sell wines under the Meadows Estate brand. The 1990s also witnessed the installation of cool-fermentation technology, and internationally trained winemakers deployed on flying visits, with New Zealander Clive Hartnell (of Hungary’s Chapel Hill renown) currently winging his way around the wineries of African Distillers. The late Peter Raynor and his son Humpfrey established Zimbabwe’s largest private vineyard near Wedza, but its once impeccably trained vines have been unattended since the Raynor family was evicted by Minister of Youth Brigadier Ambrose Mutinhiri in December 2004. The family had been forcibly removed in July of that year, only to be herded back three weeks later and told to produce a crop. They are trying to get back in, but sadly the current situation seems ominously more permanent. In addition to the human tragedy, this sadly marks the end of the brief promise shown by Zimbabwe’s first and, now, only single-vineyard, pure varietal wines—Fighill 2002 Chardonnay and Fighill 2003 Shiraz, which the Raynors made from a superselected five percent of their own production. Most of their crop used to be split 50/50 between African Distillers (which bottled their domain wines) and Mukuyu (which is 65 percent government-owned, thus escaped its threatened compulsory acquisition in December 2001). Private farms have been so vulnerable to compulsory acquisition (i.e., occupation by “war vets”) that African Distillers and Mukuyu are now the only producers here.

The WINES of
THE AMERICAS

ALL OF THE MOST FAMOUS WINE REGIONS—California, Washington, Oregon, and Chile—are found on or inland from the western coast. This is because eastern seaboard regions are generally too humid and prone to severely cold winters. Of the famous regions in the Americas, California is, of course, the most important. It is staggering to think that the 25 largest wineries in this state on their own produce twice the output of Argentina (which itself is the fifth-largest winemaking country in the world). However, California is actually more about quality than quantity. It produces some of the world's greatest Cabernet Sauvignon, Merlot, Zinfandel, Pinot Noir, and Chardonnay wines. Although Washington has always been a considerably larger wine-producing state than Oregon, from an international perspective it used to live in the shadow of the latter's excellent-but-overhyped Pinot Noir. Well, no more. Washington is now justly famous for powerful *bordelais* varietals, not to mention its up-and-coming Syrah. British Columbia has far more in common with Washington state than it does with Ontario, and is creating at least as much of a buzz in the wine world. Chile still rules in South America, but a small number of quality-conscious Argentinian producers are giving their old rival a good run for its money.

MUSTARD FLOWERS IN CARNEROS, NAPA, CALIFORNIA
Mustard planted near vines provides a habitat for predators of vine pests and also prevents the evaporation of moisture.

NORTH AMERICA

The US is the fourth-largest wine-producing country in the world, and the output of California alone is more than double that of the fifth-largest wine-producing country (Australia), yet almost every state in this vast country produces wine. And, of course, North America does not consist of just the US; it also encompasses the viticultural areas of Ontario and British Columbia in Canada (see also pp.532–7), and the Baja California and Sierra Madre in Mexico (see also pp.538–9).

IN 1521, WITHIN ONE YEAR of invading Mexico, the Spanish planted vines and set about making the first North American wines. Fourteen years later, when French explorer Jacques Cartier sailed down the St. Lawrence to New France, he discovered a large island overrun by wild vines and decided to call it the Île de Bacchus. He had second thoughts, however, and later renamed it the Île d'Orléans, a calculated move in view of the fact that the then Duke of Orléans was the son of King Francis I of France. It is assumed that, circa 1564, the Jesuit settlers who followed in the wake of Cartier's explorations were the first winemakers in what was to become Canada. The earliest wines made in what is now the United States of America came from Florida. Between 1562 and 1564, French Huguenot settlers produced wines from native Scuppernong grapes on a site that would become Jacksonville.

JEKEL VINEYARDS, CALIFORNIA

An irrigation pipe skirts rows of vines in one of the drier parts of Monterey County. Conditions are a far cry from those around the Finger Lakes, New York.

NATIVE NORTH AMERICAN GRAPE VARIETIES

All classic grape varieties belong to one species, *Vitis vinifera*, but North America's native varieties belong to several different species, not one of which happens to be *Vitis vinifera*. There were plenty of native vines growing wild wherever the early settlers traveled, and so they came to rely on them for their initial wine production. Settlers in Australia, on the other hand, were forced to wait for precious shipments of classic European vines before they could plant vineyards. Although various European varieties were taken across the Atlantic in the 19th century, nearly all North American wines, aside from California ones, remained products of native varieties until relatively recently.

The most common native North American species, *Vitis labrusca*, has such a distinctive aroma and flavor that it seems truly amazing that those pioneers who were also winemakers did not pester their home countries for supplies of more acceptable vines. The *labrusca* character, commonly referred to as "foxy," is so exotic, it cloy at the back of the throat, and is generally not appreciated by European and antipodean palates.

PROHIBITION IN THE UNITED STATES

Although total Prohibition in the United States was confined to 1920–1933, the first "dry legislation" was passed as early as 1816, and the first state to go completely dry was Maine, in 1846. By the time the 18th Amendment to the Constitution was put into effect in 1920, forbidding "the manufacture, sale, or transport of intoxicating liquors," more than 30 states were already totally dry.

The result of Prohibition was chaos. It denied the government legitimate revenue and encouraged bootleggers to amass fortunes. The number of illicit stills multiplied quicker than the authorities could find and dismantle them, and the speakeasy became a way of life in the cities. Not only did the authorities often realize that it was much easier to turn a blind eye to what was going on, but the federal government actually found it useful to open its own speakeasy in New York! Many vineyards were uprooted, but those grapes that were produced were often concentrated, pressed, and sold as "grape bricks." These came complete with a yeast capsule and instructions to dissolve the brick in one gallon of water, but warned against adding the yeast because it would start a fermentation! This would turn the grape juice into wine "and that would be illegal," the warning pointed out.

Prohibition and the wine industry

By the mid- to late 19th century, the California wine industry had such a reputation that great French wine areas, such as Champagne, began to form syndicates to protect themselves, in part, from the potential of California's marketing threat. However, the 13 years of Prohibition coincided with a vital point in the evolution of wine, and set the California wine industry back a hundred years, since other wine regions had just recovered from the effects of phylloxera (see p.471), and were busily reestablishing their reputations and carving out future markets. In Europe, World War I had robbed every industry of its young, up-and-coming generation, but the rich tradition of the wine industry enabled it to survive until the arrival of a new generation. The early 1900s were also the era of the foundation of the French *Appellation Contrôlée* laws, a quality-control system that many other serious winemaking countries would eventually copy.

The United States also lost much of one generation in World War I, but it had less of a winemaking tradition to fall back on and, by 1920, there was virtually no wine industry whatsoever to preserve. After Prohibition came one of the worst economic depressions in history, followed by World War II, which took yet

NORTH AMERICA

Wine is produced across the entire continent of North America, in Canada, the United States, and Mexico, whether from native grapes or vinifera varieties. Winemakers work in enormously varied conditions according to climate.

MOUNT PLEASANT VINEYARDS
These vineyards in Augusta, Missouri, were the first Approved Viticultural Area in the United States.

another generation of bright young minds. It was, therefore, little wonder that by the late 1940s the wine industry of the United States was so out of date. It had lost touch with European progress and resorted to the production of awful *labrusca* wines that had been the wine drinker's staple diet in pre-Prohibition days. California produced relatively little *labrusca* compared to the eastern states, but its winemakers also resorted to old-fashioned styles, making heavy, sweet, fortified wines.

The fact that Californian wine today is a match for the best of its European counterparts and that its industry is healthy, growing fast, and looking to

compete on foreign markets, clearly proves that in the United States opportunity is boundless.

THE APPELLATION SYSTEM OF THE UNITED STATES

The older generation of appellations of the United States is based on political boundaries such as counties or states, and still exists. However, during the mid-1970s, the Department of Treasury's Bureau of Alcohol, Tobacco, and Firearms (BATF) considered the concept of specific controlled appellations based on geography and climate, and in September 1978 BATF published its first laws and regulations designed to introduce a system of Approved Viticultural Areas (AVAs), to supplement the old system, which is now run by the Alcohol and Tobacco Tax and Trade Bureau (TTB). Every state, from Hawaii to Alaska, and the counties they contain, are recognized in law as their own individual appellations of origin, but other generic appellations are also recognized:

American or United States This appellation classifies blended and varietal wines from anywhere in the US, including the District of Columbia and the Commonwealth of Puerto Rico. These wines, like *vins de tables* in France, are not allowed to carry a vintage, which is, in my opinion, irrational. It is the only appellation allowed for wines shipped in bulk to other countries.

Multistate Appellation This appellation is used to classify a wine from any two or three contiguous states. The percentage of wine from each state must be clearly indicated on the label.

State Appellation A wine from any state may use this appellation; at least 75 percent of grapes must come from grapes grown within the one state indicated (except for Texas, which is 85 percent, and California, which is 100 per cent). Thus, wine claiming the appellation of Oregon may contain up to 25 percent produce of other states. The grapes can be shipped to a neighboring state and

still be given the originating state name, but not to any state that does not share a border. Grapes can therefore be shipped from California to Oregon, where they are turned into wine, and may be called California wine (as long as the wine is at least 75 percent from those grapes), but the same grapes cannot be shipped to Washington State and be called California wine (although such a wine could be labeled California-Oregon-Washington, if it contained grapes from all three states, see Multistate Appellation). The same principles apply to County Appellations and Multicounty Appellations.

Multicounty Appellation This appellation classifies a wine from any two or three contiguous counties. The percentage of wine from each county must be clearly indicated on the label.

County Appellation A wine from any county within any state may use this appellation: at least 75 percent of the wine must come from grapes grown within the one county indicated.

THE SEMI-GENERIC SAGA

It is not only easy to understand how the misuse of famous European wine names started in the US, it is also perfectly understandable. As European immigrants poured into this land, some brought vines with them and when they made different styles of wine, it was inevitable that they would use the only wine names they knew to distinguish between them. Names like Burgundy, Chablis, Champagne, *et. al.* There is nothing to forgive. Until now, that is. Ever since the California wine industry became a significant exporter, opening the door for other wine-producing states, it was incumbent upon the US to respect all other legitimate geographical appellations, however well entrenched the usage might have become within the US itself. However, in 1978, well after California wines had stepped onto the international stage, the director of the Department of Treasury's Bureau of Alcohol, Tobacco, and Firearms (BATF) legally enshrined the concept of semi-generic wine names within Federal Regulations, citing, but not restricting itself to, 14 such examples: "Burgundy, Claret, Chablis, Champagne, Chianti, Madeira, Malaga, Marsala, Moselle, Port, Rhine Wine, Sauterne, Sherry, Tokay." The regulations state that these so-called semi-generic names must be qualified by their true place of origin: American Chablis, California Champagne, and so on. However, American regulations are not only unfair, they are decidedly quirky. While it is perfectly legal for US wineries to sell wines labeled as Champagne or Chablis, the name *Liebfraumilch* is protected by the full might of Federal Law. And whereas Burgundy is permitted, Bordeaux or Rhône are not. Where is the logic? As the most abused wine names were French, it was left initially to that country to redress the situation, but they got nowhere and, frankly, were not helped by their own antics in South America, where the *champenois* were abusing the Champagne appellation. The French were also chronically shortsighted when turning down an under-the-table deal that would have seen "Champagne" dropped in favor of "Champagne Style." Since then, the production of American wine sold under famous Italian appellations has become a substantial industry in itself, which with the use of other European wine names has seen the European Union take up the fight. Its negotiators have been hammering away at the US through the World Trade Organization, but they have not been any more successful than the French. What they have failed to understand is that they have nothing to bring to the negotiating table that the US is in the slightest bit bothered about, but when they recognize this, it should provide the European authorities with the obvious solution. If the French, Italians, Spanish, Portuguese, and Hungarians officially created a few new appellations, like Napa Valley, Sonoma County Green Valley, and, to catch the attention of the East Coast elite, North Fork of Long Island and Northern Neck George Washington Birthplace, the EU would soon find that it had something to bargain with, and the US might at least understand why Europeans are so protective of their appellations. The irony is that should such appellations be formally adopted and the wines put into distribution in their country of origin, they would be automatically eligible for sale in the US, where the law defines an acceptable foreign appellation on an imported wine to be "a delimited place or region the boundaries of which have been recognized and defined by the country of origin for use on labels of wine available for consumption within the country of origin." Perhaps the wine-producing countries who feel that they have been treated unfairly by the US will realize that sometimes it does take a wrong to right another wrong. Virtually all self-respecting, quality wine producers in the US will be on their side because they are proud of their own products, which do not need any famous European names as a crutch.

DID YOU KNOW?

- America's third president, Thomas Jefferson, was the country's greatest wine connoisseur, and even tried to grow vines at Monticello.
- There is a winery in every state of the US, even Alaska (though the grapes have to be trucked in, of course).
- Although almost every state in the US grows wine grapes, California accounts for more than 90 percent of the wines produced.
- It is legal to produce and sell American Champagne or Burgundy, but not American Bordeaux or Rhône.
- There are still "dry" counties in some US states.
- The oldest winery in the US is the Brotherhood Winery (1839) at Washingtonville in the foothills of the Catskills of New York State.

AMERICAN WINE LABEL LANGUAGE

ALCOHOL It is obligatory to indicate the alcoholic strength of a US wine, and this is expressed as a percentage by volume.

ANGELICA An authentic American fortified wine style of 17–24 percent, traditionally made from Mission grapes, typically blended 50/50 wine and brandy, with the liquor added after fermentation has achieved just 5 percent alcohol, resulting in excess of 100g/l of residual sugar. If the strength is less than 18 percent, the wine must be labeled “Light Angelica.” Other grapes that are sometimes used include Grenache, Muscat, and Palomino. The quality can be extremely high. Angelica was named after Los Angeles by Spanish Missionary winemakers in the 18th century, when the city was just a town and its name in full was El Pueblo de Nuestra Señora Reina de los Ángeles de la Porciuncula.

BOTTLE FERMENTED A sparkling wine derived through a second fermentation in “glass containers of not greater than one (US) gallon capacity.” Usually refers to a wine that, after second fermentation, is decanted and filtered under pressure before rebottling.

BURGUNDY A semi-generic name allowed under US Federal Law for a red wine of legally undefined “Burgundy-style,” such products today are inevitably of basic quality and made from almost anything, although high-yielding Carignane, Grenache, and Zinfandel are traditional. American Burgundy is typically dark in color, and full in body, but with some residual sweetness to give an impression of softness.

CARBONATED WINE Still wine made bubbly through the addition of carbon dioxide from a bottle of gas, the method used to produce carbonated drinks such as lemonade or cola.

CHAMPAGNE A semi-generic name allowed under US Federal Law for a wine rendered sparkling through a second fermentation in “glass containers of not greater than one (US) gallon capacity.”

CHIANTI A semi-generic name allowed under US Federal Law for a red wine of legally undefined style, American Chianti is generally medium-bodied, falling somewhere between American claret and American Burgundy in color, character, and residual sweetness, with a more pronounced fruitiness, but is equally basic in quality.

CLARET A semi-generic name allowed under US Federal Law for a red wine of legally undefined style, American claret is a very basic wine that is generally drier than American Burgundy, as well as being somewhat lighter in color and in body.

CRACKLING WINE A sparkling wine derived through a second fermentation in “glass containers of not greater than one (US) gallon capacity,” thus the same as for American “Champagne,” although with less effervescence. This type of wine may also be called *pétillant*, *frizzante*, or *crémant*.

CRACKLING WINE—BULK METHOD I have not actually seen “Bulk Method” on a wine label, but it does exist, and it

means the same as for “Crackling Wine” but made by the *cuve close* method.

DESSERT WINE A wine, usually fortified, with an alcohol content of 14–24 percent. If less than 18 percent, the wine must be labeled “Light Dessert Wine.”

FERMENTED IN THE BOTTLE A simple and smart way of describing a wine made by the *méthode champenoise*.

FUMÉ BLANC Widely used term for oak-aged Sauvignon Blanc.

GRAPE VARIETY If a single grape variety is mentioned on a label, the wine must contain at least 75 percent of the grape variety indicated (90 percent in Oregon). Although the potential of varietal labeling was recognized in Alsace in the 1920s, the international marketing phenomenon these wines represent today was brought about by the widespread application of the concept by California wineries.

HAUTE SAUTERNE (sic) Rarely encountered, highly questionable, semi-generic name allowed and misspelled under US Federal Law for medium-sweet and sweet variants of Sauterne (sic).

HEALTH WARNING Health warnings are required by federal law, yet none of the proven health advantages are permitted on the label (see p.634).

HOCK A semi-generic name allowed under US Federal Law for an undefined style of wine that, curiously, is light and dry, rather than vaguely approximating some sort of German Rhine wine. The grapes used are often the same as for American Chablis, but are blended to produce something lighter (which is correct) and drier (which is not).

LIGHT WINE A wine with an alcohol level not in excess of 14 percent (synonymous with Table Wine).

MADEIRA A semi-generic name allowed under US Federal Law for any fortified wine of 17–24 percent, made in a legally undefined “Madeira-style” that is usually sweet to some degree. If it contains less than 18 percent alcohol, the wine must be labeled “Light Madeira.” This slowly diminishing style of wine is primarily Californian and is traditionally produced by blending American sherry with Angelica.

MALAGA A semi-generic name allowed under US Federal Law for any fortified wine of 17–24 percent, made in a legally undefined “Malaga-style” that is usually sweet to some degree. If it contains less than 18 percent alcohol, the wine must be labeled “Light Malaga.” Made primarily from Concord grapes, American Malaga is often a kosher product and is used for sacramental rites.

MARSALA A semi-generic name allowed under US Federal Law for any fortified wine of 17–24 percent, made in a legally undefined “Marsala-style” that is amber or brown in color, usually sweet to some degree, and sometimes flavored with herbs. If it contains less than 18 percent alcohol, the wine must be labeled “Light Marsala.”

MOSSELLE A semi-generic name allowed under US Federal Law for an undefined style of wine that is traditionally made from Chenin Blanc and Riesling grapes.

American Moselle is light in body, pale in color, medium sweet to taste, and sometimes very lightly *pétillant*. It is softer and lighter than American hock.

MUSCATEL Generally a more basic quality version of sweet Muscat wine (which is usually sold varietally as Muscat Frontignan or Muscat Canelli), Muscatel is usually a blend of two or more of the following: Aleatico, Malvasia Bianca, and Muscat (Alexandria, Canelli, and Frontignan). Black Muscatel is a blend of Aleatico and Black Muscat (also known as Muscat Hamburg).

NATURAL WINE A wine may be called “natural” only if it has not been fortified with grape brandy or alcohol.

PORT A semi-generic name allowed under US Federal Law for any fortified wine of 17–24 percent that has been made in a legally undefined “port style.” If it contains less than 18 percent alcohol, the wine must be labeled “Light Port.” Zinfandel, Petite Sirah, and Cabernet Sauvignon are the most common grapes to be declared on a label, but others widely used include Alicante Bouschet, Carignane, Grenache, and Mission. Additionally, there is a small but growing category of quality ports, blended and varietal, that are made from various Portuguese varieties such as Tinta Madeira, Tinta Cão, Alvalrelhão, Touriga, and Bastardo or Trousseau. When blended from different Portuguese varieties, the wine is often sold as a Tinta port. Whichever grapes are used, the wines are usually sweet to some degree, and often qualified by traditional port terminology such as Ruby, Tawny, and Vintage. Some examples can be very good indeed, particularly from specialists.

RHINE WINE Synonymous with American hock.

SAUTERNE (sic) A semi-generic name allowed and misspelled under US Federal Law for a wine that is usually of basic quality, less sweet than genuine Sauternes, and with no hint of botrytis. A few better-quality Sauterne wines are made, usually from Semillon and Sauvignon Blanc, but most Sauterne are nothing more than bland blends of Palomino, Sauvignon Vert, Thompson Seedless, and other even less respectable varieties. Amazingly for a semi-generic wine that should by definition be intensely sweet, Sauterne wines range from dry to very sweet, and are often qualified by “Dry” or “Sweet,” with “Chateau” weirdly used for the sweetest styles. The cheapest dry Sauterne wines are not dissimilar to American Chablis. Some California producers spell Sauternes correctly, but it is difficult to work out which spelling constitutes the worst insult.

SEMI-GENERIC A semi-generic name is a geographical designation that has, in the opinion of the Director of the Department of Treasury’s Alcohol and Tobacco Tax and Trade Bureau (TTB), become at least as well known for a specific style of wine, wherever it might happen to be produced, and is thus allowed under US Federal Law to be used by any wine producer in the US.

Thus, it is entirely legal within the borders of the US to abuse the appellations of Burgundy, Chablis, Champagne, Chianti, and many others. **SHERRY** A semi-generic name allowed under US Federal Law for any fortified wine of 17–24 percent that has been made in a legally undefined “sherry style,” usually sweet to some degree. If the alcohol content is less than 18 percent, the wine must be labeled “Light Sherry.” Palomino is the favored variety for high-class sheries, and is also known in California as the Golden Chasselas or Napa Golden Chasselas. Palomino is the only varietally labeled sherry that is likely to be encountered, since the other grapes used (Mission, Thompson Seedless, and *labrusca*) are hardly worth shouting about. Although legally undefined by Federal Law, the best sheries will often involve the use of flor and will be blended under a solera system. However, the most common production method is to heat the wines for several months in order to replicate sherry’s oxidative style, and some efforts are worse than others. Whatever method of production used, there are numerous substyles produced. Some sheries are actually labeled Dry, Medium, or Sweet, in addition to which there are Pale Dry (closer to fino) or Cocktail sheries, which are dry; Golden or Amber sheries, which are medium sweet; and Cream, which is sweet. The best American sheries can be very fine indeed.

SPARKLING WINE This term may be used to describe “carbonated,” *cuve close*, “bottle-fermented,” or *méthode champenoise* wine. If the label bears no other information, the consumer should fear the worst (carbonated or *cuve close*). However, the label may indicate any of the following terms: Champagne, Bottle Fermented, Fermented in this Bottle, Crackling Wine (including Crackling Wine—Bulk Method), and Carbonated Wine.

SULFITES It is obligatory for all American wines to state “Contains sulfites” or “Contains sulfiting agent/s” when sulfur dioxide or a sulfuring agent can be detected at a level of 10 or more parts per million.

TABLE WINE A wine with an alcohol level not in excess of 14 percent (synonymous with Light Wine).

TOKAY All-American blend of Angelica, Dry Sherry (to reduce the sweetness), and a dash of port to provide its characteristic tawny-pink color, Tokay is a medium-sweet dessert wine with a slightly nutty flavor, and 17–24 percent in strength. If less than 18 percent, the wine must be labeled “Light Tokay.”

VINTAGE At least 95 percent of the wine must be from the vintage indicated. Until the early 1970s, federal regulations demanded that the figure was 100 percent, but winemakers, particularly those producing higher-quality wines aged in small oak barrels, petitioned for a limited margin to enable topping off, and this was granted.

VOLUME This must be stated somewhere on the bottle by law.

Approved Viticultural Areas There are no AVA rules governing the varieties grown, the methods of vine-training employed, the yields allowed, or the style of wines produced, and AVAs are all the better for it. Although some have evolved to a point where they can be said to favor certain grape varieties and produce identifiable styles, many have not and probably never will. America's AVAs are much maligned by various American critics, yet they are the healthy product of New World free enterprise. The *raison d'être* of the AVA system is truthful labeling: a wine comes from where it says it comes from (or, at least, a minimum of 85 percent must). The AVA process merely establishes the boundary of what must be demonstrated to be a fairly homogenous growing zone, whether small or large. Unfortunately, the law does not insist that the AVA name should be immediately followed by the term "Approved Viticultural Area." As a result, who is to know if a geographical area (or a seemingly geographical area) on a wine label has any official connotation whatsoever?

HEALTH WARNINGS ON AMERICAN WINE LABELS

The following "Government Warning" must appear on every bottle of wine sold in the United States: 1. According to the Surgeon General, "women should not drink alcoholic beverages

during pregnancy because of the risk of birth defects"; 2. "Consumption of alcoholic beverages impairs your ability to drive a car or operate machinery and may cause health problems." In my opinion, however, the warning is grossly misleading and contains half-truths and unsubstantiated claims, while proven health benefits are not included on the label.

As to the first part of the warning, women alcoholics can give birth to children deformed by "fetal alcohol syndrome," but a study of 2,000 Australian women concluded (in line with other reports) that "there is no significant relationship between light and moderate maternal alcohol intake and fetal growth effect." There can be no argument with the first part of the second warning because the "consumption of alcoholic beverages" does "impair" the ability to "drive a car or operate machinery," but, while the second part is true—that alcohol may cause health problems—it is grossly misleading because it does not put into context the word "may." The US government was forced to use this word because only excessive alcohol consumption is a potential health hazard, whereas tests and studies throughout the world, many of them carried out by America's most respected institutions, have shown various benefits to health of drinking alcohol in moderation (*see* Health Benefits of Wine, p.634).

THE AVAS OF THE UNITED STATES

The very first AVA was, strangely enough, not Napa, but Augusta in Missouri, which was established in June 1980. There are now 149 AVAs and the number continues to rise, with another 15 waiting in the wings: Alexandria Lakes (Douglas County, Minnesota), Bennet Valley (Sonoma County, California), Chehalem (Willamette Valley, Oregon), Columbia Gorge (Oregon and Washington), Dundee Hills (Yamhill County, Oregon), Eola Hills (Willamette Valley, Oregon), McMinnville (Yamhill County, Oregon), Oak Knoll (Napa County), Red Hills (Lake County, California), Ribbon Ridge (Yamhill County, Oregon), Salado Creek (Stanislaus County, California), San Bernabe (Monterey County, California), Southern Oregon (encompassing the Applegate, Rogue, and Umpqua Valleys, Oregon), Trinity Lakes (Trinity County, California),

Yamhill-Carton District (Willamette Valley, Oregon). Although the establishment of these AVAs cannot be taken for granted, very few are likely to be rejected, if the growers making the proposals have done their homework. The only denial in recent memory was for a proposed California Coast AVA, which was not only 650 miles (1,050 kilometers) long, but also penetrated inland, encompassing interior basins and valleys, 5,000-foot- (1,500-meter-) high mountain ranges, as well as shorelines and coastal plains, thus providing no homogeneity of climate. Most applications are, however, more sensibly prepared, and there will, no doubt, be many more AVA proposals to come. For an explanation of why this encyclopedia uses "Approved Viticultural Areas" rather than "American Viticultural Areas," see "AVA" in the Glossary.

What truly amazes me is that a country regarded by the rest of the world as litigation-crazy has a wine industry that does not have the conviction to stand up for itself. I am informed that it would be impossible to prove the Surgeon General's unsubstantiated claim about birth defects in a court of law, so why not hire the largest firm of first-rate lawyers in the country and sue the Surgeon General for \$50 billion in lost revenue? Instead, they welcomed with open arms the recently won (1999) right to put the following message on a bottle of wine: "The proud people who made this wine encourage you to consult your family doctor about the health effects of wine consumption." Such is the unempowered state of the US wine industry that some of its members have been absolutely euphoric about this statement, declaring it a small victory in the quest to redress the negative effect of the health warning, but what does it actually say? Wine is so good for you that you should consult your doctor? That sounds more like a warning than a benefit to me. No wonder the Surgeon General approved it.

VINEYARDS, UPSTATE NEW YORK

Rows of vines combine to form an emerald-green patchwork on the gently sloping countryside near Hammondsport. In the distance is Keuka Lake, one of the finger-shaped lakes that have a moderating influence on the area's climate.

AMERICA'S LARGEST WINE GROUPS

When the New York-based Canandaigua group merged with Australia's BRL Hardy to form Constellation Brands, it replaced E. & J. Gallo as the world's largest wine producer, but it is nowhere near the biggest producer of American wines.

1. E. & J. GALLO

Accounting for more than one-quarter of all US wine sales, this company was founded by Ernest and Julio Gallo, who were driven by tragedy, division, and a legendary zeal for hard work to create—in their own words—the “Campbell Soup Company of the wine industry.” Elder brother Ernest became head of the family in 1933, after his father, a grape grower, inexplicably killed Ernest's mother, then shot himself. With the end of Prohibition, the brothers began winemaking, selling in bulk until 1940, when the first wines to carry the Gallo label appeared. The Gallo brothers had achieved their ambition by the 1960s, when theirs was easily the most popular wine brand in the US, but they wanted to conquer the world, and the only way to do that was with a profusion of inexpensive brands. By the 1980s, Gallo was the world's largest wine producer, churning out more wine than the annual output of countries like Australia. Ernest and Julio divided everything. Ernest ran the business and marketing, while Julio looked after the production. Julio died in a car crash in May 1993, but Ernest was still going, at the ripe old age of 95, in 2004.

Production is estimated at 75 million cases, mostly under penny-pinching labels such as Ernest & Julio Twin Valley Vineyards, Totts, Carlo Rossi, Ballatore, André, Gossamer Bay, Livingston Cellars, Peter Vella, and Wild Vines. Brands sold exclusively to hotels and restaurants (Burlwood, Copperridge, Liberty Creek, and William Wycliff) also represent a significant proportion, whereas midpriced wines such as Indigo Hills, Turning Leaf, and Redwood Creek do not. The combined turnover of Gallo of Sonoma and the following other authentic wineries (as opposed to “homeless” brands) belonging to E. & J. Gallo is relatively tiny: Anapamu Cellars, Bridlewood, Frei Brothers, Louis Martini, MacMurray Ranch, Marcelina Vineyards, Mirassou Vineyards, and Rancho Zabacca.

2. CONSTELLATION BRANDS

Formed by the merger between Canandaigua Wine and BRL Hardy, Constellation Brands produces 85 million cases worldwide, some 50 million of which are made by American wineries. Almost 19 million are inexpensive wines from the Mission Bell Winery, 7 million from Canandaigua, 7 million under Turner Road Vintners, 2.5 million from Widmer Wine Cellars, and 1.8 million from Batavia Wine Cellars. The balance is Mondavi, taken over by Constellation in November 2004, and Columbia Winery, Covey Run, Dunnewood Vineyards, Franciscan Vineyards, Paul Thomas Winery, Simi Vineyards, Ste. Chapelle Winery, and Viña Santa Carolina (Chile).

3. THE WINE GROUP

The annual production of this San Francisco-based group is estimated to be over 25 million cases by the following wineries: Colony, Concannon, Corbett Canyon, Franzia, Glen Ellen, Golden State Vintners (Pacific Peak and numerous other brands), Lejon, M. G. Vallejo, Morgan David, Summit, and Alamonte (Argentina).

4. JFJ BRONCO

This is the company that gave the world “Two Buck Chuck” and it did so through one of its wineries, Charles Shaw, which accounts for about 5 million of Bronco's 9-million-case

production. While other groups were uprooting vineyards, Charles Shaw was siphoning off the excess production from Bronco's other wineries (C. C. Vineyard, Coastal Ridge, Forest Glen, Hacienda, JFJ, and Napa Ridge), feeding it on to the market exclusively through Trader Joe's in a brilliant marketing coup. Bronco still has its assets in the ground, and instead of paying money out, it has raked it in. Other Bronco brands include: Albertoni Vineyards, Antares Cellar, Bear's Lair, Black Mountain, The California Winery, Cedar Brook, Domaine Napa, Douglas Hill, Estrella, Forestville, Fox Hollow, Gibson Winery, Grand Cru, JJJ, Laurier, J. W. Morris, Montpellier, Salmon Creek, and Silver Ridge.

5. VINCOR

A fast-expanding, Canada-based group, with recent acquisitions in California, Washington, and Australia, Vincor produces 8 million cases in the Americas. Wineries include Inniskillin, Hawthorne Mountain, Jackson-Triggs, Sumac Ridge, Hogue Cellars, and R. H. Phillips.

6. DIAGEO

This UK-based group is the largest spirit company in the world. It has a 7-million-case wine portfolio, 90 percent of which is US-based, with wineries that include Beaulieu Vineyards, Blossom Hill, Painted Hills, Sterling Vineyards, and The Monterey Vineyard. In December 2004, Diageo acquired the Chalone Group, which, in addition to Chalone Vineyards itself, includes the Californian wineries of Acacia Vineyard, Provenance Vineyards, Hewitt Vineyard, Jade Mountain, Moon Mountain Vineyard, Dynamite Vineyards, Orogeny Vineyards, and Echelon Vineyards. Chalone is also joint owner of Edna Valley Vineyard and, in Washington, owns Sagelands Vineyard and Canoe Ridge Vineyard.

7. BROWN-FORMAN

Generally perceived to be a Kentucky-based wine and spirits company, Brown-Forman is in fact much more than that, manufacturing everything from china and crystal, through stainless-steel and pewter products, to leather and luggage. Its American wine production totals some 6 million cases from the following wineries: Bel Arbor, Bonterra, Fetzer (including the Jekel brand), Korb, Mariah, One.9, and Sonoma-Cutrer.

8. BERINGER BLASS

The wine division of Fosters, the Australian beer group, Beringer Blass's global wine production amounts to 17 million cases, although just 5.5 million are American. Wineries include Beringer Vineyards, Chateau St. Jean, Chateau Souverain, Etude, Meridan Vineyards, Stag's Leap Winery, St. Clement, and Windsor.

9. JACKSON WINE ESTATES

With interests in Australia, Italy, and Chile as well as the US, annual sales are just over 4 million cases, and the vast majority are under Jess Jackson's core brand, Kendall-Jackson. Other American wineries in this group include Edmeades, La Crema, Stonestreet, and Calina (Chile).

10. ALLIED-DOMECQ

This Anglo-Spanish group is the second-largest beverage group in the world, but its strength is in spirits. Its wine division includes Domecq, Harvey's, and Cockburns, plus G. H. Mumm and Perrier-Jouët (France), and Montana (New Zealand), and is more focused on fine wines than high volumes. Just over 3 million cases come from its American wineries, including Atlas Peak Vineyards, Bodegas Balbi (Argentina), Buena Vista, Callaway Coastal, Clos du Bois, J. Garcia, Haywood Estate, Mumm Napa, and William Hill Winery.

CALIFORNIA

California's finest wines have become a victim of their own success. Ignoring the ridiculously priced iconic wines, the vast majority of California's greatest wines can stand shoulder-to-shoulder with equivalently priced wines from the classic regions of France, yet while the international market is willing to pay such prices for famous names from Bordeaux, Burgundy, and the Rhône, it is either unwilling or lacks the knowledge to pay the same price for the California wines. This has resulted in midpriced California wines filling the top end of the available line on even the most open-minded export markets. Thus, what is perceived to be the best that California has to offer is not really its best at all.

CALIFORNIA WAS FIRST SETTLED by the Spanish in 1769 and formed part of Mexico until 1848, when it was ceded to the United States, becoming a state of the Union in 1850. The first California wine was made in 1782 at San Juan Capistrano, by Fathers Pablo de Mugártegui and Gregorio Amurrió. Mission grapes, from vines brought to California by Don José Camacho on the *San Antonio*, which docked at San Diego on May 16, 1778, were used to make the wine. However, it was not until 1833 that *Bordelais* Jean-Louis Vignes established California's first commercial winery. He was the first California winemaker to import European vines and, in 1840, he also became the first to export California wines.

THE AMAZING HARASZTHY

Eight years before California passed from Mexican to American sovereignty, a certain Hungarian political exile called Agoston Haraszthy de Mokesa settled in Wisconsin. Haraszthy was a colorful, flamboyant entrepreneur in the mold of Barnum or Champagne Charlie. Among other things, he founded a town in Wisconsin and modestly called it Haraszthy (it was later renamed

NAPA VALLEY VINEYARDS

Of all California's winemaking regions, the Napa Valley is perhaps the best known, and its wines are the most sought after. The first vines were planted here in 1838, and today the valley boasts a vast area under vine, with a bewildering array of grape varieties.

Sauk City), ran a Mississippi steamboat, and cultivated the first vineyard in Wisconsin—all within two years of beginning a new life in a strange country.

In 1849, Haraszthy moved to San Diego, leaving his business interests in the hands of a partner, who promptly took advantage of a rumor that he had perished during his transcontinental trek, sold all the business and properties, and vanished with the money. Haraszthy was broke, yet within six months he was farming his own 160-acre (65-hectare) fruit and vegetable ranch. Such rapid success followed by disaster then an even greater triumph was to become Haraszthy's trademark. Within a few months of acquiring his ranch, he also became the owner of a butcher's shop and a livery stable in Middleton, a part of San Diego that still boasts a Haraszthy Street. In addition, he ran an omnibus company, started a construction business, was elected the first sheriff of San Diego, was made a judge, and became a lieutenant in the volunteer militia. He also began importing cuttings of numerous European vine varieties.

The Buena Vista Winery

Having imported no fewer than 165 different vine varieties from Europe, in 1857 Haraszthy purchased 560 acres (230 hectares) of land near the town of Sonoma, in an area called the Valley of the Moon. Here, he built a winery, which he named Buena Vista, and dug six cellars out of the sandstone hill. With north California's

RECENT CALIFORNIA VINTAGES

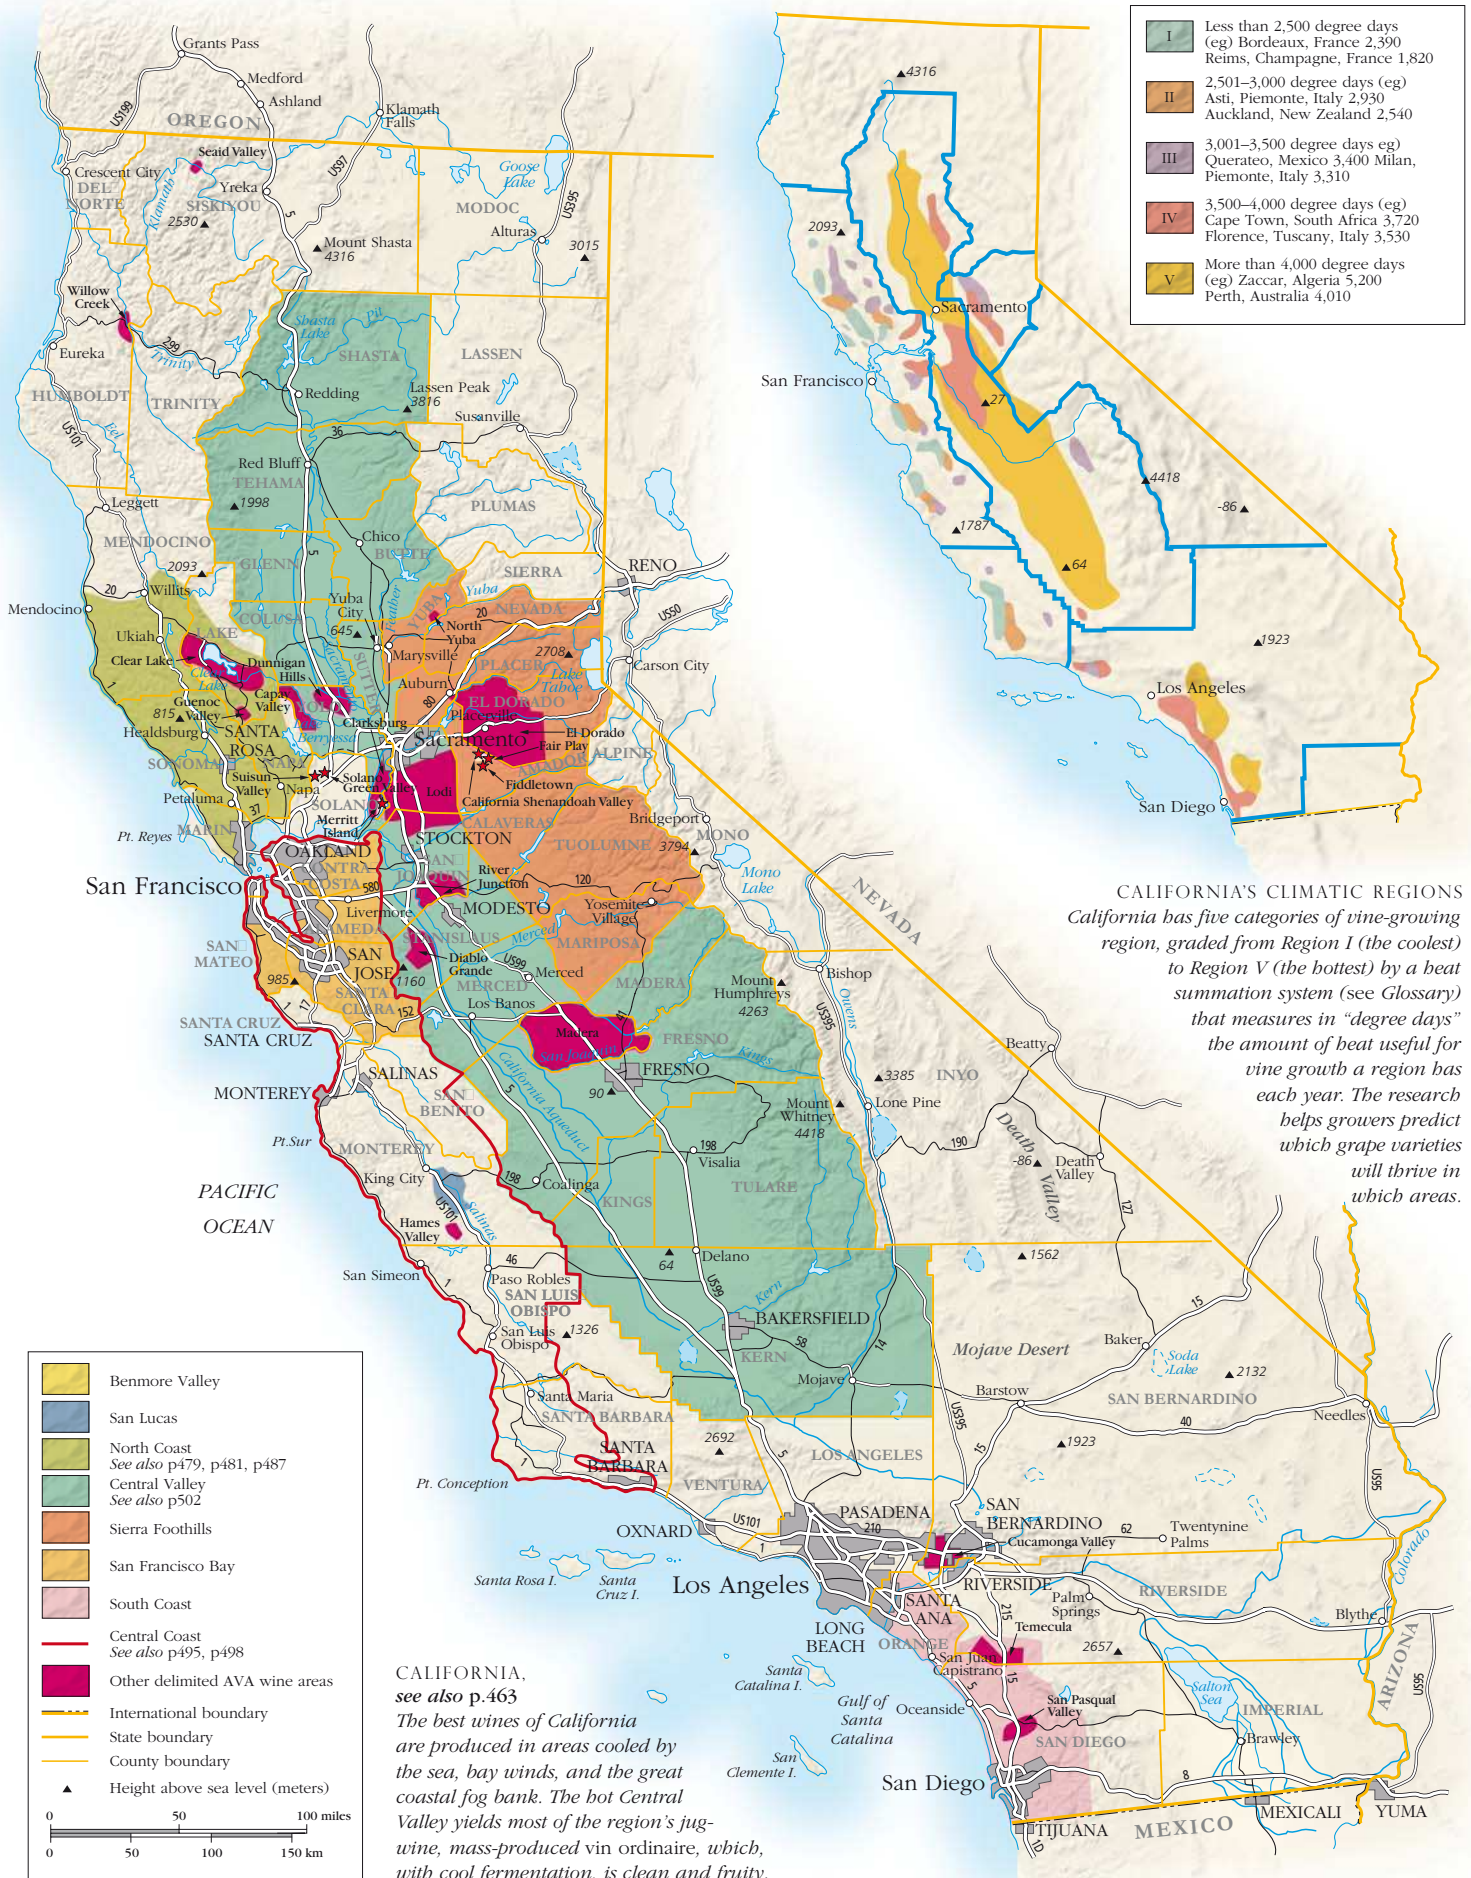

2003 Very good to excellent, this vintage has turned out to be far less variable than climatic quirks had led most critics to believe initially.

2002 Some excellent reds in all styles, especially Cabernet Sauvignon and the best Rhône styles since 2000.

2001 A hot summer and cooler fall produced some stunning late-picked Cabernet Sauvignons and great Russian River Pinot Noir.

2000 Cold weather and rain in October held back late-ripening varieties such as Cabernet Sauvignon. The result was the longest harvest season in memory, which should have resulted in a truly special quality, but in general it was merely good to very good, with whites and light reds faring best, and in particular a number of standout Rhône-style reds.

1999 A later harvest due to cool temperatures in spring and summer, but an excellent vintage throughout California and for all the different varieties, although Cabernet Sauvignon and Pinot Noir had the edge.

CALIFORNIA'S CLIMATIC REGIONS
California has five categories of wine-growing region, graded from Region I (the coolest) to Region V (the hottest) by a heat summation system (see Glossary) that measures in "degree days" the amount of heat useful for vine growth a region has each year. The research helps growers predict which grape varieties will thrive in which areas.

CALIFORNIA, see also p.463
The best wines of California are produced in areas cooled by the sea, bay winds, and the great coastal fog bank. The hot Central Valley yields most of the region's jug-wine, mass-produced vin ordinaire, which, with cool fermentation, is clean and fruity.

THE SECOND COMING

Because phylloxera, a root-feeding insect, came from the US to destroy European vineyards, which were saved only when the vines were grafted on to phylloxera-resistant native American varieties, there is a widespread belief that California's vineyards have always been safe. Nothing could be further from the truth. Phylloxera's home was east of the Rockies, where over eons native vines, such as *Vitis berlandieri* and *V. riparia*, developed a natural resistance to phylloxera. When European *vinifera* vines were introduced to California, phylloxera was bound to follow, via the wagon trains across the Rockies or on the vines themselves, and *vinifera* varieties proved to be as vulnerable in California as anywhere else.

THE ANTI-BEAST

Phylloxera was first identified at Sonoma in 1873, coincidentally at the same time as another native American bug, *Tyroglyphus*, was deliberately being shipped to France. The idea of using *Tyroglyphus*, which was harmless to the vine but a deadly enemy of phylloxera, to infect phylloxera-infested vineyards was an imaginative one. Unfortunately, unlike phylloxera, *Tyroglyphus* did not care for the European climate and failed to settle.

In California, the effect of phylloxera was devastating. By 1891, Napa could boast 18,000 acres (7,200 hectares) of vines, but phylloxera multiplies at a terrifying rate (one female bug can be responsible for one billion offspring in twelve, 30-day generation cycles every year) that this had been reduced to a mere 3,000 acres (1,200 hectares). Under the auspices of Professor Hilgard, Head of Agriculture at the Department of Viticulture and Enology in the University of California at Berkeley (established in 1880, moved to Davis in 1906), California's growers eventually adopted the same method as the Europeans to control the pest, grafting *vinifera* vines on to phylloxera-resistant varieties. Ironically, it was some time before Californians realized these wonder vines originated from eastern American states and initially imported them from France! Only half the vineyards had been grafted when they were hit by another, even more lethal, plague—Prohibition. By the late 1940s, UC Davis had assembled one of the most formidable teams of viticultural and oenological experts in the world. Headed by such legendary figures as Amerine, Olmo, and Winkler, the university was primarily responsible for making California the wine force it is today. Along the way, however, they made some errors, such as placing too much emphasis on volume and technical correctness, but the biggest mistake of all was to recommend the widespread use of AxR#1 rootstock.

ROOT CAUSE

Despite warnings from various European sources about its susceptibility to phylloxera (all acknowledged but brushed aside by numerous university textbooks), UC Davis recommended AxR's use on fertile valley floors, such as Napa, because of its ability to increase yields. As Winkler *et. al.* put it in *General Viticulture*: "This is a case where the choice of (root) stock cannot be based entirely on its resistance to phylloxera."

These words came back to haunt the faculty at Davis in the 1980s, when, slowly but inexorably, vineyards grafted on to AxR failed and the culprit, phylloxera, was identified. Three out of every four vines in California will have to be replaced, which will bring financial ruin to many, although for the California wine industry as a whole, it will ultimately be recognized as a blessing in disguise as undesirable grapes will not only be replaced by selected clones of better-quality varieties, but will also be grafted on to less productive rootstocks and planted at higher densities. The estimated cost of replanting the Napa and Sonoma districts alone is \$1.2 billion. Napa was the worst hit, but has tackled the problem far more quickly and effectively than has Sonoma.

SHARPSHOOTERS

Just as California's growers were counting the cost of dealing with phylloxera, so their vineyards were being invaded by another, possibly more dangerous, bug—*Homalodisca coagulata*, or the Glassy-Winged Sharpshooter. This leaf-hopper is not harmful in itself, but it carries the bacterium that infects vines with Pierce's disease. This disease is considerably faster-acting than phylloxera, killing vines in just one to five years, but what really frightens the industry is that there is no known cure. With no way to defeat Pierce's disease, most efforts have been focused on trying to control its vector, the Glassy-Winged Sharpshooter. In August 2000, David Morgan, a post-doctoral research scientist at the Riverside campus of the University of California, began a program to control the spread of Sharpshooters by releasing their natural enemy, *Gonatocerus triguttatus*. This tiny, stingless wasp had been effective in reducing populations in Texas and Mexico, but has yet to turn the tide in the Golden State, the southern and central counties of which are already infected. Despite Morgan's efforts, it is still predicted that the Glassy-Winged Sharpshooter will probably become a "permanent part of various habitats throughout northern California."

first significant wine estate, Haraszthy won several awards, and he attracted much publicity for both his vineyard and his wine. This venture drew so much attention that, in 1861, the governor of California commissioned Haraszthy to visit Europe and report on its winegrowing areas. Haraszthy's trip took him to every wine region in France, Germany, Italy, Spain, and Switzerland, where he interviewed thousands of winegrowers, took notes, consulted foreign literature, and so accumulated a library of reference material. He returned to the US with a staggering 100,000 cuttings of 300 different vine varieties, only to have the state Senate plead poverty when he presented them with a bill for \$12,000 for his trip, although the cuttings alone were worth three times that amount. He was never reimbursed for his trouble and many of the cuttings, which he had expected to be distributed among the state's other winegrowers, simply rotted away.

CALIFORNIA WINERIES

There are at least 1,050 wineries in California, over half of which sell less than 5,000 cases each, while the largest 25 account for 90 percent of all California wine sold on markets worldwide. According to the TTB, there were as many as 1,689 wineries in California in 2004, but there are various reasons why several different winery names might be located at the same physical address, whereas the Wine Institute's list below is a reliable source of bricks and mortar wineries on a county-by-county basis.

COUNTY	1990	2004	DIFFERENCE

Haraszthy was not deterred: within seven years he managed to expand Buena Vista to 6,000 acres (2,430 hectares). In doing so, he totally changed the course of Californian viticulture, transferring the focus of attention from the south of the state to the north. At the height of its fame Buena Vista had offices in San Francisco, Philadelphia, Chicago, New York, and London. However, this success was purely superficial, for the vineyard was described in 1864 as “the largest wine-growing estate in the world and the most unprofitable.” Haraszthy also suffered a number of losses on the stock exchange and was faced with a new tax on brandy, which resulted in further loss of income. A fire at the winery then destroyed much of his stock and the bank proceeded to cut off his credit.

Enough was enough, even for Agoston Haraszthy de Mokesa. He left California for Nicaragua, where he was successful in obtaining a government contract to distill rum from sugar. An enigmatic character to the end, Haraszthy disappeared altogether in 1869, presumed drowned while trying to cross an alligator-infested stream on his plantation.

LEARNING CURVE

With California’s natural abundance of sun and what to most Europeans seems like America’s preoccupation with size, it was perhaps inevitable that the 1950s and early 1960s saw a series of massive, ink-black, tannic Cabernet Sauvignon blockbusters hitting the shelves. The late 1960s witnessed the introduction of high-tech wineries and the use of 100 percent new oak, and the precision of style and focus of fruit that resulted were welcomed at the time, as were the supple tannins that replaced harsh ones. The mid-1970s saw the irresistible rise of Chardonnay, but the wines were blatantly too rich and oaky. Sidetracked by the quest for finesse, the wines went too far in the wishy-washy vintages of 1982 and 1983, when overacidified, tart, and downright stingy wines were made. Some winemakers wanted to sacrifice the voluptuousness that is inherent in this sunny state in a fruitless bid to fabricate some sort of European-styled, slower-developing, longer-lived wine (a number still pursue this misguided idea), but the truly magnificent 1985 vintage, the best year since 1974, was a turning point for California’s wine industry. Virtually everyone got it right. Since then, the wines of all those who sought elegance without stripping away their natural expression have deliciously demonstrated that the original quest for finesse was no folly.

This learning curve has established in California, as it has elsewhere, that the secret of fine wine is merely a matter of balance. The difficulty is in achieving it, for perfect balance is by definition a natural state that can be achieved only in the vineyard, not in the winery.

SPRING MUSTARD FLOWERS IN THE NAPA VALLEY

This bright yellow carpet of mustard seed in full bloom will soon be plowed in as a “green manure” to feed the vines.

LONGEVITY

Now that most of California’s makers of fine wines have found their direction, the only obstacle to prevent them from achieving their full potential (aside from the vagaries of vintage and occasional overzealousness), is the problem of cellarage temperature. Air conditioning is vital in California, but few people seem to realize that at 57°F (14°C), which seems to be the norm here, potentially fine white wines will fall over after two or three years and the longevity of even the best-quality red wines will be halved. The additional cost of maintaining a temperature just a few degrees lower can be considerable, but once the bottle maturation process has set in, it can only be speeded up, not slowed down, so it is a cost that cannot be cut. The *champenois* know this more than anyone else, since even their cheapest products must spend years in their cellars prior to distribution, which is why they are stored at between 50 and 52°F (10 and 11°C). Once most California cellars are kept at no more than 53.5°F (12°C), the notion that these wines rapidly mature will be shown to be a myth.

TOO MUCH OF A GOOD THING?

Investors overestimated public demand for sparkling wines in the 1980s, when they copied Domaine Chandon in a number of new dedicated sparkling wine operations (Piper-Sonoma in 1980, Maison Deutz in 1981, Freixenet’s Gloria Ferrar in 1982, Roederer Estate in 1982, Mumm Napa in 1985, Taittinger’s Domaine Carneros in 1987, and Codorníu in 1991), only to release their products onto a market plateau, sparkling off a bubbly war, as they tried to grab a slice of the shrinking pie. The only real winner was Domaine Chandon, which had already recouped its capital outlay and was the only one that could afford to play the discount game and still make a profit. Also Roederer Estate, which refused to participate, and has subsequently built up a reputation as one of the greatest sparkling wine producers outside of Champagne itself. Domaine Carneros and Mumm Napa have both survived by discounting their entry-level wines, while creating awareness for some of their higher-quality *cuvées*, but Piper-Sonoma is just a label operating out of a small corner of what was once its own proud winery, but was purchased by Judy Jordan for the production of her premium-quality “J” sparkling wine. Maison Deutz has been defunct since 1997, and Codorníu was renamed Artesa and now specializes in upmarket still wines.

History repeated itself on a grander scale at the turn of the 21st century. In the mid-1990s, California was riding on the crest of the French Paradox wave, which started with the *60 Minutes* television program in 1991 and increased per capita wine consumption in the US by almost one third. In 1995, California experienced the largest growth in its wine sales for 20 years, when the industry was hit by a small crop. Sales continued to soar in 1996, and that year’s crop was also down. Faced with the prospect of increasing sales and diminishing crops, growers commenced planting new vineyards at such a rate that by 2001 the acreage under vine had increased by more than 60 percent—then global economic decline was heightened by September 11. Wine drinking did not slow down, but consumers became more sensitive to price points. This resulted in \$10 wines being discounted to \$6, and cheaper wines being sold off anonymously. The ripple effect caused tens of thousands of acres to be grubbed up. This may not have been such a bad thing, since they were mostly fit for little more than blending, but it did seem a bit backward that while vines were being planted at the fastest rate ever in marginal areas like the Atlantic Northeast, vineyards were actually disappearing in sunny California. There was even talk that California’s wine glut was affecting sales of its ultrapremium products, but although their prices have dropped, this was not the result of a general sensitivity to price points. The minuscule tip of the California wine market had become overcrowded with \$100-plus wines, and their primary patrons, California’s new money, eventually realized the value of scarcity.

CALIFORNIA'S GRAPE VARIETIES

The area under vine in California has increased by almost 165,000 acres since 1995, but obscured by a modest increase in table grapes, and the fact that raisin varieties have actually decreased, this includes an even larger expansion of wine grapes (nearly 175,000 acres). The breakdown of vines in 2003 was as follows:

VINE TYPE	1995 ACRES	2003 ACRES	INCREASED ACREAGE	PERCENTAGE GROWTH
Wine grape varieties	354,417	529,000	174,583	49%
Raisin grape varieties	277,190	260,000	-17,190	-6%
Table grape varieties	85,539	93,000	7,461	9%
TOTAL	717,146	882,000	164,854	23%

From the breakdown below of wine grape varieties by color, the swing from red to white wine varieties continues to gather pace. In the 1980s, when the demand for Chardonnay was at its height and most people in the US believed that lighter meant healthier, white wine grapes accounted for as much as 57 percent, but the dominance of white wine sales in the US changed that fateful day in November 1991, when the so-called "French Paradox" (see Glossary) was much publicized on CBS television's *60 Minutes* program. It now appears clear that growers took advantage of the costly replanting of phylloxera-ravaged vineyards to swing the pendulum from white grape varieties to black.

GRAPE COLOR	1995 ACRES	%	2003 ACRES	%	INCREASED ACREAGE	PERCENTAGE GROWTH
Black	142,546	55%	287,075	61%	144,529	101%
White	116,979	45%	185,373	39%	68,394	58%
TOTAL	259,525	100%	472,448	100%	212,923	82%

CALIFORNIA'S WHITE GRAPE VARIETIES

In 2003 there were 185,373 acres of white grapes growing in California, with just 12 varieties accounting for almost 96 percent of this total. Again, no surprise which white grape is the fastest growing in the state, but it is strange to see the Burger (a.k.a. Monbadon) coming back into favor, having once been a very widely planted alternative to the Mission grape. It is good to see so much interest in Pinot Gris, even if the imported clones bear very little varietal relation to the spice-laden *sélection massal* from the best established vineyards in Alsace. Latin lovers should be interested to note an almost 7,000% increase (albeit from a minuscule base) in plantings of Catarratto, the prolific Sicilian grape.

CALIFORNIA'S BLACK GRAPE VARIETIES

In 2003 there were 287,075 acres of black grapes growing in California, with just 15 varieties accounting for more than 96 percent of this total. It is amazing to think that Zinfandel, which has been the most widely planted classic black variety for decades, could increase acreage by 36 percent, yet be nudged down to third place. Little surprise, however, to see that Cabernet Sauvignon is the fastest-growing black grape in the state, widening the gap between it and Merlot, despite the fashionability of softer-styled red wines from the latter variety. Interesting to note that Primitivo is listed separately from Zinfandel (see Zinfandel under The Wine Styles of California, p.478), although combining the two would not affect its positioning, despite the relatively small gap between second and third largest planted black varieties. However, Syrah looks as if it could be the dark horse, expanding from barely more than 2,000 acres to over 17,000 in just eight years.

Notes

LE5 = Five largest-expanding varieties by increased acreage.

FG5 = Five fastest-growing varieties by percentage difference.

THE WINE STYLES OF CALIFORNIA

BARBERA

This Italian grape is mostly cultivated in the Central Valley, where its high natural acidity makes it useful for blending purposes. This said, it is cultivated on a much smaller scale in fine-wine areas, particularly Sonoma, Mendocino, and Sierra Foothills, where a number of wineries produce a pure varietal Barbera in one form or another. Although L'Uvaggio di Giacomo's best Barbera is La Pantera, its Il Gufo is extraordinarily good for a Central Valley wine.

🕒 3–6 years (up to 10 in exceptional cases)

🍷 *Eberle* • *Kunde Estate* • *L'Uvaggio di Giacomo* (La Pantera) • *Palmira* • *Preston* • *Renwood* (Sierra Series) • *Thornton* (Curran Ranch)

BOTRYTIZED AND LATE HARVEST STYLES

Some of the world's most succulent botrytized and late-harvest wines are made in California. The "sunshine state" brings a wonderfully ripe peachiness to Riesling and mouthwatering tropical fruit freshness to Chenin and Muscat. Several excellent Icewines have been made, including one from Bonny Doon's irrepressible Randall Graham, even though he openly admits to storing the grapes in his freezer before pressing them! I cannot write this section without mentioning the legendary wines of Sine Qua Non in the Edna Valley, which I have never visited because it is between Pinot Noir wineries, and I have always feared that a stop there could very well kill my dry wine palate for a couple of days. However, it would be unfair to suggest anything other than that its wines should be included on this page.

🕒 Ready when released (but last well in bottle)

🍷 *Arrowood* (Riesling Owl Hoot) • *Beringer* (Nightingale) • *Bonny Doon* (Muscat Vin de Glaciere) • *Dolce* • *Domaine de la Terre Rouge* (Muscat à Petits Grains) • *Château St. Jean* (Special Late Harvest Johannisberg Riesling) • *J. C. Cellars* (Ripken Late Harvest Viognier) • *Martinelli* (Jackass Hill) • *The Ojai Vineyard* (Late Harvest Viognier)

BOTTLE-FERMENTED SPARKLING WINES

California used to be notorious for its cheap sparkling wine until Schramsberg and Domaine Chandon led the way in the early 1970s. Then in 1991, by dint of tasting back, it could be discerned that a number of houses had come of age with the wines that were made only four years earlier. Roederer Estate, in particular, was in a class of its own, and still is, but so many other producers dramatically improved the style and finesse of their wines that the quality of California sparkling wine in general had quadrupled by 1995.

🕒 2–5 years (up to 10 in very exceptional cases)

🍷 *Domaine Carneros* (Le Rêve) • *Gloria Ferrer* (Royal Cuvée) • *Handley* (Vintage Blanc de Blancs, Vintage Brut, Vintage Rosé) • *Robert Hunter* (Vintage Brut de Noirs) • *Iron Horse* (Classic Vintage Brut) • *J* (magnums) • *Mumm* (DVX) • *Roederer Estate*

CABERNET FRANC

California's cultivation of this Bordeaux variety tripled between 1983 and 1988. At that time, it was primarily used for effecting better-balanced Cabernet Sauvignon blends, and the only pure varietal versions readers were likely to encounter were rosés from the North Coast area. Since then, the area occupied by Cabernet Franc vines has doubled and pure varietals will shortly become commonplace. Top California Cabernet Franc seems to have a fragrance and finesse not dissimilar to the way it performs in the best St.-Émilion vineyards.

🕒 1–4 years

🍷 *Detert Family Vineyards* • *Nevada City Winery* • *Peju* • *Pride* • *Rancho Sisquoc* • *Raymond Burr Vineyards* • *Reverie* • *Gainey Vineyard* (Limited Selection) • *Titus*

CABERNET SAUVIGNON

California's most widely planted, and probably potentially its finest, black grape variety. In areas that are too cool, Cabernet Sauvignon wines can have bell-pepper character, or even green bean, but in most other areas they tend to produce saturated, purple-hued wines with a smooth texture, deliciously ripe blackcurrant fruit, and oak-derived notes of vanilla, mocha, cedar, and spice. Oak is now used intelligently and some of the most exciting Cabernet wines are blended with Merlot, Cabernet Franc, and/or Petit Verdot, although not to the extent of a classic blend (see Classic Red Blends, and Meritage). At their best, these wines are a match for all but the very greatest vintages of Bordeaux *premiers crus*. Indeed, California is so blessed with Cabernet Sauvignon that it is impossible to come up with a definitive top 10, just 10 of the best, and in compiling the list below I have tried not to go overboard on too many fabulously expensive, virtually unobtainable iconic wines.

🕒 3–5 years (inexpensive), 5–12 years (top wineries), 8–25 (or more) years (exceptional wines)

🍷 *Abreu* • *Atalon* • *Bebrens and Hitchcock* • *Caymus* (Special Selection) • *Colgin* (Tychson Hill) • *Duckborn* (Estate Grown) • *Dunn* • *Leuelling Vineyards* • *Lokoya* • *Robert Mondavi* (Reserve)

CARIGNANE

Surprisingly, this rarely sighted varietal is the 11th most widely grown black grape in California, well ahead of more prestigious varieties such as Cabernet Franc. Carignan, or Carignane as it is spelled in the US, provides a high yield of well-colored, strongly flavored wine that can be quite coarse and tannic. It is useful for blending both in California and in its native south of France, where it is one of the 13 grapes permitted in Châteauneuf-du-Pape. It has a less harsh character in California's coastal districts, where some wineries produce a pure varietal version, and very old vines can lose the coarse character, yielding wines of extraordinary depth and quality.

🕒 3–6 years (up to 10 years in exceptional cases)

🍷 *Cline* (Ancient Vines) • *Jessie's Grove* (Ancient Vine) • *Ravenswood* • *Ridge* • *Windsor* (Oat Valley Vineyards)

CHARBONO

This variety is the Corbeau, an almost extinct French variety that is also known as the Charbonneau. It produces a wine with vibrant cherry fruit and tingling ripe acidity, in a not dissimilar style to Barbera. Indeed, Inglenook Vineyards, which was the first winery to make a pure varietal wine from this grape, labeled it Barbera until Dr. Winkler of the UC-Davis nursery identified it properly as Charbono.

🕒 2–4 years

🍷 *Duxoup* • *Robert Foley* • *Turley* (Tofanelli)

CHARDONNAY

California might be awash with dreadful Chardonnay, but it also boasts more great-quality and/or great-value Chardonnay than ever. Although massive, blockbusting Chardonnays still abound, the best have improved and there have never been so many Chardonnay wines showing as much finesse as they do today. It is at the bottom end of the market where much of the dregs exists. Unlike the readers of this and other wine books, most consumers are no more interested in learning about wine than most drivers are in understanding cars. There is no reason why

they should be, but this has resulted in most consumers budgeting for Chardonnay as they would canned goods, and within this price-banding they have come to think of Chardonnay as a brand with recognizable characteristics like butter and vanilla. They do not realize that butter is diacetyl produced by malolactic or that the vanilla is vanillin from oak. Because Chardonnay was the first, biggest, and, for a long time, practically the only wine that most American consumers drank, the signature notes of methods used at that time have become mistaken in consumer psyche as Chardonnay's varietal character. This misconception has prevented Chardonnay as a whole from progressing, particularly at the bottom end of the market. This phenomenon is not unique to the US, but it does seem to be stronger and longer lasting. If the country could only go through a trend for zippy, zingy, unoaked Chardonnay, then it would help raise standards from the basement upward, and this would percolate through to even the most expensive Chardonnay wines, in which it would then become commercially acceptable to allow more fruit to show through. It has to be said that far too many of the most widely acclaimed California Chardonnay wines betray their production techniques on the nose long before they express their fruit or origin. Beware, also, the residual sugar level in some of these wines. There could be dozens of top 10 best California Chardonnays, all of them arguably correct, thus when I have had to make a choice, I have opted for the wine with the most harmonious acidity balance, which provides the longest, most beautifully focused, and graceful finish.

🕒 2–8 years (15 or more years in very exceptional cases)

🍷 *Au Bon Climat* (Harmony Nuits-Blanches au Bouge) • *Beringer* (Sbragia) • *Blackjack Ranch* • *Brewer-Clifton* (Sweeney Canyon) • *Cuaison* (Carneros Estate) • *Du Mol* (Chloe) • *Hartford Court* (Three Jacks) • *Kistler* (Vine Hill Road) • *Martinelli* (Three Sisters Vineyard) • *Walter Hansel* (Cahill Lane)

CHENIN BLANC

This Loire Valley grape is famous for wines such as the sweet, honey-rich Vouvray and the very dry, searingly flavored Savennières. In California it is the fourth most widely planted white wine grape, yet it is seldom spoken of. Although the recent trend to improve the acidity balance has raised the standard of California Chenin Blanc, it fares less well in this state than it does in France. Since I am not a fan of any but the greatest Chenin Blancs, it is hard for me to work up much enthusiasm for the Chenin Blanc in California. I have long wondered about the veracity of all those books that carry the same spiel—that Clarksburg is the only area to produce a regionally identifiable Chenin Blanc, especially as finding wines with any Central Valley AVA is something of a quest. The now defunct R. & J. Cook winery used to be the most prolific producer of wines bearing the Clarksburg appellation, but produced better Petite Sirah than Chenin. Dry Creek Vineyard is considered by some to produce the best Chenin Blanc, but it used to blend Clarksburg with Sonoma fruit until relatively recently, thus it was never possible to assess Dry Creek Clarksburg Chenin Blanc in its own right. Now we can, of course, and the quality is at least as good as it ever was, so more than 20 years after the Clarksburg AVA was established, we are finally

seeing this appellation make a name for itself. However, although Dry Creek is one of California's best Chenin Blanc wines, collecting more awards for this variety than any other winery in the US, it is not always that special, and others can make much finer wines on occasions. Furthermore, because of the lack of consistency for this varietal and, indeed, the small number of producers, it is sometimes worth checking out the following: Callaway Coastal, Chapellet, Foxen Vineyard, Meador Estate, Sutter Home. All the best wines below are dry or off-dry. See Botrytized and Late-Harvest Wines for sweeter styles.

🕒 1–4 years

🍷 *Baron Herzog* (Clarksburg) • *Beringer* • *Casa Nuestra* • *Chalone* • *Dry Creek* (Clarksburg) • *Husch* (La Ribera) • *Windsor Vineyards*

CINSAUT

Until the Rhône-style wine revolution in California, this variety was better known as the Black Malvoisie. There is precious little Cinsaut or Cinsaut in the state, even though plantings have increased by more than 150 percent since 1995, and what does exist is mostly used in blends, although Frick continues to make a statement with 30-year-old Cinsaut vines in Sonoma's Dry Creek. There are very few pure Cinsaut wines produced in California; the only others I have come across are Castle (Sonoma), Domaine de la Terre Rouge, and Preston.

🕒 2–5 years

🍷 *Frick*

CLASSIC RED BLEND

On balance I would say that Bordeaux-style blends are more successful in California than pure Cabernet Sauvignon varietals. However, it has proved very difficult to persuade California wine drinkers that they should pay the same price, let alone a premium, for such wines. For this reason the Meritage Association was formed (see Meritage), but not all wineries are members and some of the greatest Bordeaux-style blends do not actually use the *portmanteau*. Therefore, many of the best Bordeaux-style blends recommended here and under the producer profiles do not necessarily carry the Meritage designation. Furthermore, this encyclopedia's definition of a Classic Red Blend is not restricted to Bordeaux varieties, and California has experienced a substantial growth in Rhône-style blends since the mid-1990s. In American usage, this encyclopedia's Classic Red Blend can be taken as synonymous with a "Proprietary" red blend, but only from a certain classic quality and upward.

🕒 3–5 years (inexpensive), 5–12 years (top wineries), 8–25 (or more) years (exceptional wines)

CLASSIC WHITE BLEND

The combination of Sauvignon and Sémillon is a good one, the traditional view being that the Sauvignon provides the aromatics, freshness, acidity, and crispness, while the Sémillon adds the necessary fat, weight, depth, and

complexity. In some New World areas, however, including California, the Sauvignon is too soft and neutral for this philosophy to work successfully and is much better used to play the Sémillon's role, whereas a small quantity of that grape can, if harvested early enough, provide a grassy herbaceousness that is more like Sauvignon than Sauvignon. The effect is similar, but the reasoning somewhat back to front. This category includes all high-quality white wine blends, not just Bordeaux-style (see Meritage). Having found it difficult to whittle down the Classic Red Blends below 30-odd wines, all arguably top-10 material, it is clear that California is far better blessed for its red blends than its whites, as I have failed to find 10 worthy inclusions!

🕒 2–4 years

COLOMBARD

Amazingly, this is the second most widely planted white grape in California, and it is not even shrinking, having seen another 540 acres (200 hectares) planted since 1995. Colombard, also known as French Colombard, has always been more than adequate, but its true potential was realized only with the advent of cool fermentation techniques. A pure-varietal Colombard is not a fine-quality wine, but it can be superb value in a usually unpretentious and absolutely delicious way, if it is consumed young and fresh.

🕒 Upon purchase

🍷 *De Loach*

FORTIFIED STYLES

A small number of California wineries are fast catching up with Australia in the fortified wine category. Port is the most successful style. Long before its demise, Inglenook used to be the yardstick for California Palomino Sherry.

🕒 Ready when released (but last well in bottle)

🍷 *Bellow Wine Company* (Touriga Nacional Vintage Reserve Port) • *Cedar Mountain* (Chardonnay del Sol) • *Ficklin* (Vintage Port) • *Geysers Peak Winery* (Henry's Reserve Shiraz Vintage Port) • *Guenoc* (Vintage Port) • *Joseph Filippi* (Angelica Elena) • *Joseph Filippi* (Oloroso Sherry Library Reserve) • *V. Sattui* (Madeira) • *Windsor* (Distinguished Cream Sherry)

FUMÉ BLANC

This term was first coined by Mondavi in the 1970s, who stole and transposed two words from the French appellation Pouilly Blanc Fumé. It was very simple, yet very clever, and by fermenting the wines in oak *barriques*, he was able to sell what was then a very unfashionable grape variety under a new and catchy name. Fumé Blanc is now used as a generic name for a Sauvignon Blanc wine that has been fermented and/or aged in oak, with the results ranging from a subtle, *barrique*-fermented influence to a heavily oaked character. See also Sauvignon Blanc.

GEWÜRZTRAMINER

Although by no means one of California's commonly encountered varietal wines, Gewürztraminer must be one of its most overrated. The hype surrounding California's Gewürztraminers baffles me—most of them lack not only the varietal definition I expect of any classic grape, but their winemakers will insist on acidifying what is an intrinsically low-acid variety. The only way to extract the true pungency of spice that admirers of this varietal expect is through a prefermentation maceration. The spice will not be immediately apparent when bottled, but requires additional aging for the terpene-laden bottle-aromas to develop. The phenolics picked up from the skins during the prefermentation maceration are essential to the balance and length of such low-acid wines, providing a tactile impression that literally sears the spice on to the palate in its later life. It also gives such wines surprising longevity. The problem is that virtually every winemaker in California has been brainwashed into avoiding phenolics in white wine as if they were the plague. In case American readers should think I am taking an unreasonably European viewpoint, I quote Robert Parker: "Anyone who has tasted fine French Gewürztraminer must be appalled by what is sold under this name in California." About the only thing most California Gewürztraminer has in common with its French counterparts is that classic dry renditions are equally rare.

🕒 1–3 years

🍷 *Claiborne & Churchill* (Dry Alsatian Style) • *Fetzer* (Echo Ridge) • *Navarro* • *Windsor Vineyards*

GRENACHE

Although cultivation of this variety has been in decline in recent years, it still accounts for some 10 percent of California's black grapes and, despite being traditionally associated in this state with medium-dry rosé and tawny-port-type dessert wines, some truly delicious, high-quality pure varietals have surfaced.

🕒 1–3 years

🍷 *Alban Vineyards* • *Bonny Doon* (Clos de Gilroy) • *Epiphany* (Revelation Rodney's Vineyard) • *Holly's Hill* (El Dorado) • *Wild Horse* (Equus James Berry Vineyard)

MALBEC

Although a few wineries are now making good pure varietals from this grape, it has never really caught on in California, where, if it is not ignored entirely, Malbec is merely regarded as a blending component, much as it is in Bordeaux. Perhaps California's winemakers should look more to the 19th-century Black Wines of Cahors than to Bordeaux when considering this variety. When grown ungrafted or on low-yield rootstock, Malbec can produce excellent deep-colored red wines with soft, chewy fruit and has demonstrated the capability of developing much individuality and complexity in most warm climates, particularly when grown on gravelly-clay and marly-clay soils.

MÉRITAGE

Concocted from "merit" and "heritage," the term "Meritage" was devised as a designation for upmarket Bordeaux-style blends in 1988, and trademarked the following year. Meritage was first coined by Neil Edgar, who was one of 6,000 entrants in an international contest to come up with a name. There are no rules or regulations governing wines that use this trademark, other than that the wineries must be paid-up members of the Meritage Association, and the blends conform to very simple rules of varietal content. Such blends must consist of two or more of the following varieties: Cabernet Sauvignon, Merlot, Cabernet Franc, Petit Verdot, St. Macaire, Gros Verdot, Carmenère, and Malbec for reds; and Sauvignon Blanc, Sémillon, Muscadelle, Sauvignon Vert, and Sauvignon Musque for whites; with no single variety making up more than 90 percent of the blend. Certainly not the most inspired of American marketing terms, it has nevertheless been adopted by a wide range of wineries and restaurants, which often list these wines separately. The most outstanding, plus the many first-class blends that are not marketed as Meritage, are recommended under the Classic Red Blend and Classic White Blend categories.

MERLOT

It has always been obvious that Merlot possessed everything required to make it one of California's most fashionable and sought-after

varietals, and that is exactly what it became in the early 1990s. Its lush fruit and velvety texture are tailor-made for this sunshine state, although up to 25 percent Cabernet Sauvignon may be blended into supposedly pure varietals in order to give the wines added structure (25 percent if exported to EU countries).

PETITE SIRAH

In the first edition I suggested that ignorance was perhaps bliss in the case of California's Petite Sirah. Although California growers had referred to this grape as Petite Sirah since the 19th century, it was unknown to consumers until the 1960s, when varietal wines began to take off. Petite Sirah quickly gained in popularity on the back of the Rhône's Syrah, only for prices to plummet ridiculously in the 1970s, when it was identified as the Durif, a lowly French variety. It was the same wine, but its humble origins obviously lacked cachet for budding new wine consumers of that era. In 1997, Dr. Carole Meredith used DNA "fingerprinting" to determine that only four of the seven Petite Sirahs in the UC Davis collection were in fact Durif, and that one was identified as true Syrah. As consumers began to wonder if their favorite Petite Sirah might not in fact be Syrah, the prestige and price of this varietal began to soar. But while 10 percent of Petite Sirah is indeed Syrah, the mix is found on a vine-by-vine basis. Rather than find one vineyard of Syrah for every nine vineyards of Durif, growers find they have 10 percent Syrah in their Petite Sirah vineyards. And not just Syrah. Petite Sirah vines are mostly found in old vineyards, planted with perhaps the odd Peloursin, Carignane, Grenache, Barbera, or Alicante Bouschet, in what is known as a "field blend." Despite increased prices, the purple-colored wine made by Petite Sirah, with its floral, blackfruit aromas, is not considered the equal of a true Syrah (although Switchback Ridge and Turley Cellars Petite Sirah—*sic*—definitely are), thus it remains one of California's most underrated varietals.

PINOT BLANC

When grown with care and barrel-fermented, it is virtually impossible to tell Pinot Blanc from a Chardonnay, particularly the examples from Napa, Monterey, and Sonoma. There are some excellent, very serious makers of pure varietal Pinot Blancs, but essentially this is one of California's most underexploited varieties.

🍷 1–3 years

PINOT GRIS

Even at its best, California Pinot Gris is not at all the spicy heavyweight of Alsace fame, but more like a superior Pinot Grigio, with riper, purer fruit. Many of these wines are in fact sold as Pinot Grigio, which is preferable, as Pinot Gris implies a definite spicy element to the fruit and that is almost impossible to find outside of Alsace.

🍷 Upon purchase

PINOT NOIR

Beyond all expectations, this Burgundian grape has found a natural home in parts of California, most notably in Sonoma's Russian River Valley, the Carneros area straddling Sonoma and Napa, and the Santa Ynez Valley in Santa Barbara. Santa Barbara does, I think, have the greatest potential of all; equally fine Pinot Noir will be made elsewhere, but the largest number of Pinot Noir producers will eventually be seen to come from this southerly district. Other areas also show promise, particularly San Benito, Monterey, and the Arroyo Grande.

RIESLING

Also known as Johannisberg Riesling and White Riesling, this grape covers more than 10 percent of California's white-grape vineyards. Aside from a small, but increasing number of sensational, tangy-dry exceptions, most wines are made in a slightly sweet, commercial style to placate consumer demand. I have tried, wherever possible, to shortlist only the drier styles below, as the sweeter ones are found elsewhere. See Botrytized and Late-Harvest Wines for sweeter styles.

SANGIOVESE

Cultivation of this variety has increased over 20-fold since the late 1980s, and much of this is due to the number of winemakers and grape-growers who have Italian ancestry. Its success will depend on the choice of site, where the vine should struggle, so there is no need to employ labor-intensive methods to reduce yields through green pruning.

🍷 3–7 years (15 years or more in exceptional cases)

🍷 *Atlas Peak* • *Beringer* (Knights Valley) •

SAUVIGNON BLANC

Also known as the Fumé Blanc, a synonym now adopted for an oaked style that is dealt with separately. Many wines labeled Sauvignon Blanc rather than Fumé Blanc are also oaked, but it would be too confusing to list them in this category, so all recommended wines are listed according to their labels, whether they adhere to that style or not. A straight California Sauvignon Blanc should have a crisp style, with the vibrancy of its varietal fruit picked up by, and highlighted with, abundant ripe acidity. California Sauvignon Blanc has, however, an identity problem, as most are soft and neutral, and some are downright wishy-washy. Although there has been a move toward better, more racy acidity by California's best winemakers, the greatest wines from this grape definitely lean more toward a Graves style than varietal purity. There is none of the turbocharged vibrancy of fruit found in New Zealand's Marlborough Sauvignon Blanc, let alone any gooseberry or passionfruit intensity, yet that country built its reputation on the UCD1 clone imported from the US, and until recently, UCD1 was the only clone available for planting in the US. It is about time that Davis reimported UCD1 back from New Zealand, performed comparative trials with the UCD1 motherstock, and made available the Kiwi-evolved UCD1 to growers in the US.

SYRAH

This classic Rhône grape illustrates how quickly things move in California. In the first edition I mentioned how surprised I was that the Syrah

was not more widely planted. Since then it has increased from a modest 110 acres (45 hectares) to a massive 14,934 acres (6,403 hectares), making it the fourth most widely planted variety in California. There is a sumptuousness about California Syrah that makes it a totally different wine from either French Syrah or Australian Shiraz, although when full and ripe all three versions share the silky-*cassis* fruit and have the potential to develop a fine smoky-spicy complexity. From the top Syrahs listed below, it is obvious that this grape can be successfully grown in several areas of California.

🕒 3–10 years

VIIGNIER

This great Rhône white-wine grape was nonexistent in California until 1985, when the first vines were planted by Joseph Phelps, thus when the first edition of this book was published in 1988 they were not even bearing fruit. At that time, just 11 acres (4.5 hectares) of these vines existed. Now there are more than 2,000 acres (800 hectares), and it is the fourth largest-expanding white varietal in the state. While the vine seems to thrive in California, the wines seldom capture its elusive character. The same could be said about Château Grillet, of course, but if Condrieu has been able to overcome Viognier's inherent difficulties, there was no reason why more California winemakers could not follow suit. And in a way they have, as it is one of California's most successful white wines. What does bother me, however, is that the notoriously difficult Viognier should thrive so well in the golden state: not only is there no problem with flowered vines failing to fruit, but the yield is exceptionally high even by the greediest French grower's standard. This leads me to suspect the authenticity of the vines being sold as Viognier in California. Or, if indeed they are genuine, to wonder what else might have been eradicated during the eight years it took UC Davis to remove the virus from its Viognier bud stock before release. Perhaps the exquisiteness that makes

the best Viognier wines great can be achieved only through debilitated vines? Because, although very successful, far too many are overtly floral, instead of being peachy-floral or, at least, fruity-floral, with too much residual sweetness (aside from those that are made in a Late-Harvest style, and should be sweet), and too little acidity, making them flabby. Authentic Viognier is not overblessed with acidity, but when it is grown at low yields, and harvested physiologically ripe, rather than sugar-ripe, there is a certain acid balance that, together with the proper fruit structure, will provide sufficient grip and length to avoid any connotation of flabbiness.

ZINFANDEL

This was once thought to be America's only indigenous *Vitis vinifera* grape, but was later positively identified by Dr. Carole Meredith as the Primitivo grape of southern Italy by Isozyme "fingerprinting," a method of recording the unique pattern created by the molecular structure of enzymes found within specific varieties. However, this led to a conundrum because the earliest records of Primitivo in Italy date from the late 19th century, whereas the Zinfandel name appears in the nursery catalog of William Prince of Long Island, dated 1830. One clue was that Italian growers often referred to their Primitivo as a foreign variety. This led Meredith farther afield and, with the help of Croatian researchers, she was able to announce in 2002 that the Zinfandel and Primitivo are in fact an obscure variety called Crljenak Kastelanski (pronounced Sirl-YEN-ak Kastel-ARN-ski). Referred to as Crljenak, for short, this grape was once widely planted throughout Dalmatia and on more than 1,000 islands, but has mostly been replaced by Croatia's best-known variety, Plavac Mali (the result of a cross-pollination of Crljenak and Dobricic). Nothing special has been produced so far by Crljenak in its homeland, but there will no doubt be efforts to see what can be achieved with it in the future. In the meantime, UC Davis has imported Crljenak and when it has gone through the regulated clean-up process

(possibly by 2008), they intend growing it side by side with Primitivo and Zinfandel, to see which local characteristics these "localized clones" of the same variety might possess. Since the Crljenak gave way to Plavac Mali in Croatia because its tight grape clusters attracted rot, it would seem to be much closer to the tight-clustered Zinfandel than Primitivo, which has much looser fruit clusters. It is not unreasonable to surmise that the Primitivo clone probably adapted to the much hotter, drier local conditions in southern Italy by developing looser-hung berries.

Some growers have already started to vinify Primitivo separately from Zinfandel, and one day we shall probably see the emergence of California Crljenak. When this happens, it would make sense also to develop a blend of all three, and it strikes me that the new UC Davis classification for these grapes—ZPC—would be the ideal name for such *cuvées*. Depending on the way it is vinified, Zinfandel produces many different styles of wine, from rich and dark to light and fruity, or *nouveau* style, from dry to sweet, white to rosé, dessert wine or sparkling. The reason for such a variation in styles is that it is virtually impossible to harvest Zinfandel when all the grapes have an even ripeness. When most of the bunch achieves perfect ripeness, some grapes are green, but if the grower waits for these to ripen, the shoulder clusters quickly raisin. There are several ways to overcome this, but they are all labor-intensive, seemingly wasteful, and inevitably costly, which is why great Zinfandel is never cheap. Great Zinfandel is as rich and deep-colored as only California could produce, with ripe, peppery-spicy fruit, liquorice intensity, and a chocolate-herb complexity. When young, such wines are chewy and have classic berry-fruit flavors, which can swing toward black-cherry or simply have a gluggy-jamminess. It is the only varietal that positively demands the coconutty aromas of American oak, and it is often improved when blended with Petite Sirah for increased backbone. This is a wine that requires a certain amount of bottle-aging to bring out the dried-fruit spiciness.

Zinfandel is not one of California's longest-lived wines, but without sufficient time in bottle, the wine will merely have a richness of oak and berry fruits, and lack complexity. Massive, black, opaque Zinfandels with 16.5 percent plus of alcohol are on the increase, but they are grotesque abominations, and certainly do not stir my soul as they obviously do those of numerous American critics. I don't know what difference in style Crljenak might possess on California soil, but when Primitivo is vinified by the same winemaker, it is usually less alcoholic (just a 0.5 percent reduction), and a little softer, with less berry fruit and less "sweet and sour" flavor.

MENDOCINO COUNTY

The best vineyards here are located on the fork of the Navarro and Russian rivers in the south of Mendocino, a district that has become a byword for top-quality California sparkling wine since the emergence of Roederer Estate. Such is the climatic variation here that some excellent Zinfandel is made, and aromatic varieties may also do very well.

IN THE EARLY 1980S, Champagne Louis Roederer sunk some \$15 million into a 500-acre (200-hectare) vineyard and winery in the Anderson Valley, where the climate is considerably cooler than that of surrounding areas. A nonvintage wine in the *champenois* tradition, the first, 1986-based release was nothing special and has not improved over the years, yet the 1987-based release was the best sparkling wine produced anywhere in the world outside of Champagne itself, a quality that has been maintained ever since. The diversity of *terroir* within the sparkling-wine growing areas of Mendocino provides a fascinating contrast of styles, for Scharffenberger, just around the corner from Roederer, could hardly make a wine more different from Roederer. Whereas Roederer is rich, well-structured, and potentially complex in a style that leans decidedly toward Champagne, Scharffenberger is all lightness and elegance with a purity of fruit that gains in finesse every year. There are lots of reasons for this over and above that of *terroir*, including the good old joker in the pack—man—but

it does suggest that we are witnessing the very earliest stages of development in California's sparkling-wine industry. In 20 years' time there is every chance that the state's best sparkling-wine areas will be known, planted, and exploited to the extent that each will have many producers making contrasting styles from neighboring vineyards.

GROWTH OF MENDOCINO'S WINE INDUSTRY

Because parts of Mendocino are too hot for classic wine production, there has been a tendency in the past to plant highly productive vines for jug-wine blends. However, the county has a complex climate, and there are some areas where coastal influences dominate and cooler Region I and II climates (see p.470) prevail. This has been recognized by the substantial amount of premium-quality varietals that were planted in the late 1970s, and by the rise in the number of wineries in the area, from 16 in 1981 to 29 in 1985 and 41 in 1995.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
100 miles (160km) northwest of San Francisco, Mendocino is the most northerly of the major viticultural coastal counties.

SOIL
Deep, diverse alluvial soils in the flat riverside vineyards, gravelly-loam in parts of the Russian River Valley, and a thin scree on the surrounding slopes.

CLIMATE
The mountain ridges surrounding the Upper Russian and Navarro rivers climb as high as 3,500ft (1,070m) and form a natural boundary that creates the reputed transitional climate of Mendocino. This climate is unusual in that either coastal or inland influences can dominate for long or short periods, although it generally has relatively warm winters and cool summers. This provides for a growing season with many warm, dry days and cool nights. The Ukiah Valley has the shortest, warmest growing season north of San Francisco.

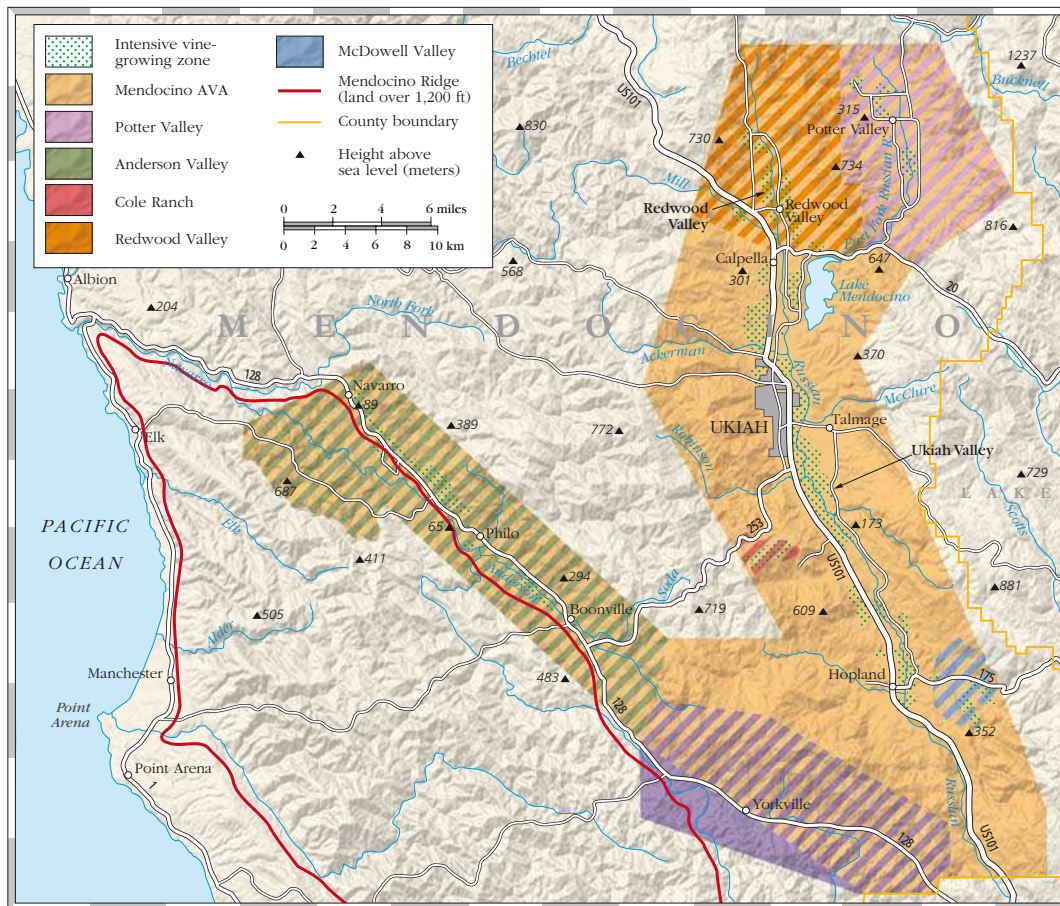

VITICULTURE AND VINIFICATION
The average growing season is 268 days, compared with 308 in Sonoma (bud-break is 10 days earlier here), and 223 days in Lake County.

GRAPE VARIETIES
Primary varieties: Cabernet Sauvignon, Carignan, Chardonnay, Chenin Blanc, Colombar, Sauvignon Blanc, Zinfandel
Secondary varieties: Barbera, Burger, Cabernet Franc, Charbono, Early Burgundy, Flora, Folle Blanche, Gamay, Gamay Beaujolais, Gewürztraminer, Grenache, Gray Riesling, Green Hungarian, Malvasia Bianca, Merlot, Muscat Blanc, Palomino, Petite Sirah, Pinot Blanc, Pinot Noir, Ruby Cabernet, Sauvignon Vert, Sémillon, Sylvaner, Syrah, White Riesling

ASPECT
Mainly flat ground on valley bottoms or gentle, lower slopes at a height of 250 to 1,460ft (76 to 445m), with some rising to 1,600ft (490m). The vines generally face east, though just south of Ukiah they face west.

MENDOCINO, *see also* p.470

This area's northerly location need not mean harsher microclimates. Inland regions are protected by the mountains, although the Anderson Valley is cooler.

THE APPELLATIONS OF MENDOCINO COUNTY

ANDERSON VALLEY AVA

Of some 57,600 acres (23,300 hectares) in this area, a mere 600 acres (240 hectares) have been planted with vines. Anderson Valley's coastal-influenced microclimate is cooler than in the rest of Mendocino. This is seen as one of California's coolest wine-growing areas, but temperatures do rise the further southwest that vines are grown. The valley's soil consists of more than 20 alluvial soils, providing the diversity required for wineries such as Roederer Estate and Scharffenberger to produce a variety of base wines, the building blocks of any fine-quality sparkling wine. This area is also suitable for aromatic varieties such as Gewürztraminer and Pinot Gris, and farther inland Cabernet Sauvignon and Zinfandel are possible.

COLE RANCH AVA

Situated in a small, narrow valley, this appellation consists of just 62 acres (25 hectares) of Cabernet Sauvignon, Chardonnay, and Johannisberg Riesling vineyards, all owned by the Cole family. Soils range from gravelly-clay loam to gravelly-silty clay.

MCDOWELL VALLEY AVA

The McDowell Valley enjoys the protection of the mountains encircling it. Its vineyards are restricted to the gravelly-loam soils at around 1,000 feet (300 meters), other soils being unsuitable for vines. The microclimate here warms up when other areas are having spring frosts, although it is slightly cooler in the growing season.

MENDOCINO AVA

This may only be used for wines produced from grapes that are grown in the southernmost third of the county. It encompasses four other smaller AVAs plus surrounding vineyards.

MENDOCINO COUNTY AO

This appellation (not an AVA) covers the wines from anywhere within the county of Mendocino.

POTTER VALLEY AVA

This appellation consists of 27,500 acres (11,130 hectares) situated northwest of Clear Lake, some

11,000 acres (4,450 hectares) of which are under vine. Vines grow on the valley floor and are protected by the surrounding hills.

REDWOOD VALLEY AVA

This area is where the first Mendocino vines were planted. It has been known as Redwood Valley since it was settled in the mid-1850s and covers 35 square miles (90 square kilometers), with some 2,300 acres (930 hectares) of area under vine already in existence. The grapes ripen later than in the hotter and drier Ukiah area, providing higher acidity, color, and tannin.

YORKVILLE HIGHLANDS AVA

Geographically, but not topographically, this appears to be an extension of the Anderson Valley AVA. Yorkville Highlands has a rocky soil with high gravel content, and a cool climate that is comparable to the middle of the Anderson Valley. Sauvignon Blanc does well here, and this AVA could also favor red Bordeaux varieties.

THE WINE PRODUCERS OF MENDOCINO COUNTY

BONTERRA

Ukiah

◎★★●

Part of the Brown-Forman group, but its organic philosophy proves that big business can be good guys too.

✓ Chardonnay • Merlot

EDMEADES VINEYARDS

Philo

★★

Part of the Kendall-Jackson group.

✓ Zinfandel

FETZER VINEYARDS

Redwood Valley

★★●

Owned by Brown-Forman, Fetzer produces value-for-money wines.

✓ Cabernet Sauvignon • Gewürztraminer • Merlot • Pinot Noir (Ben Nacido Vineyard Reserve, Five Rivers Ranch) • Syrah • Zinfandel

FREY

Redwood Valley

◎★

The oldest and largest fully organic winery in the US, Frey was set up in 1980 and was the first US winery to produce biodynamic wines. Just over 10 percent of its wine is biodynamic.

✓ Petite Sirah ◎ • Sangiovese • Syrah

GREENWOOD RIDGE VINEYARDS

Philo

★★●

An underrated winery best-known

for its Riesling, particularly its Late Harvest, although other varieties are well worth a look.

✓ Cabernet Sauvignon • Classic red blend (Home Run Red) • Pinot Noir • White Riesling (Late Harvest)

HANDLEY

Philo

★★●

An excellent, underrated *méthode champenoise* specialist. Handley's crisp Vintage Brut has creamy-vanilla richness, but he also makes flavorful Pinot Noir and Sauvignon Blanc of increasing elegance.

✓ Pinot Noir (Estate Reserve) • Sauvignon Blanc (Handley Vineyard) • Sparkling wine (Vintage Brut)

HUSCH VINEYARDS

Philo

★★●

Founded by Tony Husch, this winery was sold in 1979 to Hugo Oswald, the current owner and winemaker, who also has large vineyard holdings in the Anderson and Ukiah Valleys, from which his unpretentious white-wine varieties always stand out.

✓ Chardonnay • Chenin Blanc (La Ribera) • Muscat Canelli (La Ribera) • Sauvignon Blanc (La Ribera)

NAVARRO VINEYARDS

Philo

★★●

Some critics believe these vineyards produce some of California's best Gewürztraminer, although I think they

have the potential to do much better. If I had to name the worst varietal for a sparkling wine, it would probably be Gewürztraminer, and I've only come across four producers stupid enough to try. Yet Navarro is the exception that proves the rule. It has nothing to do with classic sparkling wine as we generally perceive it, but there are far more spicy bottle-aromas in Navarro's fizzy Gewürztraminer than there are in its regular still wine. If you can appreciate the finest Riesling Sekt and sparkling Shiraz, then you really should try Navarro Sparkling Gewürztraminer. Otherwise, it's the purity of fruit found in the Pinot wines that most attracts me to this producer at the moment.

✓ Pinot Blanc • Pinot Gris • Pinot Noir • Riesling (Riesling Cluster Select) • Sparkling wine (Gewürztraminer)

PARDUCCI WINE CELLARS

Ukiah

★★●

Parducci is a large winery, with over 351 acres (142 hectares), which was founded in Sonoma in 1918 and moved to Ukiah in 1931, where a new winery was built in preparation for the end of Prohibition. The wines are clean and fruity, and possess a good depth of flavor for their price.

✓ Petite Sirab • Zinfandel (Zingaro)

ROEDERER ESTATE

Philo

★★★●

The first New World venture to achieve a quality of sparkling wine comparable not just to Champagne,

but to very good Champagne, Roederer Estate (or Quartet as it is known on export markets) ages like no other California sparkling wine. L'Ermitage is the greatest wine here, but the standard nonvintage Brut can be almost as stunning. A bottle of the 1994-based nonvintage, which was disgorged in February 1997 and matured in my own cellar until 2002, still displayed beautifully pristine fruit of great finesse, when most California sparkling wines of a similar age would be as dead as a dodo.

✓ Entire range

SCHARFFENBERGER CELLARS

Ukiah

★★★●

Founded by John Scharffenberger in 1981 and part-owned by Pommery until it was transferred to Veuve Clicquot. After it was decided to change the name to Pacific Echo, a soulless name with no sense of place, the writing was on the wall. Veuve Clicquot did nothing to encourage exports and even thwarted efforts to promote the brand abroad. It came as no surprise when Pacific Echo was purchased in July 2004 by the Roederer-owned Maisons Marques & Domaines USA, and announced that it would drop Pacific Echo in favor of a return to the original Scharffenberger name. The company has retained Tex Sawyer, who has been the winemaker from the start; he has slowly and consistently increased the elegance and finesse of these sparkling wines.

✓ Sparkling wine (Blanc de Blancs, Rosé)

THE APPELLATIONS OF SONOMA COUNTY

ALEXANDER VALLEY AVA

Located in the northeast of the county, this appellation extends from the banks of the Russian River into the foothills of the Mayacamas Mountains. In 1986 its boundaries were extended so that it overlapped the Russian River AVA, and were further extended in 1990 to incorporate Sir Peter Michael's Gauer Ranch and Ellis Alden's Chestnut Springs vineyards in the foothills east of Geyserville. Cabernet Sauvignon and Merlot are ideally suited to this area, where very fine Nebbiolo, Sangiovese, and Chardonnay can also be produced. Formerly part of Dry Creek AVA, the Gill Creek watershed area was reclassified as Alexander Valley AVA in 2001.

CHALK HILL AVA

This appellation covers 33 square miles (85 square kilometers) and encompasses 1,600 acres (650 hectares) of vineyards rising in altitude from 200 to 1,300 feet (60 to 400 meters). There is no chalk here; the soil's whiteness is in fact derived from volcanic ash with a high quartzite content. Emitted by Mount St. Helena over many centuries, the ash has mixed with local sandy and silty loams to provide a deep soil that is not particularly fertile. This area is protected by a thermal belt that promotes a September harvest, compared with October in surrounding areas.

DRY CREEK VALLEY AVA

This appellation faces that of the Alexander Valley across the Russian River. Its climate is generally wetter and warmer than surrounding areas, with a longer growing season than the Russian River appellation to the south, and varietal suitability is very flexible, stretching from Sauvignon Blanc to Zinfandel. The Gill Creek watershed area was declassified as Dry Creek in 2001, and reclassified under the Alexander Valley AVA.

KNIGHTS VALLEY AVA

Knight's valley covers an area of approximately 55 square miles (140 square kilometers) containing 1,000 acres (400 hectares) of vineyards. The vines grow on rocky and gravelly soil of low fertility at altitudes that are generally higher than those in the adjacent AVAs, making it ideal Cabernet country.

LOS CARNEROS AVA

The Los Carneros, or simply Carneros, appellation covers an area of low, rolling hills that straddle the counties of Sonoma and Napa. This was originally sheep country, but the cool sea breezes that come off San Pablo Bay to the south provide an excellent fine-wine growing climate, especially for Chardonnay, Pinot Noir, and sparkling-wine varieties.

NORTHERN SONOMA AVA

The large appellation of Northern Sonoma completely encapsulates six other AVAs, those of Alexander Valley, Chalk Hill, Dry Creek Valley, Knights Valley, Russian River Valley, and Sonoma County Green Valley, and is separated from the Sonoma Valley appellation to the south by the city of Santa Rosa.

RUSSIAN RIVER VALLEY AVA

The name Russian River began appearing on wine labels as recently as 1970, although vineyards in this region date from the 19th

century. The early-morning coastal fog provides a cooler growing season than that of neighboring areas, making the Russian River Valley very well suited to Pinot Noir—and indeed it produces some of California's finest Pinot Noir wines. In September 2003, this AVA was expanded to include 767 acres (307 hectares) south of Fulton.

SONOMA COAST AVA

An appellation covering 750 square miles (1,940 square kilometers), Sonoma Coast AVA is made up of the area directly inland from the length of Sonoma's Pacific coastline—the AVA's western boundary. It is significantly cooler than other areas because of the persistent fog that envelops the Coast Ranges, the mountains that are within sight of the Pacific Ocean.

SONOMA COUNTY GREEN VALLEY AVA

Originally it was proposed that this area within the Russian River Valley AVA be called, simply, Green Valley, but to avoid confusion with Solano County's Green Valley appellation, it was decided to add "Sonoma County." The climate here is one of the coolest in the Russian River Valley and the soil is mostly fine sandy loam, well suited to sparkling wine.

SONOMA MOUNTAIN AVA

This tiny appellation is within the Sonoma Valley AVA. Sonoma Mountain AVA has a thermal belt phenomenon that drains cold air and fog from its steep terrain to the slopes below, creating a climate that is characterized by more moderate temperatures than the surrounding areas.

SONOMA VALLEY AVA

The first vines were planted here in 1825 by the Mission San Francisco de Sonoma. Rainfall is lower than elsewhere in the county and fog rarely penetrates the Sonoma Mountains. It is red-wine country; particularly for Cabernet Sauvignon and Zinfandel.

THE WINE PRODUCERS OF SONOMA COUNTY

A. RAFANELLI

Healdsburg

It was always said that Americo Rafanelli, who died in 1987, made wine "as they used to in the olden days." Well, he would be proud of the blockbusters made by his son David from this small, unirrigated, hillside vineyard.

✓ Zinfandel

ALEXANDER VALLEY VINEYARDS

Healdsburg

An underrated winery built on the original homestead of Cyrus

Alexander, who gave his name to the Alexander Valley, now a famed AVA. Most products are well worth buying as value-for-money, everyday drinking wines, but some are much finer than that, despite their modest prices, and the Cyrus comes precariously close to making the top 10 classic red blends in California.

✓ Cabernet Sauvignon • Chardonnay (Wetzel Family Estate) • Classic red blend (Cyrus) • Merlot • Pinot Noir

ARROWOOD VINEYARDS

Glen Ellen

Ex-Château St. Jean winemaker Richard Arrowood makes very

stylish wines and the quality gets better each year, as he hones down his varietals. Excellent-value second label (Grand Archer).

✓ Cabernet Sauvignon (Grand Archer, Réserve Spéciale) • Chardonnay (Cuvée Michel Berthod) • Merlot (Grand Archer, Réserve Spéciale) • Pinot Blanc • Riesling (Special Select Late Harvest Riesling Hoot Owl) • Syrah • Viognier

B R COHN

Glen Ellen

Sometimes you have to spit the splinters out of these wines, but you

cannot deny the quality and have to admire the enthusiasm.

✓ Cabernet Sauvignon (Olive Hill) • Merlot (Sonoma Valley)

BELVEDERE

Healdsburg

Large vineyards enable owner Bill Hambrecht to make a wide range of wines. He used to excel at Chardonnay, but his best and most consistent wines are now Merlot and Zinfandel.

✓ Merlot (Healdsburg Ranches) • Zinfandel (Healdsburg Ranches)

BENZIGERGlen Ellen
④★☆☆

Since selling its Glen Ellen and M. G. Vallejo high-volume brands to Heublein, Mike Benziger now concentrates on producing more focused, quality wines under the family name. His highly successful Imagery series now has its own winery off Highway 12.

- ✓ *Cabernet Sauvignon* (Sonoma Coast) • *Chardonnay* (Carneros) • *Pinot Noir* (Sonoma Coast) • *Syrah* (California)

BUENA VISTA WINERYSonoma
★④

Haraszthy's original winery (see p.469) is now owned by Allied-Domecq. Buena Vista's Carneros Estate wines are usually good value, particularly the Cabernet Sauvignon and Pinot Noir.

- ✓ *Cabernet Sauvignon* (Carneros Estate, Grand Reserve)

CARMENET VINEYARDSonoma
★④

Owned by Chalone Vineyards of Monterey, Carmenet offers some excellent-value wines.

- ✓ *Cabernet Sauvignon* (North Coast Dynamite) • *Merlot* • *Sauvignon Blanc* (Reserve)

CHALK HILL WINERYHealdsburg
★

This excellent operation was known as Donna Maria Vineyards when the owner only grew and sold grapes, but became Chalk Hill Winery when it first began to make and sell wines in 1981. Chardonnay has always been a major focus, and in the 2000 vintage Chalk Hill released a fascinating collection of six single-clone versions of this varietal.

- ✓ *Cabernet Sauvignon* (Estate Bottled) • *Chardonnay* (Estate Bottled)

CHÂTEAU SOUVERAINGeyserville
★④

Good-value basic range, but the Winemaker's Reserve is seldom any better.

- ✓ *Merlot* (Alexander Valley) • *Sauvignon Blanc* (Alexander Valley) • *Zinfandel* (Dry Creek Valley)

CHATEAU ST JEANKenwood
★☆☆

Prior to former Japanese owners (Suntory) selling this prestigious winery to Beringer, the style of some of these wines had already swung from overt richness to elegance. The quality remains, but some American critics are less appreciative of the change.

- ✓ *Cabernet Sauvignon* (Sonoma Coast, Sonoma Coast Reserve) • *Chardonnay* (Robert Young Vineyard Reserve) • *Classic red blend* (Cinq Cépages) • *Merlot* (Sonoma Coast) • *Riesling* (Special Late-Harvest) • *Sauvignon Blanc* (Fumé Blanc La Petite Étoile)

CHRISTOPHER CREEKHealdsburg
★★

Formerly known as the Sotoyme Winery, Christopher Creek was snapped up by Englishman John Mitchell, who makes a wonderfully deep, rich, smoky Petite Sirah and, even better, a silky, stylish Syrah.

- ✓ *Petite Sirah* (Russian River Estate Bottled) • *Syrah* (Reserve, Russian River Estate Bottled) • *Zinfandel* (Dry Creek Valley)

CLINE CELLARSSonoma
★★④

These excellent Rhône-style wines range from the jammy Côtes d'Oakly to the serious, oaky Mourvèdre, but it is the superb range of full-throttle, all-American Zinfandel wines that Cline is truly famous for.

- ✓ *Carignane* (Ancient Vines) • *Mourvèdre* (Ancient Vines, Late Harvest) • *Syrah* (Los Carneros) • *Zinfandel* (Ancient Vines)

CLOS DU BOISHealdsburg
★★④

Owned by Allied-Domecq, Clos du Bois has made fleshy, well-textured, medal-winning wines from its

impressive 925 acres (370 hectares) of vineyards under a variety of highly talented winemakers.

- ✓ *Cabernet Sauvignon* (Alexander Valley Reserve, Winemaker's Reserve) • *Chardonnay* (Flintwood) • *Classic red blend* (Marlstone) • *Malbec* (Winemaker's Reserve) • *Merlot* (Winemaker's Reserve) • *Pinot Noir* (Sonoma Coast) • *Syrah* (Shiraz) • *Tempranillo* (Alexander Valley Reserve) • *Zinfandel* (Dry Creek Valley Reserve, Russian River)

H. COTURRI & SONS LTD.Glen Ellen
④☆☆

A wide range of sometimes excellent varietals, but as is often the case with organic winemaking, the quality ranges between rustic and brilliant. If they are drunk on release, the best examples of the following can be mind-blowing. The Albarello is essentially Zinfandel and Petite Sirah field-blend that includes a hodgepodge of other varieties.

- ✓ *Carignane* • *Charbono* • *Classic red blend* (Albarello) • *Sangiovese* • *Zinfandel* (Chauvet, Freiberg, Workingman's)

DE LOACH VINEYARDSSanta Rosa
★★④

This winery's signature wine used to be Chardonnay, but the reputation of De Loach is now firmly embedded in its exceptional range of Zinfandel wines. Anyone who does not like Zinfandel or is hard to please should really try De Loach, as these wines are the smoothest you are ever likely to encounter. Top of the range wines are sold as OFS (Our Finest Selection). De Loach was acquired by Burgundy's Jean-Claude Boisset in 2003.

- ✓ *French Colombard* • *Pinot Noir* (OFS) • *Sauvignon Blanc* (Russian River Valley Fumé Blanc) • *Zinfandel*

DRY CREEK VINEYARDHealdsburg
★★④

Not all of David Stare's elegant Dry Creek Vineyard wines actually come from the Dry Creek Valley AVA.

- ✓ *Cabernet Sauvignon* • *Chenin*

Blanc (Clarksburg) • *Fumé Blanc* • *Zinfandel* (Heritage, Old Vines)

DU MOLOrinda
★★

Although based in Orinda, this small operation produces some of the classiest Chardonnay and Pinot Noir in the Russian River Valley, not to mention one of California's finest Syrahs.

- ✓ *Chardonnay* • *Pinot Noir* • *Syrah*

DUXOUPHealdsburg
★★

The first time I visited Duxoup managed to get lost and asked to be excused for being over two hours late, but Andy Cutter waved away my apology with "Don't worry, when your colleagues Robert Joseph and Charles Metcalfe paid a visit, they were two days late," and I am very happy to say the wines are equally laid-back.

- ✓ *Charbono* • *Sangiovese* (Gennaio) • *Syrah*

FERRARI-CARANOHealdsburg
★★④

Don and Rhonda Carano sold up their Reno casino and hotel to buy 500 acres (200 hectares) of Sonoma vineyards in 1981, and their Italian-styled wines have always been a special feature.

- ✓ *Classic red blend* (Sienna, Tresor) • *Dessert style* (Eldorado Noir) • *Fumé Blanc*

FISHER VINEYARDSSanta Rosa
★★④

With two hillside vineyards situated in the Mayacamas Mountains and another one on the Napa Valley floor, Fred Fisher has always crafted some high-quality wines, but in particular from his Cabernet Sauvignon grapes.

- ✓ *Cabernet Sauvignon* (Lamb Vineyard, Wedding Vineyard) • *Chardonnay* (Unity, Whitney's Vineyard) • *Merlot* (RCF Vineyard)

FRITZ CELLARSCloverdale
★④

This winery is best known for Chardonnay and Sauvignon, but it is the intense, extraordinarily long-lived Zinfandel that excites most. Particularly the Old Vine, made from a combination of 50-, 60-, and 80-year-old vines, and Rogers Reserve, from 100-year-old vines.

- ✓ *Cabernet Sauvignon* • *Zinfandel* (Old Vines)

GARY FARRELL

Healdsburg

★★

Gary Farrell makes truly special Russian River Pinot Noir, full of style, and rich in fruit, with amazing finesse and complexity.

- ✓ *Chardonnay* (Redwood Ranch)
 • *Classic red blend* (Encounter)
 • *Pinot Noir* • *Sauvignon Blanc* (Redwood Ranch) • *Zinfandel* (Maple Vineyard)

GALLO OF SONOMA

Healdsburg

◎★★★

Gina and Matt Gallo literally moved hillsides to create this estate, but they have been unable to bulldoze away the prejudice that exists in some quarters against anything remotely connected with the Gallo empire, while true enthusiasts just let the wine do the talking.

- ✓ *Barbera* (Barrelli Creek) • *Cabernet Sauvignon* • *Chardonnay* • *Pinot Gris* (Sonoma Coast) • *Zinfandel* (Frei Ranch Vineyard)

GEYSER PEAK WINERY

Geyserville

★★★

Hugely underrated because of low price points, but the Block Collection range is a stunning success, and Australian winemaker Daryl Groom is a magician with even the least expensive, most modest of wines.

- ✓ *Cabernet Sauvignon* (Block Collection) • *Chardonnay* (Alexander Valley Reserve, Block Collection, Ricci Vineyard, Sonoma County) • *Classic red blend* (Reserve Alexandre Meritage) • *Fortified* (Henry's Reserve Shiraz Vintage Port, Tawny Port) • *Merlot* (Sonoma County) • *Riesling* (Late Harvest Reserve) • *Sauvignon Blanc* (Block Collection, California, Russian River Valley) • *Shiraz* (Sonoma County Reserve) • *Vignier* (Block Collection) • *Zinfandel* (Sonoma County)

GLORIA FERRER

Sonoma

★★

Established by Cava-giant Freixenet in 1982 and named after the wife of José Ferrer, the Spanish firm's president, Gloria Ferrer. Bob Lantasca, Gloria Ferrer's ponytailed winemaker might look as if he was left behind when the hippies trekked north to Oregon, but he is very much at home in the new millennium California, as his outstanding Royal Cuvée testifies. Royal Cuvée might not be the most expensive wine in the range, but it is certainly the best.

- ✓ *Sparkling wine* (Blanc de Noirs, Carneros Rosé, Royal Cuvée, Sonoma Brut)

GUNDLACH-BUNDSCHU WINERY

Sonoma

★

High-quality Cabernet and Zinfandel from the fifth generation of the family of the founder, Jacob Gundlach, this winery also shows promising signs for other varietals.

- ✓ *Cabernet Sauvignon* (Rhinefarm Vineyard) • *Tempranillo* (Rhinefarm Vineyard) • *Zinfandel* (Rhinefarm Vineyard)

HACIENDA WINE CELLARS

Sonoma

★★

This operation used to encompass part of Haraszthy's original Buena Vista vineyard, but the brand was sold in 1993 to the Bronco Wine Company. Although little more than a label for pan-California wine blends, there are some amazing bargains.

- ✓ *Chardonnay* (Claire de Lune) • *Dry Chenin Blanc*

HANZEL VINEYARDS

Sonoma

★★

James Zellerbach, the founder of Hanzel Vineyards, revolutionized the California wine industry in 1957 by aging a Chardonnay wine in imported Burgundian *barriques*. The emphasis today of the 100 percent estate-bottled wines is *terroir*, rather than oak.

- ✓ *Chardonnay* • *Pinot Noir*

HARTFORD COURT

Sonoma

★★

Owned by Don Hartford, who is married to the daughter of Jess Jackson of Kendall-Jackson fame, Hartford Court makes extremely classy Pinot Noir and Chardonnay, and a huge, oaky Zinfandel that is definitely out to grab attention.

- ✓ *Chardonnay* (Arrendell Vineyard) • *Pinot Noir* (Arrendell Vineyard) • *Zinfandel* (Hartford Vineyard)

HOP KILN

Healdsburg

★★

The hop-drying barn that houses Hop Kiln winery was built in 1905, and has been declared a national historic landmark. A Thousand Flowers is a very inexpensive, unpretentious, soft, flowery, off-dry blend of Riesling, Chardonnay and Gewürztraminer.

- ✓ *Classic white blend* (A Thousand Flowers) • *Zinfandel* (Old Windmill Vineyard, Primitivo Vineyard)

IMAGERY ESTATE

Glen Ellen

★★★

Mike Benziger's Imagery series now has its own dedicated winery, and

has branched out into single-vineyard varietals.

- ✓ *Cabernet Franc* (BlueRock Vineyard) • *Cabernet Sauvignon* (Ash Creek Vineyard) • *Merlot* (Sunny Slope Vineyard)

IRON HORSE VINEYARDS

Sebastopol

★★

Once the only railroad stop in Sonoma Green Valley, hence the name (it also gave rise to its second label, Tin Pony), Iron Horse is famous for its textbook *méthode champenoise*, but also makes some elegant Pinot Noir wines that only reveal their hidden depth with food.

- ✓ *Pinot Noir* • *Sparkling wine* (Blanc de Blancs, Blanc de Blancs LD, Classic Vintage Brut, Rosé, Russian Cuvée)

J. ROCHIOLI VINEYARDS

Healdsburg

★★

The Rochioli family has been growing grapes at this long-established vineyard since the 1930s, but did not build a winery until 1984, making their first wine the following year. They now offer a large range of all too drinkable estate-bottled wines, including some of the most velvet-textured, varietally pure Pinot Noirs in all of California.

- ✓ *Pinot Noir* • *Sauvignon Blanc*

J. WINE COMPANY

Healdsburg

★★

Established in 1986 by Judy Jordan, who rented space in her father's Jordan Winery until 1997, when she purchased Piper Sonoma's specialist sparkling wine facility, renaming it the J Wine Company. J sparkling wine was fundamentally perfected by the 1990/1991 vintage, and magnums have a particularly noticeable effect on these wines, thus well worth the investment. Like all sparkling wine ventures that diversify into still wines, the crossover was not entirely smooth, as such wineries are designed for something entirely different. However, following extensions to the winery, including new equipment and a barrel room, the still wines have become more polished in recent years.

- ✓ *Pinot Gris* (Russian River Valley) • *Pinot Noir* (Nicole's Vineyard, Russian River Valley) • *Sparkling wine* (Brut)

JORDAN

Healdsburg

★★

This winery majors on rich, complex Cabernet Sauvignon, and is gradually honing its Chardonnay into a much finer wine than it used to be.

- ✓ *Cabernet Sauvignon* • *Chardonnay*

JOSEPH SWAN VINEYARDS

Forestville

★

For the son of teetotal parents, the late Joe Swan was an extraordinary winemaker in many senses, and his son-in-law, Rod Berglund, has continued his tradition of producing very small batches of high-quality wines, with Zinfandel his most consistent style.

- ✓ *Zinfandel*

KENWOOD VINEYARDS

Kenwood

★★

Concentrated wines with good attack are consistently produced at these vineyards.

- ✓ *Cabernet Sauvignon* (Art Series, Jack London Vineyard) • *Chardonnay* (Russian River Reserve) • *Pinot Noir* (Olivet Reserve, Russian River Reserve) • *Sauvignon Blanc* (Sonoma County)

KISTLER VINEYARDS

Trenton

★★★

Mark Bixler and Steve Kistler are outstanding single-vineyard Chardonnay specialists, who also turn out masterly Pinot Noir. No apologies for the value rating. Put these Sonoma Coast wines side by side with Burgundies of the same price, and Kistler wins more often than not.

- ✓ *Chardonnay* • *Pinot Noir*

KORBEL CHAMPAGNE CELLARS

Guerneville

?

No wine encyclopedia would be complete without mention of California's leading sparkling-wine specialist in the popular sector, even though I have been able to recommend only one of its wines on a consistent basis. While the odd blend of this and that *cuvée* might rise above the norm, only Korbel Rouge is worthy of recommending year in, year out. The irony is, of course, that this medium-sweet red bubbly is usually the one that most critics turn their noses up at, yet its bold color and equally bold flavors, enhanced with some sweetness, would not fare too badly in a blind tasting of highly respected Australian sparkling reds. Owned by Brown-Forman.

- ✓ *Sparkling red* (Rouge)

KUNDE ESTATE

Kenwood

★★

Kunde Estate winery was set up by a well-established group of Sonoma growers who started selling their own wines in 1990, and have rapidly made a huge impact with critics and consumers alike.

- ✓ *Cabernet Sauvignon* (Drummond) • *Chardonnay*

(Kinneybrook Wildwood) • *Sauvignon Blanc* (Magnolia Lane) • *Zinfandel* (Robusto)

LA CREMA

Geyserville

★☆☆

With a well-deserved reputation for reasonably priced, high-quality Chardonnay and Pinot Noir from the Russian River (9 Barrel being top of the range), La Crema also produces less expensive wines of reliable quality from the Sonoma Coast AVA.

✓ *Chardonnay* (9 Barrel, Russian River) • *Pinot Noir* (9 Barrel, Anderson Valley, Carneros, Russian River)

LANDMARK VINEYARDS

Windsor

★

These vineyards are best known for Chardonnay of a much fatter, richer, more complex style than they used to be, and are now developing a growing reputation for Pinot Noir.

✓ *Chardonnay* (Lorenzo) • *Pinot Noir* (Kastania Vineyard)

LAUREL GLEN VINEYARD

Glen Ellen

★★

Laurel Glen offers a succulent Sonoma Mountain Cabernet Sauvignon, with Counterpoint as a half-price version. Reds is a seriously underrated classic red sold for under \$10 a bottle. The 2002, for example, contained 60 percent Zinfandel from 80-year-old vines, 30 percent Carignane from 117-year-old vines, plus 10 percent Petite Sirah.

✓ *Cabernet Sauvignon* • *Classic red blend* (Reds)

LAURIER

Forestville

★

Formerly called Domaine Laurier, with production restricted to a 30-acre (12-hectare) vineyard, this is now a brand belonging to the Bronco Wine Company.

✓ *Cabernet Sauvignon* (Dry Creek Valley) • *Chardonnay* (Los Carneros) • *Merlot* (Dry Creek Valley)

LYETH WINERY

Geyserville

★

Pronounced "Leeth," this was an exciting new winery in the 1980s, but when the founder died in a plane crash in 1988, it was sold off and is now owned by Burgundian *négociant* Boisset. The second label is Christophe.

✓ *Classic red blend* (Lyeth) • *Classic white blend* (Lyeth)

MARIETTA CELLARS

Healdsburg

★

Owner-winemaker Chris Bilbro started up this operation in 1980,

after selling off his share in the Bandeira Winery, which he had established while still working as an administrator for Sonoma State Hospital. He built his reputation on lush Merlot and great-value wines.

✓ *Classic red blend* (Old Vine Red) • *Petite Sirah* • *Zinfandel* (Cuvée Angeli)

MARIMAR ESTATE

Sebastopol

★★

Miguel Torres planted his sister's vineyard with Chardonnay and Pinot Noir, at three to four times the normal density for California. These high-density vines work best for Pinot Noir, which has a combination of silky fruit, finesse, and age-worthiness that is uncommon in California.

✓ *Chardonnay* (Dobles Lias) • *Pinot Noir*

MARTINELLI VINEYARDS

Fulton

★★

Experienced grape growers, who turned winemakers in the early 1990s, the Martinelli family turns out limited quantities of lush, stylish wines under the guidance of Helen Turley. The range includes wonderfully classy Pinot Noir, stunning Syrah and Zinfandel, and sumptuous late-harvest Muscat Alexandria.

✓ *Entire range*

MATANZAS CREEK WINERY

Santa Rosa

★★

This small, highly reputed winery has been owned by Jess Jackson and Barbara Banke of Kendall-Jackson since 2000, when the founding McIver family retired and sold up. The style is fine, rich, and elegant, with a signature of good fruit-acidity, probably better suited to European palates than American.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Sauvignon Blanc*

MICHEL-SCHLUMBERGER

Healdsburg

★

Formerly known as Domaine Michel Winery, under the ownership of Swiss-born Jean-Jacques Michel, but it is now in collaboration with Jacques Schlumberger, whose family comes from Alsace.

✓ *Cabernet Sauvignon* • *Chardonnay* (La Brume) •

Merlot (Dry Creek Valley) • *Pinot Blanc* (Dry Creek Valley)

NALLE

Healdsburg

★★

Doug Nalle was winemaker at Quivira, when he started making Zinfandel under his own label in 1984. His Zinfandel wines are usually augmented with 6–12 percent of Petite Sirah, Syrah, Carignane, Alicante Bouchet, and Gamay, and aged exclusively in French oak. They are not the massive monsters that win gold after gold or make national headlines, but the British appreciate them.

✓ *Zinfandel*

PAX

Santa Rosa

★★★

Former Dean and Deluca wine-buyer Pax Mahle established California's fastest-rising Syrah superstar as recently as 2000, and the mesmerizing quality of his low-yield, hands-off, single-vineyard wines has charmed the critics off their perch.

✓ *Entire range*

PELEGRINI FAMILY VINEYARDS

South San Francisco

★

These vineyards produce delicious, vividly flavored red wines, with oodles of fresh fruit.

✓ *Cabernet Sauvignon* (Cloverdale Ranch) • *Merlot* (Cloverdale Ranch) • *Pinot Noir* (Olivet Lane Estate) • *Zinfandel* (Eight Cousins)

PETER MICHAEL WINERY

Calistoga

★★

With no expense spared, Englishman Sir Peter Michael has applied New World technology to the very best of traditional methods to produce some of the classiest wines in California. Air conditioning is vital in California, but this winery has computer-controlled steam jets to maintain sufficient humidity to reduce evaporation through the staves of new oak to virtually zero. The goal is for the wines not to overwhelm when served with food, but to build in finesse and complexity in the glass, and this is achieved most of the time. Some of the Chardonnays can be far too soft, flabby even, but when this varietal has a good acidity balance (such as the 2001 and 2002 Point Rouge, or the 2002 Cuvée Indigène), they are a match for the greatest Chardonnays from California and the Côte d'Or.

✓ *Chardonnay* (Cuvée Indigène, Pointe Rouge for power) • *Classic red blend* (Les Pavots) • *Sauvignon Blanc* (L'Après-Midi)

PIPER SONOMA

Windsor

★★

When will someone give Raphael Brisbois the home he deserves? For years he has had to make do with once Piper Sonoma's own facility. Since 1997, however, it has been the J Wine Company, owned by Judy Jordan. If I were Oded Shakked, J's winemaker, I would not want a lodger in my winery, and if I were Brisbois, I would be pretty miffed about being the master of my own premises. Not only does Brisbois not have a proper home for his wine, but he is subject to one of the most miserly budgets for grape supplies and time on yeast I have seen at any half-decent *méthode champenoise* producer, yet Piper Sonoma is better than many California sparkling wines that sell for two or three times the price. If Rémy-Cointreau (owners of Piper-Heidsieck, the Reims-based *grande marque* Champagne house) cannot afford or be bothered to do this operation justice, they should sell the brand to someone who can and will.

✓ *Sparkling wine* (Blanc de Noirs, Brut)

PRESTON VINEYARDS

Healdsburg

★★

These Dry Creek vineyards are planted with an amazing and successful mix of varieties and are capable of making high-quality wines. Carignane, Cinsault, and Mourvèdre are worth keeping an eye on.

✓ *Barbera* • *Classic red blend* (L. Preston Red) • *Syrah* • *Viognier* • *Zinfandel*

PRIDE MOUNTAIN VINEYARDS

Santa Rosa

★★

Established in 1990 by the late Jim Pride, who transformed a rundown, underperforming vineyard into the current immaculate wine estate, which produces equally immaculate red wines and one of California's finest Viogniers under the skillful guidance of winemaker Bob Foley.

✓ *Cabernet Franc* • *Cabernet Sauvignon* • *Classic red blend* (Reserve Claret) • *Merlot* • *Sangiovese* • *Viognier*

QUIVIRA

Healdsburg

★

Quivira was named after a legendary American kingdom that Europeans spent 200 years searching for. Not able to locate Quivira, the earliest settlers apparently used the name for this part of northern California before it was called Sonoma.

✓ *Classic red blend* (Dry Creek Cuvée) • *Zinfandel*

RAVENSWOOD

Sonoma
★★

Joel Peterson is the master when it comes to monstrous Zinfandel. Some growers of tiny mountainside plots produce such low yields that their wines would be too intense to drink on their own, which is why even Ravenswood's Zinfandel blends can be quite sensational. Peterson's other first-class varietals should not be overlooked.

✓ *Cabernet Sauvignon* (Gregory)
• *Carignane* • *Classic red blend* (Pickberry) • *Merlot* (Sangiaco) • *Zinfandel* (Belloni, Cooke, Dickerson, Old Hill)

RAYMOND BURR VINEYARDS

Geyserville
★

Named after the late actor, who was a partner, but he died three years before the first wines were released. Best known for Cabernet Sauvignon, yet makes one of California's best Cabernet Francs.

✓ *Cabernet Franc* • *Cabernet Sauvignon*

ROBERT STEMMLER

Sonoma
★

This winery formerly produced a full range of wines at Robert Stemmler's own winery in Healdsburg, when Pinot Noir was its biggest seller, and that variety is still its best wine, even though Robert Stemmler is now produced at and marketed by Buena Vista.

✓ *Chardonnay* (Three Clone) • *Pinot Noir*

RODNEY STRONG VINEYARDS

Windsor
★

Rodney Strong Vineyards produces rich Cabernet Sauvignon and soft-styled Chardonnay, but the fresh, easy-drinking Sauvignon is now emerging as his best wine. Constantly improving.

✓ *Cabernet Sauvignon* (Alden Vineyards) • *Chardonnay* (Chalk Hill) • *Sauvignon Blanc* (Charlotte's Home Vineyard) • *Zinfandel* (Knotty Vines Estate)

SEBASTIANI

Sonoma
★

Even Sebastiani's top of the range wines are inexpensive, and although this winery has suffered from an inconsistent performance in the past, the quality is improving and leveling, with some real bargains to be found. Other labels include Pepperwood Grove, Talus, August Sebastiani, Vendange, and Richard Cuneo. *See also* Richard Cuneo.

✓ *Barbera* • *Cabernet Sauvignon* (Alexander Valley) • *Chardonnay* (Dutton Ranch) • *Classic red blend* (Cherryblock) • *Pinot Noir* (Russian River Valley) • *Zinfandel* (Domenici Vineyard, Sonoma County)

SEGHESSIO

Healdsburg
★★

This family-owned and -operated winery owns a considerable spread of well-established vineyards, the oldest of which date back to 1895, when Edoardo Seghesio planted his first vineyard in the Alexander Valley. Although he made and sold wine in bulk, it was not until 1983 that his grandchildren were persuaded by their own children to sell wines under the Seghesio label.

✓ *Sangiovese* • *Zinfandel*

SIDURI

Santa Rosa
★★

Named after the Babylonian goddess of wine by Adam and Diana Lee, a couple of Pinot Noir fanatics who source their wines from as far north as Oregon's Willamette Valley to as far south as Santa Barbara's Santa Rita Hills.

✓ *Pinot Noir*

SIMI WINERY

Healdsburg
★

Simi's one-time dependability seems to have disappeared, with extreme variability playing havoc with what was once a power-packed line of ultra-California character. Some wines are still first class, such as the 1999 Alexander Valley Cabernet Sauvignon, but no one line has shown consistency of late. The only wine that stands out year after year is the Goldfields Vineyard Chardonnay.

✓ *Chardonnay* (Goldfields Vineyard Reserve)

SONOMA-CUTRER VINEYARDS

Windsor
★

Now owned by Brown-Forman, Sonoma-Cutrer continues to specialize in producing high-quality, single-vineyard Chardonnays.

✓ *Chardonnay* (Les Pierres, Founder's Reserve)

SONOMA-LOEB

Geyserville
★

This producer is owned by John Loeb, a former American Ambassador to Denmark, who has grown grapes here since the early 1970s. However, he did not start making and selling wine under his own label until 1988.

✓ *Chardonnay* (Private Reserve)

ST. FRANCIS VINEYARD

Kenwood
★

Situated just across the road from Château St. Jean, this was an underrated winery, but is not producing as many cellar wines as it used to.

✓ *Cabernet Sauvignon* (Reserve Nuns Canyon) • *Chardonnay* (Reserve Behler) • *Zinfandel* (Reserve Pagani Vineyard)

STARRY NIGHT WINERY

Novato
★

This could be one to watch, having started as recently as 1999, yet achieving some very polished wines almost immediately. The bulk of the production is Zinfandel, and the Russian River Old Vine stands out, but my favorite wine of all is a Rhône-style blend of Carignane, Grenache, and Syrah called Adara.

✓ *Classic red wine blend* (Adara) • *Zinfandel* (Russian River Valley Old Vine)

STONESTREET

Healdsburg
★★

One of the wineries in Kendall-Jackson's "Artisans & Estates" group, Stonestreet produces good Chardonnay, brilliant Sauvignon, and gorgeously sumptuous Cabernet and Merlot, but truly excels with its classy Legacy blend.

✓ *Cabernet Sauvignon* (Christopher's) • *Chardonnay* (Upper Barn Vineyard) • *Classic red blend* (Legacy) • *Merlot* (Sonoma County) • *Sauvignon Blanc* (Upper Barn Vineyard)

TOPOLOS AT RUSSIAN RIVER VINEYARDS

North Forestville

From good vineyards around the winery and on Sonoma Mountain, Topolos sometimes comes up with a gem in what can be an alarmingly wayward (hence rating) bunch of wines, including a bewildering array of Zinfandel.

✓ *Alicante Bouschet* • *Petite Sirah* • *Zinfandel*

TRENTADUE WINERY

Geyserville
★

The fast-improving Trentadue Winery produces a characterful

selection of good-value varietal wines that are rarely, if ever, filtered.

✓ *Classic red blend* (Old Patch)
• *Petite Sirah* • *Zinfandel* (La Storia)

WALTER HANSEL

Santa Rosa
★★

A Burgundian specialist who uses wild yeast and does not fine or filter, resulting in some of California's finest Chardonnay and Pinot Noir wines.

✓ *Chardonnay* • *Pinot Noir*

WILLIAMS SELYEM

Fulton
★★★

Established in 1981 by Burt Williams and Ed Selyem (since retired), William Selyem has carefully carved out a reputation for tiny quantities of some of the most sought-after Pinot Noir in California. The signature note of these wines is their beautiful balance and finesse.

✓ *Chardonnay* • *Pinot Noir* • *Zinfandel*

WINDSOR VINEYARDS

Asti
★★★

This producer is grossly underrated because it is corporate-owned and offers so many wines at such inexpensive prices that many think there cannot possibly be anything worth drinking. Yet on the competition circuit, Windsor Vineyards is very well known and highly respected, ranking as one of the three most award-winning wineries in the US every year for the last two decades. One reason to take a look at these wines is that Toni Stockhausen has been chief winemaker since 1999. Not only is she the daughter of Karl Stockhausen, who was quite probably Lindemans' (Australia) greatest-ever winemaker, but Toni started as an oenologist at Lindemans and went on to win awards at Australia's top wine shows before being sent to the US to head this operation. So, if you rate Australian wines, you should at least try some of these California wines made with an Aussie touch.

✓ *Cabernet Sauvignon* (Private Reserve, Signature Series, Simoneau Ranch) • *Carignane* • *Chenin Blanc* • *Classic red blend* (Signature Series Meritage) • *Gewürztraminer* • *Merlot* (Signature Series) • *Petite Sirah* (Mendocino County) • *Pinot Noir* (Private Reserve, Russian River Valley—Signature Series) • *Sauvignon Blanc* (Middle Ridge Vineyard) • *Syrah* • *Zinfandel* (North Coast, Signature Series)

NAPA COUNTY

Napa County is the heart and soul of the California wine industry. Its vineyards are the most concentrated in the state, it has more wineries than any other county, and they produce the greatest number and variety of fine wines in the entire North American continent.

IT IS HARD TO BELIEVE that Napa was planted after Sonoma, but it was, and by some 13 years; in 1838 a trapper from North Carolina, George Yount, acquired a few Mission vines from General Mariano Vallejo's Sonoma vineyard and planted them outside his log cabin, 2 miles (3 kilometers) north of present-day Yountville. He merely wished to make a little wine for his own use. Little did he know that the entire Napa Valley would one day be carpeted with a lush green sea of vines. Within six years Yount himself was harvesting an annual average of 200 gallons (900 liters); by the turn of the decade other vineyards had sprung up and, in 1859, Samuel Brannan, an ex-Mormon millionaire, purchased 3 square miles

NAPA VINEYARDS

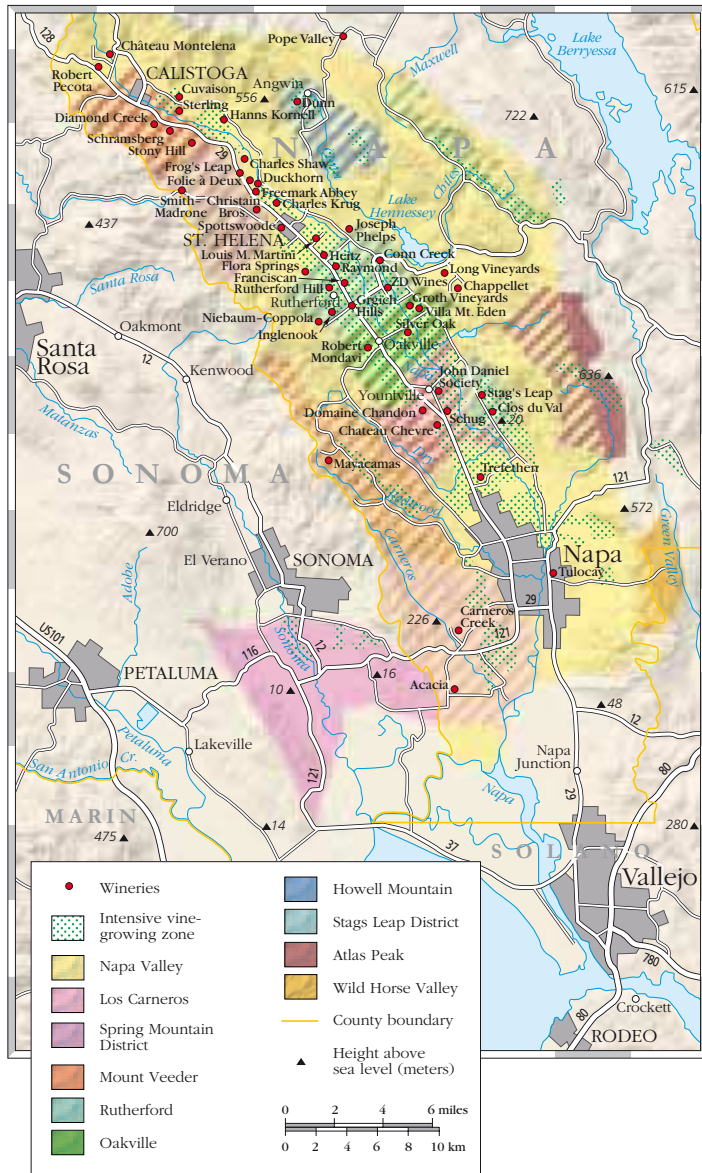

In this, the most famous of all California wine regions, vines grow mostly on the fertile valley floors, although more and more vineyards are being established in the wooded foothills, where the earliest settlers first planted vines.

(8 square kilometers) of valley land and planted cuttings of various European vine varieties he had collected on his travels. Within another 20 years there would be 18,000 acres (7,300 hectares) of vines in the county, more than half the amount currently cultivated and almost twice the area now covering Mendocino.

Today, the Napa Valley's vinous reputation is well established throughout the world. Napa wines, particularly Chardonnay and Cabernet Sauvignon, are the most sought-after and highly prized in the Americas, and will continue to be so for the foreseeable future.

NAPA COUNTY, *see also* p.470

The intensive winegrowing areas of this illustrious California district occupy a long, narrow strip running roughly parallel to those of Sonoma County. Many famous names are crowded around Route 29.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

Starting from San Francisco Bay, Napa runs 34 miles (54 kilometers) north and west to the foothills of Mount St. Helena. Flanking it are the Sonoma Valley to the west and Lake Berryessa to the east.

CLIMATE

This ranges from cool (Region I, *see* p.470) near the Bay, in the often foggy Carneros District, to warm (Region III, *see* p.470) in the northern section of the Napa Valley and in Pope Valley.

ASPECT

Vines are mostly planted on the valley floors but some are cultivated on slopes. The altitude of the valley floors ranges from barely 17 feet (5 meters) above sea level at Napa itself, to 230 feet (70 meters) at St. Helena, and 400 feet (122 meters) at Calistoga in the north. The wooded western slopes provide afternoon shade, which adds to the tempering effect of altitude and so favors white grapes, whereas the eastern slopes favor red varieties.

SOIL

Fertile clay and silt loams in the south of the region, and gravel

loams of better drainage and lower fertility in the north.

VITICULTURE AND VINIFICATION

There is a vast range of wineries here, from a small number of large firms employing the latest high-tech methods, to an increasing number of small boutique wineries. The latter have limited production, based on traditional methods, although often with judicious use of modern techniques.

GRAPE VARIETIES

Primary varieties: Cabernet Sauvignon, Chardonnay, Chenin Blanc, Merlot, Pinot Noir, Sauvignon Blanc, White Riesling, Zinfandel
Secondary varieties: Aleatico, Alicante Bouschet, Barbera, Black Malvoisie, Burger, Cabernet Franc, Carignane, Early Burgundy, Colombar, Flora, Folle Blanche, Gamay, Gamay Beaujolais, Gewürztraminer, Gray Riesling, Green Hungarian, Grenache, Malbec, Malvasia Bianca, Mataro, Mission, Muscat Blanc, Palomino, Petite Sirah, Pinot Blanc, Pinot St. George, Ruby Cabernet, Sauvignon Vert, Sémillon, Sylvaner, Syrah

THE APPELLATIONS OF NAPA COUNTY

ATLAS PEAK AVA

The Atlas Peak appellation consists of 11,400 acres (4,600 hectares) on and around Atlas Peak mountain, where more than a quarter of California's Sangiovese vines are planted.

CARNEROS AVA

Also known as Los Carneros, this AVA overlaps Napa and Sonoma counties. *See also* Los Carneros, Sonoma.

CHILES VALLEY AVA

A narrow area of vines in the Vaca Mountains overlapping the northeast edge of the Napa Valley, the Chiles Valley was named after Joseph Ballinger Chiles, who was given a land grant for this area from the Mexican government in the middle of the 19th century. The cooling bay breezes that moderate the Napa Valley do not reach Chiles Valley, but its altitude of 800 to 1,000 feet (240 to 300 meters) and the prevailing northwesterly winds that funnel dry air through the valley, in combination with the airflow from the Vaca Mountains, tend to cool the grapes down more quickly than in the main areas of the Napa Valley itself. The vines growing here are primarily Zinfandel, Cabernet Sauvignon, Chardonnay, and Sauvignon Blanc.

DIAMOND MOUNTAIN AVA

Just one-tenth of this appellation's 5,000 acres (2,000 hectares) are planted. Diamond Mountain AVA can be found in the Mayacamas Range on the northeastern corner of Napa Valley, where porous volcanic soils and extended exposure to the sun are the key to its legendary success for Cabernet Sauvignon. Other varieties, such as Cabernet Franc and Zinfandel, are almost as successful, and this is also the home of Schramsberg sparkling wine.

HOWELL MOUNTAIN AVA

The relatively flat table-top of Howell Mountain is a sub-appellation of the Napa Valley, covering 22 square miles (57 square kilometers) and encompassing some 81 hectares (200 acres) of vineyards at an altitude of between 1,400 and 2,200 feet (420 and 890 meters). Vines were first planted here in 1880. It is best for Cabernet

Sauvignon but also capable of top-flight Zinfandel and Chardonnay.

MOUNT VEEDER AVA

Situated on the east-facing slopes of the Mayacamas Mountains and named after the volcanic peak that dominates this AVA, Mount Veeder is one of the hilly areas where winemakers went to escape the Napa Valley's fertile valley floor. Cool sea breezes from San Pablo Bay and occasional marine fogs temper the climate, while air-drainage prevents frost. Chardonnay and Cabernet Sauvignon are the two dominant varieties, the latter being quite exceptional in its varietal intensity and completely different in structure from the lush valley-floor Cabernets.

NAPA COUNTY AO

This is an appellation that covers grapes grown anywhere in the entire county.

NAPA VALLEY AVA

This AVA includes all of the county with the exception of the area around Putah Creek and Lake Berryessa. The Napa Valley appellation is 25 miles (40 kilometers) long and between 12 and 8 and 10 miles (16 kilometers) wide, and is sheltered by two parallel mountain ranges. The majority of vineyards occupy the flat valley floor in a continuous strip from Napa to Calistoga, although the slopes are also beginning to be cultivated.

OAKVILLE AVA

If Rutherford has the greatest concentration of famous Cabernet Sauvignon vineyards, then neighboring Oakville, which is equally Napa's heartland, excels by its very diversity. Great Cabernet Sauvignon, Merlot, and Chardonnay are made here, and even the Sauvignon Blanc from these vineyards can be extraordinary.

RUTHERFORD AVA

One of the most famous names in Napa, yet one of the last to gain AVA status because many growers feared that dividing the Napa Valley's heartland into smaller, possibly more prestigious subappellations would gradually have the effect

of diluting the reputation of Napa itself. This AVA encompasses more than 30 wineries, including some of California's most famous, and contains many of Napa's greatest Cabernet Sauvignon vineyards.

SPRING MOUNTAIN DISTRICT AVA

Originally proposed as Spring Mountain, but as this was already a brand name, the AVA was changed to Spring Mountain District to prevent confusion. This appellation is located within the Napa Valley AVA, just west of St. Helena, on the eastern flank of the Mayacamas Mountains, and comprises 8,600 acres (3,480 hectares), of which approximately 1,980 acres (800 hectares) are planted with vines.

ST. HELENA AVA

The latest AVA to be established in a bid to carve up the Napa Valley into communal districts in a similar manner to the Médoc, St. Helena is immediately north of Rutherford.

STAGS LEAP DISTRICT AVA

Confusingly, Stags Leap is spelled in three slightly different ways: with an apostrophe before the "s" in the famous Stag's Leap Wine Cellar; with an apostrophe after the "s" in the lesser-known Stags' Leap Winery; and without an apostrophe in the AVA name. Stag's Leap Wine Cellar shot to fame in 1976 when its Cabernet Sauvignon trumped top Bordeaux wines at a blind tasting in Paris. Stags Leap District vies with Rutherford as the crème of Napa Valley Cabernet Sauvignon, but also makes good Petite Sirah, excellent Merlot, and stunning red Bordeaux-style blends.

WILD HORSE VALLEY AVA

Technically attached to Napa, Wild Horse Valley actually straddles the county line, occupying more of Solano than Napa.

YOUNTVILLE AVA

Although less famous than Rutherford or Oakville, this AVA does have one of the Napa Valley's coolest vineyard exposures, which is why some people rate its Cabernet Sauvignon above those of its neighbors.

THE WINE PRODUCERS OF NAPA COUNTY

ABREU

Napa
★★★

I often wondered what would happen when an immovable object (such as the density of the fruit used to make these wines) met an irresistible force like David Abreu's passion for great class and finesse, and here we have it in the form of Cabernet Sauvignon taken to another dimension (for where else could it go?). If you like massive, you must try Abreu.
✓ Cabernet Sauvignon

ACACIA WINERY

Napa
★★

Wines of increasing finesse, from a fine Chardonnay, which has a touch of spice, to a lovely Pinot Noir that is silky textured, and all cherries and vanilla.

✓ Chardonnay (Sangiaco Vinyard) • Pinot Noir (Beckstoffer Vinyard, Carneros, Field Blend)

ARAUIJO ESTATE

Calistoga
B★★

Bart and Daphne Araujo now own the highly regarded Eisele vineyard, which is located north of Cuvaision, and makes Cabernet Sauvignon of outstanding quality.

✓ Cabernet Sauvignon (Eisele Vineyard) • Sauvignon Blanc (Eisele Vineyard) • Syrah (Eisele Vineyard)

ARTESA

Napa
★★

Formerly called Codorníu Napa, this is the California arm of the famous Catalan Cava producer, and originally opened in 1991. Although the quality increased as the years went by, Codorníu found it difficult to sell a sparkling wine at California prices, as consumers obviously wondered why they should pay twice the price for Codorníu with California on the label. It did not

help that Codorníu was synonymous with Cava, one of the cheapest sparkling wines on the US market. The decision to pull the plug was taken in 1996, the winery was totally transformed into one suited for the production of classic varietal wines, and Artesa was born.

✓ *Cabernet Sauvignon* • *Sauvignon Blanc* (Napa Valley Reserve)

ATALON

Oakville
★★

Even the entry-level Cabernet Sauvignon is a stunning, classic structured wine of great class and supreme elegance. And relatively inexpensive for such quality—but for how long? Also fine Merlot.

✓ *Cabernet Sauvignon* • *Merlot*

ATLAS PEAK

Atlas Peak
★★

This exciting venture is backed with big bucks from Allied-Domecq (which also owns Clos du Bois and William Hill) with expertise provided by Champagne Bollinger and the famous Chianti house of Antinori. Sangiovese is the star here, and invariably the standard bottling that excels above that of the Sangiovese Reserve.

✓ *Cabernet Sauvignon* (Consenso) • *Sangiovese*

BARNETT VINEYARDS

St. Helena
★★

These mountain vineyards make intense yet delicious, very elegant Cabernet Sauvignon, among other wines.

✓ *Cabernet Sauvignon* (Rattlesnake Hill)

BEAULIEU VINEYARD

Rutherford
★

This was the center of Californian innovation under the legendary winemaker André Tchelistcheff, but has long since passed into corporate hands, and is currently owned by

the UK-based Diageo group. Not the force it was, although on its own, the legendary Georges de Latour would easily rate as a two-star entry. Other wines have their day (such as the 2000 Pinot Noir Carneros Reserve), but lack consistency.

✓ *Cabernet Sauvignon* (Georges de Latour)

BEHRENS AND HITCHCOCK

Oakville
★★

Born in the middle of nowhere, viticulturally speaking, of Arcata, Humboldt County, not far from the Oregon border, where they made 175 cases a year from trucked-in grapes in 1991, Behrens and Hitchcock moved to a rented winery in Napa in 1997, before building their own winery in 1999. When I first nosed around Humboldt and Siskiyou counties in 1994, this was just one of a handful of such producers, none of whom were taken very seriously, yet they now craft some of California's finest Cabernet Sauvignon.

✓ *Cabernet Sauvignon* • *Petite Sirah*

BELO WINE COMPANY

St. Helena
★★

This fortified wine specialist grows traditional Portuguese grape varieties, and makes great vintage port, both blended and varietal.

✓ *Fortified* (Vintage Port)

BERINGER VINEYARDS

St. Helena
★★

Although all the products from Beringer Vineyards are among the finest in California, you do get proportionately more for your money if you pay extra for the better wines, with the singular exception of the Founders' Estate Merlot, which can offer extraordinary finesse for so few dollars. Indeed, if all vintages were as brilliant as the 2000, I would not hesitate to claim it to be one of California's 10 greatest Merlots. However, I must take issue with the name of this entry-level line. Beringer might be open about its diverse origins, hence the California AVA, but Founders' Estate does imply that the vineyards in question are part of a single estate of historic origins, and I'm not so sure that Jacob and Frederick Beringer owned vineyards stretching from Santa Barbara to Mendocino!

✓ *Botrytized* (Nightingale) • *Cabernet Sauvignon* • *Chardonnay* (Sbragia) • *Chenin Blanc* • *Classic red blend* (Alluvium) • *Classic white blend* (Alluvium) • *Merlot* (Bancroft Ranch, Founders' Reserve)

BIALE VINEYARDS

Napa
★★

Amazing, huge, rich, and gorgeously ripe, single-vineyard Zinfandel, and one of California's greatest Petite Sirah.

✓ *Zinfandel* (Aldo's Vineyard)

BOUCHAINE VINEYARDS

Napa
★

Noticeable by its absence from most American critics' thoughts, Bouchaine's Pinot Noir and Chardonnay are probably too light and elegant to stir up much opinion in the US, but have a purity and finesse much appreciated by European palates.

✓ *Pinot Noir*

BRYANT FAMILY VINEYARD

Calistoga
②

This relatively new boutique winery is reputedly turning out masterly Cabernet Sauvignon.

BUEHLER VINEYARDS

St. Helena
★★

This estate is again producing Cabernet Sauvignon reminiscent of the size and quality that once made it legendary.

✓ *Cabernet Sauvignon*

BURGESS CELLARS

St. Helena
★★

Owner Tom Burgess and winemaker Bill Sorenson often produce well-weighted, oaky wines of fine quality.

✓ *Syrah* • *Zinfandel*

CAIN CELLARS

St. Helena
★★

These are interesting, innovative, and well-made wines.

✓ *Classic red blend* (Cain Concept, Cain Five) • *Sauvignon Blanc* (Cain Musqué Ventana Vineyard)

CAKEBREAD CELLARS

Rutherford
★★

Bruce Cakebread has a well-deserved reputation for producing one of the most delicious Sauvignon Blanc wines in California.

✓ *Cabernet Sauvignon* (Three Sisters, Vine Hill Ranch) • *Sauvignon Blanc* • *Syrah*

CASA NUESTRA

St. Helena
★★

A tiny, high-quality winery that is up and coming, although it has been in existence since 1979. This makes its wines great value now,

but demand could change all that by a future edition, so best to taste them while you can still afford to. Casa Nuestra produces classic styles such as Merlot and Meritage, but some quirky ones too, such as one of California's finest Chenin Blanc and a classic red blend (Tinto) made from nine varieties, including Cabernet Pfeffer. Cabernet what? That's right: Cabernet Pfeffer (see Glossary of Grape Varieties).

✓ *Chenin Blanc* • *Classic red blend* (Tinto)

CAYMUS VINEYARDS

Rutherford
★★

This extraordinary winery now focuses exclusively on deep, dark brooding Cabernet Sauvignon of superb quality. The classic white wine blend Conundrum is now sold under that name alone, and will shortly have its own dedicated winery in Monterey (see Conundrum).

✓ *Cabernet Sauvignon* (Napa Valley, Special Selection)

CHAPPELLET VINEYARDS

St. Helena
★★

Chappellet is an excellent winery with a range of skillfully produced wines that show great finesse.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Chenin Blanc* • *Johannisberg Riesling* • *Merlot* (Napa Valley)

CHARLES KRUG

St. Helena
★

Purchased by the Mondavi family in 1943 and run by Bob Mondavi's less prominent brother Peter, this winery used to be known for its Cabernet Sauvignon, but Krug's reputation is diluted by its production of jug wine and generics sold under a second label—C. K. Mondavi.

✓ *Cabernet Sauvignon* • *Merlot* (Reserve)

CHÂTEAU MONTELENA WINERY

Calistoga
★★

The style of this small, prestigious winery has changed over the years, but the quality has always been high, especially for Cabernet Sauvignon, although the Chardonnay has been almost as good in recent years.

✓ *Cabernet Sauvignon* • *Chardonnay*

CHÂTEAU POTELLE

Mount Veeder
★

This winery was established in 1985 by a *bordelais* couple, who ironically were best known in their early days for their slow-evolving Chardonnay, but have since developed a reputation for other age-worthy varietals.

✓ *Cabernet Sauvignon* (VGS) • *Chardonnay* (VGS) • *Zinfandel* (VGS)

CHIMNEY ROCK

Napa
★

Part of the Terlato Wine Group (which includes Sandford, Rutherford Hill, and Alder Brook), this was originally Chimney Rock Golf Club, until its nine holes were bulldozed and a vineyard planted.

✓ *Cabernet Sauvignon* • *Classic red blend* (Elevage)

CLIFF LEDE VINEYARD

Napa
★

Cliff Lede took over S. Anderson in 2002, and uses that label exclusively for the traditional method wines that Carol Anderson had garnered such a reputation for. The style is as elegant as the labeling, with layers of intense, finely poised fruit.

✓ *Cabernet Sauvignon* • *Sauvignon Blanc* • *Sparkling wine* (Blanc de Blancs, Brut, Rosé)

CLOS DU VAL

Napa
★★

Bernard Portet still makes some fine wines, but there is less of a buzz about these wines.

✓ *Cabernet Sauvignon* (Stags Leap District) • *Chardonnay* (Carneros) • *Zinfandel* (Stags Leap District Reserve)

CLOS PEGASE

Calistoga
★

A welcome, understated use of oak coupled with lush fruit produces wines of some elegance.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Classic red blend* (Hommage) • *Merlot*

COLGIN

Napa
★★★

Tiny production of huge-priced, high-class Cabernet Sauvignon, with sufficient structure to support the weight.

✓ *Cabernet Sauvignon* • *Classic red blend* (Cariad)

CONN CREEK WINERY

St. Helena
★

Owned by Stimson Lane (which also owns Château Ste. Michelle, Columbia Crest, and Villa Mount Eden), Conn Creek is best known for its supple, fruity Cabernet Sauvignon, but does not have the cachet it once had.

✓ *Cabernet Sauvignon* • *Classic red blend* (Anthology) • *Merlot*

CORISON

St. Helena
★★

After 10 years as Chappellet's winemaker, Cathy Corison struck out on her own, and has not looked back since, purchasing small parcels of the finest Napa Valley grapes to produce lush, supple Cabernet wines of surprising longevity.

✓ *Cabernet Sauvignon*

CORNERSTONE CELLARS

Oakville
★★

Owned by two Memphis doctors, Michael Dragutsky and David Sloas. In 1991, Sloas happened to be tasting on Howell Mountain with Randy Dunn, who mentioned that he had received almost 5 tons of grapes more than he needed from one of his farmers. Sloas telephoned his friend Dragutsky in Memphis, they agreed they had both lost their minds and purchased the grapes, thus going from wine consumers to wine producers in a few minutes.

✓ *Cabernet Sauvignon* • *Merlot*

COSENTINO

Yountville
★★

Mitch Cosentino has more wines on his list than there are dishes on a Chinese menu. The once hit-you-between-the-eyes styles have been toned down and, although the wines are still exuberant in their fruit, they now have much more finesse. Some brilliant Merlot of late (2000 Reserve is simply stunning). CE2V is an ultrapremium brand, while Crystal Valley is Cosentino's second label.

✓ *Classic red blend* (CE2V Meritage, M. Coz, The Poet Meritage) • *Dessert* (Viognier Vin Doux Kay) • *Dolcetto* (Celle Vineyard) • *Merlot* (Reserve) • *Petite Sirab* (Knoll Vineyard) • *Sangiovese* (CE2V Napa Valley, Il Chiaretto) • *Zinfandel* (Cigarzin, The Zin)

CUVAISON

Calistoga
★★

This Swiss-owned winery is making better reds than whites.

✓ *Chardonnay* (Carneros Estate Selection) • *Pinot Noir* (Carneros Estate Selection) • *Syrab* (Carneros)

DALLA VALLE

Oakville
★★

Dalla Valle produces great Cabernet in addition to a truly heroic Cabernet-based blend.

✓ *Cabernet Sauvignon* • *Classic red blend* (Maya)

DELECTUS

Oakville
★★

Small, ultrahigh-quality operation established in 1989 by Austrian-born

Gerhard Reisacher and his wife Linda.

✓ *Classic red blend* (Cuvée Julia) • *Petite Sirab*

DETERT FAMILY VINEYARDS

Oakville
★★

Former Opus One Cabernet Franc vines produce this relatively new winery's best and cheapest wine, but don't let that put you off Detert's beautifully focused Cabernet Sauvignon.

✓ *Cabernet Franc* • *Cabernet Sauvignon*

DIAMOND CREEK VINEYARDS

Calistoga
★★

This small winery specializes in awesomely long-lived, awesomely priced Cabernet Sauvignon.

✓ *Cabernet Sauvignon* (Red Rock Terrace, Gravelly Meadow, Volcanic Hill)

DOLCE

Oakville
★★★

Established by Far Niente as the only winery in the US solely devoted to producing a single late-harvest wine, Dolce is a lusciously sweet, heavily botrytized, Sauternes-styled dessert wine made from approximately 90 percent Sémillon and 10 percent Sauvignon Blanc. The only pity is that they went for such a kitsch, *nouveau riche* presentation, instead of the understated elegance that such a classy, unique wine deserves.

✓ *Botrytized* (Dolce)

DOMAINE CARNEROS

Napa
★★

This winery has the pristine façade of Taittinger's 17th-century Château de la Marquetterie in Champagne, and Le Rêve is one of the greatest 21st-century sparkling wines produced outside Champagne.

✓ *Pinot Noir* (Avant-Garde) • *Sparkling wine* (Brut, Brut Rosé, Le Rêve)

DOMAINE CHANDON

Yountville
★★

Moët & Chandon's seal of approval kickstarted California's sparkling wine industry, which until then had consisted of just one producer, Schramsberg. Although the style of its sparkling wine has lacked finesse in the past, there has been a noticeably lighter hand in recent years. The same could be said for its Pinot Noir, but that all changed with the 2000 vintage, which is impressive by any yardstick, while the Pinot Meunier has always been a delight.

✓ *Chardonnay* (Carneros) •

Pinot Meunier • *Pinot Noir* (Carneros) • *Sparkling wine* (Mt. Veeder, Riche, Vintage)

DOMINUS

Yountville
★★

Christian Moueix of Château Pétrus joined forces with the daughters of John Daniel to produce Dominus, a massively structured Bordeaux-like blend from the historic Napanook vineyard. The best vintages are from 1990 onward, with the most recent being the most impressive.

✓ *Classic red blend* (Dominus)

DUCKHORN VINEYARDS

St. Helena
★★

These superb, dark, rich, and tannic wines have a cult following. Also owns the Goldeneye winery in Mendocino. Other labels include Paraduxx (Zinfandel-Cabernet Sauvignon blend), Decoy (Bordeaux-style blend) and Migration (Pinot Noir).

✓ *Cabernet Sauvignon* • *Merlot* (Three Palms) • *Sauvignon Blanc*

DUNN VINEYARDS

Angwin
★★

Randy Dunn makes a very small quantity of majestic Cabernet Sauvignon from his Howell Mountain vineyard.

✓ *Cabernet Sauvignon*

ELYSE

Napa
★★

These wines have always had richness of fruit and expressive style, but increasingly show greater finesse.

✓ *Cabernet Sauvignon* (Morisoli Vineyard, Tietjen Vineyard) • *Zinfandel* (Howell Mountain, Morisoli Vineyard)

ETUDE

Oakville
★★

Tony Soter has eased back on his consultancy work to spend more time crafting some beautifully proportioned, silky-smooth,

succulent, and stylish wines at the venture he established, and Beringer Blass now owns.

- ✓ *Cabernet Sauvignon* (Napa Valley) • *Merlot* (Napa Valley)
• *Pinot Blanc* (Carneros) • *Pinot Gris* (Carneros) • *Pinot Noir* (Heirloom)

FAILLA
Calistoga
★★

In the short history of this winery, which was established as recently as 1998, husband and wife team Ehren Jordan and Anne-Marie Failla have found themselves in hot water, as the original name for their winery—Failla Jordan—came under heavy legal barrage from the Jordan winery for infringement of its trademark. They had no option but to drop their own family name in favor of what is, I think, a much better, more elegant label.

- ✓ *Chardonnay* (Keefer Ranch) • *Pinot Noir* (Hirsch, Keefer Ranch) • *Syrab* • *Viognier* (Alban Vineyard)

FAR NIENTE
Oakville
★

A revitalized pre-Prohibition winery that made its mark with fine Chardonnay in the 1980s, but that wine can sometimes be overblown, and Cabernet Sauvignon is the more consistent and classier bet.

- ✓ *Cabernet Sauvignon* • *Chardonnay*

FLORA SPRINGS
St. Helena
★★

This winery produces an exciting Trilogy, a blend of Merlot with two Cabernets, and a Soliloquy, a barrel-fermented Sauvignon Blanc bottled *sur lie*.

- ✓ *Cabernet Sauvignon* (Rutherford Hillside Reserve, Wild Boar Vineyard) • *Classic red blend* (Poggio del Papa, Trilogy) • *Merlot* (Napa Valley) • *Sauvignon Blanc* (Soliloquy)

FORMAN VINEYARDS
St. Helena
★

Rick Forman, formerly of Sterling Vineyard, set up this small winery in 1983. He has a following for classic yet opulent wines from his own vineyard, which sits on a gravel bed as deep as 56 feet (17 meters).

- ✓ *Cabernet Sauvignon* • *Chardonnay*

FRANCISCAN VINEYARDS
Rutherford
★★

A consistent producer since the mid-1980s of smooth, stylish, premium-quality wines.

- ✓ *Chardonnay* (Cuvée Sauvage)
• *Classic red blend* (Magnificat Meritage)

FREEMARK ABBEY
St. Helena
★★

Not as fashionable in the US as it used to be, but when it comes to its Cabernet Bosché and Chardonnay in general, Freemark Abbey consistently combines high quality and good value.

- ✓ *Cabernet Sauvignon* (Bosché)
• *Chardonnay*

FROG'S LEAP WINERY
St. Helena
★

One of California's best-known organic producers, Frog's Leap was established in 1981 by John Williams, who had taken inspiration from his first Napa Valley winemaking post at Stag's Leap Cellars as the name for his new venture.

- ✓ *Chardonnay* • *Merlot* • *Sauvignon Blanc* • *Zinfandel*

GIRARD WINERY
Oakville
★★

Top-quality, smooth, and stylish Napa Valley Red boasts seamlessly integrated oak, and is the top wine here, although Girard's Petite Sirah is one of California's finest.

- ✓ *Chardonnay* (Russian River) • *Classic red blend* (Napa Valley Red) • *Petite Sirah*

GRACE FAMILY VINEYARDS
St. Helena
★★

Produces minuscule amounts of huge, dark, extremely expensive Cabernet Sauvignon wine, with wonderfully multilayered fruit, oak, and *terroir* flavors.

- ✓ *Cabernet Sauvignon*

GRGICH HILLS CELLAR
Rutherford
★★

Owned and run by Mike Grgich, once winemaker at Château Montelena, this winery produces intense, rich, and vibrant styles of high-quality wine.

- ✓ *Cabernet Sauvignon* (Napa Valley) • *Merlot* (Napa Valley)
• *Sauvignon Blanc* (Estate Grown Fumé Blanc) • *Zinfandel* (Miljenko's Old Vine)

GROTH VINEYARDS
Oakville
★★

Although these wines are not as consistent as they used to be, Groth's Cabernet Sauvignon can still hack it with the finest in California.

- ✓ *Cabernet Sauvignon* (Oakville)

HARLAN ESTATE
Napa
★★★

Classic quality from the hills above Oakville, but you have to pay for it!

- ✓ *Bordeaux-style red* (Napa Valley)

HARTWELL VINEYARDS
Napa
★★

From a one-acre harvest in 1990, Bob and Blanca Hartwell's vineyard has become one of the fastest-rising stars in the Stags Leap District, and is now known for immaculate grapes and the deep, full, lush style of the wines produced.

- ✓ *Cabernet Sauvignon* • *Merlot*

HAVENS
Napa
★★

For 20 years Mike Havens has attracted an enviable reputation for his supremely rich Merlot Reserve, which is certainly one of California's finest, but he also makes Syrah that is in a class of its own and a masterly Bordeaux-style red wine blend called Bourriquet. There is also an interesting, authentically dry Albariño.

- ✓ *Albariño* • *Classic red blend* (Bourriquet) • *Merlot* • *Syrab*

HEITZ WINE CELLARS
St. Helena
★★

The TGA of the 1990s (or bacterial infection as some have claimed) appears to have been overcome, although too few American critics dared tell the late king that he had no clothes on at the time. It will be a surprise to some, but Heitz is a master of Grignolino, making a delightful, quaffing red and a gorgeous rosé, not to mention a very appealing port-style fortified wine, which leans closer to the lighter, traditional Portuguese style than the Ink Grade Vineyard.

- ✓ *Cabernet Sauvignon* (Martha's Vineyard, Trailside Vineyard) • *Fortified* (Grignolino Port, Ink Grade Vineyard Port) • *Grignolino* (Rosé)

JADE MOUNTAIN
Angwin
★★

These high-quality Rhône-style wines are achieving increasingly well integrated oak of late. The Mourvèdre Ancient Vines from the Evangelho Vineyard were planted in 1890.

- ✓ *Classic red blend* (La Provençale) • *Mourvèdre* (Ancient Vines Evangelho Vineyard) • *Syrab* (Paras Vineyard, Paras Vineyard Block P-10)

JOSEPH PHELPS VINEYARDS
St. Helena
★★

This prestigious winery continues to make a large range of top-quality

wines, with an increasing emphasis on exciting Rhône-style wines, including the excellent Le Mistral blend, although Insignia remains its very greatest product.

- ✓ *Cabernet Sauvignon* (Backus)
• *Chardonnay* (Ovation) • *Classic red blend* (Insignia, Le Mistral) • *Merlot* (Napa Valley)
• *Syrab* (Napa Valley)

KENT RASMUSSEN
Napa
★★

As a librarian, Kent Rasmussen loved wine and yearned, so he took a B.Sc. in oenology at UC Davis in 1983, picked up some useful experience at Robert Mondavi Winery and Domaine Chandon, took a *stage* at Stellenbosch Farmers' Winery in South Africa, then at Saltram's Wine Estate in Australia, before setting up his own winery in 1986. Since then he has created a reputation for producing Carneros Pinot Noir at its most luscious.

- ✓ *Chardonnay* (Napa Valley) • *Pinot Noir* (Carneros)

KONGSGAARD
Oakville
★★★

Many small wineries claim to make handcrafted wines, but John and Maggy Kongsgaard's is one of the few that actually does, as they limit their production—literally—to the wine they can make with their own hands. This and their nigh-fanatical minimalist approach yield wines of exceptional richness, balance, and finesse.

- ✓ *Entire range*

LA JOTA
Angwin
★★

La Jota is best known for lavishly flavored Cabernet Sauvignon, but produces a much smaller quantity of equally fine Petite Sirah.

- ✓ *Cabernet Sauvignon* • *Petite Sirah*

ROBERT KEENAN WINERY
St. Helena
★

This Spring Mountain hillside winery produces admirably restrained Cabernet Sauvignon and Merlot.

- ✓ *Cabernet Sauvignon* • *Merlot*

LAIL
Napa
★★

Established in 1995 by Robin Lail, the daughter of John Daniel, the great-nephew of the legendary Gustave Niebaum. Lail trained at Mondavi, and was the co-founder of Dominus and Merryvale, before selling her share in those businesses to set up on her own.

- ✓ *Classic red blend* (Blueprint, J. Daniel Cuvée) • *Sauvignon Blanc* (Georgia)

LARKINSt. Helena
★★

After representing a number of small, high-quality wineries, Sean Larkin made his first wine in 1999 and achieved instant critical success from all the biggest names in the business.

✓ *Cabernet Franc*

LEWELLING VINEYARDSSt. Helena
★★

The Lewelling family established these vineyards in 1864 and after the usual Prohibition hiatus, developed a reputation for supplying some of Napa's greatest wineries with grapes. These wines, however, date from just 1992, when the Wright family, descendants of the Lewellings, decided to produce wine under their own vineyard designation, and now produce some of California's greatest Cabernet Sauvignon.

✓ *Cabernet Sauvignon*

LEWIS CELLARSNapa
★★

A small, hands-on winery run by ex-racing car driver Randy Lewis and his wife Debbie. The Merlot could be called a Californian version of top-class Pomerol.

✓ *Chardonnay* • *Classic red blend* (Alec's Blend, Cuvée L) • *Merlot* • *Syrah*

LOKOYAOakville
★★★

Named after a Native American tribe that lived on Mount Veeder, Lokoya is a Napa Cabernet Sauvignon specialist *par excellence*. All three styles are outstanding, from the Howell Mountain, which is the most lush, through the Mount Veeder, which packs the most complex fruit, to Diamond Mountain, which is probably the closest to Bordeaux in style.

✓ *Cabernet Sauvignon*

LONG VINEYARDSSt. Helena
★★

This operation was established in the 1970s by Robert and Zelma Long, who have since divorced, but are still joint owners. Amazingly, they not only continue to run this winery together, they do so with their respective new partners. The wines are equally smooth, stylish, and sophisticated.

✓ *Botrytis* (Johannisberg Riesling Estate Grown) • *Cabernet Sauvignon* (Estate Grown) • *Chardonnay* (Old Vines)

LOUIS M MARTINISt. Helena
★

The quality of this winery had been slowly turning around for the better

when it was purchased by E. & J. Gallo in 2002, although its reputation is still very patchy from vintage to vintage, even for its most successful wines.

✓ *Cabernet Sauvignon* (Monte Rosso) • *Chardonnay* (RVS) • *Fortified* (Cream Sherry, Dry Sherry) • *Sangiovese* (Dunnigan Hills) • *Zinfandel* (Monte Rosso)

LUNA VINEYARDSNapa
★★

An artisanal winery with an Italian bent, located at the southern tip of the Silverado Trail.

✓ *Classic red blend* (Canto) • *Classic white blend* (Bianco) • *Pinot Grigio* • *Sangiovese* (Riserva)

MARCASSINCalistoga
★★

This small operation belongs to Helen Turley, who made her name at B. R. Cohn and the Peter Michael Winery, and is one of California's most sought-after consultants. Marcassin produces highly desirable, nigh-unobtainable, extraordinarily lavish, yet extremely stylish wines.

✓ *Chardonnay* • *Pinot Noir*

MARKHAM VINEYARDSSt. Helena
★★

This underrated Japanese-owned (Mercian Corporation) winery is best known for Merlot and Cabernet from its Napa Valley vineyards situated at Calistoga, Yountville, and Oakville, but other varieties are beginning to emerge. Good-value wines are also produced under Markham's second label, Glass Mountain.

✓ *Cabernet Sauvignon* • *Merlot* • *Petite Sirah* • *Zinfandel*

MAYACAMAS VINEYARDS

Napa

This prestigious small winery is renowned for its tannic, long-lived Cabernet, but actually produces much better, more user-friendly Chardonnay as well.

✓ *Chardonnay*

MERRYVALE VINEYARDSSt. Helena
★★

These are classy, stylish wines, particularly the Bordeaux-style blends.

✓ *Cabernet Sauvignon* (Beckstoffer Vineyard X) • *Chardonnay* (Silhouette) • *Classic red blend* (Profile)

MONTICELLO CELLARSNapa
★

This producer used to be better for whites than reds, but although Monticello still receives many

plaudits for its Chardonnay, it is the red wines that are now established as its most exciting.

✓ *Cabernet Sauvignon* (Corley Reserve, Jefferson Cuvée) • *Classic red blend* (Corley Proprietary Red) • *Merlot* (Estate Grown)

MUMM NAPA WINERYRutherford
★★

This impeccably run sparkling-wine operation is under the helm of Greg Fowler, who was the winemaker at Schramsberg for seven years. Fowler really lets his winemaking skill fly with his Sparkling Pinot Noir, which has an outrageous deep cerise color, an aroma of strawberries, and intensely perfumed Pinot fruit.

✓ *Sparkling wine* (Blanc de Blancs, DVX, Sparkling Pinot Noir, Winery Lake)

MURPHY-GOODEGeyserville
★★

The top wines are all rich, oaky blockbusters, but I get the most pleasure from Murphy-Goode's Fumé Blanc.

✓ *Fumé Blanc* (Alexander Valley Reserve)

NAPA CELLARSOakville
★★

A brilliant source of great-value, great-quality wines that hit well above their weight, often outclassing famous brands at two or three times the price.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Merlot*

NEYERSRutherford
★★

Bruce and Barbara Neyers have been producing classy wines since 1992, but seem to have stepped up a gear since moving to their current renovated winery in 2000. Part of the production is from the Neyers' own 50-acre (20-hectare) Conn Ranch vineyard, but most is bought in from selected growers.

✓ *Chardonnay* • *Grenache* • *Merlot* • *Syrah*

NEWTON VINEYARDSSt. Helena
★★

This top-notch estate has a track record for wines with impeccable oak integration, silky smooth fruit, and supple-tannin structure.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Classic red blend* (Claret) • *Merlot*

NIEBAUM-COPPOLARutherford
★★★

Hollywood movie director Francis Ford Coppola purchased the old

Gustave Niebaum homestead and half of the original Inglenook vineyards in 1975, producing his first wine, a classic red Bordeaux-style blend called Rubicon, in 1978. He bought almost all of the remaining Inglenook vineyards in 1995, plus the Inglenook winery, but not the brand (now the property of Mission Bell Winery, which belongs to Constellation Brands), and in 2002 Coppola paid out a record \$31.5 million for the 60-acre (24-hectare) J. J. Cohn vineyard (no connection with B. R. Cohn in Sonoma, which adjoined the southern section of his own property). The Cabernet and Merlot grapes from this Rutherford vineyard should not only allow for increased production of Rubicon, but should also plug some holes that occasionally appeared in the quality of wines made in whole or part with bought-in fruit. Note that only pure estate wines are made exclusively from organically grown grapes.

✓ *Cabernet Sauvignon* (Cask Cabernet) • *Classic red blend* (Rubicon) • *Merlot* (Estate) • *Zinfandel* (Edizione Pennino)

OPUS ONEOakville
★★

The product of collaboration between Robert Mondavi and the late Baron Philippe de Rothschild, Opus One was the first Bordeaux-California joint venture and there is no denying the quality of this Cabernet-Merlot blend, just as there is no getting away from its outlandish price.

✓ *Opus One*

PAHLMAYERNapa
★★

Typical of the boutique wineries established by America's affluent professional class, this operation was founded in 1985 by lawyer Jayson Pahlmeyer, who has hired various consultants, such as Randy Dunn, Helen Turley, and David Abreu, in his pursuit of varietal concentration allied to an expression of *terroir*. The Jayson is a blend of the wines that did not make the cut for Pahlmeyer's Proprietary Red.

✓ *Chardonnay* • *Classic red blend* (Jayson, Proprietary Red) • *Merlot*

PALOMASpring Mountain District
★★

This reclaimed 19th-century vineyard is located at an altitude of between 2,060 and 2,240 feet (618 and 672 meters) on Spring Mountain, and the difference between these wines and valley floor wines is that you get more complexity and length for the same weight of wine.

✓ *Cabernet Sauvignon* • *Merlot* • *Syrah*

PATZ AND HALLNapa
★★★

This winery specializes in rich, lush, single-vineyard Burgundian-style varietals.

✓ *Chardonnay* • *Pinot Noir*
(Alder Springs, Pisoni Vineyard)

PEJU PROVINCERutherford
★★

Established by Tony and Herta Peju as long ago as 1982, but with 90 percent of sales going through its tasting room, it has only been in the last five to eight years that Peju Province has really started to grab wider attention.

✓ *Cabernet Franc* • *Merlot* (Napa Valley Estate) • *Sauvignon Blanc*

PHILIP TOGNI VINEYARDSt. Helena
★★

Philip Togni earned great respect at Chalone, Chappellet, Cuvaision, Mayacamus, and Chimney Rock, before establishing this vineyard.

✓ *Cabernet Sauvignon*

PINE RIDGE WINERYNapa
★★★

These are interesting wines of exciting quality that are in the midprice range.

✓ *Cabernet Sauvignon* (Stags Leap District) • *Classic red blend* (Andrus Reserve) • *Classic white blend* (Chenin-Viognier) • *Merlot* (Crimson Creek)

PLUMPJACKNapa
★★★

Owned by the Getty family and Gavin Newsom, Plumpjack is named after the roguish spirit of Shakespeare's Sir John Falstaff, dubbed "Plump Jack" by Queen Elizabeth. There's a whole Plumpjack empire out there, starting with shops and cafés before the Plumpjack winery was established in 1997. Plumpjack made headlines in 2000, when it sold its 1997 Reserve Cabernet Sauvignon under screwcap at \$135 a bottle, while the regular cork-sealed version retailed for \$125. Not only was Newsom making a statement, but he was also years ahead of his time in making it as far as red wines are concerned.

✓ *Cabernet Sauvignon*

RAYMONDSt. Helena
★★

The Raymond family remain true to their reputation for vividly fruity Chardonnay and stylish Bordeaux-style reds. The cheaper Amberhill label is not to be overlooked.

✓ *Cabernet Sauvignon*
(Amberhill, Napa Valley Reserve, Raymond Estates) • *Chardonnay* (Amberhill, Napa Valley Reserve) • *Merlot* (Amberhill, Raymond Estates)

ROBERT CRAIGMount Veeder
★★★

Capable of classy, purple-hearted Cabernet Sauvignon.

✓ *Cabernet Sauvignon* • *Chardonnay*

ROBERT FOLEYAngwin
★★★

This red wine specialist makes just two wines, a classic blend (essentially Cabernet Sauvignon, plus a little Merlot and Petit Verdot) from his own vineyard on Candlestick Ridge, and Charbono grown by Gary Heitz.

✓ *Charbono* • *Red wine blend* (Claret)

ROBERT MONDAVIOakville
★★★

Established in 1966 by Bob Mondavi, who hoped to build a wine dynasty, and appeared to have succeeded beyond his wildest dreams by the 1980s. However, the Mondavi brand struggled to maintain its value in the new millennium, when profits plunged by 40 percent, and the company was sold to Constellation Brands in November 2004. The irony is that the top Robert Mondavi wines remain as great as they have ever been. Cabernet Sauvignon is Mondavi's greatest strength, even at the basic Napa Valley appellation, which can be very special in years such as 2000 and 2002. This winery has been rightly accused of turning out large volumes of very ordinary wine, yet it would be rated ★★★ if judged on Cabernet Sauvignon alone, as its Stags Leap District *cuvée*, and single-vineyard wines from To Kalon, Vine Hill, and Moffet are all on the same top quality level as the Reserve. The Io is not sold under the Mondavi name and its Santa Barbara mix (Syrah, Grenache, Mourvèdre) often contains more Syrah than some supposedly pure Syrah varietals.

✓ *Cabernet Sauvignon* • *Classic red blend* (Boomerang! Io) • *Riesling* (Private Selection) • *Sauvignon Blanc* (To Kalon I Block Fumé Blanc)

ROBERT PECOTA WINERYCalistoga
★★

This underrated winery always made ravishing white wines, and now has an excellent Cabernet.

✓ *Cabernet Sauvignon* (Kara's Vineyard) • *Muscat Canelli* (Moscato di Andrea)

ROBERT PEPI WINERYOakville
★★

This winery is still excellent value for Sauvignon Blanc, but is developing a reputation for interesting Italian-based blends.

✓ *Barbera* • *Classic red blend* (Colline di Sassi) • *Sangiovese* • *Sauvignon Blanc*

ROBERT SINKEY VINEYARDSNapa
★★★

These vineyards produce vividly flavored Pinot, classy Vineyard Reserve, luscious Vin Gris, and crisp, age-worthy Chardonnay.

✓ *Chardonnay* • *Classic red blend* (Vineyard Reserve) • *Pinot Noir* • *Rosé* (Vin Gris of Pinot Noir)

SADDLEBACKOakville
★★

Nils Venge, formerly at Groth, is a master of the massive, old-fashioned, portlike style of Zinfandel.

✓ *Sangiovese* (Penny Lane Vineyard) • *Zinfandel*

SAINTSBURYNapa
★★

David Graves and Dick Ward continue to make plump, juicy Pinot Noir at this increasingly impressive winery.

✓ *Chardonnay* • *Pinot Noir*

SCHRAMSBURG VINEYARDSCalistoga
★

This prestigious winery started the modern Californian sparkling-wine industry rolling in 1965 and, until Domaine Chandon was set up some eight years later, was the only producer of serious-quality, bottle-fermented sparkling wine in the US. The head winemakers at Codorníu, Franciscan, Kristone, Mumm Napa Valley, and Piper-Sonoma all cut their teeth at Schramsberg.

✓ *Sparkling wine* (Blanc de Noirs, Crémant, J. Schram)

SCREAMING EAGLEOakville
★★

Tiny quantities of cult Cabernet Sauvignon, always excruciatingly expensive, and mostly of exceptional quality, although I have found the odd underperformer at blind tastings.

✓ *Cabernet Sauvignon*

SEAVEYSt. Helena
★

Small quantities of beautifully crafted Cabernet Sauvignon wines are produced here. The Merlot is good, but less intense.

✓ *Cabernet Sauvignon* • *Merlot*

SEQUOIA GROVENapa
★

Jim and Steve Allen have been producing great Cabernet Sauvignon since 1978, and are now sourcing fine Chardonnay from Carneros.

✓ *Cabernet Sauvignon* • *Chardonnay*

SHAFFER VINEYARDSNapa
★★

Although the Cabernet Sauvignon Hillside Select is definitely the best wine, Shafer also makes very stylish Merlot and Chardonnay. The deliciously smooth Firebreak is a sort of Californian Super-Tuscan, while Relentless is a powerful blend of Syrah and Petite Sirah.

✓ *Cabernet Sauvignon* (Hillside Select) • *Chardonnay* • *Classic red blend* (Firebreak, Relentless) • *Merlot*

SIGNORELLO VINEYARDSNapa
★★★

The late Ray "Padrone" Signorello bought a vineyard on the Silverado Trail as long ago as 1970s, but only came to the fore with a bewildering display of fruity yet complex wines in the 1990s. If anything, the quality and consistency have stepped up a gear under Ray Signorello, Jr.

✓ *Cabernet Sauvignon* (Estate) • *Chardonnay* (Hope's Cuvée, Vieilles Vignes) • *Classic red blend* (Padrone) • *Classic white blend* (Seta) • *Zinfandel* (Luvisi Vineyard)

SILVER OAK CELLARSOakville
★

Concentrates solely on one variety, Cabernet Sauvignon, but there are three *cuvées*—Napa Valley, Bonny's Vineyard (also Napa Valley AVA), and Alexander Valley. I prefer the latter because it has the least oak and the most finesse.

✓ *Cabernet Sauvignon*
(Alexander Valley)

SILVERADO VINEYARDSNapa
★★

Silverado is owned by the widow of the late Walt Disney, but it has never produced a Mickey Mouse wine.

✓ *Cabernet Sauvignon*
(Limited Reserve, Stags Leap Vineyard) • *Sangiovese* • *Sauvignon Blanc*

SMITH-MADRONE

St. Helena
★★

This winery consists of some 40 acres (16 hectares) of high-altitude vines producing a small, high-quality range of wines.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Riesling*

SPOTTSWOODE

St. Helena
●★★

On benchland in the Mayacamas Mountains, the Novak family produce just two wines—tiny amounts of powerful but stylish Cabernet Sauvignon, and a deliciously fresh Sauvignon Blanc.

✓ *Cabernet Sauvignon* • *Sauvignon Blanc*

SPRING MOUNTAIN VINEYARDS

St. Helena
★★

Known to millions as “Falcon Crest,” this winery can produce wines that require aging and develop finesse.

✓ *Classic red blend* (Elivette—formerly sold as Reserve) • *Sauvignon Blanc* • *Syrah*

ST. CLEMENT VINEYARDS

St. Helena
★★

One of the best-performing California wineries in the Beringer-Blass group.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Classic red blend* (Oroppas) • *Merlot*

ST. SUPÉRY

Rutherford
★★●

Capable of producing Cabernet of a rare level of finesse, and a deliciously tangy, yet inexpensive Sauvignon Blanc. Owned by Robert Skalli of South of France fame.

✓ *Cabernet Sauvignon* (Dollarhide Ranch, Napa Valley) • *Classic red blend* (Elú Meritage, Rutherford Limited Edition) • *Merlot* • *Muscat Canelli* (Moscato) • *Sauvignon Blanc* • *Sémillon* (Dollarhide Ranch)

STAG'S LEAP WINE CELLARS

Napa
★★

This is the famous Stag's Leap, with the apostrophe before the “s” and its legendary, ultraexpensive Cabernet Sauvignon Cask 23, although its Fay Vineyard and SLV can sometimes rival it in quality. Artemis is a lighter, easier-drinking, highly recommendable, less expensive blend of the Stag's Leap Arcadia vineyard with the leftovers from the selection of the three top Cabernet Sauvignons. Its second label is Hawk Crest.

✓ *Cabernet Sauvignon* • *Chardonnay* (Arcadia)

STAGS' LEAP WINERY

Napa
★

This is the other Stags' Leap winery, with the apostrophe after the “s” and less well known, although, ironically, the first to be established, as long ago as 1893. Stags' Leap Winery makes good Cabernet Sauvignon, particularly the Reserve, but it is not in the same class as the better-known Stag's Leap, whereas it does make one of California's finest Petite Sirah wines.

✓ *Cabernet Sauvignon* • *Petite Sirah* (Petite Syrah)

STERLING VINEYARDS

Calistoga
★

Astonishingly high quality in the mid-1970s, Sterling's standards dropped after Coca-Cola purchased it in 1978, but started a revival when Seagram took over in 1983 and has continued to improve.

✓ *Cabernet Sauvignon* (Napa Valley Reserve) • *Chardonnay* (Napa Valley Reserve, Carneros Winery Lake) • *Merlot* (Three Palms, Napa Vy Reservealle)

STONY HILL VINEYARD

St. Helena
★

The Chardonnays here are still world-class, but fatter than before.

✓ *Chardonnay*

STORYBOOK MOUNTAIN VINEYARDS

Calistoga
★★

Jerry Seps, a former college professor, has created a reputation for one of California's finest Zinfandels on this mountain vineyard, originally established by Adam and Jacob Grimm in 1880.

✓ *Zinfandel*

SUTTER HOME WINERY

St. Helena
★●

Zinfandel of one style or another accounts for the majority of this winery's vast production under the state-wide California AVA. Some wines are brilliant one year (such as the 2002 Pinot Grigio), but nothing special the next, making recommendations difficult, but when the wines are good, the value is always great.

✓ *Chenin Blanc* • *Sauvignon Blanc*

SWITCHBACK RIDGE

Calistoga
★★

This converted orchard on the Peterson Ranch at the northern end of the Silverado Trail makes some of Napa's best and biggest reds.

✓ *Cabernet Sauvignon* • *Merlot* • *Petite Sirah*

THE HESS COLLECTION

Napa
★★

Swiss-born art collector David Hess makes wines to be consumed not collected, although they do last well. Readers should note that Hess Select is a second label, not a premium *cuvée*.

✓ *Cabernet Sauvignon* (Mount Veeder)

TITUS

St. Helena
★★

Lee Titus brought his family from Minnesota to Napa, where he purchased this vineyard in separate lots in 1967. He replanted with classic varieties, and began to supply some of the top Napa Valley brands until the next generation decided to make and sell their own wine. With Phillip Titus as winemaker, and his brother Eric running both the business and the vineyard, Titus now threatens to become “the most fashionable new name in California winedom,” according to Robert Parker.

✓ *Cabernet Franc*

TREFETHEN VINEYARDS

Napa
★

This winery combines quality and consistency with good value.

✓ *Cabernet Sauvignon* • *Chardonnay* (Library Selection) • *Riesling*

TRINCHERO WINERY

Napa
★★●

Although Sutter Home is the bigger brand and gets all the press, it has been owned by the Trinchero family since 1947, and they make sure that some pretty good wines go out under their own label.

✓ *Cabernet Sauvignon* (Mario's Vineyard) • *Classic red blend* (Mario's Reserve Meritage) • *Sauvignon Blanc* (Family Reserve)

TURLEY

Napa
★★★

Talented brother and sister winemakers Larry and Helen Turley produce a raft of spectacular Zinfandel, with Petite Syrah (*sic*) and other interesting odds and ends.

✓ *Charbono* (Tofanelli Vineyard) • *Petite Syrah* (*sic*) • *Zinfandel*

V. SATTUI

St. Helena
★★●

This underrated winery boasts a large range of relatively inexpensive, award-winning wines, but is let down by its rustic, 1950s labeling and presentation. Understated label would do wonders.

✓ *Cabernet Sauvignon* (Morisoli Vineyard, Suzanne's Vineyard) • *Chardonnay* (Napa Valley) • *Classic red blend* (Family Red) • *Fortified* (Madeira) • *Merlot* (Napa Valley) • *Riesling* (Dry Johannisberg, Off-Dry Johannisberg) • *Rosé* (Gamay Rouge) • *Zinfandel* (Duarte Vineyard “Old Vine”)

VIADER

St. Helena
●★★

Tiny quantities of deeply colored, concentrated, red Bordeaux-style wine blended from vines grown on the slopes of Howell Mountain. Viader is a blend of 55–70 percent Cabernet Sauvignon with Cabernet Franc, while the firmer V is typically 58 percent Petit Verdot, 34 percent Cabernet Sauvignon, 8 percent Cabernet Franc.

✓ *Classic red blend* (V, Viader)

VILLA MT EDEN WINERY

Oakville
★★●

Owned by Stimson Lane, Villa Mt. Eden established a high reputation in the 1980s, but has become less exciting since branching into a wider range of wines, although the wines that do excel are always great value.

✓ *Cabernet Sauvignon* (Grand Reserve, Signature) • *Chardonnay* (Grand Reserve, Signature)

WHITEHALL LANE WINERY

St. Helena
★★

Despite various owners, Whitehall Lane consistently produces inspired wines, as endorsed by the Decanter World Wine Awards, when its 2001 Reserve Cabernet Sauvignon swept the boards to carry off the North American Bordeaux Varietal Trophy.

✓ *Cabernet Sauvignon* • *Merlot*

WILLIAM HILL WINERY

Napa
★★

An improving winery in the Allied-Domecq stable.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Merlot*

ZD WINES

Napa
★★

Pronounced “Zee Dee”, this winery used to make variable Cabernet Sauvignons, but is now very consistent; this wine now challenges Chardonnay's position as ZD's best varietal, and ZD sometimes comes out with a killer Pinot Noir (the 2000 Carneros Reserve).

✓ *Cabernet Sauvignon* • *Chardonnay* • *Pinot Noir* (Carneros Reserve)

THE CENTRAL COAST (NORTH)

Originally a district where a small number of big companies produced a vast quantity of inexpensive wines, the northern Central Coast can now boast a large number of top-quality, highly individual wineries.

WINEMAKING IN THE northern Central Coast district dates from the 1830s, when virtually all the vineyards were located in and around Santa Clara County, and this remained the situation until the late 1950s and early 1960s, when the growing urban sprawl of San Jose forced the wine industry to search out new areas for vine-growing. Happily, this search coincided with the publication of a climatic report based on heat-summation (see p.470) by the University of California. This report pinpointed cooler areas farther south, particularly in Monterey, that should support fine-wine vineyards.

THE MOVE TO MONTEREY

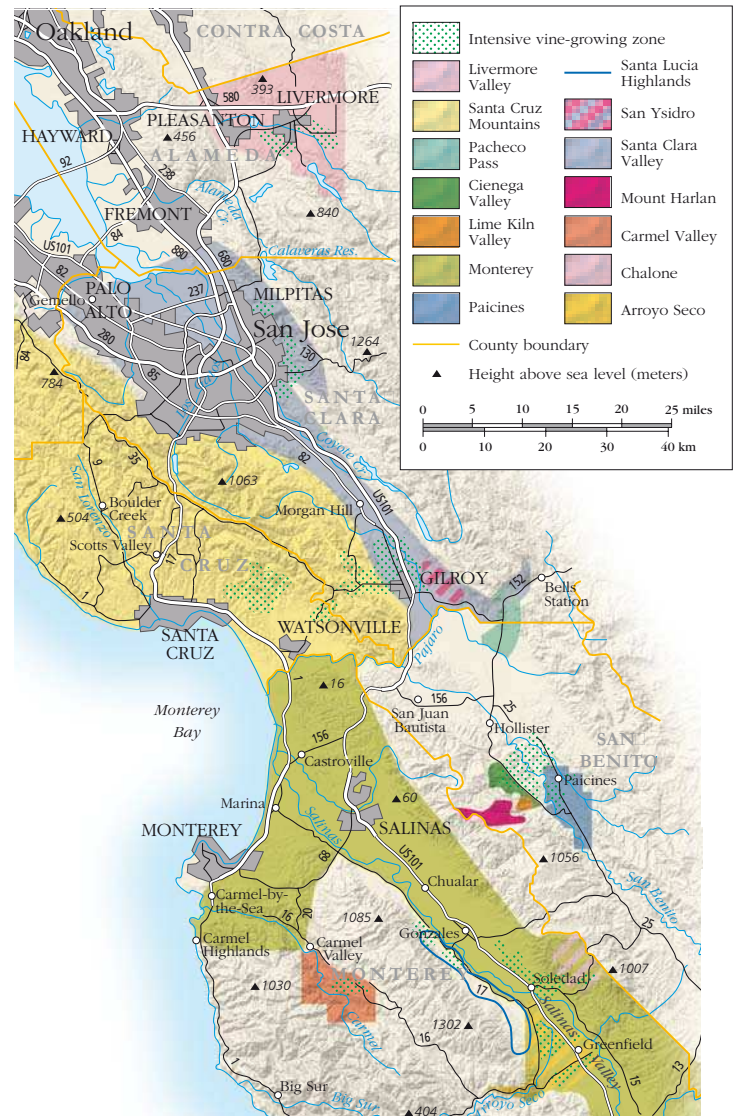

In 1957, two companies, Mirassou and Paul Masson, were the first to make the move, purchasing some 1,300 acres (530 hectares) in the Salinas Valley. In the ensuing rush to plant the land, some areas were used that were too cool or exposed to excessive coastal winds. These failures were not the fault of the heat-summation maps, but were due to producers who could not conceive that grapes would not ripen in California.

In October 1966, the two authors of the heat-summation study, Professors Winkler and Amerine, were honored at a special luncheon where a toast was made to “the world’s first fine-wine district established as the direct result of scientific temperature research.” Although this might have seemed premature, it has been substantiated by Monterey’s viticultural growth. It was Bill Jekel who first brought the quality potential of this area to international fame, but this winery has been eclipsed by an eclectic bunch of wineries such as Bonny Doon, David Bruce, Calera, Chalone, Edmunds St. John, Frick, Morgan, Mount Eden, Ridge, Rosenblum, and Tamas.

JEKEL VINEYARDS

Oak barrels wait to be filled at one of the Central Coast’s pioneering wineries. Vineyards stretch out across the flat plain of Salinas Valley, where intensive irrigation systems have made this hot and dry area more synonymous with crisp salad vegetables than with wines, and the new pioneering wineries have moved up into the hills.

FACTORS AFFECTING TASTE AND QUALITY

- LOCATION**
The Central Coast’s northern sector stretches from the San Francisco Bay area to Monterey.
- CLIMATE**
Generally warm (Region III, see p.470), but with variations such as the cooler (Region I, see p.470) areas of the Santa Cruz Mountains and the northern part of the Salinas Valley. Low rainfall in the south necessitates much irrigation, but there are microclimates with higher rainfall.
- ASPECT**
Vines are planted mainly on the flat and sloping lands of the various valleys. Variations are found: on the steep slopes of the Santa Cruz Mountains and the high benchland of the Pinnacles above Soledad, for example.
- SOIL**
A wide variety of gravel loams, often high in stone content and rich in limestone, in the Livermore Valley;

- clay and gravel loams in Santa Clara; sandy and gravelly loams over granite or limestone in San Benito; and gravelly, well-drained, low-fertility soils in Monterey.
- VITICULTURE AND VINIFICATION**
A small number of big wine companies produce a vast quantity of inexpensive wines utilizing high-tech, production-line methods. The number of small wineries is growing. Many of these are quality-conscious and some are justifiably famous.
- GRAPE VARIETIES**
Barbera, Cabernet Sauvignon, Carignane, Chardonnay, Chenin Blanc, Colombard, Gamay, Gewürztraminer, Grenache, Gray Riesling, Mourvèdre, Muscat, Pinot Blanc, Pinot Gris (*syn.* Pinot Grigio), Pinot Noir, Petite Sirah, Riesling, Sauvignon Blanc, Sémillon, Syrah, Trebbiano, Viognier, Zinfandel

THE CENTRAL COAST (NORTH), see also p.470

Until the late 1950s, most wineries were in Santa Clara County. Although this is still the Central Coast’s northern heartland, it has long been in a slow decline, while Monterey and Santa Cruz are the area’s fastest-growing counties.

THE APPELLATIONS OF
THE CENTRAL COAST (NORTH)

ALAMEDA COUNTY AO

This appellation covers grapes grown anywhere within Alameda County.

ARROYO SECO AVA

Monterey County

Triangular-shaped, sloping benchland, with frost-free vineyards of coarse sandy loam.

BEN LOMOND MOUNTAIN AVA

Santa Cruz County

This AVA covers 60 square miles (155 square kilometers) on Ben Lomond Mountain, encompassing just 70 acres (28 hectares) of vines.

CARMEL VALLEY AVA

Monterey County

This appellation covers 30 square miles (78 square kilometers) around the Carmel River and Cachagua Creek. A distinctive microclimate is created by the valley's elevation and the northeastern Tularcitos Ridge, which curbs the marine fog and provides more sunny days.

CHALONE AVA

Monterey County

Benchland vineyards at 1,650 feet (500 meters) above sea level, with volcanic and granitic soils of high limestone content. The soil combines with an arid climate to stress the vines. Suited to Chardonnay, Pinot Noir, and Pinot Blanc.

CIENEGA VALLEY AVA

San Benito County

The Cienega valley is located at the base of the Gabilan (or Gavilan) Mountain Range where the Pescadero Creek is used artificially to augment the area's rainfall. The soil is loamy, well-drained, and often lies over weathered granite.

CONTRA COSTA COUNTY AO

An appellation covering grape varieties grown anywhere within Contra Costa County.

HAMES VALLEY AVA

Monterey County

North of Lake Nacimiento, where more than 600 acres (250 hectares) of vineyards already exist.

LIME KILN VALLEY AVA

San Benito County

Annual rainfall ranges from 16 inches (41 centimeters) on the valley floor to 40 inches

(102 centimeters) in the mountainous west. Soils are sandy and gravelly loams over limestone, with a high magnesium carbonate content.

LIVERMORE VALLEY AVA

Alameda County

One of the coastal intermountain valleys surrounding San Francisco, the Livermore Valley has a moderate climate, cooled by sea breezes and morning fog, with very little spring frost.

MONTEREY AVA

Monterey County

This AVA is distinguished by a very dry climate, although the watersheds of the Santa Lucia, Gabilan, and Diablo Mountain Ranges provide sufficient water, through the presence of underground aquifers, to irrigate the vineyards.

MONTEREY COUNTY AO

An appellation covering grapes that are grown anywhere within Monterey County.

MOUNT HARLAN AVA

San Benito County

Like Chalone, Mount Harlan is, for all intents and purposes, a single-winery AVA (Calera in this instance), and is situated on rare limestone outcrops in the same range of hills (the San Benito Range), albeit at the other end and on the opposite-facing flank, and higher—2,200 feet (670 meters).

PACHECO PASS AVA

Santa Clara and San Benito Counties

The terrain sets this area apart from its neighbors. It is a small valley, with a flat or gently sloping topography that contrasts with the rugged hills of the Diablo Range to the east and west. The climate is moderate and wetter than that of the Hollister Basin to the south.

PAICINES AVA

San Benito County

Here the days are warm and the nights cool, and the annual rainfall ranges between 12 and 15 inches (30 and 38 centimeters). This AVA has fallen into disuse since Almadén, the winery that proposed it, moved to Santa Clara.

SAN BENITO AVA

San Benito County

Not to be confused with San Benito County, this AVA encapsulates the smaller AVAs of Paicines, Cienega Valley, and Lime Kiln Valley.

SAN BENITO COUNTY AO

This is an appellation covering grapes grown anywhere within San Benito County.

SAN FRANCISCO BAY AVA

This appellation encompasses more than 1.5 million acres that are, to some degree, affected by coastal fog and winds from San Francisco Bay. It also includes the city of San Francisco, apparently to justify the appellation name, but this could lead to the emergence of Moraga-like vineyards (see p.506).

SAN LUCAS AVA

Monterey County

This AVA consists of a 10-mile (16-kilometer) segment of the Salinas Valley between King City and San Ardo, in the southern section of Monterey County. The soils in this area are mostly alluvial loams.

SAN MATEO COUNTY AO

This is an appellation covering grapes grown anywhere within San Mateo County.

SAN YSIDRO AVA

Santa Clara County

The appellation covers a small enclave of vineyards at the southeastern end of the Santa Clara AVA. San Ysidro sits between two hills that channel the sea breezes coming up the Pajaro River, and is particularly noted for Chardonnay.

SANTA CLARA COUNTY AO

This is an appellation covering grapes grown anywhere within Santa Clara County.

SANTA CLARA VALLEY AVA

Santa Clara County

Encompassing the entire municipality of San Jose to the north and better known as Silicon Valley in the south, this AVA must qualify as the most built-up wine appellation in the world.

SANTA CRUZ MOUNTAINS AVA

Santa Clara County

The name "Santa Cruz Mountains" was first recorded in 1838. Its climate is influenced in the west by ocean breezes and maritime fog, while the east is moderated by San Francisco Bay. Cool air coming down from the mountains forces warmer air up, lengthening the growing season to a full 300 days. The soils are forms of shale that are peculiar to the area.

THE WINE PRODUCERS OF
THE NORTH-CENTRAL COAST

BONNY DOON VINEYARD

Santa Cruz County

★☆☆

This is one of California's brightest, most bizarre, and most innovative stars, with wines that are electrifying in their brilliance and style, often showing surprising finesse. I have

gotten lost trying to find Bonny Doon on two occasions, but it was worth the effort just to meet the whacky winemaker, Randall Grahm. In 2001, Grahm officially declared himself "off his rocker" when he macerated three wines on ground-up rocks from three different parcels of his

Cigare Volant red wine. If the experiment is deemed successful, it could lead to "The Rock Quartet," with a control sample of standard Cigare Volant as the fourth wine. ✓ *Barbera* • *Charbono* (Ca'del Solo La Farfalla) • *Classic red blend* (Cigare Volant) •

Grenache (Clos de Gilroy) • *Mourvèdre* (Old Telegram) • *Muscat Canelli* (Vin de Glaciere) • *Rosé blend* (Ca'del Solo Big House Pink, Vin Gris de Cigare) • *Roussanne* (Cigare Blanc) • *Syrab* (California, Le Pousseur)

**BURNSTEIN-REMARK
WINERY**

Monterey County

Established as recently as 2003, and not tasted, thus not rated, but the first releases have stirred up such critical acclaim that readers should be made aware of their existence.

✓ *Grenache* (Marilyn Remark Wild Horse Vineyards) • *Marsanne* (Marilyn Remark Loma Pacific Vineyard)

DAVID BRUCE

Santa Cruz County

Having gone through a learning curve, David Bruce now produces far more elegant wines than he used to. Pinot Noir has emerged as his consistently finest style.

✓ *Merlot* (Central Coast) • *Petite Syrah* (*sic*) (Central Coast, Shell Creek Vineyard) • *Pinot Noir* • *Zinfandel* (Paso Robles)

CALERA WINE COMPANY

San Benito County

One of California's premier pioneers in the continuing quest for perfect Pinot Noir, Calera continues to produce some of the state's greatest examples of this wine, although the focus on varietal purity can sometimes result in overly pretty fruit.

✓ *Pinot Noir* • *Viognier*

CEDAR MOUNTAIN

Alameda County

This boutique winery was established in 1990 and early vintages are promising, if a little too correct and in need of a personal signature.

✓ *Cabernet Sauvignon* • *Fortified* (Chardonnay del Sol) • *Zinfandel*

CHALONE VINEYARD

Monterey County

This winery's 155-acre (63-hectare) vineyard has its own AVA. Chalone Vineyard is dedicated to, and astonishingly successful at, producing a range of fine, complex wines of the most exquisite style. The Chenin Blanc is from the Gavilan Mountain ridge, 1,800 feet (540 meters) above the Salinas Valley, where the vines were planted as long ago as 1919. These venerable vines have the capacity to make California's finest Chenin Blanc, and in some years they succeed in doing so, although there is variation in quality.

✓ *Chardonnay* • *Chenin Blanc* • *Pinot Blanc* • *Pinot Noir*

CONCANNON VINEYARD

Alameda County

This winery continues to make fine *Petite Sirah* wines, but is also getting a name for its *Merlot*.

✓ *Merlot* (Selected Vineyard) *Petite Sirah* (Heritage)

CONUNDRUM

Monterey County

Under the same ownership as Caymus Vineyard, where Conundrum started out as a new addition to the range in 1989. Conundrum was created by Jon Bolta, who had assisted in the making of Caymus wines, and who has made every vintage to date. The idea behind Conundrum was to make a blended white wine to suit the new Pacific cuisine of coastal California. Jon originally experimented with 11 white grapes before deciding on the five that have been used ever since: Sauvignon Blanc, Chardonnay, Muscat Canelli, Sémillon, and Viognier.

✓ *Classic white blend* (Conundrum)

EDMUNDS ST. JOHN

Alameda County

Steven Edmunds and Cornelia St. John established this exciting winery in 1985 in what used to be the East Bay Wine Works, where they have honed some of California's most beautifully balanced wines, with a particular penchant for classy *Syrah*.

✓ *Syrah* • *Viognier* (Rozet Vineyard)

FRICK WINERY

Santa Cruz County

This winery is an up-and-coming Rhône-style specialist with a hands-off approach to winemaking.

✓ *Cinsaut* • *Classic red blend* (C2) • *Syrah*

HAHN ESTATES

Monterey County

Nicky Hahn of Smith & Hook launched this label in 1991, and his flavor-packed, bargain wines now have their own dedicated winery.

✓ *Cabernet Franc* • *Classic red blend* (Meritage) • *Merlot* • *Syrah*

HELLER VINEYARDS

Monterey County

Although under new ownership since the death of Bill Durney, this winery continues to produce heroically dark, rich, densely flavored *Cabernet Sauvignon*, and splendidly long-lived *Chardonnay*, with Celebration the standout wine.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Classic red blend* (Celebration Meritage) • *Merlot*

J. C. CELLARS

Alameda County

The personal label of Jeff "Rhône-in-his-Bones" Cohn specializes in

single-vineyard, hillside-grown *Syrah*, *Petite Syrah* (one of California's best), *Viognier*, and *Zinfandel*.

✓ *Petite Sirah* • *Syrah* • *Viognier*

JEKEL VINEYARD

Monterey County

Once known for its fascinating range of *Riesling*, owners Brown-Foreman closed this winery in February 2004, but the vineyards have been retained and production of wines under this label continues. Even before the closure, this was no longer the force it used to be in Bill Jekel's heyday, although some wines still excite.

✓ *Classic red blend* (Sanctuary) • *Syrah* (Monterey County)

J. LOHR

Santa Clara County

The Valdigüé used to be labeled *Gamay* until correctly identified by UC Davis. It is made in a fruity *Gamay* style that is not just a good quaffer, but really quite elegant and well perfumed with plenty of refreshing acidity.

✓ *Cabernet Sauvignon* (Crosspoint) • *Chardonnay* (Arroyo Vista Vineyard) • *Classic red blend* (Cuvée Pom Meritage) • *Valdigüé* (Wildflower)

MORGAN WINERY

Monterey County

Possibly California's most underrated, age-worthy *Chardonnay* and *Pinot Noir* are produced here. Although plenty of Americans love good Burgundy, such consumers are by and large not avid fans of west-coast wines, and regular California wine drinkers are often put off by Morgan's Burgundian-like character. Those of you who fall between these posts should give these wines a try. The fresh, zesty *Sauvignon Blanc* is consistently good, but the Rhône-style wines need some work.

✓ *Chardonnay* • *Pinot Noir* • *Sauvignon Blanc*

MOUNT EDEN VINEYARDS

Santa Clara County

This winery produces just three varietals. The range of *Chardonnay* excels, but the deep, dark, chocolaty Old Vines *Cabernet* comes a close second.

✓ *Cabernet Sauvignon* (Cuvée Saratoga, Old Vine Reserve) • *Chardonnay*

MURRIETA'S WELL

Alameda County

Run by Phil Wenté, whose blends are significantly better than his pure varietal wines. His style is generally understated, but finer than that of his more prominent brother, Eric of Wenté Bros. The red *Vendimia* is a

classic Bordeaux-style blend, while *Zarzuela* is *Tempranillo*-based.

✓ *Classic red blend* (Vendimia, *Zarzuela*) • *Classic white blend* (Vendimia)

RIDGE VINEYARDS

Santa Clara County

Those who wonder about the long-term maturation potential of California wines should taste these stunning ones, some of which need between 10 and 20 years in bottle before they are even approachable.

✓ *Cabernet Sauvignon* (Monte Bello) • *Chardonnay* (Howell Mountain, Santa Cruz Mountains) • *Classic red blend* (Geyserville) • *Mourvèdre* (Mataro) • *Petite Sirah* (York Creek) • *Zinfandel*

ROSENBLUM CELLARS

Alameda County

Established in 1978 by Kent Rosenblum, a Minnesotan who came to California to set up a veterinary practice, but got sidetracked by a sudden infatuation with the local wines. In its first year, Rosenblum made 400 cases of a *Zinfandel* that won a gold medal at the Orange County Fair. Now he produces over 100,000 cases of over 40 different wines from more than 75 vineyards throughout California, plus a few in Australia, and still finds time to run his veterinary practice. Excellent-value wines also sold under the Chateau La Paws label, particularly *Mourvèdre*, *Syrah*, *Zinfandel* (Amador), and *Cote de Bone* (Blanc and Roan).

✓ *Cabernet Sauvignon* • *Classic red blend* (Holbrook Mitchell Trio) • *Dessert style* (Rosie Rabbit *Zinfandel*) • *Marsanne* (Dry Creek) • *Merlot* (Mountain Selection) • *Mourvèdre* (Continente Vineyard) • *Muscat Canelli* (Muscat de Glacier) • *Petite Sirah* (Rockpile) • *Syrah* (England Shaw, Hillside Vineyards) • *Viognier* (Ripken Ranch Late Harvest) • *Zinfandel*

**ROBERT TALBOTT
VINEYARDS**

Monterey County

Run by the son of the late founder, the Talbott family is best known for the internationally renowned Monterey-based Talbott Tie Company.

✓ *Chardonnay*

WENTE BROS

Alameda County

Established for more than a century, Wenté's wines used to range from overtly fruity to distinctly dull, but have improved in recent years.

✓ *Chardonnay* (Riva Ranch Reserve) • *Sauvignon Blanc* (Livermore Valley)

THE CENTRAL COAST (SOUTH)

An up-and-coming wine district in general, the southern Central Coast has very rapidly become one of the very best areas in the world, outside of Burgundy itself, for Pinot Noir. Chardonnay is equally exciting, and Italian varietals could well be the most prized wines of the new millennium.

PASO ROBLES in San Luis Obispo county was originally planted with vines in the late 18th century; the Santa Ynez Valley, in Santa Barbara County, had a flourishing wine industry in pre-Prohibition times; Santa Barbara town itself was once dotted with vineyards. Yet both counties were virtually devoid of vines in the early 1960s; it was not until Estrella, in Paso Robles, and Firestone, in Santa Ynez Valley, established vineyards in 1972 that others followed.

Quite why Santa Barbara of all areas in the southern Central Coast has suddenly become the mecca for Pinot Noir specialists is difficult to unravel. In the late 1980s, California seemed the least likely place to be in a position to challenge Burgundy for the Holy Grail of winemaking. Oregon and New Zealand looked much more likely, but they have both since proved too small and prone to inconsistency. If it was going to be California, no one a decade ago would have put their money on Santa Barbara, way down south, just a stone's throw from Los Angeles; Carneros or Russian River seemed a more likely bet. The foundations for Santa Barbara's sudden surge of wonderful Pinot Noir wines were laid innocently in the 1970s, when the land was relatively cheap and planted with this variety in order to supply the sparkling-wine

industry in the north of the state. It is impossible to pinpoint exactly when local winemakers realized the potential of making their own still wine, but much of California's finest, purest, and most consistent Pinot Noir wines now come from this valley.

The Santa Ynez Valley makes the best Santa Barbara Pinot, yet the area where it excels is restricted: 9 miles (14 kilometers) from the ocean and the valley is too cool to ripen grapes; 16 miles (26 kilometers) and it is ideal for Pinot Noir; but for every 1 mile (1.5 kilometers) farther from the ocean the grapes gain an extra degree (ABV) of ripeness, and by 20 miles (32 kilometers) from the coast, this is Cabernet country. The best Pinot Noir vineyard in the Santa Ynez Valley is Sanford & Benedict. In the Santa Maria Valley, also well suited to Pinot Noir, the best vineyard is Bien Nacido.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
This stretches southward along the coast from Monterey, and includes the counties of San Luis Obispo and Santa Barbara.

CLIMATE
Generally warm (Region III, see p.470), except for areas near the sea, particularly around Santa Maria in the middle of the region where Regions I and II (see p.470) prevail because of the regular incursion of the tail of the great coastal fog bank. Annual rainfall ranges from 10 inches (25 centimeters) to 45 inches (114 centimeters).

ASPECT
Most vines grow on hillsides in San Luis Obispo and southern-facing benchland in Santa Barbara County, at altitudes from 120 to 600 feet (37 to 180 meters) in the Edna Valley, to 600 to 1,000 feet (180 to 305 meters) in Paso Robles, and 1,500 feet (460 meters) on York Mountain.

SOIL
Mostly sandy, silty, or clay loams, but soil can be more alkaline, as in the gravelly lime soils on the Santa Lucia Mountains foothills.

VITICULTURE AND VINIFICATION
By the mid-1980s, the cooler areas

had invited experimentation with the Burgundian varieties planted in the early 1970s to supply sparkling-wine producers in the north of the state, and by the late 1980s a number of world-class Pinot Noirs had been produced. This variety is the region's main claim to fame, although viticultural methods are still developing, as indeed are vinification processes. Open-top fermenters are commonly used, the cap being punched down frequently. Some producers have incorporated 15–30 percent whole-cluster, but most have shied away from this. A cold maceration is followed by natural yeast fermentation, the temperatures of which run nice and high. After a gentle pressing, the wines are matured in *barriques* with 25–50 percent new oak. The oak is all French, and nearly everyone prefers tight-grain, with many going for a heavy toast.

GRAPE VARIETIES
Barbera, Cabernet Franc, Cabernet Sauvignon, Chardonnay, Chenin Blanc, Gewürztraminer, Malvasia, Muscat, Pinot Blanc, Pinot Noir, Riesling, Sangiovese, Sauvignon Blanc, Sémillon, Sylvaner, Syrah, Tocai Friulano, Zinfandel

THE CENTRAL COAST (SOUTH), see also p.470

Based on San Luis Obispo and Santa Barbara counties, this area has a fine reputation for top-quality Pinot Noir.

THE APPELLATIONS OF THE CENTRAL COAST (SOUTH)

ARROYO GRANDE VALLEY AVA

San Luis Obispo County

An area of 67 square miles (173 square kilometers) some 12 miles (19 kilometers) southeast of the town of San Luis Obispo, the Arroyo Grande Valley enjoys a Region I to II climate (see p.470), thanks primarily to its proximity to the ocean and the frequent fog produced by marine air in the mornings and evenings. Planted at an altitude of between 300 and 1,000 feet (90 and 300 meters), vines grow at much higher altitudes than those in the neighboring Edna Valley AVA, and also receive slightly more rain. The hillsides cultivated range from moderate to very steep slopes, with deep, well-drained, sandy-clay and silty-clay loam soils. With a 30°F (30°F) drop in nighttime temperatures, relatively high acidity levels are maintained throughout ripening. The potential for sparkling wine is considerable, so it is perhaps not surprising that Maison Deutz is the best-known winery here, with the largest vineyards in the appellation. Deutz has also produced some still Chardonnay and Pinot Noir,

and although rather strange, disjointed, and hardly indicative of any potential for such wines, Au Bon Climat has had stunning success with these varieties.

EDNA VALLEY AVA

San Luis Obispo County

This elongated valley is located just south of Paso Robles, and is well defined by the Santa Lucia Mountains to the northeast, the San Luis Range to the southwest, and a low hilly complex to the southeast. In the northwest, the Edna Valley merges with the Los Osos Valley, forming what is, in effect, a wide-mouthed funnel that sucks in ocean air from Morro Bay. This marine air flows unobstructed into the valley, where it is captured by the pocket of mountains and hills, providing a moderate summer climate that differentiates it from surrounding areas. The vines grow on the valley floor, rising to 600 feet (120 meters) in the Santa Lucia Mountains, on soils that are mostly sandy-clay loam, clay loam, and clay.

PASO ROBLES AVA

San Luis Obispo County

This area was given its name in the 18th century, when travelers passed through it on their way from the San Miguel to the San Luis Obispo missions. It is one of California's oldest winegrowing regions: grapes have been harvested in this area of rolling hills and valleys since c.1797. There is no penetration by coastal winds or marine fog and, consequently, there is the equivalent of an additional 500 to 1,000 degree-days here compared to viticultural areas to the west and east. This obviously has a considerable effect on grape-ripening patterns

making Paso Robles red-wine country, particularly for Zinfandel and Rhône varieties.

SAN LUIS OBISPO AO

An appellation covering grapes grown anywhere within the entire county of San Luis Obispo.

SANTA BARBARA AO

An appellation covering grapes grown anywhere within the entire county of Santa Barbara.

SANTA MARIA VALLEY AVA

Santa Barbara County

The Pacific winds blow along this funnel-shaped valley, causing cooler summers and winters and warmer falls than in the surrounding areas. The terrain climbs from 200 to 800 feet (60 to 240 meters), with most of the vineyards concentrated at 300 feet (90 meters). The soil is sandy and clay loam, and is free from the adverse effects of salts. This is top-quality Pinot Noir country and Bien Nacido (to which many winemakers have access) in the Tepesquet Bench area is far and away its best vineyard. Noises about Bien Nacido in the 1990s are reminiscent of the fuss made a decade earlier about the Sanford & Benedict vineyard in

RUGGED MOUNTAINS IN THE VAST LOS PADRES NATIONAL FOREST, CALIFORNIA

California's best wines are produced in areas cooled by the sea, bay winds, and the great coastal fog bank. The Central Coast (South) has rapidly acquired a good reputation for its Pinot Noir.

the Santa Ynez Valley. The Santa Maria Valley also grows top-quality Chardonnay and even one of California's best Syrahs.

SANTA RITA HILLS AVA

Santa Barbara County

This appellation is located almost entirely within the preexisting Santa Ynez Valley AVA and includes all the latter's coolest areas. The Santa Rita Hills is primarily planted with Chardonnay and Pinot Noir, although Syrah and Riesling are on the increase.

SANTA YNEZ VALLEY AVA

Santa Barbara County

The Santa Ynez Valley is bounded by mountains to the north and south, by Lake Cachuma to the east, and by a series of low hills to the west. The valley's close proximity to the ocean serves

to moderate the weather with maritime fog, and this tends to lower the temperatures. The Santa Rita Hills block penetration of the coldest of the sea winds, however, so the middle and eastern end of the valley do not have the coolest of coastal climates (2,680 degree-days), while Lompoc, which is just 2 miles (3 kilometers) outside the appellation's western boundary, has just 1,970 degree days. The vineyards are located at an altitude of between 200 and 400 feet (60 and 120 metres) in the foothills of the San Rafael Mountains, and the vines are grown on soils that are mostly well drained, sandy, silty, clay, and shale loam. Santa Barbara's finest Pinot Noir wines come from the Sanford & Benedict vineyard (to which a number of winemakers have access) in the west, yet just a few miles farther up the valley it is Cabernet and Zinfandel country. The Santa Ynez Valley also grows top-quality Chardonnay.

TEMPLETON

San Luis Obispo County

Templeton is situated within Paso Robles. It is not an AVA, but I have included it for the purposes of clarification, because various sources have stated that it is. Even official publications from California's Wine Institute have made the same error.

YORK MOUNTAIN AVA

San Luis Obispo County

This small appellation is just 7 miles (11 kilometers) from the sea, situated at an altitude of 1,500 feet (450 meters) in the Santa Lucia Mountains, close to the western border of Paso Robles. Its Region I (see p.470) climatic classification, and 45 inches (114 centimeters) of rain per year, set it apart from the warmer, and considerably drier, surrounding areas.

THE WINE PRODUCERS OF THE CENTRAL COAST (SOUTH)

ALBAN VINEYARDS

San Luis Obispo County

★★

John Alban claims that his family-owned vineyard, founded in 1989, was "the first American winery and vineyard established exclusively for Rhône varieties." He certainly produces some of the best California Rhône varieties.

✓ *Classic red blend* (Pandora) • Grenache • Syrah • Viognier

ANDREW MURRAY

Santa Barbara County

★★

Up-and-coming, Rhône-style specialist, producing immaculately crafted wines from hillside vineyards.

✓ *Classic white blend* (Enchanté) • Syrah • Viognier

AU BON CLIMAT

Santa Barbara County

★★

It was Jim Clendenen's wines of the 1980s that convinced me of Santa Barbara's suitability to Pinot Noir, since when, of course, this area has established a soaring reputation for Rhône varieties as well as Burgundian.

✓ *Chardonnay* (especially Sanford & Benedict) • Pinot Noir

BABCOCK VINEYARDS

Santa Barbara County

★★

Best for succulent Pinot Noir and, deep, dark, rewarding Syrah.

✓ *Chardonnay* (Grand Cuvee) • Pinot Noir • Sauvignon Blanc • Syrah

BARON HERZOG

Santa Barbara County

★0

A story of riches to rags and back to riches again. Eugene Herzog was born into an aristocratic family that was renowned as suppliers of wine since the days of the Austro-Hungarian Empire. Having survived the Nazis only to see his property confiscated by the Communists, he fled Czechoslovakia in 1948, taking his family to New York, where he came down to earth with a bump, working as a driver and salesman for the Royal Wine Company. The company was short of cash flow, and paid part of his salary in shares, but Herzog's selling acumen was such that he became the majority shareholder, purchasing the rest of the company within 10 years of setting foot in the US. The Baron Herzog winery was established in 1986, since when it has not been one of the flashy highfliers, but has steadily produced a number of modestly priced, award-winning wines.

✓ *Chenin Blanc* (Clarksburg) • Sauvignon Blanc (California) • Zinfandel (Lodi Old Vines)

BLACKJACK RANCH

Santa Barbara County

★★★

In 1989, Roger Wisted invented, patented, copyrighted, and trademarked "California Blackjack," the proceeds of which enabled him to indulge in his lifelong fantasy to plant his own vineyard. His first vintage was 1997, since when his wine have displayed a structure and acidity balance that sets them apart.

✓ *Chardonnay* • *Classic red blend* (Harmonie) • Merlot • Syrah

BONACCORSI

Santa Barbara County

★★

Master Sommelier Michael Bonaccorsi, formerly of Spago Restaurant in Beverly Hills, which has won the *Wine Spectator's* Best of Award of Excellence each year since 1995. In 1999, Bonaccorsi set up his own winery, which has swiftly achieved an enviable reputation for the highly polished style of its wines.

✓ *Chardonnay* • Pinot Noir • Syrah

BREWER-CLIFTON

Santa Barbara County

★★

Specialists in sourcing top-class Burgundian varieties from single-vineyards in the best areas of Santa Rita Hills AVA.

✓ *Chardonnay* • Pinot Noir

BYRON

Santa Barbara County

★★

Under Mondavi ownership since 1990, and now part of Constellation Brands, these wines are still made by founder Byron Ken Brown, whose white wines are even better than his Pinot Noir.

✓ *Chardonnay* • Pinot Blanc • Pinot Gris • Pinot Noir

CAMBRIA

Santa Barbara County

★★

Personally owned by Jess Jackson's wife, Barbara Banke, rather than the Kendall-Jackson company, Cambria's strength is its extraordinary line of high-quality Chardonnay. Also produces interesting single-clone Pinot Noir wines from the same vineyard and vintage.

✓ *Chardonnay* • Pinot Noir (Rae's)

CLAIBORNE & CHURCHILL

San Luis Obispo County

★★0

Alsatian specialists, with 20 years' experience, Claiborne Thompson and Fredericka Churchill are particularly enthusiastic about genuinely dry, classically structured Gewürztraminer. When I first heard of these wines I was sceptical, but as soon as I tasted them, I was convinced. Drink on purchase.

✓ *Gewürztraminer* (Dry Alsatian Style) • Riesling (Dry Alsatian Style)

COLD HEAVEN

Santa Barbara County

★★

Made by Jim Clendenen's wife, Morgan, whose main focus is on Viognier, but also produces an increasingly silky-stylish Pinot Noir.

✓ *Pinot Noir* (Le Bon Climat Vineyard) • Viognier

EBERLE WINERY

San Luis Obispo County

★★

Look no farther if you want massively built Zinfandel, but the Cabernet is the better-balanced, much classier wine, while the Steinbeck Syrah is the best of both worlds.

✓ *Barbera* • Cabernet Sauvignon • Muscat Canelli • Sangiovese (Fillipponi & Thompson Vineyard) • Syrah (Steinbeck) • Viognier (Glenrose Vineyard)

EDNA VALLEY VINEYARD

San Luis Obispo County

★★

A joint venture between Chalone and the Niven family, which owns the Paragon Vineyard, Edna Valley Vineyard still produces rich, toasty Chardonnay and very good Pinot Noir, but now also turns out a

refreshing Pinot Gris that has a certain spicy potential if given a couple of years' aging. The Syrah has yet to find its feet, but other varieties are beginning to show promise.

✓ *Chardonnay* (Paragon Vineyard) • *Pinot Gris* (Paragon Vineyard) • *Pinot Noir* (Paragon Vineyard)

EPIPHANY VINEYARDS

Santa Barbara County
★☆☆

The personal winery of Eli Parker, son of Fess (see below).

✓ *Grenache* (Revelation Rodney's Vineyard) • *Pinot Gris*

FESS PARKER WINERY

Santa Barbara County
★★★☆☆

Unless you enjoyed a 1950s childhood, the name of actor Fess Parker is not likely to mean anything to you, but for me it will always be synonymous with his role as Davy Crockett, so it was quite amusing to see a fat American lady at least twice my age swoon in front of this still imposing figure. Unfortunately, she found all the wines too dry, even the excellent off-dry Riesling failed to please, but she did buy a poster of Mr. Crockett taking a bath wearing just his coonskin hat. These wines get better with each vintage.

✓ *Chardonnay* (Marcella's Vineyard) • *Pinot Noir* • *Syrah* • *Viognier*

FIRESTONE VINEYARD

Santa Barbara County
★☆☆

Although Firestone can occasionally lapse, the wines are usually rich and ripe, and are gradually assuming more finesse.

✓ *Johannisberg Riesling* • *Merlot* • *Sauvignon Blanc* • *Syrah*

FOXEN VINEYARD

Santa Barbara County
★★★☆☆

I am not as enamored as some by this winery's Pinot Noir, but have great respect for virtually everything else produced here.

✓ *Classic red blend* (Foothills Reserve) • *Pinot Noir* • *Syrah* • *Viognier*

GAINEY VINEYARDS

Santa Barbara County
★★★☆☆

This winery still makes one of Santa Barbara's best Pinots, but is now best known for its Merlot, and turns out a number of amazing bargains.

✓ *Chardonnay* (Limited Selection) • *Merlot* (Limited Selection) • *Pinot Noir* (Limited Selection Santa Rita Hills) • *Riesling* (Santa Ynez Valley) • *Sauvignon Blanc* (Limited Selection) • *Syrah* (Limited Selection)

THE HITCHING POST

Santa Barbara County
★★★☆☆

Frank Ostini is the soft-spoken, friendly, fun-loving chef-owner of the Hitching Post restaurant in Santa Maria, which serves tasteful, unpretentious American barbecue food at its best. Frank also enjoys making wines with his fisherman friend, Gray Hartley. They started out in a corner of Jim Clendenen's Au Bon Climat winery, but in 2001 moved to Central Coast Wine Services in Santa Maria, and continue to make a number of excellent wines, particularly the polished Pinot Noirs.

✓ *Pinot Noir* • *Syrah* (Purisma Mountain)

L'AVENTURE

San Luis Obispo County
★★★☆☆

Monstrous wines from *Bordelais* Stephan Asseo, whose vision of Bordeaux meets Rhône in Pas Robles has attracted rave reviews. Second label: Stephan Ridge.

✓ *Classic red blend* (Côte-à-Côte, Cuvée) • *Syrah*

LANE TANNER

Santa Barbara County
★★★☆☆

The eponymous Lane Tanner established this small winery in 1989, since when she has honed a deliciously deep style of ripe, pure-flavored Pinot Noir.

✓ *Pinot Noir* • *Syrah*

LONGORIA

Santa Barbara County
★★★☆☆

Rick Longoria started making tiny quantities under his own label while he was at Gainey Vineyard, which he put on the map as winemaker there for 12 years. Now he has his own winery, he still produces small batches of wine (ranging between 70 and 850 cases), but the quantities are massive by comparison with his early years. The quality is, however, even better—especially the Pinot Noir.

✓ *Chardonnay* • *Pinot Noir* • *Syrah* (Alisos Vineyard)

MOSBY WINERY

Santa Barbara County
★★★☆☆

Bill and Jeri Mosby run this interesting, sometimes provocative, Italian-style specialty operation.

✓ *Dolcetto* • *Pinot Grigio* • *Teroldego*

PALMINA

Santa Barbara County
★★★☆☆

Some of California's greatest Italian style wines, especially the single-vineyard offerings, from the owners of Brewer-Clifton.

✓ *Barbera* • *Classic red blend* (Savoia) • *Nebbiolo* • *Pinot Grigio*

QUPÉ

Santa Barbara County
★★★☆☆

Owned by Bob Lindquist, who operates out of the Au Bon Climat winery. Great for Rhône-style reds, particularly the various single-vineyard Syrahs. Lindquist also owns Verdad with his wife, Louisa.

✓ *Classic red blend* (Los Olivos) • *Grenache* (Purisma Mountain Vineyard) • *Syrah*

RANCHO SISQUOC

Santa Barbara County
★★★☆☆

These vividly fruity wines come from one of Santa Barbara's first vineyards. Rancho Sisquoc covers 200 acres (80 hectares) of the massive 36,000-acre (14,500-hectare) Flood Ranch.

✓ *Cabernet Franc* • *Classic red blend* (Sisquoc River Red Meritage) • *Chardonnay* (Flood Vineyard) • *Malbec* (Flood Family Vineyard) • *Riesling* (Flood Family Vineyard) • *Sylvaner*

RIVER RUN

Santa Clara County
★★★☆☆

After more than 25 years of continuous production, River Run has finally grabbed attention with an exciting quality, sharp-priced Malbec.

✓ *Malbec* (Mannstand Vineyard)

SANFORD WINERY

Santa Barbara County
Ⓞ★★★☆☆

One of the twin founders of the eponymous Sanford & Benedict vineyard, and modern-day pioneer of Santa Barbara winemaking in general, Richard Sanford released his first wine in 1976, and it is now hard to imagine why that should be Riesling. However, he quickly gained a stellar reputation for Pinot Noir, attracting dozens of crusading wineries to open up around him.

✓ *Pinot Noir* (La Riconada, Sanford & Benedict, Vin Gris Santa Rita Hills) • *Sauvignon Blanc*

SANTA BARBARA WINERY

Santa Barbara County
★★★☆☆

Although this is the oldest Santa Barbara winery, dating back to the early 1960s, it did not get interested in premium-quality wines until a decade later, after the Sanford &

Benedict revolution. It soon began producing a number of great-value Burgundian varietals, and has since moved into Rhône-style wines, making some of the region's most impressive Syrah.

✓ *Chardonnay* (Lafond Vineyard, SRH) • *Nebbiolo* (Stolpmann Vineyard) • *Pinot Noir* (Lafond Vineyard, SRH) • *Sauvignon Blanc* (Lafond Vineyard Late Harvest) • *Syrah* • *Zinfandel* (Beaujour, Essence)

TALLEY VINEYARDS

Santa Clara County
★★☆☆

Burgundian-style specialists with 100 percent estate-bottled production.

✓ *Chardonnay* • *Pinot Noir*

VERDAD

Santa Barbara County
★★★☆☆

Owned by Bob and Louisa Lindquist of Qupé, Verdad is, however, very much Louisa's baby, and she is starting to make waves with these Spanish-style wines.

✓ *Albariño* • *Rosé* • *Tempranillo* (Santa Ynez Valley)

WILD HORSE

San Luis Obispo County
★★☆☆

Established in 1982 by Ken Volk, Wild Horse was acquired in 2003 by Fortune Brands, the owners of Geyser Peak. Wild Horse crushes some 30-odd grape varieties and has something of a reputation for coming up with lesser-known varieties such as Arneis, Lagrein, Negrette, Tocai Friulano, Trousseau Gris, and Verdelho. There is a tendency to diversify into different brands, rather than create various ranges under the same label, Equus being the latest and most successful of such ventures.

✓ *Blaufrankisch* • *Grenache* (Equus James Berry Vineyard) • *Zinfandel*

ZACA MESA WINERY

Santa Barbara County
★★☆☆

Best for inexpensive, refreshing Chardonnay, and exciting, low-yield Syrah.

✓ *Chardonnay* (Zaca Vineyard) • *Grenache* (Late Bottled) • *Roussanne* (Estate Bottled) • *Syrah* (Black Bear Block, Eight Barrel, The Mesa O & N)

THE CENTRAL VALLEY

While California's coastal areas are its most famous wine districts and those most capable of producing fine wines, they are not as significant in terms of quantity as the baking-hot, flat, and dry Central Valley, which accounts for three-quarters of all California wine; one company, Gallo, produces half of that.

IF I HAD ANY PLANS at all for the California section of this new edition, it was to shine a light on the Central Valley, which has always been brushed to one side by authors because of its jug-wine reputation. Looking through the first edition of this book, I was nagged by the same question—"Surely the source of three out of every four bottles of California wine is worthy of some attention?" To find an answer, I made two visits specifically to look for the wines of the Central Valley. I wanted to establish whether any areas or wines truly stood out and the reasons why.

Why do AVAs such as Clarksburg, Merritt Island, and Lodi exist, if they do not mean something? Clarksburg is supposed to be good for Chenin Blanc, and Lodi has an even greater, older reputation for Zinfandel, but if this is true, why aren't the UK and other price-conscious, value-minded markets flooded with such wines? Perhaps in this valley of giant producers there are a number of small wineries making some stunning wines for the price, but lacking the money or marketing muscle to get them noticed?

To find some answers, I asked a local expert to set up a tasting of the best Central Valley AVA wines. I imagined there would be well over a hundred different wines, but he was able to assemble only 36, and a number of those were old vintages from wineries that no longer exist. After discounting those that were supposedly produced from pure or mostly Central Valley grapes but did not make any such claims on the bottle and were not very interesting in any case, there were just eight wines currently available that proudly proclaimed their origins. Maybe more will be available by the time this book is published, but it was evident that there were few individually expressive wines waiting to be discovered in the Central Valley. I tasted some passable Chenin from Clarksburg, but

FRANZIA WINERY IN RIPON, NEAR MODESTO

Looking more like oil refineries than wineries, firms such as Franzia have perfected the art of industrialized winemaking.

nothing special, and the best were only supposedly from Clarksburg, as they did not claim the AVA.

The wines from Bogle Vineyards on Merritt Island, at the heart of Clarksburg, were not particularly impressive at the tasting but, having had the opportunity to taste younger vintages at the winery itself, it was obviously one of the few independent Central Valley producers likely to succeed. I came away feeling that Bogle makes much better red than white wine, particularly Merlot, but it blends in up to 60 percent bought-in grapes, using the generic Californian appellation. As for the Lodi Zinfandel, the few examples claiming the AVA were big, old-fashioned, tasted maderized, and sometimes stank quite foully.

Although I failed to find any outstanding wines, the experience taught me that the Central Valley AVAs are an irrelevance because the state's largest wineries (particularly Gallo, but also Mondavi in Woodbridge, in the heart of Lodi) have ignored them. When they select exceptional wines to bear and show off these AVAs, perhaps consumers will no longer be dismissive of the Central Valley?

HARVESTED CABERNET SAUVIGNON GRAPES

Despite its huge output, premium-quality wines can be produced in Central Valley.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

The viticultural area of this huge fertile valley stretches 400 miles (640 kilometers) from Redding in the north to Bakersfield in the south, running between the Coastal Ranges to the west and the Sierra Nevada to the east.

CLIMATE

Generally homogenous from end to end, warming steadily from Region IV (see p.470) in the north to Region V (see p.470) in the south. The area around Lodi is the only exception, being cooled by sea air sweeping up the Sacramento River.

ASPECT

The vines are grown on the vast flat area of the valley floors, intersected and irrigated by a network of levees.

SOIL

Very fertile sandy loam dominates the length and breadth of the valley.

VITICULTURE AND VINIFICATION

Production of vast quantities of reliable-quality jug wine, using the latest techniques of mechanization and irrigation, and a virtually continuous fermentation and bottling process. Somewhat higher-quality Zinfandel and sweet dessert wines are produced around Lodi.

GRAPE VARIETIES

Barbera, Cabernet Sauvignon, Carmelian, Carignane, Chenin Blanc, Colombard, Grenache, Merlot, Mourvèdre, Muscat, Petite Sirah, Ruby Cabernet, Sauvignon Blanc, Sémillon, Zinfandel

THE APPELLATIONS OF THE CENTRAL VALLEY

CAPAY VALLEY AVA

Yolo County

Established as recently as 2003, this appellation is located 80 miles (130 kilometers) northeast of San Francisco, just east of Napa over the Blue Ridge Mountains, bordering Napa, Lake, and Colusa counties. Currently, the grapes grown are Tempranillo, Syrah, and Viognier.

CLARKSBURG AVA

Sacramento County

A large area south of Sacramento encompassing the AVA of Merritt Island, Clarksburg is cooled by the breezes that roll in off Suisun Bay. The average annual rainfall is 16 inches (41 centimeters), which is greater than the precipitation experienced in areas to the south and west, but less than that which occurs north and east. The area is crisscrossed by more than 1,000 miles (1,600 kilometers) of river and irrigation channels.

DIABLO GRANDE AVA

Sacramento County

This AVA, which is owned entirely by the Diablo Grande Resort Community, encompasses 30,000 acres (12,000 hectares), although only 36 (15 hectares) are planted with vines. The Diablo Grande AVA is named after Mount Diablo, the highest peak in the Pacific Coast Range; the

appellation is in its western foothills where, due to the elevation of 1,000 to 1,800 feet (300 to 540 meters), there is greater rainfall and lower average temperatures than in surrounding areas.

DUNNIGAN HILLS AVA

Yolo County

This is a new AVA located northwest of Sacramento in the rolling Dunnigan Hills. Much of the 1,100 acres (445 hectares) of vineyards cultivated in this area belongs to R. H. Phillips, a go-getting winery that has led the Dunnigan Hills reputation for easy-drinking varietals.

LODI AVA

Sacramento and San Joaquin Counties

An inland area that comprises alluvial fan, plains that are prone to flooding, and terrace lands both above and below the levees. This AVA expanded its southern and western boundaries in August 2002, increasing the viticultural area by 17 percent.

MADERA AVA

Madera and Fresno Counties

A viticultural area not to be confused with Madera County, Madera AVA is located in both Madera and Fresno counties and contains more than 36,000 acres (14,500 hectares) of wine grapes, plus substantial areas of raisin and table grapes.

MERRITT ISLAND AVA

San Joaquin County

An island bounded on the west and north by Elk Slough, by Sutter Slough on the south, and the Sacramento River on the east. Its climate is tempered by cooling southwesterly breezes from the Carquinez Straits, near San Francisco, which reduce the temperature substantially compared with that of the city of Sacramento, located just 14,500 hectares (10 kilometers) north. The soil is primarily sandy loam, while areas to the west have clay-type soil, and to the south, an organically structured, moderately fertile peat dirt.

RIVER JUNCTION AVA

San Joaquin County

As the name suggests, River Junction AVA is located at the confluence of two rivers: the San Joaquin and Stanislaus rivers. It is an area where cool maritime air collects, causing land surrounding the river junction to be significantly cooler than other Central Valley areas, and it is the only place in which a substantial amount of Grangeville fine sandy loam can be found. River Junction AVA is entirely owned by McManis Family Vineyards, which has already planted three-quarters of the appellation's 1,300 acres (520 hectares), with Chardonnay accounting for 90 percent of the planting.

THE WINE PRODUCERS OF THE CENTRAL VALLEY

BOGLE VINEYARDS

Sacramento County

Chris Smith, a former assistant winemaker at Kendall-Jackson in Lake County, is improving the quality at this winery, which has large vineyards on Merritt Island.

✓ Merlot • Petite Sirah

DELICATO

San Joaquin County

★●

From penny-pinching jug wines to real quality bargains, with pure fruit and focus presented in smart blue livery. How this Central Valley winery has come up in the world!

✓ Merlot • Syrah (Shiraz)

E. & J. GALLO WINERY

Stanislaus County

●

From the air, Gallo's Modesto premises might look like an oil refinery, but from the ground you see peacocks roaming freely over well-manicured lawns and inside the building there is a marble-bedecked reception, with waterfalls cascading into large pools surrounded by lush tropical vegetation, containing carp the size of submarines. Gallo not only makes a lot of cheap plonk, but it also

produces inexpensive, yet drinkable varietal wines. The plonk comes under a variety of labels (such as Totts, André, Bartles & James, Carlo Rossi), which encompass coolers, sweet wines from foxy-flavored native grapes such as Concord, and most of the generics (Burgundy, Chablis, Rhine), while the varietals bear the Gallo name itself (the nonvintage Cabernet Sauvignon is a real penny-saver). Some generics such as Hearty Burgundy and Chablis Blanc can cross the divide into the reasonably drinkable (sometimes amazingly drinkable) category, and the better generics also carry the Gallo name; there is a big difference between Gallo Hearty Burgundy or Chablis Blanc and Carlo Rossi Burgundy or Chablis. This is how the brothers Ernest and Julio Gallo, two struggling grape-growers who had to borrow money to buy a crusher when Prohibition ended, built up their business to become the most powerful wine producers in the world. This commercial success was not enough, however, as both brothers also wanted the critical acclaim of making some of California's finest wines, which is why they literally moved mountains to terraform their prized Sonoma estate.

But if the Gallo family is satisfied, it should not be. To create Gallo Sonoma with the money it threw at a single project was no challenge at all. If the Gallo family really does want respect and critical acclaim, then I repeat my challenge: give your winemakers in Modesto a free rein to do two things: bottle off small batches of anything exceptional, and allow them to develop pet projects.

I have never been one to condemn the huge wineries because of size. The bigger they are, then the more likely it is that they will come across an outstanding batch of grapes or wine. The choice of losing these little gems in some megablend or of giving them due recognition is what separates the best large wineries from the worst. That Gallo has an army of highly qualified oenologists is beyond question, but it is obvious that those with any creativity will want to express that talent. If Gallo allowed its winemakers to propose and carry out their own projects (such as working with Lodi growers to make the best local Zinfandel possible), this would induce them to stay.

By following these two strategies, Gallo could very quickly attract rave reviews from the most hardened

critics for limited bottlings of truly exciting wines. It would reveal the best that can be expected from California's Central Valley vineyards, verify whether the AVAs that exist deserve to be recognized, and pinpoint any other potential appellations that might exist. That would be a fitting achievement for a company that has benefited more than any other from the Central Valley, and an ideal legacy for which Gallo would always be remembered.

It is easy to recommend Gallo of Sonoma wines (see p.484), but Gallo's penny-pinching brands are a different matter. If you find a good bottling, it will be excellent value, but most wines vary from vintage to vintage, and sometimes even batch to batch of the same vintage.

✓ Cabernet Sauvignon (Turning Leaf Coastal Reserve) •
Sauvignon Blanc (Turning Leaf California)

FICKLIN VINEYARDS

Madera County

★★●

Ficklin is California's leading estate-bottled port-style specialist. The vineyards are planted with authentic Douro varieties such as Touriga Nacional and Tinta Cão, plus

Soução, used in Portugal for Dão.
 ✓ *Fortified* (Old Vine Tinta Port, Touriga Nacional Vintage Reserve, Vintage Port)

FRESNO STATE WINERY

Fresno County
 ★●

While Davis has the best-known university wine course in the US, Fresno is the only one with a commercial winery on its campus, and a very successful one it is too, having amassed a large number of medals since its inception in 1997. However, presentation is of fundamental importance to any wine venture its students might be running in the future, and the new Fresno Winery label launched in 2004 would win no medals whatsoever from any marketing competition worth its salt.

✓ *Barbera* (California, Duarte Linden Hills Vineyard) • *Muscad Canelli* • *Syrah* • *Viognier* (John Berghold Vineyard)

JEFF RUNQUIST

Amador County
 ★★●

Standout wines from a grossly underrated producer who majors on Zinfandel from the Shenandoah Valley, but also produces stunning Petite Sirah from the Central Valley AVA of Clarksburg.

✓ *Barbera* ("R" Nostro Vino Vineyard) • *Cabernet Sauvignon* ("R" Colina Poca Vineyard) • *Petite Sirah* ("R" Enver Salmon Vineyard) • *Pinot Noir* ("R" Sisters Vineyard) • *Primitivo* ("R" Nostro Vino Vineyard) • *Syrah* ("R" Paso Robles) • *Zinfandel* ("Z" Masoni Rach)

JESSIE'S GROVE

San Joaquin County
 ★★●

Tiny production of high-quality Lodi varietals, with especially noteworthy Zinfandel and one of California's few tip-top Carignane wines, made from 115-year-old vines.

✓ *Carignane* (Ancient Vines) • *Zinfandel*

QUADY WINERY

Madera County
 ★

Quady is an eclectic fortified wine specialist *par excellence*, although I am not so fond of the Vya vermouth-style offerings. By contrast, Electra is a low-alcohol (4 percent) Moscato d'Asti-style light wine.

✓ *Fortified* (Muscat—Elysium, Essensia; Port—Starboard) • *Muscad* (Electra)

R. H. PHILLIPS

Sacramento County
 ★★●

A spotless, hard-to-find winery on the Diamond G Ranch in the rolling Dunnigan Hills, R. H. Phillips is well worth searching out for supreme-value wines that are wickedly easy to drink.

✓ *Cabernet Sauvignon* (Dunnigan Hills) • *Alliance* (red Rhône style) • *Diamond G* (Sémillon-Sauvignon) • *Mourvèdre* (EXP) • *Night Harvest Cuvée Rouge*

OTHER APPELLATIONS OF CALIFORNIA

Note This section contains a round-up of the various California wine areas that are not dealt with in the preceding pages. Each of the AVAs listed below can be found on the regional California map (see p.470).

SIERRA FOOTHILLS AVA

In the 1850s, this land of majestic vistas was California's gold-rush country, but since the 1970s scores of new wineries have opened up, mostly of the one-man "boutique" ilk. The Sierra Foothills is a quality-wine area that is definitely not part of the Central Valley. It attracts rugged specialists who, not content with the safe option of farming fertile valley floors, want the challenge of making expressive wine in limited quantities in one of the few areas of California where, owing to the altitude, cultivating grapes is not always possible. In the 19th century, Zinfandel was the king of these mountain vineyards, and quickly reestablished itself as the big, blockbusting, spicy star of the 1980s. However, Sauvignon Blanc and Riesling were quick to take up the challenge, with Barbera and, predictably, Cabernet Sauvignon and Merlot not far behind.

CALIFORNIA SHENANDOAH VALLEY AVA

Amador County

The famous Shenandoah Valley is, of course, in Virginia and, like this AVA, received its status in 1983. The California Shenandoah Valley AVA, which is set amid the Sierra Foothills, was named by Virginia settlers who migrated to California during the gold rush. Vines were first grown here in 1881 when the miners ran out of gold, and, as a result, turned to making wine instead. The soil is well drained, moderately

deep, and consists mostly of coarse sandy loams formed from weathered granitic rock over heavy, often clayey, loam.

EL DORADO AVA

El Dorado County

The soil is mostly decomposed granite, except on Apple Hill, east of Placerville, where an old lava flow exists (see Lava Cap winery). Apple Hill is one of two main winegrowing areas and, as the name suggests, the area is covered with orchards. Orchards invariably predate vineyards in the US and vines always do extremely well wherever apples have grown best. The other main vineyard is located in the southeast of the AVA, between Quitingdale and Fairplay. Go any farther east and not only is it too cold for grapes, but grizzly bears become a real pest.

FIDDLETOWN AVA

Amador County

The Fiddletown viticultural area is located in the eastern Sierra Foothills of Amador County. It differs from the neighboring Shenandoah Valley of California area because of its higher elevations, colder temperatures at night, and greater rainfall. Grapes are grown without any irrigation and the vineyards are located on deep, moderately well-drained, sandy loams.

NORTHERN CALIFORNIA

SEIAD VALLEY

Siskiyou County

Located just 15 miles (21 kilometers) south of the Oregon border, the Seiad Valley AVA is

comprised of 2,165 acres (877 hectares), of which just over 2½ (1 hectare) are planted with vines.

WILLOW CREEK AVA

Humboldt County

This area is influenced primarily by two major climatic forces: the Pacific Ocean and the warmer climate of the Sacramento Valley, 100 miles (160 kilometers) to the east. These create easterly winds that give Willow Creek fairly cool temperatures in the summer and infrequent freezes in the winter. The area to the east of Willow Creek experiences colder temperatures in winter and hotter temperatures in summer.

SOUTHERN CALIFORNIA

CUCAMONGA VALLEY AVA

Los Angeles and San Bernardino Counties

An area of more than 100,000 acres (40,500 hectares), some 45 miles (72 kilometers) from Los Angeles, the Cucamonga Valley was first planted with Mission grapes in about 1840. Despite Prohibition, the vineyards reached their peak in the 1950s, when more than 35,000 acres (14,000 hectares) were under vine. As the viticultural emphasis in California moved northward, these vineyards declined, but there are still five operational wineries and some 2,000 acres (800 hectares) of vine.

MALIBU-NEWTON CANYON AVA

Los Angeles County

A one-vineyard appellation on the south-facing slopes of the Santa Monica Mountains.

SAN PASQUAL AVA

San Diego County

A natural valley located in the Santa Ysabel watershed, the San Pasqual Valley is fed by natural streams that feed the San Diequito River, and is substantially affected by coastal influences. Temperatures are warm in the summer, but seldom very hot, and ocean breezes cool the area, especially during the nighttime. The surrounding areas have a variety of very different climates ranging from tropical, through desertlike, to mountainous.

TEMECULA AVA

Riverside County

Temecula is located in Riverside County, southern California, and includes Murrieta and Rancho California. Marine breezes entering the area through the Deluz and Rainbow Gaps cool the area to moderate temperatures. Sauvignon Blanc and Chardonnay are the most widely planted varieties, and Chenin Blanc and Cabernet Sauvignon the least successful.

LAKE, MARIN, AND SOLANO COUNTIES

The only other counties of significance are Lake, Marin, and Solano, all of which are part of the North Coast AVA. Of these, Lake is the only area of real repute.

BENMORE VALLEY AVA

Lake County

Surrounded by the 2,900-foot (1,000-meter) peaks of the Mayacamas Mountains, this AVA encompasses 125 acres (50 hectares) of vines, but no wineries.

CLEAR LAKE AVA

Lake County

Located between the Mayacamas Mountains and the Mendocino National Forest, Clear Lake's large water mass moderates the AVA's climate. Although this area is best for Chardonnay and Sauvignon Blanc, well-textured Cabernet Sauvignon is also produced.

FAIR PLAY AVA

Amador County

Named after an old gold-mining camp, Fair Play is located in rolling hills at an altitude of 2,000 to 3,000 feet (600 to 900 meters), which, averaged, makes it the highest elevation of any California AVA. Low rainfall and loam soils favor Zinfandel, followed by Rhône and Italian varietals.

GUENOC VALLEY AVA

Lake County

This appellation lies south of McCreary Lake and east of Detert Reservoir. Situated within the North Coast AVA, the valley has a more extreme climate, lower rainfall, and less severe fog than the nearby Middletown area.

NORTH YUBA AVA

Yuba County

North Yuba is located in the middle and upper foothills of Yuba County, immediately west of the Sierra Nevada and north of the Yuba River. This area escapes both the early frosts and the snow of higher elevations in the Sierra Nevada and the heat, humidity, and fog common to the Sacramento Valley lowlands, and the climate is therefore relatively temperate compared with the rest of the AVA.

SOLANO COUNTY GREEN VALLEY AVA

Solano County

Green Valley is sandwiched between the Napa Valley to the west and the Suisun Valley to the east. The soil here is a clay loam and the climate is influenced by the cool, moist winds that blow inland from the Pacific and San Francisco Bay almost continuously from spring through to fall.

SUISUN VALLEY AVA

Solano County

Adjacent to Solano County Green Valley, and a stone's throw from the Central Valley, Suisun Valley AVA enjoys the same cool, moist winds that blow from spring until fall in both of these areas. The soils consist of various forms of clay, and silty and sandy loams.

OTHER WINE PRODUCERS OF CALIFORNIA

SIERRA FOOTHILLS

AMADOR FOOTHILL WINERY

Amador County

The wines from this winery, with its small Shenandoah Valley vineyards, are made by owner and ex-NASA chemist Ben Zeitman.

✓ Zinfandel

BOEGER WINERY

El Dorado County

★

The first winery to reopen the pre-Prohibition Sierra Foothill vineyards, Boeger has established itself as a producer of understated fine wines that take time to flesh out in bottle, more appealing perhaps to European palates than to Californian ones.

✓ Barbera • Classic red blend (Mourvèdre/Syrah, Reserve El Dorado Meritage) • Zinfandel

DOMAINE DE LA TERRE ROUGE

Amador County

★★★

Billed as the winery where the Rhône Valley meets the Sierra Nevada, Domaine de la Terre Rouge

produces elegant, stylish Syrah and an exotically sweet late-harvest Muscat à Petits Grains.

✓ Muscat à Petits Grains • Syrah (Ascent) • Zinfandel

HOLLY'S HILL

El Dorado County

★

A boutique winery concentrating to a large degree on Rhône-style wines, Holly's Hill is planted with the latest French clones from Beaucastel and Rayas.

✓ Grenache (El Dorado) • Syrah (Wylie-Fenaughty) • Zinfandel (Sierra Foothills)

IRONSTONE

Calaveras County

★

Opened in 1994, John Kautz's winery in gold-rush country has already shown a capability for smooth, lush Cabernet Franc and rich, oaky Syrah (labeled Shiraz, as in Australia).

✓ Cabernet Franc (Reserve) • Cabernet Sauvignon (Reserve) • Syrah (California Shiraz—sic) • Zinfandel (Reserve)

LAVA CAP

Placerville

★★★

This underrated producer just gets better and better. Excellent-value

wines, including one of California's finest Petite Sirahs, grown on the volcanic soils, some 2,500 feet (760 meters) up Apple Hill in the El Dorado AVA.

✓ Cabernet Franc • Mourvèdre • Petite Sirah • Syrah (Reserve) • Viognier • Zinfandel

MONTEVIÑA

Amador County

★

Part of Trinchero Family Estates, together with Sutter Home, Montevina is best known for Zinfandel, but has also helped the Latino trend with its Italian varieties planted in the Shenandoah Valley.

✓ Barbera (Amador) • Pinot Grigio • Sauvignon Blanc (California) • Zinfandel

NEVADA CITY WINERY

Nevada County

The ultimate garage winery, Nevada City Winery is located in the historic Miners Foundry Garage, on Spring Street in downtown Nevada City. It was founded in the early 1980s and has gone from strength to strength, winning several awards. red, white, rosé and dessert wines are produced.

✓ Cabernet Franc • Zinfandel

RENAISSANCE

Yuba County

★

Founded by the Fellowship of Friends, Renaissance is a self-sufficient community of like-minded people dedicated to the fine arts, whose wines are made in a circular winery surrounded by an amphitheater of vines in one of the most idyllic spots on earth. Although the quality at Renaissance has always been patchy, due to its reliance on *terroir* and a relatively hands-off approach to winemaking, it has to be said that the high-quality peaks seem to be getting fewer and the best wines today fall a long way short of the world-class 1985 Riesling Special Select Late Harvest.

✓ Late Harvest (Riesling, Sauvignon Blanc Select, Sémillon) • Pinot Noir • Riesling • Syrah

RENWOOD

Amador County

★

These well-made, good-value wines have just started to appear on my radar. The hillside location has produced some fine results.

✓ Barbera (Sierra Series) • Viognier (Sierra Series) • Zinfandel (Fiddleton, Jack Rabbit Flat)

SOUTHERN CALIFORNIA

Southern California, site of the state's first vineyard, has even less land under vine than the Sierra Foothills. Since 1977 it has undergone a revival, particularly in Riverside and, to a lesser extent, San Diego counties.

CALLAWAY

Riverside County
★①

One of the first wineries to prove that parts of southern California have, in fact, excellent microclimates for producing fine-wine grapes.

✓ *Dolcetto* (Temecula Special Selection) • *Merlot* (Coastal)

JOSEPH FILIPPI

San Bernadino County
★①

This 30-year-old winery has recently moved from Fontana to Ranch Cucamonga, where it continues to produce a wide range of wines, including a number of very successful fortified styles.

✓ *Fortified* (Alicante Bouschet Port, Ciello Port Reserve, Oloroso Sherry Library Reserve) • *Mourvèdre* (Library Reserve) • *Muscat Canelli* (Library Reserve)

MAURICE CAR'RIE WINERY

Riverside County
★①

The Van Roekels came to Temecula to retire in 1984, but were sidetracked into just "one more venture" and haven't stopped since.

✓ *Muscat Canelli* • *Sauvignon Blanc*

MORAGA

Los Angeles County
★★

This winery is owned by Tom Jones. Not the singer, but the one who made his millions through Stealth technology. Six acres of Bel-Air real estate worth \$3 million seems an odd place to grow vines when each bottle would have to retail at \$50 for 22 years in order to gross—not cover—the original investment. Viticulturally, however, this tiny sandstone and limestone canyon is a good choice. It has a discernible microclimate with 24 inches (61 centimeters) of rain each year, compared with 15 inches (38 centimeters) on nearby properties, and the wines are also truly fine by any standards. Bel Air is a soft, deep-colored red, Bordeaux-style blend with seamless oak integration and beautifully layered fruit, the flavor building in the mouth. He also makes a tiny amount of fresh, soft, delicately rich Sauvignon Blanc.

✓ *Moraga* (Bel Air) • *Sauvignon Blanc*

THE OJAI VINEYARD

Ventura County
★★★

Adam Tolmach, a former partner in Au Bon Climat, teamed up with Helen Hardenbergh to create this boutique winery. Stylish, smoky-blackcurrant Syrah stands out, but some great Pinot Noir too, all wines of all designations can be top-notch. The white Vin du Soleil is a nonmalolactic Roussanne-Viognier blend.

✓ *Chardonnay* • *Classic white blend* (Vin du Soleil) • *Pinot Noir* • *Sauvignon Blanc* • *Syrah* • *Viognier* (Late Harvest)

THORNTON

San Diego County
★①

Best known for its sparkling wine, particularly its Cuvée Rouge (although not my favorite), but these wines would be much better if sold younger and fresher. In recent years, however, the quality of Thornton's table wines has far exceeded that of its bubbly, and its Nebbiolo can rival the best that California has to offer.

✓ *Classic red blend* (Côte Red) • *Muscat Canelli* • *Nebbiolo* (Curran Ranch) • *Rosé* (Grenache) • *Sémillon* (Miramonte Vineyard) • *Sparkling wine* (Brut Rosé, Cuvée de Frontignan) • *Zinfandel* (Lopez Vineyard, Old Vine)

LAKE, MARIN, AND SOLANO COUNTIES

GUENOC WINERY

Lake County
★①

This was once the property of Lillie Langtry (a mistress of Edward VII, when he was the Prince of Wales), and her picture is used to market one of these excellent-value wines.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Classic red blend* (Langtry Meritage, Victorian Claret) • *Classic white blend* (Langtry Meritage) • *Petite Sirab* (North Coast, Serpentine Meadow) • *Zinfandel*

KALIN CELLARS

Marin County
②

After waiting for four years before selling his 1990 Chardonnay, only to attract great acclaim, microbiologist Terry Leighton has stretched his late-release philosophy to bizarre lengths. In October 2004, for example, Leighton decided the time was right to release his 1996 Potter Valley Sauvignon Blanc! On average, he puts his whites on the market when they are six years old,

and his reds when they are eight years old. This works better for some styles than others. While Leighton was initially to be applauded, it is always best to err on the side of youth, as the wine buying public can always cellar a wine, but cannot turn back the clock.

KENDALL-JACKSON

Lake County
★★①

It's amazing to think that when I started researching the first edition of this encyclopedia, the Kendall-Jackson brand was barely 12 months old. Since then, K-J has become one of California's best-selling brands, although its impact on export markets has been minimal. In the US this company has become so successful that some critics now love to bash the brand they helped to create, when really it is only the obviousness of the entry-level Vintner's Reserve and cheaper subsidiary brands they object to. Yet it is the obviousness of these wines that make them so popular, and the people who buy Vintner's Reserve seldom read a wine critic's column, so what's the point of putting question marks in the minds of those who do? Better instead to point out the plus points, and K-J has plenty of those, not least in its higher level offerings, where the wines pack in one hell of a lot of quality at what are relatively inexpensive prices. K-J is a private company belonging to Jess Jackson, who also owns Cambria (which is run by his wife, Barbara Banke), La Crema, Edmeades, and Stonestreet. Other brands include Camelot, and Pepi.

✓ *Cabernet Sauvignon* (Great Estates, Hawkeye Mountain, Napa Mountain, Stature) • *Chardonnay* (Camelot, Clark, Durell, Stature, Grand Reserve) • *Classic red blend* (Stature Meritage) • *Muscat Canelli* (Vintner's Reserve) • *Pinot Noir* (Great Estates, Stature) • *Riesling* (Vintner's Reserve) • *Zinfandel* (Great Estates)

ORFILA VINEYARDS & WINERY

San Diego County
★①

Good value wines, including the odd gem that punches well above its weight, from the winery of Argentinian Alejandro Orfila, who

was twice elected Secretary General of the Organization of American States.

✓ *Muscat Canelli* • *Sangiovese* (Collina Estate) • *Syrah* (San Pasqual Valley) • *Viognier* (Lotus)

SEAN THACKREY AND COMPANY

Marin County
★★

San Francisco art dealer Sean Thackrey loved Burgundy, which led him to establish this winery in 1980 and, naturally enough, try his hand at sculpting Pinot Noir. It was not until the late 1980s that his big, thick, richly flavored wines began to appear and quickly attracted attention. Since then Thackrey's obsession for fermenting under the stars, along with several other artisanal quirks of ancient winemaking, have intrigued critics and consumers alike.

✓ *Petite Sirab* (Sirius) • *Syrah* (Orion)

STEELE

Lake County
★★

This is the personal label of Jed Steele, who is a former Kendall-Jackson winemaker and a highly regarded wine consultant. His debut vintage was 1991, and his brightly flavored, brilliantly stylish wines made an instant impact. Excellent all around, but truly excels in his single-vineyard Pinot Noir range. The second label is Jed Steele's Shooting Star.

✓ *Chardonnay* • *Pinot Blanc* (Santa Barbara) • *Pinot Noir* • *Zinfandel* (Catfish Vineyard)

THE PACIFIC NORTHWEST

Oregon has a wet, maritime climate and has long been noted for its Pinot Noir, whereas Washington is a dry, semidesert wine area that has relatively recently become known for its muscular Bordeaux and Rhône varieties. After decades of needing to ride the Pacific Northwest denomination, both states are now emerging with their own clear identity.

FOR MOST OF its winegrowing history, Washington has not had a reputation for any specific style, which is probably why its wines have taken so long to register with wine drinkers, even though it has always produced a vastly larger volumes of wine than Oregon. The contrary is true for Oregon, which has had a disproportionately high profile for such a small output of wine, due no doubt to its focus on one variety: Pinot Noir.

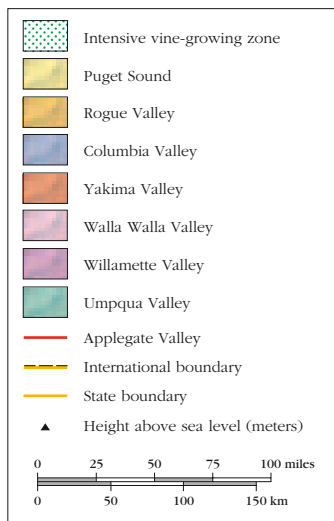

WASHINGTON STATE

In 1775 the Spanish declared the land now known as Washington State to be theirs, but 17 years later, Robert Gray, captain of the first US ship to circumnavigate the globe, claimed it for the Americans. To further confuse the issue of sovereignty, George Vancouver had actually claimed it for the British a month before Gray had even reached the area. However, it remained Spanish until 1819, although it was effectively controlled by America through its domination of the fur trade, and American authority was irrevocably recognized in 1889, when Washington became the 42nd state.

The early wine trade

The first planting of vines in Washington was in about 1825, at Fort Vancouver on the Columbia River, by traders working for the Hudson's Bay Company, though it is not known whether wine was actually produced. Washington's earliest winery was established at Walla Walla in the 1860s, and the first *vinifera* vines were planted at Yakima in 1871, although the production of wine

THE PACIFIC NORTHWEST, see also p.463
 Encompassing thousands of square miles, the Pacific Northwest is a collection of well-dispersed winemaking areas. The ocean defines its western border from northern California in the south to the Canadian border in the north. The sea moderates the climate, although it has little effect on inland Idaho.

on a truly commercial scale was not effected until the post-Prohibition New Deal era allowed funding of the Columbia River irrigation project, which transformed an arid desert into an agricultural paradise.

Washington's wine industry grew rapidly, and 42 wineries were in operation by 1937, but the vineyards, like those in the rest of North America, were essentially *Vitis labrusca*-based. In addition to supplying California wineries with base wines for their abysmal "Cold Duck" blends (see also Andrés Wines, p.535), the industry produced its own cheap, sweet, and often fortified wines from Concord, Island Belle, and other cloyingly foxy-tasting grapes.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

An arbitrary grouping of three northwestern states: Washington, Oregon, and Idaho. The Yakima Valley, running through Washington, is at roughly the same latitude as northern Bordeaux and southern Burgundy. Washington is more logically a southern extension of British Columbia's inland, desert-based vineyards than a northern extension of Oregon's coastal, rainswept hills.

CLIMATE

The temperatures generated by continental air masses are moderated in Washington and Oregon by westerly winds from the Pacific Ocean. Oregon is the coolest state, and Washington the wettest but, with the exception of Puget Sound, all the viticultural areas of Washington are not only hotter, but much drier than those of Oregon, with plentiful sunshine (averaging over 17 hours per day in June) and crisp, cool nights during the critical ripening period. Climatic conditions are generally more continental toward Idaho.

ASPECT

The vines are located in valleys, usually planted on low-lying slopes, but also on the valley floors and, in Oregon, in the hilly hinterland.

SOIL

The soils are deep, fertile, light-textured, silty, sandy, or clay loams over volcanic bedrock, and sometimes more clayey in Oregon.

VITICULTURE AND VINIFICATION

Washington vines are ungrafted, irrigation is widely practiced, with the oldest vines protected by cutting off the water supply prior to winter, thus allowing them to become dormant before the cold sets in. According to various surveys, Washington's viticultural areas are almost phylloxera-free, but some growers say it is rife in the state's Concord vines, which are resistant to the pest, yet for some mysterious reason it has not attacked *vinifera* vines growing on the same soil in adjacent vineyards. There is a general belief that Washington will have to graft over its vines, but it is difficult

from a survival point of view in areas where the winters are so cold.

Oregon is also looking at clonal and rootstock selection, but with much of Domaine Drouhin Oregon's success put down to the tight spacing of its vines, the big issue is whether to go for high-density vineyards. More than 50 percent of Oregon's Pinot Noir is planted at a density of less than 800 vines per acre (2,000 vines per hectare), and 30 percent are between 800 and 1,200 (2,000 and 3,000). A small number have tried increasing the density to between 1,200 and 1,800 per acre (3,000 and 4,500 vines per hectare), but claim there is no discernible advantage. However, the benefits do not kick in until vine density gets above 1,800 per acre (4,500 per hectare), and Drouhin's vines are planted at just under 3,000 per acre (7,450 per hectare). A good proportion of Oregon wine producers who are not certified organic manage both their vineyards and winery using sustainable and environmentally friendly practices.

GRAPE VARIETIES

Oregon

Primary varieties: Pinot Noir, Pinot Gris, Chardonnay
Secondary varieties: Cabernet Franc, Cabernet Sauvignon, Gewürztraminer, Merlot, Müller-Thurgau, Pinot Blanc, Riesling, Sauvignon Blanc, Sémillon, Syrah, Zinfandel

Washington

Primary varieties: Cabernet Sauvignon, Chardonnay, Merlot, Riesling, Syrah
Secondary varieties: Cabernet Franc, Sangiovese, Sauvignon Blanc, Sémillon, Viognier

Idaho

Primary varieties: Cabernet Sauvignon, Chardonnay, Riesling
Secondary varieties: Cabernet Franc, Chenin Blanc, Fumé Blanc, Gewürztraminer, Lemberger, Merlot, Pinot Gris, Pinot Noir, Sauvignon Blanc, Sémillon, Syrah

Vitis vinifera did exist: William Bridgman's Upland Winery in Yakima was making Muscat, Riesling, and Sémillon wines as early as 1934. It was not until 1951 that the first commercial plantings of *vinifera* vines of the post-Prohibition period took place, but the example was not followed. Trial studies of *vinifera* varieties were conducted in the late 1950s at the Washington State University by Dr. Walter Clore. Clore's enthusiasm for these grapes earned him the nickname "Grandpa Grape" and encouraged the American Wine Growers (now called Château Ste. Michelle) to start the *vinifera* ball rolling with the first of several considerable plantings in the early 1960s. By 1978, 2,500 acres (1,000 hectares) of *vinifera* vines were being grown in Washington. Today, there are more than 30,000 acres (12,000 hectares), producing almost 7 million cases of wine, making Washington the second-largest producer of premium wines in the US.

More recent developments

It is amazing to think that when I visited Washington State to research the first edition of this book, Alex Golitzen's Quilceda Creek was the only red wine of consistently great quality that I could find, and that was produced in minuscule amounts with rickety equipment that he kept stashed away in the back of a

RECENT PACIFIC NORTHWEST VINTAGES

2003 Excellent Washington reds, but more for earlier drinking than keeping. Weather-induced mediocrity in Oregon.

2002 Washington produced stunning reds, almost as special as the 1999s, while Oregon was extremely variable due to harvest rain, with only those winemakers who waited making riper, richer wines from longer-hung grapes.

2001 Both states provided very good wines for drinking while waiting for the 1999s to mature.

2000 The first year in which Washington's black grapes surpassed the state's white grape acreage, this was a good but not spectacular vintage, particularly after 1999, whereas Oregon's star shone once more.

1999 The best Washington reds ever, with dense fruit balanced by high acids and supple tannins. Very good Oregon Pinot Noir; on a par with the 1998s, but more accessible.

IRRIGATION IN WASHINGTON

Although some parts of the state have a notoriously wet climate, much of eastern Washington, where most of the vineyards are located, relies on irrigation.

WASHINGTON VERSUS OREGON

The contrast of natural factors affecting viticulture in these two contiguous coastal states offers a fascinating insight into why the wines they produce are so different:

	WASHINGTON	OREGON
Vinifera vines	30,000 acres/12,000 hectares	13,500 acres/5,420 hectares
Black varieties	60%	57%
White varieties	40%	43%
Major varieties	24% Chardonnay 22% Cabernet Sauvignon 21% Merlot 23% Others	53% Pinot Noir 13% Pinot Gris 9% Chardonnay 25% Others

- All but 1 percent of Washington vineyards are located on the hot, desert-dry, eastern side of the Cascades, whereas all of Oregon's vineyards are west of the Cascades where it is cooler, but where rain can be problematic.
- Washington irrigates, Oregon does not.
- Oregon's climate is marine-influenced, Washington's is more continental.
- Only the sturdiest varieties can withstand the cold of Washington's winter, which can kill grafted vines.
- It is Washington's extraordinary amount of sunshine (2,021 hours compared to Oregon's 1,660), rather than heat (1,240 degree days Celsius compared to Oregon's 1,179) that gives Washington State vines the photosynthetic capability of ripening Cabernet and other thick-skinned varieties that struggle in Oregon.
- Washington has no cryptogamic diseases, whereas bunch-rot is a major problem in Oregon.

garage. Now there are more than 320 wineries, with every one of them producing red wines.

As recently as 1996, almost 70 percent of all wine grapes grown in Washington were white varieties, yet by 2002 nearly 60 percent were black varieties. But it is not just the number that makes Washington a quintessentially red-wine region today. From a red-wine perspective, Washington stands shoulder to shoulder with California in terms of sheer quality.

OREGON

The first *vinifera* vines were planted in Oregon's Rogue River Valley as early as 1854. These and other *vinifera* vineyards were still in existence at the time of Prohibition, but, as in Washington, the wine industry in Oregon relied almost entirely on *labrusca* grapes of the Concord variety until the 1970s. Change began in a small way in the 1960s and 1970s, when wineries were established by California dropouts such as Richard Sommer (Hill Crest, 1961), David Lett (The Eyrie Vineyards, 1965), and Bill Fuller (Tualatin, 1973).

Oregon's overnight fame came in 1979, when Lett entered his

1975 Pinot Noir in a blind wine-tasting competition organized by Robert Drouhin. Drouhin's Chambolle-Musigny 1959 had won, but Lett's The Eyrie Vineyards 1975 Pinot Noir came second, trouncing Drouhin's fabulous 1961 Clos-de-Bèze and many other prestigious Burgundies in the process. Since that eventful day, most critics have believed that it would only be a matter of time before the Pinot Noirs of Oregon would rival those of Burgundy.

By the mid-1980s, such success seemed imminent, and the Oregon wine industry, with more than one eye on hyping up the publicity, declared McMinnville host to an annual World Pinot Noir Conference, thereby endorsing the perception that Oregon is Pinot country. This state's vineyards have increased from a total of 5,950 acres (2,380 hectares) in 1992 to 13,400 acres (5,420 hectares) in 2004. Most of the expansion has been due to Pinot Noir, which had almost tripled over the same period, and by 2004 was in excess of 7,000 acres (2,800 hectares), and Pinot Gris, which has almost quadrupled, although from a much lower base, to 1,740 acres (696 hectares) by 2004. Apart from Merlot, most other varieties have virtually stood still. Riesling has actually decreased, as, surprisingly, has Chardonnay.

Oregon's reputation for patchy quality is being left behind as producers learn how to cope with the wet climate, and stop making wines for short-term success at competitions. At one time, almost all the production was consumed locally, but half of the wines are now being sold to other US states. There is room for improvement in exports, which are less than 4 percent, and should be at least half the total production if consumers around the world are to find these wines. Oregon Pinot Noir needs to be exported, not only to raise its international standing, but also because its producers need to spread their risk over as many markets as possible, enabling them to focus sales on the healthiest economies when others are in decline.

IDAHO

At the Chicago World Fair in 1898, a prize was awarded to a wine produced by Robert Schleiser, from his vineyard near Lewiston in Idaho's Clearwater River Valley. In more modern times, grape-growing spread from Washington and Oregon to Idaho in 1969. This state's vineyards today are effectively an extension of Washington State's Snake River, and the altitude of these volcanic-soil vineyards—up to 3,500 feet (1,050 meters)—is the highest in the Pacific Northwest. Such extreme elevation ensures that the vines enjoy sunny days but extremely cold nights, and it is this extreme diurnal difference that produces wines with an unusually high acidity and alcohol balance.

THE WINEMAKING STATES AND APPELLATIONS OF THE PACIFIC NORTHWEST

IDAHO

There are a couple of wineries well north of the Snake River region, in Idaho's Panhandle area, around Coeur d'Alene, the state's largest, deepest, and, quite possibly, most beautiful lake, just a stone's throw from Spokane in Washington. There are now almost 20 wineries in Idaho, but its wine industry remains embryonic, and since Ste Chapelle is one of the largest wineries in the entire northwest, there is no real competition. However, there are much smaller, even more embryonic winemaking states in the US, so it is quite surprising that not one AVA has been proposed for Idaho, especially as there are locally defined areas, and the growing environment is such that

the wines are renowned for their distinctive style of vivid fruit flavors heightened by intrinsically high acidity.

OREGON

APPLEGATE VALLEY AVA

Completely encased within the Rogue Valley AVA, this appellation has higher elevations than surrounding areas, and is largely protected from cooling coastal influences, resulting in a warmer, drier climate that encourages growers to cultivate Chardonnay, Syrah, and black Bordeaux varieties, in addition to Oregon's ubiquitous Pinot Noir.

COLUMBIA VALLEY AVA

Oregon and Washington

See Washington.

ROGUE VALLEY AVA

Within a short distance of California, this is the most southerly and warmest of Oregon's wine regions. With a mixture of elevations and exposures, and soil types ranging from loam to clay and some decomposed granite, it has been difficult for growers to decide what grape to focus on, hence the mishmash of varieties planted. Not surprisingly, Chardonnay is the most consistent, after which Cabernet Sauvignon and Pinot Noir are the most widely cultivated, which illustrates how undecided everyone is.

Even though the elevation of the Rogue Valley AVA is very high, it is the only area in Oregon where Bordeaux varieties ripen regularly.

UMPQUA VALLEY AVA

A great variation in altitude, exposure, and other topographical factors has led to a much greater range of varieties than are grown elsewhere, with such diverse grapes as Riesling and Cabernet every bit as popular as both Pinot Noir and Chardonnay.

WALLA WALLA VALLEY AVA

Washington and Oregon

See Washington.

WILLAMETTE VALLEY AVA

The Willamette Valley is well known for Pinot Noir, although this reputation was founded as recently as 1970, when David Lett planted The Eyrie Vineyards in the Red Hills of Dundee. After Lett's 1975 Pinot Noir embarrassed Drouhin's 1961 Clos-de-Bèze, and Drouhin became serious about founding a winery in Oregon, it was no surprise that the Burgundian chose the Red Hills for the location. The Eola Hills, also in the Willamette Valley, which share the same volcanic soil as the hills of Dundee and straddle Yamhill and Polk counties, is an up-and-coming area within the Willamette Valley.

WASHINGTON

COLUMBIA VALLEY AVA

Oregon and Washington

Columbia Valley is Washington's largest appellation, encompassing two other AVAs, the Yakima Valley and Walla Walla Valley, and no fewer than 99 percent of the state's *vinifera* vines. At approximately 18,000 square miles (46,500 square kilometers), it is one-and-a-half times the size of Belgium, and consists of a large, treeless basin surrounding the Columbia, Yakima, and Snake rivers. There is a vast, undulating, semiarid plateau of between 1,000–2,000 feet (300 and 600 metres) in altitude, through which these three rivers cut many dramatic gorges, particularly just south of their confluence, where the Columbia makes a 180-degree turn to follow the Oregon border, creating some of America's most vivid, striking, and contrasting scenery.

The Columbia Valley encompasses numerous microclimates, but they mostly fall between 1,240 and 1,440 degree-days Celsius, which overlaps regions I and II on the California heat summation system (see p.470). Due to its northerly latitude and cloudless climate, the

Columbia Valley averages two hours' more sunlight during midsummer than the Napa Valley, a state and a half farther south. Astonishingly, there are more than 300 cloud-free days every year, and, although Washington as a whole is the wettest state in the nation, annual rainfall in the Columbia Valley is usually no more than 15 inches (38 centimeters).

Aside from the two subappellations of Yakima and Walla Walla, dealt with later, there are a number of other recognized areas within the Columbia Valley AVA. Without doubt, the most exciting of these is Canoe Ridge, which some people seem to think is in Walla Walla because that is where the Canoe Ridge winery is, but it is, in fact, 50 miles (80 kilometers) to the west, just beyond Paterson. The vines grow on the right bank of the Columbia, where there are great hopes for world-class Merlot, Cabernet, and Chardonnay, although some of its vineyards are prone to winds in excess of 25 miles per hour, the point at which viticulturists have recently discovered the vine temporarily shuts down its metabolism, hindering the ripening process. Other areas of note within the vast Columbia Valley AVA include Northern Columbia Valley (a convenient umbrella appellation for a collection of disparate wine regions, including Saddle Mountain, Wahluke Slope, Royal Slope, and Skookumchuck Creek, where the scenery is often breathtaking, but the wine seldom is) and Snake River (located between Red Mountain—see Yakima—and the Walla Walla, in the broad hills each side of the lower reaches of the Snake River, just a few miles east of Pasco, where it would seem that Cabernet and Merlot fare best).

PUGET SOUND AVA

Seattle has a reputation as one of the world's wettest cities ("They don't tan in Seattle," Californians claim, "they rust!"), and rainfall initially put severe restrictions on what was grown. Bainbridge Island Winery boasts the nearest vines to downtown Seattle, with Müller-Thurgau and Siegerrebe growing just a couple of miles away by ferry, while farther south on the mainland, Johnson Creek Winery grows Müller-Thurgau. Bainbridge Island was the first vineyard in Puget Sound to grow Pinot Noir.

This AVA is a climatic contradiction, since it is significantly drier than Burgundy and sunnier than Bordeaux, yet as cool as the Loire. And, in a state of such homogenous soil, the basin drained by rivers and streams that flow into the Sound is marked by a glacial moraine not seen anywhere else in the Pacific Northwest. However, these statistics are a little like those used by Atlanta to secure the 100th Anniversary Olympics in 1996, as the annual rainfall within Puget Sound ranges between 17 and 45 inches (43 and 114 centimeters), so many areas are a lot wetter than Burgundy, even if the average is drier. Recognized areas within Puget Sound include Mount Baker and Lopez Island.

RED MOUNTAIN AVA

Washington's smallest appellation, Red Mountain, overlaps Yakima AVA, encompassing 4,040 acres (1,616 hectares), of which more than 700 (280 hectares) are under vine. This AVA has a full southern exposure, with gentle slopes that are protected from frost by excellent air-drainage. The sandy loam soil has a high calcium content, which with the diurnal influence of warm summer days and cool nights, encourages increased acidity levels in the grapes grown (Cabernet Franc, Cabernet Sauvignon, Sangiovese, and Syrah).

WALLA WALLA VALLEY AVA

This area has been called the Walla Walla Valley since it was settled in the 1850s, before the creation of either Oregon or Washington. With less than half of one percent of the state's vineyards, Walla Walla would not perhaps seem to warrant its own AVA, but it can receive up to 20 inches (50 centimeters) of rain, which is more than twice as much as the rest of the Columbia Valley, and this makes Walla Walla a truly distinctive viticultural area with the potential to produce outstanding nonirrigated wine. For every mile you travel east from Walla Walla toward the Blue Mountains, you get another inch of rain.

Although viticulture is growing fast in Walla Walla, from just a dozen wineries cultivating 170 acres of vines in 1998, to more than 60 wineries growing over 1,500 acres in 2005, wine remains very much small beer compared to Walla Walla's wheat country, which still runs to almost a quarter of a million acres. But Walla Walla wine punches well above its weight when it comes to the excitement factor. At one time, Mountain Dome was one of the few outsiders to buy grapes from this AVA, traditionally sourcing a third of its Chardonnay and almost all of its Pinot noir from Whisky Creek vineyard. Nowadays Walla Walla is all the rage, with wineries from all over the state queuing up to get their hands on some of its production. A novel experience for local producers who until recently relied heavily on fruit purchased from outside the area. The Walla Walla AVA also encompasses a small chunk of Oregon.

YAKIMA VALLEY AVA

One of the Columbia Valley's two subappellations, the Yakima Valley contains the greatest concentration of Washington's wineries and 40 percent of the state's vineyards. It is in every sense the home and historical center of the Washington wine industry. Most vineyards are on the southeast-facing slopes of the Rattlesnake Hills, especially in the mid-valley area from Sunnyside to Prosser, and intermingle with the apple, cherry, and peach orchards that are found between two old irrigation canals, the Roza and the Sunnyside. The Roza is higher up the slopes and sometimes an odd plot of vines, a windbreak of trees, or an orchard can be seen above this canal, where the deep, lush green of irrigated vegetation stands out in contrast to the yellow-ocher starkness of semiarid desert. In this way, the Yakima is representative of the agricultural success brought to eastern Washington by irrigation projects dating back to the turn of the century, although real prosperity occurred under the great Columbia irrigation project funded by the New Deal. Everything grows here: apples, apricots, asparagus, cherries, hops, pears, lentils, mint, peas, plums, potatoes, and raspberries. The apple farmers arrived first and took all the best vineyard sites (apple trees and vines prefer a similar growing environment). In recent years, vineyards have slowly encroached on prime apple orchards. Old cherry orchards have also proved quite favorable for the vine, but former apple sites have proven superior and those chosen for Red Delicious the best of all (because this variety needs a warm site and is susceptible to frost). Other recognized areas that are located within the Yakima Valley AVA are Red Mountain, Red Willow, and Cold Creek. Red Mountain is just northeast of Benton City, where the wild west is at its wildest and reminiscent of the Australian outback. Despite

this, Red Mountain Cabernet Sauvignon has been an ingredient in such award-winning wines as Quilceda Creek and Woodward Canyon and it is therefore an area for future viticultural development. Red Willow is located 24 kilometers (24 kilometers) southwest of Yakima itself, on Ahtanum Ridge, which is on the opposite side of the valley to the Roza and Sunnyside canals. It has a steep slope, particularly on the west side, where there is little topsoil, most of it having been dispersed by the winds that blow across the ridge. The west side produces small, thick-skinned berries,

whereas the east side, which has less of a slope and a deep topsoil, produces larger berries and softer, less tannic wines. Mike Sauer, who first planted Red Willow in 1973, claims that the complexity of the east-slope soils and the different air movements that occur over the various blocks of the vineyard create eight distinctly different microclimates. Red Willow is the source of Columbia Winery's best Cabernet Sauvignon, its top-class Syrah, and Milestone Merlot, and at least one winery is trying Nebbiolo there. Cold Creek is close to being the driest, warmest spot in the state and

one of the first vineyards to start harvest, yet when the vineyards around Prosser are covered in an autumnal carpet of leaves, just over the low Rattlesnake Hills, the vines of Cold Ridge are still verdant. This is because it has one of the longest growing seasons in Washington, so it is not only the first to start harvesting, but the last to finish, whereas the explanation for its name is that it is one of the most bitterly cold places in the state in winter. Originally noted for Chardonnay, Cold Creek Vineyard has matured into the consistent source for most of Château Ste. Michelle's premium varietal.

THE WINE PRODUCERS OF THE PACIFIC NORTHWEST

IDAHO

HELLS CANYON

Caldwell
★●

One of the older boutique wineries, Hells Canyon Winery was founded in 1980 by Steve and Leslie Robertson, whose longer experience makes their wines stand out from most of the rest in this state.

✓ Merlot (Reserve) • Syrah (Deer Slayer, Falcons Fall Vineyard)

INDIAN CREEK

Kuma
★●

The owner of Indian Creek, Bill Stowe, is a Pinot Noir fanatic stuck in Riesling country!

✓ Pinot Noir • White Riesling

KOENIG

Caldwell
★●

Andy and Greg Koenig run an award-winning distillery and are beginning to get noticed for their wines.

✓ Cabernet Sauvignon (Bitner Vineyard) • Riesling (Ice Wine, Late Harvest) • Syrah (Three Vineyard Cuvée)

PARMA RIDGE VINEYARDS

Parma
★●

Dick and Shirley Dickstein grow Chardonnay, Gewürztraminer, Merlot, Syrah, Viognier, and even Zinfandel at an altitude of 2,400 feet (720 meters) on his 9½-acre (4-hectare) vineyard overlooking the Boise River.

✓ Chardonnay (Reserve)

PEND D'OREILLE WINERY

Sandpoint
★●

Julie and Stephen Meyer have a good reputation for their Vickers Vineyard Chardonnay and were judged "Idaho Winery of the Year" in 2003.

✓ Chardonnay (Vickers Vineyard)

ROSE CREEK VINEYARDS

Hagerman
★●

Former Ste. Chapelle employee Jamie Martin makes some very creditable wine at Rose Creek Vineyards, from both Idaho and Washington fruit, pure and mixed.

✓ Chardonnay • Riesling

STE. CHAPELLE

Caldwell
★●

Let's face it, these wines are not cheap. No, they're practically given away! Established in 1976 and named after the Gothic Ste. Chapelle in Paris, Idaho's largest and oldest winery has set a particularly fine standard for others to follow. Ste. Chapelle is, in fact, the fourth-largest winery in the Northwest, and part of Constellation Brands, the largest wine group in the world.

✓ Cabernet Sauvignon • Riesling (Ice Wine)

SAWTOOTH WINERY

Nampa
★●

Part of Corus Vineyards, Sawtooth draws on a south-facing vineyard on their large ranch just west of Boise.

✓ Cabernet Sauvignon • Merlot • Roussanne • Syrah • Viognier

SNAKE RIVER WINERY

Parma
★●

Improvised canopy management has yielded positive results since 1999.

✓ Cabernet Sauvignon (Arena Valley Vineyard) • Merlot

OREGON

A TO Z

Dundee
★●

If A to Z has any address, it is a post office box in Dundee, but if you wanted to find its winemakers, Sam Tannahill (former Archery Summit winemaker) or his wife Cheryl Francis (former Chehalem

winemaker), you would have to search a number of wineries in Yamhill county. Together with their partners William Hatcher, who developed and managed Domaine Drouhin, and his wife Debra, these two families have established a *négociant*-style business to mop up any excess production from the wineries they work with. Although the individual wines purchased by A to Z are theoretically inferior or, at best, unwanted, Tannahill and Francis should be able to blend them into a harmonious product that is greater than the sum of its parts, if they are gifted at this particular oenological discipline. And it seems that they are. *Food & Wine* magazine named their 2001 Pinot Noir Willamette Valley "the best American Pinot Noir under \$20," and since then A to Z has been set to become Oregon's fastest-growing brand.

✓ Pinot Noir (Willamette Valley)

ABACELA VINEYARDS

Roseburg
★★

A small, family-owned and -operated winery, with an interesting gaggle of grapes, including Tempranillo, Syrah, Merlot, Dolcetto, Malbec, Cabernet Franc, Grenache, Viognier, and Albariño, growing on sunny south-sloping rocky hillsides.

✓ Albariño • Tempranillo (South East Block Reserve) • Syrah • Viognier

ADEA

Gaston
★★

Known as Fisher Family Vineyards until this name was subject to a trademark conflict, when ADEA was adopted. It is always written in capital letters, since it was formed from the first letter of the first names of the Fisher family members, Ann, Dean, Erica, and Adam, who together produce delightful, velvety-textured Pinot Noir wines that are brimming with juicy fruit.

✓ Pinot Noir

ADELSHEIM VINEYARD

Newberg
★★

Fine wines across the range, and most successful for Pinot Noir, which are consistently among the best half-dozen in Oregon.

✓ Chardonnay • Pinot Gris • Merlot (Layne Vineyards Grant's Pass) • Pinot Noir • Sauvignon Blanc

AMITY VINEYARDS

Amity
★●

Most famous for Pinot Noir, yet this can be Myron Redford's least consistent varietal, as it is always well structured and can sometimes lack the fruit to support the tannin. However, when there is plenty of fruit, Amity makes one of the best-value Pinot Noirs in Oregon. Produces some sulfite-free wines.

✓ Pinot Blanc • Pinot Noir • Riesling

ARCHERY SUMMIT

Dundee
★★

Californian Gary Andrus put Archery Summit on the map with his gorgeously plump, infinitely classy Pinot Noir, but lost ownership of this winery following a very public divorce (see also Gypsy Dancer). Biodynamic experimentation under way.

✓ Pinot Noir

ARGYLE WINERY

Dundee
★★●

Part of the Australian Lion Nathan group, Argyle's exceptional sparkling wine performance is solely due to three people: Allen Holstein, who runs Domaine Drouhin's vineyards as well as Argyle's; Rollin Sole, who is this winery's gifted, laid-back winemaker; and Brian Croser, who was one of the original partners and whose intellectual curiosity into the hows and whys of everything that sparkles was the very catalyst of Argyle's success. Some excellent still

wines are made, even though the Pinot Noir was once dire.

✓ *Chardonnay* (Nuthouse)
• *Pinot Noir* • *Riesling* •
Sparkling wine • *Syrab*
(Nuthouse)

BEAUX FRÈRES

Dundee
★★★

Wine critic Robert Parker owns a share of this vineyard and winery, which is run by his partner Mike Etzel. At approximately 2,400 vines per acre (6,000 per hectare), only Domaine Drouhin is planted at a higher density. These wines were very good when I wrote the previous revision of this book, but now they are sensational. Biodynamic experimentation under way.

✓ *Pinot Noir*

BENTON-LANE

Sunnymount Ranch
★★

A joint venture between Stephen Girard of Girard Winery and Carl Doumani of Stag's Leap, whose vineyard has been certified for its sustainable viticulture by LIVE (Low Impact Viticulture and Enology).

✓ *Pinot Noir* (Reserve,
Sunnymount Cuvee)

BERGSTRÖM

Dundee
★★★

Established in 1997 by the Bergström family, who sent son Josh to France for a postgraduate course in Viticulture and Oenology at Beaune. The standard has been nothing less than exemplary since the first vintage in 1999. Their own winery was built in 2001.

✓ *Pinot Noir*

BETHEL HEIGHTS VINEYARD

Salem
★★

One of the best half-dozen wineries in the state, Bethel Heights' basic Pinot Noir (not the cheaper First Release) is often as good as the individual block bottlings and sometimes can even be better balanced, so it not only ranks as one of Oregon's best-quality Pinot Noirs, it also ranks as one of the best value.

✓ *Pinot Noir*

BRICK HOUSE VINEYARD

Newburg
★★★

These organic wines have shown a dramatic increase in elegance and finesse in recent years. Biodynamic experimentation underway.

✓ *Gamay* • *Pinot Noir*

BRIDGEVIEW

Cave Junction
★★

Located in the Illinois Valley in the Cascades, where the Chardonnay

benefits from a fairly dense cultivation of just over 1,780 per acre (4,450 vines per hectare).

✓ *Chardonnay* • *Pinot Noir*
(since 1994)

CAMERON WINERY

Dundee
★★

An underrated winery with a good, easy-drinking, if sometimes bizarre, style.

✓ *Chardonnay* • *Pinot Blanc* •
Pinot Noir

CHÂTEAU LORANE

Lorane
★★

Linde and Sharon Kester produce a wide range of varieties that is eclectic, bordering on bizarre, with crosses and hybrids mingling with classic to obscure *vinifera*. The Marechal Foch is highly regarded by lovers of that hybrid. Some organic wines are made.

✓ *Chardonnay* • *Pinot Gris*

CHEHALAM

Newburg
★★

One of Oregon's most exciting, up-and-coming wineries, Chehalam draws its fruit from three vineyards, two of which belong to Harry Peterson-Nedry, the major shareholder, while his partners Bill and Cathy Stoller own the other one.

✓ *Chardonnay* (Ian's Reserve) •
Pinot Noir

COOPER MOUNTAIN

Beaverton
★★

This winery produces fine-quality, barrel-fermented Chardonnay from an extinct volcano overlooking the Tualatin Valley. Cooper Mountain was certified organic in 1995, and biodynamic in 1999. Some wines are sulfite-free.

✓ *Chardonnay* • *Pinot Gris* •
Pinot Noir

CRISTOM

Salem
★★

Native yeast fermentations produce some of Oregon's most guggy Pinot Noirs.

✓ *Pinot Noir* • *Viognier*

DOMAINE DROUHIN

Dundee
★★★

Joseph Drouhin has been intrigued by Oregon's potential since Oregon winemaker David Lett entered his 1975 Pinot Noir in a blind wine tasting Drouhin had organized. Although Drouhin's Chambolle-Musigny 1959 won, Lett's wine came second, trouncing Drouhin's Clos-de-Bèze 1961 and many other Burgundies. Ever since Domaine Drouhin's first vintage, 1988, was

released, locals and critics alike have marveled at how Drouhin's wine instantly possessed more color, depth, and complexity than any other Oregon Pinot Noir, yet still maintained the grape's varietal purity and finesse. It appeared that Drouhin had planted his vines three-and-a-half times closer than the average in Oregon. The notion that higher-density vines give better quality more quickly became established on the international grapevine as the reason for Drouhin's success. The locals knew, however, that the wine contained not a single grape from his own vineyard, which was too young. It was all down to the way that Drouhin had handled the grapes, which itself was ironic, because the only reason he started making wine in 1988 with bought grapes was because he wanted hands-on experience of Oregon fruit before committing himself with his own produce.

The 1989 vintage was a revelation and the 1990 was almost as good, but the stunning 1991 (the first made completely by Drouhin's daughter Véronique) was of such a significantly higher order that it led many to believe it was the first 100 percent estate wine, but just one-third of the grapes were from Drouhin's own vineyards. This is hotly disputed by some critics, so I will identify where the balance, in roughly equal parts, came from: Bethel Heights, Canary Hill, Durant, Knudsen, Hyland, and Seven Springs. The 1991 has such structure, weight, and color, yet nothing but the luscious fruit of pure Pinot Noir all the way to the bottom of the glass. I did not think that Oregon Pinot Noir could possibly get any better, until, that is, I tasted it against the 1992 and was dumbfounded.

✓ *Pinot Noir*

DOMAINE SERENE

Carlton
★★

This winery made an excellent debut with the 1992 vintage, but a shaky period followed. It is now finding its feet again.

✓ *Pinot Noir*

ELK COVE VINEYARDS

Gaston
★★

Joe and Pat Campbell can produce easy-going, varietally pure Pinot Noir, but the quality is still a little erratic.

✓ *Pinot Noir* • *Riesling* (Ultima)

EOLA HILLS

Rickreall
★★

Founded in 1986 by Tom Huggins, Eola Hills has made great improvements over the last 10 years, and is now at least as good for Chardonnay as for Pinot Noir.

✓ *Chardonnay* • *Pinot Noir* •

Sauvignon Blanc (Vin d'Or
Late Harvest)

ERATH WINERY

Dundee
★★

Formerly Knudsen Erath, this is sometimes one of the best wineries in Oregon for Pinot Noir, but vintages can lurch between firm-tannic and soft, creamy, and voluptuous.

✓ *Chardonnay* • *Pinot Gris* •
Pinot Noir

EVESHAM WOOD

Salem
★★★

Evesham Wood is a small but expanding winery and is one of Oregon's rising stars.

✓ *Pinot Gris* • *Pinot Noir*

FIRESTEED

Rickreall
★★

This soft, delicious, easy-drinking wine offers brilliant value and is sourced from Oregon vineyards by Washington-based *négociant* Howard Rossbach. Originally devised to satisfy the demands of his mother, Eleanor, whose drinking prowess once featured in *Vogue* magazine, Firesteed is now a brand in its own right

✓ *Pinot Noir*

GYPSY DANCER

Hillsboro
★★

Get in on the ground floor of these great Pinot Noir wines from Californian Gary Andrus, who made some stunning vintages at Archery Summit before losing the winery in a divorce settlement.

✓ *Pinot Noir*

HENRY ESTATE

Umpqua
★★

The Henry Estate is not the most consistent of producers, but when on form can produce one of Oregon's best Pinot Noir wines.

✓ *Classic red blend* (Henry V) •
Riesling (Select Clusters)

KEN WRIGHT CELLARS

McMinnville
★★★

High-performance winery founded by the former Panther Creek owner Ken Wright, who has established a reputation for sumptuous, stylish, expressive Pinot Noir sold under single-vineyard names.

✓ *Chardonnay* (Celio Vineyard)
• *Pinot Noir*

KING ESTATE

Eugene
★★★

This vast and still-expanding vineyard surrounds a high-tech, hilltop winery that promises to put

Oregon on the commercial map with a 200,000-case capacity.

✓ *Pinot Gris* (Vin Glacé) • *Pinot Noir*

LA BÊTE
McMinnville

★

Unfiltered wines made in an uncompromising style.

✓ *Aligoté* • *Pinot Noir*

LEMELSON

Carlton

◎★★

The Lemelson family is as organic-minded as certified organic producers, but does it out of respect for the land, rather than to parade an organically produced sticker on its bottles. The Lemelsons make vividly expressive Pinot Noir wines that brim with bright fruit flavor. Lemelson was certified organic just before the 2004 harvest.

✓ *Pinot Noir*

MONTINORE VINEYARDS

Forest Grove

★◎

A large project by Oregon standards, with all wines 100 percent estate grown, Montinore is at long last beginning to reflect its true potential.

✓ *Pinot Gris* (Entre Deux) • *Pinot Noir* (Parson's Ridge, Winemaker's Reserve)

OAK KNOLL WINERY

Hillsboro

★

This winery used to produce one of Oregon's finest Pinot Noirs, and has been trying very hard since the late 1990s to reclaim that reputation. And if you ever want a pure *labrusca* Oregon wine, this winery has not lost its reputation for that outdated varietal since the 1970s!

✓ *Pinot Noir*

OWEN ROE

Newberg

★★

This winery is the result of a collaboration between Jerry Owen, who looks after the vineyards, and David O'Reilly, who makes and sells these Oregon and Washington wines. The top-of-the-line wines are beautifully presented with photogravure labels bearing the inspired photography of fellow Irishman David Brunn. Entry-level wines are sold under the O'Reilly label. For other David O'Reilly wines, see Sineann.

✓ *Cabernet Sauvignon* (DuBrul Vineyard) • *Chardonnay* (Casa Blanca Vineyard) • *Merlot* (DuBrul Vineyard) • *Pinot Noir* • *Syrab* (DuBrul Vineyard)

PANTHER CREEK

McMinnville

★★

This tiny winery specializes in opulent Pinot Noir wines that rank

among the very finest in Oregon. It also makes a delicious white wine from the Muscadet grape, sold under its synonym of Melon.

✓ *Melon* • *Pinot Noir*

PATRICIA GREEN

Newberg

★★◎

Green is a long-time Oregon winemaker who launched her own operation in 2000, and makes remarkably consistent, delicious, elegant Pinot Noir.

✓ *Pinot Noir*

PENNER-ASH

Newberg

★★

Established by former CEO of Rex Hill winery, Lynn Penner-Ash, who has quickly established a reputation for stylish Pinot Noir.

✓ *Pinot Noir* • *Syrab*

PONZI VINEYARDS

Beaverton

★★

One of Oregon's top-performing Pinot Noirs for more than a decade.

✓ *Pinot Noir*

RAPTOR RIDGE

Cheshire

★◎

"Raptor" is synonymous with bird of prey, and the name was chosen because of the large number of hawks, kestrels, and owls that hunt within the vicinity of this winery and vineyards. The bright, fruity wines produced here are also worth chasing down.

✓ *Pinot Noir*

REDHAWK VINEYARD

Salem

★◎

Proud winner of *Decanter* magazine's Worst Wine Label Awards, Redhawk has an uncanny knack with Bordeaux varieties, and is now moving into Italian and Rhône styles. The most expensive wines here cost less than the cheapest wines at some other wineries.

✓ *Cabernet Franc* • *Cabernet Sauvignon* (Safari Vineyard)

REX HILL VINEYARDS

Newberg

★★

Best known for its line of fine, stylish Pinot Noir wines, which consistently rank in the top half-dozen in Oregon.

✓ *Pinot Gris* • *Pinot Noir*

SHEA WINE CELLARS

Yamhill

★★★

You could not get two more diametrically opposed worlds than Wall Street and farming in Oregon, but Dick Shea made the transition with ease in 1996, and quickly achieved huge respect from local winemakers for his long, classy, complex Pinot Noir.

✓ *Cabernet Sauvignon* • *Merlot*

SIDURI

Santa Rosa

★★

Named after the Babylonian goddess of wine by Adam and Diana Lee, a couple of Pinot Noir fanatics who are based as far south as Santa Barbara's Santa Rita hills, but source their wines from as far north as Oregon's Willamette Valley. The Oregon Pinot Noir is grown at their Archery Summit vineyard, where they reduce yields, yet still end up rejecting up to 85 percent of the barrels made.

✓ *Pinot Noir*

SINEANN

Santa Rosa

★★

Winemaker Peter Rosback and his business partner David O'Reilly source wines for their own label from all over the northwest: Pinot Noir and Pinot Gris from the Willamette and the Hood River valleys; Cabernet Sauvignon, Merlot, and Zinfandel from the Columbia Valley; and Gewürztraminer from the Willamette Valley and the Columbia Gorge. For other David O'Reilly wines, see Owen Roe.

✓ *Cabernet Sauvignon* ("Block One" Champoux Vineyard, Baby Poux Vineyard) • *Fortified* (CJ Port) • *Merlot* (Columbia Valley) • *Pinot Noir* (all Oregon wines) • *Zinfandel* (Old Vine Columbia Valley)

SILVAN RIDGE

Eugene

★

Erratic Pinot Noir lurches between bizarre and brilliant, but surprisingly good Cabernet Sauvignon. Early Muscat Semi-Sparkling is always gorgeously peachy, and occasionally there are some extraordinary late-harvest styles.

✓ *Cabernet Sauvignon* • *Muscat* (Early Muscat Semi-Sparkling) • *Merlot*

SOKOL BLOSSER WINERY

Dundee

★★

This winery produces some lush, seductive, early-drinking Pinot Noirs that regularly rank among some of Oregon's finest. Biodynamic experimentation underway.

✓ *Chardonnay* • *Pinot Noir*

SOTER

Yamhill

★★★

Tony Soter's Oregon venture was established in 1997, and abuts properties such as Beaux Frères and Brick House. In 2003, this vineyard was awarded a LIVE Farming Certificate, which is not organic as such, but recognizes the "sustainable farming practices" that have been employed since the Soter's purchase of the land.

✓ *Chardonnay* • *Pinot Noir*

ST. INNOCENT

Salem

★★

Vineyard-designated wines made from purchased grapes grown in the Eola Hills that rank as some of Oregon's greatest Pinot Noirs.

✓ *Chardonnay* • *Pinot Noir*

THE EYRIE VINEYARDS

McMinnville

★★

The man who started it all, David Lett, also makes Pinot Noir to age, Chardonnay for medium-term storage, and Pinot Gris that is best drunk young.

✓ *Chardonnay* • *Pinot Gris* • *Pinot Noir* (Reserve)

TORI MOR

Dundee

★★

An up-and-coming producer of nicely oaked, fat, juicy Pinot Noir.

✓ *Pinot Gris* • *Pinot Noir*

TUALATIN VINEYARDS

Forest Grove

★★

Classically structured, yet elegant Pinot Noir.

✓ *Pinot Noir*

VALLEY VIEW VINEYARD

Jacksonville

★

This is one of the few consistent producers of Cabernet in Oregon. Jacksonville in the Rogue Valley is one of those idyllic towns everyone should visit. The Anna Maria *cuvée* is a reserve produced only in the best years, thus not available for all vintages in every year.

✓ *Chardonnay* (Anna Maria) • *Cabernet Sauvignon* (Anna Maria) • *Reserve* (Anna Maria) • *Sauvignon Blanc* (Anna Maria)

VAN DUZER

Dallas

★★

This vineyard is located in the foothills of the Van Duzer corridor, where the vines are affected by the cool Pacific air that flows inward to

the Willamette Valley, and the ripening process benefits from the diurnal effect of warm days chased by cool nights. Van Duzer's sustainable farming practices have been endorsed by LIVE.

✓ Pinot Noir

WILLAKENZIE ESTATE

Turner
★★

Located on the rolling hillsides on the Chehalem Mountains, this winery was named after the Willakenzie soil, on which the vineyards are planted, and these vineyards are maintained today by sustainable viticulture.

✓ Pinot Noir

WITNESS TREE

Salem
★★

This vineyard takes its name from an ancient oak tree used as a surveyor's landmark as far back as 1854, during the Oregon Trail era. All wines produced are 100 percent estate grown.

✓ Pinot Noir

WASHINGTON

ANDREW WILL

Vachon
★★★

Andrew Will as a person does not actually exist, as Chris and Annie Camarda, owners of this winery, named it after their nephew Andrew and son Will. These wines are superb, especially the line of beautifully crafted classic red blends.

✓ Cabernet Franc (Sheridan) • Cabernet Sauvignon (Klipsun) • Classic red blend (Champoux, Ciel du Cheval, Seven Hills, Sheridan, Sorella) • Merlot (Klipsun) • Sangiovese (Ciel du Cheval)

APEX CELLARS

Sunnyside
★★

Also known as Washington Hills, this venture was established in the 1980s by Harry Alhadeff, who owned a chain of wine shops and restaurants, and Brian Carter, whose winemaking skills brought the Paul Thomas winery to international attention when there were only 16 wineries in the entire state. Since 1990, Carter has produced a string of superb wines, particularly under the Apex label, which has put this winery among the very elite of Washington's producers.

✓ Cabernet Franc (Bridgman) • Cabernet Sauvignon (Apex) • Chardonnay (Apex) • Gewurztraminer (Apex Ice Wine) • Merlot (Apex) • Riesling (Apex Late Harvest) • Syrah (Apex)

ARBOR CREST

Spokane
★

Formerly a cherry winery, Arbor Crest is owned by the Mielke family, with Kristina Mielke van Lyben Sels the winemaker since 1999. The vines growing around the Cliff House winery, with its spectacular view, are the only ones you are likely to see in or around Spokane, although there are a number of other wineries in the locality. Spokane is not the best place in the world to grow vines. All the best wines from Arbor Crest and its neighboring wineries are made from grapes sourced elsewhere.

✓ Cabernet Sauvignon (Columbia Valley) • Chardonnay (Conner Lee Vineyard) • Classic red blend (Dionysus)

BADGER MOUNTAIN

Kennewick
★

Established in 1983 by Greg and Bill Powers, Badger Mountain became Washington's first certified organic vineyard in 1990. One of the more consistent organic producers, especially in recent years, this winery uses its Powers label to produce wines from grapes that are not grown in its own 100 percent organic farmed vineyards. All Vintners Estate Series wines are organic, and heartily recommended, but those with "No Sulfites Added" are not as consistent.

✓ Syrah (Vintners Estate Series)

BARNARD GRIFFIN

Kennewick
★

Owners Deborah Barnard and Rob Griffin have a track record for Merlot, but have made some splendid Cabernets since the early 1990s and some stunning Syrahs since the late 1990s.

✓ Merlot (Red Mountain Ciel du Cheval) • Sauvignon Blanc (Fumé Blanc) • Syrah (Handcrafted Selection)

BETZ FAMILY VINEYARDS

Woodinville
★★

When I first met Bob Betz, he was a director at Château Ste. Michelle. I thought that here was someone who was good at connecting with visitors, but also a person who, I realized, would be happier with his hands in the soil, getting back to his winemaking roots. Over the years he has become the second only Master of Wine in the Pacific Northwest, and in 1997 he began releasing wine under his own label, while still at Château Ste. Michelle. At that first meeting, Betz was full of enthusiasm for Red Mountain, and that was long before any Washington wine drinkers had heard of it. He left Château Ste. Michelle in 2003, and it is no surprise to find that he now sources

many of his wines from Red Mountain. Production is tiny, just 200 cases or so of each wine.

✓ Cabernet Sauvignon (Père de Famille) • Classic red blend (Clos de Betz) • Syrah (La Côte Rousse, La Serenne)

BOOKWALTER

Pasco
★★

Jerry Bookwalter graduated from UC Davis in 1962, but did not start up on his own until 1983, after 20 years' experience with Sagemoor Farms and various other vineyards in Washington and Oregon. This winery is now run by his son, John.

✓ Cabernet Sauvignon • Merlot

BUTY

Walla Walla
★★

Up-and-coming, artisanal winery established as recently as 2000 by Nina Buty Foster and Caleb Foster, whose Chardonnay and Syrah reflect Calab's eight years at Woodward Canyon Winery, followed by overseas winemaking experience in New Zealand and South Africa. This should be one to keep an eye on.

✓ Chardonnay • Syrah (Rediviva of the Stones)

CADENCE

Seattle
★★

Gaye McNutt and Ben Smith produce small lots of classy red blends: Bel Canto (Merlot-based), Coda (Cabernet Franc-based), Ciel du Cheval (Cabernet Sauvignon-based), Klipsun (Merlot-based), and Tapteil (Cabernet Sauvignon-based). I like all five of these wines, but four are a class apart, and of those, Ciel du Cheval and Tapteil stand out.

✓ Classic red blend (Bel Canto, Ciel du Cheval, Klipsun, Tapteil)

CANOE RIDGE

Walla Walla
★★

Owned by Chalone Vineyards of California, Canoe Ridge used Woodward Canyon and Hyatt Vineyards to make wines before setting up this winery to the east of its Canoe Ridge vineyards.

✓ Merlot (Reserve)

CAYUSE

Walla Walla
★★★★

This exciting boutique winery is owned by Christophe Baron of Champagne Baron Albert. Baron has always been a very enthusiastic Champagne producer, but due to the far too westerly location of his vineyards, he has not been the most consistent. Now he has gone as far west as he can without doubling back on himself, and his wines are extremely consistent. He has planted five vineyards totaling 41

acres (16 hectares), all on stony ground, which prompted Baron to name his venture after one of three local Native American tribes, as a play on the French word for stony "cailloux." Mostly planted with Syrah, plus a few other Rhône varieties. Look out for a future release of Tempranillo. Most of Baron's wines have single-vineyard designations, while those that don't are usually of a humorous ilk; this is a Frenchman with a self-deprecating sense of humor, as his top-performing "Bionic Frog" Syrah demonstrates.

✓ Syrah

CHÂTEAU STE. MICHELLE

Woodinville
★★★

If rated on the top-of-the-line wines alone, Château Ste. Michelle would deserve 2½ stars. However, to increase its overall rating to two full stars since 1997 indicates that this Stimson Lane-owned winery has made huge strides even at entry level. Col Solare is a Cabernet-Merlot blend with a dash of Syrah and Malbec, made in partnership with Piero Antinori. Eroica is the result of a collaboration with Ernest Loosen, and it has caused such a renaissance for this grape in Washington that growers are having to replant it as quickly as they can.

✓ Cabernet Sauvignon (Canoe Ridge Estate, Cold Creek) • Chardonnay (Canoe Ridge Estate, Indian Wells) • Classic red blend (Artist Series Meritage, Col Solare) • Merlot (Cold Creek) • Riesling (Eroica, Ice Wine, Single Berry Select) • Syrah (Reserve)

COLUMBIA CREST

Prosser
★★★

Owned by Stimson Lane, this winery continues to impress, but is in the middle of nowhere, and will never realize its tourist potential. As tourism not only provides profit, but also increases the reputation of a wine area, it seems odd that Stimson Lane did not build its wine wonder-palace in the Yakima Valley, which has the greatest concentration of wineries and almost half the state's vineyards.

✓ Cabernet Sauvignon (Reserve) • Classic red blend (Walter Clore Reserve) • Merlot (Grand Estates, Reserve) • Syrah (Two Vines Shiraz)

COLUMBIA WINERYBellevue
★①

Formerly Associated Vintners, these wines are made by Master of Wine David Lake, who makes some of Washington's best-value red wines.

- ✓ *Cabernet Sauvignon* (Red Willow Vineyard) • *Merlot* (Milestone) • *Syrah* (Red Willow Vineyard)

COUGAR CRESTWalla Walla
★★①

Deborah and David Hansen own 50 acres (20 hectares) of vineyards in the Walla Walla AVA, and had sold their grapes to other wineries for many years when, in 2001, they established this winery at Walla Walla airport. Very strong in red wine generally, with Cabernet Sauvignon the very best performer.

- ✓ *Cabernet Franc* • *Cabernet Sauvignon* • *Merlot* • *Syrah*

COVEY RUNZillah
★

This winery started as a partnership between several Yakima farmers as an outlet for their grapes using the Quail Run label, but they soon fell foul of Quail Ridge in California, and changed the name to Covey Run. Capable of good value, rather than special quality.

- ✓ *Cabernet Sauvignon* • *Chardonnay* • *Classic red blend* (Cabernet-Merlot) • *Riesling* (Ice Wine) • *Syrah* (Barrel Select)

DE LILLE CELLARSWoodinville
★★★

If anything is proof of the strength of Washington's classic red wine blends, it is Chris Upchurch, a self-confessed inveterate blender, who has swiftly realized the potential of this state's vineyards with his line of top-performing blends. Even its second wine, D2, is so good that he had to name it twice (the D stands for Deuxième!), as if to emphasize its modest aspirations, yet it regularly knocks seven bells out of most other proprietary reds. All percentages vary from vintage to vintage, of course, but the D2 is usually around 50 percent Merlot, 35 percent Cabernet Sauvignon, 10 percent Cabernet Franc, and 5 percent Petit Verdot, while both Harrison Hill and Chaleur Estate are effectively 65 percent Cabernet Sauvignon, 25 percent Merlot, and 10 percent Cabernet Franc, the difference being that Harrison Hill is a single vineyard, whereas Chaleur Estate is an *assemblage* of half-a-dozen different vineyards.

- ✓ *Classic red blend* (D2, Harrison Hill, Chaleur Estate) • *Syrah* (Doyenne)

DISTEFANOWoodinville
★★①

Owner-winemaker Mark Newton was a mechanical and nuclear engineer, who first turned his hand to sparkling winemaking in the 1980s, under the Newton & Newton label, but has really begun to shine since 1990, when he started making still wines to honor a wedding vow to his bride, Donna DiStefano.

- ✓ *Cabernet Franc* (Sogno) • *Cabernet Sauvignon* • *Classic red blend* (Ottimo) • *Merlot*

DUNHAM CELLARSWalla Walla
★★

Established in 1995 by Eric Dunham, who was born and brought up in Walla Walla, and served his winemaking apprenticeship under Marty Clubb at L'Ecole No. 41.

- ✓ *Cabernet Sauvignon* (Columbia Valley, Roman numeral series) • *Classic red blend* (Trutina) • *Syrah* (Columbia Valley, Lewis Vineyard)

FIDELITASKennewick
★★①

When flight test engineer Charlie Hoppes gave up his job to set up this winery, his life really took off. Smart, minimalist presentation for far from minimalist wines.

- ✓ *Classic red blend* (Columbia Valley Meritage) • *Syrah* (Yakima Valley)

FIELDING HILLSWenatchee
★★①

Although this is only a small boutique winery and established as recently as 2000, co-owner/winemaker Mike Wade has quickly made a big splash with the serious quality of these wines, which are ready to drink as soon as released, yet can easily age a decade or so.

- ✓ *Classic red blend* (Riverben Red) • *Cabernet Sauvignon* (Columbia Valley)

FIVE STARS CELLARSWalla Walla
★★①

Another up-and-coming Walla Walla boutique winery.

- ✓ *Cabernet Sauvignon* (Walla Walla Valley) • *Merlot* (Walla Walla Valley)

GORDON BROTHERSPasco
★★①

One of the more mature Washington wineries, with a large line of exclusively estate-produced wines. Bill Gordon retired in 1998, the same year that a new winery was built on the vineyard. In 2003, Jeff Gordon hired David Harvey as winemaker.

- ✓ *Chardonnay* • *Classic red blend* (Tradition) • *Syrah*

HEDGES CELLARSBenton City
★★①

I have never tasted a Hedges wine I would not want to drink. Tom Hedges has the amazing knack of being able to produce premium-quality Bordeaux-style reds that are lush, drinkable, and not lacking complexity and finesse within less than a year of the grapes being picked.

- ✓ *Classic red blend* (CMS, Red Mountain Reserve) • *Classic white blend* (Fumé Chardonnay)

HOGUE CELLARSProsser
★★①

Part of the Canadian-based Vincor group since 2001, Hogue Cellars has reinvented itself in recent years and the image today is one of a higher, more focused quality than before.

- ✓ *Cabernet Sauvignon* (Reserve) • *Chardonnay* (Reserve) • *Fumé Blanc* • *Merlot* (Reserve) • *Viognier* (Genesis)

ISENHOWER CELLARSWalla Walla
★

Former pharmacists Brett and Denise Isenhower made their first wine in 2000, but began to build their reputation for great Syrah in 2001, and constructed their own winery in 2002.

- ✓ *Cabernet Sauvignon* (Batchelor's Button) • *Syrah* (River Beauty, Wild Alfalfa)

JANUIKWoodinville
★★

Owned and run by Mike Januik, former Head Winemaker at Château Ste. Michelle. Both "basic" and single-vineyard wines of each varietal are of equally fabulous quality.

- ✓ *Cabernet Sauvignon* • *Merlot*

K VINTNERSWalla Walla
★★

A raunchy line of silky, sensuous, saturated Syrah at prices that must surely double, so buy while you can. Some wonderfully eclectic classic red blends emerging too. Second wines sold under The Magnificent Wine Co. label.

- ✓ *Syrah*

KESTRELProsser
★★①

Established in 1999, Kestrel has rapidly created a reputation for good-value, flavorful wines that are ripe and easy to drink.

- ✓ *Chardonnay* • *Syrah*

KIONA VINEYARDSBenton City
★

The arid backdrop to this lush vineyard illustrates how irrigation can transform a desert. Kiona is the most important vineyard on Red Mountain and, although it might not always hit the bull's eye in the Kiona wines themselves, the same fruit has consistently shown its potential in the wines of Woodward Canyon and has been one of three main ingredients of Quilceda Creek.

- ✓ *Cabernet Sauvignon* (Red Mountain) • *Chenin Blanc* • *Gewürztraminer* (Late Harvest) • *Merlot* (Red Mountain Reserve) • *Riesling* • *Sangiovese*

L'ECOLE NO. 41Lowden
★★①

Marty Clubb has carved out quite a reputation from the wines made at this old schoolhouse. L'Ecole No. 41 is primarily known for its Sémillon, but, although this is very good (particularly the Fries Vineyard), Marty's red wines are a class apart.

- ✓ *Cabernet Sauvignon* (Walla Walla Valley) • *Classic red blend* (Pepperbridge Vineyard Apogee) • *Merlot* (Columbia Valley, Walla Walla Valley) • *Sémillon* • *Syrah* (Seven Hills Vineyard)

LEONETTI CELLARWalla Walla
★★★

Owner-winemaker Gary Figgins has a cult following that is matched only by Quilceda Creek, and asking devotees of either wine which is best is a bit like asking a young kid in the 1960s to choose between the Beatles and the Rolling Stones. Figgins has never swayed from his convictions, but it is clear to see that over time he has perfected his handling of oak to match the distinctive style of his wines. While some of the earlier vintages could be criticized for showing too much oak, any objective observer must acknowledge that for some time now they have been beautifully balanced, highly polished, finely focused wines of great complexity, finesse, and longevity.

- ✓ *Entire range*

LONG SHADOW VINTNERSWalla Walla
②

The rating is undecided because this is such a new venture that only one wine from the inaugural 2003 vintage had been released at the time of writing, but if this ambitious project is only half successful, it should produce truly exciting results. Long Shadow is the culmination of all the dreams and fantasies Allen Shoup had during the 20 years he ran Stimson Lane (Château Ste. Michelle, Columbia Crest, *et. al.*). It

was his collaboration with Piero Antinori and, particularly, Ernst Loosen (which led to Eroica), that convinced Shoup his idea could work. After retiring from Stimson Lane in 2000, he invited several of the world's most iconic winemakers to the sunny slopes where the Snake River and the Yakima River flow into the mighty Columbia, and explained his vision. He wanted them to tour the region, run the soil through their fingers, survey the leafy trellises that spill down the hillsides of the Columbia Valley appellation, and decide where ideally they would grow those varieties they had had a lifetime's experience with. The objective is to create seven or eight stand-alone, ultrapremium wineries, producing no more than 5,000 cases or so, with a focus on a single varietal or blend, made under the supervision of world-famous winemakers, comparable in stature to those they crafted in their native wine regions. Long Shadow Vintners is so named in tribute to the reputation of Shoup's select group of winemakers. So far, only Armin Diel's Poet's Leap Riesling has been released. Watch out for forthcoming wines: Randy Dunn's Feather Cabernet, John Duval's Sequel Syrah, Augustin Huneus and Philippe Melka's Pirouette (Cabernet-Merlot blend), Allen Shoup and Gilles Nicault's Chester-Kidder (Merlot-Cabernet blend with a classic Washington twist of Syrah), and Michel Rolland's Pedestal (Merlot-Cabernet blend).

✓ *Riesling* (Poet's Leap)

MATTHEWS

Woodinville
★★★

Very young, exclusively Yakima Valley operation, Matthews demonstrates an innate sense of class in the quality of wine produced and its presentation in bottle.

✓ *Cabernet Sauvignon* (Elerding Vineyard) • *Syrab* (Hedges Estate)

MCCREA

Rainier
★★

Promoted as "Washington State's first winery dedicated to Rhône varietals," McCrea's efforts were rather patchy initially, as he tried to understand a number of varieties, some of which might never have the potential in this state, but he was one of the first to perfect Syrah.

✓ *Classic red blend* (Sirocco) • *Syrab*

MOUNTAIN DOME

Spokane
★★

Dr. Michael Manz and his family live in a dome that is cut into the side of a mountain. He is one of half a dozen people dotted around the world who have the potential to make truly exceptional sparkling wine.

✓ *Entire range*

NORTHSTAR

Walla Walla
★★★

Consistently one of the finest Merlots in the Pacific Northwest.

✓ *Classic red blend* (Stella Maris) • *Merlot*

OWEN SULLIVAN

Tukwilla
★★★

From a first vintage of a paltry 80 cases in 1997, Bill Owen and Rob Sullivan have quickly built up their sales on a reputation for Bordeaux-style reds full of sultry fruit and a long, lingering finish.

✓ *Cabernet Franc* (Champoux Vineyard) • *Classic red blend* (R3, Ulysses)

PAUL THOMAS

Bellevue
★★★

Underrated because it began with fruit wines, Paul Thomas now makes brilliant-value, vividly fruity wines.

✓ *Classic red blend* (Cabernet-Merlot) • *Chardonnay*

PEPPER BRIDGE

Walla Walla
★★★

Having supplied grapes for some of Washington's greatest wines from its Pepper Bridge and Seven Hills vineyards, Norm McKibben built a classic gravity-fed winery on his property just in time for the 2000 harvest.

✓ *Cabernet Sauvignon* • *Merlot*

PRECEPT BRANDS

Seattle
★★

Established as recently as 2003, Precept Brands is headed by Andrew Browne, who was the CEO of Corus until it was sold for \$52 million to Canandaigua in 2001. Browne is attempting to repeat the success of Corus, but without the overheads and on an even larger scale. Whereas Corus owned wineries such as Covey Run, Columbia Winery, and Paul Thomas, Precept Brands has no winery as such. Browne is taking advantage of excess production, producing *négociant*-style wines under seven Washington labels (Avery Lane, Barrelstone, Painted Stone, Pavin & Riley, Pine & Post, Sockeye, and Washington Hills) in the wineries where he buys the wine. At the same time, Precept Brands launched four Australian labels (Outback Chase, Red Knot, Shingleback, and The Gate) and one Spanish brand (El Paseo).

✓ *Cabernet Sauvignon* (Sockeye) • *Merlot* (Avery Lane, Pavin & Riley) • *Riesling* (Avery Lane, Washington Hills) • *Sauvignon Blanc* (Avery Lane) • *Syrab* (Barrelstone, Washington Hills)

PRESTON WINE CELLARS

Pasco
★★

Bill Preston turned his retirement home into what was, in the 1970s, the largest privately owned winery in the Pacific Northwest.

✓ *Cabernet Sauvignon* (Reserve) • *Syrab* (Preston Vineyards)

QUILCEDA CREEK

Seattle
★★★

Washington's first truly great red wine, Quilceda Creek is still produced in tiny quantities and remains one of this state's very elite. After 25 years of authentic garage winemaking, Alex Golitzen and his son Paul built a state-of-the-art winery in time for the 2004 vintage.

✓ *Entire range*

REININGER

Walla Walla
★★

Since Chuck Reininger established this up-and-coming Walla Walla boutique winery in 1997, he has hardly put a foot wrong.

✓ *Cabernet Sauvignon* • *Merlot* • *Syrab*

RUSSELL CREEK

Walla Walla
★★

Larry Krivoshein made smooth progress from five-gallon jars of homemade wine in 1988 to fine and sophisticated red wines from a fully bonded winery in 1998.

✓ *Cabernet Sauvignon* (Winemaker's Select) • *Classic red blend* (Tributary) • *Syrab* (Walla Walla)

SAGELANDS VINEYARDS

Wapato
★★★

Formerly known as Staton Hills, this winery and its vineyards were taken over by the Chalone Group in 1999 and relaunched as Sagelands in 2000.

✓ *Cabernet Sauvignon* (Four Corners) • *Merlot* (Four Corners)

SEVEN HILLS WINERY

Walla Walla
★★★

Grapegrowers since 1980, Casey McClellan has some of Washington's best vineyards at his fingertips, and it shows in the wonderfully expressive wines he produces.

✓ *Cabernet Sauvignon* (Klipsun, Seven Hills, Walla Walla Reserve) • *Merlot* (Seven Hills)

SPRING VALLEY

Walla Walla
★★★

These wines are made exclusively from Spring's own 40 acres (16 hectares) of vineyards, situated in the midst of over 600 acres (240 hectares) of wheat land that the Derby family has been farming for over a century.

✓ *Cabernet Sauvignon* (Derby) • *Classic red blend* (Frederick, Uriah) • *Merlot* (Muleskinner) • *Syrab* (Nina Lee)

TAMARACK CELLARS

Walla Walla
★★★

Another up-and-coming Walla Walla boutique winery, Tamarack Cellars was established in 1998 by Ron and Jamie Coleman, whose rich, ripe, opulent Cabernet Sauvignon has quickly earned them a reputation.

✓ *Cabernet Sauvignon* (Columbia Valley) • *Classic red blend* (Firehouse Red)

THREE RIVERS

Walla Walla
★

Established in 1999 by Steve Ahler, Bud Stocking, and Duane Wollmuth, Three Rivers has produced a raft of brilliant, award-winning wines in a very short time.

✓ *Cabernet Sauvignon* (Champoux Vineyard) • *Classic red blend* (Meritage) • *Classic white blend* (Meritage) • *Merlot* • *Sangiovese* (Pepper Bridge) • *Syrab* (Boushey Vineyard)

WALLA WALLA VINTNERS

Walla Walla
★★

Owner-winemakers Myles Anderson and Gordon Venneri have established a thriving business, yet still hang on to their day jobs, as an insurance agent and a psychology teacher.

✓ *Cabernet Sauvignon* (Columbia Valley, Walla Walla Valley) • *Merlot* (Columbia Valley, Walla Walla Valley)

WATERBROOK

Walla Walla
★★★

Founded in 1984 by Eric and Janet Rindal, who named this winery to reflect that of Walla Walla itself, which means "running water."

✓ *Cabernet Sauvignon* (Columbia Valley) • *Classic red blend* (Mélange, Red Mountain Meritage) • *Merlot* (Columbia Valley) • *Viognier* (Columbia Valley)

WOODWARD CANYON WINERY

Lowden
★★

This Walla Walla winery has hardly put a foot wrong since it was set up in 1981, making some of the state's most consistent and most elegant, award-winning red wines, showing great finesse and focus.

✓ *Cabernet Sauvignon* • *Classic red blend* (Charbonneau) • *Classic white blend* (Charbonneau) • *Chardonnay* (Celilo Vineyard, Conner Lee Vineyard) • *Merlot* (Columbia Valley)

THE ATLANTIC NORTHEAST

Michigan is currently outclassing New York, despite having only 90 wineries compared with the latter's 203, and nothing like its financial resources. The general consensus is that New York has the greatest potential of all northeastern states, but only a handful of its wineries are working hard to achieve that potential. Virginia promises to be the east coast's Washington State, while Pennsylvania and Ohio are the dark horses.

ALL THAT HOLDS the Atlantic Northeast back is its harsh winters. Although this does not prevent the cultivation of classic grape varieties, it does make grafting wounds highly vulnerable, and this dictates where such grafted vines are planted. If vineyards could be chosen for their ripening potential, rather than for winter survival, the eastern seaboard could rival California, as it has a much greater variation of soils and microclimates. Since the first transgenic vines were produced, only the identity of two genes has stood in the way of the Atlantic Northeast achieving its full potential—the gene that makes *Vitis amurensis* immune to Siberian winters, together with the one that enables native American vines to resist phylloxera.

AMERICA'S OLDEST WINE INDUSTRY

Wines have been made in America's Northeast since the middle of the 17th century, when vineyards were first established on Manhattan and Long Island. The emphasis, however, has always

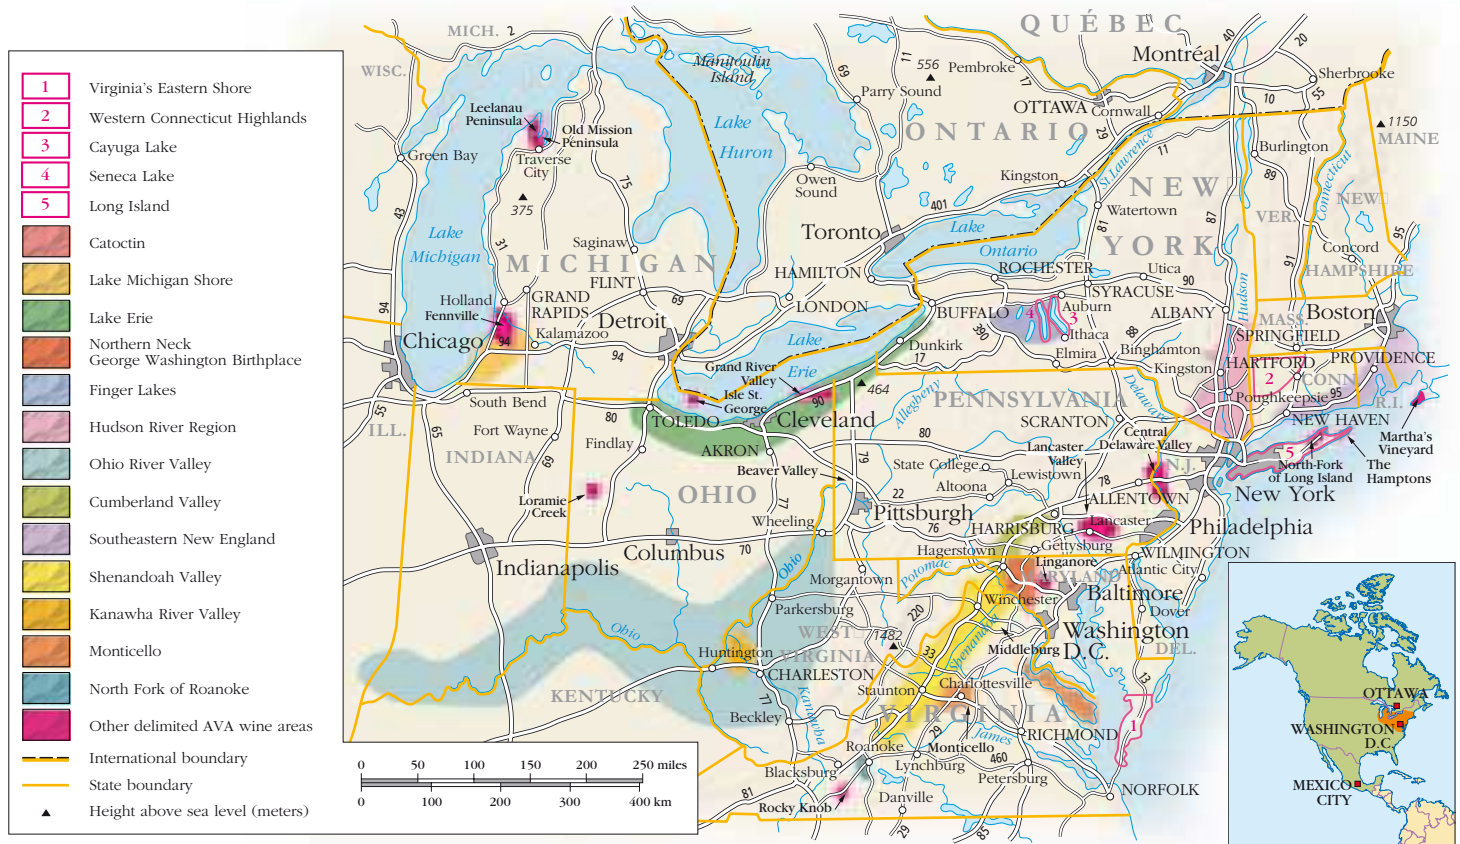

LONG ISLAND, NEW YORK

These rows of vines are widely spaced to accommodate vineyard machinery, and are a far cry from the mid-17th century, when Long Island was one of the first places in the Atlantic Northeast to be planted.

THE ATLANTIC NORTHEAST, see also p.463

The most prominent state in the Atlantic Northeast, New York has established this area's reputation for vinifera wines, but Virginia and Michigan are now rivaling this supremacy. The wine industries of many of the other states are dominated almost entirely by native labrusca.

MECHANICAL HARVESTING

Grapes are picked by machine at vineyards belonging to the Taylor Wine Company. Based at Hammondsport, the winery is one of New York State's most successful.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

An arbitrary grouping of states situated between the Great Lakes and the Atlantic Ocean.

CLIMATE

Despite severe winters, the moderating effect of large masses of inland water, such as the Great Lakes or the Finger Lakes, creates microclimates that make cultivation of *vinifera* vines possible. Harsh winter temperatures represent the most prevalent factor holding back the wine industry in the Atlantic Northeast. There are other more localized drawbacks, such as Virginia's heat and humidity at harvest time, which can cause rapid acidity drop and encourage cryptogamic diseases, but these problems can and will be overcome by viticultural practices.

ASPECT

Many of the vineyards are planted on flat ground around the various lake shores, and on the nearby lower slopes of the various mountain ranges.

SOIL

New York: shale, slate, schist, and limestone in the Hudson River Region. **Virginia:** silty loam and gravel at Rocky Knob, limestone and sandstone at North Fork of Roanoke. **Michigan:** glacial scree in

Fennville. **Ohio:** shallow drift soil over fissured limestone bedrock on Isle St. George. **Pennsylvania:** deep limestone-derived soils in the Lancaster Valley.

VITICULTURE AND VINIFICATION

In many areas, despite some advantageous microclimates, *vinifera* vines can survive the harsh winters only by being buried under several feet of earth before the winter arrives. Sparkling wines are a specialty of New York State and of the Finger Lakes area in particular. Through very careful vineyard practices, the use of the latest sprays, and the aid of new technology in vinification, the number of *vinifera* varieties produced is increasing and their reputation growing.

GRAPE VARIETIES

Native grapes such as Concord, Catawba, Delaware, Muscadine, and Norton predominate; French-American hybrids such as Vidal Blanc, Seyval Blanc, Chelois, Baco Noir, Maréchal Foch, and Aurore are important; and the quantity of *vinifera* varieties, such as Cabernet Franc, Cabernet Sauvignon, Chardonnay, Gewürztraminer, Pinot Blanc, Pinot Gris, Pinot Noir, Riesling, Sauvignon Blanc, Syrah, and Viognier is increasing.

been on the notoriously "foxy" *labrusca* varieties. *Vinifera* vines were not cultivated until as recently as 1957, although the series of events that culminated in this most important development in the Atlantic Northeast's quest for quality wines began in 1934.

Immediately after Prohibition, Edwin Underhill, the president of Gold Seal Vineyards, went to Champagne and persuaded Charles Fournier, the *chef de cave* at Veuve Clicquot, to return with him to the United States. But Fournier found the *labrusca* grape varieties planted in New York State's Finger Lake vineyards far too aromatic. Persuaded by local wine growers that *vinifera* vines could not survive the harsh winters, he began planting hybrid vines (crosses between French and native American varieties). These were initially shipped from France, and then acquired from a winemaker by the name of Philip Wagner, who had already established a considerable collection of hybrids at his Boordy Vineyard in Maryland.

In 1953 Fournier heard that one Konstantin Frank, a Ukrainian viticulturist who had arrived in the US in 1951, had been criticizing the industry for not planting European *vinifera* vines. On his arrival in the US, Frank, who spoke no English and had no money, had washed dishes to support his wife and three children. However, as soon as he had learned enough English to get by, he applied for a job at the New York State viticultural research station in Geneva, informing his prospective employers of his studies in viticulture in Odessa, and his experience in organizing collective farms in the Ukraine, teaching viticulture and oenology at an agricultural institute, and managing farms in Austria and Bavaria. When told that the winters were too harsh for European vines, he dismissed the idea as absurd. Two years later, when Fournier heard Frank's claims, he employed him, taking the chance that his theory would prove correct. Frank's claims were justified, particularly after the great freeze of February 1957. Later that year, some of the hardest *labrusca* vines failed to bear a single grape, yet fewer than 10 percent of the buds on Frank's Riesling and Chardonnay vines were damaged and they produced a bumper crop of fully ripe grapes.

In the 1980s Frank was still battling with the Geneva viticultural station. *Vinifera* had not taken off in New York State, despite Frank's success. He blamed this on the "Genevians," who maintained that *vinifera* was too risky to be cultivated by anyone other than an expert. Frank had, however, become articulate in his new language: "The poor Italian and Russian peasants with their shovels can do it, but the American farmer with his push-button tools cannot."

RECENT ATLANTIC NORTHEAST VINTAGES

2003 A very difficult year at best, with Michigan suffering the worst, as spring frosts devastated vineyards, reducing yields by 50 to 100 percent, causing some wineries to truck in grapes from the west coast. The quality of Northeast-grown wines was extremely variable, with far more lows than highs.

2002 Great red wines produced everywhere except Virginia, but this vintage was even better for white wines, especially Riesling (although not in New York's Finger Lakes).

2001 One of the best ever all-around vintages for the region, with good acidity as well as ripeness. The only exceptions were New Jersey, which endured heavy rains during the harvest, and Ohio, where many vineyards were infested by ladybugs, which tainted some of the wines.

2000 Generally a poor vintage that is best forgotten, although there are always exceptions, and in 2000 these were mostly Michigan wines, such as Ciccone Vineyards Pinot Noir, Black Star Farm's Leorie Vineyard Merlot-Cabernet Franc, Chateau de Leelanau Adante Sparkling Riesling, and Tabor Hill Riesling.

1999 An early flowering and a long, hot growing season produced great Northeast red wines for the second year running, but the whites lacked acidity.

THE WINEMAKING STATES AND APPELLATIONS OF THE ATLANTIC NORTHEAST

CONNECTICUT

No documented evidence exists of the first vineyard in this state, but from the great seal of Connecticut it seems certain that its earliest settlers at least attempted to plant vines. The great seal today depicts three grapevines bearing fruit, but the original seal, carried over from England in 1639, had 15 grapevines and the motto *Sustinet Qui Transtulit* ("who transplants sustains"). It soon became clear, however, that tobacco was the farm crop of choice. The first Connecticut wines of modern times were made by Ciro Buonocore, who planted various French hybrid varieties at North Haven.

SOUTHEASTERN NEW ENGLAND AVA

Connecticut, Rhode Island, and Massachusetts

An area distinguished in New England by the moderate climate, caused by its proximity to various coastal bodies of water.

WESTERN CONNECTICUT HIGHLANDS AVA

A vast 1,500-square-mile (3,900-square-kilometer) area of rolling hills that rise to 500 feet (150 meters) above sea level, and the Western Connecticut Highlands, small mountains that reach to 1,500 feet (460 meters).

DELAWARE

The Swedes encouraged their settlers to plant vines and make wine in 1638, as did the Dutch, after they conquered the Swedes in 1655, but they found it easier to grow apples. Nassau Valley Vineyards is the first and only winery in this state, but it has not shown any distinction so far. Another winery, Felton Crest Vineyards, was not bonded at the time of writing.

DISTRICT OF COLUMBIA

John Adlum, the author of America's first book on winemaking, tried unsuccessfully to persuade the federal government in the 1820s to support a national experimental vineyard with every variety of native vine in existence "to ascertain their growth, soil, and produce."

INDIANA

The first vines were planted by Jean-Jacques Dufour in 1804, at what would be Vevay in Switzerland county, 12 years before Indiana became a state. Dufour was a Swiss immigrant who had been sent by his family from war-torn Europe to search the newly opened lands of America for a location where they could establish a Swiss colony dedicated to winemaking. He landed in 1796, and by 1799 had already planted a vineyard at Big Bend, near Lexington, in Kentucky, but it was not a success, so he purchased land north of the Ohio River, in the newly surveyed Indiana Territory. The wines made by this Swiss colony achieved two firsts: they were made from the first American hybrid (commonly known as Alexander or Cape), and they were the very first

American-grown wines sold to the public. However, this state was also the first to introduce a Prohibition law, which went on the books in Indiana in 1816, forbidding the sale of any alcohol on Sunday (still enforced to this day). By the 1840s numerous towns and whole counties throughout Indiana had gone totally "dry," as indeed they had in Georgia, Iowa, Michigan, New Hampshire, New York, and Ohio.

OHIO RIVER VALLEY AVA

Indiana, Ohio, West Virginia, and Kentucky

This is a vast AVA. Until 1859, Ohio was the leading wine-producing state. However, during the Civil War, black rot and powdery mildew took hold and destroyed nearly all its vineyards.

MAINE

With vintners relying on *vinifera* grapes shipped in from as far afield as Washington, and only just steeling themselves to make the transition from fruit wines to own-grown French hybrids, there is hardly even an embryonic wine industry in this most northerly of America's eastern seaboard states. Maine's most important date in wine history was 1851, when it enacted the first state-wide law prohibiting the manufacture and sale of liquor. Within four years no fewer than 13 of the then 31 states of the US had followed suit. In 2004 there were 10 wineries, but although native and hybrid vines are grown, most of the production is fruit wine, and Bartlett Estate Winemaker's Reserve Blueberry is deservedly better known than any of the wines made from grapes grown in this state.

MARYLAND

In 1662, Lord Baltimore owned Maryland, and he instructed his son, Charles Calvert, the governor, to plant a vineyard and make wine. He planted 240 acres (96 hectares), and another 100 acres (40 hectares) three years later. The vines were native, not European, but the wine was reportedly "as good as the best Burgundy." Taking heart from this success, Lord Baltimore sent his son European vines in 1672, but they all failed to survive their first year. This state now grows no fewer than 140 different grape varieties, although many are French hybrids.

CATOCTIN AVA

Situated west of the town of Frederick, this area's specific *terroir* was well known before the AVA was established, due to the fact that it roughly coincides with the Maryland Land Resource Area. This was determined by the US Soil Conservation Service on the basis of identifiable patterns of soil, climate, water availability, land use, and topography.

CUMBERLAND VALLEY AVA

Maryland and Pennsylvania

The Cumberland Valley is situated between the South Mountains and the Allegheny Mountains and is 80 miles (120 kilometers) long, bending in a northeasterly direction. Although this AVA covers approximately 1,200 square miles (3,100 square kilometers), its vines are confined to small areas where the soil, drainage, rainfall, and

protection from lethal winter temperatures permit viticulture. Vineyards are found on high terraces along the north bank of the Potomac River, on the hills and ridges in the basin of the valley, and in the upland areas of the South Mountains.

LINGANORE AVA

Linganore, Maryland's first viticultural area, lies east of Frederick. It is generally warmer and wetter than the areas to the east, and slightly cooler and drier than those to the west.

MASSACHUSETTS

Wines were made from native grapes in the very first summer of the Massachusetts Bay Colony in 1630, but its dubious quality was probably the reason why the settlers immediately petitioned the Massachusetts Bay Company for Frenchmen experienced in planting vines. Two years later, as part of an agreement with the Colonial Legislature, Governor John Winthrop planted a vineyard on Governor's Island, from which he was supposed to supply as annual rent "a hogshead of the best wine." However, there is no evidence that he succeeded and, as his rent was changed to "two bushels of apples" within just a few years, there is every reason to suspect that he had failed. In modern times, the first *vinifera* vines were planted in 1971 by the Mathieson family on, appropriately, Martha's Vineyard.

MARTHA'S VINEYARD AVA

This AVA is an island of Massachusetts, and is surrounded to the north by Vineyard Sound, to the east by Nantucket Sound, and to the south and west by the Atlantic Ocean. The boundaries of the viticultural area include an area known as Chappaquiddick, which is connected to Martha's Vineyard by a sand bar. Ocean winds delay the coming of spring and make for a cooler fall, extending the growing season to an average of 210 days, compared with 180 days on the mainland.

SOUTHEASTERN NEW ENGLAND AVA

Connecticut, Rhode Island, and Massachusetts

An area distinguished in New England by the moderate climate, caused by its proximity to various coastal bodies of water.

MICHIGAN

Michigan was already a mature winemaking region by 1880, when the first national winegrowing census was taken, but the grapes used were native varieties, and they were grown in the southeast of the state, on the shore of Lake Erie, where virtually no vines exist today. Michigan made the transition to French hybrids in the 1950s and 1960s, although it was not in full swing until the mid-1970s. Meanwhile, the first European varieties were planted at Tabor Hill Vineyard by Len Olsen and Carl Banholzer in 1970, although 20 years later 85–90 percent of Tabor Hill wines were still being made from hybrids. However, that was in the southwest, in what is now Lake Michigan Shore AVA, and the future as far as

quality and diversity of *vinifera* wines was concerned, and a whole raft of new boutique wineries that were about to emerge, lay in the Old Mission Peninsula and Leelanau Peninsula in the northwest of the state. Only one man was crazy enough to plant *vinifera* 140 miles (225 kilometers) north of Canada's Niagara District in 1974, and that was Ed O'Keefe of Château Grand Traverse, where not one single hybrid has ever been planted. O'Keefe is the only person in the entire Michigan wine industry who has been 100 percent committed to *vinifera* from the very start. His constant arguing of his case did not make him many friends among his fellow winegrowers, particularly those of the old school, who were clinging on to their hybrids, but he was right, and in the end he did everyone in the Michigan wine industry a big favor. Today, Michigan has 13,500 acres (5,400 hectares) of vineyards, making it the fourth-largest grape-growing state, but most of this area is still devoted to juice grapes such as Concord and Niagara. Only 1,500 acres (600 hectares) are devoted to wine grapes, making Michigan the eighth largest state for wine grape production.

FENNVILLE AVA

Lake Michigan moderates this area's climate, providing slightly warmer winters and cooler summers than other areas within a 30-mile (48-kilometer) radius. Fennville covers 120 square miles (310 square kilometres) and has been cultivating various fruits for well over a century, including grapes for wine production. The soil is mostly scree of glacial origin.

LAKE MICHIGAN SHORE AVA

Located in the southwest corner of Michigan, this AVA is a geographically and climatically uniform region, although it does encapsulate smaller, very specific *terroirs* such as Fennville, which has its own AVA.

LEELANAU PENINSULA AVA

This AVA is on the western shore of Lake Michigan, northwest of Traverse City. The lake delays fruit development beyond the most serious frost period in the spring, and prevents sudden temperature drops in the fall. Most of Michigan's boutique wineries are located here.

OLD MISSION PENINSULA AVA

This AVA is surrounded on three sides by Grand Traverse Bay, and connected to the mainland at Traverse City. The waters, coupled with warm southwesterly winds, provide a unique climate that makes cultivation of *vinifera* vines possible. The longer established of the two peninsulas, Old Mission houses the smallest number of wineries, but there is renewed interest in the area since Black Star Farms has sourced so many award-winning red wines from here, particularly the Leori Vineyard, and the success of white wines from Peninsula Cellars.

NEW HAMPSHIRE

The first European vines were planted at the mouth of the Piscataqua River by Ambrose Gibbons in 1623, although from his diary we know he suspected that, unlike the native vines that prospered in the wild, they would not survive: "The vines that were planted will come to nothing. They prosper not in the ground where they were set, but them that grow naturally are very good of divers sorts." It would be almost another 250 years before

anyone managed to grow wine grapes in this state. In 1965, John J. Canepa planted 800 Maréchal Foch vines and, although some died in the severe winter of 1965/66, they yielded a thousand pounds of grapes in 1967, whereupon a photograph of the Canepa vineyard appeared in the *Boston Sunday Globe* with the caption "Soon, Yankee Wine"; the impossibility of this feat drew visitors from far and wide, including baffled university professors. In 1968, Canepa yielded three tons of Maréchal Foch grapes with a potential alcoholic strength of between 18 and 20 percent. He gave up the day job and built a commercial winery, which was bonded in 1969, but there are still no more than a handful of wine producers in New Hampshire.

NEW JERSEY

Although far more famous for cider than wine, New Jersey does in fact boast the first American-grown wine to win an international award. It was as early as 1767 that London's Royal Society of the Arts recognized two New Jersey vintners for producing the first quality wine derived from colonial agriculture, although they were from wild vines, not *vinifera*. This state also gave birth to Dr. Thomas Bramwell Welch, the wine-hating dentist who curiously read Pasteur's studies of fermentation, which he turned on their head to sterilize grape juice. It was "Dr. Welch's Grape Juice" that established the grape-juice industry, though it was first sold as "Dr. Welch's Unfermented Wine." By 2004 there were eight wineries in this state, where native and hybrid vines are beginning to make inroads, although fruit wines dominate. The most successful New Hampshire winery for hybrids is the Jewell Town Vineyard at South Hampton.

CENTRAL DELAWARE VALLEY AVA

Pennsylvania and New Jersey

This appellation covers 150 square miles (388 square kilometers), although very little of it is actually planted with vines. The Delaware River modifies the climate.

WARREN HILLS AVA

Wines made in the eastern half of the Central Delaware Valley AVA, which consists of five narrow valleys rather than one broad one, may use this subappellation. The narrow valleys provide hillsides that are exposed and funnel the winds, reducing the risk of frost and rot.

NEW YORK

The first vineyard in what is now New York State was cultivated by the Dutch, when it was still New Amsterdam, in 1642. Very little is known about it other than that it failed to survive the winter, so it was probably *vinifera*. Long Island was an important nursery for imported vines in the late 18th and early 19th centuries. At one time, New York was second only to California in terms of area of vines, but this peaked in 1975 and had dropped to 31,000 acres (12,400 hectares) by 2003, while the area in trailing states has increased significantly since the late 1990s. Furthermore, of New York's 31,000 acres, more than 80 percent is comprised of nine native varieties (one-third being Concord), with only 3,000 acres (1,200 hectares) of *vinifera* and 1,700 acres (680 hectares) of hybrids. Its total, therefore, of (1,880 hectares)

4,700 acres places New York in fourth place after California (529,000 acres; 211,600 hectares), Washington (30,000 acres; 12,000 hectares), and Oregon (13,400 acres; 5,360 hectares). New York is still the number two in terms of wine production, churning out 12.7 million cases compared to Washington's 7.4 million. As New York has just one-tenth of Washington's *vinifera* area, yet makes almost twice as much wine, the bulk of New York's production can only be from native grapes. Only a bigot believes it impossible for native grapes ever to make a fine wine, but they are few and far between—certainly not even half of one per cent; it is the 99.5 per cent of New York's native grape wines that are ruining the efforts of this state's best *vinifera* wineries to create an international reputation for New York wine.

CAYUGA LAKE AVA

This area encompasses vines along the shores of Lake Cayuga, making it part of the Finger Lakes AVA. The soil is predominantly shale and the growing season approximately one month longer than that of most of the Finger Lakes area.

FINGER LAKES AVA

This name is derived from the 11 finger-shaped lakes in west-central New York State. These inland water masses temper the climate, and the topography of the surrounding land creates "air drainage," which moderates extremes of temperature in winter and summer.

HUDSON RIVER REGION AVA

This AVA encompasses all of Columbia, Dutchess, and Putnam Counties, the eastern parts of Ulster and Sullivan Counties, almost all of Orange County, and the northern parts of Rockland and Westchester Counties. This is the Taconic Province, one of the most complex geological divisions where the soil is made up of glacial deposits of shale, slate, schist, and limestone.

LAKE ERIE AVA

New York, Pennsylvania, and Ohio

Overlapping three states, and encompassing the AVAs of Isle St. George and Grand River Valley, Lake Erie moderates the climate and is the fundamental factor that permits viticulture.

LONG ISLAND AVA

The Long Island AVA covers the entire island, encompassing the two preexisting AVAs of North Fork of Long Island and The Hamptons, Long Island.

NORTH FORK OF LONG ISLAND AVA

Although the climate of this AVA is classified as “humid continental,” the sea that surrounds it makes it more temperate than many other places of the same latitude in the interior of the US. The growing season is about one to three weeks longer than in the South Fork of the Island and, in general, the sandy soils contain less silt and loam, but are slightly higher in natural fertility.

SENECA LAKE AVA

Because Seneca Lake is the deepest of New York’s 11 finger lakes, it is in permanent use by the US Navy’s sonar testing platform. With a maximum depth of 678 feet (203 meters), this 35-mile- (56-kilometer-) long body of water in the heart of New York wine country does not freeze, its stored heat warms the surrounding area, and this effect is largely responsible for its success as a wine-growing region. Although best known for Riesling—the steep, slate slopes are ideal for this variety—it is often planted on silty, sandy, or loamy soils, while other varieties such as Pinot Noir are wasted on slate-rich soils, when they would do much better elsewhere.

THE HAMPTONS, LONG ISLAND AVA

The Hamptons has been a productive agricultural area for 300 years. It lies within Suffolk County, next to North Fork of Long Island, with the Peconic River and Peconic Bay its northern boundary. This AVA includes Gardiners Island.

OHIO

When Nicholas Longworth arrived in Cincinnati in the early 1820s, he studied law for a mere six months before setting up in a practice that made him a millionaire. As a hobby, he planted a vineyard in a part of Cincinnati known as Tusculum, but many of the vines he imported from Europe died. Longworth thus turned to native American varieties and quickly discovered Catawba, the so-called “wonder grape,” which he planted in 1825. Three years later he made his first Catawba wine and was so impressed that he retired from law to devote his energy to viticulture and winemaking, planting hundreds of acres. At first he produced still wine, but as soon as he made sparkling Catawba, it took off. In 1854, Henry Longfellow even wrote an Ode to Catawba Wine in which he compared it with two of the most famous growths of Champagne, and by 1858 the fame of Catawba had spread as far as Europe, where the *Illustrated London News* reported that “Sparkling Catawba, of the pure, unadulterated juice of the Catawba grape, transcends the Champagne of France.” By 1860, one-third of all the vines in America were planted along the banks of the Ohio, which boasted twice the acreage of California’s vineyards, making Ohio the wine center of the New World prior to the Civil War. Between 1980 and 2000, the number of wineries in this state hardly wavered, moving from 44 to an equally sedate 47, but it has more than doubled since, reaching 100 by 2004, and indicating that some people now think that Ohio could regain its past glories.

GRAND RIVER VALLEY AVA

Located within the Lake Erie AVA, the lake protects these vines from frost damage and forces a longer growing season than vineyards situated in inland areas. The river valley

increases “air drainage,” giving this AVA a sufficiently different microclimate to warrant its distinction from the Lake Erie AVA.

ISLE ST. GEORGE AVA

The northernmost of the Bass Islands, vines have been grown here since 1853. Today they cover over half the island. Although tempered by Lake Erie, the climate is cooler in the spring and summer, and warmer in the winter, than mainland Ohio. The region is frost-free for 206 days a year, which is longer than for any other area in Ohio. The shallow drift soil over fissured limestone bedrock is well suited to viticulture.

LORAMIE CREEK AVA

This small AVA covers only 3,600 acres (1,460 hectares) in Shelby County, west-central Ohio. Moderate-to-poor drainage means vines must be grown on slopes and ridges to prevent “wet feet.”

LAKE ERIE AVA

New York, Pennsylvania, and Ohio

Overlapping three states, and encompassing the AVAs of Isle St. George and Grand River Valley, Lake Erie moderates the climate and is the fundamental factor that permits viticulture.

OHIO RIVER VALLEY AVA

Indiana, Ohio, West Virginia, and Kentucky

This is a vast AVA. Until 1859, Ohio was the leading wine-producing state. However, during the Civil War, black rot and powdery mildew took hold and destroyed nearly all its vineyards.

PENNSYLVANIA

In 1683 William Penn established a vineyard with French and Spanish varieties he had brought with him, but they failed. However, Conrad Weiser, who arrived at the Penn colony in 1729, and became the greatest Indian interpreter of his time, was spectacularly successful with his vineyard, planted near Womelsdorf in the Tulpehocken Valley. Chambourcin is widely regarded as the most successful variety in this state today, although some good *vinifera* wines are also produced. In 2003, 14 Pennsylvania Limited Wineries established the Pennsylvania’s Premium Wine Group, which introduced its PQA (Pennsylvania Quality Assurance) certification system. In order to be awarded a PQA seal, a wine has to be “made to prescribed quality standards as well as be approved by a professional tasting panel.” Its success will depend on how stiff the selection process is, and that will take time for critics to assess, but in 2003 a total of 44 wines from member wineries were awarded the PQA seal.

CENTRAL DELAWARE VALLEY AVA

Pennsylvania and New Jersey

This appellation covers 150 square miles (388 square kilometers), although very little of it is actually planted with vines. The Delaware River modifies the climate.

CUMBERLAND VALLEY AVA

Maryland and Pennsylvania

The Cumberland Valley is situated between the South Mountains and the Allegheny Mountains and is 80 miles (120 kilometers) long, bending

in a northeasterly direction. Although this AVA covers approximately 1,200 square miles (3,100 square kilometers), its vineyards are confined to the relatively small areas where the soil, drainage, rainfall, and protection from the lethal winter temperatures permit viticulture. Vineyards are found on high terraces along the north bank of the Potomac River, on the hills and ridges in the basin of the valley, and in the upland areas of the South Mountains.

LAKE ERIE AVA

New York, Pennsylvania, and Ohio

Lake Erie AVA overlaps three US states and encompasses the AVAs of Isle St. George and Grand River Valley. Lake Erie itself moderates the climate and is the fundamental factor that permits viticulture.

LANCASTER VALLEY AVA

Grapes have been grown in Lancaster County since the early 19th century but have only recently provoked outside interest. The vines are grown on a virtually level valley floor, at an average altitude of 400 feet (120 meters), where the deep, limestone-derived soils are well drained. Even so, they have good moisture retention, are highly productive, and differ sharply from those in the surrounding hills and uplands.

RHODE ISLAND

The smallest and most densely populated US state, Rhode Island is not, of course, an island, but is surrounded on three sides by two other states, Connecticut and Massachusetts. The first vines were planted in Rhode Island in the 1820s by Huguenot settlers who successfully made wine, but these settlers were driven out by legal difficulties, after which viticulture did not continue in the state.

SOUTHEASTERN NEW ENGLAND AVA

Connecticut, Rhode Island, and Massachusetts

An area distinguished in New England by the moderate climate, caused by its proximity to various coastal bodies of water.

VERMONT

Although the home of two native grape varieties, Vergennes and Green Mountain, which were commercially significant in the 19th century, Vermont is now more cider country than wine country, which explains why there were no more than two wineries until 1990, and only nine by 2004. Most of these wineries make fruit wines, although a few of them produce wine from own-grown native or hybrid grapes.

VIRGINIA

This was not the first state to make wine. Strangely enough, that honor goes to Florida, where wine was made from wild grapes *circa* 1563; the first settlers in Virginia made wine from “hedge grapes” in 1609. However, Virginia was the first state to attempt the cultivation of *vinifera* grapes for wine, although not by its first governor, Lord De La Warre (which later became corrupted to Delaware), as many sources claim. The first documented attempt to transplant European vines to eastern America was recorded by S. M. Kingbury of the Virginia Company of London, who reported that French

vines and eight French vigneron from Languedoc had been sent out to Virginia in 1619, one year after De La Warre had died at sea. The Virginia Company caused a law to be enacted requiring every householder to plant 10 vines a year "until they have attained the art and experience of dressing a vineyard," but all efforts to cultivate vineyards failed, even though native grapes were rampant in the wild. So desperate was Virginia to succeed that an Act of Assembly was passed in 1658 offering 10,000 pounds of tobacco to the first person to make "two tunne of wine raised out of a vineyard made in this colony." No one ever claimed the prize and, almost 30 years later, the offer was quietly dropped. Today, Virginia has the ability to be the Washington State of America's Northeast, but the negative influence of its hot and humid weather during the growing season, particularly toward the end of *véraison* and at harvest time, must first be overcome. There are two main difficulties. First, the sugar-ripeness of the grapes tends to soar away from the rate at which physiological ripeness progresses, resulting in the production of wines bearing green tannins and depleted acidity. Second, the humidity encourages cryptogamic diseases. Various oenological practices are employed to combat the harsh tannins, but the goal must ultimately be to produce grapes with ripe tannins and a good sugar-acidity balance, rather than to sift out unripe pips (*délistage*). The only way to achieve this is by improving canopy management.

MONTICELLO AVA

Monticello is well known as the home of Thomas Jefferson, who is recorded as having planted wine grapes here. Most of Virginia's best wineries are found in this AVA.

NORTH FORK OF ROANOKE AVA

A valley protected from excessive rainfall in the growing season by mountains to the west and east. The vines are on the limestone southeast-facing slopes and limestone-with-sandstone north-facing slopes. These soils are very different from those in the surrounding hills and ridges.

NORTHERN NECK GEORGE WASHINGTON BIRTHPLACE AVA

This AVA lies on a peninsula 100 miles (160 kilometers) long, between the Potomac and Rappahannock rivers in the tidewater district of Virginia, which runs from Chesapeake Bay in the east to a few miles from the town of Fredericksburg to the west. The vines grow in sandy clay soils on the slopes and hills, and in alluvial soils on the river flats. The favorable climate, with excellent air-drainage, is moderated by the surrounding water.

ROCKY KNOB AVA

This AVA is in the Blue Ridge Mountains, and in spring is colder than nearby areas. This means the vines flower later, enabling them to survive the erratic, very cold early spring temperatures. It also causes a late fruit-set, extending the growing season by about a week. The silty-loam and gravel soil provides good drainage.

SHENANDOAH VALLEY AVA

Virginia and West Virginia

The Shenandoah Valley lies between the Blue Ridge Mountains, and the Allegheny Mountains. This AVA extends south beyond the Shenandoah Valley almost as far as Roanoke.

VIRGINIA'S EASTERN SHORE AVA

This is located in Accomack and Northampton counties along the 75-mile (120-kilometer) narrow tip of the Delmarva Peninsula, with the Atlantic to the east and Chesapeake Bay to the west. The climatic influence of these two large bodies of water helps to alleviate the most severe winter temperatures, but retards the ripening process and can be problematic at harvesttime.

WEST VIRGINIA

Grape-growing began here, along the Ohio River, in the 1830s, when this state was still part of Virginia, and continued after West Virginia had been created during the Civil War. In 2004 there were 17 wineries, mostly producing native, hybrid, and fruit wines, with none standing out as yet.

KANAWHA RIVER VALLEY AVA

This approved viticultural area covers 1,000 square miles (2,600 square kilometers), yet contains just 2½ acres of vines and one bonded winery.

OHIO RIVER VALLEY AVA

Indiana, Ohio, West Virginia, and Kentucky

This is a vast AVA. Until 1859, Ohio was the leading wine-producing state. However, during the Civil War, black rot and powdery mildew took hold and destroyed nearly all its vineyards.

SHENANDOAH VALLEY AVA

Virginia and West Virginia

The Shenandoah Valley lies between the Blue Ridge Mountains, and the Allegheny Mountains. This AVA extends south beyond the Shenandoah Valley almost as far as Roanoke.

BEL LAGO

Cedar
★●

Charlie Edson has no fewer than 30 different clones of Pinot Noir growing in his vineyard, but it is the Cabernet Franc-Merlot-based Tempesta that is his best wine. Under clinical tasting conditions, the American oak is too dominant, but at Hattie's in Suttons Bay (the best restaurant in the region), I was having dinner with several producers, and numerous bottles were being passed around, yet I consumed an undue amount of Tempesta. In fact, I was accused of hogging the bottle! The 2002 Gewürztraminer was the first to show any real promise.

BLACK STAR FARMS

Lake Leelanau
★★★

Michigan's superstar boutique winery (artisanal creamery and luxury B&B inn) has risen to the top under the skillful guidance of Lee Lutes, this state's most gifted red-winemaker. Lutes even manages to bring a touch of class to hybrids, making a yummy Red House Red from a blend of Maréchal Foch, Dornfelder, Regent, and Cabernet Franc.

- ✓ *Classic red blend* (Leorie Vineyard Merlot-Cabernet Franc, Red House Red) • *Pinot Gris* (Arcturos) • *Pinot Noir* (Arcturos) • *Riesling* (Arcturos Late Harvest)

BOWYER'S HARBOUR

Traverse City
②

One of those wineries where the dog is the most famous member of the staff, Bowyer's Harbour is potentially a class act, but has had an unfortunate experience with TCA-tainted corks. The level of taint was mostly low, and would not be noticeable to many customers, but it would be unfair to rate Bowyer's Harbour at this juncture. I can imagine this to be an exciting venture in the near future, so do not be put off.

CHÂTEAU CHANTAL

Traverse City
★★

Owned by a priest who fell in love with a nun and got married. Robert and Nadine Begin gave up their church, but not their beliefs, to live out the ultimate love story. In 1983, they established Château Chantal, with spectacular views of both east and west Grand Traverse Bays, and a guest house so that visitors may enjoy the sun rising and setting over the water.

- ✓ *Riesling* (Late Harvest)

CHÂTEAU DE LEELANAU

Sutton's Bay
★★

The only Michigan winery to be owned by women (Roberta Kurtz and Joanne Smart), Château de Leelanau's 2000 Adante was everything German Riesling Sekt should be, but rarely is.

- ✓ *Sparkling* (Adante Sparkling Riesling) • *Rosé* (Rosé de Cabernet Franc)

CHÂTEAU FONTAINE

Lake Leelanau
★★

Dan Matthies came across a potato farm in the 1970s, and saw it as a

vineyard in his mind's eye. After selling grapes to Good Harbour for 10 years, he used his wife's middle name (Fontaine) as his own label, which was launched in 2000, with 1998 as the inaugural vintage. Initially, Château Fontaine wines were made at Good Harbour, but the Matthies family now has its own winery.

- ✓ *Pinot Gris*

CHÂTEAU GRAND TRAVERSE

Traverse City
★★

Château Grand Traverse was established in 1974 by Ed O'Keefe, the first person in Michigan exclusively to plant *vinifera* vines, ruffling many feathers among the locals in the process. And a good thing it was too, for Michigan wine would not be where it is if he had not been as forceful as he was. The first time I had a couple of pints of Guinness with Ed at his local bar, his life story grew wilder the more we drank. I thought it was just blarney, but back at Château Grand Traverse I did indeed find a scrapbook with old brown cuttings of Ed the Olympic gymnast and Ed the Green Beret colonel being decorated. There was nothing about some of his other stories, but it was more than enough to understand that such a man has no need to fabricate anything.

- ✓ *Classic white blend* (Ship of Fools) • *Riesling* (Botrytized Select Harvest, Dry Icewine, Late Harvest)

CICCONE VINEYARD

Suttons Bay
★★

Tony Ciccone may be the father of rockstar Madonna, but he has eight children, and they are all equal in his eyes. Only one of them, however, is following in their father's viticultural footsteps, and that is Paula, who has studied oenology at Michigan State University. The best-known wine from the Ciccone Vineyard is Gewürztraminer, but the acid is too high, and it has yet to please me, although it will certainly be interesting to see how this variety develops following Paula's *stage* with Maison Trimbach in Alsace in 2004. The finest wine produced here so far has been Pinot Noir, which is light-bodied, but in vintages like 2000 can be extremely elegant, with a lovely length of beautifully pure varietal fruit. I also enjoy Ciccone's Pinot Gris, even though I like to give the man a hard time by asking for a glass of his "orange" wine. In some vintages (notably 2002), he lets this wine pick up a bit of color from the skins. It is more of a peach color than orange in truth, and should really be labeled Blanc de Noirs de Pinot Gris.

- ✓ *Chardonnay* • *Dolcetto* • *Pinot Gris* • *Pinot Noir*

DOMAINE BERRIEN

Berrien Creek
★★

It is worth a visit to this southwestern winery in the Lake Michigan Shore AVA, just to run a hand over the glossy wooden counter.

Fennville
★★

Established in 1973, this was the first winery to produce wines under the Fennville AVA. The 2002 Late Harvest Vignoles, with its high-voltage acidity, is the best example of that grape I have tasted from any producer anywhere.

- ✓ *Vignoles* (Late Harvest)

GOOD HARBOUR

Lake Leelanau
★★

Owner-winemaker Bruce Simpson is one of Michigan's most prolific medal winners.

- ✓ *Chardonnay* • *Riesling* • *Sparkling* (Moonstruck)

L. MAWBY

Suttons Bay
★★

I have been following Larry Mawby since the mid-1990s, in which time he has gone from erratic (making one decent bubbly for every four failures) to remarkably consistent in a surprisingly elegant house style. Not at any time, however, has he had difficulty selling his products. Others saw this and brought out their own bubblys, but in most cases the wines did not sell, so they asked Larry whether he would take the stock off their hands. In the meantime, he had half-jokingly applied for permission to sell a wine called "Sex," and when this was approved, he said yes to his colleagues, took back the fizz they couldn't sell, added a little red wine to make it pink, relabeled it as Sex, and it flew off the shelves quicker than he could stack it. Sex is now made by *cuvée close*, thus it comes under his second M. Lawrence label. It is not a great-quality bubbly, but it is clean, eminently drinkable and the ultimate novelty wine.

- ✓ *Sparkling* (L. Mawby: Blanc de Blancs, Mille, Redd; M. Lawrence: Sex)

LEELANAU CELLARS

Omena
★★

Established in 1974 by father and son Michael and Bob Jacobson, this winery had a brisk business in hybrid wines, and its *vinifera* wines have improved year after year since the late 1990s.

- ✓ *Chardonnay* (Tall Ship) • *Classic red wine* (Meritage) • *Pinot Gris* (Pinot Grigio) • *Riesling* (Late Harvest)

PENINSULA CELLARS

Traverse City
★★

Owned by cherry farmers David and Joan Kroupa, who saw an opportunity to expand the diversity of their 250-acre (100-hectare) farm on Old Mission Peninsula and planted their first vineyard in 1991. This winery was initially known for its Cabernet-Merlot blend, the first hint that red wines were viable in northern Michigan, and the winemaker, Lee Lutes, was lured away by the new Black Star Farms winery. His assistant, Bryan Ulbrich, took over and produced the first world-class Gewürztraminer outside of Alsace in 2002. Ulbrich is a very talented white-wine maker. His Pinot Blanc is also uncannily Alsace-like.

- ✓ *Gewürztraminer* (Manigold Vineyard) • *Pinot Blanc*

SHADY LANE

Suttons Bay
★★

Bill Stouten and Joe O'Donnell planted this vineyard in 1989. Initially, Larry Mawby made the wine, but since 2000 the winemaker has been Adam Satchwell, who studied winemaking under his famous uncle, Jed Steele, at Edmeades.

- ✓ *Chardonnay* • *Pinot Noir*

ST. JULIAN WINE

COMPANY

Paw Paw
★★

Founded in 1921 by Mariano Meconi, this winery was established in Canada, where it was called Border City Wine Cellars for a short while, before being renamed Meconi Wine Cellars. It did not become American until 1934, when Meconi moved his business to Detroit. In 1936 he moved the business to its current location, changing its name once again, to the Italian Wine Company. When the US entered World War II, Meconi sought to avoid antifascist sentiment by changing his company's name for the third and final time. The St. Julian Wine Company is thus the oldest continuously operating winery in Michigan. It is also by far the largest, producing almost as much as all the state's other wineries put together. Although the St. Julian Wine Company is rated ★, one of its products would rate ★★ on its own. The perpetually award-winning Solera Cream Sherry is world class, which would be achievement enough for any winery outside of Jerez, but that it is made exclusively from the Niagara grape makes it all the more miraculous. What lets St. Julian down is the winery itself, which should be condemned, yet the company actually shows it off through its brisk tour business. I have seen a new barrel room, but it is too little, too late. It's about time that owner David Braganini built a new, state-of-the-art facility that Michigan's wine industry can be proud of, and that St. Julian's employees deserve.

- ✓ *Fortified* (Solera Cream Sherry)

TABOR HILLBuchanam
★●

Owned by David Upton, son of the founder of Whirlpool (washing machines), this is one of a small handful of wineries in the Fennville AVA of southwestern Michigan. Tabor Hill also boasts an excellent restaurant.

✓ *Cabernet Franc* • *Riesling*

TABOR HILL
BRONTE WINES

Hartford

This winery was originally founded in Detroit as the Bronte Winery, which became the first firm to market the infamous sparkling wine called "Cold Duck," a carbonated-Concord concoction that enjoyed an extraordinary vogue in the 1960s. With such an ignominious history, it is little wonder that the firm moved to a different neighborhood and assumed another identity!

THE ROUND
BARN WINERYBaroda
★●

Established in 1992 by the Moersch family, who were the first to make wines under the Fennville AVA, this winery was known as the Heart of the Vineyard until 2004, when the name was changed to The Round Barn Winery. This was in deference to the historic round barn that was transported 90 miles (145 kilometers) from Rochester, Indiana, by Amish carpenters. They dismantled the barn into a total of just six beams and then reassembled it, without nails, exactly as it had been originally built. These old barns were round so that the devil could not hide in a corner.

✓ *Muscat* (Muscat Ottonel) • *Pinot Meunier*

WILLOW VINEYARDSSuttons Bay
★●

Just down the road from Ciccone Vineyards, this boutique vineyard and winery was built from scratch (including their home), on a shoestring, by John and Jo Crampton. John worked as a carpenter, while establishing Willow Vineyards, and Jo waitressed at night to make ends meet. A lovelier couple it would be hard to find, and this comes through in the friendliness of their fruit-filled wines.

✓ *Chardonnay* • *Pinot Gris* • *Pinot Noir*

WYNCROFTBuchanan
★●

The most southerly of Michigan's wineries, and one of the smallest, Wyncroft is little heard of, even in state. The style is noticeably fatter than most other Michigan wines.

✓ *Chardonnay* • *Pinot Noir*

NEW JERSEY

33 wineries in 2004

ALBA VINEYARDMilford
★●

This vineyard has occasionally made good Cabernet, but is best for rich, sweet, plummy port-style wines.

✓ *Vintage Port*

TOMASELLOHammonton
★●

This winery, which opened up immediately after Prohibition was repealed, has had 50 years' decent sparkling-wine experience.

✓ *Cabernet Sauvignon* (Atlantic County) • *Chambourcin* (Atlantic County)

UNIONVILLE VINEYARDSRingoos
★●

This is one of New Jersey's newest and fastest-rising wineries.

✓ *Classic red blend* (Nielson Proprietary Reserve) • *Riesling*

NEW YORK

203 wineries in 2004

ANTHONY ROADPenn Yan
★●

After 15 years of selling their grapes to other wineries, Ann and John Martini established Anthony Road in 1990 with wines made from the 1989 harvest.

✓ *Cabernet Franc* • *Chardonnay* • *Riesling*

BEDELLCutchogue
★●

The first harvest of this Long Island winery coincided with Hurricane Gloria in 1985. However, subsequent Bedell vintages have stood the test of time.

✓ *Chardonnay* (Reserve) • *Classic red blend* (Cupola) • *Merlot* (Reserve)

BENMARL WINE COMPANYMarlboro
★●

One of the state's most successful wineries. "Benmarl" is Gaelic for the vineyard's slate-marl soil, and although hybrids are much less trouble, *vinifera* is grown, including award-winning Zinfandel.

✓ *Baco Noir* • *Zinfandel*

BRIDGEHAMPTONBridgehampton
★●●

Long Island's fastest-rising star, Bridgehampton's wines have an intensity of fruit and a fine structure.

✓ *Chardonnay* • *Meritage* (red Bordeaux style) • *Merlot* • *Riesling* • *Sauvignon Blanc*

BROTHERHOOD WINERY

Washingtonville

The oldest winery in continuous operation in the US, Brotherhood Winery was established by a shoemaker called Jean Jacques, who initially sold wine to the First Presbyterian Church. The wines used to be very much of the old school, but are now fresher and crisper in character.

CANANDAIGUA WINE
COMPANY

Canandaigua

The Seneca Native American word "canandaigua" means "chosen place." Even in the late 1980s, this firm had a huge production, but it is now second only in size to Gallo in terms of American production, and its merger with Australia's BRL Hardy to form Constellation Brands makes it the largest wine producer in the world. Various Atlantic Northeast labels include Richards, J. Roget, and Virginia Dare.

CHANNING DAUGHTERBridgehampton
★●

This winery has been on the fast track since Walter and Molly Channing, and partner Larry Perrine, launched their first wines with the 1997 vintage.

✓ *Classic white blend* (Silvanus) • *Merlot* (The Sculptor) • *Tocai Friulano*

FOX RUNHamport
★●

Owner Scott Osborn is one of the movers and shakers in the Finger Lakes wine industry.

✓ *Lemburger* • *Pinot Noir* (Reserve) • *Riesling* (Dry)

DR. FRANK'S VINIFERA
WINE CELLARSHammondspport
★●

Run today by Willy Frank, the son of the legendary Konstantin Frank.

✓ *Riesling* (Dry) • *Sparkling* (Blanc de Blancs)

GALLUCCIO FAMILY
WINERIESCutchogue
★●

Vince Galluccio took over Gristina Vineyards in August 2000, since when both brands have been made here.

✓ *Chardonnay* (Galluccio Cru George Allaire) • *Classic red blend* (Galluccio Cru George Allaire) • *Merlot* (Gristina)

GLENORA WINE CELLARSDundee
★●

Named after the nearby Glenora waterfall, this winery consistently produces crisp and stylish wines.

✓ *Riesling* • *Seyval Blanc* • *Sparkling Wine* (Vintage Blanc de Blancs)

GOLD SEAL

Hammondspport

Originally called the Imperial Winery, this historic firm built its reputation on "New York Champagne." The quality of this sparkling wine was based on 100 years of Champagne expertise, in the form of Charles le Breton of Louis Roederer, Jules Crance of Moët & Chandon, Charles Fournier of Veuve Clicquot, and Guy Davaux of Marne & Champagne, who all worked at Gold Seal. Of these, it was Fournier who stood out, and his name lives on as the brand of this firm's quaffing bubbly.

GOOSE WATCH WINERYRomulus
★●

Under the same ownership as Swedish Hill winery, Goose Watch is an up-and-coming departure from the typical Finger Lakes mold, featuring grapes such as Diamond (*labrusca*), Lemberger, Melody, Merlot, Pinot Gris, and Viognier.

✓ *Lemberger* • *Viognier*

GREAT WESTERN WINERY

Hammondspport

Another historic winery, Great Western is now a subsidiary of The Taylor Wine Company. Its wines are less innovative, despite the occasional good *vinifera*.

HARGRAVE VINEYARDCutchogue
★●

After looking at wine areas nationwide, Alex and Louisa Hargrave established Long Island's first vineyard in 1973, on what used to be a potato farm.

✓ *Cabernet Franc* (Reserve)

HAZLITT'S 1852 VINEYARDSHector
★●

The late Jerry Hazlitt replanted the old family vineyards in 1984.

✓ *Riesling*

**HERMANN J WEIMER
VINEYARD****Dundee**
★①

While working for a certain hybrid aficionado, Weimer produced some outstanding *vinifera* wines from his own vineyard. They received rave reviews, and he has not looked back.

- ✓ *Gewürztraminer* (Dry) • *Riesling* (Dry) • *Sparkling* (Cuvée Brut)

HERON HILL VINEYARDS**Hammondspport**
★①

The name "Heron Hill" is a flight of fancy on the part of advertising copywriter Peter Johnstone, who so liked Finger Lake on a visit in 1968 that he stayed, set up in business with major shareholder John Ingle, and turned winemaker in 1977.

- ✓ *Classic red blend* (Eclipse, Game Bird Red) • *Riesling*

HUNT COUNTRY**Branchport**
★①

Owned and operated by Art and Joyce Hunt, the sixth generation to farm this land, but the first to make wine under their own name.

- ✓ *Vignoles* (Late Harvest)

KEUKA SPRING WINERY**Penn Yan**
★①

After more than 20 years in the business, Len and Judy Wiltberger are beginning to produce wines that are getting noticed outside the Finger Lakes district. In 1999, they even won the Governor's Cup for their 1998 Cabernet Franc, which is remarkable for this part of the wine world.

- ✓ *Cayuga* • *Vignoles* • *Riesling*

KNAPP VINEYARD**Romulus**
★①

This producer has always made wines from *vinifera* as well as hybrid varieties, including one of the state's best Seyval Blancs.

- ✓ *Cabernet Franc* • *Chardonnay* (Barrel Reserve) • *Merlot*

LAKWOOD VINEYARDS**Watkins Glen**
★①

Owned and run by the Stamp family, which has farmed this land for four generations.

- ✓ *Cabernet Franc* • *Dessert* (Glaciavinum) • *Fortified* (Port) • *Pinot Noir* • *Riesling* • *Sparkling* (Brut) • *Vignoles*

LAMOREAUX LANDING**Lodi**
★①②

There has always been something about this Finger Lakes winery, its design, and the people who run it that makes it a class act.

- ✓ *Cabernet Franc* • *Chardonnay* (Reserve) • *Merlot* • *Riesling* • *Sparkling wine* (Blanc de Blanc—sic, Brut)

LENZ**Peconic**
★①

While running a restaurant, Patricia and Peter Lenz developed a passion for wine, which led them to establish this winery on a potato farm.

- ✓ *Cabernet Sauvignon* • *Chardonnay* • *Merlot*

MARTHA CLARA**Riverhead**
★①

Interesting wines from this recent start-up, whose first vintage was 1998.

- ✓ *Dessert* (Ciel) • *Sémillon*

**MCGREGOR VINEYARD
WINERY****Dundee**
★①

Established by the McGregor family in 1980, this vineyard began making Chardonnay, Riesling, Gewürztraminer, and Pinot Noir that year, but their heart is obviously in sparkling wine.

- ✓ *Sparkling* (Blanc de Noirs, Riesling)

PALMER**Aquebogue**
★①

The vineyard was converted from a potato and pumpkin farm in 1983, and the winery, built three years later, quickly started producing attention-grabbing wines. The reds, in particular, simply have more richness than other New York wineries can manage.

- ✓ *Cabernet Franc* • *Chardonnay* • *Merlot*

PAUMANOK VINEYARDS**Aquebogue**
★①②

Another of Long Island's up-and-coming stars.

- ✓ *Cabernet Sauvignon* • *Classic red blend* (Assemblage) • *Merlot*

PECONIC BAY WINERY**Cutchogue**
★①

Established in 1979, Peconic Bay was one of the first vineyards on the North Fork, producing its first commercial crop in 1984. The Merlot is particularly outstanding.

- ✓ *Chardonnay* (La Barrique) • *Merlot*

PELEGRINI VINEYARDS**Cutchogue**
★①②

A recently established Long Island winery, Pellegrini is one of the most promising North Fork producers.

- ✓ *Cabernet Sauvignon* • *Chardonnay* • *Merlot*

PINDAR VINEYARDS**Peconic**
★①

With the intention of growing grapes, Dr. Herodotus Damianos converted a potato farm on Long Island into a vineyard. In 1982 he built a winery, named it after the Greek lyric poet, and it is now Long Island's largest producer, and also one of the best.

- ✓ *Chardonnay* • *Classic red blend* (Mythology) • *Merlot*

RAPHAEL**Peconic**
★①

Established in 1996, Raphael obviously has the money to make it one of the top two or three East Coast wineries. With Paul Pontallier of Château Margaux consulting, there is no reason why this potential should not be realized.

- ✓ *Classic red blend* (La Fontana) • *Merlot*

**SHELDRAKE POINT
VINEYARDS****Ovid**
★①

Some 40 acres (16 hectares) of *vinifera* vines on the shores of Lake Cayuga.

- ✓ *Riesling* (Ice Wine) • *Cabernet Franc*

**SILVER THREAD
VINEYARDS****Lodi**
①★①

One of the first organic producers in the Atlantic Northeast, owner-winemaker Richard Figiel makes one of the Finger Lakes' better Pinot Noirs.

- ✓ *Pinot Noir*

SWEDISH HILL WINERY**Romulus**
★①

Founded in 1986 by Dick and Cindy Peterson, Swedish Hill has become one of the largest wineries in the region, producing nearly 40,000 cases of wine a year. See also Goose Watch.

- ✓ *Riesling* • *Sparkling Wine* (R Cuvée, Spumante Blush, Vintage Brut) • *Vidal Blanc*

TRELEAVEN WINES**King Ferry**
★①

Technically the King Ferry Winery, but owners Peter and Tracie Saltonstall sell their wines under the Treleven label.

- ✓ *Riesling* (Semi Dry)

WAGNER VINEYARDS**Lodi**
★

Consistently high-quality wines for a quarter of a century.

- ✓ *Chardonnay* (Barrel Fermented) • *Riesling* (Dry, Icewine) • *Sparkling* (Riesling Champagne)

WARM LAKE ESTATE**Cambria**
★①

With the largest plantation of Dijon Clone Pinot Noir in New York, Michael Von Heckler produces one of this state's better Pinot Noir wines.

- ✓ *Pinot Noir*

WÖLFFER ESTATE**Cambria**
★①

Wölffer Estate made history with its 2000 Premier Cru Merlot when it was released as Long Island's first \$100 wine.

- ✓ *Merlot* • *Cabernet Franc*

OHIO

100 wineries in 2004

BUSCH-HARRIS**Mount Victory**
★①

Exciting new winery making waves with classy, award-winning Cabernet Sauvignon.

- ✓ *Cabernet Sauvignon*

FIRELANDS WINERY**Sandusky**
★①

This winery occupies the original Mantey Vineyard site, which was planted in 1880, and manages to attract 40,000 visitors a year.

- ✓ *Chardonnay* (Barrel Select) • *Riesling*

MARKKO VINEYARD**Ridge Road, Conneaut**
★①

This vineyard is owned by Arnulf Esterer, the first of Konstantin Frank's followers to plant *vinifera* grapes in Ohio.

- ✓ *Cabernet Sauvignon* • *Chardonnay* • *Riesling*

TROUTMAN**Wooster**
★①

Established as recently as 2001, Troutman produces a clutch of guzzlers that should attract wider attention.

Eric and Lee Miller have established Chaddsford as one of the Atlantic Northeast's most successful wineries.

✓ *Chardonnay* (Barrel Select) • *Merlot*

CLOVER HILL VINEYARDSBreinigsville
★●

Owner-winemaker John Scrips III is starting to pick up gold medals at his substantial 20,000-case winery.

✓ *Pinot Gris* (Pinot Grigio) • *Vignoles*

RHODE ISLAND

7 wineries in 2004

SAKONNET VINEYARDSLittle Compton
★●

The first winery to open on Rhode Island after Prohibition. New wine called Rhode Island Red not tasted.

✓ *Gewürztraminer* • *Vidal Blanc*

VIRGINIA

97 wineries in 2004

BARBOURSVILLE VINEYARDSBarboursville
★●●

Once the property of James Barbour, a former governor of Virginia, this estate is now owned by Zonin of Piedmont in Italy. The wines possess a remarkable elegance, balance, and finesse and this is increasing as Luca Paschina comes to terms with the growing environment. Many seem to think that Virginia's best grape is Cabernet Franc, but Barboursville's Cabernet Sauvignon outperforms its Cabernet Franc most years. The Octagon requires aging after release.

✓ *Barbera* (Reserve) • *Cabernet Franc* (Reserve) • *Cabernet Sauvignon* (Reserve) • *Classic red blend* (Octagon) • *Nebbiolo* (Reserve) • *Viognier*

BREAUX VINEYARDSHillsboro
★●

Established in 1994 by Paul and Alexis Breaux, who bought a 3-acre vineyard planted in 1985, so these are mature vines by Virginia standards. The Late Harvest Alexis is a blend of Sauvignon Blanc, Sémillon, and Vidal Blanc.

✓ *Late Harvest* (Alexis) • *Sauvignon Blanc* • *Seyval Blanc* • *Viognier*

CHÂTEAU MORISSETTERocky Mount
★●

A relatively well established (1982), but recently up-and-coming winery.

✓ *Cabernet Sauvignon* • *Merlot* (Reserve)

CHRYSALIS VINEYARDSMiddleburg
★●

Chrysalis produces the most consistent quality Norton I have come across, but don't ask owner Jennifer McCloud about this All-American grape. Not unless you really want to know, because she's probably the world's foremost expert on the subject! The Rubiana is a blend of Tempranillo, Graciano, Fer Servadou, and Norton.

✓ *Classic red blend* (Rubiana) • *Norton* • *Petit Verdot* (Hollin Reserve) • *Viognier*

HORTONCharlottesville
★●

At one time Dennis Horton was known as Virginia's lone Rhone Ranger, but he is currently performing best with grapes that are more at home in the southwest of France. Even though there is an inconsistency in Horton's Norton, I have to recommend it because the highlights are minor classics, and everyone just loves the alliteration.

✓ *Cabernet Franc* • *Norton* • *Petit Manseng* • *Tannat*

JEFFERSON VINEYARDSCharlottesville
★●

Located just outside Charlottesville, a mile from Monticello, on vineyard sites chosen and planted by Thomas Jefferson in 1774, but obviously more successful, as these bear fruit!

✓ *Merlot* (Reserve)

KESWICK VINEYARDSKeswick
★●

Located at the historic Edgewood Estate, part of the original 1727 Nicholas Meriwether Crown Grant. Al and Cindy Schornberg planted a vineyard here and produced their first wines in 2002, winning "Best White Wine in the US" at the Atlanta International Wine Summit with their Reserve Viognier.

✓ *Classic red blend* (Trevillian) • *Viognier* (Reserve)

KING FAMILY VINEYARDSCrozet
★●

Michael Shaps is considered to be one of Virginia's most talented winemakers, and King Vineyards is one of the most beautiful locations in the scenic state of Virginia. One barrel of 2002 Merlot was by leaps and bounds the greatest red wine component I have ever tasted from any Virginia winery. Pity it was not bottled in its pure format, as it would have acted as a goal for all other wineries. Wines are sold under both King Family Vineyards and Michael Shaps labels.

✓ *Cabernet Franc* • *Merlot* • *Viognier*

KLUGE ESTATECharlottesville
★●

If any winery is destined to become Virginia's first ★★ winery, it's Kluge. Owned by Patricia Kluge (pronounced Klugee) and her husband Bill Moses, they have spared no expense from grape to glass, including the acquisition of such top international consultants as Michel Rolland (Bordeaux) and Claude Thibaut (sparkling). The Cru is a beautifully focused, Vin Doux Naturel style of sweet wine that knocks the socks off most Muscat de Beaumes de Venise. Second wines are sold under the Albemarle label.

✓ *Chardonnay* (Cru) • *Classic red blend* (New World Red) • *Sparkling Wine*

OAKENCROFTCharlottesville
★●

Felicia Warburg Rogan started this venture in 1983, and is treated with love and respect as something of a *grande dame* by her younger neighbors.

✓ *Petit Verdot*

OASIS VINEYARDHume
★●

When Dirgham Salahi planted this vineyard in 1975, he was warned, like everyone else, against *vinifera* varieties, and the locals thought he was crazy when he not only ignored this advice, but also decided to gamble exclusively on premium varieties. He was proved right and has since become one of the state's more consistent producers.

✓ *Chardonnay* (Barrel Select)

PIEDMONT VINEYARDS AND WINERY INC.Middleburg
★★

When Elizabeth Furness planted *vinifera* grapes in 1973, no one advised her otherwise, presumably because anyone who is crazy enough to start a new career at the age of 75 wouldn't listen anyway. Mrs. Furness proved to be one of Virginia's best winemakers and reveled in her new job until her death in 1986. Since then her daughter, Elizabeth Worrell, has carried on admirably.

✓ *Cabernet Sauvignon* • *Chardonnay* (Native Yeast) • *Merlot*

PRINCE MICHAELCulpeper
★●

Owned by French industrialist Jean Leducq, Prince Michael is the largest vineyard in Virginia, and its production is supplemented with grapes from the company's own vineyards in Napa. Wines are also

sold under the Madison and Rapidan River labels.

✓ *Chardonnay* • *Classic red blend* (Symbius) • *Classic white blend* (Rapidan River Harmony) • *Shiraz* (Madison)

RAPPAHANNOCK CELLARSHuntly
★●

John Delmare moved from California and built this winery in 2000.

✓ *Cabernet Sauvignon* • *Classic red blend* (Meritage)

ROCKBRIDGERaphine
★●

Owner-winemaker Shepherd Rouse earned a Masters degree in oenology at UC Davis while working at Schramsberg, Chateau St. Jean, and Carneros Creek. Returning to his native Virginia in 1986, he was the winemaker at Montdomaine Cellars when its 1990 Cabernet Sauvignon won the 1993 Virginia Governor's Cup. Rouse established Rockbridge Vineyard in 1988, since when he has won the Governor's Cup twice (1995 and 2001).

✓ *Chardonnay* (DeChiel Vineyard)

TARARALeesburg
★●

Established in 1989, this 40-acre (16-hectare) vineyard and winery started to shine almost immediately.

✓ *Chambourcin* • *Chardonnay* (Reserve) • *Classic red blend* (Meritage) • *Vidal Blanc*

VALHALLA VINEYARDSRoanoke
★●

Since the Vascick family established Valhalla Vineyards in 1999, the wines have won over 125 medals in national and international competitions.

✓ *Classic red blend* (Valkyrie)

VERITASAfton
★●

British-born neurologist Andrew Hodson is in the process of establishing something special at this ambitious, but stylish and well-considered, family-run winery.

✓ *Merlot* • *Petit Verdot*

WHITE HALLWhite Hall
★●

In 1991, Tony Champ planted 6 acres (2.5 hectares) with Chardonnay, Cabernet Sauvignon, Cabernet Franc, and Merlot near the Blue Ridge Mountains. He later added other varieties, and now has 25 acres (10 hectares) of vines and a state-of-the-art winery.

✓ *Classic red blend* (Cuvée des Champs) • *Petit Verdot* • *Viognier*

OTHER WINEMAKING AREAS OF THE UNITED STATES

ALABAMA

The first commercially cultivated vines were planted here in the 1830s, and the state had a flourishing wine industry prior to Prohibition. However, as many as half its counties remained “dry” until as recently as 1975, and legislation licensing farm wineries was not passed until 1978. There are just five Alabama wineries, and the wines are made from Muscadine. Other varieties are trucked in from out of state.

ALASKA

How do they do it? Well, not with Alaskan-grown grapes, that’s for certain. There are six wineries, mostly making wines from locally grown soft fruits, although the Denali Winery produces a range of *vinifera* wines (Cabernet Sauvignon, Chardonnay, Merlot, Riesling, and the inevitable Alaska Icewine), albeit from trucked-in juice diluted with “crystal clear mountain water.”

ARIZONA

Surprisingly, table grapes have long thrived in the irrigated Arizona deserts, but recently classic wine-grape varieties have been cultivated in this state’s solitary AVA of Sonoita, which is made possible only through its altitude of between 4,000 and 5,000 feet (1,200 and 1,500 meters).

SONOITA AVA

The Santa Rita, Huachuca, and Whetstone mountain ranges isolate this AVA. Geologically, this appellation is an upland basin rather than a valley, because it comprises the headwaters for three distinct drainages: Sonoita Creek to the south, Cienega Creek to the north, and the Babocamari River to the east. Local growers believe their *terra rosa* soil will determine the potential of this area.

ARKANSAS

More than 100 wineries sprang up in Arkansas after Prohibition, but lack of winemaking skills meant that barely half a dozen survived (seven in 2004). A fortified wine made by Cowie Wine Cellars and called Robert’s Port is well respected, as is this winery’s Cynthiana.

ALTUS AVA

This plateau lies between the Arkansas River bottomlands and the climatically protective high peaks of the Boston Mountains.

ARKANSAS MOUNTAIN AVA

This covers a huge area in the mountainous region of Arkansas. The Arkansas mountains moderate winter temperatures and provide shelter from violent northerly winds and sudden changes in temperature. Classic European grape varieties are grown here, but cannot survive in the area immediately south because of Pierce’s disease, a vine-destroying condition associated with warm climates that attacks *Vitis vinifera*.

OZARK MOUNTAIN AVA

Five major rivers make up this AVA’s boundaries: the Mississippi, the Missouri, the Osage, the

Neosho, and the Arkansas, and the area includes Mt. Magazine, the highest mountain in Arkansas. The Ozark Mountain appellation straddles parts of Missouri and Oklahoma, and is hilly-to-mountainous. The soils are stony, well drained, and contain clay from deeply weathered, well-consolidated sedimentary volcanic rocks.

COLORADO

The growing season in most of Colorado is too short to permit grape-growing, but the number of wineries has grown from just 5 in 1995 to 54 by 2004, and there are more in the pipeline. Chardonnay and Merlot are the most popular *vinifera* varieties.

GRAND VALLEY AVA

Grand Valley is located just west of Grand Junction, and incorporates three localities known as Orchard Mesa, Redlands, and Vinelands.

FLORIDA

The very first wine made in what is now the US was made by French Huguenots at Fort Caroline in 1564, but the only viticulture of any significance occurred after the Civil War, when Florida was settled by dispossessed northerners and southerners alike. The northerners planted their beloved *labrusca* vines, while the southerners competed with their even more bizarre Muscadine. Some 500 acres (200 hectares) were cultivated toward the end of the 19th century, and it was the southerners who won this battle of the grapes, as *labrusca* succumbed to Florida’s extreme heat and humidity. Amid this north-south viticultural divide, a Frenchman by the name of Emile Dubois produced Norton and Cynthiana (then believed to be two different varieties) of sufficient quality to win a medal at the Paris Exposition of 1900, but virtually all of Florida’s vineyards disappeared shortly thereafter, as it was widely acknowledged that this semitropical state was better suited to citrus groves. Not surprisingly, a lot of “orange wine” is made today, not to mention the wines made from Key Lime, Mango, and Passion Fruit. However odd though these concoctions might be, they are superior to the wine made from the local Muscadine grapes. Florida’s growers have tried to grow *vinifera* again and again throughout the 20th century, only to discover that they were being killed by Pierce’s disease (PD), for which there is no cure, although Muscadine varieties are unaffected. Since the 1950s, the University of Florida has released a number of complex PD-resistant hybrids created by crossing French hybrids with American ones, with Lake Emerald (developed in 1954), Stover (1968), Conquistador (1983), Suwannee (1983), and Blanc Du Bois (1987) being the most widely planted. Set against this backdrop, it is difficult to understand why there has been an explosion of wineries opening up of late. There were just six as recently as 2000, yet no fewer than 33 by 2004.

GEORGIA

Georgia has cultivated grapes since 1733 and by 1880 was the sixth-largest wine-growing state.

Even in modern times, its wines have been based on native Muscadine grapes until very recently, and they have been an acquired taste. Since the late 1990s, however, wineries such as Creekstone, Frogtown Cellars, Tiger Mountain, Three Sisters Vineyard, and Wolf Mountain Vineyards have used *vinifera* grapes planted at an altitude of 1,800 to 2,000 feet (540 to 600 meters) in the Northeast Georgia Mountains, where humidity is no problem, and cool nights preserve acidity.

HAWAII

Only Alaska seems a less likely wine-producing state, but vines were first planted here in 1814. The first vines planted in modern times were at Tedeschi Vineyard on Maui in 1974, and the first wines made in 1980. Dozens of experimental varieties were grown, but only Carnelian was chosen for commercial production. The Carnelian is a rather rustic cross developed in the 1930s for use in the hot continental climate of California’s Central Valley, but fares less well in Hawaii’s tropical climate, where the vine is overvigorous, producing more leaves than fruit, and tends to crop several times a year. The vineyards have to be sprayed with salt to force the vines into some sort of winter rest. Further problems occurred in 1995, when the Carnelian vines were found to be infected with eutypa, or crown gall, a wasting disease that is difficult to control. In 1987 Volcano Vineyard on Hawaii island was planted with the Symphony cross, which appears to be more successful, and by 2004 the Hawaiian islands boasted five wineries in total, although most are producing tropical fruit wines, and one, Diamond Head Winery, is a DIY operation utilizing grape juice from the mainland.

ILLINOIS

By 1847, there were over 600 acres (240 hectares) of vineyards on the banks of the Mississippi, supplying no fewer than 40 wineries in Nauvo. In 1851 the oldest Concord vineyard in Illinois was planted in Nauvo State Park, where the vineyard is still producing wine today, as is Baxter’s, which was established in 1857. By 1868, Illinois was producing 225,000 gallons (852,000 liters) a year, which was very nearly as much as New York.

IOWA

Hiram Barney established 100 acres (40 hectares) of vines at Keokuk in 1869, which he called White Elk Vineyards, and it produced 30,000 gallons (115,000 liters) of wine a year before succumbing to a lethal combination of disease and Prohibition. Most of Iowa’s modern-day vineyards were destroyed in 1980 by “2, 4-D” pesticide used on neighboring crops, forcing wineries to truck in grapes from out of state, or to make fruit wine, although a number of new vineyards have been established since 2001. Norton is the most exciting variety currently grown, and although many of the better-known hybrids are not hardy enough to survive Iowa’s winters, Maréchal Foch and La Crosse are two of the more successful ones. However, of the 27 wineries in this state, none has stood out so far.

KANSAS

Kansas has never been a huge winemaking state, but it did produce as much as 110,000 cases of wine a year until it voted to go "dry" in 1880. Although no modern-day wineries existed until 1990, there were 12 wineries by 2004, and Norton is the best grape.

KENTUCKY

In 1799, John James Dufour set up the Kentucky Vineyard Society, which expected to raise \$10,000 in capital through the sale of 200 shares of \$50 each. Without waiting for the subscriptions certificates to be printed, let alone sold, Dufour had purchased 633 acres (253 hectares) of land at Big Bend on the banks of the Kentucky River, and began planting the optimistically named First Vineyard in 1798. However, almost all the vines had failed by 1802. Like so many early ventures, the cause was probably Pierce's disease, phylloxera, or both. Another more successful early Kentucky venture was planted by Colonel James Taylor at Newport. This vineyard was described by John Melish, an English traveler, as "the finest that I have yet seen in America."

LOUISIANA

Jesuit priests made altar wine here as early as 1750, and by 1775 an Englishman we know of only as Colonel Ball produced a wine from the banks of the Mississippi, north of New Orleans, that was considered worthy of sending to George III, but the vineyard died after the colonel and his family were massacred by Indians, according to the August 1822 and December 1826 issues of *American Farmer*. Louisiana's climate is unsuitable for any vine other than Scuppernong, so grapes imported from California, or other fruit such as oranges, were relied upon for winemaking. There are just seven wineries in this state today.

MINNESOTA

Vineyards have to be buried beneath several feet of earth in soil to survive Minnesota's winters, which restricts cultivation to native varieties and hybrids, with a heavy dependence on fruit wines, which are preferable more often than not. One exception is Northern Vineyards, which makes some of Minnesota's most exciting, cutting-edge wines from own-grown *vinifera* varieties such as Chardonnay, Pinot Noir, Pinot Gris, Gewürztraminer, and even St. Laurent. Of the other 18 wineries in this state, only Carlos Creek, Saint Croix Vineyards, and Whitehaven stand out.

MISSISSIPPI

The pattern here is very similar to that in Kentucky. However, heavy and restrictive taxes were reduced in 1984, when the Mississippi Delta was granted its own AVA. By 2004 there were five wineries, but none outstanding at the time of writing.

MISSISSIPPI DELTA AVA

A fertile alluvial plain with loess bluffs that abruptly rise 100 feet (30 meters) along the entire eastern side of the delta that also covers parts of Louisiana and Tennessee.

MISSOURI

The first wines were produced in Missouri in the 1830s and the state had a flourishing wine industry in the mid-18th century. The wine industry has almost doubled since the turn of the 21st century, with the number of wineries increasing from 37 in 2000 to 67 in 2004. Norton is the king of Missouri grapes.

AUGUSTA AVA

Grape-growing in Augusta, the country's first established AVA, dates from 1860. The bowl-like ridge of hills from west to east, and the Missouri River on the southern edge of the viticultural area, provide a microclimate that distinguishes Augusta from the surrounding areas.

HERMANN AVA

In 1904, this area furnished 97 percent of the wine produced in Missouri. The soils are well drained, have a high water capacity, and provide good root development.

OZARK HIGHLANDS AVA

Located within the much larger Ozark Mountain AVA, this area's climate is frost-free and relatively cool during spring and fall, compared with surrounding areas.

MONTANA

Although the growing season is generally too short for grapes, and most of this state's 11 wineries produce wines from locally grown soft fruits, or grapes trucked in from Washington, Idaho, and California, vines have grown around Flathead Lake and in the Flathead Valley since 1979, when Dr. Thomas Campbell established Mission Mountain Winery on Flathead Lake's west shore. Although Mission Mountain remains the only winery to produce pure Montana-grown wines, and has to supplement them with wines made from out-of-state grapes, there are several other growers in this southwestern area of Montana who could start up their own boutique wineries, if the experience of other embryonic wine states is anything to go by. It seems that award-winning Mission Mountain Winery and the other growers all agree that the most successful *vinifera* varieties for Montana so far are Chardonnay, Gewürztraminer, Pinot Noir, and Pinot Gris.

NEBRASKA

The earliest known producer in Nebraska was Peter Pitz, who cultivated 12 acres (5 hectares) of vines near Plattsmouth in the 1890s, and claimed to make red, white, and yellow wine! The first vineyard in modern times was planted at Pierce by Ed Swanson of Cuthills Vineyards, and there are 12 wineries today, although apart from the modest successes of Whiskey Run Creek Vineyard & Winery, and Cuthills itself, no producers stand out. Some wines are made from native varieties, but essentially Nebraska viticulture suits hybrids, of which Edelweiss is most highly regarded, and others found include Cayuga, Chambourcin, DeChaunac, LaCrosse, Marechal Foch, St. Croix, and Traminette.

NEVADA

Even though the growing season in Nevada is theoretically too short for growing vines, the first experimental vines were planted here in

1992, and by 1994 there were three vineyards: two in the Carson Valley of southern Nevada, and one in southern Nevada's Pahrump Valley. Instrumental in these ventures were Rick and Kathy Halbardier of Churchill Vineyards, which changed its name to Tahoe Ridge Vineyards & Winery in 1994, and built a research winery in 1996, harvesting its first commercial crop in 2000. There are now four wineries, but as far as I am aware, only Tahoe Ridge Vineyards & Winery produces Nevada-grown *vinifera* wines (as well as wines from California grapes), but with eight Nevada vineyards growing various *vinifera* varieties to sell to Tahoe Ridge, the nucleus exists for a small wine industry to blossom in this desert state.

NEW MEXICO

Only Florida can claim an older winemaking industry than New Mexico's, which dates back to the early 1600s, but was unknown to Americans until 1821, when the Santa Fe Trail (known then as the Rio del Norte) was opened, and reports of its vineyards filtered back to the East Coast.

MESILLA VALLEY AVA

An area that follows the Mesilla Valley along the Rio Grande River from an area just north of Las Cruces, New Mexico (where most of its vineyards are situated) to El Paso, Texas. Soils are alluvial, stratified, deep, and well drained.

MIDDLE RIO GRANDE VALLEY AVA

This narrow valley stretches along the Rio Grande River from Albuquerque to San Antonio. Franciscan missions grew vines here during the 17th century and winemaking existed until Prohibition. At an altitude of between 4,800 and 5,200 feet (1,465 and 1,585 meters), the climate is characterized by low rainfall and hot summers.

MIMBRES VALLEY AVA

An area of the Mimbres River from the north of Mimbres to the south of Columbus.

NORTH CAROLINA

Both the first and second colonies to settle this area were expected to produce wine, and although these hopes are documented, no evidence of any success exists. The hot climate dictates that most wines are produced from the hardy, native Scuppernong vine, which produces the most extraordinary, disturbingly exotic, and unusual wine from large, cherrylike grapes. It was these grapes that made North Carolina the largest wine-producing state in 1840. It was also from Scuppernong grapes that "Captain" Paul Garrett first made his notorious, best-selling Virginia Dare wine from a string of East Coast wineries in the 1900s. After

Prohibition, he created the first singing commercial for wine, and Virginia Dare once again became the country's biggest-selling wine. Scuppernong grapes were scarce, however, and despite successfully encouraging many growers in other southern states to grow this vine, he had to blend in more Californian wine, and in the process Virginia Dare lost its distinctive (and, by today's standards, not very attractive) character, so sales dropped. There are nine wineries in North Carolina, but it is still a hostile environment for anything other than Scuppernong.

YADKIN VALLEY AVA

North Carolina's first official appellation, Yadkin Valley was recognized as an AVA in February 2003. This viticultural area comprises 1.4 million acres in the northwestern section of the Piedmont region, where it spans seven counties along the Yadkin River. There were fewer than 10 wineries at the time of writing, but more were awaiting approval. Most vines here are *vinifera*, with Chardonnay, Riesling, Cabernet Sauvignon, and Merlot faring best over the long, warm growing season, with mild winters, on the Yadkin Valley's gently rolling hills of well-drained clay and loam soils.

NORTH DAKOTA

According to the Alcohol and Tobacco Tax and Trade Bureau, there were six wineries in this state by 2004, but the only ones I know of are Maple River Winery in Casselton and Pointe of View in Burlington, both of which make own-grown fruit wines.

OKLAHOMA

The first known Oklahoma wines were made by Edward Fairchild, who in 1890 moved from the viticultural paradise of New York's Finger Lakes to establish a vineyard and orchard near Oklahoma City. Fairchild made commercial quantities of Concord and Delaware wine between 1893 and 1907, when Oklahoma joined the US as a dry state.

SOUTH CAROLINA

Winemaking began here as long ago as 1748, when Robert Thorpe was paid the handsome prize of £500 by the Commons of South Carolina for being "the first person who shall make the first pipe of good, strong-bodied, merchantable wine of the growth and culture of his own plantation." However, this state has never really recovered from Prohibition, with only six wineries in existence today. The grapes used are invariably Muscadine or hybrid varieties, and even these tend to be supplemented with local-grown fruit wines. No wineries really stand out, except for Montmorenci Vineyards, which has won numerous awards for hybrid wines.

SOUTH DAKOTA

Valiant Vineyards was the first ever winery in South Dakota, established as recently as 1993, when Eldon and Sherry Nygaard planted a small vineyard overlooking Turkey Ridge Creek in Turner County. At the time it would have been illegal to build and operate a winery, so the Nygaards drew up a farm winery bill and caused it to be introduced by the South Dakota

Legislature, which passed it into law in July 1996. By 2004 there were seven wineries in this state, but none has stood out, although Prairie Berry Winery appears to be the most successful so far.

TENNESSEE

The best-known episode in this state's wine history took place in the 1850s, when a French, German, and Italian Catholic community called Vineland or Vinona established terraced vineyards, and made wine, which was sold to the Scottish Presbyterians in the southern Appalachians. Unfortunately, the Civil War put an end to both the activity and the community. In the 1880s, so-called Victorian Utopians established themselves in Rugby, and German settlers did likewise in the Allardt community of Fentress County. Although Tennessee still has some "dry" counties, the state now has 29 wineries. *Vinifera* vines have been planted here, but they usually perish under severe winter conditions. Most producers purchase grapes (*vinifera*, hybrid, and native varieties such as Scuppernong and Concord) from both in-state and out-of-state sources. Fruit wines are commonly encountered, and some mixed grape and fruit wines are also made. There are even tomato wines! Pure Tennessee grape wines are produced, but authentic is not necessarily superior. The modest wines of Beachhaven Vineyards & Winery are the most successful from this state.

TEXAS

The Franciscan missions were making wines here at least 130 years before the first vines were grown in California and the first commercial Texan winery, Vel Verde, was established before the first California one. In 1880, Thomas Volney Munson saved the phylloxera-infected French wine industry by sending Texas rootstock to Charente, and was awarded the French Legion of Honor medal, only the second American recipient at that time (the first being Benjamin Franklin). By 1919 there were 19 wineries in Texas, and a Texas wine won a gold medal at the Paris Exposition that year, but Prohibition destroyed winemaking in Texas, as everywhere else. The revival of Texas wine began by accident in the mid-1950s, when Robert Reed, a professor of viticulture at Texas Tech University, took home some discarded vine cuttings. He planted them in his garden and was astonished at how well they grew. Reed and colleague Clinton McPherson planted an experimental vineyard of 75 grape varieties, which led to the founding of Llano Estacado winery in 1975. In 1987, Cordier, the famous Bordeaux *négociant*, invested in a massive 1,000-acre (405-hectare) vineyard called Ste. Geneviève, and by 2004 there were no fewer than 91 Texan wineries in existence. In 1983 Texas was the smallest wine-producing state in the US; today it is the fifth largest.

BELL MOUNTAIN AVA

Located in Gillespie County, north of Fredericksburg (another subappellation of the Texas Hill Country AVA), this is a single-winery denomination consisting of some 55 acres (22 hectares) of vines, growing on the southern and southwestern slopes of Bell Mountain. Over a third of the vines are Cabernet Sauvignon, which has so far proved to be significantly better suited to this area than the Pinot Noir,

Sémillon, Riesling, and Chardonnay that also grow here. Bell Mountain is drier than the Pedernales Valley to the south and the Llano Valley to the north, and also cooler due to its elevation and its constant breezes. Its soils are sandy-loam, with light, sandy-clay subsoil.

ESCONDIDO VALLEY AVA

Proposed by Cordier, the Escondido Valley AVA in Pecos County encompasses the Ste. Geneviève winery. Escondido is an upland valley formed by ranges of mesas to the north and south, the vines growing at an elevation of between 2,600–2,700 feet (795 and 825 meters).

FREDERICKSBURG AVA

This AVA's full title is "Fredericksburg in the Texas Hill Country," but it is usually shortened to distinguish it from the massive Texas Hill Country appellation. Fredericksburg contained eight vineyards when established, but the area is primarily known for its peach orchards. Since the peach tree has proved as sensitive to soil and climate as *vinifera* vines, many peach farmers have experimented with grapes, and a number of these are now in commercial production. The soil is sandy loam over a mineral-rich reddish clay.

TEXAS DAVIS MOUNTAIN AVA

Described as a mountain island, this Texas appellation is cooler, twice as wet, and climatically more diverse than the Chihuahuan desert that surrounds it. Located in Jeff Davis County, Davis Mountain AVA covers 270,000 acres (108,000 hectares) in the Trans-Pecos region of western Texas that was formed during the glacially slow tectonic and volcanic catastrophe that formed the front range of the Rockies. This viticultural region ranges in height from 4,500–8,300 feet (1,350 to 2,490 meters), with about 50 acres (20 hectares) of vines currently growing on a porous, well-drained soil composed of granitic, porphyritic, and volcanic rocks, as well as limestone.

TEXAS HIGH PLAINS AVA

This massive appellation in the northwest of Texas covers 12,500 square miles (32,400 square kilometers), encompassing 24 counties and 2,000 acres (800 hectares) of vineyards. Soils are generally brown clay loams to the north and fine sandy loam to the south. Rainfall ranges from 14 inches (36 centimeters) in the west to 20 inches (51 centimeters) in the east.

TEXAS HILL COUNTRY AVA

A vast appellation, Texas Hill Country consists of the eastern two-thirds of the Edwards Plateau, encompassing two tiny AVAs (Bell Mountain and Fredericksburg), 40 commercial vineyards, and 10 wineries. Most of the hillsides are on limestone, sandstone, or granite, while the valleys contain various sandy or clayey loams.

UTAH

Despite the enormous influence wielded by the powerful Mormon Church based in Salt Lake City, winemaking has a history in this state, ironically originating with the arrival of the seemingly abstemious Latter-Day Saints. Brigham Young, who led the Mormons to Utah in 1847, ordered vineyards to be planted and a winery to be built. He required one of his followers, an experienced German winemaker,

to make as much wine as he could, and although he permitted Mormons to drink it for Communion (no longer allowed), he recommended that the bulk should be sold. His advice was not taken by the Dixie Mormons, who ran the winery and kept back their best wines for consumption. Winemaking peaked at the end of the 19th century, declining once the Church clamped down on drinking, and died out during Prohibition. Eight wineries now exist.

WISCONSIN

The present-day Wollersheim Winery is the historic site selected by the famous Agoston

Haraszthy to plant his Wisconsin vineyard in the 1840s before moving on to San Diego, after experiencing several years of winter damage on his vines. The Haraszthy vineyard was taken over by Peter Kehl, a German immigrant to the US, who built the existing winery during the Civil War period. Until relatively recently, this state had a rather more considerable reputation for its cherry, apple, and other fruit wines than for those made from grapes. Fruit wines still dominate in Wisconsin, but grape hybrids are beginning to gain ground, with some *vinifera* varieties, such as Riesling, just starting to emerge. The soils in the region are predominantly clayey loams.

LAKE WISCONSIN

Wisconsin Lake and River moderate the climate locally, providing winter temperatures that are several degrees higher than those found to the north, south, and west of this region, while the good air circulation helps to prevent both frost and rot.

WYOMING

Established in 1994, Terry Bison Ranch was this state's first winery, and by 2004 there were just three wineries, but grapes are trucked in from out of state, and true Wyoming wines are all fruit based.

TEDESCHI VINEYARDS

Maui

Still and sparkling wines are made here from Carnelian grapes grown on the Maui's volcanic slopes, although three-quarters of the production is pineapple wine. Blanc de Noirs was the first *méthode champenoise* wine and, although I have visited this winery just twice, the wines have been coarse and uninspiring on both occasions. The easy-going rosé-styled Rose Ranch Cuvée proved to be less ambitious, more successful, although I have not tasted it recently. Tedeschi's grape wines are all made from the same variety, Carnelian, but there are vague plans for growing other varieties, so quality may improve.

VOLCANO WINERY

Hawaii
★

Veterinarian Doc McKinney planted this vineyard between two active volcanoes in preparation for his

retirement in 1992, when he "went from working six days a week to seven," as he puts it. Surrounded by continuous volcanic eruption, the winery is prone to acid rain of such a strength that, in years such as 1993, production can be halved.

CEDAR CREEK WINERY

Cedarburg
★

An award-winning winery in Wisconsin. And with a winemaker named after a French winemaker, it is little wonder that Philippe Coquard is so successful.

✓ *Syrah* • *Vidal Blanc*

WOLLERSHEIM WINERY INC.

Prairie du Sac
★

The Wollersheim Winery was built in 1858 by the Kehl family, from Nierstein in Germany, and then reestablished in 1972 by Robert and Joann Wollersheim. Both hybrid and *vinifera* grapes are grown here. Wines are also sold under the Domaine du Sac label.

✓ *Classic white blend* (Prairie Fumé) • *Riesling* (Dry) • *Rosé* (Prairie Blush)

CANADA

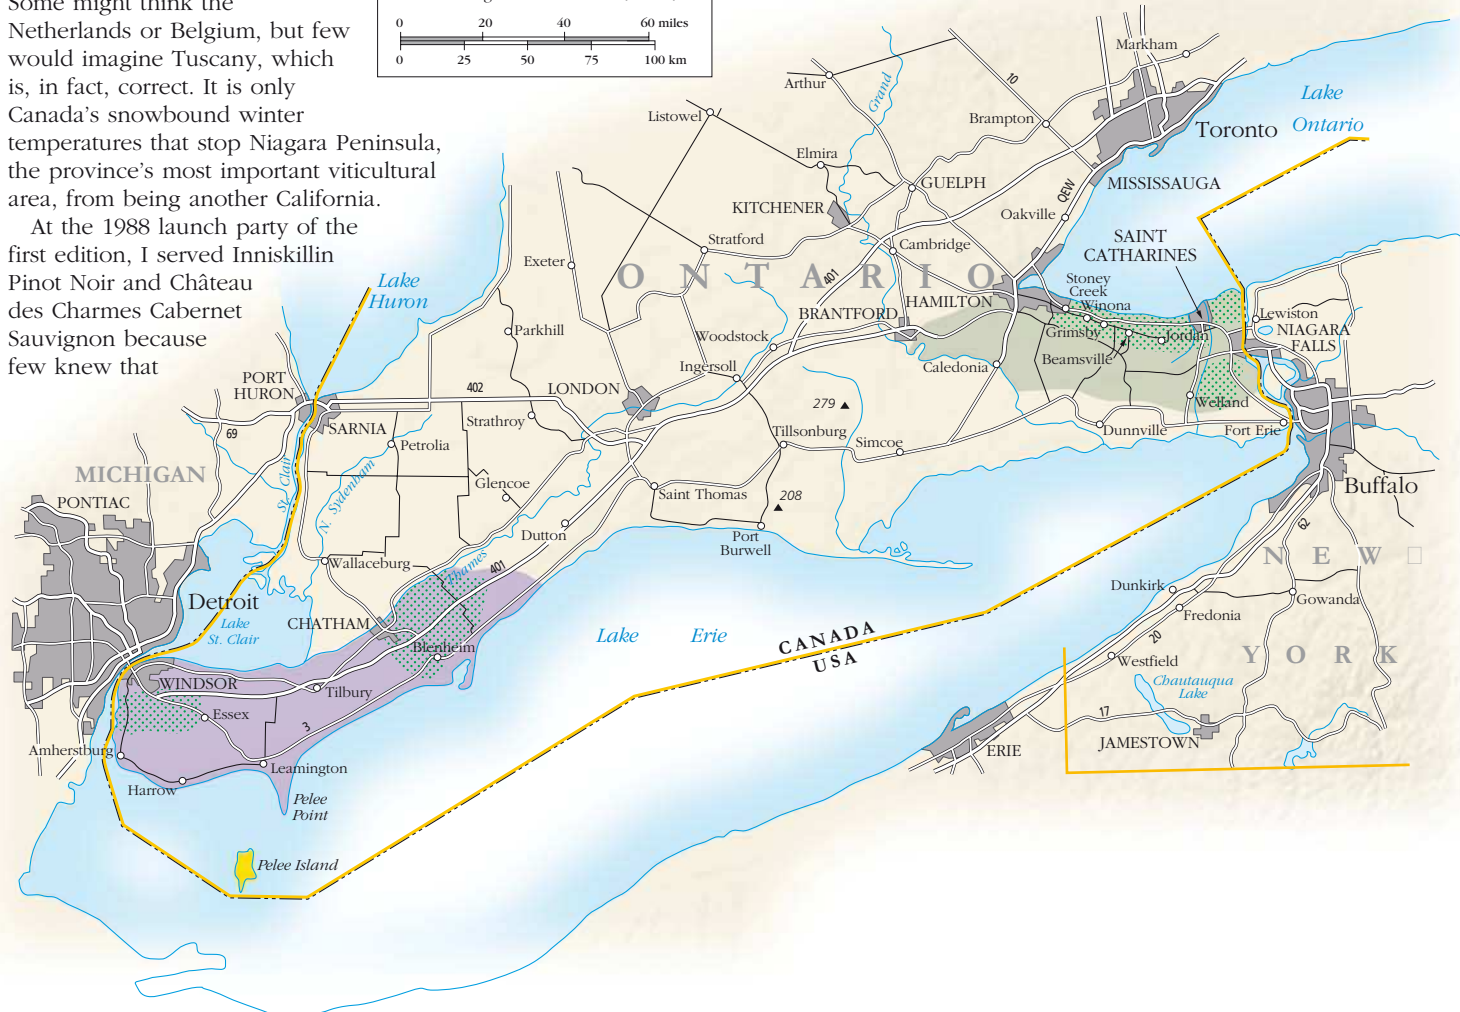

British Columbia hardly figured in Canada's wine industry when I wrote the first edition of this book, and Ontario was only just beginning to emerge. Now Ontario is old hat, and although it still produces more than 80 percent of all Canadian wine and, thus, much of the best, British Columbia is arguably the country's most exciting wine region, and wineries are popping up in Quebec, Saskatchewan, Manitoba, New Brunswick, Nova Scotia... even Newfoundland.

WINE HAS BEEN commercially produced in Canada since at least 1860. For the first 100 years, Canadian palates preferred the sweet styles produced by the native *labrusca* grape varieties, although from 1913 the Horticultural Research Centre of Ontario at Vineland began its program to develop hybrids.

ONTARIO

Ask most people, including many Canadians, if they were to trace a finger around a globe at the same latitude as Ontario, where it would point to in Europe, and they would say somewhere in Scandinavia. Some might think the Netherlands or Belgium, but few would imagine Tuscany, which is, in fact, correct. It is only Canada's snowbound winter temperatures that stop Niagara Peninsula, the province's most important viticultural area, from being another California.

At the 1988 launch party of the first edition, I served Inniskillin Pinot Noir and Château des Charmes Cabernet Sauvignon because few knew that

THE VQA SEAL OF QUALITY

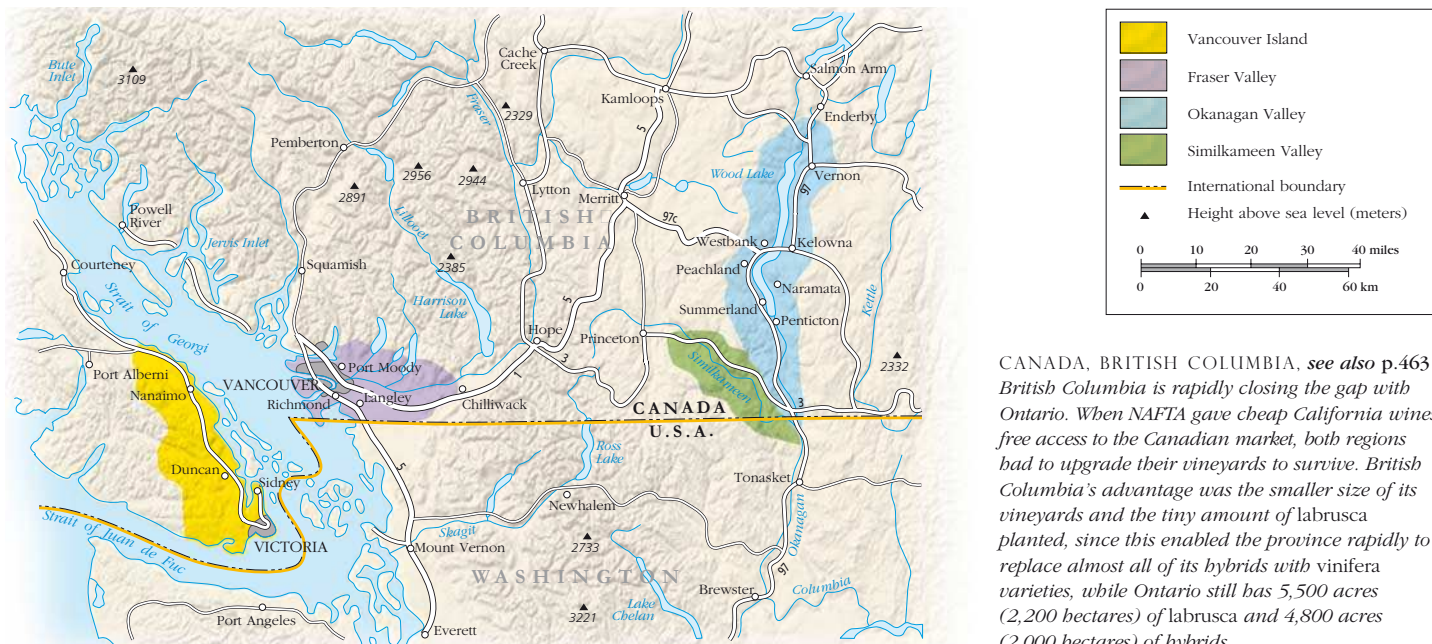

After 20 years of following appellation systems around the world, I am aware that none can guarantee quality, but whereas most legally imposed systems indicate mediocrity, the self-regulated VQA seal has driven Canadian producers to higher and higher standards.

Look for the VQA seal, which guarantees:

- Provincial appellations, such as Ontario, use 100 percent Canadian-grown grapes, a minimum of 85 percent from the province indicated, and contain a minimum ripeness level.
- Specific appellations (see maps, below and opposite), such as Okanagan Valley, are 100 percent from the province named, a minimum of 85 percent from the area named (95 percent in British Columbia), and contain only classic *vinifera* or preferred hybrid varieties of a minimum ripeness level.
- Estate-bottled wines are 100 percent from grapes owned or controlled by the winery that is specified.
- Wines that are designated by vineyard names are 100 percent from grapes grown in the particular vineyard indicated.

CANADA, ONTARIO, *see also p.463*

There are still some 5,500 acres (2,200 hectares) of labrusca in Ontario and most of these vineyards are in the Lake Erie North Shore area, but they can be used only for fruit juice, fortified, and cheap sparkling-wine products. The premium vinifera area is the Niagara Peninsula.

CANADA, BRITISH COLUMBIA. *see also p.463*
 British Columbia is rapidly closing the gap with Ontario. When NAFTA gave cheap California wines free access to the Canadian market, both regions had to upgrade their vineyards to survive. British Columbia's advantage was the smaller size of its vineyards and the tiny amount of *labrusca* planted, since this enabled the province rapidly to replace almost all of its hybrids with *vinifera* varieties, while Ontario still has 5,500 acres (2,200 hectares) of *labrusca* and 4,800 acres (2,000 hectares) of hybrids.

Canada even grew vines, let alone any of the classic varieties, and certainly no one imagined this country produced red wines. In fact, on my first visit to Niagara, I could find only three red wines made from *vinifera* grapes. Now there are hundreds.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

The chief areas are the Niagara Peninsula of Ontario in the east and the Okanagan Valley of British Columbia 2,000 miles (3,200 kilometers) away to the west. Vines also grow in Nova Scotia and Quebec.

CLIMATE

Eighty-five percent of vines are grown in Ontario at the same latitude as the French vineyards of Provence and the hills of Tuscany. In Ontario, the temperature-moderating influence of Lakes Erie and Ontario, the windbreak effect of the Niagara Escarpment, and the circular airflow from the lakes, protect the vines from winter wind and frost damage.

The Okanagan Valley of British Columbia is on a more northerly latitude, some 49° to 50°N and approximately in line with Champagne and the Rheingau, but the area is technically a desert, with as little as 6 inches (15 centimeters) of rain in the south. The summers have fierce daytime heat that rapidly builds up the grape sugars, followed by cold nights that allow the grapes to retain high acid levels. The glacial Okanagan Lake provides a moderating effect, but winter quickly sets in and grapes do not develop beyond mid-October.

ASPECT

The vines in both Ontario and British Columbia are mostly grown on lakeside slopes. Those in Ontario are sheltered by the Niagara

Escarpment, and the better grape varieties are grown on the steep north-facing slopes.

SOIL

Ontario soils cover a wide range from sandy loams to gravel, sand, and clay. Soil is sandy loam to clay on the west bank at the centre of British Columbia's Okanagan Valley, but stony-sandy clay on the east bank, more rocky and gravelly to the south, and much lighter and sandier to the north.

VITICULTURE AND VINIFICATION

The southern, red-wine producing end of the Okanagan Valley is undergoing the most extensive planting in Canada, although Niagara Peninsula's vineyards are still growing rapidly. Ontario's wine industry is mature by Canadian terms, while the smaller British Columbia industry is growing at an even more ferocious rate. The level of technology is high, but as in any young wine industry, methods and practices are changing all the time, as winemakers gain experience. Aside from Icewine production, techniques are in a state of flux.

GRAPE VARIETIES

Auxerrois, Bacchus, Baco Noir, Cabernet Franc, Cabernet Sauvignon, Chambourcin, Chancellor, Chardonnay, Ehrenfeller, Gamay, Kerner, L'Acadie, Merlot, Pinot Blanc, Pinot Gris, Pinot Noir, Riesling, Sauvignon Blanc, Sémillon, Seyval Blanc, Shiraz, Vidal Blanc, Zweigelt

Niagara's flagship wine is Icewine, and it is produced primarily from the Vidal Blanc hybrid, although there are plenty of Riesling Icewines, even Gewürztraminer and, most recently, Cabernet Franc and even sparkling Icewine. Ontario will always be the world's largest producer of this style of wine because the annual snowfall guarantees the process, but it is hardly everyday drinking and, despite the hype, represents only 5 percent of Ontario's total wine production. It might be more productive to focus on the juxtaposition of Ontario's seemingly northern vineyards being on the same latitude as Tuscany. It is no coincidence that Merlot and Cabernet Franc have proved to be among Ontario's most outstanding grapes, and wineries need to get the message across before British Columbia steals all its thunder.

BRITISH COLUMBIA

The revolution in Ontario's wine industry over the last 10 years has acted like bait, luring British Columbia along the same premium-quality path. As in Ontario, winemaking here dates back to the 1860s, but the climate is more marginal and so the industry has always been smaller and—until recently—less adventurous. Large-scale plantings of *labrusca* varieties did not commence until

RECENT CANADIAN VINTAGES

2003 Harsh weather reduced yields in Ontario by as much as half, but harvest conditions were good, and the quality excellent. British Columbia had one of its largest and possibly its greatest ever vintage.

2002 Very good-quality red and white wines in Ontario. British Columbia experienced such exceptional quality for both red and white wines that only 2003 vies with it so far.

2001 Variable quality in Ontario, where this was the "Year of the Ladybug," of which it took only the odd ladybug to taint an entire batch of wine, and no less than one million liters of tainted wine had to be poured down the drain. However, some good taint-free red wines were produced, so it is not a vintage to ignore. Some very good reds were also produced in ladybug-free British Columbia, and the whites were even better, rivaling those of 2002 and 2003.

2000 A poor year in Ontario, but better again in British Columbia, once more particularly for white wines.

1999 An average year in Ontario, except for the odd, exceptional red wine, but better in British Columbia, particularly for white wines.

the 1930s, and hybrids were not developed until the 1950s. The first *vinifera* varieties were planted in 1974, but they were not a significant presence until 1989, when two-thirds of the vineyards—all *labrusca* and the least fashionable hybrids—were transformed.

My first trip to British Columbia was in 1993, when the state of the industry was similar to that of Ontario in the mid- to late 1980s. There were only seven red wines made from premium varieties, although there were plenty made from hybrids. After seeing how rapidly Ontario changed from hybrid to *vinifera* wines, and how quickly this elevated the province's standing in the international wine community, British Columbia's winemakers

managed the same transition even more rapidly.

With the exception of certain outstanding wines from Ontario, British Columbia producers now make more consistent Chardonnay than their eastern cousins, but the varieties that truly belong to this province are Pinot Blanc and Auxerrois. Riesling shows almost as much promise as in Ontario, Gewürztraminer even more. Some locals still love their Ehrenfelser and, although I have tasted some nice examples, it usually makes a lackluster wine and even the best will mean little to people outside British Columbia. As for reds, the further British Columbia pushes its vineyards into the hotter, southern Okanagan region, the greater the potential.

THE APPELLATIONS OF CANADA

FRASER VALLEY VQA

British Columbia

The Fraser Valley VQA comprises six small farm wineries that harvest hillside vineyards amid country lanes and historic towns, just one hour's drive from Victoria.

LAKE ERIE NORTH SHORE VQA

Ontario

In the southwest of Ontario, along the shoreline of Lake Erie (the shallowest and warmest of the five Great Lakes), the Lake Erie North Shore VQA has the most hours of sunshine in Canada and the grapes are picked weeks ahead of those of other areas. Its *vinifera* vineyards are just 2 percent of the total vines.

MANITOBA

Manitoba is the easternmost of the three Prairie Provinces. On comparatively level land, plenty of soft fruits grow wild and abundant in Manitoba's rich soil and hot summers, but midwinter daytimes almost always remain well below freezing, making viticulture extremely difficult. However, some people are trying. Thomas and Ulrich Menold of Tobacco Creek Winery started experimenting with 600 vines, involving 20 varieties, in 2000, although it has yet to come to fruition. Valiant (*Fredonia* × *Wild Montana*) is supposed to be the most likely vine to survive in this province.

NEW BRUNSWICK

This province is more ciders and fruit-wine country, with schnapps and liqueurs of every kind produced. There are wines made from berries, apples, honey, and maple syrup, not to mention so-called cider and apple "iced" wines. However, wine from New Brunswick grapes has existed since 2000, when Ferme Maury sold its first own-grown products. There are now seven wineries in this province, but none has stood out so far.

NEWFOUNDLAND

Canada's most easterly province comprises the Island of Newfoundland and Labrador on the mainland. Viticulture would seem to be impossible in this province, which boasts five wineries, all on Newfoundland itself, and only fruit wines produced.

NIAGARA PENINSULA VQA

Ontario

On the south shore of Lake Ontario, Niagara Peninsula is where the lake-induced airflow is at its greatest, making viticulture most suitable, hence the area encompasses 97 percent of Ontario's vineyards. Most vines grow at a height of 300 feet (90 meters) above sea level, as the land gently slopes from the foot of the Niagara Escarpment to the lake. The escarpment rises to over 600 feet (180 meters) and contains a number of benches, about which there is increasing interest, especially in the Beamsville area.

NOVA SCOTIA

Although the growing season here is short and cool, with very harsh winters, making vinegrowing more an act of faith than the result of hard work, Nova Scotia has had commercial vineyards since 1982 and today boasts 22 growers, who between them farm 400 acres (160 hectares) of vines. The southern tip is actually below the 45th parallel and its vineyards are to be found there, on the west coast, in the Annapolis Valley. The first varieties to show promise in Nova Scotia were French hybrids, such as Baco Noir, Castel, DeChaunac, Léon Millot, Marechal Foch, and Seyval Blanc. Two Russian hybrids, Mischurnitz and Severnyi, which are *Vitis amurensis* crosses, have also been successful early ripeners, with high sugar content and excellent winter hardiness. Another hybrid, L'Acadie, was specifically created for Nova Scotia at Vineland in Ontario. Grand Pré was the first commercial winery, established by the pioneering Roger Dial, and now owned by Jim Landry and Karen Avery, who added Chardonnay to the varieties grown.

OKANAGAN VALLEY VQA

British Columbia

The largest, oldest, and most important of BC's wine areas, this stretches 100 miles (160 kilometers), with some 2,400 acres (970 hectares) of vines: more than 96 percent of BC's vineyards. French and German varieties are planted at the northern end, but much activity is focused on the fast-expanding vineyards in the south, which receive less than 6 inches (152 millimeters) of rain and where classic red-wine varieties thrive.

PELEE ISLAND VQA

Ontario

This is the site of Canada's first commercial winery, established in 1866. It is located in Lake

Erie, 15 miles (24 kilometers) off the mainland, where its 500 acres (200 hectares) are marginally closer to the equator than Rome is. Picking starts at the end of August and even late-harvested grapes are in by mid-October.

QUEBEC

If Nova Scotia wines seem improbable, then many readers may wonder at the likelihood of vineyards in Quebec, where Arcticlike winters can bring bone-chilling temperatures along with several feet of snow. But it is not the figment of somebody's imagination or a scam to sell wines made from 100 percent imported grapes. Such vineyards do exist. It was here, after all, that the Jesuits, following in the wake of Jacques Cartier, made Canada's first wines circa 1564. But even if Quebec were at the North Pole, one gets the feeling that its French descendants would make an attempt to grow vines. It's in their blood. There are now 30 wineries in this province, all very small, and most located south of Montréal, near to the border with Vermont.

SASKATCHEWAN

This province covers more than a quarter million square miles, half of which is covered by forest, and one-eighth with nearly 100,000 freshwater lakes. One-third of Saskatchewan is farmland, but while the hot summers provide numerous berry crops for the three local wineries to make fruit wine from, the long, bitterly cold winters make grape-growing seemingly impossible.

SIMILKAMEEN VALLEY VQA

British Columbia

To the southwest of the Okanagan Valley, in the high desert cattle country of the Similkameen Valley, Crowsnest Vineyards is leading a small band of pioneering wineries. The vines represent just over 2 percent of BC's vineyards, yet make this the province's second-largest appellation.

VANCOUVER ISLAND VQA

British Columbia

The province's newest wine area, Vancouver Island's wet and windy climate might not seem ideal for viticulture, yet Divino moved here from what some considered to be the finest vineyards in the Okanagan Valley. Vancouver Island is the second most important wine area in BC and shortly promises to overtake the Similkameen Valley as second-largest for vineyards.

THE WINE PRODUCERS OF CANADA

BRITISH COLUMBIA

ANDORA ESTATE

Cobble Hill

★

An exciting, new boutique winery growing *vinifera* varieties on Vancouver Island.

✓ *Classic red blend* (Vivace) • *Pinot Gris*

ANDRÉS WINES

Port Moody

This is the winery that introduced Canada to the delights of "Baby Duck," a popular and much-imitated sweet pink or red fizzy *labrusca* wine. The original version was known in Germany as "Kalte Ente" or "Cold Duck," and was made from the dregs of both red and white wines, to which some Sekt was added. For anyone not used to foxy-flavored *labrusca* grapes, Andrés's commercial version was even more disgusting than the original concoction, but it took North America by storm. As *vinifera* wines gave Canada a wine industry to be proud of, even Andrés was forced to sell premium varietals. However, it dawned on Andrés that the sort of discerning customer most likely to buy premium varietals would be the least likely to buy from a firm that was synonymous with "Baby Duck." The Peller Estates label (named after Andrew Peller, the founder of Andrés) was thus launched to market exclusively VQA *vinifera* wines, and is a fast-improving winery today (see Peller Estates).

BLUE MOUNTAIN

Okanagan Falls

★★

Ian Mavety's winery, located in a spectacular wilderness setting overlooking the Vaseux Lake, has come a very long way since 1992. He is a master of Pinot in all three formats, and under the guidance of Raphael Brisbois (formerly at Omar Khayyam in India and Iron Horse in California), he has refined his sparkling wines.

✓ *Pinot Blanc* • *Pinot Gris* • *Pinot Noir* • *Sparkling Wine* (Brut, Brut Rosé)

BURROWING OWL

Oliver

★★

One of British Columbia's most up-and-coming wineries, Burrowing Owl vineyard lies at the tip of the Sonora Desert, near the north end of Osoyoos Lake, one of Canada's most exciting new wine regions. Improving Cabernet Sauvignon and Syrah should soon join the list of highly recommended wines.

✓ *Chardonnay* • *Classic red blend* (Meritage) • *Merlot* • *Pinot Gris*

CALONA

Kelowna

★

Calona has been making wine since 1932. Its semisweet German-style Schloss Laderheim became Canada's best-seller in 1981, but Calona's wines improved, although resting on its relatively modest laurels of late.

✓ *Pinot Blanc* (Artist Series Reserve)

CEDAR CREEK

Kelowna

★

This winery has come a long way over the last five years, and is now living up to its reputation, yet continues to improve.

✓ *Chardonnay* (Estate Select) • *Classic red blend* (Platinum Reserve) • *Merlot* • *Pinot Blanc* • *Pinot Gris* • *Pinot Noir* (Platinum Reserve) • *Riesling* (Dry)

DOMAINE COMBRET

Osoyoos

★★

With a reputation for Chardonnay and Cabernet Franc, Combret also produces a very good Gamay.

✓ *Cabernet Franc* (Saint Vincent) • *Chardonnay* (Saint Vincent) • *Gamay* (Reserve)

DOMAINE DE CHABERTON

Langley

★★

Owner Claude Violet has had winemaking experience in France and Switzerland and was the first to grow grapes in the Fraser Valley.

✓ *Bacchus* • *Gamay*

GEHRINGER BROTHERS

Oliver

★★

Gordon and Walter Gehringer's modern winery is tucked into the cleft of a spectacular amphitheater of immaculate vines.

✓ *Classic red blend* (Cabernet Merlot) • *Pinot Gris* (Private Reserve) • *Pinot Noir* (Private Reserve) • *Sauvignon Blanc*

GRAY MONK CELLARS

Okanagan Centre

★★

Gray Monk has a reputation for Gewürztraminer, but it is not this winery's best wine.

✓ *Pinot Blanc* • *Pinot Auxerrois* (Odyssey) • *Siegerrebe*

HAINLE

Peachland

★★

I cannot fault Tilman Hainle's enthusiasm; he nearly always goes over the top, but can produce wonderfully exciting wines as a result, only to make a complete hash of the same *cuvée* in the following vintage.

✓ *Cabernet Franc* • *Gewürztraminer* • *Icewine* (Riesling)

HAWTHORNE MOUNTAIN VINEYARDS

Okanagan Falls

★★

This winery is owned by Albert and Dixie LeComte, with Dave Carson as winemaker.

✓ *Chardonnay* (Gold Label) • *Classic white blend* (Mountain Select White) • *Icewine* (See Ya Later Ehrenfeller) • *Merlot*

HILLSIDE

Penticton

★

Vera Klokocka fled Czechoslovakia when the Soviets invaded in 1968. She has been growing grapes since the mid-1970s, and has been making some wonderfully gluggy wines since 1990.

✓ *Cabernet Franc* (CSPC) • *Pinot Blanc*

INNISKILLIN OKANAGAN

Oliver

★

Ontario's premier publicist, Don Ziraldo, started making wines in 1994, when his winery became part of Vincor, but did not have his own premises until 1996, when Inniskillin acquired the former Okanagan Vineyards winery.

✓ *Icewine* (Dark Horse Vineyard Riesling) • *Pinot Noir* (Dark Horse Vineyard)

JACKSON-TRIGGS

Oliver

★★

The original Jackson-Triggs winery started out by building a reputation for Icewine, but soon widened its scope, making it one of the country's top, all-around wine producers.

✓ *Classic red blend* (Proprietor's

Grand Reserve: Cabernet-Shiraz, Meritage) • *Icewine* (Proprietor's Grand Reserve Riesling) • *Merlot* (Proprietor's Grand Reserve) • *Shiraz* (Proprietor's Grand Reserve) • *Viognier* (Proprietor's Reserve)

LAKE BREEZE VINEYARDS

Naramata

★★

Run by a bunch of former bankers and accountants, who now claim to have "dirty fingernails and new calluses." They've certainly got some good wines.

✓ *Chardonnay* • *Pinot Blanc* • *Pinot Gris* • *Sémillon*

LANG VINEYARDS

Naramata

★★

Owner Guenther Lang left Germany and in 1990 set up Lang Vineyards, the first boutique farm winery in the province, in 1990.

✓ *Maréchal Foch* • *Pinot Gris* • *Riesling* (Late Harvest, Reserve)

MISSION HILL VINEYARDS

Westbank

★★

This operation has won more than its fair share of international medals since New Zealander John Simes took over as winemaker in 1992, including North America's only gold medal at the 2001 Chardonnay du Monde Competition, and being named Winery of the Year at the first ever Canadian Wine Awards..

✓ *Chardonnay* (Estate) • *Classic red blend* (Oculus) • *Merlot* • *Syrah* (Estate, Shiraz)

NICHOL VINEYARD

Naramata

★

Alex and Kathleen Nichol have produced one of the Okanagan Valley's fastest-rising star wineries.

✓ *Cabernet Franc* • *Pinot Noir* • *Syrah*

QUAILS' GATE

Kelowna

★★★

The Stewart family planted its vineyards in the 1960s, but there was an uncertain feel about these wines even until the early 1990s, when the arrival of Australian-born winemaker Jeff Martin rapidly turned the quality around. The current winemaker, Grant Stanley, hails from New Zealand, has an impressive resumé, and since the vintages of the early 2000s, has taken Quails' Gate up to a completely new quality level.

✓ *Cabernet Sauvignon* (Family Reserve) • *Chardonnay* (Family Reserve) • *Chenin*

INNISKILLIN VINEYARD UNDER SNOW

Inniskillin made its first Icewine in 1984, but it was not until 1986 that the technique was perfected and started to attract international interest, which was sealed by the gold medal won at Vinexpo in 1991 for the 1989 Vidal Icewine.

Blanc (Family Reserve) •
Gamay (Family Reserve) •
Pinot Noir (Family Reserve)

SUMAC RIDGE

Summerland
★★★

Now part of Vincor, although still very much run by one of his former partners, Harry McWatters, and continuing to collect a gaggle of awards whenever the wines are entered into competitions.

✓ *Cabernet Sauvignon* (Black Sage Vineyard) • *Classic red blend* (Cabernet Merlot, Meritage) • *Icewine* (Pinot Blanc) • *Merlot* • *Pinot Blanc* (Reserve)

SUMMERHILL ESTATE

Kelowna
★★★

Whether the pyramid of Cheops on this property actually focuses pyramid-power is open to question, to put it mildly, but there is no doubt whatsoever that owner Stephen Cipes is eccentric. Famed for the world's only Pyramid-Aged "Champagne," Summerhill is appreciated locally for its Gewürztraminer, although far more consistent for its still wines made from Pinot varieties, particularly Meunier.

✓ *Pinot Blanc* • *Pinot Gris* (Platinum Series) • *Pinot Meunier*

TINHORN CREEK

Oliver
★★★

Sandra Oldfield has quickly established a reputation, particularly

for red wines, since her very recent debut vintage of 1994.

✓ *Kerner* (Late Harvest) • *Merlot*

TOWNSHIP 7 VINEYARDS

Langley
★★

This vineyard was planted in 2000, the winery opened for business in July of 2001, a vineyard on the Naramata Bench was purchased in 2003, and owners Corey and Gwen Coleman have already grabbed the attention of discerning consumers with their award-winning wines.

✓ *Merlot* (Reserve) • *Syrah*

VINCOR

Oliver

Formerly called Brights-Cartier, this vineyard is the largest wine producer in Canada, owning Jackson-Triggs, Inniskillin, Sumac Ridge, and Hawthorne Mountain, with wineries elsewhere, including R. H. Phillips and Hogue (US), Goundrey and Amberley Estate (Australia), and Kim Crawford Wines (New Zealand).

NOVA SCOTIA

JOST VINEYARDS

Malagash
★★

When Jost Vineyards 1999 Vidal Icewine was named Canada's Wine of the Year 2000, it was the first time in the competition's 20-year history that the winning wine had come from outside Ontario and British Columbia.

✓ *Fortified* (Port) • *Icewine* (Muscat, Vidal) • *Léon Millot* •

Maréchal Foch • *Michurinetz* (Premium Oak-Aged) • *Muscat* (Eagle Tree)

ONTARIO

13TH STREET

Jordan Station

★

Established in 1998 by four friends (Ken Douglas, Gunther Funk, Herb Jacobson, and Irv Willms), who make wines from their own vines (Funk Vineyard, and the warmer Sandstone Vineyard), plus bought-in fruit for wines that are not vineyard-designated.

✓ *Gamay* (Unfiltered) • *Pinot Noir* (Reserve)

CAVE SPRING CELLARS

Jordan

★★★

A large, ambitious venture founded in 1986 by Leonard Penachetti, whose vineyards are located on the Beamsville Bench, west of St. Catharines, and planted at twice the average density for this region. Something of a Chardonnay specialist, producing a rare Chardonnay exclusively from the Musqué clone, although the CSV is clearly the finest and most consistent of Cave Spring's Chardonnays.

✓ *Chardonnay* (CSV, Musqué, Reserve) • *Gamay* (Reserve) • *Icewine* (Riesling) • *Riesling*

CHÂTEAU DES CHARMES

St. Davids

★★★

Established by Paul Bosc, and run by his two sons, Pierre Jean and Paul André, Château des Charmes excels with red-wine styles.

✓ *Cabernet Franc* (St. David's Bench Vineyard) • *Chardonnay* (St. David's Bench Vineyard) • *Classic red blend* (Equuleus, Paul Bosc Estate Vineyard) • *Icewine* (Riesling)

COLIO WINES

Harrow

★★

Colio Wines was founded by a group of Italian businessmen who wanted to import Italian wines from their twin-town of Udine in Friuli-Venezia Giulia, but ultimately found that it was easier to build a winery and make their own.

✓ *Merlot* (CEV) • *Pinot Gris* (HE)

DANIEL LENKO

Vineland

★★

If you have ever wondered what the same wine tastes like in different oak, Lenko will help you out with its Old Vines Chardonnay, which you can buy in two flavors: American Oak or French Oak.

✓ *Cabernet Franc* • *Chardonnay* • *Merlot* (Old Vines) • *Rosé* (Cabernet Rosé) • *Viognier*

HENRY OF PELHAM

St. Catharines

★

Established in 1988 by the Speck family, who have grown grapes in the area since 1974. After an initial period of inconsistency, this winery has settled to a high standard of quality. Hybrid enthusiasts should taste the Baco Noir, which is one of the best in the world.

✓ *Baco Noir* • *Icewine* (Riesling) • *Riesling* (Botrytis Affected) • *Sauvignon Blanc* • *Vidal* (Special Late Harvest)

HERNDER ESTATE WINES

St. Catharines

★★

The Hernder family has been growing grapes since 1967; they turned to producing wine in 1991 and started attracting attention for well-made, inexpensive wines in the 2000s.

✓ *Baco Noir* (Reserve) • *Cabernet Franc* • *Cabernet Sauvignon* (Reserve) • *Riesling* (Reserve)

HILLEBRAND

Niagara-on-the-Lake

★

Initially called Newark (the original name for Niagara-on-the-Lake), the title of this winery changed when it was purchased by Scholl & Hillebrand of Rudesheim in 1983. The best Hillebrand wines are not as outstanding as they used to be.

✓ *Chardonnay* (Trius) • *Classic red blend* (Trius)

INNISKILLIN

Niagara-on-the-Lake

★★★

Founded by Don Ziraldo, an agronomist and one of Canada's greatest wine publicists, and the winemaker Karl Kaiser, a highly respected oenologist. You could not get two more contrasting characters, but the symbiotic relationship between extrovert Ziraldo and introvert Kaiser was essentially responsible for driving the Canadian

wine industry from the backwaters to its present position on the international wine stage.

- ✓ *Cabernet Franc* (Reserve) • *Cabernet Sauvignon* (Klose Vineyard) • *Chardonnay* (Founder's Reserve, Reserve) • *Icewine* (Riesling) • *Pinot Noir* (Montagu Estate Vineyard, Reserve) • *Riesling* (Dry, Select Late Harvest)

JACKSON-TRIGGS

Niagara-on-the-Lake
★★★

Part of Vincor, Jackson-Triggs' new winery opened in Ontario in 2001, since when it has set new standards for future wineries and, indeed, future wines in this province.

- ✓ *Chardonnay* (Proprietor's Grand Reserve) • *Classic red blend* (Proprietor's Grand Reserve Meritage) • *Icewine* (Proprietor's Grand Reserve: Gewürztraminer, Riesling) • *Riesling* (Delaine Vineyard)

KONZELMANN

Niagara-on-the-Lake
★★★

Established in 1984 by Herbert Konzelmann, who introduced the vertical trellising of vines to Canada. Konzelmann is one of the most modest and gifted winemakers in Ontario and his vineyard has always displayed exceptional potential for Gewürztraminer. These wines sell out quickly every year. My only criticism is the label.

- ✓ *Chardonnay* (Grand Reserve) • *Classic red blend* (Cabernet Merlot Reserve Unfiltered) • *Icewine* (Vidal) • *Merlot* (Barrel Aged) • *Riesling* (Select Late Harvest) • *Riesling Traminer* (Select Late Harvest)

LAKEVIEW CELLARS

Vineland
★★

Award-winning amateur winemaker Eddy Gurinkas purchased a vineyard on the Beamsville bench in 1986, went commercial in 1991, and started racking up medals in the professional arena.

- ✓ *Baco Noir* (Reserve) • *Cabernet Franc* • *Chardonnay* (Vinc Vineyard Reserve) • *Icewine* (Gewürztraminer, Vidal) • *Rosé* (Cabernet Franc Rosé)

MAGNOTTA WINERY

Mississauga
★★

This winery has vineyards on the Beamsville Bench, where it sources its top-performing Chardonnay, and some interesting, often unusual, Icewine.

- ✓ *Cabernet Sauvignon* • *Carmenère* • *Chardonnay* • *Icewine* (Cabernet Franc, Riesling)

MALIVOIRE

Beamsville
★★★

Owned by Martin Malivoire and Moira Saganski, whose choice of Ann Sperling as winemaker paid dividends in 2004, when she was named Winemaker of the Year at the Ontario Wine Awards (and they had not even entered any wines!).

- ✓ *Chardonnay* (Moira Vineyard) • *Gewürztraminer* (Moira Vineyard) • *Muscadet* (Estate Melon) • *Pinot Noir* (Estate)

PELEE ISLAND

Kingsville, Pelee Island
★

It takes an hour on a ferry to reach this island in Lake Erie, one of Ontario's VQA areas and the location of Canada's most southerly vineyards. With the longest growing season in the country and the warmest climate, it comes as no surprise that Vin Villa, Canada's first commercial winery, was established here in the 1860s.

- ✓ *Cabernet Franc* • *Icewine* (Cabernet Franc, Vidal) • *Pinot Gris* (Vendange Tardive) • *Riesling* (Late Harvest) • *Rosé* • *Sauvignon Blanc*

PELLER ESTATES

Niagara-on-the-Lake
★★

Large, successful, boutique winery owned by Andrés, the second-largest winery in Canada.

- ✓ *Icewine* (Founder Series Vidal) • *Merlot* (Signature Series Unfiltered)

PENINSULA RIDGE

Beamsville
★★

Domaine Laroche's former winemaker Jean-Pierre Colas has very quickly established a reputation at Peninsula Ridge estate, not least for the purity of its stellar quality Chardonnays.

- ✓ *Chardonnay* (Inox) • *Icewine* (Vidal) • *Merlot* (Reserve)

PILLITTERI ESTATES WINERY

Niagara-on-the-Lake
★

The Pillitteri family has been growing grapes on the Niagara Peninsula for more than half a century, and selling wines under their own name since 1993. Although on average Icewine accounts for just 5 percent of Ontario's wine production, at Pillitteri Estates, it represents no less than one-third of its bottled wine.

- ✓ *Cabernet Franc* (Family Reserve) • *Merlot* (Family Reserve) • *Icewine* (Riesling) • *Riesling* (Reserve) • *Sparkling* (Riesling Icewine)

REIF ESTATE WINERY

Niagara-on-the-Lake
★★

Firmly established as one of Niagara's top wineries, the wines

produced by Klaus Reif, just around the corner from Inniskillin, are 100 percent estate bottled, often *barrique*-influenced, and they always show great elegance.

- ✓ *Cabernet Sauvignon* (First Growth) • *Classic red blend* (Cabernet Merlot, Meritage) • *Merlot* • *Vidal* (Special Select Late Harvest)

SOUTHBROOK FARMS

Vaughan
★★

Established as recently as 1991, under the auspices of Brian Croser (of Petaluma in Australia), who also acted as consultant for the first vintage that year. The grapes came from Reif vineyard, and Klaus Reif was the winemaker initially. Since then owner Bill Redelmeier has hired Colin Campbell, who is obviously just as talented, from the awards he is picking up.

- ✓ *Cabernet Franc* (Watson Vineyard) • *Cabernet Sauvignon* (Lailey Vineyard) • *Classic red blend* (Triomphe Cabernet-Merlot)

STONEY RIDGE CELLARS

Winona
★

Although founded as recently as 1990, Stoney Ridge has firmly established itself as one of the most outstanding wineries in Ontario.

- ✓ *Cabernet Franc* (Reserve) • *Chardonnay* (Founder's Signature Collection Charlotte's, Reserve) • *Chenin Blanc*

STREWN

Winona
★

Grower-turned-winemaker Joe Will is one of Ontario's fastest-rising "young" stars.

- ✓ *Icewine* (Riesling, Vidal) • *Merlot*

THIRTY BENCH

Beamsville
★★

This small vineyard and winery has been producing some well priced, nicely focused, fruity wines since the 2000s.

- ✓ *Cabernet Franc* (Benchmark Reserve) • *Chardonnay* (Kocsis Vineyard Reserve) • *Merlot* • *Rosé* (Mountainview Blush)

VINELAND ESTATES

Vineland
★

Formerly owned by Herman Weiss, whose family has a winery in the Mosel called St. Urban, Vineland Estates is now owned by Allan Schmidt, whose father had been one of the original partners in Sumac Ridge, while Allan's brother Brian is the winemaker.

- ✓ *Cabernet Franc* • *Icewine* (Vidal) • *Riesling* (Dry)

QUEBEC

CHAPELLE ST AGNÈS

Sutton Mountains
②

An exquisite amphitheater of terraced vines, owned by Henrietta Antony and dedicated to dessert wine, Chapelle St. Agnès cropped for the first time in 2003. One to watch.

VIGNOBLE DIETRICH-JOOS

Iberville
★★

This winery has won over 100 medals at international wine competitions since it was founded in 1986.

- ✓ *Cayuga* (Storikengold) • *Classic white blend* (Cuvée Spéciale) • *Icewine* (Sélection Impérial) • *Rosé* (Rosé d'Iberville)

VIGNOBLE LES CHANTS DE VIGNES

Magog
★★

One of Quebec's few gold medal winners, even though Vignoble les Chants de Vignes yielded its first crop as recently as 1999.

- ✓ *Classic red blend* (Le Canon Rouge)

VIGNOBLE LES PERVENCHES

Farnham
★★

The only producer of Chardonnay in Quebec, in 2004 Vignoble Les Pervenches became one of Quebec's first wineries to be awarded a gold medal, and won two for good measure.

- ✓ *Classic red blend* (Cuvée de Montmollin) • *Classic white blend* (Seyval-Chardonnay)

VIGNOBLE DE L'ORPAILLEUR

Frelighsburg
★★

Established in 1982, this vineyard produced its first crop in 1985. Since then Vignoble de L'Orpailleur has produced just 15,000 bottles a year, crafted into 10 artisanal cuvées.

- ✓ *Icewine* (Vendange de Glace) • *Seyval Blanc* (L'Orpailleur Blanc)

British Columbia

A Very Fine Winery & Buried Treasure Vineyards (Abbotsford) Beaumont Estate (Kelowna) Hollywood & Wine (Summerland) K & V Vineyards (Kelowna) Knollvine Farm (Penicton) Park Hill Vineyards (Oliver) Stony Paradise (Kelowna) Vispering Vines (Okanagan Falls)

MEXICO

The biggest obstacle to Mexico's success as a winemaking country is not its hot climate, nor the feared influx of cheaper American wines, let alone even cheaper Chilean imports, but the absence of wine drinking from the culture of its population.

IT WAS THE SPANISH who brought wine to Mexico, the oldest wine-producing country in the Americas. By 1521, just one year after invading Mexico, the conquistadors had planted vines and soon afterward they began making wine.

In 1524 Hernán Cortés, the governor of New Spain (Mexico), ordered that all Spanish residents who had been granted land and given Indians for forced labor should annually plant "one thousand vines per hundred Indians" for a period of five years. By 1595 the country was almost self-sufficient in wine, and shipments of domestic Spanish wine had dwindled to such an extent that producers in the home country pressured Philip II into forbidding the planting of further vineyards in the New World.

THE ORIGINAL "TEQUILA SUNRISE"

When the Spanish encountered a strange, milky-white Aztec "wine" called *pulque*, they were not impressed. However, in a bid to utilize this popular local product, they tried distilling it—the crystal-clear, colorless liquor that resulted was far more to their taste, and was named *tequila*, after *Agave tequilana*, the variety of succulent cactus used to make it (once thought to be part of the lily family). Today, tequila is one of Mexico's most important exports, and vast quantities of *pulque* are still made and consumed by Mexicans.

MODERN MEXICAN WINE

There are 125,000 acres (50,000 hectares) of vines in Mexico, but almost 40 percent produce table grapes or raisins, and much of the wine produced is distilled into brandy.

It was not long ago that the best Mexican wines tasted little better than *pulque* but, by 1988, when the first edition of this encyclopedia was published, a combination of foreign investment and the demand from tourists for more sophisticated products had already led to significant improvements. At the time, many international oenologists were optimistic about Mexico's future as a producer of good-quality wines, but, unfortunately, although the potential remains the same, a lack of sales on the home market has seen more than half of Mexico's wineries close down. Most Mexicans drink beer or *pulque*, not wine. The consumption of wine *per capita* is less than one-thirtieth of that in the US, and

MEXICAN LABEL LANGUAGE

Many terms found on Mexican wine labels are the same as, or similar to, those seen on Spanish labels (see Spanish Label Language, p.302).

Some common terms are listed below:

VINO TINTO Red wine	CONTENIDO NETO Contents	SECO, EXTRA SECO Dry, Extra Dry
VINO BLANCO White wine	COSECHAS SELECCIONADAS Special blend	VINO DE MESA Table wine
VARIEDAD Grape variety	VIÑA Vineyard	BODEGA Winery
COMBINADOS Indicates a blend of different grape varieties.	ESPUMOSO Sparkling	HECHO EN MÉXICO Made in Mexico

VINE-GROWING AREAS IN MEXICO

STATE	NOTES
Sonora	Abutting Arizona, Sonora is by far the largest grape-growing state in Mexico, but much of the crop is for eating grapes or raisins, and virtually all of the wine grapes harvested go for distillation, although in isolated areas as much as 20–25 percent of the production is used for wine. L. A. Cetto owns 3,950 acres (1,600 hectares) of vines in Sonora.
Baja California	Baja California is the largest peninsula in the world, and the northern half, Baja California Norte, produces more than 90 percent of Mexico's wine, although it grows only 20 percent of Mexico's grapes. Indeed, just seven wineries in this state produce almost 80 percent of Mexico's wines. There are main quality districts: Valle de Calafia, Valle de Guadalupe, Ensenada, Tecate, San Antonio de la Minas, Valle de Santó Tomas, San Vicente, and Valle de Mexicali.
Aguascalientes	Just 7 percent of the vines yield wine grapes.
Zacatecas	Just 7 percent of the vines yield wine grapes, with vines growing on the Altiplano, at an altitude of 7,000 feet (2,000 meters), the highest wine region in Mexico.
Coahuila	This state and Durango together form La Laguna region, where three-quarters of the grapes grown are distilled, and much of the rest are table grapes, although quality wines are produced in the Valle de Parras.
Chihuahua	More famous for its cheddarlike cheese than wine.
Querétaro	Just 7 percent of the vines yield wine grapes, mostly sparkling from Finca Freixenet.
Durango	This state and Coahuila together form La Laguna region, where three-quarters of the grapes grown are distilled, and much of the rest are table grapes.

FACTORS AFFECTING TASTE AND QUALITY

 **LOCATION**
Eight of the country's states grow grapes, from Baja California in the north to San Juan del Rio, just north of Mexico City in the south.

 **CLIMATE**
Half of Mexico lies south of the Tropic of Cancer, but altitude moderates the temperature of the vineyards. Most are situated on the high central plateau and some are cooled by the nearby ocean. Principal problems include extreme fluctuation of day and night temperatures, and the fact that most areas have either too little or too much moisture. The dry areas often lack adequate sources of water for irrigation, and the wet districts suffer from too much rain during the growing season.

 **ASPECT**
In the states of Aguascalientes, Querétaro, and Zacatecas, vines are grown on flat plateau lands and the sides of small valleys, at altitudes of 5,300 feet (1,600 meters), rising to nearly 7,000 feet (2,100 meters) in Zacatecas State. In Baja California, vines are located in valley and desert areas at much lower altitudes of between 330 and 1,100 feet (100 and 335 meters).

 **SOIL**
The soils of Mexico can be divided into two wide-ranging categories: slope or valley soils are thin and low in fertility, while plains soils are of variable depth and

fertility. In the Baja California, the soils range from a poor, alkaline, sandy soil in Mexicali, to a thin spread of volcanic soil, which is intermixed with gravel, sand, and limestone to provide excellent drainage. In Sonora, the soils of Caborca are similar to those found in Mexicali, but those in Hermosillo are very silty and of alluvial origin. The high plains of Zacatecas have mostly volcanic and silty-clay soils. In the Aguascalientes, the soil in both the valley and the plains is of a scarce depth with a thin covering of calcium. The volcanic, calcareous sandy-clay soil in Querétaro has a good depth and drainage and is slightly alkaline, while in La Laguna the silty-sandy alluvium is very alkaline.

VITICULTURE AND VINIFICATION

Irrigation is widely practiced in dry areas such as Baja California and Zacatecas. Most wineries are relatively new and staffed by highly trained oenologists.

 **GRAPE VARIETIES**
Primary varieties: Cabernet Sauvignon, Carignan, Chenin Blanc, Grenache, Mission, Palomino, Riesling, Ruby Cabernet, Sauvignon Blanc, Sémillon, Ugni Blanc, Zinfandel

Secondary varieties: Barbera, Cabernet Franc, Chardonnay, Colombard, Malbec, Merlot, Nebbiolo, Petit Sirah, Shiraz, Tempranillo, Viognier

BAJA CALIFORNIA, MEXICO

Petite Sirah vines basking in the hot midday Mexican sunshine, with the foothills of the Sierra San Pedro Mártir in the background.

that in turn is less than one-tenth of the European average. The wine industry in the US is viable only because of the sheer scale of its economy, and the size and affluence of its middle classes, but in Mexico the middle classes are small in number and do not support the local wine industry. As Christopher Fielden put it in *The Wines of Argentina, Chile and Latin America*, “there is no national pride in the product; those who can afford to drink wine generally prefer to drink imported wine.” This has been especially

so since the North American Free Trade Agreement (NAFTA) and the Mexico-EU Free Trade Agreement (MEFTA), which have gradually lowered duty on imported wine. Imports now represent 60 percent of all the wines sold in Mexico, and this is set to increase. There may, however, be a silver lining in all this foreign infiltration because Mexico’s wineries cannot compete in price with American or Chilean cheap wines, thus, they will have to focus on both quality and exports to survive. This will lead to a whittling down of its vineyards, so that in a decade’s time, with only the best areas cultivated with site-specific clones, the full potential of Mexico as a wine producer might finally be realized.

THE WINE PRODUCERS OF MEXICO

BODEGAS DE SANTO TOMAS

Ensenada
★🍷

This winery was founded by an Italian goldminer, who sold it to General Rodriguez in 1920. Rodriguez went on to become president of Mexico and the winery passed to Esteban Ferro. The winery now belongs to Elias Pando.

✓ *Cabernet Sauvignon* • *Classic red blend* (Duetto, Gran Reserva Unico)

CASA DE PIEDRA

San Antonio de las Minas
★

Hugo d’Acosta’s expressive Tempranillo-Cabernet Sauvignon blend is a real treasure of a find.

✓ *Classic red blend* (Vino de Piedra Tinto)

CASA MADERO

Monterey
★★🍷

The second-oldest winery on the continent, comprising 1,000 acres (400 hectares) of vineyards in the Valle de Parras. Flying winemaker John Worontschak has produced clean, easy-drinking wine here for British retailer Marks & Spencer.

✓ *Cabernet Sauvignon* (Gran Reserva Especial) • *Chardonnay* • *Chenin Blanc* • *Classic red blend* (San Lorenzo) • *Merlot*

CAVAS VALMAR

Ensenada
★

Owners Fernando and Yolanda Martain met when they worked together at Bodegas de Santo Tomás before establishing this boutique winery.

✓ *Cabernet Sauvignon*

CHATEAU CAMOU

Ensenada
★🍷

Owner Ernesto Alvarez-Morphy has *bordelais* aspirations, citing Château Margaux as his inspiration, and employing Bordeaux-trained Victor Torres as the winemaker at his state-of-the-art winery in the heart of the Valle de Guadalupe.

✓ *Classic red blend* (Cabernet Franc-Merlot) • *Classic white blend* (Gran Vino Blanco) • *Merlot* (Gran Vino) •

FREIXENET MEXICO

San Juan del Rio
★🍷

Freixenet was making a fine, light, fresh sparkling wine that was better than most authentic Spanish Cava as early as 1988. Promising developments with still wines, with young, entry-level wines sold under the Dolores Vivante label, and premium quality under the Viña Doña Dolores label.

✓ *Classic red blend* (Viña Doña Dolores Tinto Gran Reserva) • *Classic white blend* (Dolores Vivante) • *Sparkling* (Sala Vivé)

L A CETTO

Tijuana
★🍷

I visited this winery’s facility in Mexico City when most of its products were still branded as Domecq and the Cetto wines were unknown internationally. Even back then, the quality here seemed more promising than at other producers.

✓ *Cabernet Sauvignon* • *Nebbiolo* • *Petite Sirah* • *Zinfandel*

MOGOR BADAN

Ensenada
★

This has been dubbed the “virtual winery” because its wines are produced at other wineries.

✓ *Chasselas*

MONTE XANIC

Ensenada
★★🍷

Pronounced Sha-nic, Xanic is Cora Indian for “the first bloom after the rain” and it certainly is blossoming well as the finest winery in Mexico.

✓ *Cabernet Sauvignon* (Calixa) • *Classic red blend* (Cabernet Sauvignon Y Merlot) • *Chardonnay* (Calixa) • *Classic red blend* (Gran Ricardo) • *Merlot* • *Syrab*

PEDRO DOMEQC

Mexico City
★🍷

This winery’s top wine, Château Domecq, produced in Baja California, is still one of Mexico’s best Cabernet Sauvignons.

✓ *Chardonnay* (XA) • *Classic red blend* (Château Domecq)

VINAS DE LICEAGA

Ensenada
★

Production began in 1993, but only now is the wine beginning to show promise.

✓ *Merlot* (Gran Reserva)

Other potentially interesting Mexican wineries include: Bodegas San Antonio, Cavas de Valmar, Casa Martell, and Vergel.

SOUTH AMERICA

The Spanish introduced viticulture to the Americas: first to Mexico in 1521, and then farther afield as the conquistadors opened up other areas of the southern continent. Relatively recently, Chile stood out for quality, and Argentina for quantity, but a growing number of ultrapremium

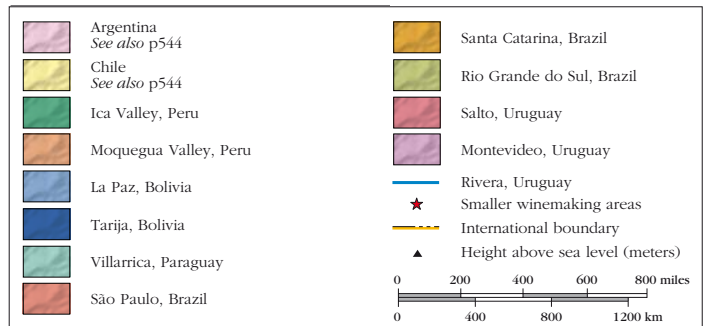

Argentinian wineries are slowly turning around this supertanker wine-producing country to take on Chile in the quality stakes, while Brazil and Uruguay continue to show some promise.

SOUTH AMERICA'S WINE INDUSTRIES are inextricably linked to Spain's expansionist policies of the 16th century, although the conquistadors were not primarily concerned with the spread of viticulture. They were in South America to plunder gold for Ferdinand of Spain, and when the Indians grew tired of the colored glass beads traded for their treasures, the conquistadors took what they wanted by more direct and brutal means. In response, the Indians poured molten gold down the throats of captured soldiers, which no doubt quenched the Spanish thirst for the precious metal, but also served as a sardonic retort to the Christian missionaries, who had forced them to drink wine as part of the Sacrament.

HARVEST IN THE RIO GRANDE, BRAZIL
Brazil's largest wine-producing region is Rio Grande do Sul. It borders the Atlantic and stretches down to Uruguay in the south.

SOUTH AMERICA
Climatic conditions and inhospitable terrain prevent much of South America from producing wine, but such is the size of this continent that most countries have some vineyards. Chile and Argentina are the top producers.

In more recent times, it has been the traditional beer-drinking culture of the local populations that has held back the development of South American wines as a whole. This phenomenon has even affected the two major wine-producing countries, Chile and Argentina. Brazil could be leading the way, however, as the switch from beer to wine among the younger generation makes this one of the few countries in the world where wine consumption is actually growing.

SOUTH AMERICAN COUNTRIES: AREA UNDER VINE AND YIELD

COUNTRY	HECTARES	(ACRES)	HECTOLITERS	(CASES)	YIELD
ARGENTINA	207,985	(513,952)	11,200,000	(124,000,000)	54 hl/ha*
CHILE	108,570	(268,287)	5,750,000	(63,900,000)	53 hl/ha
BRAZIL	80,000	(148,260)	4,000,000	(33,000,000)	50 hl/ha
URUGUAY	11,000	(27,181)	710,000	(7,900,000)	65 hl/ha
PERU	10,000	(24,710)	80,000	(900,000)	8 hl/ha**
BOLIVIA	4,000	(9,884)	20,000	(220,000)	5 hl/ha**
COLOMBIA	1,500	(3,706)		N/A	N/A
VENEZUELA	1,000	(2,470)		N/A	N/A
ECUADOR	250	(618)		N/A	N/A
PARAGUAY		negligible		N/A	N/A

*This looks suspiciously low, almost half the expected yield, but the figures come from official statistics for the 2003 harvest.

**These anomalies are because nearly all the wine is distilled into aromatic grape-brandy. Discounting this, yields can be as high as 700 cases/acre or 160 hl/ha.

VINEYARDS OF SAN PEDRO AT MOLINA, CHILE
Part of the largest single vineyard in Chile, at Molina in the Curicó district, 125 miles (200 kilometers) south of Santiago, with the Andes in the distance.

THE WINE PRODUCERS OF SOUTH AMERICA

BOLIVIA

LA CONCEPCIÓN

La Concepción

This was Bolivia's first modern winery in 1978, and it remains the best.

✓ Cabernet Sauvignon

BRAZIL

AMADEU

Bento Gonçalves

An award-winning winery under the guidance of Mario Geisse, formerly of Chandon Brazil.

✓ Cabernet Sauvignon • Merlot

COOPERATIVA VINICOLA AURORA

Bento Gonçalves

This cooperative has more than 1,000 members, who between them account for more than one-third of Brazil's vineyards, and supply 95 percent of the country's total wine exports. There are various labels, including Conde Foucolde and Clos de Nobles. Flying winemaker John Worontschak has made several wines here for British supermarkets. This might be Brazil's largest and, in a commercial sense, most successful winery, but in terms of quality this cooperative has the potential to do much better. Chardonnay has been the most consistent performer.

CHANDON DO BRASIL

Rio Grande do Sul

The least impressive of Chandon's far-flung outposts, but at least the sparkling wines are no longer sold shamelessly on the Brazilian market as Champanha.

✓ Classic red blend (Grand Philippe) • Sparkling (Diamantina)

LOVARA

Rio Grande do Sul

Despite its relatively ancient origins (established by Italian immigrants in the 1870s), Lovara is an up-and-coming winery that has been improving with each year since the 1990s.

✓ Cabernet Sauvignon • Merlot

MIOLO

Rio Grande do Sul

Grapegrowers since 1897, the Miolo family built a winery in 1989. Since then their best, medal-winning wines have been some of the most exciting Brazilian wines made.

✓ Classic red blend (Lot 43, Quinta do Seival, RAR, Terranova Cabernet Sauvignon-Shiraz)

ECUADOR

CHAUPI ESTANCIA WINERY

Yaruqui

A boutique winery with 15 acres (6 hectares) of vineyard 25 miles (25 miles) northeast of Quito, Chaupi Estancia Winery was established in 1989 to grow only *vinifera* grapes. Due to the rarefied altitude (8,100 feet; 2,440 meters) and equatorial latitude, viticulturist and winemaker Dick Handall has been experimenting with 32 different varieties and many styles and combinations of wine, with Chilean Hector Olivares Madrid consulting.

✓ Palomino

VIÑA DAVELOS

Mira

A relatively recent development by Uyama Farms, which are 100 miles (160 kilometers) north of Quito, and owned by Mauricio Davalos, a former Minister of Agriculture and ex-President of the Ecuadorian Central Bank. Viña Davelos has 60 acres (24 hectares) of vineyards, both table and wine grapes, located at a height of 6,270 feet (1,890 meters), and were planted between 1995 and 1998. Wine production started in 2003.

THE LAW THAT NEVER WAS

In 1993 I asked Yves Bénard, then the head of Moët & Chandon in Champagne, how the *champenois* could justify court actions to prevent the use of the name Champagne or Champaña on any sparkling wine produced outside the officially delimited Champagne region, when Moët had been selling South American sparkling wine as Champaña for more than 30 years.

Bénard told me that they had been trying to get the name Champaña banned, but were required by local laws to use the term, and this raised the question of why any Champagne house would set up business in countries that undermined their own appellation. What prompted my original question was that I had been told no such law existed by Trevor Bell, who was managing director of Piper-Heidsieck. I put it to Bénard that as Piper produced Argentinian sparkling wine, Bell should know what he was talking about, and they could not both be right.

Bénard maintained "It is the law. I know, because every time the CIVC (Comité Interprofessionnel du Vin de Champagne) takes a case to court, this very question is always raised by the other side and I am called to give evidence in defense of my company's actions."

I asked Bénard to supply the text of the law he was referring to. He offered a translation used as evidence in a Canadian court, but I insisted on a copy of the law itself in original Spanish for Argentina and Portuguese for Brazil, as they would have to be independently translated if there were to be no question about their interpretation.

This was duly promised, but did not materialize. Eventually I received a letter dated June 25, 1993, admitting that "The law in that country requires that sparkling wine should be specified as either champagne, champaña, vino espumoso, or vino espumante. You should be aware that in Argentina to specify a wine as vino espumoso or vino espumante considerably depreciates the product in the mind of the consumer and nobody uses these terms." Yet this is precisely the argument used by sparkling wine producers worldwide, and the *champenois* take them to court to contest it.

No copy of the Brazil law turned up either, and Moët assured me "production is tiny, less than 200,000 cases, it is not really a problem." Yet when the *champenois* took Thorncroft to court over less than 3,000 cases of nonalcoholic Elderflower Champagne, they claimed it was "the thin-end of the wedge!"

The idea that sparkling wines in Argentina and Brazil must be labeled Champagne or Champaña by law has now been shattered. It is clear that the *champenois* involved were not legally obliged to use the term "Champaña" and the pity is that the court cases won by the *champenois* can now be challenged and, presumably, reversed. On a positive note, it might have taken a decade, but the shame that this publicity brought on the hypocritical Champagne houses involved has eventually forced them to drop all versions of Champagne and Champaña from the labels of their South American bubbly. Something it was not possible to state as recently as 2001 in that year's revise of this encyclopedia.

PERU

TACAMA

Ica

★🏆

This is the only significant producer in the country and, although the wine is exported, only the Malbec is acceptable by international standards. Other reds are short or bitter, the whites are fresh but uninteresting, and the sparkling wines unpleasantly explosive. Bordeaux professors Peynaud and Ribéreau-Gayon have consulted here, and flying winemaker John Worontschak has made some quaffing wines (Malbec and Chenin) for British supermarkets.

✓ *Classic red blend* (Selección Especial 2000, Vino Tinto) • *Classic white blend* (Blanco de Blancos)

Progreso

★🏆

Established in 1924 by Don Cesare Secundino Pisano, the first generation of his Italian family to be born in Uruguay, the winery is now run by Eduardo Pisano, who has produced some of Uruguay's best wines in recent years. Around half of all the wine produced by this winery is sold abroad.

✓ *Merlot* (RPF) • *Pinot Noir* (RPF) • *Tannat* (RPF)

TRAVERSA

Montevideo

★🏆

Carlos Domingo Traversa started off in 1937 as a grower of Isabela and Moscatel vines, and in 1956 he established a small winery, which has just started to blossom under his grandsons, who have produced some of Uruguay's greatest Tannat.

✓ *Tannat* (Gran Reserva, Roble)

CHILE AND ARGENTINA

If Chile is the showcase of South America's wine-producing countries, Argentina is its bottomless vat. Yet a growing number of small, artisanal wineries have shown that Argentina can compete with Chile for quality, if its producers will only reduce their yields.

CHILE

The only problem with Chile is that most of its vineyards are in the wrong place. In such a long country it was natural for the population to live in or near the capital of Santiago, and to plant their vineyards thereabouts, especially as the melting snows of the nearby Andes provided an inexhaustible supply of irrigation.

As Chile became South America's best wine region, there was little incentive to look for better viticultural areas in uninhabited, less accessible parts of the country. New areas, such as the Casablanca Valley, are merely the fringe of the country's best wine area, the Secano region, a strip of coastal hills. Here, the cool maritime breezes temper the midday sun and sufficient rainfall permits viticulture without irrigation—if, that is, producers are content with lower yields. Casablanca nudges into the northern end of this future wine area, the greatest potential of which extends as far south as Concepcion. Ironically, the only people with vines here are peasants who cannot afford irrigation (hence its name, Secano, which means “unirrigated”) and grow Pais for their own use, but a chainsaw and chip-budding could convert these vineyards overnight, while properly planted ones are laid

CABERNET SAUVIGNON, CHILE

This Cabernet Sauvignon vine is more than 100 years old and grows on ungrafted roots in the Maipo Valley.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

In Chile, vines are grown along 800 miles (1,300 kilometers) of Pacific coast and are most concentrated south of Santiago. In Argentina, vines grow mainly in the provinces of Mendoza and San. Juan, east of the Andes foothills, west of Buenos Aires.

CLIMATE

Extremely variable conditions prevail in Chile, ranging from arid and extremely hot in the north to very wet in the south. The main wine area around Santiago is dry, with 15 inches (38 centimeters) of rain per year, no spring frosts, and clear, sunny skies. The temperature drops substantially at night due to the proximity of the snow-covered peaks of the Andes, enabling the grapes' acidity levels to remain high. Relatively new areas, such as the Casablanca Valley, are proving far more suitable for winegrowing, particularly for white wines, but inevitably the coastal range of hills will be Chile's fine-wine future, since they receive enough rainfall to allow viticulture at modest yields without irrigation. This is the area most affected by the ice-cold Humboldt Current, which supposedly brings a tempering Arctic chill to all Chilean vineyards, but is effectively blocked from flowing elsewhere in Chile by the coastal hills.

In Argentina's intensively cultivated Mendoza district, the climate is officially described as continental-semidesertic and has even less rainfall than Chile, a mere 8–10 inches (20–25 centimeters) per year, although this is mercifully spread over the summer growing months, and temperatures range from 50°F (10°C) at night to 104°F (40°C) during the day.

ASPECT

In both countries, most vines are grown on the flat coastal and valley plains extending into the foothills of the Andes. In Chile, the unirrigated hillside vineyards are found in the Central Zone, although irrigation is widely utilized in other parts of this country. In Argentina, by contrast, the hillside vineyards are usually levelled to a minimal

slope in order to allow for more efficient use of water.

SOIL

Vines are grown on a vast variety of soils in these countries. The deeper limestone soils of some parts of Chile are one reason for the generally better quality of wines from this country, but its most famous attribute is a total absence of phylloxera. In Argentina, the soils range from sandy to clay, with a predominance of deep, loose soils of alluvial and aeolian origin.

VITICULTURE AND VINIFICATION

With no climatic challenges, Chile is almost uniquely suited to organic or biodynamic viticulture. While Chile uses traditional methods for most of its wines and often uses Bordeaux techniques, Argentina relies more on bulk-production methods, although high-tech methods are also used in Argentina for its growing production of higher-grade premium varieties. Modern equipment, stainless-steel vats, and improved technology are standard in most Chilean wineries today. The “native” Pais grape is banned from the label, but is allowed in wines. Wines are often distilled into pisco, which is Chile's local brandy, as well as Peru's.

GRAPE VARIETIES

Chile

Primary varieties: Cabernet Sauvignon, Carmenère, Chardonnay, Merlot, Pinot Noir, Sauvignon Blanc, Syrah
Secondary varieties: Cabernet Franc, Carignan, Gewürztraminer, Malbec, Mourvèdre, Pais, Petit Verdot, Riesling, Sangiovese, Sauvignon Gris, Sauvignonasse, Viognier, Zinfandel

Argentina

Primary varieties: Bonarda, Cabernet Sauvignon, Chardonnay, Chenin Blanc, Malbec, Merlot, Petite Sirah, Sauvignon Blanc, Sémillon, Torrontés, Ugni Blanc
Secondary varieties: Barbera, Cabernet Franc, Cereza, Criolla, Greco Nero, Pinot Gris, Pinot Noir, Sangiovese, Sauvignon Gris, Tannat, Tempranillo, Viognier

and, most importantly, roads are built to connect these forgotten areas to the pan-American highway.

From red wines to white

As Chile exported more wine during the 1980s, it became evident that, while it made some really good-value reds, its white wines left much to be desired. In the late 1970s, the quality of Chilean wines greatly improved, with the introduction of temperature-controlled, stainless-steel vats. The early to mid-1980s saw the removal from the winemaking process of *raule* wood, a native

variety of beech, which left a taint in the wines that the Chileans had got used to but that international consumers found unpleasant.

With the introduction of new oak *barriques*, mostly of French origin, the 1989 vintage saw a transformation in the quality of Chardonnay, and with this it was widely imagined that Chile had at long last cracked the secret to successful white-wine production. But it soon became evident that even the best producers could not improve their dismal Sauvignon Blanc. Why was this so?

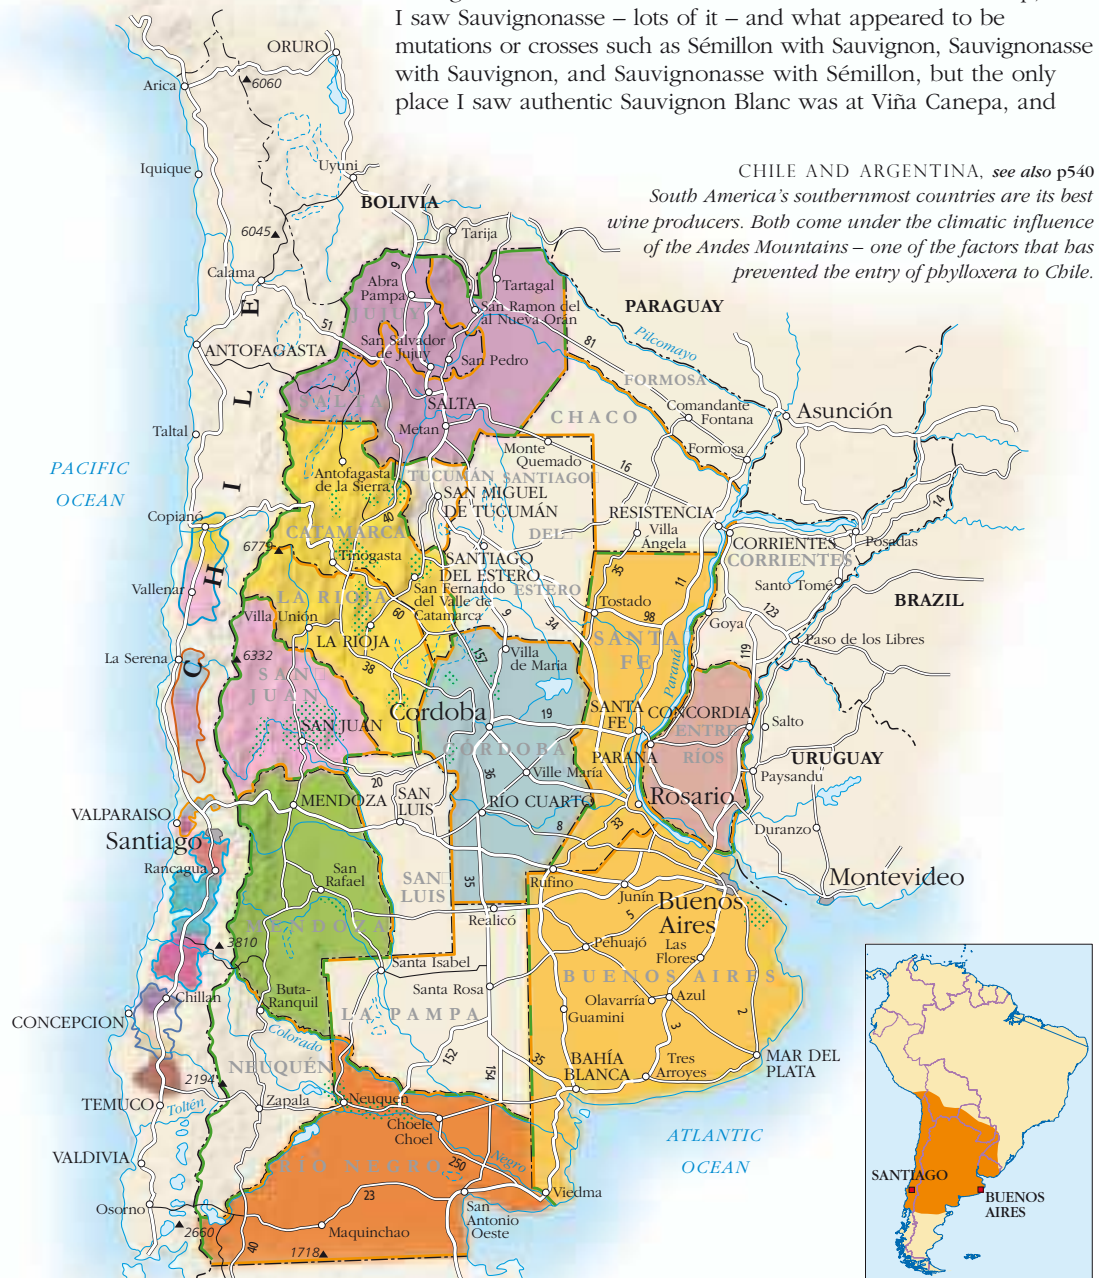

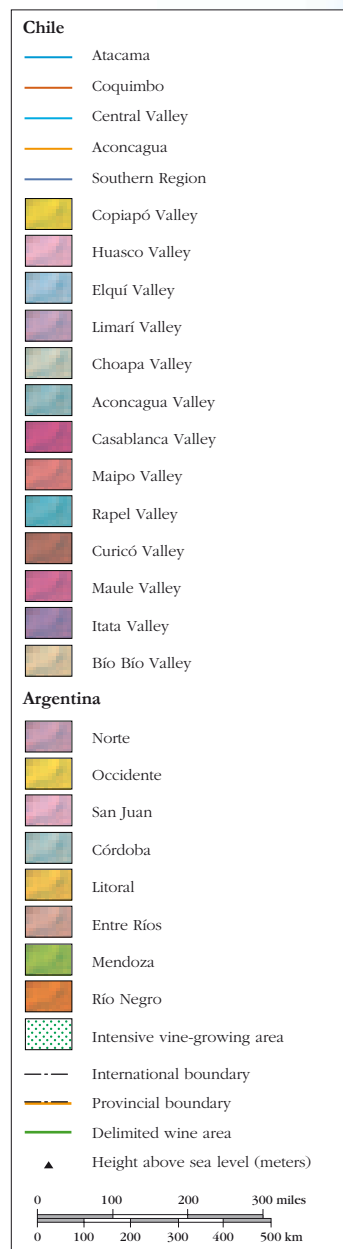

Non-existent Sauvignon

When I confronted producers, most confessed that virtually all the wine sold as Chilean Sauvignon Blanc was, in fact, Sauvignonasse. Sauvignonasse literally means “Sauvignon-like”, but this variety is not related to Sauvignon and has no Sauvignon character whatsoever. Whenever I tried to get acreage figures for Sauvignon, the Chileans would lump it together with Sauvignonasse and Sémillon, because they seemed to think it was difficult to distinguish these varieties. When I tried to obtain a breakdown of the three varieties, the nearest to a firm figure I could squeeze out of any member of the

Chilean wine trade was at least 12,500 hectares (31,000 acres) of Sauvignonasse, no more than 2,000 hectares (5,000 acres) of Sauvignon Blanc, and between 2,500 and 4,000 hectares (6,000–10,000 acres) of Sémillon. Therefore, there was on average less than 12 per cent Sauvignon Blanc in virtually every supposed Chilean Sauvignon Blanc wine up until at least the early 1990s. Little wonder, then, that Chilean Sauvignon Blancs possessed little varietal character – they contained very little Sauvignon Blanc!

Doubting these statistics, I returned to Chile with the purpose of trying to locate and identify Sauvignon Blanc in its vineyards. I got my first clue to the true state of affairs while visiting Miguel Torres’ vineyard at Curicó. He cocked his head and, with a little grin, asked, “So, Tom, tell me how you identify Sauvignon Blanc in the field?”. I launched into the differences between the inferior and superior sinuses of the Sauvignon’s leaf when compared with those of Sauvignonasse and Sémillon, and, having agreed with the ampelographic points I had churned out, Miguel Torres then set about pointing these out on the vines in front of us – only they were not there. He did not, in fact, have a pure strain of Sauvignon Blanc. We concluded that he probably had a mutated form of Sauvignon Blanc that was crossed with Sémillon. On that trip, I saw Sauvignonasse – lots of it – and what appeared to be mutations or crosses such as Sémillon with Sauvignon, Sauvignonasse with Sauvignon, and Sauvignonasse with Sémillon, but the only place I saw authentic Sauvignon Blanc was at Viña Canepa, and

CHILE AND ARGENTINA, *see also* p540
 South America’s southernmost countries are its best wine producers. Both come under the climatic influence of the Andes Mountains – one of the factors that has prevented the entry of phylloxera to Chile.

this was about the only producer engaged in making wine that actually tasted of the variety at that time.

After Chile's non-existent Sauvignon Blanc was exposed in an article in 1991, a number of Chilean wineries commissioned French experts to go through their vineyards with a fine toothcomb. They came to the same conclusion, and since then great swathes of vines have been chip-budded over to true Sauvignon Blanc. In the meantime, however, most wineries tried to make their Sauvignonasse more Sauvignon-like by harvesting early, picking unripe grapes, which resulted in wines that were green and mean. Many such wines still exist, but as the chip-budded vineyards mature, so Chile has begun to produce much better Sauvignon Blanc wines.

And back to red again

Chile always has been red wine country, and over the last decade a concerted effort has been made to project Carmenère as its own unique variety, but at the moment this variety has a better story to tell than wine to make. Carmenère is a Bordeaux variety, but it had virtually died out over there when it was discovered in Chile, masquerading as Merlot. Here was an almost extinct, ancient *bordelais* grape that had been preserved in its pure, ungrafted format. A virtually unique grape variety of impeccable breeding with which to fly the flag for Chilean wines, unchallenged by major plantings anywhere else. So far, so good, but the wine, although rich, is all too often a one-dimensional parody of overripe black-currants. Who wants Chile to become known as the Ribena of the wine world? Not me, but Carmenère does deserve investigating – sifting through the natural clones that exist, testing them in different *terroirs*, and applying more thought to their production than the richness and ripeness that extended hang-time brings.

ARGENTINA

This is the fifth-largest wine country in the world, and could be a major force in the premium-quality sector, if only its excessive yields could be curbed. While Chile has strengthened its position as South America's premier-quality wine-producing country by significantly reducing yields over the last ten years in order to concentrate on quality, Argentina has done the opposite. On the face of it, Argentina appears to have reduced production by some 10 per cent over the same period, but the fact is it has ripped up a third of its vineyards, thus its yield has actually increased from 66 to 88 hectolitres per hectare (297 to 396 cases per hectare).

Scarce rainfall dictates that Argentina's vineyards must depend on irrigation, but it is so cheap and plentiful that growers simply have to turn on the tap to increase the water supply in order to grow more grapes with which to make more wine, and this has killed the passion for quality among almost all the producers.

Initially, just a few wineries, such as Catena and Weinert, resolutely refused to go down this route, but as soon as they gave global consumers a glimpse of Argentina's true potential quality,

RECENT CHILEAN & ARGENTINIAN VINTAGES

2004 In Chile it was a difficult year for whites, but much better for reds, due in part to the smaller yield and, in particular, smaller berry size. A very good year for both reds and whites throughout most of Argentina, although unripe grapes were a problem in some of the more easterly regions.

2003 The greatest all-round vintage in Chile and Argentina since 1999, the quality of these wines showed from the very start.

2002 A very good red wine vintage in Chile, and a great vintage for both reds and whites in the Casablanca Valley. Argentina saw its greatest vintage for a decade and since very few high-quality wines were produced back then, 2002 can be viewed as the greatest ever Argentinian vintage.

2001 An outstanding vintage in Chile, but only a good one in Argentina, where high yields produced attenuated wines.

2000 Fabulously concentrated wines in both Chile and Argentina.

so others saw how much more profitable and prestigious it was to play the international field, and they have followed. However, such is the size of this wine-producing country that it requires an industry-wide change of heart to alter Argentina's image as a bottomless vat. That starts in the vineyards, which will take a generation to bring up to a desirable standard, selecting the right clones of the most appropriate varieties and planting them according to the *terroir* and in much higher densities, trained and pruned for quantity rather than volume. And the entire industry must agree on how to project a coherent, quality image, part of which will be to settle on a flagship variety or style. Malbec appears to be the logical choice. Then they must cooperate on and with major international markets. Until all this happens, even an imperfect Chile will have nothing to fear from Argentina.

High and mighty

Argentina contains the greatest concentration of high-altitude vineyards in the world. Altitude has become such a status symbol for growers in Mendoza that they almost dare each other to plant slightly higher with each new vineyard, with the best wines boasting their altitude as if it were a *grand cru* classification. Vineyards are commonly found at 900 to 1,050 metres (3,000–3,500 feet), whereas in much of Europe 480 metres (1,600 feet) is considered the upper limit for ripening. Many vineyards have been planted at 1,500 metres (5,000 feet), while Donald Hess, not satisfied with his Colome vineyard at 2,250 metres (7,500 feet), has planted another at 3,000 metres (9,900 feet)! One advantage of growing grapes at such heights is that they benefit from extended hang-time without producing wines that are too big and alcoholic.

THE APPELLATIONS OF

CHILE AND ARGENTINA

CHILE

ATACAMA VITICULTURAL REGION

Wine districts Copiapó Valley, Huasco Valley

The coastal hills are mountainous and join the Andes, with no central valley. Rainfall is virtually non-existent and viticulture is possible only with irrigation. In certain years, when there is rain, plants and insects awaken and what is one of the most arid deserts in the world suddenly

bursts into multi-coloured bloom. No quality wines are currently made from these vineyards, which produce mostly pisco and table grapes.

CENTRAL VALLEY VITICULTURAL REGION

Wine districts Curicó Valley, Maipo Valley, Maule Valley (Claro Valley, Lontue Valley), Rapel Valley (Colchagua Valley), Cachapoal Valley, Curicó Valley, Tenue Valley)

The oldest, most central, and most traditional

wine region, the Central Valley Viticultural Region contains four wine districts encompassing seven wine areas. The Curicó Valley is situated 200 kilometres (120 miles) south of Santiago, and is home to such brand leaders as Caliterra, Montes, Torres, and Valdivieso. Curicó is known principally for Chardonnay, but also produces fine Cabernet Sauvignon, Merlot, and Pinot Noir. The Maipo Valley around Santiago itself is still the country's most intensively cultivated district and therefore its most famous wine appellation. It is one of the warmest growing districts in the

country and, although by no means the best, it is still capable of regularly producing very good wines, particularly reds. Farthest south of all is the Maule Valley, which contains three wine areas and is generally better suited to red wines than whites, but is really quite variable overall, and consequently vast amounts of the local Pais grapes are grown solely for local consumption.

COASTAL VITICULTURAL REGION

Wine districts Aconcagua Valley, Casablanca Valley, Marga Marga Valley, San Antonio Valley (Leyda Valley)

Also known as the Aconcagua Viticultural Region. Not that long ago, Errázuriz was the only famous winery in the Aconcagua Valley, but it is now one of Chile's best-established, high-quality wine regions, with Panquehue a separately identified internal area. The cooler Casablanca Valley is the country's newest internationally recognized district, and has become famous for the freshness and fruitiness of its wines, particularly Chardonnay and Sauvignon Blanc, but Pinot Noir and other black grape varieties are also showing exciting potential. The San Antonio Valley is the fastest-rising new wine district in this region, and within this the Leyda Valley is very highly regarded (although Viña Leyda is the only winery here).

COQUIMBO VITICULTURAL REGION

Wine districts Elquí Valley, Limarí Valley, Choapa Valley

Like those in the Atacama Viticultural Region, the coastal hills in the Coquimbo Viticultural Region are a mountainous adjunct to the Andes, and viticulture is possible only with irrigation. The Elquí Valley is also known as the Magical Valley, because it lies at the southern end of the spectacular "flowering desert." The vines in all three valleys are found in discrete blocks, rather than in one contiguous section as is the case farther south, and the wines are high in alcohol and low in acidity. The Limarí Valley is known for its production of Pisco brandy, but since Viña Francisco de Aguirre, the country's largest Pisco producer, established a winery here in

1993, it has clearly shown excellent potential for the production of fine wine.

SOUTHERN VITICULTURAL REGION

Wine districts Itata Valley, Bío Bío Valley, Malleco Valley

The Pais is the most commonly cultivated vine here and, aside from oddities such as a Gewürztraminer from Concha-y-Toro, this region is not known for the quality of its wines.

ARGENTINA

CATAMARCA

This has a very small area under vine, the grapes of which are mostly used for local brandy.

LA RIOJA

Unlike its original Spanish counterpart, this is a very hot region producing wines high in alcohol, low in acidity, and, invariably, oxidized.

MENDOZA

This is the largest viticultural region in Argentina and accounts for more than a two-thirds of the country's total wine production. There are more than 30,000 individual growers in this mainly red-wine region, where Malbec is the most important variety, but Cabernet Sauvignon the best; others include Tempranillo, Pinot Noir, and Syrah. White grapes include Chardonnay, Chenin Blanc, Johannisberg Riesling, and Muscat.

RIO NEGRO

This region is the most suitable for grape-growing, yet possesses less than 5 percent of Argentina's vineyards. Now that this country has a more stable political climate, the Rio Negro could well attract much-needed foreign expertise, whether European, Antipodean, or Californian, and prove to be the hub of Argentina's future fine-wine production.

SALTA

This region covers less than half of 1 percent of all the vines in the country. The quality is, however, reasonable in Argentinian terms, and, with an injection of foreign expertise, could prove to be a surprise fine-wine area.

SAN JUAN

Much of this dry, hot region's high-alcohol, low-acidity grapes are exported as grape concentrate.

THE WINE PRODUCERS OF

CHILE AND ARGENTINA

CHILE

AGUATIERRA

Punitaqui
★☆☆

Established in 1999 by James Prior, a Canadian viticulturist, with Giorgio Flesatti of Viña Falernia providing winemaking services. Expect a raft of excellent organic wines.

✓ *Rosé* (Organic)

ALMAVIVA

El Monte
★★★

Joint venture between Domaines Baron Philippe de Rothschild and Concha y Toro, Almaviva is a classy single-vineyard, Bordeaux-style red wine.

✓ *Classic red blend* (Almaviva)

ANAKENA

Requinoa
★★★

Established in the mid-1990s by Jorge Gutiérrez, who excels at finely focused, fruit-driven whites.

✓ *Carmenère* (Single Vineyard) • *Classic white blend* (Ona Riesling-Viognier-Chardonnay) • *Riesling* (Single Vineyard)

AQUITANIA

Casilla
★★★

After a shaky start, this international collaboration between Bruno Prats (ex-Château Cos d'Estournel), Ghislain de Montgolfier (Bollinger),

Paul Pontallier (Château Margaux) and Felipe de Solminihac (Santa Monica) has become one of Chile's best wineries. The SOLdeSOL is from Solminihac's own property at Traiguén, the most southerly vineyard in Chile, 400 miles (650 kilometers) south of Santiago.

✓ *Cabernet Sauvignon* (Lazuli) • *Chardonnay* (SOLdeSOL)

BALDUZZI

San Javier
★★★

Produces fresh, elegant wines with creamy fruit. The Balduzzi family is of Piedmontese extraction, and arrived in Chile at the turn of the century, but began exporting wines as recently as 1987.

✓ *Cabernet Sauvignon* • *Chardonnay*

BISQUERTT

Lihueimo
★

A family-owned venture with large, well-established vineyards in the Colchagua Valley, Bisquertt began bottling its own wines in the early 1990s. It soft, easy-drinking, wines are excellent value for money.

✓ *Cabernet Sauvignon* (Reserve) • *Sauvignon Blanc* (Casa La Joya Reserve)

CALINA

Las Rastras
★★★

Stylish wines, stylishly presented by

Kendall-Jackson, which established this winery in 1993. Wines also sold under Alcance and Bravura labels.

- ✓ *Cabernet Sauvignon* (Alcance)
 • *Classic red blend* (Alcance Carmenère-Merlot-Cabernet, Bravura)

CALITERRA

Palmilla
 ★★

Originally a joint venture between Errázuriz and Franciscan Vineyards of California, but when the latter dropped out, the wines became inconsistent (the Sauvignon Blanc was particularly dire) and Caliterra almost assumed the mantle of an Errázuriz second label, but began to turn around after Robert Mondavi became an equal partner, although the reds disappoint.

- ✓ *Chardonnay* (Reserve) •
Sauvignon Blanc

CANEPA

Santiago
 ★★

This is a high-tech winery producing elegant wines with a perfectly clean line, great clarity of fruit, and excellent finesse. Terrific value wines also sold under Montenuuevo, Petroa, and Rowan Brook labels. Part organic.

- ✓ *Cabernet Sauvignon* (especially Magnificum) • *Chardonnay* (Rancagua) • *Merlot* •
Sauvignon Blanc • *Zinfandel*

CARMEN

Alto Jahuel
 ★★

Established in 1850, this is the oldest brand in Chile. Now part of the same group as Santa Rita, Carmen has a spanning new winery overseen by Alvaro Espinoza, one of Chile's best winemakers. Part organic (Nativa range).

- ✓ *Cabernet Sauvignon* • *Grand Vidure* • *Merlot* • *Petite Sirah*
 • *Sémillon* (Oak Aged)

CASA LAPOSTOLLE

Las Condes
 ★★

This is a Franco-Chilean venture between the Marnier-Lapostolle family of Grand Marnier renown (they also own Château de Sancerre) and the Rabats, an old Chilean family whose connections in the wine industry extend back to the 1920s, with Michel Rolland consulting. Part organic.

- ✓ *Merlot* • *Sauvignon Blanc*

CASABLANCA

Casablanca
 ★★

Owned by Santa Carolina, Viña Casablanca was put on the map by one of Chile's highest-profile winemakers, Ignacio Recabarren, but the wines became less consistent when he left, and have

only just started to return to form in recent years.

- ✓ *Chardonnay* (Santa Isabel) •
Classic red blend (Neblus) •
Desert (Neblus) • *Merlot* (Santa Isabella) • *Sauvignon Blanc*
 (Santa Isabel)

CASAS DEL BOSQUE

Casilla
 ★★

In 1993, Juan Cúneo Solari, the son of an Italian immigrant, fulfilled his dream of establishing a vineyard and winery in the Casablanca Valley, where he has become one of Chile's most successful producers of Sauvignon Blanc. Even the entry-level Casa Viva Sauvignon Blanc is an exceptionally fine wine—one of Chile's greatest bargains.

- ✓ *Cabernet Sauvignon* •
Chardonnay • *Merlot* (Reserve)
 • *Sauvignon Blanc*

CHÂTEAU LOS BOLDOS

Requínoa
 ★★

This long-established vineyard has been revitalized by its owners, the Massenez family of Alsace (*eaux-de-vie* distillers), who make very good-value wines of richness, finesse, and complexity.

- ✓ *Cabernet Sauvignon* •
Chardonnay • *Merlot*

CONCHA Y TORO

Santiago
 ★★

Some stunningly rich wines, ranging from vibrantly fruity to the complex and age-worthy, Concha y Toro is the largest, yet extremely serious, producer in Chile. Excellent-value wines are produced under the Sunrise and Frontera labels. Concha y Toro also owns Cono Sur and is involved with Domaines Baron Philippe de Rothschild in its Almaviva joint venture. It also owns Trivento in Argentina. Part organic.

- ✓ *Cabernet Sauvignon* (Don Melchor, Marques de Casa Concha, Terrunyo) •
Carmenère (Terrunyo)
 • *Chardonnay* (Amelia)
 • *Classic red blend* (Trio Cabernet Sauvignon-Shiraz-Cabernet Franc) • *Merlot*
 (Marques de Casa Concha, Trio) • *Pinot Noir* (Terrunyo) •
Viognier (Casillero del Diablo)

CONO SUR

Chimbarongo
 ★★

This fast-track winery is owned by Concha y Toro, and was put on the map by Californian Ed Flaherty, who made his name with the stunning El Liso Tempranillo in Spain's La Mancha, of all places. Flaherty has since moved on, but Cono Sur continues to make excellent-quality wine, while its Isla Negra label offers brilliant value for money. Good-value wines sold

under supermarket own-labels will indicate Tocornal as the producer, rather than Cono Sur (the winery was originally named Viña Tocornal). Part organic.

- ✓ *Cabernet Sauvignon* (20 Barrels) • *Merlot* (20 Barrels) •
Riesling (Visión)

COOPERATIVA AGRÍCOLA VITIVINÍCOLA DE CURICÓ

Curicó
 ★

This cooperative has been going since 1939, but has recently shown great improvement under the consultancy of flying winemaker Peter Bright, through wines sold under the Viños Los Robles label.

- ✓ *Cabernet Sauvignon* • *Sauvignon-Sémillon*

COUSIÑO MACUL

Bruin
 ★

Chile's one-time best winery has been overtaken by other producers who have not had the luxury of Cousiño Macul's established export business. Hungry to break in, others have been receptive to constructive criticism from international markets, and have willingly tailored their wines to suit, while Cousiño Macul maintained its own old-fashioned standards. It has recently relocated to new vineyards, and has started producing fresher, fruitier, better-focused wines since the 2002 vintage.

- ✓ *Cabernet Sauvignon* (Antigua Reserva) • *Classic red blend* (Finis Terrae) • *Riesling* (Doña Isidora)

ECHEVERRIA

Molina
 ★

This small, family-owned venture had long supplied other wineries with its grapes, when in 1992 it began producing wines under its own label.

- ✓ *Cabernet Sauvignon* (Family Reserva) • *Carmenère* •
Chardonnay (Reserva) •
Classic red blend (Syrah Carmenère) • *Sauvignon Blanc*

ERRAZURIZ

Santiago
 ★★

Formerly called Errázuriz-Panquehue, this old winery in the

Maule Valley has steadily improved under New Zealander Brian Bicknell (now back home), and it should continue to develop under Ed Flaherty, the gifted Californian who established Cono Sur's reputation. Part organic.

- ✓ *Carmenère* (Single Vineyard)
 • *Chardonnay* (Arbolleda)
 • *Classic red blend* (Viñedo Chadwick) • *Cabernet Sauvignon* (Dom Maximiano)
 • *Sangiovese* (Single Vineyard)
 • *Syrah* (La Cumbre)

FRANCISCO DE AGUIRE

Ovalle
 ★

This venture is the most northerly of Chile's exporting wineries, and was built on revenue produced by Pisco Capel, the top-selling pisco brand in the country. Viña Francisco de Aguirre produces premium varietals just south of the Atacama desert on steep, mineral-rich, drip-irrigated terraces of the Andes foothills. Wines are sold under the Palo Alto, Piedras Atlas, Tierra Arena, and Tierras Atlas labels.

- ✓ *Classic red blend* (Tempus Red)
 • *Late Harvest* (Moscatel de Alejandría Torontel)

FALERNIA

Vicuña
 ★

Founded in 1995 by Aldo Olivier Gramola, Viña Falernia is located in the Elqui Valley, 290 miles (470 kilometers) north of Santiago, making it Chile's most northerly winery.

- ✓ *Syrah* (Alta Tierra)

GRACIA

Totihue
 ●

This is a new winery with 890 acres (360 hectares) of vineyards ranging from the Aconcagua Valley north of Santiago to the Bio Bio Valley in the south. It is too early to make judgment on these wines.

HARAS DE PIQUIE

Pirque
 ★

A joint-venture between Chilean

entrepreneur Eduardo Matte and Antinori of Tuscany. Located on Matte's stud farm in the Andean foothills, overlooking the Maipo Valley, Haras de Pirque is one of Chile's fastest-rising stars. Unlike some of this country's recently established boutique wineries, which are destined to go bust or be taken over, this operation exudes permanency.

✓ *Chardonnay* (Haras Character) • *Syrah* (Haras Character)

LA FORTUNA

Lontue

★

The Güell family has owned this winery for more than 50 years, but it has been seriously involved in export markets only since the mid-1990s. Winemaker Claudio Barrio has made some appallingly green Sauvignon Blanc (particularly in 1996), but consistently produces lovely, soft, violet-cherry Malbec.

✓ *Malbec*

LA ROSA

Cachapoal

★★★

A 1,200-acre (500-hectare) vineyard and six-million-dollar winery owned by SOFRUCO, one of Chile's largest fruit producers.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Merlot*

LEYDA

Leyda

★★

This up-and-coming winery is proving that the Leyda Valley can produce some of Chile's fruitiest wines, especially Pinot Noir.

✓ *Pinot Noir* (Las Brisas Vineyard)

LUIS FELIPE

Colchagua

★★★

These mature vineyards produce stunning-value Cabernet Sauvignon and deliciously ripe, tropical fruit-flavored Chardonnay. Part organic.

✓ *Cabernet Sauvignon* (especially Reserva) • *Chardonnay*

MIGUEL TORRES

Curicó

★★★

The reds produced by Spain's most innovative winemaker are often misunderstood, particularly in Chile itself, where their slow-evolving style is swamped by the immediacy of more flashy, up-front winemaking methods. Part organic.

✓ *Cabernet Sauvignon* (Manso de Velasco) • *Carignan* (Cordillera) • *Chardonnay* (Maquehua)

MONTES

Curicó

★★★

The brainchild of Aurelio Montes, these wines started out as far too

oaky for all but lovers of two-by-fours. Their production has now moved from a heavy-handed use of primarily American oak to a more restrained application of French oak. Montes also makes some deliciously fruity unoaked wines. Part organic.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Malbec* • *Merlot* • *Syrah* (Folly)

MONTGRAS

Colchagua

★★★

Exciting quality from strict selection of 600 acres (250 hectares) of vineyards, made in a \$15 million winery. Part organic.

✓ *Cabernet Sauvignon* (Ninquén Reserva) • *Classic red blend* (Ninquén Cabernet Merlot)

PÉREZ CRUZ

Paine

★★

Low-yield vineyards and well-ripened fruit are responsible for the intensity of flavor in this winery's Malbec.

✓ *Malbec* (Cot Reserva Limited Edition)

SAN PEDRO

Molina

★★

The wines of San Pedro, one of the pioneers that earned respect for Chilean wines on export markets, went through a patchy period, but are emerging better than before, thanks to an expensive ultramodern winery and consultancy from flying winemaker Jacques Lurton. Wines are also sold under the penny-saving Gato Blanco and Gato Negro brands. Santa Helena is an export brand.

✓ *Chardonnay* (Castillo de Molina Reserva)

SANTA CAROLINA

Santiago

★★

Fresh, crisp, fruity whites are the best value here, although the reds are definitely the best quality. Santa Carolina owns Viña Casablanca.

✓ *Classic red blend* (VSC) • *Merlot* • *Sauvignon Blanc* • *Syrah*

SANTA INÉS

Isla de Maipo

●

This small, quality-minded winery is owned by the De Martino family.

✓ *Carmenère*

SANTA MONICA

Rancagua

★

Owner-winemaker Emilio de Solminihac (a partner in Domaine Paul Bruno) makes wines with a fat, fruity style at his own winery.

✓ *Sauvignon Blanc*

SANTA RITA

Santiago

★★★

These wines are fatter and riper than they have been in years, but the "120" range (so-called because Bernardo O'Higgins, the liberator of Chile, and his 120 men hid in these cellars after the battle of Rancagua in 1810) has remained reliable throughout. Santa Rita also owns the Carmen winery, and has a partnership with Lafite-Rothschild in Los Vascos.

✓ *Cabernet Sauvignon* ("120," Casa Real) • *Classic red blend* (Triple C) • *Sauvignon Blanc* (Casa Real) • *Merlot* (Medalla Real, Casablanca, Reserve)

SEÑA

Panquehue

★★

A joint-venture between Errázuriz and Robert Mondavi in 1996, Señá had established itself as one of Chile's *grands crus* when Errázuriz purchased Mondavi's share immediately prior to its takeover by Constellation Brands in 2004.

✓ *Classic red blend* (Seña)

TERRANOBLE

Talca

★

With Henri Marionnet, one of Touraine's best winemakers, consulting, Terranoble has fashioned an increasingly fine line of red wines.

✓ *Cabernet Sauvignon* • *Carmenère* (Reserva)

UNDURRAGA

Santiago

●

This was the first Chilean winery to export to the US, and only remains in this encyclopedia for historic reasons, as I have seldom found any exciting wines from Undurraga. Having embarked upon a 1.5-million-dollar renovation and replanting program in 1997, it was hoped that this might bring about welcome changes for Undurraga's quality, but only the Late-Harvest Sémillon is recommendable, and even that could be an anomaly.

✓ *Sémillon* (Late Harvest)

VALDIVIESO

Santiago

★★★

Originally called Champagne Alberto Valdivieso, this company still produces large quantities of ordinary Chilean fizz, but has moved into pure varietal, barrel-fermented table wines in a spectacularly successful fashion. Loco is Valdivieso's top-of-the-line red, a blend of different grape varieties from various vintages. To distinguish which batch is which (and to enable wine enthusiasts to cellar and follow the wines), they are numbered. I have tasted only Caballo Loco Number One, but it is

such a masterly wine that I have no hesitation ranking it as one of South America's finest wines. Cheaper wines are sold under the Casa label.

✓ *Caballo Loco* • *Cabernet Franc* • *Merlot* • *Pinot Noir*

VILLARD

Casablanca

★

This is a partnership between Thierry Villard (who in 1989 produced what was probably the first truly fine Chilean Chardonnay—Santa Emiliana—which is owned by Concha y Toro) and two growers, one of whom, Pablo Morandé, is Concha y Toro's winemaker.

✓ *Cabernet Sauvignon* • *Merlot* • *Pinot Noir*

VIU MANENT

Molina

★★

An old, established, family-owned winery that has moved away from bulk wines into more expressive, high-quality wines under its own label.

✓ *Cabernet Sauvignon* (Reserva) • *Malbec* (Single Vineyard)

ARGENTINA

ARCHÁVAL FERRER

Luján de Cuyo

★★

Established as recently as 1998, low-yield vineyards and a dedication to quality have made this one of Argentina's fastest-rising, highest-flying wineries.

✓ *Classic red blend* (Quimera) • *Malbec* (Finca Altamira)

ALTOS LAS HORMIGAS

Cuidad

★★

This vineyard was destroyed by a plague of ants (*bormigas*), hence its name, and had to purchase grapes until a new vineyard came into production.

✓ *Malbec*

BODEGAS LOPEZ

Buenos Aires

★

This family firm produces average-quality wines under the Château Montchenot label (known as Don Federico on some export markets).

BODEGAS

LURTON

Buenos Aires

★

The Lurons of Bordeaux originally came to Chile as flying winemakers for the British supermarket chain Tesco, but liked the potential so much that, together with the omnipresent Nicolas Catena, they purchased their own winery and are now firmly ensconced.

✓ *Malbec*

BODEGAS NACARI

La Rioja

This small cooperative specializes in Torrontes.

CATENA

Córdoba

★★

Argentina's greatest wine visionary, Nicolás Catena has produced some superb wines with the aid of his California winemaker Paul Hobbs, who helped to establish the Opus One winery before going to Argentina. Nicolas Catena Zapata is very much upmarket by local standards, while Caro is produced in conjunction with the Rothschilds of Château Lafite. Catena Alta are fine wines by any standard, and the basic Catena line is stylish, and far from basic. I should recommend the entire line, but have plucked out the very best below. Superb-value fine wines are also sold under the Alamos Ridge, Bodegas Esmerelda, and Libertad labels. Catena also owns Bodegas La Rural, and Cavas de Santa Maria. *See also* Luca and Tikal.

✓ *Cabernet Sauvignon* (Catena Alta) • *Chardonnay* (Catena Alta) • *Classic red blend* (Caro, Nicolás Catena Zapata) • *Malbec* (Catena Alta)

CHANDON ARGENTINA

Buenos Aires

This long-established arm of Moët & Chandon makes mostly sparkling wines, which used to be sold shamelessly as Champaña, under the M Chandon and Baron B labels. The quality is fresh, clean, acceptable, and improving, but not special. More interesting is the increasing amount of good and improving still wine now being made with an eye on export markets (*see* Terrazas de Los Andes).

CLOS DE LOS SIETE

Tunuyán

★

Tipped by some as potentially Argentina's greatest winery, Clos de los Siete is an ambitious project headed by Michel Rolland. The venture comprises of seven vineyards owned by seven French proprietors, who are expected to produce their own distinct wines within due course (look out for the

single vineyard names of Altamira, Lindaflo, Los Dassos, Miraflo, Primaflo, Rocaflo, and Monteviejo). Some critics claim that one investor has already backed out, and the scope of such a project will probably see others jumping ship before long. One partner, the late Jean-Michel Arcaute, tragically died before the first vintage (2002) was produced.

✓ *Classic red blend* (Clos de los Siete)

COLOME

Colome

B★★

This winery boasts the highest vineyards in the world, and California owners Hess Collection stand every chance of making Argentina's highest-quality wines here. Deliciously fruity, entry-level wines are sold under the Amalaya label.

✓ *Classic red blend* (Colme Estate)

DOMINO DEL PLATA

Luján de Cuyo

★★★

One of Argentina's most exciting new wineries, Domino del Plata is owned by husband-and-wife team Pedro Marchevsky, the viticulturist, and Susana Balbo, the winemaker. The best wines are sold under the Susana Balbo and BenMarco labels, while excellent-value wines are sold in the Crios de Susana Balbo range.

✓ *Classic red blend* (Crios de Susana Balbo Syrah-Bonarda, BenMarco VMS) • *Malbec* (BenMarco)

ETCHART

Salta

★★

The very fresh, crisp, and dry Cafayate Torrontes, with its subtle, Muscat-like aromas, is a yardstick for this peculiarly Argentinian variety, but Cabernet Sauvignon is by far the best wine here. Etchart is now fully owned by Pernod-Ricard, with Michel Rolland consulting.

✓ *Cabernet Sauvignon* • *Torrontes* (Cafayate)

FINCA LA ANITA

Luján de Cuyo

★★★

Established in 1992 by Antonio Mas, who has attained a very high quality, and continues to improve.

✓ *Malbec* • *Sémillon* • *Syrah* • *Tocai Friulano*

FINCA FLICHMAN

Mendoza

★

After considerable investment in stainless-steel vats and new French oak *barriques*, plus a certain amount of European technical assistance, the quality as well as quantity has increased. Furthermore, emphasis has moved to Latin grape

varieties such as Barbera, Sangiovese, and Tempranillo, as the choice for blending with local favorites such as Malbec, Cabernet, and Merlot.

✓ *Cabernet Sauvignon* (Caballero de la Cepa) • *Sangiovese-Malbec* • *Syrah*

HUMBERTO CANALE

Rio Negro

★★

These are interesting, improving varietal wines from some of the most southerly vineyards in the world.

✓ *Malbec* • *Merlot* • *Pinot Noir*

LUCA

Mendoza

★★

Stunning wines produced by Nicolas Catena's daughter Laura at her own winery, from her own vineyard, with typically Catena-like low yields and high altitude.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Syrah*

NORTON

Buenos Aires

★

Although this firm dates back to 1895, it was not until 1989, when Austrian businessman Gernot Langes-Swarovski purchased the winery from its uninspiring English owners, that these wines started to show their true potential. Sangiovese and Barbera are the most interesting but, regrettably, the most variable as well.

✓ *Classic red blend* (Privada) • *Malbec*

PEÑAFLOR

Buenos Aires

★★

The quality here has been greatly improved in recent years by a magnum of flying winemakers, in the form of Peter Bright and John Worontschak. The Country Red is a cheap and cheerful blend. Peñaflor also sells wines under the Andean Vineyards, Fond de Cave, Parral, Tio Quinto, and Trapiche labels. *See also* Trapiche.

✓ *Classic red blend* (Cabernet-Malbec) • *Torrontes* • *Tempranillo*

PIPER

Buenos Aires

When Englishman Trevor Bell was managing Charles Heidsieck and Piper-Heidsieck in France, he blew the whistle on those Champagne houses—including his own—that claimed they were forced by Argentinian law to use the word "Champaña" on their Argentinian sparkling wines. He considered it hypocritical and said that Piper for one would stop the practice. Bell was never heard of again. This is the only Champagne name that is still prostituting itself. Rémy-Cointreau, the owner of these two

Champagne houses, claims that it is not its responsibility, since it does not actually produce the wine. However, the company does admit to owning the brand, and licensing it out, which is just as reprehensible.

SAN PEDRO DE YACUCHUYA

Maipú

★★

A joint venture between Michel Rolland and the Etchart family.

✓ *Malbec* (Yacochuya)

TERRAZAS DE LOS ANDES

Luján de Cuyo

★★★

These still wines of Chandon Argentina are vastly superior to its sparkling wines.

✓ *Cabernet Sauvignon* (Gran Reserva) • *Classic red blend* (Cheval des Andes) • *Malbec* (Gran Reserva)

TIKAL

Mendoza

★★

This winery and vineyard is owned by Ernest Catena, son of the famous Nicolas Catena.

✓ *Classic red blend* (Corazon, Júbilo) • *Malbec* (Altos de Mendoza Amorío)

TRAPICHE

Buenos Aires

★★★

Part of Peñaflor, the quality of Trapiche has risen steadily in recent years. Michel Rolland consults. *See also* Peñaflor.

✓ *Cabernet Sauvignon* (Medalla) • *Classic red blend* (Iscay) • *Malbec* (Broquel) • *Syrah* (Oak Cask)

VISTALBA

Mendoza

★

This up-and-coming winery makes interesting reds from varieties such as Barbera and Syrah to complement Argentinian faithfuls such as Cabernet and Malbec.

✓ *Cabernet Sauvignon* • *Malbec* • *Syrah*

WEINERT

Buenos Aires

★★

Although established as long ago as 1890, this winery emerged as one of Argentina's top two producers only under the present owner, Brazilian-born Bernardo Weinert. He renovated the winery in 1975 and shortly after became the first Argentinian producer to reduce yields in order to raise quality, inspiring others to follow.

✓ *Cabernet Sauvignon* • *Classic red blend* (Cavas de Weinert) • *Malbec*

The WINES of
**AUSTRALIA,
NEW ZEALAND,
AND ASIA**

WE TEND TO THINK OF AUSTRALIA AS THE older, more traditional winemaking country, with New Zealand being a much more recent phenomenon. Yet, just a 30-year gap separates the viticultural origins of these two countries. Australia's wine industry dates back to 1788, but New Zealand's started not much later, in 1819. In modern terms, they are just 10 years apart, Australia having won its spurs in the 1980s, with New Zealand assuming classic status in the 1990s. Australia is famous for its big, creamy-mellow, spicy-cedary Shiraz, while New Zealand leads with its fresh, crisp, exhilarating Sauvignon Blanc—but these are just the flagships. Both countries produce a large and diverse range of wine styles and are currently discovering a wealth of *terroirs* and the differences in expression that they bring. In Asia, Japan and China continue to dominate; India is treading water; and we are starting to see wines from Thailand, Korea, and even Bali.

HENSCHKE'S HILL OF GRACE VINEYARD, EDEN VALLEY
This ancient Australian vineyard dates back to the 1860s. The Church of Gnadenberg can be seen in the background.

AUSTRALIA

Having built its name on the consistent quality of its high-volume brands, which have been aggressively marketed through multibottle discount deals, “Brand Australia” has grown into the biggest success story in modern wine history. Yet some producers are beginning to wonder whether they will ever sell their wines for what they are really worth—rather than giving them away.

IF ONLY THE AUSTRALIANS WERE as insecure and indecisive as this on the cricket field! They need not worry, however, since all the evidence suggests that their position will be consolidated over the medium term. The alarms are false, and merely the result of mixed messages generated by the two basic types of wine produced: brands and site-specific wines. It is no accident that the public perception of Australian wine is so dependent on the concept of branded wine. Australian brands have always been strong, but in 1996 their position was

formally promoted by the industry’s 30-year plan to become the “world’s most influential and profitable supplier of branded wines.” Most people reading this for the first time will ask themselves why the word “branded” was inserted, and who could be the author of such a biased quest?

Australian brands have been criticized as overripe and overalcoholic; formulaic wines that have no soul, perhaps. However, the fact that so many might taste very similar is in itself an indication of their very consistent quality. They might not exude individuality, and wine lovers might wonder why this commercial category of wine has been singled out for official blessing in the 30-year plan, but Australia’s branded wines are made in a soft, rich, consumer-friendly, fruit-driven style. They are nothing more than the equivalent of branded generic wines from, for instance, Bordeaux or Beaujolais, and can anyone honestly say the Australian product is worse? Certainly consumers cannot. By 2003 Australia had become the second-largest exporter of wine to the US, and had even pushed out France from the

AUSTRALIA

Wine is produced in every state, although most of the vineyards are in the southeastern corner of the country, centered on a semicircular band running from Sydney in New South Wales to Adelaide in South Australia.

number one position on the UK market. While it might not seem so surprising that an up-and-coming country like Australia should appeal more to consumers, particularly younger ones, than an old and traditional wine country such as France, it is an extraordinary feat considering the contrasting size of these two wine industries. France is nothing less than the largest wine producer in the world, responsible for 21 percent of global production, whereas Australia is a minnow, accounting for less than 4 percent. How on earth did it manage to pull it off?

THE EXPORT TRAP

Did Australia achieve its export victories because its brands were sold at economically unsustainable prices, as some now fear? No. How could this be true when the country's largest wine groups have made handsome profits in the process? There has been much talk about falling sales, reduced profit margins, and ailing wine companies, but Australia did not achieve success overnight or, indeed, over just one year, and those ailing companies were all extremely profitable on the way up.

It is evident, therefore, that Australia's brands were not undersold, but if the industry is worried that there is a perception that its wines are too cheap, then it should ask itself a few questions. Should Australia concentrate its exports so heavily on two countries, the UK and the US, which between them take over 70 percent of all Australian wine exports? And should not the industry change its 30-year plan to become the "world's most influential and profitable supplier of geographically distinct wines"? There is nothing wrong with multistate blends, such as the all-encompassing Southeastern Australian appellation, which straddles 95 percent of the country's vineyards; but for their own sake, brand owners should concentrate less on such wines, and more on expressing some level of individuality.

THE GROWTH OF AUSTRALIA'S WINE INDUSTRY

The first Australian vineyard was planted at Farm Cove in New South Wales in 1788, with vines originating not from France but from Rio de Janeiro and the Cape of Good Hope. These were collected by the first governor, Captain Arthur Phillip, *en route* to Sydney. The rich soil of Farm Cove and its humid climate proved fine for growing vines, but not for making wine. Phillip persevered, however, and planted another vineyard in Parramatta, just north of Sydney. Soil and climate were more suitable and the success of this new venture encouraged Phillip's official requests for technical assistance. England responded by sending out two French prisoners of war, who were offered their freedom in exchange for three years' service in New South Wales, in the belief that all Frenchmen knew something about making wine. This did not prove true: one was so bad at it that he was transported back to England; the other could make only cider, and mistakenly used peaches instead of apples! From these shaky beginnings an industry grew, but with no thanks to the British. At first, Australia's wine industry was monopolized by the needs of the British Empire, later the Commonwealth. It thus gained a reputation for cheap fortified wines—not because these were the only ones it could make, but because Britain wanted them. Unfortunately, Australians also acquired the taste. Although Australia made (and still makes) some of the world's finest dessert wines (botrytized as well as fortified), most wines were heavy, very sweet, and sluggish at a time when the rest of the world was drinking lighter and finer wines. Small quantities of truly fine table wine were produced but, until the 1960s, most of those exported were remarkably uniform in style.

THE RENAISSANCE OF AUSTRALIAN WINES

Over the last 40 years, the technology used in Australian winemaking has made huge advances, taking with it the quality of the wines. Until the early 1980s, as much as 99 percent of all

CORIOLE VINEYARDS, MCLAREN VALE

McLaren Vale is currently contesting Coonawarra's reputation as the best red wine region of South Australia, a state that accounts for almost 60 percent of Australia's total wine output.

Australian wine was consumed domestically. When output dramatically increased, producers had to concentrate on exports, which increased tenfold in the 1980s, and a further tenfold in the 1990s. Today they represent more than 40 percent of the country's total production. If you thought you knew a bit about Australian wines in 1996, think again, since the number of wineries has doubled since then. There are now more than 1,800 wineries, and a new winery is born every 84 hours.

THE WINE SHOW SYSTEM

Wine shows have been, and remain, a key factor in shaping the Australian wine industry, and, for better or worse, the "Australian style" of wine. The National Wine Show, held in Canberra, is considered to be the grand finale of the Australian wine show circuit, with entries restricted to wines that have previously been awarded a trophy or medal at other shows. Next in the hierarchy are the Australian Capital City Wine Shows (Adelaide, Sydney, etc.), followed by regional shows, such as the Australian Inland, Australian Small Winemakers, Ballarat, Barossa, Canberra Regional Wine Show, Clare Valley, Cowra, Griffith, Hunter Valley, Lilydale, Limestone Coast, McLaren Vale, Mount Barker, Mudgee, Riverland, Rutherglen, and Victorian Wines.

Most of these shows are run by Royal Agricultural Societies or are county fair-type shows. As such, wine is just one of the featured competitions. The societies organizing these wine shows are also responsible for other agricultural and horticultural competitions, judging everything from barley to lavender, cattle to goats, and wool to woodchopping. It is understandable how these shows originated, when a crop of grapes was very much like a crop of anything else, but since wine has evolved into such a diverse and sophisticated end product, there are good reasons to bring these competitions under specialized, independent control.

Not that the show system has had a negative effect. Indeed, the reverse has been true, particularly in the final two decades of the last century. The technical correctness demanded by judges raised quality levels across the board, and this was achieved, essentially, by Australian winemakers not being afraid to be very strict in scoring wines of their peers and, sometimes embarrassingly, wines of their own. Compare this with France, where there is reluctance among winemakers to mark down the wines of their peers, unless they are blatantly faulty, for fear of retaliation. In the 1990s, there was a move away from technical correctness, as allowances were made for the contribution of tiny faults to overall complexity.

AUSTRALIAN GEOGRAPHICAL INDICATIONS (GIs)

Australia's new appellation system, which has been developing behind the scenes since 1993, but was enacted as recently as 2001, defines boundaries and nothing more. Thankfully, it does not attempt to dictate what varieties should be grown, how vines should be pruned or trained, or target yields, alcohol levels, or style of wine produced. Geographical Indications (GIs) were introduced to support the Label Integrity Program. Label Integrity is the simplest, sanest, nondraconian form of wine control invented: if the label

AUSTRALIA AT A GLANCE

Australia produces a mere 4 percent of the world's wine, yet it is the fourth-largest wine-exporting country. Three states (South Australia, Victoria, and New South Wales) provide 95 percent of Australia's wine production. Just 20 of the country's 1,800 wineries account for 94 percent of Australia's wine production, and five of these (Southcorp, BRL Hardy, Orlando Wyndham, Beringer Blass, and McGuigan Simeon) represent 75 percent. Almost half of all Australian wine is sold as cask wine (bag-in-the-box). Chardonnay accounts for 48 percent of all Australian white wine, and is also the fastest-spreading variety of grape, black or white, with more than 12 acres (5 hectares) newly planted every day.

However, the winners of Australia's wine shows, like the winners of most wine competitions throughout the world, are invariably the biggest wines. The biggest wines are not always the best wines, and almost always never accompany food well. They are just so complete that to partner them with anything else is to detract from their glory. The only Australian wine competition I know of that sets out to reward wine of finesse and elegance is the Sydney International Wine Competition. In the second round, the judges even taste the wines with a platter of appropriate food. This competition also places a high emphasis on international judges to avoid the "cellar palate" and prejudices of the Australian wine industry and its homegrown commentators.

International judges do take part in the Royal Society shows, particularly the larger ones, but they are in a minority, and can do little against the unwritten rules. Of these, the one that troubles me the most concerns the Riesling class. Depending on the volume of Riesling entries, the trend is to judge the most recent vintage, and, possibly, the previous vintage, as classes on their own. Anything older will be lumped together under some sort of "museum" class, potentially judging a 3-year-old wine against one that may be 12 years old or more. The unwritten law among judges is to mark up lime aromas and flavors, and mark down any so-called "gasoline" aromas (see Taste Chart and Glossary of Tasting and Technical Terms). This jars with many wine drinkers from northern climes, who enjoy the gasoline bottle-aroma that accompanies the honeyed richness of a fine, mature Riesling. However, when it is realized that so many Australian Rieslings, particularly the cheaper ones, develop an overwhelming gasoline

VINEYARDS IN MUDGEE

Perhaps atypical of the area, these vineyards occupy flatland rather than the western slopes of the Great Dividing Range.

character far too rapidly from a simplistic lime fruit base, it is easy to understand how gasoline aromas have acquired such a negative connotation in this country. It should be the job of the Australian wine show circuit to promote a better understanding. To recognize that the gasoline aroma is not negative *per se*. To mark down a gasoline character that is too dominant for a certain level and simplicity of fruit, but to mark up one that has taken ages to achieve a wonderfully complex nuance. This is particularly relevant now that Australia is making finer and finer Riesling. For these wines to increase will require not only a detailed examination of each new vintage, as is the current practice, but also encouragement of producers to enter Riesling in two distinct classes: 5 to 12 years, and 13 years and older.

RECENT AUSTRALIAN VINTAGES

2004 Mixed weather produced a patchy vintage. It was a repeat of 2001 in the Hunter Valley, where the red wines were light and dilute, but some stunning Sémillon has been produced from old, low-yielding vineyards. Adelaide Hills was the best-performing region, and Shiraz the most successful variety.

2003 If Australia is not blowing hot and cold on alternate vintages, it is veering from dry to wet. In 2003, it was very hot, with a nationwide drought. There were also widespread rains in February, which caused the berries to split, reducing yields further. Other problems included smoke-taint from the January bushfires, and unusually cool spring temperatures in the country's coolest wine areas, where yields were at their lowest. Originally thought to be a red wine year, 2003 has turned out to be far patchier, with best wines ranging from Shiraz in general throughout most of Victoria and South Australia to more specific, regionally distinct successes, such as Sauvignon Blanc in Adelaide Hills, Riesling in Eden Valley, and Cabernet Sauvignon in Coonawarra. Growers in Orange reported their best ever vintage in 2003.

2002 One of Australia's greatest vintages, due to an exceptionally cool spring and summer, followed by a long, dry Indian summer. This enabled the grapes to ripen over a much longer period, producing wines of precise varietal purity, where elegance outweighs size.

2001 An extremely hot summer yielded an early crop of very ripe, concentrated grapes, although much of New South Wales suffered from harvest rain, with Hilltops and Canberra the lucky exceptions. The quality in South Australia was generally very good, with the Adelaide Hills and Eden Valley the high points. Barossa produced very good reds, but mediocre whites. An excellent vintage throughout Western Australia.

2000 Overall a difficult year in terms of both volume and quality, with South Australia faring worst, with the exception of the Limestone Coast, which was spared the harvest rain, and produced good wines, particularly reds. But Tasmania and, surprisingly, Queensland's Granite Belt were the brightest geographical stars of the vintage, with Pinot Noir the standout variety.

GOING GREEN?

Taking the organic route in the vineyard is harder in some countries than others. Essentially, the more rain or humidity there is, the more rot affects the grapes, and the more difficult it becomes to control this by natural means. Some growers are game for the challenge, even in rain-soaked countries like England, whereas hardly any bother in sunny Australia. It should be pointed out that many good growers, and all the best, are "almost" organic the world over, since anyone who is interested in producing the best wine they possibly can will realize that it is in their own interest to ensure that their own viticulture is sustainable for the long term. However, the number of organic producers in a viticultural paradise like Australia is so pathetically small that I feel compelled to list all the wineries I know to be organic, in addition to the few specifically recommended in the following pages.

Certified biodynamic	Mabrook Estate
Jeeleunup Gully Wines	(Hunter Valley, New South Wales)
(Mount Barker, Western Australia)	Martins Hill Wines
Kiltynane Estate	(Mudgee, New South Wales)
(Yarra Valley, Victoria)	Petcheys Bay Vineyard (Tasmania)
Robinvale Wines	Robinvale Wines
(Murray Darling, Victoria)	(Murray Darling, Victoria)
Rosnay Wines	Temple Breuer
(Canowindra, New South Wales)	(Langhorne Creek, South Australia)
Streamville (Arthurs Creek, Victoria)	Serventy Wines
Certified organic	(Margaret River, Western Australia)
Captains Creek	Thistle Hill Vineyard
(Macedon Ranges, Victoria)	(Mudgee, New South Wales)
Glenara Wines	Wilkie Estate Wines
(Adelaide Hills, South Australia)	(Adelaide, South Australia)

AUSTRALIA'S WINE GROUPS

There are a number of groups that cannot be usefully located under any one specific location; consequently, they have been collected together here for ease and completeness.

THE "BIG FIVE"

It used to be the "Big Four," but with the merger between McGuigan and Simeon in 2002, and the swift expansion of this new group, four has turned into five, and these companies now account for more than 75 percent of Australia's total wine production.

I. SOUTHCORP

Australia's largest wine group, Southcorp was created in 1993 after Penfolds had acquired Lindemans and was itself taken over by S. A. Brewing, which owned Seppelt at the time. That same year S. A. Brewing had sold off its brewing interests, and so a new name had to be found.

The origins of the twin pillars supporting this company are very much the story of two English doctors. Lindemans Wines dates back to 1843, when Dr. Henry John Lindeman planted his first vineyard, called Cawarra, on a tributary of the Hunter River. Lindeman had been a brilliant medical student at St. Barts, as evidenced by the fact that he had become a member of the Royal College of Surgeons in 1834 at the age of just 23, but he was rather carefree and footloose, opting for a career as a surgeon in the navy. On leave in England, he fell in love with Eliza Bramhall, and when they married in 1840 he left the navy, and the couple emigrated to Australia, where he established one of the country's most respected wineries, particularly for well-aged "Hunter Riesling" (Sémillon).

Just four years after Dr. and Mrs. Lindeman had arrived in Sydney, Dr. Penfold and his wife docked in Adelaide, where the Adelaide Register of August 8, 1844, recorded that they were "the fortunate purchaser of the delightfully situated and truly valuable Estate of Makgill at the sum of £1,200 (US\$5,760)." This is known today as Magill Estate and was, of course, due to provide the primary element in the blending of Penfolds' Grange Hermitage (now simply Penfolds' Grange), the most famous and most expensive of all Australian wines. By the time Penfolds took over Lindemans, it had already acquired the Barossa Co-op Winery (Kaiser Stuhl), and Allied Vintners wineries (Glenloth, Seaview, Tulloch, and Wynns), while Lindemans had taken over Leo Buring and Rouge Homme. Along with Seppelt's specialized sparkling wine operation, these brands created a finely tuned portfolio that propelled Southcorp to the very top of the industry, yielding increasing profits year on year.

In 1996, the group purchased Coldstream Hills in the Yarra Valley, and Devil's Lair Winery and Vineyards in Margaret River. Its strategy to focus on premium-quality wines and increase the standard of its less expensive wines was the underlying factor for its sale in 1998 of 2,307 acres (934 hectares) of vineyards in Riverland to Simeon Wines. The proficient synergy went awry in 2001, when Southcorp Wines acquired the privately owned Rosemount Estates from the Oatley family. There were just too many similarities in the Lindemans and Rosemount products, particularly on export markets, and totally opposing management styles, not to mention the radically different winemaking regimes. When Penfolds' chief winemaker John Duval left after 28 years with the company amid rumors of a rift with Rosemount's Philip Shaw, and Shaw was appointed chief winemaker for the entire Southcorp group, the deal that saw Southcorp pay AU\$1.5 billion (US\$730 million) for the merger was billed by the press as a reverse takeover by the smaller Rosemount. In theory, the acquisition of Rosemount

MAGILL ESTATE WINERY

Established by Dr. Christopher Rawson Penfold in 1844, Magill Estate is just 15 minutes from Adelaide. The winery often wins prizes for its tourist facilities.

should have resulted in operational savings of up AU\$50 million (US\$24 million), plus, of course, a substantial increase in profits provided by the income from Rosemount's lucrative brands, but Southcorp made a loss of AU\$923 million (US\$554 million) in 2003, compared with a profit of AU\$313 million (US\$166 million) the year before. Excuses at the time included the surplus stock situation, which exacerbated the already aggressive policy on export markets to a point of unprofitability, and this was further compounded by unfavorable exchange rates. The market was indeed more difficult, but Australia's other three big wine groups faced the same conditions, and all of them posted healthy profits (BRL Hardy and Orlando Wyndham even managed to increase their profit over the previous 12 months).

Southcorp's problem was not so much the market, as the incompatibility of its merger. This is borne out by the AU\$645 million (US\$387 million) in goodwill that was written off, and a drop of AU\$240 (US\$144 million) in the book value of the Rosemount name, which combined account for over 95 percent of Southcorp's loss in 2003. The best thing that Southcorp could do is divorce itself from Rosemount, as the two entities would be far more profitable on their own. Since it has been well known for a few years that the Oatley family would like to buy the company back, it might have been wiser to see what deal could have been made before writing down the Rosemount name. Whatever they can get now will be a quarter of a billion less than Southcorp could legitimately have expected prior to the write-down.

In 2002, when Southcorp was still blissfully ignorant of the massive loss it would soon endure, the company sold the Tulloch winery and brand, the Hungerford Hill brand, and the Rouge Homme winery. In June 2004, following the shockwave of almost a one billion Australian dollar loss, Southcorp analyzed its assets, and came up with various plans to rationalize its structure and operation. But although the first half of 2004 was profitable for the group, its plans are no more than the sort of integration procedures that should have been prepared prior to the merger. Specifically, they do not attend to the core problem of brand incompatibility: Lindemans and Rosemount are better apart, locked in genuine competition, than together.

The next few years will be interesting. Currently, Southcorp owns 20,000 acres (8,100 hectares) of vineyards, and its brands

include Seven Peaks, Coldstream Hills, Devil's Lair, Edwards and Chaffey, Great Western, Hungerford Hill, Kaiser Stuhl, Killawarra, Leo Buring, Lindemans, Matthew Lang, Penfolds, Queen Adelaide, Rosemount Estate, Rouge Homme, Seaview, Seppelt, Tollana, Tulloch, Woodley, and Wynns.

2. BRL HARDY

BRL Hardy owns the second-largest wine producer in terms of volume in Australia and vies with Orlando Wyndham as number two in value. With the difficulties facing Southcorp, Australia's largest wine group, and BRL Hardy now part of Constellation, the largest wine group in the world, this company is in the best position to jump to the top of the Australian league. However, it would be quite a leap, and would require Southcorp's continuing decline.

BRL Hardy was established by Thomas Hardy, a farmworker who arrived in Adelaide on board the *British Empire* in 1850. He was 20 years of age, and had traveled with two cousins, the sisters Joanna and Mary Anna Hardy. They were also accompanied by a friend and fellow farmworker, John Holbrook. Hardy went to work for John Reynhill, who owned a cattle station in Normanville, and within 18 months he had made enough money driving cattle to feed miners at the Victorian goldfields to purchase 16.5 acres (7 hectares) of land next to the Torrens River, just outside Adelaide. He married Joanna, and John Holbrook married Mary Anna. Hardy called their homestead Bankside, and planted grapes, making his first wine in 1857, and exporting two hogsheads to London in 1859.

By 1865, the Bankside winery was producing 14,000 gallons (53,000 liters). Hardy's big break came in 1873, when he was the sole bidder for the Tintara Vineyards Company, which included a winery, cellars, vast stocks of wine, and 700 acres (280 hectares) of land a few miles northeast of McLaren Vale, where the vineyards had been planted in the 1850s and were thus mature. By selling the stocks, he recouped the entire cost of the bid, and set about extending the cellars and planting even more vineyards. In 1878 he converted a disused flour mill in McLaren Vale into a brand new winery, selling off the mill machinery to fund a large part of the construction. He might have been a farmworker in England, but he was evidently a natural-born businessman, and in Victorian Australia's land of opportunity, he had the freedom to express his talents, not least of which was grape growing and winemaking, although no one knows to this day how and where he learned those skills.

By 1895, Thomas Hardy was the largest wine producer in South Australia, a position Hardy's has maintained ever since. In 1976, Thomas Hardy and Sons purchased the Emu Wine Company, which was known primarily for exporting Kangaroo Red, but also owned a little gem called Houghton Wines. Chateau Reynella and Rhine Castle Wines were taken over in 1982. Perhaps its most innovative decision was made in 1990, when the company extended its wine holdings into France, where it acquired Domaine de La Baume on the outskirts of Béziers (sold off in 2003). The company's rationale for this move was that it believed the French had not exploited varietal wines, something the authorities in that country are only just recognizing 15 years later.

In 1992, Thomas Hardy and Sons merged with Berri-Renmano, becoming BRL Hardy, which listed itself on the Australian stock exchange. The funding that resulted helped the company to purchase 4,450 acres (1,800 hectares)—only 705 acres (285 hectares) of which was plantable—at Banrock Station in 1994. Over the next three years BRL Hardy purchased Yarra Burn, a one-third share in National Liquor Distributors (New Zealand), the Hunter Ridge brand (from McGuigan Wines), 50 percent of Brookland Valley Vineyards (which is certified organic) in Western Australia, and

announced plans for its ambitious Kamberra winery and vineyards in the Canberra region. In 1998 BRL Hardy increased its shareholding in National Liquor Distributors, which had by then merged with Nobile Vintners, effectively taking control by 2000. Expansion continued as the company took a 50 percent shareholding in Barossa Valley Estates and, in 2001, entered a joint venture with the US-based Constellation Brands. This latter arrangement developed into a full merger in 2003 to form Constellation Wines, the largest wine group in the world. BRL Hardy owns 5,930 acres (2,400 hectares) of vineyards, and its brands include Banrock Station, Bay of Fires, Berri Estates, Brookland Valley, Crofters, Hardy's, Houghton, Hunter Ridge, Kamberra, Leasingham, Meeting Place, Moondah Brook, Omni, Renmano, Reynell, Stanley, Starvedog Lane, Stonehaven, Wicked Wines, and Yarra Burn.

3. ORLANDO WYNDHAM

Orlando Wyndham has been owned by the French Pernod-Ricard group since 1989. It produces, among many other wines, Jacob's Creek, which is Australia's leading export brand. Thus the French can be said not only to make a large proportion of Australian wine, but also—in delicious irony—the one brand that has done most damage to declining French wine exports. Furthermore, it was reported in February 2004 that France itself had started importing Jacob's Creek, so the enemy is now within.

Orlando Wyndham can trace its origins back to 1846, when a German immigrant, Johann Gramp, planted the Barossa Valley's first commercial vineyard, on the banks of Jacob's Creek, where he produced his first vintage in 1850. It was a white wine made in a Hock style, the forerunner of Gramp's popular Carte Blanche. The wine was sold under Gramp's label, and in 1953, the fourth generation established a milestone in Australian wine history by introducing temperature-controlled fermentation. In 1971, the UK company Reckitt and Colman, which had acquired Morris Wines of Rutherglen the year before, purchased Gramp's business and, in 1976, released a Shiraz-Cabernet-Malbec from the 1973 vintage, naming it after Johann Gramp's first vineyard on the banks of Jacob's Creek.

HARDY'S ESTATE

The company started by a British farmworker in the 1800s has developed into Australia's second-largest wine producer, BRL Hardy.

It was not until 1989 that Pernod-Ricard bought Orlando Wines, and the following year the French beverages group purchased Wyndham Estate and its subsidiaries, including Hollydene Vineyards, Saxonvale Vineyards, Montrose, Craigmoor, and Amberton Wines, but there have been as many sales as purchases since then. In 1993 Orlando Wyndham took over the Leo Buring winery (not the brand) in Tanunda, and the Buronga Hill Winery, but the next year sold Buronga to Simeon Wines and the Richmond Grove winery (not the brand, which was switched to the old Leo Buring winery) to Brian McGuigan Wines (since that time McGuigan and Simeon have merged). In 1995 Orlando Wyndham acquired 765 acres (310 hectares) for planting at Langhorne Creek, but one year later sold Saxonvale Winery to Hill of Hope, and the Hunter Estate Winery and Vineyard to Brian McGuigan Wines. A year later, it sold Hollydene Vineyards to the Singapore Lian Huat Group.

Orlando Wyndham owns 5,435 acres (2,200 hectares) of vineyards. It is the third-largest wine group in terms of production, and vies with BRL Hardy as the second largest in terms of value. Considering that the volume of its leading brand, Jacob's Creek, is as high as 6.9 million cases (2003), over five million of which are exported to 70 countries, Orlando Wyndham has set itself up as a prime target for criticism. But the quality is consistent and better than could or should be expected, with some truly excellent wines sold under the Reserve label, not to mention a few stunning Limited Releases. All in all, Orlando Wyndham does a pretty good job of flying the flag for Australian wine. Its brands currently include Carrington, Coolabah, Craigmoor, Gramp's, Jacaranda Ridge, Jacob's Creek, Maison, Montrose, Morris Wines, Orlando, Poet's Corner, Richmond Grove, Steingarten, Wickham Hill, and Wyndham Estate.

4. BERINGER BLASS

The Australian half of Beringer Blass can trace its origins back to the original Mildara winery, which was established by the Chaffey Brothers in 1888 at the Jamieson's Run sheep station in Victoria. The real growth of this company dates from the mid-1980s, when Mildara Wines acquired Yellowglen Winery, Balgownie Winegrowers, and Krondorf Wines. At roughly the same time, another company, Wolf Blass Wines, purchased a share of Tim Knappstein Wines, and took over Quelltaler Wines, before merging with Mildara Wines in 1991 to become Mildara Blass in a deal worth AU\$56 million (US\$43 million). One year later, Mildara Blass sold Tim Knappstein Wines to Petaluma, before setting off on a spending spree that saw the acquisition of so many wineries, brands, and stocks that its greatly expanded portfolio made it one of the largest wine companies in Australia. This also left the publicly quoted company vulnerable to takeover, and in 1996 it was snapped up for AU\$560 million (US\$384 million) by Fosters Brewing, which had the funds to fuel another series of acquisitions in the late 1990s. In October 2000, Fosters acquired Beringer Wine Estates for AU\$2.7 billion (US\$1.7 billion), after which purchases of Australian wineries continued until June 2004, when it was reported that Beringer Blass intended to sell nine vineyards and three wineries worth an estimated AU\$40 million (US\$30 million). This is not so much a downsizing as a restructuring to create a leaner wine division in response to lower export profits experienced by the industry in general due to the increasing value of the Australian dollar.

However, Beringer Blass continues to be one of Australia's "Big Five" producers, with 9,300 acres (3,750 hectares) of vineyards. Although its output represents just 9 percent of Australian bottled wine, it allegedly accounts for 30 percent of the premium-quality market. Its brands include Andrew Garrett, Annie's Lane, Baileys of Glenrowan, Bayliss and Fortune, Bilyara, Black Opal, Blass, Clare Essentials, Eaglehawk, Greg Norman Estates, Half Mile Creek, Ingoldby, Jamieson's Run, Krondorf, Maglieri of McLaren

Vale, Mamre Brook, Metala, Mildara, Mt. Helen, Mt. Ida, Mt. Tanglefoot, Pepperjack, Quelltaler Estate, Robertson's Well, Rothbury Estates, Saltram, St. Huberts, Wolf Blass, Yarra Ridge, and Yellowglen.

5. MCGUIGAN SIMEON

With the acquisition of Miranda Wines in September 2003, McGuigan Simeon moved up from fifth-largest producer to third, but much of the wine is sold in bulk and bottled by other wineries, thus in terms of shelf presence, it remains in fifth place. McGuigan Simeon controls (but does not own) the second-largest vineyard holding in the country, in excess of 12,350 acres (5,000 hectares), which is more than BRL Hardy and Orlando Wyndham combined. It farms even more vineyards—66,690 acres (27,000 hectares) in 2002—crushing no less than 12 percent of Australia's entire crop of grapes. All this from a zero start in 1992!

It was Brian McGuigan who founded Wyndham Estate (now part of Orlando Wyndham), based on the Dalwood Estate, which had been established by George Wyndham in 1830, and sold by Penfolds to its former cellar master, McGuigan's father, in the early 1960s. In 1992, Brian McGuigan set up McGuigan wines with the help of his wife, Fay, who was the export manager for Wyndham Estate in the 1980s. They listed the company on the Australian stock exchange, and by 2002 McGuigan Wines had become the sixth-largest wine producer in Australia, selling 1.2 million cases a year. Simeon Wines was established and listed on the Australian stock exchange in 1994, purchasing Buonga winery and vineyards from Orlando Wyndham the same year. In 1997 Simeon took over Australian Vintage, which included the Loxton winery, and the Coldridge and Manton's Run brands. The following year Simeon bought 2,307 acres (934 hectares) of Riverland vineyards from Southcorp, and Chateau Yaldara the year after that. In 2003, when market conditions and exchange rates were blamed for the others in the "Big Five" turning in a modest increase in profits at best, McGuigan Simeon announced a 27 percent jump in profits, and the acquisition of Miranda Wines. This increased its production in 2004 by 40 percent over the previous year. Brands include: Black Swan, Botany Creek, Cobweb, Conundrum Estate, Cowra Crossing, Ducks Flat, Earth's Portrait, Firefly, Fireside, Genus 4, Golden Gate, Hermitage Road, Howcroft Estate, Hunter Cellars, McGuigan, Miranda, Mirrool Creek, River Run, Silver Billet, Somerton, Tempus Two, The Drainings, and Vine Vale.

WOLF BLASS

The flamboyant founder of the eponymous brand emigrated to Australia in 1961 with just £100 (US\$280) in his pocket.

OTHER GROUPS

CASELLA

Filippo Casella emigrated to Australia from Sicily in the 1950s, purchased a farm in 1965, planted vines, and made his first wine in 1969, but did so as a bulk supplier to other wineries. Consequently, the company he established went unnoticed until it started the transition to marketing wines under its own brand. In recent years, Casella has become a legend, thanks to the “Yellow Tail” phenomenon, which took Australia’s biggest wine players by surprise. Yellow Tail went from zero to 5.9 million cases in just four years. In 2002, midway through this extraordinary growth, Yellow Tail had become the top-selling Australian wine in the US, and by 2004 Yellow Tail Shiraz was that country’s best-selling bottled red wine, as well as being officially ranked as the fastest-growing export brand in the history of the Australian wine industry. Brands currently include Carramar Estate, Casella Estate, Cottlers Bridge, Crate 31, Yellow Tail, and Yenda Vale.

LION NATHAN

This group was going down the tubes in 1997, when the self-confessed “aggressive, oppositional, demanding, and insensitive” Gordon Cairns took over, but as he rebuilt the business he went from an “in your face” type to Mr. Nice Guy. He also became a hypocrite, attributing it to the Buddhist principle that “you can hold two contradictory ideas in your mind at the same time.” He declared that company would never get involved in the wine industry, but purchased Petaluma (including its Argyle operation in Oregon) and Banksia (Hillstowe, St. Hallett, and Tatachilla) in 2001. Unless the company philosophy changes, Lion Nathan will never challenge the “Big Five,” since the strategy is to remain within a premium niche, where its wines are available only through independent outlets, and listed in hotels and restaurants. Lion Nathan currently brews 2½ billion gallons (one billion liters) of beer a year, while its Australian wine division includes Bridgewater Mill, Chainsaw, Croser, Enterprise Wines, Knappstein Wines, Mitchelton, Petaluma, Preece, Sharefarmers Vineyard, St. Halletts, Smithbrook, Stonier, Tatachilla, Thomas Mitchell, and Tim Knappstein.

LVMH AUSTRALIA AND NEW ZEALAND

This small but formidable group began in 1986, when Moët & Chandon was intent on repeating the success of its Domaine Chandon operation in California. Under the watchful eye of Dr. Tony Jordan, this was not only achieved, but the quality level of its American counterpart was quickly overtaken; the US-based Domaine Chandon has been in the shadow of the Australian ever since.

The idea back then was to concentrate exclusively on sparkling wine and not to get involved with other brands, let alone build up any kind of group. However, in 1990, Veuve Clicquot acquired a substantial shareholding in Cape Mentelle. This was just three years after the merger between Louis Vuitton (in which Clicquot was the top Champagne house) and Moët-Hennessy (where Moët ruled supreme), and Clicquot enjoyed its independence, as it continued to do for much of the 1990s. Clicquot’s stated goal not to get involved in sparkling wine in the southern hemisphere may have been a diplomatic stance (not wishing to step on Moët’s toes by competing with Domaine Chandon), but Clicquot had to reconsider when it found out that Cloudy Bay, Cape Mentelle’s New Zealand subsidiary, was five years down the line in its development of Pelorus sparkling wine, since David Hohnen (the founder of Cloudy Bay) had no intention of wasting all that effort. So Clicquot got into bubbly. Having achieved all his ambitions for Domaine Chandon, Jordan left to take over at Wirra Wirra, but returned when he was made an offer he could not refuse, to run all of LVMH’s winemaking operations in Australia and New Zealand. Thus it was, in July 2003, that Jordan took up the position of Chief Executive Officer of Cape Mentelle, Cloudy Bay, and Mountadam (which Clicquot had purchased in 2001), in addition to Domaine Chandon Australia

CASELLA TANKS AT NIGHT

Few wine drinkers have heard of the name Casella, although many know and drink Yellow Tail, Australia’s top-selling brand.

(Chandon and Green Point brands), and Moët developed an enthusiasm for table wine. Other brands include Mountadam’s David Wynn and Eden Ridge.

McWILLIAM’S

This company was established in 1877 by Samuel McWilliam, who planted his first vineyard at Corowa. In 1941, McWilliam’s purchased the Mount Pleasant Estate, which was founded at Pokolbin by the legendary Maurice O’Shea. In 1989, McWilliam’s took over Barwang Vineyard, which coincidentally had been established using cuttings from McWilliam’s some 20 years earlier. Between 1990 and 1994, McWilliam’s bought Brands Winery in Coonawarra, and Lillydale vineyards in the Yarra Valley. In 2000, this company won 13 trophies and 611 medals at Australian wine shows. It had also firmly established itself as the fifth-largest exporter of Australian wine by volume, and sixth by value. In 2001 McWilliam’s entered into an international distribution agreement with Gallo Wines (US), and by 2002 had dropped to 15th largest exporter of Australian wine by volume, and 20th by value, yet there are still some great quality and amazing value wines produced by this group, whose brands include Barawang, Brands of Coonawarra, Hanwood, Lillydale, Maurice O’Shea, McWilliam’s, Mount Pleasant, and Sunstone.

RATHBONE FAMILY GROUP

A small but highly exclusive group of premium and superpremium wineries, including Yering Station in the Yarra Valley, Mount Langi Ghiran in the Grampians region, and the jewel in Rathbone’s crown, Parker of Coonawarra.

WINGARA GROUP

Majority-owned by the Spanish Freixenet group, Wingara owns 1,550 acres (630 hectares) of vineyards, over half of which are located on prime *terra rossa* soil in Coonawarra, and its brands include Katnook, the penny-saving Riddoch, and the penny-pinching Deakin Estate label.

XANADU NORMANS WINE GROUP

This group was created in October 2001, when Xanadu Wines (formerly Chateau Xanadu) in Margaret River purchased the key premium brands and the business name of historic South Australian wine producer Normans Wines—founded in 1853—along with its Clarendon winery and vineyard and packaged stock of premium wines. These brands include Chais Clarendon, Lone Gum, and, of course, Normans. Xanadu is the best performing brand, although there are a few award-winning wines under the Normans labels. As well as the Xanadu label itself, there is the NXG label.

NEW SOUTH WALES

From the Hunter Valley's weighty Shiraz, through its honeyed, bottle-aged Sémillon, and the easy-drinking Riverina wines, to the fast-rising wines from areas such as Orange, Tumbarumba, and Hilltops—the wines of New South Wales are better in quality and more varied in style than they have ever been.

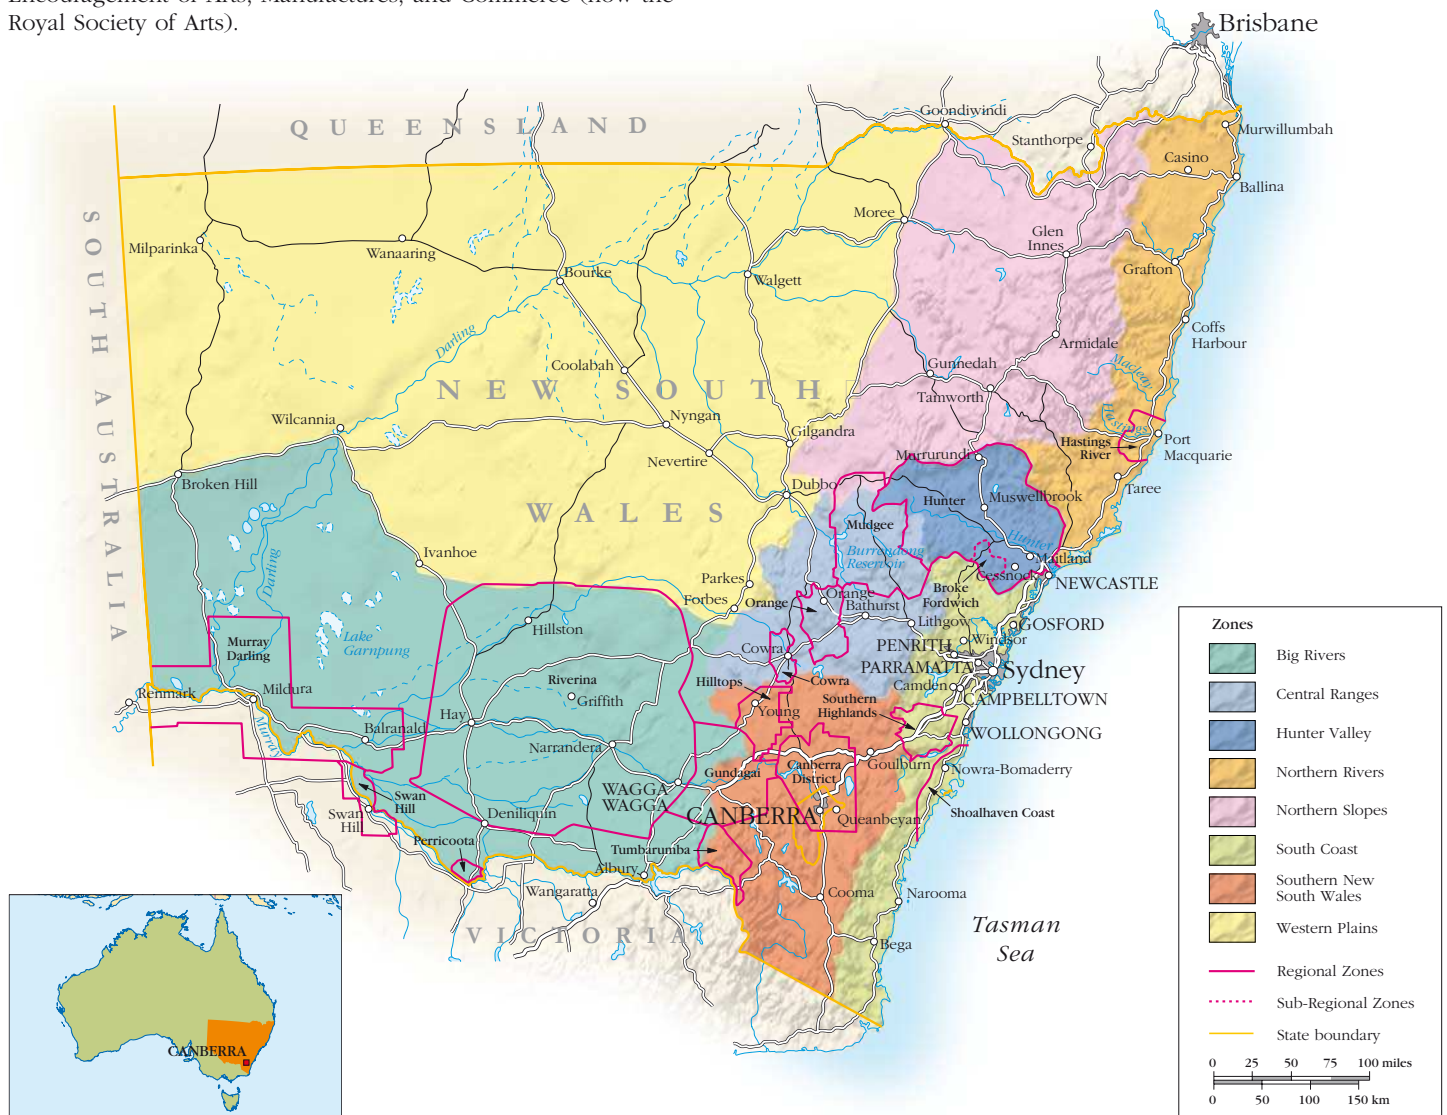

ALTHOUGH VINES ARRIVED with the British First Fleet, and Australia's first governor, Captain Arthur Phillip, planted the country's first vineyard (at Farm Cove, known by the Aborigines as Woccanmagully and now the site of Sydney's Royal Botanic Gardens) in 1788, it was Gregory Blaxland who made Australia's first wine. Blaxland planted his vineyard at Ermington, a few miles down river from Phillip's second vineyard at Parramatta. In 1822, Blaxland also became the first person to export Australian wine, when he brandied a quarter pipe (36 gallons/137.5 liters) of red wine so that it might withstand the rigors of being shipped to London, where it won a Silver Medal from the Society for Encouragement of Arts, Manufactures, and Commerce (now the Royal Society of Arts).

HUNTER SHIRAZ

The reputation of this state's wine industry will always revolve around the Hunter Valley, particularly the Upper Hunter, however much added value there is to gain from its newer regions. Because Australia has claimed Shiraz as its own, Hunter Shiraz will always play a pivotal role. But our perception of this wine has changed; it is hard to imagine that the Hunter was once famous for a huge, beefy style of Shiraz that gave off a strong, gamey, sweat-and-leather odor and possessed an earthy, almost muddy taste that was "chewed" rather than swallowed. Its "sweaty saddle" smell was supposed to derive from the Hunter Valley's volcanic basalt soil, until it was widely declared to be a defect. For quite some time, it was thought to be a mercaptan fault, but the sweaty saddle odor (also described as "horsey" or "stables") is now known to be ethyl-4-phenol, a specific volatile phenol defect caused by the *Brettanomyces* yeast.

NEW SOUTH WALES. *see also* p.552

North of Sydney, the Lower and Upper Hunter Valley and the Mudgee area excel, while the Murrumbidgee Irrigation Area to the southwest proves that quantity can, to a certain extent, coexist with quality.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

The southern part of Australia's east coast, between Victoria and Queensland.

CLIMATE

Temperatures during the growing season are similar to those of the Languedoc in southern France. Cloud cover can temper the heat in the Hunter Valley, but the accompanying rains often promote rot. The growing season is later, and the climate sunnier, in Mudgee, Orange, and Cowra, while it is hotter and drier in Riverina, and significantly cooler in Tumbbarumba.

ASPECT

Vines are grown on generally low-lying, flat, or undulating sites, but also on steeper slopes such as the fringes of the Brokenback Range in the Lower Hunter Valley, where vines are grown at altitudes of up to 1,600 feet (500 meters); on the western slopes of the Great Dividing Range, where some vineyards can be found at an altitude of 2,600 feet (800 meters); and in Canberra at 2,706 feet (820 meters).

SOIL

Soils are varied, with sandy and clay loams of varying fertility found

in all areas. Various other types of soil, such as the red-brown volcanic loams, are scattered about the Lower Hunter region and the fertile, but well-drained, alluvial sands and silts of the flat valley floors. Hilltops has a deep, gravelly, red soil, mixed with basalt and sandy granite, while Tumbbarumba much farther south also has basalt and granite soils.

VITICULTURE AND VINIFICATION

Irrigation is practiced throughout the state, particularly in the mainly bulk-wine-producing inland area of Riverina. The range of grape varieties is increasing, and grapes are harvested several days earlier than they used to be, for a crisper style. Temperature-controlled fermentation in stainless-steel vats is common, but new oak is used judiciously.

GRAPE VARIETIES

Primary varieties: Cabernet Sauvignon, Chardonnay, Pinot Noir, Riesling, Sémillon, Shiraz
Secondary varieties: Cabernet Franc, Colombar, Grenache, Malbec, Merlot, Muscat Gordo Blanco, Petit Verdot, Ruby Cabernet, Sauvignon Blanc, Trebbiano, Verdelho

IRRIGATION CANAL AND DE BORTOLI WINERY
A network of irrigation canals like this one enables Riverina wineries such as De Bortoli to produce vast amounts of modest, easy-drinking wines.

THE APPELLATIONS OF
NEW SOUTH WALES

BIG RIVERS

This zonal GI encompasses the regional GIs of Lachlan Valley, Murray Darling, Perricoota, Riverina, and Swan Hill.

BROKE FORDWICH

This subregion of Hunter centers in and around Broke, but also extends south and southwest, encompassing the catchment area of Wollombi Brook, and going north beyond Bulge. Chardonnay and Cabernet Sauvignon seem to be the most successful varieties grown here.

CANBERRA DISTRICT

One of the quirkiest GI demarcations must be that of Canberra District, since most of the appellation is not even located within the Australian Capital Territory (ACT), but in New South Wales. In fact, prior to the arrival of BRL Hardy's Kamberra there were no wineries in ACT, and only 15 acres (6 hectares) of vines. However, the reason for this has nothing to do with any lack of viticultural potential within ACT. The absence of viticulture here was due solely to the fact that the concept of freehold property does not exist within ACT. This hardly makes Canberra an attractive option for anyone in the long-term business of establishing a vineyard, thus no vineyards or stylish new boutique wineries are within a stone's throw of the nation's capital. The altitude of most vineyards is 2,000 to 2,700 feet (600 to 820 meters), but most face north or northeast, so the sunshine hours are very high at 7.2 hours per

day, enabling grapes to ripen on nearly all aspects. Although the climate is cool in Australian terms, it is not as cool as some local growers might like to boast. Summers are warm and dry, with three out of every four years yielding degree-day equivalents between those of the Médoc and Hermitage. The vineyards are dependent on irrigation, and water is a declining resource. All the usual grape varieties are grown, but snappy Rieslings, elegant Pinot Noir, and Rhône-style Shiraz excel.

CENTRAL RANGES

A zonal GI that encompasses the regional GIs of Cowra, Mudgee, and Orange.

COWRA

This is a small but growing viticultural area, which is situated some 120 miles (180 kilometers) inland and west from Sydney, and nearly the same distance north of Canberra. As in most of Australia's lesser-known wine areas, viticulture flourished here in the 19th century, and was reignited in the 1970s. But lesser known does not necessarily mean lesser quality, as demonstrated by the earliest vintages of Brian Croser's legendary Petaluma Chardonnay, which were sourced from Cowra.

GUNDAGAI

It is surprising how many emerging wine regions in New South Wales happen to be conveniently located for tourist appeal, and Gundagai is no different, since it is touted as a

near-perfect stopover between Sydney and Melbourne. Protected by the Snowy Mountains to the southeast, most vineyards are located at 1,640 to 3,280 feet (500 to 1,000 meters) in altitude, with Sémillon providing the most distinctive wines. Other varieties include Chardonnay, Sauvignon Blanc, Cabernet Sauvignon, Merlot, and Shiraz.

HASTINGS VALLEY

This small region is located on the north coast of New South Wales, where the climate is maritime and subtropical, with high humidity and rainfall. The dominant grape variety is Chambourcin, a French hybrid that survives everything that the local squally weather can throw at it. Chambourcin was pioneered by John Cassegrain, formerly of Tyrrell's, who established a vineyard here in 1980, the first to be planted in the locality since the 1860s. Chardonnay and Sémillon are also supposed to perform well, but it is worth noting that Cassegrain now sources most of his grapes from elsewhere.

HILLTOPS

Cool climatic conditions produce an elegant style of Chardonnay, and distinctive Sémillon, with red wines capable of a slow-building complexity, particularly Cabernet Sauvignon and Shiraz. This is essentially cherry orchard country, but the first vines were planted as long ago as the 1860s by Nichole Jasprizza, a Croatian immigrant who made his money selling

the wine he made to miners in the surrounding goldfields. More recently, Peter Robertson planted the first vines of the modern era at Barwang in 1969. Other varieties growing here include Merlot, Pinot Noir, Riesling, Sauvignon Blanc, and even Zinfandel. Vines grow at an elevation of 1,475 to 2,000 feet (450 to 600 meters) on a deep, gravelly, red soil, mixed with basalt and sandy granite. The climate is continental, cool, and dry with snow in winter and most rainfall occurring from mid-spring to mid-fall.

HUNTER

Subregions:
Broke Fordwich

The Hunter sounds as if it should encompass the Hunter Valley, not the other way around. The Hunter covers the areas popularly known as the Lower Hunter Valley and the Upper Hunter Valley. *See Lower Hunter Valley and Upper Hunter Valley*

HUNTER VALLEY

This zonal GI encompasses the regional GI of Hunter.

LOWER HUNTER VALLEY

Not an official GI, as yet, but the traditional practice of dividing the Hunter Valley into Lower and Upper regions must be formalized one day, if Australia's Geographical Indications are to be taken seriously. This is the "original" Hunter Valley. Its vineyards were pioneered in the 1820s by such growers as William Kelman of Kirkton and George Wyndham of Dalwood, over 130 years before the Upper Hunter Valley was opened up. The area has long been famous for its rich *Sémillons* (once sold as Hunter Riesling) and for its forceful Shiraz. The Lower Hunter Valley is not ideal grape country, being too hot and humid, although the nightly air-drainage from the Brokenback Range cools the vines and prevents the acidity of ripening grapes from dropping too rapidly. After a period of slow growth in the 1980s, the Hunter Valley has enjoyed the same rejuvenation as the Barossa Valley in South Australia.

MUDGEES

With a continuous history of grape growing since 1856, this is the oldest district on the western side of the Great Dividing Range. Mudgee produces rich and succulent red wines, particularly from Shiraz and Cabernet Sauvignon, and is building a reputation as an excellent source for *Sémillon*.

MURRAY DARLING

The Murray Darling GI straddles New South Wales and Victoria, and is essentially an industrialized wine-growing area. It has a hot and dry continental climate, with little rain, making it ideal for risk-free, large-scale, irrigated production of bag-in-the-box wines, although exceptional wines do exist, such as Tall Poppy's Petit Verdot. Almost every grape variety found in Australia grows here, but the most significant are Chardonnay and Cabernet Sauvignon, with Muscat Gordo Blanco, and clones of *Sémillon* and Colombard best suited to fortified styles.

NORTHERN RIVERS

This zonal GI consists of New South Wales' northern coastal strip and encompasses the regional GI of Hastings Valley.

NORTHERN SLOPES

Almost as barren as the Western Plains, this area is sandwiched between this area and the Northern Rivers GI.

ORANGE

Orange continues to excel. When entering this town, the first thing you see is a huge sign saying "Welcome to Orange" with a large fruit underneath—an apple! That's right, Orange is famous for apples, and in recent years for grapes. As everywhere in the New World, the best potential vineyard areas have invariably turned out to be those that initially became famous for orchards. The vines grow 2,000 to 3,000 feet (600 to 900 meters) above sea level on an extinct volcano called Mount Canobolas, which is itself part of the Great Dividing Range. When I first visited the area in the late 1980s, the only local wine was Bloodwood, grown on a very small vineyard owned by Stephen Doyle, an instructor at Orange Agricultural College. Now 22 vineyards market their own wine, with many more growers likely to follow suit when the University of Sydney's Orange Campus (formerly Orange Agricultural College) builds a winery on its Templer's Mill vineyard property, as this is intended to provide contract winemaking services for other vineyard owners. Orange is located between Cowra and Mudgee and, like most famous regions, it has expanded beyond its place of origin. Its most recent and most important plantings are found at Little Boomey, northeast of Molong. This extended region is best known for Cabernet Sauvignon and Chardonnay, but also grows Sauvignon Blanc and increasingly impressive Shiraz, although it could also succeed with Pinot Noir.

PERRICOOTA

The Perricoota region is located in the Big Rivers zone on the Victoria border, with most wine production near or around the town of Moama, and only two significant producers. St. Anne is owned by the McLean family, whose vines are up to 30 years old, with Chardonnay, Cabernet Sauvignon, Merlot, and Shiraz the main varieties. The other producer is Riverview Estate, which was planted by the Morrison family as recently as 1996, and primarily grows Cabernet Sauvignon, Shiraz, Sauvignon Blanc, and *Sémillon*. Both also produce fortified wines.

RIVERINA

The center of this region was formerly known as Murrumbidgee Irrigation Area, which was always a bit of a mouthful, or MIA, which sounded like an American military acronym. Riverina is a much more romantic name to see on a bottle of wine, although Murrumbidgee Irrigation Area accurately described a wine region that was made possible by the flooding and pumping of the Murrumbidgee River. This previously infertile land now cultivates rice and many fruits, including enough grapes to make one-tenth of all the wine in Australia. These wines are not all cheap plonk and include some of Australia's best botrytized wines.

SHOALHAVEN COAST

An emerging region on the south coast of New South Wales, where the distinct maritime climate is responsible for Chambourcin being the primary grape, as it is farther up the coast at Hastings. Other varieties include Chardonnay, Gewürztraminer, Sauvignon Blanc, *Sémillon*, Verdelho, Cabernet Sauvignon, Merlot, and

Shiraz. The first vines were planted in the 1820s, by Alexander Berry, at Coolangatta Estate, which was revived in 1988, encouraging other vineyards to be established locally, although surprisingly it was not until 1996 that the first Chambourcin was planted (by Humphries Wines). There are now 10 wineries, and a further five vineyards owned by growers who supply others for the moment.

SOUTH COAST

This zonal GI encompasses the regional GIs of Shoalhaven Coast and the Southern Highlands.

SOUTHERN HIGHLANDS

The Southern Highlands is a little farther inland than Shoalhaven Coast, but still subject to a maritime climate. With its proximity to both Canberra and Sydney, one eye was obviously on the potential tourist trade when it was decided to plant vineyards in a region that had previously been devoted to sheep, dairy farming, and horse studs. The grapes grown here are primarily Chardonnay, Riesling, Sauvignon Blanc, Cabernet Sauvignon, Pinot Noir, and Shiraz.

SOUTHERN NEW SOUTH WALES

This zonal GI encompasses the regional GIs of Canberra District, Gundagai, Hilltops, and Tumbarumba.

SWAN HILL

This regional GI overlaps New South Wales and Victoria, with most producers located in the latter.

TUMBARUMBA

One of Australia's coolest and most picturesque wine regions, Tumbarumba has an alpine climate that ripens grapes significantly later than in neighboring Gundagai region (late March to mid-April, as opposed to late February), making it one of the most exciting sources for producers of premium-quality sparkling wine. Still varietal wine successes include Chardonnay, Sauvignon Blanc, Cabernet Sauvignon, and Pinot Noir. The vineyards are in the foothills of the Australian Alps, growing at elevation of 1,640 to 2,600 feet (500 to 800 meters), on basalt or granite soils. Viticulture is relatively new in Tumbarumba, with the very first vines planted in 1983, but in keeping with much New World wine history, it was originally orchard country, and remains known today for its famous Batlow apples.

UPPER HUNTER VALLEY

Not an official GI as yet, but the traditional practice of dividing the Hunter Valley into two appellations for the Lower and Upper Hunter must be formalized one day, if Australia's Geographical Indications are to be taken seriously. The Upper Hunter Valley was pioneered in the 1960s by Penfolds and put on the map internationally by the sensational performance of Rosemount Estate, whose Show Reserve Chardonnay took export markets by storm in the early 1980s. Although this district is just as hot as the Lower Hunter Valley and the growing season very similar, the climate is drier and the vineyards need irrigation. Despite fertile alluvial soils and high yields—two factors that do not augur well for quality—some very fine wines are made.

WESTERN PLAINS

A virtual wilderness as far as wine today is concerned, this zonal GI covers more than one-third of the entire state.

THE WINE PRODUCERS OF NEW SOUTH WALES

ALLANDALE Lower Hunter Valley ★★★

Amazingly good quality. Also uses grapes from Hilltops.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Sémillon* • *Shiraz* • *Verdelho*

ARROWFIELD WINES Upper Hunter Valley ★★

This Japanese-owned estate dates back to 1824 when Governor Macquarie granted the land to one George Bowman, who named the huge fields on his property after variations of his family name, hence Arrowfield. Arrowfield primarily sources its grapes from the Hunter Valley and Cowra, tending to blend the wines for maximum effect, but the company has recently launched a regional range, defining the origin as either Hunter Valley or Cowra.

✓ *Chardonnay* (Show Reserve) • *Classic white blend* (Sémillon Chardonnay)

BARWANG VINEYARD Hilltops ★★★

Part of the McWilliam's group, Barwang was established in 1969 by Peter Robinson, who planted the vineyards with cuttings that, as chance would have it, came from its future owner.

✓ *Cabernet Sauvignon* • *Merlot* • *Shiraz*

BLOODWOOD Orange ★★★

Owned by Stephen Doyle, a pioneer of Orange, Bloodwood makes wines at the Reynolds Yarraman Estate in the Upper Hunter Valley.

✓ *Cabernet* • *Merlot*

BOTOBOLAR VINEYARD Mudgee ★★

Good-quality, biodynamically produced wines come from the highest vineyard in the Mudgee district. Botobolar tends to use odd methods such as refermenting two-year-old Shiraz on the skins of freshly picked Shiraz. Low-preserved and preservative-free wines are a feature, but although low sulfur regimes are to be applauded, it has to be said that the preservative-free wines are not among Botobolar's best.

✓ *Marsanne* • *Shiraz*

BRANGAYNE OF ORANGE Orange ★★★

Don and Pamela Hoskins make supremely stylish wines, with the ubiquitous dynamic duo of Richard Smart and Simon Gilbert consulting.

✓ *Chardonnay* • *Classic red blend* (The Tristan)

BRIAR RIDGE Lower Hunter Valley ★★★

Winemaker Steve Dodd joined Briar Ridge in December 2002, and partners Karl Stockhausen, one of the Hunter's legendary Sémillon stylists.

✓ *Chardonnay* (Hand Picked) • *Sémillon* (Signature Stockhausen)

BRINDABELLA HILLS Canberra District ★

Owner Dr. Roger Harris produces some of Canberra District's most elegant wines. The Shiraz is fleshy without being heavy, and a 1994 Riesling tasted in 2001 ranked as the best mature Australian Riesling I had ever tasted, with wonderful zesty-fresh aromas mingling with gasolinelike mature fruit.

✓ *Chardonnay* • *Cabernet Sauvignon* • *Riesling* • *Shiraz*

BROKENWOOD Lower Hunter Valley ★★★

This winery was established in 1970 by three partners, one of whom was none other than Australia's very own wine guru, James Halliday, but he has long since moved on. Iain Riggs has been winemaker here since 1983, and he is a driven man when it comes to Sémillon. The basic release is stunning, but bottle-age

puts his ILR Aged Reserve Sémillon in a class of its own, demonstrating the potentially huge longevity and sheer quality of Hunter Sémillon. Brokenwood took over Yarra Valley's Seville Estate in 1997.

✓ *Cabernet Sauvignon* (Graveyard Vineyard) • *Sauvignon Blanc/Sémillon* (Cricket Pitch) • *Sémillon* • *Shiraz* (Graveyard Vineyard, Rayner Vineyard)

CANOBOLAS-SMITH Orange ★

These hard-to-find, intensely ripe, complex wines show the great potential of Orange.

✓ *Chardonnay* • *Classic red blend* (Alchemy)

CASELLA WINES Riverina ★★

Known primarily for its Yellow Tail brand, which went from zero to 5.9 million cases in just four years. The Yellow Tail range started with Chardonnay and Shiraz, but later included a Cabernet Sauvignon, Merlot, and a Verdelho. This success has attracted more than its fair share of adverse comments from various critics, quite often revolving around residual sugar levels (9 grams per liter in one of the Cabernet Sauvignons, for example). But Yellow Tail is a AU\$10 (US\$7.50) wine designed for mass appeal, and I have seen the analyses of supposedly higher-quality, medal-winning Australian wines with similar sugar levels—sometimes significantly higher. For its place in the market, ex-Southcorp winemaker Alan Kennet has done a remarkable job of churning out megavolumes of soft, clean, fresh, fruit-driven, consumer-friendly wines. The hard part will be in maintaining this standard. In August 2004, Casella announced that a premium Cabernet Sauvignon would be released at AU\$45 (US\$35). I cannot see how it will work myself, but who am I to question the marketing logic of the creators of Yellow Tail? What I can confidently predict, however, is that this commercial success will propel Casella into the major league, prompting takeovers, and will instill a desire to produce wines that attract critical acclaim at the highest level. Whether Yellow Tail is the brand to market premium quality through is doubtful, but an increased ranking in future editions of this encyclopedia is not. Brands currently include Carramar Estate, Casella Estate, Cottlers Bridge, Crate 31, Yellow Tail, and Yenda Vale.

✓ *Merlot* (Carramar Estate, Cottlers Bridge) • *Petit Verdot*

(Yenda Vale) • *Sangiovese* (Yenda Vale) • *Sémillon* (Carramar Estate) • *Tempranillo* (Yenda Vale)

CASSEGRAIN VINEYARDS Hastings River ★

The Cassegrain family established this winery back in 1980. Some believe the maritime climate is far too marginal for viticulture, but despite the bracing sea breezes and lashing rain—which compelled John Cassegrain to plant the rot-resistant Chambourcin grape—some exciting wines are to be found amid the disappointments. Some of the early vintages of Cassegrain Brut show flashes of promise, but the quality, particularly the finesse, has lacked consistency, and requires considerable input from a top sparkling wine consultant to improve consistency. The Chambourcin is recommended within its class. Cassegrain purchased Hungerford Hill from Southcorp in 1992.

✓ *Chambourcin* • *Fortified* (Old Yarras Tawny Port) • *Fromenteau-Chardonnay* (Reserve) • *Sémillon* (Reserve) • *Verdelho*

CHALKERS CROSSING Hilltops ★★

Established in 2000, Chalkers Crossing draws on grapes sourced from Tumbarumba and Gundagai to increase the range of wines available from its own 25-acre (10-hectare) vineyard. French-born Céline Rousseau produces regionally defined wines that combine ripe fruit with graceful lines, including a Sémillon to die for.

✓ *Cabernet Sauvignon* (Hilltops) • *Chardonnay* (Tumbarumba) • *Pinot Noir* (Tumbarumba) • *Sémillon* (Hilltops)

CHARLES STURT UNIVERSITY Wagga Wagga ★

Wagga Wagga is the oenological campus of Charles Sturt University, which has always sold the "students' wines" from its cellar door, but built a brand new commercial-scale winery in 2002.

✓ *Chardonnay* (Orange)

CHATEAU PATO Lower Hunter Valley ★★

Tiny, family-owned estate producing one of the Hunter Valley's finest Shiraz wines.

✓ *Shiraz*

CLONAKILLA

Canberra District

★★

Since taking over from his father, Tim Kirk has not only put his own stamp on Clonakilla, but has achieved fame above, beyond, and despite Canberra District's low profile. His Shiraz-Viognier has been recognized for more than a decade within Australia itself as one of the country's best reds, and will be known by many Australians who do not realize that Canberra District does, in fact, produce any wine. Any emerging region seeking recognition needs to be famous for something, and if other producers in this region had been quick enough, they might have been able to make Shiraz-Viognier Canberra District's signature wine.

✓ *Chardonnay* • *Classic red blend* (Shiraz-Viognier)
• *Riesling* • *Shiraz* • *Viognier*

COWRA ESTATE

Cowra

★

Owned by South African businessman John Geber, who is obsessed with cricket and has thus introduced the new Classic Bat series of wines. He also magnanimously sells wines from other local wineries from his own cellar door. The wines are made by Simon Gilbert.

✓ *Chardonnay* (Classic Bat) • *Classic red blend* (Classic Bat Cabernet-Merlot) • *Pinot Noir* (Classic Bat)

CRANSWICK ESTATE

Riverina

★★

Cash-strapped when acquired by Evans and Tate (*see* Western Australia) for AU\$100 million (US\$60 million) in March 2003, Cranswick Estate nevertheless increased its new parent company's profits by more than 40 percent, due to rolling its operations into the fold, and by in excess of 70 percent the second year. The attraction, however, was the inexpensive Barramundi range, which is Cranswick's top-selling export brand, and should open doors for Evans and Tate.

✓ *Sparkling wine* (Sparkling Shiraz)

DE BORTOLI

Riverina

★★

Founded in 1928, De Bortoli has always produced a vast amount of modest wines, as befits the reputation of Riverina. It won international acclaim with its Noble One Botrytis Sémillon, and has gone on to establish a wider reputation for quality with its outpost in Yarra Valley, Victoria. Quality has also risen at Riverina since the acquisition of vineyards in the Hunter Valley, whose wines are sold under the Black Creek label.

✓ *Chardonnay* (Black Creek, Deen De Bortoli Vat 7) • *Classic white blend* (Montage Sémillon-Chardonnay) • *Fortified* (Black Noble, Show Liqueur Muscat, Old Boys Tawny Port) • *Sémillon* (Noble One)

DOONKUNA ESTATE

Canberra District

★

One of the most consistent Canberra District wineries, Doonkuna Estate was founded by the late Sir Brian Murray. It is now owned and run by Barry and Maureen Moran. The winemaker, Malcolm Burdett, likes high, ripe acidity and, although this winery has not produced a Riesling quite as special as Brindabella's 1994, it has been more consistent with this variety than Brindabella or any other Canberra District winery. Shiraz is the best red, but varies too much year on year to give a blanket recommendation.

✓ *Classic white blend* (Sauvignon Blanc-Sémillon) • *Riesling*

EVANS FAMILY

Lower Hunter Valley

★★

The indefatigable Len Evans established the famous Rothbury Estate, which is now part of Beringer Blass, leaving him to preside over his own vineyard, the top-quality, age-worthy wines of which are made under contract.

✓ *Chardonnay* • *Sémillon* • *Shiraz*

ANDREW HARRIS

Mudgee

★★

One of Mudgee's fastest-rising stars in the 1990s, this winery has significantly increased production and sales. Second wines sold under Twin Beaks label.

✓ *Classic red blend* (Cabernet Merlot The Vision Shiraz Cabernet) • *Sémillon* • *Sparkling* (Double Vision Sparkling Shiraz)

HELM WINES

Canberra District

★

Run by the irrepressible aspiring senator Ken Helms (he ran for the

senate in 2001), Helm Wines is a microcosm of Canberra District itself, hallmarked by inconsistency, yet always capable of shining here and there. Among his best examples is a soft, smooth, easy-drinking 2000 Reserve Merlot, but Ken's hobbyhorse of the moment is his Riesling Classic Dry. This is picked at lower ripeness to avoid the typically high alcohol levels of most Australian Rieslings, in an attempt to achieve a more European balance. The 2001 is not a bad stab, with its light-bodied, refreshingly elegant, lime-free fruit.

✓ *Merlot* (Reserve) • *Riesling*

HILLBROOK ESTATE

Canberra District

Hillbrook Estate is a blueprint for any winery wanting to know how to manicure vineyards and set up tourist facilities, but the wines are not so outstanding, although I enjoyed its juicy-fruity 2000 Merlot.

HUNGERFORD HILL

Lower Hunter Valley

★★

Hungerford Hill was established in 1969 by John Parker, who quickly expanded his vineyards to more than 500 acres (200 hectares), before shrinking the estate to a fifth of its former size. In 1980, a vineyard in Coonawarra was acquired, and some of the wines were blended from these two regions, which was the geographical equivalent of blending Rioja in Spain with a wine from the Great Hungarian plains! Sales increased to 200,000 cases by the late 1980s, attracting the attention of Seppelt, which took over the company. Seppelt was part of S. A. Brewing, which acquired Penfolds the same year, thus Hungerford Hill soon became just another Southcorp brand, and wines ended up being sourced from even more diverse regions (Hilltops, Cowra, Gundagai, and Tumarumba), although the results were equally good. In 2002, the Hungerford Hill brand was sold to the Kirby family, who also retained the services of Phillip John, the winemaker under Southcorp ownership. Members of the Kirby family are major shareholders in Cassegrain, thus the wines were made at that winery for the first year, while the stunning new complex at Pokolbin was being constructed. The wines are still sourced from wide and far, but are primarily pure regional, rather than blended bottlings, and the quality improves with each vintage.

✓ *Chardonnay* (Tumarumba) • *Merlot* (Orange) • *Pinot Noir* (Tumarumba) • *Riesling* (Clare Valley)

HUNTINGTON ESTATE

Mudgee

★★

Bob Roberts entered the business with a law degree and learned winemaking through a British-based

correspondence course. Not the strongest base for success, perhaps, but his clean, fleshy, well-balanced, stylish wines regularly outshine wines made by highly qualified professionals. The same vintage of the same varietal is often released under different bin numbers, prefixed with MB for medium-bodied and FB for full-bodied, and while I might prefer one bin number to another, I have always enjoyed both. Some vintages of the Cabernet Sauvignon and Sémillon possess remarkable longevity.

✓ *Cabernet Sauvignon* (Special Reserve Bin) • *Sémillon* • *Shiraz*

INGLEWOOD WINES

Upper Hunter Valley

★★

Established as Inglewood Vineyards in 1988, this business initially built its profits selling grapes to Southcorp, an activity that continues under a long-term contract. It gradually moved into wines, eventually purchasing the Tulloch brand (but not winery) from Southcorp in 2002.

✓ *Chardonnay* (Two Rivers Lightning Strike) • *Sémillon* (Two Rivers Stone's Throw)

JEIR CREEK

Canberra District

★

The 2000 Pinot Noir showed morello cherries with floral-menthol after-aromas, making an elegant wine, despite being the color of a full-bodied Shiraz, while the fresh, luscious 2000 Botrytis Sémillon-Sauvignon Blanc was the best dessert wine I encountered in the region on my last visit.

✓ *Botrytis wine* (Sémillon Sauvignon) • *Shiraz*

KAMBERRA

Canberra District

★★

The decision to name this winery Kamberra is because Canberra itself is a derivation of the Aboriginal word *kamberra*. Australia's capital occupies an area of land that Europeans discovered as recently as 1821, and which was granted to Lieutenant John Moore in 1824. Moore named his property Canberra after hearing local Ngunnawal Aborigines use the word *kamberra* for "meeting place" (which is this winery's second label). For more than 21,000 years the Ngunnawal have congregated at the *kamberra* in late spring to feast on *bogong*, a species of moth otherwise known as *Agrotis infusa*. These moths fly south to escape the coming summer heat, which is ironic for the thousands that end up cooked in sand and hot ashes by the Ngunnawal, who remove wings and legs to eat them straight, or mash and roast them into moth cakes. Except for 15 acres (6 hectares) belonging to Mount Majura, BRL

Hardy's new venture is the only winery to have vineyards that are actually located within the Australian Capital Territory part of the Canberra District GI. BRL Hardy had been purchasing fruit from the Canberra District and surrounds since 1995. This was initially blended into the company's other labels, but the company was sufficiently impressed with the quality to build a winery here, despite the obstacles (see Canberra District appellation). In fact, the Chardonnay purchased from Canberra in 1996 made up 30 percent of the Eileen Hardy label for that vintage, which won the Adelaide trophy for Best Table Wine of Show and a number of other trophies, including the inaugural Max Schubert Trophy. Little wonder that the company decided to invest so heavily in Canberra District! Meeting Place is Canberra's second label.

✓ *Chardonnay* • *Shiraz* • *Sparkling* (Meeting Place, Pinot Noir Chardonnay)

KYEEMA ESTATE
Canberra District
★

Kyeema has won nearly 30 competition trophies and is renowned for its reds, particularly Shiraz and Merlot. I loved the rich, mellow, and classy reds up to and including 1998, but found a number of the wines from 1999 to be attenuated, with simplistic, bell-pepper flavors. Only after asking owner Andrew McEwin why there appeared to be a sea change, did I discover that he had had to change the source of his award-winning grapes and figured his new vines were too young and needed time to settle down. I hoped he was right, and the reds appear to have improved, with Merlot taking over from Shiraz as the very best, so I have rated Kyeema as if he is. Second wines are sold under the Blue Gum label.

✓ *Chardonnay* • *Merlot* • *Shiraz*

LAKE GEORGE
Canberra District
★

In its original incarnation as Cullarin Vineyard, this was the first winery in Canberra District, and you can still visit the wooden shed where Edgar Rieck made his wines. Rieck not only established this operation in 1971, but was also the driving force behind Canberra's National Wine Show, which is where I once met him and shared one of his remarkably long-lived wines. Lake George is now owned by the Karelas Family Trust, and much has changed since Rieck's days, not just the vineyards and winery, but also the lake that this property is named after and overlooks. Lake George is mostly dry (they even play cricket on it), yet it was once full, highlighting the dire shortage of water this region faces.

✓ *Merlot* • *Pinot Noir*

LAKES FOLLY
Lower Hunter Valley
★★★

Sydney surgeon Max Lake had no winemaking experience when he founded this property in 1963, hence the name. Yet he introduced the use of new oak to the region and consistently produced vivid, vibrant, and stylish wines. Lake's Folly was sold for AU\$8 million (US\$5.3 million) in 2000 to Peter Fogarty, a Perth businessman, who installed ex-McGuigan's winemaker Rodney Kempe, since when the quality has, if anything, become even better with each vintage. The Cabernet Blend was formerly labeled Cabernets, and simply Cabernet prior to that.

✓ *Chardonnay* • *Classic red blend* (Cabernet Blend)

LARK HILL
Canberra District
★★

The highest vineyard in the Canberra District is one of its best, and where Pinot Noir is concerned it is the very best. I am also impressed by the richness, complexity, finesse, and length of Lark Hill's Shiraz—not quite in the Clonakilla league, but certainly the best pure Shiraz I have tasted from Canberra District. Readers will realize this is high praise indeed for a winery I first tried to visit in 1991, only to find a note tied to a tree, saying, "Sorry, but we had to go shopping." We had traveled half way around the world, and they had to go shopping. But in the years since, I have really come to like and respect David and Sue Carpenter. And they do make some very good wines.

✓ *Chardonnay* • *Pinot Noir* • *Riesling* • *Shiraz*

LINDEMANS WINES
Lower Hunter Valley

This brand is part of Southcorp, and its historic Hunter Valley home is now no more than a cellar door operation, bizarrely selling Lindemans wines from other areas. It's a shame that Lindemans' once-legendary Hunter Valley Sémillon wine is no longer produced. See Lindemans Wines, Victoria.

MADEW WINES
Canberra District
★

On the heels of Doonkuna when it comes to producing the most consistent Riesling. Lettuce-crisp and limey-floral, it typically goes gasolinelike within two years.

✓ *Riesling*

MARGAN FAMILY
Lower Hunter Valley
★

Although the vineyard was established in 1989, the winery was built in 1998, and the quality is very good.

✓ *Botrytis* (Sémillon) • *Cabernet Sauvignon* • *Merlot* (House of Certain Views)

MCGUIGAN WINES
Lower Hunter Valley
★★★

Now part of McGuigan Simeon, this winery was established by Brian McGuigan as recently as 1992, yet was the precursor to the fifth-largest wine company. A two-star rating might appear controversially high to some critics, but McGuigan produces some superb wines at giveaway prices, performing at least as well as the two-star McWilliam's winery.

✓ *Cabernet Sauvignon* (Genus 4 Old Vine, Hopcroft Estate) • *Chardonnay* (Bin 700, Genus 4 Old Vine) • *Petit Verdot* (Verdot Superior) • *Sémillon* (Bin 9000) • *Shiraz* (Genus 4 Old Vine)

McWILLIAM'S
Riverina
★★★

The original McWilliam's winery might be based in Riverina, but most of its best wines are sourced from the classic regions.

✓ *Botrytis* (Limited Release Botrytis Sémillon) • *Chardonnay* (Hanwood) • *Classic white blend* (Margaret River Sémillon-Sauvignon Blanc) • *Fortified* (Amontillado, Family Reserve Tawny Port, Hanwood Fine Tawny, Show Reserve Liqueur Muscat) • *Riesling* (Clare, Eden Valley) • *Sémillon* (Hunter Valley)

McWILLIAM'S MOUNT PLEASANT

Lower Hunter Valley
★★★

McWilliam's Mount Pleasant Elizabeth bottle-aged Sémillon is one of Australia's finest examples of this unique wine style, and one of its greatest bargains too. Look out for its museum releases.

✓ *Chardonnay* (Maurice O'Shea) • *Classic red blend* ("1877") • *Cabernet Sauvignon-Shiraz* • *Sémillon* (Elizabeth, Lovedale) • *Riesling* (Collection) • *Shiraz* (Maurice O'Shea, OP & OH) • *Sparkling* (Brut)

MILIMANI
Canberra District
★

MiLiMaNi (to give it the correct typography) is an African word for hills. This is one of those operations that I tend to come across every now and then, and know instinctively that it will end up as one of the region's very best, whatever its current performance might be. A bit like Lamoreaux Landing in New York's Finger Lakes. And what a view MiLiMaNi has!

✓ *Classic red blend* (Cabernet Franc-Merlot) • *Pinot Noir*

MIRAMAR WINES

Mudgee
★★

Ian McRae used to be seriously underrated, yet—ironically—these wines appear to have tapered off in quality since the mid-1990s. At their best, they can still be big and rich, in true Mudgee style.

✓ *Botrytis* (Doux Blanc) • *Cabernet Sauvignon* • *Chardonnay* • *Sémillon* • *Shiraz* (Eljamar)

MOUNT MAJURA

Canberra District
★

The best wine has consistently been Mount Majura's rich, soft, and creamy Chardonnay, but I believe the vineyard will eventually produce greater Pinot Noir. It is also worth keeping an eye on the Cabernet Franc-Merlot blend and the Tempranillo. Second wines sold under the Woolshed Creek label.

✓ *Chardonnay* • *Pinot Noir*

MOUNT VIEW ESTATE

Lower Hunter Valley
★★★

Established in 1971 by Harry and Anne Tulloch, who sold the property in 2000 to John and Polly Burgess. They have hired the talents of Keith Tulloch to maintain family traditions at the 40-acre (16-hectare) terraced estate.

✓ *Cabernet Sauvignon* • *Chardonnay* (Reserve) • *Sémillon* (Reserve) • *Shiraz* (Reserve)

MURRUMBATEMAN WINERY

Canberra District
★

The creamy-rich, black-pepper fruit in Murrumbateman's Reserve Shiraz just edges out the menthol-laden Cabernet-Merlot for this winery's best wine. The juicy, rose-petal infused fruit in the Rose of Australia makes a refreshingly enjoyable picnic wine, but blended from Traminer, Riesling, and Merlot, it should be relabeled Miner's Hodgepodge.

✓ *Barbera* • *Classic red blend* (Cabernet-Merlot) • *Pinot Noir*

PANKHURST

Canberra District

★①

Since establishing this vineyard in 1986, Allan and Christine Pankhurst have built up a reputation for Pinot Noir. The wines are not made here, but at Lark Hill, where contract winemakers David and Sue Carpenter certainly have the expertise to maximize the potential of Pankhurst's excellent vineyard.

✓ *Chardonnay* • *Classic red blend* (Cabernet-Merlot) • *Pinot Noir*

PETERSONS

Lower Hunter Valley

★★

Petersons went through a difficult patch in the early 1990s, but has rebounded, and even seems to be getting better with every new vintage.

✓ *Botrytis* (Sémillon) • *Cabernet Sauvignon* (Ian's Selection) • *Chardonnay* • *Sémillon* (Show Reserve) • *Shiraz* (Back Block, Glenesk, Glenesk Old Block Shiraz, Ian's Selection)

POET'S CORNER

Mudgee

★★①

The history of Poet's Corner is a bit like a reverse takeover, albeit one that is now confined within one of Australia's largest wine groups. Poet's Corner is housed in the old Craigmoor building, which was established in 1858. At one time, Craigmoor was the only winery in Mudgee, but was taken over in 1983 by Montrose, which owned three vineyards in the area, one of them being Poet's Corner, whence the brand was born. Montrose was purchased in 1988 by Wyndham Estate, which was itself purchased in 1990 by Orlando, to form Orlando Wyndham. Thus it is that Poet's Corner, which grew out of Montrose, which took over Craigmoor, is now the primary brand in the group's Mudgee outpost, with the older, once more famous brands of Montrose and Craigmoor effectively its second labels. However, while the Montrose label might be secondary, the quality of many of its wines most certainly is not.

✓ *Sémillon* (Henry Lawson) • *Shiraz* (Montrose Black)

POTHANA

Lower Hunter Valley

★★

The family-owned brand of well-traveled, former Lake's Folly winemaker David Hook.

✓ *Chardonnay* (Belford) • *Sémillon* (Belford) • *Shiraz*

REYNOLDS WINES

Orange

After a brief and what appeared spectacular success, the receivers

were appointed to Reynolds Wines (formerly Reynolds Yarrman) in August 2003, following an adverse decision by the Australian Taxation Office. As a result, the main assets, being the 2,155 acres (872 hectares)—1,240 acres (502 hectares) planted—at Little Boomey and the new 20,000-ton capacity winery at Quondong (Orange), were sold to Cumulus Wines on May 19, 2004 (see Cumulus Wines). The brands (Reynolds, Little Boomey, and MoonShadow) were sold to the Sutter Home Winery, which had entered into a distribution agreement with Reynolds Wines in 2000 for the US. Crucially, Cumulus Wines retained the rights to use the trademarks of Reynolds and Little Boomey in the UK. If Sutter Home Winery is successful in relaunching Reynolds as an international brand, buying the rights from Cumulus Wines will be both costly and essential, since the UK is Australia's major export market. The best Reynolds wine used to be the MoonShadow Chardonnay, but who knows what any of these wines will be like after the 2003 vintage?

ROSEMOUNT ESTATE

Upper Hunter Valley

★★①

In February 2001 Rosemount merged with Southcorp and, for a while, Philip Shaw became chief winemaker, pushing to one side—and eventually out—John Duval, Penfolds' illustrious winemaker. It was Shaw who made Rosemount's reputation, and maintained it even when production went stratospheric, so when he went, it left open the question of just how it might affect the future quality of this brand. However, the new winemaker, Matt Koch, has assisted Shaw since 1995, and there are just so many outstanding wines that I cannot see it all falling apart at the seams. So, if the ailing Southcorp can repair Rosemount's marketing, this brand should deserve at least a two-star rating. The best of the inexpensive Diamond range represent amazing value. To avoid confusion, I have also included here wines made at the Rosemount Estate's winery in McLaren Vale, South Australia.

✓ *Cabernet Sauvignon* (Coonawarra Show Reserve, Diamond, Orange, Traditional) • *Chardonnay* (Giant's Creek, Orange, Show Reserve) • *Classic red blend* (Diamond Shiraz-Cabernet, GSM, Mountain Blue Shiraz-Cabernet) • *Merlot* (Orange) • *Pinot Noir* (Diamond) • *Sémillon* (Diamond, Show Reserve) • *Shiraz* (Diamond, Hill of Gold Mudgee, McLaren Vale, Orange, Show Reserve) • *Syrah* (Balmoral)

ROTHBURY ESTATE

Lower Hunter Valley

★★①

Once owned by Len Evans, who took the company public, and under his chairmanship it continued to produce wines of an extraordinarily high quality. Evans left in 1996, when Rothbury was taken over by Mildara Blass, now Beringer Blass. Quality is currently very high.

✓ *Chardonnay* (Brokenback) • *Merlot* (Neil McGuigan Series) • *Sémillon* (Brokenback, Neil McGuigan Series) • *Shiraz* (Brokenback)

TALGA

Canberra District

★★

Established in 1998 by the Richard family, and son-in-law Ian Little. The Chardonnay is a rich, oaky, designer wine, whereas the firm tannins in the Shiraz make it a much more serious long-term prospect—although it should also appeal to the same wealthy segment of the market.

✓ *Chardonnay* • *Shiraz*

TOWER ESTATE

Lower Hunter Valley

★★①

Any joint venture involving Len Evans is bound to be noteworthy, and at Tower Estate it is the relatively inexpensive price asked for such stunning quality that is so amazing.

✓ *Chardonnay* • *Riesling* • *Sémillon* • *Shiraz*

TULLOCH

Upper Hunter Valley

★①

Once one of the most traditional wineries in the Hunter Valley, it was

little more than a brand under Southcorp, which in 2002 sold the winery to People's Rock and the brand to Inglewood Wines. Southcorp kept the quality generally good, with the occasional star performer. Hopefully, Inglewood will do at least as well.

✓ *Verdelho*

KEITH TULLOCH

Lower Hunter Valley

★★

Eponymous brand established in 1997 by a former Lindemans and Rothbury Estate winemaker with a small, but expanding production. Five varietal wines made under the Per Diem label (Cabernet Sauvignon, Chardonnay, Merlot, Shiraz, and Verdelho) are produced exclusively for The Australian Wine Selectors club.

✓ *Chardonnay* • *Classic red blend* (Forres Blend) • *Sémillon* • *Shiraz* (Kester)

TYRRELL'S VINEYARDS

Lower Hunter Valley

★★

This long-established winery is still family-owned, and although in the 1990s some critics believed that Tyrrell's Chardonnay Vat 47 was not quite as outstanding as it was in the 1970s and 1980s, that was because the number of great Australian Chardonnay wines had increased, not because the quality of Vat 47 had dropped. It is still one of this country's exceptional white wines, although I have to say that what impresses me most here is the Sémillon, especially when aged in bottle. The Shee-Oak Chardonnay is unoaked. It refers to the name of the vineyard where the Chardonnay is grown, and it was so named because of the she-oak trees surrounding the vines. She-oak, or *Casuarina equisetifolia*, is not an oak as such, but an evergreen with red, termite-resistant wood.

✓ *Cabernet-Merlot* (Old Winery) • *Chardonnay* (Shee-Oak, Vat 47) • *Sémillon* (Belford, Lost Block, Steven's Reserve, Vat 1) • *Shiraz* (Old Winery, Vat 9)

WYNDHAM ESTATE WINES

Lower Hunter Valley

★★①

Part of the French-owned Orlando Wyndham group since 1990, Wyndham Estate offers a great range of good-value wines, particularly under the Show Reserve label.

✓ *Cabernet Sauvignon* (Mudgee Show Reserve) • *Fortified* (George Wyndham Old Tawny Port) • *Sémillon* (Show Reserve).

VICTORIA AND TASMANIA

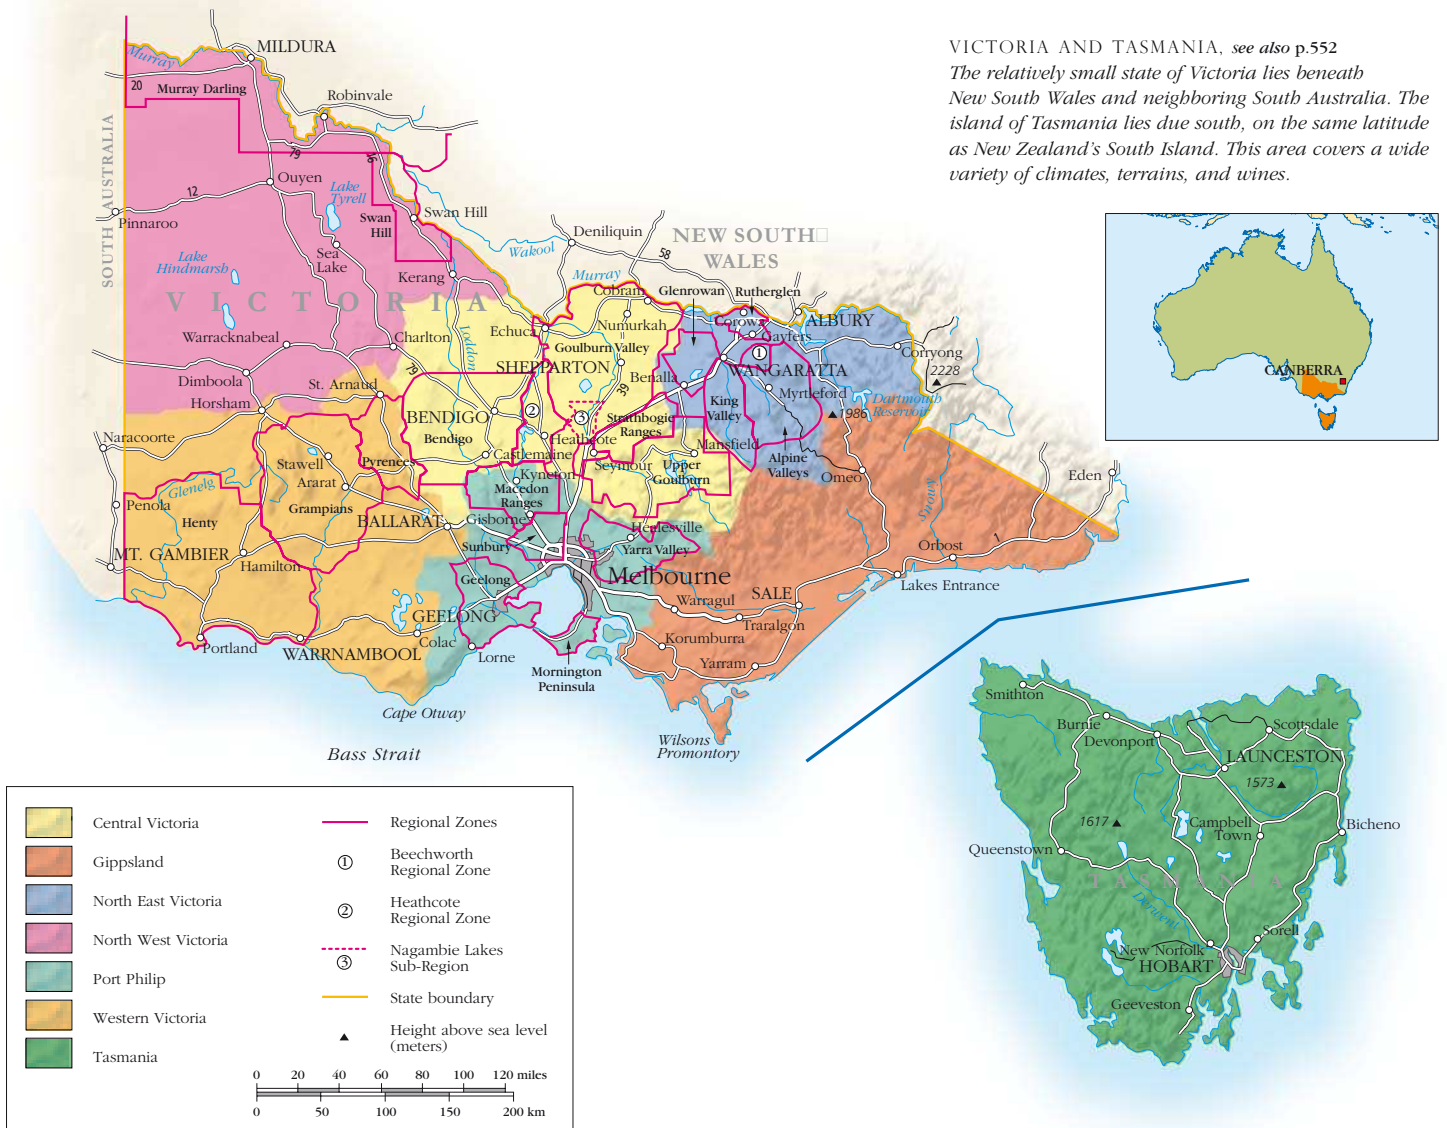

Although Victoria is the smallest of Australia's mainland states, it is second only to South Australia for the volume of wine produced, and is by far the most diverse in terms of cool-climate terroirs and the styles of premium-quality wine made. And Tasmania is, of course, cool-climate personified.

The wines of these two states range from deep-colored, cassis-flavored Cabernet Sauvignon to some surprisingly classy Pinot Noir; from light and delicate aromatic whites, to rich, oaky, yet finely structured Chardonnay and Sémillon; as well as fortified and sparkling wines of the highest reputation. Whereas Victoria is one of Australia's oldest winemaking states, and the most famous when it comes to the country's classic fortified specialties, especially its rich and sticky liqueur Muscat and Tokay, Tasmania is Australia's youngest winemaking state, and is better known for its potential than its actual quality: its greatest vineyards are probably not yet planted, and its finest wine styles possibly unimagined.

PIPERS BROOK VINEYARD, TASMANIA
This world famous winery dominates Pipers Brook, the most successful wine-producing district of Tasmania.

VICTORIA AND TASMANIA, *see also* p.552
The relatively small state of Victoria lies beneath New South Wales and neighboring South Australia. The island of Tasmania lies due south, on the same latitude as New Zealand's South Island. This area covers a wide variety of climates, terrains, and wines.

CHÂTEAU TAHBILK, GOULBURN VALLEY

This well-known Victorian winery's huge output consists of traditionally made wines. Its Cabernets can be very tannic, requiring at least 10 years in the bottle.

VICTORIA

John Batman established Melbourne in 1834, and within four years, William Rurie, a sheep farmer, planted the first Yarra Valley vineyard in a place that became known as Yering. The most important sequence of events in the viticultural history of the state began with the appointment of Swiss-born Charles La Trobe as Superintendent of Melbourne in 1839 and culminated in the arrival of 11 fellow Swiss *vignerons* from his home canton of Neuchâtel in 1846. They laid the foundation of Victoria's future wine industry when they settled in the Geelong district and planted vineyards around their homes.

TASMANIA

Although this is really a new wine region, the first vines planted here were established in 1823 at Prospect Farm by Bartholomew Broughton, an extraordinary convict who had been granted a pardon and eventually came to own a substantial amount of property. By 1827 the quality of his wines had prompted the *Colonial Times* to contrast them with those of Gregory Blaxland, whose Parramatta River vineyard near Sydney had already produced Australia's first exported and first medal-winning wine. The paper reported that a Dr. Shewin, who had tasted Blaxland's famous wine, remarked that by comparison Broughton's was "as far superior as fine Port to Blackstrap."

Such was the cruelty of Britain's penal system in the colonies that it took its toll on Broughton's lifespan. His successful attempt to be

GREAT DIVIDING RANGE, VICTORIA

Vines grow on the main upland areas of Victoria, a continuation of Eastern Australia's Great Dividing Range, which is up to 190 miles (300 kilometers) wide.

pardoned suggests that he probably suffered less than most convicts at the time, yet it was sufficient to cut short the luxury of his freedom. He died in 1828, aged 32. Captain Charles Swanston purchased Broughton's property, and by 1865 there were no fewer than 45 different varieties of vines flourishing at various sites on the island. Yet, by the end of the same decade, virtually all the vineyards had disappeared. Except for an ephemeral resurgence in the 1880s, Tasmania's wine industry was nonexistent until the renaissance of the 1950s, led by a Frenchman named Jean Miguet.

Miguet was not a *vigneron* by profession; he came to Tasmania to work on the construction of a hydroelectric plant, but his new home at La Provence, north of Launceston, reminded him of his native Haute-Savoie and, since it was protected from ocean winds by trees, he believed that grapes might ripen there. In 1956 he cleared his bramble-strewn land and planted vines that grew successfully enough to encourage another European, Claudio Alcorso, to establish a vineyard on the Derwent River in 1958. Alcorso and his Moorilla Estate are still prospering, but after fifteen years, ill-health forced Miguet to abandon his vineyard and return to France, where he sadly died from leukemia in 1974.

The Tasmanian wine industry is still relatively tiny, but has undergone a rapid and exciting transformation over the past five years and the quality just gets better. It is an island whose destiny is to produce Australia's finest traditional-method sparkling wine. Tasmania produces some intensely flavored Chardonnay and Riesling, and as far as red wines are concerned, Pinot Noir offers the greatest potential.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

Victoria is the smallest of Australia's mainland states, situated in the very southeastern corner of the continent. The island of Tasmania lies 100 miles (160 kilometers) due south of Victoria.

CLIMATE

Climates are extremely varied, ranging from the hot continental conditions of northwest Victoria around Mildura, to the temperate coastal climes of the Yarra Valley, and the cooler conditions of Tasmania.

ASPECT

Vines are grown on all types of land from the flat or undulating low-lying valley plains, mostly producing vast quantities of basic-quality wines, to the steeper, sloping sites favored for premium wines, where vineyards are planted to an altitude of 2,150 feet (650 meters).

SOIL

A wide variety of soils, ranging from the red loam of northeast Victoria that produces its famous fortified wines; through the sandy alluvial soils of the Murray Basin that produce mainly bulk wines; the gravelly soil mixed with quartz and shale on a clay subsoil found in the premium wine-producing Pyrenees area; and the rich, poorly drained, volcanic soils in Geelong, to the clay of Tasmania.

VITICULTURE AND VINIFICATION

Victoria is the only Australian state to have been totally devastated by phylloxera (1875–81) and so, unlike

neighboring South Australia, its vines all have to be grafted on to American rootstock. It generally utilizes high-quality wine-producing techniques. The northeast is traditionally dessert-wine country, but here, as elsewhere in Australia, winemakers have searched for cool-climate areas to expand the state's premium varietal industry since the 1970s. The famous traditional method sparkling wines of Victoria's Great Western region have suffered with competition from the new up-and-coming sparkling wine areas such as the French-influenced Bendigo district to the east. Tasmania has also taken to sparkling wine, and its cool climate has led to a varied cultivation of classic grape varieties. Viticulture and methods of vinification are in a constant state of flux as the tiny new wineries seek to establish a style.

GRAPE VARIETIES

Primary varieties: Cabernet Sauvignon, Chardonnay, Marsanne, Merlot, Muscat Blanc à Petit Grains, Muscadelle, Pinot Noir, Riesling, Sauvignon Blanc, Sémillon, Shiraz
Secondary varieties: Arneis, Barbera, Cabernet Franc, Carignan, Chasselas, Cinsault, Cortese, Crouchen, Dolcetto, Durif, Flora, Folle Blanche, Frontignan Blanc, Gamay, Gewürztraminer, Graciano, Grenache, Lagrein, Malbec, Marzemino, Mondeuse, Mourvèdre, Muscat d'Alexandrie, Nebbiolo, Orange Muscat, Petit Verdot, Pinot Gris, Pinot Meunier, Roussanne, Sangiovese, Tarrango, Tempranillo, Verduzzo, Viognier

STICKY STUFF

Victoria's fortified wines are world class, with Liqueur Muscat and Liqueur Tokay its supreme classics: great wines that know no peers. The older these wines are, the sweeter they are likely to be, in addition to being richer and more complex. Since many of these products are exported to Europe, where most of the terminology evolved, the same wine will be available bearing a different designation, thus the current status of these wines under EU regulations is also provided. Many of these wines are being shipped to Europe as "Australian Fortified Wine" or "Fortified Wine of Australia" qualified by acceptable terms such as "ruby" or "tawny," but it is illegal to use the word "fortified" on any wine in the US, so there are designation complications for that market that are even more difficult to generalize about.

Liqueur Muscat The most luscious of Australia's fortified wines, the best Liqueur Muscat can be like liquid fruitcake. This wine is usually made from Brown Muscat (Muscat Blanc à Petits Grains), and has a minimum of 160g/l of residual sugar. While it is well worth paying a premium for a step or two up on a producer's entry-level Liqueur Muscat, there is no need to be seduced by ultrarare, superexpensive, extremely ancient bottlings, unless you just want a mind-blowing, tiny sip, since they are seldom drinkable in the ordinary sense. There

are no EU restrictions on the naming of this product. *See also* Classifications, below.

Liqueur Port Invariably made in a *rancio* style, to replicate a tawny rather than vintage or ruby port character. Traditionally, Australian port grape varieties include Shiraz, Grenache and Mataro (Mourvèdre). Under EU-Australian agreements, the name Liqueur Port is due to be phased out, but the date for this was supposed to have been agreed by the end of 1997, and by 2004 not even the phase-out date had been agreed. Until it is, Australian fortified wines may be labelled "Port" in Australia, and in any export market where this name is legally permitted as a generic style. In the long term, it seems likely that "Australian Vintage Port" will be replaced by "Australian Vintage", and "Australian Tawny Port" by "Australian Tawny", as inadequate as they may seem. Suggested future technical restrictions include a minimum of 18% alcohol, and a maximum of 72g/l of residual sugar. *See also* Classifications below.

Liqueur Sherry Traditionally the most important grapes for Australian Sherry-style wines are Muscat, Palomino and Pedro Ximenez. Until the EU phase-out date (*see above*) has been agreed and reached, it remains legal for Australian fortified wines to be labelled "Sherry" (qualified or not) in Australia, and in any export market where this name is legally

permitted as a generic style. In markets that do not allow "Sherry" on wines other than those from Jerez in Spain, "Australian Aperitif Wine" will be qualified by Pale Dry (for fino style with less than 10g/l residual sugar), and "Australian Dessert Wine" by Medium Dry (for amontillado style with less than 27g/l sugar), Medium Sweet (for oloroso style with 28–72g/l sugar), Sweet (over 72g/l), and Cream (over 90g/l).

Liqueur Tokay Australia's very own, unique fortified wine style, Liqueur Tokay is made exclusively from Muscadelle grapes and has a minimum of 158g/l of residual sugar. No restrictions so far under EU-Australian agreements, despite Hungary's membership of the EU and restrictions in EU winemaking areas such as Alsace. Strangely, Australian Liqueur Tokay was still available in EU markets in 2004, but it will inevitably have to change its name one day. *See also* Classifications below.

Classifications

The following age-based classifications apply only to Australian Port, Muscat, and Tokay:

- Classic: minimum 5 years
- Grand: minimum 10 years
- Rare: minimum 15 years

THE APPELLATIONS OF VICTORIA AND TASMANIA

ALPINE VALLEYS

Most of the wineries and vineyards in the Alpine Valleys region are located in and around the upper reaches of the Ovens River, although vines grow as far north as the Kiewa Valley. This is a cool-climate region, with primarily Chardonnay, Sauvignon Blanc, Cabernet Sauvignon, Merlot, Pinot Noir, and Shiraz grapes growing on alluvial soils. The wines are ripe and well structured, although the Shiraz can be quite rustic.

BEECHWORTH

This small GI region within the North West Victoria zone is former gold-digging country, where Ned Kelly once plied his trade as Australia's most infamous "bushranger." Beechworth is located in the foothills of the Victorian Alps, at the northeastern edge of the Alpine Valleys, of which it is geographically a part, but Beechworth contains wineries of superstar quality, such as Giaconda, and thus it has been accorded its own regional status. The soils vary from fertile sandy alluvium on the Ovens Valley flood plain to granitic loam over decomposed gravel and clay at higher elevations, and it is the latter that produces some of Australia's finest Chardonnay, not to mention some excellent Pinot Noir and Riesling. The size and structure of Giaconda's Chardonnay belie Beechworth's cool, sub-alpine, frosty climate. Fortified wine is a small but strong feature of this region.

BENDIGO

Situated about 100 miles (160 kilometers) northwest of Melbourne, this part of the Central

Victoria zonal GI has a dry climate, although only some of its vines are irrigated. Bendigo is goldmining country, and viticulture began here during the 1850s Gold Rush. The vineyards tend to be small and scattered over three main growing areas: the Granite Slopes to the southeast; Loddon Valley to the northwest; and Marong and Golden Waters to the southwest. Bendigo is primarily known for its menthol-eucalyptus-tasting red wines. The sandy loam over red clay, quartz, and ironstone soil is well suited to producing top-quality Shiraz, but Cabernet Sauvignon and Chardonnay can also excel. More recent plantings have even included such contrasting varieties as Sauvignon Blanc and Viognier. And, as Domaine Chandon (known as Green Point on export markets) has shown, the potential for premium-quality sparkling wines also exists.

CENTRAL VICTORIA

Also known as Victorian High Country, this zonal GI encompasses the regional GIs of Bendigo, Goulburn Valley, Heathcote, Strathbogie Ranges, and Upper Goulburn.

GEELONG

Southeast of Ballarat, facing Melbourne across Port Phillip Bay, the vineyards of this district fan beyond the town of Geelong itself. Viticulture was established by Swiss immigrants in the mid-1800s, but came to a halt in 1875, when phylloxera struck, and the Victorian government ordered the removal of all vines. Geelong began its viticultural revival in 1966, somewhat earlier than other rediscovered areas of Australia, when Nini and Daryl Sefton planted the Idyll

vineyard. The cool climate and volcanic soil produce wines of fine acidity and varietal character, particularly from Chardonnay and Pinot Noir. Cabernet Sauvignon and Shiraz sometimes fare well. Bannockburn and Scotchman's Hill are the best producers.

GIPPSLAND

Sometimes referred to as Coastal Victoria, this vast zonal GI encompasses two relatively small areas known locally as East Gippsland and South Gippsland, but has expanded well beyond these boundaries to give some sort of common thread to 20-odd wineries. Most vineyards are located in and around the towns of Bairnsdale, Loch, and Foster on the South Gippsland Highway.

GLENROWAN

Part of the North East zone, this region was once better known outside Australia as Milawa, thanks to Brown Brothers, which used the name on its widely exported wines. Glenrowan has always, however, been more widely used by other winemakers. This is a classic dessert-wine area, but individual vineyards produce excellent Cabernet Sauvignon and other premium varieties, even Graciano (Brown Brothers 1974 Milawa Graciano was still in truly amazing form in 2004).

GOULBURN VALLEY

Subregion:

Nagambie Lakes

Chateau Tahbilk (now known simply as Tahbilk) was the solitary exponent of fine wines in this traditional wine district 75 miles (120

kilometers) north of Melbourne, until the Mitchelton winery was established in 1969. Since then a number of new wineries have opened their doors, and begun to attract attention. At the heart of this region, qualitatively, or at its southern tip, geographically, is Nagambie Lakes, which has its own, well-deserved GI. Beyond this subregion, most Goulburn Valley vines are located to the north, in and around Mooroopna and Shepparton, but there are others farther north in Katunga, to the east between Cobram and Yarrawonga, and to the west near Echuca.

The region's climate is warm and dry in the summer, making it dependent on irrigation from the Goulburn River and aquifers. The wines are generally full-bodied, with Cabernet Sauvignon and Shiraz the best varieties, whether in their pure form or, more traditionally, blended together. Shiraz gets more attention than Cabernet Sauvignon these days, perhaps because of the Great Australian Shiraz Challenge, which has taken place here every year since 1995. Such an event obviously focuses attention on the locally grown Shiraz, although the competition is open to any Australian region. Chardonnay and Riesling can also be very good, and both Tahbilk and Mitchelton have produced excellent Marsanne.

GRAMPIANS

The famous old sparkling-wine district of Great Western has been renamed Grampians under the GI scheme. Although it is still best known for sparkling wines, the dropping of Great Western should at least allow the region's finest varietal, Shiraz, to shine without being lumbered by a name that is linked historically and indelibly to the connotation of bubbly. Cabernet Sauvignon, Chardonnay, and Riesling can also be excellent. Top-performing wineries are Best's, Mount Langi Ghiran, and Seppelt.

HEATHCOTE

Formerly considered by many to be part of Bendigo, Heathcote has been recognized by Australia's GI system as a wine region in its own right since 2002. This is due, in part, to its reputation as a premium Shiraz-producing area, which is well deserved, and has been built up slowly over 20 years of often outstanding vintages from the likes of Jasper Hill. However, it is perhaps no coincidence that the influential critic Robert Parker awarded Wild Duck Creek Estate 1997 Duck Muck Shiraz a perfect 100-point score, which not only propelled its owner, David "Duck" Anderson, from obscurity to international fame overnight, but also reflected well on the potential of the entire locality. This assessment was responsible for the US discovering Australian Shiraz in general, and a GI of its own was the least that Heathcote deserved in the circumstances. The region sits on the north side of the Great Dividing Range at elevations between 525 to 1,050 feet (160 to 320 meters). The soil is a rich, red volcanic type known as Cambrian, the mineral content of which is said to favour the production of red wine varietals, particularly Shiraz.

HENTY

Formerly known as Drumborg, then Far South West and now a GI by the name of Henty, this remote region might have a changing identity, but is still best known for Seppelt's Drumborg winery. Henty takes its name from the Henty brothers, who in 1834 were the first to settle this part of the Portland Bay area, where they

established a sheep station. In addition to the famous merino sheep, the Henty brothers also brought vines with them, plus "13 heifers, five pigs, four working bullocks, two turkeys, and six dogs." Grapes were more of an afterthought, and it seems that the idea of a vineyard literally withered on the vine.

The earliest truly commercial viticultural operation was not set up until much later, when Seppelt established its Drumborg winery in the 1960s. The company had been looking for new supplies of grapes to furnish its growing production of sparkling wines, and the grapes from this area have been very useful components in many an Australian bubbly blend ever since. The soil is volcanic and the climate so cool that some varieties did not ripen. It is surprising, therefore, that Cabernet Sauvignon and Merlot should be so successful here, but they can be excellent; Riesling and Pinot Noir are also very good. A number of other wineries have now opened up.

KING VALLEY

Until 1989 Brown Brothers was the sole buyer of grapes in King Valley, but the fruit has since been sold far and wide, and other wineries have been built here. It has now become a full-fledged GI, but the boundaries were not finalized at the time of writing, thus the area depicted on the map should be considered as an approximate representation. Chardonnay, Riesling, and Cabernet are the most important varieties, but Barbera, Nebbiolo, and Sangiovese have shown the greatest potential. Sparkling wine is also produced.

MACEDON RANGES

A developing district within the Central Victoria region, Macedon (plain and simple) was once considered to include Sunbury, but that has since been established as a GI in its own right, and this region is now referred to as Macedon Ranges. The good folk of Melbourne flock to the Macedon Ranges in summer to escape the heat, thus it has the reputation of an "icy-cold" climate. Cool, maybe, but icy, I think not. The Macedon Ranges are certainly cool enough for some sparkling winemakers to source grapes from here. Chardonnay and Pinot Noir are also good, but a whole range of grapes grows well here, if the site is carefully selected to maximize the number of hours of sunshine.

MORNINGTON PENINSULA

After an early, but unsuccessful, start in the 1950s, a number of growers have established vineyards in this area overlooking Port Phillip Bay, south of Melbourne. Although only a handful established wineries initially, there are now more than 40 facilities in the area. Provided the vineyards are adequately protected from strong sea winds that whip up over the bay, Mornington Peninsula's cool, often wet, maritime climate shows great potential for first-class winemaking. Chardonnay and Pinot Noir are already exciting, with Viognier and Pinot Gris waiting in the wings. The red volcanic soils would seem to be ideal for premium Shiraz, and, to a lesser degree, Cabernet Sauvignon, Malbec, and Merlot.

MURRAY DARLING

This regional GI overlaps two zonal GIs: North West Victoria and Big Rivers, New South Wales. The region takes its name from the Murray and Darling rivers, two of Australia's great wine rivers. Farther upstream is the Rutherglen area,

while just downstream is Riverland. The Murray Darling region brings together several areas of mainly irrigated vineyards dotted along the banks of the middle section of the river. Vineyard plantings soared in the late 1990s, creating a major switch of emphasis from white to red, with some impressive and, frankly, unexpected results coming through.

NAGAMBIE LAKES

The Nagambie Lakes subregion GI is part of the Goulburn Valley, where the Tahbilk and Mitchelton wineries are located. This is where the very best Goulburn Valley wines have traditionally been made. Its boundaries were determined on the basis of the Nagambie Lakes system, a large body of water made up of lakes, billabongs, lagoons, and streams of, and linked by, the Goulburn River. It is the only wine region in Australia where the climate is dramatically influenced by an inland water mass, which enables the vines to enjoy a milder, cooler climate than would otherwise be expected. This is a vivid illustration of man's role as the joker in the *terroir* pack, because these bodies of water are all man-made, as is the Goulburn River Weir, which created them, and was constructed in 1888 following a four-year drought (1877–81). Another factor in determining the Nagambie Lakes GI boundary was the rare soil type found in the area. Known as duplex 2.2, this soil is a red, sandy loam with a very high iron oxide content (hence the color), over a gravelly-sandy alluvium deposited by the river system, and this is said to give a certain distinctive regional character to the wines.

NORTHEAST VICTORIA

This zonal GI encompasses the regional GIs of Alpine Valleys, Beechworth, Glenrowan, and Rutherglen.

NORTHWEST VICTORIA

This zonal GI encompasses the Victorian parts of the regional GIs of Murray Darling and Swan Hill.

PORT PHILLIP

This zonal GI encompasses the regional GIs of Geelong, Macedon Ranges, Mornington Peninsula, Sunbury, and Yarra Valley.

PYRENEES

Formerly known as the Avoca district, the vineyards around Mount Avoca, Redbank, and Moonambel are now called Pyrenees, although the former name will no doubt remain in use for a while. Pyrenees, the name of a nearby mountain range, was chosen by local wine growers as an expressive marketing "hook" upon which to "hang" their wines. By whatever name, this area was originally perceived to be red-wine country, making wines of a distinctive

and attractive minty character. There was a time in the early 1990s when white wine and even sparkling wine were thought to be the region's best prospects, but the original perceptions have since been proven right. Shiraz, Cabernet Sauvignon, and Merlot are the outstanding wines, with Chardonnay, and perhaps Pinot Noir, on the next rung of quality.

RUTHERGLEN

Rutherglen was once considered by many to include also Glenrowan (or Milawa), but it has always been the heart of the Northeast region and the soul of Victoria's wine industry, and since 1997 its own boundaries have been determined by the GI process. Although there are other, arguably more exciting, regions in Victoria, it remains the hub around which the entire state's most traditional viticultural activities revolve. Rutherglen comprises a collection of wineries and vineyards on the south bank of the Murray River, around the town of Rutherglen, and farther south into the hinterland. This is Australia's greatest dessert-wine country, producing liqueur Muscats and Tokays that know no peers. However, in addition to these world-famous fortified wines, the cooler areas of Rutherglen have emerged as an innovative light wine-producing region. Chardonnay and Sémillon are clean, fresh, and vibrant; Gewürztraminer is performing relatively well; and Durif, Carignan, Shiraz, and Cabernet Sauvignon all show promise to one degree or another.

STRATHBOGIE RANGES

Better known in Australia than abroad, this region was first planted in 1968 by Alan Plunkett, whose natural inclination was to grow cool-climate varieties, such as Riesling and Gewürztraminer. In the 1990s Dominion Wines drew attention to the area by establishing its winery at Avenel. Others followed and, in recent years, the Strathbogies has developed a growing reputation as a source for sparkling wine components, and for crisp, fresh white wines of excellent fruit intensity from a number of boutique wineries. The vineyards are located at varying altitudes, ranging from 500 to 2,130 feet (150 to 650 meters). This, plus the diversity of soil types throughout the region, suggests there may be an untapped potential for numerous styles of wine beyond the grape varieties already cultivated, which include Chardonnay, Pinot Gris, Riesling, Sauvignon Blanc, Cabernet Franc, Cabernet Sauvignon, Merlot, and Pinot Noir.

SUNBURY

Sunbury is lower in altitude and much warmer in climate than the Macedon Ranges, which about this region along the 1,310-foot (400-meter) contour line. It has alluvial soils on the plain and basalt-based loams on the slopes. Sunbury was lumped together with Macedon as part of the same region until it achieved its own GI in 1998. This status was deserved for historical reasons alone, Sunbury having been productive as a viticultural region as long ago as the 1860s. Indeed, it was Sunbury, not Macedon, that was established by the founders of Goona Warra in 1858 and Craiglee in 1864. Many Australians favor this region's Chardonnay and Shiraz, and these are definitely the best wines from its leading wine producer today, Craiglee. Other varieties grown include Sauvignon Blanc, Sémillon, Cabernet Sauvignon, and Pinot Noir. A number of new vineyards

were planted in the 1990s, and there are now 14 winemakers in the region.

SWAN HILL

This regional GI overlaps New South Wales, extending to Kyalite, but most producers are located in Victoria. Swan Hill has a Mediterranean climate, with high temperatures and low summer rainfall, making viticulture dependent on irrigation from the Murray River. The region encompasses Brown Brothers' Mystic Park vineyard to the south, and a couple of other large wineries (Andrew Peace and R. L. Buller), but mainly comprises smaller boutique wineries. There are some very good red wines from Cabernet Franc, Cabernet Sauvignon, Shiraz, Durif, and Sangiovese; whites are less exciting, although Chardonnay and Riesling fare quite well. The Golden Mile Wine Trail runs from Goodnight in the north to Beverford in the south, with many of the wineries along the way offering lunch, as well as the inevitable cellar doors sales.

TASMANIA

Tasmania is Australia's ultimate cool-climate location. The first vines were planted on Prospect Farm near Hobart in 1823 by Bartholomew Broughton, but viticulture did not last long on what was then Van Diemen's Land. The wine industry was gradually rekindled in the 1950s. Hopes of international recognition were raised in the late 1980s, when Champagne producer Louis Roederer invested in Heemskerker to produce a premier sparkling wine called Jansz, but Roederer pulled out in 1994 amid patently untrue rumors that the grapes would not ripen. Heemskerker was purchased by Dr. Andrew Pirie of Pipers Brook, Tasmania's largest and best winery. Pirie kept the vineyards, but sold the Jansz brand to Yalumba, since when his own bubbly, the eponymous Pirie, has established itself as one of the greatest sparkling wines in the world. When a winery goes public, success often breeds takeovers; Pipers Brook was taken over by a Belgian firm, and Pirie was asked to leave. In 2004 he had purchased back the right to use his own name, so it is difficult to tell whether the reputation of Tasmanian sparkling wine will be led by Pipers Brook or Pirie. Or Jansz perhaps? Or a different bubbly altogether?

Although Jansz's vintages in the 1990s have been disappointing, as have those of other aspiring Tasmanian fizz producers, they are understandable, predictable even, for three reasons. First, it is fair to say that the Australia is still getting to grips with the viticultural side of things when it comes to a climate as cool as Tasmania's (most of its vineyards are on the same latitude as Marlborough on New Zealand's South Island, some even farther south). Second, Tasmania is cut off from the rest of Australia, and many wineries lack the expertise that is readily available on the mainland. This results in a lack of sophistication in the winery, which can be great in the odd, outstanding example, but can lead to a certain rustic quality. Third, even the biggest wineries and most experienced winemakers have not been directly involved in Tasmanian winemaking that long—which brings me back to Jansz.

There is no doubt that Yalumba has the skill and determination to make Jansz an icon among New World sparkling wines, but the first vintage it can lay claim to is 1999, and we should not expect too much from the vintage of the year of the takeover. Nonetheless, it won a

gold medal at the local wine competition, whereas some of the previous vintages did not even chalk up a bronze. However, when the first releases of Jansz from the new millennium get some bottle age, they should start to show the true potential of Tasmanian sparkling wine. When they do, the plaudits they receive on international markets will form the locomotive that should drive other, smaller bubbly producers to higher and finer things.

The potential is great, but it probably won't be realized for another 10 years. Where Tasmania shows potential currently is in its intensely flavored Chardonnay, Riesling, and Pinot Noir. There has even been some fine Cabernet Sauvignon.

UPPER GOULBURN

South of the more famous Goulburn Valley region, this GI covers the upper reaches of the river. Upper Goulburn encompasses the Lake Eidon area, between Alexander and Mansfield, and is set against the backdrop of the snow-capped Australian Alps, where the river begins its journey. This region makes crisp Chardonnay, which is better used as a component for sparkling wine production than as a still varietal wine, the best varieties for which are the more aromatic types, such as Riesling or Sauvignon Blanc. Some Gewürztraminer is also grown. Perhaps the best-known winery in this region is Delatite, just outside Mansfield.

WESTERN VICTORIA

This zonal GI encompasses the regional GIs of Grampians, Henty, and Pyrenees.

YARRA VALLEY

Considered by many as Australia's answer to Burgundy, this recently rediscovered wine region benefits not only from the enriching after-effect of earlier sheep farming, but also from a cool climate, a long growing season, relatively light yields, and some very talented winemakers. The vines grow on the gray-brown loams (to the south) and red volcanic soils (to the north). Viticulture began in 1837, when the three Ryrie brothers planted vines on their cattle ranch, Yering Station, and with the help of Swiss and German immigrants, Yering and two other wineries, St. Huberts and Yeringberg, achieved an international reputation for the Yarra Valley. This region declined in the depression of the 1890s and the situation was exacerbated by the consumer shift to fortified wines, so that by the 1920s the only surviving winery was forced to close down. Viticulture in the Yarra Valley was revived in the 1960s by medical doctors who anticipated that consumers would return to table wines. Dr. John Middleton pioneered this revival, when he established the Mount Mary vineyard. The latest and most successful wave of interest in producing Yarra Valley wines came in the late 1980s. Wine critic James Halliday was responsible for much of this, after he established Coldstream Hills in 1985. It was Halliday more than anyone who made consumers believe in Yarra Valley Pinot Noir. It also helped that Moët & Chandon set up its Green Point/Domaine Chandon winery a few years later. Halliday has also produced some fine Chardonnay and Cabernet Sauvignon, but it was the Pinot Noir that caused the most excitement. Shiraz and Merlot are also very good and, of course, with the presence of Domaine Chandon, Yarrabank, and Devaux Yering Station, this is also sparkling wine country.

THE WINE PRODUCERS OF VICTORIA AND TASMANIA

2 BUD SPUR

Tasmania
★★★

Great Pinot Noir made under contract by Michael Vishacki, who does an even better job with it than at his own Panorama vineyard.

✓ Pinot Noir

ALL SAINTS

Rutherglen
★★★

Established in 1864, All Saints is owned personally by Peter Brown of Brown Brothers fame, who also owns the nearby St. Leonards winery.

✓ Durif (Carlyle) • Fortified (all Liqueur Muscats, all Tokays, Vintage Port, Old Tawny Port, Show Reserve Amontillado) • Shiraz (Carlyle)

APSLEY GORGE

Tasmania
★★★

Good Chardonnay, and starting to produce exciting quality Pinot Noir.

✓ Pinot Noir

ARMSTRONG VINEYARDS

Grampians
★★

Limited quantity, top-performing Shiraz from former Seppelt Great Western winemaker, Tony Royal.

✓ Shiraz

ARTHURS CREEK ESTATE

Yarra Valley
★

With vintages seemingly few and far between, and a high turnover in winemakers, it is difficult to rate these medal-winning wines realistically.

✓ Cabernet Sauvignon • Chardonnay

BALGOWNIE

Bendigo
★★

Balgownie went through a patchy period in the early 1990s, but now seems to be pulling out of it as far as the reds are concerned. The whites are disappointing.

✓ Cabernet Sauvignon (Estate) • Shiraz (Estate)

BANNOCKBURN VINEYARDS

Geelong
★★

Winemaker Gary Farr's experience at Domaine Dujac in Burgundy shows through in the finesse of these wines, which are as appreciated in Europe as they are in Australia. The SRH Chardonnay and Serre Pinot Noir are ultrapremium limited releases.

✓ Chardonnay • Classic red blend (Cabernet-Merlot) • Pinot Noir • Shiraz

BASS PHILLIP

Gippsland
★★★

Various stunning Pinot Noir in minuscule quantities.

✓ Pinot Noir

BERRYS BRIDGE

Pyrenees
★★★

Established in 1990, but sold grapes initially, with 1997 the first vintage, and intense Shiraz the best and most consistent wine so far.

✓ Shiraz

BEST'S WINES

Great Western
★★★

This historic winery boasts a large, superb range that includes many gems, such as the stunning Thomson Family Shiraz and the lovely zesty-fresh, lime-scented Riesling.

✓ Cabernet Sauvignon • Chardonnay • Merlot • Riesling • Shiraz

BINDI WINE GROWERS

Macedon Ranges
★★

Fast-rising Chardonnay and Pinot Noir specialist of stunning quality and individuality.

✓ Chardonnay • Pinot Noir

BLACKJACK VINEYARD

Bendigo
★

Blackjack Vineyard was named after an American sailor who caught gold fever in the 1850s and jumped ship, but this family-owned venture was established much more recently, in 1987. Everyday drinking Shiraz under the Chortle's Edge label.

✓ Classic red blend (Cabernet Merlot) • Shiraz

BLUE PYRENEES

Pyrenees
★

The original winemaker here was Frenchman Vincent Gere, who tended to make his sparkling wines on the sweet side until the 1990

vintage, when they became more classic in style. He was succeeded by Kim Hart, who placed most emphasis on still wines. Then Greg Dedman, the current winemaker, gradually raised quality all around, resulting in Blue Pyrenees being sold to a Sydney-based syndicate in 2002. Second wines are sold under Fiddlers Creek and Ghost Gum labels.

✓ Cabernet Sauvignon • Chardonnay • Classic red blend (Reserve Red) • Shiraz • Sparkling wine (Midnight Cuvée)

BROWN BROTHERS

King Valley
★★★

The size of this family-owned firm is deceptive until you visit Brown Brothers' so-called microvinification winery, which is bigger and better equipped than 70 percent of the wineries I regularly visit, with so-called microvinification tanks that are like a battery of boutique wineries. Brown Brothers' experimental wines are thus as polished as any commercially produced wine, which explains why this is one of Australia's most innovative wine producers. One of Brown Brothers' experiments has been with the Spanish Graciano grape, and that has demonstrated incredible longevity, with a 1974 vintage blowing away every example of the "genuine thing" put up by Rioja wineries in the London wine trade fair in 2004. The Tarrango might not be a fine wine, but if you like Beaujolais, it is made in that style, only better than 90 percent of wines bearing that appellation.

✓ Botrytis (Noble Riesling) • Cabernet Sauvignon (Patricia) • Chardonnay (Patricia) • Classic red blend (Shiraz Mondeuse Cabernet) • Fortified (Reserve Muscat, Very

Old Tokay) • Graciano • Shiraz (Banksdale) • Sparkling (Patricia, Pinot Noir, and Chardonnay, Vintaged Pinot Chardonnay)

R. L. BULLER & SON

Rutherglen
★★

This firm dates back to 1921 and also has a winery at Beverford in Swan Hill. The most consistent table wines are Cabernet Sauvignon (Beverford), Durif (Sails), Sémillon (Beverford), and Shiraz (Beverford), but you can buy better, and cheaper, elsewhere. Best advice is to concentrate on the beautiful fortified wines, and if you see any of the final release of the 1978 Vintage Port, make every effort to get your hands on it. Judged on Fortified alone, R. L. Buller would deserve ★★★.

✓ Fortified (Calliope Rare Liqueur Muscat, Calliope Rare Liqueur Tokay, Fine Old Muscat, Fine Old Tawny)

BY FARR

Geelong
★★★

The personal label of Bannockburn's turbocharged winemaker Gary Farr, from vines growing on the other side of the road to those of Bannockburn. So many puns could be made from "By Farr." Thankfully, none have so far, as the wine does all the talking.

✓ Chardonnay • Pinot Noir • Shiraz

CAMPBELLS WINERY

Rutherglen
★★

This is one fortified wine specialist that has expanded into varietal wines with brilliant success.

✓ Durif (The Barkly) • Fortified (Allen's Port, Isabella Liqueur Tokay, Liquid Gold Tokay, Merchant Prince Liqueur Muscat) • Shiraz (Bobbie Burns)

CHAMBERS

Rutherglen
★★

Bill Chambers is one of the all-time great producers of fortified wine. The Old Rare Muscat and Tokay have no peers.

✓ Fortified (all Liqueur Muscat, all Liqueur Tokay)

COFIELD

Rutherglen
★

Cofield specializes in small quantities of high-quality red fizz, and produces a surprisingly good Merlot for Rutherglen.

✓ Merlot (Rutherglen) • Shiraz • Sparkling (Shiraz)

COLDSTREAM HILLS

Yarra Valley
★★

James Halliday, the doyen of Australia's wine writers, has sold this property to Southcorp, but is still involved with the winemaking on a consultancy basis. Coldstream is well-known for beautiful Pinot Noir and classic Chardonnay, the Reserves of which are well worth the price for those with deep enough pockets. However, the Cabernet Sauvignon and, more recently, the Merlot have been the surprises, reflecting Halliday's penchant for length, elegance, and finesse in these Bordeaux varieties, rather than mere weight or punch.

✓ Cabernet Sauvignon • Chardonnay • Merlot • Pinot Noir

CRAIGLEE

Sunbury
★★

This famous 19th-century, four-story, bluestone winery was reestablished in 1976 by Pat Carmody, who released his first wine, a 1980 Shiraz, in 1982.

✓ Shiraz

CRAIGOW

Tasmania
★★

Wines of exciting quality are produced here by Hobart surgeon Barry Edwards.

✓ Pinot Noir • Riesling

CRAWFORD RIVER

Western District
★★

This property was established in 1982 by John Thomson, who quickly built a reputation for Riesling, particularly in the botrytis style, but is also very consistent these days with Cabernet.

✓ Cabernet Sauvignon • Classic red blend (Cabernet Merlot) • Classic white blend (Sémillon Sauvignon Blanc) • Riesling

CRITTENDEN AT DROMANA

Mornington Peninsula
★★

Garry Crittenden no longer has any connection with Dromana Estate,

the public company he founded, where his son Rollo is now chief winemaker. Nor does he have any involvement with any of Dromana Estate's labels, not even its top-performing Garry Crittenden "i" (for Italian) range. All this seems a bit strange, considering his new label is Crittenden at Dromana, and he has reclaimed the former Dromana Estate winery and vineyard. He had never sold these to the publicly quoted company, although the equipment inside the winery belonged to Dromana Estate, and this had to be relocated to its new facility at Tuerong (see Dromana Estate). He has always kept the Schinus brand separate from the public company, and continues with that, as well as playing on his reputation for Italian varietals by releasing Arneis, Barbera, Rosato, and Sangiovese under the Pinocchio label, while Crittenden at Dromana will focus on Pinot Noir and Chardonnay. It is as safe as houses to recommend in general Crittenden's new wines, but too early to specify which will be the standouts. (If Michelin can do it with its stars, I surely can with mine!)

CURLEWIS WINERY

Geelong
★★

Established in 1998 by Rainer Brett, who has very quickly established an enviable reputation for great Pinot Noir. His Shiraz is pretty damn good too.

✓ Pinot Noir • Shiraz

CURLY FLAT

Macedon Ranges
★★

Owners Phillip and Jeni Moraghan's production is relatively small, but specializes in Burgundian varietals, and the quality is outstanding. A new winery was built in 2002, and the old one turned over to cellar sales. Second wines are sold under the Williams Crossing label.

✓ Chardonnay • Pinot Noir

DALWHINNIE

Pyrenees
★★

Intensely rich and well-structured wines are consistently produced from these vineyards adjacent to Taltarni.

✓ Cabernet Sauvignon (Moonambel) • Chardonnay • Pinot Noir • Shiraz (Moonambel)

DE BORTOLI

Yarra Valley
★★

Riverina-based De Bortoli opened up this "posh" operation in one of Australia's most up-and-coming premium-quality wine regions in 1987. Over the years, it has gradually built up an outstanding reputation, helped in no small respect by the fact that it is personally run by Leanne de Bortoli, whose husband, Stephen Webber, was Lindemans' winemaker before taking up the post of the chief winemaker here. Second wines are sold under Gulf Station and Windy Peak labels.

✓ Cabernet Sauvignon (Yarra Valley) • Chardonnay (Gulf Station, Yarra Valley) • Classic red blend (Melba Barrel Select) • Pinot Noir (Gulf Station, Yarra Valley) • Riesling (Windy Peak, Yarra Valley) • Rosé (Cabernet) • Shiraz (GS Reserve)

DELATITE WINERY

Central Victorian High Country
★★

Situated on its own, in the Great Divide, Delatite has produced some very good value wines that always show rich, tangy fruit. This winery has a reputation for its Deadman's Hill Gewürztraminer.

✓ Chardonnay • Classic red blend (R. J. Cabernet-Merlot) • Pinot Noir • Riesling (VS)

DIAMOND VALLEY VINEYARDS

Yarra Valley
★★

David Lance is well known for Pinot Noir of great intensity yet elegance, but his other wines should not be overlooked.

✓ Cabernet Sauvignon • Chardonnay • Classic red blend (Cabernet-Merlot) • Pinot Noir • Sémillon-Sauvignon

DOMAINE CHANDON

Yarra Valley
★★

Moët & Chandon's Australian winery was set up later than its California venture, but quickly overtook it in quality. Much of the credit should go to Dr. Tony Jordan, who ran the enterprise at that time, but even he will admit that, with sources stretching across an entire continent, he had a wider choice of quality components to draw on. Jordan left to take over at Wirra Wirra, but has

returned to head all of LVMH's winemaking operations in Australia and New Zealand, including Western Australia's Cape Mentelle. The Rosé and Blanc de Noirs are both very good, and would be recommended under other producers, but I wanted to showcase the very best bubbly produced here. Conversely, the nonvintage Brut still needs work. In 2004, Chandon became the first major producer to market a sparkling wine sealed by a crown-cap: Brut ZD (for Zero Dosage). A pure Chardonnay blend, the inaugural 2000 vintage, was one of the few nondosaged wines that could be consumed easily upon purchase, but this was achieved by the softness of the base wines, and I found myself struggling to drink more than one glassful. The wines are known on export markets as Green Point.

✓ Chardonnay (Reserve) • Pinot Noir (Reserve) • Sparkling wine (Blanc de Blancs, Cuvée Riche, Pinot Shiraz, Vintage Brut)

DOMINIQUE PORTET

Yarra Valley
★★

After 22 years as CEO at Taltarni, Dominique Portet left to set up his own venture in the Yarra Valley. So far the Heathcote Shiraz is the standout.

✓ Cabernet Sauvignon (Heathcote) • Sauvignon Blanc • Shiraz (Heathcote)

DROMANA ESTATE

Mornington Peninsula
★★

In 2004, this producer moved from Dromana to Tuerong, as founder Garry Crittenden reclaimed the former Dromana Estate winery and vineyard for his new label, Crittenden at Dromana. It was Crittenden who had established Dromana Estate in 1982, but when he took the company public in 2001, he retained ownership of the property on which the winery stood and its surrounding vineyards. He also kept the rights to the Schinus label. He is no longer connected with the company (see Crittenden of Dromana), although his son Rollo is now its chief winemaker, being responsible not only for Dromana Estate, but also Mornington Estate, Yarra Valley Hills, and Garry Crittenden "i" (for Italian) labels. He is producing wines that are every bit as good his father's and he continues to improve. Director and shareholder David Traeger is the winemaker for Baptista, Broken River, and, of course, his eponymous brand.

✓ Chardonnay (Reserve) • Dolcetto (Garry Crittenden "i") • Nebbiolo (Garry Crittenden "i") • Pinot Noir (Estate, Reserve) • Sangiovese (Garry Crittenden "i") • Shiraz (Baptista)

ELSEWHERE VINEYARDTasmania
★★★

Established by Eric and Jette Phillips in 1984, and sold to Kylie and Andrew Cameron in 1999, Elsewhere Vineyard continues to produce superb Pinot Noir from the Huon Valley, and very good Riesling too.

✓ *Pinot Noir* (Bay of Eight) • Riesling

EVELYN COUNTY ESTATEYarra Valley
★★★

Everything here is design-driven, from the cellar door-cum-Tony Simbert gallery and restaurant, to the label. Even the wines appear to be designed for elegance.

✓ *Botrytized* (Sticky Black Paddock Chardonnay) • *Chardonnay* (Black Paddock) • *Merlot* (Black Paddock) • *Pinot Noir* (Black Paddock)

FREYCINETTasmania
★★

Geoff Bull makes a surprisingly big and beautiful Cabernet Sauvignon-Merlot, and various other fine wines, but his exquisitely crafted, sumptuous Pinot Noir surpasses all his other wines in quality and style.

✓ *Chardonnay* • *Classic red blend* (Cabernet Sauvignon Merlot) • *Pinot Noir* • Riesling

GALLI ESTATESunbury
★★★

Established in 1997 by Pam and Lorenzo Galli, who have swiftly built up a formidable reputation.

✓ *Cabernet Sauvignon* • *Pinot Grigio* • *Shiraz*

GIACONDABeechworth
★★★

Exquisitely crafted, highly sought-after wines, which only those on the mailing list have any chance of acquiring. The Pinot Noir is by far the best of an amazing range of wines.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Classic white blend* (Les Deux) • *Pinot Noir* • *Roussanne* (Aeolia)

HANGING ROCKMacedon Ranges
★

This was once the largest winery in the Macedon area and specialized in bottle-fermented sparkling wine, but Shiraz is the best wine today. Although the Heathcote Shiraz is top of the range, and certainly best, the basic Victoria Shiraz can be very nearly as good at almost half the price.

✓ *Shiraz*

HOLM OAKTasmania
★★★

Red wine specialist Nick Butler has always made one of Tasmania's best Cabernet Sauvignons, but his Pinot Noir is now every bit as good.

✓ *Cabernet Sauvignon* • *Pinot Noir*

JASPER HILLHeathcote
★★★

Not exactly known as the epitome of elegance, but there is no doubting the quality of Jasper Hill's biodynamic red wines in the big, muscular, complex style.

✓ *Classic red blend* (Emily's Paddock Shiraz-Cabernet Franc) • *Shiraz* (Georgia's Paddock)

JINDALEE ESTATEGeelong
★★★

Established as recently as 1997 by Vince and David Littoree, who own 1,400 acres (570 hectares) of vineyards in the Murray Darling region. The Jindalee label is for penny-pinchers, yet the Chardonnay can be very good indeed. The pricier Fettle's Rest label was launched in 2001, exclusively for estate-grown Geelong fruit.

✓ *Pinot Noir* (Fettle's Rest) • *Shiraz* (Fettle's Rest)

JINKS CREEKGippsland
★★★

Although established in 1981, the winery was not built until 1992. Owner-winemaker Andrew Clark is a consultant viticulturist to 10 different vineyards, which gives him access to a wide range of fruit to supplement his own small Gippsland property. Winemaking practices include some wild yeast fermentations, no filtration, and a minimal sulfur regime.

✓ *Pinot Noir* (Fettle's Rest) • *Shiraz* (Heathcote, Longford Gippsland, Yarra Valley)

KARA KARAPyrenees
★★

At one time this winery seemed to be doing good things with Sauvignon Blanc, pure and blended, but excels today with its red wines.

✓ *Cabernet Sauvignon* • *Shiraz*

KINGS CREEK WINERYMornington Peninsula
★★★

Some varietals are more consistent than others, but the Burgundian duo of Pinot Noir (particularly) and Chardonnay are always excellent quality.

✓ *Cabernet Sauvignon* • *Shiraz*

KRAANWOOD

Tasmania

Not tasted, but I have heard very good things about the Pinot Noir produced from Frank van der Kraan's 1-acre (half-hectare) vineyard.

✓ *Pinot Noir*

LILLYDALE VINEYARDSYarra Valley
★★★

Established in 1975, Lillydale has been owned by McWilliam's since 1994. I always thought of Lillydale as being best for white wines, but under McWilliam's the reds have outclassed everything except the elegantly rich and stylish Yarra Valley Chardonnay.

✓ *Chardonnay* • *Classic red blend* (Cabernet-Merlot) • *Shiraz*

LINDEMANS WINESMurray Darling
★★★

This vast winery is now part of Southcorp and produces wine from almost everywhere, although its historic home in the Hunter Valley has been reduced to cellar-door sales only. The Karadoc winery in the Murray Darling region churns out copious quantities of very respectable, sub-AU\$10 (US\$7.50) wines, including the good-value Cawarra range, and umpteen million of cases of Bin 65 Chardonnay, and would deserve a rating of no more than ★, and that would be for miraculous consistency, rather than quality *per se*. Lindemans' Coonawarra winery, which also makes the Padthaway wines, would however easily rate ★★★, hence the compromise ★★. Even at Coonawarra, regionality has gradually been replaced by state-wide blends, ripping the heart and soul out of the Lindemans heritage. The real pity is that under Southcorp, Lindemans no longer produces a modern equivalent of its legendary Hunter Riesling, some 70-year-old examples of which are still in amazing condition. The message to corporate Southcorp must be to reverse the decline of regionality in general, and reintroduce some form of ultrapremium bottle-aged Hunter Sémillon in particular.

✓ *Cabernet Sauvignon* (St. George) • *Chardonnay* (Padthaway) • *Classic red blend* (Limestone Ridge Shiraz-Cabernet, Pyrus Cabernet-

Merlot-Cabernet Franc) • *Fortified* (Macquarie Tawny Port) • *Pinot Noir* (Padthaway) • *Shiraz* (Padthaway)

MEADOWBANK VINEYARDTasmania
★★★

Classic black-cherry Pinot Noir from just north of Hobart, including the bright and brilliant Henry James Pinot Noir.

✓ *Cabernet Sauvignon* • *Chardonnay* (Grace Elizabeth) • *Pinot Noir*

MERRICKS CREEKMornington Peninsula
★★★

Established in 1998 by Peter and Georgina Parker, who are reputed to have a ridiculously high-density, low-canopy vineyard planted with a single variety, Pinot Noir, but this couple are not completely mad. They are indeed Pinot purists, but most of the 5-acre (2-hectare) vineyard is planted with vines 3 feet (1 meter) apart, and rows a very generous 8 feet (2.5 meters) apart, with the canopy a good 6½ feet (2 meters) high. However, a separate plot is planted with vines just 2 feet (600 millimeters) apart and row spacing at 3 feet (1 meter), with the fruiting wire just 8 inches (20 centimeters) above the ground—this plot must be frost-free. And only half crazy. The results are very impressive, with a helping hand from contract winemaker Nick Farr, who is the son of Pinot genius Gary (Bannockburn and By Farr), who acted as consultant viticulturist.

✓ *Pinot Noir* • *Sparkling wine* (Pinot Noir)

MERRICKS ESTATEMornington Peninsula
★★★

Consistently stunning Shiraz. Owned by the Kefford family since 1977, with no connection to Merricks Creek above.

✓ *Shiraz*

MÉTIER WINESYarra Valley
★★★

Owner-winemaker Martin Williams is a Master of Wine with winemaking experience on three continents. He established Metier in 1995 and has shot to ★★★ fame in a very short space of time with his single-vineyard masterpieces. Williams is also a partner in Master Winemakers, a premium contract winemaking business.

✓ *Chardonnay* (Trafford Vineyard) • *Classic red blends* (Manytrees Shiraz-Viognier) • *Pinot Noir* (Schoolhouse Vineyard, Trafford Vineyard)

MITCHELTON VINTNERSGoulburn Valley
★★★

Part of the Lion Nathan wine division since its takeover of

Petaluma. Innovative Rhône-style wines have added to Mitchelton's reputation as one of Australia's greatest value-for-money brands, although I find the whites such as Viognier and Airstrip (Marsanne-Roussanne-Viognier) too fat and soft.

- ✓ *Botrytis* (Blackwood Park Botrytis Riesling) • *Chardonnay* (Vineyard Series) • *Classic red blend* (Crescent Shiraz-Mourvèdre-Grenache) • *Merlot* (Chinaman's Ridge) • *Riesling* (Blackwood Park) • *Shiraz* (Print)

MONTALTO VINEYARDS

Mornington Peninsula
★★

Pinot Noir is definitely the standout at Montalto, which was established as recently as 1998. Although the Pennon Hill range is effectively Montalto's entry-level label, some vintages of the Pennon Hill Pinot Noir are of such superb quality that they rank as one of the world's best bargains for this sought-after variety.

- ✓ *Chardonnay* • *Pinot Noir* • *Riesling*

MOORILLA ESTATE

Tasmania
★★

This pioneering Tasmanian winery still produces fabulous Chardonnay and exhilarating Riesling, but is now making top-notch red wines.

- ✓ *Cabernet Sauvignon* • *Chardonnay* • *Riesling* • *Syrah*

MOOROODUC ESTATE

Mornington Peninsula
★★

Richard McIntyre's well-established estate has long been reputed for its Chardonnay, but if anything the Pinot Noir is even better.

- ✓ *Chardonnay* • *Pinot Noir* • *Riesling*

MORRIS WINES

Rutherglen
★★

While the table wines are decent enough (many of them being made at the parent company's Jacob's Creek winery), no one visits Morris Wines to taste anything other than

the fortifieds, the older and rarer blends of which are arguably the best of their type in the world. In fact, I was so eager not to miss an appointment to taste such nectar here in the early 1990s that I received an on-the-spot speeding ticket of AU\$350 (US\$250) from Victoria's finest, as I sped across the state line from New South Wales. The legendary Mick Morris was amazed at the size of the fine, asking what on earth I had done to deserve it, and I shall never forget that twinkle in his eye and the characteristic chuckle as I told him that my mind was so intent on getting to the winery that I hadn't realized that I had overtaken a police car in my haste!

- ✓ *Fortified* (entire range)

MOUNT AVOCA VINEYARD

Pyrenees
★

This winery was purchased by Barrington Estate in the Hunter Valley in 2002, and is currently performing better with red wines than white.

- ✓ *Cabernet Sauvignon* • *Classic red blend* (Arda's Choice) • *Merlot* • *Shiraz*

MOUNT BECKWORTH

Pyrenees
★★

Established in 1984, although I've only just come across these wines, perhaps because the grapes were sold in bulk, and wines under the Mount Beckworth label did not appear until much more recently.

- ✓ *Chardonnay* • *Pinot Noir* • *Shiraz*

MOUNT LANGI GHIRAN

Grampians
★★

This winery and vineyards were purchased by the Rathbone Family Group in 2002, but former owner Trevor Mast has stayed on as winemaker. Mast produces rich, ripe, complex reds (particularly Shiraz), and increasingly exciting Riesling.

- ✓ *Cabernet Sauvignon* (Joanna) • *Classic red blend* (Billi Billi, Cabernet Sauvignon-Merlot) • *Riesling* • *Shiraz* (Cliff Edge)

MOUNT MARY VINEYARD

Yarra Valley
★★★

Only small quantities of reds are made at Mount Mary, but these are outstanding with a well-deserved cult following.

- ✓ *Chardonnay* • *Classic red blend* (Quintet) • *Classic white blend* (Triolet) • *Pinot Noir*

MURRINDINI

Central Victorian High Country
★★

Owner-winemaker Hugh Cuthbertson makes wines of an extraordinary consistency and quality, from a tiny vineyard

between the Yarra Valley and the Strathbogie Ranges.

- ✓ *Chardonnay* • *Classic red blend* (Cabernets-Merlot)

NICHOLSON RIVER

Gippsland
★★

Great improvement over recent years from this well-established Gippsland producer. Second wines sold under the Mountview label.

- ✓ *Chardonnay* • *Classic red blend* (The Nicholson) • *Pinot Noir*

NO REGRETS

Tasmania
★★

An extremely promising start by Eric and Jette Phillips, who established this venture in 2000, just after they sold the nearby Elsewhere Vineyard.

- ✓ *Chardonnay* • *Classic white blend* (Triple S) • *Pinot Noir* • *Riesling* • *Sparkling* (Miss Otis)

PANORAMA

Tasmania
★★

Since Michael and Sharon Vishacki purchased this relatively long-established vineyard (1974), they have built not only a new winery, but also a new, top-performing reputation, especially for Pinot Noir.

- ✓ *Pinot Noir*

PARINGA ESTATE

Mornington Peninsula
★★

Established in 1985, Lindsay McCall's Paringa Estate is well entrenched as one of the "grands crus" of Mornington Peninsula.

- ✓ *Pinot Noir* • *Shiraz*

PASSING CLOUDS

Bendigo
★★

Graeme Leith continues to produce classy, unirrigated red wines.

- ✓ *Classic red blend* (Graeme's Blend, Angel's Bland) • *Shiraz* (Reserve)

PHILLIP ISLAND VINEYARD

Tasmania
★★

Established in 1994 by David Lance of Diamond Valley fame, Phillip Island must be the only vineyard

within spitting distance of penguins and a seal colony.

- ✓ *Chardonnay* • *Pinot Noir*

PIPERS BROOK VINEYARD

Tasmania
★★

This winery was established in 1974 by Dr. Andrew Pirie, but was taken over in 2001 by the Belgian-owned Kreglinger Australia, a wool and sheepskin business that was established as long ago as 1893, but entered the wine industry as recently as 2000, when it established Kreglinger Estate in the Mount Benson region of South Australia. Pirie was supposed to stay on, but was unceremoniously booted out of his former winery in 2003. After a less-than-friendly few months, relations between the two parties improved, and Pirie won (purchased?) back the right to his own name.

Kreglinger has renamed its Pirie sparkling wine eponymously, but will still be selling limited releases of museum vintages. Pirie will bring out his own sparkling wine as from the 2005 vintage, but to keep the Pirie brand going, he has purchased some of his old 1998 vintage. Curiously, this means that the same wine will be available under different labels from the two wineries.

As from the 1999 vintage, Pipers Brook has introduced a new disgorgement and dosage regime, so expect a change of style. For the inaugural 1995 vintage, I am on record as stating, "I would say that it is equivalent to Champagne in terms of quality. In fact, I would go further and say that the quality of Pirie falls somewhere between that of the vintage Champagne and a *deluxe cuvée*."—which is why I have followed Pirie more extensively than most other sparkling wines, and I have noticed that all of the vintages of Pirie rapidly improve, but have a relatively short life at their very peak. They do not deteriorate into the undrinkable, but they are at their very best in the first year after disgorgement. Furthermore, I have also noticed that beyond this 12-month peak, UK cellared versions (well, the Stevenson cellared one at least) are significantly superior to the same wines stored at Pipers Brook. We must wait and see what sort of quality and reputation the newly configured wine will carve out for itself. As for Pipers Brook still wines, I hope and expect little change from the delightfully stylish products that Pirie crafted. Second wines come from the former Rochecombe vineyard and are marketed under the Ninth Island label, which sells at higher prices than some wineries' first labels.

- ✓ *Pinot Noir* (Reserve, The Blackwood, The Lyre) • *Chardonnay* (Estate, Reserve) • *Riesling* (Estate)

PIRIE TASMANIA

Tasmania

After the winery he established, Pipers Brook, was taken over,

Dr. Andrew Pirie did a bit of consulting with Parker Coonawarra Estates (since ended), and the more local Dalrymple (which is ongoing), before regaining the commercial rights to his own name. He has leased the “state-of-the-art” Rosevears winery in the Tamar Valley, and produced “substantial quantities of 2004 table wines including a top-end Pinot Noir.” It looks as if his sparkling wine activities will be much smaller in future, with the first wine due to be made in 2005, sourced from vineyards matched to “the old ones: same spacing, district, age and aspect.” Tasmania is more suited to Pinot-Chardonnay sparkling wine than to Cabernet Sauvignon, although the latter is also grown. Pirie had experience of Cabernet Sauvignon at Pipers Brook, but his short spell at Parker Coonawarra left him uncertain that he was taking full advantage of the potential of this Bordeaux variety. He is reputed to be one of the best winemakers in Australia, but was humble enough to tell me that he was doing “one last masterclass with Vanya Cullen on Cabernet,” and I cannot think of anyone better suited to pass on the necessary expertise. With the exception of an entry-level Pirie South range, Pirie intends to focus on “ultrapremium” wines, so watch this space!

PORT PHILLIP ESTATE

Mornington Peninsula
★★★

Established in 1987, this property was sold in 2000 to current incumbents Giorgio and Dianne Gjergja, who are making some stunning red wines.

✓ Pinot Noir (Reserve) • Shiraz (Reserve)

PRINCE ALBERT

Geelong
★★★

Bruce Hyett continues to produce tiny quantities of highly acclaimed Pinot Noir.

✓ Pinot Noir

PROVIDENCE VINEYARDS

Tasmania
★★

Established as La Provence in 1956, with vines illegally removed from France, and smuggled into Tasmania, this estate eventually ran foul of Australia's agreement with the EU on controlled appellations, and was thus renamed Providence Vineyards in the 1990s. Contract winemaker Andrew Hood makes sensationally fine Pinot Noir, particularly under the Miguet Reserve label, which is widely recognized as one of Australia's best examples of Burgundy's great grape.

✓ Chardonnay (Monet) • Pinot Noir

RED EDGE

Heathcote
★★

This label was established with the 1997 vintage, but based on mature

vineyards planted in 1971, hence the quick rise to fame. Red wines definitely have the edge (there are no whites).

✓ Cabernet Sauvignon • Shiraz (Heathcote)

ROCHFORD WINES

Yarra Valley
★★

Part of this enterprise was formerly known as Eyton on Yarra. It was taken over in 2002 by Rochford Wines, whose winemaker, David Creed, coincidentally was a contract winemaker for Eyton on Yarra in 1993. The Rochford and Eyton wines have evolved into a three-tiered range, all under the Rochford label. The Rochford R Range is from the Macedon Ranges, and represents those wines formerly sold as Rochford; the Rochford E Range is from Yarra Valley, and is effectively the old Eyton wines; while the Rochford V Range is sourced from both wineries plus bought-in grapes, and consequently sold under the broader Victoria GI.

✓ Chardonnay (R) • Pinot Noir (R)

SCOTCHMAN'S HILL

Geelong
★★

This winery is owned by David and Vivienne Browne, whose Burgundy-style specialized vineyard and winery overlook the Bellarine Peninsula and benefit from cool maritime breezes. Second wines sold under the Spray Farm label.

✓ Chardonnay • Pinot Noir

SEPPELT GREAT WESTERN

Great Western
★★★

Part of the giant Southcorp group, this legendary sparkling wine producer makes everything from cheap, but expertly made lime-and-lavender bubbly under its most basic Great Western Brut label; through numerous exceptional value, relatively inexpensive, genuinely premium *cuvées*; to the truly fine-quality, upmarket Salinger *cuvée*. And then there is the Show Sparkling Shiraz, which is one of Australia's icons: the biggest, brashiest, and most brilliant of

sparkling “Burgundies,” even though its massive, concentrated blackcurrant-syrup fruit is too much for many to swallow more than half a glass. But it is definitely a “show” wine in the biggest of senses. And just because this winery has a well-deserved reputation for sparkling wine, it would be wrong to overlook some of Seppelt's exceptionally fine table wines. A ★★ classification is not too high because some individual wines, both with and without bubbles, would rate ★★★ on their own.

✓ Cabernet Sauvignon (Dorrien)
• Chardonnay (Drumborg, Partalunga) • Pinot Noir (Drumborg, Sunday Creek) • Shiraz (Chalambar) • Riesling (Drumborg) • Sparkling (Blanc de Blancs, Original Sparkling Shiraz, Pinot Noir-Chardonnay, Salinger, Show Sparkling Shiraz, Sparkling Shiraz)

SEVILLE ESTATE

Yarra Valley
★★★

This winery made its name on minuscule releases of its superb botrytized Riesling, but has been owned by Brokenwood since 1997, and now concentrates on the more marketable premium varietals.

✓ Chardonnay • Pinot Noir • Shiraz

SHADOWFAX

Geelong
★★★

Shadowfax: is it some pun on email? No, it's from *The Lord of the Rings*, in which Shadowfax was chief among horses. Deep and meaningful, then? No, I suspect it was just named by some Tolkein nut. Shadowfax is not run by nuts, though. This ultramodern and stylish winery, which is located in Werribee Park, has its own award-winning, luxury hotel and restaurant, The Mansion Hotel, and makes wines that are as lush and as manicured as its surroundings.

✓ Cabernet Sauvignon (Yarra Valley) • Chardonnay • Pinot Noir • Shiraz (McLaren Vale) • Viognier (Adelaide Hills)

SHANTELL

Yarra Valley
★★★

An underrated producer of fine white wines, Shantell has recently started to make excellent reds.

✓ Cabernet Sauvignon • Chardonnay • Sémillon • Shiraz

SPRING VALE VINEYARDS

Tasmania
★★★

Established in 1986, but really took off from the late 1990s, particularly with Burgundian varietals.

✓ Chardonnay • Pinot Noir

STANTON & KILLEEN

Rutherglen
★★★

Affectionately known as “Stomp It and Kill It,” this famous old fortified wine producer also manages to make some excellent table wines.

✓ Classic red blend (Shiraz Durif)
• Fortified (entire Classic range, Grand Rutherglen Muscat) • Shiraz (Moodemere)

STONIER WINES

Mornington Peninsula
★★

Stonier has been owned by Lion Nathan since the takeover of Petaluma, but its Burgundy-style wines get even more stunning by the vintage under winemaker Geraldine McFaul, who has started specializing in the expression of single vineyards.

✓ Entire range

TAHBILK

Goulburn Valley
★★★

The oldest winery in Victoria was established in 1860, when it was known as Chateau Tahbilk, but dropped the pretension at the turn of the millennium. It still makes very traditional wines that always improve in bottle. Second wines are sold under the Dalfarras, Everyday Drinking, and Republic labels.

✓ Cabernet Sauvignon • Marsanne • Riesling • Sémillon • Shiraz

TALTARNI VINEYARDS

Pyrenees
★★

Taltarni is Aboriginal for “red earth,” the soil in this vineyard being an iron-rich siliceous clay and thus red in color. The wines have always been noticeably rich in extract, but they are no longer as austere, lean or—for reds—as tannic as they used to be under Dominique Portet (who now has his own label). The style has become more relaxed, and easier to access at a much earlier age. Clover Hill and Lalla Gully are premium Tasmanian single-vineyard wines, whilst second wines are sold under the Fiddleback label.

✓ *Cabernet Sauvignon* (Taltarni) • *Chardonnay* (Lalla Gully) • *Classic red blend* (Cephas) • *Merlot* (Taltarni) • *Sauvignon Blanc* (Fumé Blanc) • *Shiraz* (Taltarni) • *Sparkling* (Clover Hill, Taltarni Brut Taché)

TAMAR RIDGE

Tasmania
★★

Joe Chromy purchased Heemskerck and Rochecombe and sold them on to Pipers Brook in 1998. But he retained 125 acres (50 hectares) in the Tamar Valley, which formed the basis of Tamar Ridge, where he built a new winery. The wines have been excellent, particularly the Pinot Noir and Riesling (the Josef Chromy Selection was outstanding). After turning down offers to buy him out from two mainland wineries, Chromy sold Tamar Ridge to Gunns, Tasmania's largest timber company, for A\$14.8 million (US\$9.7 million). Dr. Richard Smart, the "flying vine doctor," has consulted here from the beginning, but the new owners have persuaded him to move to Launceston to oversee the state's largest viticultural project, as Gunns invests a further A\$16 million (US\$10.4 million) in new vineyards that will increase Tasmania's area under vine by more than 50 percent.

✓ *Pinot Noir* • *Riesling*

TARRINGTON VINEYARDS

Henty
★★

Beautiful, Burgundy-style Pinot Noir, and refreshing, unoaked Chardonnay.

✓ *Chardonnay* • *Pinot Noir*

TEN MINUTES BY TRACTOR

Yarra Valley
★★

You have to admire the ingenuity of such a name for a winery in country that thinks nothing of trucking grapes across several state lines. But it's not a gimmick. This venture is the combination of three separate family-owned vineyards (hence the three single-vineyard labels: Judd, McCutcheon, and Wallis), each of which is just 10 minutes by tractor from the other two. The wines are brilliant.

✓ *Chardonnay* • *Pinot Noir*

VIRGIN HILLS VINEYARDS

Macedon
★★

The creation of Hungarian-born Melbourne restaurateur Tom Lazar, this "one-wine-winery" has been one of Australia's hidden jewels for more than three decades. Lazar did not learn winemaking; he simply read a book, planted a vineyard, and made his wine. Virgin Hills has always consisted primarily of Cabernet Sauvignon, plus a dash of Syrah, Merlot, and Malbec. Lazar used to maintain approximately 75 percent Cabernet Sauvignon, but

over the years this has varied between 60 and 85 percent. When he retired, Mark Sheppard took over the winemaking, and continued in the Lazar fashion, making it one of the Australia's least-known, greatest wines. Sheppard left to join Vincorp, but returned when Vincorp owned Virgin Hills for a short while in 1998, after which it was purchased by Michael Hope, the current proprietor.

✓ *Virgin Hills*

WARRABILLA

Rutherglen
★★

Great quality-price ratio from former All Saints owner-winemaker Alan Sutherland Smith.

✓ *Classic red blend* (Reserve Shiraz Durif) • *Durif* (Reserve) • *Fortified* (Reserve Muscat) • *Merlot* (Reserve) • *Shiraz* (Parola's Limited Release, Reserve)

WARRENMANG VINEYARD

Pyrenees
★★

The Grand Pyrenees does not indicate the nature of its blend on the label, but contains Merlot, Cabernet Franc, and Shiraz.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Classic red blend* (Grand Pyrenees) • *Shiraz* (Puma)

WATER WHEEL

Bendigo
★★

Owner-winemaker Peter Cumming established this vineyard in 1972, and makes well-crafted wines at very reasonable prices, deserving its ★ rating on value alone.

✓ *Cabernet Sauvignon* • *Chardonnay*

WATERTON ESTATE

Tasmania
★★

Not tasted. Indeed, never seen! But comes highly recommended by a trusted colleague, and passed on.

WEDGETAIL ESTATE

Yarra Valley
★★

This is a new one for me, although apparently established as long ago as 1994. Superb Burgundian varietals, and although the quality of the Cabernet (Cabernet Sauvignon-Shiraz blend) is vulnerable to change of vintage, it does hit the spot when the weather is right.

✓ *Chardonnay* • *Classic white blend* (Cabernet) • *Riesling*

WELLINGTON

Tasmania
★★

The own brand of consultant winemaker Andrew Hood (see Providence).

✓ *Chardonnay* • *Pinot Noir* • *Riesling* (Iced)

WILLOW CREEK

Mornington Peninsula
★

Willow Creek is housed in a historic building with magnificent views.

✓ *Cabernet Sauvignon* • *Chardonnay* (Tulum)

WINSTEAD

Tasmania
★★

Tiny production of extraordinary Pinot Noir courtesy of contract winemaker Andrew Hood.

✓ *Pinot Noir*

YARRA BURN

Yarra Junction
★★

Established in 1975, but owned by BRL Hardy since 1995, the Yarra Burn range has been revamped, and the quality upped and still improving. I used to favor the Bastard Hill *cuvées* of Chardonnay and Pinot Noir, but the straight Yarra Burn label is often as good these days, and sometimes even a little better!

✓ *Chardonnay* • *Pinot Noir* • *Shiraz* • *Sparkling* (Pinot Noir-Chardonnay-Pinot Meunier)

YARRA RIDGE

Yarra Valley
★★

Founded in 1982, but now owned by Beringer Blass, Yarra Ridge continues to make elegant red wines in a firm yet accessible style. Wines from other regions are sold under the Mount Tanglefoot range of the Yarra Ridge label.

✓ *Classic white blend* (Mount Tanglefoot Sémillon-Sauvignon Blanc) • *Pinot Noir*

YARRA VALLEY HILLS

Yarra Valley
★★

Owner-winemaker Terry Hill has turned out some truly fine, relatively inexpensive wines since he established Yarra Valley Hills in 1993.

✓ *Pinot Noir* • *Riesling*

YARRA YARRA

Yarra Valley
★★

Tiny production of superbly expressive wines from a vineyard that is so good, they named it twice!

✓ *Classic red blend* (Cabernets) • *Classic white blend* (Sémillon-Sauvignon Blanc) • *Cabernet Sauvignon* (Reserve)

YARRA YERING

Yarra Valley
★★

The first in a number of Yarra-named wineries, Yarra Yering was founded in 1969 by New Zealand botanist Dr. Bailey Carrodus, whose blended reds are legendary. Remarkably, 35 years later, he is still the day-to-day winemaker. Dry Red No.1 is Cabernet-based; Dry Red

No. 2 is Shiraz-based; Dry Red No. 3 is Cabernet-Tempranillo.

✓ *Cabernet Sauvignon* (Young Vines) • *Classic red blend* (Dry Red No.1, Dry Red No. 2) • *Merlot* • *Shiraz* (Underhill)

YELLOWGLEN VINEYARDS

Ballarat
★

This operation was started by Australian Ian Home and *champanois* Dominique Landragin, but is now owned by Beringer Blass. The wines have always shown excellent potential and have improved enormously, especially since the early 1990s. The nonvintage Pinot Noir-Chardonnay is often superior to the vintage Brut. Wines also sold under Home and Landragin label.

✓ *Sparkling* (Cuvée Victoria, Hargrave, Pinot Noir-Chardonnay)

YERING STATION

Yarra Valley
★★

Part of the Rathbone Family Group since 1996, Yering Station sells table wines under its own name, and sparkling wines under the Yarrabank label. Its most prestigious sparkling wine is the Tibault and Gillet Cuvée, but I have to go back to the 1995 and 1994 vintages to find the real class that this wine once had, and it is amazing that these old Australian bubbles have aged so gracefully.

✓ *Chardonnay* (Reserve) • *Classic red blend* (Reserve Shiraz-Viognier) • *Merlot* • *Pinot Noir* (Reserve) • *Sparkling* (Yarrabank)

YERINGBERG

Yarra Valley
★★

The oldest winery in the Yarra Valley, Yeringberg was established in 1862 by Guillaume, Baron de Pury, and reestablished in 1969 by his grandson, Guillaume de Pury, who has consistently produced fine, sometimes exceptionally fine, wines. The Dry Red is a Bordeaux-style blend.

✓ *Chardonnay* • *Classic red blend* (Dry Red) • *Classic white blend* (Marsanne-Roussanne) • *Pinot Noir*

ZILZIE

Murray Darling
★

A major supplier of grapes to Southcorp, the Forbes family established its own winery in 2000. With improving quality, and very reasonable prices, Zilzie is a name to watch. Second labels include Forbes Faily and Buloke Reserve.

✓ *Classic red blend* (Show Reserve GSM) • *Merlot* (Show Reserve) • *Tempranillo* (Buloke Reserve) • *Shiraz* (Show Reserve)

SOUTH AUSTRALIA

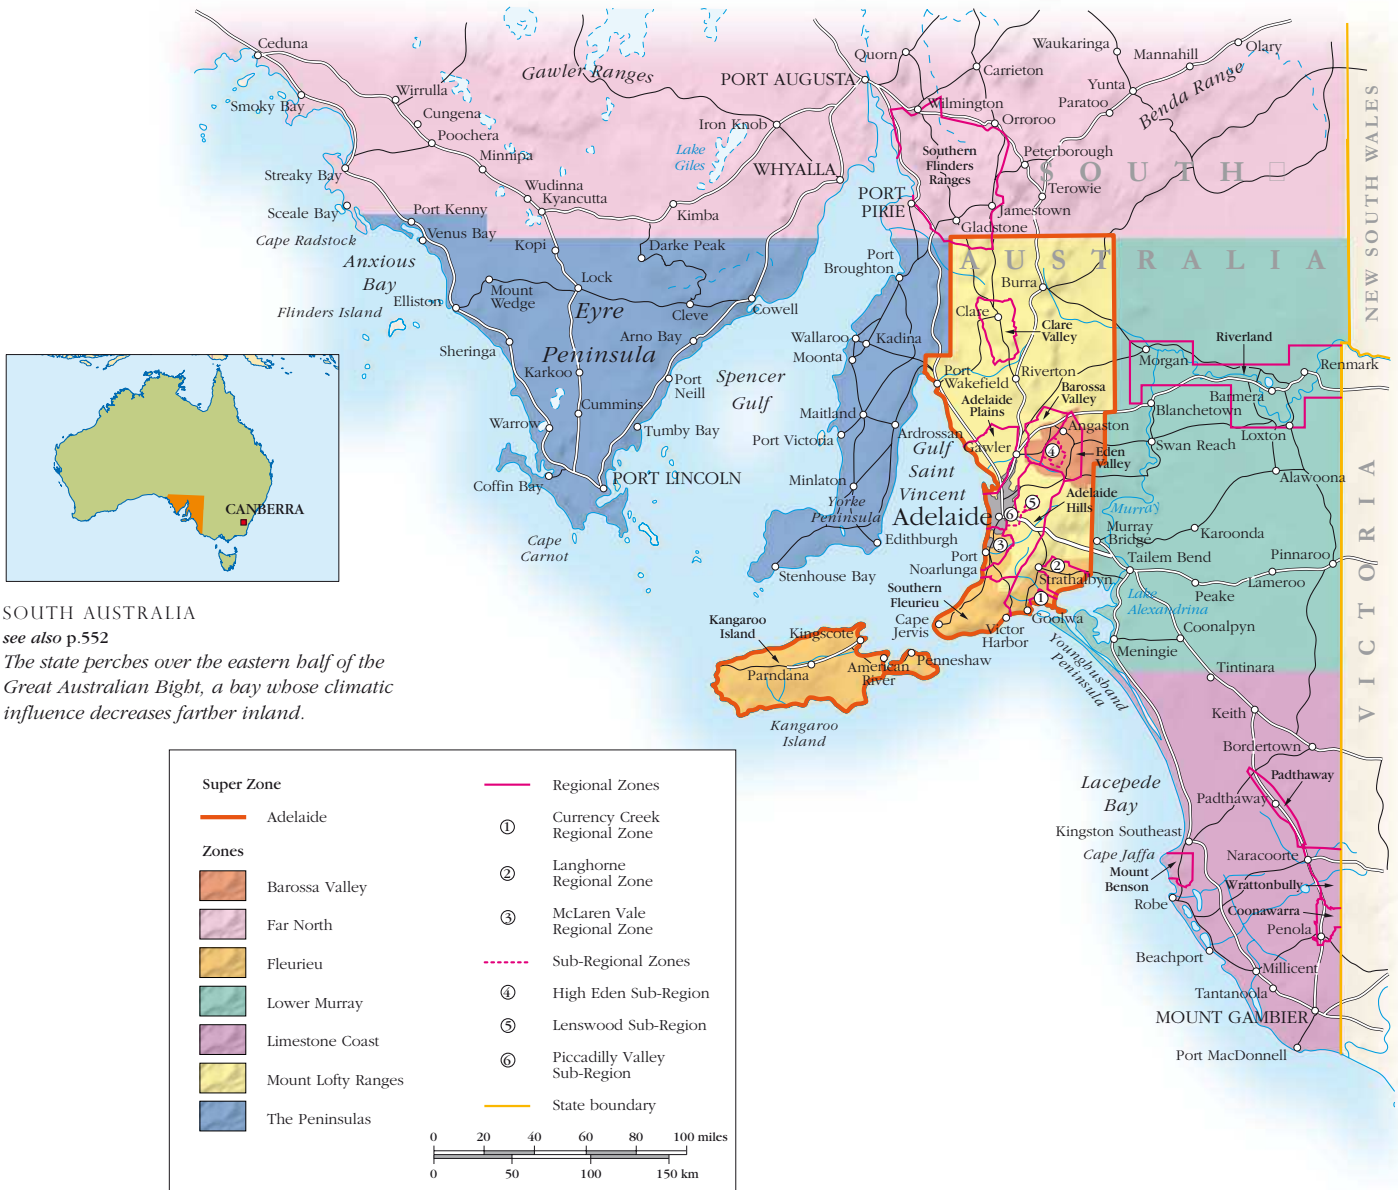

This is Australia's most productive and contradictory wine region, accounting for 42 percent of the country's vineyards, and over 50 percent of its total wine output, ranging from its cheapest to its most expensive wine.

THE BEGINNINGS OF THIS VAST MARKET GARDEN of grapes can be traced back to John Barton Hack, who planted vines at Chichester Gardens, North Adelaide, in 1837, but they were removed in 1840 in order to make way for urbanization. Meanwhile, in 1839, Hack had purchased a 4,000-acre (1,600-hectare) property near Mount Barker called Echunga Springs, where he also planted vines, producing his first wine in 1843, and sending a case to Queen Victoria the following year. Hack's Echunga Springs is generally thought to have produced the first wine in South Australia, although George Stevenson had established a vineyard in 1838 at North Adelaide, and so could have made wine at least one year before

Hack, and possibly as early 1841. There is no documented evidence that he did or, at least, none that has surfaced. Nonetheless, it would be reasonable to assume that the records from this era are far from complete, because if Hack was indeed the first to make wine, in 1843, how come in the very same year *The South Australian Vignerons* was published? Where would be the demand? Furthermore, the author of this work, George McEwin, is credited on the cover as "Gardener to George Stevenson." What is on record, however, is that Stevenson won a prize for his "Burgundy" at the South Australian Agricultural and Horticultural Show in 1845.

INCREASING REGIONAL DEFINITION

The paradox is that if consumers are asked what South Australia means to them as a winemaking state, they will probably say that it has a reputation for cheap wine, but ask them about Coonawarra, and they will say it is Australia's most famous, premium-quality wine region. Ask them about the Barossa Valley, and they will say that is where Australia's greatest Shiraz comes from. This state is an object lesson in the need to focus on

SOUTH AUSTRALIA

see also p.552

The state perches over the eastern half of the Great Australian Bight, a bay whose climatic influence decreases farther inland.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

This is the southern central part of the country, with Australia's five other mainland states to the east, north, and west, and half of the Great Australian Bight forming the coastline to the south.

CLIMATE

The climate varies greatly, from the intensely hot continental conditions of the largely cask-wine producing Riverland area, through the less extreme but still hot and dry Barossa Valley, to the cooler but still dry Coonawarra region. Sea breezes reduce humidity in the plains around Adelaide, which receives low annual rainfall, as does the whole region.

ASPECT

Vines are grown on all types of land, from the flat coastal plain around Adelaide and flat interior Riverland district to the varied locations of the Barossa Valley, where vines are grown from the valley floor at 820 feet (250 meters), up to the slopes to a maximum of 1,970 feet (600 meters) at Pewsley Vale.

SOIL

Soils are varied, ranging from sandy loam over red earth (*terra rossa*) on a limestone-marl subsoil in the Adelaide and Riverland areas (the latter having suffered for some time from excess salinity); through variable sand, loam, and clay topsoils, over red-brown loam and

clay subsoils in the Barossa Valley, to the thin layer of weathered limestone, stained red by organic and mineral matter, over a thick limestone subsoil in the Coonawarra area.

VITICULTURE AND VINIFICATION

This varies enormously, from the bulk-production methods of the large modern wineries that churn out vast quantities of clean, well-made, inexpensive wine from grapes grown in Riverland's high-yielding irrigated vineyards, to the use of new oak on restricted yields of premium-quality varietals by top estate wineries in areas such as Coonawarra, the Barossa Valley, and the up-and-coming Padthaway or Wrattenbully districts, which produce some of Australia's greatest wines.

GRAPE VARIETIES

Primary varieties: Cabernet Franc, Cabernet Sauvignon, Chardonnay, Malbec, Merlot, Petit Verdot, Pinot Noir, Riesling, Sauvignon Blanc, Sémillon, Shiraz
Secondary varieties: Cinsault, Crouchen, Doradillo, Gewürztraminer, Grenache, Mourvèdre, Muscat à Petit Grains, Muscadelle, Muscat d'Alexandrie, Muscat Gordo Blanco, Palomino, Pedro Ximénez, Ruby Cabernet, Sangiovese, Taminga, Tinta Amarella, Touriga, Ugni Blanc, Viognier

REMUAGE, BAROSSA VALLEY

Giant gyropalettes are indicative of the scale of the operation at the Southcorp-owned Barossa Valley cooperative.

regional definition. Only by increasing the regional definition within South Australia will its wine industry be recognized for its true quality and future potential.

It is already happening, as the Adelaide Hills, for example, brings a breath of cool air to the hot-climate image of this state. And within the Adelaide Hills, smaller areas such as the Piccadilly Valley manage to express the notion that specific and different *terroirs* can and do exist side by side. Even the Mount Lofty Ranges zonal GI, encompassing the Adelaide Hills and Clare Valley, expresses a difference. No two Rieslings are more intrinsically Australian than those from the Clare and Eden valleys, yet how could you mistake one for the other? With winemaking of consistently high standards from such outstanding producers as Grosset, so the highly individual character and quality of subregions within the Clare Valley, such as Polish Hill, are starting to stand out. There are certainly plenty of top-notch producers in this state. How strange that South Australia should have such a generally inexpensive image when it produces some of Australia's finest and most expensive wines, from Grosset Polish Hill, to Henschke Hill of Grace, Rockford Black Shiraz, Petaluma Tiers Chardonnay, and, of course, Penfolds Grange.

THE APPELLATIONS OF
SOUTH AUSTRALIA

ADELAIDE

A superzonal GI that encompasses the regions of Barossa, Fleurieu, and the Mount Lofty Ranges.

ADELAIDE HILLS

Sub-regions:

Lenswood, Piccadilly Valley

Petaluma country. This hilly region is just 9 miles (15 kilometers) from the coast, overlooking Adelaide, the Adelaide Plains, and McLaren Vale. It has two subregions of its own, Lenswood and Piccadilly Valley, which are determined by differing temperatures and soil types. Along with Clare Valley and Adelaide Plains, this region is part of the much larger Mount Lofty Ranges GI. Although the Adelaide Hills have a Mediterranean climate, this is by far the coolest of all South Australian wine regions, being strongly influenced by elevation ranging from 1,150–2,300 feet (350–700 meters), and the winds that sweep across St. Vincent's Gulf. Undulating hills are interspersed with steep slopes, which drop into frost-prone gullies, creating many different kinds of *terroir* according to height, aspect, and the various soils, which range from (but are not restricted to) sandy

alluvium on the valley floor, to yellow and red loams on the slopes. The first vines were planted here in the 1840s, but viticulture struggled for economic survival, finally succumbing to the Great Depression. Its revival finally came in the 1970s, when boutique wineries started to satisfy the demand of consumers who were switching from fortified to table wine. Chardonnay, Riesling, Pinot Noir, and bottle-fermented sparkling wines are now the classics here, with Cabernet Franc and Merlot faring better than Cabernet Sauvignon. Sauvignon Blanc and Sémillon are rising stars, with Sangiovese and the inevitable Shiraz showing promise.

ADELAIDE PLAINS

The Adelaide Plains is described by James Halliday as "one of the least appealing, most frequently visited regions in Australia." It is, as he also states, "laser-flat and searingly hot in summer." Little surprise, then, that there are very few wineries here, and those that do exist mostly source their grapes from elsewhere. However, extraordinarily fine wines can be made from vines growing in these furnace-like conditions, as illustrated by some of the wines

produced by the top-performing Primo winery from Joe Grilli's Virginia vineyard. Part of the Adelaide Plains has long since been consumed by the city's sprawling suburbs, which now surround Penfolds' legendary Magill vineyard. The grapes from this vineyard used to be the base for Penfolds' remarkable Grange Hermitage, but they now go to make The Magill Estate.

BAROSSA

A zonal GI encompassing the Barossa Valley and Eden Valley regional GIs.

BAROSSA VALLEY

This district is the oldest and most important of South Australia's premium varietal areas. With a hot, dry climate, the vines mostly grow on flatlands at an altitude of 800 to 1,000 feet (240 to 300 meters), although in some areas the altitude rises to 1,800 feet (550 meters), and the vines are cooled by ocean breezes. The Barossa Valley is heavily dependent on irrigation, but boreholes are metered, and the amount of water that may be drawn is strictly regulated. Big, brash Shiraz is king in this region, although a significant volume of white wine is also

produced. Chardonnay, Sémillon, and Riesling dominate, and depending on the climate and the soil (which may be limestone, clay, or sand), these white wines can range from full bodied to surprisingly delicate.

CLARE VALLEY

Clare Valley is the most northerly vinegrowing district in South Australia and its climate is correspondingly hotter and drier. Many of the vineyards are not irrigated, however, and the result is a low yield of very intensely flavored, big-bodied, often strapping wines. Riesling is the valley's most important variety and botrytis-affected wines are rich, fine, and mellifluous. Other good wines are Cabernet Sauvignon (often blended with Malbec or Shiraz), Sémillon, and Shiraz.

COONAWARRA

This famous district is the most southerly in South Australia. Coonawarra is Aboriginal for “wild honeysuckle”; it also happens to be easy on English-speaking tongues and this has been useful when it comes to marketing wine from the district in English-speaking countries. Consequently, this region achieved worldwide fame, which paradoxically held it back during the GI process, while other less well-known regions were demarcated relatively quickly. Everyone with the slightest chance of being considered part of Coonawarra wanted to be included within the boundaries, while the bureaucrats operating the GI scheme demonstrated little or no imagination, thus it took eight years to settle all the disputes. The crux of the matter revolved around Coonawarra's red earth, or *terra rossa*. Black soil areas are interspersed amongst the *terra rossa* and these soils produce quite different wines, even though they share the same limestone subsoil. The neatest solution would have been to have two appellations: a regional Coonawarra GI, within which there would be a subregional Coonawarra Terra Rossa GI. The Coonawarra ridge hardly stands out topographically, being just 194 feet (59 meters) above sea level, but it does stand out viticulturally, since the surrounding land is flat, frosty, and poorly drained. This, and the Mediterranean climate, which enjoys the cooling maritime influences off the Southern Ocean, make height-challenged Coonawarra superbly suited to viticulture, whether on black or red soils. It is just that those vineyards on *terra rossa* soils have historically been responsible for some of Australia's outstanding wines, particularly Cabernet Sauvignon. Vineyards on black soils can produce some very good wines, but those on *terra rossa* are demonstrably more expressive of their *terroir*. Cabernet Sauvignon might be king of

the *terra rossa*, but other varieties that perform well throughout Coonawarra include Shiraz, Petit Verdot, Pinot Noir, Malbec, and Merlot. Although Coonawarra is red wine country *par excellence*, successful white grapes include Chardonnay, Riesling, Sauvignon Blanc, and Sémillon.

CURRENCY CREEK

This regional GI is located on the Fleurieu Peninsula, extending from Port Elliot in the west to the shores of Lake Alexandrina in the east, and includes three islands: Hindmarsh, Mundoo, and Long Islands. The proximity to Lake Alexandrina, and the mouth of the Murray River moderates the hot Mediterranean climate, making the area suitable for viticulture. Grapes growing include Cabernet Sauvignon, Chardonnay, Sauvignon Blanc, and Shiraz.

EDEN VALLEY

Subregions:
High Eden

The Eden Valley has a rockier, more acid soil than that found in the neighboring Barossa Valley, with a cooler, much wetter climate. Vineyards are located at an altitude of 1,300–2,000 feet (400–600 meters) in the Mount Lofty Ranges, which form part of the Barossa Range. The Eden Valley GI is not a valley as such, but takes its name from the township of Eden Valley. While the preeminence of Henschke might suggest that the Eden Valley is world-class Shiraz country, that is very much due to one vineyard, Hill of Grace, and the 130-year-old Shiraz vines planted there. Eden Valley is best known for its quintessentially Australian (that is, limey) Riesling, and deservedly so. Chardonnay also fares well.

FAR NORTH

Aside from the Southern Flinders Ranges GI in the far south, the vast Far North zonal GI is very much a viticultural wilderness.

FLEURIEU

This zonal GI consists of the peninsula jutting out toward Kangaroo Island, and encompasses the regional GIs of Currency Creek, Kangaroo Island, Langhorne Creek, McLaren Vale, and Southern Fleurieu.

HIGH EDEN

So named because, unsurprisingly, this subregional GI is located at the highest point in Eden Valley, which also makes it one of the coolest and most windy areas. The terrain is hilly, and rugged, with poor sandy soils that are well suited to Chardonnay, Riesling, and Shiraz, as is the rest of the Eden Valley. Cabernet Sauvignon is also grown.

KANGAROO ISLAND

Located off the coast of South Australia, Kangaroo Island is renowned for its natural beauty, and an abundance of wildlife, including colonies of Australian sea lions, New Zealand fur seals, penguins, and the once-endangered Cape Barren goose. In recent years, Kangaroo Island has also been making a name for its Bordeaux-style blends. Most vines are grown on ruddy-colored ironstone or sandy loam soils on the north side of the island, near Kingscote, where the maritime climate is marked by strong winds and moderate humidity. In addition to Bordeaux varieties, Chardonnay and Shiraz are also grown.

THE HARVEST, BAROSSA VALLEY
Many of the best premium varietal producers in South Australia have some sort of interest in the Barossa Valley, the state's most important wine area.

LANGHORNE CREEK

This once tiny, traditional area, located southeast of Adelaide on the Bremer River, has expanded rapidly since 1995, when Orlando started sourcing grapes from here for huge brands such as Jacob's Creek. This district was named after Alfred Langhorne, a cattle-herder from New South Wales, who arrived in 1841. The meager annual rainfall of 14 inches (35 centimeters) means that the vineyards require irrigation. This area is reputed for its beefy reds and for its dessert wines.

LENSWOOD

This subregional GI is located north of Piccadilly, the other subregion in the Adelaide Hills. The vines grow on steep slopes and benefit from a cool climate, but at 1,300–1,840 feet (400–560 meters), thus lower than those in Piccadilly (up to 2,330 feet, 710 meters), and do not experience quite the same snap of coldness. The grape varieties that excel are the same—Chardonnay and Pinot Noir—and the quality can be equally exciting.

LIMESTONE COAST

The naming of this zonal GI was a stroke of genius compared with all the hoo-ha over Coonawarra, when growers and bureaucrats alike could not see the wood for the trees. Not merely because Limestone Coast is so evocative of the one geological factor that links the regional GIs within its borders (Coonawarra, Mount Benson, Padthaway, and Wrattontully), but also because, rightly or wrongly, limestone is one of the few soils known by even the casual wine drinker to have a positive influence over the growing of grapes.

LOWER MURRAY

A zonal GI that encompasses the regional GI of Riverland.

MCLAREN VALE

The rolling green hills of McLaren Vale's vineyards and orchards begin south of Adelaide and extend to south of Morphett Vale. With 22 inches (56 centimeters) of rain and a complex range of soils, including sand, sandy loam, limestone, red clay, and many forms of rich alluvium, there is great potential for quality in a range of styles from various grapes. This is perhaps why it is the most volatile wine district, attracting a lot of new talent, but also seeing wineries close or change hands. McLaren Vale produces big red wines of excellent quality from Shiraz and Cabernet Sauvignon (often blended with Merlot), with some increasingly fresh and vital white wines from Chardonnay, Sémillon, and Sauvignon Blanc. Fine dessert wines are also produced.

MOUNT LOFTY RANGES

This zonal GI encompasses the regional GIs of Adelaide Hills, Adelaide Plains, and Clare Valley.

PADTHAWAY

Once known as Keppoch, this area has been developed almost exclusively by the larger companies (Hardy's built Australia's largest winery for 20 years here in 1998). Provided the smaller businesses are not unreasonably prevented from buying land within the area, this should benefit all types of operation. The success of small ventures should be welcomed by the larger companies because it endorses the intrinsic quality potential of the district they are promoting.

THE PENINSULAS

If the Far North zonal GI is a massive viticultural wilderness above an imaginary line, then the Peninsulas is that part of South Australia to the south of the same line where hardly any wineries exist. It is not as if there is no scope for viticulture here. There are plenty of gently undulating hills, with the right aspect and altitude. The subsoil is limestone, with everything from sandy-clayey loams to gravel for topsoil. There is even *terra rossa*. But there

are only a couple of vineyards (Boston Bay and Decolline) in this zonal GI, and they are both confined to the Port Lincoln area on the Southern Eyre Peninsula.

PICCADILLY

Subregion situated in the west of the Adelaide Hills GI, between Ashton and Bridgewater. The vines grow at altitudes of 1,300–2,300 feet (400–710 meters), benefiting from a very cool, wet climate, which stretches the ripening process, yielding grapes with naturally high tartaric acid levels. Chardonnay and Pinot Noir excel.

RIVERLAND

The wine areas that cluster around the Murray River in Victoria continue into Riverland, South Australia's irrigated answer to Riverina in New South Wales and Murray Darling in Victoria. Although a lot of cheap cask-wine is made in the Riverland district, rarely is a bad one encountered. Cabernet Sauvignon, Cabernet Sauvignon-Malbec, Chardonnay, and Riesling all fare well, and some relatively inexpensive wines are produced in the area.

SOUTHERN FLEURIEU

This region GI is located at the southern end of the Fleurieu Peninsula, where its gentle, undulating coastal country benefits from cooling winds coming from both the west and south, and vines grow in sandy loam and gravelly-ironstone soils. An up-and-coming area for small, boutique wineries, where Shiraz grows best, but other varieties include Cabernet Sauvignon, Malbec, Riesling, and Viognier.

SOUTHERN FLINDERS RANGES

Although the first grapes were grown here in the 1890s, it is only in the past 10 years that viticulture has become viable on a commercial scale, hence its regional GI status. This has been due to three factors: the so-called "Goyder's line of rainfall," which reduces demand on water supplies; an early harvest; and a ready market in the neighboring Barossa and Clare valleys. The Southern Flinders Ranges are divided by "Goyder's line of rainfall," which was named after the surveyor

George W. Goyder, who first determined the "northernmost limits of feasible agriculture." Irrigation comes from underground water, but with an annual rainfall of 17–25 inches (450–650 millimeters), it is possible to grow grapes without it, which explains the focus on dry-grown, premium-quality grapes. The elevation extends from just 65 feet (20 meters) on the coast to 2,355 feet (718 meters) at Frypan Hill, but most vineyards are located on slopes at a height of 1,150–1,800 feet (350–550 meters), where the region's warm to hot climate is tempered by the cooling effects of altitude and winds crossing the gulf. The soils range from deep sandy loam on the coastal plains to the west of the Flinders Ranges, to deep loam over red clay to the east, around the Wild Dog Creek Land System, and more shallow, stony loam on the slopes. The best suited grapes are Cabernet Sauvignon, Merlot, and Shiraz.

WRATTONBULLY

Surprisingly easy to pronounce for English-speaking tongues, despite the peculiar name, perhaps because it is itself an Anglo-Saxon interpretation of the Aboriginal expression (for "a place of rising smoke signals"). Wrattobully was not the original name for this region, sandwiched between Coonawarra and Padthaway. It was formerly known as Koppamurra, but there is a vineyard of that name in the area, and there were trademark problems in using it for a GI, thus it was decided to rename the region Wrattobully, presumably to send out a signal. The first commercial vineyard was established in 1968, and by the 1990s most of Australia's biggest wine groups were sourcing fruit from here. The climate is very similar to that of Coonawarra, but its slightly higher aspect provides better air drainage, therefore a reduced risk of frost, and lower humidity, thus fewer cryptogamic disease problems. The subsoil is limestone, of course, with various topsoils consisting of red-brown sandy and clayey loams, including some of the purest *terra rossa* soils, making this ideal *terroir* for Cabernet Sauvignon and Shiraz. Potentially, the reputation of Wrattobully will be at least as great as Coonawarra's. We have barely begun to hear about these wines.

THE WINE PRODUCERS OF SOUTH AUSTRALIA

TIM ADAMS

Clare Valley

★★★

The Tim Adams style is very pure, deeply flavored, and bursting with fruit, no wine more so than the fabulous, pure lime-juice Sémillon.

✓ *Classic red blend* (The Fergus)
• Sémillon • Shiraz (Aberfeldy)

ANGOVES

Riverland

★

Most wines are fairly cheap and usually rack up a bronze medal at wine competitions, thus the odds are that even those not specifically

recommended below can be relied on for above average quality and very good value.

✓ *Cabernet Sauvignon* (Sarnia Farm) • *Chardonnay* (Classic Reserve) • *Classic red blend* (Agincourt Cabernet Sauvignon-Malbec-Merlot, Butterfly Ridge Shiraz-Cabernet) • *Fortified* (Premium Port)

ANNIE'S LANE AT QUELLTALER ESTATE

Clare Valley

★★★

The winemaker since 2000 for this precious part of the Beringer Blass

empire has been the talented Caroline Dunn, who in 1999 became the first woman to win the coveted Jimmy Watson Trophy, and in 2001 was awarded the Dux of the inaugural Len Evans Wine tutorial.

✓ *Classic red blend* (Cabernet-Merlot, Shiraz-Grenache-Mourvèdre) • *Riesling* • *Shiraz*

ASHTON HILLS

Adelaide Hills

★★★

Owner-winemaker Stephen George has honed his style into one of great elegance. Wines are also sold under the Galah label.

✓ *Chardonnay* • *Classic red blend* (Cabernet Merlot) • *Pinot Noir* • *Riesling* • *Shiraz* (Lone Star) • *Sparkling* (Salmon Brut)

BALNAVES OF COONAWARRA

Coonawarra

★★

Established in 1975 by Doug Balnaves, who sold his entire harvest as grapes until 1990, when he hired a contract winemaker to launch his own label. Quality and consistency surged upward in 1996, when Balnaves of Coonawarra got

its own brand-new winery, with Wynns' former assistant winemaker Peter Bissell in charge.

- ✓ *Cabernet Sauvignon* • *Chardonnay* • *Classic red blend* (The Blend) • *Shiraz*

BAROSSA VALLEY ESTATE

Barossa Valley

Owned by BRL Hardy, Barossa Valley Estate continues to make E. & E. Black Pepper Shiraz, one of the biggest, oakiest sparkling Shiraz wines in the country from the low-yielding Barossa vineyards of Elmor Roehr and Elmore Schulz (whence the E. & E.). Recently introduced, Epiphany is a much cheaper, more accessible version of this varietal.

- ✓ *Classic red blend* (Monculta Cabernet Sauvignon-Merlot) • *Shiraz* • *Sparkling* (E. & E. Sparkling Shiraz)

BERRI ESTATES

Riverland

The merger between Thomas Hardy and Sons and the huge, Berri-Renmano winery formed BRL Hardy, and this cooperative winery, servicing some 850 private grape-growers, was absolutely essential for the growth of that group. However, despite this pivotal role, and although Berri Estates is Australia's largest winery, processing up to 163,000 tons (this record set in 2004), neither its Berri Estates, nor its Renmano brand contribute much to the wealth and grandeur of BRL Hardy today. Most wines are bag-in-the-box and very cheap, although well made for what they are.

BETHANY WINES

Barossa Valley

Bethany produces some big, chewy, and often incredibly jammy red wines.

- ✓ *Chardonnay* (Barrel Fermented) • *Classic red blend* (Cabernet-Merlot) • *Grenache* • *Shiraz* (GR 6 Reserve)

BOWEN ESTATE

Coonawarra

Doug Bowen continues to produce some truly exceptional wines.

- ✓ *Cabernet Sauvignon* • *Classic red blend* (Cabernet-Merlot) • *Shiraz* (Ampleton)

BRAND'S OF COONAWARRA

Coonawarra

This winery is sometimes known as Brand's Laira, because of its famous Laira vineyard in Coonawarra's *terra rossa* heartland, the original part of which is planted with 110-year-old Shiraz vines. The Brand family did not purchase the Laira vineyard until 1946, and the first wine sold

under the Brand's Laira label was not until the 1966 vintage. In 1990, McWilliams purchased 50 percent of what was then known as Brand's Estate, buying up the other 50 percent in 1994, retaining Jim and Bill Brand as winemakers. Jim Brand is still one of this winery's two winemakers. The old Laira Vineyard Shiraz is sold today as Stentford Old Vines Reserve. Other fruit from the extended Laira vineyard is also found in the Patron's Reserve Cabernet Sauvignon.

- ✓ *Cabernet Sauvignon* (Patron's Reserve) • *Riesling* • *Shiraz* (Stentford Old Vines Reserve)

BREMERTON WINES

Langhorne Creek

Established in 1988, but the fact that rapidly expanding production in recent years has been matched with either constant or improved quality is something that the Wilson family should be proud of.

- ✓ *Cabernet Sauvignon* (Walter's) • *Classic red blend* (Tamblyn) • *Shiraz* (Old Adam)

GRANT BURGE

Barossa Valley

Although owner-winemaker Grant Burge launched this venture as recently as 1988, it quickly built up a reputation for richness, quality, and consistency, and he has not let his concentration lapse once. Grant Burge is probably best known for his icon Shiraz, Meshach, but the Filsell is probably just as outstanding at one-third the price, and there are numerous other wines, red and white, that are in a similar class. The Holy Trinity is a Grenache-Shiraz-Mourvèdre blend; MSJ2 is Shiraz-Cabernet; Balthasar is Shiraz-Viognier. The Lily Farm Frontignac is not a fortified wine, but is made in a wonderfully fresh, sweetish, late-harvest style.

- ✓ *Cabernet Sauvignon* (Cameron Vale) • *Chardonnay* (Summers) • *Classic red blend* (MSJ2, The Holy Trinity) • *Fortified* (20 Year Old Tawny) • *Frontignac* (Lily Farm) • *Riesling* (Thorn) • *Sémillon* (Barossa Vines, RBS2, Zerk) • *Shiraz* (Filsell, Meshach, Miamba)

LEO BURING

Eden Valley and Clare Valley

Orlando took over the Leo Buring winery (which now operates as Richmond Grove), but Southcorp bought the Leo Buring name. Although just one of Southcorp's many brands, Leo Buring remains one of Australia's foremost Riesling producers. Indeed, the range is now reduced to this one varietal, and just three versions of that. On the one hand, this is a tragic end to a once great winery, but on the other, as an exclusive Riesling brand, Leo Buring must rate a good ★★.

- ✓ *Entire range!*

CARDINHAM ESTATE

Clare Valley

Although these vineyards have been established since 1980, the Smith family sold grapes, not wine, and they did not launch their own label until as recently as 2000, since when the wines have rapidly achieved a brilliant reputation.

- ✓ *Classic red blend* (Cabernet-Merlot) • *Sangiovese* • *Shiraz* (Standbrooke)

CHAIN OF PONDS

Adelaide Hills

Zar Brooks, the young man who put a smile on the face of D'Arenberg, was hired as CEO to put his impish ideas to work here, before he moved onto stranger things (Stranger & Stranger actually, a brand consultancy firm).

- ✓ *Chardonnay* • *Pinot Noir* (Jerusalem Selection) • *Sémillon* (Adelaide Hills) • *Shiraz* (Grave's Gate)

CHAPEL HILL WINERY

McLaren Vale

This Chapel Hill has no connection with the Australian-made wines of the same name from Hungary, but instead derives its name from the deconsecrated, 19th-century hilltop chapel which is used as its winery. In December 2000, Chapel Hill was purchased by the Swiss Schmidheiny family, which also owns Cuvaision Winery in California, as well as vineyards in Argentina and Switzerland.

- ✓ *Cabernet Sauvignon* • *Chardonnay* (Reserve, Unwooded) • *Classic red blend* (The Vicar) • *Shiraz* (McLaren Vale) • *Verdelbo*

M. CHAPOUTIER

Mount Benson

This famous Rhône Valley *négociant* established its presence in Australia in 1998, when it purchased land at Mount Benson, and began planting. It now has 90 acres (36 hectares) of Shiraz, Marsanne, Viognier, and Cabernet Sauvignon, plus two joint ventures in Victoria: one with Jasper Hill at Heathcote, the other with Mount Langi Ghiran in the Grampians region. Mount Benson is biodynamic, as is Jasper Hill, but Mount Langi Ghiran is not at the time of writing. Chapoutier's Mount Benson Shiraz is not your typical Australian blockbuster, claiming only 13 percent alcohol, with only 20 percent new oak.

- ✓ *Entire range, now and in the future*

CLARENDON HILLS

McLaren Vale

Roman Bratasiuk strives for the biggest, most concentrated wines he can possibly extract from his old vines.

- ✓ *Grenache* (Romas Vineyard) • *Shiraz* (Piggott Range)

COCKATOO RIDGE

Barossa Valley

Although the Cockatoo Ridge wine label has been around since 1991, this company was not established until 2002, when it was launched on the Australian stock exchange, and now occupies Hardy's former Siegersdorf winery, which was built in 1920. Cockatoo Ridge took over International Australian Vintners (formerly Andrew Garrett Vineyard Estates) in May 2004 and in the process acquired various labels, including the founder's eponymous brand Andrew Garrett (export only; confusingly, almost exactly the same brand name as Garrett sold to Beringer Blass), Barossa Valley, Kelly's Promise (the Reserve restricted to the McLaren Vale fruit), Yarra Glen (Yarra Valley), Springwood Park (from various South Australian regions), and Ironwood.

- ✓ *Chardonnay* (Springwood Park) • *Classic red blend* (Yarra Glen Irma's Cabernet)

CORIOLE

McLaren Vale

Full-throttle reds, including top-flight Shiraz and what was once the New World's best Sangiovese (still the same brilliant quality, but lots of top producers are now growing this and other Italian varieties). Redstone is a Shiraz-Cabernet blend, while Mary Kathleen is a Bordeaux-style blend.

- ✓ *Classic red blend* (Mary Kathleen, Redstone) • *Chenin Blanc* • *Nebbiolo* • *Sangiovese*

- *Sémillon* (especially the occasional Lalla Rookh) • *Shiraz*

CRABTREE OF WATERVALE

Clare Valley
★★★

Smallish, family-owned enterprise producing extraordinary-value, elegantly structured wines.

- ✓ *Grenache* • *Riesling* • *Shiraz*

CROSER

See Petaluma

D'ARENBERG WINES

McLaren Vale
★★★

The original vineyards were planted in the 1890s, and purchased in 1912 by teetotaler John Osborn, whose family has owned the business ever since. I have been tasting these wines since the 1970s, when the style of the reds was sort of dusty-dry, but could they age! The wines became more rounded in the 1980s, but the real revolution came in the 1990s, when the wines became more voluptuous. The 1990s also saw the arrival of Zar Brooks, whose marketing flair, and ability to dream up catchy names, woke this slumbering giant. All of D'Arrenberg's Shiraz wines are stunning, but none more so than Dead Arm, which is a true Australian classic. Old Vine Shiraz and Footbolt Shiraz are almost in the same league, as is Sticks & Stones, the Rioja-style blend, and The Ironstone Pressings blend of Grenache, Mourvèdre, and Shiraz.

- ✓ *Botrytis* (Noble Riesling) • *Cabernet Sauvignon* (The Coppermine Road) • *Chardonnay* • *Classic red blend* (Bonsai Vine GSM, Sticks & Stones Tempranillo-Grenache, The Ironstone Pressings, The Laughing Magpie Shiraz-Viognier) • *Grenache* (The Custodian) • *Mourvèdre* (The Twentyeight Road) • *Shiraz*

ELDERTON

Barossa Valley
★★★

Established in 1984, Elderton has gained an enviable reputation for its high-quality, often highly oaked, wines since the early 1990s, with Cabernet Sauvignon king of this particular castle.

- ✓ *Cabernet Sauvignon* (Ashmead) • *Classic red blend* (CSM) •

Merlot • *Shiraz* (Command) • *Sparkling* (Pinot Pressings)

ELDRIDGE

Clare Valley
★★★

The quality from Leigh and Karen Eldridge gets better with each vintage. Surprisingly good Gamay.

- ✓ *Cabernet Sauvignon* • *Classic white blend* (Sémillon-Sauvignon Blanc) • *Gamay* • *Riesling* (Watervale) • *Shiraz* (Blue Chip)

GARTNER FAMILY VINEYARDS

Coonawarra
★★★

When you have over 1,000 acres (400 hectares), plus a shareholding in almost 500 acres (200 hectares) elsewhere, and supply other wineries with grapes, it's very easy to hold back something special for your own label.

- ✓ *Cabernet Sauvignon* • *Chardonnay* • *Shiraz*

GLAETZER WINES

Barossa Valley
★★★

Brilliant Shiraz, both still and sparkling.

- ✓ *Shiraz* • *Sparkling* (Shiraz)

GROSSET

Clare Valley
★★★

Owner-winemaker Jeffrey Grosset is widely regarded as the king of Australian Riesling, but everything he produces is special. Gaia is a Bordeaux-style blend. Mesh is a Yalumba-Grosset collaboration.

- ✓ *Chardonnay* (Piccadilly) • *Classic red blend* (Gaia) • *Classic white blend* (Sémillon Sauvignon Blanc) • *Pinot Noir* • *Riesling* (Mesh, Polish Hill, Watervale)

HAAN WINES

Barossa Valley
★★★

Established in 1993 by Hans and Fransien Haan. They are determined to make a name for their Merlot, thus have contracted James Irvine as winemaker.

- ✓ *Merlot* • *Sémillon* • *Viognier*

HAMILTON

McLaren Vale
★★★

Richard Hamilton makes stunning wines, particularly reds. Hut Block Cabernets is a blend of Cabernet Sauvignon and Cabernet Franc. Hamilton also owns his late uncle's vineyard in Coonawarra, Leconfield.

- ✓ *Cabernet Sauvignon* (Hut Block) • *Classic red blend* (Hut Block Cabernets) • *Merlot* (Lot 148) • *Shiraz* (Gumpers' Block, Centurion 100 Year Old Vines)

HARDY'S

McLaren Vale
★★★

This large brand is the basis of the BRL Hardy group (see Australia's wine groups, p.556), which continues to produce a number of wines under various labels bearing the Hardy's name. This diverse selection ranges from penny-pinchers through penny-savers to premium-quality wines. Eileen Hardy Chardonnay (a wine named after the late but much-loved matriarch of the family for 40 years) consistently retains its reputation as one of Australia's very greatest wines.

- ✓ *Botrytis* (Padthaway Noble Riesling) • *Cabernet Sauvignon* (Padthaway, Thomas Hardy, Tintara) • *Chardonnay* (Eileen Hardy, Tintara) • *Fortified* (Ports: Show, Tall Ships, Tawny, Vintage, Whiskers Blake Tawny) • *Riesling* (Siegersdorf) • *Shiraz* (Eileen Hardy, Oomoo, Tintara) • *Sparkling* (Arras as from 1997 vintage, Banrock Station Sparkling Shiraz, Sir James, Nottage Hill, Omni)

HEGGIES VINEYARD

Eden Valley
★★★

Part of Yalumba, this winery has always been known for its Riesling, but has started to produce a fine Merlot in recent years.

- ✓ *Merlot* • *Riesling*

HENRY'S DRIVE

Padthaway
★★★

Established as recently as 1998, Henry's Drive was "discovered" by US critic Robert Parker and has quickly gained a reputation as one of Australia's finest red wine specialists.

- ✓ *Cabernet Sauvignon* • *Shiraz*

HENSCHKE

Eden Valley
★★★

Founded in 1868, this is one of Australia's oldest and greatest wine-producing icons, with Hill of Grace Shiraz, and Cyril Henschke Cabernet Sauvignon lording it over the rest of the highly acclaimed range. Keyneton Estate used to be named Shiraz-Cabernet-Malbec, then Shiraz-Cabernet-Merlot, but is now labeled Euphonium, presumably to allow a certain varietal flexibility without advertising the fact. Henry's is a Shiraz-Grenache-Viognier blend, while Johann's Garden is a Grenache-Mourvèdre-Shiraz.

- ✓ *Cabernet Sauvignon* (Cyril Henschke) • *Chardonnay* (Crane's Eden Valley, Lenswood Croft) • *Classic red blend* (Keyneton Estate Euphonium, Henry's, Johann's Garden) • *Merlot* (Abbot's Prayer) • *Pinot Noir* (Giles) • *Riesling* (Green's Hill) • *Sémillon* (Julius Eden Valley, Louis Eden Valley) • *Shiraz* (Mount Edelstone, Hill of Grace)

HEWITSON

Adelaide
★★★

Dean Hewitson was a winemaker at Petaluma for 10 years, where he achieved the impossible by shining even in the bright light of Brian Croser. During his time at Petaluma, he completed a vintage at that company's subsidiary in Oregon, the Argyle Winery, three harvests in

France, and picked up a Masters degree at UC Davis in California. Hewitson's specialty is to source grapes from very old, superbly sited vineyards in various regions. The Mourvèdre is the extreme example, coming from 150-year-old vines in Barossa.

✓ *Entire range*

HILLSTOWE

Adelaide Hills

★★★

Part of the Banksia group, thus now within the Lion Nathan portfolio.

✓ *Chardonnay* (Udy's Mill) • *Merlot* (The Pinchbowl) • *Shiraz* (Mary's Hundred)

HOLLICK WINES

Coonawarra

★★

Owner-viticulturist Ian Hollick set up his venture in 1983 and has produced some fresh, clean, well-focused wines, including a red Bordeaux-style blend that is simply sold by its Coonawarra appellation.

✓ *Cabernet Sauvignon* (Ravenswood) • *Chardonnay* (Reserve) • *Classic red blend* (Coonawarra Cabernet Sauvignon-Merlot)

INGOLDBY

McLaren Vale

★★

Now just another Beringer Blass brand, making mostly good-value wines, but with occasional standouts.

✓ *Cabernet Sauvignon* (McLaren Vale) • *Chardonnay* (McLaren Vale) • *Shiraz* (McLaren Vale Reserve)

IRVINE

Eden Valley

★★

Established in 1980 by the indefatigable James Irvine, whose name has become synonymous with Merlot. Cheaper wines sold under the Eden Crest range.

✓ *Classic red blend* (Eden Crest Merlot-Cabernet) • *Merlot* (James Irvine Grand Merlot)

JAMIESONS RUN

Coonawarra

★★

At one time, this was the most underrated brand in the Beringer Blass stable. It is not quite the treasure trove of inexpensive goodies it used to be, but can still come up with exceptional-value Chardonnay.

✓ *Classic red blend* (Winemakers Reserve Cabernet-Shiraz) • *Chardonnay*

JIM BARRY WINES

Clare Valley

★★★

Run by Mark and Peter, sons of the eponymous Jim Barry. Their top Shiraz, The Armagh, is one of

Australia's greatest wines. It is also one of the country's most expensive, and, at one-third of the price and almost as good quality as The Armagh, the McRae Wood Shiraz is better value. Virtually all other wines produced by Jim Barry are sold at bargain prices.

✓ *Cabernet Sauvignon* (McRae Wood) • *Chardonnay* (Unwooded) • *Fortified* (Old Walnut Tawny Port, Sentimental Bloke Port) • *Riesling* (Watervale) • *Shiraz* (Lodge Hill, McRae Wood, The Armagh)

KAESLER WINES

Barossa Valley

★★★

Toby and Treena Hauppaufl have shone with Shiraz since purchasing the Kaesler vineyard in 1990, helped no doubt by a core of 110-year-old Shiraz vines. Now they are making top Cabernet Sauvignon.

✓ *Cabernet Sauvignon* • *Shiraz* (Old Vine, Stonehorse)

KATNOOK ESTATE

Coonawarra

★★

Part of the Wingara Group, which is majority-owned by Freixenet of Spain. With 815 acres (330 hectares) of vineyards in prime *terra rossa* soil, Katnook is an upmarket producer of intensely flavored wines that display remarkable finesse, the very best being Cabernet Sauvignon, Shiraz, and Sauvignon Blanc. Since 1979, when production began, Katnook wines have won a remarkable 14 trophies, plus 110 gold, 243 silver, and 645 bronze medals. Expensive wines are sold under the Riddoch label. This should not be confused with Wynns' John Riddoch, although some Riddoch reds are of almost the same outstanding quality. The penny-pinching label Deakin Estate (Murray Darling) has effectively replaced Katnook's cheaper Sunnyclyff range.

✓ *Cabernet Sauvignon* (including Riddoch) • *Merlot* • *Riesling* • *Sauvignon Blanc* • *Shiraz* (including Riddoch)

KAY BROTHERS

McLaren Vale

★★★

A fast-rising star, thanks not only to the blessing of critic Robert Parker, but also to a block of incredibly low-yielding Shiraz vines planted in 1897.

✓ *Merlot* • *Shiraz* (Block 6, Hillside)

KILIKANOON

Clare Valley

★★★

Kilikanoon has been the talk of the town since 2002, when its Riesling, Shiraz, and Cabernet Sauvignon walked away with six out of seven trophies at the Clare Valley Wine Show.

✓ *Cabernet Sauvignon* (Blocks Road) • *Grenache* (Prodigal) • *Riesling* (Mort's Block) • *Shiraz* (Covenant, Oracle)

KNAPPSTEIN

Clare Valley

★★★

Part of Lion Nathan since the takeover of Petaluma. The wines continue going from strength to strength in the capable hands of Andrew Hardy, who trained under Brian Croser.

✓ *Cabernet Sauvignon* (Enterprise) • *Classic white blend* (Sauvignon Blanc-Sémillon) • *Riesling* (Hand Picked) • *Shiraz* (Enterprise) • *Sparkling* (Chainsaw Sparkling Shiraz)

KNAPPSTEIN LENSWOOD VINEYARD

Lenswood

★★★

Since selling off his original winery and vineyards to Petaluma, now owned by Lion Nathan, Tim Knappstein produces a fraction of his former output exclusively from his Lenswood vineyard in the Adelaide Hills, which he established in 1981. If anything, Knappstein's wines are more focused, and have greater finesse, than ever. The Palatine is a blend of Merlot, Malbec, and Cabernet Sauvignon.

✓ *Chardonnay* • *Classic red blend* (The Palatine) • *Pinot Noir* • *Sauvignon Blanc* • *Sémillon*

LEASINGHAM

Clare Valley

★★★

Part of the BRL Hardy group, Leasingham makes wines that offer outstanding quality and value. Bastion (sold on some export markets as Magnus) is a Shiraz-Cabernet blend, while Bin 56 is Cabernet-Malbec.

✓ *Cabernet Sauvignon* (Classic Clare) • *Classic red blend* (Bastion Shiraz Cabernet, Bin 56) • *Riesling* (Bin 7, Classic Clare) • *Shiraz* (Bin 61, Classic Clare, Domaine)

LECONFIELD

Coonawarra

★★★

Owned by Richard Hamilton (see Hamilton), whose uncle, Sydney Hamilton, established Leconfield in 1974.

✓ *Cabernet Sauvignon* • *Merlot* • *Shiraz*

PETER LEHMANN

Barossa Valley

★★★

Often underrated in Australia itself, Peter Lehmann's range of always excellent-value, mostly brilliant-quality wines is highly regarded on international markets. The Mentor is a Cabernet Sauvignon-Malbec-Shiraz blend, while The Seven Surveys is Mourvèdre-Shiraz-Grenache.

✓ *Cabernet Sauvignon* • *Chardonnay* (The Barossa) • *Classic red blend* (The Mentor, The Seven Surveys) • *Fortified* (The King) • *Riesling* (Reserve) • *Rosé* (Grenache) • *Sémillon* (Reserve, The Barossa) • *Shiraz* (Mudflat, Stonewall)

LINDEMANS WINES

Coonawarra

Although this is the best-performing part of Lindemans' current operations, it is impossible to subdivide the brand according to location, particularly when Southcorp is progressively dropping Lindemans' regionality in favor of state blends. Consequently, all this brand's best wines can be found in the Victoria section, where the overall score is ★★★, although the wines produced in Lindemans Coonawarra winery would easily rate★★ at the moment. See Lindemans Wines, Victoria.

MAGLIERI OF MCLAREN VALE

McLaren Vale

★★★

Part of Beringer Blass since 1999. These extraordinary bargain wines are at last finding their way into mainstream outlets on export markets.

✓ *Barbera* • *Cabernet Sauvignon* • *Nebbiolo* • *Sangiovese* • *Sémillon* • *Shiraz*

MAJELLA

Coonawarra

★★★

The Lynn family had kept merino sheep for four generations, when in 1968 George and Pat Lynn decided to invest in vineyards. The first 10 years were less than successful, with 30 tons or more of grapes left to rot on the vines in some years due to low demand. In 1980, however, they entered into an agreement to supply Wynns, a relationship that lasted for over 20 years, giving the Lynns confidence to strike out on their own. Cabernet Sauvignon and Shiraz are the standout wines here. The Mallea is a Shiraz-Cabernet Sauvignon blend.

- ✓ *Cabernet Sauvignon* • *Classic red blend* (The Mallea) • *Shiraz* • *Sparkling* (Sparkling Shiraz)

MAXWELL WINES

McLaren Vale

★★★

Founded in 1979, this fairly well-established winery became an Aladdin's cave of wonderful vinous treasures in the 1990s, but has settled down to two absolute standouts.

- ✓ *Cabernet Sauvignon* (Lime Cave) • *Shiraz* (Ellen Street)

CHARLES MELTON

Barossa Valley

★★★

Most famous for his Châteauneuf-du-Pape-type blend, cheekily named Nine Popes, but all the reds produced here are highfliers, and Melton's sweet, seductive, sparkling Shiraz is regularly one of Australia's two or three finest. Rose of Virginia is a Grenache-Cabernet blend. If you want to see just how small, thus concentrated, a bunch of dry-farmed Shiraz is, then take a look at the website.

- ✓ *Cabernet Sauvignon* • *Classic red blend* (Nine Popes) • *Rosé* (Rose of Virginia) • *Shiraz*

GEOFF MERRILL

McLaren Vale

★★★

While Geoff Merrill was senior winemaker (1977-85) at Chateau Reynella, he started selling wines under his own name. He was appointed consultant red winemaker for Reynella's parent company, Thomas Hardy and Son, in 1985, but was actively searching for somewhere to make his own wines. That same year, Merrill came across the rundown Mount Hurtle Winery, which he purchased and restored, before leaving Hardy's in 1988 to concentrate on his own operation. At first, the emphasis was on the Mount Hurtle brand, but since 1993, when he took up the position as a consultant winemaker in Italy to UK supermarket Sainsbury and Gruppo Italiano Vini in Italy, the international fame of the moustachioed Merrill began to

outshine that of Mount Hurtle, thus it was inevitable that his eponymous brand would one day take center stage. Merrill's style is for elegance and length over concentration and weight, with the occasional overoaking the only significant chink in his armor. Virtually all the wines offer value for money to one degree or another. The one obvious exception being the stunningly beautiful, but horrendously expensive, Henley Shiraz. Mount Hurtle survives, but as an exclusive brand for Liquorland.

- ✓ *Chardonnay* (Unwooded) • *Classic red blend* (Shiraz-Grenache-Mourvèdre) • *Classic white blend* (Sémillon-Chardonnay) • *Shiraz* (Henley, Reserve)

MIRANDA WINES

Barossa

★★★

Part of McGuigan Simeon since 2003, the origins of Miranda Wines date back to 1938, when Francesco Miranda arrived from Naples. There are three Miranda wineries, all producing and selling their own wines: the original and largest in Riverina, the latest (1998) in King Valley, and the best in Barossa. These wines are underrated, but since 1995, they have picked up more than 2,500 national and international awards, so they must be doing something right. The single most medal-laden wine is Golden Botrytis from the Riverina winery, but most of Miranda's best wines are made in the Barossa, where the value is great, and the quality constantly improving. The Emu Plains Colombar-Chardonnay is not a classic white blend, but it is a deliciously fresh one! An inexpensive range of night-harvested wines is sold under the Firefly label.

- ✓ *Botrytis* (Botrytis Sémillon, Golden Botrytis) • *Cabernet Sauvignon* (High Country) • *Classic red blend* (Reserve Shiraz Cabernet) • *Riesling* (Eden Valley) • *Rosé* (White Shiraz) • *Shiraz* (Family Reserve Old Vine, The Drainings)

MITCHELL

Clare Valley

★★★

A small winery, Mitchell produces one of Australia's classic examples of Riesling.

- ✓ *Riesling* (Watervale) • *Shiraz* (Pepper Tree Vineyard)

MITOLO

Adelaide Plains

★★★

Fast-rising star with award-winning wine made by Ben Glaetzer. The wines are mostly sourced from McLaren Vale, with (so far) one from the Barossa Valley.

- ✓ *Cabernet Sauvignon* (Serpico) • *Shiraz* (G.A.M., Savitar)

MOUNT HORROCKS

Clare Valley

★★★

The quality and definition in style of these wines have really shone since the late 1990s, especially in the Riesling wines, which are world class. All Rieslings are highly recommended, but one—the Cordon Cut—should be explained. Its beautifully balanced sweet style is achieved by cutting, but leaving in place the cordon, which disconnects the grape clusters from the vine's metabolism, artificially inducing *passerillage*.

- ✓ *Classic red blend* (Cabernet-Merlot) • *Riesling* • *Sémillon*

MOUNTADAM VINEYARD

Eden Valley

★★★

Recently purchased by LVMH, this estate produces wines that are rich, yet lean, and of excellent quality. They come from vineyards that once belonged to Adam Wynn, son of the founder of the almost legendary Wynns Coonawarra estate (now belonging to Southcorp). Adam Wynn is still very active in the day-to-day running of Mountadam. The Red is a Cabernet Sauvignon-Merlot blend. Other brands include David Wynn and Eden Ridge.

- ✓ *Classic red blend* (The Red) • *Pinot Noir* • *Riesling*

MURDOCK

Coonawarra

②

I have not tasted the Cabernet Sauvignon from this relatively new producer (established 1998), but colleagues who have rave about its richness, ripeness, and elegance. To achieve elegance with richness and ripeness is, for me, the height of quality, thus I feel obliged to pass on the recommendation of this fast-rising producer.

NENPENTE THE VINEYARDS

Adelaide Hills

★★★

In 1996 the Tweddall family became the second-ever vineyard owner to receive permission to build a winery in the Adelaide Hills (Petaluma being the first, almost 20 years earlier).

- ✓ *Chardonnay* • *Pinot Noir* • *Riesling*

NOON WINERY

McLaren Vale

★★★

I don't know whether it's a trick of the mind, or if it really happened, but I have this memory of Drew Noon in 1991 at Cassegain, where he was assistant winemaker, and he is telling me that he dropped the "e" from the end of his name because he didn't want to be "no one"! Since then, he has passed his Master of Wine examination, taken over his parents' winery and caused enough of a stir with his massive,

superripe wine oddities to catch the attention of critic Robert Parker. Eclipse is a Grenache-Shiraz blend, and VP is a vintage port style.

- ✓ *Cabernet Sauvignon* (Reserve) • *Classic red wine* (Eclipse) • *Fortified* (VP) • *Shiraz* (Reserve)

O'LEARY WALKER

Clare Valley

★★★

David O'Leary and Nick Walker started this enterprise as recently as 2001, and so far the Rieslings have been splendid.

- ✓ *Classic red blend* (Cabernet Sauvignon Merlot) • *Riesling* (Watervale) • *Sémillon* (Watervale)

ORLANDO

Barossa Valley

★★★

Orlando in general, and Jacob's Creek in particular, have propelled the French-owned Orlando Wyndham group to become one of Australia's top four wine companies. But there is a big difference between the Jacob's Creek basic range at AU\$8 (US\$6) a bottle, and various top-performing Jacob's Creek Reserve wines at twice the price (and 10 times the bargain). Even in the basic range, there are vintages that have been so stunning that they have run away with gold medals at Capital Shows, and have even taken trophies or top golds, much to the embarrassment of some judges. I am not ashamed to say that I have been impressed by bottom-line Jacob's Creek wines such as the 2003 Grenache-Shiraz, 2000 Merlot, 1998 Shiraz-Cabernet, 2000 Sémillon-Sauvignon Blanc, 2000 and 2002 Riesling. Even Jacob's Creek Chardonnay (the very thought of which normally makes my mouth water for a decent beer) enjoyed a remarkable run of quality between the 1999 and 2002 vintages, outclassing the Reserve in the last two of those years. Since being launched in 1983, Jacob's Creek core range Riesling alone has won 253 awards, including three trophies and 20 gold medals. The entire Jacob's Creek range has notched up 27 trophies and 169 golds, but is the wine the same everywhere? Is the same vintage of the same variety or blend exactly the same, not only in all parts of Australia, but on every market in the world? There is considerable variation in the awards, with supposedly the same wine winning a trophy and numerous golds, yet sometimes three times as many bronzes, but that happens to many other wines, and could equally be due to variation of judging panels or the precise stage at which the wines have developed in bottle when they are tasted. Until every wine at every competition is analysed, I do not suppose we will ever know. Note that JC below indicates Jacob's Creek.

✓ *Botrytis* (Sémillon) • *Cabernet Sauvignon* (Jacaranda Ridge, JC Reserve, St. Hugo) • *Chardonnay* (JC Limited Release, Russet Ridge Coonawarra, St. Hilary Padthaway) • *Classic red blend* (JC Grenache-Shiraz, JC Limited Release Shiraz-Cabernet) • *Riesling* (JC, JC Reserve) • *Shiraz* (Centenary Hill, JC Reserve, Lawson's Padthaway)

PARACOMBE

Adelaide Hills

★●

Owner-viticultrice-winemaker Paul Drogemuller produces one of Australia's best-value Cabernet Franc wines.

✓ *Cabernet Franc* • *Chardonnay* • *Sauvignon Blanc*

PARKER ESTATE

Coonawarra

★★★

Acquired by the Rathbone Family Group in 2004, who utilized the consulting services of Dr. Andrew Pirie (see Pipers Brook, Tasmania) for a short while, the wines are now made by Peter Bissell of Balnaves. The estate's small, low-yielding vineyard produces superpremium wines, headed by First Growth, a blend of Cabernet Sauvignon and Merlot.

✓ *Cabernet Sauvignon* (Terra Rossa) • *Classic red blend* (Terra Rossa First Growth) • *Merlot* (Terra Rossa)

PAULETT'S

Clare Valley

★★

I have always enjoyed Neil Paulett's beautifully focused white wines, and am now rapidly becoming impressed with some of his reds.

✓ *Classic red blend* (Cabernet-Merlot) • *Riesling* • *Sauvignon Blanc* • *Shiraz*

PENFOLDS WINES

Barossa Valley

★★★●

Penfolds' superb Grange (formerly Grange Hermitage) is Australia's most famous wine, created by the late and legendary Max Schubert, and through this single masterpiece Penfolds itself has become a living legend. Naturally enough, Grange is a very expensive product—the price of a Bordeaux *premier cru*—but other far less expensive Penfolds wines are miniature masterpieces in their own right. However, some

wines, such as Bin 707 and The Magill, have become very pricey (though nowhere near as expensive as Grange), and The Magill is, in terms of its origin, more Grange than Grange has ever been, being sourced entirely from the vineyard that many people once believed to be the sole source of Grange. It is now part of Southcorp. RWT stands for Red Wine Trial, only the trial has long since stopped, and the name has stuck. Positioned between Grange and Magill, RWT is a Shiraz of incredible finesse for its size. Bin 707 is positioned as the Cabernet Sauvignon equivalent of RWT. Bin 138 is a Barossa Valley Shiraz-Mourvèdre-Grenache. Bin 389 is a Cabernet-Shiraz. Rawson's Retreat is the penny-pinching, decent-value label, but for just a little more, Koonunga Hill offers far better value for money, and even has the occasional real standout. Penfolds' Clare Valley operation is certified organic.

✓ *Cabernet Sauvignon* (Bin 407, Bin 707) • *Chardonnay* (Bin 00A, Bin 98A, Yattarna) • *Classic red blend* (Bin 138, Bin 389) • *Fortified* (Grandfather Port) • *Riesling* (Eden Valley Reserve) • *Sémillon* (Adelaide Hills) • *Shiraz* (Grange, Kalimna Bin 28, Magill Estate, RWT)

PENLEY ESTATE

Coonawarra

★★

Established in 1988 by Kym Tolley (whose mother was a Penfold and father a Tolley, hence the cheekily named Pen-ley). Penley Estates leans toward Penfolds in style, as Kym's penchant is clearly for red wines, but he has recently produced an excellent, rich, lush, toasty Chardonnay. However, Reserve and Phoenix Cabernet Sauvignons are the absolute standouts here.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Classic red blend* (Shiraz-Cabernet) • *Sparkling* (Pinot Noir-Chardonnay)

PETALUMA

Adelaide Hills

★★★●

This is still Brian Croser's domaine, even though Petaluma was the target of a hostile takeover by Lion Nathan. In the ensuing acrimony, Croser swore that he would not work for the new owner, but ended up in charge of Lion Nathan's entire wine group. Under Croser, Petaluma became a master of beautifully ripe, classically dry, top-quality Riesling that ages slowly and gracefully, and one of the best exponents of sparkling wine in the New World (see Argyle Winery, Oregon). Not to mention one of Australia's best Merlot wines, and a highly reputed Chardonnay too. Second wines are sold under Bridgewater Mill label.

✓ *Entire range*

PEWSEY VALE

Eden Valley

★★●

Forget the Cabernet Sauvignon, there is only one reason to buy Pewsey Vale, and that is for its absolutely classic Eden Valley Riesling. Even the "basic" Riesling is superb, but The Contour is magnificent.

✓ *Riesling*

PIKES

Clare Valley

★★●

Made by Neil Pike, formerly a winemaker at Mitchell, these excellent-quality red wines lean less on weight than subtlety and elegance to achieve complexity. The Luccio Red is a super-Tuscan-type blend of Sangiovese, Merlot, and Cabernet Sauvignon.

✓ *Classic red blend* (Luccio Red) • *Riesling* • *Shiraz*

PRIMO

Adelaide Plains

★★●

I cannot think why I was not wildly enthusiastic about these wines in previous editions. Owner-winemaker Joe Grilli produces some truly excellent wines, including the exquisitely rich, creamy-cedary Joseph sparkling red, its cult following being easily justified by the fact that it is regularly one of Australia's top two or three sparkling red wines. Although the best wines are sold under the Joseph label, don't ignore the basic Primo Estate white (La Biondina) and red (Il Briccone), which represent tremendous, everyday drinking value.

✓ *Botrytis* (Joseph La Magna Riesling) • *Classic red blend* (Il Briccone Shiraz-Sangiovese, Joseph Cabernet-Merlot) • *Colombard* (Il Biondina) • *Sparkling* (Joseph Red)

PUNTERS CORNER

Coonawarra

★★

This venture started life quite modestly in 1988, with 40 acres (16 hectares) of vineyards in Victoria

and Coonawarra, but now amounts to more than 370 acres (150 hectares), virtually all in Coonawarra, including 30 acres (12 hectares) surrounding the Punters Corner cellar sales (the wines are made under contract elsewhere). The basic Shiraz is stunning, but pales in comparison with the Spartacus Reserve. The Cabernet is almost entirely Cabernet Sauvignon, with just 9 percent (or thereabouts) of Merlot. Triple Crown is a blend of Cabernet Sauvignon, Shiraz, and Merlot.

✓ *Cabernet Sauvignon* • *Classic red blend* (Cabernet, Triple Crown) • *Shiraz*

RESCHKE WINES

Coonawarra

★★

The launch of the first wine, the 1998 Emyrean, caused something of a stir. First, because the asking price was AU\$100 (US\$65) for a wine with no track record. Second, because its big, porty character was praised to heaven and back by those who believe big is best. The next two vintages, however, saw a substantial drop down in alcohol level: virtually 1 percent per year, so that by 2000 Emyrean was a Bordeaux-like 12.9 percent alcohol. The wine is now more elegant, and possibly longer-lived, depending what you expect in a fully mature wine. The Vitulus is 100 percent Cabernet Sauvignon, whereas the Emyrean has always included 10 percent Merlot, but has also had 3 percent Cabernet Franc since 1999 (thus remains with the limit of a so-called pure varietal, which may include up to 15 percent of other grape varieties). The Taikurri is a blend of Cabernet Sauvignon, Merlot, Malbec, and Cabernet Franc.

✓ *Cabernet Sauvignon* (Emyrean, Vitulus) • *Classic red blend* (Taikurri) • *Shiraz*

REYNELLA

McLaren Vale

★★

Formerly known as Chateau Reynella, this historic winery dates from 1838, but has belonged to BRL Hardy and its previous incarnations since 1982. Only two, so-called superpremium wines are made, both with the emphasis on traditional methods. Fruit is favored over oak, although the latter—both American and French—still plays a significant role.

✓ *Cabernet Sauvignon* (Basket Pressed) • *Fortified* (Vintage Port) • *Shiraz* (Basket Pressed)

ROCKFORD WINES

Barossa Valley

★★

The very traditional reds from low-yielding vines might be a bit soupy for some, but the Black Shiraz will be admired by anyone who enjoys Australia's wonderfully eccentric, show-style, sparkling Shiraz. Owner-

winemaker Robert O'Callaghan has apparently made a number of onetime, single-vineyard Shiraz wines that are simply spectacular, but I have not, as yet, tasted them.

- ✓ Cabernet Sauvignon (Rifle Range) • Grenache (Moppa Springs) • Semillon (Local Growers) • Shiraz (Basket Press) • Sparkling (Black Shiraz)

ROSEMOUNT ESTATE

McLaren Vale

See Rosemount Estate, New South Wales.

ROUGE HOMME

Limestone Coast

Southcorp sold off the winery of this Lindemans brand in 2002, but not the name, thus it really is just another brand, albeit a good-value one. Rouge Homme could throw the odd curved ball, such as the truly excellent 1997 Coonawarra Pinot Noir. How on earth did they manage that? Coonawarra is hardly Burgundy; in fact, it is one of the last places on earth any sane person would plant that variety. In recent years, however, the provenance of these wines has been widened to the Limestone Coast, while the range has been reduced to a mere five wines. The Cabernet Sauvignon used to be the most reliable Rouge Homme, and some vintages were extraordinarily good, but 1999 was the last produced, unless Southcorp changes its mind. That leaves the Cabernet Merlot and Shiraz Cabernet as the safest bets.

RYMILL

Coonawarra

This property is owned and run by the descendants of John Riddoch, who planted the first Coonawarra vineyard in 1861. The MC² is so named because it is a blend of Merlot and two Cabernets (Sauvignon and Franc), but it is also half of Einstein's famous formula, E=mc², which demonstrates that energy equals mass and, as nuclear fission scientists would discover 30-odd years later, a minuscule mass can equal fabulously large amount of energy in some circumstances, so maybe there is also a more mystical meaning behind this label?

- ✓ Cabernet Sauvignon • Classic red blend (MC²) • Shiraz

ST. HALLETT

Barossa Valley

Part of Banksia, which was taken over by Lion Nathan in 2001, this long-established winery still makes splendidly rich wines. Indeed, the quality has deepened over the last few years. GST is a blend of Grenache, Shiraz, and Touriga. It is also a pun on GST (Goods Services Tax), but that's only 10 per cent of the story.

- ✓ Cabernet Sauvignon • Classic red blend (GST) • Merlot • Riesling (Eden Valley) • Shiraz (Blackwell, Old Block)

SALTRAM

Barossa Valley

Saltram has refocused on its red wines, for which it was once justifiably famous, and is again today.

- ✓ Cabernet Sauvignon (Mamre Brook) • Chardonnay (Mamre Brook) • Classic red blend (Barossa Cabernet-Merlot) • Shiraz (Mamre Brook, No.1 Reserve, The Eighth Maker)

SEAVIEW WINERY

McLaren Vale

Now part of Southcorp, Seaview has the edge over its sister Seppelt brand with its entry-level wines, although Seppelt wins hands down in the premium category.

- ✓ Sparkling (Blanc de Blancs, Edwards & Chaffey, Pinot Noir-Chardonnay)

SEPPELT

Barossa Valley

Seppelt Great Western in Victoria is Southcorp's sparkling wine specialist, while this Seppelt, in Seppeltsfield of the Barossa Valley, is its fortified wine specialist. Even though part of a corporate empire, Seppelt remains as priceless a piece of Australia's wine history as it has ever been, and Southcorp has emphasized that by restricting this winery and cellars exclusively to fortified wine. Table wines used to be made here, but no longer—they are all sourced from Victoria. The entire range of Seppelt's fortified wine is recommended, none more so than the Para range of liqueur ports. Yet it is with these wines that I have my only quibble. Or, more accurately, with the bottles that contain the wines. Worst of all is the Para 100 Year Old Liqueur Port, vintages of which easily fetch between AU\$1,000 and AU\$2,000 (US\$750–1,000) a bottle, and is

contained in a bottle that is a cross between a pretentious Cognac bottle and Mateus! What is wrong with a top-quality classic bottle shape?

- ✓ Entire range

SHAW & SMITH

Adelaide Hills

This up-and-coming venture was set up in 1989 by Martin Shaw, who is well known for his flying winemaker activities, and Michael Hill-Smith, the first Australian to become a Master of Wine. After squatting at Petaluma for a decade, Shaw & Smith built their own high-tech winery at Balhannah in 2000.

- ✓ Chardonnay (M3) • Sauvignon Blanc • Merlot • Shiraz

SKILLOGALEE

Clare Valley

Owner-winemaker David Palmer produces increasingly stylish wines from his 150-acre (60-hectare) property, particularly the Riesling.

- ✓ Classic red blend (The Cabernets) • Riesling • Shiraz

TAPANAPPA WINES

Wrattonbully

This must be one to watch: a partnership formed between Brian Croser, Champagne Bollinger (which was a major shareholder in Petaluma before the takeover by Lion Nathan), and Jean-Michel Cazes of Château Lynch-Bages in Bordeaux. This high-powered trio has purchased Koppamurra Vineyard in Wrattobulley. Tapanappa is named after a sandstone formation near Croser's beach house. Apparently it is an Aboriginal word meaning "stick to the path"—and a lot of people will be watching to see if they live up to this!

TATACHILLA

McLaren Vale

Part of Banksia, which was taken over by Lion Nathan in 2001, this long-established winery has increased tremendously its already excellent quality and value over the last five years or so. Keystone is a Grenache-Shiraz blend, while Partners is Cabernet Sauvignon-Shiraz.

- ✓ Cabernet Sauvignon (McLaren

- Vale, Padthaway) • Classic red blend (Keystone, Partners) • Merlot (Adelaide Hills, Clarendon Vineyard) • Shiraz (Foundation, McLaren Vale) • Sparkling (Sparkling Malbec)

TAYLORS

Clare Vale

The basic Cabernet Sauvignon, Shiraz, and Riesling would probably be singled out at any other winery. They're not just some of the best bargains in Australia, but some of the country's greatest wines too. The St. Andrews range is, however, in a different league, as is part of the relatively new Jaraman range. The best classic red blend is the Promised Land Shiraz-Cabernet, but it too cannot live in the company of those recommended below. Wines also sold under the Wakefield label (the Cabernet Sauvignon and Merlot can be brilliant).

- ✓ Cabernet Sauvignon (Jaraman, St. Andrews) • Chardonnay (Jaraman) • Riesling (Jaraman, Clare, St. Andrews) • Shiraz (St. Andrews)

TOLLANA

Barossa Valley

Once entirely estate-produced, Tollana is now part of Southcorp, and I used to think this had not affected its identity, quality, or value, but is it my imagination or is this brand, which dates from 1888, disappearing before our very eyes? It is like watching a grand old ship steam into the horizon.

- ✓ Botrytis (Riesling) • Cabernet Sauvignon (Bin TR222) • Shiraz (Bin TR16)

TORBRECK

Barossa Valley

The antithesis of Tollana, Torbreck is relatively young (1994), privately owned, and all of a sudden making headlines (thanks in part to US critic Robert Parker's gushing accolades). Both RunRig and Descendant are Shiraz-Viognier blends, but the former will set you

back AU\$200–250 (US\$150–200), whereas the latter costs a mere AU\$125–150 (US\$100–120)—so what is the difference? Well, RunRig contains just 3 percent of Viognier, compared to 8 percent in Descendant. Furthermore, the Viognier is vinified separately for RunRig, whereas both grapes are crushed and fermented together for Descendant, which makes the cheaper wine (if it is possible to describe Descendant as cheaper) more classic in French terms. They are each from different vineyards, the Descendant vineyard having been planted from cuttings from RunRig, hence the name.

Descendant spends 18 months in two- to three-year-old French oak, whereas RunRig is given 30 months in French oak, 60 percent of which is new. The Steading is Grenache, Mataro (Mourvèdre), and Shiraz, while Cuvée Juveniles is a full-throttle, fruit-driven, unoaked blend of Grenache, Shiraz, and Mataro. Juveniles is all old vines, but best drunk as young and as fresh as possible. VMR is a Viognier, Marsanne, and Roussanne blend, with winning acidity balance. The Bothie is Torbeck's interpretation of a Muscat de Beaumes-de-Venise.

✓ *Classic red blend* (Cuvée Juveniles, Descendant, RunRig, The Steading) • *Classic white blend* (VMR) • *Grenache* (Les Amis) • *Fortified* (The Bothie) • *Shiraz* (The Factor, The Struie)

TURKEY FLAT

Barossa Valley

★★★

Turkey Flat is a recently established, highflying winery producing several exceptionally rich, lush, complex red wines from superbly sited vineyards, the core of which are over 150 years old. Butcher's Block is a blend of Mataro (Mourvèdre), Shiraz, and Grenache.

✓ *Cabernet Sauvignon* • *Classic red blend* (Butcher's Block) • *Classic white blend* (Marsanne Sémillon) • *Fortified* (Pedro Ximénez) • *Grenache Noir* • *Rosé* • *Shiraz*

GEOFF WEAVER

Adelaide Hills

★★★

For four years Geoff Weaver was chief winemaker for the entire Hardys wine group, which effectively made him personally responsible for 10 percent of Australia's entire wine production. Not the sort of pressure that many of us would want to endure for too long, so little surprise that he left to pursue his own small wine operation in 1992. He had in fact planted his vineyard at Lenswood 10 years earlier, so it was nicely matured, and wines had been made on a part-time basis since 1986. Weaver's vineyard was also history in the making, as it was a pioneering venture into an untried region.

✓ *Chardonnay* • *Classic red blend* (Cabernet-Merlot) • *Pinot Noir* • *Riesling* • *Sauvignon Blanc*

WENDOUREE

Clare Valley

★★★

One of Australia's icon wineries since the late 19th century. Wendouree's current CEO-winemaker, Tony Brady, has continued to produce some of this country's longest-lived reds since taking over in 1974. Shiraz is the jewel in Wendouree's crown, but given some bottle-age, Brady's wonderfully individual and expressive blended reds are near equals.

✓ *Cabernet Sauvignon* • *Classic red blend* (Shiraz-Malbec, Shiraz-Mataro, Cabernet Sauvignon-Malbec) • *Shiraz*

WIRRA WIRRA

McLaren Vale

★★★

When Greg and Roger Trott took over Wirra Wirra in 1969, it was a wreck, literally. But the Trotts built it into a stylish winery making stylish wines, helped in the early days by that dynamic flying winemaker duo, Croser & Jordan (or should that be Jordan & Croser?). Croser returned for a stint as managing director, when he grew restless after having achieved everything he had set out to do at Domaine Chandon, but returned to that fold when LVMH made him an offer he couldn't refuse. Whoever Greg Trott has had around the place, Wirra Wirra has always had an excellent reputation, but over the last few years the quality has become more exciting and deepened across the range.

✓ *Cabernet Sauvignon* (The Angelus) • *Chardonnay* • *Classic red blend* (Grenache-Shiraz) • *Fortified* (VP Vintage Fortified Shiraz) • *Grenache* (McLaren Vale) • *Shiraz* (Church Block, McLaren Vale, RSW)

WOLF BLOSS

Barossa Valley

★★★

This company is now part of Beringer Blass, but its range is still huge and the wines are marketed as aggressively as ever. Wolf Blass wines are mostly graded according to the color of their label, which works well enough, although the Yellow Label tends to be more cheap than cheerful these days (the last exception being the 1999 Yellow Label Cabernet Sauvignon, which really did punch above its weight). The Red Label is cheaper than the Yellow, and Eaglehawk cheaper still (but try the Riesling!). Contrary to what most people intuitively think, the pecking order after Yellow Label is Gold, Grey, Black, and, logically, at the very top

comes Platinum. It is this role reversal of what the colors really mean that has been the genius of Wolf Blass marketing, and no Australian winery is more marketing-driven than Wolf Blass, but its best wines have to be among the country's most prolific award-winners for this to work, and that has always been so. By 1990, the total number of awards that Wolf Blass had garnered stood at 2,575, including an amazing 135 trophies and no fewer than 712 gold medals. That was 15 years ago. Who knows what the total is these days, but I can safely say that at the upper end of the Wolf Blass range, the quality has never been better. The Grey Label, which has been around since 1967, has replaced the Brown Label, but I've retained the Brown Label recommendations as the wines will be around for some time to come.

✓ *Cabernet Sauvignon-Shiraz* (Black Label, Grey Label, Platinum Label, President's Selection) • *Classic red blend* (Black Label Cabernet Sauvignon-Shiraz, Grey Label Cabernet Sauvignon-Shiraz) • *Riesling* (Clare Valley, Eaglehawk, Gold Label, South Australia) • *Shiraz* (Brown Label, McLaren Vale Reserve, Platinum Label)

WOODSTOCK

McLaren Vale

★★★

Doug and Mary Collett acquired a 25-acre (10-hectare), derelict vineyard and an old cottage named Woodstock in 1973. Apparently, the Townsend family had settled there in 1859, from Woodstock in Oxfordshire, England, which was the origin of the name. In fact I wrote the first and all successive editions of this encyclopedia in Witney, which is just a few miles from Woodstock. The Townsend name is still common in these parts. They are probably all distantly related to the original settlers of this property. The Colletts should try to get a local importer. The good folk of Woodstock would probably treat it as their house wine, making it as popular in its restaurants as Oxford Landing is in that city. Five Feet is a blend of Cabernet Sauvignon, Shiraz, Merlot, and Petit Verdot. The name supposedly comes from the wooden stocks found in English Woodstock, which had five holes for five feet—pull the other one!

✓ *Classic red blend* (Five Feet) • *Shiraz* (The Stocks)

WYNNS

Coonawarra

★★★

John Riddoch is supposed to be the top wine here, but, superb as it is, the straight Black Label Cabernet Sauvignon, although disappointingly thin during the 1980s, has been the epitome of elegance ever since, and, at half the price of John

par with the John Riddoch, in terms of quality and price, but the basic Shiraz is not the equivalent of the Black Label Cabernet Sauvignon, neither is it meant to be, as its much cheaper price indicates. Wynns is part of Southcorp.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Classic red blend* (Cabernet Shiraz-Merlot) • *Shiraz* • *Riesling*

YALUMBA

Barossa Valley

★★★

This winery produces a vast range of styles and qualities, both still and sparkling. The Reserve and The Signature are both blends of Cabernet Sauvignon and Shiraz. Mesh is a Yalumba-Grosset collaboration. Oxford Landing is its penny-pinching, entry-level brand, offering very good value for money. Yalumba also owns Heggies Vineyard in Eden Valley, and Nautilus in New Zealand.

✓ *Cabernet Sauvignon* (The Menzies) • *Chardonnay* (Adelaide Hills, Heggies) • *Classic red blend* (Barossa Valley Shiraz-Viognier, Hand Picked Mourvèdre-Grenache-Shiraz, The Reserve, The Signature) • *Fortified* (all Museum Release wines) • *Pinot Noir* (Adelaide Hills) • *Riesling* (Hand Picked Eden Valley, Mesh) • *Shiraz* (The Octavius) • *Sparkling* (Cuvée One, Cuvée Two, D, since 1989, D. Black, N. V. Jansz, vintage Jansz since 1997) • *Viognier* (Eden Valley, The Virgilius Eden Valley)

ZEMA ESTATE

Coonawarra

★★★

Established in 1982 by the Zema family, who currently cultivate 150 acres (60 hectares) of prime *terra rossa* land in Coonawarra. Cluny is a blend of Cabernet Sauvignon, Merlot, Cabernet Franc, and Malbec.

✓ *Cabernet Sauvignon* (Family Selection) • *Classic red blend* (Cluny) • *Shiraz* (Family Selection)

WESTERN AUSTRALIA

Much to the chagrin of winemakers in the rest of the country, Western Australia attracts a disproportionate amount of media attention for a state that possesses just 7 percent of Australia's vineyards. But it is no coincidence that from that 7 percent, Western Australia produces a mere 3 percent of the grapes crushed.

WITHOUT WORLD-CLASS WINE REGIONS such as Margaret River, Western Australia could not produce world-class wines, but restricting yields enables those wines to stand out. Coonawarra might be Australia's most famous wine region, but South Australia is also a prolific producer of cheap wine. Apart from Western Australia, the only other state to harvest a smaller percentage of the country's crop than its vineyards represent is Victoria, and the best wines from that state's myriad top-performing wine regions also receive disproportionate publicity.

HOW IT ALL BEGAN

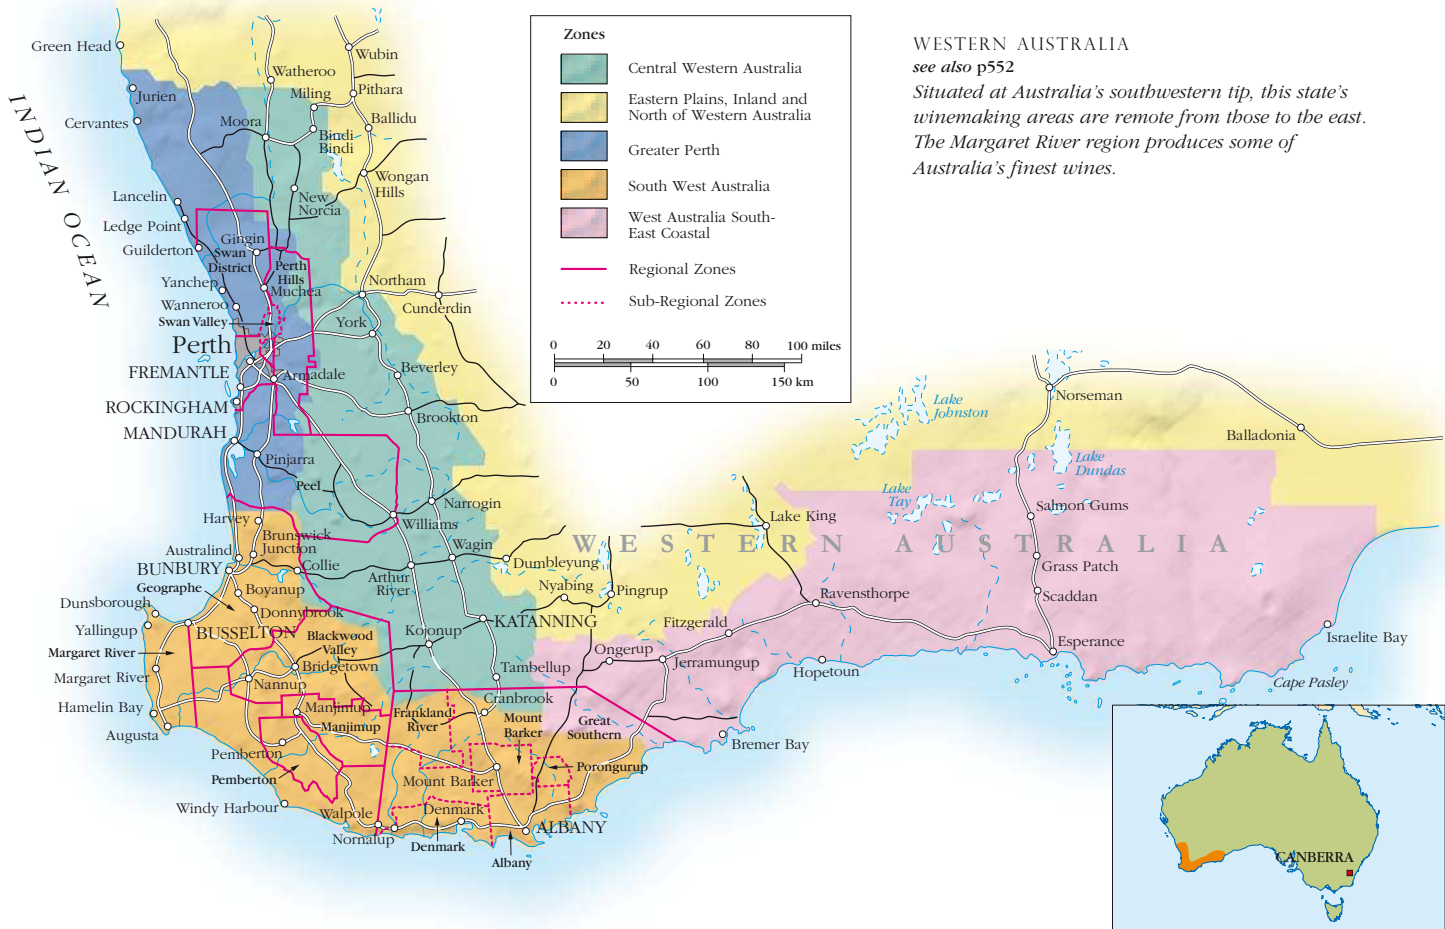

The vineyards of Western Australia were established in 1829, by either Thomas Waters or Captain John Septimus Roe. If the founder was Roe, he would not have made any wine; his vines were grown to produce table grapes and raisins. Waters, on the other hand, bought 20 acres (8 hectares) of land that was to become Olive Farm. Waters was a botanist who had learned his winemaking skills from Boers in South Africa. He arrived in

VASSE FELIX WINERY

A modern pioneering vineyard in the Margaret River region, Australia's first appellation of origin, Vasse Felix still produces a fine Cabernet Sauvignon.

Australia with numerous seeds and plants, and by 1842 was making and bartering wine. In 1835, King William IV granted over 7,400 acres (3,000 hectares) of Swan Valley land to one Henry Revett Bland, who sold it to a trio of British army officers. These

SWAN VALLEY VINEYARDS

This flat plain belongs to one of the hottest winegrowing regions in the world, and the first of Western Australia's wine districts to be established.

new owners, Messrs Lewis, Yule, and Houghton, were stationed in India, but Yule was despatched by the senior officer, Colonel Houghton, to run the property. Thus Houghton Wines, the first commercial winery in Western Australia, takes its name from a man who never set foot in the country.

The Swan Valley remained the hub of the state's wine industry and, with an influx of Europeans, all experienced in viticulture

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

Western Australia's vinegrowing areas sweep around the southwestern corner of Australia from Perth to Albany.

CLIMATE

This is very variable, from the long, very hot, dry summers and short, wet winters of the Swan Valley, one of the hottest winegrowing areas of the world, through the Mediterranean-type conditions of the Margaret River, with a higher rainfall and summer heat tempered by ocean breezes such as the "Fremantle Doctor" and "Albany Doctor", to the even cooler Lower Great Southern Area, which also has some light rainfall in summer. Ocean winds can exacerbate salinity problems and high coastal humidity helps with the development of botrytis.

ASPECT

Most vines are planted on the relatively flat coastal plain and river valley basins, but also on some rather more undulating, hilly areas, such as those around Denmark and Mount Barker near Albany in the south and east of the region. Vineyards generally grow at an altitude of between 295 and 820 feet (90 and 250 metres), but can be as high as 1,115 feet (340 metres) in the Blackwood Valley.

SOIL

Soils are fairly homogenous,

being mainly deep, free-draining, alluvial, sandy, gravelly, or clay loams over clay subsoils. Loam soils such as karri and marri are named after the gum trees that used to grow on them, and have significantly different properties. The Southwest Coastal area has a fine, white-grey topsoil called tuart sand, over a base of limestone with gravel in parts of the Margaret River.

VITICULTURE AND VINIFICATION

Drip irrigation is widespread because of the general lack of summer rain and the free-draining nature of the soil, although, ironically, winter water-logging due to clay subsoils is also a problem. Wide planting, mechanized harvesting, and the use of the most modern vinification techniques typify the area, which has generally concentrated on developing the cooler regions away from the Swan Valley in recent years. Well-equipped boutique wineries dominate the Margaret River wine regions.

GRAPE VARIETIES

Primary varieties: Cabernet Sauvignon, Chardonnay, Merlot, Riesling, Sauvignon Blanc, Sémillon, Shiraz

Secondary varieties: Cabernet Franc, Chenin Blanc, Malbec, Muscadelle, Muscat Gordo Blanco, Pinot Noir, Verdelho, Zinfandel

and winemaking, the expertise of this industry grew. Gradually, Mount Barker evolved as a wine area, then Frankland, and last, but certainly not least, Margaret River. For most non-Australian wine drinkers, it is the last of these appellations that has provided the greatest excitement and pleasure. Neither the climate, nor the soil, of the Margaret River is special in itself, but combined they produce grapes of unparalleled purity and finesse.

THE APPELLATIONS OF WESTERN AUSTRALIA

ALBANY

One of five sub-regional GIs within the Great Southern region, Albany has a Mediterranean climate that is moderated by sea breezes known locally as the "Albany Doctor". Soils suitable for viticulture are quite patchy, and mostly confined to the slopes. Pinot Noir has something of a reputation thanks, primarily, to Bill Wignall (Wignall Wines), but Cabernet Sauvignon, Chardonnay, and Sauvignon Blanc probably perform at least as well.

BLACKWOOD VALLEY

This GI is the least known and one of the newest of Western Australia's wine regions, sandwiched between Manjimup and Geographe. The first vineyard was Blackwood Crest, planted by Max Fairbrass in 1976, and by 2004 there were over 50 vineyards and 10 wineries. The

climate is Mediterranean, with dry summers and wet winters. Vines grow at an elevation of 100 to 330 to 1,115 feet (340 metres) on gravelly loam soils, which are thinner and more gravelly, with some red earths, on the steeper slopes. Cabernet Sauvignon is the most widely planted variety and the most successful, with Shiraz on the increase. Other grapes include Chardonnay, Riesling, Sauvignon Blanc, and Sémillon.

CENTRAL WESTERN AUSTRALIA

This zonal GI covers a vast area of the Darling Ranges, from the Great Southern GI to north of the Swan District, but size is the only impressive aspect of what is currently a viticultural wasteland.

DENMARK

The newest sub-region within the Great

Southern GI, Denmark is situated some 60 kilometres (37 miles) along the coast from Albany. With its wet winters and warm to hot summers, the ocean's moderating influence, and a mix of marri and karri loam soils, the focus here has quite rightly been on Chardonnay and Pinot Noir. Other varieties grown include Cabernet Franc, Cabernet Sauvignon, Sauvignon Blanc, Sémillon, and Shiraz. The etymological origin of this Denmark had nothing to do with the Scandinavian country, but was named after Dr Alexander Denmark, an English naval surgeon.

EASTERN PLAINS, INLAND AND NORTH OF WESTERN AUSTRALIA

Hardly rolls off the tongue, does it? I sincerely doubt that any wines will be sold under this zonal GI, which is the ultimate expression of

bureaucratic logic, referring to all areas of Western Australia not already covered.

FRANKLAND RIVER

A small area on the western edge of the Great Southern zone, Frankland River was put on the map by Houghton. This GI is, however, something of a misnomer, as four rivers converge in this sub-region: the Frankland, Gordon, Kent, and Tone. The climate is more Continental than Mediterranean, and, unlike the other sub-regions of the Great Southern zone, Frankland River has virtually no maritime influence. Surprisingly crisp Rieslings are made here. It is also good for Cabernet Sauvignon. Other grapes grown include Chardonnay, Sauvignon Blanc, and Shiraz.

GEOGRAPHE

Formerly known as the Southwest Coastal Plains, this regional GI takes in the curve of land on Geographe Bay, where the somewhat Mediterranean climate is cooled and humidified by the Indian Ocean. The region extends inland, where it creeps eastward into the foothills of the Darling Range. Geographe has a limestone subsoil, and is dissected by four rivers, the Capel, Collie, Ferguson, and Harvey, which have deposited alluvial soils that have a much higher nutrient content than the deep sandy soils in the coastal areas. Chardonnay is perhaps the most successful variety, followed by Cabernet Sauvignon and Merlot, with Sémillon and Shiraz on the rise.

GREAT SOUTHERN

Sub-regions:

Albany, Denmark, Frankland River, Mount Barker, Porongurup

This regional GI is the coolest of Western Australia's viticultural areas, and, although it has similar climatic influences to Margaret River, it has a lower rainfall. The vineyards are scattered throughout a vast area, and mostly consist of Riesling, Cabernet Sauvignon, Shiraz, Malbec, Pinot Noir, and Chardonnay.

GREATER PERTH

This zonal GI encompasses the regional GIs of the Peel, Perth Hills, and Swan District.

MANJIMUP

This GI is immediately north of Pemberton, on the same latitude as the Margaret River. Manjimup GI finalization was delayed because some producers wanted to be part of Pemberton, but the two regions differ in both soils and climate. Manjimup is warmer, with more sunshine and less humidity, while the marri loam is less fertile, having more sand and gravel than Pemberton's karri loam. In addition to wines produced by local boutique wineries, the region also sells a lot of its fruit to other wineries in the state. Chardonnay is the most widely planted variety, but Cabernet Sauvignon and Merlot fare best. There is more hope than promise for Pinot Noir, even though Picardy, the region's top producer, makes excellent wines from this grape. Other grapes grown include Sauvignon Blanc and Verdelho.

MARGARET RIVER

This regional GI remains Australia's premier region for wine lovers who seek class and finesse, rather than weight and glory. Situated south of Perth, the Margaret River district

attracted much attention in 1978 when it established Australia's first Appellation of Origin system. Like similar schemes, it was unsuccessful. The first vineyard was planted in the Margaret River area at Bunbury as long ago as 1890. However, it was a vineyard planted by Dr Tom Cullity at Vasse Felix in 1967 that was the first step in the Margaret River's journey to success. The region follows a ridge that runs along the coast from Cape Naturaliste to Cape Leeuwin in the south, with Margaret River flowing westward through its centre, while the Blackwood River flows southwest to Augusta. The land is undulating, with vines planted up to a maximum altitude of 90 metres (295 feet) on gravelly, sandy loams, with the majority of vineyards and wineries located in and around Wilyabrup. The warm maritime climate is cooled by ocean breezes, with most rain falling in autumn and winter. Relatively minor problems do exist in the area, notably powdery mildew, parrots, wind, and, most serious, dry summers. The powdery mildew seems to be under control, and the vineyard workers plant sunflowers to distract the parrots from the vines, while rye grass acts as a windbreak. A lot of vines experience water-stress, not a heat-related problem, but dry-summer induced, and one that is exacerbated by the wind factor. The greatness of Margaret River wines cannot be disputed. This quality of fruit is not bettered by any other Australian wine region. The best varieties are Cabernet Sauvignon, Chardonnay, Sauvignon Blanc, Sémillon, and Shiraz.

MOUNT BARKER

A sub-region of the Great Southern zonal GI, where vines enjoy a Mediterranean climate, and grow at altitudes of 180 to 250 metres (590 to 820 feet) on gravelly-sandy loams over gently undulating hills. Growers avoid the valley floors due to the salinity of their soils. Mount Barker has a reputation for its lime-laden Riesling, and elegant red wines from Cabernet Sauvignon and Shiraz. Pinot Noir has also won awards. Other varieties grown include Cabernet Franc, Chardonnay, Malbec, Merlot, Sauvignon Blanc, Sémillon, and Shiraz.

PEEL

This large region takes in the Peel Inlet just south of Mandurah, where the vines enjoy a Mediterranean climate that is cooled and moderated by this large body of water, backed up by the Indian Ocean, although this effect diminishes further inland. The soils are extremely diverse, and range from deep, free-draining tuart sand on the coast to sandy-alluvium on the plains, with marri-jarra loams, yellow duplex soils, and gravel further inland. Although vines were planted at Pinjarra as early as 1857, and remained productive for 40 years, it was not until the 1970s that viticulture in this region underwent sustained development. Chenin Blanc and Shiraz are the primary varieties. Other grapes grown include Cabernet Sauvignon, Chardonnay, Merlot, Sémillon, Shiraz, and Verdelho.

PEMBERTON

This GI south of Manjimup is one of Western Australia's less consistent wine regions, but with vineyards established in the 1980s and 1990s, it is still a young area and the locals are still confident. Pemberton is commonly known as "Karri country" after its magnificent forests of Karri gum trees, which give their name to the

soil in which they grow. Karri loam is a deep, red, fertile soil that is too fertile for vines, causing excessive vigour problems, although growers overcome this by deliberate water-stressing and hard pruning to control the canopy. Pemberton was originally thought to be a Pinot Noir area, but Cabernet Sauvignon, Merlot, and Shiraz have been far more successful. Other varieties grown include Chardonnay, Sauvignon Blanc, Sémillon, and Verdelho.

PERTH HILLS

This regional GI is adjacent to the Swan Valley and consists of a strip of the lower slopes of the Darling Ranges. Although this area has a hot climate, it is higher and cooler than the Swan Valley, with grapes ripening some two weeks later. Cabernet Sauvignon and Chardonnay are the most successful grapes, with Chenin Blanc, Shiraz, and Pinot Noir the other primary varieties grown.

PORONGURUP

Set against a backdrop of the Porongurup Ranges, this picturesque region is one of five sub-regional GIs encompassed by the Great Southern region. The vines benefit from a Mediterranean climate, and grow on granite-based karri loam soils. The primary varieties are Cabernet Franc, Cabernet Sauvignon, Chardonnay, Merlot, Pinot Noir, Riesling, Sémillon, Shiraz, and Verdelho.

SOUTH WEST AUSTRALIA

This zonal GI encompasses the majority of Western Australia's most exciting wine areas, including the regional GIs of Blackwood Valley, Geographe, Great Southern, Manjimup, Margaret River, and Pemberton.

SWAN DISTRICT

Sub-region:

Swan Valley

This regional GI contains the Swan Valley itself, but also extends northwards from Perth, encompassing former unclassified areas such as Gingin and Moondah Brook.

SWAN VALLEY

This sub-regional GI is located northeast of Perth, and represents the heart and soul of the Swan District zone. The Swan Valley has the dubious distinction of being one of the hottest viticultural regions in the world. Partly because of this, and partly as a reaction to the phenomenal success of the Margaret River, several producers have deserted the area and the number of vineyards is shrinking. What was once the traditional centre of Western Australia's wine industry is now a waning force, although the best areas are cooled by the so-called "Fremantle Doctor" wind, allowing the old-fashioned, foursquare wines to be replaced by lighter and fresher styles. If the Swan Valley can claim to make any classic wine whatsoever, it has to be fortified wines made from the Muscat Gordo Blanco and Muscadelle grapes. Other important varieties include Cabernet Sauvignon, Chardonnay, Merlot, Sémillon, and Shiraz.

WEST AUSTRALIAN SOUTH EAST COASTAL

This zonal GI covers a large swathe of coastal area that lies immediately to the east of the Great Southern zone.

THE WINE PRODUCERS OF WESTERN AUSTRALIA

ALKOOMI WINES

Frankland
★★★

Sheep farmers Mervyn and Judy Lange established this venture in 1971, making their first wines five years later. They always used to produce fresh, fruity, and rich-flavoured wines that could be recommended with confidence, but were seldom special. However, since the mid-to-late 1990s the quality, style, and expressiveness has become ever more impressive. Blackbutt is a blend of Malbec, Cabernet Sauvignon, Cabernet Franc, and Merlot. Young, easy-drinking wines are sold under the Sutherlands label.

✓ Cabernet Sauvignon (Frankland River) • Classic red blend (Blackbutt) • Riesling (Frankland River) • Sémillon (Wandoo) • Shiraz (Jarrah)

AMBERLEY ESTATE

Margaret River
★★

Eddie Price, a former chief winemaker at Brown Brothers, is the managing director and winemaker at Amberley, where most wines offer good value, but Shiraz excels.

✓ Sémillon (First Selection) • Shiraz

ASHBROOK ESTATE

Margaret River
★★★

Great quality, and even better value.

✓ Chardonnay • Classic red blend (Cabernet-Merlot) • Sémillon • Verdelho

BROOKLAND VALLEY

Margaret River
★★★

Malcolm and Deirdre Jones established Brookland Valley in 1984, with BRL Hardy purchasing a 50 percent shareholding in 1997. Since then the quality has gone from good to excellent.

✓ Chardonnay • Classic red

blend (Cabernet-Merlot, Verse 1 Cabernet-Merlot) • Classic white blend (Verse 1 Sémillon-Sauvignon Blanc) • Merlot • Sémillon (Verse 1)

CAPE MENTELLE

Margaret River
★★★

Referred to by locals as the "Mentelle asylum", this is where David Hohnen started his cult-driven empire, which included New Zealand's Cloudy Bay phenomenon. He retired in 2003, to be succeeded by Dr Tony Jordan, who now oversees all of LVMH's operations in Australia and New Zealand. The quality remains exemplary, showing an uncanny ability to straddle both Old and New World styles, respecting tradition, and understanding restraint and finesse, yet revealing the best of Margaret River's ripe fruit flavours. This is the legacy of Hohnen's own philosophy, and it even applies to the Zinfandel, which under Cape Mentelle boasts infinitely more finesse than many a California icon of this variety. Marmaduke is primarily Shiraz-Grenache-Mataro (Mourvèdre), with a little Merlot and Pinot Noir. Trinders is Cabernet Sauvignon and Merlot, with a little Cabernet Franc and Petit Verdot. Georgina is Sauvignon Blanc and Chardonnay, with a little Sémillon and Chenin Blanc. Wallcliffe is a blend of Sauvignon Blanc and Sémillon.

✓ Cabernet Sauvignon • Chardonnay • Classic red blend (Marmaduke, Trinders) • Classic white blend (Georgina, Sémillon-Sauvignon, Wallcliffe) • Shiraz • Zinfandel

CAPEL VALE WINES

Southwest Coastal Plain
★★

Owner Peter Pratten, a former radiologist, is the driving force behind this expanding brand, which is known for its delicious, vibrantly fruity wines.

✓ Cabernet Sauvignon • Classic white blend (Sauvignon Blanc-Sémillon) • Merlot (Howcroft) • Riesling (Whispering Hill) • Shiraz (Kinnaird, Mount Barker Trifecta)

CHATSFIELD

Mount Barker
★

Irish-born Dr Ken Lynch has a well-established record for producing easy-drinking wines, especially his ripe, peachy Riesling.

✓ Cabernet Franc (Soft Red) • Chardonnay • Riesling • Shiraz

CLAIRAULT

Margaret River
★★

Founders Ian and Ani Lewis have sold up, and the new owners, the Martin family, have expanded the vineyards from an original 30 acres (12 hectares) to the current 210 acres (85 hectares).

✓ Cabernet Sauvignon • Classic red blend (Cabernet-Merlot) • Classic white blend (Sémillon-Sauvignon Blanc) • Riesling • Sémillon

CULLEN WINES

Margaret River
★★★

Di Cullen sadly passed away in 2003, leaving the winery that she and her late husband Kevin established in 1966 in the hands of her youngest daughter, Vanya. She could not have left the business in safer hands. Vanya Cullen has been the winemaker since 1989, and makes an outstanding range of wines, which get better with every vintage. If winemakers of the stature of Dr Andrew Pirie are eager to subject themselves to a masterclass with her, it is little wonder that she was voted Australia's Winemaker of the Year in 2000. Cullen is an organic producer that is converting to biodynamic.

✓ Entire range

DEVIL'S LAIR

Margaret River
★★★

Planted in 1981, and purchased by Southcorp in 1996, Devil's Lair takes its name from the nearby Devil's Lair cave, where the fossil remains of the so-called Tasmanian Devil have been discovered. The Cabernets blend of Cabernet Sauvignon, Cabernet Franc, and Merlot is deep, dark, and yet finely structured, showing great potential. The Fifth Leg wines are more for ready drinking, but they are fine, elegant wines nonetheless. The latest addition, Fifth Leg Rosé, a blend of Merlot and Cabernet Sauvignon, was introduced with the 2004 vintage, and had not been tasted by this author at the time of writing. But it got me thinking about the last bottle in my cellar of 1991 Devil's Lair Cabernet Sauvignon (no longer marketed as such), and it was in beautiful condition, with soft, sweet-tasting – although totally dry, of course – fruit of a freshness that belied its 13 years of age.

✓ Classic red blend (Cabernet, Fifth Leg Red) • Classic white blend (Fifth Leg White)

EVANS & TATE

Margaret River
★★

This winery used to own vineyards in the Swan Valley as well as the Margaret River, but has sold off its Swan Valley holdings. In March 2003, Evans & Tate purchased the cash-strapped Cranwick Estates for A\$100 million, but despite the latter's precarious financial situation,

it fuelled Evans & Tate's profits by more than 40 per cent in the first year, and in excess of 70 percent the second year. The best wines at Evans & Tate combine richness with finesse.

- ✓ *Cabernet-Merlot* (Barrique 61)
- *Chardonnay* • *Merlot* • *Sémillon* • *Sémillon-Sauvignon* • *Shiraz*

FERMOY ESTATE

Margaret River

★0

The most consistent wines produced at the Fermoy Estate now are Chardonnay and Merlot. A new range has been launched under the Sentinel label, but has yet to make its mark.

- ✓ *Chardonnay* • *Merlot*

FERNGROVE VINEYARDS

Great Southern

★★★0

Murray Burton ordered the first vines to be planted in 1996, and now has over 1,000 acres (400 hectares) of vineyards, plus a brand-new winery built in 1999. Since then these wines have really taken off, reaching orbit with the 2002 Cossack Riesling, which won a record seven trophies and four golds.

- ✓ *Classic white blend* (Sémillon-Sauvignon Blanc) • *Riesling* (Cossack) • *Shiraz*

FLINDERS BAY

Margaret River

★0

Established in 1995 as a joint venture between two families, the grape-growing Gillespies and wine-retailing Irelands.

- ✓ *Classic white blend* (Pericles Sauvignon-Sémillon Blanc) • *Merlot* • *Shiraz*

FRANKLAND ESTATE

Frankland

★0

Frankland Estate is best for its blended red, which consists of Cabernets, Merlot, and Malbec. It is dedicated to the late Professor Olmo, California's famous grape breeder, not for creating varieties such as Ruby Cabernet, but because he was instrumental in selecting areas of Frankland best suited to viticulture in the early days of this wine region. Olmo's Reward is a blend of Cabernet Franc and Merlot primarily, supported by Malbec, Cabernet Sauvignon, and Petit Verdot. Poison Hill refers to the heartleaf plant growing there, which is poisonous to sheep and dogs, and thus was a threat to early settlers.

- ✓ *Classic red blend* (Olmo's Reward) • *Riesling* (Isolation Bridge, Poison Hill)

GALAFREY

Great Southern

★0

Anyone who names a winery after the mythical planet of the Time Lords in *Dr Who* should be locked up in a dark place – preferably with a good supply of Galafrey wines.

- ✓ *Cabernet Sauvignon* • *Chardonnay* (Unoaked) • *Classic white blend* (Galafrey Art Label Sémillon-Sauvignon Blanc) • *Riesling* • *Shiraz*

GILBERTS

Great Southern

★★★0

The Gilberts have their wines made by contract at Plantagenet, which does a better job for them than it does with its own wines, which are good, but just not in the same class. This is a classic demonstration of the benefits of superior *terroir*. Best known to an informed few for their Riesling, which thrust the Gilberts into the limelight when it won Best of Show at the Qantas West Australian Wine Show in both 2000 and 2001, the class of these wines can also be seen throughout the range.

- ✓ *Entire range*

GOUNDREY WINES

Great Southern

★0

Owned by Perth-based US millionaire Jack Bendat, who has invested millions in Goundrey and has been intent on driving sales ever upwards, but only of late does there seem to be a more mature reflection as to increasing consistency of quality.

- ✓ *Cabernet Sauvignon* (Reserve) • *Chardonnay* (Unwooded) • *Chenin Blanc* • *Shiraz* (Reserve)

GRALYN ESTATE

Margaret River

★★

The style leans more towards size than finesse, but you cannot help being seduced by the lush quality of these wines.

- ✓ *Cabernet Sauvignon* • *Classic red blend* (Shiraz-Cabernet) • *Fortified* (Vintage Port) • *Shiraz* (Old Vine)

HACKERSLEY

Geographe

★★★0

These wines have come a long way in the short while since Hackersley was established as a joint venture between three families. The quality far exceeds the reasonable prices asked (so far), especially for such a tiny production.

- ✓ *Cabernet Sauvignon* • *Merlot* • *Shiraz*

HAPPS VINEYARD

Margaret River

★

Erl Happ makes several wines, all of which are eminently drinkable, but you can tell that he puts his heart into his reds, and of these Merlot is the most highly regarded. Charles Andreas is a blend of Cabernet Sauvignon, Merlot, Cabernet Franc, Malbec, and Petit Verdot.

- ✓ *Cabernet Franc* (Three Hills) • *Classic red blend* (Charles Andreas) • *Merlot* (Three Hills)

HIGHER PLANE

Margaret River

★★★

Venture by Craig and Cathie Smith that has rapidly hit the heights. Craig is a doctor (plastic surgeon), which is almost *de rigueur* for anyone starting a wine business in this part of the world, and Cathie has a Master of Business in Wine Marketing. Winemaking by Matt Wood.

- ✓ *Chardonnay* • *Classic red blend* (Cabernet-Merlot) • *Merlot*

HOUGHTON WINES

Swan Valley

★★★0

Houghton wines are generally underestimated because of the winery's location in the underperforming Swan Valley, its huge production, and the fact that it is part of the even more gigantic BRL Hardy, but this winery is an exemplary instance of how big can be beautiful. Houghton's White Burgundy (sold as HWB in the EU) is a case in point: large-production and inexpensive, yet an award-winning wine of legendary reputation. However, if you have been impressed by the value of White Burgundy, you should try the White Burgundy Show Reserve, which is released when fully mature, and illustrates the potential quality of a wine that is mostly consumed within hours of purchase. As for its content, White Burgundy is primarily a blend of Chardonnay, Chenin Blanc, and Sémillon, with a mish-mash of other varieties, such as Verdelho, Sauvignon Blanc, Muscadelle, etc. These large-volume blends tend to evolve hand-in-hand with the development of Australia's vineyard mix. My notes from more than 20 years ago reveal that the 1981 was a 50/50 blend of Chenin Blanc and Muscadelle. From the

past to the future: one day this wine will have to be renamed, of course, as part of Australia's trading agreement with France. Top of the Houghton hierarchy is Jack Mann, a super-premium wine named after the late and legendary winemaker, Jack Mann MBE. Jack Mann is usually a blend of Cabernet Sauvignon with maybe Malbec one year, Shiraz another. At one time it was a blend that included both of those ancillary varieties, and occasionally it can be pure Cabernet Sauvignon (1998, for example). The Crofters is a blend of Cabernet Sauvignon and Merlot.

- ✓ *Cabernet Sauvignon* (Margaret River) • *Chardonnay* (Pemberton) • *Classic red blend* (Crofters, Jack Mann) • *Classic white blend* (Sémillon-Sauvignon Blanc, White Burgundy Show Reserve) • *Riesling* (Frankland River) • *Sauvignon Blanc* (Pemberton) • *Shiraz* (Frankland) • *Verdelho* (Show Reserve)

HOWARD PARK

Denmark

★★

Now owned by the Burch family, who also have vineyards in Margaret River, where they have built a new winery that has taken over some of the production. And lest the high rating misleads anyone, the production is very substantial indeed. Entry-level wines are sold under the Madfish label, of which the Chardonnay, Sémillon-Sauvignon Blanc, and Shiraz are all recommended as strongly as the Howard Park wines listed below.

- ✓ *Cabernet Sauvignon* • *Chardonnay* • *Classic red blend* (Cabernet Sauvignon-Merlot) • *Pinot Noir* (Scotsdale) • *Riesling* • *Shiraz* (Leston, Scotsdale)

KARRIVIEW

Great Southern

★★

Tiny production of expressive Burgundian varietals.

- ✓ *Chardonnay* • *Pinot Noir*

KILLERBY

Margaret River

★★★

This winery's move to the Margaret River has coincided with a noticeable increase in quality.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Shiraz*

LEEUWIN ESTATE

Margaret River
★★★

Leeuwin Estate continues to produce lush, stylish, and very classy wines that belong with food.

✓ *Cabernet Sauvignon* (Art Series) • *Chardonnay* (Art Series) • *Classic red blend* (Prelude Vineyards Cabernet-Merlot) • *Classic white blend* (Siblings Sauvignon Blanc-Sémillon) • *Pinot Noir* (Art Series) • *Riesling* (Art Series) • *Sauvignon Blanc* (Art Series)

LENTON BRAE

Margaret River
★★

Established in 1983 by Bruce Tomlinson, whose son Edward is the winemaker today.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Classic red blend* (Cabernet-Merlot)

MERUM

Margaret River
★★

Tiny production of stunning Sémillon, and a beautiful Shiraz.

✓ *Sémillon* • *Shiraz*

MOONDAH BROOK

Swan District
★★

This brand belongs to BRL Hardy and its good value, fruit-driven wines are made at the Houghton winery.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Chenin Blanc* • *Shiraz* • *Verdelho*

MOSS BROTHERS

Margaret River
★★

Established in 1984 by David Moss, who had been a viticulturist at Houghton and Moss Wood; Peter Moss, who actually built boutique wineries for a living; and Jane Moss,

who graduated from Roseworthy. With such experience, how could they fail? Well, they didn't, and Sémillon is this winery's flagship.

✓ *Classic red blend* (Cabernet Sauvignon-Merlot) • *Sémillon* • *Shiraz* • *Verdelho*

MOSS WOOD

Margaret River
★★

One of the very best Margaret River wineries, Moss Wood was the first in the area to perfect Pinot Noir, and arguably the best Sémillon outside the Hunter Valley.

✓ *Cabernet Sauvignon* (Glenmore Vineyard) • *Chardonnay* (Lefroy Brook Vineyard) • *Merlot* (Ribbon Vale) • *Pinot Noir* • *Sémillon*

PIERRO

Margaret River
★★

Mike Perkin, who is a genius with white wines, makes one of the best examples of Chardonnay in Margaret River. His LTC is a blend of Sémillon and Sauvignon Blanc.

✓ *Chardonnay* • *Classic red blend* (Cabernet-Merlot) • *Classic white blend* (LTC)

PLANTAGENET WINES

Great Southern
★★

A winery named after the shire in which it is situated, Plantagenet was the first to cultivate Mount Barker, and is the leading winery in the area today.

✓ *Cabernet Sauvignon* • *Chardonnay* • *Classic red blend* (Omrah Merlot-Cabernet) • *Pinot Noir* • *Riesling* • *Shiraz*

SANDALFORD

Margaret River
★★

A historic winery dating back to 1840, Sandalford was purchased in 1991 by Peter and Debra Prendiville, who have successfully resurrected this great old name.

✓ *Cabernet Sauvignon* (Premium) • *Classic white blend* (Premium Sémillon-Sauvignon Blanc) • *Fortified* (Sandalaria) • *Riesling* • *Shiraz* (Premium) • *Verdelho*

SETTLERS RIDGE

Margaret River
★★

Wayne and Kaye Nobbs purchased this 40-hectare (100-acre) property in 1994. Originally part of a dairy farm in the heart of the Margaret River region, its gravelly loam soils were immediately planted with vines, which yielded a first crop in 1997. Since then, Settlers Ridge organic wines have won more than 50 medals at wine shows.

✓ *Cabernet Sauvignon* • *Shiraz*

SMITHBROOK

Manjimup
★★

Owned by Lion Nathan since the takeover of Petaluma, who used the Pinot Noir for its Croser sparkling wine before it was dug up.

✓ *Cabernet Sauvignon* • *Classic red blend* (The Yilgarn) • *Merlot* • *Sauvignon Blanc*

SUCKFIZZLE

Margaret River
★★

The creation of two well-known Margaret River winemakers, Stuart Pym and Janice McDonald. The seemingly bizarre name was inspired by the Great Lord Suckfizzle from Rabelais's *Gargantua*, whereas the wines themselves are simply inspired.

✓ *Cabernet Sauvignon* • *Classic white blend* (Sauvignon Blanc-Sémillon) • *Muscat* (Stella Bella Pink) • *Sauvignon Blanc* (Stella Bella)

VASSE FELIX

Margaret River
★★

One of the Margaret River's pioneering wineries of the modern era, Vasse Felix's speciality has always been its long-lived Cabernet Sauvignons. It remains so today, although since the change of ownership, and the move to a new winery in 1999, they are softer and easier to drink at a younger age than they used to be. Heytesbury is a Cabernet-Shiraz blend. Classic Dry White is a Sémillon-Sauvignon Blanc blend.

✓ *Cabernet Sauvignon* • *Chardonnay* (Heytesbury) • *Classic red blend* (Heytesbury) • *Classic white blend* (Classic Dry White)

VOYAGER ESTATE

Margaret River
★★

This property was purchased in 1991 by the current owner, Michael

Wright, the mining magnate.

✓ *Cabernet Sauvignon* (Tom Price) • *Chardonnay* • *Classic red blend* (Cabernet Sauvignon-Merlot) • *Classic white blend* (Sauvignon Blanc-Sémillon, Tom Price Sémillon-Sauvignon Blanc) • *Shiraz*

WILLESPIE

Margaret River
★

Kevin Squence continues to produce fine-quality Verdelho, but the expressiveness of his red wines, especially the Shiraz, has improved dramatically, which is a revelation.

✓ *Cabernet Sauvignon* (Reserve) • *Classic red blend* (Cabernets) • *Shiraz* • *Verdelho*

WILLOW BRIDGE

ESTATE
Geographe
★★

Established as recently as 1997, when the Dewar family purchased this 180-hectare (445-acre) property in the Ferguson Valley. So far they have planted 150 acres (60 hectares), producing some immediately impressive wines in the process.

✓ *Cabernet Sauvignon* (Reserve) • *Classic white blend* (Winemaker's Reserve Sémillon Sauvignon Blanc) • *Shiraz* (The Black Dog, Winemakers Reserve)

WOODY NOOK

Margaret River
★

Neil Gallagher of Woody Nook has always made a lovely Cabernet Sauvignon, and is now starting to be noticed for his Sauvignon Blanc.

✓ *Cabernet Sauvignon* • *Sauvignon Blanc*

XANADU

Margaret River
★★

Formerly Chateau Xanadu, this ex-boutique winery has expanded its annual production to 100,000 cases. Seccession is a blend of Sémillon, Sauvignon Blanc, Chenin Blanc, and Chardonnay. Wines are also sold under the following brands (top-quality wines): Chais Clarendon (Shiraz), and Normans (Adelaide Hills Chardonnay, Encounter Bay Cabernet Sauvignon, Old Vines Shiraz). The Lagan Estate is a blend of Cabernet Sauvignon, Merlot, and Cabernet Franc. Wines are also produced under the NXG label, which stands for Next Generations wines, although they have yet to make their mark.

✓ *Cabernet Franc* • *Cabernet Sauvignon* • *Chardonnay* • *Classic red blend* (Lagan Estate) • *Classic white blend* • *Merlot* • *Sémillon*

QUEENSLAND AND NORTHERN TERRITORY

Queensland and Northern Territory cover nearly half of Australia, but contain just 15 percent of its population, the majority of whom live in Brisbane. The rest is a sparsely populated, swelteringly hot outback, yet there are at least two serious vine-growing areas, both in Queensland.

QUEENSLAND

One of the last places on Earth where one might expect to find a vineyard, Queensland actually has twice as much land planted with vines as Tasmania, Australia's most up-and-coming wine-producing state. There are some 70 wineries and a small wine industry dating back to the 1850s. Surprisingly, summers are much cooler in Queensland's high-altitude Granite Belt than in many other, far more famous Australian regions, which explains why this state's wine industry is enjoying a revival. South Burnett, where the climate is more tropical, is the latest, fastest-growing wine region.

NORTHERN TERRITORY

A less likely location for a winemaking area than Queensland is hard to imagine, but its western neighbor, Northern Territory, was such a place until 2002. This state is swelteringly hot, with land ranging from desert to tropical forests with crocodile-infested swamps. (Tourists are advised to run in a zigzag if chased by a crocodile!) Curiously it is illegal to drink alcohol in a public place within 1 mile (2 kilometers) of a licensed bar, except, of course, inside one. Outback machismo might be expected to preclude wine drinking, bearing in mind the cooling properties attributed to some of Australia's beers, yet of all places the town of Alice Springs was home to Chateau Hornsby and its 7 acres (3 hectares) of vineyards until December 2002. Viticulture is made possible by drip-irrigation from wells, as water is plentiful throughout the desertlike plateau where Alice Springs is situated, if you dig deep enough.

The only reason the vineyard was abandoned by Denis Hornsby was that he had to move closer to Sydney so that Helen, his partner, could have access to long-term medical treatment. At the time of writing, it is unknown whether this vineyard will be resurrected, but it is not beyond the bounds of possibility that one of the larger wine companies might be attracted by Hornsby's one great marketing idea: every year he made the first *nouveau* in the world by harvesting his Shiraz at one minute past midnight on January 1. Since the harvest is normally in January, this was no problem. In fact, one year his Chardonnay ripened a month early, and the 1997 vintage was actually picked on December 7, 1996!

AN OUTBACK STATION IN ALICE SPRINGS

The hot, dry climate means irrigation is necessary for the area's red-sand soil, but there is an abundant supply of water underground.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

Queensland is situated in the northeastern corner of Australia, with the Coral Sea to the east, and the Northern Territory, the north-central state, to the west.

CLIMATE

Annual rainfall at Roma is only 20 inches (51 centimeters), but the Granite Belt receives 31 inches (79 centimeters). Much of it tends to fall at vintage time and this can be a problem, but frost and hail pose a greater danger. Temperatures are high (similar to the Margaret River in Western Australia), but not unduly so, due to the tempering effect of altitude.

ASPECT

The altitude of Stanthorpe in the Granite Belt, where the surrounding vineyards lie between 2,500–3,100 feet (750–940 meters) above sea level, helps to temper the otherwise scorching summer heat in both areas. The vines here are generally grown in the hilly area, on sloping sites, whereas at South Burnett vines grow at 990–1,459 feet (300–442 meters) on more rolling countryside.

SOIL

The soils of Queensland are phylloxera-free. As the name suggests, they are granitic in the Granite Belt around Stanthorpe.

South Burnett varies from red granitic-sand with basalt on the plains and terraces, to basalt-based soils, light sandy soils, red-colored light, clayey soils, and heavier brown and black clayey soils elsewhere. The area around Alice Springs shares the same infertile, coarse, red, iron-rich sandy soil that is common to much of central Australia.

VITICULTURE AND VINIFICATION

Irrigation is necessary to produce wines near Alice Springs and, indeed, at Roma. The most modern technology is used in these areas to combat the problems of heat and oxidation. As a result, quite good wines are produced.

GRAPE VARIETIES

Primary varieties: Cabernet Sauvignon, Chardonnay, Riesling, Sauvignon Blanc, Sémillon, Shiraz, Verdelho

Secondary varieties: Barbera, Cabernet Franc, Chambourcin, Chenin Blanc, Gamay, Malbec, Marsanne, Merlot, Mourvèdre, Muscat, Nebbiolo, Petit Verdot, Pinot Gris, Pinot Noir, Ruby Cabernet, Sangiovese, Sylvaner, Tarrango, Tempranillo, Touriga Nacional, Viognier, Zinfandel

THE APPELLATIONS OF
**QUEENSLAND AND
 NORTHERN TERRITORY**

GRANITE BELT

Italian immigrants and their families pioneered viticulture and winemaking in the 1920s, selling to relations and friends in the Italian cane-growing communities to the north, but the current boutique-based industry started in the 1960s, when Shiraz was planted. The vines here are grown in an area that surrounds the town of Ballandean, on an elevated granite plateau 150 miles (240 kilometers) west of Brisbane. It is the altitude of this district, between 2,500 and 3,100 feet (790 and 940 meters), that provides a sufficiently cool climate. Indeed, at Felsberg, located at an altitude of 2,750 feet (850 meters), the grapes sometimes struggle to ripen. As can be imagined, the soil is granitic, with Riesling the most suitable variety, although the most successful individual wine is, believe it or not, Ballandean's late-harvest Sylvaner. Other varieties that do well include Cabernet Sauvignon, Chardonnay, Sémillon, and Shiraz.

ROMA

Like Alice Springs, Roma is not a GI wine region, but viticulture in this hot and arid area of Queensland is almost equally as improbable, thus its inclusion as one of most bizarre locations to plant a vine. While this might not be classic wine country, there are some 62 acres (25 hectares) of vines, and the solitary wine estate, Romavilla, has not missed a vintage since 1866, which alone makes Roma worthy of mention. Indeed, there are not many producers in Australia's premium wine regions who can claim to have 140 consecutive vintages under their belt. If Roma is any sort of wine country, it is—or it is meant to be—fortified wine country, which is why I was so surprised to be greeted by a sign proclaiming “Welcome to Roma, Champagne Country,” when I first visited the town. Apparently, in 1864 a certain Mayor Mitchell was so struck by Roma's resemblance to the Champagne area that he mentioned the fact in dispatches, and the description stuck. This can mean only one thing: that Mitchell had never visited Champagne in his life.

SOUTH BURNETT

For anyone who has followed the tiny, emerging wine industry in Queensland, it might come as a surprise to discover that South Burnett was the first official wine region in this state. Observers might be forgiven for expecting that honor would go to the Granite Belt, which is Queensland's oldest and most famous wine region, yet it received GI status in 2002, almost two years after South Burnett. Vineyards in this regional GI were established in the early 1990s, and currently stretch from Goomeri in the north, through the Murgon region to the Bunya Mountains, Kingaroy, and south to Nanango. Not surprisingly, the climate is hot, humid, and subtropical, with high rainfall during the growing season. There are various soil types, from red granitic-sandy soils on the plains and terraces, to basalt-based soils, light sandy soils, red-colored, light clayey soils, and heavier brown and black clayey soils elsewhere. Grape varieties include Cabernet Sauvignon, Chardonnay, Merlot, Riesling, Sauvignon Blanc, Sémillon, and Shiraz.

THE WINE PRODUCERS OF
**QUEENSLAND AND
 NORTHERN TERRITORY**

ALBERT RIVER WINES

Tamborine
 ★●

Established in 1998, but the first pure Queensland wines were not produced until 2000. Very much early days, but the most consistent wines so far have been the reds.

✓ *Classic red blend* (Cabernet-Shiraz-Merlot) • *Shiraz* (Grand Masters)

BALD MOUNTAIN

Granite Belt
 ●

Owned by Denis and Jackie Parsons, whose vineyards are close to Girraween National Park. Not tasted recently, but Chardonnay and Shiraz used to be the most consistent wines here.

BALLANDEAN

Granite Belt
 ★●

At AU\$4,800 (US\$3,700) for a single 75cl bottle, Ballandean's “Generation 3” Cabernet-Shiraz must be one of the world's most expensive wines, although it was bottle 001 of the first vintage, 2002, of this individually numbered line, and auctioned for charity. The same wine normally retails for a more modest AU\$29.50 (US\$22.50).

✓ *Chardonnay* (Black Label) • *Classic white blend* (Sémillon-Sauvignon Blanc) • *Fortified* (Liqueur Muscat) • *Shiraz* (Generation 3) • *Sylvaner* (Late Harvest)

**BARAMBAH
 RIDGE**

South Burnett
 ★●

Owned by Tambarambah, a public company, Barambah Ridge was established in 1997, and quickly demonstrated the potential of Queensland's most exciting new wine region, South Burnett.

✓ *Cabernet Sauvignon* • *Chardonnay* (Unwooded) • *Classic white blend* (Chardonnay-Sémillon) • *Sémillon* • *Shiraz* (Reserve) • *Verdelho*

BUNGAWARRA

Granite Belt
 ●

Originally founded in the 1920s by Angelo Barbagello, this winery was reestablished in 1979 by Alan Dorr and purchased in 1993 by Jeff Harden, a Brisbane pharmacist, who upgraded the winery. Not tasted recently.

**ROBERT
 CHANNON**

Granite Belt
 ★★●

Queensland's most successful, medal-laden winery, Robert Channon's extraordinary-quality Verdelho is, however, the real standout.

✓ *Cabernet Sauvignon* (Reserve) • *Chardonnay* (Reserve) • *Classic red blend* (Shiraz-Cabernet Sauvignon) • *Merlot* (Reserve) • *Verdelho*

**CLOVELY
 ESTATE**

South Burnett
 ★●

Ambitious 445-acre (180-hectare) project established in 1998.

✓ *Chardonnay* (Left Field, Reserve) • *Classic red blend* (Shiraz-Cabernet) • *Classic white blend* (Estate Sémillon-Chardonnay) • *Sémillon* (Left Field)

**FELSBERG
 WINERY**

Granite Belt
 ★●

For a vineyard that could not ripen Chardonnay sufficiently, Felsberg has done surprisingly well with Cabernet Sauvignon and Shiraz.

✓ *Cabernet Sauvignon* • *Shiraz*

**GLASTONBURY
 VINEYARD**

Eumundi
 ★●

Judged exclusively on the performance of Glastonbury's Emotion Cabernet Sauvignon, this winery would be rated ★★, but the other wines have to catch up.

✓ *Cabernet* (Emotion)

GOLDEN GROVE ESTATE

Granite Belt
★●

Sam and Grace Costanzo have quickly made a name for themselves since establishing this winery in 1992. Best for Reserve Chardonnay, but doing well across the range.

✓ *Chardonnay* • *Classic red blend* (Cabernet-Merlot) • *Sémillon* (Reserve)

GOVERNOR'S CHOICE

Toowoomba
★●

Established in 1999, Governor's Choice Cabernet-based blends have been the most successful wines so far.

✓ *Classic red blend* (Cabernet-Shiraz, Cabernet-Shiraz-Malbec)

GOWRIE MOUNTAIN ESTATE

Granite Belt
★

Established in 1998, four years later Gowrie Mountain Estate became the first Australian producer to sell wine in 250-milliliter aluminum cans, something that Stowell's of Chelsea did in the UK in the 1980s, but soon dropped the idea as soon as it was discovered that consumers did not take to wine in cans. However, times have changed; consumers would not have liked screw-top bottles back then, either, but do so now, so perhaps cans of wine might take off—literally, in planes, as an equally horrid, but much lighter alternative to glass splits? Wines include Tempranillo, Gamay, and Chambourcin, as well as the more regular varieties.

✓ *Chardonnay*

GRANITE RIDGE WINES

Granite Belt
★●

Founded in 1995 by current owner-winemaker, Dennis Ferguson, who originally named this venture Denlana Ferguson Estate. The Ridge is a blend of Merlot and Cabernet Sauvignon.

✓ *Classic red blend* (The Ridge) • *Merlot* (Fergies Hill) • *Shiraz* (Granite Rock)

HERITAGE WINES

Granite Belt
★●

Two very recently established ventures founded by Bryce and Paddy Kassulke, who have rapidly made a reputation for themselves.

✓ *Botrytis* (Chardonnay) • *Merlot* (Private Reserve) • *Shiraz* (Private Reserve)

IRONBARK RIDGE

Purga
★●

This winery was established in 1984, in an isolated area between

Brisbane and the Great Divide, where Robert Le Grand had planted vines in the late 19th century. His wines won acclaim in Europe in the 1890s. The Dick family took over and their wines also won awards in Europe in the early 1900s. Although best known for its Chardonnay, Ironbark Ridge has great hopes for its recent plantings of Dolcetto, Verdelho, and Nebbiolo.

✓ *Chardonnay*

JIMBOUR STATION

Jimbour
★●

Interesting recent project to resurrect winemaking in Jimbour, with the not inconsiderable skills of consultants Michael von Berg, Peter Scudamore-Smith MW, and Geoff Weaver. Some of its best-received wines have not been made exclusively from Queensland fruit. Wines also produced under the Linkeith, Ludwig Leichardt, and Old Monty labels.

✓ *Shiraz* (Darling Downs)

LILYVALE

Texas
★●

Recently established venture located on a bend of the Dumaresq River on the southern border of Queensland, a 30-minute drive east of Texas.

✓ *Sémillon* • *Verdelho*

MOUNTVIEW

Granite Belt
●

David and Linda Price, the founders of the tiny, immaculate, red-cedar barn that houses Mountview's winery, sold up in 2000. Not tasted recently, but some vintages of the Shiraz were extremely elegant, and brilliant value, thus hopefully the new owners will build on this legacy.

PRESTON PEAK

Granite Belt
★●

One of the more successful Queensland operations, Preston Peak draws on fruit from two different vineyards, but as yet I have not seen any single-vineyard wines.

✓ *Cabernet Sauvignon* (Leaf Series) • *Chardonnay* (Leaf Series) • *Petit Verdot* (Leaf Series) • *Sauvignon Blanc* (Leaf Series) • *Sémillon* (Leaf Series) • *Shiraz* (Reserve)

RIMFIRE

MacLagan
★●

Established in 1991 by the Connellan family, who have created a mysterious legend surrounding a dry white wine called 1893. This supposedly comes from a vineyard propagated from a single, 100-year-old vine found on their property, which they claim is "not listed

on the Australian DNA grape vine data base."

✓ *Classic red blend* (Cabernet Franc-Ruby Cabernet) • *Muscat* (Dry White) • *Verdelho*

RIVERSANDS VINEYARDS

St. George
★●

Established in 1990, and purchased by Alison and David Blacket in 1996, these vineyards are located on the banks of the Balbonne River in the southwest of Queensland. The fortified wines are the best.

✓ *Fortified* (Golden Liqueur Muscat, Stirlings Reserve Red Liqueur Muscat)

ROBINSONS FAMILY

Granite Belt
★●

John Robinson got his passion for wine when living in France, close to the Beaujolais region, then studied wine science at Riverina College under Brian Croser.

✓ *Cabernet Sauvignon*

ROMAVILLA WINERY

Roma
★

Established in 1863, Romavilla is a living reminder of Queensland's wine history. However, although the recommended fortified wines are rich and intense, with a big finish, there are few other wines of interest.

✓ *Chardonnay* (Reserve) • *Classic red blend* (Old Tawny Port, Very Old Liqueur Muscat, Very Old Tawny)

RUMBALARA VINEYARDS

Fletcher
★●

Rumbalara is Aboriginal for "end of the rainbow," but it is more likely to be a pot of bronze found here than the golds accumulated when there was much less competition.

✓ *Cabernet Sauvignon* • *Sémillon* • *Verdelho*

SETTLERS RISE

Montville
★●

Another recently established Queensland winery that employs the contract winemaking skills of Peter Scudamore-Smith MW, Settlers Rise is located in the hinterland of Queensland's Sunshine Coast, one hour north of Brisbane. Shows promise.

✓ *Shiraz* (Reserve)

SIRROMET WINES

Mount Cotton
★

Established by the Morris family in 1998, Sirromet's *avant-garde* restaurant was recognized in 2004 with numerous awards, including Brisbane's Best Tourism Restaurant, Brisbane's Best Restaurant in a

Winery, and Brisbane's Restaurant of the Year. If any Queensland winery has the potential to achieve a ★★ rating in this encyclopedia, it is Sirromet.

✓ *Cabernet Sauvignon* (Seven Scenes) • *Petit Verdot* (Vineyard Selection) • *Shiraz* (Seven Scenes, Vineyard Selection)

STUART RANGE ESTATES

South Burnett
★

A state-of-the-art winery inside a historic butter factory built in 1907, Stuart Range Estates is one of South Burnett's rising stars.

✓ *Chardonnay* (Goodger) • *Classic red blend* (Goodger Cabernet-Merlot) • *Shiraz* (Goodger)

SUMMIT ESTATE

Granite Belt
★●

Up-and-coming Granite Belt operation owned by Bill Ryan, Tim Galligan, and Martin Millard, who planted their vineyard in 1997. The Shiraz is most impressive.

✓ *Classic red blend* (Cabernet Sauvignon-Merlot, Merlot-Cabernet-Shiraz) • *Shiraz* (Reserve)

WHISKEY GULLY WINES

Granite Belt

Established in 1997 by John Arlidge, whose politically named wines definitely lean toward the left.

✓ *Cabernet Sauvignon* (Upper House) • *Shiraz* (Black Rod)

NEW ZEALAND

New Zealand's isolation and cool, maritime climate make it the most exciting place on Earth for wine, yet certain producers want to marginalize its most successful variety, Sauvignon Blanc. In the process they run the risk of ruining their unique reputation. While there is no doubt that New Zealand can and does produce top-class wines from numerous other grape varieties, only Sauvignon Blanc is undeniably a class apart from the same grape grown anywhere else in the world. No other country can make a similar claim for any other grape variety, and no other country has such an unassailable flagship for its wine industry. Why throw that away?

SOME PRODUCERS would also like to build a fresh reputation based on, of all grapes, Chardonnay. I am not an "anything but Chardonnay" man, but this is the last grape that any region should specialize in. New Zealand's producers should, of course, continue to make the finest Chardonnay possible, but only as part of an increasing range of world class wines. Chardonnay's place is alongside Pinot Noir, various Bordeaux varieties, Riesling, sparkling wine, and promising new grapes such as Syrah. All of these add to the breadth and depth of New Zealand's reputation.

So why would anyone in this industry want to marginalize Sauvignon Blanc? Embarrassment! They feel uncomfortable that New Zealand should be so famous for a grape of such obvious, upfront character. They long to have a more complex, classier wine to fly the flag. But it is nothing to be ashamed of: it is a refreshing, pure, vibrantly fruity wine. Sauvignon Blanc is the ideal choice to open up wider markets, whereas a more complex, more expensive wine would be restrictive.

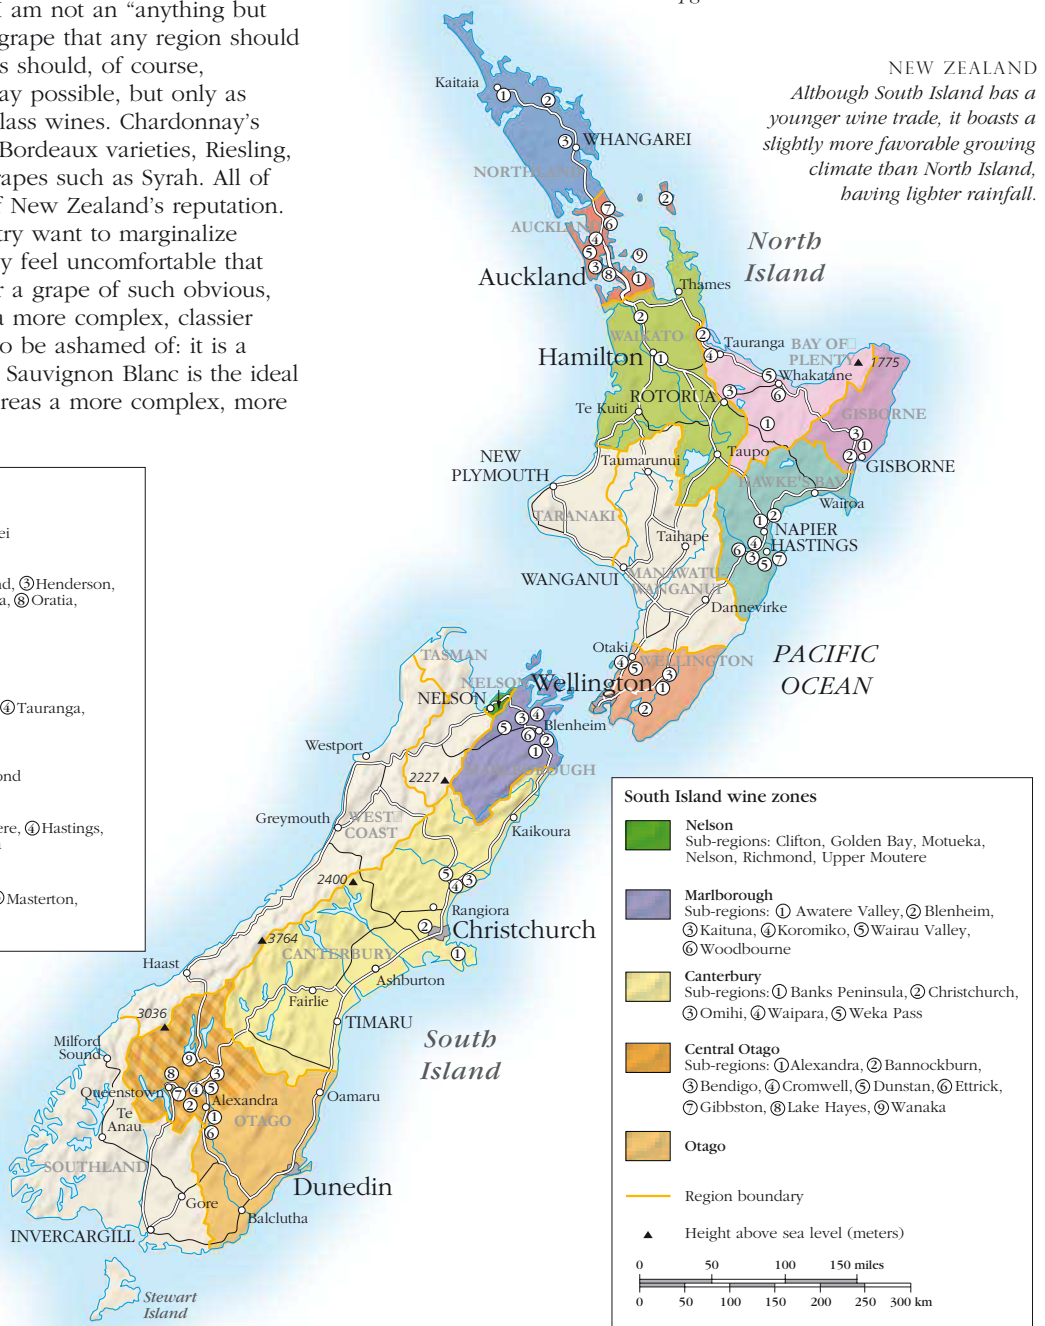

MISSION VINEYARDS, NORTH ISLAND
The Hawke's Bay winery has recently upgraded its wines.

NEW ZEALAND
Although South Island has a younger wine trade, it boasts a slightly more favorable growing climate than North Island, having lighter rainfall.

FACTORS AFFECTING TASTE AND QUALITY

 LOCATION

With the exception of Waiheke Island, all of New Zealand's grape-growing areas are on its two principal islands, North Island and South Island, stretched over 1,000 miles (1,600 kilometers) between latitudes 36°S and 45°S. Central Otago is the most southerly location.

 CLIMATE

North Island generally has a cool maritime climate, similar to that of Bordeaux in temperature but with much higher rainfall. The crucial fall periods are rarely dry; heavy rains and high humidity lead to problems of grape damage and rot. South Island is significantly cooler, but sunnier and drier. Marlborough is South Island's warmest area, and often has the country's most hours of sunshine. Rainfall is variable. Using the California heat summation system, the most important viticultural areas in both islands are all Region 1.

 ASPECT

Most vines are planted on flat or gently sloping land, and are easy to work. Some north-facing slopes have been planted in Auckland and Te Kawwhata; these provide better drainage and longer hours of intensive sunlight. Some steep vineyards are found in South Island's Central Otago district.

 SOIL

Soils are varied, mostly clay or loam based, often sandy or gravelly, with schistous loess over gravel in Central Otago, and volcanic subsoils in parts of Northland (Cottle Hill), and around Canterbury (Banks Peninsula).

 VITICULTURE AND VINIFICATION

Harvests begin in March and April, six months ahead of wine regions in the northern hemisphere. Canopy management has totally transformed New Zealand's wines, especially its reds, which no longer possess the excessive pyrazines that once gave them an unwelcome, ever-present herbaceousness. Most winemakers have studied oenology in Australia, and done at least one *stage* (internship) in Europe. This straddling of Old and New World, tradition and technique, has helped shape New Zealand's wine reputation. Many producers have adopted screwcap bottles.

 GRAPE VARIETIES

Primary varieties: Cabernet Sauvignon, Chardonnay, Merlot, Pinot Noir, Riesling, Sauvignon Blanc
Secondary varieties: Cabernet Franc, Chenin Blanc, Gewürztraminer, Malbec, Müller-Thurgau, Muscat, Pinotage, Pinot Gris, Sémillon, Syrah

COOPERS CREEK WINERY, NORTH ISLAND

Situated in the Huapi Valley, this winery produces exceptionally stylish wines. Talented North Island winemakers use both traditional and high-tech methods.

This consolidation begins in the vineyard, getting to grips with where each variety grows best, and within these areas, selecting a compact range of site-specific clones and rootstock. It also means looking up from the valley floor to the surrounding hills, which is where the future lies. I cannot imagine that anyone has stood on the hills surrounding Marlborough and not wondered whether the vines are in the right place. Obviously they are not badly sited because quality speaks for itself, but some pretty special wines could be made in those hills. Irrigation is the problem, but not an insurmountable one. Besides, potential pioneers should not be thinking in terms of the irrigation required to churn out valley-floor yields. That would be defeating the object.

There are only two blots on New Zealand's winescape: one is brand disorientation; the other is a lack of a verifiable appellation system. Brand disorientation is when wines blended from two or more countries are sold under the same brand name as pure New Zealand wines. This is particularly dangerous when the name in question is globally famous. If this practice is not restricted to entirely different, easily distinguishable brands, it could undermine New Zealand's reputation as a premium wine producer.

As for a lack of a verifiable appellation system, I do not refer to a draconian system like the French AOC, which dictates what must be grown, how the vines should be trained, and what the style of wine should be. I mean simply a system that can guarantee that what is on the label is what is in the bottle—essentially that the grapes are of the variety claimed and were grown in the area indicated. New Zealand's core regions of Auckland, Bay of Plenty, Gisborne, Hawke's Bay, Northland, Waikato, and Wellington on North Island, and Canterbury, Central Otago, Marlborough, and Nelson on South Island are defined by the Local Government Act of 1974. However, the geographical appellations of Certified Origin status announced in 1996, and mentioned in the last edition of this book, have not been implemented. This was to be the wine industry's interpretation of the Geographical Indications Act 1994, an umbrella law designed to guarantee the origin of numerous products, not just wine. Certified Origin should have been done and dusted long ago, but as one New Zealand wine official put it, "let's just say it is very complicated, but I am hopeful of some action in the next year or so...although I am not holding my breath." Complicated or not, the New Zealand wine industry must get its act together, if it wants to steer clear of long-running boundary sagas like that in Coonawarra, Australia, and prevent a repeat of various labeling

PAST, PRESENT, AND FUTURE

Up to the 1980s, Cooks, Corbans, and Montana dominated the New Zealand wine scene, and the most popular product was Müller-Thurgau sweetened-up with *süssreserve* (now that was a wine to be embarrassed about). In 1987, Cooks took over Corbans, and both were consumed by Montana, then Sauvignon Blanc began its inexorable rise. Now Cooks and Corbans are little more than brand names without heart or soul, with wines that are seldom seen on export markets. And Montana itself has been taken over by the multinational beverage group Allied-Domecq.

Meanwhile, the number of individual wineries has ballooned from 100 in the mid-1980s to about 500. The range of varietals has blossomed in their wake, as boutique producers have sought something different with which to gain an edge. Nowhere has this been more evident than in red wine varieties. Just 15 years ago, almost all of New Zealand's red wines were noted for their herbaceous flavors, a result of excessive vigor in the vineyard; but this has been eradicated through better canopy management. Bordeaux varieties are now old hat, Pinot Noir has become one of the country's hottest wines, and even Syrah is excelling.

After Montana and Nobilo, the largest wine producer is Villa Maria, followed by a number of fairly big, well-known wineries; but the majority of wineries are very small operations. The large range of New Zealand brands available even on export markets like the UK makes it hard to believe that Montana processes more than half of the country's entire wine output. This is a heavy responsibility to bear, but one that rests lightly on Montana's shoulders, since it also produces many of the country's finest and best value wines. It is a role model that other large wine producers throughout the world should follow.

The future should be bright for New Zealand, if it can accept Sauvignon Blanc as the gift it is, and show restraint in yields, thereby consolidating quality, thus the reputation, of its wines.

RECENT NEW ZEALAND VINTAGES

2004 Torrential rains in February threatened to dilute New Zealand's largest crop ever, but an Indian summer enabled growers who restricted yields and delayed harvesting to produce fine quality wines. Central Otago was hit by frosts in spring and fall, reducing yields one-third, but the quality should be high.

2003 Spring frosts reduced yields by up to half in some regions. The quality was variable, with a number of disappointments, but the best producers got it right more often than not. South Island fared best, with fresh, elegant Sauvignon Blanc and Riesling produced in Marlborough standing out.

2002 A massive crop of 118,700 tons rang alarm bells for some critics, but New Zealand's vineyards had grown by 35 percent since the previous all-time high of 80,100 tons in 2000. In terms of yield per hectare, 1999 and 1998 were both significantly higher, while 1996 and 1995 were higher still. By 1995 standards, the crop would have been 168,200 tons! Some Marlborough Sauvignon Blanc might have disappointed, but the best producers made brilliant wines, and the long, hot, dry fall weather easily ripened the weighty crop almost everywhere. Look out for great reds from Hawke's Bay and, particularly, Central Otago. Also some exceptional Riesling from Central Otago.

2001 South Island generally fared best, but with extremes such as downpours, droughts, fires, and frost throughout the country, this vintage varies considerably in quality from region to region. There were some truly delightful surprises, including some of New Zealand's greatest red wines in the Gimblett Road district of Hawke's Bay, where those who delayed picking benefited from an Indian summer.

2000 At 80,100 tons, this was New Zealand's largest ever harvest. The ripening was marked by warm days and cool nights. Even though Marlborough was affected by rain, this diurnal difference provided intense, exceptionally focused varietal flavors, with Chardonnay and Sauvignon Blanc excelling. Rain also affected various North Island regions.

NEUDORF VINEYARDS, SOUTH ISLAND

Neudorf Vineyards on South Island produces 2,000 cases annually from its 11 acres (4.5 hectares) of land.

scandals. Particularly as the current definition of origin does not hold water, let alone wine. As the same official source confirmed: subregions "are not defined in any legislation," but "they can be used if the grapes are derived from the named place," yet "the boundaries of each such subregion have not been defined" because they "are evolving over time as new vineyards are developed." And I thought the French were irrational.

THE APPELLATIONS OF NEW ZEALAND

The New Zealand appellation is usually found on exported cask wines (bag-in-the-box) and inexpensive blended wines sold on the domestic market, such as Montana's Waimanu range and Corban's White Label (if indeed the wine is from New Zealand at all).

NORTH ISLAND

The more important of the country's two islands, supporting some 70 percent of the population, North Island is where New Zealand's wine industry began and was confined to until as recently as 1973. North Island is technically an appellation in its own right, but seldom seen as such, although it has in the past been used by Azure Bay (Sauvignon Blanc-Sémillon).

AUCKLAND

Subregions

Brighams Creek, Clevedon, Drury, Glendene, Great Barrier Island, Henderson, Henderson Valley, Hobsonville, Huapai, Huapai Valley, Ihuamato, Karaka, Kumeu, Lincoln, Maburangi, Mangatangi, Mangere, Matakana, Matua Valley, Oneroa, Onetangi, Oratia, Pukekobe, Putiki Bay,

Ranui, Riverhead, Riverlea, Sunnyvale, Swanson, Swanson Valley, Taupaki, Waiheke, Waiheke Island, Waimauku, Waitakere, Warkworth, West Auckland, Whitford, Woodhill

In the 1960s, a decade before the first vines were planted in Marlborough, Auckland possessed more than half of New Zealand's vineyards. Even though the area under vine has doubled over the past 10 years, Auckland possesses just 3 percent of the country's vineyards today, such has been the rate of change throughout the rest of New Zealand. Despite this minuscule contribution in terms of vineyard land, Auckland remains the traditional center of its wine industry, primarily because it houses the headquarters of the largest wine companies: Montana and Villa Maria both bottle wines here from all over the country. And despite growth elsewhere, Auckland still has more wineries than any other region.

Auckland's various wine districts produce some of the country's very finest wines. Clevedon's vineyards are sited on steep, north-facing hillsides, where Cabernet Sauvignon, Malbec, Merlot, Syrah, and even Montepulciano vines are low-yielding and mostly handpicked. There is also a growing reputation for Chardonnay and Pinot Gris in dessert wine

styles. In the 1960s, the Henderson-Oratia district in West Auckland was second only to Hawke's Bay as the country's largest wine producing region, and is still the center of New Zealand's fortified wine industry. The Kumeu-Huapai district escapes some of the rain that falls on West Auckland, and has long been established as a source of premium varietal wines, including Chardonnay, Merlot, and Cabernet Sauvignon, although some wineries source their fruit from farther south. Matakana-Mahurangi is located on the east coast to the north of Auckland. A small, but fast-growing area, it is known for its pinkish-red, iron-rich, granulated clay soil, upon which the local wineries have built a certain red wine reputation and are beginning to show promise for full, fruity white wines. Waiheke Island is much drier and sunnier than mainland Auckland, and is one of New Zealand's most exciting districts for Bordeaux-style reds. Tiny quantities of Cabernet-Merlot have been produced on Great Barrier Island, which is way out in the Pacific, well beyond Waiheke Island. Transport costs have prevented this island from developing a wine industry with any aspirations for a national reputation. Although John Mellars, the largest of Great Barrier Island's two

vineyards, with just 2.5 acres (1 hectare) of vines, has managed to survive on local trade since his first crop in 1993.

BAY OF PLENTY

Subregions

Bethlehem, Galatea, Katikati, Murupara, Rotorua, Tauranga, Thornton, Whakatane

Known more for its dairy products than for wine, the Bay of Plenty is a very large region containing relatively few wineries, and even fewer vineyards, as most of the producers source their fruit from Hawke's Bay or elsewhere. The most famous names here are Morton Estate and Mills Reef, but only Covell Estate has any significant area under vine (17 acres/7 hectares and growing).

EAST COAST

This multiregional appellation straddles the eastern coast of both North Island and South Island, which effectively encompasses 90 percent of all the vines growing in New Zealand. It is used by high-volume wines where the brand name and flexibility of sourcing are more important than a specified provenance. Current users of the East Coast appellation include Azure Bay (Sauvignon Blanc-Sémillon), Babich (Chardonnay, Pinot Noir, and Pinotage), Montana (which owns the Azure brand, but also has an export-only East Coast range under the Montana label for Cabernet Sauvignon-Merlot, Chardonnay—usually Marlborough, Unwooded Chardonnay—usually Gisborne, and Pinotage), and Villa Maria (Gewürztraminer, Merlot-Cabernet, Müller-Thurgau).

GISBORNE

Subregions

Bushmere, Hexton, Makaraka, Makauri, Manutuke, Matawhero, Mōhaka, Mubaka, Muriwai, Ormond, Ormond Valley, Patutahi, Te Araroa, Te Karaka, Tolaga Bay, Waibirere, Waimata, Wairoa

Gisborne is synonymous with Poverty Bay, and has been dubbed “carafe country” due to its once-enormous yields of Müller-Thurgau; but Gisborne Müller-Thurgau has become uneconomic for even the cheapest bag-in-the-box wines (which are now mostly blended with imported wines). Consequently, the amount of Müller-Thurgau grown has dropped dramatically.

Now Chardonnay is the region's major grape variety but Gisborne still has a reputation as a source of blending fodder. Most vineyards are located on the plains on each side of the Waipaoa River, and although the grape varieties grown have improved, this area is primarily flat and extremely fertile, thus it is inclined to churn out even the most classic of grapes at relatively high yields. Little wonder then that Gisborne regularly produces a higher tonnage of grapes than Hawke's Bay, despite having half the area under vine. There is no sense of place to most of the wines produced, since Gisborne Chardonnay averages over 440 cases per acre (100 hectoliters per hectare). It is, however,

ideal for bulking out young, easy-drinking multiregional blends, and this is one reason why only a small proportion ends up under the Gisborne appellation.

Another reason is the small number of wineries, although this is starting to change, having risen from 10 to 16 over the past two or three years. In the hands of quality-conscious growers, even vineyards on the flats can produce expressive Chardonnay. With moves into the hills overlooking the plains, we can expect to see more individual, higher quality Gisborne Chardonnay in future years.

More than one-third of Gisborne's vines are in flat-as-a-pancake Patutahi. To the south is Manutuke, the region's oldest winegrowing district (1894), where some of Gisborne's rare red wine varieties can be found, including Malbec and Pinot Noir. White grapes vary from Chenin Blanc (probably Gisborne's best) to Chardonnay, Muscat, and Riesling. Prior to the Chardonnay boom, Gisborne's only premium varietal was Gewürztraminer from around Matawhero, on the opposite bank of the Waipaoa. Although this was and still is justly famous by New Zealand's standards, its rendition is more floral than spicy, and Gewürztraminer from Montana's Patutahi estate has been every bit as impressive. North of Matawhero, radiating out from the suburbs of Gisborne itself, the Makauri district runs on both sides of the Taruheru River into Makaraka and Bushmere. Makauri grows some of the region's better Müller-Thurgau, along with Muscat, Sémillon, and Merlot. On the other side of the plain, at the foot of the Hexton Hills, some of this bulk-blending region's more exotic varieties can be found, including Gewürztraminer, Malbec, Merlot, and Viognier. Creeping farther northwest, around the edge of the foothills, is Waihirere, which is also referred to as the Golden Hills. This area has a reputation for Chardonnay, as does Ormond farther north. Corbans' late, lamented Cottage Block Chardonnay came from the Benson Vineyard in the Ormond region. It is now called Whitmore Vineyard, and in good years the grapes go into the Montana “O” Ormond Estate Chardonnay. Gisborne's northernmost vines are found at Tiritiri Organic Vineyard, in the back of beyond, on the upper reaches of the Waimata River.

In conclusion, Gisborne is essentially white wine country, where loose-cluster grapes perform best. Varieties with tightly packed clusters run the risk of rot, while most red varieties (less than 10 percent of all Gisborne vines) are difficult to ripen. This may change as more early-ripening clones of classic red wine varieties become available, and if growers plant a thirst-quenching cover-crop between the rows to mop up as much of the diluting rain as possible.

HAWKE'S BAY

Subregions

Bay View, Clive, Crownthorpe, Dartmoor, Dartmoor Valley, Eskdale, Fernhill, Flaxmere, Gimblett Road, Greenmeadows, Hastings, Haumoana, Havelock North, Heretaunga, Korokipo, Mangatangi, Maraekakaboe, Matapiro, Meeanee, Mere Road, Mt Erin, Napier, Ngatarawa, Ngauroro, Obiti, Obiti Road, Okaua, Omarumui, Pakuratahi Valley, Puketapu, Roy's Hill, Sherenden, Swamp Road, Taradale, Te Awanga, Te Mata, Tuki Tuki, Tutaeakuri, Tuiyford, Waitobiki, Wharerangi, Woodthorpe

Hawkes Bay or Hawke's Bay? As the *Encyclopaedia Britannica* and even official Hawke's Bay publications use both spellings,

even on the same page, each name is obviously in common usage. But since Captain Cook named the bay after the First Lord of the Admiralty, Lord Hawke, it should really be Hawke's Bay with an apostrophe. Hawke's Bay is the driest wine region in the country and has the most diverse range of soils, including but not restricted to fine alluvium over graywacke gravel, hard-pan clays, heavy silts, sandy loams, sandy loams over clay, sandy silt loams over gravel, stones over gravel, and stony gravels. Hawke's Bay has always offered more potential for Cabernet Sauvignon and its derivative blends than Marlborough or any other New Zealand region, but it is wrong to class this region as red wine country, let alone the sole province of Bordeaux varieties. It is at least as exciting for Chardonnay, and a handful of producers compete even with Marlborough's best Sauvignon Blancs, albeit in a richer, fuller style.

The two most important grape varieties are Chardonnay and Merlot, but the complex matrix of soils, the differences in aspect, and local variations in climate open up Hawke's Bay to myriad different grape varieties, some of which are yet to be planted. Gimblett Road is only just finding its feet for polished Syrah that is neither Australian nor Rhône in style, and seems likely to eclipse the already heady reputation of this designated district's Cabernet Sauvignon and Chardonnay. Roy's Hill is synonymous with Gimblett Road, although geographically Gimblett Road is located at the foot of Roy's Hill. Gimblett Gravels is a memorable, descriptive appellation invented by a number of wineries to market the superior qualities of their Gimblett Road vineyards. Adjacent to Gimblett Road, to the southwest, is Ngatarawa. (The “g” in Maori names beginning “Ng” is silent, thus Ngatarawa is pronounced “na-ta-rawaa.”) This region is also known as the Redmetal Triangle, because the free-draining gravel deposits are known locally as “red metals” due to their color and metal content. However, what distinguishes Ngatarawa from the neighboring Gimblett Road is the different water-retention capacity of the gravel subsoil. In Ngatarawa, the gravels retain more moisture, giving the area a slight edge in hotter years, whereas Gimblett Road has the advantage in cooler vintages. Ngatarawa reds are generally softer than those from Gimblett Road, with Merlot the best-suited variety. It is also well known for its botrytized whites.

Dartmoor Valley could be called the Tutaeakuri Valley, as its vineyards are laid out along its banks and in its hinterland, over the hills behind Taradale, leading up to Woodthorpe and beyond. This is indeed Bordeaux country, favoring Cabernet Sauvignon on the lower reaches, and Merlot farther upriver. Chardonnay also fares well, particularly on the upper reaches and at Swamp Road, north of Omaha, between the Ngauroro and Tutaeakuri rivers, and in the vineyards of Fernhill

and Korokipo on the northern bank of the Tutaekuri. Eskdale is north of Napier, but the climate is cooler than the Hastings area due to sea breezes drawn up the Esk Valley, although nights can be warmer. Soils are relatively fertile, although more gravelly toward the coast, where the wines take on more finesse. Big, bold Bordeaux-type reds can be produced from Eskdale through the Esk Valley, and a little farther south at Bay View. Sheltered by Te Mata Peak, the north-facing slopes of Te Mata's famous Coleraine vineyard at Havelock North, southeast of Hastings, are sun-traps that have established over 25 years their ability to produce top class Cabernet Sauvignon.

To the east is Te Awanga, a coastal block of vines from the northern suburbs of Te Wanga to the mouth of the Tukiuki River, where some surprising big, bold Chardonnay and Bordeaux-style blends are grown. To the west of Ngatarawa, on the bend of the Ngaruroro River is Maraekakaho, while farther upriver and significantly cooler is the up-and-coming area of Mangatahi. Growers believe that Mangatahi's greater diurnal extremes of temperature will enable it to establish a reputation as Burgundy country, in both red and white formats. On the opposite, northern bank is the even newer Crownthorpe area, which is also known as Matapiro, and best suited to early-ripening varieties. Waipawa and Waipukurau are located at the center of Hawke's Bay itself, but way off the established Hawke's Bay viticultural map, to the southwest of Maraekakaho. These new winegrowing areas are distinctly cool, offering the promise of crisper white wines than Hawke's Bay has previously been known for, and with hopes for sparkling wines and Pinot Noir.

NORTHLAND

Subregions

Dargaville, Kaikobe, Kaitaia, Kerikeri, Kokubobu, Otaika, Raumanga, Ruakaka, Sweetwater, Te Hana, Whangarei

It was in Kerikeri, Northland, that Samuel Marsden planted New Zealand's first vines in 1819. Shortly after, in 1833, James Busby, the so-called father of Australian viticulture, settled at Waitangi, where two years later he established his own vineyard. Despite these auspicious beginnings, local winemaking dwindled to almost nothing until very recently. Production has tripled over the past 10 years, but starting from a minuscule point. There are even now just seven wineries, and the vines planted do not represent even one percent of the country's vineyards. Currently most vines are located in three districts: Kaitaia on the far northwest, the Bay of Islands (which contains the appellation Kaikohe and Kerikeri) in the northeast, and around Whangarei, Northland's largest city. These areas boast the country's warmest climate, hence Cabernet Sauvignon, Merlot, and Chardonnay are the three most widely planted grape varieties. But they also have the highest rainfall and humidity, particularly on the west coast, and thus suffer fungal diseases and significant variations in yield. Sémillon, Pinot Gris, and Syrah are on the rise.

WAIKATO

Subregions

Cambridge, Hamilton, Karangahake, Mangatawhiri, Ngabinepouri, Ohaupo, Paeroa, Pokeno, Pukeroro, Tamabere, Te Kauwhata, Thames

Situated inland, south of Auckland, and dotted across various diverse locations, Waikato is

more cow country than a wine district. Indeed, the cows are said to outnumber humans five-to-one, which is why the region is known as Mooloo to the locals. It encompasses the Te Kauwhata district, where yields are lower, and the climate hotter and more humid, making it suitable for botrytized wines.

WELLINGTON

Subregions

East Tararatahi, Gladstone, Kapiti, Longbush, Martinborough, Masterton, Otaki, Pirinoa, Ponatahi, Tararatahi, Te Horo, Te Muna, Tubitarata, Waingawa, Wairarapa

This region can be divided into two distinctly different viticultural districts: Te Horo, a two-winery district to the west of the Tararua Range; and Wairarapa, which encompasses among other areas Martinborough, Wellington's most important district. It is extraordinary to think that Martinborough was only of minor importance in the first edition of this book, as it rapidly achieved a name in the early 1990s as a potentially exciting area for Pinot Noir. This mantle has since been taken over by Central Otago, which has turned out to be no bad thing for Martinborough, since it has always been at least as good for Chardonnay as for Pinot Noir, and is probably the best place to grow Sauvignon Blanc on New Zealand's North Island. But it does not stop there, as its Rieslings are among the best in the country, not to mention its reputation for Pinot Gris and Gewürztraminer, although this is more in a New World context than objectively defined.

Just a few miles east of the town of Martinborough is Te Muna, an up-and-coming subdistrict with great hopes for Pinot Noir, as evidenced by Larry McKenna's Escarpment vineyard. Craggy Range is also planting Sauvignon Blanc, Chardonnay, Pinot Gris, and Riesling in addition to Pinot Noir, and when all of its vineyards come on stream, it will double Martinborough's output, such is its belief in Te Muna. Other Wairarapa areas include East Taratahi, Gladstone, and Masterton. Gladstone is southwest of Masterton, north of Martinborough, where some the first Wairarapa vines were planted. Gladstone and the nearby East Taratahi area are well suited to Riesling and Sauvignon Blanc in the main, whereas Pinot Noir is grown on the sunniest, north-facing slopes. This area is attracting a lot of interest; so too is Masterton itself, where the same varieties are planted, though many of the vineyards are really quite young.

SOUTH ISLAND

South Island has a much lower population than North Island and, due to transportation difficulties, was not cultivated until 1973. It has

quickly demonstrated exciting potential for premium varieties. Technically an appellation in its own right, it is seldom seen as such.

CANTERBURY

Subregions

Akaroa, Amberley, Banks Peninsula, Burnham, Christchurch, Coutts Island, Halswell, Kaiapoi, Kaituna Valley, Lansdowne, Larcomb, Lincoln, North Canterbury, Omibi, Omibi Hills, Omibi Valley, School Road, Selwyn, Swannanoa, Taitapu, Tram Road, Two Chain Road, Waikari, Waipara, Waipara Valley, Weka Pass, West Melton

Although the summer here can be as warm as in Marlborough, the fall is cooler and overall temperatures are lower. At just 24 inches (62 centimeters), the annual rainfall is substantially lower than in Marlborough and less than half of that received in Auckland. Most vineyards are located on the plains surrounding Christchurch, New Zealand's third-largest city, or at Waipara, a coastal area to the north. Quality is less consistent than it used to be, but this region still promises more than it gives. Anyone who has driven from Marlborough to Queenstown and back again knows just how flat and boring the plains around Christchurch are. It is depressing, after driving through some of the world's most spectacular scenery. There are one or two interesting producers on the plains, where the most successful wines are Pinot Noir and Chardonnay in an elegant style, but the best wineries have vineyards elsewhere.

Winegrowing in this region began as early as 1840 on the Banks Peninsula, but it has been stop-start here ever since. With just one winery and 7 acres (3 hectares) of vines, production is negligible. Waipara is the one classic winemaking area in the Canterbury region, with a variety of soils, including clays, gravels, and, in the promising Waikari-Weka Pass area to the north, brilliant-white, hard limestone. This encourages a number of different grapes to be planted. Currently, Pinot Noir, Chardonnay, Sauvignon Blanc, and Riesling fare best, but other varieties include Pinot Gris, Gewürztraminer, and Sémillon. Even Cabernet Sauvignon and Merlot are grown.

CENTRAL OTAGO

Subregions

Alexandra, Ardau Valley, Bannockburn, Bendigo, Central Otago, Cromwell, Dunstan, Earnsclough, Ettrick, Gibbston, Havea, Lake Hayes, Lowburn, Luggat, Omarama, Queenstown, Roxburgh, Tarras, Waitaki Valley, Wanaka

Otago is the authentic regional name, but because the vineyards are located inland, the term Central Otago has evolved, and is more commonly used in a viticultural context than Otago itself. Central Otago is the fastest-developing wine region in New Zealand, having grown 20-fold over the past 10 years, and is the hottest, hippest, coolest place in New Zealand for vineyard investors. The cause of all this activity is the grape variety being grown. Ten years ago, no one knew what they should be growing in Central Otago. In fact, so confused was the issue that local growers would lobby every passing wine journalist for his or her opinion. With heat summation well below the supposed minimum for ripening grapes of 1,000°C degree-days, the growers assumed that it must be white wine country; but what variety, and whether to plump for sparkling, nobody

was quite sure. If anything, there was a tendency to think of playing it safe with German varieties. No one ever imagined Central Otago could be red wine country, let alone a potential home for Pinot Noir, the Holy Grail of all red wine grapes. But since Central Otago Pinot Noir took off in the late 1990s, there has been no stopping it. A lesson, perhaps, for all those “fruit salad” regions throughout the world: find the right grape and create a reputation, rather than trying to be all things to all consumers.

So, what makes Pinot Noir work in heat summation-challenged Central Otago? Well, heat is not everything, and summation does not take account of the beneficial effect of diurnal temperature difference. Warm daytimes ripen the fruit, but the cooler it is at night, the more acidity is preserved, yielding brighter, more vibrant fruit. In Central Otago, the difference between the highest daytime and lowest nighttime temperatures can be as much as 55°F (30°C). Furthermore, the days this far south are long, with little cloud and low rainfall, thus exceptionally sunny and dry. At Bannockburn, in the heart of Central Otago’s Pinot Noir country, the average annual precipitation is half that of rot-prone Burgundy. There are just 20 inches (50 centimeters) of rainfall, yet Milford Haven, only 75 miles (120 kilometers) away, can have nearly 30 feet (850 centimeters) in a single year. And finally, the schistous loess is a heavy-textured soil, which the Pinot likes, but schist tends to powder, rather than clay up, and thus provides excellent drainage. The fact that there is very little rot, due to low humidity (30 to 40 percent), is just the icing on the cake, keeping the vineyards clean and free from the chemicals that are often used to combat cryptogamic diseases.

Although trial blocks of vines had been planted as far south as Alexandra in the 1950s, it was not until 1976 that Central Otago’s first commercial vineyard, Rippon, was established in Wanaka. And it took another five years for the first commercial vineyards to be planted in what would become Pinot country, between Gibbston (Gibbston Valley, 1981) and Alexandra (Black Ridge, 1981). Wanaka represents just three percent of Central Otago production and did not attract any other wineries until 1994, when Mount Maude started planting further north, halfway between Albert Town and Lake Hawea, and more recently when the Orpingtone Vineyard was established on the Ballantyne Road in Wanaka. Only time will tell whether these are just the first two in a last-minute rush. Alexandra is the most southerly established wine area in New Zealand; yet, counterintuitively, it is one of the warmest wine areas in Central Otago. Some claim it to be the very hottest, but it is an area of extremes. Whereas the sunny, north-facing sites are indeed among Central Otago’s warmest, other parts are too cool for any sort of viticulture. By contrast, Gibbston is one of the coolest districts in the region, and its Pinot Noir wines are just beginning to shine. More than two-thirds of all the vines planted in Central Otago are found between Lowburn and the Cromwell Basin, including Bannockburn, the most intensively planted area in the region. It is much too early to make definitive statements as to which Central Otago area is best, but based on the wines produced so far, the warm north-facing sites in Bannockburn are definitely leading the pack for Pinot Noir. Bendigo is located at the northern end of Lake Dunstan in the Cromwell Basin. No wineries exist as yet, but many Central Otago wineries

own vineyards or purchase fruit from here. Bendigo is the warmest of all the Central Otago wine areas, and even grows Syrah. Lake Hayes is located at the junction for Arrowtown and it boasts some of New Zealand’s highest vineyards, which can only be considered a gamble at this southerly latitude. Bendemere is its highest and coldest vineyard, off the heat-summation viability scale, somewhere in the low 800s, which must be scary, even for a hardened gambler. The most southerly vines are found in the Margaret-John Vineyards at Ettrick, 25 miles (40 kilometers) south of Alexandra.

MARLBOROUGH

Subregions

Awatere, Awatere Valley, Benmorven, Blenheim, Brancott, Brancott Valley, Conders Bend, Dillons Point, Dillons Point Road, Dog Point, Fairball, Fairball Valley, Hawkesbury, Kaituna, Koromiko, Lower Wairau, Marshlands, Omaka, Omaka Valley, Rarangi, Raupara, Renwick, Riverlands, Spring Creek, Waipohai, Waipohai Valley, Wairau, Wairau Valley, Woodbourne

Allan Scott planted the first vines here as recently as 1973. At the time, Scott was opening up Montana’s new Stoneleigh vineyard, but he set up his own winery and vineyards in 1990. Marlborough quickly became New Zealand’s most famous wine region, and Marlborough Sauvignon Blanc its greatest asset. The part of Marlborough planted with vines is primarily the Wairau plains between the town of Blenheim and the Waihopai River. Protected by the Inland Kaikoura Range from cold, southerly winds, and by North Island from northeasterly winds, the combination of free-draining soils, abundant sunshine, cool nights, and a long growing season creates the ideal environment to produce wines that are marked by electrifyingly bright fruit flavors. Awatere Valley is located to the southeast, just over the Wither Hills, where grapes often take one or two weeks longer to ripen, and show intense flavor. The Lower Wairau and Spring Creek areas are immediately north of Blenheim, where irrigation is seldom necessary, and Sauvignon is giving way to Pinot Noir. Raupara is a warm, sheltered area west of Spring Creek, immediately north of the main Wairau plain, where the grapes are usually harvested first, with fruit-driven whites and some of Marlborough’s ripest red wines. Vines have recently been planted north of the Wairau River, at the foot of the Richmond Range in Conders Bend, Kaituna, and further east, in areas that are becoming known for their Sauvignon Blanc and Pinot Noir. Benmorven, Brancott Valley, and Fairball Valley are part of the Southern Valley, south of Raupara, nestling up to, but not yet climbing, the foothills. The climate is cooler and drier than Raupara, allowing Riesling and, to a certain extent, Pinot

Noir to compete with Chardonnay and Sauvignon Blanc. Further west is Omaka or Hawkesbury Valley, which includes Dog Point, where Pinot Noir shows promise, but frost can be a danger. Situated northeast of Blenheim, the up-and-coming areas of Marshlands and Rarangi are the closest to the sea, with vineyards on free-draining pea-gravel soils overlooking Cloudy Bay. This would be the obvious appellation name, although I think a certain winery might object. Koromiko is further north, along the Tuamarina River, but boasts only one producer, Johannishof, Marlborough’s most northerly winery. Kaikoura Winery is Marlborough’s most southerly winery, at Kaikoura, which is more famous for its seal colony than for vineyards, although there is a small block of vines.

NELSON

Subregions

Appleby, Ataubai, Brightwater, Burkes Bank, Clifton, Golden Bay, Hope, Lower Moutere, Mabara, Mariri, Motueka, Motueka Valley, Moutere, Nelson, Neudorf, Rabbit Island, Redwood Valley, Richmond, Ruby Bay, Stoke, Tasman, Upper Moutere, Waimea, Waimea Plains, Wakapuaka, Wakefield

Nelson is overshadowed by the fame of Marlborough, on the other side of Mount Richmond, but not because of any lack of quality potential. Nelson is known for its long warm summers, cool fall nights, and for being one of the sunniest places in New Zealand. The only negative factor is rainfall, although that is nowhere near as high as in Auckland. The low profile has been due simply to there being no parcels of land of sufficient size available to attract any of New Zealand’s larger wineries. Nelson has thus never benefited from any significant marketing. The high price of land has not helped, either. However, over the past 10 years, the decline of Nelson’s apple industry has resulted in many orchards being converted to vineyards, increasing the area under vine ninefold and quadrupling the number of wineries.

Many of Nelson’s wineries, including most of the oldest established producers, are located on the Waimea plains to the east of Richmond, where rich, fruity wines are made. Similar wines are made to the south, at Brightwater, where most of the region’s newest vineyards are located, and to the northwest, at Redwood Valley, which is used by Seifried Estate as a second label. Moutere runs north from Upper Moutere, on the edge of the Redwood Valley, to the southern outskirts of Motueka. Upper Moutere produces the more impressive wines, with a broad structure and a certain minerality of fruit, but most wines are marketed as Moutere plain and simple. The Motueka wine area north of Motueka itself is quite new, and capable of growing Sauvignon Blanc with an intense, passion fruit flavor. Golden Bay is well to the north of Motueka. Despite having produced wines in the late 19th century, it is generally considered much too wet for grape growing; but that has not stopped David Heraud from establishing Waiwera Estate at Clifton. At the time of writing there was just 2½ acres (1 hectare) of Pinot Noir and Riesling, and just one wine produced, a Pinot Noir in 2003 (not tasted).

THE WINE STYLES OF NEW ZEALAND

BOTRYTIZED WINES

Botrytis, or noble rot, appears on an unpredictable basis throughout all of New Zealand's wine regions. The nearest that New Zealand has to a dedicated dessert-wine area is Te Kauhata in Waikato, because of its high humidity. As such, it is a two-winery subdistrict. The one producer that specializes in the style is Rongopai. Riesling is, without doubt, the premier grape for this style in New Zealand, producing wines of the most vivid flavor enhanced by a scintillating acidity to deliver a razor-sharp sweetness. Chardonnay is, surprisingly, the second most successful variety, a chance discovery after Hunters produced the first Botrytis Chardonnay in 1987. All peaches and cream, it stunned those lucky enough to taste it, and encouraged other New Zealanders to perfect this unusual wine. Botrytized Sémillon has yet to make its mark, but should do so now that less grassy clones are coming into production.

🕒 1–15 years

🍷 *Dry River* (Botrytis Riesling) • *Fromm* (Auslese) • *Giesen* (Canterbury Late Harvest Riesling) • *Martinborough* (Late Harvest Riesling) • *Montana* (Virtu Noble Sémillon) • *Rongopai* (Ultimo Late Harvest) • *Villa Maria* (Noble Reserve Riesling)

CABERNET FRANC

Increasingly popular as a pure varietal wine, Cabernet Franc has always been considered a useful component in classic red wine blends. Hawke's Bay is the best region, and Gimblett Road the best subdistrict.

🕒 2–5 years (up to 15 for exceptional wines)

🍷 *Clearview* • *Kim Crawford* (Wicken)

CABERNET SAUVIGNON

Pure and Blended

Not so long ago, New Zealand suffered from a reputation for green, aggressive red wines. It was white-wine country, and its cool climate was thought to be too cool to ripen such thick-skinned grapes as Cabernet Sauvignon. Today, however, almost every wine region in New Zealand has become a goldmine for rich, ripe red wines of the most serious and sensual quality. Even volume-selling brands such as Montana Cabernet Sauvignon are big, full, and spicy, with more quality and character than you can find in Bordeaux for twice the price. The most exciting Cabernet Sauvignon wines are produced by strict selection from top vineyards or crafted by smaller boutique wineries. Hawke's Bay is the best region, and Gimblett Road the best subdistrict.

🕒 2–5 years (up to 15 for exceptional wines)

🍷 *Craggy Range* (The Quarry) • *Firstland* (Cabernet-Merlot-Malbec) • *Goldwater Estate* (Cabernet-Merlot) • *Montana* (Tom) • *Stonyridge* (Larose) • *Te Mata* (Coleraine) • *Trinity Hill* (Gimblett Road) • *Vidal* (Joseph Soler) • *Villa Maria* (Reserve Cabernet Sauvignon-Merlot)

CHARDONNAY

The world's most widespread classic grape really does produce something special in New Zealand, which is why its cultivation has

increased from 865 acres (350 hectares) in the late 1980s to more than 9,143 acres (3,700 hectares) today. It is generally less predictable, more expressive, and capable of a slower, more classic rate of maturation than its Australian equivalent. This is due not only to cooler climatic conditions, but also to handpicking, whole-bunch pressing, a wider use of natural (local) yeast fermentation, and less obvious oak, although some producers can spoil the natural elegance of these wines by various permutations of malolactic fermentation and lees-contact that turn out too heavy-handed. There is more weight and complexity in Hawke's Bay, greater finesse in Marlborough, lusher qualities in Nelson, and more upfront fruit in Gisborne. Central Otago still has to establish its style.

🕒 1–4 years

🍷 *Ata Rangi* (Craighall) • *Clearview* • *Kumeu River* (Maté's Vineyard) • *Matua Valley* (Ararimu) • *Morton Estate* (Coniglio) • *Neudorf* (Moutere) • *Nobilo* (Icon) • *Villa Maria* (Reserve Barrique Fermented Gisborne)

CLASSIC WHITE-WINE BLENDS

Classic white-wine blends are one of New Zealand's slowest-developing niches, yet ultimately they could prove to be one of its most rewarding. The most logical partner for Sauvignon is Sémillon, of course; although until recently the only Sémillon vines cultivated in New Zealand were aggressively aromatic and unsuited for blending unless used in a covert way to emphasize the character of a seemingly pure Sauvignon Blanc wine. For classic blends, however, where a more neutral base is required, New Zealand's traditional late-ripening Swiss clone is much too grassy. The popular

Australian Chardonnay-Sémillon blend is not a common combination in New Zealand, where Chardonnay does not need to be crisped up, but Chardonnay and Chenin Blanc have proved to be surprisingly good bedmates.

🕒 1–3 years

🍷 *Pegasus Bay* (Sauvignon-Sémillon) • *Villa Maria* (Private Bin Chardonnay-Chenin)

CHENIN BLANC

New Zealanders should be able to show South Africa that their country can produce far more exciting Chenin Blanc than can the Cape. But the variety has never been widely planted here, and what there is has been declining of late. Pity; it would be great if, after Sauvignon Blanc, New Zealand could demolish the reputation of the Loire's other famous white grape. An opportunity missed?

🕒 1–3 years

🍷 *The Millton Vineyard* (Te Arai)

GEWÜRZTRAMINER

This is one of New Zealand's potentially exciting niche wines. But the wrong vine stock, and little understanding of how to produce a classic dry Gewürztraminer with any real spice, results in typically wishy-washy wines, with rose-petal aromas and Turkish delight fruit. These are the best, but none of them truly excites me.

🕒 1–3 years

🍷 *Dry River* • *Lawson's Dry Hills* • *Margrain* • *Montana* ("P" Patutahi)

MALBEC

Pure and Blended

Increasing at a rate similar to Syrah, Malbec does not have the same single-varietal cachet. It

SAUVIGNON BLANC GRAPES, CLOUDY BAY

Cloudy Bay makes one of Marlborough's greatest Sauvignon Blancs, and its cult following has benefited the reputation of the entire New Zealand wine industry.

is judged more useful for its ability to add some midpalate smoothness to a classic red wine blends. The pure Malbecs of Fromm and Mills Reef are exceptions. Hawke's Bay is the best region, and Gimblett Road the best subdistrict.

🕒 2–8 years

🍷 *Esk Valley* (The Terraces) • *Fromm* (Reserve) • *Mills Reef* (Elspeth)

MERLOT

Pure and Blended

Ten years ago there was twice as much Cabernet Sauvignon growing in New Zealand as there was Merlot. Now the position has reversed, even though the area planted with Cabernet Sauvignon has increased eightfold. Merlot is much more lush than any of the Cabernet varieties, but with a more European structure than California Merlot. Some wines, such as the Goldwater Esslin, are not made every year. Hawke's Bay is the best region, and Gimblett Road the best subdistrict.

🕒 2–8 years

🍷 *Craggy Range* (Sophia) • *Esk Valley* (Reserve Merlot-Malbec-Cabernet Sauvignon) • *Matua Valley* (Bullrush) • *C. J Pask* (Gimblett Road Reserve) • *Sacred Hill* (Brokenstone) • *Selaks* (Founders Reserve) • *Sileni* (EV) • *Trinity Hill* (Gimblett Road) • *Unison Vineyard* (Unison Selection)

PINOT GRIS

The most successful are closer to Pinot Grigio in style than to the spicy variety grown in Alsace, but it is distinctly superior Pinot Grigio, with more delicious, riper fruit.

🕒 1–3 years

🍷 *Ata Rangī* (Lismore) • *Chard Farm* • *Kim Crawford* (Boyzone) • *Dry River* • *Neudorf* (Moutere) • *Palliser Estate*

PINOT NOIR

The Holy Grail of all grapes was first thought to excel in Martinborough. Although some excellent Pinot Noir wines have been and still are being made there, it certainly has not turned out to be a second Burgundy. South Island has produced most of the best Pinot Noir wines on a consistent basis. First it was Nelson that showed the most promise, particularly from the likes of Neudorf, whose Moutere Pinot Noir rarely fails to please. Then it was Canterbury, followed by Marlborough and, most exciting of all, Central Otago. However, as far as outside observers are concerned, Central Otago made its name on the 1998 vintage, and that was the year of the El Niño-induced drought, after which the region has enjoyed a string of good vintages. We have to remember that Central Otago's heat summation generally defies the viticultural textbooks. There are reasons other than heat summation why viticulture does work this far south, but I think it only prudent that we see what sort of Pinot Noir this region can produce throughout a series of cool vintages before we declare Central Otago to be the southern hemisphere's Burgundy.

🕒 2–8 years

🍷 *Akarua* • *Ata Rangī* • *Craggy Range* (Te Muna) • *Felton Road* (Block 3, Block 5) • *Martinborough Vineyard* (Reserve) • *Neudorf* (Moutere) • *Two Paddocks* (The Last Chance)

RIESLING

Truly dry Riesling is still a minority product in New Zealand, where most renditions of this variety have some residual sugar, even if the result is not a distinctive sweetness. New Zealand Riesling seems to be generally crisper than its Australian counterpart, with more citrusy finesse. It does not have the same simplistic lime fruit, and is not inclined to go gasolinelike very quickly either. In structure and style it leans closer to northern Europe, although not as close as the Riesling produced in Michigan or the Finger Lakes of the US.

🕒 1–5 years

🍷 *Kim Crawford* • *Dry River* (Craighall) • *Felton Road* • *Framingham* • *Grove Mill* • *Hunter's* (Stoneburn) • *Montana* (Stoneleigh) • *Neudorf* (Dry Moutere) • *Palliser Estate* • *Pegasus Bay* (Aria)

SAUVIGNON BLANC

Why does New Zealand's Sauvignon Blanc have such vivaciously crisp and pure fruit character, while you have to scratch around to find any hint of fruit in most Loire versions of this wine? It is certainly not due to the use of a particularly expressive clone, as the clone in question is the UCD1, which was developed at the University of California, Davis; although it could be argued that the UCD1 has evolved into a more localized clone. Denis Dubourdieu of Bordeaux University is convinced it is the uniqueness of New Zealand's soil and climate that makes its Sauvignon Blanc so different. I might be able to give readers a more definitive answer in the next revision of this book, as the New Zealand government announced in 2004 that it was going to fund six years of research (at NZ\$1.6 million per annum/US\$1.15 million) into the factors affecting the aroma and flavor profile of New Zealand Sauvignon Blanc, and how the processes involved can be harnessed in the vineyard and during fermentation. This reflects the importance of New Zealand's flagship variety, the country's most widely cultivated grape, with no fewer than 13,600 acres (5,500 hectares) planted. There are now so many different techniques used to enhance various aspects of Sauvignon Blanc's style that it is no longer possible to say that it is made in any particular way. Though the secret to the earliest Marlborough successes with this grape was back-blending with a drop of early-harvested Sémillon, which is so grassy that it turbocharges the wine's varietal character. This country in general, but Marlborough in particular, has the rare capability of being able to slowly ripen Sauvignon Blanc to a near-perfect state, enabling a large number of wineries to produce very fresh wines with ripe gooseberry fruit and an electrifying balance of mouth-watering acidity. Some areas can produce such intensity of fruit that the flavors include passion fruit, even grapefruit; but asparagus and peas, especially canned peas, are characteristics to be avoided.

🕒 1–2 years (not older, unless you like the asparagus or canned-peas character that quickly develops with bottle-age in these wines, particularly when from the ripest vintages)

🍷 *Cloudy Bay* • *Craggy Range* • *Kim Crawford* • *Hunter's* • *Isabel Estate* • *Koura* (Whalesback) • *Montana* (B. Brancott) • *Nobilo* (Icon) • *Palliser Estate* • *Villa Maria*

ATA RANGI, MARTINBOROUGH

This estate produces consistent Pinot Noir.

SPARKLING WINES

At one time, Montana's Lindauer Brut and Rosé exemplified New Zealand's sparkling-wine industry. They are very good for creamy, easy-drinking bubbly made by the transfer method, but it took collaboration between Montana and Deutz to put this country on the bottle-fermented sparkling-wine map. However, it was *champenois* Daniel Le Brun who actually demonstrated Marlborough's true potential for serious sparkling wine. Le Brun's star shone so brightly in the early 1990s that he eclipsed even Montana. With the benefit of hindsight, however, we can see that his reputation was built on just three vintages: 1989, 1990, and 1991. It was the quality of these particular vintages and the speed with which Le Brun achieved this quality that grabbed the wine media's attention. Meanwhile, Cloudy Bay's Pelorus was slowly developing a cult following to match that of its Sauvignon Blanc. When Hunter's released its deliciously fresh and easy-drinking Miru Miru, the international wine press was willing to concede the potential of Kiwi bubbly, even though the Hunter's Brut is the superior wine. Quartz Reef now promises to put Central Otago on the sparkling-wine map, although Marlborough still reigns supreme.

🕒 1–2 years (from purchase)

🍷 *Kim Crawford* (Rory) • *Hunter's* (Hunter's Brut, Miru Miru) • *Montana* (Lindauer Special Reserve, Deutz Blanc de Blancs) • *Cloudy Bay* (Pelorus) • *Quartz Reef* (Chauvet NV, Chauvet vintage)

SYRAH

This could be one of New Zealand's greatest wines. The quality of this grape has come a long way since the first commercial release of Stonecroft Syrah, the earliest vintages of which were tight and green. Hawke's Bay is definitely the right place for this variety, specifically in the Gimblett Road subdistrict, where the Syrah grows dark and deep, developing a truly lush style that is set off by the classic cracked-peppercorn character. The best examples are neither Rhône nor Australian in style.

🕒 2–5 years (up to 15 for exceptional wines)

🍷 *Craggy Range* (Le Sol) • *Kingsley Estate* (Gimblett Gravels) • *Te Mata* (Bullnose) • *Trinity Hill* (Gimblett Road) • *Vidal* (Soler)

THE WINE PRODUCERS OF NEW ZEALAND

AKARUA

Central Otago
★★★

This Bannockburn winery produces beautiful Pinot Noir at relatively inexpensive prices. I purchased a case of the 2002 to lay down, but drank it all and had to order another two cases! The Gullies, Akarua's entry-level Pinot Noir, is often better than most producers' top-of-the-line Pinot Noir.

✓ Pinot Noir

ALPHA DOMUS

Hawke's Bay
★★

Sometimes the wines have too much of a fruit-accentuated style, both reds and whites. They are never unfriendly; they just try too hard. Reds have become quite big in recent vintages. Now is the time for this producer to start thinking more about finesse than size.

✓ *Classic red blend* (The Aviator, The Navigator) • *Chardonnay* (AD) • *Pinot Noir* • *Sauvignon Blanc* • *Sémillon* (Leonarda)

ALPINE PACIFIC WINES

Canterbury
★

Formerly known as Chancellor Estates, these Waipara wines are sold under The Hammer Junction and Mount Cass labels.

✓ *Pinot Noir* (Mount Cass)

AMISFIELD

Central Otago
★

Wines of impressive acidity from vineyards in the Pisa Range foothills, just north of Lowburn. Only Riesling disappoints.

✓ *Pinot Gris* • *Pinot Noir*

ATA RANGI

Martinborough
★★★

Clive Paton consistently demonstrates that Martinborough can hack it with Central Otago's very best Pinot Noirs. He also makes one of Martinborough's best Chardonnays. I am currently reserving my opinion on Ata Rangi's Célèbre. Since it has moved away from Cabernet toward more Merlot, and increased its Syrah content, so it has become more

blackcurranty and has displayed less complexity and finesse. Hopefully there is a swing back in the pipeline. Or maybe it's just a vintage thing?

✓ *Chardonnay* (Craighall) • *Pinot Gris* (Lismore) • *Pinot Noir*

BABICH

Henderson

★★

The entry-level varietal wines of this large winery have never been exciting, but the Marlborough and Hawke's Bay Sauvignon Blanc came right by 2003, so hopefully this signals a revitalization of quality from the bottom up. The top-of-the-line Babich wines, such as Irongate and The Patriarch, always excel (they are ★★ wines in their own right). The Winemaker's Reserve is developing nicely as a middle-tier, best-value range. On the other hand, Joe Babich has sold his famed Irongate vineyard to Blake Family Vineyard. (The last Irongate wine was produced in 1997, after which the name became a trademark for wine sourced from a neighboring vineyard in Gimblett, albeit a damn good one.) In 2003, he pledged to increase overall Babich production fivefold by 2005, so we will have to wait to see if and how this affects the recent climb in quality.

✓ *Classic red blend* (Irongate) • *Cabernet Sauvignon* (The Patriarch) • *Chardonnay* (Irongate, The Patriarch) • *Sauvignon Blanc*

BALDHILLS

Central Otago

A young Pinot Noir and Pinot Gris vineyard with, it seems, excellent potential.

BANNOCK BRAE

Central Otago
★

Although its first vintage was as recent as 2001, Bannock Brae has produced some excellent Pinot Noir – with plenty of ripe, creamy fruit – from its vineyard on the shore of Lake Dunstan. Its entry-level Goldfields label is also recommended.

✓ *Pinot Noir*

BENFIELD & DELAMARE

Martinborough
★★

Minuscule quantities of high quality Bordeaux-style blends produced in Martinborough's Pinot Noir country.

✓ *Classic red blend* (Merlot-Cabernet Sauvignon-Cabernet Franc)

BILANCIA

Hawke's Bay
★

Bilancia is Italian for balance. This is the personal label of Trinity Hill's winemaker, Warren Gibson, and his partner, Lorraine Leheny, who is Bilancia's winemaker. Some excellent wines have been made from purchased grapes since 1997, with Syrah from its own vineyard the following year, and Viognier in 2000.

✓ *Merlot* • *Syrah*

BLACK RIDGE

Central Otago
★

You can rely on good quality Pinot Noir and Chardonnay from this Alexandra vineyard, and sometimes Riesling. Owner Verdun Burgess even grows Cabernet Sauvignon because he was told it would never ripen. "Hey Verdun, bet you'll never grow truffles!"

✓ *Pinot Noir*

BLAKE FAMILY VINEYARD

Hawke's Bay

This is definitely one to watch. Wine-loving San Francisco financier Mark Blake is on a mission: he wants to produce wine in the style of a great Bordeaux. Not just a good Bordeaux, or indeed an excellent Bordeaux, but a great Bordeaux. And he has the means to do so. In 2000, he purchased from Babich the famous 25-acre (10-hectare) Irongate vineyard (renamed "125"). Then, in 2002, he bought the Redd Gravels vineyard from Thornbury Wines. Mark Blake told me that, "The 2004 will be our first Blake Family Vineyard release, and it will be a Merlot-dominant wine from the Redd Gravels vineyard." I won't be in any position to judge the quality and style of these wines until the next revision, and nor will anyone else.

BROOKFIELD

Napier
★★

Impressive quality red wines, particularly in recent vintages.

✓ *Classic red blend* (Gold Label) • *Syrah* (Hillside)

CABLE BAY

Waiheke Island
★

It might seem strange that the best wine from this Waiheke Island producer is a very fine Marlborough Sauvignon Blanc, but even its Waiheke Merlot-Malbec-Cabernet is blended from various vineyards spread over the island. Winemakers Neil Culley and Briony Carnahan aim to produce the best wines they can, and they are not frightened to admit that this is not always achieved by restricting themselves to their own vineyards.

✓ *Sauvignon Blanc*

CAIRNBRAE

Marlborough
★★★

Purchased by Sacred Hill in 2001. The quality here remains high, and the value is even better.

✓ *Chardonnay* • *Riesling* (Late Harvest, Reserve) • *Sauvignon Blanc* (The Stones)

CANTERBURY HOUSE

Waipara
★★

Michael Reid's ambitious project started in 1994, with the first wines produced in 1997. Early wines were disappointing, particularly the dubious sparkling wine, but gradually the quality picked up, especially the Sauvignon Blanc. However, since the 2002 vintage, the quality at Canterbury House has been on a real roll under the helm of new winemaker Alan McCorkindale.

✓ *Chardonnay* (Reserve) • *Pinot Noir* • *Riesling* (Noble) • *Sauvignon Blanc*

CARRICK

Central Otago

This up-and-coming Bannockburn producer makes mainly Pinot Noir in a clean, rich, fruity, easy-drinking style.

✓ *Pinot Noir*

CELLIER LE BRUN

Marlborough
★

Daniel Le Brun has had no connection with his old company since 1996, when Allan McWilliams took over as winemaker and general manager. Allan has improved the quality of Cellier Le Brun's wines (confusingly sold under the Daniel Le Brun label) since the late-1990s. Second label wines are sold under Terrace Road brand.

✓ *Blanc de Blancs*

CENTRAL OTAGO WINE COMPANY

Central Otago

Affectionately known as CowCo, this custom winemaking company is owned by a group of investors, including actor Sam Neill and winemaker Dean Shaw. At the time of writing, in addition to Two Paddocks, Dean also makes the wines for Berridge, Clay Cliffs, Dry Gulley, Kawarau Estate, Maharg, Mount Maude, Mt. Rosa, Nevis Bluff, Penniket Vineyard, Rock 'n' Pillar, Sleeping Dogs, and Springvale.

CHARD FARM

Central Otago

★

Owned by Rob Hay, one of the earliest viticultural pioneers this far south, Chard Farm enjoys a dramatic location. It is approached along a rough-hewn track that bends around a mountainside, with a steep gorge on one side and barely enough room to drive a car. Some wines still have a tendency to rapidly develop a canned-pea character, but Redgate Pinot Noir is a banker.

✓ Pinot Gris • Pinot Noir (Redgate) • Riesling

CLEARVIEW ESTATE

Hawke's Bay

★★★

Unashamedly bold-flavored wines from Tim Turvey, whose red wines have always benefited most from this approach. Some would claim the Chardonnay is one of New Zealand's very best. Production is set to rise due to a 55 percent increase in vineyard holdings.

✓ Cabernet Franc • Chardonnay • Classic red blend (Merlot-Malbec, Old Olive Block)

CLIFFORD BAY

Marlborough

★

An instant success from its very first vintage (1997), Clifford Bay's white wines have seduced critics and customers alike. They now seem set to repeat the experience with their very own Pinot Noir, as from the 2003 vintage.

✓ Chardonnay • Pinot Noir • Sauvignon Blanc

CLOUDY BAY

Marlborough

★★★

Cloudy Bay is a subsidiary of Cape Mentelle in Western Australia, which is now part of the French LVMH group. With 350 acres (140 hectares) supplying a fraction of its needs, even when newly planted vineyards come on stream, this is a big business. Yet it has developed the aura of a boutique winery, which has been essential to maintaining its perceived cult following and thus its relatively high prices (particularly on export markets). It has cleverly set up such a wide distribution for its Cloudy Bay Sauvignon Blanc that importers mail their clients saying, "Our allotment of seven cases has arrived," and it quickly sells out, giving the impression of a limited production. The Chardonnay is at least as good as the Sauvignon Blanc, but it is the latter that has made Cloudy Bay synonymous with Marlborough's marketing success. This is why the winery released its *barrique*-fermented Te Koko Sauvignon Blanc, rather than mess with the winning formula of its entry-level Sauvignon Blanc. I continue to have a strange, almost love-hate relationship with sparkling Pelorus. In tastings with other sparkling wines, I am invariably disappointed, finding it heavy by comparison, and lacking in finesse. Yet, whenever I order Pelorus in a restaurant, I am seldom disappointed. On its own, in the context of food, Pelorus is never heavy, and always has the finesse that is missing in the clinical ambience of a technical tasting. Sometimes it is the contradictory nature of a wine that makes it special.

✓ Chardonnay • Pinot Noir • Sauvignon Blanc • Sparkling wine (Pelorus)

COLLARDS

Henderson

★★★

This winery, founded by English horticulturist J. W. Collard in 1910, is still in family ownership. Brothers Bruce and Geoffrey Collard have maintained the winery's reputation for consistency across the range. The wines have a rich vibrancy of

fruit, notably the textbook Hawke's Bay Chardonnay, which displays a fine youthful complexity.

✓ Chardonnay (Hawke's Bay) • Riesling • Sauvignon Blanc

COOPERS CREEK

Huapai

★★★

Despite a proliferation of silly names (Cat's Pee on a Gooseberry Bush Sauvignon, Fat Cat Chardonnay, etc.), the winemaking here is very serious.

✓ Chardonnay (Swamp Reserve) • Classic red blend (Merlot-Cabernet Franc) • Pinot Noir (Glamour Puss, Marlborough) • Riesling (Hawke's Bay, Marlborough Late Harvest, Nelson) • Sauvignon Blanc (Marlborough)

COVELL ESTATE

Galatea

★

You have to be dedicated or mad, preferably both, to stick rigidly to a biodynamic regime. You also have to be dedicated or mad to plant a vineyard in the Bay of Plenty, where no one else has had the confidence to plant more than the odd acre of vines. So what does that make Bay of Plenty biodynamic producer Bob Covell? Whatever, he makes a fine, steely, citrus-flavored Riesling.

✓ Riesling

Craggy Range

Hawke's Bay

★★★

The most ambitious wine project New Zealand has seen, the Craggy Range winery, with 700 acres (285 hectares) of vineyards, has so far cost US\$36 million. It is owned by Terry Peabody, an American businessman who has lived in Australia for more than 30 years. The winery is a mix of technology and tradition, and finely tuned to produce single-vineyard wines. One of New Zealand's top viticulturists, Steve Smith MW, is in overall charge, and Doug Wisor is the winemaker. All the wines show great finesse, from Sauvignon Blanc to Syrah, and everything between. Red Rock is Craggy Range's great-value second label, with interesting wines such as The Underarm Syrah and Gravel Pit Red.

✓ Entire range

KIM CRAWFORD

Hawke's Bay

★★★

One of New Zealand's most experienced, talented, and award-winning winemakers, Kim Crawford has had his own winery since 1996. It was purchased by the Vincor group, Crawford's Canadian distributor, in 2004. The quality remains very good, and is climbing even higher. The Boyzone Pinot

Gris has lovely fruit, but in true New World fashion, absolutely no spice.

✓ Cabernet Franc (Wicken) • Chardonnay (Tietjen, Unoaked) • Classic red blend (Tane) • Pinot Gris (Boyzone) • Riesling • Sauvignon Blanc • Sparkling wine (Rory)

CROSSROADS

Hawke's Bay

★★★

The flagship wine here is a classic red blend called Talisman. Crossroads is happy to confirm it is comprised of six different black grape varieties, but refuses to divulge what they are, which has piqued many a New Zealand critic. The Destination Series is an entry-level range of 10 upfront, easy-drinking varietal wines, after which comes the Reserve range, and the Collectors Edition. The future focus will be on Merlot, Cabernet-Merlot, Syrah, and Chardonnay. And, of course, Talisman, whatever that is.

✓ Chardonnay (Reserve) • Pinot Noir (Collectors Edition) • Classic red blend (Talisman)

DELEGAT'S

Henderson

★★★

The style is generally quite restrained, with more elegance than richness, but seldom lacking depth or length. Marlborough wines are sold under the Oyster Bay label.

✓ Classic red blend (Reserve Cabernet-Merlot) • Merlot (Reserve) • Riesling (Oyster Bay Botrytized) • Sauvignon Blanc (Oyster Bay)

DRY RIVER

Martinborough

★★★

Neil McCallum sold Dry River to New York investment manager Julian Robertson and Napa Valley vineyard owner Reg Oliver (*see Te Awa*) in February 2003, but stayed on as winemaker. So, there is no real difference for the time being, except for Neil, who has NZ\$11 million (US\$8) in his pocket and, as he does not have to waste time running a business, more time to fish. Neil is known for his Gewürztraminer and Pinot Gris, but I have yet to be impressed beyond New World norms (i.e., the wines have no spice). He is, however, capable of producing one of New Zealand's most delicately perfumed dry Rieslings, his Pinot Noirs evolve beautifully, and his decadently rich botrytized wines are the stuff of legend.

✓ Chardonnay (Botrytized, Craighall) • Gewürztraminer • Pinot Gris • Pinot Noir • Riesling (Botrytized, Craighall) • Syrah

DRYLANDS

Marlborough

★★★

Selaks built this winery before the company was taken over by Nobile,

which itself was purchased by BRL Hardy, now part of Constellation, the world's largest wine-producing group. Easy-drinking reds; much finer whites.

✓ *Riesling* (Winemakers Reserve)
• *Sauvignon Blanc*

ESCARPMENT
Martinborough
★★★

If anyone put Martinborough Pinot Noir on the map, it was Larry McKenna, when he was the winemaker at Martinborough Vineyard. This is why his new venture (in partnership with the Kirby family) is so tantalizing for Martinborough Pinot Noir lovers.

✓ *Pinot Noir*

ESK VALLEY
Hawke's Bay
★★★

Esk Valley red wines have become increasingly impressive under the ownership of Villa Maria. The Terraces (Malbec-Merlot-Cabernet Franc) is one of New Zealand's most outstanding classic red blends.

✓ *Classic red blend* (Merlot-Malbec-Cabernet Sauvignon, Merlot-Cabernet Sauvignon,

The Terraces) • *Merlot* (Black Label) • *Verdelho*

FAIRHILL DOWNS
Marlborough
★

This vineyard has been planted since 1982, but the Small family did not sell their own wine until 1996. Since then they have developed a reputation for their bold fruit, balanced by crisp, ripe acidity. So vivid was the fruit in the 2003 Pinot Gris that it was almost Sauvignon Blanc-like!

✓ *Pinot Gris* • *Sauvignon Blanc*

FELTON ROAD
Central Otago
★★★

This is the producer of New Zealand's greatest Pinot Noir, and a stunning medium-sweet Riesling. Other labels include Cornish Point (good value, easy-drinking Drystone Pinot Noir). The difference between Felton Road's top-performing Block 3 and Block 5 Pinot Noirs has more to do with the clones than the soil. These vineyards are organic/biodynamic in part, but are not certified as such.

✓ *Chardonnay* • *Pinot Noir*
(Block 3, Block 5) • *Riesling*

FIRSTLAND
Waikato
★★★

Originally known as De Redcliffe, this Waikato winery now excels at red winemaking, which had previously been its weakest area. Firstland was purchased in 2002 by Ed Astor, a wealthy former publisher from the US, whose decision to take the wines off the New Zealand market and focus on exports has been remarkably successful in boosting the reputation of this winery.

✓ *Cabernet Sauvignon* (Reserve)
• *Classic red blend* • *Cabernet Sauvignon* (Cabernet-Merlot-Malbec) • *Sauvignon Blanc* (Marlborough)

FORREST ESTATE
Marlborough
★★★

An interesting range of fine wines is produced here, especially the soft, classic Sauvignon Blanc.

✓ *Classic red blend* (Cornerstone)
• *Cabernet Sauvignon* (Cornerstone) • *Merlot* (Cornerstone) • *Riesling* (Botrytized, Late Harvest) • *Sauvignon Blanc*

FOXES ISLAND WINES
Marlborough
★

John Belsham, Hunter's former winemaker, went on to establish Raupara Vintners, a designer-wine service that catered for the explosion of new labels for vineyards with no winery of their

own in the 1990s. He now focuses on his own wines, which invariably show a preference for finesse over weight, size, and overused vinification techniques. John specializes in the two classic Burgundian grapes. My only criticism is that he was so darn good with Sauvignon Blanc, he should add that variety.

✓ *Chardonnay* • *Pinot Noir*

FRAMINGHAM
Marlborough
★★★

Although Framingham produces a large and fascinating range of varietal wines, including a rare Montepulciano, its true specialty is Riesling in all its styles.

✓ *Riesling* • *Sauvignon Blanc*

FROMM
Marlborough
★★★

George and Ruth Fromm also own the George Fromm winery in Malans, Switzerland, where they currently live. The vineyards here are organic/biodynamic, but not certified as such. Winemaker Hätsch Kalberer believes in the minimum of intervention, regularly relying on wild yeasts and never filtering his red wines. Hätsch has carved out a cozy red-wine niche for Fromm, but his Riesling should not be overlooked, particularly the Auslese. All Fromm wines are sold under the La Strada label.

✓ *Malbec* (Reserve) • *Pinot Noir* (Fromm Vineyard) • *Riesling* (Auslese) • *Syrah* (Reserve)

GIBBSTON VALLEY
Central Otago
★

Grant Taylor's Pinot Noirs are becoming increasingly fleshy, and this stylistic progression should continue as the new warmer vineyards in Alexandra and Bendigo come into production.

✓ *Pinot Noir* (Reserve)

GIESEN WINE ESTATE
Canterbury and Marlborough
★★★

Once the most important winery in Canterbury, the Giesen brothers have invested so heavily in a Marlborough winery and vineyards that this is now their primary location.

✓ *Pinot Noir* (Canterbury Reserve) • *Riesling* (Canterbury Reserve, Canterbury Late Harvest, Marlborough/Canterbury) • *Sauvignon Blanc* (Marlborough)

GLADSTONE
Wairapa
★

This small winery produced its first vintage in 1991, but the current owners took over in 1996. Some interesting reds, but intense Sauvignon is the best buy here.

✓ *Sauvignon Blanc*

GOLDWATER ESTATE
Waiheke Island
★★★

Kim and Jeanette Goldwater produce one of New Zealand's greatest red wines, the Goldwater Cabernet-Merlot (sometimes with some Cabernet Franc). This is a wine of classic quality, which has the richness, finesse, longevity, and potential complexity to compete with the best wines that California, Australia, or Bordeaux can produce.

✓ *Classic red blend* (Cabernet-Merlot) • *Merlot* (Esslin) • *Sauvignon Blanc* (New Dog)

GRAVITAS
Marlborough
★

This is a new, fast-rising star in Marlborough's brightly lit firmament, with intensely flavored, expressive white wines produced by Brian Bicknell.

✓ *Chardonnay* • *Sauvignon Blanc*

GREENHOUGH
Nelson
★★★

Established in 1991 by Andrew Greenhough and Jenny Wheeler, this small but growing vineyard produces wines that are brimming with fruit.

- ✓ *Chardonnay* (Hope Vineyard)
 • *Pinot Noir* (Hope Vineyard)
 • *Riesling* (Hope Vineyard) •
Sauvignon Blanc

GROVE MILL

Marlborough
 ★①

Grove Mill recently installed New Zealand's first "smart cellar." This involves energy-efficient technology to draw cold night air into the winery and high-performance insulation to keep temperatures low during the day. There is also a heat-exchanger to supply the entire complex with hot water. The Sauvignon Blanc is a banker.

- ✓ *Chardonnay* • *Riesling* •
Sauvignon Blanc

HARRIER RISE VINEYARD

Kumeu
 ★

The owner-winemaker is Tim Harris, an Auckland lawyer and *Metro Magazine* columnist. When he established this red wine specialized venture in 1986, he called it Waitakere Road Vineyard, and sold the wine under the Harrier Rise Vineyard label. He dropped the Waitakere Road name in 1997.

- ✓ *Cabernet Franc* (Monza) •
Merlot (Bigney Coigne)

HERON'S FLIGHT

Matakana
 ★

David Hoskins and Mary Evans used to make splendid Cabernet Sauvignon, but they caught the Italian bug and started testing out Italian varieties in 1994. By 2004, they had replaced all the French varieties with Italian vines. Look out for the Dolcetto.

- ✓ *Sangiovese*

HERZOG

Marlborough
 ★★

These wines might seem expensive, but if a Michelin-starred restaurant in a classic European wine region sold the wine, its customers would not blink at such prices. And that's not an unreasonable comparison, for while Hans Herzog makes the wines, his wife Therese runs the winery's restaurant, drawing on her Michelin-starred experience in Switzerland.

- ✓ *Classic red blend* (Spirit of Marlborough) • *Montepulciano*

HIGHFIELD ESTATE

Marlborough
 ★

This Japanese-owned estate, with its brightly colored Tuscan-styled winery and restaurant overlooking the Omaka Valley, is perhaps best known for its improving sparkling wine, but rich, smooth Pinot Noir is the most consistent style here.

- ✓ *Pinot Noir* • *Sauvignon Blanc*
 • *Sparkling wine* (Elstree)

HUIA

Marlborough
 ★

Claire and Mike Allan are white-wine specialists, making only one red, a Pinot Noir. The white wines are all handpicked and whole-bunch pressed, which works particularly well for Sauvignon Blanc and an improving sparkling wine.

- ✓ *Sauvignon Blanc*

HUNTER'S

Marlborough
 ★★①

This large, established, and expanding winery is run by Jane Hunter, a gifted viticulturist whose medal-winning standards have earned her an OBE, the respect of her neighbors, and the very first IWS Women in Wine Award. Gary Duke is her longstanding winemaker.

- ✓ *Chardonnay* • *Riesling* (Stoneburn) • *Sauvignon Blanc* (Flax Mill, Marlborough, Winemaker's Selection) • *Sparkling wine* (Hunter's, Miru Miru)

HYPERION

Northland
 ★

In Greek mythology, Hyperion was one of the 12 Titans—the Titan of light. I'm not quite sure what the light is shining out of John Crone's winery, a former cowshed north of Auckland, but of all his wines, which are named after one Titan or another, his Gaia Merlot is the one that most deserves to be set free.

- ✓ *Merlot* (Gaia)

ISABELESTATE

Marlborough
 ★★

This winery consistently produces one of New Zealand's most impressive Sauvignon Blancs. Watch out for the occasional release of Noble Sauvage, a botrytized version of Marlborough's famous varietal.

- ✓ *Pinot Gris* • *Pinot Noir* •
Sauvignon Blanc

JACKSON ESTATE

Marlborough
 ★★①

At one time, Jackson Estate consistently produced Marlborough's greatest Sauvignon Blanc. The quality is still just as high, but a number of wineries now make Sauvignon Blanc that is at least as fine, and which of them produce the best of the crop varies from year to year. But Jackson Estate excels in quality and value throughout the range.

- ✓ *Chardonnay* • *Pinot Noir* •
Riesling • *Sauvignon Blanc*

KAHURANGI ESTATE

Nelson
 ★①

This is the original Seifried winery and 26-acre (10.5-hectare) vineyard. It was sold in 1998 to the current owners, Amanda and Greg Day, who renamed it Kahurangi, the Maori for "treasured possession." Kahurangi might be a new name, but it boasts the oldest commercial vineyard in the region. And with a new 30-acre (12-hectare) vineyard nearly a mile away (on the northwestern side of Upper Moutere, planted in 2001), production is expanding fast.

- ✓ *Chardonnay* • *Riesling* •
Sauvignon Blanc

KAITUNA VALLEY

Canterbury
 ★

Owner-winemakers Grant and Helen Whelan specialize in Pinot Noir and Chardonnay.

- ✓ *Pinot Noir*

KARAKA POINT

Auckland

Located on the Karaka Peninsula, southwest of Auckland, this winery is probably best known for its Chardonnay and Syrah (sometimes sold as Shiraz).

KAWARAU

Central Otago
 ★①

A restaurant-winery in an idyllic setting, with lovely, rich Pinot Noir.

- ✓ *Pinot Noir*

KEMBLEFIELD

Hawke's Bay
 ★①

John Kemble produces excellent Chardonnay and Merlot-Cabernet. For a short while his 2001 Gewürztraminer showed some spicy potential, but a second tasting was disappointing, as were later vintages.

- ✓ *Chardonnay* (The Distinction)
 • *Classic red blend* (Merlot-Cabernet)

KINGSLEY ESTATE

Hawke's Bay
 ③★★

Red-wine specialist Kingsley Tobin is one of only a few organic producers in Hawke's Bay.

- ✓ *Classic red blend* (Cabernet-Malbec, Cabernet Sauvignon-Merlot) • *Cabernet Sauvignon*
 • *Merlot* • *Syrah*

KOURA BAY

Marlborough
 ★★

The Whalesback was probably the most delicious Sauvignon Blanc produced in 2003. There might be finer examples, but none that are more delicious.

- ✓ *Sauvignon Blanc* (Whalesback)

KUMEU RIVER

Auckland
 ★★

Master of Wine Michael Brajkovich regularly produces one of New Zealand's greatest Chardonnays, but his reds are just as good. Excellent value, easy-drinking wines are sold under the Kumeu River Village label.

- ✓ *Chardonnay* (Maté's Vineyard) • *Classic red blend* (Melba) • *Merlot* • *Pinot Gris*
 • *Pinot Noir*

LAKE CHALICE

Marlborough
 ★②①

Lake Chalice opened its new winery in 2004. Called South Pacific Cellars, and sited at Riverlands for logistic rather than viticultural reasons, this is a clever joint venture with Waipara Hills and New Zealand Vineyards Ltd. It is clever because it means that both wineries can have a state-of-the-art winery with economies of scale and efficiencies that would not be possible on an individual basis. Top-of-the-range wines are sold under the Platinum label.

- ✓ *Chardonnay* (Platinum F. V.) •
Sauvignon Blanc (Marlborough)

LAWSON'S DRY HILLS

Marlborough

★★★

This winery is capable of producing intensely flavored white wines. The Gewürztraminer is a bit too pretty-pretty, but highly regarded by New World standards. Sauvignon Blanc is my favorite.

✓ *Chardonnay* • *Gewürztraminer* • *Riesling* • *Sauvignon Blanc*

LINCOLN

Henderson

★

Most critics would put Lincoln's Chardonnay first, but I prefer the richer reds, with their minty finesse and fruitcake complexity. The Chardonnay Heritage Patricia is alarmingly overwhelmed by coconutty American oak.

✓ *Classic red blend* (Home Vineyards, Vintage Selection)

LINDEN ESTATE

Hawke's Bay

★★

This Esk Valley vineyard has been growing grapes since 1969, but making wine only since 1991. It has been under Canadian ownership since 2001, with a new winemaker, Emma Lowe, in 2003.

✓ *Classic red blend* (Dam Block)

MCCASHIN'S

Nelson

★

When the McCashin family sold its famous Nelson brewery to Lion Breweries in 1999, it already had swapped horses, selling the first vintage (1998) of McCashin's wine, albeit from purchased grapes. Initially, wines were sourced from various different regions, but with the purchase of an established 100-acre (40-hectare) vineyard at Hope, this winery has begun to focus its efforts on Nelson.

✓ *Pinot Noir*

MARGARET-JOHN

Central Otago

②

John and Margaret May farm New Zealand's most southerly vineyard, at Ettrick, some 25 miles (40 kilometers) southeast of Alexandra.

MARGRAIN

Martinborough

★

This vineyard was planted in 1992 by Graham and Daryl Margrain, who produced their first wine in 1995. In January 2000, the Margrains purchased the old Chifney vineyard. Margrain makes one of New Zealand's highest award-winning Gewürztraminers (again, by New World norms), but Pinot Noir is the better wine.

✓ *Chardonnay* • *Gewürztraminer* • *Pinot Noir* • *Riesling* (Botrytis Selection)

MARTINBOROUGH

VINEYARDS

Martinborough

★★

This winery's reputation was established by winemaker Larry McKenna, but his successor, Claire Mulholland (ex-Gibbston Valley), has proved more than a match.

✓ *Chardonnay* • *Pinot Noir* (Reserve) • *Riesling* (Jackson Block, Late Harvest)

MATAKANA ESTATE

Auckland

★

The quality at Matakana's most successful winery has been steadily improving since 2001. Wines are also sold under the Goldridge Estate label.

✓ *Chardonnay* (Goldridge Premium Reserve) • *Pinot Gris* (Matakana)

MATARIKI

Hawke's Bay

★★

Although owners John and Rosemary O'Connor planted this vineyard as long ago as 1981, they did not start making and selling wines until 1997. Their mission statement is to produce "fruit-driven wines of elegance and complexity" using a "hands-off" approach to viticulture, and a "hands-on" approach in the winery. It has proved to be a very successful philosophy.

✓ *Chardonnay* • *Classic red blend* (Quintology) • *Merlot* • *Sauvignon Blanc* • *Syrac*

MATAWHERE WINES

Gisborne

★

Owner Denis Irwin was going to quit a few years ago, but ended up

selling just half of his vineyards and refocusing his operation entirely on Bordeaux and Burgundy varieties. Gewürztraminer used to be his most consistent wine, and many believed it was New Zealand's finest example of that grape. But that was a reputation built on success at international competitions in the 1970s, when expectations were very different. I will not mourn the fact that Denis has sold his Gewürztraminer vineyards. However, if he wanted to reinvent himself as a specialist in Bordeaux grapes, why not move to Hawke's Bay? It is because Denis Irwin never takes the easiest route. So why change now? He has always cropped at a low level, hand-harvested, and used natural yeasts to express the individual *terroir* of his product long before they became fashionable. Occasionally this has produced something stunning, but the results have been inconsistent, which is why I cannot recommend anything specific. You will have to suck it and see, and sometimes you will be very pleased.

MATUA VALLEY

Waimauku

★★

Owned by Beringer Blass since 2001, Matua Valley is located northwest of Auckland, but produces wine mainly from three other regions: Hawke's Bay, Gisborne, and Marlborough. This is a very large producer, with a high-tech winery that regularly produces a range of fine, expressive wines that are a pleasure to drink. The Ararimu label is reserved for Matua Valley's very best wines. At the other end of the price spectrum, the Settler Series concentrates on exceptional value, fruit-driven, entry-level wines. The Innovator series consists of commercial volumes of experimental wines. Excellent Marlborough wines are sold under the Shingle Peak label, and high quality, highly individual wines from the Ngatarawa triangle are sold under the Matheson Vineyard label.

✓ *Chardonnay* (Ararimu, Judd Estate) • *Classic red blend* (Ararimu Merlot-Cabernet Sauvignon) • *Grenache* (Innovator) • *Merlot* (Bullrush) • *Muscat* (Late Harvest) •

Pinot Noir (Wairarapa) • *Sauvignon Blanc* (Matheson Vineyard, Shingle Peak) • *Syrac* (Matheson Vineyard)

DOMAINE GEORGE MICHEL

Hawke's Bay

★★

Fine quality Chardonnay from a Beaujolais grower who now lives in New Zealand. There is also good Sauvignon and fairish Pinot Noir.

✓ *Chardonnay*

MILLS REEF

Hawke's Bay

★★

Deliciously rich, fruity whites, and some stunning reds produced by father-and-son team Paddy and Tim Preston. Elspeth Preston, Paddy's mother, passed away in 2003 at the ripe old age of 94.

✓ *Classic red blend* (Elspeth) • *Malbec* (Elspeth) • *Merlot* (Elspeth) • *Syrac* (Elspeth)

THE MILLTON VINEYARD

Gisborne

★★

This biodynamic producer is justly famous for its award-winning, lightly botrytized, medium-sweet Opu Riesling. It also produces a stylish, barrel-fermented Chardonnay, and is appreciated locally for Chenin Blanc.

✓ *Chardonnay* (Essencia, Opu Vineyards) • *Chenin Blanc* (Te Arai) • *Pinot Noir* (Clos de Ste Anne)

MISSION ESTATE WINERY

Taradale

★★

From a wine perspective, the Society of Mary fell into a rut until very recently, which is understandable considering it has been making wine here for more than 150 years. Now things are on the move, the quality is improving, and the best wines are extremely good value.

✓ *Cabernet Sauvignon* (Reserve)

- *Chardonnay* (Reserve) • *Riesling*

MORTON ESTATE

Bay of Plenty

★★★

Well known for its white wines, particularly Chardonnay, and especially Black Label and the top-of-the-line Coniglio, Morton Estate also produces some great red wines. Black Label is the premium line, but the quality of White Label wines is not to be sniffed at. Cheaper wines are sold under the Mill Road brand.

✓ *Classic red blend* (Black Label Merlot-Cabernet, White Label, The Mercure) • *Chardonnay* (Black Label, Coniglio, Riverview) • *Sauvignon Blanc* (Stone Creek, White Label, Marlborough) • *Sparkling wine* (Black Label)

MT. DIFFICULTY

Central Otago

★

With no fewer than six vineyards and a heap of experience in South Africa, Italy, and Oregon, a lot is expected from father-and-son team Robin and Matt Dicey. At the time of writing, Matt Dicey was also

making wine for Alexandra Wine Company, Bannock Brae, and Mount Michael.

✓ *Pinot Noir*

MOUNT EDWARD

Central Otago

★

Owner-winemaker Alan Brady was the original proprietor of Gibbston Valley, where he was the first person to plant grapes in what is now the viticultural boom area of southern Central Otago. After selling his interest in Gibbston Valley, Brady set up this far smaller operation down the road, where he concentrates on producing rich, elegant Pinot Noir.

✓ *Pinot Noir*

MOUNT RILEY

Marlborough

★★★

This fast-expanding, fast-improving, award-winning winery has 250 acres (100 hectares) of vines spread over six vineyards, including the top-performing Seventeen Valley south of Blenheim.

✓ *Chardonnay* (Seventeen Valley) • *Pinot Noir* (Seventeen Valley) • *Sauvignon Blanc*

MOUNTFORD

Marlborough

★

Owners Michael and Buffy Eaton are attracting much well-deserved praise for the Pinot Noir and Chardonnay produced by their blind Taiwanese winemaker, Chung Pin Lin.

✓ *Pinot Noir*

MUDDY WATER

Waipara

★★★

Waipara is Maori for “muddy water,” but there is nothing murky about the pure fruit in these wines. Belinda Gould’s wines include Pinotage and the world’s most southerly Syrah.

✓ *Chardonnay* • *Riesling* (James Hardwick, Unplugged)

MURDOCH JAMES

Martinborough

★

An up-and-coming, organic Martinborough producer, which now incorporates the old Blue Rock vineyard. An expanding range of wines includes Syrah and a rare, pure varietal Pinot Meunier. However, the 2003 Sauvignon Blanc was so green, it was mean!

✓ *Pinot Noir* (Fraser)

NAUTILUS

Marlborough

★

Owned by the Australian Yalumba group, Nautilus is improving on all fronts. It has invested heavily in developing its Pinot Noir program, which is showing progress, but the rich, ripe, Sauvignon Blanc is still its number one wine. Wines are also sold under the Twin Islands second label.

✓ *Pinot Gris* • *Pinot Noir* • *Sauvignon Blanc* • *Sparkling wine* (Marlborough Brut)

NEUDORF VINEYARDS

Nelson

★★★

I have always enjoyed Tim and Judy Finn’s creamy, Burgundian-style wines—particularly the Pinot Noir, which now benefits from its own winery. New vineyards should increase production by 50 percent.

✓ *Chardonnay* (Moutere) • *Pinot Gris* (Moutere) • *Pinot Noir* (Moutere) • *Riesling* (Dry Moutere, Late Harvest Moutere) • *Sauvignon Blanc*

MONTANA WINERIES

Auckland, Gisborne, Hawke’s Bay, and Marlborough

★★★

Although purchased by Allied-Domecq in 2001, and technically renamed Allied-Domecq Wines New Zealand in 2004, it is extremely doubtful that it will ever be known as anything other than Montana Wines. The company owns 7,400 acres (3,000 hectares) of vines, and accounts for 55 percent of all New Zealand’s wines, making it the largest wine producer in the country, yet remarkable quality and consistency exist at all price points. Church Road is Montana’s high-tech Hawke’s Bay boutique winery, producing wines that combine the restrained exuberance of cool-climate New World fruit with the classic Old World structure. The top wine produced at Church Road is “Tom,” Montana’s icon red wine.

Corbans has been consumed, and is little more than just another label, but the wines are nonetheless well made, representing excellent value. Although Cooks swallowed Corbans in 1987, it no longer exists as a brand, even though its prey still does.

The only mistake made by Montana is one that other New Zealand wine producers have also made in recent years, and that is to create an uncertainty of origin for some of its lesser brands: Copperfields, Jackman Ridge, Murray Ridge, Riverlands, Robard & Butler, and Timara. Another label, Longridge, is described by Montana as “one of New Zealand’s classic boutique wine ranges,” yet the wines are often multi-regional blends. There’s nothing wrong with that, but it is hardly the definition of a boutique winery, especially in years when yields are

BRANCOTT WINERY

Montana’s Brancott Winery was the first established in Marlborough, and opened in 1976.

KAITUNA

Wetlands neighbour the Kaituna vineyard, planted as recently as 2000 at the northern end of the Wairau Valley.

low, and some Longridge wines are more than 50 percent Chilean! All duly declared, but not boutique, not classic, and not New Zealand. Saints is another mishmash brand, with some regional varietals, a pure imported Shiraz, and a multinational Cabernet Sauvignon-Merlot. Oaklands is a cask wine (bag-in-the-box) brand, which was relaunched as a varietal cask wine range in 2002, and includes imported wines.

Other Montana brands include Aquila (sweet, carbonated bubbly), Azure Bay, Bernadino (sweet, carbonated, multinational bubbly), Blenheim, Brightstone, Cellarmans, Chardon (sweet, carbonated, multinational, low-alcohol), Chasseur, Country, Diva (*cuvée close sparkling*), Emerald Peak, Huntaway, Italiano (sweet, carbonated, multinational, low-alcohol), Liebestraum, Lindauer, Montel, Oaklands, Ridge Estate, Riverlea, St. Arnaud, Seven Oaks, Sun Country, Velluto Rosso, Verde, Vineyard, Virtù, Waimanu, and Wohnsiedler. Ironically, since Allied-Domecq has purchased Montana, it is committed to selling Deutz Montana sparkling wines, although it owns Mumm and Perrier-Jouët!

✓ *Classic red blend* (Church Road, Tom) • *Cabernet Sauvignon* (“F” Fairhall, Marlborough) • *Chardonnay* (Church Road, Marlborough, “O” Ormand Estate, “R” Renwick Estate) • *Corbans* (Private Bin, Cottage Block) • *Gewürztraminer* (“P” Patutahi) • *Merlot* • *Pinot Noir* (Reserve, “T” Terraces) • *Riesling* (Reserve, Stoneleigh) • *Sauvignon Blanc* (“B” Brancott, Marlborough Reserve, Stoneleigh) • *Sémillon* (Virtù Noble) • *Sparkling Wines* (all Deutz *cuvées*, Lindauer Special Reserve)

NGA WAKA VINEYARD

Martinborough

★★

This is a small winery producing wines that boast intense, crisp fruit. All are now sealed by screwcap.

✓ *Riesling* • *Sauvignon Blanc*

NGATARAWA WINES

Hawke's Bay

★★

Founded by the Glazebrook family and Alwyn Corban in 1981. The Glazebrooks sold up in 1999, and Alwyn's cousin Brian Corban joined the company. This is a quality-conscious Hawke's Bay winery making its mark with distinctive red wines. But with the exception of Alwyn Riesling and Glazebrook Chardonnay, its whites are so understated that their subtlety is lost on me. Second wines are sold under the Stables brand.

✓ *Cabernet* • *Merlot* (Glazebrook) • *Chardonnay* (Glazebrook) • *Riesling* (Alwyn)

NO. 1 FAMILY ESTATE

Marlborough

★★

This brand is the result of Daniel Le Brun being unable to market wine under his own name for three years following the severing, in 1996, of his ties with Cellier Le Brun. In 1999, three years to the day after the split, Daniel cheekily opened up Le Brun Family Estate (since renamed No.1 Family Estate) around the corner. He produces three sparkling wines: Cuvée No.1 (nonvintage *blanc de blancs*), Cuvée Number Eight (nonvintage classic blend), and Cuvée Virginie (vintage classic blend).

✓ *Cuvée Number Eight*

NOBILO

Auckland

★

So much change in so little time. This was already a large wine producer before it purchased Selaks in 1998. That deal brought with it substantial additional vineyards, and the new Drylands winery in Marlborough, allowing Nobile to increase production and to

develop its premium wine range. A new publicly listed company was formed, attracting investment from Australian giant BRL Hardy. The Aussies liked what they saw, invested more in the company, then effectively took it over in 2000, when the Nobile family exchanged its remaining shareholding in the old family firm for shares in BRL Hardy (and did very nicely out of that when BRL Hardy was itself taken over by Constellation Brands in 2003). Nobile is now the second-largest wine producer in New Zealand. Nobile's Icon has replaced Dixon Vineyard as the company's best Chardonnay. There is also an exciting Icon Marlborough Sauvignon Blanc, which is a welcome addition to the basic, but consistently excellent, Marlborough Sauvignon Blanc. Nobile needs to improve its red wines, but the premium Icon range is obviously the one to watch. Other labels include Fall Harvest, Fernleaf, and the new Station Road brand.

✓ *Chardonnay* (Icon) • *Sauvignon Blanc* (Marlborough, Icon)

OKAHU ESTATE

Northland

★

Established in 1984, Okahu Estate has started to earn more awards in recent years, so Monty Knight must be doing something right. Located 2 miles (3.5 kilometers) from Kaitiā on the road to Ahipara, at the southern end of the Ninety Mile Beach, this is the most northerly vineyard in New Zealand.

✓ *Cabernet* (Kaz) • *Chardonnay* (Clifton Proprietor's Reserve)

OLSENS

Central Otago

★★

A Bannockburn star in the making, with complex Pinot Noir and a Sauvignon Blanc that is way too delicious for this far south!

✓ *Pinot Noir* (Sleepjack Creek)

OMAKA SPRINGS

Marlborough

★

This estate is owned by Geoff and Robina Jensen, who were pioneers of the New Zealand olive industry, having planted 2,500 olive trees in 23 different varieties at Omaka Springs before venturing into the wine industry. They produce

inexpensive, unpretentious wines from some 150 acres (60 hectares) of vineyards.

✓ *Sauvignon Blanc*

PALLISER ESTATE

Martinborough

★★

This is a substantial producer of consistently classy wines. Even those under second label Pencarrow show some finesse.

✓ *Chardonnay* (including Pencarrow) • *Pinot Gris* • *Pinot Noir* • *Riesling* • *Sauvignon Blanc* (including Pencarrow)

C. J. PASK

Hawke's Bay

★★

Kate Radburn continues to churn out a wide range of classic quality, richly flavored wines. There are also good value, inexpensive wines sold under the Roy's Hill label.

✓ *Classic red blend* (Declaration, Gimblett Road Cabernet-Merlot) • *Chardonnay* (Gimblett Road) • *Merlot* (Gimblett Road Reserve, Reserve) • *Syrah* (Reserve)

PEGASUS BAY

Waipara

★★

The Donaldson family operate a very fine winery and restaurant south of Waipara. The style of wine produced is richly flavored with a classic structure.

✓ *Chardonnay* (Finale) • *Classic red blend* (Cabernet-Merlot) • *Pinot Noir* (especially Prima Donna) • *Riesling* (Aria) • *Classic white blend* (Sauvignon-Sémillon)

PENINSULA ESTATE

Waiheke Island

★

Brave or stupid, there is no doubting the viticultural risk taken by Doug Hamilton in planting this Cabernet-blend vineyard. It sticks out into the Pacific, exposed to salt-bearing sea breezes on three sides.

✓ *Classic red blend* (Island Red) • *Syrah* (Zeno)

PEREGRINE

Central Otago

★

Owned by Greg Hay, who helped his brother Rob establish Chard Farm before setting out on his own. Peregrine produces wines from grapes grown on the Wentworth Estates, under the banner "Wines with Altitude." Wentworth was set up as a cost-effective means of farming 75 acres (30 hectares) in an area close to Queenstown, where the price of land is high. It effectively involves selling off plots of land to build houses surrounded by vines, which are then managed by Wentworth. It provides the householder with an income from the meticulously manicured vines around it, and Peregrine with the grapes it needs.

✓ *Pinot Noir* • *Riesling*

PROVIDENCE

Matakana

★

This is a small, export-oriented, red wine specialist, whose wine often costs an arm and a leg, but the price can vary considerably from country to country.

✓ *Classic red blend* (Merlot-Cabernet Franc-Malbec)

QUARTZ REEF

Central Otago

★★

This estate is owned by Rudi Bauer and Clotilde Chauvet (who also makes Champagne in Rilly-la-Montagne). Rudi and Clotilde met at Rippon in the early 1990s, when Rudi was the winemaker. Clotilde took over as Rippon's winemaker when Rudi moved south, but they kept in touch, eventually establishing Quartz Reef together in 1996. They have pioneered vineyards at Bendigo and produce excellent Pinot Noir and sparkling wine. Rudi made the wines for Two Paddocks until the Central Otago Wine Company was set up, and Dean Shaw (who worked for Rudi at Rippon) took over. Rudi's consultancy work has gradually given way as Quartz Reef has taken off, but at the time of writing he was still making wines for Northburn, Pisa Range, and Rockburn.

✓ *Pinot Noir* (Reserve) • *Sparkling wine*

RICHMOND PLAINS

Nelson

★★

Also known as Holmes Brothers, this was the first vineyard on South Island to go organic.

✓ *Sauvignon Blanc* (Marlborough)

RIPPON

Wanaka

★

In 1974, against all advice, Lois and Rolfe Mills chose one of the most beautiful areas in the world to grow

vines. They have certainly succeeded, although it took until 1989 to make their first commercial wine. Rippon is biodynamic, but not certified as such.

✓ Pinot Noir • Riesling

ROCKBURN

Central Otago

★

Greg Hay of Peregrine is the viticulturist, and Rudi Bauer of Quartz Reef the winemaker.

✓ Pinot Noir

RONGOPAI WINES

Te Kauwhata

★

The original Rongopai winery was established in 1932 by the Gordon family, and this continued until the death of Lou Gordon in 1954. The winery fell into disrepair until 1982, when it was resurrected by Dr. Rainer Eschenbruch and Tom Van Dam from the nearby Te Kauwhata Viticultural Research Station. They produced the first new Rongopai wines in 1985, attracting instant acclaim for their botrytized wines. But Eschenbruch left in 1993, and Van Dam retired in 2001. The current owner, Scottish businessman Derek Reid, had invested in Rongopai since 1991. In 1995, he purchased the old viticultural research station, which has since become Rongopai's winery. Reid's Rongopai is no longer confined to producing stickies, although they still excel. The range includes dry whites, reds, and a port style. The only wine not produced is sparkling, although I wonder if the winemaker, Emmanuel Bollinger, has thought of bringing one out under his own label.

✓ Chardonnay (Ultimo) • Dessert wine (Ultimo Late Harvest)

SACRED HILL

Hawke's Bay

★★

Since Sacred Hill produced its first wine in 1986, its reputation has been built on its vineyards in the Dartmoor Valley hills of Hawke's Bay. In 2001, the owners purchased Cairnbrae in Marlborough, and in addition to maintaining that brand, its vineyards now contribute to Sacred Hill's growing prestige, particularly its vibrantly fresh Sauvignon Blanc. Less expensive, early-drinking wines are sold under the Whitecliff label.

✓ Chardonnay (Rifleman's) • Classic red blend (Helmsman) • Merlot (Brokenstone) • Riesling (Halo Botrytis) • Sauvignon Blanc (Marlborough)

SAINT CLAIR

Marlborough

★★★

This is a large vineyard that consistently produces fresh, crisp, expressive whites, including one of

New Zealand's best Sauvignon Blancs. There is also a rich, deliciously fresh, deep-flavored, fruit-driven Merlot.

✓ Chardonnay (Omaka) • Merlot (Reserve) • Riesling • Sauvignon Blanc

ST. HELENA

Canterbury

★

The nation's oldest Pinot Noir vines are found at St. Helena's vineyard near the Waimakiri River, which explains why this winery used to be one of New Zealand's leading Pinot Noir exponents. It was this winery that put Canterbury Pinot Noir on the map, with its legendary 1982 vintage. Those days are long gone, however. Although St. Helena occasionally manages to produce excellent wines from this variety under the Reserve label, the consistency is no longer there.

✓ Pinot Noir (Reserve)

ST. JÉRÔME

Henderson

★

The Ozich brothers have a well-deserved reputation for their Bordeaux-style blend, Matuka.

✓ Classic red blend (Matuka)

DANIEL SCHUSTER

Canterbury

★★

Danny Schuster co-authored *Grape Growing & Winemaking, A Handbook for Cool Climates* (1973), which has encouraged many New Zealanders to give it a go.

✓ Chardonnay (Omih Hills) • Pinot Noir (Omih Hills)

ALLAN SCOTT

Marlborough

★★★

Allan Scott established Marlborough's very first vineyard in 1973, while working for Montana. He later became Corbans' chief viticulturist, but left to set up his own business in 1989. He produces a good, but not special, Pinot Noir, and has been persevering with a sparkling wine that frankly needs more finesse. But Scott truly excels at still white wines, which seem to have more fruit than wines from surrounding vineyards, particularly his Riesling.

✓ Chardonnay • Riesling • Sauvignon Blanc

SEIFRIED ESTATE

Nelson

★★★

Hermann Seifried's original winery and 26-acre (10.5-hectare) vineyard now belong to Amanda and Greg Day, who purchased and renamed it Kahurangi Estate in 1998. Two years earlier, the Seifried family had opened a brand new winery in closer proximity to most of its other vineyards, which now total 395 acres (160 hectares). Seifried always was Nelson's biggest wine producer, and still is. Consumers outside New Zealand will know these wines as Redwood Valley. Seifried is best for white wines, especially the superb botrytized Riesling and one of this country's better dry Rieslings.

✓ Chardonnay (Old Coach Road) • Pinot Noir • Riesling (Botrytis Dry Riesling)

SELAKS

Auckland

★★★

This has been the award-winning division of the Nobile group since it was taken over by the group in 1998. Selaks continues to produce fine quality, stylish wines by the barrel-load, with its red wines now notching up as many successes as its whites.

✓ Chardonnay (Founders Reserve, Premium Selection) • Merlot (Founders Reserve) • Riesling (Founders Reserve Noble) • Sauvignon Blanc (Premium Selection) • Syrah (Founders Reserve)

SERESIN

Marlborough

★★★

The vines are all hand-tended, and some wines are fermented with wild yeasts. Winemaker Brian Bicknell is known for his flying winemaker exploits, but nothing he has made under contract compares with the wines from Seresin, some of which rank among the very best from Marlborough. The Seresin vineyard is certified organic. The Tatou and Raupo Creek vineyards were in the process of conversion at the time of writing, after which there are plans to go fully biodynamic. Future impetus will be toward polishing up the already impressive Pinot Noir.

✓ Chardonnay (Reserve) • Pinot Gris • Pinot Noir • Riesling • Sauvignon Blanc (Marama)

SHERWOOD ESTATE

Canterbury

★

Confusingly, wines solely from Sherwood Estate's own vineyards are sold under the Clearwater Vineyards label, while those under the Sherwood Estate label include purchased fruit. Other labels include Stratum, an entry-level range.

✓ Sauvignon Blanc

SILENI

Hawke's Bay

★★★

Since crushing its first crop in 1998, this winery has quickly built up a reputation for wines of style and finesse. Wines in the EV range are made only in exceptional vintages, while those in the Estate Selection are premium wines from Sileni's own vineyards. Entry-level wines are sold under the Cellar Selection label, and often represent exceptional value.

✓ Chardonnay (Estate Selection) • Classic red blend (Estate Selection Merlot-Cabernets) • Merlot (EV) • Semillon (Estate Selection)

SLEEPING DOGS

Central Otago

★★★

Owned by film director Roger Donaldson, whose earliest work, *Sleeping Dogs* (1977), was the cornerstone of the New Zealand film industry. It gave his friend Sam Neill his first screen role. Donaldson's vineyard was the original other half of Two Paddocks, which he and Neill planted, but

they are entirely separate operations. However, they both share the same winemaker—Dean Shaw.

✓ Pinot Noir

SOLJANS

Auckland

★

Tony Soljans can sometimes go over the top with the amount of VA lift he gives to the fruit in his wines, but it works well when it is understated.

✓ Cabernet-Merlot (Estate) • Port-style wine (10-Year-Old Tawny)

SPENCER HILL

Nelson

★

This estate was established in the Upper Moutere area in 1992 by Philip and Sheryl Jones, whose first release was in 1994. Production in the initial years was tiny, with no wine whatsoever made in 1999. Production was moved to its current location in the Coastal Ridge, north of Nelson, in 2000. Other labels include Mariner Vineyards (from own vineyards plus purchased fruit), and Tasman Bay.

✓ Chardonnay • Pinot Noir • Sauvignon Blanc (Tasman Bay)

SPY VALLEY

Marlborough

★

Owned by the Johnson family, Spy Valley is a name to watch out for. The name has its origins in the cold war: Spy Valley is what the locals have called the Waihopai Valley since the Americans built a listening station there. The grapes come from the 360-acre (145-hectare) Johnson Estate, which might sound vast for a relatively new winery, but the Johnsons have been growing for other wineries since 1992. Fresh, crisp, vibrantly fruity Sauvignon Blanc; sweet, ripe Pinot Noir; and class Riesling are the best so far.

✓ Chardonnay • Pinot Noir • Riesling (Dry) • Sauvignon Blanc

STAETE LANDT

Marlborough

★

From the beginning (in 1997), Ruud Maasdam and Dorien Vermaas have aimed to produce single-vineyard wines. All, in fact, come from the same 52-acre (21-hectare) vineyard but they have been selected on a parcel-by-parcel basis according to which combination of variety and rootstock grows best. If there are differences, they are effectively what the Burgundians would call *climats* (individual block or plots), and it would be a good idea to name them.

✓ Pinot Noir • Sauvignon Blanc

STONECROFT

Hawke's Bay

★

Alan Limmer pioneered Syrah in New Zealand, but his has lacked the

lush character of other, more successful Syrahs that have been released of late. New plantations might re-energize this wine in the future. Meanwhile, Limmer makes better Chardonnay, and a classic red blend (Cabernet-Syrah-Merlot) called Ruhani.

✓ Chardonnay • Classic red blend (Ruhani)

STONYRIDGE

Waiheke Island

★★★

Since 1985, Stephen White has produced one of New Zealand's truly great red wines, Larose, which sells out within hours of being offered en primeur each year.

✓ Classic red blend (Larose)

STRATFORD WINES

Marlborough

★★★

This is the personal label of Margrain's winemaker, Strat Canning, who first produced these wines in 1997. His best wine is, without doubt, Pinot Noir, but Strat's wonderfully racy Riesling should not be overlooked.

✓ Chardonnay • Pinot Noir • Riesling

TE AWA

Hawke's Bay

★

Sold in December 2002 to New York investment manager Julian Robertson and Napa Valley vineyard owner Reg Oliver (see Dry River), Te Awa remains under the same day-to-day control, with viticulturist Gus Lawson in overall charge. Winemaker Jenny Dobson worked at Domaine Dujac in Burgundy for 18 months before going over to the opposition—Bordeaux—where she was appointed winemaker at Château Senejac. Zone 10 and Boundary are both ★★★ wines. Entry-level wines are sold under the Longlands label.

✓ Cabernet Sauvignon (Zone 10) • Classic red blend (Boundary)

TE KAIRANGA

Martinborough

★★★

With 250 acres (100 hectares) under vine, Te Kairanga is no boutique winery, but its rich, creamy Pinot Noir is the sort of impressive quality

expected from the smallest, top-performing producer. Second label wines are sold under the Castlepoint brand.

✓ Chardonnay • Pinot Noir • Syrah

TE MATA

Hawke's Bay

★★

Te Mata Estate was purchased in 1978 by John Buck, who with the help of winemaker Peter Cowley has fashioned two of the country's greatest red wines, Awatea and Coleraine. However, in some years Awatea and/or Coleraine are too attenuated to deserve top billing. If John and Peter believe in their *terroir*, they should acknowledge that it is not possible for the vineyard to provide a top class wine every year, and declassify when necessary. Other labels include the entry-level Rymer's Change range.

✓ Chardonnay (Castle Hill, Elston) • Classic red blend (Awatea, Coleraine, Woodthorpe Syrah-Viognier) • Sauvignon Blanc (Cape Crest, Castle Hill) • Syrah (Bullnose) • Viognier (Woodthorpe)

TE MOTU

Waiheke Island

★

The Te Motu vineyard is just 60 meters from Stonyridge Vineyard, where Larose, one of New Zealand's true icon wines is produced. Currently just one style is marketed, a Cabernet-Merlot (which also includes a little Cabernet Franc and Malbec), with the same style appearing under the second label (Dunleavy).

✓ Classic red blend (Te Motu)

TE WHARE RA

Marlborough

★

In 1979, Te Whare Ra (Maori for "the house in the Sun") became the first Marlborough vineyard to be planted after Montana had paved the way. The present owners are Jason and Anna Flowerday. Under previous owners, Te Whare Ra was known principally for stickies and Gewürztraminer, but botrytized wines are now produced less often, and the Gewürztraminer has been a typical New World rose-petal-perfumed wimp. I hope the new owners know what a real Gewürztraminer tastes like. In the meantime, try the Sarah Jennings

blend of Cabernet Franc, Malbec, Merlot, and Cabernet Sauvignon. And look out for the 2004 inaugural vintage of Pinot Noir.

✓ Classic red blend (Sarah Jennings) • Sémillon (Noble)

TORLESSE

Waipara

★

Established in 1987 by 20-odd grower-suppliers, Torlesse soon went into receivership. It reemerged in 1990 as a new company that is now owned by several shareholders, also with vineyards dotted over Waipara. The spread of the vineyards should give winemakers Kym Rayner and Paul Hewett the opportunity to create a range of individual *terroir*-based wines, which is precisely their intention. So, watch this space. In the meantime, try the deliciously rich Sauvignon Blanc.

✓ Sauvignon Blanc

TRINITY HILL

Hawke's Bay

★★★

The trinity here consists of managing director John Hancock, who helped establish Morton Estate's reputation before setting up Trinity Hill; winemaker Warren Gibson, who assisted Hancock at Morton Estate; and viticulturist Michael Bell, who is a Gimblett Gravels expert, having tended the famed Irongate vineyard. The great thing about Hancock is that he insists on making beautiful wines even from grapes he dislikes, such as Sauvignon Blanc. However, Trinity Hill's most outstanding wines so far are Merlot and Syrah. The worst wine I could find at Trinity Hill was the High Country Pinot Noir, and that's a glugging wine full of strawberry fruit. The only thing I could fault it on was its straightforward, upfront, easy-drinking quality.

✓ Cabernet Sauvignon (Gimblett Road) • Classic red blend (Gimblett Road Cabernet Sauvignon-Merlot, Shepherds Croft Cabernet Sauvignon-Merlot, Shepherds Croft Merlot-Cabernet Franc-Syrah) • Merlot

(Gimblett Road) • *Riesling*
(Wairarapa) • *Roussanne* •
Syrah (Gimblett Road) •
Tempranillo

TWO PADDOCKS

Gibbston Valley
★★★

This estate is owned by actor Sam Neill, who lives in Central Otago and loves Pinot Noir. The original 5-acre (2-hectare) Two Paddocks on the Gibbston Back Road is so called because it was one of two neighboring paddocks planted by Neill and friend Roger Donaldson in 1993. Donaldson has his own label (Sleeping Dogs), while Neill retains the name for the overall business, although this vineyard is now known as One Paddock. In 1998, Neill purchased Alex Paddocks in the Earnsclough Valley, Alexandra, which is a warmer site, where 7 acres (3 hectares) have been planted. Alex Paddocks yielded its first crop in 2001, enabling the first truly *two-paddock* Two Paddocks to be produced that year. Then, in 2002, winemaker Dean Shaw made the stunning single-vineyard The Last Chance Pinot Noir. The latest addition has been Redbanks Paddock, also in the Earnsclough Valley, but significantly warmer still. With potentially 60 acres (25 hectares) of vineyards, this is Neill's most ambitious project so far. Just a few acres have been planted, including a little Riesling, and he intends to expand the operation only as and when needs be. Since 2002, a soft, easy-drinking blend of all three paddocks has been produced under the Picnic Pinot Noir label.

✓ *Pinot Noir* (The Last Chance)

UNISON VINEYARD

Hawke's Bay
★★

A winery on the way up, Unison's high density, Gimblett Gravels vineyard produces just two reds, both of which blend Merlot, Cabernet Sauvignon, and Syrah. One is simply called Unison, the other Unison Selection. Both are brilliant. Now there is a refreshing rosé from the same varieties.

✓ *Classic red blend* (Unison, Unison Selection)

VALLI

Central Otago
★

This is the own label of Gibbston Valley's winemaker, Grant Taylor. It is named after a distant relative who emigrated to New Zealand in the 19th century. Taylor has two small vineyards at his disposal, one in Gibbston Valley, which is supposed to be better in cooler vintages, the other in Bannockburn, which excels in warmer years.

✓ *Pinot Noir* (Bannockburn Vineyard)

VAVASOUR

Marlborough
★★★

Situated south of Blenheim, in the Awatere Valley, where the intense sun and dry winds are responsible for the intense fruit flavor of these well-structured wines. Excellent value wines are also sold under the Dashwood label.

✓ *Chardonnay* • *Pinot Noir* •
Sauvignon Blanc

VIDAL

Hawke's Bay
★★★

Vidal was founded by a Spaniard, Anthony Vidal, but is now owned by George Fistonich, the son of a Dalmatian immigrant and proprietor of Villa Maria. This winery consistently produces some of the most exciting red wines in the Hawke's Bay area. The whites often lack finesse, although they are usually very easy to drink, and Vidal produces one of New Zealand's better Gewürztraminers.

✓ *Classic red blend* (Reserve Merlot-Cabernet Sauvignon) •
Cabernet Sauvignon (Joseph Soler, Reserve) • *Chardonnay* (Reserve) • *Sauvignon Blanc* (Estate) • *Syrah* (Soler)

VILLA MARIA

Auckland
★★★

New Zealand's best all-around wine producer is the country's third-largest (after Montana and Nobilo), and the only one of the three that is still New Zealand-owned. Villa Maria has a vast range of wines that are all beautifully crafted to enhance fruit and finesse. Where oak is used, the touch is light and impeccably integrated. For such a large company to have the level of quality and consistency that Villa Maria has is pretty remarkable. But some of the kudos must go to Montana for chasing Villa Maria on

quality and value at all price points, despite its production being considerably larger still. The very best Villa Maria wines deserve ★★★. Full marks to proprietor George Fistonich, who converted the entire production to screwcap bottling.

✓ *Entire range*

VINO ALTO

Auckland
●

I have not tasted these wines, but I am passing on high praise from Bob Campbell MW and other critics I respect in New Zealand. Any readers who are curious how Italian varieties and styles might work in New Zealand should start at Vino Alto, where Margaret and Enzo Bettio grow, among others, Arneis, Barbera, Corvina, Montepulciano, Nebbiolo, and Sangiovese. The Retico is, apparently, well worth seeking out as an example of a rare Amarone-style wine, made from grapes that have been dried on racks for two months prior to fermentation.

WAIPARA HILLS

Canterbury
★★

An ambitious, young, up-and-coming venture that makes and sells wines from Canterbury and Marlborough, as well as Waipara.

✓ *Riesling*

WAIPARA SPRINGS

Waipara
★★

Owned by the Moore family, who tends the vineyard, and the Grants, who make and sell the wines, Waipara Springs produces a solid range of consistently fine quality wines.

✓ *Chardonnay* (Lightly Oaked) •
Pinot Noir (Reserve) •
Sauvignon Blanc

WAIPARA WEST

Canterbury
★★

This winery and vineyard is owned by a partnership called Tutton Sienko Hill. Paul Tutton is a London wine merchant, Olga Sienko is his wife, and Lindsay Hill is his sister-in-law, and the viticulturist who manages the Waipara West vineyard.

✓ *Chardonnay* • *Classic red blend* (Ram Paddock Red) •
Pinot Noir

WAIRAU RIVER

Marlborough
★

Phil and Chris Rose have been growing grapes since 1978. In 1991, they decided to launch their own label, and now take the pick of the crop from their 310 acres (125 hectares) of vines spread over three vineyards. John Belsham (see Foxes Island Wines) has been the winemaker from the beginning.

✓ *Pinot Gris* • *Riesling* •
Sauvignon Blanc

WEST BROOK

Auckland
★★

Founded by Mick Ivicevich in 1937 in what was rural Henderson. The estate was surrounded on all sides by urban sprawl by 2000, when grandson Anthony Ivicevich moved West Brook to its present location in the Ararimu Valley. Top wines are sold under the Blue Ridge label.

✓ *Chardonnay* (Blue Ridge) •
Riesling (Marlborough) •
Sauvignon Blanc (Blue Ridge)

WHITEHAVEN

Marlborough
★★★

Sensational Riesling and Sauvignon Blanc, particularly the Single Vineyard Reserve.

✓ *Chardonnay* • *Riesling* •
Sauvignon Blanc

CHARLES WIFFEN

Marlborough
★★

Charles Wiffen is based at Cheviot in North Canterbury, his vineyards are in Marlborough, and his wines are made in Auckland by Anthony Ivicevich of West Brook. Rieslings have been nothing less than stunning, especially the Late Harvest. Also very good are the Chardonnay and Sauvignon Blanc.

✓ *Chardonnay* • *Riesling* (Late Harvest) • *Sauvignon Blanc*

WITHER HILLS

Marlborough
★★★

In 2002, Wither Hills was purchased by Lion Nathan, the brewing giant that owns Australia's Petaluma. The vineyards are in South Island's Marlborough region, but the winery is at Henderson, Auckland, on North Island.

✓ *Chardonnay* • *Pinot Noir* •
Sauvignon Blanc

ASIA

According to globetrotting Asian wine specialist Denis Gastin, there are no fewer than 700 wineries spread among 10 Asian countries. However, China and Japan are by far the most important, and the sheer scale of China's economy has seen that country take over from Japan as Asia's leading wine producer.

CHINA IS NOW THE SEVENTH-LARGEST wine-producing nation in the world, ahead of Germany, South Africa, Portugal, and Chile. After years of barely drinkable white plonk under labels such as Great Wall, China has started producing serious quality red wines, such as Dragon Seal's Syrah. For some, the most interesting phenomenon throughout Asia is the emergence of wines made from indigenous, non-*vinifera* varieties, but until the producers of these wines establish a consistent quality with international grapes, how are we to know whether a local variety wine is a true rendition?

BALI

In 1994 Hatten Wines produced a rosé from Alphonse Lavallée table grapes. Local growers allow these grapes to crop as regularly as once a month, thus Hatten Rosé reached its 150th vintage by 2005! Hatten itself grows Chambourcin (on trial) and a Muscat-like variety called Belgia. The latter makes a semisweet, aromatic white wine called Alexandria, which won a bronze medal at the

International Wine and Spirit Competition in the UK in 2003. Its winemaker, French-born Vincent Desplats, also makes two traditional method wines, a rosé called Jepun and a white called Tungjung.

✓ Hatten Wines (Alexandria)

BHUTAN

Taltarni of Victoria, Australia, consults for a vineyard established in the early 1990s at Paro, at an altitude of 7,500 feet (2,300 meters).

BURMA

Myanmar Vineyard Estate was established in 1998 by Bert Morsbach at Loikaw, but moved in 1999 to Aythaya, where the vines grow on limestone slopes at 4,265 feet (1,300 meters). Varieties include Cabernet Sauvignon, Chenin Blanc, Dornfelder, Muscat, Sauvignon Blanc, Sémillon, Syrah, and Tempranillo. "Tropical" clones of Pinot Noir, Gewürztraminer, Chardonnay, and Barbera are under test. Red, white, and rosé wines are sold under the Aythaya label.

FACTORS AFFECTING TASTE AND QUALITY

 **LOCATION**
One-third of the world!

 **CLIMATE**
China Vineyards are classified as “humid microthermal cool,” a type similar to those of Austria and Hungary, where continental conditions are influenced by great water masses, creating hot, damp summers and very cold, dry winters.
India Hot, with no real winter. Two harvests a year: one dry, one humid-monsoon (usually avoided). Altitude of Maharashtra and Dodballapur provides a relatively cool climate.
Japan Extremes of climate: freezing winds in the winter, monsoon rains in the spring and fall, and typhoons in the summer. The temperature drops as one moves northward; humidity rises going southward. The climate of Miyazaki Prefecture on Kyushu, the most southerly of Japan’s four main islands, has been likened to that of Florida!

 **ASPECT**
China Recent plantings have been on well-drained, south-facing slopes to overcome the earlier problem of high water-tables on the flatter sites.
India Gentle east- and south-facing slopes at an altitude of 2,460ft (750m) in Narayangaon, and 1,980ft (600m) in Nasik and Dodballapur
Japan In the most important wine area of Honshu Island, the best vineyards are planted on the south-facing valley slopes around Kofu.

 **SOIL**
China Soils are generally alluvial.
India Vineyards at Narayangaon are on lime-rich soils, with sandy-clay loam at Nasik, and red-sandy loam at Dodballapur.
Japan Predominantly acidic soils that are unsuitable for viticulture, except around Kofu, where the soil is gravelly and of volcanic origin.

 **VITICULTURE AND WINIFICATION**
Generally the level of technology in wineries is good, but vineyard yields are too high, and sugar ripeness is seldom achieved—let alone physiological ripeness. In tropical regions, such as Bali, the grape vines

never winter, and up to 15 vintages can be harvested.

China Domestic consumption is increasing at 15 percent per annum, pushing the country’s wine industry to the seventh largest in the world. Big, new wineries in the western provinces of Xinjiang, Gansu, and Ningxia are responsible for most of this expansion. Export-orientated wineries are driving quality upward and have had some great success with superpremium wines, such as Dragon Seal’s Syrah, but attempts to raise standards across the board are held back by high-yielding varieties that crop up to 650 cases/acre (60 hl/hectare). So-called “Half Wine” (wines cut with water) have been banned in preparation to join OIV (Office International du Vin).

India Vine training is moving from the Lenz Moser high system to more sophisticated high-trellis systems.
Japan Recent developments have concentrated on the growing of top European varieties, and although this continues at an increasing pace, attention is also shifting to the Koshu grape. The biggest problem is still rain, which is frequently overcome by covering clusters of grapes with a waxed paper disk that acts as an umbrella, avoiding the rot that would otherwise be rampant. This is, however, a very expensive, labor-intensive operation.

 **GRAPE VARIETIES**
China Beichun, Cabernet Franc, Cabernet Sauvignon, Carignan, Chardonnay, Chasan, Chenin Blanc, Cock’s Heart, Dragon’s Eye (*syn.* Longyan), Gamay, Gewürztraminer, Mare’s Nipple, Marsanne, Muscat d’Hambourg, Muscat à Petits Grains, Merlot, Pinot Noir, Rkatsiteli, Saperavi, Sauvignon Blanc, Sémillon, Sylvaner, Syrah, Welschriesling
India Anab-e-shahi, Arka Kanchan, Arka Shyam, Arkavti, Bangalore Blue, Cabernet Sauvignon, Chardonnay, Karachi Gulabi, Pinot Noir, Ruby Red, Thompson Seedless, Ugni Blanc
Japan Cabernet Sauvignon, Campbell’s Early, Chardonnay, Delaware, Koshu, Merlot, Müller-Thurgau, Muscat Bailey, Riesling, Sémillon
Vietnam Cardinal

CHINA

It is assumed that Chinese grape-winemaking (as opposed to rice-winemaking) began in 128 BC, when General Chang planted *vinifera* seeds at the Imperial Palace in Chang An (now Xian), which is 600 miles (1,000 kilometers) south of Beijing. But the first documented proof of wines, rather than vines, comes from AD 674, when a grape variety was sent to Emperor Tai-Tsung by a Turkish people known as the Yagbu. Called Mare’s Nipple, this variety had purple grapes, with bunches up to 2 feet (60 centimeters) long, and the wine made from it was described as “fiery.”

In 1892, Zhang Bishi, a Chinese businessman, brought cuttings of 10 *vinifera* grape varieties from Europe, and built the Zhang Yu Winery at Yantai in Shandong province. In 1910, a French priest opened a winery in Beijing called Shangyi (now Beijing Friendship

Winery), and in 1914, a German company called Melchers set up a winery at Tsingtao (now Qindao) on the Shandong peninsula.

In more recent times, Rémy Martin was brought in to give expert technical assistance to the first Franco-Chinese joint venture. In 1980, this resulted in Dynasty, the first European-style wine produced in China, developed in conjunction with the Tianjin Winery. In 1987, the Pernod-Ricard group created the Dragon Seal brand in association with the Beijing Friendship Winery. This has been more of a success and has achieved much higher standards than Dynasty.

There are 350 wineries in China, with over 100 in the Shandong province alone, but many are small facilities. Most vineyards are either state-owned or cooperatives of several families in the same village. The area under vine has more than doubled since the late 1990s, and currently stands at 880,000 acres (360,000 hectares).

✓ *Dragon Seal* (Syrah) • *Shanxi Grace Vineyard* (Cabernet Franc)

INDIA

The vine has been growing in India for more than 6,000 years, and the country now has 113,000 acres (45,700 hectares) of vineyards, but wine production is so small that there are no official statistics. The best-known Indian wine story of modern times concerns self-made Bombay millionaire Sham Chougule. In 1982, Chougule asked Piper-Heidsieck to provide assistance for a project to create fine, traditional method Indian wines. The Champagne firm despatched a young oenologist called Raphael Brisbois, who chose a site at Narayangaon, west of Bombay and north of Pune, and constructed a \$4.8-million, high-tech winery set into the side of the Sahyadri Mountains. The first wine exported under the Omar Khayyam label caused a stir in London, not least because few people believed that Chardonnay could be grown in India. I caught a plane and saw the vines with my own eyes. However, Brisbois later confessed that his first *cuvée* was made exclusively from sultana grapes! Although the wine is just as good today as it was then, it has not moved on, while the rest of the world’s sparkling wines have. Brisbois has also moved on, and Chougule would be wise to lure him back.

Sula Vineyards is a more promising venture. It was established in 1993 by Rajeev Samant, a Stanford-trained engineer, who left his job in Silicon Valley and set up a 250-acre (100-hectare) vineyard and winery on his family’s farm in Nasik. Sament lured Sonoma winemaker Kerry Damskey to India, and hired Rahul Mehrotra, one of Bombay’s leading architects, to design his winery. Although Sula was not the first European-style winery on this subcontinent, it has pioneered Sauvignon Blanc and Chenin Blanc, also to mention Indian Blush Zinfandel. Red and sparkling wines are not produced.

However, the most exciting enterprise so far has to be Grover Vineyards, which germinated in 1979, when Kanwal Grover met *champanois* Georges Vesselle. After analyzing soil and weather data from all over India, they selected a site north of Bangalore, and by 1983 experiments had begun on 35 grape varieties. Within six years, this had been narrowed to nine varieties, all French, and in 1992, Grover Vineyards launched its first wine, a Cabernet Sauvignon. By 2004, it had expanded to 120 acres (50 hectares). Abhay Kewadkar, who trained as a winemaker under Brisbois at Indage, joined Grover in 1988. Michel Rolland has been consulting since 1995, and Veuve Clicquot took a small shareholding in 2001.

✓ *Grover* (Cabernet Sauvignon-Shiraz, La Reserve Cabernet Sauvignon)

JAPAN

Wine districts Akita, Aomori, Hokkaido Kushiro, Honshu Aichi, Hyogo, Iwate, Kyushu Fukuoka, Nagano (the best area being the Kofu Valley), Niigata, Oita, Okayama, Osaka, Sapporo, Shimane, Yamagata, Yamanashi

Japanese wine production was first documented by the Portuguese in the 16th century, but probably dates back to much earlier times. In the 17th century, under the all-powerful Tokugawa shogunate, which even controlled the emperor, Japanese wine virtually became extinct, and all things perceived as Christian or Western were

condemned. Only after Yoshinobu, the last shogun, handed back military and civil powers to the emperor in 1867 were conditions right to rebuild Japan's wine industry. In 1875, the first commercial winery was established west of Tokyo in the Yamanashi district, which still accounts for 40 percent of Japanese vineyards today.

Due to this history, wine drinking was not felt to be natural in Japanese society, and it has been slow to take off, but Westernization led to a doubling of wine consumption throughout the 1980s, and it has doubled again since. This led the industry to improve quality and come clean on the provenance of its products. Once notorious for bottling imported bulk wine as "Produce of Japan," the industry now has a voluntary code that ensures the labeling of all imported wines as *yunyu san*, Japanese-fermented wines as *kokunai san*, and any blends of the two must be clearly indicated. This self-regulated system is adhered to by producers of any note, but *kokunai san* can still be fermented from imported grapes, grape juice, or concentrate.

Virtually all of Japan's best wines to date have been from classic grape varieties, mostly French (particularly Cabernet Sauvignon, Chardonnay, and Merlot), but there is renewed interest in Koshu, a variety this country has made its own. Though this grape originated in Asia Minor, arriving in China via the Silk Route and brought into Japan by Buddhists, it has been cultivated in the Yamanashi district since at least the 8th century. Until recently, the Koshu grape was used only to make sweet wine, or it would be lost in a blended "modern"-style wine. Since the turn of the millennium, however, some innovative Japanese producers have been honing a pure, dry style. Experimentation in production methods is going on, but the groundwork should first be figured out, by selecting the best sites, developing specialized clones, and reducing yields. When this is accomplished, the Koshu might even become Japan's flagship wine.

There are 170 commercial wineries in Japan, the largest of which are Chateau Mercian, Sapporo, and Suntory. Suntory operate four wineries (Yamanashi, Yamagata, Shiojiri in Nagano, and Seto in Okayama). The Yamanashi Winery, with its 370-acre (150-hectare) vineyard close to Mount Fuji, is the largest in Japan. These three producers lead the industry, but there are plenty of smaller wineries that compete in terms of quality, with others waiting in the wings.

✓ *Chateau Mercian* (Hokushin Reserve Chardonnay, Private Reserve Kikyogahara Merlot) • *Domaine Sogga* (Chardonnay) • *Grace* (Misawa Private Reserve Cabernet-Merlot) • *Hayashi Farm* (Kifugo) • *Kumamoto* (Night Harvest Chardonnay) • *Manns* (Solaris Chikumagawa Nagano Merlot) • *Okuizumo* (Shimane Chardonnay) • *Sapporo* (Grande Polaire Furusato Cabernet Sauvignon, Grande Polaire Nagano Furusato Vineyard Cabernet Sauvignon, Grande Polaire Yoichi Kifu) • *Suntory* (Tomi no Oka Cabernet Merlot, Tsutaishizaka Chardonnay) • *Tsuno* (Campbell's Early Rose)

KOREA

Korea has 40,000 acres (16,000 hectares) of vineyards, primarily for table grapes and dried fruit. Winemaking dates back at least 2,000 years, but it was traditionally from rice and aromatized with herbs for medicinal purposes. A grape-based cooperative winery was set up in 1993 by Yoon Byeong-tae to make wine under the Chateaumani label. More recently, Roh Chong-ku established the East of Eden winery in a mountainous area of Pongwha County. He is a strong believer in Sanmaru, the local *amurensis* vine, and is Korea's only producer of such a wine, sold as Empery Cupid Wild Grapes Wine.

KYRGYZSTAN

Situated between China and Kazakhstan, this country's vineyards amount to just 17,000 acres (7,000 hectares) and produce just over 1.5 million cases (135,000 hectoliters) of wine.

TAJIKISTAN

There are more than 20 wineries in this central Asian state, most of which are found in Leninabad, Ghissar, and Vakhsh. In total, 90,000 acres (36,000 hectares) of vineyards produce 622,000 cases (56,000 hectoliters) of wine.

THAILAND

A 12-year viticultural study ordered by King Bhumibol in the mid-1970s experimented with more than 400 types of grapes from Australia, Germany, and the US. In 1992, the Thai government officially allowed wine production, and in 1993 the country's first winery, Chateau de Loei, was established in the Phurua highlands of northeastern Thailand by the late Dr. Chaijudh Karnasuta. Chateau de Loei has been followed by Shala One, Siam Winery, PB Valley Khao Yai, Granmonte, and Village Farm.

The Siam Winery released its first wine as recently as 1997, but is already Thailand's biggest producer. Owned by the Yoovidhya family, its wines are marketed under the Chantemp and Monsoon labels. Grapes are grown on the famous "floating vineyards" around Damnoen Saduak in the Chao Phraya Delta. The vineyards do not actually float, but vines are grown on thin strips of land separated by canals, from which they are tended by growers in boats.

Shala One is located at King Amphur Dong Charoen in Pichit province and is best known for its Shiraz. The Khao Yai region, 109 miles (175 kilometers) northeast of Bangkok, is Thailand's most popular spot for vineyards: PB Valley Khao Yai; Village Farm, which sells wine under Chateau de Brumes and Village Thai labels; and Granmonte, Thailand's newest winery, are all located here.

✓ *Chateau de Loei* (Reserve Syrah) • *Granmonte* (Celebration Syrah)

UZBEKISTAN

There are numerous wineries in Bukhara, Samarkand, and Tashkent. Together, 334,000 acres (135,000 hectares) of vineyards produce just over 11 million cases (990,000 hectoliters) of wine, mostly high-strength reds, dessert wines, and sparkling wines.

VIETNAM

The first winery to be established in this country was the ill-fated Ninh Thuan joint venture, established by Allied-Domecq in 1995. The potential was thought to be very high, since under French rule the Vietnamese became the first Asians to acquire a taste for wine. However, the Vietnamese drink only Bordeaux, and tourists do not generally want to try Vietnamese wine. Or at least the former was the case until the Asian economies nose-dived in 1997, the same year that the Vietnamese government banned the advertising of all alcoholic products.

A VINEYARD IN THE YAMANASHI-KEN DISTRICT, JAPAN
In the Yamanashi-Ken wine district, west of Tokyo on the island of Honsbu, the vines are trained high on slightly sloping, south-facing slopes.

WINE AND FOOD

There is only one golden rule when you are selecting a wine to accompany a dish. The more delicately flavored the dish, the more delicate the wine should be, whereas fuller-flavored foods can take fuller-flavored wines. It's as simple as that.

THIS RULE IS VERY FLEXIBLE because it is capable of adapting to personal circumstances. We all have different ways of perceiving tastes and smells; if one person has a blind spot for, or is especially sensitive to, a particular characteristic such as acidity, sweetness, or bitterness, then their perception of the delicacy or fullness of a certain dish or wine will be somewhat different from other people's. The best approach is to start with conventional food-and-wine combinations, but use them as a launchpad for experimentation.

APERITIFS

Whether you are serving a one-course supper, or a full dinner menu, you might like to start with an aperitif. This should not be an afterthought. Inevitably, the most delicate dishes in a meal arrive first and nobody will be able to appreciate them if palates have been saturated with strong spirits or highly flavored concoctions. Choose the most suitable aperitif according to your taste; do not offer a choice.

SHERRY

Fino sherry is a traditional aperitif, but its use has been abused. If the first course is sufficiently well flavored, then sherry can be an admirable choice, and may sometimes be used as an ingredient. Mostly, however, even the lightest *fino* will have too much alcohol and flavor.

PROPRIETARY APERITIFS AND SPIRITS

Proprietary brands of aromatized aperitifs, such as vermouths, inevitably also fall into the trap of being too alcoholic and too strong-tasting. All spirits, especially if they are not mixed, are too aggressive to allow the palate to appreciate the types of food usually served as a first course.

WINES

It is customary in a few countries, notably France, to serve a sweet wine such as Sauternes as an aperitif. For most occasions, this choice would be inappropriate, but sometimes it can be effective. White wines that are light-bodied, dry or off-dry, still or sparkling, make perfect all-purpose aperitifs, although a rosé may be suitable if

APPETIZERS

When matching wines to appetizers, it is important to consider the next course and its accompanying wine.

When using the food-and-wine combinations below to plan a menu, always aim to ascend in quality and flavor, serving white before red, dry before sweet, light-bodied before full-bodied, and young before old. The reason for this is twofold. Obviously, a step back in quality will be noticed. Equally, if you go straight to a reasonably fine wine, without first trying a lesser wine, you are likely to miss many of the better wine's subtle qualities.

Try also to make the sequence of wines proceed in some sort of logical order or according to a theme. The most obvious one is to remain faithful to the wines of one area, region, country, or grape variety. You could plan a dinner around the Pinot Noirs of the New World, or the Cabernet Sauvignons of Italy, for example. The theme could be one wine type or style, perhaps just Champagne or Sauternes, a popular ploy in those regions. It could be even more specific, such as different vintages of one specific grower's vineyard or a comparison of the "same" wine from different growers.

the first wine served with the meal is also a rosé or a light red wine. Excellent choices for a white-wine aperitif may include Mâcon Blanc or Mâcon Villages, good Muscadet, lighter Alsace wines such as Pinot Blanc or Sylvaner, new-wave Rioja, aromatic dry whites from northeastern Italy, many English wines, young Mosel (up to Spätlese) or Rhine (up to Kabinett), and light-bodied Chardonnay, Sauvignon, Chenin, or Colombar from California, Australia, New Zealand, or South Africa. The list is endless. If the choice is to be a rosé, try to select one from the same area, and preferably made from the same grape, as the first wine of the meal. The aperitif *par excellence* in every conceivable situation is Champagne, with Crémant de Bourgogne or Crémant d'Alsace making excellent alternatives.

✓ **Budget choice** *Cava Brut*

APPETIZERS

At one time, it was customary to get well into the first course before it was permitted to serve the wine. Nowadays, each stage of a meal is seen to play a vital part in the taste experience, leading onto the next taste, or following on from the previous one.

ARTICHOKE

If artichoke is served with butter, a light but slightly assertive, dry Sauvignon Blanc from the Loire is best. The same wine might also accompany artichokes with Hollandaise sauce, although a dry rosé with a fairly high balance of acidity, such as a Coteaux d'Ancenis Rosé from the Loire, Arbois Rosé from the Jura, or Schilcher from Austria, is also suitable.

✓ **Budget choice** *Sauvignon de Haut-Poitou*

ASPARAGUS

Fine Champagne or a young Muscat d'Alsace are perfect accompaniments. Medium-weight white Burgundy and Californian or Pacific Northwest Chardonnay also work well.

✓ **Budget choice** *Rimat Chardonnay Blanc de Blanc Brut*

AVOCADO

Although many wines of excellent acidity, such as Champagne or Chablis, are extremely successful partners of this food, Alsace Gewürztraminer, which is naturally low in acidity, is the best choice.

✓ **Budget choice** *Muscadet*

CAVIAR

Champagne is the classic partner.

✓ **Budget choice** *Mineral water*

GARLIC BUTTER

Choose the general style of wine recommended for the main ingredient, but opt for one with more body and a more assertive flavor or higher acidity.

PÂTÉS

Whether fish, fowl, or meat, pâté should be partnered according to its main ingredient or flavor. Look in the appropriate entry and choose a recommended wine. Foie gras is fabulous with a fine vintage Champagne or mature Sauternes and, although diverse in character, Alsace Gewürztraminer and Pinot Gris are both perfect partners.

SALADS

Plain green salads need little more than a light, dry white such as a Muscadet, unless there is a predominance of bitter leaves, in which case something more assertive but just as light, such as a lesser Loire Sauvignon, should be chosen. A firm Champagne is the best accompaniment to salads that include warm ingredients.

✓ **Budget choice** *Cava Brut*

SHELLFISH
A variety of white wines including good Muscadet, Loire Sauvignon, and Mosel can accompany the Spanish dish paella.

SNAILS

Modest village Burgundy from the Côte d'Or, either red or white.

✓ **Budget choice** *Côtes de Roussillon*

SOUPS

Champagne or any fine sparkling wine is ideal with most purée, velouté, or cream soups, especially with the more delicately flavored recipes. It is virtually essential with a chilled soup, whether a jellied consommé or a cold purée soup such as Vichyssoise. Most sparkling wines can match the flavor of a shellfish bisque, but a good pink Champagne makes a particularly picturesque partner. Rich-flavored soups can take full wines, most often red. A good game soup, for example, can respond well to the heftier reds of the Rhône, Bordeaux, Burgundy, and Rioja. The frothy character of Lambrusco cuts through the texture of a genuine minestrone. The sweet cherry flavor of Lambrusco also matches the soup's rich tomato tang.

✓ **Budget choice** *Blanquette de Limoux*

TERRINES

Fish, shellfish, and meat terrines should be partnered with a wine according to their main ingredient or flavor (see appropriate entry). Most vegetable terrines go well with young, dry or off-dry, light-bodied, still, sparkling, or aromatic white wines from the Loire, Alsace, Germany, Austria, northeastern Italy, New Zealand, and England.

✓ **Budget choice** *Crémant d'Alsace*

VINAIGRETTE

Appetizers with vinaigrette are difficult to partner. Conventional

wisdom suggests a *fino* or *manzanilla* sherry, or Montilla, although many believe it best not to serve any wine with such a first course. I have found that an Alsace Gewürztraminer is one of the very few wines that can really take on vinaigrette and come out on top.

✓ **Budget choice** *Inexpensive Gewürztraminer*

EGG, RICE, AND PASTA DISHES

Champagne is the perfect foil to the bland flavor of any egg dish, the texture of which is cut by the wine's effervescence. Dishes such as omelettes, quiches, soufflés, eggs cooked *en cocotte*, coddled, fried, scrambled, or poached can also be accompanied by any good sparkling wine. Savory mousses and mousselines, whether hot or cold, fish or fowl, should be partnered by a wine with slightly less body and at least as much acidity or effervescence (if this is applicable) than those suitable to accompany their main ingredient. Good sparkling wine is equally useful for many rice and pasta dishes, particularly the more delicately flavored ones, but light red wines—not too fruity and with nice grippy tannins—can make a surprisingly good accompaniment. Richer ingredients should be matched by the wine.

✓ **Budget choice** *Saumur Brut and Saumur Rouge*

FISH

Most fish and shellfish go well with dry white wines, but red, rosé, sparkling, and sweet styles are all possible accompaniments in certain circumstances.

FISH WITH SAUCES AND PAN-FRIED FISH

Whatever the fish, pan-fried, cream sauce, or butter sauce dishes require wines with more acidity or effervescence than normal. If the sauce is very rich, then consider wines with more intense flavors.

✓ **Budget choice** *Crémant de Loire*

FISH STEWS

Although red wine and fish usually react violently in the mouth, dishes cooked in red wine, such as highly flavored Mediterranean fish stews, present no such problems.

MACKEREL

An assertive but modest Loire Sauvignon is needed for mackerel, although a richer Sauvignon from various New World countries is preferable with smoked mackerel.

✓ **Budget choice** *Sauvignon de Touraine*

RIVER FISH

Generally, most river fish go well with a fairly assertive rosé, since both the fish and the wine have a complementary earthiness, but an assertive white such as Sancerre is just as effective. Sancerre, white Graves, and Champagne are especially successful with pike. Champagne or Montrachet is classic with salmon or salmon-trout, whether baked, grilled, pan-fried, poached, or smoked, but any good-quality dry sparkling wine or white Burgundy will be excellent, as will top Chardonnay wines from California, the Pacific Northwest, New Zealand, Australia, and South Africa. Riesling, whether Alsace or German, is almost obligatory with trout, particularly when it is cooked *au bleu* (rapidly, in stock with plenty of vinegar).

✓ **Budget choice** *Pink Cava Brut*

SARDINES

Vinho Verde is the ideal wine with sardines, especially if freshly caught and cooked on a beach in Portugal.

✓ **Budget choice** *Vinho Verde*

SHELLFISH

Choose a top estate Muscadet, a Bourgogne Aligoté from a sunny vintage, a Loire Sauvignon, an English wine, or a Mosel with most modest forms of shellfish (shrimp, mussels, etc.); a fine but assertive Sancerre or Pouilly Fumé with crayfish; a *grand cru* Chablis or a good Champagne with crab, lobster, oysters, and scallops. Choose a wine with more acidity or effervescence if the dish you are eating includes a cream sauce.

✓ **Budget choice** *Crémant de Bourgogne*

SMOKED FISH

A good tip is oaked for smoked. For smoked fish, drink an oak-

matured version of the wine you would drink with an unsmoked dish of the same fish. It does not work every time. Since some wines are not oak-matured, but oakiness in wine does blend well with the smokiness in food, so pick any oaked wine you think suitable.

✓ **Budget choice** *cheap Ryman-produced oaked Chardonnay from anywhere*

WHITE FISH

White fish have the very lightest flavors and it would be a pity to overwhelm their delicate nuances with a dominant wine. Grilled sole, plaice, and mullet are enhanced by a youthful *blanc de blancs* Champagne, top-quality estate Muscadet, Savennières, Pinot Blanc from Alsace, Pinot Grigio from northeastern Italy, and fine estate Vinho Verde with authentically tart dryness and just the barest prickle. Haddock, hake, halibut, turbot, cod, and sea bream are good with all the wines mentioned above, but can take slightly richer dry whites.

✓ **Budget choice** *Crémant d'Alsace*

MEAT DISHES

Few people have not heard the old maxim "red wine with dark meat, white wine with light," but it is quite acceptable to reverse the rule and have white wine with dark meat and red wine with light meat, provided that the golden rule in the introduction is observed.

BEEF

Bordeaux is the classic accompaniment to roast beef. Choose a younger, perhaps lighter style if the meat is served cold. A good Cabernet Sauvignon from Australia, California, Chile, Italy, New Zealand, or South Africa would do just as well and would be preferable in the case of steaks that are charred on the outside and pink in the middle. For pure beef burgers, an unpretentious, youthful red Côtes-du-Rhône with an honest, peppery flavor is ideal. But, frankly, almost any drinkable red wine of medium, medium-full, or full body from anywhere will accompany all beef dishes with some degree of competence, as will most full-bodied and rich-flavored white wines.

✓ **Budget choice** *Bulgarian Cabernet Sauvignon*

CASSEROLES, DARK

Dark meat casseroles require full-bodied red wines from Bordeaux, Burgundy, the Rhône, or Rioja. Chateau Musar from Lebanon and Chateau Carras from Greece are both also ideal, as are many Italian wines, from the Nebbiolo wines of Piedmont, through the fuller Sangiovese wines of Chianti, Carmignano, and Montalcino, to

the Montepulciano wines of Abruzzi and the Aglianico del Vulture, not to mention the super *barrique* wines from Tuscany and northeastern Italy. The richer the casserole, the more robust can be the wine, and the more tannin needed.

✓ **Budget choice** *Inexpensive Zinfandel*

CASSEROLES, LIGHT

Light meat casseroles are best with young Beaujolais, Loire reds (e.g. Bourgueil or Chinon), various medium-bodied reds from southwestern France and Coteaux du Languedoc, Pinot Noir from Alsace, and soft-styled Chianti. For the white-wine drinker, new-wave Rioja, Mâcon Blanc, Tokay d'Alsace, and inexpensive French Colombard or Chenin Blanc from California or South Africa are all worth trying.

✓ **Budget choice** *Californian dry white jug wine*

CHILLI CON CARNE

If it is a good chili, forget wine and stick to ice-cool lager or water.

CHINESE DISHES

Good-quality German Riesling *Kabinett* wines are very useful for partnering many Chinese dishes, particularly those in black bean, ginger, or oyster sauces or with any gingery or bell pepper flavoring. Spare ribs require a *Spätlese*, sweet-and-sour an *Auslese*, chilies and other hotter flavors an Alsace Gewürztraminer, preferably *Vendange Tardive*. For duck or goose, try a good-quality Vouvray *demi-sec*, still or sparkling. If delicate or bland ingredients such as water chestnuts, bamboo shoots, or cashew nuts dominate, choose a fresh or soft white such as a light Australian Chardonnay. With egg rolls, choose a good dry fizz. Iced water makes a good substitute for any of the above.

DUCK

Roast duck is very versatile, but the best accompaniments include certain *crus* Beaujolais such as Morgan or Moulin-à-Vent, fine red and white Burgundy, especially from the Côte de Nuits, and mature *cru* Beaujolais such as Fleurie should be considered. Duck in orange sauce goes extremely well with softer styles of red and white Burgundy, southern Rhône wines, especially Châteauneuf-du-Pape, red Rioja, and Zinfandel.

✓ **Budget choice** *Quinta da Bacalhã*

GAME

For lightly hung winged game, choose the same wines as for poultry. If it is mid-hung, try a fullish *cru* Beaujolais. Well-hung birds require a full-bodied red Bordeaux or Burgundy. Pomerol is

the classic choice with well-hung pheasant. Treat lightly hung ground game in the same way as lamb and mid-hung meat in the same way as beef. Well-hung ground game can take the biggest Hermitage, Côte Rôtie, Cornas, Châteauneuf-du-Pape, red Rioja, or an old vintage of Château Musar. White-wine drinkers should opt for old vintages of Rhône or Rioja or an Alsace Pinot Gris *Vendange Tardive* (vinified dry).

✓ **Budget choice** *Australian Shiraz*

GOOSE

I find it hard to choose between Chinon, Bourgueil, Anjou Rouge, and (sometimes) Chianti on the red side, and Vouvray (still or sparkling), Riesling (preferably, but not necessarily, Alsace), and Champagne on the white. The one trait they all share is plenty of acidity, which is needed for this fatty bird. If the goose is served in a fruity sauce, stick to white wines; a little sweetness in the wine will do no harm.

✓ **Budget choice** *South African Chenin Blanc*

GOULASH

When on form, "Bull's Blood" is the obvious choice, otherwise any East European full-bodied, robustly flavored red wine will suffice.

✓ **Budget choice** *Bulgarian Kadarka*

HAM AND BACON

Ham can react adversely in the mouth with some red wines, particularly if it is unsmoked, but young Beaujolais, Loire Gamay, and Chianti are safe bets. Sparkling white wine is perhaps best of all, although I have known that to react strangely at times.

✓ **Budget choice** *Cava Brut*

INDIAN DISHES

Surprisingly enough, a light and slightly tannic red wine can go well with a number of Indian dishes, such as chicken tikka, korma, pasanda, tandoori, and even rogan josh. You need something fresh and crisp such as a Côtes de Gascogne or one of the lighter New Zealand Sauvignon Blancs to wash down a vegetable tikka or a Madras curry, something fruitier, such as German Riesling *Kabinett*, for a vindaloo.

✓ **Budget choice** *Iced water*

LAMB

Bordeaux is as classic with lamb as it is with beef, although Burgundy works as well, particularly when the meat is a little pink. It is well known in the wine trade that lamb brings out every nuance of flavor in the finest of wines, which is why it is served more often than any other meat when a merchant is organizing a special meal. Rack

of lamb with rosemary seems to be a favorite. As with beef, almost any red wine can accompany lamb well, although this meat is perhaps best with slightly lighter wines.

✓ **Budget choice** *Bourgogne Rouge* (Buxy)

MEAT PIES

For hot pies and puddings, treat as for dark- or light-meat casseroles. Cold pork, veal-and-ham, or ham-and-turkey pies require a light- or medium-bodied red that has a firm acidity, such as Chinon or Bourgueil, while cold game pies call for something at least as rich, but softer, such as a New Zealand Cabernet Sauvignon.

✓ **Budget choice** *Saumur Brut*

MOUSSAKA

For romantic association, choose one of the better, medium- to full-bodied reds from Greece, such as Naooussa, Goumenissa, or Côtes de Meliton. White-wine drinkers require something of substance that is not too full or oxidative. A few Greek wines fit the bill (Lac des Roches from Boutari comes to mind), but something Spanish might be better, such as one of the "in-between" white Riojas.

✓ **Budget choice** *Bulgarian Merlot*

VARIETY MEATS

Kidneys go with full, well-flavored, but round wines, such as a mature red or white Châteauneuf-du-Pape or a Rioja. But much depends on what sort of kidneys they are and how they are cooked. A ragout of lamb's kidneys, for example, needs something with the finesse of a mature *cru classé* Médoc. The finest livers go well with a good but not too heavy Syrah, such as a mature Côte Rôtie or Hermitage from a top producer in a medium-good vintage. Chicken livers are quite strong and require something with a penetrating flavor, such as a good Gigondas, Fitou, or Zinfandel. Pig and ox livers are the coarsest in texture and flavor, and require a full, robust, but not too fussy red—maybe a modest *vin de pays* from the Pyrénées-Orientales. Either red or dry- to medium-dry white wine may be served with sweetbreads. Lamb's sweetbreads are the best, and take well to fine St-Émilien or St-Julien, if in a sauce, or a good white Burgundy if pan-fried.

✓ **Budget choice** *Crémant de Bourgogne*

PORK, POULTRY, AND VEAL

These meats are flexible and can take a diverse range of wines from modest traditional method sparkling, through almost every type of medium- or full-bodied dry or off-dry white wine, to light

reds from Beaujolais, Champagne, Alsace, and Germany, literally any medium-bodied red wine, whatever its origin, and a large number of full-bodied ones too. For chops, cutlets, or escalopes, grilled, pan-fried, or in a cream sauce, it is advisable to choose something with a higher acidity balance or some sparkle. Beaujolais is perhaps the best all-round choice; it works well with roast pork, particularly served cold.

✓ **Budget choice** *Gamay de Touraine*

POT-ROAST

Consult the appropriate entry for meat, and choose a wine listed there. Because of the extra flavor from added vegetables, it is possible, though by no means necessary, to serve a slightly less fine wine than with the straight roast.

✓ **Budget choice** *Côtes de Duras*

STROGANOFF

An authentic Stroganoff requires a full red with a good depth of flavor, but with some finer characteristics, not too robust, and preferably well rounded with age. Try a modest Médoc, a good Cahors, or a Bergerac.

✓ **Budget choice** *Bulgarian Cabernet Sauvignon-Merlot* (Oriahovica)

THAI DISHES

Much spicier than Chinese, with a more intricate mix of flavors, these dishes are far more difficult to match wine to. For the very hottest chili-charged dishes, forget wine and stick to beer or, better still, iced water, but with mildly hot Thai dishes, you can get away with a New Zealand Sauvignon Blanc or a Champagne, which will also go

POULTRY

Poultry has such a delicate flavor that how it is cooked will be the most important consideration when choosing a wine, particularly if it is served with a sauce, as even the most bland ancillary flavors can dominate.

with dishes that include coconut milk. When lemongrass, lime, and other zesty ingredients dominate, try an unoaked Australian Sémillon.

✓ **Budget choice** *Iced water*

DESSERTS

While a dessert wine can easily be drunk on its own, there is no reason why it has to be. There are those who believe that the finest points of a great dessert wine are lost or overshadowed by a sweet. But this happens only if the golden rule of partnering food and wine is broken.

CAKES, GÂTEAUX, PUDDINGS, AND PASTRIES

Many cakes, sponges, and gâteaux do not require wine, but I have found that Tokaji enhances those with coffee or vanilla flavors, various Iberian Moscatels are very good when almonds or walnuts are present, and sweet sparkling Vouvray or Coteaux du Layon go well with fruit-filled, fresh cream gâteaux and fruit-flavored cheesecakes. Iberian Moscatels are superb with Christmas or plum pudding and, on a similar theme, Asti is ideal with mince pies. Chocolate is more difficult, and although some people enjoy drinking wines ranging from Sauternes to *brut* Champagne with chocolate fudge cake or profiteroles, I am not one of them.

✓ **Budget choice:** *Iced water*

CRÈME BRÛLÉE AND CRÈME CARAMEL

Something sweet and luxurious is required to accompany crème brûlée. German or Austrian wines would be too tangy, a top Sauternes or one of the richer Barsacs would be excellent, but perhaps best of all would be an Alsace Pinot Gris

Sélection de Grains Nobles or a great Malmsey Madeira.

✓ **Budget choice** *Australian Liqueur Muscat*

FRUIT

A fresh peach, plump and juicy, makes the ideal partner for a Rheingau Riesling *Auslese* or *Beerenauslese*, or a late-harvest, botrytized Riesling from California or Australia. Asti, Californian Muscat Canelli, and Clairette de Die may also partner peaches, especially if they are served with strawberries or raspberries. These wines go well to one degree or another with virtually every other fruit, including fresh fruit salad. Lighter Sauternes and Barsacs, Coteaux du Layon, and sweet sparkling Vouvrais are also good with fruit salad and are the best choice for apple, pear, or peach pies, tarts, and flans.

An Austrian Grüner Veltliner or Gewürztraminer *Auslese* with strawberries and fresh coarse-ground black pepper (no cream) is a revelation. A fine Bordeaux or Burgundy with fresh raspberries that have been macerated in the same wine is liked by some, as is a top-quality Mosel *Auslese* with strawberries and fresh raspberry purée (no cream). Apple Strudel, Dutch Apple Pie, and other spicy fruit desserts need to be eaten with a Tokay, Iberian Muscatel, or an Austrian Gewürztraminer *Beerenauslese*. Pies made with dark, rich fruits require full Sauternes, Bonnezeaux, or Quarts de Chaume.

✓ **Budget choice** *Moscato Spumante*

ICE CREAM

When ice cream is part of a dessert, the other ingredients should be considered when choosing a wine.

FRUIT PASTRIES

Sweet wines, particularly Sauternes, are well suited to fruit pies, tarts, and pastries.

Ice cream on its own rarely calls for any accompaniment, but there is one perfect combination—Muscat de Beaugues de Venise with Brown Bread Ice Cream.

✓ **Budget choice** *Moscatel de Valencia*

MERINGUE

For meringue served as part of a vacherin or pavlova, choose a still or sparkling Moscato, Californian Muscat Canelli, a late-harvested botrytized Riesling, a top Mosel *Beerenauslese*, a sweet Vouvray, or a good Sauternes. For meringue desserts with nutty, coconutty, or biscuity ingredients, a Tokay Essencia, Alsace Pinot Gris Sélection de Grains Nobles, Torcolato from Veneto, or Malmsey Madeira would be equally successful. Lightly poached meringue served as floating islands or snow eggs needs something of less intensity, such as an Alsace Pinot Gris *Vendange Tardive*. An Eiswein is the perfect partner for lemon meringue pie—a dessert that demands luxury, acidity, and a vibrant sweetness.

✓ **Budget choice** *Iberian Muscatel*

CHEESES AND CHEESE DISHES

There is a school of thought that decries the traditional concept of cheese and wine as ideal partners. I am not one of its pupils. Most cheeses are flattered by many wines; only the most delicate or the most powerful of either cheeses or wines require careful consideration before trying to partner them.

BLUE-VEINED CHEESES

A good-quality blue cheese is best partnered by a sweet wine, which produces a piquant combination of flavors not dissimilar to that found in sweet-and-sour dishes. Many dessert wines will suffice, and the choice will often depend on personal taste, but I find that hard blues such as Stilton and Blue Cheshire are best with port, while soft blues are greatly enhanced by sweet white wines. Lighter Barsacs, Coteaux du Layon, German *Beerenauslese*, or a mature Sélection de Grains Nobles from Alsace for Bleu de Bresse cheeses, and Sauternes, Austrian Gewürztraminer *Trockenbeerenauslese* or Tokay are needed for the more powerfully flavored Roquefort and Gorgonzola.

✓ **Budget choice** *Moscatel de Valencia*

SOFT AND SEMI-SOFT MILD CHEESES

A light Beaujolais Nouveau or an elegant Pinot Noir from Alsace (as opposed to the deep-colored, oak-aged reds that are now being made) will partner most soft and semi-soft cheeses of the mild type, although

something even more delicate, such as one of the many fragrant dry white wines of northeastern Italy or a soft-styled Champagne Rosé should be considered for double- and triple-cream cheeses.

✓ **Budget choice** *Blanquette de Limoux*

SOFT AND SEMI-SOFT STRONG CHEESES

Munster demands a strong Gewürztraminer; and the most decadent way to wash down a perfectly ripe Brie de Meaux or Brie de Melun is with a 20-year-old vintage Champagne. Washed-skin cheeses (that have been bathed in water, brine, or alcohol while ripening) need an assertive red Burgundy or a robust claret.

✓ **Budget choice** *Young Côtes du Rhône*

HARD CHEESES

Dry and off-dry English wines are ideal with Caerphilly, while the sweeter styles of English wine are perfect with Wensleydale served with a slice of homemade apple pie. Mature Cheddar and other well-flavored, hard English cheeses demand something full and red such as a fine Bordeaux or, if it has a bite, Châteauneuf-du-Pape or Château Musar. Sangiovese-based wines bring out the sweet flavor of fresh (but mature) Parmesan. Alsace Pinot Gris and Gewürztraminer are ideal with Gruyère, although something with a little more acidity, such as a Californian Sauvignon Blanc, is better with Emmental.

✓ **Budget choice** *New World Macération carbonique*

GOAT CHEESES

These cheeses require an assertive, dry white wine such as Sancerre or Gewürztraminer, although a firm but light *cru* Beaujolais would also suit.

✓ **Budget choice** *Sauvignon de Haut-Poitou*

CHEESE FONDUE

It is possible to drink a wide range of red, dry white, and sparkling wines with fondue, but it is fitting to serve a wine from the area of origin of the dish: Fondant from the Valais with a Swiss fondue, for example, and Apremont or Crépuy with fondue Savoyarde.

✓ **Budget choice** *Edelzwicker*

CHEESE SOUFFLÉ

This requires a good sparkling wine, preferably Champagne. If it is a very rich soufflé, such as soufflé Roquefort, then the wine must have the power to match it. A *blanc de noirs* such as Bollinger's "Vieilles Vignes" would be superb.

✓ **Budget choice** *Blanquette de Limoux*

TASTE CHART

A taste chart is a useful mind-jogging aid for identifying elusive aromas and flavours that you may have encountered in a wine, but cannot put a name to – something perhaps that leaps out of the glass and is instantly recognizable yet, at the same time, is frustratingly hard to identify.

EVEN THE MOST EXPERIENCED WINE TASTERS are prone to this baffling experience but, if we analyse the problem carefully, logic tells us that anything ringing bells of recognition in the brain must be well known to it, and the odds are it is an everyday aroma or flavour, rather than something obscure, rare, or esoteric. From this we can conclude that it is not, in fact, the aroma itself that is elusive, merely its name. This is not surprising, since we all have the sensory profile of more than a thousand everyday

aromas locked away in our brains – the difficulty lies in accessing the information. I realized this long ago, which is why my personal tasting books always have a list of mind-jogging aromas and flavours. When I am on my travels and find that I cannot immediately identify a flower, fruit, or spice, I simply run my finger down the list until my brain connects with the aroma that is literally in front of my nose or the flavour that is on the tip of my tongue. This new edition of the encyclopedia seems the ideal opportunity to pass on the benefits of this system to readers.

HOW TO USE THE CHART

If you instinctively know the category (flower, fruit, spice, etc) of the aroma you are looking for, go straight to the appropriate section, otherwise start at the beginning. Take the glass in one hand, swirl the wine, and take a sniff. If it is a flavour you are seeking, take a sip, while methodically running a finger down through the following list, until one jogs your memory.

THE ORIGIN OF EVERYDAY AROMAS IN WINE

Although no wines actually contain fruits (other than grapes, of course), flowers, vegetables, herbs, spices *et al*, it is perfectly reasonable to use their aromas and flavours when describing wines. To the uninitiated it might sound rather fanciful to say that a wine is buttery, but diacetyl, which is used as an artificial flavouring to make margarine smell and taste buttery, is created naturally in wine as a by-product of the malolactic process. Wines, in fact, contain varying amounts of many chemical compounds that can be linked directly to a vast number of characteristic aromas or flavours.

Some of the compounds involved can evoke different aromas depending on the levels found and the presence of other compounds

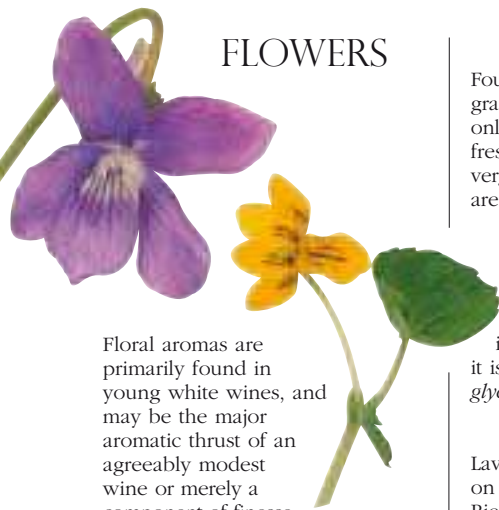

that can also exert an influence; and various unrelated compounds can induce the same aroma. The amount involved can be minuscule; a strong presence of the aromatic compounds responsible for peas and bell peppers or capsicums of the green variety can be detected, for example, at levels of one part in 100 billion!

Do not get carried away in the search for these aromas and flavours. It is far more important to concentrate on just one or two descriptors than to record a fruit cocktail or pot pourri of aromas and flavours. When you read elaborate descriptions (not too many in this book, I hope), just ask yourself what such concoctions would actually smell like and whether it would be possible to discern any of their component parts.

Note Whether we perceive any of a wine's characteristics as aromas or flavours, technically they are all aromas (see p11). However, textural and tactile impressions made in the mouth, and true tastes sensed by the tongue (sweetness, acidity or sourness, bitterness, and saltiness), also

influence our perception. Where specific chemical compounds are known to be responsible for an aroma or flavour, they are mentioned, and are italicized so that those who are interested can identify the possible cause, while those who are not can skim across without interruption to the text.

FLOWERS

Floral aromas are primarily found in young white wines, and may be the major aromatic thrust of an agreeably modest wine or merely a component of finesse in a more complex product. Violet is the most significant floral anomaly in red wine.

ACACIA

This is the flowery autolytic aroma on a recently disgorged sparkling wine. It can be found in other white wines (*paratolylmethyl ketone*).

ELDERFLOWER

Found in wines made from aromatic grape varieties, elderflower is good only when the aroma is clean and fresh, and the fruit ripe, but can verge on cat's pee when the grapes are unacceptably underripe.

GERANIUM

Commonly a sweet wine fault (*2-ethoxyhexa-3, 5-diene*), but also the sign of an Asti that is too old (*geraniol* degradation), it is always distinctive (also *glycyrrhizin* or *hexanediol*).

LAVENDER

Lavender is often found with lime on Australian wines, particularly Riesling, Muscat, or sparkling wines, and occasionally in German Riesling and even Vinho Verde.

ROSE

Rose petals can be found in many wines, particularly delicate Muscats and understated Gewürztraminers (*damascanone*, *diacetyl*, *geraniol*, *irone*, *nerol*, or *phenylethyl acid*).

VIOLET

Violets can often be found as part of the finesse on the finish of Cabernet-based red wines, notably Bordeaux, especially from Graves. It is possibly more tactile-based than a volatile aroma.

FRUITS

In general, fruitiness suggests riper grapes and more bottle-age than floral aromas and flavours, which often evolve into fruity characters. Fruitiness is enhanced by sweetness and acidity.

APPLE

Apple is a white-wine aroma that ranges from green apple (*malic acid*) in underripe wines to soft, red-apple flavours in riper wines, where 50-odd known compounds might or might not be responsible.

APRICOT

A pithy apricot character is less ripe and more bottle-aged than peachiness, which is a finer, juicier, more succulent fruitiness. Apricot is often found in Loire or German whites (*4-decanolide*).

BANANA

Banana is found in cool-fermented whites and reds made by carbonic maceration (*amyl acetate* or *isoamyl acetate*, also known as "banana oil" and "pear oil", which, in excess, can lead to a nail-varnish aroma).

BLACKCURRANT

Characteristic of classic Cabernet, blackcurrant is also found in grapes such as Syrah, particularly when bottle-aged (*ethyl acetate*, *ethyl formate*, various acids and esters).

CHERRY

Tart, red cherries are classic in cool-climate Pinot Noir, while black cherries can be part of the complexity of a great Cabernet or Syrah (*cyanhydrin benzaldehyde*).

DRIED FRUIT

The aroma of sultanas or currants is most commonly found in Italian Recioto or Amarone wines, whereas the aroma of raisins is characteristic of fortified Muscat.

FIG

A fig-like aroma is sometimes a characteristic of potential complexity in a youthful Chardonnay and may be found in combination with nuances of apple or melon.

GOOSEBERRY

The classic aroma of a truly ripe, yet exceedingly fresh, crisp, and vibrant Sauvignon Blanc, gooseberry is most widely found in white wines from New Zealand, particularly Marlborough.

GRAPE

Few wines are actually grapey, but grapiness is found in cheap German wines, young Gewürztraminer, and Muscat or Muscat-like wines (*ethyl caprylate*, *ethyl heptanoate*, and *ethyl perargonate*).

GRAPEFRUIT

Grapefruit is found in the Jurançon Sec and Alsace Gewürztraminer, German or English Scheurebe and Huxelrebe, and Swiss Arvine wines (a combination of terpenes, such as *linalool* or *citronellal*).

LEMON

Not as distinctive in wine as freshly cut lemon would suggest, many young white wines have simple, ordinary, almost mild lemony fruit or acidity (*limonene* or *citronellal*).

LIME

A truly distinctive aroma and flavour found in good-quality Australian Sémillon and Riesling, in the latter often turning to lavender in bottle (*limonene*, *citronellal*, or *linalool*).

LYCHEE

Fresh lychee is depicted as the classic varietal character of Gewürztraminer, but is not widely encountered, whereas tinned lychee is commonly found in precocious white wines from off-vintages.

MELON

A characteristic of young, cool-fermented, New World Chardonnay, melon may be found in combination with nuances of apple or fig (*limonene*, *citronellal*, or *linalool*).

ORANGE

A good blind-tasting tip is that orange can be found in Muscat, but never Gewürztraminer. It is also found in some fortified wines and Ruby Cabernet (*limonene*, *citronellal*, or *linalool*).

PEACH

Found in ripe Riesling and Muscat, very ripe Sauvignon Blanc, true Viognier, Sézannais Champagne, New World Chardonnay, and botrytized wines (*piperonal* or *undecalactone*).

PEAR

Pear is found in cool-fermented whites and reds made by carbonic maceration (*amyl acetate* or *isoamyl acetate*, also known as "banana oil" or "pear oil", which, in excess, can lead to a nail-varnish aroma).

PINEAPPLE

Pineapple is found in very ripe Chardonnay, Chenin Blanc, and Sémillon, especially in the New World, and almost any botrytized wine. It implies good acidity for the ripeness (*ethyl caprylate*).

RASPBERRY

This is sometimes found in Grenache, Loire Cabernet, Pinot Noir, and Syrah (evolving into blackcurrant in bottle) (*ethyl acetate*, *ethyl formate*, various acids and esters).

STRAWBERRY

Succulent, ripe strawberry fruit is found in classic Pinot Noir from a warm climate or top vintage. It is also found in Loire Cabernet (*ethyl acetate*, *ethyl formate*, various acids and esters).

TOMATO

We tend to think of tomato as a vegetable, but it is really a fruit and, although not a common feature in wines, it is found in bottle-aged Sylvaner and, with blood-orange, in Ruby Cabernet.

VEGETATIVE,
HERBACEOUS

In small doses vegetative and herbaceous aromas can add to a wine's complexity, but few are pleasant on their own; most are, in fact, faults.

ASPARAGUS

Asparagus is common in Sauvignon Blanc made from overripe grapes or kept too long in bottle. Some people adore this style, but most do not. It can develop into canned peas aroma (*isobutyl* or *segbutyl*).

BEETROOT

This fruity-vegetal earthiness may be found in some red wines, mostly Pinot Noir grown in unsuitable areas, and aged too long in bottle, or Cabernet Franc (*geosmin*).

BELL PEPPER OR CAPSICUM

This can be found in a slightly grassy-herbaceous Sauvignon, a Loire Cabernet Franc, or a Cabernet Sauvignon from high-vigour vines. It used to be a big problem in New Zealand (*isobutyl* or *segbutyl*).

CABBAGE OR CAULIFLOWER

The presence of cabbage or cauliflower usually denotes a Chardonnay wine or a wine from the Pinot family. Some people think mature unfiltered Burgundy should have this aroma, or even one that is farmyardy or evocative of manure (*methylmercaptan*).

CUT GRASS

Can be aggressive, but if fresh, light, and pleasant, it is a positive attribute of deliberately early-picked Sauvignon Blanc or Sémillon grapes (*methoxy-pyrazine* or *hexanedienol*).

HAY

Like dull, flat, or oxidized grassiness, the hay characteristic can be found in sparkling wines that have undergone a slight oxidation prior to their second fermentation (*linalool oxides*).

MANURE

This aroma is a very extreme form of the "farmyardy" aroma, which some people (not this author) believe to be characteristic of great Pinot Noir (see Great Pinot Noir and Chardonnay, p136). Certain New World winemakers try to emulate this aroma in their wines, but it is probably a fixed-sulphur fault, and quite possibly a *mercaptan*.

MUSHROOM

A beautifully clean mushroom aroma is an indication of Pinot Meunier in a fine old Champagne, but if the aroma is musty, it will be a contamination fault such as infected staves or a corked wine.

ONION OR GARLIC

A serious wine fault created when ethyl alcohol reacts with hydrogen sulphide, another wine fault, to form a foul-smelling compound called *ethylmercaptan*.

PEAS, CANNED

Common in Sauvignon Blanc made from overripe grapes or kept too long in bottle. Some people adore this style, but most do not. Can develop from an asparagus aroma (*isobutyl* or *segbutyl*).

POTATO PEELINGS

More earthy and less fruity than beetroot, potato peelings is found in a wide range of red wines, and could be an indication of infected staves or corkiness (*geosmin*).

SPICY, HERBAL,
RESINOUS

These aromas will either be part of the varietal character of a grape or a component of the wine's complexity, but in both cases they are enhanced by dryness and masked by sweetness.

CINNAMON

Part of the aged complexity of many fine red wines, especially Rhône, cinnamon is also found in oak-aged whites, particularly those made from botrytized grapes (*cinnamic aldehyde*).

CLOVE

Clove is found in wines that have been matured or aged in new oak *barriques*, which gain this aroma during the process of being toasted (see p33). In addition, clove is found in Gewürztraminer from certain *terroirs*, such as Soultzmat and Bergbieten in Alsace (*eugenol* or *eugenic acid*).

CURRANT LEAF

Although associated with Sauvignon Blanc, this herbaceous character can be found in any wine made from underripe grapes or grapes from high-vigour vines. Can be green and mean on the finish.

EUCALYPTUS

This aroma is noticeable in many Australian Cabernet Sauvignon and Shiraz wines, and could originate from leaves falling off eucalyptus trees into grape-pickers' baskets.

GINGERBREAD

Found in mature Gewürztraminer of the highest quality, when the true spiciness of this variety is mellowed by bottle-age.

LIQUORICE

This can be part of the complexity of red, white, and fortified wines of great concentration, particularly those that are made from late-harvested or sun-dried grapes (*geraniol* or *glycyrrhizin*).

MINT

Although it is occasionally found in Bordeaux, mint is actually far more redolent in full-bodied New World reds, particularly Californian Cabernet (especially Napa) and Coonawarra Shiraz.

PEPPERCORN

Many young reds have a basic peppery character, but Syrah evokes the distinctive fragrance of crushed black peppercorns, while for top-quality Grüner Veltliner it is ground white pepper.

SPICY

Many wines have a hint of spiciness, which is more exotic than peppery, but, after a few years' bottle-age, the spiciness of Gewürztraminer should almost burn the palate.

TAR

Like liquorice with a touch of smoke, a tarry aroma in some full-bodied reds, typically Barolo and northern Rhône, could indicate a wine that has not been racked, fined, or filtered.

OTHER AROMAS AND FLAVOURS

These include oaky, smoky, creamy, nutty, biscuity, baked, roasted, and woody characteristics, all produced by the wine's ageing. Other aromas and flavours defy classification.

BISCUITY

Found in fine-quality, well-matured Champagnes, biscuitiness is the post-disgorgement bottle-aroma that typifies Pinot Noir, although many pure Chardonnay Champagnes develop a creamy-biscuitiness (*acetal*, *acetoin*, *diacetyl*, *benzoic aldehyde*, and *undecalactone*).

BREADY

The second stage of autolysis, as the flowery acacia-like aromas take on more substance and a certain creaminess (*diacetyl*, *undecalactone*, or *paratolylmethyl ketone*).

BUBBLEGUM

Found in cool-fermented whites and reds made by carbonic maceration (*amyl acetate* or *isoamyl acetate*, also known as "banana oil" or "pear oil", which, in excess, can lead to a nail-varnish aroma).

BURNT MATCH

A burnt match aroma is the clean, if somewhat choking, whiff produced by free sulphur. This is not a fault as such in a young or recently bottled wine, and it can be dispersed by swirling the wine around in the glass (*sulphur dioxide*).

BURNT RUBBER

This is a serious wine fault created by the reaction between ethyl alcohol and hydrogen sulphide, another wine fault, which produces a foul-smelling compound called *ethylmercaptan*.

BUTTER

This characteristic is usually found in Chardonnay, and is caused by *diacetyl*, an artificial flavouring that is used by the food industry, but it is also produced naturally during the malolactic process (also *undecalactone*). It is inappropriate for classic sparkling wine, so the *champanois* utilize special low-*diacetyl*-forming bacteria.

BUTTERSCOTCH

Butterscotch is produced when very ripe, exotically fruity white wines are aged in well-toasted new oak *barriques*, and is most commonly found in New World wines (*cyclotene*, *diacetyl*, *maltol*, or *undecalactone*).

CAMEL

This may be either a mid-palate flavour in young wines aged in new *barriques* or, as in tawny port, an aftertaste achieved through considerable ageing in used barrels (*cyclotene* or *maltol*).

CANDLE WAX

Candle wax is a more accurate descriptor for Sémillon wines than the more commonly employed lanolin, since lanolin possesses no smell, even though it has a connotation of one (*aprylate*, *caproate*, or *ethyl caprylate*).

CARDBOARD

This characteristic can literally be produced by storing glasses in a cardboard box. It may also be caused by heavy-handed filtration or by leaving a wine to mature for too long in old wood.

CHEESE

Occasionally, a wine can have a clean cheese aroma (Emmental or blue-veined being most common), but a strong cheesy smell will be the result of a bacterial fault (*ethyl butyrate* or *S-ethylthioacetate*).

CHOCOLATE OR CHOCOLATE-BOX

This is the aroma or flavour typical of youngish Cabernet Sauvignon or Pinot Noir wines, when they are rich and soft with a high alcohol content and low acidity level. It may also be detected as part of the complexity of a mature wine.

COFFEE

A sign of a great old Champagne, maybe 20- or 50-year-old or more, coffee is now increasingly found on the finish of inexpensive red wines made with medium- or high-toast American oak chips.

COCONUT

This characteristic is another found in great old Champagne. Pungent coconutty aromas are also produced by various wood lactones that are most commonly found in American oak (could also be *capric acid*).

EARTHY

Wines can have an earthiness on the palate that some people incorrectly attribute to the *terroir*, but this undesirable taste is unclean and not expressive of origin (*geosmin*).

EGG, HARD-BOILED

Sulphur is added to wine in order to prevent oxidation, which it does by fixing itself to any oxygen that is present in the wine but, if it fixes with hydrogen, it creates *hydrogen sulphide*, which smells of hard-boiled or rotten eggs.

FLINTY OR WET PEBBLES

This is a subjective connotation for the finest Sauvignon Blanc that only those who have been without water and had to suck a smooth pebble to keep the saliva going are likely to comprehend.

FOXY

Foxy is the term used to describe the very distinctive, cloyingly sweet, and perfumed character of certain indigenous American grape varieties (*methyl anthranilate* or *ethyl anthranilate*).

HONEY

Almost every fine white wine becomes honeyed with age, but particularly great Burgundy, classic German Riesling, and botrytized wines (*phenylethyllic acid*).

JAM

Any red wine can be jammy, but Grenache has a particular tendency towards raspberry jam, while Pinot Noir has a distinct tendency to evoke strawberry jam. A jammy flavour is not typical of a really fine wine, but can be characteristic of a wine that is upfront and lip-smacking.

LEATHER

A suggestion of leather can be a complex element of many high-quality wines, but the "sweaty-saddle" aroma of old-fashioned Hunter Valley Shiraz is a *methylmercaptan* fault.

MACAROONS

The almond-coconutty taste of macaroons is a typical characteristic of a great old Champagne, being similar to a coconutty taste, but sweeter and more complex (*undecalactone* or *capric acid*).

NAIL POLISH

Nail polish is the pungent, pear-drop aroma produced by intensive carbonic maceration. It is found on the worst Beaujolais Nouveau (*amyl acetate* or *isoamyl acetate*, otherwise known as "banana oil" or "pear oil").

NUTS

This ranges from the generic nuttiness of mature Burgundy, and the walnuts or hazelnuts in Champagne *blanc de blancs*, to the almond fruit of young Italian red (*acetoin*, *diacetyl*, or *undecalactone*).

PETROL OR KEROSENE

Anyone who has siphoned off petrol will know that the classic petrolly aroma of mature Riesling has nothing in common with the real thing. Yet for those who know and enjoy the zesty-honeyed richness of a great Riesling, petrolly is one of the most evocative words in the wine-tasting vocabulary (various *terpenes*).

SAUERKRAUT

The lactic smell of a wine that has undergone excessive malolactic, sauerkraut is actually even less acceptable in wine than the sour milk or sour cream aroma (*diacetyl* or *lactic acid*).

SHERRY

This is the tell-tale sign of excessive *acetaldehyde*, which could turn a wine into vinegar unless it is sherry or another type of fortified wine, which will be protected by its high alcohol content.

SMOKE

Smoke is a complexity that might be varietal, as in the case of Syrah, but can be induced by stirring less during barrel fermentation, suggesting that the wine has not been racked, fined, or filtered.

SOUR MILK OR SOUR CREAM

The lactic smell of a wine that has undergone excessive malolactic, the sour-milk character may develop into a more pronounced sauerkraut aroma (*diacetyl* or *lactic acid*).

TOAST

Toastiness is commonly associated with Chardonnay and mature Champagne, particularly *blanc de blancs*, but it can be found in many wines. Toastiness can either be a slow-developing bottle-aroma or an instant gift of new oak (*furanic aldehydes*). Current theory among research chemists is that the toastiness in Chardonnay wines is technically a fixed-sulphur fault, although it is a fault that many wine lovers have come to enjoy.

VANILLA

Oak often adds a vanilla taste to wine due to vanillin, a substance that gives vanilla pods their aroma (also *lactones* or *capric acid*).

GUIDE TO GOOD VINTAGES

This chart provides a useful fingertip reference to the comparative performance of more than 950 vintages, covering 28 different categories of wine. As with any vintage chart, the ratings should merely be seen as “betting odds.” They express the likelihood of what might reasonably be expected from a wine of a given year and should not be used as a guide to buying specific wines. No blanket rating can highlight the many exceptions that exist in every vintage, although the higher the rating, the fewer the exceptions; quality and consistency do to some extent go hand in hand.

KEY TO VINTAGE RATINGS

90 – 100*	Excellent to superb
80 – 89	Good to very good
70 – 79	Average to good
60 – 69	Disappointing
40 – 59	Very bad
0 – 39	Disastrous

100* No vintage can be accurately described as perfect, but those achieving a maximum score are truly great vintages.

Remember that some wines are not particularly enjoyable, nor even superior, in so-called “great years.” Such wines, which are normally light-bodied, aromatic whites that are best drunk while young, fresh, and grapey (e.g. Muscat d’Alsace, German QbA, or *Kabinett*, etc), favor vintages with ratings of between 70 and 85, or lower.

LOW-RATED VINTAGES

These should be treated with extreme caution, but not ignored. Although wine investors buy only great vintages of blue-chip wines, the clever wine drinker makes a beeline for unfashionable vintages at a tasting and searches for the exceptions. This is because no matter how successful the wine, if it comes from a modest year it will be relatively inexpensive.

CLOSE-SCORING WINES

Obviously, the smaller the gap between two scores, the less difference one might expect in the quality of the wines, but many readers may think that to discriminate by as little as one point is to split hairs. Certainly, a one-point difference reveals no great divide but, on balance, it indicates which vintage has the edge.

UNRATED VINTAGES

It is impossible to rate generally undeclared vintages of port and Champagne because the few wines released often prove to be truly exceptional anomalies. Take the Champagne vintage of 1951: this was one of the worst vintages in Champagne's history. According to almost everyone who remembers the harvest, no pure vintage Champagnes were produced, yet my researches have uncovered three. If I were to rank 1951 on the two I actually tasted (Clos des Goisses and Salon), it would be one of the finest vintages of the century, which is clearly a nonsense. Port vintages pose a similar problem: should 1992 be judged on the basis of the superb Taylors, by the handful of other good, but distinctly lesser, 1992s, or by the majority of shippers, who did not produce good enough wine to declare a vintage?

TROUBLESHOOTER'S GUIDE

SYMPTOM	CAUSE	REMEDY
Pieces of floating cork	You are the cause, and this is not a corked wine! Tiny pieces of cork have become dislodged when opening the bottle.	Fish them out and drink the wine. If it happens frequently, buy a Screwpull corkscrew.
Sediment	All wines shed a deposit in time; most are drunk before they do.	Decant the bottle.
Coating on the inside of the bottle	Full-bodied reds from hot countries or exceptionally hot vintages in cool-climate countries are prone to shedding a deposit that adheres to the inside of the bottle.	You can check to see whether the wine pours clear. However, there is bound to be some loose sediment and, even when there is not, it is always safest to decant.
Cloudy haze	If it is not sediment, it will not drop out and is either a metal or protein haze.	Seek a refund. Home winemakers can try bentonite but, although this removes a protein haze, it could make a metal haze worse!
A film or slick on the surface	This is an oil slick caused by glasses or a decanter. Either they have not been properly rinsed or a minuscule amount of grease has come from the dish cloth used to polish them.	Use detergent to clean glasses and rinse them thoroughly in hot water. Never use a glass cloth for anything other than polishing glasses and never dry them with all-purpose tea towels.
Still wine with tiny bubbles clinging to the glass	An unwanted second fermentation or malolactic can make some still wines as fizzy as Champagne.	If the wine is really fizzy, then take it back but, if the fault is just a spritz or prickle, use a Vacu-vin to suck the gas out.
Asparagus or canned-peas aromas	Sauvignon Blanc from overripe grapes or kept too long in bottle.	No technical fault—buy a more recent vintage next time.
Cabbage, cauliflower, farmyard, or manure aromas	Technically a fault (methylmercaptan), but half the wine trade would argue it is part of the complexity of some wines, particularly Burgundy.	Some retailers will refund you, but those who have personally selected this “traditional” style may not.
Currant leaf aromas or flavors	Caused by underripe grapes or high-vigor vines, this may be deliberate if wine is from a hot country and green on the finish.	Not a fault as such, although it is not exactly good winemaking so, if you cannot force yourself to drink the wine, throw it away.
Bubblegum, peardrops, or nail polish aromas	Produced by cool-fermentation in white wines and carbonic maceration in reds, and found in the worst Beaujolais Nouveau.	This is not a fault, so drink the wine or give it away.
Burnt match aromas (or a tickle in the nose or throat)	The clean whiff of free sulfur, which protects the wine, as opposed to fixed-sulfur faults, which are pungent odors.	Swirl the glass or pour the wine vigorously into a jug and back into the bottle, to disperse the aroma through aeration.
Burnt rubber or skunk	A serious wine fault created when ethyl alcohol reacts with hydrogen sulphide, a fixed-sulphur fault, to form a foul-smelling compound called ethylmercaptan.	Take the wine back for a full refund.
Cardboard aromas	This can be due to storing glasses in a cardboard box, heavy-handed filtration, or leaving a wine too long in old wood.	If the wine is still cardboardy in a clean, untainted glass, you could seek a refund, but may have to put it down to experience.
Cheese aromas	Occasionally a wine has a clean cheese aroma (Emmental or blue-veined being most common), but a real cheesy smell will be a bacterial fault (ethyl butyrate or S-ethylthioacetate).	Take the wine back for a full refund.
Earthy aromas	Unclean, but not exactly a known fault.	Since the wine was probably purchased by someone who thought it had a <i>goût de terroir</i> , you are unlikely to get a refund.
Hard cook or rotten-egg aromas	Sulfur is added to wine to prevent oxidation by fixing itself to any oxygen, but if it fixes with hydrogen it creates hydrogen sulfide, which is the stuff of stink-bombs.	Theoretically, if you put a brass or copper object into the wine, the smell should drop out as a very fine brown sediment, but frankly it is quicker and easier to ask for a refund.
Geranium aromas	In a sweet wine, this is a sorbic acid and bacterial infection fault. In Asti or any other Muscat wine, the geraniol that gives the wine its classic flowery-peach character has degraded with age.	Take the wine back for a full refund.
Maderized (in any wine other than Madeira)	Maderization is undesirable in any ordinary, light table wine. Such a wine will have been affected by light or heat, or both.	Take the wine back for a full refund, unless you have kept it under bad conditions yourself.
Mushroom aromas	A clean mushroom aroma indicates Pinot Meunier in a fine old Champagne but, if musty, it will be a contamination fault.	If a contamination fault, take the wine back for a full refund.
Musty aromas, as in an old church	The wine is corked (or at least it is suffering from a corky taint).	Smell the wine an hour later. A corked wine will get worse and you should seek a refund. Harmless bottle mustiness disappears.
Mousy aromas	Caused by <i>Brettanomyces</i> yeast and malolactic bacteria, this is feared in the New World but some Old World wineries use <i>Brettanomyces</i> yeast deliberately to add to a wine's complexity.	Give it to someone you do not like.
Onion or garlic aromas	A serious wine fault created when ethyl alcohol reacts with hydrogen sulfide, a fixed-sulfur fault, to form a foul-smelling compound called ethylmercaptan.	Take the wine back for a full refund.
Sauerkraut aromas	The smell of a wine that has undergone excessive malolactic, this is more unacceptable than sour milk or sour cream aromas.	Take the wine back for a full refund.
Sherry aromas (in any wine other than sherry)	Excessive acetaldehyde: the wine is oxidized. An ordinary wine with excessive acetaldehyde turns into vinegar, but sherry and other fortified wines are protected by a high alcohol content.	Take the wine back for a full refund.
Vinegar aromas	The distinctive aroma of acetic acid: the wine has oxidized.	Use it for salad dressing.

GLOSSARY OF TASTING AND TECHNICAL TERMS

Terms that are explained more comprehensively within the main body of the book are accompanied by a cross-reference to the appropriate page. Terms that appear within a Glossary entry and have their own separate entry appear set in bold type.

Key to abbreviations: Fr. = French; Ger. = German; Gr. = Greek; It. = Italian; Port. = Portuguese; Sp. = Spanish; S. Afr. = South African.

ABC An acronym for “Anything But Cabernet” or “Anything But Chardonnay.” ABC was a more-than-acceptable term when originally conceived by Randall Grahm of Bonny Doon. Grahm was selling Cabernet at the time, but saw it as a rut that every California winery was trapped in. He wanted to explore the quality potential of other grapes, particularly the Rhône varieties, but was severely restricted by the public demand for Cabernet and Chardonnay. While Cabernet walked off the shelf, Grahm had to work hard at selling the virtues of anything more exotic. Compelled to sell Cabernet to fund other activities, he came up with the ABC term. Everyone loved it when Grahm invented it. It has since been hijacked by inverted snobs and myopic critics, however, who have been zealots in their crusade to rid the world of two great wine grapes.

ABV Abbreviation for alcohol by volume.

AC (Port., Gr.) Short for *Adega Cooperativa* in Portugal and *Agricultural Cooperative* in Greece, or other titles denoting a local or regional cooperative in these countries.

ACCESSIBLE Literally that the wine is easy to approach, with no great barriers of **tannin**, **acidity**, or undeveloped **extract** to prevent enjoyment of drinking. This term is often used for young, fine-quality wine that will undoubtedly improve with age but whose tannins are **supple** and thus approachable.

ACETALDEHYDE The principal **aldehyde** in all wines, but found in much greater quantities in sherry. In light, unfortified table wines, a small amount of acetaldehyde enhances the **bouquet**, but an excess is undesirable because it is unstable, halfway to complete **oxidation**, and evokes a sherrylike smell.

ACETIC ACID The most important **volatile acid** found in wine, aside from **carbonic acid**. Small amounts of acetic acid contribute positively to the attractive flavor of a wine, but large quantities produce a taste of vinegar.

ACETIFICATION The production of **acetic acid** in a wine.

ACETOBACTER The vinegar *bacillus* (rod-shaped bacterium), which can cause **acetification**.

ACIDITY Essential for the life and vitality of all wines. Too much will make wine too **sharp** (not sour—that’s a fault), but not enough will make it taste **flat** and dull, and the flavor will not last in the mouth. *See also* **Total acidity** and **pH**.

ACTIVE ACIDITY Acids contain positively charged hydrogen ions, the concentration of which determines the **total acidity** of a wine. The **pH** is the measure of the electrical charge of a given solution (positive acidity hydrogen buffered by negative alkalinity hydrogen ions). Thus, the **pH** of a wine is a measure of its active acidity.

ADEGA (Port.) Cellar or winery. Often used as part of a firm’s title.

AEROBIC Occurring in the presence of air.

AFTERTASTE A term for the flavor and **aroma** left in the mouth after the wine has been swallowed.

When the aftertaste is attractive, it could be the reason why you prefer one wine to a similar wine with no particular aftertaste.

AGES GRACEFULLY Describes wine that retains **finesse** as it matures and that sometimes may even increase in **finesse**.

AGGRESSIVE The opposite of **soft** and **smooth**.

ALBANY DOCTOR One of Western Australia’s beneficially cooling sea breezes, the Albany Doctor provides similar relief to that of the famous **Fremantle Doctor**, only farther south and closer to the coast. *See also* **Canberra Doctor**.

ALBARIZA (Sp.) A white-surfaced soil formed by diatomaceous (decomposed deep-sea algae) deposits, which is found in the sherry-producing area of Spain. *See also* **Sherry Country**, p.321.

ALCOHOL In wine terms, this is **ethyl alcohol**; a colorless flammable liquid. Alcohol is essential to the flavor and **body** of alcoholic products, thus a de-alcoholized wine is intrinsically difficult to perfect.

ALCOHOLIC This term is usually employed in a pejorative rather than a literal sense and implies that a wine has too much **alcohol** to be in **balance**.

ALDEHYDE The midway stage between an **alcohol** and an **acid**, formed during the **oxidation** of an alcohol. **Acetaldehyde** is the most important of the common wine aldehydes, and forms as wine alcohol oxidizes to become **acetic acid** (vinegar). Small amounts of acetaldehyde add to the **complexity** of a wine, but too much will make a table wine smell like sherry.

AMINO ACIDS Proteins formed by a combination of fruit **esters**, amino acids are found naturally in grapes and are both created and consumed during **fermentation** and **autolysis**. They are essential precursors to the complexity and **finesse** of a sparkling wine. *See also* **Maillard Reactions**.

AMPELOGRAPHER An expert who studies, records, and identifies grapevines.

AMYLIC The peardrop, banana, or bubble-gum aromas of amyl or isoamyl acetate, excessive amounts of which can be produced in white wines if the fermentation is conducted at a very low temperature, and in red wines made by **macération carbonique**.

ANAEROBIC Occurring in the absence of oxygen. Most maturation processes that take place in a sealed bottle are considered to be anaerobic.

ANBAUGEBIET (Ger.) A wine region in Germany, such as Rheinpfalz or Mosel, that is divided into districts (**Bereiche**). All **QbA** and **QmP** wines must show their *Anbaugebiet* of origin on the label.

ANTHOCYANINS The second-most important group of phenolic compounds found in wine, anthocyanins are color pigments located in the grapes’ skins.

ANTIOXIDANT Any chemical that prevents grapes, **must**, or wine from **oxidizing**, such as **ascorbic acid** or sulfur dioxide (SO₂).

AOC (Fr.) *Appellation d’Origine Contrôlée* is the top rung in the French wine-quality system, although in practice it includes everything from the greatest French wines to the worst; thus it is almost always better to buy an expensive **vin de pays** than a cheap **AOC** wine.

APERITIF Originally used exclusively to describe a beverage prescribed purely for laxative purposes, the term aperitif now describes any drink that is taken before a meal in order to stimulate the appetite.

APPELLATION Literally a name, this term is usually used to refer to an official geographically-based designation for a wine.

APPELLATION D’ORIGINE CONTRÔLÉE *See* **AOC**.

AQUIFER A water-retaining geological formation into which rainfall from the surrounding area drains.

AROMA This should really be confined to the fresh and fruity smells reminiscent of grapes, rather than the more winy or bottle-mature complexities of **bouquet**; but it is not always possible to use this word in its purest form, hence **aroma** and **bouquet** may be thought of as being synonymous.

AROMATIC GRAPE VARIETIES The most aromatic classic varieties are Gewürztraminer, Muscat, and Riesling, and they are defined as such because when ripe they possess high levels of various **terpenes** in their skins. Although attractive when young, these terpenes take a few years in bottle to develop their full varietal potential.

AROMATIZED WINE Usually fortified, these wines are flavored by as few as one, or as many as 50, aromatic substances and range from bittersweet **vermouth** to **retsina**. The various herbs, fruits, flowers, and other less-appetizing ingredients used include strawberries, orange peel, elderflowers, wormwood, quinine, and pine resin.

ASCORBIC ACID Otherwise known as Vitamin C, ascorbic acid is an **antioxidant**, which is often used in conjunction with sulfur. It has a more freshening effect than sulfur, which tends to dampen the aromatics in wine. It also enables less sulfur to be used in the **vinification** process. Not to be confused with **sorbic acid**.

ASEPTIC A particular characteristic of a substance such as **sorbic acid** or sulfur dioxide (SO₂) that can kill bacteria.

ASPECT The topography of a vineyard, including its altitude, the direction in which the vines face, and the angle of any slope.

ASSEMBLAGE (Fr.) A blend of base wines that creates the final *cuvée*.

ATMOSPHERE A measure of atmospheric pressure: 1 atmosphere = 15 pounds per square inch. The average internal pressure of a bottle of Champagne is six atmospheres.

ATTACK A wine with good attack suggests one that is **complete** and readily presents its full armament of taste characteristics to the **palate**. The wine is likely to be youthful rather than mature and its attack augurs well for its future.

AUSLESE (Ger.) A category of German **QmP** wine that is very sweet, made from late-harvested grapes, and may also contain some **botrytized** grapes.

AUSTERE This term is used to describe wine that lacks fruit and is dominated by harsh **acidity** and/or **tannin**.

AUTOLYSIS The enzymatic breakdown of **yeast** cells that increases the possibility of bacterial spoilage; the autolytic effect of aging a wine on its **lees** is therefore undesirable in most wines, exceptions being those bottled **sur lie** (principally Muscadet) and sparkling wines.

AUTOLYTIC With the aroma of a freshly disgorged brut-style sparkling wine, which is not “yeasty” at all, but has a flowery, often acacia-like, freshness.

BACK-BLEND To blend fresh, unfermented grape juice into a fully fermented wine, with the goal of adding a certain fresh, grapey sweetness commonly associated with German wines. Synonymous with the German practice of adding **Süssreserve**.

BACKWARD Describes a wine that is slow to develop (the opposite of precocious).

BAKED Applies to wines of high alcoholic content that give a sensory perception of grapes harvested in great heat—either from a hot country or from

a classic wine area in a swelteringly hot year. This characteristic can be controlled to some extent by the following methods: early harvesting, night harvesting, rapid transport to the winery, and modern cool-fermentation techniques.

BALANCE Refers to the harmonious relationship between acids, alcohol, fruit, **tannin**, and other natural elements. If you have two similar wines but you definitely prefer one of them, its balance is likely to be one of the two determining factors (**length** being the other).

BAN DEVENDANGE (Fr.) Official regional start of grape-picking for the latest vintage.

BARREL-FERMENTED Some white wines are still traditionally fermented in oak barrels—new for top-quality Bordeaux, Burgundy, and premium **varietal** wines; old for middle-quality wines and top-quality Champagnes. New barrels impart oaky characteristics; the older the barrels, the less oaky and more **oxidative** the influence. Barrel-fermented wines have more complex **aromas** than wines that have simply been matured in wood. *See also* Stainless Steel or Oak?, p.26.

BARRIQUE (Fr.) This literally means “barrel,” but is used generically in English-speaking countries for any small oak cask and often denotes the use of new oak.

BASIC A marketing term for a quality category; *see* **Premium**.

BAUMÉ (Fr.) A scale of measurement used to indicate the amount of sugar in grape **must**.

BEERENAUSLESE (Ger.) A category of German **QmP** wine that comes above **Auslese** but beneath **Trockenbeerenauslese**, and is made from **botrytized** grapes. It has more **finesse** and **elegance** than any other intensely sweet wine, with the possible exception of **Eiswein**.

BENCH or **BENCHLAND** The flat land between two slopes, this term describes a form of natural, rather than artificial, terrace.

BENTONITE This is a fine clay containing a volcanic ash derivative called montmorillonite, which is a hydrated silicate of magnesium that activates a precipitation in wine when used as a **fining** agent.

BEREICH (Ger.) A wine district in Germany, which contains smaller **Grosslagen** and is itself part of a larger **Anbaugebiet**.

BIG VINTAGE, BIG YEAR These terms are usually applied to great years, because the exceptional weather conditions produce bigger (i.e., fuller and richer) wines than normal. They may also be used literally to describe a year with a big crop.

BIG WINE This term describes a full-bodied wine with an exceptionally rich flavor.

BIODYNAMIC Wines produced biodynamically are grown without the aid of chemical or synthetic sprays or **fertilizers** and are vinified with natural **yeast** and the minimum use of **filtration**, sulfur dioxide (SO₂), and **chaptalization**.

BISCUITY A desirable aspect of **bouquet** that is found in some Champagnes—particularly in well-matured, Pinot-Noir-dominated blends (Chardonnay-dominated Champagnes tend to go toasty, although some top-quality Chardonnay Champagnes can slowly acquire a creamy-biscuitiness).

BITE A very definite qualification of **grip**. Bite is usually a desirable characteristic, although an unpleasant bite is possible.

BITTERNESS This quality may be an unpleasant aspect of a poorly made wine or an expected characteristic of an as-yet-undeveloped concentration of flavors that should, with maturity, become rich and delicious. The term is often applied to **tannin**.

BLACKSTRAP A derogatory term that originated when port was an unsophisticated product, colored by elderberries and very **coarse**.

BLANC DE BLANCS (Fr.) This literally means “white of whites,” and describes a white wine made from white grapes. It is a term often, but not exclusively, used for sparkling wines.

BLANC DE NOIRS (Fr.) This literally means “white of blacks,” and describes a white wine made from black grapes. It is a term that is often, but not exclusively, used for sparkling wines. In the New World, such wines usually have a tinge of pink (often no different from a full-fledged **rosé**), but a classic **blanc de noirs** should be as white as possible without artificial means.

BLIND, BLIND TASTING A winetasting at which the identity of the wines is unknown to the taster until after he or she has made notes and given scores. All competitive tastings are made blind.

BLOWZY An overblown and exaggerated fruity **aroma**, such as fruit jam, which may be attractive in a cheap wine, but would indicate a lack of **finesse** in a more expensive product.

BLUSH WINE A **rosé** wine that is probably cheap.

BOB An acronym for “Buyer’s Own Brand,” under which many retailers and restaurants sell wine of increasingly good value—particularly in the supermarket sector, in which the selection process has been increasingly honed to a fine art since the early 1980s.

BODEGA (Sp.) The Spanish equivalent of the Portuguese **adega** (i.e., a cellar or winery).

BODY The impression of weight in the mouth, which is brought about by a combination of the fruit **extract** and alcoholic strength.

BOTA (Sp.) A sherry butt (cask) with a capacity of between 600 and 650 liters (159 to 172 gallons).

BOTRYTIS A generic term for rot, but also often used as an abbreviation of **Botrytis cinerea**.

BOTRYTIS CINEREA The technically correct name for noble rot, the only rot that is welcomed by winemakers—particularly in sweet-wine areas, as it is responsible for the world’s greatest sweet wines. *See also* Sauternes, p.98.

BOTRYTIZED GRAPES Literally “rotten grapes,” but the term is commonly used for grapes that have been affected by **Botrytis cinerea**.

BOTTLE-AGE The length of time a wine spends in bottle before it is consumed. A wine that has good bottle-age is one that has sufficient time to mature properly. Bottle-aging has a mellowing effect.

BOTTLE-AROMAS In Riesling and Gewürztraminer, these are richer aromatics as **terpenes** develop under **anaerobic** conditions. In sparkling wine, they are the mellowing aromas created after **disgorgement**.

BOUQUET This should really be applied to the combination of smells directly attributable to a wine’s maturity in bottle—thus “aroma” for grape-related smells and “bouquet” for maturation-related smells. But it is not always possible to use these words in their purest form, hence **aroma** and **bouquet** may be considered synonymous.

BOURGEOIS (Fr.) **Cru Bourgeois** is a Bordeaux chateau classification beneath **Cru Classé**.

BREATHING A term used to describe the interaction between a wine and the air after a bottle has been opened and before it is drunk.

BREED The **finesse** of a wine that is due to the intrinsic quality of grape and **terroir** combined with the irrefutable skill and experience of a great winemaker.

BRETTANOMYCES A genus of yeast that can inhabit a winery or barrels that are sold from one winery to another. Brett (as it is commonly referred to) is a common spoilage organism that mainly, although not exclusively, affects red wines. It creates various **volatile phenols**, including ethyl-4-phenol, which is responsible for the “Brett” off-odors, such as the so-called sweaty saddles, barnyard, stables, and generally horsey smells.

BRUT (Fr.) Normally reserved for sparkling wines, **brut** literally means raw or bone dry. Even the driest wines, however, contain a little residual sugar.

BURNT Synonymous with **baked**, and marginally uncomplimentary.

BUTT *See* **BOTA**.

BUTTERY This is normally a rich, **fat**, and positively delicious character found in white wines, particularly those that have undergone **malolactic** fermentation.

BUYER’S OWN BRAND BOB for short, this is a brand that belongs to the wine buyer, which could be a wine merchant, supermarket, or restaurant (the buyer is the seller as far as the consumer is concerned). *See also* **BOB**.

CA (Sp.) Short for *Cooperativa Agrícola* and other titles denoting a local or regional cooperative.

CANBERRA DOCTOR An easterly evening wind from the coast that helps to cool Canberra, although it virtually blows itself out by the time it reaches Braidwood or Bungendore. *See also* **Albany Doctor** and **Fremantle Doctor**.

CANOPY MANAGEMENT The vine’s canopy is comprised of the collective arrangement of its shoots, leaves, and fruit. Ideally, a canopy will have most of its leaves well-exposed to sunlight, as this promotes fruit ripening through **photosynthesis**, and air circulation will be good, which provides the least favorable environmental conditions for the development of fungal diseases. References to an excessive or too-vigorous canopy imply that the ratio of leaves to fruit is too high, causing **herbaceous** flavors in the wines produced from such vines.

CANTINA (It.) Winery.

CANTINA SOCIALE (It.) A grower’s cooperative.

CAP The manta or layer of skins that rises to the top of the vat during **cuvaison**.

CARBON DIOXIDE *See* **Carbonic gas**.

CARBONATE A salt or ester of **carbonic acid**. Active or free carbonates increase the alkalinity of soil and are thus found in limestone soils, such as chalk.

CARBONIC ACID The correct term for carbon dioxide (CO₂) when it dissolves in the water content of wine (to become H₂CO₃). Although sometimes referred to as a **volatile acid**, it is held in equilibrium with the gas in its dissolved state and cannot be isolated in its pure form.

CARBONIC GAS Synonymous with carbon dioxide (CO₂), this gas is naturally produced during the **fermentation** process (when the sugar is converted into almost equal parts of **alcohol** and **carbonic gas**). It is normally allowed to escape during fermentation, although a tiny amount will always be present in its dissolved form (**carbonic acid**) in any wine, even a still one; otherwise, it would taste dull, **flat**, and lifeless. If the gas is prevented from escaping, the wine becomes sparkling.

CARBONIC MACERATION The English term for **Macération carbonique**.

CASEIN A milk protein sometimes used for **fining**.

CASK-FERMENTED The same as barrel-fermented.

CASSIS (Fr.) Literally “blackcurrant.” If “*cassis*” is used by winetasters in preference to “blackcurrant,” it probably implies a richer, more concentrated, and viscous character.

CEDARWOOD A purely subjective word applied to a particular **bouquet** associated with the bottle-maturity of a wine previously stored or fermented in wood, usually **oak**.

CELLAR DOOR A sales point at a winery. This is often a sophisticated retail operation in the New World, with sales of wine accessories, books, and T-shirts as well as the wines. For small growers in the Old World, however, purchases are more-often-than-not conducted in the producer’s kitchen!

CENTRIFUGAL FILTRATION Not **filtration** in the pure sense, but a process in which unwanted matter is separated from wine or grape juice by so-called “centrifugal force.”

CÉPAGE (Fr.) Literally “grape variety,” this is sometimes used on the label immediately prior to the variety, while in the plural format (**cépages**) it is used to refer to the **varietal** recipe of a particular **cuvée**.

CERAMIC FILTRATION An ultrafine depth filtration that utilizes **perlite**.

CHAI, CHAIS (Fr.) Building(s) used for wine storage.

CHAPTALIZATION The addition of sugar to fresh grape juice in order to raise a wine's alcoholic potential. Theoretically, it takes 1.7 kilograms of sugar per hectoliter (4 pounds per 27 gallons) of wine to raise its alcoholic strength by 1 percent, but red wines actually require two kilograms (4½ pounds) to allow for evaporation during the **remontage**. The term is named after Antoine Chaptal, a brilliant chemist and technocrat who served under Napoleon as minister of the interior from 1800 to 1805 and instructed winegrowers on the advantages of adding sugar at pressing time.

CHARM This is a subjective term; if a wine charms, it appeals without attracting in an obvious fashion.

CHARMAT METHOD Invented in 1907 by Eugène Charmat, this is a bulk-production method of making inexpensive sparkling wine through a natural **second fermentation** inside a sealed vat. Also known as the Tank Method or *Cuve Close*.

CHÂTEAU (Fr.) Literally “castle” or “stately home.” Whereas many château-bottled wines do actually come from magnificent buildings that could truly be described as châteaux, many are modest one-story villas; some no more than functional *cuvieries*; and a few merely tin sheds! The legal connotation is the same as for any *domaine*-bottled wine.

CHEESY This is a characteristic element in the **bouquet** of a very old Champagne, although other wines that have an extended contact with their **lees**—possibly those that have not been racked or filtered—may also possess it. It is probably caused by the production during **fermentation** of a very small amount of butyric acid that may later develop into an **ester** called ethyl butyrate.

CHEWY An extreme qualification of **meaty**.

CHIP-BUDDING A method of propagating vines in which a vine bud with a tiny wedge-shape of phloem (live bark) and xylem (inner wood) is inserted into a **rootstock** in an existing root system.

CHLOROSIS A vine disorder caused by mineral imbalance (too much active lime; not enough iron or magnesium) that is often called “green sickness.”

CHOCOLATY, CHOCOLATE-BOX This is a subjective term often used to describe the odor and flavor of Cabernet Sauvignon or Pinot Noir wines. Sometimes “chocolate-box” is used to describe the bouquet of fairly mature Bordeaux. The fruity character of a wine may also be described as chocolaty in wines with a **pH** above 3.6.

CHRISTMAS CAKE A more intense version of the tasting term **fruitcake**.

CIGAR-BOX A subjective term often applied to a certain complex **bouquet** in wines that have been matured in **oak** and have received good bottle-age (usually used in relation to red Bordeaux).

CITROUS This describes **aromas** and flavors of far greater **complexity** than mere **lemony** can suggest.

CLAIRET (Fr.) A wine that falls somewhere between a dark **rosé** and a light red wine.

CLARET An English term for a red Bordeaux wine. Etymologically, it has the same roots as the French term *clairet*.

CLASSIC, CLASSY These are subjective words to convey an obvious impression of quality. They are applied to wines that not only portray the correct characteristics for their type and origin, but also possess the **finesse** and **style** of top-quality wines.

CLASSICO (It.) This term may be used only for wines produced in the historic, or classic, area of an **appellation**—usually a small, hilly area at the center of a DOC.

CLEAN A straightforward term applied to any wine devoid of unwanted or unnatural undertones of **aroma** and flavor.

CLIMAT (Fr.) A single plot of land with its own name, located within a specific vineyard.

CLONE A vine that has developed differently to other vines of the same variety due to a process

of selection—either natural, as in the case of a vine adapting to local conditions, or artificial. *See also* Cloning and Cloning, p.36.

CLOS (Fr.) Synonymous with *climat*, except that this plot of land is, or was, enclosed by walls.

CLOSED Refers to the **nose** or **palate** of a wine that fails to show much character (or “open”). It implies the wine has some qualities—even if “hidden”—that should open up as the wine develops in bottle.

CLOVES Often part of the complex **bouquet** found on a wine fermented or matured in **oak**, the **aroma** of cloves is actually caused by eugenol acid, which is created during the toasting of oak barrels.

CLOYING Describes the sickly and sticky character of a poor sweet wine, where the **finish** is heavy and often unclean.

CO₂ *See* Carbonic gas.

COARSE Applies to a “rough and ready” wine, not necessarily unpleasant but certainly not fine.

COATES LAW OF MATURITY Master of Wine Clive Coates claims that a wine remains at its **peak** for as long as it took to arrive at this point in its maturity. This law is infinitely variable according to both the wine and individual consumers. If you find a specific wine to your liking in, say, its fifth month, year, or decade, it will remain within the bounds of this taste profile until its tenth month, year, or decade. If you think about it, however, “Coates Law of Maturity” has a logic—and whereas I do not let it influence my optimal drinking recommendations in this book, I have yet to find an anomaly serious enough to debunk the theory.

COCONUTTY-OAK Coconutty aromas are produced by various wood lactones that are most commonly found in American oak.

COMMERCIAL A commercial wine is blended to a widely acceptable formula. At its worst it may be bland and inoffensive, at its best it will be fruity, quaffable, and uncomplicated.

COMPACT FRUIT This term suggests a good weight of fruit with a correct **balance** of **tannin** (if red) and **acidity** that is presented on the **nose** and **palate** in a distinct manner that is opposite to **open-knit**.

COMPLETE Refers to a wine that has everything (fruit, **tannin**, **acidity**, **depth**, **length**, and so on) and thus feels satisfying in the mouth.

COMPLEXITY An overworked word that refers to many different nuances of smell or taste. Great wines in their youth may have a certain complexity, but it is only with maturity in bottle that a wine will achieve its full potential in terms of complexity.

CONCOCTION Usually a derogatory term, but can be used in a positive sense for a medley of flavors in an inexpensive wine.

COOKED Similar to **baked**, but may also imply the addition of grape concentrate to the wine during **fermentation**.

COOL-FERMENTED An obviously cool-fermented wine is very **fresh**, with simple aromas of apples, pears, and bananas.

CORKED Originally believed to be the result of penicillin or aspergillus mold in the cork, but such infections are extremely rare, while the “corked” phenomenon is relatively common (believed to affect up to 8 percent of all wines). Various chloroanisoles are now deemed responsible, with 2,4,6-trichloroanisole (commonly referred to as TCA) the main culprit. Initially thought to be exclusively the unwanted by-product of sterilizing corks with chlorine, TCA has since been identified at source in cork oak trees, in oak barrels, wooden pallets, and wooden roofs. Other compounds that may also be responsible include **geosmin**, which gives beets their earthy taste and can be found in reservoir water.

CORRECT This word describes a wine with all the correct characteristics for its type and origin, but not necessarily an exciting wine.

CÔTE, CÔTES (Fr.) Slope(s) or hillside(s) of one contiguous slope or hill.

COTEAUX (Fr.) Slopes and hillsides in a hilly area, not contiguous.

COULURE (Fr.) A physiological disorder of the vine that occurs as a result of alternating periods of warm and cold, dry and wet conditions after bud-break. If this culminates in a flowering during which the weather is too sunny, the sap rushes past the embryo bunches to the shoot-tips, causing a vigorous growth of foliage, but denying the clusters an adequate supply of essential nutrients. The barely formed berries thus dry up and drop to the ground.

COUPAGE (Fr.) Blending by cutting one wine with another.

CREAMY A subjective term used to convey the impression of a creamy flavor that may be indicative of the variety of grape or method of vinification. I tend to use this word in connection with the fruitiness or oakiness of a wine. Dr. Tony Jordan believes that creaminess in a sparkling wine is probably a combination of the **finesse** of the **mousse** (created by the most minuscule of bubbles and their slow release) and an understated **malolactic** influence, the combined effect of which is picked up at the back of the throat on the finish of the wine, and this is most apparent in Chardonnay-based wines.

CREAMY-OAK A more subtle, lower-key version of the vanilla-oak character that is most probably derived from wood lactones during maturation in small oak barrels.

CRÉMANT (Fr.) Although traditionally ascribed to a Champagne with a low-pressure and a soft, creamy **mousse**, this term has now been phased out in Champagne as part of the bargain struck with other producers of French sparkling wines who have agreed to drop the term *Méthode Champenoise*. In return they have been exclusively permitted to use this old Champagne term to create their own appellations, such as Crémant de Bourgogne and Crémant d'Alsace.

CRISP A clean wine, with good **acidity** showing on the **finish**, yielding a refreshing, clean taste.

CROSS A vine that has been propagated by crossing two or more varieties within the same species (within *Vitis vinifera* for example). In contrast, a hybrid is a cross between two or more varieties from more than one species.

CROSSFLOW FILTRATION A relatively new, high-speed form of microfiltration in which the wine flows across (not through), a **membrane filter**, thus avoiding build-up.

CROWN-CAP The common beer-bottle cap, which is now widely used as the temporary closure while a sparkling wine undergoes its **second fermentation**.

CRUSH Grapes are often crushed so that the juice can **macerate** in the skins prior to and during **fermentation**—to obtain color for red wines, and aromatic qualities for white wines. In the US and Australia, “the crush” is synonymous with the harvest in general, and the crushing/pressing in particular.

CRYPTOGAMIC Refers to a fungus-based disease such as gray rot.

CRU or **CRÛ** (Fr.) Literally means growth, as in *Cru Bourgeois* or *Cru Classé*.

CRU BOURGEOIS (Fr.) A nonclassified growth of the Médoc.

CRU CLASSÉ (Fr.) An officially classified French vineyard.

CS (It.) Short for *Cantina Sociale* and other titles denoting a local or regional cooperative.

CULTIVAR A term used mainly in South Africa for a cultivated variety of wine grape.

CUT 1. In blending, a wine of a specific character may be used to cut (mix with) a wine dominated by an opposite quality. This can range from a bland wine that is cut by a small quantity of very

acidic wine, to a white wine that is cut with a little red wine to make a **rosé**, as in pink Champagne. The most severe form of cutting is also called stretching and involves diluting wine with water, an illegal practice. 2. A cut in pressing terms is a point at which the quality of juice changes, the term deriving from the days of old vertical presses when the lid of the press would be lifted and workers would cut up the compacted mass with sharp spades, piling it in the middle so that more juice may be extracted. 3. In matching food and wine, a wine with high acidity may be used to cut (balance) the **organoleptic** effect of grease from a grilled or fried dish or an oily fish, just as the effervescence of a fine sparkling wine cuts the creamy texture of certain soups and sauces.

CUVAISON (Fr.) The **fermentation** period in red-wine production, during which the juice is kept in contact with its skins.

CUVE (Fr.) Vat; a *cuve* should not be confused with *cuvée*.

CUVE CLOSE (Fr.) A method of producing sparkling wine that involves a **second fermentation** in a vat. *Cuve Close* is synonymous with the Charmat Method or Tank Method.

CUVÉE (Fr.) This originally meant the wine of one *cuve* or vat, but now refers to a specific blend or product which, in current commercial terms, will be from several vats.

CUVERIE, CUVIER (Fr.) The room or building housing the fermenting vats (*cuves*).

CV (Fr.) Short for *Coopérative de Vignerons* and various other titles that denote a local or regional cooperative.

DEFINITION A wine with good definition is one that is not just clean with a correct **balance**, but that also has a positive expression of its grape variety or origin.

DÉGORGEMENT (Fr.) See **Disgorgement**.

DEGREE-DAYS See **Heat summation**.

DÉLESTAGE (Fr.) Commonly known to anglophile winemakers as “rack and return.” *Délestage* is a process designed to produce softer red wines by reducing harsh **tannins** from the grape seeds, and is particularly successful in areas where unripe seeds are common due to uneven ripening. The basic *délestage* procedure starts after a cold soak of juice and skins. The juice is drawn off into a separate tank, allowing the cap to fall to the bottom of the first tank, where it is left to drain for several hours. During this time, many seeds are loosened from the pulp and can be caught by a filter that allows free passage to the draining juice, which also goes to the second tank. Once the cap has drained out, the drain is closed off, and the juice from the second tank is pumped back into the first tank, where it is mixed with cap. This process is repeated daily until all the seeds and their harsh tannins are removed.

DELICATE Describes the quieter characteristics of quality that give a wine **charm**.

DEMI-MUID (Fr.) A large oval barrel with a capacity of 300 liters/80 gallons (600 liters/160 gallons in Champagne).

DEMI-SEC (Fr.) This literally means “semidry” but such wines actually taste quite sweet.

DENDOMETER A very accurate device that measures the minute swelling and shrinkage of the vine trunk in response to water use. It can be used to control the amount of irrigation water taken up by the vine, rather than the amount that goes into the ground.

DENOMINAÇÃO DE ORIGEM CONTROLADA (Port.) See **DOC**.

DENOMINACIÓN DE ORIGEN (Sp.) See **DO**.

DENOMINACIÓN DE ORIGEN CALIFICADA (Sp.) See **DOCa**.

DENOMINAZIONE DI ORIGINE CONTROLLATA (It.) See **DOC**.

DENOMINAZIONE DI ORIGINE CONTROLLATA E GARANTITA (It.) See **DOCG**.

DÉPARTEMENT (Fr.) A French geopolitical division, similar to a state in the US and a county in the UK.

DEPTH This refers primarily to a wine's depth of flavor and secondarily to its depth of interest.

DEPTH FILTRATION The separation of solids from a liquid solely inside a **filtration** medium such as kieselguhr (see **diatomaceous earth**). A Rotary Drum Vacuum or Plate and Frame filter is commonly used.

DIATOMACEOUS EARTH Also known as kieselguhr, this is a fine, powdered, siliceous earth evolved from decomposed deep-sea algae called diatoms. See also **Perlite**, **Ceramic filtration**, and **Polishing**.

DIRTY This applies to any wine with an unpleasant off-taste or off-smell, and is probably the result of poor vinification or bad bottling.

DISGORGEMENT This is part of the process of making a bottle-fermented sparkling wine such as Champagne. After **fermentation**, the **yeast** forms a deposit, which must be removed. To allow for this removal, the bottles are inverted in a freezing brine for just long enough for the sediment to form a semifrozen slush that adheres to the neck of the bottle. This enables the bottle to be reinverted without disturbing the wine. The temporary cap used to seal the bottle is removed and the internal pressure is sufficient to eject or “disgorge” the slush of sediment without losing very much wine at all. The wine is then topped off and a traditional Champagne cork is used to seal the bottle.

DISTINCTIVE Describes a wine with a positive character. All fine wines are distinctive to some degree or other, but not all distinctive wines are necessarily fine.

DIURNAL DIFFERENCE In **viticulture**, any reference to a diurnal or daily difference will invariably be a reference to temperature, comparing the highest daytime temperature with the lowest nighttime temperature—the greater the difference, the better the grapes' acidity retention. There can be a wide diurnal difference in relatively cool wine areas, such as Champagne, as well as in essentially hot ones, such as Idaho.

DO (Sp.) This stands for Spain's *Denominación de Origen*, which is theoretically the equivalent of the French **AOC**.

DOBLE PASTA (Sp.) Red wines macerated with double the normal proportion of grape skins to juice during fermentation. See also *Spanish Label Language*, p.302.

DOC (It., Port.) Short for Italy's *Denominazione di Origine Controllata* and Portugal's *Denominação de Origem Controlada*, which are theoretically the equivalent of the French **AOC**.

DOCa (Sp.) Abbreviation for Spain's *Denominación de Origen Calificada*, which is the equivalent of the Italian **DOCG**.

DOCG (It.) Italy's *Denominazione di Origine Controllata e Garantita* is theoretically one step above the French **AOC**. Ideally it should be similar to, say, a *Premier* or *Grand Cru* in Burgundy or a *Cru Classé* in Bordeaux, but in reality, it is almost as big a sop as Italy's *Denominazione di Origine Controllata* itself. See also Italy, p.262.

DOPPELSTÜCK (Ger.) A very large oval cask with a capacity of 2,400 liters (635 gallons).

DOSAGE (Fr.) Sugar added to a sparkling wine after **disgorgement**, the amounts of which are controlled by the terminology used on the label—*brut*, *demi-sec*, and so on.

DOUX (Fr.) Sweet, as applied to wines.

DRIP IRRIGATION Various forms exist, but at its most sophisticated, this is a computer-controlled watering system programmed with the vine's general water requirement and constantly amended by a continuous flow of data from soil sensors. The water is supplied literally drip-by-drip through a complex system of pipes with metered valves.

DRYING UP Describes a wine that has dried up and lost some of its freshness and fruit through

aging in the bottle. It may still be enjoyable, but remaining bottles should not be kept long.

DUPLEX SOILS So-called when two contrasting soil textures are found layered, with a sharp divide between the two. Duplex soils usually consist of a coarse soil over a fine-grained soil, and are commonly found in Western Australia, where they are invariably sand over clay. They are categorized by color (red, yellow, brown, dark, and gray duplex soils) based on the color of the subsoil, not the topsoil.

DUSTY Akin to “peppery” in a red wine; a blurring of **varietal** definition in a white wine.

EARTH FILTRATION This term can be synonymous with **depth filtration**.

EARTHY Describes a drying impression in the mouth. Some wines can be enjoyably earthy, but the finest-quality wines should be as clean as a whistle. When a wine is very earthy, it is usually due to a preponderance of **geosmin**, which can occur naturally in grapes, but in excess can give a wine a **corked** taste.

EASY This term is to a certain extent synonymous with **accessible**, but probably implies a cheaper, value-for-money wine, whereas “accessible” often applies to finer wines.

EAU-DE-VIE (Fr.) Literally, “water of life”; specifically, a grape-derived spirit.

EDELFAULE (Ger.) The German term for noble rot; see *Botrytis cinerea*.

EDELKEUR (S. Afr.) The South African term for noble rot; see *Botrytis cinerea*.

EDGE Almost, but not quite, synonymous with **grip**; wine can have an edge of **bitterness** or **tannin**. Edge usually implies that a wine has the capacity to develop, while grip may be applied to a wine in various stages of development, including fully mature wine.

EDGY Synonymous with **nervy** or “nervous.”

EGG WHITE A traditional **fining** agent that fines out negatively charged matter.

EINZELLAGE (Ger.) A single-vineyard wine area; the smallest geographical unit allowed under German wine law.

EISWEIN (Ger.) Originally a German concept but now used in the New World as well, this rare wine resulted from the tradition of leaving grapes on the vine in the hope of attracting *Botrytis cinerea*. The grapes are then frozen by frost or snow, harvested, and pressed while frozen. They are pressed while still frozen because the frozen ice rises to the top of the vat and it can be scraped off to leave a concentrated juice that produces a wine with a unique balance of sweetness, acidity, and extract.

ELEGANT A subjective term applied to wines that may also be termed “stylish” or “possessing *finesse*.”

ELEVATED FRUIT Synonymous with **VA lift**.

ÉLEVÉ EN FÛTS DE CHÊNE Aged in oak barrels.

ELEVEUR, ÉLEVAGE (Fr.) Literally “bringing up” or “raising” the wine. Both terms refer to the traditional function of a **négociant**: namely to buy ready-made wines after the harvest and take care of them until they are ready to be bottled and sold. The task involves **racking** the wines and blending them into a marketable product as each house sees fit.

EMBRYO BUNCHES In spring, the vine develops little clusters of miniature green berries that will form a bloom a few weeks later. If a berry successfully flowers, it is capable of developing into a grape. The embryo bunch is thus an indication of the potential size of the crop.

EN PRIMEUR (Fr.) Classic wines such as Bordeaux are offered for sale *en primeur*, which is to say within a year of the harvest, before the final blending and bottling has taken place. For experienced buyers given the opportunity to taste, this is a calculated risk and the price should reflect this element of chance.

ENCÉPAGEMENT (Fr.) The relative proportions of the grape varieties in a blend.

ENOLOGIST, ENOLOGY (Am.) Spelling of **oenologist**, oenology often used in the US.

ENTRY-LEVEL WINE From the producer's point of view, this will be his cheapest, most basic quality of wine. From a critic's point of view, this will be the cheapest wine worth buying.

ENZYLE A protein produced by living organisms (anything from **yeast cells** to human beings) that functions as a biochemical catalyst.

ESTERS Sweet-smelling compounds, formed during **fermentation** and throughout maturation, that contribute to a wine's **aroma** and **bouquet**.

ESTUFAGEM (Port.) The process whereby Madeira is heated in ovens called *estufas*, then cooled. *See also* Madeira, p.340.

ETHANOIC ACID Synonymous with **acetic acid**.

ETHANOL Synonymous with **ethyl alcohol**.

ETHYL ALCOHOL This main alcohol in wine is so important in quantitative terms that to speak of a wine's alcohol is to refer purely to its ethyl alcohol content.

EU LOT NUMBER Proposed by an EC directive in 1989 and implemented by all member states of the Community by 1992, this Lot Number must be indicated on every bottle of wine produced in or sold to the EU. Should a wine have to be removed from general distribution for any reason, this code can save unnecessary waste by pinpointing the shipment involved.

EVERYDAY WINES These are inexpensive, easy-drinking wines.

EX-CELLARS Wines offered *en primeur* are usually purchased "ex-cellar"; the cost of shipping the wine to the importer's cellar is extra, on top of which any duty and taxes will be added.

EXPANSIVE Describes a wine that is **big**, but open and **accessible**.

EXPRESSIVE A wine that is expressive is true to its grape variety and area of origin.

EXTRACT Sugar-free soluble solids that give **body** to a wine. The term covers everything from proteins and vitamins to **tannins**, calcium, and **iron**.

FALL BRIGHT A liquid that becomes limpid after cloudy matter falls as sediment to the bottom of the vessel is said to fall bright.

FALL OVER A wine that goes past its peak and starts to decline at a relatively young age, and at a faster than normal rate, is said to fall over.

FARMYARDY A term used by many people to describe a wine, quite often Chardonnay or Pinot, that has matured beyond its initial freshness of fruit, past the desired stage of roundness and the pleasing phase when it acquires certain vegetal undertones. The wine is still healthy and drinkable, and for some it is at the very peak of perfection.

FAT A wine full in body and extract. It is good for any wine to have some fat, but fat in an unqualified sense can be derogatory and no wine should be too fat, as it will be flabby or too blowzy.

FATTY ACIDS A term sometimes used for **volatile acids**.

FEMININE A subjective term used to describe a wine with a preponderance of delicately attractive qualities, rather than weight or strength. Describes a wine of striking beauty, grace, and *finesse*, with a silky texture and exquisite style.

FERMENTATION The biochemical process by which **enzymes** secreted by **yeast cells** convert sugar molecules into almost equal parts of **alcohol** and **carbonic gas**. *See also* Fermentation, p.25.

FERTILIZER A chemical product used to enrich the soil with one or more of the three basic requirements for all plant life: potassium (for fruit development and general plant metabolism), phosphorus (for root development), and nitrogen (for leaf development). Technically the term also refers to manure, compost, and other natural means of soil enrichment.

FEUILLETTE (Fr.) A small Burgundian barrel with a capacity of 114 liters (30 gallons); in Chablis this is 132 liters (35 gallons).

FIELD BLEND, FIELD MIX The best description I have seen for this is "a wine recipe planted in the ground." It is not a homogenous vineyard planted to a single grape variety (of which there may be several different clones), but a vineyard planted with a collection of grape varieties that reflect traditional Old World practices of several generations ago. The advantage is that if a disease or disorder affected one variety, the others would probably pull through unscathed. The disadvantage, however, is that the different varieties do not ripen at the same time; this was not a problem in the old days, however, since it was common practice to make several **tries** or sweeps through the vineyards, picking only the ripe grapes and cutting out any rotten ones.

FILTER, FILTRATION The removal of suspended matter. There are four basic methods of filtration: **depth filtration** (also known as earth filtration); **pad filtration** (also known as sheet filtration), **membrane filtration** (also known as microporous filtration), and **crossflow filtration**. There is also centrifugal filtration, which is not filtration in the pure sense but achieves the same objective of removing unwanted particles suspended in wine or grape juice.

FINESSE That elusive, indescribable quality that separates a fine wine from those of lesser quality.

FINE WINES Quality wines, representing only a small percentage of all wines produced.

FINING The clarification of fresh grape juice or wine is often sped up by the use of various fining agents that operate by an electrolytic reaction to fine out oppositely charged matter. *See also* Fining, p.26.

FINISH The quality, and a person's enjoyment, of a wine's aftertaste.

FIRM Refers to a certain amount of **grip**. A firm wine is a wine of good constitution, held up with a certain amount of tannin and acidity.

FIRST PRESSING The first pressing yields the sweetest, cleanest, clearest juice.

FIXED ACIDITY This is the total acidity less the **volatile acidity**.

FIXED SULFUR The principal reason why SO₂ (sulfur dioxide) is added to grape juice and wine is to prevent oxidation, but only free sulfur can do this. Upon contact with wine, some SO₂ immediately combines with oxygen and other elements, such as sugars and acids, and is known as fixed or bound sulfur. What remains is free sulfur, capable of combining with molecules of oxygen at some future date.

FLABBY The opposite of **crisp**, referring to a wine lacking in acidity and consequently dull, weak, and short.

FLASH PASTEURIZATION A sterilization technique that should not be confused with full pasteurization. It involves subjecting the wine to a temperature of about 176°F (80°C) for between 30 and 60 seconds.

FLAT 1. A sparkling wine that has lost all of its *mousse*. 2. A term that is interchangeable with **flabby**, especially when referring to a lack of acidity on the finish.

FLESHY This term refers to a wine with plenty of fruit and extract and implies an underlying firmness.

FLOR (Sp.) A scumlike **yeast** film that naturally occurs and floats on the surface of some sherries as they mature in part-filled wooden casks. It is the flor that gives Fino Sherry its inimitable character.

FLURBEREINIGUNG (Ger.) A modern viticultural method of growing vines in rows that run vertically up and down slopes, rather than across in terraces.

FLYING WINEMAKER The concept of the flying winemaker was born in Australia, where due to the size of the country and the staggered picking dates, highly sought-after consultants Brian Croser (now Petaluma) and Tony Jordan (now Green Point) would hop by plane from harvest to harvest. Riding

on the success of Australian wines in the UK market, other Australian wine wizards began to stretch their wings, flying in and out of everywhere from Southern Italy to Slovakia, usually at the behest of British supermarkets. Like the spread of Chardonnay and Cabernet, the flying winemakers were at first welcomed by wine writers, then turned upon for standardizing wine wherever they went. The truth is that before the arrival of international grapes and international winemakers, the peasant cooperatives in these countries had no idea that they could even produce wines to compete on the international market. Now that they have established a certain standard with known grape varieties and modern technology, they are beginning to turn to their roots to see what indigenous varieties might have the potential to produce more expressive wines. Few winemakers do more flying than Moët & Chandon's Richard Geoffroy, but the term is usually attributed to the mercenaries of the trade, who work for a supermarket, a supplier to a supermarket, or more than one company. Well-known flying winemakers include Peter Bright, Nick Butler, Steve Donnelly, Michael Goundrey, Lynette Hudson, Jacques and François Lurton, Geoff Merrill, Kym Milne, Martin Shaw, Brenden Smith, Adrian Wing, and John Worontschak. The late, famous Bordeaux professor Peynaud avoided the flying-winemaker tag, as has Ribereau-Gayon, despite the fact that they have each consulted for more companies in more countries over more years than the entire flock of flying winemakers listed above, perhaps because today's mercenaries have a more hands-on approach to their job than was traditional for consultants in the past.

FOLIAR FEEDS Plant nutrients that are sprayed directly onto, and are absorbed by, the foliage.

FORTIFIED Fortification with pure alcohol (usually very strong grape spirit of 77 to 98 percent) can take place either before **fermentation** (as in Ratafia de Champagne and Pineau des Charentes), during fermentation (as in port and Muscat de Beaumes de Venise), or after fermentation (as in sherry).

FOUDRE (Fr.) A large wooden cask or vat.

FOXY The very distinctive, highly perfumed character of certain indigenous American grape varieties that can be sickly sweet and cloying to unconditioned palates.

FREE-RUN JUICE *See Vin de goutte*.

FREE SULFUR The active element of sulfur dioxide (SO₂) in wine, produced by free sulfur combining with intruding molecules of oxygen.

FREMANTLE DOCTOR Also known as the "Freo Doctor," this afternoon sea breeze brings a cooling relief to better parts of the Swan Valley in Western Australia. *See also* Albany Doctor, Canberra Doctor.

FRENCH PARADOX In 1991, Morley Safer, host of the CBS show *60 Minutes*, screened a program about the so-called "French Paradox." This described how the high-cholesterol-consuming, high-alcohol-drinking, low-exercising French have a very low mortality rate from heart disease compared to health-conscious Americans, who have low-cholesterol diets, exercise frequently, and drink relatively little alcohol. Part of the explanation was attributed to the Mediterranean diet, in which milk plays a negligible role and wine—particularly red wine—a very important one. Although it is a complete food for the young, milk is unnatural for adults, who cannot digest it properly. The more milk an adult drinks (and Americans are particularly high consumers of milk), the greater the risk of cardiovascular disease, while three glasses of wine a day has a proven protective effect against cardiovascular disease. *See also* Health benefits of wine.

FRESH Describes wines that are clean and still vital with youth.

FRIABLE Term used to describe a soil structure that is crumbly or easily broken up.

FRIZZANTE (It.) Semi-sparkling.

FRIZZANTINO (It.) Very lightly sparkling, between still and semi-sparkling (i.e., *perlant*).

FRUIT Wine is made from grapes and must therefore be 100 percent fruit, yet a fruity flavor depends on the grapes used having the correct combination of **ripeness** and **acidity**.

FRUITCAKE This is a subjective term for a wine that tastes, smells, or has the complexity of the mixed dried-fruit richness and spices found in fruitcake.

FUDER (Ger.) A large oval cask with a capacity of 1,000 liters (265 gallons), more prevalent in Mosel areas than in those of the Rhine.

FULL This term usually refers to body, as in “full-bodied.” However, a wine can be light in body yet full in flavor.

FULLY FERMENTED A wine that is allowed to complete its natural course of **fermentation** and so yield a totally dry wine.

FÛT (Fr.) A wooden cask, usually made of oak, in which wines are aged, or fermented and aged.

GARRIGUE (Fr.) A type of moorland found in Languedoc-Roussillon.

GASOLINE, GASOLINE-LIKE With some bottle-age, the finest Rieslings have a vivid **bouquet** that some call gasoline-like. This character has an affinity with various **zesty** and **citrusy** odors, but many **lemony**, **citrusy**, **zesty** smells are totally different from one another and the Riesling’s gasoline character is both singular and unmistakable. As great Riesling matures, so it also develops a **honeyed** character, bringing a classic, honeyed-gasoline richness to the wine.

GELATINE A positively charged **fining** agent used for removing negatively charged suspended matter in wines, especially an excess of **tannin**.

GENERIC Describes a wine, usually blended, of a general **appellation**.

GENEROUS A generous wine gives its fruit freely on the palate, while an ungenerous wine is likely to have little or no fruit and, probably, an excess of **tannin**. All wines should have some degree of generosity.

GENUS The botanical family *Ampelidaceae* has 10 *genera*, one of which, *Vitis*, through the subgenus *Euaites*, contains the species *Vitis vinifera*, to which all the famous wine-making grape varieties belong.

GEOSMIN A chemical compound sometimes found in wine; responsible for the characteristic earthiness of beets and the earthy taste of some potatoes.

GLUGGY Easy to guzzle.

GOOD GRIP A healthy structure of **tannin** supporting the fruit in a wine.

GOUT DE TERROIR (Fr.) Literally “taste of earth,” a term that denotes a particular flavor imparted by certain soils—although not necessarily the taste of the soil itself—in a wine.

GRANDE MARQUE (Fr.) Literally a great or famous brand. In the world of wine, the term *Grande Marque* is specific to Champagne and applies to members of the *Syndicat de Grandes Marques*, which include, of course, all the famous names.

GRAFT The joint between the **rootstock** and the scion of the **producer vine**.

GRAND CRU (Fr.) Literally “great growth.” In regions such as Burgundy, where the term’s use is strictly controlled, it has real meaning (in other words, the wine should be great relative to the quality of the year), but in other winemaking areas where there are no controls, it will mean little.

GRAND VIN (Fr.) Normally used in Bordeaux, this term applies to the main wine sold under the chateau’s famous name and it will have been produced from only the finest barrels. Wines excluded during this process go into second, third, and sometimes fourth wines that are sold under different labels.

GRAPEY This term may be applied to an **aroma** or flavor that is reminiscent of grapes rather than wine, and is a particular characteristic of German wines and wines made from various Muscat or Muscat-like grapes.

GRASSY Often used to describe certain Gewürztraminer, Scheurebe, and Sauvignon wines portraying a grassy type of fruitiness.

GREEN Young and tart, as in Vinho Verde. It can be either a derogatory term or simply a description of a youthful wine that might well improve.

GREEN PRUNING Pruning is a bit of a misnomer, as this is really a method of reducing yields by thinning out the potential crop when the grapes are green (unripe) by cutting off a certain percentage of the bunches, so that what remains achieves a quicker, greater, and more even ripening. Also called summer pruning.

GRIP This term applies to a **firm** wine with a positive **finish**. A wine showing grip on the finish indicates a certain bite of **acidity** in white wines and of **tannin** in red wines.

GRIPPY Good grippy **tannins** imply ripe tannins that have a nice tactile effect without seeming in the least **firm**, **harsh**, or **austere**.

GROSSLAGE (Ger.) A wine area in Germany that is part of a larger district or *Bereich*.

GROWTH See *Cru*.

GUTSY A wine full in **body**, **fruit**, **extract**, and—usually—**alcohol**. The term is normally applied to wines of fairly ordinary quality.

GUZZLY This term is synonymous with **gluggy**.

HALBFÜDER (Ger.) An oval cask with a capacity of 500 liters (132 gallons), more prevalent in Mosel areas than in those of the Rhine.

HALBSTÜCK (Ger.) An oval cask with a capacity of 600 liters (159 gallons).

HARD Indicates a certain severity, often due to excess **tannin** and **acidity**.

HARSH A more derogatory term than **coarse**.

HEALTH BENEFITS OF WINE Wine consumed in moderation flushes out the cholesterol and fatty substances that can build up inside the body’s artery walls. It does this through the powerful **antioxidant** properties of various chemical compounds found naturally in wine (through contact with grapeskins), the most important of which are polyphenols such as procyanidins and ryoalexins such as resveratrol. Most cholesterol in the body is carried around the body on LDLs (low density lipoproteins), which clog up the arteries. By contrast, HDLs (high density lipoproteins) do not clog the arteries, but take the cholesterol straight to the liver, where it is processed out of the system. The antioxidants convert LDL into HDL, literally flushing away the cholesterol and other fatty substances. Together with **alcohol** itself, these antioxidants also act as an anticoagulant on the blood, diminishing its clotting ability, which reduces the chances of a stroke by 50 percent in contrast with nondrinkers. (However, I would be equally as dishonest as the neoprohibitionists who make phoney health-danger claims if I did not point out the one true health danger of moderate drinking that has recently come to light. In 2002, the *British Journal of Cancer* published a study demonstrating that a woman’s risk of contracting breast cancer increases by 6 percent if she consumes just one drink per day, and this rises to 32 percent if she has three or four drinks per day. The report concludes that 4 percent of all breast cancers are attributable to alcohol. It is, however, not cut-and-dried. In a summary of this report, Dr. Isabel dos Santos Silva of the International Agency for Research on Cancer wrote “Alcohol intake... is likely to account, at present, for a small proportion of breast cancer cases in developed countries, but for women who drink moderately, its lifetime cardioprotective effects probably outweigh its health hazards.” And as Dr. Philip Norrie pointed out, 10 times the number of women die from vascular disease as from breast cancer.)

HEAT SUMMATION A system of measuring the growth potential of vines in a specific area in terms of the environmental temperature, expressed in degree-days. A vine’s vegetative cycle is activated

only above a temperature of 50°F (10°C). The time during which these temperatures persist equates to the vine’s growing season. To calculate the number of degree-days, the proportion of the daily mean temperature significant to the vine’s growth—the daily mean minus the inactive 50°F (10°C)—is multiplied by the number of days of the growing season. For example, a growing season of 200 days with a daily mean temperature of 59°F (15°C) gives a heat summation of 1,800 degree-days Fahrenheit (1,000 degree-days Celsius) based on the following calculation: (59 – 50) x 200 = 1,800.

HERBACEOUS A green-leaf or white-currant characteristic that is usually associated with too much **vigor** in the vine’s canopy, which can cause underripeness. A herbaceous quality can also be the result of aggressive extraction techniques employed for red wines fermented in stainless steel.

HERBAL, HERBAL-OAK These terms apply to wines matured in cask, but unlike **vanilla-oak**, **creamy-oak**, **smoky-oak**, and **spicy-oak**, their origin is unknown. A herbal character devoid of oak is usually derived from the **varietal** character of a grape and is common to many varieties.

HERBICIDE A weedkiller that is usually, but not necessarily, a highly toxic concoction of chemicals.

HIGH-DENSITY VINES Vines planted close together compete with each other to yield higher-quality fruit, but less of it per vine, than vines planted farther apart. Initial planting costs are higher and more labor is required for pruning, but if the vineyard is in balance, the greater number of vines should produce the same overall volume per acre, even though the output per vine is reduced. Quantity can therefore be maintained while significantly raising quality, although there is a threshold density that vineyards must reach before real benefits appear. For example, more than half the vineyards in the New World are planted at less than 800 per acre (2,000 vines per hectare) and 500 to 600 (1,200 to 1,500 per hectare) is very common, whereas in Champagne, 2,666 vines per acre (6,666 per hectare) is the minimum allowed by law, 2,800 to 3,200 the average (7,000 to 8,000), and 4,400 (11,000) possible. In pre-*Phylloxera* times, it was something like 10,000 vines per acre (25,000 per hectare). Indeed, before California’s vineyards were mechanized, the average density of vines was twice what it is now because every other row has been ripped up to allow for tractors. When Joseph Drouhin planted his vineyard in Oregon, he planted 2,980 vines per acre (7,450 per hectare) and brought over French tractors that straddled the rows of vines, rather than went between them. All of a sudden, high-density vineyards entered the American vocabulary, although Drouhin did not consider them to be high density—merely a matter of course.

HIGH-TONE A term used in this book to describe elements of the bouquet that aspire to elegance, but that can become too exaggerated and be slightly reminiscent of vermouth.

HOGSHEAD A barrel with a capacity of between 300 and 315 liters (79 and 83 gallons), commonly found in Australia and New Zealand.

HOLLOW A wine that lacks any real flavor in the mouth compared to the promise shown on the nose. Usually due to a lack of **body**, **fruit**, or **acidity**.

HONEST Applied to any wine, but usually to one of a fairly basic quality, honest implies it is true in character and typical of its type and origin. It also implies that the wine does not give any indication of being souped-up in any unlawful way. The use of the word honest is, however, a way of damning with faint praise, for it does not suggest a wine of any special or truly memorable quality.

HONEYED Many wines develop a honeyed character through **bottle-age**, particularly sweet wines and more especially those with some **botrytis** character. However, some dry wines can also become honeyed, a mature Riesling being the classic example.

HORIZONTAL TASTING A tasting of different wines of the same style or vintage, as opposed to a vertical tasting (different vintages of the same wine).

HOT Synonym for **baked**.

HOUSE CLARET An unpretentious, and not too expensive, everyday-drinking red Bordeaux.

HYBRID A cross between two or more grape varieties from more than one species.

HYDROGEN SULFIDE When hydrogen combines with sulfur dioxide (SO₂), the result is a smell of bad eggs. If this occurs prior to bottling and is dealt with immediately, it can be rectified. If allowed to progress, the hydrogen sulfide can develop into **mercaptans** and ruin the wine.

ICEWINE See **Eiswein**.

ICON A marketing term for a quality category; see **Premium**.

INDICAÇÃO DE PROVENIÊNCIA REGULAMENTADA (Port.) See **IPR**.

INKY Can refer either to a wine's opacity of color or to an inkiness of character indicating a deep flavor with plenty of supple **tannin**.

IPR (Port.) Short for *Indicação de Proveniência Regulamentada*, a Portuguese quality designation that falls between **DOC** and **VR**.

IRON This is found as a trace element in fresh grapes that have been grown in soils in which relatively substantial ferrous deposits are located. Wines from such sites may naturally contain a tiny amount of iron, which is barely perceptible on the palate. If there is too much iron, the flavor becomes medicinal. Above seven milligrams per liter for white and 10 milligrams per liter for red, there is a danger of the wine going cloudy. But wines of such high iron levels should have been blue-fined prior to bottling (see **fining**).

ISINGLASS A gelatinous **fining** agent obtained from the swim-bladder of freshwater fish and used to clear hazy, low-tannin wines.

JAMMY Commonly used to describe a fat and eminently drinkable red wine rich in fruit, if perhaps a bit contrived and lacking **elegance**.

JUG WINE California's mass-produced *vin de table*, synonymous with **carafe** wine.

KABINETT (Ger.) The first rung of predication in Germany's **QmP** range, one below *Spätlese*, and often drier than a **QbA**.

KIESELGUHR A form of **diatomaceous earth**.

LACTIC ACID The acid that develops in sour milk, and which is also created in wine during the **malolactic** fermentation.

LAGAR (Port.) A rectangular concrete receptacle in which people tread grapes.

LAID-BACK A term that has come into use since the arrival of California wines on the international scene in the early 1980s. It usually implies that a wine is very relaxed, easy to drink, and confident of its own quality.

LANDWEIN (Ger.) German equivalent of *vin de pays*.

LATE DISGORGED See **LD**.

LD A sparkling-wine term that stands for "late disgorged" and, paradoxically, means the same as "recently disgorged." The use of LD implies that the wine in question is of a mature vintage that has been kept on its **yeast** deposit for an extended period. See also **RD**.

LEACHING A term that may be used to refer to the deliberate removal of **tannin** from new oak by steaming—or when discussing certain aspects of soil, such as **pH**, that can be affected when **carbonates** are leached (removed) by rainwater.

LEES Sediment that accumulates in the bottom of a vat during the **fermentation** of a wine.

LEMONY Many dry and medium-sweet wines have a tangy, fruity **acidity** that is suggestive of lemons.

LENGTH A wine that has length is one whose flavor lingers in the mouth a long time after

swallowing. If two wines taste the same, yet you definitely prefer one, but do not understand why, it is probably because the one you prefer has a greater length. See also **Balance**.

LIE (Fr.) The French for **lees**: *sur lie* refers to a wine kept in contact with its lees.

LIEU-DIT (Fr.) A named site (plural: *lieux-dits*). This term is commonly used for wines of specific growths that do not have **Grand Cru** status.

LIGHT VINTAGE A light vintage or year produces relatively light wines. Not a great vintage, but not necessarily a bad one either.

LIME This is the classic character shared by both the Sémillon and Riesling grape varieties when grown in many areas of Australia, which explains why Sémillon from the Hunter Valley used to be sold as Hunter Riesling.

LINALOOL A compound found in some grapes, particularly the Muscat and Riesling varieties. It contributes to the peachy-flowery fragrance that is characteristic of Muscat wines.

LINGERING Normally applied to the finish of a wine—an aftertaste that literally lingers.

LIQUEUR DE TIRAGE (Fr.) Bottling *liqueur*: the mix of wine, yeast, and sugar added to still Champagne to induce the **mousse**.

LIQUOREUX (Fr.) Literally "liqueurlike," this term is often applied to dessert wines of an unctuous quality. (Sometimes also "liquorous.")

LIQUORICE A quality often detected in Monbazillac, but may be found in any rich sweet wine. The term refers to the concentration of flavors from heat-shriveled, rather than **botrytized**, grapes.

LIVELINESS A term that usually implies a certain youthful freshness of fruit due to good **acidity** and a touch of **carbonic** gas.

LONGEVITY Potentially long-lived wines may owe their longevity to a significant content of **tannin**, **acidity**, **alcohol**, and/or sugar.

LUSCIOUS, LUSCIOUSNESS Almost synonymous with **voluptuous**, although more frequently used to describe an unctuous, sweet white wine than a succulently rich red.

MACERATION A term that is usually applied to the period during the vinification process when the fermenting juice is in contact with its skins. This process is traditionally used in red-winemaking, but it is on the increase for white wines utilizing prefermentation maceration techniques.

MACÉRATION CARBONIQUE (Fr.) A generic term covering several methods of vinifying wine under the pressure of **carbonic** gas. Such wines, Beaujolais Nouveau being the archetypal example, are characterized by amylc aromas (peardrops, bubble-gum, nail-polish). If this method is used for just a small part of a blend, however, it can lift the fruit and soften a wine without leaving such telltale aromas. See also *Macération Carbonique*, p.29.

MADERIZED All Madeiras are maderized by the *estufagem*, in which the wines are slowly heated in specially constructed ovens, and then by cooling them. This is undesirable in all wines except for certain Mediterranean wines that are deliberately made in a *rancio* style. Any ordinary, light, table wine that is maderized will often be erroneously diagnosed as oxidized, but there is a significant difference in the symptoms: maderized wines have a duller **nose**, have rarely any hint of the sherrylike character of **acetaldehyde**, and are flatter on the **palate**. All colors and styles of wine are capable of maderizing and the likely cause is storage in bright sunlight or too much warmth.

MAILLARD REACTIONS Chemical interactions between **amino acids** created during **autolysis** and residual sugar added by **dosage**, which are responsible for many of the mellow, complex post-**disgorgement** aromas adored by drinkers of mature Champagne. Maillard Reactions also play an important role in the raising of grapes.

MALIC A tasting term that describes the green apple **aroma** and flavor found in some young wines due to the presence of **malic acid**, the dominant acid found in apples.

MALIC ACID A very strong-tasting acid that diminishes during the fruit's ripening process, but still persists in ripe grapes and, although reduced by **fermentation**, in wine too. The quantity of malic acid present in a wine may sometimes be considered too much, particularly in a red wine, and the smoothing effect of replacing it with just two-thirds the quantity of the much weaker **lactic acid** is often desirable. See also **Malolactic** Fermentation, p.26.

MALOLACTIC The malolactic **fermentation** is often termed a secondary fermentation, but is actually a biochemical process that converts the hard **malic acid** of unripe grapes into soft **lactic acid** and **carbonic** gas. See also **Malolactic** fermentation, p.26.

MANURE A very extreme form of **farmyardy**.

MANNOPROTEIN Nitrogenous matter secreted from yeast during **autolysis**.

MANTA See **Cap**.

MARC 1. The residue of skins, seeds, and stalks after pressing. 2. The name given to a four-ton load of grapes in Champagne. 3. A rough brandy made from the residue of skins, seeds, and stalks after pressing.

MARQUE A brand or make.

MATURE, MATURITY Refers to a wine's development in bottle, as opposed to **ripe**, which describes the maturity of the grape itself.

MEAN An extreme qualification of **ungenerous**.

MEATY This term suggests a wine so rich in **body** and **extract** that the drinker feels almost able to chew it. Wines with a high **tannin** content are often meaty.

MELLOW Describes a wine that is **round** and nearing its peak of **maturity**.

MEMBRANE FILTRATION Use of a thin screen of biologically inert material, perforated with microsized pores that occupy 80 percent of the membrane, to filter wine. Anything larger than these holes is denied passage when the wine is pumped through during **filtration**.

MERCAPTANS Methyl and ethyl alcohols can react with **hydrogen sulphide** to form mercaptans, foul-smelling compounds that are often impossible to remove and can ruin a wine. Mercaptans can smell of garlic, onion, burnt rubber, or stale cabbage.

MÉTHODE CHAMPENOISE (Fr.) The process in which an effervescence is produced through a secondary **fermentation** in the same bottle in which the wine is sold (in other words, not *transvasage*). This procedure is used for Champagne and other good-quality sparkling wines. In Europe, the term is forbidden on the label of any wine other than Champagne, which never uses it itself.

MÉTHODE GAILLAÇOISE (Fr.) A variant of *Méthode Rurale* involving **disgorgement**.

MÉTHODE RURALE (Fr.) The precursor of *Méthode Champenoise*, this method involves no secondary **fermentation**. The wine is bottled before the first alcoholic fermentation has finished, and **carbonic** gas is produced during the continuation of fermentation in the bottle. There is also no **disgorgement**.

METODO CHAMPENOIS (It.) Italian for *Méthode Champenoise*.

MICROCLIMATE Due to a combination of shelter, exposure, proximity to mountains and/or water mass, and other topographical features unique to a given area, a vineyard can enjoy (or be prone to) a specific microclimate that differs from the standard climate of the region as a whole.

MICROPOROUS FILTRATION Synonymous with **membrane filtration**.

MICROVINIFICATION This technique involves **fermentation** in small, specialized vats, which are seldom bigger than a washing machine. The process is often used to make experimental

wines. There are certain dynamics involved in fermentation that determine a minimum optimum size of vat, which is why home-brewers seldom make a polished product and why most wines made in research stations are dull.

MID-PALATE 1. The center-top of your tongue.
2. A subjective term to describe the middle of the taste sensation when taking a mouthful of wine. It may be hollow if the wine is thin and lacking, or full if it is rich and satisfying.

MILLERANDAGE (Fr.) A physiological disorder of the vine that occurs after cold or wet weather at the time of the flowering. This makes fertilization very difficult, and consequently many berries fail to develop, remaining small and seedless even when the rest of the bunch is full-sized and ripe.

MINERAL Some wines have a mineral aftertaste that can be unpleasant. Vinho Verde has an attractive, almost tinny aftertaste when made from certain grape varieties.

MISTELLE (Fr.) Fresh grape juice that has been muted with alcohol before any fermentation can take place.

MOELLEUX (Fr.) Literally soft or smooth, this term implies a rich, medium-sweet style in most areas of France. In the Loire, however, it is used to indicate a truly rich, sweet *botrytis* wine, thereby distinguishing it from *demi-sec*.

MONOPOLE (Fr.) Single ownership of a vineyard.

MOUSSE (Fr.) The effervescence of a sparkling wine, which is best judged in the mouth because a wine may appear to be flat in one glass and vigorous in another due to the different surfaces. The bubbles of a good *mousse* should be small and persistent; the strength of effervescence depends on the style of wine.

MOUSSEUX (Fr.) Literally "sparkling."

MOUTH-FILL Literally meaning a wine that easily fills the mouth with a satisfying flavor. There is no holding back, but it does not quite imply anything too upfront or obvious.

MUID (Fr.) A large oval barrel with a capacity of 600 liters (159 gallons).

MUST Unfermented or partly fermenting grape juice.

MUST WEIGHT The amount of sugar in ripe grapes or grape must.

MUTAGE (Fr.) The addition of pure alcohol to a wine or to fresh grape juice either before fermentation can take place, as in the case of a *vin de liqueur*, or during fermentation, as in the case of a *vin doux naturel*. See also *Mutage*, p.31.

NÉGOCIANT (Fr.) Trader or merchant. The name is derived from the traditional practice of negotiating with growers (to buy wine) and wholesalers or customers (to sell it).

NÉGOCIANT-ÉLEVEUR (Fr.) A wine firm that buys in ready-made wines for *élevage*. The wines are then blended and bottled under the *négociant's* label.

NERVY, NERVOUS A subjective term usually applied to a dry white wine that is firm and vigorous, but not quite settled down.

NEUTRAL GRAPE VARIETIES Such grapes include virtually all the minor, nondescript varieties that produce bland tasting, low-quality wines, but also encompass better known varieties such as the Melon de Bourgogne, Aligoté, Pinot Blanc, Pinot Meunier, and even classics such as Chardonnay and Sémillon. The opposite of aromatic grapes, these varieties are ideal for oak-maturation, bottling *sur lie*, and turning into fine sparkling wines because their characteristics are enhanced rather than hidden by these processes.

NOBLE ROT A condition caused by the fungus *Botrytis cinerea* under certain conditions.

NOSE The smell or odor of a wine, encompassing both aroma and bouquet.

OAK Many wines are fermented or aged in wooden casks and the most commonly used wood is oak.

There are two main categories of oak, French and American, and they are both used the world over. Although the French always use French oak, the greatest California wines are also usually made in French oak barrels. American oak is traditional in Spain, particularly Rioja, and Australia, although both these countries have a growing usage of French oak. Oak often gives a vanilla taste to wine because it contains a substance called *vanillin*, which also gives vanilla pods their vanilla aroma. French oak is perceived to be finer and more refined, while American oak is generally considered to have a more upfront, obvious character. This difference in character is due not to intrinsic qualities in the two types of oak (although American oak grows more quickly than French and has a bigger grain, which does have some influence), but to the traditional weathering of French oak in the open for several years, which leaches out the most volatile aromatics. American oak is kiln-dried (therefore not leached) and sawn (unlike French oak, which is split), which ruptures the grain, exposing the wine to the oak's most volatile elements in a relatively short time. If French oak were to be kiln-dried and sawn, and American weathered and split, I suspect our perception of the two forms of oak might well be reversed. American oak is often highly charred in the construction of a barrel (winemakers can order it lightly toasted, medium toasted, or highly charred), and this too has an effect, adding caramel, toffee, and smoky-toasty aromas to a wine. The toastiness in oak is different to any toastiness derived from the grape itself. Strangely, oak can produce a cedary taste, although this is probably confined to wines made from spicy black-grape varieties that are fermented and/or matured in relatively old wood.

If you get a very strong impression of coconut, it's a good bet that the oak used was American. Oak barrels are very expensive to buy and labor intensive to work with, so if you find a very cheap wine with obvious oak character, it will inevitably be due to the use of oak chips or shavings, which are chucked into a huge, gleaming stainless-steel vat of wine. Cheating this may be, but it is legal, and if people like the taste of oak-aged wine, but cannot afford to pay much for a bottle, what is wrong with it? See also *Stainless Steel* or *Oak*, p.26.

OECHSLE LEVEL (Ger.) A system of measuring the sugar content in grapes for wine categories in Germany and Austria.

OENOLOGIST, OENOLOGY Pronounced "enologist" and "enology" (and usually spelled this way in the US), oenology is the scientific study of wine. It is a branch of chemistry, but with practical consequences, hands-on production experience, and an understanding of *viticulture*.

OFF VINTAGE An off vintage or year is one in which many poor wines are produced due to adverse climatic conditions, such as very little sunshine during the summer, which can result in unripe grapes, and rain or humid heat at the harvest, which can result in rot. Generally an off vintage is a vintage to be avoided, but approach any opportunity to taste the wines with an open mind because there are always good wines made in every vintage, and they have to be sold at bargain prices if a vintage has a bad reputation.

OIDIUM A fungal disease of the vine that turns leaves powdery grey and dehydrates grapes.

OILY A subjective term meaning fat and viscous, and often also flat and flabby.

OLOROSO (Sp.) A sherry style, naturally dry but usually sweetened for export markets.

OPEN-KNIT An open and enjoyable nose or palate, usually found in a modest wine that is not capable of much development.

OPULENT Suggestive of a rather luxurious varietal aroma; very rich, but not quite blowzy.

ORGANIC WINES A generic term for wines made using the minimum amount of SO₂ (sulfur dioxide), from grapes grown without the use of chemical fertilizers, pesticides, or herbicides.

ORGANOLEPTIC Affecting a bodily organ or sense, usually that of taste or smell.

OSMOTIC PRESSURE When two solutions are separated by a semipermeable membrane, water will leave the weaker solution for the more concentrated one in an endeavor to equalize the differing solution strengths. In winemaking, this is most commonly seen when yeast cells are put to work in grape juice with an exceptionally high sugar content. Since water accounts for 65 percent of a yeast cell, osmotic pressure causes the water to escape through the semipermeable cell membrane. The cell caves in (a phenomenon called plasmolysis), and the yeast dries up and eventually dies.

OVERTONE A dominating element of nose and palate; often one that is not directly attributable to the grape or wine.

OXIDATION, OXIDIZED These terms are ambiguous; as soon as grapes are pressed or crushed, oxidation sets in and the juice or wine will become oxidized to a certain and increasing extent. Oxidation is also an unavoidable part of fermentation and essential to the maturation process. In this case, however, in order not to mislead it is best to speak of a "mature" or, at the extreme, "oxidative" wine. This is because when the word oxidized is used, even among experts, it will invariably be in an extremely derogatory manner, to highlight the sherrylike odor of a wine that is in a prematurely advanced stage of oxidation.

OXIDATIVE A wine that openly shows the character of maturation on the nose or palate. This can range from buttery, biscuity, and spicy characteristics through to a hint of nuttiness.

PAD FILTRATION A filtration system utilizing a Plate and Frame filter with a series of cellulose, asbestos, or paper sheets through which wine is passed.

PALATE The flavor or taste of a wine.

PARTIAL ROOTZONE DRYING See PRD.

PASSERILLAGE (Fr.) Grapes without noble rot that are left on the vine become cut off from the plant's metabolic system as its sap withdraws into its roots. The warmth of the day, followed by the cold of the night, causes the grapes to dehydrate and concentrate in a process known as *passerillage*. The sweet wine produced from these grapes is prized in certain areas. A *passerillage* wine from a hot fall will be totally different to one from a cold fall.

PASSITO (It.) The Italian equivalent of *passerillage*. *Passito* grapes are semidried, either outside—on the vine or on mats—or inside a warm building. This concentrates the pulp and produces strong, often sweet wines.

PASTEURIZATION A generic term for various methods of stabilization and sterilization.

PEAK The ideal maturity of a wine. Those liking fresher, crisper wines will perceive an earlier peak in the same wine than drinkers who prefer mature wines. As a rule of thumb that applies to all extremes of taste, a wine will remain at its peak for as long as it took to reach it.

PEARDROP See *Amylic*; *Macération carbonique*.

PEPPERY A term applied to young wines whose components are raw and not yet in harmony, sometimes quite fierce and prickly on the nose. It also describes the characteristic odor and flavor of southern French wines, particularly Grenache-based ones. Syrah can smell of freshly crushed black pepper, while white pepper is the character of great Grüner Veltliner. Young ports and light red Riojas can also be very peppery.

PERFUME An agreeable scented quality of a wine's bouquet.

PERLANT (Fr.) Very slightly sparkling, less so than *crémant* and *pétillant*.

PERLITE A fine, powdery, light, lustrous substance of volcanic origin with diatomaceous earth-like properties. When perlite is used for filtration, it is sometimes referred to as *ceramic filtration*.

PESTICIDE Literally a pest-killer, but more accurately a parasite-killer, the term pesticide infers a highly toxic concoction of chemicals capable of eradicating parasitic insects that attack the vine, including larvae, flies, moths, and spiders.

PÉTILLANCE, PÉTILLANT (Fr.) This term describes a wine with sufficient **carbonic gas** to create a light sparkle.

PETIT CHÂTEAU (Fr.) Literally “small château,” this term is applied to any wine château that is neither a *Cru Classé* nor a *Cru Bourgeois*.

pH A commonly used chemical abbreviation of “potential hydrogen-ion concentration,” a measure of the **active acidity** or alkalinity of a liquid. It does not give any indication of the **total acidity** in a wine, but neither does the human **palate**. When we perceive the acidity in wine through taste, it is more closely associated with the pH than with the total acidity.

PHENOLS, PHENOLIC COMPOUNDS Compounds found in the skin, seeds, and stalks of grapes, the most common being **tannin** and **anthocyanins**.

PHOTOSYNTHESIS The process by which light energy is trapped by chlorophyll, a green chemical in the leaves, and is converted into chemical energy in the form of glucose. This is then carried around the plant in special tubes called phloem to grow shoots, leaves, flowers, and fruit.

PHYLOXERA A vine louse that spread from America to virtually every viticultural region in the world during the late 19th century, destroying many vines. New vines had (and still have) to be grafted on to phylloxera-resistant American **rootstocks**.

PIPE (Port.) The most famous Portuguese barrel, a Douro pipe has a 550-liter (145-gallon) capacity.

PIQUANT (Fr.) Usually applied to a pleasing white wine with positive underlying fruit and **acidity**.

PLAFOND LIMITÉ DE CLASSEMENT See **PLC**.

PLC Plafond Limité de Classement, a legalized form of cheating whereby producers of AOC wines are allowed to exceed the official maximum limit by as much as 20 percent.

PLUMMY An elegant, juicy flavor and texture that resembles the fleshiness of plums.

PLUM-PUDDING A subjective term for a rich and spicy red wine; a more intense term than **Christmas cake**.

POLISHED Describes a wine that has been skillfully crafted, leaving no rough edges. It is **smooth** and refined to drink.

POLISHING The very last, ultrafine **filtration** of a wine, usually with kieselguhr (see **diatomaceous earth**) or **perlite**. It is so called because it leaves the wine bright. Many high-quality wines are not polished because the process can wash out natural flavors.

POST-DISGORGEMENT AGING The period between **disgorgement** and when the wine is consumed. With the sudden exposure to air after an extended period of aging under **anaerobic** conditions, the development of a sparkling wine after disgorgement is very different from its development before.

POURRIURE NOBLE (Fr.) Noble rot, which is caused by the fungus *Botrytis cinerea* under certain conditions.

PRD Partial rootzone drying, a clever way of fooling the vine into thinking that it is not being irrigated, when in fact it is. This is achieved by alternating irrigation between two separate parts of the root system. Part of the vine receives a carefully metered drip irrigation, but the rest of the plant system is unaware of this and, not sensing the irrigation, believes that it is in fact experiencing a mild water stress. The vine thus diverts its metabolism (energy) from the leaves to the grape clusters, improving the quality of the fruit. When the water is drawn into the part of the vine that has shut down the metabolism of its leaves, this part of the vine reverses the metabolic process. This is the very

time that the drip irrigation is switched to that side of the vine, as it has already accepted the water's presence. However, by turning off the irrigation to the other side of the vine, that side now believes it is experiencing a mild water stress, and it is its turn to divert the vine's metabolism from the leaves to the grape clusters. And so it goes on, drip feeding either side of a vine that perpetually experiences a mild state of water stress. This conserves water, and while it does not increase yields per se, it does produce better quality at normal yields.

PREFERMENTATION MACERATION The practice of **maceration** of juice in grape skins prior to **fermentation**, to enhance the **varietal character** of the wine. This maceration is usually carried out cold and is normally employed for **aromatic** white varieties, but can be undertaken warm—or even quite hot for red wines.

PREMIER CRU (Fr.) Literally “First Growth,” this term is of relevance only in those areas where it is controlled, such as in Burgundy and Champagne.

PREMIUM A marketing term for a quality category. So-called premium or premium-quality wine is not as expensive as you might think, and certainly not the top category of wine. Because of the differential in tax, duty, and shipping costs, it is actually possible to categorize wines by exactly the same unit price in dollars (US), pounds (UK), and Euros (rest of Eurozone): Basic: less than \$3/£3/ 3; Premium: \$/€/ 5–7; Superpremium: \$/€/ 7–14; Ultrapremium: \$/€/ 14–150; and Icon: in excess of \$/€/ 150.

PRESS WINE See *Vin de presse*.

PRICKLE, PRICKLY This term describes a wine with residual **carbonic gas**, but with less than the light sparkle of a **pétillant** wine. This characteristic can be desirable in some fresh white and **rosé** wines, but it is usually taken as a sign of an undesirable **secondary fermentation** in red wines, although it is deliberately created in certain South African examples.

PRODUCER VINE Vines are usually grafted on to **phylloxera-resistant rootstock**, but the grapes produced are characteristic of the above-ground producer vine or scion, which is normally a variety of *Vitis vinifera*.

PROTEIN HAZE Protein is present in all wines. Too much protein can react with **tannin** to cause a haze, in which case **bentonite** is usually used as a **fining agent** to remove it.

PUNCHEON A type of barrel that is commonly found in Australia and New Zealand and has a capacity of 450 liters (119 gallons).

PVPP Abbreviation for polyvinylpyrrolidone, a **fining agent** used to remove compounds sensitive to browning from white wines.

PYRAZINES One of the most important groups of aromatic compounds found in grapes (especially methoxypyrazines), pyrazines typically have green, leafy, grassy characteristics through to bell-pepper, green-pea, and asparagus. The more herbaceous pyrazine **aromas** are symptomatic of an excessively vigorous vine canopy, particularly in red wines. Although pyrazines become less abundant as grapes ripen, they are considered a vital element in the varietal character of Sauvignon Blanc.

QUALITÄTSWEIN BESTIMMTER ANBAUGEBIETE See **QbA**.

QUALITÄTSWEIN MIT PRÄDIKAT See **QmP**.

QbA (Ger.) Germany's *Qualitätswein bestimmter Anbaugebiete* is the theoretical equivalent of the French AOC.

QmP (Ger.) The abbreviation for *Qualitätswein mit Prädikat*. Literally a “quality wine with predication,” this term is used for any German wine above **QbA**, from **Kabinett** upward. The predication carried by a QmP wine depends upon the level of ripeness of the grapes used in the wine.

QUAFFING WINE Describes an unpretentious wine that is easy and enjoyable to drink.

QUINTA (Port.) A wine estate.

R2 A yeast strain (*Saccharomyces cerevisiae* race *bayanus*) discovered by Danish-born winemaker Peter Vinding-Diers.

RACKING The draining of a wine off its **lees** into a fresh cask or vat. See also **Racking**, p.26.

RACY Often applied to wines of the Riesling grape. The term racy accurately suggests the liveliness, vitality, and **acidity** of this grape.

RANCIO Description of a *vin doux naturel* stored in oak casks for at least two years, often with the barrels exposed to direct sunlight. This imparts a distinctive flavor that is popular in the Roussillon area of France.

RATAFIA A *liqueur* made by combining **marc** with grape juice, Ratafia de Champagne being the best-known.

RD A sparkling-wine term that stands for “recently disgorged,” the initials RD are the trademark of Champagne Bollinger. See also **LD**.

RECIOTO (It.) A strong, sweet wine made in Italy from *passito* grapes.

REDOX The aging process of wine was originally conceived as purely **oxidative**, but it was then discovered that when one substance in wine is **oxidized** (gains oxygen), another is reduced (loses oxygen). This is known as a reductive-oxidative, or redox reaction. **Organoleptically**, however, wines reveal either oxidative or **reductive** characters. In the presence of air, wine is prone to an oxidative character, but shut off from a supply of oxygen, reductive characteristics begin to dominate, thus the bouquet of bottle-age is a reductive one and the aroma of a fresh, young wine is more oxidative than reductive.

REDUCTIVE The less exposure it has to air, the more reductive a wine will be. Different as they are in basic character, Champagne, Muscadet *sur lie*, and Beaujolais Nouveau are all examples of reductive, as opposed to **oxidative**, wines, from the vividly **autolytic** Champagne, through Muscadet *sur lie* with its barest hint of autolytic character, to the **amylic** aroma of Beaujolais Nouveau. A good contrast is between sherry and Madeira, the latter of which is reductive, while the former is oxidative. The term is, however, abused, as many tasters use it to describe a fault, when the wine is heavily reduced.

REFRACTOMETER An optical device used to measure the sugar content of grapes when out in the field.

REMONTAGE (Fr.) The pumping of wine over the **cap** (or manta) of skins during the *cuvaison* of red wine.

REMUAGE (Fr.) An intrinsic part of the *méthode champenoise*; deposits thrown off during **secondary fermentation** are eased down to the neck of the bottle and are then removed at **disgorgement**.

RESERVE WINES Still wines from previous vintages that are blended with the wines of one principal year to produce a balanced nonvintage Champagne.

RETICENT This term suggests that the wine is holding back on its **nose** or **palate**, perhaps through youth, and may well develop with a little more maturity.

RICH, RICHNESS A balanced wealth of fruit and depth on the palate, and a good **finish**.

RIPASSO (It.) Refermentation of wine on the **lees** of a *recioto* wine.

RIPE Grapes ripen; wines mature. However, the fruit and even the **acidity** in wine can be referred to as ripe. Tasters should be careful not to mistake a certain residual sweetness for ripeness.

RIPE ACIDITY The main acidic component in ripe grapes (**tartaric acid**) tastes refreshing and fruity, even in large proportions, whereas the main acidity in unripe grapes (**malic acid**) tastes hard and unpleasant.

ROASTED Describes the character of grapes subjected to the shriveling or roasting of **noble rot**.

ROBUST A milder form of **aggressive**, which may frequently be applied to a mature product. A

wine is robust by nature, rather than aggressive through youth.

ROOTSTOCK The lower rooting part of a grafted vine, often *phylloxera*-resistant. See *Rootstock*, p.35.

ROSÉ This French term has become as anglicized for pink wine as *rendezvous* has for appointment. In most cases, a rosé is made by crushing black grapes and keeping the juice in contact with the grapeskins for a short while prior to pressing or by running off colored juice (*saignée*). It will have no discernible **tannin** content. Champagne rosé is a rare case where the wine may be made by blending a little red wine into a white wine.

ROUND A wine that has rounded off all its edges of **tannin**, **acidity**, **extract**, and so on through maturity in bottle.

SACCHAROMETER A laboratory device used for measuring the sugar content of grape juice, based on specific gravity.

SAIGNÉE (Fr.) The process of drawing off surplus liquid from the fermenting vat in order to produce a rosé wine from the free-run juice. In cooler wine regions, this process may be used to produce a darker wine than would normally be possible from the remaining mass of grape pulp because the greater ratio of solids to liquid provides more coloring pigment.

SASSY Should be a less cringing version of the cheeky, audacious character found in a wine with bold, brash but not necessarily big flavor.

SCION See *Producer vine*.

SEC (Fr.) Dry. When applied to wine, this means without any sweetness, but it does not mean there is no fruit. Dry wines with plenty of very ripe fruit can sometimes seem so rich they may appear to have some sweetness.

SECOND or SECONDARY FERMENTATION The fermentation that occurs in bottle during the *Méthode Champenoise*. The term is sometimes also used, mistakenly, to refer to **malolactic** fermentation.

SEKT (Ger.) Sparkling wine.

SELECTION DE GRAINS NOBLES (Fr.) In Alsace, a rare, intensely sweet, **botrytized** wine.

SEMICARBONIC MACERATION An adaption of the traditional *macération carbonique* method of fermentation, in which whole bunches of grapes are placed in a vat that is then sealed while its air is displaced with CO₂.

SHARP This term applies to **acidity**, whereas **bitterness** applies to **tannin** and, sometimes, other natural solids. Immature wines may be sharp. However, if used by professional tasters, the term is usually a derogatory one. The opposite to sharp acidity is usually described as **ripe acidity**, which can make the fruit refreshingly tangy.

SHEET FILTRATION Synonymous with **pad filtration**.

SHERRYLIKE This term refers to the odor of a wine in an advanced state of **oxidation**, which is undesirable in low-strength or unfortified wines. It is caused by excessive **acetaldehyde**.

SHORT Refers to a wine that may have a good nose and initial flavor, but falls short on the **finish**, its taste quickly disappearing after the wine has been swallowed.

SKIN-CONTACT The **maceration** of grape skins in **must** or fermenting wine can extract varying amounts of coloring pigments, **tannin**, and aromatic compounds.

SMOKINESS, SMOKY, SMOKY COMPLEXITY, SMOKY-OAK Some grapes have an inherent smoky character (particularly Syrah and Sauvignon Blanc). This character can also come from well-toasted oak casks, but may also indicate an unfiltered wine. Some talented winemakers do not **rack** their wines and sometimes do not **filter** them in a passionate bid to retain maximum character and create an individual and expressive wine.

SMOOTH The opposite of **aggressive** and more extreme than **round**.

SO₂ A commonly used chemical formula for sulfur dioxide, an **antioxidant** with aseptic (antibacterial) qualities that is used in the production of wine. It should not be noticeable in the finished product, but sometimes a whiff may be detected on recently bottled wine. A good swirl in the glass or a vigorous decanting should remove this trace and after a few months in bottle it ought to disappear altogether of its own accord. The acrid odor of sulfur in a wine should, if detected, be akin to the smell of a recently extinguished match. If it has a rotten egg aroma, the sulfur has been reduced to **hydrogen sulfide** and the wine may well have formed **mercaptans** that you will not be able to remove. See also *The Use of Sulfur*, p.25.

SOFT Interchangeable with **smooth**, although it usually refers to the fruit on the palate, whereas **smooth** is more often applied to the **finish**. Softness is a very desirable quality, but "extremely soft" may be derogatory, inferring a weak and **flabby** wine.

SOLERA (Sp.) A system of continually refreshing an established blend with a small amount of new wine (equivalent in proportion to the amount of the blend that has been extracted from the *solera*) to effect a wine of consistent quality and character. Some existing *soleras* were laid down in the 19th century, and whereas it would be true to say that every bottle of that *solera* sold today contains a little of that first vintage, it would not even be a teaspoon. You would have to measure it in molecules, but there would be infinitesimal amounts of each and every vintage from the date of its inception to the year before bottling. See also *The Solera Blending System*, p.324.

SOLID This term is interchangeable with **firm**.

SOLUMOLOGICAL The science of soil and, in the context of wine, the relationship between specific soil types and vine varieties.

SORBIC ACID A yeast-inhibiting compound found in the berries of mountain ash, sorbic acid is sometimes added to sweet wines to prevent **refermentation**, but it can give a powerful geranium odor if the wine subsequently undergoes **malolactic** fermentation.

SOUPED-UP, SOUPY Implies a wine has been blended with something richer or more **robust**. A wine may well be legitimately souped-up, or use of the term could mean that the wine has been played around with. The wine might not be correct, but it could still be very enjoyable.

SOUS MARQUE (Fr.) A *marque* under which wines, usually second-rate wines, are offloaded.

SOUTHERN-STYLE This term describes the obvious characteristics of a wine from the sunny south of France. For reds, it may be complimentary at an **honest** basic level, indicating a full-bodied, full-flavored wine with a **peppery** character. For whites, it will probably be derogatory, implying a flabby wine with too much **alcohol** and too little **acidity** and **freshness**.

SOUTIRAGE (Fr.) Synonymous with **racking**.

SPARGING A process in which **carbonic gas** is introduced into a wine before bottling, often simply achieved through a valve in the pipe between the vat and the bottling line. See also *Carbonation*, p.31.

SPÄTLESE (Ger.) A *QmP* wine that is one step above *Kabinett*, but one below *Auslese*. It is fairly sweet and made from late-picked grapes.

SPICY 1. A varietal characteristic of some grapes, such as Gewürztraminer. 2. An aspect of a complex **bouquet** or **palate**, probably derived from **bottle-age** after time spent in wood.

SPICYOAK A subjective term describing complex aromas derived from **fermentation** or maturation in oak that can give the impression of various spices—usually "creamy" ones such as cinnamon or nutmeg—and that are enhanced by **bottle-age**.

SPRITZ, SPRITZIG (Ger.) Synonymous with *pétillant*.

SPUMANTE (It.) Fully sparkling.

STABILIZATION The process by which a heaving broth of biochemical activity becomes firmly fixed

and not easily changed. Most wines are stabilized by **tartrate** precipitation, **filtration**, **fining**, and the addition of SO₂ (sulfur dioxide).

STAGE A period of practical experience. It has long been traditional for vineyard owners to send their sons on a *stage* to a great château in Bordeaux. Now the *Bordeleais* send their sons on similar *stages* to California and Australia.

STALKY 1. The herbaceous-tannic **varietal** characteristic of Cabernet grapes. 2. Applies literally to wines made from grapes which were pressed with their stalks. 3. Could be indicative of a **corked** wine.

STERILIZATION The ultimate sterilization of a very cheap, commercial wine may be pasteurization or **flash pasteurization**.

STICKIES Common parlance for very sweet wines, usually **fortified** or **botrytized**.

STRETCHED This term describes a wine that has been diluted or cut with water (or a significantly inferior wine), which is usually illegal in an official **appellation**. It can also refer to wine that has been produced from vines that have been "stretched" to yield a high volume of attenuated fruit.

STRUCTURE The structure of a wine is literally composed of its solids (**tannin**, **acidity**, sugar, and **extract** or density of fruit flavor) in balance with the **alcohol**, and how positively they form and feel in the mouth.

STÜCK (Ger.) A large oval cask with a capacity of 1,200 liters (317 gallons).

STUCK FERMENTATION A stuck, literally halted, **fermentation** is always difficult to rekindle and, even when done successfully, the resultant wine can taste strangely bitter. The most common causes for a stuck fermentation are: 1. temperatures of 95°F (35°C) or above; 2. nutrient deficiency, which can cause yeast cells to die; 3. high sugar content, which results in high **osmotic pressure**, which can cause yeast cells to die.

STYLISH Describes wines possessing all the subjective qualities of **charm**, **elegance**, and **finesse**. A wine might have the "style" of a certain region or type, but this does not mean it is stylish. A wine is either stylish or it is not—it defies definition.

SUBTLE Although this description should mean a significant yet understated characteristic, it is often employed by wine snobs and frauds who taste a wine with a famous label and know that it should be special, but cannot detect anything exceptional. They need an ambiguous word to get out of the hole they have dug for themselves.

SULFUR DIOXIDE See SO₂.

SUMMER PRUNING Synonymous with **green pruning**.

SUPERPREMIUM A marketing term for a quality category; see *Premium*.

SUPER-SECOND A term that evolved when Second-Growth (*Deuxième Cru*) châteaux, such as Palmer and Cos d'Estournel, started making wines that came close to First-Growth (*Premier Cru*) quality at a time when certain First Growths were not always performing well. The first super-second was Palmer 1961, although the term did not evolve until some time during the early 1980s.

SUPER-TUSCAN This term was coined in Italy in the 1980s for the Cabernet-boostered *vini da tavola* blends that were infinitely better and far more expensive than Tuscany's traditional Sangiovese-based wines. See *Birth of the Super-Tuscans*, p.283.

SUPPLE Describes a wine that is easy to drink, not necessarily soft, but the term suggests more ease than **round** does. With age, the **tannin** in wine is said to become supple.

SUPPLE TANNIN Tannins are generally perceived to be harsh and mouth-puckering, but the tannins in a ripe grape are supple, whereas those in an unripe grape are not.

SUR LIE (Fr.) Describes wines, usually Muscadet, that have been kept on their **lees** and have not been **racked** or **filtered** prior to bottling. Although

this practice increases the possibility of bacterial infection, the risk is worth taking for those wines made from neutral grape varieties. In the wines of Muscadet, for example, this practice enhances the fruit of the normally bland Melon de Bourgogne grape and adds a yeasty dimension of depth that can give the flavor of a modest white Burgundy. It also avoids aeration and retains more of the **carbonic gas** created during **fermentation**, thereby imparting a certain liveliness and freshness.

SÜSSRESERVE (Ger.) Unfermented, fresh grape juice commonly used to sweeten German wines up to and including *Spätlese* level. It is also added to cheaper *Auslesen*. Use of *Süssreserve* is far superior to the traditional French method of sweetening wines, which utilizes grape concentrate instead of grape juice. *Süssreserve* provides a fresh and grapey character that is desirable in inexpensive medium-sweet wines.

TABLE WINE A term that often implies a wine is modest, even poor-quality, because it is the literal translation of *vin de table*, the lowest level of French wine. Yet it is not necessarily a derogatory term as it may also be used to distinguish between a light (unfortified) and a **fortified** wine.

TAFELWEIN (Ger.) Table wine or *vin de table*.

TALENTO (It.) Since March 1996, producers of Italian *Méthode Champenoise* wines may use the new term "Talento," which has been registered as a trademark by the *Instituto Talento Metodo Classico*—established in 1975 and formerly called the Instituto Spumante Classico Italiano. Talento is almost synonymous with the Spanish term Cava, although to be fully compatible it would have to assume the mantle of a DOC and to achieve that would require the mapping of all the areas of production. However, it will take all the *talento* they can muster to turn most Italian Spumante *brut* into an international class of sparkling wine.

TANK METHOD See *Cuve Close*.

TANNIC, TANNIN Tannins are various **phenolic** substances found naturally in wine that come from the skin, seeds, and stalks of grapes. They can also be picked up from **oak** casks, particularly new ones. Grape tannins can be divided into "ripe" and "unripe," the former being most desirable. In a proper balance, however, both types are essential to the structure of red wines, in order to knit the many flavors together. Unripe tannins are not water-soluble and will remain harsh no matter how old the wine is, whereas ripe tannins are water-soluble, have a suppleness or, at most, a grippy feel from an early age, and will drop out as the wine matures. Ripe grape tannin softens with age, is vital to the structure of a serious red wine, and is useful in wines chosen to accompany food.

TART Refers to a noticeable **acidity** somewhere between **sharp** and **piquant**.

TARTARIC ACID The ripe acid of grapes that increases slightly when the grapes increase in sugar during the *véraison*.

TARTRATES, TARTRATE CRYSTALS Deposits of **tartaric acid** look very much like sugar crystals at the bottom of a bottle and may be precipitated when a wine experiences low temperatures. Tartrates are also deposited simply through the process of time, although seldom in a still or sparkling wine that has spent several months in contact with its **lees**, as this produces a **mannoprotein** called MP32, which prevents the precipitation of tartrates. A fine deposit of glittering crystals can also be deposited on the base of a cork if it has been soaked in a sterilizing solution of metabisulphite prior to bottling. All are harmless. See also *Cold stabilization*, p.27.

TASTEVIN (Fr.) A shallow, dimpled, silver cup used for tasting, primarily in Burgundy.

TbA (Ger.) A commonly used abbreviation of *Trockenbeerenauslese*, this category is for wines produced from individually picked, **botrytized** grapes that have been left on the vine to shrivel. The wine

is golden-amber to amber in color, intensely sweet, viscous, very complex and as different from *Beerenauslese* as that wine is from *Kabinett*.

TCA Short for trichloroanisole, the prime (but by no means only) culprit responsible for **corked** wines. TCA is found in oak staves as well as in cork.

TEINTURIER A grape variety with colored (red), as opposed to clear, juice.

TERPENE Any one of a class of unsaturated hydrocarbons that are found in the essential oils of many plants. Terpenes and terpene alcohols are responsible for some of the most aromatic characteristics in wine; these range from the floral aromas of Muscat to the **gasoline** or kerosene character of a wonderfully mature Riesling. In sparkling wine, a terpene character may indicate Riesling in the blend, but is more likely to be due to part or all of the base wine being kept unduly long in tank prior to the **second fermentation**.

TERROIR (Fr.) This literally means "soil," but in a viticultural sense *terroir* refers in a more general way to a vineyard's whole growing environment, which also includes altitude, **aspect**, climate, and any other significant factors that may affect the life of a vine, and thereby the quality of the grapes it produces.

TÊTE DE CUVÉE (Fr.) The first flow of juice during the pressing of the grapes, and the cream of the *cuvée*. It is the easiest juice to extract and the highest in quality, with the best balance of acids, sugars, and minerals.

THIN A term used to describe a wine that is lacking in **body**, fruit, and other properties.

TIGHT A **firm** wine of good **extract** and possibly significant **tannin** that seems to be under tension, like a wound spring waiting to be released. Its potential is far more obvious than that of **reticent** or **closed** wines.

TOAST 1. A slow-developing, bottle-induced **aroma** commonly associated with Chardonnay, but that can develop in wines made from other grapes (including red wines). Toasty bottle aromas are initially noticeable on the **aftertaste**, often with no indication on the **nose**. 2. A fast-developing **oak**-induced aroma. 3. Barrels are toasted during their construction to one of three grades: light or low, medium, and heavy or high.

TOBACCO A subjective **bouquet**/tasting term often applied to **oak**-matured wines, usually Bordeaux.

TOTAL ACIDITY The total amount of **acidity** in a wine is usually measured in grams per liter and, because each acid is of a different strength, expressed either in terms of sulfuric or **tartaric acid**.

TRANSFER METHOD Synonym of *transvasage*.

TRANSVASAGE (Fr.) In what is also known as the transfer method, non-*Méthode Champenoise* sparkling wines undergo a **second fermentation** in bottle, and are then decanted, filtered, and rebottled under pressure to maintain the *mousse*.

TRICHLOROANISOLE See *TCA*.

TRIE (Fr.) This term usually refers to the harvesting of selected overripe or **botrytized** grapes by numerous sweeps (*tries*) through the vineyard.

TROCKENBEERenauslese See *TbA*.

TYPICAL Overused, less-than-honest form of **honest**.

TYPICITY A wine that shows good typicity is one that accurately reflects its grape variety and soil type.

UC (Fr.) Short for *Union Coopérative* or other titles denoting a local or regional cooperative.

UC DAVIS The University of California's **oenology** department at Davis.

ULLAGE (Fr.) 1. The space between the top of the wine and the head of the bottle or cask. An old bottle of wine with an *ullage* beneath the shoulder of the bottle is unlikely to be any good. 2. The practice of topping off wine in a barrel to keep it full and thereby prevent excessive **oxidation**.

ULTRAPREMIUM A marketing term for a quality category; see **Premium**.

UMAMI, UNAMI The fifth basic taste (after sweetness, sourness, bitterness, and saltiness—see *The Taste of Wine*, p.10) is the eastern concept of *umami* (a satisfying taste of completeness prompted by the **amino acid** glutamate, hence the use of monosodium glutamate as a taste enhancer in Chinese cuisine).

Umami dates back to the early 1900s, but was given scientific credence in 2002, when Charles Zuker and Nick Ryber identified a taste receptor in the palate for amino acids. The concept of *umami* as a basic taste is contested by some scientists who argue that it is artificial and created out of a complex continuum of perceptions. Other scientists claim that this explains all basic tastes, including sweetness, sourness, bitterness, and saltiness. Still others propose further basic taste sensations, such as the taste of free fatty acids and the metallic sensation.

UNDERTONE A subtle and supporting characteristic that does not dominate like an **overtone**. In a fine wine, a strong and simple overtone of youth can evolve into a delicate undertone with maturity, adding to a vast array of other nuances that give the wine **complexity**.

UNGENEROUS A wine that lacks generosity has little or no **fruit** and also far too much **tannin** (if red) or **acidity** for a correct and harmonious **balance**.

UNRIPE ACID Malic acid, as opposed to **tartaric acid** or **ripe acid**.

UPFRONT This term suggests a wine with an attractive, simple, immediately recognizable quality that says it all. Such a wine may initially be interesting, but it will not develop further and the last glass would say nothing more about its characteristics than the first.

UVAGGIO (It.) Wine that has been blended from various grape varieties.

VA The abbreviation for **volatile acidity**.

VA LIFT A winemaking "trick" whereby the **volatile acidity** is elevated to enhance the fruitiness of wine, but it is never allowed to rise anywhere near the level where the wine becomes unstable. Acceptable only in wines that are ready to drink, since this phenomenon does not improve with age.

VALUE-FOR-MONEY The difference between penny-saving and penny-pinching, true value-for-money can exist in a wine that costs \$50 (or fifty pounds, euros, *et. al.*) as much as it can in one that costs \$5, and the decision whether to buy will depend on how deep your pocket is. It is, however, facile to ask if the first wine is 10 times better than the second. You can still get value-for-money when buying a house for \$1,000,000, but will it be ten times better than a \$100,000 property?

VANILLA, VANILLA-OAK Often used to describe the **nose** and sometimes the **palate** of an **oak**-aged wine, especially Rioja. It is the most basic and obvious of oak-induced characteristics.

VANILLIN An aldehyde with a vanilla aroma that is found naturally in **oak** to one degree or another.

VARIETAL, VARIETAL AROMA, VARIETAL CHARACTER The unique and distinctive character of a single grape variety as expressed in the wine it produces.

VC (Sp.) Short for *vino comarcal*, which literally means a "local wine" and can be compared to the *vin de pays* of France.

VDL A common abbreviation of *vin de liqueur*, a fortified wine that is normally muted with alcohol before **fermentation** can begin.

VDLT (Sp.) Short for *vino de la tierra*, which literally means a "country wine," but is closer to the *VdQS* of France than its *vin de pays*.

VDN A common abbreviation for *vin doux naturel*. This is, in fact, a fortified wine, such as Muscat de Beaumes de Venise, that has been muted during the **fermentation** process, after it has achieved a level of between five and eight percent alcohol.

VDQS A common abbreviation for *vin délimité de qualité supérieure*, which is a quality-control system below *AOC*, but above *vin de table* and *vin de pays*.

VDT (It.) Short for *vino da tavola*. Supposedly the lowest rung in Italy's appellation system, it does, however, in practice, encompass some of the country's greatest wines. See Italy, p.263.

VEGETAL Applied to wines of a certain maturity, often Chardonnay or Pinot, that are well rounded in style and have taken on a *bouquet* pleasingly reminiscent of vegetation, rather than fruit.

VENDANGETARDIVE (Fr.) Late harvest.

VÉRAISON (Fr.) The ripening period, during which the grapes do not actually change very much in size, but do gain in color (if black) and increase in sugar and *tartaric acid*, while at the same time decreasing in unripe *malic acid*.

VERMOUTH An aromatized wine. The name vermouth originates from *Wermut*, the German for wormwood, which is its principal ingredient. The earliest examples made in Germany in the 16th century were for local consumption only, the first commercial vermouth being Punt-é-Mes, created by Antonio Carpano of Turin in 1786. Traditionally, Italian vermouth is red and sweet, while French is white and dry, but both countries make both styles. Vermouth is made by blending very bland base wines (they are two or three years old and come from Apulia and Sicily in Italy and Languedoc-Roussillon in France) with an extract of aromatic ingredients, then sweetening the blend with sugar and fortifying it with pure alcohol. Chambéry, a pale and delicately aromatic wine made in the Savoie, France, is the only vermouth with an official *appellation*.

VERTICAL TASTING See *Horizontal tasting*.

VIERTELSTÜCK (Ger.) A small oval cask with a capacity of 300 liters (80 gallons).

VIGNERON (Fr.) Vineyard worker.

VIGNOBLE (Fr.) Vineyard.

VIGOR Although this term could easily apply to wine, it is invariably used when discussing the growth of a vine, and particularly of its canopy. In order to ripen grapes properly, a vine needs about 8 square inches (50 square centimeters) of leaf surface to every gram of fruit, but if a vine is too vigorous (termed "high vigor"), the grapes will have an *overherbaceous* character, even when they are theoretically ripe.

VIN DE CAFÉ (Fr.) This category of French wine is sold by the carafe in cafés, bistros, and so on.

VIN DE GARDE (Fr.) Wine that is capable of significant improvement if it is allowed to age.

VIN DE GLACE (Fr.) French equivalent of *Eiswein*.

VIN DE GOUTTE (Fr.) Free-run juice. In the case of white wine, this is the juice that runs free from the press before the actual pressing operation begins. With red wine, it is fermented wine drained off from the manta or cap before this is pressed.

VIN DE L'ANNÉE (Fr.) This term is synonymous with *vin primeur*.

VIN DE LIQUEUR See *VdL*.

VIN DE PAILLE (Fr.) Literally "straw wine," a complex sweet wine produced by leaving late-picked grapes to dry and shrivel in the sun on straw mats. See also The Jura and Savoie, p.224.

VIN DE PAYS (Fr.) A rustic style of country wine that is one step above *vin de table*, but one beneath *VdQS*. See also Vin de Pays, p.248.

VIN DE PRESSE (Fr.) Very dark, tannic, red wine pressed out of the manta or cap, after the *vin de goutte* has been drained off.

VIN DE TABLE (Fr.) Literally "table wine," although not necessarily a direct translation. It describes the lowest level of wine in France and is not allowed to give either the grape variety or the area of origin on the label. In practice, it likely consists of various varieties from numerous areas that have been blended in bulk to produce a wine of consistent character, or lack thereof, as the case may be.

VIN DÉLIMITÉ DE QUALITÉ SUPÉRIEURE See *VdQS*.

VIN DOUX NATUREL See *VdN*.

VIN D'UNE NUIT (Fr.) A *rosé* or very pale red wine that is allowed contact with the manta or cap for one night only.

VIN GRIS (Fr.) A delicate, pale version of *rosé*.

VIN JAUNE (Fr.) This is the famous "yellow wine" of the Jura that derives its name from its honey-gold color that results from a deliberate *oxidation* beneath a *sherrylike flor*. The result is similar to an aged Fino sherry, although it is not *fortified*. See also The Jura and Savoie, p.224.

VIN MOUSSEUX (Fr.) This literally means "sparkling wine" without any particular connotation of quality one way or the other. But because all fine sparkling wines in France utilize other terms, for all practical purposes it implies a cheap, low-quality product.

VIN NOUVEAU (Fr.) This term is synonymous with *vin primeur*.

VIN ORDINAIRE (Fr.) Literally "an ordinary wine," this term is most often applied to a French *vin de table*, although it can be used in a rather derogatory way to describe any wine from any country.

VIN PRIMEUR Young wine made to be drunk within the year in which it is produced. Beaujolais Primeur is the official designation of the most famous *vin primeur*, but export markets see it labeled as Beaujolais Nouveau most of the time.

VINHO REGIONAL (Port.) See *VR*.

VINIFERA See *Vitis vinifera*.

VINIFICATION Far more than simply describing *fermentation*, vinification involves the entire process of making wine, from the moment the grapes are picked to the point at which the wine is finally bottled.

VINIMATIC This is an enclosed, rotating *fermentation* tank with blades fixed to the inner surface, that works on the same principle as a cement-mixer. Used initially to extract the maximum color from the grape skins with the minimum *oxidation*, it is now being utilized for *prefermentation maceration*.

VINO COMARCAL (Sp.) See *VC*.

VINO DA TAVOLA (It.) *Vin de table*, table wine.

VINO DE LA TIERRA (Sp.) See *VDLT*.

VINO DE MESA (Sp.) Table wine, *vin de table*.

VINO NOVELLO (It.) The same as *vin primeur*.

VINOUS Of, or relating to, a characteristic of wine. When used to describe a wine, this term implies basic qualities only.

VINTAGE 1. A wine of one year. 2. Synonymous with harvest: a vintage wine is the wine of one year's harvest only (or at least 85 percent according to EU regulations) and the year may be anything from poor to exceptional. It is, for this reason, a misnomer to use the term vintage for the purpose of indicating a wine of special quality.

VITICULTURE Cultivation of the vine. Viticulture is to grapes what horticulture is to flowers.

VITIS VINIFERA A species covering all varieties of vines that provide classic winemaking grapes.

VIVID The fruit in some wines can be so *fresh*, *ripe*, clean-cut, and *expressive* that it quickly gives a vivid impression of complete character in the mouth.

VOLATILE ACIDS These acids, sometimes called fatty acids, are capable of evaporating at low temperatures. Too much volatile acidity is always a sign of instability, but small amounts do actually play a significant role in the taste and *aroma* of a wine. Formic, butyric, and propionic are all volatile acids that may be found in wine, but *acetic acid* and *carbonic acid* are the most important.

VOLATILE PHENOLS Almost one-third of all French wines tested have volatile *phenols* above the level of perception, so they are clearly not always bad. Some volatile phenols such as ethyl-4-guaiacol (smoky-spicy aroma) and, to a lesser degree, vinyl-4-guaiacol (carnation aroma) can actually contribute attractive elements to a wine's bouquet. However, volatile phenols are generally considered to be faults, and the amount of ethyl and vinyl phenols

present in a wine is increased by harsh methods of pressing (particularly the use of continuous presses), insufficient settling, use of particular strains of yeast, and, to a lesser extent, increased skin-contact. Ethyl-4-phenol is responsible for the so-called Brett off-aromas (stables, horsey, sweaty-saddles—see *Brettanomyces*), while vinyl-4-phenol has a Band-Aid off-aroma.

VOLUPTUOUS A term used to describe a succulently rich wine, often a red wine, which has a seductive, mouthfilling flavor. See also *luscious*.

VQPRD A common abbreviation for *vin de qualité produit dans une région délimitée*.

VR (Port.) The abbreviation for *vinho regional*, the lowest rung in Portugal's *appellation* system. A VR can be compared to the regional *vin de pays* category in France.

WARM, WARMTH Terms suggestive of a good-flavored red wine with a high alcoholic content; if these terms are used with an accompanying description of cedary or *creamy*, they can mean well-matured in *oak*.

WATERSHED A term used for an area where water drains into a river system, lake, or some other body of water.

WATERY An extreme qualification of *thin*.

WEISSHERBST (Ger.) A single-variety *rosé* wine produced from black grapes only.

WINE LAKE A common term for the EU surplus of low-quality table wine.

WINKLER SCALE A term synonymous with the *heat summation* system.

WOOD LACTONES These are various *esters* that are picked up from new *oak*; they may be the source of certain creamy-oak and coconutty characteristics.

WOOD-MATURED This term normally refers to a wine that has been aged in new *oak*.

YEAST A kind of fungus that is absolutely vital in all winemaking. Yeast cells excrete a number of *yeast enzymes*, some 22 of which are necessary to complete the chain reaction that is known as *fermentation*. See also Yeast the Fermenter, p.25.

YEAST ENZYMES Each yeast *enzyme* acts as a catalyst for one particular activity in the *fermentation* process and is specific for that one task only.

YEASTY This is not a complimentary term for most wines, but a yeasty *bouquet* can sometimes be desirable in a good-quality sparkling wine, especially if it is young.

YIELD 1. The quantity of grapes produced from a given area of land. 2. How much juice is pressed from this quantity of grapes. Wine people in Europe measure yield in hl/ha (hectoliters per hectare—a hectoliter equals 1,000 liters), referring to how much juice has been extracted from the grapes harvested from a specific area of land. This is fine when the amount of juice that can be pressed from grapes is controlled by European-type *appellation* systems, but in the New World, where this seldom happens, they tend to talk in terms of tons per acre. It can be difficult trying to make exact conversions in the field, particularly after a heavy tasting session, when even the size of a ton or gallon can become quite elusive. This is why, as a rough guide, I multiply the tons or divide the hectoliters by 20 to convert one to the other. This is based on the average extraction rates for both California and Australia, which makes it a good rule-of-thumb. Be aware that white wines can benefit from higher yields than reds (although sweet wines should have the lowest yields of all) and that sparkling wines can get away with relatively high yields. For example, Sauternes averages 25 hl/ha, Bordeaux 50 hl/ha, and Champagne 80 hl/ha.

ZESTY A lively characteristic that is suggestive of a *zippy* tactile impression combined, maybe, with a distinctive hint of citrus *aroma*.

ZING, ZINGY, ZIP, ZIPPY Terms that are all indicative of something that is noteable for being refreshing, lively, and vital in character, resulting from a high balance of ripe fruit *acidity* in the wine.

ACKNOWLEDGMENTS

AUTHOR'S ACKNOWLEDGMENTS (2005 EDITION)

Special thanks to Jo Benwell, who was like a rock at DK. Although Jo joined the editorial team at a relatively late stage, she was in charge of most of the hard graft on this edition. Long-overdue thanks to Antony Melville and his team for selling this encyclopedia into 14 countries, including 12 foreign-language editions. Others at DK past and present I would like to thank personally include Catherine Bell, Nina Blackett, Louise Brown, Sarah Burgess, Paul Eames, Bill Evans, Deirdre Headon, Hermiona Ireland, David Lamb, Alexandra Leat, Marianne Markham, Sue Metcalfe-Meggison, Claire Nottage, David Roberts, John Roberts, Cathy Sears, Liz Statham, Serena Stent, Kate Stevenson, Louise Waller, Kevin Ward, and Gary Werner. Apologies for any missing names. Also thanks to everyone at DK India for converting the text into database format, which will be a godsend on future revisions, and to all those at Cooling Brown who helped to put this latest edition together.

Thanks to Tom Coulson and Martin Darlison at Encompass Graphics for converting the encyclopedia's maps into digital format.

Colleagues and friends who have helped me out along the way include, as ever, Michael Schmidt, but also Katrina Alloway, Tom Cannavan, Márkus György, Ron Jackson, Wink Lorch, Catherine Manach, Hamish Marrett-Crosby, John Radford, Richard Smart, and Monty Waldin. I must not forget the help and assistance from everyone I am in contact with in the international wine trade, especially those who helped coordinate my trips around the world. They might be far too numerous to list, but they know who they are and I am hugely grateful for their help.

I cannot end these acknowledgments without including a very special thanks to Christopher Davis, who is due to retire as Publisher at DK in 2005. It was Christopher's belief in me in 1985—when I had just a few editions of the annual *Sunday Telegraph Good Wine Guide* to my name and I was writing for more than 100 publications worldwide to make ends meet—that allowed me the privilege of conceiving a book such as this, and the means with which to research and write it. Hopefully, more than 500,000 copies later, with total retail sales of £17 million (\$31 million), he is as pleased about that decision as I am.
