GOOD NEWS AND BAD NEWS

THE GOOD NEWS IS THE NUMBER OF top-performing wine producers throughout the world, which has swollen out of all proportion when compared with earlier editions of this encyclopedia. Despite deleting hundreds of previously recommended producers, there are now in excess of 6,000 wineries recommended over the following pages. I have never upgraded the star ratings of so many producers in any revision than I have for the California chapter in this edition. And, proportionately, the number of increased ratings for wineries in Australia and, my self-confessed favorite, New Zealand, was not far behind.

The bad news is the low number of top-performing organic wine producers. To be frank, I had no idea just how bad the situation was when I first decided to use  and  symbols to identify recommended organic and biodynamic wine producers, but the relative rarity of these symbols throughout the book rang alarm bells. It is one thing if someone gifted like Olivier Humbrecht of Domaine Zind-Humbrecht in Alsace or Lalou Bize-Leroy of Domaine Leroy in Burgundy go organic or biodynamic. When great winemakers with exceptional *terroirs* “go green” they produce great organic or biodynamic wines. However, it is quite another matter when others less passionate about the quality of wine are organic. While they may well have a true passion for the environment, the majority of the world’s organic producers clearly have no idea how to make a superior quality wine. And considering that many of them have been churning out their green gunge for years, they obviously could not care less. Just as worrying are the organizations that certify organic and biodynamic production, because it seems as if they could not care less either. It is not good enough to certify the method of production alone. They should acknowledge the importance of quality by introducing some sort of superior award on the label. Either that or the likes of Humbrecht and Bize-Leroy should set up international schools of organic and biodynamic excellence. Both ideas would be nice.

A handwritten signature in black ink that reads "Dan Searcy". The signature is fluid and cursive, with a long horizontal stroke extending to the right.

September 2005

DISTRICTS AND TASTE GUIDES

WINE DISTRICTS
In France and California, each region's individual wine-producing districts are examined separately.

FACTORS AFFECTING TASTE AND QUALITY
In the introductory text for countries, regions, or districts, a tinted panel gives a quick-reference guide to the fundamental conditions that determine the quality and style of the wines produced in each area.

APPELLATIONS TEXT
Each winemaking area or appellation of a country, region, or district, whether legally defined or not, is listed and reviewed. The best producers in each appellation are listed. The symbols below form part of the text.

WINE STYLES
If a country or a region has a purely geographical system of appellations, then its wines may be described under the heading "The Wine Styles of..." The best-of-the-best wines of each wine style are listed.

DISTRICT MAP
These maps show color-coded winemaking areas, and, like some regional maps, also show intensive wine-producing zones and indicate the location of the best wine producers.

WINE PRODUCERS
The best and most famous wine producers in countries, regions, and districts are reviewed on Wine Producer pages. Star ratings are given where applicable, and particular wines are recommended.

ILLUSTRATIONS
Color photographs capture the flavor of each region.

Main content area containing various text boxes, tables, and maps. Includes sections like 'THE MEDOC', 'THE APPELLATIONS OF THE MEDOC', 'THE WINE PRODUCERS OF THE MEDOC', and 'THE WINE STYLES OF NEW ZEALAND'. Contains a table 'PROPORTION OF AOC AREA UNDER VINE REPRESENTED BY CRU CLASSES' and a map of the Medoc region.

STAR RATING SYSTEM
The Factors Affecting Taste and Quality boxes appear on the introductory pages of countries, regions, or districts. The taste guides (Appellations, Producers, and Wine Styles) follow these introductions.
FACTORS AFFECTING TASTE AND QUALITY
LOCATION, CLIMATE, ASPECT, SOIL, VITICULTURE AND VINIFICATION, GRAPE VARIETIES
TASTE GUIDE SYMBOLS
When to drink for optimum enjoyment. This is usually given as a range (such as 3-7 years) from the date of the vintage. "Upon purchase" is for wines that should be both bought and drunk while young. "Upon opening" is for fortified wines that can keep for many years but, contrary to popular belief, do not keep well once opened.
Grape varieties used.
The very best wines in the author's experience.
Recommended producers, vineyards, and wines.

STAR RATING SYSTEM
Stars are given for a producer's general quality and do not necessarily apply to each wine produced. When a producer has neither stars nor a cross, this indicates an acceptable but not outstanding standard.
Half-stars indicate intermediate ratings
★ Wines that excel within their class or style.
★★ Very exceptional wines. The local equivalent of a Bordeaux super-second. See Glossary, p.638.
★★★ The best wines that money can buy, without any allowances made for limitations of local style and quality.
A producer of organic wines.
A producer of biodynamic wines.
Wines of exceptional value for money, whether they are inexpensive or not.
Wines that are inconsistent, or too rustic, or judgment has been reserved for a stated reason.
Underperformers for their category or style.

THE TASTE OF WINE

The difference between tasting and drinking is similar to test-driving a car you may buy and the relish of driving it afterward. One is a matter of concentration, as you seek out merits and faults, while the other is a more relaxed and enjoyable experience. Almost anyone can learn to taste wine.

WHEN TASTING A WINE it is important to eliminate all distractions, especially comments made by others; it is all too easy to be swayed. The wine should be tasted and an opinion registered before any ensuing discussions. Even at professionally led tastings, the expert's job is not to dictate but to educate, to "lead from behind," putting into perspective other people's natural responses to smells or tastes through clear and concise explanation. The three "basics" of wine-tasting are sight, smell, and taste, known as "eye," "nose," and "palate."

THE SIGHT, OR "EYE," OF A WINE

The first step is to assess the wine's limpidity, which should be perfectly clear. Many wines throw a deposit, but this is harmless if it settles to yield a bright and clear wine. If it is cloudy or hazy, the wine should be discarded. Tiny bubbles that appear on the bowl or cling persistently to the edge of the glass are perfectly acceptable in a few wines, such as Muscadet *sur lie* and Vinho Verde, but probably indicate a flaw in most other still wines, particularly if red and from classic Old World regions.

The next step is to swirl the wine gently around the glass. So-called "legs" or "tears," thin sinewy threads of wine that run down the side of the glass, may appear. Contrary to popular belief, they are not indicative of high glycerol content, but are simply the effect of alcohol on wine's viscosity, or the way the wine flows. The greater the alcohol content, the less free-flowing, or more viscous, the wine actually becomes.

VISUAL EXAMINATION

Unless it has an extreme color or hue, the appearance of a wine is the least interesting aspect of a tasting note for most readers, which is why most authors use color descriptions sparingly. The eye is, however, one of the most important sensory organs for professional tasters, since even the most subtle shade or nuance can provide numerous clues to the wine's identity.

The color of wine

Natural light is best for observing a wine's color, the first clue to its identity once its condition has been assessed. Look at the wine against a white background, holding the glass at the bottom of the stem and tilting it away from you slightly. Red wines vary in color from *clairet*, which is almost rosé, to tones so dark and opaque that they seem black. White wines range from a colorless water-white to deep gold, although the majority are a light straw-yellow color. For some reason, there are very few rosé wines that are truly pink in color, the tonal range extending from blue-pink, through purple-pink, to orange-pink. Disregard any impression about a wine's color under artificial lighting because it will never be true—fluorescent light, for example, makes a red wine appear brown.

Factors affecting color

The color and tonal variation of any wine, whether red, white, or rosé, is determined by the grape variety. It is also influenced by the ripeness of the actual grapes, the area of production, the method of vinification, and the age of the wine. Dry, light-bodied wines from cooler climates are the lightest in color, while fuller-bodied or sweeter-styled wines from hotter regions are the deepest. Youthful red wines usually have a purple tone, whereas young white wines may hint of green, particularly if they are from a cooler climate. The aging process involves a slow oxidation that has a browning effect similar to the discoloration of a peeled apple that has been exposed to the air.

THE SMELL, OR "NOSE," OF A WINE

Whenever an experienced taster claims to be able to recognize in excess of 1,000 different smells, many wine lovers give up all hope of acquiring even the most basic tasting skills. Yet they should not be discouraged. Almost everybody can detect and distinguish over 1,000 different smells, the majority of which are ordinary, everyday odors. Ask anyone to write down all the

NOSING A WINE

As we smell most flavors, rather than taste them, a good sniff tells us a lot about a wine. But refrain from continuously sniffing, as this will dull your sense of smell. Take one good sniff, then pause for thought. Do not rush on to tasting the wine. Remember that no smells are specific to wine—they can all be compared to something familiar, but you need time to work out what they are.

smells they can recognize and most will be able to list several hundred without really trying. Yet a far greater number of smells are locked away in our brains waiting to be triggered.

The wine-smelling procedure is quite simple. Give the glass a good swirl, put your nose into the glass, and take a deep sniff. While it is essential to take a substantial sniff, it is not practicable to sniff the same wine again for at least two minutes. This is because each wine activates a unique pattern of nerve ends in the olfactory bulb; these nerve ends are like small candles that are snuffed out when activated and take a little time to reactivate. As a result, subsequent sniffs of the same smell can reveal less and less, yet it is perfectly feasible to smell different smells, therefore different wines, one after the other.

THE TASTE, OR “PALATE,” OF A WINE

As soon as one sniffs a wine the natural reaction is to taste it, but do this only after all questions concerning the nose have been addressed. The procedure is simple, although it may look and sound rather strange to the uninitiated. Take a good mouthful and draw air into the mouth through the wine; this makes a gurgling sound, but it is essential to do it in order to magnify the wine's volatile characteristics in the back of the throat.

The tongue itself reveals very little; sweetness is detected on its tip, sourness or acidity on the sides, bitterness at the back and top, and saltiness on the front and sides. Apart from these four basic taste perceptions, we smell tastes rather than taste them. Any food or drink emits odorous vapors in the mouth that are automatically conveyed to the roof of the nasal passages. Here the olfactory bulb examines, discerns, and catalogs them—as they originate from the palate the natural inclination is to perceive them as tastes. For many of us it is difficult to believe that we taste with an organ located behind the eyes at the top of the nose, but when we eat ice cream too quickly, we painfully experience precisely where the olfactory bulb is, because the chilly aromas of the ice cream literally freeze this acutely delicate sensory organ. The texture of a wine also influences its taste; the prickly tactile sensation of carbon dioxide, for example, heightens our perception of acidity, while increased viscosity softens it.

MAGNIFYING THE TASTE OF A WINE

The tongue discerns only sweetness, sourness, bitterness, and saltiness. Every other “taste” we smell. By drawing air through a mouthful of wine, the volatilized aromas are taken into the back of the throat, where they are picked up by the olfactory bulb, which automatically analyzes them and transmits the information to the brain as various so-called flavors. (See also “Umami,” Glossary p.639)

SPITTING OUT

When tasting a large number of wines, each mouthful should be ejected after due assessment to prevent alcohol from affecting the ability to taste. Yet some wine will remain, even after spitting out, coating the inner surface of the mouth, where it is absorbed directly into the bloodstream. Contrary to popular belief, the more you taste the better you taste, but it is a race between the wine sharpening the palate and the alcohol dulling the brain!

QUALITY AND TASTE: WHY OPINIONS DIFFER

Whether you are a novice or a Master of Wine, it is always personal preference that is the final arbiter when you are judging wine. The most experienced tasters can often argue endlessly over the relative merits and demerits of certain wines.

We all know that quality exists, and more often than not agree which wines have it, and yet we are not able to define it. Lacking a solid definition, most experienced tasters would happily accept that a fine wine must have natural balance and finesse and show a definite, distinctive, and individual character within its own type or style. If we occasionally differ on the question of the quality of wine, should we disagree on what it tastes like? We may love or hate a wine, but surely the taste we perceive is the same?

Conveying specific taste characteristics from the mind of one person to that of another is difficult enough, whether one is writing a book or simply discussing a wine at a tasting. Much of this difficulty lies in the words we choose, but the problem is not confined to semantics. In a world of perfect communication, conveying impressions of taste would still be an inexact art because of the different threshold levels at which we pick up elementary tastes and smells, and because of the various tolerance levels at which we enjoy them. If individuals require different quantities of acidity, tannin, alcohol, sugar, esters, and aldehydes in a wine before actually detecting them, then the same wine has, literally, a different taste for each of us. In the unlikely event of people having the same threshold for every constituent and combination of constituents, disagreement would probably ensue because we also have different tolerance levels; therefore, some of us would enjoy what others dislike because we actually like the tastes and smells they dislike. Thresholds and tolerance levels vary enormously; the threshold for detecting sweetness, for example, varies by a factor of five, which explains the “sweet tooth” phenomenon, and there are an infinite number of tolerance levels. Apply this to every basic aroma and flavor, and it is surprising that we agree on the description of any wine.

HOW TO ASSESS A WINE

It would be impossible to answer many of the following questions without a degree of experience. Likewise, it would be difficult to identify a particular wine, or type of wine, having never tasted it. But your knowledge will increase with every tasting.

SIGHT

Look at the color. Is it deep or pale? Is there a positive quality to it, a specific hue that reminds you of a particular grape variety, the growing climate, or the area of production? Is the color vivid

and youthful, or is there browning that might suggest its age? What does the rim, or meniscus, indicate? Does it retain the intensity of colour to the rim of the glass, which suggests a high-quality product, or does it fade to an unimpressive, watery finish?

SMELL

If the first impression is very heady, is the wine fortified? (Classic fortified wines, such as port, sherry, and Madeira, do have easily recognizable characteristics, but it can still be difficult to distinguish between a robust wine with a naturally high alcohol level produced in a hot country and a fortified wine.) Does the wine have any distinctive aromas, or are they obscure or bland,

A SAMPLE TASTING

This chart provides a few examples from a whole range of the possible options that are open in the complex business of tasting. It also demonstrates that it is possible to approach the task systematically and rationally. When tasting it is important to keep your options open until

you have assessed the sight, smell, and taste of the wine. At each stage you should be seeking to confirm at least one of the possibilities that has arisen during the previous stage. Be confident and do not be afraid to back your own judgement—it is the only way to learn.

SIGHT

The clear, well-defined garnet color of medium intensity suggests only moderately hot climatic origins. The tinge of purple on the meniscus could indicate youth.

SMELL

This is dominated by the distinctive pear-drop aroma of *macération carbonique*, hallmark of all but the best *cru* Beaujolais. Often mistaken for the varietal aroma of Gamay (from which Beaujolais is made), the aroma is characteristic of all wines fermented in this way. If this is a Beaujolais, the color suggests something more serious than a lighter basic Beaujolais or Nouveau.

TASTE

The balance between fruit, acidity, and alcohol confirms that this is Beaujolais. The good depth of spicy-grapey fruit beneath the pervasive pear-drop character indicates that it is better than average.

CONCLUSION

Grape variety Gamay
Region Beaujolais
Age 2 to 3 years old
Comment Beaujolais Villages

SIGHT

Water-white, this wine has obvious cool climatic origins, although the tiny bubbles collecting on the glass suggest it could be a Vinho Verde. But the palest usually have a tell-tale hint of straw color. Probably a modest *Qualitätswein* from the Mosel region of Germany.

SMELL

This is not Vinho Verde. Its crisp, youthful, sherbet aroma is typical Mosel Riesling. Considering its color, the nose would confirm that this is probably a *Qualitätswein*, or a *Kabinett* at most, of a modest vintage, but from a very good grower who is possibly as high up as the Saar tributary.

TASTE

Youthful, tangy fruit, the flower of the Riesling is still evident. More flavor than expected, and a nice dry, piquant finish with a hint of peach on the aftertaste.

CONCLUSION

Grape variety Riesling
Region Mosel
Age about 18 to 24 months
Comment *Kabinett*, top grower

SIGHT

Intense, almost black color that is virtually opaque. Obviously from a thick-skinned grape variety like the Syrah, which has ripened under a very hot sun. Australia's Swan Valley or France's Rhône Valley? California?

SMELL

As intense on the nose as on the eye. Definitely Syrah, and judging by its spicy aroma with hints of herbal scrub, almost certainly from the northern Rhône. Australia and California can now be ruled out. More massive than complex, it must be from an exceptional vintage.

TASTE

Powerful and tannic, the spicy-fruit flavor is rich with blackberries, blackcurrants, plums, and cinnamon. Beginning to develop, but has a long way to go. This is a high-quality Rhône Syrah, but without quite the class of Hermitage, or the finesse of Côte Rôtie.

CONCLUSION

Grape variety Syrah
Region Cornas, Rhône Valley
Age about 5 years old
Comment top grower, great year

SIGHT

The brick-red color and watery meniscus immediately suggest a young Bordeaux of *petit-château* quality. But first impressions can deceive—more evidence is needed.

SMELL

An attractive violet aroma with a restrained hint of soft, spicy fruit. Nothing contradicts my impressions, although the lack of blackcurrant suggests that the wine is a Bordeaux with a high proportion of Merlot rather than Cabernet Sauvignon.

TASTE

The palate perfectly reflects the nose. This is a medium-bodied, modest claret of no great age. However, the fruit is well rounded and the soft tannin structure indicates that in little more than another 2, possibly 3, years it will be at its peak.

CONCLUSION

Grape variety Merlot-dominated blend
Region Bordeaux
Age 2 years old
Comment *petit château* or good generic

or simply reticent? Does the wine smell as youthful or as mature as it appears to the eye? Is it smooth and harmonious, suggesting the wine is ready to drink? If so, should it be drunk? If it is not ready, can you estimate when it will be? Is there a recognizable grape variety aroma? Are there any creamy or vanilla hints to suggest that it has been fermented or aged in new oak? If so, which region ages such wine in oak? Is it a simple wine or is there a degree of complexity? Are there any hints as to the area of production? Is its quality obvious or do you need confirmation on the palate?

TASTE

This should reflect the wine's smell and therefore confirm any judgements that you have already made. Should. But human organs are fallible, not least the brain, so keep an open mind. Be prepared to accept contradiction as well as confirmation. Ask yourself all the questions you asked on the nose, but before you do, ask what your palate tells you about the acidity, sweetness, and alcoholic strength.

If you are tasting a red wine, its tannin content can be revealing. Tannin is derived from the grape's skin, and the darker and thicker it is, and the longer the juice macerates with the skins,

the more tannin there will be in the wine. A great red wine will contain so much tannin that it will literally pucker the mouth, while early-drinking wines will contain little.

If you are tasting a sparkling wine, on the other hand, its mousse, or effervescence, will give extra clues. The strength of the mousse will determine the style—whether it is fully sparkling, semi-sparkling, or merely *pétillant*—and the size of the bubbles will indicate the quality; the smaller they are, the better.

CONCLUSION

Just try to name the grape variety and area of origin, and give some indication of the age and quality of the wine. Wise tasters will not risk their credibility by having a stab at anything more specific, such as the producer or vineyard, unless he or she is 100 percent sure. In the Master of Wine examination, marks are given for correct rationale, even if the conclusion that is drawn is wrong, while it has been known for a candidate to name the wine in precise detail but, because of defective reasoning, to receive no score at all. Wine tasting is not a matter of guessing. It is about deduction, and getting it wrong should be encouraged because that is the only way to learn.

SIGHT
This distinctive yellow-gold color retains its intensity to the rim. Various possibilities: a sweet wine, a full-bodied dry wine, a mature wine, or something obscure like Retsina. If none of these, it could be a Gewürztraminer.

SMELL
Gewürztraminer! Full, rich, and spicy, the aroma hits you between the eyes and the first instinct is to think of Alsace. Usually you will be right, but bear in mind the possibility of a top grower in the Rheinpfalz or Austria. If the aroma were muted, it might be Italian; if exotic, Californian or Australian. This, however, seems to be a classic example of a ripe Alsace vintage of perhaps 4 years of age.

TASTE
A rich-flavored wine; full, fat, and fruity with well-developed spice and a soft, succulent finish. Evidently made from very ripe grapes.

CONCLUSION
Grape variety Gewürztraminer
Region Alsace
Age about 4 to 5 years old
Comment very good quality

SIGHT
Stunning color, more distinctive even than the Gewürztraminer, the old gold immediately suggests a full, rich, and probably very sweet wine. Sauternes springs to mind, but Austria, or even an oddity from Australia are also possible.

SMELL
This has the amazingly full, rich, and opulent nose of a botrytized wine. Anyone who dislikes sweet wine should smell a wine like this before giving up on it altogether. A touch of creamy-spicy oak rules out Austria and its maturity, probably between 10 and 15 years, probably disposes of Australia.

TASTE
Everything is here from peaches, pineapple, and cream to the honeyed aromatics of a fairly mature wine. Only a classic Sauternes can have such intense flavors, yet possess such great finesse.

CONCLUSION
Grape variety mostly Sémillon
Region Sauternes
Age about 15 years old
Comment *Premier cru*, great vintage

SIGHT
The orange-pink of this wine almost certainly pins it to Provence or Tavel, although, if the orange hue is not indicative of the style and vinification of the wine, it could be almost any over-the-hill rosé.

SMELL
Put the dunce's hat on and stand in the corner! The high-toned Pinot Noir aroma dismisses the firm conviction of a Tavel or Provence rosé. But what is it? It is not oxidized, so it cannot be an otherwise obvious wine that has gone over. Is the orange hue a clue to its origin? More information is needed; must taste the wine.

TASTE
Definitely Burgundian, but with a very distinctive, piquant Pinot Noir taste. At its peak now, but certainly not on the way down. By eliminating what it cannot be, only Rosé de Marsannay fits the bill.

CONCLUSION
Grape variety Pinot Noir
Region Burgundy
Age 4 to 5 years old
Comment medium quality

SIGHT
This sparkling wine has an attractive, lively, lemon-yellow color. Not young, but not old, its mousse is evident, but its power and size of bubble cannot be assessed without tasting it. Its star-bright limpidity just makes it look like a fine wine.

SMELL
Its quality is immediately evident, with the autolytic characteristics of a wine with several years on its first cork (in contact with its lees prior to disgorgement), which eliminates every possibility other than a fine Champagne. It has the zippy tang of ripe Chardonnay grapes. This must be a Champagne *blanc de blancs* with a high proportion of wine from the Côte des Blancs.

TASTE
A gently persistent mousse of ultra-fine bubbles. The fresh, lively flavor has a long finish but needs five years more to reach perfection.

CONCLUSION
Grape variety Chardonnay
Region Champagne
Age about 5 years old
Comment top quality

TERROIR

The same grape grown in the same area can make two totally different wines, owing to seemingly inconsequential factors such as a different soil or aspect. And yet different grapes grown continents apart may produce two wines that are very similar.

THERE ARE CERTAIN, CONSTANT FACTORS that affect the taste and quality of wine. These include location; climate, which determines the ability to grow grapes; vintage, the vagaries of which can make or break a harvest; aspect, responsible for enhancing or negating local conditions; and soil. All these factors are discussed in more detail below and can be classified as elements of *terroir*. Also important, of course, are viticulture, because the cultivation techniques used can stretch or concentrate varietal character (see pp.19–22); vinification, which, like cooking methods, can produce a range of options from the same basic ingredient (see pp.25–31); the winemaker, the idiosyncratic joker in the pack; and grape variety—always the most important factor (see pp.35–45).

LOCATION

The location of a vineyard is fundamental in determining whether its climate is suitable for viticulture. Virtually all the world's wine-producing areas, in both hemispheres, are located in the temperate zones between 30° and 50° latitude, where the annual mean temperature is between 10°C (50°F) and 20°C (68°F). The most northerly vineyards of Germany are at the outermost limit of this range, between 50° and 51° latitude (almost 53° if we include the scattered vineyards of former East Germany), but they survive because of the continental climatic influence, which assures hotter summers. The shorter days also retard the cane growth in favor of fruit maturity, allowing the grapes to ripen before the harsh continental winter. Interestingly, most of the world's finest wines are produced in west-coast locations, which tend to be cooler and less humid than east-coast areas. Forests and mountain ranges protect the vines from wind and rain. A relatively close proximity to forests and large masses of water can influence the climate through transpiration and evaporation, providing welcome humidity in times of drought, although they can also encourage rot. Thus some factors can have both positive and negative effects.

APPLE TREE IN CALVADOS, NORMANDY

Methods of vine-training are applicable to other cultivated fruits, as this spurs-trained apple tree in Calvados illustrates.

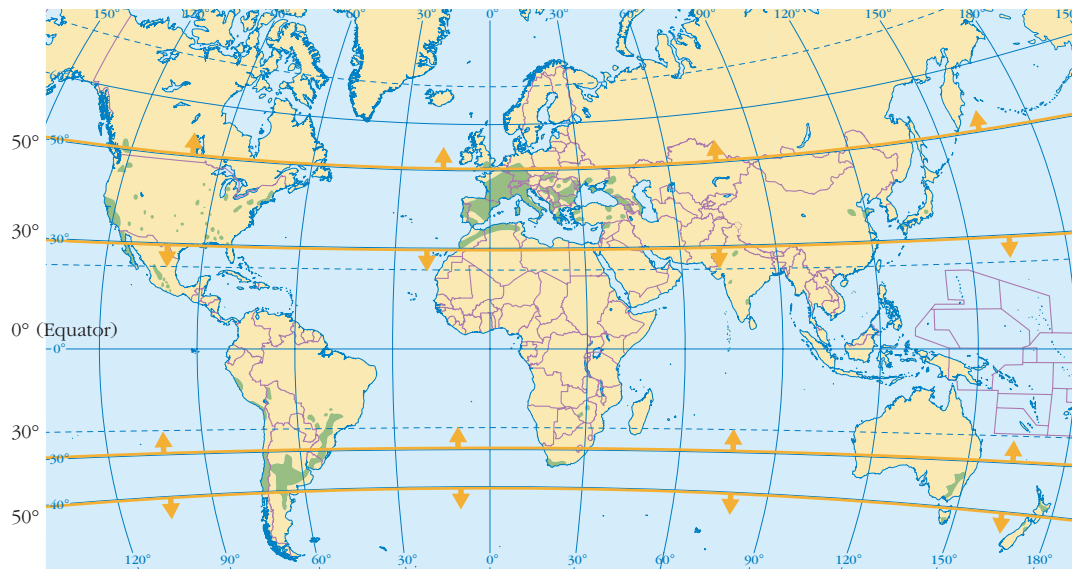

CLIMATE

Climate and weather are the most important factors that influence the growth of grapes for high-quality wines. Climate is determined by geographical location, whereas weather is the result of how nature decides to affect that climate on a daily basis. In other words, climate is what it should be, weather is what it is. A grower must select a region with an amenable climate and hope that nature does not inflict too many anomalies.

Although some vines survive under extreme conditions, most—and all classic—winemaking vines are confined to two relatively narrow climatic bands between 30° and 50° latitude and require a combination of heat, sunshine, rain, and frost.

HEAT

Vines will not provide grapes suitable for winemaking if the annual mean temperature is less than 50°F (10°C). The ideal

THE WORLD OF WINE

The most important areas of cultivation in both the northern and southern hemispheres lie mainly between latitudes 30° and 50°. However, there are a number of smaller winemaking areas closer to the equator. Indeed, equatorial vinifera wines are produced in tiny quantities in Kenya and Peru.

mean temperature is 57° to 59°F (14° to 15°C), with an average of no less than 66°F (19°C) in the summer and 30°F (-1°C) in the winter. In order for the vines to produce a good crop of ripe grapes, the minimum heat-summation, measured in “degree-days” with an average of above 50°F (10°C) over the growing season, is 1,800° (using °F to calculate) or 1,000° (using °C to calculate). Below are the degree-day totals over the growing season for a variety of vineyards from around the world.

AREA/REGION	DEGREE-DAYS FAHRENHEIT (CELSIUS)
Trier, Mosel, Germany	1,700 (945)
Bordeaux, France	2,375 (1,320)
McLaren Vale, South Australia	2,425 (1,350)
Russian River, California	3,600 (2,000)

SUNSHINE

While light is required for photosynthesis, the most important biological process of green plants, there is sufficient light for this even in cloudy conditions. For vinegrowing, however, sunshine is needed more for its heat than its light. Approximately 1,300 hours is the minimum amount of sunshine required per growing season, but 1,500 hours is preferable.

RAINFALL

A vine requires 27 inches (68 centimeters) of rain per year. Ideally, most of the rain should fall in the spring and the winter, but some is needed in the summer too. Vines can survive with less water if the temperature is higher, although rain in warm conditions is more harmful than rain in cool conditions. A little rain a few days before the harvest will wash the grapes of any sprays, and is therefore ideal if followed by sun and a gentle, drying breeze. Torrential rain, however, can split berries and cause fungus.

Below are annual rainfall figures for a variety of vineyards from around the world.

AREA/REGION	RAINFALL
McLaren Vale, South Australia	24 in (60 cm)
Trier, Mosel, Germany	26 in (65 cm)
Bordeaux, France	36 in (90 cm)
Russian River, California	53 in (135 cm)

PREPARING FOR RAIN

In southern Spain, furrows are dug horizontally between rows of vines to provide channels for any rain.

FROST

Surprising as it may seem, some frost is desirable, providing it is in the winter, since it hardens the wood and kills spores and pests that the bark may be harboring. However, frost can literally kill a vine, particularly at bud-break and flowering (see p.23).

VINTAGE

The anomalies of a vintage can bring disaster to reliable vineyards and produce miracles in unreliable ones. A vintage is made by weather, as opposed to climate. While the climate may be generally good, uncommon weather conditions can sometimes occur. In addition to this, the vintage's annual climatic adjustment can be very selective; on the edge of a summer hail storm, for example, some vineyards may be destroyed and produce no wine at all, while others are virtually unharmed and produce good wine. Vines situated between the two might be left with a partial crop of fruit that could result in wines of an exceptional quality if given a further two to three months of warm sunshine before the harvest, because reduced yields per vine produce grapes with a greater concentration of flavor.

CLIMATIC CONDITIONS

Favorable

- A fine, long summer with warm, rather than hot, sunshine ensures that the grapes ripen slowly. Such weather leads to a good acid-sugar balance.
- A dry, sunny fall is essential for ripening grapes and avoiding rot; but, again, it must not be too hot.
- The winter months from November to February (May to August in the southern hemisphere) are climatically flexible, with the vine able to withstand temperatures as low as -4°F (-20°C) and anything other than absolute flood or drought.
- Within the above parameters, the climate must suit the viticultural needs of specific grape varieties; for example a cooler climate for Riesling, hotter for Syrah, and so on.

Unfavorable

- Major dangers are frost, hail, and strong winds, all of which can denude a vine and are particularly perilous when the vine is flowering or the grapes are ripening and at their most susceptible.
- Rain and/or cold temperatures during the flowering may cause imperfect fertilization, which results in a physiological disorder called *millerandage*. The affected grapes contain no seeds and will be small and only partially developed when the rest of the cluster is fully matured.
- Persistent rain at, or immediately before, the harvest can lead to rot or dilute the wine, both of which can cause vinification problems.
- Sun is not often thought of as a climatic danger, but, just as frost can be beneficial to

the vine, so sun can be harmful. Too much sun encourages the sap to go straight past the embryo grape clusters to the leaves and shoots. This causes a physiological disorder called *coulure*, which is often confused with *millerandage*. It is totally different, although both disorders can appear together due to the vagaries of climate. Most seeds suffering from *coulure* drop to the ground, and those that remain do not develop.

- Excessive heat during the harvest rapidly decreases the acid level of grape juice and makes the grapes too hot, creating problems during fermentation. It is especially difficult to harvest grapes at an acceptable temperature in very hot areas, such as South Africa. As a result, some wine estates harvest the grapes at night when the grapes are at their coolest.

ASPECT

The aspect of a vineyard refers to its general topography—which direction the vines face, the angle and height of any slope, and so on—and how this interrelates with the climate.

There are few places in the world where winemaking grapes—as opposed to table grapes—are successfully grown under the full effect of a prevailing climate. The basic climatic requirements of the vine are usually achieved by manipulating local conditions, keeping sunshine, sun strength, drainage, and temperature in mind.

SUNSHINE

South-facing slopes (north-facing in the southern hemisphere) attract more hours of sunshine and are therefore cultivated in cooler areas. In hotter regions, the opposite facing slopes tend to be cultivated.

SUN STRENGTH AND DRAINAGE

Because of the angle, vines on a slope absorb the greater strength of the sun's rays. In temperate regions the sun is not directly overhead, even at noon, and therefore its rays fall more or less perpendicular to a slope. Conversely, on flat ground the sun's rays are dissipated across a wider area, so their strength is diluted. (The plains are also susceptible to flooding and have soils that are usually too fertile, yielding larger crops of correspondingly inferior fruit). Lake- and river-valley slopes are particularly well suited for vines because they also receive rays reflected from the water.

A sloping vineyard also affords natural drainage. However, hilltop vines are too exposed to wind and rain and their presence, instead of a forest covering, deprives vines below of protection. Forested hilltops not only supply humidity in times of drought, but absorb the worst of any torrential rain that could wash away the topsoil below.

TEMPERATURE

While slopes are very desirable sites, it must be remembered that every 330 feet (100 meters) above sea level, the temperature falls 1.8°F (1°C). This can result in an extra 10 to 15 days being needed for the grapes to ripen and, because of the extra time, the acidity will be relatively higher. Thus a vineyard's altitude can be a very effective way of manipulating the quality and character of its crop. Riverside and lakeside slopes also have the advantages of reflected sunlight and the water acting as a heat reservoir, releasing heat at night that has been stored during the day. This not only reduces sudden drops in temperature that can be harmful, but also the risk of frost. However, depressions in slopes and the very bottoms of valleys collect cold air, are frost-prone, and retard growth.

TERRACED VINEYARDS OVERLOOKING THE RHINE
Vines beside bodies of water benefit from the sun's rays reflecting off the water, an advantage in areas where the climate is cooler.

SOIL

Topsoil is of primary importance to the vine because it supports most of its root system, including most of the feeding network. Subsoil always remains geologically true. Main roots penetrate several layers of subsoil, whose structure influences drainage, the root system's depth, and its ability to collect minerals.

The metabolism of the vine is well known, and the interaction between it and the soil is generally understood. The ideal medium in which to grow vines for wine production is one that has a relatively thin topsoil and an easily penetrable (and therefore well-drained) subsoil with good water-retaining characteristics. The vine does not like "wet feet," so drainage is vital, yet it needs access to moisture, so access to a soil with good water-retention is also important. The temperature potential of a soil, its heat-retaining capacity, and its heat-reflective characteristics affect the ripening period of grapes: warm soils (gravel, sand, loam) advance ripening, while cold soils (clay) retard it. Chalk falls between these two extremes, and dark, dry soils are obviously warmer than light, wet soils. High-pH (alkaline) soils, such as chalk, encourage the vine's metabolism to produce sap and grape juice with a relatively high acid content. The continual use of fertilizers has lowered the pH level of some viticultural areas in France, and these are now producing wines of higher pH (less acidity).

THE MINERAL REQUIREMENTS OF THE VINE

Just as various garden flowers, shrubs, and vegetables perform better in one soil type as opposed to another, so too do different grape varieties. Certain minerals essential to plant growth are found in various soils. Apart from hydrogen and oxygen (which are supplied as water) the most important soil nutrients are nitrogen, which is used in the production of a plant's green matter; phosphate, which directly encourages root development and indirectly promotes an earlier ripening of the grapes (an excess inhibits the uptake of magnesium); potassium, which improves the vine's metabolism, enriches the sap, and is essential for the development of the following year's crop; iron, which is indispensable for photosynthesis (a lack of iron will cause chlorosis); magnesium, which is the only mineral constituent of the chlorophyll molecule (lack of magnesium also causes chlorosis); and calcium, which feeds the root system, neutralizes acidity, and helps create a friable soil structure (although an excess of calcium restricts the vine's ability to extract iron from the soil and therefore causes chlorosis). For information on specific soil types, *see* pp.17–18.

HILLS NEAR SANCERRE
In the spring, vineyards give the rolling countryside in France's Loire Valley a speckled appearance. Most soils in the area are dominated by clay or limestone.

GUIDE TO VINEYARD SOILS

To the wine amateur, the details of geology are not always important; what matters is how soil affects the growth of vines. If one clay soil is heavier or more silty, sandy, or calcareous, that is relevant. But there is enough jargon used when discussing wine to think of mixing it with rock-speak.

Aeolian soil Sediments deposited by wind (e.g. loess).

Albariza White-surfaced soil formed by diatomaceous deposits, found in southern Spain.

Alluvial deposits (noun—alluvium) Material that has been transported by river and deposited. Most alluvial soils contain silt, sand, and gravel, and are highly fertile.

Aqueous rocks One of the three basic rock forms (see **Rock**). Also called sedimentary or stratified.

Arenaceous rocks Formed by the deposits of coarse-grained particles, usually siliceous and often decomposed from older rocks (e.g. sandstone).

Argillaceous soils This term covers a group of sedimentary soils, commonly clays, shales, mudstones, siltstones, and marls.

Basalt material accounts for as much as 90 percent of all lava-based volcanic rocks. It contains various minerals, is rich in lime and soda, but not quartz, the most abundant of all minerals, and it is poor in potash.

Bastard soil A *bordelais* name for medium-heavy, sandy-clay soil of variable fertility.

Boulbènes A *bordelais* name for a very fine siliceous soil that is easily compressed and hard to work. This “beaten” earth covers part of the Entre-Deux-Mers plateau.

Boulder See **Particle size**

Calcareous clay Argillaceous soil with carbonate of lime content that neutralizes the clay’s intrinsic acidity. Its low temperature also delays ripening, so wines produced on this type of soil tend to be more acidic.

Calcareous soil Any soil, or mixture of soils, with an accumulation of calcium and magnesium carbonates. Essentially alkaline, it promotes the production of acidity in grapes, although the pH of each soil will vary according to its level of “active” lime. Calcareous soils are cool, with good water retention. With the exception of calcareous clays (see above), they allow the vine’s root system to penetrate deeply and provide excellent drainage.

Carbonaceous soil Soil that is derived from rotting vegetation under anaerobic conditions. The most common carbonaceous soils are peat, lignite, coal, and anthracite.

Chalk A type of limestone, chalk is a soft, cool, porous, brilliant-white, sedimentary, alkaline

CHALK

Pristine white chalk on the Côtes des Blancs.

rock that encourages grapes with a relatively high acidity level. It also allows the vine’s roots to penetrate and provides excellent drainage, while at the same time retaining sufficient moisture for nourishment. One of the few finer geological points that should be adhered to is that which distinguishes chalk from the numerous hard limestone rocks that do not possess the same physical properties.

Clay A fine-grained argillaceous compound with malleable, plastic characteristics and excellent water-retention properties. It is, however, cold, acid, offers poor drainage, and, because of its cohesive quality, hard to work. An excess of clay can stifle the vine’s root system, but a proportion of small clay particles mixed with other soils can be advantageous.

Clayey-loam A very fertile version of loam, but heavy to work under wet conditions with a tendency to become waterlogged.

Cobble See **Particle size**

Colluvial deposits (noun—colluvium) Weathered material transported by gravity or hill-wash.

Crasse de fer Iron-rich hardpan found in the Libournais area of France. Also called *machefer*.

Crystalline May either be igneous (e.g. granite) or metamorphic.

Dolomite A calcium-magnesium carbonate rock. Many limestones contain dolomite.

Feldspar or **Felspar** One of the most common minerals, feldspar is a white- or rose-colored silicate of either potassium-aluminum or sodium-calcium-aluminum and is present in a number of rocks, including granite and basalt.

Ferruginous clay Iron-rich clay.

Flint A siliceous stone that stores and reflects heat, and is often associated with a certain “gun-flint” smell that sometimes occurs in wines, although this is not actually proven and may simply be the taster’s auto-suggestion.

Galestro Rocky, schistous soil commonly found in most of Tuscany’s best vineyards.

Glacial moraine A gritty scree that has been deposited by glacial action.

Gneiss A coarse-grained form of granite.

Granite A hard, mineral-rich rock that warms quickly and retains its heat. Granite contains 40 to 60 percent quartz and 30 to 40 percent potassium feldspar, plus mica or hornblende, and various other minerals. It has a high pH, which reduces wine acidity. Thus, in Beaujolais, it is the best soil for the acidic Gamay grape. It is important to note that a soil formed from granite is a mixture of sand (partly derived from a disintegration of quartz and partly from the decomposition of feldspar with either mica or hornblende), clay, and various carbonates or silicates derived from the weathering of feldspar, mica, or hornblende.

Gravel A wide-ranging term that covers siliceous pebble of various sizes that are loose, granular, airy, and afford excellent drainage. Infertile, it encourages the vine to send its roots down deep in search of nutrients. Gravel beds above limestone subsoils produce wines with markedly more acidity than those above clay.

GRAVEL

Château de France, Leognan, Gironde.

Greywacke Argillaceous rocks that could have been formed as recently as a few thousand years ago by rivers depositing mudstone, quartz, and feldspar. Commonly found in Germany, South Africa, and New Zealand.

Gypsum Highly absorbent, hydrated calcium-sulfate that was formed during the evaporation of seawater.

Gypsiferous marl A marly soil permeated with Keuper or Muschelkalk gypsum fragments, which improve the soil’s heat-retention and water-circulation properties.

Hardpan A dense layer of clay that forms if the subsoil is more clayey than the topsoil at certain depths. Because hardpans are impermeable to both water and roots, they are not desirable too close to the surface, but may provide an easily reachable watertable if located deep down. A sandy, iron-rich hardpan known as ironpan is commonly found in parts of Bordeaux.

Hornblende A silicate of iron, aluminum, calcium, and magnesium, it constitutes the main mineral found in basalt, and is a major component of granite and gneiss.

Humus Organic material that contains bacteria and other microorganisms capable of converting complex chemicals into simple plant foods. Humus makes soil fertile. Without it, soil is nothing more than finely ground rock.

Igneous rock One of the three basic rock forms (see **Rock**), igneous rocks are formed from molten or partially molten material. Most igneous rocks are crystalline.

Ironpan A sandy, iron-rich hardpan.

Keuper Often used when discussing wines in Alsace, Keuper is a stratigraphic name for the Upper Triassic period, and can mean marl (varicolored, saliferous gray or gypsiferous gray) or limestone (ammonoid).

Kimmeridgian soil A grayish-colored limestone originally identified in, and so named after, the village of Kimmeridge in Dorset, England. A sticky, calcareous clay containing this limestone is often called Kimmeridgian clay.

Lignite The “brown coal” of Germany and the “black gold” of Champagne, this is a brown

carbonaceous material intermediate between coal and peat. Warm and very fertile, it is mined and used as a natural fertilizer in Champagne.

Limestone Any sedimentary rock consisting essentially of carbonates. With the exception of chalk, few limestones are white, with gray- and buff-colored probably the most commonly found limestone in wine areas. The hardness and water retention of this rock varies, but being alkaline it generally encourages the production of grapes with a relatively high acidity level.

Loam A warm, soft, crumbly soil with roughly equal proportions of clay, sand, and silt. It is perfect for large-cropping wines of mediocre quality, but too fertile for fine wines.

Loess An accumulation of wind-borne, mainly silty material, sometimes calcareous, but usually weathered and decalcified. It warms up relatively quickly and also has good water-retention properties.

Machefer See *Crasse de fer*

Marl A cold, calcareous clay that delays ripening and adds acidity to wine.

Marlstone Clayey limestone that has a similar effect to marl.

Metamorphic rocks One of the three basic categories of rock (see **Rock**), it is caused by great heat or pressure, often both.

Mica A generic name encompassing various silicate minerals, usually in a fine, decomposed-rock format.

Millstone Siliceous, iron-rich, sedimentary rock.

Moraine See *Glacial moraine*

Mudstone A sedimentary soil similar to clay but without its plastic characteristics.

Muschelkalk Often used when discussing wines in Alsace, *Muschelkalk* is a stratigraphic name for the Middle Triassic period, and can mean anything from sandstone (shelly, dolomitic, calcareous, clayey, pink, yellow, or millstone) to marl (varicolored or fissile), dolomite, limestone (crinoidal or gray), and shingle.

Oolite A type of limestone.

Oolith A term used for small, round, calcareous pebbles that have grown through fusion of very tiny particles.

Palus A *bordelais* name for a very fertile soil of modern alluvial origin that produces medium-quality, well-colored, robust wines.

Particle size The size of a rock determines its descriptive name. No handful of soil will contain particles of a uniform size, unless it has been commercially graded, of course, so all such descriptions can only be guessed at, but it is worth noting what they should be, otherwise you will have nothing to base your guesses on. According to the Wentworth-Udden

PUDDING STONE

Large stones (galettes), Château de Beaucastel, in Châteauneuf-du-Pape.

scale, they are: boulder (greater than 256mm), cobble (64mm–256mm), pebble (4mm–64mm), gravel (2mm–4mm), sand ($\frac{1}{16}$ mm–2mm), silt ($\frac{1}{256}$ mm– $\frac{1}{16}$ mm) and clay (smaller than $\frac{1}{256}$ mm). Notice that even by this precise scale, Wentworth and Udden have allowed overlaps, thus a $\frac{1}{16}$ mm particle might either be sand or silt and, of course, sub-divisions are possible within each group, as there is such a thing as fine, medium, or coarse sand and even gritty silt.

Pebble See **Particle size**

Perlite A fine, powdery, light, and lustrous substance of volcanic origin with similar properties to diatomaceous earth.

Porphyry A colored igneous rock with high pH.

Precipitated salts A sedimentary deposit.

Water charged with acid or alkaline material, under pressure of great depth, dissolves various mineral substances from rocks on the seabed, which are then held in solution.

When the water flows to a place of no great depth or is drained away or evaporates, the pressure is reduced, the minerals are no longer held in solution, and precipitate in deposits that may be just a few inches or several thousand yards deep. There are five groups: oxides, carbonates, sulfates, phosphates, and chlorides.

Pudding stones A term used for a large, heat-retaining conglomerate of pebbles.

Quartz The most common and abundant mineral found in various sizes and in almost all soils, although sand and coarse silt contain the largest amount. Quartz has a high pH, which reduces wine acidity, but quartz that is pebble-sized or larger, stores and reflects heat, which increases alcohol potential.

Red earth See *Terra rossa*

Rock A rock may be loosely described as a mass of mineral matter. There are three basic types of rock: igneous, metamorphic, and sedimentary (or aqueous or stratified).

Sand Tiny particles of weathered rocks and minerals that retain little water, but constitute a warm, airy soil that drains well and is supposedly phylloxera-free.

Sandstone Sedimentary rock composed of sand-sized particles that have either been formed by pressure or bound by various iron minerals.

Sandy-loam Warm, well-drained, sand-dominated loam that is easy to work and suitable for early-cropping grape varieties.

Schist Heat-retaining, coarse-grain, laminated, crystalline rock rich in potassium and magnesium, but poor in nitrogen and organic substances.

Scree Synonymous with colluvium deposits.

Sedimentary rock One of the three basic rock forms (see **Rock**), it includes arenaceous (e.g. sandstone), argillaceous (e.g. clay), calcareous (e.g. limestone), carbonaceous (e.g. peat, lignite, or coal), siliceous (e.g. quartz), and the five groups of precipitated salts, (oxides, carbonates, sulfates, phosphates, and chlorides). Sedimentary rocks are also called aqueous or stratified.

Shale Heat-retaining, fine-grain, laminated, moderately fertile sedimentary rock. Shale can turn into slate under pressure.

Shingle Pebble- or gravel-sized particle rounded by water-action.

Siliceous soil A generic term for acid rock of a crystalline nature. It may be organic (flint and kieselguhr) or inorganic (quartz) and have good heat retention, but no water retention unless found in a finely ground form in silt, clay, and

SLATE

Slate soil of the Mosel valley.

other sedimentary soils. Half of the Bordeaux region is covered with siliceous soils.

Silt A very fine deposit, with good water retention. Silt is more fertile than sand, but is cold and offers poor drainage.

Slate Hard, dark gray, fine-grain, platelike rock formed under pressure from clay, siltstone, shale, and other sediments. It warms up quickly, retains its heat well, and is responsible for many fine wines, most notably from the Mosel.

Steige A type of schist found on the north side of Andlau in Alsace, it has metamorphosed with the Andlau granite and is particularly hard and slaty. It has mixed with the granitic sand from the top of the Grand Cru Kastelberg and makes a dark, stony soil.

Stone This word should be used with rock types, such as limestone and sandstone, but is often used synonymously with pebble.

Stratified rock One of the three basic rock forms (see **Rock**), also called sedimentary or aqueous.

Terra rossa A red, claylike, sometimes flinty sedimentary soil deposited after carbonate has been leached out of limestone. It is often known as "Red earth."

Tufa Various vent-based volcanic rocks, the chalktufa of the Loire being the most important viticulturally speaking.

Volcanic soils Derived from two sources, volcanic soils are lava-based (the products of volcanic flow) and vent-based (material blown into the atmosphere). Some 90 percent of lava-based rocks and soils are comprised of basalt, while others include andesite, pitchstone, rhyolite, and trachyte. Vent-based matter has either been ejected as molten globules, cooled in the air, and dropped to Earth as solid particles (pumice), or as solid material and fractured through the explosive force with which it was flung (tufa).

TERRA ROSSA

The red soil of Wynms, Coonawarra, South Australia.

VITICULTURE

While it is the variety of grape that determines the basic flavor of a wine, it is the way in which the variety is grown that has the most profound effect on the quality of the wine.

IN VINE TRAINING, it is absolutely crucial to ensure that no cane ever touches the ground. Should a cane find its way to the ground, its natural inclination is to send out suckers that will put down roots. Within two or three years the majority of the grafted vine's (see *Phylloxera*, p.35) above-ground network would be dependent not on grafted roots, but on the regenerated root

BASIC SYSTEMS OF VINE TRAINING

There are two basic systems of vine training, cane training and spur training, of which there are many local variations. Cane-trained vines have no permanent branch because all but one of the strongest canes (which will be kept for next season's main branch) are pruned back each year to provide a vine consisting of almost entirely new growth. Apart from the trunk, the oldest wood on a cane-trained vine is the main branch and that is only ever one year old. This system gives a good spread of fruit over a large area, and allows easier regulation of annual production, because the number of fruiting buds can be increased or decreased. With spur training there is no annual replacement of the main branch, thus a solid framework is formed. It is easy, therefore, to know which basic training system has been applied to a vine simply by looking at the main branch. Even if you cannot recognize the specific style of training, if the main branch is thin and smooth, you will know that it has been cane trained, whereas if it is thick, dark, and gnarled, it has been spur trained.

GUYOT—AN EXAMPLE OF CANE-TRAINING

In the winter, the main horizontal cane is cut off and the spare cane (A) is bent horizontally to be tied to the bottom wire, where it will become next season's main cane. Another shoot close to the trunk will be allowed to grow as next season's spare cane.

GOBELET—AN EXAMPLE OF SPUR-TRAINING

The main canes on a spur-trained vine are all permanent, and will only be replaced if they are damaged. Only the year-old shoots are pruned back.

system of the producing vine. Not only would this have the effect of putting the vine at the mercy of phylloxera, but, ironically, that part of the vine still receiving its principal nourishment from the grafted hybrid rootstock would send out its own shoots and, unchecked by any sort of pruning, these would produce hybrid fruit. Therefore, the fundamental reason for training and pruning a vine is to avoid phylloxera and to ensure that the purity of the fruiting stock is maintained.

The manner in which a vine is trained will guide the size, shape, and height of the plant toward reaping maximum benefits from the local conditions of aspect and climate. Vines can be trained high to avoid ground frost, or low to hug any heat that may be reflected by stony soils at night. There may be a generous amount of space between rows to attract the sun and avoid humidity. On the other hand, vines may be intensively cultivated to form a canopy of foliage to avoid too much sun.

STYLES OF VINE TRAINING

Within the two basic systems of cane training and spur training, hundreds of different styles are employed, each developed for a reason, and all having their own advantages and disadvantages. In order to discern the style used in a particular vineyard, it is always best to look at the vines between late fall and early spring when the branches are not camouflaged with leaves. In the illustrations below, which are not drawn to scale, vines are shown as they appear during their winter dormancy, with the following season's fruiting canes shown in green. For cane-trained systems, a green-brown tint has been used to pick out the one-year-old wood used as next season's main branch.

Bush vine—*Spur-training system*

An unsupported version of the Gobelet system (see below left), the term "bush vine" originated in Australia, where a few old vineyards—usually planted with Grenache—are still trained in this fashion. Bush vines are traditional in Beaujolais (where both supported and unsupported methods are referred to as Gobelet) and they are commonly found throughout the most arid areas of the Mediterranean.

Being unsupported, the canes often flop downward when laden with fruit, giving the vine a sprawling, straggly look. In the Beaujolais *crus*, the total number of canes on a vine is restricted to between three and five, but in other, less controlled, wine areas a bush vine may have as many as 10 canes. This method is only suitable for training low-vigor vines.

Chablis—*Spur-training system*

As the name implies, this style of vine training was originally developed in the Chablis district, although the method employed there now is, in fact, the Guyot Double. Champagne is the most important winemaking region to employ the Chablis system for training vines; there, it is used for more than 90 percent of all the Chardonnay grown. Either three, four, or five permanent branches may be cultivated, each one being grown at yearly intervals. This results in a three-year-old vine (the minimum age for AOC Champagne) having three branches, a four-year-old having four branches, and so forth. The distance between each

vine in the same row determines the eventual life of the oldest branch because, when it encroaches on the next vine, it is removed and a new one cultivated from a bud on the main trunk.

The Chablis spur-training system is, in effect, little more than a slanting bush vine unsupported by a central post.

Cordon de Royat—*Spur-training system*

This is to Champagne's Pinot Noir what the Chablis system is to its Chardonnay and is nothing more complicated than a spur-trained version of Guyot Simple (*see below*). There is even a double variant, although this is rarely cultivated purely for its own ends, its primary reason for existence being to replace a missing vine on its blind side. When, after their winter pruning, they are silhouetted against the sky, Cordon de Royat vines look very much like columns of gnarled old men in perfect formation; they all face forward, bent almost double, as if with one arm dug into the pit of the back and the other seeking the support of a stick.

Geneva Double Curtain—*Spur-training system*

This downward-growing, split-canopy system was developed by Professor Nelson Shaulis of the Geneva Experimental Station in New York State in the early 1960s to increase the volume and ripening of locally-grown Concord grapes. Since then, GDC, as it is often referred to, has been adopted all over the world (particularly in Italy). However, unlike Concord varieties, classic *vinifera* vines have an upward-growing tendency, which makes the system more difficult to apply. Successful results are obtained by shoot positioning, which can either be accomplished via a moveable wire (as in Scott Henry, *see opposite*), by hand, or even by machine. Yields from GDC are 50 percent higher than those from the standard VSP trellis (*see opposite*), and the system offers increased protection from frosts (due to height above ground). It is ideal for full mechanization of medium- to high-vigor vineyards on deep fertile soils (low-vigor vines do not benefit).

Guyot—*Cane-training system*

Developed by Jules Guyot in 1860, both the double and simple forms shown here represent the most conservative style of cane training possible. It is the least complicated concept for growers to learn and, providing the number of fruiting canes and the number of buds on them are restricted, Guyot is the easiest means of restraining yields. Even when growers abuse the system, it is still the most difficult vine-training method with which to pump up production. This

GUYOT DOUBLE

system is commonly used in Bordeaux, where the number of canes and buds are restricted by AOC rules (although, like most French bureaucratic systems, much depends on self-regulation. I have never seen an INAO inspector in the middle of a vineyard checking the variety of vines or counting them, let alone counting the number of canes or buds on canes!). Guyot is also used for some of the finest wines throughout the winemaking world, both Old and New.

GUYOT SIMPLE

Lyre—*Spur-training system*

Also known as the "U" system, the canopy is divided, so as to allow a better penetration of light (thereby improving ripeness levels) and air (thereby reducing the incidence of cryptogamic disorders). Although it was developed in Bordeaux, the Lyre system is more common in the New World where vine vigor is a problem, although not a major one. As with all split-canopy systems, the Lyre method is of no use whatsoever for low-vigor vineyards. Some growers have successfully adapted Lyre to cane training.

Minimal Pruning—*Spur-training system*

A wild, unruly mass that contains a central thicket of unpruned dead wood, by definition it has no disciplined form and is therefore impossible to illustrate. Some of the central thicket may be mechanically removed in the winter, but will still be a tangled mass. Initially, several canes are wrapped loosely around a wire, either side of the trunk, about 5 to 6 feet (1.5 to 2 meters) off the ground. The vine is then left to its own devices, although if necessary some of the summer shoots will be trimmed to keep the fruit off the ground. Some growers give up very quickly because yields can initially be alarmingly high and as the volume increases, so the quality noticeably deteriorates. However, if they are patient, the vine eventually achieves a natural balance, reducing the length of its shoots and, consequently, the number of fruiting nodes on them. Although mature minimally pruned vines continue to give fairly high yields, the quality begins to improve after two or three years. By the sixth or seventh year the quality is usually significantly superior to the quality achieved before minimal pruning was introduced—and the quantity is substantially greater. The ripening time needed by the grapes also increases, which can be an advantage in a hot climate, but disastrous in a cool one, particularly if it is also wet. Furthermore, after a number of years, the mass of old wood in the central thicket and the split-ends of machine-pruned cane ends surrounding it can make the vine vulnerable to various pests and diseases, especially rot and mildew, which is why minimally pruned vines in wet areas like New Zealand are more heavily pruned than they are in the hotter areas of Australia—such as Coonawarra and Padthaway—where minimal pruning first emerged and is still used to great effect.

Pendelbogen—*Cane-training system*

Also known as the "European Loop," or "Arc-Cane Training," this vine-training system, which is a variant of the Guyot Double (*see left*), is most popular in Switzerland and the flatter Rhine Valley areas of Germany and Alsace, although it can also be found in

Mâcon, British Columbia, and Oregon. By bending the canes in an arch, Pendelbogen has more fruit-bearing shoots than the Guyot Double system, thereby providing higher yields. The arching does promote better sap distribution, which helps the production of more fruit, but it can also reduce ripeness levels, making the prime motive for adopting Pendelbogen one of economy, not of quality.

Scott Henry—Cane-training system

Developed by Scott Henry at the Scott Henry Vineyard in Oregon, this system effectively doubles the fruiting area provided by Guyot Double. It also offers a 60 percent increase in fruiting area over the standard VSP Trellis system (see right). Scott Henry not only provides larger crops, but riper, better fruit. And because the canopy is split and, therefore, less dense, the wines are less herbaceous, with smoother tannins. Increased yields and increased quality may seem unlikely, but Kim Goldwater of Waiheke Island has records to prove it; and as Goldwater Estate is consistently one of New Zealand's best red wines, that is good enough for me. When I have asked growers who have tried the Scott Henry method why they have given it up, they invariably reply "Have you ever tried to grow vine shoots downward? It doesn't work!" However, the downward-growing shoots actually grow upward for most of the season. They are separated from the other upward-growing shoots by a moveable wire that levers half the canopy into a downward position. The secret of this system's success is to move the wire no earlier than two or three weeks before the harvest, which gives the canes no time to revert and, with the increasing weight of the fruit, no inclination. In areas where grazing animals coexist with vines (as sheep do in New Zealand, for instance), the fact that both halves of the canopy are about 3 feet (1 meter) above the ground most of the time allows under-vine weeds and water-shoots to be controlled without herbicides or manual labor, without fear of the crop being eaten in the process. Scott Henry is found mainly in the New World and is becoming increasingly popular.

Scott Henry—Spur-training system

When the Scott Henry cane-training system is adapted to spur training, each vine has two permanent spurs instead of four annual canes and produces either top canopies or bottom canopies, but not both. The vines are pruned at alternating heights to replicate the effect of cane training, and all canopies grow upward until those on the lower vines are eventually

levered downward to the position shown here. The detailed structure of the Scott Henry system is almost impossible to identify when the vines are shrouded in foliage.

Sylvos—Spur-training system

This is like Guyot Double, only the trunk is much longer—just over 6 feet (2 meters)—the main branches are permanent, and the fruiting canes are tied downward, not upward. Sylvos requires minimal pruning and is simple to maintain, lending itself to mechanization, but yields are low, unless pruned very lightly. *Vinifera* varieties do not like being forced downward, but shoot positioning has been introduced by growers in Australia (where it is called "Hanging Cane") and New Zealand. The system was originally conceived by Carlo Sylvos in Italy, where it is still very popular and is sometimes operated without a bottom wire, the canes falling downward under their own weight. The main disadvantage is the dense canopy, which makes the vines prone to bunch-rot.

Sylvos (Hawke's Bay variant)—Spur-training system

This version of the Sylvos system was developed by Gary Wood of Montana Wines in the early 1980s on a Hawke's Bay vineyard belonging to Mark Read. The difference between this and the similar Scott Henry system is that it has two main spurs instead of four. With alternate fruiting canes on the same spur trained upward then downward, the canopy is more open, and grape clusters are farther apart. This reduces bunch-rot significantly and facilitates better spray penetration. Yields are increased by as much as 100 percent. The only disadvantage is the longer ripening time needed, which is a risk in areas where late harvests have their dangers.

VSP Trellis—Cane-training system

The VSP or Vertical Shoot Positioned trellis is widely used, particularly in New Zealand, where it is commonly referred to as the "standard" trellising system. With the fruiting area contained within one compact zone on wires of a narrow span, it is ideally suited to mechanized forms of pruning, leaf removal, harvesting, and spraying, but it is prone to high vigor and shading. This is a very economic method and, when properly maintained, it is capable of producing wines of good, but not top, quality. VSP is only suitable for low-vigor vines. A spur-trained version with just two main spurs is commonly encountered in France and Germany.

VITICULTURAL SPRAYS

The use of sprays was once confined to protecting the vine against pests and diseases and for controlling weeds, but they now have additional uses. Foliar feeds supply nutrients direct to the vine, while other sprays halt the growth of foliage, rendering summer pruning unnecessary. Some sprays deliberately induce two disorders called *millerandage* and *coulure* to reduce the yield and, hopefully, increase the quality.

PRUNING

Important for controlling quantity, pruning is equally important for producing a good quality of fruit. As with any crop, be it grapes or prize roses, if the quantity is reduced, the quality is increased. Reducing the number of fruiting buds lowers the quantity of fruit.

FLOWERING

The most critical period of a vine's life is when it flowers—at this stage frost, hail, rain, wind, and excessively high or low temperatures could wipe out a crop before the growing season begins in earnest. Even quality-conscious growers usually leave a couple of extra buds on each vine in case of poor weather during flowering. It follows that if the weather permits a perfect flowering, even the best growers' vines end up with too many grape bunches.

MAN: THE JOKER IN THE PACK

The winemaker, and that includes the winegrower, can maximize or minimize the fruits of nature by his or her skill. Time and again I have seen that neighboring winemakers can make totally different quality wine using virtually the same raw product and the same technology. Chemical analyzes of the wines in question may be virtually indistinguishable, yet one wine will have all the definition, vitality, and expression of character that the other lacks. Why does this occur? No doubt there are valid reasons that science may one day establish, but in our current state of ignorance I can only say that it is always the winemakers with passion who are able to produce the finer, more characterful wines. Of course, many inferior wines are made by the misuse of up-to-date technology, but I have seen dedicated winemakers produce absolutely spellbinding wines using what I would consider to be totally inadequate or inferior equipment. Some winemakers have even been known to sleep by their vats during a particularly difficult fermentation, so that they are on hand to make any adjustments immediately if anything goes wrong. From the grower who never hesitates to prune the vine for low yields, yet always agonizes over the optimum time to harvest, to the winemaker who literally nurses the wines through each and every stage of fermentation and maturation and bottles at precisely the right time and at exactly the correct temperature, the human element is most seriously the joker in the pack when it comes to factors affecting the taste and quality of the wines produced.

INSPECTING MATURING WINE

Auguste Clape, one of the finest winemakers in France's Northern Rhône area, checks the progress of his oak-matured wine.

The weather is not often so kind in classic areas, but when it is, the perfect solution is to remove some of the embryo bunches. Most growers wait until the beginning of *véraison* (the ripening period), when the grapes start to take on color and begin to ripen, before cutting off unwanted bunches. By now the vine has already wasted much of its energy on developing the clusters about to be discarded, but their removal will help the remaining bunches of grapes to ripen.

THE TIMING OF THE GRAPE HARVEST

When to pick is one of the most crucial decisions a grower has to make each year. As grapes ripen, there is a reduction in their acidity (which is also converted from mostly malic acid to primarily tartaric acid) and an increase in sugar, color, various minerals, and essential aromatic compounds. The decision when to pick will vary according to the grape variety, the location of the vineyard, and the style of wine that is to be made. White wine generally benefits from the extra acidity of early-harvested grapes, but they also need the varietal aroma and richness that can only be found in ripe grapes. It is essential to get the balance right. Red wine requires relatively low acidity and profits from the increased color, sugar, and tannin content of grapes harvested later. The grower must also take the vagaries of the weather into account. Those who have the nerve to wait for perfectly ripe grapes every year can produce exceptional wines in even the poorest vintages, but run the risk of frost, rot, or hail damage. This can totally destroy not only an entire crop, but also an entire year's income. Those who never take a chance may always harvest healthy grapes, but in poor years the disadvantage of this approach is that the crop will be unripe and the wine mediocre.

MECHANICAL HARVESTING

Mechanical harvesting is a contentious subject. The advantages of mechanization are dramatically reduced labor costs and a quick harvest of the entire crop at optimum ripeness, but the vineyard has to be adapted to the machine chosen and the reception and fermentation facilities must be enlarged to cope with the greater amounts and quicker throughput, which is costly. Disadvantages relate to the efficiency of the machinery and the quality of the wine.

As the machines beat the vine trunks with rubber sticks, the grapes drop onto a conveyor along with leaves and other matter, most of which is ejected as the fruit is sorted on its way to the hold. Apart from the rubbish that inevitably remains with the harvested grapes—which is becoming less as machines become more sophisticated—the main disadvantage of mechanical harvesting is the inability of a machine to distinguish between the ripe and the unripe, and the healthy and the diseased or plain rotten (the first thing to drop from any plant when shaken).

Despite these inadequacies, many excellent red wines have been made from mechanically harvested grapes. From a practical point of view it would seem that this method of harvesting is better for red wine than it is for white, particularly sparkling, wine because it splits the grapes. This encourages oxidation and a loss of aromatics and, when harvesting black grapes for white sparkling wine, results in an undesirable coloration of the juice.

TRANSPORTING THE GRAPES

In the race against time to get the grapes from the vineyard to the winery, everything possible should be done to cosset the fruit. Ideally, the winery and the vineyards should be as close as possible and the grapes transported in plastic crates small enough to prevent damage from their own weight. The crates should be designed so that stacking one on top of the other does not crush the fruit. The fact that some of the best-value wines of Eastern Europe are dumped into huge skips and take hours to reach their destination is fine for red wine, but currently less useful for white. It splits the grapes, thereby encouraging oxidation and a loss of aromatics.

ANNUAL LIFE CYCLE OF THE VINE

The calendar of events by which any well-established vine seeks to reproduce, through the production of grapes, is outlined below, with a commentary on

how the vine is cultivated to encourage the best grapes for winemaking. The vine's year starts and finishes with the end and approach of winter.

FEBRUARY Northern hemisphere
AUGUST Southern hemisphere

1. Weeping

Weeping is the first sign of the vine awakening after a winter of relative dormancy. When the soil at a depth of 10 inches (25 centimeters) reaches 50°F (10.2°C), the roots start collecting water and the sap in the vine rises, oozing out of the cane ends which were pruned in winter, in a manifestation called "weeping." This occurs suddenly, rapidly increases in intensity, and then decreases gradually. Each vine loses between half a quart and 11 pints (half and five-and-a-half liters) of sap. Weeping is the signal to prune for the spring growth. However, this poses a problem for the grower because the vine, once pruned, is at its most vulnerable to frost. But waiting for the danger of frost to pass wastes the vine's precious finite energy and retards its growth, delaying the ripening of the fruit by as much as 10 days, and thus risking exposure of the fruit to fall frosts later on.

As the soil warms up the vine awakes, pushing sap out of its cane ends.

MARCH to APRIL Northern hemisphere
SEPTEMBER to OCTOBER Southern hemisphere

2. Bud-break

In the spring, some 20 to 30 days after the vine starts to weep, the buds open. Different varieties bud-break at different times; there are early bud-breakers and the same variety can bud-break at different times in different years due to climatic changes. The type of soil can also affect the timing. Clay, which is cold, will retard the process, while sand, which is warm, will promote it. Early bud-break varieties are susceptible to frost in northerly vineyards (southerly in the southern hemisphere), just as late-ripeners are vulnerable to fall frosts. In the vineyard, pruning continues into March (September in the southern hemisphere). The vines are secured to their training frames, and the earth that was plowed over the grafting wound to protect it in the winter is plowed back, aerating the soil and leveling off the ground between the rows.

Buds begin to open at a time determined by variety and climate.

APRIL to MAY Northern hemisphere
OCTOBER to NOVEMBER Southern hemisphere

3. Emergence of shoots, foliage, and embryo bunches

Embryo bunches, the vine's flowers, form.

Following bud-break, foliage develops and shoots are sent out. In mid-April (mid-October in the southern hemisphere), after the fourth or fifth leaf has emerged, tiny green clusters form. These are the flowers which, when they bloom, will develop into grapes. Commonly called embryo bunches, they are the first indication of the potential size of a crop. In the vineyard, spraying to ward off various vine pests, or cure diseases and other disorders, starts in May (November), and continues until the harvest. Many of these sprays are combined with systemic

fertilizers to feed the vine directly through its foliage. These spraying operations are normally done by hand or tractor, but may sometimes be carried out by helicopter if the slopes are very steep or the vineyards too muddy to enter. At this time of year the vine can be affected by *coulure* or *millerandage* (see p.15).

MAY to JUNE Northern hemisphere
NOVEMBER to DECEMBER Southern hemisphere

4. Flowering of the vine

The 10 days in which the vine flowers is a vulnerable period.

The embryo bunches break into flower after the 15th or 16th leaf has emerged on the vine. This is normally about eight weeks after the bud-break and involves pollination and fertilization, and lasts for about 10 days. The weather must be dry and frost-free, but temperature is the most critical requirement. A daily average of at least 59°F (15°C) is needed to enable a vine to flower and between 68° and 77°F (20° and 25°C) is considered ideal. Heat summation, however, is more important than temperature levels, so the length of day has

a great influence on the number of days the flowering will last. Soil temperature is more significant than air temperature, so the soil's heat-retaining capacity is a contributory factor. Frost is the greatest hazard, and many vineyards are protected by stoves or sprinkling systems.

JUNE to JULY Northern hemisphere
DECEMBER to JANUARY Southern hemisphere

5. Fruit set

After the flowering, the embryo bunches rapidly evolve into true clusters. Each fertilized berry expands into a grape, the first visible sign of the actual fruit that will produce the wine. This is called fruit set. The number of grapes per embryo bunch varies from variety to variety, as does the percentage that actually set into grapes. The panel below illustrates this. In the vineyard, spraying continues and summer pruning (cutting away some bunches) will concentrate the vine's energy on making fruit. In some vineyards this is the time for weeding, but in others the weeds are allowed to grow as high as 20 inches (50 centimeters) before they are mown and plowed into the soil to break up the soil and provide the vines with excellent green manure.

Clearly recognizable grapes begin to form.

VARIETY	BERRIES PER EMBRYO BUNCH	GRAPES IN A RIPE CLUSTER	PERCENTAGE OF FRUIT SET
Chasselas	164	48	29%
Gewürztraminer	100	40	40%
Pinot Gris	149	41	28%
Riesling	189	61	32%
Sylvaner	95	50	53%

AUGUST Northern hemisphere
JANUARY Southern hemisphere

6. Ripening of the grapes

As the grape develops its fleshy fruit, very little chemical change takes place inside the berry until its skin begins to turn a different color—the process known as *véraison*. Throughout the grape's green stage, the sugar and acid content remains the same, but during August (January in the southern hemisphere), the ripening process begins in earnest. The skin changes color, the sugar content dramatically increases, and the hard malic acid diminishes as the riper tartaric acid builds up. Although the tartaric acid content begins to decline after about two weeks, it always remains the primary acid. It is at this stage that the grape's tannins are gradually hydrolyzed. This is a crucial moment because only hydrolyzed tannins are capable of softening as a wine matures. In the vineyard, spraying and weeding continue, and the vine's foliage is thinned to facilitate the circulation of air and thus reduce the risk of rot. Be careful not to remove too much foliage, since it is the effect of sunlight on the leaves, not the grapes, that causes the grapes to ripen.

The grapes begin to change color, the sign of true ripening.

AUGUST to OCTOBER Northern hemisphere
FEBRUARY to MARCH Southern hemisphere

7. Grape harvest

Grapes are picked at a time determined by the winemaker.

The harvest usually begins mid- to late September (mid- to late February in the southern hemisphere) and may last for a month or more, but, as is the case with all vineyard operations, the timing is earlier nearer to the equator and is dependent on the weather. Picking may, therefore, start as early as August (February) and finish as late as November (April). White grapes ripen before black grapes and must, in any case, be harvested that little bit earlier to achieve a higher acidity balance.

NOVEMBER to DECEMBER Northern hemisphere
APRIL to MAY Southern hemisphere

8. Grapes affected by *Botrytis cinerea*

Rotting grapes, soon to be harvested for sweet botrytized wine.

In November the sap retreats to the protection of the vine's root system. As a result, the year-old canes begin to harden and any remaining grapes, cut off from the vine's metabolic system, start to dehydrate. The concentrated pulp that they become is subject to severe cold. This induces complex chemical changes in a process known as *passerillage*. In specialist sweet-wine areas the grapes are deliberately left on the vine to undergo this quality-enhancing experience

and, in certain vineyards with suitable climatic conditions, growers pray for the appearance of *Botrytis cinerea*, or "noble rot."

DECEMBER to JANUARY Northern hemisphere
MAY to JUNE Southern hemisphere

9. Eiswein

Grapes still on the vine may yet become wine.

In Germany and Canada you can see grapes on the vine in December and even January. In Germany this is often because the grower has hoped for *Botrytis cinerea*, or *Edelfäule* as it is called there, but it has failed to occur on some grapes. Should frost or snow freeze the grapes, they can be harvested to produce Eiswein, or Icewine, which is made in Canada. It is one of the world's most spectacular wines. Once the grapes are pressed the frozen water is skimmed off, leaving a super-concentrated unfrozen pulp to make Eiswein.

VINIFICATION

Although the internationalization of winemaking techniques is a topic that is always much discussed. Methods of production can still vary greatly not just from country to country, but from region to region, and quite commonly even from grower to grower within the same village.

IN WINEMAKING, much depends on whether traditional values are upheld or innovations are sought and, for the latter, whether the technology is available. Whatever the winemaker decides, certain principles will, essentially, remain the same. These are described below, followed by sections on styles of wine and the processes common or unique to each one.

THE DIMINISHING QUALITY FACTOR

The quality of the grapes when they are harvested represents the maximum potential of any wine that can be made from them. However, a winemaker will never be able to transfer 100 percent of this inherent quality to the wine, because deterioration sets in from the moment a grape is disconnected from the vine's metabolism. Furthermore, the very process of turning grapes into wine is necessarily a destructive one, so every action that the winemaker takes, however quality-conscious, will inevitably erode some of the wine's potential. Winemakers, therefore, can only attempt to minimize the loss of potential quality.

It is relatively easy to retain approximately 80 percent of the potential quality of a wine, but very difficult to claw back every percentile point after that. It is also relatively easy to double or even treble the basic grape quality by better selection of vineyard sites, improved training methods, the use of superior clones, correct rootstock, and a reduction in yields. As a result, research has now swung from the winery back to the vineyard.

That said, enological practices are still important and how they are employed will have a profound effect not only on quality, but also on the style of the wine produced.

PRINCIPLES OF VINIFICATION

With modern technology, good everyday-drinking wines can be made anywhere that grapes are grown. When such wines are not made, the reason is invariably a lack of equipment and expertise. Wines of a finer quality require vineyards that have a certain potential and winemakers with a particular talent. When not even good everyday-drinking wines are made from fine-wine vineyards, it is usually due to a combination of excessive yields and poor winemaking, and there is no excuse for either.

FERMENTATION

The biochemical process that transforms fresh grape juice into wine is called fermentation. Yeast cells excrete enzymes that convert natural fruit sugars into almost equal quantities of alcohol and carbonic gas. This process ceases when the supply of sugar is exhausted or when the alcoholic level reaches a point that is toxic for the yeast enzymes (usually 15 to 16 percent, although certain strains can survive at 20 to 22 percent). Traditionally, winemakers racked their wine from cask to cask (*see* p.26) until they were sure that fermentation had stopped, but there are now many other methods that halt fermentation artificially. These can involve the use of heat, sulfur dioxide, centrifugal filtration, alcohol, pressure, or carbonic gas.

- **Heat** There are various forms of pasteurization (for table wines), flash-pasteurization (for finer wines), and chilling operations that

are used to stabilize wine. These operate on the basis that yeast cells are incapacitated at temperatures above 97°F (36°C), or below 26°F (-3°C), and that yeast enzymes are destroyed above 149°F (65°C). Flash-pasteurization subjects wines to a temperature of about 176°F (80°C) for between 30 seconds and one minute, whereas fully fledged pasteurization involves lower temperatures of 122 to 140°F (50 to 60°C) for a longer period.

- **Addition of sulfur dioxide or sorbic acid** Dosing with one or more aseptic substances will kill off the yeasts.
- **Centrifugal filtration or filtration** Modern equipment is now capable of physically removing all the yeasts from a wine, either by filtration (simply pouring the wine through a medium that prevents certain substances from passing through) or by centrifugal filtration (a process that separates unwanted matter from wine—or grape juice, if used at an earlier stage—by so-called “centrifugal force”).
- **Addition of alcohol** Fortification raises the alcohol content to a level toxic to yeast.
- **Pressure** Yeast cells are destroyed by pressure in excess of eight atmospheres (the pressure inside a Champagne bottle is around six atmospheres).
- **Addition of carbonic gas (CO₂)** Yeast cells are killed in the presence of .5 oz per quart (15 g per l) or more of carbonic gas.

THE USE OF SULFUR

Sulfur is used in winemaking from the time the grapes arrive at the winery until just before the wine is bottled. It has several qualities, including antioxidant and aseptic qualities, that make it essential for commercial winemaking. To some extent, all wines are oxidized from the moment the grapes are pressed and the juice is exposed to the air, but the rate of oxidation must be controlled. This is where sulfur is useful, because it has a chemical attraction for the tiny amounts of oxygen that are present in wine. One molecule of sulfur will combine with two molecules of oxygen to form sulfur dioxide (SO₂), or fixed sulfur. Once it is combined with the sulfur, the oxygen is neutralized and can no longer oxidize the wine. More oxygen will be absorbed by wine during the vinification process, of course, and there will also be a small head of air between the wine and the cork after bottling. It is for this reason that wines are bottled with a set amount of free sulfur (the amount of the total sulfur content that is not fixed). On occasion a winemaker claims that sulfur is completely superfluous to the winemaking process, but whereas low-sulfur regimes are

YEAST THE FERMENTER

The yeasts used for fermentation may be divided into two categories: cultured yeasts and natural yeasts.

Cultured yeasts are nothing more than thoroughbred strains of natural wine yeasts that have been raised in a laboratory. They may be used because the juice has been cleansed of all organisms, including its yeasts, prior to fermentation; or because the winemaker prefers their reliability, or for a specific purpose, such as withstanding higher alcohol levels or the increased osmotic pressure that affects bottle-fermented sparkling wines.

Natural yeasts are to be found adhering to the *pruina*, a waxy substance that covers the skin of ripe grapes and other fruits. By the time a grape has fully ripened, the coating of yeasts and other micro-organisms, commonly referred to as the “bloom,” contains an average of 10 million yeast cells, although only one percent—or just 100,000 cells—are so-called “wine-yeasts.” A yeast cell is only microscopic, yet under favorable conditions it has the ability to split 10,000 sugar molecules every second during fermentation.

actually to be encouraged, wines produced without it are usually dire or have a very short shelf-life.

One famous wine that claimed not to use any sulfur was so long-lived that I had a bottle independently analyzed, only to find that it did contain sulfur. The quantity was small, but far too significant to have been created during fermentation (which is possible in tiny amounts). It was, therefore, an example of how effective a low-sulfur regime can be. Methods of reducing the level of SO₂ are well known, the most important being a very judicious initial dosage because a resistance to sulfur gradually builds up and, as a result, later doses always have to be increased.

Some wines can be over-sulfured and, although they are less common than they used to be, they are by no means rare. Over-sulfured wines are easily recognizable by their smell, which ranges from the slight whiff of a recently ignited match (which is the clean smell of free sulfur) to the stench of rotten eggs (which is H₂S, where the sulfur has combined with hydrogen—literally the stuff of stinkbombs). When H₂S reacts with ethyl alcohol or one of the higher alcohols, foul-smelling compounds called mercaptans are formed. They can smell of garlic, onion, burning rubber, or stale cabbage, depending on the exact nature of the compound. Mercaptans are extremely difficult for the winemaker to remove and can ruin a wine, which illustrates just how important it is to maintain a low-sulfur regime.

MALOLACTIC FERMENTATION

Malolactic fermentation is sometimes known as the secondary fermentation, but this is an inappropriate description. The malolactic, or “malo” (as it is sometimes called), is a biochemical process that converts the “hard” malic acid of unripe grapes into two parts “soft” lactic, or “milk,” acid (so-called because it is the acid that makes milk sour) and one part carbonic gas. Malic acid is a very strong-tasting acid, which reduces during the fruit’s ripening process. However, a significant quantity persists in ripe grapes, and, although reduced by fermentation, also in wine.

The quantity of malic acid present in a wine may be considered too much and the smoothing effect of replacing it with just two-thirds the quantity of the much weaker lactic acid is often desirable. This smoothing effect is considered vital for red wine, beneficial for fuller, fatter, more complex whites, and optional for lighter, crisper whites and certain styles of sparkling wine.

To ensure that the malo can take place, it is essential that specific bacteria are present. These are found naturally on grape skins among the yeasts and other microorganisms, but commercially prepared bacteria may also be used. To undertake their task, they require a certain warmth, a low level of sulfur, a pH of between 3 and 4, and a supply of various nutrients found naturally in grapes.

STAINLESS STEEL OR OAK?

The use of stainless steel and oak containers for fermentation and maturation is not simply dependent on the cost (*see right*). The two materials produce opposing effects on wine, so the choice is heavily dependent on whether the winemaker wants to add character to a wine or to keep its purity.

A stainless-steel vat is a long-lasting, easy-to-clean vessel made from an impervious and inert material that is ideally suited to all forms of temperature control. It has the capacity to produce the freshest wines with the purest varietal character. An oak cask has a comparatively limited life, is not easy to clean (it can never be sterilized), makes temperature control very difficult, and is neither impervious nor inert. It allows access to the air, which encourages a faster rate of oxidation, but also causes evaporation, which concentrates the flavour. Vanillin, the essential aromatic constituent of vanilla pods, is extracted from the oak by oxidation and, with various wood lactones and unfermentable sugars, imparts a distinctive, sweet and creamy vanilla nuance to wine. This oaky character takes on a smoky complexity if the wine is allowed to

go through its malolactic fermentation in contact with the wood, and becomes even more complex, and certainly better integrated, if the wine has undergone all or most of its alcoholic fermentation in cask. Oak also imparts wood tannins to low tannin wine, absorbs tannins from tannic wine, and can exchange tannins with some wines. Oak tannins also act as catalysts, provoking desirable changes in grape tannins through a complex interplay of oxidations.

POST-FERMENTATION PROCEDURES

Numerous procedures can take place in the winery after fermentation and, where applicable, malolactic fermentation, have ceased. However, the five most basic procedures are racking, fining, cold stabilization, filtration, and bottling.

Racking

Draining the clear wine off its lees, or sediment, into another vat or cask is known as “racking” because of the different levels, or racks, on which the wine is run from one container into another. In modern vinification, this operation is usually conducted several times during vat or cask maturation. The wine gradually throws off less and less of a deposit. Some wines, such as Muscadet sur lie, are never racked.

Fining

After fermentation, wine may look hazy to the eye. Even if it does not, it may still contain suspended matter that threatens cloudiness in the bottle. Fining usually assists the clarification of wine at this stage. In addition, special fining agents may be employed to remove unwanted characteristics. When a fining agent is added to wine, it adheres to cloudy matter by physical or electrolytic attraction,

THE COST OF NEW OAK

Two hundred 59-gallon (225-liter) oak casks with a total capacity of 11,900 gallons (450 hectoliters) cost between four and 10 times the cost of a single 11,900-gallon (450-hectoliter) stainless-steel vat. After two years of much higher labor costs to operate and maintain the large number of small units, the volume of wine produced in the oak casks is 10 percent less because of evaporation, and the winemaker faces the prospect of purchasing another 200 casks.

creating tiny clusters (known as colloidal groups), which drop to the bottom of the vat as sediment. The most commonly encountered fining agents are egg white, tannin, gelatin, bentonite, isinglass, and casein. Winemakers have their preferences and individual fining agents also have their specific uses. Positively charged egg white fines out negatively charged matter, such as unwanted tannins or anthocyanins, while negatively charged bentonite fines out positively charged matter, such as protein haze and other organic matter.

Cold stabilization

When wines are subjected to low temperatures, a crystalline deposit of tartrates can form a deposit in the bottle. Should the wine be dropped to a very low temperature for a few days before bottling, this process can be precipitated, rendering the wine safe from the threat of a tartrate deposit in the bottle. For the past 20 years, cold stabilization has been almost obligatory for cheap commercial wines, and it is now increasingly used for those of better quality as well. This recent trend is a pity because the crystals are, in fact, entirely harmless and their presence is a completely welcome indication of a considerably more natural, rather than heavily processed, wine.

Filtration

Various methods of filtration exist, and they all entail running wine through a medium that prevents particles of a certain size from passing through. Filtration has become a controversial subject in recent times, with some critics claiming that anything that removes something from wine must be bad. Depending on who you listen to, this "something" is responsible for a wine's complexity, body, or flavor. However, although it is undeniable that filtration strips something from a wine, if it is unfiltered, it will throw a much heavier deposit and do so relatively quickly. The mysterious "something" is, therefore, purged from all wines at some time or other, whether they are filtered or not, and whether the critics like it or not. Filtration, like so many things, is perfectly acceptable if it is applied in moderation. The fact that many of the world's greatest wines are filtered is a testament to this.

I prefer less or no filtration, as do most quality-conscious winemakers. This is not because of any romantic, unquantifiable ideal, it is simply because I prefer wine to be as unprocessed and as natural as possible. This is a state that can only be achieved through as much of a hands-off approach as the wine will allow. Generally the finer the wine, the less filtration required, as consumers of

FROM GRAPE TO GLASS

Virtually every ingredient of a fresh grape can be found in the wine it makes, although additional compounds are produced when wine is made and any sedimented matter is disposed of before it is bottled. The most significant

difference in the two lists below is the disappearance of fermentable sugar and the appearance of alcohol, although the constituents will vary according to the variety and ripeness of the grape and the style of wine produced.

THE "INGREDIENTS" OF FRESH GRAPE JUICE

Percentage by volume

73.5	Water
25	Carbohydrates, of which:
	20% Sugar (plus pentoses, pectin, inositol)
	5% Cellulose
0.8	Organic acids, of which:
	0.54% Tartaric acid
	0.25% Malic acid
	0.01% Citric acid (plus possible traces of succinic acid and lactic acid)
0.5	Minerals, of which:
	0.25% Potassium
	0.05% Phosphate
	0.035% Sulfate
	0.025% Calcium
	0.025% Magnesium
	0.01% Chloride
	0.005% Silicic acid
	0.1% Others (aluminum, boron, copper, iron, molybdenum, rubidium, sodium, zinc)
0.13	Tannin and color pigments
0.07	Nitrogenous matter, of which:
	0.05% Amino acids (arginine, glutamic acid, proline, serine, threonine, and others)
	0.005% Protein
	0.015% Other nitrogenous matter (humin, amide, ammonia, and others)
Traces	Mainly vitamins (thiamine, riboflavin, pyridoxine, pantothenic acid, nicotinic acid, and ascorbic acid)

WATER INTO WINE

The individual flavoring elements in any wine represent barely two percent of its content. Although we can determine with great accuracy the amount and identity of 99 percent of these constituents, the mystery is that if we assembled them and added the requisite volume of water and alcohol, the result would taste nothing like wine, let alone like the specific wine we would be trying to imitate.

THE "CONTENTS" OF WINE

Percentage by volume

86	Water
12	Alcohol (ethyl alcohol)
1	Glycerol
0.4	Organic acids, of which:
	0.20% Tartaric acid
	0.15% Lactic acid
	0.05% Succinic acid (plus traces of malic acid citric acid)
0.2	Carbohydrates (unfermentable sugar)
0.2	Minerals, of which:
	0.075% Potassium
	0.05% Phosphate
	0.02% Calcium
	0.02% Magnesium
	0.02% Sulfate
	0.01% Chloride
	0.005% Silicic acid
	Traces Aluminum, boron, copper, iron, molybdenum, rubidium, sodium, zinc
0.1	Tannin and color pigments
0.045	Volatile acids (mostly acetic acid)
0.025	Nitrogenous matter, of which:
	0.01% Amino acids (arginine, glutamic acid, proline, serine, threonine, and others)
	0.015% Protein and other nitrogenous matter (humin, amide, ammonia, and others)
0.025	Esters (mostly ethyl acetate, but traces of numerous others)
0.004	Aldehydes (mostly acetaldehyde, some vanillin, and traces of others)
0.001	Higher alcohols (minute quantities of amyl plus traces of isoamyl, butyl, isobutyl, hexyl, propyl, and methyl may be present)
Traces	Vitamins (thiamine, riboflavin, pyridoxine, pantothenic acid, nicotinic acid, and ascorbic acid)

expensive wines expect sedimentation and are prepared to decant. Delicate reds, such as Pinot Noir, should be the least filtered of all, as I swear they lose fruit just by looking at them, and they certainly lose color—that, at least, is quantifiable. No wine with extended barrel-aging should ever require filtration—just a light, natural fining.

Each filtration is expensive and time-consuming, thus even producers of the most commercial, everyday wines (which even filtration critics accept must be filtered) should keep these operations to a minimum. The principle means of achieving this is by ensuring the best possible clarification by settling and racking. Fining (*see* p.26) should always take precedence, because it is both kinder on the wine and much cheaper than filtering. There are four basic types of filtration: Earth, Pad, Membrane, and Crossflow.

- **Earth Filtration** This system is primarily used after racking for filtering the wine-rich lees that collect at the bottom of the fermentation tank. A medium, usually kieselguhr (a form of diatomaceous earth), is continuously fed into the wine and used with either a Plate and Frame Filter or a Rotary Drum Vacuum Filter. Both types of filter are precoated with the medium, but in a Plate and Frame Filter, the wine and medium mix is forced, under pressure, through plates, or screens, of the medium, in a manner similar to that of any other filter. For the Rotary Drum Vacuum Filter, however, the precoat adheres to the outside of a large perforated drum by virtue of the vacuum that is maintained inside. The drum revolves through a shallow bath into which the wine is pumped and literally sucks the wine through the precoat into the center, where it is piped away. The advantage of this system is that on one side of the shallow bath there is a scraper that constantly shaves the coating on the drum to the desired thickness. The medium thus falls into the wine, with which it mixes, and is then sucked back onto, and through, the drum. It is a continuous process and a very economical one, since the amount of medium used is limited. In a Plate and Frame Filter, the medium is enclosed and eventually clogs up, requiring the operation to be stopped, and the equipment to be dismantled and cleaned before the process can resume.

- **Pad Filtration** Also called Sheet Filtration, this involves the use of a Plate and Frame Filter with a variable number of frames into which filter pads or sheets can slide. Before it was outlawed in the

1970s, these used to be made of asbestos. They now contain numerous filtration mediums, ranging from diatomaceous earth to regular cellulose pads, the latter of which are the most commonly used medium. Special filter formats include active carbon (to remove unwanted color, which is frowned upon for all but the most commercial, high-volume wines) and electrostatically charged pads. These are designed to attract any matter that is suspended in the wine, most of which will possess a negative or positive charge. It is claimed that these electrostatically charged pads are more effective in filtering out matter than the same pads without a charge.

- **Membrane Filtration** This is also called Millipore because the membranes contain microscopic holes capable of removing yeasts and other microorganisms. These holes account for 80 percent of the sheet's surface, so the throughput of wine can be extremely fast provided it has undergone a light prefiltration. Both filtration and prefiltration can now, however, be done at the same time with new Millipore cartridge filters. These contain two or more membranes of varying porosity, thus the coarser ones act as a screen for those with the most minuscule holes.

- **Crossflow Filtration** Originally designed to purify water, a crossflow filter varies from the others (with the exception of the Rotary Drum Vacuum Filter) because it is self-cleaning and never clogs up. The wine flows across the membrane, not into it, so only some of it penetrates. Most of it returns to the chamber from which it came and, because it flows very fast, takes with it any matter filtered out by the membrane.

BOTTLING

When visiting larger producers, automated bottling lines are the wine journalist's *bête noire*. They get faster and more complex each year and, having invested vast sums in the very latest bottling line, it is understandable that proprietors are keen to show off their new high-tech toy. However, as John Arlott once told me, as he resolutely refused to set foot in the bottling hall of Piper-Heidsieck, "I have not written a single word about bottling lines in my life and I'm not going to start now." They make a very dull experience and inevitably break down just as one's host boasts that it is the fastest bottling line in the world, but their smooth

operation most days of the week is essential if the wine is to remain as fresh as possible in the bottle. All that readers need to know is that the bottles should be sterile; that fully-automated lines cork, capsule, label, and box the wines; and that there is a device to detect any impurities before the bottles are boxed. All European systems print a lot number identifying the date each batch was bottled either on the label or directly onto the bottle using a laser. Therefore, in an emergency, a specific batch can be recalled, rather than the entire production having to be cleared from every wholesaler and retailer stocking a particular line.

RED WINES

On arrival at the winery the grapes are usually crushed and destemmed, although it was once accepted practice to leave the stems for a more tannic wine. However, stem tannins are too harsh and fail to soften as the wine matures. The modern winemaker can include a small quantity of stems if the grape variety requires extra structure or if the vintage needs firming up.

FERMENTATION

After the grapes are destemmed and lightly crushed, they are pumped into a vat where fermentation may begin as early as 12 hours or as late as several days later. Even wines that will be cask-fermented must start off in vats, whether they are old-fashioned oak *foudres* or modern stainless-steel tanks. This is because they must be fermented along with a *manta*, or cap, of grapeskins. To encourage fermentation, the juice may be heated and selected yeast cultures or partially fermented wine from another vat added. During fermentation, the juice is often pumped from the bottom of the vat to the top and sprayed over the *manta* to keep the juice in contact with the grapeskins. This ensures that the maximum color is extracted. Other methods involve the *manta* being pushed under the fermenting juice with poles. Some vats are equipped with crude but effective grids that prevent the *manta* from rising, others rely on the carbonic gas given off during fermentation to build up pressure, releasing periodically and pushing the *manta* under the surface; another system keeps the *manta* submerged in a “vinimatic,” a sealed, rotating stainless-steel tank, based on the cement-mixer principle.

The higher the temperature during fermentation, the more color and tannin will be extracted; the lower the temperature, the better the bouquet, freshness, and fruit will be. The optimum temperature for the fermentation of red wine is 85°F (29.4°C). If it is too hot, the yeasts produce certain substances (decanoic acid, octanoic acids, and corresponding esters) that inhibit their own ability to feed on nutrients and cause the yeasts to die. It is, however, far better to ferment hot fresh juice than to wait two weeks (which is normal in many cases) to ferment cooler but stale juice. The fuller, darker, more tannic and potentially longer-lived wines remain in contact with the skins for anything between 10 and 30 days. Lighter wines, on the other hand, are separated from the skins after only a few days.

VIN DE GOUTTE AND VIN DE PRESSE

The moment the skins are separated from the juice, every wine is divided into two—free-run wine, or *vin de goutte*, and press wine, or *vin de presse*. The free-run juice runs out of the vat when the tap is opened. The remains—the *manta* of grapeskins, pips, and other solids—are put into a press to extract the very dark, extremely tannic “press wine.” The free-run wine and the press wine are then pumped into separate vats or casks depending on the style of the wine being made. These wines then undergo their malolactic conversion separately and are racked several times, fined, racked again, blended, then fined and racked once more before bottling.

MACÉRATION CARBONIQUE

There are several variations of *macération carbonique*, a technique used almost exclusively for making red wine, involving an initial fermentation under pressure of carbonic gas. The traditional method, dating back at least 200 years, was to put the uncrushed grapes in a closed container, where after a while, a natural fermentation would take place inside the grapes. When the grapes eventually exploded, filling the container with carbonic gas, a normal fermentation continued and the grapes macerated in their own skins. Today the grapes are often placed in vats filled with carbonic gas from a bottle. *Macération carbonique* produces light wines with good color, soft fruit, and a “pear-drop” aroma.

WHITE WINES

Until fairly recently it could be said that two initial operations distinguished the white-winemaking process from the red one: first, an immediate pressing to extract the juice and separate the skins, and, second, the purging, or cleansing, of this juice. But for white wines of expressive varietal character the grapes are now often crushed and then macerated in a vinimatic for 12 to 48

hours to extract the aromatics that are stored in the skins. The juice that is run out of the vinimatic, and the juice that is pressed out of the macerated pulp left inside it, then undergoes cleansing and fermentation like any other white wine.

With the exception of wines macerated in a vinimatic, the grapes are either pressed immediately on arrival at the winery or lightly crushed and then pressed. The juice from the last pressing is murky, bitter, and low in acidity and sugar, so only the first pressing, which is roughly equivalent to the free-run juice in red wine, together with the richest elements of the second pressing, should be used for white-wine production. Once pressed, the juice is pumped into a vat where it is purged, or cleansed, which in its simplest form means simply leaving the juice to settle so that particles of grapeskin and any other impurities fall to the bottom. This purging may be helped by chilling, adding sulfur dioxide and, possibly, a fining agent. Light filtration and centrifugation may also be applied during this process.

After cleansing, the juice is pumped into the fermenting vat or directly into barrels if the wine is to be cask-fermented. The addition of selected yeast cultures occurs more often in the production of white wine because of the wine's limited contact with the yeast-bearing skins and the additional cleansing that reduces the potential amount of wine yeasts available.

The optimum temperature for fermenting white wine is 64°F (18°C), although many winemakers opt for between 50°F and 63°F (10°C and 17°C), and it is actually possible to ferment wine at temperatures as low as 39°F (4°C). At the lower temperatures, more esters and other aromatics are created, less volatile acidity is produced, and a lower dose of sulfur dioxide is required; on the other hand, the resulting wines are lighter in body and contain less glycerol.

With acidity an essential factor in the balance of fruit and, where appropriate, sweetness in white wines, many products are not permitted to undergo malolactic conversion and are not bottled until some 12 months after the harvest. Oak-matured wines which, incidentally, always undergo malolactic conversion, may be bottled between 9 and 18 months, but wines that are made especially for early drinking are nearly always racked, fined, filtered, and bottled as quickly as the process will allow in order to retain as much freshness and fruitiness as possible.

ROSÉ WINES

With the exception of pink Champagne, most of which is made by blending white wine with red, all good-quality rosés are produced either by bleeding, pressing, or limited maceration. A true-bled rosé is made from the juice that issues from black grapes pressed under their own weight. This is a sort of *tête de cuvée*, which, after fermentation, is a very pale *vin gris* color, but has a rich, fruity, and exquisitely fresh flavor. Pressed rosé is made by pressing black grapes until the juice takes on enough color. It, too, has a pale *vin gris* color, but lacks the true richness of a *tête de cuvée* rosé. Limited maceration is the most common method used in the production of rosé. During this process, rosé is made in exactly the same way as red wine, except that skin-contact is limited to what is sufficient to give the desired pink tint. (All shades of rosé exist, ranging from a barely perceptible hint of color to *clairet*, or almost red.) Some superior rosé wines that have been made using this last method are virtually by-products of red-wine production. In certain areas that lack the appropriate climate for deep red wines, some free-run juice might be run off in order to produce rosé, thus leaving a greater ratio of coloring pigment in the juice that remains.

SPARKLING WINES

When grape juice is fermented, sugar is converted into alcohol and carbonic gas. For still wines the gas is allowed to escape, but if it is prevented from doing so—by putting a lid on a vat or a cork in a bottle—it will remain dissolved in the wine until the lid or cork is removed. When the gas is released it rushes out of the wine in the form of bubbles. The production of all natural sparkling wines is based on this essential principle, using one of four different methods: *méthode champenoise*, bottle-fermented, *méthode rurale*, and *cuve close*. They can also be made by injecting the bubbles.

MÉTHODE CHAMPENOISE

Also referred to as *méthode traditionnelle* or *méthode classique* (France), *metodo classico* (Italy), and *Cap Classique* (South Africa), this term indicates a sparkling wine that has undergone a second fermentation in the bottle in which it is sold. A label may refer to a wine being “Individually fermented in this bottle,” which is the beautifully simple American equivalent of *méthode champenoise*.

HOW WHITE WINE IS MADE

BOTTLE-FERMENTED

This refers to a wine produced through a second fermentation in a bottle, but (and this is the catch) not necessarily in the bottle in which it is sold. It may have been fermented in one bottle, transferred to a vat and, under pressure at 26°F (-3°C), filtered into another bottle. This is also known as the “transfer method.”

MÉTHODE RURALE

This refers to the precursor of *méthode champenoise*, which is still used today, albeit only for a few obscure wines. It involves no second fermentation, the wine being bottled before the first alcoholic fermentation is finished.

CUVE CLOSE, CHARMAT, OR TANK METHOD

This is used for the bulk production of inexpensive sparkling wines that have undergone a second fermentation in large tanks before being filtered and bottled under pressure at 26°F (-3°C). Contrary to popular belief, there is no evidence to suggest that this is an intrinsically inferior method of making sparkling wine. It is only because it is a bulk production method that it tends to attract mediocre base wines and encourage a quick throughput. I genuinely suspect that a *cuve close* produced from the finest base wines of Champagne and given the autolytic benefit of at least three years on its lees before bottling might well be indistinguishable from the “real thing.”

CARBONATION

This is the cheapest method of putting bubbles into wine and simply involves injecting it with carbon dioxide. Because this is the method used to make lemonade, it is incorrectly assumed that the bubbles achieved through carbonation are large and short-lived. They can be, and fully sparkling wines made by this method will indeed be cheapskates, but modern carbonation plants have the ability to induce the tiniest of bubbles, even to the point of imitating the “prickle” of wine bottled *sur lie*.

FORTIFIED WINES

Any wine, dry or sweet, red or white, to which alcohol has been added is classified as a fortified wine, whatever the inherent differences of vinification may be. Still wines usually have a

strength of 8.5 to 15 percent alcohol; fortified wines a strength of 17 to 24 percent. The spirit added is usually, but not always, brandy made from local wines. It is totally neutral, with no hint of a brandy flavor. The amount of alcohol added, and exactly when and how it is added, is as critical to the particular character of a fortified wine as is its grape variety or area of production. *Mutage*, early fortification, and late fortification are all methods that may be used to fortify wines.

MUTAGE

This is the addition of alcohol to fresh grape juice. This prevents fermentation and produces fortified wines, known as *vins de liqueurs* in France, such as Pineau des Charentes in the Cognac region, Floc de Gascogne in Armagnac, and Ratafia in Champagne.

EARLY FORTIFICATION

This is the addition of alcohol after fermentation has begun. This is often done in several small, carefully measured, timed doses spread over several hours or even days. The style of fortified wine being made will dictate exactly when the alcohol is added, and the style itself will be affected by the variable strength of the grapes from year to year. On average, however, alcohol is added to port after the alcohol level has reached 6 to 8 percent, and added to the *vins doux naturels* of France, such as Muscat de Beaugues de Venise, at any stage between 5 and 10 percent.

LATE FORTIFICATION

This is the addition of alcohol after fermentation has ceased. The classic drink produced by this method is sherry, which is always vinified dry, with any sweetness added afterward.

AROMATIZED WINES

With the exception of Retsina, the resinated Greek wine, aromatized wines are all fortified. They also all have aromatic ingredients added to them. The most important aromatized wine is vermouth, which is made from neutral white wines of 2 to 3 years of age, blended with an extract of wormwood (vermouth is a corruption of the German *uermut* meaning “wormwood”), vanilla, and various other herbs and spices. Italian vermouths are produced in Apulia and Sicily, and French vermouths in Languedoc and Roussillon. Chambéry is a delicate generic vermouth from the Savoie and Chambéryzette is a red-pink version flavored with alpine strawberries, but such precise geographical aromatized wines are rare. Most, in fact, are made and sold under internationally recognized brands such as Cinzano and Martini. Other well-known aromatized wines include Amer Picon, Byrrh, Dubonnet (both red and white), Punt e Mes, St.-Raphael, and Suze.

THE CHOICE OF OAK

I have seen the question only once in print, yet it is the most fundamental question that could possibly be asked: why oak? Why out of all the woods around the world is oak, and to any significant degree, only oak, used for barrel-making?

THE ANSWER IS THAT OTHER WOODS are either too porous or contain overpowering aromatic substances that unpleasantly taint the wine. It is not entirely true to say that only oak is used in winemaking. Chestnut, for example, is occasionally found in the Rhône and elsewhere, but it is so porous and so tannic that it is usually lined with a neutral substance, rendering the wood no different from any other lined construction material (such as concrete). A beech variety called *rauli* used to be popular in Chile until its winemakers, suddenly exposed to international markets, soon discovered they had become so used to the wood that they had not realized that it gave their wines a musty joss-stick character. Large, redwood tanks are still used in California and Oregon, but they are not greatly appreciated and, as the wood cannot be bent very easily, it is not practical for small barrels. Pine has a strong resinous character that the Greeks seem to enjoy, although they have had 3,000 years to acquire the taste. Most tourists try Retsina, but very few continue to drink it by choice when they return home. Moreover, it is made by adding resin, with no direct contact with the wood and, apart from an oddity called “Tea Wine,” produced on La Palma in the Canary Islands, no wine to my knowledge is produced in barrels made of pine. Eucalyptus also has a resinous affect, acacia turns wine yellow, and hardwoods are impossible to bend and contain aromatic oils that are undesirable.

White oak, on the other hand, is easily bent, has a low porosity, acceptable tannin content, and mild, creamy aromatic substances that either have an intrinsic harmony with wine or, like the Greeks, we have grown accustomed to the effect.

LARGE OR SMALL?

The size of the cask is critical to its influence. The smaller it is, the larger the oak-to-wine ratio, and the greater an oaky flavor it imparts. A 53-gallon (200-liter) *barrique* has 1.5 times the internal surface area of oak for every quart of wine as a 132-gallon (500-liter) cask. Traditional sizes for *barriques* range from 54 gallons (205 liters) in Champagne, to 59 gallons (225 liters) in Bordeaux and Spain, 60 gallons (228 liters) in Burgundy, and 79 to 83 gallons (300 to 315 liters) in Australia and New Zealand.

AN OAK BARREL

The staves of a barrel are held together by metal hoops, which are sometimes positioned at slightly different distances, depending on the traditions of the cooper, or *tonnelier*, in question. There may be a red color between the two innermost hoops, but this is merely where some winemakers wish to conceal their own dribble marks

around the bung by dyeing the entire middle area with wine, which can look very impressive. When fermenting white wines, the bung is always uppermost and, even with a good ullage, or space, the hole may be left open during the most tumultuous period. It will be sealed with an air-lock valve when the fermentation process settles down to remain closed during the malolactic fermentation. After racking, when all wines mature for several months, the barrels are filled to the very top, and positioned so that the bung is to one side, visually reminding cellar-workers that the casks are full.

FERMENTING POSITION

MATURATION POSITION

Square barrels were even developed to increase the ratio of oak-to-wine. Although treated as a novelty, they were actually more practical and economical than normal casks. More practical because they made more efficient use of storage space and more economical because their straight sides could be reversed to create a new oak barrel from an old one. An Australian firm even built a square stainless-steel tank with two oak panels made from oak staves that could be replaced, reversed, and adjusted in size to give different oak-to-wine ratios. However, all such barrels became superfluous, with the advent and widespread use of oak chips.

CHIPS OFF THE OLD BLOCK

Using old oak barrels for the finest *barrique*-fermented or *barrique*-matured wines is a question of style rather than a consideration of cost. But for less expensive wines, it is almost entirely a question of economics, because barrels can double, for example, the cost of a *vin de pays*.

The use of new oak *barriques* for just a small percentage of a wine blend can add a certain subliminal complexity to it, although not the overt oakiness that so many people find attractive, yet so few are willing to pay very much for. Oak chips or shavings are the answer. Although generally believed to be a recent phenomenon, the use of oak chips was sufficiently widespread by 1961 to warrant statutory controls in the United States. In fact, as a by-product of barrel-making, today's ubiquitous chip probably has an equally long, if somewhat more covert, history. Oak chips have been one of the most potent weapons in the New World's armory, producing relatively inexpensive, but distinctly premium-quality, wines to conquer international markets. This has been particularly evident in Australia, where flying winemakers have not only perfected oak

FRENCH OAK “APPELLATIONS”

Some winemakers swear by a particular variety of French oak, but most are suspicious of barrels that claim to be from one specific forest. Tronçais, for example, is one of the most famous oak forests, but the Tronçais forest supplies just 2 percent of all French oak and, if every barrel claiming to be from there actually did so, the forest would have disappeared long ago.

Perhaps the Bordelais, who are the most experienced in buying new French oak, realized

this centuries ago, as they have traditionally purchased barrels made from “mixed staves” (i.e. various forests).

Most winemakers buy from a particular cooper because they like their barrels. This usually has less to do with their construction, than with the seasoning of the wood and the toasting of the barrels. Most barrels are not only made on a mix-and-match basis, but the mix of staves is likely to vary from year to year. This is because oak is sold

by auction and coopers buy on quality, not name. It is more important who owns the forest than where it is located, because known sources, such as the *Office National des Forêts*, which is the only purveyor of *Haute Futaie* oak and who only sells *Haute Futaie* oak, can guarantee a consistency that a private proprietor, even with good wood, cannot. Therefore, some companies, such as Seguin Moreau, follow a policy of buying only *Haute Futaie* oak.

chip wines, but by the early 1990s had exported the techniques to virtually every winemaking country in the world. Some experiments have demonstrated that wine matured with oak chips used in old barrels is “virtually indistinguishable” from the same wine stored in new oak. The range of oak chip products is now very comprehensive, covering the entire range of oak varieties and different toast levels. Some are even impregnated with malolactic bacteria. If a wine label mentions oak, but not *barriques*, barrels, or casks, it is probably a clue that oak chips have been employed in the winemaking and, if the wine is cheap, you can bet on it.

ANYONE FOR TOAST?

Toasting is one operation in the barrel-making process that has a very direct effect on the taste of the wine. In order to bend the staves, heat is applied in three stages: warming-up (*pre-chauffrage*), shaping (*cintrage*), and toasting (*bousinage*), each of which browns, or chars, the internal surface of the barrel. However, it is only the last stage—*bousinage*—that determines the degree of toasting. During toasting, furanic aldehydes (responsible for “roasted” aromas) reach their maximum concentration, the vanilla aroma of vanillin is heightened, and various phenols, such as eugenol (the chief aromatic constituent of oil of cloves), add a smoky, spicy touch to the complexity of oak aromas in wine.

There are three degrees of toasting: light, medium, and heavy. A light toasting is used by winemakers who seek the most natural oak character (although it is not as neutral as using staves that have been bent with steam); medium varies between a true

BOUSINAGE
The final barrel-firing operation puts a light, medium, or heavy toast on the inner surface.

medium, which suits most red wine demands, and the so-called medium-plus, which is the favorite for fermenting white wines; the third, a heavy toast, dramatically reduces the coconut-lactones and leaves a distinctly charred-smoke character that can be overpowering unless used only as a small component in a blend. Furthermore, with time, the high carbon content of heavily toasted barrels can leach the color out of some wines, so they tend to be used for white wines (often big, brash Chardonnays), although heavy toast is best suited to maturing Bourbon whiskey.

THE DIFFERENT OAKS

Both American and European oaks are used for winemaking. The aromatics of fast-growing, wide-grained American white oak, *Quercus alba*, are more pungent, while there are more tannins, finer in texture, in slow-growing, tight-grained European brown oaks, *Quercus robur* (syn *pedunculata* oak), and *Quercus sessilis* (syn *Quercus petraea* and *Quercus rouvre*). Much of the appealing, if obvious, coconut character in American oak is also due to the very different barrel-making techniques used in the U.S.

Unlike European oak, American is sawn, not split. This ruptures the wood cells, releasing aromatic substances, especially vanillin and up to seven different lactones, which together explain the coconut aroma. American oak is also kiln-dried, which concentrates the lactones, while European oak is seasoned outside for several years, a process that leaches out some of the most aromatic substances, and reduces the more aggressive tannins. The whole process tends to accentuate the character of American oak, while subduing that of European oak.

Many French winemakers consider American oak vulgar. Even so, a little-known fact is that in ultraconservative Bordeaux, at least 60 châteaux are experimenting with it. Coconut-flavored claret is by no means a foregone conclusion, but oak is expensive, a little sawn *Quercus alba* goes a long way, and a small percentage of American oak, either as barrels or mixed staves, could, in fact, significantly reduce the percentage of new oak needed each year.

EUROPEAN SPLIT VERSUS AMERICAN SAWN

After the bark has been stripped from a log destined for barrel-making, it will be split (in Europe) or sawn (in the United States) into quarters. The examples above clearly show that it is more economical to saw staves from a quarter, as opposed to splitting them. This is the major reason why American oak barrels cost half the price of European ones.

LIGHT TOAST

MEDIUM TOAST

HEAVY TOAST

REGIONAL OAK VARIETIES

For winemaking, the tighter the size of the oak grain, the better. The slower the tree grows, the tighter the grain—thus, cooler-climate European oak is older and tighter-grained than warmer-climate American oak. Of the European oaks, forest oak (*Quercus sessilis*) is preferred to solitary oak trees (*Quercus robur*)

because its branches start higher and the trunk is longer and straighter. Solitary oaks grow faster and have a larger grain because they tend to grow in fertile soil where there is more water. *Quercus sessilis* is also preferred to *Quercus robur* because it is four times richer in aromatic components.

AMERICAN *Quercus alba*

This oak covers most of the eastern U.S. Some winemakers think that Minnesota and Wisconsin are the best, while others find them too tannic and consider Appalachian oak, particularly from Pennsylvania, to be superior. Other popular oaks are Ohio, Kentucky, Mississippi, and Missouri. All are white oaks, fast-growing, wide-grained, with lower tannin (except for Oregon) than any European brown oaks, but with higher, sweeter, more coconutty aromatics. *Quercus alba* is favored for traditional Rioja, Australian Shiraz, and California Zinfandel.

OREGON *Quercus gariana*

Although a white oak, *Quercus gariana* has a significantly tighter grain than *Quercus alba*. Relatively few barrels have been made from Oregon oak, and it has always been sawn, making it hard to evaluate the claim that it is similar to European oak. In 1996, however, barrels were made from split, open-air seasoned Oregon oak, so watch this space.

ALLIER *Quercus sessilis*

Tight-grained with well-balanced, medium tannin and aromatics, Allier is highly regarded.

ARGONNE *Quercus sessilis*

Tight-grained with low aromatics and tannin, this oak was used for Champagne before the advent of stainless-steel. Now seldom used.

AMERICAN OAK FORESTS

BOURGOGNE *Quercus sessilis*

Tight-grained with high tannin and low aromatics, most of this oak goes to Burgundian cellars.

LIMOUSIN *Quercus robur*

Wider-grained with high tannin and low aromatics, this oak used to be favored for Chardonnay, but is most widely used for brandy.

NEVERS *Quercus sessilis*

Tight-grained with well-balanced, medium tannin and aromatics, Nevers is highly regarded.

TRONÇAIS *Quercus sessilis*

The tightest-grained and, with Vosges, the highest tannin content, Tronçais grows in the Allier forest. It is highly suitable for long-term maturation, owing to its understated aromatics, and has been long sought after.

EUROPEAN OAK FORESTS

VOSGES *Quercus sessilis*

The tight grain, very high tannin content, and understated but slightly spicy aromatics make Vosges an especially well-balanced oak for winemaking. It is underrated, particularly in its home region of Alsace, where even though few winemakers use *barriques*, those who do ironically seem to experiment with virtually every French forest except the one that is actually on their own doorstep. Vosges is especially popular in California and New Zealand, where some winemakers think it is similar to Allier and Nevers. Vosges deserves to receive greater recognition.

BALKAN *Quercus robur*

Often called Slavonian or Yugoslav oak, the grain is tight, with medium tannin and low aromatics. Balkan oak is popular for large oval casks, particularly in Italy. Use is diminishing because of recent troubles.

PORTUGUESE *Quercus gariana*

Cooperage oak (*Quercus gariana*) is far less of a commercial concern in Portugal than stunted cork-industry oak (*Quercus suber*), but the former's medium-grain wood has good aromatic properties, making it preferable in Portugal itself, where it is much cheaper than French oak.

RUSSIAN *Quercus sessilis*

Tight-grained with low aromatics and easy to confuse with French oak under blind conditions, this was the major oak in Bordeaux during the 19th century and up until the 1930s. Thus all the great old vintages owe something to it. Thanks to investment from Seguin Moreau, which set up a cooperage in the Adygey region near the Black Sea, French producers have begun to use Russian oak again, although it is mysteriously just 10 percent cheaper than French.

GRAPE VARIETIES

The grape variety used for a wine is the most influential factor in determining its taste. The factors that determine the inherent flavor of any grape variety are the same as those that determine the varietal taste of any fruit. How they affect the taste of wine is outlined below.

SIZE

The smaller the fruit, the more concentrated the flavor will be. Thus most classic grape varieties, such as Cabernet Sauvignon and Riesling, have small berries, although some varieties that rely more on elegance than power of concentration, such as the Pinot Noir, may yield large berries. Many varieties are known as *petit-* or *gros-* something, and it is usually the *petit* that is the better variety—Petit Vidure is Cabernet Sauvignon; Gros Vidure, Cabernet Franc.

SKIN STRUCTURE

The skin contains most of the aromatic characteristics with which we associate the varietal identity of any fruit. Its construction and thickness is, therefore, of paramount importance. For example, the thick-skinned Sauvignon Blanc produces an aromatic wine that, when ripe, varies in pungency from “peach” in a warm climate to “gooseberry” in a cool climate, and when underripe varies in herbaceousness, ranging from “grassy” to “elderflower” and even “cat’s pee.” Meanwhile the thin-skinned Sémillon produces a rather neutral wine, although its thin skin makes it susceptible to noble rot and is thus capable of producing one of the world’s greatest botrytized sweet wines, with mind-blowing aromatics.

SKIN COLOR AND THICKNESS

A dark-colored, thick-skinned grape, such as Cabernet Sauvignon, produces very deep-colored wines, while the lighter-colored, thin-skinned grapes, such as Merlot, produce a less intense color.

ACID–SUGAR RATIO AND PRESENCE OF OTHER CONSTITUENTS

The grape’s sugar content dictates the wine’s alcohol level and the possibility of any natural sweetness; together with the acidity level, this determines the balance. The proportions of a grape’s other constituents, or their products after fermentation, form the subtle nuances that differentiate the varietal characters. Although soil, rootstock, and climate have an effect on the ultimate flavor of the grape, the genetics of the vine dictate the end result.

THE VITIS FAMILY

The vine family is a large and diverse family of plants ranging from the tiny pot-plant Kangaroo Vine to Virginia Creeper. The Wine Vine Tree, (see below), shows how the *Vitis vinifera*, the classic winemaking species, relates to the rest of the vine family. The *Vitis vinifera* is one of many belonging to the subgenus *Euvites*. Other species in this subgenus are used for rootstock.

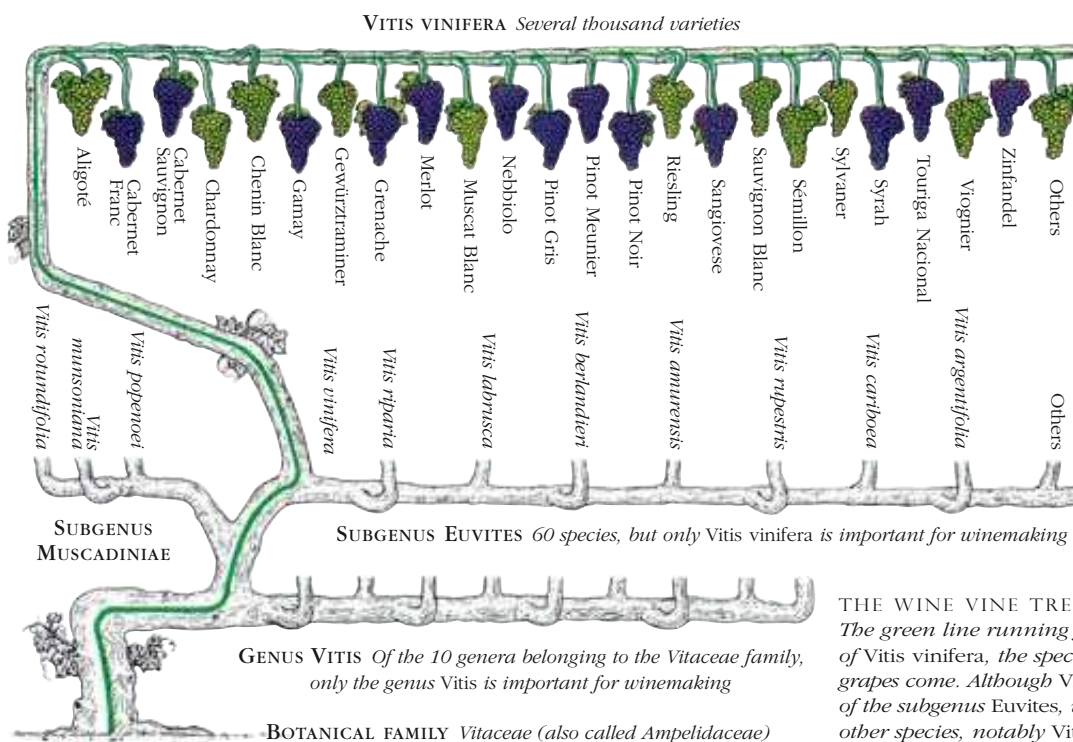

PHYLLOXERA VASTATRIX—PEST OR BLESSING?

The vine louse—*Phylloxera vastatrix*—that devastated the vineyards of Europe in the late 19th century still infests the soils of nearly all the world’s winegrowing regions. At the time, it was considered the greatest disaster in the history of wine, but with hindsight, it was a blessing in disguise.

Before phylloxera arrived, many of Europe’s greatest wine regions had gradually been devalued because of increased demand for their wines. This led to bulk-producing, inferior varieties being planted, and vineyards being extended into unsuitable lands. As phylloxera spread, it became apparent that every vine had to be grafted onto phylloxera-resistant American rootstock. This forced a much-needed rationalization, in which only the best sites in the classic regions were replanted and only noble vines were cultivated, a costly operation that vineyard owners in lesser areas could not afford. The grafting took France 50 years, and enabled the *Appellation d’Origine Contrôlée* system to be set up. It is hard to imagine what regional or varietal identities might now exist if phylloxera had not occurred.

ROOTSTOCK

Hundreds of rootstock varieties have been developed from various vine species, usually *Vitis berlandieri*, *V. riparia*, or *V. rupestris*, because they are the most phylloxera-resistant. The precise choice of rootstock is dependent on its suitability to the vinestock on which it is to be grafted as well as on its adaptability to the geographical location and soil type. The choice can increase or decrease a vine’s productivity, and thus has a strong effect on the quality of the wine produced from the grapes. Generally, the lower the quantity, the higher the quality.

THE WINE VINE TREE

The green line running from the ground traces the parentage of Vitis vinifera, the species from which all classic winemaking grapes come. Although Vitis vinifera is the most important species of the subgenus Euvites, wine is made from grape varieties from other species, notably Vitis labrusca, native to North America.

GLOSSARY OF GRAPE VARIETIES

There are thousands of winemaking grape varieties grown throughout the world. The varieties that are the most significant, to one degree or another, in the areas where they are cultivated are profiled over the following pages.

CROSSES AND HYBRIDS

A cross between grape varieties within one species is called a cross, whereas a cross between varieties from different species is called a hybrid. Cross the same grape varieties more than once and the odds are that the new strains produced will not be the same. Thus *Sylvaner* x *Riesling* is not only the parentage of the Rieslaner, but also the Scheurebe, two totally different grapes. It is also possible to cross a variety with itself and produce a different grape. In this glossary, the parentage of crosses and hybrids is always in *italic*.

CLONES AND CLONING

Within varietal limitations, intensive selection can produce a vine to suit specific conditions, such as to increase yield, resist certain diseases, or to thrive in a particular climate. Identical clones of

this vine can then be replicated an infinite number of times by microbiogenetic techniques. Clones are named by number and initial. For instance, "Riesling clone 88Gm" is the 88th clone of the Riesling variety produced at Geisenheim (Gm), the German viticultural research station. A "localized" clone is a vine that has evolved naturally under specific conditions within a particular environment. These may be named first by grape variety and then by locality and referred to as subvarieties. However, the name of the original variety is often entirely forgotten with the passing of time, so that the variety acquires a new name altogether.

GRAPE COLOR

Most white wines are made from "white" grapes, which actually range from green to amber-yellow. On the other hand, most red or rosé wines are made from "black" grapes, which vary from red to blue-black. White wine can also be made from most black grapes because, with only a few exceptions (categorized as *teinturier*, literally "dyer," grapes) only the skin is colored, not the juice. But red wine can be made only from black grapes, because it is pigments in the skin, called anthocyanins, that give the wine its color. The acidity in the skin's sap also affects the color of its wine: high acid levels gives a ruddy color, while the lower the acidity the more purple, and eventually violet, the wine becomes.

WHITE GRAPE VARIETIES

Note Some pink-colored varieties, such as Gewürztraminer and Pinot Gris, are included in this section because the wine they make is essentially white.

ALBALONGA

A *Rieslaner* x *Sylvaner* cross developed and grown in Germany for its naturally high sugar level and early-ripening qualities.

ALIGOTÉ

See box, below.

ALTESSE

The finest of Savoie's traditional varieties, this grape makes delightfully rich and fragrant wines.

ALVARINHO

The classic Vinho Verde grape, although it might not rank as a classic grape variety *per se*.

ARINTO

The Arinto is one of Portugal's potentially excellent white grapes. Its use in the small district of Bucelas is to make a crisp, lemony wine that ages well.

ARNEIS

Literally meaning "little rascal," this Piedmontese grape was so named because of its erratic ripening. Once threatened by commercial extinction, this delicately aromatic variety is now extremely fashionable.

ASSYRTIKO

One of the better-quality indigenous varieties of Greece.

AUXERROIS

At home in Alsace, Luxembourg, and England, Auxerrois makes a fatter wine than Pinot Blanc, so suits cooler situations. Its musky richness has immediate appeal, but it is inclined to low acidity and blowsiness in hotter climates.

BACCHUS

A (*Riesling* x *Sylvaner*) x *Müller-Thurgau* cross that is one of Germany's more superior crosses.

BORRADO DES MOSCAS

A Dão grape, literally called "fly droppings," Borrado des Moscas retains high natural acidity at high alcohol levels, making it well suited to white winemaking in hot areas.

BOUVIER

A modest-quality variety in Austria and one which, as Ranina, produces the "Tiger's Milk" wine of Slovenia.

BUAL

The richest and fattest of Madeira's four classic grape varieties.

CHARDONEL

Known as "Chard in Hell" to many a wine judge forced to taste its wines, Chardonel is a *Seyval* x *Chardonnay* cross made by Cornell University in 1953, but not released until 1990. So far the wines produced have been more bland than even the most anonymous Chardonnay.

CHARDONNAY

See box, opposite.

CHASSELAS

Responsible for the best-forgotten Pouilly-sur-Loire wines (not to be confused with Pouilly-Blanc Fumé), this variety is at its modest best in Switzerland's Valais (where it is known as the Fendant) and Alsace. Primarily a good grape for eating.

CHENIN BLANC

See box, opposite.

CLAIRETTE

A sugar-rich, intrinsically flabby grape best known for its many wines of southern France. It is the Muscat though, not the Clairette, which is chiefly responsible for the "Clairette de Die" in the Rhône.

COLOMBARD

This produces thin, acidic wine ideal for the distillation of Armagnac and Cognac. It has also adapted well to the hotter winelands of California and South Africa, where its high acidity is a positive attribute.

CRUCHEN BLANC

Widely cultivated, this variety usually, but incorrectly, has the tag of Riesling attached to it, such as Cape Riesling and Clare Riesling.

DELAWARE

This American hybrid of uncertain parentage was developed in Frenchtown, New Jersey, and propagated in Delaware, Ohio, in the mid-19th century. Although grown in New York State and Brazil, it is far more popular in Japan.

ALIGOTÉ

This is a thin-skinned grape of unexceptional quality grown in Burgundy and Bulgaria. It makes tart wines of moderate alcoholic content, but in exceptionally hot years they can have good weight and richness. The variety's best wines come from certain Burgundian villages, especially Bouzeron, where the quality may be improved by the addition of a little Chardonnay.

CHARDONNAY

This is the greatest nonaromatic dry white wine grape in the world, despite the proliferation of cheap, identikit

Chardonnay wines that are churned out around the world. This classic variety is responsible for producing the greatest white Burgundies and is one of the three major grape types used in the production of Champagne.

**CHENIN BLANC**

A variety that acquired its name from Mont-Cbenin in the Touraine district in about the 15th century, it can be traced back to Anjou, around A.D. 845.

The grape has a good acidity level, thin skin, and a high natural sugar content, making it very suitable for either sparkling or sweet wines, although some dry wines, notably Savennières, are made from it.

**EHRENFELSER**

A *Riesling* x *Sylvaner* cross, the Ehrenfelser has turned out to be a *cul-de-sac* in British Columbia, Canada, where it remains the preserve of a few die-hards.

ELBLING

This variety was once held in high esteem in Germany and France. The major Mosel grape in the 19th century, it is now mostly confined to the Ober-Mosel where its very acid, neutral flavor makes it useful for German *Sekt*. In Alsace it was *Knipperlé* and its former position was such that one of the *grand cru* Guebwiller slopes was named after it.

EMERALD RIESLING

A *Muscadelle* x *Riesling* cross, this grape was developed for cultivation in California by a Professor Olmo of UC-Davis fame as the sister to his Ruby Cabernet cross.

FABER

A *Weissburgunder* x *Müller-Thurgau* cross grown in Germany, where it produces a fruity wine with a distinctive light Muscat aroma.

FOLLE BLANCHE

Traditionally used for the distillation of Armagnac and Cognac, the Folle

Blanche grape also produces the Gros Plant wine of the Loire Valley.

FORTA

A little of this *Madeleine Angevine* x *Sylvaner* cross is grown in Germany, where it produces good-quality grapes that are rich in sugar.

FREISAMER

A *Sylvaner* x *Pinot Gris* cross that is grown in Germany and produces a full, neutral, Sylvaner-like wine.

FURMINT

This strong, distinctively flavored grape is the most important variety used to make Tokaji in Hungary.

GARGANEGA BIANCO

The principal grape used in the production of Soave.

GEWÜRZTRAMINER

See box, below.

GLORIA

A *Sylvaner* x *Müller-Thurgau* cross grown in Germany, where it yields grapes that are rich in sugar, but make rather neutral wines.

GRENACHE BLANC

This is the white Grenache variant that is widely planted in France and

Spain. It is an ancient Spanish variety with the potential to produce a good-quality, full-bodied wine.

GRÜNER VELTLINER

This is the most important wine grape in Austria, where it produces fresh, well-balanced wines, with a light, fruity, sometimes slightly spicy, flavor. Top-quality Grüner Veltliner from the Wachau can have a penetrating pepperiness.

GUTENBORNER

This *Müller-Thurgau* x *Chasselas* cross is grown in Germany and England. It produces grapes with intrinsically high sugar levels, but makes rather neutral wines.

HARSLEVELŰ

A Hungarian grape that is the second most important Tokaji variety. It produces a full, rich, and powerfully perfumed wine.

HUXELREBE

A *Chasselas* x *Muscat Courtillier* cross that is grown in Germany and England, and is capable of producing good-quality wine.

JACQUÈRE

The workhorse grape of the Savoie, the Jacquère is subject to rot, has a neutral flavor and high acidity.

JOHANNISBERG RIESLING

This is a synonym often used to distinguish a wine that is made from the true Riesling grape. Many people believe that the Riesling is at its classic best when grown in the Rheingau vineyards of Johannisberg, thus the synonym most probably evolved as a way of indicating that a wine contained Riesling grapes "as grown in Johannisberg."

KANZLER

A *Müller-Thurgau* x *Sylvaner* cross that produces a good Sylvaner substitute in the Rheinhessen.

KERNER

A *Trollinger* x *Riesling* cross that produces wines with a high natural sugar content and good acidity, but a very light aroma.

LEN DE L'EL

Flavorsome, naturally sugar-rich grape that is used in Gaillac.

MACABÉO

This is a Spanish variety used to "lift" a sparkling Cava blend and give it freshness. Bearing the name of Viura, it is also responsible for the "new wave" of fresh, unoaked white Rioja.

MADELEINE ANGEVINE

This is a *Précoce de Malingre* x *Madeleine Royale* cross that is grown quite successfully in England, where it produces a characteristically light-bodied, aromatic wine.

MANSENG

The Gros Manseng and Petit Manseng are grown in southwestern France, and are well known mainly for producing the legendary Jurançon Moelleux.

MARIENSTEINER

A *Sylvaner* x *Rieslaner* cross that is grown in Germany and is generally considered superior to the Sylvaner.

MARSANNE

This grape makes fat, rich, full wines and is one of the two major varieties used to produce the rare white wines of Hermitage and Châteauneuf-du-Pape.

MAUZAC

A late-ripening grape with good acidity, grown in southwestern France, Mauzac is flexible in the wines it produces, but is particularly suitable for sparkling wine.

MELON DE BOURGOGNE

This variety was transplanted from Burgundy to Nantais where it replaced less hardy vines after the terrible winter of 1709. Most famous for its production of Muscadet. When fully ripe, it makes very flabby wines, lacking in acidity, although curiously it can be successful in California's warmer climes.

MORIO-MUSKAT

This *Sylvaner* x *Pinot Blanc* cross is widely grown in the Rheinpfalz and Rheinhessen of Germany. It has always been intriguing how such neutral parents could produce such

GEWÜRZTRAMINER

At its most clear-cut and varietally distinctive in Alsace (where it is never spelled with an umlaut), this variety produces very aromatic wines that are naturally low in acidity. The Gewürztraminer's famous spiciness is derived from terpenes, which are found in the grape's skins. The grapes have to be ripe, otherwise the wine will just have a soft rose-petal character, and the wine must not be acid-adjusted or the spice will lack breadth and potential complexity.

MUSCAT À PETITS GRAINS

There are two versions of this variety—the Muscat Blanc à Petits Grains and the Muscat Rosé à Petits Grains—and some vines that seem to produce a motley crop somewhere between the two. Where one is cultivated, the other is often intermingled or growing close by. The two greatest products of the Petits Grains are the dry wines of Alsace and the sweet and lightly fortified Muscat de Beaumes de Venise, although in the production of the former the variety is giving way to the Muscat Ottonel.

a powerfully aromatic offspring, but now we know that the Traminer is one of Sylvaner's parents, the answer is obviously in the genes.

MÜLLER-THURGAU

This variety was bred at Geisenheim in 1882 by Professor Hermann Müller, who hailed from the canton of Thurgau in Switzerland, and was named after him by August Dern in 1891. It was originally believed to be a Riesling x Sylvaner cross, but not one single plant has ever reverted to Sylvaner, and the closest resemblance to it is the Rabaner, a Riesling (clone 88Gm) x Riesling (clone 64Gm). This seems to confirm the theory that the Müller-Thurgau is, in fact, a self-pollinated Riesling seed. It is more prolific than the Riesling, has a typically flowery bouquet and good fruit, but lacks the Riesling's characteristic sharpness of definition. Although this variety has a justifiably important position in the production of cheap German Tafelwein, its cultivation in the classic Riesling vineyards of the Mosel does tend to devalue that

great wine region. It is widely planted in English and New Zealand vineyards, although in both cases the acreage devoted to it has shrunk markedly since the 1990s.

MULTANER

A Riesling x Sylvaner cross, a small amount of this variety is grown in Germany. However, the area planted is declining because the grapes need to be very ripe.

MUSCADELLE

A singular variety that has nothing to do with the Muscat family, although it does have a musky aroma and there is, confusingly, a South African synonym for the Muscat—the Muskadel. In Bordeaux, small quantities of this grape add a certain lingering "after-smell" to some of the sweet wines, but the Muscadelle is at its sublime best in Australia, where it is called the Tokay and produces a rich and sweet "liqueur wine."

MUSCAT

A family name for numerous related varieties, subvarieties, and localized

clones of the same variety, all of which have a distinctive musky aroma and a pronounced grapey flavor. The wines that are produced range from dry to sweet, still to sparkling, and fortified.

MUSCAT À PETITS GRAINS

See box, left.

MUSCAT D'ALEXANDRIE

An extremely important grape in South Africa, where it makes mostly sweet, but some dry, wines. In France, it is responsible for the fortified wine Muscat de Rivesaltes (a very tiny production of unfortified dry Muscat is also made in Rivesaltes), and the grape is also used for both wine and raisin production in California.

MUSCAT OTTONEL

An East European variety which, because of its relative hardiness, is now in the process of replacing the Muscat à Petits Grains in Alsace.

NOBLESSA

This is a low-yielding Madeleine Angevine x Sylvaner cross grown in Germany, which produces grapes with a high sugar level.

NOBLING

A Sylvaner x Chasselas cross grown in Baden, Germany, its grapes have high sugar and acidity levels.

ONDENC

A grape once widely planted in southwestern France and popular in Bergerac, it is now grown more in Australia than in France. Its acidity makes it useful for sparkling wines.

OPTIMA

Developed in 1970, this (Riesling x Sylvaner) x Müller-Thurgau cross is already widely grown in Germany because it ripens even earlier than the early-ripening Müller-Thurgau.

ORTEGA

A Müller-Thurgau x Siegerrebe cross that is grown in both Germany and

England, its aromatic grapes have naturally high sugar and make a pleasantly fragrant and spicy wine.

PALOMINO

The classic sherry grape variety.

PARELLADA

The major white grape variety of Catalonia, used for still wines and sparkling Cava, in which it imparts a distinctive aroma and is used to soften the firm Xarel-lo grape.

PERLE

A Gewürztraminer x Müller-Thurgau cross, this grape can survive winter temperatures as low as -22°F (-30°C), and produces a light, fragrant, and fruity wine, but in low yields.

PINOT BLANC

A variety that is perhaps at its best in Alsace, where it is most successful, producing fruity, well-balanced wines with good grip and alcohol content. Plantings of the true Pinot Blanc are gradually diminishing worldwide.

PINOT GRIS

See box, below left.

POULSARD

The Jura's famous grape with pink skin and pink juice can produce a fine and aromatic vin gris.

PROSECCO

This grape is responsible for producing a great deal of very ordinary Italian sparkling wine.

RABANER

This Riesling (clone 88Gm) x Riesling (clone 64Gm) cross has the dubious honor of being the variety that most resembles the Müller-Thurgau.

RABIGATO

This is the main white port grape variety. It is also known as Rabo da Ovelha, or "ewe's tail."

PINOT GRIS

A variety undoubtedly at its best in Alsace, where it can produce succulent, rich, and complex wines of great quality, it has a spiciness seldom found elsewhere. When coupled with an acidity that is lower than that of Pinot Blanc, an absence of spicy varietal definition will invariably be due to high yields. This is why Pinot Grigio in northeastern Italy generally lacks the intensity of Alsace Pinot Gris, although both use the same clones.

RIESLING

The classic German grape produces a zesty, citrusy, intensely flavored wine of great mineral complexity, length, and longevity. When grown on certain soils, the terpenes in Riesling benefit from bottle-age and can, after several years, develop a bouquet reminiscent of gasoline. Alsace and Austria make most (not all) of the best dry Riesling. In Australia the wine from this grape has, by and large, a simplistic lime fruit character that is prone to going like gasoline in a relatively short while, but lacks the finesse and complexity of truly classic gasoline aromas.

REGNER

The parents of this *Luglienca Bianca* x *Gamay* cross are a curious combination. Why anyone would consider crossing a table grape with the red wine grape of Beaujolais to create a German white wine variety is a mystery. Predictably it produces sugar-rich grapes and mild, Müller-Thurgau-like wines.

REICHENSTEINER

This *Müller-Thurgau* x *Madeleine Angevine* x *Calabreser-Fröblich* cross is grown in Germany and England. Its sugar-rich grapes produce a mild, delicate, somewhat neutral, Sylvaner-like wine.

RHODITIS

This grape is used as a supporting variety in the making of Retsina, a use only eclipsed by its suitability for the distilling pot!

RIESLANER

A *Riesling* x *Sylvaner* cross mainly grown in Franken, Germany, where it produces sugar-rich grapes and full-bodied, rather neutral wines.

RIESLING

See box, *opposite*.

RKATSITELI

A grape variety that is grown extensively in Russia, on a scale that would cover the vineyards of Champagne at least 10 times over. The Soviets consider it to be a high-quality wine grape; it is also grown in Bulgaria, China, California, and New York State.

ROBOLA

Confined to the island of Cephalonia, this is a good-quality Greek grape.

ROMORANTIN

An obscure variety that is confined to the Loire Valley, Romorantin can produce a delicate, attractive, and flowery wine if it is not overcropped.

ROUSSANNE

One of two major varieties used to produce the rare white wines

of Hermitage and Châteauneuf-du-Pape in France's Rhône Valley, this grape makes the finer, more delicate wines, while those made from the Marsanne tend to be fatter and richer.

SACY

A minor grape variety that produces bland "stretching" wine and is grown in small quantities in the Chablis district. Its high acidity could make it very useful in the production of sparkling wines.

SAINT-ÉMILION

This is a synonym for the Ugni Blanc in France and for the Sémillon in Romania.

SAUVIGNON BLANC

See box, *below*.

SAUVIGNONASSE

This literally means "Sauvignon-like" and is, in fact, the Sauvignon Vert, which confusingly is no relation to the Sauvignon Blanc. According to Pierre Galet, this is the Tocai Friulano, although some find this hard to accept. The high-yielding Sauvignonasse is grown in Chile, where it used to masquerade as Sauvignon Blanc until the mid-1990s.

SAVAGNIN

This grape is a nonaromatic Traminer, and it is responsible for the sherry-like *vin jaune* of the Jura, of which the best known is Château Chalon. The Savagnin Rosé is the nonaromatic Traminer Rosé (from which the highly aromatic Gewürztraminer evolved) and this grape grows in the village of Heiligenstein, Alsace, where it is known as the Klevenner de Heiligenstein.

SAVATIANO

This grape variety was used by the Greeks to make Retsina. A pure, unresinated Savatiano called Kanza is made in Attica, the heartland of Retsina.

SAUVIGNON BLANC

Sauvignon Blanc is at its best defined in New Zealand, particularly Marlborough, and is still a long way off achieving a similar level of quality and consistency in its home location of the Loire Valley. It is improving in Bordeaux, where it is also used in Sauternes and Barsac blends. Some exciting wines have begun to emerge from the Cape winelands, South Africa (ignoring those that are artificially flavored), but California remains hugely disappointing, even though its vines are the same Sauvignon Blanc clone as New Zealand.

**SÉMILLON**

In Sauternes and Barsac, this is the grape susceptible to "noble rot." Some say its aroma is reminiscent of lanolin, but as pure lanolin is virtually odorless, the comparison hardly conveys the Sémillon's distinctive bouquet. For dry wine, this grape is at its best in Australia, particularly the Hunter Valley, where its lime fruit takes to oak like a duck to water, whereas bottle-aged Sémillon can be sublime after several decades.

**SCHUREBE**

A *Riesling* x *Sylvaner* cross, this is one of the best of Germany's new varieties. When ripe, it makes very good aromatic wines, but, if it is harvested too early, very herbaceous cat's-pee.

SCHÖNBURGER

A *Spätburgunder* x (*Chasselas Rosé* x *Muscat Hamburg*) cross, this grape is grown in Germany and England. It produces sugar-rich grapes that make wine with good aromatic qualities but low acidity.

SÉMILLON

See box, *above*.

SEPTIMER

A *Gewürztraminer* x *Müller-Thurgau* cross grown in Germany, where it is early-ripening and produces sugar-rich grapes that are made into aromatic wines.

SERCIAL

This classic grape of Madeira is reputed to be a distant relative of the Riesling. However, judging by its totally different leaf shape, this seems rather unlikely.

SEYVAL BLANC

This *Seibel 5656* x *Seibel 4986* hybrid is the most successful of the many Seyve-Villard crosses. It is grown primarily in New York State and England, where it produces attractive wines.

SIEGERREBE

This is a *Madeleine Angevine* x *Gewürztraminer* cross, a grape that is widely grown in Germany.

SYLVANER

See box, *next page*.

SYMPHONY

Plantations of this *Muscat d'Alexandrie* x *Grenache Gris* cross rapidly increased in California in the mid-1990s, although it was developed by Professor Olmo as long ago as 1940. The wine it makes

is usually off-dry with a distinctly flowery-grapey Muscat aroma.

TORRONTÉS

Various different clones of this lightly aromatic grape are found throughout South America, but particularly in Argentina. No relation to the Spanish Torrontés (which is a local synonym for the Monastrell Blanco) or Torrontés Riojano (which is a local synonym for the Malvoisie).

TRAMINETTE

A *JS 23-416* x *Gewürztraminer* hybrid that was developed by Cornell University and released in 1996, since when it has become planted here and there throughout the Atlantic Northeast. Some American winemakers consider it superior to Gewürztraminer because of its significantly higher acidity, but this interferes with aromatics, which are more "spiky" than the Gewürztraminer's classic broad-spice bouquet. Notwithstanding this, there have been successes, even if they are few and far between. Generally perceived as a cool-climate grape, the Traminette's high acidity does however raise the question of whether it might not fare much better in the warmer climes of California.

TROUSSEAU GRIS

This grape is now more widely grown in California and New Zealand than in its traditional home of the northern Jura, France. It is yet another grape that has been erroneously tagged with the Riesling name in the New World but does not resemble that grape in the slightest.

UGNI BLANC

A variety that usually makes light, even thin, wines that have to be distilled, the Ugni Blanc is ideal for making Armagnac and Cognac. There are a few exceptions, but most wines are light, fresh, and quaffing at their very best.

SYLVANER

Originally from Austria, this variety is widely planted throughout Central Europe. It is prolific, early maturing, and yields the dry wines of Franken and Alsace. It is also widely believed to be the Zierfandler of Austria. Sylvaner has a tart, earthy, yet neutral flavor, which takes on a tomato-like richness in the bottle. This grape is now known to be the offspring of the Österreichisch Weiss and Traminer.

**VIOGNIER**

This individual, shy-bearing variety was until relatively recently confined to a tiny part of the Rhône Valley, where it produced the famous wines of Condrieu and Château Grillet. Although this variety crept out to Australia in the 1970s, the real explosion did not occur until the 1990s in Languedoc-Roussillon and California. At its best, Viognier has a lush, aromatic quality, with distinctive peachy character, but it is all too often over-oaked.

**VERDELHO**

A successful grape variety for making white wines in Australia, the Verdelho is possibly connected to the Verdello of Italy. Verdelho is best known, however, as a classic grape variety that is grown on Madeira for the production of the island's fortified wine (a Verdelho *tinto* also exists on the island).

VERDICCHIO

As well as being used to make Verdicchio wine, this grape is also employed for blending.

VILLARD BLANC

This *Seibel 6468* x *Seibel 6905* hybrid is the widest cultivated of the Seyve-Villard crosses in France. Its slightly bitter, iron-rich wine cannot

be compared with the attractive wine of the Seyve-Villard 5276 or Seyval Blanc grown in England.

VIOGNIER

See box, above.

WELSCHRIESLING

No relation whatsoever to the true Riesling, this variety is grown throughout Europe, producing

ordinary medium-dry to medium-sweet white wines.

WÜRZER

A German variety with *Gewürztraminer* x *Müller-Thurgau* origins.

XAREL-LO

A Spanish grape variety vital to the sparkling Cava industry, Xarel-lo makes firm, alcoholic wines.

BLACK GRAPE VARIETIES

AGIORGITIKO

An excellent indigenous Greek grape variety that is responsible for the rich and often oak-aged wines of Nemea.

ALICANTE BOUSCHET

A *Petit Bouschet* x *Grenache* cross, this is a *teinturier* grape, with vivid, red juice. It was a favorite during Prohibition, when the rich color of its juice enabled bootleggers to stretch wines with water and sugar. Although the cultivation of this grape has increased by 42 percent since 1995, Alicante Bouschet is used primarily for port-style wines today, and is seldom seen as a varietal table wine. The secret of a good Alicante Bouschet table wine is in achieving the tannins, structure, and mouthfeel that are compatible with its naturally inky-purple color. Many moons ago, Angelo Papagni's death-defying Alicante Bouschet was not to be missed, and Coturri and Jim Clendenen (with Il Podere dell'Olivos) have at times dabbled very successfully with this variety. Rainbow Ridge ("the first gay-owned winery in the country") has yet to demonstrate that its 2001 is more than a flash in the pan. Which leaves the organically minded Topolos as the only consistently high-quality producer of Alicante Bouschet nowadays.

BARBERA

A prolific Italian variety grown in Piedmont, the Barbera makes light, fresh, fruity wines that are sometimes very good.

BASTARDO

This is the classic port grape and is identified as the Trousseau, an ancient variety once widely cultivated in the Jura, France.

BLACK SPANISH

This grape is making something of a minor revival in Texas, where it was widely grown in the 1830s to make a portlike wine. This is, in fact, Lenoir or Jacquez, and contrary to those who believe it to be a natural *aestivalis-cinerea-vinifera* hybrid, 100 percent *vinifera*.

CABERNET FRANC

See box, right.

CABERNET PFEFFER

A grape of disputed origins. The French call this Pfeffer Cabernet (also called Fer Servadou), whereas the Americans have transposed the French name into Cabernet Pfeffer, which for Anglo-Saxons slips off the tongue easily and is more rational. There are various opinions as to its origins in the U.S., the most plausible being a 19th-century cross (but no one knows what with or who made the cross, and cannot be more precise than a 100-year-old span). Only two

U.S. sources of this variety exist today: the 100-year-old Wirz Family vineyard in Monterey's Cienega Valley, California, and one of Casa Nuestra's vineyards in Oakville, where the vines were planted in the 1940s.

CABERNET SAUVIGNON

See box, opposite.

CARIGNAN

A Spanish grape grown extensively in southern France and California.

One of its synonyms—Mataro—is a common name for the Mourvèdre, which also provides a well-colored wine, but one that is not quite as harsh. A Carignan Blanc and Gris also exist.

CARMENÈRE

An old *bordelais* variety that was almost extinct, until it was discovered in Chile posing as Merlot, and then in Franciacorta, where it was pretending to be

CABERNET FRANC

Cabernet Franc is grown throughout the world, but particularly in Bordeaux. It fares best as Bouchet in St-Émilion and at Pomerol, across the Dordogne River, where Cabernet Sauvignon is less well represented. Grown under neutral conditions, it might not be easy to distinguish any significant varietal differences between the two Cabernets, but, suited as they are to different situations, the Cabernet Franc tends to produce a slightly earthy style of wine that is very aromatic, but has less fine characteristics on the palate when compared to the Cabernet Sauvignon.

CABERNET SAUVIGNON

The noblest variety of Bordeaux, the Cabernet Sauvignon, rich in color, aroma, and depth, is vitally important to the classic Médoc wines. Many of its classical traits have been transplanted as far afield as California, Chile, and Australia. The complexities that this grape can achieve transcend simplistic comparisons to cedar, blackcurrants, or violets. The Cabernet Sauvignon's parents are now known to be Cabernet Franc and Sauvignon Blanc.

**GAMAY**

The mass-produced wine of this famous grape from Beaujolais has a tell-tale "pear-drop" aroma, indicative of its macération carbonique style of vinification. These wines should be drunk very young and fresh, although traditionally vinified wines from Beaujolais' 10 classic crus can be aged like other red wines and, after 10 or 15 years, develop Pinot Noir traits. This may be because the grape is an ancient, natural clone of Pinot Noir. In France, Gamay Beaujolais is the synonym for true Gamay.

Cabernet Franc (interestingly, one of Carmenère's synonyms is Grand Vidure, while one of Cabernet Franc's names is Gros Vidure). So far, the Carmenère produced in Franciacorta has more finesse than those in Chile, but overall there is a tendency to produce wines with a marked blackcurrant character that seldom develops complexity.

CÉSAR

A minor grape variety of moderate quality that is still used in some areas of Burgundy, most notably for Bourgogne Irancy.

CINSAULT

A prolific grape found mainly in southern Rhône and Languedoc-Roussillon vineyards, where it makes robust, well-colored wines. It is best blended, as happens at Châteauneuf-du-Pape, for example.

CONCORD

The widest-cultivated variety in North America outside of California, this variety has an extremely pronounced "foxy" flavor.

DOLCETTO

Underrated variety found in northwestern Italy, where it is often overcropped, but can be delightful when yields are restricted.

GAMAY

See box, above.

GRACIANO

An important variety used in the production of Rioja, where a small amount lends richness and fruit to a blend, Graciano could be the next pure varietal to grab the headlines.

GRENACHE

See box, right.

GROLLEAU

A prolific grape with a high natural sugar content, it is important for the bulk production of Anjou rosé, but rarely interesting in terms of quality.

KADARKA

Hungary's most widely cultivated grape variety is grown throughout the Balkans. It was once thought to be the same as the Zinfandel, but this theory no longer persists. It makes pleasant, light, and fruity wine.

LAMBRUSCO

An Italian variety, this is famous for its production of the medium-sweet, red, frothy wine of the same name in the Emilia-Romagna area.

LIMBERGER

An Austrian variety (also called Blaufränkisch) that makes a relatively simple, light red wine. This grape is also grown in the Atlantic Northeast, where it is more commonly referred to as Lemberger (a name that is also used elsewhere, erroneously, as a synonym for the Gamay).

MALBEC

This grape is traditionally used in Bordeaux blends in order to provide color and tannin. It is also grown in the Loire, Cahors, and Mediterranean regions, among many others, and was the grape responsible for the "black wine of Cahors"—a legendary name, if not wine, in the 19th century. However, Cahors is now made from a blend of grapes and is an infinitely superior wine to its predecessor.

MAZUELO

A variety grown in Rioja, it is believed to be the Carignan, although it bears little resemblance to it, and produces wines of light, yet rich, fruit and low alcohol.

MERLOT

See box, next page.

MONTEPULCIANO

A late-ripening variety that performs best in the Abruzzi region of Italy, where its wines are very deep in color, and can either be full of soft, fat, luscious fruit, or made in a much firmer, more tannic, style.

MONASTRELL

An underrated Spanish variety that is usually hidden in blends. However, it does have a full and distinctive flavor and could make individual wines of some appeal.

MONDEUSE

This variety may have originally hailed from Friuli in northeastern Italy, where it is known as the Refosco. It is now planted as far afield as the Savoie in France, parts of the U.S., including California, and in Switzerland, Italy, the Argentine, and Australia, where it is often an important constituent of the fortified port-type wines.

MOURVÈDRE

This excellent-quality grape has been used more than other lesser varieties in Châteauneuf-du-Pape blends in recent years. It is grown extensively throughout southern France, and, under the name of the Mataro, also in Spain. This is one of Australia's widest-cultivated black grapes, but a declining force in southern California.

NEBBIOLO

See box, next page.

NORTON

Also known as Cynthiana, although at one time Norton and Cynthiana were thought to be different varieties. Described accurately by some of its proponents as "The Real American Grape" because, unlike Zinfandel, Norton (or Cynthiana) is native to the U.S. It is pure *Vitis aestivalis*, not *vinifera*, but does not have any "foxy" character. Norton yields very small grapes with high pip ratio, necessitating *déstelage* to avoid excessively harsh tannins in the wine. Acidity is high, with an unusually high proportion of malic acidity, and the wine has the unnerving ability seemingly to "stain" glass! That said, it is the only wild grape capable of producing fine wine.

PAMID

This is the most widely cultivated of Bulgaria's indigenous black grape varieties. It makes light and fruity quaffing wine.

GRENACHE

The Grenache is grown in southern France, where it is partly responsible for the wines of Châteauneuf-du-Pape, Tavel, and many others. It is the mainstay of Rioja, makes port-style and light rosé wines in California, and is also grown in South Africa. Its wines are rich, warm, and alcoholic, sometimes too much so, and require blending with other varieties. The true Grenache has nothing to do with the Grenache de Logroño of Spain, which is, in fact, the Tempranillo or Tinto de Rioja. Some sources say the Alicante (a synonym of the Grenache) is the Alicante Bouschet (or plain Bouschet in California), but this too is misleading.

MERLOT

Merlot produces nicely colored wines, soft in fruit but capable of great richness. It is invaluable in Bordeaux, bringing fruity lushness and a velvet quality to wines that might otherwise be rather hard and austere. It is the chief grape in Château Pétus, which is the top name in Pomerol.

**PINOT MEUNIER**

An important variety in Champagne, where vinified white gives more upfront appeal of fruit than the Pinot Noir when young, and is therefore essential for early-drinking Champagnes. Its characteristics are more immediate, but less fine and somewhat earthier than those of the Pinot Noir. The Pinot Meunier is extensively cultivated in the Marne Valley area of Champagne, where its resistance to frost makes it the most suitable vine. Now cropping up all over the place, and can make a red wine very similar to Pinot Noir.

**PETIT VERDOT**

A grape that has been used to good effect in Bordeaux because it is a late ripener, bringing acidity to the overall balance of a wine. Certain modern techniques of viticulture and vinification have rendered it less valuable, which might prove to be a pity, because it also produces a characterful, long-lived, and tannic wine when it is sufficiently ripe.

PETITE SIRAH

An ancient cross between Syrah and Peloursin, the Petite Sirah seems more at home in California than its native France.

PINEAU D'AUNIS

This grape is best known for its supporting role in the production of Rosé d'Anjou.

PINOTAGE

A *Pinot Noir* x *Cinsault* cross developed in 1925, it occupies an important position in South African viticulture, where its rustic and high-toned wine is greatly appreciated.

PINOT MEUNIER

See box, above.

PINOT NOIR

See box, below.

PORTUGIESER

The most widely planted black grape variety in Germany, it originates in the Danube district of Austria, not in Portugal as its name suggests. It makes very ordinary and extremely light red wine, so it is often used in bad years to blend with the too acidic white wine.

RONDINELLA

An Italian variety, secondary to the Corvina grape in terms of area planted, it is used in the production of Bardolino and Valpolicella.

ROTBERGER

A *Trollinger* x *Riesling* cross, the parents seem an odd couple, but the offspring is surprisingly successful, producing some excellent rosé wines.

RUBY CABERNET

An American *Carignan* x *Cabernet*

Sauvignon cross that originated in 1936, first fruited in 1940, and made its first wine in 1946.

SANGIOVESE

This is the principal variety used in Chianti. In a pure varietal form it can lack fruit and have a metallic finish.

SYRAH

See box, opposite.

TANNAT

This grape originated from the Basque region, and has the potential to produce deeply colored, tannic wines of great longevity (although there are certain modern methods of vinification that often change the traditional character of Tannat wines). The variety's best-known wines are the attractive red Madiran and Irouléguay. A little Tannat wine is used for blending purposes in and around the town of Cahors.

TEMPRANILLO

This is the most important variety in Rioja, where it is traditional to blend the grapes, although many pure

Tempranillo wines of excellent quality are made. It is capable of producing long-lived wines of some finesse and complexity. It is also an important variety in Argentina.

TOURIGA FRANCESA

This classic port grape is no relation of the Touriga Nacional. Its wine is less concentrated, but of fine quality.

TOURIGA NACIONAL

The finest port grape in the entire Douro, it produces fantastically rich and tannic wine, with masses of fruit, and is capable of great longevity and complexity.

VERDELHO TINTO

A classic Madeira grape.

XYNOMAVRO

Xyno means "acid" and "mavro" black, an indication of how dark and long-lived the wines of this excellent Greek variety can be.

ZINFANDEL

See box, opposite.

NEBBIOLO

Famous for its production of Barolo, this grape is also responsible, totally or in part, for the other splendid wines of Piedmont in Italy, such as Gattinara, Barbaresco, Carema, and Donnaz. It often needs to be softened by the addition of Bonarda grapes, which have the same role as Merlot grapes in Bordeaux. In fact, Merlot is used in Lombardy to soften Nebbiolo for the production of Valtellina and Valtellina Superiore wines, of which Sassella can be the most velvety of all.

**PINOT NOIR**

This is one of the classic varieties of Champagne, but its greatest fame lies in Burgundy. In the right place, and under ideal climatic conditions, the Pinot Noir can produce the richest, most velvet-smooth wines in the world. Depending on both climate and ripeness, its varietal flavor can range from cherries to strawberries. Great Pinot Noir is also made in California (notably Russian River and Santa Barbara), Oregon and Central Otago, New Zealand.

SYRAH

Because the name of this grape derived from Shiraz (which Australia has adopted), the capital of Fars, the idea has sprung up that this variety must have originated in Persia. We now know that it is pure French in its breeding, being the progeny of two minor varieties, the Mondeuse Blanche and Dureza. The Syrah makes fashionably dark-colored red wines in many countries.

**ZINFANDEL**

Once thought to be the only indigenous American *Vitis vinifera* grape, Zinfandel has now been positively identified by Isozyme "finger printing" as the Primitivo grape of southern Italy. However, the origins of this grape are Croatian, where it is known as the Crljenak Kastelanski. Depending on the vinification method used, Zinfandel can produce many different styles of wine, from rich and dark to light and fruity or nouveau style. They can be dry or sweet; white, rosé or red; dessert or sparkling.

GRAPE VARIETY SYNONYMS

Many varieties of grape are known by several different synonyms. The Malbec grape, for example, has at least 34 different names, including Pressac, Auxerrois, Balouzet, Cot, Estrangey, and Grifforin. This would not be too confusing if the synonyms applied, uniquely, to

the same grape variety, but unfortunately this is not the case. The Malbec is a good example. A black grape, it is known as the Auxerrois in Cahors, but in Alsace and Chablis, the Auxerrois is a white grape, while in other parts of France, the Malbec is known as the Cahors!

SYNONYMS RELATING TO LOCALIZED clones or subvarieties are often regarded as singularly separate varieties in their own right. The Italian Trebbiano, itself a synonym for the French Ugni Blanc, has many subvarieties recognized by the Italian vine regulations. Also, many synonyms revolve around the name of another grape variety, although they are not necessarily related. Ampelographers distinguish between "erroneous" and "misleading" synonyms. The former refers to varieties that have mistakenly been given the name of another, totally different variety, whereas the latter refers to varieties whose names suggest, incorrectly, that they are related to another variety. For example, the Pinot Chardonnay, which is Chardonnay, is not remotely related to any Pinot variety whatsoever.

STORING WINE

Do you have to worry about how and where to store wine? Not really. More than 95 percent of wine is ready to drink straight from the shelf and most is actually consumed within 24 hours of purchase. If you do not have a cellar—and most people do not—then there really is no need to store wine. However, if you want to keep a few bottles for convenience, common sense will tell you to place it somewhere relatively cool and dark. On the other hand, if you are determined to built up a cellar of wine (and for the enthusiast, there is nothing more enjoyable), then there are some very important factors to consider, principally temperature and light.

TEMPERATURE

While 52°F (11°C) is supposed to be the perfect storage temperature for wine, anything between 40°F and 65°F (5°C and 18°C) will in fact suffice for most styles of wines, providing there is no great temperature variation over a relatively short period of time. Higher temperatures increase the rate of oxidation in a wine, therefore a bottle of wine stored at 65°F (18°C) will gradually get “older” than the same wine stored at 52°F (11°C). However, a constant 59°F (15°C) is far kinder to a wine than erratic temperatures that often hit 52°F (11°C), but fluctuate between 40°F and 65°F (5°C and 18°C) from one day to the next. Such rapid changes in temperature cause the cork to shrink and expand, which can loosen the closure’s grip on the inner surface of the bottle’s neck, rendering the wine liable to oxidation through exposure to the air.

LIGHT

All wines are affected negatively by the ultraviolet end of the light spectrum, but some of the harmful photo-chemical effects this causes can be reversed by cellaring a light-affected wine in darkness for a few months. Brown or dead-leaf colored wine bottles offer more natural protection from ultraviolet light than those that are made of traditional green glass. But dark green is better than light green, whereas blue and clear are the most vulnerable (which is why Roederer Cristal is wrapped in protective yellow cellophane).

While it is perfectly okay to buy a wine for everyday drinking (or even for keeping a few months) off a well-lit supermarket shelf, if you want to keep a wine much longer, you should avoid any bottles displayed in sunlight or under artificial lighting. Ask instead for bottles of the same wine that are still in their cartons in the storeroom.

OTHER FACTORS

A certain humidity (between 60 and 70 percent) is essential to keep the cork moist and flexible, thereby avoiding oxidation. This is one reason why long-term storage in a

THE THURN AND TAXIS CELLAR

The contents of this wine cellar in Regensburg, Germany, were sold by Sotheby’s in October 1993, when the 75,000 bottles on offer constituted the world’s largest wine auction.

domestic refrigerator should be avoided—the refrigeration process dehumidifies. Several days in a refrigerator is okay, but much longer than this, and the cork will start to dry out. Wines should also be stored under vibration-free conditions, but this only becomes a significant factor over a long period for sparkling wines and mature wines with sediment.

The position in which a wine bottle is stored is also extremely important. Most wines should be stacked on their sides to keep their corks moist, and therefore fully swollen and airtight. Exceptions to this rule are sparkling wines and any wine that has been sealed with a screwtop lid. Champagne and any other sparkling wine may be safely stored in an upright position because the carbonic gas (CO₂) trapped in the space between the top of the wine and the base of the cork provides more-than-sufficient humidity to keep a sparkling-wine cork moist and swollen. Screwtop lids require no moistening, of course.

SYDMONTON COURT

The wine cellar in Sydmonton Court in Hampshire, England, is owned by Sir Andrew Lloyd Webber. He sold most of its contents in 1997 when he realized that he had far more wine than he could possibly drink in his lifetime.

SERVING WINE

Traditionally, white wines have been served chilled and red wines at room temperature, or chambré. At higher temperatures, the odorous compounds found in all wines are more volatile, so the practice of serving full-bodied red wines chambré has the effect of releasing more aromatics into the bouquet.

ONE MAJOR EFFECT OF CHILLING WINE is that more carbonic gas is retained at lower temperatures. This enhances the crispness and freshness and tends to liven the impression of fruit on the palate. It is thus vital to serve a sparkling wine sufficiently chilled, since this keeps it bubbling longer. However, the widespread use of refrigerators and central heating means that white wines are all too frequently served too cold, and red wines too warm.

Controversy surrounds the subject of the temperature at which wines are served. Over-chilling wine kills its flavor and aroma as well as making the cork difficult to remove because the wax on a cork adheres to the bottle. Over-warm wine, on the other hand, is bland to taste. The rough guide below is more than you need to know. I prefer not to complicate life with specific temperatures and simply think in terms of “putting a chill on” white or rosé wines and “taking the chill off” red wines.

WINE TYPE	SERVING TEMPERATURE
Sparkling (red, white, and rosé)	40–45°F (4.5–7°C)
White	45–50°F (7–10°C)
Rosé and light-bodied red	50–55°F (10–12.5°C)
Medium-bodied red	55–60°F (12.5–15.5°C)
Full-bodied red	60–65°F (15.5–18°C)

RAPID CHILLING AND INSTANT CHAMBRÉ

It is fine to chill wine in a refrigerator for a couple of hours, but not for much longer because the cork may stick. Unlike the cumulative effect of wide temperature variations, 10 or 15 minutes in the deep-freeze has never done a wine any harm. The belief that this practice “burns” a wine is unfounded; the cold creeps evenly into the bottle. The rapid-chill sheaths that can be kept in the freezer and slid over a bottle when needed are a great innovation.

Unlike cooling, warming a wine by direct heat is not an even process; whether standing a bottle by an open fire or putting it under a hot faucet, some of the wine gets too hot, leaving the rest too cold. The best way of “taking the chill off” is 60 to 90 seconds in a microwave on medium power.

DECANTING

With increasing age, many wines—especially red wines—throw a natural deposit of tannins and coloring pigments that collect in the base of the bottle. Both red and white wines, particularly white, can also shed a crystalline deposit due to a precipitation of tartrates. Although all these deposits are harmless, their appearance is distracting and decanting will be necessary to remove them.

Preparing the bottle and pouring the wine

Several hours prior to decanting, move the bottle into an upright position. So doing allows the sediment lying along the side of the bottle to fall to the bottom. Cut away the top quarter-inch so of the foil capsule. This could well reveal a penicillin growth or, if the wine is an old vintage, a fine black deposit, neither of which will have had contact with the wine, but to avoid any unintentional contamination when removing the cork it is wise to wipe the lip of

the bottle neck and the top of the cork with a clean, damp cloth. Insert a corkscrew and gently withdraw the cork. Place a clean finger inside the top of the bottle and carefully remove any pieces of cork or any tartrate crystals adhering to the inside of the neck, then wipe the lip of the bottle neck with a clean, dry cloth.

Lift the bottle slowly in one hand and the decanter in the other and bring them together over a light source, such as a candle or torch, which will reveal any sediment as the wine is poured. Aim to pour the wine in a slow, steady flow so that the bottle does not jerk and wine does not “gulp for air.” Such mishaps will disturb the sediment, spreading it through a greater volume of liquid.

Filtering dregs

Personally, I flout tradition by pouring cloudy dregs through a fine-grade coffee filter paper. I always attempt to decant the maximum volume, thereby filtering the minimum, and I have never been able to tell the difference between pure-decanted wine and that augmented by a small volume of filtered wine. In fact, none of my friends and colleagues who have doubted my assertion have been able to score higher than 50 percent in blind tastings.

ALLOWING WINE TO BREATHE

As soon as you open a bottle of wine, it will be “breathing” (exposed to the air). Wine “feeds” on the small amount of air trapped inside the bottle between the wine and the cork, and on the oxygen naturally absorbed by the wine itself. It is during this slow oxidation that various elements and compounds are formed or changed in a complex chemical process known as maturation. Allowing a wine to breathe is, in effect, creating a rapid, but less sophisticated, maturation. This artificial aging may be beneficial to certain still wines for several reasons, only some of which are known. The only generalization that tends to hold true is that breathing is likely to improve young, full-bodied, tannic red wines.

OPENING A BOTTLE OF CHAMPAGNE

- Remove the foil from the bulbous top end of the neck. Quite often there is a little foil tail sticking out, which you merely pull. Failing this, you may have to look for the circular imprint of the end of the wire cage, which will have been twisted, folded upward, and pressed into the neck. When you find this, simply pull it outwards—this will rip the foil, enabling you to remove a section from just below the level of the wire cage.
- Holding the bottle upright at an angle, keep one hand firmly on the cork to make sure it will not surprise you by shooting out, untwist the wire with the other hand, and loosen the bottom of the wire cage so that there is a good space all round. A good tip is not to remove the wire cage, not only because that is when most bottles fire their corks unexpectedly, but also because it acts as a good grip, which you need when a Champagne cork is stuck tight.
- Transfer your grip on the cork to the other hand, which should completely enclose the cork and cage, and, holding the base of the bottle with your other hand, twist both ends in opposite directions. As soon as you feel pressure forcing the cork out try to hold it in, but continue the twisting operation until, almost reluctantly, you release the cork from the bottle. The mark of a professional is that the cork comes out with a sigh, not a bang.

Keep a firm grip on the cork and cage while twisting

Twist the bottle and cork in opposite directions, backward and forward

The WINES of
THE WORLD

FROM A GLOBAL PERSPECTIVE, wine consumers are gradually moving upmarket in quality, from white wine to red, and from Old World to New. These shifts appear to be long term. Old World wine consumers drink considerably less than they did 15 years ago, whereas New World wine consumers drink significantly more. Ironically, the greatest decline in wine consumption is in the world's three largest wine-producing countries,

France, Italy, and Spain, where younger generations are drinking more beer. However, wine consumption continues to increase in the U.K., Belgium, and the Scandinavian countries, which fit more into New World drinking patterns than Old. Wine consumption in Mediterranean countries fell by 40 percent in the past two decades of the 20th century, while wine production decreased by just 20 percent. The excess in Europe was not mopped up by growing exports, highlighting the most pressing problem at the beginning of the 21st century: surplus production. This excess production has supposedly been targeted by European Union policies, but not very successfully so far.

RIPENING CABERNET FRANC GRAPES
*This traditional Bordeaux grape can now be found
in sites all over the winemaking world.*

A WORLD OF WINE

At just over 6.6 billion gallons (250 million hectoliters), world wine production has fluctuated very little over the past 10 years. It peaked at almost 8 billion gallons (300 million hl) in 2000, only slightly higher than it was a decade ago.

GOOD WINE WILL ALWAYS SELL, but almost every country produces more wine than it can consume or export. These surpluses are inevitably at the very lowest end of the quality spectrum. The situation is at its worst in, but not confined to, the European Union (EU), where the Common Agricultural Policy (CAP) has encouraged a dismal tradition of deliberate overproduction over the second half of the 20th century. Even though the wine regime under CAP was altered in 1999 to combat this practice, it has had little impact on growers, who find it much easier and more profitable to intentionally grow grapes that are not meant to be turned into wine. Intervention still exists; EU authorities continue to buy the surplus grapes and wines that achieve the minimum (intervention) prices. The grapes will be turned into rectified sugar for chaptalizing wines, while undrinkable wines are carted off for distillation (called “crisis distillation” under the new regulations). On average, global wine production exceeds demand every year, peaking at 1.4 billion gallons (53 million hl) of surplus wine in 1999 and 2000, with France and Italy claiming the dubious joint honor of providing some 80 percent of it.

For France, the main problem is straightforward overproduction in historically identifiable areas, which cynics might label as a legalized scam. Italy, on the other hand, has a serious problem of too much cheap wine competing for the same, declining market, which can be illustrated by the fact that the average price per quart of the entire Italian wine production is only 46 percent of the average price of French wine. In both countries and, indeed, throughout the entire EU, there is supposed to be a move toward drinking less in volume, more in quality, but a Bordeaux campaign to “drink less, drink better” was banned in 2004, after the National Association for the Prevention of Alcoholism took the Conseil Interprofessionnel des Vins de Bordeaux to court, and it was judged to be illegal because it “incited people to purchase wine.”

BEWARE OF ALL-CONSUMING FACTS

Statistics for *per capita* wine consumption are notoriously unreliable. Even supposedly the same statistic (i.e., *per capita* consumption for the same country in the same year) can vary in different documents and tables from the same organization. There are many anomalies at work. The Luxembourgis, to quote one major reference, “leave everyone else standing” when it comes to wine consumption, but the Belgians and Germans use their country as a giant supermarket, buying wine, cigarettes, and gasoline in bulk because of the significantly lower taxes. The trade is so vast and Luxembourg’s population so small that this cross-border trading distorts the imbibing prowess of the Luxembourgis, so precisely where they fit in the *per capita* scheme of things is debatable. In contrast, the population of France is so large that the trade makes no difference and would, in any case, be offset by cross-Channel transactions. Vacation islands with small populations, such as Cyprus, are prone to similar distortions, with much of the wine enjoyed by tourists rather than inhabitants. Small discrepancies may be due to the use of different 12-month periods, with some organizations using pure annual figures, while others use midyear to midyear and differing statistical adjustments. Such tables therefore generally provide a good overview, rather than a detailed picture.

INTERNATIONALIZATION?

Some critics are obsessed by what they see as a growing internationalization of wine. This is often ascribed to the spread of such ubiquitous grapes as Chardonnay and Cabernet Sauvignon, especially into new and emerging regions, and often at the expense of indigenous varieties. It is also attributed to a perceived homogenization in style due to technology, flying winemakers, and schools of enology, where winemakers are all taught to sing from the same sheet. Anyone who has to taste thousands of wines for a living gets “Chardonnayed out” far too frequently these days, but I believe there are good reasons not to be so pessimistic.

Those ubiquitous grapes

They were a necessary evil. It was not that long ago when it was a relief to taste a fresh young Chardonnay in parts of Languedoc-Roussillon, let alone Spain, southern Italy, Sardinia, Greece, and much more obscure wine-producing regions of the world. As recently as the early 1980s, it was almost impossible to discern whether many such areas had any potential whatsoever. Was the dire quality in these places caused by what were (then) unknown grape varieties, by the way that the vines were grown and harvested, a lack of experience of making wines of good quality, or the crude conditions under which the wines were produced? For anyone setting out to improve quality in these viticultural backwaters, the obvious place to start was in the vineyard and, equally obviously, Chardonnay was the best choice.

While Chardonnay might get a hard press these days, this was not always the case. If readers consult books and articles written a quarter of a century ago, they will discover Chardonnay to be universally revered as one of the greatest white wine grapes in the world. Furthermore, its ability to transplant varietal characteristics to myriad soils and climates throughout the world was considered uncanny and, if anything, served to confirm its nobility. Jancis Robinson waxed lyrical about Chardonnay in her seminal work *Vines, Grapes, and Wines* (1986), and even today only the most prejudiced wine drinker would deny that the best white Burgundies rank among the very greatest of dry white wines. If a winemaker in a lowly area of southern France, an Aegean island, or parts of China could not produce a half-decent wine out of the world’s greatest, best-traveled grape variety, the vineyards in question would have been written off long ago.

Decline of indigenous varieties

Far from being under the threat of decline, these varieties owe their survival to the likes of Chardonnay and Cabernet Sauvignon muscling in on their areas of production. Had the so-called “international varieties” not achieved a certain success, these areas would have been grubbed up long ago. Between 1980 and 1994, the area under vine worldwide plummeted from over 25 million acres to less than 19 million (10 million to 8 million hectares), this loss almost entirely stemming from the Old World. Having demonstrated a suitability for viticulture via yardsticks like Chardonnay, local winemakers started to apply the standards learned to the indigenous varieties. In the New World, of course, there are virtually no indigenous grapes suited to winemaking, but again the experience with benchmark international varieties has encouraged growers in emerging wine areas to experiment with other European varieties. In both Old and New Worlds, there is too much ordinary Chardonnay being made, but it is only too much for critics and wine enthusiasts—if it were too much for most consumers, the wines would not exist. If they develop a deeper interest, the market will adapt—so perhaps wine critics should spend more time communicating.

Homogenization of style

Technology is what you make of it. It can enable vast volumes of technically correct wines to be produced with more fruit and fresher flavors, thus enticing greater numbers of consumers to explore finer wines, and that's not a bad thing. When the best technology is combined with the best traditions, it can also improve the quality and expressiveness of highly individual wines, and that's not bad either.

What about so-called flying winemakers? Are they responsible for homogenization in style? I cannot imagine how they can be, as they make less than one percent of one percent of the world's wine. What flying winemakers have done is to leave a certain level of cleanliness and competence in their wake, and to show winemakers in underperforming wineries what can be achieved. They have also created a reverse flow in terms of where winemakers go to seek practical experience. Over the past quarter century, New World winemakers had gone to Europe to pick up tips on fruit handling and winemaking techniques; now the most inquisitive Europeans go to Australia, New Zealand, or California to learn.

As for schools of enology, it used to be *de rigueur* to have the likes of Bordeaux, Dijon, or Montpellier on a winemaker's resumé, but now the university faculties at Roseworthy (Australia) and Davis are the fashion, as much in Europe as the New World itself. There might be a danger that these schools are producing technically correct enologists trained not to take risks, rather than winemakers whose passion is intimately entwined with the sort of risk-taking that can result in something truly special. However, ultimately, it is better for a winemaker to understand what he or she is doing, though even that statement has its exceptions, with many a self-taught winemaker who has never opened a book on enology producing some of the world's most stunning wines.

MULTINATIONALS

With all the talk of an international style dominating the range of wines we can buy, should we be worried by multinationals and other large companies increasing this homogenization by controlling production and sales? Again, the figures do not support commonly held beliefs. Indeed, because of the fragmented nature of the wine industry, the world's top 10 wine marketers combined account for less than 14 percent of global wine volume, in direct contrast to the world's top 10 brewers and the world's top 10 spirits companies, which account for 54 percent of their respective markets. The top 10 wine companies in 2003 were:

1. Constellation
2. E & J Gallo
3. Allied Domecq*
4. LVMH
5. Southcorp
6. Beringer Blass
7. Diageo
8. Castel Frères
9. Henkell & Co
10. Freixenet

* taken over by Pernod-Ricard in April 2005

The WINES of
FRANCE

FRENCH WINES ARE REGARDED AS THE BEST in the world, and a thread of this belief is even shared by France's fiercest New World competitors. Although the winemakers of Australia and California, for instance, no longer try to copy famous French wine styles, they still consider them benchmarks. The great French wine regions are a fortunate accident of geography, climate, and *terroir*. No other winemaking country in the world has such a wide range of cool climates; this factor has enabled France to produce the entire spectrum of classic wine styles—from the crisp sparkling wines of Champagne through the smooth reds of Burgundy to the rich sweet wines of Sauternes. Over many centuries of trial and error, the French have discovered that specific grapes are suited to certain soils and, through this, distinctive regional wine styles have evolved, so that every wine drinker knows what to expect from a bottle of Bordeaux, Burgundy, Champagne, or Rhône. This has been the key to success for French wines.

THE MOON RISING OVER CHÂTEAU LATOUR

The magnificent tower of Château Latour is bathed in moonlight, evoking the majesty of one of the world's greatest wines.

FRANCE

The success of French wine has been built on deservedly famous regions that have been enshrined by Appellation d'Origine Contrôlée (AOC) laws, but the unwillingness to police this system in any meaningful sense has gradually debased historic reputations at the precise point in history when New World producers have been eager to establish their own wines.

FRANCE HAS A TOTAL OF 2,153,800 acres (872,000 hectares) under vine, including 172,900 acres (70,000 hectares) for Cognac and 14,820 acres (6,000 hectares) for Armagnac, and produces an average of almost 630 million cases (57 million hectoliters) of wine every year. Since the mid-1980s, French wine production has dropped by 27 percent in response to a move away from the lower-quality end of the spectrum, as consumers have begun to drink less wine, but of better quality. How that quality is classified is the most contentious issue facing the French wine industry.

HOW FRENCH WINE IS CLASSIFIED

In 1935, when the Institut National des Appellations d'Origine (INAO) was established, France became the first nation to set up a countrywide system for controlling the origin and quality of its wines, although individual wine areas outside France had put in place quality controls much earlier (Chianti in 1716 and Rioja in 1560). INAO's task was to devise the geographical limits of appellations and to enforce the regulations governing them.

Appellation d'Origine Contrôlée (AOC)

There are now more than 470 separate AOCs, covering almost 1,210,300 acres (490,000 hectares), and producing just over 322 million cases (29 million hectoliters) of wine. The AOC laws regulate the grape varieties used, viticultural methods, harvest and yield restrictions, minimum alcohol content, and winemaking techniques for each area. Although the laws are supposed to control the quality of each wine by having it pass an official

CHÂTEAU GRUAUD-LAROSE

One of the largest and most consistent of Bordeaux's second growths, this estate was established by the Gruaud family in 1757; the chateau was built in 1875.

analysis and tasting, the latter of these has become something of a farce, since panels of tasting judges are composed of the very people who actually make the wine. Furthermore, the wines are not tasted and passed on a tank by tank basis, the absence of which is probably responsible for most of the very worst AOC wines on the shelf. Virtually all the producers I know admit that only those wines with faults—and obvious ones at that—are likely to be rejected, with no account taken of either quality or whether a wine reflects the character of the grapes used or expresses any particular regional style. Some were honest enough to explain that most people are too afraid to start the ball rolling on the issue of quality or style for fear that someone whose wine has already been rejected might seek revenge by rejecting other wines indiscriminately. It is little surprise, therefore, that only around 2 or 3 percent of wines fail to pass such sham tastings.

The tasting system is obviously deficient, as evidenced by the glut of very poor-quality AOCs that are put on the shelf every year. The best AOC wines are still the best, but without some sort of overhaul of the system (*see* Challenging Tradition, below), the onus remains very much on the knowledge of consumers to discern the reputation of individual producers.

On a more positive note, INAO has instituted tougher controls in the vineyards that could result in distillation of the entire crop of any grower who exceeds the *Plafond Limité de Classement* (PLC). The PLC is the absolute maximum yield for any AOC. This is usually set at 20 percent above the base yield, which may itself be adjusted upward on an annual basis by, normally, some 10–15 percent. INAO has formed local “work committees” to visit vineyards, to detect any aberrations. Essentially, but not exclusively, they will be looking for signs of overproduction, and if found, they will tell the grower (depending on the time of year) to prune, green-harvest, or thin the bunches. Later in the year, the grower could have his entire crop declassified if he has not done as requested. In future years, such an offender might not be given the opportunity to rectify any overcropping and could have his entire crop carted

FRENCH WINE AT A GLANCE

BY CLASSIFICATION

Appellation d'Origine Contrôlée (AOC or AC)

Exactly 58% of total French wine production—25% exported, 75% consumed within France

Vin Délimité de Qualité Supérieure (VDQS)

Less than 1% of total French wine production—17% exported, 83% consumed within France

Vin de Pays

Almost 31% of total French wine production—10% exported, 90% consumed within France

Vin de Table

Just over 10% of total French wine production—16% exported, 84% consumed within France

BY TYPE

Red wine

Just over 65% of total French wine production—30% exported, 70% consumed within France

White wine

21.5% of total French wine production—55% exported, 45% consumed within France

Rosé wine

6.5% of total French wine production—30% exported, 70% consumed within France

Sparkling wine

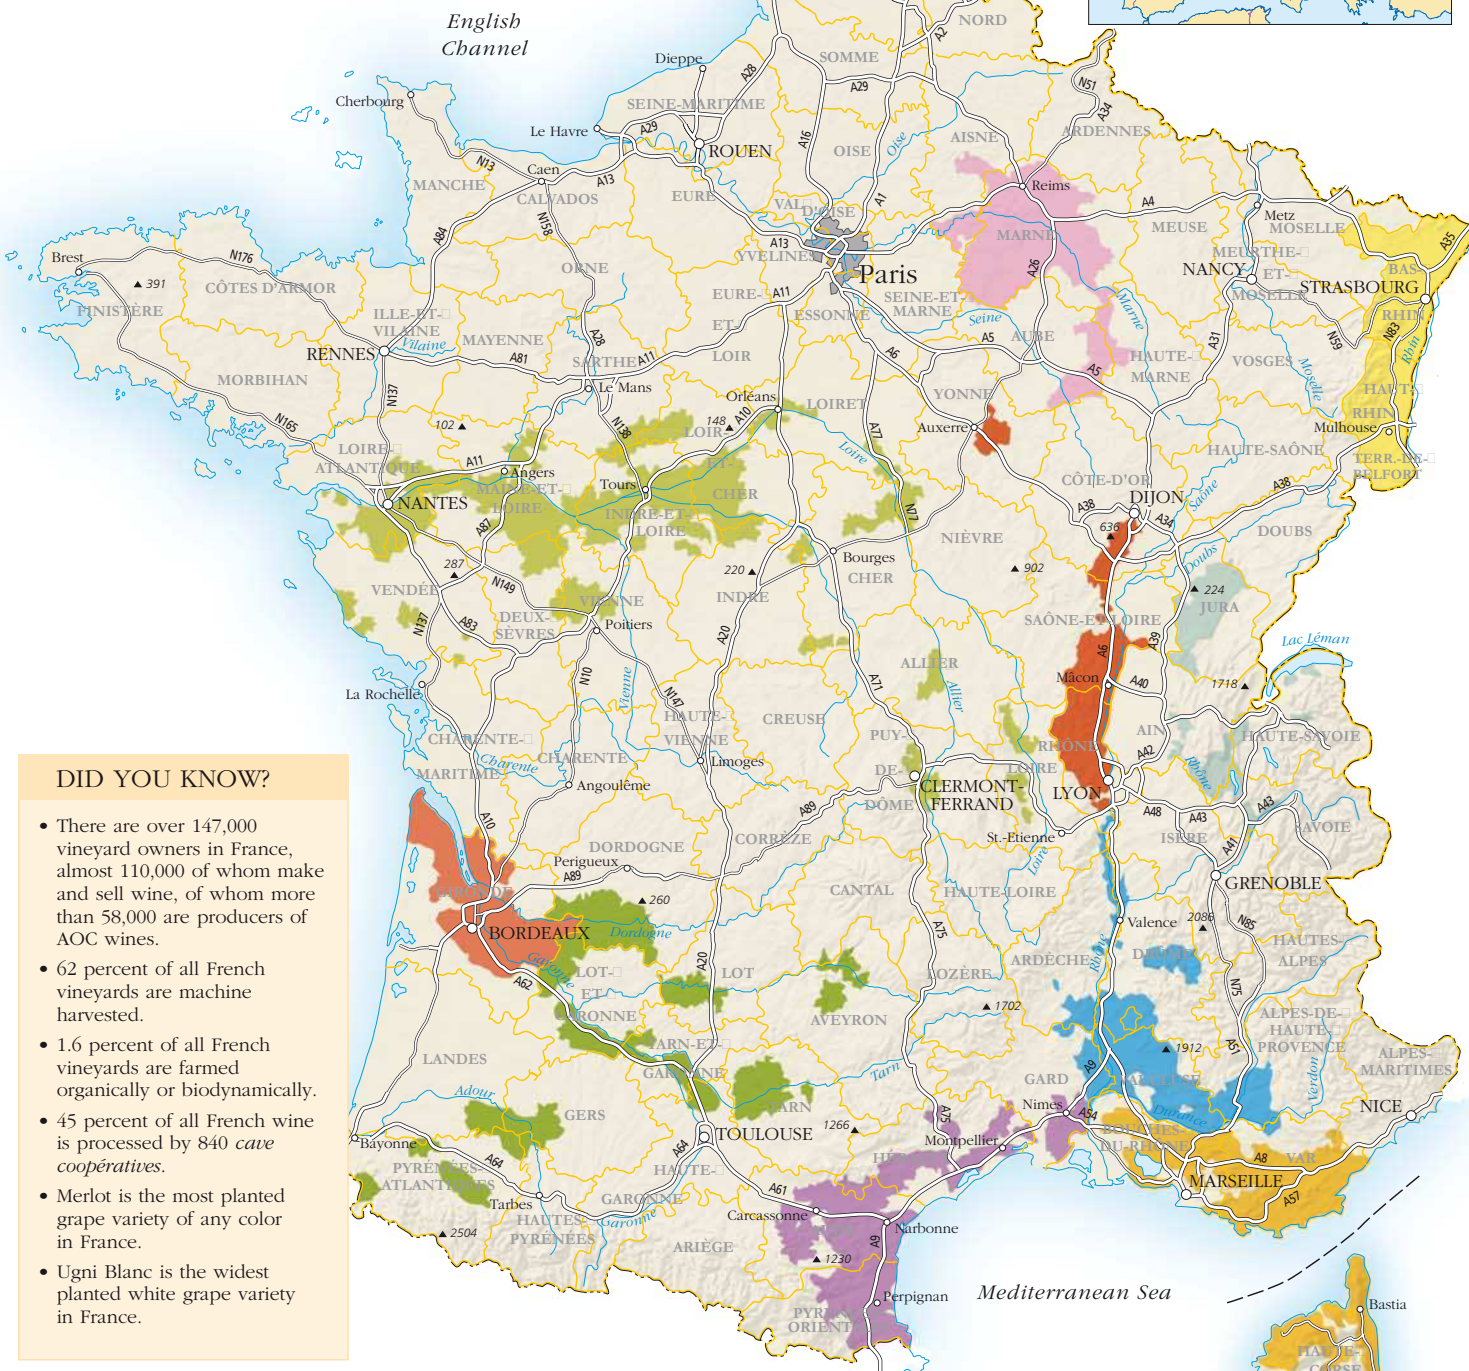

Just under 6% of total French wine production—42% exported, 58% consumed within France

Fortified wine

Just under 1% of total French wine production—20% exported, 80% consumed within France

FRANCE

The colored areas on this map identify the 10 main wine-producing regions of France, where the areas of Appellation d'Origine Contrôlée, which cover 1.2 million acres (490,000 hectares), are concentrated. However, the country has almost 400,000 acres of vineyards in total, and many good, everyday-drinking wines are made in other parts of the country. See also *Vin de Pays* maps pp.248, 249.

DID YOU KNOW?

- There are over 147,000 vineyard owners in France, almost 110,000 of whom make and sell wine, of whom more than 58,000 are producers of AOC wines.
- 62 percent of all French vineyards are machine harvested.
- 1.6 percent of all French vineyards are farmed organically or biodynamically.
- 45 percent of all French wine is processed by 840 *cave coopératives*.
- Merlot is the most planted grape variety of any color in France.
- Ugni Blanc is the widest planted white grape variety in France.

off for distillation for inadequate pruning. Of course, the efficacy of this initiative will be dependent upon how tough the “work committees” actually are, and, like AOC tasting panels, these will be comprised of fellow winegrowers.

Vin Délimité de Qualité Supérieure (VDQS)

There are just over 33 VDQS wines, covering almost 17,000 acres (approximately 6,800 hectares), and producing an annual average of just over 4.8 million cases (438,000 hectoliters) under similar controls to those applied to AOC wines, but with yields that may be higher and alcoholic strengths that are often lower. The overall quality standard is not as high, although it may be argued in certain cases that the quality is easily comparable.

Since the emergence of the *vins de pays* category in the 1970s, there have been persistent rumors of the imminent demise of VDQS, but the INAO, which is the regulatory body for both AOC and VDQS wines, has found this category to be such a convenient

staging post for potential AOCs that its removal is unlikely. VDQS wines promoted to AOC status include Coteaux du Tricastin (promoted in 1973), St.-Chinian (1982), Coteaux du Lyonnais (1984), Costières de Nîmes (1986), Côtes du Marmandais (1990), Marcillac (1990), Cheverny and Cour-Cheverny (1993), Coteaux Varois (1993), Côtes Roannaises (1994), Coteaux de Pierrevert (1998), Coteaux du Giennois (1998), Côtes de Toul (1998), Côtes du Forez (2000), and Sauvignon de St.-Bris (2003).

It would be a mistake, however, to think of all VDQS wines as purely transitory. It is not a guaranteed halfway house to full AOC status, as can be demonstrated by those wines that still retain VDQS classification 40 years after this category came into fruition, and the fact that the majority of surviving VDQS wines actually date from the 1960s and 1970s. It is not beyond imagination that the French might elevate these crusty old VDQS wines at some date in the future, but most potential new AOC wines will be selected from those VDQS wines that have come up through the nicely matured *vin de pays* ranks.

VINS DE PRIMEUR

We tend to think of Beaujolais Nouveau as the only *vin de primeur*, or “new wine,” but there are no fewer than 55 different wines that are allowed by AOC regulations to be sold in the year they are harvested, and 25 of these must be labeled *primeur* or *nouveau*. They are made in a style that is at its peak in the first year of its life. So, for those who like drinking wine when it has only just stopped fermenting, why not look out for the following?

- | | |
|--|--|
| 1. Anjou Gamay | 14. Côtes-du-Rhône (red sold only as a <i>vin de café</i> or rosé) |
| 2. Beaujolais (red or rosé) | 15. Côtes du Roussillon (red, white, or rosé) |
| 3. Beaujolais Supérieur (red or rosé) | 16. Côtes du Ventoux (red, white, or rosé) |
| 4. Beaujolais-Villages (red or rosé) | 17. Gaillac (red Gamay or white) |
| 5. Beaujolais with village name but not <i>cru</i> (red or rosé) | 18. Mâcon (white or rosé) |
| 6. Bourgogne (white only) | 19. Mâcon Supérieur (white only) |
| 7. Bourgogne Aligoté (white only) | 20. Macon-Villages (white only) |
| 8. Bourgogne Grand Ordinaire (white only) | 21. Macon with village name (white only) |
| 9. Cabernet d'Anjou (rosé) | 22. Muscadet |
| 10. Cabernet de Saumur (rosé) | 23. Muscadet de Sèvre et Maine |
| 11. Coteaux du Languedoc (red or rosé) | 24. Muscadet des Coteaux de la Loire |
| 12. Coteaux du Lyonnais (red, white, or rosé) | 25. Muscadet Côtes de Grand-Lieu |
| 13. Coteaux du Tricastin (red, white, or rosé) | 26. Rosé d'Anjou |
| | 27. Tavel (rosé only) |
| | 28. Touraine Gamay (red only) |
| | 29. Touraine (rosé only) |

The following wines may be sold from December 1 after the harvest without any mention of *primeur* or *nouveau*:

- | | |
|--|---|
| 1. Anjou (white only) | 18. Côtes du Ventoux (white or rosé) |
| 2. Bergerac (white or rosé, but not red) | 19. Entre-Deux-Mers (white only) |
| 3. Blayais (white only) | 20. Faugères (rosé only) |
| 4. Bordeaux (<i>sec</i> , rosé, or <i>clairet</i>) | 21. Graves (white only) |
| 5. Buzet (white or rosé) | 22. Graves de Vayres (white only) |
| 6. Cabernet d'Anjou (rosé) | 23. Jurançon Sec |
| 7. Cabernet de Saumur (rosé) | 24. Minervois (white or rosé) |
| 8. Corbières (white or rosé) | 25. Montravel (white or rosé) |
| 9. Costières de Nîmes (white or rosé) | 26. Muscadet |
| 10. Coteaux d'Aix-en-Provence (white or rosé) | 27. Muscadet de Sèvre et Maine |
| 11. Coteaux du Languedoc (white or rosé) | 28. Muscadet des Coteaux de la Loire |
| 12. Coteaux Varois (white or rosé) | 29. Muscadet Côtes de Grand-Lieu |
| 13. Côtes de Bourg (white only) | 30. Premières Côtes de Blaye (white only) |
| 14. Côtes de Duras (white or rosé) | 31. Rosé d'Anjou |
| 15. Côtes du Marmandais (white or rosé) | 32. Rosé de Loire |
| 16. Côtes de Provence (white or rosé) | 33. St.-Chinian (rosé only) |
| 17. Côtes-du-Rhône (white or rosé) | 34. Ste.-Foy-Bordeaux (white only) |
| | 35. Saumur (white only) |
| | 36. Touraine (white only) |

Vin de pays

There are 153 *vin de pays*, or “country wine”, appellations, covering 494,200 acres (200,000 hectares), and producing an annual average of almost 166 million cases (15 million hectoliters). Officially established in 1968, the *vins de pays* did not become a marketable reality until 1973, when the rules for production were fixed. They were created, quite simply, by authorizing some *vins de table* to indicate their specific geographic origin and, if desired, the grape varieties used, but the effect was more profound than that. For a long while, it was even obligatory for these wines to carry the term “Vin de Table” in addition to their *vin de pays* appellation, but this regulation was discontinued in 1989. Allowing producers of potentially superior table wine areas to declare, for the first time, the origin and content of their wines gave back a long-lost pride to the best growers, who started to care more about how they tended their vines and made their wines, and began to uproot low-quality varieties, replant with better ones, and restrict yields.

There are four categories of *vin de pays*, each with its own controls, but all regulated by the Office National Interprofessionnel des Vins (ONIVINS). Although every *vin de pays* must have a specified origin on the label, a wide range of grape varieties can be used and high yields are allowed. A certain flexibility on choice of grape varieties allows innovation, a character-building trait that has been denied winemakers under the AOC regime, but the high yields permitted have also caused many an unprincipled producer to jump on the relatively lucrative *vin de pays* bandwagon, thus the quality can vary greatly. This is, nevertheless, a most interesting category of wines, often infiltrated by foreign winemakers—usually Australian—producing some of the most exciting, inexpensive, and upfront-fruity wines.

Many *vins de pays* are, of course, bland and will never improve, but some will make it up the hierarchical ladder to VDQS and, possibly, then full AOC status. Certain individual producers, such as the Guiberts of Mas de Daumas Gassac and the Dürrbachs of Domaine de Trévallon, could not care less about AOC status, as they happen to be making wines under the less draconian *vin de pays* system. They already have reputations as good as those of the finest French appellations and demand even higher prices than some expensive AOC wines. For a description of the various *vin de pays* categories, a map showing the areas producing *vins de pays*, and profiles of every *vin de pays* along with their finest producers, see pp.248–259.

Vin de table

There are over 430,000 acres (175,000 hectares) of unclassified vineyards in France, producing an annual average of more than 75 million cases (nearly 5 million hectoliters) of *vins de table*, (although

BREAKDOWN OF FRENCH WINE PRODUCTION MEASURED IN HECTOLITERS

Millions of hectoliters

	AOC	VDQS	VINS DE PAYS	VINS DE TABLE	DISTILLED

Averaged over five harvests 1999–2003

FRENCH WINE PRODUCTION BY TYPE

Millions of hectoliters

Zind

Produced by Domaine Zind-Humbrecht after the authorities finally made up their minds that Chardonnay should not be allowed in any AOC Alsace blend other than a Crémant d'Alsace. Not wishing to make a sparkling wine, Olivier Humbrecht MW was forced to sell the wine as a *vin de table*, which he has named simply Zind. He cannot put the year on this wine, so he numbers each *cuvée* starting with Z001. However, I can reveal that this is in fact the 2001 vintage, so Z002 is 2002, and so on. Humbrecht also cannot put the varietal content and origin on the label, but Zind is primarily Auxerrois (usually 50 percent of the blend, invariably from Clos Windsbuhl, Herrenweg, and Rotenberg), plus Pinot Blanc (15 percent, Herrenweg) and, of course, Chardonnay (35 percent, Clos Windsbuhl). The curious thing is that the maximum permitted yield for *vin de table* is 400 cases per acre (90 hectoliters per hectare), as opposed to 440 cases per acre (100 hectoliters per hectare) for the supposedly superior Alsace appellation. In addition, no *vin de table* is allowed to be chaptalized, whereas AOC Alsace is.

Libre Expression

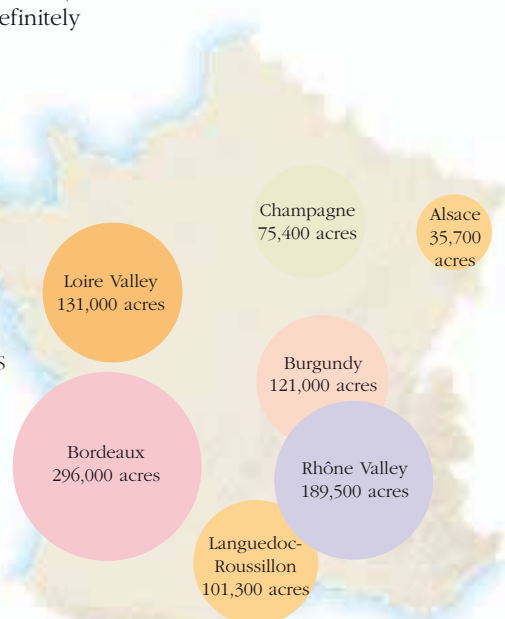

Produced by Domaine Cazes, this rich, smooth white wine, which contains 16 percent alcohol, is effectively a late-harvest, nonfortified version of Rivesaltes, but one that finishes dry. It is vintage, which is technically illegal, but by calling the wine “Libre Expression,” the Cazes brothers are definitely making a statement.

this also includes a variable volume of grape juice, grape concentrate, and wine vinegar). This compares with a production of 510 million cases (34 million hectoliters) 10 years ago, and is evidence of the trend away from the lower end of the market.

The official use of *vin de table* (also designated as *vin de consommation courante*, or wine for immediate consumption) is contrary to the common usage, particularly in New World countries, of table wine to refer to those that are neither fortified nor sparkling. In the latter sense, table wines are, or can be, quality wines, but in official French terms, *vins de table* are *vins ordinaires*, and are cheap in every sense of the word. They are not intended for keeping, and some cynics might argue that they are not fit for drinking either, since much of this wine is traditionally diluted with water before even the French can bring themselves to consume it.

Vins de table come under the auspices of ONIVINS, but there are no controls apart from negative ones, such as not being allowed to mention any grape names or indicate an origin more specific than France. The address of the producer seldom has any bearing on the origin of the wine, although some producers do try to fabricate a style in accordance with their local image. Thus a *négociant* based in Nuits-St.-Georges might attempt to make a *vin de table* with some sort of Burgundian character, but the consumer cannot be sure that any of the wines used will be from Burgundy, and the likelihood is that they will not. Some wine merchants pride themselves on the quality of their basic *vin de table* brand, but this is a dead-end category as far as being able to discover useful information, let alone rely on it, is concerned. However, there are always exceptions. These currently include:

MAJOR AOC WINE-PRODUCING REGIONS
From this map, it is easy to discern the relative size of production of the seven most important wine regions of France.

Muscat de Petit Grains Passerillé Vendange d'Octobre Elevée en Fûts de Chêne

Produced by Mas de Bellevue from old vines, on which the grapes have been left to shrivel. In the 2000 vintage (again illegally indicated), the only year I have tasted, at least half the grapes had been botrytized prior to *passerillage*.

CHALLENGING TRADITION

The French establishment has been slow to wake up to the fact that the AOC classification was not AOK, but they have started to think the unthinkable: change. When René Renou, the director of INAO (the man in charge of running the entire French appellation system), proposed a superappellation that would be bestowed on wines of “demonstrably superior quality,” he shook the very foundations of French culture—tradition. This country produces both the best and the worst wines in the world because of its fixation with tradition, but whereas the French are always willing to preserve the best traditions, they are loath to banish the worst. Even when the need to do so is staring them in the face.

In 1995 Michel Bettane, one of France’s top wine writers, was quoted as saying: “Today, *appellation contrôlée* guarantees neither quality nor authenticity.” At the time, Alain Berger was the director of INAO, and when pressured he caused uproar by confessing that: “One can find on the market scandalously poor products with the *appellation contrôlée* halo.” But was anything done? Of course not. For Renou to confirm the situation, and propose a solution, was a unique event. However, a fundamental shake-up to the system that gave birth to wine regimes throughout Europe threatened the moral authority of French wine, thus Renou’s proposals have been met with hostility in some quarters, while in others they are viewed as absolutely necessary.

Those who support Renou are, essentially, a quality-conscious minority, while those who oppose include the worst of the worst, although the vast majority simply feel so safe with their traditions that they do not wish to rock the boat.

Initially, there was good news and bad news: the good news being that the Burgundians were for it, the bad being that the *bordelais* were not. However, the good news turned out to be bad, as evidenced by the supposedly pro-Renou Jean-François Delorme, who as president of the Bureau Interprofessionnel des Vins de Bourgogne (BIVB), commented: “Of course, all of Burgundy’s AOCs would be super-AOCs.” If all Burgundy were of the quality of Romanée Conti, Leroy, or Leflaive, no one would argue, but much too much is no better than *vin ordinaire*, while—as with every wine region—some wines can be almost undrinkable. So no, a pan-Burgundian application for super-AOCs would not be very super at all.

Being no fool, Renou allowed his historic proposal to “slip out” in London, where he could count on its radical goals receiving widespread objective approval, before presenting the plan in detail to the INAO’s 80-member National Committee. He later provided more details about his superappellation, which he now called *Appellation d’Origine Contrôlée d’Excellence* (AOCE), and threw another monkey wrench in the traditionalist works by introducing the novel concept in the form of his proposed new *Site et Terroir d’Excellence* (STE) appellation.

On past experience, the odds always were that a compromise would be sought. That the goals would become so fudged, and the regulations so watered-down, that they will not simply be ineffective, but will probably be detrimental to the future of French wine. And that is precisely what has happened, but these new appellations and the reasons why they were rejected need exploring in more detail so that French wine lovers can at least know what Renou’s good intentions were. Readers will then be able to appreciate how the French catastrophically missed this opportunity, and why the growers and government minister involved deserve to reap whatever ill fortune they have sown.

The BIVB was the first to support Renou’s initiative, but Delorme’s unrealistic position was disowned by its members, who turned out to be so hostile to the idea of AOCEs that

10 WIDEST PLANTED GRAPE VARIETIES IN FRANCE BY COLOR

PINOT NOIR GRAPES

The Holy Grail of red winemakers, the Pinot Noir is the most finicky of all black grapes to work with, but when successful, it can produce velvety red wines of stunning purity, finesse, and length.

Burgundy was given until “early 2005 at the latest” to present the INAO’s president with modifications and solid proposals for putting such plans in place. They would not get the chance. The chop would come much earlier than that.

But what exactly did the Burgundians, and, in fact, growers from almost every wine region, object to? The AOCE designation would be granted only to areas that committed to a series of strict regulations in virtually every facet of vineyard management and winemaking, including lower yields, higher planting density, harvesting (manual or machines), aging (oak barrels or chips), grape varieties, wines judged by tasting panels, and so on. To become eligible for an AOCE, a minimum of 75 percent of the producers in an appellation would have to approve the tighter regulations, at which point any unwilling grower would be coerced to follow the majority and abide by the new regulations. INAO would review each appellation’s status as an AOCE every five years.

There were two obvious flaws. First, if it is up to the wine producers of an appellation to decide by voting whether it is to be an AOC or AOCE, it cannot work. A truly famous wine that is offered the opportunity of claiming superappellation status is one thing, but an ordinary wine that assumes superappellation status simply because the majority of its growers vote for it would be pointless. Equally, if the growers of a truly famous wine did not grab such a chance with both hands, they would deserve to suffer the decline that would inevitably ensue, although there were many objectors who did not think that far ahead. In Chablis, for example, which is a truly famous wine region, one person with a short-term view is Jean Durup. He sits on the INAO National Committee, and was reported as saying that he didn’t think the AOC would want to change its standards and adopt stricter rules because “we are the world’s most famous white wine, and there is no crisis in Chablis.” What would the next generation of Chablis growers think in 20 years’ time, once the AOCE status of other white Burgundies had become well established? It would surely not be unreasonable for consumers at that juncture to assume that plain old Chablis AOC was simply not in the same class as Burgundy’s AOCEs. The second potential flaw in the system was the panel tastings. If they were to be conducted by the producers themselves, the results would be as worthless as those for AOC wines.

SITE ET TERROIR D’EXCELLENCE

As for the brand new STE classification, this was a truly inspired concept and, as such, its demise has been an even greater tragedy. STE was designed to recognize the exceptional effort put in by serious, quality-conscious producers in relatively modest or otherwise generally unambitious appellations. Individual wineries could receive the STE label if their wines are much better wines than those of most other producers in the appellation. Renou had intimated that INAO was likely to approve hundreds of STE wineries. What an opportunity the French have lost to fight back on the superpremium stage.

Jean-Michel Aubinel, who represents growers in Mâcon, clearly did not think so. He was reported as saying the scheme would entrench rivalry between neighboring properties, if applied to one and not the other. Well, that’s the whole idea Monsieur: it is called competition. How else does anyone in any sphere strive to improve? But then, perhaps the AOC is meant only to guarantee mediocrity. Denis Dubourdieu of Château Reynon in Premières Côtes de Bordeaux was far more upbeat, pointing out that: “The STE concept appears to be the truly original point of the proposal. You can spend 20 years claiming you do better than most in one of Bordeaux’s lesser-known satellite appellations, but the STE will give you status, and it will stimulate producers to make excellent wines.” Well, Denis, my readers know about your top-performing wines, but it looks as though you’ll have to spend another 20 years telling the rest of the world.

FRANCE “SHOT IN FOOT”

A Bordeaux campaign to “drink less, drink better” was banned in 2004, after the National Association for the Prevention of Alcoholism (NAPA) took the Conseil Interprofessionnel des Vins de Bordeaux (CIVB) to court. Any rational person would have to question the motives of an organization that is so opposed to people drinking less, but better wine that it would drag them into a court of law. If NAPA seeks prohibition, it should do so openly. Furthermore any rational person would also have to question the motives behind a law under which a court is obliged to declare that “drink less, drink better” is illegal because it “incites people to purchase wine.” Why should inciting people to purchase less, better-quality wine be against the law? One of the Bordeaux posters was also declared illegal because it depicted someone drinking wine. According to this warped law, it is legal to display an alcoholic product on a poster, but not legal to display that product being consumed. What are people supposed to think they should do with such a product after purchasing it?

The law in question is the Loi Evin, enacted in January 1991, and named after Claude Evin, a minister in the Rocard government. And so, finally, we must question this man’s motives. Why, when Evin presented his proposal to the French parliament, did he do so under the banner of “In the case of alcohol, only abuse is dangerous”? Not to mislead parliament, since each member had full access to every detail of the Loi Evin, and the draconian powers set out certainly do not restrict this law to curbing abuse. The National Assembly is thus ultimately to blame for this legislation. Of that there is no doubt. So why did Evin hide his law behind such a misleading slogan? If not parliament, that leaves the rest of the country.... Other French governments have inherited the Loi Evin, but had done nothing to curb its excesses until July 2004, when to get around its advertising restrictions, Hervé Gaymard, the French agricultural minister, announced plans to reclassify wine as a “food.” This was quickly followed by a report requested by Prime Minister Raffarin on how to boost the “struggling wine industry” through advertising “without undermining the principles of consumer protection” in the Loi Evin.

In fact, the Loi Evin has no principles of consumer protection—it has no principles, period. It is not of the making of any current French government, so they should stop trying to fudge a questionable compromise, and simply revoke the Loi Evin on the grounds of its being against the national interest.

In conclusion, AOCEs and STEs would have reinvented and reinvigorated the French appellation system. Renou’s proposals represented one of just four options. The second was to fudge them, the third was to do nothing at all, and the fourth was to scrap the “control-freak” element of French appellations altogether, bringing them more in line with New World thinking. There are good reasons why the fourth option should have been considered, such as: Why shouldn’t people grow what they like, where they like? What does it matter what system of vine training a grower employs? Why try to control yields when the consumer will be the final arbiter of whether a producer will survive? Surely all that is necessary is the New World concept of truth in labeling: if a wine claims to be made from a particular variety, grown in a specific place, in a certain year, then that is what the wine should be. All good reasons—but there is a little Francophile part of me that wants to see the AOC concept survive, and to do that it needs reinventing from time to time. So what did they choose? The fudge, of course. The French cannot resist fudge, particularly when it comes sugar-wrapped.

At a three-hour crisis meeting between the French minister of agriculture, Hervé Gaymard, and representatives of the French wine industry on July 21, 2004, Renou’s proposals were discarded because they made the French offer more complicated at a time when it needs to become more accessible (granted, separating the wheat from the chaff does tend to make the chaff less accessible!—T. S.). Gaymard stressed that there would be “tighter” controls for the production of AOC wines, to ensure that they were genuine *vins de terroir*, which represented “the top of the range,” and were product-driven rather than consumer-driven (a flaw-free implementation of AOCE and STE would have achieved these very goals—T. S.). Gaymard’s proposals were presented to each regional interprofessional bodies with a view to becoming effective with the 2006 harvest, along with a 50 percent increase in government aid for wine promotion overseas (the sugar coating—T. S.).

FRENCH LABEL LANGUAGE

FRONT AND BACK LABEL DEFINITIONS

Année Literally year, this will refer to the vintage.

Appellation d'Origine Contrôlée Top official classification, commonly referred to as AOC, immediately above *Vin Délimité de Qualité Supérieure* (see p.54).

Barriques Small oak barrels of approximately 225 liters (59 gallons) capacity.

Blanc White.

Blanc de Blancs Literally “white of whites,” a white wine made from white grapes, a term that is often, but not exclusively, used for sparkling wines.

Blanc de Noirs Literally “white of blacks,” a white wine made from black grapes, a term that is often, but not exclusively, used for sparkling wines. In the New World, the wines usually have a tinge of pink, often no different from a fully-fledged rosé, but a classic *blanc de noirs* should be as white as possible without artificial means.

Brut Normally reserved for sparkling wines, *brut* literally means raw or bone dry, but in practice there is always some sweetness and so can at the most only be termed dry.

Cave coopérative Cooperative cellars where members take their grapes at harvest time, and the wines produced are marketed under one label. Basic products will often be blended, but top-of-the-range wines can be from very specific locations. A lot of cooperative wines can be ordinary, but the best cooperatives usually offer exceptional value.

Cépage This means grape variety, and is sometimes used on the label immediately prior to the variety, thus “Cépage Mauzac” means that the wine is made from the Mauzac grape variety.

Châtaignier Chestnut (occasionally used to make barrels).

Château Literally “castle” or “mansion,” but whereas many wines do actually come from magnificent edifices that could truly be described as châteaux, many that claim this description are merely modest one-story villas, some are no more than custom-built *cuvées*, while a few are actually tin sheds! The legal connotation of a château-bottled wine is the same as for any domaine-bottled wine.

Chêne Oak (commonly used to make barrels).

Clairet A wine that falls somewhere between a dark rosé and a light red wine.

Climat A single plot of land with its own name, located within a specific vineyard.

Clos Synonymous with *climat*, except this plot of land is either enclosed by walls, or was once.

Côte, côtes Literally slope(s) or hillside(s) of one

contiguous slope or hill, but in practical terms often no different from Coteau, Coteaux.

Coteau, Coteaux Literally slope(s) or hillside(s) in a hilly area that is not contiguous, but in practical terms often no different from Côte, Côtes.

Crémant Although traditionally ascribed to a Champagne with a low-pressure and a soft, creamy mousse, the term has now been phased out in Champagne as part of the bargain struck with other French sparkling wines that have agreed to drop the term *méthode champenoise*. In return they have been exclusively permitted to use this old Champagne term to create their own appellations, such as Crémant de Bourgogne, Crémant d'Alsace, etc.

Cru or Crû Literally means a growth or plot of land, this term usually implies that it has been officially designated in some way, such as a *cru bourgeois*, *cru classé*, *premier cru*, or *grand cru*.

Cru Bourgeois An officially designated growth below *cru classé* in the Médoc.

Cru Classé An officially classified vineyard in the Médoc and Provence.

Cuve A vat, *cuve* should not be confused with *cuvée*.

Cuve Close A sparkling wine that has undergone second fermentation in a vat, *cuve close* is synonymous with Charmat or Tank Method.

Cuvée Originally the wine of one *cuve* or vat, but now refers to a specific blend or product which, in current commercial terms, will be from several vats, this term is used most commonly, but not exclusively, in Champagne.

Dégorgé or dégorgement Found on some sparkling wines, this term will be followed by the date when the wine was disgorged of the yeast sediment that has built up during its second fermentation in bottle.

Demi-muid A large oval barrel, usually made of oak, with a capacity of 300 liters (79 gallons)—600 liters (158 gallons) in Champagne.

Demi-sec Literally semi-dry, but actually tastes quite sweet.

Domaine Closer to estate than vineyard, as a domaine can consist of vineyards scattered over several appellations in one region. The wine in the bottle must come from the domaine indicated on the label. Some former “châteaux” have changed to “domaine” in recent years.

Doux A sweet wine.

Encépagement The proportion of grape varieties in a blend or *cuvée*.

Eleveage par X or Eleveur X Refers to the traditional function of a *négociant* (X), who has not made the wine initially, but purchased it, after

which the *négociant* will age, possibly blend, bottle, and sell the wine.

Elevée en ... Aged in

Elevée et mise en bouteille par X The wine was aged and bottled by X, but none or only part of the wine was produced by X.

Foudre A large wooden cask or vat.

Fûts Barrels, but not necessarily small ones.

Grand cru Literally “great growth,” this term indicates the wine has come from a truly great vineyard (which, to put it in context, a lousy producer can make a hash of) in regions such as Burgundy and Alsace, where its use is strictly controlled. In Champagne, *grand cru* is much less meaningful, since it applies to entire villages, which might contain most of the best vineyards in the region, but where lesser vineyards also exist.

Grand vin This term has no legal connotation whatsoever, but when used properly in Bordeaux, *grand vin* applies to the main wine sold under the château's famous name, and will have been produced from only the finest barrels. Wines excluded during this process go into second, third, and sometimes fourth wines that are sold under different labels.

Lie French for lees: *sur lie* refers to a wine kept in contact with its lees.

Lieu-dit A named site, this term is commonly used for a wine from a specific, named site.

Médaille Medal: *médaille d'or* is gold medal, *médaille d'argent* is silver, and *médaille de bronze* is bronze.

Méthode Ancestrale A sweet sparkling wine from Limoux that is produced by a variant of *méthode rurale*, a process that involves no secondary fermentation, the wine being bottled before the first alcoholic fermentation has finished.

Méthode Classique One of the legal terms for a sparkling wine made by the *méthode champenoise*.

Méthode Champenoise Contrary to popular belief, this term is not banned in the EU. It is expressly reserved for Champagne, the producers of which seldom bother to use it. (I cannot say never because I saw it once!) *Méthode champenoise* is the process whereby an effervescence is produced through a secondary fermentation in the same bottle it is sold in.

Méthode Deuxième Fermentation, Traditionnelle, Méthode Traditionnelle Classique Legal terms for a sparkling wine made by the *méthode champenoise* (*méthode deuxième fermentation* is used only in Gaillac).

Millésime, millésimé Refers to the vintage year.

Mis en bouteille au domaine or à la propriété or le château Bottled at the domaine/property/

AOC

VDQS

VIN DE PAYS

CHAMPAGNE

château indicated on the label (the wine must have been made exclusively from grapes grown there).

Mis en bouteille par ... Bottled by ... (not necessarily made by).

Mistelle Fresh grape juice that has been muted with alcohol before any fermentation can take place.

Moelleux Literally “soft” or “smooth,” this term usually implies a rich, medium-sweet style in most French areas, except the Loire, where it is used to indicate a truly rich, sweet botrytis wine, thereby distinguishing it from *demi-sec*. This term is now obligatory in Alsace for wines that have a minimum residual sugar of 12g/l (9g/l for Riesling). If a wine has more than 6g/l of total acidity, the minimum residual sugar rises to 18g/l.

Monopole With one exception, this means that the wine comes from a single vineyard (usually a *grand cru*) that is under the sole ownership of the wine producer in question. The exception is Champagne Heidsieck & Co. Monopole, which is just a trading name.

Mousse The effervescence of a sparkling wine.

Mousseux Sparkling, found only on cheap fizz.

Négociant Literally a trader or merchant, this name is used by wine producers whose business depends on buying in raw materials. The name is derived from the traditional practice of negotiating with growers to buy grapes and/or wine, and with wholesalers and retailers to sell wine.

Négociant-éleveur Wine firm that buys in ready-made wines for *élevage*.

Négociant-Propriétaire A *négociant* who owns vineyards and probably offers a range of its own produced wines.

Non filtré The wine has not been filtered, thus liable to drop a sediment much earlier than most other wines, and should always be decanted.

Oeil-de-perdrix Literally “partridge eye” and refers to a rosé-colored wine.

Perlant Very slightly sparkling—less so than *pétillant*.

Pétillance, pétillant A wine with enough carbonic gas to create a light sparkle.

Premier cru Literally a “first growth,” the status of a *premier cru* is beneath that of *grand cru* but only of relevance in areas where the term is controlled, such as Burgundy and Alsace. In Champagne, *premier cru* is much less meaningful, because it applies to entire villages, of which there are far too many, and in which much lesser vineyards also exist.

Produit Product, as in Product of ...

Propriétaire-Récoltant A grower-producer whose wine will be made exclusively from his own property.

Récolte Refers to the vintage year.

Réserve Ubiquitous and meaningless.

Rosé Pink.

Rouge Red.

Rubis Sometimes seen on rosé wines, particularly, but not exclusively, on darker styles.

Saignée A rosé wine produced by “bleeding” off surplus liquid from either the press or the fermenting vat.

Sec Dry, but in a sparkling wine this will have more sweetness than a *brut*.

Sélection de Grains Nobles A rare, intensely sweet, wine in Alsace made from selected botrytized grapes.

Sélection par X Selected, but not produced or bottled by X.

Supérieur As part of an appellation (e.g., Mâcon Supérieur as opposed to Mâcon plain and simple), this refers not so much to a superior quality than—possibly—a superior alcoholic strength (the minimum criteria being 0.5 percent ABV higher than the minimum for the same appellation without the Supérieur appendage).

Sur lie Refers to wines, usually Muscadets, that have been kept on their lees and have not been racked or filtered prior to bottling. This enhances the fruit of the normally bland Melon de Bourgogne grape used in Muscadet, often imparting a certain liveliness.

Tête de cuvée No legal obligation, but this term strongly suggests that a wine has been produced exclusively from the first flow of juice during the pressing, which is the highest in quality with the most acids, sugars, and minerals.

Tonneau A large barrel, traditionally four times the size of a *barrique*.

Trie Usually used to describe the harvesting of selected overripe or botrytized grapes by numerous sweeps (or *tries*) through the vineyard.

Union Coopérative A regional collective of local cooperatives.

Vendange tardive Late harvest; the term implies a sweet wine.

Vieilles Vignes Supposedly from old vines, implying lower yields and higher concentration, but no legal parameters apply, although most reputable producers would not dream of using the term unless the vines are at least 35 to 50 years old.

Vieillessement Aging.

Vigneron Literally a vineyard worker, but often used to denote the owner-winemaker.

Vigne Vine.

Vignoble Vineyard.

Vin d'une nuit A rosé or very pale red wine that is allowed contact with its grapeskins for one night only.

Vin de glace The French equivalent of *Eiswein* or Ice Wine.

Vin Wine.

Vin de l'Année Synonymous with *vin primeur*.

Vin de liqueur A fortified wine that is muted with alcohol before fermentation can begin.

Vin de paille Literally “straw wine,” this is a complex sweet wine produced by leaving late-picked grapes to dry and shrivel while hanging from rafters over straw mats.

Vin de Pays Official classification, usually precedes the actual *vin de pays* name such as *Vin de Pays des Collines de la Moure*. *Vin de pays* is below VDQS and above *vin de table* (see p.56).

Vin de Table Lowest official classification, immediately below *vin de table* (see p.56).

Vin Délimité de Qualité Supérieure Official classification, commonly referred to as VDQS, below AOC and above *vin de pays* (see p.56).

Vin Doux Naturel. A fortified wine, such as Muscat de Beaugues de Venise, that has been muted during fermentation, after it has achieved between 5 and 8 percent alcohol.

Vin gris A delicate, pale version of rosé.

Vin jaune The famous “yellow wine” of the Jura derives its name from the honey-gold color that results from its deliberate oxidation beneath a sherry-like flor. The resulting *vin jaune* is similar to an aged fino sherry, although *vin jaune* is not fortified.

Vin Mousseux Literally means sparkling wine without any connotation of quality one way or the other, but because all fine sparkling wines in France utilize other terms, it should be taken to mean a cheap, low-quality fizz.

Vin Nouveau Synonymous with *vin primeur*.

Vin primeur A young wine that is sold within weeks of the harvest, and meant to be drunk within the year. Beaujolais Primeur is the most commonly known example of this type of wine, but numerous other AOCs are allowed to be sold in this fashion (see box, p.56), as are all *vins de pays*.

BORDEAUX

Bordeaux is an area in an almost-perfect viticultural situation on the west coast of France and benefits from the ultimate marketing tool—a château-based classification system that was established 150 years ago.

THE NEW MILLENNIUM appears to be just as taxing for Bordeaux's reputation as the last decade of the 20th century turned out to be. Rain-drenched harvests toward the end of the 1990s challenged Bordeaux's claim to be the ultimate viticultural paradise, while the depressingly poor quality of its generic wines attracted almost as much bad publicity as the grossly inflated prices of modest vintages from the top châteaux. The weather might have improved in the first few years of the 21st century, but the quality of generic Bordeaux has remained abysmal, prices continue to rise almost in direct relation to the drop in sales—and then the unimaginable happened: the renowned US wine critic Robert Parker failed to appear for the *primeur* tastings in March 2003.

But all is not lost—Christian Delpuch, the new head of the Conseil Interprofessionnel des Vins de Bordeaux (CIVB), has mooted the possibility of declassifying some of the weaker Bordeaux wines into a wider *vin de pays*, which could then be bolstered by stronger wines from outside the region, but traditional to the southwest, such as the deep, dark Tannat. Delpuch is the managing director of Ginestet, the region's biggest trader, and seems to have a good understanding of the more commercial end of Bordeaux's business. He has suggested the creation of a Vins des Cépées d'Aquitaine category for the Bordeaux region, under which varietal wines could be marketed. Far from detracting from the classic wines of Bordeaux, this would in fact improve their quality through stricter selection. And at the very top end of the market, the *bordelais* can once again sleep easy in their beds, as Robert Parker returned for the *primeur* tastings in 2004.

OVERVIEW

The Bordeaux appellation and the Gironde *département* are geographically one and the same. Moreover, the Gironde is the largest *département* in France, and Bordeaux is the largest source of quality wines in the world. There are more than 22,000 vineyard proprietors working in excess of 280,000 acres (120,000 hectares), producing over 71 million cases (6.4 million hectoliters) of Bordeaux wine (85 percent red, 3 percent rosé, and 12 percent white) under 57 different appellations every year. Of these 22,000 properties, no fewer than 10,000 are châteaux and domaines producing wine. Of these 10,000 wine-producing properties, some 6,000 make and market wine under their own name (75 percent of total production), while the remaining 4,000 wine-producing properties are members of 53 cooperative wineries in Bordeaux (representing 25 percent of production, a little of which is sold under the producing property name).

THE CHÂTEAU SYSTEM AND MERCHANT POWER

Prior to the concept of château wine estates, the land was worked on a crop-sharing basis. This feudal system slowly changed from the late 17th century onward. As the *Bordelais* brokers developed the habit of recording and classifying wines according to their *cru*, or growth (that is to say their geographical origin), and the prices they fetched, the reputations of individual properties became established.

The 19th century saw the rise of the *négociant*, or merchant, in Bordeaux. Many *négociants* were of English origin, and some

firms were established by Scottish, Irish, Dutch, or German businessmen. The best château wines were not consumed by the French themselves; they were the preserve of other northern European countries. Thus foreign merchants had an obvious advantage over their French counterparts. Yearly, in spring, these *négociants* took delivery of young wines in cask from the various châteaux and matured them in their cellars prior to shipping. They were, therefore, responsible for their *élevage*, or upbringing, and came to be known as *négociants-éleveurs*, eventually becoming the middlemen found in every aspect of wine trading. Many foreign buyers found it more convenient to deal through a *négociant* than directly with the wine producer, and often they had no alternative, since a number of châteaux were owned by, or were exclusive to, certain *négociants*.

CHÂTEAU PALMER
This majestic turreted chateau is one of the finest in the Médoc.

THE MODERN BORDEAUX WINE TRADE

It was perhaps inevitable that the historically powerful and family-owned *négociant-éleveur* firms would eventually become a spent force. They lacked the resources required to finance adequately the huge increase in demand for Bordeaux in the 1960s, and those that did not founder during the oil crisis of the early to mid-1970s fell prey to the economic depressions of the following two decades.

As proud old firms were either taken over or went bankrupt, so the power shifted from the *négociants* to the châteaux, and in order to cope with a boom in world markets, many Bordeaux properties expanded their vineyards or added large, shiny new fermentation facilities. Many of these projects were financed with bank loans when interest rates were low. When sales slumped

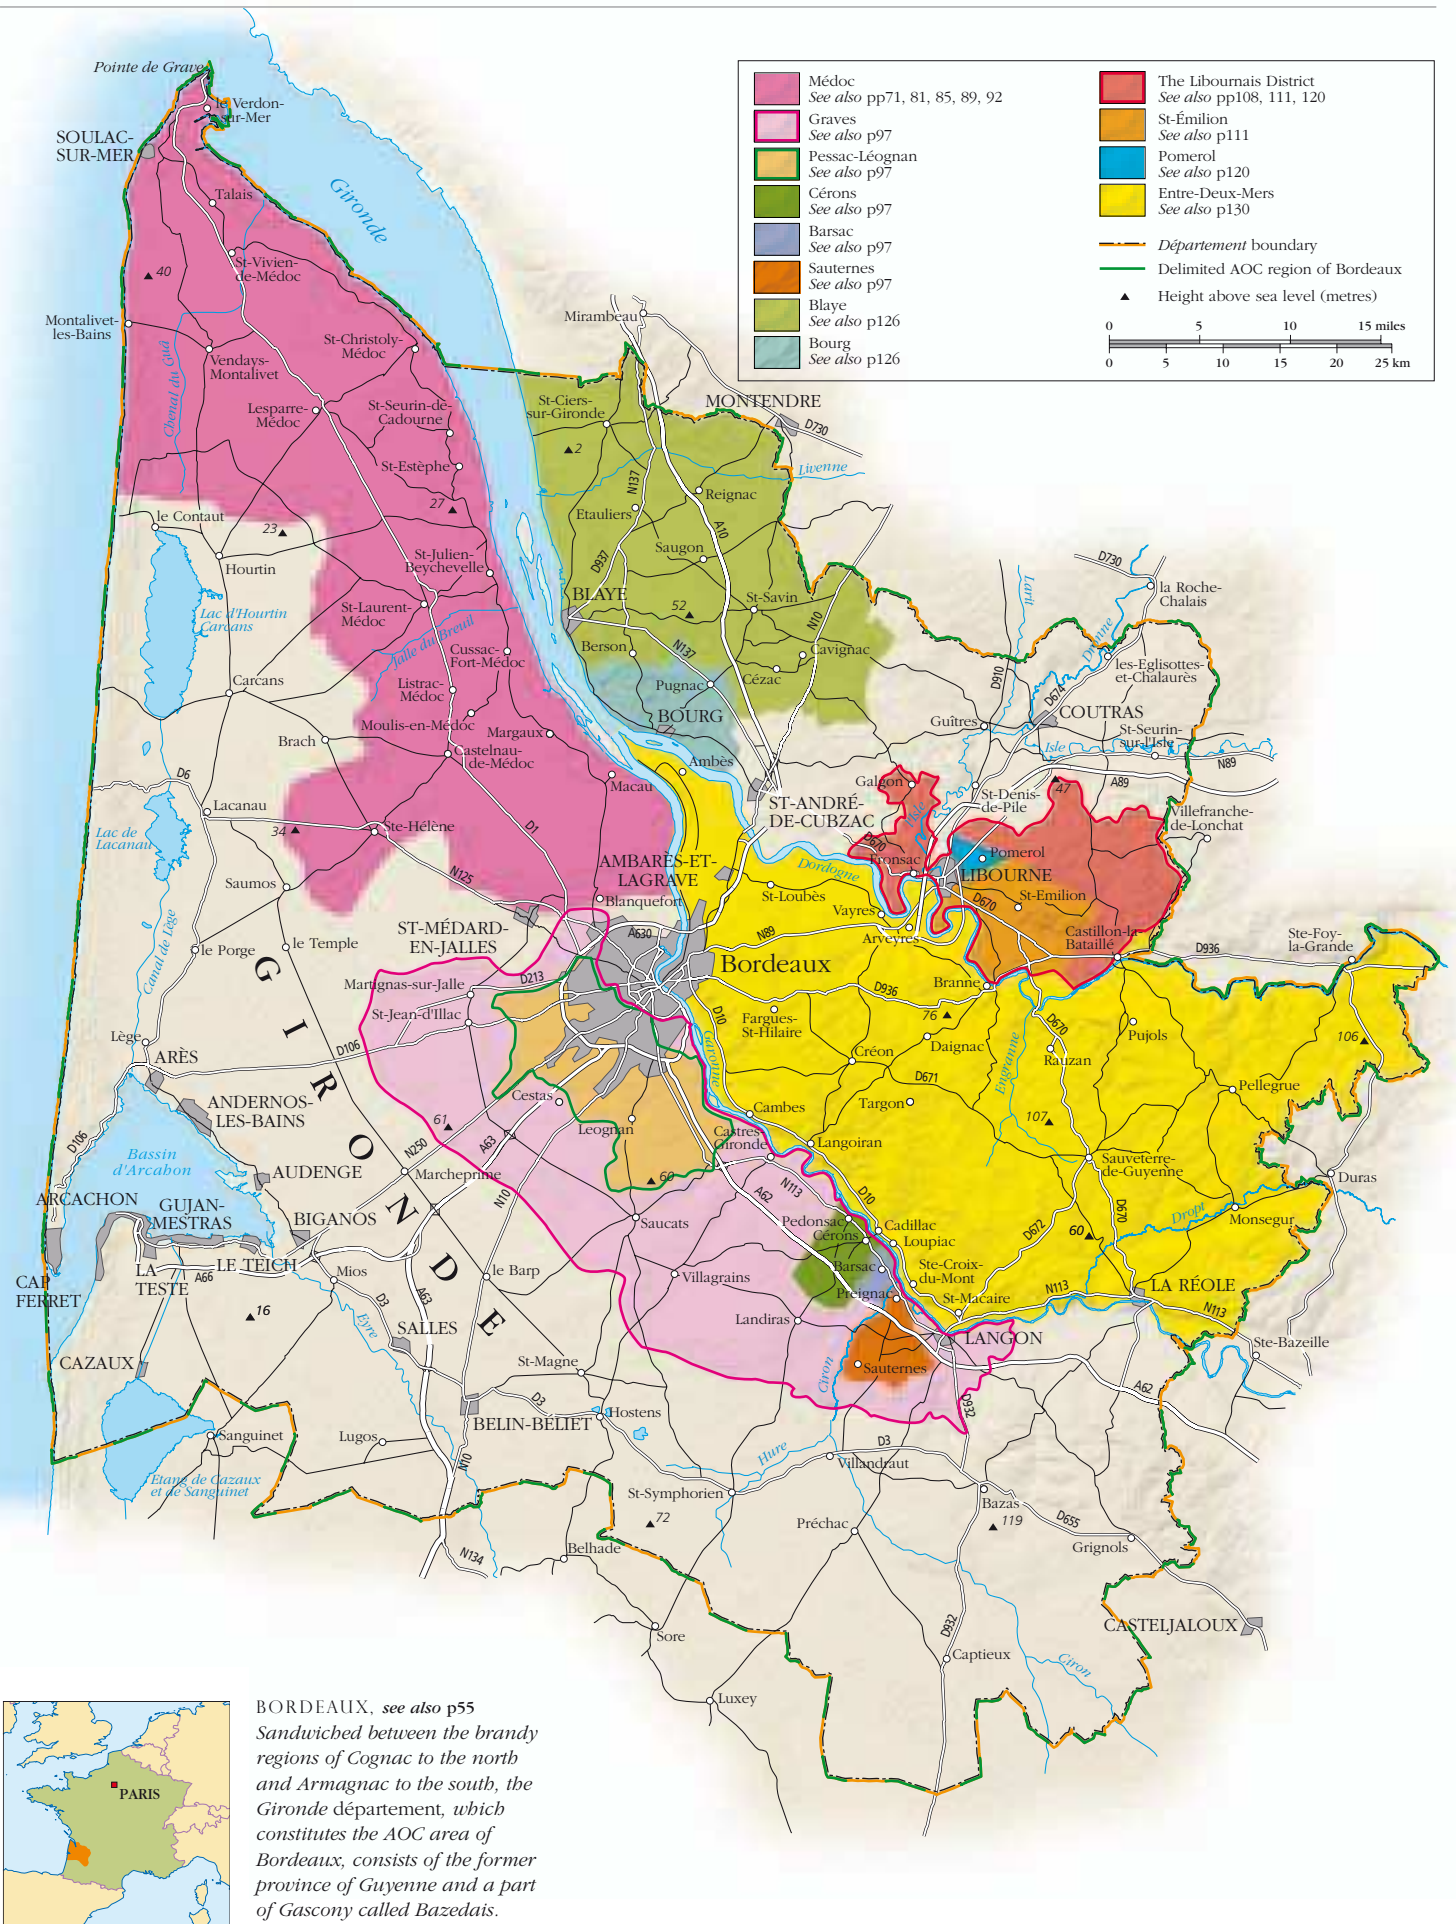

VOLUME VS. REPUTATION

Very few Bordeaux wines are produced from great vineyards. As the table below illustrates, the famous appellations represent a relatively small amount of the bordelais vignoble, and the classified growths a minuscule proportion of that. Yet it could be argued that the reputation of Bordeaux has been built upon a fraction of its *cru classé* or *grand cru classé*—the best performers. Bordeaux is a great wine region, but not all bordelais is great wine.

BORDEAUX, see also p55
 Sandwiched between the brandy regions of Cognac to the north and Armagnac to the south, the Gironde département, which constitutes the AOC area of Bordeaux, consists of the former province of Guyenne and a part of Gascony called Bazadais.

and interest rates shot up, the repayments became unbearable. Consequently, aside from a few entrepreneurial owners, power then shifted from châteaux to investors—not only banks but insurance groups, pension funds, and the like.

In today's market, therefore, the *négoce* has much less influence than before, with its *élevage* role primarily restricted to branded wines. The *élevage* of fine *cru classé* wine is either handled by the individual château itself or dispensed with by selling wines ridiculously young through French supermarkets or through the worldwide *en primeur* trade (see p66). Additionally, a number of château owners have carved out little empires, collecting estates or developing their own *négoçant* businesses.

THE CLASSIFICATION OF BORDEAUX WINES

Of all the Bordeaux classifications that exist, it is the 1855 Classification that is meant whenever anyone refers to “The Classification.” It was commissioned by the Bordeaux Chamber of Commerce, which was required by the government of the Second Empire to present a selection of its wines at the 1855 Exposition Universelle in Paris. For their own ends, the brokers of the Bordeaux Stock Exchange traditionally categorized the most famous Bordeaux properties on the basis of the prices they fetched, so they were charged by the Chamber of Commerce to submit a “complete list of classified red Bordeaux wines, as well as our great white wines.” The classifications listed above and to the right give the 19th-century names in the original form as listed by the brokers on April 18, 1855. The frequent absence of the word *château* has been followed, as has the circumflex in *crû*, and the use of *second crû* for red wines and *deuxième crû* for whites.

THE CLASSIC GRAPE VARIETIES OF BORDEAUX

Contrary to what one might expect, it is Merlot, not Cabernet Sauvignon, that is the most important grape variety in Bordeaux. Cabernet Sauvignon represents only 27 percent of black grapes cultivated in Bordeaux, whereas Merlot accounts for more than 58 percent. It is nearer the truth, therefore, to say that Cabernet Sauvignon gives backbone to Merlot, rather than to suggest that Merlot softens Cabernet Sauvignon (which is the old adage). Although Château Mouton-Rothschild contains no less than 90 percent Cabernet Sauvignon, it is an exception, as even on the Médoc's hallowed ground, where it is blasphemy to mention the name of Merlot, 40 percent of the vines grown are of that variety. Château Pétrus (see p123), one of the most expensive wines in

THE MERLOT GRAPE VARIETY

Almost twice as much Merlot as Cabernet Sauvignon grows in Bordeaux.

properties: *Château Romer* and

Château Romer-du-Hayot,

Fargues)

Lamothe, Sauternes (now two

properties: *Château Lamothe* and

Château Lamothe-Guignard)

the world, contains 95 percent Merlot, without any Cabernet Sauvignon at all. Cabernet Sauvignon is a classic grape, quite possibly the greatest red-wine grape in the world, but its importance for Bordeaux is often overstated.

Sémillon is the most important white grape variety grown in Bordeaux. It is significant both in terms of its extent of cultivation and quality. This grape variety is susceptible to botrytis, the “noble rot” that results in classic Sauternes and Barsac. It is therefore considered to be the world's greatest sweet-wine grape. Sémillon also accounts for most of the fine dry white wines of Bordeaux, but these are relatively few and lack prestige. Sauvignon Blanc plays the supporting role in the production of sweet wines, and is used to a greater or lesser degree for dry wines. Many of the less expensive dry white wines are pure Sauvignon Blanc varieties.

VARIETAL CONTRIBUTIONS TO A CUVÉE

The Cabernet Sauvignon is the most complex and distinctive of all black Bordeaux grapes. It has a firm tannic structure, yet with time reveals a powerful, rich, and long-lasting flavor. Wines from this grape can have great finesse; their bouquets often possess a “blackcurrant” or “violets” character. Cabernet Franc has similar characteristics to Cabernet Sauvignon, but may also have a leafy, sappy, or earthy taste, depending on where it is cultivated. It does, however, shine through as the superior variety when grown in St.-Émilion and Pomerol, and can compete on even terms with its more famous cousin in parts of Graves. Merlot is soft, silky, and sometimes opulent. It is a grape that charms and can make wines with lots of juicy-rich and spicy fruit. Petit Verdot is a late-ripening variety with a naturally high acidity, while Malbec has a thick skin that is rich in color pigments. Small amounts of Petit Verdot and Malbec were traditionally used to correct the color and acidity of a blended wine. The cultivation and use of these two varieties for this purpose has been on the decline for the last 20 years owing to the various modern techniques of viticulture and vinification.

The white Sémillon grape provides a wine naturally rich in flavor and high in alcohol. It makes succulent, sweet white wines that are capable of great longevity. Its intrinsically low acidity

Cos Labory, St.-Estèphe
Clerc Milon, Pauillac
Croizet-Bages, Pauillac
Cantemerle, Macau

few years ago. Early harvesting, prefermentation maceration on the grape skins to draw out the aromatics, and longer, cooler fermentation in stainless steel, have all combined to produce a far more interesting, medium-quality, dry white wine.

FERMENTATION AND MATURATION

Although some properties producing *crus classés* retain their wooden vats for the fermentation process (more because they lack the funds to reequip than for any idealistic reasons), hardly any of them actually invest in new oak vats, preferring those made of stainless steel. The one startling exception is Château Margaux. This great property has spent more money, following the advice of the legendary oenologist Professor Peynaud, than any other château in Bordeaux. This is puzzling because it was principally at his recommendation that virtually everyone else in Bordeaux invested in stainless steel.

ADDING VIN DE PRESSE

One technique that is more characteristic of red winemaking in Bordeaux than in any other region is the addition of a certain amount of *vin de presse*. This is produced after the wine has completed its alcoholic fermentation and has undergone malolactic conversion. The wine is drawn off its lees into casks and the residue of skin and pips at the bottom of the vat is pressed. Normally this requires two pressings: the first *vin de presse* is the best and represents about 10 percent of the total wine produced, the second provides a further 5 percent. *Vin de presse* is relatively low in alcohol, very dark, and extremely tannic. In a wine made for early drinking, *vin de presse* would be harsh and unpleasant, but with the structure of a classic oak-matured Bordeaux, it gives extra body and increases longevity.

THE VINIFICATION PROCESS

The proportion of grape varieties grown and the intrinsic potential of a château's terroir determine the basic quality and character of Bordeaux's finest wines. Manipulating the vinification process has, however, always been the method of honing the style of this region's best châteaux. Processes include adding up to 15 percent vin de presse; grape-skin contact (which can be for up to a month); maturation, which used to take 3 to 5 years, but now takes 15 to 18 months; and a percentage of new oak, always the hallmark of Bordeaux's premiers crus.

makes it less suitable for producing dry wines, but in exceptional circumstances the highest quality Sémillon does make a fine dry white wine—if matured in new oak. This enhances the aromatic character of the wine and gives it a firm structure without which it would be too “fat” and “flabby.”

The Sauvignon Blanc in Bordeaux is soft, delicate, and easy to drink. It does not have the same bite as it does in the Loire vineyards of Sancerre or Pouilly-Fumé, but the varietal character is more pronounced today, with a crisper, fresher style, than it was a

BUYING EN PRIMEUR

WHAT IS BUYING EN PRIMEUR?

This is a method of investing in Bordeaux wines by buying the wine before it is bottled. It is no longer something I subscribe to. Every château in Bordeaux attempts to presell a certain amount of its wine production in the first year of the wine's life, although it will not be bottled and shipped until it is three or, perhaps, four years old.

APPROXIMATED BLENDS

The wines tasted by the trade and upon which *en primeur* offers are based will be approximated blends, which is to say that they will consist of several different casks in roughly the proportion of grape variety that will make up the final *grand vin*. Yet no matter how honest and accurate the winemaker tries to be, this can never be a true representation of the final wine. Winemakers do not know what the final proportions of grape varieties will be. Much depends on whether every

barrel matures as expected, and how strict the selection is when it comes to rejecting wines not fit for making *grand vin*.

WINE SALES BY MAIL ORDER

The first sales usually go on sale in the spring after the vintage, shortly after merchants from all over the world have spent a hectic week tasting hundreds of wines barely six months old. Cask samples (wine bottled from the cask) of the best wines are taken back to their home markets for tasting by the trade and key private buyers. This can be as early as March, although June is the most popular month and it is at around then that mail-order offers go out with vivid descriptions of the wines and how they are likely to mature.

WHY BUY EN PRIMEUR?

It is only worth buying a wine that you cannot touch for three or four years (and probably

should not drink for at least another three or four years after that), if you know it will be unavailable by any other means or, when it does become available, that it is likely to cost significantly more at that time.

WHICH WINES SHOULD YOU BUY?

Wine lovers are better advised to take up offers to buy *en primeur* wines such as Cornas from the Rhône, which never seem to be available when it is ready to drink. As far as investments are concerned, there is only one piece of advice I can give, and that is to stick to "blue-chip" wines in top vintages. It does not matter whether cask samples of Latour, Mouton, Pétrus, Yquem, and so on bear any resemblance to the final bottled product, they will always be a good investment, and from a wine drinker's point of view, there is no point in gambling on any other Bordeaux *en primeur*.

OAK CASK MATURATION

After fermentation and prior to bottling, all the best red Bordeaux are matured in 59-gallon (225-liter) Bordeaux oak casks called *barriques*. The duration of this operation and the percentage of new oak casks used should depend entirely on the quality and structure of the wine, and this will vary according to the vintage. The bigger the wine, the more new oak it can take and the longer maturation it will need. The greatest wines—all the *premiers crus*—require at least 18 to 24 months in 100 percent new oak to reach maturity. Other fine-quality Bordeaux wines do not need so much time, perhaps only 12 to 18 months, and do not benefit from 100 percent new oak; between 30 and 50 percent may be enough. If you get the chance, put your nose into a new oak cask before it has been used. The wonderful creamy-smoky, vanilla-and-charcoal aroma is the very essence of what should come through when a fine wine has been properly matured in oak.

PAST, PRESENT, AND FUTURE

During the early 1980s, the idea of "second wines"—always a factor in the production of the finest Bordeaux growths—began to catch on among the properties producing *crus bourgeois*, enabling

BARRELS IN A BORDEAUX CHAI

These new oak *barriques* at Château Langoa-Barton contain the wines of Château Léoville-Barton (Léoville-Barton has no chai of its own). Both properties belong to the Barton family (who are of British descent).

modest properties to make much better wines through stricter selection of their *grands vins*. Toward the end of the 1980s, "green harvesting," or crop-thinning, became *de rigueur* for all quality-conscious châteaux (even though the Romans considered such practices essential 2,000 years ago!).

However, the most significant advance in Bordeaux over the last 20 years came in 1994, when a decision was made to harvest grapes according to tannin ripeness, rather than sugar-acidity ripeness. Unripe tannins are not hydrolyzed; they are hard and will never soften, whereas ripe tannins are hydrolyzed, have a certain suppleness from day one, and will always soften. This phenomenon has long been known, but precisely when it occurs can vary from region to region, and year to year. In Bordeaux tannin ripeness has been under study since 1986 by Vincent Dupuch, who discovered that grapes deemed physiologically ripe in Bordeaux by their sugar-acidity ratio actually possessed a high proportion of unripe tannins.

In 1994, many *bordelais* harvested according to Dupuch's tannin ripeness parameters and were surprised to discover the optimum moment to pick was in fact much later than they had previously thought. This means not only that many Bordeaux wines will be riper, but also that by determining ripeness in this way, the winemaker is aware of the precise phenolic content, and this allows the fine-tuning of maceration and fermentation for each batch of grapes.

The 21st century will see a continuation in the rise of super-premium boutique wines, particularly from St-Émilion. However, the increase in the density of vines to raise general standards in several Bordeaux appellations has been delayed. According to decrees issued in 1994, these new standards were to be fast-tracked, but this was fudged by new decrees in 1998, which let some areas off the hook, making higher-density planting not legally enforceable until 2025.

Meanwhile, the volume of dry white Bordeaux has dropped, leaving fewer producers making superior wines. Once the poorest cousin in Bordeaux, dry whites are better today than they have ever been. This applies across the board, from the lowliest Entre-Deux-Mers to the finest classified growth, even to the point where the 1993 Château Couhins-Lurton became the first Bordeaux *cru classé* to be sealed with a screwcap.

In a move to inform the public, and increase the region's profile among consumers of wines that do not include the Bordeaux name in the appellation (from Bourg to Blaye, and Fronsac to Pauillac, *et. al.*), all wines must include "Vin de Bordeaux" or "Grand Vin de Bordeaux" on the label.

RECENT BORDEAUX VINTAGES

2003 Unlike in the rest of France, this was not a drought year. In fact, precipitation levels were slightly above average. However, as in other French wine regions, 2003 was a very hot and sunny vintage, with exceptional ripeness. Exceptionally, acidification was permitted, but although initial concerns about low acid musts were widespread, relatively few producers bothered to add acid. This is a great Bordeaux vintage, with good to superb wines produced throughout the region, but favoring the Right Bank and improving the further north the vineyards are in the classic communal appellations of the Médoc. The most concentrated wines will be quite exotic and flamboyant. Great Sauternes were also produced.

2002 Hyped-up immediately after the vintage, when the wines were tasted the following spring, this vintage turned out to be far more variable than anyone had imagined. Essentially, it is a Cabernet year, not Merlot, thus some very high-quality Médocs were produced,

particularly in, but not restricted to, Pauillac. The further up the *cru classé* scale you go, the better the wines are, with Lafite a match for the greatest wines of any Bordeaux vintage. Excellent for Sauternes too.

2001 But for the outstanding 2000 vintage, everyone would have been hyping that of 2001 as one of Bordeaux's finest vintages across the board. Homogeneity (relevant to the intrinsic quality of the château, of course) is almost as widespread as in 2000, but the quality, although excellent, is not as great as that special year, while the style is more elegant, less concentrated. Another superb Sauternes vintage, and some of the best dry white *cru classé* wines produced in 10 years.

2000 God forgave the *bordeleais* their transgressions and excesses of the recent past, and smiled on the world's foremost red wine region for the last vintage of the old millennium. He held back the rains until almost everyone had brought their harvest in.

The reds on both banks are beautifully colored, high in alcohol, with the weight and plumpness of a truly great year. This is a very special vintage indeed, producing wines of extraordinary concentration, except in Sauternes and Barsac, which were hit by rain during their late harvests—the results are not that bad, with quality equaling that of 1999.

1999 This is the year when almost everything that could go wrong did go wrong in Bordeaux. It was as if the last vintage of the 1990s was a testament to the climatic difficulties that masked this decade, with disease in the vineyards, rain at harvest, and a huge crop of unripe grapes. Very patchy, but most of the best wines were made in St.-Émilion, with some excellent Margaux and St.-Julien, and some Sauternes that can vie with the 1998s, though not the 1997s. It is in vintages such as 1999 that the difference in quality between Bordeaux as a whole and that found when tasting at the top 100 or so Bordeaux estates becomes so marked.

BORDEAUX'S BEST GENERIC BRANDS

Bordeaux has the greatest reputation for red wine in the world, but as in all regions, ordinary wines do exist. In fact, the majority of wines produced in any region is very ordinary, and Bordeaux is no exception. Remember that more than money separates Mouton Cadet from Château Mouton-Rothschild. While the former might be the most famous of all generic Bordeaux brands, it is merely the blended product of relatively inferior wines grown anywhere within the vast *départementale* appellation of Bordeaux, while the latter is a selection of one of the finest wines grown on a single estate—a *premier cru classé* in the small, communal AOC of Pauillac.

As a branded generic Bordeaux wine can be a disappointing introduction to the world's greatest wine region, the following brands are suggested as reliable choices:

DOURTHE NUMÉRO 1

Probably the best, largest-selling branded Bordeaux available.

LA COUR PAVILLON

One of the most reliable and underrated generic Bordeaux wines on the market at the moment. Made at Château Loudenne, this wine always displays good fruit, but possesses enough structure to keep for a while.

MAÎTRE D'ESTOURNEL

This has the same connection to Château Cos d'Estournel as "Mouton Cadet" has to Château Mouton-Rothschild, which is absolutely nonexistent as far as the wine is concerned, but both brands hope to sell on the back of their respective château name. There is however, a fundamental difference between the two, of course: "Maître d'Estournel" happens to be an expressive, early-drinking wine that can also take a few years in bottle, whereas "Mouton Cadet" is mutton posing as lamb.

MICHEL LYNCH

Produced by Michel Cazes of Château Lynch-Bages in an unashamedly up-front, fruity style. Red, white, and rosé are all thoroughly recommended.

PREMIUS EXIGENCE

Produced by Yvon Mau, the step up between the premium Premium and Premium Exigence is about as big as it can get for two wines sharing the same brand. The stricter selection of grapes and no-expense-spared handling shows through in the richer, oak-layered fruit.

SICHEL SIRIUS

This is as serious as it sounds. An excellent oak-aged generic Bordeaux, it will improve for a further year or two in bottle.

THE APPELLATIONS OF GENERIC BORDEAUX

There are more than 50 appellations in Bordeaux and every one has its generic wines, produced by a *négociant* or local *coopérative*.

BORDEAUX AOC

As with any large, and thus variable, appellation, the generic Bordeaux AOC is responsible for the good, bad, and ugly wines of the region. Overall, quality is of a decent standard, although the best wines are unlikely to fit the classic descriptions that have made the region famous. Wines carrying the generic appellation may come from any AOC vineyard in the entire Gironde. Some of the most interesting wines are from classic areas where the more specific appellation is confined to a precise style: such as a red Bordeaux produced by a *château* in Sauternes. If the wine is a brand, it should be ready to drink. If it is a *château* wine, the address should reveal its origin, and the price will be an indication of its quality and a guide to when it should be drunk.

RED Most are simply dry, luncheon claret styles, made for early drinking and usually softened by a high Merlot content.

🍷 Cabernet Sauvignon, Cabernet Franc, Carmenère, Merlot, Malbec, Petit Verdot
🕒 1–5 years

WHITE All medium-dry, basic white bordeaux contain at least 4 grams of residual sugar per liter, and have a certain sweetness. It is by far the most variable appellation category, with many dull wines. If the wine contains less than 4 grams of residual sugar per liter, the Bordeaux appellation must be qualified by “Sec.” These dry whites are also variable, but most of the best wines of the appellation are found among them. They may be sold from December 1 without any mention of *primeur* or *nouveau*.

🍷 Sémillon, Sauvignon, Muscadelle plus up to 30% in total of Merlot Blanc, Colombar, Mauzac, Ondenc, Ugni Blanc

🕒 1–2 years

ROSÉ When made by individual properties, this medium-dry, medium-bodied wine can be attractive. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

🍷 Cabernet Sauvignon, Cabernet Franc, Carmenère, Merlot, Malbec, Petit Verdot
🕒 Immediately

BORDEAUX CLAIRET AOC

“Claret” is a term that refers to a red wine that is light in body and color. It derives from *vin claret* in Old French, a term of respect; this suggests that Bordeaux achieved a reputation for limpidity before other wines.

ROSÉ Rich, dark rosé or failed, feeble red? The best examples of this medium-dry, medium-bodied wine come from the village of Quinsac in the Premières Côtes de Bordeaux.

🍷 Cabernet Sauvignon, Cabernet Franc, Carmenère, Merlot, Malbec, Petit Verdot
🕒 1–2 years

BORDEAUX ROSÉ AOC

The theory is that this appellation is reserved for wine deliberately produced as rosé, while “Bordeaux Claret” is for a light-colored red wine. Both may simply be labeled “Bordeaux AOC.” For technical details see Bordeaux AOC.

BORDEAUX SEC AOC

White bordeaux with less than 4 grams of residual sugar per liter (see Bordeaux AOC).

BORDEAUX SUPÉRIEUR AOC

Technically superior to Bordeaux AOC by only half a degree of alcohol, yet most of these wines do seem to have a greater consistency of quality, and, therefore, value. All generics are variable, but this one is less so than most.

RED These dry, light-bodied or medium- to full-bodied wines vary a lot but are generally fuller and richer than most red wines using the basic Bordeaux appellation.

🍷 Cabernet Sauvignon, Cabernet Franc, Carmenère, Merlot, Malbec, Petit Verdot
🕒 2–6 years

WHITE Dry or sometimes sweet, light- to medium-bodied white wines that are little seen.

🍷 Sémillon, Sauvignon, Muscadelle plus up to 30% in total Merlot Blanc, Colombar, Mauzac, Ondenc, Ugni Blanc; the proportion of Merlot Blanc must not exceed 15%

🕒 1–2 years

BORDEAUX SUPÉRIEUR CLAIRET AOC

This is a little-seen appellation: the wines are sold either as “Bordeaux Supérieur” or “Bordeaux Claret.”

ROSÉ Medium-dry and medium-bodied as Bordeaux Claret, but with an extra half degree of alcohol.

🍷 Cabernet Sauvignon, Cabernet Franc, Carmenère, Merlot, Malbec, Petit Verdot
🕒 1–2 years

BORDEAUX SUPÉRIEUR ROSÉ AOC

This appellation has a small cast—and Château Lascombe’s Rosé de Lascombes still tops the bill.

ROSÉ As few examples of these medium-dry, medium-bodied wines exist, it is possible to generalize and describe them as fuller, richer, and having more class than any Bordeaux Rosé AOC wines.

🍷 Cabernet Sauvignon, Cabernet Franc, Carmenère, Merlot, Malbec, Petit Verdot
🕒 1–2 years

CRÉMANT DE BORDEAUX AOC

This was introduced in 1990 to replace the old Bordeaux Mousseux AOC (which was phased out on December 31, 1995). Although preferable to a lot of poorly produced Loire sparkling wines, there is nothing special about Bordeaux bubbly. Changing the appellation has done nothing to change the product because, like its predecessor, Crémant de Bordeaux is merely a modest and inoffensive fizz. It lacks the spirit and expressiveness to stand out from the sea of far cheaper, but equally boring, sparkling wines that exist almost everywhere. I have tasted much better from areas far less suited to sparkling wine than Bordeaux.

SPARKLING WHITE Varies from dry to sweet and light- to medium-bodied, but is almost always bland.

🍷 Sémillon, Sauvignon, Muscadelle, Ugni Blanc, Colombar, Cabernet Sauvignon, Cabernet Franc, Carmenère, Merlot, Malbec, Petit Verdot
🕒 1–2 years

SPARKLING ROSÉ The authorities should have taken advantage of the introduction of a new appellation to allow the inclusion of white grapes for this style, as this would potentially have improved the quality.

🍷 Cabernet Sauvignon, Cabernet Franc, Carmenère, Merlot, Malbec, Petit Verdot
🕒 2–3 years

THE WINE PRODUCERS OF

BORDEAUX AND BORDEAUX SUPÉRIEUR

Although many of the following properties are located within more specific appellations, at least a certain portion of their wine production is sold as either Bordeaux or Bordeaux Supérieur, and it is those particular wines that have been recommended by the author in this section.

BORDEAUX

CHÂTEAU BALLUE-MONDON

Gensac

Soft and fruity “organic” claret.

CHÂTEAU DE BERTIN

Targon

Powerful Cabernet Sauvignon-dominated wines that age gracefully.

CHÂTEAU BERTINERIE

Cavignac

A serious rosé, pleasantly romantic, with delicately rich, floral fruit on the palate and a smooth finish.

CHÂTEAU BONHOSTE

St.-Jean-de-Blaignac

Classic white bordeaux at its best.

DOMAINE DU BRU

St.-Avit-St.-Nazaire

Refreshing claret: light in color and body and easy to drink.

CHÂTEAU CARSIN

Rions

Popular in the UK, New World influenced.

CHÂTEAU COURTEY

St.-Macaire
★●

These are intensely flavored old-style wines, possessing quite a remarkable bouquet.

CHÂTEAU FAUGAS

Cadillac

Well-balanced reds with attractive berry-fruit flavors.

CHÂTEAU DU GRAND MOUEYS

Capian

Consistently elegant red wines.

CHÂTEAU GRAND VILLAGE

Mouillac

Rich and easy Merlot-dominated, oak-aged red, and a good second wine under the "Beau Village" label.

CHÂTEAU DE HAUX

Haux

Gorgeously ripe and dry white wine, with very fresh and elegant fruit.

CHÂTEAU LAGROSSE

Tabanac

★●

Elegant, ripe, and long, with lemony-rich, oaky fruit.

CHÂTEAU LAPÉYÈRE

Cadillac

Well-structured red, dominated by Cabernet Sauvignon.

CHÂTEAU DE LUGIGNAC

Pellegrue

Romantic 15th-century château making attractive, firm, and fleshy red that can show some finesse.

CHÂTEAU MARJOSSE

Branne

★●

This is Pierre Lurton's home, where he makes lush and up-front reds with creamy-silky fruit and a beautiful dry white.

CHÂTEAU MORILLON

Monségur

★●

Rich, fat, and juicy wines.

CLOS DE PELIGON

St.-Loubès

Fine, full-bodied red with a hint of oak.

CHÂTEAU PLAISANCE

Capian

This château makes excellent, lightly rich Bordeaux Blanc Sec, made from 50-year-old vines and fermented in oak.

CHÂTEAU DE PLASSAN

Tabanac

★●

The basic Bordeaux Blanc Sec has

fresh, severe Sauvignon fruit, while the more expensive Bordeaux Blanc Sec, which is fermented and aged in oak, has lovely creamy fruit and a fine, lemony-vanilla finish.

CHÂTEAU POUCHAUD-LARQUEY

La Réole

Full and rich red with lots of fruit.

CAVE DE QUINSAC

La Tresne

Delicately colored, light-bodied, rosé-style wines sold as claret.

CHÂTEAU RENON

Langoiran

★●

This is a pleasantly fresh and floral Sauvignon-style wine.

CHÂTEAU REYNON

Cadillac

★●

This is a star-performing château that produces *cru classé* dry white wine under the auspices of Denis Dubourdieu. The elite Vieilles Vignes *cuvée* is quite extraordinary, but everything produced here can be relied upon, right down to the aptly named "Le Second de Reynon." Also very good red.

CHÂTEAU ROC-DE-CAYLA

Targon

Easy-drinking, well-balanced reds with good fruit and some finesse.

LE ROSÉ DE CLARKE

Castelnaud-Médoc

From Château Clarke, this has all the fragrance expected from a classic dry rosé.

CHÂTEAU THIEULEY

Créon

★●

These are medium-bodied, elegant reds that possess more than just a hint of cask-aging. Also fine, fresh, floral, and fruity white wines.

CHÂTEAU TIMBERLAY

St.-André-de-Cubzac

★●

Deep-colored, full of flavor, but not without a certain elegance.

BORDEAUX SUPÉRIEURCHÂTEAU DES ARRAS

St.-André-de-Cubzac

★●

Deep-colored wines with good structure and lots of chunky fruit.

CHÂTEAU LA COMBE-CADIOT

Blanquefort

★●

These well-colored wines have a

big bouquet, and are oaky with delicious fruit.

CHÂTEAU FONCHEREAU

St.-Loubès

★●

Well-structured, finely balanced *vins de garde* of extremely good quality.

CHÂTEAU FOUCHÉ

Bourg-sur-Gironde

This wine is firm yet has fat, juicy fruit and a smooth finish.

CHÂTEAU LA GRANGE-LES-TOURS

St.-André-de-Cubzac

Well-made, full, flavorsome wines.

CHÂTEAU GROSSOMBRE

Branne

★●

Nicely concentrated, very good red wine which will improve for 12 to 18 months, and represents exceptional value.

CHÂTEAU LATOUR

Sauveterre-de-Guyenne

These medium-bodied wines have consistently good fruit, smooth flavor, and make a cheap way to get the "Latour" name on the table!

CHÂTEAU LAVILLE

St.-Loubès

Rich, tannic, and powerfully structured wines with spicy fruit.

MARQUIS DE BOIRAC

Castillon-la-Batille

★●

Super value *coopérative* wine with a big, oaky aroma and fruit to match.

CHÂTEAU MÉAUME

Coutras

Alan Johnson-Hill used to be a UK wine merchant before settling north of Pomerol. Since then, he has gained a reputation for cleverly tailoring this red bordeaux to young British palates.

CHÂTEAU LA MICHELIERIE

St.-André-de-Cubzac

Another property producing a big, tannic style of wine.

CHÂTEAU LES MOINES-MARTIN

Galgon

This is well-made wine for reasonably early drinking, with an attractive bouquet, round fruit, and fine balance.

CHÂTEAU DE PIERREDON

Sauveterre-de-Guyenne

★●

Serious Cabernet Sauvignon-dominated bordeaux from the Haut-Benauges.

CHÂTEAU PUYFROMAGE

Lussac

Attractive, well-balanced, medium-bodied, and easy to drink.

ROSÉ DE LASCOMBES

Margaux

Refreshing, fruity rosé of excellent character, quality, and finesse.

CHÂTEAU SARRAIL-LA-GUILLAMERIE

St.-Loubès

Rich and fleshy wine that softens nicely with age.

CHÂTEAU DE SEGUIN

La Tresne

Look out for the Cuvée Prestige, which is rich and smoother than the basic Château Seguin.

CHÂTEAU TOUR-DE-L'ESPÉRANCE

Galgon

★●

This is soft and smooth wine, full of fat, ripe, and juicy fruit, yet not without finesse.

CHÂTEAU TOUR PETIT PUCH

St.-Germain-du-Puch

★●

Attractively colored, well-made, well-balanced wines, with a touch of spice.

CHÂTEAU DE LA VIEILLE TOUR

St.-Michel-Lapujade

★●

Consistently rich and smooth, even in notoriously harsh vintages.

CHÂTEAU VIEUX MOULIN

Villegouge

These are well-rounded, long, and supple wines, which are of consistently fine quality.

THE MÉDOC

The style of wine alters more radically over short distances in the Médoc than in any other French red wine district. The wines are mild and unexceptional immediately to the northwest of Bordeaux, but from Ludon onward, they become progressively more characterful, acquire finesse, and—after Margaux—gain considerable body. Beyond St.-Estèphe, the firmness of body of the wines eventually turns to coarseness, and their finesse fades.

THE MÉDOC TAKES its name from the Latin phrase *medio aquae*—“between the waters”—referring to the Gironde estuary and the Atlantic Ocean. It is a long, thin strip of prized vines, extending northwest from the city limits of Bordeaux to the Pointe de Grave. At its center is the classic area of Bordeaux, where the vast majority of the most famous châteaux are located, and yet this was the last major district of Bordeaux to be cultivated. While winemaking in the Libournais district of St.-Émilion began as early as the Roman occupation, it was another thousand years before scattered plots of vines spread along the Médoc. Across the large, brown expanse of water called the Gironde, the Romans viewed Bourg and considered its hilly area far more suitable for growing vines. At that time the marshland of the Médoc was difficult to cross and impossible to cultivate. Today, the Médoc is the envy of winemakers the world over and Bourg is merely a source of inexpensive, if good-value, basic Bordeaux.

THE MÉDOC STYLE: VARIATIONS ON A THEME

The four famous communes of Margaux, St.-Julien, Pauillac, and St.-Estèphe, plus the two lesser-known but developing communes of Lustrac and Moulis, are to be found in a region within the Médoc known as the Haut-Médoc, where the wines are fine, firm, and fleshy. The Haut-Médoc begins at the southern outskirts of the city of Blanquefort, along the northern reaches of the Graves district, where the wines are fairly neutral. The greatest wines of the Haut-Médoc are found in the area beginning at Ludon with Château la Lagune—the first *cru classé* encountered moving north from Blanquefort. Fine *crus bourgeois* are to be found in this area as well.

The wines at Margaux are soft and velvety and full of charm, although they are very much *vins de garde* and will improve well with age. The wines of St.-Julien are elegant with a very pure flavor. They have the delicate touch of Margaux, yet lean closer to Pauillac in body. The wines of Pauillac are powerful, often having a rich blackcurrant flavor with hints of cedar and tobacco. These

DISTRIBUTION OF MÉDOC CRUS CLASSÉS THROUGHOUT THE APPELLATIONS

APPELLATION	GROWTHS					TOTAL
	1ST	2ND	3RD	4TH	5TH	
Haut-Médoc	0	0	1	1	3	5
St.-Estèphe	0	2	1	1	1	5
Pauillac	3	2	0	1	12	18
St.-Julien	0	5	2	4	0	11
Margaux	1	5	10	3	2	21
TOTAL	4	14	14	10	18	60

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
The Médoc lies on the left bank of the Gironde estuary, stretching northwest from Bordeaux in the south to Soulac in the north.

CLIMATE
Two large masses of water on each side of the Médoc—the Atlantic and the Gironde—act as a heat-regulator and help provide a microclimate ideal for viticulture. The Gulf Stream generally gives the Médoc mild winters, warm summers, and long, sunny falls. The district is protected from westerly and northwesterly winds by the continuous coastal strip of pine forest that runs roughly parallel to the Médoc.

ASPECT
Undulating hillsides with knolls and gentle slopes are characteristic of the Médoc. The best vineyards can “see the river” and virtually all areas of the Haut-Médoc gradually slope from the watershed to the Gironde. Marshy areas, where vines cannot be grown, punctuate most communes.

SOIL
Similar topsoils lie over different subsoils in the Médoc. Its topsoils are typically outcrops of gravel, consisting of sand mixed with siliceous gravel of varying particle size. Subsoils may contain gravel and reach a depth of many feet, or may consist of sand, often rich in humus, and some limestone and clay.

VITICULTURE AND VINIFICATION
Only red wines can use the Médoc appellation. Mechanical harvesting is commonplace and all grapes are destalked prior to fermentation in tanks, or in vats increasingly made of stainless steel. Skin contact lasts for one to two weeks, although some châteaux have reverted to the once standard four weeks.

GRAPE VARIETIES
Primary varieties: Cabernet Sauvignon, Cabernet Franc, Merlot
Secondary varieties: Carmenère, Petit Verdot, Malbec

BARREL-MAKING AT LAFITE ROTHSCHILD

Wines are aged in new oak at Château Lafite-Rothschild, although for a shorter length of time than in the past. The barrels are made with great care in a time-honored, traditional manner.

are wines of great finesse, and Pauillac can be considered the greatest appellation of the Médoc. St-Estèphe includes many minor growths of rustic charm and a few classic wines, and technology is changing the robustness of its spicy wines to richness.

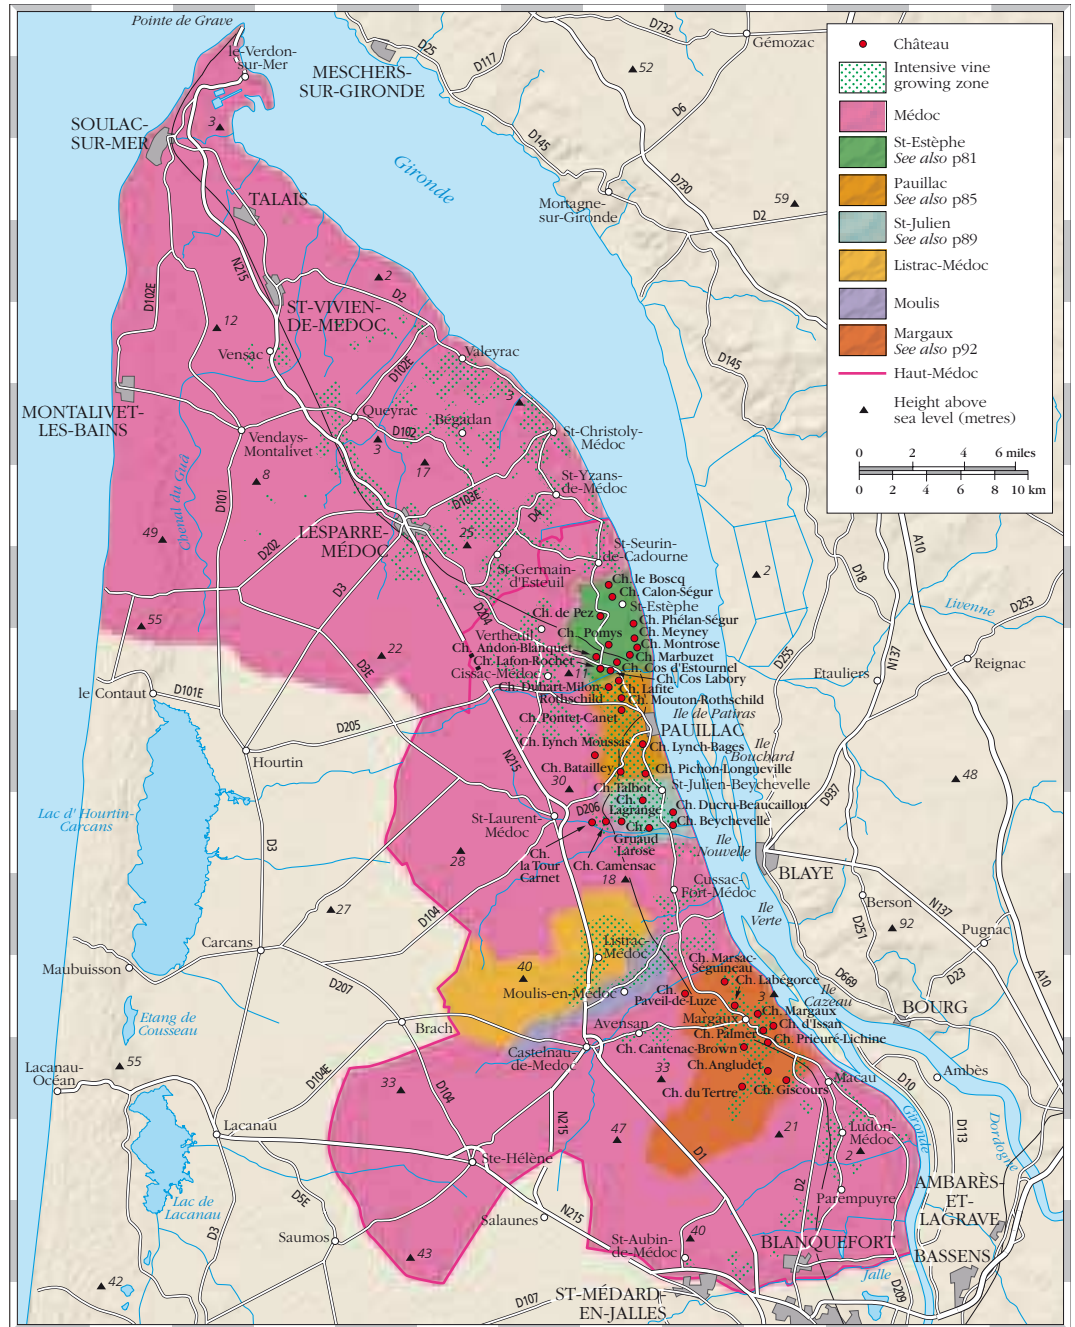

Beyond St-Estèphe lies the commune of St-Seurin-de-Cadourne, whose wines are entitled to use the Haut-Médoc appellation, after which the appellation becomes simply AOC Médoc. This area, formerly known as the Bas-Médoc, has a lesser reputation than the Haut-Médoc. However, many exceptional wines are made here: the triangle formed by St-Yzans, Lesparre, and Valeyrac contains such outstanding minor growths as Loudenne, Potensac, la Cardonne, Blaignan, les Ormes-Sorbet, la Tour-St-Bonnet, la Tour-de-By, and Patache d'Aux. In general the style is more simplistic than in the Haut-Médoc.

PROPORTION OF AOC AREA UNDER VINE REPRESENTED BY CRUS CLASSÉS

APPELLATION	TOTAL ACRES	TOTAL (HA)	TOTAL IN HA (ACRES)	CRUS CLASSÉS REPRESENTS
Médoc	3,240	(5,358)		No crus classés
Haut-Médoc	11,342	(4,590)	630 (255)	6% of AOC, 9% of crus classés
Listrac	1,641	(664)	-	No crus classés
Moulis	1,500	(607)	-	No crus classés
St-Estèphe	3,099	(1,254)	558 (226)	18% of AOC, 8% of crus classés
Pauillac	2,988	(1,209)	2,081 (842)	70% of AOC, 30% of crus classés
St-Julien	2,246	(909)	1,552 (628)	68% of AOC, 22% of crus classés
Margaux	3,464	(1,402)	2,110 (854)	61% of AOC, 31% of crus classés
TOTAL	39,520	(15,993)	6,931 (2,805)	8% of Médoc AOCs, 100% of crus classés

THE FIGHT FOR GRAVEL

The best soils for vine-growing also happen to be the most suitable for gravel quarrying. After WWII, in the absence of any legislation, gravel quarrying started in abandoned vineyards. Once the gravel was gone, the opportunity to reclaim the area as a vineyard was lost. There is plenty of gravel in the Gironde estuary itself, but it is more profitable to take it from an open pit. Quarrying companies will continue to plunder the Médoc's finite resources until the government agrees to protect them, but past administrations have shown little interest.

THE MÉDOC, see also p63

The Médoc, a narrow strip of land between the Gironde estuary and the Atlantic Ocean, stretches northwards from the city of Bordeaux to the Pointe de Grave. The climate is Bordeaux's mildest, moderated by both the estuary and the ocean.

CLASS STRUGGLE

According to the new bourgeois growths law of November 2000, the classification of wines of the Médoc is to be reassessed every 12 years. The first reassessment under this legislation took place in June 2003, and of the 490 châteaux that applied for consideration, only 245 were successful in gaining *cru bourgeois* status. The high failure rate reflects a seriousness often lacking in recent French classifications, and I believe that in most cases the judging panel got it right. However, some château owners objected to the outcome, none more so than Jean-François Mau, who was “outraged” by the exclusion of his Château Preuillac. Mau had purchased this property as recently as 1998, but the panel tasted wines only from the vintages of 1994 to 1999, which is why he was so critical of the process, stating “It is a huge injustice to be judged on the past and not present performance.” My initial reaction was that Mau was wrong, that for a classification to be taken seriously, the successful châteaux must display a firm track record, and that he was impatient, as he will surely do much better in the next reclassification. But on reflection, I think the wines tasted could have had a more recent emphasis. Part of the criteria established by the November 2000 law take

into account the reputation of any proposed bourgeois growth, and that has to be established over a period of time that—objectively—precludes the classification of Château Preuillac. But rather than tasting six vintages, the youngest of which is almost four years old, every single vintage since the last vintage tasted at the previous reclassification should be sampled. Nothing less will do, if this law is to stand the test of time. And, whereas it might not be right to classify according to the latest vintages only, the system could be made sufficiently flexible to award some form of commended classification for those châteaux that have made a profound and demonstrable effort to improve quality in recent years. This would not only be fair to new owners, and established ones who have renewed their efforts, but it would also perform a service for consumers, pointing them in the direction of Médoc wines that are improving with each vintage. This presumes, of course, that the Syndicat des Crus Bourgeois du Médoc is organized for the benefit of consumers, and not just its own glorification. The current 2003 classification consists of 9 *Crus Bourgeois Exceptionnels*, 87 *Crus Bourgeois Supérieurs*, and 151 *Crus Bourgeois* as follows:

**CRUS BOURGEOIS
EXCEPTIONNELS**

Château Chasse-Spleen (Moulis-en-Médoc, Moulis-en-Médoc)
Château Haut-Marbuzet (Saint-Estèphe, Saint-Estèphe)
Château Labegorce Zédé (Soussans, Margaux)
Château Ormes-de-Pez (Saint-Estèphe, Saint-Estèphe)
Château de Pez (Saint-Estèphe, Saint-Estèphe)
Château Phélan Ségur (Saint-Estèphe, Saint-Estèphe)
Château Potensac (Ordonnac, Médoc)
Château Poujeaux (Moulis-en-Médoc, Moulis-en-Médoc)
Château Siran (Labarde, Margaux)

**CRUS BOURGEOIS
SUPÉRIEURS**

Château d'Agassac (Ludon-Médoc, Haut-Médoc)
Château d'Angludet (Cantenac, Margaux)
Château Anthonic (Moulis-en-Médoc, Moulis-en-Médoc)

	Château Laffitte Laujac		

THE APPELLATIONS OF THE MÉDOC

HAUT-MÉDOC AOC

This AOC encompasses the Médoc's four finest communes—Margaux, St.-Julien, Pauillac, and St.-Estèphe—as well as the less well-known Lustrac and Moulis communes. Wines produced outside these six appellations but within the Haut-Médoc are not generally as thrilling, although infinitely superior to those of Médoc. Among these very reliable wines are a few great-value *crus classés* and many high-quality *crus bourgeois*, but although Haut-Médoc is a name to look out for on the label of château-bottled wines, it counts for little on a generic.

RED These dry wines have a generosity of fruit tempered by a firm structure, and are medium- to full-bodied.

🍷 Cabernet Sauvignon, Cabernet Franc, Merlot, Malbec, Petit Verdot, Carmenère

🕒 6–15 years (*crus classés*);
5–8 years (others)

LISTRAC-MÉDOC AOC

Significant funds have been invested in a number of high-performance châteaux in this commune, although its heavy clay soil does not have anything like as much potential as the gravel ridges found in the most famous Médoc appellations.

RED These dry, medium- to full-bodied wines have the fruit and finesse of St.-Julien combined with the firmness of St.-Estèphe. The most successful wines tend to have a large proportion of Merlot, which enjoys the Haut-Médoc's clay soil.

🍷 Cabernet Sauvignon, Cabernet Franc, Carmenère, Merlot, Malbec, Petit Verdot

🕒 5–10 years

MARGAUX AOC

The best Margaux are potentially the greatest wines in the whole of Bordeaux, but this is an appellation that covers five communes encompassing a great diversity of soil and some of its wines not unnaturally have a tendency to disappoint. Margaux benefits enormously from having a namesake château, which is unique in Bordeaux, and the fact that this property sets the most extraordinarily high standards has done no harm to the reputation and price of these wines generally. The phenomenal success of Château Margaux has, however, unfairly raised expectations of many lesser-quality châteaux in the area, but those critics who widely accuse proprietors of sacrificing quality for quantity could not be further from the truth. There are individual châteaux that overproduce and therefore fail to achieve their full potential, but excessive volume is not typically the problem with this appellation, since it has the

lowest yield per acre of the four famous Médoc AOCs.

RED Exquisite, dry, medium-bodied, and sometimes full-bodied, wines that can be deep-colored and fabulously rich, yet they have great finesse and a silky finish.

🍷 Cabernet Sauvignon, Cabernet Franc, Carmenère, Merlot, Malbec, Petit Verdot

🕒 5–20 years (*crus classés*);
5–10 years (others)

MÉDOC AOC

Technically, this appellation covers the entire Médoc, but most wines actually come from north of the Haut-Médoc in the area that was formerly called the Bas-Médoc. Its vineyards have undergone a rapid and extensive expansion since the mid-1970s.

RED The best of these dry, medium-bodied wines are similar in style to good Haut-Médocs, although the style is less sophisticated.

🍷 Cabernet Sauvignon, Cabernet Franc, Carmenère, Merlot, Malbec, Petit Verdot

🕒 4–8 years

MOULIS AOC OR MOULIS-EN-MÉDOC AOC

One of the two communal appellations located on the Atlantic side of the Médoc, Moulis-en-Médoc is smaller and potentially more interesting than its neighbor Lustrac. Like Lustrac, it has no *cru classé* châteaux, despite adjoining Margaux, the appellation that has the highest number of such properties in the Médoc.

RED These dry, medium-bodied, sometimes full-bodied, wines have more power than those of Margaux, but far less finesse.

🍷 Cabernet Sauvignon, Cabernet Franc, Carmenère, Merlot, Malbec, Petit Verdot

🕒 5–12 years

PAUILLAC AOC

This commune vies with Margaux as the most famous appellation, but is without doubt the most rock solid and consistent of Bordeaux AOCs, while its *premiers crus* of Latour, Lafite, and Mouton make it the most important.

RED Dark and virtually opaque, great Pauillac is a dry, powerfully constructed wine, typically redolent of blackcurrants and new oak. It might be unapproachable when young, but is always rich with fruit when mature. Although it does not have the grace of great Margaux, Pauillac

brings power and style together to produce wines of incomparable finesse for their size.

🍷 Cabernet Sauvignon, Cabernet Franc, Carmenère, Merlot, Malbec, Petit Verdot

🕒 9–25 years (*crus classés*);
5–12 years (others)

ST-ESTÈPHE AOC

The potential of St-Estèphe is exemplified by Cos d'Estournel, which is one of the best *deuxièmes crus* in the Médoc, but the strength of this appellation lies in its range of *crus bourgeois*. The area under vine is slightly less than that of Margaux, which has the largest area, but St-Estèphe has far more unclassified châteaux, and even the best wines are wonderfully cheap.

RED If Pauillac is the stallion of the four famous appellations, St-Estèphe must be the dray horse. These dry, full-bodied wines are big and strong, yet not without dignity. St-Estèphe demands affection and, with the rich fruit of a sunny year, deserves it. These most enjoyable, sweet-spice and cedary wines can have lots of honest, chunky fruit. Cos d'Estournel is the thoroughbred of the commune.

🍷 Cabernet Sauvignon, Cabernet Franc, Carmenère, Merlot, Malbec, Petit Verdot

🕒 8–25 years (*crus classés*);
5–12 years (others)

ST-JULIEN AOC

St-Julien is the smallest of the four famous appellations and the most intensively cultivated, with almost 50 percent of the commune under vine. There are no first growths, but there are as many as five seconds, and the standard and consistency of style is very high. This AOC overlaps part of the commune of Pauillac, and, historically, châteaux Latour and Pichon-Longueville-Comtesse-de-Lalande could as easily have become St-Julien AOC as Pauillac AOC.

RED These are dry, medium-bodied, sometimes full-bodied, wines that have purity of style, varietal flavor, and can be long-lived. Well balanced and elegant, these wines fall somewhere between the lushness that is typical of Margaux and the firmer structure of Pauillac.

🍷 Cabernet Sauvignon, Cabernet Franc, Carmenère, Merlot, Malbec, Petit Verdot

🕒 6–20 years (*crus classés*);
5–12 years (others)

THE WINE PRODUCERS OF THE MÉDOC

CHÂTEAU D'AGASSAC

AOC Haut-Médoc
Cru Bourgeois Supérieur
★☆☆

This is one of the best unclassified wines in the Haut-Médoc. The wine is matured in wood for 15 months, with one-third new oak.

RED Dark-colored, plummy wine, with a lot of soft, ripe fruit.

🍷 Cabernet Sauvignon 47%, Merlot 50%, Petit Verdot 3%

🕒 4–10 years

Second wine: *Château Pomiès-Agassac*

CHÂTEAU D'AURILHAC

AOC Haut-Médoc Cru Bourgeois
★

A relative newcomer that has quickly developed a cult following. The grapes are machine harvested, and the wine is matured in wood for 12 months, with 35 percent new oak.

RED A flashy, huge, dark, and dense wine with masses of fruit to balance the ripe tannins and extrovert oak.

🍷 Cabernet Sauvignon 56%, Merlot 38%, Cabernet Franc 3%, Petit Verdot 3%

🕒 5–15 years

Second wine: *Château La Fagotte*

CHÂTEAU BEAUMONT

AOC Haut-Médoc
Cru Bourgeois Supérieur
★☆☆

A large property that consistently produces wines of good quality. This wine is matured in wood for 12 months, with 30 percent new oak.

RED These are aromatically attractive wines with elegant fruit and supple tannin.

🍷 Cabernet Sauvignon 60%, Merlot 35%, Cabernet Franc 2%, Petit Verdot 3%

🕒 4–8 years

Second wine: *Château d'Arvigny*

Other wine: *Tours de Beaumont*

CHÂTEAU BEL-AIR LAGRAVE

AOC Moulis, Cru Bourgeois
★☆☆

This growth was classified *cru bourgeois* in 1932, but not included in the Syndicat's 1978 list. The wine is matured in wood for 18 to 20 months, with 70 percent new oak.

RED These vividly colored wines have a fine bouquet and firm tannic structure.

🍷 Cabernet Sauvignon 60%, Merlot 35%, Petit Verdot 5%

🕒 8–20 years

Second wine: *Château Peyvigneau*

CHÂTEAU BELGRAVE

AOC Haut-Médoc 5ème Cru Classé
★☆☆

Situated on a good gravel bank behind Château Lagrange, the wine, which is matured in wood for 24 months with up to 50 percent new oak, has improved consistently throughout the 1990s.

RED A good balance of blackcurrant fruit and ripe acidity, with much more supple tannin structure than used to be the case, and vanilla overtones of new oak.

🍷 Cabernet Sauvignon 55%, Merlot 32%, Cabernet Franc 12%, Petit Verdot 1%

🕒 8–16 years

Second wine: *Diane de Belgrave*

CHÂTEAU BEL-ORME- TRONQUOY-DE-LALANDE

AOC Haut-Médoc Cru Bourgeois
★

This property has a confusingly similar name to Château Tronquoy-Lalande, St.-Estèphe. Steady improvement since the mid-1990s has turned the once four-square character of these wines into a more classically structured style. This wine is matured in wood for 12 to 14 months, with 10 percent new oak.

RED These are firm, fruity, classically structured wines.

🍷 Cabernet Sauvignon 35%, Merlot 55%, Cabernet Franc 10%

🕒 7–15 years

CHÂTEAU BERNADOTTE

AOC Haut-Médoc
★☆☆

Consistently performing above its class, this château is situated on fine, gravelly ground that once had the right to the Pauillac appellation and formed part of a *cru classé*. The quality has improved since the property was purchased in 1996 by the redoubtable Madame Lencquesaing, who also owns Pichon-Longueville-Comtesse-de-Lalande. This wine is now matured in

wood for 12 months, with 30 percent new oak.

RED These wines are very stylish, with lush Cabernet fruit backed up by the creamy richness of new oak.

🍷 Cabernet Sauvignon 62%, Merlot 36%, Cabernet Franc and Petit Verdot 2%

🕒 6–12 years

Second wine: *Château Le Fournas Bernadotte*

CHÂTEAU BISTON-BRILLETTE

AOC Moulis
Cru Bourgeois Supérieur
★☆☆

This top-quality Moulis property ages its wines in wood for 12 to 15 months, with up to 35 percent new oak.

RED Wines that are very rich in color and fruit with a full, spicy-cassis character and a supple tannin structure.

🍷 Cabernet Sauvignon 55%, Merlot 40%, Malbec 2%, Petit Verdot 3%

🕒 5–15 years

Second wine: *Château Biston*

Other wine: *Château Graveyron*

CHÂTEAU BOUQUEYRAN

AOC Moulis
★☆☆

A big improvement in quality and value since this 32-acre (13-hectare) property was leased by Philippe Porcheron of nearby Château Rose Saint-Croix. Wines are matured in wood for 18 months with up to 50 percent new oak. La Fleur de Bouqueyran is a superior *cuvée*.

RED Lovely deep-colored, deep-flavored wines of not inconsiderable style and finesse.

🍷 Cabernet Sauvignon 41%, Merlot 57%, Petit Verdot 2%

🕒 5–10 years

Second wine: *Les Tourelles de Bouqueyran*

CHÂTEAU LE BOURDIEU VERTHEUIL

AOC Haut-Médoc Cru Bourgeois

Situated between Vertheuil and St.-Estèphe, this château was classified *cru bourgeois* in 1932, but not included in the Syndicat's 1978 list. This wine is matured in wood for 12 months, with 30 percent new oak.

RED Well-colored, full-bodied wines of robust character that are not lacking in charm.

🍷 Cabernet Sauvignon 60%, Merlot 25%, Cabernet Franc 10%, Petit Verdot 5%

🕒 7–15 years

Second wine: *Château Haut-Brignays*

Other wines: *Château La Croix des Sablons, Château Victoria-Picourneau*

CHÂTEAU BRANAS GRANDPOUJEAUX

AOC Moulis
★☆☆

These excellent and rapidly improving wines are aged in wood for 18 months, with 100 percent new oak.

RED Thanks to an increase in Merlot, this wine has plenty of accessible fruit, charming aromatic properties, and increasing finesse.

🍷 Cabernet Sauvignon 50%, Merlot 45%, Petit Verdot 5%

🕒 5–12 years

Second wine: *Clos des Demoiselles*

CHÂTEAU BRILLETTE

AOC Moulis
Cru Bourgeois Supérieur
★☆☆

This château's name reputedly derives from its glinting, pebbly soil. The wine is matured in wood for 12 months, with 40 percent new oak.

RED These are attractively colored wines of full but supple body, with delightful summer-fruit and vanilla aromas. Easily equivalent to *cru classé* quality.

🍷 Cabernet Sauvignon 40%, Merlot 48%, Cabernet Sauvignon 9%, Petit Verdot 3%

🕒 5–12 years

CHÂTEAU CAMBON-LA-PELOUSE

AOC Haut-Médoc
Cru Bourgeois Supérieur
★

Under the same ownership as Château Grand Barrail-Lamarzelle-

Figeac, this estate was classified *cru bourgeois* in 1932, but not included in the Syndicat's 1978 list. This wine is matured in wood for 12 months, with 45 percent new oak.

RED Soft, medium- to full-bodied wines with fresh and juicy flavors.

🍷 Cabernet Sauvignon 30%, Merlot 50%, Cabernet Franc 20%

🕒 3–8 years

Other wine: *Château Trois Moulins*

CHÂTEAU CAMENSAC

AOC Haut-Médoc 5^{ème} Cru Classé
★🍷

Situated behind Château Belgrave, this property was renovated in the mid-1960s by the new owners, the Former brothers, who are of Spanish origin, and later established Marquès de Cáceres in Rioja. Camensac began making wine equivalent to its classification in the late 1970s, and since 1995 has been performing beyond its class. It is matured in wood for 17 to 20 months, with 35–70 percent new oak.

RED Well-structured wine, with a medium weight of fruit and a certain amount of finesse.

🍷 Cabernet Sauvignon 60%, Merlot 40%

🕒 8–20 years

Second wine: *La Closerie de Camensac*

Other wine: *Le Batilly de Camensac*

CHÂTEAU CANTEMERLE

AOC Haut-Médoc 5^{ème} Cru Classé
★★🍷

In 1980, new stainless-steel fermentation vats replaced the old wooden ones that had been responsible for some stingy vintages. Also discarded were all the old casks, so the 1980 vintage was uniquely matured in 100 percent new oak. The wine is normally matured in wood for 18 to 20 months, with one-third new oak. It is currently performing above its classification.

RED Deliciously rich wines of fine color, creamy-oaky fruit, beautiful balance, and increasing finesse.

🍷 Cabernet Sauvignon 50%, Merlot 40%, Cabernet Franc 5%, Petit Verdot 5%

🕒 8–20 years

Second wine: *Villeneuve de Cantemerle*

CHÂTEAU CAP-LÉON-VEYRIN

AOC Lustrac
Cru Bourgeois Supérieur
★

Simply called Château Cap-Léon originally, the vines of this property are planted in two plots of clay-gravel soil over marl.

RED Deep-colored, full-bodied, richly flavored wines with high extract levels and a good balance of tannin.

🍷 Cabernet Sauvignon 35%, Merlot 60%, Petit Verdot 5%

🕒 5–12 years

CHÂTEAU LA CARDONNE

AOC Médoc
Cru Bourgeois Supérieur
★★🍷

This property was purchased by the Rothschilds of Lafite in 1973 and has since been expanded and renovated. This wine is matured in wood for 12 months, with 50 percent new oak.

RED These are attractive, medium-bodied wines with a good, grapey perfume and a silky texture, made in an elegant style.

🍷 Cabernet Sauvignon 45%, Merlot 50%, Cabernet Franc 5%

🕒 6–10 years

CHÂTEAU CARONNE-STE.-GEMME

AOC Haut-Médoc
Cru Bourgeois Supérieur
★★★🍷

This property is situated south of Château Lagrange—a superb island of vines on a gravel plateau. Matured in wood for 12 months, with 25 percent new oak.

RED Full-bodied wines rich in flavor with undertones of creamy oak, and a supple, tannin structure.

🍷 Cabernet Sauvignon 65%, Merlot 33%, Petit Verdot 2%

🕒 8–20 years

Second wine: *Château Labat*

CHÂTEAU CASTÉRA

AOC Médoc
Cru Bourgeois Supérieur
★🍷

The original château was reduced to ruins by the Black Prince in the 14th century. This wine is matured in wood for 12 months, with one-third new oak.

RED Soft-textured, medium-bodied wines best drunk relatively young.

🍷 Cabernet Sauvignon 45%, Merlot 45%, Cabernet Franc 7%, Petit Verdot 3%

🕒 4–8 years

Second wine: *Château Bourbon La Chapelle*

Other wines: *Château Moulin de Buscateau, La Chapelle du Castera*

CHÂTEAU CHANTELYS

AOC Médoc Cru Bourgeois
★★🍷

Owner Christine Courrian Braquissac brings a gentle touch to the naturally firm wines of this district.

RED Well-colored, medium-bodied, gently rich-flavored wines of some elegance.

🍷 Cabernet Sauvignon 55%, Merlot 40%, Petit Verdot 5%

🕒 3–8 years

Second wine: *Château Gautbier*

CHÂTEAU CHARMAIL

AOC Haut-Médoc
Cru Bourgeois Supérieur
★★🍷

The wines from this château have improved dramatically since its excellent 1996 vintage, and continue to perform well in recent blind tastings. This wine is matured in wood for 12 months, with 30 percent new oak.

RED Rich, spicy, and long, with well-rounded, ripe tannins.

🍷 Cabernet Sauvignon 30%, Cabernet Franc 20%, Merlot 48%, Petit Verdot 2%

🕒 3–7 years

Second wine: *Château Tours de Charmail*

CHÂTEAU CHASSE-SPLEEN

AOC Moulis
Cru Bourgeois Exceptionnel
★★★🍷

The proprietor of this quality-conscious property also owns the *cru classé* Château Haut-Bages-Libéral and the excellent unclassified growth of Château la Gurgue in Margaux. The wine is matured in wood for 18 months with 40 percent new oak, and is usually of *cru classé* quality. Certainly, it well deserves being recently classified as one of only nine *crus bourgeois exceptionnels*.

RED Full-bodied wines of great finesse, vivid color, with a luxuriant, creamy-rich flavor of cassis and chocolate with warm, spicy-vanilla undertones. Easily equivalent to *cru classé* quality.

🍷 Cabernet Sauvignon 70%, Merlot 25%, Petit Verdot 5%

🕒 8–20 years

Second wines: *L'Oratoire de Chasse-Spleen, L'Ermitage de Chasse-Spleen, L'Orangerie de Chasse-Spleen*

CHÂTEAU CISSAC

AOC Haut-Médoc
Cru Bourgeois Supérieur
★★🍷

Château Cissac is always good value, especially in hot years. It is fermented in wood and matured in cask with no *vin de presse*. This wine is matured in wood for 18 months, with up to 50 percent new oak.

RED These are deep-colored, well-

flavored, full-bodied wines made in a *vin de garde* style.

🍷 Cabernet Sauvignon 75%, Merlot 20%, Petit Verdot 5%

🕒 8–20 years

Second wine: *Château Les Reflets du Cissac*

Other wine: *Château Abiet*

CHÂTEAU CITRAN

AOC Haut-Médoc
Cru Bourgeois Supérieur

This substantial-sized property was once run by Château Coufran, then passed into Japanese ownership, under the Fujimoto company, which invested in improvements in the vineyard and winery. In 1997, it was taken back into French ownership, under the auspices of Groupe Taillan, and is run personally by Céline Villars. This wine is matured in wood for 12 to 14 months, with 40 percent new oak.

RED A once solid, if plodding, Médoc of robust character, the style has become more accessible since the mid-1990s, and since the new millennium has shown a true plumpness of fruit, with not inconsiderable finesse.

🍷 Cabernet Sauvignon 58%, Merlot 42%

🕒 5–15 years

Second wine: *Moulins de Citran*

CHÂTEAU LA CLARE

AOC Médoc Cru Bourgeois
★🍷

A well-established property that is receiving renewed attention of late. Approximately 30 percent of the wine is matured in wood for 23 months, with 5–10 percent new oak.

RED A rich, nicely colored, medium-bodied wine with some spicy finesse.

🍷 Cabernet Sauvignon 57%, Merlot 36%, Cabernet Franc 7%

🕒 4–8 years

Second wines: *Laveline, Gentilhomme*

CHÂTEAU CLARKE

AOC Lustrac
Cru Bourgeois Supérieur
★★🍷

This estate's vines were dug up and its château pulled down in 1950. All was abandoned until 1973, when it was purchased by Baron Edmund de Rothschild. He completely restored the vineyard and installed an ultramodern winery. Since the 1981 vintage, it has become one of the Médoc's fastest-rising stars. The wine is fermented in stainless steel

and matured in wood for 12 to 18 months, with up to 80 percent new oak.

RED Well-colored wines have a good measure of creamy-smoky oak, soft fruit, and increasing finesse.

🍷 Cabernet Sauvignon 40%, Merlot 60%

🕒 7–25 years

Second wine: *Château Granges des Domaines Edmond de Rothschild*

CHÂTEAU COUFRAN

AOC Haut-Médoc
Cru Bourgeois Supérieur
★●

These wines are matured in wood for 13 to 18 months, with 25 percent new oak.

RED Frank and fruity, this medium- to full-bodied wine has a chunky, chocolaty flavor, which is dominated by Merlot.

🍷 Cabernet Sauvignon 15%, Merlot 85%, Petit Verdot 5%

🕒 4–12 years

Second wine: *Domaine de la Rose-Maréchale*

CHÂTEAU DUTRUCH GRAND POUJEAUX

AOC Moulis
Cru Bourgeois Supérieur
★●

Dutruch is one of the best Grand Poujeaux satellite properties. It also makes two other wines from the specific-named plots “La Bernède” and “La Gravière.” Matured in wood for 12 months, with 25 percent new oak.

RED These are fine, full-bodied wines of excellent color, fruit, and finesse.

🍷 Cabernet Sauvignon 45%, Merlot 50%, Petit Verdot 5%

🕒 7–15 years

Other wines: *La Bernède-Grand-Poujeaux, La Gravière-Grand-Poujeaux*

CHÂTEAU FONRÉAUD

AOC Liscar
Cru Bourgeois Supérieur

This splendid château has south-facing vineyards situated on and around a knoll, Puy-de-Menjon. This wine is matured in wood for 12 to 18 months, with one-third new oak.

RED Attractive medium- to full-bodied wines of good fruit and some style.

🍷 Cabernet Sauvignon 55%, Merlot 42%, Petit Verdot 3%

🕒 6–12 years

Second wine: *La Tourelle de Château Fonréaud*

CHÂTEAU FOURCAS DUPRÉ

AOC Liscar
Cru Bourgeois Supérieur
★●

A charming house, with vineyards situated on gravel over iron-pan

soil, which can excel in hot years. This wine is matured in wood for 12 months, with one-third new oak.

RED The good color, bouquet, and tannic structure of these wines is rewarded with rich fruit in good years.

🍷 Cabernet Sauvignon 44%, Merlot 44%, Cabernet Franc 10%, Petit Verdot 2%

🕒 6–12 years

CHÂTEAU FOURCAS HOSTEN

AOC Liscar Cru Bourgeois
★●

Under multinational ownership (French, Danish, and American) since 1972, the winemaking facilities here have been renovated. The wines are matured in wood for 12 months, with one-third new oak.

RED Deeply colored and full-bodied wines, rich in fruit and supported by a firm tannic structure, although the style is becoming more supple, and can even be quite fat in ripe years like 1982.

🍷 Cabernet Sauvignon 45%, Merlot 45%, Cabernet Franc 10%

🕒 8–20 years

Second wine: *Les Cèdres d'Hosten*

CHÂTEAU LES GRANDS CHÊNES

AOC Médoc
Cru Bourgeois Supérieur
★●

The quality here has been excellent since the mid-1990s, but has taken another step up since 1999, when the château was purchased by Bernard Magrez, one of the joint owners of Château Pape Clément. Magrez runs this property personally. The wine is matured in wood for 12 to 15 months, with one-third new oak (except for its “Prestige Cuvée,” which utilizes 100 percent new oak).

RED Lush and charming, with opulent fruit and fine acidity balance.

🍷 Cabernet Sauvignon 65%, Merlot 30%, Cabernet Franc 5%

🕒 6–15 years

Other wine: ✓ *Château Les Grands Chênes Prestige Cuvée*

CHÂTEAU GRESSIER GRAND POUJEAUX

AOC Moulis
Cru Bourgeois Supérieur
★●

This château was classified *cru bourgeois* in 1932, but not in 1978. It has in recent years produced successful wines that compare well with good *crus classés*. This wine is matured in wood for 24 months, with one-third new oak.

RED Full-bodied wines with plenty of fruit and flavor. Well worth laying down.

🍷 Cabernet Sauvignon 50%, Merlot 30%, Cabernet Franc

10%, Petit Verdot 10%

🕒 6–12 years

CHÂTEAU GREYSAC

AOC Médoc Cru Bourgeois Supérieur
★●

Since it was purchased by the late Baron de Gunzbourg in 1973, the facilities of this château have undergone extensive modernization. The quality of the wine is excellent and its future promising. This wine is matured in wood for 12 months, with 25 percent new oak.

RED Stylish, medium-bodied wines with silky-textured, ripe-fruit flavors.

🍷 Cabernet Sauvignon 45%, Merlot 45%, Cabernet Franc 5%, Petit Verdot 5%

🕒 6–10 years

CHÂTEAU HANTEILLAN

AOC Haut-Médoc
Cru Bourgeois Supérieur
★●

Under the enthusiastic direction of Catherine Blasco, this large property produces a consistently fine wine, and her achievements have been consolidated by the new winemaking facilities. This wine is matured in wood for 12 months, with 30 percent new oak.

RED The wine has a fine color, spicy bouquet with underlying vanilla-oak tones, ripe fruit, and supple tannins.

🍷 Cabernet Sauvignon 50%, Merlot 41%, Cabernet Franc 5%, Petit Verdot 4%

🕒 6–12 years

Second wine: *Château Larrivaux Hanteillan*

CHÂTEAU LACOMBE-NOILLAC

AOC Haut-Médoc
★●

Jean-Michel Lapalu's property boasts some of the most northerly vines in the Médoc. The wine is matured in wood for 6 months, with 15 percent new oak.

RED Elegant, medium-bodied wines of surprising style and finesse for the location.

🍷 Cabernet Sauvignon 58%, Cabernet Franc 6%, Merlot 32%, Petit Verdot 4%

🕒 4–10 years

Second wine: *Château Les Traverses*

Other wine: *Château Les Traverses La Franque*

CHÂTEAU LA LAGUNE

AOC Haut-Médoc 3ème Cru Classé
★●●

Owned by the Ducellier family of Champagne Ayala, the immaculate vineyard of this fine château is the first *cru classé* encountered after leaving Bordeaux, and is situated on sand and gravel soil. The château itself was completely renovated in 2003. This wine is matured in wood

for 16 to 18 months, with 100 percent new oak.

RED These wines are deep-colored with complex cassis and stone-fruit flavors intermingled with rich, creamy-vanilla oak nuances. They are full-bodied but supple.

🍷 Cabernet Sauvignon 60%, Merlot 20%, Cabernet Franc 10%, Petit Verdot 10%

🕒 5–30 years

Second wine: *Moulin de Lagune*

CHÂTEAU DE LAMARQUE

AOC Haut-Médoc
Cru Bourgeois Supérieur
★●

This large and constantly improving property is owned and run by Pierre-Gilles and Marie-Hélène Gromand-Brunet d'Évry. The vineyard was systematically replanted in the 1960s and is currently at its optimum age for both quality and volume. While it will gradually decline in yield, the quality should continue to improve. The wine is matured in wood for 12 to 15 months, with one-third new oak.

RED This wine has the supple style of a modern Médoc, with plenty of real fruit flavor, and an enticingly perfumed bouquet.

🍷 Cabernet Sauvignon 46%, Merlot 25%, Cabernet Franc 24%, Petit Verdot 5%

🕒 5–12 years

Second wine: *D de Lamarque*

Other wines: *Réserve du Marquis d'Évry, Noblesse Oblige (saigné rosé)*

CHÂTEAU LAMOÛTHE-CISSAC

AOC Haut-Médoc
Cru Bourgeois
★●

An up-and-coming wine from one of Bordeaux's oldest properties, Lamoûthe-Cissac is matured in wood for 12 to 14 months, with 20 percent new oak. It has recently started to outperform Cissac.

RED Classically proportioned, Cabernet-dominated wines of excellent potential longevity.

🍷 Cabernet Sauvignon 70%, Merlot 26%, Petit Verdot 4%

🕒 4–16 years

CHÂTEAU LANESSAN

AOC Haut-Médoc Cru Bourgeois Supérieur
★●●

Supposedly missed out from the 1855 classification because the owner forgot to submit samples, or could not be bothered, this château was later classified *cru bourgeois* in 1932, but not included in the Syndicat's 1978 list. The grapes are machine harvested, and the wines are matured in wood for 15 months, with no claim of any new oak.

RED Big, intensely flavored wines of deep, often opaque, color and a quality that closely approaches that

of a *cru classé*, requiring a similar minimum aging before its fruit shows through.

🍷 Cabernet Sauvignon 75%, Merlot 20%, Cabernet Franc 1%, Petit Verdot 4%

🕒 7–20 years

Second wine: *Domaine de Ste-Gemme*

CHÂTEAU LAROSE-TRINTAUDON

AOC Haut-Médoc Cru Bourgeois Supérieur
★☆☆

This is the largest estate in the Médoc and was under the same ownership as Château Camensac until 1986, during which time vast sums were spent on renovation. The standard of these wines, which are matured in wood for 12 months with 25 percent new oak, is as high as it has ever been.

RED Medium-bodied, and sometimes full-bodied, wines with an elegantly rich flavor of juicy summer fruits, vanilla, and truffles, backed up by supple tannins. Larose-Perganson is more of a *tête de cuvée* than a second wine. Representing just 15 percent of the total production, this wine is exclusively from the oldest vines and the grapes are all handpicked, in contrast to Larose-Trintaudon, which is machine-picked.

🍷 Cabernet Sauvignon 65%, Merlot 30%, Cabernet Franc 5%

🕒 6–15 years

Second wine: *Larose Saint-Laurent*

Other wines: ✓ *Château Larose-Perganson, Les Hauts de Trintaudon*

CHÂTEAU LESTAGE-DARQUIER

AOC Moulis
★☆☆

This is the least encountered of the many Poujeaux châteaux (formerly sold as Château Lestage-Darquier-Grand-Poujeaux), but well worth digging out. This wine is matured in wood for 9 to 12 months, with 100 percent year-old oak.

RED Densely colored wines, rich in bouquet and fruit, with a powerful structure.

🍷 Cabernet Sauvignon 50%, Merlot 45%, Cabernet Franc 2%, Petit Verdot 2%

🕒 8–20 years

CHÂTEAU LIVERSAN

AOC Haut-Médoc
Cru Bourgeois Supérieur
★☆☆

The estate of Château Livisan was purchased in 1984 by Prince Guy de Polignac, when it was inexorably linked with Champagne Pommery, but was first leased and then sold to the owners of Patache d'Aux. The vineyard is on fine, sandy gravel over a limestone subsoil, just under 2 miles (3 kilometers) from Lafite and Mouton-Rothschild. The wine is

fermented in stainless steel and matured in wood for 12 months, with 25 percent new oak.

RED Rich and flavorful wines, of full body and some style. They are gaining in class with each vintage.

🍷 Cabernet Sauvignon 49%, Merlot 38%, Cabernet Franc 10%, Petit Verdot 3%

🕒 7–20 years

Second wine: *Les Charmes des Livisan*

CHÂTEAU LOUDENNE

AOC Médoc
Cru Bourgeois Supérieur
★☆☆

This pink-washed, Chartreuse-style château, with its lawns running down to the Gironde, once belonged to W. and A. Gilbey, who ran it in a style that harkened back to the last days of the British Empire. It was sold to Jean-Paul Lafgragette in 1999. The wine is matured in wood for 15 to 18 months, with 25 percent new oak. Loudenne also produces a dry white wine that is attractive when drunk one to two years after the harvest.

RED Full-bodied wines with a spicy-blackcurrant bouquet, sometimes silky and hinting of violets, with underlying vanilla oak, a big mouthful of rich and ripe fruit, excellent extract, and great length.

🍷 Cabernet Sauvignon 45%, Merlot 45%, Cabernet Franc 7%, Malbec 2%, Petit Verdot 1%

🕒 5–15 years

Second wines: *Château Lestagne, Pavillon de Loudenne*

CHÂTEAU MALESCASSE

AOC Haut-Médoc Cru Bourgeois Supérieur
★☆☆

Entirely replanted between 1970 and 1992, Château Malescasse was purchased midway through this process by the owner of Pontet-Canet and Lafon-Rochet, only to be sold to Alcatel Alsthon once completed. The wine is matured in wood for 16 months, with 30 percent new oak.

RED Firm, dependable, good-value

claret, getting better with each vintage.

🍷 Cabernet Sauvignon 55%, Merlot 35%, Cabernet Franc 10%

🕒 4–8 years

Second wine: *Le Closerie de Malescasse*

CHÂTEAU DE MALLERET

AOC Haut-Médoc
Cru Bourgeois Supérieur
★☆☆

Château de Malleret is a vast estate, which incorporates a stud farm with two training racetracks and stables for both hunting and racing. The vineyard boasts 148 acres (60 hectares). This wine is matured in wood for 12 to 16 months, with up to 50 percent new oak.

RED Delightful wines of good bouquet, medium body, and juicy-rich fruit. Improving.

🍷 Cabernet Sauvignon 65%, Merlot 30%, Cabernet Franc 3%, Petit Verdot 2%

🕒 5–12 years

CHÂTEAU MAUCAILLOU

AOC Moulis
Cru Bourgeois Supérieur
★☆☆

Château Maucailou is consistently one of the best-value wines produced in Bordeaux. This wine is matured in wood for 18 months, with up to 80 percent new oak.

RED Deep-colored, full-bodied wine with masses of velvety-textured fruit, beautiful cassis and vanilla flavors, and supple tannins.

🍷 Cabernet Sauvignon 55%, Merlot 36%, Cabernet Franc 2%, Petit Verdot 7%

🕒 6–15 years

Second wine: *Château Cap de Haut-Maucailou*

Other wine: *Château Duplessis-Fabre*

CHÂTEAU MAUCAMPS

AOC Haut-Médoc
Cru Bourgeois Supérieur
★☆☆

Situated between Macau itself and the *cru classé* Cantemerle to the south, this château makes superb use of its 37 acres (15 hectares) of fine, gravelly vineyards. This wine is matured in wood for 16 months, with up to 40 percent new oak.

RED Always a deep-colored, full-bodied wine with plenty of fruit flavor supported by supple tannins.

🍷 Cabernet Sauvignon 50%, Merlot 40%, Petit Verdot 10%

🕒 5–12 years

Second wine: *Clos de May*

CHÂTEAU LE MEYNIEU AOC

Haut-Médoc Cru Bourgeois
★☆☆

This property is under the same ownership as Château Lavillotte, which is situated in St.-Estèphe. The

deep-colored wine is not filtered before it is bottled.

RED This is a deep, dark, brooding wine of dense bouquet and solid fruit which promises much for the future.

🍷 Cabernet Sauvignon 62%, Merlot 30%, Cabernet Franc 8%

🕒 7–15 years

CHÂTEAU MOULIN-À-VENT

AOC Moulis
Cru Bourgeois Supérieur

One-third of the property of Château Moulin-à-Vent overlaps the commune of Lustrac, but its appellation is still Moulis. This wine is matured in wood for 20 months, with 25 percent new oak.

RED Medium-bodied wines with an elegant bouquet and a full flavor.

🍷 Cabernet Sauvignon 60%, Merlot 35%, Petit Verdot 5%

🕒 7–15 years

Second wine: *Moulin-de-St.-Vincent*

CHÂTEAU NOAILLAC

AOC Médoc Cru Bourgeois
★☆☆

Under the same ownership as Château La Tour de By. The wine is matured in wood for up to 12 months, with 15 percent new oak.

RED Deliciously fruity style, underpinned by a discreet use of oak.

🍷 Cabernet Sauvignon 55%, Merlot 40%, Petit Verdot 5%

🕒 3–8 years

Second wines: *Moulin de Noillac, La Rose Noillac, Les Palombes de Noillac*

CHÂTEAU LES ORMES-SORBET

AOC Médoc
Cru Bourgeois Supérieur
★☆☆

Owned by the Boivert family since 1764. The wine today is matured in wood for 18 to 20 months, with one-third new oak.

RED Once reputed for its characterful wines of substantial body, dense fruit, and positive flavor, this château has made an increasingly opulent style, with fine aromatics, since the early 1990s, fully justifying its 2003 *cru bourgeois supérieur* classification.

🍷 Cabernet Sauvignon 65%, Merlot 30%, Petit Verdot 2%, Carmenère 1%

🕒 4–15 years

Second wine: *Château de Conques*

CHÂTEAU PALOUMEY

AOC Haut-Médoc
Cru Bourgeois Supérieur
★☆☆

An old property that enjoyed fame in the 19th century, but was left rundown and forgotten until the current owner, Martine Cazeneuve, replanted it in 1990. The wine is

matured in wood for 12 to 15 months, with one-third new oak.

RED Deliciously rich and ripe, fruit-driven style that is underpinned by a nicely restrained use of oak, with exceptional finesse for such young vines. Can only get better!

🍷 Cabernet Sauvignon 55%, Merlot 40%, Cabernet Franc 5%

🕒 4–8 years

Second wines: *Les Ailes de Paloumey, Château Haut-Carmaillet*

**CHÂTEAU
PATACHE-D'AUX**
AOC Médoc
Cru Bourgeois Supérieur
★🍷

This old property once belonged to the Aux family, descendants of the counts of Armagnac, but was purchased by a syndicate headed by Claude Lapalu in 1964. Although Patache-d'Aux is always reliable, it has performed particularly well since its stunning 1990 vintage. The wine is matured in wood for 12 months, with 25 percent new oak.

RED Stylish, highly perfumed, medium-bodied wine with very accessible fruit.

🍷 Cabernet Sauvignon 70%, Merlot 20%, Cabernet Franc 7%, Petit Verdot 3%

🕒 4–8 years

Second wine: *Le Relais de Patache-d'Aux*

Other wines: *Les Chevaux de Patache-d'Aux*

CHÂTEAU PEYRABON
AOC Haut-Médoc Cru Bourgeois
★🍷

Virtually unknown until 1998, when it was purchased by Millesima (formerly Les Vins des Grands Vignobles), Château Peyrabon is matured in wood for 18 months, with one-third new oak.

RED Sturdy style, but not lacking in fruit, and usually very good value.

🍷 Cabernet Sauvignon 57%, Merlot 37%, Cabernet Franc 5%, Petit Verdot 1%

🕒 5–10 years

Second wines: *Lapiey, Château Le Fleur Peyrabon*

Other wines: *Château Pierbone, Domaine du Roman*

CHÂTEAU PLAGNAC
AOC Médoc

Owned by Domaines Cordier since 1972, this property has produced consistently good-value red Bordeaux since the end of that decade. The wine is matured in wood for 12 months.

RED Full-bodied and full-flavored, with some breed; lots of up-front Merlot fruit, and a smooth finish.

🍷 Cabernet Sauvignon 65%, Merlot 35%,

🕒 4–10 years

Second wine: *Château Haut de Plagnac*

CHÂTEAU PONTEY
AOC Médoc Cru Bourgeois
★★🍷

Owned by the Bordeaux *négociant* Quancard family, this château occupies an excellent location on a gravel plateau. The wines are matured in wood for 12 months, with one-third new oak.

RED These wines have always been cleverly constructed and brimming with lush, oaky fruit, but they are even more lush than before.

🍷 Cabernet Sauvignon 45%, Merlot 55%

🕒 3–12 years

Second wine: *Château Vieux Prezot*

Other wine: *Château Pontey Caussan*

CHÂTEAU POTENSAC
AOC Médoc
Cru Bourgeois Exceptionnel
★★🍷

This property is under the same ownership as Château Léoville-Las-Cases in St-Julien, and its wines often aspire to *cru classé* quality, fully justifying the *cru bourgeois exceptionnel* classification in 2003. The wine is fermented in stainless steel, then matured in wood for 18 months, with 20 percent new oak.

RED Classy, full-bodied wines of a lovely, brick-red color, with lots of fruit and underlying chocolate and spice flavors.

🍷 Cabernet Sauvignon 60%, Merlot 25%, Cabernet Franc 15%

🕒 6–15 years

Second wine: *Château Lassalle*

Other wines: *Château Gallais-Belleuve, Goudy la Cardonne*

CHÂTEAUX POUJEAUX
AOC Moulis
Cru Bourgeois Exceptionnel
★★🍷

After Chasse-Spleen, this château produces the best wine in Moulis and is easily the equivalent of a good *cru classé*. Hence, it was no surprise that it was classified as one of only nine *crus bourgeois exceptionnels* in 2003.

RED Full-bodied and deep-colored wine with a very expansive bouquet and creamy-rich, spicy fruit.

🍷 Cabernet Sauvignon 50%, Merlot 40%, Cabernet Franc 5%, Petit Verdot 2%

🕒 10–25 years

Second wine: *Château La Salle-de-Poujeaux*

CHÂTEAU PREUILLAC
AOC Médoc
★🍷

Purchased in 1998 by Yvon Mau, who has sold his eponymously named *négociant* business to Freixenet in a bid to build up a portfolio of estate properties. Mau devoted a lot of money and attention to renovating this

property, reducing yields, and updating the vinification facilities, which is why he was so upset not to have been included in the 2003 *cru bourgeois* classification (see p72), although there is no doubt that it will succeed at the next reclassification in 2015. Certainly, if the current rate of improvement can be maintained, this château will do very well. The grapes are all handpicked, then sorted on tables, while the wines are fermented in stainless steel (2001 being the first such vintage), then matured in wood for 18 months, with 20 percent new oak.

RED The creamy cassis and chocolaty fruit in these wines is a testament to Mau's efforts. Preuillac used to be rather rustic, but now shows more finesse with each and every vintage.

🍷 Cabernet Sauvignon 54%, Merlot 44%, Cabernet Franc 2%

🕒 4–12 years

**CHÂTEAU
RAMAGE-LA-BATISSE**
AOC Haut-Médoc
Cru Bourgeois Supérieur
★🍷

This property has excelled itself since the late 1980s, making wines of remarkable quality–price ratio which are matured in wood for 14 months, with 50 percent new oak.

RED Rich, well-flavored, oaky wines that are immediately attractive in light years and ridiculously inexpensive *vins de garde* in the best vintages. Not unlike a poor man's Lynch-Bages (which, in turn, I have called a poor man's Latour!).

🍷 Cabernet Sauvignon 70%, Merlot 23%, Cabernet Franc 5%, Petit Verdot 2%

🕒 7–15 years

Second wine: *Le Terrey*

Other wine: *Château Dutellier*

CHÂTEAU ROLLAN DE BY
AOC Médoc
Cru Bourgeois Supérieur
★★

A new cult wine on the Bordeaux scene, it is matured in wood for 18 months, with 60 percent new oak. The wine has a string of blind

tasting victories. The Château Haut-Condessas is a super-selection, with 100 percent new oak.

RED Lots of up-front fruit, but long and classy, with plenty of finesse. Not big and, surprisingly, not overoaked.

🍷 Cabernet Sauvignon 20%, Merlot 70%, Petit Verdot 10%

🕒 4–12 years

Other wine: *Château Fleur de By*

CHÂTEAU ST-BONNET
AOC Médoc
★

Some 130 of this important estate's 210 acres are planted with vines (53 of 85 hectares). The wine is matured in wood for 18 months, with 25 percent new oak.

RED Full-flavored wines of promising quality and immediate aromatic appeal.

🍷 Merlot 50%, Cabernet Sauvignon 28%, Cabernet Franc 22%

🕒 5–10 years

CHÂTEAU ST-PAUL
AOC Haut-Médoc
Cru Bourgeois
★🍷

Up-and-coming vineyard pieced together from parcels previously owned by two St-Estèphe châteaux. This wine is matured in wood for 18 months, with 25 percent new oak.

RED Plump, fruit-driven reds of good class and finesse, with a long finish.

🍷 Cabernet Sauvignon 60%, Merlot 35%, Cabernet Franc 5%

🕒 4–12 years

CHÂTEAU SÉNÉJAC
AOC Médoc
Cru Bourgeois Supérieur
★🍷

This property changed hands in 1999. The wine is matured in wood for 18 months, with 25 percent new oak (up to 100 percent for its prestige *cuvée* Karolus).

RED A firm, full-flavored wine of excellent longevity, Sénéjac is not, however, for the faint-hearted, especially in its rather stern youthful years. The Karolus is bigger, richer, and more concentrated.

🍷 Cabernet Sauvignon 60%, Merlot 25%, Cabernet Franc 14%, Petit Verdot 1%

🕒 5–15 years

Second wine: *Artique de Sénac*

Other wine: *✓ Karolus*

CHÂTEAU SIGOGNAC
AOC Médoc
🍷

Owned by Colette Bonny, this wine is matured in wood for 12 months, with 20 percent new oak.

RED Consistently good-value, lunchtime claret of some elegance.

🍷 Merlot 50%, Cabernet Sauvignon 28%, Cabernet Franc 22%

🕒 3–8 years

Second wine: *Château La Croix du Chevalier*

CHÂTEAU SOCIANDO-MALLET

AOC Haut-Médoc Cru Bourgeois

★ ★ ①

This property has been making a name for itself since 1970, when Jean Gautreau raised standards to near *cru classé* quality. The quality of Sociando-Mallet has continued to increase throughout the 1990s, when between 80 and 100 percent new oak became the norm. Its owners did not bother to submit wines for the 2003 reclassification, since it already achieves a higher price than a number of *cru classé* wines, but it is undoubtedly at least *cru bourgeois exceptionnel* in quality, if not in name.

RED These are powerfully built wines that are rich in color and extract. Often totally dominated by vanilla oak in their youth, they are backed up with plenty of concentrated cassis fruit.

🍷 Cabernet Sauvignon 55%, Merlot 42%, Cabernet Franc 2%, Petit Verdot 1%

🕒 10–25 years

Second wine: *La Demoiselle de Sociando-Mallet*

CHÂTEAU SOUDARS

AOC Médoc
Cru Bourgeois Supérieur

★ ①

Soudars was formed by the combination of several parcels of rock-strewn land that had become

overgrown with brambles until Eric Miaillhe took over the property in 1973 and spent several years clearing it. The wine is fermented in stainless steel, and matured in wood for 12 to 14 months, with up to 40 percent new oak.

RED Excellent, well-colored wines of good structure and accessible fruit.

🍷 Cabernet Sauvignon 44%, Merlot 54%, Cabernet Franc 1%

🕒 5–10 years

Second wine: *Château Marquis de Cadourne*

CHÂTEAU LE TEMPLE

AOC Médoc Cru Bourgeois

★ ①

Starting to live up to its reputation in the early 1900s, when it was known as “Lafite of the Bas-Médoc,” this wine is matured in wood for 12 months, with 22 percent new oak.

RED Increasingly lush and fruit-dominant, without losing its classic, tannin structure.

🍷 Cabernet Sauvignon 60%, Merlot 35%, Petit Verdot 5%

🕒 7–15 years

Second wine: *Château Bairac*

Other wine: *Château La Croix des Sablons*

CHÂTEAU LA TOUR DE BY

AOC Médoc Cru Bourgeois Supérieur

★ ①

The tower of Tour de By was once a lighthouse. The wine is of very good quality; it is matured in wood for 16 months, with up to 30 percent new oak.

RED These deeply colored, full-

bodied, richly flavored wines have good spicy fruit, backed up by a firm tannic structure.

🍷 Cabernet Sauvignon 60%, Merlot 36%, Cabernet Franc 4%

🕒 6–12 years

Second wine: *Château La Roque-de-By*

Other wines: *Château Moulin de Roque, Château Moulin de La Roque*

CHÂTEAU LA TOUR-CARNET

AOC Haut-Médoc
4ème Cru Classé

★

This charming, 13th-century miniature moated castle has a well-kept vineyard. Its wines used to be lackluster, but have been transformed by the new owner, Bernard Magez of Pape-Clément, who purchased the property in 1999. The wine is now matured in wood for 12 to 18 months, with 60 percent new oak.

RED Much riper, more opulent fruit, with some lush new oak in a supporting role, this wine has the richness of flavor it used to lack, with improvements noticeable from one year to the next.

🍷 Cabernet Sauvignon 53%, Merlot 33%, Cabernet Franc 10%, Petit Verdot 4%

🕒 5–15 years

Second wine: *Douves de Carnet*

CHÂTEAU TOUR HAUT-CAUSSAN

AOC Médoc
Cru Bourgeois Supérieur

★ ★

An up-and-coming property owned by Philippe Courrian, who also

makes wine in Corbières. The grapes are all hand-harvested, and the wine is matured in wood for 12 months, with one-third new oak.

RED Rich, well-colored wines with a great concentration of fruit and nicely integrated, creamy oak.

🍷 Cabernet Sauvignon 50%, Merlot 50%

🕒 4–10 years

Second wine: *Château Landotte*

CHÂTEAU LA TOUR SAINT-BONNET

AOC Médoc

★ ①

Situated on fine, gravelly ridges, this property was known as Château la Tour Saint-Bonnet-Cazenave in the 19th century. This wine is matured in wood for 18 months, with 50 percent new oak.

RED Firm, full-flavored, well-colored wines of consistent quality.

🍷 Cabernet Sauvignon 45%, Merlot 45%, Malbec 5%, Petit Verdot 5%

🕒 7–15 years

Second wine: *Château La Fuie-Saint-Bonnet*

CHÂTEAU VERDIGNAN

AOC Haut-Médoc
Cru Bourgeois Supérieur

★ ①

Since 1972, the property of the Miaillhe family, who continue to improve the quality. The wine is fermented in stainless steel and matured in wood for 12 to 14 months, with 30 percent new oak.

RED Medium-bodied, fruity wines, made in a soft and silky style.

🍷 Cabernet Sauvignon 50%, Merlot 45%, Cabernet Franc 5%

🕒 5–10 years

Second wine: *Château Plantey-de-la-Croix*

CHÂTEAU VILLEGORGE

AOC Haut-Médoc
Cru Bourgeois Supérieur

★ ①

This château was classified *cru bourgeois* in 1932. It was purchased by Lucien Lurton in 1973, but he then resigned from the Syndicat and, therefore, the château was not included in its 1978 list, although it is superior to a few that were. He was succeeded by his daughter, Marie-Louise, the present incumbent, who has continued improving the quality, achieving *supérieur* status in the 2003 reclassification. The wine is matured in wood for 10 to 24 months, with up to 30 percent new oak.

RED Full-bodied wines, with a lovely color, increasingly lush and opulent fruit, understated, creamy oak, and an increasing spicy finesse.

🍷 Cabernet Sauvignon 40%, Merlot 60%

🕒 6–12 years

Second wine: *Reflet de Villegeorge*

VINEYARDS THRIVING IN THE MEDOC

In Ancient Roman times this area was considered too marshy for cultivation, yet today it is one of the most prized areas under vine in the world, envied by winemakers worldwide.

SAINT-ESTÈPHE

Although St.-Estèphe can be considered the least sexy of the Médoc's famous four appellations, it has an abundance of high-quality bourgeois growths, which make it indubitably the "bargain basement" of Bordeaux wines.

WITH ONLY FIVE *CRUS CLASSÉS* covering a mere 6 percent of the commune, St.-Estèphe is a rich source of undervalued clarets, where the prices paid by wine drinkers are unlikely to be outbid by wine investors. Enthusiasts rather than speculators will benefit from the fact that no fewer than 4 of the Médoc's 9 *crus bourgeois exceptionnels* are to be found in this commune.

CHÂTEAU COS D'ESTOURNEL

St.-Estèphe might lack *crus classés*, but it is not lacking in class. If it had only one *cru classé*—the stunning, stylish Château Cos d'Estournel—St.-Estèphe would still be famous. The reputation of this château soared after Bruno Prats took over control in 1971. Essentially, this success can be put down to his maximizing the true potential of Cos d'Estournel's exceptional *terroir*, a superb, south-facing ridge of gravel with perfect

HARVEST, CHÂTEAU COS D'ESTOURNEL

The bizarre eastern façade of this specially built winery overlooks the vineyards. The château was owned by perfectionist Bruno Prats before it was sold to the Bernard Taillan group in October 1998.

ST-ESTÈPHE PROFILE

Appellation area Covers parts of the commune of St.-Estèphe only	Surface area of <i>crus classés</i> 558 acres (226 ha), 6% of commune, 16% of AOC
Size of commune 9,284 acres (3,757 ha)	Special comments Approximately 12.5 acres (5 ha) of vineyards within St.-Estèphe are classified as AOC Pauillac
AOC area under vine 3,099 acres (1,254 ha), 33% of commune	

ST-ESTÈPHE CRU CLASSÉ STATISTICS

<i>Crus classés</i> in AOC St.-Estèphe 5 châteaux (by number: 8% of <i>crus classés</i> in the Médoc) with 558 acres (226 ha) of vineyards (by area: 8% of <i>crus classés</i> in the Médoc and 18% of this AOC)	<i>crus classés</i> in the Médoc) with 119 acres (48 ha) of vineyards (by area: 11% of 3 ^{ème} <i>crus classés</i> in the Médoc)
1^{er} <i>crus classés</i> None	4^{ème} <i>crus classés</i> 1 château (by number: 10% of 4 ^{ème} <i>crus classés</i> in the Médoc) with 111 acres (45 ha) of vineyards (by area: 10% of 4 ^{ème} <i>crus classés</i> in the Médoc)
2^{ème} <i>crus classés</i> 2 châteaux (by number: 14% of 2 ^{ème} <i>crus classés</i> in the Médoc) with 299 acres (121 ha) of vineyards (by area: 15% of 2 ^{ème} <i>crus classés</i> in the Médoc)	5^{ème} <i>crus classés</i> 1 château (by number: 6% of 5 ^{ème} <i>crus classés</i> in the Médoc) with 30 acres (12 ha) of vineyards (by area: 2% of 5 ^{ème} <i>crus classés</i> in the Médoc)
3^{ème} <i>crus classés</i> 1 château (by number: 7% of 3 ^{ème}	

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
St.-Estèphe is the most northerly of the four classic communes of the Médoc. It is situated 11 miles (18 kilometers) south of Lesparre, bordering the Gironde.

CLIMATE
As for the Médoc (see p.00).

ASPECT
St.-Estèphe has well-drained, well-sited, softly sloping vineyards. The southeast-facing crest of gravel overlooks Château Lafite-Rothschild in Pauillac and is relatively steep for the Médoc.

SOIL
The topsoil is gravelly and more fertile than in communes farther south, with clay subsoil exposed in parts, consisting of clay beds, stony-clay, and limestone over iron-pan.

VITICULTURE AND VINIFICATION
Only the red wines have the right to the appellation in this commune. With increasing emphasis placed on the Merlot grape, which can now account for up to 50 percent of the vines cultivated in some châteaux, reduced use of *vin de presse*, and improved vinification techniques, these wines are becoming far more accessible in less sunny years. During the vinification, all grapes must be destalked, and duration of skin contact averages three weeks. Maturation in cask currently varies between 15 and 24 months.

GRAPE VARIETIES
Primary varieties: Cabernet Sauvignon, Cabernet Franc, Merlot
Secondary varieties: Carmenère, Malbec, Petit Verdot

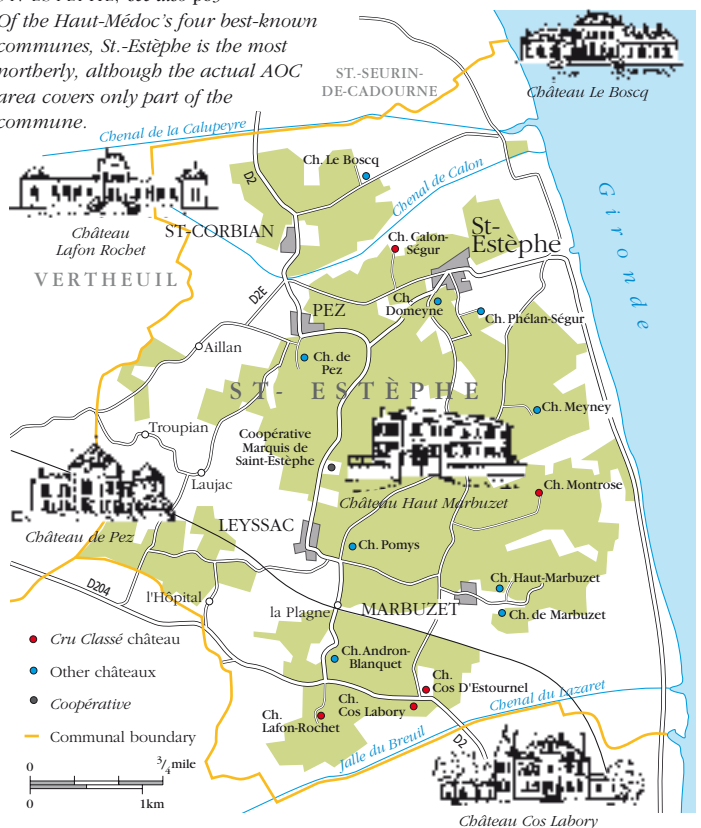

drainage. Those vineyards on heavier soil with less gravel and more clay tend to produce more rustic wines.

MODERN ST-ESTÈPHE

Most wines from St.-Estèphe have always been well structured, with natural longevity, but they now have more lushness of fruit, which allows the wines to be accessible when relatively young. It was once essential to buy only the greatest vintages and wait 20 years or more before drinking them. The increasing use of the Merlot grape as well as Cabernet Sauvignon and Cabernet Franc, and a tendency to favor vinification techniques that extract color and fruit in preference to the harsher tannins, provide richer, fruitier, and eminently drinkable wines in most vintages.

ST-ESTÈPHE, see also p63

Of the Haut-Médoc's four best-known communes, St.-Estèphe is the most northerly, although the actual AOC area covers only part of the commune.

THE WINE PRODUCERS OF SAINT-ESTÈPHE

CHÂTEAU ANDRON-BLANQUET

Cru Bourgeois
★●

Under the same ownership as Château Cos Labory, the vineyards of this property are situated above the gravel crest of *cru classé* châteaux that overlook Château Lafite-Rothschild in Pauillac. This wine is matured in wood for 12 months, with 25 percent new oak.

RED An exceptionally well-made wine that consistently rises above its *petit château* status. Fermented and matured in cask, it has good fruit and a distinctive style.

🍷 Cabernet Sauvignon 40%,
Merlot 35%, Cabernet Franc 25%

🕒 4–10 years

Second wine: *Château St.-Roch*

Other wine: *Château Blanquet*

CHÂTEAU BEAU-SITE

Cru Bourgeois Supérieur
★●

This property should not be confused with Château Beau-Site Haut-Vignoble, a lesser St.-Estèphe. This wine is matured in wood for 16 to 18 months, with 50 percent new oak.

RED A stylish, medium-bodied, sometimes full-bodied, wine that often has an elegant finish reminiscent of violets.

🍷 Cabernet Sauvignon 70%,
Merlot 30%

🕒 3–10 years

CHÂTEAU LE BOSCOQ

Cru Bourgeois Supérieur
★★●

This property has always produced good wine, but quality increased dramatically in the 1980s. It was taken over by Dourthe-Kressman in 1995.

RED Superbly aromatic, almost exotic, full-bodied wine that is elegant and rich with the flavor of summer fruits, and is nicely backed up with new oak.

🍷 Cabernet Sauvignon 42%,
Merlot 51%, Petit Verdot 7%

🕒 5–12 years

Second wine: *Héritage de Le Boscoq*

CHÂTEAU CALON-SÉGUR

3ème Cru Classé
★★●

From the Gallo-Roman origins of this château grew the community of St.-Estèphe. The first wine estate in the commune, it used to boast "*Premier Cru de St.-Estèphe*" on its label until other producers objected. This wine is matured in wood for 18 months, with 50 percent new oak.

RED Full, fruity, well-structured wine that has a creamy, rich flavor. It is of consistently good quality and improves well in bottle.

🍷 Cabernet Sauvignon 50%,
Merlot 35%, Cabernet Franc 10%, Petit Verdot 5%

🕒 3–20 years

Second wine: *Marquis de Ségur*

CHÂTEAU CAPBERN GASQUETON

Cru Bourgeois
★●

This property is under the same ownership as Château Calon-Ségur. The vineyards are found north and south of the village of St.-Estèphe. This wine is matured in wood for 18 months, with 30 percent new oak.

RED Medium-weight, ripe, and fruity wine of consistent quality; it is mellowed by 24 months in wood.

🍷 Cabernet Sauvignon 50%,
Merlot 35%, Cabernet Franc 15%

🕒 4–12 years

CHÂTEAU CHAMBERT-MARBUZET

Cru Bourgeois Supérieur
★★●

Technically faultless, hand-harvested wine produced in limited quantities from the sister château of Haut-Marbuzet. Many would rate it easily equivalent to a *cru classé*. This wine is matured in wood for 18 months, with 50 percent new oak.

RED Aromatically attractive, medium-bodied, sometimes full-bodied, wine. It is rich, ripe, and fruity, with plenty of caramel-oak and sufficient tannin to age well.

🍷 Cabernet Sauvignon 70%,
Merlot 30%

🕒 3–10 years

Second wine: *Château Grand-Village Capbern*

CHÂTEAU COS D'ESTOURNEL

2ème Cru Classé
★★★●

This was one of the very first superseconds to emerge and this was the achievement of one man, Bruno Prats, although he would claim it to be teamwork. In 1998 Prats was forced by French tax laws to sell out to Groupe Taillan, who in 2001 sold it on to Michel Reybier, a Geneva-based food manufacturer. Cos d'Estournel has no château as such, merely a bizarre façade to the winery with huge, elaborately carved oak doors that once adorned the palace of the Sultan of Zanzibar. Bruno Prats' son Jean-Guillaume manages the property for Reybier, and the wine is made in the same

careful way that his father introduced. This involves some of the wine being fermented in stainless steel, but all of it is matured in cask for 18 to 24 months, with 100 percent new oak for big years, and up to 70 percent for lighter vintages.

RED A rich, flavorful, and attractive wine of full body, great class, and distinction; without doubt the finest wine in St.-Estèphe. It is uniquely generous for the appellation and capable of amazing longevity, even in the poorest years. This is a complex wine with silky fruit and great finesse.

🍷 Cabernet Sauvignon 60%,
Merlot 40%

🕒 8–20 years

Second wine: *Les Pagodes de Cos*

CHÂTEAU COS LABORY

5ème Cru Classé
★

Until the late 19th century, this property formed part of Château Cos d'Estournel. During the 1920s, it was purchased by distant cousins of Madame Audoy, the current owner. The wine is matured in wood for 15 to 18 months, with one-third new oak.

RED These wines used to be merely light and elegant with a certain degree of finesse, even when at their best. However, recent vintages have displayed a very welcome change to a distinctly fuller, fruitier, and fatter style.

🍷 Cabernet Sauvignon 55%,
Merlot 35%, Cabernet Franc 5%, Petit Verdot 5%

🕒 5–15 years

Second wine: *Château Charme Labory*

CHÂTEAU LE CROCK

Cru Bourgeois Exceptionnel
★★●

This property is under the same ownership as Château Léoville-Poyferré of St.-Julien, and was promoted to *exceptionnel* status in the 2003 reclassification. This hand-harvested wine is matured in wood for 18 months, with 20 percent new oak.

RED These dark-colored, substantial wines have surged in quality since 1995 under the personal guidance of Michel Rolland.

🍷 Cabernet Sauvignon 58%,
Merlot 24%, Cabernet Franc 12%, Petit Verdot 6%

🕒 6–15 years

Second wine: *Château Croix Saint-Estèphe*

Other wine: *Château Fatin*

CHÂTEAU DOMEYNE

Cru Bourgeois
★●

This property was not classified *cru bourgeois* in 1932, nor was it listed by the Syndicat in 1978, but it certainly should have been. This wine is matured in wood for 18 months, with 40 percent new oak.

RED These are typically deep-colored, rich-flavored wines that have an excellent marriage of fruit and oak. They are smooth and well-rounded wines that can be drunk while fairly young.

🍷 Cabernet Sauvignon 60%,
Merlot 35%, Cabernet Franc 5%

🕒 3–8 years

CHÂTEAU FAGET

★●

Château Faget was classified *cru bourgeois* in 1932, but was not included in the Syndicat's 1978 list. However, this *coopérative*-produced wine is now superior to some that were included. This hand-harvested wine is matured in wood for 12 months, with one-third new oak.

RED This is a well-made wine that gives a solid mouthful of flavor, and ages well.

🍷 Cabernet Sauvignon 60%,
Merlot 30%, Cabernet Franc 10%

🕒 6–10 years

CHÂTEAU HAUT-MARBUZET

Cru Bourgeois Exceptionnel
★★●

This is one of several properties belonging to Henri Duboscq. These wines receive 18 months in 100 percent new oak, which is extremely rare even for *cru classé* châteaux.

RED These full-bodied, deep-colored wines are packed with juicy fruit, backed up by supple tannin. They are marked by a generous buttered-toast and creamy-vanilla character.

🍷 Merlot 50%, Cabernet Sauvignon 40%, Cabernet Franc 10%

🕒 4–12 years

Second wine: *Tour de Marbuzet*

CHÂTEAU LA HAYE

Cru Bourgeois Supérieur
★●

New equipment, 25 percent new oak casks every year, and a fair proportion of old vines combine to produce some exciting vintages at this property.

RED Always limpid, this medium-bodied, sometimes full-bodied, wine is rich in color and flavour, well balanced, and lengthy, with vanilla-oak evident on the finish.

🍷 Cabernet Sauvignon 50%,
Merlot 42%, Petit Verdot 8%

🕒 5–8 years

Second wine: *Fief de la Haye*

CHÂTEAU LAFON-ROCHET

4ème Cru Classé

★🍷

When Guy Tisseron purchased this vineyard, which is situated on the borders of Pauillac, in 1959, he embarked on a project to increase the proportion of Cabernet Sauvignon grapes used in the wine. However, this proved to be a mistake for Lafon-Rochet's *terroir* and has been rectified in recent years. The wine produced here is matured in wood for 18 months, with up to 50 percent new oak.

RED More fruit and finesse from the mid-1990s onward.

🍷 Cabernet Sauvignon 55%,
Merlot 40%, Cabernet Franc 5%

🕒 5–12 years

Second wine: ✓ *Numero 2*

CHÂTEAU LAVILLOTTE

★🍷

This star-performing *petit château* gives good value. This wine is matured in wood for 16 months, with up to 40 percent new oak.

RED These are dark-colored wines with a deep and distinctive bouquet. Smoky, full-bodied, intense, and complex.

🍷 Cabernet Sauvignon 72%,
Merlot 25%, Petit Verdot 3%

🕒 5–12 years

Second wine: *Château Aillan*

CHÂTEAU DE MARBUZET

Cru Bourgeois

★

Under the same ownership as Cos d'Estournel, Marbuzet used to include the wines rejected from the *grand vin* of that "super-second." However, all the wine from this château has been produced exclusively from its own 42-acre (17-hectare) vineyard since 1994. The wine is matured in wood for 12 to 14 months in used barrels.

RED These elegant, medium-bodied, and sometimes full-bodied, wines are well balanced and have good fruit and a supple finish.

🍷 Cabernet Sauvignon 40%,
Merlot 60%

🕒 4–10 years

Second wine: *Château Charme Labory*

LE MARQUIS DE SAINT-ESTÈPHE

★🍷

This wine is produced by the conscientious Cave Coopérative Marquis de Saint-Estèphe, who mature it in wood for 12 months, with a whopping 70 percent new oak.

RED A consistently well-made,

good-value, usually medium-bodied (although sometimes full-bodied) wine, with increasingly more noticeable oak.

🍷 Cabernet Sauvignon 65%,
Merlot 25%, Cabernet Franc 3%, Malbec 3%, Petit Verdot 4%

🕒 3–6 years

CHÂTEAU MEYNEY

Cru Bourgeois Supérieur

★🍷

This château is consistent in managing to produce fine wines in virtually every vintage.

RED These wines used to be big, beefy, chunky, and chewy, and required at least 10 years in bottle. They have changed, and for the better, acquiring a silky-textured finesse and aging gracefully without so many years in bottle.

🍷 Cabernet Sauvignon 67%,
Merlot 25%, Cabernet Franc 5%, Petit Verdot 3%

🕒 5–25 years

Second wine: *Prieuré de Meyney*

CHÂTEAU MONTROSE

2ème Cru Classé

★🍷

This "youngest" of the *cru classé* vineyards, this property grew out of an inconsequential plot of vines retained by a Mr. Dumoulin, the former owner of Calon-Ségur, when he sold that château in 1824. These vines were on a 12–15 acre (5–6 hectare) plot of land called Escargeon, which for some reason he changed to Montrose the very next year. There are rumors about the origin of this new name, but no one really knows the true story.

What we do know, however, is that by 1855, Montrose had grown to 237 acres (96 hectares), as Dumoulin bought and exchanged parcels of land from and with his neighbors. Despite the newfound importance of Montrose, Calon-Ségur was still considered by locals to be its superior, thus there was much surprise when Montrose was classified as a *deuxième cru classé*, above *troisième cru* Calon-Ségur. The wines are matured in wood for 19 months, with 50 percent new oak.

RED The inhibiting factor at Montrose had always been its "stemmy" tannins. A vintage of exceptional richness and fatness was required to overcome the aggressive character produced by these tannins. The excellent 1994 gave me hope that this château has started to harvest the grapes when they are tannin-ripe (see p66) and was applying more specific maceration techniques. Happily, my hopes were not dashed, and Montrose's performance since the mid-1990s has clearly demonstrated that this wine is a true *deuxième cru classé*.

🍷 Cabernet Sauvignon 65%,
Merlot 25%,

Cabernet Franc 10%

🕒 8–25 years

Second wine: ✓ *La Dame de Montrose*

CHÂTEAU LES ORMES DE PEZ

Cru Bourgeois Exceptionnel

★★🍷

Owner Jean-Michel Cazes of Château Lynch-Bages in Pauillac installed new stainless-steel vats in 1981 and has raised the quality of these wines from good to sensational. Matured in wood for at least 12 to 15 months, with 50 percent new oak, this relatively cheap wine is easily equivalent to a good *cru classé*.

RED Dark and fruity, yet capable of aging with a herbal complexity.

🍷 Cabernet Sauvignon 65%,
Merlot 25%, Cabernet Franc 10%

🕒 3–15 years

CHÂTEAU DE PEZ

Cru Bourgeois Exceptionnel

★★🍷

This property was purchased by Louis Roederer of Champagne in 1995. The wines are fermented in wooden vats, then matured in small casks for 18 months, with 40 percent new oak. These wines are easily the equivalent of *cru classé* quality.

RED Consistently one of the best *bourgeois* growths in the entire Médoc. A medium-bodied wine, it has a rich fruit flavor and good tannic structure, and can mature into a sublime, cedary wine.

🍷 Cabernet Sauvignon 45%,
Merlot 44%, Cabernet Franc 8%, Petit Verdot 3%

🕒 6–20 years

CHÂTEAU PHÉLAN-SÉGUR

Cru Bourgeois Exceptionnel

★★🍷

This château was purchased in 1984 by its present owners, the Gardinier family, one year after selling Champagnes Pommery and Lanson. In retrospect, it is quite clear to see that there have been two steps up in quality; the first in 1988 and the second in 1999, with obvious consolidation achieved during the

intervening decade, with serious investment going into the infrastructure of vineyard and winery. Now one of the best-value wines in the Médoc, this wine is matured in wood for 16 months, with 50 percent new oak.

RED Increasingly stylish wines of good color and a certain plumpness of fruit, without loss of true St.-Estèphe structure. Unlike most other success stories in the commune, this has not been achieved by increasing Merlot; the reverse, in fact.

🍷 Cabernet Sauvignon 60%,
Merlot 35%, Cabernet Franc 5%

🕒 5–10 years

Second wine: *Franck Phélan*

Other wine: *Croix Bonis*

CHÂTEAU POMYS

Cru Bourgeois

★🍷

This property was classified *cru bourgeois* in 1932, but was not included in the 1978 list, although it is superior to a few that were. This hand-harvested wine is matured in wood for 15 months, with 30 percent new oak.

RED Substantial wines with good fruit and tannin balance.

🍷 Cabernet Sauvignon 50%,
Merlot 35%, Cabernet Franc 15%

🕒 3–10 years

Other wine: *Château Saint-Louis*

CHÂTEAU TOUR DE PEZ

Cru Bourgeois Exceptionnel

★★🍷

The huge investments made since this château changed hands in 1989 paid off in 2003 when it became one of only nine *crus bourgeois exceptionnels*. This wine is matured in wood for 16 to 18 months, with 50 percent new oak.

RED Consistently elegant, medium-bodied wine with good, plump, fleshy fruit.

🍷 Cabernet Sauvignon 45%,
Cabernet Franc 10%, Merlot 40%, Petit Verdot 5%

🕒 3–7 years

Second wine: *T de Tour de Pez*

Other wines: *Château les Hauts de Pez, Château L'Hereteyre Château Haut-Coutelin*

CHÂTEAU TRONQUOY-LALANDE

Cru Bourgeois Supérieur

★🍷

Owned by Arlette Castéja-Texier with active input from the Dourthe-Kressman winemaking team.

RED This wine can be dark and tannic, but as from the 1996 vintage it has displayed more fruit and finesse.

🍷 Cabernet Sauvignon 45%,
Merlot 45%, Petit Verdot 10%

🕒 3–7 years

PAUILLAC

If any Bordeaux appellation can be described as “big, black, and beautiful,” it is Pauillac—the commune most famous for the three premiers crus of Latour, Lafite, and Mouton. The wine is allowed to evolve very slowly, achieving an astonishing degree of finesse for its weight.

PAUILLAC IS, HOWEVER, an appellation of quite surprising contrasts. Although it boasts three-quarters of the Médoc’s premiers crus, it also contains two-thirds of the region’s *cinquièmes crus*. Very little lies between these two extremes, and *crus bourgeois* are, therefore, the exception rather than the rule. Cabernet Sauvignon is at its most majestic in Pauillac, and while the much-vaunted blackcurrant character of this grape may be elusive in many clarets, it is certainly very much in evidence in Pauillac. In this wine, the cassis character is always beautifully balanced by a tannic structure.

PAUILLAC CRU CLASSÉ STATISTICS

Crus classés in AOC Pauillac

18 châteaux (by number: 30% of *crus classés* in the Médoc) with 2,080 acres (842 ha) of vineyards (by area: 30% of *crus classés* in the Médoc and 70% of this AOC)

1er crus classés

3 châteaux (by number: 75% of *1er crus classés* in the Médoc) with 568 acres (230 ha) of vineyards (by area: 75% of *1er crus classés* in the Médoc)

2ème crus classés

2 châteaux (by number: 14% of *2ème crus classés* in the Médoc) with 222 acres (90 ha) of vineyards (by area: 11% of *2ème crus classés* in the Médoc)

3ème crus classés

None

4ème crus classés

1 château (by number: 10% of *4ème crus classés* in the Médoc) with 111 acres (45 ha) of vineyards (by area: 10% of *4ème crus classés* in the Médoc)

5ème crus classés

12 châteaux (by number: 67% of *5ème crus classés* in the Médoc) with 1,179 acres (477 ha) of vineyards (by area: 63% of *5ème crus classés* in the Médoc)

Note: Only Margaux has more *cru classé* châteaux than Pauillac, and no communal AOC has a greater concentration of *cru classé* vines.

CHÂTEAU LATOUR

Due to radical changes in vinification techniques introduced in the 1960s, Château Latour became the most consistent of Bordeaux’s great premiers crus classés. It produces the archetypal Pauillac wine, which is full of finesse.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
 Pauillac is sandwiched between St.-Estèphe to the north and St.-Julien to the south.

CLIMATE
 As for the Médoc (see p.00)

ASPECT
 Pauillac consists of two large, low-lying plateaux, one to the northwest of the town of Pauillac, the other to the southwest. Exposure is excellent, and both drain down gentle slopes, eastward to the Gironde, westward to the forest, or north and south to canals and streams.

SOIL
 Pauillac's two plateaux are massive gravel beds, reaching a greater depth than any found elsewhere in the Médoc. The water

drains away before the iron-pan subsoil is reached. St.-Sauveur consists of shallow sand over a stony subsoil to the west, and gravel over iron-pan (or more gravel) in the center and south.

VITICULTURE AND VINIFICATION
 Only red wines have the right to the Pauillac appellation. Some *vin de presse* is traditionally used by most châteaux. Skin contact duration averages between 3 and 4 weeks, and maturation in cask currently varies between 18 and 24 months.

GRAPE VARIETIES
Primary varieties: Cabernet Sauvignon, Cabernet Franc, Merlot
Secondary varieties: Carmenère, Petit Verdot, Malbec

CAVEAU PRIVÉ, CHÂTEAU PICHON-LONGUEVILLE-COMTESSE-DE-LALANDE
 One wall of the château's private cellars encapsulates a winemaking history, particularly of Bordeaux, stretching back nearly 200 years.

PAUILLAC PROFILE

Appellation area
 Covers parts of the commune of Pauillac, plus 84 acres (34 ha) in St.-Sauveur, 40 acres (16 ha) in St.-Julien, 12.4 acres (5 ha) in St.-Estèphe, and 2.5 acres (1 ha) in Cissac

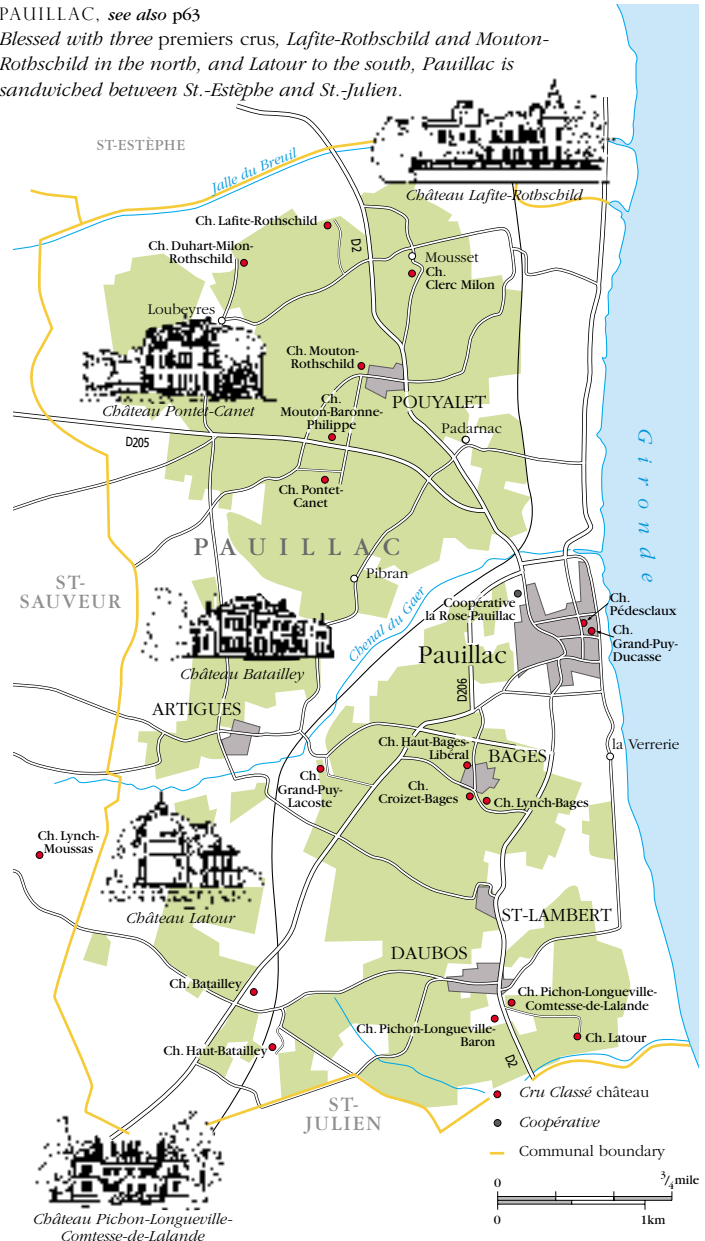

Size of commune
 6,274 acres (2,539 ha)

AOC area under vine
 2,988 acres (1,209 ha), 48% of commune

Surface area of crus classés
 2,080 acres (842 ha), 3% of commune, 70% of AOC

PAUILLAC, see also p63

Blessed with three premiers crus, Lafite-Rothschild and Mouton-Rothschild in the north, and Latour to the south, Pauillac is sandwiched between St.-Estèphe and St.-Julien.

PAUILLAC
 The town of Pauillac, the largest of the Médoc, sits on the west bank of the Gironde. Despite its size and position, it retains a quiet, rural character.

THE WINE PRODUCERS OF PAUILLAC

CHÂTEAU D'ARMAILHAC

5ème Cru Classé
★★

Baron Philippe de Rothschild purchased Château Mouton d'Armailhac in 1933. In 1956 he renamed it Château Mouton Baron-Philippe. In 1975 it was changed to Mouton-Baronne-Philippe in honor of the baron's late wife. In 1991 it reverted to d'Armailhac, but without the Mouton tag because the baron believed the wine to be in danger of assuming second wine status due to the overwhelming prestige of Mouton-Rothschild. This property borders that of Mouton, and one of Baron Philippe's reasons for acquiring it was to provide an easier, more impressive access to the famous *premier cru*. The wines, which are matured in wood for 16 months, with 25 percent new oak, are produced with the same care and consideration. Despite this attention, I have criticized the "austere, light, and attenuated style" of Château d'Armailhac in the past, which "proves that even money cannot buy *terroir*," but within limits improvements can always be made, and by tweaking harvesting and vinification techniques, owners Baron Philippe de Rothschild S.A. produced the greatest wine this property has ever known in 2000. That was an extraordinary vintage, but the style shift and giant stride in quality continued in 2001, 2002, and 2003.

RED Since 2000, much riper tannins, and a more supple structure has given this wine more velvety fruit than previous vintages had established. The start of a new era.

🍷 Cabernet Sauvignon 52%, Merlot 26%, Cabernet Franc 20%, Petit Verdot 2%

🕒 6–15 years

CHÂTEAU BATAILLEY

5ème Cru Classé
★★★

This is a château that responds well to sunny years and produces underrated and undervalued wine.

The 1985 was possibly the best bargain in Bordeaux, and the 1986 is probably even better. This wine is matured in wood for 18 months, with 60 percent new oak.

RED This wine has sometimes been rustic and too assertive in the past, but now shows its class with fine, succulent fruit supported by a ripe tannic structure and a complex creamy-oak aftertaste.

🍷 Cabernet Sauvignon 70%, Merlot 25%, Cabernet Franc 3%, Petit Verdot 2%

🕒 10–25 years

Second wine: *Château Haut-Bages Monpelou*

CHÂTEAU CLERC MILON

5ème Cru Classé
★

This property was purchased by Baron Philippe de Rothschild in 1970. After more than a decade of investment and quite a few disappointing vintages along the way, it came good in 1981, achieved sensational quality in 1982, and now consistently performs well above its classification. This wine, which is matured in wood for 18 months with one-third new oak, is one worth watching.

RED A deep-colored, medium-bodied, sometimes full-bodied, wine with cassis-cum-spicy-oak aromas and rich berry flavors well balanced by ripe acidity.

🍷 Cabernet Sauvignon 70%, Merlot 20%, Cabernet Franc 10%

🕒 10–20 years

CHÂTEAU COLOMBIER-MONPELOU

Cru Bourgeois Supérieur
★★

In the third edition of *Bordeaux and its Wines*, published in 1874, this property was described as a *quatrième cru*. Of course, it was never classified as such, but its recent *cru bourgeois supérieur* achievement is about right.

This wine is matured in wood for 16 months, with 40 percent new oak.

RED Rich, spicy, fruit with fine Cabernet characteristics, backed up by good, ripe tannic structure and vanilla-oaky undertones.

🍷 Cabernet Sauvignon 55%, Merlot 35%, Cabernet Franc 5%, Petit Verdot 5%

🕒 5–12 years

Other wines: *Château Grand Canyon*, *Château Pey la Rose*, *Château Coubersant*, *Château de Puy la Rose*

CHÂTEAU CORDEILLAN-BAGES

Jean-Michel Cazes of Château Lynch-Bages was the driving force behind the group of growers from the Médoc who renovated Château de Cordeillan, turning it into an extensive complex comprising a hotel, restaurant, and wine school. With only a very small production from just five acres of vineyard this hand-harvested wine that is produced by the Lynch-Bages winemaking team, is matured in wood for up to 15 months, with a massive 100 percent new oak.

RED As dark and as dense as might be expected from a wine produced with the Lynch-Bages influence, with smoky oak, tobacco plant, and violet aromas weaving their way through the chocolatey Cabernet fruit.

🍷 Cabernet Sauvignon 70%, Merlot 20%, Cabernet Franc 10%

🕒 3–8 years

CHÂTEAU CROIZET-BAGES

5ème Cru Classé
★★

Under the same ownership as Château Rauzan-Gassies of Margaux, and situated on the Bages plateau, Croizet-Bages is a classic example of a "château with no château." Its wine is matured in wood for 18 months and although not unattractive, it lacks class and rarely excites. Improvements started slowly in the mid-1990s, then stepped up a gear at the turn of the millennium.

RED Not one of the most deeply colored Pauillacs, this medium-bodied wine has always been easy-drinking, but has been more stylish since 1999, gaining both in gravitas and finesse.

🍷 Cabernet Sauvignon 37%, Cabernet Franc 30%, Merlot 30%, Malbec and Petit Verdot 3%

🕒 6–12 years

Second wine: *Enclos de Moncabon*

CHÂTEAU DUHART- MILON-ROTHSCHILD

4ème Cru Classé
★★★

Another "château with no château," Duhart-Milon was purchased by the Lafite branch of the Rothschild family in 1962. Its wines prior to this date were almost entirely Petit Verdot, and so only in abnormally hot years did it excel with this late-ripening grape, which is traditionally cultivated for its acidity. Interestingly, in the near-tropical heat of 1947, Duhart-Milon managed to produce a wine that many considered to be the best of the vintage. The Rothschilds expanded these vineyards bordering Lafite and replanted them with the correct combination of varieties to suit the *terroir*. In 1994 Charles Chevalier arrived, and since 1996 he has moved these wines up a gear. The wine is matured for at least 18 months in wood, with 50 percent new oak.

RED These wines are elegantly perfumed, deliciously rich in

creamy-oaky fruit, and have exceptional balance and finesse.

🍷 Cabernet Sauvignon 80%, Merlot 20%

🕒 8–16 years

Second wine: *Moulin de Dubart*

CHÂTEAU LA FLEUR-MILON

Cru Bourgeois

A "château with no château," La Fleur-Milon produces a wine accumulated from various parcels of vines bordering such prestigious properties as Lafite, Mouton, and Duhart-Milon. This wine is matured in wood for 18 months, with one-third new oak.

RED A consistently firm, solid, and decent kind of wine, which somehow fails to live up to the favored origins of its vines.

🍷 Cabernet Sauvignon 45%, Cabernet Franc 20%, Merlot 35%

🕒 4–10 years

Other wines: *Château Chanteclerc-Milon, Château Buisson-Milon*

CHÂTEAU FONBADET

Cru Bourgeois Supérieur
★●

This growth was classified *cru bourgeois* in 1932, but was not included in the Syndicat's 1978 list, although it is superior to a few that were, and achieved due recognition in the 2003 reclassification. Many of the vines are in excess of 80 years old, with an average age of 50 years for the entire 50-acre (20-hectare) vineyard. This hand-harvested wine is matured in wood for 18 months, with 30 percent new oak. Great-value Pauillac.

RED This typical Pauillac has a deep, almost opaque color, an intense cassis, cigar-box, and cedarwood bouquet, a concentrated spicy, fruit flavor with creamy-oak undertones, and a long finish.

🍷 Cabernet Sauvignon 60%, Merlot 20%, Cabernet Franc 15%, Malbec and Petit Verdot 5%

🕒 6–15 years

Other wines: *Château Haut-Pauillac, Château Padarnac, Château Montgrand-Milon, Château Tour du Roc-Milon, Pauillac*

CHÂTEAU GRAND-PUY-DUCASSE

5ème Cru Classé
★★●

Under the same owners as Château Rayne-Vigneau in Sauternes, this property produces an undervalued wine that comes from various plots scattered across half the commune. One of the best value, improving *cru classé* wines available, this wine is matured in wood for 18 to 24 months, with up to 40 percent

new oak.

RED Well-balanced, relatively early-drinking, medium-bodied, sometimes full-bodied, wine of classic Pauillac cassis character and more suppleness than is usual for this commune.

🍷 Cabernet Sauvignon 61%, Merlot 39%

🕒 5–10 years

Second wine: *Prélude à Grand-Puy Ducasse*

Other wine: *Château Artigues-Arnaud*

CHÂTEAU GRAND-PUY-LACOSTE

5ème Cru Classé
★★●

Under the same ownership as Château Ducru-Beaucaillou, Grand-Puy-Lacoste is going from strength to strength under the skillful guidance of François-Xavier Borie. The wine is matured in wood for 18 months, with 50 percent new oak.

RED Deep-colored with complex cassis, cigar-box spice, and vanilla bouquet, with lots of fruit, length, and finesse.

🍷 Cabernet Sauvignon 75%, Merlot 25%

🕒 10–20 years

Second wine: *Lacoste-Borie*

CHÂTEAU HAUT-BAGES-LIBÉRAL

5ème Cru Classé
★

Under the same ownership as the bourgeois growth of Château Chasse-Spleen in Moulis and the excellent unclassified Château la Gurgue in Margaux, this dynamic property is currently producing sensational wines. They are matured for 16 months in wood, with up to 40 percent new oak.

RED Dark, full-bodied wines with masses of concentrated spicy-cassis fruit, great tannic structure, and ripe, vanilla oak. In a word—complete.

🍷 Cabernet Sauvignon 80%, Merlot 17%, Petit Verdot 3%

🕒 8–20 years

Second wine: *Chapelle de Bages*

CHÂTEAU HAUT-BATAILLEY

5ème Cru Classé
★●

This property is under the same ownership as châteaux Grand-Puy-Lacoste and, in St-Julien, Ducru-Beaucaillou. When the Borie family purchased Château Batailley in 1942, this part of the vineyard was given to one son, while the bulk of the property, including the château itself, was given to the other. The wine is matured in wood for 20 months, with one-third new oak.

RED Haut-Batailley is well-colored and medium-bodied and shows more elegance and finesse than Batailley, although it can lack the latter's fullness of fruit.

🍷 Cabernet Sauvignon 65%, Merlot 25%, Cabernet Franc 10%

🕒 7–15 years

Second wine: *Château La Tour l'Aspic*

Other wine: *Château La Couronne*

CHÂTEAU LAFITE-ROTHSCHILD

1er Cru Classé
★★★

Since 1994 this famous château, the vineyard of which includes a small plot in St-Estèphe, has been run along traditional lines and with fastidious care by Charles Chevalier for Baron Eric of the French branch of the Rothschilds. The St-Estèphe portion of the Lafite vineyard is allowed to bear the Pauillac appellation, having been part of the Lafite-Rothschild estate for several hundred years. A change of style occurred in the mid-1970s, when the decision was made to give the wines less time in cask, but under Chevalier they have gone into hyperdrive and are often the very best of the *premiers crus*. Well into

the first decade of the new millennium, Lafite is arguably the best performing of all *premiers crus*. This hand-harvested wine is matured in wood for 20 months, with 100 percent new oak.

RED Not the biggest of the *premiers crus*, but Lafite is nevertheless textbook stuff: a rich delicacy of spicy fruit flavors, continuously unfolding, supported by an array of creamy-oak and ripe tannins; a wine with incomparable finesse.

🍷 Cabernet Sauvignon 70%, Merlot 25%, Cabernet Franc 3%, Petit Verdot 2%

🕒 25–50 years

Second wine: *Carruades de Lafite*

Other wine: *Moulin des Carruades*

CHÂTEAU LATOUR

1er Cru Classé
★★★

The Pearson Group (which now owns the publisher of this book) was accused by the French of turning a Bordeaux *premier cru* into a dairy when temperature-controlled, stainless-steel vats were installed in 1964. These French critics conveniently ignored the fact that Château Haut-Brion had done the same three years earlier. Pearson actually owned just over half of Latour at the time and Harveys of Bristol owned a quarter. Together they paid less than three million dollars for almost 80 percent of this *premier cru*. It was a bargain, for although they invested heavily in renovating the vineyards and winery, Allied-Lyons (owners of Harvey's) paid almost \$110 million in 1989 for Pearson's share, valuing the entire property at \$180 million. Allied-Lyons lost out, however, when in 1993 they needed to liquidate various shareholdings to finance takeovers and sold Latour to François Pinault, the French industrialist, for \$130 million. Pinault appointed Frédéric Engerer, a graduate of one of France's top business schools, as the new young president of Latour. He has revolutionized working practices in both the vineyard and winery and with Frédéric Ardouin, his new, even younger winemaker at his side, the change in gear at Latour promised to be as dramatic as it was at Margaux. This hand-harvested wine is matured in wood for 18 months, with 100 percent new oak.

RED Despite its close proximity to the neighboring commune of St-Julien, Latour is the archetypal Pauillac. Its ink-black color accurately reflects the immense structure and hugely concentrated flavor of this wine. If Lafite is the ultimate example of finesse, then Latour is the ideal illustration of how massive a wine can be while still retaining great finesse.

🍷 Cabernet Sauvignon 75%, Merlot 20%, Cabernet Franc and Petit Verdot 5%

🕒 15–60 years

Second wine: ✓ *Les Forts de Latour*

Other wine: *Pauillac de Latour*

CHÂTEAU
LYNCH-BAGES
5ème Cru Classé
★★★

This château is sited on the edge of the Bages plateau, a little way out of Pauillac. It is on the southern fringe of the small town of Bages. Jean-Michel Cazes produces wines that some people describe as “poor man’s Latour (or Mouton).” Well, that cannot be such a bad thing, but if I were rich, I would drink as many *cinquièmes crus* from this château as *premiers crus* from elsewhere. No expense was spared in building the new vinification and storage facilities at this château, and since 1980 the successes in off-vintages have been extraordinary, making it more consistent than some *deuxièmes crus*. This hand-harvested wine is matured in wood for 12 to 15 months, with 50 percent new oak.

RED An intensely deep purple-colored wine of seductive character that is packed with fruit and has obvious class. It has a degree of complexity on the nose, a rich, plummy flavor, supple tannin structure, and a spicy, blackcurrant and vanilla aftertaste.

🍷 Cabernet Sauvignon 75%, Merlot 15%, Cabernet Franc 10%

🕒 8–30 years

Second wine: ✓ *Château Haut-Bages-Avérous*

Other wine: *Blanc de Lynch-Bages* (rare “Médoc” white wine)

CHÂTEAU
LYNCH-MOISSAS
5ème Cru Classé
★

Owned by Emile Costéja of Borie-Manoux, this property has been renovated and the wines could well improve. The wine is matured in wood for 18 months, with 60 percent new oak.

RED After a false start in the mid-1980s, when an exceptionally stylish 1985 turned out to be exactly that (an exception), this château continued to produce light, rather insubstantial wines of no specific character or quality, but with better selection, riper fruit, less time in cask, and more than twice the

amount of new oak Lynch-Moussas used to receive, it has made significantly better wines since the mid-1990s.

🍷 Cabernet Sauvignon 75%, Merlot 25%

🕒 4–8 years

Second wine: *Château Haut-Madrac*

CHÂTEAU MOUTON-ROTHSCHILD
1er Cru Classé
★★★★

The famous case of the only wine ever to be officially reclassified since 1855, Baron Philippe de Rothschild’s plight ended with Mouton’s status being justly raised to *premier cru* in 1973. Through promotion of Mouton’s unique character, he was probably responsible for elevating the Cabernet Sauvignon grape to its present high profile. Part of his campaign to keep this château in the headlines was the introduction of a specially commissioned painting for the label of each new vintage. The hand-harvested wine is matured in wood for up to 22 months, with 100 percent new oak.

RED It is difficult to describe this wine without using the same descriptive terms as those used for Latour, but perhaps the color of Mouton reminds one more of damsons and the underlying character is more herbal, sometimes even minty. And although it ages just as well as Latour, it becomes accessible slightly earlier.

🍷 Cabernet Sauvignon 77%, Merlot 11%, Cabernet Franc 10%, Petit Verdot 2%

🕒 12–60 years

Second wine: *Le Petit Mouton de Mouton-Rothschild*

Other wines: *Aile d’Argent* (another rare “Médoc” white)

CHÂTEAU PEDESCLAUX
5ème Cru Classé

Little-seen *cru classé* produced from two very well-situated plots of vines, one bordering Lynch-Bages, the other between Mouton-

Rothschild and Pontet-Canet. Most of its exported production goes to Belgium. It is matured in wood for 18 months, with 50 percent new oak. Wine rejected for the *grand vin* is blended into the wine of Château Belle Rose, a *cru bourgeois* under the same ownership.

RED Full, firm, traditional style of Pauillac that is slow-maturing and long-lasting.

🍷 Cabernet Sauvignon 65%, Merlot 25%, Cabernet Franc 5%, Petit Verdot 5%

🕒 15–40 years

Second wine: *Château Haut-Pardanac*

CHÂTEAU PICHON-LONGUEVILLE BARON
PICHON-LONGUEVILLE
2ème Cru Classé
★★★

The smaller of the two Pichon vineyards and until very recently the less inspiring, although many experts reckoned the *terroir* of Pichon-Baron to be intrinsically superior to that of its neighbor, the star-performing Pichon-Comtesse. Indeed, 10 years ago, I even suggested that Madame de Lencquesaing should buy this château and cast her seemingly irresistible spell on what would inevitably be the still greater *terroir* of the two properties combined. Whether she had such an ambition, or even the cash to consider it, AXA-Millesimes got there first, and has been remarkably successful at conjuring the most incredible quality from Pichon-Baron.

Essentially by reducing Cabernet Sauvignon in favor of Merlot and almost tripling the amount of new oak used, AXA has ensured that Pichon-Baron now lives up to its potential. The wine is matured in wood for 15 to 18 months, with 80 percent new oak.

RED Intensely colored, full-bodied wine with concentrated spicy-cassis fruit backed up by supple tannins, which are rich and heady with smoky-creamy oak and complexity. True super-second quality.

🍷 Cabernet Sauvignon 60%, Merlot 35%, Cabernet Franc 4%, Petit Verdot 1%

🕒 8–25 years

Second wine: ✓ *Les Tourelles de Longueville*

CHÂTEAU PICHON-LONGUEVILLE
COMTESSE-DE-LALANDE
2ème Cru Classé
★★★

There is a limit to the quality of any wine and this is determined by the potential quality of its grapes. But at Pichon-Comtesse (as it is known), the formidable Madame de Lencquesaing demands the maximum from her *terroir*—and consistently gets it. The wine is matured in wood for 20 months, with 50 percent new oak.

RED This temptress is the Château Margaux of Pauillac. It is silky-textured, beautifully balanced, and seductive. A wine of great finesse, even in humble vintages.

🍷 Cabernet Sauvignon 45%, Merlot 35%, Cabernet Franc 12%, Petit Verdot 8%

🕒 10–30 years

Second wine: ✓ *Réserve de la Comtesse*

Other wines: *Les Gartieux*

CHÂTEAU
PONTET-CANET
5ème Cru Classé
★★

The reputation of this château has suffered in recent decades, but many thought the situation would be reversed when Guy Tesseron purchased the property in 1975. The 1985 vintage gave a glimmer of hope, but it was not until 1995 that the breakthrough occurred, and the 1998 vintage is nothing less than outstanding. Definitely one to watch, this hand-harvested wine is matured in wood for 15 to 20 months, with 60 percent new oak.

RED Since the mid-1990s, these wines have been fruity and graceful with a rich, smooth, oaky touch.

🍷 Cabernet Sauvignon 68%, Merlot 20%, Cabernet Franc 10%, Malbec 2%

🕒 6–12 years

Other wine: *Les Hauts de Pontet*

CHÂTEAU LA
TOUR-PIBRAN
★

This growth was classified *cru bourgeois* in 1932, but was not in the Syndicat’s 1978 list, although it is superior to a few that were.

RED This wine has bags of blackcurrant fruit, yet retains the characteristic Pauillac structure and firm finish. The superb 1985 is not unlike a “mini-Mouton.”

🍷 Cabernet Sauvignon 75%, Merlot 15%, Cabernet Franc 10%

🕒 6–16 years

SAINT-JULIEN

The commune's fame is disproportionate to its size, since it is smaller than any of the other three classic Médoc appellations—St.-Estèphe, Pauillac, or Margaux.

ST.-JULIEN HAS NO *PREMIERS CRUS*, nor *cinquièmes crus*, although some châteaux sometimes produce wines that are undeniably of *premier cru* quality. The concentration of its 11 *crus classés* in the middle of the classification is St.-Julien's real strength, enabling this commune justly to claim that it is the most consistent of the Médoc appellations; these quintessential clarets have a vivid color, elegant fruit, superb balance, and great finesse.

It is perhaps surprising that wines from as far as 40 acres (16 hectares) inside St.-Julien's borders may be classified as AOC Pauillac, particularly in view of the perceived difference in style between these appellations. This illustrates the "gray area" that exists when communal boundaries overlap the historical borders of great wine estates, and highlights the existence and importance of blending, even in a region reputed for its single-vineyard wines. We should not be too pedantic about communal differences of style: if these borders of the Médoc followed local history, Château Latour, the most famous château of Pauillac, would today be in St.-Julien—and that makes me wonder how the wines of this commune might be described under such circumstances?

ST.-JULIEN PROFILE

Appellation area Covers part of the commune of St.-Julien only	Surface area of <i>crus classés</i> 1,552 acres (628 ha), 40% of commune, 68 of AOC
Size of commune 3,840 acres (1,554 ha)	Special comments Some 40 acres (16 ha) of St.-Julien are classified as AOC Pauillac
AOC area under vine 2,246 acres (909 ha), 59% of commune	

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
St.-Julien lies in the center of the Haut-Médoc, 2.5 miles (4 kilometers) south of Pauillac.

CLIMATE
As for the Médoc (see p70).

ASPECT
The gravel crest of St.-Julien slopes almost imperceptibly eastward toward the village and drains into the Gironde.

SOIL
Fine, gravel topsoil of good-sized pebbles in vineyards within sight of the Gironde. Farther inland, the particle size decreases and the soil begins to mix with sandy loess.

The subsoil consists of iron-pan, marl, and gravel.

VITICULTURE & VINIFICATION

Only red wines have the right to the appellation. All grapes must be destalked. Some *vin de presse* may be used according to the needs of the vintage. Skin contact duration averages 2 to 3 weeks and most châteaux allow 18 to 22 months' maturation in cask.

GRAPE VARIETIES

Primary varieties: Cabernet Sauvignon, Cabernet Franc, Merlot
Secondary varieties: Carmenère, Malbec, Petit Verdot

ST.-JULIEN CRU CLASSÉ STATISTICS

Crus classés in AOC St.-Julien

11 châteaux (by number: 18% of *crus classés* in the Médoc) with 1,552 acres (628 ha) of vineyards (by area: 22% of *crus classés* in the Médoc and 68% of this AOC)

None

ST.-JULIEN-BEYCHEVELLE

The Médoc's most consistent appellation has two small villages as its major centers, St.-Julien-Beychevelle itself and, to the south, Beychevelle.

THE WINE PRODUCERS OF SAINT-JULIEN

CHÂTEAU BEYCHEVELLE

4ème Cru Classé
★★

The immaculate and colorful gardens of this château never fail to catch the breath of passers-by. Beychevelle also boasts one of the most famous legends of Bordeaux: its name is said to be a corruption of "basse-voile," the command to "lower sail." This arose because the Duc d'Épernon, a former owner who was also an admiral of France, apparently required the ships that passed through the Gironde to lower their sails in respect. His wife would then wave her kerchief in reply. This story, however, is not true. Épernon actually held the title of Baron de Beychevelle prior to being made the Amiral de Valette, and did not actually live at Beychevelle. I prefer the story of the sailors who lowered their pants and revealed their sterns, which shocked the duchess but made her children laugh. The wines are matured in wood for 20 months with 40 percent new oak.

RED Medium- to full-bodied wines of good color, ripe fruit, and an elegant oak and tannin structure. They can be quite fat in big years.

🍷 Cabernet Sauvignon 59%, Merlot 30%, Cabernet Franc 8%, Petit Verdot 3%

🕒 12–20 years

Second wine: *Reserve de l'Amiral*

Other wine: *Les Brulieres de Beychevelle*

CHÂTEAU BRANAIRE-DUCRU

4ème Cru Classé
★

The vineyards of this château are situated farther inland than those of Beychevelle and Ducru-Beaucaillou and its soil contains more clay and iron-pan than theirs, so the wine here is fuller and can be assertive, although never austere. It is matured in wood for 18 months, with up to 50 percent new oak, and is remarkably consistent.

RED This is a quite full-bodied wine, which is richly flavored and can show a certain chocolate character in big years. It has a distinctive bouquet that sets it apart from other St.-Juliens.

🍷 Cabernet Sauvignon 75%, Merlot 20%, Cabernet Franc 5%

🕒 12–25 years

Second wine: *Duluc*

CHÂTEAU LA BRIDANE

Cru Bourgeois

The owners of this property have maintained a vineyard here since the 14th century.

RED Attractive, fruity, medium-

bodied wine that is easy to drink.

🍷 Cabernet Sauvignon 55%, Merlot 45%

🕒 3–6 years

CHÂTEAU DUCRU- BEUCAILLOU

2ème Cru Classé
★★★

One of the super-second, the quality of this classic St.-Julien château, the flagship property of the Borie empire, is both legendary and inimitable. In both good years and bad it remains remarkably consistent and, although relatively expensive, the price fetched falls short of those demanded by *premiers crus*, making it a relative bargain. The wine is matured in wood for 20 months, with 50 percent new oak.

RED This wine has a fine, deep color that can belie its deft elegance of style. There is richness of fruit, complex spiciness of oak, great finesse, and exquisite balance.

🍷 Cabernet Sauvignon 65%, Merlot 25%, Cabernet Franc 10%

🕒 15–30 years

Second wine: *La Croix*

CHÂTEAU DU GLANA

Cru Bourgeois
★

This property is under the same ownership as Château Plantey in Pauillac and Château la Commanderie in St.-Estèphe.

RED Du Glana is normally an unpretentious and medium-weight wine, but it excels in really hot years, when it can be deliciously ripe and juicy.

🍷 Cabernet Sauvignon 68%, Merlot 25%, Petit Verdot 5%, Cabernet Franc 2%

🕒 3–6 years

CHÂTEAU GLORIA

★

Gloria excites opposite passions in wine drinkers: some consider it the equal of several *cru classé* wines—even superior in some cases—while others believe it earns an exaggerated price based on the reputation of merely a handful of vintages. Certainly the owners saw nothing to be gained by entering

this wine for consideration in the 2003 reclassification, although it should have easily made *cru bourgeois supérieur* status had they done so. The wine is matured in wood for 12 months, with 40 percent new oak.

RED A deep plum-colored, full-bodied wine with masses of fruit and a rich, exuberant character.

🍷 Cabernet Sauvignon 65%, Merlot 25%, Cabernet Franc 5%, Petit Verdot 5%

🕒 12–30 years

Second wine: *Peymartin*

Other wine: *Haut-Beychevelle-Gloria*

CHÂTEAU GRUAUD-LAROSE

2ème Cru Classé
★★★

This large property produces consistently great wines of a far more solid structure than most other St.-Julien wines. Anyone who has tasted the supposedly mediocre 1980 Sarget de Gruaud-Larose (made from the wines rejected from the *grand vin*) will realize the true potential of Château Gruaud-Larose in any year. If anything, the quality of Gruaud-Larose is still improving.

RED Full-bodied, rich, and plummy wine with masses of fruit. Its spicy blackcurrant flavor is supported by a structure of ripe tannins.

🍷 Cabernet Sauvignon 57%, Merlot 30%, Cabernet Franc 7%, Petit Verdot 4%, Malbec 2%

🕒 10–40 years

Second wine: *Sarget de Gruaud-Larose*

Other wines: *La Roseraie de Gruaud-Larose, Chevalier de Gruaud-Larose*

CHÂTEAU HORTEVIE

★★★

There is no château as such on this property. This tiny vineyard's wine

is made at Château Terrey-Gros-Caillou by Henri Pradère, the owner of both properties.

RED This is a silky-soft, rich, and succulent wine of excellent quality. This great-value wine is easily equivalent to *cru classé* quality.

🍷 Cabernet Franc and Cabernet Sauvignon 70%, Merlot 25%, Petit Verdot 5%

🕒 7–15 years

CHÂTEAU DE LACOUFOURQUE

This tiny 3-acre (1.25-hectare) vineyard is mentioned not because of its past performance but because it is unique in Bordeaux in being a 100 percent Cabernet Franc varietal, and it should be preserved.

RED This wine is sold in bulk as generic St.-Julien, which makes it impossible to make generalizations about its character.

🍷 Cabernet Franc 100%

CHÂTEAU LAGRANGE

3ème Cru Classé
★★★

When the *Ban de Vendanges* was held at this Japanese-owned château in 1986, everyone realized that the Japanese were not simply content to apply state-of-the-art technology; they seriously intended to make Lagrange the best-quality wine in St.-Julien. They could very well succeed in this ambition. The formidable Bordeaux oenologist Professor Peynaud has dubbed Lagrange a "dream estate," and describes its vinification center as "unlike any other in the whole of Bordeaux." Each vat is, according to Peynaud, a "winemaking laboratory." The wine spends 18 months in wood, with up to 60 percent new oak.

RED A deeply colored wine with intense spicy-fruit aromas. It is full-bodied, silky-textured, and rich, with an exquisite balance and finish.

🍷 Cabernet Sauvignon 65%, Merlot 28%, Cabernet Franc and Petit Verdot 7%

🕒 8–25 years

Second wine: *Les Fiefs de Lagrange*

CHÂTEAU LALANDE-BORIE

★

Under the same ownership as the illustrious Château Ducru-Beaucaillou, Lalande-Borie is an inexpensive introduction to the wines of St.-Julien.

RED These are well-colored wines, dominated by rich, blackcurrant Cabernet Sauvignon flavors. Some vintages are fat and juicy, while others are more

ethereal and tannic.

🍷 Cabernet Sauvignon 65%, Merlot 25%, Cabernet Franc 10%

🕒 5–10 years

CHÂTEAU LANGOA-BARTON

3ème Cru Classé

★●

This beautiful château was known as Pontet-Langlois until 1821, when it was purchased by Hugh Barton, grandson of “French Tom” Barton, the founder of Bordeaux *négociant* Barton & Guestier, and is now run by Anthony Barton. Both Langoa-Barton and Léoville-Barton are made here using very traditional techniques. The wine is matured in wood for 24 months, with a minimum of one-third new oak.

RED Attractive, easy-drinking wine with good fruit and acidity. It is lighter than the Léoville and can sometimes taste a little rustic in comparison, but has gained a degree of extra elegance and finesse in recent years.

🍷 Cabernet Sauvignon 70%, Merlot 20%, Cabernet Franc 8%, Petit Verdot 2%

🕒 10–25 years

Second wine: ✓ *Lady Langoa* (a blend of Langoa-Barton and Léoville-Barton formerly sold simply as “St-Julien”)

CHÂTEAU LÉOVILLE-BARTON

2ème Cru Classé

★★★★●

A quarter of the original Léoville estate was sold to Hugh Barton in 1826, but the château remained in the hands of the Léoville estate and is now called Château Léoville-Las Cases (*see below*). This wine is made by Anthony Barton at Langoa-Barton (*see above*). It is matured in wood for 24 months, with a minimum of one-third new oak. Although it is the better of the two Barton estates, it has been considered significantly beneath the standard set by Léoville-Las Cases—since the late 1980s, however, it has performed equally well. A great château in ascendancy.

RED Excellent wines of great finesse and breeding; they are darker, deeper, and richer than the Langoa-Barton, which is itself of very good quality. With maturity, a certain cedarwood complexity develops in this wine and gradually overwhelms its youthful cassis and vanilla character.

🍷 Cabernet Sauvignon 70%, Merlot 20%, Cabernet Franc 8%, Petit Verdot 2%

🕒 15–30 years

Second wine: ✓ *Lady Langoa* (a blend of Langoa-Barton and Léoville-Barton formerly sold simply as “St-Julien”)

CHÂTEAU LÉOVILLE-LAS CASES

2ème Cru Classé

★★★★

The label reads “*Grand Vin* de Léoville du Marquis de Las Cases,” although this wine is commonly referred to as “Château Léoville-Las Cases.” This estate represents the largest portion of the original Léoville estate. This is a great wine, and it certainly qualifies as one of the super-second, while “Clos du Marquis” is one of the finest second wines available and probably the best value St-Julien. The *grand vin* spends 18 months in wood, with 50 percent new oak.

RED This dark, damson-colored, full-bodied, and intensely flavored wine is complex, classy, and aromatically stunning. A skillful amalgam of power and finesse.

🍷 Cabernet Sauvignon 65%, Merlot 19%, Cabernet Franc 13%, Petit Verdot 3%

🕒 15–35 years

Second wine: ✓ *Clos du Marquis*
Other wines: *Domaine de Bigarnon*

CHATEAU LÉOVILLE POYFERRÉ

2ème Cru Classé

★★★

This property once formed a quarter of the original Léoville estate, and probably suffers from being compared to the other two châteaux, whose properties were also part of Léoville—Léoville-Barton and Léoville-Las Cases. Yet in the context of St-Julien as a whole, it fares very well, and since

1982 it has had some extraordinary successes. Since the involvement of Michel Rolland from the mid-1990s, quality has gone up another notch. Wine is matured in wood for 18 months, with one-third new oak.

RED This wine has always been tannic, but is now much fuller in fruit, richer in flavor, and darker in color, with oaky nuances.

🍷 Cabernet Sauvignon 65%, Merlot 30%, Cabernet Franc 5%

🕒 12–25 years

Second wine: *Moulin-Riche*

CHÂTEAU MOULIN-DE-LA-ROSE

Cru Bourgeois Supérieur

★●

This vineyard is well situated, being surrounded by *cru classés* on virtually all sides. Its wine is fermented in stainless steel and aged in cask for 18 months, with 25 percent new oak.

RED This attractively aromatic wine is unusually concentrated and firm for a minor St-Julien, but rounds out well after a few years in bottle.

🍷 Cabernet Sauvignon 65%, Merlot 25%, Petit Verdot 8%, Cabernet Franc 2%

🕒 6–12 years

CHÂTEAU ST-PIERRE

4ème Cru Classé

★★●

This property was bought in 1982 by Henri Martin, who owns the *bourgeois* growth Château Gloria. The wine is matured in wood for between 18 and 20 months, with 50 percent new oak.

RED Once an astringent, coarse wine; now ripe, fat, and full of cedarwood, spice, and fruit.

🍷 Cabernet Sauvignon 70%, Merlot 20%, Cabernet Franc 10%

🕒 8–25 years

Second wine: *Saint-Louis-le-Bosq*
Other wine: *Clos d'Uza*

CHÂTEAU TALBOT

4ème Cru Classé

★★●

Named after the English Commander who fell at the Battle of Castillon in 1453, this property remains under Cordier family ownership, while its sister château Gruaud-Larose now belongs to Groupe Taillan. To contrast the style

of these two St-Julien is justifiable, but to compare their quality is not: Château Talbot is a great wine and closer to the style of a classic St-Julien, but intrinsically it does not have the quality nor the consistency of Château Gruaud-Larose. Talbot is matured in wood for between 15 and 18 months, with one-third new oak.

RED A graceful wine, medium-bodied, with elegant fruit, gently structured by ripe oak tannins and capable of considerable finesse.

🍷 Cabernet Sauvignon 66%, Merlot 24%, Cabernet Franc 3%, Petit Verdot 5%, Malbec 2%

🕒 8–30 years

Second wine: ✓ *Cométable Talbot*

Other wine: *Caillou Blanc*

CHÂTEAU TERREY-GROS-CAILLOU

Cru Bourgeois Supérieur

★★●

This establishment is under the same ownership as Château Horteve (whose wine it also makes), and is itself a top-performing property.

RED This beautifully colored, medium- to full-bodied wine always has rich fruit and is often equivalent to a good *cru classé*.

🍷 Cabernet Sauvignon 65%, Merlot 30%, Petit Verdot 5%

🕒 5–12 years

CHÂTEAU TEYNAC

Cru Bourgeois Supérieur

★●

This fine gravel vineyard once formed part of *cru classé* Château Saint-Pierre.

RED Well-balanced, medium- to full-bodied wine with good spice and a firm tannin structure.

🍷 Cabernet Sauvignon 65%, Merlot 35%

🕒 6–10 years

MARGAUX

Situated in the south of the Médoc district, Margaux is the most famous of all Bordeaux appellations. While it bathes in the reflected glory of its name-sake premier cru, it is also the largest and least consistent of the four classic Médoc appellations.

WHILE THE OTHER THREE great Médoc AOCs—St.-Estèphe, Pauillac, and St.-Julien—are connected in one unbroken chain of vineyards, Margaux stands alone to the south, with its vines spread across five communes—Labarde, Arsac, and Cantenac to the south, Margaux in the center, and Soussans to the north. Margaux and Cantenac are the most important communes and, of course, Margaux contains the *premier cru* of Château Margaux itself. Cantenac has a slightly larger area under vine and no fewer than eight classified growths, including the star-performing Château Palmer, which was partly owned by the late Peter Sichel.

Margaux and Pauillac are the only appellations in the Médoc with *premier cru* vineyards, but only Margaux can boast vineyards in all five categories of the classification. It also has more *cru classé* châteaux than any other Médoc appellation, including an impressive total of 10 *troisièmes crus*.

MARGAUX CRU CLASSÉ STATISTICS

Crus classés in AOC Margaux

21 châteaux (by number: 35% of *crus classés* in the Médoc) with 2,110 acres (854 ha) of vineyards (by area: 35% of *crus classés* in the Médoc and 61% of this AOC)

1er crus classés

1 château (by number: 25% of *1er crus classés* in the Médoc) with 185 acres (75 ha) of vineyards (by area: 25% of *1er crus classés* in the Médoc)

2ème crus classés

5 châteaux (by number: 36% of *2ème crus classés* in the Médoc) with 670 acres (271 ha) of vineyards (by area: 34% of *2ème crus classés* in the Médoc)

3ème crus classés

10 châteaux (by number: 72% of *3ème crus classés* in the Médoc) with 754 acres (305 ha) of vineyards (by area: 72% of *3ème crus classés* in the Médoc)

4ème crus classés

3 châteaux (by number: 30% of *4ème crus classés* in the Médoc) with 259 acres (105 ha) of vineyards (by area: 22% of *4ème crus classés* in the Médoc)

5ème crus classés

2 châteaux (by number: 11% of *5ème crus classés* in the Médoc) with 242 acres (98 ha) of vineyards (by area: 13% of *5ème crus classés* in the Médoc)

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

In the center of the Haut-Médoc, some 17 miles (28 kilometers) northwest of Bordeaux, encompassing the communes of Cantenac, Soussans, Arsac, and Labarde, in addition to Margaux itself.

CLIMATE

As for the Médoc (see p70).

ASPECT

One large, low-lying plateau centering on Margaux, plus several modest outcrops that slope west toward the forest.

SOIL

Shallow, pebbly, siliceous gravel over a gravel subsoil interbedded with limestone.

VITICULTURE AND VINIFICATION

Only red wines have the right to the appellation. All grapes must be destalked. On average, between 5 and 10 percent *vin de presse* may be used in the wine, according to the needs of the vintage. Skin contact duration averages 15 to 25 days, with the period of maturation in cask currently varying between 18 and 24 months.

GRAPE VARIETIES

Primary varieties: Cabernet Sauvignon, Cabernet Franc, Merlot
Secondary varieties: Carmenère, Malbec, Petit Verdot

CHÂTEAU MARGAUX

Margaux's celebrated premier cru vineyards are matched by the grandeur of the building itself. Both the building and the wine are justifiably famous.

MARGAUX, SEE ALSO P.00

*Of the classic Médoc appellations, Margaux—the most famous—stands alone to the south, and can boast more *cru classé* châteaux than any of the others.*

MARGAUX PROFILE

Appellation covers: parts of the communes of Arsac, Cantenac, Labarde, Margaux, and Soussans as follows.

REGION	SIZE OF COMMUNE	AOC AREA UNDER VINE	VINE AREA AS PROPORTION OF COMMUNE	VINE AREA AS PROPORTION OF APPELLATION
Arsac	7,954 acres (3,219 ha)	524 acres (212 ha)	7%	15%
Cantenac	3,502 acres (1,417 ha)	963 acres (387 ha)	27%	28%
Labarde	1,174 acres (475 ha)	279 acres (113 ha)	24%	8%
Margaux	2,083 acres (843 ha)	1,006 acres (407 ha)	48%	29%
Soussans	3,850 acres (1,558 ha)	699 acres (283 ha)	18%	20%
TOTAL	18,562 acres (7,512 ha)	3,464 acres (1,402 ha)	19%	100%

Total size of all five communes: 18,562 acres (7,512 ha)

Total AOC area under vine: 3,311 acres (1,402 ha) (19% of communes)

Surface area of crus classés: 2,110 acres (854 ha) (11% of communes, 64% of AOC)

NEW CELLAR AT CHÂTEAU MARGAUX

Evidence of the investment made in Château Margaux since the late 1970s is the refurbished wine store and its full complement of new oak barrels.

SOUTIRAGE CHÂTEAU MARGAUX

As the wine matures in the barrel its clarity is checked regularly. It spends between 18 and 24 months in new oak.

AN OUTSTANDING WINE

If the massive Pauillac wines of Château Latour and Château Mouton are an object lesson in how it is possible to bombard the senses with power and flavor, and yet retain quite remarkable finesse, then the exquisite wines of Margaux at their very best are perfect proof that complexity does not necessarily issue from an intense concentration of flavor.

However, this is not to suggest that Margaux wines do not actually possess some concentration; indeed, Château Margaux has a particularly remarkable concentration of flavor, and it remains the quintessential wine of this appellation.

CHÂTEAU CANTENAC BROWN

This third growth was originally part of Château Boyd, but after the Boyds and Browns—who were joined by marriage in the late 18th century—had a family crisis, the property was divided into Château Boyd-Cantenac and Château Cantenac Brown.

CHÂTEAU D'ANGLUDET

Angludet, home of the Sichel family, dates back to Bertrand d'Angludet, who in 1313 swore allegiance to Edward II of England. Owned by Sichel from 1960 till 1999, this property exudes its English heritage, with swans gliding on the brook at the bottom of the property.

THE WINE PRODUCERS OF MARGAUX

CHÂTEAU D'ANGLUDET

Cru Bourgeois

★★

This château is owned by the Sichel family, who are also part-owners of the star-performing Château Palmer. Since the late 1980s this château has established itself as *cru classé* quality. It will be interesting to see what the next decade brings. The wine is matured in wood for 12 months, with up to one-third new oak.

RED Vividly colored, medium- to full-bodied wines with excellent fruit, finesse, and finish—classic Margaux.

🍷 Cabernet Sauvignon 55%, Merlot 35%, Petit Verdot 10%

🕒 10–20 years

Second wine: *La Ferme d'Angludet*

Other wine: *Clairet d'Angludet*

CHÂTEAU D'ARSAC

AOC Margaux
Cru Bourgeois

Until recently this was the only property in Arsac not to benefit from the Margaux appellation. Since a change in ownership this estate has expanded its vineyards from just over 27 acres (11 hectares) to 252 acres (102 hectares), of which 100 (40 hectares) are now classified as Margaux. The wines are matured in wood for 12 to 18 months, with 20 percent new oak.

RED These are deep-colored, full-bodied wines.

🍷 Cabernet Sauvignon 80%, Merlot 15%, Cabernet Franc 5%

🕒 7–15 years

Second wine: *Château Ségur-d'Arsac*

Other wine: *Château Le Monteil-d'Arsac*

CHÂTEAU BEL-AIR MARQUIS D'ALIGRE

①

Château Bel-Air Marquis d'Aligre was classified *cru bourgeois* in 1932, but was not included in the Syndicat's 1978 list, although it is superior to a few that were. The vineyard has limestone subsoil and only organic fertilizers are used.

RED Well-made wines of fine color, elegant fruit, with a distinctive style are produced by Château Bel-Air Marquis d'Aligre.

🍷 Merlot 35%, Cabernet

Sauvignon 30%, Cabernet Franc 20%, Petit Verdot 15%

🕒 6–12 years

Second wine: *Château Bel-Air-Marquis-de-Pomereu*

CHÂTEAU BOYD-CANTENAC

3ème Cru Classé

Château Boyd-Cantenac is a property producing traditional-style wines from old vines. The wine is made at owner Mr. Guillemet's other property, Château Pouget, under the supervision of Professor Peynaud. It is matured in wood for 24 months, with 30 percent new oak and, in my opinion, would benefit from more Merlot and no Petit Verdot.

RED Full-bodied, firm wine of good color that needs a long time in bottle to soften. The mediocre 1980 was particularly successful.

🍷 Cabernet Sauvignon 70%, Merlot 20%, Cabernet Franc 5%, Petit Verdot 5%

🕒 12–20 years

CHÂTEAU BRANE- CANTENAC

2ème Cru Classé

★★①

This property is a superb plateau of immaculately kept vines situated on gravel over limestone and is owned and run by Henri Lurton. The wine is matured in wood for 18 months, with 25 to 30 percent new oak.

RED These stylish wines have a smoky-cream and new-oak bouquet, deliciously rich fruit, and finesse on the palate. They are top-quality wines, velvety and beautifully balanced.

🍷 Cabernet Sauvignon 70%, Cabernet Franc 15%, Merlot 13%, Petit Verdot 2%

🕒 8–25 years

Second wine: *Le Baron de Brane*

Other wines: *Domaine de Fontarney, Château Notton*

CHÂTEAU CANTENAC BROWN

3ème Cru Classé

Ever since I drank a 50-year-old half-bottle of 1926 Cantenac Brown in splendid condition, I have had a soft spot for this château, which

has, frankly, been disproportionate to the quality of its wines. Despite heavy investment after being purchased by AXA, these wines have not noticeably improved, although in the late 1980s to early 1990s there was hope and some evidence that they might. The wines are matured in wood for 18 months, with one-third new oak.

RED This wine has always had a similar weight to Brane-Cantenac, but with a less velvety and generally more rustic style. The vintages of the 1980s have more finesse than those of the 1970s, but the quality and concentration took a sharp upward turn in 1989 and 1990.

🍷 Cabernet Sauvignon 65%, Merlot 25%, Cabernet Franc 10%

🕒 10–25 years

Second wine: *Camuet*

Other wine: *Lamartine*

CHÂTEAU CHARMANT

This property was not classified as a *cru bourgeois* in 1932, nor listed by the Syndicat in 1978, but it certainly deserves recognition today.

RED An elegant wine with plenty of fruit and a soft finish, it makes delightful drinking when young.

🍷 Cabernet Sauvignon 60%, Merlot 35%, Cabernet Franc 5%

🕒 3–8 years

CHÂTEAU DAUZAC

5ème Cru Classé

★

Now owned by MAIF and managed by Vignobles André Lurton, the quality of the wines from this château has steadily increased since the mid-1990s. The wine, which is matured in wood for 16 to 18 months with one-third new oak, is steadily improving.

RED Ruby-colored, medium-bodied, round, and attractively fruity wines that are easy to drink.

🍷 Cabernet Sauvignon 65%, Merlot 25%, Cabernet Franc 5%, Petit Verdot 5%

🕒 6–12 years

Second wine: *Labarde*

Other wine: *La Bastide*

CHÂTEAU DESMIRAIL

3ème Cru Classé

★

A "château with no château" (because the building that was its château was purchased by Château Marquis d'Alesme-Becker), Desmirail has been on the ascent since its purchase by the Lurton family, but it still has some way to go before it becomes a true *troisième cru*. It is owned and run by Denis Lurton, while oenologist Professor Peynaud advises. The wine is matured in

wood for 20 months, with 25 to 50 percent new oak.

RED A medium-bodied wine that is nicely balanced, with gentle fruit flavors and supple tannins. It is well-made and gradually gaining in finesse.

🍷 Cabernet Sauvignon 80%, Merlot 10%, Cabernet Franc 9%, Petit Verdot 1%

🕒 7–15 years

Second wine: *Château Baudry*

Other wine: *Domaine de Fontarney*

CHÂTEAU DEYREM-VALENTIN

This château was classified *cru bourgeois* in 1932, but was not included in the Syndicat's 1978 list, although it is superior to a few that were. Its vineyards adjoin those of Château Lascombes.

RED Honest, medium-bodied, fruity wine of some elegance.

🍷 Cabernet Sauvignon 45%, Merlot 45%, Cabernet Franc 5%, Petit Verdot 5%

🕒 4–10 years

CHÂTEAU DURFORT-VIVENS

2ème Cru Classé

★①

Owned by Gonzague Lurton, who is married to Claire Villars, the administrator of châteaux Chasse-Spleen and Haut-Bages-Libéral. Dufort-Vivens has become one of the best-value *cru classé* wines of Margaux since the mid-1990s. This property matures its wine in wood for 18 to 20 months, with up to one-third new oak.

RED Higher tannic structure than Brane-Cantenac, but without the luxurious new-oak character, and with less fruit and charm. The 1985 was particularly rich and impressive.

🍷 Cabernet Sauvignon 82%, Cabernet Franc 10%, Merlot 8%

🕒 10–25 years

Second wine: *Second de Dufort*

Other wine: *Domaine de Curé-Bourse*

CHÂTEAU FERRIÈRE

3ème Cru Classé

★①

When managed by Château Lascombes this was little more than second-label status, but it has gained in both exposure and quality since this property was purchased by the Villars family.

RED Quick-maturing wine of medium weight and accessible fruit.

🍷 Cabernet Sauvignon 75%, Merlot 20%, Petit Verdot 5%

🕒 4–8 years

Second wine: *Les Remparts de Ferrière*

CHÂTEAU GISCOURS3ème Cru Classé
★★

This property is situated in the commune of Labarde. It was purchased in 1952 by the Tari family, who have restored the château, the vineyard, and the quality of its wine to their former glory. In 1995 the château was sold to Eric Albada Jelgerms, a Dutch businessman who has at least maintained the quality and, arguably, improved it. The wine is matured in wood for 20 to 34 months, with 50 percent new oak.

RED Vividly colored wine, rich in fruit and finesse. Its vibrant style keeps it remarkably fresh for many years.

🍷 Cabernet Sauvignon 75%, Merlot 22%, Cabernet Franc 2%, Petit Verdot 1%

🕒 8–30 years

Second wine: *La Sirène de Giscours*

Other wine: *Cantelaude*

CHÂTEAU LA GURGUE

This property was classified *cru bourgeois* in 1932, but not included in the Syndicat's 1978 list, although it is superior to a few that were. Its proprietor also owns the *cru classé* Haut-Bages-Libéral, and the *cru bourgeois* Chasse-Spleen.

RED Soft, elegant, medium-bodied wine of attractive flavor and some finesse.

🍷 Cabernet Sauvignon 70%, Merlot 25%, Petit Verdot 5%

🕒 4–12 years

CHÂTEAU D'ISSAN3ème Cru Classé
★★

This beautiful 17th-century château is frequently cited as the most impressive in the entire Médoc, and its remarkable wines, matured in wood for 18 months, with up to one-third new oak, are consistently just as spectacular.

RED This wine really is glorious! Its luxuriant bouquet is immediately seductive, its fruit is unbelievably rich and sumptuous. A great wine of great finesse.

🍷 Cabernet Sauvignon 85%, Merlot 15%

🕒 10–40 years

Second wine: *Blason d'Issan*

Other wine: *De Candèl*

CHÂTEAU KIRWAN3ème Cru Classé
★★

Château Kirwan is a well-run and improving property owned by the Bordeaux négociant Schröder & Schyler with Michel Rolland consulting. The wine is matured in wood for 18 to 24 months, with up to 50 percent new oak.

RED Deep-colored, full-bodied, rich and concentrated wines that are well-made and gaining in generosity, riper tannins, and new oak influence with each passing vintage.

🍷 Cabernet Sauvignon 40%, Merlot 30%, Cabernet Franc 20%, Petit Verdot 10%

🕒 10–35 years

Second wine: *Les Charmes de Kirwan*

CHÂTEAU LABÉGORCE

★

This château was classified *cru bourgeois* in 1932, but not included in the Syndicat's 1978 list. Since Hubert Perrodo, a wine-loving oil tycoon, purchased Labégorce in 1989, the quality and price of its wines have increased steadily. The wine is matured in wood for 18 months, with up to one-third new oak.

RED Well-colored wine with good balance of concentration and finesse.

🍷 Cabernet Sauvignon 55%, Merlot 40%, Cabernet Franc 5%

🕒 5–15 years

CHÂTEAU LABÉGORCE-ZÉDÉ

★★

Classified *cru bourgeois* in 1932, but not included in the 1978 list, although it is one of the best non-*cru classé* wines of the commune.

RED Fine flavor and great length, combined with a certain complexity, give the wines of this château a slight edge over those of Château Labégorce.

🍷 Cabernet Sauvignon 50%, Merlot 35%, Cabernet Franc 10%, Petit Verdot 5%

🕒 5–15 years

Second wine: *Château de l'Amiral*

CHÂTEAU LASCOMBES2ème Cru Classé
★★

Owned by Bass Group, the wines of this large property have always been good, yet they have improved dramatically under René Vanatelle. It was Vanatelle who recognized that only 125 of Lascombes' 208 acres (50 of 83 hectares) were of authentic *deuxième cru* potential. He therefore segregated the vineyard and sold the lesser wines as Château Segonnes. This accounted for the noticeable step up in quality in the 1980s. Then in 1997, the year before he retired, Vanatelle introduced a true second

wine, Chevalier des Lascombes, which has pushed standards up yet another notch, before handing over to Bruno Lemoine, formerly of Montrose. The wine is matured in wood for 14 to 20 months, with one-third new oak.

RED Full-bodied, rich, and concentrated wine with ripe fruit, a lovely cedarwood complexity, and supple tannin.

🍷 Cabernet Sauvignon 55%, Merlot 40%, Petit Verdot 5%

🕒 8–30 years

Second wine: *Chevalier Lascombes*

Other wines: *Château Segonnes, Gombaudo, Rosé de Lascombes, Vin Sec Chevalier Lascombes*

CHÂTEAU MALESCOT ST-EXUPÉRY3ème Cru Classé
★

English-owned until 1955, when it was purchased by Roger Zuger, whose brother owns Château Marquis-d'Alesme-Becker. The wine is matured in wood for 18 months, with 20 percent new oak.

RED Richer, more complex wines have been produced since 1996.

🍷 Cabernet Sauvignon 50%, Merlot 35%, Cabernet Franc 10%, Petit Verdot 5%

🕒 8–25 years

Second wines: *Château De Loyac, La Dame de Malescot*

Other wine: *Balardin*

CHÂTEAU MARGAUX1er Cru Classé
★★★★

This is the most famous wine in the world and, since its glorious rebirth in 1978, the greatest. Its quality may occasionally be matched, but it is never surpassed. Purchased in 1977 for 72 million francs (\$14.5 million) by the late André Mentzelopoulos, who spent an equal sum renovating it, this fabulous jewel in the crown of the Médoc is now run by his daughter, Corinne Mentzelopoulos. Both Château Margaux and its second wine, "Pavillon Rouge," are vinified in oak vats and matured for 18 to 24 months in 100 percent new oak.

RED If finesse can be picked up on the nose, then the stunning and complex bouquet of Château Margaux is the yardstick. The softness, finesse, and velvety texture of this wine belies its depth. Amazingly rich and concentrated, with an elegant, long, and complex finish supported by ripe tannins

and wonderful smoky-creamy oak aromas. This is as near perfection as we will ever get.

🍷 Cabernet Sauvignon 75%, Merlot 20%, Cabernet Franc and Petit Verdot 5%

🕒 15–50 years

Second wine: *Pavillon Rouge du Château Margaux*

Other wine: *Pavillon Blanc du Château Margaux*

CHÂTEAU MARQUIS D'ALESME-BECKER

3ème Cru Classé

Like Château Malescot St-Exupéry, this was English-owned until purchased by Jean-Claude Zuger, who also purchased the maison of neighboring Desmirail to act as its château. The wine is matured in wood for 12 months, with one-sixth new oak.

RED Austere and charmless wines from my point of view, although they have their admirers. They are well-made, but lack sufficient selection, although the terroir has potential.

🍷 Cabernet Sauvignon 40%, Merlot 30%, Cabernet Franc 20%, Petit Verdot 10%

🕒 8–20 years

Second wine: *Marquise d'Alesme*

CHÂTEAU MARQUIS-DE-TERME

4ème Cru Classé

Situated next to Château Margaux, this once majestic estate developed the reputation for producing tight, tannic, one-dimensional wines, but its quality has picked up since the late 1970s and has been performing extremely well since 1983. The wine is matured in wood for 24 months, with one-third new oak.

RED Appears to be developing a style that is ripe and rich, with definite and delightful signs of new oak. The 1984 was quite a revelation.

🍷 Cabernet Sauvignon 60%, Merlot 30%, Petit Verdot 7%, Cabernet Franc 3%

🕒 10–25 years

Second wine: *Terme des Goudat*

CHÂTEAU MARSAC-SÉGUINEAU

This property was classified *cru bourgeois* in 1932, but not included in the Syndicat's 1978 list, although it is superior to a few that were. The vineyards of this château include some plots that originally belonged to a *cru classé*.

RED Medium- to full-bodied wines of good bouquet and a soft style.

🍷 Cabernet Sauvignon 65%, Merlot 35%

🕒 5–12 years

Second wine: *Château Gravières-de-Marsac*

CHÂTEAU MONBRISON

Cru Bourgeois
★

These vineyards used to be part of *cru classé* Château Desmirail; the wines were excellent 10 years ago, and now vie with those of true *cru classé* standard.

RED This château's second label offers a brilliant selection of beautifully deep-colored wines with spicy-oak, superrich juicy fruit, and a fine structure of supple tannin.

☼ Merlot 35%, Cabernet Franc 30%, Cabernet Sauvignon 30%, Petit Verdot 5%

🕒 8–15 years

Second wine: *Château Cordat*

CHÂTEAU MONTBRUN

Château Montbrun was classified *cru bourgeois* in 1932, but not included in the Syndicat's 1978 list, although it is superior to a few that were. This used to be part of *cru classé* Château Palmer.

RED Beautifully made, ripe, and juicy, medium- to full-bodied, Merlot-dominated wines.

☼ Merlot 75%, Cabernet Franc and Cabernet Sauvignon 25%

🕒 5–12 years

CHÂTEAU PALMER

3ème Cru Classé
★★★

Only Château Margaux outshines this property, jointly owned by Belgian, French, and British (the Sichel family) interests. Château Palmer 1961 and 1966 regularly fetch prices at auction that equal those fetched by the *premiers crus*. Judged at the very highest level, it could be more consistent. It is usually excellent, but not always astonishing—although when it is, it can stand shoulder to shoulder with *premiers crus* in a blind tasting. A true supersecond that promises to achieve even greater heights since the introduction of Alto Ego, a sort of superpremium of second wines, in 1998. The wine is matured in wood for 18 to 24 months, with one-third new oak.

RED Deep, almost opaque-colored wine with masses of cassis fruit and an exceedingly rich, intense, and complex construction of creamy, spicy, cedarwood, and vanilla flavors, supported by a fine tannic structure.

☼ Cabernet Sauvignon 50%, Merlot 40%, Cabernet Franc 7%, Petit Verdot 3%

🕒 12–35 years

Second wines: *Alto Ego, Réserve du Général*

CHÂTEAU PONTAC-LYNCH

★

This property was classified *cru bourgeois* in 1932, but not included in the Syndicat's 1978 list, although it is superior to a few that were. The vineyards are well-situated, and surrounded by *crus classés*.

RED Richly perfumed, deeply colored, full-bodied wines of good structure.

☼ Cabernet Sauvignon and Merlot 47%, Cabernet Franc 45%, Petit Verdot 8%

🕒 6–15 years

Second wine: *Château Pontac-Phénix*

CHÂTEAU POUGET

4ème Cru Classé
②

Under the same ownership as Boyd-Cantenac, this property houses the winemaking and storage facilities for both châteaux. The wine is matured in wood for 22 to 24 months, with 30 percent new oak.

RED Well-colored, full-bodied wine with good depth of flavor. Good, but not great, and could be more consistent.

☼ Cabernet Sauvignon 70%, Merlot 17%, Cabernet Franc 8%, Petit Verdot 5%

🕒 10–25 years

CHÂTEAU PRIEURÉ-LICHINE

4ème Cru Classé
★

The late Alexis Lichine purchased Château Prieuré in 1951 and added his name to it. To develop the small rundown vineyard, he bought various prized plots of vines from Palmer, Kirwan, Giscours, Boyd-Cantenac, Brane-Cantenac, and Durfort-Vivens—some 148 acres (60 hectares). The composite classification must be higher than its official status—the wines certainly are. Lichine's son Sacha ran the property until 1999, when he sold it to its current owners, the Ballande family. The wines are matured in wood for 19 months, with one-third new oak.

RED Well-colored, full-bodied wines, plummy and rich, with good blackcurrant fruit supported by supple tannins and a touch of vanilla-oak.

☼ Cabernet Sauvignon 54%, Merlot 39%, Cabernet Franc 2%, Petit Verdot 5%

🕒 7–20 years

Second wine: *Château De Clairefont*

CHÂTEAU RAUZAN-GASSIES

2ème Cru Classé
★

Until the French Revolution of 1789, this property and Château Rauzan-Ségla were one large estate. The globe-trotting Professor Peynaud was brought in to steer this wine back on course in the early 1980s, but he failed miserably. Jean-Louis Camp, formerly of Loudenne, seems to be having more success. The wine is matured in wood for 17 to 20 months, with 20 percent new oak, although there is little evidence

of it on the palate.

RED The last vintage I really enjoyed was 1961; 1996 and particularly 1998 could herald an upturn in quality.

☼ Cabernet Sauvignon 40%, Merlot 39%, Cabernet Franc 20%, Petit Verdot 1%

🕒 7–15 years

Second wine: *Enclos de Moncabon*

CHÂTEAU RAUZAN-SÉGLA

2ème Cru Classé
★★

The quality of this once-disappointing château began to lift in the 1980s due to significant investment in the property from its owner, the Bordeaux négociant house of Eschenauer, which also instigated a far stricter selection of the *grand vin*. In 1994 Rauzan-Ségla was sold to Chanel, the underbidder for Latour (sold by Allied-Lyons to the French industrialist François Pinault). Since then key personnel from the *premier cru* have been brought in to keep the improvements in full swing. The wine is matured in wood for 20 months, with 50 percent new oak, and is currently one of Bordeaux's top-performing *deuxièmes crus*.

RED In classic years, this wine is deep and dark, with a powerful tannic construction, and more than enough intensely flavored fruit to match. Lesser vintages are dark for the year, but much more lush, with softer tannins.

☼ Cabernet Sauvignon 65%, Merlot 30%, Cabernet Franc 5%

🕒 15–30 years

Second wine: *Ségla*

Other wines: *Lamouroux*

CHÂTEAU SIRAN

★★

Château Siran was classified *cru bourgeois* in 1932, but not included in the Syndicat's 1978 list, although it is superior to a few that were. The vineyard is well-situated, with immaculately manicured vines that border those of châteaux Giscours and Dauzac. The wine is matured in wood for 24 months, with one-third new oak, in air-conditioned cellars. Monsieur Mialhe, the owner, also likes to provide his guests with every facility.

RED Stylish, aromatic wines of good body, creamy-spicy fruit,

length, and obvious class. Easily equivalent to *cru classé* quality.

☼ Cabernet Sauvignon 50%, Merlot 25%, Petit Verdot 15%, Cabernet Franc 10%

🕒 8–20 years

Second wine: *Château Bellegarde*

Other wines: *Château St-Jacques*

CHÂTEAU TAYAC

Cru Bourgeois

As Bernard Ginestet, whose family owned Château Margaux for 40 years, once wrote, "this is one of the largest of the smaller properties, and one of the smallest of the larger."

RED Firm, medium- to full-bodied wines of good character, although somewhat rustic; they tend to be coarse in lesser years.

☼ Cabernet Sauvignon 65%, Merlot 25%, Cabernet Franc 5%, Petit Verdot 5%

🕒 6–12 years

CHÂTEAU DU TERTRE

5ème Cru Classé
★★

An underrated *cru classé*, this château has well-situated vineyards. It is under the same ownership as Giscours since 1998. The wine is matured in wood for 24 months, with 25 percent new oak.

RED Although the scent of violets is supposed to be common to Margaux wines, this is one of the few in which I pick it up. The wine is medium- to full-bodied, rich in fragrant fruit, and has excellent balance, with obvious class.

☼ Cabernet Sauvignon 85%, Cabernet Franc 5%, Merlot 10%

🕒 8–25 years

CHÂTEAU LA TOUR DE MONS

Cru Bourgeois

These wines are aged in wood for 22 months, with 20 percent new oak and have improved enormously since the late 1980s. Easily equivalent to *cru classé* quality.

RED As richly flavored as ever, but without the tannins or acidity that used to be this wine's pitfall.

☼ Cabernet Sauvignon 45%, Merlot 40%, Cabernet Franc 10%, Petit Verdot 5%

🕒 10–30 years

Second wine: *Château Rucheterre*

CHÂTEAU DES TROIS-CHARDONS

★

A tiny production of very high-quality wine from a château named after the current owner, a Monsieur Chardon, and his two sons.

RED Ultraclean, soft, fruity but serious wines of some finesse and well-defined Margaux character.

☼ Cabernet Sauvignon 50%, Merlot 40%, Cabernet Franc 10%

🕒 6–15 years

GRAVES, CÉRON, SAUTERNES, AND BARSAC

The finest red Graves wines are produced in Pessac-Léognan, good red and improving dry white wines in the center of Graves, and the great sweet wines of Sauternes and Barsac in the south. The emphasis in production is on classic red wines.

THE SILKY-SMOOTH red wines of the Graves district have been famous since the Middle Ages, when they were protected by local laws that punished those who dared to blend them with other Bordeaux wines. Château Haut-Brion was the only red wine outside the Médoc to be classified in 1855, and such was its reputation that it was placed alongside the *premiers crus* of Latour, Lafite, Mouton, and Margaux. Beneath Haut-Brion, there are a few great wines equivalent in quality to *deuxième* or *troisième cru*, but only a few.

The relative lack of superstars in Graves is offset by a higher base quality of wine and greater consistency of performance in the red wines at least. There are 43 communes in this appellation. Much the best are Léognan, Talence, and Pessac, after which Martillac and Portets are the most outstanding, followed by Illats and Podensac. All the greatest wines are therefore in the north of the Graves district, amid the urban sprawl of Bordeaux, and this presents something of a problem. The once-peaceful left bank of the Garonne is slowly and inexorably disappearing. As the city bursts outward, more rural vineyards are encircled by the concrete jungle, and many quite simply vanish. How many Bordeaux

aficionados who fly directly to the airport in Mérignac stop to consider the cost of such progress? In 1908 there were 30 winemaking properties in the commune of Mérignac; today there is just one—Château Picque-Caillou. The conurbated communes of Cadaujac, Gradignan, Léognan, Martillac, Mérignac, Pessac, Talence, and Villenave d'Ornon have lost 214 wine châteaux over the same period.

THE PROBLEM OF WHITE GRAVES SOLVED

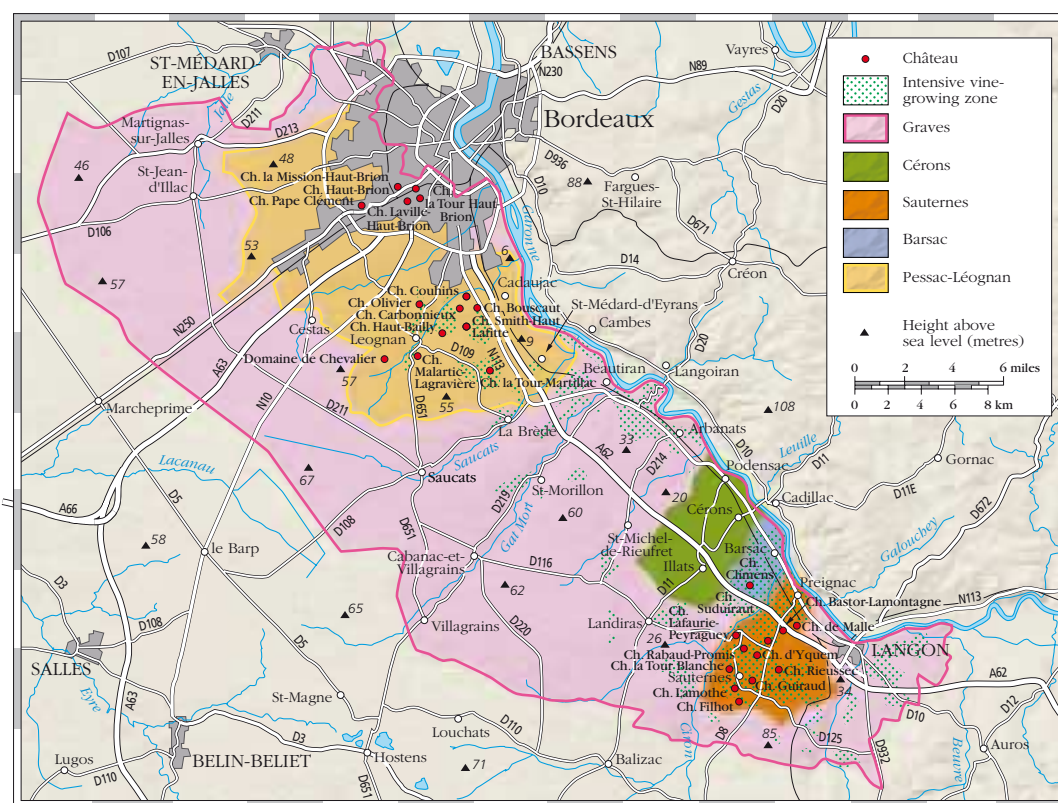

Well almost! While the quality and reputation of the red wines have always been well established, white Graves had a serious identity problem that came to a crisis point in the mid-1980s. Although fine white Graves were being produced, most of it was in the northern communes, but they were tarred with the same brush as the worst white wines from farther south. It was not simply a north-south divide; there was also an identity problem—should they be making rich, oak-aged blends or light and fluffy Sauvignon Blanc? Paradoxically, the worst wines came from some of the best properties in the north, produced by winemakers who either did not know how to, or did not care to, clean up their act, as they continued to sell tired, oversulfured, oxidized, and flabby wines on the backs of their decaying reputations.

An official north-south divide, however, proved to be the solution for, since 1987, when the Pessac-Léognan AOC was introduced, things have never looked better for Graves. The Pessac-Léognan appellation is a single appellation for both red and white wines from the communes Cadaujac, Canéjan, Gradignan, Léognan, Martillac, Mérignac, Pessac, St.-Médard-d'Eyrans, Talence, and Villenave d'Ornon. This has had the effect of giving to the northern châteaux the official quality recognition

GRAVES, CÉRON, SAUTERNES, AND BARSAC, see also p63
The winemaking area that includes Graves, Cérons, Sauternes, and Barsac forms a swathe that sweeps down from Bordeaux, parallel with the Garonne.

VINES AT HAUT-BRION
Rose bushes at the end of each row act as a pest early-warning system.

THE CLASSIFICATION OF GRAVES

The only Graves property to be classified in 1855 was Château Haut-Brion. The Syndicat, for the defense of the Graves appellation, wanted to create its own classification, but was prevented from doing so until the 1921 law was changed in 1949. The first classification was not made until 1953, and this itself was later modified in 1959.

Distinction is made between red wines and white wines, but no attempt at ranking between the various growths is made—they all have the right to use the term *cru classé*. It can be seen from the 1,320 acres (535 hectares) of classified properties listed below that this represents not much more than 13 percent of the total 1,745 acres (4,350 hectares) of delimited vineyards planted in the Graves and Pessac-Léognan appellation.

RED WINES	COMMUNE	AREA CURRENTLY UNDER VINE	AREA CURRENTLY UNDER VINE
Château Bouscaut	Cadaujac	96 acres	(39 ha)
Château Carbonnieux	Léognan	124 acres	(50 ha)
Domaine de Chevalier	Léognan	82 acres	(33 ha)
Château de Fieuzal	Léognan	96 acres	(39 ha)
Château Haut-Bailly	Léognan	69 acres	(28 ha)
Château Haut-Brion	Pessac	106 acres	(43 ha)
Château La Mission-Haut-Brion	Pessac	52 acres	(21 ha)
Château Latour-Haut-Brion	Talence	12 acres	(5 ha)
Château La Tour-Martillac	Martillac	69 acres	(28 ha)
Château Malartic-Lagravière	Léognan	91 acres	(37 ha)
Château Olivier	Léognan	94 acres	(38 ha)
Château Pape-Clément	Pessac	74 acres	(30 ha)
Château Smith-Haut-Lafite	Martillac	109 acres	(44 ha)
TOTAL AREA UNDER VINE		1,075*ACRES	(435 HA)

WHITE WINES	COMMUNE	AREA CURRENTLY UNDER VINE	AREA CURRENTLY UNDER VINE
Château Bouscaut	Cadaujac	20 acres	(8 ha)
Château Carbonnieux	Léognan	104 acres	(42 ha)
Domaine de Chevalier	Léognan	12 acres	(5 ha)
Château de Fieuzal	Léognan	20 acres	(8 ha)
Château Couhins-Lurton	Villenave	13 ha	(32 acres)
Château Haut-Brion	Pessac	10 acres	(3 ha)

Château Laville-Haut-Brion	Talence	10 acres	(4 ha)
Château Malartic-Lagravière	Léognan	17 acres	(7 ha)
TOTAL AREA UNDER VINE		250*ACRES	(100 HA)

*Note—These figures are not precise conversions of the hectare totals, but are column totals and differ because of rounding up.

THE GLOWING TINTS OF CHÂTEAU D'YQUEM
Château d'Yquem vintages, stretching back from a bottle of the 1980. The younger wines are a rich gold with a greenish tinge, deepening to old gold and amber with the older vintages.

CHÂTEAU D'YQUEM:
THE INNER COURTYARD
A huge stone well dominates the square central courtyard of this beautiful château, which comprises disparate elements dating from the 15th, 16th, and 17th centuries.

they both wanted and deserved. It was a bit slow to start off—after all, Pessac-Léognan hardly trips off the tongue and there were worries about its marketability. There is still a tendency to put Graves on labels, and use Pessac-Léognan to qualify the wine as if it were a higher classification of Graves, which for all practical purposes it is.

Once the châteaux realized that foreign markets were picking up on the superior connotation of Pessac-Léognan, use of the appellation soon became widespread. Whether by their own volition or due to peer pressure, many of the underperformers have become the most quality-conscious châteaux in the appellation, and it has spurred producers in the south to improve their wines. They do not like being considered inferior, and as they intend to prove they are not, the consumer can only gain.

CÉRONS

This is an area situated within the boundaries of Graves. It is the stepping stone between dry white Graves, and sweet white Sauternes and Barsac. The châteaux of Cérons have been given the official right to make both red and white Graves, Graves Supérieur (which may be dry but is usually sweet) and, of course, the sweet wine of Cérons—a wine that has enjoyed a modest reputation for nearly 200 years. In fact, only 20 percent of the production in this area is sold as Cérons since the appellation covers three communes, those of Illats, Podensac, and Cérons itself. Many of the vineyards comprise scattered plots, some of which are partially planted with acacias.

SAUTERNES AND BARSAC

The gap between ordinary sweet white wines and the great wines of Sauternes and Barsac is as wide as that between sweet and dry wines. What creates this gap is something called “complexity”—to

VINEYARDS AT CHÂTEAU D'YQUEM
Here, the winter vineyard shows the characteristic sandy-pebbly clay topsoil and the system of wires and stakes that supports the vines. Yquem's clay subsoil contains 62 miles (100 kilometers) of terra-cotta pipes, which were laid down at the end of the 19th century to provide perfect drainage.

TRADITIONAL HORSE-DRAWN PLOW

At *Château d'Yquem* workhorses are used to help plow the topsoil between the rows, both after the harvest and again in March.

find out what that is, sample the aroma of a glass of mature Sauternes. The wines produced in Sauternes are not only the world's most luscious, but also the most complex wines. I have seen hardened men who resolutely refuse to drink anything sweeter than lemon juice go weak at the knees after one sniff of *Château Suduiraut*, and I defy the most stubborn and bigoted anti-sweet wine drinker not to drool over a glass of *Château d'Yquem* 1967. Astonishingly, there are dissenters, but for me Yquem is by far the best wine of these two appellations, Sauternes and Barsac. The battle for second place is always between the soft, luscious style of *Suduiraut*, and the rich, powerful character of *Rieussec*, with *Climens*, *Nairac*, and the nonclassified growths of *Gillette* and *de Fargues* in close pursuit. *Guiraud* has the potential to go right to the top, and with so many châteaux seriously improving, they could all end up chasing each other for the number two spot.

The “noble rot”

Yquem might be the ultimate sweet white wine, but many other great wines are made in these two small areas tucked away in the Bordeaux backwaters. What gives all these wines their hallmark of complexity is, literally, a lot of rot—namely “noble rot,” or the fungal growth *Botrytis cinerea*. The low-lying hills of Sauternes and, to a lesser extent, of Barsac, together with a naturally warm but humid climate, provide a natural breeding ground for botrytis, the spores of which are indigenous to the area. They remain dormant in the vineyard soil and on vine bark until they are activated by suitable conditions—alternate moisture and heat (the early-morning mist being followed by hot, mid-morning sunshine). The spores latch on to the skin of each grape, replacing its structure with a fungal growth and feeding on moisture from within the grape. They also devour five-sixths of the grape's acidity and one-third of its sugar, but as the amount of water consumed is between one-half and two-thirds, the effect is to concentrate the juice into a sticky, sugar-rich pulp. A healthy, ripe grape with a potential of 13 percent alcohol is thus converted into a mangy-looking mess with a potential of between 17.5

percent and 26 percent. The spread of botrytis through a vineyard is neither orderly nor regular, and the harvest may take as long as 10 weeks to complete, with the pickers making various sorties, or *tries*, through the vineyard. On each *trie*, only the affected grapes should be picked, but care must be taken to leave some rot on each bunch to facilitate its spread. The longer the growers await the miraculous “noble rot,” the more the vines are prone to the ravages of frost, snow, hail, and rain, any of which could destroy an entire crop.

The viticulture of Sauternes and Barsac is the most labor-intensive of any region. The yield is very low, officially a maximum of 112 cases per acre (25 hectoliters per hectare), about half that in the Médoc, and the levels achieved in the best châteaux are much lower, around 67 to 90 cases per acre (15 to 20 hectoliters per hectare). At Yquem it is even less, the equivalent of one glass per vine. On top of all this, the vinification is, at the very least, difficult to handle, and maturation of a fine sweet wine demands a good proportion of very expensive new oak.

Variations in character

Not all the sugar is used up during fermentation, even when a wine of perhaps 14 to 15 percent alcohol is made. The remaining unfermented sugar, often between 50 and 120 grams per liter, gives the wine its natural sweetness. However, unlike Sauternes' German counterparts, its alcohol level is crucial to its character. Its strength, in harmony with the wine's sweetness, acidity, and fruit give it a lusciousness of concentration that simply cannot be matched. Its complexity is not, however, the effect of concentration, although an increased mineral level is no doubt an influence. Complexity is created by certain new elements that are introduced into the grape's juice during the metabolic activities of its botrytis—glycerol, gluconic acid, saccharic acid, dextrin, various oxidizing enzymes, and an elusive antibiotic substance called “botrycine.”

It is easy to explain how these components of a botrytized wine that form its inimitably complex character can vary. When tasting wine from different *tries* at the same château, the intensity of botrytized character varies according to the “age” of the fungus when the grapes are harvested. Wines made from the same percentage of botrytized grapes collected at the beginning and end of the harvest are noticeably mute compared to those in the middle when the rot is at its most rampant. If it is not surprising that youthful *Botrytis cinerea* has an undeveloped character, the same cannot be said of late-harvested. Many people believe that the longer botrytis establishes itself, the more potent its effect, but this is not true.

CHÂTEAU DE FARGUES

The original family home of the Lur-Saluces family is now a ghostly ruin. The family moved to Yquem in 1785 upon its union with the De Saunage family.

THE "POURRITURE NOBLE," OR NOBLE ROT

A bunch of *Sémillon* grapes ready for the first *trie*. Some of the grapes are still unaffected by the fungus, some are affected and discolored but not shriveled, others are dried, withered, and covered with the fungus bloom.

The rewards, the reality, and the future

A good Sauternes is the most arduous, expensive, and frustrating wine in the world to produce—and what is the winemaker's reward? Very little, I'm afraid. Aside from Château d'Yquem—not only the greatest Sauternes but the greatest wine *per se*—the wines of this region fail to realize their true worth. This is predictable in a world where the trend is toward lighter and drier styles of wine, and may have a positive effect for Sauternes *aficionados*, for it means a cheaper supply of their favorite wine. In the long term this is not a positive way to operate, and some proprietors simply cannot afford to go on. The Comte de Pontac uprooted all the vines at his *deuxième cru* Château de Myrat in Barsac, and even the ever-optimistic Tom Heeter, former owner of Château Nairac, once said "You have to be at least half-crazy to make a living out of these wines." I feel we certainly do not deserve the luscious wines of Sauternes and Barsac if we continue to ignore them, but if the authorities had more sense, and the owners more business acumen, these wines could literally become "liquid gold."

The only way ahead

The vineyards of Sauternes and Barsac should also be allowed to sell red and dry white wines under the Graves appellation. If this is a right accorded to modest Cérons, why not to its illustrious neighbors? Many châteaux already make red and dry white wines, but they are sold under the cheaper "Bordeaux" appellation. Tom Heeter was right, the proprietors must be half-crazy, because their motivation for producing these alternative products is to subsidize the cost of making their botrytized wine, when they should be trying to supplement their incomes. Given the incentive of a

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

The left bank of the Garonne river, stretching southeast from just north of Bordeaux to 6 miles (10 kilometers) east of Langon. Cérons, Sauternes, and Barsac are tucked into the southern section of the Graves district.

CLIMATE

Very similar to the Médoc, but fractionally hotter and with slightly more rainfall. In Sauternes and Barsac it is mild and humid, with an all-important fall alternation of misty mornings and later sunshine, the ideal conditions for "noble rot."

ASPECT

The suburbs of Bordeaux sprawl across the northern section of this district, becoming more rural beyond Cadaujac. Graves has a much hillier terrain than the Médoc, with little valleys cut out by myriad streams that drain into the Garonne. Some of the vineyards here are very steep. The communes of Sauternes, Bommès, and Fargues are hilly, but Preignac and Barsac, on either side of the Ciron—a small tributary of the Garonne—have gentler slopes.

SOIL

Traveling south through the district, the gravelly topsoil of Graves gradually becomes mixed with sand, then with weathered limestone and eventually with clay. The subsoil also varies, but basically it is iron-pan, limestone, and clay, either pure or mixed. Cérons has a stony soil, mostly flint and gravel, over marl; there is reddish clay-gravel over clay, or gravelly iron-pan in Sauternes, and clay-

limestone over clay-gravel in Fargues. The gravel slopes of Bommès are sometimes mixed with heavy clay soils, while the plain is sandy clay with a reddish clay or limestone subsoil. Preignac is sand, gravel, and clay over clay-gravel in the south, becoming more alluvial over sand, clay, and limestone closer to Barsac. Where the classified growths of Barsac are situated, the soil is clay-limestone over limestone, elsewhere the topsoil mingles with sandy gravel.

VITICULTURE AND VINIFICATION

Some châteaux add a certain amount of *vin de presse* to the red wine. The *cuvaison* varies between eight and 15 days, although some Graves châteaux permit 15–25 days. Maturation in cask is generally between 15 and 18 months. The sweet white wines of Sauternes and Barsac are made from several *tries* of late-harvested, overripe grapes which, ideally, have "noble rot." Destalking is usually unnecessary. The fermentation of grape juice so high in sugar content is difficult to start and awkward to control, but it is usually over within two to eight weeks. The exact period of fermentation depends upon the style desired. Many of the best wines are matured in cask for one and a half to three and a half years.

GRAPE VARIETIES

Primary varieties: Cabernet Sauvignon, Cabernet Franc, Merlot, Sémillon, Sauvignon Blanc.
Secondary varieties: Malbec, Petit Verdot, Muscadelle

superior appellation, the châteaux should concentrate on making the finest red and dry white wines every year. Only when conditions appear favorable should some of the white grape crop be left on the vine, with fingers crossed for an abundance of *Botrytis cinerea*. Instead of these châteaux investing in new oak for modest vintages, they should utilize the casks for the red and the dry white. The result would be a tiny amount of the world's most luscious wine, maybe three or four years in 10. It would no longer be necessary to attempt the impossible task of selling an old-fashioned image to young wine drinkers; the limited supply would outstrip the current demand. After 30 years of watching this area's vain attempts to win over popular support for its wines, I have come to accept the view of Comte Alexandre de Lur-Saluces, proprietor of Château d'Yquem. When asked to justify the price of Yquem, he simply said his wines are not made for everyone; they are made for those who can afford them.

THE APPELLATIONS OF GRAVES, CÉRON, SAUTERNES, AND BARSAC

BARSAC AOC

The commune of Barsac is one of five that have the right to the Sauternes appellation. (The others are Preignac, Fargues, Bommès, and Sauternes itself.) Some generic wines sold in bulk may take advantage of this, but all individual properties are sold as Barsac. The wine must include overripe botrytized grapes harvested in *tries*.

WHITE Luscious, intensely sweet wines similar in style to Sauternes, but perhaps lighter in weight, slightly drier, and less rich. As in Sauternes, 1983 is one of the best vintages of the 20th century.

☞ Sémillon, Sauvignon Blanc, Muscadelle

🕒 6–25 years for most wines; between 15–60 years for the greatest

CÉRON AOC

These inexpensive wines from an area adjacent to Barsac are the best value-for-money sweet wines in Bordeaux. They must include overripe botrytized grapes harvested in *tries*.

WHITE Lighter than Barsac, but often just as luscious, the best of these wines can show true botrytis complexity.

☞ Sémillon, Sauvignon Blanc, Muscadelle

🕒 6–15 years for most wines

GRAVES AOC

This appellation begins at the Jalle de Blanquefort, where the Médoc finishes and runs for 37 miles (60 kilometers) along the left bank of the Garonne. Almost two-thirds of the wine is red, and is consistently high in quality and value.

RED I was brought up on the notion that with full maturity a Graves reveals itself through a certain earthiness of character. Experience has taught me the opposite. The biggest Graves from hot years can have a denseness that may combine with the smoky character of new oak to give the wine a roasted or tobacco-like

complexity, but Graves is intrinsically clean. Its hallmark is its vivid fruit, clarity of style, silky texture, and hints of violets.

☞ Cabernet Sauvignon, Cabernet Franc, Merlot
Secondary grape varieties: Malbec, Petit Verdot

🕒 6–15 years

WHITE This is the disappointing half of the appellation: light- to full-bodied, from pure Sauvignon to pure Sémillon (with all proportions of blends in between, flabby to zingy, and unoaked to heavily oaked). Pay strict attention to the château profiles on the following pages. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☞ Sémillon, Sauvignon Blanc, Muscadelle

🕒 1–2 years for modest wines; 8–20 years for the best

GRAVES SUPÉRIEUR AOC

Some surprisingly good would-be Barsacs lurk beneath this appellation that is rarely seen, yet accounts for more than one-fifth of all white Graves produced.

WHITE This wine can be dry, but most is a sweet style, similar to Barsac.

☞ Sémillon, Sauvignon Blanc, Muscadelle

🕒 6–15 years

PESSAC-LÉOGNAN AOC

Introduced in September 1987, this appellation covers the 10 best communes that have the right to the Graves AOC, and it is not by chance that it also encompasses 55 of the best estates, including all the *crus classés*. The technical requirements are similar to Graves except that the Carmenère may be used for red wines; white wines must contain at least 25 percent Sauvignon Blanc and a slightly stricter yield. If you are not sure which château to buy in the Graves, it is worth remembering this appellation

and paying a premium for it.

RED Soft, silky reds of great violet elegance, and not lacking either concentration or length. Most have been aged in a percentage of new oak, which adds a smoky or tobacco-like complexity.

☞ Cabernet Sauvignon, Cabernet Franc, Merlot, Malbec, Petit Verdot, Carmenère

🕒 6–20 years

WHITE The serious styles are invariably oaked these days, with oodles of flavor, often tropical and fruity, with a firm acid structure. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☞ A minimum of 25% Sauvignon Blanc, plus Sémillon, Muscadelle

🕒 Usually 3–8 years, but up to 20 years for the best

SAUTERNES AOC

The much hillier communes of Bommès, Fargues, and Sauternes produce the richest of all Bordeaux's dessert wines, while the châteaux in the lower-lying, flatter Preignac make wines very close in style to Barsac. The wine must include overripe botrytized grapes harvested in *tries*.

WHITE Golden, intense, powerful, and complex wines that defy the senses and boggle the mind. They are rich in texture, with masses of rich, ripe, and fat fruit. Pineapple, peach, apricot, and strawberry are some of the lush flavors that can be found, and the creamy-vanilla character of fruit and new oak matures into a splendid honeyed sumptuousness that is spicy and complex. Above all, these wines are marked by the distinctive botrytis character.

☞ Sémillon, Sauvignon Blanc, Muscadelle

🕒 10–30 years for most wines; between 20 and 70 years for the greatest

THE GENERIC APPELLATIONS OF GRAVES AND CÉRON

CHÂTEAU D'ARCHAMBEAU

Illats
★★★

Sited in Podensac, one of the communes of Cérons, this fine property is owned by Dr. Jean Dubourdieu, nephew of Pierre Dubourdieu of Doisy-Daëne, a *deuxième cru* in Barsac. He produces a fine-quality, fragrant, and attractively aromatic red wine, which has the typical silky Graves texture. The deliciously fresh, crisp, and fruity dry white Graves is better than some efforts by certain *cru classé* châteaux. His soft, fruity Cérons is *moelleux* with the emphasis more on perfume than richness.

Second wines: *Château Mourlet, Château La Citadelle*

CHÂTEAU LA BLANCHERIE

La Brède
★★★

This fresh and lively dry white Graves is cool fermented, and has plenty of juicy fruit flavor balanced with ripe acidity.

CHÂTEAU LA BLANCHERIE-PEYRAT

La Brède
★★★

The red wine of La Blancherie is sold under this label. It is a medium- to full-bodied wine that is matured in casks and has an engaging, spicy bouquet and a rich, fruity flavor.

CHÂTEAU BOUSCAUT

Cadaujac
Cru Classé (red and white)
★★★

Belongs to Sophie and Louis Lurton. The red wine is matured in wood for 18 months, with 25 percent new oak. The white wine is fermented and matured for up to six months in 100 percent new oak.

RED Until the 1980s this wine was big, tough, and tannic with little charm. Recent vintages have shown increasing suppleness, but the wine still struggles to find form. The second wine, *Château Valoux*, is a really excellent wine for its class.

☞ Merlot 55%, Cabernet Sauvignon 35%, Cabernet Franc 5%, Malbec 5%

🕒 8–20 years

Second wine: *Château Valoux*

WHITE This dry, medium-bodied white wine has exotic fruit flavors supported by gentle oak.

☞ Sémillon 70%, Sauvignon 30%

🕒 5–10 years

CHÂTEAU CARBONNIEUX

Léognan
Cru Classé (red and white)
★★★

This is the largest wine estate in Graves. The white wine, the better known of the two styles, is cool-fermented in stainless steel and matured in 100 percent new oak for three months.

RED I frankly did not care for this wine until the splendid 1985

vintage, which seduced me with its creamy-oak nose, silky-textured fruit, and supple tannin, but similar joys have been few and far between.

🍷 Cabernet Sauvignon 55%, Merlot 30%, Cabernet Franc 10%, Malbec, and Petit Verdot 5%

🕒 6–18 years

WHITE Once solid and uninspiring, this wine has really come into its own since the early 1990s. From this time Château Carbonnieux has been lush and creamy with well-integrated new oak and not a little finesse.

🍷 Sauvignon 60%, Sémillon 40%

🕒 2–5 years

Second wine: *Château La Tour Léognan*

CHÂTEAU DE CARDAILLAN

Toulence

★★★

Under the same ownership as Château de Malle, this is a *deuxième cru* Sauternes in the commune of Preignac. This excellent property produces a technically brilliant red Graves with a voluptuous blackcurrant flavor, which develops quickly, yet ages well.

🍷 Cabernet Sauvignon 80%, Merlot 20%

CHÂTEAU LES CARMES-HAUT-BRION

Pessac

★

From 1584 until the French Revolution in 1789, this property belonged to the white friars Carmes, hence the name. This soft, Merlot-dominated wine has always been in the shadow of its more famous neighbor, Haut-Brion, and always will, but there has been a noticeable shift upward in quality.

CHÂTEAU DE CÉRONS

Cérons

This 17th-century château, which makes an attractively light, sweet white Cérons, is owned by Jean Perromat, owner of Mayne-Binet, de Bessanes, Ferbos, Ferbos-Lalanette in Cérons, and Prost in Barsac.

CHÂTEAU DE CHANTEGRIVE

Podensac

★★

This château produces a substantial quantity of an excellent, soft, and fruity red Graves (Cabernet Sauvignon 50 percent, Merlot 40 percent, Cabernet Franc 10 percent) that is matured in wooden vats for six months and then transferred to casks for a further 12 months with 20 percent new oak. It also produces an elegant, aromatic, cool-fermented dry white Graves that is produced entirely from the first pressing (Sémillon 60 percent, Sauvignon 30 percent, Muscadelle

10 percent). The proprietor also owns Château d'Anice.

Second wine: *Château Mayne-Lèvêque*

Other wine: *Château Bon-Dieu-des-Vignes*

DOMAINE DE CHEVALIER

Léognan

Cru Classé (red and white)

★★★

One of the top three Graves after Haut-Brion, this extraordinary property gives me more pleasure than any other in this AOC. It utilizes the most traditional methods to produce outstanding red and dry white wine. Fermenting red wine at a temperature as high as 89°F (32°C) might encourage some problems elsewhere, but under the meticulous care of those at the Domaine de Chevalier, this practice, designed to extract the maximum tannins and coloring material, is a positive advantage. The red wine is matured in wood for up to 24 months, with 50 percent new oak. The white wine is fermented and matured in wood for 18 months, with up to 25 percent new oak.

RED Deep-colored, medium-to-full or full-bodied wines, stunningly rich in fruit and oak, with intense cedarwood and tobacco overtones, yet subtle, seductive, and full of finesse. These are wines of great quality, longevity, and complexity.

🍷 Cabernet Sauvignon 65%, Merlot 30%, Cabernet Franc 5%

🕒 15–40 years

WHITE Even better than the red, but produced in frustratingly small quantities, this star-bright, intensely flavored dry wine is almost fat with exotic fruit and epitomizes finesse.

🍷 Sauvignon 70%, Sémillon 30%

🕒 8–20 years

CHÂTEAU CHICANE

Toulence

Château Chicane is one of the châteaux that produce only red wine. It is typical of the large number of properties in the area that consistently make an excellent basic Graves. Here is an elegant, medium-bodied red wine, with a bouquet of violets, and heaps of clean, silky-smooth fruit.

CLOS FLORIDÈNE

Pujols-sur-Ciron

★★★

Owned by Bordeaux's white wine revolutionary, Denis Dubourdieu, who is producing a sensational dry white Graves (Sémillon 70 percent, Sauvignon 30 percent) from this small estate. The red Clos Floridène (Cabernet Sauvignon 80%, Merlot 20%) possesses an extraordinary combination of rich fruit and elegant new oak, and is the equivalent of a top *cru classé*.

Second wine: *Second de Floridène*

CLOS SAINT-GEORGES

Illats

★★

This property produces a small amount of red Graves, but is most famous for its scintillating sweet Graves Supérieur. A stunningly rich and flavorsome wine, full of botrytis complexity.

CHÂTEAU COUHINS

Villeneuve-d'Ornon

Cru Classé (white only)

The Institut National de La Recherche Agronomique (INRA) and Lucien Lurton share this estate. INRA produces a separate wine, which is cool fermented with no maturation in wood.

WHITE Clean, crisp, and fruity dry white wines that are well made.

🍷 Sauvignon 50%, Sémillon 50%

🕒 2–4 years

Note Château also produces a red Graves, but it is not a *cru classé*.

CHÂTEAU COUHINS-LURTON

Villeneuve-d'Ornon

Cru Classé (white only)

★★

The highest-performing half of the Couhins estate owned by André Lurton. The wine is fermented and matured in 100 percent new oak.

WHITE Delicious dry wines that have all the advantages of freshness and fruitiness, plus the complexity of oak. Surprisingly fat for pure Sauvignon.

🍷 Sauvignon 100%

🕒 3–8 years

Second wine: *Château Cantebau*

CHÂTEAU DE CRUZEAU

St.-Médard-d'Eyrans

★★

Situated on a high, south-facing crest of deep, gravel soil, this property belongs to André Lurton, owner of Château Couhins-Lurton, the high-performance white Graves *cru classé*. De Cruzeau makes 18,000 cases of full-bodied red Graves (Cabernet Sauvignon 60 percent, Merlot 40 percent) that is ripe and velvety with a spicy-cedarwood complexity.

This château also produces around 5,000 cases of a fine-quality white Graves (Sauvignon 90 percent, Sémillon 10 percent) that after some five years of maturation develops an intense citrus bouquet and flavor.

CHÂTEAU FERRANDE

Castres

A large property that, like so many in Graves, makes better red wine than white. The red wine (Cabernet Sauvignon 35 percent, Merlot 35 percent, Cabernet Franc 30 percent) is a consistently good-quality, chocolatey Graves that is matured in

wood for 15 to 18 months, with 10 to 15 percent new oak. The dry white Graves (Sémillon 60 percent, Sauvignon 35 percent, Muscadelle 5 percent) is somewhat less inspiring.

CHÂTEAU DE FIEUZAL

Léognan

Cru Classé (red only)

★★

This property occupies the highest and best exposed gravel crest in the commune. The vineyard and the château are immaculate, which is reflected in the style of its wines.

RED A deeply colored, full-bodied, rich, stylish wine with typical Graves silky texture and ample finesse.

🍷 Cabernet Sauvignon 60%, Merlot 30%, Malbec 5%, Petit Verdot 5%

🕒 12–30 years

Second wine: *L'Abeille de Fieuzal*

Note De Fieuzal also produces a rich, exotic, and oaky dry white wine that is not *cru classé*, yet is one of the finest white Graves produced.

GRAND ENCLOS DU CHÂTEAU DE CÉRONS

Cérons

★★★

This property, entirely enclosed by a wall, once formed the largest part of the estate of Château de Cérons. The wines produced here—far superior to those of Château de Cérons, and possibly the best of the appellation—are fat and rich, with good aging potential and some complexity. The proprietor also makes dry white wines at nearby Château Lamouroux.

DOMAINE DE LA GRAVE

Portets

★★

Formerly owned by maestro Peter Vinding-Diers, the Danish-born, Australian-trained winemaker who isolated the famous “RZ” yeast strain. Vinding-Diers sold this property along with Landiras to Van Quikelberg in 1998. The wines are for medium-term consumption, with a very soft, vibrantly fruity, easy-to-drink red and a lovely oak-aged white.

CHÂTEAU HAURA

Illats

Château Haura produces wines under the Cérons appellation. Although not as consistent as it should be, it can sometimes produce a fine, honey-sweet wine with some distinction and concentration. The residence on this property is known as Château Hillot and red and dry white Graves are sold under this name that come from vines contiguous with those of Haura. The proprietor also owns Château Tucau in Barsac.

CHÂTEAU HAUT-BAILLY

Léognan
Cru Classé (red only)
★★★

This château's well-kept vineyard is located on an excellent gravel crest bordering the eastern suburbs of Léognan. This red Graves is matured in wood for up to 20 months, with 50 percent new oak.

RED The class of fruit and quality of new oak is immediately noticeable on the creamy-ripe nose of this medium-bodied wine. Never block-busting stuff, but always elegant and stylish.

🍷 Cabernet Sauvignon 60%,
Merlot 30%, Cabernet Franc
10%

🕒 12–25 years

Second wine: *Le Pardre de Haut-Bailly*

CHÂTEAU HAUT-BRION

Pessac
Cru Classé (red and white)
★★★

In 1663 this famous château was mentioned in Pepys's Diary as "Ho Bryan." It has been under American ownership since 1935, when it was purchased by Clarence Dillon, the banker. The parent company is called Domaine Clarence Dillon, and Dillon's granddaughter, the Duchesse de Mouchy, is the president. Jean Delmas is the technical director. The red wine is fermented in stainless steel and matured in wood for 24 to 27 months, with 100 percent new oak. The white wine is fermented and matured in 100 percent new oak.

RED This supple, stylish, medium- to full-bodied wine has a surprisingly dense flavor for the weight, and a chocolaty-violet character. The ideal commercial product, it develops quickly and ages gracefully.

🍷 Cabernet Sauvignon 55%,
Merlot 25%,
Cabernet Franc 20%

🕒 10–40 years

Second wine: ✓ *Babans-Haut-Brion*

WHITE This is not one of the biggest white Graves, but it is built to last. It is sumptuous, oaky, and teeming with citrus and more exotic fruit flavors.

🍷 Sauvignon 50%,
Sémillon 50%

🕒 5–20 years

CHÂTEAU LANDIRAS

Landiras

Mr. and Mrs. van Quikelberg purchased this property in 1998. Production is four-fifths white and potentially of *cru classé* quality.

CHÂTEAU LARRIVET-HAUT-BRION

Léognan
★★

Originally called Château Canolle, the name was at one point changed to Château Haut-Brion-Larrivet. Larrivet is a small stream that flows through the property, and Haut-Brion means "high gravel," referring to the gravel plateau west of Léognan on which the vineyard is situated.

Château Haut-Brion took legal action over the renaming, and since 1941 the property and its wines have been known as Château Larrivet-Haut-Brion. The red wine (Cabernet Sauvignon 55 percent, Merlot 45 percent), which is matured in wood for 18 months with 25 percent new oak, is certainly *cru classé* standard, being a well-colored and full-bodied Graves with good flavor, spicy-cedarwood undertones, and a firm tannin structure. The white wine (Sauvignon Blanc 85 percent, Sémillon 15 percent) has leapt in quality since 1996.

CHÂTEAU LAVILLE-HAUT-BRION

Talence
Cru Classé (white only)
★★

Since 1983, this small vineyard has been owned by Clarence Dillon, American proprietor of Château Haut-Brion. This "château with no château" is thought of as the white wine of La Mission. The wine is fermented and matured in cask.

WHITE Until 1982, the style was full, rich, oaky, and exuberant, tending to be more honeyed and spicy with a floral finesse since 1983. Both styles are stunning and complex.

🍷 Sauvignon 60%, Sémillon 40%
🕒 6–20 years

CHÂTEAU LA LOUVIÈRE

Léognan
★★★

Part of André Lurton's Graves empire, this château has made a clear about-face since 1985 as far as the quality of its red wine goes. A string of dull, lifeless vintages has come to an end with the beautiful, deep, and vividly colored wines of the years 1985 and 1986. There was another step up in quality in the mid-1990s, since when this has been a truly splendid, full-bodied red Graves that is rich in spicy-blackcurranty fruit and new oak (Cabernet Sauvignon 70 percent, Merlot 20 percent, Cabernet Franc 10 percent). The white wines of Château La Louvière have always

been excellent, but even here there has been a gigantic leap in quality. These are exciting and complex wines that deserve to be among the very best *cru classés*.

Second wine: *Château Coucheroy*

Other wines: "L" de Louvière (dry white), *Château Les Agumelles*, *Château Cantebau*, *Château Clos-du-Roy*, *Château Le Vieux-Moulin*

CHÂTEAU MAGENCE

St.-Pierre-de-Mons
★

A good property making 5,000 cases of a supple, well-perfumed, red wine (Cabernet Sauvignon 40 percent, Cabernet Franc 30 percent, Merlot 30 percent) and 10,000 cases of attractive, aromatic, cool-fermented dry white Graves (Sauvignon 64 percent, Sémillon 36 percent).

CHÂTEAU MALARTIC-LAGRAVIÈRE

Léognan
Cru Classé (red and white)
★★

This 50-acre (20-hectare) vineyard forms a single block around the château. An underrated property, which has consistently produced much higher quality wines since the 1980s. The red wine is fermented in stainless steel at a low temperature (61°F/16°C), and matured in wood for 20 to 22 months, with one-third new oak. The white wine is now matured in 100 percent new oak for seven to eight months.

RED Rich, garnet-colored with an opulent sweet-oak nose, penetrating flavor, and supple tannin structure.

🍷 Cabernet Sauvignon 50%,
Cabernet Franc 25%, Merlot 25%

🕒 7–25 years

WHITE Recent vintages of this once lackluster white Graves prove the worth of new oak. It is not difficult to mistake this honey-rich, ripe, and succulent wine for pure Sémillon.

🍷 Sauvignon 100%

🕒 5–12 years

CHÂTEAU MAYNE-BINET

Cérons

Proprietor Jean Perromat also owns several other châteaux, namely De Cérons, De Bessanes, Ferbos, and Ferbos-Lalanette in Cérons and Château Prost in Barsac. At Mayne-Binet he produces a fine sweet white Cérons.

CHÂTEAU MILLET

Portets
★ (red only)

The red is a deep, dark-colored wine made in a traditional style with a dense flavor of concentrated spicy fruit. Although it has a firm tannin structure, this quickly rounds out with a few years in bottle. There is a dry white Graves, but it lacks the boldness and character of the red.

Other wine: *Château Du Clos Renon*

CHÂTEAU LA MISSION-HAUT-BRION

Pessac
Cru Classé (red only)
★★★

Under the ownership of Henri Woltner, this was the pretender to the throne of Graves. Little wonder, then, that Clarence Dillon of Haut-Brion snapped it up when the opportunity arose in 1983. The red wine is matured in wood for 24 months, with 50 percent new oak.

RED Despite different winemaking techniques, Dillon's La Mission is no less stunning than Woltner's. Both styles are deeper, darker, and denser than any other wine Graves can manage. They are essentially powerful wines that require great bottle-age, but they do lack finesse.

🍷 Cabernet Sauvignon 60%,
Merlot 30%, Cabernet Franc
10%

🕒 15–45 years

Second wine: *La Chapelle de la Mission-Haut-Brion*

CHÂTEAU OLIVIER

Léognan
Cru Classé (red and white)
★

There has never been any doubt about this château's *terroir*, which has as much potential as any Graves *cru classé*, but it was one of the appellation's most disappointing producers until 1990. Since then progress has been agonizingly slow and patchy, but recent vintages have revived hopes that this remains a château to watch. The red wine is matured in wood for 18 months; the white wine up to three months, with 100 percent new oak.

RED The fruit is now easier-drinking and the oak, which used to be aggressive, more supple and creamy.

🍷 Cabernet Sauvignon 70%,
Merlot 30%

WHITE This wine actually began to sparkle as early as 1985, with some quite outstanding vintages in the 1990s, since when has been an added freshness, real fruit flavor, and some positive character developing.

🍷 Sémillon 65%, Sauvignon 30%,
Muscadelle 5%

🕒 3–7 years

CHÂTEAU PAPE-CLÉMENT

Pessac
Cru Classé (red only)
★★

After a disastrous period in the 1970s and early 1980s, Pape-Clément began to improve in 1985 and 1986, due to stricter selection of the *grand vin* and the introduction of a Second Wine. Some critics rate these two vintages highly, and they were very good wines, but when examined in the context of the enormous potential of this vineyard, my brain tells me they were not at

all special, even if my heart wants them to be.

The trio of 1988, 1989, and 1990 wines turned out to be the best this château has produced since 1953, although they are nowhere near as great and still not special at the very highest level of Graves wine. However, even in the string of lesser vintages Bordeaux experienced in the early 1990s, Pape-Clément managed to produce good wines, and with 1995, 1996, 1998, and 1999, it has truly regained the reputation of its former glory years. The red wine from this château is matured in wood for 24 months, with a minimum of 50 percent new oak.

RED Medium-bodied wines of excellent deep color, a distinctive style, and capable of much finesse.

☞ Cabernet Sauvignon 67%, Merlot 33%

Second Wine: Le Clémentin

Note This château also produces a little non-*cru classé* white Graves, made from equal proportions of Sémillon, Sauvignon, and Muscadelle.

CHÂTEAU RAHOUL

Portets

The wine produced by Château Rahoul is not quite as exciting as it was in the 1980s, when the property was home to—although never owned by—the maestro, Peter Vinding-Diers (see *Domaine de la Graves* and *Château Landiras*). However, both red and white wines are still reliable sources of very good value oak-aged Graves.

Second wine: *Château Constantin*

Other wine: *Petit Raboul*

CHÂTEAU RESPIDE-MÉDEVILLE

Toulence

★●

Christian Médeville, the man responsible for Château Gilette, the rising star of Sauternes, produces excellent wines here using a totally different wine philosophy. Both the red and the white are fine examples of the best of modern vinification combined with new oak. The red is

a well-colored wine with rich, ripe fruit, some spice, and a creamy, new-oak aftertaste, good for early drinking. The white is a rich, creamy-vanilla concoction with soft, succulent fruit and a fat finish.

CHÂTEAU DU ROCHEMORIN

Martillac

★●

Originally called “La Roche Morine,” (the Moorish rock) this estate has a history that extends at least as far back as the eighth century, when Bordeaux was defended by the Moors from attacking Saracens. Another château belonging to André Lurton, Rochemorin produces a fine, elegant, fruity red Graves that is well-balanced and has a good spicy finish (Cabernet Sauvignon 60 percent, Merlot 40 percent). Rochemorin also produces a very clean and correct dry white Graves.

CHÂTEAU DE ROQUETAILLADE-LA-GRANGE

Mazères

★●●

This is a very old property, that produces some 12,000 cases of an attractive, well-colored red Graves that has an aromatic bouquet and a delicious spicy-cassis flavor. This wine is made from Merlot 40 percent, Cabernet Sauvignon 25 percent, Cabernet Franc 25 percent, Malbec 5 percent, and Petit Verdot 5 percent. Its firm, tannic structure means it matures gracefully over 15 or more years. The white wine, which is made from Sémillon 80 percent, Sauvignon 20 percent, is less successful.

Second wine: *Château de Carolle*

Other wines: *Château de Roquetaillade-le-Bernet*

CHÂTEAU DU SEUIL

Cérons

Up-and-coming Graves property producing fine, elegant reds and fruity, oak-aged whites, both proving to be of increasingly excellent value.

CHÂTEAU SMITH-HAUT-LAFITTE

Martillac

Cru Classé (red only)

★●●

This château has 124 acres (50 hectares) of fine vineyards. Michel Rolland consults on the reds and Christophe Olivier on the whites; reputation and quality are soaring. The red wine matures in wood for 18 months, with 50 percent new oak.

RED These wines are now in a richer style with creamy-oak undertones and up-front fruit.

☞ Cabernet Sauvignon 69%, Merlot 20% Cabernet Franc 11%

☞ 8–20 years

Second wine: *Les Hauts-de-Smith-Haut-Lafitte*

Note A white Graves is also made. It is not a *cru classé*, yet ironically now considered one of the finest white wines in Pessac-Léognan.

CHÂTEAU LA TOUR-HAUT-BRION

Talence Cru Classé (red only)

★★

This château is situated close to Château La Mission-Haut-Brion. By 1980 wine sold under the label of this château was merely regarded as the Second Wine of Château La Mission-Haut-Brion. All the grapes from both vineyards were vinified together, and the two wines made

by selection. However, after acquisition by Domaine Clarence Dillon in 1983, some 11 acres (4.5 hectares) of vines were delimited as Château La Tour-Haut-Brion, and from 1984 all its wines can be said to be from one specific site. The wine is matured in wood for 24 months, with 50 percent new oak.

RED This very dark, tannic, full-bodied wine is full of chocolaty, tannic fruit above an earthy-smoky bitterness of undeveloped extract. Despite its awesome attack of flavor it shows great finesse.

☞ Cabernet Sauvignon 60%, Merlot 30%, Cabernet Franc 10%

☞ 20–40 years

CHÂTEAU LA TOUR-MARTILLAC

Martillac

Cru Classé (red and white)

★★

This property has its own herd of cattle to supply manure for the château's strictly “organic” wine. Its red wine is not as consistent as the very best Graves and tends to lack charm in cask. These factors make it an underrated wine. It is matured in wood for 18 to 22 months with one-third new oak. The white is fermented in stainless steel and matured in 100 percent new oak.

RED Not big or bold wines with immediate appeal; the reds are elegant with some finesse. The fruit in recent vintages has tended to be a bit plumper, but it is in bottle that these wines take on richness, developing creamy-oak flavor.

☞ Cabernet Sauvignon 60%, Merlot 25%, Cabernet Franc 6%, Malbec 5%, Petit Verdot 4%

☞ 8–20 years

Second wine: *Château La Grave-Martillac*

WHITE The stunning 1986 vintage heralded a new era of exciting dry whites. This is very fresh, elegant wine, the fruit gently balanced by complex nuances of oak.

☞ Sémillon 55%, Sauvignon 35%, Muscadelle 3%, old diverse varieties 7%

☞ 4–8 years

THE WINE PRODUCERS OF SAUTERNES AND BARSAC

CHÂTEAU D'ARCHE

Sauternes

2ème Cru Classé

★●

This property dates from 1530. It was known as Cru de Bran-Eyre until it was bought by the Comte d'Arche in the 18th century. It has been inconsistent. The wine sees up to 50 percent new oak.

WHITE The successful Château d'Arche is an elegantly balanced wine that is more in the style of

Barsac than Sauternes. It is sweet, rich, and has complex botrytis flavors, which often puts it on par with a *premier cru*, although it is less plump than most Sauternes. Easily equivalent to a classed growth in quality and the *Crème de Tête* is even better.

☞ Sémillon 80%, Sauvignon 15%, Muscadelle 5%

☞ 8–25 years

Second wine: *Cru de Braneyre*

Other wine: *d'Arche-Lafaurie*

CHÂTEAU BASTOR-LAMONTAGNE

Preignac

★●

A large property that deserves *deuxième cru* status. The wine is matured in wood for up to 36 months, with 10 to 15 percent new oak. Lighter years such as 1980, 1982, and 1985 lack botrytis but are successful in an attractive mellow, citrus style. Big years such as 1983 lack nothing: the wines are full,

rich, and stylish with concentrated botrytis flavor and ample class. 1989, 1990, 1996, 1997, 1998, and 1999 all very successful.

Second wine: *Les Remparts du Bastor*

CHÂTEAU BOUYOT

Barsac

★●●

Jammy Fonbeney, the winemaker at this little-known property, is producing some stunning wines that

deserve recognition. They have classic Barsac elegance, light in body, but not in flavor, with rich pineapple and creamy botrytis fruit, some spice, and fine length.

CHÂTEAU BROUSTET

Barsac 2ème Cru Classé

★☆☆

The wine produced at Château Broustet is matured in wood for 20 months with what was until recently just 10 percent new oak, but this increased to 40 percent after the 1986 vintage.

WHITE Château Broustet can be a delightful wine, with a fruit-salad-and-cream taste, a very elegant balance, and some spicy-botrytis complexity.

🍷 Sémillon 63%, Sauvignon 25%, Muscadelle 12%

🕒 8–25 years

Second wine: *Château de Ségur*

CHÂTEAU CAILLOU

Barsac
2ème Cru Classé

★★☆☆

This château gets its name from the *cailloux*, the stones that are brought to the surface during plowing. These have been used to enclose the entire 37-acre (15-hectare) vineyard and to provide hardcore for the tennis courts. Mr. Bravo, the owner, has run out of uses but he is still churning them up. This is not one of the better-known *deuxièmes crus*, but it consistently produces wines of a very high standard, and so deserves to be.

WHITE A rich, ripe, and spicy-sweet Barsac with concentrated botrytis flavors underscored by refined oak. Not the fattest of Barsacs, but made in the richer rather than lighter style.

🍷 Sémillon 90%, Sauvignon 10%

🕒 8–30 years

Second wine: *Petit-Mayne*

Other wines: *Cru du Clocher (red)*, *Château Caillou Sec (dry white)*, *Rosé St.-Vincent (dry rosé)*

CHÂTEAU DE LA CHARTREUSE

Preignac

★☆☆

This is the same stunning wine as Château Saint-Amande, but under a different exclusive label. See also Château Saint-Amande.

CHÂTEAU CLIMENS

Barsac
1er Cru Classé

★★★☆☆

Under the ownership of Bérénice Lurton, this property has long been considered one of the top wines of both appellations. The wine is matured in wood for 24 months with up to one-third new oak.

WHITE The fattest of Barsacs, yet its superb acidity and characteristic citrus style give it an amazingly fresh and zippy balance. This wine has masses of creamy-ripe botrytis fruit supported by good cinnamon and vanilla-oak flavors.

🍷 Sémillon 98%, Sauvignon 2%

🕒 10–40 years

Second wine: *Les Cyprès de Climens*

CHÂTEAU CLOS HAUT-PEYRAGUEY

Bommès
1er Cru Classé

★★★☆☆

Originally part of Château Lafaurie-Peyraguey, this property has been owned by the Pauly family since 1934. A good dose of sulfur dioxide used to be the method of stopping fermentation at Clos Haut-Peyraguey and the bouquet was often marred by an excess of sulfur. Thankfully, this has not been evident since the 1985 vintage, when coincidentally, the wines began to benefit from some new oak. The wine is now matured in wood for 18 months, with up to 25 percent new oak.

WHITE This wine now flaunts a positively eloquent bouquet, and has a rich flavor with complex botrytis creamy-oak nuances—very stylish.

🍷 Sémillon 83%, Sauvignon 15%, Muscadelle 2%

🕒 8–25 years

Second wine: *Château Haut-Bommès*

CHÂTEAU COUTET

Barsac
1er Cru Classé

★★★☆☆

This château is usually rated a close second to Climens, but in fact it is capable of matching it in some vintages and its occasional production of tiny quantities of *tête de cuvée* called “Cuvée Madame” often surpasses it. It is fermented and matured for 24 months in cask with 30 to 50 percent new oak. The dry white “Vin Sec” is an AOC Graves and very disappointing.

WHITE This wine has a creamy vanilla-and-spice bouquet, an

initially delicate richness that builds on the palate, good botrytis character, and oaky fruit.

🍷 Sémillon 75%, Sauvignon 23%, Muscadelle 2%

🕒 8–25 years (15–40 years for *Cuvée Madame*)

Other wines: *Cuvée Madame*, *Vin Sec du Château Coutet*

CHÂTEAU DOISY-DAËNE

Barsac
2ème Cru Classé

★★☆☆

Owner Pierre Dubourdieu cool ferments this wine in stainless steel until the desired balance of alcohol and sweetness is achieved, and then matures it in 100 percent new oak for a short while. The wine also undergoes various low-sulfur techniques. The result is a wine equal to a Barsac *premier cru*.

WHITE This is a wine of great floral freshness and elegance, with a delightful honeyed fragrance of deliciously sweet fruit, delicate botrytis character, hints of creamy oak, and perfect balance.

🍷 Sémillon 100%

🕒 8–20 years

Second wine: *Château Cantegril*

Other wine: *Vin Sec de Doisy-Daëne*

CHÂTEAU DOISY-DUBROCA

Barsac
2ème Cru Classé

This property is run in conjunction with Climens, and is the smallest part of the original Doisy estate. But the wine, although consistent, is not in the same class as Doisy-Daëne, let alone Climens. It is matured in cask for 24 to 30 months with 25 percent new oak.

🍷 Sémillon 90%, Sauvignon 10%

🕒 6–15 years

Second wine: *La Demoiselle de Doisy*

CHÂTEAU DOISY-VÉDRINES

Barsac
2ème Cru Classé

★★☆☆

This is the original and largest of the three Doisy châteaux. It is owned by Pierre Castéja, the head of Bordeaux *négociant* Roger Joanne. The wine is matured in wood for 18 months with one-third new oak.

WHITE This wine was somewhat lackluster until 1983, since when it has exploded with character. Rich, ripe, and oaky, with a concentrated botrytis complexity.

🍷 Sémillon 80%, Sauvignon 20%

🕒 8–25 years

Other wine: *Château La Tour-Védrières*

CHÂTEAU DE FARGUES

Fargues

★★★☆☆

The eerie ruin of Château de Fargues is the ancestral home of the Lur-Saluces family. The small production of ultrahigh-quality wine is made by essentially the same fastidious methods as Yquem, including fermentation and maturation in 100 percent new oak. It is powerful and viscous, very rich, succulent, and complex, with a fat, toasty character (Sémillon 80 percent, Sauvignon 20 percent). Easily equivalent to a classed growth.

CHÂTEAU FILHOT

Sauternes
2ème Cru Classé

★☆☆☆☆

The beautiful Château Filhot was built between 1780 and 1850. This splendid château has a potentially great vineyard that consistently produces boring wine. Investment is required on a large scale in nearly every department: the proportion of Sémillon should be increased, the number of *tries* should be increased, the wine should contain more botrytized grapes and should be matured in cask, with some new oak.

WHITE At best these are well-made, simply fruity, and sweet.

🍷 Sémillon 60%, Sauvignon 37%, Muscadelle 3%

CHÂTEAU GILLETTE

Preignac

★☆☆☆☆

Christian Médeville rejects modern marketing methods, preferring instead to keep his precious nectar (made from Sémillon 94 percent, Sauvignon 4 percent, Muscadelle 2 percent) in vats under anaerobic conditions for an amazing 20 years before bottling and selling it. The *Crème de Tête* is *premier cru* quality with a powerful bouquet and intense flavor of liquorice and peaches and cream, followed by a long barley-sugar aftertaste. The *Crème de Tête* deserves ★★★, but I am less impressed with Château Gillette's regular bottlings (if, indeed, any bottling at this property can be so described!).

CHÂTEAU GUIRAUD

Sauternes
1er Cru Classé

★★★☆☆

This property has been on the up since 1981, when the Narby family of Canada purchased it. The château

and vineyards were in a very rundown state. Narby dug up much of the Sauvignon and planted Sémillon, then totally reequipped the winery and renovated the château. Only Yquem is on as high ground as Guiraud and since drainage is a key factor affecting the quality of the greatest Sauternes, where heavy clay soils dominate, the potential for this wine is very exciting and one that has been skillfully exploited with the help of Xavier Plantey, ex-manager of Château la Gaffelière. The wine is matured in wood for 30 months with at least 50 percent new oak. The first vintages of the dry white Vin Blanc Sec "G" were dull, but subsequent efforts have improved.

WHITE After two dismal decades, great Sauternes arrived at this château with the classic 1983 vintage, the first true botrytis wine under Narby's ownership. Guiraud is now plump with Sémillon fruit and fat with botrytis character. A deliciously sweet wine with luxurious new oak, complexity, and considerable finesse.

☼ Sémillon 70%, Sauvignon 30%
 🕒 12–35 years

Second wine: *Le Dauphin*

Other wine: *Vin Blanc Sec "G"* (dry white)

CHATEAU HAUT-BOMMES

Bommes

The owner, Jacques Pauly, prefers to live here rather than at his *premier cru* Château Clos Haut-Peyraguey. Occasionally the wine used to excel for an unclassified growth; the recent improvements at Château Clos Haut-Peyraguey augur well for the future.

CHÂTEAU LES JUSTICES

Preignac

★🕒

Under the same ownership as the star-performing Château Gilette, but here Christian Médeville gives his wines only four years of aging in vats. Les Justices is a consistent wine of excellent quality that is riper and fruitier than Gilette and the equivalent of a *deuxième cru*.

CHATEAU LAFURIE-PEYRAGUEY

Bommes

1er Cru Classé

★★★🕒

As with Cordier properties, this wine shows remarkable consistency. It is matured in wood for between 18 and 20 months with up to 50

percent new oak.

WHITE The combination of botrytis and oak is like pineapples and peaches and cream in this elegant wine that keeps fresh and retains an incredibly light color in old age.

☼ Sémillon 98%, Sauvignon 2%
 🕒 8–30 years

CHÂTEAU LAMOTHE-DESPUJOLS

Sauternes
 2ème Cru Classé

In 1961 the Lamothe vineyard was split in two. The section belonging to Jean Despujols has been the most disappointing half up until the 1985 vintage, but it has really come into its own since 1990.

WHITE Fuller, richer, and sweeter than previously expected, and in an oily, fuller-bodied style, with overtly attractive tropical fruit character.

☼ Sémillon 70%, Sauvignon 20%,
 Muscadelle 10%

CHÂTEAU LAMOTHE-GUIGNARD

Sauternes
 2ème Cru Classé

★🕒

The Guignards are really trying to achieve something with their section of the Lamothe vineyard. It was called Lamothe-Bergey until the name was changed in 1981. The wine is matured in wood for 24 months with 20 percent new oak.

WHITE Rich, spicy, and concentrated wines of full body and good botrytis character.

☼ Sémillon 85%, Muscadelle 10%,
 Sauvignon 5%

🕒 7–20 years

CHÂTEAU LIOT

Barsac

★🕒

This wine is elegant, with light but fine botrytis character and creamy vanilla of new oak—probably the equivalent of a *deuxième cru* in quality and is excellent value. Owner Jean-Nicol David also produces Château Saint-Jean, a dry white Graves, and Château Pinsas, a fruity red Graves.

CHÂTEAU DE MALLE

Preignac

2ème Cru Classé

Dry white wine is produced under the "Chevalier de Malle" label, and red Graves from contiguous vineyards under the Château du Cardaillan label. While this vineyard does not shine every year (1989 and 1990 are its best-ever vintages), when it does, it can be superb value.

WHITE These are firm, well-concentrated wines often influenced more by *passerillage* than botrytis. Delicious, rich, and luscious.

☼ Sémillon 75%, Sauvignon 22%,
 Muscadelle 3%

🕒 7–20 years

Second wine: *Château St.-Hélène*

Other wine: *Chevalier de Malle*

CHÂTEAU DU MAYNE

Barsac

🕒

There is a good proportion of old vines at this property which adds concentration and weight to these wines, which are fatter than the norm for Barsac. Owned by the Sanders family of the splendid Château Haut-Bailly of Graves.

CHÂTEAU MÉNOTA

Barsac

🕒

This quaint old property—with its historic towers and ramparts—has exported its wines to England since the 16th century. Château Ménota produces very good Barsac, despite the unusually high proportion of Sauvignon Blanc (60 percent).

CHATEAU NAIRAC

Barsac

2ème Cru Classé

★★

Tom Heeter established the practice of fermenting and maturing his wine in up to 100 percent new oak—Nevers for vanilla and Limousin for backbone—and his perfectionist ex-wife, Nicole Tari, has continued this format with great success.

WHITE These are rich and oaky wines that require ample aging to show true finesse. With enough bottle maturity the tannin and vanilla harmonize with the fruit, and the rich botrytis complexity emerges.

☼ Sémillon 90%, Sauvignon 6%,
 Muscadelle 4%

🕒 8–25 years

CHÂTEAU PERNAUD

Barsac

★🕒

This property was once part of the Sauvage d'Yquem estate. It was then owned by the Lur-Saluces family, but was abandoned after the oidium fungus devastated Bordeaux in the late 18th century. It has been completely replanted and renovated, and is now building up something of a reputation. This slightly richer style of Barsac (Sémillon 70 percent,

Sauvignon 25 percent, Muscadelle 5 percent) has a typically elegant balance and is certainly a wine to watch.

CHÂTEAU RABAUD-PROMIS

Bommes
 1er Cru Classé

★★

The wines of this once-grand property used to be awful. It was sad to see the vineyard, château, and wine so neglected. What a joy to witness such a dramatic change. It began with the 1983; and the vintages are now something special.

WHITE A lovely gold-colored wine with full, fat, and ripe botrytis character on the bouquet and palate.

☼ Sémillon 80%, Sauvignon 18%,
 Muscadelle 2%

🕒 8–25 years

CHÂTEAU RAYMOND-LAFON

Sauternes

As I wrote in the last edition, it is easy to understand how people can get carried away by the idea of a vineyard so close to Yquem as Raymond-Lafon, especially when its owner, Pierre Meslier, was régisseur at Yquem. This was, however, an overrated and overpriced wine in the mid-1980s, and although things have improved since the 1989 and 1990 vintages, it is performing at only *deuxième cru* level and is consequently overrated and overpriced. Now that the style has been cleaned up and plumped out, Raymond-Lafon (Sémillon 80 percent, Sauvignon 20 percent) is a nice Sauternes, but not worth three times the price of Rieussec or two-and-a-half times as much as Climens.

CHÂTEAU RAYNE-VIGNEAU

Bommes

1er Cru Classé

★

The quality of Rayne-Vigneau had plummeted to dismal depths until as recently as 1985. The wine is now matured in wood for 24 months with 50 percent new oak. It has a higher Sémillon content than the statistics would suggest, due to the 5,000 cases of dry Sauvignon Blanc that are sold as "Rayne Sec."

WHITE Château Rayne-Vigneau is now a very high-quality wine that has an elegant peachy ripeness to its botrytis character.

☼ Sémillon 65%, Sauvignon 35%

🕒 8–25 years

Second wine: *Clos l'Abeille*

Other wines: *Rayne Sec*

CHÂTEAU RIEUSSEC

Fargues

1er Cru Classé

★★★

This fine property promises to make even better wine since its acquisition by Domaines Rothschild in 1984. None of the Sauvignon

produced here is used for Château Rieussec (it goes in the "R"), effectively making the wine 96 percent Sémillon. It is barrel-fermented and cask matured for 18 to 30 months with 50 percent new oak.

WHITE This wine is one of the richest and most opulent of Sauternes, with intense pineapple fruit and a heavily botrytized character.

☼ Sémillon 75%, Sauvignon 22%, Muscadelle 3%

🕒 12–35 years

Second wines: *Clos Labère, Mayne des Carmes*

Other wine: "R" de *Château Rieussec* (dry white)

CHÂTEAU DE ROLLAND

Barsac

The château of this estate has been turned into a hotel with a good restaurant, and is under separate ownership. The vineyard of Château de Rolland belongs to Jean and Pierre Guignard, who also own the excellent Château de Roquetaillade-la-Grange at Mazères in Graves. The wines (Sémillon 60 percent, Sauvignon 20 percent, Muscadelle 20 percent) are fresh and elegant with a particular emphasis on fruit.

CHÂTEAU ROMER

Fargues

2ème Cru Classé

②

The original Romer estate was divided in 1881, and at just 13 acres (five hectares) this is the smallest part. I have never come across the wine.

☼ Sémillon 50%, Sauvignon 40%, Muscadelle 10%

CHÂTEAU ROMER-DU-HAYOT

Fargues

2ème Cru Classé

①

Monsieur André du Hayot owns these 25 acres (10 hectares) of vines on a fine clayey-gravel crest that was once part of the original Romer estate. The wines are little seen, but represent very good value.

WHITE The 1980 and 1983 are in the fresh, not oversweet, fruit-salad and cream style, with light botrytis character and an elegant balance. More recent vintages have not been tasted.

☼ Sémillon 70%, Sauvignon 25%, Muscadelle 5%

🕒 5–12 years

CHÂTEAU ROUMIEU

Barsac

★①

This property, which borders the classified growths of Climens and Doisy-Védrines, has produced luscious sweet wines of a richer than normal style in some vintages (Sémillon 90 percent, Sauvignon 10 percent).

CHÂTEAU ROUMIEU-LACOSTE

Barsac

★①

A Dubourdiu property producing consistently fine Barsac (Sémillon 80 percent, Sauvignon 20 percent) with good botrytis concentration.

CHÂTEAU SAINT-AMANDE

Preignac

★①

An elegant and stylish wine (Sémillon 67 percent, Sauvignon 33 percent) that is very attractive when young, yet some vintages have potentially excellent longevity and are often equivalent to a classed growth in quality. Part of the production of this property is sold under the Château de la Chartreuse label.

Second wine: *Château de la Chartreuse*

CHÂTEAU SIGALAS-RABAUD

Bommes

1er Cru Classé

★★★

This is the largest part of the original Rabaud estate. The proprietor contracted Cordier to manage this property as from 1995 and the wines have already shown a marked improvement.

WHITE A stylish early-drinking wine with an elegant botrytis bouquet and deliciously fresh fruit on the palate.

☼ Sémillon 85%, Sauvignon 15%

🕒 6–15 years

CHÂTEAU SIMON

Barsac

2ème Cru Classé

A combination of modern and traditional methods produces a mildly sweet wine from Sémillon 70 percent, Sauvignon 30 percent. Most Sauternes and Barsacs are aged in Nevers or Limousin oak. Sometimes Allier is used, but at Simon they mature the wine in Merrain oak for two years.

CHÂTEAU SUAU

Barsac

2ème Cru Classé

The vineyard belongs to Roger Biarnès, who makes the wine at his Château Navarro in Cérons because the château is under different ownership. These wines do not have a particularly high reputation, but if the attractive wine produced

in the very modest 1980 vintage is anything to go by it is worth giving them the benefit of the doubt.

WHITE The 1980 is an attractive, fresh, and fragrantly fruity wine with a gentle citrous-and-spice botrytis complexity.

☼ Sémillon 80%, Sauvignon 10%, Muscadelle 10%

🕒 6–12 years

CHÂTEAU SUDUIRAUT

Preignac

1er Cru Classé

★★★

This splendid 17th-century château, with its picturesque parkland, effectively evokes the graceful beauty found in its luscious wines. Suduiraut's superb 245-acre (100-hectare) vineyard enjoys a good susceptibility to "noble rot," and adjoins that of Yquem. The wines went through an inconsistent patch in the 1980s, but have improved dramatically under the watchful eye of Jean-Michel Cazes's AXA insurance group. The wines are fermented and matured in cask for 24 months, with at least one-third new oak.

WHITE Soft, succulent, and sublime, this is an intensely sweet wine of classic stature. It is rich, ripe, and viscous, with great botrytis complexity that benefits from good bottle-age.

☼ Sémillon 80%, Sauvignon 20%

🕒 8–35 years

Second wine: *Castelnaud de Suduiraut*

CHÂTEAU LA TOUR BLANCHE

Sauternes

1er Cru Classé

★★★

This property was placed at the head of the *premiers crus* in 1855, when only Yquem was deemed to be superior, but until relatively recently it failed to live up to this reputation. Even at its lowest ebb, few critics would have denied that these vineyards possessed truly great potential, but the wines were ordinary. This was made all the more embarrassing by the fact that the state-owned La Tour Blanche was a school of agriculture and oenology that was supposed to teach others how to make Sauternes. This depressing situation began to change, however, in the mid-1980s when Château la Tour Blanche started increasing the proportion of Sémillon, picking much riper grapes, and implementing stricter selection in both vineyard and chais.

Fermentation is in wood (with up to 90 percent new oak but averaging 25 percent in most years), and the results have been exciting with excellent wines produced in 1988, 1989, 1990, (its greatest ever), 1994, 1995, 1996, 1997, and 1998.

WHITE These are now so rich they

are almost fat and bursting with plump, ripe, juicy fruit and oodles of complex botrytis character.

☼ Sémillon 78%, Sauvignon 19%, Muscadelle 3%

🕒 8–20 years

Second wine: *Mademoiselle de Saint-Marc*

CHÂTEAU D'YQUEM

Sauternes

1er Cru Supérieur

★★★

This most famous of all châteaux belonged to the English crown from 1152 to 1453. It then passed into the hands of Charles VII, King of France. In 1593 Jacques de Sauvage acquired tenant's rights to the royal property and in 1711 his descendants purchased the fiefdom of Yquem. In 1785 it passed into the hands of the Lur-Saluces family. The *tries* tradition was kept alive at Yquem when it was long forgotten by other noble châteaux. Like Pétrus, one of Yquem's "secrets" is its pickers. They are all skilled; they know what to pick and, just as important, what to leave. The gap between *tries* can vary from three days to several weeks. Housing and feeding 120 pickers for several weeks of inactivity is not cheap.

The property has been run with passionate care by succeeding generations, although LVMH (which owns Moët & Chandon in Champagne) purchased a majority shareholding in 1999 (after three years of acrimony between members of the Lur-Saluces family). Alexandre Lur-Saluces lost his independence, but won a handsome contract to remain in his former home. He is still very much in charge.

In 1972 the harvest consisted of 11 *tries* spread over 71 days. In that year no wine was sold as Château d'Yquem. This is not to say that Yquem's fastidious attention to selection and quality does not pay off in some poor vintages. But in good years, because of the strict selection in the vineyard, the amount of wine that is finally used is as high as 80 to 90 percent. The wines are matured for up to 42 months with 100 percent new oak. Other *terroirs* in Sauternes and Barsac are potentially comparable, but, no matter how conscientious their owners, none makes the same sacrifices as Yquem.

WHITE This wine represents the ultimate in richness, complexity, and class. No other botrytis wine of equal body and concentration has a comparable finesse, breeding, and balance. Some of the characteristic aromas and flavors include peach, pineapple, coconut, nutmeg, and cinnamon, with toasty-creamy vanilla and caramel flavors of new oak.

☼ Sémillon 80%, Sauvignon 20%

🕒 20–60 years

Other wines: "Y" de *Château d'Yquem* (dry white)

THE LIBOURNAIS AND FRONSADAIS

The right bank of the Dordogne River, known as the Libournais district, is red-wine country. Dominated by the Merlot grape, the vineyards here produce deep-colored, silky- or velvety-rich wines of classic quality in the St.-Émilion and Pomerol regions, in addition to wines of modest quality, but excellent value and character, in the “satellite” appellations that surround them.

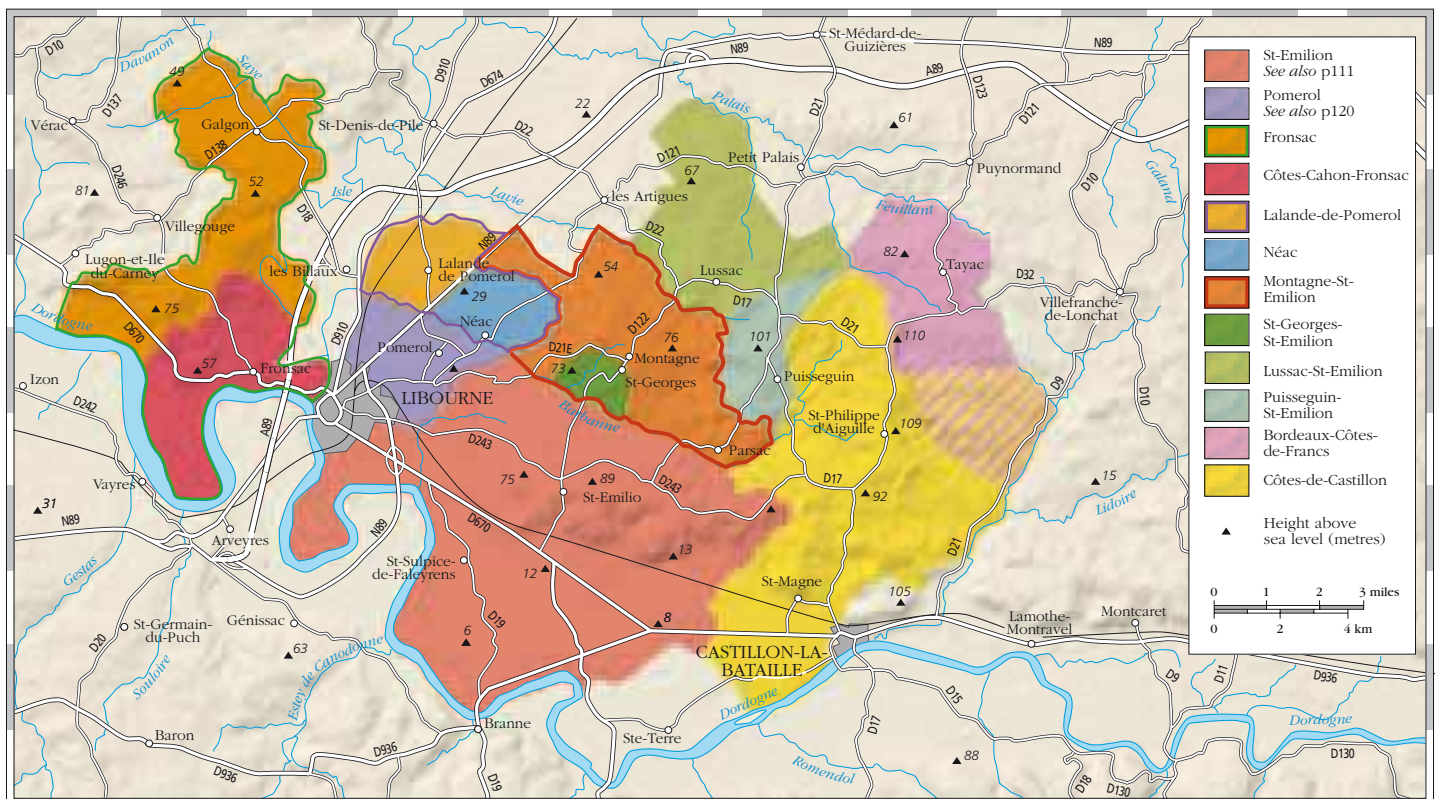

IN THE MID-1950S, many Libournais wines were harsh, and even the best AOCs did not enjoy the reputation they do today. Most growers believed that they were cultivating too much Cabernet Sauvignon and Malbec for their particular *terroir* and decided that they should plant more vines of Cabernet Franc. A few growers argued for the introduction of Merlot, which was allowed by the regulations, because it would give their wines the suppleness they desired. Even if they could have agreed on united action, changing the *encépagement* of an entire district would have been very a very long-term project, as well as being extremely expensive. However, in 1956, frost devastated the vineyards, forcing the Libournais growers into action. With poor, short crops inevitable for some years to come, prices soared, enabling them to carry out the massive replanting which, ironically, they could not have afforded prior to the crisis. This devastation led to the wholesale cultivation of Merlot and Cabernet Franc, which established a completely different style of wines, providing the catalyst for the spectacular postwar success of St.-Émilion and Pomerol.

THE GARAGISTE EFFECT

In 1979, Jacques Thienpont, owner of Pomerol’s classy Vieux Château Certan, unintentionally created what would become the “*vin de garagiste*” craze, when he purchased a neighboring plot of land and created a new wine called Le Pin. With a very low yield, 100 percent Merlot, and 100 percent new oak, the decadently rich Le Pin directly challenged Pétrus, less than a mile away. It was widely known that Thienpont considered Vieux Château Certan to be at least the equal of Pétrus, and he could certainly claim it to be historically more famous, but Pétrus regularly got much the higher price, which dented his pride. So Le Pin was born, and although he did not offer his fledgling wine at the same price as Pétrus, it soon trounced it on the auction market. In 1999, a case of 1982 Le Pin was trading at a massive \$19,000, while a case of 1982 Château Pétrus could be snapped up for a “mere” \$13,000. By 2003, the Pétrus had traded up to a mind-boggling \$26,000 and yet Le Pin sold for \$44,000. Unfortunately, Jacques Thienpont died in 1985, long before his little experiment yielded such crazy prices. By the late 1980s, however, Le Pin’s extraordinary financial success had become so obvious to a number of *vignerons* in neighboring St.-Emilion that they attempted to replicate it with small plots of land in their own appellation: Jean-Luc Thunevin with Château de Valandraud (first vintage 1991), Gérard and Dominique Bécot with Château La Gomerie (first vintage 1995), Von Neippberg with Château La Mondotte (first vintage 1996), Francis Gaboriaud with Château L’Hermitage (first vintage 1997), Alain and Françoise Raynaud with Château Quinault l’Enclos (first vintage 1997), and Château

THE LIBOURNAIS DISTRICT *See also p63*

This great red-wine area includes St.-Émilion, Pomerol, and their satellites. In the Libournais district, the Merlot grape reigns supreme, its succulent fruit essential to the local style.

Teyssier with Le Dôme (first vintage 1998). But it was Le Pin's cellar, which is truly a garage under a battered farmhouse, that inspired French wine writer Michel Bettane to coin the phrase "*vins de garage*." It is interesting how this new breed of wines has polarized critics into opposite camps, as if there is something intrinsically right or wrong with producing wine on a small scale. Because that is all it is, and the *garagistes* are popping up in the Graves, the Médoc, and well beyond the borders of Bordeaux. While some consumers (all wealthy) are happy to pay any price demanded for these wines, others seem to take offense at the very mention of the word *garagiste*. Both positions are bizarre. Besides, where do you draw the line between a *vin de garage* and an honest *lieu-dit* wine? Oh dear Jacques and Michel: what have you started?

THE SATELLITE APPELLATIONS OF ST.-ÉMILION AND POMEROL

The wines of Lussac, Montagne, Parsac, Puisseguin, Sables, and St.-Georges were once sold as St.-Émilion, but in 1936 these outer areas were given their own AOCs. This was done to protect the

image of the greatest St.-Émilion châteaux, but through the historical use of this famous name these areas won the right to attach the name of St.-Émilion to theirs. The tiny Sables area was later reclaimed by the St.-Émilion AOC, and in 1972 a new appellation, Montagne-St.-Émilion, was created. This appellation, which covered a large region, could be adopted by growers who had previously used either Parsac-St.-Émilion AOC or St.-Georges-St.-Émilion AOC, but the executive order that created Montagne-St.-Émilion AOC in 1972 did not disband either of these smaller appellations.

So, a situation arose in which growers could choose between two very similar AOCs. In 1993, however, Parsac-St.-Émilion was finally disbanded, since it was noticed that virtually all the producers of Parsac-St.-Émilion were not using the original AOC but opting for Montagne-St.-Émilion AOC. Many growers in St.-Georges-St.-Émilion, however, were still using the original appellation, and so disbanding this would not have been so simple. All five combined St.-Émilion AOCs would in fact benefit from merging, since they all produce wines of essentially similar nature, under identical regulations.

THE GENERIC APPELLATIONS OF THE LIBOURNAIS AND FRONSADAIS

BORDEAUX SUPÉRIEUR CÔTES-DE-FRANCS AOC

See Bordeaux-Côtes-de-Francis AOC

BORDEAUX- CÔTES-DE-FRANCS AOC

This forgotten area's vineyards are contiguous with those of Puisseguin-St.-Émilion and Lussac-St.-Émilion, and have a very similar clay-limestone over limestone and iron-pan soil. The Bordeaux Supérieur version of these wines differs only in its higher alcohol level.

RED These are essentially robust, rustic, full-bodied wines that are softened by their high Merlot content.

☞ Cabernet Franc, Cabernet Sauvignon, Malbec, Merlot

🕒 5–10 years

WHITE Little-seen dry, semisweet, and sweet wines of clean, fruity character.

☞ Sauvignon Blanc, Sémillon, Muscadelle

🕒 5–10 years

BORDEAUX-CÔTES-DE- FRANCS LIQUOREUX AOC

This style of Bordeaux-Côtes-de-Francis wine must by law be naturally sweet and made from overripe grapes that possess at least 223 grams of sugar per liter. The wines must have a minimum level of 11.5 percent alcohol and 27 grams of residual sugar per liter.

WHITE Rich, genuinely *liquoreux* wines; only tiny amounts are made.

☞ Sauvignon Blanc, Sémillon, Muscadelle

🕒 5–15 years

CANON-FRONSAC AOC

See Côtes-Canon-Fronsac AOC

CÔTES-CANON- FRONSAC AOC

Fronsac AOC and Côtes-Canon-Fronsac AOC will no doubt be the next wines to be "discovered" by budget-minded Bordeaux drinkers. The best of these wines are Côtes-Canon-Fronsac AOC, sometimes called Canon-Fronsac AOC. With lower yields and stricter selection, these wines could equal all but the best of St.-Émilion and Pomerol.

RED Full-bodied, deep-colored, rich, and vigorous wines with dense fruit, fine spicy character, plenty of finesse, and good length.

☞ Cabernet Franc, Cabernet Sauvignon, Malbec, Merlot

🕒 7–20 years

CÔTES-DE-CASTILLON AOC

This is an attractive hilly area squeezed between St.-Émilion, the Dordogne River, and the Dordogne *département*. Its wine has long been appreciated for quality, consistency, and value. These wines used to be sold as Bordeaux and Bordeaux Supérieur wine until the 1989 vintage, when Côtes-de-Castillon received its own AOC status.

RED Firm, full-bodied, fine-colored wines with dense fruit and finesse.

☞ Cabernet Franc, Cabernet Sauvignon, Carmenère, Malbec, Merlot, Petit Verdot

🕒 5–15 years

FRONSAC AOC

This generic appellation covers the communes of La Rivière, St.-Germain-la-Rivière, St.-Aignan, Saillans, St.-Michel-de-Fronsac, Galgon, and Fronsac.

RED These full-bodied, well-colored wines have good chunky fruit and a fulsome, chocolaty character. Not quite the spice or finesse of Côtes-Canon-Fronsac, but splendid value.

☞ Cabernet Franc, Cabernet Sauvignon, Malbec, Merlot

🕒 6–15 years

LALANDE-DE- POMEROL AOC

This good-value appellation covers the communes of Lalande-de-Pomerol and Néac. No matter how good they are, even the best are but pale reflections of classic Pomerol.

RED Firm, meaty Merlots with lots of character but without Pomerol's texture and richness.

☞ Cabernet Franc, Cabernet Sauvignon, Malbec, Merlot

🕒 7–20 years

LUSSAC-ST.-ÉMILION AOC

A single-commune appellation 5.5 miles (9 kilometers) northeast of St.-Émilion.

RED The wines produced on the small gravelly plateau to the west of this commune are the lightest, but have the most finesse. Those produced on the cold, clayey lands to the north are robust and earthy, while those from the

clay-limestone in the southeast have the best balance of color, richness, and finesse.

🍷 Cabernet Franc, Cabernet Sauvignon, Carmenère, Malbec, Merlot

🕒 5–12 years

MONTAGNE-ST.-ÉMILION AOC

This appellation includes St.-Georges-St.-Émilion, a former commune that is today part of Montagne-St.-Émilion. St.-Georges-St.-Émilion AOC and Montagne-St.-Émilion AOC are the best of all the appellations that append “St.-Émilion” to their names.

RED Full, rich, and intensely flavored wines that mature well.

🍷 Cabernet Franc, Cabernet Sauvignon, Malbec, Merlot

🕒 5–15 years

NÉAC AOC

This appellation has not been employed since the proprietors have been allowed to use the Lalande-de-Pomerol appellation. See Lalande-de-Pomerol AOC.

POMEROL AOC

The basic wines of Pomerol fetch higher prices than those of any other Bordeaux appellation. The average Merlot content of a typical Pomerol is around 80 percent.

RED It is often said that these are the most velvety-rich of the world’s classic wines, but they also have the firm tannin structure that is necessary for successful long-term maturation and development. The finest also have surprisingly deep color, masses of spicy-oak complexity, and great finesse.

🍷 Cabernet Franc, Cabernet Sauvignon, Malbec, Merlot

🕒 5–10 years (modest growths);
10–30 years (great growths)

PUISSEGUIN-ST.-ÉMILION AOC

This commune has a clay-limestone topsoil over a stony subsoil and the wines it produces tend to be more rustic than those of the Montagne-St.-Émilion AOC.

RED These are rich and robust wines with a deep flavor and lots of fruit and color, but they are usually lacking in finesse.

🍷 Cabernet Franc, Cabernet Sauvignon, Carmenère, Malbec, Merlot

🕒 5–10 years

ST.-ÉMILION AOC

These wines must have a minimum of 10.5 percent alcohol, but in years when chaptalization (the addition of sugar to grape juice to increase alcohol content) is allowed, there is also a maximum level of 13 percent.

RED Even in the most basic St.-Émilions the ripe, spicy-juiciness of the Merlot grape should be supported by the firmness and finesse of the Cabernet Franc. The great châteaux achieve this superbly: they are full, rich, and concentrated, chocolaty and fruitcakey.

🍷 Cabernet Franc, Cabernet Sauvignon, Carmenère, Malbec, Merlot

🕒 6–12 years (modest growths);
12–35 years (great growths)

ST.-GEORGES-ST.-ÉMILION AOC

Along with the Montagne region of Montagne-St.-Émilion, this is the best parish of the outer areas.

RED These are deep-colored, plummy wines with juicy, spicy fruit, and good supporting tannic structure.

🍷 Cabernet Franc, Cabernet Sauvignon, Malbec, Merlot

🕒 5–15 years

SATELLITE APPELLATIONS IN THE ST.-ÉMILION AREA

It would make sound commercial sense if all the St.-Émilion satellites (Lussac-St.-Émilion, Puisseguin-St.-Émilion, and St.-O.-Georges-St.-Émilion) were combined under the Montagne St.-Émilion appellation.

SAINT-ÉMILION

The Romans were the first to cultivate the vine in St.-Émilion, a small area that has exported its wines to various parts of the world for over eight hundred years. In the first half of the twentieth century it lapsed into obscurity, but in the last forty years it has risen like a phoenix.

ST.-ÉMILION AS WE KNOW IT is a phenomenon of the postwar era, but there are many reminders of this wine's ancient past—from the famous Château Ausone, named after the Roman poet Ausonius, to the walled hilltop village of St.-Émilion itself, which has survived almost unchanged since the Middle Ages. In contrast, the Union des Producteurs, the largest single-appellation *coopérative* in France, is a graphic illustration of the best in modern, technologically sophisticated wine production. Today, there are over a thousand *crus* within 6 miles (10 kilometers) of the village of St.-Émilion that may use this appellation.

THE APPEAL OF ST.-ÉMILION WINES

For those who find red wines too harsh or too bitter, St.-Émilion, with its elegance and finesse, is one of the easiest with which to make the transition from white to red. The difference between the wines of St.-Émilion and those of its satellites is comparable to the difference between silk and satin, whereas the difference between St.-Émilion and Pomerol is like the difference between silk and

velvet: the quality is similar, but the texture is not—although, of course, we must be humble about categorizing such complex entities as wine areas. It could justifiably be argued that the *graves* (gravelly terrain) that produces two of the very best St.-Émilions—Châteaux Cheval-Blanc and Figeac—has more in common with Pomerol than with the rest of the appellation.

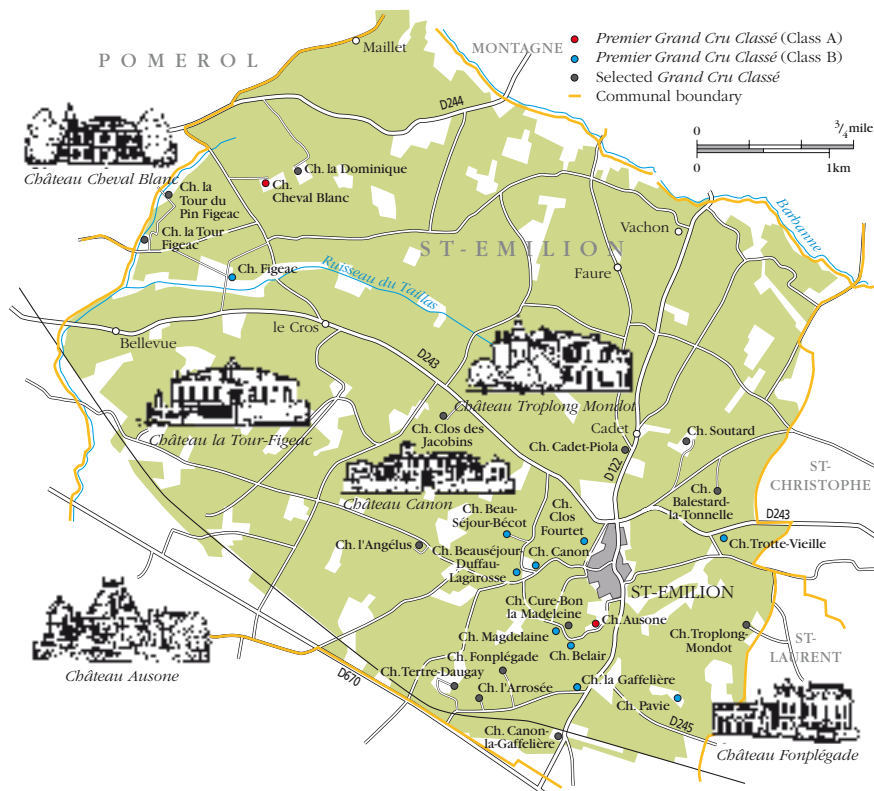

CHÂTEAU FIGEAC

Without doubt in a class of its own within Class B of premiers grands crus classés, Château Figeac has long fought to be classified with Ausone and Cheval Blanc.

A LARGE PRODUCTION

If you look at the map of the entire Bordeaux region (see p63) you will be amazed by how small this appellation of a thousand châteaux really is. It is a surprising but regular occurrence that

an appellation as small as St.-Émilion produces more wine than all the famous appellations of the Médoc combined—St.-Estèphe, Pauillac, St.-Julien, and Margaux.

CHÂTEAU AUSONE

From its hilltop perch, this ancient chateau commands a spectacular view of the sweeping vineyards below.

THE CLASSIFICATION OF ST.-ÉMILION

St.-Émilion wines were first classified in 1958, with the intention that the classification be revised every 10 years according to the performance of properties during the previous decade. Three basic categories were established: *premier grand cru classé*, *grand cru classé*, and *grand cru*. Of the 12 châteaux that were classified *premiers grands crus classés*, Ausone and Cheval-Blanc were placed in a superior subsection. The rest were listed alphabetically, not qualitatively, as were the 64 *grands crus classés*. The classification was revised in 1969, 1985 (some six years late), and again in 1996—which brought the reclassification period back to that anticipated. Beware the distinction between

grand cru (unclassified growths) and *grand cru classé* (classified growths) because the difference is considerable. In St.-Émilion, *grand cru* merely indicates a minimum alcoholic strength 0.5% higher than that required by the basic St.-Émilion appellation, and a slightly lower yield. Any producer may apply for a *grand cru*, and hundreds do so. It is not a classification, but merely an adjunct to the appellation, and would be more accurately conveyed as a new appellation called St.-Émilion Supérieur, since the difference between *grand cru* and *grand cru classé* is akin to that between basic Bordeaux and Bordeaux Supérieur.

ST.-ÉMILION CLASSIFICATIONS OF 1958, 1969, 1985, AND 1996
Incorporating vineyard soil classification

PREMIER GRAND CRU CLASSÉ CLASS A	- Château la Carte ⁴ Soil: <i>St.-Émilion plateau and ancient sand</i>	Soil: <i>Ancient sand</i>	77 Château la Tour du Pin Figeac (Owner: Moueix) Soil: <i>Ancient sand and graves</i>
1 Château Ausone Soil: <i>Côte and St.-Émilion plateau</i>	- Château Chapelle-Madeleine ⁵	50 Château Haut-Sarpe ³ Soil: <i>St.-Émilion and St.-Christophe plateaux and côtes</i>	78 Château Trimoulet Soil: <i>Ancient sand and graves</i>
22 Château Cheval Blanc Soil: <i>Graves and ancient sand</i>	24 Château le Châtelet ⁹ Soil: <i>Côte and ancient sand</i>	51 Château Jean Faure ¹ Soil: <i>Ancient sand</i>	- Château Trois-Moulins ⁴ Soil: <i>St.-Émilion plateau and côte</i>
PREMIER GRAND CRU CLASSÉ CLASS B	25 Château Chauvin Soil: <i>Ancient sand</i>	52 Château Laniole ³ Soil: <i>Ancient sand and pied de côte</i>	79 Château Troplong Mondot Soil: <i>St.-Émilion plateau</i>
3 Château l'Angélys ⁷ Soil: <i>Pied de côte and ancient sand</i>	26 Château Clos des Jacobins Soil: <i>Côte and ancient sand</i>	53 Château Larcis Ducasse Soil: <i>Côte and pied de côte</i>	80 Château Villemaurine Soil: <i>St.-Émilion plateau</i>
4 Château Beau-Séjour Bécot ^{1,7} Soil: <i>St.-Émilion plateau and côte</i>	27 Château la Clotte Soil: <i>Côte</i>	54 Château Larmande Soil: <i>Ancient sand</i>	81 Château Yon-Figeac Soil: <i>Ancient sand</i>
5 Château Beauséjour (Duffau Lagarosse) Soil: <i>Côte</i>	28 Château la Clusière Soil: <i>Côte</i>	55 Château Laroque ⁸ Soil: <i>St.-Émilion plateau and côte</i>	See opposite for an explanation of soil types.
6 Château Belair Soil: <i>St.-Émilion plateau and côte</i>	29 Château Corbin Soil: <i>Ancient sand</i>	56 Château Laroze Soil: <i>Ancient sand</i>	Notes
7 Château Canon Soil: <i>St.-Émilion plateau and côte</i>	30 Château Corbin Michotte Soil: <i>Ancient sand</i>	57 Clos la Madeleine ⁹ Soil: <i>St.-Émilion plateau and côte</i>	¹ One <i>premier grand cru classé</i> and six <i>grands crus classés</i> demoted in the 1985 revision.
8 Château-Figeac Soil: <i>Graves and ancient sand</i>	31 Château la Couspaude ^{1,8} Soil: <i>St.-Émilion plateau</i>	58 Château la Marzelle (now Château Lamarzelle) Soil: <i>Ancient sand and graves</i>	² This property was not in the original 1958 classification, nor was it included in the 1969 revision, but was awarded <i>grand cru classé</i> status in 1985.
9 Clos Fourtet Soil: <i>St.-Émilion plateau and ancient sand</i>	32 Château Coutet ¹ Soil: <i>Côte</i>	59 Château Matras ³ Soil: <i>Pied de côte</i>	³ These properties were not in the original 1958 classification, but were awarded <i>grand cru classé</i> status in the 1969 revision.
10 Château la Gaffelière Soil: <i>Côte, pied de côte</i>	Château le Couvent ⁶ Soil: <i>St.-Émilion plateau</i>	60 Château Mauvezin Soil: <i>St.-Émilion plateau and côte</i>	⁴ These two properties were merged with <i>premier grand cru classé</i> Château Beau-Séjour-Bécot in 1979. Wines bearing both labels can be found up to the 1978 vintage, and it is possible that they might reappear sometime in the future, particularly as the expansion of Château Beau-Séjour-Bécot vineyard was primarily responsible for its demotion in the 1985 classification.
11 Château Magdelaine Soil: <i>St.-Émilion plateau, côte, and pied de côte</i>	33 Couvent des Jacobins ³ Soil: <i>Ancient sand and pied de côte</i>	61 Château Moulin du Cadet Soil: <i>Côte and ancient sand</i>	⁵ This property was merged with <i>premier grand cru classé</i> Château Ausone in 1970. Wines with this label can be found up to the 1969 vintage.
12 Château Pavie Soil: <i>Côte and St.-Émilion plateau</i>	34 Château Croque Michotte ⁹ Soil: <i>Ancient sand and graves</i>	62 Clos de l'Oratoire ³ Soil: <i>Pied de côte</i>	⁶ This property changed hands prior to the 1985 revision and did not apply to be considered; it was not demoted, but simply ignored.
13 Château Trottevieille Soil: <i>St.-Émilion plateau</i>	35 Château Curé Bon la Madeleine Soil: <i>St.-Émilion plateau and côte</i>	63 Château Pavie Décèsse Soil: <i>St.-Émilion plateau and côte</i>	⁷ Two properties were promoted to <i>premier grand cru classé</i> (B) in 1996.
GRAND CRU CLASSÉ	36 Château Dassault ³ Soil: <i>Ancient sand</i>	64 Château Pavie Macquin Soil: <i>St.-Émilion plateau, côte, and sandy gravel</i>	⁸ Four properties were promoted to <i>grand cru classé</i> in 1996.
14 Château l'Arrosée Soil: <i>Côte</i>	37 Château la Dominique Soil: <i>Ancient sand and graves</i>	65 Château Pavillon-Cadet ⁹ Soil: <i>Côte and ancient sand</i>	⁹ Eight properties were demoted to <i>grand cru</i> in 1996.
15 Château Baleau (now Château Côte de Baleau) ^{1,3} Soil: <i>Côte and ancient sand</i>	38 Château Faurie de Souchard Soil: <i>Pied de côte</i>	66 Château Petit-Faurie-de-Soutard Soil: <i>Ancient sand and côte</i>	
16 Château Balestard la Tonnelle Soil: <i>St.-Émilion plateau</i>	39 Château Fonplégade Soil: <i>Côte</i>	67 Château le Prieuré Soil: <i>St.-Émilion plateau and côte</i>	
17 Château Bellevue Soil: <i>Côte and St.-Émilion plateau</i>	40 Château Fonroque Soil: <i>Côte and ancient sand</i>	68 Château Ripeau Soil: <i>Ancient sand</i>	
18 Château Bergat Soil: <i>Côte and St.-Émilion plateau</i>	41 Château Franc-Mayne Soil: <i>Côte</i>	69 Château St.-Georges (Côte Pavie) Soil: <i>Côte and pied de côte</i>	
19 Château Berliquet ² Soil: <i>Côte and pied de côte</i>	42 Château Grand Barrail Lamarzelle Figeac ⁹ Soil: <i>Ancient sand</i>	70 Clos St.-Martin Soil: <i>Côte and ancient sand</i>	
20 Château Cadet-Bon ^{1,8} Soil: <i>St.-Émilion plateau and côte</i>	43 Château Grand Corbin ⁹ Soil: <i>Ancient sand</i>	71 Château Sansonnet ⁹ Soil: <i>St.-Émilion plateau</i>	
21 Château Cadet-Piola Soil: <i>St.-Émilion plateau and côte</i>	44 Château Grand-Corbin-Despaigne ⁹ Soil: <i>Ancient sand</i>	72 Château la Serre Soil: <i>St.-Émilion plateau</i>	
22 Château Canon-la-Gaffelière Soil: <i>Pied de côte and sandy-gravel</i>	45 Château Grand Mayne Soil: <i>Côte and ancient sand</i>	73 Château Soutard Soil: <i>St.-Émilion plateau and côte</i>	
23 Château Cap de Mourlin Soil: <i>Côte and ancient sand</i>	46 Château Grandes Murailles ^{1,8} Soil: <i>Côte and ancient sand</i>	74 Château Tertre Daugay ³ Soil: <i>St.-Émilion plateau and côte</i>	
	47 Château Grand-Pontet Soil: <i>Côte and ancient sand</i>	75 Château la Tour Figeac Soil: <i>Ancient sand and graves</i>	
	48 Château Guadet St.-Julien Soil: <i>St.-Émilion plateau</i>	76 Château la Tour du Pin Figeac (Owner: Giraud-Belivier) Soil: <i>Ancient sand and graves</i>	
	49 Château Haut-Corbin		

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
St.-Émilion is on the right bank of the Dordogne, 80 miles (50 kilometers) east of Bordeaux.

CLIMATE
The climate is less maritime and more continental than that of the Médoc, with a greater variation in daily temperatures—there is also slightly more rain during spring, and substantially less during summer and winter.

ASPECT
The village of St.-Émilion sits on a plateau where vines grow at an altitude of 80–330 ft (25–100 m). These vineyards are quite steep, particularly south of the village where two slopes face each other. The plateau continues eastward in the form of hilly knolls. North and west of the village, the vineyards are on flatter ground.

SOIL
St.-Émilion's soil is extremely complex (see "The question of quality," left) and is part of the area known as "Pomerol-Figeac *graves*" that encompasses the châteaux Cheval Blanc and Figeac.

VITICULTURE AND VINIFICATION
Some of the *vin de presse*, usually the first pressing only, is considered necessary by many châteaux. Skin-contact usually lasts for 15–21 days, but may last up to four weeks. Some wines spend as little as 12 months in cask, but the average is nearer to 15–22 months.

GRAPE VARIETIES
Primary varieties: Cabernet Franc, Cabernet Sauvignon, Merlot
Secondary varieties: Malbec, Carmenère

THE QUESTION OF QUALITY

The diverse nature of St.-Émilion's soil has led to many generalizations that attempt to relate the quantity and character of the wines produced to the soils from which they come. Initially the wines were lumped into two crude categories, *côtes* (literally "hillside" or "slope") and *graves* (literally "gravelly terrain"). The term *côtes* was supposed to describe fairly full-bodied wines that develop quickly; the term *graves*, fuller, firmer, and richer wines that take longer to mature.

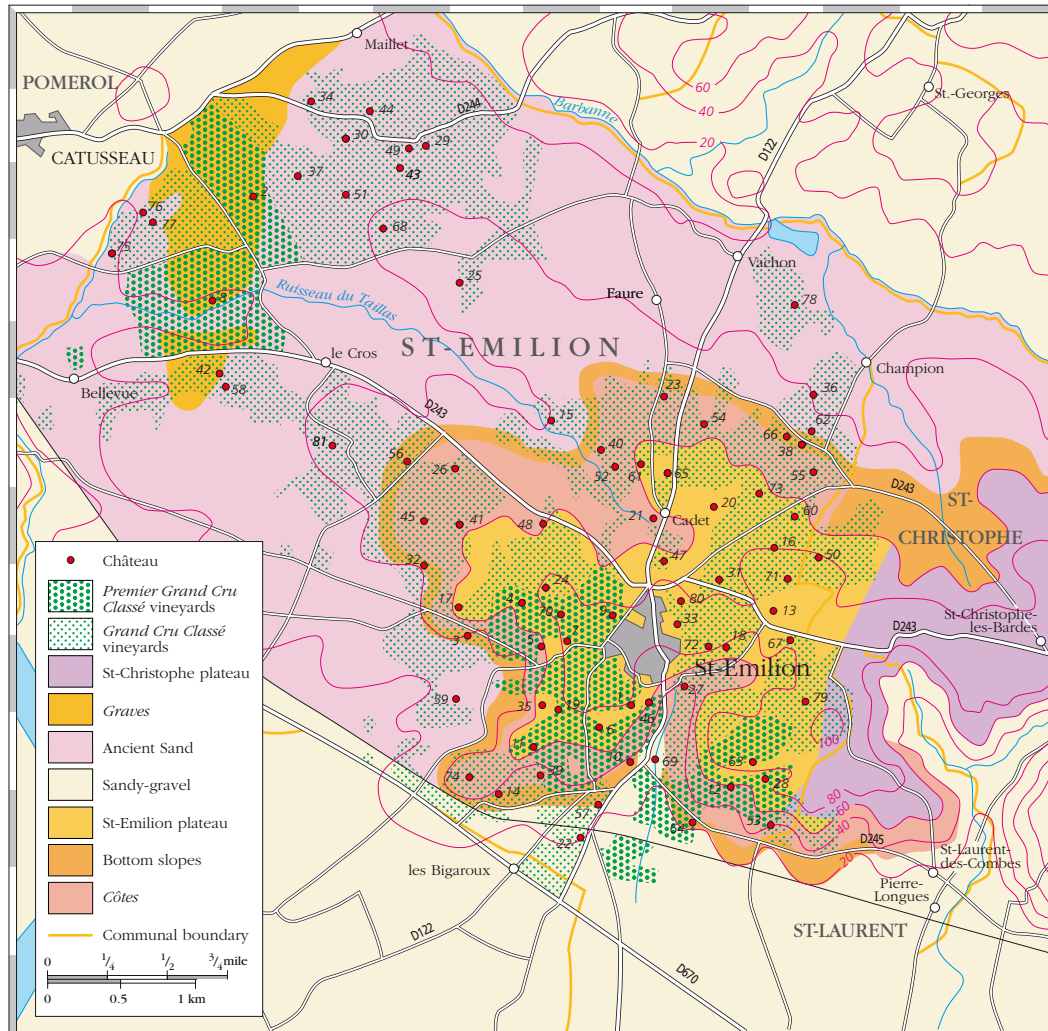

The simplicity was appealing, but it ignored the many wines produced on the stretch of deep sand between St.-Émilion and Pomerol, and those of the plateau, which has a heavier topsoil than the *côtes*. It also failed to distinguish between the eroded *côtes* and the deep-soiled bottom slopes. But most importantly, it ignored the fact that many châteaux are spread across more than one soil type (see the list of classified growths opposite) and that they have various other factors of *terroir*, such as aspect and drainage, which affect the character and quality of a wine (see Soil Survey of St.-Émilion, below).

The map below shows the positions of the 81 classified châteaux of St.-Émilion, listed with their soil types (see opposite). Châteaux la Carte, Chapelle-Madeleine, le Couvent, and Trois-Moulins are listed but do not appear on the map (see notes opposite).

SOIL SURVEY OF ST-ÉMILION

The map below shows the area covered by *premier grand cru classé* and *grand cru classé* châteaux. Each soil type is

described (right) and color keyed on the map. The numbers of the châteaux are listed opposite.

ST-CHRISTOPHE PLATEAU
Clay-limestone and clay-sand topsoil over limestone and *terra rossa* subsoil. *Terra rossa* is a red, claylike soil.

GRAVES
Deep gravel topsoil with a subsoil of large-grain sand over a very deep, hard, and impermeable sedimentary rock called *molasse*. The gravel is similar to that found in the Médoc.

ANCIENT SAND
Thick blanket of large-grain sand over a subsoil of *molasse*. The bulk of this sand extends northeast from the village of St.-Émilion toward Pomerol. Although this area seems to have a gentle slope all around it, and the sand is very permeable, the *molasse* below is flat and impermeable. The water collects, saturating root systems and increasing soil acidity. Some châteaux benefit greatly from underground drainage pipes.

SANDY-GRAVEL
Sandy and sandy-gravel topsoil over sandy-gravel, ferruginous gravel, and iron-pan.

ST-ÉMILION PLATEAU
Shallow clay-limestone and clay sand, shell debris, and silt topsoil over eroded limestone subsoil.

BOTTOM SLOPES
The gentler bottom slopes of the *côtes* have a deep, reddish-brown, sandy-loam topsoil over yellow sand subsoil.

CÔTES
The lower-middle to upper slopes of the *côtes* have a shallow, calcareous, clay-silty-loam topsoil with a high active lime content. Quite sandy on the middle slopes, the topsoil thins out higher up. The subsoil is mostly *molasse*, not the impermeable type found under the ancient sand and *graves*, but a weathered, absorbent *molasse* of limestone or sandstone.

THE WINE PRODUCERS OF SAINT-ÉMILION

CHÂTEAU ANGÉLUS Premier Grand Cru Classé (B) ★★

This is a large property with a single plot of vines on the south-facing *côtes*. At one time the château produced wines in the old “farmyard” style, but that ended with the 1980 vintage. Two-thirds of the wine is matured for 14 to 16 months in wood with 100 per cent new oak. This château is a rising star, and was promoted to *premier grand cru classé* (B) in 1996.

RED This is a soft, silky, and seductive wine. The luxury of new oak is having a positive effect on the quality, character, and aging potential of this wine.

☞ Merlot 50%, Cabernet 45%, Cabernet Sauvignon 5%

🕒 7–20 years

Second wine: *Carillon de l'Angelus*

CHÂTEAU L'ARROSÉE Grand Cru Classé ★★★

This property sits on the *côtes* above the local *coopérative*. Through excellent selection of only its finest grapes, it has consistently produced wines that are a class above those of many of its peers.

RED This medium- to full-bodied wine has a lovely ruby color, a voluptuous bouquet, and soft, creamy-rich fruit backed up by supple oak tannin.

☞ Merlot 50%, Cabernet Sauvignon 35%, Cabernet Franc 15%

🕒 5–15 years

Second wine: *Les Coteaux du Château l'Arrosée*

CHÂTEAU AUSONE Premier Grand Cru Classé (A) ★★★

After gifted winemaker Pascal Delbeck took control of Château Ausone in 1975, this prestigious property produced wines of stunning quality, and it now deserves its superstar status. In 1997, after a power struggle between the two owners, Alain Vauthier took control

and fired Delbeck and hired Michel Rolland as consultant. The vineyard of Château Ausone has a privileged southeast exposure and its vines are fairly established at between 40 and 45 years of age. They are capable of yielding very concentrated wines, which are then matured in wood for between 16 and 22 months, with 100 percent new oak.

RED These rich, well-colored wines have opulent aromas and scintillating flavors. They are full in body, compact in structure, and refined in character, with masses of spicy-cassis fruit and creamy-oak undertones. These wines are the quintessence of class, complexity, and finesse.

☞ Cabernet Franc 50%, Merlot 50%

🕒 15–45 years

CHÂTEAU BALESTARD LA TONNELLE Grand Cru Classé ★

The label of this wine bears a 15th-century poem by François Villon that cites the name of the château. One-third of the wine is matured in 100 percent new oak for up to 24 months, one-third is aged in two-year-old barrels, and the remainder rests in stainless-steel vats until bottling, when it is all blended together.

RED The gentle, ripe aromas of this wine belie its staunchly traditional style. It is a full-bodied wine of great extract, tannin, and acidity that requires time to soften, but it has masses of fruit, and so matures gracefully.

☞ Merlot 65%, Cabernet Franc 20%, Cabernet Sauvignon 10%, Malbec 5%

🕒 10–30 years

Second wine: *Les Tourelles de Balestard*

CHÂTEAU BEAUSÉJOUR (Owner: Duffau-Lagarosse) Premier Grand Cru Classé (B) ★★

These little-seen wines consistently underwhelmed critics until the 1980s, since when Château Beauséjour began to produce darker, fuller wines with more class, but I was not that impressed until the stellar class 2000 vintage.

RED Lovely rich wine, with concentrated fruit, and great potential longevity from 2000 onward.

☞ Merlot 50%, Cabernet Franc 25%, Cabernet Sauvignon 25%

🕒 7–15 years

Second wine: *La Croix de Mazerat*

CHÂTEAU BEAU-SÉJOUR BÉCOT Premier Grand Cru Classé (B) ★★

Since 1979, this property has almost doubled in size by merging with two *grands crus classés*, Château la Carte and Château Trois Moulins. In 1985, Beau-Séjour Bécot was the only *premier grand cru classé* to be demoted in the revision of the St-Émilion classification. The demotion was not due to its quality or performance, but because of its expansion. However, the general application of such criteria would mean demoting nearly all the Bordeaux châteaux classified in 1855! The problem was that expansion within reasonable limits is allowed in the Médoc, but not in St-Émilion. This has since been rectified and in 1996 this château was promoted and is once again a *premier grand cru classé* (B). The wine is fermented in stainless steel and matured in wood for 18 months, with 90 percent new oak.

RED Once lightweight and high-tone, this wine is now full, rich, and truly characterful. The silky Merlot fruit develops quickly, but is backed up with creamy new oak.

☞ Merlot 70%, Cabernet Franc 15%, Cabernet Sauvignon 15%

🕒 7–25 years

Second wine: *La Tournelle des Moines*

CHÂTEAU BELAIR Premier Grand Cru Classé (B) ★★

Pascal Delbeck, the gifted winemaker formerly of Château Ausone, lives here and makes the wine with the same care and attention that he used to apply at Ausone. The wine is matured in wood for 16 to 20 months. Up to half is aged in new oak, the rest in casks that have been used for one wine at Ausone. This is one of the very best *premiers grands crus*.

RED This is a deep-colored, full-bodied wine with a rich flavor of plums, chocolate, black cherries, and cassis. It has great finesse, an alluring style, and a scintillating, spicy-cedarwood complexity.

☞ Merlot 60%, Cabernet Franc 40%

🕒 10–35 years

Second wine: *Roc Blanquet*

CHÂTEAU BELLEVUE Grand Cru Classé

This small property was originally called “Fief-de-Bellevue” and belonged to the Lacaze family from 1642 to 1938. It is situated on the *côtes* and produces a wine that is seldom seen outside France.

RED No better than many unclassified St-Émilions.

☞ Merlot 67%, Cabernet Franc 16.5%, Cabernet Sauvignon 16.5%

🕒 5–10 years

CHÂTEAU BERGAT Grand Cru Classé ②

This small vineyard is managed by Philippe Castéja of Château Trotteville. Its wine is rarely seen and I have never tasted it.

☞ Merlot 50%, Cabernet Franc 40%, Cabernet Sauvignon 10%

CHÂTEAU BERLIQUET Grand Cru Classé ★★

This was the only property to be upgraded to *grand cru classé* in the 1985 reclassification. With Patrick Valette consulting since 1997 there has been an upward trend in quality, and if this continues it would be difficult to deny Berliquet *premier grand cru classé* status during a future revision. The wine is made under the supervision of the local *coopérative*. It is fermented in stainless-steel vats and matured in wood for 18 months, with 30 percent new oak.

RED These are deep, dark, and dense wines with spicy-cassis fruit and good vanilla oak.

☞ Merlot 70%, Cabernet Franc and Cabernet Sauvignon 30%

🕒 10–30 years

CHÂTEAU CADET-BON Grand Cru Classé ★

This property was demoted from *grand cru classé* status in the 1985 reclassification, but after a period of progress Cadet-Bon was reinstated in the 1996 reclassification. Quality continues to improve.

☞ Merlot 60%, Cabernet Franc 40%

CHÂTEAU CADET-PIOLA Grand Cru Classé ★

With the exception of the vintages of 1980 and 1981, which were very light, this property usually shows great consistency and exquisite style. Up to 50 percent of the wine is matured in new oak.

RED These are full-bodied, intensely flavored wines with powerful, new-oak character and great tannic strength.

☞ Merlot 51%, Cabernet Sauvignon 28%, Cabernet Franc 18%, Malbec 3%

🕒 12–25 years

Second wine: *Chevalier de Malte*

CHÂTEAU CANON

Premier Grand Cru Classé (B)

★★★

Many years ago this château used to produce a second wine called "St.-Martin-de-Mazerat," which was the old parish name before Château Canon was absorbed by St.-Émilion. Excellent wines were made under Eric Forner and although he sold out in 1996 the quality has been maintained. In summer 2000 the new owners, Chanel Inc., bought the nearby property Curé Bon la Madeleine with INAO agreement to incorporate it into Canon from the 2000 vintage. So goodbye Curé Bon! The *grand vin*, fermented in oak vats and matured in wood for 20 months with 50 percent new oak, is one of the best of St.-Émilion's *premiers grands crus classés*.

RED These wines have a deep purple color, an opulent cassis bouquet, and are very rich and voluptuous on the palate with masses of juicy Merlot fruit and spicy complexity.

☞ Merlot 55%, Cabernet Franc 40%, Cabernet Sauvignon 4%

🕒 8–30 years

Second wine: *Clos J. Canon*

CHÂTEAUCANON-LA-GAFFELIÈRE

Grand Cru Classé

★★

Owned since 1985 by Comte Von Neipperg, Château Canon-la-Gaffelière is one of the oldest properties in St.-Émilion. Its wine was fermented in stainless-steel vats until wooden vats were installed in 1997, and the quality soared the very next year. Malolactic fermentation is carried out in barrel and the wines matured for 18 months, with up to 50 percent new oak.

RED This wine has been on form since 1998. It has been really plump, displaying vivid, concentrated, spicy fruit, finishing with creamy oak.

☞ Merlot 65%, Cabernet Franc 30%, Cabernet Sauvignon 5%

🕒 8–20 years

Other wines: *Côte Mignon-la-Gaffelière*

CHÂTEAU
CAP DE MOURLIN

Grand Cru Classé

★

Until 1982 there were two versions of this wine, one bearing the name of Jacques Capdemourlin and one that of Jean Capdemourlin. This property is run by Jacques. The wine is matured in wood for up to 24 months, with one-third new oak.

RED An improving, attractive, well-made, medium-bodied wine, with exquisitely fresh fruit, and a smooth finish.

☞ Merlot 60%, Cabernet Franc 25%, Cabernet Sauvignon 12%, Malbec 3%

🕒 6–15 years

Second wine: *Mayne d'Artagnon*

CHÂTEAU LA CARTE

Grand Cru Classé

Since 1980, the vineyards of this property have been merged with those of *premier grand cru classé* Château Beau-Séjour-Bécot.

CHÂTEAU
CHAPELLE-MADELEINE

Grand Cru Classé until 1996

Since 1971, these vineyards have been merged with those of *premier grand cru classé* Château Ausone.

CHÂTEAU CHAUVIN

Grand Cru Classé

★

This property's wine is matured in wood for 18 months, with one-third new oak. It is difficult to find, but its quality makes it deserving of better distribution.

RED When on form, Château Chauvin can have excellent color, an aromatic bouquet, full body, and plummy fruit. More hits than misses these days, as the wines are made with an increasing degree of finesse.

☞ Merlot 60%, Cabernet Franc 30%, Cabernet Sauvignon 10%

🕒 4–10 years

Second wine: *Chauvin Variation*

CHÂTEAU
CHEVAL BLANC

Premier Grand Cru Classé (A)

★★★

The unusual aspect of this great wine is its high proportion of Cabernet Franc, which harks back to the pre-1956 era. Switching to a majority of Merlot vines was advantageous for most Libournais properties but keeping a proportion of 60 percent Cabernet Franc was even better for Château Cheval Blanc. In 1998 this château was bought by two businessmen, Albert Frère from Belgium and Bernard Arnault, the head of LVMH. The wine is matured in wood for 20 months, with 100 percent new oak.

RED These wines have all the sweet, spicy richness one expects from a classic St.-Émilion property situated on *graves*.

☞ Cabernet Franc 60%, Merlot 37%, Malbec 2%, Cabernet Sauvignon 1%

🕒 12–40 years

Second wine: *Le Petit Cheval*

CLOS FOURTET

Premier Grand Cru Classé (B)

★★★

This property had an inconsistent record, but has steadily improved throughout the 1990s. The wines are matured in wood for 12 to 18 months, using 70 percent new oak.

RED Opulent and medium-bodied with silky Merlot fruit, gaining in complexity and finesse.

☞ Merlot 60%, Cabernet Franc 20%, Cabernet Sauvignon 20%

🕒 6–12 years

Second wine: *Domaine de Martialis*

CHÂTEAU
CLOS DES JACOBINS

Grand Cru Classé

★

Clos des Jacobins, which is kept in the impeccable style to which all the Cordier properties are accustomed, is impressive even during "off vintages."

RED These are rich, fat wines, bursting with chocolate and black-cherry flavors.

☞ Merlot 85%, Cabernet Franc 10%, Cabernet Sauvignon 5%

🕒 8–25 years

CLOS DE
L'ORATOIRE

Grand Cru Classé

★★

This property belongs to Stephan Von Neipperg, who should develop a cult following for this wine. The wine is matured in wood for 18 months, with one-third new oak.

RED These fine, full-flavored wines tend to have great concentration and style.

☞ Merlot 75%, Cabernet Franc 25%

🕒 7–15 years

CLOS ST-MARTIN

Grand Cru Classé

★

These wines are made at Château Côte Baleau alongside those of that property and those of Château Grandes Murailles. Of these three wines, only Clos St.-Martin retained *grand cru classé* status after the reclassification of 1985. It is aged in wood with 25 percent new barrels every four years.

RED Vivid color with ripe Merlot fruit, silky texture, and elegant style.

☞ Merlot 75%, Cabernet Franc 25%

🕒 6–15 years

CHÂTEAU LA CLOTTE

Grand Cru Classé

②

This property is under the same

ownership as the Logis de la Cadène restaurant in St.-Émilion, where much of its wine is sold. The Libournais *négociant* Jean-Pierre Moueix takes three-quarters of the crop.

RED Although not as consistent as some *grands crus classés*, when successful this estate can make attractive and elegant wines with lots of soft, silky fruit that are a match for its peers.

☞ Merlot 70%, Cabernet Franc 30%

🕒 5–12 years

CHÂTEAU
LA CLUSIÈRE

Grand Cru Classé

②

This is a small enclave within the property of Château Pavie and is under the same ownership as Pavie and Château Pavie Décèsse. This wine is fermented in stainless-steel vats and matured in wood (two-year-old barrels from Château Pavie) for up to 24 months.

RED This wine has a certain elegance, but lacks finesse and has a high-tone style that does not appeal to me. To be fair, I must point out that those who appreciate this style often find la Clusière solid and characterful.

☞ Merlot 70%, Cabernet Franc 20%, Cabernet Sauvignon 10%

🕒 5–10 years

CHÂTEAU
CORBIN

Grand Cru Classé

②

This property has the same owners as Château Grand Corbin—the Corbin estate, which is now divided into five separate properties bordering the Pomerol district. The wine is fermented in stainless steel and one-third of the production is matured in 100 percent new oak.

RED Deep-colored, full-bodied, and deliciously rich, but rather rustic for a classified growth.

☞ Merlot 67%, Cabernet Franc and Cabernet Sauvignon 33%

🕒 6–12 years

Other wines: *Latour Corbin, Château Corbin-Vieille-Tour*

CHÂTEAU
CORBIN MICHOTTE

Grand Cru Classé

★

This is one of five Corbin and two Michotte estates! This wine is fermented in stainless steel and some is matured in wood, with one-third new oak.

RED A dark, deeply flavored, full-bodied wine that has rich, juicy Merlot fruit and some finesse.

☞ Merlot 65%, Cabernet Franc 30%, Cabernet Sauvignon 5%

🕒 6–15 years

Second wine: *Les Abeilles*

CHÂTEAU CÔTE DE BALEAU

Grand Cru Classé until 1985

This property was unjustly demoted from its *grand cru classé* status in the 1985 revision. Côte de Baleau deserves its former classification and is under the same ownership as Château Grandes Murailles and Clos St.-Martin, the former of which was also unfairly demoted. This wine is aged in wood and 25 percent of the barrels are renewed every four years.

RED Full, rich, and well-balanced wines that have good fruit, some fat, and an attractive underlying vanilla character.

☞ Merlot 70%, Cabernet Sauvignon 20%, Cabernet Franc 10%

🕒 4–12 years

Second wine: *Des Roches Blanches*

CHÂTEAU LA COUSPAUDE

Grand Cru Classé

This property was demoted from its *grand cru classé* status in 1985 but, following a string of good vintages, was promoted back to its original classification in 1996, since when the quality has continued to improve. The wine is matured in wood, with up to 80 percent new oak.

RED This wine now has lots of upfront, juicy-Merlot fruit with an increasing amount of finesse.

☞ Merlot 60%, Cabernet Franc and Cabernet Sauvignon 40%

🕒 3–7 years

Second wine: *Hubert*

CHÂTEAU COUTET

Grand Cru Classé until 1985

This property was demoted from its *grand cru classé* status in 1985. It has a record of producing finer wines than la Couspaude (see previous entry), but, unfortunately, has the same lack of consistency.

RED Most vintages have a light but elegant style, with a firm tannin structure.

☞ Cabernet Franc 45%, Merlot 45%, Cabernet Sauvignon 5%, Malbec 5%

🕒 4–8 years

COUVENT DES JACOBINS

Grand Cru Classé

The wine from the young vines of this property is not included in its *grand vin*, but is used to make a second wine called “Château Beau Mayne.” One-third of the production is matured in wood, with 100 percent new oak.

RED The delicious, silky-seductive fruit in this consistently well-made wine is very stylish and harmonious.

CHÂTEAU CROQUE MICHOTTE

Grand Cru Classé until 1996

This property certainly deserves its *grand cru classé* status. The wine is fermented in stainless steel and matured in wood for between 18 and 24 months, with up to one-third new oak.

RED A delightful and elegant style of wine, brimming with juicy, soft, and silky Merlot fruit.

☞ Merlot 80%, Cabernet Franc and Cabernet Sauvignon 20%

🕒 5–12 years

CHÂTEAU CURÉ BON LA MADELEINE

Grand Cru Classé

Surrounded by *premiers grands crus classés* such as Ausone, Belair, and Canon, this property has had an excellent record, but was absorbed by Château Canon in the summer of 2000.

CHÂTEAU DASSAULT

Grand Cru Classé

This property was promoted to *grand cru classé* in the 1969 revision of the 1954 St.-Émilion classification. It has an excellent record and more than deserves its classification. The wine is fermented in stainless steel and matured in wood for 12 months, with one-third of the casks being new oak, and undergoes as many as six rackings. With its beautifully understated Lafite-like label, Dassault's presentation is perfect.

RED Supremely elegant wines that always display a delicate marriage of fruit and oak in perfect balance, with fine acidity and supple tannin.

☞ Merlot 65%, Cabernet Franc 20%, Cabernet Sauvignon 15%

🕒 8–25 years

Second wine: *Merissac*

CHÂTEAU LA DOMINIQUE

Grand Cru Classé

This property, one of the best of the *grands crus classés*, is situated close to Château Cheval Blanc on the *graves* in the extreme west of St.-Émilion. The wine is fermented in stainless-steel vats that are equipped with grilles to keep the *marc* (residue of pips, stalks, and skin) submerged during the *cuvaison* (skin-contact fermentation). It is matured in wood for 24 months, with 50 percent new oak.

RED Very open and expressive wines that are plump and attractive, full of ripe, creamy fruit with elegant underlying oak.

☞ Merlot 60%, Cabernet Franc 15%, Cabernet Sauvignon 15%, Malbec 10%

🕒 8–25 years

Second wine: *St.-Paul de la Dominique*

CHÂTEAU FAURIE DE SOUCHARD

Grand Cru Classé

Lackluster, underperformer.

RED As from 1986 the vintages have increased in color and concentration, but the wines are not special.

☞ Merlot 65%, Cabernet Franc 26%, Cabernet Sauvignon 9%

🕒 4–7 years

Other wines: *Cadet-Peychez*

CHÂTEAU-FIGEAC

Premier Grand Cru Classé (B)

Some critics suggest that the unusually high proportion of Cabernet Sauvignon in the *encépagement* (varietal blend) of this great château is wrong, but owner Thierry de Manoncourt refutes this. He has bottles of pure varietal wines produced at Figeac going back 30 years. As far as I am concerned, his blended *grand vin* says it all every year. This château belongs with the elite of Ausone and its *graves* neighbor, Cheval Blanc. The wine is matured in wood for 18 to 20 months, with 100 percent new oak.

RED Impressively ripe, rich, and concentrated wines with fine color, a beautiful bouquet, stunning creamy-ripe fruit, great finesse, and a wonderful spicy complexity.

☞ Merlot 30%, Cabernet Franc 35%, Cabernet Sauvignon 35%

🕒 12–30 years

Second wine: *La Grange Neuve*

CHÂTEAU FONPLÉGADE

Grand Cru Classé

Under the same ownership as Château la Tour du Pin Figeac, this property belongs to Armand Moueix, cousin of Jean-Pierre Moueix of Château Pétrus *et al.* The wine is matured in wood for 12 to 15 months, using one-third new oak.

RED I used to find this wine astringent and vegetal, earthy even, but then it appeared to pick up, only to lapse. There have been so many false starts in its perceived improvement that I no longer expect any consistency. Even though the best vintages (1982, 1990, 2000, and 2001) have been delightfully clean and attractive, literally bursting with the soft, ripe, juicy fruit flavors of raspberries and strawberries, mostly this is an

austere, tannic wine with attenuated fruit, and lacking style.

☞ Merlot 60%, Cabernet Franc 35%, Cabernet Sauvignon 5%

🕒 5–12 years

Second wine: *Clos Goudichaud*

CHÂTEAU FONROQUE

Grand Cru Classé

Located just northwest of St.-Émilion itself, this secluded property has belonged to the négociant J.-P. Moueix since 1931. The wine is matured in wood for 24 months.

RED This is a deep-colored, well-made wine with a fine plummy character that shows better on the bouquet and the initial and middle palate than on the finish.

☞ Merlot 70%, Cabernet Franc 30%

🕒 6–15 years

CHÂTEAU LA GAFFELIÈRE

Premier Grand Cru Classé (B)

This property belongs to Comte Léo de Malet-Roquefort, who also owns the very old estate of Château Tertre Daugay, a *grand cru classé*. After a string of aggressive, ungenerous vintages, Gaffelière has produced increasingly excellent wines since the mid-1980s. The wine is matured in wood for 18 months, with 100 percent new oak.

RED These wines are concentrated and tannic, but they now have much more finesse, fat, and mouth-tingling richness than previously.

☞ Merlot 65%, Cabernet Franc 20%, Cabernet Sauvignon 15%

🕒 12–35 years

Second wine: *Clos la Gaffelière*

Other wines: *Roquefort*

CHÂTEAU LA GOMERIE

Grand Cru

Owned by Gérard and Dominique Bécot of Beau-Séjour-Bécot fame, I rather get the impression that the tiny production of this 100 percent Merlot vinified in 100 percent new oak is the vinous equivalent of giving the finger to the authorities. The unfair demotion of Beau-Séjour-Bécot in 1985 (rectified in 1996) was a cruel and unjustified blow to the Bécots, who had improved the quality of their wine. By producing an unclassified superpremium St.-Émilion that demands and receives a higher price than its own *premier grand cru classé*, the Bécots have demonstrated that the classification is meaningless.

RED Masses of rich, ripe Merlot fruit dominate this wine, despite its 100 percent new oak. A stunning wine that deserves its cult following.

☞ Merlot 100%

🕒 4–18 years

CHÂTEAU GRAND-CORBIN-DESPAGNE

Grand Cru Classé until 1996

★①

This part of the Corbin estate was bought by the Despagne family—hence the name. It was demoted in the 1996 St.-Émilion Classification. The wine is fermented in stainless steel and matured in wood for up to 18 months, with some new oak.

RED A well-colored wine of full and rich body with plenty of creamy fruit and oak, supported by supple tannin.

☞ Merlot 90%, Cabernet Franc 10%

🕒 7–25 years

Second wine: *Reine-Blanche*

CHÂTEAU GRANDES MURAILLES

Grand Cru Classé

★

This property was demoted from its *grand cru classé* status in 1985, unjustly I think. The wines produced here are better and more consistent than those of many châteaux that were not demoted at that time. Château Grandes Murailles was, however, promoted back to its previous status in the 1996 St.-Émilion Classification. It is under the same ownership as Château Côte de Baleau and Clos St.-Martin, the former of which was also unfairly demoted. The wine is fermented in stainless-steel vats and matured in wood for 20 months, using up to 25 percent new oak.

RED These elegant, harmonious wines have good extract and a supple tannin structure that quickly softens. They are a delight to drink when relatively young, although they also age gracefully.

☞ Merlot 60%, Cabernet Franc 20%, Cabernet Sauvignon 20%

🕒 5–20 years

CHÂTEAU GRAND MAYNE

Grand Cru Classé

★☆☆

This château ferments its wine in stainless-steel vats and ages it in wood with 80 percent new oak.

RED This is a firm, fresh, and fruity style of wine that had a rather inconsistent reputation until the 1990s, when the wines have had much more richness than in previous years.

☞ Merlot 50%, Cabernet Franc 40%, Cabernet Sauvignon 10%

🕒 4–10 years

Second wine: *Les Plantes du Mayne*

Other wines: *Cassevert, Château Beau Mazerat*

CHÂTEAU GRAND-PONTET

Grand Cru Classé

★☆☆

Since 1980 this property has been under the same ownership as

Château Beau-Séjour Bécot. The wine is matured in wood for 12–18 months with 50 percent new oak.

RED After a string of very dull vintages, this property is now producing full-bodied wines of fine quality and character. They are fat and ripe, rich in fruit and tannin, with delightful underlying creamy-oak flavors.

☞ Merlot 60%, Cabernet Franc and Cabernet Sauvignon 40%

🕒 6–15 years

CHÂTEAU GUADET ST.-JULIEN

Grand Cru Classé

★

This property consistently produces wines that well deserve their status. They are matured in wood for 18 to 20 months, using up to one-third new oak.

RED These are wines that show the silky charms of Merlot very early, and then tighten up for a few years before blossoming into finer and fuller wines.

☞ Merlot 75%, Cabernet Franc and Cabernet Sauvignon 25%

🕒 7–20 years

CHÂTEAU HAUT-CORBIN

Grand Cru Classé

★

This wine is matured in wood for 24 months, with up to 20 percent new oak. Same ownership as Canteneste, with a string of good vintages since the 1990s.

☞ Merlot 70%, Cabernet Franc and Cabernet Sauvignon 30%

Second wine: *Vin d'Edouard*

CHÂTEAU HAUT-SARPE

Grand Cru Classé

★

Although not one of the top performers, this château certainly deserves its status. The wine is matured in wood for 20 to 22 months, using 25 percent new oak.

RED Elegant, silky, and stylish medium-bodied wines that are best appreciated when young.

☞ Merlot 70%, Cabernet Franc 30%

🕒 4–8 years

CHÂTEAU JEAN FAURE

Grand Cru Classé until 1985

This property was demoted from its *grand cru classé* status in 1985. I have not tasted vintages beyond 1983. The wine is matured in wood for 24 months, with 25 percent new oak.

RED These wines have good color and easy, attractive, supple fruit.

☞ Cabernet Franc 60%, Merlot 30%, Malbec 10%

🕒 3–8 years

CHÂTEAU L'HERMITAGE

★

Owned by Véronique Gaboriaud, a friend of *garagiste* Jean-Luc

Thunevin, this well-sited property produces just 750 cases annually, with wines matured in 100 percent new oak.

RED So succulent and luscious is the fruit, and so supple the tannins, that this wine is accessible from a remarkably youthful age, yet will still improve.

☞ Merlot 60%, Cabernet Sauvignon 40%

🕒 5–15 years

CHATEAU LAMARZELLE

Grand Cru Classé

★

Under the same ownership as Grand Barrail Lamarzelle Figeac, this property preserved its classification in 1996, while the other château was demoted.

RED Forward, fruity wines that have improved throughout the 1990s.

☞ Cabernet Franc 80%, Merlot 20%

🕒 3–7 years

CHÂTEAU LANIOTE

Grand Cru Classé

★

An old property that incorporates the “Holy Grotto” where St.-Émilion lived in the 8th century. The wine is fermented and matured in wood with 25 percent new oak.

RED Stylish medium-bodied wines, with plenty of fresh, elegant fruit.

☞ Merlot 70%, Cabernet Franc 20%, Cabernet Sauvignon 10%

🕒 6–12 years

CHÂTEAU LARCIS DUCASSE

Grand Cru Classé

★★

This property, whose vineyard is situated on the Côte de Pavie, matures its wine in vat and wood for 24 months.

RED Fuller, richer wines in the 1990s, particularly in the best years.

☞ Merlot 65%, Cabernet Franc and Cabernet Sauvignon 35%

🕒 4–8 years

CHÂTEAU LARMANDE

Grand Cru Classé

★★

Consistently one of the best *grands crus classés* in St.-Émilion, fermented in stainless-steel vats and matured in wood for 12 to 18 months, with 35 to 50 percent new oak.

RED These superb wines are typified by their great concentration of color and fruit. They are rich and ripe with an abundance of creamy cassis and vanilla flavors that develop into a cedarwood complexity.

☞ Merlot 65%, Cabernet Franc 30%, Cabernet Sauvignon 5%

🕒 8–25 years

Second wine: *Le Cadet de Larmande*

Other wines: *Des Templiers*

CHÂTEAU LAROQUE

Grand Cru Classé

★

Made a *grand cru classé* in 1996, this is one of three *grands crus classés* châteaux that are not situated in the commune of St.-Émilion itself.

RED As smooth and fruity as might be expected, with good tannic edge and increasing oak influence.

☞ Merlot 80%, Cabernet Franc 15%, Cabernet Sauvignon 5%

🕒 4–16 years

Second wine: *Les Tours de Laroque*

CHÂTEAU LAROZE

Grand Cru Classé

★①

This 19th-century château was named Laroze after a “characteristic scent of roses” was found in its wines. The wine is matured in wood for one to three years.

RED The wine does have a soft and seductive bouquet, although I have yet to find “roses” in it. It is an immediately appealing wine of some finesse that is always a delight to drink early.

☞ Merlot 50%, Cabernet Franc 45%, Cabernet Sauvignon 5%

🕒 4–10 years

CHÂTEAU MAGDELAINE

Premier Grand Cru Classé (B)

★★①

This could be considered the Pétrus of St.-Émilion. It is the grandest St.-Émilion estate in the Jean-Pierre Moueix Libournais empire, but as fine as the *terroir* is, and as much as Moueix does to extract maximum quality, the wine falls short of Pétrus. The wine matures in wood for 18 months, with a third new oak.

RED These well-colored wines have excellent concentration, yet great finesse and a certain delicacy. The flavor is multilayered with a long, elegant, and complex finish.

☞ Merlot 80%, Cabernet Franc 20%

🕒 10–35 years

CHÂTEAU MATRAS

Grand Cru Classé

★

This wine is matured in tank for 12 months, followed by 12 months in one-third new oak. A fine 1990.

RED Opulent, silky fruit.

☞ Cabernet Franc 60%, Merlot 40%

🕒 6–15 years

CHÂTEAU MAUVEZIN

Grand Cru Classé

This property deserves its *grand cru classé* status. The wine is fermented and matured in new oak.

RED The style usually has been aromatic and supple with some oaky finesse.

🍷 Cabernet Franc 50%, Merlot 40%, Cabernet Sauvignon 10%

🕒 7–15 years

CHATEAU MONBOUSQUET

Grand Cru

This was hypermarket owner Gérard Perse's first venture into wine and he openly admits that he bought the property because of its beauty, rather than out of any detailed analysis of its viticultural potential. That said, he has, with the help of consultant Michel Rolland, taken this château to unbelievable heights and, having done so, set about analyzing what could and should be purchased in St.-Émilion from a purely viticultural perspective. He set his sights on Pavie and Pavie Décésse, which he purchased in 1998 and 1997. Monbousquet remains his home.

RED Voluptuous, velvety, and hedonistic, these wines lack neither complexity nor finesse, but they are so delicious to drink that their more profound qualities easily slip by. Or should that be slip down?

🍷 Cabernet Sauvignon 10%, Cabernet Franc 40%, Merlot 50%

🕒 4–15 years

CHATEAU MONDOTTE

Grand Cru

Since the 1996 vintage, Stephan Von Neipperg's unclassified *vin de garage* has surpassed the quality and price of his excellent *grand cru classé* Château Canon-la-Gaffelière. Low yield, 100 percent oak, and ludicrous prices.

RED Extraordinary color, density, and complexity for a wine that is not in the slightest bit heavy and makes such charming and easy drinking.

🍷 Cabernet Franc 10%, Merlot 90%

🕒 5–20 years

CHÂTEAU MOULIN DU CADET

Grand Cru Classé

This château, which is farmed by the Libournais *négociant* J.-P. Moueix, is consistently one of the best *grands crus classés*. The wine is matured in wood for 18 months, with a small proportion of new oak.

RED These wines have good color, a fine bouquet, delightfully perfumed Merlot fruit, excellent finesse, and some complexity. They are not full or powerful, but what they lack in size, they more than make up for in style.

🍷 Merlot 85%, Cabernet Franc 15%

🕒 6–15 years

CHÂTEAU PAVIE

Premier Grand Cru Classé (B)

This top-performing château was purchased in 1998 along with Pavie Décésse and La Clusière by Gérard Perse. Perse used to own a group of hypermarkets, but his love of fine wine began to take over his working life in 1993, when he purchased Monbousquet. The link between Pavie under its previous owners, the Valette family, and now is Michel Rolland, who has been retained as consultant. Although Pavie has produced some of the greatest wines of St.-Émilion in recent decades, the obvious advantage for Rolland is that Perse has poured a small fortune into new installations. The wine is matured in wood for 18 to 24 months, with 100 percent new oak.

RED Great, stylish wines packed with creamy fruit and lifted by exquisite new oak. Fabulous concentration since 1998, without losing any finesse, although I will keep an open mind about the 2003 for a decade or so!

🍷 Merlot 60%, Cabernet Franc 30%, Cabernet Sauvignon 10%

🕒 8–30 years

CHÂTEAU PAVIE DÉCESSE

Grand Cru Classé

This property was under the same ownership as Château Pavie when the Valette family were the owners, and still is under Perse. Although it is not one of the top *grands crus classés*, it is consistent and certainly worthy of its status.

RED Huge seachange in color, quality, and concentration in the 1998 and 1999 vintage.

🍷 Merlot 60%, Cabernet Franc 25%, Cabernet Sauvignon 15%

🕒 6–12 years

CHÂTEAU PAVIE MACQUIN

Grand Cru Classé

This property was named after Albert Macquin, a local grower who pioneered work to graft European vines on to American rootstock.

These wines have noticeably improved throughout the 1990s, when Nicolas Thienpont of Vieux Château Certan has overseen the production.

RED Much richer, with more fruit and new oak in recent years.

🍷 Merlot 75%, Cabernet Franc and Cabernet Sauvignon 25%

🕒 4–8 years

CHÂTEAU PETIT-FAURIE-DE-SOUTARD

Grand Cru Classé

This excellent property used to be part of the neighboring Château Soutard, but is now run by Jacques Capdemourlin, who also runs Château Cap de Mourlin and Château Balestard la Tonnelle. Half of its production is matured in wood for up to a year.

RED This wine has soft, creamy aromas on the bouquet, some concentration of smooth Merlot fruit on the palate, a silky texture, and a dry, tannic finish. It is absolutely delicious when young but gains a lot from a little bottle-age.

🍷 Merlot 60%, Cabernet Franc 30%, Cabernet Sauvignon 10%

🕒 3–8 years

CHÂTEAU PIPEAU

Grand Cru

Up and coming château, Pipeau is matured in wood for 18 months, with 50 percent new oak.

RED Rich, stylish, and quite striking wines that are full of fruit, underpinned by creamy-smoky oak, and easier to drink younger than most St.-Émilions.

🍷 Merlot 80%, Cabernet Franc 10%, Cabernet Sauvignon 10%

🕒 4–10 years

CHÂTEAU LE PRIEURÉ

Grand Cru Classé

This property is under the same ownership as Château Vray Croix de Gay in Pomerol and Château Siaurac in Lalande-de-Pomerol. The wine produced here is matured in wood for 18 to 24 months, with 25 percent new oak.

RED Light but lengthy wines of some elegance that are best enjoyed when young and fresh.

🍷 Merlot 60%, Cabernet Franc 30%, Cabernet Sauvignon 10%

🕒 4–8 years

Second wine: *L'Olivier*

QUINAULT L'ENCLOS

Grand Cru

Increasingly impressive since being purchased by Dr. Alain Raynaud in 1997, this wine is matured in wood for 18 months, with 100 percent new oak.

RED Exceptionally concentrated

and complex.

🍷 Merlot 80%, Cabernet Franc 10%, Cabernet Sauvignon 5%, Malbec 5%

🕒 6–20 years

CHÂTEAU ST.-GEORGES (CÔTE PAVIE)

Grand Cru Classé

Owned by Jacques Masson, this small property's vineyard is well situated, lying close to those of châteaux Pavie and la Gaffelière. The wine is fermented in stainless steel and matured in wooden casks for 24 months.

RED This is a delicious, medium-bodied wine with plump, spicy-juicy Merlot fruit, made in an attractive early-drinking style that does not lack finesse.

🍷 Merlot 50%, Cabernet Franc 25%, Cabernet Sauvignon 25%

🕒 4–8 years

CHÂTEAU SANSONNET

Grand Cru Classé until 1996

Supposedly purchased in 1999 by François d'Aulan, the former owner of Piper-Heidsieck and the master puppeteer behind numerous wine-related deals ever since. One of my spies reports that the previous owner is still there. If d'Aulan is serious about taking this château on, then we can expect some investment and improvement. However, if it's just part of one of his deals, don't hold your breath.

RED This wine is inconsistent and many vintages lack concentration, but the 1982, which is very light for the year, is supple and attractive.

🍷 Merlot 60%, Cabernet Franc 20%, Cabernet Sauvignon 20%

🕒 3–7 years

CHÂTEAU LA SERRE

Grand Cru Classé

This is another property that is improving tremendously in quality. It occupies two terraces on St.-Émilion's limestone plateau, one in front of the château and one behind. The wine is fermented in lined concrete tanks and matured in wood for 16 months with a small proportion of new oak.

RED This wine initially charms, then goes through a tight and sullen period, making it reminiscent of Château Guadet St.-Julien. Their styles, however, are very different. When young, this is quite a ripe and plump wine, totally dominated by new oak. In time, the fruit emerges to form a luscious, stylish wine of some finesse and complexity.

🍷 Merlot 80%, Cabernet Franc 20%

🕒 8–25 years

Second wine: *Menuts de la Serre*

CHÂTEAU SOUTARD

Grand Cru Classé

★★★

The large and very fine château on this estate was built in 1740 for the use of the Soutard family in the summer. Vines have grown here since Roman times. The wine of Soutard is matured in wood for 18 months, with up to one-third new oak casks.

RED This dark, muscular, and full-bodied wine is made in true *vin de garde* style, which means it improves greatly while aging. It has great concentrations of color, fruit, tannin, and extract. With time it can also achieve great finesse and complexity.

Merlot 65%, Cabernet Franc 30%, Cabernet Sauvignon 5%

12–35 years

Second wine: *Clos de la Tonnelle*

CHÂTEAU TERTRE DAUGAY

Grand Cru Classé

★

This property was purchased in 1978 by Comte Léo de Malet-Roquefort, the owner of *premier grand cru classé* Château la Gaffelière. The wine of Château Tertre Daugay, which is matured in wood with one-third new oak, is excellent and is getting better by the vintage.

RED These wines are rich, plump, and fruity with a fine bouquet, ripe underlying oak, great finesse, and surprising longevity.

Merlot 60%, Cabernet Franc 30%, Cabernet Sauvignon 10%

7–20 years

Second wine: *De Roquefort*

Other wines: *Moulin du Biguey*

CHÂTEAU TERTRE-RÔTEBOEUF

★★★

François Mitjavile's cult wine is yet more proof that the only important classification is made by the consumer. This was considered to be outrageously expensive before Mondotte. The price has not gone down, but in France you can get four or five bottles of Tertre-Rôteboeuf for the cost of one bottle of Mondotte.

RED Huge, oaky, complex, and cultish: the Leonetti of St.-Émilion!

Cabernet Franc 20%, Merlot 80%

5–20 years

CHÂTEAU LA TOUR FIGEAC

Grand Cru Classé

★★★

This property was attached to Château Figeac in 1879 and today it is one of the best of the *grands crus classés*. The wine is matured in wood for 18 months, with one-third new oak.

RED These are fat and supple wines with a very alluring bouquet

and masses of rich, ripe cassis fruit gently supported by smoky-creamy oak.

Merlot 60%, Cabernet Franc 40%

4–8 years

CHÂTEAU LA TOUR DU PIN FIGEAC

(Giraud-Bélivier)

Grand Cru Classé

②

This property is run by André Giraud, who also owns Château le Caillou in Pomerol. Unfortunately, these wines have never impressed me and so I am unable to recommend them.

Merlot 75%, Cabernet Franc 25%

CHÂTEAU LA TOUR DU PIN FIGEAC

(Moueix)

Grand Cru Classé

★★★

This property is one of the best of the *grands crus classés*. It is now part of the Armand Moueix stable of châteaux. The wine is matured in wood for 12 to 15 months, with one-third new oak.

RED These consistently well-made wines always show a beautiful balance of spicy-juicy Merlot fruit, creamy oak, and supple tannin.

Merlot 60%, Cabernet Franc 30%, Cabernet Sauvignon and Malbec 10%

6–15 years

CHÂTEAU TRIMOULET

Grand Cru Classé

★

This is an old property overlooking St.-Georges-St.-Émilion. The wine is matured in wood for 12 months, with 100 percent new oak.

RED This well-colored wine has an overtly ripe and fruity aroma, lots of creamy-oaky character, a fruit flavor, and supple tannin.

Merlot 60%, Cabernet Franc 20%, Cabernet Sauvignon 20%

7–20 years

CHÂTEAU TROIS-MOULINS

Grand Cru Classé

These vineyards have been incorporated with those of Château Beau-Séjour Bécot since 1979.

CHÂTEAU TROPLONG MONDOT

Grand Cru Classé

★★

This property is owned by Claude Valette and is run by his daughter Christine. Half the production is matured in wood for 18 months with 80 percent new oak.

RED Since the introduction of temperature-controlled fermentation and a second wine in 1985, some critics have believed the quality of this wine to be on a par with that of a *premier grand cru classé*, but for me, Troplong Mondot came on board with the sensational 1988, 1989, 1990, 1992, and 1996 (those in between being merely excellent!).

Merlot 65%, Cabernet Franc and Malbec 20%, Cabernet Sauvignon 15%

4–8 years

Second wine: *Mondot*

CHÂTEAU TROTTEVIEILLE

Premier Grand Cru Classé (B)

★★★

This property has the reputation of producing a star wine every five years or so, interspersed by very mediocre wines indeed, but has been made very consistent since 1985, and now makes true *premier grand cru classé* quality wine every year. The wine is matured in wood for 18 months, with up to 100 percent new oak.

RED The quality has dramatically improved since the mid-1980s. It has fabulous Merlot-fruit richness with new oak and the power of a true *premier grand cru classé*.

Merlot 50%, Cabernet Franc 40%, Cabernet Sauvignon 10%

8–25 years (successful years only)

CHÂTEAU VALANDRAUD

Grand Cru

★★

Owned by Jean-Luc Thunevin, Château Valandraud is one of St.-Émilion's best-known *vins de garage*, although it has grown from its original small plot of 1½ acres to 11 acres (0.6 hectares to 4.5 hectares), making it more of a *parc de stationnement*.

RED Wines that even Gary Figgins of Leonetti in Washington state might complain were too oaky!

Merlot 70%, Cabernet Franc 30%

6–25 years

CHÂTEAU VILLEMAURINE

Grand Cru Classé

Château Villemaurine belongs to Robert Giraud, which is a *négociant* concern owning not only this property, but also some 20 other *petits châteaux* in various Bordeaux districts. The wine is matured in wood for 18 to 24 months, with 50 percent new oak.

RED These are full-bodied wines of excellent, spicy Merlot fruit, good underlying oak, and firm structure.

Merlot 70%, Cabernet Sauvignon 30%

8–25 years

Other wines: *Maurinus, Beausoleil*

CHÂTEAU YON-FIGEAC

Grand Cru Classé

★

This is an important property situated near Pomerol. The wine is matured for 18 months with 100 percent new oak.

RED This wine was merely attractive and easy-to-drink until 1997, since when it has shown admirable concentration of rich, spicy fruit of increasing complexity and finesse.

Merlot 80%, Cabernet Franc 20%

6–20 years

THE BEST OF THE REST

With more than a thousand châteaux in this one district, it not practical to feature every recommendable wine, thus I list here the best of the rest: châteaux that consistently make wine that stands

out for either for quality or value, sometimes both. Those marked with a star sometimes produce wines that are better than many *grands crus classés*.

Château Bard-Haut
Château du Barry
*Château Bellegard-Figeac
*Château Carteau Côtes Daugay
*Château Le Castelot
*Château Le Châtelet

Château Tour St.-Christophe

POMEROL

The most velvety and sensuous clarets are produced in Pomerol, yet the traveler passing through this small and rural area, with its dilapidated farmhouses at every turn, few true châteaux and no really splendid ones, must wonder how this uninspiring area can produce such magnificently expensive wines.

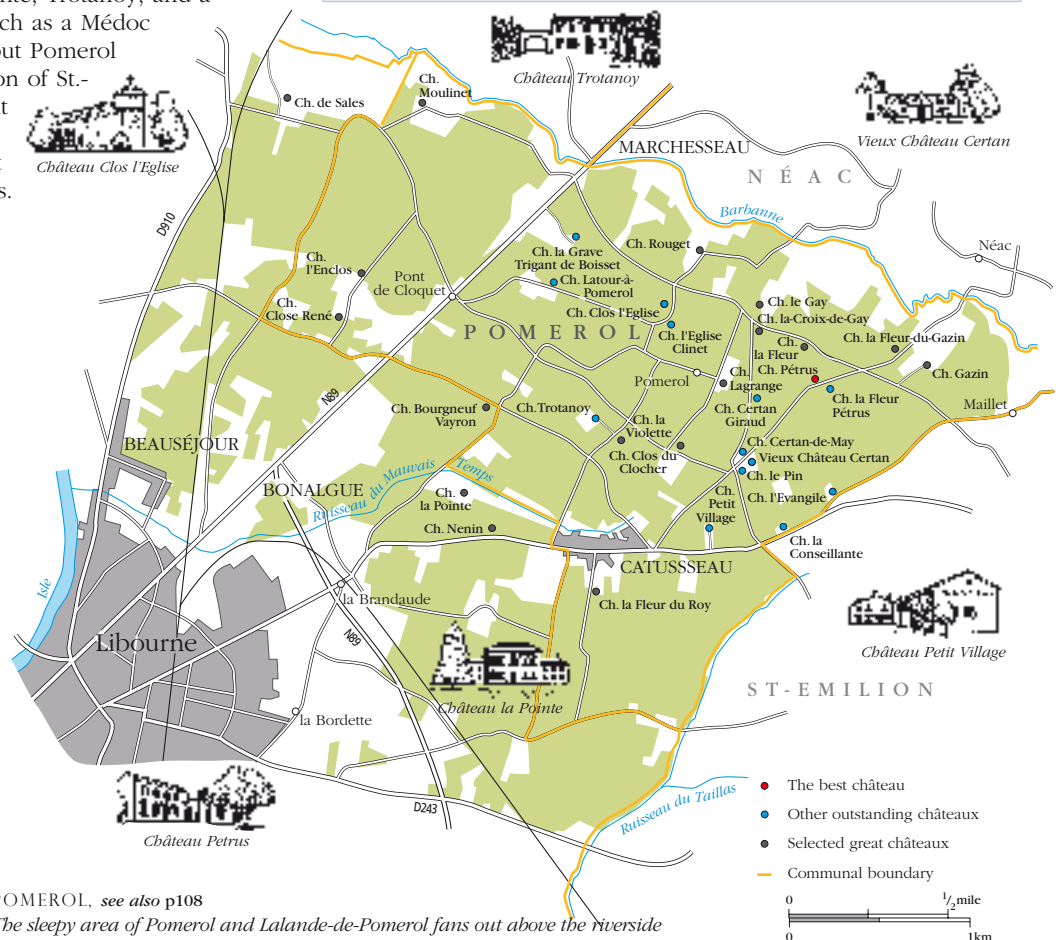

THE PROSPERITY OF RECENT YEARS has enabled Pomerol's properties to indulge in more than just an extra lick of paint, but renovation can only restore, not create, and Pomerol essentially remains an area with an air of obscurity. Even Château Pétrus, which is the greatest growth of Pomerol and produces what for the last 20 years has been consistently the world's most expensive wine, is nothing more than a simple farmhouse.

There has been no attempt to publish an official classification of Pomerol wines, but Vieux Château Certan was considered to be its best wine in the 19th century. Today, however, Pétrus is universally accepted as the leading growth. It commands prices that dwarf those of wines such as Mouton and Margaux, so could not be denied a status equivalent to that of a *premier cru*. Indeed, Le Pin has become considerably more expensive than Pétrus itself. If, like the 1885 classification, we classify Pomerol according to price, next would come Lafleur, followed by a group including L'Évangile, La Fleur Pétrus, La Conseillante, Trotanoy, and a few others, all of which can cost as much as a Médoc First Growth. It is difficult to imagine, but Pomerol was ranked as an inferior sub-appellation of St.-Émilion until it obtained its independent status in 1900. Even then it was a long hard struggle, since even Pétrus did not become sought after until the mid-1960s.

THE VINEYARDS OF VIEUX CHÂTEAU CERTAN

After Château Pétrus, this is one of the best wine-producing properties in Pomerol. A quaint signpost marks the boundary of the vineyard.

POMEROL, see also p108

The sleepy area of Pomerol and Lalande-de-Pomerol fans out above the riverside town of Libourne. None of the so-called "châteaux" is particularly imposing; among the most attractive are Château Nénin and Vieux Château Certan.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

Pomerol is a small rural area on the western extremity of the St.-Émilion district, just northeast of Libourne.

CLIMATE

The same as for St.-Émilion (see p.113).

ASPECT

This modest mound, with Château Pétrus and Château Vieux Certan situated at its center, is the eastern extension of the Pomerol-Figeac *graves* (gravelly terrain). The vines grow on slightly undulating slopes that, over a distance of 1½ miles (2 km), descend from between 115 and 130ft above sea level (35–40 m) to 33 ft (10 m).

SOIL

Pomerol's soil is sandy to the west of the national highway and to the east, where the best properties are situated on the sandy-gravel soil of the Pomerol-Figeac *graves*. The subsoil consists of an iron-pan known as *crasse de fer* or *machefer*,

with gravel in the east and clay in the north and center. The château of Pétrus lies in the very center of the Pomerol-Figeac *graves*, on a unique geological formation of sandy-clay over *molasse* (sandstone).

VITICULTURE AND VINIFICATION

Some of Pomerol's châteaux use a proportion of *vin de presse* according to the requirement of the vintage. At Pétrus, the *vin de presse* is added earlier than is normal practice, in order to allow it to mature with the rest of the wine—this is believed to reduce harshness. The duration of skin-contact is usually between 15 and 21 days, but is sometimes as brief as 10 days or as long as four weeks. The wines stay in cask for between 18 and 20 months.

GRAPE VARIETIES

Primary varieties: Cabernet Franc, Cabernet Sauvignon, Merlot
Secondary varieties: Malbec

THE WINE PRODUCERS OF POMEROL

CHÂTEAU BEAUREGARD

★★

An American architect who visited Pomerol after World War I built a replica of Beauregard called "Mille Fleurs" on Long Island, New York. Quality changed dramatically at Beauregard in 1985, two years before the arrival of Michel Rolland, who followed 1985's superb wine with others and was generally responsible for turning this château around. The wine is matured in wood for 24 months with 60 percent new oak.

RED Firm, elegant, and lightly rich wine with floral-cedarwood fruit.

🍷 Merlot 48%, Cabernet Franc 44%, Cabernet Sauvignon 6%, Malbec 2%

🕒 5–10 years

Second wine: *Le Benjamin de Beauregard*

CHÂTEAU BONALGUE

This small property lies on gravel and sand northwest of Libourne. The wine is matured in wood.

RED This medium- to full-bodied wine has always been of respectable quality with a frank attack of refreshing fruit flavors, a supple tannin structure, and a crisp finish.

🍷 Merlot 65%, Cabernet Franc and Cabernet Sauvignon 30%, Malbec 5%

🕒 5–10 years

Second wine: *Burgrave*

CHÂTEAU LE BON PASTEUR

★

This good and steadily improving wine is matured in wood for 24 months, with 35 percent new oak.

RED These intensely colored, full-bodied, complex wines are packed with cassis, plum, and black-cherry flavors.

🍷 Merlot 75%, Cabernet Franc 25%

🕒 8–25 years

CHÂTEAU BOURGNEUF-VAYRON

★

This property is situated close to Château Trotanoy. It has an honorable, if not exciting, record and a 25-acre (10-hectare) vineyard.

RED Made in a quick-maturing style with soft fruit and a light herbal finish.

🍷 Merlot 85%, Cabernet Franc 15%

🕒 4–8 years

CHÂTEAU LA CABANNE

★

This is a fine estate producing increasingly better wine. The wine is matured in wood for 18 months, with one-third new oak.

RED These medium-bodied, sometimes full-bodied, wines have fine, rich, chocolaty fruit.

🍷 Merlot 60%, Cabernet Franc 30%, Malbec 10%

🕒 7–20 years

Second wine: *Domaine de Compostelle*

CHÂTEAU CERTAN DE MAY DE CERTAN

★★

This can be a confusing wine to identify because the "De May de Certan" part of its name is in very small type on the label and it is usually referred to as "Château Certan de May." It is matured in wood for 24 months, with 50 percent new oak.

RED This is a firm and tannic wine that has a powerful bouquet bursting with fruit, spice, and vanilla.

🍷 Merlot 65%, Cabernet Franc 25%, Cabernet Sauvignon and Malbec 10%

🕒 15–35 years

CHÂTEAU CLINET

★★

This wine, which is matured in wood with one-third new oak, has undergone a revolution in recent years. It used to disappoint those looking for the typically fat, gushy-juicy style of Pomerol, and critics often blamed this on the wine's high proportion of Cabernet Sauvignon. The 1985 vintage was more promising (a touch plumper than previous vintages, with more juicy character), so Clinet's previous lack of typical Pomerol character was evidently not entirely due to the blend of grape varieties, although the vineyard has since undergone a radical change in varietal proportions. There was talk of a turnaround in quality beginning with the 1986 vintage, but it was not until the stunning 1989 and 1990 vintages that we really saw this wine take off. There has, however, been inconsistency, going through phases of better, and not so good, quality, although currently on the up.

RED Château Clinet is now producing exceedingly fine, rich, ripe wine with ample, yet supple tannin structure mixed with oak tannins to produce a creamy-herbal-menthol complexity.

🍷 Merlot 75%, Cabernet Sauvignon 15%, Cabernet Franc 10%

🕒 7–20 years

CLOS DU CLOCHER

★★

This belongs to the Libournaise négociant Audy. The wine is rotated in thirds between new oak, one-year-old casks, and vat, and is one of the most undervalued Pomerols.

RED These are deliciously deep-colored, attractive, medium-bodied, sometimes full-bodied, wines that have plenty of plump, ripe fruit, a supple structure, intriguing vanilla undertones, and plenty of finesse.

🍷 Merlot 80%, Cabernet 20%

🕒 8–20 years

Second wine: *Esprit de Clocher*

Other wine: *Château Monregard-Lacroix*

CLOS L'ÉGLISE

★★

There are several "Église" properties in Pomerol. The wine from this one is matured in wood for 24 months, with some new oak.

RED A consistently attractive wine with elegant, spicy Merlot fruit and firm structure; it is eventually dominated by violet Cabernet perfumes.

🍷 Merlot 55%, Cabernet Sauvignon 25%, Cabernet Franc 20%

🕒 6–15 years

Second wine: *La Petite Église*

CLOS RENÉ

★

This property is situated just south of l'Enclos on the western side of the N89. The wine is matured in wood for 24 months with up to 15 percent new oak. An underrated wine, it represents good value.

RED These wines have a splendid spicy-blackcurrant bouquet, plenty of fine plummy fruit on the palate, and a great deal of finesse. They are sometimes complex in structure, and are always of excellent quality.

🍷 Merlot 60%, Cabernet Franc 30%, Malbec 10%

🕒 6–12 years

Other wine: *Moulinet-Lasserre*

CHÂTEAU LA CONSEILLANTE

★★★

If Pétrus is rated a "megastar," this property must be rated at least a "superstar" in the interests of fairness. The wine is matured in wood for 20 to 24 months, with 50 percent new oak.

RED This wine has all the power and concentration of the greatest wines of Pomerol, but its priorities are its mindblowing finesse and complexity.

🍷 Cabernet Franc 45%, Merlot 45%, Malbec 10%

🕒 10–30 years

CHÂTEAU LA CROIX

★

This property's wine is matured in wood for 20 to 24 months.

RED These attractive wines are quite full-bodied, yet elegant and quick-maturing, with fine, spicy Merlot fruit.

🍷 Merlot 60%, Cabernet Sauvignon 20%, Cabernet Franc 20%

🕒 5–10 years

Second wine: *Le Gabachot*

CHÂTEAU LA CROIX DE GAY

★

This property is situated in the north of Pomerol on sandy-gravel soil, and the wine is matured in wood for 18 months, with up to 100 percent new oak.

RED Used to be somewhat lightweight, but attractive, with easy-drinking qualities, the fruit in Croix de Gay has plumped-up in recent vintages.

🍷 Merlot 80%, Cabernet Sauvignon 10%, Cabernet Franc 10%

🕒 4–8 years

Other wines: *Château le Commandeur, Vieux-Château-Groupe*

CHÂTEAU LA CROIX-ST-GEORGES

★

Under the same ownership as Château La Croix-de-Gay, this wine is matured in wood for 18 months, with 100 percent new oak.

RED Rich, soft and seductive.

🍷 Merlot 95%, Cabernet Franc 5%

🕒 4–10 years

Other wines: *Château le Commandeur, Vieux-Château-Groupe*

CHÂTEAU DU DOMAINE DE L'ÉGLISE

This is the oldest estate in Pomerol. The wine is matured in wood for 18 to 24 months, with one-third new oak.

RED This is another attractive, essentially elegant wine that is light in weight and fruit.

☞ Merlot 90%, Cabernet Franc 10%

🕒 4–8 years

CHÂTEAU L'ÉGLISE-CLINET

★★

The wine produced by Château L'Église-Clinet, which is matured in wood for up to 24 months with as much as 50 percent new oak, is fast becoming one of the most exciting Pomerols. Quality in overdrive since the 1990s.

RED These are deeply colored wines with a rich, seductive bouquet and a big, fat flavor bursting with spicy blackcurrant fruit and filled with creamy-vanilla oak complexity.

☞ Merlot 80%, Cabernet Franc 20%

🕒 8–30 years

Second Wine: *La Petite L'Église*

CHÂTEAU L'ENCLOS

★

The vineyard is situated on an extension of the sandy-gravel soil from the better side of the N89. The wine is matured in wood for 20 months, with a little new oak.

RED These are deliciously soft, rich, and voluptuous wines, full of plump, juicy Merlot fruit and spice.

☞ Merlot 80%, Cabernet Franc 19%, Malbec 1%

🕒 7–15 years

CHÂTEAU L'ÉVANGILE

★★★

Situated close to two superstars of Pomerol, Vieux Château Certan and Château la Conseillante, this château produces stunning wines that are matured in wood for 15 months with 40 percent new oak.

RED Dark but not brooding, these fruity wines are rich and packed with summer fruits and cedarwood. More Merlot and new oak since 1998 has given the wine more generosity.

☞ Merlot 78%, Cabernet Franc 32%

🕒 8–20 years

CHÂTEAU FEYTIT-CLINET

★

J.-P. Moueix, who is not this château's owner, does produce the wine and sells it on an exclusivity basis. Some vines are over 70 years old. The wine is matured in wood for 18 to 22 months.

RED Consistently well-colored and stylish wines that are full of juicy plum and black-cherry flavors.

☞ Merlot 80%, Cabernet Franc 20%

🕒 7–15 years

CHÂTEAU LA FLEUR-DE-GAY

★★

Owned by the Raynaud family, with the ubiquitous Michel Rolland consulting, this wine is matured in wood for 18 months, with 100 percent new oak.

RED Big, concentrated fruit underpinned by firm tannic structure.

☞ Merlot 100%

🕒 8–20 years

CHÂTEAU LA FLEUR-PÉTRUS

★★

Château La Fleur-Pétrus, producer of one of the best Pomerols, is situated close to Château Pétrus, but on soil that is more gravelly. Ten acres (four hectares) of Château le Gay were purchased in 1994 and incorporated in this property, fattening out the style. The wine is matured in wood for 18 to 22 months.

RED Although recent vintages are relatively big and fat, these essentially elegant wines rely more on exquisiteness than richness. They are silky, soft, and supple.

☞ Merlot 80%, Cabernet Franc 20%

🕒 6–20 years

CHÂTEAU LE GAY

★

This is another château exclusive to the Libournais négociant J.-P. Moueix. The wine is matured in wood for 18 to 22 months.

RED Firm and ripe, this big wine is packed with dense fruit and coffee-toffee oak.

☞ Merlot 70%, Cabernet Franc 30%

🕒 10–25 years

CHÂTEAU GAZIN

★★★

This château's record was disappointing until the stunning 1985 vintage, and it has been on a roll ever since, having abandoned harvesting by machine, introduced new, thermostatically controlled vats, and employed various quality-enhancing practices, not the least being a second wine, which enables stricter selection of grapes. The wine is matured in wood for 18 months

with up to one-third new oak.

RED Marvelously ripe and rich wine with plump fruit. It should have a great future.

☞ Merlot 80%, Cabernet Franc 15%, Cabernet Sauvignon 5%

🕒 8–20 years

Second Wine: *Hospitalet de Gazin*

CHÂTEAU LA GRAVE

★

The gravelly vineyard of this property has an excellent location. The Trignant de Boisset element of this château's name has been dropped. It is owned by Christian Moueix and farmed by J.-P. Moueix. The wine is matured in wood with 25 percent new oak.

RED Supple, rich and fruity, medium-bodied wines of increasing finesse.

☞ Merlot 85%, Cabernet Franc 15%

🕒 7–15 years

CHÂTEAU HOSANNA

★★★

This property was called Château Certan-Marzelle until 1956 and was purchased in 1999 by Jean-Paul Moueix, with Christian Moueix in control. Almost immediately 10 acres (four hectares) of less well-positioned vineyards were sold to Nénin and strict selection imposed on the 1999 vintage. Watch this space! The wine is matured in wood for 24 months, with 15 percent new oak.

RED These ripe, voluptuous wines become darker and denser since 1999.

☞ Merlot 67%, Cabernet Franc and Cabernet Sauvignon 33%

🕒 8–20 years

Second Wine: *Clos du Roy*

Other wines: *Château Certan-Marzelle*

CHÂTEAU LAFLEUR

★★★

This property has a potential for quality second only to Château Pétrus itself, but it has a very inconsistent record. The quality and concentration of the wines have soared since 1985.

RED This is a well-colored wine with a rich, plummy-porty bouquet, cassis fruit, a toasty-coffee oak complexity and great finesse.

☞ Cabernet Franc 50%, Merlot 50%

🕒 10–25 years

Second Wine: *Les Pensées de Lafleur*

CHÂTEAU LAFLEUR-GAZIN

★

This property has been run by the J.-P. Moueix team on behalf of its owners since 1976. It produces a wine that is matured in wood for 18 to 22 months.

RED Well-made wines of good color and bouquet, supple structure, and some richness and concentration.

☞ Merlot 70%, Cabernet Franc 30%

🕒 6–15 years

CHÂTEAU LAGRANGE

★

Not to be confused with its namesake in St-Julien, this property belongs to the firm J.-P. Moueix. The wine is aged in wood for 18 to 22 months, with some new oak.

RED The recent vintages of this full-bodied wine have been very impressive, with an attractive and accessible style.

☞ Merlot 90%, Cabernet Franc 10%

🕒 8–20 years

CHÂTEAU LATOUR À POMEROL

★★★

Château Latour à Pomerol now belongs to the last surviving sister of Madame Loubat, Madame Lily Lacoste (owner of one-third of Château Pétrus). The wine is matured in wood with 25 percent new oak.

RED These deep, dark wines are luscious, voluptuous, and velvety. They have a great concentration of fruit and a sensational complexity of flavors.

☞ Merlot 90%, Cabernet Franc 10%

🕒 12–35 years

CHÂTEAU MAZEYRES

★

Two-thirds of this wine is matured in wood with 40 percent new oak, and one-third is aged in vat.

RED These elegant wines are rich, ripe, and juicy, and have silky Merlot fruit and some oaky finesse.

☞ Merlot 70%, Cabernet Franc 30%

🕒 5–12 years

CHÂTEAU MOULINET

★

This large estate belongs to Armand Moueix. The wine is matured in wood for 18 months, with one-third new oak.

RED These red wines are attractively supple with a light, creamy-ripe fruit and oak flavor.

☼ Merlot 60%, Cabernet Sauvignon 30%, Cabernet Franc 10%

🕒 5–10 years

CHÂTEAU NÉNIN

★

A large and well-known property between Catussau and the outskirts of Libourne. The wine has had a disappointing record, but there has been a noticeable improvement since this property was purchased by Jean-Hubert Delon in 1997, who added 10 acres (four hectares) from Certan-Giraud.

RED No similarity to Nenin of the past, vintages from 1998 onward have been increasingly full, deep, and concentrated, with a lush, opulent fruit, and a silky finish.

☼ Merlot 75%, Cabernet Franc 25%

🕒 5–18 years

Second wine: ✓ *Fugue de Nenin*

CHÂTEAU PETIT-VILLAGE

★★

This property borders Vieux Château Certan and Château La Conseillante, and it therefore has the advantage of a superb terroir and a meticulous owner. The result is a wine of superstar quality, even in poor years. Petit-Village is matured in wood for 18 months with at least 50 percent of the casks made from new oak.

RED These wines seem to have everything. Full and rich with lots of color and unctuous fruit, they have a firm structure of ripe and supple tannins and a luscious, velvety texture. Classic, complex, and complete.

☼ Merlot 80%, Cabernet Franc 10%, Cabernet Sauvignon 10%

🕒 8–30 years

CHÂTEAU PÉTRUS

★★★

The Libournais *négociant* Jean-Pierre Moueix was in technical control of this estate from 1947 until his death at the age of 90 in March 2003. Before the previous owner, Madame Loubat, died in 1961, she gave one-third of Pétrus to Monsieur Moueix. She had no children, just two sisters who were not on the best of terms, so Madame Loubat wisely gave Moueix the means of ensuring that family disagreements would not be able to harm the day-to-day running of Château Pétrus. In 1964 Moueix purchased one of the other two shares and his family has controlled the destiny of this world-famous château ever since.

RED The low acidity of Château Pétrus makes it an intrinsically soft wine which, when combined with the inherent lusciousness of the Merlot grape, enables Pétrus to

produce intensely colored, superconcentrated wines that would otherwise be too harsh to drink.

☼ Merlot 95%, Cabernet Franc 5%

🕒 20–50 years

CHÂTEAU LE PIN

★★

This tiny property was purchased in 1979 by the late Jacques Thienpont. The yield is very low, the wine is fermented in stainless steel and matured in wood for 18 months with 100 percent new oak.

RED These oaky wines are very full-bodied, and powerfully aromatic with a sensational spicy-cassis flavor dominated by decadently rich, creamy-toffee, toasty-coffee oak. Those who are not convinced by Le Pin keep asking whether there is enough concentration in these wines to match the oak; my guess is that there is, and that their wonderfully voluptuous style belies their true size and structure, but it will be a long time before we really know the answer.

☼ Merlot 100%

🕒 10–40 years

CHÂTEAU PLINCE

★

This property is owned by the Moreau family, but its wines are sold by the Libournais *négociant* J.-P. Moueix. It is matured in vats for six months and in wood for 18 months, with 15 percent new oak.

RED These wines are fat, ripe, and simply ooze with juicy Merlot flavor. Although they could not be described as aristocratic, they are simply delicious.

☼ Merlot 75%, Cabernet Franc 20%, Cabernet Sauvignon 5%

🕒 4–8 years

CHÂTEAU LA POINTE

●

After hoping that the mid-1980s would prove to be a turning point in the reputation of this important château, it now seems that this did not happen until 1998, although there is still a lot of room for improvement before La Pointe can be described as a truly lush Pomerol.

RED Lightweight, lackluster wines until 1998, when they have shown more fruit, with plummy-chocolate overtones. Getting there.

☼ Merlot 80%, Cabernet Franc 15%, Malbec 5%

🕒 5–12 years

Second wine: *La Pointe Riffat*

CHÂTEAU ROUGET

★

One of the oldest properties in Pomerol. The proprietor also owns the neighboring estate of Vieux Château des Templiers. The wine is matured in wood for 24 months.

RED Château Rouget produces excellent red wines with a fine

bouquet and elegant flavor. Fat and rich, with good structure and lots of ripe fruit, they are at their most impressive when mature.

☼ Merlot 90%, Cabernet Franc 10%

🕒 10–25 years

CHÂTEAU DE SALES

★

At 119 acres (48 hectares), this is easily the largest property in the Pomerol appellation. It is situated in the very northwest of the district. Despite an uneven record, it has demonstrated its potential and inherent qualities on many occasions and the wine, which is matured in wood for 18 months with 35 percent new oak, is one to watch for the future.

RED When successful, these wines have a penetrating bouquet and a palate jam-packed with deliciously juicy flavors of succulent stone fruits such as plums, black cherries, and apricots.

☼ Merlot 70%, Cabernet Franc 15%, Cabernet Sauvignon 15%

🕒 7–20 years

Second wine: *Château Chantalouette*

Other wine: *Château de Délias*

CHÂTEAU DU TAILHAS

The wines of this château are matured in wood for 18 months with 50 percent new oak.

RED Consistently attractive, with silky Merlot fruit and creamy oak.

☼ Merlot 80%, Cabernet Franc 10%, Cabernet Sauvignon 10%

🕒 5–12 years

CHÂTEAU TAILLEFER

This potentially excellent property belongs to Bernard Moueix. The wines are matured in wood for between 18 and 22 months, with the addition of some new oak.

RED At best these wines are attractively light and fruity, revealing their potential, but more often than not they are simply light and dilute. The 2000 was the best vintage this château has produced, but it was very difficult not to make fine wine that year.

☼ Merlot 55%, Cabernet Franc 30%, Cabernet Sauvignon 15%

🕒 4–8 years

Second wine: *Clos Toulifaut*

CHÂTEAU TROTANOY

★★★

Some consider this to be second only to Château Pétrus, although in terms of price L'Évangile and Lafleur have overtaken it. The wine is matured in wood for up to 24 months, with 50 percent new oak.

RED This inky-black, brooding wine has a powerful bouquet and a rich flavor, which is supported by a firm tannin structure and a complex, creamy-toffee, spicy-coffee oak character.

☼ Merlot 90%, Cabernet Franc 10%

🕒 15–35 years

VIEUX CHÂTEAU CERTAN

★★★

This was once regarded as the finest-quality growth in Pomerol. It has not so much dropped its standards as witnessed the rapid rise of a new star—Pétrus—and all its pretenders. Vieux Château Certan remains one of Bordeaux's great wines. This wine is matured in wood for 18 to 24 months with up to 60 percent new oak.

RED This is an attractive, garnet-colored, full-bodied wine that has a smouldering, smooth, and mellow flavor. It displays great finesse and complexity of structure.

☼ Merlot 50%, Cabernet Franc 25%, Cabernet Sauvignon 20%, Malbec 5%

🕒 12–35 years

Second wine: *La Gravette de Certan*

CHÂTEAU LA VIOLETTE

★

In the same way as Château Laroze in St-Émilion is said to be named after its aroma of roses, so this château is named after its aroma of violets—or so the story goes. It is located in Catussau and its vineyards are scattered around the commune. The wine, matured in wood for up to 24 months, can be inconsistent, but I think it has great potential.

RED I have not tasted this wine as frequently as I would like, but I can enthusiastically recommend the best vintages, when they have a rich and jubilant flavor of Merlot fruit, which is ripe and fat.

☼ Merlot 95%, Cabernet Franc 5%

🕒 5–15 years

CHÂTEAU VRAY CROIX DE GAY

A small property on good gravelly soil next to Château le Gay and under the same ownership as Château le Prieuré. The wine is matured in wood in 18 months.

RED The wine can be full, rich, chocolate- and black-cherry-flavored, with the best vintages showing more fat and oak.

☼ Merlot 80%, Cabernet Franc 15%, Cabernet Sauvignon 5%

🕒 5–10 years

THE WINE PRODUCERS OF THE FRONSADAIS AND THE SAINT-ÉMILION AND POMEROL SATELLITES

CHÂTEAU D'AIGUILHE

AOC Bordeaux-Côtes-de-Castillon

★①

Purchased in 1998 by Stephan Von Neipperg, who has restored the property. One to watch.

Second wine: *Seigneurs d'Aiguible*

CHÂTEAU DES ANNÉREAUX

AOC Lalande-de-Pomerol

Attractive, fruity, medium-bodied wines of some elegance.

CHÂTEAU BARRABAQUE

AOC Côtes Canon-Fronsac

★①

Situated on the mid-*côte*, this 70 percent Merlot has really shone since the late 1990s.

CHÂTEAU BEL-AIR

AOC Puisseguin-St.-Émilion

This property makes generous, fruity, early-drinking wines.

CHÂTEAU DE BEL-AIR

AOC Lalande-de-Pomerol

★①

One of the best of the appellation, this property has fine, sandy gravel.

CHÂTEAU BELAIR-MONTAIGUILLON

AOC St.-Georges-St.-Émilion

★①

Consistently rich, deliciously fruity. The best wine selected from old vines and matured in cask, including some new oak, is sold as Château Belair-St.-Georges.

CHÂTEAU DE BELCIER

AOC Bordeaux-Côtes-de-Francis and Bordeaux Supérieur Côtes-de-Francis

This property produces fruity wines that can claim the Côtes de Castillon or Côtes de Francis appellations.

CHÂTEAU CALON

AOC Montagne-St.-Émilion and AOC St.-Georges-St.-Émilion

★

This château is under the same ownership as the *grand cru classé* Château Corbin-Michotte. The wine is good quality, with a juicy style, and very Merlot in character. Part of this vineyard falls within the St.-George-St.-Émilion area and this produces the best wine.

CHÂTEAU CANON

AOC Côtes Canon-Fronsac

★★①

This is one of several Fronsadais properties formerly owned, and still managed by, J.-P. Moueix. It was sold to a member of the Carrefour family in September 2000. It produces the best wine in this appellation from 100 percent Merlot.

CHÂTEAU CANON DE BREM

AOC Côtes Canon-Fronsac

★①

No longer owned by J.-P. Moueix, Château Canon de Brem was sold to a member of the Carrefour family in September 2000. It produces fine, firm, and flavorsome *vins de garde* that are deep-colored and powerful, yet complex and spicy.

Second wine: *Château Pichelèbre*

CHÂTEAU CANON MOUEIX

AOC Côtes Canon-Fronsac

★①

Sold to a member of the Carrefour family in September 2000, this property was known as Château Pichelèbre until 1985, when it was purchased by J.-P. Moueix. Although under new ownership, it is still managed by J.-P. Moueix; whether the name remains is uncertain.

CHÂTEAU CAP DE MERLE

AOC Lussac-St.-Émilion

Château Cap de Merle is wine guru Robert Parker's best Lussac performer for the 1981, 1982, and 1983 vintages.

CHÂTEAU CARLES

AOC Fronsac

★①

The producer's primary wine is attractive and juicy, but it is the 1.5 blockbusting 95 percent Merlot selection which is sold as Château Haut Carles that really stands out here.

Other wine: *Château Haut Carles*

CHÂTEAU CASSAGNE-HAUT-CANON

AOC Côtes Canon-Fronsac

★①

Château Cassagne-Haut-Canon produces a selection of rich, full, fat, fruitcake-flavored wines that are especially attractive when they are still young.

CHÂTEAU DE CLOTTE

AOC Bordeaux-Côtes-de-Castillon and

AOC Bordeaux Supérieur Côtes-de-Castillon

★①

This property has the right to both the Côtes-de-Castillon and Côtes-de-Francis appellations, but uses only the former.

CHÂTEAU LA CROIX CANON

AOC Côtes Canon-Fronsac

★①

Another former Moueix property that has sold to a member of the Carrefour family and yet remains managed by the established team. Attractive, Merlot-dominated wines are full of juicy fruit.

CHÂTEAU DU COURLAT

AOC Lussac-St.-Émilion

These are spicy-tannic wines with good fruit flavors.

CHÂTEAU COUSTOLLE VINCENT

AOC Côtes Canon-Fronsac

Château Coustolle Vincent's wines are well-flavored, and matured in up to 20 percent new oak.

CHÂTEAU DALEM

AOC Fronsac

★★①

These soft and velvety wines develop quickly but have finesse and are among the very best of their appellation.

CHÂTEAU DE LA DAUPHINE

AOC Fronsac

This property has been sold to a member of the Carrefour family, but is still run by the Moueix team, which produces fresh and fruity wines that mature in oak, 20 percent of which is new.

CHÂTEAU DURAND LAPLAIGNE

AOC Puisseguin-St.-Émilion

★①

The excellent-quality wine produced by Château Durand Laplaigne is grown using clay-and-limestone soil, with a strict selection of grapes and modern vinification techniques.

CHÂTEAU LA FLEUR DE BOÛIARD

AOC Lalande-de-Pomerol

★①

Very good wines, getting much better since this property was purchased by the owner of Angelus in 1998.

Second wine: *Château La Fleur St.-Georges*

CHÂTEAU FONTENIL

AOC Fronsac

★★①

This rich, velvety 90 percent Merlot high-flyer has heavy helpings of new oak and is from Michel Rolland's own property.

CHÂTEAU GRAND ORMEAU

AOC Lalande-de-Pomerol

★①

A rich and lusciously fruity wine that is matured in 50 percent new oak, Grand Ormeau is very classy for its appellation.

Second wine: *Château d'Haurange*

CHÂTEAU GRAND-BARIL

AOC Montagne-St.-Émilion

Attractive, fruity wine made by the agricultural school in Libourne.

CHÂTEAU GUIBEAU-LA FOURVIEILLE

AOC Puisseguin-St.-Émilion

★★①

Much investment has gone into this property, the wines of which are now considered to be the best in Puisseguin.

Second wines: *Le Vieux Château Guibeu, Château La Fourvieille*

CHÂTEAU HAUT-CHAIGNEAU

AOC Lalande-de-Pomerol

★①

Look out for Château Le Sergue 1.5, which is selected from this property's best wines and matured in 80 percent new oak. A poor man's Mondotte?

Other wines: *Château Le Sergue*

CHÂTEAU HAUT-CHATAIN

AOC Lalande-de-Pomerol

★★①

Fat, rich, and juicy wines with definite hints of new-oak vanilla are made by Château Haut-Chatain.

CHÂTEAU LES HAUTS-CONSEILLANTS

AOC Lalande-de-Pomerol

Château les Hauts-Consellants is another fine Néac property.

Other wines: *Château les Hauts-Tuileries* (export label)

CHÂTEAU HAUT-TUQUET

AOC Bordeaux-Côtes-de-Castillon and

AOC Bordeaux Supérieur Côtes-de-Castillon

This wine is consistently good.

CHÂTEAU JEANDEMAN

AOC Fronsac

This château produces fresh, fruity wine with good aroma.

CHÂTEAU JUNAYMEAOC Côtes Canon-Fronsac
★①

Well-known wines of finesse.

CHÂTEAU DES LAURETS

AOC Puisseguin-St.-Émilion

The appellation's largest property.
Other wines: *Château la Rochette, Château Maison Rose*CHÂTEAU DE LUSSAC

AOC Lussac-St.-Émilion

Château de Lussac produces well-balanced, early-drinking wine.

CHÂTEAU DU LYONNAT

AOC Lussac-St.-Émilion

The appellation's largest property.
Other wines: *La Rose Peruchon*CHÂTEAU MAISON BLANCHE

AOC Montagne-St.-Émilion

Château Maison Blanche produces attractive wine that is easy to drink.

CHÂTEAU MAQUIN-ST.-GEORGES

AOC St.-Georges-St.-Émilion

This wine is 70 percent Merlot.
Other wines: *Château Bellonne-St-Georges*CHÂTEAU MAUSSE

AOC Côtes Canon-Fronsac

Wines with good aroma and flavor.

CHÂTEAU MAYNE-VIEIL

AOC Fronsac

Easy-drinking wines with good Merlot spice and fruit.

CHÂTEAU MAZERIS

AOC Côtes Canon-Fronsac

There is an unusually high proportion of Cabernet Sauvignon in these wines.

CHÂTEAU MILON

AOC Lussac-St.-Émilion

★①

A château that produces a fine-quality, full, yet fragrant, wine.

CHÂTEAU MONCETS

AOC Lalande-de-Pomerol

★①

This Néac property makes a fine, rich, and elegant Pomerol look-alike.

CHÂTEAU MOULIN HAUT-LAROQUE

AOC Fronsac

Well-perfumed, rather fat wines with lots of fruit and good tannin.

CHÂTEAU MOULIN NEUFAOC Bordeaux-Côtes-de-Castillon and
AOC Bordeaux Supérieur
Côtes-de-Castillon

★①

These wines regularly win medals.

CHÂTEAU LA PAPETERIE

AOC Montagne-St.-Émilion

Wines with a rich nose and a big fruit-filled palate.

CHÂTEAU DU PONT DE GUESTRES

AOC Lalande-de-Pomerol

★①

This château produces full, ripe, fat wines of good quality.

CHÂTEAU PUYCARPINAOC Bordeaux-Côtes-de-Castillon and
AOC Bordeaux Supérieur
Côtes-de-Castillon

This property produces a well-made red, and a little dry white.

CHÂTEAU DU PUYAOC Bordeaux-Côtes-de-Francis and
AOC Bordeaux Supérieur
Côtes-de-Francis

★①

Red wines from this property are rustic and overtly fruity.

CHÂTEAU PUYGUERAUDAOC Bordeaux-Côtes-de-Francis and
AOC Bordeaux Supérieur
Côtes-de-Francis

Aromatically attractive wines with good color and supple fruit.

CHÂTEAU DE LA RIVIÈRE

AOC Fronsac

★①②

Magnificent wines that are built to last: they are rich, tannic, and fruity, and matured in up to 40 percent new oak.

CHÂTEAU ROBINAOC Bordeaux-Côtes-de-Castillon and
AOC Bordeaux Supérieur
Côtes-de-Castillon

★①

Château Robin produces award-winning red wines.

CHÂTEAU LA ROCHE-GABY

AOC Côtes Canon-Fronsac

★①

Château La Roche-Gaby produces intensely flavored, attractive, and well-structured wines, which are designed to have a long life.

CHÂTEAU ROCHER-BELLEVUEAOC Bordeaux-Côtes-de-Castillon and
AOC Bordeaux Supérieur
Côtes-de-Castillon

★①

A good St-Émilion look-alike that

regularly wins medals.

Other wines: *La Palène, Coutet-St.-Magne*CHÂTEAU ROUIDIER

AOC Montagne-St.-Émilion

★①②

Quality wines that are well-colored, richly flavored, finely balanced, and long and supple.

CHÂTEAU SIAURAC

AOC Lalande-de-Pomerol

Fine, firm, and fruity wines.

CHÂTEAU ST.-GEORGES

AOC St.-Georges-St.-Émilion

★①②

Super quality wine of great finesse.

CHÂTEAU STE-COLOMBE

AOC Bordeaux-Côtes-de-Castillon

★①

This château was purchased in 1999 by Gérard Perse of Pavie *et al* and Alain Reynaud of La Croix-de-Gay. These wines look very promising indeed.CHÂTEAU TARREYOAOC Bordeaux-Côtes-de-Castillon and
AOC Bordeaux Supérieur
Côtes-de-Castillon

Château Tarreyo (Gascon for "knoll of stones") is sited on a limestone mound, as its name suggests.

CHÂTEAU THIBAUD-BELLEVUEAOC Bordeaux-Côtes-de-Castillon and
AOC Bordeaux Supérieur
Côtes-de-Castillon

Medium-bodied, fruity red wine.

CHÂTEAU TOUMALIN

AOC Côtes Canon-Fronsac

Fresh, fruity wine from a property under the same ownership as Château La Pointe in Pomerol.

CHÂTEAU TOUR-DU-PAS-ST.-GEORGES

AOC St.-Georges-St.-Émilion

★①

An excellent and inexpensive *entrée* into the world of *premier cru* claret.CHÂTEAU DES TOURELLES

AOC Lalande-de-Pomerol

★①

Fine wines with vanilla undertones.

CHÂTEAU TOURNEFEUILLE

AOC Lalande-de-Pomerol

★①②

This rich, long-lived wine is the best of the appellation.

CHÂTEAU DES TOURS

AOC Montagne-St.-Émilion

★①

The largest property in the

appellation. The wine is big, full, and fleshy, yet soft and easy to drink.

CHÂTEAU LA VALADE

AOC Fronsac

★①

Elegant, aromatic, and silky-textured wines, which are made exclusively from Merlot grapes.

CHÂTEAU LA VIEILLE CURE

AOC Fronsac

★①

Very fresh and velvety with delightful floral, summer fruit aromas, these wines are at the very top of their appellation. The 1998 is stunning.

VIEUX-CHÂTEAU-ST.-ANDRÉ

AOC Montagne-St.-Émilion

★①②

A soft, exciting wine, full of cherry, vanilla, and spice flavors.

CHÂTEAU LA VILLARS

AOC Fronsac

★①

Soft, fat, and juicy wines of excellent quality, one-third of which are matured in new oak.

CHÂTEAU VRAY-CANON-BOYER

AOC Côtes Canon-Fronsac

This château produces a fruity, medium-bodied wine that is attractive for early drinking from 90 percent Merlot grapes.

BOURG AND BLAYE

Ninety-five percent of the wine produced in Bourg and Blaye is good-value red. Tiny Bourg makes more wine than its five-times-larger neighbor, Blaye, and most of the vines grown in Blaye come from a cluster of châteaux close to the borders of Bourg.

AS ONE WOULD EXPECT of an area that has supported a settlement for 400,000 years, Bourg has a close-knit community. Comparatively recently, the Romans used neighboring Blaye as a *castrum*, a fortified area in the defense system that shielded Bordeaux. According to some sources, the vine was cultivated in Bourg and Blaye as soon as the Romans arrived. Vineyards were certainly flourishing here long before those of the Médoc, just on the other side of the Gironde.

Bourg is a compact, heavily cultivated area with pretty hillside vineyards at every turn. The vine is less important in Blaye, which has other interests, including a caviare industry based at its ancient fishing port where sturgeon is still a major catch. The south-facing vineyards of Blaye are mostly clustered in the countryside immediately bordering Bourg and, despite the similarity of the countryside, traditionally produce slightly inferior

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

The vineyards fan out behind the town of Bourg, which is situated on the right bank of the confluence of the Dordogne and the Garonne, some 12.5 miles (20 kilometers) north of Bordeaux. Blaye is a larger district that unfolds beyond Bourg.

CLIMATE

These two areas are less protected than the Médoc from westerly and northwesterly winds, and have a higher rainfall.

ASPECT

Bourg is very hilly with vines cultivated on steep limestone hills and knolls up to a height of 260 ft (80 m). In the southern section of Blaye the country is rich and hilly, with steep slopes overlooking the Gironde that are really just a continuation of those in Bourg. The northern areas are gentle and the hills lower, with marshes bordering the viticultural areas.

SOIL

In Bourg the topsoil is clay-limestone or clay-gravel over a hard limestone subsoil, although in the east the subsoil sometimes gives way to gravel and clay. The soil in

Blaye is clay or clay-limestone over hard limestone on the hills overlooking the Gironde, getting progressively sandier going east.

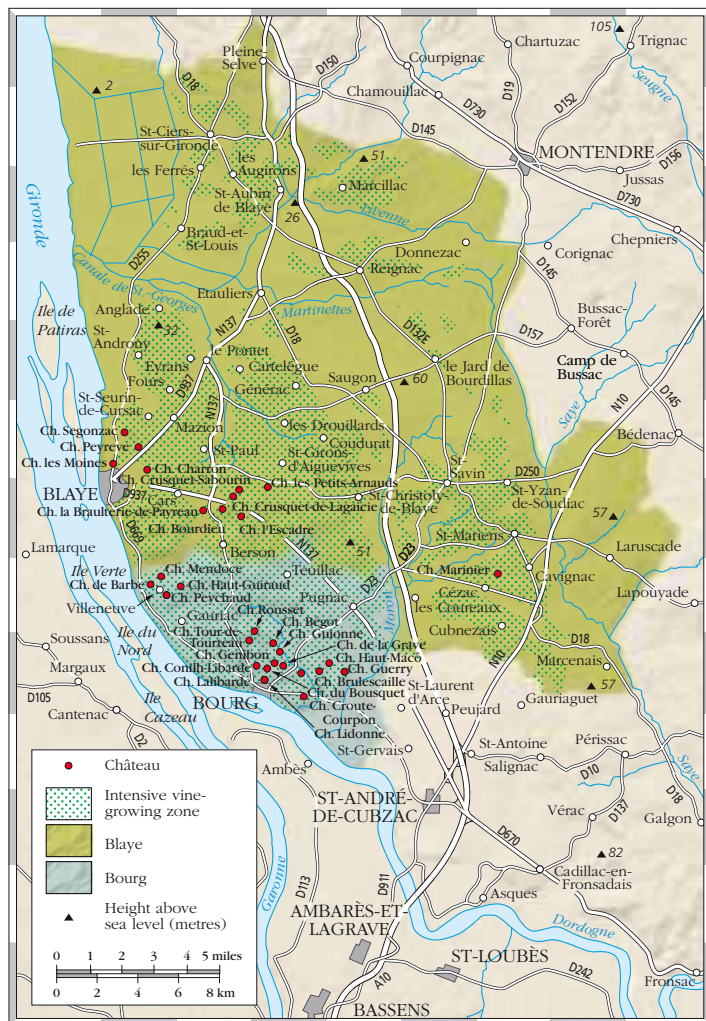

VITICULTURE AND VINIFICATION

There are many grape varieties here, some of which are far too inferior or unreliable to contribute to the quality of these wines, particularly the whites. Bourg produces the best reds, Blaye the best whites, but there is relatively little white wine made in both appellations—even Blaye is 90 percent red and Bourg is in excess of 99 percent red. Very few *petits châteaux* in both areas can afford the use of casks, let alone new ones, and much of the wine in Bourg is made by one of its five *coopératives*.

GRAPE VARIETIES

Primary varieties: Cabernet Franc, Cabernet Sauvignon, Merlot, Sauvignon Blanc, Sémillon
Secondary varieties: Malbec, Prolongeau, Cahors, Béguingol (Fer), Petit Verdot, Merlot Blanc, Folle Blanche, Colombar, Chenin blanc, Muscadelle, Ugni Blanc

THE TOWN OF BLAYE

The attractive fishing port of Blaye with, in the foreground, the ruins of its ancient citadel guarding against the approach of marauders from the sea.

BOURG AND BLAYE, *see also* p63

Most of the best growths of Bourg and Blaye are clustered behind the respective ports that give this wine-producing area its name. Bourg, the smaller area, has a higher concentration of vineyards and generally produces the better wines.

wines to those of Bourg. The D18 highway appears to be a barrier beyond which the less intensely cultivated hinterland takes on a totally different topography, where the more expansive scenery is dotted with isolated forests.

THE POTENTIAL OF BOURG AND BLAYE

To the Romans, these south-facing vineyards overlooking the Gironde seemed the ideal place to plant vines. Indeed, the quality achieved today in these vineyards would have surpassed the most optimistic hopes of those past masters of the vine. However, by today's expectations, Bourg and Blaye have been relegated to a viticultural backwater. This is a pity, since there are some exciting quality wines being made here. Perhaps when the world has woken up to the gems in Canon-Fronsac, more curious consumers might turn their attention to the better producers in this district. As soon as wine lovers are prepared to pay higher prices for these wines, so its proprietors will be able to restrict yields, improve vinification techniques, and indulge in a percentage of new oak.

CHENIN BLANC IN BORDEAUX

The Chenin Blanc of Loire fame (or infamy, as the case may be) is allowed in the white wines of Bourg, albeit restricted to a maximum of 10 percent. However, in the AOCs of Blayais and Côtes de Blaye (but not Premières Côtes de Blaye), this interloper from the north has a free run, or could have, if a producer wanted to market a pure Chenin Blanc varietal wine. I have never been a fan of Chenin Blanc in the Loire, except in those idyllic vintages when the sublime *moelleux* style can be produced in quantity, and it is very hard not to produce liquid magic. The problem with Chenin in the Loire is that it grows like a weed, but rarely has the degree of sunshine this grape likes to luxuriate in. Combine that with the inclination of far too many growers to overyield and season it with those who have less than clinically clean vinification habits, and it is clear why Loire Chenin, particularly dry Loire Chenin, has such a poor reputation. On the other hand, even cheap, mass-produced Chenin Blanc wines in the New World have lovely ripe, tropical fruit flavors. Not all of them, of course, the New World has its good, bad, and ugly too, but I believe that the longer hours of warmer sunshine in Bordeaux could produce some excellent dry Chenin wines. A pure Chenin Blanc Bordeaux would be a novelty.

VINEYARDS ALONG THE DORDOGNE AT BOURG

The Romans planted these south-facing vineyards, believing this to be a far more ideal place to grow vines than on the other side of the confluence of the Dordogne and Garonne estuaries where, understandably, they failed to realize the possibilities of the Médoc concealed beyond its virtually impenetrable marshes.

CHÂTEAU SEGONZAC, ST.-GENÈS-DE-BLAYE

A short distance from the fortress of Blaye, these sweeping vineyards belong to Château Segonzac, a wine estate created in 1887 by Jean Dupuy, the owner of the Petit Parisien, the largest-circulation newspaper in the world at the time.

THE APPELLATIONS OF BOURG AND BLAYE

The number of appellations in this area, and their various differences, are very confusing for the consumer. The system should be neaten up and there is no reason why just two AOCs—Côtes de Blaye and Côtes de Bourg—could not be used for all the wines produced here.

BLAYAIS AOC

See Blaye AOC

BLAYE AOC

Blaye or Blayais is a large and diverse appellation of variable quality.

RED Few properties cultivate obscure varieties such as Prolongeau and Béguignol, thus many utilize the prestigious sounding Premières Côtes de Blaye AOC; hence, hardly anyone bothers to sell the wine under this plain appellation.

🍷 Cabernet Sauvignon, Cabernet Franc, Merlot, Malbec, Prolongeau, Béguignol, Petit Verdol

🕒 3–7 years

WHITE Since 1997 Ugni Blanc has dominated, with Merlot Blanc and Folle Blanche banned. The ripeness level has been lowered from 170 to 153 grams of sugar, with no more than four grams residual allowed in the finished wine, and a maximum of 12.5 percent alcohol imposed, thus ensuring fresher, crisper wines. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

🍷 Ugni Blanc plus up to 10% in total of Folle Blanche, Colombard, Chenin Blanc,

Sémillon, Sauvignon Blanc, Muscadelle

🕒 1–2 years

BOURG AOC

Also called Bourgeais, this appellation, which covers both red and white wines, has fallen into disuse because the growers prefer to use the Côtes de Bourg AOC, which is easier to market but conforms to the same regulations. *See also* Côtes de Bourg AOC.

BOURGEAIS AOC

See Bourg AOC

CÔTES DE BLAYE AOC

Unlike the Bourg and Côtes de Bourg appellations, which cover red and white wines, Côtes de Blaye is white only. Blaye, however, may be red or white.

WHITE As much white Côtes de Blaye is produced as basic Blaye. The wines are similar in style and quality.

🍷 Merlot Blanc, Folle Blanche, Colombard, Chenin Blanc, Sémillon, Sauvignon Blanc, Muscadelle

🕒 1–2 years

CÔTES DE BOURG AOC

Bourg is one-fifth the size of Blaye, yet it traditionally produces a greater quantity and, more importantly, a much finer quality of wine than that produced at Blaye.

RED Excellent value wines of good color, which are full of solid, fruity flavor. Many are very stylish indeed.

🍷 Cabernet Sauvignon, Cabernet Franc, Merlot, Malbec

🕒 3–10 years

WHITE A very small quantity of this light, dry wine is produced and sold each year. It may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

🍷 Sémillon, Sauvignon Blanc, Muscadelle, Merlot Blanc, Colombard, plus a maximum of 10% Chenin Blanc

🕒 1–2 years

PREMIÈRES CÔTES DE BLAYE AOC

This covers the same area as Blaye and Côtes de Blaye, but only classic grapes are used and the minimum alcoholic strength is higher. The area has very good potential for producing quality wines.

RED There are one or two excellent properties that use a little new oak.

🍷 Cabernet Sauvignon, Cabernet Franc, Merlot, Malbec

🕒 4–10 years

WHITE Dry, light-bodied wines that may have a fresh, lively, grapey flavor.

🍷 Sémillon, Sauvignon Blanc, Muscadelle

🕒 1–2 years

THE WINE PRODUCERS OF

BOURG

CHÂTEAU DE BARBE

Villeneuve

Château de Barbe is a property that makes substantial quantities of light-styled, Merlot-dominated, gently fruity red wines that are easy to drink.

CHÂTEAU BÉGOT

Lansac

This property produces some 5,000 cases of agreeably fruity red wine, which is best drunk young.

CHÂTEAU DU BOUSQUET

Bourg-sur-Gironde

★🕒

This large, well-known château produces some 40,000 cases of red wine of excellent value for money. The wine is fermented in stainless steel and aged in oak, has a big bouquet, and a smooth feel.

CHÂTEAU BRULESCAILLE

Tauriac

Château Brulescaille's vineyards are very well-sited and produce agreeable wines for early drinking.

CHÂTEAU CONILH-LIBARDE

Bourg-sur-Gironde

Soft, fruity red wines are made at this small vineyard overlooking Bourg-sur-Gironde and the river.

CHÂTEAU CROUTE-COURPON

Bourg-sur-Gironde

A small but recently enlarged estate, it produces honest, fruity red wines.

CHÂTEAU EYQUEM

Bayon-sur-Gironde

Owned by the serious winemaking Bayle-Carreau family, which also owns several other properties, this wine is not normally, however, purchased for its quality. It is enjoyable as a light luncheon claret, but the real joy is in the spoof of serving a red "Yquem."

CHÂTEAU FALFAS

Bourg-sur-Gironde

🍷★🕒

Owned by John and Vonique Cochran, whose biodynamic wines

are consistently rich, mid-term drinkers of no little finesse.

CHÂTEAU GÉNIBON

Bourg-sur-Gironde

This small vineyard produces attractive wines that have all the enjoyment upfront and are easy to drink.

CHÂTEAU GRAND-LAUNAY

Teuillac

★🕒

This property has been developed from the vineyards of three estates: Domaine Haut-Launay, Château Launay, and Domaine les Hermats. Mainly red wine is produced, although a very tiny amount of white is also made. The star-performing wine at this château is a superb, special reserve *cuvée* of red that is sold under the Château Lion Noir label.

CHÂTEAU DE LA GRAVE

Bourg-sur-Gironde

★🕒

An important property situated on one of the highest points of Bourg-

sur-Gironde, it produces a large quantity of light, fruity Malbec-influenced red wine and a very tiny amount of white.

CHÂTEAU GUERRY

Tauriac

★🕒

Some 10,000 cases of really fine wood-aged red wines are produced at this château. The wines have good structure, bags of fruit, and a smooth, elegant flavor.

CHÂTEAU GUIONNE

Lansac

These are easy-drinking wines, full of attractive Merlot fruit, good juicy flavor, and some finesse. A little white wine of some interest and depth is also made.

CHÂTEAU HAUT-MACÔ

Tauriac

This rustic red wine is full of rich, fruity flavors, and good acidity. The proprietors also own a property called Domaine de Lilotte in Bourg-sur-Gironde producing attractive, early-drinking red wines under the

Bordeaux Supérieur appellation.

Other wine: *Les Bascauds*

CHÂTEAU HAUT-ROUSSET

Bourg-sur-Gironde

Some 12,000 cases of decent, everyday-drinking red wine and 1,000 cases of white are produced at this fairly large property. The red wines from a small vineyard close by are sold under the Château la Renardière label.

CHÂTEAU DE LIDONNE

Bourg-sur-Gironde

★

This very old property produces an

excellent-quality red wine, powerfully aromatic and full of Cabernet character. Its name comes from the 15th-century monks who looked after the estate and offered lodgings to passing pilgrims: "Lit-Donne" or "Give Bed."

CHÂTEAU PEYCHAUD

Teuillac

★

These fruity red wines are easy to drink when young. A little white is also made. It is under the same ownership as Château Peyredouille and Château le Peuy-Saincrit.

CHÂTEAU ROC DE CAMBES

Bourg-sur-Gironde

★★

You can expect to pay five times the price of any other Côtes de Bourg for this blockbuster, which is made by François Mitjavile, the owner of Tertre-Rôteboeuf. However, some vintages are worth it.

CHÂTEAU ROUSSET

Samonac

★

A fine estate of gravel vineyards producing lightly rich, juicy, Merlot-dominated wines of some finesse; they are perfect to drink when two or three years old.

CHÂTEAU SAUMAN

Villeneuve

These immaculate vineyards produce a good-quality red wine for medium-term maturity. The proprietor also owns the red-wine producing Domaine du Moulin de Mendoc in the same commune.

CHÂTEAU TOUR-DE-TOURTEAU

Samonac

★

This property was once part of Château Rousset. However, the wines are definitely bigger and richer than those of Rousset.

THE WINE PRODUCERS OF BLAYE

CHÂTEAU BARBÉ

Cars

★

This château produces well-made, and overtly fruity red and white wines. Château Barbé is one of several properties owned by the Bayle-Carreau family (see also La Carelle and Pardaillan).

CHÂTEAU BOURDIEU

Berson

This is an old and well-known property producing Cabernet-dominated red wines of a very firm structure that receive time in oak. Seven hundred years ago this estate was accorded the privilege of selling "clairet," a tradition it maintains today by aging the blended production of various vineyards in oak. It is also producing white wines of improving quality.

CHÂTEAU LA CARELLE

St.-Paul

More than 11,000 cases of agreeable red wines and just 1,500 cases of white are made at this property. The owner also runs châteaux Barbé and Pardaillan in Cars.

CHÂTEAU DE CASTETS

Plassac

A promising property, it produces attractive red and white wines for early drinking.

CHÂTEAU CHARRON

St.-Martin-Lacaussade

★

These very attractive, well-made, juicy-rich, Merlot-dominated red wines are matured in oak, some of which is new. A small amount of white wine is also made.

CHÂTEAU CRUSQUET-DE-LAGARCIE

Cars

★★

A tremendously exciting, richly styled red wine, which is deep colored,

bright, big, full of fruit, vanilla, and spice. A small amount of dry white wine is sold under the name "Clos-des-Rudel" and an even smaller quantity of sweet white wine as "Clos-Blanc de Lagarcie." The châteaux Les-Princesses-de-Lagarcie and Touzignan, also in Cars, are under the same ownership.

CHÂTEAU L'ESCADRE

Cars

★

These elegant red wines are well-colored, full, and fruity. They can be enjoyed young, but also improve with age. A small amount of fruity white wine is produced.

Second wine: *Château la Croix*

DOMAINE DU GRAND BARRAIL

Plassac

★

This château makes a fine-quality red wine that attracts by its purity of fruit. A little white wine is produced. The proprietor also owns Château Gardut-Haut-Cluzeau and Domaine du Cavalier in Cars.

CHÂTEAU DU GRAND PIERRE

Berson

★

This property can produce tremendous value medium- to full-bodied red wine with sweet, ripe fruit. Fresh, zesty, dry white wine of agreeable quality is also made.

CHÂTEAU HAUT BERTINERIE

Cubnezais

★★

The consistent class of this wine, with its silky fruit and beautifully integrated oak, makes it stand out above the rest as the best-value dry white currently made in Bordeaux.

CHÂTEAU DE HAUT SOCIONDO

Cars

Agreeably light and fruity red and white wines are made here.

CHÂTEAU LES JONQUEYRES

St.-Paul-de-Blaye

★★

This château produces lush Merlot-dominated reds with lots of well-integrated creamy oak. The wines are impeccably produced.

CHÂTEAU LACAUSSE

SAINT MARTIN "TROIS MOULINS"

St.-Martin Lacaussade

★

Owned by Jacques Chardat, but managed and marketed by Vignobles Germain, both the sumptuous red and classy dry white benefit from 100 percent new oak.

CHÂTEAU LAMANCAU

St.-Androny

★

Production at this property is entirely red and of an excellent standard: richly colored wine full of the juicy spice of Merlot.

CHÂTEAU LES MOINES

Blaye

A red-only château, producing a light- to medium-bodied, fresh and fruity wine for easy drinking

CHÂTEAU MARINIER

Cézac

★

Twice as much red wine as white is produced. The red is agreeably fruity, but the white is much the better wine: smooth, well-balanced, lightly rich, and elegant. Red and rosé wines are also produced under the Bordeaux appellation.

CHÂTEAU MAINE-GAZIN "LEVENNE" VIEILLES VIGNES

Plassac

★

With one-third new oak, this 90 percent Merlot wine is rich, sumptuous, and above its class.

CHÂTEAU MENAUDAT

St.-Androny

★

These are extremely attractive, full, and fruity red wines.

CHÂTEAU PARDAILLAN

Cars

Well-made, enjoyable, fruity red wines that are best drunk young.

CHÂTEAU LES PETITS ARNAUDS

Cars

★

Attractively aromatic red wines, pleasingly round and fruity. Dry white Blaye and a *moelleux* white.

CHÂTEAU PEYREDOUILLE

Berson

★

This 15th-century property produces mainly good-quality red wine, although some white is made. The proprietors also own Château Peychaud in the Bourgeois commune of Teuillac and the Bordeaux AOC of Château le Peuy-Saincrit.

CHÂTEAU PEYREYRE

St.-Martin-Lacaussade

★

This château produces rich-flavored reds of some finesse. Bordeaux Rosé is also made.

CHÂTEAU SEGONZAC

St.-Genès-de-Blaye

★

Château Segonzac's easy-drinking red wines are light, well-made, fresh, firm, and agreeably fruity.

ENTRE-DEUX-MERS

Entre-Deux-Mers, which literally means “between two seas” is situated between the Dordogne and Garonne rivers. It is Bordeaux’s largest district, and produces inexpensive dry white wines and an increasing volume of excellent value-for-money red wines that are entitled to the Bordeaux, Bordeaux Supérieur, and Premières-Côtes-de-Bordeaux appellations.

TECHNOLOGICAL PROGRESS in winemaking occurred earlier and more quickly in Entre-Deux-Mers than in any other district of Bordeaux. As early as the 1950s and 1960s, there was a grassroots viticultural movement to drop the traditional low vine-training systems and adopt the revolutionary “high-culture” system contrasted with the low vine-training methods common throughout Bordeaux. These new vineyard techniques were followed in the 1970s by a widespread adoption of cool-fermentation techniques. With fresh, light, and attractively dry white wines being made at many châteaux, the major export markets suddenly realized it would be easier to sell the name Entre-Deux-Mers rather than continue to sell what had become boring Bordeaux Blanc. This was even better if the wine could boast some sort of individual *petit château* personality.

THE “HIGH-CULTURE” SYSTEM OF VINE TRAINING Entre-Deux-Mers in the late 1940s and early 1950s was a sorry place. The wines were sold in bulk, ending up as anonymous Bordeaux Blanc, and much of the decline in the Bordeaux region was centered on this district. But the new postwar generation of

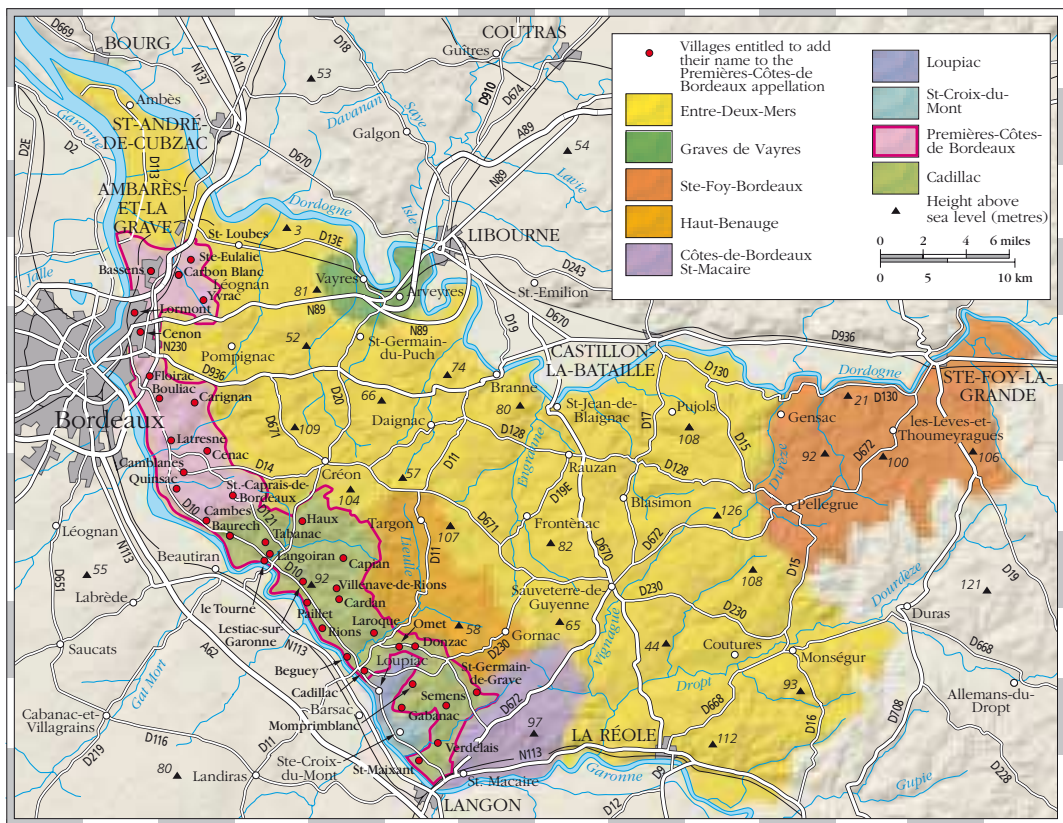

CHÂTEAU BONNET
In 1898 this vineyard was acquired by Léonce Recapet, one of the first to carry out replanting after the devastation of the Gironde vineyard by phylloxera at the turn of the century. His son-in-law, François Lurton, succeeded him, and in 1956 his grandson, André Lurton, became the owner.

winegrowers were not content with this state of affairs. Although times were difficult and the economy was deteriorating, the young, technically minded *vignerons* realized that the district’s compressed *boulbènes* soil, which was choking the vines, could not be worked by their ancestors’ outdated methods, and they therefore took a considerable financial risk to rectify the situation. They grubbed up every other row of vines, thus increasing the spacing between the rows, and trained the plants on a “high-culture” system similar to that practiced farther south in Madiran and Jurançon (also in Austria where it was originally conceived

LOUPIAC CHURCH
The local church neighbors the vineyards of Cbâteau Loupiac, which are situated on the right bank of the Garonne.

ENTRE-DEUX-MERS
 See also p55

The varied countryside of this district spreads out between the rivers Dordogne and Garonne as their paths diverge. The Premières Côtes form a narrow strip along the south side.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

A large area east of Bordeaux between the Garonne and Dordogne rivers.

CLIMATE

More windy and wetter than the Médoc; areas near the rivers are liable to flood.

ASPECT

Quiet and very attractive countryside of vine-covered hillsides, orchards, and meadows.

SOIL

Very varied topsoils, ranging from alluvium by the river to gravel on some hillsides and crests, and clay-gravel or clay-limestone on various plateaux. At the western end of the district a soil called *boulbènes* dominates. This is extremely fine and sandy and has a tendency to compress into an impermeable barrier. Vines must be grafted on to

special rootstock in order to be productive in such soil. Much of the subsoil is limestone or limestone-based, but sandy-clay, clay-and-limestone rubble, a quarry stone called *aslar*, and *ribot*—a sandstone containing gravel and iron deposits—are also found.

VITICULTURE AND VINIFICATION

This area is famed for its "high and wide" method of vine training, which was developed in the early 1950s and is similar to the Lenz Moser system used in Austria. Greater emphasis is now placed on the Sauvignon grape and cool fermentation in stainless-steel vats.

GRAPE VARIETIES

Primary varieties: Sémillon, Sauvignon Blanc, Muscadelle
Secondary varieties: Merlot Blanc, Colombard, Mauzac, Ugni Blanc

and was called the Lenz Moser system). This system allowed machinery to work the land and break up the soil. It also increased the canopy of foliage, which intensified chlorophyll assimilation and improved ripening.

COOL FERMENTATION

In the 1970s, university-trained personnel at the well-funded Entre-Deux-Mers *coopératives* invested in temperature-controlled stainless-steel vats and led the way in cool-fermentation techniques. Prior to this, fermentation temperatures were often in excess of 83°F (28°C), but it was soon discovered that the lower the temperature, the more aromatic the compounds released. They discovered that fermentation could take place at temperatures as low as 39°F (4°C), although the risk of stuck-fermentation (when the fermentation process stops) was greater at such low temperatures. It soon became clear that the ideal fermentation temperature was somewhere between 50°F (10°C) and 64°F (18°C). This increased the yield of alcohol and important aromatic and flavor compounds. It also reduced both the loss of carbonic gas and the presence of volatile acidity and required less sulfur dioxide. In the mid-1980s it was confirmed that 64°F (18°C) is the optimum temperature for fermentation. Lower temperatures also produce amylic aromas, which in small quantities are fine, but the lower the temperature, the more the wine is dominated by these nail-polish aromas.

THE APPELLATIONS OF

ENTRE-DEUX-MERS

BORDEAUX
HAUT-BENAUGE AOC

Situated above the Premières Côtes, opposite Cérons, this area corresponds to the ancient and tiny county of Benauge. To claim this appellation, as opposed to Entre-Deux-Mers-Haut-Benauge, the grapes are restricted to the three classic varieties and must be riper, with a minimum sugar level of 195 grams per liter instead of 170 grams per liter. The yield is 10 percent lower and the minimum alcoholic level 1.5 percent higher.

WHITE Dry, medium-sweet, and sweet versions of this light-bodied, fruity wine may be made.

☞ Sémillon, Sauvignon Blanc, Muscadelle

☞ 1–3 years for dry and medium-sweet wines;
3–6 years for sweet wines

CADILLAC AOC

Of the trio of sweet-wine areas on the right bank of the Garonne, Cadillac is the least known. It encompasses 21 communes, 16 of which form the canton of Cadillac, yet very little wine is produced under this appellation—just one-fifth of that made in Loupiac, or one-tenth of that made in Ste.-Croix-du-Mont. The regulations state that the wines must be made from botrytized grapes harvested in successive *tries*, but there is little evidence of this in the wines, which at best have the character of *passerillage*. The *terroir* could produce wines of a much superior quality, but it would be costly to do so, and sadly, this appellation does not fetch a high enough price to justify the substantial investment needed.

WHITE Attractive honey-gold wines with fresh, floral aromas and a semisweet, or sweet, fruity flavor.

☞ Sémillon, Sauvignon Blanc, Muscadelle

☞ 3–8 years

CÔTES-DE-
BORDEAUX-ST.-MACAIRE AOC

These little-seen wines come from an area at the eastern extremity of the Premières-Côtes-de-Bordeaux. Of the 6,000 acres (2,300 hectares) of vineyards that may use this appellation, barely 75 acres (30 hectares) bother to do so.

WHITE Medium-bodied, medium-sweet, or sweet wines that are attractive in a fruity way, but unpretentious.

☞ Sémillon, Sauvignon Blanc, Muscadelle

☞ 1–3 years

ENTRE-DEUX-MERS AOC

This is the largest district in the region, and after the generic Bordeaux Blanc, it is its greatest-volume white-wine appellation. Entre-Deux-Mers has a growing reputation for exceptional-value wines of a high technical standard.

WHITE Crisp, dry, light-bodied wines that are fragrant, aromatic, and usually predominantly Sauvignon Blanc. These are clean, cool-fermented wines. They may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☞ At least 70 percent Sémillon, Sauvignon Blanc, and Muscadelle, plus a maximum of 30 percent Merlot Blanc and up to 10 percent in total of Colombard, Mauzac, and Ugni Blanc

☞ 1–2 years

ENTRE-DEUX-MERS-
HAUT-BENAUGE AOC

These wines are drier than those of the Bordeaux-Haut-Benauge appellation, and their blends may include a greater number of grape varieties, although the same nine communes

comprise both appellations. The wines comply with the less rigorous regulations of Entre-Deux-Mers and, consequently, this AOC produces four times the volume of wine than does Bordeaux-Haut-Benauge. Entre-Deux-Mers-Haut-Benauge has so far produced only dry wines, with the exception of 1983, when a luscious vintage arrived that was easy to make into sweet wines.

WHITE These dry wines are very similar to those of Entre-Deux-Mers.

☞ At least 70 percent Sémillon, Sauvignon Blanc, and Muscadelle, plus a maximum of 30 percent Merlot Blanc and up to 10 percent in total of Colombard, Mauzac, and Ugni Blanc

☞ 1–3 years

GRAVES DE VAYRES AOC

An enclave of gravelly soil on the left bank of the Dordogne, this appellation produces a substantial quantity of excellent-value red and white wines.

RED These are well-colored, aromatic, medium-bodied wines with fragrant, juicy-spicy, predominantly Merlot fruit. They are richer than those found elsewhere in Entre-Deux-Mers.

☞ Cabernet Sauvignon, Cabernet Franc, Carmenère, Merlot, Malbec, Petit Verdot

☞ 4–10 years

WHITE Mostly dry and off-dry styles of fresh, fragrant, and fruity wines made for early drinking. Occasionally, sweeter styles are made. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☞ Sémillon, Sauvignon Blanc, and Muscadelle plus a maximum of 30 percent Merlot Blanc

☞ 1–3 years

LOUPIAC AOC

This appellation is located on the right bank of the Garonne, opposite Barsac. It is by far the best sweet-wine appellation in Entre-Deux-Mers and its wines are always excellent value. According to the regulations, Loupiac must be made with the "assistance" of overripe botrytized grapes and, unlike Cadillac, these wines often have the honeyed complexity of "noble rot." The best Loupiac wines come from vineyards with clay-and-limestone soil.

WHITE Luscious medium- to full-bodied wines that are sweet or intensely sweet, honey-rich, and full of flavor. They can be quite complex, and in suitable years have evident botrytis character.

🍇 Sémillon, Sauvignon Blanc, Muscadelle
🕒 5–15 years (25 in exceptional cases)

PREMIÈRES-CÔTES-DE-BORDEAUX AOC

A 37-mile (60-kilometer) strip of southwest-facing slopes covering 420 acres (170 hectares) of vines scattered through 37 communes, each of which has the right to add its name to this appellation. They are: Bassens, Baurech, Béguey, Bouliac, Cadillac, Cambes, Camblanes, Capian, Carbon Blanc, Cardan, Carignan, Cenac, Cenon, Donzac, Floirac, Gabarnac, Haux, Langoiran, Laroque, Lestiac, Lormont, Monprimblanc, Omet, Paillet, Quinsac, Rions, Sémens, St.-Caprais-de-Bordeaux, St.-Germain-de-Graves, St.-Maixant, Ste.-Eulalie, Tabanac, Le Tourne, La Tresne, Verdelaix, Ville-nave de Rions, and Yvrac.

RED The best red wines come from the northern communes. These well-colored, soft,

and fruity wines are a cut above basic Bordeaux AOC.

🍇 Cabernet Sauvignon, Cabernet Franc, Carmenère, Merlot, Malbec, Petit Verdot

🕒 4–8 years

WHITE Since the 1981 harvest, no dry wines have been allowed under this generally unexciting appellation. They must have at least some sweetness, and most are in fact semisweet. Simple, fruity wines, well-made for the most part, but lacking character.

🍇 Sémillon, Sauvignon Blanc, Muscadelle
🕒 3–7 years

STE.-CROIX-DU-MONT AOC

This is the second-best sweet-white appellation on the right bank of the Garonne, and it regularly produces more wine than Barsac. Like Loupiac wines, these wines must be made with the "assistance" of overripe botrytized grapes. They have less honeyed complexity of "noble rot" than Loupiac wines, but often have more finesse.

WHITE Fine, viscous, honey-sweet wines that are lighter in body and color than Loupiac wines. Excellent value when they have rich botrytis character.

🍇 Sémillon, Sauvignon Blanc, Muscadelle
🕒 5–15 years (25 in exceptional cases)

STE.-FOY-BORDEAUX AOC

Until relatively recently, Ste.-Foy-Bordeaux was known primarily for its white wines, but it now produces as much red as white. There is a high proportion of "organic" winemakers in this area.

RED Ruby-colored, medium-bodied wines made in a soft, easy-drinking style.

🍇 Cabernet Sauvignon, Cabernet Franc, Merlot, Malbec, Petit Verdot

🕒 3–7 years

WHITE Mellow, semisweet wines of uninspiring quality, and fresh, crisp dry white wines that have good aroma and make attractive early drinking. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

🍇 Sémillon, Sauvignon Blanc, and Muscadelle, and up 10 percent in total of Merlot Blanc, Colombard, Mauzac, and Ugni Blanc

🕒 1–3 years

THE WINE PRODUCERS OF ENTRE-DEUX-MERS

CHÂTEAU ARNAUD-JOUAN

Cadillac

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

★🍷

This large, well-situated vineyard makes interesting, attractive wines.

DOMAINE DU BARRAIL

Monprimblanc

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

★🍷

Both the red Premières Côtes and sweet white Cadillac produced at this property are worth watching.

CHÂTEAU DE BEAUREGARD

AOC Entre-Deux-Mers and AOC Bordeaux-Haut-Benauges

The red and white wines are well-made. The red has good structure, but is softened by the spice of the Merlot.

CHÂTEAU BEL-AIR

Vayres

AOC Graves de Vayres

Most of the wines made here are

red and well-colored. They are aromatic wines of a Cabernet character.

CHÂTEAU BIROT

Béguey

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

★🍷

Popular for its easy-drinking whites, this property also produces well-balanced red wines of some finesse.

CHÂTEAU LA BLANQUERIE

Mérignas

AOC Entre-Deux-Mers

Dry white wine with a Sauvignon character and a fine finish.

CHÂTEAU BONNET

Grézillac

AOC Entre-Deux-Mers

★★

This top-performing Entre-Deux-Mers château is owned by André Lurton. It produces crisp, fresh, and characterful white wines, and soft, fruity, extremely successful

(Bordeaux Supérieur) red.

Second wine: *Le Colombey*

Other wines: *Tour-de-Bonnet, Château Gourmin, Château Peyraud*

CHÂTEAU BRÉTHOUS

Camblanes-et-Meynac

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

★🍷

The red wines are forward and attractive, yet well-structured, while the whites are succulent and sweet.

CHÂTEAU CANET

Guillac

AOC Entre-Deux-Mers

★🍷

These excellent white wines are clean and crisp, with good fruit and an elegant balance.

CHÂTEAU CAYLA

Rions

AOC Premières-Côtes-de-Bordeaux

★🍷

The reds are elegant and accessible with just a touch of new oak.

CHÂTEAU DE CÉRONS

Cérons

AOC Cérons

★🍷

Jean Perromat also owns Château d'Arche, and consistently produces superb, white botrytized wines.

Other wine: *De Calvimont* (dry white)

DOMAINE DE CHASTELET

Quinsac

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

★🍷

Domaine de Chastelet produces red wine that is delicious, yet firm and complex, with very well-balanced blackcurrant fruit flavors and a hint of vanilla oak.

CLOS BOURGELAT

Cérons

AOC Cérons

★★🍷

These botrytized wines have great aroma, finesse, and complexity.

CLOS JEAN

Loupiac

AOC Loupiac

The wines produced by Clos Jean are similar quality to those of Château du Cros, but more refined and ethereal in character.

CHÂTEAU LA CLYDE

Tabanac

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

★●

These aromatic, deep-colored, ruby-red wines show good spice and fruit. The white has finesse and balance.

CHÂTEAU DU CROS

Loupiac

AOC Loupiac

★●

The fine, fat, succulent sweet wines of this château are among the best of the appellation.

CHÂTEAU DINTRANS

Ste.-Eulalie

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

This château produces attractive, nicely colored, fruity red wines.

CHÂTEAU DE L'ESPLANADE

Capian

AOC Premières-Côtes-de-Bordeaux

Produced by Patrick and Sabine Bayle of Château Plaisance, these primarily Merlot wines are cheaper and simpler than those of Château Plaisance, but are easy-drinking nevertheless. They are also sold under the Château Florestan label.

CHÂTEAU FAYAU

Cadillac

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

This château produces succulent sweet wines in addition to red, claret, and dry white wines.

Other wine: *Clos des Capucins*

CHÂTEAU FLORESTAN

See Château de l'Esplanade

CHÂTEAU FONGRAVE

Gornac

AOC Entre-Deux-Mers

These dry white wines have a fresh and tangy taste.

Second wine: *Château de la Sablière Fongrave* (red wines)

CHÂTEAU DE GORCE

Haux

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

This château produces fruity reds and fresh, floral whites.

CHÂTEAU GOUDICHAUD

Vayres

AOC Graves de Vayres

This property also extends into St.-Germain-du-Puch in Entre-Deux-Mers, where it produces some very respectable wines.

CHÂTEAU GOUMIN

Dardenac

AOC Entre-Deux-Mers

Goumin is another successful André Lurton château. It produces up to 10,000 cases of pleasant, soft, fruity red wine and 5,000 cases of white wine that is slightly fuller than other similar Lurton products.

GRAND ENCLOS DU CHÂTEAU DE CÉRONS

Cérons

AOC Cérons

Although historically part of Château de Cérons, this is not under the same ownership. The original estate belonged to the Marquis de Calvimont, but was split in two by the route from Bordeaux to Spain, which was constructed in 1875. The marquis then sold the property in three separate lots, one of which was called Grand Enclos and was purchased by the Lataste family, who are still the owners today. The white wines of Grand Enclos are equally as rich and potentially complex as those of Château de Cérons itself (which is so called because it retains the marquis' château).

CHÂTEAU GRAND MONEIL

Salleboeuf

AOC Entre-Deux-Mers

★●

Barely more than a thousand cases of white, but 35,000 cases of excellent-quality, soft, easy-drinking red.

CHÂTEAU DU GRAND-MOÛIEYS

Capian

AOC Premières-Côtes-de-Bordeaux

★●

Excellent-value reds for medium-term aging are currently made at this château.

CHÂTEAU GRAVELINES

Sémens

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

★●

This large property produces equal quantities of excellent red and white wines.

CHÂTEAU GROSSOMBRE

Branne

AOC Entre-Deux-Mers

★●

The daughter of André Lurton runs this property, which produces lush yet elegant white wines and a beautifully concentrated red, the latter of which is sold under the Bordeaux Supérieur AOC and must be one of Bordeaux's greatest bargains.

CHÂTEAU DU GUA

Ambarès-et-Lagrave

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

An attractive, well-structured red wine is produced from this 20-acre (8-hectare) vineyard of fine gravel.

CHÂTEAU HAUT-BRIGNON

Cénac

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

★

This property has been steadily improving since the late 1980s, producing a soft, velvety red and crisp, dry white, plus one of Cadillac's better wines.

CHÂTEAU DE HAUX

Haux

AOC Premières-Côtes-de-Bordeaux

★●

These red and white wines are gorgeously ripe and ready to drink, absolutely fresh, and very elegant, and, under the Château Frère label, a fabulous oak-fermented white is also produced. Probably the top-performing château in the Premières Côtes for both red and white.

CHÂTEAU DU JUGE

Haux

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

These promising red wines are easy drinking, and full of juicy fruit flavors. Decent, if unexciting whites are also made.

CHÂTEAU DU JUGE

Cadillac

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

Respectable red and dry white wines are produced at Château du Juge, and in some years, a little sweet white wine of high quality is also made. Both red and white wines are extraordinarily good value.

CHÂTEAU LABATUT

St.-Maixant

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

The red wines are aromatic and full of flavor, while the sweet white wines are exceptional quality. Decent dry white is also produced.

CHÂTEAU LAFITTE

Camblanes-et-Meynac

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

Nothing like the real thing (the famous *premier cru*), of course, but the wine is decent, well structured, and capable of improving with age—a cheap way to get a Château Lafitte on the table, even if it is not *the* Château Lafitte.

CHÂTEAU LAFUE

Cadillac

AOC Ste.-Croix-du-Mont

★

Attractive, sweet white wines with more of a fruity than a botrytis character. Nearly a quarter of the production is red wine.

CHÂTEAU LAGAROSSE

Tabanac

AOC Premières-Côtes-de-Bordeaux

The red is easy-drinking with soft fruit and an easy finish.

CHÂTEAU LAGRANGE-HAMILTON

Rions

AOC Premières-Côtes-de-Bordeaux

This property is run by Hamilton Narby, formerly of Château Guiraud in Sauternes. I have not yet tracked down this wine, but if Hamilton Narby devotes a mere fraction of the effort he put into reviving Guiraud to this place, then it should be worth keeping an eye on.

CHÂTEAU LAMOTHE

Haux

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

Some exceptionally good wines have been produced in recent years at this château, which derives its name from "La Motte," a rocky spur that protects the vineyard.

CHÂTEAU L AROCHE BEL AIR

Baurech

AOC Premières-Côtes-de-Bordeaux

Absolutely delicious-drinking reds under the basic Château Laroche label, and an even better selection

of oak-aged reds under Laroche Bel Air.

CHÂTEAU LATOUR

St.-Martin-du-Puy

AOC Entre-Deux-Mers

From this ancient château, parts of which date back to the 14th century, 10,000 cases of attractive, well-balanced, smooth red Bordeaux Supérieur are produced every year. This château's technically sound wines often win prizes and enable its devotees to claim that they can afford to drink Château Latour every day, at minimum expense.

CHÂTEAU LATOUR

Camblanes-et-Meynac

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

This is another everyday-drinking claret with this prestigious name.

CHÂTEAU LAUNAY

Soussac

AOC Entre-Deux-Mers

This large property produces 40,000 cases of a fresh dry white wine and 15,000 cases of a red wine sold under the "Haut-Castanet" label.

Other wines: *Bradoire, Château Dubory, Château Haut-Courgeaux, Château La Vaillante*

CHÂTEAU LAURETTE

Cadillac

AOC Ste.-Croix-du-Mont

★

This property is under the same ownership as Château Lafue and runs along similar lines.

CHÂTEAU LOUBENS

Cadillac

AOC Ste.-Croix-du-Mont

★

This château produces rich, liquorous, superbly balanced sweet white wines. Dry white wines are sold as "Fleur Blanc," and a little red wine is also made.

Other wine: *Fleur Blanc de Château Loubens*

CHÂTEAU LOUPIAC-GAUDIET

Loupiac

AOC Loupiac

Fine, honey-rich sweet wines hinting of crystallized fruit are produced here.

CHÂTEAU LOUSTEAU-VIEIL

Cadillac

AOC Ste.-Croix-du-Mont

★

This property produces richly flavoured, high-quality sweet wines.

CHÂTEAU MACHORRE

St.-Martin-de-Sescas

AOC Côtes-de-Bordeaux-St.-Macaire

★

The sweet white wine of this château has an attractive, fresh, fruit-salad flavor and is one of the best examples of the appellation. Very respectable red and dry Sauvignon wines are also produced, which are sold under the Bordeaux appellations.

CHÂTEAU DES MAILLES

Cadillac

AOC Ste.-Croix-du-Mont

Some outstanding sweet wines are produced at Château des Mailles, but the wines can occasionally be disappointing.

CHÂTEAU LA MAUBASTIT

AOC Ste.-Foy-de-Bordeaux

Some 5,000 cases of white and 2,000 of red, both "organic" wines, are sold under the Bordeaux appellation.

CHÂTEAU MORLAN-TUILIÈRE

St.-Pierre-de-Bat

AOC Entre-Deux-Mers-Haut-Benauges and Bordeaux Haut-Benauges

One of the best properties of the area, producing a vibrant, crystal-clear Entre-Deux-Mers-Haut-Benauges, a Bordeaux Supérieur in the *moelleux* style, and a fairly full-bodied red AOC Bordeaux.

CHÂTEAU MOULIN DE LAUNAY

Soussac

AOC Entre-Deux-Mers

Despite the vast quantity produced, the dry white wine is crisp and fruity, and of a very fine standard. A little red is also produced.

Other wines: *Plessis, Château Terre-de-Launay, Château de Tuilerie, Château la Vigerie*

CHÂTEAU MOULIN DE ROMAGE

AOC Ste.-Foy-de-Bordeaux

This château produces equal quantities of "organic" red and white.

DOMAINE DU NOBLE

Loupiac

AOC Loupiac

This property consistently produces fine botrytized wines that combine sweetness and strength with elegance and a fresh, long finish.

CHÂTEAU PETIT-PEY

St.-André-du-Bois

AOC Côtes-de-Bordeaux-St.-Macaire

Good, sweet white St.-Macaire and agreeably soft red AOC Bordeaux are made at this property.

CHÂTEAU PEYREBON

Grézillac

AOC Entre-Deux-Mers

Produces red and white wine in almost equal quantities. The dry white is fine and flavorsome.

CHÂTEAU PEYRINES

Mourens

AOC Entre-Deux-Mers-Haut-Benauges and Bordeaux Haut-Benauges

★★

The vineyard of this château has an excellent southern exposure and produces fruity red and white wines.

CHÂTEAU DE PIC

Le Tourne

AOC Premières-Côtes-de-Bordeaux

The basic red is a lovely, creamy-sweet, easy-drinking, fruity wine. A superb oak-aged red under the *Cuvée Tradition* label is also made.

CHÂTEAU PICHON-BELLEVUE

Vayres

AOC Graves de Vayres

The red wines are variable, but the dry whites are delicate and refined.

CHÂTEAU PLAISANCE

Capian

AOC Premières-Côtes-de-Bordeaux

The *Cuvée Tradition*, in which the wine is aged in oak and is unfiltered, gives rich, ripe fruit with supple tannin structure and smoky oak.

Other wines: *De l'Esplanade, Château Florestin*

CHÂTEAU DE PLASSAN

Tabanac

AOC Premières-Côtes-de-Bordeaux

The basic red has a lot of character, with cherry-minty undertones in riper years. However, the fuller, more complex *cuvée spéciale* is worth paying for, particularly if you want a wine to accompany food.

CHÂTEAU PONTETTE-BELLEGRIVE

Vayres

AOC Graves de Vayres

This property has a reputation for subtly flavored, dry white wines.

CHÂTEAU PUY BARDENS

Cambes

AOC Premières-Côtes-de-Bordeaux

This top-performing château produces reds with sweet, ripe, fat fruit and a soft, velvety finish.

CHÂTEAU LA RAME

Cadillac

AOC Ste.-Croix-du-Mont

One of the top wines of the appellation, La Rame can have fruit, with cream and honey flavors.

CHÂTEAU REYNON-PEYRAT

Béguey

AOC Premières-Côtes-de-Bordeaux

This property produces a superb, oak-aged Premières Côtes red wine,

and two dry white wines under the Château Reynon label.

CHÂTEAU RICAUD

Loupiac

AOC Loupiac

The wines of Château Ricard are once again the best in the Loupiac appellation. They suffered a significant decline under the previous proprietor, but have at last recovered, and now display great class under new ownership.

CHÂTEAU DE LA SABLIERE-FONGRAVE

Gornac

AOC Entre-Deux-Mers-Haut-Benauges and Bordeaux Haut-Benauges

Sold as a Bordeaux Supérieur, the red wine of Château de la Sablière-Fongrave is fairly robust and requires time in bottle to soften. A much better quality dry white is produced and sold under the Entre-Deux-Mers appellation.

CHÂTEAU TANESSE

Langoiran

AOC Premières-Côtes-de-Bordeaux and AOC Cadillac

A Cordier property, Château Tanesse produces a decent Cabernet-dominated red, and fine-quality, Sauvignon-style dry white.

CHÂTEAU DES TASTES

Cadillac

AOC Ste.-Croix-du-Mont

★

The sweet white wine is truly exciting; luxurious in texture, with creamy-rich flavors showing the classic complex character of botrytis.

CHÂTEAU TERFORT

Cadillac

AOC Ste.-Croix-du-Mont

★

A small amount of excellent sweet white wine is produced by Château Terfort.

CHÂTEAU THIEULEY

La Sauve

AOC Entre-Deux-Mers

★

Château Thieuley is owned by Professor Courselle, a former Médoc professor of viticulture and oenology. His dry white combines good fruit flavor with a fine Sauvignon style, while the red is good and silky.

CHÂTEAU DE TOUTIGEAC

Targon

AOC Entre-Deux-Mers-Haut-Benauges and Bordeaux Haut-Benauges

★

Château de Toutigeac is a well-known property that produces full, rich red wine. It is made for early drinking, and is the best the château produces.

BURGUNDY

Villages with double-barreled names are the key to Burgundy's greatest wines. This is because these villages hijacked the names of their most famous vineyards, so that humble village wines could sell on the backs of the finest grands crus. The village of Gevrey was the first to do this when in 1848 it took the name of its Chambertin vineyard to become Gevrey-Chambertin. You cannot become a Burgundy expert overnight, but if you remember the second part of every double-barreled Burgundian village is one of its best vineyards, you will instantly know some of Burgundy's greatest wines.

SAY "BURGUNDY" AND most people think of the famous wines of the Côtes de Nuits and Côtes de Beaune, but Burgundy in fact stretches from Chablis in the north, which is close to the Aube vineyards of Champagne, down to Beaujolais in the south, in the Rhône *département*. In fact, the Côtes de Nuits and Côtes de Beaune account for less than 10 percent of Burgundy, while Beaujolais represents almost half of the region's entire production.

Burgundy still produces the world's greatest Chardonnay and Pinot Noir wines, and the only Gamay wines ever to achieve classic status, but it is increasingly debased by a growing number of lackluster, sometimes quite disgusting, supermarket wines that rely solely upon the reputation of the famous Burgundian names, which their producers abuse to sell low-quality wines at high prices.

Burgundy, or *Bourgogne* as it is known in French, is an area rich in history, gastronomy, and wine, but unlike the great estates of Bordeaux, the finest Burgundian vineyards are owned by a proliferation of smallholders. Prior to 1789, the church owned most of the vineyards in Burgundy, but these were seized and broken up as a direct result of the Revolution, which was as much antichurch as antiaristocracy. While in Bordeaux, although some of the large wine estates were owned by the aristocracy, many were owned by the *bourgeoisie*, who, because of their long association with the English, were antipapist, and so escaped the

VIRÉ, MÂCONNAIS

Viré is the most ubiquitous of Mâcon's village appellations, but makes consistently fine wines. There are moves to upgrade this village and Clessé to superior appellations.

full wrath of the Revolution. In Burgundy the great vineyards were further fragmented by inheritance laws, which divided the plots into smaller and smaller parcels. Consequently, many *crus*, or growths, are now owned by as many as 85 individual growers. The initial effect of this proprietorial carve-up was to encourage the supremacy of *le négoce*. Few commercial houses had been established prior to the mid-18th century because of the difficulty of exporting from a land-locked area, but with better transportation and no opposition from land-owning aristocracy, merchant power grew rapidly. A network of brokers evolved in which dealers became experts on very small, localized areas.

As ownership diversified even further, it became a very specialized, and therefore rewarding, job to keep an up-to-date and comprehensive knowledge of a complex situation. The brokers were vital to the success of a *négociant*, and the *négoce* himself was essential to the success of international trade and therefore responsible for establishing the reputation of Burgundy.

RECENT BURGUNDY VINTAGES

2003 The year of the never-ending heatwave took its toll on Burgundy, where hopes and hype were high, but the results are of variable quality at best, with reds generally showing huge, exaggerated flavors, high alcohol levels, and low acidity in the Côte d'Or. This is not a year for true connoisseurs of Pinot Noir, who adore the elegance and finesse of this great grape. This is one of those vintages where variability is the savior, and some delightful exceptions are to be found in the Côte de Nuits. Most white wines are heavy, alcoholic, and lacking in both freshness and acidity (some of Michel Laroche's Chablis *grands crus* being among the exceptions).

2002 A very good vintage where a lovely ripeness of fruit has given the reds a slight edge over the excellent whites. One of the most interesting aspects of this vintage is how well the relatively modest village wines have excelled, especially in the hands of top growers.

2001 Despite the initial bad press, this was a good, albeit variable, vintage. I seem to have had better, fresher, more elegant whites than some other critics, although 2001 is a long way short of being a special year for either color. Not quite as good as the variable 2000 vintage, but not as bad as initially feared, the quality generally gets better the farther north the appellation.

2000 This was a good to very good year in Chablis and the Côte de Nuits, where attractive, plump, early-drinking wines were made. The Côte de Beaune and Chalonaise suffered rot following a bad storm in September, but there will be little pockets of joy where the best producers have rigorously discarded any rot-affected grapes and selected only the healthiest fruit.

1999 A large crop of high-quality reds, although rain caused some dilution in the Côte de Nuits, where the quality is not as regular as elsewhere. The whites lack acidity and crispness in the generic appellations, but are rich and concentrated from the best growers in the top *crus*.

THE ROLE OF THE NÉGOCIANT

Until as recently as the early 1980s, virtually all Burgundy would be sold through *négociants* and, although many of them had their own vineyards, these wines were seldom domaine-bottled. Faced with the rise of domaine-bottled Burgundies from small growers, most of the old-fashioned merchants were devoured by Boisset (see Did You Know? box), which has become the largest merchant of its kind. Boisset might survive by marketing a mass of different labels, particularly in the supermarket sector or at the bottom end of the restaurant market, but the recent hiring of Pascal Marchand indicates that it has changed its strategy. Marchand is the French-Canadian whose wine-wizardry enabled the quality at Domaine Comte Armand to soar in the second half of the 1990s. By enticing him away to set up and run Domaine de la Vougeraie, Boisset has shown a determination to join the ranks of the few traditional *négociants* who can be said to be top-performing. These currently include Bouchard Père, Drouhin, Louis Jadot, and Leroy, who have not only enlarged their own domaines but have also taken an increasingly proactive role in the vineyards of their suppliers, tending now to buy in grapes or must rather than wines. Until this new strategy evolved, the purchase of wine rather than grapes was the major difference between the old-style *négociant* and the new-wave growers-cum-merchants. The best of the latter include the likes of Jean-Marc Boillot, Michel Colin, Bernard Morey, and Sauzet, who tend to buy grapes to expand their range of single-vineyard wines, in contrast to the old-style merchant, who still churns out examples from nearly every village under the Burgundian sun.

The decline of the old-style merchant is clearly highlighted by domaine-bottling statistics. Today, as much as 90 percent of all *grand cru* wines (and 50 percent of all *premiers crus*) are domaine bottled, although—tellingly—only 24 percent of the entire production of Burgundy is domaine bottled.

BURGUNDY'S RICH DIVERSITY

Chablis in the north of Burgundy produces the crispest white Chardonnay wines in the world and is geographically closer to Champagne, of which it was once a part, than to the rest of Burgundy. After traveling more than 60 miles (100 kilometers)

CORTON, CÔTE DE BEAUNE

Capped by the Bois de Corton, this magnificent slope produces the Côte de Beaune's most famous red wines and minuscule amounts of Corton Charlemagne, possibly the greatest of all white Burgundies.

GRAND CRU VALMUR, CHABLIS

At the very heart of Chablis' grands crus lies Valmur. Bordered by Grenouilles and Vaudésir on one side and Les Clos on the other, this vineyard is renowned for the fine bouquet and rich flavor of its wines.

southwest from Champagne, we reach the great Burgundy districts of the Côte d'Or: the Côte de Nuits is encountered first and followed by the Côte de Beaune. If you associate Nuits with "night" or "darkness" and Beaune with "bone-white," then you will easily remember which area is most famous for which wine: for although both *côtes* make excellent red and white wines, most of the greatest red burgundies come from the Côte de Nuits, whereas most of the greatest white burgundies come from the Côte de Beaune.

The Côte Chalonnaise, or Mercurey, region—probably the least-known, but certainly the best-value, wine district of Burgundy—produces similar, if somewhat less classic, styles of red and white wines to those in the Côte de Beaune. Softer still are the primarily white wines of Mâcon, where Pouilly Fuissé AOC rules supreme. (Note that this wine should never be confused with Pouilly Fumé AOC in the Loire.)

Still in Burgundy, but farther south, is the Beaujolais region, which is in the Rhône *département*, although its soft, light, fluffy, fruity red wines are far removed from the archetypal full-bodied red wines that we immediately think of as coming from the Rhône Valley.

Beaujolais can be delicious, but most of it is not. Whereas Beaujolais Nouveau was never meant to be considered as a serious wine, it is now a joke, and far too many of even the best Beaujolais *cru* wines are simply overpriced, but that is all part of Burgundy's rich tapestry.

GREAT PINOT AND CHARDONNAY

I was pleased to read in the second edition of Anthony Hanson's book *Burgundy* that he had revised his opinion that "Great burgundy smells of shit." Although semisubliminal faults can add to the complexity, interest, and enjoyment of a wine, they should never dominate, particularly in a Pinot Noir wine, in which purity of fruit and varietal character play such an important role. Just as the once-celebrated "sweaty saddle" smell of Australia's Hunter

VINEYARD AND CHÂTEAU OF RULLY

With the most northerly AOC vineyards of the Côte Chalonnaise, Rully produces excellent dry Chardonnay wines and some pleasant red wines as well.

Valley Shiraz turned out to be a fault, so has “ça sent la merde.” Hanson now admits: “I certainly oversimplified the case when I wrote in 1982 that great Burgundy smells of shit... if I perceive decaying vegetable and animal smells, I now mostly find them unacceptable”.

While the California wineries of Santa Barbara, Carneros, and Russian River lead the way in the search for the winemaker’s Holy Grail—successful Pinot Noir—and individual wineries in other parts of California, and in Oregon and New Zealand, are not far behind, rarely can anyone outside Burgundy manage to produce a deep-colored, full-bodied example of Pinot Noir and still retain its varietal purity, finesse, and elegance. Even in Burgundy it does not come easy and cannot be attempted on grapes coming from anywhere but the best *cru* vineyards. It is, however, a relatively common occurrence.

Chardonnay is so ubiquitous it is probably cultivated in every wine-producing country in the world. Australian versions of this varietal are consistent and drinkable, even at the lowest level, but more expensive Chardonnays exist in Australia, just as they do in New Zealand, South Africa, Chile, California, Oregon, and lots of other places. This is why it is easy to forget just how different great white Burgundy is. When it is right, good white Burgundy is in a class of its own, and the incomparable richness, complexity, and longevity of the very greatest *grands crus* must be experienced to be believed.

THE GENERIC APPELLATIONS OF BURGUNDY

BOURGOGNE AOC

Many writers consider Bourgogne AOC to be too basic and boring to warrant serious attention, but for me it is the most instructive of all Burgundy’s appellations. If a producer cares about the quality of the *Bourgogne*, how much more effort does that producer put into making higher-quality wines? I delight in finding a delicious, easy-to-drink *Bourgogne*, and I often get more of a kick discovering one that will improve for several years than I do from a superior appellation that should age well, considering its famous name and high price. Light-red/dark-rosé wines may be sold as Bourgogne Clairet AOC, but the style is outmoded and the appellation rarely seen.

RED Despite the grape varieties that may be used to make this wine, the only *Bourgogne* worth seeking out is that with the flavor and aroma of pure Pinot Noir. Many producers indicate the grape variety on the label.

☼ Pinot Noir, Pinot Gris, Pinot Liébault plus, in the Yonne district, César, Tressot, and Gamay (if from one of the original nine *cru*s *Beaujolais*—but not *Régnié*)

🕒 2–5 years

WHITE There are a lot of boring white wines made under this appellation, and unless you

have access to something more interesting like the wine from J.-F. Coche-Dury or another top grower, it is probably safer to buy an inexpensive Mâcon AOC. The once overperforming Bourgogne Blanc Clos du Château du Meursault, which was often better than Château du Meursault itself (which is Meursault AOC), is now one of Burgundy’s underperformers (along with Château de Meursault!). These wines may be sold as *primeur* or *nouveau* as from the third Thursday of November following the harvest.

☼ Chardonnay, Pinot Blanc

🕒 1–4 years

ROSÉ The wines produced under this appellation are acceptable, but they are never special—it is the least exciting category of *Bourgogne*.

☼ Pinot Noir, Pinot Gris, Pinot Liébault, plus, in the Yonne district, César and Tressot

🕒 1–4 years

☼ **Bourgogne Rouge** *Robert Arnoux*

• **Côte Chalonnaise** Bourgogne Côte Chalonnaise AOC, Bourgogne Côtes du Couchois AOC (p.153)

BOURGOGNE ALIGOTÉ AOC

The finest Bourgogne-Aligoté wines come from the village of Bouzeron in the Mercurey region, which has its own appellation (see also Bouzeron

AOOC, p.160). With the exception of the wines below, the remaining Aligoté can be improved by adding *crème de cassis*, a local blackcurrant liqueur, to create an aperitif known as a “Kir.”

WHITE Dry wines that are usually thin, acid, and not very pleasant: bad examples are even worse and are becoming widespread. When good, however, Aligoté can make a refreshing change from Burgundy's ubiquitous Chardonnay wines. However, even among the top producers, this grape seems to inflict its own inconsistency. Any one of the following recommended producers could make the greatest Aligoté of the vintage one year, then turn out something very ordinary the next year. Bourgogne Aligoté may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

☞ Aligoté and a maximum of 15% Chardonnay

🕒 1–4 years

✓ *d'Auvenay* [ⓑ] • *Bersan* • *Marc Brocard* • *Arnaud Ente* • *Naudin-Ferrand* • *de la Folie* • *Alex Gambal* • *Ghislaine et Jean-Hugues Goisot* • *François Jobard* • *Daniel Largeot* • *Catherine et Claude Maréchal* • *Edmond Monot* • *Alice et Olivier Moor* • *Jacky Renard* • *Thévenot-le-Brun & Fils* • *A. & P. de Villaine* [ⓐ]

BOURGOGNE GRAND-ORDINAIRE AOC

In English-speaking markets the “Grand” sounds very grand indeed, and the fact that it qualifies “Ordinaire,” not “Bourgogne,” seems to get lost in the translation. Light-red/dark-rosé wines may be sold as Bourgogne Clairet Grand-Ordinaire AOC, but the style is outmoded and the appellation is rarely encountered.

RED These are mostly inferior wines made from the Gamay grape, but there are some interesting Pinot Noir-dominated versions.

☞ Pinot Noir, Gamay, plus, in the Yonne district, César and Tressot

🕒 2–6 years

WHITE These dry wines are even more dismal than standard-issue *Bourgogne blanc*. Buy Mâcon blanc instead! These wines may be sold as *primeur* or *nouveau* as from the third Thursday of November following the harvest.

☞ Chardonnay, Pinot Blanc, Aligoté, Melon de Bourgogne, plus, in the Yonne district, Sacy

🕒 1–4 years

ROSÉ The Hautes-Côtes *coopérative* produces a dry, light but elegant wine under this appellation, Rosé d'Orches.

☞ Pinot Noir, Gamay, plus, in the Yonne district, César and Tressot

🕒 1–3 years

✓ *Jean-Paul Brun* (Terres Dorées) • *Edmond Cornu & Fils* • *Michel Lafarge* • *Emmanuel Rouget*

BOURGOGNE MOUSSEUX AOC

Since December 1985 this appellation has been limited to, and remains the only outlet for, sparkling red Burgundy.

SPARKLING RED A favorite fizzy tippie in the pubs of prewar Britain. This wine's sweet flavor is very much out of step with today's sophisticated consumers.

☞ Pinot Noir, Gamay, plus, in the Yonne district, César and Tressot

🕒 Upon purchase

BOURGOGNE ORDINAIRE AOC

See Bourgogne Grand-Ordinaire AOC

BOURGOGNE PASSE-TOUT-GRAINS AOC

Made from a *mélange* of Pinot Noir and Gamay grapes, *pas-se-tout-grains* is the descendant of an authentic peasant wine. A grower would fill his vat with anything growing in his vineyard and ferment it all together. Thus *pas-se-tout-grains* once contained numerous grape varieties. The Pinot Noir and Gamay varieties were, however, the most widely planted, and the wine naturally evolved as a two-grape product. Up until 1943 a minimum of one-fifth Pinot Noir was enforced by law; now the minimum is one-third.

RED Many *pas-se-tout-grains* used to be drunk too early, as the better-quality examples require a few years of bottle-aging to show the aristocratic influence of their Pinot Noir content. With an increase in Pinot Noir production and

more modern vinification techniques, more producers have begun making softer, less rustic *pas-se-tout-grains*, which are easier to drink when young. They remain relatively modest wines.

☞ Pinot Noir plus a maximum of one-third Gamay and a combined maximum of 15% Chardonnay, Pinot Blanc, and Pinot Gris

🕒 2–6 years

ROSÉ This dry, pink version is worth trying.

☞ A maximum of one-third Gamay plus Pinot Noir and Pinot Liébault

🕒 1–3 years

✓ *Robert Chevillon* • *Edmond Cornu & Fils* • *Michel Lafarge* • *Laurent Ponsot* (former Volpato old vines) • *Lejeune* • *Daniel Rion & Fils*

CRÉMANT DE BURGOGNE AOC

This appellation was created in 1975 to supersede the Bourgogne Mousseux AOC, which failed to inspire a quality image because the term “*mousseux*” also applied to cheap sparkling wines. Bourgogne Mousseux is now for red wines only. The major production centers for Crémant de Bourgogne are the Yonne, Region de Mercurey, and the Mâconnais. There are already many exciting wines, and the quality is certain to improve as more producers specialize in cultivating grapes specifically for sparkling wines, rather than relying on excess or inferior grapes, as was traditional in Burgundy.

SPARKLING WHITE Dry but round, the styles range from fresh and light to rich and toasty.

☞ Pinot Noir, Pinot Gris, Pinot Blanc, Chardonnay, Sacy, Aligoté, Melon de Bourgogne, and a maximum of 20% Gamay

🕒 3–7 years

SPARKLING ROSÉ Until now the best pink Crémant produced outside of Champagne has come from Alsace. Good examples are made in Burgundy, but have not realized their potential.

☞ Pinot Noir, Pinot Gris, Pinot Blanc, Chardonnay, Sacy, Aligoté, Melon de Bourgogne, and a maximum of 20% Gamay

🕒 2–5 years

✓ *Caves de Bailly* • *André Bonhomme* • *Paul Chollet* • *André Delorme* • *Roux Père* • *Caves de Viré*

THE CHABLIS DISTRICT

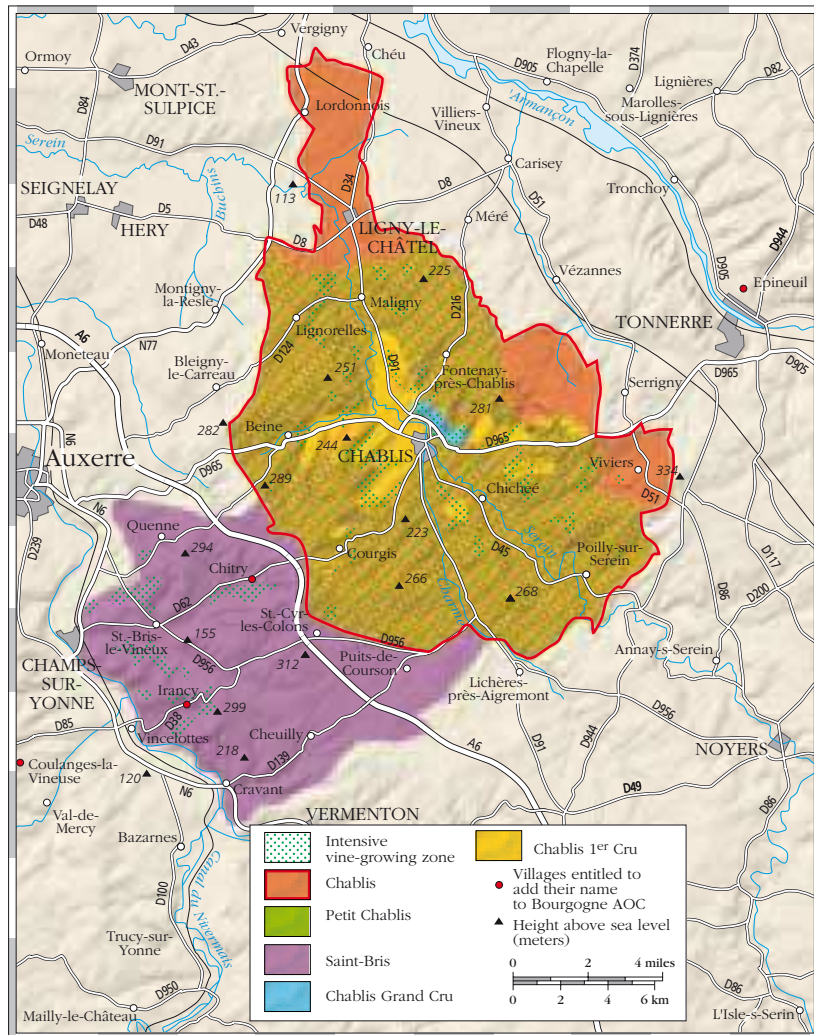

Chablis is one of Burgundy's two classic white-wine areas, yet this island of vines is closer to Champagne than to the rest of Burgundy, and its Chardonnay grape is grown on soils and under climatic conditions that are more champenois than bourguignon.

LIKE CHAMPAGNE, CHABLIS owes much of its success to a cool and uncertain northern climate that puts viticulture on a knife-edge. This is a source of constant worry and not a little diabolical wine, but when everything comes together just right, Chablis can produce the most electrifying Chardonnay in the world.

Known as the "Golden Gate," this area has the advantage of being the inevitable first stop for anyone visiting the Burgundy region by car, whether directly from Paris or via Champagne. Situated in the Yonne *département*, much of which once formed part of the ancient province of Champagne, Chablis gives the distinct impression of an area cut off not simply from the rest of Burgundy but from the rest of France. Indeed, the great *négociants* of the Côte d'Or rarely visit Chablis and have never made any significant penetration into what appears to be a closed-shop trade.

THE TOWN OF CHABLIS
Above the town of Chablis, the vines face southeast and southwest, clinging to hills along the banks of the Serein, a small tributary of the Yonne. These are the grand cru vineyards that make this district's finest wines.

FOURCHAUME
Just north of Chablis itself, Fourchaume is one of only two premier cru slopes that face southwest. The other is Montée de Tonnerre. It is probably no coincidence that, out of a total of 17 Chablis premiers crus, these vineyards are always among the top three.

CHABLIS DISTRICT
Overlooked by its grands crus and surrounded by premiers crus, Chablis lies at the center of its eponymous wine-producing area, which is geographically and climatically closer to Champagne than to the rest of Burgundy.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

Chablis is halfway between Beaune and Paris, 19 miles (30 kilometers) from the southernmost vineyards of Champagne, but 60 miles (100 kilometers) from the rest of Burgundy.

CLIMATE

This area has a semicontinental climate with minimal Atlantic influence, which results in a long, cold winter, a humid spring, and a fairly hot, very sunny summer. Hail storms and spring frosts are the greatest hazards.

ASPECT

All the *grands crus* are located on one stretch of southwest-facing slopes just north of Chablis itself, where the vineyards are at a height of between 490 to 660 feet (150 and 200 meters). Apart from the southwest-facing slopes of Fourchaume and Montée de Tonnerre, the *premier cru* slopes face southeast.

SOIL

This area is predominantly covered with calcareous clay, and the traditional view is that of the two major types, Kimmeridgian and Portlandian, only the former is suitable for classic Chablis; but this

is neither proven nor likely. Geologically they have the same Upper Jurassic origin. Any intrinsic geographical differences should be put down to aspect, microclimate, and the varied nature of the sedimentary beds that underlie and interbed with the Kimmeridgian and Portlandian soils.

VITICULTURE AND

VINIFICATION

The vineyards in Chablis have undergone rapid expansion, most particularly in the generic appellation and the *premiers crus*, both of which have doubled in size since the early 1970s. Mechanical harvesting has now found its way to the *grands crus* slopes of Chablis, but smaller producers still pick by hand. Most Chablis is fermented in stainless steel, but oak barrels are making a comeback, although too much new oak fights against the lean, austere intensity of the Chardonnay grown in this district.

GRAPE VARIETIES

Primary varieties: Chardonnay
Secondary varieties: Pinot Noir, Pinot Blanc, Pinot Gris (*syn.* Pinot Beurot), Pinot Liébault, Sauvignon Blanc, Gamay, César, Tressot, Sacy, Aligoté, Melon de Bourgogne

early, retaining the minerality of the fruit, and invariably imparting a slight spritz, further separating the style of these wines from Chardonnay produced in the Côte d'Or.

What makes the divide between oaked and unoaked Chablis even wider is the fact that the leaner, more mineral style of wine produced in this district can fight against the effects of new oak, whereas the fatter, softer, more seductive wines of the Côte d'Or embrace it with open arms. Recognizing that some people enjoy new oak characteristics, the recommendations in this book include producers of the best oaky Chablis. However, the trend for new oak peaked sometime in the late 1990s. Today, even producers known for the oakiest Chablis have been holding back, to promote the minerality meant to be expressive of the *terroir*.

There has always been a certain inconsistency about Chablis, which is only to be expected given its uncertain climate, and this has never deterred its devotees. However, things have gone from bad to worse over the past 15 years, and it is not the weather that has always been to blame—it is the increasing yields by greedy producers and sloppy winemaking. There are still great joys to be had with the best and most passionately produced of Chablis, from the lowliest appellation to the greatest *grands crus*, but wine buyers must be increasingly vigilant.

OTHER WINES OF YONNE

Other than Chablis, the two best-known wines of the Yonne are the red wines of Bourgogne Irancy AOC and the white Saint-Bris AOC, made from the Sauvignon Blanc grape—a trespasser from the Loire. Other grapes peculiar to the Yonne are the César and Tressot, which are black, and the Sacy, which is white. None is permitted in any Burgundian appellation other than AOC Bourgogne from Yonne, and they are not even widely cultivated here. César is the most interesting of these varieties, albeit rather rustic. It is a low-yielding vine that produces a thick, dark, tannic

THE VARYING STYLES OF CHABLIS

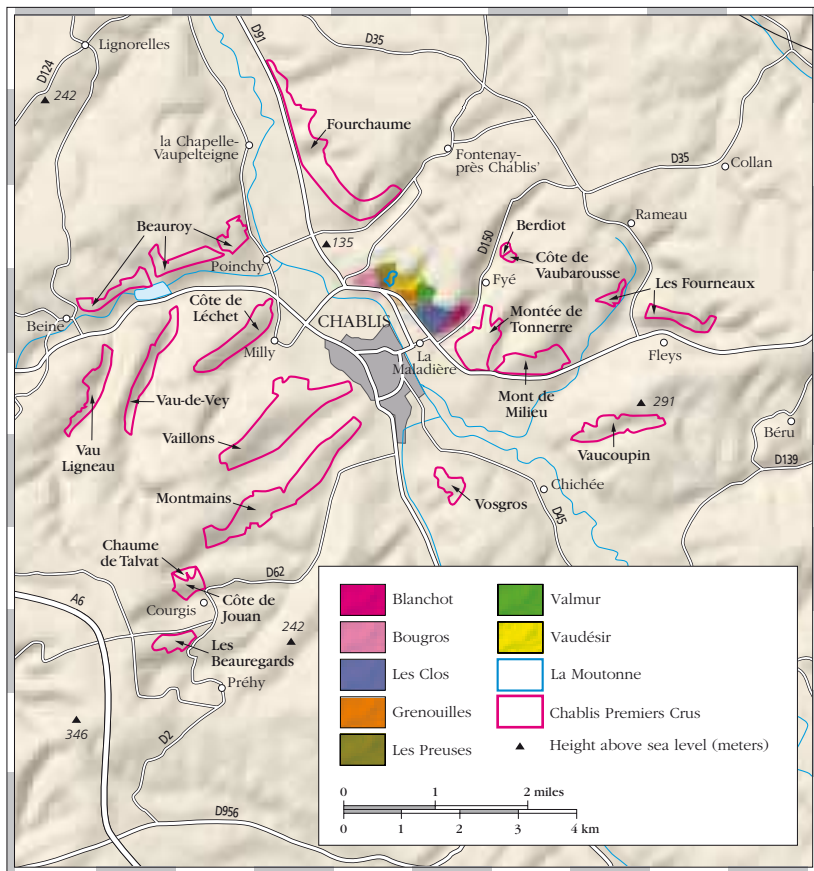

The traditional description of Chablis is of a wine of clear, pale color with a green hue around the rim. It is very straight and positive, with an aggressive, steely character, very direct attack, and a high level of acidity that needs a few years to round out. This description, however, rarely applies, as much has changed in the way these wines are made at both ends of the quality spectrum.

Thirty years ago most Chablis did not undergo malolactic fermentation. The wines that resulted had a naturally high acidity, and were hard, green, and ungenerous in their youth, although they often matured into wines of incomparable finesse. Now, most Chablis wines undergo malolactic fermentation and cold stabilization, which is used to precipitate tartrates (although some wines fermented or matured in small oak casks do not), making the wine fuller, softer, and rounder.

At the top end of the market, there are two distinctly different schools. Some wines are fermented in stainless steel and bottled early to produce the most direct and attacking style, while others are fermented in wood and matured in casks with an increasing amount of new oak. Writers often describe the unoaked, stainless-steel-fermented Chablis as traditional, but these vats were introduced in the 1960s, so it cannot be a well-established tradition. The oak barrel is much older, of course, and thus far more traditional, but what the critics really mean is that new oak has never been a feature of Chablis winemaking, therefore the crisp, clean style of Chablis fermented in stainless steel is closer to the original style: traditional by default. Obviously, the most authentic style of Chablis is the wine that is made in old or, more accurately, well-used casks. The traditional Chablisienne cask, known as a *feuillette*, is only half the size of a normal Burgundian barrel, thus has twice the effect, but not being new oak, this would be an oxidative effect, not creamy-vanilla or other aromatics. However, the more rapid oxidative effect of the *feuillette* does explain why the wines were traditionally bottled

MACHINE-HARVESTING AT DOMAINE STE.-CLAIRE IN PRÉHY
Machine-harvesting, which can lower the quality of white wines in particular, is widespread in Chablis, even on the grands crus. The technique is most appropriate at Préhy, where the vineyards are of lesser quality.

THE GRANDS CRUS OF CHABLIS

The slopes of the district's greatest vineyards rise quietly and majestically on the other side of the Serein River beyond the northern outskirts of Chablis itself.

CHABLIS PREMIERS AND GRANDS CRUS

This map clearly illustrates that all seven grands crus are buddled together on one contiguous southwest-facing slope of exceptional situation and aspect, whereas the 17 premiers crus are scattered across the surrounding area on isolated slopes of excellent, but secondary, exposure.

wine, although Simonnet-Febvre makes one of the better examples. César grows best at Irancy and can make a positive contribution when it is carefully blended with Pinot Noir. Just 5 or 10 percent of César is required, but a few growers use as much as 20 percent and this tends to knock all the elegance out of the light-bodied local Pinot Noir. The Tressot is thin, weak, and without any merit, but this blank canvas together with the advantage of its typically high yield made it the obvious partner to the César in bygone times. Occasionally encountered, it usually tastes like a thin, coarse Beaujolais. This district's other viticultural oddity is the steadily declining Sacy, a high-yielding white grape that produces acidic, neutrally flavored wines best used in Crémant de Bourgogne, although most of it has traditionally been sold to Germany for making *Sekt*.

THE APPELLATIONS OF THE CHABLIS DISTRICT

BOURGOGNE CHITRY AOC

A true single-village appellation, in that only vines in Chitry qualify. This village neighbors St.-Bris-le-Vineux to the northeast, and its vineyards are comprised of 67 acres (27 hectares) of black grapes, and 67 acres (27 hectares) of white grapes. Generally, the reds are least interesting, whereas the whites can be modestly successful, with their attractive, fresh-lemony fruit and an occasional aromatic hint on the nose and finish. Chalmeau and Thibaut are the best performers here.

☞ Pinot Noir, Pinot Liébault, Pinot Gris, César, Tressot, Chardonnay, Pinot Blanc

☞ Upon purchase

☞ Patrick & Christine Chalmeau (blanc only)

- Griffé (blanc only) • Jean-Baptiste Thibaut (rouge only) • Marcel Giraudon (rouge only)

BOURGOGNE CÔTE SAINT-JACQUES AOC

One of four Bourgogne *lieux-dits* created in the 1990s (see also Bourgogne La Chapelle Notre Dame, p.154, Bourgogne Le Chapitre, p.146, and Bourgogne Montrecul, p.146). Côte Saint-

Jacques overlooks Joigny, which has the most northerly vineyards in Burgundy. Vines were first permitted to grow here for basic Bourgogne AOC in 1975, but just a few hectares were planted. Currently the largest vineyard owner is Alain Vignot, whose father pioneered winemaking in the area, but the local *coopérative*, which also has vineyards here, is planting a large proportion of the 220 acres (90 hectares) that were officially classified as Côte Saint-Jacques. At the present time, the area barely manages to produce a light-bodied white wine, although Vignot makes a *vin gris* from Pinot Noir and Pinot Gris, which Joigny was famous for in pre-phyloxera times.

What they need here is the true Auxerrois of Alsace (which has no connection with nearby Auxerre). The reasoning would be exactly the same as for Alsace, where more Auxerrois is used to make so-called Pinot Blanc wine the farther north the vineyards are situated. In the Côte de Nuits it would be too fat and spicy, but in Joigny it would simply bring some generosity to the wines.

RED Michel Lorain's Clos des Capucins outclasses the rest of this appellation with its good color and truly expressive fruit.

☞ Pinot Noir, Pinot Liébault, Pinot Gris, César, Tressot

☞ 1–3 years

WHITE Not worth buying.

☞ Chardonnay, Pinot Blanc

☞ Upon purchase

ROSÉ There are a handful of pure Pinot Gris wines made elsewhere in Burgundy, but they are usually white wines, whereas the tradition here is to make a rosé or *vin gris* from this variety, either pure (Alain Vignot) or blended.

☞ Pinot Noir, Pinot Liébault, Pinot Gris, César, Tressot

☞ Upon purchase

☞ Michel Lorain (rouge only) • Alain Vignot (rouge and rosé only)

BOURGOGNE CÔTES D'AUXERRE AOC

Overlapping the Saint-Bris appellation, Côte d'Auxerre covers various parcels of vines scattered throughout the hillsides overlooking Augy, Auxerre-Vaux, Quenne, St.-Bris-le-Vineux, and in part of Vincelottes that does not qualify for Irancy.

RED With the exception of Bersan or Ghislaine & Jean-Hugues Goisot in a good vintage, these wines are invariably disappointingly light and dilute.

🍷 Pinot Noir, Pinot Liébault, Pinot Gris, César, Tressot

🏠 Upon purchase

WHITE Ghislaine & Jean-Hugues Goisot make a range of different Côtes d'Auxerre, and their Corps de Garde and Gondonne *cuvées* usually outclass the rest of the competition, although Bailly-Lapierre gives Goisot a good run for its money in some years (such as 2002).

🍷 Chardonnay, Pinot Blanc

🏠 Upon purchase

ROSÉ Light, fresh, easy-drinking rosé that is better than a lot of supposedly finer AOCs.

🍷 Pinot Noir, Pinot Liébault, Pinot Gris, César, Tressot

🏠 Upon purchase

✓ *Bailly-Lapierre • Bersan • Patrice Fort • Ghislaine & Jean-Hugues Goisot • Tabit & Fils*

BOURGOGNE COULANGES-LA-VINEUSE AOC

The far-flung borders of Coulanges-la-Vineuse encompass no fewer than six communes in addition to its own: Charentenay, Escolives-Sainte-Camille, Migé, Mouffy, Jussy, and Val-de-Mercy. Vines cover almost 148 acres (60 hectares), of which only 10 acres (4 hectares) are planted with white varieties.

RED Most of these wines are primarily Pinot Noir with a small dash of César. Most are simply frank and fruity, although the best can be quite rich, with truly expressive fruit.

🍷 Pinot Noir, Pinot Liébault, Pinot Gris, César, Tressot

🏠 1–3 years

WHITE Not worth buying.

🍷 Chardonnay, Pinot Blanc

🏠 Upon purchase

ROSÉ Not tasted.

🍷 Pinot Noir, Pinot Liébault, Pinot Gris, César, Tressot

🏠 Upon purchase

✓ *Le Clos du Roi (rouge only) • Jean-Luc Houblin (rouge only) • Jean-Pierre Maltoff (rouge only) • Alain Rigoutat (rouge only)*

BOURGOGNE ÉPINEUIL AOC

A true single-village appellation, Épineuil consists of 210 acres (85 hectares) of hillside vineyards on the banks of the Amançon River, overlooking Tonnerre, northeast of Chablis. Planted mostly with Pinot Noir, there are just 15 acres (6 hectares) of white grapes, with La Chablisienne the most important producer.

RED Most are light and undistinguished, but the Domaine de l'Abbaye du Petit Quincy makes a much darker version, especially its Côte de Grisey and Côte de Grisey Cuvée Juliette, which many consider to be the finest wines of Épineuil. Neither light nor dark, the ruby-colored wine produced by the local *coopérative*, La Chablisienne, is probably the most consistent wine in the appellation.

🍷 Pinot Noir, Pinot Liébault, Pinot Gris, César, Tressot

🏠 1–5 years

WHITE Few wines deliver more than a straightforward fresh, crisp, dry white of fairly neutral character.

🍷 Chardonnay, Pinot Blanc

🏠 Upon purchase

ROSÉ At its best, this can be a deliciously fresh, easy-drinking rosé.

🍷 Pinot Noir, Pinot Liébault, Pinot Gris, César, Tressot

🏠 Upon purchase

✓ *Abbaye du Petit Quincy • La Chablisienne • Eric Dampf (white only) • Dominique Grubier • Alain Matbias*

BOURGOGNE VÉZELAY AOC

This appellation southeast of the main Chablis district covers some 158 acres (64 hectares) of vines on the steep upper slopes (above the frost-line) overlooking the village of Vézelay itself.

WHITE At its most basic level, not worth buying, but top-performing white wines from these appellations are superior to the lower end of Chablis, which is relatively much more expensive. They are invariably pure Chardonnay, yet rarely taste like Chablis, being softer and smoother. Marc Meneau is the top producer here.

🍷 Chardonnay, Pinot Blanc

🏠 1–3 years

✓ *Marc Meneau • Elise Villiers*

CHABLIS AOC

With careful selection, basic Chablis can be a source of tremendous-value, classic 100 percent Chardonnay wine, particularly in the best vintages. However, the appellation covers a relatively large area with many vineyards that do not perform well, and there are far too many mediocre winemakers. Basic Chablis needs to come from the most favorable locations, where the grower restricts the yield and the winemaker selects only the best wines; it is not an appellation in which short cuts can be taken. Cheap Chablis can be dire, even in superior appellations; better, therefore, to pay for a top *cuvée* of basic Chablis than to be seduced by a cut-price *premier cru*. However, La Chablisienne's Vieilles Vignes is not the consistent superstar it used to be. (See also Chablis *premier cru* AOC and Petit Chablis AOC.)

WHITE When successful, these wines have the quintessential character of true Chablis—dry, clean, green, and expressive, with just enough fruit to balance the “steel.”

🍷 Chardonnay

🏠 2–6 years

CHABLIS GRAND CRU AOC

The seven *grands crus* of Chablis are all located on one hill that overlooks the town of Chablis itself. They are Blanchot, Bougros, Les Clos, Grenouilles, Les Preuses, Valmur, and Vaudésir. One vineyard called La Moutonne is not classified in the appellation as a *grand cru*, but the authorities permit the use of the coveted status on the label because it is physically part of other *grands crus*. In the 18th century La Moutonne was in fact a 2½-acre (1-hectare) *climat* of Vaudésir, but under the ownership of Louis Long-Depaquit its wines were blended with those of three other *grands crus* (namely, Les Preuses, Les Clos, and Valmur). This practice came to a halt in 1950 when, in a bid to get La Moutonne classified as a separate *grand cru*, Long-Depaquit agreed to limit its production to its current location, which cuts across parts of Vaudésir and Les Preuses. Its classification never actually took place, but the two *grands crus* that it overlaps are probably the finest of all.

WHITE Always totally dry, the *grands crus* are the biggest, richest, and most complex of all Chablis. Many show new oak characteristics that may unfortunately dominate the wine. Their individual styles depend very much on how the winemaker vinifies and matures the wine, but when well made they are essentially as follows: Blanchot has a floral aroma and is the most delicate of the *grands crus* (Michel Laroche's Réserve de l'Obédiance is the greatest Chablis *grand cru* I have tasted, taking richness to the very limit, while not losing sight of true Chablis structure, crispness, minerality, and finesse); Bougros has the least frills of all the *grands crus*, but is vibrant with a penetrating flavor; Les Clos is rich, luscious, and complex with great mineral finesse and beautiful balance; Grenouilles should be long and satisfying, yet elegant, racy, and aromatic; Les Preuses gets the most sun and is vivid, sometimes exotic, quite fat for Chablis, yet still expressive and definitely complex, with great finesse; Valmur has a fine bouquet, rich flavor, and smooth texture; Vaudésir has complex, intense flavors that display great finesse and spicy complexity; and La Moutonne is fine, long-flavored, and wonderfully expressive.

🍷 Chardonnay

6–20 years

✓ **Blanchot** *Billaud-Simon* (Vieilles Vignes) • *Michel Laroche* • *Raveneau* • *Domaine Vocoret* **Bougros** *William Fèvre* • *Joseph Droubin* • *de la Maladière* • *Michel Laroche* **Les Clos** *Billaud-Simon* • *La Chablisienne* • *René & Vincent Dauvissat* • *Jean-Paul Droin* • *Joseph Droubin* • *Caves Duplessis* • *William Fèvre* • *Michel Laroche* • *de la Maladière* • *Domaines des Malandes* • *Louis Michel* • *J. CHABLIS PREMIER CRU

Premiers crus: Les Beauregards, Beuroy, Berdiot, Chaume de Talvat, Côte de Jouan, Côte de Léchet, Côte de Vaubarousse, Fourchaume, Les Fourmeaux, Montée de Tonnerre, Montmains, Mont de Milieu, Vaillons, Vaucoupin, Vau-de-Vey (or Vaudevey), Vau Ligneau, and Vosgros. Unlike the *grands crus*, the 17 *premiers crus* of Chablis are scattered among the vineyards of 15 surrounding communes, and the quality and style is patchy. Montée de Tonnerre is the best *premier cru* throughout the different producers and across the many vintages. One of its *lieux-dits*, Chapelot, is considered by many to be the equivalent of a *grand cru*. After Montée de Tonnerre, Côte de Léchet, Les Forêts (which is a *climat* within Montmains), Fourchaume, Mont de Milieu, and Vaillons vie for second place.

WHITE Dry wines that can vary from light- to fairly full-bodied, but should always be finer and longer-lasting than wines of the basic Chablis appellation, although without the concentration of flavor expected from a *grand cru*.

IRANCY AOC

Irancy was promoted from Bourgogne Irancy to full village AOC status in its own right in 1999. This red-wine-only appellation encompasses 395 acres (160 hectares) in Irancy and neighboring villages of Cravant and Vincelottes.

RED Irancy is supposed to be the “famous” red wine of Chablis, but it is not really that well known and is not even the best local red wine. Michel Lorain’s Côte Saint-Jacques Clos des Capucins, and Domaine de l’Abbaye du Petit Quincy’s Côte de Grisey Cuvée Juliette are both consistently superior to the best Irancy, though the latter do possess a certain richness of fruit that most examples of this modest appellation lack. Original Irancy was a pure César wine: Anita and Jean-Pierre Colinot make the most interesting example (Les Mazelots César).

Pinot Noir, Pinot Gris, César

1–3 years

✓ **Léon Bienvenu** • *Benoît Cantin* (Cuvée Emiline) • *Roger Delalogue* • *Anita & Jean-Pierre Colinot* (Palotte, Les Mazelots, Les

Mazelots César, Les Bessys, Côte-de-Moutier) • *Roger Delalogue* • *Christophe Ferrari* (rouge only) • *Félix* • *Saint-Germain* (La Bergère)

PETIT CHABLIS AOC

A depreciatory appellation that covers inferior soils and expositions within the same area as generic Chablis, with the exception of Ligny-le-Châtel, Viviers, and Collan. Although I have found four more reliable producers than last time, this appellation should be downgraded to VDQS or uprooted. The rumor is that it will be phased out, but do not misunderstand: this does not mean that they will uproot the vines, simply that this inferior land will instead produce Chablis, albeit of a *petit vin* quality.

WHITE Aside from the occasional pleasant surprise, most are mean and meager dry wines of light to medium body. The producers below provide most of the pleasant surprises.

Chardonnay

2–3 years

✓ *Jean-Marc Brocard* • *Jean Durup* • *Vincent Gallois* • *Thierry Hamelin* • *Francine & Olivier Savary*

SAINT-BRIS AOC

This wine is as good as most Sauvignon Blanc AOCs, and considerably better than many other white AOCs made from lesser grape varieties. Ten years ago I did not believe it possible that Sauvignon de St-Bris would ever overcome Burgundy’s Chardonnay-chauvinism to rise to the ranks of Appellation Contrôlée, but in 2003, Sauvignon de St-Bris VDQS was promoted to Saint-Bris AOC (retrospectively applied to the 2001 vintage).

WHITE Fine wet-grass or herbaceous aromas, full smoky-Sauvignon flavors, and a correct, crisp, dry finish. Made from the rare Sauvignon Gris, Ghislaine & Jean-Hugues Goisot’s Cuvée du Corps de Garde Gourmand Fié Gris is the best, most consistent, and most unusual wine in this appellation, while the same producer’s “straight” Sauvignon is easily the top thoroughbred Sauvignon Blanc.

Sauvignon Blanc, Sauvignon Gris

2–5 years

CÔTE DE NUITS AND HAUTES-CÔTES DE NUITS

The Côte de Nuits is essentially a red-wine area (with one or two extraordinary whites), and with 22 of Burgundy's 23 red grands crus, it is the place par excellence for Pinot Noir.

THE CÔTE D'OR, or "golden slope," is the departmental name for both the Côte de Nuits and the Côte de Beaune. Firmness and weight are the key words to describe the wines produced here, and these characteristics intensify as the vineyards progress north. A string of villages with some of the richest names in Burgundy—Gevrey-Chambertin, Chambolle-Musigny, Vosne-Romanée, and Nuits-St.-Georges—these slopes ring up dollar signs in the minds of merchants throughout the world. Ironically, the most famous appellations also produce some of Burgundy's worst wines.

CLOS ARLOT OF DOMAINE DE L'ARLOT
Purchased in 1987 by the dynamic AXA group, *Domaine de l'Arlot* is one of the most consistent, high-quality producers in Nuits-St.-Georges, making textbook Pinot Noir and, from its monopole Clos Arlot, minuscule amounts of sublime white wine.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
The Côte de Nuits is a narrow, continuous strip of vines stretching from Dijon to just north of Beaune, with the Hautes-Côtes de Nuits in the southwestern hinterland.

CLIMATE
Semicontinental climate with minimal Atlantic influence, which results in a long, cold winter, a humid spring, and a fairly hot, very sunny summer. Hail is its greatest natural hazard and heavy rain is often responsible for diluting the wines and causing rampant rot.

ASPECT
A series of east-facing slopes that curve in and out to give some vineyards northeastern, some southeastern aspects. The vines grow at an altitude of between 740 and 1,150 feet (225 to 350 meters) and, aside from Gevrey-Chambertin and Prémieux-Prissey, those vineyards that have the right to the village and higher appellations rarely extend eastward beyond the RN 74 road.

SOIL
A subsoil of sandy-limestone, which is exposed in places but usually covered by a chalky scree mixed with marl and clay particles on higher slopes and richer alluvial deposits on lower slopes. Higher slopes sometimes have red clay.

VITICULTURE AND VINIFICATION
The vines are trained low to benefit from heat reflected from the soil at night. For red wines, the grapes are almost always destemmed and the juice is kept in contact with the skins for between eight and 10 days. Less than three percent of the wine produced is white, but this is mostly high quality and traditionally cask fermented. The best wines are matured in oak.

GRAPE VARIETIES
Primary varieties: Pinot Noir, Chardonnay
Secondary varieties: Pinot Gris (known locally as Pinot Beurot), Pinot Liébault, Pinot Blanc, Aligoté, Melon de Bourgogne, Gamay

CÔTE DE NUITS AND HAUTES-CÔTES DE NUITS, *see also* p137
The best vineyards of the Côte de Nuits form a tighter, more compact strip than those of the Côte de Beaune, (see also p151), and the wines produced are, coincidentally, tighter, with more compact fruit.

CONFRÉRIE DES CHEVALIERS DU TASTEVIN

After the three terrible vintages of 1930, 1931, and 1932, and four years of world slump following the Wall Street Crash of 1929, Camille Rodier and Georges Faveley formed the Confrérie des Chevaliers du Tastevin to revive Burgundy's fortunes. They named the brotherhood after the traditional Burgundian *tastevin*, a shallow, dimpled, silver tasting-cup with a fluted edge.

The first investitures took place on November 16, 1934, in a cellar in Nuits-St.-Georges; the Confrérie now boasts thousands of members in numerous foreign chapters and averages 20 banquets a year at Château du Clos de Vougeot. Until the late 1980s, wines bearing the distinctive Tastevinage label used to be a useful means of quickly identifying wines within basic appellations that have risen above their modest status, but the selection gradually became less rigorous, with some decidedly underperforming wines slipping through. In recent years, however, there appears to be more consistency, once again making the Tastevinage label worth watching out for.

On average only one-third of the wines submitted for the Tastevinage receive the coveted label. No charge is made for entering. The minimum quantity for commercial availability is just 900 bottles, and there is no maximum. The wines are tasted blind, and most importantly, the tasters include hoteliers, restaurateurs, sommeliers, wine merchants, and wine press, as well as producers. A wine can also be rejected on the basis of laboratory analysis alone (if, for example, it has elevated levels of volatile acidity). Another plus point is the random checks that are carried out at the point of sale on all markets.

THE APPELLATIONS OF THE CÔTE DE NUITS AND HAUTES-CÔTES DE NUITS

Note Each *grand cru* of Côte de Nuits has its own appellation and is listed individually below. However, the *premiers crus* do not, and are therefore listed under the appellation of the village in which the vineyards are situated. *Premiers crus* that are virtually contiguous with *grand cru* vineyards are in *italics*; they are possibly superior to those that do not share a boundary with one or more *grand crus*, and generally superior to those that share boundaries with village AOC vineyards.

BONNES MARES AOC

Grand Cru

Bonnes Mares is the largest of the two *grands crus* of Chambolle-Musigny. It covers 34 acres (13.5 hectares) in the north of the village, on the opposite side to Musigny, the village's other *grand cru*, and extends a further 3.5 acres (1.5 hectares) into Morey-St.-Denis.

RED This wine combines a fabulous femininity of style with sheer depth of flavor to give something rich and luscious, yet complex and complete.

Pinot Noir, Pinot Gris, Pinot Liébault

12–25 years

✓ *Bouchard Père & Fils* • *Dujac* • *R. Groffier* • *Dominique Laurent* • *J. F. Mugnier* • *Christophe Roumier* • *Georges Roumier* • *Nicolas Potel* • *Comte Georges de Vogüé*

BOURGOGNE LA CHAPITRE AOC

One of the Côte de Nuits' two Bourgogne *lieux-dits* created in 1993, La Chapitre is located at Chenove, between Marsannay and Dijon. According to Anthony Hanson (in his book *Burgundy*), the wines of Chenove once fetched higher prices than those of Gevrey (Chenove's most famous vineyard is Clos du Roi, of which Labouré-Roi took management in 1994), but the only example I have tasted (Domaine Bouvier) was not special.

BOURGOGNE HAUTES- CÔTES DE NUITS AOC

A source of good-value wines, these vineyards have expanded since the 1970s, and the quality is improving noticeably. Half-red/half-rosé wines may be sold as Bourgogne Clairét Hautes-Côtes de Nuits AOC, but the style is outmoded and the appellation rarely encountered.

RED Medium-bodied and medium- to full-bodied wines with good fruit and some true Côte de Nuits character. The wines from some growers have fine oak nuances.

Pinot Noir, Pinot Liébault, Pinot Gris

4–10 years

WHITE Just 5 percent of the production is dry white. Most have a good weight of fruit, but little finesse.

Chardonnay, Pinot Blanc

1–4 years

ROSÉ Little-seen, but those that have cropped up have been dry, fruity, and delicious wines of some richness.

Pinot Noir, Pinot Liébault, Pinot Gris

1–3 years

✓ *Bertagna* • *J.-C. Boisset* • *Yves Chaley* • *Guy*

Dufouleur • *Michel Gros* • *Robert Jayer-Gilles* • *de Montmain* • *Naudin-Ferrand* • *Thévenot-le-Brun & Fils* • *Alain Verdet* **B** • *Thierry Vigot-Battault*

BOURGOGNE MONTREUIL OR MONTRE-CUL OR EN MONTRE-CUL AOC

The other Bourgogne *lieu-dit* in this district is actually located on the outskirts of Dijon. Some might think this is a wine to moon over, but the only wine I have tasted (again Domaine Bouvier) was again not special. If no one is going to produce something exciting under these Bourgogne *lieux-dits*, why bother with them in the first place?

CHAMBERTIN AOC

Grand Cru

This is one of the nine *grands crus* of Gevrey-Chambertin. All of them (quite legally) add the name Gevrey-Chambertin to their own and one, Clos de Bèze, actually has the right to sell its wines as Chambertin.

RED Always full in body and rich in extract, Chambertin is not, however, powerful like Corton, but graceful and feminine with a vivid color, stunning flavor, impeccable balance, and lush, velvety texture.

Pinot Noir, Pinot Gris, Pinot Liébault

12–30 years

✓ *Bouchard Père & Fils* • *Vincent Girardin* • *Leroy* **B** • *Denis Mortet* • *Henri Rebourseau* • *Armand Rousseau* • *Jean Trapet Père & Fils*

CHAMBERTIN- CLOS DE BÈZE AOC

Grand Cru

Another Gevrey-Chambertin *grand cru*. The wine may be sold simply as Chambertin, the name of a neighboring *grand cru*, but Chambertin may not call itself Clos de Bèze.

RED This wine is reputed to have a greater finesse than Chambertin but slightly less body. It is just as sublime.

Pinot Noir, Pinot Gris, Pinot Liébault

12–30 years

✓ *Bouchard Père & Fils* • *Bruno Clair* • *Faiveley* • *R. Groffier* • *Louis Jadot* • *Dominique Laurent* • *Lucien Lemoine* • *Armand Rousseau*

CHAMBOLLE-MUSIGNY AOC

This village is very favorably positioned, with a solid block of vines nestled in the shelter of a geological fold.

RED Many of these medium- to fairly full-bodied wines have surprising finesse and fragrance for mere village wines.

Pinot Noir, Pinot Gris, Pinot Liébault

8–15 years

✓ *Ghislaine Barthod* • *Sylvain Cathiard* (Les Clos de L'Orme) • *Dujac Père* • *J. F. Mugnier* • *Géantet Pansiot* • *Perrot-Minot* • *Daniel Rion & Fils* • *Georges Roumier* • *Comte Georges de Vogüé*

CHAMBOLLE-MUSIGNY PREMIER CRU AOC

Premiers crus: *Les Amoureuses*, *Les Baudes*, *Aux Beaux Bruns*, *Les Borniques*, *Les Carrières*, *Les Chabiots*, *Les Charmes*, *Les Châtelots*, *La Combe d'Orveau*, *Aux Combottes*, *Les Combottes*, *Les Cras*, *Derrière la Grange*, *Aux Echanges*, *Les Feusselottes*, *Les Fuées*, *Les Grands Murs*, *Les Groseilles*, *Les Gruenchers*, *Les Hauts Doix*, *Les Lavrottes*, *Les Noirotts*, *Les Plantes*, *Les Sentiers*.

The outstanding *premier cru* is *Les Amoureuses*, with *Les Charmes* a very respectable second.

RED The best have a seductive bouquet and deliciously fragrant flavor.

Pinot Noir, Pinot Gris, Pinot Liébault

10–20 years

✓ *Amiot-Servelle* (Amoureuses) • *Ghislaine Barthod* • *Confuron-Cotéidot* • *R. Groffier* • *Moine Hudelot* • *Dominique Laurent* • *Lucien Lemoine* • *Leroy* **B** • *Denis Mortet* • *Mugnier* • *Perrot-Minot* • *Laurent Ponsot* • *Michelle & Patrice Rion* • *Christophe Roumier* • *Georges Roumier* • *Comte Georges de Vogüé*

CHAPELLE-CHAMBERTIN AOC

Grand Cru

This is one of the nine *grands crus* of Gevrey-Chambertin, comprised of two *climats* called En la Chapelle and Les Gémeaux.

RED The lightest of all the *grands crus*, with a delightful bouquet and flavor.

Pinot Noir, Pinot Gris, Pinot Liébault

8–20 years

✓ *Louis Jadot* • *Jean Trapet Père & Fils*

CHARMES-CHAMBERTIN AOC

Grand Cru

The largest Gevrey-Chambertin *grand cru*, part of the vineyard is known as Mazoyères, from which Mazoyères-Chambertin has evolved.

RED Soft, sumptuous wines with ripe-fruit flavors and pure Pinot character, although some slightly lack finesse.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–20 years

✓ *Denis Bachelet • Confuron-Cotéridot • Claude Dugat • Bernard Dugat-Py • Frederic Magnien • Géantet-Pansiot • Vincent Girardin • Perrot-Minot • Sérafin Père & Fils • Joseph Roty • Christophe Roumier • Armand Rousseau • Taupenot-Merme • de la Vougeraie B*

CLOS DE BÈZE AOC

An alternative appellation for Chambertin-Clos de Bèze. See Chambertin-Clos de Bèze AOC.

CLOS DES LAMBRAYS AOC

Grand Cru

This vineyard was classified as one of the four *grands crus* of Morey-St.-Denis only as recently as 1981, although the previous owner used to put “*grand cru classé*” (illegally) on the label.

RED The vineyard was replanted under new ownership and now produces fine, elegant wines with silky fruit of a good, easily recommendable quality.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–20 years

✓ *des Lambrays*

CLOS DE LA ROCHE AOC

Grand Cru

Covering an area of almost 42 acres (17 hectares), Clos de La Roche is twice the size of the other *grands crus* of Morey-St.-Denis.

RED A deep-colored, rich, and powerfully flavored *vin de garde* with a silky texture. Many consider it the greatest *grand cru* of Morey-St.-Denis.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–20 years

✓ *Dujac • Leroy B • Lucien Lemoine • Hubert Lignier • Michel Magnien & Fils • Ponsot • Armand Rousseau*

CLOS ST.-DENIS AOC

Grand Cru

This is the *grand cru* that the village of Morey attached to its name when it was the best growth in the village, a position now contested by Clos de la Roche and Clos de Tart.

RED Strong, fine, and firm wines with rich liquorice and berry flavors that require time to come together.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–25 years

✓ *Bertagna • Philippe Charlopin-Parizot • Philippe Charlopin • Dujac • Louis Jadot • Lucien Lemoine • Michel Magnien & Fils • Ponsot • Nicolas Potel*

CLOS DE TART AOC

Grand Cru

This is one of the four *grands crus* of Morey-St.-Denis. It is entirely owned by the *négociant* Mommessin. In addition to Clos de Tart itself, a tiny part of the Bonnes Mares *grand cru* also has the right to this appellation.

RED This *monopole* yields wines with a penetrating Pinot flavor, to which Mommessin adds such a spicy-vanilla character from 100 percent new oak that great bottle maturity is

required for a completely harmonious flavor.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 15–30 years

✓ *Mommessin*

CLOS DE VOUGEOT AOC

Grand Cru

The only *grand cru* of Vougeot, it is a massive 123-acre (50-hectare) block of vines with no fewer than 85 registered owners. It has been described as “an impressive sight, but a not very impressive site.” This mass ownership situation has often been used to illustrate the classic difference between Burgundy and Bordeaux, where an entire vineyard belongs to one chateau and so the wine can be blended to a standard quality and style every year.

RED With individual plots ranging in quality from truly great to very ordinary, operated by growers of varying skills, it is virtually impossible to unravel the intrinsic characteristics of this *cru*. Its best wines, however, have lots of silky Pinot fruit, an elegant balance, and a tendency toward finesse rather than fullness.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–25 years

✓ *Robert Arnoux • Joseph Drouhin • René Engel • Faiveley • Jean Grivot • Anne Gros • Michel Gros • Alain Hudelot-Noëllat • Louis Jadot • Dominique Laurent • Leroy B • Méo-Camuzet • Mugneret-Gibourg • Nicolas Potel • Château la Tour • de la Vougeraie B*

CLOS VOUGEOT AOC

See Clos de Vougeot AOC

CÔTE DE NUITS-VILLAGES AOC

This appellation covers the wines produced in one or more of five communes: Fixin and Brochon situated in the north of the district and Comblanchien, Corgoloin, and Prissy in the south.

RED Firm, fruity, and distinctive wines made in true, well-structured Côte de Nuits style.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 6–10 years

WHITE Very little is made—just 44 cases (4 hectoliters) in 1985—and I have never encountered it.

🍷 Chardonnay, Pinot Blanc

✓ *de l'Arlot • Michel Esmonin • Gachot-Monot • Naudin-Ferrand • Daniel Rion & Fils (Le Vaucrain)*

ECHÉZEAUX AOC

Grand Cru

This 74-acre (30-hectare) vineyard is the larger of the two *grands crus* of Flagey-Echézeaux and is comprised of 11 *climats* owned by no fewer than 84 smallholders.

RED The best have a fine and fragrant flavor that relies more on delicacy than power, but too many deserve no more than a village appellation.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–20 years

✓ *Robert Arnoux • Albert Bichot (Clos Frantin) • Confuron-Cotéridot • Dujac • Engel • Faiveley • Forey Père & Fils • Vincent Girardin • Jean Grivot • A.-F. Gros • Louis Jadot • Robert Jayer-Gilles • Lucien Lemoine • Mongeard-Mugneret • Mugneret-Gibourg • de la Romanée-Conti • Emmanuel Rouget • Fabrice Vigot*

FIXIN AOC

Fixin was at one time the summer residence of the dukes of Burgundy.

RED Well-colored wines that can be firm, tannic *vins de garde* of excellent quality and even better value.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 6–12 years

WHITE Rich, dry, and concentrated wines that are rare, but exciting and well worth seeking out. Bruno Clair shows what Pinot Blanc can produce when it is not overcropped.

🍷 Chardonnay, Pinot Blanc

🕒 3–8 years

✓ *Bart • Bertbaut • Bruno Clair • Pierre Gelin • Philippe Joliet • Mongeard-Mugneret*

FIXIN PREMIER CRU AOC

Premiers crus: Les Arvelets, Clos du Chapitre, Aux Cheusots, Les Hervelets, Le Meix Bas, La Perrière, Queue de Hareng (located in neighboring Brochon), En Suchot, Le Village.

The best *premiers crus* are La Perrière and Clos du Chapitre. Clos de la Perrière is a monopoly owned by Philippe Joliet that encompasses En Suchot and Queue de Hareng as well as La Perrière itself.

RED Splendidly deep in color and full in body with masses of blackcurrant and redcurrant fruit, supported by a good tannic structure.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–20 years

WHITE I have not encountered any but it would not be unreasonable to assume that it might be at least as good as a basic Fixin *blanc*.

✓ *Bertbaut • Pierre Gelin • Philippe Joliet • Mongeard-Mugneret*

GEVREY-CHAMBERTIN AOC

Famous for its *grand cru* of Chambertin, the best growers also produce superb wines under this appellation. Some vineyards overlap the village of Brochon.

RED These well-colored wines are full, rich, and elegant, with a silky texture and a perfumed aftertaste reminiscent of the pure fruit

of Pinot Noir.

☼ Pinot Noir, Pinot Gris, Pinot Liébault

🕒 7–15 years

✓ *Denis Bachelet • Alain Burguet • Philippe Charlopin • Confuron-Cotéridot • Droubin-Laroze • Bernard Dugat-Py • Dujac • Dujac Père • Labouré-Roi • Marc Roy (Vieilles Vignes, Clos Priéur) • Denis Mortet • Géantet Pansiot*

GEVREY-CHAMBERTIN PREMIER CRU AOC

Premiers crus: *Bel Air, La Bossière, Les Cazetiers, Champeaux, Champitenois, Champonnet, Clos du Chapitre, Cherbandes, Au Closeau, Combe au Moine, Aux Combottes, Les Corbeaux, Craipillot, En Ergot, Etournelles (or Estournelles), Fonteny, Les Goulots, Lavaut (or Lavout St-Jacques), La Perrière, Petite Chapelle, Petits Cazetiers, Plantigone (or Issarts), Poissenot, Clos Prieur-Haut (or Clos Priéure), La Romanée, Le Clos St-Jacques, Les Varoilles.*

RED These wines generally have more color, concentration, and finesse than the village wines, but, with the possible exception of Clos St-Jacques, do not quite match the *grands crus*.

☼ Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–20 years

✓ *Alain Burguet • Bruno Clair • Droubin-Laroze • Claude Dugat • Bernard Dugat-Py • Dujac • Frédéric Esmonin • Michel Esmonin • Faiveley • Jean-Claude Fourrier • Herezstyn • Louis Jadot • Lucien Lemoine • Denis Mortet • Philippe Nadeff • Géantet Pansiot • Michelle & Patrice Rion • Joseph Roty • Armand Rousseau • Sérafin • Jean Trapet Père & Fils*

GRANDS ECHÉZEAUX AOC

Grand Cru

The smaller and superior of the two *grands crus* of Flagey-Echézeaux, this area is separated from the upper slopes of the Clos de Vougeot by a village boundary.

RED Fine and complex wines that should have a silky bouquet, often reminiscent of violets. The flavor can be very round and rich, but is balanced by a certain delicacy of fruit.

☼ Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–20 years

✓ *Engel • Gros Frère & Sœur • François Lamarche • Mongeard-Mugneret • de la Romanée-Conti*

LA GRANDE RUE AOC

Grand Cru

The newest *grand cru* of Vosne-Romanée, La Grande Rue was generally considered to have the best potential of all the *premiers crus* in this village. Officially upgraded in 1992, although the quality of wine produced by its sole owner, François Lamarche, was erratic to say the least.

The *terroir* is, however, undeniably superior for a *premier cru* and as Lamarche has been on form since its promotion, perhaps the cart should come before the horse sometimes.

RED When Lamarche gets this right, the wine is well colored with deep, spicy-floral, black cherry fruit.

☼ Pinot Noir, Pinot Gris, Pinot Liébault

🕒 7–15 years

✓ *Lamarche*

GRIOTTES-CHAMBERTIN AOC

Grand Cru

The smallest of the nine *grands crus* of Gevrey-Chambertin.

RED The best growers produce deep-colored, delicious wines with masses of soft-fruit flavors and all the velvety texture that could be expected of Chambertin itself.

☼ Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–20 years

✓ *Joseph Droubin • Claude Dugat • Frédéric Esmonin • Jean-Claude Fourrier • Louis Jadot • Ponsot • Joseph Roty*

LATRICIÈRES- CHAMBERTIN AOC

Grand Cru

One of the nine *grands crus* of Gevrey-Chambertin, situated above the Mazoyères *climat* of Charmes-Chambertin. A tiny part of the adjoining *premier cru*, Aux Combottes, also has the right to use this AOC.

RED Solid structure and a certain austerity connect the two different styles of this wine (early-drinking and long-maturing). They sometimes lack fruit and generosity, but wines from the top growers recommended below are always the finest to be found.

☼ Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–20 years

✓ *Droubin-Laroze • Faiveley • Leroy • Ponsot • Jean Trapet Père & Fils*

MARSANNAY AOC

This village, situated in the very north of the Côte de Nuits, has long been famous for its rosé and has recently developed a reputation for its red wines. In May 1987 it was upgraded to full village AOC status from its previous appellation of Bourgogne Marsannay. There is talk of a classification of Marsannay that would result in a new Marsannay *premier cru* AOC. This would be at least as justifiable as Maranges *premier cru* in the Côte de Beaune, not so much in the sense that either village has vineyards of truly *premier cru* quality, but it is at least useful in highlighting the better vineyards.

RED Firm and fruity wines with juicy redcurrant flavors, hints of liquorice, cinnamon and, if new oak has been used, vanilla.

☼ Pinot Noir, Pinot Gris, Pinot Liébault

🕒 4–8 years

WHITE Mostly light and tangy, early-drinking wines, although the top wines made in a suitable vintage, by the likes of Charles Audoin and Louis Jadot, are a lot richer, creamier and offer serious aging potential.

☼ Chardonnay

🕒 2–5 years

ROSÉ These dry wines are rich, rather than light and fragrant. Packed with ripe fruit flavors that can include blackberry, blackcurrant, raspberry

and cherry, they are best consumed young, although people do enjoy them when the wine has an orange tinge and the fruit is overmature.

☼ Pinot Noir, Pinot Gris, Pinot Liébault

🕒 1–3 years

✓ *Charles Audoin • René Bouvier • Bernard Coillot (Les Boivins) • Louis Jadot • Denis Mortet (Les Longeroies) • Géantet Pansiot (Champ Perdrix)*

MAZIS-CHAMBERTIN AOC

Grand Cru

Sometimes known as Mazy-Chambertin. One of the nine *grands crus* of Gevrey-Chambertin.

RED These complex wines have a stature second only to Chambertin and Clos de Bèze. They have a fine, bright color, supersilky finesse, and a delicate flavor that lasts.

☼ Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–20 years

✓ *Auvenay • Bernard Dugat-Py • Frédéric Esmonin • Faiveley • Jean-Michel Guillon • Lucien Lemoine • Leroy • Bernard Maume • Philippe Nadeff • Joseph Roty • Armand Rousseau*

MAZOYÈRES- CHAMBERTIN AOC

An alternative appellation for Charmes-Chambertin. See Charmes-Chambertin AOC.

MOREY-ST-DENIS AOC

This excellent little wine village tends to be overlooked. The fact that it is situated between two world-famous places, Gevrey-Chambertin and Chambolle-Musigny, coupled with the fact that Clos St-Denis is no longer considered to be Gevrey-Chambertin's top *grand cru*, does little to promote the name of this village.

RED The best of these village wines have a vivid color, a very expressive bouquet, and a smooth flavor with lots of finesse. A Morey-St-Denis from a domaine such as Dujac can have the quality of a top *premier cru*.

☼ Pinot Noir, Pinot Gris, Pinot Liébault

🕒 8–15 years

WHITE Dujac produces an excellent Morey-St-Denis *blanc*, but more interesting, although less consistent, is Ponsot's Monts Luisants *blanc*. Although Monts Luisants is a *premier cru*, the upper section from which this wine comes is part of the village appellation (the southeastern corner is classified *grand cru* and sold as Clos de la Roche!). When Ponsot gets the Monts Luisants *blanc* right, it can be a superbly fresh, dry, buttery-rich wine and some writers have compared it to a Meursault.

☼ Chardonnay, Pinot Blanc

🕒 3–8 years

✓ *Pierre Amiot • Philippe Charlopin • Dujac • Dujac Père • Hubert Lignier • Michel Magnien • Perrot-Minot • Ponsot • Georges Roumier*

MOREY-ST-DENIS PREMIER CRU AOC

Premiers crus: *Clos Baulet, Les Blanchards, La Bussière, Les Chaffots, Aux Charmes, Les Charrières, Les Chénevry, Aux Cheseaux, Les Faconnières, Les Genevrières, Les Gruenchers, Les Millandes, Monts Luisants, Clos des Ormes, Clos Sorbè, Les Sorbès, Côte Rôtie, La Riotte, Les Ruchots, Le Village.*

RED These wines should have all the color, bouquet, flavor, and finesse of the excellent village wines plus an added expression of *terroir*. The best *premiers crus* are: Clos des Ormes, Clos Sorbè, and Les Sorbès.

Pinot Noir, Pinot Gris, Pinot Liébault

10–20 years

WHITE The only white Morey-St.-Denis I know is from the upper section of Monts Luisants belonging to Ponsot (see Morey-St.-Denis AOC above). To my knowledge, no other white Morey-St.-Denis *premier cru* is made.

Chardonnay

✓ Pierre Amiot • Dujac • Herezstyn • Hubert Lignier • Frédéric Magnien (Les Ruchots) • Perrot-Minot • Georges Roumier

MUSIGNY AOC

Grand Cru

Musigny is the smaller of Chambolle-Musigny's two *grands crus*. It covers some 25 acres (10 hectares) on the opposite side of the village to Bonnes Mares.

RED These most stylish of wines have a fabulous color and a smooth, seductive, and spicy bouquet. The velvet-rich fruit flavor constantly unfolds to reveal a succession of taste experiences.

Pinot Noir, Pinot Gris, Pinot Liébault

10–30 years

WHITE Musigny *blanc* is a rare and expensive dry wine produced solely at Comte Georges de Vogüé. It combines the steel of a Chablis with the richness of a Montrachet, although it never quite achieves the quality of either.

Chardonnay

8–20 years

✓ Joseph Droubin • Louis Jadot • Leroy B • J.-F. Mugnier (Château de Chambolle-Musigny) • Christophe Roumier • Georges Roumier • Comte Georges de Vogüé

NUITS AOC

See Nuits-St.-Georges AOC

NUITS PREMIER CRU AOC

See Nuits-St.-Georges Premier Cru AOC

NUITS-ST.-GEORGES AOC

More than any other, the name of this town graphically projects the image of full flavor and sturdy structure for which the wines of the Côte de Nuits are justly famous.

RED These are deep-colored, full, and firm wines, but they can sometimes lack the style and character of wines from Gevrey, Chambolle, and Morey.

Pinot Noir, Pinot Gris, Pinot Liébault

7–15 years

WHITE I have not tasted this wine. (See white Nuits-St.-Georges *premier cru*).

✓ de l'Arlet • R. Chevillon • J. Chauvenet • J.-J. Confuron • Confuron-Cotétidot • Thibault Liger-Belair • Bertrand Marchard de Gramont • A. Michelot • des Perdrix • Daniel Rion & Fils

NUITS-ST.-GEORGES PREMIER CRU AOC

Premiers crus: Les Argillats, Les Argillières*, Clos Arlot*, Aux Boudots, Aux Bousselets, Les Cailles, Les Chaboeufs, Aux Chaignots, Chaines-Carteau (or Chaines-Carteaux), Aux Champs Perdrix, Clos des Corvées*, Clos des Corvées Pagets*, Aux Cras, Les Crots, Les Damodes, Les Didiers, Les Forêts* (or Clos des Forêts St.-Georges*), Les Grandes Vignes*, Château Gris, Les Hauts Pruliers, Clos de la Maréchale*, Aux Murgers, Aux Perdrix*, En la Perrière Noblet (or En la Perrière Noblot), Les Perrières, Les Porets, Les Poulettes, Les Procès, Les Pruliers, La Richemone, La Roncière, Rue de Chauv, Les St.-Georges, Clos St.-Marc (or Aux Corvées), Les Terres Blanches, Aux Thorey, Les Vallerots, Les Vaucraains, Aux Vignerondes.

*In the village of Prémieux-Prissey.

RED These wines have a splendid color, a spicy-rich bouquet, and a vibrant fruit flavor which can be nicely underpinned with vanilla.

Pinot Noir, Pinot Gris, Pinot Liébault

10–20 years

WHITE Henri Gouges's La Perrière is dry, powerful, almost fat, with a spicy-rich aftertaste. The vines used for this wine were propagated from a mutant Pinot Noir that produced bunches of both black and white grapes. Gouges cut a shoot from a white-grape-producing branch of the mutant vine in the mid-1930s, and there is now just over one acre (just under half a hectare) of the vines planted by Gouges, none of which have ever reverted to producing black grapes.

Chardonnay, Pinot Blanc

5–10 years

✓ Bertrand Ambroise • de l'Arlet • Robert Arnoux • Bouchard Père & Fils • Jean Chauvenet (Les Perrières) • Robert Chevillon • J.-J. Confuron • Confuron-Cotétidot • Dubois & Fils • Faiveley • Forey Père & Fils • Henri Gouges • Jean Grivot • Alain Hudelot-Noëllat • Robert Jayer-Gilles • Dominique Laurent • Philippe & Vincent Lèchenaut • Leroy B • Thibault Liger-Belair • Alain Michelot • Mugneret-Gibourg • Gérard Mugneret • Gilles Remoriquet • Daniel Rion & Fils • Michelle & Patrice Rion • Patrice Rion • Antonin Rodet • Jean Tardy • de la Vougeraie B

RICHEBOURG AOC

Grand Cru

One of the six *grands crus* at the heart of Vosne-Romanée's vineyards.

RED This is a gloriously rich wine that has a heavenly bouquet and is full of velvety and voluptuous fruit flavors.

Pinot Noir, Pinot Gris, Pinot Liébault

12–30 years

✓ Jean Grivot • Anne Gros • Alain Hudelot-Noëllat • Leroy B • Méo-Camuzet • de la Romanée-Conti

LA ROMANÉE AOC

Grand Cru

This vineyard is owned by the Liger-Belair family, but the wine was matured, bottled, and sold by Bouchard Père & Fils until 2002, when Louis-Michel Liger-Belair took over. Less than 2½ acres (1 hectare), it is the smallest *grand cru* of Vosne-Romanée.

RED This is a full, fine, and complex wine that might not have the voluptuous appeal of a Richebourg, but that certainly has the class to age gracefully.

Pinot Noir, Pinot Gris, Pinot Liébault

12–30 years

✓ Bouchard Père & Fils • Vicomte Liger-Belair

ROMANÉE-CONTI AOC

Grand Cru

This Vosne-Romanée *grand cru* is under 5 acres (2 hectares) in size and belongs solely to the famous Domaine de la Romanée-Conti.

RED As the most expensive burgundy in the world, this wine must always be judged by higher standards than all the rest. Yet I must admit that I never fail to be amazed by the stunning array of flavors that continuously unfold in this fabulously concentrated and utterly complex wine.

Pinot Noir, Pinot Gris, Pinot Liébault

15–35 years

✓ de la Romanée-Conti

ROMANÉE-ST.-VIVANT AOC

Grand Cru

The largest of the six *grands crus* on the lowest slopes and closest to the village.

RED This is the lightest of the fabulous *grands crus* of Vosne-Romanée, but what it lacks in power and weight it makes up for in finesse.

Pinot Noir, Pinot Gris, Pinot Liébault

10–25 years

VINEYARDS OF CLOS DE VOUGEOT ON THE CÔTE DE NUITS

The *Château du Clos de Vougeot* has played a big part in the region's wine industry for many years. However, the 124 acres (50 hectares) of vineyards surrounding the *château* are split into more than 80 plots.

✓ Robert Arnoux • Sylvain Cathiard • J.-J. Confuron • Joseph Drouhin • Follin-Arbelet • Alain Hudelot-Noëllat • Lucien Lemoine • Leroy **B** • de la Romanée-Conti

RUCHOTTES-CHAMBERTIN AOC

Grand Cru

This is the second-smallest of the nine *grands crus* of Gevrey-Chambertin. It is situated above Mazis-Chambertin and is the last *grand cru* before the slope turns to face north.

RED Normally one of the lighter Chambertin look-alikes, but top growers like Roumier and Rousseau seem to achieve a bagful of added ingredients in their splendidly rich wines.

☞ Pinot Noir, Pinot Gris, Pinot Liébault

🕒 8–20 years

✓ Frédéric Esmonin • Mugneret-Gibourg • Christophe Roumier • Georges Roumier • Armand Rousseau

LA TÂCHE AOC

Grand Cru

One of Vosne-Romanée's six *grands crus*, this fabulous vineyard belongs to the world-famous Domaine de la Romanée-Conti (DRC), which also owns the Romanée-Conti *grand cru*.

RED While this wine is indeed extremely rich and very complex, it does not in comparative terms quite have the richness of Richebourg, nor the complexity of Romanée-Conti. It does, however, have all the silky texture anyone

could expect from the finest of burgundies, and no other wine surpasses La Tâche for finesse.

☞ Pinot Noir, Pinot Gris, Pinot Liébault

🕒 12–30 years

✓ de la Romanée-Conti

VOSNE-ROMANÉE AOC

This is the most southerly of the great villages of the Côte de Nuits. Some Vosne-Romanée vineyards are in neighboring Flagey-Echézeaux. This village includes the Romanée-Conti vineyard.

RED Sleek, stylish, medium-bodied wines of the purest Pinot Noir character and with the silky texture so typical of the wines of this village.

☞ Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–15 years

✓ Robert Arnoux • Sylvain Cathiard • Bruno Clavelier • Engel • Confuron-Contédidot • Bernard Dugat-Py (Vieilles Vignes) • Forey Père & Fils • Jean Grivot • Anne Gros • Michel Gros • Méo-Camuzet • Mugneret-Gibourg • Perrot-Minot • Emmanuel Rouget • Fabrice Vigot

VOSNE-ROMANÉE PREMIER CRU AOC

Premiers crus: *Les Beaux Monts*, Les Beaux Monts Bas*, Les Beaux Monts Hauts*, *Les Brûlées*, Les Chaumes, La Combe Brûlées, *La Croix Rameau*, *Cros-Parantoux*, *Les Gaudichots*, Les Hauts Beaux Monts, *Aux Malconsorts*, En Orveaux*, *Les Petits Monts*, Clos des Réas, *Aux Reignots*, *Les Rouges du Dessus**, *Les Suchots*. *These *premier cru* vineyards of Vosne-Romanée are actually in Flagey-Echézeaux.

RED These are well-colored wines with fine aromatic qualities that are often reminiscent of violets and blackberries. They have a silky texture and a stylish flavor that is pure Pinot Noir. The best *premiers crus* to look out for are: Les Brûlées, Cros-Parantoux, Les Petits-Monts, Les Suchots, and Les Beaumonts (an umbrella name for the various Beaux Monts, high and low).

☞ Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–20 years

✓ de l'Arlet • Robert Arnoux • Albert Bichot (Clos Frantin) • Sylvain Cathiard • Confuron-Cotédidot • Engel • Jean Grivot • Alain Hudelot-Noëllat • S. Javouhey • Henri Jay • Lamarche • Lucien Lemoine • Leroy **B** • Vicomte Liger-Belair • Méo-Camuzet • Gérard Mugneret • Perrot-Minot • Nicolas Potel • Daniel Rion & Fils • Michelle & Patrice Rion • Emmanuel Rouget

VOUGEOT AOC

The modest village wines of Vougeot are a relative rarity, this appellation covering less than 12 acres (5 hectares), which is less than one-tenth of the area encompassed by the Clos de Vougeot *grand cru* itself.

RED Little-seen, fine-flavored, well-balanced wines that are overpriced due to their scarcity. It is better to buy a *premier cru*.

☞ Pinot Noir, Pinot Gris, Pinot Liébault

🕒 8–20 years

WHITE A rarity.

✓ Bertagna • Mongeard-Mugneret

VOUGEOT PREMIER CRU AOC

Premiers crus: Les Crâs, Clos de la Perrière, Les Petits Vougeots, La Vigne Blanche.

The *premiers crus* are located between Clos de Vougeot and Musigny and, from a *terroir* point of view, should produce much better wines.

RED Can be nicely colored, medium bodied, and have an attractive flavo^r with a good balance and a certain finesse.

☞ Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–20 years

WHITE A clean, rich, and crisp wine of variable quality, called Clos Blanc de Vougeot, is produced by L'Héritier Guyot from the *premier cru* of La Vigne Blanche.

☞ Chardonnay, Pinot Blanc

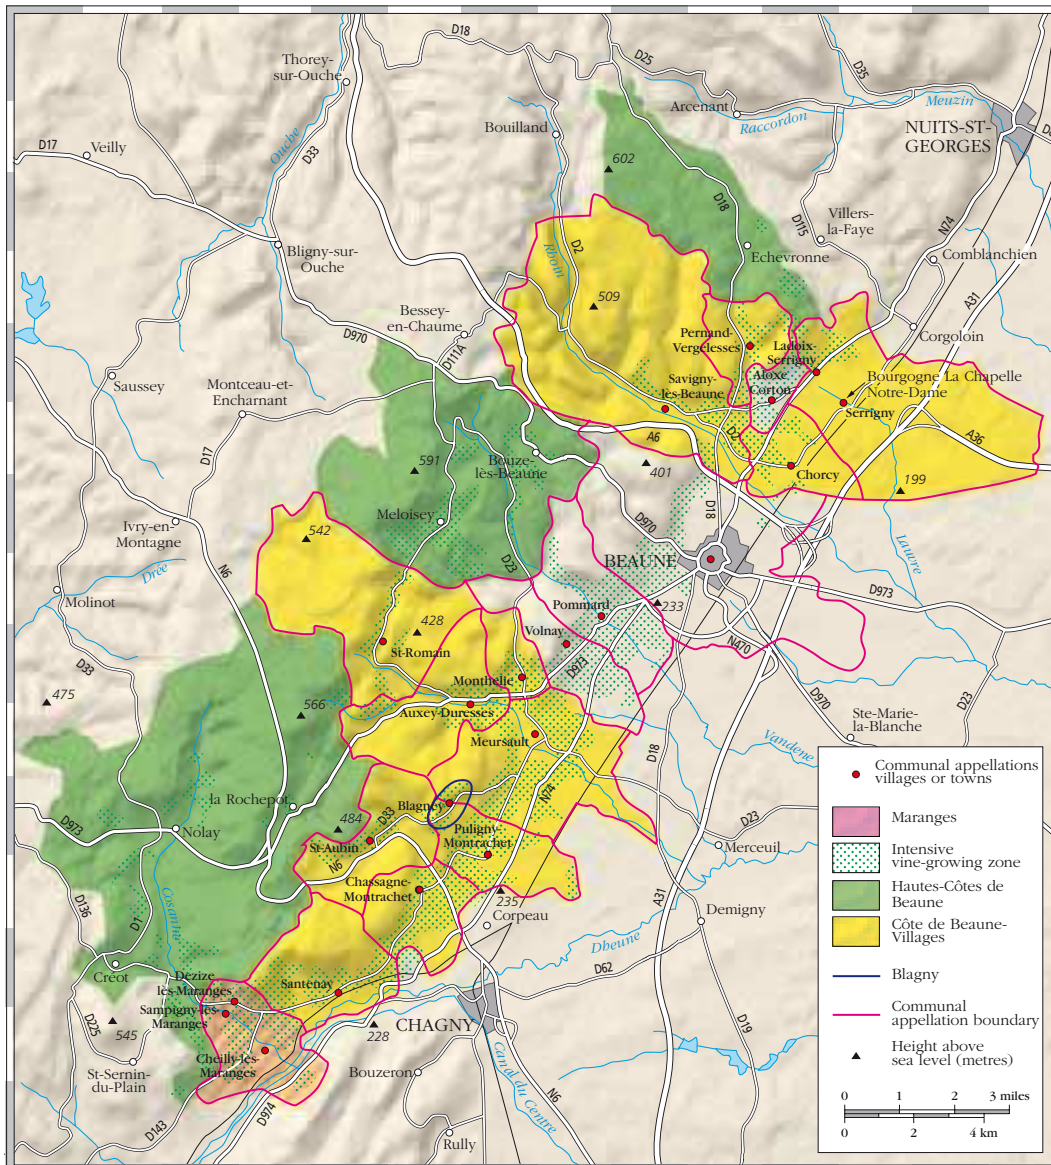

🕒 4–10 years

✓ Bertagna (Clos de la Perrière *monopole*) • Lamarche • de la Vougeraie **B** (Clos du Prieuré *monopole*)

CÔTE DE BEAUNE AND HAUTES-CÔTES DE BEAUNE

Pinot Noir in the Côte de Beaune is renowned for its softness and finesse, characteristics that become more evident as one progresses south through the region, but with seven of Burgundy's eight white grands crus this is really Chardonnay country, and the wines produced are the richest, longest-lived, most complex, and stylish white wines in the world.

ENTERING THE CÔTE DE BEAUNE from the Nuits-St-Georges end, the most immediately visible viticultural differences are its more expansive look and the much greater contrast between the deep, dark, and so obviously rich soil found on the inferior eastern side of the RN 74 road and the scanty patches of pebble-strewn thick drift that cover the classic slopes west of the road.

CÔTE DE BEAUNE VINEYARDS

The slopes of the Côte de Beaune vineyards are generally a little gentler than those of the Côte de Nuits. In both areas, Pinot Noir and Chardonnay vines are planted, but it is here that Chardonnay is king.

LADOIX-SERRIGNY

Situated to the west of Aloxe-Corton, parts of Ladoix-Serrigny are encompassed by that village's appellations, including the grands crus of Corton and Corton-Charlemagne.

CÔTE DE BEAUNE AND HAUTES-CÔTES DE BEAUNE

See also p137
The Côte d'Or is a hilly ridge that follows the trajectory of the Autoroute du Soleil. Most of the village and Hautes-Côtes appellations are clustered between Nuits-St-Georges in the north and Chagny in the south.

It is often said that the slopes of the Côte de Beaune are gentler than those of the Côte de Nuits, but there are many parts that are just as sheer, although the best vineyards of the Côte de Beaune are located on the middle slopes, which have a gentler incline. The steeper upper slopes produce good but generally lesser wines in all cases, except the vineyards of Aloxe-Corton—which are, anyway, more logically part of the Côte de Nuits than the Côte de Beaune.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
The Côte de Beaune abuts the Côte de Nuits on its southern tip and stretches almost 18 miles (30 kilometers) past the town of Beaune to Cheilly-lès-Maranges. Its vines are contiguous, although those of the Hautes-Côtes de Beaune in the western hinterland are divided into two by the Côte de Beaune vineyards of St.-Romain.

CLIMATE
This area has a slightly wetter, more temperate, climate than the Côte de Nuits and the grapes tend to ripen a little earlier. Hail is still a potential hazard, but less so, with wet winds and heavy rain being a greater nuisance.

ASPECT
Comprised of a series of east-facing slopes, just over 1 mile (2 kilometers) wide, which curve in and out to give some of the vineyards northeastern and others southeastern aspects. Here the vines grow at an altitude of between 740 to 1,250 feet (225 and 380 meters) on slightly less steep slopes than those of the Côte de Nuits. South of Beaune, no vines with the right to the village (and higher) appellations extend past the RN 74 road on to the flat and fertile ground beyond.

SOIL
A limestone subsoil with sporadic beds of oolitic ironstones with flinty clay and calcareous topsoils. Light-colored marl topsoil is found in the vineyards of Chassagne and Puligny.

VITICULTURE AND VINIFICATION
The vines are trained low to benefit from heat reflected from the soil at night. In the south of the district, the system employed is similar to that used in parts of Champagne and slightly different from elsewhere on the Côte de Beaune. For red wines, the grapes are almost always destemmed and the juice kept in contact with the skins for between eight and 10 days. Classic white wines are cask fermented and the best wines, both red and white, matured in oak. The flavor of the Pinot Noir grape can easily be overwhelmed by oak so it always receives less new-oak maturation than Chardonnay does.

GRAPE VARIETIES
Primary varieties: Pinot Noir, Chardonnay
Secondary varieties: Pinot Gris (syn. Pinot Beurot), Pinot Liébault, Pinot Blanc, Aligoté, Melon de Bourgogne, Gamay

THE HOSPICES DE BEAUNE LABEL

This distinctive label indicates that the wine comes from vineyards belonging to the Hospices de Beaune, a charitable institution that has cared for the sick and poor of Beaune since 1443. Half a millennium of gifts and legacies has seen the accumulation of vineyards that now total some 153 acres (62 hectares) of *premiers crus* and *grands crus*.

Since 1859 these wines have been sold by auction and, because of the publicity gained by this annual event, the prices fetched are now generally much higher than the going rate. We consumers must be prepared to pay a relatively higher price for these wines and help the cause.

After some criticism of the unreliability of certain wines, a new *cuvée* was built at the rear of the famous Hôtel-Dieu, known for its magnificent Flemish-crafted roof. All the wines are now matured in new oak casks. There remain, however, the variations that result from the different *élevages* of the various casks of the same *cuvée*. At the most innocent level, these may result from one *négociant* giving his wine more or less cask-maturation than another, and temperature and humidity levels can also radically change the wine's alcohol and extract content. The cellar management of less scrupulous firms may also be a consideration.

After the wines have been auctioned they become the full responsibility of the purchaser.

THE APPELLATIONS OF
**THE CÔTE DE BEAUNE AND
 HAUTES-CÔTES DE BEAUNE**

Notes: 1. All the *grands crus* of Côte de Beaune have their own separate appellations and are therefore listed individually below. However, the *premiers crus* do not, and are therefore listed under the appellation of the village in which the vineyards are situated. *Premiers crus* that are virtually contiguous with *grand cru* vineyards are italicized; they are possibly superior to those that do not share a boundary with one or more *grands crus*, and generally superior to those that share boundaries with village AOC vineyards.
 2. Leflaive plain and simple refers to Domaine Leflaive, while Olivier Leflaive is the *négociant*.

ALOXE-CORTON AOC

This village is more Côte de Nuits than Côte de Beaune, as its 99 percent red-wine production suggests.

RED These deeply colored, firm-structured wines with compact fruit are reminiscent of reds from northern Côte de Nuits. They are excellent value for money.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–20 years

WHITE Very little Aloxé-Corton *blanc* is made, but Daniel Senard makes a lovely buttery-rich, concentrated pure Pinot Gris wine (which, although it is definitely a white wine, makes it red according to the regulations!).

🍷 Chardonnay

🕒 4–8 years

✓ *Edmond Cornu & Fils* • *P. Dubreuil-Fontaine* • *Follin-Arbelet* • *Maurice Martray* • *Daniel Senard* • *Tollot-Beaut*

ALOXE-CORTON PREMIER CRU AOC

Premiers crus: *Les Chaillots*, *La Coutière**, *Les Fournières*, *Les Guérets*, *La Maréchaude**, *Clos des Maréchaudes*, *Les Maréchaudes*, *Les Meix* (or *Clos du Chapitre*), *Les Moutottes**, *Les Paulands*, *Les Petites Lolières**, *La Toppe au Vert**, *Les Valozières*, *Les Vercots*.

**Premier cru* vineyards of Aloxé-Corton in Ladoix-Serrigny.

RED These wines can have an intense bouquet and a firm, spicy fruit flavor. The best *premiers crus* are *Les Fournières*, *Les Valozières*, *Les Paulands*, and *Les Maréchaudes*.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–20 years

WHITE I have never encountered any.

✓ *Cachat-Ocquidant & Fils* (Les Machaudes) • *Capitain-Gagnerot* • *Antonin Guyon* • *André Masson* • *Prince Florent de Mérode*

AUXEY-DURESSES AOC

A beautiful village, set in an idyllic valley behind Monthélie and Meursault.

RED Attractive wines not very deep in color, but with a softness of fruit and a little finesse.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 6–12 years

WHITE Medium-bodied wines with a full, spicy-nutty flavor, like that of a modest Meursault.

🍷 Chardonnay, Pinot Blanc

🕒 3–7 years

✓ *Robert Ampeau* • *d'Auvenay* **B** • *Jean-Pierre Diconne* • *Alain Gras* • *Louis Jadot* • *Henri Latour* • *Olivier Leflaive* • *Leroy* **B** • *Prunier* (all and sundry) • *Dominique & Vincent Roy* • *Jean-Marc Vincent* (Les Hautes)

AUXEY-DURESSES PREMIER CRU AOC

Premiers crus: Bas des DuresSES, Les Bretterins, La Chapelle, Climat du Val, Les DuresSES, Les Écusseaux, Les Grands-Champs, Reugne.

RED The *premiers crus* provide nicely colored soft wines with good finesse. The best have fine redcurrant Pinot character with the creamy-oak of cask maturity.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 7–15 years

WHITE Excellent value, smooth, and stylish wines in the Meursault mould.

🍷 Chardonnay, Pinot Blanc

🕒 4–10 years

✓ *Armand* • *Jean-Pierre Diconne* • *Michel Prunier* • *Vincent Prunier*

AUXEY-DURESSES- CÔTES DE BEAUNE AOC

Alternative appellation for red wines only. See Auxey-DuresSES AOC.

BÂTARD-MONTRACHET AOC

Grand Cru

This *grand cru* is situated on the slope beneath Le Montrachet and overlaps both Chassagne-Montrachet and Puligny-Montrachet.

WHITE Full-bodied, intensely rich wine with masses of nutty, honey-and-toast flavors. It is one of the best dry white wines in the world.

🍷 Pinot chardonnay (*sic*)

🕒 8–20 years

✓ *Jean-Marc Boillot* • *Bouchard Père & Fils* • *Jean-Noël Gagnard* • *Vincent Girardin* • *Louis Latour* • *Leflaive* **B** • *Marc Morey* • *Pierre Morey* **B** • *Michel Niellon* • *Paul Pernot* • *Ramonet* • *Antonin Rodet* • *Étienne Sauzet*

BEAUNE AOC

Beaune gives its name to village wines and *premiers crus*, but not to any *grands crus*.

RED These soft-scented, gently fruity wines are consistent and good value.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 6–14 years

WHITE An uncomplicated dry Chardonnay wine with a characteristic soft finish.

🍷 Chardonnay, Pinot Blanc

🕒 3–7 years

✓ *Bouchard Père & Fils* • *Bertrand Darvot* • *Dominique Laurent* (Vieilles Vignes) • *Machard de Gramont* • *Tollot-Beaut* • *de la Vougeraie* **B**

BEAUNE PREMIER CRU AOC

Premiers crus: Les Aigrots, Aux Coucheries (or Clos de la Féguine), Aux Cras, Clos des Avaux, Les Avaux, Le Bas des Teurons, Les Beaux Fougets, Belissand, Les Blanchés Fleurs, Les Boucherottes, Les Bressandes, Les Cents Vignes, Champs Pimont, Les Chouacheux, l'Écu (or Clos de l'Écu), Les Epenottes (or Les Epenotes), Les Fèves, En Genêt, Les Grèves, Clos Landry (Clos Ste.-Landry), Les Longes, Le Clos des Mouches, Le Clos de la Mousse, Les Marconnets, La Mignotte, Montée Rouge, Les Montrevenots, En l'Orme, Les Perrières, Pertuisots, Les Reversées, Clos du Roi, Les Seurey, Les Sizies, Clos Ste.-Anne (or Sur les Grèves), Les Teurons, Les Toussaints, Les Tuvilains, La Vigne de l'Enfant Jésus, Les Vignes Franches (or Clos des Ursules).

RED The best *crus* are medium-bodied with a delightfully soft rendition of Pinot fruit and lots of finesse. Look out for Faiveley's Clos de L'Écu, a *monopole* purchased at the time of writing. I expect Faiveley will want to make some sort of quality statement here.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–20 years

WHITE These wines have lovely finesse and can display a toasty flavor more common to richer growths. Domaine Jacques Prieur's Champs Pimont has stood out lately.

🍷 Chardonnay, Pinot Blanc

🕒 5–12 years

✓ *Arnoux Père & Fils* • *Bouchard Père & Fils* • *Chanson Père & Fils* (Clos de Fèves, Clos des Mouches) • *Joseph Droubin* • *Camille Giroud* • *Louis Jadot* • *Jaffelin* • *Michel Lafarge* • *Louis Latour* • *René Monnier* • *Bernard Morey* • *Albert Morot* • *Michel Picard* • *Jacques Prieur* • *Tollot-Beaut*

BIENVENUES-BÂTARD- MONTRACHET AOC

Grand Cru

This is one of Puligny-Montrachet's four *grands crus*.

WHITE Not the fattest dry wines from this village, but they have great finesse, immaculate balance, and some of the nuttiness and honey-and-toast flavors expected in all Montrachets.

🍷 Chardonnay

🕒 8–20 years

✓ *Louis Carillon & Fils* • *Chartron et Trebuchet* • *Vincent Girardin* • *Louis Latour* • *Leflaive* **B** • *Paul Pernot* • *Ramonet* • *Étienne Sauzet*

BLAGNY AOC

A red-only appellation from Blagny, a tiny hamlet shared by the communes of Meursault and Puligny-Montrachet.

RED These rich, full-flavored, Meursault-like red wines are underrated.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 8–15 years

✓ *Robert Ampeau* • *Matrot*

BLAGNY PREMIER CRU AOC

Premiers crus: La Garenne (or Sur la Garenne), Hameau de Blagny (in Puligny-Montrachet), La Jeunelotte, La Pièce sous le Bois, Sous Blagny (in Meursault), Sous le Dos d'Ane, Sous le Puits.

RED These rich wines have even more grip and attack than basic Blagny.

Pinot Noir, Pinot Gris, Pinot Liébault

10–20 years

Robert Ampeau • François Jobard • Larue (Sous le Puits) • Leflaive B • Matrot

BLAGNY-CÔTE DE BEAUNE AOC

Alternative appellation for Blagny. See Blagny AOC.

BOURGOGNE LA CHAPELLE NOTRE-DAME AOC

One of three Bourgogne *lieux-dits* created in 1993. La Chapelle Notre Dame is located in Serrigny, which is just east of Ladoix. Red, white, and rosé may be produced according to the same grapes and rules as for Bourgogne AOC (see p.133). P. Dubreuil-Fontaine has produced a wine from this *lieu-dit* for many years. It has always been decent, not special, but capable of improving in bottle. André and Jean-René Nudant also makes a light, fresh red from this appellation.

BOURGOGNE HAUTES-CÔTES DE BEAUNE AOC

This appellation is larger and more varied than Hautes-Côtes de Nuits. Half-red/half-rosé wines may be sold as Bourgogne Clairet Hautes-Côtes de Beaune AOC, but the style is outmoded and the appellation rarely encountered.

RED Ruby-colored, medium-bodied wines with a Pinot perfume and a creamy-fruit finish.

Pinot Noir, Pinot Gris, Pinot Liébault

4–10 years

WHITE Not very frequently encountered, but Guillemaud-Dupont's pure Pinot Beurot (Pinot Gris) is rich, dry, and expressive. Its grape variety makes it a very pale white, red, or rosé according to the regulations!

Chardonnay, Pinot Blanc

1–4 years

ROSÉ Pleasantly dry and fruity wines with some richness and a soft finish.

Pinot Noir, Pinot Gris, Pinot Liébault

1–3 years

Contat-Grange • Jean Joliot & Fils • Didier Montchovet • Claude Nouveau • Naudin-Ferrand

CHARLEMAGNE AOC

Grand Cru

This white-only *grand cru* of Aloxe-Corton overlaps Pernand-Vergelesses and is almost, but not quite, identical to the *grand cru* of Corton-Charlemagne.

CHASSAGNE-MONTRACHET AOC

These village wines have a lesser reputation than those of Puligny-Montrachet.

RED Firm, dry wines with more color and less softness than most Côte de Beaune reds.

Pinot Noir, Pinot Gris, Pinot Liébault

10–20 years

WHITE An affordable introduction to the great wines of Montrachet.

Chardonnay, Pinot Blanc

5–10 years

✓ Bernard Colin & Fils • Fontaine-Gagnard • Jean-Noël Gagnard • Marquis de Laguiche • Bernard Morey • Jean-Marc Morey • Ramonet

CHASSAGNE-MONTRACHET PREMIER CRU AOC

Premiers crus: Abbaye de Morgeot, Les Baudines, *Blanchot Dessus*, Les Boirettes, Bois de Chassagne, Les Bondues, La Boudriotte, Les Brussonnes, En Cailleret, La Cardeuse, Champ Jendreau, Les Champs Gain, La Chapelle, Clos Chareau, Les Chaumées, Les Chaumes, Les Chenévottes, Les Combards, Les Commes, Ez Crets, Ez Crottes, *Dent de Chien*, Les Embrazées, Les Fairendes, Francemont, La Grande Borne, La Grande Montagne, Les Grandes Ruchottes, Les Grands Clos, Guerchère, Les Macherelles, *La Maltroie*, Les Morgeots, Les Murées, Les Pasquelles, Petingeret, Les Petites Fairendes, Les Petits Clos, Clos Pitois, Les Places, Les Rebichets, En Remilly, La Romanée, La Roquemaure, Clos St.-Jean, Tête du Clos, Tonton Marcel, Les Vergers, *Vide Bourse*, Vigne Blanche, Vigne Derrière, En Virondot.

RED The wines of Chassagne-Montrachet have the weight of a Côte de Nuits and the softness of a Côte de Beaune.

Pinot Noir, Pinot Gris, Pinot Liébault

10–25 years

WHITE Flavorsome dry wines, but lacking the finesse of those in the neighboring appellation of Puligny.

Chardonnay, Pinot Blanc

6–15 years

✓ Guy Amiot & Fils • Roger Belland (Morgeot Clos Pitois *monopole*) • Bernard Colin & Fils • Marc Colin • Vincent Dancer • Michel Colin-Deléger (due to a split in this domaine, look out for Bruno Colin and Philippe Coil) • Fontaine-Gagnard • Jean-Noël Gagnard • Gagnard-Delagrangé • Vincent Girardin • Gabriel et Paul Jouard • Vincent et François Jouard • Louis Latour • Olivier Leflaive • Lucien Lemoine • Châteaude la Maltroie • Bernard Moreau & Fils • Marc Morey • Michel Niellon • Ramonet • Roux • Verget

CHASSAGNE-MONTRACHET-CÔTE DE BEAUNE AOC

Alternative appellation for red wines only. See Chassagne Montrachet AOC.

CHEVALIER-MONTRACHET AOC

Grand Cru

This is one of Puligny-Montrachet's four *grands crus*.

WHITE Fatter and richer than Bienvenues-Bâtard-Montrachet, this wine has more explosive flavor than Bâtard-Montrachet.

Chardonnay

10–20 years

✓ d'Auvenay B • Bouchard Père & Fils • Vincent Dancer • Georges Déleger • Vincent Girardin • Louis Jadot • Leflaive B • Marc Morey • Michel Niellon

CHOREY-LÈS-BEAUNE AOC

This satellite appellation of Beaune produces exciting, underrated wines.

RED Although next to Aloxe-Corton, Chorey has all the soft and sensuous charms that are quintessentially Beaune.

Pinot Noir, Pinot Gris, Pinot Liébault

7–15 years

WHITE Less than one percent of the wines produced in this village are white.

✓ Arnoux Père & Fils • Maillard Père & Fils • Maurice Martray • Tollot-Beaut

CHOREY-LÈS-BEAUNE CÔTE DE BEAUNE AOC

Alternative appellation for red wines only. See Chorey-lès-Beaune AOC.

CORTON AOC

Grand Cru

This is one of the *grands crus* of Aloxe-Corton (it extends into Ladoix-Serrigny and Pernand-Vergelesses). Corton is the only *grand cru* in the Côte de Beaune that includes red and white wines and thus parallels the Côte de Nuits *grand cru* of Musigny. The following 20 *climats* may hyphenate their names (with or without the prefix) to the Corton appellation: Les Bressandes, Le Charlemagne, Les Chaumes, Les Chaumes et la Voierosse, Les Combes, Le Corton, Les Fiètres, Les Grèves, Les Languettes, Les Maréchaudes, Les Miex, Les Meix Lallemand, Les Paulands, Les Perrières, Les Pougets, Les Renardes, Le Rognet-Corton, Le Clos de Roi, Les Vergennes, La Vigne au Saint. So it is possible to get a red Corton-Charlemagne. Beware: Corton is one of the least dependable *grands crus* for quality. When it is great, it is wicked, but production is vast (38,850 to 42,180 cases/3,500 to 3,800 hectoliters per year)—more than twice the volume of the huge, overproducing Clos de Vougeot, and over one-quarter of all the red *grand cru* wine produced in both the Côte de Nuits and Côte de Beaune.

RED These wines may sometimes appear intense and broody in their youth, but, when fully mature, a great Corton has such finesse and complexity that it can stun the senses.

Pinot Noir, Pinot Gris, Pinot Liébault

12–30 years

WHITE A medium- to full-bodied wine with a fine, rich flavor.

Chardonnay

10–25 years

✓ Arnoux Père & Fils • Bouchard Père & Fils • Chevalier Père & Fils (Rognet) • Vincent Girardin • Antonin Guyon • Louis Jadot • Leroy B • Bonneau du Martray • Faiveley • Michel Juillot • Prince Florent de Mérode • Jacques Prieur • Rapet Père & Fils • Comte Daniel Senard • Tollot-Beaut

CORTON-CHARLEMAGNE AOC

Grand Cru

This famous *grand cru* of Aloxe-Corton extends into Ladoix-Serrigny and Pernand-Vergelesses. Although the best Corton-Charlemagne is incomparable, there is so much produced that consumers can pay a lot of money for relatively disappointing wine. At an average of 25,300 cases (2,280 hectoliters), the production of Corton-Charlemagne represent more than two out of every three bottles of all the *grand cru* white wines produced in both the Côte de Nuits and Côte de Beaune.

WHITE At its natural best, this is the most sumptuous of all white Burgundies. It has a fabulous concentration of rich, buttery fruit flavors, a dazzling balance of acidity, and delicious overtones of vanilla, honey, and cinnamon.

🍷 Chardonnay

📅 5–25 years

✓ *Bertrand Ambroise* • *Bonneau du Martray* • *Bouchard Père & Fils* • *J.-F. Coche-Dury* • *Joseph Drouhin* • *Genot-Boulanger* • *Vincent Girardin* • *Antonin Guyon* • *Louis Jadot* • *Patrick Javillier* • *Michel Juillot* • *Louis Latour* • *Olivier Leflaive* • *Lucien Lemoine* • *Jacques Prieur* • *Rapet Père & Fils* • *Remoissenet Père & Fils* • *Christophe Roumier*

CÔTE DE BEAUNE AOC

Wines that are entitled to the actual Côte de Beaune appellation are restricted to a few plots on the Montagne de Beaune above Beaune itself.

RED These are fine, stylish wines that reveal the purest of Pinot Noir fruit. They are produced in the soft Beaune style.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

📅 10–20 years

WHITE Little-seen, dry basic Beaune.

🍷 Chardonnay, Pinot Blanc

📅 3–8 years

✓ *Lycée Agricole & Viticole de Beaune*

CÔTE DE BEAUNE-VILLAGES AOC

While AOC Côte de Nuits-Villages covers red and white wines in a predominantly red-wine district, AOC Côte de Beaune-Villages applies only to red wines in a district that produces the greatest white Burgundies!

RED Excellent-value fruity wines, made in true soft Beaune style.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

📅 7–15 years

✓ *Bernard Bachelet & Fils* • *Coron Père & Fils* • *Lequin Roussot*

CRIOTS-BÂTARD-MONTRACHET AOC

Grand Cru

The smallest of Chassagne-Montrachet's three *grands crus*.

WHITE This wine has some of the weight of its great neighbors and a lovely hint of honey-and-toast richness, but it is essentially the palest and most fragrant of all the Montrachets.

🍷 Pinot chardonnay (*sic*)

📅 8–20 years

✓ *Joseph Belland* • *Blain-Gagnard* • *Vincent Girardin*

LADOIX AOC

Parts of Ladoix-Serrigny have the right to use the Aloxe-Corton Premier Cru appellation or the *grands crus* of Corton and Corton-Charlemagne. Ladoix AOC covers the rest of the wine produced in the area.

RED Many wines are rustic versions of Aloxe-Corton, but there are some fine grower wines that combine the compact fruit and structure of a Nuits with the softness of a Beaune.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

📅 7–20 years

WHITE Just 5 percent of the production is white and it is not very well distributed.

🍷 Chardonnay, Pinot Blanc

📅 4–8 years

✓ *Capitain-Gagnerot* • *Edmond Cornu & Fils* • *François Gay & Fils* • *Maurice Martray* • *Prince Florent de Mérode*

LADOIX PREMIER CRU AOC

Premiers crus: Basses Mourottes, Bois Roussot, Les Buis, Le Clou d'Orge, La Corvée, Les Gréchons, *Hautes Mourottes*, Les Joyeuses, La Micaude, En Naget, *Rognet et Corton*.

These *premiers cru* vineyards were expanded from 35 to 59 acres (14 to 24 hectares) in 2000.

RED These wines are decidedly finer in quality and deeper in color than those with the basic village appellation.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

📅 7–20 years

WHITE Prince Florent de Mérode of de Serrigny makes the only white Ladoix Premier Cru I know: Ladoix Hautes Mourottes blanc.

✓ *Capitain-Gagnerot* • *Edmond Cornu & Fils* • *Prince Florent de Mérode* • *Naudin-Ferrand* • *André Nudant & Fils* • *G. & P. Ravaut*

LADOIX-CÔTE DE BEAUNE AOC

See Ladoix AOC

Alternative appellation for red wines only.

MARANGES AOC

In 1989 Maranges AOC replaced three separate appellations: Cheilly-lès-Maranges AOC, Dézize-lès-Maranges AOC, and Sampigny-lès-Maranges AOC, a trio of villages sharing the once moderately famous *cru* of Marange, which is on a well-exposed hillside immediately southwest of Santenay. The red wines may also be sold as Côte de Beaune AOC or Côte de Beaune-Villages AOC. Production used to be erratic, with most of the wine (including much of that qualifying for *premier cru*) sold to *négociants* for blending into Côte de Beaune-Villages, but two or three dedicated growers are beginning to get the name around.

RED Wines with a very pure Pinot perfume, which are developing good color and body.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

📅 2–7 years

WHITE Rarely produced in any of the three villages and never in Dézize-lès-Maranges, as far as I am aware, although it is allowed.

✓ *Fernand Chevrot* • *Contat-Grange* • *Jaffelin* • *René Martin* • *Edvard Monnot* • *Claude Nouveau*

MARANGES CÔTE DE BEAUNE AOC

Alternative appellation for red wines only. See Maranges AOC.

MARANGES PREMIER CRU AOC

Premiers crus: Clos de la Boutière, La Croix aux Moines, La Fussière, Le Clos des Loyères, Le Clos des Rois, Les Clos Roussots.

Some of these *climats* officially designated as *premiers crus* are a bit of a puzzle. Clos de la Boutière, for example, was originally just plain old La Boutière, and Les Clos Roussots once adjoined a *premier cru* called Les Plantes de Marange, but was never classified as one itself. According to maps prior to the merging of the three appellations, Les Plantes de Marange, Maranges, and En Maranges were the authentic names of the most important vineyards in the area classified as *premier cru*, but they have since adopted less repetitive *lieux-dits*, and such revisionism is probably justified from a marketing aspect.

RED The best examples are well colored, with a good balance of fruit, often red fruits, and a richer, longer finish than those wines bearing the basic Maranges appellation.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

WHITE Rarely encountered.

🍷 Chardonnay, Pinot Blanc

✓ *Bernard Bachelet & Fils* • *Fernand Chevrot* • *Contat-Grangé* • *Edvard Monnot* • *Claude Nouveau*

MEURSAULT AOC

While the greatest white Côte de Beaune is either Montrachet or Corton-Charlemagne, Meursault is probably better known and is certainly more popular.

RED This is often treated as a novelty, but it is a fine wine in its own right, with a firm edge.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

📅 8–20 years

WHITE Even the most basic Meursault should be deliciously dry with a nutty-buttery-spice quality added to its typically rich flavor.

🍷 Chardonnay, Pinot Blanc

📅 5–12 years

✓ *Robert Apeau* • *d'Auvenay* ^B • *Bouchard Père & Fils* • *Boyer-Martenot* • *Alain Coche-Bizouard* • *J.-F. Coche-Dury* • *Jean-Philippe Fichet* • *Henri Germain* (Limozin) • *Albert Grivault* • *Patrick Javillier* • *François Jobard* • *Rémy Jobard* • *Comte Lafon* ^B • *Michelot* (any Michelot, hyphenated or otherwise, with a Meursault address) • *François Mikulski* • *Pierre Morey* ^B • *Guy Roulot*

MEURSAULT PREMIER CRU AOC

Premiers crus: Aux Perrières, Les Bouchères, Les Caillerets, Les Charmes-Dessous (or Les Charmes-Dessus), Les Chaumes de Narvaux, Les Chaumes des Perrières, Les Cras, Les Genevrières-Dessous (or Les Genevrières-Dessus), Les Gouttes d'Or, La Jeunelotte, Clos des Perrières, Les Perrières-Dessous (or Les Perrières-Dessus), La Pièce sous le Bois, Les Plures, Le Porusot, Les Porusot-Dessous (or Le Porusot-Dessus), Clos des Richemont (or Cras), Les Santenots Blancs, Les Santenots du Milieu, Sous Blagny, Sous le Dos d'Âne.

RED Finer and firmer than the basic village wines, these reds need plenty of time to soften.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–20 years

WHITE Great Meursault should always be rich. Their various permutations of nutty, buttery, and spicy Chardonnay flavours may often be submerged by the honey, cinnamon, and vanilla of new oak until considerably mature.

🍷 Chardonnay, Pinot Blanc

🕒 6–15 years

✓ *d'Auvenay* **B** • *Bouchard Père & Fils* • *Michel Bouzereau & Fils* • *J.-F. Coche-Dury* • *Vincent Dancer* • *Henri Germain* • *Vincent Girardin* • *Albert Grivault* (Clos des Perrières) • *Patrick Javillier* • *François Jobard* • *Comte Lafon* **B** • *Leroy* **B** • *Martelet de Cherisey* (Meursault-Blagny) • *Matrot* • *Mazilly Père & Fils* (Les Meurgers) • *Michelot* (any Michelot, hyphenated or otherwise, with a Meursault address) • *Pierre Morey* **B** • *Alain Patriarche* (Les Grands Charrons) • *Jacques Prieur* • *Hubert de Montille* (Château de Puligny-Montrachet, Les Pruzots) • *Remoissenet Père & Fils* • *Guy Roulot*

MEURSAULT-BLAGNY PREMIER CRU AOC

Premiers crus: La Jeunelotte, La Pièce sous le Bois, Sous Blagny, Sous le Dos d'Âne.

An alternative appellation for Meursault wines from vineyards in the neighboring village of Blagny. The wines must be white, otherwise they claim the Blagny Premier Cru appellation. See Meursault Premier Cru AOC.

MEURSAULT-CÔTE DE BEAUNE AOC

Alternative red-wine-only appellation for Meursault. See Meursault AOC.

MEURSAULT-SANTENOTS AOC

This is an alternative appellation for Meursault Premier Cru that comes from a part of the Volnay-Santenots appellation. See Volnay-Santenots AOC.

MONTHÉLIE AOC

Monthélie's wines, especially the *premiers crus*, are probably the most underrated in Burgundy. A few years ago there was a silly fuss over whether there should be an accent on the first "e" in Monthélie, and sure enough, a number of very authoritative references differ. The definitive answer—in black and white from the mayor of the village, and the president of the local *syndicat* for Monthélie—is yes, there should be.

RED These excellent wines have a vivid color, expressive fruit, a firm structure, and a lingering, silky finish.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 7–15 years

WHITE Relatively little white wine is produced.

🍷 Chardonnay, Pinot Blanc

🕒 3–7 years

✓ *Eric Boigelot* • *Denis Boussey* • *Eric Boussey* • *J.-F. Coche-Dury* • *Paul Garaudet* • *Comte Lafon* **B** • *Monthélie-Doubairat* • *Annick Parent*

MONTHÉLIE PREMIER CRU AOC

Premiers crus: Le Cas Rougeot, Les Champs Fulliot, Les Duresses, La Château Gaillard, Le Clos Gauthey, Le Meix Bataille, Les Riottes, Sur la Velle, La Taupine, Les Vignes Rondes, Le Village de Monthélie.

RED Monthélie's *premiers crus* are hard to find, but worth the effort.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 8–20 years

WHITE Paul Garaudet's delicately perfumed Champs-Fulliot *blanc* is the only white *premier cru* I have come across.

✓ *Eric Boigelot* • *Denis Boussey* (Les Champs Fulliots) • *Jehan Changarnier* • *Gérard Doreau* • *Paul Garaudet* • *Château de Monthélie* **B** • *Annick Parent*

MONTHÉLIE- CÔTE DE BEAUNE AOC

Alternative appellation for red wines only. See Monthélie AOC.

LE MONTRACHET AOC

See Montrachet AOC

MONTRACHET AOC

Grand Cru

Many consider Montrachet to be the greatest dry white wine in the world. On the other hand, I do remember reading somewhere that its flavors can be so intense that it is difficult to know whether it is a joy to drink or whether you are giving your palate an end-of-year exam. It definitely is a joy to drink, but I know what the writer means.

WHITE When it is fully mature, Montrachet has the most glorious and expressive character of all dry white wines. Its honeyed, toasty, floral, nutty, creamy, and spicy aromas are simply stunning.

🍷 Pinot Chardonnay (*sic*)

🕒 10–30 years

✓ *Guy Amiot & Fils* • *Amiot-Bonfils* • *Bouchard Père & Fils* • *Charron et Trebuchet* • *Marc Colin* • *Louis Jadot* • *Comte Lafon* **B** • *Leflaive* **B** • *Marquis de Laguiche* (made and sold by Joseph Drouhin) • *Pierre Morey* **B** • *Jacques Prieur* • *Ramonet* • *de la Romanée-Conti*

PERNAND-VERGELESSES AOC

This village, near Aloxe-Corton, is the most northerly appellation of the Côte de Beaune.

RED With the exception of the silky wines recommended below, too many of these are rustic and overrated and would be better off in a *négociant* Côte de Beaune-Villages blend.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 7–15 years

WHITE Although this village is famous for its Aligoté, growers such as Jacques Germain

produce smooth, deliciously balanced wines that deserve more recognition.

🍷 Chardonnay, Pinot Blanc

🕒 4–8 years

✓ *Denis Père & Fils* • *P. Dubreuil-Fontaine* • *Jacques Germain* • *Olivier Leflaive*

PERNAND-VERGELESSES PREMIER CRU AOC

Premiers crus: En Caradeux, Creux de la Net, Les Fichots, Île des Hautes Vergelesses, Les Basses Vergelesses.

RED These wines repay keeping until the fruit develops a silkiness that hangs gracefully on the wine's structure and gives Pernand's *premiers crus* the class its village wines lack.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 10–20 years

WHITE The Beaune firm of Chanson Père & Fils produces a consistent wine of medium body, which is dry but mellow. However, Pavelot is the best white *premier cru* from this village I have tasted.

🍷 Chardonnay, Pinot Blanc

🕒 4–8 years

✓ *Delarache* • *P. Dubreuil-Fontaine* • *Roger Jaffelin & Fils* (Creux de la Net) • *Pavelot* • *Rapet Père & Fils* • *Rollin Père & Fils*

PERNAND-VERGELESSES- CÔTE DE BEAUNE AOC

Alternative appellation for red wines only. See Pernand-Vergelesses AOC.

POMMARD AOC

A very famous village with a "reborn" image built up by a group of dedicated and skillful winemakers.

RED The "famous" dark, alcoholic, and soupy wines of Pommard are now mostly a thing of the past, having been replaced by exciting fine wines.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 8–16 years

✓ *Robert Ampeau* • *Comte Armand* • *Billard-Gonnet* • *Jean-Marc Boillot* • *Bernard & Louis Glantenay* • *Leroy* **B** • *Aleth Leroyer-Girardin* • *Hubert de Montille* • *F Parent* • *Château de Pommard* • *Vaudoissey-Creusefond* (Croix Blanche)

POMMARD PREMIER CRU AOC

Premiers crus: Les Arvelets, Les Bertins, Clos Blanc, Les Boucherottes, La Chanière, Les Chanlins-Bas, Les Chaponnières, Les Charmots, Les Combes-Dessus, Clos de la Commaraine, Les Croix Noires, Derrière St.-Jean, Clos des Epeneaux, Les Premiers, Les Grands Epenots, Les Jarolières, En Largillière (or Les Argillières), Clos Micot, Les Petits Epenots, Les Pézerolles, La Platière, Les Poutures, La Refène, Les Rugiens-Bas, Les Rugiens-Hauts, Les Saussilles,

Clos de Verger, Village.

RED The best *crus* are the various *climats* of Les Rugiens (deep and voluptuous) and Les Epenots (soft, fragrant, and rich).

Pinot Noir, Pinot Gris, Pinot Liébault

10–20 years

✓ *Comte Armand* (Les Petits Epenots **B**) • *Denis Carré* • *Billard-Gonnet* • *Jean-Marc Boillot* • *de Courcel* (Les Vaumuriens) • *Vincent Dancer* • *Lejeune* • *Leroy* **B** • *Olivier Leflaive* • *Catherine et Claude Maréchal* • *Moissenet-Bonnard* (Les Epenots) • *Hubert de Montille* • *Pierre Morey* **B** • *Parent* • *Nicolas Potel* • *Pothier-Rieusset* • *de la Pousse d'Or* • *de la Vougeraie* **B**

PULIGNY-MONTRACHET AOC

One of two Montrachet villages producing some of the greatest dry whites in the world.

RED Although some fine wines are made, Puligny-Montrachet *rouge* demands a premium for its scarcity.

Pinot Noir, Pinot Gris, Pinot Liébault

10–20 years

WHITE Basic Puligny-Montrachet from a top grower is a very high-quality wine: full bodied, fine, and steely, requiring a few years to develop a nutty honey-and-toast flavor.

Chardonnay, Pinot Blanc

5–12 years

✓ *Robert Ampeau* • *Jean-Marc Boillot* • *Louis Carillon & Fils* • *des Lambrays* (Clos du Cailleret) • *Leflaive* **B** • *Olivier Leflaive* • *Étienne Sauzet*

PULIGNY-MONTRACHET PREMIER CRU AOC

Premiers crus: *Le Cailleret* (or *Demoiselles*), Les Chalumeaux, Champ Canet, Champ Gain, Au Chanot, Clavaillon, Les Combettes, Ez Folatières, Les Folatières, La Garenne (or Sur la Garenne), Clos de la Garenne, Hameau de Blagny, La Jaquelotte, Clos des Meix, Clos de la Mouchère (or Les Perrières), Peux Bois, *Les Pucelles*, Les Referts, En la Richarde, Sous le Courthil, Sous le Puits, La Truffière.

RED I have never encountered any.

Pinot Noir, Pinot Gris, Pinot Liébault

WHITE A *premier cru* Puligny made by a top grower such as Étienne Sauzet is one of the most flavor-packed taste experiences you are likely to encounter.

Chardonnay, Pinot Blanc

7–15 years

✓ *Guy Amiot & Fils* • *Robert Ampeau* • *d'Auvenay* **B** • *Jean-Marc Boillot* • *Michel Bouzereau & Fils* (Les Champs Gains) • *Louis Carillon & Fils* • *Joseph Droubin* • *Louis Jadot* (La Garenne) • *Leflaive* **B** • *Lucien Lemoine* • *Martelet de Cherisey* • *Hubert de Montille* • *Marc Morey* • *Jacques Prieur* • *Étienne Sauzet*

PULIGNY-MONTRACHET-CÔTE DE BEAUNE AOC

Alternative appellation for red wines only. See Puligny-Montrachet AOC.

ST.-AUBIN AOC

This underrated village has many talented winemakers and is an excellent source for good-value wines.

RED Delicious, ripe but light, fragrant, and fruity red wines that quickly develop a taste of wild strawberries.

Pinot Noir, Pinot Gris, Pinot Liébault

4–8 years

WHITE Supervalued white wines—a sort of “Hautes-Côtes Montrachet”!

Chardonnay, Pinot Blanc

3–8 years

✓ *Jean-Claude Bachelet* • *Françoise & Denis Clair* • *Clerget* • *Marc Colin* • *Hubert Lamy & Fils*

ST.-AUBIN PREMIER CRU AOC

Premiers crus: Le Bas de Gamay à l'Est, Bas de Vermarain à l'Est, Les Castets, Les Champlots, Es Champs, Le Charmois, La Chatenière, Les Combes au Sud, Les Cortons, En Créot, Derrière chez Edouard, Derrière la Tour, Echaille, Les Fionnes, Sur Gamay, Marinot, En Montceau, Les Murgers des Dents de Chien, Les Perrières, Pitangeret, Le Puits, En la Ranché, En Remilly, Sous Roche Dumay, Sur le Sentier du Clou, Les Travers de Marinot, Vignes Moingeon, Le Village, En Vollon à l'Est.

The best of these *premiers crus* are Les Fionnes and Les Murgers des Dents de Chien, followed by La Chatenière, Les Castets, En Remilly, and Le Charmois.

RED Very appealing strawberry and oaky-vanilla wines that are delicious young, yet improve further with age.

Pinot Noir, Pinot Gris, Pinot Liébault

5–15 years

WHITE These dry wines are often superior to the village wines of Puligny-Montrachet and always much cheaper.

Chardonnay, Pinot Blanc

4–10 years

✓ *Guy Amiot & Fils* • *Jean-Claude Bachelet* • *Clerget* • *Marc Colin* • *Vincent Girardin* • *Hubert Lamy* • *Patrick Miolane* • *Bernard Morey* • *Marc Morey* • *Henri Prudbon & Fils* • *Gérard Thomas*

ST.-AUBIN-CÔTE DE BEAUNE AOC

Alternative appellation for red wines only. See St.-Aubin AOC.

ST.-ROMAIN AOC

A little village amid picturesque surroundings in the hills above Auxey-Duresses.

RED Good-value, medium-bodied, rustic reds that have a good, characterful flavor.

Pinot Noir, Pinot Gris, Pinot Liébault

4–8 years

WHITE Fresh and lively, light- to medium-bodied dry white wines of an honest Chardonnay style.

Chardonnay, Pinot Blanc

3–7 years

✓ *Ambroise Bertrand* • *de Chassorney* • *Joseph Droubin* • *Alain Gras* • *Thévenin-Montbélié*

ST.-ROMAIN-CÔTE DE BEAUNE AOC

Alternative appellation for red wines only. See St.-Romain AOC.

SANTENAY AOC

This most southerly village appellation of the Côte d'Or (but not of the Côte de Beaune) is a source of good-value burgundy.

RED These wines are fresh and frank, with a clean rendition of Pinot Noir fruit supported by a firm structure.

Pinot Noir, Pinot Gris, Pinot Liébault

7–15 years

WHITE Only 2 percent of Santenay is white, but some good buys can be found among the top growers.

Chardonnay, Pinot Blanc

4–8 years

✓ *Bernard Bachelet & Fils* • *Roger Belland* • *Françoise & Denis Clair* • *Vincent Girardin* • *Alain Gras* • *Prieur-Brunet*

SANTENAY PREMIER CRU AOC

Premiers crus: Beauregard, Le Chainey, La Comme, La Comme Dessus, Clos Faubard, Les Fourneaux, Grand Clos Rousseau, Les Gravières, La Maladière, Clos des Mouches, Passetemps, Petit Clos Rousseau, Clos de Tavannes.

The best are Clos de Tavannes, Les Gravières, La Maladière, and La Comme Dessus.

RED In the pure and frank mold of Pinot Noir wines, but with an added expression of *terroir*.

Pinot Noir, Pinot Gris, Pinot Liébault

6–15 years

WHITE Rarely encountered.

Chardonnay, Pinot Blanc

5–10 years

✓ *Roger Belland* • *Françoise & Denis Clair* • *Vincent Girardin* • *Alain Gras* (also sold as René Gras-Boisson) • *Lecquin-Colin* (Vieilles Vignes) • *Bernard Morey* • *Lucien Muzard & Fils* • *de la Pousse d'Or* • *Jean-Marc Vincent* (Beaurepaire, Passetemps)

SANTENAY- CÔTE DE BEAUNE AOC

Alternative appellation for red wine only. See Savigny-lès-Beaune AOC.

SAVIGNY-LÈS-BEAUNE AOC

This village has gifted winemakers producing very underrated and undervalued wines.

RED Delicious, easy-to-drink, medium-bodied wines that are very soft and Beaune-like in style.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 7–15 years

WHITE Some excellent dry wines with good concentration of flavor, a smooth texture and some finesse, but they are difficult to find.

🍷 Chardonnay, Pinot Blanc

🕒 4–10 years

✓ *Robert Ampeau • Simon Bize & Fils • Bouchard Père & Fils • Camus-Brochon • Philippe Delagrange (white) • Maurice Giboulot • Girard-Vollot • Pierre Guillemot • Lucien Jacob • Maréchal-Caillot • Parent • Jean-Marc Pavelot • du Prieuré • Rollin Père & Fils • Tollot-Beaut*

SAVIGNY-LÈS-BEAUNE PREMIER CRU AOC

Premiers crus: Aux Clous, Aux Fournaux, Aux Gravains, Aux Guettes, Aux Serpentières, Bas Marconnets, Basses Vergelesses, Clos la Bataillères (or Aux or Les Vergelesses), Champ Chevrey (or Aux Fournaux), Les Charnières, Hauts Jarrons, Les Hauts Marconnets, Les Jarrons (or La Dominode), Les Lavières, Les Narbantons, Petits Godeaux, Les Peuillets, Redrescut, Les Rouvrettes, Les Talmettes

RED These wines have a very elegant, soft, and stylish Pinot flavor that hints of strawberries, cherries, and violets. The best are: Les Lavières, La Dominode, Aux Vergelesses, Les Marconnets, and Aux Guettes.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 7–20 years

WHITE Domaine des Terregelesses produces a splendidly rich, dry Les Vergelesses.

🍷 Chardonnay, Pinot Blanc

🕒 5–15 years

✓ *Simon Bize & Fils • Bouchard Père & Fils • Camus-Brochon • Chandon de Briailles •*

Chanson Père & Fils • Bruno Clair • Maurice Ecard • François Gay & Fils • Machard de Gramont • A.-F. Gros (Clos des Guettes) • Louis Jadot • Leroy B • Albert Morot (La Bataillère aux Vergelesses) • Olivier Père & Fils (Les Peuillets) • Pavelot • des Terregelesses (Les Vergelesses) • Tollot-Beaut

SAVIGNY-LÈS-BEAUNE-CÔTE DE BEAUNE AOC

Alternative appellation for red wines only. See Savigny-lès-Beaune AOC.

VOLNAY AOC

Volnay ranks in performance with such great *crus* as Gevrey-Chambertin and Chambolle-Musigny. It is the most southerly red-wine-only appellation in the Côte d'Or, and the only great wine village located above its vineyards.

RED These wines are not cheap, but they are firm and well colored with more silky finesse than should be expected from a village appellation.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 6–15 years

✓ *Marquis d'Angerville • Michel Lafarge • Régis Rossignol*

VOLNAY PREMIER CRU AOC

Premiers crus: Les Angles, Les Aussy, La Barre, Bousse d'Or (or Clos de la Bousse d'Or), Les Brouillards, En Cailleret, Les Caillerets, Cailleret Dessus (part of which may be called Clos des 60 Ouvrées), Carelles Dessous, Carelle sous la Chapelle, Clos de la Caves de Ducs, En Champans, Chanlin, En Chevret, Clos de la Chapelle, Clos des Chênes (or Clos des Chânes), Clos de Ducs, Clos du Château des Ducs, Frémiets (or Clos de la Rougeotte), La Gigotte, Les Grands Champs, Lassolle, Les Lurets, Les Mitans, En l'Ormeau, Pitures Dessus, Pointes d'Angles, Robardelle, Le Ronceret, Taille Pieds, En Verseuil (or Clos du Verseuil), Le Village.

RED No *grands crus*, but its silky-smooth and fragrant *premiers crus* are great wines, showing

tremendous finesse. The best are: Clos des Chêne, Taille Pieds, Bousse d'Or, Clos de Ducs, the various *climats* of Cailleret, Clos des 60 Ouvrées, and En Champans.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 8–20 years

✓ *Marquis d'Angerville • Jean-Marc Boillot • Jean-Marc Bouley (Les Carelles) • Antonin Guyon • Louis Jadot • Michel Lafarge • Comte Lafon B • Olivier Leflaive • Leroy B • Hubert de Montille • Nicolas Potel • de la Pousse d'Or • Régis Rossignol*

VOLNAY-SANTENOTS PREMIER CRU AOC

This confusing appellation is in Meursault, not Volnay, although it does run up to the boundary of that village. It dates back to the 19th century, when the Meursault *lieu-dit* of Les Santenots du Milieu became famous for its red wines. White wines cannot be called Volnay-Santenots and must be sold as Meursault or, if produced from the two-thirds of this vineyard farthest from the Volnay border, they may be sold as Meursault Premier Cru AOC or Meursault-Santenots. The right to the Volnay-Santenots appellation was accorded by Tribunal at Beaune in 1924.

RED These wines, which are not often found, are similar to Volnay with good color and weight, but can lack its silky elegance.

🍷 Pinot Noir, Pinot Gris, Pinot Liébault

🕒 8–20 years

✓ *Robert Ampeau • Comte Lafon B • Leroy B • Matrot • François Mikulski • Jacques Prieur • Prieur-Brunet*

GRAND CRU VINEYARD CORTON CLOS DES VERGENNES

The tiny vineyard of Corton Clos des Vergennes is under single ownership and the wines are distributed by Moillard-Grirot.

THE CÔTE CHALONNAISE

This is a simple district in wine terms, with just five appellations, two exclusively white and three red or white. Despite the fact that many of the wines are little known, their quality in all appellations is very good, and the value for money is even better.

THE CÔTE CHALONNAISE, or Région de Mercurey, as it is sometimes called, was once the forgotten area of Burgundy, perceived as too serious for its own good. Because its flavorsome reds and buttery whites have more in common with the wines of the Côte de Beaune than elsewhere, merchants categorized them as inferior or pretentious. Perhaps the Côte Chalonnaise need not have been forgotten had merchants thought of it more as a superior Mâconnais than as an inferior Côte de Beaune. However, over the last 10 years, as merchants across the world have become more willing to seek out lesser-known wines, the area has built up a reputation as one of Burgundy's best sources of quality wines.

EXCELLENT NÉGOCIANTS

The Burgundy drinker is blessed with a fine choice of *négociants* in the Côte Chalonnaise, including Chandesais, Delorme, and Faiveley. There is a good *coopérative* at Buxy, and an increasing number of talented growers. This area produces fine Crémant de Bourgogne and, in Bouzeron, has the only single-village appellation of Aligoté wine.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
These three islands of vines are situated to the west of Chalon-sur-Saône, 217 miles (350 kilometers) southeast of Paris, between the Côte de Beaune in the north and the Mâconnais in the south.

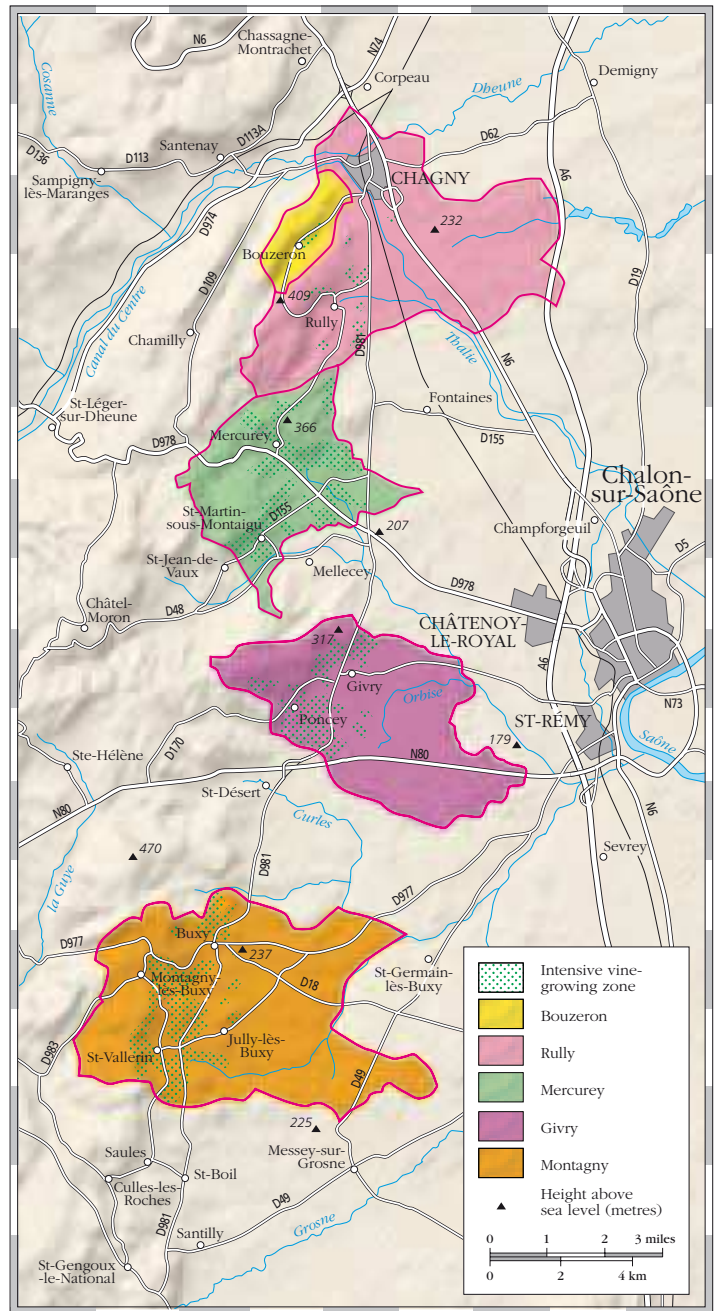

CLIMATE
Slightly drier than that of the Côte d'Or, with many of the best slopes protected from the worst ravages of frost and hail.

ASPECT
This is a disjointed district in which the great plateau of the Côte d'Or peters out into a complex chain of small hills with vines clinging to the most favorable slopes, at an altitude of between 750 and 1,050 feet (230 to 320 meters), in a far more sporadic fashion than those in the Côte d'Or.

SOIL
Limestone subsoil with clay-sand topsoils that are sometimes enriched with iron deposits. At Mercurey there are limestone ooliths mixed with iron-enriched marl.

VITICULTURE AND VINIFICATION
The wines are produced in an identical way to those of the Côte de Beaune, with no exceptional viticultural or vinification techniques involved, *see* p152.

GRAPE VARIETIES
Primary varieties: Pinot Noir, Chardonnay
Secondary varieties: Pinot Gris (syn. Pinot Beurot), Pinot Liébault, Pinot Blanc, Aligoté, Melon de Bourgogne, Gamay

THE CÔTE CHALONNAISE, *see also* p137
The vine-growing zones form three separate "islands" west of Chalon, between the Côte de Beaune to the north and the Mâconnais to the south.

THE APPELLATIONS OF THE CÔTE CHALONNAISE

BOURGOGNE CÔTE CHALONNAISE AOC

As from the 1990 vintage, basic Bourgogne made exclusively from grapes harvested in the region may bear this specific appellation.

RED A. & P. de Villaine's Digoine has outstanding fruit and finesse for such a modest appellation.

Only Michel Goubard's Mont-Avril comes close in richness, and can be truly excellent, but is not in the same class. Both are terrific value.

Pinot Noir, Pinot Liébault, Pinot Gris
1-3 years

WHITE Normally softer and fuller than a Mâcon, but not particularly rich in fruit, except for A. &

P. de Villaine's Clous, which is the best white wine in the appellation, and Venot's La Corvée, the number two.

Chardonnay, Pinot Blanc
Upon purchase

ROSÉ Seldom encountered and not special; no reason though why it should not be successful.

Pinot Noir, Pinot Liébault, Pinot Gris

Upon purchase

✓ *René Bourgeon • Caves de Buxy • André Delorme • Michel Derain • Michel Goubard (Mont Avril) • Guy Narjoux • Venot (La Corvée) • A. & P. de Villaine* ☉

BOURGOGNE CÔTES DU COUCHOIS AOC

Although the Côtes du Couchois extends across five communes (Dracy-Lès-Couches, Saint-Jean-de-Trézy, Saint-Maurice-Lès-Couches, Saint-Pierre-de-Vareennes, and Saint-Cernin-du-Plain) in addition to Couches itself, at just 50 acres (20 hectares) this appellation is nowhere near as large as the Côte Chalonnaise, which comprises 1,643 acres (665 hectares) of vines. The wines I have tasted (Domaine des Trois Monts, Bichot's Château de Dracy, and Serge Prost), although restricted in number and style (red only, although white and rosé are also permitted), have not been special.

BOUZERON AOC

In 1979 Bouzeron became the only *cru* to have its own appellation specifically for the Aligoté grape, as Bourgogne Aligoté Bouzeron AOC, and in 1998 achieved full village status.

WHITE This excellent and interesting dry wine is much the fullest version of Aligoté available. In weight, fruit, and spice its style is nearer to Pinot Gris than to Chardonnay. The Bouzeron produced by A. & P. de Villaine is a class apart.

Aligoté

1–5 years

✓ *Bougeot • Ancien Carnot (sold by Bouchard Père & Fils) • Chanzy Frères • André Delorme • A & P de Villaine* ☉

GIVRY AOC

Underrated wines from just south of Mercurey.

RED Light- to medium-bodied, soft, and fruity wine with delightful nuances of cherry and redcurrant.

Pinot Noir, Pinot Gris, Pinot Liébault

5–12 years

WHITE Just 10 percent of Givry is white—a deliciously clean, dry Chardonnay that can have an attractive spicy-buttery hint on the aftertaste.

Chardonnay, Pinot Blanc

3–8 years

✓ *René Bourgeon • Chofflet-Vaudenaire • Michel Derain • Didier Erker (En Chenèvre) • Mme du Jardin • Joblot • Louis Latour • François Lumpp • Parize Père & Fils (Champ Nalot) • Jean-Paul Ragot • R. Remoissenet & Fils • Baron Thénard*

GIVRY PREMIER CRU AOC

Premiers crus: Clos de la Barraude, Les Berges, Bois Chevaux, Bois Gauthier, Clos de Cellier aux Moines, Clos Charlé, Clos du Cras Long, Les Grandes Vignes, Grand Prétants, Clos Jus, Clos Marceaux, Marole, Petit Marole, Petit Prétants, Clos St.-Paul, Clos St.-Pierre, Clos Salomon, Clos de la Servoisine, Vaux, Clos du Vernoy, En Vignes Rouge, Le Vignon.

RED Best examples are medium bodied, soft, rich, and fruity with delightful nuances of cherry and redcurrant.

Pinot Noir, Pinot Gris, Pinot Liébault

5–12 years

WHITE Similar in character to Givry AOC, the

deliciously clean, dry Chardonnay can have an attractive spicy-buttery hint on the aftertaste.

Chardonnay, Pinot Blanc

3–8 years

✓ *René Bourgeon • Chofflet-Vaudenaire • Michel Derain • Mme du Jardin • Joblot • Louis Latour • François Lumpp • Parize & Fils • Jean-Paul Ragot • R. Remoissenet & Fils • Baron Thénard*

MERCUREY AOC

The wines of Mercurey, including the *premiers crus*, account for two-thirds of the production of the entire Côte Chalonnaise.

RED Medium-bodied wines with excellent color and fine varietal character that have an exceptional quality-for-price ratio.

Pinot Noir, Pinot Gris, Pinot Liébault

5–12 years

WHITE Dry wines that combine the lightness and freshness of the Mâconnais with some of the fatness and butteriness of the Côte de Beaune.

Pinot Chardonnay (*sic*)

3–8 years

✓ *Brintet (white Vieilles Vignes) • Château de Chamilly • Louis Desfontaine • Lorenzon • Antonin Rodet*

MERCUREY PREMIER CRU AOC

Premiers crus: La Bondue, Les Byots, La Cailloute, Champs Martins, La Chassière, Le Clos, Clos des Barraults, Clos Château de Montaigu, Clos l'Évêque, Clos des Myglands, Clos du Roi, Clos Tonnerre, Clos Voyens (or Les Voyens), Les Combins, Les Crêts, Les Croichots, Les Fourneaux (or Clos des Fourneaux), Grand Clos Fortoul, Les Grands Voyens, Griffères, Le Levrière, Le Marcilly (or Clos Marcilly), La Mission, Les Montaigus (or Clos des Montaigus), Les Nauges, Les Petits Voyens, Les Ruelles, Sazenay, Les Vasées, Les Velley.

RED These *premiers crus* have increased in number from 5 to 27 and in area from 37 to over 250 acres (15 to 100 hectares).

Pinot Noir, Pinot Gris, Pinot Liébault

5–15 years

WHITE I have encountered white Mercurey only at the basic village level.

✓ *Brintet • Faiveley • Jeannin-Nastet • Émile Juillot • Michel Juillot • Lorenzon • Guy Narjoux • François Raquillet • Antonin Rodet (Château de Chamirey)*

MONTAGNY AOC

As all the vineyards in this AOC are *premiers crus*, the only wines that appear under the basic village appellation are those that fail to meet the technical requirement of 11.5 percent alcohol before chaptalization.

WHITE These dry white wines are good-value, fuller versions of the white Mâcon type.

Chardonnay

3–10 years

✓ *Maurice Bertrand & François Juillot • Caves de Buxy • Faiveley • Louis Latour • Antonin Rodet*

MONTAGNY PREMIER CRU AOC

Premiers crus: Les Bassets, Les Beaux Champs, Les Bonnevaux, Les Bordes, Les Bouchots, Le Breuil, Les Burnins, Les Carlins,

Les Champs-Toiseau, Les Charmelottes, Les Chandits, Les Chazelles, Clos Chaudron, Le Choux, Les Clouzeaux, Les Coères, Les Combes, La Condemine, Cornevent, La Corvée, Les Coudrettes, Les Craboulettes, Les Crets, Creux des Beaux Champs, L'Épaule, Les Garchères, Les Gouresses, La Grand Pièce, Les Jardins, Les Las, Les Males, Les Marais, Les Marocs, Les Monts Cuchots, Le Mont Laurent, La Mouillère, Moulin l'Echenaud, Les Pandars, Les Pasquiers, Les Pidans, Les Platières, Les Resses, Les St.-Mortille, Les St-Ytages, Sous les Roches, Les Thilles, La Tillonne, Les Treufferes, Les Varignys, Le Vieux Château, Vignes Blanches, Vignes sur le Clou, Les Vignes Couland, Les Vignes Derrière, Les Vignes Dessous, La Vigne Devant, Vignes Longues, Vignes du Puits, Les Vignes St.-Pierre, Les Vignes du Soleil.

With every one of its 60 vineyards classified as *premier cru*, Montagny is unique among the villages of Burgundy.

WHITE These delicious dry wines have a Chardonnay flavor that is more akin to that of the Côte de Beaune than it is to Mâconnais.

Chardonnay

4–12 years

✓ *Stéphane Aladame • Arnoux Père & Fils • Caves de Buxy • Château de Davenay (white) • Maurice Bertrand & François Juillot • Château de la Saule • Jean Vachet*

RULLY AOC

The Côte Chalonnaise's northernmost appellation produces wines that are closest in character to those from the southern Côte de Beaune.

RED Delightfully fresh and fruity wines of light to medium body and some finesse which are uncomplicated when young but develop well.

Pinot Noir, Pinot Gris, Pinot Liébault

5–12 years

WHITE Serious dry wines that tend to have a crisper balance than wines made farther south in Montagny, although a few can be quite fat.

Chardonnay

3–8 years

✓ *Chanzy Frères • André Delorme • Joseph Droubin • Raymond Dureuil-Jantbial • de Folie • des Fromanges • Henri-Paul Jacqueson • de la Renard • Antonin Rodet (Château de Rully)*

RULLY PREMIER CRU AOC

Premiers crus: Agneux, Bas de Vauvry, La Bressaude, Champ-Clou, Chapitre, Clos du Chaigne, Clos St.-Jacques, Les Cloux (or Cloux), Ecloiseau, La Fosse, Grésigny, Margotey (or Margoté), Marissou, Meix-Caillet, Mont-Palais, Moulesne (or Molesme), Phillot, Les Pieres, Pillot, Préau, La Pucelle, Raboursay (or Rabourcé), Raclot, La Renarde, Vauvry.

RED Fine-quality, medium-bodied wines with a silky texture added to the summer-fruit flavor.

Pinot Noir, Pinot Gris, Pinot Liébault

5–15 years

WHITE Generally finer, fuller, and richer dry wines, many with excellent finesse.

Chardonnay

4–12 years

✓ *Belleville • Jean-Claude Brelière • Michel Briday • André Delorme • de Folie • Vincent Girardin • Henri-Paul Jacqueson • Laborde-Juillot • Albert Sounit*

THE MÂCONNAIS

The Mâconnais produces three times more white wine than the rest of Burgundy put together and, although it never quite matches the high quality achieved in the Côte d'Or; its best producers make the world's greatest-value pure Chardonnay wines.

THE MÂCONNAIS IS AN ANCIENT viticultural area that was renowned as long as 1,600 years ago when Ausonius, the Roman poet of St.-Émilion, mentioned its wines. Today, it makes sense to couple it with the Beaujolais because, while Chardonnay is the dominant white grape in both districts (as it is in the rest of Burgundy), the Gamay is the dominant black grape, which it is not elsewhere; this forms a link between the two. The Mâconnais can be seen as essentially a white-wine producing area, while the Beaujolais is almost entirely red.

MÂCON ROUGE—A RELIC OF THE PAST?

Although the Mâconnais is a white-wine district in essence, some 25 percent of the vines planted here are in fact Gamay; and a further 7.5 percent are Pinot Noir. The Gamay does not, however, perform very well on the limestone soils of the Mâconnais, and

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
Situated halfway between Lyon and Beaune, the vineyards of the Mâconnais adjoin those of the Côte Chalonnaise to the north and overlap with those of Beaujolais to the south.

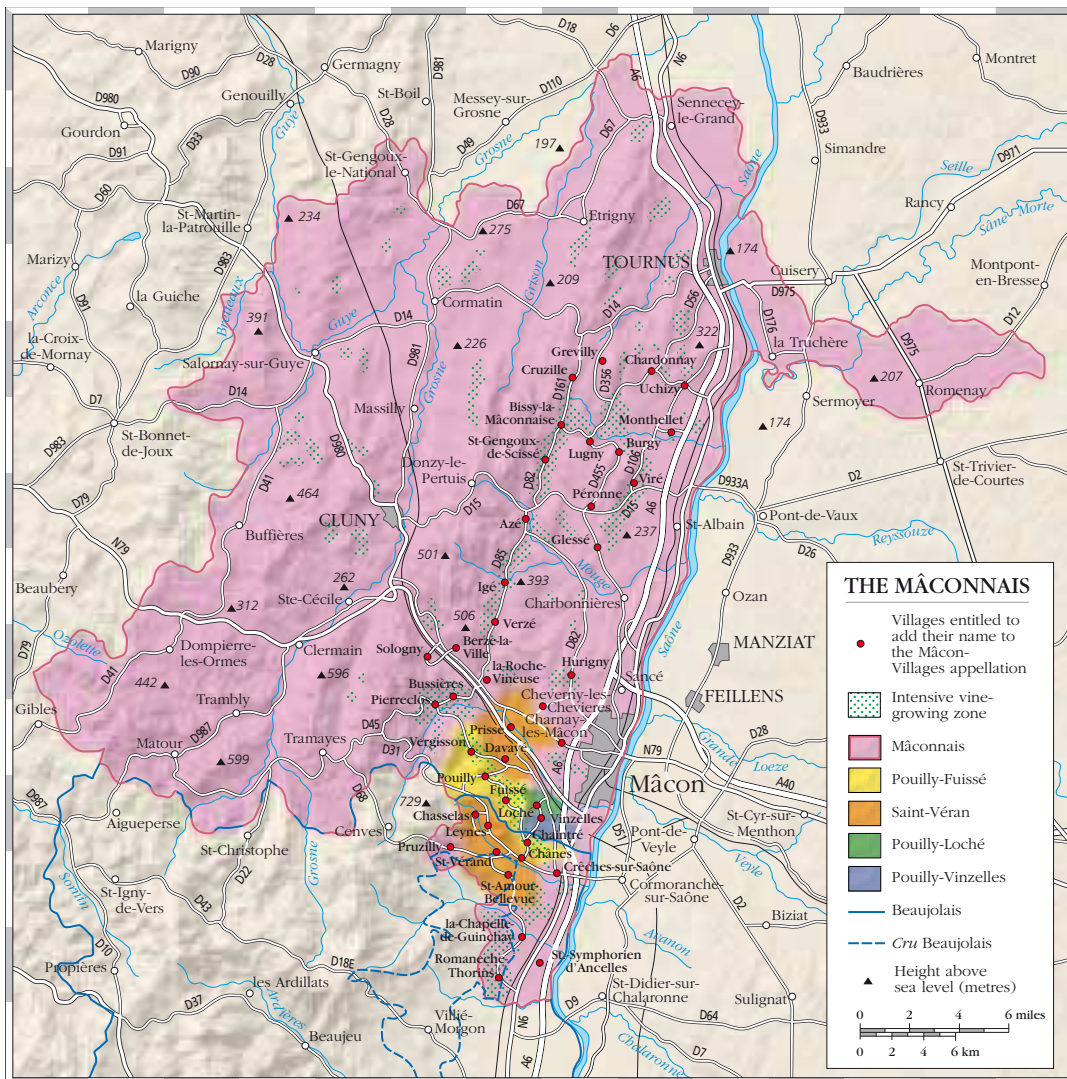

CLIMATE
The climate is similar to that of the Côte Chalonnaise, but with a Mediterranean influence gradually creeping in toward the south, so occasional storms are more likely.

ASPECT
The soft, rolling hills in the north of the Mâconnais, which are a continuation of those in the Côte Chalonnaise, give way to a more closely knit topography with steeper slopes and sharper contours becoming increasingly prominent as one travels farther south into the area that overlaps the Beaujolais.

SOIL
The topsoil consists of scree and alluvium, or clay and clay-sand, and covers a limestone subsoil.

VITICULTURE AND VINIFICATION
Some exceptional wines (such as the "Vieilles Vignes" Château de Fuissé made in Pouilly Fuissé) can stand a very heavy oak influence, but most of the white wines are fermented in stainless steel and bottled very early to retain as much freshness as possible. The red wines are vinified by *macération carbonique*, either fully or in part.

GRAPE VARIETIES
Primary varieties: Chardonnay, Gamay
Secondary varieties: Pinot Noir, Pinot Gris (*syn.* Pinot Beurot), Pinot Liébault, Pinot Blanc, Aligoté, Melon de Bourgogne

THE ROCK OF SOLUTRÉ
The dramatic shape of the Rock of Solutré towers over the village's vineyard. Solutré is one of the 42 villages of the Mâcon-Villages appellation, and a commune of Pouilly-Fuissé.

THE MÂCONNAIS
See also p137
Concentrated to the west of the river Saône, the famous appellations of the Mâconnais interlace with those of Beaujolais to the south and spread out over the area northwest of itself.

despite the smoothing effect of modern vinification techniques, these wines will always be of rustic quality with a characteristic hard edge. I well remember a blind tasting I once organized as editor of *The Sunday Telegraph Good Wine Guide*. All that the tasters knew was that the wines were produced from the Gamay grape and were thus most probably Beaujolais. British Master of Wine Christopher Tatham simply wrote “Limestone’s the trouble!” about one wine. It turned out to be the only non-Beaujolais wine; it was Mâcon Rouge, which meant that limestone was indeed the problem. Such an accurate observation under blind conditions highlights how inappropriate the Gamay is in the Mâconnais.

It is possible to make a pure Pinot Noir Mâcon *rouge*, but because the market assumes that this appellation is pure Gamay, there is little incentive for producers to plant the more noble grape. It is, however, far more suitable and capable of producing wines of some finesse in the limestone vineyards of the Mâconnais. Perhaps it is time to introduce a Mâcon Rouge Pinot Noir appellation, or maybe producers should print the grape variety boldly on the label of the existing appellation?

BERZÉ-LE-CHÂTEL, SAÔNE-ET-LOIRE, MÂCONNAIS
The massive fortifications of Berzé-le-Châtel, the seat of the first feudal barony of Mâcon, boast 13 medieval towers.

THE APPELLATIONS OF THE MÂCONNAIS

MÂCON AOC

Most wines from this district-wide appellation are produced in the area north of the Mâcon-Villages area.

RED Better vinification techniques have improved these essentially Gamay wines, but Gamay is still a grape that does not like limestone.

☞ Gamay, Pinot Noir, Pinot Gris

🕒 2–6 years

WHITE These are basic-quality Chardonnay wines that are also fresh, frank, tasty, and dry; easy to drink and superb value. They may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

☞ Chardonnay, Pinot Blanc

🕒 1–4 years

ROSÉ These lightweight wines have an attractive, pale raspberry color and light fruit flavor, and are more successful than their counterparts. They may be sold as *primeur* or *nouveau* from the third Thursday of November after the harvest.

☞ Gamay, Pinot Noir, Pinot Gris

🕒 1–3 years

✓ *Bénaux Frères* • *E. Brocard* (red) • *Desvignes* • *des Deux Roches* (Pierreclos red & Chavigne red) • *Maurice Gonon* (red) • *Guffens-Heynen* • *Jean Thévenet* • *Henri Lafarge* (Braye red) • *Saumaize-Michelin* (Les Bruyères red) • *Valette*

MÂCON SUPÉRIEUR AOC

All of France’s so-called “*Supérieur*” appellations merely demand extra alcohol (usually one degree more than the basic appellation), which does not necessarily make a superior wine.

RED Aside from those listed, these well-colored, medium-bodied wines are nothing special.

☞ Gamay, Pinot Noir, Pinot Gris

🕒 3–8 years

WHITE It is curious that almost a quarter of Mâcon Supérieur is white. The wines could just

as easily sell as Mâcon AOC plain and simple. These wines may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

☞ Chardonnay, Pinot Blanc

🕒 1–4 years

ROSÉ These are attractively colored wines with a fresh and tasty fruit flavor.

☞ Gamay, Pinot Noir, Pinot Gris

🕒 1–2 years

✓ *Paul Beaudet* (Terres Rouges) • *Père Tienne* (Elevé en Fût)

MÂCON-SUPÉRIEUR (VILLAGE NAME) AOC

See Mâcon (village name) AOC

MÂCON-VILLAGES AOC

This white-only appellation covers 41 villages, 8 of which also fall within the Beaujolais-Villages appellation (see p.167); four of these have the additional right to the Saint-Véran AOC (see p.164). If the wine comes from a single village, it may replace the “Villages” part of this appellation with the name of that specific village (see the list below for details of all 41 villages).

WHITE These are some of the world’s most delicious, thirst-quenching, easy-drinking, dry Chardonnay wines. They also represent tremendous value. These wines may be sold as *primeur* or *nouveau* commencing from the third Thursday of November following the harvest.

☞ Chardonnay, Pinot Blanc

🕒 1–4 years

✓ *Mâcon-Villages* (without a named village) *Gonon* • *René Michel* (Vieilles Vignes)

THE 41 VILLAGES OF MÂCON-VILLAGES

The single-village version of Mâcon-Villages AOC covers the white wines from 41 villages (originally 43 villages, but Mâcon-Clessé and Mâcon-Viré were replaced by Viré-Clessé in 1999, see Viré-Clessé AOC):

MÂCON-AZÉ AOC

This village has a good *coopérative*, and its wines a reputation for fatness and consistency.

✓ *Cave d’Azé* (Cuvée Jules Ricard) • *Georges Blanc* (d’Azenay) • *des Grand Bruyères* • *Duvergey-Taboureau* (de la Garonne)

MÂCON-BERZÉ-LE-CHÂTEL AOC

The only wine I have tasted here has been Paul Beaudet’s Château de Berzé.

MÂCON-BERZÉ-LE-VILLE AOC

I have not encountered these wines.

MÂCON-BISSY-LA-MÂCONNAISE AOC

Rijckaert’s delicious wine is the only Mâcon-Bissy-La-Mâconnaise I have encountered.

✓ *Jean Rijckaert*

MÂCON-BURGY AOC

I have very rarely encountered these wines, but elegant examples from de Chervin demonstrate its potential.

✓ *de Chervin* • *Verget*

MÂCON-BUSIÈRES AOC

Rarely encountered.

✓ *du Terroir de Jocelyn*

MÂCON-CHARENTRE AOC

Chaintre is home to Georges Duboeuf’s older brother, Roger. Since this village is one of five that form the appellation of Pouilly-Fuissé, its wines are entitled to two appellations.

✓ *Cave Coopérative de Chaintre* • *Roger Duboeuf* • *des Granges* • *Valette*

MÂCON-CHÂNES AOC

This village is also part of the Beaujolais-Villages and Saint-Véran areas, so its wines have a choice of three appellations.

✓ *de Lalande* (Les Serraudières)

MÂCON-LA CHAPELLE- DE-GUINCHAY AOC

This village is also part of the Beaujolais-Villages area and its wines therefore have the right to both appellations.

MÂCON-CHARDONNAY AOC

These wines have a certain following due in part, no doubt, to the novelty of their name. The *coopérative*, however, produces fine wines.
✓ *Cave de Lugny* (L'Original)

MÂCON-CHARNAY- LÈS-MÂCON AOC

Excellent wines produced east of Pouilly-Fuissé.
✓ *E. Chevalier & Fils* • *Jean Manciat* • *Manciat-Poncet* • *Didier Tripoz* (Clos des Tourmons)

MÂCON-CHASSELAS AOC

Unfortunately, Chasselas is also the name of a table grape known for producing inferior wines, thus growers here usually sell their wines as basic Mâcon or as Saint-Véran. The only Mâcon-Chasselas I have come across was a decent, but not special red wine from Château de Chasselas.

MÂCON-CHEVAGNY- LÈS-CHEVRIÈRES AOC

Reasonable wines, but not easy to find.
✓ *Groupelement de Producteurs de Prissé*

MÂCON-CLESSÉ AOC

This appellation lapsed as of 2002. See Viré-Clessé AOC.

MÂCON-CRÈCHES- SUR-SAÔNE AOC

I have not encountered these wines.

MÂCON-CRUZILLE AOC

These are rare wines from a tiny hamlet in the extreme north of the *villages* appellation area.
✓ *Demessy* (Château de Messy) • *Guillot-Broux* **B**

MÂCON-DAVAYÉ AOC

Some excellent wines are made here, although they are usually sold as Saint-Véran AOC.
✓ *des Deux Roches* • *Lycée Viticole de Davayé*

MÂCON-FUISSÉ AOC

This village is one of five communes that form Pouilly-Fuissé AOC.
✓ *Cordier* • *de Fussiacus* • *Yves Giroux* • *Le Moulin du Pont* • *La Soufrandise* • *Jean-Paul Thibert*

MÂCON-GRÉVILLY AOC

A village with a good reputation, Mâcon-Grévilly is located in the extreme north of the

villages appellation area.

✓ *Guillot-Broux* **B**

MÂCON-HURIGNY AOC

I have not encountered these wines.

MÂCON-IGÉ AOC

The wines from this village are not very often seen, but have a good reputation.
✓ *Les Vignerons d'Igé*

MÂCON-LEYNES AOC

This village is also part of the Beaujolais-Villages and Saint-Véran AOCs and its wines therefore have a choice of all three appellations.
✓ *André Depardon*

MÂCON-LOCHÉ AOC

This village also has the right to the Pouilly-Loché and Pouilly-Vinzelles AOCs, and its wines therefore have a choice of all three appellations.
✓ *Caves des Grands Crus Blancs* • *Château de Loché*

MÂCON-LUGNY AOC

Louis Latour has done much to promote the wines of this village.
✓ *Louis Latour* • *Cave de Lugny* • *du Prieuré*

MÂCON-MILLY-LAMARTINE AOC

Dominique Lafon makes a delicious Milly-Lamartine, particularly from the Clos du Four.
✓ *Comte Lafon* **B**

MÂCON-MONTBELLET AOC

Rarely encountered wines that develop well after a couple of years in bottle.
✓ *Henri Goyard* (de Roally) • *Jean Rijckaert* (En Pottes Vieilles Vignes)

MÂCON-PÉRONNE AOC

These wines seem to be fuller on the nose and stronger on the palate than those of most villages, but with less charm, although their producers say this is because they take longer than most Mâcon to "come around."
✓ *Maurice Josserand* • *de Lanques* (Les Berthelots) • *des Légères* • *Cave de Lugny* • *du Mortier* • *Daniel Rousset*

MÂCON-PIERRECLOS AOC

Guffens-Heynen is by far the best producer here.
✓ *Guffens-Heynen* • *Henri de Villamont*

MÂCON-PRISSÉ AOC

This village is also part of the Saint-Véran area and its wines therefore have a choice of two appellations.
✓ *Groupelement de Producteurs de Prissé* • *de Thibert Père & Fils*

MÂCON-PRUZILLY AOC

This village is situated in the Beaujolais-Villages area and its wines therefore have a choice of two appellations.

MÂCON-LA ROCHE VINEUSE AOC

These underrated wines of Mâcon-La Roche Vineuse are produced on west- and south-facing slopes north of Pouilly-Fuissé, the potential of which is pushed to the very limits by Olivier

Merlin, one of Mâcon's greatest winemakers.

✓ *Olivier Merlin* • *Groupelement de Producteurs de Prissé* • *Verget*

MÂCON-ROMANÈCHE-THORINS AOC

The village of Mâcon-Romanèche-Thorins is also part of the Beaujolais-Villages area, so its wines have a choice of two appellations. Most of its production is red.

MÂCON-SOLOGNY AOC

The village of Mâcon-Sologny lies just north of Pouilly-Fuissé AOC and produces a fresh, crisp, herbaceous wine.
✓ *Ets Bertrand* • *Cave de Sologny*

MÂCON-SOLUTRÉ AOC

This village is one of the five communes of Pouilly-Fuissé and also forms part of the Saint-Véran area. Its wines therefore have a choice of three appellations.
✓ *André Depardon* • *Jean-Michel & Béatrice Droubin* • *Chantal & Dominique Vaupré*

MÂCON-ST-AMOUR- BELLEVUE AOC

Mâcon-St-Amour Bellevue is a village famous for its *cru* Beaujolais St-Amour and also forms part of the Beaujolais-Villages and Saint-Véran areas. Some of its vineyards therefore have a choice of four appellations and this one is the least appealing.

MÂCON-ST-GENGOUX- DE-SCISSÉ AOC

I have not encountered these wines.

MÂCON-ST-SYMPHORIEN- D'ANCELLES AOC

As Mâcon-St-Symphorien-d'Anceles is also part of the Beaujolais-Villages area, its wines therefore have the advantage of a choice between two appellations.

MÂCON-ST-VÉRAND AOC

This village is in an area that is also part of the Beaujolais-Villages and the similarly spelled Saint-Véran areas and its wines therefore have a choice of all three appellations.

MÂCON-UCHIZY AOC

More commonly seen than a few years ago, the wines from this village, which is adjacent to Chardonnay, are usually of a good, thirst-quenching quality.
✓ *Raphaël et Gard Sallet* (Clos des Ravières) • *Paul & Philebert Talmard*

MÂCON-VERGISSON AOC

This village of Mâcon-Vergisson is one of five communes that form the Pouilly-Fuissé AOC. Its wines are richer than most, and can be aged a few years in bottle.
✓ *Daniel Barraut* • *Michel Forest* • *Verget*

MÂCON-VERZÉ AOC

Rarely encountered.
✓ *du Clos Gandin*

MÂCON-VINZELLES AOC

This village also has the right to Pouilly-Vinzelles AOC and its wines therefore have a choice of two appellations.
✓ *Caves des Crus Blancs*

MÂCON-VIRÉ AOC

This appellation is due to lapse as of 2002. See Viré-Clessé AOC.

MÂCON (VILLAGE NAME) AOC

This appellation differs from the Mâcon-Villages AOC above (which may attach a village name and has to be white) in that it covers a slightly larger range of villages, the names of which must (rather than may) be indicated on the label, and it applies only to red and rosé wines. In addition to 41 villages listed under the white-only Mâcon-Villages appellation, the full list for this sister AOC also includes Boyer, Bray, Bresse sur Grosne, Champagny-sous-Uxelles, Champlieu, Etrigny, Jugy, Laives, Mancey, Montceaux-Ragny, Nanton, Sennecey-le-Grand, and Vers.

RED There is some indication that a few villages (or more accurately, individual growers with isolated plots of vines growing in favorable soils within a few villages) can make better-balanced wines than the Gamay has hitherto been expected to produce in Mâcon.

☞ Gamay, Pinot Noir, Pinot Gris

ROSÉ I have not encountered these wines.

☞ Gamay, Pinot Noir, Pinot Gris

✓ *Jean-Michel Combié* (Serrières) • *Henri Lafarge* (Bray) • *Thierry Morot* (Pierreclos Vieilles Vignes) • *Jean-Claude Thevenet* (Quintaine)

PINOT CHARDONNAY-MÂCON AOC

This is an alternative appellation for white Mâcon. See Mâcon AOC.

POUILLY-FUISSÉ AOC

This pure Chardonnay wine should not be confused with Pouilly-Fumé, the Sauvignon Blanc wine from the Loire. This appellation covers a wide area of prime vineyards, but there is considerable variation.

WHITE These dry wines range from typical Mâcon *blanc* style, through slightly firmer versions, to the power-packed, rich oaky flavors of Michel Forest and Vincent's Château Fuissé Vieilles Vignes. Although these last two are widely regarded as the finest in Pouilly-Fuissé, they are by no means typical of Mâcon, leaning more toward the Côte Chalonnaise, sometimes even the Côte de Beaune, and ardent admirers of the more traditional, light, and fluffy Mâcon will not even touch them. On the other hand, wines from producers such as Guffens-Heynen can be just as rich and intense as either Forest or Château Fuissé, but without any oak whatsoever.

☞ Chardonnay

☞ 3–8 years

✓ *Daniel et Martine Barraud* • *Cordier* •

VILLAGE OF FUISSÉ SURROUNDED BY ITS VINEYARDS

Fuissé, which dates back to Neanderthal settlements, sits at the center of an amphitheater of vineyards.

Nadine Ferrand (Prestige) • *Des Gerbeaux* (Cuvée Jacques Charvet) • *Guffens-Heynen* • *Jeandeau* (Terre Jeanduc) • *Roger Lassarat* • *Pascal Rollet* (Clos de la Chapelle) • *Jean Rijckaert* • *Thibert Père & Fils* (Vignes de la Cote) • *Pierre Vessigaud* (Vieilles Vignes) • *Valette* • *Vergé* • *Vincent & Fils* (Château de Fuissé Vieilles Vignes)

POUILLY-LOCHÉ AOC

One of Pouilly-Fuissé's two satellite appellations.

WHITE This village may produce Mâcon-Loché AOC, Pouilly-Loché AOC, or Pouilly-Vinzelles AOC. The dry wines of this village are more of the Mâcon style, whatever the AOC.

☞ Chardonnay

☞ 1–4 years

✓ *Louis Jadot* (Château de Loché) • *Cordier*

POUILLY-VINZELLES AOC

One of Pouilly-Fuissé's two satellite appellations.

WHITE More the Mâcon-type of Pouilly-Fuissé, for similar reasons to those of Pouilly-Loché.

☞ Chardonnay

☞ 1–4 years

✓ *La Soufrandière* (X Taste) • *Thibert Père & Fils* (aka Thibert-Parisse) • *Valette*

SAINT-VÉRAND AOC

This appellation overlaps the Mâconnais and Beaujolais districts, and is itself bisected by the Pouilly-Fuissé AOC, with two villages to the north (Davayé and Prissé) and five to the south (Chânes, Chasselas, Leynes, Saint-Amour, and Saint-Vérand). Saint-Vérand was named after Saint-Vérand, but the "d" was dropped in deference to the growers in certain other villages, who it was feared would not support the new appellation if they felt their wines were

being sold under the name of another village. This appellation was introduced in 1971 to provide a more suitable outlet for white wines produced in Beaujolais than the Beaujolais Blanc appellation.

WHITE Excellent value, fresh, dry, and fruity Chardonnay wines that are very much in the Mâcon-Villages style. Vincent, the proprietor of Château Fuissé, produces an amazingly rich wine that is far closer to Pouilly-Fuissé than to Mâcon-Villages, with hints of oak and honey.

☞ Chardonnay

☞ 1–4 years

✓ *Daniel et Martine Barraud* • *Cordier* • *Pierre Janny* • *Roger Lassarat* • *Michel Paquet* (Cuvée Hors Class) • *Jean Rijckaert* • *Vergé*

VIRÉ-CLESSÉ AOC

This appellation was created in February 1999, by combining the Mâcon-Viré and Mâcon-Clessé subappellations, and recognizing the wines from Viré-Clessé in their own right, above and beyond those of Mâcon-Villages. The appellation was retrospectively applied to the 1998 vintage, but producers could continue using either of the original two AOCs up to and including the 2002 vintage. Viré was always the most ubiquitous of the Mâcon-Villages wines, but it was also the most consistent and one of the best, while Clessé showed the most finesse. The regulations are slightly stricter in terms of yield, with an increased minimum natural sugar content for wines bearing a *lieu-dit* name.

☞ Chardonnay

☞ 1–4 years

✓ All those recommended under Mâcon-Viré and Mâcon-Clessé are potential recommendations here, but those that have actually excelled are: *André Bonhomme* • *Jean Rijckaert* (L'Épinet) • *La Soufrandière* (Les Plantes) • *Jean Thévenet* • *Vergé* (Vieilles Vignes) • *Cave de Viré* (Cuvée Spéciale)

THE BEAUJOLAIS

This huge district is famous for producing the only Gamay wine to gain classic status—a purple-colored, fresh, light, and quaffing wine that accounts for almost half of all the Burgundy produced each year.

THE BEST PRODUCERS in the 10 *crus* Beaujolais make a Gamay wine that truly deserves its classic status. Basic Beaujolais, however, should be simply fresh, purple-colored, juicy-fruit wine. The problem is that most Beaujolais falls short of even these basic standards: the majority of it, including bad *cru* Beaujolais, smells of bubble gum or bananas and tastes of pear drops. The trade calls it “lollipop” wine and it is ideal for anyone who does not actually enjoy the characteristics of real wine.

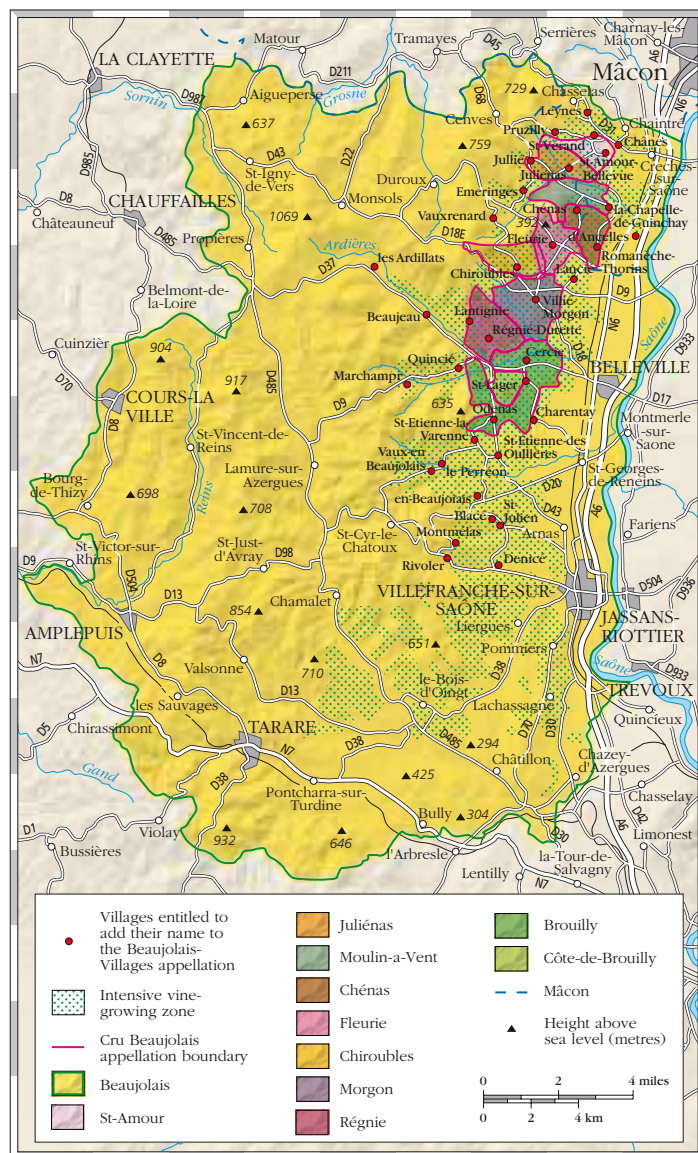

The factors that make most Beaujolais the lollipop wine it is are the method of vinification and the sheer volume of production—the grape variety has nothing to do with it. A massive amount of Beaujolais is produced each year: two-and-a-

HARVESTING IN FLEURIE

To encourage semicarbonsic maceration, the Gamay grapes must arrive at the cuverie in whole bunches, on their stalks, and as uncrushed as possible.

half times the entire red- and white-wine production of the rest of Burgundy put together! More than half is sold only a few weeks after the harvest as Beaujolais Nouveau or Primeur and all of this, plus a great chunk of Beaujolais, Beaujolais Supérieur, and Beaujolais-Villages, not to mention rip-off *cru* Beaujolais, is made by semicarbonsic maceration (a variant of *macération carbonique*, see p.00), which creates a preponderance of the same chemical compounds (amyl acetate and ethyl acetate) that give bubble gum, bananas, and pear drops their trademark aroma. This process also creates the pungent aroma of nail polish, of which some of the worst Beaujolais Nouveau can smell, although I

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
Beaujolais, the most southerly of Burgundy's districts, is located in the Rhône *département*, 250 miles (400 kilometers) southeast of Paris.

CLIMATE
Beaujolais has an essentially sunny climate tempered by the Atlantic and Mediterranean, as well as by continental influences. Although the annual rainfall and temperature averages are ideal for winegrowing, they are subject to sudden stormy changes due to the influence of the Mediterranean.

ASPECT
A hilly district where vines grow at between 500 and 2,000 feet (150 to 550 meters) on slopes facing all points of the compass.

SOIL
The northern Beaujolais, which encompasses the famous *crus* and those communes entitled to the Beaujolais-Villages AOC, is an area renowned for its granite-based soil, the only type on which the Gamay has so far excelled. The topsoils are often schistous or comprised of decomposed granite mixed with

sand and clay. The southern section is essentially limestone-based and this is a problem for the Gamay grape, which accordingly produces much lighter wines, which lack the class of those in the north.

VITICULTURE AND VINIFICATION
The vines are trained and pruned to the Gobelet system (see p.00), which gives them a totally different appearance from those in the rest of Burgundy. Grapes are hand-harvested and undergo whole-bunch fermentation by semicarbonsic maceration, which encourages the accumulation of carbon dioxide in the top half of the vat, although *cru* Beaujolais are more traditionally produced, have greater skin contact (around seven days as opposed to just two days for Beaujolais Nouveau), and may be matured with some new oak.

GRAPE VARIETIES
Primary varieties: Gamay
Secondary varieties: Chardonnay, Pinot Noir, Pinot Gris (*syn.* Pinot Beurot), Pinot Liébault, Pinot Blanc, Aligoté, Melon de Bourgogne

THE BEAUJOLAIS, see also p137

Forming the southernmost part of the Burgundy region, the Beaujolais area is planted almost entirely with Gamay vines, the best vineyards being on granite soil.

THE LEGEND OF “PISSE VIEILLE”

The vineyard of Pisse Vieille in Brouilly amuses English-speaking consumers, who are dismayed by those writers who dare only to print the vineyard's story in French. It goes like this:

One day, an old woman called Mariette went to confession. The priest was new to the village and unaware of its dialect. He also did not know that Mariette was hard of hearing. When he heard her confession, he merely said “Allez! Et ne péchez plus!” (“Go! And do not sin again!”). Mariette misheard this as “Allez! Et ne piché plus!”—which in the dialect meant “Go! And do not piss again!” (*piché* being the local form of *pisser*). Being a devout Catholic, Mariette did exactly as she was told. When her husband asked what terrible sin she had committed she refused to tell and, after several days, he went to ask the new priest. When he found out the truth he hurried home, and as soon as he was within shouting distance, began yelling “Pisse, vieille!” (“Piss, old woman!”).

hasten to add that it is not harmful. The amount of antipathy, even in Burgundy, to this style of Gamay is revealed by Anthony Hanson, who, in his book *Burgundy*, quotes Jean-Marie Guffens as describing the fermentation method used in much Beaujolais as “carbonic masturbation.”

The profit generated by Beaujolais Nouveau is considerable, but the wine itself should not be taken too seriously by anyone. No producer of Beaujolais Nouveau claims it is a fine wine. Such a claim would destroy the carefully marketed image of a young, unpretentious wine intended to be consumed in copious quantities. Beaujolais Nouveau should be fun and used to promote a greater awareness of wine *per se*, just as Liebfraumilch can attract new wine drinkers, although readers should be aware that these “lollipop” wines are not good-quality Gamay, whereas the best *crus* of Beaujolais are the world's greatest Gamay wines.

VIN DE MERDE OR “THE SHIT WINE CASE”

After 1,100,000 cases (100,000 hectoliters) of Beaujolais had to be distilled in 2001, a French wine critic by the name of François Mauss claimed in *Lyon Mag*, a small French magazine, that poor-quality Beaujolais of this ilk was “not proper wine, but rather a sort of lightly fermented and alcoholic fruit juice.” No wonder they could not sell it. Mauss blamed the need for distillation on the craze for Beaujolais Nouveau, which is rushed to market barely two months after the harvest. Beaujolais producers, he claimed, had ignored all warning signs that consumers were no longer willing to buy such wine, which he branded as *vin de merde* or “shit wine,” and the proverbial hit the fan.

Even though this description was not the assessment of *Lyon Mag per se*, but a quote from someone being interviewed, and despite the fact that the publication balanced these comments with those of a Beaujolais representative defending the wine, an association of 56 Beaujolais cooperative producers decided to sue the magazine, not for libel, but under a rarely used French law that protects products from being denigrated. A cynic might ask why these producers did not feel able to sue for libel, but even more disturbing is the fact that a modern-day court in a supposedly civilized society could actually find what this magazine published to be illegal in any way. But it did, and more disturbingly, the court (in Villefranche-sur-Saône, the heart of Beaujolais country) considered this quote to be so serious a wrongdoing that it ordered *Lyon Mag* to pay \$350,000, which for such a small, employee-owned publication would have put it out of business. On appeal, this was reduced to \$113,000 and, after a backlash of bad publicity around the world, the Beaujolais cooperatives decided not to pursue any damages, just their costs, which amounted to \$2,800.

At the time of writing, *Lyon Mag* was planning to appeal on a point of principle, and was intent on taking it all the way to the European Court of Human Rights if necessary. If the association of 56 cooperative producers started this case to protect the reputation of Beaujolais Nouveau, it clearly achieved the opposite result, since its reputation has been dealt a more severe blow by the worldwide coverage of “The Shit Wine Case.” If the cooperatives don't like wine critics describing Beaujolais Nouveau as crap, they should make it delicious and fruity to drink. Is that too much to ask?

THE APPELLATIONS OF THE BEAUJOLAIS

BEAUJOLAIS AOC

This generic Beaujolais appellation accounts for half the wine produced in the district and more than half of this is sold as Beaujolais “Primeur.” The basic quality of these wines means that they cannot be bought from the great *négociants* of the Côte d'Or, although *cru* Beaujolais can be.

RED Due to their method of vinification, most of these wines have a “pear-drop” character to their fruitiness. The best also have a delightful freshness and frankness that beg for the wine to be consumed in large quantities.

☞ Gamay, Pinot Noir, Pinot Gris

🕒 1–3 years

WHITE Less than half of one percent of the production of this basic appellation consists of dry white wine, and the specialized producers of this usually make very fine wines. Pierre Charmet's Beaujolais *blanc* is aromatic and peachy.

☞ Chardonnay, Aligoté

🕒 1–3 years

ROSÉ Fresh, “pretty,” and fruity.

☞ Gamay, Pinot Noir, Pinot Gris

🕒 1–3 years

✓ *Jean-Paul Brun* (Terres Dorées) • *Jean-Jacques Martin* (white) • *Cave Sain-Bel* (Les Bruyères) • *Cave Saint-Vérand* (Vieilles Vignes) • *Terres Morel* • *Vissoux* (Traditionnelle)

BEAUJOLAIS NOUVEAU AOC

See Beaujolais Primeur AOC

BEAUJOLAIS PRIMEUR AOC

More than half of all the Beaujolais produced is sold as *vin de primeur*, a wine made by intensive semicarbonic maceration methods that enable it to be consumed in export markets from the third Thursday of each November. “Beaujolais Nouveau” is synonymous with “Beaujolais Primeur” and the former is the name more often seen on export market labels, while the latter is more popular on the French market itself. Beaujolais Nouveau is supposed to be a fun wine, but the merrymaking wears a bit thin when it smells like nail polish and tastes of bubble gum. What else can you expect from something that was swinging from the vine just a few weeks before? “Lollipop” wine is how it is known in the trade. There is no such thing as good-quality Beaujolais Nouveau, and that is “official.” While organizing tastings for the preparation of the 2005 revised edition of this book, the Union Interprofessionnelle des Vins du Beaujolais (UIVB) conveyed to me that it was eager to assist. One of the challenges I gave the UIVB was to show me, if such wines existed, a serious-quality Beaujolais Nouveau from a producer with a successful track record with this style, rather than the exception. Of all the wines the UIVB submitted for my

consideration, there was not one Beaujolais Nouveau or Primeur. It was not as if it were bad timing, as the UIVB had the 2003 vintage to choose from, and that was supposed one of the best vintages ever for *nouveau*. The only conclusion I can draw is that even the local authorities consider that there is no such thing as good-quality Beaujolais Nouveau. This regulations for this AOC should be totally overhauled, or it should be banned altogether. If the regulations are overhauled, then the one thing that must be tackled above everything else is the method of production. With today's technology, there are numerous ways to make a serious-quality red wine drinkable within weeks without inducing the pear-drop aroma of full-scale carbonic maceration. As one of several tools, carbonic maceration can have a positive effect, but its use has to be restricted to no more than 10 to 20 percent of the wine, so that the grape is allowed to express itself (many consumers unwittingly believe that pear drops are the varietal aroma of Gamay!). If the authorities and, ultimately, producers are not willing to take this on, then Beaujolais Nouveau will continue being a joke, and not a very funny one at that. For real Beaujolais and great Gamay, then readers must be prepared to pay for the wines recommended under any of the other appellations.

BEAUJOLAIS SUPÉRIEUR AOC

Only 1 percent of all Beaujolais wines carry this appellation. It is very rare to find a

Beaujolais Supérieur that is superior in anything other than strength to basic Beaujolais AOC, since this appellation merely indicates that the wines contain an extra 1 percent alcohol. Red and rosé Beaujolais Supérieur may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

RED By no means superior to Beaujolais AOC—buy basic Beaujolais for fun or *cru* Beaujolais for more serious drinking.

☼ Gamay, Pinot Noir, Pinot Gris

🕒 3–8 years

WHITE Barely 5 percent of this tiny appellation produces white wine. Fine as it may be, it has no intrinsic superiority over the quaffing quality of basic Beaujolais *blanc*.

☼ Chardonnay, Aligoté

🕒 1–3 years

ROSÉ I have not encountered any pink versions of this appellation.

✓ *Cave Beaujolais du Bois-d'Oingt* • *Cave Saint-Vérand*

BEAUJOLAIS-VILLAGES AOC

The 38 villages that may add their names to the Beaujolais AOC (*see* Beaujolais [village name] AOC) also have the right to this appellation and must use it if the wine is a blend of wines from two or more villages.

RED If you find a good example, these wines are well coloured with a rich Gamay flavor and should have all the superiority that Beaujolais Supérieur wines mysteriously lack.

☼ Gamay, Pinot Noir, Pinot Gris

🕒 3–8 years

WHITE Very little encountered, but more Villages *blanc* is produced than Beaujolais *blanc*. These wines may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

☼ Chardonnay, Aligoté

🕒 1–3 years

ROSÉ Seldom encountered, but the Cave Beaujolais du Bois-d'Oingt makes an attractive wine. These wines may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

☼ Gamay, Pinot Noir, Pinot Gris

🕒 1–3 years

✓ *Accoeur* • *Philippe Deschamps* • *des Duc* • *Stephane Gardette* • *Jean-Claude Lapalu* (Vieilles Vignes) • *Manoir du Pavé* • *Sermezy* • *Michel Tête* (Clos du Fief)

BEAUJOLAIS (VILLAGE NAME) AOC

Of the 38 villages that may add their names to this appellation, very few do. One reason is that all or part of 15 of these villages (asterisked below) qualify for one of the superior *cru* Beaujolais appellations and it makes no sense to use a less famous name to market the wines. Another is that eight of the villages are entitled to the Mâcon-Villages AOC (marked "M") and four of these are also within the St.-Véran AOC (*see also* p.164), marked "S.-V.," which overlaps with Mâconnais and Beaujolais; some of these villages, of course, produce more white wine than red. These village names are also underexploited because,

apart from a few that are famous (the best wines of which will claim *cru* Beaujolais status), the rest are either unknown or more suggestive of Mâcon than Beaujolais, thus it is easier to sell them as nothing more specific than Beaujolais-Villages. The wines may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

The following is a complete list of villages that may use the appellation: Arbussonnas; Les Ardillats; Beaujeu; Blacé; Cercié*; Chânes (M., S.-V.); La Chapelle-de-Guinchay* (M.); Charentay; Chénas; Chiroubles*; Denicé; Durette; Emeringes*; Fleurie*; Jullié*; Juliéna*; Lancié; Lantignié; Leynes (M., S.-V.); Marchamp; Montmelas; Odenas; Le Perréon; Pruzilly* (M.); Quincié*; Régnié*; Rivolet; Romanèche-Thorins* (M); St-Amour-Bellevue* (M., S.-V.); St.-Étienne-des-Ouillères; St.-Étienne-la Varenne*; St.-Julien; St.-Lager; St.-Symphorien-d'Ancelles (M.); St.-Vérand (M., S.-V.); Salles; Vaux; Vauxrenard; Villié-Morgon*

RED When you find good examples, they should be richly flavored Gamay wines that are similar in quality to nonspecific Beaujolais-Villages, but with more personality.

☼ Gamay, Pinot Noir, Pinot Gris

🕒 3–8 years

WHITE I have rarely encountered these wines.

☼ Chardonnay, Aligoté

🕒 1–3 years

ROSÉ Rarely encountered, and uninspiring when they are.

☼ Gamay, Pinot Noir, Pinot Gris

🕒 1–3 years

BROUILLY AOC

Cru Beaujolais

The largest and most southerly of the 10 *cru* villages, this is the only one, with Côte de Brouilly, to permit grapes other than Gamay.

RED Most Brouilly are serious wines, even if they do not rank among the best *cru* Beaujolais. They are not quite as intense as Côte de Brouilly wines, but they are full, fruity, and supple, if a little earthy. They should be rich and can be quite tannic.

☼ Gamay, Chardonnay, Aligoté, Melon de Bourgogne

🕒 2–7 years (4–12 years for *vin de garde* styles produced in the very best vintages)

✓ *de la Chanaise* (Château du Prieuré) • *Daniel Guillet* • *Jean-Claude Lapalu* (Vieilles Vignes) • *Joseph Pellerin* • *Château Thivin*

CHÉNAS AOC

Cru Beaujolais

The smallest of the *cru* Beaujolais, situated on the slopes above Moulin-à-Vent. These slopes used to be occupied by oak trees, and so its

name derives from *chêne*, the French for oak.

RED Although most Chénas cannot match the power of the wines from neighbouring Moulin-à-Vent, they are nevertheless in the full and generous mold, and wines made by gifted growers such as Jean Benon and Champagnon are seductively rich and powerful, the former oaked, the latter not.

☼ Gamay

🕒 3–8 years (5–15 years for *vin de garde* styles produced in the very best vintages)

✓ *Jean Benon* (especially Vieillis en Fût de Chêne) • *Champagnon* • *des Duc* (Chante Grilles) • *Hubert Lapierre* (Vieilles Vignes)

CHIROUBLES AOC

Cru Beaujolais

Situated high in the hills above the Beaujolais plain, the terrace of Chiroubles produces the most fragrant of all the *cru* Beaujolais.

RED These light-bodied wines have a perfumed bouquet and a deliciously delicate, crushed-grape flavor. They are charming to drink when young, but exceptional examples can improve with age.

☼ Gamay

🕒 1–8 years (5–15 years for *vin de garde* styles produced in the very best vintages)

✓ *Alain Passot* • *Bernard Métrat* • *Céline & Gilles Méziat* (Petit Puits) • *Maison des Vignerons de Chiroubles* (Cuvée Vidame de Rocsain) • *Château de Raoussat*

CÔTE DE BROUILLY AOC

Cru Beaujolais

If there were such things as *grands crus* in Beaujolais, Côte de Brouilly would undoubtedly be classified as the *grand cru* of Brouilly (the vineyards of which practically surround those of this appellation).

RED A fine Côte de Brouilly is full, rich, and flavorsome. Its fruit should be vivid and intense, with none of the earthiness that may be found in a Brouilly.

☼ Gamay, Pinot Noir, Pinot Gris

🕒 3–8 years (5–15 years for *vin de garde* styles produced in the very best vintages)

✓ *Jean-Paul Brun* (Terres Dorées) • *Georges Duboeuf* • *Franchet* • *Griffon* • *Château Thivin* (especially Cuvée Zacharie) • *Bernadette et Gilles Vincent*

COTEAUX DU LYONNAIS AOC

This is not part of the true Beaujolais district, but it falls within its sphere of influence and certainly utilizes classic Beaujolais grapes. In May 1984, this wine was upgraded from VDQS to full AOC status.

RED Light-bodied wines with fresh Gamay fruit and a soft balance. These wines may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

🍷 Gamay

🕒 2–5 years

WHITE Fresh and dry Chardonnay wine that is softer than a Mâcon and lacks the definition of a Beaujolais *blanc*. These wines may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

🍷 Chardonnay, Aligoté

🕒 1–3 years

ROSÉ I have not encountered these wines.

✓ *Ris Descotes (blanc)* • *de Prapin (blanc)* • *Clos du Saint-Marc*

FLEURIE AOC

Cru Beaujolais

The evocatively named Fleurie is the most expensive of the *crus* and its finest wines are the quintessence of classic Beaujolais.

RED The wines of Fleurie quickly develop a fresh, floral, and fragrant style. Not as light and delicate as some writers suggest, their initial charm belies a positive structure and a depth of fruit that can sustain the wines for many years.

🍷 Gamay

🕒 2–8 years (4–16 years for *vin de garde* styles produced in the very best vintages)

✓ *Michel Chignard* • *Jean-Marc Despres* (Cuvée Spéciale Vieilles Vignes) • *Georges Duboeuf* (Château des Bachelards, Prestige) • *de la Madone* • *Bernard Métrat* • *Alain Passot* • *Vissoux (Garants)*

JULIÉNAS AOC

Cru Beaujolais

Situated in the hills above St.-Amour, Juliéнас is named after Julius Caesar and, according to local legend, was the first Beaujolais village to be planted. It is probably the most underrated of the 10 Beaujolais *crus*.

RED The spicy-rich, chunky-textured fruit of a youthful Juliéнас will develop a classy, satin-smooth appeal if given sufficient time to develop in bottle.

🍷 Gamay

🕒 3–8 years (5–15 years for *vin de garde* styles produced in the very best vintages)

✓ *Mme Ernest Aujas* • *Jean Benon* • *François Condemine* • *J. M. Coquenlorge* • *Georges Duboeuf* (La Trinquée) • *Château de Juliéнас* • *Henri Lespinasse* • *Cellier de la Vieille Église* (Cuvée fût de chêne)

MORGON AOC

Cru Beaujolais

Just as the Côte de Brouilly is a finer and more concentrated form of Brouilly, so the wines of Mont du Py in the center of Morgon are far more powerful than those of the surrounding vineyards in this commune.

RED Although these wines are variable in character and quality, the best of them rank with those of Moulin-à-Vent as the most sturdy

of all Beaujolais. They have a singularly penetrating bouquet and very compact fruit.

🍷 Gamay

🕒 4–9 years (6–20 years for *vin de garde* styles produced in the very best vintages)

✓ *Aucoeur* • *Daniel Bouland* • *Jean-Marc Burgaud* • *de la Chanais* • *François Condemine* • *Louis-Claude Desvignes* • *Donzel* (Cuvée Prestige) • *J. Gonard & Fils* • *Marcel Lapiere* • *Jacques Lespinasse* (Maupas) • *Michel Tête* (Clos du Fief)

MOULIN-À-VENT AOC

Cru Beaujolais

Because of its sheer size, power, and reputation for longevity, Moulin-à-Vent is known as the “King of Beaujolais.” The exceptionally powerful character of Moulin-à-Vent has been attributed to the high manganese content of its soil. The availability of manganese to the vine’s metabolic system depends on the pH of the soil, and in the acid, granite soil of Beaujolais, manganese is all too readily available. For a healthy metabolism, however, the vine requires only the tiniest trace of manganese, so its abundance at Moulin-à-Vent could be toxic (to the vine that is, not the consumer!), may well cause chlorosis, and would certainly affect the vine’s metabolism. This naturally restricts yields and could alter the composition of the grapes produced.

RED These well-colored wines have intense fruit, excellent tannic structure, and, in many cases, a spicy-rich oak flavor.

🍷 Gamay

🕒 4–9 years (6–20 years for *vin de garde* styles produced in the very best vintages)

✓ *de la Chanais* • *Château de Chénas* • *Desperrier Père & Fils* (Clos de la Pierre) •

Georges Duboeuf (Carquelin, Prestige, Rosiers) • *Gay-Coperet* • *Château des Jacques (lieu-dit cuvées only)* • *Paul Janin* (Clos du Tremblay) • *Château du Moulin-à-Vent* (Cuvée Exceptionnelle) • *du Vissoux* (Rochegès, Rochelles)

RÉGNIÉ AOC

Cru Beaujolais

The growers claim this village was the first to be planted with vines in Beaujolais, but so do the growers of Juliéнас. Régnié was upgraded to full *cru* Beaujolais status in December 1988. Too many half-hearted efforts nearly sank the ship while it was being launched, but the best growers are gradually carving a reputation for this fledgling *cru*.

RED There are two distinct styles of red wine here: one is light and fragrant, the other much fuller and more meaty, but all the best examples are fruity and supple, showing a fresh, invigorating aroma.

🍷 Gamay

🕒 2–7 years (4–12 years for *vin de garde* styles produced in the very best vintages)

✓ *Lydie et Lucien Grandjean* (Coteaux de Vallières) • *Jacky Gauthier* (Coteaux de Colette) • *Les Petit Pierres* • *Michel Rampon & Fils*

ST.-AMOUR AOC

Cru Beaujolais

This is the most northerly of the 10 *crus*, and is more famous for its Mâcon wines than for its *cru* Beaujolais. Despite its modern-day connotations, St.-Amour has nothing to do with love, but derives from St.-Amateur, a Roman soldier who was converted to Christianity and founded a monastery in the locality.

RED Charming wines of fine color, seductive bouquet, and fragrant flavor. They reveal a soft, fruity flavor, but they will also repay a little aging.

🍷 Gamay

🕒 2–8 years (4–12 years for *vin de garde* styles produced in the very best vintages)

✓ *des Duc* (especially Cuvée Saint Valentin) • *Jean-Marc Monnet* (Chataignier Durand) • *André Poitevin* • *Michel Tête* • *Georges Trichard*

BARRELS AND FLOWERS AT ST.-AMOUR, BEAUJOLAIS

Just five *cru* Beaujolais were originally classified in 1936 (Chénas, Chiroubles, Fleurie, Morgon, and Moulin-à-Vent), a further three (Brouilly, Côte de Brouilly, and Juliéнас) in 1938, while St.-Amour became the ninth *cru* in 1946 and Régnié the tenth in 1988.

CHAMPAGNE

If you have become accustomed to the quality and character of good Champagne, there really is no other sparkling wine that will satisfy you—and the very best of Champagne’s competitors are just as expensive as the real thing.

NO OTHER VINE-GROWING region can challenge Champagne’s claim to produce the world’s greatest sparkling wine because no other area resembles this viticultural twilight zone where the vine struggles to ripen grapes each year. In order to produce a truly great sparkling wine in the classic *brut* sense, the grapes must be harvested with a certain balance of richness, extract, and acidity, which can be achieved only through the long-drawn-out ripening process that occurs when the vine is grown on a knife-edge between success and failure. The Champagne *terroir*, which includes a cold, sometimes stingy, northern climate and lime-rich chalk soil, is the key to the wine’s intrinsic superiority, yet if such an area were to be discovered today, modern wine experts would quickly dismiss it as unsuitable for viticulture, thus economically unsound for winemaking.

A SPECIFIC WINE, NOT A STYLE

Contrary to beliefs in some parts of the world, Champagne is not a generic term for any sparkling wine, but the protected name of a sparkling wine produced from grapes grown within a specific, legally defined area of northern France.

In Europe and various countries throughout the world, strict laws ensure that only true Champagne may be sold under the name “Champagne,” but this principle is not respected in a number of places. The most blatant misuse in the developed world is in the US, although the Americans are not entirely to blame, since the *Champenois* have stubbornly refused even to consider a compromise, such as “Champagne-style.” Considering this intransigence and the fact that for many years some of the most powerful Champagne houses have sold the sparkling wines they produce in South America under the name “Champaña,” which is Spanish for Champagne, the *Champenois* deserve the treatment they get in the US. In 1985, the term *méthode champenoise* was

AUTUMNAL VIEW OF VILLEDOMMANGE

The premier cru vineyards of Villedommange completely surround the village, which is located in the Petite Montagne, a few miles southwest of Reims. Pinot Meunier reigns supreme, although the Pinot Noir, shown above, accounts for 30 percent of the vines grown.

banned for all wines produced or sold in the European Economic Community (now the European Union). The term, while not a guarantee, had proved useful for separating the wheat from the chaff, since the quality of the product must warrant the cost of fermenting in bottle. Now consumers have to look for linguistic variations along the *méthode traditionnelle* or *classique* theme. In addition, there are Crémant AOCs in France, Cava DO in Spain, as well as new terms (for example Talento in Italy), which crop up all the time.

THE FIVE MAJOR DISTRICTS

There are five major districts in Champagne, and each produces numerous base wines that differ distinctly within a region as well as between regions. When these wines are blended in various proportions, many contrasting styles are produced. The best way to appreciate regional influences is to seek out grower-producer Champagnes.

MONTAGNE DE REIMS

The vineyards of the northern *montagne* face north and would not ripen grapes but for the fact that the *montagne* itself is a free-standing formation, which allows the chilled night air to slip down the slopes on to the plain, to be replaced by warmer air from a thermal zone that builds up above the *montagne* during the day.

The vines here generally produce darker-colored, bigger-bodied wines than those from the southern *montagne*, which often have a deeper flavor, a more aromatic character, and greater finesse.

Primary grape variety Pinot Noir
Best villages Ambonnay, Ay-Champagne, Bouzy, Verzenay, Verzy

CÔTE DES BLANCS

The name of this area is derived from its almost exclusive cultivation of white Chardonnay grapes. The wines produced from these grapes have become the most sought-after wines in the whole of Champagne. They contribute finesse and delicacy yet they mature to an unequaled intensity of flavor.

Primary grape variety Chardonnay
Best villages Cramant, Avize, le Mesnil-sur-Oger

VALLÉE DE LA MARNE

Essentially easy-drinking, fruity, and forward wines produced from an extremely high proportion of Pinot Meunier, which is cultivated in the frost-prone valley vineyards due to its late bud-break and early ripening.

Primary grape variety Pinot Meunier
Best villages Mareuil-sur-Aÿ (for Pinot Noir), Dizy and Hautvillers (for both Pinot Noir and Pinot Meunier), Cumières, Leuvrigny, and Ste-Gemme (for Pinot Meunier)

THE AUBE

Ripe, fruity wines are produced in this southern part of Champagne, which is closer to Chablis than to the classic vineyards of the Marne. The wines are cleaner in style and better in quality than those of the outer areas of the Vallée de la Marne

around Château-Thierry.

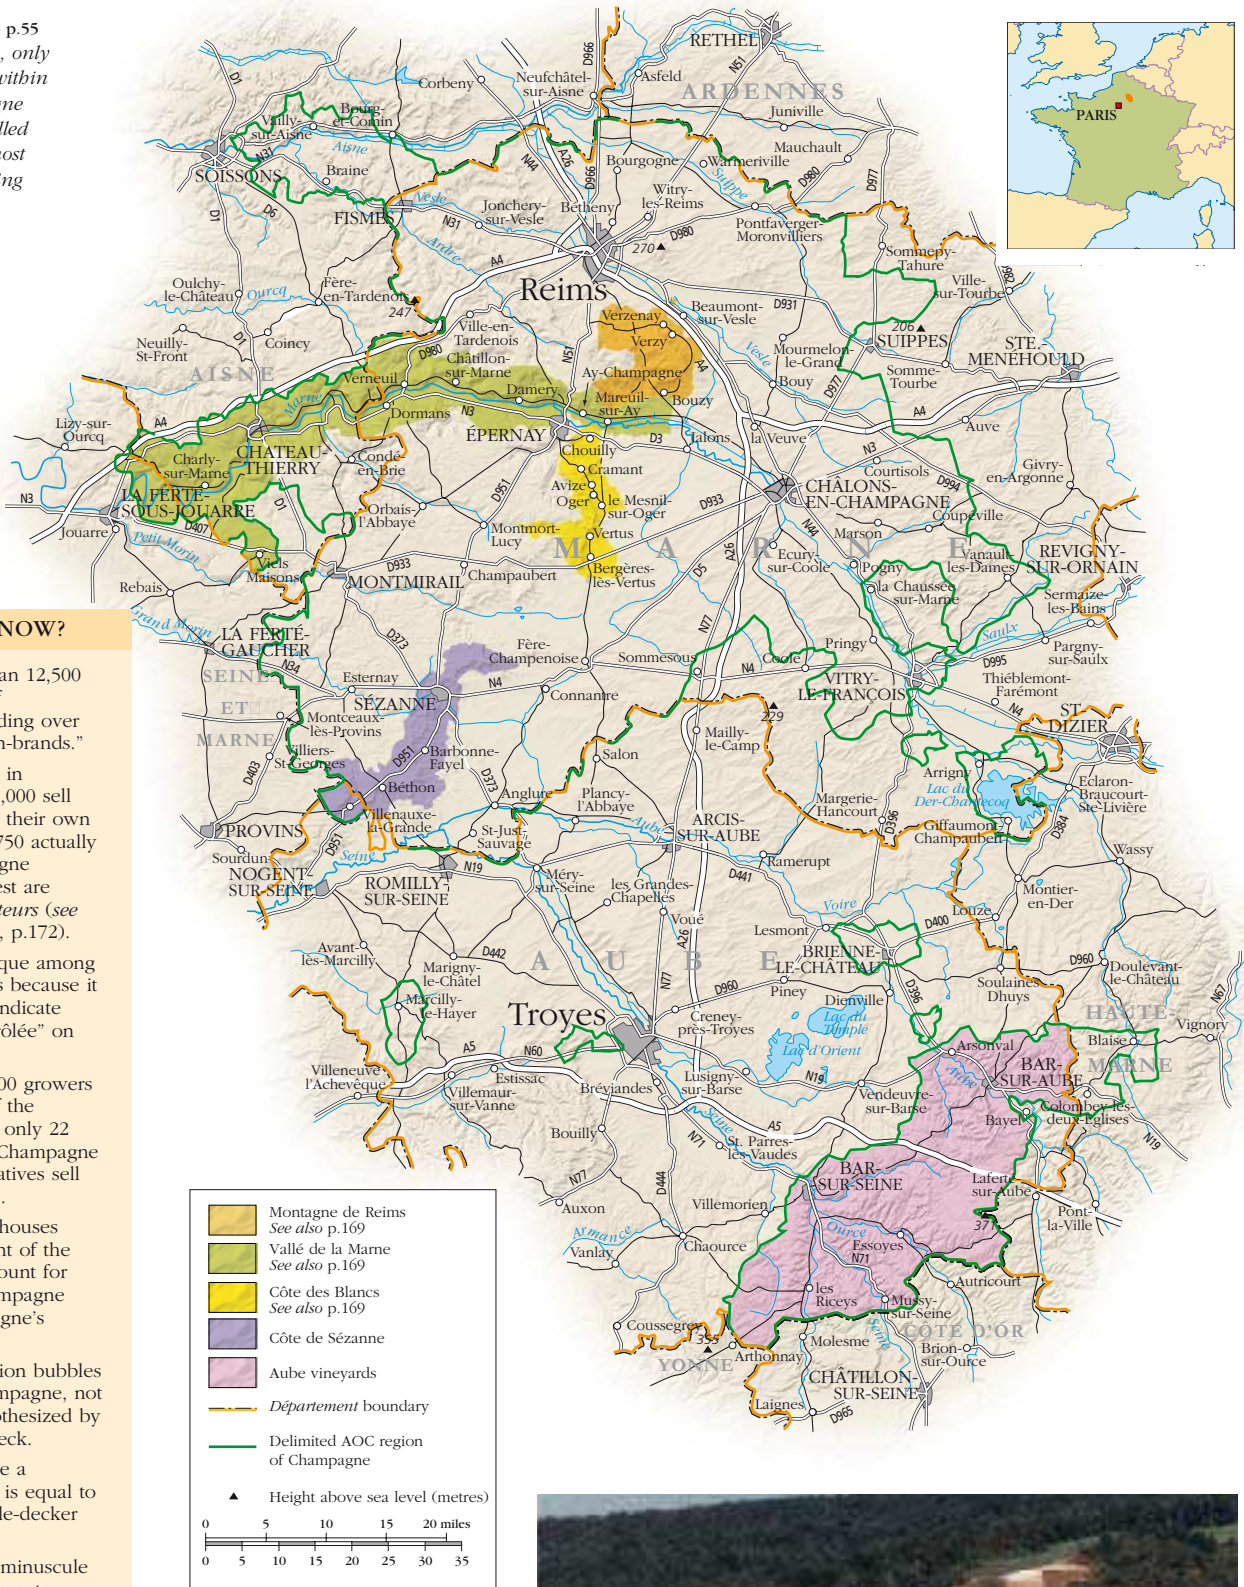

Primary grape variety Pinot Noir
Best village les Riceys

CÔTE DE SÉZANNE

The Sézannais is a rapidly developing area 10 miles (16 kilometers) southwest of the Côte des Blancs. Like its neighbor, the Sézannais favors Chardonnay, but its wines are fruitier, with less finesse, than those of the Côte des Blancs, and can be quite exotic and musky. These wines are ideal for people who enjoy New World sparkling wines but may have difficulty coming to terms with the more classic style of Champagne.

Primary grape variety Chardonnay
Best villages Bethon, Villenaux-la-Grande

CHAMPAGNE, *see also* p.55
 In the European Union, only those wines produced within the delimited Champagne AOC region may be called Champagne. It is the most northerly wine-producing region of France.

DID YOU KNOW?

- There are more than 12,500 different brands of Champagne, including over 3,000 “buyer’s own-brands.”
- Of 19,000 growers in Champagne, just 5,000 sell Champagne under their own name, but only 3,750 actually make the Champagne themselves. The rest are *récoltants-coopérateurs* (*see* Types of Producer, p.172).
- Champagne is unique among French AOC wines because it does not have to indicate “Appellation Contrôlée” on the label.
- Champagne’s 19,000 growers own 88 percent of the vineyards, but sell only 22 percent of all the Champagne produced (cooperatives sell another 7 percent).
- Champagne’s 264 houses own just 12 percent of the vineyards, but account for 71 percent of Champagne sales (*see* Champagne’s Troubles, p.173).
- There are 250 million bubbles in a bottle of Champagne, not 49 million as hypothesized by scientist Bill Lembeck.
- The pressure inside a Champagne bottle is equal to that inside a double-decker bus tire.
- As the wine ages, minuscule amounts of oxygen enter a Champagne bottle through the cork, against the internal pressure, due to a principle known as exchange of gases.
- The chalk bed that surfaces in Champagne’s Côte des Blancs is contiguous with the seam of chalk that extends westward, beneath Paris, to emerge as the White Cliffs of Dover in the UK.

CHAMPAGNE’S CHALK SUBSOIL
This subsoil is part of a seabed that dried up 65 million years ago and is part of the same bed of chalk as the White Cliffs of Dover. It was formed by the slow accumulation of coccoliths, a calcareous matter secreted by sea organisms. It took 1,000 billion coccoliths to produce each cubic inch of this pure-white chalk.

FACTORS AFFECTING TASTE AND QUALITY

 LOCATION

This most northerly of the AOC wine regions of France lies some 90 miles (145 kilometers) northeast of Paris, and is separated from Belgium by the forested hills of the Ardennes. Four-fifths of the region is in the Marne, and the balance is spread over the Aube, Aisne, Seine-et-Marne, and the Haute-Marne.

 CLIMATE

This cold and wet northern climate is greatly influenced by the Atlantic, which has a cooling effect on its summer and makes the seasons generally more variable. Its position at the northern edge of the winemaking belt stretches the duration of the vine's growth cycle to the limit, making frost a major problem during spring and fall.

 ASPECT

Vineyards are planted on the gently rolling east- and southeast-facing slopes of the Côte des Blancs at altitudes of 380 to 640 feet (120 to 200 meters). On the slopes of the Montagne de Reims (a plateau) the vines grow at altitudes similar to those on the Côte. The best valley vineyards lie in sheltered situations on the right bank of the Marne.

 SOIL

The vineyards of the Côte des Blancs, Montagne de Reims, Marne Valley, and Côte de Sézanne are all situated on a porous chalk subsoil up to 960 feet (300 meters) thick, which is covered by a thin layer of drift derived in various proportions from sand, lignite, marl, loam, clay, and chalk rubble. The pure-white chalk in Champagne's soil drains well, yet retains enough water for the vines to survive a drought. The chalk's high active lime content encourages the vines to produce grapes that have relatively high acid when they become ripe.

 VITICULTURE AND VINIFICATION

Jacquesson is leading the way to improve quality from the ground up, operating a very expensive form of viticulture, from cover-cropping to plowing, leaving off herbicides, short pruning, double-debudding, and so on. This house is the first Champagne grower to train Pinot Noir and Meunier on a permanent cordon, as opposed to employing a replacement branch, and growing the vines much closer together to restrict the branch length. This means fewer fruiting canes, but entails a lot more work to improve exposure and ventilation. The resultant grapes actually looked like grapes even in the obscenely huge, largely rotten, and underripe 2001

vintage, something that not many others managed to achieve. No mechanical harvesting is allowed, hence the entire Champagne crop is gathered by hand. Picking usually starts around mid-October. Contrary to popular belief, the grapes are not early-picked, but are on average picked two weeks later than Bordeaux. In exceptional years the harvest has commenced as early as August and as late as November. Rain invariably interrupts the flowering, resulting in at least two crops, although the second, known in *champenois* as the *bouvreux*, rarely ripens and is traditionally left for the birds. The once-traditional sorting into shallow trays called *osiers* is rarely carried out today. Roederer and Bollinger both sort their grapes on occasions, but not so thoroughly as in the past, and most houses do not use any form of selection, although some small growers have started. With rot being a regular problem, intensive sorting should be a legal requirement. If a minimum percentage of grapes must be discarded for Châteauneuf-du-Pape in the sunny south of France, logic dictates that a similar law would be even more beneficial in rainy Reims. Most grapes are still pressed using the traditional, vertical Champagne press or *pressoir coquard*, although pneumatic presses are fairly common. Increasing use is being made of stainless-steel vats with temperature-controlled conditions for the first fermentation, but a few houses and many growers still ferment part or all of their wines in cask, with the younger generation employing a percentage of new oak. The second fermentation gives the wine its sparkle, and this always takes place in the bottle in which it is sold. A nonvintage Champagne must not be sold until at least 15 months after January 1 following the harvest (of the youngest wines in the blend), although most nonvintage Champagnes spend 18 to 24 months of yeast. A vintage Champagne must not be sold for at least 36 months but most are aged for much longer. Aging improves Champagne because the sediment contains dead yeast cells that break down through autolysis, which contributes to the wine's inimitable "champagny" character.

 GRAPE VARIETIES

Primary varieties: Chardonnay, Pinot Noir, Pinot Meunier
Secondary varieties: Arbanne, Petit Meslier, Pinot Blanc Vrai

CHAMPAGNE PRESS

The design of the pressoir coquard is basically the same as it was in the 17th century, when Dom Pérignon devised several winemaking methods still practiced in Champagne today.

THE MÉTHODE CHAMPENOISE

The techniques used to create Champagne—essentially the second fermentation inside the bottle in which the wine is subsequently sold—have defined the production method for the best sparkling wines worldwide (see Making sparkling wine, pp.30–31). There is nothing mysterious about the initial fermentation, which results in a dry, still wine, very acid to taste and seemingly quite unremarkable in character. It must be neutral in character for the subtle influence of the second fermentation (and the process of autolysis that follows it) to work their effect on the flavor.

ASSEMBLAGE—THE BLENDER'S ART

In other wine regions blending is frowned upon, and the best wines made on one estate come from a single vintage. The traditional view in Champagne could not be a greater contrast, since a nonvintage blend of different grapes, from many different areas and several harvests, is the most classic of Champagnes. The critical operation of *assemblage*, or blending, is highly skilled and painstaking. To blend from as many as 70 different base wines—each of which changes in character from year to year—a consistent nonvintage *cuvée* of a specific house style is a remarkable feat and one that is more successful in some years than in others. The *assemblage* takes place in the first few months of the year following the harvest. At its most basic, and without taking into consideration any particular house style, it is a matter of balancing the characteristics of two or more of the three available grape varieties. The Chardonnay is often steely in its youth, but has the greatest finesse and potential longevity. Pinot Noir provides much of the backbone and body of a Champagne, and real depth and richness of fruit. The Pinot Meunier is a grape of immediate fruity-flowery appeal and in a

blend of all three varieties in equal parts it is the first to dominate the wine, particularly on the nose.

The blender can also draw on stocks of reserve wines (quite literally wines kept in reserve from previous years). These are essential for, indeed restricted to, the production of nonvintage Champagne. The job of reserves is, like that of the *dosage*, to make Champagne easier to drink at a younger age. Reserve wines also provide a certain richness, fullness, and mellowed complexity.

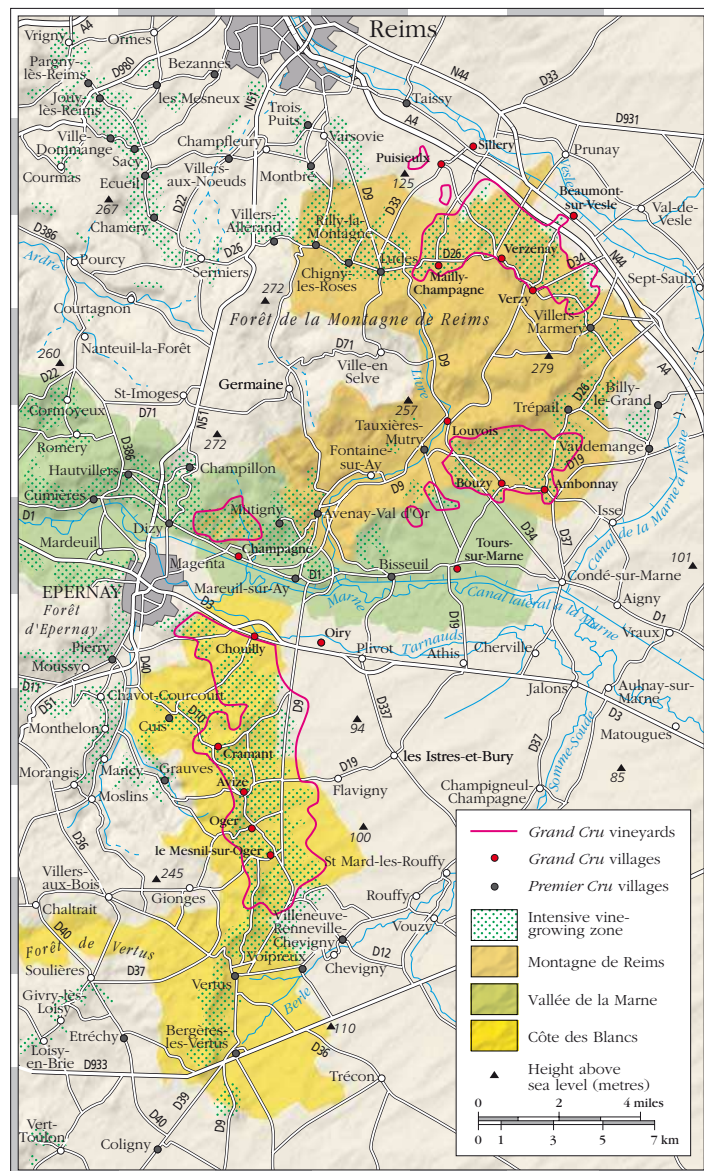

BLENDING

The highly skillful art of blending a fine Champagne can be compared to the game of chess: the winemaker, like the chess player, must think several moves ahead—this is necessary in order to predict how the wine will react to each addition to the blend.

THE SECOND FERMENTATION AND REMUAGE

The second fermentation is the essence of the *méthode champenoise*, and is the only way to produce a fully sparkling wine. After the blended wine has undergone its final racking, the *liqueur de tirage*, or bottling liquor, is added. This is a mixture of still Champagne, sugar, selected yeasts, yeast nutrients, and a clarifying agent. The amount of sugar added depends on the degree of effervescence required and the amount of natural sugar in the wine. The wines are bottled (usually in May or thereabouts) and capped with a temporary closure. The second fermentation can take between 10 days and three months, after which the bottles can be transferred to *pupitres* to undergo *remuage*. A *pupitre* consists of a pair of heavy, hinged, rectangular boards, each containing 60 holes, which have been cut at an angle to enable the bottle to be held by the neck in any position between horizontal and vertical (neck pointing downward).

Remuage is a method of riddling the bottles to loosen sediment, encouraging it to move to the neck of the bottle, where it collects. By hand this takes about eight weeks, although many companies now have computerized 504-bottle pallets that perform the task in just eight days. A technique involving the use of porous yeast

THE GRAND CRU AND PREMIER CRU VILLAGES
Within the three important districts surrounding Epernay, 17 villages have grand cru status and 40 the status of premier cru.

TYPES OF PRODUCER

The label on a bottle of Champagne will include some initials, usually found at the bottom and preceding a small code or number. These initials are the key to the type of producer who has made the Champagne.

NM = Négociant-Manipulant
Traditionally referred to as a “house,” a *négociant-manipulant* is a producer that is allowed to purchase grapes and *vins clairs* in large volumes from growers, cooperatives, and other houses. A few houses, such as Bollinger and Louis Roederer, own sufficient vineyards to supply as much as two-thirds of their own needs, whereas some own none or hardly any at all (Alfred Gratien).

RM = Récoltant-Manipulant
Otherwise known as a grower-producer, or grower for short. In principle, a grower is not allowed to buy grapes or *vins clairs*, as the Champagne sold under their label is supposed to be 100 percent from their own vineyards. However, growers are legally permitted to purchase grapes or wines from each other, up to a maximum of 5 percent of their total production. The reasoning behind this is to enable those with exclusively

Chardonnay vines to buy Pinot Noir for the production of rosé.
CM = Coopérative-Manipulant
A cooperative of growers that makes and sells Champagne under one or more brands that it owns.

RC = Récoltant-Coopérateur
A grower who delivers grapes to a cooperative and, in part or full payment, receives back ready-made Champagne, which they sell under their own name. Although more than 4,000 RC brands are registered, they are seldom encountered even in France, and many of these cooperative clones are still sold with RM numbers. Moves to rectify this are ongoing.

SR = Société de Récoltants
A publicly registered firm set up by two or more growers—often related—who share premises to make and market their Champagne under more than one brand.

ND = Négociant-Distributeur
A company that sells Champagne it did not make to others, who then retail it.

MA = Marque d’Acheteur
A brand name owned by the purchaser, such as a restaurant, supermarket, or wine merchant.

WHO OWNS THE BRANDS?

GROUP	TOTAL PRODUCTION	BRANDS
LVMH	60 million bottles	Moët & Chandon, Mercier Ruinat, Veuve Clicquot, Krug
Lanson International	22 million bottles	Lanson (including Massé), Besserat de Bellefon (plus 200 low-profile brands)
Vranken Monopole	15 million bottles	Vranken, Pommery, Charles Lafitte Demoiselle, Heidsieck & Co Monopole Barancourt, Collin, Charbaut, Germain
Laurent-Perrier	14 million	Laurent-Perrier (including Lemoine), De Castellane (including Chaurey, Freminet, Ettore Bugatti, Jacques Cattier, A. Mérand), Salon, Delamotte, Beaumet, Jeanmaire, Oudinot
Allied-Domecq	10 million bottles	Mumm Perrier-Jouët
Rapeneau	10 million bottles	G. H. Martel (including De Noiron, Rapeneau, Charles du Roy, Charles Oban, P. L. Martin, Balahu, Mortas, Comte de Lamotte, Marcel Pierre), De Cazenove (including Baudry, J. Lanvin, Magenta, Marguerite Christel), Mansard-Baillet, Château de Bligny
Rémy-Cointreau	8 million bottles	Piper-Heidsieck, Charles Heidsieck, Heidsieck, Bonnet Père et Fils, Brossault
Duval-Leroy	7 million bottles	Duval-Leroy (including Baron de Beaupré, E. Michel, Henri de Varlane, Paul Vertay)
Boizel-Chanoine	7 million bottles	Chanoine, Boizel (including Camuset, Kremer, Montoy, Veuve Borodin, Veuve Delaroy), Philipponnat (including Abel-Lepître), De Venoge, Alexandre Bonnet
Taittinger	5 million bottles	Taittinger (including Irroy, Saint-Eyremont)
Thienot	6 million bottles	Alain Thienot (including Billiard, Castille, Petitjean), Marie Stuart, Joseph-Perrier, Canard-Duchêne, Malard (including Georges Goulet, Gobillard)
Roederer	4 million bottles	Louis Roederer, Théophile Roederer, Deutz

SEDIMENT

The Champagne's second fermentation creates a sediment that falls in separate sticky layers; it must be worked down the bottle by an operation called *remuage*.

capsules, which trap the sediment inside them, reduces *remuage* to a mere eight seconds. After *remuage*, the wine undergoes a period of aging *sur point* (in a fully inverted position) before the sediment is removed.

DISGORGEMENT AND DOSAGE

Disgorgement is the removal of the sediment from the wine, which is usually collected in a plastic pot. The method usually used today is known as *dégorgement à la glace*, which involves the immersion of the bottle neck in a shallow bath of freezing brine. This causes the sediment to adhere to the base of the plastic pot, enabling the bottle to be turned upright without disturbing the sediment. When the crown-cap is removed, the semifrozen sediment is ejected by the internal pressure of the bottle. Only a little wine is lost, as the wine's pressure is reduced by its lowered temperature.

Before corking, bottles are topped off to their previous level and *liqueur d'expédition* is added. In all cases except for *Extra Brut*, this *liqueur* includes a small amount of sugar: the younger the wine, the greater the *dosage* of sugar required to balance its youthful acidity. High acidity is crucial to a fine Champagne, since it keeps the wine fresh during its lengthy bottle-aging method of production and also during any additional cellaring by the consumer. High acidity is also necessary to carry the flavor to

the palate through the tactile effect caused by thousands of minuscule bursting bubbles. This acidity rounds out with age, thus the older the Champagne, the smaller the *dosage* required.

CHAMPAGNE'S TROUBLES

Champagne sales are notoriously cyclical, going from boom to bust and back to boom again. This is due partly to achieving worldwide fame at a time when the Industrial Revolution created new money, and partly because of the intrinsic imbalance of vineyard ownership. For centuries the fashionability of Champagne had vied with that of Burgundy, so it was only by chance that Champagne happened to be in vogue in the 1870s, when the *nouveau riche* were on the rise. The pop of the cork and liveliness of the bubbles captured the imagination and suited the celebratory lives of the *nouveau riche*, who quickly made Champagne the most chic drink in London, Paris, and New York, doubling its sales in the process. That is why Champagne is inextricably linked to celebration and happiness. Champagne sales are thus extremely sensitive to the mood of consumers, making fluctuations unavoidable. Any well-organized industry should be able to cope with such fluctuations, but the disparity in vineyard ownership creates tensions in supply and demand that convert what would otherwise be relatively harmless fluctuations into damaging booms and busts. Just 12 percent of the vineyards are owned by the houses, which are responsible for over 70 percent of Champagne sales. When Champagne sales boom, the houses are desperate for grapes, which the growers withhold, selling only a fraction of what they normally would, demanding as much as they can in the process. The pressure created by disproportionate vineyard ownership causes an artificially high demand, which is inevitably followed by a crash. When the bubble bursts, the houses do not want to buy grapes, and will ignore all but those growers with whom they have long-term relationships, especially those who have speculated at their expense.

This boom-bust recipe for commercial disaster could be consigned to history, but the system is rigged to keep vineyards under the ownership of small growers. It would be an equal travesty if growers were forced to sell any vineyards to the *négoce*, but it should at least be possible for houses to buy or rent vineyards. In theory they can, but only in theory. Ostensibly, there is nothing stopping anyone from buying any land in France, but in practice, Champagne's strict adherence to certain controls ensures that the growers maintain ownership of the vineyards. The only realistic

RECENT CHAMPAGNE VINTAGES

2003 Thanks to the pan-European heat-wave, this was the earliest Champagne harvest since at least 1822 and, with 50 percent of the potential crop destroyed by spring frosts, it was also the smallest harvest since 1981. The second crop from buds that developed after the frost was substantial and this *bouvreux* ("for the birds") is one of only three I have known to ripen properly, the other two being 1989 and 1990, but neither were on such a widespread scale as 2003. Although the variation in quality of the *bouvreux* was noticeable, the cream of this second crop was often just as ripe as the first harvest, but with distinctly superior acidity. There were concerns over low acidity and high pH readings. In fact, the pH readings were the worst on record. There will be some truly special Champagnes (Roederer and Jacquesson stand out), but they will be mixed in with a motley crew of the weird and ugly.

2002 This is without a doubt a vintage year and a very special one too, marked by a *passerillage* that reduced the crop in some vineyards by up to 40 percent, and endowed the wines with the highest natural alcohol level since 1990 (which itself was the highest since 1959). It is definitely a Pinot Noir year, with Aÿ-Champagne the most successful village. There are some fine Chardonnays, but in general they are less impressively structured and lack acidity. Not that the Pinot Noirs are overblessed with acidity; low acidity is a key feature of this vintage.

2001 Dilute, insipid, and unripe. Anyone who declares this vintage needs to have his head examined.

2000 Virtually vintage-quality ripeness, but more of a good nonvintage year, although there are many *champenois* who believe that 2000 is a magical number, so we can expect

more declarations from this year than it really deserves. However, good, even great, Champagne can be made in almost any year if the selection is sufficiently strict, and with so many 2000s likely to be marketed (because their producers still believe that 2000 is a magical number), there should be plenty of good bottles to choose from. Some special wines such as Clos des Goisses and Jacquesson Dizy Premier Cru Come Bautreay will be great.

1999 Vintage-quality ripeness, but the worst acidity and pH levels Champagne has seen for a couple of decades. Some very good Champagnes will no doubt be made through strict selection, but with fewer producers likely to declare, the number will probably be much smaller than for 2000. Chanoine's new vintaged Tsarine Rosé and Drappier's Grande Sèndrée are the only 1999s with true finesse encountered so far.

COMBATTING FROST

Vines are protected from frost, the most harmful of Champagne's natural hazards, by aspersion. Aspersion (water-sprinkling) is performed by a system that operates automatically whenever the vineyard temperature drops below freezing. The frost expends its energy in freezing the water, leaving the delicate shoots and buds safely cocooned in ice.

way for a house to acquire more vineyards is to take over ailing companies that owned land prior to the Contrôlée des Structures, a law that forbids any firm from farming more than 37 acres (15 hectares), whether owned or rented. This law applies throughout France, but Champagne is very stringent in its application, which has not only maintained an artificial imbalance in vineyard ownership, but has encouraged the industry's polarization.

CLASSIFICATION OF CHAMPAGNE VINEYARDS

Champagne's vineyards are quality-rated on a village-by-village basis using a percentile system known as the *Échelle des Crus*, which constitutes a pro-rata basis for grape prices. Villages with the maximum *échelle* of 100 percent are *grands crus*, while those rated between 90 and 99 percent are *premiers crus* and receive a correspondingly lower price for their grapes. The lowest-rated villages are currently classified at 80 percent, but the *Échelle des Crus* was originally a true percentile system, starting at just 22.5 percent. It would be unrealistic for any such system to commence at 1 percent, since no village with merely one-hundredth the potential of a *grand cru* should even be part of the Champagne appellation, but when first conceived, the *Échelle des Crus* had a comprehensive structure of *crus* covering the middle ground, which is something that it lacks today. Due to various *ad hoc* reclassifications and political posturing, the minimum *échelle* has gradually increased from 22.5 per cent to 80 percent, and in truth the present system is nothing more than a 20-point scale.

CHAMPAGNE CORKS

1. A crown-cap to seal the wine during second fermentation.
2. The plastic pot in which the deposit is collected after a successful *remuage*.
3. A cork before insertion, which is cylindrical.
4. A cork from a youthful Champagne, which shows the mushroom head achieved when ramming it into the bottle.
5. The cork of a more mature Champagne, which has shrunk and straightened through age.

There are 17 villages possessing official *grand cru* status. Until 1985 there were only 12. The five villages elevated to *grand cru* in 1985 were Chouilly, le Mesnil-sur-Oger, Oger, Oiry, and Verzy.

HOMEGROWN

Is it better for a Champagne producer to grow its own grapes? Does this guarantee a better quality and greater consistency of style? As the table below demonstrates, the answer is "maybe" to the first question and "no" to the second. Own grapes do not guarantee a better quality or a greater consistency of style. They make it easier to achieve these ends, but there are more than enough cooperatives and growers making poor Champagne exclusively from their own vineyards to realize that own grapes do not guarantee quality, whereas the likes of Alfred Gratien and Gosset, neither of whom own a single vine, demonstrate that the highest levels of quality and consistency can be achieved exclusively from purchased grapes. Economically, it is cheaper to grow grapes than to buy them, unless yields are deliberately reduced, and other quality-enhancing viticultural techniques are practiced.

VINEYARDS BELONGING TO THE HOUSES

PRODUCER	VINEYARDS OWNED	PROPORTION OF PRODUCTION ¹	CHAMPAGNES MADE FROM OWN GRAPES ²
Billecart-Salmon ³	240 acres	7%	Entire range (7%)
Bollinger	395 acres	67%	Vieilles Vignes Françaises (100%) Grande Année (80–90%) Grande Année Rosé (80–90%)
Deutz	104 acres	30%	Entire range (30%)
Gosset	None	Zero	None
Alfred Gratien	None	Zero	None
Henriot	67 acres	20%	Entire range (20%)
Jacquesson	64 acres	60%	Avize Grand Cru (100%) Grand Vin Signature (67%) NV cuvées (40–60%) In the pipeline: Aÿ Grand Cru (100%) Dizy Premier Cru (100%) Forthcoming Grand Vin Signature (75%)
Krug	50 acres	40%	Clos du Mesnil (100%) Rest of range (40%)
Lanson	2.5 acres	0.08%	Entire range (0.08%)
Moët & Chandon	1,850 acres	up to 25%	Dom Pérignon (100%) Trilogie des Grands Crus (100%) Vintage cuvées (50–75%)
Mumm	544 acres	25%	Entire range (25%)
Perrier-Jouët	160 acres	25%	Entire range (25%)
Bruno Paillard	59 acres	14%	Most used in Brut Première Cuvée, but sometimes part in Chardonnay Réserve Privée or Vintage or NPU.
Philipponnat	42 acres	33%	Clos des Goisses (100%) Réserve Millésimée (75%) Cuvée 1522 (65%)
Pol Roger	210 acres	over 50%	Chardonnay ("largely") Rest of the range (over 50%)
Pommery	133 acres	10%	N/A (current cuvées and those due to be sold for several years to come were made when Pommery owned 307 hectares, supplying 40% of needs)
Roederer	504 acres	67%	Vintage cuvées (100%) NV cuvées (50%)
Taittinger	667 acres	50%	Entire range (50%)
Veuve Clicquot	944 acres	up to 30%	Grande Dame (up to 100%) Grande Dame Rosé (up to 100%) vintage cuvées (predominantly)

Notes

¹ Represented by own grapes. An average figure that very much depends on the harvest.

² An average figure that very much depends on the harvest (especially when no vintage wines are produced) and, of course, the ultimate freedom to construct each cuvée according to the judgment of the house rather than to any set formula that dictates a certain percentage.

³ Includes 222 acres (90 hectares) belonging to Frey, a major shareholder in Billecart-Salmon, which has first refusal on all grapes grown as of October 2004.

WHO INVENTED CHAMPAGNE?

Originally Champagne was a still wine (a “faintly reddish” *vin gris*); any incidental fizziness would have been considered a fault back then, as it would be in, say, a *cru classé* claret today. To find the first sparkling wine, we must ignore accidents and faults, and look for the earliest deliberate rendering of a wine in the sparkling format: the precursor to the evolutionary process we know as the traditional method.

PÉRIGNON THE PRETENDER

The French would have us believe that Dom Pérignon invented Champagne in the late 1690s, but there is no evidence that he made a single bottle of sparkling wine, and every suggestion that he regarded fizziness as a fault. If anything, the legendary Benedictine monk spent his life trying to rid Champagne of bubbles. So what do the French traditionalists base their belief on? They rely on a French document, *Mémoire sur le Manière de cultiver la Vigne et de faire le Vin de en Champagne*, written in 1718 by an anonymous author (believed to be Jean Godinot), which contains the first use of the term “vin mousseux” and refers to its popularity having been established “more than 20 years earlier.” This is not proof, of course, but if we accept it as an accurate account, sparkling wines became mainstream around 1697.

LACK OF TECHNOLOGY

It could not possibly have been much earlier than this because the French did not have the technology. They did not have a strong enough glass bottle to withstand the internal pressure of a sparkling wine, or an effective seal to maintain it. French glass was wood-fired, and thus too weak, while cork-stoppers had been “lost” during the decline of the Roman Empire and replaced by wooden bungs wrapped in hemp, which would hardly keep the draft out, let alone the fizz in.

INVENTION OF INVENTOR

There is no mention in Godinot’s *mémoire* of Dom Pérignon. Incredible though it may seem, the first documented claim that Dom Pérignon made sparkling Champagne was made in 1821, more than a century after his death, by Dom Grossard, who wrote “As you know, it was the celebrated Dom Pérignon who found the secret of making white sparkling wine.” But there was no secret process. The manifestation of effervescence in wine was a capricious and ephemeral effect that Godinot attributed to the phases of the moon! However, despite his claim of sparkling Champagne’s popularity in France from the late 1690s, the 1721 edition of *Dictionnaire Universel* did not refer to any wine as “mousseux,” an adjective that would not appear in this context until the 1724 edition.

ENGLISH CHAMPAGNE

Yet sparkling Champagne was not only available in England much earlier than this, but it had also become so popular that dramatists were mentioning it by 1676,

DOM PÉRIGNON

How could Dom Pérignon have invented Champagne when “sparkling Champaign” was mentioned in English literature six years before the famous monk arrived in the region?

when Sir George Etherege wrote in *The Man of Mode*:

*To the Mall and the Park
Where we love till ’tis dark,
Then sparkling Champaign
Puts an end to their reign;
It quickly recovers
Poor languishing lovers,
Makes us frolic and gay,
And drowns all sorrow;
But, Alas,
We relapse again on the morrow.*

ENGLISH PARADOX

How could sparkling Champagne be recorded in English literature two decades before even the French admit the first sparkling Champagne was made? Because, whereas the French did not have the technology, the English did, and, being inveterate meddlers, they used it to make still French wines fizzy. Although the French did not rediscover cork until 1685 at the earliest (almost a decade after Etherege’s “sparkling Champaign”), the English, who also lost the cork after the Romans left, had come across it more than 130 years before the French. All wines in Shakespeare’s time were shipped to England in casks, but the English habitually bottled their wines, sealing them with corks, from the late 16th century onward. And whereas French glass was wood-fired and intrinsically weak, English glass was coal-fired at a much higher temperature, making it a vastly stronger product.

It is clear that the English had the means to preserve the effervescence of a sparkling Champagne long before its first recorded mention by Sir George Etherege, but how and why did still wine from Champagne end up sparkling?

IRRELEVANCE OF NATURAL FIZZ

Obviously there were many occurrences of accidental refermentation causing a wine to become fizzy. The most common cause for such faulty wines was the cold northerly situation of Champagne, where we can be sure that fermentation would have prematurely stopped at the first snap of winter, only for it to recommence once bottled and stored in the

warmth of an English tavern. However, accidentally sparkling wines have been a fact of life since Biblical times, and such incidents are an irrelevance to historians searching for the first deliberately sparkling wine.

MÉTHODE MERRET

Conclusive proof can only be demonstrated by documentary evidence describing the most rudimentary element of the traditional method—the addition of sugar to a finished wine to induce a second fermentation with the specific intention of making it not just “gay,” “brisk,” or “lively” (words often thought to imply effervescence), but unequivocally sparkling. Such a document exists, not in Reims or Épernay, but in London, where an eight-page paper entitled “Some observations concerning the ordering of wines” was presented on December 17, 1662, to the newly formed Royal Society by Christopher Merret, who stated “our wine-coopers of recent times use vast quantities of sugar and molasses to all sorts of wines to make them drink brisk and sparkling.”

PROOF POSITIVE

Merret goes on to state that this process was also “... to give them spirit as also to mend their bad tastes, all which raisins and cure and stum perform.” His use of “spirit” denotes increased alcohol content, while his “stum perform” describes precisely in 17th-century English a new fermentation. Although Merret does not mention Champagne specifically, he does state “all wines” and this would surely have included Champagne. Furthermore, we can deduce that of “all wines” it was Champagne that suited the process better than any other because, within a very short while, all efforts were concentrated on that wine. If not, then “sparkling Champaign” could not have achieved the level of fame required for Etherege to wax lyrical about it just 14 years later.

Thus the English invented the Champagne process, and did so six years before Dom Pérignon set foot in Champagne, more than 30 years before the French made their first sparkling Champagne, over 60 years before *mousseux* was first mentioned in a French dictionary, and almost 80 years before the first Champagne house was established.

THE WINE STYLES OF CHAMPAGNE

NONVINTAGE BRUT

No wine depends upon the winemaker's blending skills more than nonvintage Champagne, which accounts for more than 75 percent of all Champagne sold. Although nonvintage Champagnes are not usually the finest Champagnes, they are capable of being so. Their base wine, to which reserve wines may be added, will always be from the last harvest. Most producers make up between 10 and 15 percent of their blends from reserves from the previous two or three years, but some utilize as much as 40 percent, while a few will add much less reserve wine in volume, but from a greater number of much older vintages. Many growers have no reserve wines, thus their nonvintage will in fact be from one year, but of a lesser quality than the *cuvée* selected for their vintage Champagne. All but the most dynamic coopératives typically make up just 5 percent of their blends from reserves from the year immediately preceding that of the base wine—and they seldom excel.

🍷 *Billecart-Salmon* • *Deutz* (Classic) • *Gosset* (Grande Réserve) • *Charles Heidsieck* (Mis en Cave) • *Jacquesson* (Cuvée No XXX) • *Henri Mandois* • *Serge Mathieu* (Tête de Cuvée Select) • *Bruno Paillard* • *Louis Roederer* • *Vilmart & Cie* (Grand Cellier d'Or)

VINTAGE BRUT

Not more than 80 percent of any year's harvest may be sold as vintage Champagne, so at least 20 percent of the best years' harvests are conserved for the future blending of nonvintage wines. Some houses stick rigidly to declaring a vintage in only the greatest years, but many, sadly, do not, which is why we have seen vintage Champagnes from less than ideal years such as 1980, 1987, and even 1984. Most *coopératives* and a large number of grower-producers produce a vintage virtually every year, which is possible, of course, but rather defeats the object and debases the value of the product. However, even in great years, a vintage Champagne is more the result of tightly controlled selection of base wines than a reflection of the year in question, and this makes these wines exceptionally good value. The character of a vintage Champagne is more autolytic, giving it an acialike floweriness, than that of a nonvintage of the same age because it has no reserve-wine mellowness. If you like those biscuity or toasty bottle-aromas, you should keep vintage for a few years. For those who have read about me trumpeting Henri Giraud's 1993 Fût de Chêne, despite its ludicrous price (five euros [\$6.50] more than Cristal, at the time of writing), I have not tasted another vintage from this producer that comes remotely close to the special quality of his 1993.

🍷 *Billecart-Salmon* (Cuvée Nicolas-François Billecart) • *Bollinger* (Grande Année) • *Deutz* • *Alfred Gratien* • *Krug* • *Lanson* • *Pol Roger* • *Louis Roederer* • *Veuve Clicquot* • *Vilmart & Cie* (Grand Cellier d'Or)

BLANC DE BLANCS Non-vintage, vintage, and prestige

Literally meaning “white of whites,” this wine is produced entirely from white Chardonnay grapes and possesses the greatest aging potential of all Champagnes. *Blanc de blancs* may be made in any district of Champagne, but the best examples come from a small part of the Côte des Blancs between Cramant and Le Mesnil-sur-Oger. If consumed too early, a classic *blanc de blancs* can be austere and seem to lack fruit and generosity, yet with proper maturity this style of Champagne can be very succulent. Given a few years' bottle aging after purchase, most *blanc de blancs* develop a toasty-lemony bouquet together with intense, beautifully focused fruit. If the first blend of Lenoble's nonvintage Cuvée Les Aventures (1990/5/6) is anything to go by, it will be fighting for a place in the top 10 nonvintage *blanc de blancs*.

🍷 **Nonvintage** *Billecart-Salmon* • *Boizel* • *Bonnaire* • *Gaston Chicquet* • *Delamotte* • *Pierre Gimonnet* • *Moncuit* • *Joseph Perrier* • *Jacques Sélosse* (Tradition) • *Vilmart & Cie* • **Vintage** *Billecart-Salmon* • *Bonnaire* • *Deutz* • *Duval-Leroy* • *Pierre Gimonnet* (Collection en magnum) • *Jacquesson* (Avize) • *Henri Mandois* (Chardonnay Brut) • *Le Mesnil* (Vigne Sélectionnée) • *Pol Roger* • *Louis Roederer* • **Prestige cuvée** *Boizel* (Joyeau) • *Deutz* (Amour de Deutz) • *Charles Heidsieck* (Cuvée de Millénaires) • *Krug* (Clos du Mesnil) • *Ruinart* (Dom Ruinart) • *Salon* (“S”) • *Taittinger* (Comtes de Champagne)

BLANC DE NOIRS

Nonvintage, vintage, and prestige

Literally translated as “white of blacks,” these Champagnes are made entirely from black grapes, either Pinot Noir or Pinot Meunier, or a blend of the two. The most famous and most expensive is Bollinger's Vieilles Vignes Françaises, which is a unique example of pure Pinot Noir Champagne made from two tiny plots of ungrafted vines, which between them cannot produce more than 3,000 bottles, hence the hefty price tag. Aside from Bollinger, few producers have traditionally used the term *blanc de noirs*, but the Vieilles Vignes Françaises has given it a certain cachet and a few commercially minded houses have begun to cash in on the term (Beaumont, Jeanmaire, Mailly Grand Cru, Oudinot, and De Venoge, for example). Many supermarkets now sell their own-label brand of *blanc de noirs*. Bollinger inadvertently created the myth that a *blanc de noirs* is intrinsically a big, full, and muscular Champagne, but it is generally little different in style from the other *cuvées* a house may produce. If you try Serge Mathieu's Champagne,

you will discover a wine so elegant that you would never guess it is made only from Pinot Noir, let alone that it is grown in the Aube. Pommery's Wintertime and the Mailly cooperative's basic nonvintage Blanc de Noirs Grand Cru just miss the cut, but deserve an honorary mention. Another cooperative, Veuve A. Devaux, has just come back on track with its nonvintage Blanc de Noirs, which should make the list next time around if standards are maintained.

🍷 *Bollinger* (Vieilles Vignes Françaises) • *Canard-Duchêne* (Charles VII) • *Serge Mathieu* (Cuvée Tradition) • *Moët & Chandon* (Les Sarments d'Aÿ)

EXTRA SEC, SEC, AND DEMI-SEC (RICH)

Nonvintage and vintage

In theory, *doux* is the sweetest Champagne style available, with a residual sugar level in excess of 50 grams per liter. However, this style is no longer used. The last *doux* sold was a 1983-based Louis Roederer Carte Blanche. That *cuvée* is now a *demi-sec*, although 100 years ago it contained a fabulous 180 grams per liter of sugar.

The extinction of *doux* has meant that *demi-sec* has, for all practical purposes, become the sweetest of the Champagne categories. A *demi-*

SWEETNESS CHART

The sweetness of a Champagne can be accurately indicated by its residual sugar level, which is measured in grams per liter. The percentage *dosage* applied, which some books refer to, is not an accurate indicator because the *liqueur* added in the *dosage* itself varies in sweetness. The legal levels are as follows:

BRUT NATURE 0–3 GRAMS PER LITER

Absolutely bone dry!

EXTRA BRUT 0–6 GRAMS PER LITER Bone dry

BRUT 0–15 GRAMS PER LITER Dry to very dry, but never austere

EXTRA SEC OR EXTRA DRY 12–20 GRAMS PER LITER A misnomer—dry to medium-dry

SEC OR DRY 17–35 GRAMS PER LITER A bigger misnomer—medium to medium-sweet

DEMI-SEC 33–50 GRAMS PER LITER

Definitely sweet, but not true dessert sweetness

DOUX 50+ GRAMS PER LITER Very sweet; this style was favored by the czars, but is no longer commercially produced

Note Under the old Champagne laws, *rich* or *riche* was strictly used as an official alternative designation for *demi-sec*, but is currently used for anything between *sec* and *demi-sec*.

sec may contain between 33 and 50 grams per liter of residual sugar, although most of them contain 35 grams, and only a few contain as much as 45 grams.

While these wines are not dry, they certainly are not sweet and are nothing like a top Sauternes, which in great years will average between 90 and 108 grams per liter. A *demi-sec* thus falls between two stools and, because it is primarily sold to an unsophisticated market, the *champenois* have been able to get away with using wines of decreasing quality. There are exceptions, of course, but Champagne *demi-sec* is now so adulterated that few *champenois* take the style seriously.

The exceptions that do exist are not sweet enough to accompany desserts and are best served with the main course, or even with starters, with fruit elements in the sauce or garnish that present a little natural sweetness, requiring a balancing sweetness in the wine.

🍷 **Nonvintage Billecart-Salmon** (Demi-Sec Réserve) • *Gatinois* (Demi-Sec) • *Lanson* (Ivory Label) • *Moët & Chandon* (Nectar) • *Philipponnat* (Sublime) • *Piper-Heidsieck* (Sublime) • *Pol Roger* (Demi-Sec) • *Louis Roederer* (Rich Sec) • *Jacques Sélosse* (Cuvée Exquise Sec) • *Veuve Clicquot* (Demi-Sec) • **Vintage Veuve Clicquot** (Rich)

ROSÉ

Nonvintage, vintage, and prestige

The first record of a commercially produced rosé Champagne is by Clicquot in 1777 and this style has enjoyed ephemeral bursts of popularity ever since. It is the only European rosé that may be made by blending white wine with a little red; all other rosé, whether still or sparkling, must be produced by macerating the skins and juice to extract pigments. More pink Champagne is produced by blending than through skin contact, and in blind tasting it has been impossible to tell the difference. Both methods produce good and bad wine that can be light or dark in color and rich or delicate in flavor. A good pink Champagne will have an attractive color, perfect limpidity, and a snow-white mousse. Why no Krug Rosé? Intrinsicly it would come very close to the top of my list of "multivintage" rosés, but Krug either makes too much or it does not sell quickly enough—or they don't make it often enough. It is the only wine in the Krug range that does not merit keeping, and there have been too many occasions when a tired Krug Rosé was the only Krug Rosé available. Laurent-Perrier's Cuvée Grand Siècle Alexandra, the first couple of vintages of which were to die for, is edged out of the top 10 prestige *cuvée* rosés for having no track record between the 1990 and 1997 vintages. On the other hand, Chanoine's 1999 Tsarine Rosé was not only a beautifully elegant start for this new vintaged wine, but it was also exceptionally fine for a 1999; but will Chanoine maintain this standard?

🍷 **Nonvintage Billecart-Salmon** • *Château de Boursault* • *Egley-Ouriot* • *Gosset* (Grand Rosé) • *Jacquesson* (Perfection) • *Henri Mandois* • *Serge Mathieu* • *Piper-Heidsieck* (Rosé Sauvage) • *François Secondé* • **Vintage Bollinger** • *Jacquesson* (Signature) • *Pol Roger* • *Louis Roederer* • *Veuve Clicquot* • **Prestige cuvée Billecart-Salmon** (Cuvée Elisabeth) • *Deutz* (Cuvée William Deutz) • *Gosset* (Celebris) • *Moët & Chandon* (Dom Pérignon) • *Perrier-Jouët* (Belle Epoque) • *Pommery* (Cuvée Louise Pommery) • *Louis Roederer* (Cristal) • *Ruinart* (Dom Ruinart) • *Taittinger* (Comtes de Champagne) • *Veuve Clicquot* (Grande Dame)

NON-DOSAGE

Nonvintage and vintage

The first non-*dosage* Champagne to be sold was Laurent-Perrier's Grand Vin Sans Sucre in 1889. Officially Brut Extra, but commercially labeled variously as Brut Zéro, Brut Sauvage, Ultra Brut, or Sans Sucre, these wines became fashionable in the early 1980s, when consumers began seeking lighter, drier wines. This trend was driven by critics who had been privileged to taste wonderful old vintages straight off their lees, which led them to believe that a Champagne without any *dosage* was somehow intrinsically superior to a Champagne with a *dosage*. It is, of course, if it is of superior quality and at least 10 years old before disgorgement. It is not superior, however, when the Champagne is of normal commercial age, when it can only be austere, tart, and unpleasant to drink, which is why the fashion was so short-lived. Sometimes, even I think that I have discovered a great non-*dosage* Champagne, only to discover most of the follow-up releases disappointing. These include De Bruyne, Mailly (Cassiopee), and Philipponnat (Cuvée 1522 Extra Brut). I enjoyed Delouvin Nowack 1996 Brut Extra Selection, but nothing before or since. I could have died for the first release of André et Michel Drappier NV Pinot Noir Zero Dosage, but later shipments fell a long way short. Even Billecart-Salmon reduced a great Champagne to merely a good to very good one when launching its single-vineyard Les Clos St.-Hilaire with no *dosage* in the inaugural 1995 vintage. I could say the same about Jacquesson Corne Beautray.

🍷 **Vintage Bollinger** (R. D. Extra Brut) • *Duval-Leroy* (Fleur de Champagne Extra Brut) • *Pierre Gimmonnet* (Cuvée Oenophile Extra-Brut) • *Pommery* (Flacon d'Excellence Nature *en magnum*)

CUVÉE DE PRESTIGE

Brut style—Nonvintage and vintage

Also known as special or deluxe *cuvées*, Cuvées de Prestige should be the best that Champagne has to offer, regardless of the price. Dom Pérignon was the first commercial example of these Champagnes, launched in 1936, although Louis Roederer's Cristal has a far longer history, having first been produced in 1876, but that was made exclusively for Czar Alexander II. The first commercially available Cristal *cuvée* was not produced until 1945.

A typical prestige *cuvée* may be made entirely of wines from a firm's own vineyards, and the blend is often restricted to grapes from *grand cru* villages. Most of these are vintage Champagnes, and many are produced by the most traditional methods (fermented in wood,

sealed with a cork and *agrafe*, rather than a crown-cap, then hand-disgorged), aged for longer than normal, and sold in special bottles at very high prices. Some are clearly overpriced, others are overrefined, having so much mellowness that all the excitement has been squeezed out of them, but a good number are truly exceptional Champagnes and worth every penny.

In addition to true deluxe *cuvées*, there are many more premium *cuvées* that are probably far better value, but are not included below. These are the special selections of vintage and nonvintage *brut* that for a relatively modest increase, as opposed to a doubling or tripling in price, offer a distinctive step up in quality.

🍷 **Nonvintage Krug** (Grande Cuvée) • *Laurent-Perrier* (Grand Siècle La Cuvée) • *de Meric* (Catherine de Medici) • *Piper-Heidsieck* (Cuvée Rare) • **Vintage Billecart-Salmon** (Grande Cuvée) • *Deutz* (Cuvée William Deutz—since 1995) • *Jacquesson* (Grand Signature) • *Moët & Chandon* (Dom Pérignon) • *Perrier-Jouët* (Belle Epoque) • *Pol Roger* (Cuvée Sir Winston Churchill) • *Pommery* (Cuvée Louise Pommery) • *Louis Roederer* (Cristal) • *Veuve Clicquot* (Grande Dame) • *Vilmart* (Coeur de Cuvée)

Note Top-performing prestige *cuvées* that are *blanc de blancs*, *blanc de noirs*, *rosé*, or single-vineyard Champagnes are not recommended above, but under their respective headings. For those who might wonder about the absence of Krug Vintage, it was a matter of juggling the top 10 selections, so I have included that under Vintage Brut.

SINGLE VINEYARD

Nonvintage and vintage

Although the winemakers of Champagne are gradually becoming aware of the concept of single-vineyard sparkling wines, it is only a handful of houses that are doing this and not the growers, who are those best equipped to take advantage of and promote the concept of wines that are expressive of *terroir*. The trio of nonvintage single-vineyard Champagnes sold under Leclerc-Briant's Les Authentiques label have not lived up to their initial promise, and only one of Moët's three single-vineyard *grand cru* Champagnes stands out, but keep your eye out for Lenoble's nonvintage Cuvée Les Aventures, which might, if the initial 1990/5/6 blend is anything to go by. Billecart-Salmon's Les Clos St.-Hilaire is very good, but needs a *dosage* to achieve a listing below. Also watch out for a whole raft of single-vineyard Champagnes from top-performing Jacquesson.

🍷 **Nonvintage Cattier** (Clos du Moulin) • *Moët & Chandon* (Sarments d'Aÿ) • **Vintage Drappier** (Grande Sèdrée Brut and Rosé) • *Krug* (Clos du Mesnil) • *Philipponnat* (Clos des Goisses)

COTEAUX CHAMPENOIS AOC

Nonvintage and vintage

The still wines (red, white, and rosé) that are produced in Champagne are low in quality and high in price. The white and rosé are the least interesting, although with modern technology they should be more successful in a fresh, easy-to-drink style. Château Saran from Moët & Chandon is a Coteaux Champenois *blanc* that has to achieve a certain minimum standard, since it comes from some of the vines reserved for Dom Pérignon, which is a 50/50 blend, thus for every bottle of Château Saran produced, two bottles of Dom Pérignon must be sacrificed! Regrettably, the minimum standard is not that special, and, although it is a nice enough, smooth, dry white wine when released, it does not improve after a year in bottle.

Although Champagne's notorious climate is very punishing on those who try to make a red wine every year, it is the Coteaux Champenois *rouge* that can be the most fascinating of all. Black grapes rarely ripen sufficiently to obtain a good color without overextraction, which merely brings out the harsh, unripe tannins. Most reds are, therefore, light- to medium-bodied wines that barely hint at the flush of fruit found in a good Burgundy at the most basic level.

However, the all-too-rare exceptions can be singly impressive in their deep color and rich

fruit. Such wines often have a slightly smoky style distinctly reminiscent of Pinot Noir. Bouzy is the most famous of these wines, but a good vintage rarely occurs in the same village more than once in 10 years and various other growths can be just as good. The best reds from a successful vintage in Ambonnay, Ay, or any other winegrowing village in Champagne can certainly be compared to Bouzy.

Because of this intrinsic unreliability, it is impossible to recommend any Coteaux Champenois on a regular basis. However, virtually all the famous houses have a bottle or two of an amazing *rouge*—usually Bouzy from venerable vintages such as 1929, 1947, or 1959—but their current commercial bottlings are usually pretty mediocre. Bollinger is the exception, with a *barrique*-matured Ay *rouge* from the *lieu-dit* La Côte aux Enfants, which consistently tries hard, even if it is more successful in some years than others. Joseph Perrier's Cumières Rouge is also worth keeping an eye on. I cannot in all honesty list a top 10 of such a variable product, but to give readers a starting point, in addition to La Côte aux Enfants listed below and Joseph Perrier's Cumières Rouge already mentioned, the Coteaux Champenois I have had most joy from over the years include Paul Bara (Bouzy), Edmond Barnault (Bouzy), André Clouet (Bouzy), Denois (Cumières), Paul Déthune (Ambonnay), Egly-

Ouriet (Bouzy), Fresnet-baudot (Sillery), Gatinois (Ay), René Geoffroy (Cumières), Gosset-Brabant (Ay), Patrick Soutiran (Ambonnay), and Emmanuel Tassin (Celles-sur-Ource). The largest producer of Coteaux Champenois in all three denominations is Laurent Perrier, but the quality is seldom more exciting than acceptable.

🍷 *Bollinger* (La Côte aux Enfants)

ROSÉ DES RICEYS AOC

This is not part of the Coteaux Champenois AOC, but is a totally separate appellation. This pure Pinot Noir, still, pink wine is made in the commune of Les Riceys in the Aube *département* and is something of a legend locally, its fame dating back to the 17th century and Louis XIV, who is said to have served it as often as he could. It should be dark pink, medium bodied, and aromatic. The best are often reminiscent of chocolate, herbs, and even mint, and can possess a penetrating, fruity flavor with a long, smooth finish. Production has greatly increased in recent years, with even Vranken, the most commercial of commercial houses, producing one, but quality is erratic, and I have never tasted an example anywhere near Horiot's 1971. Try Veuve A. Devaux, Gallimard, and Morel—but be prepared for more disappointments than successes.

THE WINE PRODUCERS OF CHAMPAGNE

Notes

GM Former *grande marque*

NV Nonvintage

V Vintage

PC Prestige *cuvée* (see p177)

SV Single vineyard

Where "entire range" is recommended, this applies to Champagne only, not to Coteaux Champenois.

MICHEL ARNOULD

28 rue de Mailly
51360 Verzenay

★☆☆

Arnould is a traditional grower specializing in pure Verzenay Champagne, including a very rich but exquisitely balanced *blanc de noirs* Grand Cru Réserve.

🍷 *Grand Cru Brut (NV)* • *Grand Cru Brut Rosé (NV)* • *Grand Cru Brut Réserve (NV)*

AYALA & CO. (GM)

Château d'Aÿ
51160 Aÿ-Champagne

★☆☆

Under the capable management of Thierry Budin, former head of Perrier-Jouët and cousin of Christian Pol-Roger, this house is back on form after a disappointing period, and is again making good-value, easy-to-drink *grande marque* Champagnes.

🍷 *Brut (NV)* • *Brut (V)* • *Grande Cuvée (V)*

BEAUMONT DES CRAYÈRES

64 rue de la Liberté
51318 Mardeuil

★☆☆

This cooperative's 210 members own just 200 acres (80 hectares) of vineyards and they are mostly of modest origin, but they are tended like gardens, without resort to machines or chemical treatments. Winemaker Jean-Paul Bertus regularly produces richly flavored Champagne with a light *dosage*.

🍷 *Fleur de Rosé (V)* • *Fleur de Prestige (V)*

BILLECART-SALMON (GM)

40 rue Carnot
51160 Mareuil-sur-Aÿ

★★★

Billecart-Salmon is a small, family-owned (55 percent), *grande marque* of exceptionally high quality. This house has an excellent reputation for the delicate, silky style of its rosé Champagnes, which it has been producing since 1830, and its top-of-the-line *Cuvée Elisabeth Salmon Rosé* really is exquisite. All the Champagnes here have a delicious richness of fruit, with an accent on elegance and finesse. The single-vineyard Clos St.-Hilaire is very good, but has the potential to be much greater with a *dosage*.

🍷 *Entire range*

BOIZEL

14 rue de Bernon
51200 Epernay

★★☆☆

Boizel is now part of BCC (Boizel-Chanoine Champagne), one of the industry's youngest and most dynamic companies (of which Bruno Paillard is the chairman and the largest shareholder, although the Roques-Boizel family and Philippe Baijot of Chanoine are almost equal partners). Although the nonvintage Boizel has occasionally been prone to the ubiquitous pear-drop style, quality has been more consistent since 1995 and the *blanc de blancs*, rosé, and prestige *cuvée* have always stood out.

🍷 *Brut (NV)* • *Blanc de Blancs (NV)* • *Rosé (V)* • *Joyau de France (PC)* • *Joyau de Chardonnay (V)*

BOLLINGER (GM)

Rue Jules Lobet
51160 Aÿ-Champagne

★★★

If you find the nonvintage Special *Cuvée* too austere, try it in

magnums, which are always fruitier. Bollinger is, however, a house *par excellence* for vintage Champagne and, although famous for its R. D. (exactly the same Champagne as the Grande Année, but with longer yeast contact), I prefer buying the Grande Année when released, and aging after disgorgement.

🍷 *Entire range*

BONNAIRE

120 rue d'Epernay
51530 Cramant

★★☆☆

Although occasionally spoiled by dominant malolactic or the whisper of lifted fruit, most wines are a pure joy, with beautifully focused fruit, and a luxuriantly creamy finish. When on form, these are stunningly rich, crisp, and vivacious wines, with intense, zippy-zingy fruit supported by great acidity, offering great potential longevity.

🍷 *Brut Blanc de Blancs (NV)* • *Cuvée Prestige (V)* • *Cramant Grand Cru (V)*

RAYMOND BOULARD

Routte Nationale 44
51220 Cauroy-les-Hermonville

★★☆☆

Run by Francis Boulard, whose style tends to be lifted fruit with oxidative complexity and, like most export-conscious growers these days, he is dabbling with new oak.

🍷 *Cuvée Rosé Brut (NV)* • *Brut Tradition (NV)*

CHÂTEAU DE BOURSULT

Boursault

51480 prés Epernay

★●

Château de Boursault NV has started to develop a real finesse since 1995, and the rosé has always been a joy. Made by owner Harald Fringhian, these Champagnes are now outperforming the château's modest 84 percent *écbelle*, which is probably helped by the fact that the vineyards are a genuine *clos* (an enclosed plot of land).

✓ Rosé (NV)

CANARD DUCHÊNE (GM)

1 rue Edmond Canard

51500 Ludes

★●

Owned by Veuve Clicquot from 1978 until 2003, when it was sold to the Alain Thienot group, these value-for-money, easy-drinking Champagnes have improved significantly since the mid-1990s. The Blanc de Noirs version of Charles VII prestige *cuvée* is serious quality.

✓ Brut (NV) • Rosé (NV) • Charles VII Blanc de Noirs (NV)

DE CASTELLANE

57 rue Verdun

51200 Epernay

★●

Part of the Laurent-Perrier group, this is an excellent source of undervalued, ripe, exotic *blanc de blancs*, as are the more expensive Cuvée Commodore and Cuvée Florens de Castellane, despite their presentation—the former looks like its from the 1950s, while the latter is decidedly kitsch.

✓ Chardonnay (NV) • Cuvée Royale Chardonnay (V) • Cuvée Commodore (PC) • Cuvée Florens de Castellane (PC)

CATTIER

6 et 11 rue Dom Pérignon

51500 Chigny-les-Roses

★●

I have always respected Clos du Moulin, Cattier's great single-vineyard Champagne, but have not been impressed—or depressed for that matter—by any of the other *cuvées*, until I first tasted its trio of particularly stunning vintages: 1988, 1989, and 1990.

✓ Brut (V) • Clos du Moulin (SV)

CHANOINE

avenue de Champagne

51100 Reims

★●

This marque was established in 1730 (just one year after Ruinart, the oldest house in Champagne) but was relaunched by Philippe Baijot in 1991. I was greatly impressed with the first *cuvées* following the relaunch, but their brilliant quality has never been recaptured. Well, not in the basic vintage and nonvintage, but the more recent

Tsarine *cuvées* promise to grab attention (and I don't only mean because of the convoluted bottle shape, which comes out of the same mold as a certain brand of Asti!). The first vintage (1999) of Tsarine Rosé is of exceptional quality and elegance.

✓ Tsarine (NV) • Tsarine (V)

CHAUVET

41 avenue de Champagne

51150 Tours-sur-Marne

★●

A small, quality-conscious house situated opposite Laurent Perrier, Champagne Chauvet is owned by the Paillard-Chauvet family, who are wonderfully eccentric. They are related to Pierre Paillard in Bouzy, Bruno Paillard in Reims, and the Gossets of Ay. I have always enjoyed Chauvet's Carte Vert *blanc de blancs*, which is an excellent nonvintage blend of exclusively *grand cru* wines, and I have also greatly admired the consistency and quality of their entire range since the early 1990s.

✓ Entire range

GASTON CHIQUET

890-912 avenue du Général-Leclerc

51310 Dizy

★★●

Antoine and Nicolas Chiquet are grower cousins of *négociants* Jean-Hervé and Laurent Chiquet of Jacquesson, which is also in Dizy. The style here is succulent and creamy, with moreish juicy fruit. Only a tendency to use volatile acidity to lift the fruit holds this producer back from a two-star rating.

✓ Entire range

ANDRÉ CLOUET

8 rue Gambetta

51150 Bouzy

★

André Clouet, a small, quality-conscious grower, produces a very large range of attractive, rich, and beautifully made Champagnes.

✓ Brut Grande Réserve (NV) • Brut Millésime (V)

COMTE AUDOIN DEDAMPIERRE

5 Grande Rue

51140 Chenay

★●

This Anglophile, lovingly eccentric, classic car fanatic of an aristocrat is one of those larger than life characters who are simply too charming and polite to ignore.

Elegant and fruity, most *cuvées* are nicely made for current drinking. The cork on Dampierre's late disgorged *grand cru blanc de blancs* is tied down in the old style with hemp, and even comes with a pair of scissors in the box!

✓ Entire range

DELAMOTTE PÈRE & FILS

5 rue de la Brèche

51190 Le Mesnil-sur-Oger

★●

Part of the Laurent-Perrier group and situated next door to Champagne Salon, which also belongs to Laurent-Perrier, Delamotte is a small, underrated, high-quality, good-value house that has been privately owned by the Nonancourt family (the owners of Laurent-Perrier) since the end of World War I, when it was purchased by Marie Louise de Nonancourt, the sister of Victor and Henri Lanson.

✓ Brut (NV) • Blanc de Blancs (NV) • Blanc de Blancs (V) • Nicolas Louis Delamotte (PC)

PAUL DÉTHUNE

2 rue du Moulin

51150 Ambonny

★★●

As one of the more consistent growers, Paul Déthune always makes good vintage and rosé, but is best known for his prestige *cuvée*, the luxuriously rich, big, deliciously creamy Princesse des Thunes, which is made from an assemblage of mature vintages. Try his fascinating, educational, and quality-driven Trilogy Ambonny Grand Cru: three bottles labeled Cuvée 1, 2, and 3—each one being made from the same Pinot Noir and Chardonnay wines, but in different proportions. Decide which one you prefer (they are all excellent), then discover why. Also, from 2005, look out for Cuvée à l'Ancienne.

✓ Grand Cru Rosé (NV) • Millésimé (V) • Trilogy (V) • Princesse des Thunes (PC)

DEUTZ (GM)

16 rue Jeanson

51160 Ay-Champagne

★★★●

The profitability and quality of Deutz suffered from underfunding until Roederer acquired it in 1983. Its resurgence began a little shakily with the 1985 vintage but was firmly established by 1988, when it returned to making very stylish Champagnes. Now on stunning form. Deutz also owns Delas Frères in the Rhône and Château Vernous in the Médoc, and has a partnership

with Montana to produce Deutz Marlborough in New Zealand (owned by Allied-Domecq, which owns Mumm and Perrier-Jouët).

✓ Entire range

DRAPPIER

Grande rue

10200 Urville

★★●

Drappier's Champagnes are brilliantly consistent, ultrafruity, and rapidly acquire mellow biscuity complexity.

✓ Entire range

J. DUMANGIN

3 rue de Rilly

51500 Chigny-les-Roses

★●

Run by Gilles Dumangin, who makes soft, fruit-driven Champagnes that tend to go biscuity rather than, or as well as, toasty.

✓ Brut Grande Réserve (NV)

DUVAL-LEROY

65 avenue de Bammental

51130 Vertus

★★●

Duval-Leroy has never been in the premier league, but it is heading that way, and in doing so has achieved a consistency of quality for its light, elegant house-style that has exceeded levels set by most so-called *grandes marques*. This has been thanks to Hervé Jestin, Duval-Leroy's quietly spoken, highly talented winemaker. Couple this with Carol Duval's focus on the primary brand to the detriment of the firm's BOB business (once its staple) and it is easy to appreciate just how close Duval-Leroy was to premier league promotion at the turn of the millennium. Jestin is an inveterate experimenter with everything from new oak to the effect of power cables on the fermentation process, and includes both organic and biodynamic wines in the range.

✓ Entire range

NICOLAS FEUILLATTE

CV de Chouilly

51206 Chouilly

★●

Some of this giant cooperative's customers seem to be under the impression that Nicolas Feuillatte is a small, lone grower. The guy exists, but he just represents this super-cooperative brand. Aside from a couple of special wines (the 1985 Palmes d'Or Brut, and the 1992 Palmes d'Or Brut in magnums), I was never enamoured by the quality here until the splendid 1995s and 1996s. The trio of 1995 single-village grand cru Champagnes was as inspired and as innovative as any cooperative has achieved, including the very best (Devaux, Palmer, and Jacquart), and I was delighted to hear that the range had been extended to six for the 1996 vintage. But despite the greatness of that year, and Feuillatte's success with other 1996s, the quality was not as

exciting. Perhaps they just need more time on yeast? They are worth keeping an eye on, even if I cannot give them *carte blanche* approval below. And Feuillatte's newfound quality has continued into the 1997 vintage, so it is good to know that the surge in quality was not a flash in the pan due more to vintage than intrinsic improvements.

✓ *Cuvée Speciale* (V) • *Palmes d'Or* (V) • *Palmes d'Or Rosé* (V)

FLEURY

43 Grande rue
10250 Courteron
★★★

One of the more readily available biodynamic Champagnes on export markets, Fleury was nothing more than acceptable until the 1996 vintage, when this grower produced a classic *barrique*-fermented Champagne with a mind-blowing barrage of aromas and flavors.

✓ *Fleur de l'Europe Brut* (NV) • *Brut* (V)

GARDET & CIE

13 rue Georges Legros
51500 Chigny-les-Roses
★★

This Champagne used to be sold as Georges Gardet in the UK and Charles Gardet in France, but the emphasis is now on Gardet plain and simple. Gardet has always prided itself on the longevity of its wines, but I prefer the vintage almost before it is even released, although the greatest Gardet I have ever tasted was the 1964 in 1995. A very welcome addition to the range is the succulent new *blanc de blancs*, the first vintage of which was 1990.

✓ *Brut Spécial* (NV) • *Brut* (V) • *Blanc de Blancs* (V)

RENÉ GEOFFROY

150 rue du Bois-des-Jots
51480 Cumières
★★

The Geoffroy family has been growers in Cumières since 1600 and conscientiously harvests grapes in *tries*. The Champagne, which does not go through malolactic fermentation and may be matured in oak *foudres*, is classic, long-lived, and capable of great complexity.

✓ *Cuvée Prestige* (NV) • *Cuvée de Réserve Brut* (NV) • *Cuvée Sélectionnée Brut* (V) • *Brut Rosé* (NV)

PIERRE GIMONNET

1 rue de la République
51530 Cuis
★★★

This excellent grower's vineyards are all planted with Chardonnay, hence every wine is a *blanc de blancs*, which is a very rare phenomenon, even among growers on the Côte des Blancs. Quality is exceptionally high and prices very reasonable.

✓ *Entire range*

PAUL GOERG

4 Place du Mont Chenil
51130 Vertus
★★

This small but superior *coopérative* produces very fine and elegant yet rich, concentrated Champagnes.

✓ *Blanc de Blancs* (NV) • *Brut* (V) • *Cuvée Lady C* (V)

GOSSET (GM)

69 rue Jules Blondeau
51160 Ay-Champagne
★★★★

Established in 1584, Gosset is the oldest house in the region, but for still wines, not sparkling. In 1992, Gosset became the first new *grande marque* for more than 30 years, then in 1994, after 400 years of family ownership, the house was sold to the Cointreau family, and is under the direct control of Béatrice Cointreau. The *chef de caves* and oenologist remain the same, as do the winemaking techniques. I have always rated the Grande Réserve, the Grand Millésimé, and the Grand Millésimé Rosé as three of the consistently greatest Champagnes available, and they have since been accompanied by the prestige vintage *brut* and *rosé* under the Celebris label.

✓ *Entire range* (except Brut Excellence)

HENRI GOUTORBE

11 rue Jeanson
51160 Ay-Champagne
★★★

With 37 acres (15 hectares) of vineyards and half a million bottles in stock, this is one of the larger wine growers. Henri Goutorbe produces some rich, classic, and well-structured Champagnes that become very satisfying with age.

✓ *Entire range*

GRAND CHAMPAGNE NAPOLEON

2 rue de Villiers-aux-Bois
51130 Vertus
★

This small, low-profile quality-conscious house is run by Etienne Prieur, whose brother Vincent makes the wines in one of the tiniest Champagne cellars I've seen. The Carte Or is richer and more mature than the Carte Vert, with some biscuity complexity.

✓ *Carte Or* (NV)

ALFRED GRATIEN

30 rue Maurice-Cerveaux
51201 Epernay
★★★

This house is part of Gratien, Meyer, Seydoux & Cie, who also sell a range of Loire traditional method wines under the Gratien & Meyer brand. Alfred Gratien is one of the most traditionally produced Champagnes available. The old vintages never fail to amaze, as they

are brilliant in quality and retain a remarkable freshness for decades. The nonvintage wine is beautifully fresh with mature reserves coming through on the palate, making it a wine to drink now, yet one that will improve with age.

✓ *Vintage Brut*

CHARLES HEIDSIECK (GM)

12 allée du Vignoble
51061 Reims
★★★

Charles Heidsieck is part of Rémy-Cointreau's Champagne group, which also includes Piper-Heidsieck. The superb quality of the house of Charles Heidsieck was guided by the masterly hand of Daniel Thibault until his untimely demise in 2002. As his creation of Mis en Cave demonstrated, Thibault was one of Champagne's greatest winemakers. Mis en Cave is still the best-value, most consistent Champagne in the richly flavored style, regularly achieving a standard few vintage Champagnes can match. Thibault will be a hard act to follow, but for a few years he had been grooming Régis Camus, the former *chef de caves* at Jacquart, to do just that. Due to the long lead time required before a Champagne reaches the shelf, it will not be until the year following publication of this edition of the encyclopedia that we will begin to know whether he is succeeding. This Champagne is rated on the hope that he is.

✓ *Entire range*

HENRIOT

3 place des Droits-de-l'Homme
51100 Reims
★

Under family ownership since 1994, when Joseph Henriot left Clicquot, the house he had famously performed a reverse-takeover on prior to the formation of LVMH. Henriot's son, Stanislaus, is now in day-to-day control, while Odilon de Varenne has moved from Deutz to take over as *chef de caves*. Aside from the fact that the Enchanteurs is more often than not released far too late, there is not much to criticize here.

✓ *Cuvée des Enchanteurs* (V) • *Brut Millésime* (V) • *Blanc de Blancs Brut* (NV)

JACQUART

5 rue Gosset
51066 Reims
★★★

This CRVC (Coopérative Régionale des Vins de Champagne) *coopérative* cleverly converted its primary brand into a *négociant-manipulant* Champagne by making its members shareholders. The quality of Jacquart is always acceptable at the very least, and some vintages, such as the 1985, can be outstanding, while the 1987 turned out to be one of the four best wines of that year.

✓ *Cuvée Mosaïque Brut* (V) • *Cuvée Mosaïque Blanc de Blancs* (V) • *Cuvée Mosaïque Rosé* (V) • *Brut de Nominée* (NV) • *Cuvée Onctueuse Rosé* (NV)

JACQUESSON & FILS

68 rue du Colonel Fabien
51310 Dizy
★★★★

This small, family-owned house is run by the Chiquet brothers, two of the most charming people you are likely to meet. Michael McKenzie of Mayfair Cellars is a shareholder. Jacquesson makes utterly sublime Champagnes, on the same quality level as Billecart-Salmon, but in a bigger, fuller style. Both houses make Champagnes of complexity and finesse, but Jacquesson has more complexity, while Billecart-Salmon has more finesse.

Jacquesson has pioneered various quality-enhancing practices in the vineyards, while in the winery it has turned Champagne's traditional nonvintage concept on its head by not attempting any consistency in style. Rather than smooth out the differences presented by each harvest, the new concept is to produce the best possible nonvintage Champagne each year. It is something that no large *grande marque* would dare contemplate, but it is a very clever move for a small house, as it effectively creates a second vintage wine and one that is easier to make, given the flexibility of blending in wine from other years. The first new nonvintage was named Cuvée No. 728 and was 2000-based, Cuvée No. 729 is 2001-based, and so on. Another innovation is a whole raft of single-vineyard Champagnes, the best of which will take several vintages to discern, although the 1998 Le Clos de Jacquesson, a pure Pinot Meunier Champagne, has been the most exciting so far. And the 2003 Oiry Champ Braux *vin clair* was so delicious that I ordered a case bottled as a still wine!

✓ *Entire range*

ANDRÉ JARRY

Rue Principale
51260 Bethon
★★★

Excellent Champagne in a style that is midway between the classic character of Champagnes from the Marne *département* and the exotic character of Sézannais Champagnes, full of biscuity richness yet with an aftertaste of vanilla and peaches.

✓ *Cuvée Special* (NV)

KRUG & CO. (GM)

5 rue Coquebert
51051 Reims
★★★★

Krug puts quality first and makes Champagne in its own individual style, regardless of popular taste or production costs. With the possible exception of Salon, this sort of quality is not equalled by any other

Champagne house, although it could be if they were willing to sell tiny quantities at very high prices. If everyone did this, it would be a disaster—Champagne has to be affordable—but that at least one house does is not just laudable, it is very important for Champagne.

✓ *Entire range*

LANSON INTERNATIONAL

22 rue Maurice-Cerveaux

51205 Epernay

★

One of the region's largest producers, yet Lanson International (formerly Marne et Champagne) has been relatively unknown because its wines are sold under some 200 low-key labels. Its presence has been more noticeable, however, since its acquisition of Lanson and Besserat de Bellefon. Quality, even under the most obscure label or buyers'-own-brands, can be very good, particularly if cellared for an additional 12 months, but the best-quality Champagnes are to be found under the Alfred Rothschild (restricted to the French market), Pol Gessner, Eugène Cliquot, Geismann & Co., and Gauthier labels. Other top-selling brands include Pol Albert, Bourgeois, Baron de Brou, De Bracieux, Colligny Père & Fils, Delacoste & Fils, Laurence Duvivier, Leprince-Royer, Georges Martel, Mary Martin, Veuve Pasquier & Fils, Roger Perreau, Roger Perroy, Marquis de Prevel, and Veuve Guérin.

LANSON PÈRE & FILS (GM)

12 boulevard Lundy

51056 Reims

★★★

This house was purchased in 1991 by Marne et Champagne (now Lanson International), a low-profile firm specializing in *sous marque* and own-label Champagnes. Lanson famously eschewed malolactic, excelling at classic, slow-maturing, biscuity vintage Champagnes, but the deal did not include the vineyards that this *grande marque* had relied upon, so the jury was out for a while. Even when Lanson had vineyards, the vintages were sometimes ordinary at best when released, but devotees got to know a good vintage when they saw one (some stunning old vintages *en magnum* are still commercially available: 1989, 1988, 1981, 1979, 1976). When the 1993 was first released, it was a creditable wine, but not special, and this was put down to the good, but not exceptional, year. However, it attained much more gravitas with an additional 12 months on yeast, and today the magnums with 4 years postdisgorgement aging are unbelievably classic in quality. The 1995 was obviously excellent from the start, but the 1996 is singularly special—the greatest value, classic quality Champagne of that very particular year. Lanson is back!

✓ *Entire range*

GUY LARMANDIER

30 rue du Général Koenig

51130 Vertus

★

Guy and François Larmandier have a well-earned reputation for finely balanced wines of surprising depth and obvious finesse.

✓ *Blanc de Blancs Cramant (NV)*

LARMANDIER-BERNIER

43 rue du 28 août

51130 Vertus

★

These high-quality *blanc de blancs* Champagnes are made by Pierre Larmandier, the president of the Young Winegrowers of Champagne.

✓ *Entire range*

LAURENT-PERRIER (GM)

Avenue de Champagne

51150 Tours-sur-Marne

★★★

This house used to head a sprawling vinous empire until its outposts in Burgundy and Bordeaux were sold off to concentrate Laurent-Perrier's efforts and finances on its Champagne holdings, including De Castellane, Delamotte, Lemoine, and Salon, and in 2003 it took over Château Malakoff (Champagnes Beaumet, Jeanmaire, and Oudinot, plus the Michelin-starred La Briqueterie in Vinay). Michel Fauconnet took over as *chef de caves* in early 2004.

✓ *Entire range* (except Ultra Brut)

LECLERC BRIANT

67 rue de la Chaud-Ruelle

51204 Epernay

★★

Pascal Leclerc can come up with the odd Champagne to dumbfound people, such as his blood-red Rubis Rosé des Noirs, which excels in some vintages. When he does, they represent excellent value for money, but there could be more consistency here. His Les Authentiques range of single-vineyard Champagnes was a brilliant marketing concept, but the wines, while enjoyable enough when launched, have failed to display any consistent and distinctive *terroir* character. A *cuvée* called Divine is the best of the range, despite its gaudy label.

✓ *Divine (PC)*

LILBERT FILS

223 rue du Moutier

51200 Cramant

★

This house is a consistent producer of firm *blancs de blancs* that show finesse and age gracefully.

✓ *Entire range*

MAILLY GRAND CRU

28 rue de la Liberation

51500 Mailly-Champagne

★★★

I have never been so impressed by this *mono-cru* cooperative than I

am now. The quality and innovation has been on a roll for a few years.

✓ *Cassiopee (NV) • Brut Millésime (V) • Cuvée des Ecbansons (V) • Cuvée l'Intemporelle (V) • Cuvée du 60e Anniversaire (V)*

HENRI MANDOIS

66 rue du Gal-de-Gaulle

51200 Pierry

★★★

The house style of Henri Mandois is for elegant Champagnes that have a very satisfying length of attractive, creamy fruit, and a fine balance. Most *cuvées* peak at between five and six years of age and do not attain great complexity. However, they do represent great value and give much satisfaction. Jimmy Boyle's favorite Champagne!

✓ *Entire range*

SERGE MATHIEU

Les Riceys

10340 Avirey-Lingey

★★★

Mathieu, a small grower in the Aube, consistently produces excellent Champagnes that are beautifully focused, have much finesse, and a real richness of fruit for such light and elegantly balanced wines.

✓ *Entire range*

MERCIER (GM)

75 avenue de Champagne

51200 Epernay

★

Mercier, established by Eugène Mercier in 1858, was the original owner of the Dom Pérignon brand, although it never utilized it and, in a strange twist of fate, sold it to Moët & Chandon in 1930. Moët liked the product so much that it bought Mercier, albeit some 40 years later. Mercier is still the best-selling brand in France, no matter how hard the parent company tries to make Moët number one, although Moët is way ahead in global sales. There are rumors that LVMH wants shot of Mercier like it did Canard-Duchêne (the reasoning being that it would increase the vineyards-to-sales ratio, the average price of LVMH brands, and gross profit percentage), and it would not surprise me if this house were to be snapped up by Lanson International.

✓ *Brut (V)*

DE MERIC

17 rue Gambetta

51160 Aÿ-Champagne

★★

De Meric, whose wines are made by Christian Besserat, ranges from the simple but elegant and fruity nonvintage Brut to the sublime and very special *Cuvée Cathérine de Medicis*, with various fine and fragrant *cuvées* in between.

✓ *Blanc de Blancs (NV) • Rosé (NV) • Cuvée Cathérine de Medicis (PC)*

LE MESNIL

Union des Propriétaires Récoltants

51390 Le Mesnil-sur-Oger

★★

If only all the Champagnes produced by this cooperative were as stunning as those recommended below.

✓ *Vigne Sélectionnée Blanc de Blancs (V) • Réserve Sélection, Blanc de Blancs (V) • Sublime (V)*

MOËT & CHANDON (GM)

20 avenue de Champagne

54120 Epernay

★★★

The largest Champagne house by a mile, Moët is also the leading company in the LVMH group, which also includes Mercier, Krug, Ruinart, Pommery, and Veuve Clicquot. When first released, the soft style of Brut Impérial makes it amenable to everyone and offensive to no one, but after a further 12 months bottle-age, it mellows into a much fuller, toasty-rich Champagne that has won many a competitive tasting. Between the unfairly criticized nonvintage and the universally praised Dom Pérignon, the vintage Brut Impérial and Brut Impérial Rosé have both been ignored and underrated. With sales of Dom Pérignon approaching two million bottles, and a group ethos that is pushing the premium *cuvée* envelope (by cutting out lower-priced brands, increasing the vineyard-to-sales ratio, and introducing innovative, premium-priced *cuvées*), the obvious move would be to add another 247 acres (100 hectares) to the 494 (200 hectares) currently reserved for this most famous of Champagnes, invest in a showcase winery exclusively devoted to Dom Pérignon, and develop a range of wines under this label, which is already perceived as a brand in its own right.

✓ *Brut Impérial (V) • Dom Pérignon (PC) • Dom Pérignon Rosé (PC)*

MONCUIT

11 rue Persault-Maheu

51190 Le Mesnil-sur-Oger

★★

Some years (or disgorgements of apparently the same wine) can have overly dominant buttery-malo aromas, while others are fresh and crisp, with lively rich fruit that is tasty and satisfying. Usually matures into a creamy-biscuity style.

✓ *Cuvée Nicole Moncuit Vieille Vigne (V)*

G. H. MUMM & CO. (GM)

29 & 34 rue du Champ-de-Mars

51053 Reims

★

Now owned by the Anglo-Spanish Allied-Domecq group, Mumm has successfully pulled its act together

under the direction of Jean-Marie Barelli re, whose masterstroke was to put a young winemaker by the name of Dominique Demarville in charge of a large *grande marque* house in 1998, after trying him out for three years. Demarville was so successful, so quickly and so efficiently, that Barelli re promoted him to Wines and Vines Director for both Mumm and Perrier-Jouet. Demarville continues to improve the quality, returning Mumm to its authentic house-style freshness, light balance, fragrance, and elegance, although he knows he still has a way to go before he can be satisfied.

✓ Brut Ros  (NV) • Demi-Sec (NV) • Mumm de Cramant (NV) • Cordon Rouge (V)

BRUNO PAILLARD

avenue du Champagne
51100 Reims
★☆☆

Bruno Paillard is Champagne's fastest-rising star. He opts for elegance rather than body or character, and his Premi re Cuv e is not just elegant, it is one of the most consistent nonvintage Champagnes on the market. This house belongs personally to Bruno Paillard and is not part of the BCC group, which he heads. Look out for the excellent new vintage *blanc de blancs*.

✓ Entire range

PALMER & CO.

67 rue Jacquart
51100 Reims
★☆☆

Palmer is generally acknowledged to be one of the highest-quality and most reliable *coop ratives* in Champagne, on top of which it has a growing reputation for the excellent Champagnes sold under its own label and is particularly well known for its mature vintages.

✓ Entire range

PANNIER

23 rue Roger Catillon
02400 Ch teau-Thierry
★☆☆

For some time now this *coop rative* has been able to produce some very good vintage Champagne, especially its prestige *cuv e* Eg rie de Pannier, but the basic Brut Tradition was always forthright. This changed with the 1990-based Brut Tradition. Although this was and still is Pannier's best *cuv e*, due no doubt to the year in question, it also marked a general increase in finesse and this promises better quality ahead.

✓ Brut Tradition (NV) • Brut Vintage (V) • Eg rie de Pannier (V)

JOSEPH PERRIER (GM)

69 avenue de Paris
51005 Ch lons-sur-Marne
★☆☆

This house is still run by Jean-Claude Fourmon, even though he has sold a 51 percent share in the business to his cousin Alain Thienot via an ephemeral interest by Laurent-Perrier. The style of these Champagnes is rich and mellow, although the difference when switching from one *cuv e* or vintage to the next can be quite severe, and the wines need to be laid down for 12 months or so.

✓ Cuv e Royale (NV) • Cuv e Royale Ros  (NV) • Cuv e Royale Blanc de Blancs (NV) • Cuv e Royale (V) • Cuv e Jos phine (PC)

PERRIER-JOUET (GM)

26/28 avenue de Champagne
51200 Epernay
★☆☆

Now owned by Allied-Domecq, along with its sister house Mumm. The straight vintage here has always been one of Champagne's longest-lived, and this standard has been maintained by the current *chef de caves*, Herv  Deschamps.

✓ Grand Brut (V) • Belle  poque Brut (PC) • Belle  poque Ros  (PC) • Belle  poque Blanc de Blancs (PC)

PHILIPPONNAT

13 rue du Pont
51160 Mareuil-sur-A 
★☆☆

Part of the BCC group, under the day-to-day control of Charles Philipponnat, a direct descendant and a sharp player in the grape-buying business. Philipponnat has built new facilities, with space for up to 500 barrels. Clos des Goisses is already 35 to 45 percent wood and will stay that way; vintages are 15 to 20 percent wood and will increase to about 30 to 35 percent; nonvintage is 5 to 10 percent and will increase to 20 to 25 percent. Clos des Goisses remains Philipponnat's jewel in the crown—one of the greatest Champagnes available. Clos des Goisses is a fully south-facing vineyard on a very steep incline overlooking the Marne canal.

✓ Grand Blanc (V) • Clos des Goisses (PC) • Abel Lepitre (Cuv e No. 134, Brut Mill sime)

PIPER-HEIDSIECK (GM)

51 boulevard Henri Vasnier
51100 Reims
★☆☆

After working his miracles on Charles Heidsieck, the late Daniel Thibault upgraded the quality of Piper-Heidsieck without upsetting

the supremacy of its sister brand. He achieved this by pouring more fruit into the blend and sourcing much of it from the warm Aube vineyards, giving the wine a soft but simple, fruity aroma, and very tempting fruit on the palate. New *chef de caves* R gis Camus launched a quartet of delicious new *cuv es* in 2004, the same year that the 1996 vintage (made by Thibault) scooped the Champagne Trophy at the first Decanter World Wine Awards.

✓ Ros  Sauvage (NV) • Divin Blanc de Blancs (NV) • Brut Mill sim  (V) • Cuv e Rare (PC) • Sublime (NV)

PLOYEZ-JACQUEMART

51500 Ludes
★☆☆

Although the prestige *cuv e* L. d'Harbonville has always been excellent, it has jumped up a class since the 1989 vintage, when it was first fermented in small oak barrels and not put through its malolactic fermentation. This made it even more succulent and mouthwatering than usual, with ample *dosage* to balance its electrifying acidity.

✓ Entire range

POL ROGER & CO. (GM)

1 rue Henri Lelarge
51206 Epernay
★☆☆

If I were to choose just one house from which to source a vintage Champagne to lay down, there is no question that I would choose Pol Roger. There are always exceptions, of course, but, generally speaking, these Champagnes last longer and remain fresher than those of any other house, however justified their great reputations may be, and I base this opinion on tasting a good number of vintages spanning back a century or more at many houses.

✓ Entire range

POMMERY (GM)

5 place G n ral-Gouraud
51053 Reims
★☆☆

Owned by Vranken, Pommery has been on a roll since 1995, which is no mean feat for such a light and elegant Champagne with a production of almost seven million bottles, because the lighter the wine's style, the more difficult it is to maintain the quality as production increases.

✓ Entire range

LOUIS ROEDERER (GM)

21 boulevard Lundy
51100 Reims
★☆☆

Louis Roederer is the most profitable house in Champagne, and should be an object lesson for those houses that count success in terms of the number of bottles they sell. The keys to real success in Champagne are an impeccable reputation, which guarantees a

premium price; sufficient vineyards to guarantee consistent quality for a production large enough to rake in the money; and the self-discipline required not to go beyond that level. Jean-Claude Rouzaud knows that if he goes too far beyond Roederer's current production of 2.5 million bottles, he will be unable to guarantee the quality he demands and his brand would soon lose the cachet of relative exclusiveness. He does not, however, like to see his capital lie idle, which is why he would rather take over Deutz than increase his own production. Jean-Baptiste Lecaillon has slipped seamlessly into the position of *chef de cave* previously occupied by the talented Michel Pansu.

✓ Entire range

RUINART (GM)

4 rue de Cray res
51053 Reims
★☆☆

Established in 1729 by Nicolas Ruinart, this is the oldest commercial producer of sparkling Champagne. This house was taken over in 1963 by Mo t & Chandon, but has managed to maintain the image of an independent, premium-quality Champagne in spite of it being part of LVMH, the largest Champagne group, and tripling its production in the meantime. The house style tends to develop very toasty aromas.

✓ Entire range

SALON (GM)

5 rue de la Br che
51190 Le Mesnil-sur-Oger
★☆☆

Owned by Laurent-Perrier, located next door to Delamotte (also owned by Laurent-Perrier), Salon is one of the greatest Champagnes available, and possibly the rarest, since only one *cuv e* is produced and it is exclusively vintage, thus it is not produced every year. The wine does not usually undergo malolactic fermentation, is often kept on its sediment for 10 years or more, and continues to benefit from at least an equal amount of aging after disgorgement.

✓ "S" (V)

JACQUES S LOSSE

22 rue Ernest Vall e
51190 Avize
★☆☆

Anselme S losse has found a niche in the market for *barrique*-fermented, nonmalolactic wines that receive minimal *dosage* and usually require several years extra postdisgorgement cellaring to show their full potential, by which time they have lost much of the finesse that would have been present with a normal *dosage*. Generally far too much raw oak for my liking, but there is no denying the quality of the wine underneath, and rated for those who like the style.

✓ Entire range (but with care)

TAITTINGER (GM)

9 place Saint-Nicaise

51061 Reims

★★

This house uses a high proportion of Chardonnay in its nonvintage Brut Réserve, making it one of the most elegant and delicate of *grande marque* Champagnes. Comtes de Champagne *blanc de blancs* is one of the greatest Champagnes produced.

14 rue des Moissons

51100 Reims

★

A very savvy financier who has quietly built up a significant group (including Joseph Perrier, Canard-Duchêne, George Goulet, and Marie Stuart), Alain Thienot also produces good-value, fruit-driven Champagnes under his own label, ranging from a successful pouring-quality nonvintage, through good-quality vintage *brut* and *rosé*, to an excellent *Cuvée Stanislas*.

✓ *Brut Rosé (V) • Grand Cuvée Brut (V) • Cuvée Stanislas (V)***UNION CHAMPAGNE**

7 rue Pasteur

51190 Avize

★

Champagne de St.-Gall is this cooperative's primary brand, with *Cuvée Orpale* its prestige *cuvée*. There are two ranges, Grands Crus and Premiers Crus, and wines in the former range are not always superior. The quality of Champagnes released by this cooperative has improved considerably over the last five years or so.

✓ *Grands Crus Millésime (N) • Cuvée Orpale (PC)***DE VENOGÉ**

30 avenue de Champagne

51200 Epernay

★

Part of BCC (Boizel-Chanoine Champagne) group, this remains a good-value, well-made brand, but its one top-quality Champagne, the

often truly excellent *Cuvée des Princes*, looks ridiculous in its novelty, tear-shaped bottle.

✓ *Blanc de Noirs (V) • Brut (V) • Cuvée des Princes (PC)***VEUVE CLICQUOT-PONSARDIN (GM)**

12 rue du Temple

51054 Reims

★★★

The quality and image of this producer is surprisingly high and upmarket for such a large house. The Clicquot style is not just big, but beautiful. This is achieved by the excellence of its Pinot Noir vineyards on the Montagne de Reims, with Bouzy often dominating the selection of grapes from these vineyards, and the relatively hands-off approach to winemaking. The fermentation temperature is not excessively low at Veuve Clicquot-Ponsardin, there is no filtering before blending, and only a light filtration prior to bottling, with reserves stored on their lees.

✓ *Entire range***VEUVE A. DEVAUX**

Domaine de Villeneuve

10110 Bar-sur-Seine

★

This was the most dynamic cooperative in Champagne from the late 1980s and throughout the 1990s, producing richer, crisper, fruitier Champagnes than some Marne-based cooperatives with a large percentage of *grand cru* vineyards. The quality took a dip at the turn of the millennium, but is now back on track.

✓ *Grande Réserve Brut (NV) • Cuvée D Brut (NV) • Blanc de*

Noirs (NV) • Cuvée Distinction Rosé (V) • D. de Devaux (V)

VILMART

4 rue de la République

51500 Rilly-la-Montagne

★★★

The top *cuvées* became too oaky, but Vilmart has now gone through this heavy-handed phase, and emerged all the better for it as from the 1996 vintage.

✓ *Entire range***VRANKEN**

42 avenue de Champagne

51200 Epernay

②

The house of Vranken is owned by Belgian Paul Vranken, whose ideas on quality I do not share but who undoubtedly has one of the most clever commercial brains in the region. His brands include Charles Lafitte, René Lallement, Demoiselle, Vranken, Barancourt, and Heidsieck & Co. Monopole, but his masterstroke was the purchase of Pommery in 2002. Marne et Champagne bought Lanson at the top of the market, and watched its assets dwindle, whereas Vranken bought Pommery at the bottom of the market, and watched his assets grow. He paid 150–180 million (\$180–215 million), which was some 50 (\$60 million) less than LVMH was asking. Although sales inevitably sank after the millennium blip, Vranken knew they were about to rise, and very quickly saw the value of Pommery jump 50 million (\$60 million). In addition, Pommery sells at a premium compared to other Vranken brands, thus his group's profit margin increased overnight. Some critics believed the Belgian business maestro would have to sell more bottles of Pommery to meet his bank repayments, and the only way he could do that would be by cutting prices, but he has in fact increased both sales and price! Vranken also owns subsidiaries in Portugal (Port: Quinta do Convento, Quinta do Paco, and São Pedro) and Spain (Cava: Senora, and Vranken).

BEST OF THE REST

The following producers have produced at least some wines of excellence since the early 2000s.

MORE GREEN CHAMPAGNES

In addition to the few Champagnes listed in this directory that are biodynamic or organic, there are also the following. No negative inference of quality should be taken from the fact that they are not

Biodynamic

Champagne Françoise Bedel (Crouettes-sur-Marne)
Champagne Benoît Lahaye (Bouzy)
Champagne Thierry Demarne (Villé-sur-Arce)
Champagne David Léclapart (Trépail)
Champagne Réaut-Noirot (Courteron)
Champagne Ruffin (Avenay)
Champagne Schreiber (Courteron)
Champagne Vouette & Sorbée (Buxières-sur-Arce)

featured among the recommended Champagne producers. The truth is that there are over 12,500 brands, and I have no experience of the Champagnes produced by many of the following.

Organic

Champagne Jacques Beaufort (Ambonnay)
Champagne Bénard-Pitois (Mareuil-sur-Aÿ)
Champagne Jean Bliard (Hautvillers)
Champagne Vincent Bliard (Hautvillers)
Champagne Serge Faust (Vandières)
Champagne José Ardinat (Vandières)
Champagne Roger Fransoret (Mancy)
Champagne Vincent Laval (Cumières)
Champagne Lefèvre (Bonnel)
Champagne Régis Poirrier (Venteuil)

ALSACE

Contrary to the New World's belief that they invented the concept, Alsace has built its reputation on varietal wines. This is a region that traditionally produces rich, dry white wines, but they have in recent years become increasingly sweet.

A FASCINATING MIXTURE of French and German characteristics pervades this northeastern fragment of France, cut off from the rest of the country by the barrier of the Vosges mountains, and separated from neighboring Germany by the mighty Rhine. The colorful combination of cultures is the result of wars and border squabbles that have plagued the ancient province since the Treaty of Westphalia put an end to the Thirty Years' War in 1648. This gave the French sovereignty over Alsace, and royal edicts issued in 1662, 1682, and 1687 proffered free land to anyone willing to restore it to full productivity. As a result of this, Swiss, Germans, Tyroleans, and Lorrainers poured into the region. In 1871, at the end of the Franco-Prussian War, the region once again came under German control, and remained so until the end of World War I, when it once again became French. At this juncture, Alsace began to reorganize the administration of its vineyards in line with the new French AOC system, but in 1940 Germany reclaimed the province from France before this process was complete. Only after World War II, when Alsace reverted to France, was the quest for AOC status resumed, finally being realized in 1962.

The vineyards of Alsace are dotted with medieval towns of cobbled streets and timbered buildings, reflecting—as do the wines—the region's myriad Gallic and Prussian influences. The grapes are a mixture of German, French, and the exotic, with the German Riesling and Gewurztraminer (written without an umlaut in Alsace), the French Pinot Gris, and the decidedly exotic Muscat comprising the four principal varieties. Sylvaner, another German grape, also features to some extent, while other French varieties include Pinot Noir, Pinot Blanc, Auxerrois, and Chasselas. While Gewurztraminer is definitely German (and fine examples are still to be found in the Pfalz, its area of origin), only in Alsace is it quite so spicy. And only in Alsace do you find spicy Pinot Gris, a grape that is neutral elsewhere. Even the Pinot Blanc may produce spicy wines in Alsace, although this is normally due to the inclusion of the fat-spicy Auxerrois grape.

HEADQUARTERS OF HUGEL & FILS

The small wine shop, cellars, and offices of the merchants Hugel & Fils in Riquewibr are marked by a typically Alsatian sign.

Very little red wine is made in Alsace. What is produced is intended principally for local restaurants and *Weinstuben*. Ninety percent of the wine in Alsace is white. Traditionally, the style of these very fruity wines is dry, although some varieties, such as the Gewurztraminer, have always been made less dry than others. With the introduction of Vendange Tardive and Sélection de Grains Nobles wines, growers have deliberately reduced yields to chase high sugar levels. This practice has resulted in even the most basic *cuvées* being too rich for a truly dry style, so the tendency to produce less dry wine has now spread to other grape varieties.

VENDANGE TARDIVE AND SELECTION DE GRAINS NOBLES

“Vendange Tardive,” or late-harvested wines, have occasionally been made by a handful of quality-conscious producers throughout the history of Alsace, among them Hugel & Fils, who had long sold such wines under the German descriptions:

RECENT ALSACE VINTAGES

2003 The hottest summer since 1540 (and they really do have records going back that far). Rainfall was virtually nonexistent (4½ inches between May and September) and temperatures were relentlessly hot, at one point exceeding 104°F (40°C) for almost two weeks continuously. Heat and drought stress caused many vines to shut down their metabolic system during the *véraison*, especially the Riesling, which does not like hot weather. Remarkable as it might seem for such a hot year, some Riesling failed to ripen beyond 8 percent ABV. Indeed, most growers had picked the greater part of their crop by mid-September, whereas the grapes were not physiologically ripe until mid-October. There is no doubt that 2003 was an exceptional and extraordinary vintage, but aside from Pinot Noir (for which this is a benchmark year), and a handful of anomalies, the quality will not be either exceptional or extraordinary.

2002 The best 2002s have the weight of the 2000s, but with higher alcohol levels and, more importantly, even higher acidity, thus have far more focus and finesse. Riesling definitely fared best, and will benefit from several years of bottle age, but Gewurztraminer and Muscat also performed well. The Gewurztraminers are very aromatic, with broad spice notes, whereas the Muscats are exceptionally fresh and floral. Pinot Gris was less successful. Some extraordinary Sélections de Grains Nobles (*see opposite*) have been produced.

2001 Most growers and critics rate 2000 over 2001, but size is not everything, and this vintage has the finesse and freshness of fruit that is missing from most of the 2000 bruisers. The hallmark of the 2001 vintage is a spontaneous malolactic that endowed so many of the wines with a special balance. You hardly notice the malolactic in the wines, it is just a creaminess on the finish, more textural than taste and rarely picked up on the nose. Although I am an avid fan of nonmalolactic Alsace wine, this particular phenomenon left the fruit crystal clear, with nice, crisp acidity.

2000 A generally overrated vintage, but bigger is not better, and there are relatively few stunning nuggets. Lesser varieties, such as Sylvaner and Pinot Blanc, made delicious drinking in their first flush of life but have since tired. The classic varieties lack finesse, although some exceptional Vendanges Tardives (*see opposite*) were made. Excellent reds should have been made, but many were either overextracted or heavily oaked.

1999 A large crop of easy-drinking wines, with good *vins de garde* from lower-yielding domaines, although most other wines have begun to tire.

LA PETITE VENISE, COLMAR

This charming town, closely associated with the wine trade, boasts many architectural delights as well as a picturesque canal district.

“Auslese” and “Beerenauslese.” Wanting to introduce Francophile terms, the firm pioneered the decree authorizing and controlling the commercial designations of Vendange Tardive (VT) and Sélection de Grains Nobles (SGN). The decree was passed in March 1984, and these styles have been universally produced since the botrytis-rich vintage of 1989.

DISAPPEARING DRY WINES

Although there has been an explosion in the numbers of producers making and selling VT and SGN wines—from just two or three prior to the decree to literally hundreds—the production of these late-harvest wines remains minute at just 2 percent of Alsace wines as a whole. The vast bulk of Alsace wines have traditionally been dry, but these so-called dry wines have become increasingly sweet over the last 10 years or so, and some are very sweet indeed. So much so that it has become almost impossible for the wine-drinking public to tell whether the wine they are buying is dry or sweet. This is not because Alsace producers deliberately chose to sweeten their wines; it is merely the by-product of good intentions.

All the best producers, including many of the names most commonly encountered on export shelves, have dramatically cut their yields, particularly in the *grand cru* vineyards. Reduced yields produce higher must weights, and in sun-blessed Alsace this soon leads to a choice between overalcoholic wines or significant amounts of residual sugar. However, the *grands crus* and other prized sites are not so much sun-blessed as sun-traps, thus lowering yields in these vineyards has increased must weights to the point where, even at 15 percent alcohol, the wines have so much residual sugar that they are really quite sweet. Throughout Alsace, Gewurztraminer and Tokay-Pinot Gris frequently contain residual sugar of 30 to 40 grams per liter, with 50 grams per liter or more not unusual. To give a few specific examples, Zind-Humbrecht’s Gewurztraminer 2001 Clos Windsbuhl weighed in at 35 grams per liter, while its Pinot Gris 2001 Heimbouurg had 50 grams per liter, and the Pinot Gris 2001 Clos Windsbuhl no less than 70 grams per liter, yet none of these wines is classified as a Vendange Tardive. As I wrote in *The Wines of Alsace* (1993), “Few people command the respect that Léonard Humbrecht does. There is not one *négociant* too large or lofty to acknowledge his tireless enthusiasm and almost evangelical crusade for lower yields.” Zind-Humbrecht pioneered low yields, then other growers saw the extraordinary plaudits and prices the wines attracted and followed suit. The result is a market full of sweet Alsace wine today. Or so it seems. The situation is not quite as bad as it appears, especially in restaurants and on the

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

The northeast corner of France, flanked by the Vosges mountains and bordered by the Rhine and Germany’s Black Forest. Six rivers rise in the fir-capped Vosges, flowing through the 60-mile (97-kilometer) strip of vineyards to feed the River Ill.

CLIMATE

Protected from the full effect of Atlantic influences by the Vosges mountains, these vineyards are endowed with an exceptional amount of warm sunshine and a very low rainfall. The rain clouds tend to shed their load on the western side of the Vosges as they climb over the mountain range.

ASPECT

The vineyards nestle on the lower east-facing slopes of the Vosges at a relatively high altitude of about 600–1,200 feet (180–360 meters), and at an angle ranging between 25° on the lower slopes and 65° on the higher ones. The best vineyards have a south or southeast aspect, but many good growths are also found on north- and northeast-facing slopes. In many cases the vines are cultivated on the top as well as the sides of a spur, but the best sites are always protected by forested tops. Too much cultivation of the fertile plains in the 1970s has led to recent overproduction problems. However, some vineyards on the plains do yield very good-quality wines due to favorable soil types.

SOIL

Alsace has the most complex geological and solumological situation of all the great wine areas of France. The three basic

morphological and structural areas are: the siliceous edge of the Vosges; limestone hills; and the hydrous alluvial plain. The soils of the first include: colluvium and fertile sand over granite, stony-clay soil over schist, various fertile soils over volcanic sedimentary rock, and poor, light, sandy soil over sandstone; of the second, dry, stony, and brown alkaline soil over limestone, brown sandy calcareous soils over sandstone and limestone, heavy fertile soils over clay-and-limestone, and brown alkaline soil over chalky marl; and of the third, sandy-clay and gravel over alluvium, brown decalcified loess, and dark calcareous soils over loess.

VITICULTURE AND VINIFICATION

The vines are trained high on wires to avoid spring ground frost. There are a high number of organic and biodynamic producers. Traditionally, the wines are fermented as dry as possible (*see below*). Although very few have a strict no-malolactic policy (Trimbach being one of the exceptions), the general trend is to avoid it if possible. In years like 2001, however, it happens spontaneously during the fermentation process and is widespread, although the results are more creamy-tactile than buttery aromas.

GRAPE VARIETIES

Primary varieties:

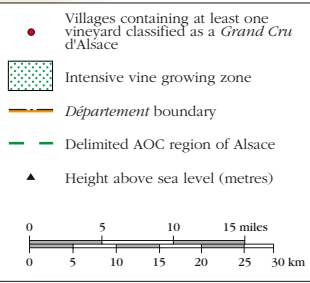

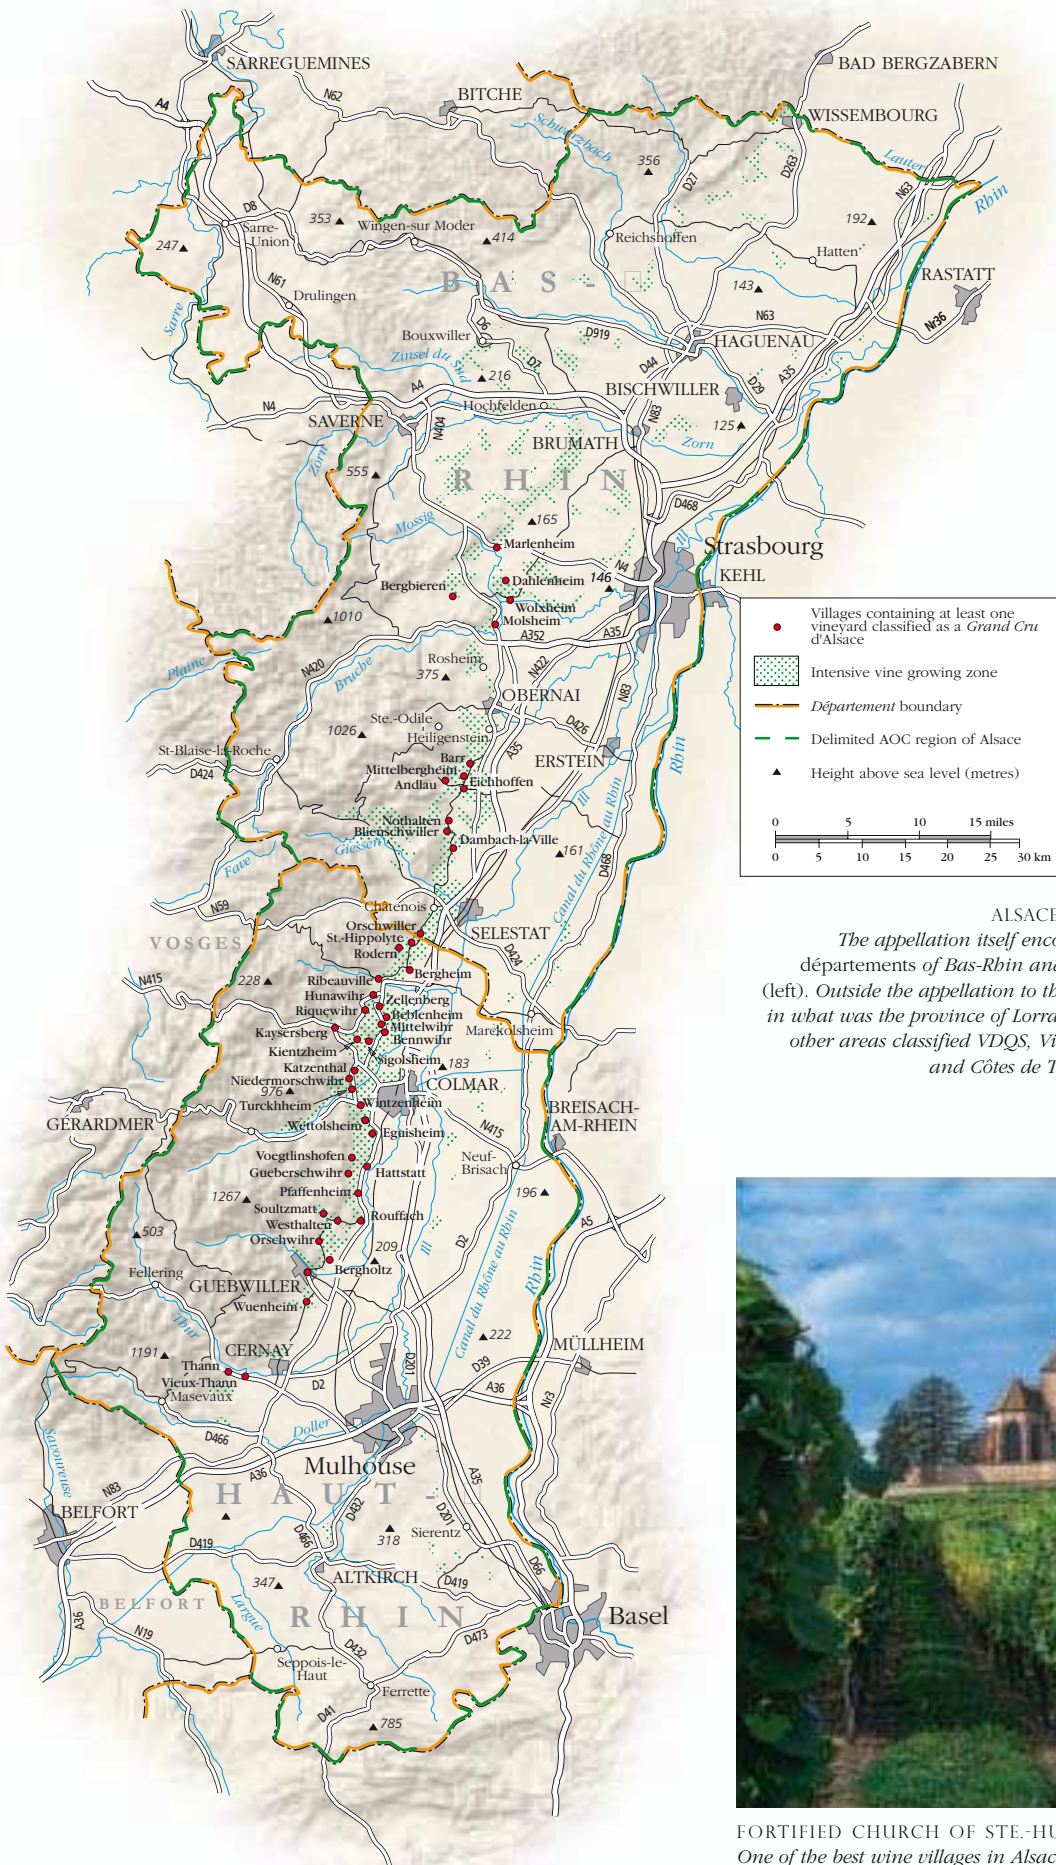

Gewurztraminer, Muscat (Blanc/Rosé à Petits Grains, and Ottone), Pinot Gris, Riesling

Secondary varieties: Auxerrois, Chardonnay, Chasselas, Pinot Blanc, Pinot Noir, Savagnin Rosé, Sylvaner

PINOT GRIS, ROTENBERG

A view of Turckbeim from the steep slopes of Rotenberg vineyard in Wintzenheim, where Domaine Humbrecht produces fabulously fat Pinot Gris wines with powerful aromatic qualities.

ALSACE, see also p.55
 The appellation itself encompasses the départements of Bas-Rhin and Haut-Rhin (left). Outside the appellation to the northwest, in what was the province of Lorraine, are two other areas classified VDQS, Vin de Moselle and Côtes de Toul (above).

FORTIFIED CHURCH OF STE.-HUNA, HUNAWIHR
 One of the best wine villages in Alsace, Hunawihr is most famous for its Clos Ste.-Hune vineyard, from which Trimbach consistently produces great Riesling.

best export markets. This is because the phenomenon applies primarily to the best producers and vineyards, particularly *grands crus*. These are the wines that make the headlines, are reviewed and entered into competitions. However, putting the problem into perspective does not help those who buy the best Alsace wines, or order a Riesling in a restaurant to go with fish only to find it is as sweet as Sauternes.

The simple solution would have been to introduce an obligatory dry wine designation, but in 2004 the opposite was accomplished when it was ruled that wines with a minimum of 12 grams per liter (9 grams per liter for Riesling) of residual sugar must be labeled “*moelleux*.” If a wine has more than 6 grams per liter of total acidity, then the minimum residual sugar rises to 18 grams per liter (12 grams per liter for Riesling). The trouble with defining minimum residual sugar content for a sweet designation is that it does not mean that all those wines that do not qualify are in fact dry. The introduction of *moelleux* has reduced, not

solved, the dilemma facing Alsace consumers, but when it comes to French bureaucracy, this is about as good as it gets.

THE WINES OF LORRAINE

Viticulture in these parts dates back to Roman times, and when the *départements* of Meurthe-et-Moselle and Moselle formed part of the old Province of Lorraine, their vineyards covered some 74,000 acres (30,000 hectares). This area was more than twice that of neighboring Alsace today. They currently cover a mere 222 acres (90 hectares), virtually all of which are in the Meurthe-et-Moselle *département*. The viticultural outcrops of the Moselle are particularly sparse and make a sorry sight compared to their former glory; today it is the *Route de la Mirabelle* (damson road), not the *Route du Vin* (wine road), that is flourishing. Growing damsons, it would seem, is far less risky than growing vines, although most people find that working in the industrialized town of Metz is more profitable.

THE GRANDS CRUS OF ALSACE

In the 2001 revised edition of this encyclopedia, I wrote: “The original *grand cru* legislation was introduced in 1975, but it was not until 1983 that the first list of 25 *grand cru* sites appeared. Three years later a further 23 were added, and there are now 50, although this number is the subject of much controversy, not least because it excludes what is acknowledged as one of the most famous, truly great *crus* of Alsace—Kaefferkopf in Ammerschwihr. While the *grands crus* will be of long-term benefit to both Alsace and the consumer, the limitation of *grand cru* to pure varietal wines of just four grapes—Muscat, Riesling, Pinot Gris, and Gewurztraminer—robs us of the chance to drink the finest quality Pinot Noir, Pinot Blanc, Sylvaner, and Chasselas.

“Even if these wines might not be in the same league as the big four, it seems wholly unreasonable to prevent their cultivation for AOC Alsace Grand Cru when market forces dictate that most growers will, in any case, plant the four classic varieties in their most prized *grand cru* sites because they fetch the highest prices. If, however, a grower on a *grand cru* is determined to make the best possible wine from any of the less lucrative varieties or, indeed, to produce a classic blend, why should we, the buyers, be prevented from knowing where the grapes came from because the law prevents the grower from mentioning *grand cru* on the label of such wines?”

I have been aware of these shortcomings since the publication of *The Wines of Alsace* (1993), so it was particularly heartening when in 2000 various impeccable sources informed me that the *grand cru* appellation would shortly be opened up to include varieties other than the so-called noble grapes. In 2004 Zotzenberg became the first (for Sylvaner), followed by Altenberg de Bergheim (for a blend of grapes), and, having cleared that hurdle, the INAO

was forced to give the go-ahead for *grand cru* application.

It will not stop there. There is talk of allowing Pinot Noir for Steinklotz, and if Steinklotz is classified for Pinot Noir, then Vorbourg cannot be far behind. The ball will just keep rolling because if Sylvaner from Zotzenberg, why not Chasselas from Hengst? There will be fears that these wines will dilute the status of *grand cru*, and that may indeed happen, but it does not matter. In the long term, it is the market that dictates status, not a decree. Reputations have to be earned, not bestowed. That is why the cheapest wine from Zind-Humbrecht is more expensive than some producers’ *grands crus*. The classification Alsace Grand Cru was late in coming, but happened in a rush, leapfrogging any thought of an intermediate *premier cru* appellation, and the delimitation of many sites was a joke. However, the market is already starting to separate the chaff from the wheat and the same will happen to classified wines made from less classic varieties and grape blends.

Under the same law that permits local *syndicats* of growers to press for different wine styles under their own particular *grand cru*, they are also permitted to impose more stringent quality criteria on a growth-by-growth basis. Where the *syndicats* have actually done this, you will find the new specifications listed below. Where there are no new specifications, the criteria laid down in the *grand cru* decree applies, and that is as follows. Riesling and Muscat: maximum yield of 66hl/ha (basic limit of 55hl/ha plus 11hl/ha PLC); minimum ripeness equivalent to 11% at time of harvest, and chaptalization up to 1.5% allowed. Pinot Gris and Gewurztraminer: maximum yield of 66hl/ha (basic limit of 55hl/ha plus 11hl/ha PLC); minimum ripeness equivalent to 12.5% at time of harvest, and chaptalization up to 1.5% allowed. Note that all ripeness levels are expressed as percent ABV.

ALTENBERG DE BERGBIETEN

Bergbieten

An exceptional growth, but not a truly great one. Its gypsum-permeated, clayey-marl soil is best for Gewurztraminer, which has a very floral character with immediate appeal, yet can improve for several years in bottle. The wines are now allowed to be blended from different varieties. The local *syndicat* has renounced the PLC, limiting the yield to an absolute maximum of 55hl/ha. It has also outlawed all chaptalization, and has increased the minimum

ripeness of Riesling and Muscat from 11% to 12%, and that of Pinot Gris and Gewurztraminer from 12.5% to 14%.

🍷 Etienne Loue • Frédéric Mochel

ALTENBERG DE BERGHEIM

Bergheim

This Altenberg has been a true *grand cru* since as long ago as the 12th century, and its calcareous clay soil is best suited to Gewurztraminer, which is tight and austere in youth, but gains in depth and bouquet with

aging. This *cru* will apply for classification of wines made from a blend of grapes.

🍷 Marcel Deiss • Louis Freyburger

ALTENBERG DE WOLXHEIM

Wolxheim

Even though it was appreciated by Napoleon, this calcareous clay *cru* cannot honestly be described as one of the greatest growths of Alsace, although it has a certain reputation for its Riesling.

🍷 Zoeller

BRAND

Turckheim

This *cru* might legitimately be called Brand New, the original Brand being a tiny *cru* of little more than 7½ acres (3 hectares). In 1924 it was expanded to include surrounding sites: Steinglitz, Kirchthal, Schneckenberg, Weingarten, and Jebstal, each with its own fine reputation. By 1980 it had grown to 74 acres (30 hectares) and it is now almost double that. This confederation of *lieux-dits* is one of the most magnificent sites in the entire region, and the quality of the wines consistently excites me—great Riesling, Pinot Gris, and Gewurztraminer. The local *syndicat* has reduced chaptalization of Riesling and Muscat from the allowable 1.5% to 1%, and that of Pinot Gris and Gewurztraminer from 1.5% to 0.5%. It has also increased the minimum ripeness of Riesling and Muscat from 11% to 11.5%, and that of Pinot Gris and Gewurztraminer from 12.5% to 13.5%.

🍷 *Albert Boxler • Dopff Au Moulin • Jos Meyer*
 ⓑ • *Preiss-Zimmer • Zind-Humbrecht* ⓑ

BRUDERTHAL

Molsheim

Riesling and Gewurztraminer—reputedly the best varieties—occupy most of this calcareous clay *cru*. I have tasted good, fruity Riesling from Bernard Weber, which was elegant, but not really top stuff. Gérard Neumeyer used not to impress me at all, but his genuinely dry 2001 Pinot Gris was one of the best Bruderthal I have tasted. The local *syndicat* has renounced all chaptalization. It has also increased the minimum ripeness of Riesling and Muscat from 11% to 12%, and that of Pinot Gris and Gewurztraminer from 12.5% to 13%.

🍷 *Alain Klengenfus • Gérard Neumeyer*

EICHBERG

Eguisheim

This calcareous clay *cru* has the lowest rainfall in Colmar and produces very aromatic wines of exceptional delicacy, yet great longevity. Famous for Gewurztraminer, which is potentially the finest in Alsace, Eichberg is also capable of making superb long-lasting Riesling and Pinot Gris. The local *syndicat* has reduced chaptalization of Riesling from 1.5% to 1%, and outlawed it completely for Pinot Gris and Gewurztraminer. It has also increased the minimum ripeness of Riesling from 11% to 11.5%, and Pinot Gris and Gewurztraminer from 12.5% to 13%. The chaptalization and minimum ripeness of Muscat remain the same.

🍷 *Charles Baur* ⓑ • *Emile Beyer • Léon Beyer* (not sold as such, Beyer's Cuvée des Comtes d'Eguisheim is 100% pure Eichberg) • *Paul Ginglinger • Albert Hertz*

ENGELBERG

Dahlenheim and Scharrachbergheim

One of the least-encountered *grands crus*, this vineyard gets long hours of sunshine and is supposed to favor Gewurztraminer and Riesling; but few of the wines I have tasted suggest anything special.

🍷 *Jean-Pierre Bechtold*

FLORIMONT

Ingersheim and Katzenthal

Mediterranean flora abounds on the sun-blessed, calcareous clay slopes of this *cru*—hence its name, meaning “hill of flowers”—the excellent microclimate producing some stunning Riesling and Gewurztraminer.

🍷 *François Bohn • René Meyer • Bruno Sorg*

FRANKSTEIN

Dambach-la-Ville

Not so much one vineyard as four separate spurs, the warm, well-drained, granite soil of this *cru* is best suited to the production of delicate, racy Riesling, and elegant Gewurztraminer. J. Hauller used to be by far and away the best producer of Frankstein, for both the Riesling and Gewurztraminer.

🍷 *Charles & Dominique Frey* ⓑ • *Ruhlman • Schaeffer-Woerly*

FROEHN

Zellenberg

This *cru* sweeps up and around the southern half of the hill upon which Zellenberg is situated. The marly-clay soil suits Muscat, Gewurztraminer, and Pinot Gris, in that order, and the wines are typically rich and long-lived. The local *syndicat* has outlawed all chaptalization, and increased the minimum ripeness of Riesling and Muscat from 11% to 12%, and that of Pinot Gris and Gewurztraminer from 12.5% to 13.5%.

🍷 *J. P. & J. F. Becker* ⓑ

FURSTENTUM

Kientzheim and Sigolsheim

This estate is best for Riesling, although the vines have to be well established to take full advantage of the calcareous soil. Gewurztraminer can also be fabulous—in an elegant, more floral, less spicy style—and Pinot Gris excels even when the vines are very young. The local *syndicat* has reduced all chaptalization from the allowable 1.5% to 0.5%. It has also increased the minimum ripeness of Riesling and Muscat from 11% to 11.5%, and Pinot Gris and Gewurztraminer from 12.5% to 13%.

🍷 *Paul Blanck* ⓑ • *Bott-Geyl • Albert Mann • Weinbach/Faller*

GEISBERG

Ribeauvillé

Geisberg has been well documented since as long ago as 1308 as Riesling country par

excellence. The calcareous, stony-and-clayey sandstone soil produces fragrant, powerful, and long-lived wines of great finesse. Trimbach owns vines here, and in a contiguous plot with vines in Osterberg, the whole of which produces the superb Riesling Cuvée Frédéric Émile. The local *syndicat* has reduced the chaptalization of Riesling, Pinot Gris, and Gewurztraminer from 1.5% to 0.5%. It has also increased the minimum ripeness of Riesling from 11% to 11.5%, and that of Pinot Gris and Gewurztraminer from 12.5% to 13%. The chaptalization and minimum ripeness of Muscat remain the same.

🍷 *Robert Faller • André Kientzler*

GLOECKELBERG

Rodern and St-Hippolyte

This clay-granite *cru* is known for its light, elegant, and yet persistent style of wine, with Gewurztraminer and Pinot Gris the most successful varieties. The local *syndicat* has halved the PLC, thereby reducing the absolute maximum yield allowed to 60.5hl/ha.

🍷 *Koberlé-Kreyer*

GOLDERT

Guebenschwihr

Dating back to the year 750, and recognized on export markets as long ago as 1728, Goldert derives its name from the color of its wines, the most famous of which is the golden Gewurztraminer. The Muscat grape variety also excels on the calcareous clay soil, and whatever the varietal the style of wine is rich and spicy with a luscious creaminess.

🍷 *Ernest Burn (Clos St-Imer) • Zind-Humbrecht* ⓑ

HATSCHBOURG

Hattstatt and Voegtlinshoffen

Gewurztraminer from this south-facing, calcareous marl soil slope excels, but Pinot Gris and Riesling are also excellent.

🍷 *Buecher-Fix • André Hartmann • Lucien Meyer*

HENGST

Wintzenheim

Hengst Gewurztraminer is a very special, complex wine, seeming to combine the classic qualities of this variety with the orange zest and rose-petal aromas more characteristic of the Muscat grape variety. But Hengst is a very flexible *cru*. Besides Gewurztraminer, its calcareous marl soil also produces top-quality Muscat, Riesling, and Pinot Gris. The local *syndicat* has renounced all chaptalization. It has also increased the minimum ripeness of Riesling and Muscat from 11% to 12%, and that of Pinot Gris and Gewurztraminer from 12.5% to 13%.

🍷 *Jos Meyer* ⓑ • *Albert Mann • Zind-Humbrecht* ⓑ

KAEFFERKOPF

Ammerschwihr

Although not technically a *grand cru*, this is one of the greatest Alsace *crus*, superior to many of the officially nominated sites, and after a long hagggle, will shortly be classified. Possibly even by the time this edition is published. Kaefferkopf was legally delimited in 1932. However, the bureaucrats refused to recognize all of it because it is not geologically uniform. Furthermore, they refused to recognize the traditional Kaefferkopf practice of blending varieties—usually Riesling and Gewurztraminer. However, after the brilliant, but fanatical Jean-Michel Deiss bulldozed his way through this bureaucratic nonsense with his sensational, succulently sweet, classic blends under the Altenberg de Bergheim Grand Cru, INAO had no option but to agree that Kaefferkopf blends may be classified as a *grand cru*. However, bureaucrats being what they are, they only did this on the proviso that the borders of Grand Cru Kaefferkopf should not be as large as the 1932 delimitation. This desire to keep *grands crus* as small, authentic, and as geologically homogenous as possible would be admirable if it had been applied to all the other 49 *grands crus*, but some *grands crus* are geologically less uniform and have swollen well beyond their historical boundaries. Brand, for example, is 20 times its original designated size. After unreasonably withholding *grand cru* status from the growers on Kaefferkopf for so long, and unreasonably allowing the growers on what is now Brand to get away with murder, the decent thing would have been to recognize the 1932 delimitation.

🍷 J. B. Adam (Jean-Baptiste) • Marcel Freyburger **B** • Meyer-Fonné (Nicolas) • Martin Schaezel **B** • Maurice Schoech

KANZLERBERG

Bergheim

Although this tiny *cru* adjoins the western edge of Altenberg de Bergheim, the wines of its gypsum-permeated, clayey-marl *terroir* are so different from those of the Altenberg growth that the vinification of the two sites has always been kept separate. The wines have the same potential longevity, but the Kanzlerbergs are fuller and fatter. Kanzlerberg has a reputation for both Riesling and Gewurztraminer, but their ample weight can be at odds with their varietal aromas when young, and both wines require plenty of bottle age to achieve their true finesse. The local *syndicat* has renounced the PLC, limiting the yield to an absolute maximum of 55hl/ha. It has also outlawed all chaptalization, and increased the minimum ripeness of Riesling and Muscat from 11% to 12%, and that of Pinot Gris and Gewurztraminer from 12.5% to 14%.

🍷 Louis Freyburger **B** • Sylvie Spielmann **B**

KASTELBERG

Andlau

One of the oldest vineyards in Alsace, Kastelberg has been planted with vines since the Roman occupation. Situated on a small hill next to Wiebelsberg, Andlau's other *grand cru*, the very steep, schistous *terroir* has long proved to be an excellent site for racy and delicate Riesling, although the wines can be very closed when young and require a few years to develop their lovely bottle aromas. Kastelberg wines remain youthful for 20 years or more, and even show true *grand cru* quality in so-called "off" years.

🍷 Guy Wach

KESSLER

Guebwiller

Though a *cru* more premier than grand (the truly famous sites of Guebwiller being Kitterlé and Wanne, the latter not classified), the central part of Kessler is certainly deserving of *grand cru* status. Here, the vines grow in a well-protected, valleylike depression, one side of which has a very steep, south-southeast facing slope. Kessler is renowned for its full, spicy, and mellow Gewurztraminer, but Riesling can be much the greater wine. The local *syndicat* has renounced the PLC, limiting the yield to an absolute maximum of 55hl/ha. It has also outlawed all chaptalization, and increased the minimum ripeness of Riesling and Muscat from 11% to 11.5%, and that of Pinot Gris and Gewurztraminer from 12.5% to 13.5%.

🍷 Dirler-Cadé **B** • Schlumberger

KIRCHBERG DE BARR

Barr

The true *grands crus* of Barr are Gaensbroennel and Zisser, but these have been incorporated into the calcareous marl *terroir* of Kirchberg, which is known for its full-bodied yet delicate wines that exhibit exotic spicy fruit, a characteristic that applies not only to Pinot Gris and Gewurztraminer but also to Riesling.

🍷 Stoeffler **O**

KIRCHBERG DE RIBEAUVILLÉ

Ribeauvillé

One of the few *lieux-dits* that has regularly been used to market Alsace wine over the centuries. It is famous for Riesling, which typically is firm, totally dry, and long-lived, developing intense gasoline characteristics with age. Kirchberg de Ribeauvillé also produces great Muscat with a discreet, yet very specific, orange-and-musk aroma, excellent acidity, and lots of finesse. The local *syndicat* has reduced the chaptalization of Riesling, Pinot Gris and Gewurztraminer from 1.5% to 0.5%. It has also increased the minimum ripeness of Riesling from 11% to 11.5%, and that of Pinot Gris and Gewurztraminer from 12.5% to 13%. The chaptalization and minimum ripeness of Muscat remain the same.

🍷 André Kientzler • Jean Sipp • Louis Sipp

KITTERLÉ

Guebwiller

Of all the grape varieties that are grown on this volcanic sandstone *terroir*, it is the crisp, gasolinelike Riesling that shows greatest finesse. Gewurztraminer and Pinot Gris are also very good in a gently rich, supple, and smoky-mellow style. The local *syndicat* has renounced

the PLC, limiting the yield to an absolute maximum of 55hl/ha. It has also outlawed all chaptalization, and has increased the minimum ripeness of Riesling and Muscat from 11% to 11.5%, and that of Pinot Gris and Gewurztraminer from 12.5% to 13.5%.

🍷 Schlumberger

MAMBOURG

Sigolsheim

The reputation of this *cru* has been documented since 783, when it was known as the "Sigoltesberg." A limestone *coteau*, with calcareous clay topsoil, Mambourg stretches for three-quarters of a mile (over a kilometer), penetrating farther into the plain than any other spur of the Vosges foothills. Its vineyards, supposedly the warmest in Alsace, produce wines that tend to be rich and warm, mellow and liquorous. Both the Gewurztraminer and the Pinot Gris have plenty of smoky-rich spice in them. The local *syndicat* has reduced chaptalization of Riesling, Pinot Gris and Gewurztraminer from 1.5% to 0.5% and increased the minimum ripeness of Riesling from 11% to 12%, and that of Pinot Gris and Gewurztraminer from 12.5% to 13%.

🍷 Jean-Marc Bernhard • Marcel Deiss **B** • Daniel Fritz • Pierre Sparr • Marc Tempé **B**

MANDELBERG

Mittelwihr and Beblenheim

Mandelberg—"almond tree hill"—has been planted with vines since Gallo-Roman times, and used as an appellation since 1925. Its reputation has been built on Riesling, although today more Gewurztraminer is planted; high-quality Pinot Gris and Muscat is also produced. The local *syndicat* has renounced the PLC, limiting the yield to an absolute maximum of 55hl/ha. It has also outlawed chaptalization for Pinot Gris and Gewurztraminer, increasing the minimum ripeness for these two grapes from 12.5% to 13%. The minimum ripeness for Riesling and Muscat remains at 11%, and the possibility of chaptalization is retained exclusively for these two varieties.

🍷 Hartweg • Frédéric Mallo • André Stentz **O**

MARCKRAIN

Bennewihr and Sigolsheim

Markrain is the east-facing slope of the Mambourg, which overlooks Sigolsheim. The soil is a limestone-marl with oolite pebbles interlayering the marl beds. It is mostly planted with Gewurztraminer, with some Pinot Gris and a few Muscat vines. The Bennewihr *coopérative* usually makes a decent Pinot Gris under the Bestheim label. The local *syndicat* has reduced the chaptalization of Pinot Gris and Gewurztraminer from an allowable 1.5% to 1%, and increased the minimum ripeness of these grapes from 12.5% to 13%. The chaptalization and minimum ripeness of Riesling and Muscat remain the same.

🍷 Bestheim

MOENCHBERG

Andlau and Eichhoffen

Moenchberg—"monk's hill"—was owned by a Benedictine order until 1097, when it was taken over by the inhabitants of Eichhoffen. With its clayey-marl soil, excellent exposure to the sun, and very hot, dry microclimate, this *cru* has built up a reputation for firm, intensely fruity, and very racy Riesling. Excellent though it is,

however, the finest Moenchberg wines I have tasted have been Pinot Gris. Not to be confused with the equally excellent *grand cru* Muenchberg of Nothalten.

🍷 *André & Rémy Gresser*

MUENCHBERG

Nothalten

This sunny vineyard belonging to the abbey of Baumgarten, whose monks tended vines in the 12th century, nestles under the protection of the Undersberg, a 2,950-foot (900-meter) peak in the Vosges mountains. The striking style of Muenchberg's wines is due in part to the special microclimate it enjoys, and also to the ancient, unique, and pebbly volcanic sandstone soil. The wines are now allowed to be blended from different varieties. The local *syndicat* has renounced the PLC, limiting the yield to an absolute maximum of 55hl/ha. It has also outlawed all chaptalization and has increased the minimum ripeness of Riesling and Muscat from 11% to 12%, and that of Pinot Gris and Gewurztraminer from 12.5% to 14%.

🍷 *André Ostertag* **B** • *Jean-Luc Schwartz*

OLLWILLER

Wuenheim

Ollwiller's annual rainfall is one of the lowest in France, with Riesling and Gewurztraminer faring best on its clayey-sand soil—although it is not one of the greatest *grands crus*, and the recommended wines are rated in that context.

🍷 *Château Ollwiller* • *CV Vieil Armand*

OSTERBERG

Ribeauvillé

This stony-clay growth abuts Geisberg, another Ribeauvillé *grand cru*, and makes equally superb Riesling country. The wines age very well, developing the gasoline nose of a fine Riesling. Trimbach owns vines here, and in a contiguous plot with vines in Geisberg, the whole of which produces the superb Riesling Cuvée Frédéric Émile. Gewurztraminer and Pinot Gris also fare well.

🍷 *André Kientzler* • *Louis Sipp*

PFERSIGBERG *also spelled* PFERSICHBURG & PFIRSIGBERG

Eguisheim and Wettolsheim

A calcareous sandstone soil well-known for its full, aromatic, and long-lived Gewurztraminer—although Pinot Gris, Riesling, and Muscat also fare well here. The wines all share a common succulence of fruit acidity, and possess exceptional aromas. The local *syndicat* has reduced chaptalization of Riesling from 1.5% to 1% and outlawed it completely for Pinot Gris and Gewurztraminer. It has also increased the minimum ripeness of Riesling from 11% to 11.5%, and that of Pinot Gris and Gewurztraminer from 12.5% to 13%. The chaptalization and minimum ripeness of Muscat remain the same.

🍷 *Charles Baur* **B** • *Emile Beyer* • *Léon Beyer* (not sold as such, but Beyer's Cuvée Particulière is 100% pure Pfersigberg) • *Pierre Freudenreich* • *Bruno Sorg*

PFINGSTBERG

Orschwihr

All four *grand cru* varieties grow well on the calcareous-marl and clayey-sandstone of this *cru*, producing wines of typically floral aroma, combined with rich, honeyed fruit. The local *syndicat* has renounced all chaptalization. It has also increased the minimum ripeness of Riesling and Muscat from 11% to 12%, and that of Pinot Gris and Gewurztraminer from 12.5% to 13.5%.

🍷 *Lucien Albrecht* • *François Braun* • *François Schmitt* • *Albert Ziegler*

PRAELATENBERG

Kintzheim and Orschwihr

Although Praelatenberg dominates the north side of the village of Orschwihr, virtually all the *cru* actually falls within the boundary of Kintzheim, 1 mile (1.5 kilometers) away. The locals say that all four varieties grow to perfection here, but Pinot Gris has been best in my experience, followed by Riesling, and then Gewurztraminer. The local *syndicat* has reduced all chaptalization from an allowable 1.5% to 1%. It has also increased the minimum ripeness of Riesling and Muscat from 11% to 11.5%, and that of Pinot Gris and Gewurztraminer from 12.5% to 13%.

🍷 *Allimant-Laugner* • *Jean Becker* • *Engel Frères* • *Siffert*

RANGEN

Thann and Vieux-Thann

The 15th-century satirist Sebastian Brant, writing about the little-known travels of Hercules through Alsace, reveals that the mythical strongman once drank so much Rangen that he fell asleep. So ashamed was he on waking that he ran away, leaving behind his bludgeon—the club which today appears on Colmar's coat of arms.

So steep that it can be cultivated only when terraced, Rangen's volcanic soil is very poor organically, but extremely fertile minerally. It also drains very quickly, and its dark color makes it almost too efficient in retaining the immense

heat that pours into this sweltering sun-trap. However, this fierce heat and rapid drainage are essentially responsible for the regular stressing of the vine, which is what gives the wines their famed power and pungency. Rangen produces great wines even in the poorest years, making it a true *grand cru* in every sense.

🍷 *Schoffit* • *Wolfberger* • *Zind-Humbrecht* **B**

ROSACKER

Hunawihr

First mentioned in the 15th century, this *cru* has built up a fine reputation for Riesling, but one wine—Trimbach's Clos Ste.-Hune—is almost every year far and away the finest Riesling in Alsace. Occasionally other producers make an exceptional vintage that may challenge it, but none has consistently matched Clos Ste.-Hune's excellence. Trimbach makes no mention of Rosacker on its label because the family believes, as do a small number of internationally known producers, who avoid using the term, that much of Rosacker should not be classified as *grand cru* (although Trimbach used to sell Clos Ste.-Hune *grand cru* in the 1940s). Rosacker's calcareous and marly-clay soil is rich in magnesium and makes fine Gewurztraminer as well as top Riesling. The local *syndicat* has reduced chaptalization of Riesling, Pinot Gris, and Gewurztraminer from 1.5% to 1%. It has also increased the minimum ripeness of Riesling from 11% to 11.5%, and that of Pinot Gris and Gewurztraminer from 12.5% to 13%. The chaptalization and minimum ripeness of Muscat remain the same.

🍷 *C. V. de Hunawihr* • *Roger Jung* • *F. E. Trimbach* (Clos Ste.-Hune)

SAERING

Guebwiller

This vineyard, first documented in 1250 and marketed since 1830, is situated below Kessler and Kitterlé, Guebwiller's other two *grands crus*. Like Kessler, this *cru* is more *premier* than *grand* (yet still better than many of the *grands crus*). The floral, fruity, and elegant Riesling is best, especially in hot years, when it becomes exotically peachy, but Muscat and Gewurztraminer can also be fine.

🍷 *Dirler-Cadé* **B** • *Loberger* • *Schlumberger*

THE VILLAGE OF RIQUEWIHR

Alsace is full of beautiful villages, but Riquewihr is one of the most delightful, having avoided much of the commercial exploitation that has made nearby Ribeauvillé a more thriving yet less intimate place.

SCHLOSSBERG

Kientzheim and Kaysersberg

The production of Schlossberg was controlled by charter in 1928, and in 1975 it became the first Alsace *grand cru*. Although its granite *terroir* looks equally shared by the two sites, 1¼ acres (less than half a hectare) belongs to Kaysersberg. Schlossberg is best for Riesling, but Gewurztraminer can be successful in so-called “off” vintages. The wine is full of elegance and finesse, whether produced in a classic, restrained style, as Blanck often is, or with the more exuberant fruit that typifies Weinbach/Faller. The local *syndicat* has reduced the chaptalization of Pinot Gris and Gewurztraminer from an allowable 1.5% to 0.5%, and increased the minimum ripeness of these grapes from 12.5% to 13%. The chaptalization and minimum ripeness of Riesling and Muscat remain the same.

🍷 Paul Blanck ① • Joseph Fritsch • Albert Mann • Weinbach/Faller • Ziegler-Mauler

SCHOENENBOURG

Riquewihr

This vineyard has always had a reputation for producing great Riesling and Muscat, although modern wines show Riesling to be supreme, with Pinot Gris vying with Muscat for the number two spot. Schoenenbourg’s gypsum-permeated, marly-and-sandy soil produces very rich, aromatic wines in a *terroir* that has potential for VT and SGN.

🍷 J. P. & J. F. Becker ② • Marcel Deiss ② • Roger Jung

SOMMERBERG

Niedermorschwihr and Katzenthal

Known since 1214, the fame of this *cru* was such that a strict delimitation was in force by the 17th century. Situated in the foothills leading up to Trois-Épis, its granite soil is supposed to be equally excellent for all four classic varieties, although Riesling stands out in my experience. Sommerberg wines are typically aromatic, with an elegant succulence of fruit.

🍷 Albert Boxler

SONNENGLANZ

Beblenheim

In 1935, two years after Kaefferkopf was defined by tribunal at Colmar, Sonnenglanz received a similar certification. Unlike at Kaefferkopf, however, its producers failed to exploit the appellation until 1952, when the local cooperative was formed. But Sonnenglanz is a *grand cru* and Kaefferkopf technically is not. Once renowned for its Sylvaner, the calcareous clay soil of Sonnenglanz is best suited to Gewurztraminer and Pinot Gris, which can be very ripe and golden in color.

🍷 J. P. & J. F. Becker ② • Bott-Geyl • Hartweg

SPIEGEL

Bergholtz and Guebwiller

Known for only 50 years or so, this is not one of the great *grands crus* of Alsace. However, its sandstone and marl *terroir* can produce fine, racy Riesling with a delicate bouquet and good, though not great, Gewurztraminer and Muscat. The local *syndicat* has renounced all chaptalization of Pinot Gris and Gewurztraminer, but permissible chaptalization of Riesling and Muscat remains at 1.5%. It has also increased the minimum ripeness of Pinot Gris and Gewurztraminer from 12.5% to 13.5%, but that of Riesling and Muscat remains 11%.

🍷 Dirlir • Loberger • Eugène Meyer ② • Wolfberger

SPOREN

Riquewihr

Sporen is one of the truly great *grands crus*, its stony, clayey-marl soil producing wines of remarkable finesse. Historically, this *terroir* is famous for Gewurztraminer and Pinot Gris, which occupy virtually all of its vineyard today, but it was also traditional to grow a mix of varieties and vinify them together to produce a classic nonvarietal wine, such as Hugel’s Sporen Gentil, which was capable of aging 30 years or more (and in a totally different class from that firm’s own Gentil, which does not come from Sporen and is a blend of separately vinified wines).

🍷 Dopff Au Moulin • Roger Jung • Mittnacht-Klack

STEINERT

Pfaffenheim and Westhalten

Pinot Gris is the king of this stony, calcareous *cru*, although historically Schneckenberg (now part of Steinert) was always renowned for producing a Pinot Blanc that tasted more like Pinot Gris. The Pfaffenheim cooperative still produces a Pinot Blanc Schneckenberg (although not a *grand cru*, of course), and its stunning Pinot Gris steals the show. Steinert’s Pinot Blanc-cum-Gris reputation illustrates the exceptional concentration of these wines.

Gewurztraminer fares best on the lower slopes, Riesling on the higher, more sandy slopes. The local *syndicat* has reduced chaptalization of Riesling and Muscat from the allowable 1.5% to 1%, and that of Pinot Gris and Gewurztraminer

from 1.5% to 0.5%. It has also increased the minimum ripeness of Riesling and Muscat from 11% to 12%, and that of Pinot Gris and Gewurztraminer from 12.5% to 13.5%.

🍷 C. V. Pfaffenheim • Rieflé • François Runner • Pierre Paul Zink

STEINGRUBLER

Wettolsheim

Although this calcareous-marl and sandstone *cru* is not one of the great names of Alsace, I have enjoyed some excellent Steingrubler wines, particularly Pinot Gris. This can be very rich, yet show great finesse. Certainly Steingrubler is one of the better lesser-known *grands crus*, and it could well be a great growth of the future. The local *syndicat* has reduced all chaptalization from an allowable 1.5% to 1%. It has also increased the minimum ripeness of Riesling and Muscat from 11% to 11.5%, and that of Pinot Gris and Gewurztraminer from 12.5% to 13%.

🍷 Barmès-Buecher ② • Robert Dietrich • Albert Mann • Wolfberger • Wunsch & Mann (Collection Joseph Mann)

STEINKLOTZ

Marlenheim

Steinklotz (“block of stone”) was in 589 part of the estate of the Merovingian king Childebert II, from which Marlenheim derives its still-flourishing reputation for Pinot Noir wines of red and rosé style, but since it has flown the *grand cru* flag, Steinklotz is supposed to be good for Pinot Gris, Riesling, and Gewurztraminer. However, local growers are determined to have their Pinot Noir recognized and will be applying for *grand cru* status for these wines.

🍷 Romain Fritsch

VORBOURG

Rouffach and Westhalten

All four varieties excel in this calcareous sandstone *terroir*, whose wines are said to develop a bouquet of peaches, apricots, mint, and hazelnut—but Riesling and Pinot Gris fare best. Muscat favors warmer vintages, when its wines positively explode with flavor, and Gewurztraminer excels in some years but not in others. Vorbourg catches the full glare of the sun from dawn to dusk and so is also well suited to Pinot Noir, which is consequently heavy with pigment. The local *syndicat* has renounced all chaptalization. It has also increased the minimum ripeness of Riesling and Muscat from 11% to 12%, and that of Pinot Gris and Gewurztraminer from 12.5% to 13.5%.

🍷 de l’École (Fleuron de Vorbourg) • Muré ① (Clos St.-Landelin)

WIEBELSBERG

Andlau

This vineyard has very good sun exposure, and its siliceous soil retains heat and drains well.

Riesling does well, producing wines that can be very fine and floral, slowly developing a delicate, ripe-peachy fruit on the palate.

🍷 *André & Rémy Gresser • André Rieffel*

WINECK-SCHLOSSBERG

Katzenthal and Ammerschwihr

Wineck-Schlossberg's granite vineyards enjoy a sheltered microclimate that primarily favors Riesling, followed by Gewurztraminer. The wines are light and delicate, with a fragrant aroma.

🍷 *J. B. Adam (Jean-Baptiste) • Meyer-Fonné*

WINZENBERG

Blienschwiller

Locals claim that this *cru* is cited in "old documents" and that Riesling and Gewurztraminer fare best in its granite vineyards. The Riesling I have encountered has

been light and charming, but not special. Gewurztraminer has definitely been much the superior wine, showing fine, fresh aromas with a refined spiciness of some complexity.

🍷 *Autber*

ZINNKOEPLÉ

Soultzmatt and Westthalten

Zinnkoeplé's hot, dry microclimate gives rise to a rare concentration of Mediterranean and Caspian fauna and flora near its exposed summit. The heat and the arid, calcareous sandstone soil are what gives it its reputation for strong, spicy, and fiery styles of Pinot Gris and Gewurztraminer. The Riesling is a delicate and most discreet wine, but this is deceptive and it can, given decent bottle-age, be just as powerful. Mention should be made of Seppi Landmann, who has produced some stunning Zinnkoeplé, but also far too many

ordinary wines, and a few absolute bums, thus does not get a wholehearted recommendation below.

🍷 *Léon Boesch • Agathe Bursin • Jean-Marie Haag • Schlegel-Boeglin*

ZOTZENBERG

Mittelbergheim

First mentioned in 1364, when it was known as Zoczenberg, the wines of this calcareous clay *terroir* have been sold under its own *lieu-dit* since the beginning of the 20th century. It is historically the finest site in Alsace for Sylvaner, and is destined to become the first *grand cru* to be officially recognized for this supposedly lowly grape variety. Gewurztraminer and Riesling show a creamy richness of fruit.

🍷 *Agathe Bursin • André Rieffel*

THE APPELLATIONS OF ALSACE AND LORRAINE

ALSACE AOC

This appellation covers all the wines of Alsace (with the exception of Alsace Grand Cru and Crémant d'Alsace), but 95 percent of the wines are often sold according to grape variety. These are: Pinot (which may also be labeled Pinot Blanc, Clevner, or Klevner), Pinot Gris, Pinot Noir, Riesling, Gewurztraminer, Muscat, Sylvaner, Chasselas (which may also be labeled Gutedel), and Auxerrois. This practice effectively creates nine "varietal" AOCs under the one umbrella appellation, and these are listed separately.

ALSACE GRAND CRU AOC

The current production of *grand cru* wine is approximately 4 percent of the total volume of AOC Alsace. Because every *cru*, or growth, makes a wine of a specific character, it is impossible to give a generalized description.

WHITE See The Grands Crus of Alsace, p.187

🍷 Muscat, Riesling, Gewurztraminer, Pinot Gris, Sylvaner (Zotzenberg only)

ALSACE SÉLECTION DE GRAINS NOBLES AOC

This is not an AOC in itself, but a subordinate designation that may be appended either to the basic appellation or to Alsace Grand Cru AOC. Its production is strictly controlled, and the regulations are far tougher than for any AOC elsewhere. In theory, these wines are harvested after VT, but in practice they are picked in several tries prior to the best VT, which will be produced from what remains on the vine after a further period of ripening.

These rare and sought-after wines are made from botrytis-affected grapes; unlike Sauternes, however, Alsace is no haven for "noble rot," which occurs haphazardly and in much reduced concentrations. The wines are, therefore, produced in tiny quantities and sold at very high prices. The *sauternais* are often amazed not only by the high sugar levels (while chaptalization is not permitted in Alsace, it has become almost mandatory in Sauternes), but also by how little sulfur is used, highlighting why SGN has become one of the world's greatest dessert wines.

WHITE Now made with less alcohol and higher sugar than when first introduced, these wines possess even more finesse than before. While Gewurztraminer is almost too easy to make, Pinot Gris offers the ideal balance between quality and price; just a couple of Muscat have been produced, and Riesling SGN is in a class of its own. Check the appropriate varietal entry for the best producers.

🍷 Gewurztraminer, Pinot Gris, Riesling, Muscat

🍷 5–30 years

ALSACE VENDANGE TARDIVE AOC

This is not an AOC in itself, but a subordinate designation that may be appended either to the basic appellation or to Alsace Grand Cru AOC. Its production is controlled, and the regulations are far stricter than for any AOC elsewhere in France. VT is far less consistent in quality and character than SGN. This is because some producers make these wines from grapes that have the correct minimum sugar content, but that were picked with the rest of the crop, not late-harvested. Such VT lacks the true character of a late-harvested wine, which is only brought about by the complex changes that occur inside a grape that has remained on the vine until November or December. As the leaves begin to fall and the sap retreats to the protection of the root system, the grapes, cut off from the vine's metabolic system, start dehydrating. The compounds that this process (known as *passerillage*) produces are in turn affected by the prevailing climatic conditions. *Passerillé* grapes that have endured progressively colder

temperatures (the norm) and those that have enjoyed a late Indian summer (not uncommon) will produce entirely different wines. Until the regulations are changed to ensure that VT is always harvested after a certain specified date, choose recommended wines and look for a date of harvest on the back label.

Another aspect that requires regulating is the relative sweetness of the wine, as VT can be anything from almost dry to sweeter than some SGN. Refer to the appropriate varietal entry for the best producers.

WHITE Whether dry, medium-sweet, or sweet, this relatively full-bodied wine should always have the true character of *passerillage*—although sometimes this will be overwhelmed by botrytis. Gewurztraminer is the most commonly encountered variety, but only the best have the right balance; Pinot Gris and Riesling both offer an ideal balance between quality, availability, and price. Muscat is almost as rare for VT as it is for SGN, as it tends to go very flabby when overripe.

🍷 Gewurztraminer, Pinot Gris, Riesling, Muscat

🍷 5–20 years

AUXERROIS AOC

Theoretically this designation does not exist, but Auxerrois is one of the varieties permitted for

the production of Pinot wine and makes such a distinctly different product that it has often been labeled separately. This practice, currently on the increase, is “officially tolerated.”

WHITE Fatter than Pinot Blanc, with a more buttery, honeyed, and spicy character to the fruit, the greatest asset of Auxerrois is its natural richness and immediate appeal. Inclined to low acidity, it can easily become flabby and so musky it tastes almost foxy, but the best Auxerrois can give Pinot Gris a run for its money.

☞ Auxerrois

🕒 Up to 5 years

✓ *Emile Beyer* • *Rolly Gassmann* • *JosMeyer* • *André Kientzler* • *Julien Rieffel* (the Klevner Vieilles Vignes is pure Auxerrois despite the Pinot Blanc synonym) • *Bruno Sorg* • *Marc Tempé* (Vieilles Vignes)

CHASSELAS AOC

Rarely seen, but enjoying something of a revival among a few specialized growers.

WHITE The best Chasselas wines are not actually bottled, but sit in vats waiting to be blended into anonymous *cuvées* of Edelzwicker. They are neither profound nor complex, but teem with fresh, fragrant fruit and are an absolute joy to drink; they taste better, however, before they are bottled than after. The fruit is so delicate that it needs a lift to survive the shock of being bottled, and the wine would probably benefit from being left on lees and bottled very cold to retain a bit of tongue-tingling carbonic gas.

☞ Chasselas

🕒 Upon purchase

✓ *JosMeyer* • *André Kientzler* • *Schoffit*

CLASSIC ALSACE BLENDS

Despite the varietal wine hype, Alsace is more than capable of producing the finest-quality classic blends, but their number is small and dwindles every year because so few consumers realize their true quality. It is difficult for producers to make potential customers appreciate why their blends are more expensive than ordinary Edelzwicker, but classic Alsace blends should no more be categorized with Edelzwicker than *crus classés* compared with generic Bordeaux. This category focuses attention on the region's top-performing blends which, whether or not they fetch them, deserve *grand cru* prices. Unlike the blending of Edelzwicker, for which various wines are mixed together—and where there is always the temptation to get rid of unwanted wines—the different varieties in most classic Alsace blends always come from the same vineyard and are traditionally harvested and vinified together. See also Kaefferkopf, p.189

WHITE Most of these wines improve with age, but go through phases when one or other grape variety dominates, which is interesting to observe and should help you to understand why you prefer to drink a particular blend. Depending on the amounts involved, Gewurztraminer typically dominates in the young wine, followed by Pinot Gris then, many years later, Riesling, but other varieties may also be involved when overripe.

☞ Chasselas, Sylvaner, Pinot Blanc, Pinot Gris, Pinot Noir, Auxerrois, Gewurztraminer, Muscat Blanc à Petits Grains, Muscat Rosé à Petits Grains, Muscat Ottonel, Riesling

✓ *Marcel Deiss* (Grand Vin de Schoenbourg, Altenberg de Bergheim Assemblage, Burg, Engelgarten) • *Marcel Freyburger* (Kaefferkopf) • *C. V. Ribeauvillé* (Clos du Zahnacker equal parts Gewurztraminer, Pinot Gris, and Riesling) • *Jean Sipp* (Clos du Schlossberg 50% Riesling, 20% Gewurztraminer, 20% Tokay-Pinot Gris, 10% Muscat) • *Louis Sipp* (Côtes de Ribeauvillé 40% Pinot Blanc plus 60% Sylvaner, Riesling, and Gewurztraminer)

CLEVNER AOC

Commonly used synonym under which Pinot is marketed, sometimes spelled Klevner, but not to be confused with Klevener. See Pinot AOC

CÔTES DE TOUL AOC

Part of the once-flourishing vineyards of Lorraine, these *côtes* are located in eight communes west of Toul, in the *département* of Meurthe-et-Moselle, and were elevated to AOC status in 2003. Although the best are merely ready-drinking country wines, Laroppe easily outclasses the competition.

RED The Pinot Noir is the most successful, and the wine is usually sold as a pure varietal. It can have surprisingly good color for wine from such a northerly region, and good cherry-Pinot character.

☞ Pinot Meunier, Pinot Noir

🕒 1–4 years

WHITE These wines represent less than two percent of the VDQS, just 844 cases (76 hectoliters). Nevertheless, the Auxerrois is the best grape, its fatness making it ideal for such a northerly area with a calcareous soil.

☞ Aligoté, Aubin, Auxerrois

🕒 1–3 years

ROSÉ Most Côtes de Toul is made and sold as *vin gris*. This pale rosé is delicious when it is still youthful.

☞ Gamay, Pinot Meunier, Pinot Noir, plus a maximum of 15% Aligoté, Aubin, and Auxerrois

🕒 Upon purchase

✓ *Vincent Gorny* • *Michel & Marcel Laroppe* • *de la Linotte* • *Isabelle et Jean-Michel Mangeot* • *CV du Toulous*

CRÉMANT D'ALSACE AOC

Although small growers like Dirlinger had made Vin Mousseux d'Alsace as early as 1880, it was not until 1900 that Dopff Au Moulin created a sparkling wine industry on a commercial scale, and 1976 before an AOC was established. The quality is good, and is improving. Good to see the Hartenberg Pinot Gris back on track.

SPARKLING WHITE Although the Pinot Blanc has perfect acidity for this sort of wine, it can

lack sufficient richness, and after intensive tastings I have come to the conclusion that the Pinot Gris has the right acidity and richness.

☞ Pinot Blanc, Pinot Gris, Pinot Noir, Auxerrois, Chardonnay, Riesling

🕒 5–8 years

SPARKLING ROSÉ These delightful wines can have a finer purity of perfume and flavor than many pink Champagnes.

☞ Pinot Noir

🕒 3–5 years

✓ *René Barth* • *Bernard Becht* • *Joseph Gruss* • *Klein-Brand* • *C. V. Pfaffenheim* (Hartenberg Pinot Gris) • *Rieflé* • *Wolfberger*

EDELZWICKER AOC

This appellation—its name means “noble blend”—is reserved for wines blended from two or more of the authorized grape varieties, and it was indeed once noble. However, since the banning of AOC Zwicker, which was never meant to be noble, and due to the fact that there has never been a legal definition of which varieties are noble, producers simply renamed their Zwicker blends Edelzwicker. Consequently, this appellation has become so tarnished that many producers prefer to sell their cheaper AOC Alsace wines under brand names or simply AOC Alsace, rather than put the debased Edelzwicker name on the label. See also Classic Alsace Blends

WHITE Essentially dry, light-bodied wines that have a clean flavor and are best drunk young. Most Edelzwickers are either Sylvaner or Pinot Blanc-based. Better or slightly more expensive products have a generous touch of Gewurztraminer to fatten up the blend, but most of these have forsaken the Edelzwicker designation, and there are now no examples that can be recommended with confidence.

☞ Chasselas, Sylvaner, Pinot Blanc, Pinot Gris, Pinot Noir, Auxerrois, Gewurztraminer, Muscat Blanc à Petits Grains, Muscat Rosé à Petits Grains, Muscat Ottonel, Riesling

🕒 Upon purchase

GEWURZTRAMINER AOC

No other wine region in the world has managed to produce Gewurztraminer with any real spice, which is probably why this is usually the first Alsace wine people taste. Its voluptuous, up-front style is always immediately appealing.

WHITE The fattest and most full-bodied of Alsace wines. Classic renditions of this grape typically have the aroma of banana when young and take 3 to 4 years in bottle to build up a pungent spiciness of terpene-laden aromas,

often achieving a rich gingerbread character when mature.

🍷 Gewurztraminer

🕒 3–10 years (20–30 years for great examples)

GUTEDEL AOC

Synonym under which Chasselas may be marketed. See Chasselas AOC

KLEVENER DE HEILIGENSTEIN AOC

An oddity in Alsace for three reasons: first, the wine is made from a grape variety that is native to the Jura farther south and not found anywhere else in Alsace; second, of all the famous village appellations (Rouge d'Ottrott, Rouge de Rodern, etc.), it is the only one specifically defined in the regulations; third, it is the only grape confined by law to a fixed area within Alsace (the village of Heiligenstein). It is not to be confused with Klevner, a common synonym for the Pinot Blanc.

WHITE Dry, light-bodied wines of a subdued, spicy aroma, and delicate, fruity flavor. Sadly, no wines worth recommending.

🍷 Savagnin Rosé

🕒 2–4 years

KLEVNER AOC

See Pinot Blanc AOC

MOSELLE VDQS

This VDQS was called Vins de Moselle until 1995, when it became simply Moselle. Although many restaurants list German Mosel as “Moselle,” the river and the wine it produces are called Mosel in Germany, only becoming Moselle when crossing the border into France (and Luxembourg). Gamay is limited by law to a maximum of 30 percent of the surface area of this appellation. A maximum of 12.5 percent alcohol is applied to prevent producers from overchaptalizing.

RED Château de Vaux produces a surprisingly good Pinot Noir.

🍷 Gamay, Pinot Meunier, Pinot Noir

🕒 Upon purchase

WHITE There has been an improvement in these wines, particularly the Pinot Gris.

🍷 Auxerrois, Müller-Thurgau, Pinot Blanc, Pinot Gris, Riesling, Gewurztraminer

🕒 Upon purchase

✓ *Michel Maurice* (Pinot Gris) • *Oury-Schreiber* • *Château de Vaux* (Pinot Noir Les Hautes Bassières)

MUSCAT AOC

The best Muscat wine, some growers believe, is made from the Muscat d'Alsace, a synonym for both the white and pink strains of the rich, full Muscat à Petits Grains. Others are convinced that the lighter, more floral Muscat Ottonel is best. A blend of the two is probably preferable. These wines are better in average years, or at least in fine years that have good acidity, rather than in truly great vintages.

WHITE Dry, aromatic wines with fine floral characteristics that often smell of orange-flower water and taste of peaches. A top-quality Muscat that is expressive of its *terroir* is a great wine.

🍷 Muscat Blanc à Petits Grains, Muscat Rosé à Petits Grains, Muscat Ottonel

PINOT AOC

Not necessarily pure Pinot Blanc, this white wine may be made from any of the Pinot grape varieties, including Auxerrois (often confused with Pinot Blanc but in fact a totally separate variety). Most Pinot wines are a blend of Pinot Blanc and Auxerrois; the farther north the vines are cultivated, the more Auxerrois is used to plump out the Pinot Blanc. Zind is included under Zind-Humbrecht below because this luscious, effectively dry blend of 50 percent Auxerrois, 35 percent Chardonnay, and 15 percent Pinot Blanc used to be sold under the Pinot designation. When the authorities enforced the regulations that state Chardonnay may only be used in Crémant d'Alsace, not a still wine under the AOC, Zind-Humbrecht was forced to sell the wine as *vin de table*. Since it

is not allowed to indicate a vintage on a *vin de table* (the European Union wine regime obviously does not believe in greater transparency), Olivier Humbrecht used a code, and it does not take a genius to figure out Z001 stands for 2001, or that the next NV will be numbered Z002, and so on. The funny thing is that the maximum permitted yield for *vin de table* is 90 hectoliters per hectare as opposed to 100 hectoliters per hectare for the Alsace appellation, and chaptalization is banned. Silly us for thinking that an AOC is supposed to be superior to a *vin de table*!

WHITE Some Pinot wines are occasionally spineless, but lackluster examples are not as common as they used to be, as it is the plump and juicy *cuvées* that have made this the fastest-growing category of Alsace wine.

🍷 Pinot Blanc, Auxerrois, Pinot Noir (vinified white), Pinot Gris

PINOT BLANC AOC

This designation should only be used if the wine is made from 100 percent Pinot Blanc. See also Pinot AOC

PINOT GRIS AOC

This designation is now the most common way of marketing wine from the rich Pinot Gris grape. For hundreds of years, it has been known locally as Tokay d'Alsace. Legend had it that the Pinot Gris was brought back to Alsace from Hungary by Baron Lazare de Schwendi in the 1560s, and as Tokay or Tokaji was the only famous Hungarian wine, it was assumed that this was the grape Tokay was made from, and the name stuck. But they got it all wrong; this grape came to Alsace from Burgundy, Schwendi had nothing to do with it, and Pinot Gris has nothing to do with Tokay/Tokaji. In the 1980s, the Hungarians wanted their name back, and initially the French agreed, but after counterarguments from Alsace producers, alleging over 400 years' use of the name, the French reneged, and agreed instead to change the name from Tokay d'Alsace to Tokay-Pinot Gris, with vague promises that they might drop the Tokay at some time in the future. That did not happen, but the fall of communism did, and with Hungary's entry to the European Union, the French were forced to honor their partner's historic appellation, so all bottles will have to be labeled Pinot Gris, with no reference to Tokay, no later than the end of 2006.

WHITE This full-bodied, off-dry wine is decadently rich, but has excellent acidity, and its fullness of flavor never tires the palate. A

young Pinot Gris can taste or smell of banana, sometimes be smoky, with little or no spice, but as it matures it increasingly develops a smoky-spice, toasty-creamy richness, finally achieving a big, honeyed walnut-brazil complexity with good bottle age. Top Alsace Riesling can be much finer, but the variety is so sensitive to soil conditions and handling that the quality is nowhere near as consistent as Pinot Gris across the board.

PINOT NOIR AOC

Not so long ago, Pinot Noir d'Alsace was synonymous in style with rosé, but the trend has swung hard over toward a true red wine. After a steep learning curve, during which many wines were overextracted, lacked elegance, were prone to rapid oxidation, and bore the most ungainly caramelized characteristics, Alsace winemakers have now managed to master the handling of oak and red-wine techniques. Alsace producers are now allowed to use a fatter bottle of almost Burgundian proportions for Pinot Noir instead of the Flûte d'Alsace, the use of which has been enshrined in law since 1959. This is a positive move, and although strictly confined to Pinot Noir, I hear rumors that it will be used for other Pinot varieties, which would also be good.

RED Most are unsatisfactory (overextracted, too tannic, or too oaky—sometimes all three), but Marcel Deiss's Burlenberg is in a different class and is comparable to a good Burgundy. A step down, but still good, is Domaine Weinbach Réserve in a good year, and the most commercial of all, Hugel Jubilée Pinot Noir, with its special selection Le Neveux, is a serious contender for Deiss's crown. And that is about it. You can find perhaps another four or five wines each year that are delightful on the nose, but do not live up to the promise on the palate. Why is it that although both Alsace and Germany started at the same time (mid-1980s) to develop Pinot Noir as a serious red wine style (as opposed to rosé), only Germany has succeeded? The cadre of top-performing German Pinot Noir producers includes the likes of Deutzerhof, Kreuzberg, Huber, Johner, Knipser, Philipp Kuhn, Bernhart, Fürst, August Kesseler, and Aldinger, yet the only Alsace producer who would not be shown up in such company is Deiss, and the very best of Hugel's wines.

🍷 Pinot Noir

MORE GREEN ALSACE

In addition to the Alsace producers recommended above, and which are either biodynamic or organic, there are also the following. No negative inference of quality should be taken from the fact that they are not featured among my recommended Alsace producers. There are a number that have been recommended in other editions, and still make some fine wines, but have been culled out to make room for others.

Biodynamic

Geschick (Ammerschwir) • Jean Ginglinger (Pfaffenheim) • Pierre-Paul Humbrecht (Pfaffenheim) • Marc Kreydenweiss (Andlau) • Jean Schaezel (Ammerschwir) • Trapet Alsace (Bebenheim) • Valentin Zusslin Fils (Orschwir) • **Organic** • Yves Amberg (Epfig) • Yannick et Jean Baltenweck (Ribeauvillé) • Maurice Barthelme (Wettolsheim) • Rémy Biwand (Mackenheim) • Lucien et Théo Dietrich (Sigolsheim) • Yves Dietrich (Sigolsheim) • André Durmann (Andlau) • Eblin-Fuchs (Zellenberg)

Gilg (Wettolsheim) • Philippe & Fernand Heitz (Molsheim) • Annick Hummel (St-Léonard Boersch) • Bernard Hummel (St-Léonard Boersch) • Martin Jund (Colmar) • Clément Klur (Katzenthal) • Mathieu Knecht (Dambach la Ville) • Pierre Martin (Scherwiller) • Mischler (Bennwir) • Mittnacht Frères (Hunawibr) • Charles Muller & Fils (Traenheim) • François-Joseph Munsch (Jungholtz) • André Rohrer (Mittelbergheim) • Albert Staehle (Wintzenheim) • Philippe Vorburger (Voegtlinshoffen) • Odile & Danielle Weber (Eguisheim)

🕒 2–6 years (12 years for exceptional *cuvées*)

ROSÉ At its best, this dry, light-bodied wine has a deliciously fragrant aroma and flavor, which is reminiscent of strawberries, raspberries, or cherries. Seldom seen on export markets, but still commonly encountered by the *picbet* in local *winstubs*.

🍷 Pinot Noir

🕒 1–2 years

✓ *Marcel Deiss* **B** (Burlenberg) • *Hugel & Fils* (Jubilée Le Neveux) • *Weinbach/Faller* (Réserve)

RIESLING AOC

Of all Alsace grape varieties, Riesling is the most susceptible to differences in soil: clay soils give fatness and richness; granite Riesling is also rich, but with more finesse; limestone adds obvious finesse but less richness; and volcanic soil gives a well-flavored, spicy style.

WHITE In youth, fine Rieslings can show hints of apple, fennel, citrus, and peach, but can be so firm and austere that they give no hint of the beautiful wines into which they can evolve.

🍷 Riesling

🕒 4–20 years

SYLVANER AOC

Hugh Johnson once described the Sylvaner as “local tap-wine,” and this is how it should be served—direct from the stainless-steel vat, with all the zip and zing of natural carbonic gas (normally filtered out during the bottling process). Like the Muscat, it does not suit heat, and is a wine to buy in cooler years. Most attempts at late-harvest or botrytized styles (which cannot legally be sold as either VT or SGN) are diabolical. This does not mean that people should give up, just that they should not try to palm off these failures on the public. Better to add their tiny quantity to a much larger volume of an Edelzwicker—or whatever they like to call it—and sell more bottles of a turbo-charged basic appellation at a much smaller premium, as this might result in better reviews and a better profit. Alsace producers should take a lesson from Angelo Publisi of Ballandean winery (*see* p.596), who replicates the VT style by cutting the fruit-bearing canes just after *véraison*. This cuts the grape off from the vine's metabolism and the effect is much the same as when the leaves drop and sap returns to the roots after the first snap of winter. The resulting wine is consistently fabulous.

WHITE Sylvaner is an unpretentious, dry, light-to medium-bodied wine, with fragrance rather than fruitiness. It is generally best drunk young, but, like the Muscat, exceptionally long-living examples can always be found.

🍷 Sylvaner

VIN D'ALSACE AOC

Alternative designation for Alsace AOC.

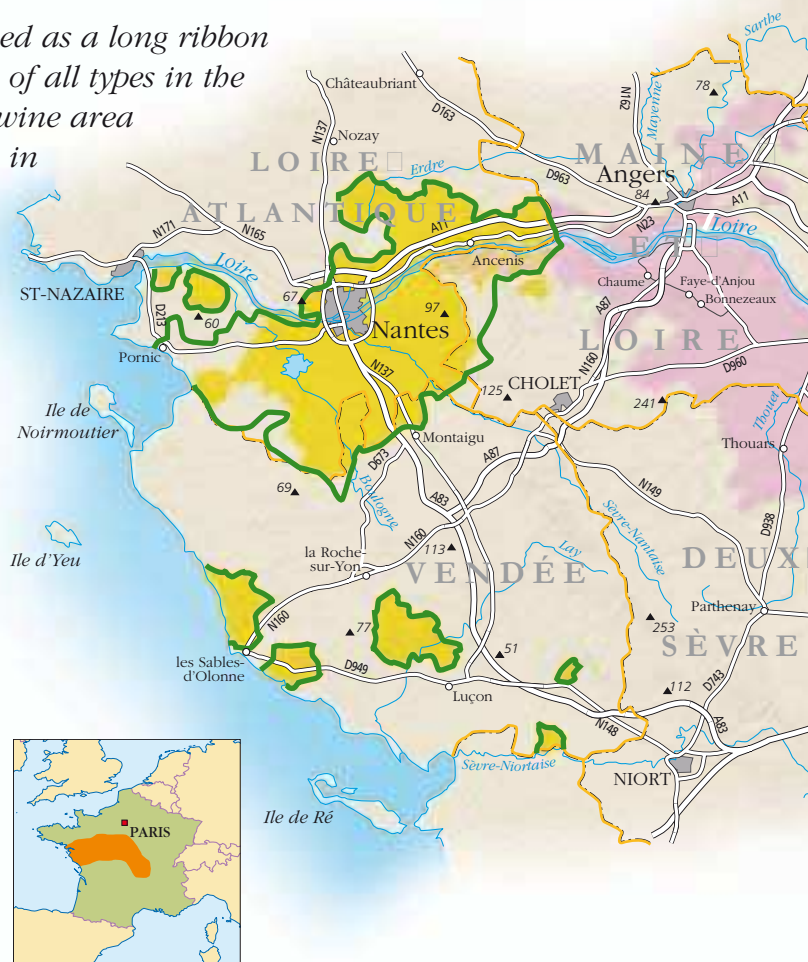

THE LOIRE VALLEY

In winemaking terms, the Loire Valley is best imagined as a long ribbon with crisp white wines at either end and fuller wines of all types in the middle. It is the home of Sauvignon Blanc, the only wine area in the world that specializes in Cabernet Franc and, in truly great vintages, makes some of the most sublime and sumptuous botrytized wines.

THE LOIRE IS THE LONGEST RIVER in France. From its source in the Cévennes Mountains, it flows 620 miles (1,000 kilometers) through 12 *départements*. The variations in soil, climate, and grape varieties found along its banks and those of its tributaries are reflected in the wide range of wines grown in the four major wine-producing districts. Red, white, and rosé; still, *pétillant*, and fully sparkling wines are produced in 87 different appellations ranging in style from bone dry to intensely sweet.

THE LOIRE'S MOST IMPORTANT GRAPE

The Chenin Blanc grape produces four distinctly different styles of wine—dry, semisweet, sweet, and sparkling. This is due to traditional practices that have been forced on growers by the vagaries of climate. This grape has abundant natural acidity and, if it receives enough sun, a high sugar content. But the Loire is considered a northern area in viticultural terms, and the vine grower must contend with late frosts, cold winds, and variable summers. Given a sunny year, the grower's natural inclination is to make the richest wine possible with this sweet and tangy grape; but in many vintages, only a medium or a dry style can be achieved. This variation in style is the root of the Loire's problems because it is difficult to build a reputation on uncertainty. If you take into account overproduction, the all too often debilitating effect of rot, and the lack of almost any

VINEYARDS AT VOUVRAY

In sunny years the area just to the east of Tours produces sweet, slow-maturing wines, valued for their longevity.

RECENT LOIRE VINTAGES

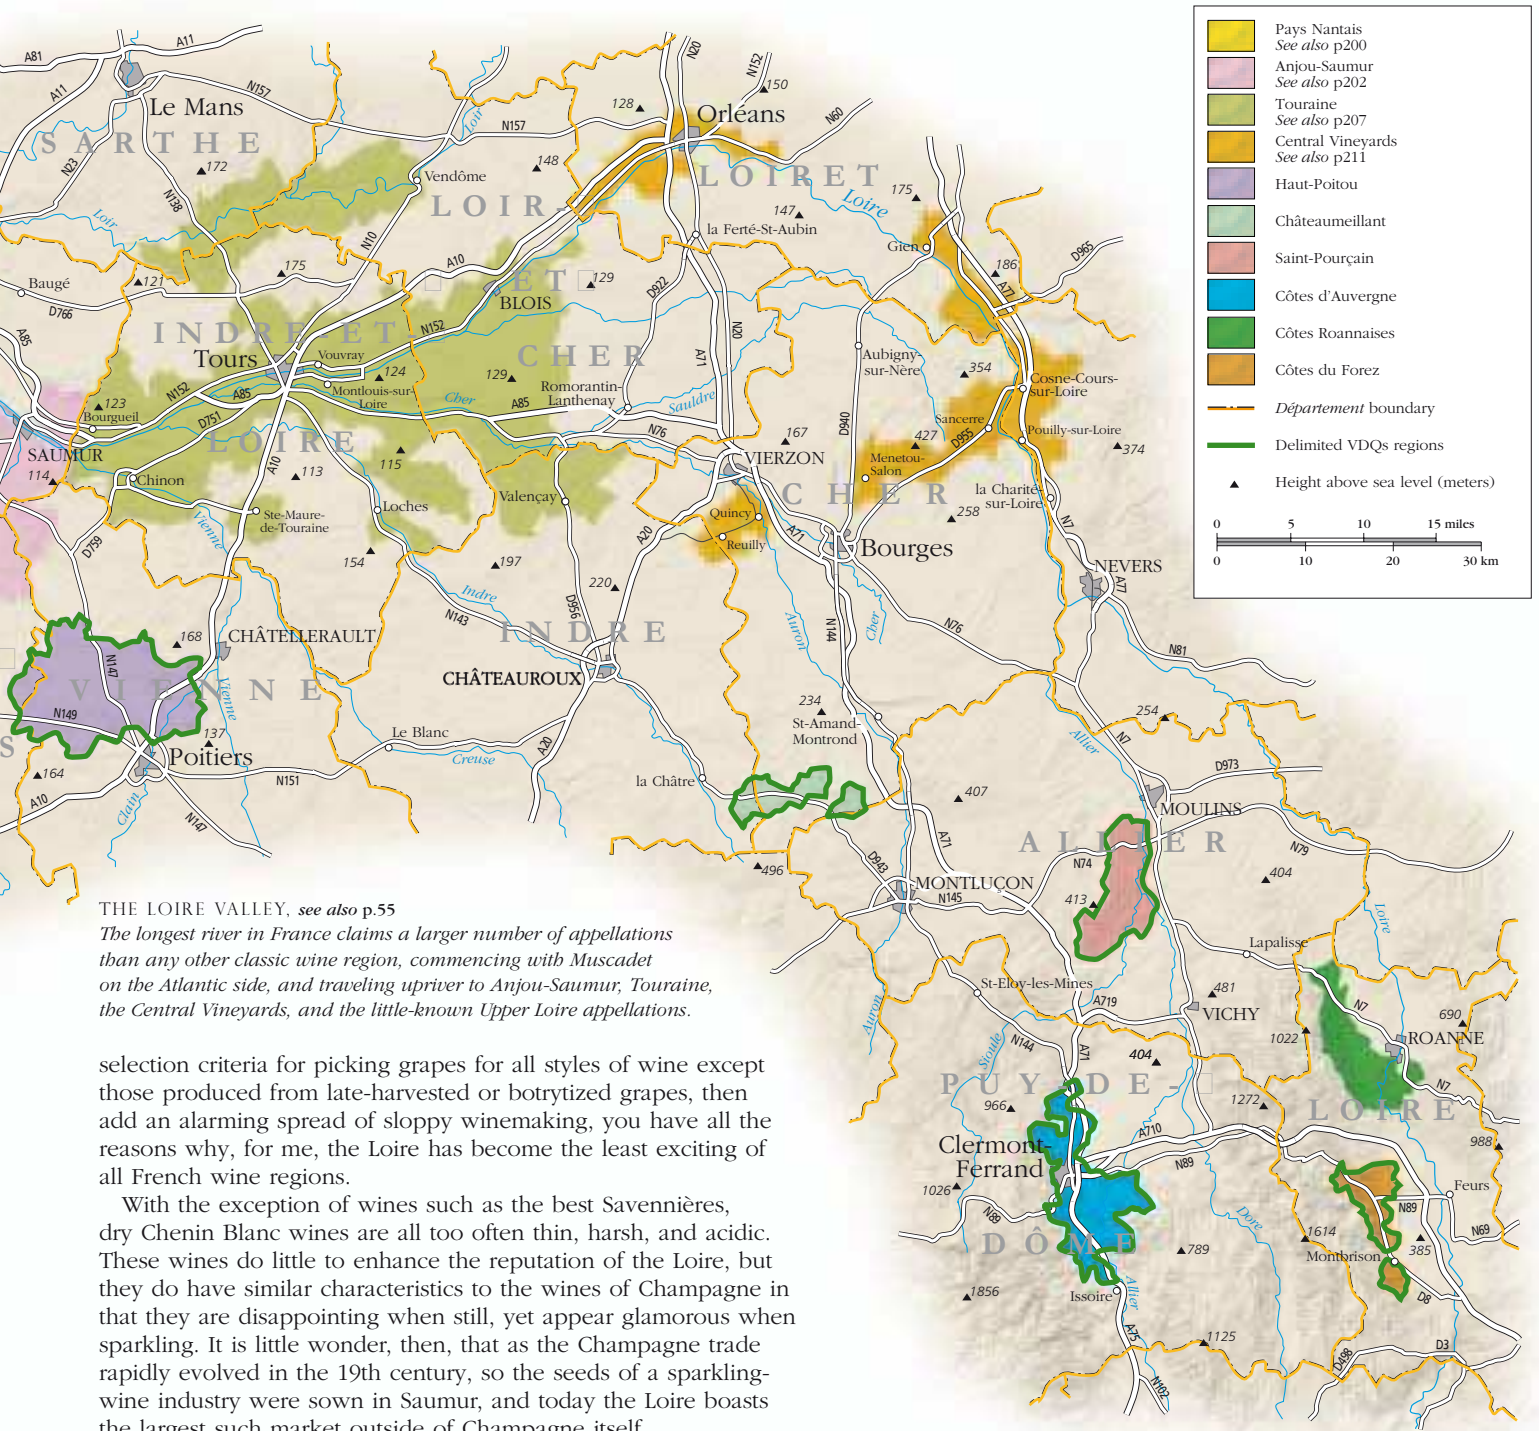

2003 The vintage par excellence for Cabernet Franc and other Loire reds, which have an intensity of color and flavor seldom seen in the Loire, with a plumpness of fruit and, thanks to low acid levels, a seductively soft finish. Some very rich, incredibly sweet wines have been made, but through *passerillage*, not botrytis. Be very wary of all dry whites, with the possible exception of Muscadet, which might not be Muscadet as we know it, but has made some tremendous wines for those who like to see a more Burgundian style.

2002 Top-class vintage for all styles in all districts, the wines have great ripeness levels, but pack more acidity than the 2003s.

2001 A very good year for dry whites, but not for reds, although some of the best growers in Bourgueil and Chinon made some good wines. Sweet whites possess lots of botrytis, thus great finesse.

2000 With heavy rain and cold temperatures in July, along with widespread mildew, this was a problematic year with extremely variable results. Contrary to expectations, the reds have good color and represent one of the Loire's successes. They have an easy-drinking suppleness, but are not for keeping. However, it is the Sauvignon wines of the Central Loire that stand out. Good Muscadet was made, with fruit as well as acidity for a change, but very few sweet wines of any note.

1999 A difficult year that produced some surprisingly good, soft, and supple reds (Alphonse Mellot's red Sancerre in particular). The whites have good acidity. Tread carefully.

THE LOIRE VALLEY, *see also* p.55
 The longest river in France claims a larger number of appellations than any other classic wine region, commencing with Muscadet on the Atlantic side, and traveling upriver to Anjou-Saumur, Touraine, the Central Vineyards, and the little-known Upper Loire appellations.

selection criteria for picking grapes for all styles of wine except those produced from late-harvested or botrytized grapes, then add an alarming spread of sloppy winemaking, you have all the reasons why, for me, the Loire has become the least exciting of all French wine regions.

With the exception of wines such as the best Savennières, dry Chenin Blanc wines are all too often thin, harsh, and acidic. These wines do little to enhance the reputation of the Loire, but they do have similar characteristics to the wines of Champagne in that they are disappointing when still, yet appear glamorous when sparkling. It is little wonder, then, that as the Champagne trade rapidly evolved in the 19th century, so the seeds of a sparkling-wine industry were sown in Saumur, and today the Loire boasts the largest such market outside of Champagne itself.

THE LOIRE NEAR SANCERRE
 In this area the ground rises well above the river and the neighboring vineyards.

DID YOU KNOW?

- The Loire is the last wild river in Europe and designated a World Heritage Site by the United Nations Educational, Scientific, and Cultural Organization (UNESCO).
- As a wild river, the water level can vary by several yards within a few days, and its islands slowly move from year to year.
- The Loire Valley is known as the “Garden of France.”
- The Loire Valley is the second-largest sparkling wine region in France (although Crémant d’Alsace is the second-largest individual appellation).

To suggest that the Chenin Blanc is fit only for fizzing up is to do the grape a great injustice. First, it is not in fact suited to the classic *brut* style of sparkling wine, as its aromatic qualities tend to fight rather than absorb the subtle effects of second fermentation. Second, it is this very character that makes Chenin Blanc one of the world's greatest wine grapes when botrytized. However, it is not the grape that is intrinsically disappointing when vinified as a still wine, but merely the methods employed by the grower and winemaker.

Chenin Blanc has been given pride of place in the Anjou-Saumur district, but unfortunately its cultivation has spread to unsuitable areas over the past 25 years. Producers more interested in making money than building a fine reputation have taken advantage of the Chenin Blanc's natural inclination to overcrop. It is a grape that should be harshly pruned, but most growers lack the courage to do this, and when the weather is unsettled it is these same growers who are the first to harvest. The heavier the crop, the less ripe the grapes, and the less ripe the grapes, the more washed out the flavors.

However, there are quality-conscious growers in the Loire, who restrict their yield and allow the grapes to ripen, yet still agonize

over whether to risk the weather for one more day's maturity. It is from such top-performing growers as Domaine Baumard in the Coteaux du Layon, Clos Naudin and Huet in Vouvray, and Dominique Moyer in Montlouis that we get Chenin Blanc wines that dazzle our palates.

FROM SOURCE TO SEA

For some inexplicable reason, most references restrict the Loire to its four major districts of Pays Nantais, Anjou-Saumur, Touraine, and Central Vineyards. Although some books incorporate the outlying areas of Fiefs Vendéens and Haut-Poitou, few mention the appellations of the Upper Loire, yet the wines of Côtes du Forez, Côte Roannaise, Côtes d'Auvergne, St.-Pourçain, and Châteaumeillant are equally legitimate members of the Loire's family of wines. And whereas the most famous appellations could and should rank among the most exciting wines of the world, there are so many underachievers that the major districts have become a minefield for wine lovers, while growers in the lesser-known areas of the Upper Loire have everything to prove.

THE GENERIC AND OUTLYING APPELLATIONS OF THE LOIRE VALLEY

CHÂTEAUMEILLANT VDQS

Borders the Cher and Indre, around Bourges. Although only red-wine grapes are grown, white wine of some standing used to be made here, and its production is still permitted.

RED The Gamay grape usually dominates the red wines, which should be drunk as young as possible.

☼ Gamay, Pinot Gris, Pinot Noir

🕒 6–12 months

ROSÉ The best Châteaumeillant wines. They are fresh, grapey, and delicately balanced.

☼ Gamay, Pinot Gris, Pinot Noir

🕒 6–12 months

✓ *Du Chaillet* • *CV Châteaumeillant* • *Valérie et Frédéric Dallot* • *De Pavillon*

CÔTES D'Auvergne VDQS

Côtes d'Auvergne is located south of Saint-Pourçain and west of Côtes du Forez on the edge of the Massif Central. This is the most remotely situated of all the outer areas that fall officially within the Loire region. The wines from certain villages are superior and have therefore been given the right to use the following communal appellations: Côtes d'Auvergne-Boudes (villages of Boudes, Chalus, and St.-Hérant); Côtes d'Auvergne-Chanturgues (villages of Clermont-Ferrand and Cézabat [part]); Côtes d'Auvergne-Châteaugay (villages of Châteaugay and Cézabat [part]); Côtes d'Auvergne-Corent (villages of Corent, Les Martres-de-Veyre, La Sauvetat, and Veyre-Monton); and Côtes d'Auvergne-Madargues (village of Riom).

RED The best of these dry, light-bodied, and fruity wines carry the Chanturgues appellation. Most are made from Gamay, a grape that has traditionally been grown in the area, and are very much in the style of Beaujolais.

☼ Gamay, Pinot Noir

🕒 1–2 years

WHITE These dry, light-bodied wines made from Chardonnay have been overlooked but can be more accessible than the same variety grown in more classic areas of the Loire, thus

they are surely a marketable commodity in view of Chardonnay's upmarket status.

☼ Chardonnay

🕒 1–2 years

ROSÉ These are dry, light-bodied wines with an attractive cherry flavor. They are made in the village of Clermont-Ferrand, and carry the Chanturgues appellation.

☼ Gamay, Pinot Noir

🕒 Within 1 year

✓ *Vignoble de l'Arbe Blanc* • *Pradier* • *Gilles Persilier*

CÔTES DU FOREZ AOC

Similar to Beaujolais, this wine is produced in the Loire *département* adjacent to Lyon, and was upgraded from VDQS to AOC in 2000. The wines are improving through the efforts of the *coopérative* and a few quality-conscious growers, but they could be better.

RED These are dry, light-bodied wines with some fruit. They are best drunk young and at a cool temperature.

☼ Gamay

🕒 Upon purchase

ROSÉ Simple, light-bodied, dry rosés that make attractive, unpretentious picnic wines.

☼ Gamay

🕒 Upon purchase

✓ *Gilles Bonnefoy* (La Madone) • *Les Vignerons Foreziens* • *Odile Verdier et Jacky Logel*

CÔTE ROANNAISE AOC

Red and rosé wines made from a localized Gamay clone called Gamay Saint-Romain. Grown on south- and southwest-facing slopes of volcanic soil on the left bank of the Loire some 25 miles (40 kilometers) west of the Mâconnais district of Burgundy. This appellation was promoted from VDQS to full AOC status in 1994.

RED Some of these dry, medium- to full-bodied wines are produced using a form of *macération carbonique*, and a few are given a little

maturation in cask. The result can vary between well-colored wines that are firm and distinctive, and oaky and fruity Beaujolais-type versions for quaffing when young.

☼ Gamay

🕒 1–5 years

ROSÉ Dry, medium-bodied, well-made wines that are crisp and fruity.

☼ Gamay

🕒 2–3 years

✓ *Alain Baillon* (Cuvée Monplaisir) • *Paul et Jean-Pierre Benetère* (Vieilles Vignes) • *Des Pothiers* • *De la Rochette* (Vieilles Vignes) • *Robert Serol* (Cuvée Troisgros)

CRÉMANT DE LOIRE AOC

Of all the Loire's sparkling wines, this is probably the most underrated, yet it has the greatest potential because it can be blended from the wines of Anjou-Saumur and Touraine and from the widest range of grape varieties.

SPARKLING WHITE The better-balanced *cuvées* of these dry to semisweet, light- to medium-bodied wines are normally a blend of Chenin Blanc in the main, with a good dash of Cabernet Franc and Chardonnay. The best Chardonnay clones are yet to be established in the Loire, but at least Chardonnay is widely utilized for sparkling wines, whereas Pinot Noir is not—this is a mystery, as it is a proven variety in the region.

☼ Chenin Blanc, Cabernet Franc, Cabernet Sauvignon, Pineau d'Aunis, Pinot Noir, Chardonnay, Arbois, Grolleau Noir, and Grolleau Gris

🕒 1–3 years

SPARKLING ROSÉ The best of these light- to medium-bodied wines are *brut*, and usually contain a high proportion of Cabernet Franc and Grolleau Noir grapes. Cabernet Franc makes the most distinctive wine. A pure Pinot Noir *crémant* rosé would be interesting to taste.

☼ Chenin Blanc, Cabernet Franc, Cabernet Sauvignon, Pineau d'Aunis, Pinot Noir, Chardonnay, Arbois, Grolleau Noir and Gris

🕒 Most are best consumed upon purchase, although some benefit if kept 1–2 years.

✓ *Baumard* • *Yves Lambert* • *Château de Montgueret* • *De Nerleux* • *Château de Putille* • *C. V. de Saumur*

HAUT-POITOU VDQS

Situated 50 miles (80 kilometers) southwest of Tours, the Poitiers district produces wines that have achieved a remarkable reputation despite its hot, dry climate, and flat land that is more suited to arable farming than to viticulture. The local *cave coopérative* was responsible for this achievement, partly because of its high-tech establishment, which turned out clean wines during the late 1980s, when the rest of the Loire was going through its worst dirty wine period, and partly due to clever marketing. However, things went wrong on the financial side, Georges Duboeuf bought 40 percent of the cooperative, and it now operates as a *négociant*.

RED This is a wine to watch: although the really successful reds have until now been in short supply and confined mainly to Cabernet, there is a feeling that a general breakthrough is imminent. The quality of the entire appellation is likely to rise significantly, and there is promise of some exciting, pure varietal reds.

☼ Pinot Noir, Gamay, Merlot, Malbec, Cabernet Franc, Cabernet Sauvignon, and a maximum of 20% each of Gamay de Chaudenay and Grolleau

🕒 Within 3 years

WHITE Dry, light- to medium-bodied, varietal wines. Those made from pure Sauvignon are softer and more floral than most of their northern counterparts, yet retain the freshness and vitality that is so important to this grape variety.

☼ Sauvignon Blanc, Chardonnay, Pinot Blanc, and up to a maximum of 20% Chenin Blanc

🕒 Within 1 year

ROSÉ These dry, light- to medium-bodied wines are fresh and fruity.

☼ Pinot Noir, Gamay, Merlot, Malbec, Cabernet Franc, Cabernet Sauvignon, and a maximum of 20% each of Gamay de Chaudenay and Grolleau

🕒 Within 3 years

✓ *Ampelidae* • *Du Centaure* • *C. V. Haut-Poitou*

ORLÉANS VDQS

Although made an appellation as recently as 2000, vines have been growing in this area since the 10th century. Legend has it that vines were originally brought from the Auvergne, hence the local synonyms of Auvernat Rouge for Pinot Noir and Auvernat Blanc for Chardonnay. The delimited area consists of 494 acres (200 hectares) in scattered parcels, of which 395 acres (160 hectares) are currently planted, encompassing the outskirts of Orléans, where the soil is silty, and 11 neighboring villages, stretching from the chalky soils of Saint Hilaire, and red, sandy-stony soils of Sologne, near Mézières, to clayey soils elsewhere.

RED Successful wines have good color and just about enough fruit to balance the tannins, affording a more supple finish. Montigny-Piel's Clos Saint-Fiacre stands out as the best wine of this appellation in all its color formats.

☼ Minimum of 60% Pinot Meunier, plus Pinot Noir and Pinot Gris

🕒 Within 3 years

WHITE The least exciting wines so far, although it is very early days for these dry white wines, which must possess no more than 4 grams per liter of residual sugar.

☼ Minimum of 60% Chardonnay, plus Pinot Gris

🕒 Within 1 year

ROSÉ The few encountered have been fresh, easy drinking with Meunier-cum-Pinot character, expressed more as red summer fruits than as cherries.

☼ Minimum of 60% Pinot Meunier, plus Pinot Noir and Pinot Gris

🕒 Within 3 years

✓ *Montigny-Piel* (Clos Saint-Fiacre)

ORLÉANS-CLÉRY VDQS

This subappellation was granted in 2002, and is restricted to red wines produced in Cléry-Saint-André and four neighboring villages southwest of Orléans, but confusingly from entirely different grapes from the main appellation.

RED The local *coopérative* (Grand Maison) makes a good wine from 25-year-old vines, which is old for this rediscovered part of the Loire, but most Cabernet-based wines from this area suffer too much from a herbaceous character.

☼ Minimum of 75% Cabernet Franc, plus Cabernet Sauvignon planted before October 2002

🕒 Within 3 years

✓ *Jacky Legroux* • *C. V. de la Grand Maison*

PINEAU DES CHARENTES AOC

A *vin de liqueur* produced in the Cognac region, which is between the Loire and Bordeaux (thus not really the Loire Valley, but it has to go somewhere!).

WHITE Few manage to rise above the typically dull, oxidative *vin de liqueur* style that goes *rancio* with age.

☼ Cabernet Franc, Cabernet Sauvignon, Colombard, Folle Blanche, Jurançon Blanc, Meslier Saint-François, Merlot, Merlot Blanc, Montils, Sauvignon Blanc, Sémillon, Ugni Blanc

🕒 Upon opening

ROSÉ Few manage to rise above the typically dull, oxidative *vin de liqueur* style that goes *rancio* with age.

☼ Cabernet Franc, Cabernet Sauvignon, Malbec, Merlot

🕒 Upon opening

✓ *Barbeau & Fils* (Tres Vieux Rosé Grand Réserve) • *Chais du Rouissoir* (Rosé) • *Vinet* (Félix-Marie de la Villière Blanc)

ROSÉ DE LOIRE AOC

A dry rosé wine introduced in 1974 to exploit the international marketing success of Rosé d'Anjou and to take advantage of the trend for drier styles. The result has been very disappointing on the whole, although the few producers (recommended below) who have really tried demonstrate that very good-quality dry rosé can be made throughout the Loire.

ROSÉ Dry, light- to medium-bodied rosé from the Loire that could (and should) be the most attractive wine of its type—a few growers try, but most do not. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☼ Pineau d'Aunis, Pinot Noir, Gamay, Grolleau, and at least 30% Cabernet Franc and Cabernet Sauvignon

🕒 Upon purchase

✓ *De Chanteloup* • *Lecheteau* • *De Montgilet* • *Château de Passavant*

ST.-POURÇAIN VDQS

The wines of Saint-Pourçain have a long and impressive history for what is, after all, an obscure VDQS, with vineyards first planted not by the Romans, as elsewhere in the Loire Valley, but by the Phoenicians. The Saint-Pourçain area covers 19 communes southeast of the Bourges appellations of the Central Vineyards in the Allier *département*. The growers are quite ambitious, and many people think that these wines have a particularly promising future. There are 1,235 acres (500 hectares) of vineyards.

RED Dry, light- to medium-bodied wines, but they can vary from very light Beaujolais look-alikes to imitations of Bourgogne Passetoutgrains, depending on the grape varieties in the blend.

☼ Gamay, Pinot Noir, and up to a maximum of 10% Gamay Teinturier

🕒 1–2 years

WHITE Dry, light- to medium-bodied wines. The Tresallier grape (which is known as the Sacy in Chablis), when blended with Chardonnay and Sauvignon, produces a crisp, toasty, full-flavored wine that does have some merit. Very little is known about the Saint-Pierre-Doré, except that locals say it makes a “filthy wine,” according to Master of Wine Rosemary George in *French Country Wines*.

☼ A maximum of 50% Tresallier and 10% Saint-Pierre-Doré, plus Aligoté, Chardonnay, and Sauvignon Blanc

🕒 1–2 years

ROSÉ Crisp, dry, light- to medium-bodied wines that have a fragrance that is reminiscent of soft summer fruits. The rosés are generally more successful than the red wines of the area, but both styles are particularly refreshing and thirst-quenching.

☼ Gamay, Pinot Noir, and up to a maximum of 10% Gamay Teinturier

🕒 1–2 years

✓ *De Bellevue* • *Jallet* (Les Ceps Centenaires) • *C. V. de Saint-Pourçain* (Cuvée Réserve) • *Cave Touzain*

PAYS NANTAIS

Nantais is Muscadet country. The Sèvre-et-Maine district produces the richest Muscadet, while Côtes de Grandlieu, granted its own appellation in 1994, and the Coteaux de la Loire to the north produce wines with extra acidity.

SOUTHEAST OF NANTES are the vineyards of Muscadet. The best are those of the Sèvre-et-Maine district, named after two rivers, which is much hillier than the surrounding countryside and protected from northwesterly winds by Nantes itself. Sèvre-et-Maine accounts for one-quarter of the general appellation area, yet 85 percent of all Muscadet produced. Only in unusually hot or dry years, when they contain extra natural acidity, can Muscadet grapes grown farther north in the Coteaux de la Loire sometimes surpass those of Sèvre-et-Maine.

THE MUSCADET GRAPE AND ITS WINES

It is uncertain when the Muscadet grape, also known as the Melon de Bourgogne and the Gamay Blanc, was first planted in the area. There is a plaque at Château de la Cassemichère that claims that the first Muscadet vine was transplanted there from Burgundy in 1740. But Pierre Galet, the famous ampelographer (vine botanist), tells us that “following the terrible winter of 1709, Louis XIV ordered that the replanting of the frozen vineyards of Loire-Atlantique be with Muscadet blanc.”

The wine produced from the Muscadet grape is neutral in flavor and bears no hint of the muskiness that some believe its name implies. Traditionally, it is harvested early to preserve acidity, and yet, in doing so, the grower risks making a wine that lacks fruit. But if the wine is left in contact with its sediment and bottled *sur lie*, this enhances the fruit, adds a yeasty roundness, and, by retaining more of the carbonic gas created during fermentation, imparts a certain liveliness and freshness.

There have always been rare examples of exceptionally ripe Muscadet, which tend to age like a modest Burgundy after a few years in bottle. More recently, however, there has been a trend among quality-conscious growers to pick riper grapes (which is a significant risk, given the weather), in order to produce fuller, richer wines. This practice has come under attack from more conservative growers, who believe that there should not only be a maximum alcoholic strength for the finished wine (currently 12 percent after any chaptalization), but also a high minimum total acidity.

I have some sympathy with these traditionalists, since the Melon de Bourgogne grape is intrinsically incapable of competing with Chardonnay at even modest levels, thus most of the wines produced in this manner, while being extraordinary for Muscadet, make disappointing “Burgundy.” Furthermore, I like the way that a correctly lean structure and naturally high acidity yield a certain nervousness of fruit in good Muscadet. However, good Muscadet represents perhaps one out of every 10 bottles, and it is a lack—sometimes a total absence—of fruit that is the pitfall of the rest. The *sur lie* process cannot conjure fruit out of thin air. But, despite their initial concentration on richness rather than fruit, the new winemakers should be encouraged, as they need to experiment in every direction if they are to find a reliable way to impart a feather-light fruit and freshness to these wines. There is no need for traditionalists to worry about the classic Muscadet style being perverted by a few; they have already done much worse by allowing the majority to all but destroy its classic quality. They should give the rebels the chance to do better; they will not want a reputation for poor man’s Burgundy, but rather for rich man’s Muscadet.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
The Pays Nantais lies in the coastal area and the westernmost district of the Loire Valley, with vineyards occupying parts of the Loire-Atlantique and the Maine-et-Loire départements.

CLIMATE
Mild and damp, but winters can be harsh and spring frosts troublesome. Summers are generally warm and sunny, although they are also rainy.

ASPECT
Some of the vineyards are found on the flat land around the mouth of the Loire southwest of Nantes. There are rolling hills in the Sèvre-et-Maine and Coteaux de la Loire, with the best vineyards on gentle riverside slopes. Some of the smaller valleys are actually too steep for viticulture, and the vines in these areas occupy the hilltops.

SOIL
The best vineyards of the Sèvre-et-Maine are light and stony, with varying proportions of sand, clay, and gravel above a granitic, schistous, and volcanic subsoil that

is rich in potassium and magnesium. The Coteaux de la Loire is more schistous, while the Côtes de Grandlieu is schistous and granitic, and vineyards in the generic Muscadet appellation have sand with silt. These soils provide good drainage, essential here.

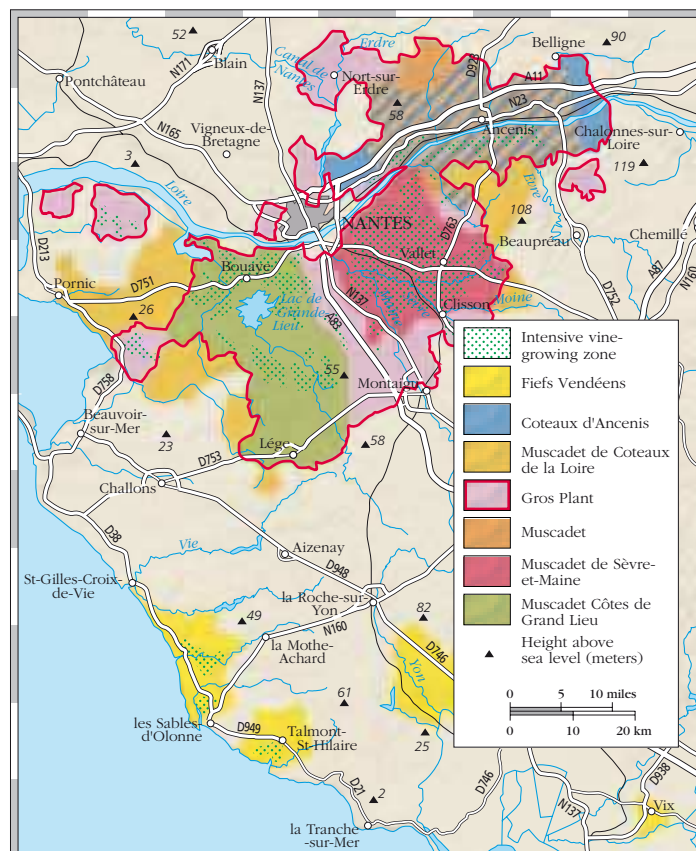

VITICULTURE AND VINIFICATION

The Muscadet is a frost-resistant, early-ripening grape that adapts well to the damp conditions of the Pays Nantais. It is harvested early (mid- to late September) to preserve its acidity, although a number of growers have started to reduce yields and pick riper. The best Muscadet is left in vat or barrel on its sediment—*sur lie*—until it is bottled. This imparts a greater depth and fruitiness, and a faint prickle of natural carbonic gas.

GRAPE VARIETIES

Primary varieties: Muscadet, Folle Blanche
Secondary varieties: Cabernet Franc, Cabernet Sauvignon, Gamay, Gamay de Chaudenay, Gamay de Bouze, Négrette, Pinot Noir, Groslot Gris, Chardonnay, Chenin Blanc

PAYS NANTAIS, see also p.196

The finest wines in the Pays Nantais are produced to the east of Nantes in Sèvre-et-Maine and Coteaux de la Loire.

THE APPELLATIONS OF PAYS NANTAIS

COTEAUX D'ANCENIS VDQS

These varietal VDQS wines, which come from the same area as Muscadet Coteaux de la Loire, should be promoted to full AOC status.

RED Bone-dry to dry, and light- to medium-bodied wines that include Cabernets, made from both Cabernet Franc and Cabernet Sauvignon grapes. Surprisingly, they are not as successful as the juicy Gamay wines that represent no less than 80 percent of the total production of this appellation.

🍷 Cabernet Sauvignon, Cabernet Franc, Gamay, and up to a combined total of 5% Gamay de Chaudenay and Gamay de Bouze

🕒 2 years

WHITE Dry to medium-dry, light-bodied wines. The Pinot Gris, also sold as “Malvoisie,” is not as alcoholic as its Alsatian cousin, yet can possess a light richness that will linger in the mouth. The Chenin Blanc, known locally as “Pineau de la Loire,” is rarely very special.

🍷 Chenin Blanc, Pinot Gris

🕒 12–18 months

ROSÉ Bone-dry to dry, light- to medium-bodied wines, some of which are fresh, firm, and lively. Gamay is the most popular grape variety.

🍷 Cabernet Sauvignon, Cabernet Franc, Gamay, and up to a combined total of 5% Gamay de Chaudenay and Gamay de Bouze

🕒 2 years

📍 *CV des Terroirs de la Noëlle • Guindon • Du Haut Fresne*

IEFS VENDÉENS VDQS

A *vin de pays* until 1984, this appellation has been steadily improving and deserves its VDQS status. The regulations controlling the grape varieties permitted for this appellation are unique. They determine the proportion of each variety that must be cultivated in the vineyard, yet they do not limit the percentages of grapes contained in the final blend; thus blends and pure varietals are allowed.

RED The communes of Vix and Mareuil-sur-Lay-Disais produce the best wines. They are dry, medium-bodied, and firm, but not long-lived. They can have a grassy character, derived from the Cabernet Franc, which is the predominant grape grown in both these villages.

🍷 A minimum of 50% Gamay and Pinot Noir plus Cabernet Franc, Cabernet Sauvignon, Négrette, and up to a maximum of 15% Gamay de Chaudenay

🕒 Within 18 months

WHITE Bone-dry to dry, light-bodied wines which, apart from those of Vix and Pissotte, are of limited quality. This could be because the Chenin Blanc rarely ripens properly in a northerly coastal area. If some of the other permitted grape varieties were grown over a much wider area, quality might improve.

🍷 A minimum of 50% Chenin Blanc, plus Sauvignon Blanc and Chardonnay. A maximum of 20% Melon de Bourgogne in the communes of Vix and Pissotte and a maximum of 30% Groslot Gris in the coastal vineyards around Les Sables d'Olonne.

🕒 Upon purchase

ROSÉ Dry, light- to medium-bodied wines. The

best wines of Vix and Mareuil-sur-Lay-Disais are soft, delicate, and underrated.

🍷 A minimum of 50% Gamay and Pinot Noir plus Cabernet Franc, Cabernet Sauvignon, Négrette, and a maximum of 15% Gamay de Chaudenay. A maximum of 30% (was as high as 30% until 1994) Groslot Gris in the coastal vineyards around Les Sables d'Olonne.

🕒 Within 18 months

📍 *Coirer (Pissotte Sélection) • Des Dames (Les Aigues Marines) • Saint Nicolas (Brem Reflets)*

GROS PLANT VDQS OR GROS PLANT NANTAIS VDQS

Gros Plant is the local synonym for the Folle Blanche—one of the grapes used to make Cognac.

WHITE Gros Plant is normally so dry, tart, and devoid of fruit and body that it seems tough and sinewy to taste. I would rather drink lemon juice than 99 percent of the Gros Plant that I have had, but if yields are limited and the wine bottled *sur lie*, it can have sufficient depth to match its inherent bite.

🍷 Gros Plant

🕒 Usually upon purchase

📍 *De la Boitaudière (Sur Lie) • Guy Bossard (De l'Écu) • La Haut-Vrignais (Sur Lie)*

MUSCADET AOC

This basic appellation covers the whole Muscadet area, yet the wines produced under it account for only 10 percent of the total production.

WHITE Bone-dry, light-bodied wines that, with very few exceptions, are ordinary at best, and often lack balance. Not one basic Muscadet has impressed me in recent years. These wines may be sold as *primeur* or *nouveau* as from the third Thursday of November following the harvest.

🍷 Muscadet

🕒 Upon purchase

MUSCADET DES COTEAUX DE LA LOIRE AOC

The Coteaux de la Loire is the most northerly wine area on the French coast, above which it is almost impossible to grow grapes of sufficient ripeness for winemaking.

WHITE Bone-dry, light-bodied wines of variable quality, usually lacking in fruit, but can be the best balanced of all Muscadets in very hot years.

🍷 Muscadet

🕒 Upon purchase

📍 *Guindon • Du Moulin Giron • De la Varenne*

MUSCADET CÔTES DE GRANDLIEU AOC

Delimited as recently as 1994, this area west of Sèvre-et-Maine once represented 73 percent of the basic Muscadet appellation. The wines now fetch a nice premium above that received when they were merely perceived as generic Muscadets and, while some deserve elevated

price and status, many plainly do not.

WHITE Bone-dry, light-bodied wines that initially displayed considerable variation in quality, but the best are now showing a fine, floral-minerality of fruit.

🍷 Muscadet

🕒 Upon purchase

📍 *Du Fief Guerin • Gandais Père & Fils • Les Hautes Noëles*

MUSCADET DE SÈVRE-ET-MAINE AOC

Classic Muscadet from a small area containing most of the best wines. Some 45 percent of this appellation is bottled and sold as *sur lie*, having remained in contact with its sediment for at least one winter before bottling. There are so many groupings of Muscadet estates that I have decided to list them separately where I can.

WHITE Bone-dry to dry, light-bodied wines. The best should have fruit, acidity, and elegance, but although they can be reminiscent of a modest white Burgundy and exceptional wines can survive considerable aging, they seldom improve and always trade off finesse for depth.

🍷 Muscadet

🕒 2 years, although some may last 3–4 years

📍 *Guy Bossard (De l'Écu) • De la Braudière • Michel Bregeon • De la Chavinière • Chasseloir • Coing de Saint-Fiacre • Comte Leloup de Chasseloir • Jean Douillard • Gandais Père & Fils • Grand Fief de la Cormeraie • La Haute Févrie • De la Louvretie • Des Petites Cossardières • De la Quilla • Château des Roi • Abbaye de Ste Radegonde • Sawion*

MUSCADET SUR LIE AOC

Until recently there were no controls and unscrupulous producers would simply describe an ordinary filtered wine as *sur lie* and thereby demand a higher price. Since 1994, however, this term may be applied to only one of the three subappellations (Coteaux du Loire, Côtes de Grandlieu, and Sèvre-et-Maine) and may not be used on any wines bearing the generic Muscadet AOC. Quite what the logic is to this is uncertain, since Gros Plant VDQS is permitted to use *sur lie* and it is even more inferior than the generic Muscadet appellation. The lesser the wine, the more need for a *sur lie* boost, thus rather than limiting its use, more emphasis should be placed on stricter controls.

At the moment Muscadet *sur lie* must remain in contact with its sediment for one winter, and may not be bottled before the third week of March following the harvest, with a second bottling period of mid-October to mid-November for fuller styles. The wine must also be bottled directly off its lees, and must not be racked or filtered, but there is still no regulation on the size and type of vessel in which the wine should be kept *sur lie*. Some growers would like the term applied only to wines kept in wooden barrels, arguing that the effect of keeping a wine in contact with its lees in huge vats is negligible, but at the very least vats over a certain size should be equipped with paddles to circulate the lees.

ANJOU-SAUMUR

Anjou-Saumur is a microcosm of the entire Loire Valley, with almost every grape available in the Loire producing virtually every style of wine imaginable—from dry to sweet, red through rosé to white, and still wines to sparkling.

SAUMUR IS THE LOIRE'S SPARKLING-WINE CENTER, where tourists flock in the summer, visiting the numerous cellars hewn out of the solid tufa subsoil. The magnificent white tufa-stone castle that overlooks the town was built in the 14th century. It is regarded as one of the finest of the Loire châteaux, and is used by the Confrérie des Chevaliers du Sacavins (one of Anjou's several wine fraternities) for various inaugural ceremonies and celebrations.

THE WINES OF ANJOU

Rosé still represents as much as 45 percent of Anjou's total wine output, even though it is on the decline. The figure was 55 percent in the late 1980s. However, although rosé remains this district's most popular wine, it has a down-market image and is essentially a blend of minor grapes; thus its commercial success has not propelled a specific variety to fame. Anjou's most celebrated grape is the Chenin Blanc used to make white wines. This vine has been cultivated in the area for well over a thousand years. It has many synonyms, from "Pineau de la Loire" to "Franc-blanc," but its principal name, Chenin Blanc, stems from Mont-Chenin in 15th-century Touraine. Under other names it can be traced as far

VINEYARDS, COTEAUX DU LAYON

In favorable sites, the vines are sometimes attacked by "noble rot." The area is famous for its sweet white wines.

back as the year 845, to the abbey of Glanfeuil (south of the river in the Anjou district). The distinctive tang of the Chenin Blanc grape comes from its inherently high tartaric acid content and this, combined with a naturally high extract, makes for unacceptably tart and often bitter styles of dry and medium-dry white. Exceptions to this rule are few and mostly confined to the four sun-blessed, southeast-facing slopes of Savennières. Anjou growers go by the rule rather than the exception, and the common practice has always been to leave the harvest of this variety until as late as

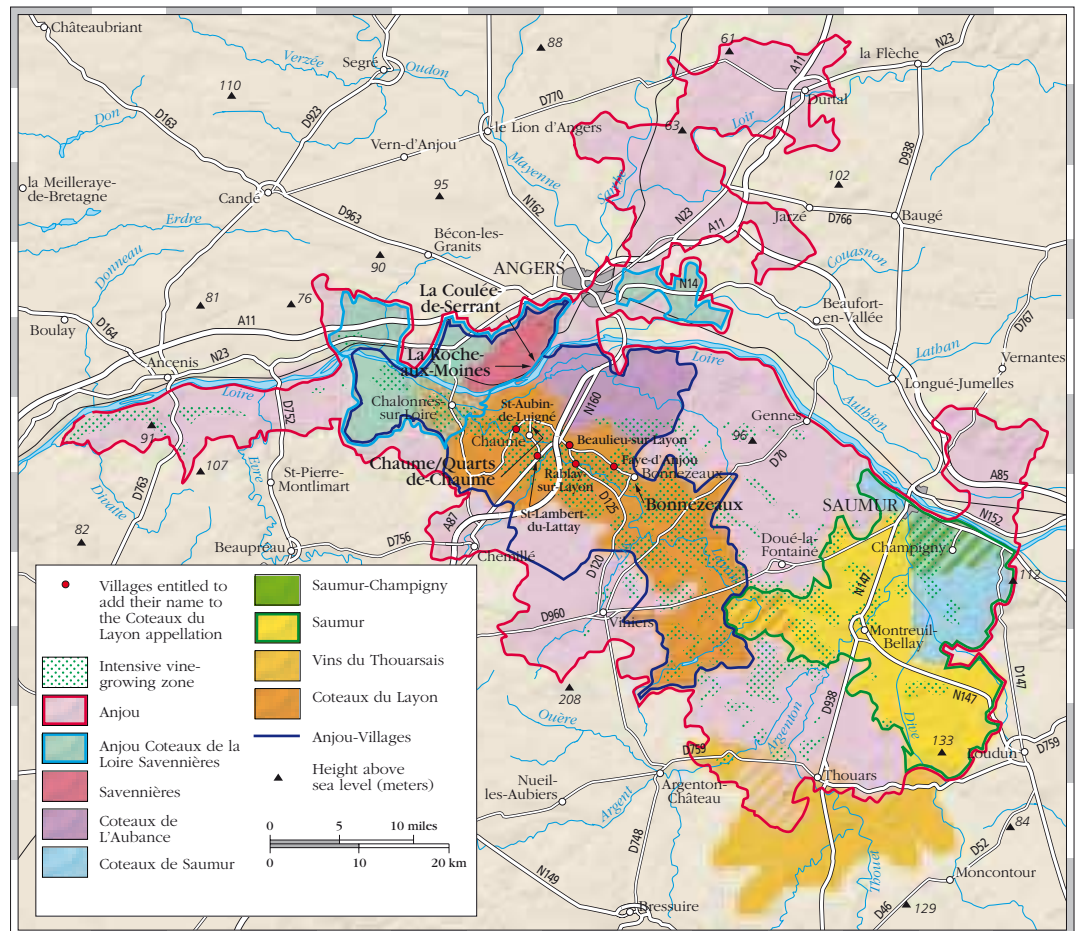

ANJOU-SAUMUR,
see also p.196-7

Boasting sparkling wine, and more, from Saumur, and a range of wines from Angers's environs, Anjou-Saumur produces most types of wine found in the Loire as a whole.

BOTTLING AT
SAUMUR-CHAMPIGNY

The appellation produces some of the Loire Valley's finest red wines from Cabernet Franc.

possible. This invites the risk of rain, but by going over the vines several times in the time-honored tradition of *tries*, picking only the ripest and healthiest grapes on each and every sweep of the vineyard, a miraculous wine may be made. Although this is a time-consuming, labor-intensive operation, the unique quality of overripe grapes produced can result in the most succulent and immaculately balanced of sweet wines. Unlike poor and boring dry Chenin Blanc wines that only deteriorate with age, these treasures are vinous investments that are capable of great maturity and can achieve wonderfully complex honeyed characteristics.

THE SPARKLING SAUMUR INDUSTRY

With the rapid growth of the Champagne market in the 19th century, producers in the Loire began to copy effervescent winemaking practices, believing that here, at last, was a potential outlet for the surplus of thin, tart Chenin Blanc wines with which even the most quality-conscious growers were often lumbered. Saumur eventually turned into the largest French sparkling-wine industry outside Champagne. In many parts of the Loire the Chenin Blanc grape has the perfect acidity for a quality sparkling wine, although devotees of the true yeasty character of Champagne can find its bouquet sweet and aromatic, maintaining that its flavor is too assertive to be properly transmuted by the traditional method. However, the wines are hugely popular, and the mixture of Chardonnay and other neutral varieties can greatly improve the overall blend. The most ardent admirer of Champagne has been known to fall prey to the charms of a superior pure Chenin Blanc bubbly from this region, and even

TUFA SUBSOIL CELLARS

The tufa-stone not only dominates the architecture; the subsoil is ideal for the sparkling-wine cellars.

THE TOWN OF SAUMUR

The 14th-century castle, one of the finest in the Loire, towers above the bustling town of Saumur, the buildings distinguished by the brilliant white tufa-stone typical of the area.

I have been known to be besotted by Bouvet-Ladubay's luxuriously ripe, oak-fermented Trésor.

THE REGION'S RED WINES

It is in Anjou, especially south of Saumur, that the Cabernet Franc emerges as the Loire's best red-wine grape. However, beyond neighboring Touraine, its cultivation rapidly diminishes. The Loire is the largest wine region in France, yet surprisingly it boasts just three classic red wines—Saumur-Champigny, Bourgueil, and Chinon—to which we might now add Anjou-Villages. It is no coincidence that most of the vineyards producing these wines are clustered together in a compact area around the confluence of the Vienne and the Loire—two rivers that long ago established the gravel terraces so prized for growing Cabernet Franc today.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

West-central district with mostly left-bank vineyards situated between Angers and Saumur.

CLIMATE

A gentle Atlantic-influenced climate with light rainfall, warm summers, and mild falls, but frost is a problem in Savennières.

ASPECT

Soft, rolling hills which hold back the westerly winds. The best sites are the south-facing rocky hillside of Savennières and the steep-sided valley of the Layon River.

SOIL

In the west and around Layon, the soil is schist with a dark, shallow topsoil that stores heat well and helps ripen the grapes, but some colder clay-soil areas produce heavier wines. The chalk-tufa soil in the east of the district around Saumur produces lighter wines, while the shale and gravel in Saumur-Champigny favors Cabernet Franc.

VITICULTURE AND VINIFICATION

The Chenin Blanc is a particularly slow-ripening grape that is often left on the vine until November, especially in the Coteaux du Layon. The effect of the fall sun on the dew-drenched, overripe grapes can encourage "noble rot," particularly in Bonnezeaux and Quarts-de-Chaume. In good years, pickers go through the vineyards several times, selecting only the ripest or most rotten grapes—a tradition known as *tries*. Most wines are bottled in the spring following the vintage, but wines produced from such richly sweet grapes take at least three months to ferment and, for this reason, might not be bottled until the following fall.

GRAPE VARIETIES

Primary varieties: Chenin Blanc, Cabernet Franc, Gamay, Grolleau
Secondary varieties: Chardonnay, Sauvignon Blanc, Cabernet Sauvignon, Malbec, Pineau d'Aunis

THE APPELLATIONS OF ANJOU-SAUMUR

ANJOU AOC

The Anjou district encompasses the vineyards of Saumur; thus Saumur may be sold as Anjou, but not vice versa. The red wines are by far the best, the whites the worst, and the rosé wines, although waning in popularity, remain the most famous. Because “mousseux” has “cheap bubbly” connotations, the wines officially designated as Anjou Mousseux appellation are often marketed simply as “Anjou.”

RED Dry, medium- to full-bodied wines, made mostly from pure Cabernet Franc or with a touch of Cabernet Sauvignon. These delightful wines are best drunk young, although the odd oak-aged wine of surprising complexity can be found.

☞ Cabernet Franc, Cabernet Sauvignon, Pineau d'Aunis

🕒 1–3 years

✓ *Des Baumard • Bouwet-Ladubay* (Non Pareils) • *Château de Fesles • Richard Leroy • Le Logis du Prieuré • D'Orgigné • Des Sablonnettes* (Genêts) • *Saint Arnoul • De la Sansonnière • Château Soucherie* (Champ aux Loups) • *De Terrebrune*

WHITE Although these wines vary from dry to sweet and from light- to full-bodied types, there are too many aggressively acid-dry or simply mediocre medium-sweet Chenin Blanc wines in the appellation. Some improvement has been made by growers maximizing the 20 percent Chardonnay and Sauvignon allowance, while Jacques Beaujeu and a few others use oak to smooth out Chenin's jagged edges, and Ogereau even ferments *en barrique*. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☞ A minimum of 80% Chenin Blanc and a maximum of 20% Chardonnay and Sauvignon Blanc

🕒 Upon purchase

✓ *Philippe Delesvaux • Les Grandes Vignes* (Varenne de Combre) • *Ogereau • Château de Passavant* ☉ • *Jo Pithon • Du Regain • Du Roy René* (Les Pierres) • *Richou • Château La Varière*

ROSÉ Once a marketing miracle, Anjou Rosé or Rosé d'Anjou sells less well in today's increasingly sophisticated markets. There is nothing intrinsically wrong with a wine that happens to be pink with some sweetness, although you would be forgiven for thinking this is exactly why some critics turn up their

noses at these wines. I prefer dry rosés, but I enjoy medium-sweet rosés when they are very fresh and fruity. The trouble with so many of these medium-sweet, light- to medium-bodied, coral-pink wines is that, while they can be delicious in the early spring following the vintage, an alarming number quickly tire in the bottle. The moral is, therefore, that even when you have found an Anjou rosé you like, never buy it by the case. These wines may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest or from December 1 without any mention of *primeur* or *nouveau*.

☞ Predominantly Grolleau, with varying proportions of Cabernet Franc, Cabernet Sauvignon, Pineau d'Aunis, Gamay, Malbec

🕒 Upon purchase

✓ *C. V. de la Loire* (Elysis) • *Château La Varière*

ANJOU COTEAUX DE LA LOIRE AOC

This rare, white-only appellation is situated southwest of Angers. Production is small and will dwindle even further as vineyards are replanted with Cabernet for the increasingly popular Anjou Rouge appellation. The minimum natural richness of the grapes at harvest is 221 grams per liter (the same as Sauternes), with a minimum residual sugar in the finished wine of 17 grams per liter.

WHITE Although currently produced in dry through to medium styles, this was originally legally defined in 1946 as a traditionally sweet wine. Today, producers following the trend for drier styles are hampered by out-of-date regulations that set the alcoholic strength too high and the yield too low.

☞ Chenin Blanc

🕒 Within 1 year

✓ *Musset Roullier*

ANJOU GAMAY AOC

Gamay is only allowed in Anjou AOC wines if the name of the grape is added to the appellation on the label.

RED Dry to medium-dry, light-bodied wines that are rarely of great interest. These wines may be sold as *primeur* or *nouveau* as from the third Thursday of November following the harvest.

☞ Gamay

🕒 Upon purchase

✓ *De la Charmoise • Roy René* (La Creusette)

ANJOU MOUSSEUX AOC

This traditional method wine is softer, but less popular than its Saumur equivalent, although it may come from the communes within Saumur itself.

SPARKLING WHITE These dry to sweet, light- to medium-bodied wines desperately need a change of regulation to allow a little Chardonnay in the blend. The Chardonnay's fatter, more neutral character would enable producers to make a more classic, less frivolous style of sparkling wine.

☞ A minimum of 60% Chenin Blanc plus Cabernet Sauvignon, Cabernet Franc, Malbec, Gamay, Grolleau, Pineau d'Aunis

🕒 1–2 years

SPARKLING ROSÉ If you want to know what Anjou Rosé tastes like with bubbles, try this light- to medium-bodied wine, which is mostly sold as *demi-sec*.

☞ Cabernet Sauvignon, Cabernet Franc, Malbec, Gamay, Grolleau, Pineau d'Aunis

🕒 Upon purchase

ANJOU PÉTILLANT AOC

A little-used appellation for gently sparkling traditional method wines with a minimum of nine months' bottle age, which must be sold in ordinary still-wine bottles with regular corks.

SEMI-SPARKLING WHITE These are dry to *demi-sec*, light-bodied sparkling wines. Considering the variable quality of Anjou Blanc, many producers might be better advised to fizz it up and sell it under this appellation.

☞ A minimum of 80% Chenin Blanc and a maximum of 20% Chardonnay and Sauvignon Blanc

🕒 Upon purchase

SEMI-SPARKLING ROSÉ Dry to medium, light-bodied wines which are rarely encountered outside the area and may be labeled “Anjou Pétillant,” “Anjou Rosé Pétillant,” or “Rosé d'Anjou Pétillant.”

☞ Grolleau, Cabernet Franc, Cabernet Sauvignon, Pineau d'Aunis, Gamay, Malbec

🕒 Upon purchase

ANJOU ROSÉ AOC

See Anjou AOC

ANJOU-VILLAGES AOC

This superior, red-wine-only appellation was first delimited in 1986, but it did not come into effect until 1991. If you buy from the best growers, you will get some of the finest red wines that the Loire has to offer.

RED The very best wines can be deeply colored with a creamy-raspberry aroma and flavor.

☞ Cabernet Franc, Cabernet Sauvignon

🕒 2–6 years

✓ *Patrick Baudoin • De la Bergerie • Château Pierre Bise • Des Griottes • L. & F. Martin • De la Motte • Ogereau • De la Poterie • De Putille • Des Quatre Quarres • Michel Robineau • Des Saulaies • Château La Varière*

ANJOU-VILLAGES BRISSAC AOC

This village was singled out under the Anjou-Villages appellation in 1998 and backdated for wines from 1996 onward. It covers the area of Brissac-Quincé and nine surrounding communes.

✓ *Davieau* (Château de Brissac) • *De Haute-Perche • Du Prieuré • Richou • Des Rochelles* (La Croix de Mission) • *Château La Varière*

BONNEZEAUX AOC

Grown on three south-facing river slopes of the commune of Thouarcé in the Coteaux du Layon, this is one of the undisputed great sweet

wines of France. The grapes must be harvested in *tries* with the pickers collecting only the ripest, often botrytis-affected fruit, which can take up to two weeks. In 2003 the minimum natural richness of the grapes at harvest was increased from 204 to 238 grams per liter (compared to 221 grams per liter for Sauternes), and the minimum residual sugar increased from 17 to 34 grams per liter.

WHITE Intensely sweet, richer, and more full-bodied than Quarts-de-Chaume, the other great growth of the Layon Valley, this wine can have pineapple and liquorice fruit when young, often achieving a beautiful honeyed-vanilla complexity with age.

☞ Chenin Blanc

🕒 Up to 20 years or more

✓ *Philippe Delesvaux • Château de Fesles • Godineau/Des Petit Quarts • Claude Robin (Floriane) • De la Sansonnière • De Terrebrune • Château La Varière*

CABERNET D'ANJOU AOC

This appellation includes Saumur, and it was a *saumurois* named Taveau who, in 1905, was the first person to make an Anjou Rosé from Cabernet grapes. Despite its classic Cabernet content and an extra degree of natural alcohol, this is not as superior to Anjou Rosé as it should be because bulk sales at cheap prices have devalued its reputation.

ROSÉ Good examples of these medium to medium-sweet, medium-bodied wines produced by the best domaines have a clean and fruity character with aromas of raspberries. These wines may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest or from December 1 without any mention of *primeur* or *nouveau*.

☞ Cabernet Franc, Cabernet Sauvignon

🕒 Upon purchase

✓ *La Croix des Loges • C. V. de la Loire (Elysis) • Des Petite Grouas • De Preville*

CABERNET DE SAUMUR AOC

All Cabernet de Saumur wines have the right to claim the appellation Cabernet d'Anjou, but those sold as Saumur are usually finer in quality.

ROSÉ A delicate, medium-sweet, light- to medium-bodied wine with a hint of straw to its pink color and a distinctive raspberry aroma. These wines may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest or from December 1 without any mention of *primeur* or *nouveau*.

☞ Cabernet Franc, Cabernet Sauvignon

🕒 Upon purchase

✓ *Du Val Brun*

CHAUME IER CRU DES COTEAUX DU LAYON AOC

This new appellation covers the south-facing vineyards on the *butte* de Chaume, and has been a long time in receiving recognition, as the original application dates back almost 50 years. The grapes must have a minimum natural sugar of 238 grams per liter (compared to 221 grams per liter for Sauternes) and are harvested by successive *tries*, with a maximum yield of 110 cases per acre (25 hectoliters per hectare) and a minimum residual sugar in the finished wine of 34 grams per liter. Because of the natural air-drainage on these slopes, *passerillage* is more widespread than *Botrytis cinerea*.

WHITE Big, rich, lusciously sweet wines that will make their mark in years to come.

☞ Chenin Blanc

🕒 5–15 years

✓ *Château Pierre Bise • Michel Blouin • Cady • Du Petit Metris • Du Rocher • De la Soucherie*

COTEAUX DE L'AUBANCE AOC

These wines are made from old vines grown on the schistous banks of the Aubance River. To be entitled to this appellation growers must use grapes that are well ripened and harvested by *tries*, a labor-intensive system that is not cost-effective, thus until recently most growers produced Cabernet d'Anjou. A new generation of growers has transformed this appellation such that in 2003 the minimum natural sugar of the grapes at harvest was increased from 204 to 230 grams per liter (compared with 221 grams per liter for Sauternes) or 294 grams per liter for Coteaux l'Aubance "Sélection de Grains Nobles," as indicated on the label. The minimum residual sugar was increased from 17 to 34 grams per liter.

WHITE A few growers still make this rich and semisweet, medium- to full-bodied wine of excellent longevity and exceptional quality.

☞ Chenin Blanc

🕒 5–10 years

✓ *De Ablut • Davieu • De Montgilet (Clos Prieur) • Richou*

COTEAUX DU LAYON AOC

This appellation, which overlaps Anjou Coteaux de la Loire in the northwest and Saumur in the southeast, has been famous for its sweet white wines since the fourth century. In favorable sites the vines are sometimes attacked by "noble rot," but in all cases the grapes must be extremely ripe and harvested by *tries* to a minimum of 12 percent alcohol from a maximum 132 cases per acre (30 hectoliters per hectare). Due to the relatively low price this appellation commands, harvesting by *tries* is viable only for the top domaines. In 2003 the minimum natural richness of the grapes at harvest was increased from 204 to 221 grams per liter (the same as Sauternes) or 294 grams per liter for Coteaux du Layon "Sélection de Grains Nobles." The minimum residual sugar was also increased from 17 to 34 grams per liter.

WHITE Green-gold- to yellow-gold-colored, soft-textured, sweet, medium- to full-bodied wines, rich in fruit, and potentially long lived.

☞ Chenin Blanc

🕒 5–15 years

✓ *Patrick Baudoin • Baumard (Le Paon) • Château Pierre Bise • Philippe Delesvaux • Dhomme • Château de Fesles (Château de la Roulerie) • De la Gerfauderie (Les Hauts de la Gerfauderie) • Ogereau (Prestige) • Du Petit Val (Simon) • Du Portaille (Planche Mallet) • Du Regain (Le Paradis) • Des Sablonnettes (La Bohème)*

COTEAUX DU LAYON VILLAGES AOC

Historically, these six villages have consistently produced the cream of all the wines in the Coteaux du Layon, and thus have the right to add their names to the basic appellation. In 2003 the minimum natural sugar of the grapes at harvest was increased from 204 to 238 grams per liter (compared to 221 grams per liter for Sauternes) or 294 grams per liter for Coteaux du

Layon Villages "Sélection de Grains Nobles." The minimum residual sugar was also increased from 17 to 34 grams per liter.

WHITE Sweet wines that are medium- to full-bodied. According to the "Club des Layon Villages," Beaulieu has a soft, light aroma; Faye has a scent reminiscent of brushwood; Rablay is big, bold, and round; Rochefort is full-bodied, tannic, and matures well; St.-Aubin has a delicate aroma that develops; and St.-Lambert is robust yet round.

☞ Chenin Blanc

🕒 5–15 years

✓ *Beaulieu Château de Breuil • Château Pierre Bise • Faye Château de Fresne (Clos de Cocus), Richard Leroy • Rablay Des Sablonnettes • Rochefort De la Motte • St.-Aubin Des Barres, Philippe Delesvaux, Jo Pitbon, De la Roche Moreau • St.-Lambert Ogereau, Jo Pitbon, Du Roy René (Les Cartelles), Michel Robineau*

COTEAUX DU LAYON-CHAUME AOC

In many ways, there is very little that separates this single-village appellation from Coteaux du Layon, although it does have a lower maximum yield of 110 cases per acre (25 hectoliters per hectare) instead of 132 cases per acre (30 hectoliters per hectare), which itself is very low.

WHITE Sweet, medium- to full-bodied, fine, viscous wines that usually rank above most basic Coteaux du Layon.

☞ Chenin Blanc

🕒 5–15 years

✓ *Château de Fesles (Château de la Roulerie Aunis) • Des Forges (Les Onnis) • Château de la Guimonnière • L. & F. Martin • Du Petit Metris*

COTEAUX DE SAUMUR AOC

After the ban in 1985 on the use of the term *méthode champenoise* for wines produced or sold in the European Union (see p.169), there were moves to develop this little-used appellation as the principal still wine of the Saumur district in order to promote Saumur AOC as an exclusively sparkling wine. That idea has, it seems, ground to a halt.

WHITE Relatively rare, semisweet, medium- to full-bodied wines that are richly flavored and worth seeking out.

☞ Chenin Blanc

🕒 5–10 years

✓ *Champs Fleuris (Sarah) • De Nerleux • De Saint Just (La Valboisière)*

QUARTS-DE-CHAUME AOC

These wines are grown on the plateau behind the village of Chaume in the Coteaux-du-Layon commune of Rochefort-sur-Loire. The vineyards of Quarts-de-Chaume used to be run by the abbey of Ronceray, whose landlord drew a quarter of the vintage as rent. In 2003 the minimum natural sugar of the grapes at harvest was increased from 204 to 238 grams per liter (compared to 221 grams per liter for Sauternes), and the minimum residual sugar increased from 17 to 34 grams per liter.

WHITE These are semisweet to sweet, medium- to full-bodied wines. Although harvested by *tries* and produced in the same manner as Bonnezeaux, Quarts-de-Chaume comes from a more northerly area and as a result is slightly

lighter in body. It also tends to have a touch less sweetness.

☼ Chenin Blanc

🕒 Up to 15 years or more

✓ *Des Baumard • Château de Bellerive • De Laffourcade • Château de la Roche Moreau • Château Pierre Bise • Château La Varière*

ROSÉ D'ANJOU AOC

See Anjou AOC

ROSÉ D'ANJOU PÉTILLANT AOC

See Anjou Pétillant AOC

SAUMUR AOC

Saumur, situated within the borders of the Anjou appellation, is regarded as the pearl of Anjou. Its wine may be sold as Anjou, but Anjou does not automatically qualify as Saumur. Unless made from Cabernet grapes, all rosé wines must adopt the Anjou Rosé appellation. Like Anjou, its white wines are variable, yet its red wines are excellent.

RED These fine, bone-dry to dry, medium- to full-bodied wines are often similar to the red wines of Anjou, although they can vary from light and fruity to deep-colored and tannic.

☼ Cabernet Franc, Cabernet Sauvignon, Pineau d'Aunis

🕒 1–10 years according to style

✓ *Du Bois Mignon (La Belle Cave) • Du Collier • De Fiervaux • De Château-Gaillard • Filliatreau • Guiberteau • Des Hautes Vignes • Langlois-Château (Vieilles Vignes) • Des Nerleux • Château de Passavent • Des Raynières • C. V. de Saumur (Reserve) • Château Yvonne*

WHITE Varying from bone-dry to sweet and from light- to full-bodied, these wines have a style more akin to Vouvray than Anjou, due to the limestone and the tufa soil. In poor-to-average years, however, a Saumur is easily distinguished by its lighter body, leaner fruit, and a tartness of flavor that can sometimes have a metallic edge on the aftertaste. These wines may be sold as from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☼ A minimum of 80% Chenin Blanc and a maximum of 20% Chardonnay and Sauvignon Blanc

🕒 Upon purchase

✓ *Du Collier • Guiberteau (Le Clos) • Château de Hureau • Langlois-Château (Vieilles Vignes) • Des Roches Neuves • Clos Rougeard • C. V. de Saumur • Château de Villeneuve*

SPARKLING WHITE Although the production per acre of this wine is one-third more than for its Anjou equivalent, Saumur is—or at least should be—better in quality and style due to its Chardonnay content and the tufa-limestone soil. Most wines are made in a true, bone-dry, *brut* style, although the full gamut is allowed and wines up to *demi-sec* sweetness are relatively common. The vast majority of these wines have a tart green-gage character, lack finesse, and do not pick up bottle aromas. The wines indicated below have an elegance sadly lacking in most Saumur, and possess gentler, more neutral fruit, which will benefit from a little extra time in bottle, although after a while all these wines tend to age rather than mature gracefully. The creamy-rich *barrique*-fermented Bouvet Trésor

is the one significant exception as not only is it just the best sparkling wine in the Loire, it can be compared to very good-quality Champagne, although it is in a very different style.

☼ Chenin Blanc plus a maximum of 20% Chardonnay and Sauvignon Blanc, and up to 60% Cabernet Sauvignon, Cabernet Franc, Malbec, Gamay, Grolleau, Pineau d'Aunis, and Pinot Noir

🕒 3–5 years

✓ *De Beauregard • De la Bessière • Bouvet-Ladubay (Mlle Ladubay, Trésor) • De Brizé • Gratien & Meyer (Flamme) • C. V. de Saumur (Spéciale)*

SPARKLING ROSÉ An increasing number of pink Saumurs are pure Cabernet Franc and an increasing number are showing very well. However, the aggressive potential of this grape can quickly turn a thrilling raspberry-flavored fizz into something hideous. Pure Cabernet Sauvignon rosés can be much smoother, less overt, and not as intrinsically Saumur as a Cabernet Franc *cuvée*.

☼ Cabernet Sauvignon, Cabernet Franc, Malbec, Gamay, Grolleau, Pineau d'Aunis, Pinot Noir

🕒 Upon purchase

✓ *Bouvet-Ladubay (Trésor) • Gratien & Meyer (Flamme)*

SAUMUR-CHAMPIGNY AOC

Many people believe that the vineyards southeast of Saumur entitled to add the village name of Champigny to their appellation produce the best red wines in the Loire.

RED Bone-dry to dry, full-bodied wines with a distinctive deep color and full and fragrant raspberry aromas, often tannic and long-lived.

☼ Cabernet Franc, Cabernet Sauvignon, Pineau d'Aunis

🕒 5–10 years

✓ *Du Bois Moze Pasquier • La Bonnelière • Des Champs Fleuris • Filliatreau • Château du Hureau (Lisagathe) • René-Noël Legrand • Petit Saint Vincent • De Rocfontaine (Vieilles Vignes) • Des Roches Neuves • Clos Rougeard • De Saint Just • Château de Villeneuve • Château Yvonne*

SAUMUR MOUSSEUX AOC

This is the technically correct appellation for all fully sparkling white and rosé Saumur wines made by the traditional method, but producers have shied away from the down-market term *mousseux*, selling the wines simply as Appellation Saumur Contrôlée. There is no allowance for this in the regulations, but it is a widespread practice. A significant amount of red traditional method wine is also produced, but this cannot claim AOC status. See also Saumur AOC

SAUMUR D'ORIGINE AOC

When the European Union banned the term *méthode champenoise*, this marketing term was developed by the producers of sparkling Saumur to promote and advertise their wines. See also Saumur AOC

SAUMURZ PÉTILLANT AOC

Little-used appellation for gently sparkling, traditional method wines with a minimum of nine months' bottle age, which must be sold in ordinary still-wine bottles with regular corks.

SEMI-SPARKLING WHITE These dry to *demi-sec*, light-bodied, and fruity wines are not

dissimilar to the fine wines of the Montlouis Pétillant appellation and should be revived.

☼ A minimum of 80% Chenin Blanc and a maximum of 20% Chardonnay and Sauvignon Blanc

🕒 Upon purchase

SAVENNIÈRES AOC

When this small portion of Anjou Coteaux de la Loire produced only sweet wines, the AOC regulations set a correspondingly low maximum yield. This concentrates the wines on four southeast-facing slopes of volcanic debris that produce the world's greatest dry Chenin Blanc.

WHITE Bone-dry to dry wines of great mineral intensity, Savennières can be some of the longest-lived dry white wines in the world. Most critics believe that the single greatest Savennières is Nicolas Joly's Clos de la Coulée de Serrant and, while I agree that it is one of the greatest wines of the Loire, I think that Baumard's Clos du Papillon (not to be confused with Clos du Papillon from other growers) consistently displays greater elegance and finesse. Over the past 15 years or so, a few producers have resurrected the semisweet style that used to be more popular in Savennières in the first half of the 20th century.

☼ Chenin Blanc

🕒 5–8 years (10–15 years for Clos de la Coulée de Serrant)

✓ *Des Baumard • Du Closel (Clos du Papillon) • Château de Fesles (Château de Varennes) • Nicolas Joly (Clos de la Coulée de Serrant) • De la Monnaie • Château Pierre Bise • Pierre Soulez*

SAVENNIÈRES COULÉE-DE-SERRANT AOC

One of just two single-vineyard designations authorized for Savennières, Coulée-de-Serrant is 17 acres (7 hectares) and a *mono-cru*, solely owned by Nicolas Joly of Château de la Roche-aux-Moines. Many consider this to be the single-greatest Loire dry white wine. See also Savennières AOC

SAVENNIÈRES ROCHE-AUX-MOINES AOC

The second and largest of the two single-vineyard designations authorized for Savennières, Roche-aux-Moines is 42 acres (17 hectares) and owned by three producers: Nicolas Joly of Château de la Roche-aux-Moines, Pierre and Yves Soulez of Château de Chamboureau, and Madame Laroche of au Moines. See also Savennières AOC

VINS DU THOUARSAIS VDQS

Michel Gigon is the sole producer of Vins du Thouarsais, a wine that could once boast over a hundred growers.

RED Dry, light- to medium-bodied, fruity reds, sometimes reminiscent of cherries and other stone fruit.

☼ Cabernet Franc, Cabernet Sauvignon, Gamay

🕒 1–2 years

WHITE A lighter-bodied but far more fragrant version of dry and semisweet Anjou Blanc.

☼ Chenin Blanc plus up to 20% Chardonnay

🕒 Upon purchase

ROSÉ This is a splendid dry, light-bodied or light- to medium-bodied picnic wine.

🕒 Upon purchase

✓ *Michel Gigon*

TOURAINE

Wines bearing Touraine appellations are prolific and capable of giving good value, but for the most part they are not great. However, there are notable exceptions, such as the wines from Vouvray and the less well-known but equally elite wines of Montlouis, Bourgueil, and Chinon.

THE WINEGROWING DISTRICT around Tours dates back to Roman times, as does the town itself. The Cabernet Franc, known locally as Breton, was flourishing in the vineyards of the abbey of Bourgueil 1,000 years ago and, as recently as 500 years ago, the Chenin Blanc—today’s predominant Touraine grape—acquired its name from Mont Chenin in the south of the district.

TOURAINE’S WINE REGIONS

With the possible exception of Saumur-Champigny, the best red wines in the Loire come from the appellations of Chinon and Bourgueil, which face each other across the Loire River, just west of Tours. Made predominantly from Cabernet Franc, good vintages aged in oak may be complex and comparable to claret, while the more everyday wines have the aromas of fresh-picked raspberries and can be drunk young and cool. To the east, Vouvray and Montlouis produce rich, sweet, long-lived *moelleux* wines from overripe Chenin Blanc grapes in sunny years. North of Tours, the wines produced in Jasnières are from the same grape, but the dry style is distinctly different. Jasnières is a singular white subappellation within a wider red, white, and rosé AOC called the Coteaux du Loir. The “Loir” is not a typographical error for “Loire,” but a tributary of the great river. Also grown on the banks of the Loir, Coteaux du Vendômois produces the full spectrum of still-wine styles, as does Cheverny to the east, including a distinctive dry white wine from the obscure Romorantin grape. Touraine Sauvignon Blanc makes an attractively priced, unassuming alternative to Sancerre, while the fruity Gamay makes easy-drinking reds and rosés. Chenin Blanc is still the dominant

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
East-central district with most of its vineyards in the *département* of Indre-et-Loire, but they extend into Loir-et-Cher, Indre, and Sarthe.

CLIMATE
Touraine falls under some Atlantic influence, but the climate is less maritime than in the Nantes district and Anjou-Saumur. Protected from northerly winds by the Coteaux du Loir. Warm summer, low October rainfall.

ASPECT
Attractively rolling land, flatter around Tours itself, hillier in the hinterland. Vines are planted on gently undulating slopes, which are often south-facing, at between 130 to 330 feet (40 and 100 meters) above sea level.

SOIL
Clay and limestone over tufa subsoil east of Tours around Vouvray and Montlouis. Tufa is chalk boiled by volcanic action. It is full of minerals, retains water, and

can be tunneled out to make large, cool cellars for storing wine. Sandy-gravel soils in low-lying Bourgueil and Chinon vineyards produce fruity, supple wines; the slopes or *coteaux* of sandy-clay produce firmer wines.

VITICULTURE AND VINIFICATION

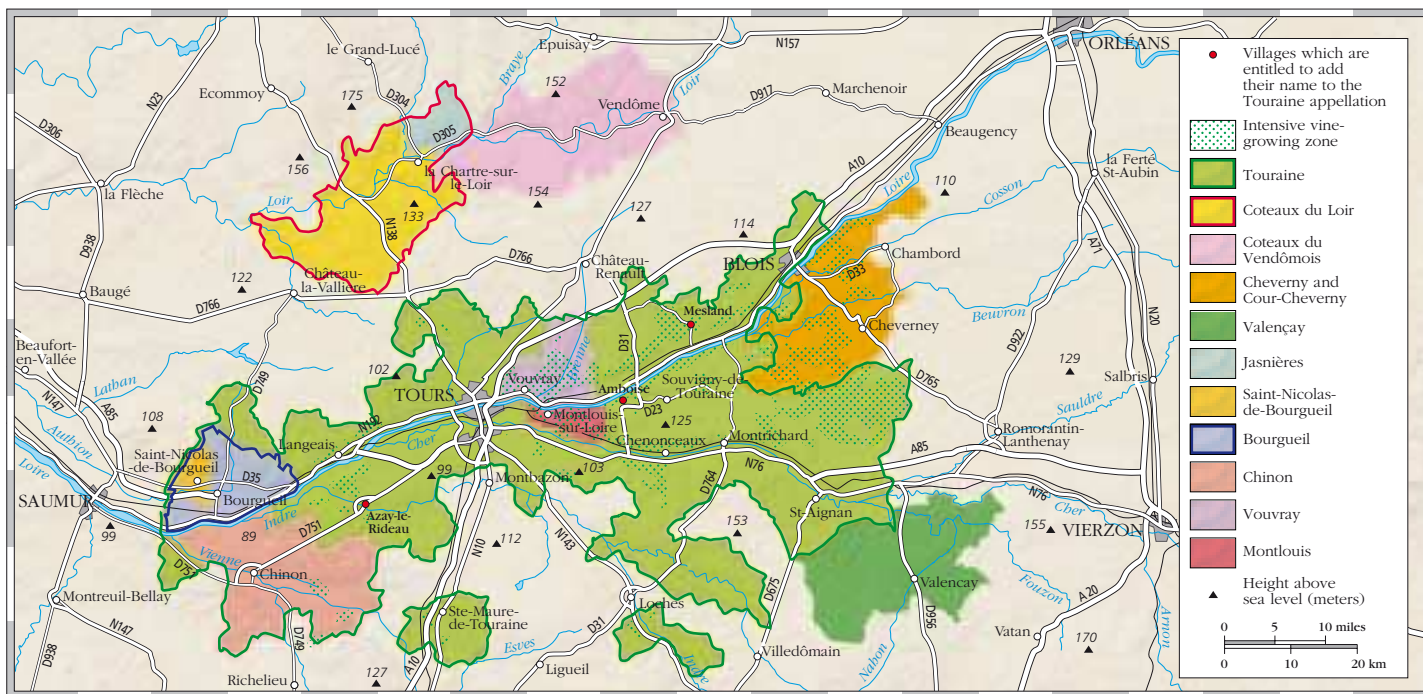

White-wine fermentation takes place at low temperatures and lasts for several weeks for dry wines, several months for sweet wines. The reds undergo malolactic fermentation. Some Bourgueil and Chinon is aged for up to 18 months in oak casks before bottling.

GRAPE VARIETIES

Primary varieties: Chenin Blanc, Cabernet Franc, Sauvignon Blanc, Grolleau
Secondary varieties: Cabernet Sauvignon, Pinot Noir, Meslier, Gamay, Gamay Teinturier, Pineau d’Aunis, Romorantin, Arbois, Chardonnay, Malbec

variety here and, as in Anjou-Saumur, the tradition has been to produce naturally sweet wines in great years when these grapes are full of sugar, but lighter, not completely dry styles are more usual. The surplus of less-than-overripe grapes, like that in Anjou-Saumur, is traditionally utilized for sparkling wines.

TOURAINE, *see also* p.197
Surrounded by different appellations, the ancient city of Tours is the focal point of an area rich in the variety of its wines.

THE APPELLATIONS OF TOURAINÉ

BOURGUEIL AOC

Most of the vines are grown on a sand-and-gravel plateau, or *terrasse*, by the river. The wines have a pronounced fruity character and are delicious to drink when less than six months old. Those grown on the south-facing clay and tufa slopes, or *coteaux*, ripen up to 10 days earlier and produce more full-bodied, longer-lived wines.

RED Bone-dry to dry, medium-bodied, lively wines, full of soft-fruit flavors, which are often aged in cask. They are very easy to drink when less than six months old; many close up when in bottle and need time to soften. Wines from the *terrasse* vineyards are best drunk young, while those from the *coteaux* repay keeping.

🍷 Cabernet Franc with up to 10% Cabernet Sauvignon

🕒 Within 6 months or after 6 years

ROSÉ Bone-dry to dry, light- to medium-bodied wines that are very fruity with aromas of raspberries and blackberries and good depth of flavor. They deserve to be better known.

🍷 Cabernet Franc with up to 10% Cabernet Sauvignon

🕒 2–3 years

✓ *Yannick Amirault* (Les Quartier Vieilles Vignes) • *Breton* • *Des Chesnaies* (Prestige) • *De la Chevalerie* (Busardières) • *De la Cotelleraie* • *Delaunay Père & Fils* • *Vignoble de la Grioche* (Santenay) • *Des Ouches* • *Du Petit Bondiaud* (Le Petit Mont) • *Guy Saget* (L'Echallerie) • *De la Taille au Loups*

CHEVERNY AOC

Upgraded from VDQS to full AOC status in 1993. These good-value, crisp, and fruity wines deserve their promotion and should be better known. Cheverny is usually made and marketed as a pure varietal wine, the most interesting of which, Romorantin, has been awarded its own AOC for the best vineyards around Cour-Cheverny itself. *See also* Cour-Cheverny AOC

RED Dry, light- to medium-bodied wines. The smaller growers mostly produce pure Gamay wines of very acceptable quality, although the addition of 10 percent or more Pinot Noir gives a smoother wine. Gamay Teinturier de Chaudenay, which has colored juice, is no longer permitted.

🍷 Between 40 and 65% Gamay, plus Pinot Noir, Cabernet Franc, Malbec. Cabernet Sauvignon is no longer permitted.

🕒 1–2 years

WHITE Dry, light-bodied, modest wines with a fine, flowery nose, delicate flavor, and crisp balance. Now primarily a Sauvignon Blanc wine, as Romorantin may not be used and the amount of Sauvignon in these wines has been regulated since 1993.

🍷 Between 65 and 80% Sauvignon Blanc, plus Chardonnay, Chenin Blanc, and Arbois

🕒 1–2 years

ROSÉ Only small quantities are produced, but the wines are agreeably dry and light-bodied and very consistent in quality. Since acquiring full AOC status, Cabernet Franc, Cabernet Sauvignon, and Malbec have been allowed for

the production of these wines, which has boosted the quantity even further.

🍷 At least 50% Gamay, plus Cabernet Franc, Cabernet Sauvignon, Malbec, Pineau d'Aunis, and Pinot Gris

🕒 1–2 years

✓ *De la Desoucherie* • *De la Gaudronnière* (Tradition) • *Du Moulin* • *Sauger & Fils*

CHINON AOC

The appellations of Chinon and Bourgueil produce the best red wine in Touraine using the Cabernet Franc grape, known locally as Breton. Chinon wines are generally lighter and more delicate than those of Bourgueil, but those from the tufa hill slopes have greater depth and flavor and age well.

RED Bone-dry to dry, light- to medium-bodied wines that are lively, soft, and delicate. Most growers use small oak casks for aging and produce wines of very good quality.

🍷 Cabernet Franc with up to 10% Cabernet Sauvignon

🕒 2–3 years

WHITE A tiny production of clean, dry, light- to medium-bodied wines that are strangely aromatic for Chenin Blanc with an intriguing perfumed aftertaste.

🍷 Chenin Blanc

🕒 1–2 years

ROSÉ These are dry, fairly light-bodied, smooth, and fruity wines which, like Bourgueil rosés, are very easy to drink and deserve to be better known.

🍷 Cabernet Franc with up to 10% Cabernet Sauvignon

🕒 2–3 years

✓ *Philippe Alliet* • *Château de l'Aulée* (Artissimo) • *Bernard Baudry* • *Guy Saget* (Marie de Beauregard) • *Breton* • *Château de Coullaine* • *Couly-Dutheil* (Clos de l'Echo) • *Charles Joguet* • *J. L. Page* (Sélection Clément Martin) • *Jean-Marie Raffault* (Le Puy) • *De Saint-Louand* (Réserve de Trompegueux) • *Serge et Bruno Sourdis*

COTEAUX DU LOIR AOC

This is an area that had extensive vineyards in the 19th century. Production has since declined and these generally unexciting wines come from the Loir, which is a tributary of, and not to be confused with, the Loire.

RED These are dry, medium-bodied wines that can have a lively character and good extract in sunny years.

🍷 Minimum of 30% Pineau d'Aunis with Gamay, Pinot Noir, Cabernet Franc, and Cabernet Sauvignon

🕒 1–2 years

WHITE Bone-dry to dry, light-bodied wines that are high in acidity that can be mean and astringent.

🍷 Chenin Blanc

🕒 As early as possible

ROSÉ Dry, fairly light-bodied wines, a few of which are fruity and well balanced.

🍷 Pineau d'Aunis, Cabernet Franc, Gamay, and Malbec with up to 25% Grolleau

🕒 Within 1 year

✓ *De Bellivière* • *Jean-François Maillet* (Réserve d'Automme)

COTEAUX DU VENDÔMOIS AOC

Situated on both banks of the Loir, upstream from Jasnières, this steadily improving wine was upgraded to full AOC status in 2001, when the *encépagement* changed.

RED Dry, fairly light-bodied wines that are full of soft-fruit flavors and very easy to drink.

🍷 Minimum of 40% Pineau d'Aunis plus 10–40% Gamay, Pinot Noir, and Cabernet Franc, with a maximum of 20% Gamay reducing to 10% in 2016 (Cabernet Sauvignon is no longer permitted)

🕒 1–2 years

WHITE Dry, fairly light-bodied wines which, when made from pure Chenin Blanc, have a tendency to be very astringent. Growers who blend Chardonnay with Chenin Blanc produce better-balanced wines.

🍷 Primarily Chenin Blanc with up to 20% Chardonnay

🕒 Within 1 year

ROSÉ Fresh and fragrant, Coteaux du Vendômois is one of the most appealing, yet little seen, of the Loire's dry rosés.

🍷 Pineau d'Aunis (Gamay is no longer permitted)

🕒 1–2 years

✓ *Patrice Colin* • *Du Four à Chaux* • *C. V. de Villiers-sur-Loir*

COUR-CHEVERNY AOC

Cheverny gained this special single-village appellation exclusively for Romorantin when it was upgraded in 1993 from a VDQS to an AOC, but it lost its right to produce sparkling wine. Romorantin is grown in the best sites around Cour-Cheverny. *See also* Cheverny AOC

WHITE These are dry, light-bodied, modest wines, which have a fine, flowery nose, delicate flavor, and crisp balance.

🍷 Romorantin

🕒 1–2 years

✓ *De la Desoucherie* • *De la Gaudronnière* (Le Mur de Gaudronnière) • *Du Moulin*

JASNIÈRES AOC

This is the best area of the Coteaux du Loir—the wines produced here can, in hot years, achieve a richness that compares well with those of Savennières in Anjou (*see* p.206).

WHITE Medium-bodied wines that can be dry or sweet. They are elegant and age well in good years, but they can be unripe in poor years.

🍷 Chenin Blanc

🕒 2–4 years

✓ *De Bellivière* • *J. Martellière* (Poète)

MONTLOUIS-SUR-LOIRE AOC

All Montlouis appellations were renamed Montlouis-sur-Loire AOC from November 2003. Like Vouvray, Montlouis produces wines that

can be dry, medium-dry, or sweet depending on the vintage and, like those of its more famous neighbor, the greatest wines of Montlouis are the sweetest, most botrytis-rich wines often sold as *moelleux*. The wines are very similar in style to those of Vouvray, but Montlouis is terribly underrated, whereas Vouvray is often overrated. I would rank Moyer's 1959 and the 1947 Montlouis alongside even the greatest vintages of Château d'Yquem Sauternes.

WHITE Light- to medium-bodied wines that can be dry or sweet. They are softer and more forward than the wines of Vouvray but can have the same honeyed flavor in fine years. Sweet Montlouis is aged in cask, but the best medium-dry styles are clean-fermented in stainless steel.

☞ Chenin Blanc

🕒 1–3 years for medium-dry, up to 10 years for sweeter wines

✓ *Laurent Chatenay • François Chidaine • De la Croix Melier • Alex Mathur (Dionys) • Dominique Moyer • De la Taille au Loups*

MONTLOUIS-SUR-LOIRE MOUSSEUX AOC

In poor vintages the grapes are used to make traditional method sparkling versions of Montlouis. The medium-dry (*demi-sec*) styles of the AOC are very popular in France.

SPARKLING WHITE These light- to medium-bodied wines can be *brut*, *sec*, *demi-sec*, or *moelleux*. The last two styles are made only in years that are particularly sunny.

☞ Chenin Blanc

🕒 Upon purchase

✓ *Alain Joulin • Thierry et Daniel Mosny*

MONTLOUIS-SUR-LOIRE PÉTILLANT AOC

Gently effervescent, Montlouis Pétillant is one of the most successful, yet least encountered, and underrated, slightly sparkling French white wines.

SEMI-SPARKLING WHITE Light- to medium-bodied wines that can be dry or sweet. Very consistent in quality, with a rich, fruity flavor balanced by a delicate *mousse* of fine bubbles.

☞ Chenin Blanc

🕒 Upon purchase

✓ *Levasseur • Dominique Moyer*

ST.-NICOLAS-DE- BOURGUEIL AOC

This is a commune with its own appellation in the northwest corner of Bourgueil. The soil is sandier than that of surrounding Bourgueil and the wines are lighter but certainly equal in terms of quality. These are some of the finest red wines in the Loire.

RED Bone-dry to dry, medium-bodied wines that age well and have greater finesse than the wines of Bourgueil.

☞ Cabernet Franc with up to 10% Cabernet Sauvignon

🕒 After 5–6 years

ROSÉ A small amount of dry, medium-bodied rosé with firm, fruity flavor is produced.

☞ Cabernet Franc with up to 10% Cabernet Sauvignon

🕒 Upon purchase

✓ *Yannick Amirault • Max Cognard (Estelle,*

Malagnes) • Sebastian David • Frédéric Malibeu (Coutures, Eclipse) • Jacques et Vincent Malibeu (La Gardière Vieilles Vignes) • Clos des Quarterons (Vieilles Vignes) • Du Rochouard (Pierre du Lane)

TOURAINE AOC

A prolific appellation with sparkling wines in dry and medium-dry styles, plus sweet white, red, and rosé still wines from all over Touraine. Most are pure varietal wines and the label should indicate which grape they have been made from. See also Touraine Mousseux AOC and Touraine Pétillant AOC

RED Dry, light- to medium-bodied wines of little interest, which cannot be enhanced by the fact that the lackluster Grolleau grape has been used in Touraine *rouge* since 1994. Those made from Gamay are fresh and fruity, and may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

☞ Gamay, Cabernet Franc, Cabernet Sauvignon, Malbec, Pinot Noir, Pinot Meunier, Pinot Gris, Pineau d'Aunis, and Grolleau

🕒 Within 3 years

WHITE These are bone-dry to dry, medium-bodied wines; when made from pure Sauvignon, they are fresh, aromatic, and fruity. Good Touraine Sauvignon is better than average Sancerre. Chardonnay has been restricted in Touraine *blanc* since 1994. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☞ Chenin Blanc, Sauvignon Blanc, Arbois, and a maximum of 20% Chardonnay

🕒 1–2 years

ROSÉ Dry, light- to medium-bodied wines, while those made from Pineau d'Aunis are drier and more subtle than Anjou rosé. They may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

☞ Cabernet Franc, Gamay, Grolleau, and Pineau d'Aunis with up to 10% Gamay Teinturier de Chaudenay or Gamay de Bouze

🕒 1–2 years

✓ *De la Charmoise (also those simply labeled Henry Marionnet) • Des Corbillères • De la Garrelière • Henri Marionnet • Michaud • Dominique Percereau • De la Puannerie • Du Pre Baron (Sauvignon L'Elegante) • Clos Roche Blanche • Les Vaucorneilles (Gamay)*

TOURAINE AMBOISE AOC

Modest white wines and light reds and rosés are produced by a cluster of eight villages surrounding, and including, Amboise. The vines are grown on both sides of the Loire adjacent to the Vouvray and Montlouis areas.

RED Dry, light-bodied wines that are mostly blended. Those containing a high proportion of Malbec are the best.

☞ A minimum of 60% Gamay, plus 10–30% Cabernet Franc and Malbec, with an optional maximum of 10% Cabernet

Sauvignon until 2010, when it will no longer be allowed

🕒 2–3 years

WHITE These bone-dry to dry, light-bodied Chenin Blancs are usually uninspiring; the rosés are superior.

☞ A minimum of 60% Chenin Blanc, plus a maximum of 30% Sauvignon Blanc, and a maximum of 15% Chardonnay

🕒 Upon purchase

ROSÉ These dry, light-bodied, well-made wines are mouth-watering.

☞ A minimum of 80% Gamay, plus Cabernet Franc and Malbec

🕒 Within 1 year

✓ *Dutertre • Guy Saget • Lionel Truet (Grande Foucaudière)*

TOURAINE AZAY-LE-RIDEAU AOC

Good-quality wines from eight villages on each side of the Indre River, a tributary of the Loire.

WHITE Delicate, light-bodied wines that are usually dry but may be *demi-sec*.

☞ Chenin Blanc

🕒 1–2 years

ROSÉ Attractive, refreshing, truly dry (maximum of 3 grams per liter residual sugar) wines that are coral-pink and often have a strawberry aroma.

☞ A minimum of 60% Grolleau, plus Malbec, Gamay, Cabernet Franc, and Cabernet Sauvignon (the last two must not total more than 10% of the entire blend)

🕒 1–2 years

✓ *J.L. Page • Pibaleau Père & Fils*

TOURAINE MESLAND AOC

Wines from the vineyards of Mesland and the five surrounding villages on the right bank of the Loire. The reds and rosés of this appellation are definitely well worth looking out for.

RED These dry, medium- to full-bodied wines are the best of the AOC and can be as good as those of Chinon or Bourgueil.

☞ A minimum of 60% Gamay, plus 10–30% Cabernet Franc and Malbec, with an optional maximum of 10% Cabernet Sauvignon until 2010, when it will no longer be allowed

🕒 1–3 years

WHITE Dry, light-bodied wines with a high acidity that is only tamed in the best and sunniest years.

☞ A minimum of 60% Chenin Blanc, plus a maximum of 30% Sauvignon Blanc, and a maximum of 15% Chardonnay

🕒 1–2 years

ROSÉ These dry, medium-bodied wines have more depth and character than those of Touraine Amboise.

☞ A minimum of 80% Gamay, plus Cabernet Franc and Malbec

🕒 1–3 years

✓ *De la Bridayerie • Châteaue Gaillard*

TOURAINE MOUSSEUX AOC

Very good-value traditional method red, white, and rosé wines. While the grapes for the white and rosé can come from the entire Touraine AOC area, those for red Touraine Mousseux may come from only the following areas: Bourgueil, St.-Nicolas-de-Bourgueil, or Chinon.

SPARKLING RED Dry, light- to medium-bodied wines that are fruity and refreshing.

☞ Cabernet Franc

☞ Upon purchase

SPARKLING WHITE These light- to medium-bodied wines are made in dry and sweet styles, and the quality is consistent due to the large production area, which allows for complex blending.

☞ Primarily Chenin Blanc but may also include Arbois and up to 20% Chardonnay and a combined maximum of 30% Cabernet, Pinot Noir, Pinot Gris, Pinot Meunier, Pineau d'Aunis, Malbec, and Grolleau

☞ Upon purchase

SPARKLING ROSÉ Light- to medium-bodied wines that are attractive when *brut*, though a bit cloying if sweeter.

☞ Cabernet Franc, Malbec, Noble, Gamay, and Grolleau

☞ 1–2 years

✓ *Blanc Foussy* (Robert de Schlumberger, Veuve Oudinot) • *Jean-Pierre Laissement* (Rosé) • *Monmousseau* (JM)

TOURAINE NOBLE-JOUÉ AOC

A rosé-only appellation, this AOC was created in 2001 in recognition of the *vin gris* produced that was modestly famous in the 19th century, but its vineyards were gradually swallowed by the creeping urbanization southwest of Tours.

ROSÉ Yet to reestablish a reputation, the best of these wines so far have been fresh, light-bodied, elegantly fruity wines with smoky-floral minerality.

☞ A minimum of 40% Pinot Gris, plus at least 20% Pinot Gris and a minimum of 10% Pinot Noir

☞ Upon purchase

✓ *Bernard Blondeau*

TOURAINE PÉTILLANT AOC

Refreshing, slightly effervescent white and rosé wines made from the same grape varieties as Touraine Mousseux. None are exported.

SEMI-SPARKLING RED Medium-dry, light-bodied wines that are not very popular.

☞ Cabernet Franc

☞ Upon purchase

SEMI-SPARKLING WHITE Well-made, refreshing, light-bodied wines, in dry and sweet styles.

☞ Chenin Blanc, Arbois, Sauvignon Blanc, and up to 20% Chardonnay

☞ Upon purchase

SEMI-SPARKLING ROSÉ Attractive, light, quaffing wines that are made in dry and sweet styles.

☞ Cabernet Franc, Malbec, Noble, Gamay, and Grolleau

☞ Upon purchase

VALENÇAY AOC

Situated in the southeast of Touraine around the Cher River, these vineyards produce well-made, attractive wines. Promoted from VDQS to AOC in 2003, when the *encépagement* changed. Rarely seen outside France.

RED Dry, light-bodied, fragrant wines that can be very smooth and full of character. The Malbec, known locally as Cot, is particularly successful.

☞ 30–60% Gamay, with at least 30% in total of Pinot Noir and Malbec, plus optional

Cabernet Franc and Cabernet Sauvignon, which together must not exceed 10% of the entire blend (20% up to the 2003 vintage)

☞ 1–2 years

WHITE Simple, dry, light-bodied wines that are improved by the addition of Chardonnay.

☞ A minimum of 70% Sauvignon Blanc, plus Arbois and Chardonnay

☞ 1–2 years

ROSÉ Dry to medium-dry, light-bodied wines that can be full of ripe soft-fruit flavors.

☞ 30–60% Gamay, with at least 30% in total of Pinot Noir and Malbec, plus an optional maximum of 30% Pinot d'Aunis, with or without Cabernet Franc and Cabernet Sauvignon, which together must not exceed 20% of the entire blend

☞ Upon purchase

✓ *Chantal et Patrick Gibault* • *Jean-François Roy*

VOUVRAY AOC

These white wines may be dry, medium-dry, or sweet depending on the vintage. In sunny years, the classic Vouvray that is made from overripe grapes affected by the “noble rot” is still produced by some growers. In cooler years, the wines are correspondingly drier and more acidic, and greater quantities of sparkling wine are produced.

WHITE At its best, sweet Vouvray can be the richest of all the Loire sweet wines. In good years, the wines are very full bodied, rich in texture, and have the honeyed taste of ripe Chenin Blanc grapes.

☞ Chenin Blanc but may also contain Arbois

☞ Usually 2–3 years; the sweeter wines can last up to 50 years

✓ *Des Aubuisières* (Giraudières) • *Champalou* (Le Clos du Portail Sec) • *Philippe Foreau* (Clos Naudin) • *De la Haute Borne* (Tendre) • *Huet* • *Clos de Noyus* • *Pichot* • *De la Taille au Loups* • *Vigneau Chevreau* ☉ • *Alain Robert* (La Sablonnière)

VOUVRAY MOUSSEUX AOC

These sparkling wines are made from overripe grapes. In years when the grapes do not ripen properly they are converted into sparkling wines using the traditional method and blended with reserve wines from better years.

SPARKLING WHITE Medium- to full-bodied wines made in both dry and sweet styles. They are richer and softer than sparkling Saumur but have more edge than sparkling Montlouis.

☞ Chenin Blanc and Arbois

☞ Non-vintage 2–3 years, vintage *brut* and *sec* 3–5 years, vintage *demi-sec* 5–7 years

✓ *Marc Brédif* • *Champalou* • *Champion* • *Clos de l'Épinay* (Tête de Cuvée) • *Philippe Foreau* • *Domaine de la Galinière* (Cuvée Clément) • *Sylvain Gaudron* • *Huet* • *Laurent et Fabrice Maillet* • *Château de Moncontour* (Cuvée Prédilection)

VOUVRAY PÉTILLANT AOC

These are stylish and consistent semi-sparkling versions of Vouvray, but very little is produced.

SEMI-SPARKLING WHITE Medium- to full-bodied wines made in dry and sweet styles. They should be drunk young.

☞ Chenin Blanc and Arbois

☞ Upon purchase

✓ *Gilles Champion* • *Jean-Charles Cathelineau* • *Huet*

MORE GREEN WINES

In addition to the Loire producers recommended in this book that are either biodynamic or organic, there are also the following. They include a number that have been recommended in other editions, and still make some fine wines, but have been culled out to make room for others.

PAYS NANTAIS

Biodynamic

St. Nicolas (Brem sur Mer)

Organic

Chevolleau-Goulpeau (Aubigny), *De La Louvetrie* (La Haye-Fouassière), *De la Parentière* (Vallet), *Bruno Dejardin* (Rosnay)

ANJOU-SAUMUR

Biodynamic

De la Charmeres se (Faye d'Anjou), *De la Sansonnrière* (Thouracé), *Château La Tour Grise* (Le Pûy Notre Dame)

Organic

Laurent Charrier (Doué la Fontaine), *Collégiale des de Loire* (Le Puy Notre Dame), *Cousin Leduc* (Martigne Briand), *De Dreuilé* (Champ-sur-Layon), *De l'Echalier* (Rablay-sur-Layon), *Elliau* (Vaudelany), *Foucault* (Chacé), *Château Fouquet* (Dampierre-sur-Loire), *Des Frogères* (Chacé), *I. & J. Godineau Pitbon* (St-Lambert du Lattay), *Anne Hacquet* (Beaulieu-sur-Layon), *Huret* (Martigné Briand), *Henquimet-Pilbon* (Champ-sur-Layon), *Michel Joseph* (Chacé), *Du Layon* (St-Georges du Layon), *Gérard Leroux* (Les Verchers-sur-Layon), *Manoir de la Tête Rouge* (Le Puy Notre Dame), *De Mosse* (St-Lambert du Lattay), *Nouveau-Cerisier Père & Fils* (Faye d'Anjou), *Du Pas St. Martin* (Doué la Fontaine), *Régnier-David* (Meigné), *Rochais* (Rocheport-sur-Loire), *De Rochambeau* (Soulaines-sur-Aubance), *Rochard* (Chanzeaux), *Ste.-Barbe* (Saumur), *Patric Thomas* (St-Georges-sur-Layon), *Val Brun* (Parnay), *Du Vieux Tuffeau* (Le Puy Notre Dame), *Vintrou* (St. Jean des Mauvrets).

TOURAINE

Biodynamic

De Pontcher (Thésée)

Organic

Clos Roches Blanches (Mareuil-sur-Cher), *Philippe Tessier* (Cheverny), *Michelle Thibault* (Bourgueil), *Du Clos Tue Boeuf* (Les Montils), *Breton* (Restigné), *Yves Lecocq* (Bourgueil), *Loquineau* (Cheverny), *De la Mabilrière* (Vernou-sur-Brenne), *Joseph Moreau* (Vallères), *Du Mortier* (St. Nicolas de Bourgueil), *Château de la Roche* (Cheillé), *Les Cailloux du Paradis* (Soings en Sologne), *Alain Courtault* (Thésée), *Joël Courtault* (Thésée—in conversion to biodynamic), *Denis Père et Fils* (Civray de Touraine), *Des Deux Saintes* (St. Aubin le Dépeint), *Georget* (La Brosse-Touvois), *Guion* (Le Pontarin)

CENTRAL VINEYARDS

Organic

Claude Prugnard (Orcet), *Clos St. Jean*, *Clos de la Chapelle* (St. Jean St. Maurice), *Carroget Gautier* (Anetz), *Christian Chaput* (Prompsat), *Joël Lapalue* (St. Jean St. Maurice)

CENTRAL VINEYARDS

In this district of scattered vineyards, all the classic wines are dry variations of the Sauvignon Blanc, but there are some discernible differences between the best of them—the concentration of Sancerre, the elegance of Pouilly Fumé, the fresh-floral character of Menetou-Salon, the lightness of Reuilly, and the purity of Quincy.

THE CENTRAL VINEYARDS are so called because they are in the center of France, not the center of the Loire Valley. This is a graphic indication of how far the Loire Valley extends and, while it might not be a surprise to discover the vineyards of Sancerre are quite close to Chablis, it does take a leap of the imagination to accept that they are nearer to the Champagne region than to Tours. And who could discern by taste alone that Sancerre is equidistant between the production areas of such diverse wines as Hermitage and Muscadet?

Best known of all the towns in this district is Orléans, famous for its liberation by Joan of Arc from the English in 1429. The other important town is Bourges, which is situated in the south between the wine villages of Reuilly, Quincy, and Menetou-Salon, and was once the capital of the Duchy of Berry.

THE REGION'S SAUVIGNON BLANC WINES

The Sauvignon Blanc is to the Central Vineyards what Muscadet is to the Pays Nantais. It produces the classic wine of the district, which, like Muscadet, also happens to be both white and dry. But two dry white wines could not be more different in style and taste. In the best Muscadet *sur lie* there should be a yeasty fullness, which can sometimes be misread as the Chardonnay character of a modest Mâcon. In Central Vineyard Sauvignons, however, whether they come from Sancerre or Pouilly—or even from one of the lesser-known, but certainly not lesser-quality, villages around Bourges—the aroma is so striking it sometimes startles. The rasping dryness of the wine's flavor catches the breath and can come from only one grape variety.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

The most easterly vineyards of the Loire are situated in the center of France, chiefly in the *départements* of Cher, Nièvre, and Indre.

CLIMATE

More continental than areas closer to the sea; the summers are shorter and hotter and the winters longer and colder. Spring frosts and hail are particular hazards in Pouilly. Harvests are irregular.

ASPECT

Chalk hills in a quiet, green landscape. Vines occupy the best sites on hills and plateaux. At Sancerre they are planted on steep, sunny, sheltered slopes at an altitude of 660 feet (200 meters).

SOIL

The soils are dominated by clay or limestone, topped with gravel

and flinty pebbles. When mixed with chalk-tufa, gravelly soils produce lighter, finer styles of Sauvignon wines; when combined with Kimmeridgian clay, the result is firmer and more strongly flavored.

VITICULTURE AND VINIFICATION

Some of the vineyard slopes in Sancerre are very steep, so cultivation and picking are done by hand. Most properties are small and use the traditional wooden vats for fermentation, but some growers have stainless-steel tanks.

GRAPE VARIETIES

Primary varieties: Sauvignon Blanc, Pinot Noir

Secondary varieties: Chasselas, Pinot Blanc, Pinot Gris, Cabernet Franc, Chenin Blanc, Gamay

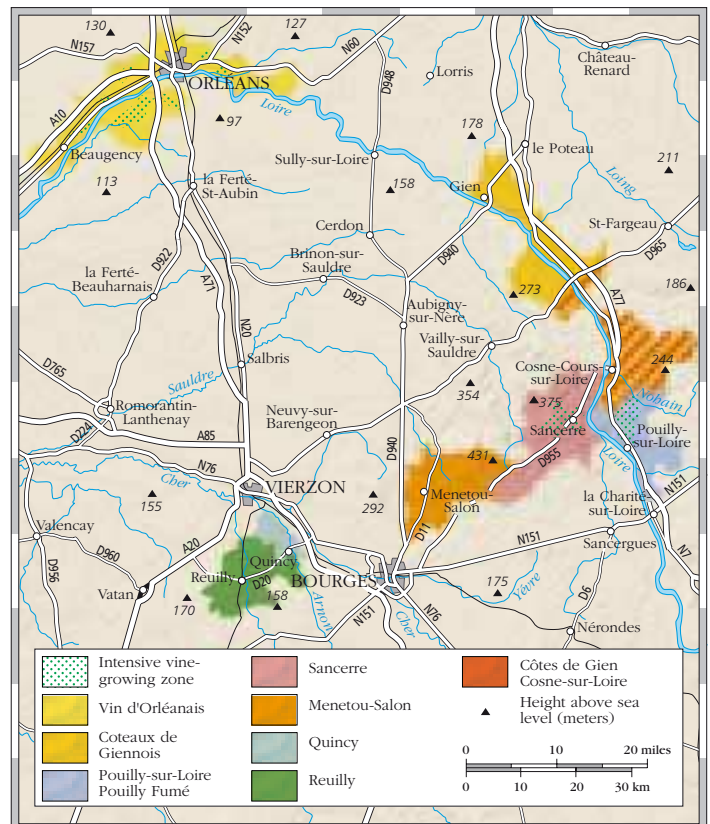

CHÂTEAU DU NOZET, POUILLY-SUR-LOIRE

This 19th-century château at Pouilly-sur-Loire is the home of Patrick de Ladoucette, the baron of Pouilly.

A BURGUNDIAN INFLUENCE

Historically, this district was part of the Duchy of Burgundy, which explains the presence of Pinot Noir vines. After the scourge of *phylloxera*, the area under vine shrank. That brought back into production was mostly replanted with Sauvignon Blanc, which began to dominate the vineyards, although isolated spots of Pinot Noir were maintained. Some of the wines these produce today can be good, although they are extremely delicate in style; and however fine the quality, they are but a shadow of great Burgundian Pinot.

CENTRAL VINEYARDS, *see also* p.197

The most easterly of the Loire's vineyards, and the most central of France, the Central Vineyards are famous for wines made from the Sauvignon Blanc grape.

THE APPELLATIONS OF CENTRAL VINEYARDS

CÔTES DU GIEN COSNE-SUR-LOIRE AOC

Of the 16 communes that produce Coteaux du Giennois, only eight are entitled to add Cosne-sur-Loire to the appellation. It was promoted from VDQS to AOC in 1998.

RED Dry, bright ruby-colored wines. Often full-tasting, but rarely with the body to match and sometimes quite tannic.

☞ Gamay, Pinot Noir—since 1992, neither variety may exceed 80% of the total blend

🕒 1–2 years

WHITE These are dry, medium-bodied, curiously aromatic white wines that develop a full, toasty flavor with a little bottle age.

☞ Sauvignon Blanc

🕒 1–2 years

ROSÉ Light-salmon-colored wines, slightly fuller bodied than the Coteaux du Giennois made a little further to the north, but equally capable of the same citrus fragrance.

☞ Gamay, Pinot Noir—since 1992, neither variety may exceed 80% of the total blend

🕒 1–4 years

✓ *Alain Paulat* ☉

COTEAUX DU GIENNOIS AOC

This appellation could boast nearly a thousand growers at the turn of the 20th century when it was 40 times its current size. Promoted from VDQS to AOC in 1998.

RED Dry, light-bodied red wines that often have less color than many rosés.

☞ Gamay, Pinot Noir—since 1992, neither variety may exceed 80% of the total blend

🕒 1–2 years

WHITE These very basic, dry, light-bodied wines lack interest. Chenin Blanc can no longer be used to make this wine.

☞ Sauvignon Blanc

🕒 1–2 years

ROSÉ Light-salmon-colored, light-bodied wines that can have a fragrant citrus character.

☞ Gamay, Pinot Noir—since 1992, neither variety may exceed 80% of the total blend

🕒 1 year

✓ *Emile Balland • De Beurois • De Villegeai*

MENETOU-SALON AOC

This underrated appellation covers Menetou-Salon and the nine surrounding villages.

RED These are dry, light-bodied, crisp, and fruity wines with fine varietal aroma. They are best drunk young, although some oak-matured examples can age well.

☞ Pinot Noir

🕒 2–5 years

WHITE Bone-dry to dry wines. They are definitely Sauvignon in character, but the flavor can have an unexpected fragrance.

☞ Sauvignon Blanc

🕒 1–2 years

ROSÉ Extremely good-quality, dry, light-bodied aromatic wines, full of straightforward fruit.

☞ Pinot Noir

🕒 Within 1 year

✓ *Georges Chavet & Fils • De Loye • Henry Pellé*

POUILLY BLANC FUMÉ AOC

See Pouilly Fumé AOC

POUILLY FUMÉ AOC

This used to be the world's most elegant Sauvignon Blanc wine, but too many wines of ordinary and often quite dire quality have debased this once-great appellation. In Pouilly-sur-Loire and its six surrounding communes, only pure Sauvignon wines have the right to use "Fumé" in the appellation name, a term that evokes the grape's gunsmoke character.

WHITE Great Pouilly Fumé is rare but when found, its crisp, gooseberry flavor will retain its finesse and delicacy in even the hottest years.

☞ Sauvignon Blanc

🕒 2–5 years

✓ *Bouchié-Chatellier • Jean-Claude Châtelain • Didier Dagueneau • Château Tracy*

POUILLY-SUR-LOIRE AOC

This wine comes from the same area as Pouilly Fumé, but it is made from the Chasselas grape, although Sauvignon Blanc is allowed for blending. Chasselas is a good dessert grape but makes very ordinary wine.

WHITE Dry, light-bodied wines. Most are neutral, tired, or downright poor.

☞ Chasselas, Sauvignon Blanc

🕒 Upon purchase

✓ *Guy Saget*

QUINCY AOC

These vineyards, on the left bank of the Cher, are situated on a gravelly plateau. Although located between two areas producing red, white, and rosé wines, Quincy produces only white wine, from Sauvignon Blanc.

WHITE Bone-dry to dry, quite full-bodied wines in which the varietal character of the Sauvignon Blanc is evident. There is a purity that rounds out the flavor and seems to remove the rasping finish usually expected in this type of wine.

☞ Sauvignon Blanc

🕒 1–2 years

✓ *Bailly • De Ballandors • Mardon • De Puy-Ferrand • Philippe Portier • Silice de Quincy*

REUILLY AOC

Due to the high lime content in the soil, Reuilly produces wines of higher acidity than those of neighboring Quincy.

RED These are dry, medium-bodied wines. Some are surprisingly good, although often tasting more of strawberries or raspberries than the more characteristic redcurrant flavor associated with Pinot Noir.

☞ Pinot Noir, Pinot Gris

🕒 2–5 years

WHITE These are bone-dry to dry, medium-bodied wines of good quality with more of a grassy than a gooseberry flavor, yet possessing a typically austere dry finish.

☞ Sauvignon Blanc

🕒 1–2 years

ROSÉ This bone-dry to dry, light-bodied wine is a pure Pinot Gris wine, although it is simply labeled Pinot.

☞ Pinot Gris

🕒 2–5 years

✓ *Aujard¹ • Claude Lafond • De Seresnes¹ • Jean-Michel Sorbe¹ • Pascal Desroches (Clos des Varennes)*

¹Also particularly recommended for red or rosé

SANCERRE AOC

This appellation is famous for its white wines, although originally its reds were better known. Recently the reds and rosés have developed greater style.

RED These wines have been more variable in quality than the whites, but the consistency is improving rapidly. They are dry, light- to medium-bodied wines, with a pretty floral aroma and a delicate flavor.

☞ Pinot Noir

🕒 2–3 years

WHITE Classic Sancerre should be bone dry, highly aromatic, and have an intense flavor, sometimes tasting of gooseberries or even peaches in a great year. However, too many growers overproduce, never get the correct ripeness, and make the most miserable wines.

☞ Sauvignon Blanc

🕒 1–3 years

ROSÉ Attractive, dry, light-bodied rosés with strawberry and raspberry flavors.

☞ Pinot Noir

🕒 Within 18 months

✓ *Henri Bourgeois • Pascal Cotat • Lucien Crochet¹ • Vignoble Dauny ☉ • André Dezat¹ • Fouassier (Clos Paradis, Les Grands Groux) • Gitton • Alphonse Mellot • Henry Natter • Vincent Pinard • Christian Thirot (Des Vieux Pruniers)*

¹Also particularly recommended for red or rosé

VINS DE L'ORLÉANAIS VDQS

These wines have been made for centuries, but only one-third of the appellation is worked now.

RED Dry, medium-bodied, fresh, and fruity wines that are given a short maceration, producing a surprisingly soft texture. They are usually sold as pure varietal wines: the Pinot can be delicate, the Cabernet Franc is fuller.

☞ Pinot Noir, Pinot Meunier, Cabernet Franc

🕒 1–2 years

WHITE Very small quantities of interesting wines are made from Chardonnay, known locally as Auvernat Blanc. Dry, medium-bodied, and surprisingly smooth and fruity.

☞ Chardonnay (*syn.* Auvernat Blanc), Pinot Gris (*syn.* Auvernat Gris)

🕒 1–2 years

ROSÉ The local speciality is a dry, light- to medium-bodied rosé known as Meunier Gris—an aromatic *vin gris* with a crisp, dry finish.

☞ Pinot Noir, Pinot Meunier, Cabernet Franc

🕒 Within 1 year

✓ *Clos St.-Fiacre • Vignerons de la Grand'Maison*

THE RHÔNE VALLEY

Famous for its full, fiery, and spicy-rich red wines, the Rhône Valley also produces small quantities of rosé and white, and even some sparkling and fortified wines. Although essentially red-wine country, and great red-wine country at that, the Rhône has experienced a kind of revolution in white-wine production. There has been a growing number of exotic, world-class white wines in various appellations since the late 1980s, when just a few began to emerge in Châteauneuf-du-Pape.

STRETCHING FROM VIENNE TO AVIGNON, the Côtes-du-Rhône appellation occupies a 125-mile (200-kilometer) length of the Rhône River. Beyond this great region other Rhône wines exist, and some are not even French. The banks of this mighty European river are clad with vines all the way from the Valais vineyards of Visp in Switzerland, just 30 miles (50 kilometers) from the Rhône's glacial origins in the Alps, to the *vin de pays* vineyards of the Bouches-du-Rhône, set amid the Rhône delta just west of Marseilles, where the river finally and sluggishly runs into the Mediterranean.

Only a tiny patch of vineyards in the very north of this region is in fact located within the Rhône *département* (which is a geographic misnomer as it actually accounts for 70 percent of Burgundy's output). Comparing the contrasting characters of Rhône

LA LANDONNE VINEYARD, CÔTE RÔTIE
Syrab grapes are harvested on the steep slopes of Guigal's top-performing La Landonne vineyard in the Côte Brune area of Côte Rôtie, above Ampuis.

CÔTE BRUNE ON THE CÔTE RÔTIE, NORTHERN RHÔNE
The Côte Brune is an area of the Côte Rôtie where the rust color of the soil is visible evidence of iron-rich elements in its granitic sandy soil.

and Burgundy wines produced within the one *département* can have a humbling effect on all those who glibly talk about regional styles. For example, what could be further apart than a rich, classic Condrieu and a fresh, light Mâcon, or an intense, ink-black Côte Rôtie and a quaffing, cherry-colored Beaujolais? Yet all of these wines are produced in the same *département* and could thus be described as coming from the same region.

BEAUMES-DE-VENISE, SOUTHERN RHÔNE
Home to one of the most elegant and consistent fortified Muscat wines in the world, Beauges-de-Venise also produces a soft, peppery red wine under the Côtes-du-Rhône-Villages appellation.

RECENT RHÔNE VINTAGES

2003 Another classic region turned upside-down by the dramatic heat wave, with unprecedented high sugar and low acidity levels that provided the potential for great red wines only from those skilled enough to cope with the challenge. There will be many more flashes of brilliance that will have the critics raving about big, black monsters, only to find the wines will shed their fruit relatively quickly to end up with the alcohol showing through. The northern Rhône probably has the edge over the south, but where the wines are properly balanced, the greatest reds from all over the region will probably be a match for the best Rhônes from any vintage in living memory. There will always be exceptions, but generally you can forget the whites and rosés.

2002 A washout, literally.

2001 Some good northern reds, particularly in Côte-Rôtie, but September rain meant that many lack finesse, leaving them overall average at best. Much better, potentially long-lived reds in the south.

2000 A brilliant year for reds in both the northern and southern Rhône, with the wines showing excellent color and tannin structure, and lush fruit. The whites, however, are fat and blowsy.

1999 Soft, juicy, well-colored reds in the Northern Rhône have the edge over the southern reds, although those in the south who picked late have made wines to rival their northern cousins.

A REGION DIVIDED

In terms of grape varieties, the Rhône divides neatly into two—the Syrah-dominated north and the Grenache-influenced south—although there are those who confuse the issue by separating the southernmost section of the northern district and calling it the Middle Rhône. The north and south differ not only in terrain and climate, but also contrast socially, culturally, and gastronomically.

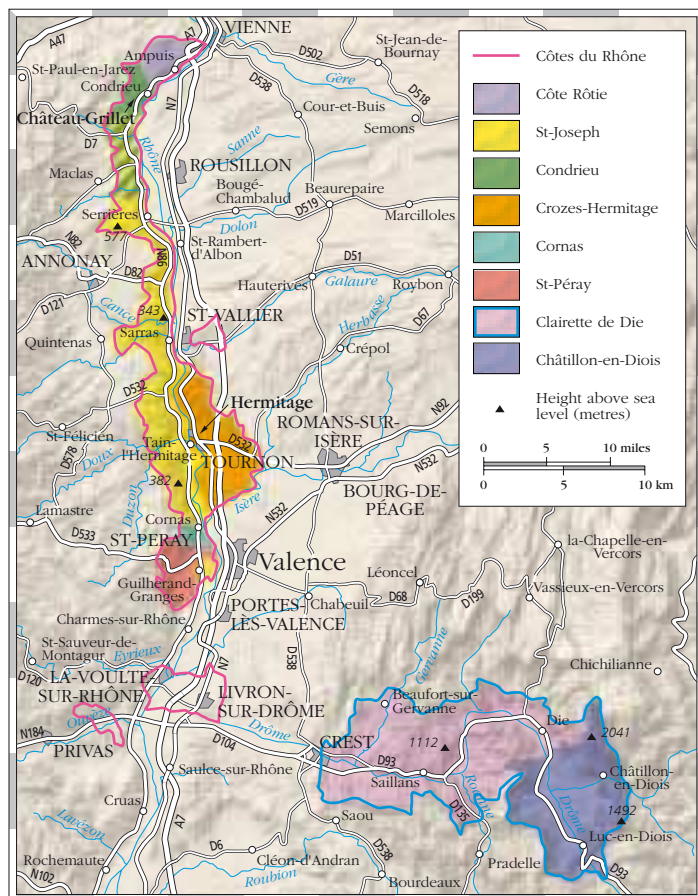

THE NORTHERN RHÔNE

The Northern Rhône is dominated by the ink-black wines of Syrah, the Rhône's only truly classic black grape. A small amount of white wine is also produced and, in the south of the district, at St.-Péray and Die, sparkling wines are made.

THE NORTHERN RHÔNE might be the gateway to the south, but it has more in common with its northern neighbor, Burgundy, than it does with the rest of the Rhône, even though its wines cannot be compared with those from any other area. Indeed, it would be perfectly valid to isolate the north as a totally separate region called the Rhône, which would, therefore, allow the Southern Rhône to be more accurately defined as a high-quality extension of the Midi.

THE QUALITY OF THE NORTHERN RHÔNE

The ink-black classic wines of Hermitage and Côte Rôtie stand shoulder to shoulder with the *crus classés* of Bordeaux in terms of pure quality, and the greatest Hermitage and Côte Rôtie deserve the respect given to *premiers crus* such as Latour, Mouton, or Lafite. Cornas can be even bigger and blacker than Hermitage or Côte Rôtie, and the top growers can rival the best of wines from its better-known neighbors. While the fine, dry white wines of Condrieu and (potentially) Château Grillet are unique in character, the presence of such a style in this part of France is not as surprising as that of the sparkling white wines of St.-Péray and Die, particularly the latter, which Francophiles would describe as a superior sort of Asti!

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

The narrow strip of vineyards that belong to the Northern Rhône commences at Vienne, just south of Lyon, and extends southward to Valence.

CLIMATE

The general effect of the Mediterranean is certainly felt in the Northern Rhône, but its climate has a distinctly continental influence. This results in the pattern of warmer summers and colder winters, which is closer to the climate of southern Burgundy, to the north, than to that of the Southern Rhône. The climatic factor that the area does have in common with the southern half of the Rhône is the Mistral, a bitterly cold wind that can reach up to 90 miles (145 kilometers) per hour and is capable of denuding a vine of its leaves, shoots, and fruit. As a result, many Mistral-prone vineyards are protected by poplar and cypress trees. The wind can, however, have a welcome drying effect in humid harvest conditions. The average summertime temperature is just two degrees Fahrenheit lower than in the south.

ASPECT

The countryside is generally less harsh than that of the southern Rhône, with cherry, peach, chestnut, and other deciduous trees in evidence. The valley vineyards are cut far more steeply into the hillsides than they are in areas farther south.

SOIL

The Northern Rhône's soil is generally light and dry, granitic and schistous. More specifically, it is made up of: granitic-sandy soil on the Côte-Rôtie (calcareous-sandy on the Côte Blonde and ruddy, iron-rich sand on the Côte Brune);

granitic-sandy soil at Hermitage and Condrieu with a fine overlay of decomposed flint, chalk, and mica, known locally as *arzelle*; heavier soil in Crozes-Hermitage with patches of clay; granitic sand with some clay between St.-Joseph and St.-Péray, getting stonier toward the southern end of the region, with occasional outcrops of limestone; and limestone and clay over a solid rock base in the area that surrounds Die.

VITICULTURE AND VINIFICATION

Unlike the Southern Rhône, most Northern Rhône wines are produced entirely or predominantly from a single grape variety, the Syrah, despite the long list of grapes that are occasionally used (see Secondary varieties, below). Viticultural operations are labor-intensive in the northern stretch of the district and, due to the cost, the vineyards were once under the threat of total abandonment. Since that threat we pay much more for Côte Rôtie, but at least it has remained available. Vinification techniques are very traditional and, when wines are aged in wood, there is less emphasis on new oak than is given in Bordeaux or Burgundy, although chestnut casks are sometimes used.

GRAPE VARIETIES

Primary varieties: Syrah, Viognier
Secondary varieties: Aligoté, Bourboulenc, Calitor, Camarèse, Carignan, Chardonnay, Cinsault, Clairette, Cunoise, Gamay, Grenache, Marsanne, Mauzac, Mourvèdre, Muscardin, Muscat Blanc à Petits Grains, Pascal Blanc, Picardan, Picpoul, Pinot Blanc, Pinot Noir, Roussanne, Terret Noir, Ugni Blanc, Vaccarèse

THE NORTHERN RHÔNE, see also p.213

At the heart of this region the towns of Tain and Tournon face each other across the river.

AMPUIS UNDER SNOW

These southeast-facing vineyards of Côte Rôtie form a dramatic stretch of scenery on the west bank of the Rhône, 5 miles (9 kilometers) south of Vienne.

THE APPELLATIONS OF THE NORTHERN RHÔNE

CHÂTEAU GRILLET AOC

Château Grillet has remained under the same family ownership (Neyret-Gachet) since 1830, and is one of only two single-estate appellations in France, the other being Romanée-Conti. Although it is often described as one of the world's great white wines, this is a legacy from more than a century ago. Château Grillet has not achieved anything like its full potential for at least the last few decades. There is no doubt that its sun-blessed terraces could produce Viognier of a singularly outstanding quality, but there is no inking the proprietors can be bothered to pursue such a course. Who could blame them when Château Grillet could charge two or three times the price of Condrieu? But the price of some of the best Condrieu are now snapping at its heels, and unless there is a dramatic increase in quality, Château Grillet will drop in price. In today's more transparent market, fine wine consumers are no longer willing to drink labels.

WHITE This is, potentially, a wine of great finesse and complex character, but not one to keep in bottle as long as some would have you believe.

☞ Viognier
🕒 3–7 years

CHÂTILLON-EN-DIOIS AOC

This wine was raised to full AOC status in 1974, although it is hard to comprehend what merited such an elevation then or now.

RED Light in color and body, thin in fruit, with little discernible character.

☞ Gamay, plus up to 25% Syrah and Pinot Noir

WHITE Sold as pure varietal wines, the light and fresh, gently aromatic Aligoté is as good as the richer, fuller, and rather angular Chardonnay.

☞ Aligoté, Chardonnay

ROSÉ I have not encountered any.

☞ Gamay, plus up to 25% Syrah and Pinot Noir

✓ *Didier Cornillon (Clos de Beylière)*

CLAIRETTE DE DIE AOC

This dry sparkling wine is being phased out in favor of Crémant de Die from 1999 in what must be a classic example of Gallic logic—removing the name Clairette from an appellation of a wine that must be made from 100 percent Clairette grapes, yet retaining it for one (see below) that does not have to contain any! See also Crémant de Die AOC

CLAIRETTE DE DIE MÉTHODE DIOISE ANCESTRALE AOC

Formerly sold as Clairette de Die Tradition, this wine may contain Clairette, but it is not the primary grape. What makes it so different, however, is that it is produced from one fermentation only, as opposed to the two required by Crémant de Die, the old Clairette de Die Mousseux, and most other sparkling wines.

In the *Méthode Dioise Ancestrale*, the wine first undergoes a long, cold part-fermentation in bulk and when bottled must contain a minimum

of 55 grams of residual sugar per liter and no *liqueur de tirage*. Fermentation continues inside the bottle, but when disgorged the wine must still retain at least 35 grams of residual sugar per liter. The wine undergoes *transvasage* (meaning it is filtered into a fresh bottle) and is corked without any addition of a *liqueur d'expédition*.

SPARKLING WHITE A very fresh, deliciously fruity, gently sparkling wine of at least *demi-sec* sweetness, with a ripe, peachy flavor.

☞ At least 75% Muscat à Petits Grains (this went up in 1993 from a minimum of 50%), plus Clairette

🕒 Upon purchase

✓ *Buffardel Frères • C. V. du Diois (Clairdie, Clairdissime)*

CONDRIEU AOC

This is the greatest white-wine appellation in the entire Rhône Valley, with more up-and-coming young talent among its producers than anywhere else in the world. Initially the trend was to produce sweet and medium-sweet wines, but Condrieu has tended to be a distinctly dry wine for a couple of decades now. When the vintage permits, late-harvested sweeter wines are produced, and these styles are very much part of Condrieu's recent revival as one of the undisputed great white wines of the world.

WHITE These pale-gold-colored wines are essentially dry, but can have such an exotic perfume that you might easily think they are sweet when you first breathe in their heavenly aroma. The bouquet is fine, floral, and fruity, with heady, opulent aromas that can include may-blossom, honeysuckle, violets, roses, peaches, lime, and apricot, and in especially rich vintages there can also be some youthful honey wafting through. The fruit on the palate is always very perfumed and can give the impression of sweetness, even when completely dry. A great Condrieu has a beguiling balance of fatness, freshness, and finesse that produces an elegant, peachy-apricoty coolness of fruit on the finish. Do not be fooled into cellaring these wines—the dry ones in any case—as their greatest asset is the freshness and purity of fruit, which can only be lost over the years.

☞ Viognier

🕒 4–8 years

✓ *Yves Cuilleron (Les Ayguets) • Delas (Clos Boucher) • E. Guigal (La Doriane) • Vignobles du Montillet (Les Grandes Chaillées) • Alain Paret (Lys de Volan) •*

André Perret (Clos Chanson) • Georges Vernay • François Villard (Le Grand Vallon)

CORNAS AOC

The sun-trap vineyards of Cornas produce the best value of all the Rhône's quality red wines, but you have to buy it as soon as it is released as it is always sold far too young, so there is none left when it starts to show its true potential.

RED Ink-black, full-bodied, strong-flavored, pure Syrah wines with lots of blackcurrant and blackberry fruit, lacking only a little finesse if compared to a great Hermitage or Côte Rôtie.

☞ Syrah

🕒 7–20 years

✓ *Thierry Allemand • Auguste Clape • Jean-Luc Colombo • Courbis (Les Eygats) • Eric & Joël Durand • Patrick Lesec • Paul Jaboulet Aîné • Tardieu-Laurent (Vieilles Vignes)*

CÔTE RÔTIE AOC

The terraces and low walls of the "burnt" or "roasted" slopes of Côte Rôtie must be tended by hand, but the reward is a wine of great class that vies with Hermitage as the world's finest example of Syrah.

RED A garnet-colored wine of full body, fire, and power, made fragrant by the addition of Viognier grapes. The result is a long-living and complex wine with nuances of violets and spices, and great finesse.

☞ Syrah, plus up to 20% Viognier

🕒 10–25 years

✓ *Patrick & Christophe Bonnefond • Clusel-Roch • Cuilleron-Gaillard-Villard (Les Essartilles) • Delas (Seigneur de Maugiron) • Jean-Michel Gerin (Champin le Seigneur) • E. Guigal • Paul Jaboulet Aîné • Joseph Jamet • Patrick Jasmin • Michel Ogier • René Rostaing • Vidal-Fleury (La Chatillonne) • François Villard (La Brocardie)*

COTEAUX DE DIE AOC

This new appellation was created in 1993 to soak up wines from excess Clairette grape production that were formerly sold under previous sparkling-wine appellations.

WHITE Perhaps it is unfair to prejudice a wine that has had so little time to establish itself, but it is hard to imagine a quality wine made from this grape. In effect, Coteaux de Die is the still-wine version of Crémant de Die. It is easy to see why such a bland dry wine needs bubbles to lift it, yet so few make the transition successfully.

☞ Clairette

🕒 Upon purchase

✓ *Jean-Claude Raspail*

CÔTES DU RHÔNE AOC

Although generic to the entire region, relatively little Côtes du Rhône is made in this district, where the only difference in technical criteria is that Syrah may replace Grenache as the principal red wine variety.

CRÉMANT DE DIE AOC

This dry sparkling wine was introduced in 1993 to replace Clairette de Die Mousseux, which

was phased out by January 1999. Like the old Clairette de Die Mousseux appellation, Crémant de Die must be made by the traditional method, but whereas the former could include up to 25 percent Muscat à Petit Grains, the latter must be made entirely from Clairette.

SPARKLING WHITE It is too early to make a definitive pronouncement, but it looks as if Crémant de Die will be every bit as neutral and lackluster as Clairette de Die.

☞ Clairette

🕒 1–3 years

✓ *Carod*

CROZES-HERMITAGE AOC

See Crozes-Hermitage AOC

CROZES-HERMITAGE AOC

Crozes-Hermitage is produced from a relatively large area surrounding Tain, hence the quality is very variable, but a good Crozes-Hermitage will always be a great bargain.

RED These well-colored, full-bodied wines are similar to Hermitage, but they are generally less intense and have a certain smoky-rustic-raspberry flavor that only deepens into blackcurrant in the hottest years. The finest wines do, however, have surprising finesse, and make fabulous bargains.

☞ Syrah, plus up to 15% Roussanne and Marsanne

🕒 6–12 years

8–20 years for top wines and great years

WHITE These dry white wines are improving and gradually acquiring more freshness, fruit, and acidity.

☞ Roussanne, Marsanne

🕒 1–3 years

¹Particularly recommended for white as well as red.

HERMITAGE VIN DE PAILLE AOC

In the first edition of this book (1988), I wrote “In 1974 Gérard Chave made the last *vin de paille* of Hermitage, a wine that is now confined to the Jura vineyards of eastern France. Monsieur Chave declares he made the wine for ‘amusement.’ Considering its success, it is extraordinary that some enterprising grower has not taken advantage of this appellation.”

Chapoutier has since made several vintages of Hermitage *vin de paille* on a commercial basis—or as near commercial as you can get with this style of wine—and other producers include Michel Ferraton, Jean-Louis Grippat, and Guigal. Even the local *coopérative* has churned some out. At one time all Hermitage *blanc* was, in effect, *vin de paille*, a style that dates back in this locality to at least 1760. Marc Chapoutier apparently drank the last wine of that vintage in 1964 when it was 204 years old. The traditional *vin de paille* method in Hermitage is not as intensive as the one revived relatively recently in Alsace, in which the grapes are dried out over straw beds until more than 90 percent of the original juice has evaporated before they are pressed, as even Chave’s legendary 1974 was made from grapes bearing as much as a third of their original juice, but some of the results have been equally stunning. Despite decades between production, this wine still has its own AOC.

WHITE Some *vins de paille* are rich and raisiny whereas others—the best—have a crisp, vivid freshness about them, with intense floral-citrus aromas and a huge, long, honeyed aftertaste. After his famed 1974 vintage, Chave made a 1986 and at least a couple more vintages since. His *vin de paille* is reputed to be the greatest, but is practically unobtainable and certainly not available on the open market. This wine is made in the most commercial quantity, yet this still amounts to hardly anything, since the wine is hard to find and very expensive. Jean-Louis Grippat made a *vin de paille* in 1985 and 1986, neither of which I have had the privilege to taste, but John Livingstone-Learmonth describes them as “not quite like late-harvest Gewürztraminer” in his seminal work *The Wines of the Rhône*.

ST.-JOSEPH AOC

MORE GREEN NORTHERN RHÔNE

In addition to the producers recommended in this directory that are either biodynamic or organic, there are also the following. No negative inference of quality should be taken from the fact that they are not featured among the other producers. There are a number that have been recommended in other editions, and still make some fine wines, but have been culled out to make room for others.

Biodynamic

Ferme des Sept Lunes (Bogy)

Monier (St.-Desirat)

Organic

Achard-Vincent (Sainte-Croix)

Barou (Charnas)

Bégot (Serves-sur-Rhône)

du Coulet (Cornas)

C. V. de Die Jaillance (Die)

Giniès (Piégon)

Lattard (Autichamp)

des Treilles (Montbrison-sur-Lez)

At last, some truly exciting wines are being produced under this appellation. St.-Joseph has now replaced Cornas as the bargain-seeker’s treasure trove.

RED The best wines are dark, medium- to full-bodied, with intense blackberry and blackcurrant fruit aromas and plenty of soft fruit, whereas mediocre St.-Joseph remains much lighter-bodied with a pepperiness more reminiscent of the Southern Rhône.

☞ Syrah, plus up to 10% Marsanne and Roussanne

🕒 3–8 years

WHITE At their best, clean, rich, and citrus-resinous dry wines.

¹Particularly recommended for white as well as red

ST.-PÉRAY AOC

This white-wine-only village appellation is curiously out of step with the rest of the area.

WHITE Firm and fruity, with good acidity for a wine from the south of the region, but unfortunately it usually lacks charm. Even the best growers within this region, recommended below, struggle to produce anything of interest.

☞ Marsanne, Roussanne

🕒 1–3 years

✓ *J.-F. Chaboud* • *Bernard Grippa* • *Jean Lionnet* • *Alain Voge*

ST.-PÉRAY MOUSSEUX AOC

This is a traditional method sparkling wine made from the wrong grapes grown on the wrong soil. The growers would be advised to rip the whole lot up and replant with black grapes for a red Côtes du Rhône.

SPARKLING WHITE An overrated, dry sparkling wine with a coarse *mousse*.

☞ Marsanne, Roussanne

THE SOUTHERN RHÔNE

While the mellow warmth of the Grenache is found in most Southern Rhône wines, this region is in fact a blender's paradise, with a choice of up to 23 different grape varieties.

THE SOUTHERN RHÔNE is a district dominated by herbal scrubland, across which blows a sweet, spice-laden breeze. This is a far larger district than the slender northern *côtes*, and its production is, not unnaturally, much higher. Allowing the north a generous 10 percent of the generic *Côtes du Rhône* appellation, the southern Rhône still accounts for a staggering 95 percent of all the wines produced in the region.

WINES OF THE MIDI OR PROVENCE?

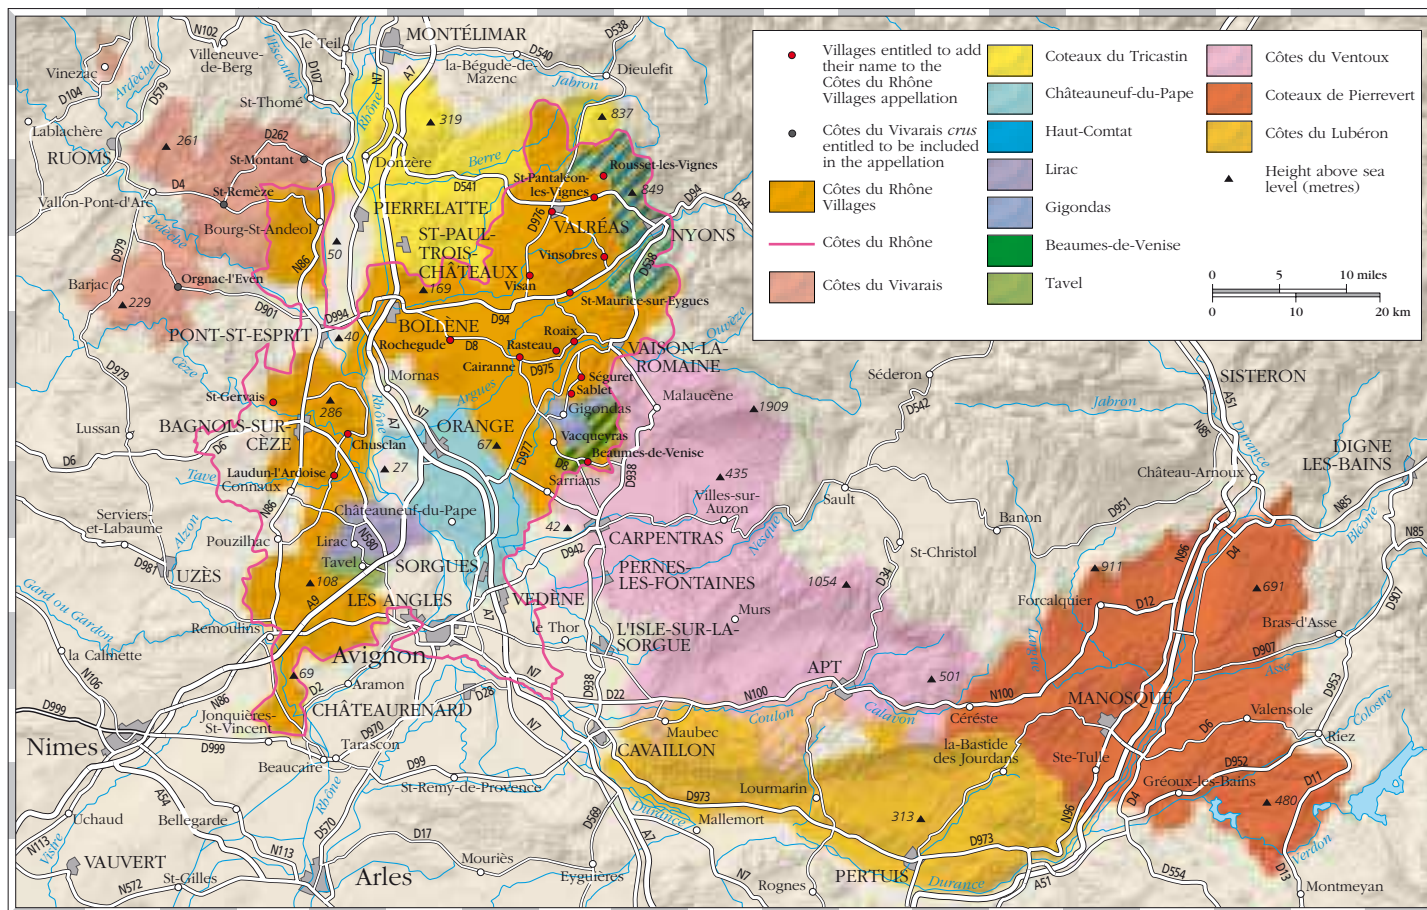

At least half of the Southern Rhône is in what was once called the Midi, an area generally conceded to cover the *départements* of the Aude, Hérault, and Gard. This is never mentioned by those intent on marketing the Rhône's image of quality, because the Midi was infamous for its huge production of *vin ordinaire*. The Rhône River marks the eastern border of the Midi and its most famous appellations are geographically part of Provence. But, viticulturally, these areas do not possess the quasi-Italian varieties that dominate the vineyards of Provence and may, therefore, be more rationally defined as a high-quality extension of the Midi.

THE SOUTHERN RHÔNE, *see also* p.213

The wider southern part of the Rhône Valley area stretches its fingers down toward Provence and eastwards to the Alps.

FACTORS AFFECTING TASTE AND QUALITY

-  **LOCATION**
The Southern Rhône starts at Viviers, south of Valence, and runs south to Avignon.
 -  **CLIMATE**
The Southern Rhône's climate is unmistakably Mediterranean and its vineyards are far more susceptible to sudden change and abrupt, violent storms than are those of the Northern Rhône.
 -  **ASPECT**
The terrain in the south is noticeably Mediterranean, with olive groves, lavender fields, and herbal scrub amid rocky outcrops.
 -  **SOIL**
The limestone outcrops that begin to appear in the south of the Northern Rhône become more prolific and are often peppered with clay deposits, while the topsoil is noticeably stonier. Châteauneuf-du-Pape is famous for its creamy-colored drift boulders, which vary according to location. Stone-marl soils persist at Gigondas and weathered-gray sand in Lirac, Tavel, and Chusclan. The soils also incorporate limestone rubble, clay-
- sand, stone-clay, calcareous clay, and pebbles.
-  **VITICULTURE AND VINIFICATION**
The vines are traditionally planted at an angle leaning into the wind so that the Mistral may blow them upright when they mature. The south is a district where blends reign supreme. However, pure varietal wines are gaining ground. Traditional methods of vinification are used on some estates, but modern techniques are common.
 -  **GRAPE VARIETIES**
Primary varieties: Carignan, Cinsault, Grenache, Mourvèdre, Muscat Blanc à Petits Grains, Muscat Rosé à Petits Grains
Secondary varieties: Aubun, Bourboulenc, Calitor, Camarèse, Clairette, Clairette Rosé, Counoise, Gamay, Grenache Blanc, Grenache Gris, Macabéo, Marsanne, Mauzac, Muscardin, Oeillade, Pascal Blanc, Picardan, Picpoul Blanc, Picpoul Noir, Pinot Blanc, Pinot Noir, Roussanne, Syrah, Terret Noir, Ugni Blanc, Vaccarèse, Vermentino (known locally as Rolle), Viognier

THE APPELLATIONS OF THE SOUTHERN RHÔNE

BRÉZÈME CÔTES DU RHÔNE AOC

A regulatory curiosity, Brézème is not one of the 16 Côtes du Rhône Villages, which may attach their name only to the end of that appellation, but an anomalous village that through a peculiarity in the AOC laws is allowed to put its name before the basic Côtes du Rhône appellation (although some prefer to place it after, in much larger letters). The story dates back to the mid-1800s, when the wines from Brézème almost rivaled those of Hermitage, and sold for nearly as much. In 1943, when Brézème was first allowed to add its own name to the Côtes du Rhône AOC, the vineyards amounted to a mere 25 acres (10 hectares). Shortly afterward, most of the vineyards were abandoned and the village was all but forgotten. By 1961 there were barely 2½ acres under cultivation, yet remarkably a few producers continued to make Brézème. According to Eric Texier, one of the most respected growers was a Monsieur Pouchoulin, who was known as the “Grandfather of Brézème.” Texier, a former nuclear engineer, took over Pouchoulin’s vines, which are all Syrah and range from 60 to 100 years old. Thanks to Pouchoulin and others like him, the Brézème AOC was extended to include 208 acres (84 hectares) and, with renewed interest in the wine, plantings have increased by a further 55 acres (22 hectares), with more vines going in each year.

RED This pure Syrah wine has been likened to a Crozes-Hermitage, but some *cuvées* (Lombard’s Grand Chêne and Eugène, for example) are aged in a percentage of new oak and are not at all like a Northern Rhône wine.

☞ The full spectrum of Côtes du Rhône grapes is allowed, but Syrah is the only red wine grape grown

🕒 3–10 years

WHITE Texier produces a pure Viognier and a pure Roussanne.

☞ The full spectrum of Côtes du Rhône grapes is allowed, but only Marsanne, Roussanne, and Viognier are grown

🕒 3–10 years

✓ *Jean-Marie Lombard* • *Eric Texier* (Syrah, Viognier)

CHÂTEAUNEUF-DU-PAPE AOC

The name Châteauneuf-du-Pape dates from the time of the dual papacy in the 14th century. The appellation is well known for its amazingly stony soil, which at night reflects the heat stored during the day, but the size, type, depth,

and distribution of the stones varies enormously, as does the aspect of the vineyards. These variations, plus the innumerable permutations of the 13 grape varieties that may be used, account for the diversity of its styles. In the early 1980s, some growers began to question the hitherto accepted concepts of *encépagement* and vinification; winemaking in Châteauneuf-du-Pape is still in an evolutionary state. The steady decline of the traditionally dominant Grenache has speeded up as more growers are convinced of the worth of the Syrah and Mourvèdre. The Cinsault and Terret Noir are still well appreciated, and the Cunoise is beginning to be appreciated for its useful combination of fruit and firmness. The use of new oak is under experimentation and it already seems clear that it is better suited to white wine than red.

The regulations for this appellation have a unique safeguard designed to ensure that only fully ripe grapes in the healthiest condition are utilized: between 5 and 20 percent of the grapes harvested within the maximum yield for this AOC are rejected and may be used to make only *vin de table*. This process of exclusion is known as *le rapé*.

RED Due to the variations of *terroir* and almost limitless permutations of *encépagement*, it is impossible to describe a typical Châteauneuf-du-Pape, but there are two categories—the traditional, full, dark, spicy, long-lived style and the modern, easy-drinking Châteauneuf-du-Pape, the best of which are unashamedly upfront and brimming with lip-smacking, juicy-jammy fruit. Both are warmer and spicier than the greatest wines of Hermitage and Côte Rôtie.

☞ Grenache, Syrah, Mourvèdre, Picpoul, Terret Noir, Cunoise, Muscardin, Vaccarèse, Picardan, Cinsault, Clairette, Roussanne, Bourboulenc

🕒 6–25 years

WHITE Early harvesting has reduced sugar levels and increased acidity, while modern vinification techniques have encouraged a drop in fermentation temperatures, so these wines are not as full as those produced previously. They can still be very rich, albeit in a more opulent, exotic fruit style, with a much fresher, crisper finish. The very best white Châteauneuf-du-Pape is generally agreed to be Château de Beaucastel Vieilles Vignes.

☞ Grenache, Syrah, Mourvèdre, Picpoul, Terret Noir, Cunoise, Muscardin, Vaccarèse, Picardan, Cinsault, Clairette, Roussanne, Bourboulenc

🕒 1–3 years (4–6 years in exceptional cases)

✓ *Paul Autard* (Côte Ronde) • *Barville* • *Château de Beaucastel*¹ • *de Beurenard* (Boisrenard) • *Benedetti*¹ • *Bois de Boursan* (Felix) • *Bousquet des Papes* • *La Boutinière* • *Clos du Caillou* • *Les Cailloux* (Centenaire) • *Réserve des Célestins* • *Chapoutier* • *Barbe Rac, Croix de Bois* • *de la Charbonnière* • *Gérard Charvin* • *de Cistia* • *Font de Michelle* • *Château de la Gardine* • *Grand Veneur* • *de la Janasse* • *Lafond Roc-Epine* • *Patrick Lesec* • *de Marcoux* • *Font de Michelle* (Etienne Gonet) • *Monpertuis* • *Château Mont-Redon* • *de la Mordorée* (Reine des Bois) • *de Nalys* • *Château la Nerthe*¹ • *de Panisse* • *Clos des Papes* • *du Pegau* • *Château Rayas*¹ • *Roger Sabon* • *Clos St. Michel* (Grand Clos) • *de la Solitude* • *Tardieu-Laurent* (Vieilles Vignes) • *Pierre Usseglio* • *de la Vieille Julienne* • *du Vieux Télégraphe* • *de Villeneuve*

¹Particularly recommended for white as well as red

COTEAUX DE PIERREVERT AOC

This appellation consists of some 990 acres (400 hectares) and was upgraded from VDQS to full AOC status in 1998.

RED Dull, uninspiring wines with little original character to commend them.

☞ Carignan, Cinsault, Grenache, Mourvèdre, Oeillade, Syrah, Terret Noir

🕒 2–5 years

WHITE Unspectacular, light, dry white wines with more body than fruit.

☞ Clairette, Marsanne, Picpoul, Roussanne, Ugni Blanc

🕒 1–3 years

ROSÉ Well-made wines with a blue-pink color and a crisp, light, fine flavor.

☞ Carignan, Cinsault, Grenache, Mourvèdre, Oeillade, Syrah, Terret Noir

🕒 1–3 years

✓ *La Blaque* (Réserve) • *Vignobles de Régusse* (Bastide des Oliviers)

COTEAUX DU TRICASTIN AOC

Established as a VDQS in 1964, Tricastin was upgraded to full AOC status in 1973.

RED Very good wines, especially the deeply colored, peppery Syrah wines that are a delight after a few years in bottle. These wines may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

☞ Grenache, Cinsault, Mourvèdre, Syrah, Picpoul Noir, and a maximum of 20% Carignan; and 20% (in total) of Grenache Blanc, Clairette, Bourboulenc, and Ugni Blanc

🕒 2–7 years

WHITE Although I was unable to recommend Tricastin *blanc* in the first edition of this book (1988), the variety of grapes permitted has since been expanded to include Roussanne, Marsanne, and Viognier, which has enabled some producers to make richer, crisper, more interesting wines.

☞ Grenache Blanc, Clairette, Picpoul, Bourboulenc, and a maximum of 30% (in total) of Ugni Blanc, Roussanne, Marsanne, and Viognier

ROSÉ A small production of fresh and fruity dry rosé that occasionally yields an outstandingly good wine. These wines may be sold as *primeur* or *nouveau* as from the third Thursday of November following the harvest.

☞ Grenache, Cinsault, Mourvèdre, Syrah, Picpoul Noir, and a maximum of 20% Carignan; and 20% (in total) of Grenache Blanc, Clairette, Bourboulenc, and Ugni Blanc

☞ Upon purchase

✓ *Bour • des Estubiens • de Grangeneuve • de Montine • Saint-Luc*

CÔTES DU LUBÉRON AOC

The wine of Côtes du Lubéron was promoted to full AOC status in February 1988. Much of the credit must go to Jean-Louis Chancel: his vineyards at Château Val-Joanis are still young, but the promise is such that this property has been described as the jewel in Lubéron's crown.

RED These are bright, well-colored wines with plenty of fruit and character, improving with every vintage.

☞ A blend of two or more varieties to include a minimum of 60% Grenache and Syrah (in total)—of which Syrah must represent at least 10%; a maximum of 40% Mourvèdre; 20% (each) of Cinsault and Carignan; and 10% (either singly or in total) of Counoise, Pinot Noir, Gamay, and Picpoul

☞ 3–7 years

WHITE As white Lubéron has no established style or reputation, it seems bureaucratic nonsense to be so precise about the percentage of each grape variety that may or may not be included in its production. There was a feeling that some sort of quality and style was about to emerge in these wines in the late 1980s when Lubéron was merely a VDQS. Even then the regulation concerning grape varieties was unnecessarily complicated. Since its upgrade to full AOC status, the regulations have become even more confusing, and I doubt if it is a coincidence that Lubéron *blanc* has completely lost its way over the same period.

☞ A blend of two or more varieties, which can include Grenache Blanc, Clairette, Bourboulenc, Vermentino, a maximum of 50% Ugni Blanc, and up to 20% (of the blend) of Roussanne and/or Marsanne

☞ 1–3 years

ROSÉ These attractively colored, fresh, fruity wines are much better quality than most Provence rosé.

☞ A blend of two or more varieties to include

a minimum of 60% Grenache and Syrah (in total)—of which Syrah must represent at least 10%; a maximum of 40% Mourvèdre; 20% (each) of Cinsault and Carignan; 20% (in total) of Grenache Blanc, Clairette, Bourboulenc, Vermentino, Ugni Blanc, Roussanne, and Marsanne; plus 10% (either singly or in total) of Counoise, Pinot Noir, Gamay, and Picpoul

☞ Upon purchase

✓ *de la Bastide de Rhodarès • Château la Canorgue • de la Citadelle • Château Constantin-Chevalier (Fondateurs) • de Fontenille (Prestige) • Cellier de Marrenon (Grand Lubéron) • de Mayol • de la Royere • Château Thouramme • Château Val Joanis*

CÔTES DU RHÔNE AOC

A generic appellation that covers the entire Rhône region, although the vast majority of wines are actually produced in the Southern Rhône. There are some superb Côtes du Rhône, but there are also some disgusting wines. The quality and character varies to such an extent that it would be unrealistic to attempt any generalized description. The red and rosé may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest, although the reds can be sold only unbottled as *vin de café*. Red, white, and rosé wines can go on sale from December 1 without mention of *primeur* or *nouveau*.

RED The red wines are the most successful of this basic appellation, and often represent the best choice when dining in a modest French restaurant with a restricted wine list. Top *négociants* like Guigal consistently produce great-value Côtes du Rhône, but those below are all capable of very special quality.

☞ A minimum of 40% Grenache (except in the Northern Rhône, where Syrah may be considered the principal variety), plus Syrah and/or Mourvèdre, with up to 30% in total of any of the following: Camarèse, Carignan, Cinsault, Clairette Rosé, Counoise, Grenache Gris, Muscardin, Vaccarèse, Picpoul Noir, Terret Noir, and no more than 5% in total of any of the following white varieties: Clairette, Grenache Blanc, Marsanne, Picpoul, Roussanne, Bourboulenc, Ugni Blanc, Viognier

☞ 3–10 years

WHITE These wines have improved tremendously in the past 5–10 years and continue to do so in encouraging fashion.

☞ Bourboulenc, Clairette, Grenache Blanc, Marsanne, Roussanne, Viognier, and up to 20% Ugni Blanc and/or Picpoul

☞ 1–3 years

ROSÉ Many of the best rosés are superior in quality to those from more expensive Rhône appellations.

☞ A minimum of 40% Grenache (except in the Northern Rhône, where Syrah may be considered the principal variety), plus Syrah and/or Mourvèdre, with up to 30% in total of any of the following: Camarèse, Carignan, Cinsault, Clairette Rosé, Counoise, Grenache Gris, Muscardin, Vaccarèse, Picpoul Noir, Terret Noir, and no more than 5% in total of any of the following white varieties: Clairette, Grenache Blanc, Marsanne, Picpoul, Roussanne, Bourboulenc, Ugni Blanc, Viognier

☞ 1–3 years

✓ *Max Aubert (de la Présidente) • Castan • Coudoulet de Beaucastel • Cuilleron-Gaillard-Villard • Fond Croze • Château de Fontsegune • Grand Veneur • Clos de l'Hermitage • Paul Jaboulet Aîné • Clos des Magnaneraie • Clos Martin • Château de Montfaucon • Château Mont-Redon • Rigot • des Roches Fortes (Prestige) • Xavier Vignon*

CÔTES DU RHÔNE VILLAGES AOC

Compared with the generic Côtes du Rhône, these wines generally have greater depth, character, and quality. The area covered by the appellation is entirely within the Southern Rhône. If the wine comes from one commune only, then it has the right to append that name to the appellation.

Gigondas, Cairanne, Chusclan, and Laudun were the four villages that formed the original Côtes du Rhône Villages appellation. Gigondas achieved its own AOC in 1971, but other villages have been added from time to time. Vacqueyras became an AOC in its own right in 1990.

The wines recommended immediately below the criteria for rosé carry the Côtes du Rhône Villages appellation without any specified village, followed by separate entries for each of the 16 villages that are currently allowed to add their name to this AOC.

RED These wines are mostly excellent.

☞ A minimum of 50% Grenache, plus a minimum of 20% Syrah and/or Mourvèdre, with up to 20% in total of Camarèse, Carignan, Cinsault, Clairette Rosé, Counoise, Grenache Gris, Muscardin, Vaccarèse, Picpoul Noir, Terret Noir

☞ 3–10 years

WHITE These wines are improving—Vieux Manoir du Frigoulas is the best.

☞ Bourboulenc, Clairette, Grenache Blanc, Marsanne, Picpoul, Roussanne, Viognier

☞ 1–3 years

ROSÉ These wines can be very good.

☞ A minimum of 50% Grenache, plus a minimum of 20% Syrah and/or Mourvèdre; up to 20% in total of Camarèse, Carignan, Cinsault, Clairette Rosé, Cunoise, Grenache Gris, Muscardin, Vaccarèse, Picpoul Noir, Terret Noir; no more than 20% in total of any of the following white varieties: Bourboulenc, Clairette, Grenache Blanc, Marsanne, Picpoul, Roussanne, Viognier; and a maximum of 20% Ugni Blanc and/or Picpoul

☞ 1–3 years

✓ *Les Aphillanthes* • *Bouche* • *Le Clos du Caillou* • *Château la Gardine* • *Château d'Hugues* (L'Orée des Collines) • *de la Janasse* (Terre Argile) • *Mas de Libian* • *du Petit-Barbras* (Le Chemin de Barbras Sélection) • *La Réméjeanne* (Eglantiers) • *Dominique Rocher* (Monsieur Paul) • *St.-Anne* • *Saint Estève d'Uchaux* (Vieilles Vignes) • *C. V. de St.-Hilaire d'Ozilban* (Savoir du Temps) • *Viret* (Emergence)

THE 16 VILLAGES OF THE CÔTES DU RHÔNE VILLAGES

These single-villages versions of the above appellation wines can add their village name to the Côtes du Rhône Villages appellation.

CÔTES DU RHÔNE BEAUMES-DE-VENISE AOC

Famous for its delectable, sweet Muscat wine, Beaumes-de-Venise also produces a pleasant red wine with a good peppery-raspberry fruit flavor. Dry white and rosé wines are produced under the generic AOC.

✓ *La Chapelle Notre Dame d'Aubune* • *Durban*

CÔTES DU RHÔNE CAIRANNE AOC

Since Vacqueyras was promoted to its own AOC, Cairanne is now the top village in the appellation. It is an excellent source of rich, warm, and spicy red wines that age very well.

✓ *d'Aeria* • *Daniel et Denis Alary* • *Les Grand Bois* (Mireille) • *Les Hautes Cancès* • *de l'Oratoire St.-Martin* • *Marcel Ricbaud* (L'Ebrescade)

CÔTES DU RHÔNE CHUSCLAN AOC

One of two single-village appellations whose wines actually come from more than one commune, Chusclan may also be made from vines growing in Bagnols-sur-Cèze, Cadolet,

Orsan, and St.-Etienne-des-Sorts. These villages are situated just north of Lirac and Tavel, two famous rosé appellations, and make an excellent rosé. However, most of the wines are red, and produced in a good, quaffing style. The white is fresh, lively, and reliable.

✓ *C. V. de Chusclan* (Esprit de Terror) • *Château Signac*

CÔTES DU RHÔNE LAUDUN AOC

Laudun, one of the appellation's four original villages, produces the other wine (see Côtes du Rhône Chusclan AOC) that can be made from vines grown outside the village indicated—in this case from St.-Victor-Lacoste and Tresques—and excels in making fine, fresh, and spicy red wines. It also makes the best white wines in the Côtes du Rhône Villages appellation, and a small amount of quite delightful rosé wines.

✓ *Château St.-Maurice*

CÔTES DU RHÔNE RASTEAU AOC

This village is best known for its sweet Rasteau “Rancio” (see below), yet it produces nearly four times as much dry red, white, and rosé as it does Rasteau. Its red is the best: deep-colored, full, and rich, with a spicy warmth. Rasteau *rouge* is a wine that can improve for up to 10 years.

✓ *de Beaurenard* (Argiles Bleus) • *Bressy-Masson* • *La Courançon* (Magnificat) • *des Escaravailles* (La Ponce) • *La Soumade* (Confiance) • *Tardieu-Laurent*

CÔTES DU RHÔNE ROAIX AOC

Neighboring the vineyards of Séguret, Roaix produces a similar dark-colored red wine that requires two or three years in bottle to mellow. A little rosé is also produced.

✓ *C. V. de Roaix-Séguret*

CÔTES DU RHÔNE ROCHEGUDE AOC

Only the red wine of Rochegeude may claim the Côtes du Rhône Villages appellation. I have encountered only the local *coopérative* wine, but it is good quality, well colored, soft, and plummy. As at Beaumes-de-Venise, the white and rosé is sold as generic Côtes du Rhône.

✓ *C. V. de Rochegeude*

CÔTES DU RHÔNE ROUSSET-LES-VIGNES AOC

The neighboring villages of Rousset-les-Vignes and St.-Pantaléon-les-Vignes possess the most northerly vineyards of this appellation, close to the verdant Alpine foothills. With the coolest climate of all the Côtes du Rhône villages, the wines are light, but soft and quaffable. Most of the production is monopolized by the local *coopérative*.

✓ *La Bouwade*

CÔTES DU RHÔNE SABLET AOC

This village's soft, fruity, and quick-maturing red and rosé wines are consistent in quality, and are always good value.

✓ *de Piaugier* (Montmartel)

CÔTES DU RHÔNE ST.-GERVAIS AOC

The valley vineyards of St.-Gervais are not those

of the great river itself, but belong to the Cèze, one of its many tributaries. The red wines are deliciously deep and fruity, and the whites are fresh and aromatic with an excellent, crisp balance for wines from such a southerly location.

✓ *Clavel* (L'Étoile du Berger) • *C. V. de St.-Gervais* (Prestige) • *Sainte-Anne*

CÔTES DU RHÔNE ST.-MAURICE AOC OR CÔTES DU RHÔNE ST.-MAURICE-SUR-EYGUES AOC

Light, easy-drinking red and rosé wines.

Production is dominated by the local *coopérative*.

✓ *C. V. des Coteaux St.-Maurice*

CÔTES DU RHÔNE SÉGURET AOC

Séguret produces red wine that is firm and fruity with a good, bright, deep color. A little white and rosé is also made but they seldom excel.

✓ *de Mourchon* (Grande Réserve) • *Eric Texier*

CÔTES DU RHÔNE ST.-PANTALÉON-LES-VIGNES AOC

The neighboring villages of St.-Pantaléon-les-Vignes and Rousset-les-Vignes possess the most northerly vineyards of this appellation. With the coolest climate of all the Côtes du Rhône villages, the wines are light, but soft and quaffable. Production is monopolized by the local *coopérative*, which has yet to make anything special.

CÔTES DU RHÔNE VALREAS AOC

These are fine red wines with plenty of fruit flavor. A little rosé is also made.

✓ *Clos Petite Bellane* • *Comte Louis de Clermont-Tonnerre* • *des Grands Devers* • *Le Val des Rois*

CÔTES DU RHÔNE VINSOBRES AOC

This village consistently produces good-quality, firm red wines. It also produces a small amount of passable rosé.

✓ *des Ausellons* • *du Coriançon* • *du Moulin* (Charles Joseph) • *Perrin*

CÔTES DU RHÔNE VISAN AOC

These red wines have good color and true *vin de garde* character. Fresh, quaffing white wines are also made.

✓ *de la Coste Chaude* • *Olivier Cuilleras*

CÔTES DU VENTOUX AOC

The limestone subsoil of the Côtes du Ventoux appellation produces a lighter wine than is normal for the Rhône.

RED These fresh and fruity, easy-to-drink reds are the best wines in this AOC. The wines may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

☞ Grenache, Syrah, Cinsault, and Mourvèdre, plus up to 30% Carignan, and a maximum of 20% (in total) of Picpoul Noir, Cunoise, Clairette, Bourboulenc, Grenache Blanc, Roussanne, and—until the 2014 vintage—Ugni Blanc, Picpoul Blanc, and Pascal Blanc

☞ 2–5 years

WHITE A little white is produced, but it is seldom anything more than of minimal interest. These wines may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

☞ Clairette, Bourboulenc, plus up to 30% (in total) of Grenache Blanc, Roussanne, and—until the 2014 vintage—Ugni Blanc, Picpoul Blanc, and Pascal Blanc

ROSÉ The fresh character and deliciously delicate fruit of these wines can be pure joy on a hot sunny day. They may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

☞ Grenache, Syrah, Cinsault, and Mourvèdre, plus up to 30% Carignan, and a maximum of 20% (in total) Picpoul Noir, Counoise, Clairette, Bourboulenc, Grenache Blanc, Roussanne, and—until the 2014 vintage—Ugni Blanc, Picpoul Blanc, and Pascal Blanc

☞ Upon purchase

✓ *La Ferme Saint Pierre* (Roi Fainéant) • *Le Murmurium* • *Château Talaud* • *Les Terrasses d'Eole* (Lou Mistran) • *Château Valcombe* • *de la Verrière* • *Xavier Vignon* (Xavier)

CÔTES DU VIVARAIS AOC

The *côtes* of Vivarais look across the Rhône River to the *coteaux* of Tricastin. Its best *cru* villages (Orgnac, St.-Montant, and St.-Remèze) may add their names to the Côtes du Vivarais appellation, and of these, the wines of the village of Orgnac stand out. Promoted from VDQS to AOC in 1999.

RED These light, quaffing reds are by far the best wines in the district.

☞ Since 1995 Mourvèdre, Picpoul, Aubun, and Carignan have been banned, and this wine must now contain a minimum of 90% (in total) of Syrah and Grenache; the Syrah must account for at least 40% and Grenache at least 30%, with Cinsault and Carignan optional

☞ 1–3 years

WHITE These wines were always dull and disappointing, but with the recent improvement in the *encépagement*, standards have undoubtedly improved, and Vivarais *blanc* may very well prove to be interesting in the future.

☞ Since 1995 Bourboulenc, Macabéo, Mauzac, Picpoul, and Ugni Blanc have been banned, and this wine must now be made from at least two varieties of the three recommended grapes—Clairette, Grenache, and Marsanne—with no single variety accounting for more than 75% of the total

☞ 1–3 years

ROSÉ These pretty pink, dry wines can have a ripe, fruity flavor and are generally better than the whites.

☞ Since 1995 Mourvèdre, Carignan, Picpoul, and Aubun have been banned, and this wine must now be made from at least two of the three recommended grapes—Syrah, Grenache, and Cinsault—with no single variety accounting for more than 80% of the total

☞ 1–3 years

✓ *Les Chais du Vivarais*

GIGONDAS AOC

Gigondas produces some of the most underrated red wines in the Rhône Valley.

RED The best have an intense black-red color with a full, plummy flavor.

☞ A maximum of 80% Grenache, plus at least 15% Syrah and Mourvèdre, and a maximum of 10% (in total) of Clairette, Picpoul, Terret Noir, Picardan, Cinsault, Roussanne, Marsanne, Bourboulenc, Viognier, Counoise, Muscardin, Vaccarèse, Pinot Blanc, Mauzac, Pascal Blanc, Ugni Blanc, Calitor, Gamay, and Camarèse

☞ 7–20 years

ROSÉ Good-quality, dry rosé wines.

☞ A maximum of 80% Grenache and a maximum of 25% (in total) of Clairette, Picpoul, Terret Noir, Picardan, Cinsault, Roussanne, Marsanne, Bourboulenc, Viognier, Counoise, Muscardin, Vaccarèse, Pinot Blanc, Mauzac, Pascal Blanc, Ugni Blanc, Calitor, Gamay, and Camarèse

☞ 2–5 years

✓ *La Bouissière* • *Brusset* (Le Grand Montmirail, Les Hauts des Montmirail) • *du Cayron* • *de la Gardette* • *Les Goubert* (Florence) • *Grapillon d'Or* (Elevé en Vieux Foudres) • *de Longue-Toque* • *Gabriel Meffre* (Château Raspail) • *L'Oustau Fauquet* (Secret de la Barrique) • *Saint Cosme* • *Saint-Damien* (Les Souteyrades) • *de St.-Gayan* (Fontmaria) • *Sainte Anne* • *Santa Duc* • *La Tourade*

LIRAC AOC

This appellation was once the preserve of rosé, but the production of red is now on the increase.

RED In really great years, the Syrah and Mourvèdre can dominate despite the quite small quantities used, which produces a more plummy wine with silky-spicy finesse.

☞ A minimum of 40% Grenache and 25% (in total) of Syrah and Mourvèdre, plus up to 10% Carignan and no limit on the amount of Cinsault (although this used to be restricted to 20%, and I suspect this

relaxation is due to clerical error when the regulations were rewritten in 1992)

☞ 4–10 years

WHITE A fragrant, dry white wine, the best of which has improved since 1992, when Marsanne, Roussanne, and Viognier were permitted for use in this appellation. The cheapest wines have declined in quality because the amount of Clairette allowed has been doubled. Macabéo and Calitor are no longer permitted.

☞ Up to 60% (each) of Bourboulenc, Clairette, and Grenache Blanc; plus up to 25% (each) of Ugni Blanc, Picpoul, Marsanne, Roussanne, and Viognier (but these secondary varieties must not represent more than 30% of the blend in total)

☞ 1–3 years

ROSÉ Production is declining in favor of red wine, but these dry rosés can have a delightful summer-fruit flavor that is fresher than either Tavel or Provence.

☞ A minimum of 40% Grenache and 25% (in total) of Syrah and Mourvèdre, plus up to 10% Carignan, no limit on the amount of Cinsault (but see red wine grapes above), and up to 20% (in total) of Bourboulenc, Clairette, Grenache Blanc, Ugni Blanc, Picpoul, Marsanne, Roussanne, and Viognier

☞ 1–3 years

✓ *Château d'Aquéria* • *Lafond Roc-Epine* • *Maby* (La Fermade) • *de la Mordorée*

MUSCAT DE BEAUMES-DE-VENISE AOC

These wines from Muscat de Beaumes-de-Venise are the most elegant of the world's sweet fortified Muscat wines. Very little sweet Muscat was made before World War II. When the AOC was granted in 1945, the wine was classified as a *vin doux naturel*. The process by which this is made entails the addition of pure grape spirit, in an operation called *mutage*, after the must has achieved 5 percent alcohol by natural fermentation. The final wine must contain at least 15 percent alcohol, plus a minimum of 110 grams per liter of residual sugar. The Coopérative des Vins & Muscats, which was established in 1956, accounts for a formidable 90 percent of the wine produced. It is often said that this wine is always nonvintage, but in fact 10 percent is sold with a vintage on the label.

WHITE/ROSÉ The color varies between the rare pale gold and the common light apricot-gold, with an aromatic bouquet more akin to the perfume of dried flowers than fruit. You should expect Muscat de Beaumes-de-Venise to have hardly any acidity, which surprisingly does not make it cloying, despite its intense sweetness, but does enable it to be one of

the very few wines to partner ice cream successfully.

☞ Muscat Blanc à Petits Grains, Muscat Rosé à Petits Grains

☞ 1–2 years

✓ *de Coyeux • de Durban • Paul Jaboulet Aîné • Gabriel Meffre (Laurus) • Pigeade • de St.-Saver • Vidal-Fleury*

RASTEAU AOC

This appellation was first created in the early 1930s, and was promoted to full AOC status on January 1, 1944. Rasteau was the first of the Rhône's two *vin doux naturel* appellations. In popularity and quality it is, however, second to Muscat de Beaugues-de-Venise.

RED A rich, sweet, coarse, grapey-flavored concoction with plenty of grip, a rather awkward spiritous aroma, and a pithy, apricot-skin aftertaste.

☞ A minimum of 90% Grenache (Gris or Blanc), plus up to 10% (in total) of Clairette, Syrah, Mourvèdre, Picpoul, Terret Noir, Picardan, Cinsault, Roussanne, Marsanne, Bourboulenc, Viognier, Carignan, Counoise, Muscardin, Vaccarèse, Pinot Blanc, Mauzac, Pascal Blanc, Ugni Blanc, Calitor, Gamay, and Camarèse

☞ 1–5 years

WHITE/TAWNY/ROSÉ This wine can be white, tawny, or rosé depending on the technique used and on the degree of aging. It does not have the grip of the red, but has a mellower sweetness.

☞ A minimum of 90% Grenache (Gris or Blanc), plus up to 10% (in total) of Clairette, Syrah, Mourvèdre, Picpoul, Terret Noir, Picardan, Cinsault, Clairette, Roussanne, Bourboulenc, Viognier, Carignan, Counoise, Muscardin, Vaccarèse, Pinot Blanc, Mauzac, Pascal Blanc, Ugni Blanc, Calitor, Gamay, and Camarèse

☞ 1–5 years

✓ *des Escaravailles*

RASTEAU “RANCIO” AOC

These wines are similar to those of the Rasteau AOC (*see above*), except they must be stored in oak casks “according to local custom,” which often means exposing the barrels to sunlight for a minimum of two years, which allows the wines to develop the “rancio” character.

TAVEL AOC

Tavel is the most famous French dry rosé, but only the very best domaines live up to its reputation. In order to retain freshness, Tavel's alcoholic level is restricted to a maximum of 13 percent.

MORE GREEN SOUTHERN RHÔNE

In addition to the producers recommended in this directory that are either biodynamic or organic, there are also the following. No negative inference of quality should be taken from the fact that they are not featured among my recommended producers. There are a number that have been recommended in other editions, and still make some fine wines, but have been cut out to make room for others.

Biodynamic

Pierre André (Courthézon), Château de Bastet (Sabran), des Estubiens (Les Granges Gontardes), Grande Bellane (Domaine de la Grande Bellane), Gaïa (Saint-Marcellin), Patrick Pélisson (Goult), Eric Saurel (Sarrians), St. Apollinaire (Vaison-La-Romaine)

Organic

des Adrès (Villedieu), Arbre aux Soleils (Faucon), des Auzières (Roaix), de Balazut (St. Paulet de Caisson), des Carabiniers (Roquemaure), Catherine Le Goeuil (Cairanne), des Cèdres (St. Nazaire), Le Clos de Caveau (Vacqueyras), Clos du

Joncuas (Gigondas), des Coccinelles (Domazan), Château de la Croix des Pins (Mazan), Jean David (Séguret), Michel Delacroix (Theziers), Duseigneur (St. Laurent des Arbres), de la Gautière (La Penne-sur-Ouvèze), Goisbault (Saze), Grange de Louiset (Flassans), Herbouze (St. Alexandre), de la Jasse (Violès), de Lumian (Valreas), Monastère de Solan (La Bastide d'Engras), C. V. du Nyonsais (Nyons), de la Roche Buisnière (Faucon St. Honorat (Domazan), St. Pons (Villars), Terres de Solence (Mazan), C. V. des Vignerons de Vacqueyras (Vacqueyras), Val de Morcasse (Montfrin), Le Van (Bedoin), du Vieux Chêne (Camarac-sur-Aigues), La Vigneronne (Vaison la Romaine)

ROSÉ Some properties still cling to the old-style vinification methods and, frankly, this means the wines are too old before they are sold. The top domaines in the appellation make clean-cut wines with freshly scented aromas and fine fruit flavors, which are invariably good food wines.

☞ Grenache, Cinsault, Clairette, Clairette Rosé, Picpoul, Calitor, Bourboulenc, Mourvèdre, and Syrah (none of which may account for more than 60% of the blend), plus a maximum of 10% Carignan

☞ 1–3 years

✓ *Château d'Aquéria • Come des Rieu • de la Mordorée (La Dame Rousse)*

VACQUEYRAS AOC

Formerly one of the single-village wines under the AOC Côtes du Rhône-Villages, Vacqueyras was elevated to full AOC status in 1990, without any mention of Côtes du Rhône or Côtes du Rhône-Villages, and is now theoretically on a par with Gigondas. The vines are spread over two communes, Vacqueyras and Sarrians, growing in the foothills of the Dentelles de Montmirail.

RED The best are dark, rich, and robust, with a warm, black-pepper spiciness.

☞ At least 50% Grenache, plus up to 20% in total of Syrah and/or Mourvèdre, plus no more than 10% in total of any of the following: Camarèse, Carignan, Cinsault, Clairette Rosé, Counoise, Grenache Gris, Muscardin, Vaccarèse, Picpoul Noir, Terret Noir

☞ 4–12 years

WHITE This is the least successful style of the appellation; most tend to be either flabby or so dominated by modern, cool vinification methods that they are simply fresh and could come from anywhere.

☞ Grenache Blanc, Clairette, and Bourboulenc, plus up to 50% in total of Marsanne, Roussanne, and Viognier

☞ 2–3 years

ROSÉ Can be lovely, fresh, and fruity.

☞ At least 60% of Grenache, plus a minimum of Mourvèdre and/or Cinsault, with an optional maximum 10% of any of the following: Camarèse, Carignan, Cinsault, Clairette Rosé, Counoise, Grenache Gris, Muscardin, Vaccarèse, Picpoul Noir, Terret Noir

☞ 2–3 years

✓ *des Amouriers • de la Brunely (Elevé en Fût de Chêne) • de la Charbonnière • La Fourmone • Les Grands Cypres • de la Monardièrre (Vieilles Vignes) • Le Sang des Cailloux (Lopy) • Tardieu-Laurent (Vieilles Vignes) • Xavier Vignon (Povidis)*

THE JURA AND SAVOIE

White wines dominate the production from these picturesque vineyards set amid the ski slopes of the French Alps. Sparkling wines are the specialty of Savoie, while Jura can boast the rare, sweet vins de paille and the amazingly long-lived vins jaunes.

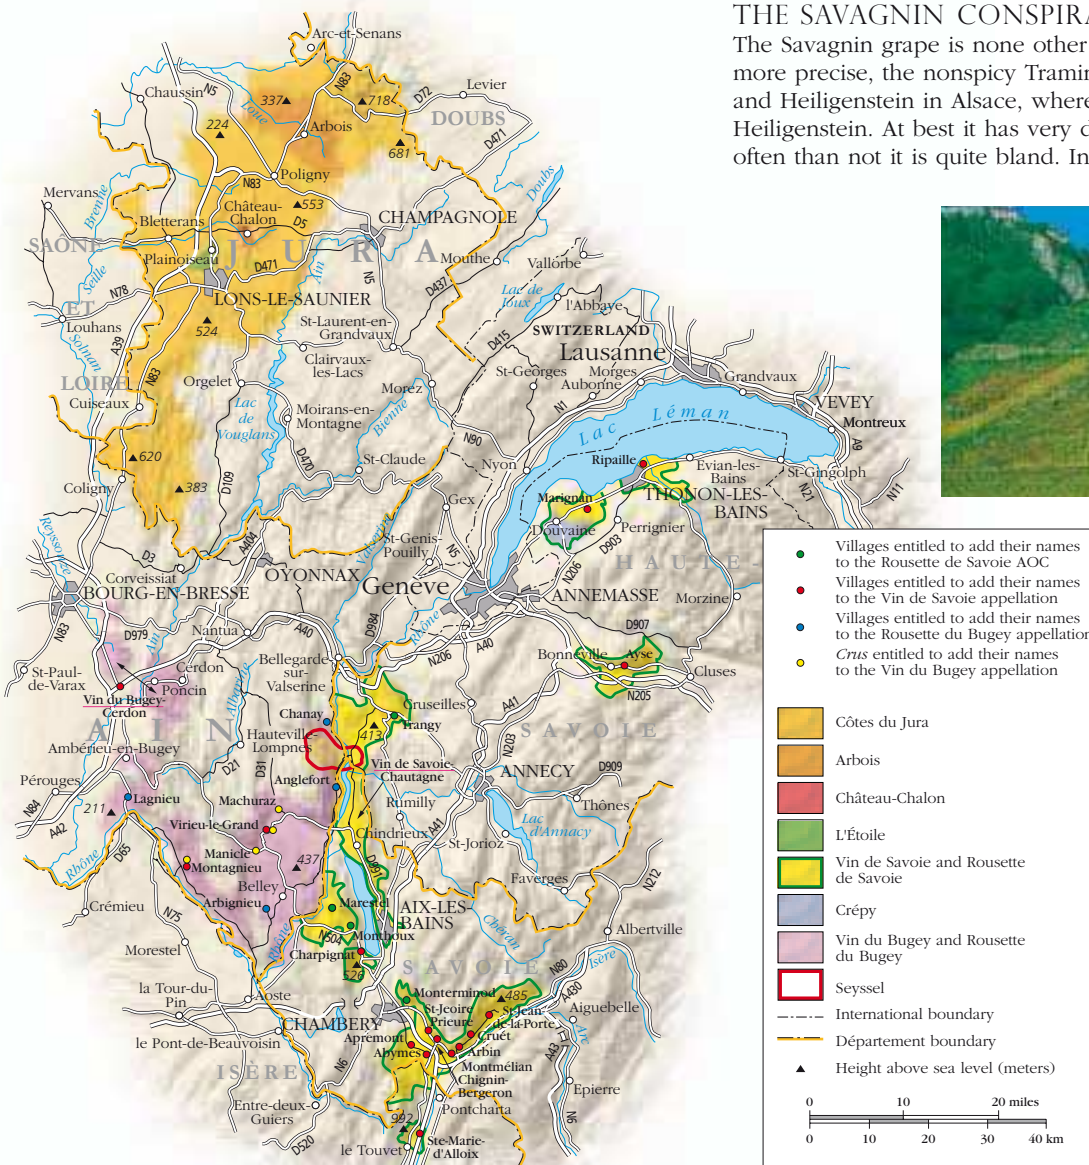

THE JURA IS DOMINATED by the town of Arbois, a little alpine community reigned over by the winemaker Henri Maire. His infamous sparkling “Vin Fou,” or “Mad Wine,” has no appellation and comes in various different *cuvées*, of which some are better than others, but many taste the same. Despite the light-hearted approach to its consumption, “Vin Fou” has performed one admirable function: it has introduced wine drinkers to the district of Jura and Savoie and its many better wines. This could not have been achieved by the *vins de paille* and *vins jaunes*, due to their scarcity and high price. The very sweet *vin de paille*, or “straw wine,” is so called because the grapes were traditionally dried on straw mats to concentrate the juice into a syrup. The *vin jaune*, or

“yellow wine,” derives its name from the color that results from its deliberate oxidation under a yeast *flor* when matured in casks that are not topped up for six years. This region also produces a number of more ordinary wines, often pure varietals, that are seldom exciting. The Jura’s other claim to fame is, of course, as the birthplace of Louis Pasteur (1822–1895), who for all intents and purposes invented oenology, having been requested by Napoléon III to investigate the changes already observed during the maturation of wine. Born in the Arbois, where a small museum dedicated to him exists today, Pasteur’s discoveries included the vital role of yeast during fermentation—totally unsuspected in his day, but without the knowledge of which the branch of chemistry called oenology would not exist. His vineyard, just outside Arbois, is now owned by the firm of Henri Maire.

The vineyards in the area between Lake Geneva and Grenoble, known as the Savoie, should be far more of a success than they are. I cannot imagine a better way to promote these wines than through the Savoie’s winter-sports business. The only obstacle to their greater success is the failure of foreign wine merchants to import the wines in sufficient quantities.

THE SAVAGNIN CONSPIRACY

The Savagnin grape is none other than the Traminer or, to be more precise, the nonspicy Traminer as found in Tramin, Italy, and Heiligenstein in Alsace, where it is sold as Klevener de Heiligenstein. At best it has very delicate aromatics, but more often than not it is quite bland. In the Jura, however, it has

CHÂTEAU-CHALON VINEYARDS

This commune produces the most famous of all the vins jaunes from 100 percent Savagnin. Best drunk very old, the wine takes its name from its deep honey-gold color.

THE JURA AND SAVOIE, see also p.55

This region lies parallel to Burgundy, between Beaune and the southern limits of the Beaujolais. There are two mountain ranges.

RECENT JURA AND SAVOIE VINTAGES

2003 A benchmark year for red wines in both regions, and for *vins de paille* in the Jura, but dry whites were problematic. There is a question mark over the *vins jaunes*, although the Jura has never experienced such Jerez-like heat, thus the quality could surprise everyone.

2002 Much better in the Jura than in the Savoie. Although the harvest in Savoie was saved by good weather in the last few weeks, the best wines were early drinking, and would have been at their best as après ski before this edition was due to be published. All styles were good in the Jura.

2001 Although there are a handful of well-made wines, these are the exceptions to what is an easily forgettable vintage.

2000 Early-maturing wines of average to quite good quality at best.

1999 A top-class vintage in the Jura in all styles, and the first year that this author noticed Savagnin made in a fresh, light, dry style with absolutely none of the oxidation that has been traditionally and erroneously associated with its varietal character. The Savoie was not very successful, and any half-decent wines should have been drunk long ago.

always had a tendency to oxidize. Or so we were told. Every time I tasted a pure Savagnin produced in a light table wine style, it always had at least a niggling oxidative hint. And every time I asked the producer, whether in the Jura or at tastings in London, why this should be so in a grape variety that is not oxidative elsewhere, I was always told “*C’est le Savagnin, il est un vin typé.*” And now I know that each time, every producer I spoke to lied. It is not the Savagnin. It is the *vin jaune* that fails to receive certification, or has been weeded out somewhere along its six-year route to certification, and that they have disposed of by blending it into their dry white table wines.

While I fully support a certification process that prevents inferior wines from bearing the *vin jaune* designation, and I understand the dilemma of producers faced with stocks of yellow, oxidized wine they are unable to sell as *vin jaune*, the answer is not to spoil fresh, light table wines. The only rational solution is to create a *vin de pays* for the *vin jaune* style. Consumers will understand that the *vin de pays* version is not supposed to be of the same standard and, indeed, this would be reflected in the price. However, although cheaper than *vin jaune* proper, a *vin de pays* “*vin jaune*” would probably attract a premium over the price

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
Running down the mountainous eastern border of France, the Jura and Savoie are parallel to the Burgundy region.

CLIMATE
The climate is continental, with hot summers and cold winters. The close proximity of the Jura and the Savoie mountain ranges can provoke sudden changes, although these may sometimes be mitigated by the calming effect of lakes Geneva and Bourget.

ASPECT
The vineyards of the Jura are situated on the lower slopes of the Jura mountains. The vines grow at an altitude of 820–1,640 feet (250–500 meters). The Savoie vineyards lie lower than those of the Jura.

SOIL
The limestone of the Jura is generally mixed with clay over a subsoil of compacted marl. There are limestone and marl topsoils over a base of sandy and gravelly marls at Arbois and Château-Chalon and a limestone scree, calcareous sand, and claylike sand with alluvial deposits at Bugey and Seyssel.

VITICULTURE AND VINIFICATION
The Jura is famous for two special techniques: the viticultural practice responsible for *vin de paille* and the vinification procedure required to make *vin jaune*. For *vin de paille*, wicker trays or wire mesh may be used, but in most cases bunches of

grapes are hung from the rafters of heated huts, after which the shriveled-up, highly concentrated, raisinlike grapes produce an amber-colored sweet wine of great potential longevity. *Vin jaune* is produced entirely from the Savagnin grape, which, after a normal fermentation, is left to age in wooden barrels for six years with no topping off. A yeast *flor* develops similar to that generated during the production of *fino* sherry and the results are not dissimilar. Light dry Jura white wines made from the traditional Savagnin grape used to be distinctly oxidized due to the common practice of blending in any *vin jaune* that failed to make the grade, but some producers have begun to make at least a few of these wines without any declassified *vin jaune*, thus in a totally fresh, nonoxidative style.

GRAPE VARIETIES
Aligoté, Cabernet Franc, Cabernet Sauvignon, Chardonnay (*syn.* Melon d’Arbois or Gamay Blanc), Chasselas, Chasselas Roux, Chasselas Vert, Etraire de la Dui, Frühroter Veltliner (*syn.* Malvoisie Rosé or Veltliner Rosé), Gamay, Gringet (close relation to Savagnin), Jacquère, Joubertin, Marsanne, Molette, Mondeuse, Mondeuse Blanche, Persan, Pinot Blanc, Pinot Noir (*syn.* Gros Noiren), Poulsard (*syn.* Ploussard), Roussette, Roussette d’Ayze, Savagnin (*syn.* Naturé), Serène, Trousseau, Verdesse

of the Jura’s light table wines, and without the rejected *vin jaune*, the light table wines would be fresher, crisper, cleaner, and fruitier, the sales and price of which could only increase. Better profits for producers, and better wines for consumers. A result all round, I would have thought. And no need to tell lies.

THE APPELLATIONS OF
THE JURA AND SAVOIE

ARBOIS AOC

This is the best-known appellation of the Jura, from in and around the town of Arbois.

RED Trousseau wines are rich, and sometimes coarse, and Pinot wines are light and rustic.

☞ Trousseau, Poulsard, Pinot Noir

☞ 2–8 years

WHITE Light, fresh Chardonnays are best; pure Savagnin can be delicately aromatic when not blended with declassified *vin jaune*, good examples of which are world renowned.

☞ Savagnin, Chardonnay, Pinot Blanc

☞ 1–3 years

ROSÉ Famous for its firm and distinctive dry rosé wines made in the pale *vin gris* style.

☞ Poulsard, Trousseau, Pinot Noir

☞ 1–3 years

☑ Daniel Dugois • Raphaël Fumey & Adeline Chatelain • Michel Gabir (Trousseau Grands Vergers) • Labet Père & Fils • Henri Maire (Montbief Chardonnay) • De la Pinte (Terre Rouge) • Jacques Puffeney • Cave de la Reine Jeanne • Jean Rijckaert • André & Mireille Tissot • Jacques Tissot • De la Tournelle

ARBOIS MOUSSEUX AOC

This is a traditional method sparkling wine seldom seen outside Arbois.

SPARKLING WHITE These fresh, dry sparkling wines show more potential than quality.

☞ Savagnin, Chardonnay, Pinot Blanc

☞ 1–3 years

☑ Foret • Fruitière Viticole d’Arbois

(Montboise)

ARBOIS PUPILLIN AOC

This is a single-commune appellation for red, white, rosé, *vin jaune*, and *vin de paille* made to the same specification as Arbois AOC. See Arbois AOC, Arbois Vin de Paille AOC, and Arbois Vin Jaune AOC.

✓ *Désiré Petit & Fils* (Vin de Paille) • *De la Renardière*

ARBOIS VIN JAUNE AOC

For details of production and style, see Château-Chalon AOC.

✓ *De la Pinte* • *Jacques Puffeney* • *Rolet* • *André & Mireille Tissot* • *Jacques Tissot*

**ARBOIS VIN DE PAILLE AOC**

This wine is made from grapes that are dried to concentrate the juice, followed by a long fermentation and up to four years in wood.

WHITE These are very sweet wines with an old-gold color, complex bouquet, and a rich, nutty flavor.

☞ Poulsard, Trousseau, Savagnin, Chardonnay
 ⌚ 10–50 (or more) years

✓ *Rolet* • *André & Mireille Tissot* •

BUGEY VDQS

Formerly called Vin de Bugey, the criteria for these wines has changed substantially since the decree of January 2004, particularly the *encépagement*. The village of Machuraz no longer has the right to add its name to this appellation. However, the following villages may still add their name: Manicle (for Chardonnay or Pinot Noir), Montagnieu (Mondeuse), Virieu-le-Grand (white only).

RED Fresh wines that range from the fruity Pinot to the rich Mondeuse.

☞ Gamay, Mondeuse, Pinot Noir
 ⌚ 2–8 years

WHITE Off-dry, fresh, light, and gently fruity.

☞ A minimum of 50% Chardonnay, plus optional Aligoté, Altesse, Jacquère, Mondeuse Blanche, and Pinot Gris

⌚ 1–3 years

ROSÉ Light and refreshing dry wines.

☞ Gamay, Mondeuse, Pinot Noir

⌚ 1–3 years

✓ *Monin* (Mondeuse: Les Griots, Les Perrailles)

BUGEY CERDON VDQS

This appellation was a confusing mess until January 2004. Prior to this date, the wines could be still or sparkling, dry or sweet, and white or red. If sparkling they had to be white, but could be described as *mousseux* or *pétillant*, and had to be made by the traditional method. Now they must be rosé only, and

made by *méthode ancestrale*, with a minimum of 40 grams per liter of residual sugar, which puts it at the top side of *demi-sec*, thus could easily become *doux*. The appellation is restricted to Cerdon and seven surrounding villages.

SPARKLING ROSÉ Should be fresh and luscious, but true Cerdon Rosé Méthode Ancestrale has yet to establish a track record.

☞ Gamay, Poulsard

⌚ Within 1 year

✓ *Daniel Boccard* • *Christian Bolliet*

CHÂTEAU-CHALON AOC

The Jura's *vins jaunes* possess a unique style and Château-Chalon (which is the name of a commune) is its most legendary exponent. It is normally fermented, then left to age in sealed wooden barrels for six years with no topping up. During this time, a *flor* develops—a skin of yeast that floats on top of the wine. The changes induced by the *flor* give the acetaldehyde-dominated *vin jaune* a resemblance to a *fino* sherry, but the fact that it is not fortified (whereas sherry is) and is made from a different grape produces its unique character.

WHITE *Vin jaune* is something of an acquired taste and should be drunk when very old. The vast array of complex nuances of bouquet eventually subdue and transmute the sherrylike smell of acetaldehyde. It has a dry flavor.

☞ Savagnin

⌚ 10–100 years

✓ *Baud Père & Fils* • *Berthet-Bondet* • *Philippe Butin* • *Durand-Perron* • *Jean Macle*

CÔTES DU JURA AOC

This generic appellation contains some of the most widely encountered Jura wines. Its larger area of production gives it an edge over Arbois, the better-known AOC within its boundaries.

RED Usually light in color and body, with elegant fruit and a little finesse.

☞ Poulsard, Trousseau, Pinot Noir

⌚ 2–8 years

WHITE Simple dry whites that make an ideal accompaniment to the local *raclette* cheese dish.

☞ Savagnin, Chardonnay

⌚ 1–3 years

ROSÉ These dry rosés have a fine and fragrant *vin gris* style, with solid fruit.

☞ Poulsard, Trousseau, Pinot Noir, Pinot Gris, Savagnin, Chardonnay

⌚ 1–3 years

✓ *Château d'Arlay* • *Daniel & Pascal Chalandard* (Cuvée Siloé) • *Charbonnier* • *Ganevat* (Florine Ganevat Chardonnay, Julien Ganevat Pinot Noir) • *Grand Frères* (Tradition) • *Labet* • *Jean Macle* • *Pignier* • (Trousseau) • *Jean Rijckaert* • *Rolet* (Chardonnay) • *André & Mireille Tissot* •

CÔTES DU JURA MOUSSEUX AOC

Probably Jura's best sparkling-wine appellation.

SPARKLING WHITE These wines have a persistent *mousse* of tiny bubbles, excellent balance, surprising finesse, and great potential.

☞ Savagnin, Chardonnay, Pinot Blanc

⌚ 1–3 years

✓ *Château Gréa***CÔTES DU JURA VIN JAUNE AOC**

For details of production and style, see Château-Chalon AOC.

✓ *Château d'Arlay* • *Philippe Butin*

CÔTES DU JURA VIN DE PAILLE AOC

These wines are made from grapes that are dried to concentrate the juice, after which fermentation is long and the wine is given up to four years in wood.

WHITE These very sweet wines have old-gold, honey-gold, and amber-gold colors; a full, distinctive, and complex bouquet; a powerfully rich and nutty flavor; and a surprisingly crisp finish, with a raisiny, apricot-skin aftertaste.

☞ Poulsard, Trousseau, Savagnin, Chardonnay
 ⌚ 10–50 (or more) years

✓ *Berthet-Bondet* • *Denis & Marie Chevassu* • *Richard Delay* • *Château Gréa* • *Labet* • *Morel-Thibaut* • *Désiré Petit & Fils* • *Pignier* • *Père & Fils* • *Philippe Vandelle*

CRÉMANT DU JURA AOC

This appellation was introduced in 1995. It can be used for any wine conforming to *vin mousseux* AOCs of the Côtes du Jura, Arbois, and L'Étoile, and may be applied retrospectively to any of these wines from 1991 onward.

Part of the “*crémantization*” of French traditional method appellations, once most sparkling wines in the region are marketed as Crémant du Jura, the unwieldy bunch of *mousseux* appellations (see below) will be quietly dropped.

✓ *Richard Delay* • *Grand Frères* (Prestige) • *De Montebourgeau* • *Désiré Petit & Fils* (Cuvée Désiré) • *Rolet Père & Fils* (Coeur de Chardonnay) • *Jacques Tissot*

CRÉPY AOC

These wines are well known to the skiing set, who enjoy them after a day on the *piste*.

WHITE Light, dry, and fruity wines, with a floral aroma and a slight spritz.

☞ Chasselas Roux, Chasselas Vert

⌚ 1–3 years

✓ *Goutte d'Or* (Tête de Cuvée)

L'ÉTOILE AOC

These wines are named after the star-shaped fossils found in the local limestone.

WHITE Light, dry white wines whose aromas reveal the scents of alpine herbs and bracken.

☞ Chardonnay, Poulsard, Savagnin

⌚ 1–3 years

✓ *Baud Père & Fils*

L'ÉTOILE MOUSSEUX AOC

Not quite up to the standard of Côtes du Jura Mousseux, but this traditional method wine has more potential than Arbois Mousseux.

SPARKLING WHITE De Montbourgeau makes a fine-quality, dry, sparkling wine.

☞ Chardonnay, Poulsard, Savagnin

🕒 1–3 years

✓ *Château de l'Étoile*

L'ÉTOILE VIN JAUNE AOC

See *Château-Chalon AOC*

🍷 Savagnin

🕒 10–100 years

✓ *Château de l'Étoile • Claude & Cédric Joly*

MACVIN AOC OR MACVIN DU JURA AOC

Macvin, a *vin de liqueur*, is made by adding *marc* (local brandy distilled from the residue of skins) to grape juice, preventing fermentation.

RED Typical dull *vin de liqueur* aroma, sweet and grapey.

🍷 Poulard, Trousseau, Pinot Noir

🕒 Upon purchase or never

WHITE This has a typical dull *vin de liqueur* aroma, and is sweet and grapey. This is the most oxidative Macvin style.

🍷 Chardonnay, Poulard, Savagnin

🕒 Never!

ROSÉ Typical dull *vin de liqueur* aroma, sweet and grapey.

🍷 Poulard, Trousseau, Pinot Noir

🕒 Upon purchase or never

✓ *Labet*

ROUSSETTE DU BUGEY VDQS

The following villages may add their name to this appellation, if harvested within an extremely low yield: Anglefort, Arbignieu, Chanay, Lagnieu, Montagnieu, and Virieu-le-Grand.

WHITE Light, fresh, and agreeable off-dry wines with few pretensions.

🍷 A minimum of 50% Roussette, plus (until 2008) Chardonnay

🕒 1–3 years

✓ *Jean Peillot*

ROUSSETTE DE SAVOIE AOC

The following villages have the right to add their name to this appellation, if the wine is 100 percent Roussette: Frangy, Marestel (or Marestel-Altresse), Monterminod, and Monthoux.

WHITE Drier than Roussette de Bugey, these wines have fine, tangy fruit.

🍷 Roussette, Mondeuse Blanche, plus up to 50% Chardonnay

🕒 1–3 years

✓ *Dupasquier • Château de Monterminod • André & Michel Quénard • De Saint-Germain*

SEYSSEL AOC

This is a favorite après-ski wine.

WHITE These are fragrant, dry, refreshing wines.

🍷 Roussette

🕒 1–3 years

✓ *Maison Mollex*

SEYSSEL MOUSSEUX AOC

It was Varichon & Clerc that first carved a niche for Seyssel Mousseux in the export market.

SPARKLING WHITE With a full, yeasty nose, fine *mousse*, and elegant flavor, the Royal Seyssel Private Cuvée is a yardstick for other producers.

MORE GREEN WINES

In addition to the producers recommended in this directory that are either biodynamic or organic, there are also the following. No negative inference of quality should be taken from the fact that they are not featured among my recommended producers. There are a number that have been recommended in other editions, and still make some fine wines, but have been culled out to make room for others.

JURA

Biodynamic *Dominique Dumon* (Bersaillin)

Organic *Daniel Crinquand* (Pupillin), *Clos des Grives* (Chillé), *Henri Maire* —limited range only (Arbois), *Overmoy & Houillon* (Pupillin), *Christian & Colette Perrard* (Arbois), *Michel Terrier* (Pannessières), *Les Vignes de Bry* (Beaufort), *Gérard Villet* (Arbois)

SAVOIE

Organic *Rapbaël Bartucci* (Merignat), *Belluard* (Aye), *Maurice Berthet* (Saint-Cassien), *Bernard Brun* (Curienne), *Bernard Canelli-Suchet* (Sciez), *Guy-Noël Choulet* (La Motte-Servolex), *Davoine & Martin* (Flaxieu), *François Grinand* (Villebois), *Olivier Masson* (Apremont)

🍷 Molette, Chasselas, plus a minimum of 10% Roussette

🕒 1–3 years

✓ *Maison Mollex • Royal Seyssel*

VIN DE SAVOIE AOC

The wines in this generic appellation are produced to a high standard. The following villages have the right to add their name to the appellation: Abymes, Apremont, Arbin, Aye, Chautagne, Chignin, Chignin-Bergeron (white Roussanne only), Cruet, Jongieux, Marignan (Chasselas white only), Marin, Montmélian, Ripaille (Chasselas white), St.-Jean de la Porte, St.-Jeoire Prieuré, and Sainte-Marie d'Alloix.

RED Blends and single-variety wines; the blended wines are usually better.

🍷 Gamay, Mondeuse, Pinot Noir, plus a maximum of 10% (in the Savoie *département*) of Cabernet Franc, and Cabernet Sauvignon, Persan, and (in the Isère *département*) Etraire de la Dui, Joubertin, Persan, and Serène

🕒 2–8 years

WHITE These dry wines are the best of the AOC, with Abymes, Apremont, and Chignin the best villages. All are fine, rich, and complex.

🍷 Aligoté, Altesse, Jacquère, Mondeuse Blanche, Roussette, Veltliner Précoce, plus a maximum of 10% (in the Ain and Haute-Savoie *départements*) of Chasselas, Gringet, Roussette d'Ayze, and (in the Isère *département*) Marsanne and Verdesse

🕒 1–3 years

ROSÉ Attractive, light, and fruity, dry to off-dry rosés made for early drinking.

🍷 Gamay, Mondeuse, Pinot Noir, plus a maximum of 10% (in the Savoie *département*) of Cabernet Franc, and Cabernet Sauvignon, Persan, and (in the Isère *département*) Etraire de la Dui, Joubertin, Persan, and Serène

🕒 1–3 years

Montmélian *Louis Magnin*

VIN DE SAVOIE AYZE PÉTILLANT OR MOUSSEUX AOC

These are very promising, single-commune, traditional method wines, but unfortunately are seldom encountered.

SEMI-SPARKLING WHITE Wispy-light wines with an Alpine-fresh, clean taste.

🍷 Gringet, Roussette, plus up to 30% Roussette d'Ayze

🕒 1–3 years

VIN DE SAVOIE MOUSSEUX AOC

These are very consistent and undervalued generic traditional-method wines. The Savoie does not have a large-scale sparkling-wine industry as such, although it most certainly has the potential to build one. The tradition of making the effervescent wines in this part of eastern France dates back to 1910, when two growers, Messieurs Varichon and Clerc, joined together to make sparkling wine in Seyssel from the Roussette grape, the wines of which were naturally *pétillant*, just as the Swiss wines made from the Chasselas, just across Lake Geneva, were, and still are, today.

SPARKLING WHITE These dry and delicately fruity wines have a fragrant aroma, fine acidity, and a good balance.

🍷 Aligoté, Roussette, Jacquère, Chardonnay, Pinot Gris, Mondeuse Blanche, plus (in the Ain and Haute-Savoie *départements*) Chasselas, (in the Haute-Savoie and Isère *départements*) Molette, (in the Haute-Savoie *département*) Gringet and Roussette d'Ayze, (in the Isère) Marsanne and Verdesse

🕒 1–2 years

✓ *Maison Mollex • Des Rocailles*

VIN DE SAVOIE PÉTILLANT AOC

A very consistent and undervalued generic traditional method wine.

SEMI-SPARKLING WHITE Attractive, early-drinking dry wines with a gentle, light *mousse* and a fragrant flavor.

🍷 Aligoté, Roussette, Jacquère, Chardonnay, Pinot Gris, Mondeuse Blanche, plus Chasselas (in the Ain and Haute-Savoie *départements*), Gringet, Rousset d'Ayze (in the Haute-Savoie *département*), Marsanne, and (in the Isère *département*) Verdesse

🕒 Within 1 year

✓ *Perrier & Fils • Varichon & Clerc*

SOUTHWEST FRANCE

This region encompasses numerous small, scattered areas that combine to produce an impressively wide range of excellent-value wines with diverse, but quite discernible, stylistic influences from Bordeaux, Spain, Languedoc-Roussillon, and the Rhône.

AT THE HEART OF THE REGION lies Gascony, the great brandy district of Armagnac. It was from here that d'Artagnan set out in around 1630 to seek fame and fortune in the King's Musketeers. The narrow tracks upon which his eventful journey began still wind their lonely way around wooded hills and across bubbling brooks. Aside from brightly colored fields of cultivated sunflowers, surprisingly little has changed since Alexandre Dumas painted such a vivid and colorful picture of these parts, for they remain sparsely populated to this day. Time passes slowly even in the towns, where

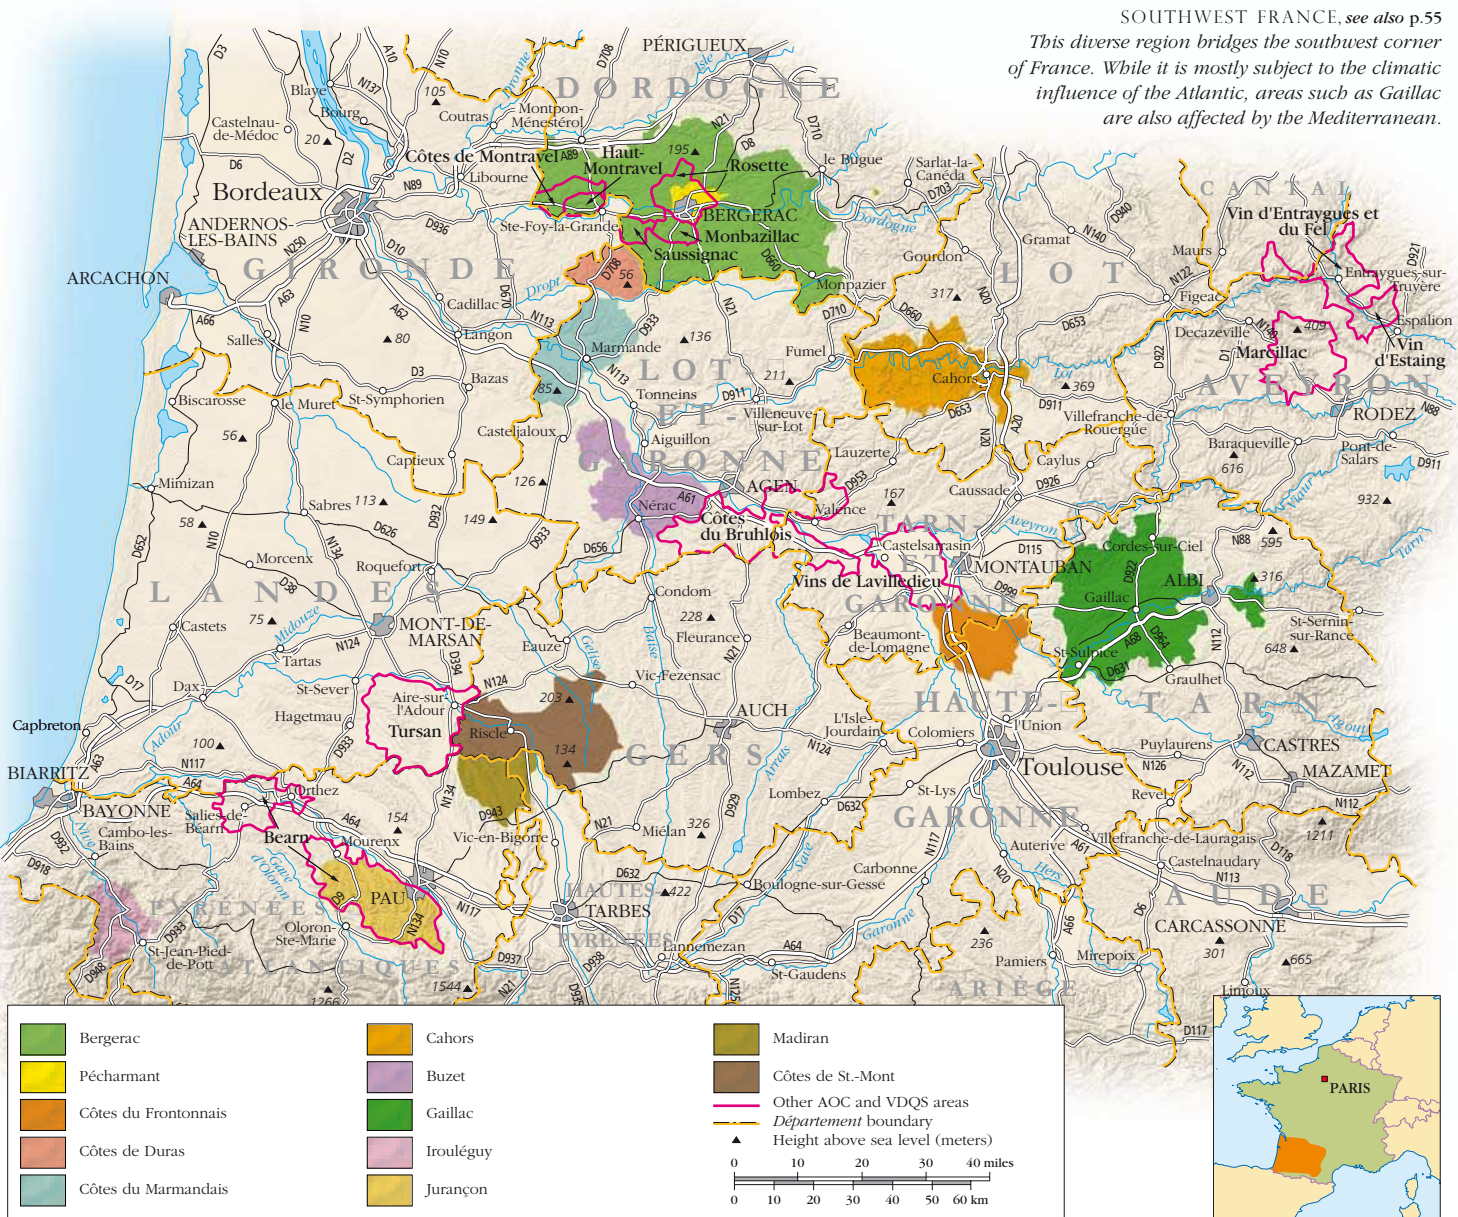

the main square is usually completely deserted all day long, except during the five o'clock rush hour, which can last for all of 10 minutes.

THE DIVERSITY OF THE APPELLATIONS

The Southwest does not have a single wine of truly classic status, yet it probably offers more value for money and is a greater source of hidden bargains than any other French region. From the succulent, sweet Jurançon *moelleux* and Monbazillac to the fine wines of Bergerac, Buzet, and Marmandais, the revitalized "black wines" of Cahors, the up-and-coming Frontonnais, the tannic Madiran, and the highly individual Irouléguay of the Basque country, this part of France represents tremendous potential for knowing wine drinkers.

Perhaps because it is a collection of diverse areas, rather than one natural region, the appellations of the Southwest seem at first numerous and confusing—even within one area there appear to be needless duplications. In Bergerac, for example, the dry white wines and red wines are reasonably easy to understand, since there are three dry appellations (Bergerac, Bergerac sec, and

SOUTHWEST FRANCE, *see also p.55*
This diverse region bridges the southwest corner of France. While it is mostly subject to the climatic influence of the Atlantic, areas such as Gaillac are also affected by the Mediterranean.

CÔTES DE BUZET VINEYARDS

This good-value Bordeaux satellite is barely 9 miles (15 kilometers) from the Gironde département.

Montravel) and three red-wine appellations (Bergerac, Côtes de Bergerac, and Pécharmant), but there is a veritable galaxy of sweet and semi-sweet appellations (Bergerac, Bergerac Moelleux, Montbazillac, Côtes de Montravel, Haut-Montravel, Rosette, and Saussignac). When such a small and relatively minor area as Bergerac can develop so many different appellations, it is little wonder that a large and famous region such as Bordeaux has evolved into 50-odd appellations. It would surely be simpler to have a single Bergerac appellation to which certain villages might be allowed to add a communal name; if the same logic were applied throughout this region, more of its wines could achieve marketing success, rather than attracting only occasional attention as hidden bargains. With a more cohesive image and some enterprising wineries straddling the many different appellations, Southwest France should be at least as exciting as Languedoc-Roussillon has recently become. Flying winemakers have occasionally come to roost here in the past few years, but it will take a permanent New World winery for the exciting potential of Southwest France to be fully recognized.

RECENT SOUTHWEST FRANCE VINTAGES

2003 As elsewhere in France, a vintage that was too hot and too early, with some reds and late-picked sweet whites the only likely standouts.

2002 Good to exceptional quality in Cahors particularly, but also Bergerac and Buzet. Variable elsewhere.

2001 The best year all around since 1998.

2000 Good reds, particularly in Madiran, and an excellent year for sweeter Jurançon.

1999 Extremely variable for all styles.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

The southwest corner of France, bordered by Bordeaux, the Atlantic, the Pyrenees, and the Mediterranean vineyards of Languedoc-Roussillon.

CLIMATE

The climate of southwestern France is Atlantic-influenced, with wet winters and springs, warm summers, and long, sunny falls. The vineyards of Cahors, Fronton, and Gaillac are subject to the greater heat but more changeable characteristics of the Mediterranean.

ASPECT

Mostly east- and east-through-to-south-facing slopes, affording protection from the Atlantic, in a varied countryside that can range from rolling and gently undulating to steep and heavily terraced.

SOIL

This collection of diverse areas has, not unexpectedly, a number of different soils: sandy-and-calcareous clay over gravel in the best vineyards of Bergerac; sandy soils on the Côte de Duras; calcareous and alluvial soils in the *côtes* of Buzet and Marmandais; gravel-clay and gravel crests over marly bedrock in the hilly hinterland of Cahors, and alluvial soils peppered with pebbly quartz, limestone, and gravel over a calcareous bedrock in the Lot Valley; limestone, clay-and-limestone, and gravel at Gaillac; sandy soils in Madiran, Tursan, and Irouléguay; and stony and sandy soils in Jurançon.

VITICULTURE AND VINIFICATION

The viticultural traditions and vinification techniques of Bergerac, Buzet, Marmandais, and, to some extent, Cahors, are similar to those of Bordeaux. Other districts of this composite region have very much their own distinctive, individual practices: Béarn, Gaillac, and Jurançon produce almost every style of wine imaginable by many vinification techniques, among them the *méthode rurale* (known locally as the *méthode gaillaçoise*).

Although the winemaking technique in these areas is generally very modern, the Basque district of Irouléguay remains stoutly traditional, allowing only the introduction of Cabernet Sauvignon and Cabernet Franc to intrude upon its set ways.

GRAPE VARIETIES

Abouriou, Aruffiac, Baroque, Cabernet Franc, Cabernet Sauvignon, Camarlet, Castet, Chardonnay, Chenin Blanc, Cinsault, Clairette, Claret de Gers, Claverie, Colombar, Courbu Blanc, Courbu Noir, Cruchinet, Duras, Fer, Folle Blanche, Fuella, Gamay, Gros Manseng, Jurançon Noir, Lauzet, Len de l'El, Malbec (*syn. Cot*), Manseng Noir, Mauzac, Mauzac Rosé, Mérille, Merlot, Milgranet, Mouyssaguès, Muscadelle, Négrette, Ondenc, Petit Manseng, Picpoul, Pinot Noir, Raffiat, Roussellou, Sauvignon Blanc, Sémillon, Syrah, Tannat, Ugni Blanc, Valdiguié

THE APPELLATIONS OF SOUTHWEST FRANCE

BÉARN AOC

This modest AOC shines in the local Basque area. Wines made in Bellocq, Lahontan, Orthez, and Saliès are allowed to add the communal designation Bellocq to the appellation.

RED Fresh, light, and fruity wines with a good balance, but lacking depth.

☼ A maximum of 60% Tannat, plus Cabernet Franc, Cabernet Sauvignon, Fer, Manseng Noir, Courbu Noir

🕒 1–4 years

WHITE Light, dry, and aromatic wines.

☼ Petit Manseng, Gros Manseng, Courbu Blanc, Lauzet, Camararet, Raffiat, Sauvignon Blanc

🕒 1–2 years

ROSÉ Simple, fruity, dry rosés with a fresh floral aroma.

☼ Tannat, Cabernet Franc, Cabernet Sauvignon, Fer, Manseng Noir, Courbu Noir

🕒 1–2 years

✓ *Bouscassé* (Rosé) • *C. V. de Jurançon* (Larribère)

BÉARN-BELLOCQ AOC

See Béarn AOC

BERGERAC AOC

Adjoining Bordeaux, Bergerac produces wines that are sometimes mistaken for the modest appellations of its more famous neighbor. Its wines were shipped to London as early as 1250. Supplies dried up after the Hundred Years' War, which ended with the Battle of Castillon, and Castillon-la-Bataille marks the ancient English-French boundary between Bergerac and Bordeaux.

RED The best reds have a good garnet or ruby color, fine fruit, and an elegant balance.

☼ Cabernet Sauvignon, Cabernet Franc, Merlot, Malbec, Fer, Mérille

🕒 2–8 years

WHITE Mostly dry Bordeaux-style wines, but semisweet wines with up to 54 grams per liter of residual sugar are permitted. Until 1993, such wines had to be described as *moelleux*; however, as this is no longer compulsory, we will not know whether some of these wines are *moelleux* or not. Bergerac Blanc may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☼ Sémillon, Sauvignon Blanc, Muscadelle, Ondenc, Chenin Blanc, and up to 25% Ugni Blanc (on the proviso that the quantity of Sauvignon Blanc used is at least equal)

🕒 1–3 years

ROSÉ These are light, easy, and attractive dry wines. They may be sold from December 1 following the harvest without mention of *primeur* or *nouveau*.

☼ Cabernet Sauvignon, Cabernet Franc, Merlot, Malbec, Fer, Mérille

🕒 1–3 years

✓ *de l'Ancienne Cure* • *Julienne* (Casnova des Conti) • *Château Les Justices* • *Château Laurerie* • *Château Miaudoux* (Inspiration) • *Château Le Payral* (Héritage) • *Château Pion* • *Julien de Savignac* (Rosé) • *Château*

Tour des Gendres • *Les Verdots* (Les Verdots selon David Fourtout)

BERGERAC SEC AOC

These white wines are distinguished from Bergerac Blanc by having to be dry, with no more than 4 grams per liter of residual sugar.

WHITE Dry Bordeaux-style wines. They may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☼ Sémillon, Sauvignon Blanc, Muscadelle, Ondenc, Chenin Blanc, and up to 25% Ugni Blanc (on the proviso that the quantity of Sauvignon Blanc used is at least equal)

🕒 1–3 years

✓ *de l'Ancienne Cure* • *Château Cailevet* (Accent) • *Château Miaudoux* • *Château de Panisseau* (Divin) • *Michel Roche* (Le Top de Mazière) • *Julien de Savignac* (Les Jardins de Cyrano) • *Château Tour des Gendres* • *Château Tourmentine* (Barrique) • *Les Verdots* (Les Verdots selon David Fourtout)

BUZET AOC

Formerly known as Côtes de Buzet, this supervalued Bordeaux satellite is located on the northern edge of the Armagnac region.

RED The best are always very good, with considerable finesse and charm.

☼ Merlot, Cabernet Sauvignon, Cabernet Franc, Malbec

🕒 3–10 years (15 in exceptional cases)

WHITE These dry whites are the least interesting wines in this appellation. They may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☼ Sémillon, Sauvignon Blanc, Muscadelle

🕒 1–3 years

ROSÉ Ripe, fruity, dry rosés. They may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☼ Merlot, Cabernet Sauvignon, Cabernet Franc, Malbec

🕒 1–4 years

✓ *Baron d'Albret* • *C. V. de Buzet* • *Château Sauvagnères*

CAHORS AOC

The once-famous “black wine” of Cahors got its name from the Malbec grape, which, prior to phylloxera, produced dark, inky-colored wines. But the vines did not graft well to the earliest American rootstocks and Cahors fell into decline. Compatible rootstocks were developed, and with the introduction of the Merlot and Tannat, Cahors has started to claw back its reputation. The sheer number of good producers now makes Cahors one of the most reliable red-wine appellations in France. Vieux Cahors must be aged in oak for at least three years.

RED Most Cahors wines have a deep color with a blackcurrant tinge. They are full of fruit and have a good, plummy, Bordeaux-like taste, with a silky texture and a distinctive violet-perfumed aftertaste.

☼ A minimum of 70% Malbec, plus up to 30% (in total) of Merlot and Tannat—Jurançon Noir has not been permitted since 1996

🕒 3–12 years (20 in exceptional cases)

✓ *Château de Clasou* • *Château la Caminade* (Commandery, Esprit) • *Château de Cèdre* • *de la Coustarelle* • *Croix du Mayne* (Elevé en Fûts de Chêne) • *C. V. Côtes d'Olt* • *Château Gautoul* • *des Grauzils* • *Château Haut Monplaisir* (Pur Plaisir) • *Clos d'Un Jour* • *Château Lacapell Cabanac* (Prestige Elevé en Fûts de Chêne) • *Château Lagrezette* • *Château Lamartine* (Expression, Particulière) • *Primo Palatum* • *du Prince* • *Château La Reyne* (Vente d'Ange) • *Clos Triguédina*

COTEaux DU QUERCY VDQS

Located just south of the Cahors area, and a *vin de pays* since 1976, Coteaux du Quercy was promoted to VDQS in 1999, when its *encépagement* changed (formerly Gamay- and Merlot-dominated wines).

RED Richly colored, full-bodied wines, the best of which have plenty of morello cherry and blackberry fruit.

☼ Cabernet Sauvignon, Cabernet Franc, Merlot, Malbec, Fer, Mérille

🕒 1–4 years

ROSÉ Soft, easy-drinking, fresh, and fruity rosé, with a maximum of 3 grams per liter residual sugar, thus truly dry.

☼ Cabernet Sauvignon, Cabernet Franc, Merlot, Malbec

🕒 Upon purchase

✓ *de Merchien*

CÔTES DE BERGERAC AOC

Geographically, there are no *côtes*; the only difference between this appellation and Bergerac is an extra degree of alcohol. The appellation Côtes de Bergerac Moelleux was withdrawn in 1993 (wines from this appellation must now be sold as Bergerac or Bergerac Moelleux), thus any wine bearing Côtes de Bergerac must now be red.

RED Should be richer than Bergerac AOC.

☼ Cabernet Sauvignon, Cabernet Franc, Merlot, Malbec, Fer, Mérille

🕒 3–10 years

✓ *Château La Bard Les Tendoux* (Elevé en Fûts de Chêne) • *Château Les Mailleries*

(Dany Moelleux) • *Château Masburel* • *Marlene & Alain Mayet* (Révelation du Bois de Pourquie) • *Château Tour des Verdots*

CÔTES DU BRULHOIS VDQS

Elevated from *vin de pays* in November 1984, this appellation encompasses vineyards along the Garonne immediately west of Buzet.

RED Decent, if unexciting, Bordeaux-like wine, though more rustic in style.

🍷 Cabernet Franc, Cabernet Sauvignon, Fer, Merlot, Malbec, Tannat

🕒 2–4 years

ROSÉ Fresh, easy-to-drink dry wine.

🍷 Cabernet Franc, Cabernet Sauvignon, Fer, Merlot, Malbec, Tannat

🕒 1–3 years

✓ *Château Grand Chêne* (Elevé en Fûts de Chêne)

CÔTES DE DURAS AOC

An appellation of increasing interest.

RED Light Bordeaux-style wines.

🍷 Cabernet Sauvignon and Franc, Merlot, Malbec

🕒 2–3 years

WHITE Clean, crisp, and dry wines, except for those designated *moelleux*, which must have a minimum of 4 grams per liter of residual sugar, although most good *moelleux*, such as *Château Lafon*, contain much more than this and are definitely sweet. With the exception of *moelleux*, these wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

🍷 Sauvignon Blanc, Sémillon, Muscadelle, Mauzac, Chenin Blanc, Ondenc, and up to 25% Ugni Blanc (provided that the quantity of Sauvignon Blanc used is at least equal)

🕒 1–3 years

ROSÉ These attractively colored, dry, crisp, fruity rosés are firm and fresh. They may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

🍷 Cabernet Sauvignon, Cabernet Franc, Merlot, Malbec

🕒 1–3 years

✓ *des Allergrets* (Elevé en Fûts de Chêne) • *Duc de Berticot* (Elevé en Fûts de Chêne) • *Château la Grave Bechade* (Alexandre Elevé en Fûts de Chêne) • *Château Laplace* • *Château Moulière* • *Château La Petite Bertrande* (Elevé en Fûts de Chêne) • *Château La Petit Malrome* (Sarah Elevé en Fûts de Chêne)

CÔTES DU FRONTONNAIS AOC

Situated just west of Gaillac. The wines of two villages, Fronton and Villaudric, are allowed to add their own names to the appellation.

RED These medium- to full-bodied wines have excellent color and violet-perfumed fruit.

🍷 50–70% Négrette, up to 25% (in total) of Malbec, Mérille, Fer, Syrah, Cabernet Franc, and Cabernet Sauvignon, plus a maximum of 15% Gamay, Cinsault, and Mauzac

🕒 2–8 years

ROSÉ Overtly fruity wines.

🍷 50–70% Négrette, up to 25% (in total) of Malbec, Mérille, Fer, Syrah, Cabernet Franc, and Cabernet Sauvignon, plus a maximum

of 15% Gamay, Cinsault, and Mauzac

🕒 1–3 years

✓ *Château Baudare* • *Château Bellevue la Forêt* • *Château Bouissel* • *Château Devès* (Allegro) • *Château Laurou* (Elevé en Fûts de Chêne) • *Château Plaisance* • *Château le Roc*

CÔTES DU FRONTONNAIS FRONTON AOC

See *Côtes du Frontonnais AOC*

CÔTES DU FRONTONNAIS VILLAUDRIC AOC

See *Côtes du Frontonnais AOC*

CÔTES DU MARMANDAIS AOC

This successful Bordeaux imitation, upgraded from VDQS to AOC in 1990, is situated on the border of Bordeaux itself; its vines grow on both sides of the Garonne, on the left-bank *Côtes de Cocomont* and the right-bank *Côtes de Beaupuy*. Few French people outside the region know anything about these wines, but the English have shipped them since the 14th century.

RED Fresh, clean, and impeccably made wines.

🍷 A maximum of 75% (in total) of Cabernet Franc, Cabernet Sauvignon, and Merlot, plus up to 50% (in total) of Abouriou, Malbec, Fer, Gamay, and Syrah

🕒 2–5 years

WHITE These dry white wines are soft and delicious. They may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

🍷 At least 70% Sauvignon Blanc, plus Ugni Blanc and Sémillon

🕒 1–2 years

ROSÉ Ripe and dry wines. They may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

🍷 A maximum of 75% (in total) of Cabernet Franc, Cabernet Sauvignon, and Merlot, plus up to 50% (in total) of Abouriou, Malbec, Fer, Gamay, and Syrah

🕒 1–2 years

✓ *CV de Cocomont* (Beroy) • *Château La Gravette* (Elevé en Fûts de Chêne) • *Eliau da Ros*

CÔTES DE MILLAU VDQS

Upgraded to VDQS in 1994 from *vin de pays* status (Gorges et *Côtes de Millau*), this appellation has yet to establish any characteristic style or reputation. There is no intrinsic reason why it should not, but with just 124 acres (50 hectares) under vine and one dominant *coopérative* (Aguessac), it will not be easy.

RED *Vin primeur* is a specialty.

🍷 A blend of at least two varieties, including a minimum of 30% Gamay and Syrah, plus Fer, Duras, and up to 20% Cabernet Sauvignon

WHITE Very little is made and I have not encountered any.

🍷 Chenin Blanc, Mauzac

ROSÉ Very little is made and I have not encountered any.

🍷 A blend of at least two varieties, including a minimum of 50% Gamay, plus Syrah, Cabernet Sauvignon, Fer, and Duras

✓ *C. V. des Gorges du Tarn* (Maitre des Sampettes) • *du Vieux Noyer*

CÔTES DE MONTRAVEL AOC

This wine must have a minimum residual sugar of 8 grams per litre and a maximum of 54 grams per liter in order to meet the requirements of the appellation. Any red wines produced here are sold as Bergerac AOC.

WHITE These fat, fruity wines are usually produced in a *moelleux* style.

🍷 Sémillon, Sauvignon Blanc, Muscadelle

🕒 3–8 years

✓ *Château du Bloy* • *Château Lespinassat* (Vieilles Vignes) • *Château Masburel*

CÔTES DE SAINT-MONT VDQS

Situated within the Armagnac region, the vineyards of this appellation extend northward from Madiran. Wine production is dominated by the local *coopérative*.

THE DORDOGNE RIVER, SEEN FROM THE TOWN OF DOMME

Southwest France includes appellations lying just east of Bordeaux, such as *Côtes de Duras* and *Bergerac* on the Dordogne, as well as areas of vineyard close to the Spanish border.

RED Well-colored wines of good flavor and medium body. They are not dissimilar to a lightweight Madiran, although they could become deeper, darker, and more expressive if the *coopérative* were prepared to reduce yields and produce better-quality wine.

☼ At least 70% Tannat, plus Cabernet Sauvignon, Cabernet Franc, Merlot, and Fer (which must constitute one-third of all the grapes other than the Tannat)

🕒 2–5 years

WHITE Fruity, dry wines with a tangy finish.

☼ At least 50% Arrufiac, Clairette, and Courbu, plus Gros Manseng and Petit Manseng

🕒 1–2 years

ROSÉ Dry wines with a clean, fruity flavor.

☼ At least 70% Tannat, plus Cabernet Sauvignon, Cabernet Franc, Merlot, and Fer (which must constitute one-third of all grapes other than the Tannat)

🕒 1–3 years

✓ *Producteurs Plaimont • Château Saint-Go* (Élevé en Fûts de Chêne)

FLOC DE GASCOGNE AOC

This *vin de liqueur* is produced in the Armagnac region.

WHITE Few manage to rise above the typically dull, oxidative *vin de liqueur* style that goes *rancio* with age.

☼ A minimum of 70% Colombard, Gros Manseng, and Ugni Blanc, plus Baroque, Folle Blanche, Petit Manseng, Mauzac, Sauvignon Blanc, and Sémillon

🕒 Upon opening

ROSÉ Few manage to rise above the typically dull, oxidative *vin de liqueur* style that goes *rancio* with age.

☼ A minimum of 50% Tannat, plus Cabernet Franc, Cabernet Sauvignon, Fer Servadou, Malbec, and Merlot

🕒 Upon opening

✓ *C. V. du Muscat de Lunel* (Prestige) • *Saint Pierre de Paradis* (Vendange d'Automne)

GAILLAC AOC

These vineyards, among the oldest in France, have only recently begun to make their mark. In order to emphasize local styles, there has been a concerted move away from classic grapes toward different native varieties. Gaillac Liqueureux and Gaillac Moelleux are no longer permitted appellations, but such wines are still available under the Gaillac Doux appellation. The Gaillac Sec Perlé denomination for slightly *pétillant* dry white wines has been dropped (although Gaillac Perlé still seems to flourish), and the sparkling wines of Gaillac are now segregated by their method of production (see Gaillac Mousseux AOC and Gaillac Mousseux Méthode Gaillaçoise AOC). The required *encépagement* has always been confusingly complex, but became even more so with the new regulations introduced in 2001.

RED Wines made mostly in the fresh, soft but light *macération carbonique* style. They may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

☼ At least 60% Duras, Fer, Gamay, and Syrah, of which Duras, Fer, and Syrah (or any two of these) must represent at least 30% of the entire blend; furthermore, there must be at least 10% each of Duras and Fer, plus

optional Cabernet Franc, Cabernet Sauvignon, and Merlot

🕒 1–3 years

WHITE Dry and fresh, these wines may be sold as *primeur* or *nouveau* as from the third Thursday of November following the harvest.

☼ At least 15% of Len de l'El or Sauvignon Blanc (or a blend of the two), plus Mauzac, Mauzac Rosé, Muscadelle, Ondenc, and Sémillon

🕒 Upon purchase

ROSÉ Easy to drink, light, fresh, and dry rosés.

☼ At least 60% Duras, Fer, Gamay, and Syrah, of which Duras, Fer, and Syrah (or any two of these) must represent at least 30% of the entire blend; furthermore, there must be at least 10% each of Duras and Fer, plus optional Cabernet Franc, Cabernet Sauvignon, and Merlot

🕒 1–2 years

✓ *Causse Marines* (Délires d'Automne) • *Manoir de l'Émeille* (Tradition) • *d'Escausses* (La Vigne l'Oubli) • *de Gineste* (Aurore, Grand Cuvée) • *de Larroque* (Privilège d'Autan) • *Château de Lastours* • *Château Lecusse* (Spéciale) • *Château Montels* • *Paysels* (Tradition) • *Robert Plageoles* • *René Rieux* (Concerto) • *des Terrisses* (Saint-Laurent) • *Château La Tour Plantade*

GAILLAC DOUX AOC

These are naturally sweet wines that must contain a minimum of 70 grams per liter of residual sugar.

WHITE Sweet to very sweet wines of ripe-peach, or richer, character.

☼ At least 15% (each or in total) of Len de l'El and Sauvignon Blanc, plus Mauzac, Mauzac Rosé, Muscadelle, Ondenc, and Sémillon

🕒 5–15 years

✓ *Barreau* (Caprice d'Automne) • *Château Palvie* (Les Secrets) • *Peyres-Combe* (Flaveurs d'Automne) • *Robert Plageoles* • *Rotier* (Renaissance) • *Sanbatan* (Muscadelle) • *de Vayssette* (Maxime) • *Les Vergnades*

GAILLAC MOUSSEUX AOC

This is a sparkling wine made by the traditional method. Expect to see a phasing out of the term *mousseux* on these and other Gaillac sparkling-wine appellations.

SPARKLING WHITE These wines are fresh and fragrant with a fine sparkle.

☼ At least 15% (each or in total) of Len de l'El and Sauvignon Blanc, plus Mauzac, Mauzac Rosé, Muscadelle, Ondenc, and Sémillon

🕒 1–3 years

SPARKLING ROSÉ Attractive, fresh, fruity wines.

☼ At least 60% Duras, Fer, Gamay, and Syrah, of which Duras, Fer, and Syrah (or any two of these) must represent at least 30% of the entire blend; furthermore, there must be at least 10% each of Duras and Fer, plus optional Cabernet Franc, Cabernet Sauvignon, and Merlot

🕒 1–2 years

✓ *Manoir de l'Émeille* • *René Rieux*

GAILLAC MOUSSEUX MÉTHODE GAILLAÇOISE AOC

Sparkling wines made by the *méthode rurale*, involving just one fermentation, with no addition of a *liqueur de tirage*. The wine is

bottled before the fermentation stops and no *liqueur d'expédition* is added prior to distribution, thus any residual sweetness is entirely from the original grape sugars. Styles include *brut* and *demi-sec*. A *doux* is also available, but is governed by stricter rules and is given its own appellation (see below).

SPARKLING WHITE These very fresh, fragrant, and grapey wines have a fine natural sparkle.

☼ At least 15% (each or in total) of Len de l'El and Sauvignon Blanc, plus Mauzac, Mauzac Rosé, Muscadelle, Ondenc, and Sémillon

🕒 1–3 years

SPARKLING ROSÉ These wines are attractive, fresh, and deliciously fruity.

☼ At least 60% Duras, plus Fer, Gamay, Syrah, Cabernet Sauvignon, Cabernet Franc, Merlot

🕒 1–2 years

GAILLAC MOUSSEUX MÉTHODE GAILLAÇOISE DOUX AOC

This is a sparkling wine made by the *méthode rurale* (see above) from riper grapes (minimum of 11 percent) than those of any other Gaillac sparkling-wine appellation, and with at least 45 grams per liter of residual natural sugar.

SPARKLING WHITE Not as exotic as, say, Clairette de Die Méthode Dioise Ancestrale, but delicious, grapey, and fragrant all the same.

☼ At least 15% (each or in total) of Len de l'El and Sauvignon Blanc, plus Mauzac, Mauzac Rosé, Muscadelle, Ondenc, and Sémillon

🕒 1–3 years

SPARKLING ROSÉ I have never come across a Gaillac Doux rosé, but if the white is anything to go by, it would be an interesting wine.

☼ At least 60% Duras, Fer, Gamay, and Syrah, of which Duras, Fer, and Syrah (or any two of these) must represent at least 30% of the entire blend; furthermore, there must be at least 10% Cabernet Franc, Cabernet Sauvignon, and Merlot

🕒 1–2 years

GAILLAC PREMIÈRES CÔTES AOC

These are dry white wines that come from 11 communes. The grapes must be riper than for ordinary Gaillac AOC and the wine must conform to the technical requirements of Gaillac Doux in all but sweetness.

✓ *Robert Plageoles* • *Château de Salettes*

HAUT-MONTRAVEL AOC

This wine must have a minimum residual sugar of 8 grams and a maximum of 54 grams per liter to meet the requirements of the appellation. Any red wines produced here are sold as Bergerac AOC.

WHITE Fat, fruity, and *moelleux* wines.

☼ Sémillon, Sauvignon Blanc, Muscadelle

🕒 3–8 years

✓ *Château Puy-Servain*

IROULÉGUY AOC

The local *coopérative* dominates this Basque appellation, which makes some of the most distinctive red wines in Southwest France. Surprisingly, however, the production of rosé outweighs that of red.

RED These deep, dark, tannic wines have a rich and mellow flavor, with a distinctive earthy-and-spicy aftertaste.

☞ Tannat, plus at least 50% (in total) of Cabernet Sauvignon and Cabernet Franc

🕒 4–10 years

WHITE These modest dry whites are the least interesting of this appellation.

☞ Courbu, Manseng

ROSÉ This salmon-colored, very fruity dry rosé is best drunk very young and fresh.

☞ Tannat plus at least 50% (in total) of Cabernet Sauvignon and Cabernet Franc

🕒 Upon purchase

✓ *Arretxa* • *Etxegaraya*

JURANÇON AOC

The sweet version of this wine from the Pyrénées-Atlantiques was used at Henri de Navarre's christening in 1553 and is often sold today as *vendanges tardives* or *moelleux*. Most production is, however, tart, dry, and nervy, and sold as Jurançon Sec (see below).

WHITE The best wines have a fine, spicy, and tangy bouquet and flavor, and can hint of pineapples and peaches, candied peel, and cinnamon.

☞ Petit Manseng, Gros Manseng, Courbu, plus up to 15% (in total) of Camaralet and Lauzet

🕒 5–20 years

✓ *Bru-Baché* • *Caubapé* • *Clos Lapeyre* • *Primo Palatum* • *Clos Thou* • *Clos Uroulat*

JURANÇON SEC AOC

This wine has to meet the same requirements as Jurançon AOC, but less residual sugar is allowed, and the grapes may be less ripe. It is best drunk young. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

WHITE If any wine in the world habitually has a certain nervousness, it has to be Jurançon Sec.

Most lack any individual character that would make them stand out from other dry whites, and none has the complexity and richness of Jurançon's late-harvest wines, but the best can have an intensity that hints of grapefruit.

☞ Petit Manseng, Gros Manseng, Courbu, plus up to 15% (in total) of Camaralet and Lauzet

🕒 2–5 years

✓ *Capdevielle* (Brise Océane) • *Caubape* (Sève d'Automne) • *du Cinqau* • *C. V. de Jurançon* (Grain Sauvage) • *Lapeyre* • *Larredya* • *Nigri* • *Primo Palatum*

MADIRAN AOC

One of the most individually expressive appellations in Southwest France, but there are as many disappointments as successes. Many domaines are trying new oak, and there is a trend toward more Cabernet Franc.

RED You literally have to chew your way through the tannin in these dark, rich, and meaty wines when young.

☞ At least 40% Tannat, plus Cabernet Franc, Cabernet Sauvignon, and Fer

🕒 5–15 years

✓ *Berthoumieu* • *Château Bouscassé* • *Château Labranche-Laffont* • *Château Laffitte-Teston* • *Laffont* • *Château Montus* • *Plaimont* (Arte Benedicte) • *Primo Palatum* • *Château de Viela*

MARCILLAC AOC

This rarely encountered wine from the northeastern borderlands was upgraded from Vin de Marcillac VDQS to Marcillac AOC in 1990, when greater focus was placed on the local Fer and Gamay—Jurançon Noir, Mouyssaguès, and Valdiguié were disallowed.

RED Rough and rustic when young, these wines soften with age.

☞ At least 90% Fer, plus Cabernet Franc, Cabernet Sauvignon, and Merlot

🕒 3–6 years

ROSÉ Full, ripe, and attractive dry rosés that have expressed more individual style since the minimum Fer content has tripled.

☞ At least 90% Fer, plus Cabernet Franc, Cabernet Sauvignon, and Merlot

🕒 1–3 years

✓ *C. V. de Ladrecht*

MONBAZILLAC AOC

An excellent value Sauternes-style appellation at the heart of Bergerac, these wines date back to 1080, when vines were planted by the abbey of St.-Martin on a hill called Mont Bazailhac.

WHITE These intensely sweet, rich wines are of a very high quality.

☞ Sémillon, Sauvignon Blanc, Muscadelle

🕒 7–20 years

✓ *de l'Ancienne Cure* (Abbaye, L'Extase) • *Château Caillavel* • *Château Fonmorgues* • *Grande Maison* • (Cuvée du Château) • *Château Tirecul La Gravière*

MONTRAVEL AOC

The largest of the three Montravel appellations and the only one where the white wine can (and must) be dry.

RED Elegant, ruby-colored reds that are very much in the Bergerac style. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☞ A minimum of 50% Merlot, plus Cabernet Franc, Cabernet Sauvignon, and Malbec

🕒 2–8 years

WHITE Dry, crisp, and aromatic Sauvignon-dominated wines. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☞ A minimum 25% each of Sémillon and Sauvignon Blanc, plus optional Muscadelle (Chenin Blanc, Ondenc, and Ugni Blanc are no longer allowed)

🕒 1–2 years

✓ *Château du Bloy* (Le Bloy) • *Château Laulerie* • *Moulin Caresse* (Cent pour 100) • *Château Pagnon* • *Château Pique-Sègue* • *Portes du Bondieu* • *Château Puy-Servain* (Marjolaine)

PACHERENC DU VIC-BILH AOC

New oak is being increasingly used in this white-only appellation, which covers the same area as Madiran.

WHITE Exotic floral aromas, a fruit salad of flavors, Pacherenc du Vic-Bilh is made in off-dry (sold as *sec*), medium-sweet (*moelleux*), and sweet (*doux*) styles.

☞ A minimum of 30% Arrufiac, which with Courbu and Petit Manseng must represent at least 60% of the entire blend, plus Gros

Manseng and a maximum of 10% in total of Sauvignon Blanc and Sémillon

🕒 3–7 years

✓ *Château Bouscassé • Berthoumiou • Château Labranche-Laffont • Château de Viela*

PÉCHARMANT AOC

These are the finest red wines of Bergerac; all but one (Saint-Saveur) of the communes in this appellation are also within the Rosette AOC.

RED All the characteristics of Bergerac, but with a greater concentration of color, flavor, and tannin.

🍷 Cabernet Franc, Cabernet Sauvignon, Merlot, Malbec

🕒 4–12 years

✓ *Château Beauportail • Château de Biran (Prestige de Bacchus) • Château Champarel • Château Hugon (Elevé en Fûts de Chêne)*

ROSETTE AOC

A white-wine-only appellation. The wines must contain 8 to 54 grams per liter of residual sugar. Any red wines are sold as Bergerac AOC.

WHITE Soft and delicately fruity with a sweet, waxy flavor.

🍷 Sémillon, Sauvignon Blanc, Muscadelle

🕒 4–8 years

✓ *Château de Contancie*

SAUSSIGNAC AOC

A sweet-wine appellation; it must have a minimum of 18 grams per liter of residual sugar. Any red wines are sold as Bergerac AOC.

WHITE The best can be very rich, fat, and full.

🍷 Sémillon, Sauvignon Blanc, Muscadelle, Chenin Blanc

🕒 5–15 years

✓ *Château Le Chabrier • Château Eyssards (Flavie) • Château Grinou (Elevé en Fûts de Chêne) • Château La Maurigine (La Maurigine) • Château Miaudoux*

TURSAN VDQS

The reds rely on the Tannat, the same primary grape used in Madiran; the whites are essentially Baroque, a variety more at home in Tursan. There was a change of *encépagement* as from 2003.

RED Rich and chewy, or finer-flavored and aromatic, depending on the dominant grape.

🍷 A minimum of 30% Tannat and 30% Cabernet Franc, plus (until 2010) a maximum of 10% Cabernet Sauvignon and Fer

MORE GREEN WINES

In addition to the producers recommended in this directory that are either biodynamic or organic, there are also the following. No negative inference of quality should be taken from the fact that they are not featured among my recommended producers. There are a number that have been recommended in other editions, and still make some fine wines, but have been culled out to make room for others.

Biodynamic

de Beaulande (Nastringues), *de Lafage* (Montpezat de Quercy), *Château Laroque* (St. Antoine de Breuilh), *de Souch* (Jurançon), *Château Vent d'Autun* (Saint Matre)

Organic

Château Haut Pontet (Vélines), *Château Larchère* (Pomport), *de Matens* (Gaillac), *du Petit Malromé* (St. Jean de Duras), *Château Richard* (Monestier),

Clos Julien (St. Antoine de Brieuil), *Château du Seigneur* (Bergerac), *Tinou* (Lasseube), *de La Tronque* (Castelnau de Montmirail), *Domaine des Vignals* (Cestayrols), *Château Le Clou* (Pomport), *de Durand* (St. Jean de Duras), *de L'Antenet* (Puy L'Évêque), *Château le Barradis* (Monbazillac), *Baulandes* (Vélines), *Bois Moisset* (Montans), *Cailloux* (Pomport), *Pajot (Eauze)*, *Theulet Marsalet* (Monbazillac)

WHITE The *coopérative* traditionally makes a full-bodied white with a solid, somewhat rustic, rich flavor, but it is gradually being influenced by the growing reputation of the wine made under the relatively new Château de Bachen label, Baron de Bachen, which is far more aromatic and elegant.

🍷 A minimum of 30% Baroque, plus a maximum of 50% (in total) of Gros Manseng and Petit Manseng, of which Petit Manseng must not represent more than 20% of the entire blend; no more than 30% Sauvignon Blanc and 20% Chenin Blanc (Claverie, Raffiat, Claret du Gers, and Clairette no longer allowed)

🕒 2–5 years

ROSÉ An unpretentious dry wine with good, juicy, fruit flavor.

🍷 A minimum of 50% Cabernet Franc and 10–30% Tannat, plus a maximum of 40% Cabernet Sauvignon and Fer

🕒 1–3 years

✓ *Michel Guérard* (Baron de Bachen) • *C. V. de Landais* (Haute Carte)

VINS D'ENTRAYGUES AND DU FEL VDQS

This area overlaps the Aveyron and Cantal *départements* in the northeast of the region, but only a tiny amount is made. The wines are rarely encountered and never exported.

RED Light, rustic wines that are best consumed locally because they need all the local ambience they can get.

🍷 Cabernet Franc, Cabernet Sauvignon, Fer, Gamay, Jurançon Noir, Merlot, Mouyssaguès, Négrette, Pinot Noir

🕒 1–2 years

WHITE Light, dry, and crisp wines for unpretentious quaffing.

🍷 Chenin Blanc, Mauzac

🕒 Upon purchase

ROSÉ Light, fresh, and dry rosés.

🍷 Cabernet Franc, Cabernet Sauvignon, Fer, Gamay, Jurançon Noir, Merlot, Mouyssaguès, Négrette, Pinot Noir

🕒 1–2 years

✓ *Jean-Marc Vigner*

VINS D'ESTAING VDQS

This area is contiguous with the southern tip of the above VDQS and production is even more minuscule.

RED These wines are light bodied, attractive, and fruity.

🍷 Fer, Gamay, Abouriou, Jurançon Noir, Merlot, Cabernet Franc, Cabernet Sauvignon, Mouyssaguès, Négrette, Pinot Noir, Duras, Castet

🕒 1–3 years

WHITE These are unpretentious, dry white wines with a crisp flavor and a rustic, tangy style.

🍷 Chenin Blanc, Roussellou, Mauzac

🕒 1–2 years

ROSÉ These pleasant dry wines are probably the most interesting in the appellation.

🍷 Fer, Gamay, Abouriou, Jurançon Noir, Merlot, Cabernet Franc, Cabernet Sauvignon, Mouyssaguès, Négrette, Pinot Noir, Duras, Castet

🕒 Upon purchase

✓ *C. V. d'Olt* (Prestige)

VINS DE LAVILLEDIEU VDQS

Situated south of Cahors, this VDQS is a northern extension of the Frontonnais, with vines growing on a *boulbènes* soil that is similar to that of Bordeaux's Entre-Deux-Mers district. Production is dominated by the local *coopérative*, and the wines are seldom seen outside the locality.

RED Nicely colored, medium-bodied wines with a fresh, fruity flavor.

🍷 A minimum of 80% (in total) of Mauzac, Mérille, Cinsault, Fuella, and Négrette (which must account for at least 35%), plus up to 20% (in total) of Syrah, Gamay, Jurançon Noir, Picpoul, Milgranet, and Fer

🕒 3–6 years

WHITE Dry, crisp, aromatic wines.

🍷 Mauzac, Sauvignon Blanc, Sémillon, Muscadelle, Colombar, Ondenc, Folle Blanche

🕒 1–3 years

✓ *C. V. de Lavilledieu du Temple*

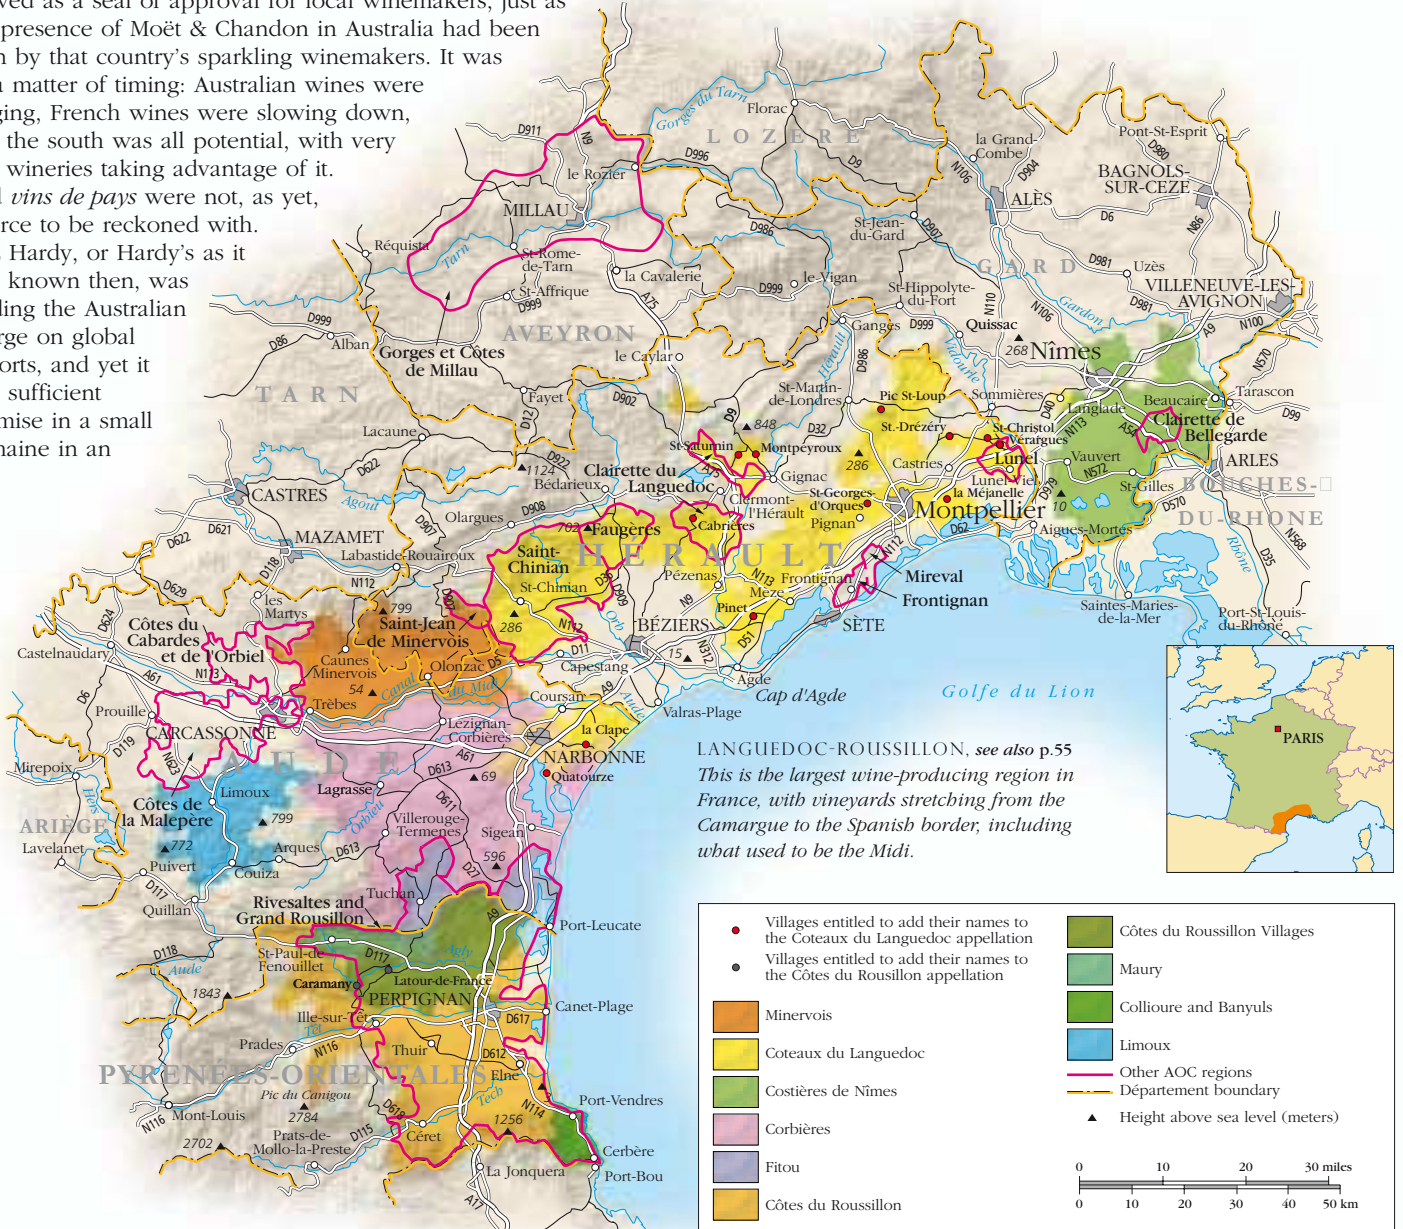

LANGUEDOC-ROUSSILLON

The 1990s saw an influx of Australian winemakers, who have since played a not insignificant role in the raising of standards; but the sale in 2003 of the Australian-owned *Domaine de la Baume* could signal a swing back to a more homegrown stimulus. *Domaine de la Baume* is not significant in terms of the total production of this region, but there is no denying that its purchase by BRL Hardy in 1990, at the beginning of Australia's inexorable success on export markets, gave local wine producers a psychological boost.

VINEYARDS AT BAGES
 The Mediterranean coastal vineyards of the Côte du Roussillon, around Perpignan, are reputed to be some of the hottest in France.

IN A STRANGE WAY, the presence of a top Australian group was viewed as a seal of approval for local winemakers, just as the presence of Moët & Chandon in Australia had been seen by that country's sparkling winemakers. It was all a matter of timing: Australian wines were surging, French wines were slowing down, and the south was all potential, with very few wineries taking advantage of it. And *vins de pays* were not, as yet, a force to be reckoned with. BRL Hardy, or Hardy's as it was known then, was leading the Australian charge on global exports, and yet it saw sufficient promise in a small domaine in an

unknown part of France to be sidetracked into purchasing it outright. The next few years saw the rise of *vins de pays*, particularly Vin de Pays d'Oc, including those of Domaine de la Baume, which became a commercial success on the UK market, against the tide for most other inexpensive French wines. During this time, there was an internationalization of grape varieties and wine styles in the south of France, and, barring some unfortunate experiments in the late 1970s and the 1980s, this development was far from regrettable.

Some French producers had started putting their own houses in order long before the BRL Hardy purchased Domaine de la Baume. Indeed, a number of domaines began bottling their own wines in the late 1970s, when the government's *vins de pays* program was encouraging quality-conscious growers to reduce yields. The problem was that there were never enough "quality-conscious" growers. But those who were formed a new generation of elite winemakers. They combined modern technology with the best traditional practices, including the use of some aging with new oak, to create exciting new wines in the early 1980s. As other growers observed the vastly increased prices that their pioneering neighbors were attracting, more of them switched from selling in bulk to domaine-bottling, and it was this potential that attracted the Australians.

It was thus the French who created the newfound pride in this region, but it was the Australians who grabbed the limelight, focusing international attention on the fabulous potential. It is almost possible to give consumers an iron-clad guarantee that if they buy ultrapremium *cuvées* from Languedoc-Roussillon they will not only be delighted with the wines, but they will also be

RECENT LANGUEDOC-ROUSSILLON VINTAGES

2003 Higher-altitude appellations, such as Pic-St.-Loup, have fared best, but it will be a mishmash of good, bad, and ugly elsewhere, with a very small scattering of stunning reds.

2002 The year of the floods, with only those areas that escaped (essentially western and southern extremities, and higher-altitude vineyards) managing to produce a decent quality.

2001 The best year all around since 1998, with excellent quality achieved in all styles.

2000 A good, but not great, year in which Roussillon generally fared better than Languedoc.

1999 An average year except for Corbières and Minervois, which excelled and in some cases produced wines of the decade.

cheaper than and far superior to medium-priced wines bearing the most famous French appellations.

When BRL Hardy sold Domaine de la Baume to Les Grands Chais in 2003, the Australians left this wine region in a far better commercial position than they found it 13 years earlier; so the French in general, and Les Grands Chais in particular, have no excuse if they fail to take Languedoc-Roussillon to the next level of success. That will require a twin philosophy that does not restrict the planting of classic grapes and yet encourages a resurgence of the most interesting local varieties.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

A crescent of vineyards situated in southern France between the Rhône to the east and the Pyrenees to the southwest.

CLIMATE

The Mediterranean-influenced climate is generally well suited to the cultivation of the vine, although it is subject to occasional stormy weather. Two winds dominate: the cold and parching Mistral, which blows down from the heights of the Alpine glaciers, and the wet and warm Marin, which comes in from the sea and can cause rot at harvest time. There are many microclimates in this collection of isolated vine-growing areas.

ASPECT

Famous for its unending tracts of flat, *vin ordinaire* vineyards that stretch across the vast plains; the best sites of Languedoc-Roussillon, however, mostly occupy south-, southeast-, and east-facing *garrigues* and hillsides, or nestle beneath protective overhanging cliffs.

SOIL

In general terms, the plains and valleys have rich alluvial soils, while the hillsides are schist or limestone and the *garrigues*, or former moorlands, are comprised of stony, carbonaceous soils over fissured limestone. However, specific situations vary enormously.

VITICULTURE AND VINIFICATION

This remains the great *vin ordinaire* region of France, where everything is mechanized and the vines of the plain are farmed like wheat or corn. There is a trend toward developing single-domaine vineyards that have potentially expressive *terroirs*, growing classic varieties and combining various traditional methods with modern techniques. Limoux still practices the ancient *méthode rurale*—in Blanquette Méthode Ancestrale AOC (*see below*)—although the majority of the wines are pure traditional method and sold under the new *crémant* appellation.

GRAPE VARIETIES

Aspiran Noir, Aspiran Gris, Aubun (*syn.* Counoise), Bourboulenc (known in some areas as Malvoisie or Tourbat), Cabernet Franc, Cabernet Sauvignon, Carignan, Carignan Blanc, Cinsault, Clairette, Duras, Fer, Grenache, Grenache Blanc, Grenache Gris, Lladoner Pelut, Listan Negra (the black version of Spain's Palomino), Malbec, Macabéo, Marsanne, Merlot, Mourvèdre, Muscat d'Alexandrie, Muscat Blanc à Petits Grains, Muscat Doré de Frontignan, Muscat Rosé à Petits Grains, Négrette, Oeillade, Picpoul, Picpoul Noir, Roussanne, Syrah, Terret, Terret Noir, Ugni Blanc, Vermentino (*syn.* Rolle).

THE APPELLATIONS OF LANGUEDOC-ROUSSILLON

BANYULS AOC

The most southerly appellation in France, the vineyards of this *vin doux naturel* are literally a stone's throw from those of Spain. The vines are grown on precipitous slopes of schist where man and mule have great difficulty in maintaining a foothold, mechanization is out of the question, yields are extremely low, and ripeness very high. You will often see "rimage" on labels; this word is derived from the Catalan *rime*, or "grape," and refers to the vintage.

RED This is the deepest and darkest of all VDNs. A rich, sweet, red Banyuls (without too much barrel-age) has a chocolaty, bottled-

fruitiness, which is the nearest France gets to the great wines of Portugal's Douro region. It lacks the fire of a great port, but has its own immense charm. After 15 to 20 years in bottle a great Banyuls develops a curious but wonderful complexity that falls somewhere between the porty-plummy, dried-fruit spice of a mature vintage port and the coffee-caramel, nutty-raisiny smoothness of a fine old tawny.

🕒 10–40 years

WHITE/ROSÉ/TAWNY Like all VDNs that may be made in red, white, and rosé style, they can all turn tawny with time, particularly "rancio" wines.

Note In the following entries, a wine described as a *vin doux naturel* (or VDN) is made from very ripe grapes and fortified with pure grape spirit after its fermentation has reached 5 or 6 percent. It has the natural sweetness of the grape. To be labeled "Rancio" a VDN must be stored in oak casks "according to local custom," which often means exposing the barrels to direct sunlight for a minimum of two years. This imparts the distinctive *rancio* flavor that is so prized in Roussillon. Depending on the color of the original wine, the wine technique used, and how long it has been aged, the style of the wine produced varies; it can be red, white, rosé, or tawny.

☞ All wines: a minimum of 50% Grenache, plus Grenache Gris, Grenache Blanc, Macabéo, Tourbat, Muscat Blanc à Petits Grains, Muscat d'Alexandrie, and a maximum 10% (in total) of Carignan, Cinsault, and Syrah

🕒 10–20 years

✓ *Le Dominican* (Hanicotte) • *C. V. l'Étoile* (Extra Vieux) • *Du Mas Blanc* • *De la Tour Vieille* • *Du Traginer* Ⓞ (Rimage Mis Tardive)

BANYULS GRAND CRU AOC

The requirements are the same as for Banyuls AOC, but a minimum of 75 percent Grenache is required. The grapes must be destemmed and macerated for a minimum of five days and the wine matured in oak for at least 30 months.

The wines are similar in character to those of the basic, although not at all ordinary, Banyuls appellation, but in terms of classic port styles, they veer more toward the tawny than vintage.

✓ *L'Abbé Rous* (Christian Reynal) • *L'Étoile* (Réserve) • *Cellier des Templiers*

BANYULS GRAND CRU "RANCIO" AOC

See Banyuls Grand Cru AOC

BANYULS "RANCIO" AOC

See Banyuls AOC

BLANQUETTE DE LIMOUX AOC

Although this always has been a surprisingly good traditional method wine for such sunny southern vineyards, the best Blanquette de Limoux have improved by leaps and bounds over the past decade, moving away from a somewhat rustic bubbly to a much finer style, although not to the degree of finesse possible in a Crémant de Limoux. Some may regret its loss of individuality (more so for the Crémant appellation) and this is to a certain extent a true loss, but Limoux must adopt a more refined style if it is to compete in the international premium sparkling-wine market. Although we should not overstate the case, the best of these wines still retain a sufficiently distinctive style to stand out in any blind tasting. This has been assured by the Mauzac component, which rose from optional to a minimum of 90 percent when the Crémant appellation was introduced.

SPARKLING WHITE These wines used to have the distinctive aroma of fresh-cut grass, but are now developing finer, more flowery, autolytic aromas.

☞ Mauzac, Chardonnay, Chenin Blanc

🕒 1–3 years (up to 12 for vintages)

✓ *Antech* (Flascon des Maîtres) • *Robert* (Dame Robert, Maître Blanquetiers) • *Sieur d'Arques* (Aimery Princesse)

BLANQUETTE MÉTHODE ANCESTRALE AOC

Formerly called Vin de Blanquette, but still produced by the ancient *méthode rurale*, this wine was apparently invented by the monks at the abbey of St.-Hilaire in 1531.

SPARKLING WHITE These succulently sweet sparkling wines are a hedonist's dream and should be far more commercially available. The ancient *méthode rurale* should be perfected so that prestige *cuvées* can be sold at a premium,

allowing Limoux to capitalize on its historical value and individual wines' reputation.

☞ Mauzac

✓ *Sieur d'Arques* (Dame d'Arques)

CABARDÈS AOC

An obscure appellation north of Carcassonne, these wines were once sold as Côtes du Cabardès et de l'Orbiel VDQS, but this hardly tripped off the tongue, thus the shortened form was in common usage long before the appellation was promoted to full AOC status in 1999, when the *encépagement* changed.

RED The best wines have elegant fruit and a leaner, more Bordeaux-like balance than most of the warmer, spicy-ripe southern French reds.

☞ At least 40% Grenache and Syrah, plus a minimum of 40% Cabernet Franc, Cabernet Sauvignon, and Merlot (Aubun and Carignan are no longer allowed)

🕒 3–8 years

ROSÉ A rich, fruity, well-colored rosé.

☞ At least 40% Grenache and Syrah, plus a minimum of 40% Cabernet Franc, Cabernet Sauvignon, and Merlot (Aubun and Carignan are no longer allowed)

🕒 Between 2–3 years

✓ *Château de La Bastide* (L'Esprit) • *Claude et Michelle Carayol* (Cabrol Vent d'Est) • *Château de Pennautier* (L'Esprit) • *Château Ventenac* (Le Carla)

CLAIRETTE DE BELLEGARDE AOC

When compared with all the best *vins de pays*, this appellation, which is dedicated to the lowly, intrinsically flabby Clairette grape, does not deserve to be a VDQS, let alone an AOC.

WHITE Unimpressive dry white wines.

☞ Clairette

🕒 Before Christmas of the year of production

CLAIRETTE DU LANGUEDOC AOC

The appellation of Clairette du Languedoc covers three basic wine types. These are natural, fortified, and *rancio*. The *rancio* must be aged in sealed casks for at least three years, and can be produced in both natural and fortified styles.

WHITE The natural wine is fuller and richer than Bellegarde, but has more alcohol and less sweetness in its *rancio* form. The fortified version is off-dry to medium-sweet, with a resinous flavor that is stronger in *rancio* character than the natural white.

☞ Clairette

🕒 1–3 years for naturally fermented wines, 8–20 years for fortified wines and *rancio* wines

✓ *Saint Rome* (Moelleux)

CLAIRETTE DU LANGUEDOC "RANCIO" AOC

See Clairette du Languedoc AOC

COLLIOURE AOC

An obscure but exciting appellation for unfortified wines from normally harvested grapes grown in Banyuls, the eponymous wine of which is made from only the ripest, late-picked (but not botrytized) grapes. The *encépagement* changed in 2003.

RED These deep, dark, and powerful wines have a full and concentrated fruit flavor, with a soft, spicy aftertaste.

☞ At least 60% (in total) of Grenache, Mourvèdre, and Syrah (no variety may exceed 90%), plus Cinsault and no more than 30% Carignan (Grenache Gris is no longer allowed)

🕒 2–10 years

WHITE These wines had to be sold as Vin de Pays de la Côte Vermeille until 2002, when white Collioure was first allowed.

☞ Minimum of 70% in total of Grenache Blanc and/or Grenache Gris, plus a maximum of 30% in total (and individually a maximum of 15%) of Malvoisie, Macabeo, Marsanne, Rousanne, and Velmentino

🕒 1–3 years

ROSÉ I have not encountered these wines.

☞ At least 60% (in total) of Grenache, Mourvèdre, and Syrah (no variety may exceed 90%), plus Cinsault and no more than 30% Carignan (Grenache Gris is no longer allowed)

🕒 Upon purchase

✓ *Château des Abelles* • *Du Mas Blanc* (Les Junquets) • *Mas Cornet* • *Celliers des Templiers* (Abbaye de Valbonne) • *De la Tour Vieille* (Puig Oriol) • *Du Traginer* (Octobre)

CORBIÈRES AOC

When this appellation was elevated to full AOC status in December 1985, its area of production was practically halved to its current realm of 57,000 acres (23,000 hectares). The top estates often use *macération carbonique*, followed by 12 months or so in new oak and the results can be stunning. The only problem appears to be the difficulty of projecting any characteristic style, especially as there is such a great diversity of *terroirs* in the appellation.

This has led to the unofficial formation of 11 internal zones: Boutenac (central-north of Corbières, Mourvèdre apparently does well); Durban (wedged between the two hilly halves of Fitou, this zone is cut off from any Mediterranean influence); Fontfroide (extending from the northern tip of Durban to the western outskirts of Narbonne, this zone has a very low rainfall and is well suited to Mourvèdre); Lagrasse (protected limestone valley vineyards immediately west of Boutenac); Lézignan (a low plateau of gravelly vineyards in the most northerly zone of Corbières); Montagne d'Alaric (northerly zone just west of Lézignan, with vines growing on well-drained slopes of gravel over limestone); Quéribus (most southerly zone, with vineyards on high, stony slopes); St.-Victor (the very heart of Corbières); Serviès (the northwestern perimeter, the wettest zone, with calcareous-clay soils particularly well suited to Syrah); Sigean (the coastal strip of Corbières,

where Syrah performs best); Termenès (the western perimeter, between Serviès and Quéribus, with the highest vineyards in the appellation). The *encépagement* changed in 2003.

RED These wines have an excellent color, a full, spicy-fruity nose, and a creamy-clean, soft palate that often hints of cherries, raspberries, and vanilla.

🍷 A minimum of 50% of Grenache, Lladoner Pelut, Mourvèdre, and Syrah, plus Carignan, Picpoul Noir, Terret, and a maximum of 20% Cinsault (Macabéo and Bourboulenc are no longer allowed)

🕒 2–5 years (3–8 years in exceptional cases)

WHITE Soft, almost clinically clean, dry wines that have acquired a more aromatic character in recent vintages—Château Meunier St.-Louis is probably the best example—but many of the wines should be more expressive. There have been some successful experiments with oak fermentation. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

🍷 Bourboulenc, Grenache Blanc, Macabéo, Marsanne, Roussanne, and Vermentino, plus a maximum of 10% Clairette, Muscat Blanc à Petit Grains, Picpoul, and Terret

🕒 1–3 years

ROSÉ The best of these dry wines have an attractive color and a pleasant, floral aroma, but are nothing special.

🍷 A minimum of 50% of Grenache, Lladoner Pelut, Mourvèdre, and Syrah, plus Carignan, Picpoul Noir, Terret Noir, a maximum of 20% Cinsault, and no more than 10% Bourboulenc, Grenache Blanc, Macabéo, Marsanne, Roussanne, and Vermentino, plus a maximum of 10% Clairette, Muscat Blanc à Petit Grains, Picpoul, and Terret

🕒 1–3 years

✓ *Clos de L'Anbel* • *Des Chandelles* • *Clos Canos* (Les Cocobirous) • *Desmoisses* (Blanc de Blancs) • *C. V. de Gruissan* (Elevé en Fûts de Chêne) • *Château de Mansenoble* (Marie-Annick, Réserve) • *C. V. du Mont Ténarel d'Octaviana* (Sextant) • *Château de Romilbac* (Privilage) • *Rouire-Séjour* (Vieilles Vignes) • *Château la Voultre-Gaspars* (Romain Pauc)

COSTIÈRES DE NÎMES AOC

Formerly a VDQS called Costières du Gard, these wines have never been special, but most have been better than many a lackluster wine from far more famous appellations, and in this respect Costières de Nîmes well deserved its promotion to AOC status in 1986. But since then the grape varieties permitted for all three styles—red, white, and rosé—have altered so radically that you have to wonder why they bother to have any controls whatsoever.

RED Simple, light, fruity wines are the norm, yet the best are round, aromatic, and spicy.

🍷 A maximum of 40% (each) Carignan and

Cinsault, a minimum of 25% Grenache, and at least 20% (in total or each) of Mourvèdre and Syrah

🕒 2–3 years (average wines), 3–8 years (better *cuvées*)

WHITE Fresh, soft, but uninspiring. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

🍷 Bourboulenc, Clairette, Grenache Blanc (maximum 30%), Ugni Blanc, plus Macabéo, Marsanne, Roussanne, and Vermentino

🕒 1–2 years

ROSÉ Good-value dry wine with a delightful color and ripe fruit. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

🍷 A maximum of 40% (each) of Carignan and Cinsault, a minimum of 25% Grenache, at least 20% (in total or each) of Mourvèdre and Syrah, plus up to 10% (in total) of Clairette, Grenache Blanc, Bourboulenc, Ugni Blanc, Marsanne, Roussanne, Macabéo, and Rolle

🕒 Within 1–2 years

✓ *Château Amphoux* (Les Galion des Crêtes Elevé en Fûts de Chêne) • *Barbe-Caillette* (Haut Jovis) • *Château Grande Cassagne* • *Château Lamargue* (Aegidiane) • *Château La Tour de Beraud* • *Château Tuilerie* (Carte Blanche) • *Château de Valcombe* (Garence)

COTEAUX DU LANGUEDOC AOC

This appellation consists of a collection of areas strung out across three *départements*, which gives rise to a variation in style, but the quality is remarkably consistent. After a decade of exciting red wine developments, it is now the time for white wines to buzz.

RED Full and honest red wines that make excellent everyday drinking. These wines may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

🍷 A minimum of 50% Grenache (itself limited to maximum of 40%), Lladoner Pelut, Mourvèdre, and Syrah (these last two must represent at least 10% of the entire blend), no more than 40% of either Carignan or Cinsault, plus a maximum of 10% (in total) Counoise, Grenache Gris, Terret, and Picpoul Noir

🕒 1–4 years

WHITE Getting better by the day, some wonderfully fresh, aromatic, dry white wines are being made by the appellation's younger *vignerons*, often with a little new oak and not infrequently from very old vines. These wines may be sold from December 1 of the vintage indicated without any mention of *primeur* or *nouveau*.

🍷 Bourboulenc, Clairette, Grenache Blanc, Picpoul, Marsanne, Roussanne, Vermentino, plus a maximum of 30% Macabéo, Terret Blanc, Carignan Blanc, and Ugni Blanc (growers may no longer plant Carignan Blanc, Macabéo, or Ugni Blanc)

ROSÉ These dry wines have good fruit and are far more enjoyable than many a pricey Provence rosé. These wines may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

🍷 A minimum of 50% Grenache (itself limited to maximum of 40%), Lladoner Pelut, Mourvèdre, and Syrah (these last two must

represent at least 10% of the entire blend), no more than 40% of either Carignan or Cinsault, plus a maximum of 10% (in total) Bourboulenc, Carignan Blanc, Clairette, Counoise, Grenache Blanc, Grenache Gris, Macabéo, Picpoul, Picpoul Noir, Marsanne, Roussanne, Terret Blanc, Terret Noir, Ugni Blanc, and Vermentino

COTEAUX DU LANGUEDOC (VILLAGE NAME) AOC

Except where stated, the wines bearing the names of the following villages conform to the requirements of Coteaux du Languedoc AOC.

LES ASPRES AOC

New red-wine-only appellation as from the 2004 vintage, Les Aspres must be produced from at least three varieties, with a minimum of 50 percent Grenache, Mourvèdre, and Syrah (the last two varieties must represent at least 20 percent of the entire blend), plus a maximum of 20 percent Carignan. Too early to provide a critique.

CABRIÈRES AOC

This is a single commune of steep schistous slopes in the center of the Clairette du Languedoc subappellation. Cabrières's production is dominated by the local *coopérative*. This village produces mostly rosé: a fine, firm, and racy wine that contains more Cinsault than other Languedoc rosés. A little red is also produced, and its *vin vermeil*, so-called because of its vivid vermilion color, is best known.

✓ *Du Temple* (Jacques de Molay)

LA CLAPE AOC

These red, white, and rosé wines come from vineyards on a limestone outcrop extending across five communes of the Aude *département* where the appellations of Coteaux du Languedoc and Corbières overlap. One of only two whites allowed under the Coteaux du Languedoc Villages appellation, it must be made from at least 60 percent Bourboulenc and Grenache Blanc. White La Clape can be full, fine, and golden or firm, with an attractive Mediterranean spice, and is generally more expensive than the red. But the latter is easily best, with its full, rich flavor and *vin de garde* style. The rosé is refreshing, light, and well worth seeking out.

✓ *Ferri Arnaud* (Romain Elevé en Fûts de Chêne) • *Château de la Négly* (La Falaise) •

Château Pech Redon • *Château Rouquette-sur-Mer* (Henry Lapiere)

COTEAUX DE LA MÉJANELLE AOC

See *La Méjanelle AOC*

COTEAUX DE ST.-CHRISTOL AOC

See *St.-Christol AOC*

COTEAUX DE VÉRARGUES AOC

See *Vérargues AOC*

GRÈS DE MONTPELLIER AOC

New red-wine-only appellation as from the 2002 vintage, Grès de Montpellier effectively encompasses the Coteaux du Languedoc Villages designations of St.-Christol, St.-Drézéry, St.-Georges-d'Orques, and Vérargues. It must be produced from at least 70 percent in total of Grenache (itself a minimum of 20 percent), Mourvèdre, Syrah, and up to 30 percent Carignan. Too early to provide a critique.

LA MÉJANELLE AOC

This appellation, which may also be sold as Coteaux de la Méjanelle, covers four communes in an area once part of the Rhône delta—river-smoothed boulders litter the vineyards.

Rosé is permitted, but La Méjanelle produces mostly red wines of a dark, rich, and well-structured *vin de garde* style. Château de Flaugergues consistently ranks as the best.

✓ *Château de Flaugergues* (Sommelière)

MONTPEYROUX AOC

This village is located on schistous hills next to St.-Saturnin, just north of the Clairette du Languedoc subappellation. The style of all but the best of these red and rosé wines is firm and somewhat rustic, but they are honest and pleasing, and those recommended below rank among the finest in Languedoc.

✓ *D'Aupilbac* • *Des Grecaux* (Héméra) • *Château de Lancyre* (Vieilles Vignes)

PICPOUL-DE-PINET AOC

Covering six communes, this white-wine-only appellation must be made, as the name suggests, from 100 percent Picpoul, which in Pinet produces a lively young wine that quickly tires, and thus must be drunk as young as possible. Gaujal is undoubtedly the best.

✓ *Château Font-Mars* • *C. V. de Florensac* (Ressac Prestige) • *Des Lauriers*

PIC-ST.-LOUP AOC

Red and rosé wines from 12 communes in Héralut and one in Gard, all in the vicinity of the *pic*, or peak, of Pic St.-Loup, including some high-altitude locations that must rank among the coolest vineyards in southern France. Permitted grape varieties for Pic-St.-Loup break from the norm—red wines must be made from a blend of at least two of the following: Grenache, Mourvèdre, and Syrah (no minimum or maximum restrictions), plus up to 10 percent Carignan and Cinsault (Counoise, Grenache Gris, Terret Noir, Picpoul Noir, and Lladoner Pelut are not allowed). The grapes for rosé are the same, except that Carignan is excluded and as much as 30 percent Cinsault may be used.

✓ *Devois du Claus* (Elevé en Fûts de Chêne) • *Foulaquier* (Les Chalades) • *Mas Gourdou* (Les Roches Blanches) • *De l'Hortus* •

Clos Marie • *Morties* (Que Sera Sera) • *Château Taurus-Montel* (Prestige Elevé en Fûts de Chêne)

QUATOURZE AOC

These sandy-soil vineyards just south of Narbonne overlap the Corbières appellation, but the wines, mostly red with some rosé, are rather stern and four-square, although the best can fill out and soften up with a few years in bottle. I have tasted nothing recommendable from this village since the last edition.

ST.-CHRISTOL AOC

Just north of Lunel, the calcareous-clay soil of St.-Christol produces ripe, spicy, well-balanced red and rosé wines that may also be sold as Coteaux de St.-Christol AOC. The local *coopérative* dominates production.

✓ *De la Coste* (Sélectionné) • *Guinand* (Elevé en Fûts de Chêne) • *Gabriel Martin* • *C. V. de St.-Christol*

ST.-DRÉZÉRY AOC

Both red and rosé wines are allowed under this village appellation north of Montpellier, but I have encountered only reds, and those have been of a very modest quality.

ST.-GEORGES-D'ORQUES AOC

Just west of Montpellier, the St.-Georges-d'Orques appellation extends over five communes and produces mostly red wines of very good color, plenty of fruit, and no little finesse for this unpretentious Languedoc appellation. A small quantity of rosé is also made, the best having a bouquet of dried flowers and some summer fruits on the palate.

✓ *Château de l'Engarran* (Quetton Saint-Georges) • *Château Icard* (Elevé en Fûts de Chêne) • *Les Quatre Pilas*

ST.-SATURNIN AOC

Named after the first bishop of Toulouse, these red and rosé wines come from three communes in the foothills of the Cévennes Mountains, just west of Montpeyroux, where deep-colored, fine, and full-flavored red wines are possible, if not always evident. Production is dominated by the *coopératives* of St.-Félix-de-Lodez and St.-Saturnin, the former specializing in a pleasant, slightly *pétillant* rosé, while the latter makes a *vin d'une nuit*, a light-bodied red that has been macerated for only one night.

✓ *Lucian* • *C. V. de St.-Saturnin*

VÉRARGUES AOC

Vérargues produces large quantities of quaffing, but otherwise unexceptional, red and rosé wines from nine communes, four of which also constitute the Muscat de Lunel appellation. They are also sold as Coteaux de Vérargues AOC.

✓ *Château du Grès-St.-Paul*

CÔTES DE LA MALEPÈRE VDQS

Between the Razès *coopérative* and Domaines Virginie (Des Bruyère), this is becoming one of the fastest-rising, value-for-money, superb-quality appellations in Languedoc-Roussillon. Should be made an AOC.

RED Well-colored wines of medium to full body, with elegant, deliciously spicy fruit.

☼ A minimum of 50% Merlot, at least 20% Cabernet Franc and Malbec, plus optional

Cabernet Sauvignon, Cinsault, Grenache, and Lladoner Pelut (Syrah is no longer allowed)

☼ 3–7 years

ROSÉ These attractive dry wines are totally different from the reds, due to the greater use and mellow effect of Grenache.

☼ A minimum of 70% Cabernet Franc, Cinsault, and Grenache, plus optional Cabernet Sauvignon, Malbec, Merlot, and Syrah (Lladoner Pelut is no longer allowed, and growers must not plant any more Syrah)

☼ 1–3 years

✓ *Château de Barthe* • *Girard* (Neri) • *Château Guilhem* (Prestige) • *Château Guiraud*

CÔTES DU CABARDÈS ET DE L'ORBIEL VDQS

See *Cabardès AOC*

CÔTES DU ROUSSILLON AOC

Situated south of Corbières, this large appellation began to shrug off the sort of reputation that typified the wines of the Midi long before Languedoc. Although the latter region tends to grab most of the headlines these days, Roussillon still offers a tremendous choice of richly flavored wines of exciting value and quality.

RED The best of these wines have a good color and a generosity of southern fruit, with the tiniest hint of vanilla and spice. They may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

☼ A blend of at least three of the following varieties, no two of which may exceed 90% of the total: Carignan (60% maximum), Cinsault, Grenache, Lladoner Pelut, Macabéo (10% maximum), Mourvèdre, and Syrah (there must be at least 20% of Syrah and/or Mourvèdre)

☼ 3–8 years

WHITE The best of these floral wines were fat, and all too often lacked acidity, prior to the change of *encépagement* in 2002. (So was 2003, but that was the vintage, rather than the varietal mix.) They may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

☼ At least 50% of Grenache, Macabéo, and Tourbat, plus a minimum of 20% Marsanne, Roussanne, and Vermentino (all varieties obligatory)

☼ 1–2 years

ROSÉ Fresh and attractive dry wines, these rosés may be sold as *primeur* or *nouveau* from the third Thursday of November following the harvest.

☼ A blend of at least three of the following varieties, no two of which may exceed 90% of the total: Carignan (60% maximum), Cinsault, Grenache, Lladoner Pelut, Macabéo (10% maximum), Mourvèdre, and Syrah (furthermore, there must be at least 20% of Syrah and/or Mourvèdre)

☼ 1–2 years

✓ *Alquier* (Des Filles) • *Mas Amiel* • *Mas des Baux* (Soleil) • *De Casenove* • *C. V. Catalans* • *Mas Crémat* (Dédicace, La Llose) • *Cazes Frères* ☼ • *Jaubert-Noury* (Château Planères) • *Joliette* ☼ (André Mercier) • *Lafage* (Le Vignon) • *Du Mas Rous* (Elevé en Fûts de Chêne) • *Mosse* (Tradition) •

C. V. de Passa (Mas d'en Badie) • *Piquemal* • *Primo Palatum* • *Pujols* (La Montadella) • *Château de Rey* (Les Galets Roulés) • *Sarda-Malet* • *Sol-Payre* (Scelerata Ame Noire)

CÔTES DU ROUSSILLON VILLAGES AOC

This appellation encompasses exclusively red wines from 25 villages along the Agly River and its hinterland, in the best area of the Côtes du Roussillon. The *encépagement* changed in 2003.

RED Just as good value as basic Côtes du Roussillon, the best can have even more character and finesse.

As a blend of at least three of the following varieties, no two of which may exceed 90% of the total: Carignan (60% maximum), Cinsault, Grenache, Lladoner Pelut, Macabéo (10% maximum), Mourvèdre, and Syrah (furthermore, there must be at least 30% of Syrah and/or Mourvèdre)

3–10 years

✓ *Château Aymerich* (Général Joseph Aymerich) • *Château de Caladroy* (La Juliane) • *Clot de L'Oum* (Saint Bart Vieilles Vignes) • *Clos des Fées* • *Força Real* (Hauts de Força) • *Gardiés* • *Haute Coutume* (Schistes de Trémoine) • *Mas de Lavaill* (Tradition) • *Château Planezes* (Elevé en Fûts de Chêne) • *Des Schistes* (Tradition)

CÔTES DU ROUSSILLON VILLAGES CARAMANY AOC

This supervalued red wine conforms to the requirements of Côtes du Roussillon Villages, except for a minimum Syrah content and the stipulation that the Carignan must be vinified by *macération carbonique*. (This strange criterion stems from the fact that, in 1964, the local *coopérative* claimed to be the first in France to use this technique.)

RED Simply the fullest, richest, and longest-living wines of Roussillon, despite the *macération carbonique*, which just goes to prove how useful that process can be when used to lift the natural fruit of a wine instead of dominating it with pear-drop aromas.

As for Côtes du Roussillon Villages except that there must be at least 25% Syrah

3–15 years

✓ *C. V. Catalans*

CÔTES DU ROUSSILLON VILLAGES LESQUERDE AOC

This relatively recent (1996) red wine district is restricted to vines growing in the villages of Lansac, Lesquerde, and Rasiguères. It conforms to the requirements of Côtes du Roussillon Villages, except for some of the *encépagement* and the stipulation that the Carignan must be vinified by *macération carbonique* (see Côtes du Roussillon Caramany for explanation).

RED Rich, well-colored wines that deserve their own village designation.

As for Côtes du Roussillon Villages except that Macabéo is not allowed, and there must be at least 30% Syrah and Mourvèdre

3–15 years

✓ *Semper* (Voluptas) • *C. V. de Tautavel* (Tradition)

CÔTES DU ROUSSILLON VILLAGES TAUTAVEL AOC

This relatively recent (1997) red wine district is restricted to vines growing in the villages of Tautavel and Vingrau. It conforms to the requirements of Côtes du Roussillon Villages, except for some of the *encépagement*, the stipulation that at least 50 percent of the Carignan content must be vinified by *macération carbonique* (see Côtes du Roussillon Caramany for explanation), and the fact that the wines may not be released for sale prior to October 1 following the year of harvest.

RED Rich, well-colored wines that deserve their own village designation.

As for Côtes du Roussillon Villages except that Macabéo is not allowed, and there must be at least 20% Grenache and Lladoner Pelut, and no more than 50% Carignan

3–15 years

✓ *Des Chênes* (La Carissa) • *Fontanel* (Prieuré Elevé en Fûts de Chêne)

CÔTES DU ROUSSILLON VILLAGES LATOUR-DE-FRANCE AOC

This is a fine-value red wine that conforms to the requirements of Côtes du Roussillon Villages. Virtually the entire production of Latour-de-France used to be sold to, and through, the national French wine-shop group Nicolas, which was a great advantage when this village obtained its own appellation, as its seemingly cheeky name was already known the length and breadth of the country.

RED Full in color and body, these fine-value wines have a fruity flavor.

3–15 years

✓ *De L'Ausseil* (La Capitelle)

CRÉMANT DE LIMOUX AOC

This provisional sparkling wine was introduced in 1989 to allow producers to decide the future name of their appellation: Blanquette de Limoux or Crémant de Limoux. The former relied primarily on the Mauzac grape and, upon introducing the Crémant appellation, at least 90 percent content of this local variety became compulsory. In contrast, the newly created Crémant de Limoux had a minimum content of Chenin Blanc, albeit a more modest percentage. The choice was not merely about a name, but what direction and style the wine should follow. It was thought that Mauzac-based Blanquette de Limoux would take the slow lane while Chardonnay-influenced Crémant would be in the fast lane. By law, they should have made this decision by the end of 1994, but Crémant de Limoux did not take off as anticipated. Just a year before the deadline, only one-twentieth of Limoux's sparkling-wine harvest had adopted the Crémant appellation. The lawmakers face a dilemma, since two names are being used for one wine and there is much less support for the new appellation than expected. However, both styles deserve to exist.

SPARKLING WHITE Chardonnay tends to be the main base, with just enough Mauzac retained to assure a certain style, and Chenin Blanc is used as a natural form of acid adjustment. The wines are generally more refined than Blanquette de Limoux, and the best have a finesse that the more traditional products cannot match.

A maximum of 90% in total of Chardonnay

and Chenin Blanc, including at least 20% of the latter, plus a maximum of 20% in total of Mauzac and Pinot Noir, with the latter restricted to no more than 10%

✓ *De l'Aigle* • *Sieur d'Arques* • *Veuve Tailban*

FAUGÈRES AOC

Although fair-sized, Faugères is an obscure and overlooked appellation, probably due to the fact that it was formerly known for *eau-de-vie* and fortified Muscat, with red wine a postwar development. Despite the similarity between the schistous, hillside vineyards and grape varieties here and in neighboring St.-Chinian, the two appellations make distinctly different wines.

RED These rustic wines have a deep color and are heavy with the spicy, warm flavors of Cinsault and Carignan.

3–10 years

ROSÉ Small production of attractively colored, ripe, and fruity dry rosés. These wines may be sold as from December 1 following the harvest without any mention of *primeur* or *nouveau*.

A maximum of 40% Carignan, and no more than 20% Cinsault, plus at least 20% Grenache and/or Lladoner Pelut, a minimum of 15% Syrah, and at least 5% Mourvèdre (furthermore, Grenache, Lladoner Pelut, Mourvèdre, and Syrah represent at least 50% of the entire blend)

3–10 years

✓ *Alquier* • *Château des Estanilles* • *Abbaye de Sylva Plana*

FITOU AOC

When it was made an AOC in 1948, Fitou was fast asleep, but wine buyers beat a path to its desolate door in the early 1980s, making it the fastest-rising star in the Mediterranean firmament. It seems to have returned to its dozing state. The *encépagement* changed in 2001.

RED Even at the lowest level, these wines have a fine color and a spicy warmth of Grenache that curbs and softens the concentrated fruit and tannin of low-yielding Carignan.

A minimum of 30% Carignan, plus Mourvèdre, Syrah, and at least 30% Grenache and Lladoner Pelut; within this Carignan, Grenache, and Lladoner Pelut must account for at least 70% of the entire blend; and until 2007 there must be at least 10% Cinsault, while as from 2008 there must be at least 10% Mourvèdre (Macabéo and Terret Noir are no longer allowed)

3–6 years (4–10 years in exceptional cases)

✓ *Bertrand Bergé* • *Château des Erles* • *C. V. de Mont Tauch* (Seigneur de Don Neuve) • *Château de Nouvelles* • *De la Rochelière* (Noblesse du Temps) • *De Roland*

FRONTIGNAN AOC

See Muscat de Frontignan AOC

GRAND ROUSSILLON AOC

The largest appellation producing the least amount of wine, Grand Roussillon is a VDN that encompasses 100 communes, yet produces as little as 330 cases (30 hectoliters) of wine per year. This has nothing to do with low yields or a strict selection process—the appellation is apparently used as a sort of *sous marque* or dumping ground for the inferior wines produced by the better VDNs within its boundaries.

☞ Muscat d'Alexandrie, Muscat Petits Grains, Grenache (Gris, Blanc, and Noir), Macabéo, Tourbat, plus up to 10% (in total) of Carignan, Cinsault, Syrah, and Listan

GRAND ROUSSILLON "RANCIO" AOC

See Grand Roussillon AOC

LIMOUX AOC

Until 1993, Mauzac was the only grape allowed for the still-wine version of Blanquette de Limoux, but new regulations reduced this to a minimum of 15 percent and allowed the inclusion of Chardonnay and Chenin Blanc. At the same time, Limoux became the first French AOC to insist upon barrel fermentation and some fabulous successes quickly established an enviable reputation for the Chardonnay-dominated wines of this appellation. The only question now is will Limoux have equal success with Chenin Blanc? A new red Limoux was introduced in 2004.

RED Newly introduced in 2004.

☞ Minimum of 50% Merlot, plus Cabernet Franc, Cabernet Sauvignon, Carignan, Grenache, malbec and Syrah. The Carignan must not exceed 10% and is due to be phased out by 2010. There must be at least three varieties, no two of which may exceed 90% of the total blend.

☞ 3–6 years

WHITE Although every wine must contain at least 15 percent Mauzac, you will encounter supposedly pure Chardonnay and Chenin Blanc varietal wines (and Mauzac, of course). This is explained by the European Union law that requires that a pure varietal wine must contain at least 85 percent of the grape named. Chardonnay varietals are sherbetty-fresh with a zesty style at minimum; the best are beautifully rich, with succulent, lemony-oaky fruit and mouth-watering acidity. The pure Mauzac from Rives-Blanques makes me wonder whether it would not be better for producers to focus on this, their local grape, rather than resign themselves to making yet another Chardonnay in a world awash with that variety. This was not initially my view. Tasted when first released, the Chardonnay clearly outshines the Mauzac, thus it is little wonder that the Cuvée Occitania vacuums up so many medals for Rives-Blanques. However, follow them in bottle for just 12 months, and the Mauzac evolves into the more expressive wine.

☞ A minimum of 15% Mauzac, plus Chardonnay and Chenin Blanc

☞ 1–2 years

☑ *D'Antugnac* (Gravas) • *Rives-Blanques* (Dédicace) • *Sieur d'Arques* (Toques et Clochers)

MAURY AOC

Despite the long list of possibilities, these fortified wines are mostly pure Grenache, a fact that is recognized by the gradual increase in the compulsory percentage of this grape—the minimum was just 50 percent 10 years ago.

RED/WHITE/ROSÉ/TAWNY Pale and intricate wines, they have a combination of tangy, toasty, berry flavors and nutty-raisiny richness.

☞ At least 75% Grenache (a minimum of 70% for pre-2000 vintages), a maximum of 10% Macabéo (15% for pre-2000 vintages), plus Grenache Gris, Grenache Blanc, Muscat à

Petits Grains, Muscat d'Alexandrie, Tourbat, and a combined maximum of 10% of Carignan, Cinsault, Syrah, and Listan Negra

☞ 10–30 years

☑ *Mas Amiel* • *Jean-Louis Lafage* (Prestige Vieilli en Fûts de Chêne) • *Pouderoux*

MAURY "RANCIO" AOC

See Maury AOC

MINERVOIS AOC

North of Corbières and adjoining the western extremity of the Coteaux du Languedoc, the rocky Minervois area has the typically hot and arid air of southern France. Elevated to full AOC status in February 1985, its vineyards are divided into zones. As in Corbières, these are not official, but one day they may in part or whole join La Livinière, which was recognized as a *cru* in its own right in 1999. The zones are: L'Argent Double (rough, rugged vineyards amid rocky outcrops in the arid heart of Minervois); La Clamoux (a cooler western area with a touch more rainfall than most Minervois zones, with Grenache and Syrah doing well, particularly on the higher-altitude vineyards); La Clause (rugged, mountain climate and stony, *terra rosa* soil combine to produce rather rustic *vins de garde* in the north of Minervois); Les Côtes Noires (under a harsh mountain climate, these high-altitude vineyards situated in the northwestern corner of Minervois are better suited to the production of white wine rather than of red); Le Petit Causse (when it can get enough moisture, Mourvèdre does well on these baking-hot, sheltered, limestone slopes in the arid heart of Minervois—La Livinière is located at the heart of Le Petit Causse); Les Serres (very dry, stony vineyards over limestone subsoil, mostly planted with Carignan). The *encépagement* for red and rosé changed in 2003.

RED At worst, these wines are rough and ready for an AOC, but some of the best domaines also produce *vins de pays* that are better than the Minervois of other properties, thus their Minervois can be very good indeed.

☞ A minimum of 40% Grenache, Lladoner Pelut, Mourvèdre, and Syrah (these last two must represent at least 10% of the entire blend, and at least 20% as from 2006), plus optional Aspiran Noir, Carignan, Cinsault, Picpoul Noir, and Terret Noir

☞ 1–5 years

WHITE Less than one percent of Minervois is white. A simple, dry, and fruity wine fermented at cooler temperatures than was once standard, it is now fresher and more aromatic.

☞ Bourboulenc, Grenache Blanc, Macabéo, Marsanne, Roussanne, Vermentino, plus not more than 20% Clairette, Muscat à Petits Grains (itself limited to a maximum of 10%), Picpoul, and Terret Blanc

☞ Within 1 year

ROSÉ Most of these are good-value wines with a pretty pink color and a dry, fruity flavor.

☞ A minimum of 40% Grenache, Lladoner Pelut, Mourvèdre, and Syrah (these last two must represent at least 10% of the entire blend, and at least 20% as from 2006), plus optional Aspiran Noir, Carignan, Cinsault, Picpoul Noir, and Terret Noir, with no more than 10% Bourboulenc, Clairette, Grenache Blanc, Macabéo, Marsanne, Roussanne,

Muscat à Petits Grains, Picpoul, Terret Blanc, and Vermentino

☞ Within 1 year

☑ *Des Aires Hautes* • *Borie de Maurel* (Sylla) • *Le Cazal* (Le Paps de Zarat) • *Château d'Oupia* (Oppius) • *Primo Palatum* • *Du Roc* (Passion) • *La Tour Buisse*

MINERVOIS LA LIVINIÈRE AOC

Located in Le Petit Causse, the central-northern zone of Minervois, La Livinière was in 1999 the first *cru* in this appellation to be recognized in its own right. The vines grow on the best areas of the Petit Causse, the sheltered, limestone cliffs that skirt the foot of the Montagne Noir at a height of 460 feet (140 meters).

RED Where there is sufficient finesse to match the structure of these wines, they represent some of Minervois's best *vins de garde*.

☞ A minimum of 40% Grenache, Lladoner Pelut, Mourvèdre, and Syrah (these last two must represent at least 10% of the entire blend, and at least 20% as from 2006), plus optional Aspiran Noir, Carignan, Cinsault, Picpoul Noir, and Terret Noir

☞ 2–10 years

☑ *Clos de L'Escandil* • *C. V. des Crus de Haut-Minervois* (Gaïa) • *Château Faiteau*

MUSCAT DE FRONTIGNAN AOC

It is claimed that the Marquis de Lur-Saluces visited Frontignan in 1700 and it inspired him to make sweet wines at Château d'Yquem in Sauternes, but Muscat de Frontignan is no longer botrytized—it is a fortified wine. Muscat de Frontignan may either be a *vin doux naturel* (VDN) or a *vin de liqueur* (VDL). In the latter, the spirit is added to the grape juice before any fermentation whatsoever can take place. If the label does not differentiate between the two, the small green tax mark on the cap should bear the letters VDN or VDL.

WHITE The VDNs are delightful, golden-colored, raisiny-rich, sweet, and delicious wines that have a succulent, honeyed aftertaste with a somewhat fatter style than those of Beaugues, although many lack its finesse. The VDLs are much sweeter.

☞ Muscat Doré de Frontignan

☞ 1–3 years

☑ *Château des Aresquiers* • *Château de la Peyrade*

MUSCAT DE LUNEL AOC

Situated on limestone terraces northeast of Montpellier, this undervalued VDN approaches Frontignan in terms of pure quality.

WHITE/ROSÉ Lighter than Frontignan, these wines nevertheless have fine, fragrant Muscat aromas of great delicacy and length.

☼ Muscat Blanc à Petits Grains, Muscat Rosé à Petits Grains

🕒 1–3 years

✓ *Lacoste* (Clos Bellevue, Passerillé) • *C. V. du Muscat de Lunel* (Prestige)

MUSCAT DE MIREVAL AOC

This is a little-seen VDN appellation.

WHITE Light and sweet wines that can have a better balance and (relatively) more acidity than those from neighboring Frontignan. Mireval wines can have more elegance, although they may lack the raisiny-rich concentration.

☼ Muscat Blanc à Petits Grains

🕒 1–3 years

✓ *Château d'Excindre* (Vent d'Ange) • *Du Mas Neuf*

MUSCAT DE RIVESALTES AOC

This appellation should not be confused with the blended Rivesaltes VDNs that bear no mention of the Muscat grape.

WHITE/ROSÉ Rich, ripe, grapey-raisiny wines that are very consistent in quality.

☼ Muscat Blanc à Petits Grains, Muscat d'Alexandrie

🕒 1–3 years

✓ *Cazes Frères* ☉ • *Des Chênes* • *Cornelianum* • *Jean Estavel* (Prestige) • *Lafage* • *Laporte* • *Château de Nouvelles* • *Sarda-Malet* • *Des Schistes* • *Arnaud de Villeneuve*

MUSCAT DE ST.-JEAN-DE-MINERVOIS AOC

This tiny subappellation of Minervois produces a little *vin doux naturel* that used to be grossly underrated but has gained excellent distribution on export markets over the past seven years.

WHITE/ROSÉ These golden wines have a balanced sweetness and an apricot flavor.

☼ Muscat Blanc à Petits Grains, Muscat Rosé à Petits Grains

🕒 1–3 years

✓ *De Barroubio* • *La Muscat* (Petit Grain)

RIVESALTES AOC

This appellation represents half of the *vin doux naturel* produced in France. Optional legally defined terms include *ambré* for an oxidative style of tawny colored Rivesaltes; *tuilé* for an oxidative red; and *grenat* for a reductive-style red that must not be bottled any later than March 1 of the second year. *Hors d'age* requires a minimum of five years' aging.

RED/ROSÉ The warm, brick-red glow of these wines belies their astringent-sweet, chocolate, and cherry-liqueur flavor and drying, tannic finish.

☼ A minimum of 50% (for oxidative style) or 75% (for reductive style) Grenache, plus Grenache Blanc, Grenache Gris, Tourbat, with a maximum of 10% Carignan, Cinsault, Palomino, and Syrah

🕒 10–40 years

WHITE/TAWNY Because much of the red version can be lightened after lengthy maturation in wood, all Rivesaltes eventually

merge into one tawny style with time. The whites do not, of course, have any tannic astringency and are more oxidative and raisiny, with a resinous, candied-peel character.

☼ Grenache Blanc, Grenache Gris, Macabéo, Muscat Blanc à Petits Grains, Muscat d'Alexandrie, Muscat Romain, Tourbat (the Muscat varieties must not exceed 20% of the entire blend in total or separately)

🕒 10–20 years

✓ *Du Mas Alart* (Ambré Hors d'Age) • *Des Chênes* • *Cazes Frères* ☉ • *Gardies* • *Château de Nouvelles* (Tuilé) • *Sarda-Malet* (La Carbasse) • *Château de Sau* (Ambré Hors d'Age) • *Terrassous* (Ambré Vinifié en Fûts de Chêne) • *Arnaud de Villeneuve* (Ambré Hors d'Age)

RIVESALTES "RANCIO" AOC

See Rivesaltes AOC

ST.-CHINIAN AOC

Upgraded from VDQS in May 1982, the excellent-value appellation of St.-Chinian is the nearest that native southern French grapes come to resembling Bordeaux. Similar grapes from comparable schistous hillsides in neighboring Faugères make an entirely different, far more rustic wine that lacks the finesse of St.-Chinian, let alone Bordeaux. As from 2004, two *crus*

have been awarded their own designation: St.-Berlou and St.-Chinian Roquebrun, but it is too early to make a critique. Moves are under way to introduce a white style of St.-Chinian.

RED Relatively light in color and weight, these wines have an elegance that belies their Mediterranean origin.

☼ At least 50% in total of Grenache, Lladoner Pelut, Mourvèdre, and Syrah, plus a maximum of 40% Carignan and no more than 30% Cinsault

🕒 2–6 years

ROSÉ Dry and delicately fruity rosés with an attractive, fragrant bouquet and flavor. May be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☼ At least 50% in total of Grenache, Lladoner Pelut, Mourvèdre, and Syrah, plus a maximum of 40% Carignan and no more than 30% Cinsault

🕒 1–3 years

✓ *Clos Bagatelle* • *Berlou* (Vignes Royales) • *Mas Canet Valette* • *De Canimals Le Haut* • *Mas Champart* • *Château La Dournie* • *Fontaine Marcousse* • *Des Jougla* (Vieih Arrasics) • *Navare* (Olivier)

VIN DE FRONTIGNAN AOC

See Muscat de Frontignan AOC

MORE GREEN WINES

In addition to the producers recommended in this directory that are either biodynamic or organic, there are also the following. No negative inference of quality should be taken from the fact that they are not featured among my recommended producers. There are a number that have been recommended in other editions, and still make some fine wines, but have been culled out to make room for others.

Biodynamic

Beau-Thorey (Corconne), *De Bila-Haut* (Latour de France), *De Combe Belle* (Villespassans), *Jean-Claude Daumond* (Vendargues), *De Fontedict* (Caux), *De Malaigue* (Uzès), *Des Perrières* (Manduel), *Le Petit Domaine de Gimios* (St Jean de Minervois), *St Julien* (Azille), *Sylvain Saux* (Lauraguel)

Organic

Cabanis (Beauvoisin), *De Caillan* (Bessan), *De Camplazens* (Combaillaux), *Château de Caraguilhes* (St Laurent de la Cabrerisse), *De Clairac* (Cazouls lès Béziers), *Combes-Giraud* (Valros), *Costeplane* (Cannes et Clairan), *CV les Côteaux de Creissan* (Creissan), *Jean Bigou* (Rouvenac), *Blanquette Beirieu* (Roquetaillade), *Bourguet* (Béziers), *Alain Bousquet* (St Etienne de Gourgas), *Couderc* (Neffies), *Mas Coutelou* (Puimisson), *Du Farlet* (Meze), *La Fon de Lacan* (St Pargoire), *Jacques Frélin Vignobles* (Villeneuve lès Béziers), *Grand Bourry* (Le Cailar), *La Grangette* (Castelnau de Guers), *De Gressac* (Verfeuil), *Mas de Janiny* (St Bauzille de la Sylve), *Mas Julien* (Jonquières), *CV La Clairette* (Bellegarde), *La Tour* (Beaucaire), *Du Lac* (Montescot), *CV Languedoc Roussillon* (Montpellier), *Bernard Legoy* (Condac-en-Combrailles), *CV Les Gres* (Vendargues), *De Litenis* (St Jean de Fos), *Lou Pas d'Estrech* (St Christol de Rodières), *Loupia* (Pennautier), *Louwet/Cellier du Languedoc Vins Distribution* (Narbonne), *Château Maris* (La Livinière), *Maurel Vedeau* (Servian), *Antoine Maurel* (Conques-sur-Orbiel), *De Mayrac* (Couiza), *De Montabuc*

(St Jean de Minervois), *Croix de Bel-Air* (Marseillan), *De Montjouy* (Florensac), *CV de Montpeyroux* (Montpeyroux), *Ochre Rouge* (Dions), *Château du Parc* (Pezenas), *Pastouret* (Bellegarde), *Château Pech-Latt* (Lagrasse), *De Petit Roubié* (Pinet), *Château des Auzines* (Auzines), *Bannières* (Castries), *Du Mas Barjac* (Monteils), *Bassac* (Puissalicon), *De Malavieille* (Merifons), *Peyre-Rose* (St Pargoire), *De Picheral* (Mus), *Château Roubia* (Roubia), *La Solana* (Festes), *Des Soulié* (Assignan), *St Alban* (Neffies), *Château St Auriole* (Lézignan-Corbières), *De St Blaise* (Cessenon), *St Marie des Pins* (Verzeille), *Des Syles* (Béziers) *La Triballe* (Guzargues), *De Valescure* (Aimargues), *Abbaye de Valmagne* (Villeveyrac), *Château Ventaiolle* (Ventenac-Cabardes), *Château Veredus* (Cruscades), *Zumbaum-Tomasi* (Claret), *De l'Ametier* (Pézenas), *Anthéa* (Sallès d'Aude), *La Batteuse* (Antugnac), *Château Bel Air La Côte* (Beauvoisin), *Château Belausse* (Lagrasse), *Belles Croix Robin* (Guzargues), *Château Bousquette* (Cessenon-sur-Orb), *De Brau* (Villemoustaussou), *De Buzarens* (Assas), *Arnaudies* (Ceret), *Batle-Jacquet* (Fourques), *Carle-Courty* (Millas), *Henri-Albert Foxonet* (Toulouges), *Joliette* (Espira de l'Agly), *Franck Jorel* (St Paul de Fenouillet), *Château de L'Ou* (Montescot), *Laguerre* (St Martin de Fenouillet), *Le Casot de Mailloles* (Banyuls-sur-Mer), *Lenan* (Trouillas), *Nivet-Galinier* (Toulouges), *Jean-Michel Paraire* (Fourques), *Olivier Pithon* (Calce), *De la Rouède* (Fourques), *Du Soula* (St Martin de Fenouillet), *Clos St Martin* (Bompas)

PROVENCE AND CORSICA

If any wine does not travel, it has to be Provence rosé. But this probably has more to do with the romance surrounding the wine than with the wine itself. The best Provençal wines are red, and they can be truly splendid.

YOU CAN FORGET MOST PROVENCE ROSÉ. It may come in an exotically shaped bottle, but exotic is the last word that could be used to describe its dull, flabby contents. They have been making wine here for more than 2,600 years, and by the time the Romans arrived, in 125BC, it was already so good that they immediately exported it back to Rome. But ask yourself this question: do you think that wine was a rosé? Of course not; Provence rosé is a relatively recent phenomenon and, some would cynically say, one that was deliberately designed to swindle the gold-draped *nouveau riche* who flock here.

Rosé still represents more than half of all Provençal production, although sales have declined in recent years, as the once-

CORSICAN VINEYARDS

These vineyards of Domaine de Valrose at Borgo, near the east coast, are typical of the Corsican landscape. The east-coast plains are backed by dramatic mountains, and palm trees proliferate.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

Provence is situated in the southeast of France, between the Rhône delta and the Italian border. A farther 68 miles (110 kilometers) southeast lies Corsica.

CLIMATE

Winters are mild, as are springs, which can also be humid. Summers are hot and stretch into long, sunny falls. A vine requires 1,300 hours of sunshine in one growing season—1,500 hours is preferable, but in Provence, it luxuriates in an average of 3,000 hours. The close proximity of the Mediterranean, however, is also capable of inducing sharp fluctuations in the weather. Rain is spread over a limited number of days in fall and winter.

ASPECT

The vineyards run down hillsides and on to the plains.

SOIL

The geology of Provence is complex. Many ancient soils have undergone chemical changes and numerous new soils have been created. Sand, red sandstone, and granite are, however, the most regular common denominators, with limestone outcrops that often determine the extent of superior *terroirs*: the Var *département* has mica-schist, chalky scree, and chalky tufa as well as granite hillsides; there are excellent flinty-limestone soils at Bandol; and pudding stones (conglomerate pebbles) that are rich in flint at Bellet. The south of Corsica is mostly granite, while the north is schistous, with a few limestone outcrops and deposits of sandy and alluvial soils in between.

VITICULTURE AND VINIFICATION

All the vines used to be planted in *gobelet* fashion, but most are now trained on wires. The recent trend toward Cabernet Sauvignon has stopped, although many excellent wines are still made from this grape. The current vogue is to reestablish a true Provençal identity by relying exclusively (where possible) on local varieties, and the laws have been changed to encourage this particular evolution. Much of the rosé has been improved by modern cool-ventilation techniques, although most remains tired and flabby.

GRAPE VARIETIES

Aragnan, Aramon, Aramongris, Barbarossa, Barbaroux, Barbaroux Rosé, Bourboulenc, Braquet, Brun-Fourcat, Cabernet Sauvignon, Calitor (*syn.* Pecoui-touar), Carignan, Castets, Chardonnay, Cinsault (*syn.* Plant d'Arles), Clairette, Clairette à Gros Grains, Clairette à Petits Grains, Clairette de Trans, Colombard, Counoise, Doucillon, Durif, Fuella, Grenache, Grenache Blanc, Marsanne, Mayorquin, Mourvèdre, Muscat d'Aubagne, Muscat Blanc à Petits Grains, Muscat de Die, Muscat de Frontignan, Muscat de Hambourg, Muscat de Marseille, Muscat Noir de Provence, Muscat Rosé à Petits Grains, Nielluccio, Panse Muscade, Pascal Blanc, Petit-Brun, Picardan, Picpoul, Pigneron, Sauvignon Blanc, Sémillon, Sciacarello, Syrah, Téoulier (*syn.* Manosquin), Terret Blanc, Terret Gris (*syn.* Terret-Bourret), Terret Noir, Terret Ramenée, Tibouren (*syn.* Tibourenc), Ugni Blanc, Ugni Rosé, Vermentino (*syn.* Rolle)

exclusive resorts become more accessible to the sophisticated middle classes, who recognize how dull these wines are. Quality improved in the 1980s, but has reached a plateau and, without resorting to actually acidifying the wines, modern vinification techniques will never be able to rid them of the dusty flabbiness that is their sunny southern heritage.

THE TRUE CLASSIC WINES OF PROVENCE

For most people, Provence evokes the beaches of St.-Tropez or the rich, *bouillabaisse*-laden aromas of backstreet Marseille, but there are other experiences to be had in this sun-blessed corner of southern France. For while the wines of Provence may not have the classic status of Burgundy or Bordeaux, the reds, such as the magnificent Bandol, the darkly promising Bellet, and the aptly named Cassis, have an abundance of spice-charged flavors that show more than a touch of class. Silly-shaped bottles are being discarded by the more serious winemakers who find the classic,

RECENT PROVENÇAL AND CORSICAN VINTAGES

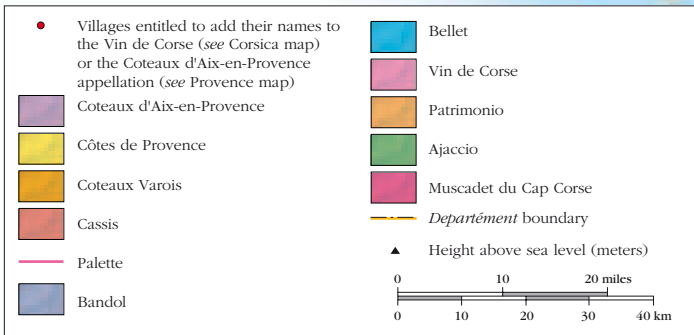

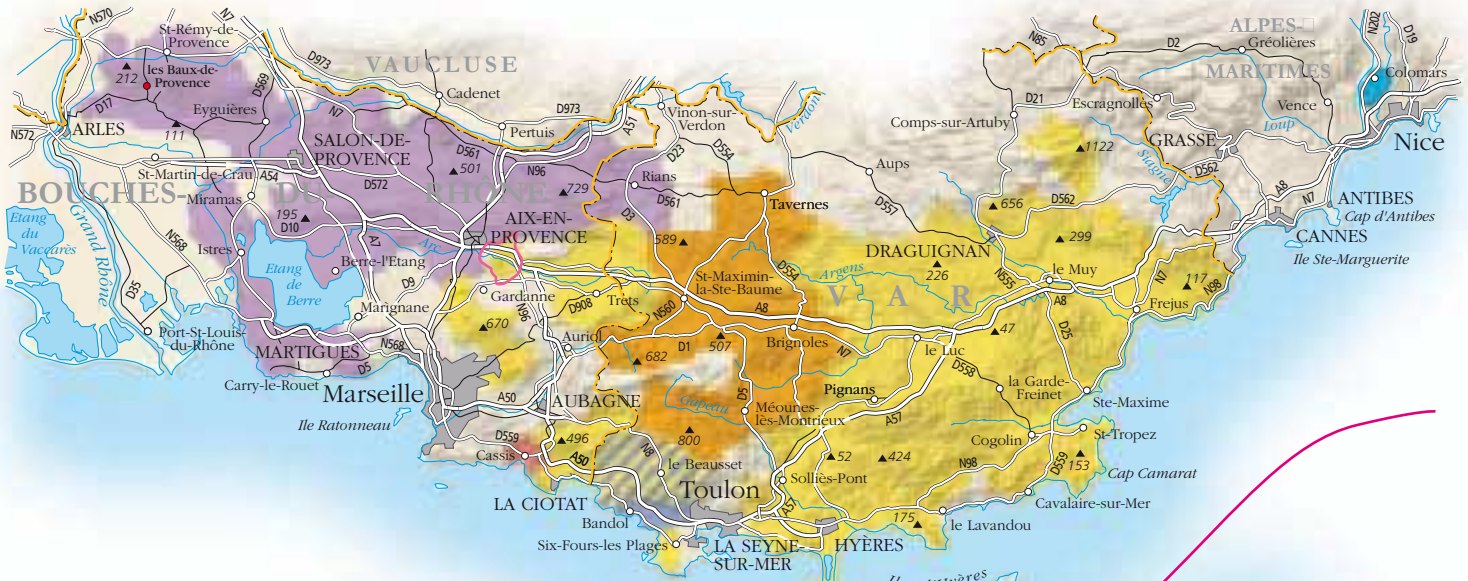

2003 The year of the heatwave meant extremely variable results in Provence, where even the best reds are all too often overalcoholic and lacking in elegance.

2002 Wet at best, floods at worst, with few exceptional wines in Provence (a good rosé year!), but good in Corsica for Vin de Corse (particularly, though not exclusively, for whites), Patrimonio, and Muscat du Cap Corse.

2001 A dry year produced well-colored Provençal red wines of good to very good quality.

2000 Very good quality all around.

1999 Average to good for Bandol, better for other reds.

PROVENCE AND CORSICA, see also p.55
 Although part of this wine-producing area is an island and part is on the French mainland, both of these sun-soaked regions are subject to the same capricious Mediterranean weather conditions, although frost is rare in both.

THE CRUS CLASSÉS OF PROVENCE

Provence is the only region outside Bordeaux to boast a cru classé system. The cru classé concept was conceived by Napoléon III, hence the 1855 classification. One hundred years later, 14 domaines in the Côtes de Provence somehow managed to arrange their own classification, endorsed by ministerial decree on July 20, 1955. These domaines were selected on the basis of the following criteria: ancestral inheritance; family ownership; historic buildings and reputation; the soil, vineyard, winery, and cellar; the wine produced; and the quality sought for more than one century. The crus classés of Côtes de Provence are:

- Château de Brégançon (Bormes les Mimosas): 124 acres/50ha
- Clos Cibonne (Le Pradet): 34½ acres/14ha
- Château du Galoupet (La Londe): 163 acres/66ha
- Domaine du Jas d'Esclans (La Motte): 156 acres/63ha
- Château de Mauvanne (Hyères): 124 acres/50ha
- Château Minuty (Gassin): 161 acres/65ha
- Clos Mireille (La Londe): 131 acres/53ha
- Domaine de Rimauresq (Pignans): 91 acres/37ha
- Château de Roubine (Lorgues): 173 acres/70ha
- Château Ste. Marguerite (La Londe): 62 acres/25ha
- Château de St. Martin (Taradeau): 94 acres/38ha
- Château St. Maur (Cogolin): 119 acres/48ha
- Château Ste. Roseline (Les Arcs-sur-Argens): 222 acres/90ha
- Château de Selle (Taradeau): 151 acres/61ha

understated lines of Bordeaux- and Burgundy-style bottles better reflect the quality of their wines.

The top estates of the Riviera produce red wines of a far more serious caliber than might be expected from an area better known for its play than its work. Maximum yields are low, however, and the potential for quality can be high. The smaller AOCs of Bandol, Bellet, and Palette are restricted to a maximum of 180 cases per acre (40 hectoliters per hectare), which is very modest for a region that could easily average more than double this amount. Even the all-embracing AOCs of Côtes de Provence and Coteaux d'Aix-en-Provence are absolutely full of fine vineyards capable of producing the exciting red wine that must surely be Provence's future.

CORSICA—"THE ISLE OF BEAUTY"

In Corsica, the advent of France's *vin de pays* system meant that around one-third of the island's vineyards were uprooted and put

to better use. If the *vin de pays* system was intended to encourage the production of superior-quality wines from the bottom of the market upward, then here at least it has been successful, for this island is no longer the generous contributor to Europe's "wine-lake" it used to be.

The days when Corsica's wines were fit only for turning into industrial spirit are long gone, but nor is this a potentially fine wine region. Just 15 percent of its vineyards are AOC, and these yield barely more than 5 percent of Corsica's total wine production. Although this is a fair and accurate reflection of its true potential, most critics agree that even within the modest limits of *vin de pays* production there should be many more individually expressive domaines. What has restricted their numbers is, however, something few are willing to talk about—intimidation and extortion by the local Mafia, which has caused more than one brave new Corsican venture to founder.

THE APPELLATIONS OF PROVENCE AND CORSICA

Note * denotes producers who are particularly recommended for rosé.

AJACCIO AOC

This is a predominantly red-wine appellation on the west coast of Corsica.

RED When successful, this will inevitably be a medium-bodied Sciacarello wine with a good bouquet.

At least 60% (in total) of Barbarossa, Nielluccio, Vermentino, and Sciacarello (the last of which must account for at least 40%), plus a maximum of 40% (in total) of Grenache, Cinsault, and Carignan (the last of which must not exceed 15%)

WHITE Decently dry and fruity, the best have a good edge of Ugni Blanc acidity.

ROSÉ Average to good-quality dry rosé with a typical southern roundness.

As for the red

All wines: 1–3 years

✓ *Comte Abbattucci* (Faustine Abbattucci) • *Comie Peraldi*

BANDOL AOC

The red wine of this Provence appellation is a true *vin de garde* and deserves recognition. The white wine *encépagement* changed in 2003.

RED The best of these wines have a dark purple-black color, a deep and dense bouquet, masses of spicy-plummy Mourvèdre fruit, and complex after-aromas that include vanilla, cassis,

cinnamon, violets, and sweet herbs.

A blend of at least two of the following: Mourvèdre, Grenache, and Cinsault, of which a minimum of 50% Mourvèdre is obligatory, plus no more than 15% in total or 10% individually of Syrah and Carignan

3–12 years

WHITE These dry wines are now fresher and more fragrant than they were, but they are nothing special compared with the reds.

A minimum of 20% (50% as from 2011) Clairette, plus 40% (60% as from 2011) of Bourboulenc and/or Ugni Blanc (Sauvignon Blanc is no longer allowed)

Within 1 year

ROSÉ Well-made, attractive dry rosés, with body, structure, and a fine individual character.

As for red but no minimum Mourvèdre content

1–2 years

✓ *Château des Baumelles* • *Bunan* (Moulin des Costes Charriage, Château la Rouvière, Mas de la Rouvière) • *Dupéré-Barrera* (India) • *du Gros Noré* • *de l'Hermitage* • *de la Laidière* • *Lafran-Veyrolles* • *Château de Pibarnon* • *Château Pradeaux* • *Château Ste.-Anne* • *des Salettes* • *La Suffrene* (Les Lauves) • *Tempier* • *Terrebrune* • *Vannières*

LES BAUX DE PROVENCE AOC

Excellent red and rosé wines, sold under the subappellation of Coteaux d'Aix-en-Provence Les Baux until 1995, when they were given their own AOC and the requirements changed.

RED Deep, dark, and rich, with creamy-spicy cherry and plum flavors.

A minimum of 60% Grenache, Mourvèdre and Syrah, no two varieties of which must account for more than 90% of the entire blend, plus a maximum 30% in total of one or more of the following: Carignan, Cinsault and Counoise, with a maximum of 20% Cabernet Sauvignon

4–10 years

ROSÉ De la Vallongue is rich and ripe.

A minimum of 60% Cinsault, Grenache, and Syrah, no two varieties of which must account for more than 90% of the entire blend, plus a maximum of 30% in total of one or more of the following: Carignan, Counoise, and Mourvèdre, with a maximum of 10% Cabernet Sauvignon

1–2 years

✓ *Hauvette* • *Mas Sainte-Berthe* (Louis David) • *de la Vallongue* *

BELLET AOC

This tiny Provence appellation is cooled by Alpine winds and produces exceptionally fragrant wines for such a southerly location.

ROSÉ Fine, floral, dry rosés that are exceptionally fresh and easy to drink.

Braquet, Fuella, Cinsault, plus up to 40% (in total) of Grenache, Rolle, Ugni Blanc, Mayorquin, Clairette, Bourboulenc, Chardonnay, Pigneron, and Muscat à Petits Grains

1–2 years

RED These wines have a good color and structure, with a well-perfumed bouquet.

Braquet, Fuella, Cinsault, plus up to 40% (in total) of Grenache, Rolle, Ugni Blanc, Mayorquin, Clairette, Bourboulenc, Chardonnay, Pigneron, and Muscat à Petits Grains

4–10 years

WHITE Fine, firm yet fragrant, and highly aromatic, dry white wines of unbelievable class and finesse.

☞ Rolle, Ugni Blanc, Mayorquin, plus up to 40% Clairette, Bourboulenc, Chardonnay, Pignierol, and Muscat à Petits Grains

🕒 3–7 years

✓ *Château de Bellet • Clos Saint-Vincent* (Clos)

CASSIS AOC

This is a decent but overpriced Provence appellation located around a beautiful rocky bay, a few miles east of Marseille. In all but a few enterprising estates, these vineyards are on the decline.

RED These solid, well-colored red wines can age, but most do not improve.

☞ Grenache, Carignan, Mourvèdre, Cinsault, Barbaroux, plus up to 10% (in total) of Terret Noir, Terret Gris, Terret Blanc, Terret Ramené, Aramon, and Aramon Gris

WHITE These dry white wines have an interesting bouquet of herby aromas of gorse and bracken, but are usually flabby and unbalanced on the palate. However, Bagnol and St.-Magdeleine produce excellent, racy whites for such southerly vineyards, and Ferme Blanche can be almost as good.

☞ Ugni Blanc, Sauvignon Blanc, Doucillon, Clairette, Marsanne, Pascal Blanc

ROSÉ Pleasantly fresh, dry rosés of moderately interesting quality.

☞ Grenache, Carignan, Mourvèdre, Cinsault, Barbaroux, plus up to 10% (in total) of Terret Noir, Terret Gris, Terret Blanc, Terret Ramené, Aramon, and Aramon Gris

🕒 All wines: 1–3 years

✓ *du Bagnol • Clos Val Bruyère*

CORSE AOC

Alternative appellation, *see* Vin de Corse AOC

COTEAUX D'AIX-EN-PROVENCE AOC

This large appellation has many fine estates, several of which have been replanted and reequipped.

RED The best are deeply colored *vins de garde* with lots of creamy-cassis, spicy-vanilla, and cherry flavors, capable of some complexity.

☞ Grenache, plus a maximum of 40% of

Cinsault, Counoise, Mourvèdre, Syrah, Cabernet Sauvignon, and Carignan (the last two of which must not exceed 30%)

🕒 3–12 years

WHITE Dry and fruity white wines that are of moderate quality, and are certainly improving. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☞ A maximum of 70% (each) of Bourboulenc, Clairette, Grenache Blanc, Vermentino, up to 40% Ugni Blanc and no more than 30% (each) of Sauvignon Blanc and Sémillon

🕒 Upon purchase

ROSÉ Fine-quality dry rosés that are light in body, but bursting with deliciously fresh and ripe fruit. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☞ As for red, plus up to 10% (in total) of Bourboulenc, Clairette, Grenache Blanc, Vermentino, Ugni Blanc, Sauvignon Blanc, and Sémillon

🕒 1–2 years

✓ *des Béates* Ⓞ (Terra d'Or) • *Château de Beaupré* • *Château de Calissanne* • *de Camaissette* (Amadeus) • *Jean-Luc Colombo* (Pin Couchés) • *Hauvette* Ⓞ • *Château Pigoudet* (La Chapelle) • *Château St-Jean**

COTEAUX VAROIS AOC

Upgraded from *vin de pays* to VDQS in 1985 and to AOC in 1993, this appellation covers an area of pleasant country wines in the center of Provence. The *encépagement* changed in 2001.

RED The best have good color, a deep fruity flavor, and some finesse.

☞ At least two of the following must represent 80 to 90% of the entire blend: Cinsault, Grenache, Mourvèdre, and Syrah, plus optional Cabernet Sauvignon, Carignan, and Tibouren (permitted since 2001)

WHITE Soft and fresh at best.

☞ A minimum of 30% Vermentino, plus Clairette, Grenache Blanc, a maximum of 30% Sémillon, and no more than 25% Ugni Blanc

ROSÉ These attractive, easy-to-drink, dry rosés offer better value than some of the more famous, pretentious wines of Provence.

☞ At least two of the following must represent 80 to 90% of the entire blend: Cinsault, Grenache, Mourvèdre, and Syrah, plus optional Cabernet Sauvignon, Carignan, and Tibouren (permitted since 2001), and no more than 10% Clairette, Grenache Blanc, Sémillon, Ugni Blanc, and Vermentino

🕒 All wines: 1–3 years

✓ *des Chaberts* (Prestige) • *de Garbelle* (Les Barriques de Barbelle) • *Château Lafoux* • *de Ramatuelle* • *Château Thuerry* (Les Abeillons) • *Château Trians*

CÔTES DE PROVENCE AOC

While this AOC is famous for its rosés, it is the red wines of Côtes de Provence that have real potential, and they seem blessed with good vintages, fine estates, and talented winemakers. Inferior wines are made, but drink the best and you will rarely be disappointed. The major drawback of this all-embracing appellation is its very size. There are, however, several areas with peculiarities of soil and specific microclimates that would make a Côtes

de Provence Villages AOC a logical evolution and give the most expressive growers something to aim for.

RED There are too many exciting styles to generalize, but the best have a deep color and many show an exuberance of silky Syrah fruit and plummy Mourvèdre. Some have great finesse, others are more tannic and chewy. The southern spicy-cassis of Cabernet Sauvignon is often present and the Cinsault, Grenache, and Tibouren grapes also play important roles.

☞ The following must represent at least 70% (80% as from 2015) of the entire blend: Cinsault, Grenache, Mourvèdre, Syrah, and Tibouren, but no two varieties may account for more than 90%; plus optional Barbaroux Rosé, Cabernet Sauvignon, Calitor, and Carignan, with no more than 10% of Clairette, Sémillon, Ugni Blanc, and Vermentino

🕒 3–10 years

WHITE Moderate but improving soft, dry, fragrant, and aromatic wines. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☞ Clairette, Sémillon, Ugni Blanc, and Vermentino

🕒 1–2 years

ROSÉ Mediterranean sun is integral to the enjoyment of these wines, which are without doubt made to accompany food, but even the best fail to perform against other rosés under blind conditions; their low acidity makes them seem flat and dull. These wines may be sold from December 1 following the harvest without any mention of *primeur* or *nouveau*.

☞ The following must represent at least 70% (80% as from 2015) of the entire blend: Cinsault, Grenache, Mourvèdre, Syrah, and Tibouren, but no two varieties may account for more than 90%; plus optional Barbaroux Rosé, Cabernet Sauvignon, Calitor, and Carignan, with no more than 10% of Clairette, Sémillon, Ugni Blanc, and Vermentino

🕒 1–2 years

MUSCAT DU CAP CORSE AOC

When I first wrote this book in 1988, Corsica's only truly classic wine, the succulent sweet Muscat of Cap Corse, was not even recognized, let alone awarded the AOC status it deserved, and it took five more years to get it on the statute books. The Muscat du Cap Corse appellation overlaps Vin de Corse Coteaux du Cap Corse and five of the seven communes that

MORE GREEN WINES

In addition to the producers recommended in this directory that are either biodynamic or organic, there are also the following. No negative inference of quality should be taken from the fact that they are not featured among my recommended producers. There are a number that have been recommended in other editions, and still make some fine wines, but have been removed to make room for others.

Biodynamic

Château la Canorgue (Bonnieux),
Les Fouques (Hyères),
Château Romanin (St Rémy de Provence),
St Estève (Lambesc)

Organic

des Terres Blanches (St Rémy-de-Provence),
du Thouar (Le Muy), *de l'Adret des Salettes*
(Lorgues), *des Alysses* (Pontèves),
des Annibals (Brignoles), *L'Atillon* (Mas Thibert),
Les Bastides (Le Puy Ste Réparate),
de Beaujeu (Arles), *Château de Beaulieu*
(Rognes), *Château La Calisse* (Pontevès),
CV des Vignerons de Correns et du Val (Correns),
de Costebonne (Eygalières),
Mas de la Dame (Les Baux de Provence),

Chateau du Duvivier (Pontevès),
Château d'Esclans (La Motte), *Château Les*
Eydins (Bonnieux), *Mas de Gourgnonier*
(Mouriès), *Hauvette* (St Rémy de Provence),
de l'Isle des Sables (Fourques), *du Jas d'Esclans*
(La Motte), *La Bastide du Puy*
(St Saturnin Lès Apt), *de Landue* (Solliés-Pont),
Mas de Longchamp (St Rémy de Provence),
Château Miraval (Correns), *de Pierrascas*
(La Garde), *de Pinchinat* (Pourrières),
Rabiega (Draguignan), *de Révaou*
(La Londe les Maures), *Richeaume*
(Puylobier), *Robert* (Rognes), *de la Sanglière*
(Bormes Les Mimosas), *SCIEV* (Molleges),
de Séoule (St Saturnin Lès Apt),
St André de Figuière (La Londe des Maures),
de St-Jean-de-Villecroze (Villecroze)

comprise the Patrimonio AOC.

WHITE The wines of Clos Nicrosi (in particular) demonstrate that Corsica has the ability to produce one of the most fabulous Muscats in the world. These wines are so pure and succulent, with wonderful fresh aromas, that they have very little to gain through age.

☞ Muscat Blanc à Petits Grains

☞ Upon purchase

✓ *Clos Nicrosi* • *Leccia* • *Orenga de Gaffory*

PALETTE AOC

The ridiculously long list of permissible grapes here illustrates one of the worst excesses of the AOC system. What is the point of such a large number of diverse grape varieties? Ignoring the fact that it includes some low-quality ones that should, if anything, be banned, it is obvious that no specific style could possibly result from the infinite permutation of varieties and percentages this AOC permits. Why not simply have an appellation that guarantees that Palette is from Palette? Despite this farce, Palette is one of the best in Provence. It can be considered the equivalent of a *grand cru* of Coteaux d'Aix-en-Provence, standing out from surrounding vineyards by virtue of its calcareous soil. Three-quarters of this appellation is occupied by just one property—Château Simone.

RED Though not in the blockbusting style, this is a high-quality wine with good color and firm structure, and can achieve finesse.

☞ At least 50% (in total) of Mourvèdre, Grenache, and Cinsault, plus Téoulrier, Durif, and Muscat (any variety planted), Carignan, Syrah, Castets, Brun-Fourcat, Terret Gris, Petit-Brun, Tibouren, Cabernet Sauvignon, and up to 15% (in total) of Clairette (any variety planted), Picardan, Ugni Blanc, Ugni Rosé, Grenache Blanc, Muscat (any variety planted), Picpoul, Pascal, Aragnan, Colombard, and Terret-Bourret

☞ 7–20 years

WHITE Firm but nervy dry wine with a pleasantly curious aromatic character.

☞ At least 55% (in total) of Clairette (any

variety planted), plus Picardan, Ugni Blanc, Ugni Rosé, Grenache Blanc, Muscat (any variety planted), Picpoul, Pascal, Aragnan, Colombard, and a maximum of 20% Terret-Bourret

☞ Upon purchase

ROSÉ A well-made but not exceptional wine, which is perhaps made too seriously for its level of quality.

☞ At least 50% (in total) of Mourvèdre, Grenache, and Cinsault, plus Téoulrier, Durif, and Muscat (any variety planted), Carignan, Syrah, Castets, Brun-Fourcat, Terret Gris, Petit-Brun, Tibouren, Cabernet Sauvignon, and up to 15% (in total) of Clairette (any variety planted), Picardan, Ugni Blanc, Ugni Rosé, Grenache Blanc, Muscat (any variety planted), Picpoul, Pascal, Aragnan, Colombard, and Terret-Bourret

☞ 1–3 years

✓ *Château Crémade* • *Château Simone*

PATRIMONIO AOC

This is a small appellation situated west of Bastia in the north of Corsica. The *encépagement* changed in 2002.

RED Some fine-quality red wines of good color, body, and fruit are made.

☞ At least 90% Nielluccio, plus Grenache, Sciaccarello, and Vermentino

WHITE Light and dry wines of a remarkably fragrant and floral character for Corsica.

☞ Vermentino

ROSÉ Good-value dry rosés that have a coral-pink color and an elegant flavor.

☞ At least 75% Nielluccio, plus Grenache, Sciaccarello, and Vermentino

☞ All wines: 1–3 years

✓ *Aliso-Rossi* • *de Catarelli* • *Gentile* (Sélection Noble) • *Giacomett* (Cru des Agrigates) • *Leccia* • *Orenga de Gaffory* • *Pastricciola* • *Clos Teddi*

VIN DE CORSE CALVI AOC

Lying north of Ajaccio, this subappellation of Vin de Corse AOC requires the same grape varieties and meets the same technical level.

✓ *Colombu* • *Maestracci* • *Renucci*

VIN DE CORSE COTEAUX DU CAP CORSE AOC

A subappellation of Vin de Corse, this requires the same varieties, except that Codivarta may be used with Ugni Blanc in support of Vermentino.

VIN DE CORSE FIGARI AOC

Situated between Sartène and Porto Vecchio, Vin de Corse Figari is a subappellation of Vin de Corse AOC and requires the same grape varieties and technical level.

✓ *de Petra Bianca* (Vinti Legna)

VIN DE CORSE PORTO VECCHIO AOC

The southeastern edge of Corsica, around Porto Vecchio, is a subappellation of Vin de Corse AOC and requires the same grape varieties and technical level.

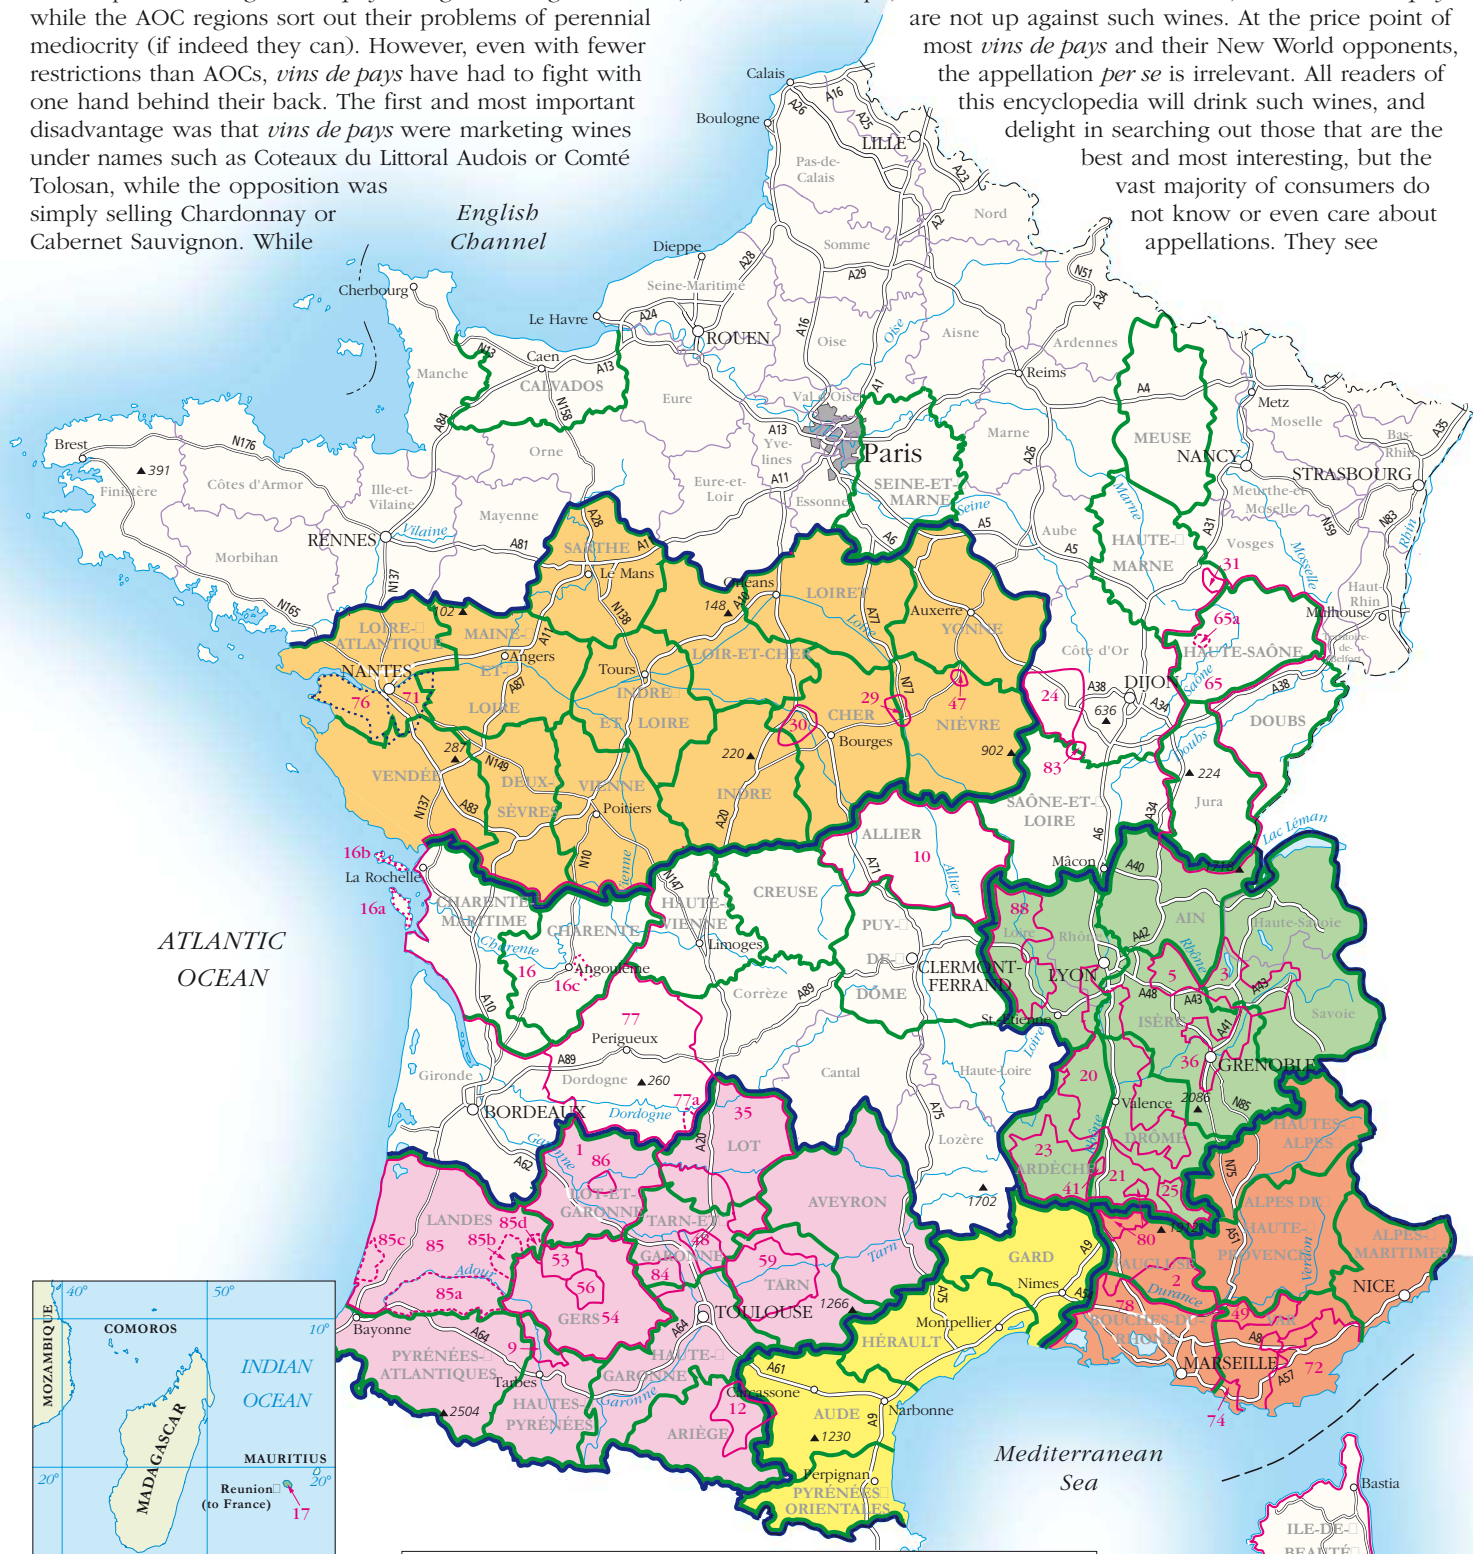

VIN DE CORSE SARTENE AOC

South of Ajaccio, this subappellation of Vin de Corse AOC requires the same grape varieties and conforms to the same technical level.

✓ *Clos d'Alzeto* • *Saparale*

the average-quality AOC wines have been losing the export battle against the New World, particularly “Brand Australia.” It was left to the up-and-coming *vins de pays* to fight a rear-guard action, while the AOC regions sort out their problems of perennial mediocrity (if indeed they can). However, even with fewer restrictions than AOCs, *vins de pays* have had to fight with one hand behind their back. The first and most important disadvantage was that *vins de pays* were marketing wines under names such as Coteaux du Littoral Audois or Comté Tolosan, while the opposition was simply selling Chardonnay or Cabernet Sauvignon. While

the varietal concept might cause a “sense of place” crisis for the New World’s finer wines, when they try to ride the export surf into Europe, it matters not one bit in the US, and the *vins de pays* are not up against such wines. At the price point of most *vins de pays* and their New World opponents, the appellation *per se* is irrelevant. All readers of this encyclopedia will drink such wines, and delight in searching out those that are the best and most interesting, but the vast majority of consumers do not know or even care about appellations. They see

VIN DE PAYS, MAP B, see also p.248 (opposite)
 This map shows all the regional and départemental vins de pays, plus those zonal appellations that are situated beyond the boundaries of the Languedoc-Roussillon region.

VINS DE PAYS AT A GLANCE

153 VIN DE PAYS DENOMINATIONS IN TOTAL

Or 167 if the subregional and subzonal *vins de pays* are included. From virtually zero production in 1973 to an annual average of almost 166 million cases (15 million hectoliters), *vins de pays* now represent over 30 percent of the total French wine production, and this expansion is continuing.

TYPES OF VINS DE PAYS

There are three basic categories of *vins de pays*: regional, *départementale*, and zonal. Although no official quality differences exist between these, it is not an unreasonable assumption that the zonal *vins de pays* may sometimes show more individual character than the much larger *vins de pays départementaux* or all-encompassing regional *vins de pays*, but this is not always so.

A grower within a specific zone may find it easier to sell wine under a more generic *vin de pays*, which explains why so many individual wines are to be found under the vast Vin de Pays d'Oc denomination. Also, the geographical size of a *vin de pays* can be deceptive, with many *départements* producing relatively little wine compared with some more prolific, relatively minute, zonal *vins de pays*. In the Loire few producers bother with the *départementale* denominations.

REGIONAL VINS DE PAYS (45 percent of total *vin de pays* output)

There are five of these wide-ranging appellations: Comté Tolosan; Comtés Rhodaniens; Jardin de la France (which includes a further two subregional denominations); Oc; and Portes de Méditerranée. Each encompasses two or more *départements*. They represented only 12 percent of *vin de pays* production in 1990, yet Vin de Pays d'Oc alone accounts for 26 percent today.

DÉPARTEMENTALE VINS DE PAYS (28 percent of total *vin de pays* output)

These cover entire *départements*, and although 52 are officially in use, some are effectively redundant as producers have opted for one of the more widely supported regional appellations, which are often easier to promote. In theory every *département* in France can claim a

vin de pays under its own *départementale* denomination, but to avoid confusion with AOC wines the following were in 1995 expressly forbidden from exercising this right: the Marne and Aube (in Champagne), the Bas-Rhin and Haut-Rhin (in Alsace), the Côte-d'Or (in Burgundy), and the Rhône (which encompasses Beaujolais but is likely to cause confusion with the Côtes du Rhône AOC). Jura, Savoie, and Haut-Savoie have also been disenfranchised.

ZONAL VINS DE PAYS (27 percent of total *vin de pays* production)

There are now 96 zonal *vins de pays*, plus 12 subzonal denominations, although many of the former and some of the latter are seldom encountered.

VINS DE CÉPAGE

After a widespread authorization of pure varietal *vins de pays* in 2000, regulations for which lagged well behind the actual production, this category has taken off to such an extent that it now accounts for half of all the *vins de pays* produced each year, with 80 percent sold under one of five regional *vins de pays*, of which 70 percent is Vin de Pays d'Oc.

VINS DE PAYS PRIMEUR

Since 1990, all *vin de pays* denominations have been permitted to produce these wines, which may be marketed from the third Thursday of October following the harvest (much earlier than Beaujolais Nouveau). The regulations allow for red and white wines to be made as *vins primeurs*, but strangely not rosé, although by the very nature of their production many reds are lighter than some rosés, so it is a somewhat moot point. White wines are vinified by cool-fermentation techniques and red wines by one of three methods: *macération carbonique* (see Glossary), part-*macération carbonique* (some of the grapes are crushed and mixed with the whole bunches), and "short-classic" (traditional vinification with minimum skin contact). Cool-fermented whites and *macération carbonique* reds are dominated by amylic aromas (pear drops, banana, nail polish). "Short-classic" rarely provides enough fruit, depth, or color, whereas part-*macération carbonique* can be very successful in enhancing the fruitiness of a wine without drowning it in amylic aromas, but it has to be expertly applied.

Chardonnay on two or three bottles, and grab one. Why? Probably because they have had it before, and it was okay, or for no other reason than the label looks nicer than the others—but the reason is immaterial. What is important is that in making their choice, they—that is, the vast majority—have gone straight past the Coteaux du Littoral Audois *et al.*

This is the old story of customers proclaiming, "I don't want Chablis, I want Chardonnay," and the French authorities have agonized about how to get around the problem. The French being French could not bring themselves to allow *vins de pays* to be sold as pure varietal wines. Instead, in 1996, they tried to divert consumer attention from single-varietal names with the twin-varietal concept, enabling producers to market wines as Cabernet-Merlot, Chardonnay-Sémillon, and so on. Although some very good wines were produced, the idea never really took off. It is fine in a New World country, where the varietal wine concept is all, and a twin-varietal is simply seen as a logical move, but for the *vins de pays* it was like learning to run before they could walk.

The French realized this, and in 2000 issued wide-sweeping decrees authorizing varietal wines for almost all *vins de pays*. It was still an unfair fight because the regulations insisted that such wines be made from 100 percent of the variety indicated, whereas New World imports merely had to comply with the European Union minimum of 85 percent. At the price point of most *vins de pays* and New World varietals, the flexibility to strengthen or soften a variety to one degree or another in a given year is a major advantage. Another advantage the opposition had was to use oak chips. It is one thing to expect a *cru classé* château to use casks rather than chips (although I cannot see why it actually has to be illegal), but it is impossible for *vins de pays* to compete at the same price as the New World wines if the French have to use oak casks or nothing. With casks, they cannot even get the wine on

the shelf at the same time, let alone the same price. Fortunately, Hervé Gaymard, the French Minister of Agriculture, finally agreed that it was unfair, and in July 2004 authorized producers to use oak chips and to blend up to 15 percent of another variety and vintage into a single-varietal *vin de pays*.

VIN DE PAYS DES CÉPAGES DE FRANCE

At the same meeting, one thing that Gaymard refused to authorize was the proposed Vin de Pays des Cépages de France. The faction proposing this have only themselves to blame. Cross-regional blending is a good idea; the error was simply in the naming of the *vin de pays*, which doomed it to failure from the start. Those who objected in principle to cross-regional blending, including a number of UK shippers, claimed that it would "almost certainly become a dumping ground, especially in the current climate of oversupply." That was part of the attraction, from my viewpoint. How else do the classic AOC regions raise the quality of their most basic wines without some form of selection, i.e. dumping, of lesser quality wines? Furthermore, wines might be "dumped" by Bordeaux for different, sometimes opposite, reasons from the Rhône or Roussillon, and blending the two, together with wines from nonclassic areas, could produce something superior to its individual parts. And even when it does not, the shippers have nothing to fear because no one is making them buy the wines.

Where the cross-regional *vin de pays* went wrong was in naming it Vin de Pays des Cépages de France, sourcing the wine from anywhere in France, and expecting European Union legislation to be modified to allow this through. All they had to do was to draw a line from Vannes on the west coast to Roubaix on the Belgian border, name the wine Vin de Pays des Cépages de Sud-Est France (deliberate shades of southeastern Australia), and it would have been passed without anyone blinking an eye.

THE VINS DE PAYS OF FRANCE

AGENAIS

Zonal *vin de pays* Map B, No.1

These red, white, and rosé wines are produced from a combination of classic *bordelais* grapes and some rustic regional varieties, including the Tannat and Fer. Although more than three-quarters of the output is red, it is the rosé made primarily from Abouriou that is best known.

✓ *de Cazeaux* (Tradition)

AIGUES

Zonal *vin de pays* Map A, No.2

Created as recently as 1993, this *vin de pays* roughly corresponds to the Coteaux du Lubéron, and has a similar range of grape varieties.

AIN

Départementale *vin de pays* Map B

This *départementale vin de pays* encompasses unclassified vineyards in southern Burgundy, and has relatively recently come into usage, but the level of production remains insignificant. Pure varietal wines have been allowed since 2000.

✓ *Jean-Christophe Pellerin* (Chardonnay Cép d'Argent)

ALLIER

Départementale *vin de pays* Map B

Relatively recent *départementale vin de pays* for red and rosé wines, primarily from Cabernet Franc, Cabernet Sauvignon, Gamay, and Grolleau, but also Abouriou, Pinot d'Aunis, and Pinot Noir. Whites primarily from Chardonnay, Chenin Blanc, and Sauvignon Blanc, but also Arbois, Folle Blanche, Grolleau Gris, Melon de Bourgogne, and Pinot Blanc. Pure varietal wines have been allowed since 2000.

ALLOBROGIE

Zonal *vin de pays* Map B, No.3

This is the *vin de pays* equivalent of the Vin de Savoie, although it extends beyond the borders of that AOC into cattle country, where the existence of vines is very sporadic. The wines are similar to Vin de Savoie, if somewhat lighter and more rustic in style. Almost 90 percent of production is white, made primarily from Jacquère, Chardonnay, and Chasselas, although Altesse, Mondeuse Blanche, Roussanne, and Molette can also be used. The balance of the production is essentially red and may be made from Gamay, Mondeuse, and Pinot Noir, with rosé accounting for less than 1 percent. Pure varietal wines have been allowed since 2000.

✓ *Demeure-Penet* (Jacquère)

ALPES DE HAUTE-PROVENCE

Départementale *vin de pays* Map B

Most of these wines come from the Durance Valley in the east of the *département*. Production is mostly red, made from Carignan, Grenache, Cinsault, Cabernet Sauvignon, Merlot, and Syrah. Rosé accounts for 15 percent and white made from Ugni Blanc, Clairette, Chardonnay, and Muscat for just 7 percent. Pure varietal wines have been allowed since 2000.

✓ *La Madeleine* (Cabernet Sauvignon) • *de Régusse* (Muscat Moelleux, Pinot Noir Elevé en Fûts de Chêne)

ALPES-MARITIMES

Départementale *vin de pays* Map B

Some 70 percent of production is red and 30 percent rosé, made from Carignan, Cinsault, Grenache, Ugni Blanc, and Vermentino grapes, mostly from the communes of Carros, Mandelieu, and Mougins. White wines may also be produced. Pure varietal wines have been allowed since 2000.

✓ *de Toasc* (Lou Vin d'Aqui)

ARDÈCHE

Départementale *vin de pays* Map B

Red and white wines, from a range of Rhône and *bordelais* grapes, are produced on a limited scale. Pure varietal wines have been allowed since 2000.

✓ *de Champal* (Viognier Arzelle)

ARGENS

Zonal *vin de pays* Map A, No.4

This denomination covers part of the Côtes de Provence and almost half the wines are rosé of a similar style and quality to those of the Vin de Pays du Var. Half the production is red, which is rich, tannic, and spicy, made from Carignan, Cinsault, Syrah, Roussanne du Var, Mourvèdre, and Cabernet Sauvignon. A little white is also produced.

ARIÈGE

Départementale *vin de pays* Map B

Recent *départementale vin de pays* with a small production of red, white, and rosé wine, Ariège is in the very south of France, at the foot of the Pyrenees, overlapping the notional borders of Southwest France and Languedoc-Roussillon. Pure varietal wines have been allowed since 2000.

AUDE

Départementale *vin de pays* Map B

Although still the second or third largest *vin de pays*, this used to boast almost exactly the same output as Vin de Pays d'Oc in 1993, but while the production of the latter appellation has more than tripled, Vin de Pays de L'Aude has virtually stood still. Nevertheless, a lot of fresh and fruity wine is made here, most of which is red, with just 5 percent each of rosé and white. Mediterranean grape varieties dominate. Pure varietal wines have been allowed since 2000.

✓ *de La Bouyssonie* (Merlot) • *de Fontannelles* (Poète Renaissance)

AVEYRON

Départementale *vin de pays* Map B

Since most of the wines produced in this *département*, which is situated between Cahors and Hérault, used to claim the Vin de Pays des Gorges et Côtes de Millau (now Côtes de Millau VDQS) appellation, it will be interesting to see how many *vin de pays* producers utilize this denomination or prefer to use the wider Comté Tolosan appellation. Pure varietal wines have been allowed since 2000.

BALMES DAUPHINOISES

Zonal *vin de pays* Map B, No.5

In the denomination of Balmes Dauphinoises, dry white, made from Jacquère and Chardonnay, accounts for 60 percent of production, and red, made from Gamay and Pinot Noir, accounts for 40 percent. Rosé may also be produced.

BÉNOVIE

Zonal *vin de pays* Map A, No.6

This denomination is located at the eastern extremity of the Coteaux du Languedoc and overlaps part of the Muscat-de-Lunel area. Almost 80 percent of the production is a light, fruity red, made predominantly from Carignan, Grenache, Cinsault, and Syrah, although Merlot and Cabernet Sauvignon may also be used. A fair amount of attractive rosé is made, mostly by the *saignée* method, plus a small quantity of Ugni Blanc-based dry white. Pure varietal wines have been allowed since 2000.

✓ *des Hospitaliers* (Merlot)

BÉRANGE

Zonal *vin de pays* Map A, No.7

Production in Bérange is 75 percent red, 20 percent rosé, and 5 percent white, made from a range of grape varieties very similar to those used in the Coteaux du Languedoc and neighboring Bénovie.

BESSAN

Zonal *vin de pays* Map A, No.8

This tiny, single-village denomination just east of Béziers is best known for its dry, aromatic rosé, which now accounts for 65 percent of production. Just 10 percent red is made, with simple Ugni Blanc-based white accounting for the balance.

BIGORRE

Zonal *vin de pays* Map B, No.9

Mostly full, rich, Madiran-type red wine is made here, plus a little good crisp, dry white. Rosé may also be produced.

BOUCHES-DU-RHÔNE

Départementale vin de pays Map B

This denomination has one of the largest *vin de pays* productions in the country, some 80 percent of which is red and most of that comes from the Coteaux d'Aix-en-Provence area. These wines are warm, spicy, and often quite powerfully structured from Carignan, Grenache, Cinsault, Cabernet Sauvignon, Merlot, and Syrah. The production of rosé is just 12 percent, which is a reasonable proportion for the style, and also in view of the absence of the mystique of a name (it cannot have Provence on the label). The quality is invariably much better than most of the AOC rosé from this area. A little white is also made from Ugni Blanc, Clairette, Bourboulenc, Vermentino, Chardonnay, and Chasan (a slightly aromatic Listan and Chardonnay cross). Domaine de Trévallon is not only the finest wine of the appellation, but one of the greatest *vins de pays*, producing a quality easily equal to some of the best *crus classés* of Bordeaux. Pure varietal wines have been allowed since 2000.

✓ *Hauvette* • *de l'Île St.-Pierre* (Chardonnay)
• *La Michelle* (Rouge) • *Jean-Paul Luc*
(Minna Vineyard Rouge) • *de Trévallon*

BOURBONNAIS

Zonal vin de pays Map B, No.10

This is a rarely seen *vin de pays* from a white-only area of unclassified vines in the Loire Valley.

CALVADOS

Départementale vin de pays Map B

Growers are legally entitled to produce a *vin de pays* named after the *département* in which the vines are located, but after all the fuss about *départementale* names that could be construed to come from a classic wine region, it is surprising to see Calvados approved. Although a *départementale vin de pays*, the area of vines is very small, located at Grisy, west of St. Pierre-sur-Dives. The wines are varietal (Auxerrois, Pinot Gris, Melon, and Müller-Thurgau) made by Gérard Samson under the Arpents du Soleil label. Pure varietal wines have been allowed since 2000.

CASSAN

Zonal vin de pays Map A, No.11

This area is in the Coteaux du Languedoc north of Béziers and overlaps part of Faugères. Almost three-quarters of the wine is red and full bodied, from Carignan, Cinsault, Grenache, Cabernet Sauvignon, Merlot, and Syrah. The balance is split between a well-flavored rosé and a crisp, dry white made primarily from Ugni Blanc, although Clairette and Terret may also be used. Since 2000, however, it has been permissible to market wines as pure varietals, without any specification in the new regulation as to what those varieties may be, hence the Tempranillo below.

✓ *de La Tour Penedesses* (Tempranillo Mas de Couy Elevé en Fûts de Chêne)

CATHARE

Zonal vin de pays Map A, No.12

This area overlapping the Aude and Ariège *départements* was made a *vin de pays* in 2001. Red wines are made from the following: Merlot, Cabernet Franc, Cabernet Sauvignon, and Merlot, one or more of which must represent 50 to 70 percent of the entire blend, plus at least two of the following must account for 30

to 50 percent: Arinarnoa, Caladoc, Carignan, Cinsaut, Chenanson, Eiodola, Grenache, Malbec, Marselan, Pinot Noir, Pinot Gris, Pinot Blanc, Portan, and Syrah. For white wine, there should be 60 to 80 percent of Chardonnay and/or Sauvignon Blanc, plus 20 to 40 percent Bourboulenc, Chasan, Chenin Blanc, Grenache, Grenache Blanc, Macabéo, Marsanne, Mauzac, Roussanne, Sémillon, Ugni Blanc, Vermentino, and Viognier. Rosé is made from Merlot, Cabernet Franc, Cabernet Sauvignon, and Syrah, one or more of which must represent 50 to 70 percent of the entire blend, plus one or more of the following, which must account for 30 to 50 percent: Caladoc, Cinsaut, Chanson, Grenache, and Portan.

✓ *de Sautes* (Signature Cathare)

CAUX

Zonal vin de pays Map A, No.13

This *vin de pays* produces a good, typical dry and fruity rosé in a Languedoc style from vines growing north of Béziers. Some 40 percent of the output is red, and a little white and rosé are also made. Pure varietal wines have been allowed since 2000.

✓ *Causse de Nizzas* (Carignan Vieilles Vignes)

CESSENON

Zonal vin de pays Map A, No.14

This appellation produces red wines of a rustic St.-Chinian style, plus a little rosé.

CÉVENNES

Zonal vin de pays Map A, No.15

This new appellation is an amalgamation of four former *vins de pays*, now subzones: Coteaux Cévenols (15a), Coteaux du Salavès (15b), Côtes du Libac (15c—originally Serre du Coiran), Mont Bouquet (15d), and Uzège (15e), each of which may add its subzonal name to the Vin de Pays des Cévennes. Most of the wines are red; 15 percent are rosé, with *saignée* rosé a specialty. Pure varietal wines have been allowed since 2000. Very small quantities of white *vin primeur* are also produced. Production is mostly of an honest, fruity Languedoc style. Pure varietal wines have been allowed since 2000.

✓ *Clos de La Roque* (Pinot Noir)

CHARENTAIS

Zonal vin de pays Map B, No.16

The dry white wines are really good, even though 50 percent of the grapes used are Ugni Blanc. It seems that this lowly variety and, indeed, the Colombard make light but very fresh, crisp, and tangy wine in the Charente, which is not only well suited to distilling Cognac, but makes a cheap, cheerful, quaffable wine. Some red and rosé wines from Gamay and *bordelais* grapes are also made. The following subzonal areas are allowed to add their names to Vin de Pays Charentais: Île d'Oléron (16a), Île de Ré (16b), and Saint Sornin (16c). Pure varietal wines have been allowed since 2000.

✓ *de La Chauvillière* (Chardonnay) • *Gardrat* (Colombard) • *Chai du Rousoir* (Cabernet Terroir de Fossiles) • *Terra Sana*

CHARENTE

Départementale vin de pays Map B

Hardly used *départementale vin de pays*, most producers preferring the wider-known Vin de

Pays Charentais. Pure varietal wines have been allowed since 2000.

CHARENTE-MARITIMES

Départementale vin de pays Map B

Hardly used *départementale vin de pays*, most producers preferring the wider-known Vin de Pays Charentais. Pure varietal wines have been allowed since 2000.

CHER

Départementale vin de pays Map B

Mostly Touraine-like, Gamay-based red wine, plus a small amount of dry rosé in a light *vin gris* style. Since 1997, an increasing amount of dry white Sauvignon Blanc has been made by the cooperative at Venesmes, which makes a wine comparable to a rustic Sancerre or Menetou-Salon. Pure varietal wines have been allowed since 2000.

CILAIOS

Zonal vin de pays Map B, No.17

The most remote of all French wines, the Vin de Pays de Cilaos was created in January 2004 for vines growing on the island of Réunion, a French protectorate in the Indian Ocean, 420 miles (680 kilometers) east of Madagascar. Grape varieties already grown include Chenin Blanc, Pinot Noir, and Malbec, with plans to plant Gros Manseng, Pinotage, Syrah, and Verdelho. The styles produced are red, white, rosé, and, because the tendency is for grapes to overripen rather too easily, *moelleux*. The only wine producer currently is the local cooperative, which in January 2004 harvested 28 tons of grapes. "Cilaos" means "the place you never leave."

CITÉ DE CARCASSONNE

Zonal vin de pays Map A, No.18

Red wines account for over 90 percent of production, rosé 5 percent, and white wine barely 1 percent. The wines come from 11 communes around Carcassonne. Pure varietal wines have been allowed since 2000. If blended, red and rosé wines must include at least 20 percent of one or more of the following: Cabernet Franc, Cabernet Sauvignon, Malbec, Merlot, Pinot Noir, and Syrah, plus a maximum of 40 percent Alicante Bouschet, Arinarnoa, Caladoc, Carignan, Chenanson, Cinsault, Egiodola, Grenache, Marselan, and Portan. Red *vin de primeur* is restricted to Chenanson, Cinsaut, Merlot, Portan, and Syrah. White wine blends may be made from any of the following: Bourboulenc, Carignan Blanc, Chardonnay, Chasan, Chenin Blanc, Clairette, Colombard, Grenache Blanc, Macabéo, Marsanne, Mauzac, Muscat d'Alexandrie, Muscat à Petits Grains Blanc, Picpoul, Roussanne, Sauvignon Blanc, Sémillon, Terret, Turbat, Ugni Blanc, and Viognier.

✓ *Auzias*

COLLINES DE LA MOURE

Zonal vin de pays Map A, No.19

More than 80 percent of production is basic red, made from a choice of Carignan, Cinsault, Grenache, Syrah, Cabernet Sauvignon, and Merlot, the last two of which are often vinified separately. A light, dry rosé accounts for about 15 percent of production, but very little white is made and it is mostly from Ugni Blanc. Although late-harvest rather than a *vin doux naturel*, it should still come as no surprise that

this *vin de pays* denomination roughly corresponds to the AOCs Muscat de Mireval and Muscat de Frontignan.

✓ Montlobre (La Chapelle) • *de Mujolan* (Mas de Mante Vertige)

COLLINES RHODANIENNES

Zonal *vin de pays* Map B, No.20

A large denomination at the center of Comtés Rhodaniens, this *vin de pays* straddles five *départements* (Rhône, Isère, Drôme, Ardèche, and Loire) and produces primarily red wines from Gamay, Syrah, Merlot, and Pinot Noir. Some extremely small quantities are made of rosé and white, the latter coming from an interesting choice of Chardonnay, Marsanne, Roussanne, Viognier, Jacquère, Aligoté, and Clairette. With the range of body, fatness, aromatic complexity, and acidity that a successful blend of these varieties could bring, there is ample scope for Collines Rhodaniennes to develop a first-rate reputation for white wines. Pure varietal wines have been allowed since 2000.

✓ Cuilleron-Gaillard-Villard (Sotatum) • François Villard (Syrah)

COMTÉ DE GRIGNAN

Zonal *vin de pays* Map B, No.21

Virtually all the production of Comté de Grignan is red and most of that Grenache-dominated, although Syrah, Cinsault, Gamay, Carignan, Merlot, and Cabernet Sauvignon are also allowed. Rosé accounts for just 1 percent, and white is virtually nonexistent.

COMTÉ TOLOSAN

Regional *vin de pays* Map B

Modest quantities of mostly red wines are produced, with some rosé and a tiny amount of white (of which Daubert and Ribonnet stand out). The white wines should be made from the same grape varieties permitted for Armagnac (Blanc Dame, Colombar, Folle Blanche, Graisse, Jurançon Blanc, Mauzac, Mauzac Rosé, Meslier St-François, Ugni Blanc, and until 2010 Baco Blanc). Red wine grapes are not specified beyond "what is growing"! Certainly the white wines are the most successful. Domaine de Ribonnet makes a very good stab at the Australian Chardonnay-Sauvignon Blanc style. Pure varietal wines have been allowed since 2004.

✓ Baudave (Rouge) • François Daubert (Madrigal sur le Mauzac) • Plaimont (Rive Haute Sauvignon Blanc) • *de Ribonnet*

COMTÉS RHODANIENS

Regional *vin de pays* Map B

Created in 1989, Comtés Rhodaniens encompasses eight *départements* and its name

can be given only to wines that have already qualified as a zonal *vin de pays*. It is the smallest of the five regional *vins de pays*, with just one-tenth of the production of the second-smallest regional *vin de pays* (Comté Tolosan), and a mere one-thousandth of the largest (Oc).

✓ *C. V. Ardechois*

CORRÈZE

Départementale *vin de pays* Map A

Mostly reds from Cabernet Franc, Merlot, and Gamay, grown on the stony, limestone *coteaux* of Branceilles, the vineyards of which flourished in the 19th century, but were restored as recently as the 1990s. Pure varietal wines have been allowed since 2000.

✓ Mille et Une Pierre (Elevé en Fûts de Chêne)

CÔTE VERMEILLE

Zonal *vin de pays* Map A, No.22

Mostly red and rosé, these wines are the *vin de pays* equivalent of Collioure, which in turn is the table-wine equivalent of Banyuls.

✓ Vial Magnères

COTEAUX DE L'ARDÈCHE

Zonal *vin de pays* Map B, No.23

This large denomination has a very significant output and is particularly well known for its dark, spicy red wine, which accounts for 80 percent of the total production. Often Syrah-dominated, this wine may also include Cabernet Sauvignon, Carignan, Cinsault, Grenache, Gamay, and Merlot. Louis Latour's Chardonnay put this *vin de pays* on the map during the 1990s, and the same firm's stunning Pinot Noir is proving to be an even greater success. Just over 10 percent of this denomination's total output is rosé, and just under 10 percent is white, the latter made from Bourboulenc, Marsanne, Viognier, Roussanne, Marsanne, Sauvignon Blanc, and Ugni Blanc. About 30 percent of all wines produced are sold as pure varietal.

✓ *C. V. Ardècheois* • *de Bournet* (Chris) • *Mas d'Intras* • Louis Latour • *des Louanes* (L'Encre de Sy)

COTEAUX AUXOIS

Zonal *vin de pays* Map B, No.24

This zonal *vin de pays* has replaced the *départementale* denomination Côte d'Or (which some growers want to utilize for a new AOC), and may produce red and rosé wines from one or more of Gamay, Pinot Gris, and Pinot Noir; while white wines are made from one or more of Aligoté, Auxerrois, Chardonnay, Pinot Gris, Melon de Bourgogne, Sauvignon Blanc, and Sauvignon Gris.

✓ *C. V. de Flavigny* (Chardonnay Fûts de Chêne)

COTEAUX DES BARONNIES

Zonal *vin de pays* Map B, No.25

Almost 90 percent of Coteaux des Baronnie wines are red and almost 10 percent rosé, made from Cabernet Sauvignon, Cinsault, Syrah, Grenache, Pinot Noir, Gamay, and Merlot. Less than 2 percent is white, with varietal wines generally increasing. Pure varietal wines have been allowed since 2000.

✓ du Rieu Frais (Cabernet Sauvignon) • La Rosière (Merlot)

COTEAUX DE BESSILLES

Zonal *vin de pays* Map A, No.26

Fresh, light, rustic-style wines from the Coteaux du Languedoc immediately north of Pinet. Production is two-thirds red, one-quarter rosé, and the balance white. Pure varietal wines have been allowed since 2000.

✓ *St-Hilaire* (Vermentino)

COTEAUX DE LA CABRERISSE

Zonal *vin de pays* Map A, No.27

Mostly red wine, as might be expected from what is after all the heart of Corbières, with 10 percent rosé and just 3 percent white, including some *vins primeurs*. There is a wide range of grape varieties permitted, particularly for the red, which may be made from Carignan, Grenache, Cinsault, Syrah, Mourvèdre, Terret Noir, Cabernet Sauvignon, Cabernet Franc, Merlot, and the Teinturier grape Alicante Bouschet. White grapes include Terret, Grenache Blanc, Clairette, Ugni Blanc, and Macabéo.

COTEAUX DE CEZE

Zonal *vin de pays* Map A, No.28

This is a large denomination with a modest output of roughly 80 percent red and 20 percent rosé, with a minuscule amount of white.

COTEAUX CHARITOIS

Zonal *vin de pays* Map B, No.29

Basic white wines and light reds (Pinot Noir) from the Loire Valley.

✓ du Puits de Compostelle (Pinot Noir Elevé en Fûts de Chêne)

COTEAUX DU CHER ET DE L'ARNON

Zonal *vin de pays* Map B, No.29

The reds and *vin gris* are made from Gamay, and dry white from Sauvignon Blanc.

COTEAUX DE COIFFY

Zonal *vin de pays* Map A, No.31

A relatively new and as yet untested *vin de pays* from way up north, between Champagne and Alsace, in the southeastern corner of the Haute-Marne *département*. Red and rosé from Gamay and Pinot Noir; whites from Aligoté, Arbane, Auxerrois, Chardonnay, Pinot Blanc, Pinot Gris, and Petit Meslier. Pure varietal wines have been allowed since 2001.

✓ *C. V. les Coteaux de Coiffy* (Auxerrois)

COTEAUX D'ENSÉRUNE

Zonal *vin de pays* Map A, No.31

This *vin de pays* west of Béziers used to produce two-thirds red and one-third rosé, but red wines now account for almost 90 percent of the output, made from a typical range of Languedoc grapes. Just 10 percent rosé is produced, but hardly any white. However, Jeanjean makes a nice, soft, fruity dry white from Ugni Blanc, Marsanne, and Chardonnay.

✓ Jeanjean

COTEAUX FLAVIENS

Zonal *vin de pays* Map A, No.33

From hills named after the Roman Emperor Flavius, this *vin de pays* just south of Nîmes in the Costières de Nîmes produces a full, warm-hearted red which accounts for 85 percent of

the output. Most of the rest is rosé, and just a small amount of white is made. Carignan, Grenache, Cinsault, Cabernet Sauvignon, Merlot, and Syrah are the main grape varieties used.

COTEAUX DE FONTCAUDE

Zonal *vin de pays* Map A, No.34

This area overlaps much of Saint-Chinian in the eastern section of the Coteaux du Languedoc. Almost 80 percent of the wines are red, and these are made in a light, fresh but interesting style from Carignan, Cinsault, Grenache, Cabernet Sauvignon, and Syrah. Rosé and a little white are also to be found.

COTEAUX DE GLANES

Zonal *vin de pays* Map B, No.35

This appellation produces mainly red wines, which are Gamay or Merlot dominated, plus a little rosé.

COTEAUX DU GRÉSIVAUDAN

Zonal *vin de pays* Map B, No.36

Red and rosé Savoie-style wines made from Gamay, Pinot, and Etraire de la Dui (a local grape variety), and Jacquère-based dry whites.

COTEAUX DE LAURENS

Zonal *vin de pays* Map A, No.37

Some 85 percent of these wines are a red *vin de pays* equivalent of Faugères, made mostly from Carignan, Cinsault, Syrah, and Grenache, but some of the better wines also include Cabernet Sauvignon and Merlot. A small amount of rosé and even less white is made.

✓ *de La Commanderie de St.-Jean*

COTEAUX DU LIBRON

Zonal *vin de pays* Map A, No.38

Situated around Béziers itself, this *vin de pays* produces mainly red wines, made from Carignan, Grenache, Cinsault, Cabernet Sauvignon, Merlot, and Syrah. Some 12 percent of the output is rosé, and less than 7 percent white, the latter being made mainly from Ugni Blanc, with a touch of Terret and Clairette. Pure varietal wines have been allowed since 2000.

✓ *de la Colombette • de Pierre-Belle (Réserve)*

COTEAUX DU LITTORAL AUDOIS

Zonal *vin de pays* Map A, No.39

This area corresponds geographically to the unofficial Sigean zone of Corbières, where Syrah performs best and is used, not surprisingly, in many of these *vins de pays*, of which red wine accounts for no less than 98 percent of the total output. Other black grape varieties permitted include Carignan, Grenache, Cinsault, Merlot, and Cabernet Sauvignon. Minuscule amounts of rosé and white are produced; the latter is made mainly from Grenache Blanc and Macabéo, but can also include Ugni Blanc, Terret, and Clairette.

COTEAUX DE MIRAMONT

Zonal *vin de pays* Map A, No.40

Red wines from a typically Mediterranean range of *bordelais* and southern-Rhône grapes dominate this denomination, which bridges the Côtes de La Malepère and Corbières. Rosé and white together account for less than 5 percent of output, including some *vins primeurs*.

✓ *Foncalieu*

COTEAUX DE MONTÉLIMAR

New zonal *vin de pays* Map B, No.41

This *vin de pays* was established in September 2004, and encompasses vineyards between Montélimar and Dieulefit in the Drôme *département*, just north of the Coteaux de Tricastin AOC. Pure varietal wines are allowed. Red and rosé must be made from one or more of the following: Cabernet Sauvignon, Carignan, Cinsault, Gamay, Grenache, Marselan, Merlot, Pinot Noir, and Syrah. White wines from one or more of Chardonnay, Clairette, Grenache Blanc, Marsanne, Muscat à Petits Grains, Roussanne, Sauvignon Blanc, and Viognier.

COTEAUX DE MURVIEL

Zonal *vin de pays* Map A, No.42

Just next to the Saint-Chinian area, this *vin de pays* produces some very good reds, which account for 85 percent of the output, made from Carignan, Cinsault, Grenache, Cabernet Sauvignon, Merlot, and Syrah. There are a number of rosés, but very few whites.

✓ *de Ciffre (Val Taurou) • de Ravanès (Les Gravières du Taurou Grande Réserve)*

COTEAUX DE NARBONNE

Zonal *vin de pays* Map A, No.43

Mostly soft red wines, and just 4 percent in total of white and rosé, come from this coastal edge of Corbières where the vines overlap with those of Coteaux du Languedoc.

✓ *Hospitalet*

COTEAUX DE PEYRIAC

Zonal *vin de pays* Map A, No.44

Full and rustic red wines, made from local grape varieties augmented by the Syrah, Cabernet, and Merlot, account for more than 80 percent of the production of this *vin de pays* in the heart of Minervois. The remainder is mostly rosé, with less than 1 percent white.

COTEAUX DU PONT DU GARD

Zonal *vin de pays* Map A, No.45

The Pont du Gard is a stunningly beautiful, three-tier Roman aqueduct from the 1st century BCE. Its bottom tier is still strong enough to support modern traffic 2,000 years later, but the wines of Coteaux du Pont du Gard, though mostly rich and powerful reds, are built for a considerably shorter life span. A small amount of white and rosé is also produced, with *vins primeurs* a local specialty.

✓ *Mas de Forton • Leyris Mazière*

COTEAUX DU SALAGOU

Zonal *vin de pays* Map A, No.46

Production is 80 percent red and 20 percent rosé, from a range of typical Languedoc grapes.

COTEAUX DE TANNAY

Zonal *vin de pays* Map B, No.47

This relatively new *vin de pays* area east of Sancerre was created in 2001. White wines are made from Chardonnay or Melon de Bourgogne. Red and rosé come from Gamay and Pinot Noir, plus up to 20 percent of Gamay Teinturier de Bouze and Gamay de Chaudenay. Pure varietal wines are allowed.

✓ *Cyrille Raty (Chardonnay)*

COTEAUX ET TERRASSES DE MONTAUBAN

Zonal *vin de pays* Map B, No.48

Red and rosé wines from the Pays de La Garonne.

✓ *de Montels (Louise)*

COTEAUX DU VERDON

Zonal *vin de pays* Map B, No.49

This *vin de pays* in the northern hinterland of Côtes de Provence and Coteaux Varois was created as recently as 1992 and has no restriction on the grape varieties that may be used.

✓ *La Colline de Vignoble (Merlot-Cabernet Sauvignon)*

CÔTES DU BRIAN

Zonal *vin de pays* Map A, No.50

An area in Minervois, Côtes du Brian produces 90 percent red, from Carignan for the most part, although Grenache, Cinsault, Cabernet Sauvignon, Merlot, and Syrah may also be used. The balance of the production is principally rosé, with very few white wines. Pure varietal wines have been allowed since 2000.

CÔTES CATALANES

Zonal *vin de pays* Map A, No.51

Much enlarged following the absorption of and merger with the former *vins de pays* of Catalan, Coteaux de Fenouillèdes, and Vals d'Agly. This nonsensical exercise of bureaucratic expediency has angered many, not least those in the Coteaux de Fenouillèdes, who were just beginning to make a name for themselves when their *vin de pays* was suppressed in September 2003. Furthermore, the inhabitants of the Fenouillèdes are not Catalan, nor do they speak Catalan. Hopefully some sense and sensitivity will prevail. In the meantime, I list the best wines according to their old *vin de pays* below. Pure varietal wines have been allowed since 2000.

✓ **Coteaux de Fenouillèdes** *Gauby* Ⓟ (Le Soula), *Salvat* (Fenouil Rouge) • **Catalan** *Mas Baux* (Grenache Velours Rouge), *Mosse* Ⓞ (La Carignan) • **Côtes Catalanes** *Boudau* (Le Petit Clos Rosé, Muscat Sec), *Cazes Frères* Ⓟ, *de Pézilla*, *Arnaud de Villeneuve* (Muscat Moelleux) • **Vals d'Agly des Chênes** Ⓟ

CÔTES DU CÉRESSOU

Zonal *vin de pays* Map A, No.52

Typically light and fruity Languedoc wines are produced in fairly large amounts; 60 percent is red, 15 percent white, and 25 percent rosé.

CÔTES DU CONDOMOIS

Zonal *vin de pays* Map B, No.53

Production includes 60 percent red, dominated by the Tannat grape, and 40 percent white, from the Colombard or Ugni Blanc. A little rosé is also produced.

✓ *Plaimont (Prestige du Condomois)*

CÔTES DE GASCOGNE

Zonal *vin de pays* Map B, No.54

These deliciously tangy, dry white wines are the undistilled produce of Armagnac. Those made from the Colombard grape are the lightest, while those from the Ugni Blanc are fatter and more interesting. Manseng and Sauvignon Blanc

are also used to good aromatic effect in some blends. Less than 20 percent of production is red and barely 1 percent rosé. Pure varietal wines have been allowed since 2000.

- ✓ Alain Brumont (Les Menhirs) • des Cassagnoles (Gros Manseng Sélection) • de Joy (Sauvignon Gros Manseng) • de Lartigue • Plaimont • du Tariquet (Les Premières Gries)

CÔTES DE LASTOURS

Zonal *vin de pays* Map A, No.55

This area roughly corresponds to the Cabardès VDQS and produces mostly red wines from a similar range of grapes. Just 4 percent rosé and 3 percent white (Mauzac, Chenin, Chardonnay, and Ugni Blanc) is made, with *vins primeurs* a local speciality.

- ✓ Baron d'Ambres

CÔTES DE MONTESTRUC

Zonal *vin de pays* Map B, No.56

Production includes reds, made from Alicante Bouschet, Cabernets, Malbec, Merlot, and Jurançon Noir, and white wines, made from the Colombard, Mauzac, and Ugni Blanc.

CÔTES DE PÉRIGNAN

Zonal *vin de pays* Map A, No.57

This area is within the southern extremity of the Coteaux du Languedoc, just north of La Clape AOC and incorporating some of La Clape's northern slopes. Almost 90 percent is red wine that is similar, if more rustic, in style to the wines of La Clape and made from a similar range of grape varieties, but with Grenache, Syrah, and Cinsault dominating. The fresh, dry rosé can be good quality and flavorsome too. Just 1 percent of white wine is made, mainly from Clairette and Ugni Blanc, but Terret and Macabéo are also permitted. *Vin primeur* is also made.

- ✓ de La Negly (Palazy Rosé)

CÔTES DE PROUILLE

Zonal *vin de pays* Map A, No.58

These red, white, and rosé wines produced by the Côtes de Prouille appellation come from the Aude *département*.

CÔTES DU TARN

Zonal *vin de pays* Map B, No.59

Côtes du Tarn is the *vin de pays* equivalent of Gaillac: some 60 percent is red, 30 percent white, and the rest rosé. These wines are made from *bordelais* and southwestern grape varieties, plus, uniquely for France, the Portugais Bleu. Gamay is often used for Côtes du Tarn Primeur, while together with Syrah it makes an appealing, delicate *saignée* rosé. Pure varietal wines have been allowed since 2000.

- ✓ Guy Fontaine (Les Vignes des Garbasses Syrah) • Sabrelle (Chardonnay)

CÔTES DE THAU

Zonal *vin de pays* Map A, No.60

A small denomination west of Béziers, producing almost equal quantities of red, white, and rosé from all the usual Languedoc varieties. These wines used to be used for vermouth until the upswing in *vin de pays*.

- ✓ de Marie-Anais (Syrano)

CÔTES DE THONGUE

Zonal *vin de pays* Map A, No.61

Just south of Faugères, this appellation produces mostly red wine, from grapes including Grenache, Cinsault, Cabernet Sauvignon, Merlot, Syrah, and Carignan, with *vins primeurs* of the last three varieties a speciality. Emphasis is placed on pure varietal wines of all styles. Some 15 percent rosé and 10 percent white is also made in this up-and-coming *vin de pays*. Pure varietal wines have been allowed since 2000.

- ✓ C. V. d'Alignan du Vent (Icare, Montarels) • Clos de l'Arjolle • de la Croix Belle (Cascaillou, No.7 Rouge) • Deshenrys (Lissac) • Mont d'Hortes (Sauvignon) • Montplézy (Félicité)

CÔTES DU VIDOURLE

Zonal *vin de pays* Map A, No.62

Wegged between the Coteaux du Languedoc and Costières de Nîmes, more than 80 percent of the wines produced are red, from Carignan, Grenache, Cinsault, Cabernet Sauvignon, Merlot, Cabernet Franc, and Syrah. About 15 percent rosé is made, but white is seldom seen.

CREUSE

Départementale vin de pays Map B

Recent, little-used *départementale vin de pays* right in the center of France. Red and rosé wines are made primarily from Cabernet Sauvignon, Cabernet Franc, Merlot, Tannat, although Abouriou, Fer Servadou, and Malbec are sometimes used. White wines are primarily from Chenin Blanc, Sauvignon Blanc, and Sémillon, although Chardonnay, Colombard, Gros Manseng, and Muscadelle are occasionally used. Pure varietal wines have been allowed since 2000.

CUCUGNAN

Zonal *vin de pays* Map A, No.63

A tiny denomination of essentially red wines in the midst of the Côtes du Roussillon Villages

district, produced from Rhône varieties boosted by Cabernet Sauvignon and Merlot. Rosé may be made, but it seldom is, although there is an average of 1 percent dry white from Mauzac, Chenin Blanc, Chardonnay, and Ugni Blanc.

DEUX-SÈVRES

Départementale vin de pays Map B

Simple wines of a frank nature, from the vineyards with the richest soil (and thus the poorest for wine production) in the Nantais. Pure varietal wines have been allowed since 2000.

- ✓ Bouvet-Ladubay (Non Pareils)

DOUBS

Départementale vin de pays Map B

Recent *départementale vin de pays* with minute production, Doubs is in the very east of France, between the Jura and Alsace. Pure varietal wines have been allowed since 2000.

DRÔME

Départementale vin de pays Map B

Red, white, and rosé wines are produced from typical Rhône varieties augmented by Gamay, Cabernet Sauvignon, and Merlot. More than 90 percent of the output is red and similar in style to Coteaux du Tricastin AOC. A small amount of decent rosé is made, but white wines represent barely 1 percent. Pure varietal wines have been allowed since 2000.

- ✓ Le Plan (Rouge) • Sud-Est Appellations (Syrah)

DUCHÉ D'UZES

Zonal *vin de pays* Map A, No.64

In theory, this area is in the southern half of Vin de Pays des Cévennes, but in practice the two *vins de pays* are virtually identical. This was recognized by the decree in 1995, in which Duché d'Uzès overlaps all but 10 of the 131 villages in Vin de Pays des Cévennes.

FRANCHE COMTÉ

Zonal *vin de pays* Map B, No.65

A vast area overlapping the Jura and Savoie, Franche Comté produces fresh, clean, crisp, but otherwise unremarkable red and rosé wines. Only the white, made from Chardonnay, Pinot Gris, and Pinot Blanc, is of any note. Wines produced in the village of Champlitte have the right to add the subzonal name Coteaux de Champlitte (65a) to the Franche Comté *vin de pays*.

- ✓ Vignoble Guillaume (Collection Réservee)

GARD

Départementale vin de pays Map B

A large production of mostly red wines made from Carignan, Grenache, Cinsault, Cabernet Sauvignon, Merlot, and Syrah. Some 15 percent of the output is a clean, fruity rosé, and the mainly Ugni Blanc-based white wines account for less than 3 percent (with Viognier a growing niche within this small percentage). Pure varietal wines have been allowed since 2000.

- ✓ Mas de Aveylands • Mas de Bressades • de Campuget (Viognier Prestige) • des Cantarelles • de Guiot • Saint-Antoine

GERS

Départementale vin de pays Map B

Mostly white wines, similar in style to Côtes de Gascogne. Pure varietal wines have been allowed since 2000.

✓ Patrick Azcué • *Château Bouscassé*

GIRONDE

Départementale vin de pays Map B

Red and white wines made in isolated areas not classified for the production of Bordeaux. Pure varietal wines have been allowed since 2000.

HAUTE GARONNE

Départementale vin de pays Map B

Robust red and rosé wines made from Jurançon Noir, Négrette, and Tannat grapes grown in old vineyards south of Toulouse, with a little Merlot, Cabernet, and Syrah. A minuscule amount of dry white is made, and total production of all styles is very small, but De Ribonnet has put this denomination on the viticultural map and is in a class apart from all the other producers. Pure varietal wines have been allowed since 2000.

✓ de Ribonnet

HAUTE MARNE

Départementale vin de pays

Located adjacent to Champagne's Aube and Burgundy's Côte d'Or, it is not surprising that Le Muid Montsaigeonnais has made some pretty good Pinot Noir. Pure varietal wines have been allowed since 2000.

✓ Le Muid Montsaigeonnais (Pinot Noir Elevé en Fûts de Chêne)

HAUTERIVE

Zonal vin de pays Map A, No.66

Formerly called Vin de Pays d'Hauterive en Pays d'Aude, this appellation was renamed in 2004, when it was merged with the former *vins de pays* of Coteaux de Termenès, Côtes de Lézignan, and Val d'Orbieu. Production is primarily red, made from a range of typical Languedoc and southwestern grapes in the Corbières. A little *vin primeur* is made, as well as small amounts of white and rosé.

HAUTES-ALPES

Départementale vin de pays Map B

Very little wine is produced under this denomination, which is the *département* just south of the Savoie. Pure varietal wines have been allowed since 2000.

✓ de Trébsaudon (Rouge)

HAUTE-SAÔNE

Départementale vin de pays Map B

Rarely used, this is a minor *départementale vin de pays* for red, white, and rosé wines from unclassified vineyards in the south of Burgundy. Pure varietal wines have been allowed since 2000.

HAUTE-VALLÉE DE L'AUDE

Zonal vin de pays Map A, No.67

Mostly dry whites, from Chardonnay, Chenin, Mauzac, and Terret grapes grown in the Limoux district. A quarter of the output is red, from *bordelais* grapes, with just 3 percent rosé. Pure varietal wines have been allowed since 2000.

✓ de l'Aigle (Chardonnay Les Aigles, Pinot Noir

Terres Rouges) • Marc Ramires (Prieuré d'Antugnac)

HAUTE-VALLÉE DE L'ORB

Zonal vin de pays Map A, No.68

A limited amount of red, white, and rosé, primarily from Pinot Noir, Chardonnay, and Viognier. Pure varietal wines have been allowed since 2000.

✓ Marc Ramires (Prieuré d'Antugnac) • de Roquebrun (Orb Rouge)

HAUTE-VIENNE

Départementale vin de pays Map B

Rarely used, minor *départementale vin de pays* for red, white, and rosé wines east of the Cognac region. Pure varietal wines have been allowed since 2000.

HAUTS DE BADENS

Zonal vin de pays Map A, No.69

These red and rosé wines are produced in a rustic Minervois style.

HÉRAULT

Départementale vin de pays Map B

Red wine accounts for 85 percent of production and is increasing. The choice of grapes is quite wide, but most blends are based on Carignan, Cinsault, Grenache, and Syrah, boosted by a small proportion of *bordelais* varieties. About 10 percent rosé and 5 percent white wine is produced, the latter made from Clairette, Macabéo, Grenache Blanc, and Ugni Blanc. Production is vast, over 11 million cases (one million hectoliters), making it the second or third largest *vin de pays*, together with Vin de Pays de l'Aude. Improved viticultural and vinicultural techniques have transformed what was once the heart of Midi mediocrity into delicious, brilliant-value wine in some cases. Pure varietal wines have been allowed since 2000.

The most famous wine bearing this modest *vin de pays* denomination is, of course, Mas de Daumas Gassac. Situated northwest of Montpellier at Aniane, this property has been dubbed "the Lafite of the Languedoc," but when Aimé and Véronique Guibert purchased it, wine was the last thing on their minds. That was, however, before the visit of Professor Enjalbert, the Bordeaux geologist and author, who discovered Daumas Gassac had a rare, fine,

powdery volcanic soil that is an incredible 65 feet (20 meters) deep. Enjalbert predicted that it would yield a world-class wine if cultivated as a *grand cru*, and that is exactly what Aimé Guibert set out to do. I am not convinced about the rosé, and the white has been far too flabby in recent vintages, but the red is the equivalent of a Bordeaux *cru classé*. Even in lighter vintages, when Guibert gets slated by the critics, I think his red has a rare elegance that is missed just because it is not as big as people expect.

✓ Mas de Daumas Gassac (Rouge) • de la Fadèze • C. V. Frontignan (Abeillon) • La Grange des Pères • Mas de Janiny (Cabernet Sauvignon) • Les Quatre Pîlas (Mouchère)

ÎLE DE BEAUTÉ

Zonal vin de pays Map B, No.70

With AOC wines accounting for just 15 percent of Corsica's wine output, its one all-encompassing (though technically not *départementale*) *vin de pays* has a huge impact on the perceived quality of this island's wine. Almost 60 percent of this *vin de pays* is red and 25 percent rosé, both made from a wide range of grapes, including many indigenous Corsican varieties, some of which may be related to certain Italian grapes. Grape varieties used include: Aleatico (red Muscat-like variety), Cabernet Sauvignon, Carignan, Cinsault, Grenache, Merlot, Syrah, Barbarossa, Nielluccio (the widest-planted on the island and said to be related to Sangiovese), Sciacarello (echoes of Provence's Tibouren), and Pinot Noir. A lot of effort is made to promote Corsican Pinot Noir, but at the time of writing this seems to be totally misguided. The best show decent varietal aroma, but lack an elegance of fruit and do not possess the essence of Pinot on the palate. Maybe someone will make good Corsican Pinot Noir, but it is a variety that requires a lot more care and attention in the vineyard and winery than is evident in any example I have tasted so far. Nielluccio has a reputation for good rosé, but as Orega de Gaffory of Patrimonio in Corsica has shown, it also has the ability to produce a very fine red wine.

White wines from Chardonnay, Ugni Blanc, Muscat, and Vermentino are usually more demonstrative of clean, anaerobic handling and very cool fermentation than they are of any expression of *terroir*. Pure varietal wines have been allowed since 2000.

✓ Casabianca (Nectar d'Automne) • du Mont Saint-Jean (Aleatico, Pinot Noir) • de Patrapiana (Nielluccio) • de Saline • Terra Vecchia (Rouge)

INDRE

Départementale vin de pays Map B

Red, white, and rosé wines, including a pale *vin gris* style, from traditional Loire grape varieties are produced under this appellation. Pure varietal wines have been allowed since 2000.

INDRE-ET-LOIRE

Départementale vin de pays Map B

From vineyards east of Tours, this *vin de pays* is 80 percent red, made primarily from Gamay, although Cabernet Franc and Grolleau are also used. A little white, but even less rosé, is made. Pure varietal wines have been allowed since 2000.

ISÈRE*Départementale vin de pays* Map B

Hardly used *départementale vin de pays*, most producers preferring one of a number of zonal appellations for the unclassified vineyards in this part of the northern Rhône Valley. Mostly red wine, a smattering of white, but no rosé. Pure varietal wines have been allowed since 2000.

JARDIN DE LA FRANCE*Regional vin de pays* Map B

This *vin de pays* produces red, white, and rosé wines from 14 *départements* covering most of the Loire Valley. It would seem, from the wines most commonly encountered, that the majority of this vast output must be dry white, dominated by either Chenin Blanc or Sauvignon Blanc, but, according to the statistics, 60 percent is red. Generally a disappointing appellation, with the thin, acid Chardonnays being the most depressing, but the Cabernet Sauvignon from Pierre & Paul Freuchet is surprisingly soft and perfumed for this northerly denomination. Pure varietal wines have been allowed since 2000.

- ✓ *Paul Boutinot* (Signature Chardonnay)
- *Adéa Consules* (Ligerie) • *Bruno Cormerais* (Elevé en Fûts de Chêne) • *de la Couperie* (Clyan Elevé en Fûts de Chêne) • *Manoir La Perrière* (Chardonnay) • *Henry Marionnet* (Provinage) • *du Petit Château* (Chardonnay) • *Château de La Ragoitière* • *de la Saulze* (Gamay Rosé)

LANDES*Départementale vin de pays* Map B

Red, white, and rosé wines are produced under this appellation. Approximately 80 percent is red, and the grapes used are traditional southwestern varieties. Pure varietal wines have been allowed since 2000.

- ✓ *Duprat Frères* (Cabernet-Tannat)

LOIRE-ATLANTIQUE*Départementale vin de pays* Map B

Red and rosé wines, including a pale *vin gris*, are made from Gamay and Grolleau, while Folle Blanche and Melon de Bourgogne are used for white, with some interesting developments using Chardonnay. Pure varietal wines have been allowed since 2000.

LOIRET*Départementale vin de pays* Map B

This appellation produces a small amount of red and rosé, including a pale *vin gris* style, made from Gamay. A Sauvignon Blanc white is also made. Pure varietal wines have been allowed since 2000.

LOIR-ET-CHER*Départementale vin de pays* Map B

Red, white, and rosé wines, including a pale *vin gris*, are made from traditional Loire grape varieties, mostly from around Blois in the Cheverny area. Almost half the production is red and the rest white, but a touch more of the former is made, with very little rosé. Pure varietal wines have been allowed since 2000.

LOT*Départementale vin de pays* Map B

Most wines in this *département* are red, and claim either the regional Comté Tolosan denomination or Vin de Pays des Coteaux de Glanes. Pure varietal wines have been allowed since 2000.

- ✓ *des Ardailloux* (Chardonnay Tradition)

LOT-ET-GARONNE*Départementale vin de pays* Map B

This denomination is seldom seen, as the wines in this *département* are mostly red and sold as Vin de Pays du Comté Tolosan, but a tiny amount of white wine is produced under the Vin de Pays du Lot-et-Garonne label. Pure varietal wines have been allowed since 2000.

- ✓ *C. V. des Coteaux du Mézinais* (Gros Manseng Moelleux)

MAINE-ET-LOIRE*Départementale vin de pays* Map B

Production is 85 percent red, and white and rosé account for the rest, made from traditional Loire grape varieties in the Anjou-Saumur district. Substantial quantities are produced, but most are sold from the back door. Pure varietal wines have been allowed since 2000.

- ✓ *Gaillard* Ⓟ

MARCHES DE BRETAGNE*Subregional vin de pays* Map B, No.71

Wines from the Marches de Bretagne subregion have the right to add this name to the Vin de Pays du Jardin de la France. Production includes red and rosé wines, made predominantly from Abouriou, Gamay, and Cabernet Franc, plus a little white from Muscadet and Gros Plant.

MAURES*Zonal vin de pays* Map B, No.72

This denomination has a very large production and covers most of the southern part of the Côtes de Provence. Almost half the wines are rosé of a similar style and quality to those of the *Vin de Pays du Var*. The rest is red, which is rich, warm, and spicy, while white wine accounts for just 5 percent of total output. Pure varietal wines have been allowed since 2000.

- ✓ *Borrelly-Martin* (Le Carre de Laure) • *Dupéré-Barrera* (Nowat Syrah) • *Marouine* (Carignan Vieilles Vignes)

MEUSE*Départementale vin de pays* Map B

This *vin de pays* produces red and rosé wines, including a pale *vin gris*, from Pinot Noir and Gamay. Some white wine from Chardonnay, Aligoté, and Auxerrois is also made. Pure varietal wines have been allowed since 2000.

- ✓ *de Coustille* (Pinot Gris) • *Laurent Degenève* (Auxerrois)

MONT BAUDILE*Zonal vin de pays* Map A, No.73

Production is mostly red wine, from a typical Languedoc range of grapes grown in the foothills of the Causses de Larzac. Rosé and white account for less than 15 percent of the total output, although crisp, dry whites are on the increase.

- ✓ *d'Aupilbac*

MONT-CAUME*Zonal vin de pays* Map B, No.74

Effectively the *vin de pays* of Bandol—it is indeed the red wines that are the best here, including some truly outstanding wines, such as Bunan's classic Cabernet Sauvignon. However, the main varieties for most red and rosé wines (which account for 45 percent of the total production) are Carignan, Grenache, Cinsault, Syrah, and Mourvèdre. A little white is produced, but it is of little interest. Pure varietal wines have been allowed since 2000.

- ✓ *Bunan* (Cabernet Sauvignon, Mourvèdre) • *Gaubly* (Ginestre)

MONTS DE LA GRAGE*Zonal vin de pays* Map A, No.75

These red and rosé wines are produced in a basic Languedoc style, often beefed up with Syrah grapes. White wines must be truly dry (less than 2.5 grams per liter residual sugar). Pure varietal wines have been allowed since 2000.

- ✓ *de la Bergerie d'Amilbac* (Syrah) • *Le Bosc* (Syrah) • *Condamine Bertrand* (Petit Verdot Gourmandise) • *de la Fadèze* (Merlot Elevé en Fûts de Chêne) • *Grange des Rouquette* (Agrippa) • *de Malleport* (Alexandre) • *Mas Montelle* (Jéricho) • *de Montlobre* (Tête de Cuvée) • *de Saint-Louis* • *du Soleil* (Solstice Merlot Réserve Barrique) • *des Soutie* (Merlot) • *de Terre Mégère* (Cabernet Sauvignon) • *Vigne Blanche* (Cabernet Sauvignon)

NIÈVRE*Départementale vin de pays* Map B

Red, white, and rosé wines, production of which is mostly confined to the areas of Charité-sur-Loire, La Celle-sur-Nièvre, and Tannay. Pure varietal wines have been allowed since 2000.

OC*Regional vin de pays* Map B

This vast appellation is the most successful of all *vins de pays*, commercially and qualitatively. It sells well because of the simplicity of its name, which even English speakers have no difficulty pronouncing, and it encompasses most of the best *vins de pays* produced in France. The "Oc" of this regional *vin de pays* is southern dialect for "yes," it being "oui" elsewhere in France; thus, Languedoc, the "tongue of Oc." Some 70 percent of production is red, with the balance split equally between

white and rosé. Even though most of the finest *vins de pays* are produced here, the volume of output is so vast that the quality will inevitably be variable. What has enabled so many truly fine wines to emerge in this denomination is the role of the so-called *cépages améliorateurs*. These grapes, such as Cabernet Sauvignon, Merlot, Syrah, Chardonnay, and Sauvignon Blanc, are not traditional in the region, but add greatly to the quality and finesse of more rustic local varieties. They also make excellent varietal wines. Viognier is on the increase as a varietal wine and makes a good-value, juicy-fruity (sometimes creamy-oaky), more exotic alternative to Chardonnay.

The quest for Pinot Noir du Vin de Pays d'Oc has been less satisfactory. The best so far are the oak renditions from Clovallon and Joseph de Bel Air, and the strawberry-milkshake-flavored concoction from Virginie. They might succeed, but even these three are very far from doing so, and the efforts of others have been totally alien to any knowledgeable drinker's concept of this grape. Some of Domaine de La Baume's wines are organic.

✓ *de l'Aigle* (Chardonnay Les Aigles) • *des Aires Hautes* • *Astruc* (Chardonnay Réserve) • *de la Baume* • *Condamine Bertrand* (Cigalus, Elixir Rouge) • *Jean-Marc Boillot* (de la Truffière) • *des Bons Auspices* (Emparitz Cabernet Sauvignon) • *Chantoverent* (Chardonnay Dolmen des Fées) • *Jean-Louis Denois* • *Le Fort* (Blanche Chardonnay) • *Foncalieu* (Bouquet d'Oriane, Enseduna Réserve Syrah) • *de Gourgazaud* • *La Grange des Quatre Sous* • *de Granoupiac* (Merlot) • *James Herrick* • *Lalande* (Pinot Noir) • *Michel Laroche* (La Croix Chevalière) • *Paul Mas* (La Forge Merlot) • *Mas Neuf* • *Gabriel Meffre* (Galet Vineyards) • *Montlobre* (Tête de Cuvée Rouge) • *de l'Orviel* (Chardonnay) • *Primo Palatum* (Chardonnay) • *Peirière* (Elevé en Fûts de Chêne: Cabernet Sauvignon, Merlot, Syrah) • *Michel Picard* (Chardonnay) • *Antonin Rodet* (Syrah) • *St.-Hilaire* • *Skalli* (Réserve F: Cabernet Sauvignon or Merlot) • *du Soleil* (La Chasse du Pape: Chardonnay, Viognier, or Syrah) • *de Terre Mégère* • *C. V. des Trois Terroirs* (L'Esprit du Midi Viognier, XL Les Grès) • *Vedau* (Chardonnay Terre d'Amandiers) • *Arnaud de Villeneuve* (Grenache, Syrah) • *Virginie* (Castel Chardonnay Réserve, Gold Label Cabernet Merlot Réserve) • *Les Yeuses* (Cuvée La Soure)

PAYS DE RETZ

Subregional *vin de pays* Map B, No.77

This denomination may be added to the Vin de Pays du Jardin de la France. Best known for its rosé made from the Grolleau Gris (typified by Domaine du Parc), although red wines are also made from Grolleau, Gamay, and Cabernet Franc and account for as much as 70 percent of

production. A tiny amount of white from Grolleau Gris can be found. Pure varietal wines have been allowed since 2000.

✓ *du Parc* (Grolleau)

PÉRIGORD

Zonal *vin de pays* Map B, No.77

This name replaced the *départementale* Vin de Pays of Dordogne for vines growing on the *causse* or limestone region of Périgord, where vineyards flourished in the 19th century. Now there are just 45 acres (18 hectares), producing 35% rosé, 10% Perigord Noir, and 50% Tradition (an oak-matured red wine). The balance is sold as *vin primeur*. The subzonal Vin de Domme (77a) is allowed to add its name to this *vin de pays*.

✓ *C. V. des Coteaux du Cèou* (Vin de Domme Tradition)

PETITE CRAU

Zonal *vin de pays* Map B, No.78

A small *vin de pays* just south of Avignon, production is almost 80 percent red and 20 percent rosé from mostly Carignan, Grenache, Cinsault, and Syrah. Most rosé wines are made from, or dominated by, the Cinsault using the *saignée* method. Insignificant amounts of white from Ugni Blanc and Clairette are also produced. Pure varietal wines have been allowed since 2000.

✓ *C. V. de Laure* (Cabernet Pétrarque et Laure)

PORTES DE MÉDITERRANÉE

Regional *vin de pays* Map B

A vast regional *vin de pays*, but merely a modest production.

✓ *La Blaque* (Pinot Noir)

PÉZENAS

Zonal *vin de pays* Map A, No.79

Just south of Cabrières AOC, this single-village denomination produces mostly red wines. The grapes permitted are typical for Languedoc, with pure varietal wines on the increase, particularly Merlot, Cabernet Sauvignon, and Syrah. Rosé and white account for about 10 percent each, with crisp, dry whites on the increase, including a tiny amount sold as *vins primeurs*.

PRINCIPAUTÉ D'ORANGE

Zonal *vin de pays* Map B, No.80

This is a full red wine, made predominantly from Rhône grape varieties grown around Orange, north of Avignon, in an area that bridges Châteauneuf-du-Pape and Côtes-du-Rhône Villages. Just 4 percent rosé and barely 1 percent white is made.

✓ *Font Simian*

PUY-DE-DÔME

Départementale vin de pays Map B

Red, white, and rosé wines of simple, rustic quality are made under this appellation. A *puy* is a volcano stack, a number of which are found in the Puy-de-Dôme *département*. Pure varietal wines have been allowed since 2000.

PYRÉNÉES-ATLANTIQUES

Départementale vin de pays Map B

Two-thirds red and one-third white wine from traditional southwestern grape varieties is produced under this appellation. Pure varietal wines have been allowed since 2000.

PYRÉNÉES-ORIENTALES

Départementale vin de pays Map B

From the most southerly French *département*, bordering Spain's Andorra region, much of the *vin de pays* in the Pyrénées-Orientales comes from the same area as the AOC Côtes-du-Roussillon and Vin de Pays Catalan. Most of the production consists of full, fruity reds, with just 10 percent rosé and 5 percent white. Pure varietal wines have been allowed since 2000.

✓ *The Fifteen* (Grenache)

SABLES DU GOLFE DU LION

Zonal *vin de pays* Map A, No.81

A very go-ahead *vin de pays* situated along the Mediterranean coast of Gard, Hérault, and Bouches-du-Rhône, where the vines are mostly ungrafted and grown on an amazing sandbar with seawater on both sides. Production is, unusually, two-thirds rosé, including a large proportion in pale *vin gris* style, plus 30 percent red and a small amount of white wine. Pure varietal wines have been allowed since 2000.

✓ *Bosquet-Canet* (Cabernet Sauvignon) • *du Petit Chaumont* (Chardonnay) • *Listel* (Jarras Gris de Gris)

SAINT BAUME

New zonal *vin de pays*

Too recent to map, this *vin de pays* was established in September 2004 and encompasses vineyards in the villages of Bras, Brignoles, La Celle, Mazaugues, Méounes-lès-Montrieux, Nans-les-Pins, Néoules, Ollières, Plan-d'Aups, Riboux, La Roquebrussanne, Rougiers, Saint-Maximin, Saint-Zacharie, Signes, and Tourves in the Var *département*. No grape varieties are specified, but pure varietal wines are allowed.

SAINT-GUILHEM-LE-DÉSERT

Zonal *vin de pays* Map A, No.82

Formerly called Vin de Pays des Gorges de L'Hérault, this denomination is in Coteaux du Languedoc and overlaps most of the Clairette du Languedoc appellation, yet less than 10 percent of its wines are white, with Ugni Blanc and Terret supporting Clairette. They are, however, better known than the reds, which account for over 80 percent of output. Some rosés are also made.

✓ *d'Aupilbac* (Plos des Baumes)

SAINT-SARDOS

Zonal *vin de pays* Map B, No.83

This *vin de pays* produces wines from a typical hodgepodge of grape varieties, with reds and rosés from Cabernet Franc, Cabernet Sauvignon, Gamay, Syrah, and Tannat, plus a maximum of 30 percent in total of Gamay Teinturier de Bouze and Teinturier de Chaudenay, both of which have colored juice; while whites are made from Chardonnay, Mauzac, Muscadelle, Sauvignon Blanc, and Sémillon.

✓ *C. V. de Saint-Sardos* (Gilles de Morban Rouge)

SAINTE-MARIE-LE-BLANCHE

Zonal *vin de pays* Map A, No.84

This *vin de pays* area straddles the border between Côte d'Or and Saône-et-Loire. Those in the Côte d'Or are just a few miles east of Beaune, and used to have the right to the Vin de Pays de la Côte d'Or until it was suppressed in 1998. Pure varietal wines are allowed. Red wines are made from one or more of Gamay, Pinot Gris, and Pinot Noir, while white wines

are made from one of the following: Aligoté, Auxerrois, Chardonnay, Melon de Bourgogne, Pinot Blanc, and Pinot Gris.

✓ *Vincent Sauvestre* (Chardonnay)

SAÔNE-ET-LOIRE

Départementale vin de pays Map B

Rarely exported *départementale vin de pays* for mostly red and white wines from unclassified vineyards in the Burgundy region. Pure varietal wines have been allowed since 2000.

SARTHE

Départementale vin de pays Map B

Red, white, and rosé wines may be made, although production of this *vin de pays départementale* is minuscule and, as far as I am aware, limited to just one grower in Marçon. Pure varietal wines have been allowed since 2000.

SEINE-ET-MARNE

Départementale vin de pays Map B

Recently created, rarely used, minor *départementale vin de pays* for red, white, and rosé wines from unclassified vineyards in between Champagne and Paris. Red and rosé wines from Gamay and Pinot Noir, white wines from Aligoté, Auxerrois, Chardonnay, and Sauvignon Blanc. Pure varietal wines have been allowed since 2000.

TARN

Départementale vin de pays Map B

Relatively minor *départementale vin de pays* for red, white, and rosé wines produced outside the well-known Côtes du Tarn *vin de pays*. Pure varietal wines have been allowed since 2000.

✓ *C. V. de Labastide de Lévis* (Les Trois Bastides)

TARN-ET-GARONNE

Départementale vin de pays Map B

Red wine accounts for 90 percent of the tiny production of this appellation, although some rosé and a minuscule amount of white is also made. Most of these vines are west of Montauban, in an area that can also claim the Vin de Pays Saint-Sardos, which overlaps part of a southwest VDQS called Vins de Lavilledieu. The grape varieties are similar to those for Lavilledieu, except for the fact that they can also include Merlot, Cabernet, and Tannat. Pure varietal wines have been allowed since 2000.

TERROIRS LANDAIS

Zonal vin de pays Map B, No.85

These are red, white, and rosé wines from four separate subzonal areas in Aquitaine, each of which may be appended to this *vin de pays* denomination: Les Coteaux de Chalosse (85a—the largest area in the south of the Landes *département*, where vines grow in and around Dax and Murgon); Les Côtes de l'Adour (85b—from vines around Aire-sur-Adour and Geaune); Les Sables de l'Océan (85c—the romantic-sounding "Sands of the Ocean" refers to vines growing in the sand dunes around Messanges); and Les Sables Fauves (85d—the "Wild Sands" is a tiny enclave of vines west of Eauze). Reds and rosés are made from Tannat supported by *bordelais* varieties, while whites are primarily Ugni Blanc plus Colombard, Gros Manseng, and Baroque.

✓ *Michel Guérard* (Rouge de Bachen)

THÉZAC-PERRICARD

Zonal vin de pays Map A, No.86

This is a small *vin de pays* adjoining the western extremity of Coteaux du Quercy, producing Cahors-like reds from Cabernet Franc, Cabernet Sauvignon, Gamay, Malbec, Merlot, and Tannat.

✓ *C. V. de Thézac-Perricard* (Vin du Tsar Le Bouquet)

TORGAN

Zonal vin de pays Map A, No.87

As this is geographically the *vin de pays* equivalent of Fitou AOC, it is no surprise to discover that 98 percent of its wines are red. They are, in fact, made from a very similar range of grapes as that used to make Fitou, but certain other grapes are also permitted, including *bordelais* varieties and the Teinturier Alicante Bouschet. Rosé may be made, but seldom is, and the minuscule amount of aromatic dry white may be made from Clairette, Macabéo, and Marsanne. This *vin de pays* used to be known as Coteaux Cathares.

✓ *C. V. du Mont Tauch* (de Gardie)

URFÉ

Zonal vin de pays Map B, No.88

Red wine is made in modest quantities. White and rosé may also be produced.

VAL-DE-CESSE

Zonal vin de pays Map A, No.89

These are mostly red wines, plus 10 percent rosé, and 5 percent white from local grape varieties in the Minervois area.

VAL-DE-DAGNE

Zonal vin de pays Map A, No.90

This area overlaps part of the Côtes de Malepère and produces almost entirely red wines from a choice of Carignan, Grenache, Terret Noir, Merlot, Cabernet Sauvignon, Cabernet Franc, and the Teinturier Alicante Bouschet. Very little rosé and white is made.

VAL DE MONTFERRAND

Zonal vin de pays Map A, No.91

Mostly red wines, but rosé accounts for 25 percent of production, and white for 15 percent in this denomination, which encompasses the *garrigues* below the Cévennes. The usual Languedoc grapes are used. *Vin primeur* and *vin d'une nuit* are local specialties produced in relatively large quantities.

✓ *Mas de Martin* (Roi Patriote)

VALLÉE DU PARADIS

Zonal vin de pays Map A, No.92

Mostly red wines from an area that overlaps Corbières and Fitou, made from Carignan, Syrah, Grenache, Cinsault, Cabernet Sauvignon, and Merlot. Very little white wine is made (usually as *vin primeur*) and even less rosé. A heavenly name, even to English-speakers' ears, which no doubt helps it on export markets, which account for almost half its sales.

✓ *Jeanjean*

VAR

Départementale vin de pays Map B

This denomination is one of the largest producers of *vins de pays*. Covering the vast majority of the Côtes de Provence AOC, it not surprisingly produces a large quantity of rosé:

no less than 45 percent, in fact. The wines are usually made by the *saignée* method and range from a very pale *vin gris* style, through orange to almost cherry red. The quality is equally as variable. The big, rich, spicy reds are much better and of a more consistent quality, often using Syrah, Mourvèdre, and Cabernet Sauvignon to boost the Grenache, Cinsault, Carignan, and Roussane du Var, on which the rosés mainly rely. Some white wines are also made, but represent just 5 percent of production. They are not usually very exciting, and are mostly made from Ugni Blanc, Clairette, Bourboulenc, and Vermentino. The white from Rabiega is one of the exceptions, relying on Chardonnay for body and Viognier and Sauvignon Blanc to lift the Ugni Blanc base. Pure varietal wines have been allowed since 2000.

✓ *de Garbelle* (Vermentino) • *Château Sarrins* • *Château Thuerry* (L'Exception)

VAUCLUSE

Départementale vin de pays Map B

Three-quarters of output of this *vin de pays* is red, similar to basic Côtes-du-Rhône. Rosé can be fresh, and accounts for just 10 percent of output; white is generally the least interesting. Pure varietal wines have been allowed since 2000.

✓ *de la Citadelle* (Cabernet Sauvignon) • *Fondacci* (Chasan) • *Fontaine du Clos* (Chardonnay) • *de Marotte*

VAUNAGE

Zonal vin de pays Map A, No.93

Light red wines made in typical Languedoc style.

VENDÉE

Départementale vin de pays Map B

Red, white, and rosé wines are produced in small quantities, in a similar style to Fiefs Vendéens (which was a *vin de pays* until it was promoted to VDQS status in December 1984). Pure varietal wines have been allowed since 2000.

VICOMTÉ D'AUMELAS

Zonal vin de pays Map A, No.94

Overlapping part of Cabrières, this *vin de pays* produces mostly red wines of a simple, fresh, fruity style, from traditional southwestern grape varieties, such as the typical Languedoc grape. Just over 10 percent of wines are rosé, and a tiny amount of crisp, dry white is produced.

VIENNE

Départementale vin de pays Map B

This appellation produces red, white, and rosé wines, most of which are grown in and around the Haut-Poitou district. Pure varietal wines have been allowed since 2000.

✓ *Ampelidae*

VISTRENQUE

Zonal vin de pays Map A, No.96

This appellation produces red and rosé wines, which are made in very small quantities. White wine may also be produced.

YONNE

Départementale vin de pays Map B

The Yonne is a white-only appellation, and its production of wines is quite small. Pure varietal wines have been allowed since 2000.

The WINES of
ITALY

THE WINES OF ITALY ARE RICH IN POTENTIAL but lack focus; consequently, the country's image is muddled, when it should really be diverse. In Italy, vines are so easy to grow that one even expects them to shoot up from cracks in the sidewalk after a Mediterranean squall. Furthermore, the number of interesting indigenous grape varieties is greater than can be found in any other major winemaking country of the world, including France. However, there are no wine regions, great or otherwise, in Italy—just provinces that abut each other. Consumers cannot visualize Italian wines in the maps of their minds as they can French wines. Vine varieties and the types of wine they make not only merge within provinces, but also overlap their boundaries, blurring the already confused picture. Despite this, Italy, like France, makes a quarter of the world's wines, and Italian exports are healthy. If and when Italy manages to project a coherent image of distinct regional styles, France will have a rival to worry about.

HILLSIDE VINES ABOVE FUMANE, VENETO
The town of Fumane is situated in one of five valleys that comprise the historic Valpolicella Classico area.

ITALY

This country churns out new appellations as if there is no tomorrow, with far too many that are far too obscure. The trend also continues to promote ordinary DOCs to even-less-than-ordinary DOCGs. Italy has an extraordinary and exceptional potential to make some of the greatest wines in the world, yet seems even more inept than France at running its wine industry.

IT IS STAGGERING TO THINK that a quarter of the world's wine is Italian yet, despite 4,000 years of Italian winemaking history, the Italian wine industry remains in a state of flux. Italy's enormous wine production has given many discerning wine drinkers a misleading impression of the country's true quality

MONTALCINO

With its famous Brunello vines in the foreground, Montalcino basks in Tuscan sunshine. Viticulturally, the surrounding area is highly prestigious; its tannic red wines generally need at least 10 years' maturation.

potential. Italy can, and does, make many fine wines, but they have always been surrounded by so much *vin ordinaire* that finding them is a hit-and-miss affair. Like Italy, France churns out a huge volume of wine and its production can include a fair amount of plonk, but the names of great French wines roll off the tongue of even the uninitiated, and, rightly or wrongly, France has managed to get away with it, whereas Italy never has. Yet Italy has at least as much potential in terms of the diversity of its *terroir* and a plethora of native grape varieties. The key problem is identity: in Italy vines grow in every corner, whereas in France they are mostly confined to half a dozen major regions and each of these has its own recognizable style and reputation.

ITALY'S LAW OF MEDIOCRITY

Italy's DOC legislation was introduced in 1963, but this law was fundamentally flawed because it failed to establish a small number of easily identifiable regions, each bearing an umbrella name and style. It also actively encouraged increased volume by officially recognizing the most productive grape varieties and classifying the highest-yielding areas on the edges of famous appellations. The late 1950s and early 1960s were crucial in the development of the modern wine industry in Europe, and Italy's DOC system

encouraged its largest bottlers to move out of the low-yielding, hilly, *classico* areas, which make better wines than the higher-yielding plains but are the more difficult and expensive to maintain. From this point, the Italian wine industry became increasingly dominated by mass production; most wineries became passionless factories and the quality of Italy's most famous wines sank as fast as the volume of production increased.

At first, out of respect for Senator Paolo Desana, who fathered the DOC concept, Italy ignored foreign criticism of its new wine regime. But by the early 1980s, its greatest wine names were so devalued that many of its best wines were being sold as *vini da tavola*, which made a mockery of the DOC system. In the end, even the most conservative Italians had to admit something must

be done. Over the next 10 years, successive agricultural ministers tried to overhaul Italy's wine laws, but failed because of the political clout of the industrial bottlers, who had a lot to gain by flooding the market with cheap wines. When agricultural minister Giovanni Goria declared his intention to press for even more radical changes than any of his predecessors had, few took him seriously. No one would have bet a single lira on Goria's success, yet within 10 weeks of his appointment, a "New Disciplinary Code for Denomination of Wines of Origin" had been ratified by the Senate.

GORIA'S LAW

In February 1992 Law 164, now known simply as Goria's Law or the Goria Law, replaced Desana's wine regime. When the law first

RECENT ITALIAN VINTAGES

2003 Some unwieldy wines were produced, but overall this will be viewed as a great red wine vintage across the country, but particularly for Barolo, Barbaresco, and Sangiovese-based wines in Tuscany.

2002 A small and generally poor-quality vintage, relieved only by a few light and refreshing whites in northeastern Italy.

2001 A great year for both red and white wines throughout the country.

2000 The grapes ripened quickly throughout Italy, but particularly in Piedmont. Tuscany had problems with overripeness, although some great full-bodied Chianti was produced.

1999 Except for individual cases, the wines this year were not quite up to the quality of the 1998s. However, some great Barolo was produced, and a number of Tuscan reds show exceptional finesse.

came into force, much attention was focused on the introduction of a brand new category called IGT (*Indicazioni Geografiche Tipiche*). The equivalent of French *vins de pays*, IGTs were supposed to form a buffer between the DOCs and *vini da tavola*, Goria having denied the latter the right to bear any geographical provenance other than Italy itself. Each IGT would come from an officially recognized zone of production, but could not claim to be anything more specific, such as the product of a village, microzone, estate, or single vineyard. Under Law 164 all such specific origins were restricted to DOC or DOCG wines.

In the euphoric first few months of this new law, it was predicted that there would be 150 to 200 IGTs, accounting for some 130 million cases (12 million hectoliters) of wine, which should—according to Goria’s own plans—rise to 40 percent of the total Italian wine output, representing 10 percent of world production. For almost five years, no applications were received for IGT status. Without the right to mention the specific origins of these wines, yet being obliged to meet similar criteria to a DOC, why would producers bother, when they might as well opt for DOC or simply make *vino da tavola*? This is why the major thrust of Goria’s groundbreaking law was considered, even in Italy, to have been stillborn. Then, with the 1996 harvest, the applications poured in, and there are now no fewer than 118 classified IGTs, in addition to the 309 DOCs and 30 DOCGs.

NEW RESPECT FOR THE DOCs?

Did the Goria Law successfully reconfigure the fundamentally flawed DOCs and DOCGs? The answer is yes and no. “No” because Italy’s wines will never achieve their true potential until, like those of France, they can be encapsulated within half a dozen major regions of recognizable style (see DOC’s Lack of Specificity below) and reputation. Goria did not even attempt to tackle this problem. Furthermore, Italy’s greatest wines will never receive the international acclaim they deserve until their delimited areas are reduced to the original hilly *classico* districts, about which Goria also did nothing.

Until Goria’s Law, many wines were denied the *vini da tavola* status because Italy’s appellation system defined the characteristics of each DOC, and in so doing did not take into account the foreign grapes and nontraditional vinification methods that most premium *vini da tavola* came to employ. Giovanni Goria had the sense to realize that any system that did not recognize some of the country’s finest wines is a discredited system. He thus made it easier for such wines to be accepted within established DOCs.

To qualify for DOC status, the wine or wines must have a history of at least five years’ production. Any DOC with a further

five years of recorded production can apply for a DOCG, providing it has acquired a “reputation and commercial impact both at home and at an international level.”

DOC’S LACK OF SPECIFICITY

Part of the problem of Italian wines being unable to project a readily discernible image is the number of ways in which a single DOC wine may be interpreted. An appellation system should project and protect a recognizable style (and, one hopes, quality) through detailed regulations, or it should simply make sure the provenance of a wine is as stated—guaranteeing where it comes from, even if it is a blend of different areas. The very last thing that any wine regime should do is insist on an intricate recipe of grape-variety percentages and precise geographical limitation, then say it can be dry, off-dry, medium sweet, sweet, still, *passito*, *frizzantino* (slightly sparkling), *frizzante* (semi-sparkling), or *spumante* (fully sparkling). All this does is foster the uncertain image with which Italian wines have long been lumbered.

ALL THAT SPARKLES

No country has as many sparkling wine appellations as Italy, with its optional “may be *spumante*” clauses littering over 100 of its DOCs, including some of its truly greatest red wines. However, despite so many possibilities, Italy had no specific appellation for dry sparkling wine until 1995 when Franciacorta, the first and still the only appellation to insist on the traditional method, was given DOCG status. The rest of Italy’s little-known, half-forgotten sparkling wine appellations are all *cuvee close*. Bottle-fermentation does not guarantee quality, but it does encourage producers in the right direction, which is why it is a mistake for any dry sparkling DOC wine to be produced by any other process. Until all DOC *cuvee close* is outlawed, no Italian dry sparkling wine will be taken seriously and Franciacorta’s efforts to establish the country’s first classic *brut* appellation will be frustrated.

FUTURE SIMPLICITY

The solution to Italy’s wine worries is very simple. Map out no more than half-a-dozen truly classic Italian wine regions, reduce the number of DOCs within these regions to a maximum of 100, all limited to historically authentic areas, and the most famous styles (no more multiple choice appellations!), with tough regulations and qualifying tastings performed by an independent

RIONERO, BASILICATA

A 17th-century farm building on the Conca d’Oro estate in Vulture, where Fratelli d’Angelo produces a great red wine called Aglianico del Vulture.

ITALIAN LABEL LANGUAGE

ABBOCCATO Slightly sweet

AMABILE Sweeter than *abboccato*

AMARO Bitter or very dry

ANNATA This means “year” and often precedes or follows the vintage date. At least 85 percent of the wine must be from the vintage indicated. *See also Vendemmia*

ASCIUTTO Bone dry

AUSLESE German term used in the Alto Adige for wines from selected grapes

AZIENDA, AZIENDA AGRICOLA, AZIENDA

AGRARIA, OR AZIENDA VITIVINICOLA Estate winery

BIANCO White

CANTINA SOCIALE OR COOPERATIVA A cooperative winery

CASCINA North Italian term for a farm or estate

CASA VINICOLA A commercial winery

CERASUOLO Cherry red, used for vividly colored rosés

CHIARETTO Wines falling between very light red and genuine rosé

CLASSICO The best or most famous part of a DOC zone

CONSORZIO A group of producers who control and promote wine, usually insisting on higher standards than DOC regulations enforce

DENOMINAZIONE DI ORIGINE CONTROLLATA, OR DOC There are more than 250 DOCs, but some are multiple-varietal appellations covering as many as 12 different wines, resulting in more than

600 DOC names. This is similar, and just as worthless as, the French AOC system, as both merely guarantee mediocrity. The producer's name is still the best assurance of quality.

DENOMINAZIONE DI ORIGINE CONTROLLATA e GARANTITA, OR DOCG Theoretically the highest-quality official denomination, but encompasses a lot of very ordinary wine, as well as isolated pockets of truly fine wine. Again, the producer's name is the best assurance of quality.

DOLCE Very sweet

FATTORIA Farm

FERMENTAZIONE NATURALE

Method of producing sparkling wine by natural fermentation in a tank or bottle

FIORE Term meaning “flower.”

Often part of a name, it indicates quality, as it implies that the first grape pressing has been used.

FRIZZANTE Semi-sparkling, the equivalent of *pétillant*

FRIZZANTINO Very lightly sparkling

IMBOTTIGLIATO ALL'ORIGINE Estate-bottled

INDICAZIONE GEOGRAFICA TIPICA, OR IGT

The Italian equivalent of a French *vin de pays*

LIQUOROSO Usually fortified and sweet, but may also be dry wine that is simply high in alcohol

LOCALITÀ, RONCO, OR VIGNETO Indicates a single-vineyard wine

MESSO IN BOTTIGLIA NELL'ORIGINE Estate-bottled

METODO CLASSICO OR METODO

TRADIZIONALE The Italian for traditional method

PASSITO Strong, often sweet wine made from semidried grapes

PASTOSO Medium-sweet

PRODUTTORE ALL'ORIGINE Estate-bottled

RAMATO Copper-colored wine made from Pinot Grigio grapes that are briefly macerated on their skins.

RECIOTO Strong, sweet wine made from semidried grapes

RIPASSO Wine refermented on the lees of a *recioto* wine

RISERVA OR RISERVA SPECIALE DOC or DOCG wines that have been matured for a statutory number of years (the *speciale* is older)

ROSATO Rosé

ROSSO Red

SECCO Dry

SEMI-SECCO Medium-sweet

SPUMANTE Fully sparkling

STRAVECCHIO Very old wines aged according to DOC or DOCG rules

SUPERIORE When part of the appellation, this usually refers to a longer minimum aging period before the wine can be sold

TALENTO A registered trademark signifying a sparkling wine made by the traditional method

TENUTA Estate

UVAGGIO Wine blended from various grape varieties

VECCHIO Old

VENDEMMIA This means “harvest” and often precedes or follows the vintage date. At least 85 percent of the wine must be from the vintage indicated. *See also Annata*

VIGNA OR VIGNETO Vineyard

VIN SANTO OR VINO SANTO Traditionally sweet, occasionally dry, white wine made from *passito* grapes stored in sealed casks, and not topped up for several years

VINO Wine

VINO NOVELLO Italian equivalent of Beaujolais Nouveau

VINO DA PASTO Ordinary wine

VINO DA TAVOLA Literally “table wine,” this is Italy's most basic category, but as well as including most of the country's plonk, it also includes some of its greatest wines, although many of the latter are gradually developing their own appellations

body with no vested interests. Set up a panel of experts to determine the 12 truly greatest wines to receive DOCG status, and set that in stone, so that no expansion can ever dilute the DOCG reputation. Within each DOCG, an Italian equivalent of *grand cru* and *premier cru* classification should be made. Then I would dispose of all the 118 IGTs except for the 12 regional IGTs (Basilicata, Toscana, Sicilia, etc.), and increase their number to 20, which would cover the entire country. There should be no other type of IGT. To balance this restriction, I would encourage the greatest flexibility in IGT regulations, including the use of single-village, single-estate, and individual site names. I would even allow the use of obsolete DOCs and IGTs (providing they are not classified as such, and their names are printed at no more than one-third the size of the regional IGT), so that no producer could claim that he had been prevented from selling his wine under the appellation for which it had become known, however obscure or meaningless that might have been to the outside world. The bureaucrats might squeal at the thought of such a thing, but it really does not matter. What matters is that these IGTs would have a recognizable name and therefore offer some sense of place

for drinkers in other countries. Just as important, a flexible IGT could be used both to preserve traditional values and promote innovation. And, finally, the clever part: the Italians should steal René Renou's concept of *Site et Terroir d'Excellence* (STE—see p.58). If the French authorities are too stupid to adopt such an ingenious idea, then the Italians should demonstrate what an opportunity they have missed. With the number of regional IGTs and DOCGs fixed, there must be another means of rewarding true standout quality, if any new system is to avoid the current wine regime's guarantee of mediocrity, and a nice big STE stamp on the label of an IGT or DOC wine would provide that. Imagine the difference it would make. A cluster of STE-awarded IGT wineries might one day elect to form a new DOC, but the flexibility of IGT and premium attracted by STE status should be sufficient to keep most wineries in the IGT system, thereby reducing any threat of a major expansion of the number of DOCs. And while the highest-flying STE-awarded DOCs should never be allowed to join the ranks of the DOCGs (all the best systems have something intrinsically unfair, yet inherently stable, built into them), they might well fetch the price of a top DOCG.

NORTHWEST ITALY

This area includes the great wine region of Piedmont as well as the regions of Liguria, Lombardy, and Valle d'Aosta. Generally, the wines are fuller and richer than those of northeastern Italy, which is a more mountainous area.

FEW AREAS ENCOMPASS such contrasting topographies as northwest Italy, from the alpine *pistes* of the Valle d'Aosta and the Apennines of Liguria to the alluvial plains of the Po River. Contrast is also evident in the character of its two most famous wines—the big, black, and tannic Barolo DOCG and the light, water-white, effervescent, and grapey-sweet Asti DOCG.

PIEDMONT (PIEMONTE)

Piedmont is dominated by two black grapes (Nebbiolo and Barbera) and one white (Moscato). Nebbiolo makes the magnificently rich and smoky Barolo and the elegant, more feminine, yet sometimes just as powerful, Barbaresco. The Barbera has a much greater yield than Nebbiolo but is potentially almost as fine. It is softer in tannin, at least as high in acidity, and

NORTHWEST ITALY, *see also* p.263

The presence of the Alps gives this largely hilly region a hot growing season and a long fall. The finest wines come from the foothills of Piedmont, which provide ideal growing conditions for the late-ripening Nebbiolo grape.

AVERAGE ANNUAL PRODUCTION		
REGION	DOC PRODUCTION	TOTAL PRODUCTION
Piedmont	11 million cases (1 million hl)	44 million cases (4 million hl)
Lombardy	4 million cases (400,000 hl)	22 million cases (2 million hl)
Liguria	78,000 cases (7,000 hl)	4 million cases (400,000 hl)
Valle d'Aosta	5,550 cases (500 hl)	350,000 cases (30,000 hl)

Percentage of total Italian production: Piedmont, 5.2%; Lombardy, 2.6%; Liguria, 0.52%; Valle d'Aosta, 0.04%.

excels around Alba and, to a slightly lesser extent, around Asti. White Asti, made from Moscato, is Italy's most popular fine wine. Whether still, *frizzantino*, or *spumante*, Asti is light and succulently sweet, with a mesmerizing grapey character. Fully sparkling Asti is no longer called Asti Spumante because the term, like *mousseux*, has a cheap, low-quality connotation and Asti is undeniably the world's greatest dessert-style sparkling wine.

LOMBARDY (LOMBARDIA)

Northeast of Piedmont, Lombardy stretches from the flat plains of the Po Valley to snow-clad Alpine peaks. The region's finest wines

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

Flanked to the north and west by the Alps and by the Ligurian Sea to the south, northwest Italy contains the provinces of Piedmont, Lombardy, Liguria, and Valle d'Aosta.

CLIMATE

The winters are severe with frequent inversion fogs rising out of the valleys. Summers are hot, though not excessively so, but hail can damage the grapes at this time of year. Long falls enable the late-ripening Nebbiolo grape to be grown very successfully.

ASPECT

This area covers mountains, foothills (*piedmont* means "foothill"), and the valley of Italy's longest river, the Po. Grapes are grown on hillsides that provide good drainage and exposure to the sun. In classic areas such as Barolo, every south-facing hillside is covered with vines, while in Lombardy many vineyards extend down to the rich, alluvial plains of the Po Valley.

SOIL

A wide range of soils with many local variations, the predominant type is calcareous marl (*see* p.18), which may be interlayered or intermingled with sand and clay.

VITICULTURE AND VINIFICATION

The great red wines of the region have suffered in the past from long aging in large wooden vats, as many growers bottled their wine only when they sold it. This practice dried up the fruit and oxidized the wine. However, many wines are

bottled at the optimum time although there is still no consensus about the best aging vessels. The use of *cuve close* for sweet, grapey styles of wine from Asti has been very successful and these wines sell well internationally. Some of the same *spumante* houses have developed dry *spumante* from Pinot and Chardonnay grapes, using the traditional method, to produce fine-quality sparkling wines.

GRAPE VARIETIES

Primary varieties: Barbera, Muscat (*syn.* Moscato), Nebbiolo (*syn.* Chiavennasca)
Secondary varieties: Arneis, Blanc de Morgex, Bonarda, Brachetto, Brugnola, Cabernet Franc, Cabernet Sauvignon, Casalese, Chardonnay, Cortese, Croatina (*syn.* Bonarda in Lombardy, but not the true Bonarda of Piedmont), Dolcetto (*syn.* Ormeasco in Liguria), Erbaluce, Favorita, Freisa, Fumin, Gamay, Grenache, Grignolino, Gropello, Incrocio Terzi (Barbera x Cabernet Franc), Lambrusco, Malvasia, Marzemino, Mayolet, Merlot, Neyret, Petit Rouge (*syn.* Oriou), Petite Arvine, Pigato, Pignola Valtellina, Pinot Blanc (*syn.* Pinot Bianco), Pinot Gris (*syn.* Pinot Grigio, Malvoisie, not Malvasia), Pinot Noir (*syn.* Pinot Nero), Premetta, Riesling (*syn.* Riesling Renano), Rossese, Rossola, Ruché, Schiava Gentile, Syrah, Timorasso, Tocai Friulano (separate variety—neither Pinot Grigio nor Malvasia), Trebbiano (*syn.* Buzzetto), Ughetta, Uva Rara, Vermentino, Vespolina, Vien de Nus, Welschriesling (*syn.* Riesling Italico)

PERGOLA-TRAINED VINES

These Nebbiolo vines, grown near Carema in Piedmont, are trained on a Pergola Piemontese. They are made into a fragrant, medium-bodied wine.

include Franciacorta's full reds and its new DOCG for classic *brut* sparkling wines, plus the best of Valtellina's red Sassella. These wines are still relatively unknown compared with Piedmont's Barolo and Barbaresco and are good value.

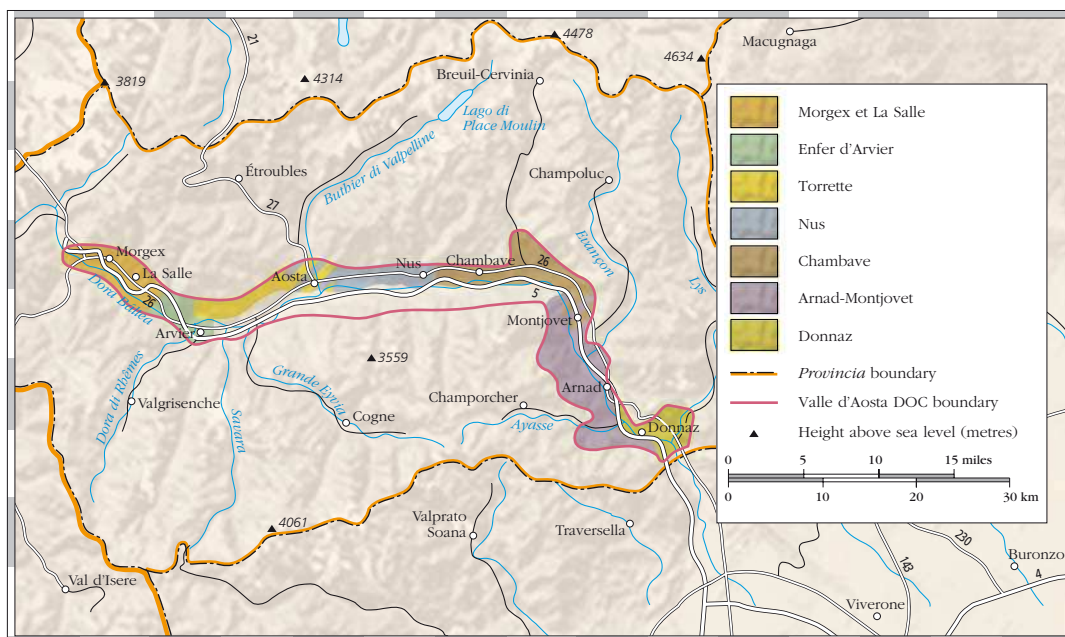

LIGURIA

One of Italy's smallest regions, Liguria is more famous for its Riviera, which is set against the dramatic and beautiful backdrop of the Maritime Alps, than it is for its wines. Cinque Terre, which is the best-known Ligurian wine, is named after the *Cinque Terre*, or five villages, which are perched along the Ligurian coast, above which the steep, intricately terraced vineyards tower like some great Aztec pyramid. Other than the Cinque Terre, interesting wines include the soft, spicy Rossese di Dolceacqua and the vividly colored Albenga rosé of the Riviera Ligure di Ponente DOC. The Colli di Luni is almost Tuscan, and part of this DOC even overlaps that region, so it is not surprising that it is capable of producing a decent Sangiovese. However, most Ligurian wines belong to the category of pleasant vacation drinking, and some of the best

potential vineyards have been grubbed up to accommodate the tourists who drink them.

VALLE D'AOSTA

If Liguria is a marginal wine region, then Valle d'Aosta is almost subliminal. High in the Alps, overlooked by Mont Blanc and the Matterhorn, the Valle d'Aosta looks at first as if it could as easily be a part of France or Switzerland as of Italy, but the only easy, natural access is from Piedmont along the Dora Baltea River. Italy's smallest and most mountainous wine region, the Valle d'Aosta has picturesque, high-altitude vineyards that produce some enjoyable wines, particularly Chambave, Nus, and Torrette, just three of the 20 wines within the Valle d'Aosta DOC. However, most are tourist wines; the best are easy-drinking and unpretentious.

VALLE D'AOSTA, *see also* opposite

The winters here are cold and snowy, but summers in the valley can be very hot with contrastingly cold nights, which should make for some exciting wines.

THE APPELLATIONS OF NORTHWEST ITALY

CLASSIC BRUT SPARKLING WINES

All these wines are made by the traditional method.

☞ Upon purchase—for all regions

☞ **Piedmont** *Stefano Barbero*, *Luigi Bosca Brut Nature*, *Contratto Brut*

ALBENGA DOC

Liguria

Vividly colored, dry, and characterful, Liguria's best-known rosés are now classified as part of the Riviera Ligure di Ponente DOC. See Riviera Ligure di Ponente DOC.

ARENGO

Piedmont

A soft, light-bodied, fruity non-DOC Barbera red made by several Asti producers.

ARNAD-MONTJOVAT DOC

Valle d'Aosta

A red-only subappellation of the regional Valle d'Aosta DOC producing Nebbiolo-based red wines, with up to 30 percent Dolcetto, Freisa, Neyret, Pinot Noir, and Vien de Nus. See Valle d'Aosta DOC.

ARNEIS DI ROERO DOC

Piedmont

These wines are produced from the ancient Arneis grape grown in the hills north of Alba. Formerly a *vino da tavola*, the high price and reputation of these wines ensured they would eventually become part of the Roero DOC. The best are amazingly rich and full-flavored white wines, yet soft and deftly balanced with a fine *frizzantino*. Essentially dry wines, some renditions are, however, less dry than others and Deltetto's Bric Tupin has started a trend for a lusciously sweet style. See Roero DOC.

☞ 3–5 years

✓ *Ceretto* (Blangé) • *Carlo Deltetto* • *Bruno Giacosa* • *Castello di Neive* • *Vietti*

ASTI DOCG

Piedmont

Formerly sold as Asti Spumante, the *spumante* (which means "sparkling") has been removed because it has become tarnished by cheap products that also use the term. It is now known simply as Asti and has been promoted to full DOCG status, which the best wines deserve, but an increasing number of underperformers do not. Italy's finest sparkling wine, and one of the most famous wines in the world, Asti is made by *cuvee close*, which is far superior to the traditional method when

producing an aromatic, sweet sparkling wine. The grapes used are grown in 52 communes throughout the provinces of Asti, Cuneo, and Alessandria.

The best Asti has a fine *mousse* of tiny bubbles, a fresh and grapey aroma, a luscious sweetness, and a light, delicately rich flowery-fruitiness that hints at peaches. Asti should be consumed as young as possible primarily because one of the most important compounds contributing to the Moscato aroma is geraniol, which is wonderful when fresh, but with bottle-age assumes a pungent geranium odor. Gancia's special selection *cuvée* called Camilo Gancia (no longer produced) was the best Asti I ever tasted. See also Moscato d'Asti DOCG.

☞ Upon purchase

BARBACARLO

Lombardy

Dry, *frizzante*, red *vin de garde* that was originally classified as part of the Oltrepò Pavese DOC. However, Lino Maga has been legally recognized as its exclusive producer and it has returned to being a *vino da tavola*.

BARBARESCO DOCG

Piedmont

Generally more feminine and elegant than Barolo, Barbaresco has a greater suppleness, softer fruit, and a more obvious charm, although some producers overlap the weightier Barolo style. Produced from Italy's greatest indigenous grape variety, Nebbiolo, these wines must be aged for a minimum of two years, one of which must be in oak or chestnut casks.

☞ 5–20 years

✓ *Produttori di Barbaresco* • *Ceretto* • *Pio Cesare* • *Fratelli Cigliuti* • *Giuseppe Cortese* • *Angelo Gaja* • *Bruno Giacosa* • *Piero Busso* • *Cantina del Glicine* • *Marchesi di Gresy* • *Mocagatta* • *Castello di Neive* • *Alfredo Prunotto* • *Bruno Rocca* • *Scarpa*

BARBERA

Piedmont

Although this grape can be a bit rustic, overly acidic, and may lack elegance if not grown in a suitable *terroir*, stunning *vini da tavola*, often aged in a *barrique*, are made in classic areas by producers who do not want to be restricted by the DOC and thus do not claim it.

✓ *Braida* (Bricco dell'Uccellone) • *Castello di Neive* (Rocca del Mattarello)

BARBERA D'ALBA DOC

Piedmont

Barbera is the most prolific Piedmont vine and, as such, has suffered unfairly from a somewhat lowly image. But in fact, it is one of Italy's great grapes and the best Barbera from Alba are magnificently rich and full of flavor, and quite

capable of challenging Barolo and Barbaresco very closely in terms of intrinsic quality. The production of Barbera d'Alba is very small, in fact often minute, in comparison with that of Barbera d'Asti.

☞ 5–12 years

BARBERA D'ALBA COLLINE NICESI DOC

Piedmont

The lower yield of this proposed subzone of Barbera d'Alba is intended to lead the way to full DOCG status for part or all of the current Barbera d'Alba DOC classified wines.

BARBERA D'ASTI DOC

Piedmont

Similar in character to Barbera d'Alba, but softer and more supple, with simpler generic wines, but equally profound single-vineyard wines.

☞ 3–8 years

✓ *Marchesi Alfieri* • *Cascina la Barbatella* • *Bava* (Stradivario) • *Alfiero Boffa* • *Braida* (Bricco della Figotta) • *Cascina Castelet* (Passum) • *Chiario* (Valle del Sole) • *Coppo* • *Cossetti* (Cascina Salomone) • *Neirano* (Le Croci) • *Antica Casa Vinicola Scarpa* • *Zonin* (Castello del Poggio)

BARBERA DEL MONFERRATO DOC

Piedmont

Most of the wines produced by Barbera Del Monferrato are lesser versions of Barbera d'Asti. Semisweet or *frizzante* styles may also be made.

✓ *C. S. di Castagnole Monferrato* (Barbera Vivace)

BAROLO DOCG

Piedmont

Barolo is unquestionably Italy's greatest wine appellation and its finest wines are the ultimate expression of the Nebbiolo grape. All the best vineyards of Barolo are located on a small, raised area of mostly gentle, but occasionally steep, slopes surrounded by the hills of the Langhe. The soil is essentially calcareous marl (see p.18), the northwestern half high in

magnesium and manganese, the southeastern half more iron-rich. This small difference is deemed to be the reason why Barolo wines from the northwest have more elegance, while those from the southeast are fuller in body.

The biggest factor in the quality of Barolo has, however, been due more to man than to soil, especially with the trend over the past 10 years to isolate the very best Barolo and market them under single-vineyard names. A vineyard name will not necessarily guarantee excellence, but hardly any of the very top Barolo are blended these days, and quality should continue to rise under the Gorla Law (see p.263), which requires significantly lower yields from any wine claiming single-vineyard status.

Great Barolo is incomparable, but there are still poor Barolo wines, although not as many as in the late 1980s. But even then the emergence of a new wave of fruit-driven Barolo was fairly evident. Initially, this split Barolo; the modern-style wines had more fruit, riper and more supple tannins, and were aged in small *barriques* of new oak, while the worst of the so-called traditionalists continued to produce thick, tannic, dried-out wines.

The popular belief that so many traditional Barolo are dried out because they are bottled late is only half right. The truth is that they are—or were—bottled to order. This meant that some of the shipments of the same vintage would be more dried-out than others. There is still a large number of producers who perceive themselves to be traditional, but this simply means that they eschew *barriques* and new oak. Most traditionalists now bottle their Barolo when the wines—not the orders—require it, which, in effect, is earlier than before. They also tend to pick later and began to drop their yields even before the Gorla Law of 1992. Today, both the modern and traditional schools of producers make stunning Barolo.

Modern styles are riper and more creamy than traditional ones, supported by the vanilla of new oak, whereas the traditional styles are arguably more complex, with tobacco, tar, and smoky aromas replacing the clean-cut vanilla. The best of both, however, are deep, sometimes inky-deep, in color and share lashings of fruit. All Barolo should be powerfully built, even the more elegant, earlier-drinking styles, and they all have a surprising finesse for such weighty wines.

BAROLO CHINATO DOCG

Piedmont

This Barolo, aromatized with quinine, is a DOCG, which is a bit like classifying Bordeaux's aperitif "Lillet" as a *cru classé*.

BLANC DE COSSAN

Valle d'Aosta

These are fresh, tart *blancs de noir* made by the Institut Agricole Régional from Grenache grapes grown at Cossan, just outside Aosta.

BOCA DOC

Piedmont

These are medium- to full-bodied, spicy red Nebbiolo wines. They are hard to find, but wines have been made here since Roman times and when found can be good value.

🕒 3–6 years

✓ *Antonio Vallana • Podere ai Valloni*

BOTTICINO DOC

Lombardy

Full-bodied, Barbera-based red wines with a good level of alcohol and a light tannic structure.

🕒 3–5 years

✓ *Miro Bonetti • Benedetto Tognazzi*

BRACHETTO

Piedmont

Sweet, red, non-DOC Brachetto is often made by Asti producers.

✓ *Bataciolo*

BRACHETTO D'ACQUI DOCG

Piedmont

Sweet, *frizzante* (semi-sparkling), and sparkling red wines that are grapey and Muscat-like.

BRAMATERRA DOC

Piedmont

Good value, full-bodied red wines produced primarily from Nebbiolo, but which may include Bonarda, Croatina, and Vespolina grapes.

🕒 3–6 years

✓ *Luigi Perazzi • Fabrizio Sella*

BUTTAFUOCO DOC

Lombardy

See Oltrepò Pavese DOC.

CABERNET FRANC

Lombardy

This grape is far more traditional in Lombardy than Cabernet Sauvignon is, although the latter steals the limelight today. Mostly used in blends.

CABERNET SAUVIGNON

Piedmont

Thrives in Piedmont where *vini da tavola* can be excellent in quality as well as in value.

✓ *Angelo Gaja* (Darmagi)

CABERNET-MERLOT

Lombardy

A relative newcomer to Lombardy, this classic Bordeaux mix has shown outstanding potential.

✓ *Bellavista* (Solesine) • *Ca' del Bosco* (Maurizio Zanella)

CALUSO PASSITO DOC

Piedmont

Fragrant yet full-bodied, sweet white wines made from *passito* Erbaluce grapes.

🕒 3–5 years

✓ *Vittorio Boratto*

CAPRIANO DEL COLLE DOC

Lombardy

Rarely encountered red wines made from the Sangiovese, which are blended with Marzemino, Barbera, and Merlot, and tart white wines made from the Trebbiano.

CAREMA DOC

Piedmont

Soft, medium-bodied Nebbiolo wines that are grown on the mountainous slopes close to the border with the Valle d'Aosta. They are good and reliable but rarely exciting.

🕒 2–5 years

✓ *Luigi Ferrando*

CASALESE

Piedmont

A local grape capable of light, delicately dry white wine with a characteristic bitter finish, both as DOC and *vino da tavola*.

CELLATICA DOC

Lombardy

This aromatic and flavorsome red wine has been made in the hills overlooking Brescia for 400 years. Permitted grapes are Barbera, Marzemino, Schiava Gentile, and Incrocio Terzi.

🕒 2–6 years

✓ *Barbi*

CHAMBAVE DOC

Valle d'Aosta

A subappellation of the regional Valle d'Aosta DOC, Chambave produces attractively scented, crisp red wines primarily from Petit Rouge grapes, plus up to 40 percent Dolcetto, Gamay, and Pinot Noir. Two white wines are also permitted; one sweet, long-lived, and *passito* in style, the other a highly perfumed, early-drinking, dry- to off-dry white—both from the Moscato grape. See Valle d'Aosta DOC.

🕒 2–3 years (red and *passito*) • upon purchase (white)

✓ *La Crotta di Vegneron • Ezio Voyat*

CHARDONNAY

Lombardy, Piedmont, and the Valle d'Aosta

Most of the Chardonnay grown in Lombardy ends up in traditional method wines, many of no specific origin, or in the Franciacorta and Oltrepò Pavese DOCs. However, there are a growing number of excellent, pure varietal *barrique*-aged *vini da tavola*, many of which are surprisingly full and lustrous in style.

In contrast to Valle d'Aosta below, pure Chardonnay *vini da tavola* are quite common in Piedmont. Although the quality is variable,

when Piedmont Chardonnay is good, it is rich and lush, yet classically structured and of a quality that few other Italian wine regions can touch. Many will no doubt receive official DOC status in years to come.

A few *barrique*-aged examples have proved the worth of this grape in Valle d'Aosta, but it is not a frequently encountered varietal, even though it is recognized in the regional DOC.

- ✓ **Lombardy** *Bellavista* • *Ca'del Bosco*
• *Cascina La Pertica* • *Tenuta Castello*
• *Tronconero*

Piedmont *Angelo Gaja* • *Pio Cesare*

CINQUE TERRE or CINQUETERRE DOC

Liguria

These spectacular coastal vineyards produce good, though not exactly spectacular, delicately fruity dry white wines, and the somewhat more exciting Cinque Terre Sciacchetrà, which is a medium-sweet *passito* wine.

☞ 1–3 years

- ✓ *Forlani Cappellini*

COLLI DI LUNI DOC

Liguria

Sangiovese-based reds and Vermentino whites from the eastern extremity of Liguria, bordering and even overlapping part of Tuscany.

☞ 2–5 years (red) and 1–2 years (white)

- ✓ *La Colombiera*

COLLI MORENICI MANTOVANI DEL GARDA DOC

Lombardy

Although vines have been cultivated since ancient times in Lake Garda, today viticulture is one of the least important crops. The wines are dry, light-bodied, red, white, and rosé, produced from a mixture of grape varieties.

COLLI TORTONESI DOC

Piedmont

Robust and rather rustic, full-bodied Barbera reds, and crisp, dry, rather lightweight, and sometimes *frizzante* Cortese whites.

COLLINE NOVARESI DOC

Piedmont

A new DOC for red and white wines from the Novarese province northwest of Milan; the white is dry and made exclusively from the Erbaluce grape, whereas the red is a blend of at least 40 percent Uva Rara and 30 percent Nebbiolo, plus up to 30 percent Vespolina and Croatina.

CORTESE DELL'ALTO MONFERRATO DOC

Piedmont

Dry, crisp, still, *frizzante*, and fully sparkling white wines that often incline to a coarser style than expected for the Cortese grape.

CORTESE DI GAVI DOCG

See Gavi DOCG.

DIANO D'ALBA DOC

See Dolcetto di Diano d'Alba DOC.

DOLCETTO

Piedmont

Non-DOC Dolcetto can be excellent-value reds, gushing with soft, easy-drinking fruit.

- ✓ *Clerico* • *Corino* • *Marchesi di Gresy*
• *Marcarini* • *Luciano Sandrone*

DOLCETTO D'ACQUI DOC

Piedmont

Dolcetto is a plump grape with a low acid content that is traditionally used to make cheerful, Beaujolais-type wines that are deep purple in color and best enjoyed young.

☞ 1–3 years

- ✓ *Viticoltori dell'Acquese* • *Villa Banficut*

DOLCETTO D'ALBA DOC

Piedmont

Dolcetto d'Alba DOC produces some soft, smooth, juicy wines that should be drunk while they are young, fresh, and fruity.

☞ 1–3 years

- ✓ *Elio Altare* • *Azelia* • *Batasiolo* • *Fratelli Broyia* • *Ceretto* • *Pio Cesare* • *Fratelli Cigliuti* • *Aldo Conterno* • *Cascina Drago*
• *Franco Fiorina* • *Elio Grasso* • *Bartolo Mascarello* • *Pira* • *Roberto Voerzio*

DOLCETTO D'ASTI DOC

Piedmont

These wines are lighter than Dolcetto d'Alba.

DOLCETTO DELLE LANGHE MONREGALESI DOC

Piedmont

Rare wines produced in tiny quantities, reputed to have an exceptionally fine aroma.

DOLCETTO DI DIANO D'ALBA or DIANO D'ALBA DOC

Piedmont

Diano is a hilltop village just south of Alba, which produces wines that are slightly fuller and more grapey than most other Dolcetto wines.

☞ 3–5 years

- ✓ *Alario* • *Casavecchia* • *Colué*
• *Fontanafredda* • *Giuseppe Mascarello*
• *Cantina della Porta Rossa* • *Mario Savigliano* • *Veglio & Figlio*

DOLCETTO DI DOGLIANI DOC

Piedmont

Most Dolcetto from Dogliani used to be made to drink young and fruity, but more is now being made in a *vin de garde* style. The best attain a lovely perfumed finesse with a few years in bottle.

- ✓ *Chionetti* • *Luigi Einaudi* • *Angelo Gaja*
• *Pira* • *Roberto Voerzio*

DOLCETTO DI OVADA DOC

Piedmont

These are the fullest and firmest of Dolcettos.

☞ 3–6 years (up to 10 for the very best)

- ✓ *Cascina Scarsi Olivi*

DOLCETTO-NEBBIOLO

Piedmont

When backed up by full, firm Nebbiolo, the soft, lush fruit of Dolcetto remains remarkably fresh for a considerable time in bottle.

- ✓ *Cascina Drago* (Bricco del Drago, especially Vigna le Mace)

DONNAZ or DONNAS

Valle d'Aosta

Formerly its own DOC, but now a subappellation of the regional Valle d'Aosta DOC, Donnaz produces soft, well-balanced, Nebbiolo-based red wines that have a pleasant, yet slightly bitter aftertaste. See also Valle d'Aosta DOC, p274.

ENFER D'ARVIER

Valle d'Aosta

Formerly its own DOC, but now a subappellation of the regional Valle d'Aosta DOC, Enfer d'Arvier is a low-key, medium-bodied red wine made primarily from the Petit Rouge grape, although Dolcetto, Gamay, Neyret, Pinot Noir, and Vien de Nus may also be used. See also Valle d'Aosta DOC, p274.

ERBALUCE DI CALUSO or CALUSO DOC

Piedmont

These are fresh, dry, light-bodied white wines made from the Erbaluce, which is a rather undistinguished grape. A far more interesting *passito* version exists and it is probably this that gave Erbaluce its overrated, albeit localized, reputation. See also Caluso Passito DOC.

☞ 1–3 years

- ✓ *Luigi Ferrando*

FARA DOC

Piedmont

In the hands of someone like Dessilani, Fara DOC proves to be an underrated, enjoyable, Nebbiolo-based wine with lots of fruit combined with a spicy-scented character.

- ✓ *Luigi Dessilani* (Caramino)

FAVORITA

Piedmont

Descended from the Vermentino, this was once a popular table grape, but now makes dry, crisp white *vini da tavola* and, since 1995, DOC Langhe Favorita. The best varietal wines have a delicate floral aroma and refreshing acidity.

FLÉTRI

Valle d'Aosta

In this bilingual region, the French *flétri*, which means "shriveled," may be used in preference to the Italian *passito*.

FRANCIACORTA DOCG

Lombardy

The sparkling white and rosé wines made by Franciacorta were promoted to DOCG status in September 1995. Produced by the traditional method with 25 months' aging on the lees (or 37 if *riserva*), Franciacorta had already shown its potential for producing fine, biscuity, *brut*, and lightly rich rosé sparkling wines when this book was first published. It not only deserves its prestigious classification, it is an object lesson for the rest of the Italian wine industry for two reasons. First, the still wines have retained their former DOC status (see Terre di Franciacorta DOC), making it one of Italy's more prestigious appellations. Meanwhile, the selection of only sparkling wines for DOCG enhances this new classification, whereas promoting an entire DOC devalues it. Not every region has a supercategory to promote as Franciacorta has, but others could, for example, restrict production to the original *classico* area and a reduced yield. This would result in both a DOC and DOCG for the same region and, in the mind of the consumer, it would ensure that the "G" did guarantee an elevated quality equivalent to *grand cru*, for example. The second lesson is that as the first Italian wine to insist on bottle-fermentation, Franciacorta is currently the only Italian dry sparkling-wine appellation that can demand respect from the rest of the world. See Terre di Franciacorta DOC for still wines.

🕒 2–5 years

 • *Lo Sparviere* • *Villa*

FREISA

Piedmont

The Freisa is a black grape of refreshing acidity, which makes ruby-red wines with characteristic raspberry and rose-petal aromas for early drinking. Non-DOC wines abound, particularly around Alba, where this variety excels in quality, despite the lack of official recognition.

🕒 3–6 years (up to 10 for the very best)

✓ *Clerico* • *Aldo Conterno* • *Coppo*

FREISA D'ASTI DOC

Piedmont

Known for centuries, and a favorite of King Victor Emmanuel, this is the original and most famous Freisa. These fruity red wines may be made fully sparkling, *frizzante*, or still, and in both dry and sweet styles.

🕒 3–6 years (up to 10 for the very best)

✓ *Gilli*

FREISA DI CHIERI DOC

Piedmont

Freisa di Chieri produces the same styles of wine as Freisa d'Asti from just outside Turin.

FUMIN

Valle d'Aosta

Very little is known about this grape, which is usually blended with others but occasionally makes a robust red on its own under the Valle d'Aosta DOC or as a *vino da tavola*.

GABIANO DOC

Piedmont

The full-bodied, red Barbera wines of Castello di Gabiano seemed to make this a promising DOC, but the appellation has not taken off and these wines are seldom encountered.

GAMAY

Valle d'Aosta

The non-DOC wines of Gamay are light-bodied with an attenuated earthy fruitiness.

GAMAY-PINOT NERO

Valle d'Aosta

A light and fruity *passetoutgrains* style.

GATTINARA DOCG

Piedmont

From Nebbiolo and up to 10 percent Bonarda grown on the right bank of the Sesia River in northern Piedmont, Gattinara can be a fine, though not a great, wine, especially now that overcropping problems have been reduced since Gattinara attained DOCG status. When young, the fruit can be chunky and rustic when compared with Barbaresco or Barolo, but the best Gattinara wines develop a fine, silky-textured flavor and a graceful, violet-perfumed finesse when mature. Gattinara earned its DOC and then full DOCG status through the almost single-handed efforts of Mario Antonolo, whose wines have always been among the greatest produced in the area. Others have followed his example, but have been too few and too slow to give Gattinara the sort of reputation that a world-class wine appellation ought to have.

🕒 6–15 years

✓ *Mario Antonolo* • *Le Colline* • *Travaglini*

GAVI or CORTESE DI GAVI DOCG

Piedmont

The quality and character of these highly fashionable wines is very uneven, although prices are uniformly high. At best, they are soft-textured, dry white wines with a slight *frizzantino* when young, and can develop a honey-rich flavor after a couple of years in bottle. Too many examples have all their character fermented out at low temperatures, which gives them an amylic pear-drop aroma, and some are definitely *frizzante*.

🕒 2–3 years

✓ *Nicola Bergaglio* • *Chiarlo* (Fior di Rovere)
 • *Carlo Delletto* • *La Scolca*

GHEMME DOCG

Piedmont

A Nebbiolo-based wine produced on the bank opposite Gattinara, Ghemme is usually seen as the inferior of the two appellations, but it has never been as persistently overcropped and is generally more consistent. Although not capable of reaching the heights of Antonolo's Gattinara, for example, most Ghemme has just as much color, body, and flavor as Gattinara in general, and starts off with a much finer bouquet and more elegant fruit. In addition to Nebbiolo, Vespolina and Bonarda may be used.

🕒 4–15 years

✓ *Antichi Vigneti di Cantelupo* • *Le Colline*
 • *Luigi Dessilani*

GRIGNOLINO D'ASTI DOC

Piedmont

Grignolino d'Asti DOC produces lightly tannic red wines with a slightly bitter aftertaste.

GRIGNOLINO DEL MONFERRATO CASALESE DOC

Piedmont

These are light, crisp, fresh red wines made from Grignolino around the Casalese Monferrato.

GRUMELLO DOC

Lombardy

See Valtellina Superiore DOC.

INFERNO DOC

Lombardy

See Valtellina Superiore DOC.

LAMBRUSCO MANTOVANO DOC

Lombardy

Not all Lambrusco comes from Emilia-Romagna. This one is produced just across the border on the plains of Mantua (Mantova). Formerly a *vino da tavola*, Mantovano is red and *frizzante* with a pink foam and may be dry or sweet.

🕒 Upon purchase

✓ *C. S. di Quistello*

LANGHE DOC

Piedmont

This area overlaps the DOCs Barbaresco, Barolo, Nebbiolo d'Alba, Dolcetto d'Alba, and Barbera d'Alba and, if used sensibly, through selection, could ensure the highest quality in those wines. White, red, and six varietal wines are permitted: Dolcetto, Freisa, and Nebbiolo for red; and Arneis, Favorita, and Chardonnay for white.

✓ *Chionetti* • *Aldo Conterno* • *Angelo Gaja*
 • *Giuseppe Mascarello*

LESSONA DOC

Piedmont

These are red wines that can be delightfully scented, with rich fruit and some finesse.

LOAZZOLO DOC

Piedmont

From the village of Loazzolo, south of Canelli, this Moscato *passito* is aged for two years, including six months in *barriques*, to produce a golden-hued, richly flavored, lusciously textured, exotically sweet wine. A wine that can age, but which is best drunk young.

🕒 2–4 years

✓ *Borgo Maragliano • Borgo Sambui*
• *Bricchi Mej • Giancarlo Scaglione*

LUGANA DOC

Lombardy

These are soft, smooth, dry white wines made from Trebbiano grown on the shores of Lake Garda, slightly overlapping Veneto in northeast Italy. There are many dullards, but the very best Lugana manage to transcend the lackluster level normally expected from this grape variety.

☞ 1–2 years

✓ *Cà dei Frati • Visconti*

MALVASIA

Lombardy

In many instances Malvasia, Malvoisie, and Pinot Gris are the same variety of grape, but the Malvasia of Lombardy is the true Malvasia and a very different grape from the Malvoisie of Valle d'Aosta. A dark-skinned grape, Malvasia makes both red and white wines, still and sparkling, dry and sweet, and, most puzzling of all, full- and light-bodied, and neutral and aromatic.

✓ *La Muiraghina*

MALVASIA DI CASORZO D'ASTI DOC

Piedmont

These are lightly aromatic, sweet, red, and rosé wines that may also be sparkling.

☞ 1–2 years

✓ *Bricco Mondalino*

MALVASIA DI CASTELNUOVO DON BOSCO DOC

Piedmont

The DOC of Malvasia di Castelnuovo Don Bosco produces attractive, lightly aromatic, sweet, red, still, and sparkling wines.

☞ 1–2 years

✓ *Bava*

MALVOISIE

Valle d'Aosta

The Malvoisie of Valle d'Aosta is in fact Pinot Gris, not Malvasia, and its dry, semisweet, and *passito* wines are, though not at all spicy, smooth and usually slightly bitter in both DOC and *vino da tavola* versions.

MONFERRATO DOC

Piedmont

This is a relatively new DOC, which was introduced in 1995 for red, white, and *ciaret* or *chiaretto* (rosé) Dolcetto, Casalese, and Freisa from a wide area overlapping the Asti region.

✓ *La Barbatella • Martinetti • Villa Sparina*

MORGEX ET LA SALLE DOC

Valle d'Aosta

A subappellation of the regional Valle d'Aosta DOC, the vineyards of these two communes reach as high as 4,265 feet (1,300 meters), which makes it one of the highest wine-growing areas in Europe. However, most vines in these two villages are grown between 2,952 and 3,280 feet (900 and 1,000 meters), although even this is remarkable as, in theory, grapes do not ripen above 2,625 feet (800 meters) in the Valle d'Aosta. However, in practice they ripen, and produce a fine, dry, *frizzantino* white. Brut, Extra Brut, and Demi Sec *spumante* versions are also made. See also Valle d'Aosta DOC.

☞ 1–3 years

✓ *Alberto Vevey*

MOSCATO

Lombardy and Piedmont

Good non-DOC is made in Lombardy and the Moscato di Scanzo is undoubtedly the best. In the Piedmont, non-DOC Moscato is prolific in many styles and formats, and even a crisp, dry version to challenge Alsace is available from Alasia (an alliance between the flying winemaker Martin Shaw and the Araldica consortium of cooperatives).

✓ *Lombardy Celnate Ronchello • Il Cipresso • La Cornasella*

Piedmont Alasia (especially Muscaté Sec)

MOSCATO D'ASTI DOCG

Piedmont

Wines similar in flavor to Asti, but with a minimum pressure of three atmospheres, as opposed to five. Still, slightly *frizzantino*, and positively *frizzante* examples of Moscato d'Asti exist. Those with some degree of effervescence are bottled without any *dosage*, while the first fermentation is still underway, as opposed to Asti plain and simple, which is made by the *cuve close* method. Compared with Asti, Moscato d'Asti is generally, though not necessarily, less alcoholic (5.5 to 8 percent instead of 7.5 to 9 percent) and almost always much sweeter. If there is any criticism of this luscious, heavenly nectar, it is the unfortunate trend to make these wines fizzier, as there is often little difference between modern Moscato d'Asti and Asti itself. Rarely does one find a still Moscato d'Asti with the barest prickle, as in the past. That said, this is the Asti DOC to pick. As there are fewer than 3 million bottles, as opposed to 85 million Asti, it is more expensive, and the best, such as Borgo Maragliano's La Caliera, which is in a completely different class from the rest, are definitely fine.

☞ Upon purchase

✓ *Araldica • Castello Banfi • Alfiero Boffa • Borgo Maragliano • Redento Dogliotti • Gatti • Marchesi di Gresy • Villa Lanata • Luciana Rivella • La Spinetta-Rivetti*

NEBBIOLO

Piedmont

Most *vini da tavola* from this grape are relatively simple red wines, as the best areas for Nebbiolo have long been known and have become famous DOCGs. Exceptionally fine examples have, however, been made in great years by the best Barolo and Barbaresco producers. It remains to be seen whether or not they will continue to do so now that they also have the choice of Nebbiolo d'Alba and Langhe

Nebbiolo DOCs through which to sell such wines.

✓ *Elio Altare • Clerico (Arté) • Corino • Cascina Drago • I Paglieri* (Opera Prima)

NEBBIOLO D'ALBA DOC

Piedmont

Pure Nebbiolo wines come from between Barolo and Barbaresco. Most are fine, full, rich, and fruity. Sweet and sparkling versions are allowed.

☞ 4–10 years

✓ *Ascheri • Tenuta Carretta • Ceretto • Pio Cesare • Aldo Conterno • Giacomo Conterno • Franco Fiorina • Angelo Gaja • Bruno Giacosa • Hilberg-Pasquero • Giuseppe Mascarello • Val de Prete • Vietti*

NEBBIOLO-BARBERA

Piedmont

A strikingly successful *vino da tavola* blend that takes to *barrique*-aging like a duck to water, producing delicious yet classy red wines with plump, juicy fruit, held together by supple tannins and a touch of smoky-oak. Some wines, such as Conterno Fantino's Monprà, contain more Barbera than Nebbiolo. See also Petit Rouge.

✓ *Giacomo* (Bric Milieu) • *Chiarlo* (Barilotti) • *Valentino Migliorini* (Bricco Manzoni) • *Conterno Fantino* (Monprà) • *Vietti* (Fioretto) • *Roberto Voerzio* (Vignaserra) • *Oriou* (Valle d'Aosta)

NUS DOC

Valle d'Aosta

A subappellation of the Valle d'Aosta DOC, Nus makes an interesting red from Vien de Nus, Petit Rouge, and Pinot Noir grapes. Dry and *passito* styles of white wine are made from Pinot Gris or Malvoisie de Nus. See also Valle d'Aosta DOC.

☞ 2–4 years

✓ *La Crotta di Vegneron*

OLTREPÒ PAVESE DOC

Lombardy

The Oltrepò Pavese covers 42 communes south of the Po River, although much of the production is not marketed under this DOC, but sold to specialized wineries in Piedmont. These wineries turn it into non-DOC *spumante* by the *cuve close* process or the traditional method. There used to be three geographical subappellations, but Barbaresco has since been recognized as the exclusive product of Lino Maga, reverting to *vino da tavola* status. The two remaining subappellations are **Oltrepò Pavese Buttafuoco** ("sparks of fire"), a deep-colored, fruity, dry or semisweet *frizzante* red; and **Oltrepò Pavese Sangue di Giuda** (charmingly named "blood of Judas"), a soft, sweet, red *spumante*. Both wines are restricted to vineyards around the villages of Broni, Canetto Pavese, Castana, Cigognola, Montescano, Pietra de Giorgi, and Stradella. Aside from blended red, white, and rosé wines, Oltrepò Pavese permits 11 varietal wines: Barbera, Bonarda (made from Croatina), Cabernet Sauvignon, and Pinot Noir (still and *spumante*) for red; and Chardonnay, Cortese, Malvasia, Moscato (still, *spumante*, and *liquoroso*), Pinot Grigio, Riesling Italico, and Riesling Renano for white.

☞ 1–3 years (white, rosé, and sparkling)
2–5 years (red)

- ✓ *Giacomo Agnes* • *Angelo Ballabio*
 • *Bianchina Alberici* • *Doria* (Pinot Nero) • *Lino Maga* (see also *Barbacarlo*)
 • *Monsupello* • *Piccolo Bacco dei Quaroni* • *Tronconero* (Bonarda) • *Zonin* (Moscato spumante)

ORMEASCO

Liguria

Ormeasco is the local Ligurian variant of Dolcetto, which can produce some deliciously easy-to-drink, soft, fruity red wines.

PETIT ROUGE

Valle d'Aosta

Deep, dark, and highly perfumed red wines from this low-yielding, local grape that can be met within both DOC and *vino da tavola* versions. There are many variants in the family of Petit Rouge, but they can all be traced back to the Oriou, which may in future be used for its varietal wines. Moves have been underway since the early 1990s to change the name of the Petit Rouge grape to Oriou owing to the supposedly belittling effect of *petit* in its name, even though this refers to the size of berry, not the quality of wine (most classic varieties have smaller, rather than larger, grapes and this should thus be seen as a positive attribute).

PIEMONTE DOC

Piedmont

Introduced in 1995, this DOC embraces all the other DOC areas in the Piedmont and, with the exception of Piemonte Moscato and Piemonte Moscato Passito, which must be made from 100 percent Moscato grapes, all wines claiming this appellation are required to contain at least 85 percent of the variety indicated. Permitted red wine varietals are Barbera, Bonarda, Brachetto, Dolcetto, and Pinot Noir, while in addition to the Moscato wines already mentioned above, white varietals include Cortese, Pinot Blanc, and Pinot Gris. The creation of this regional DOC probably explains why no IGT wines have been declared in Piedmont, and it is doubtful whether any IGT will be in the future.

PINOT NERO

Lombardy

Most Pinot Noir grown in northwest Italy goes into classic *brut spumante* wines. Still wines are made under the Oltrepò Pavese denomination (Doria being outstanding) and a small number of non-DOC examples are to be found. The two wines listed below are *barrique*-aged, and are exceptionally fine in quality.

- ✓ *Ca' del Bosco* • *Tenuta Mazzolino*

PREMETTA

Valle d'Aosta

Lightly tannic, bright cherry-red wines from this local grape, Premetta, can be encountered in both DOC and *vino da tavola* versions.

RIVIERA DEL GARDA BRESCIANO or GARDA BRESCIANO DOC

Lombardy

This area makes light, fruity, slightly bitter red wines that are no more interesting than the bulk of Valpolicella, produced on the opposite bank of Lake Garda. Most are blended from Gropello, Sangiovese, Marzemino, and Barbera, but some

are pure varietal wines from the Gropello grape and these tend to be superior. Although the whites may be pure Riesling, this is taken to mean either Riesling Renano, which is true Riesling, or Riesling Italo, which is not. Furthermore, as up to 20 percent of other local grape varieties may be used, Garda Bresciano *bianco* has not been of much interest so far. The most successful wine here has been the rosé, or *chiaretto*, which, although it is made from exactly the same varieties as the *rosso*, can be much softer and easier to drink.

☞ Upon purchase

- ✓ *Costaripa*

RIVIERA LIGURE DI PONENTE DOC

Liguria

Four former *vini da tavola* are grouped together under this appellation, which covers the western Riviera of Liguria. These are: *Ormeasco*, bright, cherry-red wines with juicy, raspberry, Dolcetto fruit; *Pigato*, full-flavored yet somewhat precocious red wines; *Rossese*, well-scented, characterful reds; and *Vermentino*, rich, full, and characterful dry white wines.

ROERO DOCG

Piedmont

This DOC covers light-bodied, easy-drinking, inexpensive Nebbiolo reds and the highly regarded, highly priced Arneis whites from the Roeri hills north of Alba. See Arneis di Roero.

☞ 1–2 years

- ✓ *Carlo Deltetto* • *Giovanni Almondo* • *Matteo Correggia* • *Monchero Carboni* • *Malvirà*

ROSSESE DI DOLCEACQUA or DOLCEACQUA DOC

Liguria

This DOC produces light, easy-drinking red wines that are capable of rich, lush fruit, a soft texture, and spicy-aromatic aftertaste.

☞ 1–4 years

- ✓ *Giobatta Cane* • *Lupi* • *Antonio Perrino*

RUBINO DI CANTAVENNA DOC

Piedmont

A full-bodied red wine blend of mostly Barbera, Grignolino, and sometimes Freisa. It is made by a *cooperativa* called Rubino, which was solely responsible for creating this appellation, but failed to interest other producers. As a result, the DOC has not taken off.

RUCHÉ

Piedmont

The Ruché is a rather mysterious grape of unknown origin that generally makes a light ruby-colored wine with an aromatic twist, although, through reduced yields, much darker, weightier, richer wines can be achieved.

- ✓ *Scarpa*

RUCHÉ DI CASTAGNOLE MONFERRATO DOC

Piedmont

When grown on the vineyards overlooking Castagnole Monferrato, the Ruché grape is supposed to produce an aromatic red wine that ages like Nebbiolo. Up to 10 percent Barbera

and Brachetto may be used in production.

☞ 3–5 years

- ✓ *Piero Bruno* • *Ruché del Parrocco*

SAN COLOMBANO AL LAMBRO or SAN COLOMBANO DOC

Lombardy

Rich, robust, if somewhat rustic red wines made from Croatina, Barbera, and Uva Rara are produced by this DOC. San Colombano is the only DOC in the Milan province.

☞ 2–5 years

- ✓ *Carlo Pietrasanta*

SAN MARTINO DELLA BATTAGLIA DOC

Lombardy

Dry, full-flavored white wine with a flowery aroma and slightly bitter aftertaste, and a sweet, *liquoroso* wine, made from the Tocai Friulano.

SANGUE DI GIUDA DOC

See Oltrepò Pavese DOC.

SASSELLA DOC

Lombardy

See Valtellina Superiore DOC.

SAUVIGNON BLANC

Piedmont

These wines are virtually unknown in the region, although the soil and climate seem favorable. Angelo Gaja's *barrique*-aged pure Sauvignon Alteni di Brassica shows potential.

- ✓ *Angelo Gaja* (Alteni di Brassica)

SIZZANO DOC

Piedmont

These are good, full-bodied red wines that are produced from a Gattinara-like blend on a bank of the Sesia River, just south of Ghemme.

SPANNA

Piedmont

The local name for the Nebbiolo, Spanna merely represents the most basic wines from this grape variety, although in the hands of some specialists it can surpass many generic Barolo and Barbaresco.

- ✓ *Luciano Brigatti* • *Villa Era*

SYRAH

Valle d'Aosta

The Institut Agricole Régional has produced very interesting *barrique* wine from this grape, the Syrah, since the late 1980s.

TERRE DI FRANCIACORTA DOC

Lombardy

Part of the original Franciacorta appellation since 1967, the still wines were renamed Terre di Franciacorta in 1995 when the name in its singular form, Terra di Franciacorta, was reserved for the new DOCG. Produced northeast of Milan, on hilly slopes near Lake Iseo, the red wines are typically well colored, medium- to full-bodied, made from Cabernet Franc and Cabernet Sauvignon, with the possible addition of Barbera, Nebbiolo, and

Merlot. Many are richly flavored and show some finesse. The dry white wines, primarily from Chardonnay with a little Pinot Blanc permissible, have improved tremendously.

🕒 3–8 years (red), 1–3 years (white)

✓ *Ca' del Bosco • Enrico Gatti • Ragnoli*

TIMORASSO

Piedmont

Tipped by some to be the next trendy white grape variety, Timorasso has until now been confined to *vini da tavola* and *grappa*, with more emphasis on the latter. Walter Massa in the upper Val Curone was the first to produce a varietal wine from Timorasso, almost by accident, when a *grappa* producer by the name of Antonella Bocchino became curious about this grape. She had seen it mentioned in 19th-century documents, but it was thought to be extinct until she tracked down a plot on Massa's estate. Since Bocchino was interested in making only *grappa* with the pressings, Massa was left with the wine on his hands and it turned out to be more than just a curiosity. Massa has supplied other estates with cuttings and several producers now make Timorasso, a varietal that could follow on the success of Gavi and Arneis.

TORRETTE DOC

Valle d'Aosta

A red-only subappellation of the regional Valle d'Aosta DOC, Torrette produces deep-colored wines of good bouquet and body from the Petit Rouge, plus up to 30 percent Dolcetto, Fumin, Gamay, Mayolet, Pinot Noir, Premetta, and Vien de Nus. See also Valle d'Aosta DOC.

✓ *Elio Cassol • Grosjean*

VALCALEPIO DOC

Lombardy

An up-and-coming appellation for well-colored, deeply flavored red wines made from a blend of Merlot and Cabernet Sauvignon, and for light, delicately dry white wines made from Pinot Blanc and Pinot Gris.

🕒 1–3 years (white), 3–7 years (red)

✓ *Tenuta Castello*

VALGELLA DOC

Lombardy

See Valtellina Superiore DOC.

VALLE D'AOSTA *or* VALLÉE D'AOSTE DOC

Valle d'Aosta

A regional DOC encompassing 20 different styles of wine, Valle d'Aosta took under its wings the only two DOCs formerly recognized in the region: Donnaz and Enfer d'Arvier. These are now two of the seven subappellations within this DOC, the other five being Arnad-Montjovat, Chambave, Morgex et La Salle, Nus, and Torrette (see individual entries). The Valle d'Aosta DOC has revitalized this region's tiny production of somewhat low-key wines. Aside from blended red, white, and rosé, the following varietal wines are permitted: Fumin, Gamay, Nebbiolo, Petit Rouge, Pinot Noir, and Premetta for reds; and Chardonnay, Müller-Thurgau, Petit Arvine, and Pinot Gris for whites. There is also a Bianco di Pinot Nero, which you might see labeled as a Blanc de Noir de Pinot Noir, as all Valle d'Aosta wines have official alternative French designations.

SPRINGTIME AT MORGEX, VALLE D'AOSTA

Grown at more than 3,000 feet (900 meters), these vines annually disprove the theory that grapes should not ripen above 2,600 feet (800 meters) in the Valle d'Aosta.

🕒 1–3 years

✓ *Grosjean • La Crotta di Vegneron • Les Crêtes*

VALTELLINA DOC

Lombardy

Encompasses 19 communes of the province of Sondrio. Most are light-scented, medium-bodied red wines of simple, but pleasing, character. Many critics believe Valtellina to be very overrated, and the basic *appellation* certainly is, but the fine wines are virtually all classed as Valtellina Superiore. See also Valtellina Superiore DOC.

VALTELLINA SUPERIORE DOCG

Lombardy

The best wines of Valtellina are produced from a narrow strip of vineyards on the north bank of the Adda River near the Swiss border, and must contain a minimum of 12 percent alcohol, as opposed to the 11 percent required for Valtellina. Most of the wines come from four subdistricts: **Grumello** (the lightest), **Inferno** (supposedly the hottest, rockiest part of the valley), **Sassella** (the best), and **Valgella** (the most productive but least interesting). Essentially a Nebbiolo, but up to 10 percent Pinot Noir, Merlot, Rossola, Brugnola, and Pignola Valtellina may also be used. The richness of the best of these wines is belied by their elegance. They have good color and are capable of developing exquisite finesse after several years in bottle. *Sfursat* or *Sforzato*, which literally means "strained" and is made from shriveled grapes, is a dry, concentrated red wine that has a minimum of 14.5 percent alcohol (try Nino Negri's), which makes it the equivalent of *amarone*.

🕒 5–15 years

✓ *Enologica Valtellinese • Sandro Fay • Fondazione Fojanini • Nino Negri • Conti Sertoli-Salis • Fratelli Triacca • Mamete Prevostini*

VIEN DE NUS

Valle d'Aosta

A very similar grape to the Petit Rouge, but whereas the Petit Rouge is widely planted throughout the Valle d'Aosta, cultivation of the Vien de Nus is restricted to the vineyards around Nus itself.

VIN DE CONSEIL

Valle d'Aosta

Perfumed dry white made by the Institut Agricole Régional from Petite Arvine.

NEW IGT WINES

The following Indicazioni Geografiche Tipiche wines were agreed to at the end of 1996, yet most have still to register with consumers, or establish any consistency of style or quality:

✓ *Liguria Colli Savonesi • Golfo del Tigullio • Val Polcevera*

Lombardy *Alto Mincio • Benaco Bresciano • Bergamasca • Collina del Milanese • Quistello • Ronchi di Brescia, Sabbioneta • Sebino • Terrazze Retiche di Sondrio*

Piedmont *none*

Valle d'Aosta *none*

NORTHEAST ITALY

Freshness, crisp acidity, and purity of varietal character personify the wines of the northeastern regions of Trentino-Alto Adige, Friuli-Venezia Giulia, and the Veneto; but beware the mass-produced wines, which are so clean and pure that they lack any fruit.

THIS IS A MORE MOUNTAINOUS area than the northwest (with the exception of that region's Valle d'Aosta), as just over half the land is occupied by the Dolomites and their precipitous foothills. Some of the finest wines are grown in the lush, verdant vineyards of the South Tyrol (Alto Adige), just over the border from Austria. A great deal of wine is exported; the bulk of it is unexciting Soave and Valpolicella. Locally there is much greater variety and value to be had—a number of French and German grapes are grown in addition to fascinating local varieties, and dedicated

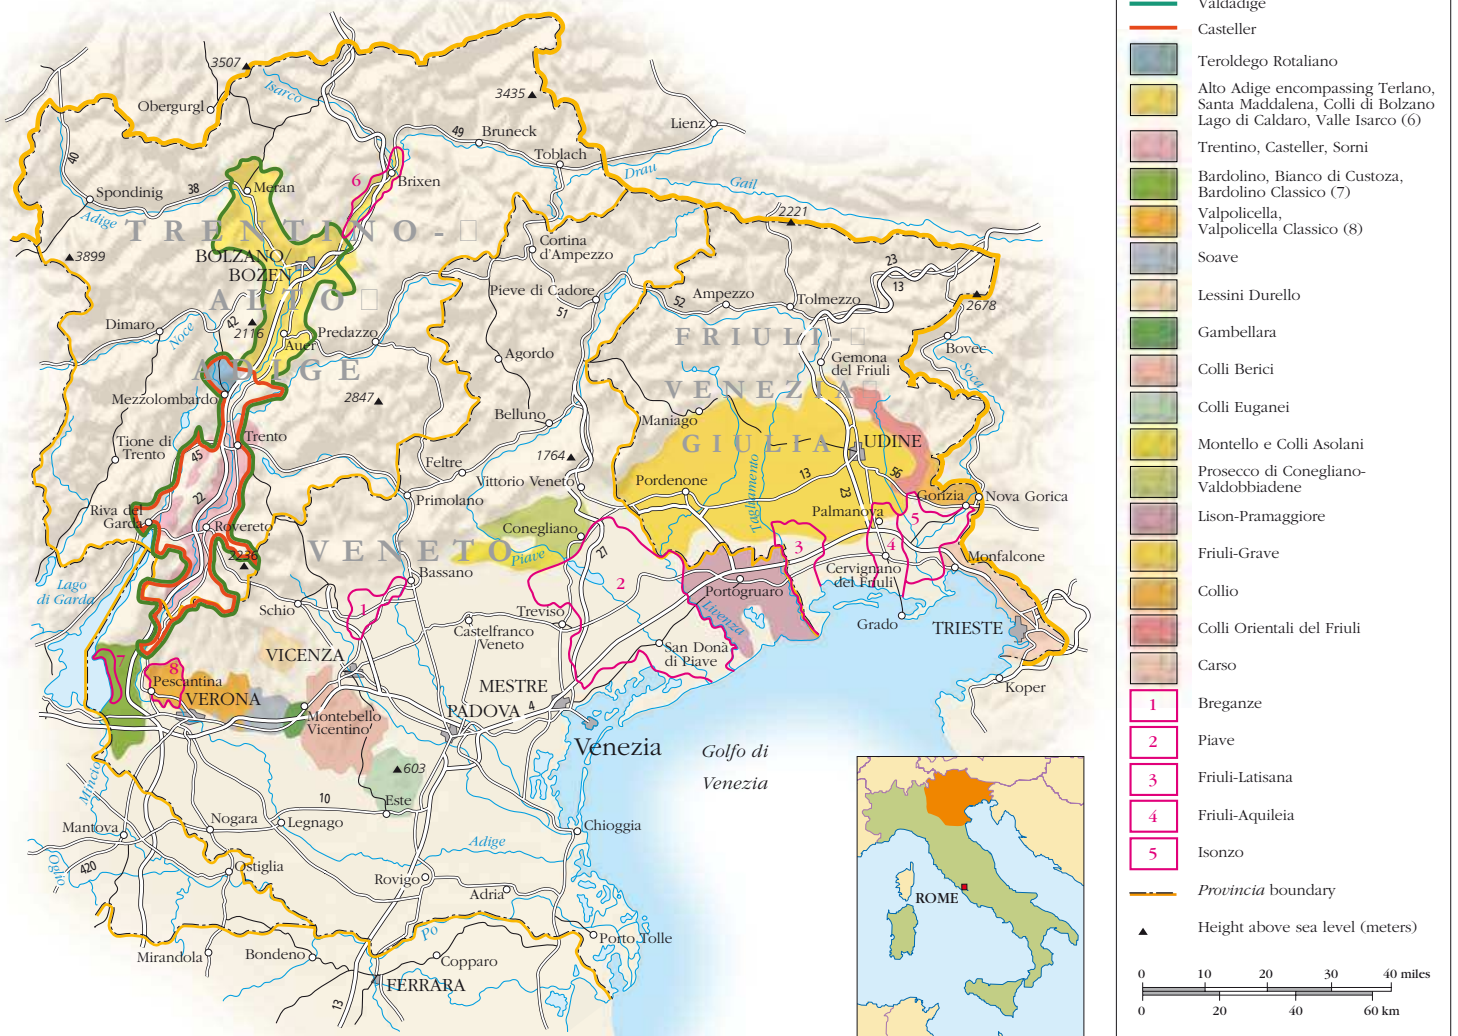

NORTHEAST ITALY, *see also* p.263

The variety of sites offered by the mountains and the hills of this area enables many grape varieties to be grown in addition to local ones. The most exciting wines come from the high vineyards of the South Tyrol, the hills of Friuli, and around Vicenza in the Veneto.

TERMENO VINEYARDS, ALTO ADIGE

The town of Termeno, or Tramin, as it is also called, is situated between Bolzano and Trento, in the Alto Adige region. This is where the Traminer Aromatico, or Gewürztraminer, is supposed to have originated, but the local clone is far more restrained than the classic Alsace version, with hardly any spice to its character.

AVERAGE ANNUAL PRODUCTION

REGION	DOC PRODUCTION	TOTAL PRODUCTION
Veneto	17 million cases (1.5 million hl)	110 million cases (10 million hl)
Trentino-Alto Adige	8 million cases (700,000 hl)	17 million cases (1.5 million hl)
Friuli-Venezia Giulia	5 million cases (5 million cases)	18 million cases (1.6 million hl)

Percentage of total Italian production: Veneto, 13%; Trentino-Alto Adige, 2%; Friuli-Venezia Giulia, 1.5%.

producers continue to experiment. Austria to the north and Slovenia to the east have influenced the styles produced.

TRENTINO-ALTO ADIGE

This is the most westerly and spectacular of the northeast's three regions, and more than 90 percent of its area is covered by mountainous countryside. It is made up of two autonomous provinces, the Italian-speaking Trento in the south and the German-speaking Bolzano, or South Tyrol, in the north. In Bolzano the wines may possess alternative German names and can carry a QbA (*Qualitätswein bestimmter Anbaugebiete*) designation. The generic Alto Adige DOC (*Südtiroler QbA*) is remarkably good and accounts for one-third of the region's total DOC output. There are also numerous fine wines produced in these cool, high vineyards.

THE VENETO

The Veneto stretches from the Po River to the Austrian border, between Trentino-Alto Adige to the west and Friuli-Venezia Giulia to the east, and most of the wines are grown on alluvial plains in the south. Once famous, but more recently infamous, for its Valpolicella and Soave, the Veneto is also one of the most exciting hunting grounds for some of Italy's best Bordeaux-type blends, and there are signs that even the aforementioned abused wine names are beginning to regain a little of their former respectability.

FRIULI-VENEZIA GIULIA

Situated in the northeastern corner of Italy, this predominantly mountainous region has grown many non-Italian varieties since phylloxera wiped out its vineyards in the late 19th century. The naturally innovative Friulians (and South Tyroleans) used the

BARDOLINO VINEYARDS

Ripening grapes adorn rows of vines in the Veneto's Bardolino area, which has a good reputation for light, dry red, and rosé wines.

opportunity to replant their vineyards with several better-quality foreign grape varieties, starting with the Merlot, which was brought to this region by Senator Pecile and Count Savorgnan in 1880. Over the past 100 years, the northeast has consistently demonstrated that the use of superior grape varieties and relatively lower yields can produce wines of dramatically improved quality. Friuli is the home of some of the country's finest wines, including many of its most complex Cabernet blends. Girolamo Dorigo's Montsclapade, which is the best of an exceptionally fine group of wines, is a typically Friulian blend of both Cabernets, Merlot, and Malbec. It is rare to find the Malbec variety on this side of the Alps, but it fares well in Friuli and might well be the key to the complexity of these wines. A few rather unconventional blends are found, the most unusual being Abbazia di Rosazzo's multinational Ronco dei Roseti, which mixes the four Bordeaux varieties with the German Limberger, the Italian Refosco, and the obscure Tazzelenghe. Another Abbazia di Rosazzo wine, Ronco delle Acacie, is a rare masterpiece in the new Italian school of "superdeluxe" *vini da tavola* white wines—a category of dry white Italian wine that is expensive but mostly disappointing.

The largest volume of fine wines produced in the northeast comes from Colli Orientali del Friuli, one of Friuli's two *colli*, or "hilly," areas. This one is situated close to the former Yugoslav border and encompasses many varietal wines. These wines are well worth looking out for—with the exception of the Picolit, which is a grossly overrated and horrendously overpriced sweet wine wherever it comes from. The Picolit produced in Colli Orientali del Friuli is the only one in Italy to have DOC status, but, in fact, the wine is no better than other examples to be found throughout the country.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

The northeast is bounded by the Dolomites to the north and the Adriatic Sea to the south.

CLIMATE

Similar to the northwest in that summers are hot and winters cold and harsh, but fog is less of a problem and hail more frequent. There are unpredictable variations in the weather from year to year so vintages are important, particularly for red wines.

ASPECT

Vineyards are found on a variety of sites ranging from the steep, mountainous slopes of Trentino-Alto Adige to the flat, alluvial plains of the Veneto and Friuli-Venezia Giulia. The best vineyards are always sited in hilly countryside.

SOIL

Most vineyards are on glacial moraine—a gritty mixture of sand, gravel, and sediment deposited during the Ice Age. Most are clayey or sandy clay and the best sites are often marly and rich in calcium. The light, stony soil in the South Tyrol is rapidly leached by weathering and fertilizers have to be added annually.

VITICULTURE AND VINIFICATION

The northeast has led Italy's move toward more modern vinification

techniques and experimentation with foreign grape varieties. It was the first area to use cold fermentation and, initially, the wines produced were so clean that they lacked natural character. There is now much experimentation into how to increase intensity of flavor through the use of new oak.

GRAPE VARIETIES

Blauer Portugieser (*syn.* Portoghese), Cabernet Franc, Cabernet Sauvignon, Chardonnay, Cortese (*syn.* Bianca Fernanda), Corvina (*syn.* Corvinone or Cruina), Durello, Franconia (*syn.* Limberger), Garganega, Gewürztraminer, Incrocio Manzoni 215 (*Prosecco x Cabernet Sauvignon*), Incrocio Manzoni 6013 (*Riesling x Pinot Blanc*), Kerner, Lagrein, Lambrusco a Foglia Frastagliata, Malbec, Malvasia, Marzemino, Merlot, Molinara (*syn.* Rossara or Rossanella), Mondeuse (*syn.* Refosco or Terrano), Muscat (*syn.* Moscato), Nosiola, Petit Verdot, Picolit, Pinella (Pinello), Pinot Blanc (*syn.* Pinot Bianco), Pinot Gris (*syn.* Pinot Grigio), Pinot Noir (*syn.* Pinot Nero), Prosecco (*syn.* Serprina or Serprino), Raboso (*syn.* Friularo), Ribolla, Riesling, Rossola (*syn.* Veltliner), Sauvignonasse (*syn.* Tocai Friulano), Sauvignon Blanc, Schiava (*syn.* Vernatsch), Schioppettino, Tazzelenghe, Teroldego, Tocai, Ugni Blanc (*syn.* Trebbiano), Verduzzo, Vespaiolo.

ALTO ADIGE *or* SÜDTIROLER DOC

Trentino-Alto Adige

This generic appellation covers the entire Alto Adige, or South Tyrol, which is the northern half of the Valdadige DOC.

There are seven red-wine varieties: Cabernet covers either Cabernet Sauvignon or Cabernet Franc, or both, and ranges from simple, but delightful, everyday wines to deeper-colored, fuller-bodied, richer wines that become warm, mellow, and spicy after five to 10 years; Lagrein Scuro, or *Lagrein Dunkel*, is made from an underrated, indigenous grape and can have a fine, distinctive character and good color; Malvasia, or *Malvasier*, is produced here as a red wine, although it would be better made into white or rosé; Merlot can be simply light and fruity or can attain greater heights, with a good spicy, sweet-pepper aroma and a fine, silky texture; Pinot Noir, or *Blauburgunder*, is a difficult varietal to perfect, but those from Mazzon are good and a specialty of this region (they will have Mazzoner on the label); Schiava, or *Vernatsch*, accounts for one in five bottles produced under this appellation and is the most popular tavern wine; Schiava Grigia, or *Grauer Vernatsch*, has recently been added to the list, as have two red-wine blends of Cabernet-Lagrein and Cabernet-Merlot.

There are no fewer than 10 different white-wine varieties: Chardonnay can range from light and neutral to delicately fruity, and even *frizzantino* or verging upon *spumante*—the fuller versions can have recognizable varietal characteristics, but still lack the weight and intensity of flavor of even basic Burgundy; Moscato Giallo, or *Goldenmuskateller*, is made into delicious dessert wines; Pinot Bianco, or *Weissburgunder*, is the most widely planted of all the white grape varieties and produces most of Alto Adige's finest white wines; Pinot Grigio, or *Ruländer*, is potentially as successful as Pinot Blanc, but does not always occupy the best sites; Riesling Italic, or *Welschriesling*, is insignificant in both quantity and quality; Riesling Renano, or *Rheinriesling*, is fine, delicate, and attractive at the lowest level, but can be extraordinarily good in exceptional vintages; Riesling x Silvaner, or *Müller-Thurgau*, is relatively rare, which is a pity because it achieves a lively spiciness in this region; Sauvignon was very scarce in the early 1980s, but as the vogue for this grape spread so its cultivation increased and the crisp, dry, varietally pure Sauvignon is now one of the most successful wines of the Alto Adige; Silvaner is made mostly to be drunk young and fresh; Traminer Aromatico, or *Gewürztraminer*, is far more restrained than the classic Alsace version, even if, as some claim, the variety

originated in the village of Tramin or Termeno, between Bolzano and Trento. If you can forget the full-blown spicy wine of Alsace, the delicate aroma and understated flavor of this wine can have a certain charm of its own.

Only three dry varietal rosato, or *Kretzer*, wines are allowed: Lagrein Rosato, or *Lagrein Kretzer*, is overtly fruity in a very round and smooth style; Merlot Rosato, or Merlot Kretzer, is a relatively recent addition and makes a curiously grassy or bell-pepper rosé; Pinot Nero Rosato, or *Blauburgunder Kretzer*, is more successful as a rosé than as a red.

Moscato Rosa, or *Rosenmuskateller*, are very flamboyant, deep-pink to scarlet-red, semisweet to sweet wines with an unusually high natural acidity, intense floral perfume, and an exaggerated Muscat flavor.

There is one sparkling-wine denomination for pure or blended Pinot Blanc and/or Chardonnay with up to 30 percent Pinot Gris and Pinot Noir, with both *cuvee close* and the traditional method permissible.

In 1994 five former DOCs were incorporated into the Alto Adige, or Südtiroler, DOC as geographical subappellations. **Colli di Bolzano DOC**, or *Bozner Leiten*, for soft, fruity, early-drinking, Schiava-based red wines from the left bank of the Adige River, and both banks of the Isarco near Bolzano; **Meranese, or Meranese di Collina DOC**, or *Meraner Hügel*, from the hills around Merano, north of Bolzano, where the Schiava grape produces a light, delicately scented red wine, which may be labeled as *Burgravito*, or *Burggräfler*, if it comes from the part of the Meranese that was formerly part of the Contea di Tirol; **Santa Maddalena DOC**, or *Sankt Magdalener*, in the heart of the Colli di Bolzano (see above), where the Schiava-based red wines are just as soft and fruity, but fuller in body and smoother in texture—few Italian references today boast that Santa Maddalena was ranked by Mussolini (overoptimistically) as one of Italy's greatest wines; **Terlano DOC**, or *Terlaner*, which overlaps most of Caldaro DOC on the right bank of the Adige, running some 10 miles (16 kilometers) northwest of Bolzano to 15 miles (24 kilometers) south, and covers one blended, one *spumante*, and the following eight varietal white wines: Pinot Bianco (*Weissburgunder*), Chardonnay, Riesling Italic (*Welschriesling*), Riesling Renano (*Rheinriesling*), Silvaner, Müller-Thurgau, and Sauvignon; and, finally, **Valle Isarco DOC**, or *Eisacktaler*, which takes in both banks of the Isarco River from a few miles north of Bolzano to just north of Bressanone, where the vineyards are high in altitude and the vines trained low to absorb ground heat. Six white-wine varieties are produced: Kerner, Müller-Thurgau, Pinot Grigio, or *Ruländer*, Sylvaner, Traminer Aromatico, or *Gewürztraminer*, and Veltliner. Valle Isarco also includes a geographical blend called *Klausner Leitacher* for red wines from the villages of Chiusa (also known as *Klausen*), Barbiano, Velturmo, and Villandro, which must be made from at least 60 percent Schiava plus up to 40 percent Portoghese and Lagrein. Furthermore, any Valle Isarco wine produced in Bressanone or Varna can be labeled "di Bressanone" or "*Brixner*."

BARDOLINO SUPERIORE DOCG

Veneto

Bardolino DOC produces dry, sometimes *frizzante*, red and rosé (*chiarretto*) wines from the southeastern shores of Lake Garda. The reds, made from Corvina, Molinara, and Negrara, could be very interesting, but unfortunately most producers tend to make rather bland, lightweight wines.

☞ 1–3 years

✓ *Guerrieri-Rizzardi*

BIANCO DI CUSTOZA DOC

Veneto

Effectively the white wines of Bardolino, they can be scented with a smooth aftertaste and may sometimes be sparkling. Some critics compare Bianco di Custoza to Soave, which neatly sums up the quality. The grapes are Trebbiano, Garganega, Tocai Friulano, Cortese, and Malvasia.

BOZNER LEITEN *or* COLLI DI BOLZANO DOC

Trentino-Alto Adige

See Alto Adige DOC.

BREGANZE DOC

Veneto

This is one of Italy's unsung DOC heroes, largely due to the excellence of Maculan. As a generic red, Breganze is an excellent Merlot-based wine with the possible addition of Pinot Noir, Freisa, Marzemino, Gropello Gentile, Cabernet Franc, and Cabernet Sauvignon. As a white, it is fresh, zesty, and dry and made from Tocai Friulano, with the possible addition of Pinot Blanc, Pinot Gris, Welschriesling, and Vespaiole. But it is mostly sold as a varietal, of which there are two red (Cabernet and Pinot Nero) and three white (Pinot Bianco, Pinot Grigio, and Vespaiole).

🕒 2–5 years (red), 1–2 years (white)

✓ *Bartolomeo da Breganze* • *Maculan*

CABERNET FRANC

Veneto

Most Cabernet wines are DOC, but a few non-DOC exist and are invariably well worth seeking out as they tend to be *barrique*-aged selections of ripe, not too grassy fruit.

✓ *Quintarelli* (Alerzo)

CABERNET SAUVIGNON

Veneto

Less traditional in Veneto than Cabernet Franc, pure varietal wines of any real quality or concentration are rarely encountered, but Cabernet Sauvignon from Anselmi and Le Vigne di San Pietro can be superb.

🕒 3–6 years

✓ *Anselmi* (Realda) • *Le Vigne di San Pietro* (Refolà)

CABERNET-MERLOT

Trentino-Alto Adige and Veneto

There are so many Cabernet DOCs available in this region that few bother to produce a *vino da tavola*, but of those that do, the hellishly expensive San Leonardo is the very best. In the Veneto, with one notable exception, Cabernet-based blends are not as common as one imagines they might be.

✓ *Trentino-Alto Adige Tenuta San Leonardo* (Vallagrina)

Veneto Conte Loredan-Gasparini (Venegazzù della Casa, Venegazzù Capo di Stato)

CALDARO *or* LAGO DI CALDARO KALTERER KALTERERSEE DOC

Trentino-Alto Adige

As this overlaps the heart of the Terzano area, Caldaro might as well be yet another subappellation of the Alto Adige DOC, along with Terzano and the other former DOCs that have now been absorbed. Schiava-based red wines with the possible addition of Lagrein and Pinot Noir, they are usually soft and fruity, with a hint of almond, and easy to drink.

CARSO DOC

Friuli-Venezia Giulia

Carso Terrano must consist of at least 85 percent Terrano (also known as Mondeuse or Refosco), which makes a deep, dark, and full red wine that can be fat and juicy. Carso Malvasia is a rich and gently spicy, dry white wine.

🕒 1–3 years

✓ *Edi Kante*

CASTELLER DOC

Trentino-Alto Adige

The thin strip of hilly vineyards that produces these wines is virtually identical to the Trentino DOC. Dry or semisweet, red and rosé wines for everyday drinking from Schiava, Merlot, and Lambrusco a Foglia Frastagliata grapes.

CHARDONNAY

Northeast Italy

A decade ago, only two pure Chardonnay DOCs existed in northeast Italy: Alto Adige and Grave del Friuli. Now it is one of the most ubiquitous varietals, but premium-priced non-DOC wines from this grape variety are still excellent quality.

✓ *Azienda Agricola Inama* (Campo dei Tovi) • *Jermann* (Where The Dreams Have No End)

COLLI BERICI DOC

Veneto

In addition to a sparkling Garganega-based white wine, this DOC includes three red varietals (Merlot, Tocai Rosso, and Cabernet) and five white (Garganega, Tocai Bianco, Pinot Bianco, Sauvignon, and Chardonnay). The Cabernet can be rich and grassy with chocolatey fruit, and the Merlot, in the right hands, is plump and juicy; the red Tocai is unusual and interesting, and the Chardonnay suffices as usual. However, the other wines from this area immediately south of Vicenza are less exciting.

🕒 2–5 years (red), 1–2 years (white)

✓ *Castello di Belvedere* • *Villa dal Ferro*

COLLI DI BOLZANO *or* BOZNER LEITEN DOC

Trentino-Alto Adige

See Alto Adige DOC.

COLLI EUGANEI DOC

Veneto

Bordering Colli Berici to the southeast, this area produces soft, full-bodied, dry or semisweet red-wine blends (from Merlot plus Cabernet Franc, Cabernet Sauvignon, Barbera, and Raboso) and four red varietals: Cabernet, Cabernet Franc, Cabernet Sauvignon, and Merlot. There are dry or semisweet white-wine blends (from Prosecco, Garganega, and Tocai Friulano) and seven white varietals: Chardonnay, Fior d'Arancio (from the Moscato Giallo grape in sweet *frizzantino*, *spumante*, and *liquoroso* styles), Moscato (sweet *frizzantino* and *spumante* styles), Pinella or Pinello, Pinot Bianco, Serprina or Serprino (dry

or sweet in still, *frizzantino*, *frizzante*, or *spumante* styles), and Tocai Italiano.

🕒 2–5 years (red), 1–2 years (white)

✓ *Villa Sceriman* • *Vignatta*

COLLI ORIENTALI DEL FRIULI DOC

Friuli-Venezia Giulia

Larger than neighboring Collio and initially more prestigious, both DOCs have now shown their excellent potential. In addition to a generic *rosato* blend, there are seven red varietals (Cabernet, Cabernet Franc, Cabernet Sauvignon, Merlot, Pinot Noir, Refosco, and Schioppettino); and 12 white (Chardonnay, Malvasia, Picolit, Pinot Bianco, Pinot Grigio, Ramandolo (dessert-style Verduzzo), Ribolla, Riesling Renano, Sauvignon Blanc, Tocai Friulano, Traminer Aromatico, and Verduzzo Friulano). The whites are especially outstanding, but the most famous, Picolit, is overrated and overpriced, even though this used to be the only Picolit in Italy to have its own DOC and should, therefore, have a reputation to maintain.

🕒 3–8 years (red), 1–3 years (white)

✓ *Borgo del Tiglio* • *Girolamo Dorigo* • *Le Due Terre* • *Livio Felluga* • *Dorino Livon* • *Miani* • *Scubla* • *Le Vigne di Zamò* • *Volpe Pasini*

COLLIO *or* COLLIO GORIZIANO DOC

Friuli-Venezia Giulia

A large range of mostly white wines from a hilly area close to the Slovenian border, Collio now encompasses 19 different wines. With some top producers making very high-quality wines, this appellation is clearly in line for full DOCG status in the near future. As well as a blended dry white (primarily from Ribolla, Malvasia, and Tocai Friulano), which can be slightly *frizzantino*, and blended red (Merlot, Cabernet Sauvignon, and Cabernet Franc, plus Pinot Noir and possibly one or two others), there are five red varietals (Cabernet, Cabernet Franc,

Cabernet Sauvignon, Merlot, and Pinot Nero); and 12 white (Chardonnay, Malvasia, Müller-Thurgau, Picolit, Pinot Bianco, Pinot Grigio, Riesling Italico, Riesling Renano, Tocai Friulano, Ribolla, Sauvignon, and Traminer Aromatico). Jerman makes some of the very greatest wines, but now markets his wines under the IGT Delle Venezie. They are included below for completeness.

☞ 1–4 years (red), 1–3 years (white)

CORVINA

Veneto

Arguably the greatest grape in Veneto, Corvina is the key player in Bardolino and Valpolicella, particularly the *recioto* and *amaron* styles of the latter, but can also be found in a few premium *vini da tavola*.

✓ *Allegrini* (Pelara, La Poja)

EISACKTALER *or* VALLE ISARCO DOC

Trentino-Alto Adige

See Alto Adige DOC.

ETSCHTALER DOC

Trentino-Alto Adige

See Valdadige DOC.

FRANCONIA *or* BLAUFRANKISCH

Friuli-Venezia Giulia

Franconia is the synonym for the Limberger grape of Germany. The wine is made in a fuller, darker style than is possible in its homeland, yet it still possesses the same light, fruity flavor.

FRIULI-AQUILEA DOC

Friuli-Venezia Giulia

Formerly know simply as Aquileia, this is a wide-ranging appellation that covers five varietal red wines (Merlot, Cabernet, Cabernet Franc, Cabernet Sauvignon, and Refosco); eight white varietals (Chardonnay, Tocai Friulano, Pinot Bianco, Pinot Grigio, Riesling Renano, Sauvignon, Traminer, and Verduzzo Friulano); and a generic rosé of least 70 percent Merlot plus Cabernet Franc, Cabernet Sauvignon, and Refosco. There is also a Chardonnay *spumante*. All are generally light, crisply balanced wines, although some producers excel in better years.

☞ 1–4 years (red), 1–3 years (white, rosé, and sparkling)

✓ *Zonin* (Tenuta Cà Bolani)

FRIULI-GRAVE DOC

Friuli-Venezia Giulia

Formerly called Grave del Friuli, this massive appellation spreads out on both sides of the Tagliamento River between Sacile in the west and Cividale di Friuli in the east, and accounts for over half of the region's total production. It is a huge and complicated, but rapidly improving, multivarietal DOC in which several winemakers regularly produce fine wines. In addition to generic red and white blends, there are six red varietals (Cabernet, Cabernet Franc, Cabernet Sauvignon, Merlot, Refosco, and Pinot Noir); and eight white varietals (Chardonnay,

Pinot Bianco, Pinot Gris, Riesling Renano, Sauvignon, Tocai Friulano, Traminer Aromatico, and Verduzzo Friulano). There is a Chardonnay *frizzante*, Verduzzo *frizzante*, Chardonnay *spumante*, and a blended generic *spumante*.

☞ 1–4 years (red), 1–3 years (white, rosé, and sparkling)

✓ *Borgo Magredo • Pighin • Vigneti le Monde • Vigneti Pittaro*

FRIULI-LATISANA *or* LATISANA DOC

Friuli-Venezia Giulia

An area that stretches from the central section of the Friuli-Grave to the Adriatic coast at Lignano Sabbiadoro. In addition to a generic, blended rosé (Bordeaux varieties) and *spumante* (Chardonnay and Pinot varieties) there are five red varietal wines (Merlot, Cabernet Sauvignon, Franconia (Limberger), Pinot Nero, and Refosco); and nine white varietals (Chardonnay, Malvasia, Pinot Bianco, Pinot Grigio, Riesling Renano, Sauvignon, Tocai Friulano, Traminer Aromatico, and Verduzzo Friulano). Chardonnay, Malvasia, and Pinot Nero may also be produced in a *frizzante* style.

GAMBELLARA DOC

Veneto

Produces scented, dry, or sometimes semisweet white wines and fruity, semisweet, still, *frizzante* or fully sparkling white *recioto*. A smooth, sweet *vin santo* is also produced here.

☞ 2–5 years

✓ *La Bianca*

GARGANEGA

Veneto

The primary grape used for Soave—in skilled hands Garganega can produce a fabulously rich yet delicately balanced dry white, but it has a tendency to overcrop, and most Garganega wines turn out bland.

GRAVE DEL FRIULI DOC

Friuli-Venezia Giulia

See Friuli-Grave DOC.

ISONZO *or* ISONZO DEL FRIULI DOC

Friuli-Venezia Giulia

A small area south of Collio, producing a very good yet still improving quality wine. There are generic red- and white-wine blends, plus four red varietals (Cabernet, Merlot, Franconia (Limberger), and Refosco); and 10 white varietals (Chardonnay, Malvasia, Pinot Bianco, Pinot Grigio, Riesling Italico, Riesling Renano, Sauvignon, Tocai Friulano, Traminer Aromatico, and Verduzzo Friulano); and a Pinot *spumante*.

☞ 1–4 years (red), 1–3 years (white)

✓ *Borgo Conventi • Lis Neris-Pecorari • Ronco del Gelso • Vie di Romans*

KALTERER *or* KALTERERSEE DOC

Trentino-Alto Adige

See Caldaro DOC.

LAGREIN

Trentino-Alto Adige

An ancient Alto Adige variety, it was well known to Pliny, who called it Lageos. Although

it is by no means the greatest grape grown in the region, Lagrein does, however, produce one of Alto Adige's most original and expressive wines, with rich, chunky, youthful fruit of relatively high acidity, but capable of developing a silky, violety finesse after a few years in bottle.

LATISANA DOC

Friuli-Venezia Giulia

See Friuli-Latisana DOC.

LESSINI DURELLO DOC

Veneto

Dry white wine from just northeast of Soave, in still, *frizzantino*, and fully sparkling styles, from the Durello grape with the possible addition of Garganega, Trebbiano, Pinot Blanc, Pinot Noir, and Chardonnay.

✓ *Marcato*

LISON-PRAMAGGIORE DOC

Veneto and Friuli-Venezia Giulia

This DOC, which is in the very east of the Veneto, and overlaps a small part of Friuli, originally combined three former DOCs (Cabernet di Pramaggiore, Merlot di Pramaggiore, and Tocai di Lison) into one. However, it has since been expanded to encompass a total of seven white varietal wines (Chardonnay, Pinot Bianco, Pinot Grigio, Riesling Italico, Sauvignon, Tocai Italico, and Verduzzo); and four reds (Cabernet, Cabernet Franc, Cabernet Sauvignon, and Refosco dal Peduncolo Rosso). Cabernet and Merlot are still the best in a rich, delicious, chocolaty style.

☞ 3–8 years (red), 1–3 years (white)

✓ *Santa Margherita • Russola • Tenuta Sant'Anna • Villa Castalda* (Cabernet Franc)

LUGANA DOC

Veneto

See Lugana DOC (Lombardy) under Northwest Italy.

MARZEMINO

Trentino-Alto Adige

This grape variety was probably brought to Italy from Slovenia by the Romans. By the 18th century, it had achieved sufficient fame for Mozart to use it in his opera *Don Giovanni* as a preliminary to the seduction of Zerlina. A Marzemino cluster typically provides large, loosely bunched grapes, which make an aromatic, early-drinking red wine, either as DOC (Trentino) or *vino da tavola*.

MERANESE *or* MERANESE DI COLLINA MERANER HÜGEL DOC

Trentino-Alto Adige

See Alto Adige DOC.

MERLOT

Friuli-Venezia Giulia

A prolific grape in northeastern Italy, where it has been grown for almost 200 years. Far too many wishy-washy examples abound, but top producers achieve concentration and quality through low yields and strict selection. Although Merlot is a varietal wine in virtually all the DOCs of Friuli-Venezia Giulia, the only ones with any special reputation for it are Colli

Orientali, where the richest varietals are made, and Collio, which is less consistent, but the best are plump and juicy.

✓ *Borgo del Tiglio (Rosso della Centa)*

MONTELLO E COLLI ASOLANI DOC

Veneto

From vineyards at the foot of the aptly named Mount Grappa, most of wines are varietals, comprising two reds (Merlot and Cabernet); four whites (Prosecco, Chardonnay, Pinot Bianco, and Pinot Grigio); and three *spumante* (Chardonnay, Pinot Bianco, and Prosecco). Any red wines that do not carry a varietal name will be primarily Cabernet-Merlot blends.

☞ 1–3 years

✓ *Fernando Berta • Abbazia di Nervesa*

NOSIOLA

Trentino-Alto Adige

Probably the least known of the Trentino's traditional grapes because it is mostly used for *vin santo*. However, dry white varietal wines are also made from this variety and, although it is best when blended with more aromatic varieties, as in Sorni DOC, it is even making a reputation as a premium *vino da tavola*.

✓ *Pravis (Le Frate)*

PIAVE *or* VINI DEL PIAVE DOC

Veneto

A large area to the west of Lison-Pramaggiore producing five red varietals (Merlot, Cabernet, Cabernet Sauvignon, Pinot Nero, and Raboso); and five whites (Chardonnay, Tocai Italico, Pinot Bianco, Pinot Grigio, and Verduzzo). The Cabernet and Raboso can be particularly good.

☞ 1–3 years

✓ *Reichsteiner*

PICOLIT DOC

Friuli-Venezia Giulia

See Colli Orientali del Friuli DOC.

PROSECCO

Veneto

Although it is one of the most traditional of Veneto grape varieties, Prosecco originated in the village of that name in Friuli's Carso district. Latin-lovers adore the soft bubbly produced by this grape, but most of it is boring, and it will take a revolution in quality to convince me that this grape is suitable for dry sparkling wines.

PROSECCO DI CONEGLIANO- VALDOBBIADENE DOC

Veneto

Dry and semisweet fizzy white wines of passable quality, although most of them have large bubbles and a coarse, dull flavor. A still version is also produced.

☞ Upon purchase

✓ *Adami Adriano (Vigneto Giardino)*
• *Fratelli Bartolin Spumante • Carpenè Malvolti*

RABOSO

Veneto

The indigenous Raboso grape has long made excellent-value red wines that are full of sunny fruit and capable of improving after two to

three years in bottle. There are two distinct, localized clones—Raboso del Piave, most often used as a pure varietal, and the more productive Raboso Veronese, which does not have the richness or such a positive character, and is merely a blending component. Most of the wines produced are *vini da tavola* but DOC wines are available under the Piave appellation.

RAMANDOLO DOCG

Friuli-Venezia Giulia

Sweet Verduzzo dessert wine.

RECIOTO BIANCO DI CAMPOCIESA

Veneto

Soft, sweet, well-scented, golden-colored, non-DOC white wines made from *passito* grapes.

RECIOTO DELLA VALPOLICELLA *or* RECIOTO DELLA VALPOLICELLA AMARNO DOC

Veneto

See Valpolicella DOC.

RECIOTO DI SOAVE DOCG

Veneto

Naturally sweet Soave made from *passito* grapes, to produce wines that are either *liquoroso* or *spumante*. Most are too oxidative, but Pieropan is excellent and Anselmi is outstanding—both as pure as driven snow.

✓ *Anselmi (I Capitelli) • Pieropan (Le Colombare Vendemmia Tardiva)*

REFOSCO

Friuli-Venezia Giulia

Known as Terrano in the Carso district, the Refosco is none other than the Mondeuse of France. It typically produces a deep-colored red wine with soft, juicy, low-acid fruit, which can be somewhat one-dimensional, but is at its best in the Colli Orientali and Friuli-Grave.

SANTA MADDALENA *or* SANKT MAGDALENER DOC

Trentino-Alto Adige

See Alto Adige DOC.

SCHIAVA

Trentino-Alto Adige

This is the most widely cultivated variety in the Alto Adige, where it accounts for 60 percent of the vines grown. In the Tyrol, where this grape is believed to have originated, it is known as Vernatsch, but most ampelographers refer to it as Schiava. There are four subvarieties: Schiava Grossa, Schiava Gentile, Schiava Grigia, and Schiava Meranese. Schiava wines are usually medium-bodied with an almond character to the fruit and a light bitterness on the finish.

SCHIOPPETTINO

Friuli-Venezia Giulia

An ancient Friulian variety, Schioppettino was nearly extinct until these wines suddenly became fashionable in the 1980s. It produces very ripe and round wines with a fine, spicy-scented bouquet and rich fruit flavor that attains great finesse only with maturity.

✓ *Ronchi di Cialla • Ronco del Gnemiz*
• *Giuseppe Toti*

SOAVE DOC

Veneto

Most Soave is still overcropped, thin, and acidic, and in 2000, Roberto Anselmi took his greatly admired wines out of the Soave appellation in protest. Top producers continue to make immensely enjoyable wines from Garganega and Trebbiano, when they are grown to restricted yields in the central, hilly, *classico* area. Anselmi's wines are included below for completeness. See also Recioto di Soave DOC.

☞ 1–4 years

✓ *Anselmi (Capitel Foscarino, Capitel Croce) • Bolla (Castellaro, Vigneti di Frosca) • Ca' Rugate (Monte Alto) • Cantina del Castello (Monte Pressoni) • Inama (Vigneto du Lot) • Pieropan (Vigneto Calvarino, Vigneto la Rocca) • Suavia (Le Rive) • Fratelli Tedeschi (Monte Tenda)*

SORNI DOC

Trentino-Alto Adige

This tiny DOC is situated just south of Mezzolombardo at the confluence of the Avisio and Adige rivers. Soft Schiava-based reds are often improved by the addition of Teroldego and Lagrein. Light, fresh, delicate Nosiola-based white wines are usually charged with a dollop of Müller-Thurgau, Silvaner, and Pinot Blanc.

☞ 2–3 years (red), up to 18 months (white)

✓ *Maso Poli*

SÜDTIROLER DOC

Trentino-Alto Adige

See Alto Adige DOC.

TACELENGHE *or* TAZZELENGHE

Friuli-Venezia Giulia

This grape variety takes its name from the local dialect for *tazzalingua* which means "a sharpness in the tongue," and is indicative of the wine's tannic nature. However, it does soften after five or six years in bottle.

TERLANO *or* TERLANER DOC

Trentino-Alto Adige

See Alto Adige DOC.

TEROLDEGO

Trentino-Alto Adige

An indigenous black grape with a thick bluish skin, Teroldego is productive and makes a dark-colored red wine with a distinctive aroma and a chewy, tannic raspberry richness that softens with age, attaining a silky-violety finesse. This has made it a very useful blending component

in the past. However, more varietal wines are gradually being made and it has even started to be marketed as a premium *vino da tavola*.

✓ Foradori (Granato)

TEROLDEGO ROTALIANO DOC

Trentino-Alto Adige

Full-bodied red wines made from the Teroldego in the Rotaliano area, where the grape is said to have originated. There is also a fuller *Superiore* version and an attractive rosé.

🕒 1–4 years

✓ Foradori (Vigneto Morei) • Conti Martini

TERRANO

Friuli-Venezia Giulia

See Refosco.

TREBBIANO

Veneto

The Trebbiano of Soave and Lugana are supposedly superior to the Trebbiano of Tuscany, but there is much dross produced in both DOCs, and it is the producer who makes the real difference.

TRENTINO DOC

Trentino-Alto Adige

This appellation represents the southern half of the Valdadige DOC and its wines are generally softer and less racy than those from Alto Adige to the north, although there is an equally bewildering number of varietal wines. If no variety is shown, white wines will be Chardonnay-Pinot Blanc blends and reds Cabernet-Merlot. There are seven red-wine varietals (Cabernet, Cabernet Franc, Cabernet Sauvignon, Lagrein, Marzemino, Merlot, and Pinot Nero); and nine white (Chardonnay, Moscato Giallo, Müller-Thurgau, Nosiola, Pinot Bianco, Pinot Grigio, Riesling Italico, Riesling Renano, and Traminer Aromatico). Furthermore, the Nosiola can be made in *vin santo* style, while all Pinot (Blanc, Gris, and Noir) may be fully sparkling. There is also a bright scarlet, lusciously sweet Moscato Rosa, and both Moscato Rosa and Moscato Giallo may be made in *liquoroso* style.

✓ Barone de Cles • Cavit • Cesconi • LaVis • Longariva • Madonna del Vittoria • Conti Martini • Pojer & Sandri • Giovanni Poli • Tenuta San Leonardo • Armando Simoncelli • de Tarczal • Vallarom • Roberto Zeni

VALDADIGE or ETSCHTALER DOC

Trentino-Alto Adige and Veneto

This huge generic denomination encompasses both the Alto Adige and Trentino DOCs, a myriad of subappellations, and extends well into the Veneto. Few producers bother to use what is generally considered to be Trentino-Alto Adige's lowest quality DOC. If the IGTs proposed by the Gorla Law actually existed and worked, the size and location of Valdadige would make it an ideal candidate, as producers could select their best wines to go out under Alto Adige, Trentino, or another label, selling off the balance as an unpretentious Valdadige country wine. As it is already a DOC, nobody would dare suggest downgrading it to IGT, so the result is that hardly anyone uses it anyway. And, of the few who do, the dry and

semisweet white and red wines that they sell inevitably attract a poor reputation as DOCs, whereas underselling the same products as IGTs would make them honest, good-value introductions to the finer wines of Trentino-Alto Adige.

VALLE ISARCO or EISACKTALER DOC

Trentino-Alto Adige

See Alto Adige DOC.

VALPANTENA DOC

Veneto

See Valpolicella DOC.

Subappellation for Valpolicella, in *recioto*, *amarone*, *spumante*, and regular *rosso* styles.

VALPOLICELLA DOC

Veneto

In the first edition I agreed with Robert Parker, the American wine writer, when he described most Valpolicella as “insipid industrial garbage,” but technology has changed things over the last 10 years. While most are still insipid and industrial, relatively few are as bad as garbage. Made from at least 80 percent Corvina with the possible addition of Rossignola, Negrara, Trentina, Barbera, and Sangiovese, most Valpolicella are simply light-red and light-bodied, with lackluster, attenuated fruit hinting of cherries, and a dry, slightly bitter finish. There are an increasing number of wines that are full of juicy cherry-fruit flavors, but they are still in a minority and for truly fine wines bearing the Valpolicella DOC you have to seek out exceptional wines from the tiny number of producers recommended below.

Valpolicella *recioto* is a bittersweet, yet very smooth, deep-colored, portlike wine made from *passito* grapes, although it may also be produced in a *spumante* style. *Amarone* is a derivative of *recioto*, with a similar deep color, but in a dry or off-dry style, which seems to make the flavors more powerful and chocolaty-spicy with a distinctly bitter finish. There is also something very specific that marks the fruit in *amarone* wines, which wine writer Oz Clarke once described—perfectly to my mind—as a “bruised sourness.” This is an oxidative character that will not appeal to lovers of clean, precise, well-focused flavors, but its complexity is undeniable and such wines age wonderfully. Quintarelli is the most outstanding producer, with Allegrini hard on his heels.

🕒 Upon purchase for most, 2–5 years for recommendations

✓ Valpolicella Allegrini (La Grola) • Bolla (Vigneti di Jago) • Guerrieri-Rizzardi (Villa Rizzardi Poiega) • Quintarelli • Le Ragose •

Serègo Alighieri • Fratelli Tedeschi (Capitel delle Lucchine, Capitel dei Nicalò) • Tommasi (Vigneto del Campo Rafael)
Recioto della Valpolicella Stefano
 Accordini (Acinatico) • Allegrini (Gardane) • Lorenzo Begali • Tommaso Bussola (TB) • Masi (Mazzanella) • Quintarelli • Serègo Alighieri (Casel dei Ronchi) • Fratelli Tedeschi (Capitel Monte Fontana)
Recioto della Valpolicella Amarone
 Allegrini (Fieramonte) • Bertani • Brigaldara • Tommaso Bussola • Masi (Mazzone) • Fratelli Pasqua (Vigneti Casterna) • Quintarelli • Romano Dal Forno (Vigneto di Monte Lodoletta) • Sant'Antonio (Campo de Gigli) • Serègo Alighieri (Vaio Armoron) • Speri (Vigneto Monte Sant'Urbano) • Fratelli Tedeschi (Capitel Monte Olmi) • Tommasi • Viviani (Casa de Bepi)

VALPOLICELLA “RIPASSO”

Veneto

Ripasso (“re-passed”) wine has long been traditional in the Veneto. The best young Valpolicella is put into tanks or barrels that still contain the lees of the *recioto* for which they were previously used. When mixed with the young wine, active yeast cells in this sediment precipitate a second fermentation. This increases the alcohol content and gives it some *recioto* character. After having undergone this process, the wines usually cannot carry the Valpolicella appellation and are therefore sold as *vino da tavola* under various brand names, although some Valpolicella wines are turbocharged by *ripasso* without any mention of it on the label.

🕒 6–15 years

✓ Allegrini (Palazzo alla Torre) • Boscaini (Le Cane) • Fratelli Tedeschi (Capitel San Rocco) • Masi (Campo Fiorin)

VINI DEL PIAVE DOC

Veneto

See Piave DOC.

WILDBACHER

Veneto

This black grape seems to be restricted to the Veneto area and to Western Styria in Austria, where it is known as Blauer Wildbacher. Mostly used as a blending component, its distinctive, aromatic quality and high acidity are sometimes found in varietal form in non-DOC wines.

✓ Le Case Bianche

NEW IGT WINES

The following Indicazioni Geografiche Tipiche wines were agreed at the end of 1996, yet most have still to register with consumers, or establish any consistency of style or quality:

✓ Friuli-Venezia Giulia *Alto Livenza*
 • Delle Venezie • Venezia Giulia
 Trentino-Alto Adige *Atesino* • Delle Venezie • Vallagarina
 Veneto *Alto Livenza* • Colli Trevigiani • Conselvano • Delle Venezie • Marca Trevigiani • Provincia di Verona or Veronese • Vallagarina • Veneto • Veneto Orientale

WEST-CENTRAL ITALY

The heart of Italy is also the center of the country's most important quality-wine exports, which are dominated by famous red Sangiovese wines from the tiny Tuscan hills and valleys between Florence and the Umbria-Latium border.

TUSCANY (TOSCANA)

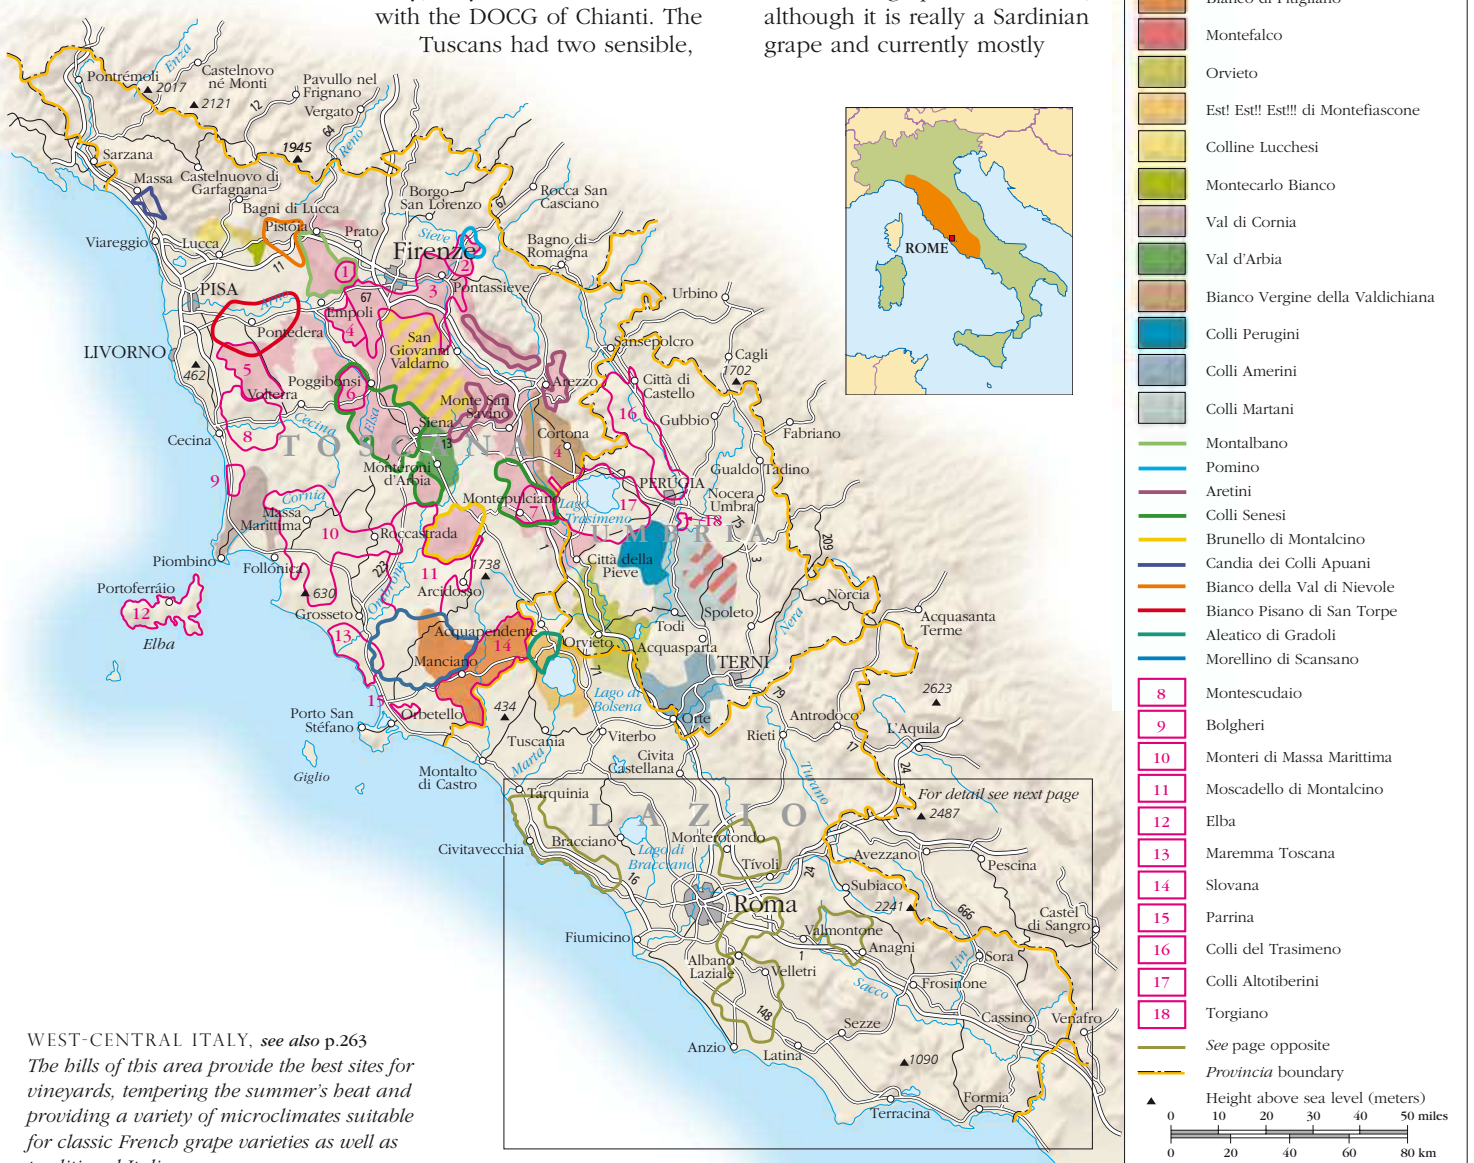

The home of traditional winemaking, Tuscany has also been the main focus of experimentation. Its powerful red *Vino Nobile di Montepulciano* was Italy's first DOCG, and has been followed by *Brunello di Montalcino*, *Chianti*, *Carmignano*, and *Vernaccia di San Gimignano*. But not all of its finest wines bear these famous appellations, a fact recognized by the Tuscan producers themselves, who, on the one hand, sought the ideal DOCG solution for Chianti, while on the other began to invest in premium wines that were not restricted by the DOC. It was the uncompromising quality of their Super-Tuscan wines that encouraged premium *vini da tavola* throughout the rest of Italy.

Unfortunately, they were less successful with the DOCG of Chianti. The Tuscans had two sensible,

forward-thinking approaches: one was to apply DOCG to the Chianti Classico area and other isolated areas, such as parts of Rufina and the Colli Fiorentini, where most of the finest wines have traditionally been made, and to leave the rest as DOC Chianti; the other was to grant DOCG status to the best 10 percent, regardless of origin. Either would have made Chianti a success. But the biggest Chianti producers had more political clout than the best producers, and the new regulations gave DOCG status to the whole area and all Chianti wines, regardless of their origin or quality.

It is true that the *Trebbiano Toscano*, a localized clone, is an intrinsically high-class *Trebbiano* and, indeed, it can make some charming wines, but it is not a fine-wine grape. Currently, Tuscany has no white-wine sister for its red *Sangiovese* grape.

Unfortunately, its best dry white-wine grape so far has been *Chardonnay*, a variety that excels in almost every half-decent wine area. *Vermentino* might be Tuscany's white-wine grape of the future, although it is really a Sardinian grape and currently mostly

WEST-CENTRAL ITALY, *see also* p.263
The hills of this area provide the best sites for vineyards, tempering the summer's heat and providing a variety of microclimates suitable for classic French grape varieties as well as traditional Italian ones.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

Located between the Apennines to the north and east and the Tyrrhenian Sea to the west.

CLIMATE

Summers are long and fairly dry and winters are less severe than in northern Italy. Heat and lack of rain can be a problem throughout the area during the growing season.

ASPECT

Vineyards are usually sited on hillsides for good drainage and exposure to the sun. Deliberate use is made of altitude to offset the heat, and black grapes grow at up to 1,800 feet (550 meters) and white grapes at up to 2,275 feet (700 meters). The higher the vines, the longer the ripening season and the greater the acidity of the grapes.

SOIL

These are very complex soils with gravel, limestone, and clay outcrops predominating. In Tuscany a rocky, schistose soil, known in some localities as *galestro*, covers most of the best vineyards.

VITICULTURE AND VINIFICATION

After much experimentation, particularly in Tuscany, with classic French grapes, the trend recently has been to develop the full potential of native varieties. Many stunning Cabernet-influenced,

super-Tuscan wines still exist, and always will, but top-performing producers are seeking clones, *terroirs*, and techniques to maximize the fruit and accessibility of their own noble grapes.

A traditional speciality is the sweet, white *vin santo*, which is made from *passito* grapes dried on straw mats in attics. It is aged for up to six years, often in a type of *solera* system.

GRAPE VARIETIES

Primary varieties: Sangiovese (*syn.* Brunello, Morellino, Prugnolo, Sangiovese, Tignolo, Uva Canina), Malvasia, Trebbiano (*syn.* Procanico)
Secondary varieties: Abbuoto, Aglianico, Albana (*syn.* Greco, but not Grechetto), Albarola, Aleatico, Barbera, Bellone, Bombino, Cabernet Franc, Cabernet Sauvignon, Canaiolo (*syn.* Drupeggio in Umbria), Carignan (*syn.* Uva di Spagna), Cesanese, Chardonnay, Cilieggiolo, Colorino, Gamay, Grechetto (*syn.* Greco, Pulciano), Inzolia (*syn.* Ansonica), Mammolo, Merlot, Montepulciano, Moscadello, Muscat (*syn.* Moscadello, Moscato), Nero Buono di Cori, Pinot Blanc (*syn.* Pinot Bianco), Pinot Gris (*syn.* Pinot Grigio), Roussanne, Sagrantino, Sauvignon Blanc, Sémillon, Syrah, Verdello, Vermentino, Vernaccia, Welschriesling

TRADITION AND INNOVATION

This tranquil landscape appears to have remained unchanged for many centuries, but, while Tuscan winemaking is steeped in tradition, the area is now also experimenting with different grape varieties and barrique aging.

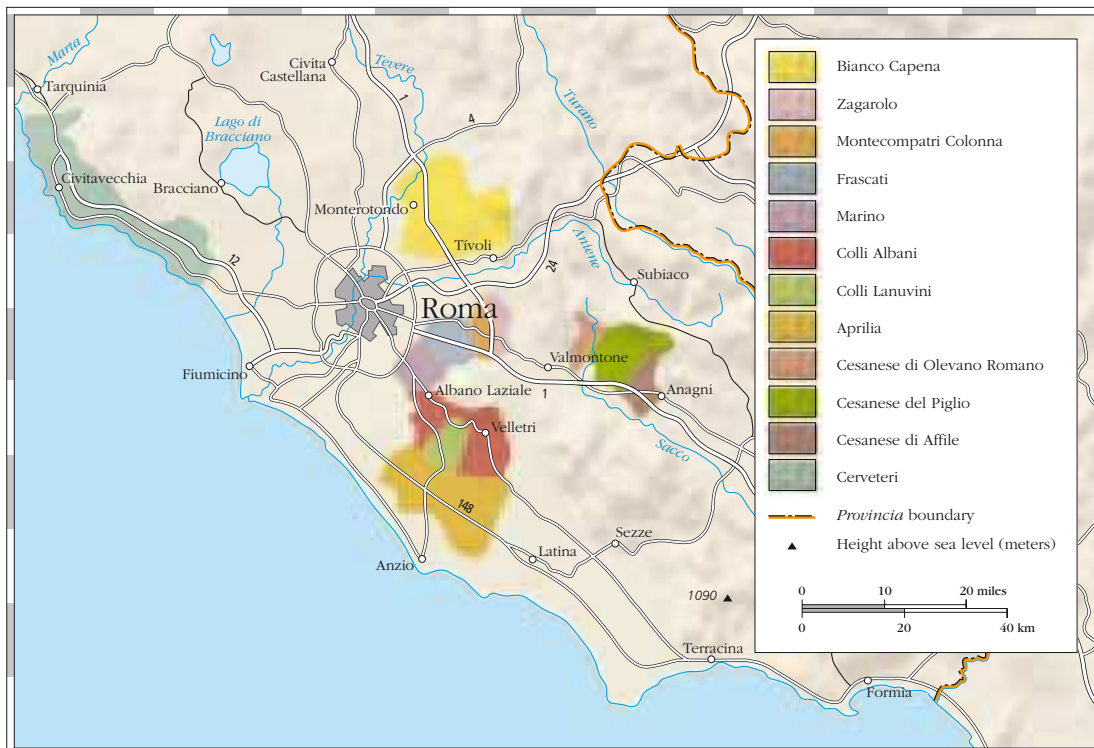

restricted to Tuscany's coastal areas. It is time someone managed to rekindle an ancient, all-but-extinct Tuscan white grape and rescue it with commercial success, much as the *piemontesi* did with Arneis and, as I suspect, they will next try with Timorasso.

BIRTH OF THE SUPER-TUSCANS

Ten years ago the largest number of exceptional Tuscan wines were the then relatively new *barrique*-aged Super-Tuscans. Their story began in 1948 when the now famous Sassicaia wine was produced for the first time by Incisa della Rochetta using Cabernet Sauvignon vines reputedly from Château Lafite-Rothschild. This was an unashamed attempt to produce a top-quality Italian wine from Bordeaux's greatest grape variety, decades before the idea became old hat in the wine world. It became so successful that in the wake of the 1971 vintage, a new red called Tignanello was

ROME AND ITS ENVIRONS. *see also opposite*

The recent proliferation of appellations in the hills surrounding Italy's capital are evidence of a wine regime gone mad—this country's wines need cohesion, not further diversity.

VERNACCIA VINES IN FALL

These vines grow exclusively around the medieval Tuscan town of San Gimignano, whose impressive towers can be seen here in the distance. When it comes from good producers, the white Vernaccia can be a deliciously crisp, fruity dry wine.

AVERAGE ANNUAL PRODUCTION

REGION	DOC PRODUCTION	TOTAL PRODUCTION
Tuscany	11 million cases (1 million hl)	44 million cases (4 million hl)
Latium	6 million cases (540,000 hl)	67 million cases (6 million hl)
Umbria	2 million cases (165,000 hl)	18 million cases (1.7 million hl)

Percentage of total Italian production: Latium, 7.8%; Tuscany, 5.2%; Umbria, 2.2%.

introduced by Piero Antinori with a Sangiovese base and 20 percent Cabernet Sauvignon, as a compromise between Tuscany and Bordeaux. Although Frescobaldi had used Cabernet Sauvignon in its Nipozzano Chianti for over a century and it grew in the Carmignano area in the 18th century, nobody had truly appreciated the harmony that could be achieved between the two grapes until Tignanello appeared. The blend was akin to the natural balance of Cabernet and Merlot, only the Cabernet added weight to the Sangiovese and provided balance through a more satisfying flavor. Tignanello thus sparked off a new wave of Super-Tuscan *vini da tavola*. However, as the numbers grew, so they became an embarrassment, as observers realized that very few of the region's greatest wines actually qualified for DOC. But at the same time, many of the winemakers responsible for these French-influenced Super-Tuscans were also working hard to make the Sangiovese stand alone. After extensive clonal and site selection, reduced yields, improved viticultural practices and vinification techniques, a new

breed of Super-Tuscan emerged; first as Sangiovese-dominated blends, such as Tignanello, then as pure Sangiovese wines. Now that the Goria Law has opened the door for Italy's greatest *vini da tavola*, many who had resorted to making wines outside the DOC system are using their experience in remolding the Sangiovese to reestablish the great old names of the past (Chianti, Brunello di Montalcino, Vino Nobile di Montepulciano) by making wines that are complete without the help of foreign varieties.

UMBRIA

Orvieto is Umbria's best-known and best-forgotten wine. Next to Frascati and Soave, it is the most used and abused name in the world's Italian restaurants. While there are a few good Orvieto wines, and tiny amounts of truly exciting *muffato* (a lusciously sweet botrytized version), they are in a lamentable minority. One of Umbria's few deservedly famous names is Lungarotti Rubesco Torgiano, whose reputation led to the Torgiano DOC and, more recently, to DOCG status for Torgiano Riserva. Lungarotti also leads in the production of Umbria's excellent new-wave wines. These use various grapes, both native and French, and are made in various styles, although nearly always aged in new-oak *barriques*.

LATIUM (LAZIO)

One of Italy's largest regions, Latium appropriately boasts one of its largest-selling wines, Frascati, the Latin Liebfraumilch, and Est! Est! Est!!!, probably the blandest tourist wine in existence. For a region responsible for Falernum, a classic wine of antiquity, it can now boast only two truly fine wines, Boncompagni Ludovisi's Fiorano Rosso and Cantina Colacicchi's Torre Ercolana, both innovative Cabernet-Merlot blends, which are very good.

THE APPELLATIONS OF
WEST-CENTRAL ITALY

CLASSIC BRUT SPARKLING WINES

The best sparkling *brut* wines are made in Tuscany by the traditional method.

✓ *Brut di Capezzana* • *Falchini Brut* • *Villa Banfi Brut*

ALEATICO

Tuscany

These are rare, rich, sweet red wines.

ALEATICO DI GRADOLI DOC

Latium

Sweet, sometimes fortified, red wines, without the reputation of the Aleatico di Puglia DOC.

APRILIA DOC

Latium

This DOC has two red varietals, Merlot and Sangiovese, and one white, Trebbiano, which is uninspiring. The washed-out flavors indicate that official yields are far too high.

ASSISI

Umbria

Assisi produces some soft, satisfying red, and fresh, easy-drinking white wines.

✓ *Sasso Rosso* • *Fratelli* • *Sportoletti* • *Tili*

BARCO REALE DI CARMIGNANO DOC

Tuscany

After Carmignano became a DOCG, this appellation was adopted for easy-drinking, Sangiovese-dominated (with a touch of Cabernet) red wines in order to retain simple DOC status. This acted as a selection instrument to increase and maintain quality for the superior denomination. See also Carmignano DOC and Carmignano DOCG.

BIANCO CAPENA DOC

Latium

Bianco Capena is a large DOC northeast of Rome producing dry and semisweet Trebbiano-based white wines of modest quality.

BIANCO DELL'EMPOLESE DOC

Tuscany

This is an overrated, overpriced, and uninspiring dry white Trebbiano from the Empoli hills, west of Florence. A *passito* may be sold as *vin santo* under the same denomination.

BIANCO DELLA VAL DI NIEVOLE *or* BIANCO DELLA VALDINIEVOLE DOC

Tuscany

Dry, slightly *frizzante* white wines and soft, white *vin santo*, made primarily from Trebbiano grapes.

BIANCO DI PITIGLIANO DOC

Tuscany

This DOC produces delicate, refreshing, dry, and easy-drinking Trebbiano-based white wines, which are improved by the possible inclusion of Malvasia, Grechetto, Verdello, Chardonnay, Sauvignon, Pinot Blanc, and Welschriesling. A *spumante* version is also allowed.

☞ 1–2 years

✓ *La Stellata*

BIANCO PISANO DI SAN TORPÉ DOC

Tuscany

These dry white wines and dry or semisweet *vin santo* are made from Trebbiano grown in a large area southeast of Pisa.

BIANCO VERGINE DELLA VALDICHIANA DOC

Tuscany

This DOC produces off-dry, Trebbiano-based white wines with a bitter aftertaste. The best have a more delicate, floral fragrance.

☞ 1–2 years

✓ *Poliziano*

BOLGHERI DOC

Tuscany

Until recently this was a relatively anonymous, pleasant, but hardly exciting DOC, producing

delicate, dry whites and dry, slightly scented, Sangiovese *rosato*. Reds were ignored, even though it was home to Sassicaia, one of Italy's greatest wines. Now that reds are allowed, Sassicaia has its own subappellation, and two varietal whites (Sauvignon and Vermentino) and a pink *vin santo*, Occhio di Pernice, have been added. Sassicaia will surely be upgraded to full DOCG status shortly, and will probably leave behind a much healthier, better-known Bolgheri DOC with, hopefully, a number of aspiring new wines aiming to replicate its success. Look out for Piero Antinori's new Vermentino, which promises to be Tuscany's first great white wine from a native variety, and for established wines, such as Lodovico Antinori's Ornellaia.

🕒 1–3 years (white), 3–7 years (most reds), 8–25 years (Sassicaia and *vin santo*)

✓ *Antinori* (Guado al Tasso) • *Angelo Gaja* (Ca' Marcanda Camarcanda) • *Le Macchiola* (Paleo) • *Colle Massari* (Grattamacco) • *Enrico Santini* • *Michele Satta* • *Tenuta dell'Ornellaia* • *Tenuta San Guido* (especially Sassicaia)

BRUNELLO DI MONTALCINO DOCG

Tuscany

One of Italy's most prestigious wines, made from Brunello, a localized clone of Sangiovese. Many relatively unknown producers offer classic wines. The idea is that the wines should be so thick with harsh tannins that they must be left for at least 20 years. If they are ripe skin tannins and there is enough fruit, this can be a formula for a wine of classic stature. But too many are macerated for too long and are not destemmed, leaving the tannins in even the most expensive wines incapable of softening. The producers below make wines requiring at least 10 years' maturation, but packed with fruit that develops into layers of complex, smoky-spicy, plummy-fruit flavors. Look out for new Frescobaldi-Mondavi wines from the Solaria estate.

🕒 10–25 years

✓ *Altesino*, *Tenuta di Argiano* • *Villa Banfi* (especially Poggio all'Oro) • *Fattoria dei Barbi* (Vigna del Fiore) • *Campogiovanni* • *Tenuta Caparzo* • *Tenuta Carlina* (La Torgata) • *Casanova di Neri* • *Casa Basse* • *Castelgiocondo* • *Castello Romitorio* • *Cerbaiona* • *Col d'Orcia* • *Conti Costanti* • *Frescobaldi* • *Eredi Fuligni* • *Fanti-La Palazzetta Fanti-San Filippo* • *Lisini* • *Mastrojanni* • *Pertimali* • *Podere Salicuttini* • *La Poderina* (Poggio Banale) • *Poggio Antico* • *Tenuta Il Poggione* • *Salvioni-La Cerbaiola* • *Tenuta Silvio Nardi* (Manachiana) • *Siro Pacenti* • *Solaria-Cencioni* • *Talenti* • *Uccelliera* • *Val di Suga*

CABERNET SAUVIGNON

Tuscany

Ideally suited to the Tuscan soil and climate.

✓ *Villa Banfi* (Tavernelle) • *Villa Cafaggio* (Cortaccio) • *Frescobaldi* (Mormoreto) • *Isole e Olena* • *Monsanto* (Nemo) • *Fattoria di Nozzole* (Il Pareto) • *Poliziano* (Le Stanze) • *Castello di Querceto* (Cignale)

CABERNET-MERLOT

West-central Italy

Cabernet-Merlot is a classic *bordelais* blend that is best suited to Tuscany.

✓ *Tuscany Il Paradis* (Saxa Calida) • *Villa di Capezzana* (Ghiaie della Furba) • *Podere Il*

Carnasciale • *Tenuta dell'Ornellaia* (Ornellaia)

Latium *Cantina Colacicchi* (Torre Ercolana), *Fiorano Rosso*, *Colle Picchioni* (Vigna del Vassello)

CABERNET-SANGIOVESE BLENDS

Tuscany

Most contain at least 80 percent Cabernet Sauvignon, 20 percent Sangiovese, and are the antithesis of the rising tide of Sangiovese blends.

✓ *Antinori* (Solaia) • *Tenuta di Bossi* (Mazzaferrata) • *Castellare di Castellina* (Coniale di Castellare) • *Castello di Gabbiano* (R e R) • *Lungarotti* (San Giorgio) • *Sette Ponti* (Oreno) • *Tenuta dell'Ornellaia* (Le Volte) • *Castello di Querceto* (Il Querciolaia) • *Poliziano* (Le Stanze) • *Castello dei Rampolla* (Sammarco, D'Alceo) • *Rocca delle Macie* (Roccatò)

CANAIOLO

Tuscany

This is a native Tuscan grape, which is capable of soft, seductively fruity red wines.

CANDIA DEI COLLI APUANI DOC

Tuscany

Delicate, slightly aromatic, dry or semisweet whites from Vermentino and Albarola grapes.

CARMIGNANO DOC

Tuscany

Since Carmignano achieved DOCG status, the DOC has been used for *rosato*, *vin santo*, and *rosé vin santo*, called Occhio di Pernice (even though these styles were not allowed before the upgrading). The declassified Carmignano reds can now be sold as Barco Reale di Carmignano.

CARMIGNANO DOCG

Tuscany

Only traditional red Carmignano from this tiny appellation west of Florence may claim DOCG status. Other wines are classified as either Carmignano DOC or Barco Reale di Carmignano DOC. This DOCG is made from 45 to 65 percent Sangiovese, 10 to 20 percent Canaiolo Nero, 6 to 10 percent Cabernet Sauvignon, 10 to 20 percent Trebbiano, Canaiolo Bianco or Malvasia, and up to 5 percent Mammolo or Colorino. The result is similar to medium-bodied Chianti, but with less acidity, which, with its Cabernet content, gives a chocolaty-finesse to the fruit. *See also* Carmignano DOC and Barco Reale di Carmignano DOC.

🕒 4–10 years

✓ *Fattoria di Ambra* • *di Artimino* • *Fattoria di Bacchereto* • *Contini Bonacossi* (Villa di Capezzana, Villa di Trefiano) • *Fattoria Il Poggiolo* • *Piaggia*

CASTELLI ROMANI

Latium

Castelli Romani are rarely exciting, dry and semisweet white, red, and rosé wines.

CERVETERI DOC

Latium

Rustic Sangiovese-based reds, dry and semisweet Trebbiano-Malvasia white wines of decent, everyday quality.

CESANESE

Latium

This local black grape variety makes medium-bodied red wines of no special quality in all styles from dry to sweet, and still to sparkling.

CESANESE DEL PIGLIO or PIGLIO DOC

Latium

This DOC covers a complicated range of basically simple red wines, from Cesanese grapes grown in a hilly area southeast of Rome. The styles include bone-dry, off-dry, medium-dry, semisweet, and sweet, and may be still, *frizzantino*, *frizzante*, or *spumante*.

CESANESE DI AFFILE or AFFILE DOC

Latium

This DOC produces the same styles as Cesanese del Piglio from a neighboring area.

CESANESE DI OLEVANO ROMANO or OLEVANO ROMANO DOC

Latium

Much smaller than the previous two nearby Cesanese DOCs, but covering the same styles.

CHARDONNAY

Tuscany and Umbria

The great, if ubiquitous, Chardonnay first squeezed into the official wines of Tuscany when it was adopted by the Pomino DOC, but the best renditions are still *vini da tavola*. In Umbria, although there are only a few great Chardonnay wines, it has great potential in the region, whether in the pure form, as made by Lungarotti, or blended with a little Grechetto, as in the case of Antinori's Cervaro della Sala.

✓ **Tuscany** *Castello di Ama* (Colline di Ama) • *Caparzo* (Le Grance) • *Villa Banfi* (Fontanelle) • *Felsina Berardenga* (I Sistri) • *Isole e Olena* • *Ruffino* (Cabreo Vigneto la Pietra)

Umbria *Antinori Castello della Sala* (Cervaro della Sala) • *Lungarotti* (Vigna I Palazzi)

CHIANTI & CHIANTI CLASSICO DOCG

Tuscany

When Chianti was granted DOCG status, its yields were reduced, the amount of white grapes allowed in Chianti Classico was cut, and up to 10 percent Cabernet Sauvignon was permitted in the blend. However, the DOCG was applied to the entire Chianti production area and thus has failed to be a guarantee of quality. Most Chianti is still garbage, albeit in a

cleaner, more sanitized form than it used to be. The best basic Chianti, however, is full of juicy cherry, raspberry, and plummy fruit flavors, which makes an enjoyable quaffer, although it is not what DOCG should be about. Only the finest wines of Chianti deserve DOCG status and they are usually sold as *classico* (the original, hilly Chianti area), although Rufina (from a small area northeast of Florence, which should not be confused with Rufino, the brand name) and Colli Fiorentini (which bridges the Classico and Rufina areas), which are both outside the *classico* district, also produce *classico*-like quality. Both also have lower yields than the rest of Chianti, with the exception of Classico, which demands the lowest yield of all.

Whatever the industrial bottlers do to continue debasing Chianti's reputation, readers must not forget that the best wines from these three areas rank among the greatest in the world. Rufina and Colli Fiorentini are, however, just two of six subappellations collectively known as the Chianti Putto, which covers the peripheral areas surrounding Chianti Classico itself. The other four are Colli Senesi (the largest and most varied, and so inconsistent that few wines claim this provenance, two portions of which are better known for Brunello di Montalcino and Vino Nobile di Montepulciano); Colli Pisani (lightest of all Chianti); Colli Aretini (young, lively Chianti); and Montalbano (in effect the second wine of Carmignano, although there are two of those, so maybe it is the third wine?).

All Chianti other than *classico* must contain between 75 and 90 percent Sangiovese plus the possibility of 5 to 10 percent Canaiolo Nero, 5 to 10 percent Trebbiano or Malvasia, and up to a maximum of 10 percent Cabernet or any other specified black grape varieties. This recipe applied to Chianti Classico until 1995, when it was changed to allow up to 100 percent Sangiovese, which should be a good move for those dedicated growers who are striving to get this difficult variety right. With the amount of Cabernet and other black grapes increased to 15 percent, this DOC is wide open to many of the so-called Super-Tuscans to be classified as Chianti Classico and thereby greatly enhance the reputation of this once great appellation.

🕒 3–5 years (inexpensive, everyday drinking), 4–8 years (more serious Chianti), 6–20 years (finest *classico*)

✓ *Antinori* (Peppoli) • *Badia a Coltibuono* • *Barone Ricasoli* (Castello di Brolio) • *Carobbio* (Riserva) • *Caparsa* (Doccia a Matteo Riserva) • *Castellare di Castellina* (Vigna Il Poggiale) • *Castellini Villa* • *Castello di Ama* • *Castello di Cacciano* • *Castello di Fonterutoli* • *Castello Querceto* • *Castello di Rampolla* • *Castello di San Polo in Rosso* • *Castello di Volpaia* • *Felsina* (Rancia) • *Fontodi* • *Isole e Olena* • *La Massa* (Giorgio Primo) • *Monsanto* (Il Poggio) • *Podere Il Palazzino* (Grosso Sanese) • *Poggerino* • *Poggio al Sole* (Casasilia) • *Riecine* (Riserva) • *Rocca della Macie* (Roccatò) • *San Fabiano Calcinaia* (Cellele Riserva) • *San Felice* (Poggio Rosso Riserva) • *San Giusto* (Gaiò) • *San Vicente* (Riserva) • *Terrabianca* • *Uggiano* • *Vecchie Terre di Montefili* • *Villa Vignamaggio* (Mona Lisa Riserva)

COLLI ALBANI DOC

Latium

Soft and fruity, dry and semisweet white wines that can be *spumante*.

COLLI ALTOTIBERINI DOC

Umbria

An interesting DOC in the hilly upper Tiber Valley area, which produces dry white wines from Trebbiano and Malvasia, and firm, fruity reds from Sangiovese and Merlot. However, it is the crisp, fragrant rosés from the same red grape varieties that most people prefer.

COLLI AMERINI DOC

Umbria

Dry whites from Trebbiano with the possible addition of Grechetto, Verdello, Garganega, and Malvasia, with red and rosé from Sangiovese plus the possibility of Montepulciano, Cilieggiolo, Canaiolo, Merlot, and Barbera. A dry white pure Malvasia varietal may also be produced.

COLLI DEL TRASIMENO DOC

Umbria

A very large DOC area on the Tuscan border. The dry and off-dry whites are ordinary, but the reds, in which the bitter edge of Sangiovese is softened with Gamay, Cilieggiolo, Malvasia, and Trebbiano are more interesting.

🕒 2–5 years

✓ *La Fiorita*

COLLI DELL'ETRURIA CENTRALE DOC

Tuscany

The idea was fine, to provide an alternative appellation for lesser red, white, and rosé wines produced in the Chianti area and thus improve the DOCG through selection. But the name hardly trips off the tongue and one might be forgiven for thinking it was agreed to by producers who wanted any excuse not to use it and so keep churning out as much Chianti as possible. Red wines may be referred to as *vermiglio*, which has historical connotations with Chianti, and *vin santo* may also be made.

COLLI DI LUNI DOC

Tuscany

See Colli di Luni DOC (Liguria, Northwest Italy).

COLLI LANUVINI DOC

Latium

Smooth, white wines, either dry or semisweet.

COLLI MARTANI DOC

Umbria

This covers four varietal wines from a large but promising area encompassing the Montefalco DOC: Sangiovese, Trebbiano, Grechetto, and the single-commune Grechetto di Todi.

COLLI PERUGINI DOC

Umbria

Dry, slightly fruity, Trebbiano-based white wines, full-bodied red wines, and dry, fresh rosé wines, primarily from Sangiovese grapes. Produced in a large area between Colli del Trasimeno and the Tiber, covering six communes in the province of Perugia and one in the province of Terni.

COLLINE LUCCHESI DOC

Tuscany

This DOC produces light, soft, Chianti-like reds and bland, dry, Trebbiano-based whites.

CORI DOC

Latium

Little-seen and rarely exciting, dry, semisweet, or sweet white wines and smooth, vinous reds.

ELBA DOC

Tuscany

The range of wines from the vacation isle of Elba have been expanded to include 10 types: Trebbiano-based dry white; Sangiovese-based red, and *riserva* red; *rosato*; Ansonica dell'Elba (dry white from the Ansonica, better known as the Inzolia grape of Sicily); Ansonica Passito dell'Elba; Aleatico dell'Elba; Vin Santo dell'Elba, Vin Santo dell'Elba Occhio di Pernice; and a white *spumante*. However, these wines are mostly made for tourists.

🕒 *In situ* only

✓ *Acquabona*

EST! EST!! EST!!! DI MONTEFIASCOONE DOC

Latium

The name is the most memorable thing about these dry or semisweet white wines made from Trebbiano and Malvasia grapes grown around Lake Bolsena, adjacent to the Orvieto district. Traditionally, the name dates to the 12th century, when a fat German bishop called Johann Fugger had to go to Rome for the coronation of Henry V. In order to drink well on his journey, he sent his *majordomo* ahead to visit the inns along the route and mark those with the best wine with the word "Est," short for "*Vinum est bonum*." When he arrived at Montefiascone, the *majordomo* so liked the local wine that he chalked "Est! Est!! Est!!!" Fugger must have agreed with him, because once he had tasted the wine he canceled his trip and stayed in Montefiascone until his death. The truth of the story is uncertain, for, although a tomb in the village church bears Fugger's name, whether it contains his 800-year-old body or not is unknown. As for the wine, Hugh Johnson has accurately described it as an unextraordinary white wine that trades on its oddball name.

FALERNO or FALERNUM

Latium

Falerum was the famous wine of Ancient Rome. Its modern equivalent is a typically dark and rustically rich Aglianico wine, the best of which is the Villa Matilde *riserva*, which has a full aroma and a better balance than most. A dry white wine is also produced.

FRASCATI DOC

Latium

Most Frascati used to be flabby or oxidized, but with recent improvements in vinification techniques they are now invariably fresh and clean, although many still have a bland, peardrop aroma and taste. The few exceptions come from virtually the same group of top-performing producers as they did a decade ago and these wines stand out for their noticeably full flavor, albeit in a fresh, zippy-zingy style. Frascati is made from Trebbiano and Malvasia grapes, primarily dry, but semisweet, sweet, and *spumante* styles are also made.

🕒 1–2 years

✓ *Colli di Catone* (especially Colle Gaiò—other labels include Villa Catone and Villa Porziana) • *Fontana Candida* (Vigneti Santa Teresa) • *Villa Simone*

GALESTRO

Tuscany

This ultraclean, light, fresh, and delicately fruity, dry white wine is made by a *consorzio* of Chianti producers to agreed standards. It is shortly due to receive DOC recognition.

GRECHETTO or GRECO

Umbria and Tuscany

Clean, fresh, dry and sweet white wines with a pleasant floral aroma that can make interesting drinking, but seldom excel, with the exception of Bigi's Marrano, which is aged in oak.

☞ 1–2 years

✓ *Bigi* (Marrano)

MARINO DOC

Latium

A typically light and unexciting Trebbiano and Malvasia blend that may be dry, semisweet, or *spumante*. Paola di Mauro's deliciously rich and caramelized Colle Picchioni Oro stands out due to its relatively high proportion of Malvasia grapes, and the fact that it receives a pre-fermentation maceration on its skins and is matured in *barriques*.

☞ 1–4 years

✓ *Colle Picchioni* (Oro)

MERLOT

Tuscany

There is only one classic Merlot produced in Tuscany, Masseto, and although it is one of the most expensive red wines in Italy, some vintages can stand shoulder to shoulder with Pétrus, which might make it look like a bargain, depending on your perspective.

☞ 3–8 years

✓ *Villa Banfi* (Mandrielle) • *Tenuta dell'Ornellaia* (Masseto) • *Petrolo* (Galatrona)

MONTECARLO DOC

Tuscany

Some interesting dry white wines are starting to appear in this area situated between Carmignano and the coast. Although based on the bland Trebbiano, supplementary varieties (Roussanne, Sémillon, Pinot Grigio, Pinot Bianco, Sauvignon Blanc, and Vermentino) may account for 30 to 40 percent of the blend, thus allowing growers to express individual styles, from light and delicate to full and rich, either with or without *barrique*-aging. Red wines may be made from Sangiovese, Canaiolo, Ciliegolo, Colorino, Syrah, Malvasia, Cabernet Franc, Cabernet Sauvignon, and Merlot. A white *vin santo* and a pink Occhio di Pernice *vin santo* are also allowed.

☞ 4–10 years

✓ *Fattoria dell' Buonamico* • *Carmignani* • *Fattoria Michi* • *Vigna del Greppo*

MONTECOMPATRI COLONNA or MONTECOMPATRI COLONNA DOC

Latium

These dry or semisweet, Malvasia-based white wines may bear the name of one or both of the above towns on the label.

MONTEFALCO DOCG

Umbria

There is a significant difference in quality between these basic red and white wines and the more interesting, characterful DOCG Sagrantino of Montefalco.

MONTEFALCO SAGRANTINO DOCG

Umbria

Upgraded to DOCG in 1992 and detached from the basic Montefalco denomination, these distinctive red wines in dry and sweet *passito* styles are made exclusively from the Sagrantino grape, which has the advantage of being grown on the best-exposed hillside vineyards southwest of Perugia. The *passito* wines are the most authentic in style, dating back to the 15th century, but the dry table-wine style, which hints of ripe, fresh-picked blackberries, is the best and most consistent.

☞ 3–12 years

✓ *Fratelli Adanti* • *Antonelli* • *Villa Antico* • *Arnaldo Caprai* • *Colpetrone*

MONTEREGIO DI MASSA MARITTIMA DOC

Tuscany

These are red, white, rosé, *novello*, and *vin santo* from the northern part of the province of Grosseto. A dry white Vermentino varietal wine and a pink *passito* called Occhio di Pernice are also included within Monteregio di Massa Marittima DOC.

MONTESCUDAIO DOC

Tuscany

A Trebbiano-based dry white wine, a soft, slightly fruity, Sangiovese-based red, and a *vin santo* from the Cecina Valley.

☞ 1–3 years

✓ *Poggio Gagliardo* • *Sorbaiano*

MORELLINO DI SCANSANO DOC

Tuscany

This DOC produces some good Brunello-like wines from 100 percent Sangiovese, which are thick with tasty, ripe fruit and can age well.

☞ 4–8 years

✓ *Erik Banti* • *Poggio Argentiera* (*Capa Tosta*) • *Motta* • *Fattoria Le Pupille*

MOSCADELLO DI MONTALCINO DOC

Tuscany

An ancient style of aromatic, sweet Muscat that was famous long before Brunello. Fortified versions and sweet *frizzante* are also possible.

☞ Upon purchase

✓ *Villa Banfi* (Vendemmia Tardiva) • *Col d'Orcia* • *Tenuta Il Poggione*

MOSCATO

Tuscany

There is just one Tuscan Moscato DOC, Moscadello di Montalcino, but a few delicately sweet rosé *vini da tavola* are made from the Moscato Rosa grape. It is an exquisite wine well worth searching out.

☞ Upon purchase

✓ *Castello di Farnatella* (Rosa Rosae)

ORVIETO DOC

Umbria and Latium

The vineyards for this popular, widely exported, dry or semisweet, Trebbiano-based white wine are primarily located in Umbria. In general, Orvieto is still disappointing, although Bigi's Vigneto Torricella remains outstanding and the number of wines aspiring to a similar quality is growing. The best semisweet, or *abboccato*, style will include a small proportion of botrytized grapes. Fully botrytized, or *muffato*, Orvieto are extremely rare, but well worth tracking down as they offer a fabulous combination of elegance, concentration, and youthful succulence.

☞ Upon purchase

✓ *Antinori* (Campogrande) • *Barberani* (Castagnolo) • *Bigi* (Torricella) • *Decugnano dei Barbi* • *Palazzone* (Terre Vineate)

PARRINA DOC

Tuscany

The dry whites of Parrina, the most southerly of Tuscany's DOCs, are the least interesting. The Sangiovese-based reds used to be merely soft, light, and attractive, but of late have become much darker, fuller, and richer, like an oaky Chianti, with just a touch of vanillin sweetness on the finish, and even an occasional wisp of mint on the aftertaste.

☞ 3–7 years

✓ *Franca Spinola*

POMINO DOC

Tuscany

This wine dates back to 1716, and a Pomino was marketed as a single-vineyard Chianti by Marchesi de' Frescobaldi long before it was resurrected as its own DOC in 1983. The white is a blend of Pinot Blanc, Chardonnay, and Trebbiano, although Frescobaldi's Il Benefizio is pure Chardonnay. The red is a blend of Sangiovese, Canaiolo, Merlot, Cabernet Franc, and Cabernet Sauvignon. A semisweet *vin santo* is also made in both red and white styles.

☞ 1–3 years (blended white) 3–7 years (red and Il Benefizio)

✓ *Frescobaldi* • *Fattoria Petrognano*

ROSATO DELLA LEGA

Tuscany

Rosato della Lega are dry, Tuscan rosé wines, which are produced by members of the Chianti Classico *consorzio*.

ROSSO DELLA LEGA

Tuscany

These are reasonable, everyday red wines, which are produced by members of the Chianti Classico *consorzio*.

ROSSO DI MONTALCINO DOC

Tuscany

This appellation is for lesser or declassified wines of Brunello di Montalcino or for wines made from young vines. Although there has been a tendency in recent years to produce deeper, darker, more concentrated wines, as a rule the biggest Rosso di Montalcino wines are much more accessible in their youth than Brunello, which some readers may prefer.

🕒 5–15 years

✓ *Altesino* • *Castelgiocondo* • *Conti Costanti* • *Lisini* • *Tenuta Il Poggione* • *Val di Suga*

ROSSO DI MONTEPULCIANO DOC

Tuscany

This DOC is for the so-called lesser wines of *Vino Nobile di Montepulciano* and, like Rosso di Montalcino DOC, its wines are softer and more approachable when young.

🕒 5–15 years

✓ *Avignonesi* • *Bindella* • *Podere Boscarelli* • *Le Casalte* • *Contucci* • *Fattoria del Cerro* • *Poliziano* • *Tenuta Trerose*

SAGRANTINO

Umbria

Another local variety that almost died out but has seen a revival, Sagrantino traditionally makes both dry and sweet, *passito* reds. Some people believe its name is derived from *sagra*, (“festival”) and suggest that the wines it yields were originally reserved for feast days.

SANGIOVESE or SANGIOVESE-DOMINATED

Tuscany and Umbria

Although just 10 years ago no one believed that Sangiovese could stand alone, its success was merely a matter of reduced yields and a suitable *terroir*. With good, but not overstated, *barrique*-aging, and bottling at the optimum moment for fruit retention, Sangiovese can be rich, lush, and satisfyingly complete, with a succulent, spicy-cedary oak complexity. It is commonly found in Umbria, but exceptional Sangiovese-based wines are relatively rare.

✓ **Tuscany** *Altesino* (Palazzo Altesini) • *Avignonesi* (I Grifi) • *Badia a Coltibuono* (Sangiovese) • *Calcinai* (Cerviole Rosso) • *Castello di Cacchiano* (RF, Rocca di Montegrossi) • *Villa Cafaggio* (San Martino) • *Podere Capaccia* (Querciangrande) • *Castiglione* (Giramonte) • *Felsina* (Fontalloro) • *Fontodi* (Flaccianello della Pieve) • *Isole e Olena* (Cepparello) • *Monsanto* (Bianchi Vigneti di Scanni) • *Montepeloso* (Nardo) • *Podere Il Palazzino* (Grosso Senese) • *Poliziano* (Elegia) • *Castello di Querceto* (La Corte) • *Ruffino* (Cabreo Il Borgo) • *Guicciardini Strozzi* (Sodole) • *Terrabianca* (Campaccio, Piano del Cipresso) • *Monte Vertine* (Le Pergole Torte) • *Viticcio* (Prunai)

Umbria *Lungarotti*

SANGIOVESE WITH OTHER ITALIAN GRAPES

Tuscany

✓ *Castellare di Castellina* (I Sodi di San Niccolò) • *Ricasoli-Firidolfi* (Geremia) • *Monte Vertine* (Il Sodaccio)

SANGIOVESE-CABERNET/MERLOT BLENDS

Tuscany

Cabernet Sauvignon was originally blended with Sangiovese to supply fruit and accessibility within a classic fine-wine structure.

✓ *Altesino* (Alte d'Altesi) • *Antinori* (Tignanello) • *Caparzo* (Cà del Pazzo) • *Castello di Bossi* (Corbaia) • *Colombaio* (Il Futuro) • *Fonterutoli* (Siepi) • *Monsanto* (Tinscvil) • *Quercetabella* (Camartina) • *Castello di Volpaia* (Balifico)

SAUVIGNON

Tuscany

The Sauvignon does not really seem at home in Tuscany, although judging by the remarkable success of Ornellaia's Poggio alle Gazze, you wouldn't think this was the case.

✓ *Tenuta dell'Ornellaia* (Poggio alle Gazze)

SYRAH

Tuscany

This classic Rhône grape shows tremendous potential, but at equally tremendous prices.

✓ *Fontodi* (Case Vie) • *Isole e Olena* (L'Eremo) • *Varramista*

TORGIANO DOC

Umbria

This DOC was built on the back of the reputation of one producer, Lungarotti (*see also* Torgiano Riserva DOCG). As before, Torgiano DOC covers generic blends for red and rosé (Sangiovese, Canaiolo, Trebbiano, Ciliegiole, and Montepulciano) and white (Trebbiano, Grechetto, Malvasia, and Verdello), but also sparkling (Pinot Noir and Chardonnay) and five varietals: Chardonnay, Pinot Grigio, Riesling Italico, Cabernet Sauvignon, and Pinot Noir.

🕒 3–8 years (red), 1–5 years (white and rosé)

✓ *Lungarotti*

TORGIANO RISERVA DOCG

Umbria

Lungarotti's best *rosso*, the *riserva* is a model of how all DOCG denominations should work, and has deservedly been upgraded from DOC.

🕒 4–20 years

✓ *Lungarotti*

VAL D'ARBIA DOC

Tuscany

A large area south of the Chianti Classico district, producing a dry, fruity, Trebbiano-based white wine boosted by Malvasia and Chardonnay, which may be dried prior to fermentation for dry, semisweet, or sweet *vin santo*.

VAL DI CORNIA DOC

Tuscany

A large area of scattered vineyards in hills east of Piombino and south of Bolgheri. Rarely seen Trebbiano dry whites and Sangiovese reds and rosés, with the subappellations of Campiglia Marittima, Piombino, San Vincenzo, and Surveto.

✓ *Russo* (Barbicone)

VELLETRI DOC

Latium

Rather uninspiring, dry or semisweet white wines and reds from the Castelli Romani area.

VERNACCIA DI SAN GIMIGNANO DOCG

Tuscany

This dry white wine was Italy's first-ever DOC, so DOCG status was inevitable, even if most are bland. The best have always been deliciously crisp and full of vibrant fruit, which makes them well worth seeking out, but not seriously worthy of DOCG status if this is supposed to signify one of the world's finest wines.

🕒 1–3 years

✓ *Falchini* • *Panizzi* • *Teruzzi & Puttob*

VIGNANELLO DOC

Latium

This is a new and untested DOC for red, white, and rosé blends, plus pure Grechetto dry white wine in still and fully sparkling formats.

VIN SANTO

Tuscany and Umbria

A red or white *passito* wine that may be sweet, semisweet, or dry.

✓ *Avignonesi* (Occhio di Pernice)

VINO NOBILE DI MONTEPULCIANO DOCG

Tuscany

Made largely from Prugnolo Gentile, a clone of Sangiovese, plus Canaiolo and other local grapes, including white varieties, these wines come from Montepulciano. Most wines used to be overrated and overpriced, and a number still are, but a growing number of producers make wines that deserve DOCG status. The best resemble a fine *riserva* Chianti Classico, but have a more exuberant character, with generous ripe-fruit flavors hinting of cherry and plum.

🕒 6–25 years

✓ *Avignonesi* • *Bindella* • *Podere Boscarelli* • *Le Casalte* • *Contucci* • *Fattoria de Cerro* • *Poliziano* • *Tenuta Trerose*

ZAGAROLO DOC

Latium

This DOC has a tiny production of dry or semisweet white from Malvasia and Trebbiano grapes, which are grown east of Frascati in an area more famed for its wines half a millennium ago than it is now.

NEW IGT WINES

The following Indicazioni Geografiche Tipiche wines were agreed to at the end of 1996, yet most have still to register with consumers, or establish any consistency of style or quality:

✓ **Latium** *Castelli Romani* • *Circeo* • *Civitella d'Agliano* • *Colli Cimini* • *Colli delle Sabina* • *Colli Etruschi Viterbesi* • *Frusinate or del Frusinate* • *Lazio* • *Nettuno*

Tuscany *Alta Valle Della Greve* • *Colli della Toscana Centrale* • *Maremma Toscana* • *Orcia* • *Toscana or Toscano* • *Val di Magra*

Umbria *Allerona* • *Assisi* • *Bettona* • *Cannara* • *Lago di Corbara* • *Narni* • *Spello* • *Umbria*

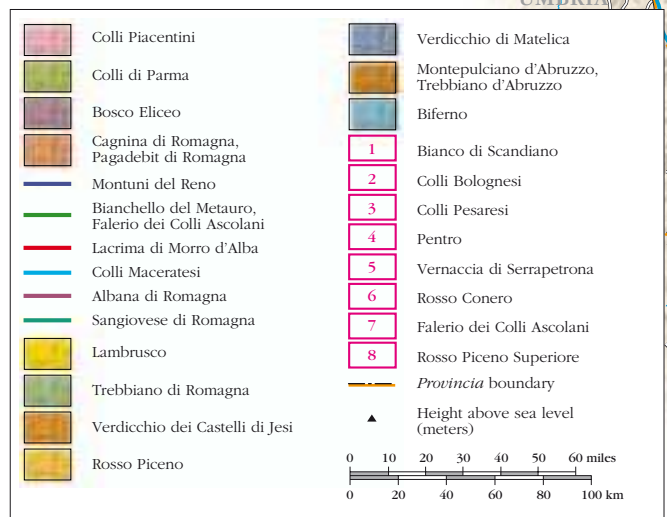

EAST-CENTRAL ITALY

This area comprises the regions of Emilia-Romagna, the Marche, the Abruzzi, and Molise. The best-quality wines come from the Marche and the Abruzzi, but the best-known is Emilia-Romagna's lollipop wine, Lambrusco, which is exported in vast quantities.

IF THIS REGION, which extends across almost the entire width of northern Italy into Piedmont, appears geographically to wander off its central-east designation, it certainly does not do so topographically, for every acre lies east of the Apennines on initially hilly ground that flattens out into alluvial plains stretching toward the Adriatic.

EMILIA-ROMAGNA

Emilia-Romagna is protected on its western flank by the Apennines, the source of seven major, and many minor, rivers.

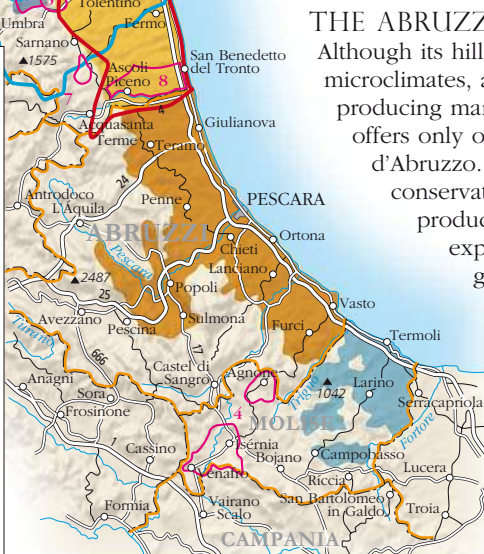

FACTORS AFFECTING TASTE AND QUALITY

- LOCATION**
This area stretches along the Adriatic coast, from Molise in the south right up to Emilia-Romagna.
- CLIMATE**
The influence of the Mediterranean provides generally hot and dry summers, which become progressively hotter as one travels south, and cool winters. In hilly regions microclimates are created by the effects of altitude and aspect.
- ASPECT**
The best vineyards are invariably to be found on well-drained, foothill sites, but viticulture is spread across every imaginable type of terrain, with a heavy concentration on flat plains, particularly along the Po Valley in Emilia-Romagna, where grapes are produced in abundance.
- SOIL**
The soil is mostly alluvial, with some outcrops of granite and limestone.
- VITICULTURE AND VINIFICATION**
A wide variety of viticultural practices and vinification techniques are used here. Much bulk-blended wine originates here, but some producers retain the most worthwhile traditions and augment them with modern methods.
- GRAPE VARIETIES**
Aglianico, Albana (*syn.* Ancona, or Passerina), Ancellotta, Barbarossa, Barbera, Beverdino, Bombino Bianco (*syn.* Pagadebit or Pagadebito), Cabernet Franc, Cabernet Sauvignon, Chardonnay, Ciliegliolo, Croatina (*syn.* Bonarda), Fortana (*syn.* Fruttana or Uva d'Oro), Incrocio Bruni 54 (*Verdicchio x Sauvignon*), Lacrima (*syn.* Gallioppa or Galloppo), Lambrusco, Macerato, Malvasia, Merlot, Mondeuse (*syn.* Cagnina, Refosco or Terrano), Montepulciano, Montuni (*syn.* Montù or Bianchino), Moscato (*syn.* Muscat), Ortrugo (*syn.* Altra Uva), Pecorino, Perricone (*syn.* Pignoletto), Pinot Bianco (*syn.* Pinot Blanc), Pinot Grigio (*syn.* Pinot Gris), Pinot Nero (*syn.* Pinot Noir), Sangiovese, Sauvignon (*syn.* Spergola), Toscano, Trebbiano (*syn.* Campolese, Ugni Blanc or Albanella), Verdea, Verdicchio, Vernaccia Nera, Riesling Italo (*syn.* Welschriesling)

The rich soil results in abundant grape production, the most prolific varieties being Lambrusco, Trebbiano, and Albana, which produce rustic white wines that, unaccountably, have been given Italy's first DOCG for a white wine. Emilia-Romagna does, however, have some genuinely outstanding *vini da tavola*, such as Fattoria Paradiso's Vigna del Dosso, a red from the Barbarossa, and, especially, a classy Sangiovese-Cabernet blend from Fattoria Zerbina, called Marzeno di Marzeno.

THE ABRUZZI (ABRUZZO)

Although its hills have a variety of soils and microclimates, and should be capable of producing many fine wines, the Abruzzi offers only one—Montepulciano d'Abruzzo. But winemakers are conservative here and only one producer, Santoro Corella, is experimenting with different grape varieties.

EAST-CENTRAL ITALY, see also p.263
With the Apennines forming the region's western border, the eastern part of central Italy is dominated by their foothills and the plains.

THE MARCHES (MARCHE)

This region has a beautiful coastline where vacationers quench their thirst with the local white—the dry Verdicchio. But there are more exciting wines to be found in the exceptionally fine DOCs of Rosso Cònero and Rosso Piceno and, in a few circumstances, Sangiovese dei Colli Pesaresi, together with excellent *vini da tavola*, such as Rosso di Corinaldo and Tristo di Montesecco.

MOLISE

This poor region with high unemployment has a badly equipped wine industry. Until 1963 it was combined with the Abruzzi and only gained its first DOC in 1983. Italian-wine expert Burton Anderson believes that it may one day provide wines of real class.

AVERAGE ANNUAL PRODUCTION

REGION	DOC PRODUCTION	TOTAL PRODUCTION
Emilia-Romagna	6.6 million cases (600,000 hl)	122 million cases (11 million hl)
Molise	5 million cases (450,000 hl)	6 million cases (550,000 hl)
Marches	3 million cases (275,000 hl)	28 million cases (2.5 million hl)
Abruzzi	2.7 million cases (250,000 hl)	50 million cases (4.5 million hl)

Percentage of total Italian production: Emilia-Romagna 14%; Abruzzi 6%; Marches 3%; Molise 0.7%.

THE APPELLATIONS OF EAST-CENTRAL ITALY

ALBANA

Emilia-Romagna

In theory, this must be Italy's greatest white-wine grape, as Albana di Romagna was Italy's first DOCG. In practice, this high-yielding grape makes a rather rustic, almost common wine.

ALBANA DI ROMAGNA DOCG

Emilia-Romagna

These straightforward, fruity, sometimes dry, occasionally semisweet white wines are still or sparkling and may be in a very sweet style, either by regular vinification or from *passito* grapes. This is the precise style, reputation, and quality that in 1987 became the first Italian white wine to receive DOCG status. From any angle, this occurred as a result of a political fudge. It's a bit like the French setting up a super-AOC and making Muscadet the first white to receive elite status. On the bright side, the producers of Albana di Romagna have had so much stick that they have had to work hard at improving their product, to good effect.

🍷 In situ only

✓ Fattoria Paradiso

ANCELOTTA

Emilia-Romagna

This is used to deepen the color of Lambrusco.

BARBAROSSA

Emilia-Romagna

This variety is unique to Emilia-Romagna and produces one of the region's best red wines.

✓ Fattoria Paradiso (Vigna del Dosso)

BERTINORO DOC

Emilia-Romagna

See Pagadebit di Romagna DOC.

BIANCHELLO DEL METAURO DOC

Marches

Dry, delicate white wines are made from the Bianchetto grape (possibly with some Malvasia) which is grown in the lower Metauro Valley.

BIANCO DI SCANDIANO DOC

Emilia-Romagna

Full-bodied, dry and semisweet white wines that may also be *spumante* and *frizzante*.

BIFERNO DOC

Molise

Smooth, slightly tannic, red and fruity rosé wines from Montepulciano, Trebbiano, and Aglianico grapes; and dry, lightly aromatic, white wines from Trebbiano, Bombino, and Malvasia.

BOSCO ELICEO DOC

Emilia-Romagna

A large coastal region, separated from the major Emilia-Romagna viticultural areas in the northeast. There is a rustic red varietal from the mysterious Fortana grape, also called the Uva d'Oro, although I know nothing of it. Bosco Eliceo Fortan can be dry or sweet, has a slightly bitter tannic bite, is *frizzante*, and not dissimilar to Lambrusco. There is also a generic blended white (Trebbiano, Sauvignon, and Malvasia—may be *frizzante*); two pure varietals, a Merlot (sometimes *frizzantino*) and a Sauvignon (may also be *frizzantino*).

CAGNINA DI ROMAGNA DOC

Emilia-Romagna

Tannic but sweet and fruity red wines, with balancing high acidity.

COLLI BOLOGNESI DOC

Emilia-Romagna

Also known as Colli Bolognesi dei Castelli Medioevali or Colli Bolognesi di Monte San Pietro, this appellation covers an Albana- and Trebbiano-based generic white; three red varietals, Barbera, Cabernet Sauvignon, and Merlot; and five whites, Riesling Italico, Sauvignon (may be *frizzantino*), Pinot Bianco, Pignoletto, and Chardonnay. The last three are made still, *frizzante*, and *spumante*.

🍷 1–3 years

✓ Terre Rosse

COLLI DI PARMA DOC

Emilia-Romagna

Solid, slightly *frizzantino* red wines and two white varietals, Malvasia and Sauvignon, in dry, sweet, still, *frizzante*, or *spumante* styles.

COLLI MACERATESI DOC

Marches

This huge area produces a dry, white-wine blend that used to be Trebbiano-based, but now must contain at least 80 percent Maceratino, and Verdicchio, Malvasia, and Chardonnay if possible.

COLLI PESARESI DOC

Marches

Originally a Sangiovese DOC, Colli Pesaresi now includes four different wines, although the deeply flavored Sangiovese-based red still stands out, with the best showing real class. Focara may contain up to 15 percent Pinot Noir, but displays Sangiovese-like characteristics. There is also a Trebbiano-based dry white and a very similar wine called Roncaglia.

🍷 3–8 years

✓ Tattà • Umani Ronchi • Vallone
• Villa Pigna

COLLI PIACENTINI DOC

Emilia-Romagna

Fourteen wines produced in the Piacenza hills, where Julius Caesar's father-in-law made a wine that was traditionally drunk from a vessel called a *gutturium*. This is the origin of Gutturnio, the DOC's most famous wine, a Barbera-Bonarda blend. A red, it is usually dry and still, although a semisweet *frizzantino* or *frizzante* version is often made. There are two blended whites: an aromatic wine called Monterosso Val d'Arda (Malvasia, Moscato, Trebbiano, and Ortrugo, possibly with Beverdino and Sauvignon) in dry, sweet, still, *frizzantino*, or *frizzante* styles; and wine called Val Nur (Malvasia, Moscato, Trebbiano, and Ortrugo), which may be dry or sweet, still, *frizzante*, or *spumante*. The following whites may be *frizzantino*, *frizzante*, or *spumante*: Chardonnay, Trebbiano Val Trebba, Malvasia, Ortrugo, Pinot Grigio, and Sauvignon. The Chardonnay, Pinot Grigio, and Sauvignon must be dry, but the others may be dry or sweet. Three red varietals: Barbera, Cabernet Sauvignon, and Pinot Nero can be dry or sweet, still, *frizzantino*, *frizzante*, or *spumante*.

FALERIO DEI COLLI ASCOLANI DOC

Marches

Dry, lightly scented white wines made from a blend of Trebbiano, Passerina, Verdicchio, Malvasia, Pinot Blanc, and Pecorino.

🍷 1–3 years

✓ Cocci Grifoni (Vigneti San Basso)

FOCARA DOC

Marches

See Colli Pesaresi DOC.

**GUTTURNIO *or* GUTTURNIO
DEI COLLI PIACENTINI DOC**

Emilia-Romagna

See Colli Piacentini DOC.

**LACRIMA DI MORRO
D'ALBA DOC**

Marches

Nothing to do with the wine Lacryma Christi or the town of Alba in Piedmont, this is a soft, medium-bodied red from the mysterious Lacrima grape grown in and around Morro d'Alba, in the province of Ancona. A seemingly single-village wine, this DOC has the largest appellation of the Marches region. Montepulciano and Verdicchio may also be used.

**LACRYMA (*or* LACRIMA)
CHRISTI DOC**

Campania

See Vesuvio DOC (Southern Italy and the Islands).

LAMBRUSCO

Emilia-Romagna

Non-DOC Lambrusco is not interesting and the DOC only occasionally so. Lambrusco is an off-dry, cherry-red, frothy wine, which is low in alcohol (although the DOC is higher) and tastes of ripe cherries; export wines are mostly sweet. White and rosé styles are made and the sparkle varies from barely *frizzantino* to *spumante*. Of the many subvarieties, Grasperossa, Salamino, and Sorbara make the most interesting wines.

LAMBRUSCO DI SORBARA DOC

Emilia-Romagna

Mostly dry, although sometimes semisweet, these are medium-bodied, *frizzantino* reds or rosés with more body and depth of flavor than most.

**LAMBRUSCO GRASPAROSSA DI
CASTELVETRO DOC**

Emilia-Romagna

Dry or semisweet, vinous, *frizzantino* reds and rosés, usually better than non-DOC versions, but not quite matching the Lambrusco di Sorbara.

LAMBRUSCO REGGIANO DOC

Emilia-Romagna

Dry or semisweet, *frizzante* red and rosé wines that are the lightest DOC Lambruscos.

**LAMBRUSCO SALAMINO DI
SANTA CROCE DOC**

Emilia-Romagna

These dry or semisweet, vinous, semi-*spumante* red and rosé wines are the most aromatic of the Lambruscos and can come up to the standard of the Lambrusco di Sorbara.

**MONTEPULCIANO
D'ABRUZZO DOCG**

Abruzzi

This is the Abruzzi's only fine wine and there are two distinct styles. Made from Montepulciano with up to 15 percent Sangiovese, both are very deep in color, but one is full of soft, luscious fruit, the other firmer and more tannic. A lighter style called *cerasuolo* exists for cherry-pink wine with fresh fruit, but it is seldom as exciting.

3–4 or 8–20 years (red), 1–3 years

✓ *Illuminati* • Gianni Masciarelli • Emidio Pepe • Tenuta del Priore • Valentini

**MONTEROSSO VAL
D'ARDA DOC**

Emilia-Romagna

See Colli Piacentini DOC.

MONTUNI DEL RENO DOC

Emilia-Romagna

Light, dry or sweet, still or sparkling white wine with a slightly bitter finish.

**PAGADEBIT DI
ROMAGNA DOC**

Emilia-Romagna

Dry and semisweet, still or *frizzante* white wines from the Bombino Bianco grape, known locally as "Pagadebit." This DOC includes a single-village wine called Bertinoro, the characteristics of which are the same, although potentially finer.

**PENTRO *or* PENTRO DI
ISERNIA DOC**

Molise

Smooth, slightly tannic reds and dry, fruity rosés from Montepulciano and Sangiovese; and dry, fresh whites from Trebbiano and Bombino.

PIGNOLETTO

Emilia-Romagna

Believed to be a distant relation of the Riesling.

RONCAGLIA DOC

Marches

See Colli Pesaresi DOC.

ROSSO CÒNERO DOCG

Marches

Fine Montepulciano-based wines that improve with *barrique*-aging. Deep-colored and rich.

3–6–15 years

✓ *Garofoli* (Agontano) • *Umani Ronchi* (San Lorenzo) • *Marchetti* • *Mecvini* • *Monteschiaivo* (Adeodato) • *Silvano Strologo* (Traiano)

ROSSO PICENO DOC

Marches

Small amounts of Trebbiano and Passerina may now be added to this excellent Sangiovese and Montepulciano wine. The best are firm and ruby-colored with smooth fruit. Often *barrique*-aged.

3–4–10 years

✓ *Saladini Pilastrini* •

**SANGIOVESE DI
ROMAGNA DOC**

Emilia-Romagna

These solid red wines rarely excite, unless from exceptional vineyards.

3–7 years

✓ *Fattoria Paradiso* (Vigneti delle Lepri) • *San Patrignano* (Avi Riserva) • *Stefano Berti* (Calisto)

SANGIOVESE-CABERNET

Emilia-Romagna

This blend is relatively rare in this region.

✓ *Fattoria Zerbina* (Marzeno di Marzeno)

TREBBIANO D'ABRUZZO DOC

Abruzzi

These are usually dry, neutral, and mediocre white wines, although they can sometimes be delicately scented and velvety in texture.

3–13 years

✓ *Emidio Pepe* • *Tenuta del Priore* • *Valentini*

**TREBBIANO DI
ROMAGNA DOC**

Emilia-Romagna

This producer makes dry, neutral white wines that are also made in dry, sweet, and semisweet *spumante* versions.

**VAL NUR *or* VAL NUR DEI
COLLI PIACENTINI DOC**

Emilia-Romagna

See Colli Piacentini DOC.

**VERDICCHIO DEI
CASTELLI DI JESI DOC**

Marches

These are popular, lean, fresh, and mostly uninteresting dry white wines. *Spumante*, *frizzante*, and *frizzantino* versions are also produced.

3–4 years

✓ *Brunori* • *Bucci* • *Fazi Battaglia* (Le Moie) • *Garofoli* • *Monte Schiavo* • *Umani Ronchi* • *Zaccagnini*

**VERDICCHIO DI
MATELICA DOC**

Marches

Made in a hilly area in the center of Macerata, these wines are slightly fatter than those of Castelli di Jesi, but most are just as uninteresting to drink.

3–4 years

✓ *Fratelli Bisci* • *La Monacesca*

**VERNACCIA DI
SERRAPETRONA DOCG**

Marches

Made from Vernaccia grapes, Sangiovese, Montepulciano, and Cilieggiolo may be added to these semisweet to sweet *spumante* reds.

IGT WINES

The following IGT wines were agreed at the end of 1996, and yet most have still to register with consumers, or establish any consistency of style or quality.

✓ *Abruzzi Alto Tirino* • *Colli Aprutini* • *Colli del Sangro* • *Colline Frentane* • *Colline Pescaresi* • *Colline Teatime* • *Del Vastese or Histonium* • *Terre di Chieti* • *Valle Peligna*

Marches Marche

Molise Molise • *Oscio or Terre degli Osci* • *Rotae*

SOUTHERN ITALY AND THE ISLANDS

Hot and largely billy, with volcanic soils, southern Italy is an ancient and prolific wine-growing area. Overproduction continues to be a problem, but well-made wines were starting to clean up Italy's southern-plonk image over a decade ago, since when a host of flying winemakers have made some remarkably expressive wines utilizing local varieties.

JUTTING OUT INTO THE BLUE WATERS of the Mediterranean, the vineyards of southern Italy receive very little natural moisture and bake rather than bask in unrelenting sunshine. This explains the deep-colored wines with strong flavors and high alcoholic levels. Although these heavy wines do not suit modern tastes and southern Italy continues to produce a glut of these almost unsellable wines, the region is subtly changing course. Its

small but growing volume of cleaner, finer, more expressive wines may enable it to establish an identity capable of thriving in ever more sophisticated world-wine markets. In this respect it is being helped by foreign investment and flying winemakers, but the biggest obstacle to consolidating these isolated successes is the poverty that has for so long blighted southern Italy.

APULIA (PUGLIA)

Apulia's exceptionally fertile plains make it one of Italy's largest wine-producing regions, but until the 1970s most of its wines were seen as fit only for blending or for making Vermouth. Because of this, most Apulian producers chose to try to rid themselves of this lowly reputation, bringing about a radical transformation of their industry. A great number of very ordinary wines are still produced, but various changes have greatly improved the situation. Irrigation programs, the introduction of lower-yielding, higher-quality grape varieties (including many classic French ones), and a move away from the single-bush cultivation, known as *alberello*, to modern wire-trained systems, have led to both new wines gaining favor and some traditional ones showing renewed promise. The two most important grape varieties are now the Primitivo, which has been identified as the Zinfandel of California and is the earliest-ripening grape grown in Italy, and the Uva di Troia, which

	Aleatico di Puglia	1	Falerno del Massico
	Solopaca	2	Vesuvio
	Taburno	3	Ischia

	Copertino		
	Provincia boundary		
	Height above sea level (meters)		

SOUTHERN ITALY, *see also* p.263
Southern Italy produces huge quantities of wine. Apulia makes distinguished wines, but aside from the Aglianico wines of Basilicata and Campania, the quality is patchy.

THE AMALFI COAST
These vines and citrus trees are terraced on cliffs typical to this area.

has no connection with the town of Troia in Apulia's northern province of Foggia, but refers to ancient Troy, whence the grape originates. It was brought to the region by the first Greeks to settle in the Taranto area.

CAMPANIA

The best-known wine of Campania Felix, as the Romans called this area, is Lacryma Christi (Tears of Christ), but the best quality is the lesser-known Taurasi DOCG made from the underrated Aglianico grape. Falerno del Massico is an up-and-coming Aglianico-based DOC, but aside from wines made by individual producers such as Mastroberardino and Antica Masseria Venditti, there is little else of interest produced here.

BASILICATA

Basilicata is a dramatic and wild region dominated by the extinct volcano Mount Vulture. Manufacturing industry is scarce here, accounting for less than one percent of the region's output, and the mountainous terrain makes mechanized agriculture extremely difficult. Lacking investment finance and with two in every three

THE ISLANDS, *see also* p.263
Sicily and Sardinia are usually included with southern Italy because they are on the same latitude, but they had to be separated for mapping purposes in this edition because of the proliferation of new appellations, including the contentious DOCG status of Vermentino di Gallura in Sardinia.

AVERAGE ANNUAL PRODUCTION

REGION	DOC PRODUCTION	TOTAL PRODUCTION
Sicily	3 million cases (270,000 hl)	110 million cases (10 million hl)
Sardinia	2.8 million cases (260,000 hl)	28 million cases (2.5 million hl)
Apulia	2.2 million cases (198,000 hl)	2.5 million hl (11 million hl)
Calabria	367,000 cases (33,000 hl)	13 million cases (1.2 million hl)
Campania	139,000 cases (12,500 hl)	28 million cases (2.5 million hl)
Basilicata	70,000 casesx (70,000 cases)	4.7 million cases (0.42 million hl)

Percentage of total Italian production: Apulia, 14%; Sicily, 13%; Campania, 3.3%; Sardinia, 3.3%; Calabria, 1.6%; Basilicata, 0.6%.

inhabitants unemployed, Basilicata has not had the means nor the incentive to modernize its wine industry. Consequently, with the exception of the first-class, if idiosyncratic, Aglianico del Vulture, (Basilicata's solitary DOC), a wonderful non-DOC Aglianico called Canneto from Fratelli d'Angelo, and delicious Moscato and Malvasia from Fratelli d'Angelo and Paternosta, the fine-wine scene in Basilicata is as barren as the landscape, although it should make fertile pastures for flying winemakers.

CALABRIA

The decline in Calabria's viticultural output since the 1960s has been for the better in terms of quality. Since then, the most unsuitable land has been abandoned, and the 10 current DOCs, located in hilly and mountainous terrain, may eventually prove to be a source of quality wine. At the moment, however, improvement in wine technology is slow and, with the exception of Umberto Ceratti's succulent Greco di Bianco, a world-class dessert wine that is a relic of the past, and Odoardi's Vigna Vecchia, a fruity red from the obscure Gaglioppo variety, and a luscious Moscato *vino da tavola* from Guido Lojelo, this region also has little in the way of interesting wine.

SICILY (SICILIA)

Sicily is the largest island in the Mediterranean and, in terms of quantity, is one of Italy's most important wine regions, annually producing a quantity roughly equal to the Veneto or Emilia-Romagna. Much of this is produced at high yields deliberately to take advantage of the EU's intervention program, which takes the wine off the market and distills it. The ancient port of Marsah-el-Allah, built under Arab rule, gives its name to Sicily's once popular classic wine, Marsala. By the mid-19th century, Marsala had evolved into a style between that of Madeira and sherry, but now finds itself as popular as bread and dripping, and just as likely to come back into fashion. Indeed, until recently, Sicilian wines were generally unfashionable. Then in 1995, the Planeta family established its winery, the wines started to attract attention and growing respect in the early 2000s, and Planeta is now not only the island's top producer, but also one of Italy's greatest. The stunning quality of these

THE POLLINO MOUNTAINS, CALABRIA

Spring flowers carpet the slopes above Frascineto, in the foothills of the Pollino Mountains. This small mountain range gives its name to the fruity chiaretto-style wine made from Gaglioppo, Greco Nero, Malvasia, and Guarnaccia.

wines encouraged some long-established wineries (such as Tasca d'Almerita and, when it was bought by Illva Saronno, Corvo) to raise standards, as well as investment from big mainland producers, such as Zonin, which established Feuda Principi di Butera.

SARDINIA (SARDEGNA)

Sardinia is the second-largest island in the Mediterranean and, while it produces virtually all styles of wine, the modernization its wine industry has undergone since the late 1970s has had a more radical effect on its white wines than on any other style. Although Sardinia produces no “fine” wines in the classic sense, the wines are generally well made and easy to enjoy, and a small number of top-performing wineries make interesting wines under the Carignano del Sulcis

and Cagliari DOCs, while exceptional Malvasia *vini da tavola* are made by Gian Vittorio Naitana. Vermentino di Gallura was another enjoyable DOC, but its controversial promotion was the most ludicrous abuse of DOCG status since Albana di Romagna. Gallura does offer potential for fine wines, but more for reds, than whites. Indeed, much of the hilly terrain on this island is naturally suited to lower-yielding, black grape varieties, which if harvested fully ripe could produce intensely flavored, age-worthy reds, such as Turriga from Antonio Argiolas, an excellent Cannonau-based blend.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

This area includes the southern mainland regions of Apulia, Campania, Basilicata, Calabria, the islands of Sicily farther south, and Sardinia, across the Tyrrhenian Sea to the west.

CLIMATE

The south is by far the hottest and driest region of Italy, although the coastal areas and islands are tempered by maritime winds.

ASPECT

Most of the region is either mountainous or hilly, although vineyards are to be found on the flat land and gentle slopes of Apulia. The best sites are always found on the north-facing, higher slopes of hillsides where the vines receive less sun and benefit from the tempering effect of altitude, thus ensuring a longer growing season.

SOIL

Soil is predominantly volcanic and granitic, but there are some isolated outcrops of clay and chalk.

VITICULTURE AND VINIFICATION

This area, together with the Midi in France, is the principal source of Europe's infamous “wine lake.” Nevertheless, producers using better-quality grape varieties grown on higher sites are making wines of a standard and style that deserve wider recognition. Flying winemakers have helped enormously by showing what can be done.

GRAPE VARIETIES

Aglianico, Albana (*syn.* Greco, but this Greco is not Grechetto), Aleatico, Alicante Bouschet, Asprinio (*syn.* Asprino, Olivese, Ragusano, or Uva Asprina), Barbera, Bianco d'Alessano, Biancolella (*syn.* Biancolelle, Ianculillo, Ianculella,

Petit Blanche, or Teneddu), Bombino, Bombino Nero, Cabernet Franc, Calabrese (*syn.* Nero d'Avola or Niura d'Avola), Carignan (*syn.* Carignano or Uva di Spagna), Carricante, Cataratti (*syn.* Cataratto), Chardonnay, Cinsault (*syn.* Ottavianello), Coda del Volpe (Caprettone, Coda di Pecora, or Pallagrello Bianco), Damaschino, Falanghina, Fiano, Forastera, Francavidda (*syn.* Francavilla), Gaglioppo (*syn.* Arvino, Gaioppo, Lacrima Nera, Magliocco, Mantónico Nero, or Montónico Nero), Garganega (*syn.* Grecanico), Girò, Grechetto, Greco Nero, Grenache (*syn.* Cannonadu, Cannonatu, Cannonao, Cannonau, or Canonau), Grillo, Guarnaccia (*syn.* Cannamelo or Uarnaccia), Impigno, Incrocio Manzoni 6013 (Riesling x Pinot Blanc), Inzolia (*syn.* Ansolia, Ansonica or Nzolia), Malbec, Malvasia, Malvasia Nera,

THE APPELLATIONS OF SOUTHERN ITALY AND THE ISLANDS

AGLIANICO

Basilicata

Many people think that this black grape is not dissimilar to the Barbera, and it has been respected since Ancient Roman times, when it produced the famed wine of Falernum. One of Italy's two greatest Aglianico wines today is Basilicata's Aglianico del Vulture (the other is Campania's Taurasi). Its best producer, Fratelli d'Angelo, is also the greatest producer of a non-DOC Aglianico.

🕒 6–20 years

✓ Fratelli d'Angelo (Canneto)

AGLIANICO DEL TABURNO DOC

Campania

See Taburno DOC.

AGLIANICO DEL VULTURE DOC

Basilicata

This is the only DOC in Basilicata to encompass the volcanic slopes of Mount Vulture and its surrounding hills, which make the best growing areas for the Aglianico grape. A big but balanced red wine of warm color, rich, chocolate-cherry fruit, and firm tannin structure, Aglianico del Vulture can be slightly rustic in youth, yet develops a true silky finesse with age.

Some would argue that it is the greatest Aglianico and will doubtless achieve DOCG status. If described as *vecchio* (old), Aglianico del Vulture will have been aged for a minimum of three years, while *riserva* will have had five; both will have been aged for two years in wood. Aglianico del Vulture may also be sold as semisweet and *spumante*.

🕒 6–20 years

✓ Fratelli d'Angelo • Paternosta

ALCAMO or BIANCO ALCAMO DOC

Sicily

Dry, slightly fruity white wines from the Catarratto grape with the possible addition of Damaschino, Garganega, and Trebbiano. The soil is too fertile and yields far too high to produce wines of any real quality or character.

ALEATICO DI PUGLIA DOC

Apulia

Produced in tiny quantities throughout the region, this wine is rarely exported. Opulent and aromatic wines with a full, warming, smooth, and exotic flavour, ranging from very sweet and fortified (*liquoroso* or *liquoroso dolce naturel*) to medium-sweet and unfortified (*dolce naturel*). A *riserva* must be aged for at least three years from the date of harvest or, in the case of *liquoroso*, the date of fortification.

🕒 Upon purchase

✓ Francesco Candido

ALEZIO DOC

Apulia

A DOC since 1983 for red and *rosato* wines made from Negroamaro, with the possible

addition of Sangiovese, Montepulciano, and Malvasia Nera. The red is alcoholic, slightly tannic, and not very interesting, but the dry *rosé* can be soft and flavorful with delicate fruit.

🕒 Upon purchase (*rosé*)

✓ Michele Calò (Mjère)

ARBOREA DOC

Sardinia

Three varietal wines: Sangiovese red, Sangiovese *rosato*, and a dry or semisweet Trebbiano white.

ASPRINIO

Basilicata

This grape is always grown on its own rootstock and produces a green, often mean, dry white that is often *frizzante*.

ASPRINIO DI AVERSA DOC

Campania

Fresh, crisp, Vinho Verde-look-alike dry white wine from Asprinio grapes grown on vines trained to trees. Usually still, *frizzantino*, or *frizzante*, but sometimes fully sparkling.

BIANCOLELLA

Campania

Almost exclusively grown on the island of Ischia where D'Ambra does a pure varietal bottling.

BRINDISI DOC

Apulia

Smooth, vinous red wines and dry, light, fruity rosés, both primarily from Negroamaro grapes, although Montepulciano, Malvasia Nera, Sangiovese, and Susumaniello may also be used.

🕒 3–6 years (red)

✓ Cosimo Taurino (Patriiglione)

CABERNET BLENDS

Calabria

Relatively few Cabernet-dominated wines stand out, but Gravello and Montevetrano are exceptionally fine.

✓ Silvio Imperato (Montevetrano) • Librandi (Gravello)

CACC'E MMITTE DI LUCERA DOC

Apulia

The name of this full-bodied red *waggio*, which is made from seven grape varieties, loosely

means “knock it back” (*cacc'e* means “drink” and *mmitte* means “pour”), which aptly applies to this simple, easy-drinking red wine.

CAGLIARI DOC

Sardinia

Four varietals: Malvasia (a smooth, delicately scented red wine in dry, sweet, and *liquoroso* styles); Moscato (rich, succulently sweet white wines that may be fortified); Nasco (finely scented, delicate, dry and sweet white wines that can also be *liquoroso*); and Nuragus (a large production of dry, semisweet, and *frizzante* white wines from the Nuragus grape).

🕒 1–2 years

✓ Meloni

CAMPI FLEGREI DOC

Campania

Two generic blends: red (Piedirosso, Aglianico, and Sciascinoso) and white (Falanghina, Biancolella, and Coda del Volpe); plus one red-wine varietal: Piedirosso (dry or *passito* dry-to-sweet); and one dry white varietal Falanghina (still or *spumante*).

CAMPIDANO DI TERRALBA or TERRALBA DOC

Sardinia

Soft yet full-bodied reds from the Monastrell, known locally as Bovale.

CANNONAU DI SARDEGNA DOC

Sardinia

A DOC of variable quality that throws up the occasional gem, Cannonau, better known as the Grenache, encompasses dry, semisweet, or sweet red, *rosé*, and *liquoroso* styles.

CAPRI DOC

Campania

Easy-to-drink, dry white wines seldom seen beyond the Isle of Capri. The island's soil and climate suggests that these wines should be much finer, but the land for vines is scarce and expensive, encouraging growers to extract far too much from those vineyards that do exist.

CARIGNANO DEL SULCIS DOC

Sardinia

Promising red and *rosé* wines from the Carignan grape, to which may be added a little Monica, Pascale, and Alicante Bouschet.

🕒 1–4 years

✓ CS di Santadi (Riserva Rocca Rubia, Terre Brune)

CASTEL DEL MONTE DOC

Apulia

The region's best-known wine is named after the 13th-century castle built by Emperor Frederick von Hohenstaufen. With the exception of a red *riserva* made by Rivera and called Il Falcone (The Falcon), the wines are less lofty than the name of this DOC suggests. In addition to the generic red and *rosé*, which are made from Uva di Troia and Aglianico grapes, and the

basic dry white from Pampanuto and Chardonnay, there are two red varieties, Pinot Nero and Aglianico; four white varieties, Chardonnay, Pinot Bianco, Pinot Bianco da Pinot Nero, and Sauvignon; plus a rose, Aglianico.

🕒 2–6 years (red, but 8–20 years for Il Falcone)

✓ *Rivera* (especially Il Falcone and Terre al Monte)

CASTEL SAN LORENZO DOC

Campania

A relatively new DOC covering several communes in the province of Salerno, Castel San Lorenzo encompasses generic red and rosé (Barbera and Sangiovese), white (Trebiano and Malvasia), one red wine varietal (Barbera) and one sweet white varietal (Moscato, still or *spumante*).

CERASUOLO DI VITTORIA DOC

Sicily

Cherry-colored Nerello-Calabrese wines from the southeastern corner of Sicily.

✓ *Planeta*

CERDÈSER

Sicily

Red, white, and rosé wines produced in and around Cerda, close to Palermo.

CILENTO DOC

Campania

Vines struggle in the rocky vineyards of Cilento, where generic red and rosé are made from Aglianico, Piediroso, and Barbera, and generic white from Fiano, Trebbiano, Greco, and Malvasia. An Aglianico varietal also exists, but has yet to prove itself.

CIRÒ DOC

Calabria

Strong, alcoholic Gaglioppo-based red and rosé, and Greco-based dry white wines that rely too heavily on the Cirò name, which was famous in ancient times.

CONTESSA ENTELLINA DOC

Sicily

This new DOC encompasses vineyards in the commune of Contessa Entellina in the province of Palermo for a delicate dry white blend of Inzolia, Catarratto, Garganega, Chardonnay, Sauvignon, and Müller-Thurgau; and three dry white-wine varieties, Chardonnay, Greco (Garganega), and Sauvignon.

COPERTINO DOC

Apulia

This appellation is named after the town of Copertino, although the wines that qualify for this DOC can also come from five other

villages. These smooth, rich red wines and dry, finely scented rosés are made primarily from the Negroamaro grape with the possible addition of Malvasia Nera, Montepulciano, and Sangiovese.

🕒 2–5 years

✓ *C. S. di Copertino* (riserva)

CORVO

Sicily

The brand name for red, white, *spumante*, and fortified “Stravecchio di Sicilia” wines of Duca di Salaparuta, Corvo has no DOC but is probably the most famous wine in Sicily. The full, smooth, fruity red is by far the most successful and consistent of the range.

CREMOVO ZABAIONE VINO or CREMOVO ZABAIONE VINO AROMATIZZATO DOC

Sicily

See Marsala DOC.

DONNICI DOC

Calabria

Fruity, cherry-colored red and rosé wines (traditionally *chiaretto*) from Gaglioppo and Greco Nero grapes grown in the province of Cosenza. They are best drunk young.

ELORO DOC

Sicily

This appellation straddles the provinces of Ragusa and Siracusa, where a generic red and rosé (Calabrese, Frappato, and Pignatello) are produced and, if the blend contains at least 80 percent Calabrese, it may be called Pachino. These grapes are also vinified separately to produce three varietal wines, the Calabrese being sold under its local synonym Nero d'Avola.

ETNA DOC

Sicily

According to Homer, this is the wine that Ulysses used to intoxicate the Cyclops. There are three basic styles: a full red and fruity rosé from the Nerello grape, and a soft but bland dry white from Carricante and Catarratto with the possible addition of Trebbiano.

✓ *Benanti* (Pietramarina)

FALERNO DEL MASSICO DOC

Campania

This appellation celebrates Falernum, the wine so enjoyed in Ancient Rome, which was made in the northwest of Campania and Latium. The deep-colored, full-bodied, and rustically robust red generic is a blend of Aglianico and Piediroso with the possible addition of Primitivo and Barbera. The round, fruity dry white generic is, in fact, pure Falanghina. A red varietal Primitivo is also produced.

🕒 3–7 years (red) Upon purchase (white and rosé)

✓ *Villa Matilde • Michele Moio* (Primitivo)

FARO DOC

Sicily

Ruby-colored, medium-bodied but firmly flavored red wines from Nerello and Nocera grapes grown around Messina. Calabrese, Gaglioppo, and Sangiovese may also be used.

🕒 2–5 years

✓ *Bagni • Palari*

FIANO DI AVELLINO DOCG

Campania

Mastroberardino's Vignadora is the best wine in this unusual, but well above average, dry white wine DOCG, made from Fiano grapes grown in the hilly hinterland of Avellino.

🕒 1–3 years

✓ *Mastroberardino*

GIOIA DEL COLLE DOC

Apulia

For this large DOC in the province of Bari there are generic red and rosé blends (Primitivo, Montepulciano, Sangiovese, Negroamaro, and Malvasia Nera); a dry white (Trebiano and anything else that moves); and two varieties, a sweetish Primitivo and an intensely sweet Aleatico (which can be fortified).

GIRO DI CAGLIARI DOC

Sardinia

Smooth, alcoholic, dry and sweet red wines and dry and sweet fortified wines.

GRAGNANO DOC

Campania

See Penisola Sorrentina DOC.

GRAVINA DOC

Apulia

Dry or semisweet, blended white wines that may be still or *spumante*, made from Malvasia, Greco, and Bianco d'Alessano, with the possible addition of Bombino, Trebbiano, and Verdecia.

GRECO DI BIANCO DOC

Calabria

Made on the very tip of Calabria, around Bianco, from the Grechetto grape, known locally as Greco Bianco. With the exception of Umberto Ceratti's exceptional rendition, Greco di Bianco is a simple *passito* wine. Ceratti harvests tiny, already shriveled grapes and, apparently, plunges them into boiling water immediately after picking (to flash pasteurize the wine, which removes or reduces the need to use sulfur). His Greco di Bianco is deceptively strong, succulently sweet and smooth, with a vivacious bouquet, exuberant fruit, and a luscious silk finish.

🕒 3–5 years

✓ *Umberto Ceratti*

GRECO DI TUFO DOCG

Campania

Delicate, dry, and soft white wines that may sometimes be *spumante*, from the true Greco grown north of Avellino.

🕒 Upon purchase

✓ *Mastroberardino* (Vignadangelo)

GUARDIA SANFRAMONDI or GUARDIOLO DOC

Campania

Located in the hilly terrain of the Benvenuto, this DOC consists of a generic dry white (Malvasia and Falanghina plus up to 30 percent pick-and-mix), generic Sangiovese-based red and rosé, one dry white varietal (Falanghina), which may be *spumante*, and one red varietal (Aglianico).

ISCHIA DOC

Campania

Vinous, medium-bodied generic red (Guarnaccia and Piediroso, plus 20 percent pick-and-mix); a lightly aromatic, generic dry white (Forastera and Biancolella), which may be *spumante*; two dry white varietal wines (Biancolella and Forastera); and one red varietal (Piediroso), which can be either dry or *passito*.

🕒 2–4 years (red), upon purchase (white and rosé)

✓ *D'Ambrà*

LAMEZIA DOC

Calabria

Originally a one-wine DOC for a light, delicately fruity, but otherwise unexceptional blended red wine (Nerello, Gaglioppo, Greco Nero, and Marsigliana), Lamezia has now been expanded to include a generic, full dry white (Grechetto, Trebbiano, and Malvasia) and a white varietal called Greco, the local name for Grechetto. The light red has been split into red and rosé.

LETTERE DOC

Campania

See Penisola Sorrentina DOC.

LEVERANO DOC

Apulia

Alcoholic red wines and fresh, fruity rosés (Negroamaro with the possible addition of Sangiovese, Montepulciano, and Malvasia Nera), and soft, dry white wines (Malvasia plus Bombino and Trebbiano). Conti Zecca's elegant red Vigna del Sareceno stands out.

🕒 3–7 years (red)

✓ *Conti Zecca* (Vigna del Saraceno)

LIZZANO DOC

Apulia

Negroamaro-based red and rosé, still or *frizzante* generic wines, which may be boosted by the addition of Montepulciano, Sangiovese, Bombino Nero, Pinot Noir, and Malvasia Nera. The rosé can also be fully *spumante*, as can the generic white blend of Trebbiano and Chardonnay (with the possible addition of Malvasia, Sauvignon, and Bianco d'Alessano), which also comes in still or *frizzante* styles. There are two red varietal wines, Negroamaro and Malvasia Nera; and one rosé varietal, Negroamaro—all three in straightforward, dry still-wine styles.

LOCOROTONDO DOC

Apulia

Fresh, lightly fruity, dry white wines of improving quality from Verdeca and Bianco d'Alessano, with the possible addition of Fiano, Malvasia, and Bombino, made in still and *spumante* styles.

🕒 Upon purchase

✓ *C. S. di Locorotondo*

MALVASIA

Basilicata and Sardinia

This grape plays a respectable second fiddle to Moscato in the *vini da tavola* stakes. Usually sweet, sometimes fizzy. In Sardinia, the wines are mostly fortified and DOC, but Malvasia della Planargia is still *vino da tavola*, although many rank it as the finest in Sardinia.

✓ *Basilicata Fratelli d'Angelo • Paternosta Sardinia Gian Vittorio Naitana* (Vigna Giagonia, Vigna Murapiscados)

MALVASIA DELLE LIPARI DOC

Sicily

Sweet, aromatic, *passito* white wines.

🕒 2–5 years

✓ *Carlo Hauner*

MALVASIA DI BOSCA DOC

Sardinia

Rich, sweet and dry white wines, and sweet and dry *liquoroso* wines. Generally fuller-bodied than Malvasia di Cagliari.

MALVASIA DI CAGLIARI DOC

Sardinia

Rich, sweet or dry, white wines, and dry or sweet, *liquoroso* wines. They are lighter but finer and more elegant wines than Malvasia di Bosa and traditionally are drier.

MALVASIA NERA

Apulia

Dark-skinned Malvasia is commonly found in the Salento district, and traditionally complements the local Negroamaro grape, although it is sometimes made into a pure varietal wine, both as DOC and *vini da tavola*. Alone, this grape produces a vivid red wine with slightly aromatic fruit and a dry but velvety-smooth finish.

MANDROLISAI DOC

Sardinia

Red and rosé wines with a bitter aftertaste blended from Bovale (Monastrell), Cannonau (Grenache), and Monica.

MARSALA DOC

Sicily

This wine was conceived by John Woodhouse, who began shipping it in 1773. Its name is Arabic, deriving from *Marsab-el-Allab*, the old name of the port of Marsala. The grapes used include Grillo (the original Marsala variety and still considered the best), Catarratto, Pignatello, Garganega, Calabrese, Damaschino, Nerello, and Inzolia. The wine is fortified by the adding of neutral spirit and, where appropriate, sweetened with grape concentrate made locally. Marsala can be dry (*secco*), semisweet (*semi-secco*), or sweet (*dolce*); is further defined by color, gold (*oro*), amber (*ambra*), and red (*rubino*); and is made in four basic styles, *Fine*, *Superiore*, *Vergine*, and *Solera*.

Marsala Fine, the lowest category, is aged for just a year (not necessarily in wood) with at least 17 percent ABV. As Italian-wine expert David Gleave MW has put it, Marsala Fine is “usually anything but fine, being a cheap and rather nasty travesty of the name.” Marsala Superiore is aged for at least two years in wood (four years if *riserva*), with a minimum 18 percent ABV. Marsala Vergine is aged for at least five years in wood, or 10 if *stravecchio* or *riserva*, is only *secco* (thus no grape concentrate allowed), and must have a minimum 18 percent ABV. Marsala Solera is also aged for at least five years in wood, or 10 years if *stravecchio* or *riserva*, is only *secco* (thus no grape concentrate allowed), and must have a minimum of 18 percent ABV. Some historical abbreviations are still found on labels: IP (stands for Italy

Particular—Marsala Fine), LP (London Particular—Marsala Superiore), SOM (Superior Old Marsala—Marsala Superiore), GD (Garibaldi Dolce—Marsala Superiore). Flavored Marsala may be sold as Cremovo Zabaione Vino or Cremovo Zabaione Vino Aromatizzato (sickly sweet eggnog containing at least 80 percent Marsala wine, eggs, and a minimum of 200 grams of residual sugar per liter). Preparato con l'impiego di Vino Marsala (for other Marsala-based products containing not less than 60 percent Marsala wine), and you will find non-DOC Marsala-based concoctions with all sorts of flavorings (banana, chocolate, orange, etc.). I must confess that, except for rare old bottlings of Vergine or Solera, most Marsala leaves me cold and the flavored versions horrify me, but the best producers are well known.

🕒 Upon purchase

✓ *Cantina de Bartoli • Florio • Carlo Pellegrino*

MARTINA or MARTINA FRANCA DOC

Apulia

These dry white wines in still or *spumante* styles are very similar to those of Locorotondo.

MATINO DOC

Apulia

Dry, robust red and slightly vinous rosé wines made from Negroamaro with the possible addition of Malvasia Nera.

MELISSA DOC

Calabria

An appellation of full-bodied reds (Gaglioppo, Greco Nero, Grechetto, Trebbiano, and Malvasia) and crisp, dry whites (Grechetto, Trebbiano, and Malvasia).

MENFI

Sicily

Decent red and white *vini da tavola* are made in and around Menfi at the western end of the south coast of the island.

METAPONTUM

Basilicata

Basic red and white *vini da tavola* are produced from the Ionian coastal plain either side of the Basento River around Metaponto in the eastern corner of Basilicata.

MOSCATO

Basilicata and Calabria

In Basilicata, the two best wine producers of these *vini da tavola* believe in the potential of Moscato, always sweet and usually fully *spumante*, from the Mount Vulture area. It is also grown all over Calabria, but is more often made into a *passito* wine than a *spumante* one.

✓ *Basilicata Fratelli d'Angelo • Paternosta Calabria Guido Lojelo*

MOSCATO DI CAGLIARI DOC

Sardinia

See Cagliari DOC.

MOSCATO DI NOTO DOC

Sicily

Still, *spumante*, or fortified semisweet and sweet Moscato wines.

MOSCATO DI PANTELLERIA DOC

Sicily

Sicily's best still, *spumante*, and fortified semi-sweet and sweet Moscato are made on the island of Pantelleria, closer to Tunisia than to Sicily.

✓ *De Bartoli* (Passito Bukkuram) • *Cantine Florio* (Morsi di Luce) • *Salvatore Murana*

MOSCATO DI SIRACUSA DOC

Sicily

These sweet, smooth white wines are made from semi-*passito* grapes.

MOSCATO DI SORSO-SENNORI DOC

Sardinia

Sweet, rich, white Moscato and sweet, aromatic *liquoroso*. The wines are fuller than either Moscato di Cagliari or Moscato di Sardegna.

MOSCATO DI TRANI DOC

Apulia

Tiny production of luscious, ultrasmooth, sweet white Moscato wines, which may be fortified. These wines are high quality and distinctive.

☞ Upon purchase

✓ *Fratelli Nugnes*

NARDO DOC

Apulia

Cherry-red rosés from Negroamaro, with Malvasia Nera and Montepulciano permitted.

NASCO DI CAGLIARI DOC

Sardinia

See Cagliari DOC.

NEGROAMARO

Apulia

A productive grape, the Negroamaro makes dark, potentially bitter red wines that used to be sold in bulk for blending, but are starting to acquire their own reputation. It makes a good rosé under the Alezio DOC, but unless vinified with care, the red wine it produces tends to be too alcoholic, coarse, and bitter, although Calò's *barrique*-aged Vigna Spano and Vallone's *passito* Graticcia are *vino da tavola* exceptions.

✓ *Michele Calò* (Vigna Spano) • *Vallone* (Graticcia)

NEGROAMARO-MALVASIA NERO

Apulia

The traditional red-wine blend of Salento.

✓ *Cosimo Taurino* (Notarpanaro)

NURAGUS DI CAGLIARI DOC

Sardinia

See Cagliari DOC.

ORTA NOVA DOC

Apulia

These are full-bodied red and dry rosé Sangiovese-based wines from the villages of Orta Nova and Ortona in the province of Foggia.

OSTUNI DOC

Apulia

A delicate, dry white made from Impigno and Francavidda and a light-bodied red from the

THE MARSALA PLAINS, SICILY

Vines on the hot, arid plains of western Sicily grow on a low-yielding soil called sciari, producing the finest Marsala, while farther east, but still within the DOC, the soil is more fertile and the wines are of lower quality.

Cinsault grape, known locally as Ottavianello, with the possible addition of Negroamaro, Notar Domenico, Malvasia Nera, and Susumaniello.

OTTAVIANELLO DOC

Apulia

See Ostuni DOC.

PELLARO

Campania

Ottavianello DOC produces powerful Alicante-based *chiaretto* wines from just south of Reggio di Calabria on the very toe of Italy.

PENISOLA SORRENTINA DOC

Campania

This is a relatively new DOC for former *vini da tavola* from the Sorrento peninsula, including a generic red (Piedirosso with the possible addition of Sciascinoso, Aglianico, and other unspecified nonaromatic varieties), which can also be made in a purple-colored *frizzante* style, and a dry white generic (Falanghina with the possible addition of Biancolella, Greco, and other nonaromatic varieties). If the subzones Sorrento (for white and still red), Gragnano, or Lettere (red *frizzante*) appear on the label, the wines must conform to higher standards, including extraripe grapes.

PIEDIROSSO

Campania

An ancient variety identified by Pliny, Piedirosso is usually blended with more noble varieties, but has been produced as a varietal wine by D'Ambra on the island of Ischia, where the grape is commonly known as Per'e Palummo.

POLLINO DOC

Calabria

Full, fruity, *chiaretto* wines from Gaglioppo, Greco Nero, Malvasia, and Guarnaccia.

PRIMITIVO

Apulia

Now proven to be the Zinfandel, although it generally makes a wine that has nowhere near Zinfandel's character, let alone its quality.

PRIMITIVO DI MANDURIA DOC

Apulia

Dry to semisweet, full-bodied red wines which may also be fortified and naturally sweet, and fortified and dry. Until I tasted Giordano's 1993 vintage in 1996, no Primitivo had shown any class.

☞ 3–10 years (Giordano as from 1993)

✓ *Giordano* • *Vinicola Savese*

ROSSO BARLETTA DOC

Apulia

Medium-bodied, ruby-colored, everyday-quality red wines made from Uva di Troia with the possible addition of Montepulciano, Sangiovese, and a small amount of Malbec. Most Rosso Barletta is consumed locally when very young.

ROSSO CANOSA DOC

Apulia

Vinous, slightly tannic red wines made from Uva di Troia with the possible addition of Montepulciano and Sangiovese.

ROSSO DI CERIGNOLA DOC

Apulia

Rare, rustic reds from Negroamaro and Uva di Troia with the possible addition of Sangiovese, Barbera, Montepulciano, Malbec, and Trebbiano.

SALICE SALENTINO DOC

Apulia

Full-bodied reds and smooth, alcoholic rosés from Negroamaro with the possible addition of Malvasia Nera, and, more recently, two dry white wines: a Chardonnay, which may be *frizzante*, and a Pinot Bianco, which may be *spumante*; plus a sweet red Aleatico, which can be fortified. The Negroamaro-based red wines are still, however, the best wines in this DOC.

☞ 3–7 years

✓ *Francesco Candido* • *Leone de Castris* • *Cosimo Taurino* • *Vallone*

SAN SEVERO DOC

Apulia

Dry, vinous red and rosé wines made from Montepulciano and Sangiovese, and dry, fresh whites from Bombino and Trebbiano, with the possible addition of Malvasia and Verdeca.

SAN VITO DI LUZZI DOC

Calabria

A new DOC covering generic red, rosé (Gaglioppo and Malvasia with the possible addition of Greco Nero and Sangiovese), and dry white (Malvasia, Grechetto, and Trebbiano) wines produced in and near the village of Luzzi in the province of Coneseza.

SANT'AGATA DEI GOTI DOC

Campania

Relatively new DOC for generic red, dry white, and rosé from Aglianico and Piediroso (thus the white is a *blanc de noirs*); two red wine varietals, Aglianico and Piediroso; and two white varietals, Greco and Falanghina.

SANT'ANNA DI ISOLA CAPO RIZZUTO DOC

Calabria

Vinous red and rosé wines from Gaglioppo, Greco Nero, and Guarnaccia grapes grown in the Ionian hills.

SARDEGNA DOC

Sardinia

This DOC is for wines made from grapes grown throughout the island, although in practice they are generally restricted to traditional areas. For Moscato, vines must not be grown above 1,476 feet (450 meters). Moscato di Sardegna is sweet and surprisingly delicate, usually in a natural still-wine style, although *spumante* is produced and the subappellations Tempio Pausania, Tempio, and Gallura are reserved for sparkling wines in the Gallura area. Monica di Sardegna is a fragrant red wine that may be dry or sweet, still or *frizzante*, but unlike Monica di Cagliari, is never fortified. Vermentino di Sardegna is a light-bodied, soft, clean, unexciting dry white wine that all too often has its flavors washed out by cool fermentation techniques.

SAVUTO DOC

Calabria

Fresh, fruity red or rosé wines from Gaglioppo, Greco Nero, Nerello, Sangiovese, Malvasia, and Pecorino grapes grown in Catanzaro province.

☞ 1–3 years

✓ *Odoardi* (Vigna Vecchia)

SCAVIGNA DOC

Calabria

Generic red, rosé (Gaglioppo, Nerello, and Aglianico) and a fruity dry white (Trebbiano, Chardonnay, Grechetto, and Malvasia) from the communes of Nocera Terinese and Falerna.

☞ 1–3 years

✓ *Abbazia Sant'Anastasia* (Passomaggio)

SICILIA IGT

Sicily

All—not just most—of the very best wines produced on this island are sold under this IGT, and considering Sicily's reputation up to now, the prices that some of these wines achieve

should be an object lesson to all the odd, obscure IGTs on the mainland.

✓ *Cottanera* (Sole di Sesta) • *Corvo* (Duca Enrico) • *Cusumano* (Noà, Sagana) • *Fatascià* (Almanera) • *Feuda Principi di Butera* (Deliella) • *Firriato* (Camalot, Harmonium) • *Morgante* (Don Antonio), *Planeta* (Burdese, Cometa, Merlot, Syrah), *Santa Anastasia* (Litra) • *Tasca d'Almerita* (Contea di Sciafani, Cabernet Sauvignon), *Tenute Rapitala* (Hugonis, Solinero) • *Trapani* (Forti Terre Cabernet Sauvignon)

SOLOPACA DOC

Campania

Smooth generic red and rosé (Sangiovese and Aglianico with the possible addition of Piediroso, Sciascinoso, and up to 30 percent pick-and-mix), generic dry white (Trebbiano, Falanghina, Malvasia, and Coda di Volpe), one red wine varietal (Aglianico) and one white varietal (Falanghina—still or *spumante*). Solopaca comes from the Calore Valley.

☞ 1–4 years

✓ *Antica Masseria Venditti*

SORRENTO DOC

Campania

See Penisola Sorrentina DOC.

SQUINZANO DOC

Apulia

Full-bodied red wines and lightly scented rosé wines from Negroamaro with the possible addition of Sangiovese and Malvasia Nera, grown in Squinzano and the surrounding communes.

☞ 2–4 years (red), upon purchase (rosé)

✓ *Villa Valletta*

TABURNO DOCG

Campania

This DOC started out life as Aglianico del Taburno in red and rosé, but it is one of those DOCs that just grows. It now includes a generic red (Sangiovese and Aglianico); white (Trebbiano and Falanghina, plus 30 percent pick-and-mix); a *spumante* (Coda di Volpe and Falanghina, plus 40 percent pick-and-mix); three white wine varietals (Falanghina, Greco, and Coda di Volpe); and one red (Piediroso).

TAURASI DOCG

Campania

Red wines made primarily from Aglianico grapes (up to 15 percent in total of Barbera, Piediroso, and Sangiovese may be added) that are grown in Taurasi and 16 nearby villages. It was elevated to DOCG status in 1993. Along with Basilicata's thicker tasting Aglianico del Vulture, it is one of the country's greatest wines from this underrated grape variety, in an equally age-worthy style. Mastroberardino's *riserva* excels.

☞ 5–10 years (some may last for as long as 20)

✓ *Mastroberardino* • *Giovanni Struzziero* • *Antonio Caggiano*

TERRALBA DOC

Sardinia

See Campidano di Terralba DOC.

VERMENTINO DI GALLURA DOCG

Sardinia

Despite cool fermentation, this is the best Vermentino Sardinia offers, the hilly *terroir* of Gallura producing intense flavors. Although this wine was elevated to DOCG status in 1997, it could be much better quality and cheaper to make if fermented at slightly higher temperatures.

☞ 1–2 years

✓ *Tenuta di Capichera* • *C. S. di Gallura* • *C. S. del Vermentino*

VERNACCIA DI ORISTANO DOC

Sardinia

The DOC of Vernaccia di Oristano makes dry and lightly bitter white wines, which are sherry-like in style. Also produced are *liquoroso* sweet and dry wines.

☞ Upon purchase

✓ *Contini*

VESUVIO DOC

Campania

Restricted to vines on the volcanic slopes of Mount Vesuvius, a generic dry white (Coda di Volpe and Verdeca grapes, with the possible addition of Falanghina and Greco), and a generic rosé (Piediroso and Sciascinoso with the possible addition of Aglianico) are produced by Vesuvio DOC. Those that are labeled Lacryma (or Lacrima) Christi del Vesuvio are usually dry white wines, but less commonly they may also be *spumante* or sweet and fortified.

NEW IGT WINES

The following IGT wines were agreed at the end of 1996, but we have yet to see what style, quality, or consistency each one will establish:

✓ **Apulia** *Daunia* • *Murgia* • *Puglia* • *Salento* • *Tarantino* • *Valle d'Itria*

Basilicata and Calabria *Arghilli* • *Bivongi* • *Calabria* • *Condoleo* • *Costa Viola* • *Esaro* • *Lipuda* • *Locride* • *Palizzi* • *Scilla* • *Val di Neto* • *Valdamato* • *Valle del Crati*

Campania *Colli di Limvara* • *Isola dei Nuraghi* • *Marmilla* • *Nurra* • *Ogliastro* • *Parteolla* • *Planargia* • *Provincia di Nuoro* • *Romangia* • *Sibiola* • *Tbarros* • *Trexenta* • *Valle del Tirso*

Sicily *Cammaro* • *Colli Ercini* • *Della Nivolelli* • *Fontanarossa di Cerda* • *Salemi* • *Salina* • *Sciaccia* • *Valle Belice*

The WINES of
SPAIN

SPAIN CONTINUES TO OVERPERFORM, providing more wines of real interest and quality than the most optimistic critic could reasonably hope for. Why do I say that? For a start, as indigenous grape varieties go, Tempranillo is Spain's only class act. Furthermore, although most Spanish vineyards are not totally lacking in potential (otherwise we would not have witnessed the revolution in Spanish wines that we have), there are no really world-class *terroirs* to be found beyond parts of Rioja, Penedés, and the Ribera del Duero. Yet the number of truly fine Spanish wines continues to increase, with at least as much excitement at the lower end of the quality scale as at the higher end. As recently as the 1980s, with the general exception of Rioja, most Spanish wines were either oxidized or oversulfured. Never has an established, traditional winemaking nation got its act together so quickly and thoroughly as Spain.

FALL VINES AT LAROCO, VALDEORRAS
*Until Rías Baixas came on the scene, Laroco was
Galicia's up-and-coming white-wine district.*

SPAIN

In the early 1970s, Spanish wines had such a bad reputation that, by comparison, Italian wines seemed preferable. By the late 1980s, however, the wines of Spain were being taken seriously, whereas those of Italy generally were not.

THAT SPAIN COULD ACHIEVE such a swift turnaround in the quality of its wines can be put down to its efforts to get out of the bulk wine market. The Spanish did not stop selling bulk wine altogether, but prevented this low-quality product from dominating exports. By its very volume, bulk wine dilutes and downgrades a country's winemaking reputation, and in the 1970s Spanish bulk wine was so bad that the country's worsening image threatened to undermine its share of global markets just as the culture of wine drinking was developing in the US, the UK, and other potentially lucrative markets. It was not as if there was a

CONSEJO REGULADOR STAMPS

Every current DO and DOCa possesses its own stamp, which usually appears somewhere on the label, offering a guarantee of authenticity.

SPANISH LABEL LANGUAGE

AÑEJO Aged for 12 months in cask or bottle

BLANCO White

BODEGA Literally a "wine cellar," commonly used as part of the name of a wine firm

CAVA A sparkling DO wine produced using the traditional method

CLARETE Midway between light red and dark rosé, synonymous with *tintillo*

COSECHA Means vintage, and indicates that a minimum of 85 percent of a wine thus labeled is produced in the year marked

COSECHERO A fresh, fruity, "new" or nouveau style wine, synonymous with *nuevo* and *vino joven*, and usually a *vino de mesa*

CRiado Y EMBOTELLADO POR Blended and bottled by

CRianza A red *crianza* must be aged for a minimum of 2 years (of which at least 6 months must be in oak); a white or rosé *crianza* requires 1 year of aging, with at least 6 months in oak

CRianza CORTA Wines that have less than the legal minimum cask-age for any cask-age designation, synonymous with *sin crianza*.

DENOMINACIÓN DE ORIGEN (DO) Wine from a controlled-quality wine region

DENOMINACIÓN DE ORIGEN CALIFICADA (DOCA) The highest official classification, above *Denominación de Origen*

DOBLE PASTA This term refers to red wines that have been macerated with double the normal proportion of grape skins to juice during fermentation. Such wines are opaque, with an intense color, and may be sold in the bottle or for blending.

DULCE Sweet

EMBOTELLADO POR Bottled by

ESPUMOSO A sparkling wine made by any method

GENEROSO A fortified or dessert wine

GRAN RESERVA Wines from the very best years that are considered capable of even further aging. For red wines, the minimum is 5 years, of which at least 18 months must be in oak. White and rosé *gran reservas* require 4 years' aging, of which at least 6 months must be in oak

NOBLE Aged for 2 years in cask or bottle

NUEVO A fresh, fruity, "new" or nouveau style wine, synonymous with *cosechero* and *vino joven*, and usually a *vino de mesa*

RESERVA Wines from good years that are considered capable of even further aging. For red wines, the minimum amount of aging is 3 years, of which at least 1 year must be in oak. White and rosé *reservas* require 2 years' aging, of which at least 6 months must be in oak

ROSADO Rosé

SECO Dry

SEMIDULCE Medium-sweet

SIN CRianza A wine without wood-aging, including all cool-fermented, early-bottled white and most rosé wines. The term *sin crianza* is falling out of use, in favor of *vino joven*

TINTILLO Midway between light red and dark rosé, synonymous with *clarete*

TINTO Red

VIEJO A term that literally means "old." The use of this term was not controlled by law until 2005,

since which date a wine must be aged for at least 3 years

VIÑA OR VIÑEDO Literally "vineyard," but often merely part of a brand name, and nothing to do with a specific vineyard

VINO COMARCAL A regional wine, above *Vino de mesa* and below *Vino de la tierra*

VINO DE AGUJA A semi-sparkling, or *pétillant*, wine

VINO DE CALIDAD CON INDICACIÓN

GEOGRÁFICA A stepping stone between *Vino de la tierra* and *Denominación de Origen*

VINO DE LA TIERRA Literally "country wine"

VINO DE MESA Literally "table wine"; likely to be seen on the labels of very ordinary, inexpensive wines

VINO DE PASTO An ordinary, inexpensive, and often light style of wine

VINO JOVEN Wine made to be drunk within the year. There are moves to replace the term *sin crianza* with *vino joven*, but while wines in both categories must be without any wood-aging, some *sin crianza* wines are made to age well in bottle, unlike *vino joven*

SPAIN, see also Canary Islands, p.304
 The south of Spain has long been famed for its sherry, but the last 20 years have seen amazing progress in still and sparkling nonfortified, bottled wines.

meeting at which the entire Spanish wine industry took a vote to change things, but there must have been some sort of industry-wide determination to improve quality because the situation was reversed so quickly. Spain's reputation leapfrogged Italy's, despite having much less going for it in terms of native grape varieties and *terroirs*, establishing the country as one of the best-value sources in Europe.

ANCIENT ORIGINS

Vines were first planted in Spain c.1100 BC around Cádiz by, it is believed, the Phoenicians. The earliest wines were by all accounts rich, sweet, and heavy, the precursors of modern-day sherry. However, from the start of the 8th century until the end of the 15th, southern Spain was under the rule of the Moors, and being Mohammedans, wine production was not a priority. This is not to say that the Moors never drank wine; indeed, Al-Motamid, the last Moorish king of Seville, enjoyed wine so much that he publicly

mocked anyone who drank water. The Moors also enjoyed the grape as a fruit and for its fresh, unfermented juice, but under a theoretically abstemious rule, winemaking stagnated. So, while Spain can claim a 3,000-year history of wine, the diversity of its wine areas and styles did not commence until the 1490s, just 30 years before the Spanish planted the first vines in the Americas. Some parts of the Old and New Worlds are much closer in age, in terms of winemaking, than these terms imply.

SPAIN'S BEST WINES AND ITS APPELLATION SYSTEM

Vega Sicilia in the Ribera del Duero was once definitively Spain's most expensive wine, leading many to believe that it must be Spain's greatest. Others can now lay equal claim to be the most expensive and greatest of Spanish wines (Clos l'Ermita, Dominio de Pingus, and Cirsión are likely candidates), and many more are equal in quality if not quite as ridiculously priced, including

Pesquera, Rioja (Contino, Barón de Ley, Muga Prado Enea, Murrieta Castillo Ygay Gran Reserva), Penedés (Torres and Jean León), and even some nonappellation wines such as Marqués de Griñón.

The *Denominación de Origen* (DO) system is Spain's equivalent of the French *Appellation d'Origine Contrôlée* (AOC) or Italian *Denominazione di Origine Controllata* (DOC) systems. The only higher Spanish classification is *Denominación de Origen Calificada* (DOCa), and Rioja remains the only recipient of this superior status since its inception in 1981, although other high-quality wines may be promoted to DOCa in the future. Ribera del Duero, Navarra, Penedés, and Cava all spring to mind as candidates for such promotion. If there is a lesson the Spanish could learn from Italy, it is not to overlook outstanding nonappellation wines such as Marqués de Griñón's Cabernet Sauvignon and Syrah from south of Madrid. Indisputably two of Spain's great wines, they should jump from DO straight to DOCa status, if Spain's regime is to avoid the same fate as Italy's, whose best *vini da tavola* were forced to build up reputations at the expense of the official system.

TRADITIONAL VERSUS MODERN STYLES

It used to be possible to speak of new-wave Spanish wines, as the tradition had been to leave wines in oak for longer than most modern winemakers consider wise and a younger generation of winemakers reacted by producing wines that were as fresh, clean, and unoaked as possible. However, although the old style for reds was dried-out and that for whites oxidized, the new style was so clean, it was clinical, and was no great improvement as such. The tendency now is to talk of modern style rather than new-wave, as the wines are much fruitier and the use of oak is not so much avoided, as restrained, with French casks more likely than American, and fermented rather than aged.

RECENT SPANISH VINTAGES

2003 It might seem odd that Spain's baking-hot south fared better than the north of the country in this sweltering hot drought year, but as others have pointed out, the vineyards down there are prepared for the heat.

2002 Variable quality, mostly average to poor, with somewhat better quality in the south.

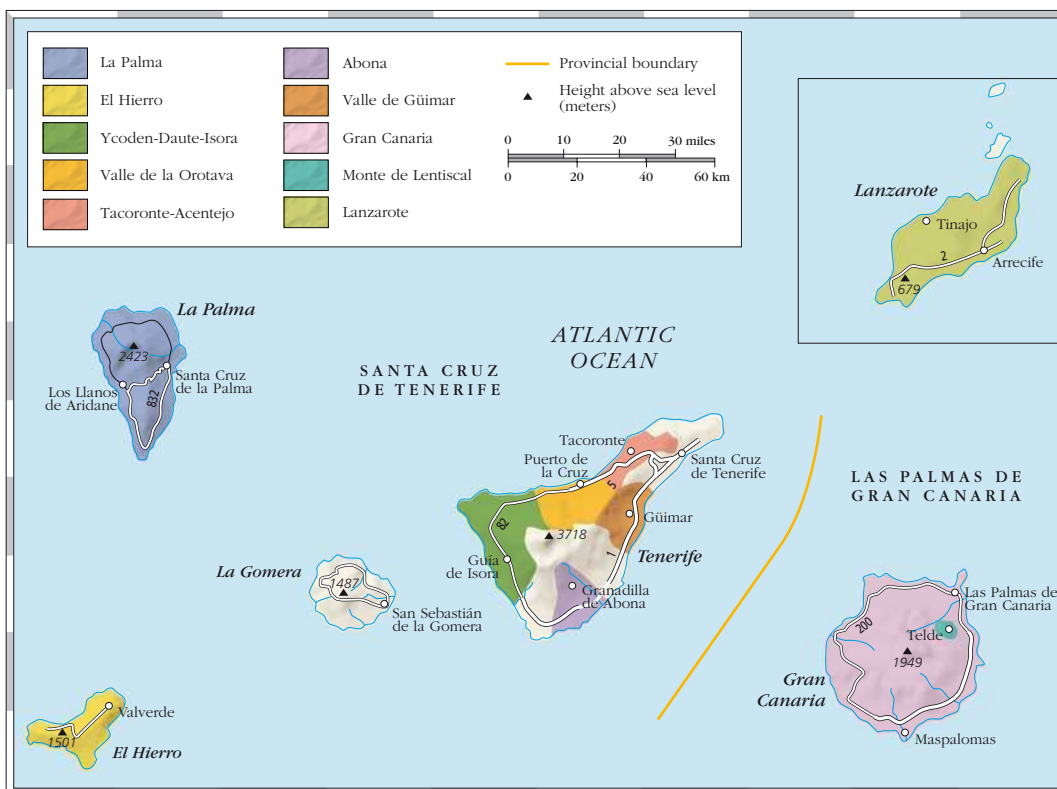

2001 Brilliant quality across the country and throughout the styles.

2000 Variable quality; best in Penedès, worst in Rioja.

1999 An unexciting year, most of which should have been consumed by now.

THE HILLTOP TOWN OF LAGUARDIA
Set against the majestic backdrop of the Sierra de Cantabria is the hilltop town of Laguardia, which boasts some of the finest vineyards of the Rioja Alava.

SAMPLING SHERRIES USING A VENENCIA
The development of a cask of sherry is of crucial importance in determining its eventual style.

CANARY ISLANDS
The first of these appellations was established in 1992, but "Canary Sack" was famous in Shakespeare's time.

APPELLATIONS BELOW DENOMINACIÓN DE ORIGEN

A baffling oddity in Spain's wine regime is the hierarchy of country-wine classifications, all of which are similar to the French *vin de pays* appellation. *Vino de la tierra* (VdT) literally means "country wine," while *vino comarcal* (VC) means "local wine" and comes from a larger area, effectively adding

ABANILLA VDLT

Murcia This flat, dry area has a scattering of vineyards whose wines have traditionally been blended with others in the Murcia region.

ALJARAFE VC

Andalucía These fortified wines are effectively an extension of the Condado de Huelva appellation.

ALTO JILOCA VC

Aragón Made mainly from Garnacha and Macabéo grapes, these wines were formerly sold with those of Daroca under the Alto Jiloca-Daroca appellation.

ANOIA VC

Catalonia Mostly soft, bland rosé wines from the Sumoll grape, as the whites are usually sold in bulk to Cava producers in Penedés.

BAGES VDLT

Catalonia Formerly the *vino comarcal* Artés, this area of Barcelona changed its appellation to Bages when it was upgraded to Catalonia's only *vino de la tierra*. Bages VdLT is now the DO Pla de Bages, although vintages of both are still available.

BAJO ARAGON VDLT

Aragón These wines are mostly *tinto* or *blanco* from red and white Garnacha grapes, although a fair amount of Macabéo, Mazuelo, and even Cabernet Sauvignon grow in this very large area.

BAJO-EBROE-MONTSIA VC

Catalonia Meseguera, known locally as Exquixagos, is the widest-planted grape variety in this area.

BENAVENTE VC

Castilla-León This region was once quite famous for its *pétillant* rosé, but has yet to reestablish its historical reputation.

BENIARRÉS VC

Valencia This area produces robust, alcoholic reds and sweet Moscatel from Alicante.

BETANZOS VC

Galicia A small amount of crisp, light-bodied, "Vinho Verde"-style wines are produced here.

CADIZ VDLT

Andalucía These are light, white table wines of Jerez, pioneered and promoted by Barbadiño—they are fresh, but not special.

CAMPO DE CARTAGENA VDLT

Murcia Mostly oxidized whites, plus some rustic reds, although quality is apparently improving.

CAÑAMERO VDLT

Extremadura These rustic whites are produced in the foothills of the Sierra de Guadalupe. Now one of the six subregions of the DO Ribera del Guadiana, although some

producers refused to join the DO and are still labeling their wines as Cañamero VdLT.

CASTILLA VDLT

Castilla-La Mancha This VdLT was inaugurated in 1999 after lobbying by "maverick" winemakers in Castilla-La Mancha, headed by Carlos Falcó. It is a "Vin de Pays d'Oc"-type classification allowing people to make the wines they want with minimal regulation throughout a vast region.

CEBREROS VDLT

Castilla-León A good source of cheap, fruity wines made from the Garnacha grape. Destined to achieve DO status.

CONCA DE TREMP VC

Catalonia A once-famous wine area at the foot of the Pyrenees, Conca de Tremp has a warmer microclimate than surrounding areas and could produce some interesting wines.

CONTRAVIESA-ALPUJARRA VDLT

Andalucía These rustic, fortified wines are from Granada and used to be called Costa-Albondón.

DAROCA VC

Aragón Made mainly from Garnacha and Macabéo grapes, these wines were formerly sold with those of Alto Jiloca.

FERMOSELLE-ARRIBES DEL DUERO VDLT

Castilla-León This is a large but shrinking viticultural area in which one of its secondary grape varieties, Juan García, could prove to be the most interesting. Destined to become the Arribes del Duero DO.

GALVEZ VDLT

Castilla-La Mancha Grape varieties in this large area southwest of Toledo are Tempranillo and Garnacha.

GRAN CANARIA-EL MONTE VDLT

Canary Islands These wines are made from the Negra Común grape grown on Gran Canaria. Recently promoted to DO status under the appellation of Monte Lentiscal, but vintages of both are still available.

GRANDES PAGOS DE CASTILLA

Castilla-La Mancha & Castilla-León Literally meaning "Great Domains of Castile," this is a private designation utilized by an important group of producers throughout both parts of Castile. The wines they will make under this banner could be DO, VdLT, or without regulations, but the corporate designation will take pride of place. The founding members include Mariano García, formerly of Vega Sicilia, plus various local government dignitaries, and the wine writer Victor de la Serna. The president is Carlos Falcó. One to watch.

regional status to a *vino de mesa*. A new appellation called *Vino de Calidad con Indicación Geográfica* (VCIG) has been introduced for wines that aspire to *Denominación de Origen* (DO) and is thus seen as a stepping stone to it, making VCIG similar to the French *Vin Délimité de Qualité Supérieure*.

LA GOMERA VDLT

Canary Islands Wines made from Forastera and Palomino grapes grown on the steep hillsides of La Gomera.

LA RIBERA DEL ARLANZA VC

Castilla-León This is a declining viticultural area, but high-altitude vineyards growing Tempranillo vines show potential.

LA SIERRA DE SALAMANCA VC

Castilla-León This area has potential, but some 70 percent of its shallow granitic terraces overlooking the Alagón River are planted with Rufete, a high-yielding, low-quality Portuguese grape.

LAUJAR VC

Andalucía These are mostly rosé wines from an area better suited to the production of table grapes.

LOPERA VC

Andalucía These are unfortified Pedro Ximénez wines, sold in bulk.

LOS PALACIOS VC

Andalucía These wines are mostly *mistela* (a combination of unfermented grape juice and alcohol) made from the Mollar grape, or light, attenuated, white wines from Airén grapes.

MANCHUELA VDLT

Castilla-La Mancha These are effectively the lesser wines produced in the DO areas of Jumilla, La Mancha, and Utiel-Requena. This is now a DO, but vintages of both are still available.

MATANEGRA VDLT

Extremadura A very large area, Matanegra produces rather lackluster whites, but interesting Tempranillo-based reds.

MONTANCHEZ VDLT

Extremadura This is a sizeable area in the province of Cáceres, producing rustic reds and whites from a mixture of varieties.

MUNIESA VC

Aragón This area is planted mostly with Garnacha, and the wines tend to be dark and tough.

PLA I LLEVANT DE MALLORCA VDLT

Balearic Islands Mallorca is seeking to replicate the fame of Majorca's Binissalem, which itself is but local. This is now a DO, although vintages of both are still available.

POZOHONDO VDLT

Castilla-La Mancha The reds are made from Monastrell grapes, the whites from Airén. They have yet to achieve any reputation.

RIBEIRA DO ULLA VC

Galicia Albarella (*syn.* Albarello) is supposedly the best varietal to look for here.

RIBERA ALTA DEL GUADIANA VDLT

Extremadura There is promising potential here from both indigenous and foreign grape varieties.

SACEDÓN-MONDÉJAR VDLT

Castilla-La Mancha An area southwest of Madrid producing mostly young, Tempranillo-based reds that are deep in color and often sold in bulk. The area is also called Mondéjar-Sacedón. This is now the DO Mondéjar, although vintages of both are still available.

SAN MATEO VC

Valencia No reputation, not encountered, and no connection with the San Mateo festival in Rioja.

SIERRA DE ALCARAZ VDLT

Castilla-La Mancha No reputation, not encountered, but I hear that this area is starting to show some serious promise, mainly through Manuel Manzanque, and could be a candidate for DO.

TIERRA BAJA DE ARAGON VDLT

Aragón These rough and ready Garnacha-dominated reds could well be improved over the next few years through increased cultivation of Tempranillo and Cabernet Sauvignon.

TIERRA DE BARROS VDLT

Extremadura Bodegas Invidia is demonstrating this area's potential for inexpensive fruity reds.

TIERRA DEL VINO DE ZAMORA VDLT

Castilla-León This traditional winegrowing area between Toro and Zamora is best known for its Tempranillo-based reds.

VALDEJALÓN VDLT

Aragón This has a similar history to that of Calatayud, but lags behind and has not quite the same potential. This VdLT is about to become a DO.

VALDEVIMBRE-LOS OTEROS VDLT

Castilla-León Of all the VdLTs in Castilla-León, this area holds the most promise. Rocky-clay terraces either side of the Elsa River are planted with the Prieto Picudo grape, which produces wines that are similar to Tempranillo, but without the color. They are traditionally blended to good effect with Garnacha and the underrated Mencía grape.

VALLE DEL CINCA

Aragón Exciting new area being developed by Codorníu's high-tech Naviana winery and estate.

VALLE DEL MIÑO VDLT

Galicia These wines used to be sold as Ribeira del Sil prior to the best vineyards receiving DO status, while the remaining areas were relegated to this *vino de la tierra*.

THE APPELLATIONS OF SPAIN

Note Regions or provinces in which appellations are located are given in bold beneath each heading. "DO" is short for *Denominación de Origen*. A synonym for a particular grape variety is indicated by "syn."

ABONA DO

Canary Islands

This new appellation was established in 1996 for white wines made in the south of Tenerife, where the vines are grown on terraces that are also planted with potatoes. Before they gained DO status, these wines were sold under the names of Granadilla, San Miguel, and Vilaflor.

☼ Listán, Malvasia

✓ *Viña Peraza*

ALELLA DO

Catalonia

This is a tiny, predominantly white appellation just north of Barcelona, where grapes are traditionally grown on windy granite hills, but due to urban development the DO was extended in 1989 into the colder, limestone vallès of the Cordillera Catalana. The red wines of Alella have good color, medium body, and a soft, fruity flavor. White and *rosado* are pale-colored, fresh, and delicate, with good acidity when made with grapes from the best north-facing slopes.

☼ Chardonnay, Chenin Blanc, Garnacha, Garnacha Blanca, Garnacha Peluda, Pansá Rosada, Tempranillo, Xarel-lo

☞ 1–5 years (red), 1–2 years (white and *rosado*), 1–4 years (sweet)

✓ *Alta Alella Chardonnay* • *Alellasol* • *Marfil* • *Marqués de Alella*

ALICANTE DO

Valencia

These mild-climate red, white, and *rosado* wines are grown on dark, limey soil in the hills behind Alicante. The red wines are naturally deep in color and, when made in a *doble pasta* style, they can be ink-black and astringent, but younger, fruitier styles are emerging, as indeed they are among *rosados* and whites. Fortified Moscatels from this region are light and refreshing. A fortified wine of local repute called Fondillón is made from Monastrell grapes in a tawny port style.

☼ Airén, Bobal, Garnacha, Garnacha Tinta, Meseguera, Moscatel Romano, Monastrell, Planta Fina, Tempranillo, Viura

☞ 6–12 years (reds)

✓ *Enrique Mendoza* • *Hijo de Luís García Poveda* (Costa Blanca)

ALMANSA DO

Castilla-La Mancha

This red and *rosado* appellation, which lies north of Jumilla and Yecla, bridges the heights of the central plains of La Mancha and the lowlands of Valencia. The red wines produced here are full-bodied and richly colored, with the best examples being quite smooth and fruity. Good examples of *rosado* can be fruity and clean.

☼ Airén, Garnacha, Meseguera, Monastrell, Tempranillo

☞ 3–10 years (red), 1–3 years (*rosado*)

✓ *Alfonso Abellan* • *Carrion* • *Piqueras*

AMPURDAN-COSTA BRAVA DO

Catalonia

Lying at the foot of the narrowest section of the Pyrenees, this is the closest Spanish wine appellation to France. Most of the production is *rosado* and aimed at tourists, but the reds are much better, having a fairly deep, cherry-red color, medium to full body, and a crisp, plummy flavor. Whites are fruity and may be off-dry or slightly sweet, with a pale, often greenish-tinged color, and are sometimes *pétillant* (lightly sparkling).

☼ Cariñena, Garnacha, Garnacha Blanca, Viura

☞ 2–5 years (red), 9–18 months (white and *rosado*)

✓ *Cavas de Ampurdán* • *Convivosa* • *Oliveda*

BIERZO DO

Castilla-León

One of the more exciting of Spain's less traditional DOs, Bierzo includes red, white, and *rosado* wines. Young reds stand out, being made from a minimum of 70 percent Mencía, an underrated variety capable of attractively aromatic wines.

☼ Doña Blanca, Garnacha, Godello, Malvasía, Mencía, Palomino

☞ 1–4 years (red), 9–18 months (white and *rosado*)

✓ *Bodegas C. A. del Bierzo* • *Bodegas Palacio de Arganza* (non-DO wines) • *Pérez Caramés* • *Casa Valdaiga*

BINISALEM DO

Balearic Islands

This appellation owes its existence primarily to just one man, José Ferrer, but there are at least two other producers of Majorca's best-known wine who are worth searching out. The white and *rosado* are simple, but the reds are slightly more serious and show some potential.

☼ A minimum of 50% Manto Negro (for reds) or 70% Moll for whites, plus Callet, Monastrell, Parellada, Tempranillo, and Viura

☞ Upon purchase

✓ *José L Ferrer* • *Jaume Mesquida* • *Miguel Oliver*

BULLAS DO

Murcia

This is a large region just south of Jumilla where the soil is so poor that, aside from vines, only olives and almonds can survive. The young red wines here are made primarily from Monastrell grapes and seem to have the best potential, but white and *rosado* wines are also allowed. Bullas is, however, a new appellation that has yet to prove its quality.

☼ Airén, Garnacha, Monastrell, Tempranillo

CALATAYUD DO

Aragón

A patchwork of vineyards, mostly planted with Garnacha vines, tussle with fruit trees for meager sustenance from the poor, buff-colored rocky soil. Increasing the amount of Tempranillo vines and temperature-controlled stainless-steel vats will eventually improve the potential here, but the best wines are still simple, fresh, fruity *rosados*.

☼ Garnacha, Garnacha Blanca, Juan Ibáñez, Malvasía, Mazuelo, Miguel de Arco, Moscatel Romano, Monastrell, Tempranillo, Viura

☞ Upon purchase

✓ *Jalón* • *Langa*

CAMPO DE BORJA DO

Aragón

This name derives from the notorious Borgia family, who used to run things here at the height of their power in the late 15th century. The whites are fresh, but somewhat neutral. The reds and *rosados* are full, robust, and can be alcoholic, but are they are improving. Their character is sometimes compared with that Navarra once had, and Campo de Borja is now experimenting with Cabernet Sauvignon in the same way as Navarra once did. This is a wine area to watch.

☼ Garnacha, Garnacha Blanca, Viura

☞ 3–8 years (red), 9–15 months (white and *rosado*)

✓ *Bordeje* • *Agrícola de Borja* (Borsao) • *C. A. del Campo Union* • *Agraria del Santo Cristo* • *C. A. del Campo San Juan Bautista*

CARIÑENA DO

Aragón

Cariñena's low rainfall accounted for the traditionally high alcohol content of these wines, but modern vinification now makes a fresher, lighter, fruitier, more aromatic style. Reds are the best of this appellation, especially from parcels of old Garnacha. Some deliberately maderized *rancio* wines are still produced.

☼ Cabernet Sauvignon, Cariñena, Garnacha, Garnacha Blanca, Juan Ibáñez, Moscatel Romano, Monastrell, Parellada, Tempranillo, Viura

☞ 11–5 years (red), 9–18 months (white and *rosado*)

✓ *Añadas* • *Covinca* • *Gran Ducay*

CATALUNYA DO

Catalonia

With all styles of red, white, *rosado*, and fortified wine allowed, this basic, regional appellation offers innovative winemakers more flexibility than the supposedly superior, smaller, more specific DOs.

☼ Bobal, Cabernet Franc, Cabernet Sauvignon, Cariñena, Chardonnay, Chenin Blanc, Garnatxa Blanca, Garnatxa Negra, Garnatxa Tintorera, Gewürztraminer, Macabeu, Malvasia, Malvasia de Sitges, Mazuela, Merlot, Monastrell, Muscat d'Alexandrie,

Parellada, Pedro Ximénez, Peluda, Picapoll, Pinot Blanc, Pinot Noir, Riesling, Sauvignon Blanc, Syrah, Tempranillo, Ull de Llebre, Xarel-lo

✓ *Mas Gil (Clos d'Agon)*

CAVA DO

See Penedés: Cava Country p.318

CHACOLI or TXAKOLINA DO

Cantabria

This appellation is split into three areas: Chacolí de Alava (or Getariako Alava), Chacolí de Guetaria (or Getariako Txakolina), and Chacolí de Vizcaya (or Bizkaiko Txakolina). The alternative names are Basque and, as this is Basque country, these spellings will probably take precedence. The wines are mostly white, dry, and slightly *pétillant*, although a little red is also produced. As is typical of wines in the northeastern corner of the Iberian peninsula, they are high in acidity and low in alcohol.

☞ Hondarribi Beltza, Hondarribi Zuri

✓ *Aretxondo • Txomin Etzaniz*

CIGALES DO

Castilla-Léon

This appellation is best known for fresh, fruity, light reds and *rosados*.

☞ Albillo, Garnacha, Palomino, Tempranillo, Verdejo, Viura

✓ *C. A. de Cigales* (Escogido del Año, Viña Torondos) • *Emeterio Fernández* (La Legua Capricho) • *Frutos Villa* (Conde Ansurez, Viña Calderona) • *González Lara* (Fuente del Conde Rosado)

CONCA DE BARBERA DO

Catalonia

This once little-known appellation for red, white, and *rosado* wines from the hilly hinterland of Penedés promises to be one of Spain's most exciting areas. Chardonnay is outstanding here, whether light and early-harvested as Ryman makes, or rich, serious, and potentially complex, as Torres demonstrates. Merlot is the most up-and-coming variety in the red department, but Trepat could mount a few surprises for fresh,

easy-drinking styles of both red and *rosado*.

☞ Cabernet Sauvignon, Garnacha, Merlot, Parellada, Tempranillo, Trepat, Viura

☞ 1–5 years

✓ *Torres* (Milmanda Chardonnay)

CONDADO DE HUELVA DO

Andalucía

The sweet dessert wines of this area, which is sandwiched between the sherry district of southwest Spain and the Algarve of Portugal, once had some fame, for they were mentioned by Chaucer in *The Canterbury Tales*. They ended up, however, as blending fodder for sherry. There are two basic types of fortified wine here: *pálido* (young, pale-straw color, dry, austere wines, of 14–17 percent alcohol) and *viejo* (solera-matured, mahogany-hued, in both dry and sweet styles that are deliberately oxidized, of 15–23 percent alcohol). Light, dry wines are a more recent phenomenon, and most are consumed locally.

☞ Garrido Fino, Palomino, Zalema

☞ Upon purchase

COSTERS DEL SEGRE DO

Catalonia

This is a top-performing appellation taking in four areas of different viticultural character in the province of Lérida: Les Garrigues and Valls de Riu Corb (primarily white-grape districts); Artesa (planted almost entirely with black grapes); and Raimat (dominated by foreign grape varieties and has quickly assumed classic status through Codorníu's innovative Raimat Estate).

☞ Cabernet Sauvignon, Cariñena, Chardonnay, Garnacha, Garnacha Blanca, Merlot, Monastrell, Parellada, Trepat, Ull de Llebre, Viura, Xarel-lo

☞ 2–6 years (red), 1–4 years (white)

✓ *Raimat • Castell del Remei*

DOMINIO DE VALDEPUSA DO

Castilla-La Mancha

Owned by Carlos Falcó of Marqués de Griñón fame, Dominio de Valdepusa became Spain's first *Pago*, or single-estate, appellation in 2001, recognizing 30 years of toil and extraordinary dedication. This vineyard was the first in Spain to use a new trellis system for training vines and the first to establish drip-irrigation, both as long ago as 1973. More recently, Dominio de Valdepusa became the first vineyard in Europe to adopt the Australian PRD technique, and one of the first in the world to deploy dendrometers (see Glossary). Over the years, Falcó has employed a veritable gaggle of gurus (Lichine, Peynaud), with Rolland and Smart his current advisors. According to Smart, the red clay over limestone at Dominio de Valdepusa is identical to the famous *terra rossa* soil of Coonawarra.

☞ Cabernet Sauvignon, Petit Verdot, Syrah

✓ *Marqués de Griñón* (Dominio de Valdepusa)

EL HIERRO DO

Canary Islands

This new appellation was established in 1996 for El Hierro, the smallest and most westerly island in the archipelago, yet the local cooperative is one of the most advanced in the Canary Islands. Before gaining DO status, these wines were sold under the local names of Frontera and Valverde. The best areas are Valle de Golfo, El Pinar, and Echedo. The Negramoll

grape is best for reds and *rosados*, while the Verjadiciego is best for whites.

☞ Listán, Malvasía, Moscatel, Negramoll, Pedro Ximénez, Verdello, Verjadiciego

✓ *Fontera*

FINCA ELEZ DO

Castilla-La Mancha

Located near the village of El Bonillo, in the heart of the Sierra de Alcaraz, this single-estate appellation was established in 2002 and is owned by Manuel Manzaneque, a theater director and producer.

☞ Cabernet Sauvignon, Chardonnay, Merlot, Syrah, Tempanillo

✓ *Finca Elez*

JEREZ or JEREZ-XERÈS-SHERRY DO

See Sherry Country p.321

JUMILLA DO

Murcia

The high, hilly vineyards of Jumilla have never been affected by phylloxera, and most of the vines are still ungrafted. Almost all the wines produced here are red, and until recently were lackluster, unless made in a *doble pasta* style, which produces wines so thick and intense that they are in great demand for blending purposes throughout Spain and also abroad. The best reds carry the Jumilla Monastrell varietal appellation and can be very smooth, fruity, and aromatic, tending to improve with age. With earlier picking and temperature-controlled fermentation, lighter, more accessible wines are now being made that are best drunk when young and juicy, including some soft, fruity whites as well as some *rosados*.

☞ Airén, Garnacha, Meseguera, Monastrell, Pedro Ximénez, Tempranillo

☞ 1–3 years (red, but up to 6 years for wines made in *doble pasta* style), 9–15 months (white and *rosado*)

- ✓ *Bleda* (Castillo Jumilla) • *Julia Roch e Hijos*
• *Jumilla Union Vitivinícola* (Cerrillares,
Incunable) • *Señorío del Condestable*

LA MANCHA DO

Castilla-La Mancha

Although its output remains enormous, accounting for some 40 percent of all Spanish wines produced, the wine land of Don Quixote has improved tremendously since the 1980s. Many producers now harvest much earlier than previously and ferment at cooler temperatures (sometimes too cool), achieving fresher, lighter, more aromatic wines. The best wines of La Mancha used to be made in Valdepeñas DO, and that appellation still boasts most of the best, but the arrival of Alejandro Fernández (El Vinculo) in 1999 has raised the stakes. Who would have thought that any wine bearing “La Mancha” could be considered up-and-coming?

- ☞ Airén, Cabernet Sauvignon, Garnacha, Merlot, Moravia, Pardina, Tempranillo, Viura

🕒 1–4 years (red), 9–15 months (white and rosado)

- ✓ *Ayuso* (Estola Gran Reserva) • *Vimícola de Castilla* (Castillo de Alhambra, Señorío de Guadianeja) • *Jesús Díaz e Hijos* • *El Vinculo* • *C. Españolas* (Fuente del Ritmo) • *Hermanos Morales* (Gran Créacion) • *C. A. del Campo Nuestra Señora de Manjavacas* (Zagarrón) • *C. A. del Campo Nuestra Padre Jesús de Perdon* (Casa la Teja, Lazarillo, Yuntero) • *Rama Corta* • *Rodríguez y Berger* (Viña Santa Elena) • *Julian Santos* • *Torres Filoso* (Arboles de Castollejo)

LA PALMA DO

Canary Islands

This new appellation was established in 1995 for the island of La Palma. It was in Fuencaliente, in the south of the island, that the famed “Canary Sack” of Shakespeare’s time was produced, and the grape responsible, Malvasia, still grows here, amid four smoking volcanoes, in the same sort of craterlike depressions that abound on Lanzarote. An oddity aged in pine casks and curiously called *Vino del Tea* (“Tea” being the local name for a particular species of pine) is available in the north of the island, but only the most ardent admirers of Retsina should search it out.

- ☞ Bujariego, Gual, Listán, Malvasia, Negramoll

✓ *Hoyo de Mazo*

LANZAROTE DO

Canary Islands

This new appellation was established in 1995 for the island of Lanzarote, where the lunar landscape is dotted with vines in craterlike

depressions, protected by low stone walls. The most spectacular example of this weirdly beautiful form of viticulture can be viewed at La Geria, an area west of Arrecife where no fewer than 5,000 acres (2,000 hectares) of such vineyards are to be found.

- ☞ include: Caleta, Diego, Listán, Malvasia

MÁLAGA DO

Andalucía

Just northeast of Jerez in southern Spain, the coastal vineyards of Málaga produce one of the most underrated classic dessert wines in the world. Most of this is matured by the *solera* system, involving some six scales (see Sherry Country, p.321) and may be blended in a sherrylike manner using various grape-based coloring and sweetening agents, such as *arrope*, *vino de color*, *vino tierno*, and *vino maestro*. The color of these fortified wines can range from gold through tawny to brown and red, depending on the style of Málaga, its age, and method of maturation, its degree of sweetness, and the grape variety used.

Málaga may be any one of the following. Dulce Color is a dark, medium-bodied Málaga that has been sweetened with *arrope*. Lágrima is made from free-run juice only, and is the most luscious of all Málaga styles. Moscatel is a sweet, rich, raisiny, medium- to full-bodied wine that is similar to the Jerez version, only more luscious. Old Solera has the most finesse, depth, and length of all Málagas and is capable of complexity rather than lusciousness. It is medium- to full-bodied, still sweet yet with a dry finish. Oscuro is a dark, sweet Málaga that has been sweetened with *arrope* and colored by *vino de color*. Pajarete or Paxarete is darkish in color, and less sweet, but more alcoholic, than other Málagas. Pedro Ximénez is a smooth, sweet, deliciously rich varietal wine with an intense flavor that is similar in character to the Jerez version. Seco is a pale, dry, tangy wine with a distinctive creamy hazelnut character.

- ☞ Moscatel, Pedro Ximénez

🕒 Upon purchase (although it can last, but not improve, for several years)

- ✓ *Scholtz Hermanos* • *Pérez Texeira* • *Larios*

MANCHUELA DO

Castilla-La Mancha

This is a very large region, encompassing La Mancha, Ribera del Júcar, Utiel-Requena, and Almansa, with cooperatives accounting for two-thirds of the *bodegas*, and a quality that is seldom better than an acceptable quaff. Much is a lot worse. The delicious red wines of Finca Sandoval are, however, a class apart, and the improving Gualberto may one day reach a similar level.

- ☞ Albillo, Bobal, Cabernet Sauvignon, Cencibel, Chardonnay, Garnacha, Macabéo, Merlot, Monastrell, Moravia Dulce, Sauvignon Blanc, Syrah, Verdejo

✓ *Finca Sandoval* • *Gualberto*

MANZANILLA DO

See Sherry Country p.321

MÉNTRIDA DO

Castilla-La Mancha

Cheap wine, still mostly consumed locally, but yields have dropped, and a number of *bodegas* have improved their facilities, although it is too early to confirm a similar improvement in

quality, as there are still too many deep-colored, coarse reds and alcoholic *rosados*.

- ☞ Garnacha, Tempranillo

MONDÉJAR DO

Castilla-La Mancha

Although fewer bulk wines are being produced here since Mondéjar achieved DO status, the wines are still mostly uninspiring, with Mariscal the solitary producer that seems interested in improving quality.

- ☞ Airen, Cabernet Sauvignon, Garnacha, Jaén, Macabéo, Malvar, Tempranillo, Torrontés

✓ *Mariscal*

MONSTANT DO

Catalonia

A new and potentially exciting appellation clasping the eastern, western, and southern edges of Priorat.

- ☞ Cabernet Sauvignon, Carineña, Garnacha, Merlot, Monastrell, Syrah, Tempranillo

✓ *Celler de Capéanes* (Mas Picoso) • *Fra Guerau* • *Laurona*

MONTERREI DO

Galicia

This area was first awarded a provisional DO in the early 1980s, but this was revoked when too few of its growers showed any interest in modernizing their estates. However, some progress was made in the late 1980s, and this appellation has now been granted full DO status.

- ☞ Alicante, Doña Blanca, Godello, Gran Negro, Mencía, Mouratón, Palomino

✓ *Pazo Pondal* (Lenda Pondal)

MONTILLA-MORILES DO

Andalucía

The sherrylike wines of Montilla fall into three categories: *generosos* (fortified *finos*, *amontillados*, *olorosos*, and magnificent PX); unfortified traditional wines (cream, medium, and dry at 14.5 percent alcohol); and *jóvenes afrutados* (ghastly).

- ☞ Airén, Baladí, Moscatel, Pedro Ximénez, Torrontés

🕒 Can be kept, but consume upon opening

✓ *Marqués de la Sierra* • *Alvear* • *Mora Chacon* • *Gracia Hermanos* • *Perez Barquero* • *Rodríguez Chiachio*

NAVARRA DO

See Rioja and Navarra p.312

PENEDÈS DO

See Penedès: Cava Country p.318

PLA DE BAGES DO

Catalonia

Winemaking is an old tradition in Bages, and yet this is an up-and-coming DO, with many newly planted vineyards and a small but growing band of modern *bodegas*, of which Massies d'Avinyó clearly leads the way. "Bages" is a derivative of Bacchus, the name of the Roman god of wine.

☞ Chardonnay, Garnatxa, Macabéo, Malbec, Merlot, Picapoll, Pinot Noir, Sauvignon Blanc, Sumoll, Tempranillo

✓ *Massies d'Avinyó*

PLA I LEVANT DO

Mallorca

The island's newest appellation produces some of its best wines.

☞ Cabernet Sauvignon, Callet, Chardonnay, Frogoneu, Manto Negro, Macabéo, Merlot, Moscatel, Parellada, Pinot Noir, Prensal Blanc, Syrah, Tempranillo

✓ *Miquel Geabert • Miquel Oliver*

PRIORAT DOCA

Catalonia

This area has a dry climate and poor soil, in which the vines' roots spread everywhere in search of moisture, the local saying being that Priorat vines can suck water out of stone. The best wines are currently being made around the hilltop town of Gratallops, by a group of young winemakers led by Bordeaux-trained Riojan oenologist Alvaro Palacios, who brought with him a wealth of experience from Château Pétrus to the Napa Valley. New-style reds are huge, serious, and stunningly rich, but those of the old style tend to be heavy, overalcoholic, and oxidized, although the best traditional wines fall somewhere in between. One of the country's oldest appellations, Priorat is one of the Spanish wine industry's superstars. The use of the spelling "Priorato" has been dropped on bottles in favor of the Catalan version "Priorat," and DOQ, the Catalan equivalent of DOCa, is now prevalent.

☞ Cabernet Sauvignon, Cariñena, Garnacha, Garnacha Blanca, Merlot, Monastrell, Pedro Ximénez, Syrah, Viura

☞ 5–15 years (red)

✓ *Alvaro Palacios* **B** (Finca Dofi, Clos l'Ermita, Las Terrasses) • *René Barbier* (Clos Mogador) • *Clos Erasmus* • *Costers del Siurana* (Clos de l'Obac, Miserere) • *Masia Barril* • *De Muller* • *Scala Dei* (Cartoixa, El Cipres, Novell) • *Vinícola del Priorato* (Mas d'Alba, Onix)

RÍAS BAIXAS DO

Galicia

Spain's fastest-rising star in the DO firmament, the Rías Baixas appellation covers various red, white, and *rosado* wines, but the best-known and most enjoyable wines are the softly perfumed, zippy whites made from low-yielding Albariño grapes, which can have real depth and fruit, and a fresh, lively acidity. Although I have always admired the best of these wines, I did wonder whether they are worth what appeared to be an increasingly high price. At the table, however, they accompany fine food beautifully, which in my book makes even the most expensive Rías Baixas well worth the price demanded for it.

☞ Albariño, Brancellao, Caiño Blanco, Caiño Tinto, Espadeiro, Loureira Blanca, Loureira Tinta, Mencía, Sousón, Torrontés, Treixadura

☞ 1–3 years

✓ *Albariño do Salnes* • *Pazo de Barrantes* • *Cardallal* • *Lagar de Cervera* • *del Palacio de Fefiñanes* • *Granxa Fillaboa* • *Morgadio-Agromiño* • *Pazo Pondal* • *de Vilaríño Cambados* (Martín Códax, Organistrum) • *Santiago Ruíz*

RIBEIRA SACRA DO

Galicia

The most widely planted grape variety here is Palomino, but on the steep, terraced vineyards of Ribeira Sacra, Albariño is far more exciting, and the Mencía variety also shows promise for red wines.

☞ Albariño, Brancellao, Caiño, Doña Blanca, Espadeiro, Ferrón, Godello, Garnacha, Loureira, Loureira Tinta, Mencía, Merenzao, Negrada, Palomino, Sousón, Torrontés

☞ 1–3 years

✓ *Adegas Moure* (Albariño Abadia da Cova)

RIBEIRO DO

Galicia

Due to the Atlantic-influenced climate of northwest Spain, the styles of Ribeiro's red and white wines reflect that of Portugal's Vinhos Verdes, except that they are somewhat more fruity and aromatic. The very best examples possess a wonderfully fresh, pure, vibrancy of fruit.

☞ Albariño, Albillo, Brancellao, Caiño, Ferrón, Garnacha, Godello, Jerez, Loureira, Mencía, Sousón, Tempranillo, Torrontés, Treixadura, Viura

☞ 9–18 months

✓ *Alanis* • *Arsenio Paz* • *Rivera* • *C. A. del Ribeiro*

RIBERA DEL DUERO DO

Castilla-León

From the upper reaches of the Duero River (which becomes the Douro, once it crosses the Portuguese border), the *rosados* are fresh, dry, fruity wines of a *clarete* or *claro* style, but are nowhere near the class of the best reds, which have a truly dense, black color and are packed solid with rich, oaky-sweet, plummy-blackcurrant fruit flavors.

Ribera del Duero DO built its reputation on "Vega Sicilia," formerly Spain's most expensive wine. In the first edition of this book, I categorically stated that contrary to the informed opinion of many other wine critics, this was not Spain's greatest red wine, although it was potentially the best. The problem was that 10 or more years in wood took its toll on the fruit in a way that would destroy many of the greatest wines of Bordeaux.

There was also no logic to the duration and mode of aging at Vega Sicilia, which occurred in different sizes and ages of wooden cask, the various vintages being transferred from one vessel to another simply to fulfill the logistical necessity of moving the wines around in order to accommodate the incoming harvest. Since the first edition, however, Vega Sicilia has given its wines no more than six years in wood and now has a more disciplined approach to how long wines spend in various types and ages of cask, including new oak *barriques*. It is once again one of Spain's greatest wines, but not necessarily the greatest Ribera del Duero, with a handful of *bodegas* capable of matching, sometimes surpassing, the quality of Vega Sicilia. These include Aalto, Vega Sicilia's own Alion, Alejandro Fernández's Pesquera, Condado de Haza (also owned by Fernández), Domino de Pingus, and Pago de los Capellanes, with a few others waiting in the wings.

☞ Cabernet Sauvignon, Garnacha, Malbec, Merlot, Pardina, Tinto del País

☞ 3–8 years (modern red), 5–25 years (traditional red), 1–2 years (*rosado*)

✓ *Aalto* • *Abadía Retuerta* • *Alión* • *Arzuaga Condado de Haza* • *Domínio de Pingus* **B** • *Emelio Moro* • *Ismael Arroyo* • *Julio Cesar Conde Delgado y Otros* (Neo) • *Legaris* • *Mauro* • *Pago de Carraovejas* • *Pago de los*

Capellanes • Pagos del Rey • Pérez Pascuas (Viña Pedrosa) • Pesquera • Pomar Vinédos • Real Sitio de Ventosilla (Prado Rey) • Reyes • Sastre • Uvaquilera Aguilera • Vega Sicilia (including Valbuena)

RIBERA DEL GUADIANA DO

Extremadura

A group of six *vinos de la tierra* (Cañamero, Matanegra, Montanchez, Ribera Alta, Ribera Baja, and Tierra de Barros), which retain this classification, but also form subzones of the Ribera del Guadiana DO, entitling them to make wines under two different origins of quality.

Alarje, Bobal, Borba, Cabernet Sauvignon, Cayetana Blanca, Chardonnay, Cigüente, Eva O Beba de Los Santos, Garnacha Tinta, Garnacha Tintorera, Graciano, Jaen Tinto, Macebéo, Malvar, Mazuela, Merlot, Monastrell, Montúa, Moscatel, Moscatel de Grano Menudo, Pardina, Parellada, Pedro Ximénez, Perruno, Pinot Noir, Sauvignon Blanc, Syrah, Tempranillo, Verdejo

La de Barros • Santa Mariña

RIOJA DOCA

See Rioja and Navarra p.312

RUEDA DO

Castilla-León

This small district downriver from Ribeiro del Duero is known for fresh, crisp, dry white wines made almost entirely from Verdejo, but traditionally the wines were fortified *in fino* (Palido Rueda) and *rancio* (Dorado Rueda) styles, and these can still be found. A traditional method Rueda Espumoso is also allowed.

Palomino, Sauvignon Blanc, Verdejo, Viura
1–2 years

Agricola Castellana • Frutos Villa (Viña Morejona) • Marqués de Griñón • Marqués de Riscal

SHERRY or JEREZ-XÉRÈS-SHERRY DO

See Sherry Country p.321

SIERRAS DE MÁLAGA DO

Andalucía

Although Málaga is one of Spain's oldest DOs, this appellation was granted in 2001, for an area that is higher in altitude than Málaga, and for red and white wines that cannot be fortified.

Airén, Cabernet Franc, Cabernet Sauvignon, Chardonnay, Colombar, Doradilla, Garnacha, Macabeo, Merlot, Moscatel d'Alejandro, Moscatel Morisco, Pedro Ximénez, Petit Verdot, Pinot Noir, Romé, Sauvignon Blanc, Syrah, Tempranillo

F. Schatz

SITGES

Catalonia

This is a famous, but rare, non-DO fortified Malvasia and Moscatel wine that is made just south of the outskirts of Barcelona, from grapes that are allowed to shrivel on the vine.

Cellers Robert

SOMONTANO DO

Aragón

Set at the foot of the Pyrenees mountains, between the regions of Penedés and Navarra, Somontano is destined to become one of Spain's greatest wine regions. Chardonnay is by far the best grape grown here for serious, barrel-fermented white wines, but both Tempranillo and Cabernet Sauvignon show superb potential for making fragrant reds with a lively richness of fruit.

Alcañón, Cabernet Sauvignon, Chardonnay, Garnacha, Garnacha Blanca, Moristel, Parreleta, Tempranillo, Viura

2–5 years (red),
1–3 years (white)

Aragonesa • Otto Bestué • Viñas del Vero • Enate • Lalanne • Pirineos

TACORONTE-ACENTEJO DO

Canary Islands

Established in 1992, this is the oldest Canary Island appellation and, so far, it has proved to be the best, although it is too early to tell how the others will fare.

Castellano, Gual, Listán, Listán Negro, Malvasía, Marmajuelo, Moscatel, Negra Común, Negramoll, Pedro Ximénez, Tintillo, Torrontés, Verdello

El Lomo • Monje • Viña Norte

TARRAGONA DO

Catalonia

This is the largest appellation in Catalonia, but its potential quality is modest compared with that of neighboring Penedés. Having said that, Australian winemakers Nick Butler and Mark Nairn have been quietly raising standards at Pedro Rovira, using hands-off methods to retain as much natural character in the wine as possible. The best red, white, and rosado from this region can all be fresh, fruity, and rewarding. Even the local fortified wine, which is sold as Tarragona Classico, can be worth looking out for.

Cariñena, Garnacha, Garnacha Blanca, Parellada, Tempranillo, Viura, Xarel-lo

1–5 years (red), 1–2 years (white and rosado)

C. A. de Valls • José Lopez Beltrán (Don Beltrán) • Pedro Masana (non-DO wines) • De Müller (Moscatel Seco, Parxete) • Pedro Rovira

TERRA ALTA DO

Catalonia

This slowly improving appellation lies in the highlands well away from the coast. It produces some good, everyday-drinking red and white wines, but the best sites are not always planted with the most suitable varieties and have to compete with Cava growers. It is advisable to avoid the local sweet, fortified *mistela*.

Cabernet Sauvignon, Cariñena, Garnacha, Garnacha Blanca, Merlot, Moscatel, Parellada, Tempranillo, Viura

1–2 years

C. A. Gandesa • C. A. la Hermandad • Pedro Rovira (Alta Mar, Viña d'Irto) • Vinalba dels Arcs (Vall de Berrús)

TORO DO

Castilla-León

The exciting quality of Toro wines today is a very recent phenomenon, built on a sudden influx of high-profile names, which has tripled the number of *bodegas* since 2000. When this DO was established in 1987, there were just four *bodegas*, the decrepit local cooperative dominated production, and the quality was really quite dire. By the mid-1990s, considerable improvements had occurred, notably at Farina, and British supermarket buyers began to import some of the better wines. However, there were still only 12 *bodegas* and the area obviously lacked the dynamics of a sufficient number of highly talented, ambitious, and competitive producers to push the quality envelope to anywhere near its full potential. In 2000, the number of *bodegas* had increased to 18, but, more importantly, the Álvarez family of Vega Sicilia fame had been purchasing land under an assumed name since 1997, and after this was announced in 2002, the floodgates opened, so that at the last count there were 40 *bodegas*. Consequently, land prices have soared, and the battle for Toro's true quality has only just begun. Vega Sicilia's rival, Alejandro Fernández of Pesquera, followed suit in 1998, but the great wine produced under the Dehesa La Granja label is in fact made from vines growing just outside this DO, near Zamora. I suspect this may be a single-estate DO in waiting.

🍷 Garnacha, Malvasía, Tinta de Toro, Verdejo Blanco

🕒 2–8 years (red), 1–3 years (white)

TXAKOLINA DO

See Chacoli DO

UTIEL-REQUENA DO

Valencia

This large and important, essentially red-wine district is situated in the extreme west of the province of Valencia. Although distilling wine and the *doble pasta* process were once the area's forte, softer, more palatable reds are now being made, and the best dry *rosados* are fresh and delicate for such sunny climes.

🍷 Bobal, Garnacha, Meseguera, Tardana, Tempranillo, Viura

🕒 2–5 years (red), 9–18 months (*rosados*)

✓ *Augusto Egli* (Casa Lo Alto)

VALDEORRAS DO

Galicia

Until Rías Baixas came on the scene, this was Galicia's most promising district. With vines planted on terraced, slaty hillsides flanking the Sil River and Valdeorras's northern, wet, Atlantic-influenced climate, these wines have never been overburdened with alcohol, as so much Spanish wine was once upon a time, and refreshing acidity is part of their charm. The best wineries have now been modernized and are even better than they used to be, particularly for white wines made from the Godello grape.

🍷 Doña Blanca, Garnacha, Godello, Gran Negro, Lado, María Ardoña, Mencía, Merenzao, Palomino

🕒 1–4 years (red), 1 year (white and *rosado*)

✓ *Godeval* • *Gutián* • *Jesus Nazareno* • *Joaquín Rebolledo*

VALDEPEÑAS DO

Castilla-La Mancha

This is Castilla-La Mancha's solitary fine-wine area. Despite the torrid heat (the climate has been described as nine months of winter, three months of hell) and an apathetic attitude held by far too many producers, some terrific wines are being made here by a minority of wineries, and they represent very good value. The rich, red, stony soil hides a water-retentive limestone base that helps offset the lack of rainfall. The best reds are medium- to full-bodied, pure Tempranillo, with a wonderfully rich yet well-balanced flavor, and more and more new-oak influence. The *rosados* can be smooth and fruity, but it would take a complete overhaul of the vineyards, replanting them with something decent, to make the white wines appealing, although there is really no excuse for their not being fresh.

🍷 Airén, Tempranillo

🕒 2–6 years (red), 9–18 months (*rosado*)

✓ *Miguel Calatayud* • *J. A. Megía* • *Los Llanos* • *Luis Megía* (Marqués de Gastañaga) • *Felix Solis* (Viña Albali Reserva) • *Casa de la Viña* (Vega de Moriz)

VALENCIA DO

Valencia

This area was once renowned for its heavy, alcoholic, and low-quality *vino de mesa* (table wine). However, most modern wineries today produce much lighter wines than before, and they are at least fresh and drinkable. There are some good reds from the Monastrell grape, which are smooth and medium bodied, and these wines may sometimes be aged in oak. The deliciously sweet and raisiny Moscatel is consistently excellent value, often performing well under blind conditions against French Muscat de Beaugues de Venise that sells for twice the price.

🍷 Forcayot, Garnacha, Malvasía, Meseguera, Monastrell, Moscatel, Pedro Ximénez, Planta Fina, Tempranillo, Tortosí, Viura

🕒 1–4 years (red), 9–18 months (white and *rosado*), upon opening (Moscatel)

✓ *C. A. de Villar* • *Vicente Gandía* • *Augusto Egli* (particularly good-value Moscatel) • *Schenk* (Cavas Murviedro) • *Tierra Hernández*

VALLE DE GÜÍMAR DO

Canary Islands

This appellation was established in 1996 for wines from the eastern side of Tenerife, just south of downtown Santa Cruz. The vineyards here are about cultivated fields, which are irrigated and thus indirectly feed these vines. Before gaining DO status, these wines were not even sold locally, but consumed by the people who produced them.

🍷 Listán, Listán Negro, Negramoll

VALLE DE LA OROTAVA DO

Canary Islands

Established in 1996, this appellation covers wines produced on the lush, northern side of Tenerife, between the appellations of Tacoronte-Acentejo and Ycoden-Daute-Isora. Before they were granted DO status, these wines were sold

under the *vino de la tierra* (literally “country wine”) of La Orotava-Los Realos.

🍷 Listán, Listán Negro

VINOS DE MADRID DO

Madrid

Much admired by Casanova, who sought refuge in Madrid at a time when the capital was rapidly expanding at the expense of its vineyards, these wines probably assumed a rarity value that outshone their intrinsic quality. By extending the appellation well beyond its fast-disappearing 18th-century boundaries, Vinos de Madrid was resurrected in 1990, although you would have to be a greater lover of these wines than Casanova to declare your open admiration for them. There are, however, a couple of exceptions to the rule, and one of these, Jesús Díaz e Hijos, is exceptional by any standards.

🍷 Airén, Albillo, Garnacha, Malvar, Tinto Fino

🕒 Upon purchase (2–3 years for recommended wines)

✓ *Francisco Figuro* • *Jesús Díaz e Hijos*

**XÉRÈS or JEREZ-
XÉRÈS-SHERRY DO**

See Sherry Country p.321

YCODEN-DAUTE-ISORA DO

Canary Islands

This DO was established in 1995 for the wines that are produced on the northwestern corner of the island of Tenerife. In this area, the grapes are usually grown on terraces, which are often irrigated. Before they gained DO status, these wines were sold under the *vino de la tierra* of Icod de Los Vinos, a name that recalls their long-lost fame. After the Battle of Trafalgar, the Canaries were a favorite watering hole with the British Royal Navy, and the orange-tinted white wines of this area were apparently enjoyed by all ranks.

🍷 Listán, Listán Negro

YECLA CAMPO ARRIBA DO

See Yecla DO

YECLA DO

Murcia

You might think that these stony-limestone vineyards between Alicante and Jumilla should do rather well in terms of quality, but although some decent wines can be found, nothing special stands out.

The reds produced here are either ink-black, *doble pasta*-style wines, or are cherry-colored, generally with good body and fruit. Wines from the Campo Arriba zone in the north of this appellation are permitted to add this name to the Yecla DO if they are either red or *rosado*, and are made from 100 percent Monastrell grapes harvested at almost half the yield required elsewhere in Yecla. The white wines produced in Yecla are at their best fresh, clean, and pleasantly fruity, but, again, tend not to be remarkable.

🍷 Garnacha, Meseguera, Monastrell, Verdil

🕒 2–5 years (red), but 3–6 years for Yecla Campo Arriba, 1–2 years (white and *rosado*)

✓ *Castaño* (Pozuelo, Las Gruesas) • *Ochoa Palao* (Cuvée Prestige)

RIOJA AND NAVARRA

The first wine to receive DOCa status, Spain's highest classification, Rioja is without doubt the country's greatest fine-wine region. Neighboring Navarra, which was once regarded as the country's best source of rosado but little else, is slowly developing a reputation for other styles, having upgraded its vineyards and wineries.

ONLY A SHORT DRIVE from the shabby suburbs of the commercial city of Bilbao, and the dramatic beauty of an upland valley becomes apparent, rich with architectural treasures of the 12th century, isolated hilltop *pueblos*, a philanthropic people, a generous tradition, and a hearty cuisine.

RIOJA

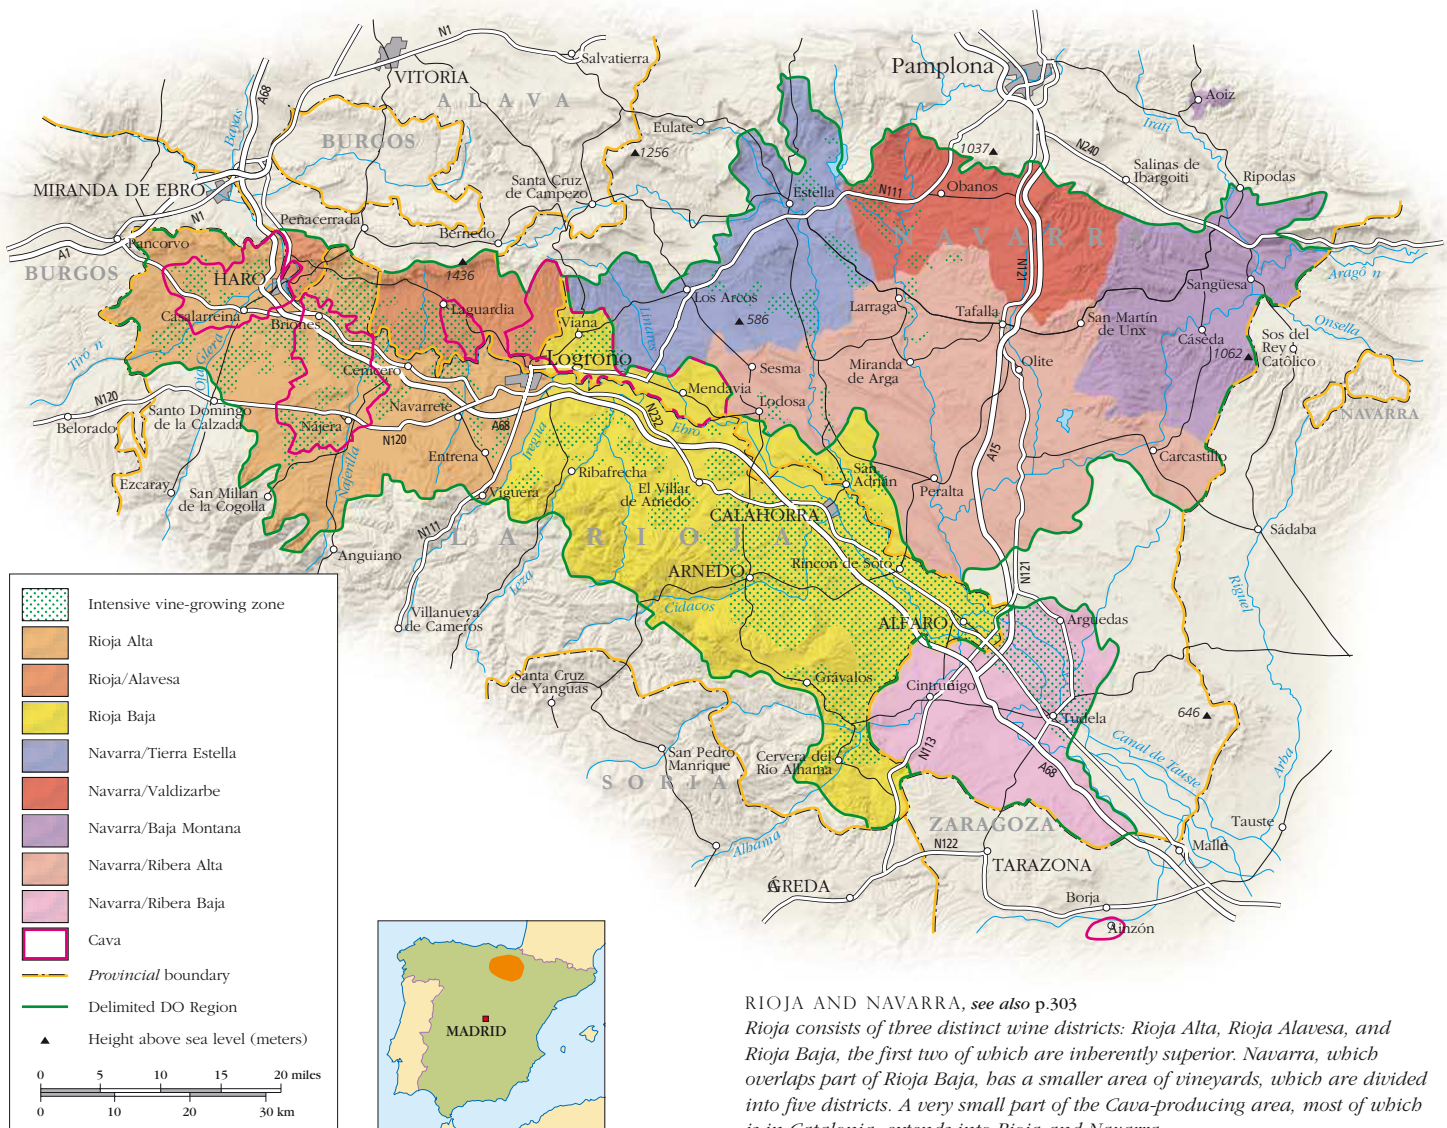

Rioja is oaky, and all attempts to rid the wine of oak are doomed to failure. Oak is the basis of its fame and the reason it became Spain's first and greatest red-wine success, and while critics who suggest that these wines are too oaky for today's more

sophisticated consumers may have a point, there is precious little left in most Rioja once you take away the oak.

It was the French who originally blessed the wines of this region with their unmistakable sweet-vanilla oak identity. As early as the 18th century, a few enlightened *Riojanos* had looked to France, Bordeaux particularly, to improve their winemaking skills. The transformation that resulted was subtle compared to the radical changes that occurred in Rioja in the 1840s and 1860s, after phylloxera, a louse that attacks vine roots, had wreaked havoc on French vineyards. A number of *vignerons*, mostly *Bordelais* but some Burgundian too, gave up hope of reviving their own vineyards and descended upon Rioja to set up new wineries. Their methods dramatically improved the quality and style of Rioja, while other Frenchmen, mostly merchants from Bordeaux, opened up an instantly lucrative trade for the wine, as they desperately sought to boost the dwindling produce of their own devastated vineyards.

Origins

Wine has been made in Rioja since at least the 2nd century BC, when the Romans conquered the area. Rioja was sufficiently well respected by 1560 that its producers forbade the use of grapes from outside the region, guaranteeing the authenticity of their

RIOJA AND NAVARRA, *see also* p.303

Rioja consists of three distinct wine districts: Rioja Alta, Rioja Alavesa, and Rioja Baja, the first two of which are inherently superior. Navarra, which overlaps part of Rioja Baja, has a smaller area of vineyards, which are divided into five districts. A very small part of the Cava-producing area, most of which is in Catalonia, extends into Rioja and Navarra.

wines with a brand on the *pellejos* (goat skins) in which they were transported. Wooden barrels came into use in the 18th century, but were five times the size of casks today and it was not until 1860 at Marqués de Riscal that the first Bordeaux *barriques* were used (although there seems to be evidence that Manuel Quintano was the first, c.1800). One particularly influential Frenchman, Jean Pineau, was employed to teach French methods to local growers. In 1868, upon completion of his contract, Pineau was employed by Don Camilo Hurtado de Amezaga, the Marqués de Riscal, who was an admirer of Médoc wines and had lived in Bordeaux for 15 years. He had planted Cabernet Sauvignon on his estate in 1863 and wanted Pineau to develop his new *bodega* in the manner of the most advanced wine châteaux in the Médoc.

RIOJA'S CLASSIC WINE DISTRICTS

Rioja's vineyards are located along the Ebro Valley, between Haro and Alfaro, and throughout its hinterland, with vines clustered around many of the Ebro's tributaries, one of which, the Oja River, has given its name to the region. Most Rioja is red and blended from wines or grapes (primarily Tempranillo and Garnacha) originating from the region's three districts (Rioja Alta, Rioja Alavesa, and Rioja Baja), although many of the best-quality are single-district wines and a handful of single-estate Rioja have also emerged in recent years.

Rioja Alta

Logroño and Haro, the principal towns of Rioja, are both in the Rioja Alta. Logroño is a very big town by Spanish standards, but Haro, at the western edge of the region, is an enclosed hilltop community and a much smaller, far more charming, older, and traditional place. The area's wine is Rioja's fullest in terms of fruit and concentration, and can be velvety smooth. Bodegas Muga makes fine examples of pure Rioja Alta, as do CVNE (Compañía Vinícola del Norte de España)—in the form of their Imperial line—in nine years out of every ten.

Rioja Alavesa

There are no large towns in the Alavesa, a district that is similar in climate to the Alta. Wines produced here are Rioja's fullest in body and reveal a much firmer character than those of the Alta and the Baja, with greater acidity. It was to the Alavesa that Pedro Domecq came, after years of intensive research, to plant a vast estate of 985 acres (400 hectares), cultivating his vines on wires as opposed to

using the bush method traditional to the region. Aside from Bodegas Domecq, which produces mainly pure Alavesa wines, Remelluri and Contino, two single-estate Alavesas, are both typical of the district.

Rioja Baja

Baja is a semi-arid area influenced by the Mediterranean, and is hotter, sunnier, and drier than the Alta and the Alavesa, with rainfall averaging between 15 and 17 inches (38 and 43 centimeters) per year, but falling as low as 10 inches (25 centimeters) at Alfaro in the south. Some 20 percent of the vines growing here come within, and can claim, the Navarra appellation. The wines are deep-colored and very alcoholic, some as strong as 18 percent, but lack acidity, aroma, and finesse, and are best used for blending.

NAVARRA

The wine-growing region of Navarra overlaps part of the Rioja Baja, but although not quite in the same league as Rioja in general, it is capable of producing some fine wines of exceptional value.

Recent marketing successes have halted the decline in Navarra's vineyards and encouraged various ambitious trials with foreign grapes such as Merlot, while previous experimental varieties such as Cabernet Sauvignon are now fully recommended. According to the Estación de Viticultura y Enología de Navarra (EVENA), Spain's most advanced viticultural and oenological research station, these Bordeaux varieties are ideally suited to Navarra's soil and climate.

A rosy past

Navarra was once virtually synonymous with *rosado* and this style still accounts for almost half of total production, but what has really held back the reputation of this area has been the Garnacha (*syn.* Grenache) grape. This modest-quality grape variety can make good *rosado*, but except as part of a blend, rarely excels in red wines. Garnacha makes up more than 65 percent of Navarra's vines, so the region is ill equipped to develop beyond its *rosado* horizon. Furthermore, Tempranillo, the grape upon which Rioja's success has been built and indubitably Spain's finest red-wine variety, represents just 15 percent of Navarra's vines. This proportion has, however, doubled in the last decade, and with Tempranillo and Cabernet Sauvignon making up 60 percent and 20 percent respectively of all new vines currently being planted, Navarra is set to achieve a tremendous boost in quality.

According to Javier Ochoa, former chief oenologist at EVENA, the perfect Navarra blend should be something in the order of

GRAPE VARIETIES IN RIOJA

Although there has been a recent trend toward pure varietal wines (particularly Tempranillo for *tinto* and Viura for *blanco*), most Rioja is blended, thus its character and quality depend to a large extent upon the producer's own house style. In addition to blending the strengths and weaknesses of different *terroirs*, there is usually an attempt to balance the various varietal characteristics of one or more of the seven grapes that are permitted in Rioja. These grape varieties are: Tempranillo, Garnacha, Graciano, Mazuelo, Viura, Malvasía, and the little-utilized Garnacha Blanca.

A TYPICAL RED RIOJA BLEND

Tempranillo 70 percent for its bouquet, acidity, and aging qualities. It ripens some two weeks before the Garnacha (*temprano* means "early") and is also known in Spain as the Cencibel, Tinto Fino, or Ull de Llebre. Tempranillo has a naturally low oxidizing enzyme content, giving its wines exceptional longevity.

Garnacha 15 percent for body and alcohol—too much can make the wine coarse. This is the Grenache of the Rhône, also known as the Lladoner and Aragonés. It is the major variety of the Rioja Baja, where it can produce wines of 16 percent alcohol.

Graciano 7.5 percent for freshness, flavor, and aroma. A singular variety with the unusual property of thin, yet tough, black skin.

Mazuelo 7.5 percent for color, tannin, and good aging characteristics. This is the Carignan of southern France and is also known in Spain as the Cariñena.

To the above a small proportion of white grapes, perhaps 5–10 percent of Viura, may sometimes be added, but this tradition is fading. Cabernet Sauvignon is not an authorized variety in Rioja, but is permitted by special dispensation for *bodegas* that have historically used the variety (such as Marqués de Riscal, which uses 15 to 60 percent) and those that are growing it on a trial basis. Although a number of *bodegas* have experimental plantations, Cabernet Sauvignon is not of any great significance for the vast majority of Rioja wines.

A TYPICAL WHITE RIOJA BLEND

Viura 95 percent for freshness and fragrance. This grape has reasonable acidity and a good resistance to oxidation. It is also known as the Macabéo and Alcañón in other parts of Spain, and is one of three major Cava varieties.

Malvasía 5 percent for richness, fragrance, acidity, and complexity. Also known as the Rojal Blanco and Subirat, this grape has a tendency to color a patchy red when ripe, so pressing must be quick to avoid tainting the juice.

Most white wines are pure Viura, although some contain up to 50 percent Malvasía. Some *bodegas* use a tiny amount of Garnacha Blanca, particularly in lesser years, to increase alcohol levels, but they do so at the expense of a certain amount of freshness and aroma.

50 percent Tempranillo, 30 percent Garnacha, and 20 percent Cabernet Sauvignon, but I wonder if even this is tempered by the large amount of Garnacha that will still exist when the replanting program has concluded.

NAVARRA'S DISTRICTS

The region is divided into five districts:

Baja Montaña

Situated in the Montaña foothills, Baja Montaña is the highest and wettest area of Navarra and the vintage is considerably later here than in the south of the region, hence the greater importance placed on early-ripening Tempranillo. Extra rain causes the grape yield to be between 50 and 100 percent higher than that of any of the other four areas. The district produces some of Navarra's best *rosados*, fresh and fruity in aroma and flavor.

Ribera Alta

With twice the number of vineyards as Baja Montaña and Tierra Estella, this is one of the two most important of Navarra's districts. Ribera Alta borders the Rioja Alta and produces some of the region's finest wines. The *rosados* are smooth and aromatic, and the reds soft and fruity, but with as much as 40 percent Viura planted, this is a major white-wine player and the style is soft, dry, and fresh.

TIERRA ESTELLA, NAVARRA

The picturesque village of Maneru is situated near Estella, southwest of Pamplona. Tempranillo is the main variety grown in the area's vineyards.

Ribera Baja

One of the two most important wine districts of Navarra, Ribera Baja is very hot and dry and includes approximately 20 percent of what is effectively the Rioja Baja district. The wines produced are mostly red, made principally from the Garnacha (Grenache) grape, and typically deep-colored, full, and robust. Muscat à Petits Grains accounts for 10 percent of the vines planted and produces a sweet Moscatel-style wine.

Tierra Estella

Viticulturally as important as Baja Montaña and climatically similar to Valdizarbe in the north, though gradually getting drier farther south, the Tierra Estella makes pleasant, fruity reds and *rosados* from the Tempranillo, which is heavily planted here. The Garnacha variety is less important since its wines tend to oxidize. Some crisp white wines from the Viura grape are also produced.

Valdizarbe

The smallest of Navarra's five districts, Valdizarbe has a slightly drier climate than the Baja Montaña and is an excellent source of good-value red and *rosado* wines, although some of these have an unfortunate tendency to oxidize.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

Situated in northern Spain in the upper valley of the Ebro River, Rioja and Navarra are bounded to the northeast by the Pyrenees and to the southwest by the Sierra de la Demanda. Navarra has the second-most northerly vineyards in Spain.

CLIMATE

The Cantabrian Mountains, a range that is modest in elevation yet impressive in structure, provide a major key to the quality of Rioja, protecting the region from the devastating winds whipped up over the Bay of Biscay and holding in precarious check the influence of the Atlantic and Mediterranean. That of the former is at its strongest in Navarra, and of the latter in the Rioja Baja. Temperature rises and rainfall decreases as one moves eastward to the Mediterranean. The Pyrenees also provide shelter from the north, but winters can be cold and foggy, particularly in Navarra. Rioja can suffer from hailstorms and the hot, dry *solano* wind.

ASPECT

Vineyards are variously located, from the highest in the foothills of the Pyrenees in Navarra to those on the flatter lands of the Rioja Baja in the southeast. Generally, the best vineyards are in the central hill country of the Rioja Alta and the Alavesa.

SOIL

Although soils do vary, the common denominator is limestone. In Navarra, limestone contains between 25 and 45 percent "active" lime, and is coated by a layer of silty-alluvium near the Ebro or by

weathered limestone and sandstone topsoil in drier areas. Limestone with either sandstone or calcareous clay and slaty deposits dominate the Rioja Alavesa and Alta, while a ferruginous-clay and a silty-loam of alluvial origin cover a limestone base in the Rioja Baja.

VITICULTURE AND VINIFICATION

Most wines are a blend of at least three grapes from different areas within a single appellation; very few are 100 percent pure varietal or single-estate wines. The traditional vinification process, which is still used to produce the local *vino nuevo*, is a crude form of *macération carbonique* carried out in open vats; the grapes are trodden after the first few days of intercellular fermentation. This is much as Beaujolais wines used to be made, but the result here is much coarser, with a dark-damson color and lots of youthful tannin. Most wines are, however, vinified in the normal manner, but aged longer than other commercial wines. Although recent trends favor shorter oak-aging and longer bottle-maturation, the character of Rioja still relies heavily on oak, and it is essential for its future that it should remain so.

GRAPE VARIETIES

Primary varieties: Tempranillo, Viura (*syn.* Macabéo)
Secondary varieties: Cabernet Sauvignon, Carignan (*syn.* Mazuelo), Chardonnay, Cinsault, Garnacha (*syn.* Grenache), Garnacha Blanca (*syn.* Grenache Blanc), Graciano, Malvasia, Mourvèdre (*syn.* Monastrell), Muscat (*syn.* Moscatel)

THE WINE PRODUCERS OF RIOJA AND NAVARRA

Note Unless specifically stated otherwise, all recommendations (including “Entire range”) are for red wine only. Reds from both regions are generally drinking well in their third year, but top *cuvées* often improve for up to 10 years, and exceptional ones can age gracefully for decades, while most white and *rosado* wines are best fresh and should thus be consumed when purchased. See p.304 for details of the wine styles mentioned.

BODEGAS AGE

Rioja

See also Campo Viejo and Marques del Puerto

Part of Bebidas (formerly Savin), this *bodega* is now better known as Bodegas & Bebidas or ByB, and is under the same ownership as Campo Viejo and Marques del Puerto. The basic quality is rather uninspiring, but top of the line wines are usually very good value indeed. Labels include Agessimo, Azpilicueta Martínez, Credencial, Don Ernesto, Marqués del Romeral (traditional style and the best), and Siglo (modern style).

✓ Reserva • Gran Reserva

BODEGAS ALAVESAS

Rioja

This makes some long-lived *reserva* and *gran reserva* of surprising quality and elegance. Labels include Solar de Samaniego (primary) and Castillo de Bodala (secondary).

✓ Reserva • Gran Reserva

FINCA ALLENDE

Rioja

★★

One of the fastest-rising stars on the Riojan firmament.

✓ Entire range

AMÉZOLA DE LA MORA

Rioja

★

I have encountered a couple of interesting wines from this Rioja Alta estate. One to watch.

✓ *Viña Amézola* • *Señorío de Amézola*

ARAEX

Rioja

Formed in 1993, ARAEX is a group of nine *bodegas* selling Rioja under the following labels: Bodegas Don Balbino, Bodegas Luís Cañas (some excellent *reservas* that benefit from aging 10 years or more in bottle), *Viña Diezmo*, Bodegas Larchago (voluptuous fruit), *Viña Lur*, Bodegas Heredad de Baroja (heaps of fruit, firm tannin structure), Bodegas Muriel, Solagüen, and Valserano.

BARÓN DE LEY

Rioja

★★★

See also El Coto

An exciting single-estate Rioja, produced by Barón de Ley using exclusively French, rather than American, oak. It is currently one of the two greatest Riojas in production (the other being Contino).

✓ Entire range

BARÓN DE OÑA

Rioja

★★

See also La Rioja Alta

This small *bodega* at Paganos was established in the late 1980s but sold to La Rioja Alta in 1995, long before its wines had any chance of distribution in Spain, let alone abroad. With a high-tech, stainless-steel winery and use of 100 percent new French oak, Barón de Oña is a name to watch out for.

✓ Entire range

BODEGAS BERBERANA

Rioja

★

This producer can be disappointing at the lower end, but makes good to very good *reserva* and *gran reserva* wines that are full, fat, and sometimes even blowy, with soft, oaky fruit. Berberana is also good value for older vintages. Labels include *Preferido* (*joven* style), *Carta de Plata* (younger style), *Carta de Oro* (bigger, richer), and *Berberana reserva* and *gran reserva* (best).

✓ Reserva • Gran Reserva • *Tempranillo* • *Dragon Tempranillo*

BODEGAS BERCEO

Rioja

Berceo has few vineyards and makes ordinary basic wines, but good *reservas* and *gran reservas*. Bodegas Berceo, located at Haro in Rioja Alta, has the same owners as Bodegas Luís Gurpegui Muga at San Adrián, where Rioja Baja overlaps Navarra.

✓ *Gonzalo de Berceo Gran Reserva*

BODEGAS BERONIA

Rioja

These are firm, oaky reds and fresh whites from Gonzalez Byass.

✓ Reserva • Gran Reserva

BODEGAS BILBAÍNAS

Rioja

★

Major vineyard owners, Bilbaínas are producers of traditionally styled Rioja. Labels include *Viña Pomal* (deep, dark, and well-oaked with plummy fruit), *Viña Zaco* (oakier), *Vendimia Especial* (excellent older

vintages) and *Royal Carlton* (one of Rioja's Cava brands).

✓ Reserva • Gran Reserva

BODEGAS CAMPILLO

Rioja

★

See also Faustino Martínez

Touted by many as a new Rioja, Campillo has been around for some years, starting out as a second label of Faustino Martínez. Even at the time of the first edition of this encyclopedia in 1988, Campillo was “often better than the principal label.” This was because these wines were used to break in Faustino's new barrels, a strategy that caused Campillo to outshine Faustino's flagship wines.

✓ Entire range

BODEGAS CAMPO VIEJO

Rioja

★

See also Bodegas AGE and Marqués del Puerto

A large producer with major vineyard holdings under the same ownership as Bodegas AGE and Marqués del Puerto, Campo Viejo has a well-earned reputation for good-quality wines of exceptional value. Its *tinto* wines are typically full-bodied and marked by a fatness of ripe fruit and rich vanilla-oak. Labels include *Albor* (*joven* style), *Viña Alcorta* (wood-aged pure varietals), *San Asensio* (exuberantly fruity) and *Marqués de Villamagna* (created for bottle-aging, classic and fine rather than fat).

✓ Reserva • Gran Reserva • *Marqués de Villamagna Gran Reserva*

BODEGAS CARLOS SERRES

Rioja

Carlos Serres was founded by Charles (later known as Carlos) Serres in 1869, one year after his fellow Frenchman Jean Pineau went to Marqués de Riscal. The house style tends to be on the light side, but the *reserva* and *gran reserva* wines often have an elegant richness.

✓ *Carlomagno* (Reserva) • *Carlos Serres* (Gran Reserva)

BODEGAS CASTILLO DE MONJARDÍN

Navarra

★

An up-and-coming new *bodega* growing a high proportion of *Tempranillo* and French varieties. Fresh, creamy-rich red and white wines, both with and without oak. Exciting potential.

✓ *Chardonnay* • *Tinto Crianza*

CONTINO

Rioja

★★★

Owned by CVNE and a group of growers (whose combined holdings comprise the vineyards of this single-estate Rioja), Contino was not the first single-vineyard Rioja, but its great success encouraged other boutique wineries to follow. It also stimulated interest in French oak as opposed to American.

✓ *Contino Rioja Reserva*

BODEGAS CORRÁL

Rioja

This improving *bodega* has relatively few vineyards and is best known for its Don *Jácobo* line, although the underrated *Corral Gran Reserva* is by far its best wine.

✓ *Corral Gran Reserva*

COSECHEROS ALAVESAS

Rioja

★

Perhaps one reason why this is one of Rioja's better cooperatives is that it is so small that it is hardly a cooperative in the commonly accepted definition of the term. The other reason is the excellent location of their vines around *Laguardia* in Rioja Alavesa. The style is always bright and fruity.

✓ *Artadi* (including blanco) • *Orobio* • *Valdepomares*

BODEGAS EL COTO

Rioja

★★

See also Barón de Ley

These are wines of immaculate style, grace, and finesse, particularly the *Coto de Imaz* and, more recently, the single-vineyard *Barón de Ley*.

✓ *El Coto* • *Coto de Imaz Reserva*

CVNE

Compañía Vinícola del Norte de España Rioja

★

See also Contino

Also known as *Cune* (pronounced “coonay”), *Compañía Vinícola del Norte de España* Rioja was once the most old-fashioned and traditional of Rioja producers and its vintages were legendary, easily lasting 30 years or more. Ironically, these

wines went through a dicey patch following the installation of a \$23 million state-of-the-art winery, but CVNE seems to be coming to terms with this new technology. Recent vintages appear to be picking up, hence its half-star rating, and, hopefully, this *bodega* will return to its previous long-established quality, which should earn it two stars. Labels include Imperial (for finesse) and Viña Real (a plummier, fatter style) and Monopole (the best of the freshest, creamiest, oakiest style of *blanco*).

✓ *Gran Reserva* • *Monopole*

BODEGAS DOMEQCQ

Rioja

This famous sherry house has not only built up the largest vineyard holdings in Rioja, but has also carefully pieced together one consolidated block of vines, whereas other large holdings are scattered throughout the region. It is, if you like, a sort of supersized Contino under single rather than multiple ownership. The original concept was thus to sell a single-vineyard Rioja under the Domecq Domaine label. This would create the desired prestige, while the lesser-quality Marqués de Arienzo brand, produced from both own-vineyard and bought-in grapes, would attract a healthy cash flow through high-volume sales. If the wines of Domecq Domaine had been richer and better, it could have worked, but they were not, and marketing was further confused by these wines being called Privilegio Rey Sancho in Spain itself. Domecq could have been a super-single-vineyard Rioja, but Marqués de Arienzo has now assumed the mantle of this *bodega's* flagship wine. A new cheaper brand is called Viña Eguia, and the house style continues to be light and refined, rather than either big or exciting. Stick to the *gran reserva*.

✓ *Gran Reserva*

DOMINIO DE MONTALVO

Rioja

★

This is an innovative barrel-fermented, pure Viura *blanco*.

✓ *Dominio de Montalvo Viura*

BODEGAS FAUSTINO MARTÍNEZ

Rioja

★

If given sufficient bottle-age (keeping five years will do no harm) Faustino *reserva* and *gran reserva* can attain exceptional finesse, but are often outshone by Campillo, which started out as a second brand tasked with soaking up the unwanted oakiness from the *bodega's* new barrels.

✓ *Faustino V* (Reserva) • *Faustino I* (Gran Reserva)

FEDERICO PATERNINA

Rioja

These wines are generally light and lacking, especially Banda Azul, its

best-known label. You must go up to *reserva* level to find real richness, although the *gran reserva* (Conde de Los Andes) is unpredictable, ranging from pure brilliance to absolute volatility.

✓ *Viña Vial* (Reserva)

BODEGAS GUELZENZU

Non-DO Navarra

★★★

Taken out of the DO in order to increase quality and consistency through less restrictive regulations, the basic, ridiculously cheap, Guelbenzu Jardín is a wonderfully delicious, easy-drinking wine made from 30–40 year-old Garnacha vines that is superior to 90 percent of “authentic” DO Navarra. Guelbenzu Azul (primarily Tempranillo-Cabernet Sauvignon with 10–20% Merlot) is where the class starts, Evo (Cabernet Sauvignon-Tempranillo reverses the emphasis, plus 10–20% Merlot) was once the top-of-the-line, but Guelbenzu has topped this with the truly magnificent Lautus (50% Tempranillo, 30% Merlot, 10% Cabernet Sauvignon, 10% Garnacha).

✓ *Entire range*

BODEGAS GURPEGUI

Rioja

Located at San Adrián in Rioja Baja, where it produces the Viñadrán and Dominio de la Plana ranges, Bodegas Gurpegui also owns Bodegas Berceo in Rioja Alta.

BODEGAS IRACHE

Navarra

This is a modern winery producing unpretentious, fruity wines.

✓ *Viña Irache* • *Gran Irache*

BODEGAS JULIÁN CHIVITE

Navarra

Bodegas Julián Chivite typically produces soft, mellow, smooth, oaky wines with plenty of creamy-coconutty fruit flavor.

✓ *Chivite Reserva* • *Gran Feudo* • *Viña Marcos*

BODEGAS LAGUNILLA

Rioja

Lagunilla is decent and dependable, but rarely exciting, even though the wines are usually pure Tempranillo and one of its labels, Viña Herminia, enjoys a good reputation in Spain itself. It is best to stick to older vintages and *gran reservas*.

LEALTANZA

Rioja

★★

High-tech winery blending the best of tradition to produce top-class, exclusively Tempranillo wines.

✓ *Entire range*

BODEGAS MAGAÑA

Navarra

★

Juan Magaña is best-known for varietal wines, particularly the

excellent Merlot, but his Merlot-Tempranillo blend called Eventum has more finesse.

✓ *Eventum* • *Merlot*

MANZANOS

Rioja

★★

High-tech winery blending the best of tradition to produce a line of top-class, exclusively Tempranillo wines.

✓ *Entire range*

MARQUÉS DE CÁCERES

Unión Viti-vinícola

★

Marqués de Cáceres is often quoted as part of the modern school of Rioja winemaking, but is more accurately described as a traditional Bordeaux style. They are lighter, less rustic wines than those of modern Rioja style that benefit from bottle-aging. Antea is an excellent barrel-fermented white.

✓ *Antea* • *Reserva* • *Gran Reserva*

MARQUÉS DE GRIÑÓN

Rioja

★★★

Marqués de Griñón is perhaps better known for its outstanding Domino de Valdepusa, Spain's first *Pago* DO, from south of Madrid, but it also produces excellent modern-style Rioja, including some wines that incorporate “experimental” Syrah, Merlot, and Cabernet Sauvignon. Wines also sold under the Marqués de Concordia label.

✓ *Entire range*

MARQUÉS DE MURRIETA

Rioja

★★★

Owned by Dominos de Creixell, along with Pazo de Barrantes (see Rías Baixas DO under “The Appellations of Spain,” p.309), Marqués de Murrieta is known for its pungently oxidative *blanco reserva*, which is impossible to criticize, even if some vintages taste like a cup of lemon tea brewed in new oak, as it is considered to be the epitome of its style. Marqués de Murrieta whites contain more freshness and fruit than they used to. A remarkable range of old vintages remain commercially available, especially the venerable Castillo Ygay.

✓ *Ygay Etiqueta Blanca* • *Ygay Reserva* • *Castillo Ygay*

MARQUÉS DE RISCAL

Rioja

★★★

When the first edition of this book came out, Riscal's Swiss importer faxed Francisco Hurtado de Amexaga a copy of this page claiming “the red wines from Rioja's most famous *bodega* have an unpleasant musty-mushroom character,” upon receipt of which Hurtado de Amexaga recalled his top winemaker from Riscal's Rueda outpost to investigate.

These wines had gradually acquired a musty character since the 1960s, prior to which they were always among the top three Riojas produced, but since they had the oldest and greatest reputation in Rioja, no one had dared mention this until this book was published in 1988. Every one of Riscal's 20,000 barrels was tasted and 2,000 were immediately destroyed, with the equivalent of 600,000 bottles of wine poured away. Another 2,000 borderline barrels were earmarked for replacement the next year and a program instigated to renew all 20,000 over 10 years. In turning around the situation so quickly and with no expense spared, Hurtado de Amexaga ensured that Riscal would regain its position among the world's finest wines.

✓ *Reserva* • *Gran Reserva* • *Barón de Chirel*

MARQUÉS DEL PUERTO

Rioja

See also Bodegas AGE and Campo Viejo

Formerly known as Bodegas Lopez Agos, Marqués del Puerto is part of Bebidas (formerly Savin), along with Bodegas AGE and Campo Vieja, and produces an elegant style of Rioja, with ripe fruit and good acidity.

✓ *Reserva*

BODEGAS MARTÍNEZ BUJANDA

Rioja

★

This high-tech winery consistently produces pure, fresh *blanco* and fine, firm, fruit-driven *tinto*.

✓ *Conde de Valdemar*

BODEGAS MONTECILLO

Rioja

★

Owned by Osborne of Jerez, Montecillo covers the spread of styles, from fruity *crianza* reds, through zippy *blanco*, to great *gran reserva* reds.

✓ *Viña Cumbreño* (blanco) • *Reserva* • *Gran Reserva*

BODEGAS MUERZA

Rioja

②

The cheapest reds made here are light, peppery wines that spoil the reputation of this *bodega*, which also produces relatively inexpensive *reservas* and *gran reservas* that are firm and oaky with good, old-fashioned, life-preserving acidity.

✓ *Rioja Vega* (Reserva, Gran Reserva)

BODEGAS MUGA

Rioja

★★★

Lovely *rosado* here, but the reds are really top-class, especially Prado Enea. The basic Muga *crianza* is much younger and fresher, but can be bottle-aged to obtain a similar

elegance and seductive, silky finish to those found in the Prado Enea.

✓ *Entire range*

BODEGAS MURUA

Rioja
★

This is a small winery dedicated to producing pure Rioja Alta Tempranillo of some finesse.

✓ *Reserva • Gran Reserva*

BODEGAS NEKEAS

Navarra
★★

The amazing discovery of the 1996 International Wine Challenge, Nekeas defeated some of the greatest Chardonnays from Burgundy and the New World to win the coveted Chardonnay Trophy. Made by Spain's former agricultural minister, Francisco San Martin, who certainly knows his vines, and probably his onions, too.

✓ *Entire range*

BODEGAS OCHOA

Navarra
②

The well-known Bodega Ochoa has been disappointing of late, but EVENA's (see p.313) former head oenologist certainly has the knowledge, equipment, and expertise to produce top-flight Navarra wines once again, so I will reserve my judgment.

BODEGAS OLARRA

Rioja
★

This ultramodern, high-tech winery always used to produce a good Rioja across the range, but vintages became erratic in the mid-1980s, then decidedly poor, but improvements were first noticed with the 1990 vintage in the mid-1990s, so my fingers are crossed. Labels include La Catedral.

✓ *Añares and Cerro Añón ranges*

BODEGAS PALACIO

Rioja
★★

An old *bodega* that has truly excelled since the early 1990s, Palacio uses both French and American oak, with wines ranging from the pure Tempranillo Cosme Palacio y Hermanos, a very traditional Rioja that is consistently Palacio's best wine, and Milflores, which gushes with delicious, juicy fruit, making it one of the better *joven* wines produced.

✓ *Cosme Palacio y Hermanos • Glorioso • Milflores*

BODEGAS PALACIO REMONDO

Rioja
★★

Class Rioja from the gifted hands of Alvaro Palacio.

✓ *Entire range*

PALACIO DE LA VEGA

Navarra
★★

José María Nieves produces beautifully packaged, stylish wines that are brimming with fruit and finesse. He makes them exclusively from vines grown on this excellent estate.

✓ *Cabernet Sauvignon (Reserva)*

BODEGAS PIEDEMONTE

Navarra
★

This is an up-and-coming *bodega*, which produces excellent Cabernet Sauvignon with a silky texture and a spicy finesse.

✓ *Oligitum Cabernet Sauvignon*

BODEGAS PRÍNCIPE DE VIANA

Navarra
★①

Formerly known as Agronavarra Cenal and having devoured and dispensed with Bodegas Canals, Príncipe de Viana, the firm's premium product, has been adopted as the name of the high-tech *bodega*. Bodegas Príncipe de Viana wines have become something of a bargain compared to those of other top Navarra *bodegas*, which have gained in price as they have achieved greater quality. Príncipe de Viana does not have the finesse of the best Navarra wines, but they are much cheaper and have oodles of rich, coconutty fruit, which I associate with American oak, although some of the wines claim to use French barrels. Labels include Agramont and Campo Nuevo.

✓ *Cabernet Sauvignon • Chardonnay*

BODEGAS RAMÓN BILBAO

Rioja
★

With few of its own vineyards and a small production from mostly bought-in grapes, Ramón Bilbao's best wine is Viña Turzaballa. Its blend contains 90 percent Tempranillo, and the wine is given plenty of time in oak. Viña Turzaballa and also benefits from up to six years further aging in bottle.

✓ *Viña Turzaballa Gran Reserva*

REMELLURI

La Granja Nuestra Señora de Remelluri
Rioja
★★

These single-vineyard Riojas of consistently high quality from Labastida de Alava possess exquisite balance, elegance, and finesse, great richness of ripe fruit, and a long creamy-vanilla oak finish.

✓ *Labastida de Alava*

LA RIOJA ALTA

Rioja
★★

The Viña Alberdi *crianza* is an excellent introduction to these wines, but the serious business begins with the elegant Viña Arana and Viña Ardanza *reservas*, which are remarkably complex wines considering that they account for more than half of the firm's production. The Gran Reserva 904 is an exceptionally concentrated and classy wine, while the Gran Reserva 890 is a rare product indeed.

✓ *Barón de Oña • Viña Alberdi • Viña Ardanza (Reserva) • Gran Reserva 904 • Gran Reserva 890*

BODEGAS RIOJA SANTIAGO

Rioja

Memories of excellent 1950s vintages from Rioja Santiago tasted in the 1970s are fading fast by today's acceptable, but hardly special, standards. Other labels these days include Vizconde de Ayala.

✓ *Gran Condal (Reserva, Gran Reserva)*

BODEGAS RIOJANAS

Rioja
★★

A traditional *bodega* that has built its reputation on red wines, particularly the *reserva* and *gran reserva* versions of its rich-oaky Viña Albina and the dark, plummy Monte Real with its vanilla-spice aftertaste.

✓ *Canchales (Vino Nuevo) • Viña Albina (Reserva) • Monte Real (Reserva)*

SAN VICENTE

Rioja
★★

Top quality Rioja from the makers of Numanthia in Toro.

✓ *Entire range*

BODEGA DE SARRÍA

Navarra
★

A large, well-established estate with a modern winery, producing clean, fruity wines that are constantly improving despite the death of Francisco Moriones, the oenologist

responsible for establishing this *bodega's* current reputation. Labels include Viña del Portillo, Viña Ecoyen, and Viña del Perdón.

✓ *Gran Vino del Señorío de Sarriá • Viña del Perdón • Viña Ecoyen • Blanco seco • Rosado*

BODEGAS SIERRA CANTABRIA

Rioja
★

These are large vineyard owners producing an easy-drinking Rioja, with lush fruit, its fatness often lifted by an intense cherry tang. Other labels include Bodegas Egaran.

✓ *Codice • Reserva*

VIÑA IJALBA

Rioja
★

One of the smallest and potentially most exciting of Rioja *bodegas*, making startling wines in weird bottles, including a rare, pure Graciano. Warranting two stars by the next edition?

✓ *Ijalba (Graciano) • Solferino (Tempranillo)*

VIÑA SALCEDA

Rioja
★

Fresh, gluggy *crianza* reds, huge, rich, and serious *gran reservas*.

✓ *Gran Reserva*

VIÑA TONDONIA

López de Heredia Viña Tondonia
Rioja
★★

Just up the hill from the very traditional Bodegas Muga is Tondonia, a firm that makes Muga look high-tech. It is impossible to find a more old-fashioned *bodega*, from the huge cobwebs in the tasting room to the religious dipping into wax of all bottle ends as if they contained port. The wines are rich and oaky, and capable of great age. Tondonia is the finest, Bosconia the fattest, and Cubillo the youngest.

✓ *Viña Bosconia • Viña Cubillo • Viña Tondonia (including blanco)*

VINÍCOLA DE LABASTIDA

Rioja
★

This is probably the best cooperative in Rioja.

✓ *Gastrijo (Reserva) • Castillo Labastida (Gran Reserva)*

VINÍCOLA NAVARRA

Navarra
①

Richly colored and flavored wines, sometimes a touch porty, but always cheap and good value, Vinicola Navarra is part of the sprawling ByB empire.

✓ *Las Campanas • Castillo de Tiebas (Reserva)*

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

Lying in the northeast corner of Spain, where Rioja's Ebro River enters the Mediterranean, Penedès is part of Catalonia, which also includes Alella, Tarragona, Priorato, and Terra Alta.

CLIMATE

A mild Mediterranean climate prevails in Penedès, becoming more continental (hotter summers and colder winters) moving westward and inland toward Terra Alta. In the same way, problems with fog in the northeast are gradually replaced by the hazard of frost toward the southwestern inland areas. In the high vineyards of Alta Penedès, white and aromatic grape varieties are cultivated at greater altitudes than traditional ones; since they benefit from cooler temperatures.

ASPECT

Vines are grown on all types of land, ranging from the flat plains of the Campo de Tarragona, through the 1,300-foot- (400-meter-) high plateaux of Terra Alta, to the highest vineyards in the Alta Penedès, which reach an altitude of 2,620 feet (800 meters). For every 330-foot (100-meter) rise in altitude, the temperature drops 0.56°F (1°C).

SOIL

There is a wide variety of soils, ranging from granite in Alella, through limestone-dominated clay, chalk, and sand in Penedès, to a mixture of mainly limestone and chalk with granite and alluvial

deposits in Tarragona. The soil in Priorat is an unusual reddish slate with particles of reflective mica in the north, and schistose rock in the south.

VITICULTURE AND VINIFICATION

Catalonia is a hotbed of experimentation. Ultramodern winemaking techniques have been pioneered by Cava companies such as Codorníu and fine-wine specialists like Torres. Viticultural and vinification practices are generally quite modern throughout Catalonia. This is especially so at the Raimat Estate in Lérida, where the technology ranges from the latest and most efficient "Sernagiotto" continuous press for bulk production to the "Potter gravity crusher." Described as the simplest press ever designed, this extracts no more than 50–60 percent of the grape's potential juice.

GRAPE VARIETIES

Primary varieties: Cabernet Sauvignon, Carignan (*syn.* Cariñena, Mazuelo), Garnacha (*syn.* Lladoner, Aragonés), Mourvèdre (*syn.* Alcayata, Monastrell), Samsó, Tempranillo (*syn.* Ull de Llebre), Viura (*syn.* Macabéo); Xarel-lo (*syn.* Pansá Blanca)

Secondary varieties: Cabernet Franc, Chardonnay, Chenin Blanc, Gewürztraminer, Merlot, Muscat d'Alsace, Parellada, Pinot Noir, Riesling, Sauvignon, Subirat-Parent (*syn.* Malvasía Riojana)

internationally renowned grapes like Chardonnay can only dilute the wine's identity. However, as Codorníu has shown, blending with Chardonnay can fill out a Cava in a way that the traditional varieties (Macabéo, Parellada, and Xarel-lo) cannot.

At a Cava shippers' dinner in 1991, when Manuel Duran, the chairman of Freixenet, admitted that they were still undecided as to whether Cava's varieties were ideally suited to sparkling wine, he was challenged not simply to find an indigenous substitute for Chardonnay, but also to try to experiment with black Spanish varieties. Cava's traditionalists have, for some bizarre reason, always considered black grapes in a white Cava to be sacrilegious, yet Duran picked up the gauntlet, producing a Monastrell-Xarel-lo *cuvée* (the first release was too flabby, but the second release in 1997 was much better—the Catalonians are not used to handling black grapes for white wines, and I expect this Cava to continue improving). Prior to Freixenet's project, Codorníu was the only house to try black grapes in white Cava and succeeded in producing one of the most sumptuous Spanish sparkling wines ever using Pinot Noir.

Whether it is Monastrell, Grenache (*syn.* Garnacha), Trepát, Tempranillo, or some other Spanish grape, I believe that Cava will one day benefit from the use of indigenous black varieties and when that happens, Codorníu will, I am sure, use them, just as they will use any Spanish white variety that is discovered to be as useful in plumping up a *cuvée* as Chardonnay.

CAVA AND PENEDÈS

Although many Cava producers are either manual or computer-controlled girasols, which enable remuage to be performed by the pallet-load, some of the more traditional houses, such as the family-owned firm of Juvé y Camps, still use pupitres.

Luis Justo i Villanueva, the Laboratory Director at the Agricultural Institute of Sant Isidre in Catalonia. It was under Villanueva that all the earliest commercial producers of Spanish sparkling wine learned the Champagne process. In 1872, three of his former students, Domenec Soberano, Francesc Gil, and Augusti Vilaret, entered their sparkling wines in a Barcelona competition. All used classic Champagne grapes grown in Catalonia. Soberano and Gil were awarded gold medals, while Vilaret, who used raspberry liqueur in the dosage, received a bronze. Vilaret's firm, Caves Mont-Ferrant, is the only one of these enterprises to have survived.

The above facts are fully documented and thus contradict Codorníu's claim that it was first to produce Spanish sparkling wine in 1872. Codorníu did not, in fact, sell its first sparkling wines until 1879, and it would not be until 1893 that its production hit 10,000 bottles, a level that the three original firms achieved in the 1870s. What everyone seems agreed on, however, is that José Raventós i Fatjó of Codorníu was the first to make bottle-fermented sparkling wine out of Parellada, Macabéo, and Xarel-lo and that these grapes came to form the basis of the entire Cava industry.

CAVA'S SPANISH CHARACTER

The production of Cava is dominated by two firms: Codorníu and Freixenet. The latter has always been violently opposed to the invasion of Cava vineyards by foreign grape varieties. Freixenet's argument is certainly valid—that the introduction of foreign varieties could erode Cava's Spanish character. Cava is, after all, the only dry sparkling-wine appellation of any repute outside France and, of course, Spain has its own indigenous varieties, thus

THE WINE PRODUCERS OF CAVA AND PENEDEÈS

Note For recommended wines of all other Catalonian appellations, see the relevant DO under "The Appellations of Spain" on p.306. Included below are only those wines that come under Cava DO and Penedès DO. Reds from Penedès generally drink well in their third year, but top *cuvées* often improve for up to 10 years, and exceptional ones can age gracefully for decades. Penedès white and *rosado* wines and sparkling Cava are best fresh and should thus be consumed when purchased.

ALBET I NOYA

★

Established as recently as 1981, Josep Albet i Noya soon became a respected producer of fresh, lively Cava and well-made white Penedès, but is now turning out some spectacular reds.

✓ *Cava* (Vintage) • *Blanc Novell*
• *Cabernet Sauvignon*
• *Tempranillo*

CAN RAFOLS DELS CAUS

★

This is an up-and-coming small estate producing excellent Cabernet (Franc and Sauvignon), and a Merlot blend called Gran Caus. Other labels include Petit Caus.

✓ *Gran Caus*

CASTELL DE VILARNAU

★

This producer is not as consistent as it should be, but has always been capable of richer, more complex Cava, even before the general improvement that lifted the industry in the mid-1990s.

✓ *Cava* (Vintage)

CASTELLBLANCH

★

Castellblanch is a firm owned by Freixenet, and it produces a remarkably consistent Cava wine.

✓ *Cava* (Brut Zero)

CODORNÍU

★

The largest and most innovative Cava firm, its production dwarfs even that of Moët & Chandon in Champagne. Codorníu started the foreign grape controversy by introducing Chardonnay, first through Raimat Cava in Conca de Barberà, then in its own range. When grown in the right area, Chardonnay does plump up the quality, depth, and finesse of Cava, but there is opposition to nontraditional Spanish grape varieties from those who fear they will erode the intrinsically Spanish character of the wine.

✓ *Cava* (Anna de Codorníu Chardonnay, Jaume de Codorníu, Brut Rose)

CONDE DE CARALT

★

This is a reliable Cava from part of the Freixenet group.

✓ *Cava* (Brut)

COVIDES

★

This cooperative produces a surprisingly rich style of Cava.

✓ *Cava* (Duc de Foix Brut, Duc de Foix Vintage, Xenius)

FREIXENET

★

Freixenet is the second-largest Cava firm, and produces probably the best known of all Cavas. Other labels include Castellblanch, Conde de Caralt, Paul Cheneau, and Segura Viudas.

✓ *Cava* (Brut Nature, Carta Nevada)

GRAMONA

★

Of its tangy Cavas, Celler Battle shows rare vanilla-finesse on finish.

✓ *Celler Battle* • *Imperial III Lustrós*

CAVAS HILL

★

This old-established, family-owned estate produces elegant Cavas and some very good still wines.

✓ *Cava* (Reserva Oro Brut)
• *Blanc Cru* • *Gran Cívet*
• *Gran Toc*

JAUME SERRA

★

Jaume Serra produces good Cava, but even better Penedès still wines, made in modern, fruit-driven style in collaboration with Chilean winemaker Ignacio Recabarren.

✓ *Cava* (Cristalino) • *Vinya de Mar*

JEAN LÉON

★★

Following the death of Jean Léon, these wines are now made and marketed by Torres. These big, rich, oaky wines are stunning, but some vintages can disappoint. By no means infallible.

✓ *Cabernet Sauvignon*
• *Chardonnay*

JUVÉ Y CAMPS

I have failed to discern any of the intrinsically superior qualities in these wines that some Cava-infatuated critics have found. However, I do hasten to add that there is nothing wrong with the wines of this respected, traditional, family firm. They are just not special.

MARQUÉS DE MONISTROL

★

This competent Cava firm, owned by Martini & Rossi, also makes a fine Reserva red Penedès wine and a fresh, youthful Merlot.

✓ *Cava* • *Penedès Reserva*
• *Merlot*

MAS RABASSA

★

Mas Rabassa makes fresh and quite delicious, new-style wines.

✓ *Xarello* • *Macabéo*

CAVAS MASCARÓ

★

A small, family-owned producer founded in the immediate postwar era, Mascaró is best known for its Don Narciso brandy, but also makes an underrated line of wines.

✓ *Cava* (Brut) • *Anima Cabernet Sauvignon*

MASÍA BACH

★

Renowned more for its sweet, oak-aged white Extrísimo Bach, than for its reds, which have always been merely soft and acceptable, this Codorníu-owned firm began to take its red winemaking seriously when it released a stunning 1985, simply labeled Masía Bach.

✓ *Masía Bach* (Reserva) • *Vinya Extrísima* (Reserva)

MESTRES

★

Mestres is a small, traditional, family-owned Cava business that produces numerous wines of fine autolytic character.

✓ *Cava* • *Clos Nostre Senyor*
• *Mas-Via*

MONT MARÇAL

★

This is a well-made Cava produced by a private family firm.

✓ *Cava* (Nature, Chardonnay)

PARXET

★

Under the same ownership as Marqués de Alella, Parxet is capable of producing refined sparkling wines. Its pink-hued "Cuvée Dessert" is sweeter than a *demi-sec* and needs to be cellared for a couple of years. This firm is not afraid to go out on a limb.

✓ *Cava* (Brut Nature, Brut Reserva)

CELLARS PUIG I ROCA

★★

Cellars Puig and Roca are exciting, estate-bottled wines from ex-Torres troubleshooter Josep Puig. The entrepreneurial Puig even produces

a varietal vinegar from Cabernet Sauvignon, which is aged in chestnut casks for flavor.

✓ *Augustus* (Cabernet Sauvignon, Cabernet Sauvignon Rosado, Chardonnay, Merlot)

RAÏMAT

★★

In the Conca de Barberà, the Raïmat estate is owned by Codorníu and utilizes innovative equipment to make an excellent range of fine wines (Abadia, Tempranillo, Cabernet Sauvignon, and Merlot), using classic grape varieties, in addition to its Cava, which was Spain's first pure Chardonnay sparkling wine.

✓ *Abadia Reserva Cabernet Sauvignon* (Mas Castell) • *Chardonnay* (Seleccion Especial) • *Sparkling wine* (Chardonnay)

RAVENTÓS I BLANC

★

Josep Maria, black sheep of the Raventós family, left Codorníu to set up his own Cava house, producing, fresh, lively *cuvées*, sometimes of excellent quality.

✓ *Cava* (Brut)

RENÉ BARBIER FILL

★★

Not the old-established firm of René Barbier, which belongs to Freixenet, but René Barbier fill (Catalan for "son"), which is the relatively new company that has been founded in Gratallops in Priorat.

✓ *Priorat* (Clos Mogador)

SEGURA VIUDAS

★★

The best Cava house in the huge Freixenet group, the wines produced by Segura Viudas seem to have extra richness and relatively greater aging potential.

✓ *Cava* (Aria, Heredad, Vintage Brut)

TORRES

★★

The Torres name conjures up French grape varieties and limited editions of world-class wines, but it is actually one of the largest family-owned wine producers in Spain, with 2,000 acres (800 hectares) of vineyard and annual sales of 1.4 million cases of wine. Considering that Sangre de Toro accounts for some 300,000 cases, which is almost a quarter of Torres' total production, this modest, hearty red wine is of a remarkable quality.

✓ *Entire range* (but especially Atrium Fransola, Vinya Esmeralda, Mas la Plana Cabernet Sauvignon)

SHERRY COUNTRY

On January 1, 1996, sherry regained exclusive use in Europe of its own name, which had suffered decades of abuse by producers of so-called “sherry” in other countries, especially Great Britain and Ireland. The governments of these countries had vetoed the protection of sherry’s name when Spain joined the Common Market in 1986.

SUCH ARE THE BALANCES and checks of the European Union (EU) that it took 10 years for this legislation allowing the abuse of sherry’s name to be reversed, ensuring that the name “sherry” (also known as Jerez or Xérès) may now be used only for the famous fortified wines made around Cádiz and Jerez de la Frontera in the south of Spain. Due to the sherry industry’s own folly in trying to compete with these cheaper, fortified rip-offs, the vineyards of Jerez got into massive overproduction problems, but this was recognized in the early 1990s, when lesser-quality vineyards were uprooted, reducing the viticultural area from 43,000 acres (17,500 hectares) to the current 26,000 acres (10,600 hectares).

SHERRY’S ANCIENT ORIGINS

The vinous roots of sherry penetrate three millennia of history, back to the Phoenicians who founded Gadir (today called Cádiz), in 1100 BC. They quickly deserted Gadir because of the hot, howling *levante* wind that is said to drive men mad, and they established a town farther inland called Xera, which some historians believe may be the Xérès, or Jerez, of today. It was probably the Phoenicians who introduced viticulture to the region. If they did not, then the Greeks certainly did, and it was the

JEREZ DE LA FRONTERA

Palomino vines amid the brilliant white albariza soil of Montigillilo, Emilio Lustau’s superb 300-acre (120-hectare) vineyard, just north of Jerez.

Greeks who brought with them their *hepsema*, the precursor of the *arropes* and *vinos de color* that add sweetness, substance, and color to modern-day sweet or cream Sherries. In the Middle Ages, the Moors introduced to Spain the *alembic*, a simple pot-still with which the people of Jerez were able to turn their excess wine production into grape liquor, which they added, along with *arrope* and *vino de color*, to their new wines each year to produce the first crude but true sherry. The repute of these wines gradually spread throughout the Western world, helped by the English merchants who had established wine-shipping businesses in Andalucía at the end of the 13th century. After Henry VIII broke with Rome, Englishmen in Spain were under constant threat from the Inquisition. The English merchants were rugged individualists and they survived, as they also did, remarkably, when Francis Drake set fire to the Spanish fleet in the Bay of Cádiz in 1587. Described as the day he singed the King of Spain’s beard, it was the most outrageous of all Drake’s raids, and when he returned home, he took with him a booty of 2,900 casks of sherry. The exact size of these casks is not known, but the total volume is estimated to be in excess of 150,000 cases, which makes it a vast shipment of one wine for that period in history. It was, however, eagerly consumed by a relatively small population that had been denied its normal quota of Spanish wines during the war. England has been by far the largest market for sherry ever since.

THE UNIQUENESS OF JEREZ SHERRY

It is the combination of Jerez de la Frontera’s soil and climate that makes this region uniquely equipped to produce sherry, a style of wine attempted in many countries around the world but never truly accomplished outside Spain. Sherry has much in common with Champagne, as both regions are inherently superior to all others in their potential to produce a specific style of wine. The parallel can be taken further: both sherry and Champagne are made from neutral, unbalanced base wines that are uninspiring to drink before they undergo the elaborate process that turns them into high-quality, perfectly balanced, finished products.

The famous albariza soil

Jerez’s *albariza* soil, which derives its name from its brilliant white surface, is not chalk but a soft marl of organic origin formed by the sedimentation of diatom algae during the Triassic period. The *albariza* begins to turn yellow at a depth of about

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

This winemaking region is situated in the province of Cádiz, around Jerez de la Frontera in the southwest of Spain.

CLIMATE

This is the hottest wine region in Spain. Generally, the climate is Mediterranean, but toward the Portuguese border, the Atlantic influence comes into play and, farther inland, around Montilla-Moriles, it becomes more continental. It is the Atlantic-driven *poniente* wind that produces the *flor* yeast of *fino* Sherry.

ASPECT

Vines are grown on all types of land, from the virtually flat coastal plains producing Manzanilla, through the slightly hillier Sherry vineyards rising to 330 feet (100 meters), to the higher gentle inland slopes of Montilla-Moriles and the undulating Antequera plateau of Málaga at some 1,640 feet (500 meters).

SOIL

The predominant soil in Jerez is a deep lime-rich variety known as *albariza*, which soaks up and

retains moisture. Its brilliant white color also reflects sun on to the lower parts of the vines. Sand and clay soils also occur but, although suitable for vine-growing, they produce second-rate Sherries. The equally bright soil to the east of Jerez is not *albariza*, but a schisto-calcareous clay.

VITICULTURE AND VINIFICATION

Vinification is the key to the production of the great fortified wines for which this area is justly famous. Development of a *flor* yeast and oxidation by deliberately underfilling casks are vital components of the vinification, as, of course, is the *solera* system that ensures a consistent product over the years. The larger the *solera* the more efficient it is, because there are more butts. Montilla is vinified using the same methods as for Sherry, but is naturally strong in alcohol, and so less often fortified.

GRAPE VARIETIES

Palomino, Pedro Ximénez, Moscatel

3 feet (1 meter) and turns bluish after 16 feet (5 meters). It crumbles and is superabsorbent when wet, but extremely hard when dry. This is the key to the exceptional success of *albariza* as a vine-growing soil. Jerez is a region of baking heat and drought; there are about 70 days of rain each year, with a total precipitation of some 20 inches (50 centimeters). The *albariza* soaks up the rain like a sponge and, with the return of the drought, the soil surface is smoothed and hardened into a shell that is impermeable to evaporation. The winter and spring rains are imprisoned under this protective cap, and remain at the disposal of the vines, the roots of which penetrate some 13 feet (4 meters) beneath the surface. The *albariza* supplies just enough moisture to the vines, without making them too lazy or overproductive. Its high active-lime content encourages the ripening of grapes with a higher acidity level than would otherwise be the norm for such a hot climate. This acidity safeguards against unwanted oxidation prior to fortification.

OSBORNE,
PUERTO DE SANTA MARÍA
The Bajamar solera of Osborne
was established in 1772.

The levante and poniente winds

The hot, dry *levante* is one of Jerez de la Frontera's two alternating prevailing winds. This easterly wind blow-dries and vacuum-cooks the grapes on their stalks during the critical ripening stage. This results in a dramatically different metabolism of fruit sugars, acids, and aldehydes, which produces a wine with an unusual balance peculiar to Jerez. Alternating with the *levante* is the wet Atlantic *poniente* wind. This is of fundamental importance, as it allows the growth of several *Saccharomyces* strains in the microflora of the Palomino grape. This is the poetically named sherry *flor* (see opposite), without which there would be no *fino* in Jerez.

SHERRY'S CLASSIC GRAPE VARIETIES

British sherry expert Julian Jeffs believes that as many as 100 different grape varieties were once traditionally used to make sherry and, in 1868, Diego Parada y Barreto listed 42 then in use. Today only

three varieties are authorized: Palomino, Pedro Ximénez, and Moscatel Fino. The Palomino is considered the classic sherry grape and most Sherrys are, in fact, 100 percent Palomino, though they may be sweetened with Pedro Ximénez for export markets.

HOW GREAT SHERRY IS MADE

The harvest

Twenty or more years ago, it was traditional to begin the grape harvest in the first week of September. After picking, Palomino grapes were left in the sun for 12–24 hours, Pedro Ximénez and Moscatel for 10–21 days. Older vines were picked before younger ones, and Pedro Ximénez and Moscatel were picked first of all because they required longer sunning than Palomino. At night, the grapes were covered with *esparto* grass mats as a protection against dew. This sunning is called the *soleo*, and its primary purpose is to increase sugar content, while reducing the malic acid and tannin content. Although some producers still

carry out the *soleo*, most harvest in the second week of September and forgo the *soleo* for all grapes but Pedro Ximénez and Moscatel, used in the sweetest sherry. The grapes are now left in the sun for far fewer than the traditional 10–21 days.

The yeso

Traditionally, prior to pressing the grapes, the stalks are removed and a small proportion of *yeso* (gypsum) is added to precipitate tartrate crystals. This practice, which is dying out, may have evolved when growers noticed that grapes covered by *albariza* dust produced better wine than clean ones. *Albariza* has a high calcium carbonate content that would crudely accomplish the task.

The pressing

Traditionally, four laborers called *pisadores* were placed in each *lagar* (open receptacle) to tread the grapes, not barefoot but wearing *zapatos de pisar*, heavily nailed cow-hide boots to trap the seeds and stalks undamaged between the nails. Each man tramped 36 miles (58 kilometers) on the spot during a typical session lasting from midnight to noon. Automatic horizontal, usually pneumatic, presses are now in common use.

Fermentation

Some sherry houses still ferment their wine in small oak casks purposely filled to only 90 percent capacity. After 12 hours, the fermentation starts and continues for between 36 and 50 hours at 77–86°F (25–30°C), by which time as much as 99 percent of available sugar is converted to alcohol; after a further 40 or 50 days, the process is complete. Current methods often use stainless-steel fermentation vats, and yield wines that are approximately 1 percent higher in alcohol than those fermented in casks due to an absence of absorption and evaporation.

THE MAGICAL FLOR

For the majority of sherry drinkers, *fino* is the quintessential sherry style. It is a natural phenomenon called *flor* that determines whether or not a sherry will become a *fino*. *Flor* is a strain of *Saccharomyces* yeast that appears as a gray-white film floating on a wine's surface, and it occurs naturally in the microflora of the Palomino grape grown in the Jerez district. It is found to one degree or another in every vat of sherry and Manzanilla, but whether or not it can dominate the wine and develop as a *flor* depends upon the strength of the *Saccharomyces* and the biochemical conditions. The effect of *flor* on sherry is to absorb remaining traces of sugar, diminish glycerine and volatile acids, and greatly increase esters and aldehydes. To flourish, *flor* requires:

- An alcoholic strength of between 13.5 and 17.5 percent. The optimum is 15.3 percent, the level at which vinegar-producing acetobacter is killed.
- A temperature of between 59 and 86°F (15 and 30°C).
- A sulfur dioxide content of less than 0.018 percent.
- A tannin content of less than 0.01 percent.
- A virtual absence of fermentable sugars.

CASK CLASSIFICATION AND FORTIFICATION

The cellarmaster's job is to sniff all the casks of sherry and mark on each one in chalk how he believes it is developing, according to a recognized cask-classification system. At this stage, lower-grade wines (those with little or no *flor*) are fortified to 18 percent to kill any *flor*, thus determining their character once and for all and thereafter protecting the wine from the dangers of acetification. The *flor* itself is a protection against the acetobacter that threaten to turn the wine into vinegar, but it is by no means invincible and will be at great risk until it is fortified to 15.3 percent, or above, the norm for *fino*, and is not truly safe until it is bottled. A fifty-fifty mixture known as *mitad y mitad*, *miteado*, or *combinado* (half

GRAPE-BASED SWEETENING AND COLORING AGENTS

The most traditional and most important sweetening agent in the production of sherry, although gradually giving way to other less expensive ones, is that made from pure, overripe, sun-dried Pedro Ximénez grapes, also known as PX. After the *soleo*, or sunning, of the grapes (see p.322), the sugar content of the PX increases from around 23 percent to between 43 and 54 percent. The PX is pressed and run into casks containing pure grape liquor. This process, known as muting, produces a mixture with an alcohol level of about 9 percent and some 430 grams of sugar per liter. This mixture is tightly bunged and left for four months, during which time it undergoes a slight fermentation, increasing the alcohol by about one degree and reducing the sugar by some 18 grams per liter. Finally, the wine undergoes a second muting, raising the alcoholic strength to a final 13 percent but reducing the sugar content to about 380 grams per liter. Other sweetening agents are:

MOSCATEL

This is prepared in exactly the same way as PX, but the result is not as rich and its use, which has always been less widespread than PX, is technically not permitted under DO regulations.

DULCE PASA

Preparation is as for PX and Moscatel, but using Palomino, which achieves up to a 50 percent sugar concentration prior to muting. Its use is on the increase. This must not be confused with *dulce racimo* or *dulce apagado*, sweetening agents that were once brought in from outside the region and are now illegal.

DULCE DE ALMIBAR OR DULCE BLANCO

A combination of glucose and levulose blended with *fino* and matured, this agent is used to sweeten pale-colored sherries.

SANCOCHO

A dark-colored, sweet, and sticky nonalcoholic syrup that is made by reducing unfermented local grape

juice to one-fifth of its original volume by simmering over a low heat. It is used in the production of *vino de color*—a “coloring wine.”

ARROPE

This dark-colored, sweet, and sticky nonalcoholic syrup, made by reducing unfermented local grape juice to one-fifth of its original volume, is also used in the production of *vino de color*.

COLOR DE MACETILLA

This is the finest *vino de color* and is produced by blending two-parts *arrope* or *sancocho* with one-part unfermented local grape juice. This results in a violent fermentation and, when the wine falls bright, it has an alcoholic strength of 9 percent and a sugar content of 235 grams per liter. Prized stocks are often matured by *solera*.

COLOR REMENDADO

This is a cheap, commonly used *vino de color*, which is made by blending *arrope* or *sancocho* with local wine.

HOW THE FERMENTED SHERRY DEVELOPS

The larger *bodegas* like to make something of a mystery of the *flor*, declaring that they have no idea whether or not it will develop in a specific cask. There is some justification for this—one cask may have a fabulous froth of *flor* (looking like dirty soapsuds), while the cask next to it may have none. Any cask with good signs of dominant *flor* will invariably end up as *fino*, but others with either no *flor* or ranging degrees of it may develop into one of many different styles. There is no way of guaranteeing the evolution of the wines, but it is well known that certain zones can generally be relied upon to produce particular styles.

ZONE	STYLE	ZONE	STYLE
Añina	<i>fino</i>	Madroñales	<i>Moscatel/sweet</i>
Balbaina	<i>fino</i>	Miraflores	<i>fino/manzanilla</i>
Carrascal	<i>oloroso</i>	Rota	<i>Moscatel/sweet</i>
Chipiona	<i>Moscatel/sweet</i>	Sanlúcar	<i>fino/manzanilla</i>
Los Tercios	<i>fino</i>	Tehigo	<i>colouring wines</i>
Macharnudo	<i>amontillado</i>	Torrebreba	<i>manzanilla</i>

pure alcohol, half grape juice) is usually used for fortification. However, some producers prefer to use mature sherry for fortification instead of grape juice.

Further cask-classification

The wines are often racked prior to fortification, and always after. Two weeks later, they undergo a second, more precise classification,

but no further fortification, or other action, will take place until nine months have elapsed, after which they will be classified regularly over a period of two years to determine their final style.

CASK CLASSIFICATION IN THE CELLAR

FIRST CASK CLASSIFICATION

CHALK MARK	CHARACTER OF WINE	PROBABLE STYLE OF SHERRY	ACTION TO TAKE
<i>una raya</i>	light and good	<i>fino/amontillado</i>	fortify up to 15.5%
<i>raya y punto</i>	<i>slightly less promising</i>	undecided	fortify up to 15.5%
<i>dos rayas</i>	less promising	<i>oloroso</i>	fortify up to 18%
<i>tres rayas</i>	coarse or acid	—	usually distil
<i>vinegar</i>	—	—	immediately remove to avoid infection

SECOND CASK CLASSIFICATION

CHALK MARK	CHARACTER OF WINE	PROBABLE STYLE OF SHERRY	ACTION TO TAKE
<i>palma</i>	a wine with breeding	<i>has flor</i>	—
<i>raya</i>	fuller	<i>no flor</i>	—
<i>dos rayas</i>	tending to be coarse	<i>no flor</i>	—
<i>gridiron</i>	no good at all	<i>no flor</i>	—

FURTHER CASK CLASSIFICATION

CHALK MARK	CHARACTER OF WINE	PROBABLE STYLE OF SHERRY	ACTION TO TAKE
<i>palma</i>	Light and delicate	a <i>fino</i> sherry	—
<i>palma cortada</i>	Fuller than a <i>fino</i>	<i>Fino-amontillado</i> or <i>amontillado</i>	—
<i>palo cortado</i>	No flor, but exceptional, full-bodied, and delicate	<i>Palo cortado</i>	—
<i>raya</i>	Darker, fuller, not breeding flor	Medium-quality <i>oloroso</i>	—
<i>dos rayas</i>	Darker and fuller but coarser	Low-quality <i>oloroso</i> , for blending cheap sherries that are usually sweetened	—
<i>pata de gallina</i>	a <i>raya</i> that has developed the true fragrance of a fine <i>oloroso</i>	Top-quality <i>oloroso</i> , to be aged and kept dry	—

The solera blending system

Once the style of the sherry has been established, the wines are fed into fractional-blending systems called *soleras*. A *solera* consists of a stock of wine in cask, split into units of equal volume but different maturation. The oldest stage is called the *solera*; each of the younger stages that feed it is a *criadera*, or nursery. There are up to seven *criaderas* in a sherry *solera*, and up to 14 in a *manzanilla solera*. Up to one-third (the legal maximum) of the *Solera* may be drawn off for blending and bottling, although some *bodegas* may restrict their very high-quality, old *soleras* to one-fifth. The amount drawn off from the mature *solera* is replaced by an equal volume from the first *criadera*, which is topped off by the second *criadera*, and so on. When the last *criadera* is emptied of its one-third, it is refreshed by an identical quantity of *añada*, or new wine. This comprises like-classified sherries from the current year's production, aged up to 36 months, depending on the style and exactly when they are finally classified.

THE EVOLUTION OF SHERRY STYLES

The tree shows the course taken by each sherry to become one of the well-known styles by which it is sold.

THE STYLES OF SHERRY

The development of a sherry can be natural, so that a *fino* can, without the help of increased fortification, turn into an *oloroso* (thus a natural *oloroso* may have developed with the aid of *flor*, whereas the increased fortification usually used to turn a *fino* into an *oloroso* would prevent the development of *flor*). A *palo cortado* can develop from either an *amontillado* or an *oloroso*. A genuine old *fino* sherry can surprise everyone and turn into an *oloroso*.

ALMACENISTA or BODEGAS DE ALMACENADO

This is not a style, but a category of increasing interest among sherry enthusiasts. An *almacenista* is a private stockholder whose pure, unblended sherries are held as an investment for 30 years or more, after which they are in great demand by large *bodegas*, which use them to improve their commercial blends. Lustau, itself an *almacenista* until the 1950s (and now part of the Caballero group), was the first firm to market the concept, making these purest of sherries available to consumers

(and they registered “Almacenista” as a trademark in the process). All styles of sherry and *manzanilla* exist in *almacenista* form and are, almost by definition, guaranteed to be of extraordinary quality. Fractions on the label such as $\frac{1}{8}$, $\frac{1}{2}$, or $\frac{1}{40}$ indicate the number of barrels in the *solera* from which it was drawn, therefore, the lower the denominator (the number below the line), the greater the rarity of the wine and, consequently, the more expensive it will be.

✓ *Lustau*

AMONTILLADO

With age, a *fino* develops an amber color in cask and becomes a *fino-amontillado*, then, after at least eight years, a full *amontillado*, when it takes on a nutty character and acquires more body. A true *amontillado* is completely dry, with between 16 and 18 percent alcohol, but will often be sweetened to a medium style for export markets.

The term *amontillado* means “Montilla style”; it was originally used to distinguish a sherry with characteristics similar to those of Montilla

(then part of the Jerez region—see p.321). Ironically, it was illegal for producers of Montilla to use the term *amontillado* under the Spanish republic, thus sherry could be made in a montilla-style, but not Montilla! Under the EU, however, the law has changed and once again Montilla houses are shipping Montilla *amontillado*.

✓ *Domecq* (Botaina) • *Gonzalez Byass* (Duque) • *Sandeman* (Bone Dry Old Amontillado) • *Valdespino* (*Coliseo*, *Don Tomás*) • *Wisdom & Warter* (Very Rare Solera Muy Viejo)

BROWN

This sweetened *oloroso* is usually, but not always, of lesser quality than Oloroso. High-quality Brown sherries used to be very popular in Scotland.

✓ *Williams & Humbert* (Walnut Brown)

CREAM or DARK CREAM

An *oloroso* style that is usually sweetened with Pedro Ximénez, the quality of which can range

from the commercial to extremely good.

✓ *Diego Romero* (Jerezana) • *Lustau* (Premium Solera, Vendimia)

EAST INDIA

Some sources believe that this rich, sweet, Madeira-like style of sherry dates back to as early as 1617, but the practice of shipping sherry to the Orient and back gradually disappeared during the 19th century with the advent of steam-driven ships. It was revived in 1958 by the owners of the Ben Line and Alastair Campbell, an Edinburgh wine merchant, when they sent a hogshead of Valdespino Oloroso on a 20,000-mile (32,000-kilometer) round trip to the Far East, but although the style survives, the effects of the sea voyage, as with Madeira, are now replicated in the cellar.

✓ *Lustau* (Old East India) • *Osborne* (India Rare Solera Oloroso)

FINO

A *palma* is the highest quality of *fino* sherry and may be graded in a rising scale of quality: *dos palmas*, *tres palmas*, *cuatro palmas*. A *palma cortada* is a *fino* that has developed more body, has a very dry, but smooth, almond flavor, and is veering toward *amontillado*. An *entre fino* has little merit. Few *finos* remain *fino* with age in cask, which is why genuine Old Fino sherry is rare. A *fino* is light, dry, and delicate; its *flor* nose should overpower any acetaldehyde.

This style is best appreciated straight from the cask, when it is crisp and vital, as it quickly tires once bottled and further declines rapidly as soon as it is opened. Until producers are required to declare the bottling date on the label (fat chance), the only sensible advice is not to buy *fino* until the day you want to drink it and, once opened, consume the entire contents: don't keep it. The wines are invariably 100 percent Palomino with an alcoholic strength of between 15.5 and 17 percent.

✓ *Tomás Abad* • *Domecq* (La Ina) • *Gonzalez Byass* (Tio Pepe) • *La Riva* (Tres Palmas) • *Williams & Humbert* (Pando)

MANZANILLA

Sea winds in the Sanlúcar de Barrameda area create a more even temperature and higher humidity than those found in Jerez itself, which with the tradition of allowing more ullage (empty volume) in *manzanilla* casks, encourages the thickest, whitest, and most vigorous growth of *flor* in the region. *Fino* is, therefore, the most classic style, but *manzanilla*, too, has its *fino-amontillado*

(called *pasada*) and *amontillado*. *Oloroso* and various intermediary styles are also produced, but these are invariably sold as sherry, rather than *manzanilla*, even when they are exclusively composed of the latter.

MANZANILLA AMONTILLADA

Fuller than a *pasada*, but lighter and more fragrant than Jerez *amontillado*, this is less common than the previous two, but can be excellent.

✓ *Barbadillo* (Principe) • *Lustau* (Manuel Cuevas Jurado)

MANZANILLA FINA

Manzanilla (sherry made in Sanlúcar de Barrameda) is a relatively modern, early-picked *fino*. Its production differs from that of a traditional *fino* in that its fortification is lower and the *solera* system more complex. A true *manzanilla fina* is pale, light-bodied, dry, and delicate with a definite *flor* nose, a touch of bitterness on the palate, and sometimes even a slightly saline tang. See general *fino* style below about freshness and when to consume. These wines are usually 100 percent Palomino with an alcoholic strength of 15.5–17 percent.

✓ *Barbadillo* (Eva) • *Diez-Mérito* (Don Zoilo) • *Duff Gordon* (Cabrera)

MANZANILLA PASADA

When a *manzanilla* begins to age, it loses its *flor*, gains alcoholic strength, and becomes the equivalent of a *fino-amontillado*, known in Sanlúcar de Barrameda as a *pasada*. These wines are invariably 100 percent Palomino with an alcoholic strength of up to 20.5 percent.

✓ *Barbadillo* (Solear) • *Delgado Zuleta* (Amontillado Fino, La Goya) • *Hidalgo* (Pasada)

MILK

Sweetened *amontillado*, usually of lesser quality.

MOSCATEL

Occasionally, releases of this wine can be rich, raisiny delights.

✓ *Lustau* (Las Cruces, Solera Reserva Emelin)

OLOROSO

Oloroso means fragrant and, when genuinely dry, rich, and complex from age, I find it certainly has the greatest finesse, and is the most rewarding wine in Jerez. Much of its character is due to the relatively high fortification it receives and the generous glycerine content that develops without the aid of *flor*. The alcoholic strength of these wines

usually ranges between 18 and 20 percent. Some high-quality, sweeter, dessert-style *oloroso* wines are also produced.

✓ *Dry Barbadillo* (Oloroso Seco) • *Diez-Mérito* (Victoria Regina) • *Domecq* (Río Viejo) • *Gonzalez Byass* (Alfonso, Apostles) • *Hidalgo* (Oloroso Seco) • *Lustau* (Don Nuno, Emperatriz Eugenia, Principe Río, Tonel) • *Osborne* (Bailén, Alonso el Sabio) • *Diego Romero* (Jerezana) • *Sandeman* (Dry Old Oloroso) • *Valdespino* (Don Gonzalo)

Dessert style *Gonzalez Byass* (Matúsalem) • *Sandeman* (Royal Corregedor) • *Valdespino* (Solera 1842)

PALE CREAM

Pale cream is sweetened, usually lesser-quality, *fino* sherry.

PALE DRY

This style is synonymous with *fino*.

PALO CORTADO

This wine cannot be deliberately made, nor even encouraged (a *palo cortado solera* is very difficult to operate); only one vat in a thousand turns into a true *palo cortado*. A law unto itself, it is a naturally dry wine with a style somewhere between *amontillado* (on the nose) and *oloroso* (on the palate), but this description does not by any means convey the stunning richness, nutty complexity, and fabulous finesse, which really must be experienced to be believed.

It should be totally dry, but some sweeter dessert-style *palo cortado* wines are produced and can be wonderful. Like *palma*, *palo cortado* may be graded; *dos cortados*, *tres cortados*, *cuatro cortados*.

✓ *Domecq* (Sibarita) • *Hidalgo* (Jerez) • *Lustau* (Peninsula) • *Rosario Fantante* (Dos Cortados) • *Sandeman* (Dry Old) • *Valdespino* (Cardenal) • *Williams & Humbert* (Dos Cortados)

Dessert style *Osborne* (Abocado Solera) • *Sandeman* (Royal Ambrosante) • *Wisdom & Warter* (Tizón)

PEDRO XIMÉNEZ

Although it is primarily produced as a sweetening agent, Pedro Ximénez is occasionally released in limited bottlings that are invariably very old and utterly stunning. These are huge, dark, deep, powerfully rich wines piled high with complex yet succulent, raisiny, Muscovado flavors. These bottlings of Pedro Ximénez can be compared in quality, weight, and intensity—though not in character—with only some of the oldest and rarest Australian liqueur Muscats.

✓ *Gonzalez Byass* (Noe) • *Lustau* (Murillo, San Emilio) • *Sanchez Romate* (Superior) • *Valdespino* (Solera Superior) • *Wisdom & Warter* (Viale Viejísimo)

PUERTO FINO

This is a *manzanilla*-type sherry that is produced in El Puerto de Santa María, where the winds are almost as legendary as those of Sanlúcar de Barrameda.

✓ *Burdon* (Puerto Fino Superior Dry) • *Osborne* (Coquenera Amontillado)

The WINES of
PORTUGAL

THIS COUNTRY IS SLOWLY BUT SURELY shaking off its image of tired white wines and dusty-dry reds. Thanks to a bonanza of grants during Portugal's honeymoon period of European Union membership, its wine industry underwent a massive technological upgrade in the 1990s, and we are only just beginning to reap the rewards. First came fresh, fruity, inexpensive red wines, then a whole raft of classy, upmarket reds hit the shelves. Over the next few years, we shall see similar improvements in Portugal's white wines. International varieties still have a role to play, but it will be this country's indigenous grapes that will establish its reputation in the third millennium. And while Madeira suffers the same woes as most other fortified wines, port remains by-and-large resistant to the modern trend of ignoring this style of wine.

VINEYARDS IN THE DOURO VALLEY
*Vines grow on terraces overlooking the Douro River
near Pinhão, a town in the port region.*

PORTUGAL

Once devoid of anything interesting beyond its two classic fortified wines, port and Madeira, Portuguese winemakers have now woken up to the tremendous potential of the terroirs and native grape varieties that their country offers, making it a hotbed of innovation.

THE JOINT VENTURE BETWEEN Bruno Prats, the former owner and winemaker of Château Cos d'Estournel, and the Symington family of port fame to produce premium red wine in the Douro will put the icing on the cake for Portugal's fine wine reputation. This testament to the top-end potential of Portugal's wine industry follows close on the heels of the red wine revolution that started to materialize in its more inexpensive reds in the mid-1990s.

In the past, Dão had always typified the sort of wines we had come to expect from Portugal, with its dried-out, fruitless reds and dull, heavy, oxidized whites. But in 1995 deliciously fruity, easily accessible reds and fresh, crisp whites came on stream and, like a true revolution, the change started at the lowest levels, with wines such as Alta Mesa and Ramada from Estremadura. At the time these were, and still are, some of the cheapest wines in the world. They had already turned heads by being clean, easy-drinking wines from what was formerly considered a lackluster wine country but, with the vintages of 1994 and 1995, they suddenly had twice the fruit, which gave them instant gulpability and gained them international recognition.

VINEYARDS, SETÚBAL
The area's Moscatel vines (Muscat d'Alexandrie) produce a celebrated fortified wine that has its own Denominação de Origem Controlada.

PORTUGAL

It is in the north of the country that the most famous wines—port and Vinho Verde—are produced, along with the most upwardly mobile, those from Bairrada and Dão.

CURRENT TRENDS

The rush of fruit has only just begun to filter its way upward through the quality scale. This was in part due to the fact that more serious wines took longer to reach the market, thus while we were gulping 1994s and 1995s from Estremadura and other lesser-known Vinhos Regionals, such as Alentejo and Terras do Sado, the 1991s and 1992s from Dão and Bairrada were only just reaching the shelves. A few producers, such as Duque de Viseu in Dão, had got their act together by the early 1990s, but most had not and we still had to get through the dismal 1993 vintage before these more famous regions could show us what they were doing while the likes of Alta Mesa and Ramada were being knocked out.

Another reason for the delayed action in Portugal's fine-wine regions is that producers had until relatively recently been forced to buy wines. Quite extraordinarily, it was illegal for them to buy grapes. Most growers involved in the bulk market barely have a grasp of how to cultivate vines, let alone ferment wines, so being able to buy grapes has enabled firms like Sogrape (which makes Duque de Viseu) to have much greater control over the quality of

RECENT PORTUGUESE VINTAGES

2003 Some excellent reds, and should be a very good vintage port year.

2002 A potentially outstanding red wine vintage destroyed by preharvest rain almost everywhere, the exception being in the Douro, both for still reds, and for single *quinta* port.

2001 A below-average year, due to a cool August and wet September, although a few fine single *quinta* ports might be released.

2000 Great for reds, particularly in the north, and a classic vintage port year.

1999 A vintage best forgotten, except for a number of exceptional single *quinta* ports.

the final product. When and if the same growers ever learn to grow grapes properly, the recent surge in quality will seem nothing and Portugal's finest wine areas should be catapulted to superstardom.

PORTUGUESE LABEL LANGUAGE

ADAMADO Sweet

ADEGA Literally "cellar," and commonly used as part of the name of a company or cooperative, similar to the Spanish term *bodega*.

APERITIVO Apéritif

BRANCO White

BRUTO Portuguese adaptation of the French *brut*, used to describe a dry sparkling wine.

CARVALHO Oak

CASA Refers to the property or estate and may also indicate a single-vineyard wine.

CASTA Grape variety

CASTA PREDOMINANTE Refers to the major grape variety used in a wine.

COLHEITA This means vintage and is followed by the year of harvest.

CLARETE Bordeaux-style or deep rosé

CLARO New, or "nouveau," wine

DOCE Sweet

DENOMINAÇÃO DE ORIGEM CONTROLADA

(DOC) Roughly equivalent to a French AOC.

ENGARRAFADO POR Bottled by

ENGARRAFADO NA ORIGEM Estate-bottled

ESCOLHA Choice or selection

ESPUMANTEA sparkling wine that may be made by any method unless qualified by another term.

GARRAFA Bottle

GARRAFEIRA This term may be used only for a vintage-dated wine that possesses an extra 0.5 percent of alcohol above the minimum requirement.

Red wines must have a minimum of three years' maturation, including one year in bottle; white wines must have one year, with six months in bottle. The wine may come from a demarcated region, or be blended from various areas.

GENEROSO An apéritif or dessert wine rich in alcohol and usually sweet.

INDICAÇÃO DE PROVENIÊNCIA REGULAMENTADA

(IPR) Roughly equivalent to a French VDQS

LICOROSO A fortified wine

MADURO Literally "matured"—it often refers to a wine that has been aged in a vat.

PALÁCIO Refers to the property or estate and may also indicate a single-vineyard wine.

PRODUZIDO E ENGARRAFADO POR Produced and bottled at or by

QUINADO Tonic wine

QUINTA Farm or estate

ROSADO Rosé

RESERVA A term that can be used only to qualify a vintage year of "outstanding quality," where the wine has an alcoholic strength of at least 0.5 percent above the minimum requirement. Wine may come from a demarcated region, but does not have to; it could be blended from different areas.

SECO Dry

SOLAR Refers to the property or estate and may also indicate a single-vineyard wine.

TINTO Red

VELHO Literally means "old" and, in the past, this term used not to have any legal definition. Now it can only be applied to wines with a strict minimum age: three years for red wines and two years for whites.

VINHA Vineyard

VINHO REGIONAL (VR) Similar to a large-sized *vin de pays*.

VINHO DE MESA The table wine equivalent to French *vin de table*. If the label does not state a specific DOC or Garrafeira, the wine will be a cheap blend.

THE APPELLATIONS OF PORTUGAL

Note DOC stands for *Denominação de Origem Controlada*, Portugal's equivalent of France's AOC, Spain's DO, etc.

IPR stands for *Indicação de Proveniência Regulamentada*, roughly equivalent to VDQS or a "DOC in waiting", a number having been promoted to DOC status in recent years.

VR stands for *Vinho Regional*, a sort of large-sized *vin de pays*.

ALCOBAÇA IPR

Map (No. 1)

These wines from the hills surrounding the old monastic town of Alcobça are predominantly white. Yields are unfavorably high, producing thin reds and light whites significantly lower in

alcohol than wines from surrounding areas.

☞ For all wines: Arinto, Baga, Fernão Pires, Malvasia, Periquita, Tamariz, Trincadeira, Vital

ALENQUER IPR

Map (No. 2)

The valley-side vineyards of Alenquer are well-suited to viticulture, ripening grapes easily and producing full, ripe-flavored reds, with peppery-spicy aromas and soft, easy-going, creamy-dry whites.

☞ Arinto, Camarate (possibly the same as Castelão Nacional), Fernão Pires, Graciano (*syn.* Tinta Miuda), Jampal, Mortágua, Periquita, Preto Martinho, Vital

☞ 1–3 years (new-wave, fruity style) 2–5 years (others)

☑ *Quinta de Abrigada* • *Quinta de Plantos* • *Quinta do Carneiro*

ALENTEJO VR

Stretching up from the Algarve, the plains of Alto and Baixo Alentejo cover about one-third of Portugal. A sparsely populated area with large estates and a scattering of vines, Alentejo is better known for cork than vineyards, even though it has produced some of the country's most outstanding one-off wines and has achieved this with both indigenous and imported grape varieties.

- Abundante, Alfrocheiro Preto, Alicante Bouschet, Antão Vaz, Arinto, Cabernet Sauvignon, Carignan, Chardonnay, Diagalves, Fernão Pires, Grand Noir, Manteudo, Moreto, Palomino (*syn.* Perrum), Periquita, Rabo de Ovelha, Tempranillo (*syn.* Aragonez), Trincadeira
- 1–3 years (new-wave, fruity style), 2–5 years (others)
- ✓ *Apostolo* • *Cortes de Cima* • *Esporão* (other brands include Monte Velha) • *J. P. Vinhos* (Quinta da Anfora) • *Herdade de Mouchão* • *José de Sousa* • *Pêra Manca* • *A. C. de Reguengos* • *Quinta do Carmo* • *Sogrape* (Vinha do Monte) • *Tapada do Chaves*

ALGARVE VR

The downgrading of Algarve to Vinho Regional was just a smoke-screen to gain acceptance for its four new internal DOCs: Lagos, Portimão, Lagoa, and Tavira. Lagoa used to have a reputation for fortified whites, which is not surprising considering its proximity to Jerez, but although wine is still produced, none of any interest, fortified or not, is made in the Algarve these days. It is wise to remember that the tourist economy, not quality, regulates wine appellations in the Algarve.

- Arinto, Bastardo, Diagalves, Moreto, Negra Mole, Periquita, Perrum, Rabo de Ovelha, Tamarêz d'Algarve (possibly the same as Roupeiro)
- ✓ *Adega do Cantor*

ALMEIRIM IPR

Map (No. 3)

- An up-and-coming area in the Ribatejo region, rapidly becoming known as a source for cheap, fruity red and white wines, often from the plains, known locally as *lezíria* and simply sold as *vinho de mesa*. Terraced vines on the left bank of the Tagus apparently have more potential.
- Arinto, Baga (*syn.* Poirinha), Castelão Nacional, Fernão Pires, Periquita, Rabo de Ovelha, Tinta Amarela (*syn.* Trincadeira Preta), Trincadeira das Pratas (*syn.* Tamarêz d'Azeitão), Ugni Blanc (*syn.* Tália), Vital
- 6–18 months
- ✓ *A. C. de Almeirim* (including wines under Falcoaria and Quinta das Verandas labels)

ARRABIDA IPR

Map (No. 4)

This area on the Setúbal peninsula has well-drained limestone soil and great quality potential, particularly for reds, but whether it takes off as an appellation, when the much wider, more flexible

Terras do Sado VR is doing so well, remains to be seen.

- A Afrocheiro, Arinto, Cabernet Sauvignon, Periquita (Castelão Francês), Fernão Pires, Muscat d'Alexandrie (*syn.* Moscatel de Setúbal), Rabo de Ovelha, Roupeiro

ARRUDA IPR

Map (No. 5)

From intensively cultivated hillsides surrounding the town of Arruda in the Estremadura region, come some of Portugal's cheapest, yet reliable, fruity reds.

- Camarate (possibly the same as Castelão Nacional), Fernão Pires, Graciano (*syn.* Tinta Miuda), Jampal, Trincadeira, Vital
- 1–3 years (new-wave, fruity style), 2–5 years (others)
- ✓ *A. C. de Arruda*

BAIRRADA DOC

Map (No. 6)

This area produces one of Portugal's two most important red wines and the best have a deep color with good tannin and fine, bell pepper-blackcurranty fruit. However, it is only just beginning to demonstrate its potential for white wines. Sogrape's Nobilis exemplifies Bairrada's fast-emerging rosé style, which really hits the spot with its freshness and depth of fruit.

- Baga, Borrado das Moscas (*syn.* Bical), Castelão Francês, Fernão Pires (*syn.* Maria Gomes), Rabo de Ovelha, Tinta Pinheira
- 3–12 years (reds) 1–3 years (rosés and whites)
- ✓ *José Maria da Fonseca* • *Gonçalves Faria* (Reserva) • *Luís Pato* (especially Quinta do Ribeirinho Vinhos Velhos) • *Quinta de Pedralvites* • *Casa de Saima* • *Caves São João* • *Sogrape* (Reserva, Nobilis Rosé) • *Terra Franca* (tinto)

BEIRAS VR

Located in the north of Portugal, encompassing the three Beira provinces of Alta, Baixa, and Litoral, containing the DOCs of Dão and Bairrada, plus the IPRs of Castelo Rodrigo, Cova de Beira, Lafões, Lamego, Pinhel, Varosa, Encostas da Nave, and most of Encostas d'Aire, Beiras produces virtually every imaginable style of wine made, but standards vary enormously.

- Arinto, Baga, Bastardo, Borrado das Moscas (*syn.* Bical), Camarate (possibly the same as Castelão Nacional), Cerceal, Esgana Cão, Fernão Pires, Jaen, Malvasia, Marufo, Monvedro, Periquita, Rabo de Ovelha, Rufete, Tinta Amarela (Trincadeira Preta), Touriga Nacional, Verdelho, Vital
- 1–3 years (new-wave, fruity style) 2–5 years (others)
- ✓ *Bright Brothers* (Baga) • *Buçaco* • *Conde de Santar* (Reserva) • *Entre Serras* • *João Pato* • *Quinta de Foz de Arouce*

BISCOITOS IPR

Map (No. 7)

Rarely encountered fortified wines produced on the island of Terceira in the Azores.

- Arinto, Terrantez, Verdelho

BORBA DOC

Map (No. 8)

The first subappellation of the Alentejo region to gain recognition outside of Portugal itself,

especially for its inexpensive, juicy red wines.

- Aragonez, Periquita, Perrum, Rabo de Ovelha, Roupeiro, Tamarêz, Trincadeira
- 1–3 years
- ✓ *A. C. de Borba* (Reserva)

BUCELAS DOC

Map (No. 9)

The Arinto grape grows particularly well on the loam soil of this small district, but the antiquated winemaking methods are still holding back what is obviously a potentially fine white-wine appellation. Cool fermentation, early bottling, and a delicate touch of new oak would make this wine an international superstar, but so many wines are dried-out and overacidic. Quinta da Romeira is the most consistent Bucelas, and is recommended in this context, but has failed to live up to its promise.

- Arinto, Esgana Cão
- Upon purchase
- ✓ *Quinta da Romeira* (Prova Régia)

CARCAVELOS DOC

Map (No. 10)

Famous in Portugal itself since the late 18th century when the Marquis of Pombal owned a large vineyard and winery here. This area's oldest surviving vineyard, Quinta do Barão, stopped production in 1991, but a relatively new one, Quinta dos Pesos, is trying desperately to rekindle interest in Carcavelos. Rarely seen on export markets, it is a topaz-colored, off-dry fortified wine with a nutty aroma, delicate almond flavor, and a velvety texture.

- Arinto, Boal, Galego Dourado, Negra Mole, Trincadeira, Torneiro
- 5–20 years
- ✓ *Quinta dos Pesos*

CARTAXO IPR

Map (No. 11)

This flat, fertile area overlaps the Estremadura and Ribatejo regions, producing good, fruity, value-for-money reds and whites.

- Arinto, Castelão Nacional, Fernão Pires, Periquita, Preto Martinho, Tinta Amarela (Trincadeira Preta), Trincadeira das Pratas (*syn.* Tamarêz d'Azeitão), Ugni Blanc (*syn.* Tália), Vital
- 1–3 years
- ✓ *Almeida*

CASTELO RODRIGO IPR

Map (No. 12)

These full, spicy reds on the border with Spain, south of the Douro, in the Beiras region, show excellent potential, but have yet to establish an international reputation.

- Arinto, Assario Branco (*syn.* Arinto do Dão), Bastardo, Codo, Fonte Cal, Marufo, Rufete, Touriga Nacional
- 1–3 years (new-wave, fruity style) 2–5 years (others)
- ✓ *Quinta do Cardo*

CHAMUSCA IPR

Map (No. 13)

This subappellation of the Ribatejo region is adjacent to Almeirim and produces similar wines, but not quite of the same potential.

- Arinto, Castelão Nacional, Fernão Pires,

Periquita, Tinta Amarela (Trincadeira Preta), Trincadeira das Pratas (*syn.* Tamarêz d'Azeitão), Ugni Blanc (*syn.* Tália), Vital

CHAVES IPR

Map (No. 14)

From the upper reaches of the Tâmega River in the Trás-os-Montes VR, this appellation tends to produce a similar but lighter style to that of the Douro DOC.

☞ Bastardo, Boal, Codega (possibly the same as Roupeiro), Gouveio, Malvasia Fina, Tinta Carvalha, Tinta Amarela

COLARES DOC

Map (No. 15)

This small wine area is famous for its ungrafted Ramisco vines planted in trenches dug out of the sandy dunes of Sintra, which not only protects them from salt-blighting Atlantic winds, but also from the dreaded phylloxera louse. This is a historic wine, but should not be vinified in such an antiquated fashion if it is going to appeal to modern consumers. If the greatest Bordeaux châteaux have moved with the times, why not Colares? The reds are well-colored and full-bodied, but have so much tannin that they are mouth-puckeringly astringent, smoothing out to a silky finish only with great age, when there is no fruit left. If the grapes could be picked according to tannin-ripeness, rather than fruit-ripeness, and more careful fermentation techniques employed, Colares could be world class. The dry whites are traditional *maduro*-style and not recommended.

☞ Arinto, Jampal, Galego Dourado, Malvasia, Ramisco

☞ 15–30 years (red)

✓ *Antonio Bernardino Paulo da Silva* (Chitas)

CORUCHE IPR

Map (No. 16)

This appellation covers wines made from sandy, well-irrigated plains covering the southern half of the Ribatejo region, but Coruche is seldom encountered and has yet to make its mark.

☞ Fernão Pires, Periquita, Preto Martinho, Tinta Amarela (Trincadeira Preta), Trincadeira das Pratas (*syn.* Tamarêz d'Azeitão), Ugni Blanc (*syn.* Tália), Vital

COVA DE BEIRA IPR

Map (No. 17)

Located in the Beira Alta, between the Vinho Verde and Dão districts, Cova de Beira is the largest of Portugal's IPRs. As with the Beiras VR, every style of wine is produced in varying quality, but the area is best-known for its lightweight reds.

☞ Arinto, Assario Branco (*syn.* Arinto do Dão), Jaen, Marufo, Periquita, Pérola, Rabo de Ovelha, Rufete, Tinta Amarela

DÃO DOC

Map (No. 18)

For 20 years there have been rumors that Dão wines have more fruit and less tannin, but only over the past five have we seen this promise fulfilled in the glass, as fruit-filled Dão have begun to emerge.

They have sufficient fruit to drink much earlier than the old-style Dão wines, but have a certain structure and dry, spicy-finesse that expresses their Portuguese origins. The best whites can be clean and fresh, but not yet truly special, although the Quinta de Saes branco is surprisingly good, especially when consumed with food.

☞ Alfrocheiro Preto, Assario Branco (*syn.* Arinto do Dão), Barcelo, Bastardo, Borrado das Moscas, Cercial, Encruzado, Jaen, Tempranillo (*syn.* Tinta Roriz), Tinta Pinheira, Touriga Nacional, Verdelho

☞ 3–8 years (reds), 1–3 years (whites)

✓ *José Maria da Fonseca* (Garrafeira P) • *Campos da Silva Olivera* • *Casa da Insua* • *Duque de Viseu*

DOURO DOC

Map (No. 19)

Known principally for its port, the Douro Valley in fact makes as much table wine as fortified wine. Because the finest port is produced on schist soils, most table wines are relegated to areas of the region's other dominant soil, granite. I remain surprised that the Syrah, which thrives in the Northern Rhône's hot, granite soil, has not been tried here, even though it has been experimented with in the Alentejo, where there is much less potential for this variety. The Douro's table wine quality potential is highlighted by Barca Velha, Portugal's most expensive table wine, made by Ferreira at Quinta do Vale de Meão, although its second wine, Reserva Especial, is often just as good, if not better. Is it a coincidence that across the Spanish frontier, where the Douro becomes the Duero, Vega Sicilia, Spain's most expensive wine, grows on its banks? There is nothing party about these table wines, which range from the lighter, claret types to the fuller, richer Burgundian style. New oak is almost *de rigueur* for premium quality wines.

☞ Bastardo, Donzelinho Branco, Gouveio, Malvasia Fina, Rabigato (probably not the same as Rabigato *syn.* Rabo de Ovelha), Mourisco Tinto, Tempranillo (*syn.* Tinta Roriz), Tinta Amarela, Tinta Barroca, Tinta Cão, Touriga Nacional, Touriga Francesa, Viosinho

☞ 2–10 years (red, but up to 25 for Barca Velha), 1–4 years (white)

✓ *Bright Brothers* • *Ferreirinha* (Barca Velha, Reserva Especial) • *Niepoort* (Redoma and especially Charme Douro) • *Quinta do Côto* (Grande Escolha) • *Quinta do Crasto* • *Quinta de Passadouro* • *Quinta de la Rosa* • *Quinta do Vale da Raposa* • *Ramos-Pinto* (Duas Quintas) • *Sogrape* (Reserva) • *Vale do Bomfim* (Reserva)

ENCOSTAS DA AIRE IPR

Map (No. 20)

Overlapping the Beiras and Estremadura region, the limestone hills of this appellation should produce some excellent wines, but most have so far been light and rather dried-out.

☞ Arinto, Baga, Fernão Pires, Periquita, Tamarêz, Tinta Amarela (Trincadeira Preta), Vital

ENCOSTAS DA NAVE IPR

Map (No. 21)

Not to be confused with Encostas da Aire, this is a much smaller appellation, located entirely within the Beiras region, adjacent to Varosa, and its wines are much fuller, resembling those of the Douro immediately north, but have yet to establish themselves.

☞ Folgosão, Gouveio, Malvasia Fina, Mourisco Tinto, Tinta Barroca, Touriga Francesa, Touriga Nacional

ESTREMADURA VR

From Lisbon, Estremadura stretches north to the Bairrada region and encompasses the DOCs of Bucelas, Carcavelos, and Colares, plus the IPRs of Alenquer, Arruda, Obidos, Torres Vedras, and, in part, Encostas d'Aire (which overlaps Beiras) and Cartaxo (which overlaps Ribatejo). This is Portugal's largest wine-producing region in terms of volume (although Beiras and Alentejo are much larger geographically) and, as such, Estremadura is often perceived as a source of cheap, uninteresting wine. While there are indeed cheap wines made here, they are good guzzlers and far from uninteresting, with a few *quintas* making much finer, more serious wines that are not remotely expensive.

☞ Alfrocheiro Preto, Antão Vaz, Arinto, Baga, Bastardo, Borrado das Moscas (*syn.* Bical), Cabernet Sauvignon, Camarate (possibly the same as Castêlão Nacional), Chardonnay, Esgana Cão, Fernão Pires, Graciano (*syn.* Tinta Miuda), Jampal, Malvasia, Moreto, Periquita, Rabo de Ovelha, Ramisco, Tamarêz, Tinta Amarela (Trincadeira Preta), Trincadeira das Pratas (*syn.* Tamarêz d'Azeitão), Ugni Blanc (*syn.* Tália), Vital

☞ 2–4 years (reds, 4–8 years for better wines), 1–3 years (whites)

✓ *A. C. do Arruda* (selected cuvées) • *A. C. de São Mamede da Ventosa* • *A. C. do Torres Vedras* (selected cuvées) • *Espiga* • *Quinta da Folgorosa* • *Quinta de Pancas* • *Palha Canas*

EVORA IPR

Map (No. 22)

This area of the Alentejo region is destined to be one of Portugal's most exciting appellations, especially for full-bodied, creamy-rich red.

☞ Aragonez, Arinto, Periquita, Rabo de Ovelha, Roupeiro, Tamarêz, Tinta Caida, Trincadeira

🕒 2–5 years

✓ *Herdade de Cartuxa • Pêra Manca (branco)*

GRACIOSA IPR

Map (No. 23)

Rarely encountered light table wines produced on the island of Graciosa in the Azores.

🍷 Arinto, Fernão Pires, Terrantez, Verdelho

GRANJA AMARELEJA IPR

Map (No. 24)

The harsh climate and schistous soils of this subappellation of the Alentejo region can produce powerful, spicy reds, but it has yet to establish itself on export markets.

🍷 Manteudo, Moreto, Periquita, Rabo de Ovelha, Roupeiro, Trincadeira

LAFÕES IPR

Map (No. 25)

Light, acidic, red and white wines produced in a small area straddling the Vinho Verde and Dão regions.

🍷 Amaral, Arinto, Cerceal, Jaen

LAGOA DOC

Map (No. 26)

Formerly known for fortified white wines, which are still made, but are not of interest, this subappellation of the Algarve does not deserve its DOC classification.

🍷 Crato Branco, Negra Mole, Periquita

LAGOS DOC

Map (No. 27)

These Algarve wines do not deserve their DOC classification.

🍷 Boal Branco, Negra Mole, Periquita

MADEIRA DOC

Map (No. 28)

See The styles of Madeira, p.341

MOURA IPR

Map (No. 29)

Cool, red clay soil stretches out the grape's ripening period in this hot patch of the Alentejo, adding a certain finesse to the lush, plump fruit in these wines, which promise great things, but the appellation has not yet established itself.

🍷 Alfrocheiro, Antão Vaz, Fernão Pires, Moreto, Periquita, Rabo de Ovelha, Roupeiro, Trincadeira

OBIDOS IPR

Map (No. 30)

The white wines from this area have traditionally been distilled, but the firm, cedary-oaky reds might have potential.

🍷 Arinto, Bastardo, Camarate (possibly the same as Castelão Nacional), Fernão Pires, Periquita, Rabo de Ovelha, Tinta Miuda, Vital

PALMELA IPR

Map (No. 31)

The Palmela area was first made famous by the João Pires off-dry white made from early-picked Muscat grapes, but it is equally good for full-bodied reds and the inspired, high-volume João Pires now claims the much larger Terras do Sado appellation, as have others, hence there are no

recommendations, despite the excellent wines made here.

🍷 Alfrocheiro, Arinto, Fernão Pires, Muscat d'Alexandrie (*syn.* Moscatel de Setúbal), Periquita, Rabo de Ovelha, Tamarêz, Tinta Amarela (*syn.* Espadeiro, but no connection with the Espadeiro of Vinho Verde)

PICO IPR

Map (No. 32)

Rarely encountered fortified wines produced on the island of Pico in the Azores.

🍷 Arinto, Terrantez, Verdelho

PINHEL IPR

Map (No. 33)

In the Beiras region, just south of the Douro, Pinhel makes dry, full, and earthy-tasting white wines, mostly sold to sparkling-wine producers.

🍷 Arinto, Assario Branco (*syn.* Arinto do Dão), Bastardo, Codo, Fonte Cal, Marufo, Rufete, Touriga Nacional

PLANALTO MIRANDÊS IPR

Map (No. 34)

In the Trás-os-Montes region, in the very northeastern corner of Portugal, Planalto Mirandês borders Spain, producing full-bodied reds and heavy whites.

🍷 Bastardo, Gouveio, Malvasia Fina, Mourisco Tinto, Rabo de Ovelha (*syn.* Rabigato), Tinta Amarela, Touriga Francesa, Touriga Nacional, Viosinho

PORT DOC

See The styles of port, p.337

PORTALEGRE DOC

Map (No. 35)

Powerful, yet elegant, spicy reds, and rather heavy, alcoholic whites produced in the Alentejo region, adjacent to the Spanish frontier.

🍷 Aragonez, Arinto, Assário, Fernão Pires, Galego, Grand Noir, Manteudo, Periquita, Roupeiro, Trincadeira

PORTIMÃO DOC

Map (No. 36)

These Algarve wines do not deserve their DOC classification.

🍷 Crato Branco, Negra Mole, Periquita

REDONDO DOC

Map (No. 37)

A subappellation within the progressive Alentejo region, Redondo shows promise for the sort of gushy, upfront, fruity reds that are popping up all over Portugal at grassroots level.

🍷 Aragonez, Fernão Pires, Manteudo, Moreto, Periquita, Rabo de Ovelha, Roupeiro, Tamarêz, Trincadeira

🕒 1–3 years

✓ *A. C. de Redondo*

REGUENGOS DOC

Map (No. 38)

An up-and-coming DOC in the Alentejo, Reguengos is already producing both gluggy and much finer reds, plus increasingly good whites, making it an appellation to watch.

🍷 Aragonez, Manteudo, Moreto, Periquita, Perrum, Rabo de Ovelha, Roupeiro, Trincadeira

🕒 1–3 years (new-wave, fruity style), 2–5 years (others)

✓ *A. C. de Reguengos (tinto) • J. P. Vinhos (Quinta da Anfora)*

RIBATEJO VR

This large province is sandwiched between Estremadura and Alentejo, and includes the following IPRs: Almeirim, Cartaxo (in part), Chamusca, Coruche, Santarém, Tomar, and Valada do Ribatejo. The temperate climate and rich alluvial plains of the Tagus River encourage high yields, making this the second most important wine region in Portugal. Some very good wines are made by those who restrict yields, particularly by Peter Bright in collaboration with the Fuiza family's vineyards.

🍷 Arinto, Cabernet Sauvignon, Camarate (possibly the same as Castelão Nacional), Carignan, Chardonnay, Esgana Cão, Fernão Pires, Jampal, Malvasia Fina, Malvasia Rei (possibly the same as Palomino), Merlot, Periquita, Pinot Noir, Rabo de Ovelha, Sauvignon, Syrah, Tamarêz, Tinta Amarela (Trincadeira Preta), Tinta Miuda, Touriga Nacional, Trincadeira das Pratas (*syn.* Tamarêz d'Azeitão), Ugni Blanc (*syn.* Tália), Vital

🕒 1–5 years (reds), 1–3 years (whites)

✓ *Bright Brothers • Falua • Fuiza • Quinta da Lagoalva • Terra de Lobos*

RIOS DO MINHO IPR

A sort of *vin de pays* Vinhos Verdes, except that this appellation also allows for still table wines from foreign varieties. Predictably lightweight.

🍷 Alvarinho, Arinto (*syn.* Paderna), Avesso, Azal Branco, Azal Tinto, Batoca, Borracal, Brancelho (*syn.* Alvarelho), Cabernet Sauvignon, Chardonnay, Espadeiro, Loureiro, Merlot, Padreiro de Basto, Pedral, Rabo de Ovelha, Riesling, Trajadura, Vinhão (possibly the same as Sousão)

SANTARÉM IPR

Map (No. 39)

A new appellation for the area around the capital of the Ribatejo region, Santarém should begin to establish itself over the next few years.

🍷 Arinto, Castelão Nacional, Fernão Pires, Periquita, Preto Martinho, Rabo de Ovelha, Tinta Amarela (Trincadeira Preta), Trincadeira das Pratas (*syn.* Tamarêz d'Azeitão), Ugni Blanc (*syn.* Tália), Vital

SETÚBAL DOC

Moscatel de Setúbal

Map (No. 40)

This style of fortified Muscat wine is believed to have been created by José-Maria da Fonseca, the old-established company that still has a quasi-monopoly over its production today. There are various wood-aged styles (5- or 6-Year-Old is best for freshness and the grapey-apricoty varietal character, while 20- or 25-Year-Old is darker and far more complex with a raisiny-nutty-caramel-apricoty intensity), but single-vintage Setúbal is top of the range.

☞ Muscat d'Alexandrie (*syn.* Moscatel de Setúbal), Moscatel do Douro, Moscatel Roxo plus up to 30 percent Arinto, Boais, Diagalves, Fernão Pires, Malvasia, Olho de Lebre, Rabo de Ovelha, Roupeiro, Tália, Tamarêz, Vital

☞ Upon purchase (but will last many years)

✓ *J. M. Fonseca*

TAVIRA DOC

Map (No. 41)

These Algarve wines do not deserve their DOC classification.

☞ Crato Branco, Negra Mole, Periquita

TERRAS DO SADO VR

Probably the most clever appellation the Portuguese could conjure up, Terras do Sado covers a fairly large area fanning out from the Sado estuary far beyond the Setúbal peninsula, where a good many innovative wines originated, but their development had been threatened by the urban sprawl south of Lisbon. If such wines take up the Terras do Sado appellation, they can be sourced from a much wider area. João Pires, Periquita, Quinta de Camarate, and Quinta da Bacalhôa have all claimed this humble VR status without it affecting the prices they command, which has made Terras do Sado an attractive appellation for future new wines.

☞ **RED** At least 50 percent Aragonez, Cabernet Sauvignon, Merlot, Moscatel Roxo, Periquita (Castelão Francês), Tinta Amarela (Trincadeira Preta) and Touriga Nacional, plus up to 50 percent Alfrocheiro Preto, Alicante Bouschet, Bastardo, Carignan, Grand Noir, Monvedro, Moreto, Tinto Miuda

☞ **WHITE** At least 50 percent Arinto, Chardonnay, Fernão Pires, Malvasia Fina, Muscat d'Alexandrie (*syn.* Moscatel de Setúbal) and Roupeiro, plus up to 50 percent Antão Vaz, Esgana Cão, Sauvignon, Rabo de Ovelha, Trincadeira das Pratas (*syn.* Tamarêz d'Azeitão), Ugni Blanc (*syn.* Tália)

☞ 1–3 years (new-wave style), 2–5 years (others)

✓ *J. M. Fonseca* (João Pires, Periquita, Quinta de Camarate Tinto) • *J. P. Vinhos* (Quinta da Bacalhôa, Cova da Urça)

TOMAR IPR

Map (No. 42)

Red and white wines grown on limestone slopes of the right bank of the Tagus River in the Ribatejo region.

☞ Arinto, Baga, Castelão Nacional, Fernão Pires, Malvasia, Periquita, Rabo de Ovelha, Ugni Blanc (*syn.* Tália)

TORRES VEDRAS IPR

Map (No. 43)

Originally called simply “Torres” until Miguel Torres objected, these high-yielding vineyards in the Estremadura region of Portugal have traditionally supplied the largest producers with bulk wines for their high-volume branded *vinho de mesa*.

☞ Arinto, Camarate (possibly the same as Castelão Nacional), Fernão Pires, Graciano (*syn.* Tinta Miuda), Jampal, Mortágua, Periquita, Rabo de Ovelha, Seara Nova, Vital

TRÁS-OS-MONTES VR

The province of Trás-os-Montes is situated in northeastern Portugal, and encompasses the IPRs of Chaves, Valpaços, and Planalto-Mirandês. The style of wine ranges from light-bodied in the higher altitude vineyards to full-bodied and alcoholic in the south. But the most important wine made in terms of volume is semisweet, semi-sparkling *rosado*.

☞ Bastardo, Cabernet Franc, Cabernet Sauvignon, Chardonnay, Donzelinho, Gewürztraminer, Gouveio, Malvasia Fina, Merlot, Mourisco Tinto, Pinot Noir, Rabo de Ovelha (*syn.* Rabigato), Sauvignon Blanc, Sémillon, Tempranillo (*syn.* Tinta Roriz), Tinta Amarela, Tinta Barroca, Tinta Cão, Touriga Francesa, Touriga Nacional, Viosinho

☞ 1–3 years (new-wave style), 2–5 years (others)

✓ *Casal de Valle Pradinhos* • *Quintas dos Bons Ares*

VALPAÇOS IPR

Map (No. 44)

Firm reds and slightly *pétillant rosés* from the upper reaches of the Tua, a tributary of the Douro, in the Trás-os-Montes region.

☞ Bastardo, Boal, Codega (possibly the same as Roupeiro), Cornifesto, Fernão Pires, Gouveio, Malvasia Fina, Mourisco Tinto, Rabo de Ovelha (*syn.* Rabigato), Tempranillo (*syn.* Tinta Roriz), Tinta Amarela, Tinta Carvalha, Touriga Francesa, Touriga Nacional

VAROSA IPR

Map (No. 45)

Like Pinhel, this Beiras subappellation has yet to establish a reputation above that of being a traditional source of base wines for the sparkling-wine industry.

☞ Alvarelhão, Arinto, Borrado das Moscas, Cercial, Chardonnay, Fernão Pires, Folgoso, Gouveio, Malvasia Fina, Pinot Blanc, Pinot Noir, Tempranillo (*syn.* Tinta Roriz), Tinta Barroca, Touriga Francesa, Touriga Nacional

VIDIGUEIRA DOC

Map (No. 46)

This appellation takes its name from one of three towns around which vineyards flourish on volcanic soils, while the name of the town itself is derived from the word *videira*, meaning “wine,” illustrating how long vines have been growing in this part of the Alentejo.

☞ Alfrocheiro, Antão Vaz, Manteudo, Moreto, Periquita, Perrum, Rabo de Ovelha, Roupeiro, Trincadeira

VINHO VERDE DOC

The vines literally grow on trees, up telephone poles, and along fences—on anything that takes them above the ground. Training the vine in such a way enables the smallholders—and there are more than 60,000 of them in the Minho—to grow the cabbages, corn, and beans that the families survive on, and to produce grapes, which are either sold to large wineries or made into wine locally and sold to tourists. Genuine Vinho Verde is sharp, may be slightly fizzy, but should always be totally dry, either delicately or raspily dry, depending primarily on the grape varieties used. The best two grape varieties are Alvarinho and Loureiro. The Alvarinho is a low-cropping variety that is more at home in the northern part of the Minho, between the Lima Valley and the Spanish border. It produces the most substantial Vinhos Verdes, with alcohol levels of 12.5 percent ABV, compared to the norm of 9.5–10 percent. Palácio da Brejoeira is the yardstick for this grape, and widely considered to be a class apart from any other Vinho Verde. The Loureiro is a heavier-cropping variety, producing aromatic wines. Vinhão is the most successful grape for red Vinho Verde, followed by Azal Tinto and Espadeiro, and the best examples of these deep-purple wines have a peppery smack to them, even if it is quickly washed down the throat in a fizzy rush.

☞ Alvarinho, Arinto (*syn.* Paderna), Aveso, Azal, Azal Tinto, Brancelho (*syn.* Alvarelho), Borracal, Espadeiro, Loureiro, Perdal, Trajadura, Vinhão (possibly the same as Sousão)

☞ Upon purchase (9–18 months maximum)

✓ **Red single-quintas** *Casa do Valle* • *Ponte de Lima*

White single-quintas *Casa de Sezim* • *Morgadio de Torre* • *Palácio da Brejoeira* • *Ponte de Lima* • *Quinta de Azevedo* • *Quinta de Franqueira* • *Quinta da Tamariz* • *Solar de Bouças*

White commercial blends *Cepa Velha* (Alvarinho) • *Chello* • *Gazela* • *Grinalda*

PORT: THE DOURO VALLEY

No two neighboring districts could produce wines of more contrasting styles than the deep-colored, rich, sweet, warm, and spicy fortified port of Portugal's Douro Valley, and the light, water-white, sharply dry, semi-sparkling Vinho Verde of the Minho region.

"IT SHOULD FEEL LIKE liquid fire in the stomach... it should burn like inflamed gunpowder... should have the tint of ink... it should be like the sugar of Brazil in sweetness and the spices of India in aromatic flavor." Written in 1754 by the agents for the Association of Port Wine Shippers, such vivid accounts of port remain a fair description of the great after-dinner wine we know today.

THE ORIGIN OF PORT

It is hard to imagine how such a wonderful winter-warming drink as port could ever have been conceived in such a hot and sunny country as Portugal. Popular belief has it that it was not the Portuguese but the British who were responsible for port; however, this is not entirely accurate. We can thank the Portuguese for dreaming up this most classic of fortified wines; the British merely capitalized on their original idea.

In 1678, two Englishmen were sent by a Liverpool wine merchant to Viana do Castelo, north of Oporto, to learn the wine business. Vacationing up the Douro River, they were regally entertained by the Abbot of Lamego. Finding his wine "very agreeable, sweetish, and extremely smooth," they asked what made it exceptional among all others tasted on their journey. The Abbot

confessed to doctoring the wine with brandy, but the Englishmen were so pleased with the result this had that they purchased the entire stock and shipped it home.

THE ORIGIN OF THE PORT TRADE

The ancient house of C. N. Kopke & Co. had been trading in Douro wines for nearly 40 years by the time the above encounter took place. Eight years before they stumbled upon the Abbot of Lamego, another Englishman named John Clark was busy building up a business that would become Warre & Co. In 1678, the same year as the encounter, Croft & Co. was established, and this was followed by Quarles Harris in 1680 and Taylor's in 1692. By the time the Methuen Treaty of 1703 gave Portuguese wines preferential rates of duty in Britain, many British firms had set up business in Oporto. Firms of other nationalities—Dutch, German, and French—followed, but it was the British shippers who virtually monopolized the trade, frequently abusing their power. In 1755, the Marquis of Pombal, who had assumed almost dictatorial powers over Portugal some five years before, put a curb on their activities through the Board of Trade. The privileges enjoyed by British merchants under two 100-year-old treaties were restricted. He also established the Oporto Wine Company, endowing it with the sort of powers to which the British had been accustomed.

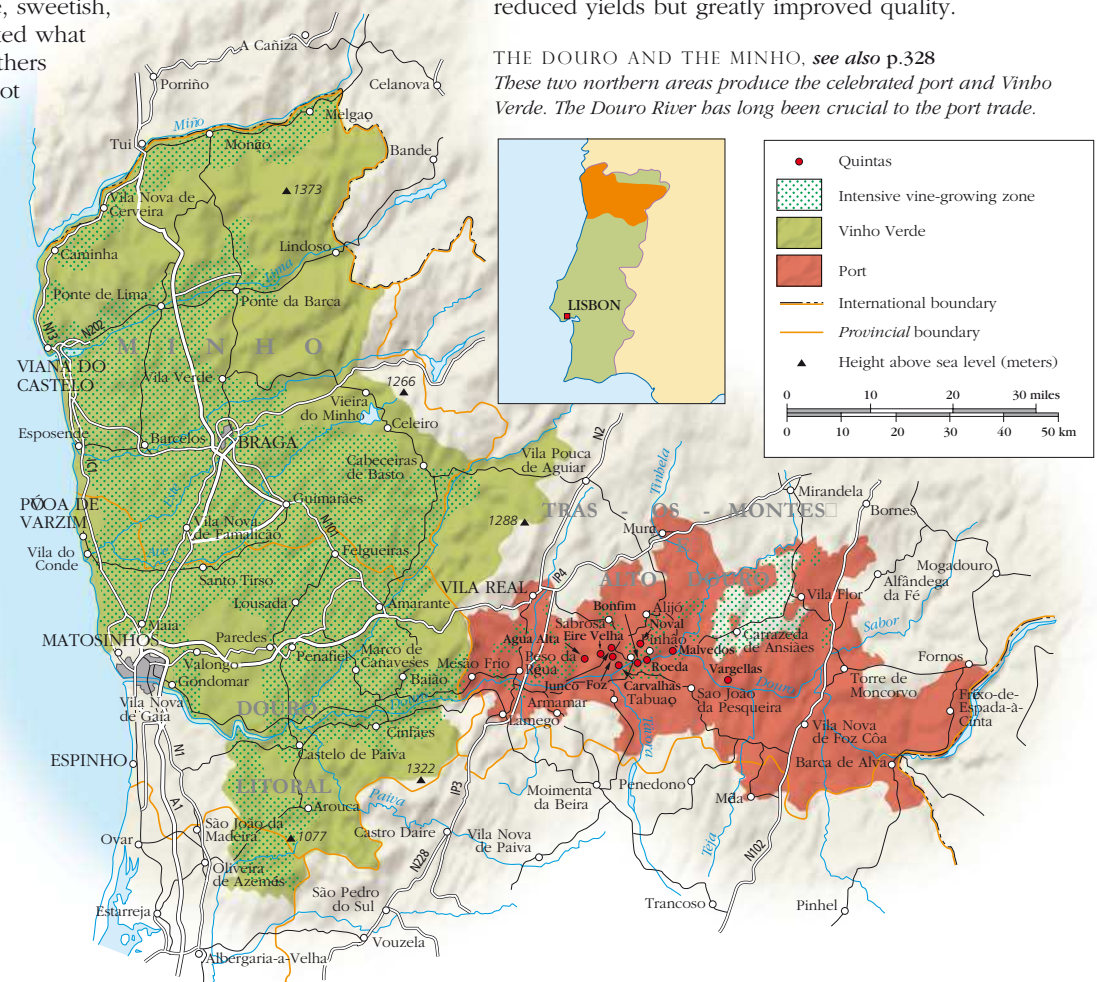

This infuriated the British, but their protests were to no avail and Pombal went on to instigate many worthy, if unpopular, reforms, including limiting the Douro's production area to the finest vineyards, the banning of elderberries for coloring the wine, and the outlawing of manure, which reduced yields but greatly improved quality.

THE DOURO AND THE MINHO, *see also p.328*

These two northern areas produce the celebrated port and Vinho Verde. The Douro River has long been crucial to the port trade.

GRAPE PICKERS NEAR AMARANTE, SOUTHERN MINHO
Grape pickers use ladders with buckets attached to them to harvest the overhead bunches.

PORT GRAPE VARIETIES

There are 48 grape varieties permitted in the production of port. This simple fact goes a long way to explaining the great variation in quality and character of ports within the same basic style. The official classification of the grapes is as follows:

VERY GOOD BLACK GRAPES

Bastardo, Donzelinho Tinto, Mourisco, Tinta Cão, Tinta Francisca, Tinta Roriz, Touriga Francesa, Touriga Nacional

GOOD BLACK GRAPES

Cornifesto, Malvasia Preta, Mourisco de Semente, Periquita, Rufete, Samarrinho, Sousão, Tinta Amarela, Tinta da Barca, Tinta Barroca, Tinta Carvalha, Touriga Brasileira

AVERAGE BLACK GRAPES

Alvarelhão, Avesso, Casculho, Castela, Coucieira, Moreto, Tinta Bairrada, Tinto Martins

VERY GOOD WHITE GRAPES

Donzelinho, Esgana Cão, Folgoso, Gouveio (or Verdelho), Malvasia Fina, Malvasia Rei, Rabigato, Viosinho

GOOD WHITE GRAPES

Arinto, Boal, Cercial, Còdega, Malvasia Corada, Moscatel Galego

AVERAGE WHITE GRAPES

Branco sem Nome, Fernão Pires, Malvasia Parda, Pedernã, Praça, Touriga Branca

THE SIX BEST PORT GRAPE VARIETIES

The six port grape varieties currently considered by growers and winemakers to be the best are:

Touriga Nacional

Almost universally agreed to be the very best of all port grapes, this has tiny berries and produces pitch-black wine with intense aromatic properties, great extract, and high tannin content. It prefers hotter situations, but is a poor pollinator and does not yield a large crop. Cloning is underway to increase production by 15 percent and sugar content by 10 percent, the most successful clone so far being R110.

Tinta Cão

This variety can add finesse and complexity to a blend, but it enjoys a cooler environment and requires training on wires to produce a decent crop. Since traditional cultivation methods make it a poor producer, growers are not overly eager to cultivate it; the grape's survival will depend upon the willingness of port shippers to maintain the variety on their large, managed estates.

Tinta Roriz

Not really a member of the Tinta family, this grape is sometimes simply called the Roriz. It is, in fact, the well-known Spanish variety, Tempranillo, the mainstay of Rioja. In the Douro it likes heat and fares best on the sunniest front rows of terraces cut into south- or west-

facing slopes. Its dark grapes have thick skins, high sugar content, and low acidity, providing great color, tannin, and succulence in a blend. Some believe this to be better than the Touriga Nacional.

Tinta Barroca

The wine produced by this grape variety is quite precocious and is therefore useful in younger-drinking ports, or to dilute wines that are too tannic and distinctive. Like Tinta Cão, this grape variety prefers cooler situations and particularly enjoys north-facing slopes.

Touriga Francesa

A member of the Touriga family, this grape has no connection with the similarly named Tinta Francisca, a member of the Tinta family. According to Bruce Guimaraens of Fonseca and Taylor's, this high-quality variety is useful for "filling in the gaps" in vineyards between those areas occupied by vines that like either hot or cool situations. It gives fruit and aroma to a blend.

Tinta Amarela

This grape variety is dark-colored and very productive. Its importance has been on the increase in recent years. As this high-quality vine is susceptible to rot, it performs best in the hottest, driest areas.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

Port is made in the Cima Corgo, Baixo Corgo, and Douro Superior districts of the Douro Valley in the north of Portugal.

CLIMATE

The summers are dry and hot, the winters mild and wet, becoming more continental in the upper Douro Valley, where the summers are extremely hot, rainfall is high—20½ inches (52 centimeters)—and winters can be very cold.

ASPECT

Vines are planted on generally hilly land that becomes very steep in some parts.

SOIL

The Douro is a patchwork of hard, sun-baked, granite, and schist soils, with the finest ports originating from the schist vineyards

that dominate upriver. Because of the importance of schist to port production, Douro table wines are relegated to granite soils.

VITICULTURE AND VINIFICATION

Terracing in the Douro is widespread to maximize the use of the land, although the current trend is to make wider terraces, thus enabling mechanization. Some of the less precipitous slopes are now cultivated in vertical rows. Steep terraces mean labor-intensive viticulture, and the hard Douro soil often requires blasting to enable planting. Port wines are made and fortified in the Douro, but most are blended and bottled at lodges in Vila Nova de Gaia.

GRAPE VARIETIES

See Port Grape Varieties, left

by the British. It is even possible to generalize about the stylistic difference between the wines of British- and Portuguese-owned port houses. The British tend to go for bigger, darker, sweeter, fruit-driven wines and have made vintage port their particular niche, while the Portuguese opt for lighter, elegant, more mellow styles, the best of which are exquisitely aged tawnies. At one time, some Portuguese houses rarely even declared a vintage, since they focused on tawny. When they did, the wines were so much lighter in style that export countries often dismissed them as inferior. Although a few were indeed inferior, many were just different. Now, of course, world markets demand that if they are to survive, the Portuguese houses must declare vintages as often as British-owned houses.

When considering stylistic differences between vintage port and the lighter, tawny styles, it is probably more accurate to categorize the fuller, fatter vintage port as North European, not simply British, because this style is also preferred by Dutch, German, and French port houses.

HOW PORT IS MADE

If any wine is perceived as having been "trodden," then it is port. This is perhaps because the pressing and winemaking traditionally takes place in the vineyards where, until relatively recently, affairs

THE HISTORIC BARCO RABELO

Based on the Viking warship, these flat-bottomed boats, loaded with pipes of port, would sail for Oporto on the hazardous journey from the upper Douro.

The production of port had not been perfected at this time. Fifty years after the encounter with the Abbot of Lamego, the industry had widely accepted the practice of brandying, but the importance of when, and in what quantity, to administer the brandy had not been recognized. Ironically, the Abbot's wine was superior because he had added the brandy during, and not after, the fermentation, thus interrupting, or "muting," the process with the natural sweetness that had so attracted the two Englishmen. Even after several centuries, the port business is still dominated

were conducted on farms in a rather rustic style. Today, few ports are trodden, although several houses have showpiece *lagars*—troughs used for crushing grapes—for tourists. Many houses have

THE QUINTA CLASSIFICATION

A *quinta* is a wine-producing estate or vineyard. The Douro Valley covers 600,000 acres (243,000 hectares), of which 82,000 acres (33,000 hectares) are cultivated. Within this area, there are approximately 80,000 individual vineyards or *quintas* owned by 29,620 growers. Each vineyard is classified according to a points system allocated for the categories listed below. The better the classification, the higher official price a vineyard receives for its grapes and the greater its permitted production.

CATEGORY	MINIMUM	MAXIMUM
Location	-50	+600
Aspect	1,000	+250
Altitude; lowest is best	(-900)	(+150)
Gradient; steepest is best	(-100)	(+100)
Soil	(-350)	(+100)
Schist	(N/A)	(+100)
Granite	(-350)	(N/A)
Mixture	(-150)	(N/A)
Microclimate; sheltered is best	0+	60
Vine varieties; official classification	-300	+150
Age of vines; oldest is best	0	+60
Vine density; lowest is best	-50	+50
Productivity; lowest is best	-900	+120
Vineyard maintenance	-500	+100
Total	-3,150	+1,490

Vineyards are classified from **A**, for best, to **F**, for worst, as follows: • **Class A** (1,200 points or more); **Class B** (1,001–1,199 points); **Class C** (801–1,000 points); **Class D** (601–800 points); **Class E** (400–600 points); **Class F** (400 points or below).

CLASS A

Aciprestes (Royal Oporto), *Atayde* (Cockburn), *Bomfin* (Dow), *Bom-Retiro* (Ramos-Pinto), *Carvalbas* (Royal Oporto), *Carvalbeira* (Calem & Filho), *Boa vista* (Offley Forrester), *Corte* (privately owned, managed by Delaforce), *Corval* (Royal Oporto), *Cruzeiro St. Antonio* (Guimaraens), *Cavadinba* (Warre), *Eira Velba* (privately owned, managed by Cockburn), *Ervamoira* (Ramos-Pinto), *Fontela* (Cockburn), *Fonte Santa* (Kopke), *Foz* (Calem & Filho), *La Rosa* (privately owned), *Lobata* (Barros, Almeida), *Madalena* (Warre), *Malvedos* (Graham), *Mesquita* (Barroa, Almeida), *Monte Bravo* (privately owned, managed by Dow), *Nova* (privately owned, managed by Warre), *Panascal* (Guimaraens), *Passa Douro* (Sandeman), *Sagrado* (Calem & Filho), *Santo Antonio* (Calem & Filho), *Sibio* (Royal Oporto), *St Luiz* (Kopke), *Terra Feita* (Taylor's), *Tua* (Cockburn), *Vale de Mendiz* (Sandeman), *Vale Dona Maria* (Smith Woodhouse), *Vargellas* (Taylor's), *Vedial* (Calem & Filho), *Zimbro* (privately owned, managed by Dow)

CLASS A-B

Aradas (Noval), *Avidagos* (Da Silva), *Casa Nova* (Borges & Irmao), *Ferra dosa* (Borges & Irmao), *Hortos* (Borges & Irmao), *Junco* (Borges & Irmao), *Leda* (Ferreira), *Marco* (Noval), *Meao* (Ferreira family), *Noval* (Noval), *Porto*

(Ferreira), *Roeda* (Croft), *Seixo* (Ferreira), *Silbo* (Borges & Irmao), *Silval* (Noval), *Soalbeira* (Borges & Irmao), *Urqueiras* (Noval), *Velbo Roncao* (Pocas), *Vezuvio* (Symington family)

CLASS B

“autovinificators”—rather antiquated devices that rely on the build-up of carbonic gas pressure given off during fermentation to force the juice up and over the *manta* (cap) of grape skins. The object is to extract the maximum amount of coloring matter from the skins, because so much is lost by fortification. It is possible also to achieve this using special vats and several have been installed throughout the port industry.

FERMENTATION AND FORTIFICATION

The initial fermentation phase of port differs little from that in the rest of the world, except that vinification temperatures are often as high as 90°F (32°C). This has no detrimental effect on port, and in fact probably accounts for its chocolaty, high-pH complexity. When a level of about 6 to 8 percent alcohol has been achieved, the wine is fortified, unlike sherry, for which the fermentation process is allowed to complete its natural course. Port derives its sweetness from unfermented sugars, whereas sweet sherries are totally dry wines to which a syrupy concentrate is added. The timing of the addition of brandy is dependent upon the sugar reading, not the alcohol level. When the sweetness of the fermenting juice has dropped to approximately 90 grams per liter of sugar, the alcoholic strength will normally be between 6 and 8 percent, but this varies according to the richness of the juice, which in turn is dependent upon the grape variety, where it is grown, and the year.

The use of the word “brandy” is somewhat misleading. It is not, in fact, brandy, but a clear, flavorless, grape-distilled spirit of 77 percent alcohol, known in Portugal as *aguardente*. It adds alcoholic strength to a port, but not aroma or flavor. *Aguardente* is produced either from wines made in southern Portugal or from excess production in the Douro itself. Its price and distribution to each shipper are strictly rationed. On average 29 gallons (110 liters) is added for every 116 gallons (440 liters) of wine, making a total of 145 gallons (550 liters)—the capacity of a Douro pipe, a specific size of cask used for shipping wine from the valley to the lodges at Vila Nova de Gaia. A drier port has a slightly longer fermentation and requires less than 26 gallons (100 liters) of *aguardente*, while a particularly sweet (or *geropiga*) port is muted with as much as 36 gallons (135 liters). If gauged correctly, the brandy which has been added to arrest the fermentation will eventually harmonize with the fruit and the natural sweetness of the wine. Our conception of balance between fruit, alcohol, and sweetness is, of course, greatly affected by what we are used to drinking. In deepest Douro a local farmer is likely to use a far higher proportion of alcohol for port he intends to drink himself than for the port he makes for export. Generally, British shippers prefer more fruit and less brandy, but all commercial shippers, British or Portuguese, would consider the domestic port of a Douro farmer to lack sufficient body to match the brandy.

MATURATION AND BLENDING

Until 1986, all port had by law to be matured and bottled at Vila Nova de Gaia on the left bank of the Douro estuary opposite Oporto. At some 47 miles (75 kilometers) from the region of production, this was like insisting that all Champagne be blended, bottled, and disgorged at Le Havre. The law bestowing Vila Nova de Gaia was made in 1756 and it was ostensibly created by and for the big shippers, as it effectively prevented small growers from exporting their wine, since they could not possibly afford the expense of a lodge at Vila Nova de Gaia. By the late 18th century, most of the famous port names were already established, and this restrictive law enabled them to maintain the status quo, especially on the lucrative international markets. All this has changed, and though most ports still come from the big shippers' lodges, many new ports now find their way on to the market directly from privately owned Douro *quintas*.

THE STYLES OF PORT

Note With the exception of white port, there are just two basic styles from which all variants stem: ruby and tawny. What distinguishes these two styles is bottle-aging for rubies and cask-aging for tawnies.

WHITE PORT

Most dry white ports taste like flabby sherry, but there are some interesting sweet ones such as Ferreira's Superior White, which is creamy-soft and delicious. Truly sweet white port is often labeled Lagrima. Niepoort pure Moscatel can make an nice alternative to Moscatel de Setúbal.

☞ Upon purchase

✓ Ferreira's Superior White

BASIC RUBY PORT

The cheapest red ports are rubies with less than a year in cask and often no time at all. Sold soon after bottling, they do not improve if kept. Inexpensive rubies have a basic, pepper-grapey flavor that can be quite fiery. Superior-quality wines are blended from various vintages with up to four years in cask, giving a more homogenous taste, though they should still have the fruity-spice and warmth of a young ruby.

☞ Upon purchase

✓ Cockburn's (Special Reserve) • Fonseca (Bin 27) • Graham's (Six Grapes) • Quinta de la Rosa (Finest Reserve) • Warre's (Warrior)

CRUSTED PORT *or* CRUSTING PORT

The greatest nonvintage ruby port, this is a blend of very high-quality wines from two or more years, given up to four years in cask and, ideally, at least three years in bottle. Like vintage, it throws a deposit in bottle, hence the name. Ready to drink when purchased, providing it is carefully decanted, crusting port benefits from acclimatizing to new storage conditions, when it will shed further sedimentation before resuming the much slower process of maturation.

☞ 1–10 years

✓ Churchill's • Martinez • Smith Woodhouse

LATE-BOTTLED VINTAGE PORT (LBV)

A late-bottled vintage is a pure vintage port from a good, but not necessarily great, year. LBVs are usually made in lighter, generally undeclared years. Lighter, more precocious vintages are usually chosen for this less expensive category, and the wines are given between four and six years in cask to bring them on even quicker. LBVs are thus ready for drinking when sold, but will continue to improve in bottle for another five or six years.

☞ 5–10 years

✓ Burmester • Churchill's • Graham's • Quinta de la Rosa • Ramos-Pinto • Smith Woodhouse • Warre's

SINGLE-QUINTA PORT

A wine from a single vineyard, this may be a classic vintage port from an established house or a special release from an undeclared vintage.

Most single-*quinta* ports are as accessible as LBV because, after bottling, the wines are stored until more or less ready to drink. Many single-*quinta* and LBV ports are the same age, although the former is aged longer *after* bottling, while the latter is aged longer *before*. With interest in these ports increasing, the change in the law allowing port to be matured at the *quintas*, and the fact that individual domaine wines are seen as more prestigious, this category could one day become more esteemed than vintage port itself.

☞ 8–25 years

✓ Calem (Quinta de Foz) • Champalimaud (Quinta do Cotto) • Churchill's (Quinta de Agua Alta) • Ferreira (Quinta do Seixo) • Fonseca (Quinta do Panascal) • Niepoort (Quinta do Passadouro) • Quinta de la Rosa • Quinta de Vesuvio • Quinta do Noval • Quinta do Sagrado • Ramos-Pinto (Quinta da Urtiga) • Taylor's (Quinta de Vargellas) • Warre's (Quinta da Cavadinha)

VINTAGE CHARACTER PORT

The suggestion that these wines, blended from various years and matured in cask for up to four years, have a "vintage" character is misleading. They may be fine ports, but the character is that of a genuine fine old ruby, not a vintage port.

☞ Upon purchase

✓ Calem • Churchill's • Ferreira • Royal Oporto (The Navigator's) • Sandeman's (Signature)

VINTAGE PORT

By law, a vintage port must be bottled within two years. Maturation in bottle is more reductive than cask-aging and the wine that results has a certain fruitiness that will not be found in any fine old tawny. When mature, a fine vintage port is a unique taste experience with a heady bouquet and a sultry flavor. A warming feeling seems to follow the wine down the throat—more an "afterglow" than an aftertaste. The grape and spirit are totally integrated and the palate is near to bursting with warm, spicy-fruit flavors.

☞ 12–30 years (but see individual producers)

✓ Churchill's • Champalimaud (Quinta do Cotto) • Ferreira • Fonseca • Fonseca Guimaraens • Gould Campbell • Niepoort • Quinta do Noval (especially Nacional) • Taylor's

AGED TAWNY PORT

These 10-, 20-, 30-Year-Old and Over 40 Years Old ports are traditionally known as "fine old tawnies" (FOT), but like fine old rubies, there are no legal requirements. By constant racking over a period of 10, 20, or more years, port fades to a tawny color, falls bright, and will throw no further deposit. It assumes a smooth, silky texture, a voluptuous, mellow, nutty flavor, and complex after-aromas that can include freshly ground coffee, caramel, chocolate, raisins, nutmeg, and cinnamon. The years are merely an indication of age; in theory, a 20-Year-Old tawny could be just a year old, if it could fool the Port Wine Institute. In practice, most blends probably have an age close to that

indicated. Most tawny port experts find 20-Year-Old the ideal tawny, but 30- and Over 40 Years Old tawnies are not necessarily past it. The only relatively negative aspect of a good 30- or Over 40 Years Old is that it will be more like a liqueur than a port.

☞ Upon purchase

✓ 10-Year-Old Calem • Churchill's • Cockburn's • Croft • Dow's • Ferreira (Quinta do Porto) • Fonseca • Graham's • Niepoort • Offley (Baron Forrester) • Ramos-Pinto • Robertson's (Pyramid) • Smith Woodhouse • Taylor's • Warre's (Sir William)

20-Year-Old Barros Almeida • Burmester • Calem • Cockburn's • Croft (Director's Reserve) • Dow's • Ferreira (Duque de Bragança) • Fonseca • Graham's • Niepoort • Noval • Offley (Baron Forrester) • Robertson's (Private Reserve) • Sandeman (Imperial) • Taylor's

30-Year-Old Calem • Croft • Dow's • Fonseca • Niepoort • Ramos-Pinto

Over 40 Years Old Calem • Fonseca • Graham's • Noval • Taylor's

BASIC TAWNY PORT

These are often a blend of red and white ports. Some skillful blends can be very good and have even the most experienced port-tasters guessing whether they are tawny by definition or blending. On the whole it is wise to pay more to ensure you are buying an authentically aged product. The best tawnies are usually eight years old, although this is seldom indicated.

☞ Upon purchase

✓ Delaforce (His Eminence's Choice) • Dow's (Boardroom) • Warre's (Nimrod)

SINGLE-QUINTA TAWNY PORT

Although most single-vineyard ports are vintage and ruby in style, some are made as tawny, either with an indicated age or vintage-dated.

☞ Upon purchase

✓ 10-Year-Old: Quinta do Sagrado • Ramos-Pinto (Quinta da Ervamoira)
20-Year-Old: Ramos-Pinto (Quinta do Bom-Retiro)
Vintage-Dated: Borges' Quinta do Junco

VINTAGE-DATED TAWNY *or* COLHEITA PORT

These excellent-value, often sublime, cask-aged wines are from a single vintage, and may have 20 or 50 years in cask. They must not be confused with the plumper, fruitier vintage ports. There should be an indication of when the wine was bottled or a term such as "Matured in Wood." Some vintage ports are simply labeled "vintage" and tawnies "Colheita." Other clues are "Reserve," "Reserva," or "Bottled in" dates.

☞ Upon purchase

✓ Barros Almeida • Burmester • Calem • Offley (Baron Forrester) • Niepoort • Noval

THE WINE PRODUCERS OF THE DOURO VALLEY

Note The age range for “when to drink” refers to the optimal enjoyment of vintage ports and appears only when this style is recommended. When the entire range is recommended, this includes all wines with the exception of the most basic ruby and tawny or any white port, unless otherwise stated.

BARROS

Barros Almeida

★①

Manuel de Barros started work as an office boy at Almeida & Co., ending up not only owning the company, but also building a port empire, as he and his descendants took over Douro Wine Shippers and Growers, Feist, Feuerheerd, Hutcheson, Kopke, Santos Junior, and Viera de Sousa. Only Kopke and Barros Almeida itself retain any form of independence, and the others have become little more than brands.

✓ 20-Year-Old Tawny • Vintage-Dated Tawny • Colheitas

BORGES & IRMÃO

⊗

Established in 1884, the Portuguese-owned house of Borges & Irmão is best known for its Soalheira 10-Year-Old and Roncão 20-Year-Old Tawnies, but the quality of their port has suffered under a lack of direction from Portuguese government ownership.

BURMESTER

★①

Of Anglo-German origin, Burmester is an underrated house that is best for mature tawny styles, but also makes good vintage.

✓ Late-Bottled • Vintage • 20-Year-Old Tawny • Colheitas • Vintage

CÁLEM

★

Cálem was established in 1859 and today is still owned by the Cálem family, which consistently produces elegant tawny, single-*quinta*, and vintage port.

☞ 15–25 years

✓ 10-, 20-, 30-, and 40-Year-Old Tawny • Vintage Character • Quinta de Foz • Vintage

CHAMPALIMAUD

Quinta do Cotto

★★★

Although Miguel Montez Champalimaud can trace his family's viticultural roots in the Douro Valley back to the 13th century, he did not produce his first port until 1982, when it became the world's first estate-bottled single-*quinta* port, making him the fastest-rising star among the new wave of privately owned grower ports.

☞ 12–25 years

✓ Quinta do Cotto

CHURCHILL'S

★★★

Established in 1981 by Johnny Graham, a member of the Graham's port family who was married to Caroline (*née* Churchill), this was the first port shipper to be established in recent times, and it has quickly risen to the top.

☞ 12–25 years

✓ Entire range

COCKBURN'S

★★★

Founded in 1815 by Robert Cockburn, who married Mary Duff, a lady much admired by Lord Byron, this house is still British-owned (Allied-Domecq). Although Cockburn's best-selling Special Reserve and Fine Old Ruby are produced in vast quantities, they are exceptionally good and consistent in quality as are the vintage ports also produced by Cockburn's. *See also* Martinez.

☞ 15–30 years

✓ Entire range

CROFT

★

To many people, Croft is best known for its sherries, yet it is one of the oldest port houses, having started production in 1678. Its elegant style best suits Fine old tawnies, more characteristic of a Portuguese-owned house than a British-owned one. In all but a few years, its vintage ports are among the lightest. *See also* Morgan.

✓ 10-, 20-, and 30-Year-Old Tawny

CRUZ

⊗

The lackluster quality of Cruz says a lot about the average Frenchman's appreciation of the world's greatest fortified wine. France takes nearly half of all the port currently exported and this is the best-selling brand. The French could be forgiven if they cooked with it, but they actually drink the stuff.

DELAFORCE

★

Although owned by IDV (Grand Met) since 1968, and thus a sister company to both Croft and Morgan, this house still retains a certain amount of independence, with fifth-generation David Delaforce very much in day-to-day control. The style of Delaforce is very much on the lighter-bodied side, which particularly suits His Eminence's Choice, an exquisite old tawny with a succulent balance as well as a lingering fragrance.

✓ His Eminence's Choice Superb Old Tawny

DIEZ

Diez Hermanos

②

Interesting recent vintages make this low-key producer one to watch.

DOURO WINE SHIPPERS AND GROWERS

See Barros

DOW'S

Silva & Cosens

★★★

Although the brand is Dow's, this firm is actually called Silva & Cosens. It was established in 1862 and James Ramsay Dow was made a partner in 1877, when his firm, Dow & Co., which had been shipping port since 1798, was merged with Silva & Cosens. Dow's is now one of the many brands belonging to the Symington family, but consistently makes one of the very greatest vintage ports. *See also* Gould Campbell, Graham's, Quarles Harris, Smith Woodhouse, Warre's.

☞ 18–35 years

✓ Entire range

FEIST

See Barros

FERREIRA

★★★

This house was established in 1761 and was family-owned until 1988, when it was taken over by Sogrape, the largest wine-shipper in Portugal. The brand leader in Portugal itself, Ferreira did not establish its present reputation until the mid-19th century, when it was under the control of Dona Antonia Adelaide Ferreira, who was so successful that when she died she left an estate of \$16.6 million, valued at 1896 rates. Ever mindful of its Portuguese roots, it is not surprising that elegantly rich tawny port is Ferreira's forte. Equally consistent is the style of its vintage port. While this wine is typically light, smooth, and mellow, it does age beautifully.

☞ 12–30 years

✓ Entire range

FEUERHEERD

See Barros

FONSECA

Fonseca Guimaraens

★★★

This house was originally called Fonseca, Monteiro & Co., but changed its name when it was purchased by Manuel Pedro Guimaraens in 1822. Although it has been part of Taylor, Fladgate & Yeatman since 1948, it operates in a totally independent fashion, utilizing its own *quintas* and contracted suppliers. Fonseca has always been the top-quality brand, but even its second wine, Fonseca Guimaraens, puts many port houses to shame.

☞ 15–30 years

✓ Entire range

GOULD CAMPBELL

★

Although at the cheaper end of the Symington group, Gould Campbell, which was established in about 1797, produces fine, sometimes stunningly fine, vintage ports. *See also* Dow's, Graham's, Smith Woodhouse, Quarles Harris, Warre's.

☞ 12–25 years

✓ vintage

GRAHAM'S

W. & J. Graham & Co.

★★★

Graham's was founded as a textile business and only entered the port trade when, in 1826, its Oporto office accepted wine in payment of a debt. Along the way, Graham's took over the firm of Smith Woodhouse and both of them became part of the Symington port empire in 1970. Although it is the vintage port that earned Graham's its reputation, the entire range is of an equally high quality, category for category. *See also* Dow's, Gould Campbell, Quarles Harris, Smith Woodhouse, Warre's.

MARTINEZ

Martinez Gassiot

★★★

Martinez was founded in 1797 by Sebastian González Martinez, a

Spaniard, but became affiliated to Cockburn in the early 1960s. Rather underrated, it produces small quantities of high-quality vintage and great value cruised, and is also a source of extraordinarily good own-label port. *See also* Cockburn's.

🕒 12–20 years
 ✓ *Entire Range*

MORGAN

★①

One of the oldest port houses, Morgan was purchased in 1952 by Croft (now part of IDV, thus Grand Met), and now produces plummy port, but is fast becoming known as an excellent source of good value, own-label ports, particularly the 10-Year-Old Tawny. *See also* Croft.

✓ *Own-label Tawny*

NIEPOORT

★★

This small Dutch-owned firm is best known for its elegantly rich tawnies, especially the colheitas, but also makes fine, underrated vintage port.

🕒 12–25 years
 ✓ *Entire range*

NOVAL

Quinta do Noval

★★

Nacional ★★★

Originally a Portuguese house, having been founded in 1813 by Antonio José da Silva, Quinta do Noval was controlled by the Dutch van Zeller family for four generations until it was purchased by the French AXA group. Although the firm is officially known as Quinta do Noval, it has been careful to market most products under the Noval brand, reserving the *quinta* name for those ports made exclusively from the property itself.

🕒 15–35 years (25–70 years for Nacional)

✓ *Vintage • Nacional • 20- and 40-Year-Old Tawny*

OFFLEY

Offley Forrester

★★

Established in 1737, this firm once belonged to the famous Baron Forrester, but is now owned by Sogrape. Offley makes excellent quality colheitas, elegant vintage ports, and a deeper-colored single-quinta Boa Vista.

🕒 12–25 years

✓ *Vintage • Boa Vista • Colheita • 10- and 20-Year-Old Tawny*

POÇAS

Poças Junior

Established in 1918, like many Portuguese-owned firms, Poças Junior started declaring vintage ports relatively recently (1960s) and is primarily known for its tawnies and colheitas. Second labels include Lopes, Pousada, and Seguro.

QUARLES HARRIS

Established in 1680 and the second-largest port house in the 18th century, when it was taken over by Warre's, Quarles Harris is now one of the smallest port brands under the control of the progressive Symington Group. *See also* Dow's, Gould Campbell, Graham's, Quarles Harris, Smith Woodhouse, Warre's.

QUINTA DE LA ROSA

★

Promising new estate-bottled, Single-Quinta Port. Look out for the new 10-Year-Old tawny.

🕒 8–25 years

✓ *Finest Reserve • Late Bottled Vintage • Vintage*

QUINTA DO COTTO

See Champalimaud

QUINTA DO INFANTADO

②

The vintage port from this estate-bottled single-*quinta* have been rather lightweight, but the 1991 late-bottled vintage was a real gem, so it might be worth keeping an eye on future releases from this independent producer.

QUINTA DO NOVAL

See Noval

QUINTA DO VESUVIO

This massive, 990-acre (400-hectare), former Ferreira property was considered to be the greatest *quinta* in the Douro when planted in the 19th century. Owned since 1989 by the Symington group, which has already established its vintage port as exceptional, but how exceptional remains to be seen.

🕒 12–30 years

✓ *Vintage*

RAMOS-PINTO

★★

Established in 1880 by Adriano Ramos-Pinto, when he was 20 years old, this firm remained in family ownership until 1990, when it was purchased by Champagne Louis Roederer. Ramos-Pinto always has produced excellent tawnies, particularly the single-*quintas* 10- and 20-Year-Old and its colheitas, but if the 1994 is anything to go by, vintage port could be its future *forte*.

🕒 12–25 years

REBELLO VALENTE

See Robertson Brothers and Co.

ROBERTSON BROTHERS AND CO.

★

Established in 1881, this small port house is now a subsidiary of Sandeman and thus owned by

Seagram. Best known for its tawnies and, under the famous Rebello Valente label, very traditional vintage ports.

🕒 12–25 years

✓ *10- and 20-Year-Old Tawnies* • *Vintage*

ROYAL OPORTO

Real Companhia Velha

★①

Founded in 1756 by the Marquis de Pombal to regulate the port trade, the future ownership of this firm looks uncertain at the time of writing, but its reputation as a good source of inexpensive tawny and vintage character ports should ensure its survival.

✓ *Vintage Character* (The Navigator's)

ROZES

②

Part of the giant Moët-Hennessy group, Rozes has yet to establish a reputation beyond the French market, but with Moët & Chandon's globe-trotting "wine doctor" Richard Geoffroy getting involved, anything could happen.

SANDEMAN

★

Also known for its sherry and Madeira, Sandeman was established in 1790 and took over Robertson's and Rebello Valente in 1881, after which it acquired Diez and Offley (now part of Sogrape), and is itself owned by Seagram. The quality of Sandeman's vintage port is variable and seldom blockbusting, but its tawnies are reliable, especially Imperial 20-Year-Old.

SYMINGTON GROUP

The Symingtons are one of the most well-known and successful of all port families, owning six brands, yet not one of these boasts the family name. *See also* Dow's, Gould Campbell, Graham's, Quarles Harris, Smith Woodhouse, Warre's.

TAYLOR'S

Taylor, Fladgate & Yeatman

★★★

Founded in 1692 by Job Bearsley, this house underwent no fewer than 21 changes of title before adopting its present one, which derives from the names of various partners: Joseph Taylor in 1816, John Fladgate in 1837, and Morgan Yeatman in 1844. At one time the firm was known as Webb, Campbell, Gray & Cano (Joseph Cano was, as it happens, the only American ever to be admitted into the partnership of a port house). In 1744, Taylor's became the first shipper to buy a property in the Douro, but its most famous acquisition was Quinta de Vargellas in 1890, a prestigious property that provides the heart and soul of every Taylor's vintage port.

🕒 20–40 years

✓ *Entire range*

VIERA DE SOUSA

See Barros

WARRE'S

★★★

Only the German-founded house of Kopke can claim to be older than Warre's, which was established in 1670, although it only assumed its present name in 1729 when William Warre entered the business. This house, which now belongs to the entrepreneurial Symington family, normally vies with Graham's, another Symington brand, as the darkest and most concentrated vintage port after that of Taylor's. *See also* Dow's, Gould Campbell, Graham's, Quarles Harris, Smith Woodhouse.

🕒 18–35 years

WEISE & KROHN

Weise & Krohn port house was originally founded in 1865 by two Norwegians of German extraction, Theodore Weise and Dankert Krohn. It has been owned by the Portuguese Carneiro family since the 1930s. It makes rather insubstantial vintage port, and is best known for its tawnies.

✓ *Colheitas*

THE STYLES OF MADEIRA

There have traditionally been four basic styles of Madeira, named after the following grape varieties: Sercial, Verdelho, Bual, and Malmsey. During the 20th century, however, the majority of Madeira produced was blended with a high proportion of Tinta Negra Mole (or its variant Complexa) or of American hybrids. Since 1990, however, no hybrids have been allowed, and since 1993, those wines made from Tinta Negra Mole may use only generic terms of sweetness (and not the stylistic terms listed below), such as *seco* (dry), *meio seco* (medium dry), *meio doce* (medium sweet), and *doce* (sweet), accompanied by descriptors such as pale, dark, full, or rich, while at least 85 percent of a varietal wine must be made from the grape indicated.

Note Madeira should be ready to drink when sold and good Madeira will keep indefinitely, so no optimal drinking periods are given below.

BASTARDO

Another rarity from Madeira's once glittering past, there is some question as to whether this black grape variety is related to the Douro variety of the same name, but there is no doubting its great potential quality, making it yet another golden oldie that is long overdue a revival.

BUAL

Definitely sweeter and darker than the styles above, Bual can often be recognized under blind conditions by its khaki-colored meniscus. This style has soft, gentle fruit with noticeable fatness and ripeness, underscored by a baked, smoky complexity. The legal limit for residual sugar is 78–96 grams per liter.

✓ See styles by age

EXTRA RESERVE *or* OVER-15-YEAR-OLD MADEIRA

This style is rarely encountered, but is always significantly richer and more complex than 10-Year-Old Madeira. The 15 years reference is excluded from some wines that are much older.

✓ *Barbeito* (25-Year-Old Bual) • *Cossart* (Malmsey 15-Year-Old Malmsey, Very Old Duo Centenary Celebration Bual, Very Old Duo Centenary Celebration Sercial)

FINEST *or* 3-YEAR-OLD MADEIRA

This, the lowest level of Madeira, will be the style of any Madeira whose age is not given. It consists primarily of Tinta Negra Mole, and some Moscatel. Three years is too short a time for any decent wine to evolve into a true Madeira and much is sold in bulk for cooking, and cannot be recommended.

MALMSEY

Made from both white and black varieties of Malvasia grown on the island's lowest and warmest regions, Malmsey is the ultimate Madeira and my own favorite. It is the most luscious, the sweetest, and most honeyed of all Madeira styles. Potentially the most complex and long-lived Madeira, Malmsey matures to an ultrasmooth, coffee-caramel succulence, which

lasts forever in the mouth. The legal limit for residual sugar is 96–135 grams per liter.

✓ See styles by age

MOSCATEL

Madeira has made some interesting Moscatel, but only a few remain available for tasting today. However, with so many fortified Muscats of superb quality made throughout the world, Madeira's Moscatel should perhaps be reserved for blending purposes only.

RAINWATER

This is effectively a paler, softer version of a medium-dry Verdelho but, because varietal names are never used, making Rainwater with Verdelho would be a waste of this good-quality classic grape. Rainwater is more likely to be a paler, softer version of Tinta Negra Mole trying to emulate Verdelho. There are two theories about the origin of this curiously named Madeira style. One is that it came from the vines, which were grown on hillsides where it was impossible to irrigate, thus growers had to rely on rainwater. The other theory concerns a shipment that was bound for Boston in the US: even though the wine was accidentally diluted by rain en route, the Madeira house in question had hoped to get away with it, and were shocked when the Americans loved it so much they wanted more!

RESERVE *or* 5-YEAR-OLD MADEIRA

This is the youngest age at which the noble varieties (Sercial, Verdelho, Bual, Malmsey, Bastardo, and Terrantez) may be used, so if no single variety is claimed, you can be sure that it is mostly, if not entirely, Tinta Negra Mole. Five years was once far too young for a classic Madeira from noble grapes, but they are much better than they used to be and some bargain five-year-old varietals can be found.

✓ *Barbeito* (Malmsey) • *Blandy's* (Sercial, Bual, Malmsey) • *Cossart* (Sercial)

SERCIAL

This grape is known on the Portuguese mainland as Esgana Cão, or “dog strangler,” and is grown in the island's coolest vineyards. Sercial is the palest, lightest, and driest Madeira, but matures to a rich, yet crisp, savory flavor with the sharp tang of acidic spices and citrus fruits. The legal limit for residual sugar is 18–65 grams per liter (the bottom end of this range tastes bone dry when balanced against an alcohol level of 17 percent in such an intensely flavored wine, and even 40 grams per liter can seem dry).

✓ See styles by age

SOLERA MADEIRA

Although an old *solera* will contain barely a few molecules from the year on which it was based and which it boasts on the label, the best examples of authentic Madeira *soleras* (there have been several frauds) are soft, sensuous, and delicious.

✓ *Blandy's Solera 1863 Malmsey* • *Blandy's Solera 1880 Verdelho* • *Cossart Solera 1845 Bual*

SPECIAL RESERVE *or* 10-YEAR-OLD MADEIRA

This is where serious Madeira begins, and even nonvarietals may be worthy of consideration because, although some wines in this style may be made with Tinta Negra Mole, producers will risk only superior wines from this grape for such extended aging.

✓ *Blandy's* (Sercial, Malmsey) • *Cossart* (Verdelho, Malmsey) • *Henriques & Henriques* (Sercial, Malmsey) • *Power Drury* (Malmsey) • *Rutherford & Miles* (Bual, Malmsey)

TERRANTEZ

This white grape variety is virtually extinct on the island, but the highly perfumed, rich, powerfully flavored, and tangy-sweet Madeira wine it produced is so highly regarded that old vintages can still attract top prices at auction. If and when the Young Turks ever reach Madeira, this is one variety they will be replanting in earnest.

VERDELHO

Some modern renditions of this style are almost as pale as Sercial, but Verdelho, both white and black varieties of which are grown on the island, traditionally produces a golden Madeira whose color deepens with age. It is, however, always made in a medium-dry to medium-sweet style, which gives it somewhat more body than Sercial, and this can make it seem softer and riper than it actually is, although its true astringency is revealed on the finish. The legal limit for residual sugar in these wines is 49–78 grams per liter.

✓ See styles by age

VINTAGE MADEIRA

All Madeira wines at one time bore a vintage, but this practice is unusual today, since most are blends or products of *solera* systems. Current regulations stipulate that vintage Madeira must spend at least 20 years in cask, but if Madeira is to prosper, this outdated approach must be discarded and a system similar to that used for vintage port must be adopted. This is not to suggest that vintage Madeira should not spend 20 years in cask, just that this rather lengthy process ought not to be mandatory. Consumers worldwide perceive vintage wines to be superior to nonvintage ones, and it does not seem to matter that the opposite is sometimes true: if Madeira is to reclaim the world stage and capture international imaginations, producers simply must put the spotlight on vintage Madeira, and the world is unlikely to wait 20 years for this to happen. Madeira must therefore release some of its vintages when they are much younger and put the onus on consumers to age the wines themselves. This would have the added advantage of feeding the auction circuit with a new investment and, as the different vintages are successively tasted and retasted, reported and discussed by critics, this would raise consumer awareness of these wines, thus very usefully enhancing the reputation of Madeira in general.

The WINES of
**GERMANY,
AUSTRIA, AND
SWITZERLAND**

CLASSIC GERMAN RIESLING IS INCOMPARABLE. No other wine can offer in a single sip as much finesse, purity of fruit, intensity of flavor, and thrilling acidity as a fine Riesling, yet it remains underrated. German Pinot Noir (Spätburgunder) is even more underrated. Few people have even heard of it. Yet, almost one-third of Germany's vineyards are planted with black grapes and, of that, one-third is Pinot Noir. Top Spätburgunder from the Ahr, Baden, and the Pfalz can be compared in quality with some of the best *premiers crus* in Burgundy. The only question is whether such wines can be produced at prices that do not make good Burgundy seem cheap by comparison! Austria also makes beautiful, underappreciated Riesling and Pinot Noir, in addition to which, top quality examples of one of its indigenous varieties, the highly distinctive Grüner Veltliner, are at last being taken seriously. And if German red wine is a surprise, nearly half of all Swiss wine is red, with smooth Pinot Noir and dense-yet-velvety Merlot the up-and-coming stars. These three countries will offer consumers some of the most exciting and diverse wine experiences of the new millennium.

THE RHEINGAU DISTRICT

A fall view of the quaint Hallgarten chapel, which lies between the Schönbell and Würzgarten vineyards.

GERMANY

The best German wines (Riesling and Pinot Noir) are better than ever, but the worst have never been as bad, and the German wine law passed in 1994 to replace the flawed law of 1971 has unfortunately not improved matters. On top of this, we now have a befuddled Großes Gewächs classification muddying the water at the very top end of the market, and wine labels with Anglicized fantasy names that are supposed to simplify labeling at the bottom end of the market, yet make some German wines look as if they were made in Eastern Europe.

EVERY GERMAN WINE is graded by the natural sugar content of its grapes; the more sugar, the higher the quality, therefore the greatest German wines are inevitably the sweetest. Although the philosophy that equates ripeness with greatness is misguided and has proved harmful to Germany's reputation, it is not an unreasonable one, for ripe grapes are required to make fine wine, and in Germany's northerly climate it is usually only the best sites that can fully ripen grapes. Nonetheless, taken to its ultimate conclusion, the German ideal implies, nonsensically, that a drier wine is inherently inferior to a sweeter wine. In the quest for sweetness and greater volume, the Riesling was gradually discarded in favor of German crosses such as Müller-Thurgau and Kerner, which easily ripened at much higher sugar levels and yielded far larger crops.

A GERMAN ESTATE-WINE REVIVAL?

In the 18th and 19th centuries, German wines from the Rhine were as famous and as expensive as the wines of Bordeaux, and Germany's system of aristocratic wine estates was on a par with the great wine châteaux of France. Today, almost every wine critic agrees that Germany's best estates must reassert their position, if this country wants to regain its reputation for quality. But this is not currently possible because each estate makes far too many wines to project any sort of unified image, let alone reputation.

SCHLOSS JOHANNISBERG

This historic, mansion-style schloss, which dominates the Rheingau slope between Winkel and Geisenheim, was built in 1563.

In Bordeaux one can speak of the style and quality of, say, Château Margaux *vis-à-vis* Château Latour, but what can be said about any top German estate, when the wines range from QbA, through *Kabinett, Spätlese, Auslese, Beerenauslese, and Trockenbeerenauslese* to *Eiswein* for each grape variety grown? At one time Germany's top wine estates did not market a vast number of *Prädikat* wines. Instead, they built their reputations on a single, flagship *cuvée*, which was invariably pure Riesling and, no matter how many times the vineyards were combed for

THE WINE REGIONS OF GERMANY

Viticulturally, Germany is made up of four large *Deutscher Tafelwein* regions encompassing eight *Tafelwein* subregions, within which there are separate infrastructures for 13 *Qualitätswein* and 20 *Landwein* regions. (The two *Qualitätswein* and two *Landwein* regions in former Eastern Germany fall outside the *Tafelwein* structure.) The *Qualitätswein* regions encompass 39 *Bereiche* (districts), containing 160 *Grosslagen* (collective sites), which in turn encapsulate 2,632 *Einzellagen* (single sites).

DEUTSCHER TAFELWEIN REGIONS	DEUTSCHER TAFELWEIN SUB-REGIONS	LANDWEIN REGIONS	QUALITÄTSWEIN REGIONS

		Sächsischer Landwein	Sachsen
		Mecklenburger Landwein	
Stargarder Land			

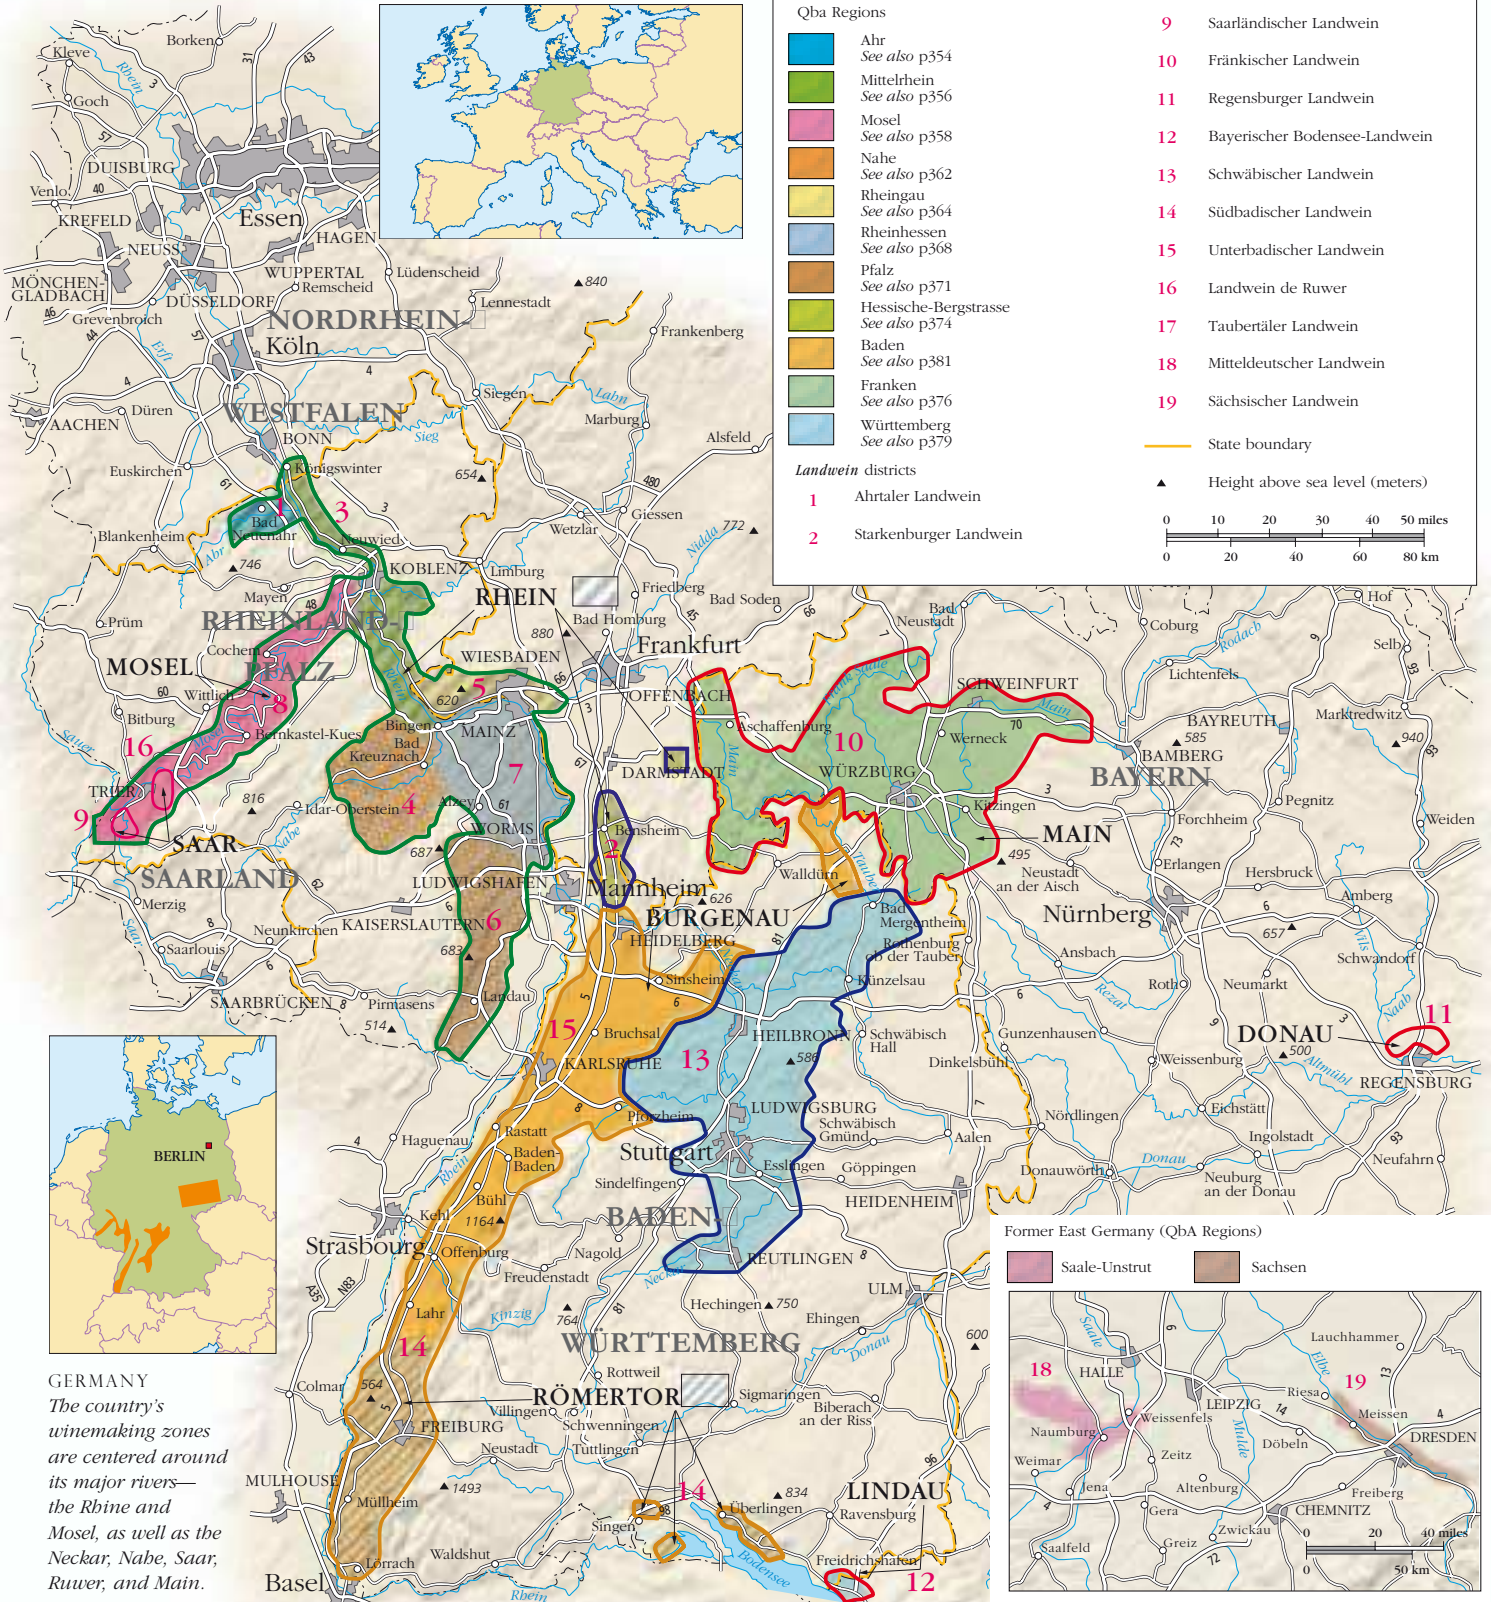

QUALITY STRUCTURE OVERVIEW

This is a simplistic overview because each category varies according to the grape variety and its area of origin. More detailed analyses are given under each region (see Quality Requirements and Harvest Percentages box, p.346).

QUALITY CATEGORY	MINIMUM OECHSLE	MINIMUM POTENTIAL ALCOHOL
Deutscher Tafelwein*	44–50°	5.0–5.9%
Landwein*	47–55°	5.6–6.7%
Qualitätswein bestimmter Anbaugebiete (QbA)*	50–72°	5.9–9.4%
QUALITÄTSWEIN MIT PRÄDIKAT (QmP):		
Kabinett	67–85°	8.6–11.4%
Spätlese	76–95°	10.0–13.0%
Auslese	83–105°	11.1–14.5%
Beerenauslese	110–128°	15.3–18.1%
Eiswein	110–128°	15.3–18.1%
Trockenbeerenauslese (TBA)	150–154°	21.5–22.1%

*Chaptalization is allowed, and will be necessary if the wine has a potential alcoholic strength of less than 8.5 percent.

grapes, just one wine was produced. It would be like combining all the different *Prädikat* wines into one superb rich blend today. In the days of Germany's illustrious wine estates, the wines were fermented more fully, rather than being arrested at artificially low alcohol levels in order to retain sweetness. Thus, these flagship *cuvées* were not just richer than today's wines, but drier, fuller-bodied, and more alcoholic. It was this sort of wine that made Germany's finest wine estates famous throughout the world, and

QUALITY REQUIREMENTS AND HARVEST PERCENTAGES

Germany is notorious for the variation of its vintages. Therefore, as a form of insurance, most of the crop is harvested early. This secures a minimum income from Deutscher Tafelwein and QbA wines, with those grapes that remain on the vine providing a possibility of higher-quality wines from late harvests. If, when, and how much these grapes ripen is the most basic indication of the nature of any vintage. The degree of ripeness attained is expressed in degrees *Oechsle* and the minimum level for each QmP can vary according to the region and grape variety in question. Each degree of *Oechsle* is the equivalent of 2–2.5 per liter grams of sugar. The exact amount of sugar varies according to the level of unfermentable extract also present. (For a survey of each region, see the individual charts in the regional sections.)

only when they return to the same basic philosophy will they be able to rebuild their reputations.

THE 1971 GERMAN WINE LAW

In 1971 a wine law was established to take account of EEC legislation regulating wine production. The main aspect of the law was to reduce 30,000 *Einzellagen* (individually named vineyards) to 2,600. The law allowed the boundaries of each of the original *Einzellagen* to be extended in order to cover a minimum area of five hectares (12½ acres). The solution appeared efficient, but missed the point of why any plot of land evolves a name or reputation to distinguish it from neighboring vineyards: *terroir* (see pp.14–16). The enshrining of these amalgamated vineyards in law has duped the public into believing that highly priced wines come from specific, historical sites when in fact they may originate from the surrounding areas that, on average, are more than 10 times the size.

This was nothing less than legalized fraud, but the bureaucratic bungling did not end there. The lawmakers went on to create an entirely new geographical appellation called the “*Grosslage*,” which has turned out to be an even greater deception. In fact, once this law’s capacity to deceive was fully understood, it became known on English-speaking markets as the “Gross lie.” A *Grosslage*, or “collective site,” is a very large area, not merely encompassing several *Einzellagen* (single sites as the term literally means) but many villages, each of which comprises a large number of *Einzellagen*. On average, each *Grosslage* consists of 17 post-1971 *Einzellagen* or 197 pre-1971 *Einzellagen*. Such wines are widely blended and of modest quality, but this in itself would not have been a problem had it been obligatory for the term “*Grosslage*” to appear on the label before the name of the

COMPARISON OF GERMAN HARVESTS 2000–2003

Production varies enormously in Germany—from as much as 171 million cases (15.4 million hectoliters) in 1982 to as little as 58 million cases (5.2 million hectoliters) in 1985—as does the spread of wines across the range of quality categories, shown by the table below:

QUALITY CATEGORY	2000	2001	2002	2003
Tafelwein to Landwein	2%	0.5%	0.5%	3%
QbA	54%	45.5%	43.5%	33%
QmP	44%	54%	56%	64%
SIZE OF HARVEST				
Millions of hectolitres	10.1	9.1	10.1	8.3
(Millions of cases)	112	101	112	92
Hectares under vine	101,546	99,714	98,772	98,270
(Acres)	250,926	246,399	244,071	242,830
Hectolitres per hectare	99.3	91.1	102.6	84.3

DECODING THE AP NUMBER

All QbAs and QmPs, including *Deutscher Sekt*, must carry an AP number (*Amtliche Prüfnummer*). This proves that a wine has undergone and passed various tasting and analytical tests and its origin has been established to the board’s satisfaction. Each time a producer applies for an AP number, specially sealed samples of the approved wine are kept by both the board and the producer. Should there be a fault or a fraud enquiry, these samples are analyzed and checked against a sample of the product on the market that has given rise to complaint or investigation. This sounds foolproof, and it is indeed more stringent than the EU’s Lot Number, which has been in operation since 1989. But like all systems it can be abused, which in this case would simply mean printing fictitious AP numbers on the label, although if noticed the penalty for this would be imprisonment, plus a ban from operating for the company, and a large fine. Understanding the AP number can be very useful. If the wine is a nonvintage QbA, it can give you some idea of how long it has been in bottle.

2002 “Weingut Müller-Catoir” Riesling Spätlese Qualitätswein mit Prädikat (QmP)

5 = Examination Board number

174 = number of the commune where the wine was bottled

079 = the bottler’s registered number

16 = the bottler’s application number

03 = the year in which the bottler made the application

AP Nr. 5 174 079 16 03

The communes’ and bottlers’ numbers run into thousands and are of the least significance to the consumer. It is the last two sets of numbers that provide the most useful information. In this instance, the 16 and 03 reveal that this is Weingut Müller-Catoir’s 16th application made in 2003. The application numbers are sequential, but do not necessarily apply to the same wine, i.e., none of the 15 previous applications made by Weingut Müller-Catoir in 2003 need necessarily apply to its 2002 Riesling Spätlese QmP. You will find that some references state that the application number actually refers to a specific cask the wine came from (which in this case would be *fuder* 16), but although this is so in some cases (Fritz Haag, and Von Schubert’s Maximin Grünhaus, for example), this is only because the producer in question will number his cask to coincide with the application number. What the last two sets of digits tell us is that if they are the same, then the wine is *exactly* the same. If you find two bottles of 2002 Weingut Müller-Catoir Riesling Spätlese QmP both bearing the AP number 5 174 079 16 03, then you know beyond any doubt that the contents of both bottles swam with each other before being bottled together. If you find two bottles of 2002 Weingut Müller-Catoir Riesling Spätlese QmP both bearing the AP number where either or both of the last two sets of digits are different, then you know that the contents are, at the very least, subtly different. They might simply be bottled on a different date, or from a different cask, but when the designation is as broad as Riesling Spätlese QmP, the grapes could have been grown miles apart, picked on different days, vinified in different tanks, with radically different sugar, alcohol, and acidity readings.

Grosslage itself, as “*Bereich*” (district) has to. Not only does the term *Grosslage* not have to appear anywhere on the label, but the name of the *Grosslage* appears after that of the village, in precisely the same way as the name of an *Einzellage* does, constantly leading consumers to believe that a *Grosslage* wine is from a single *Einzellage*. The criteria that originally established Germany as one of the great wine-producing countries of the world—the preeminence and defining quality of the Riesling grape, the famous villages or estates where it was grown, and the legendary quality of the individually named vineyards, or true *Einzellagen*—no longer applied after 1971.

THE 1994 WINE LAW

In 1994, when Germany was required to bring its wine law into line with those of other EU member states, it had a chance to remedy the flaws in the 1971 wine law. Those who cared about

GERMAN LABEL LANGUAGE

ABFÜLLUNG Bottling.

AUSLESE A category of German QmP wine that is very sweet, made from late-picked grapes, and which may also contain some botrytized grapes, *Auslese* is one step of sweetness above *Spätlese*, but one below *Beerenauslese*, and most of the best lean upward rather than downward.

BADISCH ROTGOLD A specialty rosé wine made from a blend of Ruländer and Spätburgunder, Badischer Rotgold must be of at least QbA level, and can be produced only in Baden.

BARIQUEWEIN Fermented or matured in new oak casks.

BEERENAUSELE A category of German QmP wine that comes above *Auslese* in sweetness, but beneath *Trockenbeerenauslese* and is made from botrytized grapes. It has more finesse and elegance than any other intensely sweet wine, with the possible exception of *Eiswein*.

BEREICH If the wine carries the appellation of a *Bereich*, it will simply state this—"Bereich Burg Cochem," for example.

DEUTSCHER GERMAN.

DEUTSCHER QUALITÄTS-SCHAUMWEIN OR DEUTSCHER SEKT BESTIMMTER ANBAUGEBIETE A sparkling wine made by any method (but probably *cuvée close*), from 100 percent German grapes grown in one specified region, although it may indicate an even smaller area of origin if at least 85 percent of the grapes come from that named area.

DEUTSCHER SEKT OR DEUTSCHER QUALITÄTSSCHAUMWEIN A sparkling wine made by any method (but probably *cuvée close*), from 100 percent German grapes. It may indicate a maximum of two grape names and should be at least 10 months old when sold.

DEUTSCHER WEINSIEGEL An official seal of quality awarded to wines that receive a higher score than the minimum required for an AP number, Deutscher Weinsiegels use a color-coding system: *trocken* wines bear a bright yellow seal; *halbtrocken* a lime green seal, and sweeter wines a red seal.

EDELFÄULE The German term for noble rot.

EINZELLAGE A single-vineyard wine area; the smallest geographical unit allowed under German wine law.

EISWEIN A rare wine resulting from the tradition of leaving grapes on the vine in the hope of attracting *Botrytis cinerea*. The grapes are frozen by frost or snow, then harvested, and pressed while frozen. This is done because only the ice freezes and, as

this rises to the top of the vat, it can be scraped off to leave a concentrated juice that produces a wine with a unique balance of sweetness, acidity, and extract.

ERSTES LAGE See *Grosses Gewächs*

ERSTES GEWÄCHS See *Grosses Gewächs*

ERZEUGERABFÜLLUNG At one time this was considered to mean estate-bottled, but so many cooperatives use it (because, they claim, their members' estates are the cooperative's estates) that it now means no more producer-bottled, thus some estates now use *Gutsabfüllung*. See *Gutsabfüllung*

FLASCHENGÄRUNG A bottle-fermented *Sekt* that is not necessarily made by the traditional method.

FLASCHENGÄRUNG NACH DEM TRADITIONELLEN VERFAHREN A *Sekt* made by the traditional method, although it is not likely to show much autolytic character.

FÜDER A large oval cask that holds 1,000 liters (265 gallons); more prevalent in the Mosel than the Rhine.

FÜR DIABETIKER GEEIGNET Suitable for diabetics, the wines must be *trocken* (dry), contain less than 1.5 grams per liter of sulfur dioxide (as opposed to the legal maximum of 2.25 grams per liter), and no more than 12 percent alcohol.

GROSSES GEWÄCHS (Great Growth), **ERSTES GEWÄCHS** (First Growth—Rheingau only), and **ERSTE LAGE** (First Site—Mosel only) are reserved for wines from the most highly rated vineyards. Only *Auslese*, *Beerenauslese*, *Trockenbeerenauslese*, or *Eiswein* *prädikate* are allowed, except in Mosel, where *Kabinett* and *Spätlese* *prädikate* and various other designations may also be used. When not qualified by any *prädikat*, *Grosses Gewächs* must be a dry wine made from grapes with a minimum *Spätlese* must weight. In the Ahr, only dry Pinot Noir or Frühburgunder of a minimum *Auslese* must weight qualify for *Grosses Gewächs*. All *Grosses/Erstes Gewächs* and *Erste Lage* wines must be hand harvested to a maximum yield of 50hl/ha (220 cases/acre), subjected to a VDP taste test, and cannot be released until September of the year following that of the harvest (two years for red wines).

GROSSLAGE A *Grosslage*, or "collective site," is a large area under which name cheap, bulk-blended wines are sold.

GUTSABFÜLLUNG This term literally means "bottled on the property" and has been taken up by those who feel that *Erzeugerabfüllung* has been so debased by the cooperatives that it no longer stands for a wine that is

truly estate-bottled. *Gutsabfüllung* can only be used by a winemaker who holds a diploma in oenology. This means any naturally gifted winemaker who has not sat the examination, but owns an estate and makes brilliant wines, has no legal way of indicating his or her wine is an authentic product that has been grown on, fermented at, and bottled on a individual wine estate.

GUTSWEIN AND ORTSWEIN (estate wine and commune wine) is applicable to wines observing the VDP's general standards, which include viticultural methods adhering to strict controls, regular inspection of vineyards, higher must weights than those prescribed by law, and a maximum yield of 75hl/ha (330 cases/acre).

HALBTROCKEN Literally "half-dry," although practically semisweet on most occasions, this wine does not contain more than 18 grams per liter of residual sugar and 10 grams per liter of acid.

JAHRGANG Vintage year.

KLASSIFIZIERTER LAGENWEIN

(wine from a classified site) is restricted to wines from classified vineyards that impart site-specific traits, with a maximum yield of 65hl/ha (285 cases/acre).

KABINETT The predicate at the end of this wine's name (it can come either before or after the grape variety) reveals that it is the lightest and driest of the QmP wines.

LANDWEIN This Teutonic version of the French *vin de pays* is not only a failure in commercial terms (unlike its Gallic compatriot), but is also rather strange in that it may be produced in only *trocken* and *halbtrocken* styles.

LIEBLICH Technically medium-sweet, although nearer to the French *moelleux*, this wine may have up to 45 grams per liter of residual sugar.

ORTSWEIN See *Gutswein*

QUALITÄTSSWEIN MIT PRÄDIKAT (QmP) The wine comes from the highest quality category of German wine and will carry one of the predicates that range from *Kabinett* up to *Trockenbeerenauslese*.

PERLWEIN Cheap, semi-sparkling wines made by carbonating a still wine. Mostly white, but may be red or rosé.

QbA *Qualitätswein bestimmter Anbaugebiete*, this is the theoretical equivalent of the French AOC.

QmP *Qualitätswein mit Prädikat*, this literally means a "quality wine with predication," and is a term used for any German wine above QbA, from *Kabinett* upward. The predication carried by a QmP wine depends upon the level of ripeness of the grapes used in the wine.

QUALITÄTSSCHAUMWEIN A "quality sparkling wine" can be produced by any member state of the EU, but the term should be qualified by the country of origin (of the wine). Only *Deutscher Qualitäts-schaumwein* will necessarily be from Germany.

REBE Grape variety.

RESTUSSE Residual sugar.

ROSEWEIN OR ROSEWEIN ROSÉ.

ROTUNG A rosé wine that may be made from black grapes or a mixture of black and white. This designation must be indicated on the label of any category of *Tafelwein* up to and including *Landwein*, and must also be featured on the label of QbA wine, although it is optional for QmP.

ROTWEIN Red wine. This designation must be indicated on the label of any category of *Tafelwein* up to and including *Landwein*, and must also be featured on the label of QbA wine, although it is optional for QmP.

SCHAUMWEIN With no further qualification, such as *Qualitätsschaumwein*, this indicates the cheapest form of sparkling wine, probably a carbonated blend of wines from various EU countries.

SCHILLERWEIN A style of wine produced in Württemberg that is the same as a *Rotling*.

SEKT Sparkling wine.

SPÄTLESE A QmP wine that is one step of sweetness above *Kabinett*, but one below *Auslese*. It is fairly sweet and made from late-picked grapes.

SÜSS A sweet wine with in excess of 45 grams per liter of residual sugar.

TAFELWEIN A lowly table wine or *vin de table*.

TROCKEN Literally "dry," a *trocken* wine must not contain more than 4 grams per liter of residual sugar, although up to 9 grams per liter is permitted if the acidity is 2 grams per liter or more.

TROCKENBEERENAUSELE A wine produced from individually picked, botrytized grapes that have been left on the vine to shrivel, it is typically golden-amber to amber in color, intensely sweet, viscous, very complex and as different from *Beerenauslese* as that wine is from *Kabinett*.

VDP Verband Deutscher Prädikats- und Qualitätsweingüter, an association of top wine estates.

WEISSHERBST A single-variety rosé produced from black grapes only, the variety of which must be indicated.

WEISSWEIN White wine. This designation must be indicated on the label of any category of *Tafelwein* up to and including *Landwein*. It may also be featured on the label of QbA and higher-quality wines, but this is not mandatory.

SÜSSRESERVE

Süssreserve is sterilized grape juice that may have just one or two degrees of alcohol, but has none if processed before fermentation can commence. It not only contributes the grapey freshness and sweetness for which German wines are famous, but also provides the winemaker with a convenient last-minute ingredient with which he can correct the balance of a wine. The origin of *Süssreserve* must, in essence, be the same as the wine to which it is added. Its quality, or degree of ripeness, should by law be at least the equivalent of the wine itself. The quantity added is not in itself restricted, but is indirectly controlled by the overall ratio of sugar to alcohol.

QUALITY	GRAMS OF ALCOHOL FOR EVERY GRAM OF RESIDUAL SUGAR PER LITRE	EXCEPTIONS
Tafelwein	3g	Franconian red 5g
Qualitätswein	3g	Franconian red 5g Franconian white and rosé 3.5g Württemberg red 4g Rheingau white
Kabinett	no controls	Franconian red 5g Franconian white 3g and rosé

quality bravely attempted reforms, but the large private and cooperative bottlers of inferior wine were too powerful, thus the bad law of 1971 was replaced by the even worse law of 1994. *Grosslagen* and *Bereiche* could and should have been disposed of because they are unnecessary appellations that do not enhance the reputation of German wines. But if such a simple yet radical move was too difficult to accomplish, then a temporary and perfectly adequate means of stopping the rot would have been to focus on reforming the *Grosslagen*, which are a deception as well as a distraction. This would have been easy to achieve simply by making it mandatory to print the term *Grosslage* on the label, in the same way that *Bereich* must appear. Until there is a consensus on the reform or eradication of the *Grosslagen*, there is no hope of reinstating the authentic names and boundaries of the *Einzellagen*, yet this is the only hope Germany has of reclaiming equal fine-wine status with France. Only a hierarchical classification of Germany's greatest vineyards will put this country back among the elite winemaking nations of the world, but it would be pointless to build one on the current tissue of lies. The number of *Einzellagen* was reduced to 2,600 in 1971 because, it was claimed, 30,000 was too confusing to contemplate;

RECENT GERMAN VINTAGES

2003 This was 1976 all over again, only the growers were given permission to irrigate the vines this time (water stress having turned that potentially great vintage into a hodgepodge of the good, bad, and the ugly). Only no one was set up for irrigation, and tanks were seen all over the vineyard, although what good they did is debatable. So 2003 is probably a slightly more successful version of 1976, and still they won't bother to waste money on irrigation.

2002 A truly great vintage that, despite rain at the beginning of the harvest, was perfect for everything from reds and QbAs to the upper end of the QmP scale.

2001 Brilliant quality, especially for Riesling. Outstanding *Eiswein*.

2000 Too much rain in July and October meant that 2000 was not as magical a year as some hoped it would be. Predominantly a Qualitätswein vintage with relatively small amounts of Prädikat wines produced. Definitely a year to stick to classic sites from top estates.

1999 With September rains, those who picked late rather than early turned out to be the winners, making the 1999 a high-quality vintage. Good ripeness levels in Riesling and Spätburgunder. Emphasis on *Kabinett* and *Spätlese* wines, although BA and TBA were produced.

WEINGUT MAX FERD RICHTER, MÜLHEIM

A producer of great Riesling, particularly from *Juffer Sonnenubr* in Braumberg. Dr. Richter is justly famous for his superb *Eiswein*.

but this claim was without justification. It does not matter whether there are 30,000 or 300,000—there are as many *Einzellagen* as there are; they all have the same right to exist, but only the outstanding ones will ever earn a reputation, so where is the potential for confusion? No one has suggested that all 30,000 should be classified. If the Germans ever conduct an official classification, and it is done properly, it would probably consist of no more than the best 250 *Einzellagen* and only the top 10 percent of these would need to create the sort of international reputation that Bordeaux's *premiers crus* have so effectively achieved.

VDP CLASSIFICATION

Without the will or authority to impose a legally recognized nationwide classification, this task has been left to voluntary, quality-conscious organizations. The earliest response was in 1983 in the Rheingau, where the late George Breuer pushed through the now famous Charta (pronounced "karta"), whereby vineyards were classified as *Erstes Gewächs* (First Growths), a designation that could only be used for wines that are essentially dry in style and comply with strict quality criteria. The most important aspect of the Charta, however, was its reclassification of the *Einzellagen*. It demonstrated that some famous sites had been inflated by as much as 806 percent under the 1971 wine law. It was hoped this example would be copied on a panregional basis by the largest organization of wine estates, the *Verband Deutscher Prädikatsweingüter* (VDP). Unfortunately, the VDP did not pick up the gauntlet until June 2002, when it announced its *Großes Gewächs* (Great Growths) classification for all regions, except the Ahr and Mosel (the Mosel having joined the scheme in March 2003, and the Ahr in August 2003).

A LITTLE GERMAN

Those who don't speak German may find it helpful to know that the plural of German words ending in "e" is achieved by adding an "n," thus, one *Grosslage*, two or more *Grosslagen*. For the plural of words ending with a consonant, an "e" is added, thus, one *Bereich*, two or more *Bereiche*.

The delay was much less of a worry than what had prompted the VDP into action in the first place. It was not so much vineyard classification, as the new dry wine designations of Classic and Selection. The VDP agreed with most of the criteria for the top Selection designation, which is restricted to *Einzellage* wines, but objected to the lack of any vineyard classification, other than the mostly bloated and thus meaningless *Einzellage* created by the 1971 wine law. It therefore withdrew its support of Classic and Selection designations and launched instead its *Grosses Gewächs* concept. Thus the whole *Grosses Gewächs* concept has become irrevocably and unnecessarily entangled in what wine should be produced using its designation, instead of setting out with blinding simplicity the true boundaries of Germany's greatest vineyards.

By not concentrating on a sense of place, the VDP became engrossed in ridiculous arguments as to what wine styles should be permitted to use the *Grosses Gewächs* classification, with definitions differing from region to region, not to mention the designation itself, which now accommodates the well-established *Erstes Gewächs* in the Rheingau, plus *Erstes Lage* (First Site) in the Mosel.

CHANGING IDEAS ABOUT GERMAN WINES

The modern idea of which German wines to drink, and how and when to drink them, is based on a tradition that is over a hundred years old. Outside Germany itself, the predilection for Rhine and Mosel is essentially a British one. Historically, this has always been so. Even two world wars failed to diminish the British fondness for these wines, and despite a 25 percent drop in exports in the early 1990s, Britain remains Germany's biggest customer.

At one time, the British, whose tastes influenced the rest of the world, drank only Hock, a name that originally applied only to the wines of Hochheim in Rheingau, but soon became generic for all white Rhine wines. Unlike the light, grapey Rhine wines we know today, the passion in the 19th century was for mature, full-flavoured, amber-colored wines. In fact, Hock glasses traditionally have brown stems because they were deliberately made to reflect the desired amber hue of age into the wine. The Christie's auction of May 1777 listed "Excellent Genuine Old Hock" of the 1719 vintage, and another London sale offered "Hock Hoheim" 1726 in August of 1792. How a modern Hock might taste in 60 years or so is anyone's guess, but mine is that it would not be very pleasant by today's standards—unless it happened to be a *Trockenbeerenauslese*.

FROM HOCK TO MOSEL

By the time Mosel wines became popular, the trend was for lighter, younger wines, hence traditional green-stemmed Mosel glasses were manufactured. The green stem reflected the verdancy of youth from the glass into the wine. (Incidentally, "Moselle" is the name of the river in France's most northerly wine area, producing VDQS Vins de Moselle, and as soon as the river crosses the border it becomes "Mosel." Surprisingly, too many English-labeled German wines mistakenly use the spelling "Moselle".) The brown- or amber-stemmed "Hock" glass was introduced in the 18th century, when it had become fashionable to drink Rhine of great maturity; the colored glass was intended to reflect the desired hues of honeyed-richness and maturity in the wine.

LIEBFRÄUMILCH—NOT A WINE THE GERMANS DRINK OR EVEN KNOW!

More than one-third of all German wine exports are sold as Liebfraumilch, an inexpensive, bulk-blended product that few Germans have even heard of, let alone tasted. Less than 0.01 percent of the 12 million cases (1.1 million hectoliters) produced each year is consumed in Germany itself, and most of that is sold to foreign tourists and servicemen. Virtually 100 percent of all

PICKING GRAPES IN THE MOSEL

Harvesting the Riesling in this region's steep vineyards is labor-intensive, due to precipitous slopes and treacherous loose slate soil.

Liebfraumilch is consumed by non-Germans and, although it is no longer fashionable among the new generation of drinkers in the UK, it nevertheless remains the number one best-selling wine in Britain's largest supermarket groups. While the two largest markets, the UK and US, continue to consume such vast quantities of Liebfraumilch, I am duty bound to tell the full story.

Myriad theories surround the origin of the name Liebfraumilch (or Liebfrauenmilch), but many agree that it means "milk of Our Lady" and refers to the wine produced from one small and fairly indifferent vineyard in the suburbs of Worms that was once called Liebfrauenkirche, or "Church of Our Lady." This is now part of Liebfrauenstift-Kirchenstück, which in turn is part of the 2,470-acre (1,000-hectare) *Grosslage* Liebfrauenmorgen. The single-vineyard wine that gave birth to the name of Liebfraumilch has no bearing whatsoever on the bulk-blended wine of today, nor, for that matter, any connection with the Liebfraumilch that was sold more than 100 years ago. What is interesting, however, is the nature of those early Liebfraumilch wines that gave the blended product of today its worldwide reputation and huge sales. The blurred and nonspecific character of this wine was officially classified by the Worms Chamber of Commerce in 1910, when it stated that Liebfraumilch was merely "a fancy name" that merchants "have made use of," applying it to "Rhine wines of good quality and character." The ill-defined use of this "fancy name" widened during the following 20 years. Even between 1945 and the advent of the new German wine laws in 1971, one-third of the wines blended into Liebfraumilch came from German regions other than the Rhine.

This should have ended when Liebfraumilch was granted *Qualitätswein* status under the 1971 German wine law because the law further stated that a *Qualitätswein* could come only from one specified region. However, the regulations also specified that

SEKT SWEETNESS CHART

SWEETNESS RATING	RESIDUAL SUGAR (GRAMS PER LITRE)
Extra Herb or Extra Brut	0–6
Herb or Brut	0–15
Extra Trocken or Extra Dry	12–20
Trocken* or Dry	17–35
Halbtrocken* or Demi-Sec	33–50
Süss, Drux, Doux, or Sweet	50+

*Not to be confused with still-wine limits, which are no more than 9 grams per liter for trocken and 18 grams per liter for halbtrocken.

BERNKASTEL-KUES, MOSEL

Looking across the Mosel to Bernkastel-Kues, above which is the famous Doctor vineyard, from which some of Germany's greatest wines come.

Liebframilch could be made only from Rheinhessen, Pfalz, Rheingau, and Nahe grapes and, although few people doubted the spirit of the law, many producers interpreted this quite literally. They considered Liebframilch to be an umbrella designation that entitled the wine to come from any one or more of the four specified regions. Now, however, at least 85 percent of every Liebframilch has to come from just one region, which must be indicated on the label.

There have been many moves to reclassify Liebframilch as a *Tafelwein*, which would permit it to be blended with grape varieties from the much wider *Tafelwein* regions and this would be more in keeping with its quality, which is not poor or bad *per se*, simply unpretentious and of nonspecific character. However, Liebframilch producers disliked the idea of the *Tafelwein* classification—a misguided view in my opinion, not least because Liebframilch sells on its brand name. Although not intrinsically poor quality, far too many Liebframilch are bad wines, just as far too many cheap German wines in general are. Taken at its best, a decent Liebframilch should possess a fresh, flowery aroma and sweet, grapey taste. It has proved to be a good stepping-stone, with statistics showing that the vast majority of seasoned wine drinkers originally “cut their teeth” on this accessible wine, but there will always be some Liebframilch drinkers who never stray beyond it. Those drinkers, if honest, dislike the taste of alcohol, but enjoy the effect it has and most of them are not too fond of tannin, acidity, and the assertively dry taste found in most “real” wines. There is no reason why they should—it is all a matter of taste.

WHAT IS LIEBFRAUMILCH?

Ironically, Germany's most criticized wine is the only one to be defined by taste and sweetness in its wine laws. According to the regulations, the minimum residual sugar allowed is 18 grams per liter, equivalent to the maximum allowed for a *halbtrocken*, although few are actually this low, and some are twice as high. Producers have their own idea of what level of sweetness is right for the market and make their wines accordingly. Many buyers insist on a certain ratio of sugar to acidity; most brands contain between 22–35 grams per liter of sugar, with 27–28 grams per liter of sugar as a good average. Liebframilch labels must now show one of the four permitted regions; at least 85 percent of the wine must come from the region stated. On average, the Rheinhessen and the Pfalz produce more than nine out of every 10 bottles of Liebframilch, while the Nahe makes very little and the Rheingau virtually none. Any grape permitted for German QbA wine may be used for the production of Liebframilch, the only control being that at least 51 percent of the blend must be composed of one or more of the following varieties: Riesling, Silvaner, Müller-Thurgau, and Kerner. According to the present regulations, the wine should taste of these grapes, although I have so far met no expert who can either describe or detect a definitive blend of four such different varieties in the wine. What I have discovered, however, is that some of the best blends have actually been denied their AP numbers because they have received a beneficial *Süßreserve* of aromatic Morio-Muskat. The Liebframilch examining board apparently believes these eminently more attractive wines to be atypical of the appellation.

SEKT—GERMANY'S SPARKLING WINE

Germany's *Sekt* or sparkling wine industry is very important, producing almost half a billion bottles a year, more than twice that of Champagne. This is almost entirely made by *cuve close* and over 85 percent is not *Deutscher Sekt* at all, but *Sekt* plain and simple, made from imported wines. Despite a fourfold increase in exports over the past 15 years, foreign markets still represent barely 8 percent of sales. In general, Germans make *Sekt* for themselves and its bland, off-dry style with a very young tartness to it has a peculiarly domestic appeal that sparkling wine drinkers in most international markets cannot comprehend, whether they are used to Champagne or New World bubbly. *Deutscher Sekt* is little better, and the best *Deutscher Sekt* is seldom encountered. On those rare occasions when bottle-fermented wines are produced, *Sekt* will not appeal to most sparkling wine drinkers outside Germany itself because the grapes are too aromatic for the expected mellow biscuity character to develop. However, there are Pinot Noir-based *Sekt* rosés that cross the barrier, and the best mature Riesling *Sekt* can appeal to a niche market, just as Australia's sparkling Shiraz does.

HOW TO USE THE “APPELLATIONS OF...” SECTIONS

The entries that follow for each of Germany's wine regions are set out in a logical order. In each of these regions, or *Anbaugebiete*, every *Bereich* is listed and the wine styles are described; this is followed by the *Grosslagen* within that particular *Bereich*. Under each *Grosslage*, the best villages are listed where applicable and, within each of these, the finest *Einzellagen*, or vineyards, are named.

In Germany, vineyards are rarely owned only by one estate, as they are in Bordeaux, for example. It is therefore important to be aware of not only which are the top vineyards, but also who makes the best wines there, which is why I recommend growers and estates within each of the finest vineyards. The term “village” covers both *Gemeinden*—communes, which may be anything from a tiny village to a large, bustling town—and *Ortsteile*, which are villages absorbed within the suburbs of a larger *Gemeinde*. The term “*Grosslagenfrei*” refers to villages and *Einzellagen* within one *Bereich* that are not part of any of its *Grosslagen*.

Where it is stated that there are no outstanding villages, vineyards, estates, or growers in a particular *Grosslage*, excellent estates and growers might well

own vineyards there, but the wine produced in these vineyards may not actually be of the highest standard.

All styles and descriptions of wines refer to Riesling, unless otherwise stated. The following sample entry is given from the Franken region.

BEREICH	BEREICH STEIGERWALD
GROSSLAGE	GROSSLAGE SCHLOSSBERG
BEST VILLAGE	RÖDELSEE
BEST VINEYARD AND/OR BEST GROWERS	✓ Vineyard Küchenmeister Grower Juliuspital Würzburg • Vineyard Schwanleite Grower Johann Ruck

THE WINE STYLES OF GERMANY

Note From *Wein* to *Trockenbeerenauslese*, the categories below are in ascending order of quality, and not in alphabetical order, after which different styles are listed. Only the broadest character can be given for each category, since so much depends upon the grape variety. The grape variety can even determine the color of a wine, although some 90 percent of the production is white. Most grape varieties likely to be encountered, including all the most important crosses, are included in the Glossary of Major Grape Varieties (see pp.36–45).

The area of origin also has a strong influence on the type of wine a particular grape variety will produce. A winemaker can either make the most of what nature brings, or fail. For full details on these two aspects, see the regional chapters in which styles are described and growers recommended.

WEIN

The existence of this term without the qualification “Tafel-,” indicates a cheap, blended wine made from grapes grown outside the EU.

TAFELWEIN

Table wine may be a blend from different EU countries or wine made in one member country from grapes harvested in another. Known as “Euroblends,” these products are sometimes dressed up to look like German wines, but the wine beneath the Gothic writing and German language usually turns out to be an Italian or multistate blend. This practice, once prolific, now less so, is tantamount to deception and contrary to EU regulations. To be sure of drinking a genuine German product, check that “Tafelwein” is qualified by the all-important “Deutscher.” The more successful of these wines are made in years when Germany is overburdened by such a huge yield of basic-quality wines that the wineries turn back the convoy of tankers from Italy and dump the excess production in their bulk-selling Euroblends. The best have a good dose of fresh and flowery Morio-Muskat *Süssreserve*.

☞ Upon purchase

DEUTSCHER TAFELWEIN

This is the lowest grade of pure German wine, which about 10 years ago represented between 3 and 5 percent of the country's total production, but now, when added to *Landwein*, it accounts for between 1 and 2 percent. The quality of production has not dramatically improved at the bottom end of the German wine market and the cheapest QbAs have actually deteriorated in quality—now you know why.

This wine must be 100 percent German and, if at least 75 percent comes from any one of the *Tafelwein* regions or subregions indicated earlier in the table, the label is allowed to show that name. These regional names are the most specific geographic location permitted, although, prior to the introduction of *Landwein* legislation, it was permissible sometimes to include the name of a *Bereich*.

A *Deutscher Tafelwein* should convey the basic characteristics of the region from which it comes, so a Rhein, for example, might be expected to have a more flowery aroma, but less acidity than a Mosel. In practice, however, the wines are blended from such a hodgepodge

of grape varieties, mostly crosses, that all one can hope for is something fresh and fruity in a medium-dry “Germanic” style!

☞ Upon purchase

LANDWEIN

Landwein is a *Deutscher Tafelwein* from a specific region and the label must contain both terms. The major difference is that the former must be made either as *trocken*, with up to 9 grams per liter residual sugar, or as *halb trocken*, with a maximum of 18 grams per liter.

Landwein was introduced in 1982 to parallel the French *vin de pays* system, although there are significant differences. The 153 or so *vins de pays* represent a group of wines that aspire to VDQS and, theoretically, AOC status, and it has become one of the most exciting categories of wine in the world (see p.248). The German category is not a transitional one, it consists of 20 fixed areas that have no hope of achieving anything more illustrious than a “dressed-up” *Tafelwein* status.

Although *Landwein* can never be the same as a *vin de pays*, it could and should serve a very useful, one might even say essential, purpose: to improve the quality of German wines in the QbA (primarily) and QmP categories through selection. By siphoning off the lesser elements of these wines of superior status, it could have improved not only their quality, but the quality of *Landwein* itself. It would be great to think that the biggest producers had taken this category to heart and, through a genuine desire to raise standards all round, reduced yields and used *Landwein* to mop-up 15 or 20 percent of total German production. However, the authorities have instead opted to use this category to increase yields, which is why the country's best winemakers have not been attracted to the notion of *Landwein* as a legitimate means to increase the quality of their other wines, thus there have been no special *Landweins* to attract critics and consumers. The wines have not taken off and, together with *Deutscher Tafelwein*, account for less than 2 percent of Germany's total production, which has not helped this country's wine reputation one iota.

☞ Upon purchase

QUALITÄTSWEIN BESTIMMTER ANBAUGEBIETE OR QBA

A QbA is literally a quality wine from one of the 13 specified regions. These wines may be (and invariably are) chaptalized to increase the alcohol content, and sweetened with *Süssreserve*. The legal minimum potential alcoholic strength of a QbA is merely 5.9 percent, so it can be understood why the alcohol level is not increased for its own sake, but to give the wine a reasonable shelf life. The category includes Liebfraumilch and the vast majority of Niersteiner Gutes Domtal, Piesporter Michelsberg, and other generic wines. Most *Grosslage* and *Bereich* wines are sold as QbAs. There is no technical or legal reason why this is so, but it makes marketing sense if more specific wines, such as *Einzellagen* or estate-bottled wines, are sold as prestigious QmPs, as they can demand higher prices. Although a QbA has a lower *Oechsle* than a *Kabinett*, it is a more

commercial product and therefore often distinctly sweeter.

☞ 1–3 years (up to 10 years for exceptional wines)

QUALITÄTSWEIN GARANTIERTEN URSPRUNGS OR QGU

Qualitätswein garantierten Ursprungs is a QbA from a specific district, vineyard or village that has a consistent taste profile associated with its appellation of origin. Such wines are subject to more stringent sensory and analytical requirements than QbAs generally. Some Mosel vintners near the Luxembourg border were the first to make use of QGU status with an Obermosel Elbling Trocken.

☞ 1–3 years

QUALITÄTSWEIN MIT PRÄDIKAT OR QMP

This means “a quality wine affirmed (predicated) by ripeness” and covers the categories *Kabinett*, *Spätlese*, *Auslese*, *Beerenauslese*, *Eiswein*, and *Trockenbeerenauslese*. The grower must give the authorities prior notice of his intention to harvest for any QmP wine and, whereas a QbA can be blended from grapes gathered from all four corners of an *Anbaugebiet*, providing it carries only the name of that region, the origin of a QmP must be a geographical unit of no greater size than a *Bereich*. A QbA can be chaptalized, but a QmP can not. A certain very highly respected estate owner who believes he could make much better QmP wines if he were allowed to chaptalize them, once made the interesting observation that the French chaptalize their best wines, while Germans chaptalize only their poorest! It is, however, permissible to add *Süssreserve*, although many growers maintain that it is not the traditional method and claim that sweetness is best achieved by stopping the fermentation before all the natural grape sugars have been converted to alcohol. (See the various QmP entries.)

KABINETT QMP

The term *Kabinett* once referred to wines that were stored for their rare and exceptional qualities, such as “Reserve” is commonly used today. In this context, it originated at Kloster Eberbach in the Rheingau in the early 18th century. The first documented existence of this

word appeared as “Cabernet” on an invoice from the Elville master cooper, Ferdinand Ritter, to the Abbot of Eberbach in 1730. Just six years later, another bill in Ritter’s hand refers to the “Cabinet-Keller.” (The meaning of “Cabinet” as a treasured store found its way into the French language as early as 1547, and is found in German literature in 1677.) *Kabinett* is the first of the predicates in the *Oechsle* scale. Its grapes must reach an *Oechsle* level of 67–85°, the exact minimum varying according to the grape variety concerned and its geographical origin. With no chaptalization, this means that the wine has a minimum potential alcoholic strength of between 8.6 and 11.4 percent by volume.

Although made from riper (thus sweeter) grapes than a QbA, a *Kabinett* is usually, though not necessarily, made in a slightly drier style. Some producers resolutely refuse to bolster the wine with *Süssreserve*. This makes *Kabinett* the lightest and, for some, the purest of German wine styles.

🕒 2–5 years (up to 10 years in exceptional cases)

SPÄTLESE QMP

Technically, “*Spätlese*” implies that a wine is made from late-harvested grapes, but it is important to remember that “late” is relative to the normal (early) occurrence of a harvest in Germany. As both QbA and *Kabinett* are produced from grapes that have not fully ripened, *Spätlese* can more accurately be seen as the first level of German wine to be produced from ripe grapes. The minimum *Oechsle* level of 76–95°, which would give a minimum potential strength of between 10 and 13 percent by volume, is hardly an indication of overripe grapes. Although a *Spätlese* is made from grapes that merely have a modest degree of ripeness, the style of wine produced is traditionally sweet, with excellent balancing acidity.

🕒 3–8 years (up to 15 in exceptional cases)

AUSLESE QMP

This predicated wine is made from bunches left on the vines after the *Spätlese* harvest and as such is truly late-harvested. The regulations state that bunches of fully ripe to very ripe grapes free from disease or damage must be selected for this wine – how this can be achieved by machine-harvesting, which has been permitted for *Auslese* since the new German wine laws of 1994, is beyond the imagination of every quality-conscious German winemaker I have spoken to.

Auslese must also possess an *Oechsle* reading of 83–105°, the exact minimum varying according to the grape variety concerned and its geographical origin. With no chaptalization, this means that the wine has a minimum potential strength of between 11.1 and 14.5 percent by volume.

Traditionally, this rich and sweet wine is made in exceptional vintages only. There may be some hint of *Edelfäule* (botrytis), especially if the wine comes from a top estate that has a policy of underdeclaring its wines, and thus an *Auslese* might be borderline *Beerenauslese*, but even without *Edelfäule*, an *Auslese* is capable of considerable complexity. It is possible to find totally dry *Auslese* wine and this may or may not be labelled *Auslese trocken*, depending on the whim of the winemaker. *Auslese* is the perfect ripeness level for *trocken* wines, but ideally a different designation should be found for these wines to distinguish them from their sweet counterparts.

Christmann, Müller-Catoir* • *Rheinhessen*: *Gunderloch, Keller, Wittmann*

BEERENAUSLESE QMP

A very rare wine made only in truly exceptional circumstances from overripe grapes that have been affected by *Edelfäule*. According to the regulations, each berry should be shriveled, and be individually selected on a grape-by-grape basis. They must achieve an *Oechsle* level of 110–128°, the exact minimum varying according to the grape variety concerned and its geographical origin. With no chaptalization, this means that the wine has a minimum potential strength of between 15.3 and 18.1 percent by volume, but only 5.5 percent need actually be alcohol, with residual sugar accounting for the rest.

These intensely sweet, full-bodied wines are remarkably complex and elegant. I actually prefer *Beerenauslese* to the technically superior *Trockenbeerenauslese*—it is easier to drink and be delighted by the former, whereas the latter requires concentration and appraisal.

🕒 10–35 years (up to 50 years in exceptional cases)

🍷 *Baden*: *Andreas Laible* • *Mosel*: *Molitor, Fritz Haag, J. J. Prüm, Dr. Loosen* • *Nabe*: *Dönnhoff, Emrich-Schönleber* • *Rheingau*: *Fritz Allendorf, August Kessler, Dr. Weil* • *Rheinhessen*: *Keller* • *Pfalz*: *Müller-Catoir*

EISWEIN QMP

Until 1982 this was a qualification used in conjunction with one of the other predicates. It was previously possible to obtain *Spätlese Eiswein*, *Auslese Eiswein* and so on; but *Eiswein* is now a predicate in its own right, with a minimum *Oechsle* level for its grapes equivalent to *Beerenauslese*. An *Eiswein* occurs through extremely unusual circumstances whereby grapes left on the vine to be affected by *Edelfäule* are frozen by frost or snow. They are harvested, rushed to the winery, and pressed in their frozen state. Only the water inside the grape actually freezes; this either remains caked inside the press or rises to the top of the vat in the form of ice, which is then skimmed off. What remains available for fermentation is a freeze-condensed juice that is rich, concentrated, and capable of producing wines that are the equivalent of, but totally different from, *Beerenauslese* or *Trockenbeerenauslese*.

This icy harvest can be very late. It seldom occurs before December and often takes place in January of the following year (although it must carry the previous year’s vintage). The *Oechsle* level of an *Eiswein*, which must be at least the equivalent of a *Beerenauslese*, can be every bit as high as a *Trockenbeerenauslese*. Its quality is also comparable, although of an entirely different character, due essentially to its far higher acidity balance. For me, it is the zippy, racy, tangy vitality of this acidity that makes it superior. The finest *Eiswein* has a finesse unequaled by other botrytis wine, but it remains to be seen what effect the 1994 German wine law will have on the reputation of these very special wines. The quality-minded wanted the new law to demand handpicking for *Eiswein*, which would bring it in line with *Auslese*, *Beerenauslese*, and *Trockenbeerenauslese*, but the industrial bottlers not only fended this off, but made it legal for it to be machine-harvested, although anyone who has made *Eiswein* will tell you this method is impossible.

TROCKENBEERENAUSLESE QMP OR TBA

Germany’s legendary TBA is produced from heavily botrytized grapes, left on the vine to shrivel into raisinlike berries that must be individually picked. These grapes must reach an *Oechsle* level of 150–154°. With no chaptalization, the wine will have a minimum potential strength of between 21.5 and 22.1 percent by volume, although only 5.5 percent need be alcohol, the rest being residual sugar.

Consulting charts, however, does little to highlight the difference in style that exists between a *Beerenauslese* and a TBA, which is every bit as great as that between a *Kabinett* and a *Beerenauslese*. The first noticeable difference is often the color. Going from *Auslese* to *Beerenauslese* is merely to progress from a light to a rich gold or buttercup yellow. The TBA color range extends from a raisin khaki through various shades of brown, to dark iodine, with some distinctly odd orange-tawny

hues in between. The texture is very viscous and its liqueurlike consistency is just one of many reasons why it is impossible to drink TBA. Taking a good mouthful of TBA is about as easy as swigging cough syrup—one can merely sip it. Its intensity and complexity, and the profundity of its aromas and flavors really must be experienced. It demands attention and provokes discussion, but is not really a wine to enjoy, and is difficult to relax with.

RED WINE

The most commonly encountered German red wines are Dornfelder, Regent, and Spätburgunder (Pinot Noir), and many of the best are sold simply as Qualitätswein or even Tafelwein, to allow producers a greater freedom of expression. Dornfelder is grown mostly in the Pfalz, Rheinhessen, and Württemberg and producers have developed three basic styles: *barrique*-aged for serious drinking, early-drinking Beaujolais-style, and an off-dry grapey style. Regent is a relative newcomer hybrid, grown for its fungus and mildew resistance and though mainly produced in a quaffing style can also yield wines with serious quality aspirations—a red wine equivalent of Müller-Thurgau. Spätburgunder is the widest-planted black grape variety in the country and over the past 15 years some talented winemakers have managed to produce truly beautiful, silky-smooth, well-colored red wines from this grape. A few growers have been almost as successful with Frühburgunder, a lighter mutation of Pinot Noir that has evolved in and around the village of Bürgstadt in the Franken, where it has been grown for at least 150 years. The Frühburgunder nearly became extinct in the 1970s because it was considered uneconomical due to its variable yields, but dedicated growers such as Rudolf Fürst have coaxed exquisitely elegant wines from this grape through very low yields. Red wines are generally at their best in southern Baden, the Pfalz, and the Ahr.

IMMACULATE VINEYARDS, BADEN

Baden's greatest wines are produced around the extinct volcano of Kaiserstuhl, in neat vineyards that are perfect examples of Flurbereinigung.

SPARKLING WINE

The common method of production for this anonymous sparkling wine is *cuvée close*, although when the industry was born in the 1820s, all *Sekt* was bottle-fermented. Today, not only is it an industrialized product, but most is made from grapes grown outside Germany, usually from Italy or the Loire Valley in France. Furthermore, until 1986, this Euro-fizz could be called *Deutscher Sekt*. This was because *Sekt* was considered to be a method of production and, so it was argued, if production took place in Germany, it must logically be German or *Deutscher Sekt*. As the vast majority of Germany's huge *Sekt* industry used imported grapes, juice, or wine (and still does), this was more a matter of lobbying by those with vested interests, than logic. However, much of the effort to dispose of this false logic came from honorable sectors within the German wine industry itself. Common sense finally won out on September 1, 1986, when an EU directive brought this appellation into line with the general philosophy of the EU's wine regime. There has been a noticeable upsurge in the numbers of what are now genuine German *Deutscher Sekt*, although *Sekt* plain and simple still dominates the market.

DEUTSCHER SEKT

Deutscher Sekt must be made from 100 percent German grapes. The best are usually Riesling-based and do not allow autolysis (the enzymatic breakdown of yeast) to interfere with the pure

varietal aroma and flavor of the wine, characteristics that are held in the greatest esteem by its producers and the vast majority of its German consumers. Try Max Ferdinand. The best *Sekt* I have ever tasted was Wegeler-Deinhard Bernkasteler Doctor, but it is rarely produced and very expensive. See also Deutscher Qualitätsschaumwein bestimmter Anbaugebiete.

🕒 3–8 years

See Deutscher Qualitätsschaumwein bestimmter Anbaugebiete

DEUTSCHER QUALITÄTSSCHAUMWEIN BESTIMMTER ANBAUGEBIETE OR DEUTSCHER QUALITÄTSSCHAUMWEIN BA

This *Deutscher Sekt* must be made entirely from grapes grown within one specified wine region and may come from a smaller geographical unit, such as a *Bereich, Grosslage, or Einzellage*, providing that at least 85 percent of the grapes used come from the area indicated. An alternative appellation is *Deutscher Sekt bestimmter Anbaugebiete*.

🕒 3–8 years

TROCKEN/ HALBTROCKEN WINES

Wines of the *trocken* category must not contain more than 9 grams per liter of residual sugar, or 18 grams for the off-dry *halbtrocken* category. National demand for drier style wines really started to take off in the early 1990s and now accounts for more than 50 percent of all German wines produced, but some of these can be thin, weak, and disappointing. There are some terrific *trocken* wines, but to be any good, *trocken* really has to be made from grapes of Auslese ripeness. Only then does it have the body, structure, and weight that most dry wine drinkers are used to. The VDP's *Grosses Gewächs* classification considers *Spätlese trocken* ripe enough, but some of the wines released under this banner do not really meet the standard expected from a *grand cru* designation. The former practice of quality-conscious growers to make and sell *trocken* offerings as *Deutscher Tafelwein* has more or less ceased except for one or two producers of red wines.

THE AHR

It may seem surprising that black grapes can be cultivated here at all, considering the Ahr is one of Europe's most northerly wine regions, yet varieties such as Spätburgunder and Portugieser account for three-quarters of the Ahr's vines.

SPÄTBURGUNDER AND PORTUGIESER can grow here because the Ahr is a deep valley—protected by the Hohe Eifel hills—this captures sunlight in its rocky, slaty soil. The cumulative effect of the heat allows black grapes to ripen, but until recently few growers took advantage of these favorable conditions. Consequently the Ahr became known for mild, dilute red wines, popular with social clubs on weekend outings.

A change in winemaking philosophy, however, has propelled a good number of the region's Spätburgunders into contention for Germany's red wine crown. Unfortunately, quantities will always be too small to quench the international wine community's thirst, thus readers are unlikely to find the Ahr's best reds in their local wine store. These remain the preserve of knowledgeable consumers willing to put on walking boots and take a trip to the Ahr to buy them direct. Not that the wines are cheap. The likes of Meyer-Näkel, Deutzerhof, and Kreuzberg produce some of Germany's greatest Pinot Noirs, and the wines are priced accordingly. The region takes the name of the river that flows parallel to, and north of, the lower Mosel and joins the Rhine just south of Bonn. It is one of the world's most beautiful and serene viticultural landscapes, as anyone who has ever traveled along the *Rotweinwanderweg*, the Ahr's red-wine route, will verify.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION

The Ahr is one of Germany's northernmost wine regions, with vineyards extending only 15 miles (24 km) along the lower reaches of the Ahr River, 6 miles (10 kilometers) south of Bonn.

CLIMATE

Despite its northerly position, the deep Ahr valley is sheltered by the surrounding Hohe Eifel hills and maintains temperatures that are favorable for viticulture, with a greenhouse-like climate on some of the steeper sites.

ASPECT

The best vineyards of the Ahr are sited on steeply terraced rocky valley sides, with higher yielding vineyards on gentler slopes in the broader, eastern end of the valley.

SOIL

Deep, rich, loess soils in the lower Ahr valley (eastern) and basalt

and slaty stone soils with some tufa in the upper Ahr valley (western).

VITICULTURE AND VINIFICATION

Three-quarters of vineyards are worked by part-time farmers, whose wines are sold by cooperatives. Most vines are cultivated under labour-intensive conditions, hence the wines are expensive to produce. Nearly all of the region's wine is consumed locally or sold to tourists. Pure varietal Weissherbst, usually Spätburgunder, is a speciality, but in terms of pure quality, this easy-drinking rosé has given way to fully red styles. As Riesling vines diminish, so the Spätburgunder is taking over as the classic Ahr variety.

GRAPE VARIETIES

Primary varieties: Portugieser, Riesling, Spätburgunder
Secondary varieties: Domina, Dornfelder, Frühburgunder, Kerner, Müller-Thurgau

RIESLING

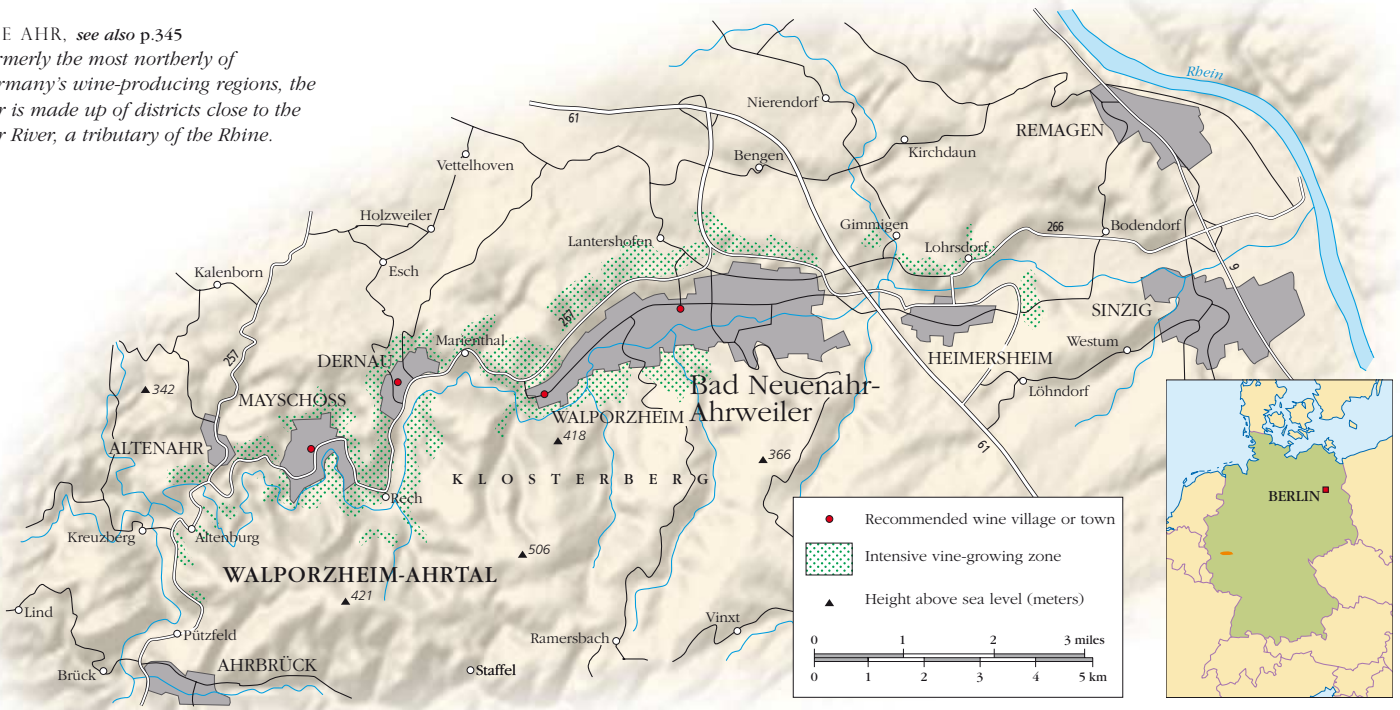

Riesling grapes can produce fresh, racy, aromatic wines here, but over the years have given way to black grapes and now comprise just 8 percent of the region's vines. Given the healthy prices that Ahr reds command, Riesling is unlikely to regain its share.

HARVESTING IN THE AHR

These steeply sloping vineyards at Marienthal are planted with the black grape varieties Spätburgunder and a little Portugieser, and 80 percent of the region's wines are, in fact, red.

THE AHR, *see also* p.345
 Formerly the most northerly of Germany's wine-producing regions, the Ahr is made up of districts close to the Ahr River, a tributary of the Rhine.

QUALITY REQUIREMENTS AND AVERAGE QMP PRODUCTION

AHR'S MINIMUM OECHSLE	QUALITY CATEGORY	HARVEST BREAKDOWN
44°	Deutscher Tafelwein	0.5%
47°	Landwein	0.5%
50–60°	* QbA	80%
67–73°	* Kabinett	12.5%
76–85°	* Spätlese	6%
83–88°	* Auslese	0.5%

THE APPELLATIONS OF THE AHR

BEREICH WALPORZHEIM-AHRTAL

This is the only *Bereich* in the Ahr region. Walporzheim-Ahrtal produces many kinds of wines, from light, ruby-colored Portugiesers to Dornfelders with great intensity, but the real class is provided by some of Germany's finest Spätburgunders. Those areas in the *Bereich* with slaty soil give a vigorous wine, while those situated on rich loess soil produce a softer style. At one time, the wines used to be fairly sweet, but the trend today is for drier wines. The Weissherbst is a soft and fruity wine, and the Riesling fresh and racy. Try the Rotwein with *Rauchfleisch* (smoked meats), the Weissherbst with *Schinken* (ham), and the Riesling with trout or with the salmon that have recently been reintroduced into the river.

GROSSLAGE KLOSTERBERG

The only *Grosslage* in the *Bereich*, Klosterberg is thus identical to that of Walporzheim-Ahrtal.

THE MITTELRHEIN

Possessing precariously perched vineyards that have declined by almost 50 percent since 1965, the Mittelrhein is a region that is all too often overlooked by serious wine drinkers. Yet it offers some of Germany's finest and most underrated wines.

IT WAS FROM THE MITTELRHEIN that the Celts spread out across Europe. With such ancient roots, it is not surprising that this region is so steeped in Germany's mythical history. It was at the Drachenfels in Königswinter, for instance, that Siegfried slew the dragon, and, in fact, the vineyards in this area produce a red Spätburgunder wine known as Drachenblut, or "Dragon's blood." The Rhine River, associated with many myths and fables, flows past numerous medieval castles and towers, and rushes through the Rhine Gorge, past the famous "Loreley" rock on to which the siren lured many ships to their final and fatal destination.

SHRINKING VINEYARDS, GROWING TOURISM

The difficulty of working the steepest of the Mittelrhein's vineyard slopes has encouraged many of the workforce to forsake them and seek higher wages for easier work in Germany's industrial cities. This has led to a decline in the number of vineyards, although the Mittelrhein is by no means deserted, as its dramatic beauty makes it one of Germany's favorite tourist spots. In this region, where many tiny tributaries provide valley vineyards of a superior natural aspect for viticulture than most others on the Rhine, there is much potential for producing high-quality Riesling on its slaty soil. There

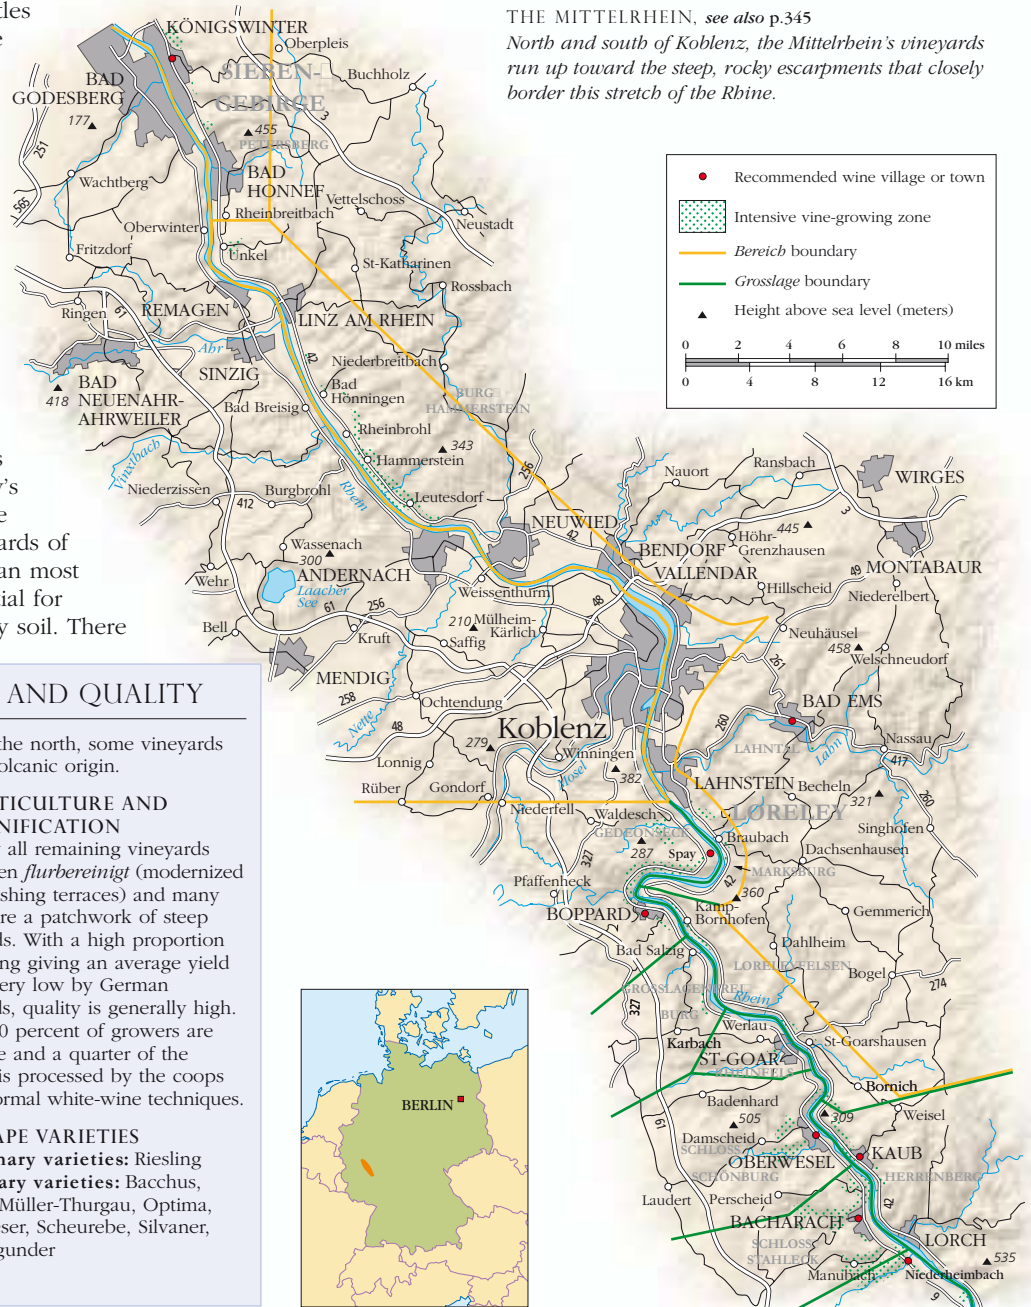

QUALITY REQUIREMENTS AND AVERAGE QMP PRODUCTION

**Minimum Oechsle levels vary according to grape variety; those that have a naturally lower sugar content may qualify at a correspondingly lower level.*

THE MITTELRHEIN, *see also* p.345

North and south of Koblenz, the Mittelrhein's vineyards run up toward the steep, rocky escarpments that closely border this stretch of the Rhine.

FACTORS AFFECTING TASTE AND QUALITY

LOCATION
A 100-mile (160-kilometer) stretch of the Rhine Valley between Bonn and Bingen.

CLIMATE
The benefits of the sun are maximized by the steep valley sides that afford protection from cold winds. The river acts as a heat-reservoir, tempering the low night and winter temperatures.

ASPECT
Vines on the steep valley sides benefit from any available sunshine. North of Koblenz the vineyards are on the east bank, while to the south most are on the west bank.

SOIL
Primarily clayish slaty soil and graywacke. There are also small, scattered deposits of loess and,

toward the north, some vineyards are of volcanic origin.

VITICULTURE AND VINIFICATION
Virtually all remaining vineyards have been *flurbereinigt* (modernized by abolishing terraces) and many slopes are a patchwork of steep vineyards. With a high proportion of Riesling giving an average yield that is very low by German standards, quality is generally high. About 80 percent of growers are part-time and a quarter of the harvest is processed by the coops using normal white-wine techniques.

GRAPE VARIETIES
Primary varieties: Riesling
Secondary varieties: Bacchus, Kerner, Müller-Thurgau, Optima, Portugieser, Scheurebe, Silvaner, Spätburgunder

THE REGION AT A GLANCE

Area under vine 1,260 acres or 510 ha (decreasing)	Most important grape varieties 71% Riesling (decreasing), 7% Müller-Thurgau (decreasing), 7% Kerner (increasing), 12% Others
Average yield 290 cases/acre or 66 hl/ha (decreasing)	Infrastructure <i>Bereiche</i> 2; <i>Grosslagen</i> 11; <i>Einzellagen</i> 111
Red wine 7% (increasing)	Note The vineyards of the Mittelrhein straddle 59 <i>Gemeinden</i> (communes), the names of which may appear on the label.
White wine 93% (decreasing)

MITTELRHEIN VINEYARDS

The region's weekend winegrowers have plenty to do to maintain these slopes, which include some of the steepest vineyards in Germany.

are a few excellent estates making exciting wines that display a vigorous varietal character, intense flavor, and splendid acidity. The acidity, so prized that *Sekt* houses try to buy as much of the lesser quality and surplus wines as possible, makes the rare occurrence of *Auslese* and higher QmP wines something special.

THE APPELLATIONS OF THE MITTELRHEIN

BEREICH LORELEY

This new *Bereich* is formed from the two former *Bereiche* of Bacharach (the very small but heavily cultivated southern end of the Mittelrhein, restricted to the west bank and named after the beautiful old market town of Bacharach) and Rheingurgengau (a very large, successful area bordering the Rheingau).

GROSSLAGE BURG HAMMERSTEIN

Starting just south of Königswinter and stretching along the right bank, almost as far as Koblenz, this long, scenic *Grosslage* comprises scattered vineyards, with the only unbroken stretch of fine Riesling vines at Hammerstein.

GROSSLAGE BURG RHEINFELS

A village-sized *Grosslage* on the west bank, with its best vineyards situated on the southeast-facing banks of a small tributary at Werlau, an *Ortsteil* of Sankt Goar.

GROSSLAGE GEDEONSECK

A top-performing *Grosslage* where a bend in the river allows for good east- and south-facing vineyards, the best of which are situated within an *Ortsteil* of Boppard.

BOPPARD HAMM
