Preparation of Medium: Add prunes to 1.0L of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Pass the prunes and liquid through a sieve to include as much of the prune pulp as possible. Add agar. Gently heat and bring to boiling. Remove from heat and add the lactose and yeast extract. Mix thoroughly. Adjust pH to 5.8–6.0. Distribute into tubes or flasks. Autoclave for 20 min at 20 psi pressure–126°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pyricularia oryzae*.

PRYES Agar

See: [Pentachloronitrobenzene Rose Bengal Yeast Extract Sucrose Agar](#)

PSA (Potato Sucrose Agar)

Composition per liter:

Potatoes	200.0g
Agar	20.0g
Sucrose	20.0g

Preparation of Medium: Slice potatoes with skin. Place 200.0g of potatoes in 1.0L of distilled/deionized water. Gently heat and bring to boiling. Allow to boil for 20 min. Filter through Whatman filter paper. Add agar and sucrose to filtrate. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Aspergillus oryzae*, *Cylindrodendrum album*, *Nectria ipomoeae*, *Nectria haematococca*, and other fungi.

PSD Agar

See: [Peptone Starch Dextrose Agar](#)

PSE Agar

See: [Pfizer Selective Enterococcus Agar](#)

Pseudoalteromonas spiralis Medium (DSMZ Medium 1072)

Composition per liter:

NaCl	15.0g
Na-acetate	1.0g
Yeast extract	0.5g
Casamino acids	0.5g
MgSO ₄ ·7H ₂ O	0.5g
KH ₂ PO ₄	0.3g
NH ₄ Cl	0.3g
KCl	0.3g
CaCl ₂ ·2H ₂ O	0.05g
Trace elements solution	2.0mL
Vitamin solution	2.0mL

pH 7.8 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.3g
FeSO ₄ ·7H ₂ O	3.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Thiamine-HCl·2H ₂ O	400.0mg
Nicotinic acid	400.0mg
Biotin	80.0mg
Vitamin B ₁₂	20.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.9. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add vitamin solution. Mix thoroughly. Adjust to pH 7.8 with NaHCO₃. Aseptically distribute into culture vessels.

Use: For the cultivation of *Pseudoalteromonas spiralis*.

Pseudoamycolata halophobica* Medium*Composition per liter:**

Glucose	5.0g
Peptone.....	5.0g
Yeast extract.....	3.0g
K ₂ HPO ₄	0.2g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pseudoamycolata halophobica*.

Pseudobutyrvibrio* Medium*Composition per liter:**

Disodium succinate.....	5.0g
Yeast extract.....	5.0g
NaCl.....	0.45g
(NH ₄) ₂ SO ₄	0.45g
K ₂ HPO ₄	0.225g
KH ₂ PO ₄	0.225g
MgSO ₄ ·7H ₂ O	0.09g
CaCl ₂ ·2H ₂ O.....	0.06g
Indigocarmine	5.0mg
Rumen fluid, clarified.....	400.0mL
Glucose solution.....	20.0mL
NaHCO ₃ solution.....	10.0mL
L-Cysteine-HCl·H ₂ O solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL

pH 6.6–6.8 at 25°C

Glucose Solution:**Composition per 20.0mL:**

D-Glucose.....	5.0g
----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition per 10.0mL:**

NaHCO ₃	6.4g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine-HCl·H₂O Solution:**Composition per 10.0mL:**

L-Cysteine-HCl·H ₂ O	0.3g
---------------------------------------	------

Preparation of L-Cysteine-HCl·H₂O Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Preparation of Medium: Add components, except glucose solution, L-cysteine-HCl·H₂O solution, Na₂S·9H₂O solution, and NaHCO₃ solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile glucose solution, 10.0mL of sterile L-cysteine-HCl solution, 10.0mL of sterile Na₂S·9H₂O solution, and 10.0mL of sterile NaHCO₃ solution. Mix thoroughly.

Use: For the cultivation of *Pseudobutyrvibrio ruminis*.

Pseudomonas aeruginosa* Agar*(PA Agar)****(m-PA Agar)****(m-*Pseudomonas aeruginosa* Agar)****Composition per liter:**

Agar	15.0g
Na ₂ S ₂ O ₃	6.8g
L-Lysine-HCl.....	5.0g
NaCl.....	5.0g
Xylose.....	2.5g
Yeast extract.....	2.0g
Lactose.....	1.25g
Sucrose.....	1.25g
Ferric ammonium citrate.....	0.8g
Sulfapyridine.....	0.176g
Cycloheximide.....	0.15g
Phenol Red.....	0.08g
Nalidixic acid.....	0.037g
Kanamycin.....	8.5mg

pH 7.1 ± 0.2 at 25°C

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components—except sulfapyridine, cycloheximide, nalidixic acid, and kanamycin—to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 55°–60°C. Readjust pH to 7.1. Aseptically add the sulfapyridine, cycloheximide, nalidixic acid, and kanamycin. Mix thoroughly. Pour into 50mm × 12mm Petri dishes in 3.0mL volumes.

Use: For the cultivation and estimation of numbers of *Pseudomonas aeruginosa* in water by the membrane filter method.

Pseudomonas Agar F **(DSMZ Medium 907)**

Composition per liter:

Agar	15.0g
Tryptone	10.0g
Proteose peptone	10.0g
Glycerol	10.0g
K ₂ HPO ₄	1.5g
MgSO ₄	1.5g

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Schineria larvae*.

Pseudomonas Agar F

Composition per liter:

Proteose peptone No. 3	20.0g
Agar	15.0g
Glycerol	10.0g
Pancreatic digest of casein	10.0g
K ₂ HPO ₄	1.5g
MgSO ₄ ·7H ₂ O	0.73g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and observation of fluorescein production in *Pseudomonas* species.

Pseudomonas Agar F

Composition per liter:

Agar	15.0g
Glycerol	10.0g
Proteose peptone No. 3	10.0g
Pancreatic digest of casein	10.0g
K ₂ HPO ₄	1.5g
MgSO ₄ ·7H ₂ O	1.5g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and differentiation of *Pseudomonas aeruginosa* on the basis of pigment production.

Pseudomonas Agar (for Fluorescein), HiVeg

Composition per liter:

Agar	15.0g
Plant hydrolysate	10.0g

Plant peptone No. 3	10.0g
MgSO ₄	1.5g
K ₂ HPO ₄	1.5g
Glycerol	10.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without glycerol, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and observation of fluorescein production in *Pseudomonas* species.

Pseudomonas Agar (for Pyocyanin), HiVeg

Composition per liter:

Plant special peptone	20.0g
Agar	15.0g
K ₂ SO ₄	10.0g
MnCl ₂	1.4g
Glycerol	10.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without glycerol, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and observation of pyocyanin production in *Pseudomonas* species.

Pseudomonas Agar P

Composition per liter:

Proteose peptone No. 3	20.0g
Agar	15.0g
Glycerol	10.0g
K ₂ HPO ₄	10.0g
MgCl ₂ ·6H ₂ O	1.4g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and differentiation of *Pseudomonas aeruginosa* on the basis of pigment production.

Pseudomonas Asparagine Broth

Composition per liter:

DL-Asparagine	3.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the presumptive identification of *Pseudomonas aeruginosa* from recreational waters.

***Pseudomonas* Basal Mineral Medium**

Composition per liter:

K ₂ HPO ₄	12.5g
KH ₂ PO ₄	3.8g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.1g
Carbon source (0.8M solution).....	100.0mL
Trace elements solution.....	5.0mL

pH 7.2 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	0.232g
ZnSO ₄ ·7H ₂ O.....	0.174g
FeSO ₄ (NH ₄) ₂ SO ₄ ·6H ₂ O.....	0.116g
CoSO ₄ ·7H ₂ O.....	0.096g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	0.022g
CuSO ₄ ·5H ₂ O.....	8.0mg
MnSO ₄ ·4H ₂ O.....	8.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Carbon Source:

Composition per 100.0mL:

Glucose.....	14.4g
--------------	-------

Preparation of Carbon Source: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Other carbon sources may replace glucose. Prepare 0.8M carbon source solution.

Preparation of Medium: Add components, except carbon source, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile carbon source. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and differentiation of *Pseudomonas* species based on their ability to grow on different carbon sources.

***Pseudomonas bathycetes* Medium**

Composition per liter:

NaCl.....	24.0g
Proteose peptone.....	10.0g
MgSO ₄ ·7H ₂ O.....	7.0g
MgCl ₂	5.3g
Yeast extract.....	3.0g
KCl.....	0.7g

pH 7.2–7.4 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Alteromonas haloplanktis*, *Alteromonas nigrifaciens*, *Pseudomonas bathycetes*, and *Pseudomonas elongata*.

***Pseudomonas* CFC Agar**

Composition per liter:

Pancreatic digest of gelatin.....	16.0g
Agar.....	11.0g
Pancreatic digest of casein.....	10.0g
K ₂ SO ₄	10.0g
MgCl ₂ ·6H ₂ O.....	1.4g
CFC selective supplement.....	10.0mL
Glycerol.....	10.0mL

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

CFC Selective Supplement:

Composition per 10.0mL:

Cephaloridine.....	0.05g
Fucidin.....	0.01g
Cetrimide.....	0.01g

Preparation of CFC Selective Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except CFC selective supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile CFC selective supplement. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of *Pseudomonas* species.

***Pseudomonas chloritidismutans* Medium (DSMZ Medium 944)**

Composition per 1001.0mL:

Solution A.....	900.0mL
Solution B.....	50.0mL
Solution C.....	50.0mL
Vitamin solution.....	1.0mL

pH 9.0 ± 0.2 at 25°C

Solution A:

Composition per 900mL:

Na-acetate·3H ₂ O.....	2.72g
NaClO ₃	1.06g
KH ₂ PO ₄	0.41g
Na ₂ HPO ₄	0.53g
Resazurin.....	0.5mg
Selenite-tungstate solution.....	4.0mL
Trace elements solution SL-10.....	1.0mL

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N_2 + 20% CO_2 .

Selenite-Tungstate Solution

Composition per liter:

NaOH	0.5g
$\text{Na}_2\text{WO}_4 \cdot 2\text{H}_2\text{O}$	4.0mg
$\text{Na}_2\text{SeO}_3 \cdot 5\text{H}_2\text{O}$	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N_2 .

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution B:

Composition per 50.0mL:

CaCl_2	0.11g
MgCl_2	0.10g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution C:

Composition per 50.0mL:

NaHCO_3	3.73g
$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$	0.5g
NH_4HCO_3	0.44g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per liter:

Vitamin B ₁₂	50.0mg
Pantothenic acid	50.0mg
Riboflavin	50.0mg
Alpha-lipoic acid	50.0mg
<i>p</i> -Aminobenzoic acid	50.0mg
Thiamine-HCl-2H ₂ O	50.0mg
Nicotinic acid	25.0mg
Nicotine amide	25.0mg
Biotin	20.0mg
Folic acid	20.0mg
Pyridoxamine-HCl	10.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 100% N_2 gas. Aseptically and anaerobically combine 900.0mL sterile solution A, 50.0mL sterile solution B, 50.0mL sterile solution C, and 1.0mL sterile vitamin solution. Mix thoroughly. The pH should be 9.0. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Pseudomonas chloritidismutans* (*Pseudomonas stutzeri*).

Pseudomonas CN Agar

Composition per liter:

Pancreatic digest of gelatin	16.0g
Agar	11.0g
Pancreatic digest of casein	10.0g
K_2SO_4	10.0g
$\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$	1.4g
CN selective supplement	10.0mL
Glycerol	10.0mL

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

CN Selective Supplement:

Composition per 10.0mL:

Cetrimide	0.1g
Sodium nalidixate	7.5mg

Preparation of CN Selective Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except CN selective supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile CN selective supplement. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of *Pseudomonas* species.

Pseudomonas denitrificans Medium (LMG 153)

Composition per liter:

Agar	15.0g
Glucose	10.0g
Yeast extract	5.0g
FeCl_3 solution	20.0mL

FeCl_3 Solution:

Composition per 100.0mL:

FeCl_3	0.03g
-----------------------	-------

Preparation of FeCl_3 Solution: Add FeCl_3 to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except FeCl_3 solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL of sterile FeCl_3 solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Pseudomonas* species.

Pseudomonas Denitrification Medium

Composition per liter:

Glycerol	10.0g
KNO_3	10.0g
Yeast extract	3.0g
$(\text{NH}_4)_2\text{SO}_4$	1.5g
Agar	1.0g
$\text{K}_2\text{HPO}_4 \cdot 3\text{H}_2\text{O}$	0.8g
$\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$	0.5g

KH ₂ PO ₄	0.2g
CaCl ₂	0.1g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of *Pseudomonas* species based on their ability to produce pyocin and other fluorescent pigments during denitrification.

Pseudomonas halophila Medium

Composition per liter:

Solution A.....	890.0mL
Solution B.....	100.0mL
Vitamin solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Solution A:

Composition per 890.0mL:

NaCl.....	46.8g
MgSO ₄ ·7H ₂ O.....	39.4g
Glycerol.....	5.0g
NH ₄ Cl.....	1.0g
Trace elements solution SL-10.....	1.0mL

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	0.19g
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution B:

Composition per 100.0mL:

KH ₂ PO ₄	1.0g
---------------------------------------	------

Preparation of Solution B: Add KH₂PO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Calcium pantothenate.....	5.0mg
Nicotinic acid.....	5.0mg
Robiflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
<i>p</i> -Aminobenzoic acid.....	1.0mg
Cyanocobalamin.....	0.01mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 890.0mL of cooled sterile solution A, 100.0mL of cooled sterile solution B, and 10.0mL of sterile vitamin solution. Mix thoroughly. Adjust pH to 7.0 with sterile 6N NaOH or HCl solution.

Use: For the cultivation and maintenance of *Pseudomonas halophila*.

Pseudomonas HiVeg Agar Base with Glycerol and Selective Supplement

Composition per liter:

Plant peptone No. 2.....	16.0g
Agar.....	11.0g
Plant hydrolysate.....	10.0g
K ₂ SO ₄	10.0g
MnCl ₂ , anhydrous.....	1.4g
Glycerol.....	10.0mL
Selective supplement.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without glycerol or selective supplement, is available as a premixed powder from HiMedia.

Selective Supplement Solution:

Composition per 10.0mL:

Cetrimide.....	0.2g
Nalidixic acid.....	15.0mg

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add glycerol and then other components, except selective supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL selective supplement. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation of *Pseudomonas* species.

Pseudomonas indigofera Agar

Composition per liter:

Agar.....	12.0g
Yeast extract.....	10.0g
Glucose.....	5.0g
Sodium acetate.....	0.5g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas indigofera*.

Pseudomonas Isolation Agar

Composition per liter:

Peptone.....	20.0g
Agar.....	13.6g
K ₂ SO ₄	10.0g
MgCl ₂ ·6H ₂ O.....	1.4g

Irgasan® (triclosan).....	0.025g
Glycerol	20.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Pseudomonas* species.

Pseudomonas Isolation HiVeg Agar Base with Glycerol

Composition per liter:

Plant peptone.....	20.0g
Agar	13.6g
K ₂ SO ₄	10.0g
MnCl ₂	1.4g
Triclosan (Irgasan®).....	0.025g
Glycerol	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without glycerol, is available as a premixed powder from HiMedia.

Preparation of Medium: Add glycerol and then other components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation and identification of *Pseudomonas aeruginosa* from clinical and nonclinical specimens.

***Pseudomonas lemoignei* Agar**

Composition per liter:

Agar	20.0g
Sodium pyruvate.....	4.0g
MgSO ₄ ·7H ₂ O.....	0.2g
KH ₂ PO ₄	0.15g
K ₂ HPO ₄	0.05g
Salt solution	15.0mL
pH 7.0 ± 0.2 at 25°C	

Salt Solution:

Composition per 100.0mL:

Ferric ammonium citrate.....	1.0g
CaCl ₂	0.1g

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas lemoignei*.

***Pseudomonas* Medium (ATCC Medium 59)**

Composition per liter:

K ₂ HPO ₄	1.15g
NH ₄ NO ₃	1.0g

Yeast extract.....	1.0g
KH ₂ PO ₄	0.625g
MgSO ₄ ·7H ₂ O.....	0.02g
Pyrrrolidine	4.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add pyrrolidine to 500.0mL of distilled/deionized water. Mix thoroughly. Adjust pH to 7.0. Add remaining components. Bring volume to 1.0L with distilled/deionized water. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Pseudomonas fluorescens*.

***Pseudomonas* Medium (ATCC Medium 179)**

Composition per 1020.0mL:

Solution 1.....	1.0L
Solution 3.....	15.0mL
Solution 2.....	5.0mL
pH 6.8 ± 0.2 at 25°C	

Solution 1:

Composition per liter:

Agar	20.0g
K ₂ HPO ₄	2.56g
KH ₂ PO ₄	2.08g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution 2:

Composition per 100.0mL:

Ferric ammonium citrate.....	1.0g
CaCl ₂	0.1g

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution 3:

Composition per 100.0mL:

Succinic acid.....	11.8g
--------------------	-------

Preparation of Solution 3: Add succinic acid to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 6.0 with NaOH. Filter sterilize.

Preparation of Medium: To 1.0L of cooled sterile solution 1, aseptically add 5.0mL of sterile solution 2 and 15.0mL of sterile solution 3. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Pseudomonas lemoignei* and *Pseudomonas putida*.

***Pseudomonas* Medium (ATCC Medium 186)**

Composition per liter:

Marine salts mix	19.0g
Glucose.....	10.0g
Yeast extract.....	10.0g
K ₂ HPO ₄	1.0g

Peptone.....	1.0g
KH ₂ PO ₄	0.5g
NH ₄ Cl.....	0.5g
CaCl ₂	0.1g
Na ₂ SO ₃	0.1g
NaHCO ₃	0.1g
FeCl ₃	0.05g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus sphaericus*.

***Pseudomonas* Medium (ATCC Medium 226)**

Composition per liter:

Agar.....	20.0g
Yeast extract.....	10.0g
Glucose.....	5.0g
Sodium acetate.....	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas indigofera*.

***Pseudomonas* Medium (ATCC Medium 609)**

Composition per liter:

Agar.....	15.0g
K ₂ HPO ₄	8.71g
Nitritotriacetic acid.....	1.91g
Na ₂ SO ₄	0.57g
MgSO ₄	0.25g
FeSO ₄	0.5mg
Ca(NO ₃) ₂	0.5mg

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add nitritotriacetic acid to approximately 500.0mL of distilled/deionized water. Mix thoroughly. Adjust pH to 6.5. Add remaining components. Bring volume to 1.0L with distilled/deionized water. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas* species.

***Pseudomonas* Medium (ATCC Medium 775)**

Composition per liter:

NH ₄ Cl.....	5.0g
K ₂ HPO ₄	1.5g
L-Tryptophan.....	1.0g
KH ₂ PO ₄	0.5g
Yeast extract.....	0.5g
MgSO ₄	0.2g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Comamonas acidovorans*.

***Pseudomonas* Medium A**

Composition per liter:

Peptone.....	20.0g
Agar.....	15.0g
Glycerol.....	10.0g
K ₂ SO ₄	10.0g
MgCl ₂	1.4g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 10 min at 10 psi pressure–115°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and production of pyocyanin by *Pseudomonas* species.

***Pseudomonas* Medium B**

Composition per liter:

Peptone.....	20.0g
Agar.....	15.0g
Glycerol.....	10.0g
MgSO ₄ ·7H ₂ O.....	1.5g
K ₂ HPO ₄ solution.....	100.0mL

pH 7.2 ± 0.2 at 25°C

K₂HPO₄ Solution:

Composition per 100.0mL:

K ₂ HPO ₄	1.5g
---------------------------------------	------

Preparation of K₂HPO₄ Solution: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except K₂HPO₄ solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile K₂HPO₄ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and observation of fluorescin production by *Pseudomonas* species.

***Pseudomonas* Medium I**

Composition per liter:

Pancreatic digest of casein.....	10.0g
Yeast extract.....	10.0g
Glucose.....	5.0g
K ₂ HPO ₄	5.0g
Salts solution.....	5.0mL

Salts Solution:

Composition per 100.0mL:

MgSO ₄ ·4H ₂ O.....	4.0g
FeSO ₄	0.2g
MnSO ₄ ·4H ₂ O.....	0.2g
NaCl.....	0.2g

Preparation of Salts Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus sphaericus*.

Pseudomonas Medium No. 2**Composition per liter:**

Agar	15.0g
Na ₂ HPO ₄ ·12H ₂ O	6.0g
Succinic acid	5.0g
KH ₂ PO ₄	2.4g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂ ·6H ₂ O	0.01g
FeCl ₃ ·6H ₂ O	0.01g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Pseudomonas* species and *Psychrobacter immobilis*.

Pseudomonas Phage Medium**Composition per liter:**

Agar	15.0g
Nutrient broth	10.0g
K ₂ HPO ₄	1.11g
Glucose	1.0g
KH ₂ PO ₄	0.49g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas fluorescens*.

Pseudomonas pickettii Medium**Composition per liter:**

Agar	15.0g
Peptone	5.0g
NaCl	5.0g
Na ₂ HPO ₄ ·12H ₂ O	2.39g
Yeast extract	2.0g
Beef extract	1.0g
K ₂ HPO ₄	0.45g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Burkholderia pickettii*.

Pseudomonas saccharophila Medium**Composition per 1015.0mL:**

Agar	20.0g
Na ₂ HPO ₄	4.8g
KH ₂ PO ₄	4.4g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.5g

Solution A	5.0mL
Solution B	10.0mL

Solution A:**Composition per 100.0mL:**

Ferric ammonium citrate	1.0g
CaCl ₂	0.1g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution B:**Composition per 100.0mL:**

Sucrose	10.0g
---------------	-------

Preparation of Solution B: Add sucrose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except solution A and solution B, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile solution A and sterile solution B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Pseudomonas saccharophila* and other *Pseudomonas* species.

Pseudomonas solanacearum Medium**Composition per liter:**

Agar	17.0g
Peptone	10.0g
Glucose	5.0g
Pancreatic digest of casein	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas solanacearum*.

Pseudomonas syngii Medium**Composition per liter:**

Agar	15.0g
Acid casein hydrolysate	7.5g
Sucrose	2.0g
MgSO ₄ ·7H ₂ O	250.0mg
K ₂ HPO ₄	500.0mg
Ammonium ferric citrate solution	20.0mL

Ammonium Ferric Citrate Solution:**Composition per 20.0mL:**

Ammonium ferric citrate	0.25g
-------------------------------	-------

Preparation of Ammonium Ferric Citrate Solution: Add ammonium ferric citrate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ammonium ferric citrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 20.0mL of sterile ammonium ferric citrate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Pseudomonas syngii*.

Pseudomonas syringae* Selective Medium*Composition per liter:**

Agar	15.0g
L-Proline	5.0g
MgSO ₄ ·7H ₂ O	0.2g
K ₂ HPO ₄	0.08g
KH ₂ PO ₄	0.02g
MnSO ₄ ·4H ₂ O solution	10.0mL
pH 6.8 ± 0.2 at 25°C	

MnSO₄·4H₂O Solution:**Composition per 10.0mL:**

MnSO ₄ ·4H ₂ O	2.1g
--	------

Preparation of MnSO₄·4H₂O Solution: Add MnSO₄·4H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except MnSO₄·4H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8. Autoclave for 10 min at 10 psi pressure–115°C. Cool to 45°–50°C. Aseptically add sterile MnSO₄·4H₂O solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation and cultivation of *Pseudomonas syringae*.

Pseudosel™ Agar

See: **Cetrimide Agar, USP**

PSS Broth

See: **Peptone Succinate Salts Broth**

PSS Medium

See: **Peptone Succinate Salts Medium**

PSTA Enrichment HiVeg Broth Base**Composition per liter:**

Tris hydroxymethyl aminomethane	3.0g
Plant peptone	1.0g
Sucrose	1.0g
NaN ₃	0.192g
Brilliant Green	0.0125g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the secondary enrichment of *Yersinia enterocolitica* from foods.

PT Agar**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	4.0g
Yeast extract	4.0g
MgSO ₄ ·7H ₂ O	2.0g
CaCl ₂ ·2H ₂ O	1.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of myxobacteria.

**PTYG Medium
(LMG Medium 238)****Composition per liter:**

Agar	15.0g
Peptone	5.0g
Tryptone	5.0g
Yeast extract	5.0g
Glucose	5.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Sphingobium herbicidovorans* and *Sphingomonas pruni*.

**PTYG Medium
(DSMZ Medium 914)****Composition per liter:**

Glucose	10.0g
Peptone	5.0g
Tryptone	5.0g
Yeast extract	5.0g
MgSO ₄ ·7H ₂ O	0.6g
CaCl ₂	0.06g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Kineococcus radiotolerans*.

Purple Agar**Composition per liter:**

Agar	15.0g
Proteose peptone No. 3	10.0g
NaCl	5.0g
Beef extract	1.0g
Bromcresol Purple	0.02g
Carbohydrate solution	20.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Carbohydrate Solution:**Composition per 20.0mL:**

Carbohydrate	10.0g
--------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 20.0mL. For expensive carbohydrates, 5.0g may be used instead of 10.0g. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix

thoroughly. Gently heat and bring to boiling. Distribute into tubes in 9.8mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 0.2mL of sterile carbohydrate solution to each tube. Mix thoroughly. Allow tubes to cool in a slanted position.

Use: For the preparation of carbohydrate media used in fermentation studies for the identification of bacteria, especially members of the Enterobacteriaceae. Bacteria that can ferment the carbohydrate turn the medium yellow.

Purple Broth (Purple Carbohydrate Broth)

Composition per liter:

Proteose peptone No. 3	10.0g
NaCl	5.0g
Beef extract	1.0g
Bromcresol Purple	0.015g
Carbohydrate solution	20.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Carbohydrate Solution:

Composition per 20.0mL:

Carbohydrate	10.0g
--------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 20.0mL. For expensive carbohydrates, 5.0g may be used instead of 10.0g. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 9.8mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 0.2mL of sterile carbohydrate solution to each tube. Mix thoroughly.

Use: For the preparation of carbohydrate media used in fermentation studies for the identification of bacteria, especially members of the Enterobacteriaceae. Bacteria that can ferment the carbohydrate turn the medium yellow.

Purple Broth

Composition per liter:

Pancreatic digest of gelatin	10.0g
NaCl	5.0g
Bromcresol Purple	0.02g
Carbohydrate solution	20.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Carbohydrate Solution:

Composition per 20.0mL:

Carbohydrate	10.0g
--------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 20.0mL. For expensive carbohydrates, 5.0g may be used instead of 10.0g. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.4 if necessary. Distribute into tubes

containing an inverted Durham tube. Fill each tube with 9.8mL of medium. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 0.2mL of sterile carbohydrate solution to each tube.

Use: For the preparation of liquid fermentation media. Bacteria that can ferment the carbohydrate turn the medium yellow.

Purple Broth with Sodium Chloride (Purple Carbohydrate Broth with NaCl) (BAM M130)

Composition per liter:

Proteose peptone No. 3	10.0g
NaCl	5.0g
Beef extract	1.0g
Bromcresol Purple	0.02g
Carbohydrate solution	20.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Carbohydrate Solution:

Composition per 20.0mL:

Carbohydrate	10.0g
--------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 20.0mL. For expensive carbohydrates, 5.0g may be used instead of 10.0g. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 9.8mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 0.2mL of sterile carbohydrate solution to each tube. Mix thoroughly.

Use: For the preparation of carbohydrate media used in fermentation studies for the identification of bacteria, especially members of the Enterobacteriaceae. Bacteria that can ferment the carbohydrate turn the medium yellow.

Purple Carbohydrate Broth *See: Purple Broth*

Purple Carbohydrate Fermentation Broth Base (BAM M130a)

Composition per liter:

Pancreatic digest of gelatin	10.0g
NaCl	5.0g
Bromcresol Purple	0.02g
Carbohydrate solution	100.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostics.

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate	5.0g
--------------------	------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL.

Mix thoroughly. Adjust pH to 7.4 if necessary. Distribute into tubes containing an inverted Durham tube. Fill each tube with 9.0mL of medium. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 1.0mL of sterile carbohydrate solution to each tube.

Use: For the preparation of liquid fermentation media. Bacteria that can ferment the carbohydrate turn the medium yellow.

Purple Carbohydrate Fermentation Broth Base with Esculin (BAM M130a)

Composition per liter:

Pancreatic digest of gelatin	10.0g
NaCl	5.0g
Esculin	5.0g
Bromcresol Purple	0.02g
Carbohydrate solution	10.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium, without esculin, is available as a premixed powder from BD Diagnostics.

Carbohydrate Solution:

Composition per 100.0mL:

Carbohydrate	5.0g
--------------------	------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution and esculin, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 7.4 if necessary. Distribute into tubes containing an inverted Durham tube. Fill each tube with 9.0mL of medium. Add 0.05g esculin to each tube. Autoclave for 15 min at 10 psi pressure–115°C. Aseptically add 1.0mL of sterile carbohydrate solution to each tube.

Use: For the preparation of liquid fermentation media, e.g., for *Listeria* spp. and *Enterococcus* spp. Bacteria that can ferment the carbohydrate turn the medium yellow.

Purple HiVeg Agar Base with Carbohydrate

Composition per liter:

Agar	15.0g
Plant special peptone	10.0g
NaCl	5.0g
Plant extract	1.0g
Bromcresol Purple	0.02g
Carbohydrate solution	20.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium, without carbohydrate, is available as a premixed powder from HiMedia.

Carbohydrate Solution:

Composition per 20.0mL:

Carbohydrate	10.0g
--------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 20.0mL. For expensive carbohydrates, 5.0g may be used instead of 10.0g. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in

9.8mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 0.2mL of sterile carbohydrate solution to each tube. Mix thoroughly. Allow tubes to cool in a slanted position.

Use: For the preparation of carbohydrate media used in fermentation studies for the identification of bacteria, especially members of the Enterobacteriaceae. Bacteria that can ferment the carbohydrate turn the medium yellow.

Purple HiVeg Broth Base with Carbohydrate

Composition per liter:

Plant special peptone	10.0g
NaCl	5.0g
Bromcresol Purple	0.02g
Carbohydrate solution	20.0mL
pH 6.8 ± 0.2 at 25°C	

Source: This medium, without carbohydrate, is available as a premixed powder from HiMedia.

Carbohydrate Solution:

Composition per 20.0mL:

Carbohydrate	10.0g
--------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 20.0mL. For expensive carbohydrates, 5.0g may be used instead of 10.0g. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 9.8mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 0.2mL of sterile carbohydrate solution to each tube. Mix thoroughly.

Use: For the preparation of carbohydrate media used in fermentation studies for the identification of bacteria, especially members of the Enterobacteriaceae. Bacteria that can ferment the carbohydrate turn the medium yellow.

Purple Lactose Agar

Composition per liter:

Agar	10.0g
Lactose	10.0g
Peptone	5.0g
Beef extract	3.0g
Bromcresol Purple	0.025g
pH 6.8 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the detection and differentiation of members of the Enterobacteriaceae. Bacteria that can ferment lactose turn the medium yellow.

Purple Serum Agar Base

Composition per liter:

Agar	20.0g
Lactose	20.0g

Peptone.....	20.0g
NaCl.....	5.0g
Bromcresol Purple.....	0.03g
Phenol Red.....	0.024g

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and differentiation of Gram-negative bacteria isolated from the urinary tract. Bacteria that can ferment lactose turn the medium yellow.

PV Blood Agar

(Paromomycin Vancomycin Blood Agar)

Composition per liter:

Agar.....	20.0g
Pancreatic digest of casein.....	15.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	5.0g
Yeast extract.....	5.0g
L-Cystine.....	0.4g
Paromomycin.....	0.1g
Vancomycin.....	7.5mg
Hemin.....	5.0mg
Sheep blood, defibrinated.....	50.0mL
Vitamin K ₁ solution.....	10.0mL

pH 7.5 ± 0.2 at 25°C

Vitamin K₁ Solution:

Composition per 10.0mL:

Vitamin K ₁	0.01g
Ethanol.....	10.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 10.0mL of absolute ethanol. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except vitamin K₁ solution, sheep blood, paromomycin, and vancomycin—to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling for 1 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add the sterile vitamin K₁ solution, sheep blood, vancomycin, and paromomycin. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective cultivation of fastidious anaerobic bacteria.

PW Medium

(LMG 182)

Composition per 1100.0mL:

Agar.....	12.0g
Papaic digest of soybean meal.....	4.0g
KH ₂ PO ₄	1.2g
K ₂ HPO ₄	1.0g
Trypticase™ peptone.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.4g
Glutamine solution.....	50.0mL
Bovine serum albumin solution.....	30.0mL
Phenol Red (0.2% solution).....	10.0mL
Solution A.....	10.0mL

Glutamine Solution:

Composition per 50.0mL:

L-Glutamine.....	4.0g
------------------	------

Preparation of Glutamine Solution: Add glutamine to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Bovine Serum Albumin Solution:

Composition per 50.0mL:

Bovine serum albumin, fraction V.....	10.0g
---------------------------------------	-------

Preparation of Bovine Serum Albumin Solution: Add bovine serum albumin to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Solution A:

Composition per 101.0mL:

NaOH (0.05N solution).....	100.0mL
Hemin chloride.....	0.1g

Preparation of Medium: Add components, except glutamine solution and bovine serum albumin solution, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of sterile glutamine solution and 10.0mL of sterile bovine serum albumin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Xylella fastidiosa*.

PXA Agar

See: [Pril Xylose Ampicillin Agar](#)

PY Basal Medium

Composition per 104.0mL:

Yeast extract.....	1.0g
L-Cysteine-HCl·H ₂ O.....	0.5g
Peptone.....	0.5g
Pancreatic digest of casein.....	0.5g
Resazurin.....	0.16mg
Salts solution.....	4.0mL

Salts Solution:

Composition per liter:

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂	0.2g
MgSO ₄	0.2g

Preparation of Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 104.0mL. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the identification of treponemes.

PY Broth

(DSMZ Medium 1071)

Composition per liter:

NaCl.....	30.0g
Agar.....	15.0g
Polypepton™.....	2.0g
Yeast extract.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.5g
FeCl ₃ ·6H ₂ O.....	6.0mg

CaCl ₂ ·2H ₂ O.....	5.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	5.0mg
CuCl ₂ ·2H ₂ O.....	4.0mg
pH 8.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.0. Distribute into tubes or flasks. Gently heat while stirring and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Use: For the cultivation of *Desulfosporosinus orientis*.

PY Carbohydrate Medium

Composition per 110.0mL:

Polypeptone™.....	1.0g
Yeast extract.....	1.0g
Glucose.....	0.4g
Maltose.....	0.4g
Ribose.....	0.4g
Starch, soluble.....	0.4g
L-Cysteine·HCl·H ₂ O.....	0.09g
Resazurin.....	0.16mg
Serum VFAH supplement.....	10.0mL
NaHCO ₃ solution.....	10.0mL
Salts solution.....	4.0mL
pH 7.2–7.5 at 25°C	

Serum VFAH Supplement:

Composition per 107.5mL:

Rabbit serum.....	100.0mL
Heme solution.....	5.0mL
VFA solution.....	1.5mL
Thiamine pyrophosphate solution.....	1.0mL

Preparation of Serum VFAH: Combine the four solutions. Mix thoroughly. Filter sterilize.

Thiamine Pyrophosphate Solution:

Composition per 10.0mL:

Thiamine pyrophosphate.....	0.05g
-----------------------------	-------

Preparation of Thiamine Pyrophosphate Solution: Add thiamine pyrophosphate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Heme Solution:

Composition per 100.0mL:

Hemin.....	0.5g
NaOH (1N solution).....	1.0mL

Preparation of Heme Solution: Add hemin to NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

VFA Solution:

Composition per 100.0mL:

Acetic acid, glacial.....	5.0mL
n-Butyric acid.....	4.0mL
n-Valeric acid.....	1.0mL
Isobutyric acid.....	1.0mL
Isovaleric acid.....	1.0mL
n-Butyric acid.....	1.0mL

Preparation of VFA Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.0.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	0.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add the NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Salts Solution:

Composition per 400.0mL:

K ₂ HPO ₄	0.9g
NaCl.....	0.8g
KH ₂ PO ₄	0.4g
MnCl ₂ ·4H ₂ O.....	0.16g
MgSO ₄	0.08g

Preparation of Salts Solution: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.

Preparation of Medium: Add components, except serum VFAH supplement and NaHCO₃ solution, to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 10.0mL of sterile serum VFAH supplement and 10.0mL of sterile NaHCO₃ solution. Anaerobically distribute into sterile tubes or flasks under 100% N₂.

Use: For the cultivation of oral treponemes.

PY CMC Medium

(Peptone Yeast Extract Carboxymethyl Cellulose Medium)

Composition per liter:

Agar.....	15.0g
Carboxymethyl cellulose.....	10.0g
NaCl.....	5.0g
Polypeptone™.....	5.0g
Yeast extract.....	5.0g
MgSO ₄ ·7H ₂ O.....	2.0g
KH ₂ PO ₄	1.0g
Na ₂ CO ₃ solution.....	100.0mL

pH 9.5 ± 0.2 at 25°C

Na₂CO₃ Solution:

Composition per 100.0mL:

Na ₂ CO ₃	10.0g
---------------------------------------	-------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except Na₂CO₃ solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile Na₂CO₃ solution. Mix thoroughly. Adjust pH to 9.5 if necessary. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of alkalophilic *Bacillus* species.

PY Inositol Medium

(Peptone Yeast Extract Inositol Medium)

Composition per liter:

i-Inositol.....	10.0g
Yeast extract.....	10.0g

Peptone.....	5.0g
Pancreatic digest of casein.....	5.0g
L-Cysteine·HCl·H ₂ O.....	0.5g
Salts solution.....	40.0mL
Hemin solution.....	10.0mL
Resazurin solution.....	4.0mL
Vitamin K ₁ solution.....	0.2mL

pH 6.9 ± 0.2 at 25°C

Salts Solution:**Composition per liter:**

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂ , anhydrous.....	0.2g
MgSO ₄	0.2g

Preparation of Salts Solution: Add CaCl₂ and MgSO₄ to 300.0mL of distilled/deionized water. Mix thoroughly until dissolved. Bring volume to 800.0mL with distilled/deionized water. Add remaining components while stirring. Bring volume to 1.0L. Mix thoroughly. Store at 4°C.

Hemin Solution:**Composition per 100.0mL:**

Hemin.....	0.05g
NaOH (1N solution).....	1.0mL

Preparation of Hemin Solution: Add hemin to NaOH solution. Mix thoroughly. Adjust volume to 100.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Resazurin Solution:**Composition per 44.0mL:**

Resazurin.....	0.044g
----------------	--------

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 44.0mL. Mix thoroughly.

Vitamin K₁ Solution:**Composition per 30.0mL:**

Vitamin K ₁	0.15g
Ethanol (95% solution).....	30.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to ethanol. Mix thoroughly. Store in a brown bottle and keep under refrigeration. Discard after 1 month.

Preparation of Medium: Add components—except hemin solution, L-cysteine·HCl·H₂O, and vitamin K₁ solution—to distilled/deionized water and bring volume to 989.8mL. Mix thoroughly. Gently heat and bring to boiling under 80% N₂ + 10% CO₂ + 10% H₂. Continue boiling until resazurin turns colorless, indicating reduction. Cool to 50°C. Add the L-cysteine·HCl·H₂O, hemin solution, and vitamin K₁ solution. Adjust pH to 6.9 if necessary. Anaerobically distribute into tubes under 80% N₂ + 10% CO₂ + 10% H₂. Cap the tubes with rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Eubacterium desmolans*.

PY Medium

See: **Peptone Yeast Extract Medium**

PY 1% Medium (Peptone Yeast Extract 1% Medium)

Composition per liter:

Peptone.....	10.0g
Yeast extract.....	10.0g
NaCl.....	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Brevibacterium lactofermentum* and *Corynebacterium glutamicum*.

PY Medium with Fructose**(Peptone Yeast Extract Medium with Fructose)****Composition per liter:**

Fructose.....	10.0g
Yeast extract.....	10.0g
Peptone.....	5.0g
Pancreatic digest of casein.....	5.0g
L-Cysteine·HCl·H ₂ O.....	0.5g
Salts solution.....	40.0mL
Hemin solution.....	10.0mL
Resazurin solution.....	4.0mL
Vitamin K ₁ solution.....	0.2mL

pH 6.9 ± 0.2 at 25°C

Salts Solution:**Composition per liter:**

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂ , anhydrous.....	0.2g
MgSO ₄	0.2g

Preparation of Salts Solution: Add CaCl₂ and MgSO₄ to 300.0mL of distilled/deionized water. Mix thoroughly until dissolved. Bring volume to 800.0mL with distilled/deionized water. Add remaining components while stirring. Bring volume to 1.0L. Mix thoroughly. Store at 4°C.

Hemin Solution:**Composition per 100.0mL:**

Hemin.....	0.05g
NaOH (1N solution).....	1.0mL

Preparation of Hemin Solution: Add hemin to NaOH solution. Mix thoroughly. Adjust volume to 100.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Resazurin Solution:**Composition per 44.0mL:**

Resazurin.....	0.044g
----------------	--------

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 44.0mL. Mix thoroughly.

Vitamin K₁ Solution:**Composition per 30.0mL:**

Vitamin K ₁	0.15g
Ethanol (95% solution).....	30.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to ethanol. Mix thoroughly. Store in a brown bottle and keep under refrigeration. Discard after 1 month.

Preparation of Medium: Add components—except hemin solution, L-cysteine·HCl·H₂O, and vitamin K₁ solution—to distilled/deionized water and bring volume to 989.8mL. Mix thoroughly. Gently heat and bring to boiling under 80% N₂ + 10% CO₂ + 10% H₂. Continue boiling until resazurin turns colorless, indicating reduction. Cool to 45°–50°C. Add the L-cysteine·HCl·H₂O, hemin solution, and vitamin K₁ solution. Adjust pH to 6.9 if necessary. Anaerobically distribute into tubes under 80% N₂ + 10% CO₂ + 10% H₂. Cap the tubes with rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Megasphaera cerevisiae*.

**PY Medium with Glucose
(Peptone Yeast Extract Medium with Glucose)
(PYG Medium)**

Composition per liter:

Glucose	10.0g
Yeast extract	10.0g
Peptone.....	5.0g
Pancreatic digest of casein.....	5.0g
L-cysteine·HCl·H ₂ O	0.5g
Salts solution.....	40.0mL
Hemin solution.....	10.0mL
Resazurin solution.....	4.0mL
Vitamin K ₁ solution	0.2mL

pH 6.9 ± 0.2 at 25°C

Salts Solution:

Composition per liter:

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂ , anhydrous	0.2g
MgSO ₄	0.2g

Preparation of Salts Solution: Add CaCl₂ and MgSO₄ to 300.0mL of distilled/deionized water. Mix thoroughly until dissolved. Bring volume to 800.0mL with distilled/deionized water. Add remaining components while stirring. Bring volume to 1.0L. Mix thoroughly. Store at 4°C.

Hemin Solution:

Composition per 100.0mL:

Hemin.....	0.05g
NaOH (1N solution).....	1.0mL

Preparation of Hemin Solution: Add hemin to NaOH solution. Mix thoroughly. Adjust volume to 100.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Resazurin Solution:

Composition per 44.0mL:

Resazurin	0.044g
-----------------	--------

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 44.0mL. Mix thoroughly.

Vitamin K₁ Solution:

Composition per 30.0mL:

Vitamin K ₁	0.15g
Ethanol (95% solution).....	30.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to ethanol. Mix thoroughly. Store in a brown bottle and keep under refrigeration. Discard after 1 month.

Preparation of Medium: Add components—except hemin solution, L-cysteine·HCl·H₂O, and vitamin K₁ solution—to distilled/deionized water and bring volume to 989.8mL. Mix thoroughly. Gently heat and bring to boiling under 80% N₂ + 10% CO₂ + 10% H₂. Continue boiling until resazurin turns colorless, indicating reduction. Cool to 45°–50°C. Add the L-cysteine·HCl·H₂O, hemin solution, and vitamin K₁ solution. Adjust pH to 6.9 if necessary. Anaerobically distribute into tubes under 80% N₂ + 10% CO₂ + 10% H₂. Cap the tubes with rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Clostridium* species.

PY Medium with Serum-Coccarboxylase

Composition per liter:

Yeast extract.....	10.0g
Peptone	5.0g
Pancreatic digest of casein.....	5.0g
L-Cysteine·HCl·H ₂ O	0.5g
Serum-coccarboxylase solution.....	100.0mL
Salts solution.....	40.0mL
Hemin solution.....	10.0mL
Resazurin solution	4.0mL
Vitamin K ₁ solution	0.2mL

pH 6.9 ± 0.2 at 25°C

Salts Solution:

Composition per liter:

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂ , anhydrous.....	0.2g
MgSO ₄	0.2g

Preparation of Salts Solution: Add CaCl₂ and MgSO₄ to 300.0mL of distilled/deionized water. Mix thoroughly until dissolved. Bring volume to 800.0mL with distilled/deionized water. Add remaining components while stirring. Bring volume to 1.0L. Mix thoroughly. Store at 4°C.

Hemin Solution:

Composition per 100.0mL:

Hemin	0.050g
NaOH (1N solution).....	1.0mL

Preparation of Hemin Solution: Add hemin to NaOH solution. Mix thoroughly. Adjust volume to 100.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Resazurin Solution:

Composition per 44.0mL:

Resazurin	0.044g
-----------------	--------

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 44.0mL. Mix thoroughly.

Vitamin K₁ Solution:

Composition per 30.0mL:

Vitamin K ₁	0.15g
Ethanol (95% solution).....	30.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to ethanol. Mix thoroughly. Store in a brown bottle and keep under refrigeration. Discard after 1 month.

Serum-Coccarboxylase Solution:

Composition per 101.0mL:

Rabbit serum, heat inactivated.....100.0mL
Coccarboxylase solution.....1.0mL

Coccarboxylase Solution:

Composition per 100.0mL:

Coccarboxylase.....5mg

Preparation of Coccarboxylase Solution: Add coccarboxylase to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Serum-Coccarboxylase Solution: Aseptically combine 100.0mL of sterile, heat-inactivated rabbit serum with 1.0mL of sterile coccarboxylase solution. Mix thoroughly.

Preparation of Medium: Add components, except serum-coccarboxylase solution, L-cysteine-HCl·H₂O, hemin solution, and vitamin K₁ solution, to distilled/deionized water and bring volume to 889.8mL. Mix thoroughly. Gently heat and bring to boiling under 80% N₂ + 10% CO₂ + 10% H₂. Continue boiling until resazurin turns colorless, indicating reduction. Cool to 45°–50°C. Add the serum-coccarboxylase solution, L-cysteine-HCl·H₂O, hemin solution, and vitamin K₁ solution. Adjust pH to 6.9, if necessary. Anaerobically distribute into tubes under 80% N₂ + 10% CO₂ + 10% H₂. Cap the tubes with rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation of *Treponema phagedenis*.

PY Salt Medium

(Peptone Yeast Extract Salt Medium)

Composition per liter:

Peptone.....9.0g
NaCl.....5.0g
Yeast extract.....5.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus brevis*.

PYb Agar

Composition per liter:

Agar.....20.0g
Proteose peptone.....1.0g
Yeast extract.....1.0g
KH₂PO₄ solution.....32.0mL
Na₂HPO₄ solution.....8.0mL
CaCl₂ solution.....4.0mL
MgSO₄·7H₂O solution.....2.5mL

pH 6.5 ± 0.5 at 25°C

CaCl₂ Solution:

Composition per 100.0mL:

CaCl₂.....0.75g

Preparation of CaCl₂ Solution: Add CaCl₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 6.5. Autoclave for 25 min at 15 psi pressure–121°C. Cool to 50°–55°C.

MgSO₄·7H₂O Solution:

Composition per 100.0mL:

MgSO₄·7H₂O.....9.8g

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 6.5. Autoclave for 25 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Na₂HPO₄ Solution:

Composition per 100.0mL:

Na₂HPO₄.....6.7g

Preparation of Na₂HPO₄ Solution: Add Na₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 6.5. Autoclave for 25 min at 15 psi pressure–121°C. Cool to 50°–55°C.

KH₂PO₄ Solution:

Composition per 100.0mL:

KH₂PO₄.....3.4g

Preparation of KH₂PO₄ Solution: Add KH₂PO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 6.5. Autoclave for 25 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Add components, except KH₂PO₄ solution, Na₂HPO₄ solution, CaCl₂ solution, and MgSO₄·7H₂O solution, to distilled/deionized water and bring volume to 953.5mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 32.0mL of sterile KH₂PO₄ solution, 8.0mL of sterile Na₂HPO₄ solution, 4.0mL of sterile CaCl₂ solution, and 2.5mL of sterile MgSO₄·7H₂O solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Acanthamoeba hatchetti*, *Acanthamoeba jacobsi*, *Acanthamoeba polyphaga*, *Echinamoeba exundans*, *Naegleria gruberi*, *Paratetramitus jugosus*, *Rhizamoeba* species, *Tetramitus rostratus*, and *Vahlkampfia lobospinosa*.

PYCS Medium

Composition per liter:

KH₂PO₄.....1.0g
(NH₄)₂SO₄.....1.0g
MgCl₂·6H₂O.....0.2g
NaCl.....0.2g
CaCl₂·2H₂O.....45.0mg
Fructose solution.....50.0mL
NaHCO₃ solution.....10.0mL
Wolfe's mineral solution.....10.0mL

pH 7.2 ± 0.2 at 25°C

Fructose Solution:

Composition per 50.0mL:

D-Fructose.....5.0g

Preparation of Fructose Solution: Add D-fructose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO₃.....1.68g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
CaCl ₂	0.1g
CoCl ₂ ·6H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
AlK(SO ₄) ₂ ·12H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to approximately 500.0mL of water and adjust to pH 6.5 with KOH to dissolve the compound. Bring volume to 1.0L with remaining water and add remaining components one at a time.

Preparation of Medium: Add components, except fructose solution and NaHCO₃ solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL of sterile fructose solution and 10.0mL of sterile NaHCO₃ solution. Mix thoroughly. Adjust pH to 7.2. Aseptically distribute into sterile tubes or flasks. Fill containers to capacity.

Use: For the cultivation of *Rhodospirillum rubrum* and *Thiocapsa halophila*.

PYE Medium

Composition per liter:

Yeast extract	4.0g
Sodium pyruvate	2.2g
K ₂ HPO ₄	1.0g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
Na ₂ S ₂ O ₃ ·5H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.02g
Trace elements solution SL-6	1.0mL

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Heliobacterium modestocaldum*.

PYEA Agar

Composition per liter:

Agar	15.0g
Peptone	10.0g

Yeast extract	10.0g
NaCl	5.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Blastobacter natariorius* and *Deinobacter grandis*.

**PYEM Medium
(DSMZ Medium 1157)**

Composition per liter:

Peptone	2.0g
Yeast extract	2.0g
NH ₄ Cl	0.5g
Riboflavin solution	5.0mL
Glucose solution	2.0mL
Magnesium sulfate solution	1.0mL
Calcium chloride solution	1.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:

Composition per 10.0mL:

Glucose	5.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Riboflavin Solution:

Composition per 10.0mL:

Riboflavin	2.0mg
------------------	-------

Preparation of Riboflavin Solution: Add riboflavin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Calcium Chloride Solution:

Composition per 10.0mL:

CaCl ₂ ·2H ₂ O	1.0g
--	------

Preparation of Calcium Chloride Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Magnesium Sulfate Solution:

Composition per 10.0mL:

MgSO ₄ ·7H ₂ O	2.0g
--	------

Preparation of Magnesium Sulfate Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except riboflavin, glucose, magnesium sulfate, and calcium chloride solutions, to distilled/deionized water and bring volume to 991.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add riboflavin, glucose, magnesium sulfate, and calcium chloride solutions. Mix thoroughly. Aseptically distribute into culture vessels.

Use: For the cultivation of *Phenylobacterium conjunctum*.

Pyes Medium (DSMZ Medium 937)

Composition per liter:

Peptone from casein.....	3.0g
Yeast extract.....	3.0g
Sodium succinate.....	2.3g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Hymenobacter aerophilus* and *Hymenobacter* sp.

PYEX Glucose Salt Medium (Peptone Yeast Extract Glucose Salt Medium)

Composition per liter:

Peptone.....	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Glucose.....	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Micrococcus luteus*.

PYF Medium

Composition per liter:

Yeast extract.....	10.0g
Fructose.....	5.0g
Peptone.....	5.0g
Pancreatic digest of casein.....	5.0g
Na ₂ HPO ₄	2.0g
L-Cysteine-HCl.....	1.0mL
Tween™ 80.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium acetobutylicum*, *Megasphaera cerevisiae*, *Megasphaera elsdenii*, *Pectinatus cerevisiiphilus*, *Pectinatus frisingensis*, *Selenomonas lactificifex*, *Zymophilus paucivorans*, and *Zymophilus raffinovorans*.

PYG Agar

Composition per liter:

Glucose.....	5.0g
Peptone.....	5.0g
Yeast extract.....	5.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Mycoplana ramosa* and *Mycoplana segnis*.

PYG Agar

Composition per liter:

Agar.....	20.0g
Proteose peptone.....	20.0g
Yeast extract.....	1.0g
Glucose solution.....	50.0mL
Sodium citrate solution.....	34.0mL
Ferric ammonium sulfate.....	10.0mL
KH ₂ PO ₄ solution.....	10.0mL
MgSO ₄ ·7H ₂ O solution.....	10.0mL
Na ₂ HPO ₄ solution.....	10.0mL
CaCl ₂ solution.....	8.0mL

pH 6.5 ± 0.5 at 25°C

Glucose Solution:

Composition per 100.0mL:

Glucose.....	36.0g
--------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 55°C.

MgSO₄·7H₂O Solution:

Composition per 100.0mL:

MgSO ₄ ·7H ₂ O.....	9.8g
---	------

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 6.5. Autoclave for 25 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Ferric Ammonium Sulfate Solution:

Composition per 100.0mL:

Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O.....	0.135g
---	--------

Preparation of Ferric Ammonium Sulfate Solution: Add Fe(NH₄)₂(SO₄)₂·6H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 6.5. Autoclave for 25 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Na₂HPO₄ Solution:

Composition per 100.0mL:

Na ₂ HPO ₄	6.7g
--	------

Preparation of Na₂HPO₄ Solution: Add Na₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 6.5. Autoclave for 25 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Sodium Citrate Solution:

Composition per 100.0mL:

Sodium citrate·2H ₂ O.....	2.9g
---------------------------------------	------

Preparation of Sodium Citrate Solution: Add 2.9g of sodium citrate·2H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 6.5. Autoclave for 25 min at 15 psi pressure–121°C. Cool to 50°–55°C.

KH₂PO₄ Solution:

Composition per 100.0mL:

KH ₂ PO ₄	3.4g
---------------------------------------	------

Preparation of KH₂PO₄ Solution: Add KH₂PO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 6.5. Autoclave for 25 min at 15 psi pressure–121°C. Cool to 50°–55°C.

CaCl₂ Solution:

Composition per 100.0mL:

CaCl₂..... 0.75g

Preparation of CaCl₂ Solution: Add CaCl₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 6.5. Autoclave for 25 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Add components, except glucose solution, sodium citrate solution, ferric ammonium sulfate solution, KH₂PO₄ solution, Na₂HPO₄ solution, CaCl₂ solution, and MgSO₄·7H₂O solution, to distilled/deionized water and bring volume to 868.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of sterile glucose solution, 34.0mL of sterile sodium citrate solution, 10.0mL of sterile ferric ammonium sulfate solution, 10.0mL of sterile KH₂PO₄ solution, 10.0mL of sterile Na₂HPO₄ solution, 8.0mL of sterile CaCl₂ solution, and 10.0mL of sterile MgSO₄·7H₂O solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Acanthamoeba astronyxis*, *Acanthamoeba castellanii*, *Acanthamoeba comandoni*, *Acanthamoeba culbertsoni*, *Acanthamoeba divionensis*, *Acanthamoeba healyi*, *Acanthamoeba quina*, *Acanthamoeba lenticulata*, *Acanthamoeba lugdunensis*, *Acanthamoeba mauritaniensis*, *Acanthamoeba palestinensis*, *Acanthamoeba pearcei*, *Acanthamoeba polyphaga*, *Acanthamoeba pustulosa*, *Acanthamoeba rhyodes*, *Acanthamoeba royreba*, *Acanthamoeba* species, *Acanthamoeba terricola*, and *Acanthamoeba triangularis*.

PYG Broth

(Peptone Yeast Extract Glucose Broth)

Composition per liter:

Peptone..... 20.0g
 D-Glucose..... 10.0g
 Yeast extract..... 10.0g
 L-cysteine·HCl·H₂O..... 0.5g
 VPI salt solution..... 40.0mL
 Resazurin solution..... 4.0mL

pH 7.2 ± 0.2 at 25°C

Resazurin Solution:

Composition per 44.0mL:

Resazurin 0.044g

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 44.0mL. Mix thoroughly.

VPI Salt Solution:

Composition per 40.0mL:

CaCl₂..... 0.2g
 MgSO₄..... 0.2g
 K₂HPO₄..... 1.0g
 KH₂PO₄..... 1.0g

Preparation of VPI Salt Solution: Add CaCl₂ and MgSO₄ to 300.0mL of distilled/deionized water. Mix thoroughly until dissolved. Bring volume to 800.0mL with distilled/deionized water. Add remaining components while stirring. Bring volume to 1.0L. Mix thoroughly. Store at 4°C.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into screw-capped tubes in 7.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C under 100% N₂.

Use: For the cultivation of a wide variety of anaerobic bacteria.

PYG Medium

See: **PY Medium with Glucose**

PYG Medium

(Peptone Yeast Extract Glucose Medium)

Composition per liter:

Proteose peptone..... 20.0g
 Glucose..... 18.0g
 Yeast extract..... 2.0g
 Sodium citrate·2H₂O..... 1.0g
 MgSO₄·7H₂O..... 0.98g
 Na₂HPO₄·7H₂O..... 0.355g
 KH₂PO₄..... 0.34g
 CaCl₂..... 0.059g
 Fe(NH₄)₂(SO₄)₂·6H₂O..... 0.02g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components, except CaCl₂, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly until dissolved. Add CaCl₂. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Distribute into screw-capped tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Acanthamoeba* species.

PYG Medium

(Peptone Yeast Extract Glucose Medium)

Composition per liter:

Agar..... 15.0g
 Glucose..... 0.25g
 Peptone..... 0.25g
 Yeast extract..... 0.25g
 Hutner's modified salt solution..... 20.0mL
 Vitamin solution..... 10.0mL

Hutner's Modified Salts Solution:

Composition per liter:

MgSO₄·7H₂O..... 29.7g
 Nitritotriacetic acid..... 10.0g
 CaCl₂·2H₂O..... 3.34g
 FeSO₄·7H₂O..... 0.1g
 Metals "44"..... 50.0mL

Preparation of Hutner's Modified Salts Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Metals "44":

Composition per 100.0mL:

ZnSO₄·7H₂O..... 1.1g
 FeSO₄·7H₂O..... 0.5g
 EDTA..... 0.25g
 MnSO₄·7H₂O..... 0.154g
 CuSO₄·5H₂O..... 0.04g
 Co(NO₃)₂·6H₂O..... 0.025g
 Na₂B₄O₇·10H₂O..... 0.018g

Preparation of Metals "44": Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine·HCl..... 0.01g
 Calcium pantothenate..... 5.0mg

Nicotinamide.....	5.0mg
Riboflavin.....	5.0mg
Thiamine·HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile vitamin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Pasteuria ramosa*.

PYG Medium
(Peptone Yeast Extract Glucose Medium)
(ATCC Medium 663)

Composition per liter:

Agar.....	20.0g
Glucose.....	3.0g
Peptone.....	1.25g
Yeast extract.....	1.25g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Eikenella corrodens*.

PYG Medium (B)
(DSMZ Medium 1139)

Composition per liter:

Yeast extract.....	10.0g
Glucose.....	10.0g
Polypeptone.....	5.0g
Tryptone.....	5.0g
Salts solution.....	40.0mL

pH 7.2 ± 0.2 at 25°C

Salts Solution:

Composition per 10.0mL:

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.4g
CaCl ₂ ·2H ₂ O.....	0.2g

Preparation of Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Use: For the cultivation of *Flavobacterium omnivorum*.

PYG Medium (E)
(DSMZ Medium 1140)

Composition per liter:

Agar.....	15.0g
Peptone.....	5.0g
Beef extract.....	3.0g
MgSO ₄ ·7H ₂ O.....	1.5g
Yeast extract.....	0.2g
Glucose.....	5.0g
NaCl.....	0.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Pour into Petri dishes or leave in tubes.

Use: For the cultivation of *Flavobacterium glaciei*.

PYG Medium, Modified

Composition per 961.0mL:

Yeast extract.....	10.0g
Beef extract.....	5.0g
Glucose.....	5.0g
Peptone.....	5.0g
Trypticase™.....	5.0g
K ₂ HPO ₄	2.0g
L-Cysteine·HCl.....	0.5g
Resazurin.....	1.0mg
Salt solution.....	40.0mL
Hemin solution.....	10.0mL
Tween™ 80.....	1.0mL
Vitamin K ₁ solution.....	0.2mL

pH 7.2 ± 0.2 at 25°C

Salt Solution:

Composition per liter:

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.25g

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Hemin Solution:

Composition per 100.0mL:

Hemin.....	50.0mg
NaOH (1N solution).....	1.0mL

Preparation of Hemin Solution: Add hemin to 1.0mL of NaOH solution. Mix thoroughly until dissolved. Bring volume to 100.0mL with distilled/deionized water. Mix thoroughly. Store at 4°C.

Vitamin K₁ Solution:

Composition per 20.0mL:

Vitamin K ₁	0.1g
Ethanol (95% solution).....	20.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 95% ethanol and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Store in a brown glass bottle at 4°C.

Preparation of Medium: Add components, except L-cysteine-HCl, vitamin K₁ solution, and hemin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to room temperature while sparging with 100% CO₂. Add L-cysteine-HCl, vitamin K₁ solution, and hemin solution. Mix thoroughly. Adjust pH to 7.2 using 8N NaOH while continuing to sparge with 100% CO₂. After pH has been attained sparge with 100% N₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Acetomicrobium flavidum*, *Actinomyces denticolens*, *Actinomyces hordeovulneris*, *Actinomyces meyeri*, *Actinomyces pyogenes*, *Anaerobiospirillum succiniciproducens*, *Arcanobacterium haemolyticum*, *Atopobium minutum*, *Atopobium parvulum*, *Atopobium rimae*, *Bacteroides eggerthii*, *Bacteroides helcogenes*, *Bacteroides pyogenes*, *Bacteroides species*, *Bacteroides suis*, *Bacteroides uniformis*, *Bifidobacterium gallinarum*, *Clostridium beijerinckii*, *Clostridium butyricum*, *Clostridium species*, *Clostridium xylanolyticum*, *Coriobacterium glomerans*, *Eubacterium combesii*, *Eubacterium limosum*, *Eubacterium multiforme*, *Eubacterium nitritogenes*, *Eubacterium tenue*, *Fusobacterium naviforme*, *Fusobacterium necrophorum*, *Fusobacterium nucleatum*, *Gemella morbillorum*, *Lactobacillus catenaformis*, *Lactobacillus crispatus*, *Megamonas hypermegas*, *Megasphaera cerevisiae*, *Megasphaera elsdenii*, *Mitsuokella multiacidus*, *Peptostreptococcus anaerobius*, *Peptostreptococcus indolicus*, *Peptostreptococcus magnus*, *Peptostreptococcus prevotii*, *Peptostreptococcus productus*, *Peptostreptococcus species*, *Peptostreptococcus tetradius*, *Prevotella bivia*, *Prevotella buccae*, *Prevotella buccalis*, *Prevotella denticola*, *Prevotella disiens*, *Prevotella intermedia*, *Propionibacterium acnes*, *Propionibacterium avidum*, *Propionibacterium freudenreichii*, *Propionibacterium granulosum*, *Propionibacterium lymphophilum*, *Selenomonas sputigena*, *Staphylococcus saccharolyticus*, *Streptococcus constellatus*, *Streptococcus hansenii*, *Streptococcus intermedius*, and *Streptococcus pleomorphus*.

PYG Medium for *Spirillum* (Peptone Yeast Extract Glucose Medium for *Spirillum*)

Composition per liter:

Agar	15.0g
Peptone.....	10.0g
Yeast extract.....	5.0g
Glucose solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Glucose Solution:

Composition per 10.0mL:

D-Glucose.....	3.0g
----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Spirillum pleomorphum*.

PYG Medium with Volatile Fatty Acids

Composition per 1003.3mL:

Yeast extract.....	10.0g
Beef extract.....	5.0g
Glucose	5.0g
Trypticase™.....	5.0g
L-Cysteine-HCl	0.5g
(NH ₄) ₂ SO ₄	0.5g
Hemin	5.0mg
Resazurin	1.0mg
Mineral solution.....	40.0mL
Fatty acid mixture.....	3.1mL
NaOH (1N solution).....	0.5mL
Vitamin K ₁ solution	0.2mL

pH 6.9 ± 0.2 at 25°C

Mineral Solution:

Composition per liter:

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.48g
CaCl ₂ ·2H ₂ O	0.3g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Fatty Acid Mixture:

Composition per 31.0mL:

Acetic acid.....	17.0mL
Propionic acid.....	6.0mL
n-Butyric acid	4.0mL
DL-2-Methylbutyric acid.....	1.0mL
iso-Butyric acid.....	1.0mL
iso-Valeric acid.....	1.0mL
n-Valeric acid.....	1.0mL

Preparation of Fatty Acid Mixture: Combine components.

Vitamin K₁ Solution:

Composition per 10.0mL:

Vitamin K ₁	0.05g
Ethanol (95% solution).....	10.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 95% ethanol and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Store in a brown glass bottle at 4°C.

Preparation of Medium: Dissolve hemin in 0.5mL of 1N NaOH. Add remaining components, except L-cysteine-HCl, and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to room temperature while sparging with 100% CO₂. Add L-cysteine-HCl. Mix thoroughly. Adjust pH to 6.0 using 8N NaOH while continuing to sparge with 100% CO₂. After pH has been attained, sparge with 100% N₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Acetivibrio ethanolgignens* and *Bacteroides xylanolyticus*.

PYG with 0.1% Tween™ 80

Composition per 1004.2mL:

Glucose	10.0g
Yeast extract.....	10.0g
Peptone	5.0g

Pancreatic digest of casein.....	5.0g
Tween™ 80.....	1.0g
L-Cysteine·HCl·H ₂ O.....	0.5g
Salts solution.....	40.0mL
Hemin solution.....	10.0mL
Resazurin (0.025% solution).....	4.0mL
Vitamin K ₁ solution.....	0.2mL

pH 7.0 ± 0.2 at 25°C

Salts Solution:**Composition per liter:**

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂ , anhydrous.....	0.2g
MgSO ₄	0.2g

Preparation of Salts Solution: Add CaCl₂ and MgSO₄ to distilled/deionized water and bring volume to 300.0mL. Add 500.0mL of distilled/deionized water. Add the remaining components while swirling slowly. Add 200.0mL of distilled/deionized water. Mix thoroughly. Store at 4°C.

Hemin Solution:**Composition per 100.0mL:**

Hemin.....	50.0mg
NaOH (1N solution).....	1.0mL

Preparation of Hemin Solution: Dissolve hemin in 1.0mL of 1N NaOH solution. Bring volume to 100.0mL with distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin K₁ Solution:**Composition per 30.15mL:**

Ethanol (95% solution).....	30.0mL
Vitamin K ₁	0.15mL

Preparation of Vitamin K₁ Solution: Combine components. Mix thoroughly. Store at 4°C in the dark. Discard solution after 1 month.

Preparation of Medium: Add components, except the 0.5g of L-cysteine·HCl·H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Add L-cysteine·HCl·H₂O. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus uli* and *Atopobium rimaie*.

Pygeye Agar**Composition per liter:**

Agar.....	15.0g
Glucose.....	10.0g
Neopeptone.....	5.0g
Yeast extract.....	0.5g
Egg yolk emulsion, 50%.....	200.0mL

Egg Yolk Emulsion, 50%:**Composition per 200mL:**

Chicken egg yolks.....	22
Whole chicken egg.....	2
NaCl (0.9% solution).....	100.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 2 chicken eggs. Beat to form emulsion. Measure 100.0mL of egg yolk emulsion and add to

100.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Preparation of Medium: Add components, except egg yolk emulsion, 50%, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 200.0mL of sterile egg yolk emulsion, 50%. Mix thoroughly. Pour into sterile Petri dishes in 15.0mL volumes.

Use: For the cultivation and maintenance of *Conidiobolus apiculatus*, *Conidiobolus obscurus*, *Dactylella oviparasitica*, *Entomophthora aphidis*, *Entomophthora ignobilis*, *Entomophthora sphaerosperma*, and *Erynia blunckii*.

PYGHS Medium**Composition per 60.0mL:**

Beef heart, solids from infusion.....	10.0g
Glucose.....	1.0g
Polypeptone™.....	1.0g
Yeast extract.....	1.0g
L-Cysteine·HCl·H ₂ O.....	0.9g
Ionagar No. 2.....	0.72g
NaHCO ₃	0.5g
Tryptose.....	0.2g
NaCl.....	0.1g
Resazurin.....	0.16mg
Rabbit serum, inactivated.....	5.0mL
Salts solution.....	5.0mL

pH 7.2–7.5 at 25°C

Salts Solution:**Composition per 400.0mL:**

K ₂ HPO ₄	0.9g
NaCl.....	0.8g
KH ₂ PO ₄	0.4g
MnCl ₂ ·4H ₂ O.....	0.16g
MgSO ₄	0.08g

Preparation of Salts Solution: Add components to distilled/deionized water and bring volume to 400.0L. Mix thoroughly.

Preparation of Medium: Add components, except rabbit serum, to distilled/deionized water and bring volume to 55.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 5.0mL of sterile rabbit serum. Mix thoroughly.

Use: For the cultivation of treponemes.

PYGM Medium**(Peptone Yeast Extract Glucose Maltose Medium)****Composition per 261.0mL:**

Peptone.....	5.0g
Yeast extract.....	2.5g
Glucose.....	1.25g
Maltose.....	1.25g
L-Cysteine·HCl·H ₂ O.....	0.125g
Salts solution.....	10.0mL
Resazurin (0.025% solution).....	1.0mL

Salts Solution:**Composition per 100.0mL:**

NaHCO ₃	1.0g
NaCl.....	0.2g
K ₂ HPO ₄	0.1g

KH ₂ PO ₄	0.1g
CaCl ₂ , anhydrous	0.02g
MgSO ₄	0.02g
H ₂ SO ₄ (50% solution).....	0.3mL
Na ₂ MoO ₄ ·2H ₂ O	1.0μg
CoCl ₂ ·6H ₂ O	1.0μg

Preparation of Salts Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 261.0mL. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacteroides praeacutus*, *Eubacterium nitritogenes*, *Lactobacillus ruminis*, and *Tissierella praeacuta*.

**PYGS Agar
(Peptone Yeast Glucose Seawater Agar)
(ATCC Medium 1973)**

Composition per liter:

Agar	15.0g
Glucose	3.0g
Peptone.....	1.25g
Yeast extract.....	1.25g
Seawater.....	25.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to cold distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of marine bacteria.

PYGV Agar

Composition per liter:

Agar	15.0g
Peptone.....	0.25g
Yeast extract.....	0.25g
Hutner's basal salts solution	20.0mL
Glucose solution	10.0mL
Vitamin solution 2X.....	5.0mL

pH 7.5 ± 0.2 at 25°C

Hutner's Basal Salts Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitrilotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O.....	3.335g
FeSO ₄ ·7H ₂ O.....	99.0mg
(NH ₄) ₆ MoO ₇ O ₂₄ ·4H ₂ O	9.25mg
"Metals 44"	50.0mL

"Metals 44":

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.095g
FeSO ₄ ·7H ₂ O.....	0.5g
Sodium EDTA.....	0.25g
MnSO ₄ ·H ₂ O.....	0.154g
CuSO ₄ ·5H ₂ O	39.2mg
Co(NO ₃) ₂ ·6H ₂ O	24.8mg
Na ₂ B ₄ O ₇ ·10H ₂ O.....	17.7mg

Preparation of "Metals 44": Add sodium EDTA to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Add a few drops of concentrated H₂SO₄ to retard precipitation of heavy metal ions. Add remaining components. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Hutner's Basal Salts Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Glucose Solution:

Composition per 10.0mL:

D-Glucose.....	0.25g
----------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Vitamin Solution 2X:

Composition per liter:

Pyridoxine·HCl.....	20.0mg
p-Aminobenzoic acid.....	10.0mg
Calcium DL-pantothenate.....	10.0mg
Nicotinamide.....	10.0mg
Riboflavin	10.0mg
Thiamine·HCl	10.0mg
Biotin	4.0mg
Folic acid	4.0mg
Vitamin B ₁₂	0.2mg

Preparation of Vitamin Solution 2X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Store in the dark at 5°C.

Preparation of Medium: Add components, except glucose solution and vitamin solution 2X, to distilled/deionized water and bring volume to 985.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.5 with 6N KOH (approximately 6 drops). Autoclave for 20 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile glucose solution and 5.0mL of sterile vitamin solution 2X. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Blastobacter aggregatus*, *Blastobacter capsulatus*, *Blastobacter denitrificans*, *Planctomyces limnophilus*, and *Gemmobacter aquatilis*.

**PYGV Marine Medium
(Peptone Yeast Extract Glucose
Vitamin Marine Medium)**

Composition per liter:

Agar	15.0g
Peptone	0.25g
Yeast extract.....	0.25g
Mineral salt solution	20.0mL
Glucose solution	10.0mL
Vitamin solution.....	5.0mL

pH 7.5 ± 0.2 at 25°C

Mineral Salt Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitrilotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.34g
FeSO ₄ ·7H ₂ O.....	0.099g

Na ₂ MoO ₄ ·2H ₂ O	0.013g
Metals "44"	50.0mL

Preparation of Mineral Salt Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Readjust pH to 7.2.

Metals "44":

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.1g
FeSO ₄ ·7H ₂ O	0.5g
EDTA	0.25g
MnSO ₄ ·7H ₂ O	0.154g
CuSO ₄ ·5H ₂ O	0.04g
Co(NO ₃) ₂ ·6H ₂ O	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O	0.018g

Preparation of Metals "44": Add a few drops of H₂SO₄ to distilled/deionized water to inhibit precipitate formation. Add components to acidified distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Glucose Solution:

Composition per 100.0mL:

D-Glucose	2.5g
-----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	0.02g
<i>p</i> -Aminobenzoic acid	0.01g
Calcium D-pantothenate	0.01g
Nicotinamide	0.01g
Riboflavin	0.01g
Thiamine-HCl	0.01g
Biotin	4.0mg
Folic acid	4.0mg
Cyanocobalamin	0.2mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution and vitamin solution, to seawater and bring volume to 985.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile glucose solution and 5.0mL of sterile vitamin solution. Mix thoroughly. Adjust pH to 7.5 with sterile KOH if necessary. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Planctomyces brasiliensis*.

PYGV Medium

(Peptone Yeast Extract Glucose Vitamin Medium)

Composition per liter:

Agar	15.0g
Peptone	0.25g
Yeast extract	0.25g
Mineral salt solution	20.0mL

Glucose solution	10.0mL
Vitamin solution	5.0mL

pH 7.5 ± 0.2 at 25°C

Mineral Salt Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitrilotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.34g
FeSO ₄ ·7H ₂ O	99.0mg
Na ₂ MoO ₄ ·2H ₂ O	12.67mg
Metals "44"	50.0mL

Preparation of Mineral Salt Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Readjust pH to 7.2.

Metals "44":

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.1g
FeSO ₄ ·7H ₂ O	0.5g
EDTA	0.25g
MnSO ₄ ·7H ₂ O	0.154g
CuSO ₄ ·5H ₂ O	0.04g
Co(NO ₃) ₂ ·6H ₂ O	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O	0.018g

Preparation of Metals "44": Add a few drops of H₂SO₄ to distilled/deionized water to inhibit precipitate formation. Add components to acidified distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Glucose Solution:

Composition per 100.0mL:

D-Glucose	2.5g
-----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	0.02g
<i>p</i> -Aminobenzoic acid	0.01g
Calcium D-pantothenate	0.01g
Nicotinamide	0.01g
Riboflavin	0.01g
Thiamine-HCl	0.01g
Biotin	4.0mg
Folic acid	4.0mg
Cyanocobalamin	0.2mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution and vitamin solution, to distilled/deionized water and bring volume to 985.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile glucose solution and 5.0mL of sterile vitamin solution. Mix thoroughly. Adjust pH to 7.5 with sterile KOH if necessary. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Blastobacter aggregatus*, *Blastobacter capsulatus*, *Blastobacter denitrificans*, and *Planctomyces limnophilus*.

PYGV Medium

Composition per liter:

Agar	15.0g
Peptone.....	0.25g
Yeast extract.....	0.25g
Mineral solution	20.0mL
Glucose solution	10.0mL
Vitamin solution.....	5.0mL

pH 7.5 ± 0.2 at 25°C

Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	29.7g
NaMoO ₄ ·2H ₂ O.....	12.67g
Nitritotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O.....	3.34g
FeSO ₄ ·7H ₂ O.....	0.1g
Metals “44” solution.....	50.0mL

Preparation of Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Readjust pH to 7.2 with H₂SO₄ or KOH. Add distilled/deionized water to 1.0L. Store at 5°C.

Metals “44” Solution:

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O.....	1.1g
FeSO ₄ ·7H ₂ O.....	0.5g
EDTA.....	0.25g
MnSO ₄ ·7H ₂ O.....	0.154g
CuSO ₄ ·5H ₂ O.....	0.04g
Co(NO ₃) ₂ ·6H ₂ O.....	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O.....	0.018g

Preparation of Metals “44” Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Glucose Solution:

Composition per 100.0mL:

D-Glucose	2.5g
-----------------	------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per liter:

Pyridoxin·HCl.....	0.02g
p-Aminobenzoic acid.....	0.01g
Ca-pantothenate.....	0.01g
Nicotinamide.....	0.01g
Riboflavin.....	0.01g
Thiamine·HCl.....	0.01g
Biotin.....	4.0mg
Folic acid.....	4.0mg
Vitamin B ₁₂	0.2mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L.

Preparation of Medium: Add components, except glucose solution and vitamin solution, to distilled/deionized water and bring volume to 985.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 60°C. Aseptically add 10.0mL of sterile glucose solution and 5.0mL of sterile vitamin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the enrichment of *Stella* species from polluted waters.

**Pyrazinamidase Agar
(Pyrazinamide Medium)**

Composition per liter:

Pancreatic digest of casein.....	15.0g
Agar.....	15.0g
Papaic digest of soybean meal.....	5.0g
NaCl.....	5.0g
Yeast extract.....	3.0g
Pyrazinecarboxamide.....	1.0g
Tris(hydroxymethyl)amino- methane maleate buffer (0.2M, pH 6.0).....	1.0L

pH 6.0 ± 0.2 at 25°C

Preparation of Medium: Combine components. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation, differentiation, and maintenance of pathogenic *Yersinia* species. Bacteria that produce pyrazinamidase turn the medium pink.

**Pyrazinamidase Agar
(BAM M131)**

Composition per liter:

Pancreatic digest of casein.....	11.25g
Agar.....	11.25g
Papaic digest of soybean meal.....	3.75g
NaCl.....	3.75g
Yeast extract.....	3.0g
Pyrazine-carboxamide.....	1.0g
Tris maleate, 0.2M, pH6.0.....	1.0L

pH 6.0 ± 0.2 at 25°C

Preparation of Medium: Add components to 0.2M tris maleate and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. For slants allow tubes to cool in an inclined position.

Use: For the cultivation of *Yersinia* spp.

Pyrazinamide Medium

Composition per liter:

Agar.....	15.0g
Na ₂ HPO ₄	2.5g
Sodium pyruvate.....	2.0g
L-Asparagine.....	2.0g
KH ₂ PO ₄	1.0g
Pancreatic digest of casein.....	0.5g
Tween™ 80.....	0.2g
Pyrazinamide.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.5mg
CuSO ₄ ·5H ₂ O.....	0.1mg
ZnSO ₄ ·7H ₂ O.....	0.1mg
Ferric ammonium citrate.....	0.05g
MgSO ₄ ·7H ₂ O.....	0.01g

pH 6.6 ± 0.2 at 25°C

Preparation of Medium: Combine components. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 5.0mL vol-

umes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation and differentiation of *Corynebacterium* species and related organisms. Bacteria that produce pyrazinamidase turn the medium pink.

Pyridine Medium

Composition per 1001.0mL:

K ₂ HPO ₄	0.61g
KH ₂ PO ₄	0.39g
KCl.....	0.25g
Yeast extract.....	0.15g
MgSO ₄ ·7H ₂ O.....	0.13g
Pyridine.....	1.0mL
Trace elements solution.....	1.0mL

Trace Elements Solution:

Composition per liter:

FeSO ₄ ·7H ₂ O.....	40.0mg
MnSO ₄ ·4H ₂ O.....	40.0mg
ZnSO ₄ ·7H ₂ O.....	20.0mg
CuSO ₄ ·5H ₂ O.....	5.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	5.0mg
CoCl ₂ ·6H ₂ O.....	4.0mg
CaCl ₂ ·2H ₂ O.....	0.4mg
NaCl.....	1.0g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except pyridine, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. In a fume hood, aseptically add 1.0mL of pyridine. Mix thoroughly. Aseptically distribute into sterile tubes or flasks. Use polyurethane foam closures to eliminate odors caused by volatilization of pyridine.

Use: For the cultivation of *Micrococcus luteus*.

Pyridoxine Assay Medium

Composition per liter:

Sucrose.....	30.0g
Ammonium tartrate.....	10.0g
KH ₂ PO ₄	5.0g
Sodium dihydrogen citrate.....	4.0g
MgSO ₄ ·7H ₂ O.....	1.0g
CaCl ₂ ·2H ₂ O.....	0.2g
NaCl.....	0.2g
Choline chloride.....	0.01g
FeCl ₃	0.01g
Thiamine-HCl.....	0.01g
ZnSO ₄ ·7H ₂ O.....	4.0mg
Nicotinic acid.....	2.0mg
Calcium pantothenate.....	1.0mg
Riboflavin.....	1.0mg
<i>p</i> -Aminobenzoic acid.....	200µg
Biotin.....	8µg

pH 4.5 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in 5.0mL volumes. Add standard solutions and test solutions to each tube. Bring volume of each tube to 10.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the microbiological assay of pyridoxine using *Neurospora sitophila* as the test organism.

Pyridoxine Y Medium

Composition per liter:

Glucose.....	40.0g
(NH ₄) ₂ SO ₄	4.0g
L-Asparagine.....	4.0g
KH ₂ PO ₄	3.0g
MgSO ₄ ·7H ₂ O.....	1.0g
CaCl ₂ ·2H ₂ O.....	0.49g
DL-Isoleucine.....	0.04g
DL-Methionine.....	0.04g
DL-Tryptophan.....	0.04g
DL-Valine.....	0.04g
L-Histidine-HCl.....	0.02g
Riboflavin.....	0.02g
Biotin salt.....	8.0mg
Inositol.....	5.0mg
FeSO ₄ ·7H ₂ O.....	0.5mg
Calcium pantothenate.....	0.4mg
Nicotinic acid.....	0.4mg
Thiamine-HCl.....	0.4mg
H ₃ BO ₃	0.2mg
KI.....	0.2mg
CuSO ₄ ·5H ₂ O.....	0.09mg
MnSO ₄ ·H ₂ O.....	0.08mg
ZnSO ₄ ·7H ₂ O.....	0.08mg
(NH ₄) ₂ MoO ₄	0.04mg

pH 4.4 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in 5.0mL volumes. Add standard solutions and test solutions to each tube. Bring volume of each tube to 10.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the microbiological assay of pyridoxine using *Saccharomyces uvarum* as the test organism.

Pyrobaculum calidifontis Medium (DSMZ Medium 1090)

Composition per liter:

Tryptone.....	10.0g
Na ₂ S ₂ O ₃	3.0g
Yeast extract.....	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 with NaOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pyrobaculum calidifontis*.

Pyrobaculum Medium

Composition per liter:

Na ₂ S ₂ O ₃ ·5H ₂ O	2.0g
(NH ₄) ₂ SO ₄	1.3g
Peptone.....	0.5g
Na ₂ S·9H ₂ O.....	0.5g
KH ₂ PO ₄	0.28g
MgSO ₄ ·7H ₂ O.....	0.25g
Yeast extract.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.07g
FeCl ₃ ·6H ₂ O.....	0.02g
Resazurin	1.0mg
MnCl ₂ ·4H ₂ O.....	1.8mg
Na ₂ B ₄ ·10H ₂ O.....	4.5mg
ZnSO ₄ ·7H ₂ O.....	0.22mg
CuCl ₂ ·2H ₂ O.....	0.05mg
Na ₂ MoO ₄ ·2H ₂ O.....	0.03mg
VOSO ₄ ·2H ₂ O.....	0.03mg
CoSO ₄	0.01mg

Preparation of Medium: Add components, except peptone, yeast extract, and Na₂S·9H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Bring pH to 6.0 using 8N NaOH. Sparge with 100% N₂ for 30 min. Add peptone, yeast extract, and Na₂S·9H₂O. Bring pH back to 6.0 using 10N H₂SO₄. Anaerobically distribute into sterile tubes or flasks under 100% N₂. Do not autoclave medium. If not used immediately, heat the medium to 90°C for 60 min on each of 3 consecutive days.

Use: For the cultivation and maintenance of *Pyrobaculum islandicum*.

Pyrobaculum Medium

Composition per liter:

Sulfur, powdered.....	20.0g
(NH ₄) ₂ SO ₄	1.3g
Peptone.....	0.5g
Na ₂ S·9H ₂ O.....	0.5g
KH ₂ PO ₄	0.28g

VOSO ₄ ·2H ₂ O.....	0.03mg
CoSO ₄	0.01mg

Preparation of Medium: Add components, except peptone, yeast extract, and Na₂S·9H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Bring pH to 6.0 using 8N NaOH. Sparge with 100% N₂ for 30 min. Add peptone, yeast extract, and Na₂S·9H₂O. Bring pH back to 6.0 using 10N H₂SO₄. Anaerobically distribute into sterile tubes or flasks under 100% N₂. Do not autoclave medium. If not used immediately, heat the medium to 90°C for 60 min on each of three consecutive days.

Use: For the cultivation and maintenance of *Pyrobaculum organotrophum*.

Pyrococcus endeavori Medium ES4

Composition per 3.0L:

Solution A.....	1.0L
Solution B.....	1.0L
Solution C.....	1.0L

Solution A:

Composition per liter:

NaCl.....	47.8g
Na ₂ SO ₄	8.0g
KCl.....	1.4g
NaHCO ₃	0.4g
KBr.....	0.2g
H ₃ BO ₃	0.06g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per liter:

MgCl ₂ ·6H ₂ O.....	21.6g
CaCl ₂ ·2H ₂ O.....	3.0g
SrCl ₂ ·6H ₂ O.....	0.05g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per liter:

Sodium acetate.....	50.0g
NH ₄ Cl.....	12.5g
K ₂ HPO ₄	7.0g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 1.0L of sterile solution A with 1.0L of sterile solution B and 1.0L of sterile solution C. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Pyrococcus endeavori*.

Pyrococcus furiosus Medium

Composition per liter:

NaCl.....	13.8g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
Maltose.....	5.0g
MgSO ₄	3.5g
MgCl ₂	2.75g
KH ₂ PO ₄	0.5g
CaCl ₂	0.75g
KCl.....	0.325g
NaBr.....	50.0mg
KI.....	50.0mg
H ₃ BO ₃	15.0mg
SrCl ₂	7.5mg
Citric acid.....	5.0mg
Resazurin.....	2.5mg
Mineral solution.....	10.0mL

pH 6.8 ± 0.2 at 25°C

Mineral Solution:**Composition per liter:**

Nitritotriacetic acid	1.0g
MnSO ₄	0.5g
FeCl ₃ ·6H ₂ O	1.1g
Na ₂ WO ₄ ·2H ₂ O	0.3g
EDTA	0.292g
NiCl ₂ ·6H ₂ O	0.2g
CoSO ₄ ·7H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Mix thoroughly. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of high cell concentrations of *Pyrococcus furiosus*.

Pyrococcus* Medium*Composition per liter:**

Sulfur	30.0g
NaCl	13.85g
Peptone	5.0g
MgSO ₄ ·7H ₂ O	3.5g
MgCl ₂ ·6H ₂ O	2.75g
Yeast extract	1.0g
CaCl ₂	0.75g
KH ₂ PO ₄	0.5g
KCl	0.325g
NaBr	0.05g
H ₃ BO ₃	15.0mg

Citric acid	5.0mg
(NH ₄) ₂ Ni(SO ₄) ₂	2.0mg
Resazurin	1.0mg
KI	0.05mg
Trace minerals solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

Trace Minerals Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.1g
CoSO ₄ (or CoCl ₂)	0.1g
FeSO ₄ ·7H ₂ O	0.1g
ZnSO ₄	0.1g
AlK(SO ₄) ₂	0.01g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoSO ₄ 2H ₂ O	0.01g

Preparation of Trace Minerals Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with

KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 7.0.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.3g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5 with H₂SO₄. Do not autoclave. Sterilize by steaming at 100°C for 30 min on 3 consecutive days. Before inoculation, add 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Pyrococcus furiosus* and *Pyrococcus woesei*.

Pyrococcus/Staphylothermus* Medium*Composition per 1010.0mL:**

Sulfur, powdered	30.0g
NaCl	13.85g
Peptone	5.0g
MgSO ₄ ·7H ₂ O	3.5g

SrCl ₂ ·6H ₂ O	7.5mg
Citric acid	5.0mg
Resazurin	1.0mg
KI	0.05mg
Trace elements solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 6.5 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Adjust pH to 7.0. Add distilled/deionized water to 1.0L.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**Na₂S·9H₂O 0.5g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to room temperature while sparging with 100% N₂. Bring pH to 6.5 using 10N H₂SO₄. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Immediately prior to inoculation, add 0.1mL of sterile Na₂S·9H₂O solution to each 10.0mL of medium. Check that final pH is 6.5.

Use: For the cultivation and maintenance of *Pyrococcus furiosus*, *Pyrococcus woesei*, and *Staphylothermus marinus*.

Pyrodictium abyssi* Medium*Composition per liter:**

Sulfur, powdered.....	30.0g

Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
Na ₂ WO ₄ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.30mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 1.0 with H₂SO₄.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

KI Solution:

Composition per 10.0mL:

KI.....	5.0mg
---------	-------

Preparation of KI Solution: Add KI to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 80% H₂ + 20% CO₂. Distribute into serum bottles under 80% H₂ + 20% CO₂, e.g., 20mL into 120mL serum bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically inject Na₂S·9H₂O solution, 0.2mL per 20mL medium. Mix thoroughly. Adjust pH to 5.5. After inoculation pressurize vials to 2 bar overpressure with 80% H₂ + 20% CO₂ gas mixture.

Use: For the cultivation of *Pyrolobus fumarii*.

Pyrrolidone Agar

Composition per liter:

Noble agar.....	21.0g
K ₂ HPO ₄	5.65g
KH ₂ PO ₄	2.95g
MgSO ₄ ·7H ₂ O.....	1.0g
Pyrrolidone carboxylic acid solution.....	30.0mL
NaOH solution.....	30.0mL
Trace metals.....	6.3mL

Pyrrolidone Carboxylic Acid Solution:

Composition per 300.0mL:

Pyrrolidone carboxylic acid.....	50.0g
----------------------------------	-------

Preparation of Pyrrolidone Carboxylic Acid Solution: Add pyrrolidone carboxylic acid to distilled/deionized water and bring volume to 300.0mL. Mix thoroughly. Filter sterilize.

NaOH Solution:

Composition per 100.0mL:

NaOH.....	5.0g
-----------	------

Preparation of NaOH Solution: Add NaOH to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Metals:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	0.18g
MnCl ₂ ·2H ₂ O.....	0.13g
CuSO ₄ ·5H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.02g

Preparation of Trace Metals: Add a few drops of H₂SO₄ to distilled/deionized water to inhibit precipitate formation. Add components to acidified distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except pyrrolidone carboxylic acid solution and NaOH solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 30.0mL of sterile pyrrolidone carboxylic acid solution and 30.0mL of sterile NaOH solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Pseudomonas fluorescens*.

Pyruvate Utilization Medium

Composition per liter:

Sodium pyruvate.....	10.0g
Pancreatic digest of casein.....	10.0g
K ₂ HPO ₄	5.0g
NaCl.....	5.0g

Yeast extract.....	5.0g
Bromthymol Blue	0.1g
pH 7.1–7.4 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.1–7.4. Distribute into tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of bacteria that can metabolize pyruvate. Bacteria that can utilize pyruvate turn the medium yellow.

Pyruvic Acid Egg Medium

Composition per 1640.0mL:

KH ₂ PO ₄	11.4g
D-Glucose.....	10.0g
Na ₂ HPO ₄	6.0g
Pyruvic acid	3.0g
MgSO ₄ ·7H ₂ O	0.3g
Malachite Green.....	0.125g
Egg, homogenized whole.....	1.0L
Penicillin solution	10.0mL

Source: This medium is available as a prepared medium from Oxoid Unipath.

Penicillin Solution:

Composition per 10.0mL:

Penicillin G	100,000U
--------------------	----------

Preparation of Penicillin Solution: Add penicillin G to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Homogenized Whole Egg:

Composition per liter:

Whole eggs	18–24
------------------	-------

Preparation of Homogenized Whole Egg: Use fresh eggs, less than 1 week old. Scrub the shells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. Break the eggs into a sterile container. Homogenize by shaking. Filter through four layers of sterile cheesecloth into a sterile graduated cylinder. Measure out 1.0L.

Preparation of Medium: Add components, except homogenized whole egg and penicillin solution, to distilled/deionized water and bring volume to 630.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add homogenized whole egg and penicillin solution to cooled sterile basal medium. Mix thoroughly. Aseptically distribute into sterile tubes. Inspissate at 85°–90°C (moist heat) for 45 min.

Use: For the isolation and cultivation of *Mycobacterium* species, especially ones that are drug resistant and difficult to grow.

PYS Agar

(Peptone Yeast Extract Salt Agar)

Composition per liter:

Agar	15.0g
Peptone.....	15.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
pH 7.2–7.4 at 25°C	

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Dis-

tribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinomadura madurae*.

PYS Medium

(DSMZ Medium 1117)

Composition per liter:

Peptone	8.0g
Yeast extract	4.0g
NaCl	2.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Geobacillus toebii* subsp. *decanicus*.

PYSE Medium

(DSMZ Medium 1120)

Composition per liter:

NaCl	15.0g
MgCl ₂ ·6H ₂ O	5.4g
Peptone	8.0g
Yeast extract	3.0g
MgSO ₄ ·7H ₂ O	2.65g
CaSO ₄ ·2H ₂ O	0.65g
KCl	0.35g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Cobwellia maris*.

Quinoline Medium

Composition per 1000.2mL:

K ₂ HPO ₄	0.61g
KH ₂ PO ₄	0.39g
KCl.....	0.25g
Yeast extract.....	0.1g
Wolfe's mineral solution.....	10.0mL
Quinoline	0.2mL

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitilotriacetic acid	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Preparation of Medium: Add components, except quinoline, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. In a fume hood, aseptically add 0.2mL of quinoline. Mix thoroughly. Aseptically distribute into sterile tubes or flasks. Use polyurethane foam closures to eliminate odors caused by volatilization of quinoline.

Use: For the cultivation of *Rhodococcus* species.

Quinolinic Acid Medium

Composition per liter:

Quinolinic acid.....	1.5g
K ₂ HPO ₄	1.1g
NH ₄ NO ₃	1.0g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.25g

Preparation: Add quinolinic acid to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Bring pH to 7.0 with NaOH. Add other components. Bring volume to 1.0L. Mix thoroughly.

Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of microorganisms that can utilize quinolinic acid as sole carbon source.

R Agar

Composition per liter:

Agar.....	20.0g
Peptone.....	10.0g
Casamino acids.....	5.0g
Malt extract.....	5.0g
Yeast extract.....	5.0g
Beef extract.....	2.0g
Glycerol.....	2.0g
MgSO ₄ ·7H ₂ O.....	1.0g
Tween™ 80.....	50.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Arthrobacter polychromogenes*, *Arthrobacter protophormia*, *Aureobacterium* species, *Brevibacterium acetylicum*, *Brevibacterium linens*, *Cellulomonas cartae*, *Clavibacter michiganense*, *Corynebacterium* species, *Curtobacterium citreum*, *Curtobacterium albidum*, *Curtobacterium flaccumfaciens*, *Curtobacterium insectiphilium*, *Curtobacterium luteum*, *Curtobacterium pusillum*, *Curtobacterium* species, *Dermabacter hominus*, *Microbacterium arborescens*, *Microbacterium imperiale*, *Microbacterium lacticum*, *Mycobacterium acapulcensis*, *Mycobacterium* species, *Nocardioides fastidiosa*, *Rhizomonas suberifaciens*, *Rhodococcus luteus*, *Rhodococcus maris*, *Staphylococcus carnosus*, *Staphylococcus* species, *Terrabacter tumescens*, and *Tsakumurella paurometabolum*.

R Agar for Phage Lysates

Composition per liter:

Agar.....	12.0g
Pancreatic digest of casein.....	10.0g
NaCl.....	8.0g
Yeast extract.....	1.0g
Glucose solution.....	5.0mL
CaCl ₂ ·2H ₂ O solution.....	2.0mL

pH 6.8 ± 0.2 at 25°C

Glucose Solution:

Composition per 10.0mL:

D-Glucose.....	2.0g
----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

CaCl₂·2H₂O Solution:

Composition per 10.0mL:

CaCl ₂ ·2H ₂ O.....	1.47g
---	-------

Preparation of CaCl₂·2H₂O Solution: Add the CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution and CaCl₂·2H₂O solution, to distilled/deionized water and bring volume to 993.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 5.0mL of glucose solution and 2.0mL of CaCl₂·2H₂O solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of bacterial host cells in the production of bacteriophage lysates.

R Agar with Catalase

Composition per liter:

Agar.....	20.0g
Peptone.....	10.0g
Casamino acids.....	5.0g
Malt extract.....	5.0g
Yeast extract.....	5.0g
Beef extract.....	2.0g
Glycerol.....	2.0g
MgSO ₄ ·7H ₂ O.....	1.0g
Catalase.....	60.0mg
Tween™ 80.....	50.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Rarobacter faecitabidus*.

R Agar with 3% Sodium Chloride

Composition per liter:

NaCl.....	30.0g
Agar.....	20.0g
Peptone.....	10.0g
Casamino acids.....	5.0g
Malt extract.....	5.0g
Yeast extract.....	5.0g
Beef extract.....	2.0g

Glycerol	2.0g
MgSO ₄ ·7H ₂ O	1.0g
Tween™ 80	50.0mg
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Rhodococcus marinonascens*.

R Agar with 5% Sodium Chloride

Composition per liter:

NaCl	50.0g
Agar	20.0g
Peptone.....	10.0g
Casamino acids	5.0g
Malt extract.....	5.0g
Yeast extract.....	5.0g
Beef extract.....	2.0g
Glycerol	2.0g
MgSO ₄ ·7H ₂ O	1.0g
Tween™ 80	50.0mg
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Marinococcus albus*, *Marinococcus halophilus*, and other *Marinococcus* species.

R Broth for Phage Lysates

Composition per liter:

Pancreatic digest of casein.....	10.0g
NaCl	8.0g
Yeast extract.....	1.0g
Glucose solution	5.0mL
CaCl ₂ ·2H ₂ O solution.....	2.0mL
pH 6.8 ± 0.2 at 25°C	

Glucose Solution:

Composition per 10.0mL:

D-Glucose	2.0g
-----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

CaCl₂·2H₂O Solution:

Composition per 10.0mL:

CaCl ₂ ·2H ₂ O.....	1.47g
---	-------

Preparation of CaCl₂·2H₂O Solution: Add the CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution and CaCl₂·2H₂O solution, to distilled/deionized water and bring volume to 993.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 5.0mL of glucose solution and 2.0mL of CaCl₂·2H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of bacterial host cells in the production of bacteriophage lysates.

R Medium

Composition per liter:

Agar	30.0g
NaHCO ₃	8.0g
K ₂ HPO ₄	3.0g
Glucose	2.5g
Glutamine	0.61g
Serine	0.24g
Leucine	0.23g
Lysine.....	0.23g
Asparagine	0.18g
Valine	0.17g
Isoleucine.....	0.17g
Tyrosine	0.14g
Arginine-HCl	0.125g
Phenylalanine.....	0.125g
Threonine	0.12g
Methionine	0.073g
Glycine.....	0.065g
Histidine-HCl.....	0.055g
Proline.....	0.043g
Tryptophan.....	0.035g
L-Cystine.....	0.025g
MgSO ₄ ·H ₂ O	9.9mg
CaCl ₂ ·2H ₂ O	7.4mg
Adenine sulfate	2.1mg
Uracil	1.4mg
Thiamine-HCl	1.0mg
MnSO ₄ ·H ₂ O	0.9mg
pH 8.0 ± 0.2 at 25°C	

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Filter sterilize. Warm to 45°–50°C. Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically combine both solutions. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Bacillus anthracis*, especially for the production of toxins.

R-Top Agar

Composition per liter:

Pancreatic digest of casein.....	10.0g
NaCl	8.0g
Agar	5.0g
K ₂ HPO ₄	2.3g
Yeast extract.....	1.0g
KH ₂ PO ₄	0.67g

Sodium citrate	0.17g
MgSO ₄ ·7H ₂ O	0.03g
Glucose solution	5.0mL
CaCl ₂ ·2H ₂ O solution.....	2.0mL
pH 7.0 ± 0.2 at 25°C	

Glucose Solution:**Composition per 10.0mL:**

D-Glucose 2.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

CaCl₂·2H₂O Solution:**Composition per 10.0mL:**CaCl₂·2H₂O 1.47g

Preparation of CaCl₂·2H₂O Solution: Add the CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution and CaCl₂·2H₂O solution, to distilled/deionized water and bring volume to 993.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 5.0mL of glucose solution and 2.0mL of CaCl₂·2H₂O solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For use as a top agar in the cultivation of bacterial host cells for the production of bacteriophage lysates.

R2 Broth
(ATCC Medium 1795)

Composition per liter:

Tryptone 20.0g

Yeast extract 10.0g

NaCl 10.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Spiroplasma citri*, *S. floricola*, *S. apis*, *S. melliferum*, and *Mycoplasma iowae*.

R2 Broth

Composition per liter:

Peptones 1.0g

Yeast extract 0.5g

Glucose 0.5g

Starch, soluble 0.5g

KH₂PO₄ 0.3g

Sodium pyruvate 0.3g

MgSO₄·7H₂O 0.024g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus* spp. and *Deinococcus* spp.

RA

(Raulin Neutral of Dierckx)

Composition per liter:

Solution A 50.0mL

Solution B 900.0mL

Solution A:**Composition per 50.0mL:**

Tartaric acid 0.47g

MgCO₃ 0.265g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution B:**Composition per 900.0mL:**

Sucrose 46.60g

NH₄NO₃ 2.66gK₂CO₃ 0.40g(NH₄)₃PO₄ 0.40g(NH₄)₂SO₄ 0.16gFeSO₄ 0.04gZnSO₄ 0.04g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly.

Preparation of Medium: Add 50.0mL of solution A and 900.0mL of solution B to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Penicillium* species.

R2A Agar

Composition per liter:

Agar 15.0g

Yeast extract 0.5g

Acid hydrolysate of casein 0.5g

Glucose 0.5g

Soluble starch 0.5g

K₂HPO₄ 0.3g

Sodium pyruvate 0.3g

Pancreatic digest of casein 0.25g

Peptic digest of animal tissue 0.25g

MgSO₄, anhydrous 0.024g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat with mixing and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For use in standard methods for pour plate, spread plate, and membrane filter analysis to enumerate heterotrophic bacteria from waters.

R2A Agar

Composition per liter:

Agar 15.0g

Yeast extract 0.5g

Acid hydrolysate of casein 0.5g

Glucose 0.5g

Soluble starch 0.5g

K₂HPO₄ 0.3g

Sodium pyruvate 0.3g

Pancreatic digest of casein 0.25g

Peptic digest of animal tissue 0.25g

MgSO₄, anhydrous 0.024g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat with mixing and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For use in standard methods for pour plate, spread plate, and membrane filter analysis to enumerate heterotrophic bacteria from potable waters.

R2A Agar, Modified

CaCl ₂ ·2H ₂ O.....	0.015g
Resazurin.....	0.5mg
Rumen fluid.....	50.0mL
Na-pantothenate solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL
pH 7.2 ± 0.2 at 25°C	

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂.

Rumen Fluid:**Composition per 50.0mL:**

Rumen fluid, clarified.....	50.0mL
-----------------------------	--------

Preparation of Rumen Fluid: Sparge clarified rumen fluid with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na-Pantothenate Solution:**Composition per 10.0mL:**

Na-pantothenate.....	0.1g
----------------------	------

Preparation of Na-Pantothenate Solution: Add Na-pantothenate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃, pantothenate solution, Na₂S·9H₂O, cysteine-HCl, and rumen fluid, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add solid bicarbonate, sodium sulfide, and cysteine-HCl. Adjust pH to 7.2. Distribute under 80% N₂ + 20% CO₂ atmosphere into anaerobe tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add, per liter of medium, 50.0mL rumen fluid and 10.0mL Na-pantothenate solution. Mix thoroughly. The final pH of the medium should be 7.2.

Use: For the cultivation of *Spirochaeta* spp.

R70-2 Agar, Modified with Fructose**Composition per liter:**

Preparation of 100X Modified Salts: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Wolfe’s vitamin solution and 100X modified salts, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile Wolfe’s vitamin solution and 100X modified salts. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Acetobacter xylinum*.

R70-2 Broth, Modified with Glucose

Composition per liter:

Fructose.....	30.0g
Yeast extract.....	5.0g
Dimethyl glutaric acid	4.01g
(NH ₄) ₂ SO ₄	3.3g
Trisodium citrate·2H ₂ O.....	1.18g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.25g
Wolfe’s vitamin solution.....	10.0mL
100X modified salts	10.0mL

pH 5.0 ± 0.2 at 25°C

Wolfe’s Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	0.01g
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin	0.1mg

Preparation of Wolfe’s Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

100X Modified Salts:

Composition per liter:

CaCl ₂ ·2H ₂ O.....	1.47g
FeCl ₃ ·6H ₂ O.....	0.27g
ZnSO ₄ ·7H ₂ O.....	0.144g
MnSO ₄ ·H ₂ O.....	0.085g

CoCl ₂ ·6H ₂ O	0.024g
NiCl ₂ ·6H ₂ O	0.024g
Na ₂ MoO ₄ ·2H ₂ O	0.024g
CuSO ₄ ·5H ₂ O	0.016g
HCl, concentrated	4.1mL

Preparation of 100X Modified Salts: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Wolfe's vitamin solution and 100X modified salts, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile Wolfe's vitamin solution and 100X modified salts. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Acetobacter xylinum*.

Rabbit Blood Agar

Composition per 1250.0mL:

Pancreatic digest of casein	16.0g
Agar	13.5g
Brain heart, solids from infusion	8.0g
Peptic digest of animal tissue.....	5.0g
NaCl	5.0g
Glucose	2.0g
Na ₂ HPO ₄	2.5g
Rabbit blood, defibrinated	250.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, except rabbit blood, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi–121°C. Aseptically add sterile rabbit blood. Pour into sterile Petri dishes or aseptically distribute into sterile tubes or flasks while shaking.

Use: For the cultivation and maintenance of *Corynebacterium diphtheriae*, *Haemophilus ducreyi*, and *Actinobacillus lignieresii*.

Rabbit Dung Agar

Composition per liter:

Rabbit dung	20.0g
Agar	15.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add rabbit dung to 1.0L of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 20 min. Filter through Whatman #1 filter paper. Bring volume of filtrate to 1.0L with distilled/deionized water. Add agar. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of myxobacteria.

Rabbit Dung Agar

Composition per test tube:

Rabbit pellets, presterilized.....	3 or 4
Agar solution.....	4.0mL

Agar Solution:

Composition per 100.0mL:

Agar	1.5g
------------	------

Preparation of Agar Solution: Add agar to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling.

Preparation of Medium: Place 3 or 4 presterilized rabbit pellets in each test tube. Dispense 4.0mL of 1.5% agar solution into the tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position so that rabbit pellets extend above agar surface. Inoculate microorganism on pellets.

Use: For the cultivation and maintenance of *Chaetomium adinocladium*, *Lophotrichus incarnatus*, *Mycocarachis inversa*, *Nigrosabulum globosum*, many *Pilobolus* species, *Spiromyces minutus*, and *Wardomyces simplex*.

Rabbit Food Agar

Composition per liter:

Rabbit food, commercial pellets	25.0g
Agar	15.0g

Preparation of Medium: Add rabbit food pellets to 1.0L of distilled/deionized water. Gently heat and bring to boiling. Let steep for 30 min. Filter solids through cheesecloth. Add agar to filtrate. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of the yeasts *Candida glabrosa*, *Chaetomium virescens*, *Curvularia lunata*, *Filobasidium floriforme*, and numerous filamentous fungi.

Rabbit Heart Infusion Agar

Composition per liter:

Beef heart, infusion from	500.0g
Agar	15.0g
Tryptose	10.0g
NaCl	5.0g
Rabbit blood, defibrinated	50.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, except rabbit blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of sterile rabbit blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the culture and maintenance of *Bartonella quintana*.

Rabbit Laked Blood Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue	10.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Glucose	1.0g
NaHSO ₃	0.1g
Rabbit blood, laked.....	50.0mL
Hemin solution.....	1.0mL
Vitamin K ₁ solution	1.0mL

pH 7.0 ± 0.2 at 25°C

Hemin Solution:

Composition per 10.0mL:

Hemin	0.5g
NaOH (1N solution).....	10.0mL

Preparation of Hemin Solution: Add hemin to 10.0mL of NaOH solution. Mix thoroughly.

Vitamin K₁ Solution:

Composition per 20.0mL:

Vitamin K ₁ (phytomenadione).....	0.2g
Ethanol (95% solution).....	20.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 20.0mL of ethanol. Mix thoroughly.

Preparation of Medium: Add components, except vitamin K₁ solution and laked rabbit blood, to distilled/deionized water and bring volume to 849.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of sterile vitamin K₁ solution and 50.0mL of sterile laked rabbit blood. Laked blood is prepared by freezing whole blood overnight and thawing to room temperature. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and enhancement of pigment production of a variety of anaerobic bacteria.

**Rabbit Serum Medium
(Rabbit Serum Bovine Serum
Albumin Tween™ 80 Medium)
(Rabbit Serum BSA Tween™ 80 Medium)**

Composition per liter:

Basal medium	900.0mL
Rabbit serum with supplements	100.0mL
pH 7.4 ± 0.2 at 25°C	

Basal Medium:

Composition per 900.0mL:

Na ₂ HPO ₄	1.0g
NaCl.....	1.0g
KH ₂ PO ₄	0.3g
Glycerol (10% solution).....	1.0mL
NH ₄ Cl (25% solution).....	1.0mL
Sodium pyruvate (10% solution).....	1.0mL
Thiamine (0.5% solution).....	1.0mL

Preparation of Basal Medium: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 25°C.

Rabbit Serum with Supplements:

Composition per 106.0mL:

Rabbit serum	100.0mL
L-Asparagine (3% solution)	5.0mL
MgCl ₂ -CaCl ₂ solution	1.0mL

Preparation of Rabbit Serum with Supplements: Combine the three solutions. Mix thoroughly. Filter sterilize.

MgCl₂-CaCl₂ Solution:

Composition per 100.0mL:

CaCl ₂ ·2H ₂ O.....	1.5g
MgCl ₂ ·6H ₂ O.....	1.5g

Preparation of MgCl₂-CaCl₂ Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Aseptically combine 900.0mL of cooled sterile basal medium and 100.0mL of sterile rabbit serum with supplements. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Leptospira* species.

RAE Medium

See: **Reinforced AE Medium**

**R8AH Medium
(DSMZ Medium 651)**

Composition per liter:

Malic acid	2.5g
(NH ₄) ₂ SO ₄	1.25g
Yeast extract.....	1.0g
K ₂ HPO ₄	0.9g
KH ₂ PO ₄	0.6g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.07g
EDTA.....	0.02g
Ferric citrate.....	0.01g
Vitamin solution.....	7.5mL
Trace elements solution	1.0mL
pH 6.9 ± 0.2 at 25°C	

Trace Elements Solution:

Composition per 100.0mL:

Ferric citrate.....	0.3g
EDTA.....	0.05g
CaCl ₂ ·2H ₂ O.....	0.02g
MnSO ₄ ·H ₂ O.....	2.0mg
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	2.0mg
H ₃ BO ₃	1.0mg
CuSO ₄ ·5H ₂ O.....	1.0mg
ZnSO ₄	1.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Thiamine-HCl	0.4g
Nicotinic acid.....	0.2g
Nicotinamide.....	0.2g
Biotin	8.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add malic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.9 with NaOH. Add remaining components. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Adjust pH to 6.9. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Rhodospseudomonas palustris*, *Rhodobacter sphaeroides*, *Rhodocyclus tenuis*, *Rhodospseudomonas rutila*, *Rhodospirillum photometricum*, and *Rhodospirillum rubrum*.

Rainbow Agar O157

Composition per liter:

Proprietary.

Source: This medium is available as a premixed powder from Biolog Inc.

Preparation: Suspend 60.0g of the proprietary mixture in distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–

121°C. Cool to 45°C–50°C. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. The final medium should be clear and virtually colorless. No pH adjustment is needed. The final pH should be pH 7.9–8.3. To increase the selectivity of the medium, a sterile solution containing 0.8mg potassium tellurite and 10mg novobiocin can be added. Caution must be used because tellurite is toxic.

Use: For the detection, isolation, and presumptive identification of verotoxin-producing strains of *Escherichia coli*, particularly serotype O157:H7. The medium contains chromogenic substrates that are specific for two *E. coli*-associated enzymes: β -galactosidase (a blue-black chromogenic substrate) and β -glucuronidase (a red chromogenic substrate). The distinctive black or gray coloration of *E. coli* O157:H7 colonies is easily viewed by laying the Petri plate against a white background. When O157 is surrounded by pink or magenta non-toxicogenic colonies, it may have a bluish hue. The addition of selective agents improves performance. *E. coli* O157:H7 colony coloration will be slightly bluer with these selective agents added. Tellurite is highly selective for *E. coli* O157:H7 and can reduce background flora considerably. Novobiocin inhibits *Proteus* swarming and the growth of tellurite-reducing bacteria. Rare strains of O157:H7 are tellurite sensitive.

Rainbow Agar *Salmonella*

Composition per liter:

Proprietary

pH 7.2–7.6 at 25°C

Source: This medium is available from Biolog.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Add 10.0mL 35% glycerol. Stir until components are evenly dispersed. Gently heat and boil. Autoclave for 10 min at 15 psi pressure–121°C. Do not exceed 10 min. Cool agar to 45°C–50°C before pouring plates.

Use: As a selective, chromogenic medium to aid in the detection and isolation of H₂S-producing *Salmonella* species. Black colonies are formed by even weak H₂S-producing strains.

RajHans Medium

(HiCrome™ *Salmonella* Medium, Modified)

Composition per liter:

Agar	12.0 g
Casein enzymic hydrolysate	8.0 g
Yeast extract	5.0 g
NaCl	5.0 g
Chromogenic mixture	4.32 g
Peptic digest of animal tissue	4.0 g
Lactose	3.0 g
Sodium deoxycholate	1.0 g
Neutral Red	0.02 g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Mix to completely dissolve components. Do not autoclave. Cool to 50°C. Mix thoroughly. Pour into sterile Petri dishes.

Use: A selective chromogenic medium used for the isolation and differentiation of *Salmonella* species from the members of Enterobacteriaceae, especially *Proteus* species.

RajHans Medium, HiVeg (HiCrome™ *Salmonella* Medium, Modified)

Composition per liter:

Agar	12.0g
Propylene glycol	10.0g
Plant special peptone	8.0g
Yeast extract	2.0g
B.C. indicator	2.0g
Sodium deoxycholate	1.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Mix to completely dissolve components. Do not autoclave. Cool to 50°C. Mix thoroughly. Pour into sterile Petri dishes.

Use: A selective chromogenic medium used for the isolation and differentiation of *Salmonella* species from the members of Enterobacteriaceae, especially *Proteus* species.

Raka-Ray Agar

Composition per liter:

Pancreatic digest of casein	20.0g
Agar	17.0g
Maltose	10.0g
Fructose	5.0g
Glucose	5.0g
Yeast extract	5.0g
2-Phenylethanol	3.0g
Potassium aspartate	2.5g
Potassium glutamate	2.5g
Betaine-HCL	2.0g
Diammonium hydrogen citrate	2.0g
MgSO ₄ ·7H ₂ O	2.0g
KH ₂ PO ₄	2.0g
Liver concentrate	1.0g
MnSO ₄ ·H ₂ O	0.66g
N-Acetylglucosamine	0.5g
Cycloheximide	7.0mg
Sorbitan monooleate	10.0mL

pH 5.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except phenylethanol, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 3.0g of 2-phenylethanol. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of lactic acid bacteria in beer and brewing processes.

**Raka-Ray No. 3 Medium
(DSMZ Medium 1047)**

Composition per liter:

Tryptone.....	20.0g
Agar.....	16.0g
Maltose.....	10.0g
Fructose.....	5.0g
Glucose.....	5.0g
Yeast extract.....	5.0g
Potassium aspartate.....	2.5g
Potassium glutamate.....	2.5g
Betaine·HCL.....	2.0g
Diammonium hydrogen citrate.....	2.0g
KH ₂ PO ₄	2.0g
Liver concentrate.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.98g
MnSO ₄ ·H ₂ O.....	0.66g
N-Acetylglucosamine.....	0.5g

pH 5.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of “*Lactobacillus backii*.”

Rambach® Agar

Composition per liter:

Agar.....	15.0g
Polypropylene glycol.....	10.5g
Peptone.....	8.0g
NaCl.....	5.0g
Chromogenic mix.....	1.5g
Na-desoxycholate.....	1.0g

pH 7.4 ± 0.2 at 25°C

Source: Rambach Agar is available from CHROMagar Microbiology and Merck.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat in a boiling water bath or in a current of steam, while shaking from time to time. The medium is totally suspended, if no visual particles stick to the glass wall. The medium should not be heat treated further. Complete dissolution with shaking in 5-min sequences is approximately 35–40 minutes. Do not autoclave. Do not overheat. Cool as fast as possible to 45°–50°C while gently shaking from time to time. Pour into sterile Petri dishes. To prevent any precipitate or clotting of the chromogenic mix in the plates, place Petri dishes during pouring procedure on a cool (max. 25°C) surface. The plates are opaque and pink.

Use: For the detection of enteric bacteria, including coliforms and *Salmonella* spp. Sodium desoxycholate inhibits the accompanying Gram-positive flora. This medium enables *Salmonella* spp. to be differentiated unambiguously from other bacteria. *Salmonella* spp. form a characteristic red color. In order to differentiate coliforms from Salmonellae, the medium contains a chromogene indicating the presence of β-galactosidase splitting, a characteristic of coliforms. Coliform microorganisms grow as blue-green or blue-violet colonies. Other Enterobacteriaceae and Gram-negative bacteria, such as *Proteus*, *Pseudomonas*, *Shigella*, *S. typhi*, and *S. paratyphi* A, grow as colorless-yellow colonies.

Rap Broth, Modified

See: **Rappaport Broth, Modified**

Raper Achyla Medium No. 1

Composition per liter:

Agar.....	20.0g
Lentil (hot water extract).....	10.0g
Starch, soluble.....	3.0g
Peptone.....	1.0g
CaCl ₂	1.0μg
FeCl ₃	1.0μg
KH ₂ PO ₄	1.0μg
MgSO ₄	1.0μg
ZnSO ₄	1.0μg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Achyla* species.

Raper Achyla Medium No. 2

Composition per liter:

Agar.....	20.0g
Starch, soluble.....	3.0g
Inositol.....	1.0g
Peptone.....	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Achyla* species.

RAPID E. coli 2 Agar

Composition per liter:

Proprietary

Source: This medium is available from Biorad.

Use: For the direct enumeration of *E. coli* and coliforms in foods. Selectivity and electivity are based on the detection of glucuronidase and galactosidase activities. Hydrolysis of chromogenic substrate results in purple to pink *E. coli* colonies (gluc+/gal+) and blue-green coliform colonies (gluc-/gal+). RAPID *E. coli* 2 agar is AFNOR validated according to ISO 16140 protocol to enumerate *E. coli* and coliforms on the same plate at 37°C, without any further confirmation of characteristic colonies.

RAPID Enterococcus Agar

Composition per liter:

Proprietary

Source: This medium is available from Biorad.

Use: A selective chromogenic culture medium for the direct enumeration, without confirmation, of enterococci in water and in food products. The cleavage of the chromogenic substrate by glucosidase activity of Enterococci leads to specific blue colonies. RAPID *Enterococcus* totally inhibits growth of Gram-negative flora and that of practically all Gram-positive bacteria other than Enterococci, due to the combined action of temperature and selective media.

Rapid Fermentation Medium**Composition** per liter:

Pancreatic digest of casein.....	20.0g
NaCl.....	5.0g
Agar.....	3.5g
L-Cystine.....	0.5g
Na ₂ SO ₃	0.5g
Phenol Red.....	0.017g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of *Neisseria* species isolated from clinical specimens.

Rapid HiColiform Agar**Composition** per liter:

Agar.....	15.0g
Peptone, special.....	5.0g
NaCl.....	5.0g
K ₂ HPO ₄	2.7g
KH ₂ PO ₄	2.0g
Sorbitol.....	1.0g

pH 7.5 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Caution: Sodium azide has a tendency to form explosive metal azides with plumbing materials. It is advisable to use enough water to flush off the disposables.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the rapid and easy identification and differentiation of enterococci from water samples.

RAPID *L. mono* Medium (BAM M131a)

Composition per liter:

Peptones	30.0g
Agar B, proprietary	13.0g
D-Xylose	10.0g
LiCl	9.0g
Meat extract	5.0g
Yeast extract	1.0g
Phenol Red	0.12g
Selective supplement, proprietary	20.0g
Chromogenic substrate, proprietary	1.0mL
pH 7.3 ± 0.1 at 25°C	

Source: This medium is available from Biorad.

Use: A selective chromogenic culture medium for the detection and differentiation of *Listeria* spp., including *L. ivanovii* and *L. monocytogenes*.

Rappaport Broth, Modified (Rap Broth, Modified)

Composition per 250.2mL:

Solution A	155.0mL
Solution C	53.0mL

Solution B	40.0mL
Solution D	1.6mL
Solution E	0.6mL

Solution A:

Composition per liter:

Pancreatic digest of casein	10.0g
-----------------------------------	-------

Preparation of Solution A: Add pancreatic digest of casein to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution B:

Composition per liter:

Na ₂ HPO ₄	9.5g
--	------

Preparation of Solution B: Add Na₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution C:

Composition per 100.0mL:

MgCl ₂ ·6H ₂ O	40.0g
--	-------

Preparation of Solution C: Add MgCl₂·6H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution D:

Composition per 100.0mL:

Malachite Green	0.2g
-----------------------	------

Preparation of Solution D: Add Malachite Green to sterile distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Do not sterilize.

Solution E:

Composition per 10.0mL:

Carbenicillin	0.01g
---------------------	-------

Preparation of Solution E: Add carbenicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Combine 155.0mL of solution A and 40.0mL of solution B. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 53.0mL of sterile solution C, 1.6mL of solution D, and 0.6mL of sterile solution E. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Yersinia enterocolitica* from foods.

Rappaport-Vassiliadis Enrichment Broth (RV Enrichment Broth)

Composition per liter:

NaCl	8.0g
Papaic digest of soybean meal	5.0g
KH ₂ PO ₄	1.6g
Magnesium chloride solution	100.0mL
Malachite Green solution	10.0mL
pH 5.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Magnesium Chloride Solution:

Composition per 100.0mL:

MgCl ₂ ·6H ₂ O	40.0g
--	-------

Preparation of Magnesium Chloride Solution: Add 40.0g of MgCl₂·6H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Malachite Green Solution:**Composition per 10.0mL:**

Malachite Green oxalate 0.04g

Preparation of Malachite Green Solution: Add Malachite Green to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 10 psi pressure–115°C.

Use: For the isolation and cultivation of *Salmonella* species from food and environmental specimens.

Rappaport-Vassiliadis R10 Broth**Composition per liter:**MgCl₂, anhydrous 13.4g

NaCl 7.2g

Papaic digest of soybean meal 4.54g

KH₂PO₄ 1.45g

Malachite Green oxalate 0.036g

pH 5.1 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into screw-capped tubes in 10.0mL volumes. Autoclave for 15 min at 10 psi pressure–116°C.

Use: For the isolation and cultivation of *Salmonella* species from food and environmental specimens.

Rappaport-Vassiliadis Medium Semisolid, Modified with Novobiocin (MSRV)**Composition per liter:**MgCl₂ 10.93g

NaCl 7.34g

Enzymatic digest of casein 4.59g

Casein acid hydrolysate 4.59g

Agar 2.7g

KH₂PO₄ 1.4 g

Malachite Green oxalate 0.037g

Novobiocin solution 1.0mL

pH 5.6 ± 0.2 at 25°C

Novobiocin Solution:**Composition per 10.0mL:**

Novobiocin 0.2g

Preparation of Novobiocin Solution: Add novobiocin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except novobiocin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Do not autoclave. Do not overheat. Cool to 50°C. Aseptically add 1.0mL novobiocin solution. Pour into sterile Petri dishes or leave in tubes.

Use: For the rapid and sensitive isolation of motile *Salmonella* spp. from food products following pre-enrichment or selective enrichment. The semisolid medium allows motility to be detected as halos of growth around the original point of inoculation. Recommended by the

European Chocolate Manufacturer's Association. For the isolation of *Salmonella* spp. (other than *S. typhi* and *S. paratyphi* type A) from stool specimens with high sensitivity and specificity.

Rappaport-Vassiliadis Soy Peptone Broth (RVS Broth)**Composition per liter:**MgCl₂, anhydrous 13.58g

NaCl 7.2g

Papaic digest of soybean meal 4.5g

KH₂PO₄ 1.26gK₂HPO₄ 0.18g

Malachite Green 0.036g

pH 5.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into screw-capped tubes in 10.0mL volumes. Autoclave for 15 min at 10 psi pressure–115°C.

Use: For the isolation and cultivation of *Salmonella* species from food and environmental specimens.

Raymond's Medium**Composition per liter:**Na₂HPO₄ 3.0g

NaCl 3.0g

NH₄NO₃ 2.0gKH₂PO₄ 2.0gMgSO₄ 0.2gNa₂CO₃ 0.1gMnSO₄ 0.02gCaCl₂ 0.01gFeSO₄ 0.01g*n*-Hexadecane 10.0mL

pH 6.8–7.0 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the cultivation of *Rhodococcus erythropolis*, *Rhodococcus luteus*, *Rhodococcus maris*, and other bacteria that can utilize *n*-hexadecane as a carbon source.

Razi's Medium**Composition per liter:**

Beef extract 10.0g

Peptic digest of animal tissue 10.0g

Glucose 5.0g

NaCl 5.0g

Sodium acetate 3.0g

Yeast extract 3.0g

Potassium aspartate 2.0g

Starch, soluble 1.0g

Agar 0.5g

Cysteine hydrochloride 0.5g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the maintenance of cultures of *Campylobacter* spp.

RBA

See: **Diazotrophic Medium**

RB-1/RB-9 Medium

Composition per liter:

Glucose or starch	10.0g
Na ₂ HPO ₄ ·12H ₂ O	4.2g
KH ₂ PO ₄	2.64g
Yeast extract	2.0g
Na ₂ SO ₄	1.0g
NH ₄ Cl	0.5g
L-Cysteine·HCl	0.5g
Na ₂ S·9H ₂ O	0.5g
MgCl ₂ ·6H ₂ O	0.36g
Resazurin	1.0mg
Trace elements solution	10.0mL
Vitamin solution	10.0mL

pH 5.0–6.0 at 25°C

Vitamin Solution:

Composition per liter:

Pyridoxine·HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine·HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Adjust pH to 5.0–6.0. Anaerobically distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium* species.

RC Agar

See: **Rippey-Cabelli Agar**

RCM Medium

See: **Reinforced Clostridial Agar**

RCM Medium, Modified

Composition per liter:

Casamino acids	15.0g
Tryptose	10.0g
Beef extract	10.0g
Glucose	5.0g
NaCl	5.0g
Yeast extract	3.0g
Sodium acetate	3.0g
Soluble starch	1.0g
L-Cysteine·HCl·H ₂ O	0.5g
Agar	0.5g

pH 6.8 ± 0.2 at 25°C

Source: Reinforced clostridial medium without casamino acids is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 10 psi pressure–115°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Clostridium acetireducens* and *Clostridium aminophilum*.

R-CW Medium

(DSMZ Medium 775)

Composition per 1001.0mL:

Trypticase™	5.0g
Tryptone	5.0g
Yeast extract	5.0g
KH ₂ PO ₄	5.0g
Na-acetate	5.0g
(NH ₄) ₂ citrate	2.0g
MgSO ₄ ·7H ₂ O	0.5g
MnSO ₄ ·2H ₂ O	0.2g
Cheese whey	1000.0mL
Tween™ 80	1.0mL

pH 5.5 ± 0.2 at 25°C

Preparation of Medium: Add components to 1.0L cheese whey. Mix thoroughly. Adjust pH to 5.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus kefirgranum* and *Lactobacillus parakefiri*.

R-CW Medium

(LMG Medium 265)

Composition per liter:

Trypticase™	5.0g
Tryptone	5.0g

Yeast extract.....	5.0g
KH ₂ PO ₄	5.0g
Na-acetate.....	5.0g
(NH ₄) ₂ citrate.....	2.0g
MgSO ₄ ·7H ₂ O.....	0.5g
MnSO ₄ ·5H ₂ O.....	0.2g
Cheese whey.....	1.0L
Tween™ 80.....	1.0mL

pH 5.5 ± 0.2 at 25°C

Preparation of Medium: Add components to 1.0L cheese whey. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For cultivation and maintenance of *Lactobacillus kefirgranum* and *Lactobacillus parakefiri*.

RE-101 Medium (DSMZ Medium 1130)

Composition per liter:

NaCl.....	175.0g
MgCl ₂ ·6H ₂ O.....	20.0g
K ₂ SO ₄	5.0g
Yeast extract.....	5.0g
CaCl ₂ ·2H ₂ O.....	0.1g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Haloplanus natans*.

Reactivation with Liquid Medium 246 (DSMZ Medium 246a)

Composition per liter:

Peptone.....	10.0g
Yeast extract.....	10.0g
Artificial seawater, filtered.....	750.0mL

pH 7.3 ± 0.2 at 25°C

Artificial Seawater:

Composition per liter:

NaCl.....	28.13g
MgCl ₂ ·6H ₂ O.....	4.8g
MgSO ₄ ·7H ₂ O.....	3.5g
CaCl ₂ ·2H ₂ O.....	1.6g
KCl.....	0.77g
NaHCO ₃	0.11g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add peptone and yeast extract to 250.0mL tap water. Mix thoroughly. Adjust pH to 7.8. Boil for 5 min. Filter and readjust the pH to 7.3. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Add 750.0mL filter sterilized seawater. (Note: Natural seawater is stored in the dark for at least 3 weeks to age. If natural seawater is not available use artificial seawater.) Mix thoroughly.

Use: For the rehydration and cultivation of *Photorhabdus luminescens*=*Xenorhabdus luminescens* and marine bacteria from lyophilized ampules of stock cultures.

Reactivation with Tryptone Soya Broth (DSMZ Medium 220a)

Composition per liter:

Peptone from casein.....	17.0g
Peptone from soymeal.....	3.0g
NaCl.....	5.0g
D(+)-Glucose.....	2.5g
K ₂ HPO ₄	2.5g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the reactivation and cultivation of *Aeromonas* spp., *Pseudomonas* spp., *Burkholderia* spp., *Burkholderia phenazinium* (*Pseudomonas phenazinium*), *Plesiomonas shigelloides*, and *Sphingobium chlorophenolicum*=*Sphingomonas chlorophenolica*.

Reddy's Differential Agar, Modified (Lactic Streak HiVeg Agar)

Composition per liter:

Agar.....	15.0g
Sodium carboxymethylcellulose.....	10.0g
Calcium citrate.....	10.0g
Plant peptone.....	5.0g
Papaic digest of soybean meal.....	5.0g
Yeast extract.....	5.0g
Plant extract.....	5.0g
Lactose.....	1.5g
L-Arginine-HCl.....	1.5g
Bromocresol Purple.....	2.0mg

pH 6.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 10 min at 10 psi pressure–115°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the qualitative and quantitative differentiation of lactic streptococci.

Reduced Salt Solution Medium (RSS Medium)

Composition per liter:

CaCl ₂ ·H ₂ O.....	20.0g
NaHCO ₃	10.0g
Dithiothreitol.....	2.0g
MgSO ₄ ·7H ₂ O.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
NaCl.....	0.2g

pH 9.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into screw-capped tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the transport and isolation of bacteria from dental plaque, especially *Streptococcus mutans*, *Streptococcus sanguis*, and *Lactobacillus* species.

Reduced Transport Fluid

Composition per liter:

(NH ₄) ₂ SO ₄	9.0g
NaCl.....	9.0g
K ₂ HPO ₄	4.5g
KH ₂ PO ₄	4.5g
Na ₂ CO ₃	4.0g
EDTA (ethylenediamine tetraacetic acid).....	3.8g
Dithiothreitol.....	2.0g
MgSO ₄ ·7H ₂ O.....	1.8g

pH 8.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically distribute into sterile tubes with rubber stoppers.

Use: For the transport and isolation of bacteria from dental plaque, especially *Streptococcus mutans* and *Streptococcus sanguis*. Also used for the cultivation of a variety of Gram-positive bacteria from the oral cavity, especially streptococci, actinomycetes, lactobacilli, clostridia, *Bacteroides* species, *Fusobacterium* species, and *Veillonella* species.

Reduced Transport Fluid

Composition per liter:

Stock mineral salt solution No. 1.....	75.0mL
Stock mineral salt solution No. 2.....	75.0mL
Dithiothreitol (1% solution).....	20.0mL
Ethylenediamine tetraacetic acid (1M solution).....	10.0mL
Na ₂ CO ₃ (8% solution).....	5.0mL
Resazurin (0.1% solution).....	1.0mL

pH 8.0 ± 0.2 at 25°C

Stock Mineral Salt Solution No. 1:

Composition per 100.0mL:

K ₂ HPO ₄	0.6g
---------------------------------------	------

Preparation of Stock Mineral Salt Solution No. 1: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Stock Mineral Salt Solution No. 2:

Composition per 100.0mL:

NaCl.....	1.2g
(NH ₄) ₂ SO ₄	1.2g
K ₂ HPO ₄	0.6g
MgSO ₄ ·7H ₂ O.....	0.25g

Preparation of Stock Mineral Salt Solution No. 2: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically distribute into sterile tubes with rubber stoppers.

Use: For the transport and isolation of bacteria from dental plaque, especially *Streptococcus mutans* and *Streptococcus sanguis*. Also used for the cultivation of a variety of Gram-positive bacteria from the oral

cavity, especially streptococci, actinomycetes, lactobacilli, clostridia, *Bacteroides*, *Fusobacteria*, and *Veillonella*.

Regan-Lowe Charcoal Agar (Regan-Lowe Medium)

Composition per liter:

Agar.....	12.0g
Beef extract.....	10.0g
Pancreatic digest of gelatin.....	10.0g
Soluble starch.....	10.0g
NaCl.....	5.0g
Charcoal.....	4.0g
Niacin.....	0.01g
Horse blood, defibrinated.....	100.0mL
Cephalexin solution.....	10.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Cephalexin Solution:

Composition per 10.0mL:

Cephalexin.....	0.04g
-----------------	-------

Preparation of Cephalexin Solution: Add cephalexin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except horse blood and cephalexin solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse blood and sterile cephalexin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. Swirl medium while dispensing to keep charcoal in suspension.

Use: For the selective isolation and cultivation of *Bordetella pertussis* and *Bordetella parapertussis* from clinical specimens.

Regan-Lowe Semisolid Transport Medium

Composition per liter:

Agar.....	6.0g
Beef extract.....	5.0g
Pancreatic digest of gelatin.....	5.0g
Soluble starch.....	5.0g
NaCl.....	2.5g
Charcoal.....	2.0g
Niacin.....	0.01g
Horse blood, defibrinated.....	100.0mL
Cephalexin solution.....	10.0mL

pH 7.4 ± 0.2 at 25°C

Cephalexin Solution:

Composition per 10.0mL:

Cephalexin.....	0.04g
-----------------	-------

Preparation of Cephalexin Solution: Add cephalexin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except horse blood and cephalexin solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse blood and sterile cephalexin solution. Mix thoroughly. Aseptical-

ly distribute into small, sterile, screw-capped tubes. Fill tubes half-full. Swirl medium while dispensing to keep charcoal in suspension.

Use: For the transport of *Bordetella pertussis* and *Bordetella parapertussis* isolated from clinical specimens.

**Reinforced AE Medium
(RAE Medium)
(LMG Medium 239)**

Composition per liter:

Base medium.....	500.0mL
Growth medium.....	500.0mL
pH 5.0 ± 0.2 at 25°C	

Base Medium:

Composition per liter:

Agar	10.0g
------------	-------

Preparation of Base Medium: Add agar to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour as a base layer into sterile Petri dishes.

Growth Medium:

Composition per liter:

Glucose	40.0g
Agar	20.0g
Yeast extract.....	10.0g
Peptone.....	10.0g
Na ₂ HPO ₄ ·2H ₂ O.....	3.38g
Citric acid·2H ₂ O.....	1.5g
Ethanol.....	20.0mL
Acetic acid	10.0mL

Preparation of Growth Medium: Add components, except ethanol and acetic acid, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL filter sterilized ethanol and 10.0mL filter sterilized acetic acid. Mix thoroughly.

Preparation of Growth Medium: This medium is used as a double layer. Pour as a layer of base medium into sterile Petri dishes. Allow to solidify. Pour a thin layer of growth medium over the solid base medium. Allow to solidify.

Use: For the isolation and cultivation of *Gluconacetobacter* spp. and *Acetobacter pomorum*.

Reinforced Clostridial Agar

Composition per liter:

Agar	13.5g
Beef extract.....	10.0g
Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g
Glucose	5.0g
Yeast extract.....	3.0g
Sodium acetate.....	3.0g
Soluble starch.....	1.0g
L-Cysteine·HCl·H ₂ O.....	0.5g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 10 psi pressure–115°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of *Clostridium* species, *Bifidobacterium* species, other anaerobes (e.g., lactobacilli), and facultative organisms from clinical specimens and foods.

**Reinforced Clostridial Agar with Tween™
(LMG Medium 146)**

Composition per liter:

Agar	13.5g
Beef extract.....	10.0g
Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g
Glucose	5.0g
Yeast extract.....	3.0g
Sodium acetate.....	3.0g
Tween™ 80.....	1.0g
Soluble starch.....	1.0g
L-Cysteine·HCl·H ₂ O.....	0.5g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 10 psi pressure–115°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bifidobacterium merycicum*.

Reinforced Clostridial HiVeg Agar

Composition per liter:

Agar	13.5g
Plant extract.....	10.0g
Plant hydrolysate	10.0g
Glucose	5.0g
NaCl.....	5.0g
Yeast extract.....	3.0g
Sodium acetate.....	3.0g
Starch, soluble.....	1.0g
L-Cysteine·HCl	0.5g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 10 psi pressure–115°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of clostridia and other anaerobes.

Reinforced Clostridial HiVeg Broth

Composition per liter:

Plant extract.....	10.0g
Plant hydrolysate	10.0g
Glucose	5.0g
NaCl.....	5.0g
Sodium acetate.....	3.0g
Yeast extract.....	3.0g

Starch, soluble.....	1.0g
Agar	0.5g
L-Cysteine·HCl.....	0.5g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 10 psi pressure–115°C.

Use: For the cultivation and enumeration of clostridia and other anaerobes.

Reinforced Clostridial Medium

Composition per liter:

Tryptose	10.0g
Beef extract	10.0g
Glucose	5.0g
NaCl	5.0g
Yeast extract.....	3.0g
Sodium acetate.....	3.0g
Soluble starch.....	1.0g
L-Cysteine·HCl·H ₂ O	0.5g
Agar	0.5g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 10 psi pressure–115°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the nonselective cultivation and enumeration of *Clostridium* species, other anaerobes such as lactobacilli, and facultative organisms from clinical specimens and foods.

Reinforced Clostridial Medium with Casamino Acids

Composition per liter:

Casamino acids	15.0g
Agar	13.5g
Beef extract	10.0g
Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g
Glucose	5.0g
Yeast extract.....	3.0g
Sodium acetate.....	3.0g
Soluble starch.....	1.0g
L-Cysteine·HCl·H ₂ O.....	0.5g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium aminophilum*.

Reinforced Clostridial Medium with Glycerol

Composition per liter:

Agar	13.5g
Beef extract	10.0g
Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g

Glucose	5.0g
Glycerol	5.0g
Yeast extract.....	3.0g
Sodium acetate.....	3.0g
Soluble starch.....	1.0g
L-Cysteine·HCl·H ₂ O	0.5g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 10 psi pressure–115°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Anaerovibrio glycerini*.

Reinforced Clostridial Medium, Modified (ATCC Medium 2107)

Composition per liter:

Tryptose	10.0g
Beef extract.....	10.0g
Glucose	5.0g
NaCl.....	5.0g
Yeast extract.....	3.0g
Sodium acetate.....	3.0g
Soluble starch.....	1.0g
L-Cysteine·HCl·H ₂ O.....	0.5g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 10 psi pressure–115°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Clostridium saccharobutylicum*, *Clostridium frigidicarnis*, and *Mitsuokella jalaludinii*.

Reinforced Clostridial Medium with Sodium Lactate

Composition per liter:

Tryptose	10.0g
Beef extract.....	10.0g
Glucose	5.0g
NaCl.....	5.0g
Yeast extract.....	3.0g
Sodium acetate.....	3.0g
Soluble starch.....	1.0g
L-Cysteine·HCl·H ₂ O	0.5g
Agar	0.5g
Sodium lactate (60% solution).....	15.0mL
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 10 psi pressure–115°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the nonselective cultivation and enumeration of *Clostridium* species, other anaerobes such as lactobacilli, and facultative organisms from clinical specimens and foods.

Reinforced Clostridial Medium with Uric Acid

Composition per liter:

Agar	13.5g
Beef extract	10.0g
Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g

Glucose	5.0g
Uric acid.....	3.0g
Yeast extract.....	3.0g
Sodium acetate.....	3.0g
Soluble starch.....	1.0g
L-Cysteine·HCl·H ₂ O.....	0.5g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium acidurici*.

Renibacterium KDM2 Medium

Composition per liter:

Agar	15.0g
Peptone.....	10.0g
L-Cysteine·HCl·H ₂ O.....	1.0g
Yeast extract.....	0.5g
Fetal calf serum.....	200.0mL

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components, except fetal calf serum and agar, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Adjust pH to 6.5 with NaOH. Add agar. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add fetal calf serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Renibacterium salmoninarum*.

Reuters Sorbic Acid Agar Base

Composition per liter:

D-Glucose.....	20.0g
Agar	16.0g
Casein enzymic hydrolysate	10.0g
Meat extract	10.0g
Yeast extract.....	5.0g
Sodium acetate.....	5.0g
Sodium citrate.....	3.0g
Tween 80.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·2H ₂ O.....	0.05g
Selective supplement solution	10.0mL

pH 5.0 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Selective Supplement Solution:

Composition per 10.0mL:

Sorbic acid	0.4g
-------------------	------

Preparation of Selective Supplement Solution: Add sorbic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Mix to dissolve components completely. Cool to 50°C. Aseptically add selective supplement solution. Mix thoroughly. Sterilize for 30 min at 0 psi pressure–100°C. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the isolation and differentiation of lactobacilli from food-stuffs, feces, etc.

RF Medium

Composition per liter:

Yeast extract.....	0.05g
Peptone	0.05g
(NH ₄) ₂ SO ₄	0.05g
L-Cysteine·HCl·H ₂ O.....	0.05g
Salt solution.....	50.0mL
Rumen fluid, clarified.....	30.0mL
Resazurin (1% solution).....	0.1mL

pH 7.4 ± 0.2 at 25°C

Salt Solution:

Composition per liter:

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂ , anhydrous.....	0.2g
MgSO ₄	0.2g

Preparation of Salts Solution: Add CaCl₂ and MgSO₄ to 300.0mL of distilled/deionized water. Mix thoroughly until dissolved. Bring volume to 800.0mL with distilled/deionized water. Add remaining components while stirring. Bring volume to 1.0L. Mix thoroughly. Store at 4°C.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.2–6.3 with 4N HCl. Gently heat and bring to boiling under 100% N₂. Anaerobically distribute into tubes in 7.0mL volumes. Cap with rubber stoppers. Place tubes in a press. Autoclave for 20 min at 15 psi pressure–121°C with fast exhaust. The pH of the medium should be 7.4 after autoclaving.

Use: For the cultivation and maintenance of *Treponema bryantii*.

RFC Agar

See: **Rumen Fluid Cellobiose Agar**

RGCA Medium

(Rumen Fluid Glucose Cellobiose Agar)

Composition per 300.3mL:

Rumen fluid.....	120.0mL
Solution IV.....	65.0mL
Mineral solution I.....	45.0mL
Mineral solution II.....	45.0mL
Na ₂ CO ₃ solution.....	20.0mL
L-Cysteine·HCl·H ₂ O solution.....	5.0mL
Solution III.....	0.3mL

pH 6.6 ± 0.2 at 25°C

Mineral Solution I:

Composition per 100.0mL:

K ₂ HPO ₄	0.3g
---------------------------------------	------

Preparation of Mineral Solution I: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Mineral Solution II:

Composition per 100.0mL:

(NH ₄) ₂ SO ₄	0.6g
NaCl.....	0.6g

KH ₂ PO ₄	0.3g
MgSO ₄	0.06g
CaCl ₂	0.06g

Preparation of Mineral Solution II: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution III:

Composition per 10.0mL:

Resazurin	0.01g
-----------------	-------

Preparation of Solution III: Add resazurin to 10.0mL of distilled/deionized water. Mix thoroughly.

Solution IV:

Composition per 65.0mL:

Agar	4.5g
Glucose	0.6g
Cellobiose	0.6g

Preparation of Solution IV: Add components to distilled/deionized water and bring volume to 65.0mL. Mix thoroughly.

L-Cysteine·HCl·H₂O Solution:

Composition per 100.0mL:

L-Cysteine·HCl·H ₂ O	3.0g
---------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Na₂CO₃ Solution:

Composition per 100.0mL:

Na ₂ CO ₃	6.0g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Rumen Fluid:

Composition per 120.0mL:

Rumen fluid	120.0mL
-------------------	---------

Preparation of Rumen Fluid: Filter rumen contents, obtained from a cow on an alfalfa-hay concentrate ration, through two layers of cheesecloth to remove larger particles. Store under CO₂ in quart milk bottles in the refrigerator. Much of the particulate matter settles out. Use the supernatant fluid.

Preparation of Medium: Combine 45.0mL of mineral solution I, 45.0mL of mineral solution II, 0.3mL of solution III, and 65.0mL of solution IV in a 500.0mL flask. Gently heat and bring to boiling. Add 120.0mL of rumen fluid. Gently heat and bring to boiling under 100% CO₂. Cap with a rubber stopper and wire the stopper secure. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 45°–50°C. Remove stopper and gas with 100% CO₂ to eliminate O₂. Aseptically add 5.0mL of sterile L-cysteine·HCl·H₂O solution and 20.0mL of sterile Na₂CO₃ solution. Mix thoroughly. Aseptically and anaerobically distribute into tubes under 100% CO₂ in 6.0mL volumes. Cap with rubber stoppers.

Use: For the cultivation and maintenance of *Ruminococcus albus*, *Ruminococcus flavifaciens*, and *Succinimonas amylolytica*.

Rhamnose Salts Medium

Composition per liter:

Rhamnose.....	10.0g
Yeast extract.....	3.0g
K ₂ HPO ₄	2.9g
KH ₂ PO ₄	2.1g
NH ₄ ·Cl	2.0g

MgSO ₄ ·7H ₂ O.....	0.4g
NaCl.....	30.0mg
CaCl ₂	3.0mg
FeSO ₄ ·7H ₂ O.....	1.0mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Rhodococcus chlorophenolicus*.

Rhizobium Agar (LMG 201)

Composition per liter:

Agar	20.0g
Mannitol.....	10.0g
Yeast extract.....	1.0g
Sodium glutamate	0.5g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O	40.0mg
FeCl ₃	4.0mg

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Rhizobium fredii*, *Rhizobium galegae*, *Rhizobium leguminosarum*, *Rhizobium loti*, *Rhizobium meliloti*, and *Rhizobium tropici*.

Rhizobium BIII Defined Agar

Composition per liter:

Agar	13.0g
Mannitol.....	10.0g
Sodium glutamate	1.1g
K ₂ HPO ₄	0.23g
MgSO ₄ ·7H ₂ O.....	0.1g
Trace elements stock.....	1.0mL
Vitamin stock	1.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Stock:

Composition per liter:

Nitritotriacetic acid	7.0g
CaCl ₂ ·2H ₂ O	6.62g
H ₃ BO ₃	0.145g
FeSO ₄ ·7H ₂ O.....	0.125g
Na ₂ MoO ₄	0.125g
ZnSO ₄ ·7H ₂ O.....	0.108g
CoSO ₄ ·7H ₂ O.....	0.07g
CuSO ₄ ·5H ₂ O.....	5.0mg
MnCl ₂ ·4H ₂ O.....	4.3mg

Preparation of Trace Elements Stock: Add components to 500.0mL of distilled/deionized water in the order: CaCl₂·2H₂O, H₃BO₃, FeSO₄·7H₂O, CoSO₄·7H₂O, CuSO₄·5H₂O, MnCl₂·4H₂O, ZnSO₄·7H₂O, and Na₂MoO₄. Adjust pH to 5.0. Add nitritotriacetic acid. Bring volume to 1.0L with distilled/deionized water.

Vitamin Stock:**Composition per liter:**

Inositol	0.12g
<i>p</i> -Aminobenzoic acid	0.02g
Biotin	0.02g
Calcium pantothenate	0.02g
Nicotinic acid	0.02g
Pyridoxine-HCl	0.02g
Riboflavin	0.02g
Thiamine-HCl	0.02g
Sodium phosphate buffer (50.0mM solution, pH 7.0)	1.0L

Preparation of Vitamin Stock: Combine components. Mix thoroughly. Filter sterilize. Store at 4°C in the dark.

Preparation of Medium: Add components, except vitamin stock, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of sterile vitamin stock. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Rhizobium* species from root nodules.

Rhizobium BIII Defined Broth**Composition per liter:**

Mannitol	10.0g
Sodium glutamate	1.1g
K ₂ HPO ₄	0.23g
MgSO ₄ ·7H ₂ O	0.1g
Trace elements stock	1.0mL
Vitamin stock	1.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Stock:**Composition per liter:**

Nitrilotriacetic acid	7.0g
CaCl ₂ ·2H ₂ O	6.62g
H ₃ BO ₃	0.145g
FeSO ₄ ·7H ₂ O	0.125g
Na ₂ MoO ₄	0.125g
ZnSO ₄ ·7H ₂ O	0.108g
CoSO ₄ ·7H ₂ O	0.07g
CuSO ₄ ·5H ₂ O	5.0mg
MnCl ₂ ·4H ₂ O	4.3mg

Preparation of Trace Elements Stock: Add components, except nitrilotriacetic acid, to 500.0mL of distilled/deionized water in the order listed. Adjust pH to 5.0. Add nitrilotriacetic acid. Bring volume to 1.0L with distilled/deionized water.

Vitamin Stock:**Composition per liter:**

Inositol	0.12g
<i>p</i> -Aminobenzoic acid	0.02g
Biotin	0.02g
Calcium pantothenate	0.02g
Nicotinic acid	0.02g
Pyridoxine-HCl	0.02g
Riboflavin	0.02g
Thiamine-HCl	0.02g
Sodium phosphate buffer (50.0mM solution, pH 7.0)	1.0L

Preparation of Vitamin Stock: Combine components. Mix thoroughly. Filter sterilize. Store at 4°C in the dark.

Preparation of Medium: Add components, except vitamin stock, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 1.0mL of sterile vitamin stock. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Rhizobium* species.

Rhizobium japonicum Agar**Composition per liter:**

Agar	15.0g
Mannitol	10.0g
Yeast extract	1.0g
Soil extract	200.0mL

Soil Extract:**Composition per liter:**

African Violet soil	77.0g
Na ₂ CO ₃	0.2g

Preparation of Soil Extract: Add components to 1.0L of tap water. Autoclave for 15 min at 15 psi pressure–121°C. Filter through Whatman filter paper. Bring volume to 1.0L with tap water.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bradyrhizobium japonicum*.

Rhizobium Medium 1**Composition per liter:**

Agar	15.0g
Yeast extract	10.0g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.2g
FeCl ₃ ·6H ₂ O	0.002g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Add agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of members of the Rhizobiaceae.

Rhizobium Medium 2**Composition per liter:**

Agar	15.0g
Glycerol	4.6g
CaSO ₄	1.3g
K ₂ HPO ₄	1.0g
L-Arabinose	1.0g
Yeast extract	1.0g
KNO ₃	0.7g
MgSO ₄ ·7H ₂ O	0.36g
FeCl ₃ ·6H ₂ O	4.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Add agar. Gently heat and bring to boiling. Distribute

into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of members of the Rhizobiaceae.

Rhizobium X Medium

Composition per liter:

Agar	15.0g
Mannitol.....	10.0g
Yeast extract.....	1.0g
Soil extract.....	200.0mL

pH 7.2 ± 0.2 at 25°C

Soil Extract:

Composition per 200.0mL:

African Violet soil.....	77.0g
Na ₂ CO ₃	0.2g

Preparation of Soil Extract: Add components to tap water and bring volume to 200.0mL. Autoclave for 60 min at 15 psi pressure–121°C. Filter through Whatman #1 filter paper.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bradyrhizobium japonicum*, *Rhizobium* species, and *Sinorhizobium xinjiangensis*.

Rhizobium X Medium with Thiram

Composition per liter:

Agar	15.0g
Mannitol.....	10.0g
Yeast extract.....	1.0g
Soil extract.....	200.0mL
Thiram solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Thiram Solution:

Composition per 10.0mL:

Thiram.....	1.0mg
Ethanol, absolute.....	10.0mL

Preparation of Thiram Solution: Add thiram to 10.0mL of absolute ethanol. Mix thoroughly. Filter sterilize.

Soil Extract:

Composition per 200.0mL:

African Violet soil.....	77.0g
Na ₂ CO ₃	0.2g

Preparation of Soil Extract: Add components to tap water and bring volume to 200.0mL.

Preparation of Medium: Add components, except thiram solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL of sterile thiram solution. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bradyrhizobium japonicum*, *Rhizobium* species, and *Sinorhizobium xinjiangensis*.

Rhizoctonia Isolation Medium

Composition per liter:

Agar	20.0g
K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
NaNO ₂	0.2g
FeSO ₄ ·7H ₂ O.....	0.01g
Dexon [®] solution	10.0mL
Antibiotic solution	10.0mL
Gallic acid solution	10.0mL

Antibiotic Solution:

Composition per 10.0mL:

Chloramphenicol.....	0.05g
Streptomycin.....	0.05g

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Dexon[®] Solution:

Composition per 10.0mL:

Dexon [®] (Chemagro [®]) wettable powder	0.09g
---	-------

Preparation of Dexon[®] Solution: Add Dexon[®] to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Gallic Acid Solution:

Composition per 10.0mL:

Gallic acid.....	0.4g
------------------	------

Preparation of Gallic Acid Solution: Add gallic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except Dexon[®] solution, antibiotic solution, and gallic acid solution—to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile Dexon[®] solution, sterile antibiotic solution, and sterile gallic acid solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Rhizoctonia* species.

Rhizomonas Medium

Composition per liter:

Noble agar.....	11.0g
Pancreatic digest of casein.....	5.0g
Glucose	2.5g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
KNO ₃	0.5g
Ca(NO ₃) ₂ ·4H ₂ O	0.06g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Rhizomonas suberifaciens*.

Rhizomonas suberifaciens* Medium*Composition per liter:**

Pancreatic digest of casein.....	5.0g
K ₂ HPO ₄ ·3H ₂ O.....	1.3g
Noble agar.....	1.1g
KNO ₃	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
Ca(NO ₃) ₂ ·4H ₂ O.....	60.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Rhizomonas suberifaciens*.

Rhodobacter adriaticus* Medium*Composition per 1001.0mL:**

NaCl.....	25.0g
NaHCO ₃	3.0g
K ₂ HPO ₄	1.0g
NH ₄ Cl.....	1.0g
MgCl ₂ ·6H ₂ O.....	0.5g
Sodium ascorbate.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.1g
Trace elements solution SLA.....	1.0mL
Vitamin solution.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution SLA:**Composition per liter:**

CuCl ₂ ·2H ₂ O.....	10.0g
FeCl ₂ ·4H ₂ O.....	1.8g
H ₃ BO ₃	0.5g
CoCl ₂ ·6H ₂ O.....	0.25g
ZnCl ₂	0.1g
MnCl ₂ ·4H ₂ O.....	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	30.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	10.0mg
NiCl ₂ ·6H ₂ O.....	10.0mg

Preparation of Trace Elements Solution SLA: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Bring pH to 2.0–3.0.

Vitamin Solution:**Composition per liter:**

Nicotinamide.....	35.0mg
Thiamine-HCl.....	30.0mg
<i>p</i> -Aminobenzoic acid.....	20.0mg
Pyridoxal-HCl.....	10.0mg
Calcium DL-pantothenate.....	10.0mg
Biotin.....	10.0mg
Vitamin B ₁₂	5.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically

add 1.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Rhodobacter adriaticus*.

***Rhodobacter changlensis* Medium
(DSMZ Medium 1197)****Composition per 1001.0mL:**

Yeast extract.....	0.4g

Ferric Citrate Solution :**Composition** per 100.0mL:

Ferric citrate 0.1g

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Elements Solution:**Composition** per liter:

H₃BO₃ 0.3g
 CoCl₂·6H₂O 0.2g
 ZnSO₄·7H₂O 0.1g
 Na₂MoO₄·2H₂O 30.0mg
 MnCl₂·4H₂O 30.0mg
 NiCl₂·6H₂O 20.0mg
 CuCl₂·2H₂O 10.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute 40 mL medium into 50 mL screw-capped bottles. Flush each bottle for 1 to 2 min with nitrogen gas and then close immediately with rubber septa and screw caps. Autoclave for 15 min at 15 psi pressure–121°C. Sterile syringes are used to inoculate and remove the samples. Incubate in light using a tungsten lamp.

Use: For the cultivation of *Rhodobacter capsulatus*, *Rhodobacter sphaeroides*, and *Rhodospirillum rubrum*.

***Rhodobacter veldkampii* Medium
(DSMZ Medium 867)**

Composition per 2780.0mL:

Solution 1 1540.0mL
 Solution 3 1000.0mL
 Solution 4 120.0mL
 Solution 5 120.0mL

pH 4.0 ± 0.1 at 25°C

Solution 1:**Composition** per 2500.0mL:

CaCl₂ 2.0g

Preparation of Solution 1: Add CaCl₂ to distilled/deionized water and bring volume to 2.5L. Mix thoroughly.

Solution 3:**Composition** per liter:

NaHCO₃ 4.5g
 Solution 2 100.0mL

Preparation of Solution 3: Add NaHCO₃ to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Sparge with gaseous CO₂ for at least 30 min. Add 100.0mL solution 2. Immediately filter sterilize using CO₂ pressure to push the liquid through (no suction).

Solution 2:**Composition** per 100.0mL:

Sodium ascorbate 2.4g
 KH₂PO₄ 1.0g
 KCl 1.0g
 NH₄Cl 0.8g
 MgCl₂·6H₂O 0.8g
 Heavy metal solution 50.0mL
 Vitamin solution 15.0mL
 Vitamin B₁₂ solution 3.0mL

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Heavy Metal Solution:**Composition** per liter:

EDTA 1.50g
 FeSO₄·7H₂O 0.2g
 ZnSO₄·7H₂O 0.1g
 MnCl₂·7H₂O 0.02g
 Modified Hoagland trace elements solution 6.0mL

Preparation of Heavy Metal Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Modified Hoagland Trace Elements Solution:**Composition** per 3.6L:

H₃BO₃ 11.0g
 MnCl₂·4H₂O 7.0g
 ZnCl₂ 1.0g
 CuCl₂ 1.0g
 NiCl₂ 1.0g
 CoCl₂ 1.0g
 AlCl₃ 1.0g
 KI 1.0g
 KBr 0.5g
 LiCl 0.5g
 SnCl₂·2H₂O 0.5g
 BaCl₂ 0.5g
 Na₂MoO₄ 0.5g
 Na₂SeO₃ 0.5g
 NaVO₃·H₂O 0.1g

Preparation of Modified Hoagland Trace Elements Solution:

Add components sequentially to distilled/deionized water and bring final volume to 3.6L. Mix thoroughly after adding each component until dissolved. Adjust pH to just below 7.0. Adjust the final pH to 3–4. The flaky yellow precipitate which is formed after mixing transforms after standing for one or a few days into a very fine white precipitate. Mix thoroughly before use.

Vitamin B₁₂ Solution:**Composition** per 3.0mL:

Vitamin B₁₂ (cyanocobalamine) 2.0mg

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 3.0mL. Mix thoroughly.

Vitamin Solution:**Composition** per 100.0mL:

Pyridoxamine·2HCl 5.0mg
 Nicotinic acid 2.0mg
 Thiamine 1.0mg
 Pantothenic acid 0.5mg
 Biotin 0.2mg
p-Aminobenzoic acid 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO₂ for 30 min.

Solution 4:**Composition** per 200.0mL:

Na₂S·9H₂O 3.0g

Preparation of Solution 4: Add Na₂S·9H₂O to distilled/deionized water in a flask with a magnetic stirrer and bring volume to 200.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature. Partially neutralize the steril-

ized solution by adding, on a magnetic stirrer, drop by drop, 2.0mL sterile 2M H₂SO₄.

Solution 5:

Composition per 200.0mL:

Na-acetate 6.0g

Preparation of Solution 5: Add Na-acetate to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Sparge with 100% N₂ for 5 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Distribute solution 1 in 77.0mL amounts into 20 127mL screw-capped Boston round bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 50.0mL sterile solution 3 to each of the 20 127mL bottles containing 77.0mL of sterile solution 1 so that the solution completely fills the bottle. Mix thoroughly. Remove 6.0mL of the medium from the completely filled bottles. Add 6.0mL of neutralized solution 4 so that the bottles are again completely filled. Mix thoroughly. Remove 6.0mL of the medium from the completely filled bottles. Add 6.0mL of solution 5 so that the bottles are again completely filled. Mix thoroughly. Adjust pH to 4.0. Allow the bottles to stand overnight to develop a hazy, white precipitate before inoculating. Mix the solution thoroughly before use. To inoculate, remove 6.0mL of completed medium and replace it with an equal volume of inoculum. Grow cultures under tungsten light.

Use: For the cultivation of *Rhodobacter veldkampii*.

Rhodobacter veldkampii Medium

Composition per 127.0mL:

Solution 1 76.2mL
Solution 2 + Solution 3 44.8mL
Solution 4 6.0mL

Solution 1:

Composition per 2.5L:

CaCl₂ 2.0g

Preparation of Solution 1: Add CaCl₂ to distilled/deionized water and bring volume to 2.5L. Distribute in 80.0mL volumes into 127.0mL screw-capped bottles. Autoclave for 15 min at 15 psi pressure–121°C.

Solution 2:

Composition per 100.0mL:

Sodium ascorbate 2.4g
Sodium acetate 1.0g
KCl 1.0g
KH₂PO₄ 1.0g
MgCl₂·6H₂O 0.8g
NH₄Cl 0.8g
Heavy metal solution 50.0mL
Vitamin solution 15.0mL
Vitamin B₁₂ solution 3.0mL

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Heavy Metal Solution:

Composition per liter:

Ethylenediamine tetraacetate (EDTA) 1.5g
FeSO₄·7H₂O 0.2g
ZnSO₄·7H₂O 0.1g
MnCl₂·4H₂O 0.02g
Modified Hoagland trace elements solution 6.0mL

Preparation of Heavy Metal Solution: Dissolve EDTA in 800.0mL of distilled/deionized water. Add remaining components. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly.

Modified Hoagland Trace Elements Solution:

Composition per 3.6L:

H₃BO₃ 11.0g
MnCl₂·4H₂O 7.0g
AlCl₃ 1.0g
CoCl₂ 1.0g
CuCl₂ 1.0g
KI 1.0g
NiCl₂ 1.0g
ZnCl₂ 1.0g
BaCl₂ 0.5g
KBr 0.5g
LiCl 0.5g
Na₂MoO₄ 0.5g
SeCl₄ 0.5g
SnCl₂·2H₂O 0.5g
NaVO₃·H₂O 0.1g

Preparation of Modified Hoagland Trace Elements Solution:

Prepare each component as a separate solution. Dissolve each salt in approximately 100.0mL of distilled/deionized water. Adjust the pH of each solution to below 7.0. Combine all the salt solutions and bring the volume to 3.6L with distilled/deionized water. Adjust the pH to 3–4. A yellow precipitate may form after mixing. After a few days, it will turn into a fine white precipitate. Mix the solution thoroughly before using.

Vitamin Solution:

Composition per 100.0mL:

Pyridoxamine·2HCl 5.0mg
Nicotinic acid 2.0mg
Thiamine 1.0mg
Pantothenic acid 0.5mg
Biotin 0.2mg
p-Aminobenzoic acid 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B₁₂ (cyanocobalamin) 2.0mg

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution 3:

Composition per 900.0mL:

NaHCO₃ 4.5g

Preparation of Solution 3: Add NaHCO₃ to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Bubble 100% CO₂ through the solution for 30 min. After CO₂ saturation of solution 3, add solution 2 and immediately filter the mixture through a Seitz filter (or a Millipore) using positive CO₂ pressure to push the liquid through.

Solution 4:

Composition per 200.0mL:

Na₂S·9H₂O 3.0g

Preparation of Solution 4: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 200.0mL. Add a magnetic stir bar to the flask. Autoclave for 15 min at 15 psi pressure–121°C. On a magnetic stirrer,

slowly add 2.0mL of sterile 2M H₂SO₄. This partially neutralizes the solution. The solution should turn yellow. H₂S gas will be liberated—neutralization and distribution of the solution should be done as rapidly as possible under adequate ventilation.

Preparation of Medium: To the 80.0mL of sterile solution 1 in screw-capped bottles, add combined solutions 2 and 3 immediately after filtration and fill bottles to capacity. Mix thoroughly. Aseptically remove 6.0mL of the medium from the bottles and replace it with 6.0mL of neutralized solution 4. Let stand for 24 hr. The medium should form a fine white precipitate before using. To inoculate, remove 6.0mL of the completed medium from the bottles and replace it with 6.0mL of inoculum.

Use: For the cultivation and maintenance of *Rhodobacter veldkampii*.

 Na₂MoO₄·2H₂O..... 40.0mg
 CuCl₂·2H₂O..... 20.0mg
 NiCl₂·6H₂O..... 20.0mg
 HCl (25%)..... 1.0mL

Preparation of Trace Elements Solution SL-7: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition** per liter:

Vitamin B₁₂..... 2.0mg

Preparation of Vitamin Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Sodium Pyruvate Solution:**Composition** per 10.0mL:

Sodium pyruvate..... 3.0g

Preparation of Sodium Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract..... 0.4g

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Sulfide Solution:

Composition per 10.0mL:

Na₂S·9H₂O..... 0.25g

Preparation of Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Thiosulfate Solution:

Composition per 10.0mL:

Na₂S₂O₃·5H₂O..... 1.6g

Preparation of Thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Adjust to pH 10.0. Filter sterilize.

Bicarbonate Solution:

Composition per 100.0mL:

NaHCO₃..... 10.0g

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 6.5. Seal in bottles (half full) under an atmosphere of CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except ferric citrate, trace elements, sulfide, thiosulfate, bicarbonate, vitamin, sodium pyruvate, and yeast extract solutions, to distilled/deionized water and bring volume to 943.0mL. Mix thoroughly. Adjust pH to 6.9. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add ferric citrate, trace elements, sulfide, thiosulfate, bicarbonate, vitamin, sodium pyruvate, and yeast extract solutions. Mix thoroughly. Aseptically distribute into culture vessels.

Use: For the cultivation of *Roseospira visakhapatnamensis*.

**Rhodobium gokurnum Medium
(DSMZ Medium 1129)**

Composition per liter:

NaCl..... 20.0g
MgSO₄·7H₂O..... 1.5g
NH₄Cl..... 0.6g
KH₂PO₄..... 0.5g
CaCl₂·2H₂O..... 0.15g
Sulfide solution..... 10.0mL
Thiosulfate solution..... 10.0mL
Bicarbonate solution..... 10.0mL
Yeast extract solution..... 10.0mL
Sodium pyruvate solution..... 10.0mL
Ferric citrate solution..... 5.0mL

Trace elements solution SL-7..... 1.0mL
Vitamin solution..... 1.0mL
pH 6.8 ± 0.2 at 25°C

Ferric Citrate Solution:

Composition per 10.0mL:

Ferric citrate..... 0.01g

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-7:

Composition per liter:

CoCl₂·6H₂O..... 200.0mg
MnCl₂·4H₂O..... 100.0mg
ZnCl₂..... 70.0mg
H₃BO₃..... 60.0mg
Na₂MoO₄·2H₂O..... 40.0mg
CuCl₂·2H₂O..... 20.0mg
NiCl₂·6H₂O..... 20.0mg
HCl (25%)..... 1.0mL

Preparation of Trace Elements Solution SL-7: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Vitamin B₁₂..... 2.0mg

Preparation of Vitamin Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Sodium Pyruvate Solution:

Composition per 10.0mL:

Sodium pyruvate..... 3.0g

Preparation of Sodium Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract..... 0.4g

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Sulfide Solution:

Composition per 10.0mL:

Na₂S·9H₂O..... 0.25g

Preparation of Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Thiosulfate Solution:

Composition per 10.0mL:

Na₂S₂O₃·5H₂O..... 1.6g

Preparation of Thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Adjust to pH 10.0. Filter sterilize.

Bicarbonate Solution:

Composition per 100.0mL:

NaHCO₃..... 10.0g

Preparation of Bicarbonate Solution: Add NaHCO_3 to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 6.5. Seal in bottles (half full) under an atmosphere of CO_2 . Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except ferric citrate, trace elements, sulfide, thiosulfate, bicarbonate, vitamin, sodium pyruvate, and yeast extract solutions, to distilled/deionized water and bring volume to 943.0mL. Mix thoroughly. Adjust pH to 6.8. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add ferric citrate, trace elements, sulfide, thiosulfate, bicarbonate, vitamin, sodium pyruvate, and yeast extract solutions. Mix thoroughly. Aseptically distribute into culture vessels.

Use: For the cultivation of *Roseospira goensis*.

Rhodobium Medium (DSMZ Medium 745)

Composition per liter:

NaCl	50.2g
Na-DL-malate	3.6g
Yeast extract	1.0g
KH_2PO_4	1.0g
$(\text{NH}_4)_2\text{SO}_4$	1.0g
$\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$	0.2g
$\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$	0.05g
$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ solution	10.0mL
Trace elements solution SL-8	1.0mL
pH 6.8 ± 0.2 at 25°C	

Trace Elements Solution SL-8:

Composition per liter:

Na_2 -EDTA	5.2g
$\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$	1.5g
$\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$	190.0mg
$\text{MnCl}_2 \cdot 4\text{H}_2\text{O}$	100.0mg
ZnCl_2	70.0mg
H_3BO_3	62.0mg
$\text{Na}_2\text{MoSO}_4 \cdot 2\text{H}_2\text{O}$	36.0mg
$\text{NiCl}_2 \cdot 6\text{H}_2\text{O}$	24.0mg
$\text{CuCl}_2 \cdot 2\text{H}_2\text{O}$	17.0mg

Preparation of Trace Elements Solution SL-8: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N_2 .

$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ Solution:

Composition per 10.0mL:

$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$	0.5g
---	------

Preparation of $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ Solution: Add $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Adjust pH to 6.8. Autoclave under 100% N_2 for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust to pH 6.8. Gently heat and bring to boiling. Cool to room temperature while sparging with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Add 10.0mL sterile $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ solution. Mix thoroughly. Aseptically and anaerobically under 100% N_2 distribute into sterile screw-cap tubes or flasks.

Use: For the cultivation of *Rhodobium orientis* (*Rhodovulum orientis*).

Rhodoblastus Medium (DSMZ Medium 1142)

Composition per liter:

Yeast extract	0.1g
Na_2 -succinate	1.0g
KH_2PO_4	0.5g
$\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$	0.4g
NaCl	0.4g
NH_4Cl	0.4g
$\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$	0.05g
Trace elements solution SL-6	1.0mL
pH 5.7 ± 0.2 at 25°C	

Trace Elements Solution SL-6:

Composition per liter:

$\text{MnCl}_2 \cdot 4\text{H}_2\text{O}$	0.5g
H_3BO_3	0.3g
$\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$	0.2g
$\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$	0.1g
$\text{Na}_2\text{MoO}_4 \cdot 2\text{H}_2\text{O}$	0.03g
$\text{NiCl}_2 \cdot 6\text{H}_2\text{O}$	0.02g
$\text{CuCl}_2 \cdot 2\text{H}_2\text{O}$	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.7. Distribute into tubes or flasks. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Rhodoblastus* spp.

Rhodocyclus Medium (LMG Medium 82)

Composition per liter:

Yeast extract	1.0g
Ammonium acetate	0.5g
KH_2PO_4	0.5g
$\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$	0.4g
NaCl	0.4g
NH_4Cl	0.4g
$\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$	50.0mg
Ferric citrate solution	5.0mL
Trace elements solution	1.0mL
Vitamin solution	1.0mL
Ethanol	0.5mL
pH 5.8 ± 0.2 at 25°C	

Ferric Citrate Solution :

Composition per 100.0mL:

Ferric citrate	0.1g
----------------------	------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

H_3BO_3	0.3g
$\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$	0.2g
$\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$	0.1g
$\text{Na}_2\text{MoO}_4 \cdot 2\text{H}_2\text{O}$	30.0mg
$\text{MnCl}_2 \cdot 4\text{H}_2\text{O}$	30.0mg

NiCl ₂ ·6H ₂ O	20.0mg
CuCl ₂ ·2H ₂ O	10.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per 100.0mL:

Vitamin B ₁₂	2.0mg
-------------------------------	-------

Preparation of Vitamin Solution: Add vitamin B₁₂ to 100.0mL of distilled/deionized water. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute 40.0mL medium into 50 mL screw-capped bottles. Flush each bottle for 1 to 2 minutes with nitrogen gas and then close immediately with rubber septa and screw caps. Autoclave for 15 min at 15 psi pressure–121°C. Sterile syringes are used to inoculate and remove the samples. Incubate in light using a tungsten lamp.

Use: For the cultivation of *Rhodocyclus purpureus*.

Rhodocyclus purpureus Medium (DSMZ Medium 44)

Composition per 1056.9 mL:

Na ₂ -succinate	1.0g
(NH ₄)-acetate	0.5g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.4g
NaCl	0.4g
NH ₄ Cl	0.4g
Yeast extract	0.3g
L-Cysteine	0.3g
CaCl ₂ ·2H ₂ O	0.05g
Ferric citrate solution	5.0mL
Trace elements solution SL-6	1.0mL
Ethanol	0.5mL
Vitamin B ₁₂ solution	0.4mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B ₁₂	10.0mg
-------------------------------	--------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min.

Ferric Citrate Solution:

Composition per 10.0mL:

Ferric citrate	10.0mg
----------------------	--------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min.

Preparation of Medium: Add components to 1050.0mL distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Boil for 3–4 min under a stream of 100% N₂. Distribute 45.0mL of the prepared medium into 50.0mL screw-capped tubes that have been flushed with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sterile syringes are used to inoculate and remove samples. Incubate in the light using a tungsten lamp.

Use: For the cultivation and maintenance of brown and other oxygen sensitive Rhodospirillaceae.

Rhodocyclus purpureus Medium (DSMZ Medium 44)

Composition per 1056.9 mL:

Na ₂ -succinate	1.0g
(NH ₄)-acetate	0.5g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.4g
NaCl	0.4g
NH ₄ Cl	0.4g
Yeast extract	0.3g
CaCl ₂ ·2H ₂ O	0.05g
Ferric citrate solution	5.0mL
Trace elements solution SL-6	1.0mL
Ethanol	0.5mL
Vitamin B ₁₂ solution	0.4mL
Neutralized sulfide solution	variable

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B ₁₂	10.0mg
-------------------------------	--------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min.

Ferric Citrate Solution:

Composition per 10.0mL:

Ferric citrate	10.0mg
----------------------	--------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min.

Neutralized Sulfide Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	1.5g
---	------

Preparation of Neutralized Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water in a 250.0mL screw-capped bottle fitted with a butyl rubber septum and bring volume to 100.0mL. Add a magnetic stir bar. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Adjust pH to about 7.0 with sterile 2M H₂SO₄. Do not open the bottle to add H₂SO₄; use a sterile syringe. Stir the solution continuously to avoid precipitation of elemental sulfur. The final solution should be clear and yellow in color.

Preparation of Medium: Add components, except neutralized sulfide solution, to 1050.0mL distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Boil for 3–4 min under a stream of 100% N₂. Distribute 45.0mL of the prepared medium into 50.0mL screw-capped tubes that have been flushed with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Before inoculation, aseptically and anaerobically add 0.25–0.50mL of neutralized sulfide solution. Sterile syringes are used to inoculate and remove samples. Incubate in the light using a tungsten lamp.

Use: For the cultivation and maintenance of brown and other oxygen-sensitive Rhodospirillaceae.

Rhodocyclus purpureus Medium (DSMZ Medium 44)

Composition per 1056.9 mL:

Na ₂ -succinate	1.0g
(NH ₄)-acetate	0.5g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.4g
NaCl	0.4g
NH ₄ Cl	0.4g
Yeast extract	0.3g
CaCl ₂ ·2H ₂ O	0.05g
Ferric citrate solution	5.0mL
Trace elements solution SL-6	1.0mL
Ethanol	0.5mL
Vitamin B ₁₂ solution	0.4mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B ₁₂	10.0mg
-------------------------------	--------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min.

Ferric Citrate Solution:

Composition per 10.0mL:

Ferric citrate	10.0mg
----------------------	--------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min.

Preparation of Medium: Add components to 1050.0mL distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Boil for 3–4 min under a stream of 100% N₂. Distribute 45.0mL of the prepared medium into 50.0mL screw-capped tubes that have been flushed with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sterile syringes are used to inoculate and remove samples. Incubate in the light using a tungsten lamp.

Use: For the cultivation and maintenance of *Rhodocyclus purpureus*.

Rhodomicrobium Medium (LMG Medium 79)

Composition per liter:

Di-odium succinate	1.0g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.4g
NaCl	0.4g
NH ₄ Cl	0.4g
Yeast extract	0.2g
CaCl ₂ ·2H ₂ O	50.0mg
Ferric citrate solution	5.0mL
Trace elements solution	1.0mL

pH 5.7 ± 0.2 at 25°C

Ferric Citrate Solution :

Composition per 100.0mL:

Ferric citrate	0.1g
----------------------	------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	30.0mg
MnCl ₂ ·4H ₂ O	30.0mg
NiCl ₂ ·6H ₂ O	20.0mg
CuCl ₂ ·2H ₂ O	10.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute 40.0mL medium into 50mL screw-capped bottles. Flush each bottle for 1 to 2 min with nitrogen gas and then close immediately with rubber septa and screw-caps. Autoclave for 15 min at 15 psi pressure–121°C. Sterile syringes are used to inoculate and remove the samples. Incubate in light using a tungsten lamp.

Use: For the cultivation of *Rhodomicrobium vannielii* and *Rhodoblastus acidophilus*.

Rhodopila globiformis Medium

Composition per liter:

Mannitol	1.5g
Sodium gluconate	0.56g
KH ₂ PO ₄	0.4g
NaCl	0.4g
MgCl ₂ ·6H ₂ O	0.4g

NH ₄ Cl	0.4g
Na ₂ S ₂ O ₃ ·5H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.05g
Ferric citrate	5.0mg
VA vitamins	1.0mL
Trace elements solution SL-6	1.0mL
pH 4.9 ± 0.2 at 25°C	

VA Vitamins:**Composition per 500.0mL:**

Nicotinamide	0.175g
Thiamine-HCl	0.15g
<i>p</i> -Aminobenzoic acid	0.1g
Biotin	0.05g
Pyridoxine·2HCl	0.05g
Calcium pantothenate	0.05g
Cyanocobalamin	0.025g

Preparation of VA Vitamins: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Trace Elements Solution SL-6:**Composition per liter:**

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 4.9. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Rhodopila globiformis*.

Rhodopila globiformis Medium (LMG Medium 81)

Composition per 1008.0mL:

Mannitol	1.5g
Sodium gluconate	0.5g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.4g
NH ₄ Cl	0.4g
NaCl	0.4g
Yeast extract	0.25g
CaCl ₂ ·2H ₂ O	50.0mg
Ferric citrate solution	5.0mL
Na ₂ SO ₃ solution	2.0mL
Trace elements solution	1.0mL
Biotin solution	1.0mL
<i>p</i> -Aminobenzoic acid solution	1.0mL
pH 4.9 ± 0.2 at 25°C	

Ferric Citrate Solution:**Composition per 100.0mL:**

Ferric citrate	0.1g
----------------------	------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Elements Solution:**Composition per liter:**

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	30.0mg
MnCl ₂ ·4H ₂ O	30.0mg
NiCl ₂ ·6H ₂ O	20.0mg
CuCl ₂ ·2H ₂ O	10.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Biotin Solution:**Composition per 100.0mL:**

Biotin	2.0mg
--------------	-------

Preparation of Biotin Solution: Add biotin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

p*-Aminobenzoic Acid Solution:*Composition per 100.0mL:**

<i>p</i> -Aminobenzoic Acid	10.0mg
-----------------------------------	--------

Preparation of *p*-Aminobenzoic Acid Solution: Add *p*-aminobenzoic acid to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Na₂S₂O₃ Solution:**Composition per 10.0mL:**

Na ₂ S ₂ O ₃	1.0g
---	------

Preparation of Na₂S₂O₃ Solution: Add Na₂S₂O₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except Na₂S₂O₃ solution, ferric citrate solution, biotin solution, and *p*-aminobenzoic acid solution, to distilled deionized water and bring volume to 1.0mL. Mix thoroughly. Adjust pH to 4.9. Add 5.0mL of ferric citrate solution, 1.0mL of biotin solution, and 1.0mL of *p*-aminobenzoic acid solution. Mix thoroughly. Distribute into screw-capped tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Allow to cool to room temperature. Aseptically add 0.2mL of sterile Na₂S₂O₃ solution to each 100.0mL of medium. Mix thoroughly.

Use: For the cultivation and maintenance of *Rhodopila globiformis* spp.

Rhodopseudomonas blastica Medium

Composition per liter:

Sodium pyruvate	1.5g
Sodium hydrogen malate	1.5g
Yeast extract	1.0g
NH ₄ Cl	0.5g
MgSO ₄ ·7H ₂ O	0.4g
NaCl	0.4g
CaCl ₂ ·2H ₂ O	0.05g
Sodium pyruvate solution	50.0mL
Sodium hydrogen malate solution	50.0mL
Sodium phosphate buffer (0.1M, pH 6.8)	50.0mL
pH 6.8 ± 0.2 at 25°C	

Sodium Pyruvate Solution :**Composition per 50.0mL:**

Sodium pyruvate	1.5g
-----------------------	------

Preparation of Sodium Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Sodium Hydrogen Malate Solution :

Composition per 50.0mL:

Sodium hydrogen malate 1.5g

Preparation of Sodium Hydrogen Malate Solution: Add sodium hydrogen malate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except sodium pyruvate solution, sodium hydrogen malate solution, and sodium phosphate buffer—to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8 with KOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Filter sterilize the sodium pyruvate solution, sodium hydrogen malate solution, and sodium phosphate buffer. Aseptically add 50.0mL of sterile sodium pyruvate solution, 50.0mL of sodium hydrogen malate solution, and 50.0mL of sodium phosphate buffer to cooled basal medium. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Rhodopseudomonas blastic* and other *Rhodopseudomonas* species.

Rhodopseudomonas globiformis Medium

Composition per 1002.0mL:

Mannitol..... 1.5g
 KH₂PO₄..... 0.5g
 Sodium gluconate 0.5g
 MgSO₄·7H₂O 0.4g
 NaCl 0.4g
 NH₄Cl 0.4g
 Yeast extract..... 0.25g
 CaCl₂·2H₂O..... 0.05g
 Ferric citrate solution..... 5.0mL
 Na₂S₂O₃ solution..... 2.0mL
 Biotin solution..... 1.0mL
p-Aminobenzoic acid solution 1.0mL
 Trace elements solution SL-6 1.0mL
 pH 4.9 ± 0.2 at 25°C

Ferric Citrate Solution:

Composition per 10.0mL:

Ferric citrate..... 0.01g

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S₂O₃ Solution :

Composition per 10.0mL:

Na₂S₂O₃ 1.0g

Preparation of Na₂S₂O₃ Solution: Add Na₂S₂O₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Biotin Solution:

Composition per 10.0mL:

Biotin 0.2mg

Preparation of Biotin Solution: Add biotin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

p-Aminobenzoic Acid Solution:

Composition per 10.0mL:

p-Aminobenzoic acid..... 1.0mg

Preparation of *p*-Aminobenzoic Acid Solution: Add *p*-aminobenzoic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-6:

Composition per liter:

MnCl₂·4H₂O 0.5g
 H₃BO₃ 0.3g
 CoCl₂·6H₂O 0.2g
 ZnSO₄·7H₂O 0.1g
 Na₂MoO₄·2H₂O 0.03g
 NiCl₂·6H₂O 0.02g
 CuCl₂·2H₂O 0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except Na₂S₂O₃ solution, ferric citrate solution, biotin solution, and *p*-aminobenzoic acid solution, to distilled deionized water and bring volume to 993.0mL. Mix thoroughly. Adjust pH to 4.9. Add 5.0mL of ferric citrate solution, 1.0mL of biotin solution, and 1.0mL of *p*-aminobenzoic acid solution. Mix thoroughly. Distribute into screw-capped tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Allow to cool to room temperature. Aseptically add 0.2mL of sterile Na₂S₂O₃ solution to each 100.0mL of medium. Mix thoroughly.

Use: For the cultivation and maintenance of *Rhodopila globiformis*.

Rhodopseudomonas julia Medium

Composition per liter:

NaHCO₃..... 3.0g
 NaCl 1.0g
 KH₂PO₄..... 1.0g
 NH₄Cl 1.0g
 Sodium acetate 1.0g
 Na₂SO₄..... 0.7g
 MgCl₂·6H₂O 0.5g
 Sodium ascorbate..... 0.5g
 CaCl₂·2H₂O 0.1g
 Yeast extract..... 0.1g
 Na₂S·9H₂O solution 10.0mL
 SLA trace elements solution 1.0mL
 VA vitamin solution 1.0mL
 pH 6.9–7.0 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.156g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

SLA Trace Elements Solution:

Composition per liter:

FeCl₂·4H₂O 1.8g
 H₃BO₃ 0.5g
 CoCl₂·6H₂O 0.25g
 ZnCl₂..... 0.1g

MnCl ₂ ·4H ₂ O.....	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	30.0mg
CuCl ₂ ·2H ₂ O.....	10.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	10.0mg
NiCl ₂ ·6H ₂ O.....	10.0mg

Preparation of SLA Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 2.0–3.0.

VA Vitamin Solution:

Composition per liter:

Nicotinamide.....	0.175g
Thiamine-HCl.....	0.15g
<i>p</i> -Aminobenzoic acid.....	0.1g
Biotin.....	50.0mg
Calcium D-(+)-pantothenate.....	50.0mg
Pyridoxine·2HCl.....	50.0mg
Cyanocobalamin.....	25.0mg

Preparation of VA Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 6.9–7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Rhodopseudomonas julia*.

Rhodopseudomonas Medium (ATCC Medium 543)

Composition per liter:

Sodium succinate.....	2.5g
(NH ₄) ₂ SO ₄	1.25g
K ₂ HPO ₄	0.9g
KH ₂ PO ₄	0.6g
Yeast extract.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂	0.07g
Ferric citrate.....	3.0mg
Ethylenediamine tetraacetate (EDTA).....	2.0mg
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Rhodopseudomonas* species.

Rhodopseudomonas Medium (ATCC Medium 650)

Composition per liter:

Sodium succinate.....	1.5g
KH ₂ PO ₄	1.0g
NH ₄ Cl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.4g
NaCl.....	0.4g
CaCl ₂ ·2H ₂ O.....	0.05g
Trace metals solution.....	10.0mL
pH 5.6–6.0 at 25°C	

Trace Metals Solution:

Composition per 100.0mL:

Ferric citrate.....	0.3g
Ethylenediamine tetraacetic acid (EDTA).....	0.05g
CaCl ₂ ·2H ₂ O.....	0.02g
MnSO ₄ ·H ₂ O.....	0.002g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	0.002g
H ₃ BO ₃	0.001g
CuSO ₄ ·5H ₂ O.....	0.001g
ZnSO ₄	0.001g

Preparation of Trace Metals Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except trace metals solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 10.0mL of trace metals solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Rhodopseudomonas viridis*, *Rhodopseudomonas acidophila*, and other *Rhodopseudomonas* species.

Rhodopseudomonas rutila Medium

Composition per liter:

Sodium glutamate.....	2.0g
Sodium L-malate.....	2.0g
Yeast extract.....	2.0g
KH ₂ PO ₄	1.0g
NaHCO ₃	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.1g
MnSO ₄ ·H ₂ O.....	2.0mg
Biotin.....	1.0mg
Nicotinic acid.....	1.0mg
Thiamine-HCl.....	1.0mg
CoCl ₂ ·6H ₂ O.....	0.5mg
FeSO ₄ ·7H ₂ O.....	0.5mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Rhodopseudomonas palustris* and *Rhodopseudomonas rutila*.

Rhodopseudomonas sulfoviridis Medium

Composition per 1050.0mL:

Ammonium acetate.....	1.5g
Sodium malate.....	1.0g
KH ₂ PO ₄	0.5g
Na ₂ S ₂ O ₃	0.5g
MgSO ₄ ·7H ₂ O.....	0.4g
NaCl.....	0.4g
NH ₄ Cl.....	0.4g
Yeast extract.....	0.3g
Disodium succinate.....	0.25g
CaCl ₂ ·2H ₂ O.....	0.05g
Ferric citrate solution.....	5.0mL
Trace elements solution SL-6.....	1.0mL
Ethanol.....	0.5mL

Vitamin B ₁₂ solution	0.4mL
Neutralized sulfide solution	variable
pH 6.8 ± 0.2 at 25°C	

Ferric Citrate Solution:**Composition per 10.0mL:**

Ferric citrate	10.0mg
----------------------	--------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge under 100% N₂ for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂.

Trace Elements Solution SL-6:**Composition per liter:**

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin B₁₂ Solution:**Composition per 100.0mL:**

Vitamin B ₁₂	10.0mg
-------------------------------	--------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge under 100% N₂ for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂.

Neutralized Sulfide Solution:**Composition per 100.0mL:**

Na ₂ S·9H ₂ O	1.5g
---	------

Preparation of Neutralized Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water in a 250mL screw-capped bottle fitted with a butyl rubber septum and bring volume to 100.0mL. Add a magnetic stir bar. Mix thoroughly. Sparge under 100% N₂ for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Adjust pH to about 7.3 with sterile 2M H₂SO₄. Do not open the bottle to add H₂SO₄; use a sterile syringe. Stir the solution continuously to avoid precipitation of elemental sulfur. The final solution should be clear and yellow in color.

Preparation of Medium: Add components, except neutralized sulfide solution, to distilled/deionized water and bring volume to 1050.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3–4 min under a stream of 100% N₂. Distribute 45.0mL of the prepared medium into 50.0mL screw-capped tubes that have been flushed with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Before inoculation, aseptically and anaerobically add 0.25–0.50mL of neutralized sulfide solution to each tube.

Use: For the cultivation and maintenance of *Rhodopseudomonas sulfoviridis*.

Rhodospirillaceae Enrichment Medium**Composition per liter:**

Dicarboxylic acid substrate	1.0g
KH ₂ PO ₄	0.5g
NaCl	0.4g
NH ₄ Cl	0.4g

MgSO ₄ ·7H ₂ O	0.2g
Yeast extract	0.2g
CaCl ₂ ·2H ₂ O	0.05g
Ferric citrate solution	5.0mL
Trace elements solution SL-7	1.0mL
Vitamin B ₁₂ solution	1.0mL
pH 6.8 ± 0.2 at 25°C	

Ferric Citrate Solution:**Composition per 100.0mL:**

Ferric citrate	0.1g
----------------------	------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Elements Solution SL-7:**Composition per liter:**

CoCl ₂ ·6H ₂ O	0.2g
MnCl ₂ ·4H ₂ O	0.1g
ZnCl ₂	0.07g
H ₃ BO ₃	0.06g
NaMoO ₄ ·2H ₂ O	0.04g
CuCl ₂ ·2H ₂ O	0.02g
NiCl ₂ ·6H ₂ O	0.02g
HCl (25% solution)	1.0mL

Preparation of Trace Elements Solution SL-7: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin B₁₂ Solution:**Composition per 100.0mL:**

Vitamin B ₁₂	1.0mg
-------------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Succinic acid or glutaric acid may be used for the dicarboxylic acid substrate. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enrichment and isolation of members of the Rhodospirillaceae.

Rhodospirillaceae Enrichment Medium**Composition per liter:**

Fatty acid substrate	1.0g
KH ₂ PO ₄	0.5g
NaCl	0.4g
NH ₄ Cl	0.4g
MgSO ₄ ·7H ₂ O	0.2g
Yeast extract	0.2g
CaCl ₂ ·2H ₂ O	0.05g
NaHCO ₃ solution	40.0mL
Ferric citrate solution	5.0mL
Trace elements solution SL-7	1.0mL
Vitamin B ₁₂ solution	1.0mL
pH 7.3 ± 0.2 at 25°C	

Ferric Citrate Solution:**Composition per 100.0mL:**

Ferric citrate	0.1g
----------------------	------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Elements Solution SL-7:**Composition** per liter:

CoCl ₂ ·6H ₂ O	0.2g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnCl ₂	0.07g
H ₃ BO ₃	0.06g
NaMoO ₄ ·2H ₂ O.....	0.04g
CuCl ₂ ·2H ₂ O.....	0.02g
NiCl ₂ ·6H ₂ O.....	0.02g
HCl (25% solution).....	1.0mL

Preparation of Trace Elements Solution SL-7: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin B₁₂ Solution:**Composition** per 100.0mL:

Vitamin B ₁₂	1.0mg
-------------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

NaHCO₃ Solution:**Composition** per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except NaHCO₃ solution, to distilled/deionized water and bring volume to 1.0L. Acetate, propionate, or butyrate salts may be used for the fatty acid substrate. Mix thoroughly. Adjust pH to 7.3. Distribute into flasks in 50.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Immediately prior to inoculation, aseptically add 2.0mL of sterile NaHCO₃ solution to each flask containing 50.0mL of medium.

Use: For the enrichment and isolation of members of the Rhodospirillaceae.

Rhodospirillaceae Enrichment Medium**Composition** per liter:

Fatty acid or dicarboxylic acid substrate	1.0g
KH ₂ PO ₄	0.5g
NaCl.....	0.4g
NH ₄ Cl.....	0.4g
MgSO ₄ ·7H ₂ O.....	0.2g
Yeast extract.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.05g
Ferric citrate solution.....	5.0mL
Trace elements solution SL-7.....	1.0mL
Vitamin B ₁₂ solution.....	1.0mL

pH 5.2–5.5 at 25°C

Ferric Citrate Solution:**Composition** per 100.0mL:

Ferric citrate.....	0.1g
---------------------	------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Elements Solution SL-7:**Composition** per liter:

CoCl ₂ ·6H ₂ O.....	0.2g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnCl ₂	0.07g

H ₃ BO ₃	0.06g
NaMoO ₄ ·2H ₂ O.....	0.04g
CuCl ₂ ·2H ₂ O.....	0.02g
NiCl ₂ ·6H ₂ O.....	0.02g
HCl (25% solution).....	1.0mL

Preparation of Trace Elements Solution SL-7: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin B₁₂ Solution:**Composition** per 100.0mL:

Vitamin B ₁₂	1.0mg
-------------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Acetate, propionate, or butyrate salts may be used for the fatty acid substrate. Succinic acid or glutaric acid may be used for the dicarboxylic acid substrate. Lactate or ethanol may be used as an alternate substrate. Mix thoroughly. Adjust pH to 5.2–5.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enrichment and isolation of *Rhodopseudomonas acidophila* and *Rhodomicrobium vannielii*.

Rhodospirillaceae Medium**Composition** per liter:

Succinic acid.....	1.0g
KH ₂ PO ₄	0.5g
NaCl.....	0.4g
NH ₄ Cl.....	0.4g
MgSO ₄ ·7H ₂ O.....	0.2g
Yeast extract.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.05g
Ferric citrate solution.....	5.0mL
Vitamin B ₁₂ solution.....	1.0mL
Trace elements solution SL7.....	1.0mL

pH 6.8 ± 0.2 at 25°C

Ferric Citrate Solution:**Composition** per 100.0mL:

Ferric citrate.....	0.1g
---------------------	------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Vitamin B₁₂ Solution:**Composition** per 100.0mL:

Vitamin B ₁₂	1.0mg
-------------------------------	-------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-7:**Composition** per liter:

MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
H ₃ BO ₃	60.0mg
NaMoO ₄ ·2H ₂ O.....	40.0mg
CoCl ₂ ·2H ₂ O.....	20.0mg
CuCl ₂ ·2H ₂ O.....	20.0mg

NiCl ₂ ·6H ₂ O	20.0mg
HCl (25%)	1.0mL

Preparation of Trace Elements Solution SL7: Add 100mg of MnCl₂·4H₂O to 1.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except ferric -citrate solution, vitamin B₁₂ solution, and trace elements solution SL-7, to distilled/deionized water and bring volume to 993.0mL. Mix thoroughly. Adjust pH to 6.8. Autoclave for 30 min at 15 psi pressure–121°C. Aseptically add 5.0mL of sterile ferric citrate solution, 1.0mL of sterile vitamin B₁₂ solution, and 1.0mL of sterile trace elements solution SL-7. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes under anaerobic conditions. Tighten screw caps.

Use: For the cultivation of *Rhodospirillum* species and other members of the family Rhodospirillaceae.

Rhodospirillaceae Medium, Modified

Composition per 1050.0mL:

Ammonium acetate	1.5g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.4g
NaCl	0.4g
NH ₄ Cl	0.4g
Yeast extract	0.3g
Disodium succinate	0.25g
CaCl ₂ ·2H ₂ O	0.05g
Ferric citrate solution	5.0mL
Trace elements solution SL-6	1.0mL
Ethanol	0.5mL
Vitamin B ₁₂ solution	0.4mL
Neutralized sulfide solution	variable

pH 6.8 ± 0.2 at 25°C

Ferric Citrate Solution:

Composition per 10.0mL:

Ferric citrate	10.0mg
----------------------	--------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge under 100% N₂ for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂ gas.

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Vitamin B ₁₂	10.0mg
-------------------------------	--------

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂ gas.

Neutralized Sulfide Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	1.5g
---	------

Preparation of Neutralized Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water in a 250mL screw-capped bottle fitted with a butyl rubber septum and bring volume to 100.0mL. Add a magnetic stir bar. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Adjust pH to about 7.3 with sterile 2M H₂SO₄. Do not open the bottle to add H₂SO₄; use a sterile syringe. Stir the solution continuously to avoid precipitation of elemental sulfur. The final solution should be clear and yellow in color.

Preparation of Medium: Add components, except neutralized sulfide solution, to distilled/deionized water and bring volume to 1050.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3–4 min under a stream of 100% N₂. Distribute 45.0mL of the prepared medium into 50.0mL screw-capped tubes that have been flushed with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Before inoculation, aseptically and anaerobically add 0.25–0.50mL of neutralized sulfide solution to each tube.

Use: For the cultivation and maintenance of *Ectothiorhodospira marismortui*, *Rhodobacter capsulatus*, *Rhodobacter sphaeroides*, *Rhodobacter sulfidophilus*, *Rhodocyclus tenuis*, *Rhodopseudomonas blastica*, *Rhodopseudomonas marina*, *Rhodopseudomonas palustris*, *Rhodopseudomonas rosea*, *Rhodopseudomonas viridis*, *Rhodospirillum fulvum*, *Rhodospirillum molischianum*, *Rhodospirillum photometricum*, *Rhodospirillum rubrum*, *Rhodospirillum salexigens*, and *Rubrivivax gelatinosus*.

Rhodospirillum Medium

Composition per 1006.5mL:

Disodium succinate	1.0g
Yeast extract	0.8g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.4g
NaCl	0.4g
NH ₄ Cl	0.4g
Yeast extract	0.2g
CaCl ₂ ·H ₂ O	50.0mg
Ferric citrate solution	5.0mL
Trace elements solution	1.0mL
Ethanol	0.5mL

pH 6.8 ± 0.2 at 25°C

Ferric Citrate Solution:

Composition per 10.0mL:

Ferric citrate	0.01g
----------------------	-------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ferric citrate solution, trace elements solution, and ethanol, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 5.0mL of sterile ferric citrate solution, 1.0mL of sterile trace elements solution, and 0.5mL of filter-sterilized ethanol. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Rhodospirillum fulvum*.

Rhodospirillum Medium (ATCC Medium 1308)

Composition per liter:

Yeast extract.....	1.0g
Disodium succinate.....	1.0g
KH ₂ PO ₄	0.5g
Sodium ascorbate.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.4g
NaCl.....	0.4g
NH ₄ Cl.....	0.4g
CaCl ₂ ·2H ₂ O.....	0.05g
Ferric citrate (0.1% solution).....	5.0mL
Trace elements solution SL-6.....	1.0mL
Ethanol.....	0.5mL

pH 6.0 ± 0.2 at 25°C

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.03g
Na ₂ MoO ₄ ·H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Rhodospirillum* species.

Rhodospirillum Medium (ATCC Medium 1408)

Composition per liter:

NaCl.....	100.0g
MgCl ₂ ·6H ₂ O.....	3.5g
Yeast extract.....	1.5g
Peptone.....	1.5g
Sodium malate.....	1.4g
KH ₂ PO ₄	0.3g
SLA trace elements.....	1.0mL

pH 7.0 ± 0.2 at 25°C

SLA Trace Elements:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.8g
H ₃ BO ₃	0.5g
CoCl ₂ ·6H ₂ O.....	0.25g
ZnCl ₂	0.1g
MnCl ₂ ·4H ₂ O.....	0.07g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.01g
CuCl ₂ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.01g

Preparation of SLA Trace Elements: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 2–3.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust medium to final pH of 7.0. Sterilize by autoclaving at 121°C for 15 min.

Use: For the cultivation of *Rhodospirillum* species.

Rhodospirillum Medium, Modified I

Composition per liter:

Disodium succinate.....	1.0g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.4g
NaCl.....	0.4g
NH ₄ Cl.....	0.4g
Yeast extract.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.05g
Ferric citrate (0.1% solution).....	5.0mL
Trace elements solution SL-6.....	1.0mL

pH 5.7 ± 0.2 at 25°C

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.10g
MnCl ₂ ·4H ₂ O.....	0.03g
Na ₂ MoO ₄ ·H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.7. Distribute 40.0mL volumes into tubes or bottles. Sparge with 100% N₂ for 1–2 min. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Rhodospirillum vannielii*, *Rhodopseudomonas acidophila*, and *Rhodobacter capsulatus*.

Rhodospirillum Medium, Modified II

Composition per liter:

Yeast extract.....	1.0g
Disodium succinate.....	1.0g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.4g
NaCl.....	0.4g
NH ₄ Cl.....	0.4g

CaCl ₂ ·2H ₂ O.....	0.05g
Ferric citrate (0.1% solution).....	5.0mL
Trace elements solution SL-6.....	1.0mL
Ethanol.....	0.5mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution SL-6:**Composition per liter:**

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.10g
MnCl ₂ ·4H ₂ O.....	0.03g
Na ₂ MoO ₄ ·H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute 40.0mL volumes into tubes or bottles. Sparge with 100% N₂ for 1–2 min. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Rhodobacter sphaeroides*, *Rhodocyclus tenuis*, *Rhodopseudomonas blastica*, *Rhodopseudomonas palustris*, *Rhodopseudomonas viridis*, *Rhodospirillum fulvum*, *Rhodospirillum molischianum*, *Rhodospirillum photometricum*, *Rhodospirillum rubrum*, and *Rubrivivax gelatinosus*.

Rhodospirillum Medium, Modified III**Composition per liter:**

Yeast extract.....	1.0g
Ammonium acetate.....	0.5g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.4g
NaCl.....	0.4g
NH ₄ Cl.....	0.4g
CaCl ₂ ·2H ₂ O.....	0.05g
Vitamin B ₁₂	20.0mg
Ferric citrate (0.1% solution).....	5.0mL
Trace elements solution SL-6.....	1.0mL
Ethanol.....	0.5mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution SL-6:**Composition per liter:**

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.03g
Na ₂ MoO ₄ ·H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute 40.0mL volumes into tubes or bottles. Sparge with 100% N₂ for 1–2 min. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Rhodocyclus purpureus*.

Rhodospirillum Medium, Modified IV**Composition per liter:**

NaCl.....	25.0g
Yeast extract.....	1.0g
Disodium succinate.....	1.0g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.4g
NaCl.....	0.4g
NH ₄ Cl.....	0.4g
CaCl ₂ ·2H ₂ O.....	0.05g
Ferric citrate (0.1% solution).....	5.0mL
Trace elements solution SL-6.....	1.0mL
Ethanol.....	0.5mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution SL-6:**Composition per liter:**

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.03g
Na ₂ MoO ₄ ·H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute 40.0mL volumes into tubes or bottles. Sparge with 100% N₂ for 1–2 min. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Rhodobacter sulfidophilus*.

Rhodospirillum salinarum Medium**Composition per liter:**

NaCl.....	100.0g
KCl.....	5.0g
MgCl ₂ ·6H ₂ O.....	5.0g
MgSO ₄ ·7H ₂ O.....	5.0g
NH ₄ Cl.....	5.0g
Peptone solution.....	30.0mL
Yeast extract solution.....	30.0mL
Ferric citrate solution.....	10.0mL
Trace elements solution.....	5.0mL

Peptone Solution:**Composition per 100.0mL:**

Peptone.....	15.0g
--------------	-------

Preparation of Peptone Solution: Add peptone to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Yeast Extract Solution:**Composition per 10.0mL:**

Yeast extract.....	15.0g
--------------------	-------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Ferric Citrate Solution:**Composition per 10.0mL:**

Ferric citrate.....	0.1g
---------------------	------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution:

Composition per liter:

CoCl ₂ ·6H ₂ O	10.0g
ZnSO ₄ ·7H ₂ O	220.0mg
MgCl ₂ ·4H ₂ O	180.0mg
Na ₂ MoO ₄ ·2H ₂ O	6.3mg
CuSO ₄ ·5H ₂ O	1.0mg

Preparation of Medium: Add components, except peptone solution, yeast extract solution, ferric citrate solution, and trace elements solution to distilled/deionized water and bring volume to 925.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 30.0mL of sterile peptone solution, 30.0mL of sterile yeast extract solution, 10.0mL of sterile ferric citrate solution, and 5.0mL of sterile trace elements solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Rhodospirillum salinarum*.

Rhodovulum iodolum *Rhodovulum robiginosum* Medium (DSMZ Medium 929)

Composition per liter:

NaCl	26.4g
MgSO ₄ ·7H ₂ O	6.8g
MgCl ₂ ·6H ₂ O	5.7g
CaCl ₂ ·2H ₂ O	1.5g
KCl	0.66g
KBr	0.09g
NaHCO ₃ solution	30.0mL
Phosphate solution	10.0mL
Sodium acetate solution	10.0mL
Iron sulfate solution	10.0mL
NH ₄ Cl solution	1.0mL
Thiosulfate solution	1.0mL
Selenite-tungstate solution	1.0mL
Trace elements solution	1.0mL
Vitamin solution	1.0mL
Vitamin B ₁₂ solution	1.0mL
Vitamin B ₁ solution	1.0mL

pH 6.8 ± 0.2 at 25°C

Sodium Acetate Solution:

Composition per 100.0mL:

Na-acetate	4.1g
------------------	------

Preparation of Sodium Acetate Solution: Add sodium acetate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution:

Composition per liter:

CoCl ₂ ·6H ₂ O	190.0mg
ZnSO ₄ ·7H ₂ O	144.0mg
MnCl ₂ ·4H ₂ O	100.0mg
Na ₂ MoO ₄ ·4H ₂ O	36.0mg
H ₃ BO ₃	30.0mg
NiCl ₂ ·6H ₂ O	24.0mg
Na ₂ EDTA	5.2mg
FeSO ₄ ·7H ₂ O	2.1mg
CuCl ₂ ·2H ₂ O	2.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per 100.0mL:

Pyridoxine	15.0mg
Nicotinate	10.0mg
Pantothenate	5.0mg
Para-aminobenzoic acid	4.0mg
Biotin	1.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Vitamin B₁₂ Solution:

Composition per 100.0mL:

Cyanocobalamin	5.0mg
----------------------	-------

Preparation of Vitamin B₁₂ Solution: Add cyanocobalamin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Vitamin B₁ Solution:

Composition per 100.0mL:

Thiamine	10.0mg
----------------	--------

Preparation of Vitamin B₁ Solution: Add thiamine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

NH₄Cl Solution:

Composition per 10.0mL:

NH ₄ Cl	2.5g
--------------------------	------

Preparation of NH₄Cl Solution: Add NH₄Cl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Thiosulfate Solution:

Composition per 10.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O	1.24g
--	-------

Preparation of Thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	8.4g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C under an atmosphere of CO₂. Cool to room temperature.

Selenite-Tungstate Solution

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Phosphate Solution:**Composition** per 10.0mL:

KH₂PO₄..... 0.4g

Preparation of Phosphate Solution: Add KH₂PO₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Iron Sulfate Solution:**Composition** per 10.0mL:

FeSO₄..... 1.52g

Preparation of Iron Sulfate Solution: Add FeSO₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Prepare and dispense medium under 90% N₂ + 10% CO₂ gas mixture. Add components, except NaHCO₃ solution, phosphate solution, sodium acetate solution, iron sulfate solution, NH₄Cl solution, thiosulfate solution, selenite-tungstate solution, trace elements solution, vitamin solution, vitamin B₁₂ solution, and vitamin B₁ solution, to distilled/deionized water and bring volume to 933.0mL. Mix thoroughly. Sparge with 90% N₂ + 10% CO₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 30.0mL NaHCO₃ solution, 10.0mL phosphate solution, 10.0mL sodium acetate solution, 10.0mL iron sulfate solution, 1.0mL NH₄Cl solution, 1.0mL thiosulfate solution, 1.0mL selenite-tungstate solution, 1.0mL trace elements solution, 1.0mL vitamin solution, 1.0mL vitamin B₁₂ solution, and 1.0mL vitamin B₁ solution. When the iron is added a white precipitate may form. Adjust pH to 6.8. Aseptically and anaerobically distribute to tubes or bottles.

Use: For the cultivation of *Rhodovulum iodolum* and *Rhodovulum robiginosum*.

***Rhodovulum kholense* Medium (DSMZ Medium 1136)**

Composition per liter:

NaCl 20.0g
Sodium pyruvate 3.0g
MgSO₄·7H₂O 2.0g
NH₄Cl 0.64g
KH₂PO₄ 0.5g
Yeast extract 0.5g
CaCl₂·2H₂O 0.12g
Trace elements solution SL-12 1.0mL

pH 5.7 ± 0.2 at 25°C

Trace Elements Solution SL-12:**Composition** per liter:

FeSO₄·7H₂O 1.1g
H₃BO₃ 0.3g
CoCl₂·6H₂O 0.19g
MnCl₂·2H₂O 0.05g
ZnCl₂ 42.0mg
NiCl₂·6H₂O 24.0mg
Na₂MoO₄·4H₂O 18.0mg
CuCl₂·2H₂O 2.0mg

Preparation of Trace Elements Solution SL-12: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Rhodoblastus* spp.

***Rhodovulum strictum* Medium (DSMZ Medium 746)**

Composition per liter:

Solution 1 500.0mL
Solution 2 500.0mL

pH 7.8 ± 0.2 at 25°C

Solution 1:**Composition** per 500.0mL:

NaCl 8.2g
Na-DL-malate 3.6g
Yeast extract 1.0g
(NH₄)₂SO₄ 1.0g
Na₂S₂O₃·5H₂O 0.5g
MgCl₂·6H₂O 0.2g
CaCl₂·2H₂O 0.05g
Trace elements solution SL-8 1.0mL

Trace Elements Solution SL-8:**Composition** per liter:

Na₂-EDTA 5.2g
FeCl₂·4H₂O 1.5g
CoCl₂·6H₂O 190.0mg
MnCl₂·4H₂O 100.0mg
ZnCl₂ 70.0mg
H₃BO₃ 62.0mg
Na₂MoSO₄·2H₂O 36.0mg
NiCl₂·6H₂O 24.0mg
CuCl₂·2H₂O 17.0mg

Preparation of Trace Elements Solution SL-8: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂.

Preparation of Solution 1: Prepare and dispense medium under an oxygen-free 100% N₂. Add components to distilled/deionized water and bring volume to 500.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 2:**Composition** per 500mL:

K₂HPO₄ 1.35g
KH₂PO₄ 0.35g

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 7.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Aseptically and anaerobically combine 500.0mL solution 1 and 500.0mL solution 2 under N₂. Mix thoroughly. Adjust pH to 7.8. Aseptically and anaerobically distribute into sterile screw-cap tubes or flasks.

Use: For the cultivation of *Rhodovulum strictum*.

***Rhodovulum sulfidophilum* Medium
(LMG Medium 84)****Composition per liter:**

NaCl	25.0g
Yeast extract	1.0g
Disodium succinate	1.0g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.4g
NaCl	0.4g
NH ₄ Cl	0.4g
CaCl ₂ ·2H ₂ O	50.0mg
Ferric citrate solution	5.0mL
Trace elements solution	1.0mL
Ethanol	0.5mL

pH 5.8 ± 0.2 at 25°C

Ferric Citrate Solution :**Composition per 100.0mL:**

Ferric citrate	0.1g
----------------	------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Elements Solution:**Composition per liter:**

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	30.0mg
MnCl ₂ ·4H ₂ O	30.0mg
NiCl ₂ ·6H ₂ O	20.0mg
CuCl ₂ ·2H ₂ O	10.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute 40.0mL medium into 50mL screw-capped bottles. Flush each bottle for 1 to 2 min with nitrogen gas and then close immediately with rubber septa and screw caps. Autoclave for 15 min at 15 psi pressure–121°C. Sterile syringes are used to inoculate and remove the samples. Incubate in light using a tungsten lamp.

Use: For the cultivation of *Rhodovulum sulfidophilum*.

***Rhodovulum visakhum* Medium
(DSMZ Medium 1128)****Composition per liter:**

NaCl	20.0g

NiCl ₂ ·6H ₂ O	0.02g

Preparation of Trace Elements Solution SL-8: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Vitamin Solution:**Composition per 10.0mL:**

Vitamin B ₁₂	0.2mg
-------------------------	-------

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except trace elements SL-8 and vitamin solutions, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Distribute into tubes or flasks. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add trace elements SL-8 and vitamin solutions. Mix thoroughly. Adjust pH to 8.3. Aseptically distribute into culture vessels.

Use: For the cultivation of *Rhodovulum visakhum*.

Riboflavin Assay Medium**Composition per liter:**

Peptone, photolyzed	22.0g
Glucose	20.0g
Yeast supplement	2.0g
Sodium acetate	1.8g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.4g
L-Cystine	0.2g
FeSO ₄ ·7H ₂ O	20.0mg
MnSO ₄ ·H ₂ O	20.0mg
NaCl	20.0mg

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 5.0mL volumes. Add standard solutions and test solutions to each tube. Bring volume of each tube to 10.0mL. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the microbiological assaying of riboflavin using *Lactobacillus casei* as the test organism.

Riboflavin Medium**Composition per liter:**

Glucose	20.0g
Yeast extract	10.0g
Peptone	10.0g
Riboflavin	0.02g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Saccharomyces cerevisiae*.

Ribose Production Medium

Composition per liter:

D-Glucose	150.0g
CaCO ₃	20.0g
Dried yeast	10.0g
(NH ₄) ₂ SO ₄	5.0g
Tryptophan	0.05g
Tyrosine	0.05g
Phenylalanine	0.05g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus subtilis*.

Rice Extract Agar

Composition per liter:

Agar	20.0g
White rice, solids from extract	5.0g
Polysorbate 80	10.0mL

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except polysorbate 80, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Add polysorbate 80. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and differentiation of *Candida albicans* and *Candida stellatoidea* from other *Candida* species based on chlamydospore formation.

Rice Extract Agar

Composition per liter:

Agar	20.0g
White rice, solids from extract	20.0g
Polysorbate 80	10.0mL

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except polysorbate 80, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Add polysorbate 80. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and differentiation of *Candida albicans* and *Candida stellatoidea* from other *Candida* species based on chlamydospore formation.

Rice Grain Medium

Composition per 25.0mL:

White rice, polished and without added vitamins	8.0g
---	------

Preparation of Medium: Add 8.0g of white rice to 25.0mL of distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the identification of *Microsporium audovini* (no growth) from other *Microsporium* species (growth and sporulation).

Rice Infusion Oxgall Tween™ 80 Agar

See: [RIOT Agar](#)

Rich Medium (DSMZ Medium 736)

Composition per liter:

Agar	20.0g
Peptone	10.0g
Yeast extract	5.0g
Casamino acids	5.0g
Malt extract	5.0g
Meat extract	2.0g
Glycerol	2.0g
MgSO ₄ ·7H ₂ O	1.0g
Tween™ 80	0.05g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Cryobacterium psychrophilum*=*Curtobacterium psychrophilum*, *Demetria terrigena*, *Knoellia sinensis*, *Knoellia subterranea*, *Beutenbergia cavernae*, *Ornithinococcus hortensis*, *Ornithinimicrobium humiphilum*, *Janibacter terrae*, and *Tetrasphaera elongata*.

Rifampicin Luria Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g
NaCl	0.5g
Glucose solution	20.0mL
Rifampicin solution	10.0mL

Glucose Solution:

Composition per 50.0mL:

Glucose	5.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Rifampicin Solution:

Composition per 10.0mL:

Rifampicin	30mg
------------------	------

Preparation of Rifampicin Solution: Add rifampicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution and rifampicin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile glucose solution and 10.0mL of sterile rifampicin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

Rila Marine Medium

Composition per liter:

Agar	15.0g
Peptone.....	0.5g
Yeast extract.....	0.5g
Pancreatic digest of casein.....	0.5g
Marine salts mixture	800.0mL
pH 7.6–8.0 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.6–8.0. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Alteromonas denitrificans*.

Rimler-Shotts Medium (RS Medium)

Composition per liter:

Agar	13.5g
Na ₂ S ₂ O ₃ ·5H ₂ O	6.8g
L-Ornithine-HCl.....	6.5g
NaCl	5.0g
L-Lysine-HCl	5.0g
Maltose.....	3.5g
Yeast extract.....	3.0g
Sodium deoxycholate.....	1.0g
Ferric ammonium citrate.....	0.8g
L-Cysteine-HCl.....	0.3g
Bromthymol Blue	0.03g
Novobiocin solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Novobiocin Solution:

Composition per 10.0mL:

Novobiocin.....	5.0mg
-----------------	-------

Preparation of Novobiocin Solution: Add novobiocin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except novobiocin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile novobiocin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and presumptive identification of *Aeromonas hydrophila* and other Gram-negative bacteria based on their ability to decarboxylate lysine and ornithine, ferment maltose, and produce H₂S. Maltose-fermenting bacteria appear as yellow colonies. Bacteria that produce lysine or ornithine decarboxylase turn the medium greenish-yellow to yellow. Bacteria that produce H₂S appear as colonies with black centers.

RIOT Agar (Rice Infusion Oxgall Tween™ 80 Agar)

Composition per 1010.0mL:

Agar	10.0g
Oxgall.....	10.0g

Rice extract	1.0L
Tween™ 80.....	10.0mL
pH 7.3 ± 0.2 at 25°C	

Rice Extract:

Composition per liter:

Cream of rice cereal.....	10.0g
---------------------------	-------

Preparation of Rice Extract: Add cream of rice cereal to 1.0L of boiling tap water. Mix thoroughly. Filter quickly through cheesecloth. Bring volume of filtrate to 1.0L with tap water.

Preparation of Medium: Combine components. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and differentiation of *Candida albicans* and *Candida stellatoidea* from other *Candida* species based on chlamydospore formation.

Rippey-Cabelli Agar (RC Agar)

Composition per liter:

Agar	15.0g
Meat peptone	5.0g
Trehalose.....	5.0g
NaCl.....	3.0g
KCl.....	2.0g
Yeast extract.....	2.0g
Bromthymol Blue	0.44g
MgSO ₄ ·7H ₂ O.....	0.2g
FeCl ₃ ·6H ₂ O.....	0.1g
Sodium deoxycholate.....	0.1g
Ampicillin solution.....	10.0mL
Ethanol.....	10.0mL
pH 8.0 ± 0.2 at 25°C	

Ampicillin Solution:

Composition per 10.0mL:

Ampicillin.....	0.02g
-----------------	-------

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except sodium deoxycholate, ampicillin solution, and ethanol—to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sodium deoxycholate, 10.0mL of sterile ampicillin solution, and 10.0mL of ethanol. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, cultivation, and differentiation of *Aeromonas* species and *Plesiomonas* species from water samples using the membrane filter method. This medium differentiates bacteria on the basis of trehalose fermentation. Bacteria that ferment trehalose turn the medium yellow.

Rippey-Cabelli HiVeg Agar Base with Ethanol and Ampicillin

Composition per liter:

Agar	15.0g
Plant hydrolysate No. 1.....	5.0g
Trehalose.....	5.0g

NaCl.....	3.0g
KCl.....	2.0g
Yeast extract.....	2.0g
MgSO ₄	0.2g
Iron (III) chloride.....	0.1g
Bromthymol Blue.....	0.04g
Ampicillin solution.....	10.0mL
Ethanol.....	10.0mL

pH 8.0 ± 0.2 at 25°C

Source: This medium, without ampicillin solution and ethanol, is available as a premixed powder from HiMedia.

Ampicillin Solution:

Composition per 10.0mL:

Ampicillin.....	0.02g
-----------------	-------

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except ampicillin solution and ethanol—to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile ampicillin solution, and 10.0mL of ethanol. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, cultivation, and differentiation of *Aeromonas* species and *Plesiomonas* species from water samples using the membrane filter method. For the differential and selective isolation of *Aeromonas hydrophila* species from water samples

RM Medium

Composition per liter:

Glucose.....	20.0g
Agar.....	15.0g
Yeast extract.....	10.0g
KH ₂ PO ₄	2.0g
Solution 1.....	250.0mL
Solution 2.....	250.0mL
Solution 3.....	250.0mL
Solution 4.....	250.0mL

pH 6.0 ± 0.2 at 25°C

Solution 1:

Composition per 250.0mL:

Glucose.....	20.0g
--------------	-------

Preparation of Solution 1: Add glucose to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution 2:

Composition per 250.0mL:

Agar.....	15.0g
-----------	-------

Preparation of Solution 2: Add agar to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution 3:

Composition per 250.0mL:

Yeast extract.....	10.0g
--------------------	-------

Preparation of Solution 3: Add yeast extract to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution 4:

Composition per 250.0mL:

KH ₂ PO ₄	2.0g
---------------------------------------	------

Preparation of Solution 4: Add KH₂PO₄ to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Aseptically combine the four sterile solutions. Mix thoroughly. Adjust pH to 6.0. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Zymomonas mobilis*.

Rogosa Agar

Composition per liter:

Sodium acetate.....	25.0g
Agar.....	20.0g
Glucose.....	20.0g
Pancreatic digest of casein.....	10.0g
KH ₂ PO ₄	6.0g
Yeast extract.....	5.0g
Ammonium citrate.....	2.0g
Sorbitan monooleate.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.575g
MnSO ₄ ·H ₂ O.....	0.12g
FeSO ₄ ·7H ₂ O.....	0.4mg
Acetic acid, glacial.....	1.32mL

pH 5.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components, except acetic acid, to distilled/deionized water and bring volume to 998.7mL. Mix thoroughly. Gently heat and bring to boiling. Add glacial acetic acid. Mix thoroughly. Gently heat while stirring and bring to 90°–100°C for 2–3 min. Do not autoclave. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, cultivation, and enumeration of lactobacilli, especially from feces, saliva, vaginal specimens, and dairy products.

Rogosa Broth, Modified

Composition per 1005.0mL:

Glucose.....	20.0g
Trypticase™.....	10.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	3.0g
KH ₂ PO ₄	3.0g
Tryptose.....	3.0g
Ammonium citrate.....	2.0g
Sodium acetate.....	1.0g
Tween™ 80.....	1.0g
L-Cysteine.....	0.2g
Salt solution.....	5.0mL

pH 6.8 ± 0.2 at 25°C

Salt Solution:

Composition per 100.0mL:

MgSO ₄ ·7H ₂ O.....	11.5g
MnSO ₄	2.4g
FeSO ₄ ·7H ₂ O.....	1.68g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except salt solution, to distilled/deionized water and bring volume to 995.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 5.0mL of sterile salt solution. Adjust pH to 6.8. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Lactobacillus* species.

Rogosa SL Agar (Rogosa Selective *Lactobacillus* Agar)

Composition per liter:

Agar	15.0g
Sodium acetate	15.0g
Glucose	10.0g
Pancreatic digest of casein	10.0g
K ₂ HPO ₄	6.0g
Yeast extract	5.0g
Arabinose	5.0g
Sucrose	5.0g
Ammonium citrate	2.0g
Sorbitan monooleate	1.0g
MgSO ₄ ·7H ₂ O	0.57g
MnSO ₄ ·7H ₂ O	0.12g
FeSO ₄ ·H ₂ O	0.03g
Acetic acid, glacial	1.32mL

pH 5.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except glacial acetic acid, to distilled/deionized water and bring volume to 998.7mL. Mix thoroughly. Gently heat and bring to boiling. Add glacial acetic acid. Mix thoroughly. Gently heat while stirring and bring to 90°–100°C for 2–3 min. Do not autoclave. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, cultivation, and enumeration of lactobacilli, especially from feces, saliva, vaginal specimens, and dairy products.

Rogosa SL Broth (Rogosa Selective *Lactobacillus* Broth)

Composition per liter:

Sodium acetate	15.0g
Glucose	10.0g
Pancreatic digest of casein	10.0g
K ₂ HPO ₄	6.0g
Yeast extract	5.0g
Arabinose	5.0g
Sucrose	5.0g
Ammonium citrate	2.0g
Sorbitan monooleate	1.0g
MgSO ₄ ·7H ₂ O	0.57g
MnSO ₄ ·7H ₂ O	0.12g
FeSO ₄ ·H ₂ O	0.03g
Acetic acid, glacial	1.32mL

pH 5.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except glacial acetic acid, to distilled/deionized water and bring volume to 998.7mL. Mix thoroughly. Gently heat and bring to boiling. Add glacial acetic acid. Mix thoroughly. Gently heat while stirring and bring to 90°–100°C for 2–3 min. Do not autoclave. Aseptically distribute into sterile tubes.

Use: For the isolation, cultivation, and enumeration of lactobacilli, especially from feces, saliva, vaginal specimens, and dairy products.

Rogosa SL HiVeg Agar

Composition per liter:

Agar	15.0g
Sodium acetate	15.0g
Glucose	10.0g
Plant hydrolysate No. 1	10.0g
KH ₂ PO ₄	6.0g
Arabinose	5.0g
Saccharose	5.0g
Yeast extract	5.0g
Ammonium citrate	2.0g
MgSO ₄	0.57g
MnSO ₄	0.12g
FeSO ₄	0.03g
Acetic acid, glacial	1.32mL
Polysorbate 80	1.0mL

pH 5.4 ± 0.2 at 25°C

Source: This medium, without acetic acid or polysorbate 80, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Gently heat to 90–100°C. Hold at temperature for 2–3 min. Do not autoclave. Cool to 50°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and enumeration of lactobacilli, especially from feces, saliva, vaginal specimens, and dairy products. For the cultivation of oral and fecal lactobacilli.

Rogosa SL HiVeg Broth

Composition per liter:

Sodium acetate	15.0g
Glucose	10.0g
Plant hydrolysate No. 1	10.0g
KH ₂ PO ₄	6.0g
Arabinose	5.0g
Saccharose	5.0g
Yeast extract	5.0g
Ammonium citrate	2.0g
MgSO ₄	0.57g
MnSO ₄	0.12g
FeSO ₄	0.03g
Acetic acid, glacial	1.32mL
Polysorbate 80	1.0mL

pH 5.4 ± 0.2 at 25°C

Source: This medium, without acetic acid or polysorbate 80, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Gently heat to 90–100°C. Hold at temperature for 2–3 min. Do not autoclave.

Use: For the isolation, cultivation, and enumeration of lactobacilli, especially from feces, saliva, vaginal specimens, and dairy products.

Rolled Oats Mineral Medium (DSMZ Medium 84)

Composition per 1001.0mL:

Rolled oats	20.0g
Agar	12.0g
Trace elements solution	1.0mL
pH 7.2 ± 0.2 at 25°C	

Trace Elements Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add rolled oats to 500.0mL distilled/deionized water. Gently heat and bring to boiling. Boil for 20 min. Filter. Add agar to the filtrate and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Add 1.0mL trace elements solution. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinomadura rubrobrunea*, *Streptomyces chartreusis*, *Streptomyces aculeolatus*, *Streptomyces thermodiastaticus*, *Microbispora rosea*, *Micromonospora coerulea*, *Thermoactinomyces vulgaris*, *Thermoactinomyces sacchari*, *Streptopogon album*, and *Planobispora rosea*.

Rose Bengal Chloramphenicol Agar

Composition per liter:

Agar	15.0g
Glucose	10.0g
Papaic digest of soybean meal	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
Rose Bengal	0.05g
Chloramphenicol solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Chloramphenicol Solution:

Composition per 10.0mL:

Chloramphenicol	0.1g
-----------------------	------

Preparation of Chloramphenicol Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except chloramphenicol solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°C. Aseptically add sterile chloramphenicol solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and enumeration of yeasts and molds from environmental specimens and foods.

Rose Bengal Chloramphenicol HiVeg Agar

Composition per liter:

Agar	15.5g
Glucose	10.0g
Plant peptone No. 4	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄	0.5g
Rose Bengal	0.05g
Chloramphenicol solution	10.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium, without chloramphenicol, is available as a premixed powder from HiMedia.

Chloramphenicol Solution:

Composition per 10.0mL:

Chloramphenicol	0.1g
-----------------------	------

Preparation of Chloramphenicol Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except chloramphenicol solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°C. Aseptically add sterile chloramphenicol solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and enumeration of yeasts and molds from environmental specimens and foods.

Roseicyclus Medium (DSMZ Medium 1183)

Composition per liter:

Na ₂ SO ₄	15.0g
MgSO ₄	2.0g
Malic acid	1.0g
Na acetate	1.0g
Yeast extract	1.0g
Peptone	0.5g
KCl	0.3g
NH ₄ Cl	0.3g
Bicarbonate solution	5.0mL
Phosphate solution	3.0mL
Vitamin solution	2.0mL
Trace elements solution	2.0mL
Calcium chloride solution	0.5mL
pH 8.3 ± 0.2 at 25°C	

Phosphate Solution:

Composition per 10.0mL:

K ₂ HPO ₄	1.0g
---------------------------------------	------

Preparation of Phosphate Solution: Add K₂HPO₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Calcium Chloride Solution:

Composition per 10.0mL:

CaCl ₂ ·2H ₂ O	1.0g
--	------

Preparation of Calcium Chloride Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Bicarbonate Solution:**Composition per 10.0mL:**NaHCO₃ 1.0g

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Adjust pH to 6.5. Filter sterilize.

Vitamin Solution:**Composition per liter:**

Nicotinic acid 0.4g

Thiamine-HCl·2H₂O 0.4g

Biotin 80.0mg

Vitamin B₁₂ 0.5mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution:**Composition per liter:**FeSO₄·7H₂O 0.3gZnSO₄·7H₂O 5.0mgMnCl₂·4H₂O 3.0mgNiCl₂·6H₂O 3.0mgNa₂MoO₄·4H₂O 3.0mgH₃BO₃ 2.0mgCuCl₂·2H₂O 2.0mgCoCl₂·6H₂O 1.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.0. Filter sterilize.

Preparation of Medium: Add components, except phosphate, bicarbonate, calcium chloride, trace elements, and vitamin solutions, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 5.95. Distribute into tubes or flasks. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add phosphate, bicarbonate, calcium chloride, trace elements, and vitamin solutions. Mix thoroughly. Aseptically distribute into culture vessels.

Use: For the cultivation of *Roseicyclus* spp.

***Roseinatronobacter* Agar
(DSMZ Medium 928)**

Composition per liter:K₂HPO₄ 25.0gNa₂CO₃ 11.0gNaHCO₃ 4.0g

NaCl 2.5g

Sodium acetate 0.8g

Yeast extract 0.5g

Peptone 0.5g

KNO₃ 0.25g

Agar solution 500.0mL

pH 10.0 ± 0.2 at 25°C

Agar Solution:**Composition per 500.0mL:**

Agar 20.0g

Preparation of Agar Solution: Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 55°C.

Preparation of Medium: Add components, except agar solution, to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 55°C. Add 500.0mL sterile warm agar solution. Mix thoroughly. Pour into Petri dishes or distribute to sterile tubes.

Use: For the cultivation of *Roseinatronobacter thiooxidans*.

***Roseinatronobacter* Medium
(DSMZ Medium 928)**

Composition per liter:K₂HPO₄ 25.0gNa₂CO₃ 11.0gNaHCO₃ 4.0g

NaCl 2.5g

Sodium acetate 0.8g

Yeast extract 0.5g

Peptone 0.5g

KNO₃ 0.25g

pH 10.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Roseinatronobacter thiooxidans*.

**Rouf's Medium
(DSMZ Medium 1019)**

Composition per liter:

Yeast extract 5.0g

Peptone 5.0g

MgSO₄·7H₂O 0.2gFe(NH₃)citrate 0.15gCaCl₂·2H₂O 0.05gMnSO₄·H₂O 0.05gFeCl₃·6H₂O 0.01g

Vitamin solution 10.0mL

Trace elements solution 1.0mL

pH 7.1 ± 0.2 at 25°C

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl 10.0mg

Thiamine-HCl·2H₂O 5.0mg

Riboflavin 5.0mg

Nicotinic acid 5.0mg

D-Ca-pantothenate 5.0mg

p-Aminobenzoic acid 5.0mg

Lipoic acid 5.0mg

Biotin 2.0mg

Folic acid 2.0mg

Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution:**Composition per liter:**

Nitrilotriacetic acid 12.8g

CoCl₂·6H₂O 0.17gCaCl₂·2H₂O 0.1gFeSO₄·7H₂O 0.1g

MnCl ₂ ·4H ₂ O.....	0.1g
NaCl	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.1g

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly. Adjust pH to 7.0.

Preparation of Medium: Add components, except trace elements and vitamin solutions, to distilled/deionized water and bring volume to 989.0mL. Mix thoroughly. Adjust pH to 7.1. Distribute into tubes or flasks. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add trace elements and vitamin solutions. Mix thoroughly. Adjust pH to 7.1. Aseptically distribute into culture vessels.

Use: For the cultivation of *Phenylbacterium lituiforme*.

RP Medium

Composition per liter:

Solution 1	960.0mL
Solution 2	40.0mL

Solution 1:

RPMI 1640 solution	900.0mL
HEPES solution	60.0mL

RPMI 1640 Medium:

Composition per liter:

Inorganic salt solution	400.0mL
Other component solution.....	400.0mL
Amino acid solution	100.0mL
Vitamin solution.....	100.0mL

Inorganic Salt Solution:

Composition per 400.0mL:

NaCl	6.0g
NaH ₂ PO ₄ ·H ₂ O.....	0.8g
KCl.....	0.4g
Ca(NO ₃) ₂ ·4H ₂ O.....	0.1g
MgSO ₄ (anhydrous)	48.84mg

Preparation of Inorganic Salt Solution: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Other Component Solution:

Composition per 400.0mL:

D-Glucose.....	2.0g
Phenol Red.....	5.0mg
Glutathione, reduced.....	1.0mg

Preparation of Other Component Solution: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Amino Acid Solution:

Composition per 100.0mL:

L-Glutamine	300.0mg
L-Arginine.....	200.0mg
L-Cysteine·2HCl.....	65.0mg
L-Asparagine (free base).....	50.0mg
L-Isoleucine.....	50.0mg
L-Leucine	50.0mg
L-Lysine·HCl.....	40.0mg

L-Serine.....	30.0mg

L-Aspartic acid.....	20.0mg
L-Glutamic acid	20.0mg
L-Hydroxyproline	20.0mg
L-Proline	20.0mg
L-Threonine.....	20.0mg
L-Valine.....	20.0mg
L-Histidine (free base)	15.0mg
L-Methionine.....	15.0mg
L-Phenylalanine	15.0mg
Glycine.....	10.0mg
L-Tryptophan	5.0mg

Preparation of Amino Acid Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per 100.0mL:

<i>i</i> -Inositol.....	35.0mg
Folic acid	1.0mg
Niacinamide.....	1.0mg
Para-aminobenzoic acid.....	1.0mg
Pyridoxal-HCl.....	1.0mg
Pyridoxine-HCl.....	1.0mg
Thiamine-HCl	1.0mg
Choline chloride.....	3.0mg
D-Ca pantothenate.....	0.25mg
Biotin	0.2mg
Riboflavin	0.2mg
Vitamin B ₁₂	0.005mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of RPMI 1640 Medium: Aseptically combine 400.0mL of sterile inorganic salt solution, 400.0mL of sterile other component solution, 100.0mL of sterile amino acid solution, and 100.0mL of sterile vitamin solution.

HEPES Solution:

Composition per 60.0mL:

HEPES.....	5.94g
------------	-------

Preparation of HEPES Solution: Add HEPES to distilled/deionized water and bring volume to 60.0mL. Mix thoroughly. Filter sterilize.

Preparation of Solution 1: Aseptically combine 960.0mL of sterile RPMI-1640 solution and 60.0mL sterile HEPES solution.

Solution 2:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution 2: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 960.0mL of sterile solution 1 with 40.0mL of sterile solution 2. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Balamuthia mandrillaris* and *Plasmodium falciparum*.

Biotin	0.2mg
Riboflavin	0.2mg
Vitamin B ₁₂	5.0μg

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.3 with 1N HCl or 1N NaOH. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of mammalian cells in tissue culture. Culture media for human immunodeficiency viruses.

RS MediumSee: [Rimler-Shotts Medium](#)**RS HiVeg Medium Base with Novobiocin
(Rimler-Shotts Medium)****Composition per liter:**

Agar	13.5g
Na ₂ S ₂ O ₃	6.8g
L-Ornithine hydrochloride	6.5g
L-Lysine hydrochloride	5.0g
NaCl	5.0g

Maltose	3.5g
Yeast extract	3.0g
Synthetic detergent No. III	1.0g
Ferric ammonium citrate	0.8g
L-Cysteine·HCl	0.3g
Bromthymol Blue	0.03g
Novobiocin solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without novobiocin, is available as a premixed powder from HiMedia.

Novobiocin Solution:**Composition per 10.0mL:**

Novobiocin	5.0mg
------------	-------

Preparation of Novobiocin Solution: Add novobiocin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except novobiocin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile novobiocin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation, cultivation, and presumptive identification of *Aeromonas hydrophila* and other Gram-negative bacteria based on their ability to decarboxylate lysine and ornithine, ferment maltose, and produce H₂S. Maltose-fermenting bacteria appear as yellow colonies. Bacteria that produce lysine or ornithine decarboxylase turn the medium greenish-yellow to yellow. Bacteria that produce H₂S appear as colonies with black centers.

RSS MediumSee: [Reduced Salt Solution Medium](#)**Rubitelea Medium
(DSMZ Medium 1177)****Composition per liter:**

Starch	10.0g
Yeast extract	4.0g
Peptone	2.0g
Seawater	1.0L

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components, except bicarbonate solution, to seawater and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Distribute into tubes or flasks. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Rubitelea* spp.

**Rubritalea Medium
(DSMZ Medium 1137)****Composition per liter:**

Peptone	1.5g
Yeast extract	1.5g
Glucose	1.5g
Concentrated artificial seawater	325.0mL
Hutner's basal salts solution	20.0mL
Bicarbonate solution	10.0mL
Tris-HCl (1M, pH 7.5)	5.0mL

pH 7.5 ± 0.2 at 25°C

Hutner's Basal Salts Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	29.7g
Nitrilotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.335g
FeSO ₄ ·7H ₂ O	99.0mg
(NH ₄) ₆ MoO ₇ O ₂₄ ·4H ₂ O	9.25mg
"Metals 44"	50.0mL

"Metals 44":**Composition per 100.0mL:**

ZnSO ₄ ·7H ₂ O	1.095g
FeSO ₄ ·7H ₂ O	0.5g
Sodium EDTA	0.25g
MnSO ₄ ·H ₂ O	0.154g
CuSO ₄ ·5H ₂ O	39.2mg
Co(NO ₃) ₂ ·6H ₂ O	24.8mg
Na ₂ B ₄ O ₇ ·10H ₂ O	17.7mg

Preparation of "Metals 44": Add sodium EDTA to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Add a few drops of concentrated H₂SO₄ to retard precipitation of heavy metal ions. Add remaining components. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Hutner's Basal Salts Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Concentrated Artificial Seawater:**Composition per liter:**

NaCl	70.43g
Na ₂ SO ₄	11.75g
MgCl ₂ ·6H ₂ O	31.86g
CaCl ₂ ·2H ₂ O	4.35g
KCl	1.99g
KBr	0.29g
H ₃ BO ₃	0.08g

Preparation of Concentrated Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Bicarbonate Solution:**Composition per 10.0mL:**

NaHCO ₃	2.88g
--------------------	-------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Adjust pH to 6.5. Filter sterilize.

Preparation of Medium: Add components, except bicarbonate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.5. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add bicarbonate solution. Mix thoroughly. Adjust pH to 7.5. Aseptically distribute into culture vessels.

Use: For the cultivation of *Rubritalea* spp.

Rumen Bacteria Medium**Composition per 1001.0mL:**

Na ₂ CO ₃	4.0g
Trypticase™	2.0g
Yeast extract	0.5g

K ₂ HPO ₄	0.3g
Hemin	1.0mg
Resazurin	1.0mg
Minerals solution	38.0mL
Carbohydrate solution	20.0mL
L-Cysteine·HCl·H ₂ O solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Volatile fatty acid mixture	3.1mL

pH 6.7 ± 0.2 at 25°C

Minerals Solution:**Composition per liter:**

NaCl	12.0g
KH ₂ PO ₄	6.0g
(NH ₄) ₂ SO ₄	6.0g
MgSO ₄ ·7H ₂ O	2.5g
CaCl ₂ ·2H ₂ O	1.6g

Preparation of Minerals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

L-Cysteine·HCl·H₂O Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.25g
---------------------------------	-------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.25g
-------------------------------------	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Carbohydrate Solution:**Composition per 20.0mL:**

Glucose	0.5g
Cellobiose	0.5g
Glycerol	0.5g
Maltose	0.5g
Starch, soluble	0.5g

Preparation of Carbohydrate Solution: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge under 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Volatile Fatty Acid Mixture:**Composition per 7.75mL:**

Acetic acid	4.25mL
Propionic acid	1.50mL
Butyric acid	1.0mL
DL-2-Methyl butyric acid	0.25mL
iso-Butyric acid	0.25mL
iso-Valeric acid	0.25mL
n-Valeric acid	0.25mL

Preparation of Volatile Fatty Acid Mixture: Combine components. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 100% CO₂. Add components, except carbohydrate solution, Na₂CO₃, L-cysteine·HCl·H₂O solution, and Na₂S·9H₂O solution, to distilled/deion-

ized water and bring volume to 960.0mL Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to room temperature while sparging with 100% CO₂. Add Na₂CO₃. Continue sparging with 100% CO₂ until pH reaches 6.8. Distribute into rubber-stoppered tubes under 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile carbohydrate solution, 10.0mL of sterile L-cysteine-HCl-H₂O solution, and 10.0mL of sterile Na₂S·9H₂O solution or, using a syringe, inject the appropriate amount of sterile carbohydrate solution, sterile Na₂S·9H₂O solution, and sterile L-cysteine-HCl-H₂O solution into individual tubes containing medium.

Use: For the cultivation and maintenance of *Anaerovibrio glycerini*, *Anaerovibrio lipolytica*, *Butyrivibrio fibrisolvens*, *Lachnospira multiparus*, *Succinimonas amylolytica*, and *Succinivibrio dextrinosolvens*.

Rumen Fluid Cellobiose Agar (RFC Agar)

Composition per 10.0mL:

Rumen fluid cellobiose base medium	8.9mL
NaHCO ₃ -rifampin solution	1.0mL
Cellobiose solution	0.1mL

Rumen Fluid Cellobiose Base Medium:

Composition per 89.0mL:

Noble agar	0.7g
Cysteine-HCl-H ₂ O	0.1g
Clarified rumen fluid	30.0mL
Salts solution A	20.0mL
Salts solution B	20.0mL
Resazurin (0.1% solution)	0.1mL

pH 6.7–7.0 at 25°C

Preparation of Rumen Fluid Cellobiose Base Medium: Add components to distilled/deionized water and bring volume to 89.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Anaerobically distribute into tubes in 8.9mL volumes under 100% CO₂. Cap tubes with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Salts Solution A:

Composition per liter:

CaCl ₂	0.45g
MgSO ₄	0.45g

Preparation of Salts Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Salts Solution B:

Composition per liter:

NaCl	4.5g
(NH ₄) ₂ SO ₄	4.5g
KH ₂ PO ₄	2.25g
K ₂ HPO ₄	2.25g

Preparation of Salts Solution B: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

NaHCO₃-Rifampin Solution:

Composition per 10.0mL:

NaHCO ₃	0.5g
Rifampin	0.1mg

Preparation of NaHCO₃-Rifampin Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Cellobiose Solution:

Composition per 10.0mL:

Cellobiose	1.0g
------------------	------

Preparation of Cellobiose Solution: Add cellobiose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To each tube containing 8.9mL of sterile rumen fluid cellobiose base medium, aseptically add 1.0mL of sterile NaHCO₃-rifampin solution and 0.1mL of sterile cellobiose solution. Mix thoroughly.

Use: For the selective isolation of rumen treponemes.

Ruminobacter amylophilus Medium

Composition per liter:

Pancreatic digest of casein	10.0g
NaHCO ₃	6.0g
Starch, soluble	5.0g
NaCl	0.9g
(NH ₄) ₂ SO ₄	0.9g
L-Cysteine-HCl	0.5g
K ₂ HPO ₄	0.45g
KH ₂ PO ₄	0.45g
MgSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.12g
Resazurin	1.0mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Prepare and dispense under 100% CO₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% CO₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Ruminobacter amylophilus*.

Ruminococcus albus Medium

Composition per 1001.0mL:

Pancreatic digest of casein	5.0g
Na ₂ CO ₃	4.0g
Glucose	3.0g
Cellobiose	2.0g
Yeast extract	2.0g
L-Cysteine-HCl	0.5g
Resazurin	1.0mg
Mineral solution 1	40.0mL
Mineral solution 2	40.0mL
Fatty acid mixture	1.0mL

Mineral Solution 1:

Composition per 100.0mL:

K ₂ HPO ₄	0.6g
---------------------------------------	------

Preparation of Mineral Solution 1: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Mineral Solution 2:

Composition per 100.0mL:

(NH ₄) ₂ SO ₄	2.0g
NaCl	2.0g
KH ₂ PO ₄	0.6g
MgSO ₄ ·7H ₂ O	0.25g
CaCl ₂ ·7H ₂ O	0.16g

Preparation of Mineral Solution 2: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Fatty Acid Mixture:

Composition per 100.0mL:

Isobutyric acid.....	10.0mL
Isovaleric acid.....	10.0mL
2-Methylbutyric acid.....	10.0mL

Preparation of Fatty Acid Mixture: Add components to distilled/deionized water and bring volume to 100.0mL. Sparge with 100% CO₂.

Preparation of Medium: Add components, except Na₂CO₃, L-cysteine-HCl, and fatty acid mixture, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to room temperature while sparging with 100% CO₂. Add Na₂CO₃, L-cysteine-HCl, and fatty acid mixture. Adjust pH to 7.0. Anaerobically distribute into tubes or flasks under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Ruminococcus albus*.

***Ruminococcus pasteurii* Medium**

Composition per liter:

NaHCO ₃	2.5g
Sodium tartrate.....	2.0g
NaCl.....	1.0g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
Na ₂ S·9H ₂ O.....	0.36g
NH ₄ Cl.....	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	1.0mg
NaHCO ₃ solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace elements solution SL-7.....	1.0mL
pH 7.2 ± 0.2 at 25°C	

Trace Elements Solution SL-7:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	0.19g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnCl ₂	0.07g
H ₃ BO ₃	0.062g
Na ₂ MoO ₄ ·2H ₂ O.....	0.036g
NiCl ₂ ·6H ₂ O.....	0.024g
CuCl ₂ ·2H ₂ O.....	0.017g
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-7: Add the FeCl₂·4H₂O to the HCl. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C under 100% N₂. Cool to room temperature.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add the NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.36g
--	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C under 100% N₂.

Preparation of Medium: Add components—except NaHCO₃ solution, Na₂S·9H₂O solution, and trace elements solution SL-7—to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling under 80% N₂ + 20% CO₂. Distribute into tubes in 9.8mL volumes under 80% N₂ + 20% CO₂. Cool to 25°C. Aseptically add 0.1mL of sterile NaHCO₃ solution and 0.01mL of sterile trace elements solution SL-7 to each tube. Mix thoroughly. Immediately prior to inoculation, aseptically add 0.1mL of sterile Na₂S·9H₂O solution to each tube.

Use: For the cultivation and maintenance of *Ruminococcus pasteurii*.

***Ruminococcus pasteurii* Medium**

KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	1.0mg
Biotin.....	0.4mg
2,3-Butanediol solution.....	50.0mL
NaHCO ₃ solution.....	20.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL
pH 7.2 ± 0.2 at 25°C	

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Prepare and dispense under 80% N₂ + 20% CO₂. Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

2,3-Butanediol Solution:

Composition per 50.0mL:

2,3-Butanediol.....	0.9g
---------------------	------

Preparation of 2,3-Butanediol Solution: Add 2,3-butanediol to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.36g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare medium and dispense under 80% N₂ + 20% CO₂. Add components, except 2,3-butanediol solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile 2,3-butanediol solution, 20.0mL of sterile NaHCO₃ solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Ruminococcus pasteurii*.

Runella slithyformis Medium

Composition per liter:

Agar 10.0g
Peptone 2.0g
Yeast extract 1.0g
MgSO₄·7H₂O 0.2g

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Runella slithyformis*.

Russell Double-Sugar Agar

Composition per liter:

Agar 15.0g
Proteose peptone No. 3 12.0g
Lactose 10.0g
NaCl 5.0g
Beef extract 1.0g
Glucose 1.0g
Phenol Red 0.025g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the identification of Gram-negative enteric bacilli based on their fermentation of glucose and lactose. Bacteria that ferment both glucose and lactose produce a yellow slant and yellow butt. Bacteria that ferment glucose but do not ferment lactose produce a red slant and a yellow butt. Bacteria that ferment neither glucose nor lactose produce an unchanged pink-orange color.

RV Enrichment Broth

See: [Rappaport-Vassiliadis Enrichment Broth](#)

RVS Broth

See: [Rappaport-Vassiliadis Soy Peptone Broth](#)

RV5 Medium (DSMZ Medium 1147)

Composition per liter:

NaCl 15.0g
DL-malic acid 4.0g
BICINE [N,N-bis(2-hydroxyethyl)glycine] buffer 1.63g
K₂HPO₄ 1.0g
NH₄Cl 0.52g
Yeast extract 0.5g
MgSO₄·7H₂O 0.2g
EDTA 10.0mg
CaCl₂·2H₂O 7.5gm
Vitamin solution 10.0mL
NaHCO₃ solution 10.0mL
Trace elements solution 1.0mL

pH 7.5 ± 0.2 at 25°C

Vitamin Solution:

Composition per 10.0mL:

Thiamine-HCl·2H₂O 1.0mg
Biotin 0.03mg
Vitamin B₁₂ 0.02mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO₃ 2.5g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Trace Elements Solution:

Composition per liter:

EDTA 5.2g
FeCl₂·4H₂O 1.5g
CoCl₂·6H₂O 190.0mg
Na₂MoO₄·2H₂O 188.0mg
MnCl₂·4H₂O 100.0mg
ZnCl₂ 70.0mg
VoSO₄·2H₂O 30.0mg
Ni₂Cl₂·6H₂O 25.0mg
CuCl₂·2H₂O 17.0mg
H₃BO₃ 6.0mg
Na₂WO₄·2H₂O 2.0mg
NaHSeO₃ 2.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 3.0. Mix thoroughly.

Preparation of Medium: Add components, except bicarbonate solution and vitamin solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 9.5. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add vitamin solution. Mix thoroughly. Adjust pH to 9.5. Aseptically distribute into culture vessels. Before inoculation aseptically add bicarbonate solution.

Use: For the cultivation of *Rhodobaca bogoriensis*.

Ryan's *Aeromonas* Medium
See: *Aeromonas* Medium

R2YE Medium

Composition per 1062.2mL:

Thiostrepton	50.0mg
Basal solution.....	800.0mL
TES (<i>N</i> -tris[hydroxymethyl]methyl-2-amino-ethane-sulfonic acid) buffer	100.0mL
CaCl ₂ ·2H ₂ O solution.....	80.2mL
Yeast extract solution.....	50.0mL
L-Proline solution.....	15.0mL
KH ₂ PO ₄ solution.....	10.0mL
NaOH solution.....	5.0mL
Trace elements solution.....	2.0mL

pH 7.2 ± 0.2 at 25°C

Basal Solution:

Composition per 800.0mL:

Sucrose.....	103.0g
MgCl ₂ ·6H ₂ O.....	10.12g
D-Glucose.....	10.0g
K ₂ SO ₄	0.25g
Casamino acids.....	0.1g

Preparation of Basal Solution: Add components to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

TES Buffer:

Composition per liter:

TES (<i>N</i> -tris[hydroxymethyl]methyl-2-amino-ethane-sulfonic acid) buffer	57.3g
--	-------

Preparation of TES Buffer: Add TES to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Filter sterilize.

CaCl₂·2H₂O Solution:

Composition per 100.0mL:

CaCl ₂ ·2H ₂ O.....	3.68g
---	-------

Preparation of CaCl₂·2H₂O Solution: Add the CaCl₂·2H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Yeast Extract Solution:

Composition per 100.0mL:

Yeast extract.....	10.0g
--------------------	-------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

L-Proline Solution:

Composition per 100.0mL:

L-Proline.....	20.0g
----------------	-------

Preparation of L-Proline Solution: Add the proline to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

KH₂PO₄ Solution:

Composition per 100.0mL:

KH ₂ PO ₄	0.5g
---------------------------------------	------

Preparation of KH₂PO₄ Solution Solution: Add the KH₂PO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

NaOH Solution:

Composition per 100.0mL:

NaOH.....	40.0g
-----------	-------

Preparation of NaOH Solution: Add the NaOH to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution:

Composition per liter:

FeCl ₃ ·6H ₂ O.....	0.2g
ZnCl ₂	0.04g
CuCl ₂ ·2H ₂ O.....	0.01g
MnCl ₂ ·4H ₂ O.....	0.01g
Na ₂ B ₄ O ₇ ·10H ₂ O.....	0.01g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	0.01g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 800.0mL of cooled, sterile basal solution, aseptically add the remaining components. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Streptomyces lividans*.

***S. aureus* ID**

Composition per liter:

Proprietary

Source: This medium is available from bioMérieux.

Use: For the direct identification of *Staphylococcus aureus* and the selective isolation of staphylococci. Direct identification of *S. aureus* is based on the spontaneous green coloration of α-glucosidase-producing colonies.

S Broth

Composition per liter:

Peptone.....	10.0g
Meat extract.....	2.4g
NaCl.....	2.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus cereus*.

S Medium

Composition per liter:

Glycogen.....	3.0g
MgSO ₄ ·7H ₂ O.....	2.0g
L-Leucine.....	1.0g
L-Tyrosine.....	0.6g
L-Asparagine.....	0.5g
L-Isoleucine.....	0.5g
L-Proline.....	0.5g
L-Lysine.....	0.25g
KH ₂ PO ₄	0.13g

Djenkolic acid.....	0.1g
L-Arginine.....	0.1g
L-Serine.....	0.1g
L-Threonine.....	0.1g
L-Valine.....	0.1g
L-Alanine.....	0.05g
L-Glycine.....	0.05g
L-Histidine.....	0.05g
L-Methionine.....	0.05g
L-Tryptophan.....	0.05g

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically distribute into tubes or flasks.

Use: For the cultivation of *Myxococcus xanthus*.

S Salts

Composition per liter:

Dibenzothiophene.....	5.0g
NH ₄ Cl.....	0.5g
KH ₂ PO ₄	0.25g
MgCl ₂ ·6H ₂ O.....	0.25g

pH 6.5–7.0 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5–7.0 with KOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus sulfasportare*.

S6 Medium for Thiobacilli

Composition per liter:

Agar.....	15.0g
Na ₂ S ₂ O ₃	10.0g
KH ₂ PO ₄	11.8g
Na ₂ HPO ₄	1.2g
MgSO ₄ ·7H ₂ O.....	0.1g
(NH ₄) ₂ SO ₄	0.1g
CaCl ₂	0.03g
FeCl ₃	0.02g
MnSO ₄	0.02g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Thiobacillus denitrificans* and *Thiobacillus thioeparus*.

S8 Medium for Thiobacilli

Composition per liter:

Agar.....	15.0g
KH ₂ PO ₄	11.8g
Na ₂ S ₂ O ₃	10.0g
KNO ₃	5.0g
Na ₂ HPO ₄	1.2g
NaHCO ₃	0.5g
MgSO ₄ ·7H ₂ O.....	0.1g
(NH ₄) ₂ SO ₄	0.1g
CaCl ₂	0.03g

FeCl ₃	0.02g
MnSO ₄	0.02g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Thiobacillus neapolitanus*.

SA Agar

Composition per liter:

Agar.....	15.0g
Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g
Starch, soluble.....	1.0g
Ampicillin.....	0.01g
Phenol Red.....	0.018g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, except ampicillin, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add ampicillin. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation, cultivation, and differentiation, based on starch hydrolysis, of *Aeromonas hydrophila* from foods. After inoculation of plates and growth of cultures, starch hydrolysis is determined by flooding each plate with 5.0mL of Lugol's iodine solution.

SA Agar, Modified (Lachica's Medium)

Composition per liter:

Beef heart, solids from infusion.....	500.0g
Agar.....	15.0g
Tryptose.....	10.0g
NaCl.....	5.0g
Amylose Azure.....	3.0g
Ampicillin.....	0.01mg

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the isolation and cultivation of *Aeromonas hydrophila* from foods. *Aeromonas hydrophila* appears as colonies surrounded by a light halo on a light blue background.

SA HiVeg Agar Base with Ampicillin

Composition per liter:

Agar.....	15.0g
Plant hydrolysate.....	10.0g
Starch, soluble.....	10.0g
NaCl.....	5.0g
Phenol Red.....	0.025g
Ampicillin solution.....	10.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium, without ampicillin, is available as a premixed powder from HiMedia.

Ampicillin Solution:**Composition per 10.0mL:**

Ampicillin 0.01g

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ampicillin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°C. Aseptically add sterile ampicillin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation, cultivation, and differentiation of *Aeromonas hydrophilia* from foods based on starch hydrolysis.

SABHI Agar**(Sabouraud Glucose and Brain Heart Infusion Agar)****Composition per liter:**

Glucose 21.0g
 Agar 15.0g
 Pancreatic digest of casein 10.5g
 Peptic digest of animal tissue 5.0g
 Brain heart, solids from infusion 4.0g
 NaCl 2.5g
 Na₂HPO₄ 1.25g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes in 20.0mL volumes or leave in tubes.

Use: For the cultivation of dermatophytes and other pathogenic and nonpathogenic fungi from clinical and nonclinical specimens.

SABHI Agar**Composition per liter:**

Beef heart, infusion from 125.0g
 Calf brains, infusion from 100.0g
 Glucose 21.0g
 Agar 15.0g
 Neopeptone 5.0g
 Proteose peptone 5.0g
 NaCl 2.5g
 Na₂HPO₄ 1.25g
 Chloromycetin solution 1.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Chloromycetin Solution:**Composition per 10.0mL:**

Chloromycetin 1.0g

Preparation of Chloromycetin Solution: Add chloromycetin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except chloromycetin solution, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of sterile chloromycetin solution. Mix thoroughly. Aseptically distribute into sterile tubes in 5.0mL volumes.

Use: For the cultivation of dermatophytes and other pathogenic and nonpathogenic fungi from clinical and nonclinical specimens.

SABHI Agar, Modified**Composition per liter:**

Beef heart, infusion from 62.5g
 Calf brain, infusion from 50.0g
 Glucose 20.5g
 Brain heart infusion broth 18.6g
 Agar 7.5g
 Neopeptone 5.0g
 Pancreatic digest of gelatin 2.5g
 NaCl 1.25g
 Na₂HPO₄ 0.625g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Dissolve, then autoclave at 121°C for 15 min. Cool to 50°C and add 1.0mL of sterile chloramphenicol solution (100.0mg/mL). Mix well and dispense into sterile tubes. Slant and allow to harden. Refrigerate until needed.

Use: For the cultivation of dermatophytes and other pathogenic and nonpathogenic fungi from clinical and nonclinical specimens.

SABHI Blood Agar**Composition per liter:**

Beef heart, infusion from 125.0g
 Calf brains, infusion from 100.0g
 Glucose 21.0g
 Agar 15.0g
 Neopeptone 5.0g
 Proteose peptone 5.0g
 NaCl 2.5g
 Na₂HPO₄ 1.25g
 Blood 100.0mL
 Chloromycetin solution 1.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Chloromycetin Solution:**Composition per 10.0mL:**

Chloromycetin 1.0g

Preparation of Chloromycetin Solution: Add chloromycetin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except blood and chloromycetin solution, to distilled/deionized water and bring volume to 899.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile blood and 1.0mL of sterile chloromycetin solution. Sheep blood or human blood may be used. Mix thoroughly. Aseptically distribute into sterile tubes in 5.0mL volumes.

Use: For the cultivation of dermatophytes and other pathogenic and nonpathogenic fungi from clinical and nonclinical specimens. Blood enhances the recovery of *Blastomyces dermatitidis* and *Histoplasma capsulatum* and their conversion to the yeast phase.

SABHI HiVeg Agar Base with Chloramphenicol

Composition per liter:

Glucose	21.0g
Agar	15.0g
Plant infusion	5.14g
Plant peptone No. 3	5.0g
Plant special peptone	5.0g
Plant special infusion	4.11g
NaCl	2.5g
Na ₂ HPO ₄	1.25g
Chloramphenicol solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without chloramphenicol, is available as a premixed powder from HiMedia.

Chloramphenicol Solution:

Composition per 10.0mL:

Chloramphenicol	0.1g
-----------------------	------

Preparation of Chloramphenicol Solution: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except chloramphenicol solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile chloramphenicol solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation of dermatophytes and other pathogenic and nonpathogenic fungi from clinical and nonclinical specimens.

SABHI HiVeg Agar Base with Chloromycetin

Composition per liter:

Glucose	21.0g
Agar	15.0g
Plant infusion	5.14g
Plant peptone No. 3	5.0g
Plant special peptone	5.0g
Plant special infusion	4.11g
NaCl	2.5g
Na ₂ HPO ₄	1.25g
Chloromycetin solution	1.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without chloromycetin, is available as a premixed powder from HiMedia.

Chloromycetin Solution:

Composition per 10.0mL:

Chloromycetin	1.0g
---------------------	------

Preparation of Chloromycetin Solution: Add chloromycetin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except chloromycetin solution, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of

sterile chloromycetin solution. Mix thoroughly. Aseptically distribute into sterile tubes in 5.0mL volumes.

Use: For the cultivation of dermatophytes and other pathogenic and nonpathogenic fungi from clinical and nonclinical specimens.

SABHI HiVeg Agar Base with Blood and Chloromycetin

Composition per liter:

Glucose	21.0g
Agar	15.0g
Plant infusion	5.14g
Plant peptone No. 3	5.0g
Plant special peptone	5.0g
Plant special infusion	4.11g
NaCl	2.5g
Na ₂ HPO ₄	1.25g
Blood	100.0mL
Chloromycetin solution	1.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without blood and chloromycetin, is available as a premixed powder from HiMedia.

Chloromycetin Solution:

Composition per 10.0mL:

Chloromycetin	1.0g
---------------------	------

Preparation of Chloromycetin Solution: Add chloromycetin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except blood and chloromycetin solution, to distilled/deionized water and bring volume to 899.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile blood and 1.0mL of sterile chloromycetin solution. Sheep blood or human blood may be used. Mix thoroughly. Aseptically distribute into sterile tubes in 5.0mL volumes.

Use: For the cultivation of dermatophytes and other pathogenic and nonpathogenic fungi from clinical and nonclinical specimens. Blood enhances the recovery of *Blastomyces dermatitidis* and *Histoplasma capsulatum* and their conversion to the yeast phase.

Sabouraud Agar

Composition per liter:

Neopeptone	30.0g
Agar	20.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of yeasts and molds.

Sabouraud Agar with CCG and 3% Sodium Chloride

Composition per 3031.5mL:

Glucose	120.0g
NaCl	90.0g
Agar	45.0g
Peptone	30.0g
Chloramphenicol solution	15.0mL

Cycloheximide solution	15.0mL
Gentamicin solution	1.5mL

Chloramphenicol Solution:**Composition** per 15.0mL:

Chloramphenicol	0.15g
-----------------------	-------

Preparation of Chloramphenicol Solution: Add chloramphenicol to distilled/deionized water and bring volume to 15.0mL. Mix thoroughly. Filter sterilize.

Cycloheximide Solution:**Composition** per 15.0mL:

Cycloheximide	0.3g
---------------------	------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 15.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Gentamicin Solution:**Composition** per 10.0mL:

Gentamicin	0.4g
------------------	------

Preparation of Gentamicin Solution: Add gentamicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except chloramphenicol solution, cycloheximide solution, and gentamicin solution—to distilled/deionized water and bring volume to 3.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 15.0mL of sterile chloramphenicol solution, 15.0mL of sterile cycloheximide solution, and 1.5mL of sterile gentamicin solution. Mix thoroughly. Aseptically distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the selective isolation and cultivation of fungi from specimens with a mixed flora.

Sabouraud Agar with CCG and 5% Sodium Chloride**Composition** per 3031.5mL:

NaCl	150.0g
Glucose	120.0g
Agar	45.0g
Peptone	30.0g
Chloramphenicol solution	15.0mL
Cycloheximide solution	15.0mL
Gentamicin solution	1.5mL

Chloramphenicol Solution:**Composition** per 15.0mL:

Chloramphenicol	0.15g
-----------------------	-------

Preparation of Chloramphenicol Solution: Add chloramphenicol to distilled/deionized water and bring volume to 15.0mL. Mix thoroughly. Filter sterilize.

Cycloheximide Solution:**Composition** per 15.0mL:

Cycloheximide	0.3g
---------------------	------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 15.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Gentamicin Solution:**Composition** per 10.0mL:

Gentamicin	0.4g
------------------	------

Preparation of Gentamicin Solution: Add gentamicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except chloramphenicol solution, cycloheximide solution, and gentamicin solution—to distilled/deionized water and bring volume to 3.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 15.0mL of sterile chloramphenicol solution, 15.0mL of sterile cycloheximide solution, and 1.5mL of sterile gentamicin solution. Mix thoroughly. Aseptically distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the selective isolation and cultivation of fungi from specimens with a mixed flora.

Sabouraud Agar, Diluted 1/10**Composition** per liter:

Agar	20.0g
Glucose	4.0g
KH ₂ PO ₄	1.5g
MgSO ₄ ·7H ₂ O	1.0g
NaNO ₃	1.0g
Peptone	1.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of fungi and heterotrophic bacteria.

Sabouraud Agar, Diluted 1/10 with Salt**Composition** per liter:

Agar	15.0g
Glucose	2.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	1.0g
Mycological peptone	1.0g

pH 6.8–7.0 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8–7.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Arthroderma benhamiae*, *Arthroderma vanbreuseghemii*, *Microsporium canis*, and *Trichophyton mentagrophytes*.

Sabouraud Agar, Modified**Composition** per liter:

Agar	20.0g
Glucose	20.0g
Neopeptone	10.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of yeasts, molds, and aciduric bacteria.

Sabouraud Chloramphenicol HiVeg Agar

Composition per liter:

Glucose	40.0g
Agar	15.0g
Plant hydrolysate.....	5.0g
Plant peptone.....	5.0g
Chloramphenicol.....	0.05g
Chloramphenicol solution.....	10.0mL
pH 5.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and identification of yeasts.

Sabouraud Cycloheximide Chloramphenicol HiVeg Agar

Composition per liter:

Glucose	20.0g
Agar	15.0g
Plant peptone.....	10.0g
Cycloheximide	0.5g
Chloramphenicol.....	0.04g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Cycloheximide is very toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of pathogenic fungi.

Sabouraud Dextrose Agar (BAM M133)

Composition per liter:

Neopeptone	30.0g
Agar	20.0g
pH 5.6 ± 0.2 at 25°C	

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of yeasts and molds.

Sabouraud Dextrose Agar pH 5.6

Composition per liter:

Glucose	40.0g
Agar	15.0g
Mycological peptone	10.0g
pH 5.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of yeasts and other fungi. For use in qualitative and quantitative procedures for yeasts and fungi.

Sabouraud Glucose Agar (SabDex, 2%)

Composition per liter:

Glucose	20.0g
Agar	15.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue	5.0g
pH 5.6 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of yeast and filamentous fungi. For the cultivation of pathogenic and nonpathogenic fungi, especially dermatophytes. The medium may be made more selective for fungi by the addition of chloramphenicol. Fluconazole (final concentration of 8–16mg per mL) may also be added to test for antibiotic sensitivity.

Sabouraud Glucose Agar (SabDex, 4%)

Composition per liter:

Glucose	40.0g
Agar	15.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue	5.0g
pH 5.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of yeast and filamentous fungi. For the cultivation of pathogenic and nonpathogenic fungi, especially dermatophytes. The medium may be made more selective for fungi by the addition of chloramphenicol. Fluconazole (final concentration of 8–16mg per mL) may also be added to test for antibiotic sensitivity.

Sabouraud Glucose Agar, Emmons**Composition per liter:**

Glucose	20.0g
Agar	17.0g
Pancreatic digest of casein	5.0g
Peptic digest of animal tissue	5.0g
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of dermatophytes and other pathogenic and nonpathogenic fungi from clinical and nonclinical specimens. For the cultivation of yeast and filamentous fungi.

Sabouraud Glucose Agar with Chloramphenicol and Cycloheximide**Composition per liter:**

Glucose	40.0g
Agar	15.0g
Pancreatic digest of casein	5.0g
Peptic digest of animal tissue	5.0g
Cycloheximide solution	10.0mL
Chloramphenicol solution	10.0mL
pH 5.6 ± 0.2 at 25°C	

Cycloheximide Solution:**Composition per 10.0mL:**

Cycloheximide	0.5g
Acetone	10.0mL

Preparation of Cycloheximide Solution: Add cycloheximide to acetone. Mix thoroughly.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Chloramphenicol Solution:**Composition per 10.0mL:**

Chloramphenicol	0.05g
Ethanol (95% solution)	10.0mL

Preparation of Chloramphenicol Solution: Add chloramphenicol to ethanol. Mix thoroughly.

Preparation of Medium: Add components, except cycloheximide solution and chloramphenicol solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Add the cycloheximide solution and chloramphenicol solution. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and identification of yeasts.

Sabouraud Glucose Agar, HiVeg**Composition per liter:**

Glucose	40.0g
Agar	15.0g

Plant peptone No. 4	10.0g
Selective supplement	10.0mL
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Selective Supplement:**Composition per 10.0mL:**

Cycloheximide	0.5g
Chloramphenicol	0.04g

Preparation of Selective Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is very toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except selective supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL sterile selective supplement. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into tubes.

Use: For the cultivation of dermatophytes and other pathogenic and nonpathogenic fungi from clinical and nonclinical specimens. For the cultivation of yeast and filamentous fungi.

Sabouraud Glucose Agar with Olive Oil**Composition per liter:**

Glucose	40.0g
Agar	15.0g
Pancreatic digest of casein	5.0g
Peptic digest of animal tissue	5.0g
Olive oil	20.0mL
Tween™ 80	2.0mL
pH 5.6 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation and maintenance of *Malassezia* species.

Sabouraud Glucose and Brain Heart Infusion Agar

See: **SABHI Agar**

Sabouraud Glucose Broth**Composition per liter:**

Glucose	20.0g
Neopeptone	10.0g
pH 5.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Avoid overheating.

Use: For the cultivation of pathogenic and nonpathogenic fungi, especially dermatophytes. The medium may be made more selective for fungi by the addition of chloramphenicol.

**Sabouraud Glucose HiVeg Agar Base, Modified
with Cycloheximide and Chloramphenicol
(Glucose HiVeg Agar Base, Emmons)**

Composition per liter:

Glucose	20.0g
Agar	17.0g
Plant special peptone	10.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of fungi.

**Sabouraud Glucose HiVeg Broth
(Sabouraud Liquid HiVeg Medium)**

Composition per liter:

Glucose	20.0g
Plant special peptone	10.0g
pH 5.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of pathogenic and nonpathogenic fungi, especially dermatophytes. The medium may be made more selective for fungi by the addition of chloramphenicol.

Sabouraud Glucose Maltose HiVeg Agar

Composition per liter:

Agar	15.0g
Glucose	10.0g
Maltose.....	10.0g
Plant hydrolysate.....	5.0g
Plant peptone.....	5.0g
pH 5.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Avoid overheating. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of fungi.

Sabouraud Liquid Broth, Modified

See: Antibiotic Medium 13

Sabouraud Maltose Agar

Composition per liter:

Maltose.....	40.0g
Agar	15.0g

Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue	5.0g
pH 5.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Avoid overheating. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of fungi.

Sabouraud Maltose Broth

Composition per liter:

Maltose	40.0g
Neopeptone	10.0g
pH 5.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Avoid overheating.

Use: For the cultivation of a variety of fungi.

Sabouraud Maltose HiVeg Broth

Composition per liter:

Maltose	40.0g
Plant peptone No. 4.....	10.0g
pH 5.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Avoid overheating.

Use: For the cultivation and maintenance of a variety of fungi.

Sabouraud Medium, Emmons Modification

Composition per liter:

Glucose	20.0g
Agar	15.0g
Peptone	10.0g
pH 6.8–7.0 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8–7.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Arthroderma benhamiae*, *Arthroderma vanbreuseghemii*, *Aureobasidium pullulans*, *Epidermophyton floccosum*, *Microsporum canis*, *Sporothrix schenckii*, *Trichophyton mentagrophytes*, and *Trichophyton rubrum*.

Sabouraud Medium, Fluid**Composition per liter:**

Glucose	20.0g
Pancreatic digest of casein	5.0g
Peptamin	5.0g
pH 5.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Avoid overheating.

Use: For the isolation and cultivation of yeasts and molds.

**Sabouraud Medium, Fluid, HiVeg
(Fluid Sabouraud HiVeg Medium)****Composition per liter:**

Glucose	20.0g
Plant hydrolysate.....	5.0g
Plant peptone.....	5.0g
pH 5.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of a variety of fungi. For the sterility testing of pharmaceutical preparations for the presence of molds and bacteria.

Saccharococcus Agar**Composition per liter:**

Agar	20.0g
Beef extract	5.0g
Sucrose.....	5.0g
Pancreatic digest of casein.....	3.0g
Glucose	1.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Saccharococcus thermophilus*.

Saccharolytic Clostridia Medium**Composition per liter:**

Pancreatic digest of casein.....	10.0g
Yeast extract.....	6.0g
Sodium thioglycolate.....	0.5g
Carbohydrate solution.....	100.0mL
Potassium phosphate (1M solution, pH 7.5).....	30.0mL
MgSO ₄ (1M solution).....	1.0mL
Solution M.....	0.5mL
FeSO ₄ solution.....	0.2mL
pH 7.0–7.2 at 25°C	

Carbohydrate Solution:**Composition per 100.0mL:**

Glucose or sucrose.....	20.0g
-------------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution M:**Composition per liter:**

CaCl ₂	3.33g
MnCl ₂ ·4H ₂ O.....	1.98g
Na ₂ MoO ₄ ·2H ₂ O.....	1.21g
CoCl ₂ ·6H ₂ O.....	1.19g

Preparation of Solution M: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

FeSO₄·7H₂O Solution:**Composition per 10.0mL:**

FeSO ₄ ·7H ₂ O.....	55.6g
H ₂ SO ₄ (0.1M solution).....	10.0mL

Preparation of FeSO₄·7H₂O Solution: Add the FeSO₄·7H₂O to 10.0mL of H₂SO₄ solution. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile carbohydrate solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of saccharolytic *Clostridium* species.

Saccharolytic Clostridia Medium**Composition per liter:**

Sodium thioglycolate.....	1.0g
K ₂ HPO ₄	0.8g
KH ₂ PO ₄	0.2g
MgSO ₄ ·7H ₂ O.....	0.2g
NaCl.....	0.2g
Na ₂ MoO ₄ ·2H ₂ O.....	0.025g
Yeast extract.....	0.01g
FeSO ₄ ·7H ₂ O.....	0.01g
MnSO ₄ ·4H ₂ O.....	0.01g
CaCl ₂	0.01g
Carbohydrate solution.....	100.0mL
Soil extract.....	10.0mL
Trace elements solution.....	1.0mL
pH 7.2 ± 0.2 at 25°C	

Carbohydrate Solution:**Composition per 100.0mL:**

Glucose or sucrose.....	10.0g
-------------------------	-------

Preparation of Carbohydrate Solution: Add glucose or sucrose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Soil Extract:**Composition per 200.0mL:**

Garden soil, neutral.....	100.0g
---------------------------	--------

Preparation of Soil Extract: Add garden soil to 100.0mL of tap water. Gently heat and bring to 130°C for 60 min. Cool to 45°C. Filter through Whatman #1 filter paper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Trace Elements Solution:**Composition per liter:**

Na ₂ B ₄ O ₇ ·10H ₂ O	0.05g
CoNO ₃ ·6H ₂ O	0.05g
CdSO ₄ ·2H ₂ O	0.05g
CuSO ₄ ·5H ₂ O	0.05g
ZnSO ₄ ·7H ₂ O	0.05g
MnSO ₄ ·H ₂ O	0.05g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except sodium thioglycolate and carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Add sodium thioglycolate. Mix thoroughly. Distribute 9.5mL into test tubes that contain inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 0.5mL of sterile carbohydrate solution to each tube. Mix thoroughly.

Use: For the isolation of N₂-fixing, saccharolytic *Clostridium* species.

Saccharomyces Medium**Composition per liter:**

Glucose	20.0g
Peptone.....	20.0g
Agar	15.0g
Yeast extract.....	10.0g
Yeast nitrogen base without amino acids	6.7g
(NH ₄) ₂ SO ₄	5.0g
Proline.....	4.0mg

Preparation of Medium: Add glucose, yeast nitrogen base without amino acids, and proline to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Filter sterilize. Add peptone, yeast extract, (NH₄)₂SO₄, and agar to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically combine the two sterile solutions. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Saccharomyces cerevisiae*.

Saccharomyces rouxii Medium**Composition per liter:**

Glucose	400.0g
Agar	20.0g
Peptone.....	20.0g
Yeast extract.....	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Zygosaccharomyces rouxii*.

Use: For the cultivation of *Monodictya austrina*.

Sakazakii DHL Agar**Composition per liter:**

Agar	15.0g
Casein enzymic hydrolysate	10.0g

Meat peptone	10.0g
Lactose.....	10.0g
Sucrose.....	10.0g
Meat extract	3.0g
Na ₂ S ₂ O ₃	2.0g
Sodium deoxycholate.....	1.5g
Sodium citrate	1.0g
Ammonium iron (III) citrate.....	1.0g
L-Cysteine·HCl·H ₂ O	0.2g
Neutral Red.....	0.03g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection and isolation of pathogenic Enterobacteriaceae from all types of specimens.

Saline Czapek Agar (SCZA)**Composition per liter:**

Sucrose.....	30.0g
NaCl.....	25.0g
Agar	15.0g
NaNO ₃	3.0g
K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except sucrose, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Distribute into tubes or flasks. In a separate flask, add sucrose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave both solutions separately for 15 min at 15 psi pressure–121°C. Cool to 50°C. Combine the sterile solutions. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Salinibacter ruber Agar (DSMZ Medium 936)**Composition per liter:**

NaCl.....	195.0g
MgSO ₄ ·7H ₂ O	49.5g
MgCl ₂ ·6H ₂ O	34.6g
Agar	20.0g
KCl.....	5.0g
CaCl ₂ ·2H ₂ O	1.25g
Yeast extract.....	1.0g
NaBr.....	0.625g
NaHCO ₃	0.25g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Salinibacter ruber*.

***Salinibacter ruber* Medium
(DSMZ Medium 936)**

Composition per liter:

NaCl	195.0g
MgSO ₄ ·7H ₂ O	49.5g
MgCl ₂ ·6H ₂ O	34.6g
KCl	5.0g
CaCl ₂ ·2H ₂ O	1.25g
Yeast extract	1.0g
NaBr	0.625g
NaHCO ₃	0.25g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Salinibacter ruber*.

***Salinivibrio costicola* Subspecies *vallismortis* Medium
(DSMZ Medium 597)**

Composition per liter:

NaCl	25.0g
MgSO ₄ ·7H ₂ O	9.6g
MgCl ₂ ·6H ₂ O	7.0g
Glucose	5.0g
KCl	3.8g
Yeast extract	1.0g
CaCl ₂ ·2H ₂ O	0.5g
K ₂ HPO ₄ ·3H ₂ O	0.4g
NaHCO ₃ solution	100.0mL

pH 7.0 ± 0.2 at 25°C

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	3.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except NaHCO₃ solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL NaHCO₃ solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Salinivibrio costicola* subsp. *vallismortis*.

***Salmonella* Chromogen Agar
(Rambach Equivalent Agar)**

Composition per liter:

Agar	15.0g
Peptone	5.0g
NaCl	5.0g
Yeast extract	2.0g
Meat extract	1.0g
Sodium deoxycholate	1.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available from Fluka, Sigma-Aldrich.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while

stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: A differential diagnostic agar for the detection of *Salmonella* in food, including the isolation and enumeration of *Salmonella* from bivalves.

***Salmonella* Chromogenic Agar
(OSCM)**

Composition per liter:

Chromogenic mix	28.0g
Agar	12.0g
Special peptone	10.0g
Selective supplement solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Selective Supplement Solution:**Composition per 10.0mL:**

Cefsulodin	12.0mg
Novobiocin	5.0mg

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not autoclave. Cool quickly to 50°C. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the identification of *Salmonella* species and differentiation of *Salmonella* spp. other organisms in the family Enterobacteriaceae. This medium combines two chromogens for the detection of *Salmonella* spp., 5-bromo-6-chloro-3-indolyl caprylate (Magenta-caprylate) and 5-bromo-4-chloro-3-indolyl-β-D galactopyranoside (X-gal). X-gal is a substrate for the enzyme β-D-galactosidase. Hydrolysis of the chromogen, Magenta-caprylate, by lactose-negative *Salmonella* species results in magenta colonies. The addition of the selective supplement solution increases the selectivity of the medium. Novobiocin inhibits *Proteus* growth and cefsulodin inhibits growth of pseudomonads.

***Salmonella* Differential Agar
(RajHans Medium)**

Composition per liter:

Agar	12.0g
Propylene glycol	10.0g
Peptone, special	8.0g
B.C. indicator	2.0g
Yeast extract	2.0g
Sodium deoxycholate	1.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Mix to completely dissolve components. Do not autoclave. Cool to 50°C. Mix thoroughly. Pour into sterile Petri dishes.

Use: A selective chromogenic medium used for the isolation and differentiation of *Salmonella* species from the members of Enterobacteriaceae, especially *Proteus* species.

***Salmonella* Differential HiVeg Agar, Modified**
(*Salmonella* Differential Agar, Modified, HiVeg)

Composition per liter:

Propylene glycol	10.0g
Plant special peptone	8.0g
NaCl	5.0g
Yeast extract	3.0g
B.C. indicator	2.0g
Synthetic detergent.....	1.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Mix to completely dissolve components. Do not autoclave. Cool to 50°C. Mix thoroughly. Pour into sterile Petri dishes.

Use: A selective chromogenic medium used for the isolation and differentiation of *Salmonella* species from the members of Enterobacteriaceae, especially *Proteus* species.

***Salmonella* HiVeg Agar, ONOZ**

Composition per liter:

Agar	15.0g
Sucrose.....	13.0g
Lactose	11.5g
Na ₃ -citrate·5H ₂ O.....	9.3g
Plant peptone.....	8.625g
Plant extract No. 1	6.0g
L-Phenylalanine.....	5.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	4.25g
Yeast extract.....	3.0g
Synthetic detergent No. 1	2.0g
Na ₂ HPO ₄ ·2H ₂ O.....	1.0g
Ferric citrate.....	0.5g
Metachrome Yellow	0.47g
MgSO ₄	0.4g
Aniline Blue.....	0.25g
Neutral Red	0.022g
Brilliant Green	1.66mg

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Gently heat and bring to boiling. Do not autoclave. Cool to 50°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance *Salmonella* spp. from clinical specimens.

***Salmonella* Medium**

Composition per liter:

Pancreatic digest of casein.....	10.0g
NaCl	5.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Escherichia coli* and *Salmonella choleraesuis*.

***Salmonella* Rapid Test Elective Medium**

Composition per liter:

Tryptone.....	10.0g
Na ₂ HPO ₄	9.0g
Sodium chloride.....	5.0g
Casein	5.0g
KH ₂ PO ₄	1.5g
Malachite Green.....	0.0025g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the Oxoid *Salmonella* Rapid Test which is for the presumptive detection of motile *Salmonella* in foods and environmental samples.

***Salmonella* Rapid Test Elective Medium, 2X**

Composition per liter:

Tryptone.....	20.0g
Na ₂ HPO ₄	18.0g
Sodium chloride.....	10.0g
KH ₂ PO ₄	3.0g
Casein	10.0g
Malachite Green.....	0.005g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Use: Use as described in the Oxoid *Salmonella* Rapid Test which is for the presumptive detection of motile *Salmonella* in foods and environmental samples.

***Salmonella* Shigella Agar**
(SS Agar)

Composition per liter:

Agar	13.5g
Lactose.....	10.0g
Bile salts.....	8.5g
Na ₂ S ₂ O ₃	8.5g
Sodium citrate.....	8.5g
Beef extract.....	5.0g
Pancreatic digest of casein.....	2.5g
Peptic digest of animal tissue	2.5g
Ferric citrate.....	1.0g
Neutral Red.....	0.025g
Brilliant Green	0.33mg

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not autoclave. Cool to 45°–50°C. Pour

into sterile Petri dishes in 20.0mL volumes. Allow the surface of the plates to dry before inoculation.

Use: For the selective isolation and differentiation of pathogenic enteric bacilli, especially those belonging to the genus *Salmonella*. This medium is not recommended for the primary isolation of *Shigella* species. Lactose-fermenting bacteria such as *Escherichia coli* or *Klebsiella pneumoniae* appear as small pink or red colonies. Lactose-nonfermenting bacteria—such as *Salmonella* species, *Proteus* species, and *Shigella* species—appear as colorless colonies. Production of H₂S by *Salmonella* species turns the center of the colonies black.

***Salmonella Shigella* Agar, Modified (SS Agar, Modified)**

Composition per liter:

Agar	12.0g
Lactose	10.0g
Sodium citrate	10.0g
Na ₂ S ₂ O ₃	8.5g
Bile salts	5.5g
Beef extract	5.0g
Peptone	5.0g
Ferric citrate	1.0g
Neutral Red	0.025g
Brilliant Green	0.33mg

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes in 20.0mL volumes. Allow the surface of the plates to dry before inoculation.

Use: For the selective isolation and differentiation of pathogenic enteric bacilli, especially those belonging to the genus *Salmonella*. This medium provides better growth of *Shigella* species. Lactose-fermenting bacteria such as *Escherichia coli* or *Klebsiella pneumoniae* appear as small pink or red colonies. Lactose-nonfermenting bacteria—such as *Salmonella* species, *Proteus* species, and *Shigella* species—appear as colorless colonies. Production of H₂S by *Salmonella* species turns the center of the colonies black.

***Salmonella Shigella* Deoxycholate Agar** *See: SS Deoxycholate Agar*

Salt Agar

Composition per liter:

NaCl	58.4g
Agar	15.0g
Proteose peptone	5.0g
Pancreatic digest of casein	5.0g

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Marinococcus halophilus*.

Salt Broth, Modified

Composition per liter:

NaCl	65.0g
Enzymatic digest of animal tissue	10.0g
Heart digest	10.0g
Glucose	1.0g
Bromocresol Purple	0.016g

pH 7.2 ± 0.2 at 25°C

Source: Available as a prepared medium from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of the enterococcal group D streptococci from nonenterococcal group D streptococci based on salt tolerance.

Salt Colistin Broth

Composition per liter:

NaCl	20.0g
Peptone	10.0g
Yeast extract	3.0g
Colistin solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Colistin Solution:

Composition per 10.0mL:

Colistin methane sulfonate	500,000U
----------------------------------	----------

Preparation of Colistin Solution: Add colistin methane sulfonate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except colistin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat until dissolved. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add sterile colistin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of halophilic *Vibrio* species.

Salt Malt Agar (SMA1)

Composition per liter:

NaCl	25.0g
Agar	15.0g
Malt extract	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Dendryphiella salina* and *Dendryphiella arenaria*.

Salt Meat Broth

Composition per liter:

NaCl	100.0g
Neutral ox-heart tissue	30.0g
Beef extract	10.0g
Peptone	10.0g

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as tablets from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of staphylococci from specimens with a mixed flora such as fecal specimens, especially during the investigation of staphylococcal food poisoning.

Salt Medium

Composition per liter:

NaCl	58.4g
Proteose peptone	5.0g
Pancreatic digest of casein	5.0g
pH 4.9 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Marinococcus halophilus*.

Salt Nutrient Agar

Composition per liter:

NaCl	25.0g
Agar	15.0g
Peptone	5.0g
Yeast extract	2.0g
Beef extract	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Bacillus* species, *Pseudomonas beijerinckii*, and other *Pseudomonas* species.

Salt Polymyxin Broth (SPB)

Composition per liter:

NaCl	20.0g
Pancreatic digest of casein	10.0g
Yeast extract	3.0g
Polymyxin B	250,000U
pH 8.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.8. Distribute into tubes or flasks. Autoclave for 10 min at 10 psi pressure–115°C.

Use: For the isolation and cultivation of *Vibrio* species from foods.

Salt Polymyxin HiVeg Broth Base with Polymyxin

Composition per liter:

NaCl	20.0g
Plant hydrolysate	10.0g
Yeast extract	3.0g
Selective supplement	10.0mL
pH 8.8 ± 0.2 at 25°C	

Source: This medium, without selective supplement, is available as a premixed powder from HiMedia.

Selective Supplement:

Composition per 10.0mL:

Polymyxin B sulfate	100,000U
---------------------------	----------

Preparation of Selective Supplement: Add polymyxin B sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Mix thoroughly. Adjust pH to 8.8. Distribute into tubes or flasks. Autoclave for 10 min at 10 psi pressure–115°C. Cool to 50°C. Aseptically add 10.0mL sterile selective supplement. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into tubes.

Use: For the isolation and cultivation of *Vibrio* species from foods.

Salt Tolerance Medium

Composition per liter:

Beef heart, infusion from	500.0g
NaCl	65.0g
Tryptose	10.0g
Glucose	1.0g
Indicator solution	1.0mL
pH 7.4 ± 0.2 at 25°C	

Indicator Solution:

Composition per 100.0mL:

Bromcresol Purple	1.6g
Ethanol (95% solution)	100.0mL

Preparation of Indicator Solution: Add Bromcresol Purple to ethanol. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of salt-tolerant *Streptococcus* species and other salt-tolerant Gram-positive cocci. For the differentiation of Gram-positive cocci based on salt tolerance.

Salt Tolerance Medium

Composition per liter:

NaCl	60.0g
Peptone	5.0g
Yeast extract	2.0g
Beef extract	1.0g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of *Aeromonas* and *Plesiomonas* species based on salt tolerance.

Salt Tolerance Medium

Composition per liter:

Beef heart, solids from infusion	500.0g
NaCl	65.0g
Tryptose	10.0g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For testing the salt tolerance of a variety of microorganisms.

Salt Tolerance Medium, Gilardi**Composition per liter:**

NaCl	65.0g
Pancreatic digest of casein	15.0g
Agar	15.0g
Papaic digest of soybean meal	5.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of salt-tolerant, nonfermenting Gram-negative bacteria. For the differentiation of nonfermenting Gram-negative bacteria based on salt tolerance.

Salt Tolerance Medium, Tatum**Composition per liter:**

NaCl	65.0g
Peptone	5.0g
Yeast extract	2.0g
Beef extract	1.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of salt-tolerant, nonfermenting Gram-negative bacteria. For the differentiation of nonfermenting Gram-negative bacteria based on salt tolerance.

Sanfrancisco Medium**Composition per liter:**

Rye bran or wheat bran	50.0g
Fresh baker's yeast	21.0g
Pancreatic digest of casein	10.0g
Fructose	7.0g
Glucose	7.0g
Maltose	7.0g
Yeast extract	7.0g
Diammonium citrate	5.0g
Sodium acetate·3H ₂ O	5.0g
KH ₂ PO ₄ ·3H ₂ O	2.5g
Meat extract	2.0g
Sodium gluconate	2.0g
Tween™ 80	1.0g
L-Cysteine·HCl	0.5g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.05g
FeSO ₄ ·7H ₂ O	0.01g

pH 5.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus sanfrancisco*.

SAP 1 Agar**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	5.0g
Yeast extract	5.0g
Artificial seawater	1.0L

pH 7.2 ± 0.2 at 25°C

Artificial Seawater:**Composition per liter:**

NaCl	24.7g
MgSO ₄ ·7H ₂ O	6.3g
MgCl ₂ ·6H ₂ O	4.6g
CaCl ₂	1.0g
KCl	0.7g
NaHCO ₃	0.2g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add solid components to 1.0L of artificial seawater. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

SAP 2 Agar**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	1.0g
Yeast extract	1.0g
Artificial seawater	1.0L

pH 7.2 ± 0.2 at 25°C

Artificial Seawater:**Composition per liter:**

NaCl	24.7g
MgSO ₄ ·7H ₂ O	6.3g
MgCl ₂ ·6H ₂ O	4.6g
CaCl ₂	1.0g
KCl	0.7g
NaHCO ₃	0.2g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add solid components to 1.0L of artificial seawater. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

Saprospira grandis Medium**Composition per 1010.0mL:**

Pancreatic digest of casein	5.0g
Yeast extract	5.0g
Ca(NO ₃) ₂ ·4H ₂ O	0.1g
K ₂ HPO ₄	0.02g
Seawater, filtered	1.0L
Trace elements	10.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements:**Composition per liter:**

FeSO ₄ ·7H ₂ O	0.5mg
ZnSO ₄ ·7H ₂ O	0.3mg
H ₃ BO ₃	0.1mg
CoCl ₂ ·6H ₂ O	0.1mg
CuSO ₄ ·5H ₂ O	0.1mg
MnSO ₄ ·4H ₂ O	0.1mg
Na ₂ MoO ₄ ·2H ₂ O	0.1mg

Preparation of Trace Elements: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Adjust pH to 7.0. Filter sterilize.

Use: For the cultivation of *Saprospira grandis*.

Sarcina maxima* Medium*Composition per liter:**

Glucose	10.0g
Peptone	10.0g
Yeast extract	5.0g
L-Cysteine·HCl solution	10.0mL
pH 6.0 ± 0.2 at 25°C	

L-Cysteine·HCl Solution:**Composition per 10.0mL:**

L-Cysteine·HCl	0.5g
----------------	------

Preparation of L-Cysteine·HCl Solution: Add L-cysteine·HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-cysteine·HCl solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add sterile L-cysteine·HCl solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Sarcina maxima*.

***Sarcina* Medium
(DSMZ Medium 21)****Composition per liter:**

Glucose	30.0g
Peptone	5.0g
Yeast extract	5.0g
Distilled water	1000.0mL
pH 6.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Sarcina ventriculi* and *Sarcina maxima*.

Sarcina ventriculi* Growth Medium*Composition per liter:**

Glucose	30.0g
Peptone	5.0g
Yeast extract	5.0g
pH 6.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Sarcina maxima* and *Sarcina ventriculi*.

Sauton's Fluid Medium Base**Composition per liter:**

L-Asparagine	1.33g
Polysorbate 80	0.833g
Citric acid	0.66g
K ₂ HPO ₄	0.177g
NaH ₂ PO ₄	0.056g
NaCl	0.035g
Ferric ammonium citrate (brown)	0.0167g
Glycerol	20.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add glycerol to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add remaining components. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enumeration of mycobacteria.

Sauton's Medium**Composition per liter:**

L-Asparagine	4.0g
Citric acid	2.0g
K ₂ HPO ₄	0.5g
MgSO ₄	0.5g
Triton® WR 1339	0.25g
Ferric ammonium citrate	0.05g
Glycerol	40.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Mycobacterium tuberculosis* strain Bacille Calmette-Guèrin (BCG) for vaccine production.

**SBG Enrichment Broth
(Selenite Brilliant Green
Enrichment Broth)****Composition per liter:**

D-Mannitol	5.0g
Peptone	5.0g
Yeast extract	5.0g
Na ₂ SeO ₃ ·5H ₂ O	4.0g
K ₂ HPO ₄	2.65g
KH ₂ PO ₄	1.02g
Sodium taurocholate	1.0g
Brilliant Green	5.0mg
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Continue boiling for 5–10 min. Do not autoclave. Distribute into sterile tubes or flasks.

Use: For the selective isolation of *Salmonella* species, especially from eggs and egg products.

SBG Sulfa Enrichment

Composition per liter:

D-Mannitol.....	5.0g
Peptone.....	5.0g
Yeast extract.....	5.0g

Sodium taurocholate.....	1.0g
Sodium sulfapyridine.....	0.5g
Brilliant Green.....	5.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5–10 min. Do not autoclave. Distribute into sterile tubes or flasks.

Use: For the selective isolation of *Salmonella* species, especially from eggs and egg products.

SB/SW Medium

Composition per liter:

NaCl.....	1.0g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	1.0mg
Sodium crotonate solution.....	50.0mL
NaHCO ₃ solution.....	20.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Seven vitamin solution.....	10.0mL
Sodium dithionite solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Prepare and dispense under 80% N₂ + 20% CO₂. Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Sodium Crotonate Solution:

Composition per 50.0mL:

Sodium crotonate.....	1.1g
-----------------------	------

Preparation of Sodium Crotonate Solution: Add sodium crotonate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.36g
--	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	0.3g
Thiamine-HCl.....	0.2g
Nicotinic acid.....	0.2g
Calcium DL-pantothenate.....	0.1g
Vitamin B ₁₂	0.1g
<i>p</i> -Aminobenzoic acid.....	80.0mg
Biotin.....	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Sodium Dithionite Solution:

Composition per 10.0mL:

Sodium dithionium.....	0.2g
------------------------	------

Preparation of Sodium Dithionite Solution: Add sodium dithionium to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare medium and dispense under 80% N₂ + 20% CO₂. Add components, except sodium crotonate solution, seven vitamin solution, sodium dithionite solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 910.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile sodium crotonate solution, 20.0mL of sterile NaHCO₃ solution, 10.0mL of seven vitamin solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks. After inoculation, add 0.1mL of sodium dithionite solution per 10.0mL of medium.

Use: For the cultivation of *Syntrophobacter buswellii*.

SB/SW Medium

Composition per liter:

NaCl.....	1.0g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g

Resazurin	1.0mg
Sodium pyruvate solution	50.0mL
NaHCO ₃ solution	20.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Seven vitamin solution.....	10.0mL
Sodium dithionite solution.....	10.0mL
Trace elements solution SL-10	1.0mL

pH 7.2 ± 0.2 at 25°C

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Prepare and dispense under 80% N₂ + 20% CO₂. Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Sodium Pyruvate Solution:**Composition per 50.0mL:**

Sodium pyruvate	1.25g
-----------------------	-------

Preparation of Sodium Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

NaHCO₃ Solution:**Composition per 20.0mL:**

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.36g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Seven Vitamin Solution:**Composition per liter:**

Pyridoxine·HCl	0.3g
Thiamine·HCl	0.2g
Nicotinic acid.....	0.2g
Calcium DL-pantothenate.....	0.1g
Vitamin B ₁₂	0.1g
<i>p</i> -Aminobenzoic acid.....	80.0mg
Biotin	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Sodium Dithionite Solution:**Composition per 10.0mL:**

Sodium dithionium	0.2g
-------------------------	------

Preparation of Sodium Dithionite Solution: Add sodium dithionium to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium:

Prepare medium and dispense under 80% N₂ + 20% CO₂. Add components, except sodium pyruvate solution, seven vitamin solution, sodium dithionite solution, NaHCO₃ solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 910.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile sodium pyruvate solution, 20.0mL of sterile NaHCO₃ solution, 10.0mL of seven vitamin solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks. After inoculation, add 0.1mL of sodium dithionite solution per 10.0mL of medium.

Use: For the cultivation of *Syntrophobacter wolinii*.

SC Agar**(DSMZ Medium 751)****Composition per liter:**

Agar	15.0g
Peptone from soy meal	8.0g
Corn meal, solids from infusion	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
Hemin solution.....	15.0mL
Serum albumin solution.....	10.0mL
Cysteine solution	10.0mL
Glucose solution	5.0mL

pH 6.6 ± 0.2 at 25°C

Hemin Solution:**Composition per 100.0mL:**

Hemin	0.1g
-------------	------

Preparation of Hemin Solution: Add hemin to 100.0mL 0.05N NaOH. Mix thoroughly.

Serum Albumin Solution:**Composition per 10.0mL:**

Bovine serum albumin, fraction V.....	2.0g
---------------------------------------	------

Preparation of Serum Albumin Solution: Add bovine serum albumin, fraction V to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:**Composition per 10.0mL:**

D-Glucose	1.0g
-----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Cysteine Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	1.0g
---------------------------------------	------

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, serum albumin solution, and cysteine solution, to distilled/deionized water and bring volume to 975.0mL. Mix thoroughly. Gently heat

and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL sterile cysteine solution, 10.0mL sterile glucose solution, and 10.0mL sterile serum albumin solution. Mix thoroughly. Adjust pH to 6.6. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Leifsonia xyli* subsp. *cynodontis*=*Clavibacter xyli* subsp. *cynodonti*.

SC Agar

Composition per liter:

Agar	15.0g
Papaic digest of soybean meal	8.0g
Corn meal (solids from infusion).....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
Hemin solution.....	15.0mL
Bovine serum albumin, fraction V.....	10.0mL
L-Cysteine·H ₂ O solution.....	10.0mL
Glucose solution	1.0mL

pH 6.6 ± 0.2 at 25°C

Hemin Solution:

Composition per 100.0mL:

Hemin.....	0.1g
NaOH (0.05 <i>N</i> solution).....	100.0mL

Preparation of Hemin Solution: Add hemin to NaOH solution. Mix thoroughly.

Bovine Serum Albumin, Fraction V Solution:

Composition per 10.0mL:

Bovine serum albumin, fraction V.....	2.0g
---------------------------------------	------

Preparation of Bovine Serum Albumin, Fraction V Solution: Add bovine serum albumin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

L-Cysteine·H₂O Solution:

Composition per 10.0mL:

L-Cysteine·H ₂ O.....	1.0g
----------------------------------	------

Preparation of L-Cysteine·H₂O Solution: Add L-cysteine·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 10.0mL:

D-Glucose	5.0g
-----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except bovine serum albumin solution, L-cysteine·H₂O solution, and glucose solution—to distilled/deionized water and bring volume to 979.0mL. Mix thoroughly. Adjust pH to 6.6 with NaOH. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile bovine serum albumin solution, 10.0mL of sterile L-cysteine·H₂O solution, and 1.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Clavibacter xyli*.

SC Agar

Composition per liter:

L-Methionine.....	1.49g
L-Threonine.....	1.19g
L-Valine.....	1.17g
L-Serine.....	1.05g
L-Lysine.....	0.91g
L-Phenylalanine.....	0.83g
L-Tryptophan.....	0.82g
L-Histidine.....	0.58g
<i>m</i> -inositol.....	0.36g
Uracil.....	0.22g
L-Tyrosine.....	0.18g
Adenine.....	0.135g

Preparation of Synthetic Stock Solution: Add components to distilled/deionized water and bring volume to 300.0mL. Mix thoroughly. Filter sterilize. Store in the dark at 25°C.

Preparation of Medium: Add components, except synthetic stock solution and glucose solution, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 30.0mL of sterile synthetic stock so-

lution and 50.0mL of sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Saccharomyces cerevisiae*.

SC Broth without Histidine

Composition per liter:

(NH ₄) ₂ SO ₄	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
NaCl.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
Inositol.....	2.0mg
KI.....	1.0mg

Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 30.0mL of sterile synthetic stock solution and 50.0mL of sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of strains of *Saccharomyces cerevisiae* that do not require uracil.

SC Medium (DSMZ Medium 751)

Composition per liter:

Peptone from soy meal	8.0g
KH ₂ PO ₄	1.5g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
Hemin solution.....	15.0mL
Serum albumin solution.....	10.0mL
Cysteine solution.....	10.0mL
Glucose solution	5.0mL

pH 6.6 ± 0.2 at 25°C

Hemin Solution:

Composition per 100.0mL:

Hemin.....	0.1g
------------	------

Preparation of Hemin Solution: Add hemin to 100mL 0.05N NaOH. Mix thoroughly.

Serum Albumin Solution:

Composition per 10.0mL:

Bovine serum albumin, fraction V.....	2.0g
---------------------------------------	------

Preparation of Serum Albumin Solution: Add bovine serum albumin, fraction V to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 10.0mL:

D-Glucose	1.0g
-----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O	1.0g
---------------------------------------	------

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, serum albumin solution, and cysteine solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL sterile cysteine solution, 10.0mL sterile glucose solution, and 10.0mL sterile serum albumin solution. Mix thoroughly. Adjust pH to 6.6. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Leifsonia xyli* subsp. *cynodontis*.

SC Medium

Composition per 1021.0mL:

Agar	15.0g
Papaic digest of soybean meal.....	8.0g
Corn meal, solids from infusion	2.0g
Tween™ 80.....	1.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
Hemin chloride solution	15.0mL
Bovine serum albumin solution.....	10.0mL
L-Cysteine solution	10.0mL
Glucose solution	1.0mL

pH 6.6 at 25°C

Hemin Chloride Solution:

Composition per 100.0mL:

Hemin chloride	0.1g
NaOH (0.05N solution).....	100.0mL

Preparation of Hemin Chloride Solution: Add hemin chloride to 100.0mL of NaOH solution. Mix thoroughly.

Bovine Serum Albumin Solution:

Composition per 10.0mL:

Bovine serum albumin.....	2.0g
---------------------------	------

Preparation of Bovine Serum Albumin Solution: Add bovine serum albumin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

L-Cysteine Solution:

Composition per 10.0mL:

L-Cysteine, free base.....	1.0g
----------------------------	------

Preparation of L-Cysteine Solution: Add L-cysteine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 10.0mL:

Glucose	5.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components—except bovine serum albumin solution, L-cysteine solution, and glucose solution—to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile bovine serum albumin solution, 10.0mL of sterile L-cysteine solution, and 1.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of coryneform bacteria that cause ratoon stunting disease of sugarcane.

SCGYEM Medium

Composition per liter:

Casein, isoelectric	10.0g
Yeast extract.....	5.0g
Glucose	2.5g
Na ₂ HPO ₄	1.325g
KH ₂ PO ₄	0.8g
Calf serum, heat inactivated	100.0mL

Preparation of Medium: Add components, except calf serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 30 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL of sterile, heat-inactivated calf serum. Mix thoroughly. Aseptically distribute into sterile, screw-capped tubes or flasks.

Use: For the cultivation of *Naegleria australiensis* and *Naegleria fowleri*.

Schaedler Agar (Schaedler Anaerobic Agar)

Composition per liter:

Agar	13.5g
Glucose	5.83g
Pancreatic digest of casein	5.7g
Proteose peptone No. 3	5.0g
Yeast extract	5.0g
Tris(hydroxymethyl)aminomethane buffer	3.0g
NaCl	1.65g
Papaic digest of soybean meal	1.0g
K ₂ HPO ₄	0.83g
L-Cystine	0.4g
Hemin	0.01g

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and enumeration of anaerobic and aerobic microorganisms.

Schaedler Agar

Composition per liter:

Agar	13.5g
Pancreatic digest of casein	8.2g
Glucose	5.8g
Yeast extract	5.0g
Tris(hydroxymethyl)aminomethane buffer	3.0g
Peptic digest of animal tissue	2.5g
NaCl	1.7g
Papaic digest of soybean meal	1.0g
K ₂ HPO ₄	0.8g
L-Cystine	0.4g
Hemin	0.01g

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and enumeration of anaerobic and aerobic microorganisms.

Schaedler Agar with Vitamin K₁ and Sheep Blood

Composition per liter:

Agar	13.5g
Pancreatic digest of casein	8.2g
Glucose	5.8g
Yeast extract	5.0g
Tris(hydroxymethyl)aminomethane buffer	3.0g
Peptic digest of animal tissue	2.5g
Papaic digest of soybean meal	1.0g
NaCl	1.7g
K ₂ HPO ₄	0.8g
L-Cystine	0.4g
Hemin	0.01g
Sheep blood, defibrinated	50.0mL
Vitamin K ₁ solution	1.0mL

pH 7.6 ± 0.2 at 25°C

Vitamin K₁ Solution:

Composition per 10.0mL:

Vitamin K ₁	5.0g
Ethanol, absolute	10.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to ethanol. Mix thoroughly.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the recovery of fastidious anaerobic bacteria such as *Bacteroides* species.

Schaedler Anaerobic Agar

See: Schaedler Agar

Schaedler Anaerobic Broth

See: Schaedler Broth

Schaedler Broth (Schaedler Anaerobic Broth)

Composition per liter:

Pancreatic digest of casein	8.2g
Glucose	5.8g
Yeast extract	5.0g
Tris(hydroxymethyl)aminomethane buffer	3.0g
Peptic digest of animal tissue	2.5g
NaCl	1.7g
Papaic digest of soybean meal	1.0g
K ₂ HPO ₄	0.8g
L-Cystine	0.4g
Hemin	0.01g

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Eubacterium combesii*, *Eubacterium contortum*, and a variety of other anaerobic bacteria.

Schaedler CNA Agar with Vitamin K₁ and Sheep Blood

Composition per liter:

Agar	13.5g
Pancreatic digest of casein	8.2g
Glucose	5.8g
Yeast extract	5.0g
Tris(hydroxymethyl)aminomethane buffer	3.0g
Peptic digest of animal tissue	2.5g
Papaic digest of soybean meal	1.0g
NaCl	1.7g
K ₂ HPO ₄	0.8g
L-Cystine	0.4g
Hemin	0.01g
Colistin	0.01g
Nalidixic acid	0.01g
Sheep blood, defibrinated	50.0mL
Vitamin K ₁ solution	1.0mL

pH 7.6 ± 0.2 at 25°C

Vitamin K₁ Solution:

Composition per 10.0mL:

Vitamin K ₁	5.0g
Ethanol, absolute	10.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to ethanol. Mix thoroughly.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of anaerobic, Gram-positive cocci, especially *Peptococcus* species and *Peptostreptococcus* species.

Schaedler HiVeg Agar with Blood

Composition per liter:

Agar	15.0g
Glucose	5.83g
Plant hydrolysate	5.67g
Plant peptone No. 3	5.0g
Yeast extract	5.0g
Tris(hydroxymethyl)aminomethane buffer	3.0g
NaCl	1.67g
Papaic digest of soybean meal	1.0g
K ₂ HPO ₄	0.83g
L-Cystine	0.4g
Fe ₄ (P ₂ O ₇) ₃ ·H ₂ O	0.01g
Sheep blood, defibrinated	50.0mL

pH 7.6 ± 0.2 at 25°C

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile sheep blood. Mix thoroughly.

Use: For the enumeration of various aerobic and anaerobic bacterial species present in the gastrointestinal tract.

Schaedler HiVeg Broth

Composition per liter:

Glucose	5.83g
Plant hydrolysate	5.67g
Plant peptone No. 3	5.0g
Tris(hydroxymethyl)aminomethane buffer	3.0g
Yeast extract	5.0g
NaCl	1.67g
Papaic digest of soybean meal	1.0g
K ₂ HPO ₄	0.83g
L-Cystine	0.4g
Fe ₄ (P ₂ O ₇) ₃ ·H ₂ O	0.01g
Sheep blood, defibrinated	50.0mL

pH 7.6 ± 0.2 at 25°C

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile sheep blood. Mix thoroughly. Aseptically distribute to tubes or flasks.

Use: For the enumeration of various aerobic and anaerobic bacterial species present in the gastrointestinal tract.

Schaedler KV Agar with Vitamin K₁ and Sheep Blood

Composition per liter:

Agar	13.5g
Pancreatic digest of casein	8.2g
Glucose	5.8g
Yeast extract	5.0g
Tris(hydroxymethyl)aminomethane buffer	3.0g
Peptic digest of animal tissue	2.5g
NaCl	1.7g
Papaic digest of soybean meal	1.0g
K ₂ HPO ₄	0.8g
L-Cystine	0.4g
Hemin	0.01g
Kanamycin	0.01g
Vancomycin	7.5mg
Sheep blood, defibrinated	50.0 mL
Vitamin K ₁ solution	1.0mL

pH 7.6 ± 0.2 at 25°C

Vitamin K₁ Solution:

Composition per 10.0mL:

Vitamin K ₁	5.0g
Ethanol, absolute	10.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to ethanol. Mix thoroughly.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of Gram-negative anaerobic bacteria.

Schiemann's CIN Agar
See: Yersinia Selective (CIN) Agar

Schizophyllum Medium

Composition per liter:

Agar	20.0g
Glucose	20.0g
Peptone.....	2.0g
Yeast extract.....	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
KH ₂ PO ₄	0.46g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Schizophyllum* species.

Schizosaccharomyces Malate Medium

Composition per liter:

Agar	30.0g
Glucose	10.0g
Malic acid	10.0g
Peptone.....	5.0g
Yeast extract.....	3.0g
Malt extract	3.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 4.8 with KOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Schizosaccharomyces pombe*.

Schleifer-Krämer Agar
(SK Agar)

Composition per liter:

Agar	13.0g
Glycerol	10.0g
Sodium pyruvate.....	10.0g
Pancreatic digest of casein.....	10.0g
Beef extract	5.0g
Yeast extract.....	3.0g
Potassium isothiocyanate.....	2.25g
LiCl	2.0g
Na ₂ HPO ₄ ·2H ₂ O.....	0.9g
NaH ₂ PO ₄ ·H ₂ O.....	0.6g
Glycine.....	0.5g
NaN ₃ solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

NaN₃ Solution:

Composition per 10.0mL:

NaN ₃	0.045g
------------------------	--------

Preparation of NaN₃ Solution: Add NaN₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except NaN₃ solution, to distilled/deionized water and bring volume to 990.0mL. Mix thor-

oughly. Adjust pH to 7.2. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile NaN₃ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Staphylococcus* species.

Schmitthenner's Agar

See: **StA**

Schneider's Drosophila Medium

Composition per liter:

MgSO ₄ ·7H ₂ O	3.7g
NaCl	2.1g
Yeast extract.....	2.0g
Trehalose.....	2.0g
D-Glucose.....	2.0g
L-Glutamine	1.8g
L-Lysine·HCl	1.7g
L-Proline.....	1.7g
KCl.....	1.6g
Na ₂ HPO ₄ ·7H ₂ O.....	1.3g
L-Glutamic acid.....	0.8g
L-Methionine.....	0.8g
CaCl ₂ , anhydrous.....	0.6g
KH ₂ PO ₄	0.5g
β-Alanine	0.5g
L-Tyrosine	0.5g
L-Arginine	0.4g
L-Aspartic acid	0.4g
L-Histidine.....	0.4g
L-Threonine.....	0.4g
NaHCO ₃	0.4g
Glycine.....	0.3g
L-Serine	0.3g
L-Valine	0.3g
L-Isoleucine.....	0.2g
L-Leucine	0.2g
L-Phenylalanine.....	0.2g
α-Ketoglutaric acid.....	0.2g
Fumaric acid	0.1g
Malic acid	0.1g
Succinic acid.....	0.1g
L-Cystine	0.1g
L-Tryptophan.....	0.1g
L-Cysteine	0.06g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Use: For the cultivation of *Drosophila* and other insect species. Also used as a chemically defined supplement for the cultivation of fastidious micro-organisms.

Schuberts Arginine Broth

Composition per liter:

Casein enzymic hydrolysate	17.0g
L-Arginine monohydrochloride	10.0g
NaCl	5.0g
Papaic digest of soabean meal	3.0g
D-Glucose.....	0.5g
Cresol Red	0.01g

Bromothymol Blue	0.0075g
Brilliant Green	0.00038g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. pH 7.2 ± 0.2 at 25°C

Use: For the isolation of chlorine-damaged *Pseudomonas aeruginosa* from swimming pool water.

Schuster's Axenic Naegleria Medium

Composition per liter:

Peptone.....	2.5g
Yeast extract.....	2.5g
Fetal bovine serum, inactivated	100.0mL
Liver desiccate solution	100.0mL
Na ₂ HPO ₄ (0.05M).....	60.0mL
KH ₂ PO ₄ (0.05M).....	40.0mL

Liver Desiccate Solution:

Composition per 100.0mL:

Liver, desiccated	5.0g
-------------------------	------

Preparation of Liver Desiccate Solution: Add desiccated liver to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter through Whatman no. 1 filter paper to remove sediment. Autoclave filtrate for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except fetal bovine serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Immediately prior to use, aseptically add 100.0mL of sterile fetal bovine serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Naegleria gruberi*.

Schwartz Differential HiVeg Medium

Composition per liter:

Agar	20.0g
Glucose	10.0g
Plant peptone.....	5.0g
Malt extract	3.0g
Yeast extract.....	3.0g
Na ₂ SO ₃	2.92g
Basic Fuchsin.....	0.47g
Dextrin	0.11g
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 45°C. Pour into sterile Petri dishes.

Use: For the differentiation of brewing yeasts from wild yeasts.

SCY Medium

Composition per liter:

Sucrose.....	1.0g
Pancreatic digest of casein.....	0.9g
NaCl	0.05g

Papaic digest of soybean meal.....	0.03g
K ₂ HPO ₄	0.025g
Vitamin solution.....	10.0mL
pH 7.1 ± 0.2 at 25°C	

Vitamin Solution:

Composition per 10.0mL:

Thiamine.....	0.4mg
Vitamin B ₁₂	0.01mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.1. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Flavobacterium* species.

SCY Medium

(Maintenance SCY Medium)

Composition per liter:

Agar	10.0g
Sucrose.....	1.0g
Pancreatic digest of casein.....	0.92g
Yeast extract.....	0.25g
NaCl.....	0.05g
Papaic digest of soybean meal.....	0.03g
K ₂ HPO ₄	0.025g
Thiamine.....	0.4mg
Cyanocobalamin	0.01mg
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Use: For the cultivation and maintenance of iron and sulfur bacteria.

SCY Medium

(Maintenance SCY Medium)

Composition per liter:

Solution A.....	1.0L
Solution B	200.0mL

Solution A:

Composition per liter:

Agar	10.0g
Pancreatic digest of casein.....	0.92g
NaCl.....	0.05g
Papaic digest of soybean meal.....	0.03g
K ₂ HPO ₄	0.025g
pH 7.0 ± 0.2 at 25°C	

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Solution B:

Composition per 200.0mL:

Sucrose.....	2.0g
Yeast extract.....	0.5g

Thiamine	0.8mg
Vitamin B ₁₂	0.02mg
pH 8.5 ± 0.2 at 25°C	

Preparation of Solution B: Add components to slightly alkaline tap water, pH 8.5, and bring volume to 200.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Inoculate bacteria onto prepared slants of solution A. After inoculation of tubes, aseptically add 2.0mL of sterile solution B on top of each slant.

Use: For the cultivation and maintenance of iron bacteria. For the cultivation and maintenance of *Haliscomenobacter hydroxissis*.

SCZA

See: **Saline Czapek Agar**

SD Medium

See: **Serratia Differential Medium**

SDO Medium (DSMZ Medium 1151)

Composition per liter:

NaCl	100.0g
MgSO ₄ ·7H ₂ O	3.45g
MgCl ₂ ·6H ₂ O	3.00g
NaHCO ₃	1.0g
NH ₄ Cl	0.25g
CaSO ₄ ·2H ₂ O	0.25g
KH ₂ PO ₄	0.14g
CaCl ₂ ·2H ₂ O	0.14g
Yeast extract	0.1g
Trace elements solution SL-6	1.0mL
Vitamin solution	1.0mL
pH 6.0 ± 0.2 at 25°C	

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Salinisphaera shabanensis*.

SDS HiVeg Agar with Polymyxin B (Sodium Dodecyl Sulfate Polymyxin Sucrose HiVeg Agar)

Composition per liter:

NaCl	20.0g
Agar	15.0g
Sucrose	15.0g
Plant peptone No. 3	10.0g
Plant extract	5.0g
Sodium dodecyl sulfate	1.0g
Bromthymol Blue	0.04g
Cresol Red	0.04g
Polymyxin B solution	1.0mL

pH 7.6 ± 0.2 at 25°C

Source: This medium, without polymyxin B solution, is available as a premixed powder from HiMedia.

Polymyxin B Solution:

Composition per 1.0mL:

Polymyxin B	1.0mg
-------------------	-------

Preparation of Polymyxin B Solution: Add polymyxin B to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except polymyxin B solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45–50°C. Aseptically add 1.0mL of polymyxin B solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the enrichment, isolation, and enumeration of *Vibrio vulnificus* from seafood.

Seawater Agar (SWA)

Composition per liter:

Agar	15.0g
Peptone	5.0g
Yeast extract	5.0g
Beef extract	3.0g
Seawater, synthetic	1.0L

pH 7.5 ± 0.2 at 25°C

Seawater, Synthetic:

Composition per liter:

NaCl	27.0g
MgSO ₄ ·7H ₂ O	7.0g
Tris(hydroxymethyl)aminomethane buffer	2.0g
KCl	0.6g
CaCl ₂	0.3g

Preparation of Seawater, Synthetic: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of halophilic microorganisms from foods, such as *Pseudomonas* species and *Vibrio* species from fish.

Seawater Agar

Composition per liter:

Agar	20.0g
Beef extract	10.0g
Peptone.....	10.0g
Seawater.....	750.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation and cultivation of *Planococcus* species.

Seawater Agar (SWA)

Composition per liter:

Agar	15.0g
Peptone.....	5.0g
Yeast extract.....	5.0g
Beef extract.....	3.0g
Seawater, synthetic.....	1.0L

pH 7.5 ± 0.2 at 25°C

Seawater, Synthetic:

Composition per liter:

NaCl	24.0g
MgSO ₄ ·7H ₂ O	7.0g
MgCl ₂ ·6H ₂ O.....	5.3g
KCl.....	0.7g
CaCl ₂	0.1g

Preparation of Seawater, Synthetic: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5.

Preparation of Medium: Combine components. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of halophilic microorganisms from foods, such as *Pseudomonas* species and *Vibrio* species from fish.

Seawater Agar

Composition per liter:

Agar	20.0g
Beef extract	10.0g
Peptone.....	10.0g
Artificial seawater.....	750.0mL

Artificial Seawater

Composition per liter:

NaCl	28.13g
MgSO ₄ ·7H ₂ O.....	3.5g

MgCl ₂	2.55g
CaCl ₂	1.2g
KCl.....	0.77g
NaHCO ₃	0.11g

pH 7.3 ± 0.2 at 25°C

Preparation of Artificial Seawater: Natural seawater is stored in the dark for at least 3 weeks to “age.” If natural seawater is not available, use artificial seawater. To prepare artificial seawater, add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add beef extract and peptone to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Adjust pH to 7.8. Gently heat and bring to boiling. Boil for 10 min. Add 750.0mL of natural or artificial seawater. Mix thoroughly. Adjust pH to 7.3. Add 20.0g of agar. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Alteromonas rubra*, *Brevibacterium stationis*, *Chromohalobacter marismortui*, *Flectobacillus marinus*, *Marinococcus albus*, *Marinococcus halophilus*, *Pasteurella piscicida*, *Photobacterium phosphoreum*, *Planococcus citreus*, *Planococcus kocurii*, *Vibrio adaptatus*, *Vibrio campbellii*, *Vibrio costicola*, *Vibrio harveyi*, *Vibrio mediterranei*, *Vibrio natriegens*, and other *Vibrio* species.

Seawater Agar with Fetal Calf Serum

Composition per liter:

Agar	20.0g
Beef extract	10.0g
Peptone	10.0g
Seawater.....	750.0mL
Fetal calf serum.....	100.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except fetal calf serum, to tap water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile fetal calf serum warmed to 50°–55°C. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Aeromonas* species and *Vibrio salmonicida*.

Seawater Agar with Horse Blood

Composition per liter:

Agar	20.0g
Beef extract	10.0g
Peptone	10.0g
Seawater.....	750.0mL
Horse blood.....	100.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except horse blood, to tap water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile horse blood warmed to 50°–55°C. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Aeromonas* species.

Seawater Agar Medium**Composition per liter:**

Agar	15.0g
Beef extract	10.0g
Peptone.....	10.0g
Seawater, aged	750.0mL

pH 7.2–7.3 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of marine *Flavobacterium* species.

**Seawater Agar Modified
(DSMZ Medium 917)****Composition per liter:**

NaCl	17.7g
Agar	15.0g
MgSO ₄ ·7H ₂ O	4.46g
MgCl ₂ ·6H ₂ O.....	3.4g
Peptone.....	2.5g
Hexadecane	2.0g
Yeast extract.....	1.5g
KCl.....	0.48g
Calcium chloride solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Calcium Chloride Solution:**Composition per 10.0mL:**

CaCl ₂ ·2H ₂ O.....	0.98g
---	-------

Preparation of Calcium Chloride Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except agar and calcium chloride solution, to distilled/deionized water and bring volume to 990.0mL. Adjust pH to 7.2. Mix thoroughly. Add 15.0g agar. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL sterile calcium chloride solution. Mix thoroughly. Pour into sterile Petri dishes or distribute to sterile tubes.

Use: For the cultivation and maintenance of *Muricauda ruestringensis*.

Seawater Agar with 1% Serum**Composition per liter:**

Agar	12.0g
Seawater.....	990.0mL
Horse serum	10.0mL

Preparation of Medium: Add agar to 990.0mL of seawater. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Basipetospora halophila*, *Halosphaeria retorquens*, *Thraustochytrium striatum*, and *Lagenidium callinectes*.

Seawater Basal Medium**Composition per liter:**

NH ₄ -Cl	10.0g
Lactate.....	2.0g
Tris (hydroxymethyl) aminomethane	0.6g
K ₂ HPO ₄ ·3H ₂ O	75.0mg
FeSO ₄ ·7H ₂ O.....	29.0mg
Artificial seawater.....	500.0mL

Artificial Seawater:**Composition per liter:**

MgSO ₄ ·7H ₂ O	24.65g
NaCl.....	23.37g
CaCl ₂ ·2H ₂ O	2.94g
KCl.....	1.49g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of marine bacteria.

Seawater Complete Medium**Composition per liter:**

Pancreatic digest of casein.....	5.0g
Yeast extract.....	3.0g
Seawater.....	750.0mL
Glycerol	3.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Vibrio fischeri*.

Seawater Lemco Agar**Composition per liter:**

Agar	15.0g
Beef extract.....	10.0g
Peptone	10.0g
Seawater, filtered aged.....	750.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.8. Gently heat and bring to boiling. Boil for 3–5 min. Filter through Whatman filter paper. Adjust pH to 7.3. Add agar. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Halococcus nondenitrificans*.

Seawater Lemco Broth**Composition per liter:**

Beef extract.....	10.0g
Peptone	10.0g
Seawater, filtered aged.....	750.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.8. Gently heat and bring to boiling. Boil for 3–5 min. Filter through Whatman filter paper. Adjust pH to 7.3. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Halococcus nondenitrificans*.

Seawater Medium

Composition per liter:

Agar	15.0g
Peptone.....	5.0g
Beef extract	2.0g
KNO ₃	0.5g
Seawater, aged	1.0L

pH 7.8 ± 0.2 at 25°C

Preparation of Medium: Combine components. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of halophilic bacteria.

Seawater Medium

Composition per liter:

Agar	15.0g
Peptone.....	5.0g
Yeast extract.....	1.0g
FeSO ₄	0.2g
Seawater, aged	1.0L

Preparation of Medium: Add components to 1.0L of seawater. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Cyclobacterium marinus*.

Seawater 802 Medium

Composition per liter:

Solution A	500.0mL
Solution B	500.0mL

Solution A:

Composition per 500.0mL:

NaCl	27.5g
MgCl ₂ ·6H ₂ O.....	5.38g
MgSO ₄ ·7H ₂ O	6.78g
KCl.....	0.72g
NaHCO ₃	0.2g
CaCl ₂ ·2H ₂ O	1.4g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Filter sterilize.

Solution B:

Composition per liter:

Rye grass cerophyll.....	5.0g
--------------------------	------

Preparation of Solution B: Add cerophyll to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to a boil. Boil for 5 min. Filter through Whatman #1 filter paper. Add 0.5g of Na₂HPO₄. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Distribute 10.0mL volumes into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Source: Cerophyll can be obtained from Ward's Natural Science Establishment, Inc. Dairy Goat Nutrition distributes Grass Media Culture, which is equivalent. Cereal Leaf Product from Sigma Chemical is similar to cerophyll.

Preparation of Medium: Aseptically add 500.0mL of sterile solution A and 500.0mL of sterile solution B. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Amastigomonas bermudensis*, *Ancyromonas sigmoides*, *Bodo curvifilus*, *Bodo saliens*, *Cafeteria roenbergensis*, *Cafeteria minuta*, *Ciliophrys infusionum*, *Cruzella marina*, *Glauconema bermudense*, *Helkesimastix faecicola*, *Jakoba libera*, *Massisteria marina*, *Monosiga brevicollis*, *Percolomonas cosmopolitus*, *Pteridomonas danica*, and *Trimyema shoalsia*.

Seawater 802 Medium, Half-Strength

Composition per liter:

Solution A	500.0mL
Solution B	500.0mL

Solution A:

Composition per 500.0mL:

NaCl	27.5g
MgCl ₂ ·6H ₂ O	5.38g
MgSO ₄ ·7H ₂ O	6.78g
CaCl ₂ ·2H ₂ O	1.4g
KCl.....	0.72g
NaHCO ₃	0.2g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Filter sterilize.

Solution B:

Composition per liter:

Rye grass cerophyll.....	2.5g
NaH ₂ PO ₄	0.5g

Preparation of Solution B: Add cerophyll to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to a boil. Boil for 5 min. Filter through Whatman #1 filter paper. Add 0.5g of Na₂HPO₄. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Distribute 10.0mL volumes into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Source: Cerophyll can be obtained from Ward's Natural Science Establishment, Inc. Dairy Goat Nutrition distributes Grass Media Culture, which is equivalent. Cereal Leaf Product from Sigma Chemical is similar to cerophyll.

Preparation of Medium: Aseptically add 500.0mL of sterile solution A and 500.0mL of sterile solution B. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Euplotes harpa*.

Seawater Nitrosomonas Medium

Composition per 1003.3mL:

HEPES (N-[2-hydroxyethyl]piperazine-N'-2-ethanesulfonic acid) buffer	4.76g
(NH ₄) ₂ SO ₄	1.5g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	20.0mg
K ₂ HPO ₄	15.0mg
Artificial seawater.....	1.0L
K ₂ CO ₃ (5% solution)	2.0mL
Trace elements solution	1.0mL
Phenol Red (0.04% solution).....	0.3mL

pH 7.8 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

EDTA	2.06g
FeSO ₄ ·7H ₂ O	1.54g
MnCl ₂ ·4H ₂ O	0.2g
Na ₂ MoO ₄ ·2H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CuSO ₄ ·5H ₂ O	20.0mg
CoCl ₂ ·6H ₂ O	2.0mg
HCl, concentrated	83.0mL

Preparation of Trace Elements: Add HCl and EDTA to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Add remaining components. Mix thoroughly.

Artificial Seawater:**Composition per liter:**

NaCl	27.5g
MgSO ₄ ·7H ₂ O	6.78g
MgCl ₂ ·6H ₂ O	5.38g
CaCl ₂ ·2H ₂ O	1.4g
KCl	0.72g
NaHCO ₃	0.2g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Adjust pH to 7.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Nitrosomonas cryotolerans*.

**Seawater Nutrient Agar
(SNA)
(ATCC Medium 2205)**

Composition per liter:

Nutrient agar, 2X	500.0mL
Synthetic seawater, 2X	500.0mL
pH 7.3 ± 0.2 at 25°C	

Nutrient Agar, 2X**Composition per 500.0mL:**

Agar	15.0g
Peptone	5.0g
NaCl	5.0g
Yeast extract	2.0g
Beef extract	1.0g

Preparation of Nutrient Agar, 2X: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Seawater, Synthetic, 2X:**Composition per 500.0mL:**

NaCl	24.0g
MgSO ₄ ·7H ₂ O	7.0g
MgCl ₂ ·6H ₂ O	5.3g
KCl	0.7g
CaCl ₂	0.1g

Preparation of Seawater, Synthetic, 2X: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 7.5. Filter sterilize.

Preparation of Medium: Warm synthetic seawater to 50°C. Aseptically combine sterile nutrient agar and sterile synthetic seawater. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of marine bacteria.

Seawater *Spirillum* Medium**Composition per liter:**

Calcium lactate	10.0g
Peptone	5.0g
Beef extract	3.0g
Yeast extract	3.0g
Seawater	750.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 20 min at 10 psi pressure–115°C. A precipitate will form during autoclaving.

Use: For the cultivation of marine *Spirillum* species.

Seawater with Serum**Composition per liter:**

Agar	10.0g
Seawater	1.0L
Bovine serum, sterile	100.0mL

Preparation of Medium: Add agar to 1.0L of seawater. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45–50°C. Aseptically add 100.0mL of sterile liquid beef serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Basipetospora halophila*, *Halosphaeria retorquens*, *Lagenidium callinectes*, and *Thraustochytrium striatum*.

Seawater Yeast Extract Agar**Composition per liter:**

Marine salts mix	37.9g
Agar	15.0g
Proteose peptone	10.0g
Yeast extract	3.0g
pH 7.2–7.4 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Alteromonas* species, *Caulobacter halobacteroides*, *Caulobacter maris*, *Cytophaga marinoflava*, and *Cytophaga salmonicolor*.

Seawater Yeast Extract Broth, Modified**Composition per liter:**

NaCl	23.4g
MgSO ₄ ·7H ₂ O	6.9g
Peptone	1.0g
Yeast extract	1.0g
KCl	0.75g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Proteus* species and *Vibrio* species.

Seawater Yeast Extract Peptone Medium

Composition per liter:

Agar	15.0g
Peptone.....	5.0g
Yeast extract.....	3.0g
Seawater, aged and filtered.....	750.0mL
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.8. Gently heat and bring to boiling. Continue boiling for 3–5 min. Filter through Whatman filter paper. Adjust pH to 7.3. Add agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Planococcus kocurii*.

Seawater Yeast Peptone Agar (DSMZ Medium 243)

Composition per liter:

Agar	12.0g
Peptone.....	5.0g
Yeast extract.....	3.0g
Artificial seawater.....	750.0mL
pH 7.3 ± 0.2 at 25°C	

Artificial Seawater:

NaCl.....	28.13g
MgCl ₂ ·6H ₂ O.....	4.8g
MgSO ₄ ·7H ₂ O.....	3.5g
CaCl ₂ ·2H ₂ O.....	1.6g
KCl.....	0.77g
NaHCO ₃	0.11g

Preparation of Artificial Sea Water: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add peptone and yeast extract to 250.0mL distilled/deionized water. Mix thoroughly. Adjust pH to 7.8. Boil for 5 min. Filter and readjust the pH to 7.3. Add agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°C–50°C. Add 750.0mL filter-sterilized seawater that has been heated to 50°C. (Note: Natural seawater is stored in the dark for at least 3 weeks to age. If natural seawater is not available use artificial seawater.) Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Zobellia uliginosa*=*Cellulophaga uliginosa*=*Cytophaga uliginosa*, *Marinobacterium jannaschii*=*Oceanospirillum jannaschii*, *Vibrio harveyi*=*Lucibacterium harveyi*, *Halomonas* sp., *Pseudoalteromonas espejiana*=*Alteromonas espejiana*.

Seawater Yeast Peptone Medium (DSMZ Medium 949)

Composition per liter:

Peptone.....	5.0g
Yeast extract.....	3.0g
Seawater, filtered and aged.....	750.0mL
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Shewanella algae*.

Seawater YPG (DSMZ Medium 1169)

Composition per liter:

NaCl	20.0g
Peptone	10.0g
Glucose	10.0g
Yeast extract	5.0g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Altererythrobacter indicus*.

Seed Agar

See: Antibiotic Medium 1

Selection Agar I

Composition per liter:

Agar	25.0g
Yeast extract.....	1.0g
CuSO ₄	0.5mg
Wort solution.....	1.0L

Wort Solution:

Composition per liter:

Malt extract.....	110.0g
-------------------	--------

Preparation of Wort Solution: Add malt extract to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective cultivation of *Saccharomyces cerevisiae*.

Selection Agar II

Composition per liter:

Sodium acetate.....	40.0g
Agar	25.0g
(NH ₄) ₂ SO ₄	5.0g
Maltose	2.5g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
NaCl.....	0.1g
CaCl ₂ ·2H ₂ O	0.1g
Inositol	2.0mg
KI	1.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine·HCl	0.4mg
Pyroxidine·HCl.....	0.4mg
Niacin.....	0.4mg
Calcium pantothenate	0.4mg

<i>p</i> -Aminobenzoic acid.....	0.2mg
Riboflavin	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
CuSO ₄ ·5H ₂ O	0.04mg
Folic acid.....	2.0μg
Biotin	2.0μg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective cultivation of *Saccharomyces cerevisiae*.

Selective 7H11 Agar

See: [Seven H11 Agar](#)

Selenite Brilliant Green Enrichment Broth

See: [SBG Enrichment Broth](#)

Selenite Broth

(Selenite Broth, Lactose)

(Selenite F Enrichment Medium)

(Sodium Biselenite Medium)

(Sodium Hydrogen Selenite Medium)

Composition per liter:

Na ₂ HPO ₄	10.0g
Pancreatic digest of casein.....	5.0g
Lactose.....	4.0g
NaHSeO ₃ ·5H ₂ O	4.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and a prepared medium from Oxoid Unipath.

Caution: Sodium biselenite is toxic and a potential teratogen and care must be taken to avoid inhalation of the powdered dye, contact with the skin, or ingestion, especially in pregnant laboratory workers.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Distribute into sterile tubes in 10.0mL volumes.

Use: For the isolation and enrichment of *Salmonella* species from clinical specimens and food products.

Selenite Broth Base, Mannitol

Composition per liter:

Na ₂ HPO ₄	10.0g
Peptone.....	5.0g
Mannitol.....	4.0g
NaHSeO ₃ ·5H ₂ O	4.0g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Caution: Sodium selenite is toxic and a potential teratogen and care must be taken to avoid inhalation of the powdered dye, contact with the skin, or ingestion, especially in pregnant laboratory workers.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat. Do not

autoclave. Distribute into sterile tubes in 10.0mL volumes. Sterilize for 10 min at 0 psi pressure–100°C.

Use: For the isolation and cultivation of *Salmonella typhi* and *Salmonella paratyphi*.

Selenite Cystine Broth

Composition per liter:

Na ₂ HPO ₄	10.0g
Pancreatic digest of casein.....	5.0g
Lactose.....	4.0g
Na ₂ SeO ₃ ·5H ₂ O.....	4.0g
L-Cystine.....	0.02g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Caution: Sodium selenite is toxic and a potential teratogen and care must be taken to avoid inhalation of the powdered dye, contact with the skin, or ingestion, especially in pregnant laboratory workers.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat. Do not autoclave. Distribute into sterile tubes in 10.0mL volumes. Sterilize for 15 min at 0 psi pressure–100°C.

Use: For the isolation and cultivation of *Salmonella* species from feces, dairy products, and other specimens.

Selenite Cystine Broth (BAM M134)

Composition per liter:

Na ₂ HPO ₄	5.5g
Polypeptone	5.0g
KH ₂ PO ₄	4.5g
Lactose.....	4.0g
Na ₂ SeO ₃ ·5H ₂ O.....	4.0g
L-Cystine.....	0.01g

pH 7.0 ± 0.2 at 25°C

Caution: Sodium selenite is toxic and a potential teratogen and care must be taken to avoid inhalation of the powdered dye, contact with the skin, or ingestion, especially in pregnant laboratory workers.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat. Do not autoclave. Distribute into sterile tubes in 10.0mL volumes. Sterilize for 10 min at 0 psi pressure–100°C in flowing steam.

Use: For the isolation and cultivation of *Salmonella* species from feces, dairy products, and other specimens.

Selenite F Broth

Composition per liter:

KH ₂ PO ₄	7.0g
Pancreatic digest of casein.....	5.0g
Lactose.....	4.0g
Na ₂ SeO ₃ ·5H ₂ O.....	4.0g
Na ₂ HPO ₄	3.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Sodium selenite is toxic and a potential teratogen and care must be taken to avoid inhalation of the powdered dye, contact with the skin, or ingestion, especially in pregnant laboratory workers.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat. Do not autoclave. Distribute into sterile tubes in 10.0mL volumes. Sterilize for 30 min at 0 psi pressure–100°C.

Use: For the isolation and cultivation of *Salmonella* species from feces, dairy products, and other specimens.

Selenite F Enrichment Medium

See: **Selenite Broth**

Selenate Reducer Medium (DSMZ Medium 1049)

Composition per 1004mL:

Solution A	940.0mL
Solution B	9.4mL
Solution C	23.5mL
Solution D	12.2mL
Solution E	0.94mL
Solution F (vitamin solution)	4.7mL
Solution G (trace elements solution SL-10)	9.4mL
Solution H	4.7mL

pH 6.9 ± 0.2 at 25°C

Solution A:

Composition per 940.0mL:

NaCl	23.0g
MgCl ₂ ·6H ₂ O	3.0g
KCl	1.30g
DL-Na-lactate	1.12g
NH ₄ Cl	0.5g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.1g
Resazurin	0.5mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Distribute to anaerobic cultivation vessels. Gently heat and bring to boiling. Cool to room temperature while sparging with a gas mixture of 80% N₂ + 20% CO₂. Seal vessels. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution B:

Composition per 10.0mL:

Na ₂ SeO ₄	0.019g
----------------------------------	--------

Preparation of Solution B: Add Na₂SeO₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with a gas mixture of 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution C:

Composition per 10.0mL:

NaHCO ₃	0.5g
--------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with a gas mixture of 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution D:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
-------------------------------------	------

Preparation of Solution D: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution E:

Composition per 10.0mL:

Na ₂ WO ₄	8.0mg
Na ₂ S ₂ O ₃	3.0mg

Preparation of Solution E: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution F (Vitamin Solution):

Composition per liter:

Folic acid	20.0g
α-Lipoic acid	50.0mg
p-Aminobenzoic acid	50.0mg
Pantothenic acid	50.0mg
Riboflavin	50.0mg
Thamine-HCl	50.0mg
Vitamin B ₁₂	50.0mg
Nicotine amide	25.0mg
Biotin	20.0mg
Nicotinic acid	20.0mg
Pyridoxamine-HCl	10.0mg

Preparation of Solution F (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Stir for 2 hr. Filter sterilize.

Solution G (Trace Elements Solution SL-10):

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Solution G (Trace Elements Solution SL-10):

Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly. Adjust pH to 7.0. Sparge with 100% N₂. Filter sterilize.

Solution H:

Composition per 10.0mL:

1,4-Naphthaquinone	0.4mg
Hemin	0.1mg

Preparation of Solution H: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add the following to 10.0mL of solution A: 0.1mL solution B, 0.25mL solution C, 0.13mL solution D, 0.01mL solution E, 0.05mL solution F, 0.1mL solution G, and 0.05mL solution H.

Use: For the cultivation of *Sedimenticola selenatireducens*.

Selenomonas acidaminophila Medium

Composition per liter:

Disodium β -glycerophosphate	19.0g
Beef extract	5.0g
Lactose	5.0g
Papaic digest of soybean meal	5.0g
Sodium glutamate	3.4g
Pancreatic digest of casein	2.5g
Peptic digest of animal tissue	2.5g
Yeast extract	2.5g
Ascorbic acid	0.5g
MgSO ₄ ·7H ₂ O	0.25g

pH 7.15 ± 0.05 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Selenomonas acidaminophila*.

Selenomonas ruminantium Medium

Composition per liter:

Pancreatic digest of casein	5.0g
Na ₂ CO ₃	4.0g
Sodium acetate	4.0g
Yeast extract	2.0g
Glucose	1.0g
KH ₂ PO ₄	1.0g
L-Cysteine-HCl	0.5g
Resazurin	1.0mg
<i>n</i> -Valeric acid	0.1mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Prepare and dispense medium under 100% CO₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% CO₂. Adjust pH to 7.0. Anaerobically distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Selenomonas ruminantium* and *Selenomonas* species.

Selenomonas Selective Medium (SS Medium)

Composition per 100.0mL:

Pancreatic digest of casein	0.5g
Mannitol	0.2g
FeSO ₄ ·7H ₂ O	0.1g
Sodium acetate	0.1g
Yeast extract	0.1g
L-Cysteine-HCl	0.08g
Mineral solution S	4.0mL
Sodium carbonate (8% solution)	2.5mL
<i>n</i> -Valeric acid	0.05mL

pH 5.9–6.1 at 25°C

Mineral Solution S:

Composition per liter:

KH ₂ PO ₄	12.0g
NaCl	12.0g
(NH ₄) ₂ SO ₄	6.0g
MgSO ₄ ·7H ₂ O	2.5g
CaCl ₂ ·2H ₂ O	1.6g

Preparation of Mineral Solution S: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Selenomonas* species.

Sellers Agar (Sellers Differential Agar)

Composition per 1015.0mL:

Pancreatic digest of gelatin	20.0g
Agar	13.5g
D-Mannitol	2.0g
NaCl	2.0g
MgSO ₄ ·7H ₂ O	1.5g
K ₂ HPO ₄	1.0g
L-Arginine	1.0g
NaNO ₃	1.0g
Yeast extract	1.0g
NaNO ₃	0.35g
Bromthymol Blue	0.04g
Phenol Red	8.0mg
Glucose solution	15.0mL

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Glucose Solution:

Composition per 10.0mL:

D-Glucose	5.0g
-----------------	------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position to form a 3-inch slant with a 1.5-inch butt. Immediately prior to inoculation, aseptically add 0.15mL of sterile glucose solution to each tube. Let the glucose solution run down the side of the tube opposite the slant.

Use: For the cultivation and differentiation of nonfermentative Gram-negative bacilli, especially *Pseudomonas aeruginosa*, *Herellea vaginicola* (*Acinetobacter calcoaceticus*), *Mima polymorpha* (*Acinetobacter lwoffii*), *Alcaligenes faecalis*, and *Bacterium anitratum* (*Acinetobacter calcoaceticus*).

Sellers Differential HiVeg Agar

Composition per liter:

Plant peptone	20.0g
Agar	15.0g
D-Mannitol	2.0g

NaCl	2.0g
MgSO ₄ ·7H ₂ O	1.5g
K ₂ HPO ₄	1.0g
L-Arginine	1.0g
Sodium nitrate	1.0g
Yeast extract	1.0g
Sodium nitrite	0.35g
Bromthymol Blue	0.04g
Phenol Red	8.0mg
Glucose solution	15.0mL

pH 6.7 ± 0.2 at 25°C

Source: This medium, without glucose solution, is available as a pre-mixed powder from HiMedia.

Glucose Solution:**Composition per 20.0mL:**

Glucose	10.0g
---------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position to form a 3-inch slant with a 1.5-inch butt. Just before inoculation add 0.15mL sterile glucose solution to each slant.

Use: For the cultivation and differentiation of nonfermentative Gram-negative bacilli.

**Semiselective Medium for
Legionella pneumophila
See: BMPA-α Medium**

Semisolid *Brucella* Broth**Composition per liter:**

Peptone	10.0g
Pancreatic digest of casein	10.0g
NaCl	5.0g
Yeast extract	2.0g
Agar	1.6g
D-Glucose	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Campylobacter* species.

**Semisolid BSA Tween™ 80 Medium
See: Bovine Serum Albumin
Tween™ 80 Soft Agar**

**Semisolid IMRV HiVeg Medium Base
with Novobiocin****Composition per liter:**

Plant hydrolysate	13.5g
Plant peptone	13.5g
MnCl ₂	10.91g
Saccharose	7.5g
Agar	2.7g

KH ₂ PO ₄	1.47g
Na ₂ S ₂ O ₃	0.8g
Lactose	0.5g
FeNH ₄ (SO ₄) ₂ ·12H ₂ O	0.2g
Bromcresol Purple	0.08g
Malachite Green	0.037g
Novobiocin solution	1.0mL

pH 5.6 ± 0.2 at 25°C

Source: This medium, without novobiocin, is available as a pre-mixed powder from HiMedia.

Novobiocin Solution:**Composition per 10.0mL:**

Novobiocin	0.1g
------------	------

Novobiocin Solution: Add novobiocin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except novobiocin solution, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Do not autoclave. Do not overheat. Cool to 50°C. Aseptically add 1.0mL novobiocin solution. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of motile *Salmonella* spp. from foods

**Semiolid Medium, Modified
(BAM M30c)**

Composition per liter:

Peptone	10.0g
Lactalbumin hydrolysate	5.0g
Yeast extract	5.0g
NaCl	5.0g
Agar	1.8g
α-Ketoglutaric acid	1.0g
Na-pyruvate	0.5g
Na ₂ S ₂ O ₅	0.5g
NaCO ₃	0.6g
Na-citrate	0.1g
Hemin	0.01g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool to 50°C. Adjust pH to 7.4. Distribute into screw-capped tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the storage and preservation of *Campylobacter* spp.

**Semisolid Medium, Modified
with Cysteine and Neutral Red
(BAM M30d)**

Composition per liter:

Peptone	10.0g
Lactalbumin hydrolysate	5.0g
Yeast extract	5.0g
NaCl	5.0g
Agar	1.8g
α-Ketoglutaric acid	1.0g
NaCO ₃	0.6g
Na-pyruvate	0.5g
Na ₂ S ₂ O ₅	0.5g
L-Cysteine·HCl·H ₂ O	0.2g

Hemin.....	0.01g
Neutral Red solution.....	10.0mL
pH 7.4 ± 0.2 at 25°C	

Neutral Red Solution:**Composition per 100.0mL:**

Neutral Red.....	0.2g
Ethanol.....	10.0mL

Preparation of Neutral Red Solution: Add 0.2g Neutral Red to 10.0mL ethanol. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool to 50°C. Adjust pH to 7.4. Distribute into screw-capped tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the biochemical identification of *Campylobacter* spp.

**Semisolid Medium, Modified
with Nitrate and without Neutral Red
(BAM M30d)**

Composition per liter:

KNO ₃	10.0g
Peptone.....	10.0g
Lactalbumin hydrolysate.....	5.0g
Yeast extract.....	5.0g
NaCl.....	5.0g
Agar.....	1.8g
α-Ketoglutaric acid.....	1.0g
NaCO ₃	0.6g
Na-pyruvate.....	0.5g
Na ₂ S ₂ O ₅	0.5g
Hemin.....	0.01g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool to 50°C. Adjust pH to 7.4. Distribute into screw-capped tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the biochemical identification of *Campylobacter* spp.

**Semisolid Medium, Modified
with Sodium Chloride and Neutral Red
(BAM M30d)**

Composition per liter:

NaCl.....	35.0g
Peptone.....	10.0g
Lactalbumin hydrolysate.....	5.0g
Yeast extract.....	5.0g
Agar.....	1.8g
α-Ketoglutaric acid.....	1.0g
NaCO ₃	0.6g
Na-pyruvate.....	0.5g
Na ₂ S ₂ O ₅	0.5g
Hemin.....	0.01g
Neutral Red solution.....	10.0mL
pH 7.4 ± 0.2 at 25°C	

Neutral Red Solution:**Composition per 100.0mL:**

Neutral Red.....	0.2g
Ethanol.....	10.0mL

Preparation of Neutral Red Solution: Add 0.2g Neutral Red to 10.0mL ethanol. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool to 50°C. Adjust pH to 7.4. Distribute into screw-capped tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the biochemical identification of *Campylobacter* spp.

Semisolid Medium for Motility

Composition per liter:

Biosate.....	5.0g
Polypeptone™.....	5.0g
NaCl.....	5.0g
Agar.....	4.0g
Myosate.....	1.5g
Triphenyltetrazolium chloride solution.....	2.5mL
pH 6.9–7.1 at 25°C	

Triphenyltetrazolium Chloride Solution:**Composition per 10.0mL:**

Triphenyltetrazolium chloride.....	0.1g
Ethanol (95% solution).....	10.0mL

Preparation of Triphenyltetrazolium Chloride Solution: Add triphenyltetrazolium chloride to 10.0mL of ethanol. Mix thoroughly.

Preparation of Medium: Add components, except triphenyltetrazolium chloride solution, to distilled/deionized water and bring volume to 997.5mL. Mix thoroughly. Gently heat and bring to boiling. Add 2.5mL of triphenyltetrazolium chloride solution. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of bacteria based on motility.

Semisolid Pectin Agar

Composition per liter:

Pectin.....	30.0g
Yeast extract.....	5.0g
Agar.....	3.0g
Bromthymol Blue (0.1% solution).....	1.0mL
CaCl ₂ ·2H ₂ O (10% solution).....	0.6mL
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add approximately 100.0mL of distilled/deionized water to a 2.0L flask. Place on a magnetic stirrer without heat. Slowly add the CaCl₂·2H₂O solution, Bromthymol Blue solution, yeast extract, and pectin while stirring. Mix thoroughly to ensure uniform wetting of the particles. Add agar. Gently heat and bring to almost boiling. Adjust pH to 7.3 with 1N NaOH if necessary. Do not overshoot pH above 7.3. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of bacteria such as *Erwinia* species and some *Klebsiella* species based on their ability to degrade pectin.

Semisolid RV HiVeg Medium Base with Novobiocin**Composition** per liter:

MnCl ₂ , anhydrous	10.93g
NaCl	7.34g
Plant hydrolysate.....	4.6g
Plant hydrolysate No. 1.....	4.6g
Agar	2.7g
Malachite Green.....	0.037g
Novobiocin solution.....	1.0mL

pH 5.4 ± 0.2 at 25°C

Source: This medium, without novobiocin, is available as a premixed powder from HiMedia.

Novobiocin Solution:**Composition** per 10.0mL:

Novobiocin.....	0.1g
-----------------	------

Preparation of Novobiocin Solution: Add novobiocin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except novobiocin solution, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Do not autoclave. Do not overheat. Cool to 50°C. Aseptically add 1.0mL novobiocin solution. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of motile *Salmonella* spp. from foods

Sensitest Agar**Composition** per liter:

Pancreatic digest of casein.....	11.0g
Agar	8.0g
Buffer salts	3.3g
Peptone.....	3.0g
NaCl	3.0g
Glucose	2.0g
Starch	1.0g
Nucleoside bases.....	0.02g
Thiamine	0.02mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the performance of antibiotic sensitivity assays.

Sensitivity Test HiVeg Medium with Blood Serum**Composition** per liter:

Agar	15.0g
Glucose	10.0g
Veal, infusion from	10.0g
Plant peptone No. 3.....	10.0g
NaCl	3.0g
Na ₂ HPO ₄	2.0g
Sodium acetate.....	1.0g
Guanine.....	0.01g
Uracil	0.01g
Xanthine.....	0.01g

Adenine sulfate.....	0.01g
Sterile bovine or sheep blood	50.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile bovine blood or sheep blood. Mix thoroughly. Pour into sterile Petri dishes.

Use: For antimicrobial sensitivity testing of sulfonamides and other antimicrobics.

**Serratia Differential Medium
(SD Medium)****Composition** per 102.0mL:

Solution A.....	92.0mL
Solution B.....	10.0mL

pH 6.7 ± 0.2 at 25°C

Solution A:**Composition** per 92.0mL:

Yeast extract.....	1.0g
L-Ornithine	1.0g
NaCl.....	0.5g
Agar	0.4g
Irgasan inhibitor.....	1.0mL
Indicator solution.....	1.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 92.0mL. Mix thoroughly. Adjust pH to 6.7 with 1N NaOH.

Irgasan Inhibitor:**Composition** per 100.0mL:

Irgasan-DP-300 (4,2', 4'-trichloro- 2-hydroxydiphenylether).....	0.1g
NaOH (1N solution).....	10.0mL

Preparation of Irgasan Inhibitor: Add irgasan to 10.0mL of NaOH solution. Mix thoroughly. Gently heat to dissolve. Bring volume to 100.0mL with distilled/deionized water.

Indicator Solution:**Composition** per 100.0mL:

Bromthymol Blue	0.2g
Phenol Red.....	0.1g

Preparation of Indicator Solution: Add components to 50.0mL of distilled/deionized water. Mix thoroughly for 1 hr. Bring volume to 100.0mL with distilled/deionized water.

Solution B:**Composition** per 10.0mL:

L-Arabinose.....	1.0g
------------------	------

Preparation of Solution B: Add L-arabinose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Combine 92.0mL of solution A with 10.0mL of solution B. Mix thoroughly. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in an upright position.

Use: For the cultivation and differentiation of *Serratia* species based on the fermentation of arabinose and production of ornithine decarboxylase. *Serratia marcescens* changes the medium to purple throughout the tube. *Serratia liquefaciens* changes the medium to a band of purple at the top of the tube with a green/yellow butt. *Serratia rubidaea* changes the medium to yellow throughout the tube.

Serratia Hd-MHr

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	7.0g
Glucose	5.0g
KH ₂ PO ₄	3.0g
2-Methyl-DL-histidine·2HCl.....	1.0g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Serratia marcescens*.

Serratia Medium (ATCC Medium 181)

Composition per liter:

Agar	20.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
Glucose	1.0g
K ₂ HPO ₄	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Serratia marcescens*.

Serratia Medium (ATCC Medium 1399)

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	7.0g
Glucose	5.0g
KH ₂ PO ₄	3.0g
Casein hydrolysate.....	1.0g
(NH ₄) ₂ SO ₄	1.0g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O	0.1g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Serratia marcescens*.

Serum Glucose Agar (Serum Dextrose Agar) (ATCC Medium 287)

Composition per 1060.0mL:

Agar	15.0g
Peptone	10.0g
Beef extract.....	5.0g
NaCl.....	5.0g
Serum-glucose solution	60.0mL

pH 7.3 ± 0.2 at 25°C

Serum-Glucose Solution:

Composition per 60.0mL:

D-Glucose.....	10.0g
Serum (inactivated at 56°C, 30 min).....	50.0mL

Preparation of Serum-Glucose Solution: Add glucose to 50.0mL of heat-inactivated serum. Horse serum or ox serum may be used. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except serum-glucose solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 10 psi pressure–115°C. Cool to 50°C. Aseptically add 60.0mL of sterile serum-glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the cultivation and maintenance of *Brucella* species.

Serum Glucose Agar, Farrell Modified

Composition per 1086.9mL:

Agar	15.0g
Peptone	10.0g
Beef extract.....	5.0g
NaCl.....	5.0g
Serum-glucose solution	60.0mL
Bacitracin solution.....	12.5mL
Cycloheximide solution.....	10.0mL
Nystatin solution.....	2.0mL
Polymyxin B solution.....	1.0mL
Nalidixic acid solution.....	1.0mL
Vancomycin solution.....	0.4mL

pH 7.3 ± 0.2 at 25°C

Serum-Glucose Solution:

Composition per 60.0mL:

D-Glucose.....	10.0g
Serum (inactivated at 56°C, 30 min).....	50.0mL

Preparation of Serum-Glucose Solution: Add glucose to 50.0mL of heat-inactivated serum. Horse serum or ox serum may be used. Mix thoroughly. Filter sterilize.

Bacitracin Solution:

Composition per 12.5mL:

Bacitracin.....	25,000U
-----------------	---------

Preparation of Bacitracin Solution: Add Bacitracin to distilled/deionized water and bring volume to 12.5mL. Mix thoroughly. Filter sterilize.

Cycloheximide Solution:

Composition per 100.0mL:

Cycloheximide.....	1.0g
Acetone.....	5.0mL

Preparation of Cycloheximide Solution: Add cycloheximide to 5.0mL of acetone. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water. Mix thoroughly. Filter sterilize.

Nystatin Solution:

Composition per 5.0mL:

Nystatin 250,000U

Preparation of Nystatin Solution: Add nystatin to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Polymyxin B Solution:

Composition per 2.0mL:

Polymyxin B 10,000U

Preparation of Polymyxin B Solution: Add polymyxin B to distilled/deionized water and bring volume to 2.0mL. Mix thoroughly. Filter sterilize.

Nalidixic Acid Solution:

Composition per 2.0mL:

Nalidixic acid 0.1g

NaOH (0.5N solution) 2.0mL

Preparation of Nalidixic Acid Solution: Add nalidixic acid to 2.0mL of NaOH solution. Mix thoroughly. Immediately before use, add 1.0mL of this stock solution to 9.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Vancomycin Solution:

Composition per 1.0mL:

Vancomycin 0.05g

Preparation of Vancomycin Solution: Add vancomycin to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except serum-glucose solution, bacitracin solution, cycloheximide solution, nystatin solution, polymyxin B solution, nalidixic acid solution, and vancomycin solution—to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 10 psi pressure–115°C. Cool to 50°C. Aseptically add 60.0mL of sterile serum-glucose solution, 12.5mL of sterile bacitracin solution, 10.0mL of sterile cycloheximide solution, 2.0mL of sterile nystatin solution, 1.0mL of sterile polymyxin B solution, 1.0mL of sterile nalidixic acid solution, and 0.4mL of sterile vancomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the selective isolation and cultivation of *Brucella* species.

Serum Potato Infusion Agar

Composition per 1120.0mL:

Agar 15.0g

Peptone 10.0g

Meat extract 5.0g

NaCl 5.0g

Potato infusion 1.0L

Horse serum, heat inactivated 100.0mL

Glycerol 20.0mL

pH 6.8 ± 0.2 at 25°C

Potato Infusion:

Composition per 10.0mL:

Potatoes 250.0g

Preparation of Potato Infusion: Add peeled, thinly sliced potatoes to 1.0L of distilled/deionized water. Infuse overnight at 60°C. Filter through Whatman #1 filter paper. Bring volume to 1.0L with distilled/deionized water.

Preparation of Medium: Combine components, except horse serum. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Brucella* species.

Serum Tellurite Agar

Composition per liter:

Agar 20.0g

Pancreatic digest of casein 10.0g

Peptic digest of animal tissue 10.0g

NaCl 5.0g

Glucose 2.0g

Lamb serum 50.0mL

Chapman tellurite solution 10.0mL

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Chapman Tellurite Solution:

Composition per 100.0mL:

K₂TeO₃ 1.0g

Preparation of Chapman Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except lamb serum and Chapman tellurite solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile lamb serum and 10.0mL of sterile Chapman tellurite solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Corynebacterium* species, especially in the laboratory diagnosis of diphtheria.

Seven H11 Agar (Selective 7H11 Agar)

Composition per 1010.0mL:

Agar 13.5g

KH₂PO₄ 1.5g

Na₂HPO₄ 1.5g

Pancreatic digest of casein 1.0g

NaCl 0.85g

Monosodium glutamate 0.5g

(NH₄)₂SO₄ 0.5g

Sodium citrate 0.4g

MgSO₄·7H₂O 0.05g

Ferric ammonium citrate 0.04g

CuSO₄·5H₂O 1.0mg

Pyridoxine 1.0mg

ZnSO₄·7H₂O 1.0mg

Biotin 0.5mg

CaCl₂·2H₂O 0.5mg

Malachite Green 0.25mg

Middlebrook OADC enrichment	100.0mL
Antibiotic inhibitor	10.0mL
Glycerol	5.0mL
pH 6.6 ± 0.2 at 25°C	

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Middlebrook OADC Enrichment:

Composition per liter:

Bovine albumin fraction V	5.0g
Glucose	2.0g
NaCl	0.85g
Catalase	3.0mg
Oleic acid	0.06mL

Preparation of Middlebrook OADC Enrichment: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Antibiotic Inhibitor:

Composition per 10.0mL:

Carbenicillin.....	0.05g
Trimethoprim lactate.....	0.02g
Amphotericin B.....	0.01g
Polymyxin B	200,000U

Preparation of Antibiotic Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add glycerol to 900.0mL of distilled/deionized water. Mix thoroughly. Add remaining components, except Middlebrook OADC enrichment and antibiotic inhibitor. Mix thoroughly. Gently heat. Do not boil. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile Middlebrook OADC enrichment and 10.0mL of sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Mycobacterium* species from specimens with a mixed flora.

Seven-Hour Fecal Coliform Agar (Seven-Hour FC Agar) (m-Seven-Hour Fecal Coliform Agar)

Composition per liter:

Agar	15.0g
Lactose	10.0g
NaCl	7.5g
D-Mannitol.....	5.0g
Proteose peptone No. 3	5.0g
Yeast extract.....	3.0g
Bromcresol Purple	0.35g
Phenol Red.....	0.3g
Sodium lauryl sulfate.....	0.2g
Sodium deoxycholate.....	0.1g
pH 7.3 ± 0.1 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to 55°–60°C. Adjust pH to 7.3 with 0.1N NaOH. Cool to 45°–50°C. Pour into sterile Petri dishes with tight-fitting lids in 5.0mL volumes. Store at 2°–10°C.

Use: For the rapid estimation of the bacteriological quality of water using the membrane filter method.

SF Broth (*Streptococcus faecalis* Broth)

Composition per liter:

Pancreatic digest of casein.....	20.0g
Glucose	5.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
KH ₂ PO ₄	1.5g
NaN ₃	0.5g
Bromcresol Purple	0.032g
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of group D enterococci (*Streptococcus faecalis* and *Streptococcus faecium*) from group D non-enterococci and from other *Streptococcus* species. Group D enterococci turn the medium turbid and yellow-brown.

SF HiVeg Broth

Composition per liter:

Plant hydrolysate	20.0g
Glucose	5.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
KH ₂ PO ₄	1.5g
NaN ₃	0.5g
Bromcresol Purple	0.032
pH 6.9 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of group D enterococci (*Streptococcus faecalis* and *Streptococcus faecium*) from group D non-enterococci and from other *Streptococcus* species. Group D enterococci turn the medium turbid and yellow-brown.

SF1 Medium

Composition per liter:

NaCl.....	120.0g
MgCl ₂ ·6H ₂ O	7.0g
MgSO ₄ ·7H ₂ O.....	6.0g
KCl.....	3.8g
Pancreatic digest of casein.....	2.0g
Yeast extract.....	2.0g
NH ₄ Cl	1.0g
CaCl ₂ ·2H ₂ O	0.5g
L-Cysteine-HCl	0.5g
K ₂ HPO ₄ ·3H ₂ O	0.4g
Resazurin	1.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	75.0µg
Na ₂ CO ₃ solution.....	20.0mL

Trimethylamine-HCl solution	20.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10	1.0mL
NaOH (10M solution)	0.6mL
pH 7.3 ± 0.2 at 25°C	

Na₂CO₃ Solution:**Composition per 20.0mL:**

Na ₂ CO ₃	10.0mg
---------------------------------------	--------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂.

Trimethylamine-HCl Solution:**Composition per 20.0mL:**

Trimethylamine-HCl	10.0mg
--------------------------	--------

Preparation of Trimethylamine-HCl Solution: Add trimethylamine-HCl to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	10.0mg
---	--------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Store under N₂.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except L-cysteine-HCl, NaOH, Na₂CO₃ solution, trimethylamine-HCl solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add L-cysteine-HCl and NaOH while continuing to sparge with 80% N₂ + 20% CO₂. Adjust pH to 6.7. Anaerobically distribute into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile trimethylamine-HCl solution, 20.0mL of sterile Na₂CO₃ solution, and 10.0mL of sterile Na₂S·9H₂O solution per 950.0mL of medium. Check that final pH is 6.7.

Use: For the cultivation and maintenance of *Methanohalophilus* species.

SFP Agar**(Shahidi-Ferguson Perfringens Agar)****Composition per 2020.0mL:**

Basal layer	1010.0mL
Cover layer	1010.0mL

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Basal Layer:**Composition per 1010.0mL:**

Agar	20.0g
Tryptose	15.0g
Papaic digest of soybean meal	5.0g
Yeast extract	5.0g
Ferric ammonium citrate	1.0g
NaHSO ₃	1.0g
Egg yolk emulsion, 50%	100.0mL
Antibiotic inhibitor	10.0mL

pH 7.6 ± 0.2 at 25°C

Egg Yolk Emulsion, 50%:**Composition per 100.0mL:**

Chicken egg yolks	11
Whole chicken egg	1
NaCl (0.9% solution)	50.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Antibiotic Inhibitor:**Composition per 10.0mL:**

Kanamycin	0.012g
Polymyxin B sulfate	30,000U

Preparation of Antibiotic Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Basal Layer: Add components—except egg yolk emulsion, 50%, and antibiotic inhibitor—to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile egg yolk emulsion, 50%, and antibiotic inhibitor. Mix thoroughly. Pour into sterile Petri dishes in 10.0mL volumes.

Cover Layer:**Composition per 1010.0mL:**

Agar	20.0g
Tryptose	15.0g
Papaic digest of soybean meal	5.0g
Yeast extract	5.0g
Ferric ammonium citrate	1.0g
NaHSO ₃	1.0g
Antibiotic inhibitor	10.0mL

pH 7.6 ± 0.2 at 25°C

Preparation of Cover Layer: Add components—except antibiotic inhibitor—to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic inhibitor. Mix thoroughly.

Preparation of Medium: Prepare and dispense basal layer into sterile Petri dishes in 10.0mL volumes. Incubate overnight to dry plates and test for sterility. Inoculate plates using 0.1mL volume. Spread inoculum over surface of agar. Aseptically add 10.0mL of cover layer to each plate. Incubate at 37°C under 90% N₂ + 10% CO₂.

Use: For the isolation and enumeration of *Clostridium perfringens* from foods. *Clostridium perfringens* appears as black colonies surrounded by a precipitate.

S.F.P. HiVeg Agar Base with Egg Yolk and Antibiotics

Composition per liter:

Basal layer.....	500.0mL
Cover layer.....	500.0mL

Basal Layer:

Composition per liter:

Agar	20.0g
Plant hydrolysate No. 1	15.0g
Yeast extract.....	5.0g
Papaic digest of soybean meal	5.0g
NaHSO ₃	1.0g
Ferric ammonium citrate.....	1.0g
Egg yolk emulsion, 50%.....	100.0mL
Antibiotic inhibitor	10.0mL

pH 7.6 ± 0.2 at 25°C

Source: This medium, without egg yolk emulsion and antibiotic inhibitor, is available as a premixed powder from HiMedia.

Egg Yolk Emulsion, 50%:

Composition per 100.0mL:

Chicken egg yolks.....	11
Whole chicken egg.....	1
NaCl (0.9% solution).....	50.0mL

Preparation of Egg Yolk Emulsion, 50%: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg. Beat to form emulsion. Measure 50.0mL of egg yolk emulsion and add to 50.0mL of 0.9% NaCl solution. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Antibiotic Inhibitor:

Composition per 10.0mL:

Kanamycin.....	0.012g
Polymyxin B sulfate.....	30,000U

Preparation of Antibiotic Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Basal Layer: Add components—except egg yolk emulsion, 50%, and antibiotic inhibitor—to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile egg yolk emulsion, 50%, and antibiotic inhibitor. Mix thoroughly. Pour into sterile Petri dishes in 10.0mL volumes.

Cover Layer:

Composition per 1010.0mL:

Agar	20.0g
Tryptose	15.0g
Papaic digest of soybean meal	5.0g
Yeast extract.....	5.0g
Ferric ammonium citrate.....	1.0g

NaHSO ₃	1.0g
Antibiotic inhibitor	10.0mL
pH 7.6 ± 0.2 at 25°C	

Antibiotic Inhibitor:

Composition per 10.0mL:

Kanamycin.....	0.012g
Polymyxin B sulfate	30,000U

Preparation of Antibiotic Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Cover Layer: Add components—except antibiotic inhibitor—to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic inhibitor. Mix thoroughly.

Preparation of Medium: Prepare and dispense basal layer into sterile Petri dishes in 10.0mL volumes. Incubate overnight to dry plates and test for sterility. Inoculate plates using 0.1mL volume. Spread inoculum over surface of agar. Aseptically add 10.0mL of cover layer to each plate. Incubate at 37°C under 90% N₂ + 10% CO₂.

Use: For the isolation and enumeration of *Clostridium perfringens* from foods. *Clostridium perfringens* appears as black colonies surrounded by a precipitate.

SG Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein.....	15.0g
CaCl ₂ ·2H ₂ O	2.0g
MgSO ₄ ·7H ₂ O	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of myxobacteria.

Shapton HiVeg Medium

Composition per liter:

Agar	15.0g
Plant peptone	5.0g
Plant extract	3.0g
Plant hydrolysate	2.5g
Yeast extract.....	1.0g
Glucose	1.0g
Bromocresol Purple	0.025g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of aciduric and thermophilic flat sour spore-formers. For the enumeration of spores of *Bacillus stearothersophilus* which cause flat sour spoilage in canned foods with pH more than 4.5.

Shapton Medium**Composition per liter:**

Agar	15.0g
Peptic digest of animal tissue.....	5.0g
Beef extract.....	3.0g
Casein enzymic hydrolysate	2.5g
Glucose.....	1.0g
Yeast extract.....	1.0g
Bromo Cresol Purple	0.025g

pH 6.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of aciduric and thermophilic flat sour spore-formers. For the enumeration of spores of *Bacillus stearothermophilus* which cause flat sour spoilage in canned foods with pH more than 4.5.

**Sheep Blood Agar
(BAM M135)****Composition per liter:**

Proteose peptone	15.0g
Agar	12.0g
Liver digest	2.5g
Yeast extract.....	5.0g
NaCl.....	5.0g
Sheep blood, defibrinated	50.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–46°C. Aseptically add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly and pour into sterile Petri dishes.

Use: For the isolation, cultivation, and detection of hemolytic activity of streptococci and other fastidious microorganisms.

Sheep Blood Agar**Composition per liter:**

Tryptone.....	14.0g
Agar	12.0g
NaCl.....	5.0g
Peptone, neutralized.....	4.5g
Yeast extract.....	4.5g
Sheep blood, defibrinated	70.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 70.0mL of sterile, defibrinated sheep blood. Mix thoroughly and pour into sterile Petri dishes.

Use: For the isolation, cultivation, and detection of hemolytic activity of streptococci and other fastidious microorganisms. Specifically formulated to give maximum recovery and improved hemolytic reactions with sheep blood.

Shepard's Differential AgarSee: **A7 Agar****Shepard's M10 Medium**See: **Standard Fluid Medium 10B****Shigella Broth****Composition per liter:**

Pancreatic digest of casein.....	20.0g
NaCl.....	5.0g
K ₂ HPO ₄	2.0g
KH ₂ PO ₄	2.0g
Glucose	1.0g
Novobiocin solution.....	11.1mL
Tween™ 80	1.5mL

pH 7.0 ± 0.2 at 25°C

Novobiocin Solution:**Composition per liter:**

Novobiocin	0.05g
------------------	-------

Preparation of Novobiocin Solution: Add novobiocin to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except novobiocin solution, to distilled/deionized water and bring volume to 988.9mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile novobiocin solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the isolation and cultivation of *Shigella* species from food.

Shigella HiVeg Broth Base with Novobiocin**Composition per liter:**

Plant hydrolysate	20.0g
NaCl.....	5.0g
K ₂ HPO ₄	2.0g
KH ₂ PO ₄	2.0g
Glucose	1.0g
Polysorbate 80	1.5 ml
Novobiocin solution.....	11.1mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without novobiocin, is available as a premixed powder from HiMedia.

Novobiocin Solution:**Composition per liter:**

Novobiocin	0.05g
------------------	-------

Preparation of Novobiocin Solution: Add novobiocin to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except novobiocin solution, to distilled/deionized water and bring volume to 988.9mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile no-

vobiocin solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the isolation and cultivation of *Shigella* species from food.

Shiitake Agar

Composition per liter:

Malt extract	20.0g
Agar	15.0g
Yeast extract	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Lentinula edodes*, *Ochrobactrum anthropi*, and *Pseudomonas* species.

SI Agar

Composition per liter:

Peptone	15.6g
Agar	12.0g
NaCl	5.6g
Yeast extract	2.8g
D-Glucose	1.0g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

Siderophore Mineral Medium

Composition per liter:

KH ₂ PO ₄	8.2g
NaOH	1.6g
NH ₄ Cl	1.0g
KCl	0.5g
CaSO ₄ ·2H ₂ O	0.5mg
CuSO ₄ ·5H ₂ O	0.5mg
FeCl ₃ ·6H ₂ O	0.5mg
ZnSO ₄ ·7H ₂ O	0.5mg
Deferrioxamine B solution	10.0mL
MgSO ₄ ·7H ₂ O solution	10.0mL
Wolfe's vitamin solution	5.0mL

Deferrioxamine B Solution:

Composition per 10.0mL:

Deferrioxamine B	1.0g
------------------	------

Preparation of Deferrioxamine B Solution: Add deferrioxamine B to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

MgSO₄·7H₂O Solution:

Composition per 10.0mL:

MgSO ₄ ·7H ₂ O	0.5g
--------------------------------------	------

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine·HCl	0.01g
Thiamine·HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except deferrioxamine B solution, MgSO₄·7H₂O solution, and Wolfe's vitamin solution—to distilled/deionized water and bring volume to 975.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile deferrioxamine B solution, 10.0mL of sterile MgSO₄·7H₂O solution, and 5.0mL of sterile Wolfe's vitamin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of ATCC strain 49538.

Sierra Medium

Composition per liter:

Agar	15.0g
Peptone	10.0g
NaCl	5.0g
CaCl ₂ ·H ₂ O	0.1g
Tween™ 80	10.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, except Tween™ 80, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Separately autoclave Tween™ 80 for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile Tween™ 80. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the differentiation of bacteria based on lipase activity. Bacteria with lipase activity form colonies surrounded by a white precipitate.

SIM HiVeg Medium

Composition per liter:

Plant peptone	30.0g
Agar	3.0g
Plant extract	3.0g
HiVeg peptonized iron	0.2g
Na ₂ S ₂ O ₃	0.025g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 15.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in an upright position.

Use: For the determination of hydrogen sulfide production, indole formation, and motility of enteric bacilli.

SIM Medium

Composition per liter:

Peptone.....	30.0g
Agar	3.0g
Beef extract.....	3.0g
Peptonized iron.....	0.2g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	0.025g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 15.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in an upright position.

Use: For the differentiation of members of the Enterobacteriaceae based on H₂S production, indole production, and motility.

SIM Medium

Composition per liter:

Pancreatic digest of casein.....	20.0g
Peptic digest of animal tissue.....	6.1g
Agar	3.5g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O.....	0.2g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	0.2g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 15.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in an upright position.

Use: For the differentiation of members of the Enterobacteriaceae based on H₂S production, indole production, and motility.

SIM Motility Medium (BAM M137)

Composition per liter:

Pancreatic digest of casein.....	20.0g
Peptic digest of animal tissue.....	6.1g
Agar	3.5g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O.....	0.2g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	0.2g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 15.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in an upright position.

Use: For the differentiation of members of the Enterobacteriaceae based on H₂S production, indole production, and motility.

Simmons' Citrate Agar (Citrate Agar)

Composition per liter:

Agar.....	15.0g
NaCl.....	5.0g
Sodium citrate.....	2.0g
K ₂ HPO ₄	1.0g
(NH ₄)H ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
Bromthymol Blue.....	0.08g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of Gram-negative bacteria on the basis of citrate utilization. Bacteria that can utilize citrate as sole carbon source turn the medium blue.

Simmons' Citrate Agar, Modified See: Acetate Differential Agar

Simonsiella Agar (LMG Medium 31)

Composition per liter:

Tryptone.....	17.0g
Agar.....	15.0g
NaCl.....	5.0g
Yeast extract.....	4.0g
Soy peptone.....	3.0g
K ₂ HPO ₄	2.5g
Bovine serum.....	100.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except bovine serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL sterile bovine serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Simonsiella* spp.

Simonsiella Agar

Composition per liter:

Pancreatic digest of casein.....	17.0g
Agar.....	15.0g
NaCl.....	5.0g
Yeast extract.....	4.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Horse serum.....	100.0mL

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile

horse serum warmed to 50°–55°C. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Simonsiella muelleri* and *Simonsiella steedae*.

Simonsiella Broth

Composition per liter:

Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Yeast extract.....	4.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Horse serum.....	100.0mL

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL of sterile bovine serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Simonsiella muelleri* and *Simonsiella steedae*.

Simulated Grape Juice Medium

Composition per liter:

Glucose.....	16.0g
Tartaric acid.....	0.5g

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of microorganisms associated with winemaking.

Singh's Medium, Modified

Composition per liter:

NaCl.....	8.75g
Lactalbumin hydrolysate.....	8.13g
Yeast extract.....	6.25g
D-Glucose.....	5.0g
CaCl ₂ ·2H ₂ O.....	0.25g
KCl.....	0.25g
NaH ₂ PO ₄ ·H ₂ O.....	0.25g
NaHCO ₃	0.15g
MgCl ₂ ·6H ₂ O.....	0.13g
Phenol Red.....	0.01g
Fetal bovine serum (heat inactivated at 56°C, 30 min).....	200.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 with NaOH if necessary. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Spiroplasma* species.

Single-Layer Agar

Composition per 1050.0mL:

Tributyryn substrate.....	50.0g
Basal medium.....	1.0L
pH 6.8 ± 0.2 at 25°C	

Basal Medium:

Composition per liter:

Agar.....	15.0g
Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g

Preparation of Basal Medium: Add components to 1.0L of distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Tributyryn Substrate:

Composition:

Tributyryn substrate.....	50.0g
---------------------------	-------

Preparation of Tributyrin Substrate: Remove free fatty acids in the tributyrin substrate by dissolving 50.0g in 500.0mL of petroleum ether. Pass the solution through an activated alumina column. Remove the petroleum ether by evaporation on a steam table under 100% N₂. Autoclave for 30 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Aseptically combine 1.0L of sterile basal medium with 50.0g of sterile tributyrin substrate in a warm, sterile blender container. Blend for 1 min until homogenized. Rapidly pour into sterile Petri dishes in 7.0mL volumes. Dry the surface of the plates by partially opening the lids in a laminar flow hood for 15 min.

Use: For the isolation, cultivation, and identification of lipolytic microorganisms from food.

Single-Layer Agar

Composition per 1050.0mL:

Fat substrate.....	50.0g
Basal medium.....	1.0L
pH 6.8 ± 0.2 at 25°C	

Basal Medium:

Composition per liter:

Agar.....	15.0g
Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g
Victoria Blue B solution.....	200.0mL

Preparation of Basal Medium: Add agar to 800.0mL of distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 200.0mL of Victoria Blue B solution. Mix thoroughly.

Victoria Blue B Solution:

Composition per 200.0mL:

Victoria Blue B.....	0.12g
----------------------	-------

Preparation of Victoria Blue B Solution: Add the Victoria Blue B to 200.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize. Warm to 50°C.

Fat Substrate:

Composition:

Fat substrate.....	50.0g
--------------------	-------

Preparation of Fat Substrate: Corn oil, soybean oil, any cooking oil, lard, tallow, or triglycerides that do not contain antioxidants or other inhibitory substances may be used. Remove free fatty acids in the fat

substrate by dissolving 50.0g of fat substrate in 500.0mL of petroleum ether. Pass the solution through an activated alumina column. Remove the petroleum ether by evaporation on a steam table under 100% N₂. Autoclave for 30 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Aseptically combine 1.0L of sterile basal medium with 50.0g of sterile fat substrate in a warm, sterile blender container. Blend for 1 min until homogenized. Rapidly pour into sterile Petri dishes in 7.0mL volumes. Dry the surface of the plates by partially opening the lids in a laminar flow hood for 15 min.

Use: For the isolation, cultivation, and identification of lipolytic microorganisms from food.

Singulosphaera Medium (DSMZ Medium 1144)

Composition per liter:

Agar-agar	18.0g
N-acetylglucosamine	1.0g
KH ₂ PO ₄	0.1g
Peptone	0.1g
Yeast extract	0.1g
Hutner's basal salts solution	20.0mL
Ampicillin solution	10.0mL

pH 5.8 ± 0.2 at 25°C

Hutner's Basal Salts Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitritotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O.....	3.335g
FeSO ₄ ·7H ₂ O.....	99.0mg
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	9.25mg
"Metals 44"	50.0mL

"Metals 44":

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.095g
FeSO ₄ ·7H ₂ O.....	0.5g
Sodium EDTA.....	0.25g
MnSO ₄ ·H ₂ O.....	0.154g
CuSO ₄ ·5H ₂ O.....	39.2mg
Co(NO ₃) ₂ ·6H ₂ O	24.8mg
Na ₂ B ₄ O ₇ ·10H ₂ O.....	17.7mg

Preparation of "Metals 44": Add sodium EDTA to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Add a few drops of concentrated H₂SO₄ to retard precipitation of heavy metal ions. Add remaining components. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Hutner's Basal Salts Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Ampicillin Solution:

Composition per 10.0mL:

Na-ampicillin	0.2g
---------------------	------

Preparation of Ampicillin Solution: Add Na-ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Hutner's basal salts solution and ampicillin solution, to distilled/deionized water and

bring volume to 970.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add Hutner's basal salts solution and ampicillin solution. Mix thoroughly. Adjust pH to 5.8. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Singulosphaera* spp.

Six B Agar (6 B Agar)

Composition per liter:

Glycerol	50.0g
Soluble starch.....	20.0g
Agar	15.0g
Glucose	10.0g
Yeast extract.....	5.0g
N-Z amine, type A	5.0g
CaCO ₃	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Geodermatophilus obscurus*, *Micromonospora* species, *Nocardia carnea*, *Nocardia otitidiscavium*, and *Nocardia seriolae*.

SJ Agar

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	1.0g
KCl.....	0.5g
MgSO ₄ ·7H ₂ O	0.5g
NaNO ₃	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g
Glucose solution	100.0mL

pH 7.2 ± 0.2 at 25°C

Glucose Solution:

Composition per 100.0mL:

D-Glucose	1.0g
-----------------	------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

SK Agar

See: [Schleifer-Krämer Agar](#)

Skim Milk Acetate Medium

Composition per liter:

Agar	15.0g
Skim milk powder.....	5.0g

Yeast extract..... 0.5g
Sodium acetate..... 0.2g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Cytophaga johnsonae*.

**Skim Milk Agar
(Milk Agar)
(ATCC Medium 377)**

Composition per liter:

Agar 15.0g
Skim milk..... 8.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Herpetosiphon aurantiacus*.

Skim Milk Agar

Composition per 1100.0mL:

Agar 15.0g
Pancreatic digest of casein..... 5.0g
Yeast extract..... 2.5g
Glucose 1.0g
Skim milk solution..... 100.0mL

pH 7.0 ± 0.1 at 25°C

Preparation of Skim Milk Solution: Add skim milk solids to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except skim milk solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of cooled, sterile skim milk solution. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation and differentiation of bacteria based on proteolytic activity.

Skim Milk Agar, Half Strength

Composition per liter:

Solution A 500.0mL
Solution B 500.0mL

Solution A:

Composition per 500.0mL:

Skim milk..... 25.0g

Preparation of Solution A: Add 25.0g of skim milk to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:

Composition per 500.0mL:

Agar 20.0g

Preparation of Solution B: Add 20.0g of agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically mix 500.0mL of solution A with 500.0mL of solution B. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pilimelia anulata*.

**Skim Milk Glucose Agar
(DSMZ Medium 810)**

Composition per liter:

Solution A 500.0mL
Solution B 500.0mL

pH 6.8 ± 0.2 at 25°C

Solution A:

Composition per 500.0mL:

Skim milk..... 40.0g

Preparation of Solution A: Add skim milk to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 500.0mL:

Glucose 20.0g
Agar 20.0g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically mix 500.0mL sterile solution A and 500.0mL sterile solution B. Mix thoroughly. Adjust pH to 6.8. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Trichophyton* spp.

Skim Milk HiVeg Agar

Composition per liter:

Skim milk powder..... 28.0g
Agar 15.0g
Plant hydrolysate 5.0g
Yeast extract..... 2.5g
Glucose 1.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of microorganisms encountered in the dairy industry.

Skim Milk Horn Meal Mineral Agar

Composition per liter:

Agar 15.0g
Bovine horn meal..... 10.0g
MgSO₄·7H₂O 0.7g
Ca(NO₃)₂·4H₂O 0.5g

NaHCO ₃	0.2g
FeCl ₃	5.0mg
K ₂ HPO ₄	5.0mg
Skim milk solution.....	10.0mL

Skim Milk Solution:**Composition per 10.0mL:**

Skim milk, powdered.....	2.5g
--------------------------	------

Preparation of Skim Milk Solution: Add powdered skim milk to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except skim milk solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C. Aseptically add 10.0mL of sterile skim milk solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Capnocytophaga gingivalis*, *Capnocytophaga ochracea*, and *Capnocytophaga sputigena*.

Skirrow Brucella Medium**Composition per liter:**

Blood agar base No. 2.....	940.0mL
Horse blood, lysed defibrinated.....	50.0mL
Antibiotic solution.....	10.0mL

pH 7.4 ± 0.2 at 25°C

Blood Agar Base No. 2**Composition per 940.0mL:**

Proteose peptone.....	15.0g
Agar.....	12.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Liver digest.....	2.5g

pH 7.4 ± 0.2 at 25°C

Preparation of Blood Agar Base No. 2: Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45–50°C.

Antibiotic Solution:**Composition per 10.0mL:**

Vancomycin.....	0.01g
Trimethoprim.....	5.0mg
Polymyxin B.....	2500U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 940.0mL of sterile cooled blood agar base No. 2, aseptically add 50.0mL of sterile, lysed defibrinated horse blood and 10.0mL of sterile antibiotic solution. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of *Campylobacter* species.

Skirrow's Campylobacter AgarSee: *Campylobacter Agar, Skirrow's***SL Medium
(DSMZ Medium 959)****Composition per liter:**

NaCl.....	15.0g
PIPES.....	3.4g
Na-acetate·3H ₂ O.....	2.72g
Yeast extract.....	2.0g
Trypticase™.....	2.0g
NH ₄ Cl.....	1.0g
MgCl ₂ ·6H ₂ O.....	0.5g
K ₂ HPO ₄	0.35g
KH ₂ PO ₄	0.35g
KCl.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.1g
Resazurin.....	0.5mg
Maltose solution.....	50.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL

pH 7.5 ± 0.2 at 25°C

Maltose Solution:**Composition per 100.0mL:**

Maltose.....	3.5g
--------------	------

Preparation of Maltose Solution: Add maltose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Na₂S·9H₂O Solution:**Composition per 50.0mL:**

Na ₂ S·9H ₂ O.....	5.0g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 50.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Preparation of Medium: Add components, except maltose solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Sparge with N₂. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 10.0mL sterile Na₂S·9H₂O solution and 50.0mL sterile maltose solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks under N₂. The final pH should be 7.5.

Use: For the cultivation of *Petrotoga olearia* and *Petrotoga sibirica*.

SL Medium**Composition per liter:**

Agar.....	15.0g
Pancreatic digest of casein.....	10.0g
Glucose.....	10.0g
KH ₂ PO ₄	6.0g
Arabinose.....	5.0g
Sucrose.....	5.0g
Yeast extract.....	5.0g
Sodium acetate·3H ₂ O.....	2.5g
Diammonium citrate.....	2.0g
Tween™ 80.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.58g
MnSO ₄ ·4H ₂ O.....	0.28g

pH 5.4 ± 0.2 at 25°C

Preparation of Medium: Add agar to 500.0mL of distilled/deionized water. Gently heat and bring to boiling. In a separate flask, add the remaining components, except sodium acetate, to distilled/deionized water and bring volume to 300.0mL. Mix thoroughly. Combine the two solutions. In a separate flask, add sodium acetate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 5.4 with glacial acetic acid. Add this solution to the agar solution. Mix thoroughly. Adjust pH to 5.4 with additional glacial acetic acid. Bring volume to 1.0L with distilled/deionized water. Do not autoclave. Aseptically distribute into sterile screw-capped tubes or flasks.

Use: For the selective isolation and cultivation of *Lactobacillus* species.

Slad Medium

Composition per liter:

Solution B	900.0mL
Solution A	100.0mL

Solution A:

Composition per 100.0mL:

Raffinose	20.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.1g
CaCl ₂ ·2H ₂ O	0.1g
Ammonium sulfate	7.0mg
Inositol	2.0mg
KI	1.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine·HCl	0.4mg
Pyroxidine·HCl	0.4mg
Niacin	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid	0.2mg
Riboflavin	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
CuSO ₄ ·5H ₂ O	0.04mg
Folic acid	2.0μg
Biotin	2.0μg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 50°–55°C.

Solution B:

Composition per 900.0mL:

Agar	40.0g
------------	-------

Preparation of Solution B: Add agar to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine 100.0mL of sterile solution A and 900.0mL of sterile solution B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Saccharomyces cerevisiae*.

Slanetz and Bartley, HiVeg (Slanetz and Bartley HiVeg Medium)

Composition per liter:

Plant hydrolysate No. 1	20.0g
Agar	15.0g
Yeast extract	5.0g
Na ₂ HPO ₄	4.0g
Glucose	2.0g
NaN ₃	0.4g
2,3,5-Triphenyltetrazolium chloride	0.1g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling to dissolve the medium completely. Excessive heating should be avoided. Do not autoclave. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection and enumeration of fecal streptococci by the membrane filter technique.

Slanetz and Bartley Medium

Composition per liter:

Tryptose	20.0g
Agar	10.0g
Yeast extract	5.0g
Na ₂ HPO ₄ 2H ₂ O	4.0g
Glucose	2.0g
NaN ₃	0.4g
Tetrazolium chloride	0.1g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the detection and enumeration of enterococci by the membrane filter method.

Sludge Medium for Methanobacteria

Composition per liter:

NaHCO ₃	4.0g
Sodium formate	2.0g
Sodium acetate	1.0g
Yeast extract	1.0g
L-Cysteine·HCl·H ₂ O	0.5g
KH ₂ PO ₄	0.5g
Na ₂ S·9H ₂ O	0.5g
MgSO ₄ ·7H ₂ O	0.4g
NaCl	0.4g
NH ₄ Cl	0.4g
CaCl ₂ ·2H ₂ O	0.05g
FeSO ₄ ·7H ₂ O	2.0mg
Resazurin	1.0mg
Sludge fluid	50.0mL

Fatty acid mixture	20.0mL
Trace elements solution SL-6	1.0mL
pH 6.7-7.0 at 25°C	

Sludge Fluid:**Composition per 100.0mL:**

Yeast extract	0.4g
Sludge	100.0mL

Preparation of Sludge Fluid: Add yeast extract to a concentration of 0.4% to sludge taken from an anaerobic digester. Gas with 100% N₂ for 5 min. Incubate at 37°C for 24 hr. Centrifuge at 13,000 × g. Remove the supernatant fluid. Gas with 100% N₂ for 5 min. Autoclave for 15 min at 15 psi pressure–121°C. Store at 25°C protected from light.

Fatty Acid Mixture:**Composition per 20.0mL:**

α-Methylbutyric acid	0.5g
Isobutyric acid	0.5g
Isovaleric acid	0.5g
Valeric acid	0.5g

Preparation of Fatty Acid Mixture: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Adjust pH to 7.5 with concentrated NaOH.

Trace Elements Solution SL-6:**Composition per liter:**

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.7–7.0. Distribute anaerobically into tubes or bottles with aluminum seals. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation of *Methanobacterium uliginosum* and *Methanobrevibacter ruminantium*.

Sludge Medium for Methanobacteria, pH 7.9**Composition per liter:**

NaHCO ₃	4.0g
Sodium formate	2.0g
Sodium acetate	1.0g
Yeast extract	1.0g
L-Cysteine·HCl·H ₂ O	0.5g
KH ₂ PO ₄	0.5g
Na ₂ S·9H ₂ O	0.5g
MgSO ₄ ·7H ₂ O	0.4g
NaCl	0.4g
NH ₄ Cl	0.4g
CaCl ₂ ·2H ₂ O	0.05g
FeSO ₄ ·7H ₂ O	2.0mg
Resazurin	1.0mg
Sludge fluid	50.0mL

Fatty acid mixture	20.0mL
Trace elements solution SL-6	1.0mL
pH 7.9 ± 0.2 at 25°C	

Sludge Fluid:**Composition per 100.0mL:**

Yeast extract	0.4g
Sludge	100.0mL

Preparation of Sludge Fluid: Add yeast extract to a concentration of 0.4% to sludge taken from an anaerobic digester. Gas with 100% N₂ for 5 min. Incubate at 37°C for 24 hr. Centrifuge at 13,000 × g. Remove the supernatant fluid. Gas with 100% N₂ for 5 min. Autoclave for 15 min at 15 psi pressure–121°C. Store at 25°C protected from light.

Fatty Acid Mixture:**Composition per 20.0mL:**

α-Methylbutyric acid	0.5g
Isobutyric acid	0.5g
Isovaleric acid	0.5g
Valeric acid	0.5g

Preparation of Fatty Acid Mixture: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Adjust pH to 7.5 with concentrated NaOH.

Trace Elements Solution SL-6:**Composition per liter:**

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 7.9. Distribute anaerobically into tubes or bottles with aluminum seals. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation of *Methanobacterium alcaliphilum* and *Methanobacterium thermoalcalip*.

SM Basal Salts Medium**Composition per liter:**

Na ₂ HPO ₄	4.5g
KH ₂ PO ₄	1.5g
NH ₄ Cl	0.3g
MgSO ₄ ·7H ₂ O	0.1g
Trace metals solution	5.0mL
pH 6.0 ± 0.2 at 25°C	

Trace Metals Solution:**Composition per liter:**

Ethylenediamine tetraacetate	50.0g
ZnSO ₄ ·7H ₂ O	22.0g
CaCl ₂	5.54g
MnCl ₂ ·4H ₂ O	5.06g
FeSO ₄ ·7H ₂ O	4.99g
CoCl ₂ ·H ₂ O	1.61g

CuSO ₄ ·5H ₂ O	1.57g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	1.1g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Thiobacillus delicatus*.

SM ID2 Agar

Composition per liter:

Proprietary

Source: This medium is available from bioMérieux

Use: A new chromogenic medium for the selective isolation and detection of *Salmonella*. *S. typhi*, and *S. paratyphi* and most lactose(+) *Salmonella* present pale pink to mauve colonies. Other organisms are either inhibited, colorless, or pale blue in appearance.

SM Medium

Composition per liter:

Na ₂ HPO ₄	4.5g
KH ₂ PO ₄	1.5g
NH ₄ Cl	0.3g
MgSO ₄ ·7H ₂ O	0.1g
Na ₂ S ₂ O ₃ solution	100.0mL
Trace metals solution	5.0mL

pH 7.5 ± 0.2 at 25°C

Na₂S₂O₃ Solution

Composition per 100.0mL:

Na ₂ S ₂ O ₃ solution	10.0g
--	-------

Preparation of Na₂S₂O₃ Solution: Add 10.0g of Na₂S₂O₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Metals Solution:

Composition per liter:

Ethylenediaminetetraacetic acid	50.0g
ZnSO ₄ ·7H ₂ O	22.0g
CaCl ₂	5.54g
MnCl ₂ ·4H ₂ O	5.06g
FeSO ₄ ·7H ₂ O	4.99g
CoCl ₂ ·6H ₂ O	1.61g
CuSO ₄ ·5H ₂ O	1.57g
(NH ₄) ₆ Mo ₇ O ₂₄ ·H ₂ O	1.10g

Preparation of Trace Metals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0 using KOH. Filter sterilize.

Preparation of Medium: Add components, except Na₂S₂O₃ solution and trace metals solution, to distilled/deionized water and bring volume to 895.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL of sterile Na₂S₂O₃ solution and 5.0mL of sterile trace metals solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Thiobacillus thiooparus*.

SM Selective Medium

Composition per liter:

Agar	15.0g
Mannitol	2.5g
L-Glutamic acid	1.0g
MgSO ₄ ·7H ₂ O	0.16g
Triphenyltetrazolium-chloride solution	10.0mL
Antibiotic solution	10.0mL
KH ₂ PO ₄ (0.2mM solution)	1.0mL
Metals solution	0.05mL

pH 7.2 ± 0.2 at 25°C

Triphenyltetrazolium Chloride Solution:

Composition per 10.0mL:

2,3,5-Triphenyltetrazolium chloride	0.1g
Ethanol (95% solution)	10.0mL

Preparation of Triphenyltetrazolium Chloride Solution: Add 2,3,5-triphenyltetrazolium chloride to 10.0mL of ethanol. Mix thoroughly.

Antibiotic Solution:

Composition per 10.0mL:

Bacitracin	0.05g
Cycloheximide	0.05g
Tyrothricin	0.02g
Captan	0.01g
Vancomycin	0.01g
Chloromycetin	5.0µg
Penicillin G	1.0µg

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Metals Solution:

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.1g
MnSO ₄ ·H ₂ O	0.62g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	0.18g
CuSO ₄ ·5H ₂ O	0.029g
CaSO ₄ ·5H ₂ O	0.029g
H ₃ PO ₃	0.011g
KI	0.013mg

Preparation of Metals Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2 with KOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Pseudomonas solanacearum*.

SMA1

See: **Salt Malt Agar**

SMB Medium (DSMZ Medium 1185)

Composition per liter:

NaCl	50.0g
Tryptone	5.0g
Na ₂ HPO ₄	3.0g

KH ₂ PO ₄	2.0g
Yeast extract	2.0g
NH ₄ NO ₃	1.0g
MgSO ₄ ·7H ₂ O	0.2g
Na ₂ CO ₃	0.1g
CaCl ₂ ·2H ₂ O	0.01g
Manganese sulfate solution	2.0mL
Iron sulfate solution	1.0mL

pH 6.8–7.1 at 25°C

Manganese Sulfate Solution:**Composition per 10.0mL:**

MnSO ₄ ·2H ₂ O	0.1g
--	------

Preparation of Manganese Sulfate Solution: Add MnSO₄·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Iron Sulfate Solution:**Composition per 10.0mL:**

FeSO ₄ ·7H ₂ O	0.1g
--	------

Preparation of Iron Sulfate Solution: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8–7.1. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Salinicola socius*.

SMC Medium**Composition per liter:**

Sorbitol	70.0g
Pancreatic digest of casein	17.0g
NaCl	5.0g
Beef extract	3.0g
Yeast extract	3.0g
Beef heart, solids from infusion	2.0g
Horse serum	200.0mL
Yeast extract solution	100.0mL
Phenol Red solution	20.0mL
Sucrose solution	20.0mL
L-Arginine-HCl solution	10.0mL
Fructose solution	2.0mL
Glucose solution	2.0mL

pH 7.5 ± 0.2 at 25°C

Yeast Extract Solution:**Composition per 100.0mL:**

Yeast extract	25.0g
---------------------	-------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Phenol Red Solution:**Composition per 100.0mL:**

Phenol Red	0.01g
------------------	-------

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Sucrose Solution:**Composition per 20.0mL:**

Sucrose	10.0g
---------------	-------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

L-Arginine-HCl Solution:**Composition per 10.0mL:**

L-Arginine-HCl	4.2g
----------------------	------

Preparation of L-Arginine-HCl Solution: Add L-arginine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Fructose Solution:**Composition per 10.0mL:**

Fructose	5.0g
----------------	------

Preparation of Fructose Solution: Add fructose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Glucose Solution:**Composition per 10.0mL:**

Glucose	5.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components—except horse serum, yeast extract solution, Phenol Red solution, sucrose solution, L-arginine-HCl solution, fructose solution, and glucose solution—to distilled/deionized water and bring volume to 646.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 200.0mL of sterile horse serum, 100.0mL of sterile yeast extract solution, 20.0mL of sterile Phenol Red solution, 20.0mL of sterile sucrose solution, 10.0mL of sterile L-arginine-HCl solution, 2.0mL of sterile fructose solution, and 2.0mL of sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Spiroplasma citri*.

SMC, Modified**Composition per liter:**

Sorbitol	70.0g
Pancreatic digest of casein	17.0g
NaCl	5.0g
Beef extract	3.0g
Yeast extract	3.0g
Beef heart, solids from infusion	2.0g
Solution 1	100.0mL
Solution 3	20.0mL
Solution 2	10.0mL
NaOH (1N solution)	6.0mL

pH 7.7–7.8 at 25°C

Solution 1:**Composition per 100.0mL:**

Sucrose	10.0g
Yeast extract	2.0g
Fructose	1.0g
Glucose	1.0g
Phenol Red	0.02g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution 2:**Composition** per 10.0mL:

Bovine serum albumin, fraction V..... 0.1g

Preparation of Solution 2: Add bovine serum albumin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Solution 3:**Composition** per 20.0mL:

Horse serum.....20.0mL

Preparation of Solution 3: Inactivate horse serum at 56°C for 30 min. Filter sterilize.

Preparation of Medium: Add components—except solution 1, solution 2, and solution 3—to distilled/deionized water and bring volume to 870.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile solution 1, 20.0mL of sterile solution 3, and 10.0mL of sterile solution 2. Mix thoroughly. Adjust pH to 7.7–7.8. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Spiroplasma citri*.

SME Agar (ATCC Medium 2345)

Composition per 1010.0mL:

NaCl.....	27.7g
Agar.....	18.0g
MgSO ₄ ·7H ₂ O.....	7.0g
MgCl ₂ ·6H ₂ O.....	5.5g
CaCl ₂ ·2H ₂ O.....	1.5g
KCl.....	0.65g
NaBr.....	0.1g
H ₃ BO ₃	30.0mg
SrCl ₂ ·6H ₂ O.....	15.0mg
KI.....	0.05mg
Tris-HCl buffer (1.0M solution, pH 7.0).....	25.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Aquifex pyrophilus*.

SME Medium (DSMZ Medium 1155)

Composition per liter:

NaCl.....	27.7g
Sulfur, elemental.....	10.0g
MgSO ₄ ·7H ₂ O.....	7.0g
MgCl ₂ ·6H ₂ O.....	5.5g
KH ₂ PO ₄	1.0g
CaCl ₂ ·2H ₂ O.....	0.75g
KCl.....	0.66g
(NH ₄) ₂ SO ₄	0.5g
NaBr.....	0.10g
H ₃ BO ₃	30.0mg
SrCl ₂ ·6H ₂ O.....	15.0mg
Sulfide solution.....	20.0mL
Yeast extract solution.....	10.0mL
KJ solution.....	0.05mL

pH 5.5 ± 0.2 at 25°C

KJ Solution:**Composition** per 10.0mL:

KJ..... 10.0mg

Preparation of KJ Solution: Add KJ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Sulfide Solution:**Composition** per 10.0mL:Na₂S·9H₂O..... 0.25g

Preparation of Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Yeast Extract Solution:**Composition** per 10.0mL:

Yeast extract..... 0.4g

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sulfide and yeast extract solutions, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Sparge with a gas mixture of 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add sulfide solution. Mix thoroughly. Adjust pH to 5.5 with sulfuric acid. Aseptically add yeast extract solution. Mix thoroughly. Sparge with a gas mixture of 80% H₂ + 20% CO₂. Aseptically distribute into culture vessels.

Use: For the cultivation of *Thermoplasma maritimum*.

SME Medium, Modified

Composition per 1010.0mL:

NaCl.....	30.0g
MgSO ₄ ·7H ₂ O.....	7.0g
NaHCO ₃	2.0g
KCl.....	0.65g
CaCl ₂ ·2H ₂ O.....	0.5g
K ₂ HPO ₄	0.15g
NH ₄ Cl.....	0.15g
NaBr.....	0.1g
MgCl ₂ ·6H ₂ O.....	5.5mg
Trace elements solution.....	10.0mL

pH 6.5 ± 0.2 at 25°C

Trace Elements Solution:**Composition** per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
(NH ₄) ₂ Ni(SO ₄) ₂	2.0g
Nitrilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g

Na ₂ WO ₄	10.0mg
Na ₂ SeO ₄	10.0mg
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to approximately 500.0mL of distilled/deionized water. Dissolve by adding KOH and adjust pH to 6.5. Add remaining components. Bring volume to 1.0L with additional distilled/deionized water. Adjust pH to 7.0 with KOH.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂ for 20 min. Adjust pH to 6.5–6.8 with H₂SO₄. Distribute 10.0mL volumes into 120.0mL serum bottles while gassing under 100% CO₂. Stopper each serum bottle tightly. Exchange the gas phase in each serum bottle with 79.75% H₂ + 19.75% CO₂ + 0.5% O₂ and bring pressure to 300KPa. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Aquifex pyrophilus*.

SME Medium Modified for IS7 (DSMZ Medium 891)

Composition per liter:

NaCl	30.0g
NaHCO ₃	2.0g
MgSO ₄ ·7H ₂ O	0.7g
KCl	0.65g
MgCl ₂ ·6H ₂ O	0.55g
CaCl ₂ ·2H ₂ O	0.5g
Sulfur, powdered	0.5g
NH ₄ Cl	0.15g
K ₂ HPO ₄	0.15g
NaBr	0.1g
Trace elements solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 using H₂SO₄. Distribute into anaerobe tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Provide an atmosphere of 78% H₂ + 20% CO₂ + 2% O₂.

Use: For the cultivation of unclassified bacterium DSM 12047.

Smibert's Semisolid *Brucella* Medium

Composition per liter:

Casein enzymic hydrolysate	10.0g
Peptic digest of animal tissue	10.0g
NaCl	5.0g
Yeast extract	2.0g
Agar	1.6g
Glucose	1.0g
NaHSO ₃	0.1g
Neutral Red	0.02g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of *Campylobacter* species.

Smithella Medium (DSMZ Medium 1030)

Composition per liter:

Yeast extract	2.0g
Trypticase peptone	2.0g
NH ₄ Cl	1.0g
MgCl ₂ ·6H ₂ O	1.0g
CaCl ₂ ·2H ₂ O	0.4g
KH ₂ PO ₄	0.4g
Wolfe's mineral elixir	1.0mL
Resazurin	0.5mg
Crotonate solution	10.0mL
Vitamin solution	10.0mL
Bicarbonate solution	10.0mL
Sulfide solution	10.0mL
Coenzyme M solution	10.0mL

pH 7.1 ± 0.2 at 25°C

Crotonate Solution:

Composition per 10.0mL:

Na-crotonate	1.7g
--------------------	------

Preparation of Crotonate Solution: Add Na-crotonate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Coenzyme M Solution:

Composition per 10.0mL:

Mercaptoethanesulfonic acid (coenzyme M)	0.5g
--	------

Preparation of Coenzyme M: Add coenzyme M to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Bicarbonate Solution:

Composition per 10.0mL:

NaHCO ₃	2.0g
--------------------------	------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% H₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Sulfide Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.3g

Preparation of Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Wolfe's Mineral Elixir:

Composition per liter:

MgSO₄·7H₂O 30.0g
 NaCl 10.0g
 MnSO₄·2H₂O 5.0g
 (NH₄)₂NiSO₄·6H₂O 2.8g
 CoCl₂·6H₂O 1.8g
 ZnSO₄·7H₂O 1.8g
 FeSO₄·7H₂O 1.0g
 CaCl₂·2H₂O 1.0g
 KAl(SO₄)₂·12H₂O 0.18g
 CuSO₄·5H₂O 0.1g
 H₃BO₃ 0.1g
 Na₂MoO₄·2H₂O 0.1g
 Na₂SeO₄ 0.1g
 Na₂WO₄·2H₂O 0.1g

Preparation of Wolfe's Mineral Elixir: Adjust pH of 1.0L of distilled/deionized water to 1.0 with dilute H₂SO₄. Add remaining components one at a time. Mix thoroughly to dissolve.

Preparation of Medium: Add components, except bicarbonate, vitamin, crotonate, coenzyme M, and sulfide solutions, to distilled/deionized water and bring volume to 950.0mL. Gently heat and bring to boiling. Boil for 1 min. Mix thoroughly. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Dispense into culture vessels under an atmosphere of 80% N₂ + 20% CO₂ (e.g., Balch tubes or serum vials). Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anoxically add bicarbonate, vitamin, crotonate, coenzyme M, and sulfide solutions. Adjust pH to 7.1.

Use: For the cultivation of *Smithella* spp.

Snyder Agar

Composition per liter:

Glucose 20.0g
 Agar 16.0g
 Pancreatic digest of casein 13.5g
 Yeast extract 6.5g

NaCl 5.0g
 Bromcresol Green 0.02g
 pH 4.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 13 psi pressure–118°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of lactobacilli in saliva and indication of dental caries activity.

Snyder Test Agar

Composition per liter:

Agar 20.0g
 Glucose 20.0g
 Tryptose 20.0g
 NaCl 5.0g
 Bromcresol Green 0.02g
 pH 4.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 13 psi pressure–118°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of lactobacilli in saliva and indication of dental caries activity.

**Snyder Test HiVeg Agar
(BCG-Glucose Agar, HiVeg)**

Composition per liter:

Agar 20.0g
 Glucose 20.0g
 Plant peptone 20.0g
 NaCl 5.0g
 Bromcresol Green 0.02g
 pH 4.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 13 psi pressure–118°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of lactobacilli in saliva and indication of dental caries activity.

Soap Agar

Composition per 315.0mL:

Stearic acid 30.0g
 NaCl 1.5g
 Peptone 1.5g
 Yeast extract 0.6g
 Agar 0.33g

Beef extract	0.3g
NaOH (7M)	15.0mL

pH 8.5 ± 1.0 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 315.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Arthrobacter* species.

Sodalis glossinidius Medium (DSMZ Medium 1021)

Composition per liter:

Agar	17.0g
NaCl	8.7g
Casein hydrolysate	8.1g
Yeast extract	6.2g
D-Glucose	5.0g
KCl	0.25g
CaCl ₂ ·2H ₂ O	0.25g
NaHCO ₃	0.15g
MgCl ₂ ·6H ₂ O	0.12g
Phosphate solution	100.0mL

pH 8.0 ± 0.2 at 25°C

Phosphate Solution:

Composition per 100.0mL:

NaH ₂ PO ₄	0.28g
--	-------

Preparation of Phosphate Solution: Add NaH₂PO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Add components, except phosphate solution, to distilled/deionized water and bring volume to 900.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add phosphate solution. Mix thoroughly. Adjust pH to 8.0. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Sodalis glossinidius*.

Sodium Acetate Agar *See: Acetate Differential Agar*

Sodium Acetate Medium I

Composition per liter:

Sodium acetate	33.0g
Agar	15.0g
Glucose	10.0g
Peptone	10.0g
K ₂ HPO ₄	5.0g
NaCl	5.0g
Yeast extract	3.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pediococcus halophilus* and *Staphylococcus simulans*.

Sodium Biselenite Medium

See: Selenite Broth

Sodium Caseinate Agar

Composition per liter:

Agar	15.0g
Sodium caseinate	2.0g
K ₂ HPO ₄	0.5g
Peptone	0.5g
Yeast extract	0.5g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of actinomycetes.

Sodium Chloride Broth, 6.5%

Composition per liter:

Beef heart, solids from infusion	500.0g
NaCl	65.0g
Tryptose	10.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of enterococci and other salt-tolerant organisms. For the differentiation of microorganisms based on salt tolerance.

Sodium Chloride Sucrose Medium 900 (Sodium Chloride SUC Medium 900)

Composition per liter:

Sucrose	97.3g
Pancreatic digest of gelatin	14.5g
NaCl	14.3g
Agar	13.3g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue	6.0g
Yeast extract	5.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g
MgSO ₄	0.25g
Horse serum (γ-globulin free, inactivated 30 min at 56°C)	100.0mL
Carbenicillin solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Carbenicillin Solution:

Composition per 10.0mL:

Carbenicillin	5.0g
---------------------	------

Preparation of Carbenicillin Solution: Add carbenicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbenicillin solution and horse serum, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add carbenicillin solution and horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Pseudomonas aeruginosa*.

Sodium Chloride Sucrose Medium 900 with Penicillin G

Composition per liter:

Sucrose.....	97.3g
Pancreatic digest of gelatin.....	14.5g
NaCl.....	14.3g
Agar.....	13.3g
Brain heart, solids from infusion.....	6.0g
Peptic digest of animal tissue.....	6.0g
Yeast extract.....	5.0g
Glucose.....	3.0g
Na ₂ HPO ₄	2.5g
MgSO ₄	0.25g
Horse serum (γ-globulin free, inactivated 30 min at 56°C).....	100.0mL
Penicillin solution.....	10.0mL
pH 7.4 ± 0.2 at 25°C	

Penicillin Solution:

Composition per 10.0mL:

Penicillin G.....	500,000U
-------------------	----------

Preparation of Penicillin Solution: Add penicillin G to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except penicillin solution and horse serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add penicillin solution and horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Pseudomonas aeruginosa*.

Sodium Dodecyl Sulfate Polymyxin Sucrose Agar

Composition per liter:

NaCl.....	20.0g
Agar.....	15.0g
Sucrose.....	15.0g
Proteose peptone.....	10.0g
Beef extract.....	5.0g
Sodium lauryl sulfate.....	1.0g
Bromthymol Blue.....	0.04g
Cresol Red.....	0.04g
Polymyxin B solution.....	10.0mL
pH 7.6 ± 0.2 at 25°C	

Polymyxin B Solution:

Composition per 10.0mL:

Polymyxin B sulfate.....	100,000U
--------------------------	----------

Preparation of Polymyxin B Solution: Add polymyxin B sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except polymyxin B solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile polymyxin B solution. Mix thoroughly. Pour immediately into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Vibrio* species from foods.

Sodium Hippurate Broth (Hippurate Broth)

Composition per liter:

Beef heart, solids from infusion.....	500.0g
Tryptose.....	10.0g
Sodium hippurate.....	10.0g
NaCl.....	5.0g
pH 7.4 ± 0.2 at 25°C	

Source: Heart infusion broth is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-capped tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Tighten caps to prevent drying.

Use: For the identification and differentiation of β-hemolytic streptococci based on hippurate hydrolysis. After inoculation and incubation, tubes are treated with FeCl₃ reagent. A heavy precipitate remaining after 10–15 min indicates that hippurate has been hydrolyzed.

Sodium Hydrogen Selenite Medium *See: Selenite Broth*

Sodium Lactate Agar

Composition per liter:

Agar.....	15.0g
Pancreatic digest of casein.....	10.0g
Sodium lactate.....	10.0g
Yeast extract.....	10.0g
K ₂ HPO ₄	0.25g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and isolation of *Propionibacterium* species from foods. For the isolation and cultivation of propionic acid-producing bacteria from cheese.

Sodium Lactate Agar, Modified

Composition per liter:

Agar.....	15.0g
Yeast extract.....	10.0g
Pancreatic digest of casein.....	5.1g
NaCl.....	1.5g
Papaic digest of soybean meal.....	0.9g
K ₂ HPO ₄	0.75g
Glucose.....	0.75g
Sodium lactate, 60% syrup.....	20.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and isolation of *Propionibacterium* species from foods. For the isolation and cultivation of propionic acid-producing bacteria from cheese.

Soft Agar Gelatin Overlay

Composition per plate:

Base agar	15.0mL
Soft agar gelatin overlay	2.5mL
pH 7.0 ± 0.2 at 25°C	

Base Agar:

Composition per liter:

Agar	15.0g
Peptone.....	5.0g
NaCl.....	5.0g
Beef extract	3.0g
MnSO ₄ ·H ₂ O	0.05g

Preparation of Base Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Soft Agar Gelatin Overlay:

Composition per liter:

Gelatin.....	15.0g
Agar	8.0g
Peptone.....	5.0g
NaCl.....	5.0g
Beef extract	3.0g
MnSO ₄ ·H ₂ O	0.05g

Preparation of Soft Agar Gelatin Overlay: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Aseptically pour cooled, sterile base agar into sterile Petri dishes in 15.0mL volumes. Allow agar to solidify. Inoculate plates with samples. Overlay each plate with 2.5mL of soft agar gelatin overlay.

Use: For the cultivation and differentiation of microorganisms based on proteolytic activity.

Soil Extract

Composition per 200.0mL:

African Violet soil.....	77.0g
Na ₂ CO ₃	0.2g

Preparation of Medium: Add components to 200.0mL of distilled/deionized water. Mix thoroughly. Autoclave for 60 min at 15 psi pressure–121°C. Filter through paper and reserve filtrate.

Use: Used as a growth factor additive for the cultivation of soil bacteria and fungi.

Soil Extract Agar

Composition per liter:

Agar	20.0g
Glucose	1.0g
K ₂ HPO ₄	1.0g
Peptone.....	1.0g
Yeast extract.....	1.0g

Soil extract.....	400.0mL
Cycloheximide solution	10.0mL
pH 6.6 ± 0.2 at 25°C	

Soil Extract:

Composition per liter:

Garden soil, neutral.....	1.0Kg
---------------------------	-------

Preparation of Soil Extract: Add garden soil to 1.0L of tap water. Autoclave for 20 min at 15 psi pressure–121°C. Filter through Whatman filter paper. Bring volume to 1.0L with tap water.

Cycloheximide Solution:

Composition per 10.0mL:

Cycloheximide	0.04g
---------------------	-------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cycloheximide solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile cycloheximide solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Arthrobacter* species.

Soil Extract Agar

Composition per liter:

Soil.....	500.0g
Agar	15.0g
Glucose	2.0g
Yeast extract.....	1.0g
KH ₂ PO ₄	0.5g

Preparation of Medium: Add 500.0g of garden soil to 1.0L of tap water. Autoclave for 3 hr at 15 psi pressure–121°C. Filter through Whatman #2 filter paper. Add remaining components to filtrate. Bring volume to 1.0L with tap water. Gently heat and bring to boiling. Distribute into tubes in 7.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation and identification of *Histoplasma capsulatum*, *Blastomyces dermatitidis*, and *Bacillus* species based on the formation of typical conidia.

Soil Extract Agar

Composition per liter:

Agar	15.0g
Soil extract.....	1.0L
pH 6.8 ± 0.2 at 25°C	

Soil Extract:

Composition per liter:

Soil.....	400.0g
-----------	--------

Preparation of Soil Extract: Air dry garden soil with a high content of organic matter and pass through a sieve. Weigh out 400.0g and add to 960.0mL of tap water. Autoclave for 60 min at 15 psi pressure–121°C. Cool to room temperature and allow soil to settle out. Decant supernatant solution. Filter through paper. Bring volume to 1.0L with distilled/deionized water.

Preparation of Medium: Add agar to 1.0L soil extract. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Aureobacterium flavescens* and *Bacillus* species.

Soil Extract Glucose Yeast Extract Agar

Composition per liter:

Agar	15.0g
Glucose	2.0g
Yeast extract	1.0g
Soil extract	250.0mL

pH 6.8 ± 0.2 at 25°C

Soil Extract:

Composition per liter:

Garden soil	500.0g
-------------------	--------

Preparation of Soil Extract: Add 500.0g of garden soil to 1.0L of tap water. Autoclave for 1 hr at 15 psi pressure–121°C. Filter through Whatman #2 filter paper.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces rectus*.

Soil Extract Glycerol Medium

Composition per liter:

Glycerol	20.0g
Peptone	5.0g
Beef extract	3.0g
Soil extract	150.0mL

pH 7.0 ± 0.2 at 25°C

Soil Extract:

Composition per liter:

Soil	400.0g
------------	--------

Preparation of Soil Extract: Allow garden soil to air dry. Add 400.0g of the air-dried garden soil to 960.0mL of tap water. Autoclave for 60 min at 15 psi pressure–121°C. Allow to cool to 25°C. Let stand until settling ceases. Decant the liquid through Whatman filter paper. Autoclave for 30 min at 15 psi pressure–121°C. Cool to room temperature. Let stand until settling ceases.

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Mycobacterium terrae*.

Soil Extract Medium

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
Soil extract	250.0mL

pH 6.8 ± 0.2 at 25°C

Soil Extract:

Composition per liter:

Garden soil	500.0g
-------------------	--------

Preparation of Soil Extract: Add 500.0g of garden soil to 1.0L of tap water. Autoclave for 1 hr at 15 psi pressure–121°C. Filter through Whatman #2 filter paper.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces rectus*.

Soil Extract Medium

Composition per liter:

Soil	400.0g
Agar	15.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Sieve air-dried garden soil with a high content of organic matter. To 400.0g of soil add 1.0L of distilled/deionized water. Autoclave for 60 min at 15 psi pressure–121°C. Cool to room temperature. Allow solids to sediment for a few hours. Carefully decant the supernatant solution. Centrifuge the supernatant solution at 10,000 × g for 15 min. Decant supernatant solution. Add agar (15.0g per liter of supernatant). Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Arthrobacter* species, *Aureobacterium flavescens*, *Aureobacterium terregens*, and *Bacillus thiaminolyticus*.

Soil Extract Peptone Beef Extract Medium

Composition per liter:

Agar	15.0g
Peptone	5.0g
Beef extract	3.0g
Soil extract	1.0L

pH 7.0 ± 0.2 at 25°C

Soil Extract:

Composition per liter:

Garden soil	400.0g
-------------------	--------

Preparation of Soil Extract: Add garden soil to 1.0L of tap water. Autoclave for 1 hr at 15 psi pressure–121°C. Filter through cheesecloth and Whatman #2 filter paper. Autoclave filtrate again for 20 min at 15 psi pressure–121°C. Filter through Whatman #2 filter paper.

Preparation of Medium: Add agar, peptone, and beef extract to 1.0L of soil extract. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Oerskovia turbata* and *Oerskovia xanthineolytica*.

Soil Extract Potato Extract Medium

Composition per 510.0mL:

Malt extract	10.0g
Yeast extract	4.0g
Potato extract	250.0mL
Soil extract	250.0mL

pH 7.0 ± 0.2 at 25°C

Soil Extract:

Composition per liter:

Garden soil	400.0g
-------------------	--------

Preparation of Soil Extract: Add garden soil to 1.0L of tap water. Autoclave for 45 min at 15 psi pressure–121°C. Filter through cheesecloth.

Potato Extract:

Composition per liter:

Potatoes 400.0g

Preparation of Potato Extract: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 15 min. Filter through cheesecloth. Bring volume to 1.0L with distilled/deionized water.

Preparation of Medium: Combine components. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Saccharopolyspora recti-virgula*.

Soil Extract Salts Medium

Composition per liter:

Soil extract stock 625.0mL
Solution 1 125.0mL
Solution 2 125.0mL
Solution 3 125.0mL

Soil Extract Stock:

Composition per liter:

Soil, air dried and sieved 333.3g

Preparation of Soil Extract Stock: Add soil to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.0 with 1N NaOH or HCl. Autoclave for 30 min at 15 psi pressure–121°C. Allow soil to settle out. Carefully pour off supernatant. Filter through two layers of cheesecloth.

Solution 1:

Composition per liter:

K₂HPO₄ 1.0g

Preparation of Solution 1: Add K₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution 2:

Composition per liter:

MgSO₄·7H₂O 1.0g

Preparation of Solution 2: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution 3:

Composition per liter:

KNO₃ 10.0g

Preparation of Solution 3: Add KNO₃ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Chlamydomonas applanata*, *Polytoma uvella*, *Polytoma mirum*, *Polytoma ellipticum*, *Polytoma difficile*, and *Polytoma anomale*.

Soil Seawater Medium for Algae

Composition per liter:

HESNW medium solution 750.0mL
Soil extracts salts medium solution 250.0mL

HESNW Medium Solution:

Composition per 1011.0mL:

Natural seawater 1.0L
Enrichment solution 10.0mL
Vitamin solution 1.0mL

Preparation of HESNW Medium Solution: Allow natural seawater to age for 2 months. Filter sterilize. Aseptically add 10.0mL of sterile vitamin solution and 1.0mL enrichment solution. Mix thoroughly.

Enrichment Solution:

Composition per liter:

NaNO₃ 4.667g
Na₂SiO₃·9H₂O 3.000g
Sodium glycerophosphate 0.667g
EDTA·2H₂O 0.553g
H₃BO₃ 0.380g
Fe(NH₄)₂(SO₄)₂·6H₂O 0.234g
MnSO₄·4H₂O 0.054g
FeCl₃·6H₂O 0.016g
ZnSO₄·7H₂O 7.3mg
CoSO₄·7H₂O 1.6mg

Preparation of Enrichment Solution: Add Na₂SiO₃·9H₂O to distilled/deionized water. Mix thoroughly. Neutralize Na₂SiO₃·9H₂O with 1N HCl. Add 500.0mL of distilled/deionized water. Mix thoroughly. Add remaining components and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per liter:

Thiamine 0.1g
Vitamin B₁₂ 2.0mg
Biotin 1.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Soil Extracts Salts Medium Solution:

Composition per liter:

Soil extract stock 625.0mL
Solution 1 125.0mL
Solution 2 125.0mL
Solution 3 125.0mL

Soil Extract Stock:

Composition per liter:

Soil, air dried and sieved 333.3g

Preparation of Soil Extract Stock: Air dry soil. Sieve through fine-mesh screen. Add soil to distilled/deionized water and bring volume to 1.0L. Adjust pH to 8.0 with 1N NaOH or 1N HCl. Autoclave for 30 min at 15 psi pressure–121°C. Allow soil to settle. Decant liquid. Filter through cheesecloth.

Solution 1:

Composition per liter:

K₂HPO₄ 1.0g

Preparation of Solution 1: Add K₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution 2:

Composition per liter:

MgSO₄·7H₂O 1.0g

Preparation of Solution 2: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution 3:**Composition per liter:**

KNO₃ 10.0g

Preparation of Solution 3: Add KNO₃ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Soil Extracts Salts Medium Solution: Combine 625.0mL of soil extract stock, 125.0mL of solution 1, 125.0mL of solution 2, and 125.0mL of solution 3. Filter sterilize.

Preparation of Medium: Aseptically combine 750.0mL of sterile HESNW medium solution and 250.0mL of sterile soil extracts salts medium solution. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Amphora roettgeri*.

Sonneborn's Paramecium Medium**Composition per liter:**

Solution 1 1.0L

Klebsiella pneumoniae cultured on solution 2 variable

Solution 1:**Composition per liter:**

Rye grass cerophyll 2.5g

Na₂HPO₄ 0.5g

Preparation of Solution 1: Add cerophyll to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for 5 min. Filter through Whatman #1 filter paper. Add 0.5g of Na₂HPO₄. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Distribute 10.0mL volumes into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Source: Cerophyll can be obtained from Ward's Natural Science Establishment, Inc. Dairy Goat Nutrition distributes Grass Media Culture, which is equivalent. Cereal Leaf Product from Sigma Chemical is similar to cerophyll.

Solution 2:**Composition per liter:**

Agar 20.0g

Yeast extract 4.0g

Glucose 0.16g

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute 5.0mL volumes into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Preparation of Medium: Inoculate the surface of the agar slants of solution 2 with a culture of *Klebsiella pneumoniae*. Incubate at 37°C for 24–48 hr. Scrape cells from the surface of the agar slants and add to 10.0mL of solution 1. Incubate at 30°C for 24 hr. Inoculate with protozoa.

Use: For the cultivation of a variety of *Paramecium* species, *Bodo* species, *Cercomonas* species, *Chlamydomyces* species, *Cyclidium* species, *Dimastigella* species, *Euplotes aediculatus*, *Glaucoma chattoni*, *Reclinomonas americana*, *Rhabdostyla* species, *Rhynchomonas nasuta*, *Stachyamoeba* species, *Thaumatostix* species, and *Trichamoeba* species.

Sorangium Medium**Composition per liter:**

Agar 10.0g

KNO₃ 1.0g

K₂HPO₄ 1.0g

MgSO₄ 0.2g

CaCl₂ 0.1g

FeCl₃ 0.02g

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position. Aseptically add a sterile strip (4.5cm × 1.0cm) of Whatman #1 filter paper to the surface of each slant or 4–6 sterile strips of filter paper to the surface of each agar plate.

Use: For the cultivation and maintenance of *Polyangium cellulorum*.

Sorbitol Agar**Composition per liter:**

Agar 20.0g

Peptone 10.0g

NaCl 2.0g

Yeast extract 2.0g

Sorbitol solution 50.0mL

pH 7.0 ± 0.2 at 25°C

Sorbitol Solution:**Composition per 50.0mL:**

Sorbitol 5.0g

Preparation of Sorbitol Solution: Add sorbitol to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sorbitol solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sorbitol solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Pseudomonas* species.

**Sorbitol HiVeg Agar
(Sorbitol MacConkey HiVeg Agar)****Composition per liter:**

Plant peptone 17.0g

Agar 13.5g

D-Sorbitol 10.0g

Plant peptone No. 3 3.0g

Synthetic detergent 1.5g

NaCl 5.0g

Neutral Red 0.03g

Crystal Violet 1.0mg

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Avoid overheating. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation and identification of enteropathogenic *Escherichia coli* strains associated with infant diarrhea.

**Sorbitol HiVeg Agar with Blood
(Sorbitol MacConkey HiVeg Agar)****Composition per liter:**

Plant peptone 17.0g

Agar 13.5g

D-Sorbitol.....	10.0g
Plant peptone No. 3.....	3.0g
Synthetic detergent.....	1.5g
NaCl.....	5.0g
Neutral Red.....	0.03g
Crystal Violet.....	1.0mg
Sterile bovine or sheep blood.....	50.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile bovine blood or sheep blood. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation and identification of a wide variety of pathogenic bacteria.

Sorbitol Iron HiVeg Agar

Composition per liter:

Agar.....	20.0g
Plant peptone No. 3.....	15.0g
NaCl.....	5.0g
Plant extract.....	3.0g
D-Sorbitol.....	2.0g
Ferric ammonium citrate.....	0.5g
Na ₂ S ₂ O ₃	0.5g
Phenol Red.....	0.03g
pH 7.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of coliform bacteria. For the identification and differentiation of enteropathogenic strains of *Escherichia coli* that do not ferment sorbitol.

Sorbitol MacConkey Agar (MacConkey Agar with Sorbitol)

Composition per liter:

Peptone.....	20.0g
Agar.....	15.0g
Sorbitol.....	10.0g
NaCl.....	5.0g
Bile salts No. 3.....	1.5g
Neutral Red.....	0.03g
Crystal Violet.....	1.0mg
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of pathogenic *Escherichia coli*.

Sorbitol MacConkey Agar (MacConkey Agar with Sorbitol) (BAM M139)

Composition per liter:

Peptone or gelysate.....	17.0g
Agar.....	13.5g
Sorbitol.....	10.0g
NaCl.....	5.0g
Proteose peptone No. 3 or polypeptone.....	3.0g
Bile salts, purified.....	1.5g
Neutral Red.....	0.03g
Crystal Violet.....	1.0mg
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of pathogenic *Escherichia coli*.

Sorbitol MacConkey Agar with BCIG (SMAC with BCIG)

Composition per liter:

Peptone.....	20.0g
Agar.....	15.0g
Sorbitol.....	10.0g
NaCl.....	5.0g
Proteose peptone.....	3.0g
Bile salts mixture.....	1.5g
5-Bromo-4-chloro-3-indolyl-β-D-glucuronide sodium salt.....	0.1g
Neutral Red.....	0.03g
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: A selective and differential medium for the detection of *Escherichia coli* O157 incorporating the chromogen 5-bromo-4-chloro-3-indolyl-β-D-glucuronide (BCIG). The medium combines two different screening mechanisms for the detection of *E. coli* O157, the failure to ferment sorbitol and the absence of β-glucuronidase activity. The non-sorbitol-fermenting and β-glucuronidase-negative *E. coli* O157 will appear as straw-colored colonies. Organisms with β-glucuronidase activity will cleave the substrate, leading to a distinct blue-green coloration of the colonies. The intestinal tract of ruminants is the prime reservoir of *E. coli* O157 and other enterohemorrhagic *E. coli* (EHEC) strains; therefore meats derived from cattle, sheep, goat, and deer can be expected to be contaminated. Foods implicated in human illness related to *E. coli* O157 include meats, dairy products, vegetables, salads, apple juice, and water.

Sorbitol Medium

Composition per liter:

Sorbitol.....	50.0g
Agar.....	15.0g
Peptone.....	10.0g
Yeast extract.....	10.0g
pH 6.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0 with HCl. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Gluconobacter asaii* and *Gluconobacter frateurii*.

Sorbitol Medium, 5%

Composition per liter:

D-Sorbitol	50.0g
Agar	15.0g
Peptone.....	10.0g
Yeast extract.....	10.0g

pH 6.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust to pH 6.0 with HCl. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Gluconobacter frateurii* and *Gluconobacter asaii*.

Sorogena Medium

Composition per 2000.0mL:

HI Agar	1.0L
HI/LV Broth.....	1.0L

HI Agar:

Composition per liter:

Agar	15.0g
Hay infusion broth	1.0L

pH 6.5 ± 0.2 at 25°C

Hay Infusion Broth:

Composition per liter:

Hay.....	2.5g
----------	------

Preparation of Hay Infusion Broth: Add hay to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for 30 min. Filter through Whatman #1 filter paper. Bring volume to 1.0L with distilled/deionized water.

Preparation of HI Agar: Add agar to hay infusion broth and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 with 5% lactic acid or 1N NaOH. Gently heat and bring to boiling. Autoclave for 20 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

HI/LV Broth:

Composition per liter:

Lactose.....	0.2g
Yeast extract.....	0.1g
Hay infusion broth	1.0L

pH 6.0 ± 0.2 at 25°C

Hay Infusion Broth:

Composition per liter:

Hay.....	2.5g
----------	------

Preparation of Hay Infusion Broth: Add lactose and yeast extract to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for 30 min. Filter through Whatman #1 filter paper. Bring volume to 1.0L with distilled/deionized water.

Preparation of HI/LV Broth: Add components to 1.0L hay infusion broth. Mix thoroughly. Adjust pH to 6.0 with 5% lactic acid. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Aseptically add 15.0mL of HI/LV broth as an overlay over the surface of the HI agar plates.

Use: For the cultivation of *Sorogena stoianovitchae*.

SOT Medium

Composition per liter:

NaHCO ₃	16.8g
NaNO ₃	2.5g
K ₂ SO ₄	1.0g
NaCl.....	1.0g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
Disodium EDTA·2H ₂ O.....	0.08g
CaCl ₂ ·2H ₂ O.....	0.04g
FeSO ₄ ·7H ₂ O.....	0.01g
Trace metals mix A5.....	1.0mL
Trace metals mix B6, modified.....	1.0mL

pH 9.0 ± 0.2 at 25°C

Trace Metals Mix A5:

Composition per liter:

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O.....	1.81g
Na ₂ MoO ₄ ·2H ₂ O.....	0.39g
ZnSO ₄ ·7H ₂ O.....	0.222g
CuSO ₄ ·5H ₂ O.....	0.079g
Co(NO ₃) ₂ ·6H ₂ O.....	0.049g

Preparation of Trace Metals Mix A5: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Metals Mix B6, Modified:

Composition per liter:

NH ₄ NO ₃	0.23g
K ₂ Cr ₂ (SO ₄) ₄ ·24H ₂ O.....	0.096g
NiSO ₄ ·7H ₂ O.....	0.048g
Ti ₂ (SO ₄) ₃	0.04g
Na ₂ WO ₄ ·2H ₂ O.....	0.018g

Preparation of Trace Metals Mix B6, Modified: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 9.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Spirulina maxima* and *Spirulina platensis*.

Sour Dough Medium

Composition per liter:

Maltose	20.0g
Pancreatic digest of casein.....	6.0g
Yeast extract.....	3.0g
Tween™ 80.....	0.3g
Fresh yeast extract solution	15.0mL

pH 5.6 ± 0.2 at 25°C

Fresh Yeast Extract Solution:**Composition per 100.0mL:**

Baker's yeast, live, pressed, starch-free,..... 25.0g

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.6 with 20% lactic acid or 6N HCl. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Lactobacillus sanfrancisco*.

Soy Peptone Broth**Composition per liter:**

Papaic digest of soybean meal..... 20.0g

NaCl..... 5.0g

Phenol Red (2% solution)..... 1.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Mycoplasma* species and *Ureaplasma* species.

Soybean Agar**Composition per liter:**

White soybeans..... 100.0g

Agar..... 15.0g

Preparation of Medium: Add soybeans to 1.0L of distilled/deionized water. Soak overnight. Autoclave for 60 min at 15 psi pressure–121°C. Filter through cheesecloth. Measure volume of filtrate. Add agar to a concentration of 1.5%. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus subtilis* and *Pseudomonas syringae*.

Soybean Casein Digest Agar

See: Trypticase™ Soy Agar

**Soybean Casein Digest Agar, HiVeg
(Tryptone Soy Agar, HiVeg)****Composition per liter:**

Agar..... 15.0g

Plant hydrolysate..... 15.0g

Papaic digest of soybean meal..... 5.0g

NaCl..... 5.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a wide variety of bacteria.

Soybean Casein Digest Broth, USP

See: Trypticase™ Soy Broth

**Soybean Casein Digest Medium, HiVeg
(Tryptone Soy Broth, HiVeg)****Composition per liter:**

Plant hydrolysate..... 17.0g

NaCl..... 5.0g

Papaic digest of soybean meal..... 3.0g

Glucose..... 2.5g

KH₂PO₄..... 2.5g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Store in a cool dark place preferably below 25°C.

Use: For the cultivation of a wide variety of bacteria.

Soybean Extract, M-1**Composition per liter:**

Soybeans..... 50.0g

Soluble starch..... 15.0g

(NH₄)₂HPO₃..... 10.0g

KCl..... 0.2g

MgSO₄·7H₂O..... 0.2g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add soybeans to 1.0L of distilled/deionized water. Soak overnight. Add 2.0g of NaOH. Adjust pH to 7.0 with HCl. Autoclave for 60 min at 0 psi pressure–100°C. Filter through cheesecloth. Bring volume of filtrate to 1.0L with distilled/deionized water. Add remaining components. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus subtilis*.

Soybean HiVeg Broth Base with Novobiocin**Composition per liter:**

Plant hydrolysate..... 17.0g

NaCl..... 5.0g

K₂HPO₄..... 4.0g

Papaic digest of soybean meal..... 3.0g

Glucose..... 2.5g

Synthetic detergent No. 1..... 1.12g

Selective solution..... 10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without selective novobiocin supplement, is available as a premixed powder from HiMedia.

Selective Solution:**Composition per 10.0mL:**

Novobiocin..... 0.1g

Preparation of Selective Solution: Add novobiocin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL selective solution. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 5 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the enrichment and isolation of *Escherichia coli* O157:H7 from foods.

Soybean HiVeg Medium (Tryptone Soy HiVeg Broth without Glucose)

Composition per liter:

Plant hydrolysate.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a wide variety of microorganisms. For sterility testing.

Soybean HiVeg Medium with 0.1% Agar (Tryptone Soy HiVeg Broth with 0.1% Agar)

Composition per liter:

Plant hydrolysate.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Agar.....	1.0g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of anaerobes from root canals, blood, and other clinical specimens.

Soybean HiVeg Medium with 0.1% Agar with Glucose (Tryptone Soy HiVeg Broth with 0.1% Agar)

Composition per liter:

Plant hydrolysate.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
Glucose.....	2.5g
K ₂ HPO ₄	2.5g
Agar.....	1.0g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of anaerobes from root canals, blood, and other clinical specimens and for determining glucose fermentation.

Soybean HiVeg Medium with Yeast Extract and Ferric Pyrophosphate

Composition per liter:

Plant hydrolysate.....	17.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Fe ₄ (P ₂ O ₇) ₃ ·H ₂ O.....	0.02g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of fastidious bacteria.

SP Agar

Composition per liter:

Agar.....	15.0g
Pancreatic digest of casein.....	2.5g
Galactose.....	1.0g
Raffinose.....	1.0g
Sucrose.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
K ₂ HPO ₄	0.25g
Vitamin solution.....	2.5mL

Vitamin Solution:

Composition per liter:

Inositol.....	1.0g
Calcium pantothenate.....	0.2g
Choline hydrochloride.....	0.2g
Thiamine.....	0.1g
Nicotinamide.....	0.75g
Pyridoxin.....	0.75g
Riboflavin.....	0.75g
<i>p</i> -Aminobenzoic acid.....	5.0mg
Folic acid.....	1.0mg
Biotin.....	0.05mg
Vitamin B ₁₂	0.05mg
Ethanol.....	1.0L

Preparation of Vitamin Solution: Add solid components to 1.0L of ethanol. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of myxobacteria.

SP 2 Agar**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	3.0g
Yeast extract	1.0g
Sodium acetate	0.02g
Artificial seawater	1.0L

pH 7.2 ± 0.2 at 25°C

Artificial Seawater:**Composition per liter:**

NaCl	24.7g
MgSO ₄ ·7H ₂ O	6.3g
MgCl ₂ ·6H ₂ O	4.6g
CaCl ₂	1.0g
KCl	0.7g
NaHCO ₃	0.2g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add solid components to 1.0L of artificial seawater. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

SP Medium**Composition per liter:**

Agar	15.0g
Soluble starch	5.0g
Pancreatic digest of casein	2.5g
Galactose	1.0g
Raffinose	1.0g
Sucrose	1.0g
MgSO ₄ ·7H ₂ O	0.5g
K ₂ HPO ₄	0.25g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Archanigium gephyra*, *Cystobacter fuscus*, *Melittangium lichenicola*, *Myxococcus* species, *Polyangium brachysporum*, *Stigmatella aurantiaca*, and *Stigmatella erecta*.

SP 2 Agar**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	3.0g
Yeast extract	1.0g
Sodium acetate	0.02g
Artificial seawater	1.0L

pH 7.2 ± 0.2 at 25°C

Artificial Seawater:**Composition per liter:**

NaCl	24.7g
MgSO ₄ ·7H ₂ O	6.3g
MgCl ₂ ·6H ₂ O	4.6g
CaCl ₂	1.0g

KCl	0.7g
NaHCO ₃	0.2g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add solid components to 1.0L of artificial seawater. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

SP 4 Medium**Composition per liter:**

Base solution	615.0mL
Fetal calf serum (inactivated at 56°C, 1 hr)	170.0mL
Yeast extract (2% solution)	100.0mL
CMRL 1066, 10X with glutamine	50.0mL
Fresh yeast extract solution	35.0mL
Phenol Red (0.1% solution)	20.0mL
Penicillin solution	10.0mL

pH 7.0–7.4 ± 0.2 at 25°C

Base Solution:**Composition per 615.0mL:**

Pancreatic digest of casein	11.2g
Noble agar	8.0g
Pancreatic digest of gelatin	5.3g
Glucose	5.0g
NaCl	0.875g
Beef extract	0.525g
Yeast extract	0.525g
Beef heart, solids from infusion	0.35g

Preparation of Base Solution: Add components to distilled/deionized water and bring volume to 615.0mL. Mix thoroughly. Adjust pH to 7.5. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

CMRL 1066, 10X with Glutamine:**Composition per liter:**

NaCl	6.8g
NaHCO ₃	2.2g
D-Glucose	1.0g
KCl	0.4g
L-Cysteine·HCl·H ₂ O	0.26g
CaCl ₂ , anhydrous	0.2g
MgSO ₄ ·7H ₂ O	0.2g
NaH ₂ PO ₄ ·H ₂ O	0.14g
L-Glutamine	0.1g
Sodium acetate·3H ₂ O	0.083g
L-Glutamic acid	0.075g
L-Arginine·HCl	0.07g
L-Lysine·HCl	0.07g
L-Leucine	0.06g
Glycine	0.05g
Ascorbic acid	0.05g
L-Proline	0.04g
L-Tyrosine	0.04g
L-Aspartic acid	0.03g
L-Threonine	0.03g
L-Alanine	0.025g
L-Phenylalanine	0.025g

L-Serine	0.025g
L-Valine	0.025g
L-Cystine	0.02g
L-Histidine·HCl·H ₂ O	0.02g
L-Isoleucine	0.02g
Phenol Red	0.02g
L-Methionine	0.015g
Deoxyadenosine	0.01g
Deoxycytidine	0.01g
Deoxyguanosine	0.01g
Glutathione, reduced	0.01g
Thymidine	0.01g
Hydroxy-L-proline	0.01g
L-Tryptophan	0.01g
Nicotinamide adenine dinucleotide	7.0mg
Tween™ 80	5.0mg
Sodium glucuronate·H ₂ O	4.2mg
Coenzyme A	2.5mg
Cocarcboxylase	1.0mg
Flavin adenine dinucleotide	1.0mg
Nicotinamide adenine dinucleotide phosphate	1.0mg
Uridine triphosphate	1.0mg
Choline chloride	0.5mg
Cholesterol	0.2mg
5-Methyldeoxycytidine	0.1mg
Inositol	0.05mg
p-Aminobenzoic acid	0.05mg
Niacin	0.025mg
Niacinamide	0.025mg
Pyridoxine	0.025mg
Pyridoxal·HCl	0.025mg
Biotin	0.01mg
D-Calcium pantothenate	0.01mg
Folic acid	0.01mg
Riboflavin	0.01mg
Thiamine·HCl	0.01mg

Preparation of CMRL 1066, 10X with Glutamine: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Filter sterilize.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free, 25.0g

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Penicillin Solution:

Composition per 10.0mL:

Penicillin G 1,000,000U

Preparation of Penicillin Solution: Add penicillin G to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 615.0mL of cooled sterile base solution, aseptically add 170.0mL of sterile inactivated fetal calf serum, 100.0mL of sterile yeast extract, 50.0mL of sterile CMRL 1066, 10X with glutamine, 35.0mL of sterile fresh yeast extract solution, 20.0mL of Phenol Red solution, and 10.0mL of sterile penicillin solution. Mix thoroughly. Aseptically distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the cultivation of tick-derived *Mycoplasma (Spiroplasma)*. Used for the enhanced recovery of *Mycoplasma pneumoniae*, *Mycoplasma alvi*, and *Mycoplasma hyopneumoniae*.

SP 4 Medium (DSMZ Medium 1076)

Composition per 510.2mL:

Tryptone	5.0g
Peptone	3.3g
NaCl	0.5g
Beef extract	0.3g
Yeast extract	0.3g
Beef heart, solids from infusion	0.2g
Fetal bovine serum (inactivated at 56°C, 1 hr)	90.0mL
CMRL 1066, 10X with glutamine	25.0mL
Yeast extract solution	17.5mL
Yeastolate solution	5.0mL
Glutamine solution	1.7mL
Phenol Red solution	1.0mL

pH 7.4 ± 0.2 at 25°C

CMRL 1066, 10X with Glutamine:

Composition per liter:

NaCl	6.8g
NaHCO ₃	2.2g
D-Glucose	1.0g
KCl	0.4g
L-Cysteine·HCl·H ₂ O	0.26g
CaCl ₂ , anhydrous	0.2g
MgSO ₄ ·7H ₂ O	0.2g
NaH ₂ PO ₄ ·H ₂ O	0.14g
L-Glutamine	0.1g
Sodium acetate·3H ₂ O	0.083g
L-Glutamic acid	0.075g
L-Arginine·HCl	0.07g
L-Lysine·HCl	0.07g
L-Leucine	0.06g
Glycine	0.05g
Ascorbic acid	0.05g

L-Tyrosine	0.04g
L-Aspartic acid	0.03g
L-Threonine	0.03g
L-Alanine	0.025g
L-Phenylalanine	0.025g
L-Serine	0.025g
L-Valine	0.025g
L-Cystine	0.02g
L-Histidine·HCl·H ₂ O	0.02g
L-Isoleucine	0.02g
Phenol Red	0.02g
L-Methionine	0.015g
Deoxyadenosine	0.01g
Deoxycytidine	0.01g
Deoxyguanosine	0.01g
Glutathione, reduced	0.01g
Thymidine	0.01g
Hydroxy-L-proline	0.01g
L-Tryptophan	0.01g
Nicotinamide adenine dinucleotide	7.0mg
Tween™ 80	5.0mg
Sodium glucuronate·H ₂ O	4.2mg

Coenzyme A	2.5mg
Coccarboxylase.....	1.0mg
Flavin adenine dinucleotide.....	1.0mg
Nicotinamide adenine dinucleotide phosphate.....	1.0mg
Uridine triphosphate.....	1.0mg
Choline chloride.....	0.5mg
Cholesterol.....	0.2mg
5-Methyldeoxycytidine.....	0.1mg
Inositol.....	0.05mg
<i>p</i> -Aminobenzoic acid.....	0.05mg
Niacin.....	0.025mg
Niacinamide.....	0.025mg
Pyridoxine.....	0.025mg
Pyridoxal-HCl.....	0.025mg
Biotin.....	0.01mg
D-Calcium pantothenate.....	0.01mg
Folic acid.....	0.01mg
Riboflavin.....	0.01mg
Thiamine-HCl.....	0.01mg

Preparation of CMRL 1066, 10X with Glutamine: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Filter sterilize.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract.....	2.0g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Yeastolate Solution:

Composition per 10.0mL:

Yeastolate.....	2.0g
-----------------	------

Preparation of Yeastolate Solution: Add yeastolate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Phenol Red Solution:

Composition per 100.0mL:

Phenol Red.....	1.0g
-----------------	------

Preparation of Phenol Red Solution: Add 1.0g of Phenol Red to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.0. Filter sterilize.

Glutamine Solution:

Composition per 10.0mL:

L-Glutamine.....	1.5g
------------------	------

Preparation of Glutamine Solution: Add 1.5g of L-glutamine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except fetal bovine serum, CMRL, yeast extract solution, yeastolate solution, Phenol Red solution, and glutamine solution, to distilled/deionized water and bring volume to 375.0mL. Mix thoroughly. Adjust pH to 7.4. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Mix thoroughly. Aseptically add fetal bovine serum, CMRL, yeast extract solution, yeastolate solution, Phenol Red solution, and glutamine solution. Mix thoroughly.

Use: For the cultivation of *Mycoplasma fermentans*.

SP 4 Medium with Glucose (DSMZ Medium 1076a)

Composition per 515.4mL:

Tryptone.....	5.0g
Peptone.....	3.3g

Coenzyme A.....	2.5mg
Coccarboxylase.....	1.0mg
Flavin adenine dinucleotide.....	1.0mg

Nicotinamide adenine dinucleotide phosphate	1.0mg
Uridine triphosphate	1.0mg
Choline chloride	0.5mg
Cholesterol	0.2mg
5-Methyldeoxycytidine	0.1mg
Inositol	0.05mg
<i>p</i> -Aminobenzoic acid	0.05mg
Niacin	0.025mg
Niacinamide	0.025mg
Pyridoxine	0.025mg
Pyridoxal-HCl	0.025mg
Biotin	0.01mg
D-Calcium pantothenate	0.01mg
Folic acid	0.01mg
Riboflavin	0.01mg
Thiamine-HCl	0.01mg

Preparation of CMRL 1066, 10X with Glutamine: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Filter sterilize.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract	2.0g
---------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Yeastolate Solution:

Composition per 10.0mL:

Yeastolate	2.0g
------------------	------

Preparation of Yeastolate Solution: Add yeastolate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Phenol Red Solution:

Composition per 100.0mL:

Phenol Red	1.0g
------------------	------

Preparation of Phenol Red Solution: Add 1.0g of Phenol Red to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.0. Filter sterilize.

Glutamine Solution:

Composition per 10.0mL:

L-Glutamine	1.5g
-------------------	------

Preparation of Glutamine Solution: Add 1.5g of L-glutamine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 10.0mL:

D-Glucose	1.0g
-----------------	------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except fetal bovine serum, CMRL, yeast extract solution, yeastolate solution, Phenol Red solution, and glutamine solution, to distilled/deionized water and bring volume to 375.0mL. Mix thoroughly. Adjust pH to 7.4. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Mix thoroughly. Aseptically add fetal bovine serum, CMRL, yeast extract solution, yeastolate solution, glucose solution, Phenol Red solution, and glutamine solution. Mix thoroughly.

Use: For the cultivation of *Mycoplasma genitalium*.

SP 5 Broth

Composition per liter:

Pancreatic digest of casein	9.0g
Yeast extract	1.0g
Artificial seawater	1.0L

pH 7.2 ± 0.2 at 25°C

Artificial Seawater:

Composition per liter:

NaCl	24.7g
MgSO ₄ ·7H ₂ O	6.3g
MgCl ₂ ·6H ₂ O	4.6g
CaCl ₂	1.0g
KCl	0.7g
NaHCO ₃	0.2g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add solid components to 1.0L of artificial seawater. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

SP 6 Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	3.0g
Yeast extract	1.0g
Artificial seawater	1.0L

pH 7.2 ± 0.2 at 25°C

Artificial Seawater:

Composition per liter:

NaCl	24.7g
MgSO ₄ ·7H ₂ O	6.3g
MgCl ₂ ·6H ₂ O	4.6g
CaCl ₂	1.0g
KCl	0.7g
NaHCO ₃	0.2g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add solid components to 1.0L of artificial seawater. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

SPB

See: **Salt Polymyxin Broth**

Special Infusion Agar, HiVeg with Blood

Composition per liter:

Agar	15.0g
Plant infusion	10.0g
Plant peptone No. 3	10.0g
Plant special infusion	7.5g

NaCl	5.0g
Na ₂ HPO ₄	2.5g
Glucose	2.0g
Blood, defibrinated	50.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 950.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Add 50.0mL sterile defibrinated blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of a variety of fastidious and nonfastidious aerobic and anaerobic microorganisms, including streptococci, yeasts, and molds.

Special Infusion Broth, HiVeg with Blood

Composition per liter:

Plant infusion	10.0g
Plant peptone No. 3	10.0g
Plant special infusion	7.5g
NaCl	5.0g
Na ₂ HPO ₄	2.5g
Glucose	2.0g
Blood, defibrinated	50.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 950.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Add 50.0mL sterile defibrinated blood. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of a variety of fastidious and nonfastidious aerobic and anaerobic microorganisms, including streptococci. For the propagation of pathogenic cocci and other fastidious organisms associated with blood culture work and allied pathological investigations.

Specimen Preservative Medium

Composition per liter:

NaCl	5.0g
Sodium citrate·2H ₂ O	5.0g
(NH ₄) ₂ HPO ₄	4.0g
KH ₂ PO ₄	2.0g
Yeast extract	1.0g
Sodium deoxycholate	0.5g
MgSO ₄ ·7H ₂ O	0.4g
Glycerol	300.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except glycerol, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Gently heat and bring to boiling. Add 300.0mL of glycerol. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 11 psi pressure–116°C.

Use: For the preservation of viable microorganisms in stool specimens. For the transport of fecal material.

Sphaericus Spore Medium

Composition per liter:

Agar	15.0g
Pancreatic digest of gelatin	5.0g
Beef extract	3.0g
Yeast extract	0.5g
MgCl ₂	0.095g
CaCl ₂	0.078g
MnCl ₂	6.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus sphaericus*.

Sphaerotilus Agar

(DSMZ Medium 51)

Composition per liter:

Agar	15.0g
Beef extract, Lab Lemco	5.0g

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cool in a sloping position to form slants. Cover solid slants with 2mL sterile tap water. Inoculate into the covering tap water and incubate at 20°C–25°C.

Use: For the cultivation and maintenance of *Sphaerotilus natans*.

Sphaerotilus CGYA Medium

Composition per liter:

Glycerol	10.0g
Pancreatic digest of casein	5.0g
Yeast extract	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Sphaerotilus natans* and *Sphaerotilus* species.

Sphaerotilus Defined Medium

Composition per liter:

Agar	15.0g
Glycerol	5.0g
Glutamic acid	0.9g
FeSO ₄ ·7H ₂ O	0.5g
MgSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.03g
ZnSO ₄ ·7H ₂ O	0.03g
Phosphate solution	100.0mL

pH 7.0 ± 0.2 at 25°C

Phosphate Solution:

Composition per 500.0mL:

K ₂ HPO ₄	5.7g
KH ₂ PO ₄	2.3g

Preparation of Phosphate Solution: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until dissolved. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except phosphate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile phosphate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Sphaerotilus* species.

Sphaerotilus discophorus Medium

Composition per liter:

Agar	12.0g
Peptone.....	5.0g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂	0.05g
MnSO ₄ ·H ₂ O	0.05g
Ferric solution.....	100.0mL
pH 7.0 ± 0.2 at 25°C	

Ferric Solution:

Composition per 100.0mL:

Ferric ammonium citrate.....	0.5g
FeCl ₃ ·6H ₂ O	0.01g

Preparation of Ferric Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ferric solution, to tap water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile ferric solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Sphaerotilus discophorus*.

Sphaerotilus Isolation Medium

Composition per liter:

Agar	15.0g
Glycerol	10.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	1.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Sphaerotilus* species.

Sphaerotilus/Leptothrix Agar

Composition per liter:

Agar	20.0g
Peptone.....	1.5g
Yeast extract.....	1.0g
Ferric ammonium citrate.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂	0.05g

MnSO ₄ ·H ₂ O.....	0.05g
FeCl ₃ ·6H ₂ O.....	0.01g
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.1. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Leptothrix cholodnii*, *Leptothrix* species, and *Sphaerotilus natans*.

Sphaerotilus and *Leptothrix* Enrichment Medium

Composition per liter:

Glucose	1.0g
Peptone	1.0g
MgSO ₄ ·7H ₂ O	0.2g
FeCl ₃ ·6H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.05g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enrichment and cultivation of *Sphaerotilus* species and *Leptothrix* species.

Sphaerotilus Leptothrix Medium (DSMZ Medium 803)

Composition per liter:

Agar	20.0g
Peptone	1.5g
Yeast extract.....	1.0g
Ferric ammonium citrate.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂	0.05g
MnSO ₄ ·2H ₂ O.....	0.05g
FeCl ₃ ·6H ₂ O.....	0.01g
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Leptothrix mobilis*.

Sphaerotilus Medium (DSMZ Medium 51)

Composition per liter:

Beef extract, Lab Lemco.....	5.0g
------------------------------	------

Preparation of Medium: Add beef extract to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Sphaerotilus natans*.

Sphaerotilus Medium

Composition per liter:

Agar	15.0g
Lab-Lemco powder.....	5.0g
pH 7.0 ± 0.2 at 25°C	

Source: Lab-Lemco powder is available from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Sphaerotilus natans*.

Sphaerotilus natans Enrichment Medium

Composition per liter:

Sodium lactate.....	0.1g
Na ₂ HPO ₄ ·7H ₂ O.....	0.034g
CaCl ₂	0.027g
MgSO ₄ ·7H ₂ O.....	0.023g
K ₂ HPO ₄	0.022g
KH ₂ PO ₄	8.5mg
NH ₄ Cl.....	1.7mg
FeCl ₃ ·6H ₂ O.....	0.25mg
pH 7.1–7.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enrichment and cultivation of *Sphaerotilus natans*.

Sphaerotilus natans Isolation Agar

Composition per liter:

Agar.....	15.0g
Meat extract.....	0.5g

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Sphaerotilus natans*.

Sphaerotilus natans Isolation Agar

Composition per liter:

Agar.....	15.0g
Casein hydrolysate.....	1.5g

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Sphaerotilus natans*.

Sphaerotilus natans Medium (LMG Medium 33)

Composition per liter:

Yeast extract.....	10.0g
Peptone.....	5.0g
Casitone.....	5.0g
Glucose.....	5.0g
(NH ₄) ₂ SO ₄	0.5g
L-Cysteine·HCl.....	0.5g
Resazurin.....	1.0mg
Mineral solution.....	40.0mL
Fatty acid mixture.....	3.1mL

Hemin solution.....	0.5mL
Vitamin K ₁	0.2mL
pH 6.9 ± 0.2 at 25°C	

Mineral Solution:

Composition per liter:

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.48g
CaCl ₂ ·2H ₂ O.....	0.3g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Fatty Acid Mixture:

Composition per 31.0mL:

Acetic acid.....	17.0mL
Propionic acid.....	6.0mL
<i>n</i> -Butyric acid.....	4.0mL
<i>n</i> -Valeric acid.....	1.0mL
<i>iso</i> -Valeric acid.....	1.0mL
<i>iso</i> -Butyric acid.....	1.0mL
DL-2-Methylbutyric acid.....	1.0mL

Preparation of Fatty Acid Mixture: Combine components. Mix thoroughly. Adjust pH to 7.5 with concentrated NaOH.

Hemin Solution:

Composition per 1.0mL:

Hemin.....	5.0mg
NaOH (1N solution).....	1.0mL

Preparation of Hemin Solution: Add hemin to 1.0mL of NaOH solution. Mix thoroughly.

Preparation of Medium: Add components, except L-cysteine-HCl, hemin solution, and fatty acid mixture, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to room temperature while sparging with 100% CO₂. Add L-cysteine-HCl, hemin solution, and fatty acid mixture. Adjust pH to 6.9 with 8N NaOH while continuing to sparge with 100% CO₂. After pH has been reached, sparge with 100% N₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Sphaerotilus natans*.

Sphingobacterium Medium

Composition per liter:

Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g
Yeast extract.....	3.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Sphingobacterium mizutae*, *Sphingobacterium multivorum*, and *Sphingobacterium spiritivorum*.

Spirillum gracile Agar

Composition per liter:

Agar.....	15.0g
Peptone.....	5.0g
Yeast extract.....	0.5g

K ₂ HPO ₄	0.1g
Tween™ 80.....	0.02g
Tap water.....	1.0L
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Spirillum gracile*.

Spirillum gracile Broth

Composition per liter:

Peptone.....	5.0g
Yeast extract.....	0.5g
K ₂ HPO ₄	0.1g
Tween™ 80.....	0.02g
Tap water.....	1.0L
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Spirillum gracile*.

Spirillum gracile Medium

Composition per liter:

Agar.....	15.0g
Peptone.....	5.0g
Yeast extract.....	0.5g
K ₂ HPO ₄	0.1g
Tween™ 80.....	0.02g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Aquaspirillum gracile*.

Spirillum lipoferum Medium

Composition per liter:

Sodium malate.....	5.0g
Agar.....	3.5g
KH ₂ PO ₄	0.4g
MgSO ₄ ·7H ₂ O.....	0.2g
K ₂ HPO ₄	0.1g
NaCl.....	0.1g
CaCl ₂	0.02g
FeCl ₃	0.01g
NaMoO ₄ ·2H ₂ O.....	2.0mg
Bromthymol Blue solution.....	5.0mL
pH 6.8 ± 0.2 at 25°C	

Bromthymol Blue Solution:

Composition per 10.0mL:

Bromthymol Blue.....	0.5g
Ethanol.....	10.0mL

Preparation of Bromthymol Blue Solution: Add Bromthymol Blue to 10.0mL of ethanol. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Spirillum leptoferum*.

Spirillum lipoferum Medium

Composition per liter:

Malic acid.....	5.0g
NaOH.....	4.7g
Agar.....	1.75g
KH ₂ PO ₄	0.4g
MgSO ₄ ·7H ₂ O.....	0.2g
K ₂ HPO ₄	0.1g
NaCl.....	0.1g
CaCl ₂	0.02g
FeCl ₃	0.01g
NaMoO ₄ ·2H ₂ O.....	2.0mg
Bromthymol Blue solution.....	5.0mL
pH 6.8 ± 0.2 at 25°C	

Bromthymol Blue Solution:

Composition per 10.0mL:

Bromthymol Blue.....	0.5g
Ethanol.....	10.0mL

Preparation of Bromthymol Blue Solution: Add Bromthymol Blue to 10.0mL of ethanol. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Spirillum leptoferum*.

Spirillum lipoferum Medium

Composition per liter:

Malic acid.....	5.0g
KOH.....	4.0g
Agar.....	1.75g
FeSO ₄ ·7H ₂ O.....	0.5g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
NaCl.....	0.1g
CaCl ₂	0.02g
MnSO ₄ ·H ₂ O.....	0.01g
NaMoO ₄ ·2H ₂ O.....	2.0mg
Bromthymol Blue solution.....	5.0mL
pH 6.8 ± 0.2 at 25°C	

Bromthymol Blue Solution:

Composition per 10.0mL:

Bromthymol Blue.....	0.5g
Ethanol.....	10.0mL

Preparation of Bromthymol Blue Solution: Add Bromthymol Blue to 10.0mL of ethanol. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Spirillum leptoferum*.

Spirillum* Medium*Composition per liter:**

Calcium lactate	10.0g
Peptone.....	5.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 20 min at 11 psi pressure–116°C. A precipitate will form during autoclaving.

Use: For the cultivation of *Spirillum* species.

Spirillum* Medium*Composition per liter:**

Peptone.....	10.0g
MgSO ₄ ·7H ₂ O	1.0g
(NH ₄) ₂ SO ₄	1.0g
Succinic acid.....	1.0g
FeCl ₃ ·6H ₂ O	2.0mg
MnSO ₄ ·H ₂ O	2.0mg

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Aquaspirillum autotrophicum*, *Aquaspirillum dispar*, *Aquaspirillum peregrinum*, and *Aquaspirillum serpens*.

Spirillum* Nitrogen-Fixing Medium*Composition per liter:**

Sodium malate	5.0g
KH ₂ PO ₄	0.4g
MgSO ₄ ·7H ₂ O	0.2g
K ₂ HPO ₄	0.1g
NaCl	0.1g
Yeast extract.....	0.05g
CaCl ₂	0.02g
FeCl ₃	0.01g
NaMoO ₄ ·2H ₂ O.....	2.0mg

pH 7.2–7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Azospirillum brasilense*, *Azospirillum lipoferum*, and *Herbaspirillum seropedicae*.

Spirillum volutans* Defined Medium*Composition per liter:**

BES (<i>N,N</i> -bis[2-hydroxyethyl]-2-aminoethane sulfonic acid) buffer	1.07g
MgSO ₄ ·7H ₂ O	1.0g
(NH ₄) ₂ SO ₄	1.0g
Succinic acid.....	1.0g
L-Histidine.....	0.2g
L-Isoleucine.....	0.2g
L-Methionine.....	0.2g
L-Threonine.....	0.2g
NaCl	0.085g

L-Cystine	0.025g
K ₂ HPO ₄	0.02g
FeCl ₃ ·6H ₂ O	3.0mg
DL-Norepinephrine.....	2.0mg
MnSO ₄ ·H ₂ O	2.0mg
CaCO ₃	1.0mg
ZnSO ₄ ·7H ₂ O	0.72mg
Na ₂ MoO ₄ ·2H ₂ O	0.245mg
CoSO ₄ ·7H ₂ O	0.14mg
CuSO ₄ ·5H ₂ O	0.13mg
H ₂ BO ₃	0.031mg

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Spirillum volutans*.

Spirit Blue Agar**Composition per liter:**

Agar	20.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g
Spirit Blue.....	0.15g
Lipoidal emulsion.....	30.0mL

pH 6.8 ± 0.2 at 25°C

Lipoidal Emulsion:**Composition per 500.0mL:**

Tween™ 80.....	1.0mL
Cottonseed oil or olive oil.....	100.0mL

Preparation of Lipoidal Emulsion: Add Tween™ 80 to 400.0mL of warm distilled/deionized water. Mix thoroughly. Add 100.0mL of cottonseed or olive oil. Emulsify in a blender. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except lipoidal emulsion, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 30.0mL of sterile lipoidal emulsion. Mix thoroughly. Pour into sterile Petri dishes while shaking flask to keep emulsion dispersed.

Use: For the detection, enumeration, and study of lipolytic microorganisms.

Spirit Blue HiVeg Agar**Composition per liter:**

Agar	17.0g
Plant hydrolysate	10.0g
Yeast extract.....	5.0g
Spirit Blue.....	0.15g
Lipoidal emulsion.....	30.0mL

pH 6.8 ± 0.2 at 25°C

Source: This medium, without lipoidal emulsion, is available as a pre-mixed powder from HiMedia.

Lipoidal Emulsion:**Composition per 500.0mL:**

Tween™ 80.....	1.0mL
Cottonseed oil or olive oil.....	100.0mL

Preparation of Lipoidal Emulsion: Add Tween™ 80 to 400.0mL of warm distilled/deionized water. Mix thoroughly. Add 100.0mL of cottonseed or olive oil. Emulsify in a blender. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except lipoidal emulsion, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 30.0mL of sterile lipoidal emulsion. Mix thoroughly. Pour into sterile Petri dishes while shaking flask to keep emulsion dispersed.

Use: For the detection, enumeration, and study of lipolytic microorganisms.

Spirochaeta americana Medium (DSMZ Medium 1165)

Composition per liter:

NaCl	30.0g
NaHCO ₃	24.0g
Na ₂ CO ₃	2.76g
NH ₄ Cl	1.0g
KCl	0.2g
K ₂ HPO ₄	0.2g
MgCl ₂ ·6H ₂ O.....	0.1g
Resazurin	1.0mg
Sulfide solution.....	10.0mL
Glucose solution	10.0mL
Yeast extract solution.....	10.0mL
Vitamin solution.....	2.0mL
Trace elements solution	1.0mL
pH 9.4 ± 0.2 at 25°C	

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract	0.5g
---------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Glucose Solution:

Composition per 10.0mL:

D-Glucose.....	5.0g
----------------	------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Sulfide Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.4g
--	------

Preparation of Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg

Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution:

Composition per 200.0mL:

MnCl ₂ ·4H ₂ O	0.72g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	0.4g
FeSO ₄ ·7H ₂ O.....	0.2g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.2g
NiCl ₂ ·6H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.02g
CuSO ₄ ·5H ₂ O.....	0.02g
H ₃ BO ₃	0.02g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
HCl.....	5.0mL

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except carbonate, bicarbonate, sulfide solution, yeast extract solution, glucose solution, and vitamin solution, to distilled/deionized water and bring volume to 968.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 100% N₂ gas. Add the Na₂CO₃ and NaHCO₃. Mix thoroughly while sparging with 100% N₂ gas. Adjust pH to 9.4. Dispense into culture vessels (Hungate tubes or serum bottles). Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add sulfide solution, yeast extract solution, glucose solution, and vitamin solution. Mix thoroughly.

Use: For the cultivation of *Spirochaeta americana*.

Spirochaeta aurantia Agar

Composition per 1010.0mL:

Solution A.....	1.0L
Solution B.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Solution A:

Composition per liter:

Agar	10.0g
Pancreatic digest of casein.....	5.0g
Glucose	2.0g
Yeast extract.....	2.0g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5 with KOH. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°.

Solution B:

Composition per 200.0mL:

K ₂ HPO ₄	21.25g
KH ₂ PO ₄	10.62g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Combine 1.0L of sterile solution A with 10.0mL of sterile solution B. Mix thoroughly. Aseptically pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Spirochaeta aurantia*.

Spirochaeta aurantia Growth Medium

Composition per liter:

Yeast extract.....	4.0g
Maltose.....	2.0g
Peptone.....	2.0g
Potassium phosphate buffer (0.1M solution, pH 7.0).....	100.0mL
	pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Filter sterilize potassium phosphate buffer. Add components, except potassium phosphate buffer, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile potassium phosphate buffer. Mix thoroughly. Adjust pH to 7.2. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Spirochaeta aurantia*.

Spirochaeta aurantia Isolation Medium

Composition per liter:

Peptone.....	1.0g
Yeast extract.....	1.0g
Hay extract.....	500.0mL
	pH 6.5 ± 0.2 at 25°C

Hay Extract:

Composition per liter:

Hay, dried.....	5.0g
-----------------	------

Preparation of Hay Extract: Add hay to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 10 min. Filter through Whatman #1 filter paper.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Spirochaeta aurantia*.

Spirochaeta caldaria Medium

Composition per liter:

Glucose.....	2.0g
Pancreatic digest of casein.....	2.0g
L-Cysteine.....	0.25g
Resazurin.....	0.5mg
Wolfe's mineral solution.....	25.0mL
Trace elements solution SL-10.....	10.0mL
Wolfe's vitamin solution.....	10.0mL
	pH 7.0 ± 0.2 at 25°C

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoCl ₂ ·6H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g

CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8. Filter sterilize. Sparge with 100% N₂.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
p-Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Calcium DL-pantothenate.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except Wolfe's mineral solution, trace elements SL-10 solution, and Wolfe's vitamin solution, to distilled/deionized water and bring volume to 955.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 25.0mL of sterile Wolfe's mineral solution, 10.0mL of sterile trace elements SL-10 solution, and 10.0mL of sterile Wolfe's vitamin solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks. Adjust pH to 7.0 with sterile NaOH.

Use: For the cultivation of *Spirochaeta caldaria*.

Spirochaeta halophila Medium

Composition per liter:

Glucose salts solution.....	970.0mL
Yeast extract peptone solution.....	30.0mL

Glucose Salts Solution:**Composition per liter:**

NaCl	49.3g
MgSO ₄ ·7H ₂ O	49.2g
CaCl ₂ ·2H ₂ O	5.9g
Glucose solution	100.0mL
Sulfide solution	100.0mL

Preparation of Glucose Salts Solution: Add components, except glucose solution and sulfide solution, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add sterile glucose solution and sulfide solution. Mix thoroughly.

Sulfide Solution:**Composition per 100.0mL:**

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Glucose Solution:**Composition per 100.0mL:**

Glucose	5.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Yeast Extract Peptone Solution:**Composition per 30.0mL:**

Yeast extract	4.0g
Peptone	2.0g

Preparation of Yeast Extract Peptone Solution: Add components to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Aseptically combine 30.0mL of yeast extract peptone solution with 970.0mL of glucose salts solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Spirochaeta halophila*.

Spirochaeta isovaleric* Medium*Composition per liter:**

Glucose	2.0g
Pancreatic digest of casein	1.0g
Yeast extract	0.5g
L-Cysteine·HCl	0.05g
Resazurin	0.001g
Seawater	750.0mL
Tris·HCl buffer (0.2M solution, pH 7.5)	250.0mL
pH 7.5 ± 0.2 at 25°C	

Preparation of Medium: Prepare and dispense medium under 100% N₂. Combine components. Mix thoroughly. Sparge with 100% N₂. Adjust pH to 7.5 while continuing to sparge with 100% N₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Spirochaeta isovaleric*.

Spirochaeta litoralis* Medium*Composition per liter:**

Pancreatic digest of casein	3.0g
NaCl	2.0g
Yeast extract	0.5g
Glucose solution	2.0mL
Potassium phosphate buffer (1M, pH 7.4)	2.0mL
Sulfide solution	0.5mL
Salts solution	0.2mL
pH 7.3 ± 0.2 at 25°C	

Glucose Solution:**Composition per 100.0mL:**

D-Glucose	25.0g
-----------------	-------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Sulfide Solution:**Composition per 100.0mL:**

Na ₂ S·9H ₂ O	10.0g
---	-------

Preparation of Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Salts Solution:**Composition per 100.0mL:**

MgSO ₄ ·7H ₂ O	12.5g
CaCl ₂ ·2H ₂ O	3.75g
EDTA	1.0g
FeSO ₄ ·7H ₂ O	0.5g
Trace elements solution	25.0mL

Preparation of Salts Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Elements Solution:**Composition per 1800.0mL:**

H ₃ BO ₃	5.5g
MnCl ₂ ·4H ₂ O	3.5g
AlCl ₃ ·6H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.5g
CuCl ₂ ·2H ₂ O	0.5g
NiCl ₂ ·6H ₂ O	0.5g
ZnCl ₂	0.5g
KI	0.25g
LiCl	0.25g
Na ₂ MoO ₄ ·2H ₂ O	0.25g
BaCl ₂ ·2H ₂ O	0.15g
SnCl ₂ ·2H ₂ O	0.15g
NaVO ₃	0.05g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1800.0mL. Mix thoroughly. Adjust pH to 3–4 with HCl.

Preparation of Medium: Add components, except glucose solution and sulfide solution, to distilled/deionized water and bring volume to 997.5mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution and sulfide solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation of *Spirochaeta litoralis* from marine habitats.

Spirochaeta litoralis Medium**Composition per liter:**

Glucose	2.0g
Pancreatic digest of casein	1.0g
Yeast extract	1.0g
L-Cysteine	0.5g
Resazurin	1.0mg
Seawater	750.0mL
Tris-HCl buffer (1.0M solution, pH 7.5)	50.0mL
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Adjust pH to 7.5 while continuing to sparge with 100% N₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Final pH of medium after autoclaving should be 7.2.

Use: For the cultivation and maintenance of *Spirochaeta litoralis*.

Spirochaeta smaragdinae Medium (DSMZ Medium 819)**Composition per liter:**

NaCl	50.0g
Yeast extract	5.0g
NH ₄ Cl	1.0g
Cysteine-HCl·H ₂ O	0.5g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
MgCl ₂ ·6H ₂ O	0.2g
KCl	0.2g
CaCl ₂ ·2H ₂ O	0.1g
Resazurin	0.5mg
NaHCO ₃ solution	80.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution	10.0mL
pH 7.8 ± 0.2 at 25°C	

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.2g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Neutralize to pH 7.0 with sterile HCl.

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g

NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 910.0mL. Mix thoroughly. Adjust pH to 7.8. Gently heat and bring to boiling. Cool while sparging with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically and anaerobically add 80.0mL NaHCO₃ solution and 10.0mL Na₂S·9H₂O solution. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Spirochaeta smaragdinae*.

Spirochaeta stenostrepta Medium**Composition per liter:**

Glucose	5.0g
Peptone	2.0g
Yeast extract	0.3g
Vitamin B ₁₂	0.01mg
Salts solution	100.0mL
Phosphate solution	15.0mL
Sulfide solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Phosphate Solution:**Composition per liter:**

KH ₂ PO ₄	30.0g
K ₂ HPO ₄	70.0g

Preparation of Phosphate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Salts Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	2.0g
CaCl ₂ ·2H ₂ O	0.75g
EDTA	0.2g
FeSO ₄ ·7H ₂ O	0.1g
Trace elements solution	5.0mL

Preparation of Salts Solution: Add EDTA to approximately 800.0mL of distilled/deionized water. Gently heat until dissolved. Adjust pH to 7.0 with 2.5% KOH. Add the remaining components. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water.

Trace Elements Solution:**Composition per 1800.0mL:**

H ₃ BO ₃	5.5g
MnCl ₂ ·4H ₂ O	3.5g
AlCl ₃ ·6H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.5g
CuCl ₂ ·2H ₂ O	0.5g
NiCl ₂ ·6H ₂ O	0.5g
ZnCl ₂	0.5g

KI	0.25g
LiCl	0.25g
Na ₂ MoO ₄ ·2H ₂ O	0.25g
BaCl ₂ ·2H ₂ O	0.15g
SnCl ₂ ·2H ₂ O	0.15g
NaVO ₃	0.05g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1800.0mL. Mix thoroughly. Adjust pH to 3–4 with HCl.

Sulfide Solution:

Composition per 100.0mL:

Na ₂ S·9H ₂ O	2.0g
---	------

Preparation of Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Prepare solution freshly.

Preparation of Medium: Add components, except sulfide solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile sulfide solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation of *Spirochaeta stenostrepta*.

Spirochaeta stenostrepta Medium

Composition per liter:

Glucose	5.0g
Peptone	2.0g
Yeast extract	2.0g
L-Cysteine	0.5g
Resazurin	1.0mg

pH 7.3–7.6 at 25°C

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Adjust pH to 7.3–7.6 while continuing to sparge with 100% N₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Spirochaeta stenostrepta*.

Spirochaeta zuelzeri Medium

Composition per liter:

Solution 1	480.0mL
Solution 2	480.0mL
Solution 3	20.0mL
Solution 4	20.0mL

pH 7.2 ± 0.2 at 25°C

Solution 1:

Composition per 480.0mL:

KH ₂ PO ₄	0.75g
L-Cysteine·HCl·H ₂ O	0.5g
NaH ₂ PO ₄ ·H ₂ O	0.25g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 480.0mL. Mix thoroughly. Adjust pH to 7.2 with 5.0% KOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution 2:

Composition per 480.0mL:

NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.5g

Yeast extract	0.2g
CaCl ₂	0.02g
Resazurin	1.0mg
FeCl ₃ ·6H ₂ O solution (0.25g/L)	10.0mL
Trace elements solution	2.0mL

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 480.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Trace Elements Solution:

Composition per 100.0mL:

Na ₂ MoO ₄ ·2H ₂ O	0.075g
H ₃ BO ₃	0.056g
ZnSO ₄ ·7H ₂ O	0.044g
CoCl ₂ ·6H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	2.0mg
MnCl ₂	2.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution 3:

Composition per 20.0mL:

NaHCO ₃	1.0g
--------------------------	------

Preparation of Solution 3: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize under pressure.

Solution 4:

Composition per 20.0mL:

Glucose	2.0g
---------------	------

Preparation of Solution 4: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically add 480.0 mL of sterile solution 1 to 480.0mL of sterile solution 2 under 80% N₂ + 20% CO₂. While gassing, add 20.0mL of sterile solution 3 and 20.0mL of sterile solution 4. Mix thoroughly. Adjust pH to 7.2. Aseptically and anaerobically distribute into tubes. Cap with rubber stoppers.

Use: For the cultivation and maintenance of *Spirochaeta zuelzeri*.

Spirochete Enrichment Medium

Composition per liter:

Agar	10.0g
Beef extract	1.0g
Peptone	1.0g
Yeast extract	1.0g
Seawater	500.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of spirochetes from muds. A well is cut into the agar plate and filled with mud samples. Spirochetes migrate out of the mud into the agar surrounding the well.

Spirochete Medium (ATCC Medium 164)

Composition per liter:

Agar	15.0g
KH ₂ PO ₄	1.0g

NH ₄ Cl	1.0g
Yeast extract	1.0g
MgSO ₄	0.5g
CaCl ₂	0.04g
FeCl ₃ ·6H ₂ O	1.25mg
NaHCO ₃ solution	20.0mL
Glucose solution	10.0mL
Na ₂ S·9H ₂ O solution	5.0mL

Glucose Solution:**Composition per 100.0mL:**

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add the NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Na₂S·9H₂O Solution:**Composition per 100.0mL:**

Na ₂ S·9H ₂ O	10.0g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components—except NaHCO₃ solution, glucose solution, and Na₂S·9H₂O solution—to distilled/deionized water and bring volume to 965.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 20.0mL of sterile NaHCO₃ solution, 10.0mL of sterile glucose solution, and 5.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of spirochetes.

Spirochete Medium (ATCC Medium 1712)

Composition per liter:

Tris(hydroxymethyl)aminomethane buffer	7.52g
Pancreatic digest of casein	1.0g
Yeast extract	1.0g
L-Cysteine·HCl·2H ₂ O	0.5g
Resazurin	1.0mg
Seawater	750.0mL
Glucose solution	20.0mL

pH 7.2 ± 0.2 at 25°C

Glucose Solution:**Composition per 20.0mL:**

Glucose	2.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except glucose solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Aseptically add sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Spirochaeta litoralis*.

Spirochete Thermophile Medium (DSMZ Medium 509)

Composition per 1012.0mL:

Solution A	920.0mL
Solution D	50.0mL
Solution E	20.0mL
Solution F	10.0mL
Solution G	10.0mL
Solution B	1.0mL
Solution C	1.0mL

pH 7.0 ± 0.2 at 25°C

Solution A:**Composition per 920.0mL:**

NaCl	4.0g
MgCl ₂ ·6H ₂ O	0.8g
KCl	0.5g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.03g
Resazurin	1.0mg

Preparation of Solution A: Add components to 920.0mL distilled/deionized water. Mix thoroughly. Bring to boiling for a few minutes. Cool to room temperature while gassing with 80% N₂ + 20% CO₂ gas. Adjust pH to 6.0. Immediately distribute under N₂ into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:**Composition per liter:**

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution D:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution D: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with

100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution E:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Solution F:

Composition per 10.0mL:

Starch.....	1.0g
-------------	------

Preparation of Solution F: Add starch to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Solution A is distributed into anaerobic tubes with rubber stoppers prior to autoclaving. Using aseptic and anaerobic conditions and syringes, appropriate volumes of sterile solutions B–G are injected into each tube to yield the specified concentrations.

Use: For the cultivation of *Spirochaeta thermophila*.

Spirolate Broth

Composition per liter:

Pancreatic digest of casein.....	15.0g
Glucose.....	5.0g
Yeast extract.....	5.0g
NaCl.....	2.5g
L-Cysteine-HCl·H ₂ O.....	1.0g
Sodium thioglycolate.....	0.5g
Palmitic acid.....	0.05g
Stearic acid.....	0.05g
Oleic acid.....	0.05g
Linoleic acid.....	0.05g
Serum.....	100.0mL

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Distribute into screw-capped tubes in 20.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 2.0mL

of serum to each tube. Heat-inactivated sheep, rabbit, or bovine serum may be used. Tighten caps. Mix thoroughly.

Use: For the cultivation of *Treponema phagedenis* and other spirochetes.

Spirolate HiVeg Broth, OMATA with Serum

Composition per liter:

Plant hydrolysate.....	15.0g
Glucose.....	5.0g
Yeast extract.....	5.0g
NaCl.....	2.5g
L-Cysteine-HCl.....	1.0g
Na-thioglycolate.....	0.5g
Sheep or rabbit blood serum, inactivated 10%.....	100.0mL

pH 7.1 ± 0.2 at 25°C

Source: This medium, without serum, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Distribute into screw-capped tubes in 20.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 2.0mL of serum to each tube. Heat-inactivated sheep, rabbit, or bovine serum may be used. Tighten caps. Mix thoroughly.

Use: For the cultivation of *Treponema phagedenis* and other spirochetes.

Spiroplasma Agar MID

Composition per 291.2mL:

Schneider's <i>Drosophila</i> medium.....	160.0mL
Solution 1.....	80.0mL
Fetal calf serum.....	50.0mL
Phenol Red (0.5% solution).....	1.2mL

pH 7.4 ± 0.2 at 25°C

Schneider's *Drosophila* Medium:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.7g
NaCl.....	2.1g
Yeast extract.....	2.0g
Trehalose.....	2.0g
D-Glucose.....	2.0g
L-Glutamine.....	1.8g
L-Lysine-HCl.....	1.7g
L-Proline.....	1.7g
KCl.....	1.6g
Na ₂ HPO ₄ ·7H ₂ O.....	1.3g
L-Glutamic acid.....	0.8g
L-Methionine.....	0.8g
CaCl ₂ , anhydrous.....	0.6g
KH ₂ PO ₄	0.5g
β-Alanine.....	0.5g
L-Tyrosine.....	0.5g
L-Arginine.....	0.4g
L-Aspartic acid.....	0.4g
L-Histidine.....	0.4g
L-Threonine.....	0.4g
NaHCO ₃	0.4g
Glycine.....	0.3g
L-Serine.....	0.3g
L-Valine.....	0.3g

L-Isoleucine	0.2g
L-Leucine	0.2g
L-Phenylalanine	0.2g
α -Ketoglutaric acid	0.2g
Fumaric acid	0.1g
Malic acid	0.1g
Succinic acid	0.1g
L-Cystine	0.1g
L-Tryptophan	0.1g
L-Cysteine	0.06g

Preparation of Schneider's *Drosophila* Medium: Add components to 1.0L of distilled/deionized water. Mix thoroughly. Filter sterilize.

Solution 1:

Composition per 80.0mL:

Sorbitol	7.0g
Noble agar	5.0g
Beef heart, solids from infusion	5.0g
Peptone	1.8g
Sucrose	1.0g
Pancreatic digest of casein	1.0g
NaCl	0.5g
D-Fructose	0.1g
D-Glucose	0.1g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 80.0mL. Mix thoroughly. Adjust pH to 7.8 with 1N NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Bring fetal calf serum and Phenol Red solution to 56°C. Rapidly bring Schneider's *Drosophila* medium to 37°C. Rapidly combine the components. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Spiroplasma kunkelii* and *Spiroplasma* species.

Spiroplasma Broth MID

Composition per 291.2mL:

Schneider's <i>Drosophila</i> medium	160.0mL
Solution 1	80.0mL
Fetal calf serum	50.0mL
Phenol Red (0.5% solution)	1.2mL

pH 7.4 \pm 0.2 at 25°C

Schneider's *Drosophila* Medium:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.7g
NaCl	2.1g
Yeast extract	2.0g
Trehalose	2.0g
D-Glucose	2.0g
L-Glutamine	1.8g
L-Lysine·HCl	1.7g
L-Proline	1.7g
KCl	1.6g

α -Ketoglutaric acid	0.2g
Fumaric acid	0.1g
Malic acid	0.1g
Succinic acid	0.1g
L-Cystine	0.1g
L-Tryptophan	0.1g
L-Cysteine	0.06g

Preparation of Schneider's *Drosophila* Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Solution 1:

Composition per 80.0mL:

Sorbitol	7.0g
Beef heart, solids from infusion	5.0g
Peptone	1.8g
Sucrose	1.0g
Pancreatic digest of casein	1.0g
NaCl	0.5g
D-Fructose	0.1g
D-Glucose	0.1g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 80.0mL. Mix thoroughly. Adjust pH to 7.8 with 1N NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Bring fetal calf serum and Phenol Red solution to 56°C. Rapidly bring Schneider's *Drosophila* medium to 37°C. Rapidly combine the components. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Spiroplasma kunkelii* and *Spiroplasma* species.

Spiroplasma Medium

Composition per liter:

Sucrose	80.0g
Beef heart, solids from infusion	34.7g
Peptone	6.9g
NaCl	3.5g
Horse serum, heat inactivated	100.0mL

pH 7.2 \pm 0.2 at 25°C

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Spiroplasma* species.

Spiroplasma Medium**Composition per liter:**

Sorbitol.....	70.0g
Pancreatic digest of casein.....	7.0g
Yeast extract.....	5.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g
Beef heart, solids from infusion.....	2.0g
Fructose.....	1.0g
Glucose.....	1.0g
Phenol Red.....	20.0mg
Horse serum.....	100.0mL

pH 7.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile horse serum. Mix thoroughly.

Use: For the cultivation of *Spiroplasma citri*.

**Spiroplasma Medium
with 25 mg/L of Phenol Red****Composition per liter:**

Sucrose.....	80.0g
Beef heart, solids from infusion.....	34.7g
Peptone.....	6.9g
NaCl.....	3.5g
Phenol Red.....	25.0mg
Horse serum, heat inactivated.....	100.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add heat-inactivated horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Spiroplasma floricola*.

Spizizen Potato Agar**Composition per liter:**

Potatoes.....	200.0g
Agar.....	15.0g
MnSO ₄	5.0mg

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Peel and dice potatoes. Add potatoes to 1.0L of tap water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Add MnSO₄ to filtrate and bring volume to 1.0L with tap water. Mix thoroughly. Adjust pH to 6.8. Add agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus amyloliquefaciens*.

SPMA

See: Mineral Salt Peptonized Milk Agar

Spore Strip Broth**Composition per liter:**

Spore strip broth.....	9.0g
------------------------	------

Preparation of Medium: Add 9.0g of spore strip broth powder (a mixture of glucose, buffer salts, growth factors, and Bromthymol Blue) to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the recovery of spores of *Bacillus stearothermophilus* on spore strips used to determine the sterilization efficiency of autoclaves.

**Sporobacter Medium
(DSMZ Medium 711)****Composition per liter:**

NH ₄ Cl.....	1.0g
NaCl.....	0.6g
Na-acetate·3H ₂ O.....	0.5g
Cysteine-HCl·H ₂ O.....	0.5g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
Yeast extract.....	0.2g
MgCl ₂ ·6H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.1g
KCl.....	0.1g
Resazurin.....	0.5mg
NaHCO ₃ solution.....	40.0mL
Trimethoxycinnamate solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace elements solution SL-10.....	1.5mL

pH 7.1 ± 0.2 at 25°C

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Trimethoxycinnamate Solution:

Composition per 10.0mL:

Trans-3,4,5-trimethoxycinnamate 1.2g

Preparation of Trimethoxycinnamate Solution: Add trans-3,4,5-trimethoxycinnamate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Neutralize with NaOH. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, trimethoxycinnamate solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 938.5mL. Mix thoroughly. Adjust pH to 7.1. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 40.0mL NaHCO₃ solution, 10.0mL Na₂S·9H₂O solution, 10.0mL trimethoxycinnamate solution, and 1.5mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Sporobacter termitidis*.

Sporocytophaga Medium

Composition per liter:

NaNO₃ 2.0g
K₂HPO₄ 1.2g
MgSO₄·7H₂O 1.0g
KCl 0.5g
KH₂PO₄ 0.14g
Yeast extract 0.02g
FeSO₄·7H₂O 6.0mg
Filter paper strips variable

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except filter paper strips, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add a sterile filter paper strip to each tube so that 1.0–2.0cm of the strip extends above the medium.

Use: For the cultivation and maintenance of *Sporocytophaga myxococcoides*.

Sporohalobacter lortetii Agar

Composition per liter:

NaCl 105.0g
L-Glutamic acid 4.0g
Agar 20.0g
CaCO₂ 5.0g
Soluble starch 2.0g
Casamino acids 2.0g
Nutrient broth 2.0g
Yeast extract 2.0g
KCl 0.75g
L-Cysteine 0.5g
FeSO₄·7H₂O 0.002g
Resazurin 1.0mg
MgCl₂·6H₂O solution 40.0mL
CaCl₂·2H₂O solution 10.0mL

Trace elements solution 10.0mL
Vitamin solution 10.0mL
pH 6.5 ± 0.2 at 25°C

MgCl₂·6H₂O Solution:

Composition per 40.0mL:

MgCl₂·6H₂O 0.01g

Preparation of MgCl₂·6H₂O Solution: Add MgCl₂·6H₂O to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

CaCl₂·2H₂O Solution:

Composition per 40.0mL:

CaCl₂·2H₂O 0.01g

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g
Nitrilotriacetic acid 1.5g
NaCl 1.0g
MnSO₄·2H₂O 0.5g
CoSO₄·7H₂O 0.18g
ZnSO₄·7H₂O 0.18g
CaCl₂·2H₂O 0.1g
FeSO₄·7H₂O 0.1g
NiCl₂·6H₂O 0.025g
KAl(SO₄)₂·12H₂O 0.02g
CuSO₄·5H₂O 0.01g
H₃BO₃ 0.01g
Na₂MoO₄·2H₂O 0.01g
Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
Calcium DL-pantothenate 5.0mg
Lipoic acid 5.0mg
Nicotinic acid 5.0mg
p-Aminobenzoic acid 5.0mg
Riboflavin 5.0mg
Thiamine-HCl 5.0mg
Biotin 2.0mg
Folic acid 2.0mg
Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except MgCl₂·6H₂O and CaCl₂·2H₂O solutions, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 40.0mL of sterile MgCl₂·6H₂O solution and 10.0mL of sterile CaCl₂·2H₂O solution. Mix thoroughly. Aseptically and anaerobically pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Sporohalobacter lortetii*.

Sporohalobacter lortetii Broth**Composition per liter:**

NaCl	105.0g
L-Glutamic acid	4.0g
Casamino acids	2.0g
Nutrient broth	2.0g
Yeast extract	2.0g
KCl	0.75g
L-Cysteine	0.5g
FeSO ₄ ·7H ₂ O	0.002g
Resazurin	1.0mg
MgCl ₂ ·6H ₂ O solution	40.0mL
CaCl ₂ ·2H ₂ O solution	10.0mL
Trace elements solution	10.0mL
Vitamin solution	10.0mL

pH 6.5 ± 0.2 at 25°C

MgCl₂·6H₂O Solution:**Composition per 40.0mL:**

MgCl ₂ ·6H ₂ O	0.01g
--------------------------------------	-------

Preparation of MgCl₂·6H₂O Solution: Add MgCl₂·6H₂O to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

CaCl₂·2H₂O Solution:**Composition per 40.0mL:**

CaCl ₂ ·2H ₂ O	0.01g
--------------------------------------	-------

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg

Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except MgCl₂·6H₂O and CaCl₂·2H₂O solutions, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 40.0mL of sterile MgCl₂·6H₂O solution and 10.0mL of sterile CaCl₂·2H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Sporohalobacter lortetii*.

Sporomusa Medium**Composition per 877.0mL:**

NaCl	2.25g
Pancreatic digest of casein	2.0g
Yeast extract	2.0g
MgSO ₄ ·7H ₂ O	0.5g
NH ₄ Cl	0.5g
K ₂ HPO ₄	0.35g
KH ₂ PO ₄	0.23g
CaCl ₂ ·2H ₂ O	0.025g
FeSO ₄ ·7H ₂ O	2.0mg
Resazurin	1.0mg
NaHSeO ₃	15.0μg
NaHCO ₃ solution	50.0mL
Glycine betaine solution	50.0mL
Wolfe's vitamin solution	10.0mL
L-Cysteine·HCl·H ₂ O solution	10.0mL
Trace elements solution SL-6	3.0mL

pH 7.0–7.2 at 25°C

NaHCO₃ Solution:**Composition per 50.0mL:**

NaHCO ₃	4.0g
--------------------	------

Preparation of NaHCO₃ Solution: Add the NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Gas under 80% N₂ + 20% CO₂ for 20 min.

Glycine Betaine Solution:**Composition per 50.0mL:**

Glycine betaine	5.0g
-----------------	------

Preparation of Glycine Betaine Solution: Add the glycine betaine to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 80% N₂ + 20% CO₂.

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	0.01g
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

L-Cysteine·HCl·H₂O Solution:**Composition per 10.0mL:**L-Cysteine·HCl·H₂O 0.3g

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂.

Trace Elements Solution SL-6:**Composition per liter:**

H₃BO₃ 0.3g
 CoCl₂·6H₂O 0.2g
 ZnSO₄·7H₂O 0.1g
 MnCl₂·4H₂O 0.03g
 Na₂MoO₄·H₂O 0.03g
 NiCl₂·6H₂O 0.02g
 CuCl₂·2H₂O 0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Add components—except NaHCO₃ solution, glycine betaine solution, and L-cysteine·HCl·H₂O solution—to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 5 min. Cool rapidly to 25°C under 80% N₂ + 20% CO₂. Add 50.0mL of NaHCO₃ solution. Mix thoroughly. Autoclave anaerobically for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add sterile glycine betaine solution. Mix thoroughly. Immediately prior to inoculation, aseptically and anaerobically add L-cysteine·HCl·H₂O solution.

Use: For the cultivation and maintenance of *Sporomusa ovata* and *Sporomusa sphaeroides*.

Sporomusa Medium**Composition per 1010.0mL:**

Betaine·H₂O 6.7g
 NaHCO₃ 4.0g
 NaCl 2.25g
 Pancreatic digest of casein 2.0g
 Yeast extract 2.0g
 MgSO₄·7H₂O 0.5g
 NH₄Cl 0.5g
 K₂HPO₄ 0.348g
 CaCl₂·2H₂O 0.25g
 KH₂PO₄ 0.227g
 FeSO₄·7H₂O 2.0mg
 Resazurin 1.0mg
 NaHSeO₃ 26.3μg
 Vitamin solution 10.0mL
 Reducing agent solution 10.0mL
 Trace elements solution SL-10 1.0mL

pH 7.0 ± 0.2 at 25°C

Vitamin Solution:**Composition per liter:**

Pyridoxine·HCl 10.0mg
 Calcium DL-pantothenate 5.0mg
 Lipoic acid 5.0mg
 Nicotinic acid 5.0mg
p-Aminobenzoic acid 5.0mg
 Riboflavin 5.0mg
 Thiamine·HCl 5.0mg
 Biotin 2.0mg

Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Reducing Agent Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H₂O 0.3g
 Na₂S·9H₂O 0.3g

Preparation of Reducing Agent Solution: Add 10.0mL of distilled/deionized water to a flask. Gently heat and bring to boiling. Continue to boil for 1 min while sparging with 100% N₂. Cool to room temperature. Add L-cysteine·HCl·H₂O. Mix thoroughly. Adjust pH to 9 with 5*N* NaOH. Add Na₂S·9H₂O. Mix thoroughly. Autoclave for 10 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 190.0mg
 MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 Na₂MoO₄·2H₂O 36.0mg
 NiCl₂·6H₂O 24.0mg
 H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except reducing agent solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Using a syringe, aseptically and anaerobically add sterile reducing agent to each tube (10.0mL per liter of medium).

Use: For the cultivation and maintenance of *Sporomusa* species.

Sporomusa Medium, Modified**Composition per liter:**

NaHCO₃ 4.0g
 NaCl 2.25g
 Pancreatic digest of casein 2.0g
 Yeast extract 2.0g
 MgSO₄·7H₂O 0.5g
 NH₄Cl 0.5g
 K₂HPO₄ 0.348g
 CaCl₂·2H₂O 0.25g
 KH₂PO₄ 0.227g
 FeSO₄·7H₂O 2.0mg
 Resazurin 1.0mg
 NaHSeO₃ 26.3μg
 Fructose solution 50.0mL
 Reducing agent solution 10.0mL
 Vitamin solution 10.0mL
 Trace elements solution SL-10 1.0mL

pH 7.0 ± 0.2 at 25°C

Fructose Solution:**Composition per 50.0mL:**

Fructose..... 10.0g

Preparation of Fructose Solution: Add fructose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize. Store under N₂ gas.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl..... 10.0mg
 Calcium DL-pantothenate..... 5.0mg
 Lipoic acid..... 5.0mg
 Nicotinic acid..... 5.0mg
p-Aminobenzoic acid..... 5.0mg
 Riboflavin..... 5.0mg
 Thiamine-HCl..... 5.0mg
 Biotin..... 2.0mg
 Folic acid..... 2.0mg
 Vitamin B₁₂..... 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Reducing Agent Solution:**Composition per 10.0mL:**

L-Cysteine-HCl·H₂O..... 0.3g
 Na₂S·9H₂O..... 0.3g

Preparation of Reducing Agent Solution: Add 10.0mL of distilled/deionized water to a flask. Boil under N₂ gas for 1 min. Cool to room temperature. Add L-cysteine-HCl·H₂O and dissolve. Adjust to pH 9 with 5*N* NaOH. Add washed Na₂S·9H₂O and dissolve. Mix thoroughly. Autoclave for 10 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl₂·4H₂O..... 1.5g
 CoCl₂·6H₂O..... 190.0mg
 MnCl₂·4H₂O..... 100.0mg
 ZnCl₂..... 70.0mg
 Na₂MoO₄·2H₂O..... 36.0mg
 NiCl₂·6H₂O..... 24.0mg
 H₃BO₃..... 6.0mg
 CuCl₂·2H₂O..... 2.0mg
 HCl (25% solution)..... 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Add components, except NaHCO₃ and reducing agent solution, to distilled/deionized water and bring volume to 940.0mL. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature under 80% N₂ + 20% CO₂. Add solid NaHCO₃ and bring pH to 7.0 by gassing. Distribute anaerobically under 80% N₂ + 20% CO₂ into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Prior to inoculation of cultures, aseptically and anaerobically add 0.1mL of sterile reducing agent solution and 0.5mL of sterile fructose solution to each tube containing 9.4mL of sterile basal medium.

Use: For the cultivation and maintenance of *Sporomusa acidovorans*.

Sporomusa Medium, Modified**Composition per liter:**

NaHCO₃..... 4.0g
 NaCl..... 2.25g
 Pancreatic digest of casein..... 2.0g
 Yeast extract..... 2.0g
 Betaine..... 1.35g
 MgSO₄·7H₂O..... 0.5g
 NH₄Cl..... 0.5g
 K₂HPO₄..... 0.348g
 CaCl₂·2H₂O..... 0.25g
 KH₂PO₄..... 0.227g
 FeSO₄·7H₂O..... 2.0mg
 Resazurin..... 1.0mg
 NaHSeO₃..... 26.3μg
 Fructose solution..... 50.0mL
 Reducing agent solution..... 10.0mL
 Vitamin solution..... 10.0mL
 Trace elements solution SL-10..... 1.0mL
 pH 7.0 ± 0.2 at 25°C

Fructose Solution:**Composition per 50.0mL:**

Fructose..... 10.0g

Preparation of Fructose Solution: Add fructose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize. Store under N₂ gas.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl..... 10.0mg
 Calcium DL-pantothenate..... 5.0mg
 Lipoic acid..... 5.0mg
 Nicotinic acid..... 5.0mg
p-Aminobenzoic acid..... 5.0mg
 Riboflavin..... 5.0mg
 Thiamine-HCl..... 5.0mg
 Biotin..... 2.0mg
 Folic acid..... 2.0mg
 Vitamin B₁₂..... 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Reducing Agent Solution:**Composition per 10.0mL:**

Dithiothreitol..... 0.154g

Preparation of Reducing Agent Solution: Add 10.0mL of distilled/deionized water to a flask. Boil under N₂ gas for 1 min. Cool to room temperature. Add dithiothreitol and dissolve. Autoclave for 10 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl₂·4H₂O..... 1.5g
 CoCl₂·6H₂O..... 190.0mg
 MnCl₂·4H₂O..... 100.0mg
 ZnCl₂..... 70.0mg
 Na₂MoO₄·2H₂O..... 36.0mg
 NiCl₂·6H₂O..... 24.0mg
 H₃BO₃..... 6.0mg
 CuCl₂·2H₂O..... 2.0mg
 HCl (25% solution)..... 10.0mL

Preparation of Trace Elements Solution SL-10: Add $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Add components, except NaHCO_3 and reducing agent solution, to distilled/deionized water and bring volume to 940.0mL. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature under 80% N_2 + 20% CO_2 . Add solid NaHCO_3 and bring pH to 7.0 by gassing. Distribute anaerobically under 80% N_2 + 20% CO_2 into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Prior to inoculation of cultures, aseptically and anaerobically add 0.1mL of sterile reducing agent solution and 0.5mL of sterile fructose solution to each tube containing 9.4mL of sterile basal medium.

Use: For the cultivation and maintenance of *Sporomusa termitida*.

Sporomusa silvacetica Medium (DSMZ Medium 777)

Composition per liter:

NaCl	2.25g
Yeast extract	1.0g
Casitone	1.0g
NH_4Cl	0.5g
$\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$	0.5g
K_2HPO_4	0.348g
KH_2PO_4	0.227g
$\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$	0.25g
$\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$	0.002g
Resazurin	1.0mg
NaHSeO_3	15.1 μg
Cysteine solution	10.0mL
NaHCO_3 solution	10.0mL
$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ solution	10.0mL
Fructose solution	10.0mL
Vitamin solution	10.0mL
Trace elements solution SL-10	1.0mL

pH 6.6 \pm 0.2 at 25°C

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine-HCl \cdot H_2O	0.3g
---	------

Preparation of Cysteine Solution: Add L-cysteine-HCl \cdot H_2O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ Solution:

Composition per 10.0mL:

$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$	0.3g
---	------

Preparation of $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ Solution: Add $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N_2 for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO_3 Solution:

Composition per 10.0mL:

NaHCO_3	1.5g
------------------------	------

Preparation of NaHCO_3 Solution: Add NaHCO_3 to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N_2 + 20% CO_2 . Filter sterilize.

Fructose Solution:

Composition per 10.0mL:

Fructose	5.0g
----------------	------

Preparation of Fructose Solution: Add fructose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution SL-10:

Composition per liter:

$\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$	1.5g
$\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$	190.0mg
$\text{MnCl}_2 \cdot 4\text{H}_2\text{O}$	100.0mg
ZnCl_2	70.0mg
$\text{Na}_2\text{MoO}_4 \cdot 2\text{H}_2\text{O}$	36.0mg
$\text{NiCl}_2 \cdot 6\text{H}_2\text{O}$	24.0mg
H_3BO_3	6.0mg
$\text{CuCl}_2 \cdot 2\text{H}_2\text{O}$	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N_2 + 20% CO_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl $\cdot 2\text{H}_2\text{O}$	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B_{12}	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H_2 + 20% CO_2 . Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N_2 + 20% CO_2 gas atmosphere. Add components, except NaHCO_3 solution, fructose solution, cysteine solution, vitamin solution, and $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 6.5–6.7. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically and anaerobically add 10.0mL NaHCO_3 solution, 10.0mL fructose solution, 10.0mL cysteine solution, 10.0mL vitamin solution, and 10.0mL $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Sporomusa silvacetica*, *Thermicanus aegyptius*, *Moorella thermoacetica*, and *Moorella mulderi*.

Sporosarcina halophila Agar

Composition per liter:

NaCl	30.0g
Agar	20.0g
$\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$	5.0g
Peptone	5.0g
NaCl	5.0g

Yeast extract.....	2.0g
Beef extract.....	1.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Halomonas elongata*, *Halomonas halmophila*, *Listonella anguillara*, *Salinicoccus roseus*, *Sporosarcina halophila*, *Vibrio fluvialis*, *Vibrio furnissii*, *Vibrio hollisae*, *Vibrio ordalii*, and *Vibrio vulnificus*.

Sporosarcina ureae Medium

L-Cysteine solution.....	10.0mL
(NH ₄) ₂ SO ₄ solution.....	10.0mL
pH 8.7 ± 0.2 at 25°C	

Biotin Solution:

Composition per 10.0mL:

D-Biotin.....	1.0mg
---------------	-------

Preparation of Biotin Solution: Add biotin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

L-Cysteine Solution:

Composition per 10.0mL:

L-Cysteine.....	0.04g
-----------------	-------

Preparation of L-Cysteine Solution: Add L-cysteine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

(NH₄)₂SO₄ Solution:

Composition per 10.0mL:

(NH ₄) ₂ SO ₄	0.2g
---	------

Preparation of (NH₄)₂SO₄ Solution: Add (NH₄)₂SO₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except biotin solution, L-cysteine solution, and (NH₄)₂SO₄ solution—to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Adjust pH to 8.7 with 1N NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile biotin solution, L-cysteine solution, and (NH₄)₂SO₄ solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of *Sporosarcina ureae*.

Sporosarcina ureae Medium

Composition per liter:

Agar.....	30.0g
Glucose.....	4.0g
(NH ₄) ₂ SO ₄	4.0g

Malt extract.....	3.0g
Peptone.....	3.0g
Yeast extract.....	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄	0.8g
CaCl ₂	0.1g
MnSO ₄ ·H ₂ O.....	0.1g
CuSO ₄ ·5H ₂ O.....	0.01g
ZnSO ₄	0.01g
FeSO ₄ ·7H ₂ O.....	1.0mg

Preparation of Medium: Add components to 1.0L of distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and induction of sporulation of *Sporosarcina ureae*.

Sporulating Agar

See: AK Agar No. 2

Sporulation Agar

Composition per liter:

Agar.....	15.0g
Glucose.....	10.0g
Tryptose.....	2.0g
Beef extract.....	1.0g
Yeast extract.....	1.0g
FeSO ₄	0.1mg
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Chlorella pyrenoidosa*.

Sporulation Agar

Composition per 1001.0mL:

Agar.....	10.0g
Pancreatic digest of gelatin.....	3.75g
Beef extract.....	2.25g
Trypticase™.....	2.0g
Yeast extract.....	1.0g
Marine broth 2216.....	0.5g
MnSO ₄ ·H ₂ O.....	0.5mg
Inosine (5mM) solution.....	1.0mL

Source: Marine broth 2216 is available from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus aminovorans*.

Sporulation Agar (m-Sporulation Agar)

Composition per liter:

Agar.....	15.0g
Glucose.....	10.0g

Tryptose	2.0g
Beef extract	1.0g
Yeast extract	1.0g
FeSO ₄	1.0μg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and sporulation of *Streptomyces*, *Streptovorticillium*, and *Thermoactinomyces* species. For the identification of sporulating bacteria by the membrane filter method.

Sporulation Broth

Composition per liter:

Polypeptone™	15.0g
Na ₂ HPO ₄	11.0g
Starch, soluble	3.0g
Yeast extract	3.0g
Sodium thioglycolate	1.0g
MgSO ₄ , anhydrous	0.1g

pH 7.8 ± 0.1 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 15.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and observation of sporulation of *Clostridium perfringens*.

Sporulation Broth

Composition per liter:

Glucose	3.3g
Tryptose	0.66g
Beef extract	0.33g
Yeast extract	0.33g
FeSO ₄	0.33μg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and sporulation of *Streptomyces*, *Streptovorticillium*, and *Thermoactinomyces* species.

Sporulation Broth

Composition per liter:

Glucose	3.3g
Tryptose	0.7g
Beef extract	0.3g
Yeast extract	0.3g
FeSO ₄	0.1mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Chlorella pyrenoidosa*.

Sporulation Medium, Modified

See: **Duncan-Strong Sporulation Medium, Modified**

Spray's Fermentation Medium

Composition per 1100.0mL:

Neopeptone	10.0g
Pancreatic digest of casein	10.0g
Agar	2.0g
Sodium thioglycolate	0.025g
Carbohydrate solution	110.0mL

pH 7.4 ± 0.1 at 25°C

Carbohydrate Solution:

Composition per 200.0mL:

Carbohydrate	20.0g
--------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 200.0mL. Glucose or glycerol may be used. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except agar and carbohydrate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.4. Add agar. Gently heat and bring to boiling. Distribute into tubes in 9.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Immediately prior to use heat tubes in a boiling water bath for 10 min. Cool to 45°C. Aseptically add 1.0mL of sterile carbohydrate solution. Mix thoroughly.

Use: For the cultivation and differentiation of *Clostridium perfringens* based on carbohydrate fermentation patterns.

SPS Agar

(Sulfite Polymyxin Sulfadiazine Agar)

Composition per liter:

Pancreatic digest of casein	15.0g
Agar	13.9g
Yeast extract	10.0g
Ferric citrate	0.5g
Na ₂ SO ₃	0.5g
Sulfadiazine	0.12g
Polymyxin sulfate	0.01g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and detection of *Clostridium perfringens* and *Clostridium botulinum* in foods and other materials.

SPS HiVeg Agar

Composition per liter:

Plant hydrolysate	15.0g
Agar	13.9g
Yeast extract	10.0g
Polysorbate 80	0.5g
Na ₂ SO ₃	0.5g
Sulphadiazine	0.12g
Polymyxin B sulfate	0.01g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and detection of *Clostridium perfringens* and *Clostridium botulinum* in foods and other materials.

SPS HiVeg Agar, Modified

Composition per liter:

Agar	15.0g
Plant hydrolysate.....	15.0g
Yeast extract.....	10.0g
Na ₂ SO ₃	0.5g
Ferric citrate.....	0.5g
Sulphadiazine.....	0.12g
Na-thioglycollate	0.1g
Sorbitan monooleate	0.05g
Polymyxin B sulfate.....	0.01g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and detection of *Clostridium perfringens* and *Clostridium botulinum* in foods and other materials.

**SPYE Medium
(LMG Medium 262)**

Composition per liter:

Sea salts.....	30.0g
Agar No. 1.....	12.0g
Peptone.....	2.0g
Yeast extract.....	1.0g
Vitamin solution.....	5.0mL
Glucose solution	2.0mL

pH 7.3 ± 0.2 at 25°C

Vitamin Solution:

Composition per 10.0mL:

Riboflavin	2.0mg
------------------	-------

Preparation of Vitamin Solution: Add riboflavin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 10.0mL:

Glucose	5.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution and glucose solution, to 993.0mL distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 5.0mL of ster-

ile vitamin solution and 2.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Maricaulis* spp.

**SP4-Z Medium with Arginine and DNA
(DSMZ Medium 1076b)**

Composition per 499.0mL:

Tryptone	5.0g
Peptone	3.3g
NaCl.....	0.5g
Beef extract.....	0.3g
Yeast extract.....	0.3g
Beef heart, solids from infusion.....	0.2g
DNA, herring sperm	0.04g
Fetal bovine serum (inactivated at 56°C, 1 hr).....	90.0mL
CMRL 1066, 10X with glutamine.....	25.0mL
Yeastolate solution.....	5.0mL
Arginine solution	2.0mL
Glutamine solution.....	1.7mL
Phenol Red solution.....	1.0mL

pH 7.4 ± 0.2 at 25°C

CMRL 1066, 10X with Glutamine:

Composition per liter:

NaCl.....	6.8g
NaHCO ₃	2.2g
D-Glucose.....	1.0g
KCl.....	0.4g
L-Cysteine·HCl·H ₂ O	0.26g
CaCl ₂ , anhydrous.....	0.2g
MgSO ₄ ·7H ₂ O.....	0.2g
NaH ₂ PO ₄ ·H ₂ O.....	0.14g
L-Glutamine	0.1g
Sodium acetate·3H ₂ O.....	0.083g
L-Glutamic acid.....	0.075g
L-Arginine·HCl.....	0.07g
L-Lysine·HCl.....	0.07g
L-Leucine	0.06g
Glycine.....	0.05g
Ascorbic acid	0.05g
L-Proline	0.04g
L-Tyrosine	0.04g
L-Aspartic acid	0.03g
L-Threonine	0.03g
L-Alanine.....	0.025g
L-Phenylalanine.....	0.025g
L-Serine	0.025g
L-Valine	0.025g
L-Cystine	0.02g
L-Histidine·HCl·H ₂ O.....	0.02g
L-Isoleucine	0.02g
Phenol Red.....	0.02g
L-Methionine	0.015g
Deoxyadenosine.....	0.01g
Deoxycytidine	0.01g
Deoxyguanosine	0.01g
Glutathione, reduced.....	0.01g
Thymidine.....	0.01g
Hydroxy-L-proline	0.01g
L-Tryptophan.....	0.01g
Nicotinamide adenine dinucleotide	7.0mg

Tween™ 80	5.0mg
Sodium glucuronate·H ₂ O	4.2mg
Coenzyme A	2.5mg
Coccarboxylase	1.0mg
Flavin adenine dinucleotide	1.0mg
Nicotinamide adenine dinucleotide phosphate	1.0mg
Uridine triphosphate	1.0mg
Choline chloride	0.5mg
Cholesterol	0.2mg
5-Methyldeoxycytidine	0.1mg
Inositol	0.05mg
<i>p</i> -Aminobenzoic acid	0.05mg
Niacin	0.025mg
Niacinamide	0.025mg
Pyridoxine	0.025mg
Pyridoxal·HCl	0.025mg
Biotin	0.01mg
D-Calcium pantothenate	0.01mg
Folic acid	0.01mg
Riboflavin	0.01mg
Thiamine·HCl	0.01mg

Preparation of CMRL 1066, 10X with Glutamine: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Filter sterilize.

Yeastolate Solution:

Composition per 10.0mL:

Yeastolate	2.0g
------------	------

Preparation of Yeastolate Solution: Add yeastolate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Phenol Red Solution:

Composition per 100.0mL:

Phenol Red	1.0g
------------	------

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.0. Filter sterilize.

Glutamine Solution:

Composition per 10.0mL:

L-Glutamine	1.5g
-------------	------

Preparation of Glutamine Solution: Add L-glutamine to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Arginine Solution:

Composition per 10.0mL:

L-Arginine·HCl	5.0g
----------------	------

Preparation of Arginine Solution: Add L-arginine·HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except fetal bovine serum, CMRL, yeast extract solution, yeastolate solution, Phenol Red solution, arginine solution, and glutamine solution, to distilled/deionized water and bring volume to 375.0mL. Mix thoroughly. Adjust pH to 7.4. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Mix thoroughly. Aseptically add fetal bovine serum, CMRL, yeast extract solution, yeastolate solution, arginine solution Phenol Red solution, and glutamine solution. Mix thoroughly.

Use: For the cultivation of *Mycoplasma* spp. and *Spiroplasma* spp., including the cultivation of *Mycoplasma genitalium*, *Mycoplasma gal-*

linarum, *Spiroplasma culicicola*, *Spiroplasma chinense*, *Spiroplasma corruscae*, *Spiroplasma alleghenense*, and *Spiroplasma clarkii*.

SP4-Z Medium with Glucose and DNA (DSMZ Medium 1076b)

Composition per 499.0mL:

Tryptone	5.0g
Peptone	3.3g
NaCl	0.5g
Beef extract	0.3g
Yeast extract	0.3g
Beef heart, solids from infusion	0.2g

Tween™ 80	5.0mg
Sodium glucuronate·H ₂ O	4.2mg

Coenzyme A	2.5mg
Coccarboxylase	1.0mg
Flavin adenine dinucleotide	1.0mg
Nicotinamide adenine dinucleotide phosphate	1.0mg
Uridine triphosphate	1.0mg
Choline chloride	0.5mg
Cholesterol	0.2mg
5-Methyldeoxycytidine	0.1mg
Inositol	0.05mg
<i>p</i> -Aminobenzoic acid	0.05mg
Niacin	0.025mg
Niacinamide	0.025mg
Pyridoxine	0.025mg
Pyridoxal-HCl	0.025mg
Biotin	0.01mg
D-Calcium pantothenate	0.01mg
Folic acid	0.01mg
Riboflavin	0.01mg
Thiamine-HCl	0.01mg

Preparation of CMRL 1066, 10X with Glutamine: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Filter sterilize.

Yeastolate Solution:

Composition per 10.0mL:

Yeastolate	2.0g
------------------	------

Preparation of Yeastolate Solution: Add yeastolate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Phenol Red Solution:

Composition per 100.0mL:

Phenol Red	1.0g
------------------	------

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.0. Filter sterilize.

Glutamine Solution:

Composition per 10.0mL:

L-Glutamine	1.5g
-------------------	------

Preparation of Glutamine Solution: Add L-glutamine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 10.0mL:

D-Glucose	5.0g
-----------------	------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except fetal bovine serum, CMRL, yeast extract solution, yeastolate solution, Phenol Red solution, and glutamine solution, to distilled/deionized water and bring volume to 375.0mL. Mix thoroughly. Adjust pH to 7.4. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Mix thoroughly. Aseptically add fetal bovine serum, CMRL, yeast extract solution, yeastolate solution, glucose solution Phenol Red solution, and glutamine solution. Mix thoroughly.

Use: For the cultivation of *Mycoplasma* spp. and *Spiroplasma* spp., including the cultivation of *Mycoplasma genitalium*, *Mycoplasma gallinarum*, *Spiroplasma culicicola*, *Spiroplasma chinense*, *Spiroplasma corruscae*, *Spiroplasma alleghenense*, and *Spiroplasma clarkii*.

SRB-Psychrophile Medium (DSMZ Medium 861)

Composition per 1158mL:

NaCl	20.0g
Na ₂ SO ₄	4.0g
MgCl ₂ ·6H ₂ O	3.0g
CaCl ₂ ·2H ₂ O	0.15g
KBr	0.09g
KCl	0.5g
Resazurin	0.5mg
NH ₄ Cl solution	49.5mL
KH ₂ PO ₄ solution	49.5mL
NaHCO ₃ solution	29.7mL
Vitamin solution	9.9mL
Substrate solution	9.9mL
Na ₂ S·9H ₂ O solution	9.9mL
Dithionite solution	1.0mL
Trace elements solution SL-10	1.0mL
Selenite-tungstate solution	1.0mL

pH 7.2 ± 0.2 at 25°C

Dithionite Solution

Composition per 10.0mL:

Na-dithionite	0.25g
---------------------	-------

Preparation of Dithionite Solution: Add Na-dithionite to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Selenite-Tungstate Solution

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

NH₄Cl Solution:**Composition per 100.0mL:**

NH ₄ Cl	0.5g
--------------------------	------

Preparation of NH₄Cl Solution: Add NH₄Cl to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

KH₂PO₄ Solution:**Composition per 100.0mL:**

KH ₂ PO ₄	0.4g
---------------------------------------	------

Preparation of KH₂PO₄ Solution: Add KH₂PO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Substrate Solution:**Composition per 10.0mL:**

Na-acetate	1.5g
------------------	------

Preparation of Substrate Solution: Add Na-acetate to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, substrate solution, selenite-tungstate solution, NH₄Cl solution, KH₂PO₄ solution, vitamin solution, dithionite solution, and trace elements solution SL-10. Distribute 30.0mL aliquots into 50mL serum bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically and anaerobically for each 30.0mL medium add 1.5mL NH₄Cl solution, 1.5mL KH₂PO₄ solution, 0.9mL NaHCO₃ solution, and 0.3mL each of Na₂S·9H₂O, substrate, selenite-tungstate, and vitamin solution, and 0.03mL each of dithionite solution and trace elements solution SL-10. Final pH is 7.2.

Use: For the cultivation of *Desulfofrigus oceanense* DSM 12341.

**SRB-Psychrophile Medium

NH ₄ Cl solution	49.5mL
KH ₂ PO ₄ solution	49.5mL
NaHCO ₃ solution	29.7mL
Vitamin solution	9.9mL
Substrate solution	9.9mL
Na ₂ S·9H ₂ O solution	9.9mL
Dithionite solution	1.0mL
Trace elements solution SL-10	1.0mL
Selenite-tungstate solution	1.0mL

pH 7.2 ± 0.2 at 25°C

Dithionite Solution**Composition per 10.0mL:**

Na-dithionite	0.25g
---------------------	-------

Preparation of Dithionite Solution: Add Na-dithionite to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Selenite-Tungstate Solution**Composition per liter:**

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg

NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

NH₄Cl Solution:

Composition per 100.0mL:

NH ₄ Cl	0.5g
--------------------------	------

Preparation of NH₄Cl Solution: Add NH₄Cl to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

KH₂PO₄ Solution:

Composition per 100.0mL:

KH ₂ PO ₄	0.4g
---------------------------------------	------

Preparation of KH₂PO₄ Solution: Add KH₂PO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Substrate Solution:

Composition per 10.0mL:

Na-lactate	2.5g
------------------	------

Preparation of Substrate Solution: Add Na-lactate to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, substrate solution, selenite-tungstate solution, NH₄Cl solution, KH₂PO₄ solution, vitamin solution, dithionite solution, and trace elements solution SL-10. Distribute 30.0mL aliquots into 50mL serum bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically and anaerobically for each 30.0mL medium add 0.9mL NaHCO₃ solution, 0.3mL Na₂S·9H₂O solution, 0.3mL substrate solution, 0.03mL selenite-tungstate solution, 1.5mL NH₄Cl solution, 1.5mL KH₂PO₄ solution, 0.3mL vitamin solution, 0.03mL dithionite solution, and 0.03mL trace elements solution SL-10. Final pH is 7.2.

Use: For the cultivation of *Desulfotalea arctica* DSM 12342 and *Desulfofrigus fragile* DSM 12345.

SRB-Psychrophile Medium (DSMZ Medium 861)

Composition per 1158.0mL:

NaCl	10.0g
Na ₂ SO ₄	4.0g
MgCl ₂ ·6H ₂ O	3.0g
KCl	0.5g
CaCl ₂ ·2H ₂ O	0.15g
KBr	0.09g

Resazurin	0.5mg
NH ₄ Cl solution	49.5mL
KH ₂ PO ₄ solution	49.5mL
NaHCO ₃ solution	29.7mL
Vitamin solution	9.9mL
Substrate solution	9.9mL
Na ₂ S·9H ₂ O solution	9.9mL
Dithionite solution	1.0mL
Trace elements solution SL-10	1.0mL
Selenite-tungstate solution	1.0mL

pH 7.2 ± 0.2 at 25°C

Dithionite Solution

Composition per 10.0mL:

Na-dithionite	0.25g
---------------------	-------

Preparation of Dithionite Solution: Add Na-dithionite to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Selenite-Tungstate Solution

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N_2 + 20% CO_2 . Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO₃ 10.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N_2 + 20% CO_2 . Filter sterilize.

NH₄Cl Solution:

Composition per 100.0mL:

NH₄Cl 0.5g

Preparation of NH₄Cl Solution: Add NH₄Cl to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N_2 . Filter sterilize.

KH₂PO₄ Solution:

Composition per 100.0mL:

KH₂PO₄ 0.4g

Preparation of KH₂PO₄ Solution: Add KH₂PO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N_2 . Filter sterilize.

Substrate Solution:

Composition per 10.0mL:

Na-lactate 2.5g

Preparation of Substrate Solution: Add Na-lactate to distilled/deionized water and bring volume to 10.0mL. Sparge with N_2 . Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N_2 + 20% CO_2 . Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, substrate solution, selenite-tungstate solution, NH₄Cl solution, KH₂PO₄ solution, vitamin solution, dithionite solution, and trace elements solution SL-10. Distribute 30.0mL aliquots into 50mL serum bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically and anaerobically for each 30.0mL medium add 0.9mL NaHCO₃ solution, 0.3mL Na₂S·9H₂O solution, 0.3mL substrate solution, 0.03mL selenite-tungstate solution, 1.5mL NH₄Cl solution, 1.5mL KH₂PO₄ solution, 0.3mL vitamin solution, 0.03mL dithionite solution, and 0.03mL trace elements solution SL-10. Final pH is 7.2.

Use: For the cultivation of *Desulfotalea psychrophila* DSM 12343.

SRB-Psychrophile Medium (DSMZ Medium 861)

Composition per 1158.0mL:

NaCl 20.0g
 Na₂SO₄ 4.0g
 MgCl₂·6H₂O 3.0g
 CaCl₂·2H₂O 0.15g
 KBr 0.09g
 KCl 0.5g
 Resazurin 0.5mg
 NH₄Cl solution 49.5mL
 KH₂PO₄ solution 49.5mL
 NaHCO₃ solution 29.7mL
 Vitamin solution 9.9mL

Substrate solution 9.9mL
 Na₂S·9H₂O solution 9.9mL
 Dithionite solution 1.0mL
 Trace elements solution SL-10 1.0mL
 Selenite-tungstate solution 1.0mL
 pH 7.2 ± 0.2 at 25°C

Dithionite Solution

Composition per 10.0mL:

Na-dithionite 0.25g

Preparation of Dithionite Solution: Add Na-dithionite to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N_2 . Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.5g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N_2 for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
 p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H_2 + 20% CO_2 . Filter sterilize.

Selenite-Tungstate Solution

Composition per liter:

NaOH 0.5g
 Na₂WO₄·2H₂O 4.0mg
 Na₂SeO₃·5H₂O 3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N_2 . Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 190.0mg
 MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 Na₂MoO₄·2H₂O 36.0mg
 NiCl₂·6H₂O 24.0mg
 H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N_2 + 20% CO_2 . Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:**Composition per 100.0mL:**NaHCO₃ 10.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

NH₄Cl Solution:**Composition per 100.0mL:**NH₄Cl 0.5g

Preparation of NH₄Cl Solution: Add NH₄Cl to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

KH₂PO₄ Solution:**Composition per 100.0mL:**KH₂PO₄ 0.4g

Preparation of KH₂PO₄ Solution: Add KH₂PO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Substrate Solution:**Composition per 10.0mL:**

Na-propionate 1.5g

Preparation of Substrate Solution: Add Na-propionate to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, substrate solution, selenite-tungstate solution, NH₄Cl solution, KH₂PO₄ solution, vitamin solution, dithionite solution, and trace elements solution SL-10. Distribute 30.0mL aliquots into 50mL serum bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically and anaerobically for each 30.0mL medium add 0.9mL NaHCO₃ solution, 0.3mL Na₂S·9H₂O solution, 0.3mL substrate solution, 0.03mL selenite-tungstate solution, 1.5mL NH₄Cl solution, 1.5mL KH₂PO₄ solution, 0.3mL vitamin solution, 0.03mL dithionite solution, and 0.03mL trace elements solution SL-10. Final pH is 7.2.

Use: For the cultivation of *Desulfofaba gelida* DSM 12344.

SS Agar

See: *Salmonella Shigella Agar*

SS Agar, HiVeg**(Salmonella Shigella Agar, HiVeg)****Composition per liter:**

Agar 15.0g
 Plant peptone 11.5g
 Lactose 10.0g
 Sodium citrate 10.0g
 Na₂S₂O₃ 8.5g
 Plant extract 5.0g
 Synthetic detergent No. I 2.0g
 Ferric citrate 1.0g
 Neutral Red 0.025g
 Brilliant Green 0.33mg

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes in 20.0mL volumes. Allow the surface of the plates to dry before inoculation.

Use: For the selective isolation and differentiation of pathogenic enteric bacilli, especially those belonging to the genus *Salmonella*. This medium is not recommended for the primary isolation of *Shigella* species. Lactose-fermenting bacteria such as *Escherichia coli* or *Klebsiella pneumoniae* appear as small pink or red colonies. Lactose-non-fermenting bacteria—such as *Salmonella* species, *Proteus* species, and *Shigella* species—appear as colorless colonies. Production of H₂S by *Salmonella* species turns the center of the colonies black.

SS Agar, Modified

See: *Salmonella Shigella Agar, Modified*

SS Deoxycholate Agar**(Salmonella Shigella Deoxycholate Agar)****(SSDC)****Composition per liter:**

Agar 13.5g
 Lactose 10.0g
 Sodium deoxycholate 10.0g
 Bile salts 8.5g
 Na₂S₂O₃ 8.5g
 Sodium citrate 8.5g
 Beef extract 5.0g
 Pancreatic digest of casein 2.5g
 Peptic digest of animal tissue 2.5g
 CaCl₂·2H₂O 1.0g
 Ferric citrate 1.0g
 Neutral Red 0.025g
 Brilliant Green 0.33mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes in 20.0mL volumes. Allow the surface of the plates to dry before inoculation.

Use: For the isolation and cultivation of *Yersinia enterocolitica* from foods.

SSL Agar**Composition per liter:**

Agar 2.5g
 CaCl₂·2H₂O 1.0g
 Gelatin 1.0g
 KNO₃ 1.0g
 MgSO₄·7H₂O 1.0g
 NaCl 1.0g
 Pancreatic digest of casein 1.0g
 Yeast extract 1.0g
 Sodium glycerophosphate 0.1g
 Cyanocobalamin 1.0µg
 Trace elements solution 1.0mL

pH 7.5 ± 0.2 at 25°C

Trace Elements Solution:**Composition per liter:**

Disodium EDTA	8.0g
MnCl ₂ ·4H ₂ O.....	0.1g
CoCl ₂ ·6H ₂ O	0.02g
KBr.....	0.02g
KI.....	0.02g
ZnCl ₂	0.02g
CuSO ₄	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
LiCl.....	5.0mg
SnCl ₂ ·2H ₂ O.....	5.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

SSM Agar**Composition per liter:**

Solution A	850.0mL
Solution B	50.0mL
Solution C	100.0mL

Solution A:**Composition per 850.0mL:**

Agar, noble.....	15.0g
Na ₂ HPO ₄	6.0g
KH ₂ PO ₄	3.0g
MgSO ₄ ·7H ₂ O.....	0.2g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:**Composition per 50.0mL:**

Glucose	5.0g
---------------	------

Preparation of Solution B: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution C:**Composition per 100.0mL:**

Casein hydrolysate.....	20.0g
-------------------------	-------

Preparation of Solution C: Add casein hydrolysate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter through Whatman #1 paper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine 850.0mL of sterile solution A, 50.0mL of sterile solution B, and 100.0mL of sterile solution C. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of a variety of bacteria.

ST Agar

See: *Streptococcus thermophilus* Agar

**ST Holding Medium
(m-ST Holding Medium)****Composition per liter:**

KH ₂ PO ₄	3.0g
Tris(hydroxymethyl)aminomethane buffer.....	3.0g
Sulfanilamide.....	1.5g
NaH ₂ PO ₄ ·H ₂ O.....	0.1g
Ethanol (95% solution).....	10.0mL

pH 8.6 ± 0.2 at 25°C

Preparation of Medium: Dissolve the sulfanilamide in the ethanol. Add all components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Distribute in 1.8mL volumes to sterile Petri dishes with tight-fitting lids and an absorbent filter.

Use: For the cultivation and enumeration of coliform bacteria by the delayed-incubation total coliform procedure. For use as a holding or transport medium to keep coliform bacteria viable between sampling and laboratory culture.

StA**(Schmitthenner's Agar)****Composition per liter:**

Agar	20.0g
Sucrose.....	2.5g
Asparagine.....	0.27g
KH ₂ PO ₄	0.15g
K ₂ HPO ₄	0.15g
MgSO ₄	0.1g
Sitosterol.....	0.01g

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add agar. Swirl. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pythium aphanidermatum*, *Pythium graminicola*, *Pythium myriotylum*, *Pythium sylvaticum*, and *Pythium ultimum*.

StA**(Schmitthenner's Agar)****Composition per liter:**

Sucrose.....	2.75g
NaNO ₃	0.35g
KH ₂ PO ₄	0.15g
K ₂ HPO ₄	0.15g
MgSO ₄	0.1g
Sitosterol.....	0.01g
Agar	20.0g

Preparation of Medium: Add components, in the order listed, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pythium aphanidermatum*, *Pythium graminicola*, *Pythium myriotylum*, *Pythium sylvaticum*, and *Pythium ultimum*.

STAA Agar Base

Composition per liter:

Peptone.....	20.0g
Agar	13.0g
Glycerol	7.5g
Yeast extract.....	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	1.0g
STAA selective supplement.....	10.0mL

pH 7.0 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

STAA Selective Supplement:

Composition per 10.0mL:

Streptomycin sulfate	0.5g
Cycloheximide	0.05g
Thallos acetate	0.05g

Preparation of STAA Selective Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glycerol and STAA selective supplement, to distilled/deionized water and bring volume to 985.0mL. Mix thoroughly. Gently heat and bring to boiling. Add glycerol. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile STAA selective supplement. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of *Brochothrix thermosphacta* from meat products.

Stab Agar

Composition per liter:

Nutrient broth.....	10.0g
Agar	6.0g
NaCl	5.0g
L-Cysteine-HCl·H ₂ O.....	0.01g
Thymine	0.01g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the maintenance of bacterial strains, especially *Escherichia coli*.

Staib Agar

See: Birdseed Agar

Staley's Maintenance Agar

Composition per liter:

Agar	15.0g
Peptone.....	5.0g
Yeast extract.....	0.5g
Hutner's basal salts solution.....	20.0mL
Vitamin solution.....	10.0mL

Hutner's Basal Salts Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitrilotriacetic acid	10.0g

CaCl ₂ ·2H ₂ O	3.335g
FeSO ₄ ·7H ₂ O.....	99.0mg
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	9.25mg
“Metals 44”	50.0mL

“Metals 44”:

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.095g
FeSO ₄ ·7H ₂ O.....	0.5g
Sodium EDTA.....	0.25g
MnSO ₄ ·H ₂ O	0.154g
CuSO ₄ ·5H ₂ O.....	39.2mg
Co(NO ₃) ₂ ·6H ₂ O	24.8mg
Na ₂ B ₄ O ₇ ·10H ₂ O.....	17.7mg

Preparation of “Metals 44”: Add sodium EDTA to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Add a few drops of concentrated H₂SO₄ to retard precipitation of heavy metal ions. Add remaining components. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Hutner's Basal Salts Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Vitamin Solution:

Composition per liter:

Nicotinamide.....	9.0mg
Calcium DL-pantothenate.....	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Hutner's basal salts solution and vitamin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 20.0 mL of sterile Hutner's basal salts solution and 10.0mL of sterile vitamin solution. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Gemmata obscuriglobus*.

Staley's Maintenance Broth

Composition per liter:

Peptone	5.0g
Yeast extract.....	0.5g
Hutner's basal salts solution.....	20.0mL
Vitamin solution.....	10.0mL

Hutner's Basal Salts Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitrilotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.335g
FeSO ₄ ·7H ₂ O.....	99.0mg
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	9.25mg
“Metals 44”	50.0mL

“Metals 44”:**Composition per 100.0mL:**

ZnSO ₄ ·7H ₂ O	1.095g
FeSO ₄ ·7H ₂ O	0.5g
Sodium EDTA	0.25g
MnSO ₄ ·H ₂ O	0.154g
CuSO ₄ ·5H ₂ O	39.2mg
Co(NO ₃) ₂ ·6H ₂ O	24.8mg
Na ₂ B ₄ O ₇ ·10H ₂ O	17.7mg

Preparation of “Metals 44”: Add sodium EDTA to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Add a few drops of concentrated H₂SO₄ to retard precipitation of heavy metal ions. Add remaining components. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Hutner’s Basal Salts Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Vitamin Solution:**Composition per liter:**

Nicotinamide	9.0mg
Calcium DL-pantothenate	5.0mg
Riboflavin	5.0mg
Thiamine·HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Hutner’s basal salts solution and vitamin solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 20.0 mL of sterile Hutner’s basal salts solution and 10.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Gemmata obscuriglobus*.

Stan 4 Agar**Composition per liter:**

Solution B	650.0mL
Solution A	350.0mL

Solution A:**Composition per 350.0mL:**

CaCl ₂ ·2H ₂ O	1.0g
KNO ₃	1.0g
MgSO ₄ ·7H ₂ O	1.0g
Trace elements solution	1.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 350.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Trace Elements Solution:**Composition per liter:**

EDTA	8.0g
MnCl ₂ ·4H ₂ O	0.1g
CoCl ₂	0.02g

KBr	0.02g
ZnCl ₂	0.02g
CuSO ₄	0.01g
H ₃ BO ₃	0.01g
NaMoO ₄ ·2H ₂ O	0.01g
BaCl ₂	5.0mg
LiCl	5.0mg
SnCl ₂ ·2H ₂ O	5.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution B:**Composition per 650.0mL:**

Agar	10.0g
K ₂ HPO ₄	1.0g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 650.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Aseptically combine 350.0mL of cooled, sterile solution A and 650.0mL of cooled, sterile solution B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of myxobacteria.

Stan 5 Agar**Composition per liter:**

Solution B	650.0mL
Solution A	350.0mL

Solution A:**Composition per 350.0mL:**

CaCl ₂ ·2H ₂ O	1.0g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄ ·7H ₂ O	1.0g
Trace elements solution	1.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 350.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Trace Elements Solution:**Composition per liter:**

EDTA	8.0g
MnCl ₂ ·4H ₂ O	0.1g
CoCl ₂	0.02g
KBr	0.02g
ZnCl ₂	0.02g
CuSO ₄	0.01g
H ₃ BO ₃	0.01g
NaMoO ₄ ·2H ₂ O	0.01g
BaCl ₂	5.0mg
LiCl	5.0mg
SnCl ₂ ·2H ₂ O	5.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution B:**Composition per 650.0mL:**

Agar	10.0g
K ₂ HPO ₄	1.0g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 650.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Aseptically combine 350.0mL of cooled, sterile solution A and 650.0mL of cooled, sterile solution B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of myxobacteria.

Stan 6 Agar

Composition per liter:

Agar	10.0g
CaCl ₂ ·2H ₂ O	1.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	1.0g
(NH ₄) ₂ SO ₄	1.0g
FeCl ₃	0.2g
MnSO ₄ ·7H ₂ O	0.1g
Yeast extract	0.02g
Trace elements solution	1.0mL

Trace Elements Solution:

Composition per liter:

Disodium EDTA	8.0g
MnCl ₂ ·4H ₂ O	0.1g
CoCl ₂ ·6H ₂ O	0.02g
KBr	0.02g
KI	0.02g
ZnCl ₂	0.02g
CuSO ₄	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
LiCl	5.0mg
SnCl ₂ ·2H ₂ O	5.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

Stan 5 Mineral Medium

Composition per liter:

K ₂ HPO ₄	1.0g
(NH ₄) ₂ SO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.1g
FeCl ₃	0.02g

pH 7.0–7.5 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

Standard Agar with Methanol and Yeast Extract

Composition per liter:

Base solution	982.0mL
Methanol	10.0mL
Solution B	5.0mL
Solution A	1.0mL
Solution C	1.0mL
Solution D	1.0mL

pH 4.0–4.5 at 25°C

Base Solution:

Composition per 982.0mL:

Agar	20.0g
Yeast extract	0.5g

Preparation of Base Solution: Add components to distilled/deionized water and bring volume to 982.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Methanol:

Composition per 10.0mL:

Methanol	10.0mL
----------------	--------

Preparation of Methanol: Filter sterilize.

Solution A:

Composition per liter:

K ₂ HPO ₄	87.09g
KH ₂ PO ₄	68.05g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Solution B:

Composition per liter:

NH ₄ Cl	152.28g
--------------------------	---------

Preparation of Solution B: Add NH₄Cl to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Solution C:

Composition per liter:

CaCl ₂ ·6H ₂ O	5.47g
--	-------

Preparation of Solution C: Add CaCl₂·6H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Solution D:

Composition per liter:

MgSO ₄ ·7H ₂ O	71.2g
FeSO ₄ ·7H ₂ O	5.0g
MnSO ₄ ·4H ₂ O	0.81g
CuSO ₄ ·5H ₂ O	0.79g
ZnSO ₄ ·7H ₂ O	0.44g
Na ₂ MoO ₄ ·2H ₂ O	0.25g

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 982.0mL of cooled, sterile base solution, aseptically add 10.0mL of sterile methanol, 1.0mL of sterile solution A, 5.0mL of sterile solution B, 1.0mL of sterile solution C, and 1.0mL of sterile solution D. Mix thoroughly. Adjust pH to 4.0–4.5 if necessary. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Acetobacter methanolicus*.

Standard Fluid Medium 10B (Shepard's M10 Medium)

Composition per 102.5mL:

Base solution.....	70.0mL
Horse serum, unheated.....	20.0mL
Fresh yeast extract solution.....	10.0mL
Penicillin solution.....	1.0mL
CVA enrichment.....	0.5mL
L-Cysteine·HCl·H ₂ O solution.....	0.5mL
Urea solution.....	0.4mL
Phenol Red solution.....	0.1mL

pH 6.0 ± 0.2 at 25°C

Base Solution:

Composition per 70.0mL:

Beef heart, solids from infusion.....	5.0g
Peptone.....	1.0g
NaCl.....	0.5g

Preparation of Base Solution: Add components to distilled/deionized water and bring volume to 70.0mL. Mix thoroughly. Adjust pH to 5.5 with 2N HCl. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Penicillin Solution:

Composition per 10.0mL:

Penicillin G.....	1,000,000U
-------------------	------------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

CVA Enrichment:

Composition per liter:

Glucose.....	100.0g
L-Cysteine·HCl·H ₂ O.....	25.9g
L-Glutamine.....	10.0g
L-Cystine·2HCl.....	1.0g
Adenine.....	1.0g
Nicotinamide adenine dinucleotide.....	0.25g
Coccarboxylase.....	0.1g
Guanine·HCl.....	0.03g
Fe(NO ₃) ₃	0.02g
<i>p</i> -Aminobenzoic acid.....	0.013g
Vitamin B ₁₂	0.01g
Thiamine·HCl.....	3.0mg

Preparation of CVA Enrichment: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

L-Cysteine·HCl·H₂O Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O.....	0.2g
--------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Urea Solution:

Composition per 10.0mL:

Urea.....	1.0g
-----------	------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Phenol Red Solution:

Composition per 10.0mL:

Phenol Red.....	0.1g
-----------------	------

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 70.0mL of cooled, sterile base solution, aseptically add 20.0mL of sterile horse serum, 10.0mL of sterile fresh yeast extract solution, 1.0mL of sterile penicillin solution, 0.5mL of sterile CVA enrichment, 0.5mL of sterile L-cysteine·HCl·H₂O solution, 0.4mL of sterile urea solution, and 0.1mL of sterile Phenol Red solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Ureaplasma urealyticum* from clinical specimens.

Standard I with Malt Agar

Composition per liter:

Agar.....	12.0g
Malt extract.....	10.0g
Peptone from meat.....	7.8g
Pancreatic digest of casein.....	7.8g
NaCl.....	5.6g
Yeast extract.....	2.8g
CaCO ₃	2.0g
D(+)-Glucose.....	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Thermocrispum municipale* and *Thermocrispum agreste*.

Standard I Medium (DSMZ Medium 453)

Composition per liter:

Peptone from meat.....	7.8g
Peptone from casein.....	7.8g
NaCl.....	5.6g
Yeast extract.....	2.8g
D(+)-Glucose.....	1.0g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available from Merck.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Brevibacillus* spp., *Bacillus coagulans*, and *Thermoactinomyces vulgaris* (*Thermoactinomyces candidus*).

**Standard Methods Agar
(Tryptone Glucose Yeast Agar)
(Plate Count Agar)**

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	5.0g
Yeast extract	2.5g
Glucose	1.0g
pH 7.0 ± 0.1 at 25°C	

Source: Available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration by microbial plate counts of microorganisms isolated from milk and dairy products, foods, water, and other specimens.

Standard Methods Agar, HiVeg

Composition per liter:

Agar	15.0g
Plant peptone	5.0g
Yeast extract	2.5g
Glucose	1.0g
pH 7.0 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration by microbial plate counts of microorganisms isolated from milk and dairy products, foods, water, and other specimens.

**Standard Methods Agar
with Lecithin and Polysorbate 80**

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	5.0g
Polysorbate 80	5.0g
Yeast extract	2.5g
Glucose	1.0g
Lecithin	0.7g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For determination of the sterility of surfaces.

**Standard Methods Broth
(m-Standard Methods Broth)
(Tryptone Glucose Yeast Broth)
(m-Plate Count Broth)**

Composition per liter:

Pancreatic digest of casein	10.0g
Yeast extract	5.0g
Glucose	2.0g
pH 7.0 ± 0.2 at 25°C	

Source: Available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For enumeration of the total number of microorganisms by the membrane filter method.

Standard Methods Caseinate Agar

Composition per liter:

Agar	15.0g
Sodium caseinate	10.0g
Pancreatic digest of casein	5.0g
Yeast extract	2.5g
Glucose	1.0g
Trisodium citrate solution	1.0L
CaCl ₂ ·2H ₂ O (1M solution)	20.0mL

Trisodium Citrate Solution:**Composition** per liter:

Trisodium citrate·2H ₂ O	4.41g
---	-------

Preparation of Trisodium Citrate Solution: Add trisodium citrate·2H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add yeast extract, pancreatic digest of casein, glucose, and agar to 500.0mL of the trisodium citrate solution. Mix thoroughly. Gently heat until boiling. Add the remaining components. Bring volume to 1.0L with trisodium citrate solution. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes.

Use: For the cultivation of proteolytic bacteria from foods.

Standard Methods Caseinate HiVeg Agar

Composition per liter:

Agar	15.0g
Sodium caseinate	10.0g
Plant hydrolysate	5.0g
Na ₃ -citrate	4.41g
Yeast extract	2.5g
CaCl ₂	2.22g
Glucose	1.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes in 20.0mL volumes. Allow the surface of the plates to dry before inoculation.

Use: For the cultivation of proteolytic bacteria from foods.

Standard Methods HiVeg Agar with Tween 80 and Lecithin

Composition per liter:

Agar	15.0g
Polysorbate 80 (Tween 80)	5.0g
Plant hydrolysate.....	5.0g
Yeast extract.....	2.5g
Glucose	1.0g
Lecithin	0.7g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For determination of the sterility of surfaces.

Standard II Nutrient Agar

Composition per liter:

Agar	13.0g
Tryptose	7.0g
NaCl	5.0g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of nonfastidious microorganisms. For the maintenance of cultures of a wide variety of nonfastidious bacteria. May also be used as a base for blood and other enrichments for the cultivation of fastidious microorganisms. May be used to determine indole production.

Standard Nutrient HiVeg Agar

Composition per liter:

Agar	20.0g
Plant extract	10.0g
Plant peptone.....	10.0g
NaCl	5.0g

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of not particularly fastidious microorganisms.

Standard Nutrient HiVeg Broth (H.S. Vaccine HiVeg Medium)

Composition per liter:

Plant extract	10.0g
Plant peptone	10.0g
NaCl.....	5.0g

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and enumeration of not particularly fastidious microorganisms. For the culture of bacteria for vaccine production.

Standard Staphylococcus HiVeg Broth

Composition per liter:

Plant peptone	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Staphylococcus* spp.

Stanier's Basal Medium with Pyridoxine and Yeast Extract

Composition per liter:

KH ₂ PO ₄	2.78g
Na ₂ HPO ₄	2.78g
(NH ₄) ₂ SO ₄	1.0g
Yeast extract.....	0.2g
Hutner's mineral base	20.0mL
Pyridoxine solution.....	10.0mL

pH 6.8 ± 0.2 at 25°C

Pyridoxine Solution:

Composition per 10.0mL:

Pyridoxine.....	2.0g
-----------------	------

Preparation of Pyridoxine Solution: Add pyridoxine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Hutner's Mineral Base:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitilotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.34g
FeSO ₄ ·7H ₂ O.....	99.0mg
(NH ₄) ₂ MoO ₄	9.25mg
Metals "44"	50.0mL

Preparation of Hutner's Mineral Base: Add nitilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5

with KOH. Add remaining components. Readjust pH to 7.2 with H₂SO₄ or KOH. Add distilled/deionized water to 1.0L.

Metals "44":

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.1g
FeSO ₄ ·7H ₂ O	0.5g
EDTA	0.25g
MnSO ₄ ·7H ₂ O	0.154g
CuSO ₄ ·5H ₂ O	0.04g
Co(NO ₃) ₂ ·6H ₂ O	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O	0.018g

Preparation of Metals "44": Add a few drops of H₂SO₄ to distilled/deionized water to inhibit precipitate formation. Add components to acidified distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except pyridoxine solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 6.8 with 1N KOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile pyridoxine solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Pseudomonas* species.

Stanier's Basal Medium with Trichlorophenoxyacetate

Composition per liter:

KH ₂ PO ₄	2.78g
Na ₂ HPO ₄	2.78g
(NH ₄) ₂ SO ₄	1.0g
2,4,5-Trichlorophenoxyacetate	1.0g
Hutner's mineral base	20.0mL

Hutner's Mineral Base:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitrilotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.34g
FeSO ₄ ·7H ₂ O	0.1g
(NH ₄) ₂ MoO ₄	9.25mg
Metals "44"	50.0mL

Preparation of Hutner's Mineral Base: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Readjust pH to 7.2 with H₂SO₄ or KOH. Add distilled/deionized water to 1.0L. Store at 5°C.

Metals "44":

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.1g
FeSO ₄ ·7H ₂ O	0.5g
EDTA	0.25g
MnSO ₄ ·7H ₂ O	0.154g
CuSO ₄ ·5H ₂ O	0.04g
Co(NO ₃) ₂ ·6H ₂ O	0.025g
Na ₂ B ₄ O ₇ ·10H ₂ O	0.018g

Preparation of Metals "44": Add a few drops of H₂SO₄ to distilled/deionized water to inhibit precipitate formation. Add components to acidified distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Pseudomonas cepacia*.

Staphylococcus Agar No. 110

Composition per liter:

NaCl	75.0g
Gelatin	30.0g
Agar	15.0g
D-Mannitol	10.0g
Pancreatic digest of casein	10.0g
K ₂ HPO ₄	5.0g
Yeast extract	2.5g
Lactose	2.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Swirl flask while pouring plates to disperse precipitate.

Use: For the isolation and enumeration of staphylococci from clinical and nonclinical specimens.

Staphylococcus aureus Enrichment HiVeg Broth

Composition per liter:

Plant peptone	10.0g
Plant infusion	5.0g
NaCl	5.0g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Staphylococcus aureus*.

Staphylococcus Broth (m-Staphylococcus Broth)

Composition per liter:

NaCl	75.0g
Mannitol	10.0g
Pancreatic digest of casein	10.0g
K ₂ HPO ₄	5.0g
Yeast extract	2.5g
Lactose	2.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and enumeration of pathogenic and enterotoxigenic staphylococci by the membrane filter method. Also, when used

in conjunction with Lipovitellin-salt-mannitol agar, for the detection of *Staphylococcus aureus* in swimming pool water.

Staphylococcus Medium

Composition per liter:

Agar	15.0g
Peptone.....	6.0g
Pancreatic digest of casein	4.0g
Yeast extract.....	3.0g
Beef extract.....	1.5g
Glucose	1.0g
pH 6.6 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Staphylococcus aureus*. For the enumeration of pathogenic and enterotoxigenic staphylococci by the membrane filter method.

Staphylococcus/Streptococcus Selective Medium

Composition per 1060.0mL:

Columbia blood agar base.....	1.0L
Horse blood, defibrinated	50.0mL
Antibiotic inhibitor	10.0mL
pH 7.3 ± 0.2 at 25°C	

Columbia Blood Agar Base:

Composition per liter:

Special peptone.....	23.0g
Agar	10.0g
NaCl	5.0g
Starch	1.0g

Source: Columbia blood agar base is available as a premixed powder from Oxoid Unipath.

Preparation of Columbia Blood Agar Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Antibiotic Inhibitor:

Composition per 10.0mL:

Nalidixic acid.....	0.015g
Colistin sulfate	0.01g
Ethanol (95% solution)	10.0mL

Preparation of Antibiotic Inhibitor: Add components to 10.0mL ethanol. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 1.0L of cooled sterile Columbia blood agar base, aseptically add sterile horse blood and sterile antibiotic inhibitor. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of *Staphylococcus aureus* and streptococci from clinical specimens or foods.

Starch Agar

Composition per liter:

Starch, soluble.....	20.0g
Agar	10.0g
NaNO ₃	2.5g

K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.6g
CaCl ₂ ·2H ₂ O	0.1g
NaCl.....	0.1g
FeCl ₃	1mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of myxobacteria.

Starch Agar

Composition per liter:

Agar	15.0g
Potato starch.....	10.0g
Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components, except potato starch, to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Add potato starch to distilled/deionized water and bring volume to 250.0mL. Gently heat and bring to boiling. Combine the two solutions and bring the volume to 1.0L with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and differentiation of aerobic *Actinomyces* species based on amylase production. After incubation, starch hydrolysis is determined by the addition of Gram's or Lugol's iodine solution. Organisms that produce amylase appear as colonies surrounded by a clear zone.

Starch Agar

Composition per liter:

Agar	12.0g
Soluble starch.....	10.0g
Beef extract.....	3.0g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and differentiation of a variety of microorganisms based on amylase production. After incubation, starch hydrolysis is determined by the addition of Gram's or Lugol's iodine solution. Organisms that produce amylase appear as colonies surrounded by a clear zone.

Starch Agar

Composition per liter:

Agar	25.0g
Starch, soluble.....	2.0g
Mineral solution.....	200.0mL

Mineral Solution:

Composition per liter:

KH ₂ PO ₄	2.0g
(NH ₄) ₂ SO ₄	1.4g

MgSO ₄ ·7H ₂ O	0.3g
Calcium chloride solution	10.0mL
Trace elements solution	10.0mL

Calcium Chloride Solution:

Composition per 100.0mL:

CaCl ₂ ·2H ₂ O	3.0g
--	------

Preparation of Calcium Chloride Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

FeSO ₄ ·7H ₂ O	0.5g
CoCl ₂	0.2g
MnSO ₄ ·H ₂ O	0.16g
ZnSO ₄ ·7H ₂ O	0.14g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Aspergillus awamori*.

Starch Agar with Bromcresol Purple

Composition per liter:

Agar	15.0g
Cornstarch	10.0g
Meat peptone	10.0g
Bromcresol Purple solution	1.2mL
pH 6.8 ± 0.2 at 25°C	

Bromcresol Purple Solution:

Composition per 10.0mL:

Bromcresol Purple	0.16g
Ethanol (95% solution)	10.0mL

Preparation of Bromcresol Purple Solution: Add Bromcresol Purple to 10.0mL of 95% ethanol. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of *Gardnerella vaginalis* (*Haemophilus vaginalis*, *Corynebacterium vaginale*) from other microorganisms found in the genitourinary tract, with the exception of some strains of *Streptococcus* and *Lactobacillus*. Differentiation is based on starch hydrolysis. Bacteria that can hydrolyze starch appear as colonies surrounded by a yellow zone.

Starch Agar with Bromcresol Purple

Composition per liter:

Solution 1	200.0mL
Solution 2	20.0mL
pH 7.8 ± 0.2 at 25°C	

Solution 1:

Composition per 200.0mL:

Heart infusion agar	5.0mL
Bromcresol Purple solution	0.2mL

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling.

Heart Infusion Agar:

Composition per liter:

Beef heart, solids from infusion	500.0g
Agar	15.0g
Tryptose	10.0g
NaCl	5.0g

Preparation of Heart Infusion Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling.

Bromcresol Purple Solution:

Composition per 10.0mL:

Bromcresol Purple	0.16g
Ethanol (95% solution)	10.0mL

Preparation of Bromcresol Purple Solution: Add Bromcresol Purple to 10.0mL of ethanol. Mix thoroughly.

Solution 2:

Composition per 20.0mL:

Starch	0.4g
--------------	------

Preparation of Solution 2: Add starch to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling.

Preparation of Medium: Combine solution 1 and solution 2. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the differentiation of *Gardnerella vaginalis* (*Haemophilus vaginalis*, *Corynebacterium vaginale*) from other microorganisms found in the genitourinary tract, with the exception of some strains of *Streptococcus* and *Lactobacillus*. Differentiation is based on starch hydrolysis. Bacteria that can hydrolyze starch appear as colonies surrounded by a yellow zone.

Starch Agar Medium for Pseudomonas

Composition per liter:

Agar	15.0g
Peptone	5.0g
Yeast extract	5.0g
Soluble starch	3.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas* species and *Erwinia herbicola*.

Starch Casein Agar

Composition per liter:

Agar	15.0g
Soluble starch	10.0g
K ₂ HPO ₄	2.0g

KNO ₃	2.0g
NaCl	2.0g
Casein.....	0.3g
MgSO ₄ ·7H ₂ O	0.05g
CaCO ₃	0.02g
FeSO ₄ ·7H ₂ O.....	0.01g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. For bottom layers, distribute into tubes in 15.0mL volumes. For top layers, distribute into tubes in 17.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of *Actinomycetes* species from water and soil samples by the double-layer agar technique.

Starch Casein Potassium Nitrate Agar

Composition per liter:

Agar	18.0g
Starch	10.0g
KNO ₃	2.0g
K ₂ HPO ₄	2.0g
NaCl	2.0g
Casein.....	0.3g
MgSO ₄ ·7H ₂ O	0.05g
CaCO ₃	0.02g
FeSO ₄ ·7H ₂ O.....	0.01g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation and cultivation of streptomycetes.

Starch Fermentation Broth

Composition per 225.2mL:

Starch solution	20.0mL
Heart infusion broth	5.0mL
Bromcresol Purple solution	0.2mL
pH 7.8 ± 0.2 at 25°C	

Heart Infusion Broth:

Composition per liter:

Beef heart, infusion from	500.0g
Tryptose	10.0g
NaCl	5.0g
pH 7.4 ± 0.2 at 25°C	

Source: Heart infusion broth is available as a premixed powder from BD Diagnostic Systems.

Preparation of Heart Infusion Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Bromcresol Purple Solution:

Composition per 10.0mL:

Bromcresol Purple	0.1g
Ethanol (95% solution)	10.0mL

Preparation of Bromcresol Purple Solution: Add Bromcresol Purple to 10.0mL ethanol. Mix thoroughly.

Starch Solution:

Composition per 20.0mL:

Starch	0.4g
--------------	------

Preparation of Starch Solution: Add starch to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling.

Preparation of Medium: Combine 5.0mL of heart infusion broth, 0.2mL of Bromcresol Purple solution, 200.0mL of distilled/deionized water, and 20.0mL of starch solution. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Corynebacterium* species.

Starch HiVeg Agar

Composition per liter:

Agar	15.0g
Plant peptone	5.0g
NaCl.....	5.0g
Starch, soluble.....	2.0g
Yeast extract.....	1.5g
Plant extract	1.5g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and differentiation of a variety of microorganisms based on amylase production. After incubation, starch hydrolysis is determined by the addition of Gram’s or Lugol’s iodine solution. Organisms that produce amylase appear as colonies surrounded by a clear zone.

Starch Hydrolysis Agar

Composition per liter:

Beef heart, infusion from	500.0g
Soluble starch.....	20.0g
Agar	15.0g
Tryptose	10.0g
NaCl.....	5.0g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and differentiation of a variety of microorganisms based on amylase production. After incubation, starch hydrolysis is determined by the addition of Gram’s or Lugol’s iodine solution. Organisms that produce amylase appear as colonies surrounded by a clear zone.

Starch Hydrolysis Agar

Composition per liter:

Agar	12.0g
Soluble starch.....	10.0g
Beef extract	3.0g
pH 7.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and differentiation of a variety of microorganisms based on amylase production. For the differentiation of bacteria, e.g. *Neisseria* sp. based upon starch hydrolysis. After incubation, starch hydrolysis is determined by the addition of Gram's or Lugol's iodine solution. Organisms that produce amylase appear as colonies surrounded by a clear zone.

Starch Medium

Composition per liter:

Agar	15.0g
Soluble starch.....	10.0g
Yeast extract.....	3.0g
MgSO ₄ ·7H ₂ O	0.25g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Guignardia laricina*.

Starch Mineral Salt Agar

Composition per liter:

Agar	12.0g
Starch, soluble.....	10.0g
CaCO ₃	2.0g
(NH ₄) ₂ SO ₄	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	1.0g
NaCl	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptovorticillium* species and *Thermomonospora formosensis*.

Starch Nitrate Medium (DSMZ Medium 856)

Composition per liter:

NaCl	100.0g
Agar	20.0g
Starch	20.0g
CaCO ₃	3.0g
KNO ₃	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄	0.5g
Trace salts solution	1.0mL

pH 7.1 ± 0.2 at 25°C

Trace Salts Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O	0.1g

Preparation of Trace Salts Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Saccharomonospora halophila* (*Microbispora* sp.).

Starch Salts Agar

Composition per liter:

Agar	20.0g
Solution A.....	500.0mL
Solution B.....	500.0mL

Solution A:

Composition per 500.0mL:

CaCO ₃	2.0g
(NH ₄) ₂ SO ₄	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	1.0g
NaCl.....	1.0g
Trace salts	1.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Salts:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g

Preparation of Trace Salts: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 500.0mL:

Soluble starch.....	10.0g
---------------------	-------

Preparation of Solution B: Make a paste of the starch with a small volume of distilled/deionized water and then gradually add the starch to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Thoroughly mix 500.0mL of solution A and 500.0mL of solution B. Adjust the pH to 7.2. Add 20.0g of agar and gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Thoroughly mix to evenly distribute the precipitate. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Amycolatopsis rugosa*, *Nocardia lucida*, *Streptomyces canus*, *Streptomyces cyanogriseus*, *Streptomyces fradiae*, *Streptomyces hiroshimensis*, *Streptomyces kuwairiensis*, *Streptomyces rubroverrucosus*, *Streptomyces spinoverrucosus*, *Streptomyces viridoverrucosus*, and *Thermoactinomyces dichotomicus*.

Starkey's Medium C, Modified

Composition per liter:

Sodium lactate	3.5g
MgSO ₄ ·7H ₂ O.....	2.0g
Na ₂ SO ₄	1.0g
NH ₄ Cl	1.0g

Yeast extract.....	1.0g
KH ₂ PO ₄	0.5g
CaCl ₂ ·2H ₂ O.....	0.1g
Ferrous ammonium sulfate solution	50.0mL
L-Cysteine·HCl·H ₂ O solution	10.0mL

pH 7.5 ± 0.2 at 25°C

Ferrous Ammonium Sulfate Solution:**Composition per 100.0mL:**

Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	1.0g
--	------

Preparation of Ferrous Ammonium Sulfate Solution: Add Fe(NH₄)₂(SO₄)₂·6H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

L-Cysteine·HCl·H₂O Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.75g
---------------------------------------	-------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ferrous ammonium sulfate solution and L-cysteine·HCl·H₂O solution, to tap water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile ferrous ammonium sulfate solution and 10.0mL of sterile L-cysteine·HCl·H₂O solution. Mix thoroughly. Adjust pH to 7.5 with filter-sterilized 2N NaOH. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Desulfotomaculum* species and *Desulfovibrio* species.

Starkey's Medium C, Modified with Salt**Composition per liter:**

NaCl.....	25.0g
Sodium lactate.....	3.5g
MgSO ₄ ·7H ₂ O.....	2.0g
Na ₂ SO ₄	1.0g
NH ₄ Cl	1.0g
Yeast extract.....	1.0g
KH ₂ PO ₄	0.5g
CaCl ₂ ·2H ₂ O.....	0.1g
Ferrous ammonium sulfate solution	50.0mL
L-Cysteine·HCl·H ₂ O solution	10.0mL

pH 7.5 ± 0.2 at 25°C

Ferrous Ammonium Sulfate Solution:**Composition per 100.0mL:**

Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	1.0g
--	------

Preparation of Ferrous Ammonium Sulfate Solution: Add Fe(NH₄)₂(SO₄)₂·6H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

L-Cysteine·HCl·H₂O Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.75g
---------------------------------------	-------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ferrous ammonium sulfate solution and L-cysteine·HCl·H₂O solution, to tap water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring

to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile ferrous ammonium sulfate solution and 10.0mL of sterile L-cysteine·HCl·H₂O solution. Mix thoroughly. Adjust pH to 7.5 with filter-sterilized 2N NaOH. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of halophilic *Desulfovibrio* species.

**Steenken and Smith Agar
(Hohn's Medium, Modified)****Composition per 2065.0mL:**

Homogenized whole egg	1500.0mL
Stock salts solution	500.0mL
Lacmoid solution	25.0mL
HCl (1N solution)	40.0mL

pH 6.6 ± 0.2 at 25°C

Stock Salts Solution:**Composition per 500.0mL:**

KH ₂ PO ₄	2.0g
Asparagine	1.5g
Magnesium citrate	1.25 g
Na ₂ HPO ₄ , anhydrous	1.2 g
MgSO ₄	0.3g
Glycerol	60.0mL

Preparation of Stock Salts Solution: Add components, except glycerol, to distilled/deionized water that has been warmed to 80°C. Bring volume to 440.0mL. Mix thoroughly. Add 60.0mL of glycerol. Mix thoroughly. Autoclave for 20 min at 10 psi pressure–115°C. Cool to 25°C. Aseptically divide the solution into two 250.0mL parts.

Lacmoid Solution:**Composition per 100.0mL:**

Lacmoid.....	1.0g
Ethanol (50% solution).....	100.0mL

Preparation of Lacmoid Solution: Add lacmoid to 100.0mL of ethanol solution. Mix thoroughly.

Preparation of Medium: To one 250.0mL part of sterile stock salts solution, add 25.0mL of lacmoid solution. Mix thoroughly. To the other 250.0mL part of sterile stock salts solution, add 40.0mL of HCl solution. Mix thoroughly. Soak eggs in 70% ethanol for 10 min. Dry between sterile towels. Break eggs into a sterile container. Aseptically homogenize the whole eggs with a sterile glass rod. Add both stock salt solutions to the homogenized whole egg mixture. Mix thoroughly. Filter through sterile cheesecloth. Aseptically distribute into sterile tubes. Inspissate medium at 85°C (moist heat) for 90 min on 2 consecutive days.

Use: For the cultivation and maintenance of *Mycobacterium microti*.

**Sterility Test Broth
(USP Alternative Thioglycolate Medium)****Composition per liter:**

Pancreatic digest of casein.....	15.0g
Glucose	5.0g
Yeast extract.....	5.0g
NaCl.....	2.5g
L-Cystine	0.5g
Sodium thioglycolate.....	0.5g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. If not used immediately, prior to inoculation heat tubes in a boiling water bath for 5–10 min. Cool to 25°C.

Use: As an alternate medium, instead of fluid thioglycolate broth, for testing the sterility of a variety of specimens.

***Stetteria* Medium (DSMZ Medium 795)**

Composition per liter:

Sulfur, powdered	10.0g
Peptone	2.0g
Yeast extract	1.0g
KH ₂ PO ₄	0.5g
NaHCO ₃	0.16g
NiCl ₂ ·6H ₂ O	3.0mg
Resazurin	0.75mg
Synthetic seawater, concentrated	500.0mL
Trace elements solution	15.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Selenite-tungstate solution	1.5mL

pH 7.2 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Selenite-Tungstate Solution

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂.

Synthetic Seawater, Concentrated:

Composition per liter:

NaCl	55.4g
MgSO ₄ ·7H ₂ O	14.0g
MgCl ₂ ·6H ₂ O	11.0g
CaCl ₂ ·2H ₂ O	1.5g
KCl	1.3g
NaBr	0.2g
H ₃ BO ₃	0.06g
SrCl ₂ ·6H ₂ O	0.03g
Na ₃ -citrate	20.0mg
KI	0.1mg

Preparation of Synthetic Seawater, Concentrated: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitilotriacetic acid	1.5g
NaCl	1.0g

MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas mixture. Add components, except synthetic seawater and Na₂S·9H₂O solution, to 490.0mL distilled/deionized water. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 500.0mL filter-sterilized concentrated seawater. Flush with 80% N₂ + 20% CO₂ gas mixture for 20 min. Aseptically add 10.0mL Na₂S·9H₂O solution. Adjust pH to 6.0 with H₂SO₄. Mix thoroughly. Aseptically and anaerobically distribute 20mL aliquots into sterile 100mL serum bottles. Pressurize bottles to 2 bar gas overpressure with 80% N₂ + 20% CO₂. Heat at 100°C for 1.5 h. Before use check that the medium pH is 6.0.

Use: For the cultivation of *Stetteria hydrogenophila* and *Staphylothermus hellenicus*.

STL Broth

Composition per liter:

Casamino acids	1.0g
Glucose	1.0g
Sodium glutamate	1.0g
CaCl ₂ ·2H ₂ O	0.1g
KNO ₃	0.1g
MgSO ₄ ·7H ₂ O	0.1g
Sodium glycerophosphate	0.1g
Thiamine	1.0mg
Vitamin B ₁₂	1.0μg
Trace elements solution	1.0mL

pH 7.5 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

Disodium EDTA	8.0g
MnCl ₂ ·4H ₂ O	0.1g
CoCl ₂ ·6H ₂ O	0.02g
KBr	0.02g
KI	0.02g
ZnCl ₂	0.02g
CuSO ₄	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
LiCl	5.0mg
SnCl ₂ ·2H ₂ O	5.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

Stock Culture Agar

Composition per liter:

Beef heart infusion.....	500.0g
Gelatin.....	10.0g
Proteose peptone.....	10.0g
Agar.....	7.5g
Casein.....	5.0g
Na ₂ HPO ₄	4.0g
Sodium citrate.....	3.0g
Glucose.....	0.5g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to cold distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the maintenance of pathogenic and nonpathogenic bacteria, especially streptococci.

Stock Culture Agar with L-Asparagine

Composition per liter:

Beef heart infusion.....	500.0g
Gelatin.....	10.0g
Proteose peptone.....	10.0g
Agar.....	7.5g
Casein.....	5.0g
Na ₂ HPO ₄	4.0g
Sodium citrate.....	3.0g
L-Asparagine.....	1.0g
Glucose.....	0.5g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to cold distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the maintenance of pathogenic and nonpathogenic bacteria, especially streptococci.

Stokes Agar

Composition per liter:

Agar.....	12.5g
Glucose.....	1.0g
Peptone.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂	0.05g
FeCl ₃ ·6H ₂ O.....	0.01g

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Sphaerotilus natans*.

Stonebrink's Medium

Composition per 3040.0mL:

Homogenized whole egg.....	2.0L
Mineral salts solution.....	1.0L
Malachite Green solution.....	40.0mL

Mineral Salts Solution:

Composition per liter:

Na-pyruvate.....	12.5g
KH ₂ PO ₄	7.0g
Na ₂ HPO ₄ ·7H ₂ O.....	4.0g

Preparation of Mineral Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Malachite Green Solution:

Composition per 100.0mL:

Malachite Green.....	2.0g
----------------------	------

Preparation of Malchite Green Solution: Add Malachite Green to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Homogenized Whole Egg:

Composition per 2.0L:

Whole eggs.....	36–48
-----------------	-------

Preparation of Homogenized Whole Egg: Use fresh eggs, less than 1 week old. Scrub the shells with soap. Let stand in a soap solution for 30 min. Rinse in running water. Soak eggs in 70% ethanol for 15 min. Break the eggs into a sterile container. Homogenize by shaking. Filter through four layers of sterile cheesecloth into a sterile graduated cylinder. Measure out 2.0L.

Preparation of Medium: Aseptically add 40.0mL sterile Malachite Green solution to 1.0L of sterile mineral salts solution. Mix thoroughly. Aseptically add 2.0L of homogenized whole egg. Mix thoroughly. Distribute into sterile screw-capped tubes. Place tubes in a slanted position. Inspissate at 85°C (moist heat) for 45 min.

Use: For the cultivation of *Mycobacterium* species. For the isolation of *Mycobacterium bovis*.

Straw DYAA

Composition per liter:

Agar.....	20.0g
Glucose.....	10.0g
Yeast extract.....	1.0g
Asparagine.....	0.5g
K ₂ HPO ₄ ·3H ₂ O.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.25g
FeCl ₃ solution.....	0.5mL
Straw.....	variable

FeCl₃ Solution:

Composition per 10.0mL:

FeCl ₃	1.0g
-------------------------	------

Preparation of FeCl₃ Solution: Add FeCl₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Preparation of Medium: Add components, except straw, to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Autoclave

straw for 15 min at 15 psi pressure–121°C. Aseptically add straw to the solidified agar.

Use: For the cultivation of *Cochliobolus sativus*.

Straw Malt Agar

Composition per liter:

Agar	15.0g
Malt extract	10.0g
Straw	variable

Preparation of Medium: Add components, except straw, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Autoclave straw for 15 min at 15 psi pressure–121°C. Aseptically add some straw to the solidified agar.

Use: For the cultivation of *Cladosporium vigneae*, *Cochliobolus sativus*, and *Cochliobolus victoriae*.

StrepB Carrot Broth™

Composition per liter:

Proteose peptone No. 3	25.0g
Soluble sStarch	20.0g
Selective agents	12.2g
Morpholinepropanesulfonic aAcid (MOPS)	11.0g
Na ₂ HPO ₄	8.5g
Glucose	2.5g
Sodium pyruvate	1.0g
MgSO ₄	20.0g
StrepB carrot broth tiles with growth promoting factors	variable
pH 7.4 ± 0.1 at 25°C	

Source: This medium is available from Hardy Diagnostics.

Preparation: This medium is supplied as a prepared broth in tubes. The StrepB carrot broth tile is added to a tube just prior to inoculation with a vaginal swab. The tile must remain submerged in the broth.

Use: For detecting the presence of Group B *Streptococcus* infections in pregnant women. This new screening test is an improvement over conventional methods, by increasing sensitivity, decreasing turn around time, while lowering overall cost. Tubes show an orange to red color change, typical of group B streptococci. The production of orange, red, or brick red pigment is a unique characteristic of hemolytic Group B streptococci due to reaction with substrates such as starch, proteose peptone, serum, and folate pathway inhibitors.

Strep ID Quad Plate

Composition per liter:

Quadrant I	5.0mL
Quadrant II	5.0mL
Quadrant III	5.0mL
Quadrant IV	5.0mL

Source: Available as a prepared medium from BD Diagnostic Systems.

Quadrant I:

Composition per 5.0mL:

Bacitracin	0.5mg
TSA II agar	5.0mL

Quadrant II:

Composition per 5.0mL:

TSA II agar	5.0mL
Sheep blood, defibrinated	0.25mL

Quadrant III:

Composition per 5.0mL:

Bile esculin agar	5.0mL
-------------------------	-------

Quadrant IV:

Composition per 5.0mL:

Blood agar base with 6.5% NaCl	5.0mL
--------------------------------------	-------

Preparation of Quadrant Media: Sterilize agars by autoclaving for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Add additional components as filter sterilized solutions. Mix and distribute as 5.0mL aliquots into quadrants.

Use: For the differentiation and presumptive identification of streptococci. The Strep (*Streptococcus*) ID (Identification) Quad Plate is a four-sectored plate, each containing a different medium.

Streptococcal Growth Medium

Composition per liter:

Beef heart, solids from infusion	500.0g
Tryptose	10.0g
NaCl	5.0g
Glucose	1.0g
Bromcresol Purple solution	1.0mL
pH 7.4 ± 0.2 at 25°C	

Bromcresol Purple Solution:

Composition per 10.0mL:

Bromcresol Purple	0.16g
Ethanol (95% solution)	10.0mL

Preparation of Bromcresol Purple Solution: Add Bromcresol Purple to 10.0mL of ethanol. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Streptococcus* species and other Gram-positive cocci. Growth in this medium turns the indicator yellow and the solution turbid.

Streptococcus agalactiae Selective HiVeg Agar Base with Blood and *Staphylococcus B* toxin

Composition per liter:

Agar	13.0g
Plant peptone	10.0g
NaCl	5.0g
Plant extract No. 1	5.0g
Esculin	1.0g
Thallosulfate	0.333g
Crystal Violet	1.3g
Sheep blood, defibrinated	50.0mL
<i>Staphylococcus B</i> toxin	25.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without blood or toxin, is available as a pre-mixed powder from HiMedia.

Preparation of Medium: Add components, except sheep blood and staphylococcal toxin, to distilled/deionized water and bring volume to 925.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave

for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile sheep blood and 25.0mL of staphylococcal toxin. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective cultivation of *Streptococcus agalactiae*.

Streptococcus Agar

Composition per liter:

Glucose	20.0g
Pancreatic digest of casein	20.0g
Agar	15.0g
K ₂ HPO ₄	2.0g
MgSO ₄ ·7H ₂ O	0.1g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptococcus* species.

Streptococcus Blood Agar, Selective

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g
Beef extract	6.7g
Nucleic acid	6.0g
NaCl	5.0g
Sheep blood, defibrinated	50.0mL
Maltose solution	10.0mL
Antibiotic inhibitor	10.0mL

pH 7.3 ± 0.2 at 25°C

Maltose Solution:

Composition per 10.0mL:

Maltose	0.25–5.0g
---------------	-----------

Preparation of Maltose Solution: Add maltose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Antibiotic Inhibitor:

Composition per 10.0mL:

Polymyxin B sulfate	0.02g
Neomycin sulfate	0.01g

Preparation of Antibiotic Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except sheep blood, maltose solution, and antibiotic inhibitor—to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood, sterile maltose solution, and sterile antibiotic inhibitor. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of group A hemolytic *Streptococcus* species from the human respiratory tract.

Streptococcus Enrichment HiVeg Broth (SE HiVeg Broth)

Composition per liter:

Plant hydrolysate	26.0g
Yeast extract	6.0g

NaCl	5.0g
Synthetic detergent	3.0g
Esculin	1.0g
Sodium citrate	1.0g
Ferric ammonium citrate	0.5g
NaN ₃	0.25g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective isolation, cultivation, and enumeration of streptococci from specimens containing a mixed flora.

Streptococcus faecalis Broth

See: **SF Broth**

Streptococcus lactis Differential HiVeg Agar Base with Potassium Ferricyanide and Citrate

Composition per liter:

Agar	15.0g
Skim milk (nonfat milk)	10.0g
Glucose	5.0g
Plant hydrolysate No. 3	2.5g
Potassium ferricyanide solution	10.0mL
Citrate solution	10.0mL

pH 6.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Citrate Solution:

Composition per 10.0mL:

Ferric citrate	0.25g
Sodium citrate	0.25g

Preparation of Citrate Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sterilize using flowing steam for 30 min.

Potassium Ferricyanide Solution:

Composition per 10.0mL:

K ₃ [Fe(CN) ₆]	1.0g
---	------

Preparation of Potassium Ferricyanide Solution: Add 1.0g of K₃[Fe(CN)₆] to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sterilize using flowing steam for 30 min.

Preparation of Medium: Add components, except potassium ferricyanide and citrate solution, to distilled/deionized water and bring volume to 980.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 12 min at 10 psi pressure–115°C. Cool to 50°C. Add 10.0mL sterile potassium ferricyanide solution and 10.0mL citrate solution. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For the differentiation of citrate-utilizing lactic streptococci—*Lactobacillus lactis* (*Streptococcus lactis*) subspecies *diacetylactis*—from citrate-nonutilizing *Lactobacillus lactis* (*Streptococcus lactis*) and *Lactobacillus lactis* (*Streptococcus lactis*) subspecies *cremoris*.

Streptococcus Medium**Composition per liter:**

Agar	15.0g
Glucose	4.0g
K ₂ HPO ₄	3.8g
Pancreatic digest of casein	2.5g
Yeast extract	2.5g

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Enterococcus faecalis*.

Streptococcus mutans Medium**Composition per 100.0mL:**

Pancreatic digest of casein	2.0g
Mannitol	0.5g
NaCl	0.25g
Lactoalbumin	0.25g
Agar	0.075g
L-Cystine	0.05g
Sodium thioglycolate	0.05g
Thallium acetate	0.025g
Crystal Violet	0.1mg
Bromcresol Purple (0.04% solution)	15.0mL

pH 7.1 ± 0.2 at 25°C

Caution: Thallium salts are toxic.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective isolation and cultivation of *Streptococcus mutans*. Bacteria that turn the medium yellow are presumptive for *Streptococcus mutans*.

Streptococcus pneumoniae Medium**Composition per liter:**

Pancreatic digest of casein	17.0g
Glucose	10.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
Yeast extract	3.0g
K ₂ HPO ₄	2.5g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Streptococcus pneumoniae*.

Streptococcus Selection HiVeg Agar**Composition per liter:**

Agar	15.0g
Plant hydrolysate	15.0g
Glucose	5.0g
Papaic digest of soybean meal	5.0g

NaCl	4.0g
Sodium citrate	1.0g
L-Cystine	0.2g
NaN ₃	0.2g
Na ₂ SO ₃	0.2g
Crystal Violet	0.2mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective isolation and enumeration of all types of streptococci including group A beta hemolytic strains.

Streptococcus Selection HiVeg Agar with Cycloheximide**Composition per liter:**

Agar	15.0g
Plant hydrolysate	15.0g
Glucose	5.0g
Papaic digest of soybean meal	5.0g
NaCl	4.0g
Sodium citrate	1.0g
NaN ₃	0.2g
Na ₂ SO ₃	0.2g
L-Cystine	0.2g
Crystal Violet	0.2g
Cycloheximide solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Cycloheximide Solution:**Composition per 10.0mL:**

Cycloheximide	0.01g
---------------------	-------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cycloheximide solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL cycloheximide solution. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into tubes.

Use: For the selective isolation and enumeration of all types of streptococci including group A beta hemolytic strains.

Streptococcus Selection HiVeg Broth**Composition per liter:**

Plant hydrolysate	15.0g
Glucose	5.0g
Papaic digest of soybean meal	5.0g
NaCl	4.0g
Sodium citrate	1.0g
L-Cystine	0.2g
NaN ₃	0.2g

Na ₂ SO ₃	0.2g
Crystal Violet.....	0.2mg
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective cultivation of streptococci including group A beta hemolytic strains.

Streptococcus Selective Medium

Composition per liter:

Special peptone.....	23.0g
Agar.....	10.0g
NaCl.....	5.0g
Starch.....	1.0g
Horse blood, defibrinated.....	50.0mL
Antibiotic inhibitor.....	10.0mL
pH 7.3± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Antibiotic Inhibitor:

Composition per 10.0mL:

Colistin sulfate.....	10.0mg
Oxolinic acid.....	5.0mg

Preparation of Antibiotic Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except horse blood and antibiotic inhibitor, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse blood and sterile antibiotic inhibitor. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of streptococci from clinical specimens or foodstuffs.

Streptococcus suis Medium

Composition per liter:

Peptone.....	10.0g
Meat extract.....	8.0g
Glucose.....	5.0g
Lactose.....	5.0g
Yeast extract.....	3.0g
K ₂ HPO ₄	2.5g
KH ₂ PO ₄	2.5g
L-Cysteine·HCl.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·4H ₂ O.....	0.05g
Bovine serum.....	50.0mL
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components, except bovine serum, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically

add 50.0mL of sterile bovine serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Streptococcus suis*.

Streptococcus thermophilus Agar (ST Agar)

Composition per liter:

Agar.....	15.0g
Sucrose.....	10.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	2.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Streptococcus thermophilus* from dairy products.

Streptococcus thermophilus Isolation HiVeg Agar

Composition per liter:

Agar.....	15.0g
Plant hydrolysate.....	10.0g
Sucrose.....	10.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	2.0g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation and cultivation of *Streptococcus thermophilus*.

Streptococcus uberis Broth

Composition per liter:

Peptone.....	0.5g
Yeast extract.....	0.5g
Skimmed milk.....	1.0L

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 6.2 psi pressure–110°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptococcus uberis*.

Streptomyces Agar (LMG Medium 93)

Composition per liter:

Agar.....	20.0g
L-Asparagine.....	1.0g
K ₂ HPO ₄	1.0g
Glycerol.....	10.0mL
Trace salts solution.....	1.0mL
pH 7.0–7.4	

Trace Salts Solution:**Composition** per 100.0mL:

FeSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g

Preparation of Trace Salts Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Streptomyces* spp.

Streptomyces Agar**Composition** per liter:

Agar	20.0g
Glucose	10.0g
Beef extract.....	4.0g
Peptone.....	4.0g
NaCl.....	2.5g
Yeast extract.....	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinomadura ferruginea*, *Actinomadura libanotica*, *Actinomadura madurae*, *Actinomadura pelletieri*, *Actinomadura roseoviolacea*, *Actinomadura spiralis*, *Actinomadura verrucosospora*, *Micropolyspora fascifera*, *Nocardioides albus*, *Nocardioopsis albus*, *Nocardioopsis dassonvillei*, *Saccharopolyspora rectivirgula*, *Streptococcus pluton*, and *Streptomyces griseus*.

Streptomyces Agar**Composition** per liter:

Agar	12.0g
Malt extract.....	10.0g
Glucose	4.0g
Yeast extract.....	4.0g
CaCO ₃	2.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinoplanes missouriensis*, *Saccharopolyspora rectivirgula*, *Streptococcus albogriseolus*, *Streptomyces badius*, *Streptomyces bikiniensis*, and *Thermomonospora mesophila*.

Streptomyces Agar**Composition** per liter:

Agar	12.0g
Malt extract.....	10.0g
Glucose	4.0g
Yeast extract.....	4.0g
CaCO ₃	2.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH (use pH indicator paper) to 7.2 using KOH. Add agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Stygiolobus azoricus*.

Streptomyces Medium**Composition** per liter:

Agar	25.0g
Glucose	5.0g
L-Glutamic acid.....	4.0g
KH ₂ PO ₄	1.0g
NaCl.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.7g
FeSO ₄ ·7H ₂ O.....	3.0mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces kanamyceticus*.

Streptomycete Antibiotic Activity Inoculum Medium**Composition** per liter:

Pancreatic digest of casein.....	10.0g
D-Glucose.....	5.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	1.0g
Liver extract.....	100.0mL

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Streptomyces* species to be used in the antibiotic activity assay.

Streptomycete Antibiotic Activity Medium**Composition** per liter:

Agar	15.0g
D-Glucose.....	15.0g
Soybean meal.....	15.0g
NaCl.....	5.0g
Yeast extract.....	1.0g
CaCO ₃	1.0g
Glycerol	2.5mL

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the the cultivation and determination of antibiotic production of *Streptomyces* species by the streak method. *Bacillus subtilis* NRRL B-765, *Sarcina lutea* NRRL B-1018, *Escherichia coli* NRRL B-766, *Saccharomyces pasteurianus* NRRL Y-139, *Candida albicans* NRRL

Y-477, and *Mucor ramannianus* NRRL 1839 are used as test organisms.

Streptomyces Medium

Composition per liter:

Solution B	500.0mL
Solution A	400.0mL
Solution C	100.0mL

Solution A:

Composition per 400.0mL:

Glucose	20.0g
Agar	4.0g
Yeast extract	1.2g
MgSO ₄ ·7H ₂ O	0.25g
Bromcresol Purple	0.012g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B:

Composition per 500.0mL:

Na ₂ HPO ₄ ·2H ₂ O	534.0mg
KH ₂ PO ₄	272.0mg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution C:

Composition per 100.0mL:

CaCO ₃	1.0g
-------------------------	------

Preparation of Solution C: Add CaCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Distribute solution C into test tubes in 0.2mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Combine cooled, sterile solution A and cooled, sterile solution B. Mix thoroughly. Add 1.8mL of solution A-B to each test tube containing sterile solution C. Mix thoroughly to distribute the CaCO₃. Cool tubes rapidly in an ice-water bath.

Use: For the cultivation and differentiation of streptomycetes based on their formation of organic acids. Bacteria that form organic acids turn the medium yellow and dissolve the CaCO₃.

Streptomyces Medium

Composition per liter:

Glycerol	5.0g
Agar	4.0g
NaCl	2.0g
KNO ₃	1.0g
Na ₂ HPO ₄ ·2H ₂ O	0.534g
MgSO ₄ ·7H ₂ O	0.5g
KH ₂ PO ₄	0.272g
Trace elements solution	1.0mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 1.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of streptomycetes based on their reduction of nitrate to nitrite. Bacteria that reduce nitrate to nitrite form a red color after the addition of Griess-Ilosvay reagent.

Streptomyces Medium

Composition per liter:

Agar	12.0g
NaCl	5.0g
Na ₂ HPO ₄ ·2H ₂ O	1.98g
KH ₂ PO ₄	1.51g
Glucose	1.0g
Pancreatic digest of casein	1.0g
MgSO ₄ ·7H ₂ O	0.5g
Phenol Red	0.012g
Urea solution	100.0mL

pH 6.8 ± 0.2 at 25°C

Urea Solution:

Composition per 100.0mL:

Urea	20.0g
------------	-------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except urea solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile urea solution. Mix thoroughly. Aseptically distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the cultivation and differentiation of streptomycetes based on their ability to produce urease.

Streptomyces Medium

Composition per liter:

Sodium hippurate	10.0g
Na ₂ HPO ₄	5.0g
Glucose	2.0g
Meat extract	2.0g
Peptone	2.0g
Yeast extract	2.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 3.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of streptomycetes based on their ability to hydrolyze hippurate.

Streptomycin Assay Agar with Yeast Extract

See: Antibiotic Medium 5

Streptomycin L Broth Medium

Composition per liter:

Pancreatic digest of casein	10.0g
NaCl	5.0g

Yeast extract.....	5.0g
Glucose.....	1.0g
Streptomycin solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Streptomycin Solution:

Composition per 10.0mL:

Streptomycin sulfate.....	25.0mg
---------------------------	--------

Preparation of Streptomycin Solution: Add streptomycin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except streptomycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Bring pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile streptomycin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

Streptomycin Nutrient Agar

Composition per liter:

Agar.....	15.0g
Peptone.....	5.0g
Meat extract.....	3.0g
Streptomycin sulfate.....	40.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

Streptomycin Nutrient Agar No. 2

Composition per liter:

Agar.....	15.0g
Peptone.....	5.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Beef extract.....	1.0g
Streptomycin solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Streptomycin Solution:

Composition per 10.0mL:

Streptomycin sulfate.....	125.0mg
---------------------------	---------

Preparation of Streptomycin Solution: Add streptomycin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except streptomycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Bring pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile streptomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Micrococcus luteus*.

Streptomycin Nutrient Agar No. 3

Composition per liter:

Agar.....	15.0g
Peptone.....	5.0g

NaCl.....	5.0g
Yeast extract.....	2.0g
Beef extract.....	1.0g
Streptomycin solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Streptomycin Solution:

Composition per 10.0mL:

Streptomycin sulfate.....	500.0mg
---------------------------	---------

Preparation of Streptomycin Solution: Add streptomycin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except streptomycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Bring pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile streptomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Micrococcus luteus*.

Streptomycin Nutrient Agar No. 4

Composition per liter:

Agar.....	15.0g
Peptone.....	5.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Beef extract.....	1.0g
Streptomycin solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Streptomycin Solution:

Composition per 10.0mL:

Streptomycin sulfate.....	80.0mg
---------------------------	--------

Preparation of Streptomycin Solution: Add streptomycin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except streptomycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Bring pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile streptomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Corynebacterium* species.

Streptomycin Terramycin® Malt Extract Agar

Composition per liter:

Malt extract.....	30.0g
Agar.....	15.0g
Peptone.....	5.0g
Streptomycin solution.....	100.0mL
Terramycin solution.....	100.0mL
pH 5.4 ± 0.2 at 25°C	

Streptomycin Solution:

Composition per 100.0mL:

Streptomycin.....	0.07g
-------------------	-------

Preparation of Streptomycin Solution: Add streptomycin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Terramycin Solution:**Composition per 100.0mL:**

Terramycin 0.07g

Preparation of Terramycin Solution: Add terramycin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except streptomycin solution and terramycin solution, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile streptomycin solution and 100.0mL of sterile terramycin solution. Mix thoroughly. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the cultivation and enumeration of fungi isolated from sewage and polluted waters.

StreptoseTM Agar**Composition per liter:**

Pancreatic digest of casein 15.0g
 Agar 12.0g
 Glucose 5.0g
 Papaic digest of soybean meal 5.0g
 NaCl 4.0g
 Sodium citrate 1.0g
 L-Cystine 0.2g
 NaN₃ 0.2g
 Na₂SO₃ 0.2g
 Crystal Violet 0.2mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. If medium is used the same day, do not autoclave. Pour into sterile Petri dishes or leave in tubes. If medium is to be stored, autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation, cultivation, and enumeration of streptococci from specimens containing a mixed flora.

StreptoseTM Broth**Composition per liter:**

Pancreatic digest of casein 15.0g
 Glucose 5.0g
 Papaic digest of soybean meal 5.0g
 NaCl 4.0g
 Sodium citrate 1.0g
 L-Cystine 0.2g
 Na₂SO₃ 0.2g
 NaN₃ 0.2g
 Crystal Violet 0.2mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C.

Use: For the selective isolation and cultivation of streptococci from specimens containing a mixed flora.

**Steroidobacter Medium with Testosterone
(DSMZ Medium 1116)****Composition per 1040.3mL:**

NaCl 1.0g
 KCl 0.5g
 NaNO₃ 0.42g
 MgCl₂·6H₂O 0.4g
 NH₄Cl 0.25g
 KH₂PO₄ 0.2g
 CaCl₂·2H₂O 0.15g
 Na₂SO₄ 0.07g
 Bicarbonate solution 30.0mL
 Testosterone solution 10.0mL
 Trace elements solution SL-10 0.1mL
 Selenite-tungstate solution 0.1mL
 Vitamin solution 0.1mL

pH 7.2 ± 0.2 at 25°C

Testosterone Solution:**Composition per 10.0mL:**

Testosterone 0.2g
 Acetone 10.0mL

Preparation of Testosterone Solution: Add testosterone to acetone and bring volume to 10.0mL. Mix thoroughly.

Selenite-Tungstate Solution:**Composition per liter:**

NaOH 0.5g
 Na₂WO₄·2H₂O 4.0mg
 Na₂SeO₃·5H₂O 3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:**Composition per liter:**

MgSO₄·7H₂O 3.0g
 Nitrilotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoSO₄·7H₂O 0.18g
 ZnSO₄·7H₂O 0.18g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 H₃BO₃ 0.01g
 Na₂MoO₄·4H₂O 0.01g
 CuSO₄·5H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution SL-10: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly. Adjust pH to 7.0.

Vitamin Solution:**Composition per liter:**

Vitamin B ₁₂	50.0mg
Thiamine-HCl·2H ₂ O	50.0mg
Riboflavin	50.0mg
D-Ca-pantothenate	50.0mg
<i>p</i> -Aminobenzoic acid	50.0mg
Lipoic acid	50.0mg
Nicotinic acid	25.0mg
Nicotine amide	25.0mg
Biotin	20.0mg
Folic acid	20.0mg
Pyridoxine-HCl	10.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly for several hours. Filter sterilize.

Bicarbonate Solution:**Composition per 100.0mL:**

NaHCO ₃	8.4g
--------------------------	------

Preparation of Bicarbonate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% H₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Dispense testosterone solution into anaerobic culture vessels. Allow solvent to evaporate to dryness. Add remaining components, except bicarbonate solution, vitamin solution, trace elements solution SL-10, and selenite-tungstate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Dispense 10.0mL portions of the medium to the culture vessels. Sparge with a gas mixture of 80% N₂ + 20% CO₂. Close the culture vessels. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. For every 10.0mL of medium, add 0.3mL bicarbonate solution, 0.001mL trace elements solution SL-10, 0.001mL selenite-tungstate solution, and 0.001mL vitamin solution. Adjust pH to 7.2. Treat the vessels in an ultrasonic bath to detach and suspend the testosterone.

Use: For the cultivation of *Steroidobacter denitrificans*.

***Steroidobacter* Medium with Heptanoate
(DSMZ Medium 1116)**

Composition per 1090.3mL:

NaCl	1.0g
KCl	0.5g
NaNO ₃	0.42g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Na ₂ SO ₄	0.07g
Heptanoate solution	50.0mL
Bicarbonate solution	30.0mL
Trace elements solution SL-10	0.1mL
Selenite-tungstate solution	0.1mL
Vitamin solution	0.1mL

pH 7.2 ± 0.2 at 25°C

Heptanoate Solution:**Composition per 100.0mL:**

Heptanoate	0.85g
------------------	-------

Preparation of Heptanoate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly for several hours. Filter sterilize.

Selenite-Tungstate Solution:**Composition per liter:**

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution SL-10: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly. Adjust pH to 7.0.

Vitamin Solution:**Composition per liter:**

Vitamin B ₁₂	50.0mg
Thiamine-HCl·2H ₂ O	50.0mg
Riboflavin	50.0mg
D-Ca-pantothenate	50.0mg
<i>p</i> -Aminobenzoic acid	50.0mg
Lipoic acid	50.0mg
Nicotinic acid	25.0mg
Nicotine amide	25.0mg
Biotin	20.0mg
Folic acid	20.0mg
Pyridoxine-HCl	10.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly for several hours. Filter sterilize.

Bicarbonate Solution:**Composition per 100.0mL:**

NaHCO ₃	8.4g
--------------------------	------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except heptanoate solution, bicarbonate solution, vitamin solution, trace elements solution, and selenite-tungstate solution, to distilled/deionized water and bring

volume to 1.0L. Mix thoroughly. Dispense 10.0mL portions of the medium to the culture vessels. Sparge with a gas mixture of 80% N₂ + 20% CO₂. Close the culture vessels. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. For every 10.0mL of medium, add 0.5mL heptanoate solution, 0.3mL bicarbonate solution, 0.001mL trace elements solution SL-10, 0.001mL selenite-tungstate solution, and 0.001mL vitamin solution. Adjust pH to 7.2. Treat the vessels in an ultrasonic bath to detach and suspend the heptanoate.

Use: For the cultivation of *Steroidobacter denitrificans*.

STT Agar

See: **Sucrose Teepol Tellurite Agar**

STTA Medium

Composition per liter:

Peptone.....	20.0g
Glycerol	15.0g
Agar	13.0g
Yeast extract.....	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·4H ₂ O.....	1.0g
Antibiotic solution	10.0mL
Thallos acetate solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Antibiotic Solution:

Composition per 10.0mL:

Streptomycin sulfate	0.5g
Cycloheximide	0.05g

Preparation of Antibiotic Solution: Add cycloheximide and streptomycin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Thallos Acetate Solution:

Composition per 10.0mL:

Thallos acetate	0.05g
-----------------------	-------

Preparation of Thallos Acetate Solution: Add thallos acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic solution and thallos acetate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution and thallos acetate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of *Brochothrix thermosphacta*.

Stuart Leptospira Broth, Modified

Composition per liter:

NaCl.....	1.93g
Na ₂ HPO ₄	0.66g
NH ₄ Cl	0.34g
MgCl ₂ ·6H ₂ O.....	0.19g
L-Asparagine	0.13g
KH ₂ PO ₄	0.08g
Glycerol	5.0mL
Rabbit serum, inactivated at 56°C, 30 min	100.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add each component, except rabbit serum, to distilled/deionized water in separate flasks and bring each volume to 100.0mL. Mix thoroughly. Combine the seven solutions, except the rabbit serum. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile rabbit serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Leptospira* species.

Stuart Medium Base

Composition per 1100.0mL:

NaCl.....	1.8g
Na ₂ HPO ₄	0.67g
MgCl ₂ ·6H ₂ O	0.41g
NH ₄ Cl	0.27g
Asparagine	0.13g
KH ₂ PO ₄	0.09g
Phenol Red.....	0.01g
Glycerol	5.0mL
<i>Leptospira</i> enrichment.....	100.0mL

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems. *Leptospira* enrichment contains rabbit serum and hemoglobin and is available from BD Diagnostic Systems.

Preparation of Medium: Add components, except glycerol and *Leptospira* enrichment, to distilled/deionized water and bring volume to 995.0mL. Mix thoroughly. Add glycerol. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add *Leptospira* enrichment. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes in 10.0mL volumes.

Use: For the cultivation of *Leptospira* species.

Stuart Transport Medium

Composition per liter:

Sodium glycerophosphate.....	10.0g
Sodium thioglycolate.....	1.0g
CaCl ₂ ·2H ₂ O	0.1g
Methylene Blue.....	2.0mg

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into 7.0mL screw-capped tubes. Fill tubes to capacity. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the preservation of *Neisseria* species and other fastidious organisms during their transport from clinic to laboratory.

Stuart Transport Medium, Modified

Composition per liter:

Sodium glycerophosphate.....	10.0g
Agar	5.0g
L-Cysteine·HCl·H ₂ O	0.5g
Sodium thioglycolate.....	0.5g
CaCl ₂ ·2H ₂ O	0.1g
Methylene Blue.....	1.0mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into 7.0mL screw-capped tubes. Fill tubes to capacity. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the preservation of *Neisseria* species and other fastidious organisms during their transport from clinic to laboratory.

Stygiolobus Medium

Composition per liter:

Sulfur flowers	5.0g
(NH ₄) ₂ SO ₄	1.3g
KH ₂ PO ₄	0.28g
MgSO ₄ ·7H ₂ O	0.25g
Yeast extract	0.2g
CaCl ₂ ·2H ₂ O	0.07g
FeCl ₃ ·6H ₂ O	0.02g
Na ₂ B ₄ O ₇ ·10H ₂ O	4.5mg
MnCl ₂ ·4H ₂ O	1.8mg
Resazurin	0.5mg
ZnSO ₄ ·7H ₂ O	0.22mg
CuCl ₂ ·2H ₂ O	0.05mg
Na ₂ MoO ₄ ·2H ₂ O	0.03mg
VOSO ₄ ·2H ₂ O	0.03mg
CoSO ₄	0.01mg

pH 2.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 2.5 with 10N H₂SO₄. Distribute 20.0mL of medium into 100.0mL flasks or serum bottles. Autoclave for 15 min at 15 psi pressure–121°C. After inoculation, pressurize bottles to 200KPa with 80%H₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Stygiolobus azoricus*.

Styrene Mineral Salts Agar

Composition per liter:

Agar	20.0g
(NH ₄) ₂ SO ₄	2.0g
K ₂ HPO ₄	1.55g
NaH ₂ PO ₄ ·2H ₂ O	0.85g
MgCl ₂ ·6H ₂ O	0.1g
EDTA	10.0mg
FeSO ₄ ·7H ₂ O	5.0mg
ZnSO ₄	2.0mg
CaCl ₂ ·2H ₂ O	1.0mg
MnCl ₂ ·2H ₂ O	1.0mg
CoCl ₂ ·6H ₂ O	0.4mg
CuSO ₄ ·5H ₂ O	0.2mg
Na ₂ MoO ₄ ·2H ₂ O	0.2mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Place plates in a desiccator. Add to the desiccator an open bottle containing 10.0mL of dibutyl phthalate and 200.0µl of styrene.

Use: For the cultivation of styrene-utilizing microorganisms.

Styrene Mineral Salts Broth

Composition per liter:

(NH ₄) ₂ SO ₄	2.0g
K ₂ HPO ₄	1.55g

NaH ₂ PO ₄ ·2H ₂ O	0.85g
MgCl ₂ ·6H ₂ O	0.1g
EDTA	10.0mg
FeSO ₄ ·7H ₂ O	5.0mg
ZnSO ₄	2.0mg
CaCl ₂ ·2H ₂ O	1.0mg
MnCl ₂ ·2H ₂ O	1.0mg
CoCl ₂ ·6H ₂ O	0.4mg
CuSO ₄ ·5H ₂ O	0.2mg
Na ₂ MoO ₄ ·2H ₂ O	0.2mg
Styrene	0.1mL

Preparation of Medium: Add components, except styrene, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Under a fume hood, aseptically add styrene to screw-capped tubes or flasks (5.0µl of styrene into 50.0mL of sterile mineral salts solution). Seal caps tightly.

Use: For the cultivation and maintenance of styrene-utilizing microorganisms.

Succinate Mineral Medium

Composition per 1001.0mL:

MnSO ₄ ·7H ₂ O	62.0g
Succinate	2.7g
K ₂ HPO ₄ ·3H ₂ O	1.63g
NH ₄ Cl	1.02g
KH ₂ PO ₄	0.39g
Trace elements solution	1.0mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution:

Composition per 100.0mL:

Solution A	50.0mL
Solution B	50.0mL

Preparation of Trace Elements Solution: Aseptically combine 50.0mL of sterile solution A with 50.0mL of sterile solution B.

Solution A:

Composition per liter:

Disodium EDTA	0.25g
CaCl ₂ ·2H ₂ O	0.14g
FeCl ₂ ·4H ₂ O	0.14g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per liter:

Disodium EDTA	0.25g
H ₃ BO ₃	30.0mg
CoCl ₂ ·2H ₂ O	28.0mg
ZnCl ₂	5.0mg
MnCl ₂ ·4H ₂ O	4.0mg
NaMoO ₄ ·2H ₂ O	3.0mg
NiCl ₂ ·6H ₂ O	1.65mg
CuCl ₂ ·2H ₂ O	0.7mg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except trace elements solution, to distilled/deionized water and bring volume to 1.0L. Mix

thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 1.0mL of sterile trace elements solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of bacteria that can utilize succinate as a carbon source.

Succiniclasticum Medium

Composition per liter:

Disodium succinate.....	5.0g
Yeast extract.....	5.0g
NaCl.....	0.45g
(NH ₄) ₂ SO ₄	0.45g
K ₂ HPO ₄	0.225g
KH ₂ PO ₄	0.225g
MgSO ₄ ·7H ₂ O.....	0.09g
CaCl ₂ ·2H ₂ O.....	0.06g
Indigocarmine.....	5.0mg
Rumen fluid, clarified.....	400.0mL
NaHCO ₃ solution.....	10.0mL
L-Cysteine·HCl·H ₂ O solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL

pH: 6.6–6.8

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	6.4g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine·HCl·H₂O Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O.....	0.3g
--------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, L-cysteine·HCl·H₂O solution, and NaHCO₃ solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile L-cysteine·HCl·H₂O solution, 10.0mL of sterile Na₂S·9H₂O solution, and 10.0mL of sterile NaHCO₃ solution to each tube. Mix thoroughly.

Use: For the cultivation of *Succiniclasticum ruminis*.

Sucrose Agar

Composition per liter:

Sucrose.....	50.0g
Agar.....	20.0g
Peptone.....	10.0g

NaCl.....	5.0g
Yeast extract.....	5.0g
CaCO ₃	3.0g
Phenylethyl alcohol.....	3.0g
MgSO ₄ ·7H ₂ O.....	0.5g
MnSO ₄ ·4H ₂ O.....	0.5g
Tween™ 80.....	0.1g
Bromocresol Green.....	20.0mg
Cycloheximide solution.....	10.0mL

pH 6.2 ± 0.2 at 25°C

Cycloheximide Solution:

Composition per 10.0mL:

Cycloheximide.....	0.01g
--------------------	-------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Add remaining components, except cycloheximide solution and phenylethyl alcohol, and bring volume to 990.0mL with distilled/deionized water. Adjust pH to 6.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile cycloheximide solution and 3.0g of phenylethyl alcohol. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Lactobacillus* species from brewery isolates.

Sucrose Agar

Composition per liter:

Beef heart, solids from infusion.....	500.0g
Sucrose.....	50.0g
Agar.....	15.0g
Tryptose.....	10.0g
NaCl.....	5.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of bacteria based on their ability to produce glucan. Dextran production, typical of *Streptococcus sanguis* and *Streptococcus mutans*, results in highly refractile-adherent or dry-adherent colonies. Levan production, typical of *Streptococcus salivarius*, results in opaque, gummy, nonadherent colonies. Colonies of *Streptococcus bovis* and *Leuconostoc mesenteroides* are similar to those of *Streptococcus salivarius* but are somewhat less gummy and rarely adhere to the medium. Large or small colonies that are mucoidal and nonadherent are considered negative or have no extracellular polysaccharide production.

Sucrose Broth

Composition per liter:

Solution A.....	500.0mL
Solution B.....	500.0mL

pH 7.1 ± 0.2 at 25°C

Solution A:

Composition per 500.0mL:

Pancreatic digest of casein.....	15.0g
Sodium acetate.....	12.0g

K ₂ HPO ₄	10.0g
Glucose	5.5g
Yeast extract.....	5.0g
NaCl.....	2.5g
L-Cystine	0.5g
Sodium thioglycolate.....	0.5g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B:

Composition per 500.0mL:

Sucrose.....	50.0g
--------------	-------

Preparation of Solution B: Add sucrose to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Combine sterile solution A with sterile solution B. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the differentiation of bacteria based on their ability to produce glucan. Production of glucan is indicated when the broth is partially or completely gelled—typical of *Streptococcus sanguis*—or when gelatinous, adherent deposits form on the bottom and walls of the tube—typical of *Streptococcus mutans*. An increase in the viscosity indicates the production of slime (unknown polysaccharide)—typical of *Streptococcus bovis*.

Sucrose HiVeg Agar for Brewery Isolates

Composition per liter:

Sucrose.....	50.0g
Agar	15.0g
Plant hydrolysate.....	10.0g
(NH ₄) ₃ PO ₄	5.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	5.0g
Cycloheximide solution	10.0mL

pH 6.2 ± 0.2 at 25°C

Source: This medium, without cycloheximide, is available as a pre-mixed powder from HiMedia.

Cycloheximide Solution:

Composition per 10.0mL:

Cycloheximide	0.01g
---------------------	-------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Add remaining components, except cycloheximide solution and phenylethyl alcohol, and bring volume to 990.0mL with distilled/deionized water. Adjust pH to 6.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile cycloheximide solution and 3.0g of phenylethyl alcohol. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Lactobacillus* species, especially brewery isolates.

Sucrose Peptone Agar

Composition per liter:

Sucrose.....	20.0g
Agar	12.0g
Peptone	5.0g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.25g

pH 7.2–7.4 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2–7.4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas solanacearum* and *Xanthomonas albilineans*.

Sucrose Peptone Medium

Composition per liter:

Peptone	20.0g
Sucrose.....	20.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pseudomonas* species.

Sucrose Phosphate Glutamate Transport Medium

Composition per liter:

Sucrose.....	75.0g
Na ₂ HPO ₄	1.22g
Glutamic acid.....	0.72g
K ₂ HPO ₄	0.52g
Bovine serum	50.0mL
Antibiotic inhibitor	10.0mL

pH 7.4–7.6 at 25°C

Antibiotic Inhibitor:

Composition per 10.0mL:

Vancomycin	0.1g
Streptomycin.....	0.05g
Nystatin.....	25000U

Preparation of Antibiotic Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except bovine serum and antibiotic inhibitor, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.4–7.6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile bovine serum and sterile antibiotic inhibitor. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the maintenance of *Chlamydia* species during transport.

Sucrose Phosphate Transport Medium

Composition per liter:

Sucrose.....	68.5g
K ₂ HPO ₄	2.1g
KH ₂ PO ₄	1.1g

Bovine serum	50.0mL
Antibiotic inhibitor	10.0mL
pH 7.0 ± 0.2 at 25°C	

Antibiotic Inhibitor:**Composition per 10.0mL:**

Vancomycin	0.1g
Streptomycin	0.05g
Nystatin	25,000U

Preparation of Antibiotic Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except bovine serum and antibiotic inhibitor, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile bovine serum and sterile antibiotic inhibitor. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the maintenance of *Chlamydia* species during transport.

Sucrose Teepol Tellurite Agar (STT Agar)

Composition per liter:

Agar	20.0g
Beef extract	1.0g
Peptone.....	1.0g
Sucrose.....	1.0g
NaCl	0.5g
Bromthymol Blue (0.2% solution).....	2.5mL
Tellurite solution	2.5mL
Sodium lauryl sulfate (Teepol, 0.1% solution)	0.2mL
pH 8.0 ± 0.2 at 25°C	

Tellurite Solution:**Composition per 100.0mL:**

K ₂ TeO ₃	0.05g
---------------------------------------	-------

Preparation of Tellurite Solution: Add the K₂TeO₃ to distilled/deionized water and bring the volume to 100.0mL. Mix thoroughly. Filter sterilize. Use freshly prepared solution.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Pour into sterile Petri dishes.

Use: For the selective isolation, cultivation, and differentiation of *Vibrio* species based on their ability to ferment sucrose. *Vibrio cholerae* appears as flat yellow colonies. *Vibrio parahaemolyticus* appears as elevated green-yellow mucoid colonies.

Sucrose Yeast Extract Medium

Composition per liter:

Sucrose.....	20.0g
Yeast extract.....	4.0g
K ₂ HPO ₄	2.5g
MgSO ₄ ·7H ₂ O	1.0g
Trace elements solution	4.0mL
pH 7.0 ± 0.2 at 25°C	

Trace Elements Solution:**Composition per liter:**

ZnSO ₄ ·7H ₂ O	18.0g
FeSO ₄ ·7H ₂ O.....	9.0g
MnSO ₄ ·4H ₂ O	3.0g
CoCl ₂ ·6H ₂ O	0.9g
CuSO ₄ ·5H ₂ O	0.8g
Conc. H ₂ SO ₄	5.0mL

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of bacteria that can utilize sucrose as a carbon source.

Sulfate API Broth

Composition per liter:

NaCl.....	10.0g
Sodium lactate	5.2g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O	0.2g
Ascorbic acid	0.1g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	0.1g
K ₂ HPO ₄	0.01g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add the components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly until dissolved. Distribute into tubes in 9.0mL volumes. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the detection, differentiation, and estimation of sulfate-reducing bacteria.

Sulfate-Reducing Bacteria Enrichment Medium

Composition per 1018.0mL:

Solution 1	970.0mL
Solution 4.....	30.0mL
Solution 6A, 6B, 6C, 6D, or 6E.....	10.0mL
Solution 5.....	3.0mL
Solution 2.....	1.0mL
Solution 3.....	1.0mL
Solution 7.....	1.0mL
Solution 8.....	1.0mL
Solution 9.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Solution 1:**Composition per 970.0mL:**

Na ₂ SO ₄	3.0g
NaCl.....	1.2g
MgCl ₂ ·6H ₂ O	0.4g
KCl.....	0.3g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Autoclave for 30 min at 15 psi pressure–121°C. Cool to 25°C under 90% N₂ + 10% CO₂.

Solution 2:**Composition per liter:**

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.12g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnCl ₂	0.07g
H ₃ BO ₃	0.06g
Na ₂ MoO ₄ ·2H ₂ O	0.025g
NiCl ₂ ·6H ₂ O	0.025g
CuCl ₂ ·2H ₂ O	0.015g
HCl (25% solution).....	6.5mL

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 3:**Composition per liter:**

NaOH	0.5g
Na ₂ SeO ₃	3.0mg

Preparation of Solution 3: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 4:**Composition per 100.0mL:**

NaHCO ₃	8.5g
--------------------------	------

Preparation of Solution 4: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Saturate with 100% CO₂. Filter sterilize. Aseptically add solution to sterile, gas-tight, screw-capped bottles.

Solution 5:**Composition per 100.0mL:**

Na ₂ S·9H ₂ O.....	12.0g
--	-------

Preparation of Solution 5: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Add solution to gas-tight, screw-capped bottles. Gas under 100% N₂ for 20 min. Close caps tightly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 6A:**Composition per 100.0mL:**

Sodium acetate·3H ₂ O.....	20.0g
---------------------------------------	-------

Preparation of Solution 6A: Add sodium acetate·3H₂O to distilled/deionized water and bring volume to 100.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 6B:**Composition per 100.0mL:**

<i>n</i> -Butyric acid	8.0g
------------------------------	------

Preparation of Solution 6B: Add *n*-butyric acid to distilled/deionized water and bring volume to 100.0mL. Adjust pH to 9.0 with NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 6C:**Composition per 100.0mL:**

Propionic acid	7.0g
----------------------	------

Preparation of Solution 6C: Add propionic acid to 100.0mL of distilled/deionized water. Adjust pH to 9.0 with NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 6D:**Composition per 100.0mL:**

Benzoic acid.....	5.0g
-------------------	------

Preparation of Solution 6D: Add benzoic acid to distilled/deionized water and bring volume to 100.0mL. Adjust pH to 9.0 with NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 6E:**Composition per 100.0mL:**

<i>n</i> -Palmitic acid.....	5.0g
NaOH.....	0.78g

Preparation of Solution 6E: Add *n*-palmitic acid and NaOH to distilled/deionized water and bring volume to 100.0mL. Heat in a water bath until clear. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 7:**Composition per 100.0mL:**

Thiamine	0.01g
<i>p</i> -Aminobenzoic acid.....	5.0mg
Vitamin B ₁₂	5.0mg
Biotin	1.0mg

Preparation of Solution 7: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution 8:**Composition per liter:**

Succinic acid.....	0.6g
Isobutyric acid	0.5g
2-Methylbutyric acid	0.5g
3-Methylbutyric acid	0.5g
Valeric acid	0.5g
Caproic acid.....	0.2g

Preparation of Solution 8: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 9.0 with NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution 9:**Composition per 100.0mL:**

Na ₂ S ₂ O ₄	3.0g
---	------

Preparation of Solution 9: Add Na₂S₂O₄ to 100.0mL of O₂-free distilled/deionized water. Mix thoroughly. Anaerobically filter sterilize.

Preparation Medium: To 970.0mL of cooled, sterile solution 1, aseptically and anaerobically add 1.0mL of sterile solution 2, 1.0mL of sterile solution 3, 30.0mL of sterile solution 4, and 3.0mL of sterile solution 5. Mix thoroughly. Adjust pH to 7.2 with sterile HCl solution or sterile Na₂CO₃ solution. Aseptically and anaerobically distribute into sterile screw-capped bottles in 100.0mL volumes. Add 1.0mL of solution 6A, 6B, 6C, 6D, or 6E to each bottle containing 100.0mL of basal medium. Add 0.1mL of solution 7, 0.1mL of solution 8, and 0.1mL of solution 9 to each bottle containing 100.0mL of basal medium. Mix thoroughly.

Use: For the isolation, cultivation, and enrichment of sulfate-reducing bacteria.

Sulfate-Reducing Bacteria Medium**Composition per 1008.0mL:**

Solution A.....	850.0mL
Solution C.....	100.0mL
Solution G.....	20.0mL

Solution D.....	10.0mL
Solution E (Wolfe's vitamin solution).....	10.0mL
Solution H.....	10.0mL
Solution F.....	6.6mL
Solution B (Trace elements solution SL-10).....	1.0mL
Solution I.....	0.4mL

pH 7.6 ± 0.2 at 25°C

Solution A:**Composition per 920.0mL:**

Na ₂ SO ₄	3.0g
NaCl.....	1.0g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	0.5mg

Preparation of Solution A: Prepare and dispense solution anaerobically under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction, and a pH of 6.0 is reached. Cap with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B (Trace Elements Solution SL-10):**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	0.19g
MnCl ₂ ·4H ₂ O.....	0.10g
ZnCl ₂	0.070g
Na ₂ MoO ₄ ·2H ₂ O.....	0.036g
NiCl ₂ ·6H ₂ O.....	0.024g
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add the FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Bring volume to approximately 900.0mL with distilled/deionized water. Mix thoroughly. Adjust pH to 6.0 with NaOH. Bring volume to 1.0L with distilled/deionized water. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution C:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 80% N₂ + 20% CO₂ for 20 min.

Solution D:**Composition per 10.0mL:**

Sodium propionate.....	1.5g
------------------------	------

Preparation of Solution D: Prepare and dispense solution anaerobically under 80% N₂ + 20% CO₂. Add sodium propionate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution E (Wolfe's Vitamin Solution):**Composition per liter:**

Pyridoxine·HCl.....	0.01g
---------------------	-------

Thiamine·HCl.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
Calcium pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin.....	0.1mg

Preparation of Solution E (Wolfe's Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min.

Solution F:**Composition per 6.6mL:**

AlCl ₃ ·6H ₂ O (4.9% solution).....	5.0mL
Na ₂ CO ₃ (10.6% solution).....	1.6mL

Preparation of Solution F: Combine both solutions. Mix thoroughly. Gas with 100% N₂. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:**Composition per 10.0mL:**

Rumen fluid, clarified.....	20.0mL
-----------------------------	--------

Preparation of Solution G: Gas rumen fluid under 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution H:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.4g
--	------

Preparation of Solution H: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Gas under 100% N₂ for 20 min. Cap with a rubber stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution I:**Composition per 10.0mL:**

Na ₂ S ₂ O ₄	0.5g
---	------

Preparation of Solution I: Add Na₂S₂O₄ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Aseptically gas under 100% N₂ for 20 min. Prepare solution freshly.

Preparation of Medium: To 850.0mL of cooled, sterile solution A, aseptically and anaerobically add in the following order: 1.0mL of sterile solution B, 100.0mL of sterile solution C, 10.0mL of sterile solution D, 10.0mL of sterile solution E, 6.6mL of sterile solution F, 20.0mL of sterile solution G, and 10.0mL of sterile solution H. Mix thoroughly. Immediately prior to inoculation, aseptically and anaerobically add 0.4mL of sterile solution I. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of a variety of sulfate-reducing bacteria.

Sulfate-Reducing Bacteria Medium with Lactate**Composition per liter:**

Solution 1.....	980.0mL
Solution 2.....	10.0mL
Solution 3.....	10.0mL

pH 7.4 ± 0.2 at 25°C

Solution 1:**Composition** per 980.0mL:

Sodium lactate (70% solution).....	3.5g
MgSO ₄ ·7H ₂ O.....	2.0g
NH ₄ Cl.....	1.0g
Na ₂ SO ₄	1.0g
Yeast extract.....	1.0g
K ₂ HPO ₄	0.5g
CaCl ₂ ·2H ₂ O.....	0.1g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution 2:**Composition** per 10.0mL:

FeSO ₄ ·7H ₂ O.....	0.5g
---	------

Preparation of Solution 2: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution 3:**Composition** per 10.0mL:

Ascorbic acid.....	0.1g
Sodium thioglycolate.....	0.1g

Preparation of Solution 3: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Aseptically combine 980.0mL of cooled, sterile solution 1, 10.0mL of cooled, sterile solution 2, and 10.0mL of cooled, sterile solution 3. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the enrichment and isolation of sulfate-reducing bacteria.

Sulfate-Reducing HiVeg Medium**Composition** per liter:

Part A.....	890.0mL
Part B.....	100.0mL
Part C.....	10.0mL

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Part A:**Composition** per 890.0mL:

Plant peptone.....	2.0g
MgSO ₄ ·7H ₂ O.....	2.0g
Na ₂ SO ₄	1.5g
Plant extract.....	1.0g
K ₂ HPO ₄	0.5
CaCl ₂	0.1g

Preparation of Part A: Add components to distilled/deionized water and bring volume to 890.0mL. Gently heat and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Part B:**Composition** per 100.0mL:

Ferrous (NH ₄) ₂ SO ₄	0.392g
Sodium ascorbate.....	0.1g

Preparation of Part B: Add components to distilled/deionized water and bring volume to 100.0mL. Gently heat and bring to boiling. Mix thoroughly. Filter sterilize. Prepare on day of use.

Part C:**Composition** per 100.0mL:

Sodium lactate.....	3.5g
---------------------	------

Preparation of Part C: Add sodium lactate to distilled/deionized water and bring volume to 100.0mL. Gently heat and bring to boiling. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 890.0mL part A, 100.0mL part B, and 10.0mL part C. Mix thoroughly. Distribute into screw-cap tubes. Completely fill the tubes.

Use: For the enumeration of sulfate reducing bacteria in water samples.

Sulfate-Reducing Medium**Composition** per liter:

Sodium lactate.....	3.5g
MgSO ₄ ·7H ₂ O.....	2.0g
Peptone.....	2.0g
Na ₂ SO ₄	1.5g
Beef extract.....	1.0g
K ₂ HPO ₄	0.5g
CaCl ₂	0.1g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O solution.....	10.0mL
Sodium ascorbate solution.....	10.0mL

pH 7.5 ± 0.3 at 25°C

Fe(NH₄)₂(SO₄)₂·6H₂O Solution:**Composition** per 100.0mL:

Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O.....	3.92g
---	-------

Preparation of Fe(NH₄)₂(SO₄)₂·6H₂O Solution: Add 3.92g of Fe(NH₄)₂(SO₄)₂·6H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Use freshly prepared solution.

Sodium Ascorbate Solution:**Composition** per 100.0mL:

Sodium ascorbate.....	0.05g
-----------------------	-------

Preparation of Sodium Ascorbate Solution: Add sodium ascorbate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Use freshly prepared solution.

Preparation of Medium: Add components, except sodium ascorbate solution and Fe(NH₄)₂(SO₄)₂·6H₂O solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Distribute into screw-capped tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Tubes must be filled to capacity after inoculation, so prepare extra medium and sterilize in a screw-capped flask or bottle. Prior to inoculation, aseptically add 0.1mL of freshly prepared sterile Fe(NH₄)₂(SO₄)₂·6H₂O solution for each 10.0mL of medium in the tubes. Also aseptically add 0.1mL of freshly prepared sterile sodium ascorbate solution for each 10.0mL of medium in the tubes. Inoculate tubes. Fill tubes to capacity with extra sterile medium. Screw caps tight.

Use: For the isolation, cultivation, and enumeration of iron and sulfur bacteria.

Sulfite Agar**Composition** per liter:

Agar.....	20.0g
Pancreatic digest of casein.....	10.0g

Na ₂ SO ₃	1.0g
Iron nails	66
pH 7.6 ± 0.2 at 25°C	

Source: This medium, without iron nails, is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-capped tubes in 15.0mL volumes. Add a clean iron nail to each tube. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C until ready to inoculate.

Use: For the detection and cultivation of thermophilic anaerobes that can produce H₂S from sulfite. Sulfite reduction appears as a blackening of the medium.

Sulfite HiVeg Agar with Iron

Composition per liter:

Agar	20.0g
Plant hydrolysate.....	10.0g
Na ₂ SO ₃	1.0g
Ferric citrate solution	10.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Ferric Citrate Solution:

Composition per 10.0mL:

Ferric citrate.....	0.5g
---------------------	------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection of thermophilic sulfide-producing anaerobes.

Sulfite Polymyxin Sulfadiazine Agar

See: SPS Agar

Sulfitobacter pontiacus Medium

(DSMZ Medium 733)

Composition per liter:

Basal salts solution.....	959.0mL
Biotin solution.....	10.0mL
Na-acetate solution	10.0mL
Yeast extract peptone solution	10.0mL
Magnesium calcium solution	10.0mL
Trace elements solution	1.0mL
pH 7.6 ± 0.2 at 25°C	

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g

FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly. Filter sterilize.

Basal Salts Solution:

Composition per liter:

HEPES	8.0g
K ₂ HPO ₄	1.0g
NH ₄ Cl	0.5g
NaCl.....	15.0g

Preparation of Basal Salts Solution: Add components to 1.0L of distilled/deionized water. Adjust pH to 7.5–7.8 with NaOH. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Biotin Solution:

Composition per 10.0mL:

Biotin	0.1g
--------------	------

Preparation of Biotin Solution: Add biotin to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Magnesium Calcium Solution:

Composition per 10.0mL:

MgSO ₄ ·7H ₂ O	1.0g
CaCl ₂ ·2H ₂ O	0.05g

Preparation of Magnesium Calcium Solution: Add components to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Na-Acetate Solution:

Composition per 10.0mL:

Na-acetate	1.6g
------------------	------

Preparation of Na-Acetate Solution: Add Na-acetate to 10.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Yeast Extract Peptone Solution:

Composition per 10.0mL:

Yeast extract.....	1.0g
Peptone	0.5g

Preparation of Yeast Extract Peptone Solution: Add components to 10.0mL of distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Aseptically combine 959.0mL basal salts solution, 1.0mL trace elements solution, 10.0mL Na-acetate solution, 10.0mL magnesium calcium solution, 10.0mL yeast extract peptone solution, and 10.0mL biotin solution. Mix thoroughly. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of *Sulfitobacter pontiacus*.

Sulfobacillus disulfidooxidans Medium

(DSMZ Medium 812)

Composition per liter:

(NH ₄) ₂ SO ₄	3.0g
KH ₂ PO ₄	0.5g

MgSO ₄ ·7H ₂ O	0.5g
KCl.....	0.1g
Ca(NO ₃) ₂ ·4H ₂ O.....	0.1g
Yeast extract.....	0.1g
Glutathione solution.....	10.0mL
pH 2.25 ± 0.1 at 25°C	

Glutathione Solution:**Composition per 10.0mL:**

Glutathione.....	1.0g
------------------	------

Preparation of Glutathione Solution: Add glutathione to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glutathione solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 2.25. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 10.0mL sterile glutathione solution. Mix thoroughly. Aseptically distribute into sterile tubes or bottles.

Use: For the cultivation of *Sulfobacillus disulfidooxidans*.

Sulfobacillus* Medium*Composition per 1020.0mL:**

Solution A	700.0mL
Solution B	300.0mL
Solution C	20.0mL
pH 1.9–2.4 at 25°C	

Solution A:**Composition per 700.0mL:**

(NH ₄) ₂ SO ₄	3.0g
KCl.....	0.1g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.5g
Ca(NO ₃) ₂	0.01g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Adjust pH to 2.0–2.2 with sulfuric acid. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:**Composition per 300.0mL:**

FeSO ₄ ·7H ₂ O.....	44.2g
H ₂ SO ₄ , 10N solution.....	1.0mL

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 300.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 20.0mL:**

Yeast extract.....	0.2g
--------------------	------

Preparation of Solution C: Add yeast extract to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 700.0mL of solution A, 300.0mL of solution B, and 20.0mL of solution C. Aseptically adjust pH to 1.9–2.4

Use: For the cultivation of *Sulfobacillus thermosulfidooxidans*.

***Sulfolobus acidocaldarius*
Simplified Basal Medium****Composition per liter:**

K ₂ SO ₄	6.0g
NaH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.6g
CaCl ₂ ·7H ₂ O	0.2g
Trace minerals solution.....	0.04mL
pH 3.5 ± 0.2 at 25°C	

Trace Minerals Solution:**Composition per 100.0mL:**

FeCl ₃ ·6H ₂ O	5.0g
CuCl ₂ ·2H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.5g
MnCl ₂ ·2H ₂ O	0.5g
ZnCl ₂	0.5g
HCl (1N solution)	100.0mL

Preparation of Trace Minerals Solution: Combine components. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.5 with H₂SO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Sulfolobus acidocaldarius*.

Sulfolobus brierleyi* Medium*Composition per liter:**

Sulfur flowers	10.0g
(NH ₄) ₂ SO ₄	3.0g
K ₂ HPO ₄ ·3H ₂ O.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g
KCl.....	0.1g
Ca(NO ₃).....	0.01g
Yeast extract solution.....	20.0mL
pH 1.5–2.5 at 25°C	

Preparation of Sulfur: Autoclave sulfur at 8 psi pressure–112°C for 15 min.

Yeast Extract Solution:**Composition per 20.0mL:**

Yeast extract.....	0.2g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except yeast extract solution and sulfur, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH with 6N H₂SO₄ to 1.5–2.5. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile yeast extract solution and 10.0g of sterile sulfur. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Acidianus brierleyi*.

Sulfolobus* Broth*Composition per liter:**

Sucrose yeast solution.....	500.0mL
CaCl ₂ ·2H ₂ O solution.....	250.0mL
Trace elements solution	250.0mL
pH 3.0–3.5 at 25°C	

Sucrose Yeast Solution:**Composition per 500.0mL:**

Sucrose.....	2.0g
Yeast extract.....	1.0g

Preparation of Sucrose Yeast Solution: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

CaCl₂·2H₂O Solution:**Composition per 250.0mL:**

CaCl ₂ ·2H ₂ O.....	2.0g
---	------

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:**Composition per 250.0mL:**

(NH ₄) ₂ SO ₄	1.3g
KH ₂ PO ₄	0.28g
MgSO ₄ ·7H ₂ O.....	0.25g
FeSO ₄ ·7H ₂ O.....	28.0mg
Na ₂ B ₄ O ₇ ·10H ₂ O.....	4.5mg
MnCl ₂ ·7H ₂ O.....	1.8mg
ZnSO ₄ ·7H ₂ O.....	0.22mg
CuCl ₂ ·2H ₂ O.....	0.05mg
NaMoO ₄ ·2H ₂ O.....	0.03mg
VOSO ₄ ·2H ₂ O.....	0.03mg
CoSO ₄ ·2H ₂ O.....	0.01mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 500.0mL of sterile sucrose yeast solution with 250.0mL of sterile CaCl₂·2H₂O solution and 250.0mL of sterile trace elements solution. Mix thoroughly. Adjust pH to 3.0–3.5 with sterile H₂SO₄. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Sulfolobus* species.

Sulfolobus* Medium*Composition per liter:**

(NH ₄) ₂ SO ₄	1.3g
Yeast extract.....	1.0g
KH ₂ PO ₄	0.28g

ZnSO ₄ ·7H ₂ O.....	0.22mg
CuCl ₂ ·2H ₂ O.....	0.05mg
Na ₂ MoO ₄ ·2H ₂ O.....	0.03mg
VOSO ₄ ·2H ₂ O.....	0.03mg
CoSO ₄	0.01mg

pH 2.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH at 25°C to 2.0 with 10N H₂SO₄. Filter sterilize. Aseptically distribute into tubes or flasks.

Use: For the cultivation and maintenance of *Sulfolobus acidocaldarius*.

Sulfolobus* Medium*Composition per liter:**

Gellan sucrose yeast solution.....	500.0mL
CaCl ₂ ·2H ₂ O/MgCl ₂ ·6H ₂ O solution.....	250.0mL
Trace elements solution.....	250.0mL

pH 3.0–3.5 at 25°C

Gellan Sucrose Yeast Solution:**Composition per 500.0mL:**

Gellan gum.....	6.5g
Sucrose.....	2.0g
Yeast extract.....	1.0g

Source: Gellan gum is available from Kelco.

Preparation of Gellan Sucrose Yeast Solution: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C.

CaCl₂·2H₂O/MgCl₂·6H₂O Solution:**Composition per 250.0mL:**

CaCl ₂ ·2H ₂ O.....	2.44g
MgCl ₂ ·6H ₂ O.....	2.0g

Preparation of CaCl₂·2H₂O/MgCl₂·6H₂O Solution: Add components to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C.

Trace Elements Solution:**Composition per 250.0mL:**

(NH ₄) ₂ SO ₄	1.3g
KH ₂ PO ₄	0.28g
MgSO ₄ ·7H ₂ O.....	0.25g
FeSO ₄ ·7H ₂ O.....	28.0mg
Na ₂ B ₄ O ₇ ·10H ₂ O.....	4.5mg
ZnSO ₄ ·7H ₂ O.....	0.22mg
CuCl ₂ ·2H ₂ O.....	0.05mg
NaMoO ₄ ·2H ₂ O.....	0.03mg
VOSO ₄ ·2H ₂ O.....	0.03mg
CoSO ₄ ·2H ₂ O.....	0.01mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C.

Preparation of Medium: Aseptically combine 500.0mL of sterile gellan sucrose yeast solution with 250.0mL of sterile CaCl₂·2H₂O/MgCl₂·6H₂O solution and 250.0mL of sterile trace elements solution. Mix thoroughly. Adjust pH to 3.0–3.5 with sterile H₂SO₄. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Sulfolobus* species.

Sulfolobus* Medium, Revised*Composition per liter:**

(NH ₄) ₂ SO ₄	1.3g

Na ₂ MoO ₄ ·2H ₂ O	0.03mg
VO ₂ SO ₄ ·2H ₂ O	0.03mg
CoSO ₄ ·7H ₂ O	0.01mg

pH 4.0–4.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH at 25°C to 4.0–4.2 with 10N H₂SO₄. Filter sterilize. Aseptically distribute into tubes or flasks.

Use: For the cultivation and maintenance of *Sulfolobus solfataricus*.

Sulfolobococcus zilligii Medium (DSMZ Medium 770)

Composition per 1035.0mL:

Glycine	1.5g
Na ₂ CO ₃	230.0mg

CaCl ₂ ·2H ₂ O	66.0mg
Na ₂ -EDTA	32.0mg
MgSO ₄ ·7H ₂ O	31.0mg
KCl	31.0mg
MnSO ₄ ·2H ₂ O	2.3mg
ZnCl ₂	2.1mg
Na ₂ B ₄ O ₇ ·10H ₂ O	1.8mg
Resazurin	0.5mg
Serum albumin solution	10.0mL
Dithiothreitol solution	10.0mL
Yeast extract solution	10.0mL
Iron sulfate solution	5.0mL

pH 7.6 ± 0.2 at 25°C

Dithiothreitol Solution:

Composition per 10.0mL:

Dithiothreitol	1.54mg
----------------	--------

Preparation of Dithiothreitol Solution: Add dithiothreitol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Iron Sulfate Solution:

Composition per 10.0mL:

FeSO ₄ ·7H ₂ O	0.1g
--------------------------------------	------

Preparation of Iron Sulfate Solution: Add FeSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Serum Albumin Solution:

Composition per 10.0mL:

Bovine serum albumin, fraction V	1.0g
----------------------------------	------

Preparation of Serum Albumin Solution: Add bovine serum albumin, fraction V to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract	1.0g
---------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Prepare medium anaerobically under 100% N₂ gas. Add components, except iron sulfate solution, serum albumin solution, dithiothreitol solution, and yeast extract solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool to 80–90°C. Adjust pH to 7.6. Cool to room temperature. Dispense 30.0mL aliquots into serum bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically inject per each 30.0mL the following solutions: 0.3mL sterile yeast extract solution, 0.3mL sterile dithiothreitol solution, 0.15mL sterile iron sulfate solution, and 10.0mL sterile serum albumin solution. Final pH should be 7.6.

Use: For the cultivation of *Sulfolobococcus zilligii*.

Sulforhabdus Medium (DSMZ Medium 386a)

Composition per 1002.0mL:

Solution A	920.0mL
Solution C	50.0mL
Solution D	10.0mL

Solution E	10.0mL
Solution F	10.0mL
Solution B (Trace elements solution SL-10B).....	1.0mL
pH 7.2–7.5 at 25°C	

Solution A:**Composition** per 920.0mL:

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
KH ₂ PO ₄	0.2g
NH ₄ Cl	0.3g
CaCl ₂ ·2H ₂ O	0.15g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ gas until saturated. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B (Trace Elements Solution SL-10B):**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
H ₃ BO ₃	300.0mg
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	7.7mL

Preparation of Solution B (Trace Elements Solution SL-10B):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition** per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ gas until saturated, approximately 20 min. Filter sterilize under 100% CO₂ into a sterile, gas-tight 100.0mL screw-capped bottle.

Solution D:**Composition** per 10.0mL:

Na ₂ -acetate·3H ₂ O	0.3g
--	------

Preparation of Solution D: Add Na₂-acetate to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Filter sterilize. Store anaerobically.

Solution E:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O	0.4g
---	------

Preparation of Solution E: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Solution F:**Composition** per 10.0mL:

Na-thiosulfate	2.5g
----------------------	------

Preparation of Solution F: Add Na-thiosulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Flush with 80% N₂ + 20% CO₂ to remove dissolved oxygen.

Preparation of Medium: Add solution B, solution C, solution D, solution E, and solution F to solution A in that order under 80% N₂ + 20% CO₂ gas. Adjust the pH to 7.2–7.5.

Use: For the cultivation of *Desulfocapsa thiozymogenes*.

Sulfur Medium**Composition** per liter:

Sulfur, elemental	10.0g
KH ₂ PO ₄	3.0g
MgSO ₄ ·7H ₂ O	0.5g
(NH ₄) ₂ SO ₄	0.3g
CaCl ₂ ·2H ₂ O	0.25g
FeCl ₃ ·6H ₂ O	0.02g

pH 4.8 ± 0.2 at 25°C

Preparation of Medium: Add components, except sulfur, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add 1.0g of sulfur to each of ten 250.0mL flasks. Add 100.0mL of medium to each flask. Autoclave for 30 min at 0 psi pressure–100°C on 3 consecutive days.

Use: For the isolation, cultivation, and enumeration of iron and sulfur bacteria.

**Sulfurimonas paralvinella Medium
(DSMZ Medium 1053)****Composition** per liter:

NaCl	20.0g
Sulfur, elemental	10.0g
MgSO ₄ ·7H ₂ O	4.0g
MgCl ₂ ·6H ₂ O	3.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	1.0g
NaNO ₃	1.0g
CaCl ₂ ·2H ₂ O	0.8g
KCl	0.33g
NH ₄ Cl	0.25g
K ₂ HPO ₄	0.09g
KH ₂ PO ₄	0.07g
Fe ₂ (SO ₄) ₃ ·H ₂ O	0.01g
Resazurin	0.5mg
Trace elements solution	10.0mL
Bicarbonate solution	10.0mL
Vitamin solution	10.0mL
Selenite-tungstate solution	1.0mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution:**Composition** per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g

Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Bicarbonate Solution:

Composition per 10.0mL:

NaHCO ₃	1.0g
--------------------------	------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Selenite-Tungstate Solution:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Steam sulfur for 3 hr on each of 3 successive days. Add the sulfur to the culture vessels. Add components, except vitamin solution, sulfur, and bicarbonate solution, to distilled/deionized water and bring volume to 975.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to room temperature under 80% H₂ + 20% CO₂. Adjust pH to 6.8 with NaOH. Dispense under same gas atmosphere into the culture vessels containing the sulfur (up to volume of 20%). Autoclave for 20 min at 6 psi pressure–110°C. Aseptically add vitamin and bicarbonate solutions. Adjust the pH to 6.5. After inoculation pressurize vessels to 2 bar overpressure with 80% H₂ + 20% CO₂ gas mixture.

Use: For the cultivation of *Sulfurimonas parvalinella*.

Sulfurospirillum Medium

Composition per 1004.0mL:

Solution A	900.0mL
Solution C	80.0mL
Solution D	20.0mL
Solution B (Trace elements solution SL-10)	2.0mL
Solution E	2.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:

Composition per 900.0mL:

KH ₂ PO ₄	1.36g
MgSO ₄ ·7H ₂ O	0.37g
NH ₄ Cl	0.27g
CaCl ₂ ·2H ₂ O	0.1g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 80.0mL:

NaHCO ₃	4.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 80.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D:

Composition per 20.0mL:

Sodium fumarate	4.0g
-----------------------	------

Preparation of Solution D: Add sodium fumarate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E:

Composition per 2.0mL:

L-Cysteine·HCl	0.063g
----------------------	--------

Preparation of Solution E: Add L-cysteine-HCl to distilled/deionized water and bring volume to 2.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To sterile solution A in tubes or flasks, add, using a syringe, appropriate volumes of sterile solution B, solution C, solution D, and solution E. Mix thoroughly.

Use: For the cultivation of *Sulfurospirillum deleyianum*.

Sulfurospirillum Medium

Composition per liter:

Solution A	953.0mL
Solution B	42.0mL
Solution C	5.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:**Composition** per 953.0mL:

KH ₂ PO ₄	1.36g
MgSO ₄ ·7H ₂ O.....	0.37g
NH ₄ Cl.....	0.27g
CaCl ₂ ·2H ₂ O.....	0.10g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 953.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature while sparging with 90% N₂ + 10% CO₂.

Solution B:**Composition** per 42.0mL:

Sodium fumarate.....	4.0g
NaHCO ₃	2.0g
Trace elements solution SL-10.....	2.0mL

Trace Elements Solution SL-10:**Composition** per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 42.0mL. Mix thoroughly. Filter sterilize.

Solution C:**Composition** per 5.0mL:

L-Cysteine-HCl.....	0.063g
---------------------	--------

Preparation of Solution C: Add L-cysteine-HCl to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 953.0mL of sterile solution A with 42.0mL of sterile solution B and 5.0mL of sterile solution C. Prepare freshly. Adjust pH to 7.2 with sterile 2M Na₂CO₃ solution or sterile 2N HCl solution.

Use: For the cultivation of *Sulfurospirillum deleyianum*.

Sulfurospirillum II Medium (DSMZ Medium 771)

Composition per 1080.0mL:

Yeast extract.....	1.0g
NaCl.....	460.0mg
K ₂ HPO ₄	225.0mg
KH ₂ PO ₄	225.0mg
(NH ₄) ₂ SO ₄	225.0mg
MgSO ₄ ·7H ₂ O.....	117.0mg
Resazurin.....	0.5mg
NaHCO ₃ solution.....	30.0mL
NaNO ₃ solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Na-lactate solution.....	10.0mL

Vitamin solution.....	10.0mL
Cysteine solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL
Selenite-tungstate solution.....	1.0mL
pH 7.3 ± 0.2 at 25°C	

Cysteine Solution:**Composition** per 10.0mL:

L-Cysteine-HCl·H ₂ O.....	0.15g
--------------------------------------	-------

Preparation of Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite-Tungstate Solution**Composition** per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na-lactate Solution:**Composition** per 10.0mL:

Na-lactate.....	2.25g
-----------------	-------

Preparation of Na-lactate Solution: Add Na-lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

NaNO₃ Solution:**Composition** per 10.0mL:

NaNO ₃	1.7g
-------------------------	------

Preparation of NaNO₃ Solution: Add NaNO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:

Na ₂ S·9H ₂ O.....	0.1g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:**Composition** per 30.0mL:

NaHCO ₃	4.2g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution SL-10:**Composition** per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N_2 + 20% CO_2 .

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H_2 + 20% CO_2 . Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N_2 + 20% CO_2 . Add components, except NaHCO_3 solution, $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ solution, cysteine solution, NaNO_3 solution, Na-lactate solution, and vitamin solution, to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Sparge with 80% N_2 + 20% CO_2 . Adjust pH to 7.3. Dispense either 10.0mL aliquots into 15mL Hungate tubes or 50.0mL aliquots into 100mL Hungate bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically inject from sterile stock solutions NaHCO_3 solution, $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ solution, cysteine solution, vitamin solution, sodium nitrate solution, and sodium lactate solution. Final pH should be 7.3.

Use: For the cultivation of *Sulfurospirillum arsenophilum* (*Geospirillum* sp.) and *Sulfurospirillum barnesii*.

**Sulfurospirillum MV Medium
(DSMZ Medium 1097)**

Composition per liter:

NaCl.....	20.0g
$\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$	3.0g
$\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$	0.8g
KCl.....	0.7g
NH_4Cl	0.2g
KH_2PO_4	0.2g
Resazurin.....	0.5mg
Vitamin solution.....	10.0mL
Sulfide solution.....	10.0mL
Fumarate solution.....	10.0mL
Bicarbonate solution.....	10.0mL
Trace elements solution SL-10.....	2.0mL
Selenite-tungstate solution.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Bicarbonate Solution:

Composition per 10.0mL:

NaHCO_3	2.5g
------------------------	------

Preparation of Bicarbonate Solution: Add NaHCO_3 to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO_2 + 80% N_2 . Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N_2 . Filter sterilize.

Fumarate Solution:

Composition per 10.0mL:

Na_2 -fumarate.....	1.6g
------------------------------	------

Preparation of Fumarate Solution: Add Na_2 -fumarate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution SL-10:

Composition per liter:

$\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$	3.0g
Nitritotriacetic acid.....	1.5g
NaCl.....	1.0g
$\text{MnSO}_4 \cdot 2\text{H}_2\text{O}$	0.5g
$\text{CoSO}_4 \cdot 7\text{H}_2\text{O}$	0.18g
$\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$	0.18g
$\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$	0.1g
$\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$	0.1g
$\text{NiCl}_2 \cdot 6\text{H}_2\text{O}$	0.025g
$\text{KAl}(\text{SO}_4)_2 \cdot 12\text{H}_2\text{O}$	0.02g
H_3BO_3	0.01g
$\text{Na}_2\text{MoO}_4 \cdot 4\text{H}_2\text{O}$	0.01g
$\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$	0.01g
$\text{Na}_2\text{SeO}_3 \cdot 5\text{H}_2\text{O}$	0.3mg

Preparation of Trace Elements Solution SL-10: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly. Adjust pH to 7.0.

Selenite-Tungstate Solution:

Composition per liter:

NaOH.....	0.5g
$\text{Na}_2\text{WO}_4 \cdot 2\text{H}_2\text{O}$	4.0mg
$\text{Na}_2\text{SeO}_3 \cdot 5\text{H}_2\text{O}$	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Sulfide Solution:

Composition per 10.0mL:

$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$	0.3g
---	------

Preparation of Sulfide Solution: Add $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N_2 for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except vitamin solution, bicarbonate solution, fumarate solution, and sulfide solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Cool to room temperature under 80% N₂ + 20% CO₂. Dispense under same gas atmosphere into culture vessels. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add fumarate, sulfide, vitamin, and bicarbonate solutions. Adjust the pH to 7.2.

Use: For the cultivation of *Sulfurospirillum* spp.

Super HiVeg Broth

Composition per liter:

Plant hydrolysate.....	35.0g
Yeast extract.....	20.0g
NaCl.....	5.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli*.

Super MMB Medium (LMG Medium 188)

Yeast extract.....	1.0g
KH ₂ PO ₄	1.0g
Peptone.....	0.4g
Sodium succinate.....	0.4g
NH ₄ Cl.....	0.2g
NaCl.....	0.2g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	10.0mg
Ferric citrate.....	5.0mg
Vitamin solution.....	20.0mL
Trace elements solution SL-6.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution SL-6 :

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O.....	0.2g
ZnSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.03g
Na ₂ MoO ₄ ·H ₂ O.....	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6 : Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Vitamin Solution:

Composition per liter:

Calcium DL-pantothenate.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to 980.0mL distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 20.0mL sterile vitamin solution. Mix thoroughly. Aseptically distribute to sterile tubes or flasks.

Use: For the cultivation of *Aquabacter* spp.

Superbroth

Composition per liter:

Pancreatic digest of casein.....	32.0g
Yeast extract.....	20.0g
NaCl.....	5.0g
NaOH (1N solution).....	5.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli*.

Supplemented (Arginine) M9 Medium See: M9 Medium with Arginine

Supplemented *Aspergillus* Minimal Agar

Composition per liter:

Agar.....	20.0g
Glucose.....	20.0g
NaNO ₃	6.0g
(NH ₄) ₂ SO ₄	5.0g
Casamino acids.....	2.0g
K ₂ HPO ₄	1.52g
KH ₂ PO ₄	1.0g
KCl.....	0.52g
MgSO ₄ ·7H ₂ O.....	0.52g
NaCl.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
Inositol.....	2.0mg
KI.....	1.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O.....	0.4mg
MnSO ₄ ·4H ₂ O.....	0.4mg
Thiamine-HCl.....	0.4mg
Pyroxidine-HCl.....	0.4mg
Niacin.....	0.4mg
Calcium pantothenate.....	0.4mg
<i>p</i> -Aminobenzoic acid.....	0.2mg
Riboflavin.....	0.2mg
Na ₂ MoO ₄ ·4H ₂ O.....	0.2mg
CuSO ₄ ·5H ₂ O.....	0.04mg
Folic acid.....	2.0μg
Biotin.....	2.0μg
FeCl ₃ ·6H ₂ O.....	1.0μg
ZnSO ₄ ·7H ₂ O.....	1.0μg

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Gently heat and bring to boiling. Distribute into tubes or flasks. Auto-

clave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Aspergillus* species.

Supplemented *Aspergillus* Minimal Broth

Composition per liter:

Glucose	20.0g
NaNO ₃	6.0g
(NH ₄) ₂ SO ₄	5.0g
Casamino acids	2.0g
K ₂ HPO ₄	1.52g
KH ₂ PO ₄	1.0g
KCl.....	0.52g
MgSO ₄ ·7H ₂ O	0.52g
NaCl.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
Inositol	2.0mg
KI	1.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine·HCl	0.4mg
Pyroxidine·HCl	0.4mg
Niacin	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid.....	0.2mg
Riboflavin	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
CuSO ₄ ·5H ₂ O	0.04mg
Folic acid.....	2.0μg
Biotin	2.0μg
FeCl ₃ ·6H ₂ O.....	1.0μg
ZnSO ₄ ·7H ₂ O.....	1.0μg

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Aspergillus* species.

Supplemented (Tryptophan) M9 Medium

See: M9 Medium with Tryptophan

SW 2 Agar

Composition per liter:

Agar	15.0g
NH ₄ Cl	1.0g
Sodium acetate.....	0.02g
Artificial seawater.....	1.0L

Artificial Seawater:

Composition per liter:

NaCl.....	24.7g
MgSO ₄ ·7H ₂ O	6.3g
MgCl ₂ ·6H ₂ O.....	4.6g
CaCl ₂	1.0g
KCl.....	0.7g
NaHCO ₃	0.2g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add solid components to 1.0L of artificial seawater. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprospira* species, and *Flexithrix* species.

SWA

See: Seawater Agar

Swampy Medium

Composition per liter:

Agar	10.0g
CaCO ₃	10.0g
Peptone	0.5g
Yeast extract.....	0.5g

Preparation of Medium: Add components to seawater and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Vibrio liquefaciens*.

Sweet E Broth for Anaerobes

Composition per 100.0mL:

Gelatin.....	0.3g
Cellobiose	0.1g
Fructose.....	0.1g
Glucose	0.1g
L-Arabinose	0.1g
Maltose	0.1g
Starch	0.1g
Agar	0.075g
Peptone	0.05g
L-Cysteine·HCl·H ₂ O	0.05g
(NH ₄) ₂ SO ₄	0.05g
Yeast extract.....	0.05g
Salts solution.....	50.0mL
Rumen fluid	30.0mL
Resazurin solution	0.4mL
Pyruvic acid	0.01mL

pH 6.5 ± 0.2 at 25°C

Salts Solution:

Composition per liter:

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂ , anhydrous.....	0.2g
MgSO ₄ ·7H ₂ O.....	0.2g

Preparation of Salts Solution: Add CaCl₂ and MgSO₄·7H₂O to distilled/deionized water and bring volume to 300.0mL. Mix thoroughly. Bring volume to 800.0mL with distilled/deionized water. Add remaining components while stirring. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Store at 4°C.

Resazurin Solution:

Composition per 44.0mL:

Resazurin	0.011g
-----------------	--------

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 44.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling under O₂-free 97% N₂ + 3% H₂. Adjust the pH to 6.5 if necessary. Continue boiling until the medium turns yellow. Distribute into tubes or flasks under O₂-free 97% N₂ + 3% H₂. Cap tubes with rubber stoppers. Place tubes in a press. Autoclave for 15 min at 15 psi pressure–121°C with fast exhaust.

Use: For the cultivation and maintenance of *Clostridium cocleatum* and *Clostridium spiroforme*.

SWM Medium

Composition per 1014.0mL:

Solution A	940.0mL
Solution E (NaHCO ₃ solution)	50.0mL
Solution F (Substrate solution)	10.0mL
Solution G (Na ₂ S·9H ₂ O solution)	10.0mL
Solution B (Trace elements solution SL-10).....	2.0mL
Solution C (Seven vitamin solution).....	1.0mL
Solution D (Selenite-tungstate solution).....	1.0mL
pH 7.2–7.4 at 25°C	

Solution A:

Composition per 940.0mL:

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin	0.5mg

Preparation of Solution A: Prepare and dispense under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Prepare and dispense under 100% N₂. Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C (Seven Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	300.0mg
Nicotinic acid.....	200.0mg
Thiamine-HCl	200.0mg
Calcium pantothenate	100.0mg
Cyanocobalamine.....	100.0mg

<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Solution C (Seven Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Solution D (Selenite-Tungstate Solution):

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Solution D (Selenite-Tungstate Solution):

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Solution E (NaHCO₃ Solution):

Composition per 50.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of Solution E (NaHCO₃ Solution): Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F (Substrate Solution):

Composition per 10.0mL:

Pyrogallol.....	0.5g
-----------------	------

Preparation of Solution F (Substrate Solution): Add pyrogallol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G (Na₂S·9H₂O Solution):

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Solution G (Na₂S·9H₂O Solution): Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 940.0mL of sterile solution A, aseptically and anaerobically add 1.0mL of sterile solution B, 1.0mL of sterile solution C, 1.0mL of sterile solution D, 50.0mL of sterile solution E, 10.0mL of sterile solution F, and 10.0mL of sterile solution G. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Pelobacter massiliensis*.

SWMTY Marine Medium

Composition per liter:

Marine salts mix	38.0g
Agar	15.0g
Pancreatic digest of casein.....	2.0g
Yeast extract.....	2.0g
Tris(hydroxymethyl)aminomethane buffer.....	1.0g
KNO ₃	0.5g
Sodium glycerophosphate.....	0.1g
Trace elements solution HO-LE	1.0mL
pH 7.0 ± 0.2 at 25°C	

Trace Elements Solution HO-LE:

Composition per liter:

H ₃ BO ₃	2.85g
MnCl ₂ ·4H ₂ O	1.8g

Sodium tartrate.....	1.77g
FeSO ₄ ·7H ₂ O.....	1.36g
CoCl ₂ ·6H ₂ O.....	0.04g
CuCl ₂ ·2H ₂ O.....	0.027g
Na ₂ MoO ₄ ·2H ₂ O.....	0.025g
ZnCl ₂	0.02g

Preparation of Trace Elements Solution HO-LE: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of heterotrophic marine bacterial species.

SXT Blood Agar

Composition per liter:

Pancreatic digest of casein.....	14.5g
Agar.....	14.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	5.0g
Growth factor, BBL.....	1.5g
Sulfamethoxazole.....	0.024g
Trimethoprim.....	1.25mg
Sheep blood, defibrinated.....	50.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except defibrinated sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of defibrinated sheep blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of Lancefield group A and group B streptococci from throat cultures and other clinical specimens.

SY Broth

Composition per liter:

(NH ₄) ₂ SO ₄	2.0g
Na ₂ HPO ₄ ·2H ₂ O.....	1.4g
KH ₂ PO ₄	0.7g
MgSO ₄ ·7H ₂ O.....	0.2g
FeSO ₄	5.0mg
MnSO ₄	5.0mg
Glucose solution.....	100.0mL

Glucose Solution:

Composition per 100.0mL:

D-Glucose.....	10.0g
----------------	-------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glu-

cose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Cytophaga* species, *Herpetosiphon* species, *Saprosira* species, and *Flexithrix* species.

SYA Medium

Composition per liter:

Agar.....	20.0g
Soluble starch.....	10.0g
Yeast extract.....	2.0g

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces chartreusis*.

SYC Medium

Composition per liter:

Sucrose.....	10.0g
Pancreatic digest of casein.....	8.0g
Yeast extract.....	4.0g
K ₂ HPO ₄	3.0g
MgSO ₄ ·7H ₂ O.....	0.3g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Agrobacterium tumefaciens*.

SYFAC Medium (DSMZ Medium 1041)

Composition per liter:

Sea salts, Sigma.....	35.0g
Yeast extract.....	1.0g
Resazurin.....	0.5mg
Vitamin solution.....	10.0mL
Fumarate solution.....	10.0mL
Bicarbonate solution.....	10.0mL
Acetate solution.....	10.0mL
Sulfide solution.....	10.0mL
Wolfe's mineral elixir.....	1.0mL

pH 7.1 ± 0.1 at 25°C

Sulfide Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Bicarbonate Solution:

Composition per 10.0mL:

NaHCO ₃	2.0g
--------------------------	------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Acetate Solution:**Composition per 10.0mL:**

Na-acetate 1.6g

Preparation of Acetate Solution: Add Na-acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Fumarate Solution:**Composition per 10.0mL:**Na₂-fumarate 3.2g

Preparation of Fumarate Solution: Add Na₂-fumarate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Wolfe's Mineral Elixir:**Composition per liter:**MgSO₄·7H₂O 30.0g

NaCl 10.0g

MnSO₄·2H₂O 5.0g(NH₄)₂NiSO₄·6H₂O 2.8gCoCl₂·6H₂O 1.8gZnSO₄·7H₂O 1.8gFeSO₄·7H₂O 1.0gCaCl₂·2H₂O 1.0gKAl(SO₄)₂·12H₂O 0.18gCuSO₄·5H₂O 0.1gH₃BO₃ 0.1gNa₂MoO₄·2H₂O 0.1gNa₂SeO₄ 0.1gNa₂WO₄·2H₂O 0.1g

Preparation of Wolfe's Mineral Elixir: Adjust pH of 1.0L of distilled/deionized water to 1.0 with dilute H₂SO₄. Add remaining components one at a time. Mix thoroughly to dissolve.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl 10.0mg

Thiamine-HCl·2H₂O 5.0mg

Riboflavin 5.0mg

Nicotinic acid 5.0mg

D-Ca-pantothenate 5.0mg

p-Aminobenzoic acid 5.0mg

Lipoic acid 5.0mg

Biotin 2.0mg

Folic acid 2.0mg

Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except sulfide, acetate, fumarate, bicarbonate, and vitamin solutions, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize. Gently heat and bring to boiling. Boil for 1 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂ gas mixture. Dispense under same gas atmosphere in culture vessels. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add acetate, bicarbonate, fumarate, vitamin, and sulfide solutions from sterile, anoxic solutions. Mix thoroughly. Adjust the pH to 7.0–7.2.

Use: For the cultivation of *Desulfuromusa ferrireducens*.

SYLC Medium (DSMZ Medium 1040)

Composition per liter:

Sea salts, Sigma 35.0g

Yeast extract 1.0g

Resazurin 0.5 mg

Vitamin solution 10.0mL

Bicarbonate solution 10.0mL

Lactate solution 10.0mL

Sulfide solution 10.0mL

Wolfe's mineral elixir 1.0mL

pH 7.1 ± 0.1 at 25°C

Sulfide Solution:**Composition per 10.0mL:**Na₂S·9H₂O 0.3g

Preparation of Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Bicarbonate Solution:**Composition per 10.0mL:**NaHCO₃ 2.0g

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 20% CO₂ + 80% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Lactate Solution:**Composition per 10.0mL:**

Na-lactate 2.5g

Preparation of Lactate Solution: Add Na-lactate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Wolfe's Mineral Elixir:**Composition per liter:**MgSO₄·7H₂O 30.0g

NaCl 10.0g

MnSO₄·2H₂O 5.0g(NH₄)₂NiSO₄·6H₂O 2.8gCoCl₂·6H₂O 1.8gZnSO₄·7H₂O 1.8gFeSO₄·7H₂O 1.0gCaCl₂·2H₂O 1.0gKAl(SO₄)₂·12H₂O 0.18gCuSO₄·5H₂O 0.1gH₃BO₃ 0.1gNa₂MoO₄·2H₂O 0.1gNa₂SeO₄ 0.1gNa₂WO₄·2H₂O 0.1g

Preparation of Wolfe's Mineral Elixir: Adjust pH of 1.0L of distilled/deionized water to 1.0 with dilute H₂SO₄. Add remaining components one at a time. Mix thoroughly to dissolve.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl 10.0mg

Thiamine-HCl·2H₂O 5.0mg

Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except sulfide, lactate, bicarbonate, and vitamin solutions, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Gently heat and bring to boiling. Boil for 1 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂ gas mixture. Dispense under same gas atmosphere in culture vessels. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add lactate, bicarbonate, vitamin, and sulfide solutions from sterile, anoxic solutions. Mix thoroughly. Adjust the pH to 7.0–7.2.

Use: For the cultivation of *Desulfovibrio ferrireducens*.

Syncase Broth

Composition per liter:

Casamino acids	20.0g
K ₂ HPO ₄	8.71g
Yeast extract.....	6.0g
NaCl.....	2.5g

pH 8.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of heat-labile, toxin-producing *Escherichia coli* from foods.

Synthetic Broth, AOAC (Synthetic Broth, Association of Official Analytical Chemists)

Composition per liter:

Na ₂ HPO ₄	4.0g
NaCl.....	3.0g
K ₂ HPO ₄	1.5g
L-Glutamic acid.....	1.3g
DL-Valine.....	1.0g
L-Lysine.....	0.85g
L-Leucine.....	0.8g
DL-Serine.....	0.61g
DL-Threonine.....	0.5g
L-Aspartic acid.....	0.45g
DL-Isoleucine.....	0.44g
DL-Alanine.....	0.43g
L-Arginine.....	0.4g
DL-Methionine.....	0.37g
DL-Histidine.....	0.3g
DL-Phenylalanine.....	0.26g
L-Tyrosine.....	0.21g
KCl.....	0.2g

Aminoacetic acid.....	0.06g
L-Cystine.....	0.05g
MgSO ₄	0.05g
L-Proline.....	0.05g
DL-Tryptophan.....	0.05g
Nicotinamide.....	0.01g
Thiamine-HCl.....	0.01g

pH 7.1 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the determination of phenol coefficients of disinfectants.

Synthetic Complete Medium

Composition per liter:

Solution A.....	600.0mL
Solution B.....	400.0mL

Solution A:

Composition per 600.0mL:

Agar.....	20.0g
-----------	-------

Preparation of Solution A: Add agar to distilled/deionized water and bring volume to 600.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45–50°C.

Solution B:

Composition per 400.0mL:

Glucose.....	20.0g
Yeast nitrogen base without amino acids.....	6.7g
L-Leucine.....	0.18g
L-Alanine.....	90.0mg
L-Arginine.....	90.0mg
L-Asparagine.....	90.0mg
L-Aspartic acid.....	90.0mg
L-Cysteine.....	90.0mg
L-Glutamine.....	90.0mg
L-Glutamic acid.....	90.0mg
Glycine.....	90.0mg
L-Histidine.....	90.0mg
<i>i</i> -Inositol.....	90.0mg
L-Isoleucine.....	90.0mg
L-Lysine.....	90.0mg
L-Methionine.....	90.0mg
L-Phenylalanine.....	90.0mg
L-Proline.....	90.0mg
L-Serine.....	90.0mg
L-Threonine.....	90.0mg
L-Tryptophan.....	90.0mg
L-Tyrosine.....	90.0mg
L-Valine.....	90.0mg
Adenine.....	23.0mg
<i>p</i> -Aminobenzoic acid.....	9.0mg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Filter sterilize. Warm to 45°–50°C prior to preparation of medium.

Preparation of Medium: Aseptically combine 600.0mL of sterile solution A with 400.0mL of sterile solution B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Saccharomyces cerevisiae*.

Synthetic Malate Medium with 0.25% Sodium Chloride

Composition per 1010.0mL:

DL-Malic acid.....	5.0g
KOH.....	4.5g
NaCl.....	2.5g
KH ₂ PO ₄	0.6g
NH ₄ Cl.....	0.5g
K ₂ HPO ₄	0.4g
MgSO ₄ ·7H ₂ O.....	0.2g
Yeast extract.....	0.1g
CaCl ₂	0.02g
MnSO ₄ ·H ₂ O.....	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.002g
Biotin.....	0.1mg
Ferric EDTA solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Ferric EDTA Solution:

Composition per 100.0mL:

Ferric EDTA.....	0.66g
------------------	-------

Preparation of Ferric EDTA Solution: Add ferric EDTA to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Azospirillum halopraeferens*.

Synthetic *Mucor* Agar

Composition per liter:

Glucose.....	40.0g
Agar.....	15.0g
Asparagine.....	2.0g
KH ₂ PO ₄	0.5g
MgSO ₄	0.25g
Thiamine:HCl.....	0.5mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Mucor* species.

Synthetic Sea Salt

Composition per liter:

NaCl.....	14.9g
MgSO ₄ ·7H ₂ O.....	3.80g
MnCl ₂ ·6H ₂ O.....	2.94g
KCl.....	0.435g
NaHCO ₃	0.1515g
Borax.....	3.0mg
SrCl ₂ ·6H ₂ O.....	0.7mg

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of marine bacteria.

Synthetic Seawater Medium

Composition per liter:

NaCl.....	27.0g
MgSO ₄ ·7H ₂ O.....	7.0g
Monosodium glutamate.....	5.0g
Tris(hydroxymethyl)aminomethane buffer.....	2.0g
Glucose.....	1.0g
KCl.....	0.6g
CaCl ₂	0.3g
Sodium glycerophosphate.....	0.2g
Vitamin B ₁₂	1.0µg

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Leucothrix mucor*.

Syntrophobacter pfennigii Medium

Composition per liter:

NaCl.....	1.0g
Na ₂ SO ₄	0.7g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	1.0mg
Sodium propionate solution.....	50.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Na ₂ S ₂ O ₄ solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL
Seven vitamin solution.....	1.0mL
NaHCO ₃ solution.....	variable

pH 7.2–7.4 at 25°C

Sodium Propionate Solution:

Composition per 50.0mL:

Sodium propionate.....	1.5g
------------------------	------

Preparation of Sodium Propionate Solution: Add sodium propionate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.36g
--	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S₂O₄ Solution:

Composition per 10.0mL:

Na₂S₂O₄·5H₂O 2.0g

Preparation of Na₂S₂O₄ Solution: Add Na₂S₂O₄·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 190.0mg
 MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 Na₂MoO₄·2H₂O 36.0mg
 NiCl₂·6H₂O 24.0mg
 H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Prepare and dispense under 80% N₂ + 20% CO₂. Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 0.3g
 Thiamine-HCl 0.2g
 Nicotinic acid 0.2g
 Calcium DL-pantothenate 0.1g
 Vitamin B₁₂ 0.1g
 p-Aminobenzoic acid 80.0mg
 Biotin 20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare medium and dispense under 80% N₂ + 20% CO₂. Add components, except sodium propionate solution, NaHCO₃ solution, Na₂S·9H₂O solution, and Na₂S₂O₃ solution, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL of sterile sodium propionate solution, 10.0mL of sterile Na₂S₂O₃ solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically add sufficient volume of sterile NaHCO₃ solution to bring pH to 7.2–7.4. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Syntrophobacter pfennigii*.

***Syntrophobacter wolinii* Medium**

Solution A 916.0mL
 Solution B 70.0mL
 Solution C 10.0mL
 Solution D 10.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:

Composition per 916.0mL:

Na₂SO₄ 2.8g
 Sodium propionate 1.5g
 Pancreatic digest of casein 1.0g
 Resazurin 1.0mg
 Mineral solution 50.0mL
 Rumen fluid, clarified 50.0mL
 Vitamin solution 5.0mL
 Trace elements solution SL-10 1.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 916.0mL. Adjust pH to 7.2. Gently heat and bring to boiling. Continue boiling for a few minutes. Allow to cool to room temperature under 80% N₂ + 20% CO₂. Distribute into bottles under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Mineral Solution:

Composition per liter:

Nitritotriacetic acid 12.5g
 NaCl 1.0g
 FeCl₃·4H₂O 0.2g
 MnCl₂·4H₂O 0.1g
 CaCl₂·2H₂O 0.1g
 ZnCl₂ 0.1g
 CuCl₂ 0.02g
 Na₂SeO₃ 0.02g
 CoCl₂·6H₂O 0.017g
 H₃BO₃ 0.01g
 Na₂MoO₄·2H₂O 0.01g

Preparation of Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Biotin 0.25mg
 Nicotinic acid 2.5mg
 Thiamine-HCl 1.25mg
 p-Aminobenzoic acid 1.25mg
 Pantothenic acid 0.62mg
 Pyridoxine-HCl 6.2mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-10:

Composition per liter:

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 190.0mg
 MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 Na₂MoO₄·2H₂O 36.0mg
 NiCl₂·6H₂O 24.0mg
 H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Solution B:**Composition** per 70.0mL:NaHCO₃ 3.5g

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 70.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂ for 15 min.

Solution C:**Composition** per 10.0mL:

L-Cysteine-HCl 0.3g

Preparation of Solution C: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Solution D:**Composition** per 10.0mL:Na₂S·9H₂O 0.3g

Preparation of Solution D: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 916.0mL of sterile solution A, add 70.0mL of sterile solution B, 10.0mL of sterile solution C, and 10.0mL of sterile solution D. Mix thoroughly.

Use: For the cultivation and maintenance of *Syntrophobacter wolinii*.

Syntrophococcus sucromutans* Medium*Composition** per 1002.0mL:

Solution A 916.0mL

Solution C 50.0mL

Solution B 25.0mL

Solution D 10.0mL

Solution E 1.0mL

pH 7.2–7.4 at 25°C

Solution A:**Composition** per 916.0mL:

Sodium formate 0.6g

Resazurin 1.0mg

Rumen fluid, clarified 300.0mL

Mineral solution 50.0mL

Vitamin solution 5.0mL

Trace elements solution SL-10 1.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 916.0mL. Mix thoroughly. Adjust pH to 6.4. Autoclave for 15 min at 15 psi pressure–121°C.

Mineral Solution:**Composition** per liter:KH₂PO₄ 10.0g

NaCl 8.0g

NH₄Cl 8.0gMgCl₂·6H₂O 6.6gCaCl₂·2H₂O 1.0g

Preparation of Mineral Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl 6.2mg

Nicotinic acid 2.5mg

p-Aminobenzoic acid 1.25mg

Thiamine-HCl 1.25mg

Pantothenic acid 0.62mg

Biotin 0.25mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-10:**Composition** per liter:FeCl₂·4H₂O 1.5gCoCl₂·6H₂O 190.0mgMnCl₂·4H₂O 100.0mgZnCl₂ 70.0mgNa₂MoO₄·2H₂O 36.0mgNiCl₂·6H₂O 24.0mgH₃BO₃ 6.0mgCuCl₂·2H₂O 2.0mg

HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:**Composition** per 25.0mL:

Lactose 5.0g

Preparation of Solution B: Add lactose to distilled/deionized water and bring volume to 25.0mL. Mix thoroughly. Filter sterilize.

Solution C:**Composition** per 50.0mL:NaHCO₃ 2.5g

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D:**Composition** per 10.0mL:

L-Cysteine 0.24g

Preparation of Solution D: Add L-cysteine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E:**Composition** per 1.0mL:Na₂S·9H₂O 78.0mg

Preparation of Solution E: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under H₂-free 80% N₂ + 20% CO₂. Aseptically and anaerobically combine 916.0mL of sterile solution A with 25.0mL of sterile solution B, 50.0mL of sterile solution C, 10.0mL of sterile solution D, and 1.0mL of sterile solution E. Mix thoroughly. Final pH should be 6.4–6.8

Use: For the cultivation and maintenance of *Syntrophococcus sucromutans*.

Syntrophomonas bryantii* Medium*Composition** per 1026.0mL:

Solution A 916.0mL

Solution B 70.0mL

Solution C	10.0mL
Solution D	10.0mL
Sodium laurate solution	10.0mL
CaCl ₂ ·2H ₂ O solution	10.0mL
pH 7.2 ± 0.2 at 25°C	

Solution A:

CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized

water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 916.0mL. Adjust pH to 7.2. Gently heat and bring to boiling. Continue boiling for a few minutes. Allow to cool to room temperature under 80% N₂ + 20% CO₂. Distribute into bottles under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 70.0mL:

NaHCO ₃	3.5g
--------------------------	------

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 70.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂ for 15 min.

Solution C:

Composition per 10.0mL:

L-Cysteine·HCl	0.3g
----------------------	------

Preparation of Solution C: Add L-cysteine·HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Solution D:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Solution D: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Sodium Laurate Solution:

Composition per 10.0mL:

Sodium laurate	2.78g
----------------------	-------

Preparation of Sodium Laurate Solution: Add sodium laurate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

CaCl₂·2H₂O Solution:

Composition per 40.0mL:

CaCl ₂ ·2H ₂ O	1.84g
--	-------

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 916.0mL of sterile solution A, add 70.0mL of sterile solution B, 10.0mL of sterile solution C, and 10.0mL of sterile solution D. Mix thoroughly. Prior to inoculation, aseptically add 10.0mL of sterile sodium laurate solution and 10.0mL of sterile CaCl₂·2H₂O solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Syntrophomonas sapovorans*.

***Syntrophomonas* Medium**

Composition per 1006.0mL:

Solution A	916.0mL
Solution B	70.0mL
Solution C	10.0mL
Solution D	10.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:**Composition per 916.0mL:**

Na ₂ SO ₄	2.8g
Butyric acid.....	1.7g
Pancreatic digest of casein.....	1.0g
Resazurin.....	1.0mg
Mineral solution.....	50.0mL
Rumen fluid, clarified.....	50.0mL
Vitamin solution.....	5.0mL
Trace elements solution SL-10.....	1.0mL

Mineral Solution:**Composition per liter:**

Nitritotriacetic acid.....	12.5g
NaCl.....	1.0g
FeCl ₃ ·4H ₂ O.....	0.2g
MnCl ₂ ·4H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
ZnCl ₂	0.1g
CuCl ₂	0.02g
Na ₂ SeO ₃	0.02g
CoCl ₂ ·6H ₂ O.....	0.017g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g

Preparation of Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl.....	6.2mg
Nicotinic acid.....	2.5mg
Thiamine-HCl.....	1.25mg
<i>p</i> -Aminobenzoic acid.....	1.25mg
Pantothenic acid.....	0.62mg
Biotin.....	0.25mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 916.0mL. Adjust pH to 7.2. Gently heat and bring to boiling. Continue boiling for a few minutes. Allow to cool to room temperature under 80% N₂ + 20% CO₂. Distribute into bottles under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:**Composition per 70.0mL:**

NaHCO ₃	3.5g
--------------------------	------

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 70.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂ for 15 min.

Solution C:**Composition per 10.0mL:**

L-Cysteine-HCl.....	0.3g
---------------------	------

Preparation of Solution C: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Solution D:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Solution D: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 916.0mL of sterile solution A, add 70.0mL of sterile solution B, 10.0mL of sterile solution C, and 10.0mL of sterile solution D. Mix thoroughly.

Use: For the cultivation of *Syntrophomonas* species.

Syntrophomonas* Medium, Sulfate-Free*Composition per 1006.0mL:**

Solution A.....	916.0mL
Solution B.....	70.0mL
Solution C.....	10.0mL

CoCl ₂ ·6H ₂ O.....	0.017g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g

Preparation of Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add

remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	6.2mg
Nicotinic acid	2.5mg
Thiamine-HCl	1.25mg
<i>p</i> -Aminobenzoic acid	1.25mg
Pantothenic acid	0.62mg
Biotin	0.25mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 916.0mL. Adjust pH to 7.2. Gently heat and bring to boiling. Continue boiling for a few minutes. Allow to cool to room temperature under 80% N₂ + 20% CO₂. Distribute into bottles under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 70.0mL:

NaHCO ₃	3.5g
--------------------------	------

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 70.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂ for 15 min.

Solution C:

Composition per 10.0mL:

L-Cysteine-HCl	0.3g
----------------------	------

Preparation of Solution C: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Solution D:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Solution D: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 916.0mL of sterile solution A, add 70.0mL of sterile solution B, 10.0mL of sterile solution C, and 10.0mL of sterile solution D. Mix thoroughly.

Use: For the cultivation of *Syntrophus buswelii*.

Syntrophomonas species Medium

Composition per 1006.0mL:

Solution A	916.0mL
Solution B	70.0mL
Solution C	10.0mL
Solution D	10.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:

Composition per 916.0mL:

Na ₂ SO ₄	2.8g
Pancreatic digest of casein	1.0g
Sodium stearate	0.61g
Resazurin	1.0mg
Mineral solution	50.0mL
Rumen fluid, clarified	50.0mL
Vitamin solution	5.0mL
Trace elements solution SL-10	1.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 916.0mL. Adjust pH to 7.2. Gently heat and bring to boiling. Continue boiling for a few minutes. Allow to cool to room temperature under 80% N₂ + 20% CO₂. Distribute into bottles under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Mineral Solution:

Composition per liter:

Nitritotriacetic acid	12.5g
NaCl	1.0g
FeCl ₃ ·4H ₂ O	0.2g
MnCl ₂ ·4H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
ZnCl ₂	0.1g
CuCl ₂	0.02g
Na ₂ SeO ₃	0.02g
CoCl ₂ ·6H ₂ O	0.017g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	6.2mg
Nicotinic acid	2.5mg
Thiamine-HCl	1.25mg
<i>p</i> -Aminobenzoic acid	1.25mg
Pantothenic acid	0.62mg
Biotin	0.25mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg

CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Solution B:

Composition per 70.0mL:

NaHCO ₃	3.5g
--------------------------	------

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 70.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂ for 15 min.

Solution C:

Composition per 10.0mL:

L-Cysteine·HCl	0.3g
----------------------	------

Preparation of Solution C: Add L-cysteine·HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Solution D:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Solution D: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 916.0mL of sterile solution A, add 70.0mL of sterile solution B, 10.0mL of sterile solution C, and 10.0mL of sterile solution D. Mix thoroughly.

Use: For the cultivation of *Syntrophomonas wolfei*.

Syntrophothermus Medium **(DSMZ Medium 870)**

Composition per liter:

NaHCO ₃	2.5g
NH ₄ Cl	0.54g
MgCl ₂ ·6H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.15g
KH ₂ PO ₄	0.14g
Resazurin	0.5mg
Na ₂ S·9H ₂ O solution	10.0mL
Cysteine solution	10.0mL
Vitamin solution	10.0mL
Substrate solution	10.0mL
Trace elements solution	1.0mL
Selenite-tungstate solution	1.0mL

pH 7.0 ± 0.2 at 25°C

Substrate Solution:

Composition per 10.0mL:

Na-crotonate	0.86g
--------------------	-------

Preparation of Substrate Solution: Add Na-crotonate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O	0.3g
---------------------------------------	------

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite-Tungstate Solution

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine·HCl	10.0mg
Thiamine·HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except cysteine solution, Na₂S·9H₂O solution, and substrate solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Adjust pH to 7.0. Sparge with

80% N₂ + 20% CO₂ for 30 min. Distribute into Hungate tubes or serum bottles. Autoclave for 15 min at 15 psi pressure–121°C. For each 10.0mL medium, aseptically and anaerobically add 0.1mL cysteine solution, 0.1mL Na₂S·9H₂O solution, and 0.1mL substrate solution. Mix thoroughly.

Use: For the cultivation of *Syntrophothermus lipocalidus* DSM 12680.

Syntrophothermus Medium (DSMZ Medium 870)

Composition per liter:

Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except cysteine solution, Na₂S·9H₂O solution, and substrate solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Adjust pH to 7.0. Sparge with 80% N₂ + 20% CO₂ for 30 min. Distribute into Hungate tubes or serum bottles. Autoclave for 15 min at 15 psi pressure–121°C. For each 10.0mL medium, aseptically and anaerobically add 0.1mL cysteine solution, 0.1mL Na₂S·9H₂O solution, and 0.1mL substrate solution. Mix thoroughly.

Use: For the cultivation of *Syntrophothermus lipocalidus* DSM 12681.

Syntrophus buswellii II Medium

Composition per 1001.0mL:

Solution A.....	870.0mL
Solution C.....	100.0mL
Solution D.....	10.0mL
Solution E (Vitamin solution).....	10.0mL
Solution F.....	10.0mL
Solution B (Trace elements solution SL-10).....	1.0mL

pH 7.1–7.4 at 25°C

Solution A:

Composition per 870.0mL:

Na ₂ SO ₄	3.0g
NaCl.....	1.0g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
NH ₄ Cl.....	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3-4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Solution D:

Composition per 10.0mL:

Sodium benzoate	3.0g
Sodium acetate	1.0g

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	10.0mg
Calcium DL-pantothenate	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.4g
---	------

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine 870.0mL of sterile solution A with 1.0mL of sterile solution B, 100.0mL of sterile solution C, 10.0mL of sterile solution D, 10.0mL of sterile solution E, and 10.0mL of sterile solution F, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 100% N₂.

Use: For the cultivation and maintenance of *Syntrophus buswelii*.

***Syntrophus* Medium**

Composition per 1006.0mL:

Solution A	916.0mL
Solution B	70.0mL
Solution C	10.0mL
Solution D	10.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:

Composition per 916.0mL:

Na ₂ SO ₄	2.8g
Sodium benzoate	2.0g
Pancreatic digest of casein	1.0g
Resazurin	1.0mg
Mineral solution	50.0mL
Rumen fluid, clarified	50.0mL
Vitamin solution	5.0mL
Trace elements solution SL-10	1.0mL

Mineral Solution:

Composition per liter:

Nitritotriacetic acid	12.5g
NaCl	1.0g
FeCl ₃ ·4H ₂ O	0.2g
MnCl ₂ ·4H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
ZnCl ₂	0.1g
CuCl ₂	0.02g
Na ₂ SeO ₃	0.02g
CoCl ₂ ·6H ₂ O	0.017g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	6.2mg
Nicotinic acid	2.5mg
Thiamine-HCl	1.25mg
<i>p</i> -Aminobenzoic acid	1.25mg
Pantothenic acid	0.62mg
Biotin	0.25mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg

NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 916.0mL. Adjust pH to 7.2. Gently heat and bring to boiling. Continue boiling for a few minutes. Allow to cool to room temperature under 80% N₂ + 20% CO₂. Distribute into bottles under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 70.0mL:

NaHCO ₃	3.5g
--------------------------	------

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 70.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂ for 15 min.

Solution C:

Composition per 10.0mL:

L-Cysteine·HCl	0.3g
----------------------	------

Preparation of Solution C: Add L-cysteine·HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Solution D:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Solution D: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 916.0mL of sterile solution A, add 70.0mL of sterile solution B, 10.0mL of sterile solution C, and 10.0mL of sterile solution D. Mix thoroughly.

Use: For the cultivation and maintenance of *Syntrophus buswelii*.

Syntrophus Medium, Sulfate-Free

Composition per 1006.0mL:

Solution A	916.0mL
Solution B	70.0mL
Solution C	10.0mL
Solution D	10.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:

Composition per 916.0mL:

Sodium benzoate	2.0g
Pancreatic digest of casein	1.0g
Resazurin	1.0mg
Mineral solution	50.0mL
Rumen fluid, clarified	50.0mL
Vitamin solution	5.0mL
Trace elements solution SL-10	1.0mL

Mineral Solution:

Composition per liter:

Nitrilotriacetic acid	12.5g
NaCl	1.0g
FeCl ₃ ·4H ₂ O	0.2g
MnCl ₂ ·4H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
ZnCl ₂	0.1g
CuCl ₂	0.02g
Na ₂ SeO ₃	0.02g
CoCl ₂ ·6H ₂ O	0.017g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine·HCl	6.2mg
Nicotinic acid	2.5mg
Thiamine·HCl	1.25mg
p-Aminobenzoic acid	1.25mg
Pantothenic acid	0.62mg
Biotin	0.25mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 916.0mL. Adjust pH to 7.2. Gently heat and bring to boiling. Continue boiling for a few minutes. Allow to cool to room temperature under 80% N₂ + 20% CO₂. Distribute into bottles under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 70.0mL:

NaHCO ₃	3.5g
--------------------------	------

Preparation of Solution B: Add NaHCO₃ to distilled/deionized water and bring volume to 70.0mL. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂ for 15 min.

Solution C:

Composition per 10.0mL:

L-Cysteine·HCl	0.3g
----------------------	------

Preparation of Solution C: Add L-cysteine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Solution D:

Composition per 10.0mL:

Na₂S·9H₂O 0.3g

Preparation of Solution D: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ for 3–4 min. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C.

Preparation of Medium: To 916.0mL of sterile solution A, add 70.0mL of sterile solution B, 10.0mL of sterile solution C, and 10.0mL of sterile solution D. Mix thoroughly.

Use: For the cultivation and maintenance of *Syntrophus buswelii*.

SYPC Medium (DSMZ Medium 1188)

Composition per liter:

Sea salts, Sigma 35.0g
Yeast extract 1.0g
Trypticase polypeptone 0.5g
Lactate solution 10.0mL
Wolfe's mineral elixir 1.0mL

pH 7.5 ± 0.2 at 25°C

Cellobiose Solution:

Composition per 10.0mL:

Cellobiose 2.0g

Preparation of Cellobiose Solution: Add cellobiose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Wolfe's Mineral Elixir:

Composition per liter:

MgSO₄·7H₂O 30.0g
NaCl 10.0g
MnSO₄·2H₂O 5.0g
(NH₄)₂NiSO₄·6H₂O 2.8g
CoCl₂·6H₂O 1.8g
ZnSO₄·7H₂O 1.8g
FeSO₄·7H₂O 1.0g
CaCl₂·2H₂O 1.0g
KAl(SO₄)₂·12H₂O 0.18g
CuSO₄·5H₂O 0.1g
H₃BO₃ 0.1g
Na₂MoO₄·2H₂O 0.1g
Na₂SeO₄ 0.1g
Na₂WO₄·2H₂O 0.1g

T 7Agar Base (m-T7 Agar Base)

Composition per liter:

Lactose 20.0g
Agar 15.0g
Polyoxyethylene ether W-1 5.0g
Yeast extract 3.0g
Pancreatic digest of casein 2.5g

Peptic digest of animal tissue 2.5g
Sodium heptadecyl sulfate 0.1g
Bromthymol Blue 0.1g
Bromcresol Purple 0.1g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. The medium may be made more selective by adding 1.0mg of penicillin G per liter. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective recovery and differential identification of injured coliform microorganisms from chlorinated water by the membrane filter method. For rapid estimation of the bacteriological quality of water using the membrane filter method.

T-ASW Medium

Composition per 1003.0mL:

NaCl 25.0g
Na₂S₂O₃·5H₂O 2.5g
MgSO₄·7H₂O 1.5g
(NH₄)₂SO₄ 1.0g
KH₂PO₄ 0.4g
CaCl₂·2H₂O 0.3g
NaHCO₃ 0.2g
Tris-HCl buffer, 0.1M, pH 7.5 200.0mL
Phenol Red (0.5% solution) 2.0mL
Trace elements solution 1.0mL

pH 7.5 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

Disodium EDTA 50.0g
CaCl₂·2H₂O 5.5g
MnCl₂·4H₂O 5.1g
FeSO₄·7H₂O 5.0g
ZnSO₄·7H₂O 2.2g
CoCl₂·6H₂O 1.6g
CuSO₄·5H₂O 1.6g
(NH₄)₆Mo₇O₂₄·4H₂O 1.1g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0 with KOH. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Filter sterilize.

Use: For the cultivation and maintenance of *Thiobacillus hydrothermalis*.

T2 Medium for *Thiobacillus*

Composition per liter:

Solution A 250.0mL
Solution B 250.0mL
Solution C 250.0mL
Solution D 250.0mL

pH 7.0 ± 0.2 at 25°C

Solution A:**Composition** per 250.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g
KNO ₃	2.0g
NH ₄ Cl	1.0g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Filter sterilize.

Solution B:**Composition** per 250.0mL

KH ₂ PO ₄	2.0g
---------------------------------------	------

Preparation of Solution B: Add KH₂PO₄ to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Filter sterilize.

Solution C:**Composition** per 250.0mL

NaHCO ₃	2.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Filter sterilize.

Solution D:**Composition** per 250.0mL

MgSO ₄ ·7H ₂ O	0.8g
FeSO ₄ ·7H ₂ O (2%, w/v, in 1N HCl).....	1.0mL
Trace metal solution.....	1.0mL

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Filter sterilize.

FeSO₄·7H₂O Solution:**Composition** per 100.0mL

FeSO ₄ ·7H ₂ O.....	2.0g
HCl (1N solution).....	100.0mL

Preparation of FeSO₄·7H₂O Solution: Add the FeSO₄·7H₂O to the HCl solution. Mix thoroughly.

Trace Metals Solution:**Composition** per liter:

EDTA	50.0g
ZnSO ₄	22.0g
CaCl ₂	5.54g
MnCl ₂	5.06g
FeSO ₄ ·7H ₂ O.....	4.99g
CoCl ₂	1.61g
CuSO ₄	1.57g
(NH ₄) ₂ MoO ₄	1.1g

Preparation of Trace Metals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0 with KOH.

Preparation of Medium: Aseptically combine the four sterile solutions: solution A, solution B, solution C, and solution D. Adjust the pH to 7.0. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Thiobacillus denitrificans* and other thiobacilli.

Tap Water Agar**Composition** per liter:

Agar	15.0g
Tap water.....	1.0L

Preparation of Medium: Add agar to 1.0L of tap water. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and differentiation of fungi and aerobic actinomycetes based on filament and aerial hyphae morphology.

Tarshis Blood Agar**Composition** per 1050.0mL:

Beef heart infusion.....	500.0g
Agar	15.0g
Meat peptone	10.0g
NaCl.....	5.0g
Penicillin G, sterile.....	100,000U
Sheep blood, sterile.....	300.0mL
Glycerol	10.0mL

pH 6.6 ± 0.2 at 25°C

Preparation of Medium: Add components, except sheep blood and penicillin G, to distilled/deionized water and bring volume to 750.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood and sterile penicillin G. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Mycobacterium tuberculosis*.

**Tartoff-Hobbs HiVeg Broth with Glycerol
(Terrific HiVeg Broth)****Composition** per liter:

Yeast extract.....	24.0g
Plant hydrolysate	12.0g
KH ₂ PO ₄	9.4g
K ₂ HPO ₄	2.2g
Glycerol	4.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without glycerol, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of plasmid-bearing strains of *Escherichia coli*.

TAT Broth Base**(Trypticase™ Azolectin Tween™ Broth Base)****Composition** per liter:

Pancreatic digest of casein.....	20.0g
Lecithin	5.0g
Polysorbate 20 (Tween™ 20).....	40.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add pancreatic digest of casein and lecithin to distilled/deionized water and bring volume to 960.0mL. Add the Tween™ 20. Mix thoroughly. Gently heat and bring to 48°–50°C for 30 min. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation of Gram-negative organisms from topical drugs and cosmetics.

TAT HiVeg Broth Base with Polysorbate**Composition per liter:**

Plant hydrolysate.....	20.0g
Azolectin.....	5.0g
Polysorbate 20 (Tween™ 20).....	40.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium, without polysorbate, is available as a premixed powder from HiMedia.

Preparation of Medium: Add plant hydrolysate and azolectin to distilled/deionized water and bring volume to 960.0mL. Add 40.0mL Tween™ 20. Mix thoroughly. Gently heat and bring to 48°–50°C for 30 min. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation of Gram-negative organisms from topical drugs and cosmetics.

Tatum Motility Test and Maintenance Medium

See: **Motility Test and Maintenance Medium, Tatum**

Taurocholate Tellurite Gelatin Agar

See: **Monsur Agar**

TB Broth Base**Composition per liter:**

Proteose peptone.....	4.0g
Na ₂ HPO ₄	2.5g
Yeast extract.....	2.0g
Sodium citrate.....	1.5g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.6g
Polysorbate 80.....	0.5g
Bovine albumin solution.....	50.0mL
Glucose solution.....	10.0mL
Glycerol.....	5.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Glucose Solution:**Composition per 10.0mL:**

Glucose.....	5.0g
--------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Bovine Albumin Solution:**Composition per 50.0mL:**

Bovine serum albumin.....	5.0g
---------------------------	------

Preparation of Bovine Albumin Solution: Add bovine serum albumin to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except bovine albumin and glucose solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add glucose solution and bovine albumin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Mycobacterium tuberculosis*.

TB Broth Base without Polysorbate 80**Composition per liter:**

Proteose peptone.....	4.0g
Na ₂ HPO ₄	2.5g
Yeast extract.....	2.0g
Sodium citrate.....	1.5g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.6g
Bovine albumin solution.....	50.0mL
Glucose solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Glucose Solution:**Composition per 10.0mL:**

Glucose.....	5.0g
--------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Bovine Albumin Solution:**Composition per 50.0mL:**

Bovine serum albumin.....	5.0g
---------------------------	------

Preparation of Bovine Albumin Solution: Add bovine serum albumin to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add glycerol to distilled/deionized water and bring volume to 955.0mL. Mix thoroughly. Add remaining components, except bovine albumin and glucose solutions, Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add glucose solution and bovine albumin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Mycobacterium tuberculosis*.

TB HiVeg Broth Base with Bovine Albumin and Glucose**Composition per liter:**

Plant peptone No. 3.....	4.0g
Na ₂ HPO ₄	2.5g
Yeast extract.....	2.0g
Sodium citrate.....	1.5g
KH ₂ PO ₄	1.0g
MgSO ₄	0.6g
Polysorbate 80.....	0.5g
Glucose solution.....	50.0mL
Bovine albumin solution.....	50.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without glucose or bovine albumin, is available as a premixed powder from HiMedia.

Glucose Solution:**Composition per 100.0mL:**

Glucose.....	10.0g
--------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Bovine Albumin Solution:**Composition per 100.0mL:**

Bovine albumin fraction V.....	10.0g
--------------------------------	-------

Preparation of Bovine Albumin Solution: Add bovine albumin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.8 with NaOH. Store at -20°C .

Preparation of Medium: Add components, except bovine albumin solution and glucose solution, to distilled/deionized water and bring volume to 900.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure -121°C . Cool to 50°C . Add 50.0mL sterile glucose solution and 50.0mL bovine albumin solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of *Mycobacterium tuberculosis*.

TB HiVeg Broth Base with Bovine Serum and Glucose

Composition per liter:

Plant peptone No. 3.....	4.0g
Na_2HPO_4	2.5g
Yeast extract.....	2.0g
Sodium citrate.....	1.5g
KH_2PO_4	1.0g
MgSO_4	0.6g
Polysorbate 80.....	0.5g
Glucose solution.....	50.0mL
Bovine serum.....	50.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without glucose or bovine albumin, is available as a premixed powder from HiMedia.

Glucose Solution:

Composition per 100.0mL:

Glucose.....	10.0g
--------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except bovine serum and glucose solution, to distilled/deionized water and bring volume to 900.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure -121°C . Cool to 50°C . Add 50.0mL sterile glucose solution and 50.0mL bovine serum. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of *Mycobacterium tuberculosis*.

TB HiVeg Broth Base without Tween™ 80 with Bovine Albumin and Glucose

Composition per liter:

Plant peptone No. 3.....	4.0g
Na_2HPO_4	2.5g
Yeast extract.....	2.0g
Sodium citrate.....	1.5g
KH_2PO_4	1.0g
MgSO_4	0.6g
Glucose solution.....	50.0mL
Bovine albumin solution.....	50.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without glucose or bovine albumin, is available as a premixed powder from HiMedia.

Glucose Solution:

Composition per 100.0mL:

Glucose.....	10.0g
--------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Bovine Albumin Solution:

Composition per 100.0mL:

Bovine albumin fraction V.....	10.0g
--------------------------------	-------

Preparation of Bovine Albumin Solution: Add bovine albumin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.8 with NaOH. Store at -20°C .

Preparation of Medium: Add components, except bovine albumin solution and glucose solution, to distilled/deionized water and bring volume to 900.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure -121°C . Cool to 50°C . Add 50.0mL sterile glucose solution and 50.0mL bovine albumin solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of mycobacteria when the presence of oleic acid is undesirable. For the cultivation of *Mycobacterium tuberculosis*.

TB HiVeg Broth Base without Tween™ 80 with Bovine Serum and Glucose

Composition per liter:

Plant peptone No. 3.....	4.0g
Na_2HPO_4	2.5g
Yeast extract.....	2.0g
Sodium citrate.....	1.5g
KH_2PO_4	1.0g

Glucose.....	10.0g
--------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except bovine serum and glucose solution, to distilled/deionized water and bring volume to 900.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure -121°C . Cool to 50°C . Add 50.0mL sterile glucose solution and 50.0mL bovine serum. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of mycobacteria when the presence of oleic acid is undesirable. For the cultivation of *Mycobacterium tuberculosis*.

TB Nitrate Reduction Broth

Composition per 100.0mL:

$\text{Na}_2\text{HPO}_4 \cdot 12\text{H}_2\text{O}$	0.485g
KH_2PO_4	0.117g
NaNO_3	0.085g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure -121°C .

Use: For the differentiation of *Mycobacterium* species based on nitrate reduction. After growth of cells in appropriate medium, nitrate reduction is determined by making a suspension of cells in TB nitrate reduction broth and adding hydrochloric acid, sulfanilamide, and *N*-naphthyl-enendiamine. Nitrate reduction turns the medium pink. *Mycobacterium tuberculosis* reduces nitrate and turns the medium deep pink within 1 min. *Mycobacterium bovis* does not reduce nitrate and does not change the medium.

TBAB 298 Medium

(Tryptose 298 Blood Agar Base Medium)

Tryptose Blood Agar Base:

Composition per 409.6mL:

Agar	15.0g
Tryptose	10.0g
NaCl	5.0g
Beef extract	3.0g
Glucose solution	4.0mL
Thymine solution	2.0mL
D-Alanine solution	2.0mL
Streptomycin sulfate solution	1.6mL

pH 7.2 ± 0.2 at 25°C

Glucose Solution:

Composition per 100.0mL:

Glucose	50.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Thymine Solution:

Composition per 10.0mL:

Thymine	0.1g
---------------	------

Preparation of Thymine Solution: Add thymine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

D-Alanine Solution:

Composition per 10.0mL:

D-Alanine	0.1g
-----------------	------

Preparation of D-Alanine Solution: Add D-alanine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Streptomycin Sulfate Solution:

Composition per 10.0mL:

Streptomycin sulfate	2.5g
----------------------------	------

Preparation of Streptomycin Sulfate Solution: Add streptomycin sulfate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add agar, tryptose, NaCl, and beef extract to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 4.0mL of the sterile glucose solution, 2.0mL of the sterile thymine solution, 2.0mL of the sterile alanine solution, and 1.6mL of the sterile streptomycin sulfate solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Bacillus subtilis*.

TBX Agar (Tryptone Bile X-glucuronide Agar)

Composition per liter:

Peptone	20.0g
Agar	15.0g
Bile salts	1.5g
X-β-D-glucuronide	0.075g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available from Fluka, Sigma-Aldrich.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the detection and enumeration of *E. coli* in foodstuffs, animal food, and water without further confirmation. *E. coli* colonies are colored blue-green. The presence of the enzyme β-D-glucuronidase differentiates most *E. coli* sp. from other coliforms. *E. coli* absorbs the chromogenic substrate 5-bromo-4-chloro-3-indolyl-β-D-glucuronide. The enzyme β-glucuronidase splits the bond between the chromophore 5-bromo-4-chloro-3-indolyl and the β-D-glucuronide. Growth of accompanying Gram-positive flora is largely inhibited by the use of bile salts.

TBYA Agar

(Tryptone Beef Yeast Extract Acetate Agar)

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	2.0g
Beef extract	0.5g
Yeast extract	0.5g
Sodium acetate	0.2g

pH 7.2–7.4 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.4. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Leuconostoc* species.

TCBS Agar**(Thiosulfate Citrate Bile Salt Sucrose Agar)****Composition per liter:**

Sucrose.....	20.0g
Agar.....	14.0g
NaCl.....	10.0g
Sodium citrate.....	10.0g
Na ₂ S ₂ O ₃	10.0g
Yeast extract.....	5.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g
Oxgall.....	5.0g
Sodium cholate.....	3.0g
Ferric citrate.....	1.0g
Thymol Blue.....	0.04g
Bromthymol Blue.....	0.04g

pH 8.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of *Vibrio cholerae* and *Vibrio parahaemolyticus* from a variety of clinical and nonclinical specimens.

TCBS HiVeg Agar**Composition per liter:**

Sucrose.....	20.0g
Agar.....	15.0g

Plant peptone No. 3.....	15.0g
NaCl.....	10.0g
Sodium citrate.....	10.0g
Na ₂ S ₂ O ₃	10.0g
Yeast extract.....	6.0g
Synthetic detergent No. II.....	2.0g
Ferric citrate.....	1.0g
Thymol Blue.....	0.04g
Bromthymol Blue.....	0.04g

pH 8.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of *Vibrio cholerae* and *Vibrio parahaemolyticus* from a variety of clinical and nonclinical specimens. For the cultivation of enteropathogenic vibrios causing food poisoning.

TCBS HiVeg Agar (Selective)**Composition per liter:**

Sucrose.....	20.0g
Agar.....	15.0g
Plant special peptone.....	14.5g
NaCl.....	10.0g
Sodium citrate.....	10.0g
Na ₂ S ₂ O ₃	10.0g
Yeast extract.....	5.0g
Synthetic detergent No. II.....	2.0g
Synthetic detergent No. IV.....	1.5g
Ferric citrate.....	1.0g
BromthymolBlue.....	0.04g
Thymol Blue.....	0.04g

pH 8.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of *Vibrio cholerae* and other enteropathogenic vibrios.

TCG Medium**(DSMZ Medium 1009)****Composition per liter:**

Casitone.....	5.0g
Glucose.....	4.0g
Tryptone.....	3.0g
Artificial seawater.....	1.0L

pH 7.5 ± 0.2 at 25°C

Artificial Seawater:**Composition per 10.0mL:**

Sea salts, Instant Ocean.....	22.0g
-------------------------------	-------

Preparation of Artificial Seawater: Add Instant Ocean sea salts to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to artificial seawater and bring volume to 1.0L. Mix thoroughly. Distribute to tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Mechercharimyces mesophilus*.

TCH Medium

(Thiophene 2 Carboxylic Acid Hydrazide Medium)

Composition per 1105.0mL:

Thiophene-2-carboxylic acid hydrazide	1.1mg
Middlebrook 7H10 agar base.....	1.0L
OADC enrichment	100.0mL
Glycerol	5.0mL

pH 6.6 ± 0.2 at 25°C

Middlebrook 7H10 Agar Base:

Composition per liter:

Agar	15.0g
Na ₂ HPO ₄	1.5g
KH ₂ PO ₄	1.5g
(NH ₄) ₂ SO ₄	0.5g
L-Glutamic acid.....	0.5g
Sodium citrate.....	0.4g
Ferric ammonium citrate.....	0.04g
MgSO ₄ ·7H ₂ O	0.025g
ZnSO ₄ ·7H ₂ O	1.0mg
CuSO ₄ ·5H ₂ O	1.0mg
Pyridoxine.....	1.0mg
Biotin	0.5mg
CaCl ₂ ·2H ₂ O.....	0.5mg
Malachite Green.....	0.25mg

Preparation of Middlebrook 7H10 Agar Base: Add glycerol to 900.0mL of distilled/deionized water and add remaining components. Mix thoroughly. Gently heat and bring to boiling.

Middlebrook OADC Enrichment:

Composition per 100.0mL:

Bovine albumin fraction V	5.0g
Glucose	2.0g
NaCl	0.85g
Oleic acid	0.05g
Catalase.....	4.0mg

Source: This enrichment is available as a prepared enrichment from BD Diagnostic Systems.

Preparation of Middlebrook OADC Enrichment: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation for Medium: Combine components. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of *Mycobacterium* species based on sensitivity to TCH. *Mycobacterium bovis* is inhibited by TCH. *Mycobacterium tuberculosis* and other mycobacteria are generally resistant to low concentrations of TCH. This distinguishes *Mycobacterium bovis* from other nonchromogenic, slow-growing mycobacteria.

TCY Agar

Composition per liter:

NaCl	31.3g
Agar	15.0g
MgCl ₂ ·6H ₂ O	10.8g

CaCl ₂ ·2H ₂ O.....	1.0g
Casamino acids.....	1.0g
Tryptone.....	1.0g
KCl.....	0.7g
Yeast extract.....	0.2g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Flexibacter maritimus*.

TCY Broth

Composition per liter:

NaCl.....	31.3g
Agar	15.0g
MgCl ₂ ·6H ₂ O	10.8g
CaCl ₂ ·2H ₂ O.....	1.0g
Casamino acids	1.0g
Tryptone.....	1.0g
KCl.....	0.7g
Yeast extract.....	0.2g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Flexibacter maritimus*.

TD3 Medium (DSMZ Medium 876)

Composition per 1078.0mL:

NaCl.....	20.0g
MgCl ₂ ·6H ₂ O	9.8g
Na ₂ SO ₄	4.0g
KCl.....	0.5g
NH ₄ Cl	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.1g
Resazurin	0.5mg
NaHCO ₃ solution	50.0mL
Na ₂ S·9H ₂ O solution	13.0mL
Sodium caproate solution	10.0mL
Selenite-tungstate solution.....	2.0mL
Seven vitamin solution	1.0mL
Vitamin solution.....	1.0mL
Trace elements solution SL-10	1.0mL

pH 6.8 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 20.0mL:

Na ₂ S·9H ₂ O.....	0.6g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Sodium Caproate Solution:

Composition per 10.0mL:

Sodium caproate 0.5g

Preparation of Sodium Caproate Solution: Add sodium caproate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine hydrochloride 300.0mg
Thiamine-HCl·2H₂O 200.0mg
Nicotinic acid 200.0mg
Vitamin B₁₂ 100.0mg
Calcium pantothenate 100.0mg
p-Aminobenzoic acid 80.0mg
D(+)-Biotin 20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Vitamin Solution:

Composition per 100.0mL:

Pyridoxine-HCl 10.0mg
Thiamine-HCl·2H₂O 5.0mg
Riboflavin 5.0mg
Nicotinic acid 5.0mg
D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
Lipoic acid 5.0mg
Biotin 2.0mg
Folic acid 2.0mg
Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl₂·4H₂O 1.5g
CoCl₂·6H₂O 190.0mg
MnCl₂·4H₂O 100.0mg
ZnCl₂ 70.0mg
Na₂MoO₄·2H₂O 36.0mg
NiCl₂·6H₂O 24.0mg
H₃BO₃ 6.0mg
CuCl₂·2H₂O 2.0mg
HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite-Tungstate Solution

Composition per liter:

NaOH 0.5g
Na₂WO₄·2H₂O 4.0mg
Na₂SeO₃·5H₂O 3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Optional Supplemental Fatty Acid Mixture:

Composition per 20.0mL:

Valeric acid 0.5g
Isovaleric acid 0.5g
Alpha-Methylbutyric acid 0.5g
Isobutyric acid 0.5g

Preparation of Optional Supplemental Fatty Acid Mixture:

Add components to 20.0mL distilled/deionized water. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, sodium caproate solution, Na₂S·9H₂O solution, vitamin solution, seven vitamin solution, selenite-tungstate solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL NaHCO₃ solution, 10.0mL sodium caproate solution, 10.0mL Na₂S·9H₂O solution, 1.0mL vitamin solution, 1.0mL seven vitamin solution, 2.0mL selenite-tungstate solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. Growth can be stimulated by addition of clarified rumen fluid or 10–20mL of a mixture of fatty acids. Final pH should be 6.7–6.9.

Use: For the cultivation of unclassified bacterium DSM 13418.

TDC Medium

Composition per liter:

Agar 20.0g
CaCO₃ 10.0g
Glucose 5.0g
K₂HPO₄ 1.0g
MgSO₄ 1.0g

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Azotobacter beijerinckii* and other *Azotobacter* species.

TDN Broth (DSMZ Medium 1012)

Composition per liter:

Pancreatic digest of gelatin 0.5g
Casamino acids 0.5g
Beef extract 0.3g
Yeast extract 0.1g
Magnesium chloride solution 10.0mL
Calcium chloride solution 10.0mL

pH 7.2 ± 0.2 at 25°C

Calcium Chloride Solution:

Composition per 10.0mL:

CaCl₂·2H₂O 0.3g

Preparation of Calcium Chloride Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thor-

oughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Magnesium Chloride Solution:

Composition per 10.0mL:

MgCl₂·6H₂O..... 0.6g

Preparation of Magnesium Chloride Solution: Add MgCl₂·6H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except calcium chloride and magnesium chloride solutions, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust the pH to 7.2 with NaOH. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add calcium chloride and magnesium chloride solutions. Mix thoroughly.

Use: For the cultivation of *Bdellovibrio bacteriovorus*.

Tea Fungus Medium (DSMZ Medium 268)

Composition per liter:

Sucrose..... 50.0g
Tea leaves, black 5.0g

Add tea and sucrose to a flask. Add 1.0L freshly boiled tap water. Allow to stand for 15 min. Filter and cool to room temperature. Place a small disc of a cork stopper that has been steamed for 15 min on 2 successive days on the surface of the tea. Place the inoculum onto the cork. Cover the beaker with aluminum foil and incubate.

Use: For the cultivation of tea fungus.

TEC Agar (m-TEC Agar)

Composition per liter:

Agar 15.0g
Lactose 10.0g
NaCl 7.5g
Proteose peptone 5.0g
K₂HPO₄ 3.3g
Yeast extract 3.0g
KH₂PO₄ 1.0g
Sodium lauryl sulfate 0.2g
Sodium deoxycholate 0.1g
Bromcresol Purple 0.08g
Bromphenol Red 0.08g

pH 5.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 5.0. Sterilization is unnecessary. Pour into sterile Petri dishes or distribute into sterile tubes or flasks. Store at 2°–8°C. Use within 1 week.

Use: For detection of *Escherichia coli* in recreational waters by the membrane filter method. This agar is used in conjunction with a urea substrate to detect urease production. After addition of the urea substrate, *Escherichia coli* appears as yellow-yellow/brown colonies when viewed under a fluorescent lamp.

Tech Agar

Composition per liter:

Pancreatic digest of gelatin 20.0g
Agar 13.6g
K₂SO₄·7H₂O 10.0g
MgCl₂·6H₂O 1.4g
Glycerol 10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except glycerol, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Add glycerol. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the production of pyocyanin pigment by *Pseudomonas* species.

Teepol Broth, Enriched (m-Teepol Broth, Enriched)

Composition per liter:

Peptone 40.0g
Lactose 30.0g
Yeast extract 6.0g
Phenol Red 0.2g
Sodium lauryl sulfate
(Teepol, 0.1% solution) 4.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enumeration of coliform organisms and *Escherichia coli* in water by the membrane filter method.

Teepol HiVeg Broth

Composition per liter:

Plant peptone 20.0g
Lactose 10.0g
NaCl 5.0g
Teepol 1.0g
Phenol Red 0.02g

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enumeration of coliform organisms and *Escherichia coli* in water by the membrane filter method. For the selective isolation and identification of enteric, lactose-fermenting bacteria.

Tellurite Blood Agar

See: Chocolate Tellurite Agar

Tellurite Glycine Agar

Composition per liter:

Agar 17.5g
Pancreatic digest of casein 10.0g
Glycine 10.0g

Yeast extract.....	6.5g
D-Mannitol.....	5.0g
K ₂ HPO ₄	5.0g
LiCl.....	5.0g
Enzymatic hydrolysate of soybean meal.....	3.5g
Chapman tellurite solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Lithium chloride is harmful. Avoid bodily contact and inhalation of vapors. On contact with skin wash with plenty of water immediately.

Chapman Tellurite Solution:

Composition per 100.0mL:

K ₂ TeO ₃	1.0g
---------------------------------------	------

Preparation of Chapman Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except Chapman tellurite solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile Chapman tellurite solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. Allow the surface of the plates to dry before inoculating.

Use: For the isolation and cultivation of coagulase-positive staphylococci.

Tellurite Glycine Agar

Composition per liter:

Agar.....	16.0g
Pancreatic digest of casein.....	10.0g
Glycine.....	10.0g
Yeast extract.....	5.0g
D-Mannitol.....	5.0g
K ₂ HPO ₄	5.0g
LiCl.....	5.0g
Chapman tellurite solution.....	20.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Chapman Tellurite Solution:

Composition per 100.0mL:

K ₂ TeO ₃	1.0g
---------------------------------------	------

Preparation of Chapman Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except Chapman tellurite solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 20.0mL of sterile Chapman tellurite solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. Allow the surface of the plates to dry before inoculating.

Use: For the quantitative detection of coagulase-positive staphylococci from foods and other sources.

Tellurite Polymyxin Egg Yolk Agar

See: **TPEY Agar**

TEP Uric Acid Medium

Composition per liter:

Agar.....	20.0g
Na ₂ HPO ₄ ·12H ₂ O.....	9.0g
Uric acid.....	4.0g
Pancreatic digest of casein.....	1.7g
KH ₂ PO ₄	1.5g
NaCl.....	0.5g
Papaic digest of soybean meal.....	0.3g
K ₂ HPO ₄	0.25g
Glucose.....	0.25g
MgSO ₄ ·7H ₂ O.....	0.2g
CaCl ₂	0.02g
Ferric ammonium citrate.....	1.2mg
MnCl ₂ ·4H ₂ O.....	1.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus fastidiosus* and other microorganisms that can utilize uric acid as a carbon source.

Tepidanaerobacter Medium (DSMZ Medium 1051)

Composition per liter:

Yeast extract.....	2.3g
NH ₄ Cl.....	0.54g
MgCl ₂ ·6H ₂ O.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
KH ₂ PO ₄	0.14g
Resazurin.....	0.5mg
Bicarbonate solution.....	10.0mL
Glucose solution.....	10.0mL
Sulfide solution.....	10.0mL
Cysteine solution.....	10.0mL
Trace elements solution.....	1.0mL
Vitamin solution.....	2.0mL

pH 7.1 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

Nitrioltriacetic acid.....	12.8g
FeCl ₃ ·6H ₂ O.....	1.35g
NaCl.....	1.0g
NiCl ₂ ·6H ₂ O.....	0.12g
MnCl ₂ ·4H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
ZnCl ₂	0.1g
Na ₂ SeO ₃ ·5H ₂ O.....	0.026g
CuCl ₂ ·2H ₂ O.....	0.025g
CoCl ₂ ·6H ₂ O.....	0.024g
Na ₂ MoO ₄ ·2H ₂ O.....	0.024g
H ₃ BO ₃	0.01g

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to approximately 500.0mL of distilled/deionized water. Dissolve by adding KOH and adjust pH to 6.5. Add remaining components. Bring volume to 1.0L with additional distilled/deionized water. Adjust pH to 7.0 with KOH.

Glucose Solution:

Composition per 10.0mL:

D-Glucose 2.2g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Sulfide Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.3g

Preparation of Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Bicarbonate Solution:

Composition per 10.0mL:

NaHCO₃ 2.5g

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with a gas mixture of 80% N₂ + 20% CO₂. Filter sterilize.

Cysteine Solution:

Composition per 10.0mL:

L-Cysteine-HCl·2H₂O 0.3g

Preparation of Cysteine Solution: Add L-cysteine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add components, except vitamin, bicarbonate, glucose, cysteine, and sulfide solutions, to distilled/deionized water and bring volume to 958.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Cool to room temperature while sparging with a gas mixture of 80% N₂ + 20% CO₂. Dispense into culture vessels under an atmosphere of 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add vitamin, bicarbonate, glucose, cysteine, and sulfide solutions. Mix thoroughly. Adjust the pH to 7.0–7.2.

Use: For the cultivation of *Tepidanaerobacter syntrophicus*.

***Tepidibacter Medium*
(DSMZ Medium 985)**

Composition per liter:

NaCl 18.0g
 Casein 10.0g
 MgCl₂·6H₂O 4.0g
 KCl 0.34g
 NH₄Cl 0.25g
 Yeast extract 0.2g
 KH₂PO₄ 0.18g
 CaCl₂·2H₂O 0.11g
 Fe(NH₄)₂(SO₄)₂·6H₂O 0.02g
 Resazurin 1.0mg
 Bicarbonate solution 10.0mL
 Vitamin solution 10.0mL
 Sulfide solution 10.0mL
 Trace elements solution SL-10 1.0mL
 pH 6.8 ± 0.2 at 25°C

Sulfide Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.5g

Preparation of Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Bicarbonate Solution:

Composition per 10.0mL:

NaHCO₃ 5.0g

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with gas mixture of 80% N₂ + 20% CO₂. Filter sterilize.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 190.0mg
 MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 Na₂MoO₄·2H₂O 36.0mg
 NiCl₂·6H₂O 24.0mg
 H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Add $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except vitamin, bicarbonate, and sulfide solutions, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Cool to room temperature while sparging with a gas mixture of 80% N_2 + 20% CO_2 . Dispense into culture vessels under an atmosphere of 80% N_2 + 20% CO_2 . Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add vitamin, bicarbonate, and sulfide solutions. Mix thoroughly. Adjust the pH to 6.6–7.0.

Use: For the cultivation of *Tepidibacter thalassicus* and *Deferribacter autotrophicus*.

Tepidibacter Medium with Peptone (DSMZ Medium 985)

Composition per liter:

NaCl	18.0g
Peptone.....	10.0g
$\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$	4.0g
KCl	0.34g
NH_4Cl	0.25g
Yeast extract	0.2g
KH_2PO_4	0.18g
$\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$	0.11g
$\text{Fe}(\text{NH}_4)_2(\text{SO}_4)_2 \cdot 6\text{H}_2\text{O}$	0.02g
Resazurin	1.0mg
Bicarbonate solution	10.0mL
Vitamin solution.....	10.0mL
Sulfide solution.....	10.0mL
Trace elements solution SL-10	1.0mL
Wolfe's mineral elixir.....	1.0mL

pH 6.8 ± 0.2 at 25°C

Sulfide Solution:

Composition per 10.0mL:

$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$	0.5g
---	------

Preparation of Sulfide Solution: Add $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N_2 for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Bicarbonate Solution:

Composition per 10.0mL:

NaHCO_3	5.0g
------------------------	------

Preparation of Bicarbonate Solution: Add NaHCO_3 to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with a gas mixture of 80% N_2 + 20% CO_2 . Filter sterilize.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl- $2\text{H}_2\text{O}$	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg

Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H_2 + 20% CO_2 . Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

$\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$	1.5g
$\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$	190.0mg
$\text{MnCl}_2 \cdot 4\text{H}_2\text{O}$	100.0mg
ZnCl_2	70.0mg
$\text{Na}_2\text{MoO}_4 \cdot 2\text{H}_2\text{O}$	36.0mg
$\text{NiCl}_2 \cdot 6\text{H}_2\text{O}$	24.0mg
H_3BO_3	6.0mg
$\text{CuCl}_2 \cdot 2\text{H}_2\text{O}$	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Wolfe's Mineral Elixir:

Composition per liter:

$\text{MgSO}_4 \cdot 7\text{H}_2\text{O}$	30.0g
NaCl.....	10.0g
$\text{MnSO}_4 \cdot 2\text{H}_2\text{O}$	5.0g
$(\text{NH}_4)_2\text{NiSO}_4 \cdot 6\text{H}_2\text{O}$	2.8g
$\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$	1.8g
$\text{ZnSO}_4 \cdot 7\text{H}_2\text{O}$	1.8g
$\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$	1.0g
$\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$	1.0g
$\text{KAl}(\text{SO}_4)_2 \cdot 12\text{H}_2\text{O}$	0.18g
$\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$	0.1g
H_3BO_3	0.1g
$\text{Na}_2\text{MoO}_4 \cdot 2\text{H}_2\text{O}$	0.1g
Na_2SeO_4	0.1g
$\text{Na}_2\text{WO}_4 \cdot 2\text{H}_2\text{O}$	0.1g

Preparation of Wolfe's Mineral Elixir: Adjust pH of 1.0L of distilled/deionized water to 1.0 with dilute H_2SO_4 . Add remaining components one at a time. Mix thoroughly to dissolve.

Preparation of Medium: Add components, except vitamin, bicarbonate, and sulfide solutions, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Cool to room temperature while sparging with a gas mixture of 80% N_2 + 20% CO_2 . Dispense into culture vessels under an atmosphere of 80% N_2 + 20% CO_2 . Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add vitamin, bicarbonate, and sulfide solutions. Mix thoroughly. Adjust the pH to 6.6–7.0.

Use: For the cultivation of *Clostridium tepidiprofundum*.

Teredinobacter Medium

Composition 1010.0mL:

Solution A.....	50.0mL
Solution C.....	750.0mL
Solution B.....	200.0mL
Solution D.....	10.0mL

Solution A:**Composition per 50.0mL:**

K ₂ HPO ₄	20.0mg
Na ₂ CO ₃	20.0mg
Ferric ammonium citrate.....	6.0mg
EDTA.....	1.0mg
Trace metal mix A5.....	1.0mL

Trace Metal Mix A5:**Composition per liter:**

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O.....	1.81g
ZnSO ₄ ·7H ₂ O.....	0.222g
Na ₂ MoO ₄ ·2H ₂ O.....	0.39g
CuSO ₄ ·5H ₂ O.....	0.079g
Co(NO ₃) ₂ ·6H ₂ O.....	49.4mg

Preparation of Trace Metal Mix A5: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:**Composition per 200.0mL:**

Agar, noble.....	2.0g
------------------	------

Preparation of Solution B: Add agar to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution C:**Composition per 750.0mL:**

Seawater.....	750.0mL
---------------	---------

Preparation of Solution C: Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution D:**Composition per 10.0mL:**

Cellulose, Sigmacell Type 101.....	1.0g
------------------------------------	------

Preparation of Solution D: Add cellulose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine 50.0mL of sterile solution A, 200.0mL of sterile solution B, 750.0mL of sterile solution C, and 10.0mL of sterile solution D. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation of unidentified bacterium ATCC 39867.

Tergitol 7 Agar**Composition per liter:**

Lactose.....	20.0g
Agar.....	13.0g
Peptone.....	10.0g
Yeast extract.....	6.0g
Meat extract.....	5.0g
Tergitol-7.....	0.1g
Bromthymol Blue.....	0.05g
TTC solution.....	5.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

TTC Solution:**Composition per 100.0mL:**

Triphenyltetrazolium chloride.....	0.05g
------------------------------------	-------

Preparation of TTC Solution: Add triphenyltetrazolium chloride to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 995.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 5.0mL of sterile TTC solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the detection and enumeration of coliforms. Lactose-fermenting bacteria appear as yellow colonies. Lactose-nonfermenting bacteria appear as blue colonies.

Tergitol 7 Agar**Composition per liter:**

Agar.....	15.0g
Lactose.....	10.0g
Yeast extract.....	3.0g
Pancreatic digest of casein.....	2.5g
Peptic digest of animal tissue.....	2.5g
Tergitol 7.....	0.1g
Bromthymol Blue.....	25.0mg
TTC solution.....	3.0mL

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

TTC Solution:**Composition per 100.0mL:**

Triphenyltetrazolium chloride.....	1.0g
------------------------------------	------

Preparation of TTC Solution: Add triphenyltetrazolium chloride to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 997.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 3.0mL of sterile TTC solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and differentiation of coliform bacteria based on lactose fermentation. Lactose-fermenting bacteria appear as yellow colonies. Lactose-nonfermenting bacteria appear as blue colonies.

Tergitol 7 Agar H**Composition per liter:**

Agar.....	15.0g
Lactose.....	10.0g
Yeast extract.....	3.0g
Pancreatic digest of casein.....	2.5g
Peptic digest of animal tissue.....	2.5g
Ferric ammonium citrate.....	0.5g
Na ₂ S ₂ O ₃	0.5g
Tergitol 7.....	0.1g
Bromthymol Blue.....	0.025g

pH 7.2 ± 0.2

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation and differentiation of enteric bacteria from urine.

Tergitol 7 Broth

Composition per liter:

Lactose	10.0g
Yeast extract	3.0g
Pancreatic digest of casein	2.5g
Peptic digest of animal tissue	2.5g
Tergitol 7	0.1g
Bromthymol Blue	25.0mg
TTC solution	3.0mL

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

TTC Solution:

Composition per 100.0mL:

Triphenyltetrazolium chloride	1.0g
-------------------------------------	------

Preparation of TTC Solution: Add triphenyltetrazolium chloride to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 997.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 3.0mL of sterile TTC solution. Mix thoroughly.

Use: For the isolation and cultivation of coliforms, *Salmonella*, and other enteric bacteria.

Tergitol 7 HiVeg Agar Base with TTC

Composition per liter:

Agar	15.0g
Lactose	10.0g
Plant peptone No. 3	5.0g
Yeast extract	3.0g
Sodium heptadecyl sulfate	0.1g
Bromthymol Blue	0.025g
TTC solution	5.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium, without TTC solution, is available as a premixed powder from HiMedia.

TTC Solution:

Composition per 100.0mL:

Triphenyltetrazolium chloride	0.05g
-------------------------------------	-------

Preparation of TTC Solution: Add triphenyltetrazolium chloride to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 995.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 5.0mL of sterile TTC solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the detection and enumeration of coliforms. Lactose-fermenting bacteria appear as yellow colonies. Lactose-nonfermenting bacteria appear as blue colonies. For the selective enumeration and

identification of coliform organisms, as per Indian Standard published by BIS.

Tergitol 7 HiVeg Agar H

Composition per liter:

Agar	15.0g
Lactose	10.0g
Plant peptone No. 3	5.0g
Yeast extract	3.0g
Ferric ammonium citrate	0.5g
Na ₂ S ₂ O ₃	0.5g
Tergitol 7	0.1g
Bromthymol Blue	0.025g

pH 7.2 ± 0.2

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation and differentiation of enteric bacteria from urine.

Tergitol-7 HiVeg Broth

Composition per liter:

Lactose	10.0g
Plant peptone No. 3	5.0g
Yeast extract	3.0g
Tergitol 7	0.1g
Bromthymol Blue	0.025g

pH 6.9 ± 0.2

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective and differential medium for detection and enumeration of coliforms.

Termitobacter Medium

Composition per 1060.0mL

NH ₄ Cl	1.0g
NaCl	0.6g
Sodium acetate·3H ₂ O	0.5g
L-Cysteine·HCl	0.5g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
MgCl ₂ ·6H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.1g
KCl	0.1g
Yeast extract	0.2g
Resazurin	0.5mg
NaHCO ₃ solution	40.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trans-3,4,5-trimethoxycinnamate solution	10.0mL
Trace elements solution SL-10	1.5mL

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	1.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.3g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Trans-3,4,5-Trimethoxycinnamate Solution:

Composition per 10.0mL:

Trans-3,4,5-trimethoxycinnamate 1.19g

Preparation of Trans-3,4,5-Trimethoxycinnamate Solution:

Add trans-3,4,5-trimethoxycinnamate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Neutralize with NaOH. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas mixture. Add components, except NaHCO₃ solution, trans-3,4,5-trimethoxycinnamate solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ gas mixture. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 40.0mL of sterile NaHCO₃ solution, 10.0mL of sterile trans-3,4,5-trimethoxycinnamate solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Sporobacter termitidis*.

Terrific Broth

Composition per liter:

Yeast extract 24.0g
Tryptone 12.0g
KH₂PO₄ 9.4g
K₂HPO₄ 2.2g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of plasmid-bearing strains of *Escherichia coli*.

Terrific Broth with 50 µg/ml Ampicillin

(ATCC Medium 2140)

Composition per liter:

Yeast extract 24.0g
Tryptone 12.0g
Glycerol 12.0g
Buffer solution 100.0mL
Ampicillin solution 10.0mL

pH 7.2 ± 0.2 at 25°C

Buffer Solution:

Composition per 100.0mL:

KH₂PO₄ 2.31g
K₂HPO₄ 12.54g

Preparation of Buffer Solution: Add components to 100.0mL distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Ampicillin Solution:

Composition per 10.0mL:

Ampicillin 50µg

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except buffer and ampicillin solutions, to 890.0mL distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add the buffer and ampicillin solutions. Mix thoroughly. Aseptically distribute to tubes or flasks.

Use: For the cultivation of plasmid-bearing strains of *Escherichia coli*.

Terrific Broth with 100 µg/ml Ampicillin

(ATCC Medium 1946)

Composition per liter:

Yeast extract 24.0g
Tryptone 12.0g
Glycerol 12.0g
Buffer solution 100.0mL
Ampicillin solution 10.0mL

pH 7.2 ± 0.2 at 25°C

Buffer Solution:

Composition per 100.0mL:

KH₂PO₄ 2.31g
K₂HPO₄ 12.54g

Preparation of Buffer Solution: Add components to 100.0mL distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Ampicillin Solution:

Composition per 10.0mL:

Ampicillin 100µg

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except buffer and ampicillin solutions, to 890.0mL distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add the buffer and ampicillin solutions. Mix thoroughly. Aseptically distribute to tubes or flasks.

Use: For the cultivation of plasmid-bearing strains of *Escherichia coli*. For the cloning of *p3PK* plasmid for studying intracellular protein targeting, *pSH* plasmid which is a strong mammalian expression vector, and *pOT182* plasmid for the construction and use of a self-cloning promoter probe vector for Gram-negative bacteria.

Terrific Broth with 200 µg/ml Ampicillin

(ATCC Medium 1945)

Composition per liter:

Yeast extract 24.0g
Tryptone 12.0g
Glycerol 12.0g

Buffer solution	100.0mL
Ampicillin solution	10.0mL
pH 7.2 ± 0.2 at 25°C	

Buffer Solution:**Composition** per 100.0mL:

KH ₂ PO ₄	2.31g
K ₂ HPO ₄	12.54g

Preparation of Buffer Solution: Add components to 100.0mL distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Ampicillin Solution:**Composition** per 10.0mL:

Ampicillin	200.0µg
------------------	---------

Preparation of Ampicillin Solution: Add ampicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except buffer and ampicillin solutions, to 890.0mL distilled/deionized water. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add the buffer and ampicillin solutions. Mix thoroughly. Aseptically distribute to tubes or flasks.

Use: For the cultivation of plasmid-bearing strains of *Escherichia coli*. For the cloning of *pSVbeta*, *pCMVbeta*, *pTKbeta*, *pADbeta*, *pNASS-beta*, and *pBS-hTOP2* plasmids in *E. coli*.

Tetracycline L Broth Medium**Composition** per liter:

Agar	15.0g
Pancreatic digest of casein.....	10.0g
NaCl	5.0g
Yeast extract.....	5.0g
Peptone.....	5.0g
NaCl	5.0g
Yeast extract.....	2.0g
Beef extract	1.0g
Glucose	1.0g
Tetracycline solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Tetracycline Solution:**Composition** per 10.0mL:

Tetracycline.....	12.5mg
-------------------	--------

Preparation of Tetracycline Solution: Add tetracycline to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except tetracycline solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Bring pH to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile tetracycline solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

Tetracycline Luria Agar No. 1**Composition** per liter:

Agar	15.0g
Pancreatic digest of casein.....	10.0g

Yeast extract.....	5.0g
NaCl.....	0.5g
Glucose solution	20.0mL
Tetracycline solution.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Glucose Solution:**Composition** per 50.0mL:

Glucose	5.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Tetracycline Solution:**Composition** per 10.0mL:

Tetracycline.....	12.0mg
-------------------	--------

Preparation of Tetracycline Solution: Add tetracycline to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except tetracycline solution and glucose solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Bring pH to 7.0. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile tetracycline solution and 20.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Escherichia coli*.

Tetracycline Luria Agar No. 2**Composition** per liter:

Agar	15.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g
NaCl	0.5g
Glucose solution	20.0mL
Tetracycline solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Glucose Solution:**Composition** per 50.0mL:

Glucose	5.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Tetracycline Solution:**Composition** per 10.0mL:

Tetracycline.....	10.0mg
-------------------	--------

Preparation of Tetracycline Solution: Add tetracycline to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except tetracycline solution and glucose solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Bring pH to 7.0. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile tetracycline solution and 20.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Escherichia coli*.

Tetracycline Luria Agar No. 3**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g
NaCl	0.5g
Glucose solution	20.0mL
Tetracycline solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Glucose Solution:**Composition per 50.0mL:**

Glucose	5.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Tetracycline Solution:**Composition per 10.0mL:**

Tetracycline	20.0mg
--------------------	--------

Preparation of Tetracycline Solution: Add tetracycline to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except tetracycline solution and glucose solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Bring pH to 7.0. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile tetracycline solution and 20.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Escherichia coli*.

Tetracycline TY Salt Medium**Composition per liter:**

NaCl ₂	10.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g
Tetracycline solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Tetracycline Solution:**Composition per 10.0mL:**

Tetracycline	12.5mg
--------------------	--------

Preparation of Tetracycline Solution: Add tetracycline to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except tetracycline solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Bring pH to 7.0. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile tetracycline solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Escherichia coli*.

Tetrahymena* Medium*Composition per liter:**

Pancreatic digest of casein	5.0g
Proteose peptone	5.0g
K ₂ HPO ₄	0.2g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into screw-capped tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Tetrahymena americanis*, *Tetrahymena asiatica*, *Tetrahymena australis*, *Tetrahymena borealis*, *Tetrahymena canadensis*, *Tetrahymena capricornis*, *Tetrahymena caudata*, *Tetrahymena corlissi*, *Tetrahymena elliotti*, *Tetrahymena furgasoni*, *Tetrahymena hegewischi*, *Tetrahymena hyperangularis*, *Tetrahymena malaccensis*, *Tetrahymena mimbres*, *Tetrahymena nanney*, *Tetrahymena nipissingi*, *Tetrahymena pigmentosa*, *Tetrahymena pyriformis*, *Tetrahymena silvana*, *Tetrahymena sonneborni*, *Tetrahymena thermophila*, and *Tetrahymena tropicalis*.

Tetramethyl Ammonium Chloride Agar**Composition per liter:**

Agar	15.0g
Tetramethyl ammonium chloride	1.0g
Thiamine-HCl	0.5g
Standard mineral base	1.0L
pH 6.5 ± 0.2 at 25°C	

Standard Mineral Base:**Composition per liter:**

(NH ₄) ₂ SO ₄	1.0g
Phosphate buffer (1M solution, pH 6.8)	40.0mL
Huntner's vitamin-free mineral base	20.0mL

Huntner's Vitamin-Free Mineral Base:**Composition per liter:**

MgSO ₄ ·7H ₂ O	14.45g
Nitritotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.335g
FeSO ₄ ·7H ₂ O	99.0mg
Metals "44"	50.0mg
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	9.25mg

Preparation of Huntner's Vitamin Free Mineral Base: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 7.0.

Metals "44":**Composition per 100.0mL:**

ZnSO ₄ ·7H ₂ O	1095.0mg
FeSO ₄ ·7H ₂ O	500.0mg
Ethylenediaminetetraacetic acid	250.0mg
MnSO ₄ ·H ₂ O	154.0mg
CuSO ₄ ·5H ₂ O	39.2mg
Co(NO ₃) ₂ ·6H ₂ O	24.8mg
Na ₂ B ₄ O ₇ ·10H ₂ O	17.7mg

Preparation of Metals "44": Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Paracoccus kocurii*.

Tetramitus rostratus* Flagellate Medium, PY/2*Composition per liter:**

Na ₂ HPO ₄	3.55g
KH ₂ PO ₄	3.40g

MgSO ₄ ·7H ₂ O	2.47g
CaCl ₂ , anhydrous	1.12g
Proteose peptone	0.5g
Yeast extract	0.5g
pH 6.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Distribute into screw-capped tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Tetramitus rostratus*.

Tetrathionate Brilliant Green HiVeg Broth

Composition per liter:

CaCO ₃	20.0g
K ₂ S ₄ O ₆	20.0g
Plant peptone	8.6g
Synthetic detergent No. II	8.0g
NaCl	6.4g
Brilliant Green	0.07g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. A slight precipitate will remain. Do not autoclave. Cool to 25°C. Store at 4°C.

Use: For the enrichment and isolation of salmonellae.

Tetrathionate Broth

Composition per liter:

Na ₂ S ₂ O ₃	40.7g
CaCO ₃	25.0g
NaCl	4.5g
Peptone	4.5g
Yeast extract	1.8g
Beef extract	0.9g
Iodine solution	20.0mL

Iodine Solution:

Composition per 20.0mL:

Iodine	6.0g
KI	5.0g

Preparation of Iodine Solution: Add iodine and KI to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly.

Preparation of Medium: Add components, except iodine solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 40°C. Add 20.0mL of iodine solution. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Use medium the same day it is prepared.

Use: For the selective isolation and enrichment of *Salmonella typhi* and other salmonellae from fecal specimens, sewage, and other specimens.

Tetrathionate Broth (FDA M145)

Composition per 1030.0mL:

Tetrathionate broth base	1.0L
Iodine-potassium iodide solution	20.0mL
Brilliant Green solution	10.0mL
pH 8.4 ± 0.2 at 25°C	

Tetrathionate Broth Base:

Composition per liter:

Na ₂ S ₂ O ₃ ·5H ₂ O	30.0g
CaCO ₃	10.0g
Polypeptone™	5.0g
Bile salts	1.0g

Preparation of Tetrathionate Broth Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. A slight precipitate will remain. Do not autoclave. Cool to 25°C. Store at 4°C.

Iodine-Potassium Iodide Solution:

Composition per 20.0mL:

Iodine, resublimed	6.0g
KI	5.0g

Preparation of Iodine-Potassium Iodide Solution: Add KI to 5.0mL of sterile distilled/deionized water. Mix thoroughly. Add iodine. Mix thoroughly. Bring volume to 20.0mL with sterile distilled/deionized water.

Brilliant Green Solution:

Composition per 100.0mL:

Brilliant Green	0.1g
-----------------------	------

Preparation of Brilliant Green Solution: Add Brilliant Green to sterile distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Combine 1.0L of tetrathionate broth base, 20.0mL of iodine-potassium iodide solution, and 10.0mL of Brilliant Green solution. Mix thoroughly. Aseptically distribute into tubes in 10.0mL volumes. Do not heat medium after it has been mixed.

Use: For the selective isolation and cultivation of *Salmonella* species from foods.

Tetrathionate Broth (TT Broth)

Composition per liter:

Na ₂ S ₂ O ₃	30.0g
CaCO ₃	10.0g
Proteose peptone	5.0g
Bile salts	1.0g
Iodine solution	20.0mL

pH 8.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Iodine Solution:

Composition per 20.0mL:

Iodine	6.0g
KI	5.0g

Preparation of Iodine Solution: Add iodine and KI to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly.

Preparation of Medium: Add components, except iodine solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 40°C. Add 20.0mL of iodine solution. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Use medium the same day it is prepared.

Use: For the selective isolation and enrichment of *Salmonella typhi* and other salmonellae from infectious material.

Tetrathionate Broth
(m-Tetrathionate Broth)
(m-TT Broth)

Composition per liter:

Na ₂ S ₂ O ₃	30.0g
CaCO ₃	10.0g
Pancreatic digest of casein	2.5g
Peptic digest of animal tissue.....	2.5g
Iodine-iodide solution	20.0mL
pH 8.0 ± 0.2 at 25°C	

Iodine-Iodide Solution:**Composition per 20.0mL:**

Iodine	6.0g
KI	5.0g

Preparation of Iodine-Iodide Solution: Add iodine and KI to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly.

Preparation of Medium: Add components, except iodine-iodide solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 40°C. Add 20.0mL of iodine-iodide solution. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Use medium the same day it is prepared.

Use: For the selective isolation in the membrane filter method of *Salmonella* species from feces, urine, foods, and other specimens of sanitary importance.

Tetrathionate Broth
(m-Tetrathionate Broth)

Composition per liter:

Na ₂ S ₂ O ₃	30.0g
Proteose peptone	5.0g
Bile salts.....	1.0g
Iodine solution	20.0mL
pH 8.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Iodine Solution:**Composition per 20.0mL:**

Iodine	6.0g
KI	5.0g

Preparation of Iodine Solution: Add iodine and KI to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly.

Preparation of Medium: Add components, except iodine solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 40°C. Add 20.0mL of iodine solution. Mix thoroughly. Use medium the same day it is prepared.

Use: For the enrichment of *Salmonella* species in the membrane filter method prior to placing the filter on selective media such as Brilliant Green broth.

Tetrathionate Broth, Hajna
(TT Broth, Hajna)

Composition per liter:

Na ₂ S ₂ O ₃	38.0g
CaCO ₃	25.0g
Casein/meat peptone (50/50)	18.0g
NaCl	5.0g

D-Mannitol	2.5g
Yeast extract.....	2.0g
Glucose	0.5g
Sodium deoxycholate.....	0.5g
Brilliant Green	0.01g
Iodine solution	40.0mL

pH 7.5–7.8 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Iodine Solution:**Composition per 40.0mL:**

KI	8.0g
Iodine	5.0g

Preparation of Iodine Solution: Add iodine and KI to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly.

Preparation of Medium: Add components, except iodine solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 40°C. Add 40.0mL of iodine solution. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Use medium the same day it is prepared.

Use: For the isolation of *Salmonella* species, except *Salmonella typhi*, and *Arizona* species from fecal specimens, urine, food samples, and other specimens of sanitary significance.

Tetrathionate Broth with Novobiocin

Composition per liter:

Na ₂ S ₂ O ₃	38.0g
CaCO ₃	25.0g
Casein/meat peptone (50/50)	18.0g
NaCl	5.0g
Yeast extract.....	2.0g
D-Mannitol	0.5g
Glucose	0.5g
Sodium deoxycholate.....	0.5g
Brilliant Green	0.01g
Novobiocin	4.0mg
Iodine solution	40.0mL

pH 7.5–7.8 at 25°C

Iodine Solution:**Composition per 40.0mL:**

KI	8.0g
Iodine	5.0g

Preparation of Iodine Solution: Add iodine and KI to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly.

Preparation of Medium: Add components, except iodine solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 40°C. Add 40.0mL of iodine solution. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Use medium the same day it is prepared.

Use: For the isolation of *Salmonella* species, except *Salmonella typhi*, and *Arizona* species from fecal specimens and other specimens of sanitary importance. Novobiocin suppresses the growth of *Proteus* species.

Tetrathionate Broth, USA
(TT Broth, USA)

Na ₂ S ₂ O ₃	30.0g
CaCO ₃	10.0g

Casein peptone	2.5g
Meat peptone	2.5g
Bile salts	1.0g
Iodine-iodide solution	20.0mL

Source: This medium is available as a premixed powder from Oxoid Unipath.

Iodine-Iodide Solution:

Composition per 20.0mL:

Iodine	6.0g
KI	5.0g

Preparation of Iodine-Iodide Solution: Add iodine and KI to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly.

Preparation of Medium: Add components, except iodine solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 40°C. Add 20.0mL of iodine solution. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Use medium the same day it is prepared.

Use: For the selective enrichment of *Salmonella* species from feces, urine, foods, and other specimens of sanitary importance.

Tetrathionate Crystal Violet Enhancement Broth

Composition per liter:

Potassium tetrathionate	20.0g
Casein/meat peptone (50/50)	8.6g
NaCl	6.4g
Crystal Violet	0.005g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation of *Salmonella* species, except *Salmonella typhi*, and *Arizona* species from fecal specimens, urine, food samples, and other specimens of sanitary significance.

Tetrathionate HiVeg Broth Base, Hajna with Iodine (TT HiVeg Broth Base)

Composition per liter:

Na ₂ S ₂ O ₃	38.0g
CaCO ₃	25.0g
Plant special peptone	18.0g
NaCl	5.0g
D-Mannitol	2.5g
Yeast extract	2.0g
Glucose	0.5g
Synthetic detergent No. III	0.5g
Brilliant Green	0.01g
Iodine solution	40.0mL

pH 7.6 ± 0.2 at 25°C

Source: This medium, without iodine, is available as a premixed powder from HiMedia.

Iodine Solution:

Composition per 40.0mL:

KI	8.0g
Iodine	5.0g

Preparation of Iodine Solution: Add iodine and KI to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly.

Preparation of Medium: Add components, except iodine solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 40°C. Add 40.0mL of iodine solution. Mix thoroughly. Distribute into tubes in 10.0mL volumes. Use medium the same day it is prepared.

Use: For the isolation of *Salmonella* species, except *Salmonella typhi*, and *Arizona* species from fecal specimens, urine, food samples, and other specimens of sanitary significance.

Tetrathionate Reductase Medium

Composition per tube:

Solution I	10.0mL
Solution III	0.2mL
Solution II	0.1mL
Solution IV	0.1mL

Solution I:

Composition per liter:

Na ₂ HPO ₄ ·12H ₂ O	3.6g
KH ₂ PO ₄	1.0g
NH ₄ Cl	0.5g
Peptone	0.25g
Yeast extract	0.25g
MgSO ₄ ·7H ₂ O	0.03g

Preparation of Solution I: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution II:

Composition per 100.0mL:

CaCl ₂ ·2H ₂ O	0.1g
Ferric ammonium citrate	0.05g

Preparation of Solution II: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution III:

Composition per 100.0mL:

Sodium succinate	15.0g
------------------------	-------

Preparation of Solution III: Add sodium succinate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat until dissolved. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution IV:

Composition per 100.0mL:

Na ₂ S ₄ O ₆ ·2H ₂ O	10.0g
--	-------

Preparation of Solution IV: Add Na₂S₄O₆·2H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sterilize by filtration. Store at 4°C.

Preparation of Medium: To each tube containing 10.0mL of sterile solution I, aseptically add 0.1mL of sterile solution II, 0.2mL of sterile solution III, and 0.1mL of sterile solution IV. Mix thoroughly. Use immediately.

Use: For the cultivation and differentiation of hydrogen-oxidizing bacteria based on their production of tetrathionate reductase.

Tetrathionate Reductase Test Medium**Composition per 1025.0mL:**

K ₂ S ₄ O ₆	5.0g
Peptone water	1.0L
Bromthymol Blue (0.2% solution)	25.0mL
pH 7.4 ± 0.2 at 25°C	

Peptone Water:**Composition per liter:**

Peptone	10.0g
NaCl	5.0g

Preparation of Peptone Water: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Adjust pH to 7.4. Filter sterilize. Dispense into tubes in 1.0mL volumes or into wells of sterile microculture plates for replica inoculation.

Use: For the cultivation and identification of *Serratia* species based on their ability to reduce tetrathionate. Bacteria that reduce tetrathionate turn the medium yellow.

Tetrazolium Thallium Glucose Agar**Composition per liter:**

Agar	14.0g
Beef extract	10.0g
Peptone	10.0g
Glucose solution	100.0mL
2,3,5-Triphenyltetrazolium·HCl solution	10.0mL
Thallos acetate solution	10.0mL

2,3,5-Triphenyltetrazolium·HCl Solution:**Composition per 10.0mL:**

2,3,5-Triphenyltetrazolium·HCl	0.1g
--------------------------------------	------

Preparation of 2,3,5-Triphenyltetrazolium·HCl Solution: Add 2,3,5-triphenyltetrazolium·HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 7 min at 15 psi pressure–121°C.

Glucose Solution:**Composition per 100.0mL:**

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Thallos Acetate Solution:**Composition per 10.0mL:**

Thallos acetate	1.0g
-----------------------	------

Preparation of Thallos Acetate Solution: Add thallos acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except glucose solution, 2,3,5-triphenyltetrazolium·HCl solution, and thallos acetate solution—to distilled/deionized water and bring volume to 880.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile glucose solution, 2,3,5-triphenyltetrazolium·HCl solution, and thallos acetate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Streptococcus* species.

Tetrazolium Tolerance Agar**(TTC Agar)****Composition per liter:**

Pancreatic digest of casein	15.0g
Agar	15.0g
Triphenyltetrazolium chloride	10.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of bacteria based upon the ability to tolerate and grow in the presence of tetrazolium. *Streptococcus faecalis* (enterococci) rapidly reduces tetrazolium.

TF Medium**Composition per liter:**

NaCl	7.0g
Pancreatic digest of casein	2.0g
Yeast extract	2.0g
MgSO ₄ ·7H ₂ O	1.8g
K ₂ HPO ₄	1.6g
MgCl ₂ ·6H ₂ O	1.4g
Na ₂ HPO ₄ ·H ₂ O	1.0g
NH ₄ Cl	0.5g
Na ₂ S·9H ₂ O	0.3g
MgSO ₄ ·7H ₂ O	0.16g
Resazurin	0.5mg
Wolfe's mineral solution	10.0mL
Wolfe's vitamin solution	10.0mL
Glucose solution	10.0mL
CaCl ₂ ·2H ₂ O solution	10.0mL
L-Cysteine·HCl·H ₂ O solution	10.0mL

pH 6.8–7.0 at 25°C

Wolfe's Mineral Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Glucose Solution:**Composition per 10.0mL:**

D-Glucose	3.0g
-----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

CaCl₂·2H₂O Solution:**Composition per 10.0mL:**

CaCl ₂ ·2H ₂ O	0.06g
--	-------

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine·HCl·H₂O Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.3g
---------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except glucose solution, CaCl₂·2H₂O solution, and L-cysteine·HCl·H₂O solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Adjust pH to 6.8–7.0. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile glucose solution, 10.0mL of sterile CaCl₂·2H₂O solution, and 10.0mL of sterile L-cysteine·HCl·H₂O solution. Mix thoroughly. Final pH should be 6.8–7.0.

Use: For the cultivation of *Thermosipho* species.

TF(A) Medium (DSMZ Medium 740)

Composition per liter:

K ₂ HPO ₄	1.6g
Yeast extract	2.0g
Trypticase™	2.0g
Na ₂ HPO ₄ ·H ₂ O	1.0g
NH ₄ Cl	0.5g
MgSO ₄ ·7H ₂ O	0.16g
Resazurin	0.5mg
Calcium chloride solution	10.0mL
Glucose solution	10.0mL
Cysteine solution	10.0mL

Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution	10.0mL
Vitamin solution	10.0mL

pH 6.8 ± 0.2 at 25°C

Calcium Chloride Solution:**Composition per 10.0mL:**

CaCl ₂ ·2H ₂ O	0.06g
--	-------

Preparation of Calcium Chloride Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Cysteine Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.3g
---------------------------------------	------

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Glucose Solution:**Composition per 10.0mL:**

Glucose	3.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly. Filter sterilize.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg

<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under an oxygen-free 100% N₂. Add components, except vitamin solution, cysteine solution, calcium chloride solution, glucose solution, trace elements solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 10.0mL sterile vitamin solution, 10.0mL of sterile cysteine solution, 10.0mL sterile glucose solution, 10.0mL sterile calcium chloride solution, 10.0mL sterile trace elements solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Adjust pH to 6.8. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Feravidobacterium pennivorans*, *Feravidobacterium gondwanense*, and *Feravidobacterium* sp.

TGA Medium

Composition per liter:

Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g
Glucose.....	2.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Salmonella typhimurium*.

TGB HiVeg Agar

Composition per liter:

Agar.....	15.0g
Plant hydrolysate.....	5.0g
Plant extract.....	3.0g
Glucose.....	1.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the enumeration of bacteria in water, air, milk, and other dairy products.

TGE Broth

Composition per liter:

Pancreatic digest of casein.....	10.0g
Beef extract.....	6.0g
Glucose.....	2.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enumeration of bacteria by the membrane filter method.

TGMM-2 Medium

Composition per liter:

<i>Saccharomyces cerevisiae</i> type II cells, dried.....	3.0g
Soy lecithin penterythritol mix.....	0.1g
Skim milk powder.....	1.0mg

Source: Dried *Saccharomyces cerevisiae* type II cells and soy lecithin (type II-S L- α -phosphatidyl choline) are available from Sigma Chemical Co.

Soy Lecithin Penterythritol Mix:

Composition per 0.11g:

Penterythritol.....	0.1g
Soy lecithin (type II-S L- α -phosphatidyl choline).....	10.0mg

Preparation of Soy Lecithin Penterythritol Mix: Mix soy lecithin with the inert solid diluent penterythritol as a 1:10 mixture and grind to a fine powder.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat to 85°C while vigorously mixing for 10 min. Distribute 10.0mL volumes into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Tetrahymena limacis*, *Tetrahymena patula*, *Tetrahymena rostrata*, and *Tetrahymena setosa*.

TGY Medium

(Tryptone Glucose Yeast Extract Medium)

Composition per liter of tap water:

Agar.....	20.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
Glucose.....	1.0g
K ₂ HPO ₄	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of bacteria, including *Bacillus* species, *Corynebacterium* species, *Enterococcus* species, and *Pseudomonas* species.

TGYM Medium

(Tryptone Glucose Yeast Extract Methionine Medium)

Composition per liter:

Pancreatic digest of casein.....	5.0g
Yeast extract.....	3.0g
Glucose.....	1.0g
DL-Methionine.....	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Deinococcus* species.

***Thauera aromatica* AR-1 Medium
(DSMZ Medium 855)**

Composition per 992.0mL:

Solution A	870.0mL
Solution C	100.0mL
Solution D	10.0mL
Solution E (Vitamin solution)	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
Selenite-tungstate solution	1.0mL
pH 7.2 ± 0.2 at 25°C	

Solution A:

Composition per 870.0mL:

Na ₂ SO ₄	3.0g
NaCl	1.0g
KNO ₃	0.6g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Flush with 80% N₂ + 20% CO₂ to remove dissolved oxygen.

Solution D:

Composition per 10.0mL:

Na-benzoate	0.7g
-------------------	------

Preparation of Solution D: Add Na-benzoate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.10mg

Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite-Tungstate Solution

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Gently heat solution A and bring to boiling. Boil solution A for a few minutes. Cool to room temperature. Gas with 80% N₂ + 20% CO₂ gas mixture to reach a pH below 6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sequentially add 1.0mL solution B, 100.0mL solution C, 10.0mL solution D, 10.0mL solution E, and 1.0mL sterile selenite-tungstate solution. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. Addition of 10–20mg sodium dithionite per liter from a 5% (w/v) solution, freshly prepared under N₂ and filter-sterilized, may stimulate growth.

Use: For the anaerobic cultivation of *Thauera aromatica*.

***Thauera aromatica* AR-1 Medium
(DSMZ Medium 855)**

Composition per 892.0mL:

Vitamin B ₁₂	0.10mg

Solution D (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite-Tungstate Solution**Composition** per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Adjust pH of solution A to 7.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sequentially add 1.0mL solution B, 10.0mL solution C, 10.0mL solution D, and 1.0mL sterile selenite-tungstate solution. Adjust pH to 7.2. Aseptically distribute into tubes or flasks.

Use: For the aerobic cultivation of *Thauera aromatica*.

Thauera aromatica* Medium*Composition** 1015.0mL:

Solution A	500.0mL
Solution B	500.0mL

Trace elements solution SL-10	10.0mL
Vitamin solution	5.0mL
pH 7.5 ± 0.2 at 25°C	

Solution A:**Composition** per 500.0mL:

K ₂ HPO ₄	5.92g
KH ₂ PO ₄	0.816g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution B:**Composition** per 500.0mL:

KNO ₃	2.0g
Sodium benzoate	0.72g
NH ₄ Cl	0.267g
MgSO ₄ ·7H ₂ O	0.197g
CaCl ₂ ·2H ₂ O	0.025g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution SL-10:**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 500.0mL of sterile solution A, 500.0mL of sterile solution B, 10.0 mL of sterile trace elements solution SL-10, and 5.0 mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Thauera aromatica*.

Thauera mechernichi Medium (DSMZ Medium 918)

CNVT Inhibitor:

Composition per 10.0mL:

Colistin sulfate.....	7.5mg
Trimethoprim lactate.....	5.0mg
Vancomycin.....	3.0mg
Nystatin.....	12,500U

Preparation of CNVT Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Supplement Solution:

Composition per liter:

Glucose.....	100.0g
L-Cysteine-HCl.....	25.9g
L-Glutamine.....	10.0g

L-Cystine.....	1.1g
Adenine.....	1.0g
Nicotinamide adenine dinucleotide.....	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate.....	0.1g
Guanine-HCl.....	0.03g
Fe(NO ₃) ₃ ·6H ₂ O.....	0.02g
<i>p</i> -Aminobenzoic acid.....	0.013g
Thiamine-HCl.....	3.0mg

Source: The supplement solution IsoVitaleX[®] enrichment is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except CNVT inhibitor and supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile CNVT inhibitor and 10.0mL of sterile supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of *Neisseria* species from specimens containing mixed flora of bacteria and fungi.

Thayer-Martin HiVeg Medium Base with Hemoglobin and Vitox Supplement

Composition per liter:

Plant special peptone.....	23.0g
Agar.....	13.0g
NaCl.....	5.0g
Starch.....	1.0g
Hemoglobin solution.....	250.0mL
Vitox supplement.....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without hemoglobin or Vitox supplement, is available as a premixed powder from HiMedia.

Hemoglobin Solution:

Composition per 250.0mL:

Hemoglobin.....	5.0g
-----------------	------

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Vitox Supplement:

Composition per 10.0mL:

Glucose.....	2.0g
L-Cysteine-HCl.....	0.518g
L-Glutamine.....	0.2g
L-Cystine.....	0.022g
Adenine sulfate.....	0.01g
Nicotinamide adenine dinucleotide.....	5.0mg
Coccarboxylase.....	2.0mg
Guanine-HCl.....	0.6mg
Fe(NO ₃) ₃ ·6H ₂ O.....	0.4mg
<i>p</i> -Aminobenzoic acid.....	0.26mg
Vitamin B ₁₂	0.2mg
Thiamine-HCl.....	0.06mg

Preparation of Vitox Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except hemoglobin and Vitox supplement, to distilled/deionized water and bring volume to 740.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 250.0mL of sterile hemoglobin solution and 10.0mL of sterile Vitox supplement. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of fastidious microorganisms, especially *Neisseria* species. For the selective isolation of gonococci from pathological specimens.

Thayer-Martin Medium

Composition per liter:

GC agar base	740.0mL
Hemoglobin solution.....	250.0mL
Vitox supplement	10.0mL
	pH 7.3 ± 0.2 at 25°C

GC Agar Base:

Composition per 740.0mL:

Special peptone	15.0g
Agar	10.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g
	pH 7.2 ± 0.2 at 25°C

Preparation of GC Agar Base: Add components of GC medium base and the hemoglobin to distilled/deionized water and bring volume to 740.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:

Composition per 250.0mL:

Hemoglobin	5.0g
------------------	------

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Vitox Supplement:

Composition per 10.0mL:

Glucose	2.0g
L-Cysteine-HCl.....	0.518g
L-Glutamine	0.2g
L-Cystine	0.022g
Adenine sulfate	0.01g
Nicotinamide adenine dinucleotide	5.0mg
Coccarboxylase.....	2.0mg
Guanine-HCl	0.6mg
Fe(NO ₃) ₃ ·6H ₂ O	0.4mg
<i>p</i> -Aminobenzoic acid.....	0.26mg
Vitamin B ₁₂	0.2mg
Thiamine-HCl	0.06mg

Preparation of Vitox Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 740.0mL of cooled sterile GC agar base, aseptically add 250.0mL of sterile hemoglobin solution and

10.0mL of sterile Vitox supplement. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of fastidious microorganisms, especially *Neisseria* species.

Thayer-Martin Medium

Composition per liter:

Hemoglobin	10.0g
GC medium base.....	980.0mL
CNVT inhibitor.....	10.0mL
Supplement B.....	10.0mL
	pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a prepared medium in tubes from BD Diagnostic Systems.

GC Medium Base:

Composition per 980.0mL:

Proteose peptone No. 3	15.0g
Agar	10.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g
	pH 7.2 ± 0.2 at 25°C

Preparation of GC Medium Base: Add components of GC medium base and the hemoglobin to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

CNVT Inhibitor:

Composition per 10.0mL:

Colistin sulfate	7.5mg
Trimethoprim lactate.....	5.0mg
Vancomycin	3.0mg
Nystatin.....	12,500U

Preparation of CNVT Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 980.0mL of cooled sterile GC medium base, aseptically add 10.0mL of sterile CNVT inhibitor and 10.0mL of sterile supplement B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of fastidious microorganisms, especially *Neisseria* species.

Thayer-Martin Medium, Modified (Modified Thayer-Martin Agar)

Composition per liter:

GC agar base.....	720.0mL
Hemoglobin solution	250.0mL
GC supplement	30.0mL
	pH 7.3 ± 0.2 at 25°C

GC Agar Base:

Composition per 720.0mL:

Special peptone.....	15.0g
Agar	10.0g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g

Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of GC Agar Base: Add components of GC medium base to distilled/deionized water and bring volume to 720.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:

Composition per 250.0mL:

Hemoglobin	5.0g
------------------	------

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

GC Supplement:

Composition per 30.0mL:

Yeast autolysate.....	10.0g
Glucose	1.5g
NaHCO ₃	0.15g
Colistin sulfate	7.5mg
Trimethoprim lactate.....	5.0mg
Vancomycin	3.0mg
Nystatin.....	12,500U

Preparation of GC Supplement: Add components to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 720.0mL of cooled sterile GC agar base, aseptically add 250.0mL of sterile hemoglobin solution and 30.0mL of sterile GC supplement. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of fastidious microorganisms, especially *Neisseria* species.

Thayer-Martin Medium, Modified (Modified Thayer-Martin Agar)

Composition per liter:

GC agar base.....	730.0mL
Hemoglobin solution.....	250.0mL
Vitox supplement	10.0mL
VCNT antibiotic solution.....	10.0mL
pH 7.3 ± 0.2 at 25°C	

GC Agar Base:

Composition per 730.0mL:

Special peptone.....	15.0g
Agar	10.0g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of GC Agar Base: Add components of GC medium base in to distilled/deionized water and bring volume to 730.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:

Composition per 250.0mL:

Hemoglobin	5.0g
------------------	------

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Vitox Supplement:

Composition per 10.0mL:

Glucose	2.0g
L-Cysteine·HCl.....	0.518g
L-Glutamine.....	0.2g
L-Cystine	0.022g
Adenine sulfate.....	0.01g
Nicotinamide adenine dinucleotide	5.0mg
Coccarboxylase.....	2.0mg
Guanine·HCl.....	0.6mg
Fe(NO ₃) ₃ ·6H ₂ O.....	0.4mg
<i>p</i> -Aminobenzoic acid.....	0.26mg
Vitamin B ₁₂	0.2mg
Thiamine·HCl	0.06mg

Preparation of Vitox Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

VCNT Antibiotic Solution:

Composition per 10.0mL:

Colistin methane sulfonate	7.5mg
Trimethoprim lactate.....	5.0mg
Vancomycin	3.0mg
Nystatin.....	12,500U

Preparation of VCNT Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 730.0mL of cooled, sterile GC agar base, aseptically add 250.0mL of sterile hemoglobin solution, 10.0mL of sterile Vitox supplement, and 10.0mL of VCNT antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of fastidious microorganisms, especially *Neisseria* species.

Thayer-Martin Medium, Selective

Composition per liter:

GC agar base.....	730.0mL
Hemoglobin solution	250.0mL
Vitox supplement.....	10.0mL
VCN antibiotic solution.....	10.0mL
pH 7.3 ± 0.2 at 25°C	

GC Agar Base:

Composition per 730.0mL:

Special peptone.....	15.0g
Agar	10.0g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of GC Agar Base: Add components of GC medium base to distilled/deionized water and bring volume to 730.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:**Composition per 250.0mL:**

Hemoglobin 5.0g

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Vitox Supplement:**Composition per 10.0mL:**

Glucose 2.0g
 L-Cysteine-HCl 0.518g
 L-Glutamine 0.2g
 L-Cystine 0.022g
 Adenine sulfate 0.01g
 Nicotinamide adenine dinucleotide 5.0mg
 Cocarboxylase 2.0mg
 Guanine-HCl 0.6mg
 Fe(NO₃)₃·6H₂O 0.4mg
p-Aminobenzoic acid 0.26mg
 Vitamin B₁₂ 0.2mg
 Thiamine-HCl 0.06mg

Preparation of Vitox Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

VCN Antibiotic Solution:**Composition per 10.0mL:**

Colistin methane sulfonate 7.5mg
 Vancomycin 3.0mg
 Nystatin 12,500U

Preparation of VCN Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 730.0mL of cooled, sterile GC agar base, aseptically add 250.0mL of sterile hemoglobin solution, 10.0mL of sterile Vitox supplement, and 10.0mL of VCN antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation and cultivation of fastidious microorganisms, especially *Neisseria* species.

Thayer-Martin Selective Agar**Composition per liter:**

Agar 12.0g
 Hemoglobin 10.0g
 Pancreatic digest of casein 7.5g
 Selected meat peptone 7.5g
 NaCl 5.0g
 K₂HPO₄ 4.0g
 Cornstarch 1.0g
 KH₂PO₄ 1.0g
 Supplement solution 10.0mL
 VCN inhibitor 10.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Supplement Solution:**Composition per liter:**

Glucose 100.0g
 L-Cysteine-HCl 25.9g

L-Glutamine 10.0g
 L-Cystine 1.1g
 Adenine 1.0g
 Nicotinamide adenine dinucleotide 0.25g
 Vitamin B₁₂ 0.1g
 Thiamine pyrophosphate 0.1g
 Guanine-HCl 0.03g
 Fe(NO₃)₃·6H₂O 0.02g
p-Aminobenzoic acid 0.013g
 Thiamine-HCl 3.0mg

Source: The supplement solution IsoVitaleX[®] enrichment is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

VCN Inhibitor:**Composition per 10.0mL:**

Colistin 7.5mg
 Vancomycin 3.0mg
 Nystatin 12,500U

Preparation of VCN Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except supplement solution and VCN inhibitor, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile VCN inhibitor and sterile supplement solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of *Neisseria gonorrhoeae* and *Neisseria meningitidis* from specimens containing mixed flora of bacteria and fungi.

**Thermincola Medium
(DSMZ Medium 1028)****Composition per liter:**

NH₄Cl 1.0g
 MgCl₂·6H₂O 0.33g
 KH₂PO₄ 0.5g
 KCl 0.33g
 Na-acetate 0.2g
 CaCl₂·2H₂O 0.1g
 Resazurin 0.5mg
 Vitamin solution 20.0mL
 Bicarbonate solution 10.0mL
 Carbonate solution 10.0mL
 Sulfide solution 10.0mL
 Yeast extract solution 10.0mL
 Wolfe's mineral elixir 1.0mL

pH 8.0 ± 0.2 at 25°C

Sulfide Solution:**Composition per 10.0mL:**

Na₂S·9H₂O 1.0g

Preparation of Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Bicarbonate Solution:**Composition per 10.0mL:**

NaHCO₃ 0.5g

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with gas mixture of 80% N₂ + 20% CO₂. Filter sterilize.

Carbonate Solution:**Composition per 10.0mL:**

Na₂CO₃ 0.5g

Preparation of Carbonate Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with gas mixture of 80% N₂ + 20% CO₂. Filter sterilize.

Yeast Extract Solution:**Composition per 10.0mL:**

Yeast extract 0.2g

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ gas. Autoclave for 15 min at 15 psi pressure–121°C.

Wolfe's Mineral Elixir:**Composition per liter:**

MgSO₄·7H₂O 30.0g
 NaCl 10.0g
 MnSO₄·2H₂O 5.0g
 (NH₄)₂NiSO₄·6H₂O 2.8g
 CoCl₂·6H₂O 1.8g
 ZnSO₄·7H₂O 1.8g
 FeSO₄·7H₂O 1.0g
 CaCl₂·2H₂O 1.0g
 KAl(SO₄)₂·12H₂O 0.18g
 CuSO₄·5H₂O 0.1g
 H₃BO₃ 0.1g
 Na₂MoO₄·2H₂O 0.1g
 Na₂SeO₄ 0.1g
 Na₂WO₄·2H₂O 0.1g

Preparation of Wolfe's Mineral Elixir: Adjust pH of 1.0L of distilled/deionized water to 1.0 with dilute H₂SO₄. Add components one at a time. Mix thoroughly to dissolve.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Cool to room temperature while sparging with 100% N₂ gas. Dispense into culture vessels under an atmosphere of 100% CO (carbon monoxide).

Culture vessels should be filled to approximately 20%. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add carbonate, bicarbonate, vitamin, and sulfide solutions. Mix thoroughly. Adjust the pH to 8.0 with sterile, anoxic 1N HCl. Prior to inoculation aseptically add yeast extract solution.

Use: For the cultivation of *Thermincola carboxydiphila*.

Thermoacetogenium phaeum Medium (DSMZ Medium 880)

Composition per liter:

KHCO₃ 3.5g
 NH₄Cl 1.0g
 NaCl 0.6g
 KH₂PO₄ 0.3g
 MgCl₂·6H₂O 0.1g
 CaCl₂·2H₂O 0.08g
 Resazurin 0.5mg
 Sodium pyruvate solution 50.0mL
 Vitamin solution 10.0mL
 Na₂S·9H₂O solution 10.0mL
 Cysteine solution 10.0mL
 Trace elements solution 1.0mL
 Selenite-tungstate solution 1.0mL

pH 7.0–7.1 at 25°C

Sodium Pyruvate Solution:**Composition per 50.0mL:**

Sodium pyruvate 5.0g

Preparation of Sodium Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Selenite-Tungstate Solution**Composition per liter:**

NaOH 0.5g
 Na₂WO₄·2H₂O 4.0mg
 Na₂SeO₃·5H₂O 3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na₂S·9H₂O 0.3g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Cysteine Solution:**Composition per 10.0mL:**

L-Cysteine-HCl·H₂O 0.3g

Preparation of Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:**Composition per liter:**

FeCl₂·4H₂O 1.5g
 Na₂-EDTA 0.5g
 CoCl₂·6H₂O 190.0mg
 MnCl₂·4H₂O 100.0mg

ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Adjust pH to 6.5. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except KHCO₃, sodium pyruvate solution, cysteine solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 10 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Add 3.5g KHCO₃. Mix thoroughly while sparging with 80% N₂ + 20% CO₂ gas atmosphere. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 50.0mL sodium pyruvate solution, 10.0mL cysteine solution, and 10.0mL Na₂S·9H₂O solution. Mix thoroughly. Final pH is 7.0–7.1. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Thermacetogenium phaeum*.

Thermoacidurans Agar

Composition per liter:

Agar.....	20.0g
Yeast extract.....	5.0g
Proteose peptone.....	5.0g
Glucose.....	5.0g
K ₂ HPO ₄	4.0g

pH 5.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Bacillus thermoacidurans* from food products.

Thermoacidurans HiVeg Agar

Composition per liter:

Agar.....	20.0g
Glucose.....	5.0g
Plant peptone No. 3.....	5.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	4.0g

pH 5.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 12 psi pressure–118°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Bacillus thermoacidurans* from food products.

Thermoactinomyces dichotomicus Medium

Composition per liter:

Maize, split.....	50.0g
Agar.....	20.0g
Starch.....	10.0g
NaCl.....	5.0g
Peptone.....	5.0g
CaCl ₂	0.5g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add split maize (crushed corn) to 1.0L of boiling water. Steam for 30 min. Filter through Whatman #1 filter paper. Add remaining components to maize filtrate. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Thermoactinomyces dichotomicus*.

Thermoactinomyces Medium (DSMZ Medium 978)

Composition per liter:

Polypeptone™.....	30.0g
Agar.....	15.0g
Glycerol.....	2.0g
L-Asparagine.....	1.0g
K ₂ HPO ₄	1.0g
Vitamin B solution.....	10.0mL
Trace salts solution.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Trace Salts Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g

Preparation of Trace Salts Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Vitamin B Solution:

Composition per 200.0mL:

Thiamine-HCl.....	10.0mg
Riboflavin.....	10.0mg
Nicotinate.....	10.0mg
Pyridoxine-HCl.....	10.0mg

Inositol	10.0mg
Calcium pantothenate	10.0mg
<i>p</i> -Aminobenzoate	10.0mg
D-Biotin	5.0mg

Preparation of Vitamin B Solution: Add components to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin B solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 100.0mL vitamin B solution. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Thermoactinomyces peptonophilus*.

Thermoactinomyces Medium

Composition per liter:

Agar	20.0g
Malt extract	10.0g
Yeast extract	4.0g
Glucose	4.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Thermoactinomyces sacchari*.

Thermoactinomyces Medium (DSMZ Medium 978)

Composition per liter:

Polypeptone	30.0g
Agar	15.0g
Glycerol	2.0g
L-Asparagine	1.0g
KH ₂ PO ₄	1.0g
Vitamin solution	10.0mL
Trace elements solution	1.0mL

pH 7.2 ± 0.2 at 25°C

Vitamin Solution:

Composition per 200.0mL:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	10.0mg
Riboflavin	10.0mg
Nicotinic acid	10.0mg
D-Ca-pantothenate	10.0mg
Inositol	10.0mg
<i>p</i> -Aminobenzoic acid	10.0mg
Biotin	5.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust the pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add vitamin solution. Mix thoroughly. Aseptically dispense into culture vessels.

Use: For the cultivation of *Thermoactinomyces* spp.

Thermoactinopolyspora Medium

Composition per liter:

Maltose	20.0g
Agar	15.0g
Papaic digest of soybean meal	15.0g
Yeast extract	2.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Thermoactinomyces* and *Thermoactinopolyspora* species.

Thermoanaerobacter ethanolicus Medium

Composition per liter:

Glucose	8.0g
Na ₂ HPO ₄ ·12H ₂ O	4.2g
Yeast extract	2.0g
KH ₂ PO ₄	1.5g
NH ₄ Cl	0.5g
MgCl ₂ ·6H ₂ O	0.18g
Reducing solution	40.0mL
Wolfe's modified mineral solution	5.0mL
Resazurin (0.1% solution)	1.0mL
Vitamin solution	0.5mL

Caution: This medium contains Na₂S, and H₂S production will occur, especially upon prolonged boiling. H₂S is hazardous and preparation of this medium should be done in a chemical fume hood.

Reducing Solution:

Composition per 200.0mL:

Cysteine-HCl·H ₂ O	2.5g
Na ₂ S·9H ₂ O	2.5g
NaOH (0.2N solution)	200.0mL

Preparation of Reducing Solution: Gently heat the NaOH solution and bring to boiling. Gas with 95% N₂ + 5% H₂. Cool to room temperature. Add the cysteine-HCl·H₂O and Na₂S·9H₂O. Anaerobically distribute into tubes. Cap with rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per 500.0mL:

Pyridoxine-HCl	0.1g
<i>p</i> -Aminobenzoic acid	0.05g
Calcium pantothenate	0.05g
Nicotinic acid	0.05g
Thioctic acid	0.05g
Biotin	0.02g
Folic acid	0.02g
Riboflavin	5.0mg

Thiamine-HCl	5.0mg
Vitamin B ₁₂	1.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Store solution in the dark at -10°C.

Wolfe's Modified Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
CaCl ₂ (anhydrous).....	0.1g
Co(NO ₃) ₂ ·6H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
AlK(SO ₄) ₂ (anhydrous).....	0.01g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ (anhydrous).....	1.0mg

Preparation of Wolfe's Modified Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Preparation of Medium: Add components, except reducing solution, to distilled/deionized water and bring volume to 1.0L. Gently heat and bring to boiling under 95% N₂ + 5% H₂. Continue boiling until color changes from blue to pink. Add the reducing solution. The pink color will disappear, indicating that the solution has been reduced. Distribute into tubes or flasks under 95% N₂ + 5% H₂ using anaerobic techniques. Cap tubes with rubber stoppers. Autoclave for 15 min at 15 psi pressure-121°C.

Use: For the cultivation and maintenance of thermophilic anaerobes such as *Thermoanaerobacter* species and some *Clostridium* species.

Thermoanaerobacter subterraneus Medium (DSMZ Medium 899)

Composition per liter:

Yeast extract	2.0g
MgCl ₂ ·6H ₂ O.....	1.0g
NH ₄ Cl	1.0g
NaCl	0.6g
Cysteine-HCl·H ₂ O	0.5g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
KCl.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.1g
Resazurin	0.5mg
D-Glucose solution.....	30.0mL
NaHCO ₃ solution	20.0mL
Trace mineral solution	10.0mL
Na ₂ S ₂ O ₃ solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.45g
---	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Autoclave under 100% N₂ for 15 min at 15 psi pressure-121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO ₃	4.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Glucose Solution:

Composition per 30.0mL:

D-Glucose.....	4.0g
----------------	------

Preparation of Glucose Solution: Add D-glucose to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S₂O₃ Solution:

Composition per 10.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O	2.5g
--	------

Preparation of Na₂S₂O₃ Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure-121°C. Cool to room temperature.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, glucose solution, Na₂S·9H₂O solution, and Na₂S₂O₃ solution, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Distribute into sterile tubes or bottles. Autoclave for 15 min at 15 psi pressure-121°C. Aseptically and anaerobically per 1.0L of medium add 20.0mL NaHCO₃ solution, 30.0mL glucose solution, 10.0mL Na₂S·9H₂O solution, and 10.0mL Na₂S₂O₃ solution. Mix thoroughly. The final pH should be 7.0.

Use: For the cultivation of *Thermoanaerobacter subterraneus*.

Thermoanaerobacter sulfurophilus Medium (DSMZ Medium 827)

Composition per 1055.0mL:

Sulfur, powdered.....	10.0g
NH ₄ Cl	0.33g

KCl.....	0.33g
KH ₂ PO ₄	0.33g
MgCl ₂ ·6H ₂ O.....	0.33g
CaCl ₂ ·2H ₂ O.....	0.33g
Resazurin	0.5mg
Glucose solution	25.0mL
Na ₂ S·9H ₂ O solution	15.0mL
Vitamin solution.....	10.0mL
Yeast extract solution.....	5.0mL
Trace elements solution SL-10	1.0mL
pH 7.0 ± 0.2 at 25°C	

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Glucose Solution:**Composition** per 50.0mL:

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Yeast Extract Solution:**Composition** per 10.0mL:

Yeast extract.....	1.0g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution SL-10:**Composition** per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition** per 20.0mL:

Na ₂ S·9H ₂ O.....	0.6g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas mixture. Add components, except Na₂S·9H₂O solution, glucose solution, vitamin solution, and yeast extract solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat to 90°C on each of 3 successive days. Aseptically and anaerobically add 25.0mL sterile glucose solution, 15.0mL sterile Na₂S·9H₂O solution, 10.0mL sterile vitamin solution, and 5.0mL sterile yeast extract solution. Mix thoroughly. Aseptically and anaerobically distribute to tubes or bottles. The pH should be 7.0.

Use: For the cultivation of *Thermoanaerobacter sulfurophilus*.

Thermoanaerobacter tengcongensis Medium (DSMZ Medium 965)

Composition per liter:

Soluble starch.....	10.0g
NaCl.....	2.0g
Tryptone.....	2.0g
NH ₄ Cl.....	1.0g
Yeast extract.....	1.0g
MgCl ₂ ·6H ₂ O.....	0.5g
Cysteine-HCl·H ₂ O.....	0.5g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
KCl.....	0.2g
CaCl ₂ ·2H ₂ O.....	0.05g
Resazurin	0.5mg
Thiosulfate solution	50.0mL
Trace elements solution	10.0mL
pH 7.5 ± 0.2 at 25°C	

Thiosulfate Solution:**Composition** per 50.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O.....	5.0g
---	------

Preparation of Thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution:**Composition** per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH

to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except thiosulfate solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to room temperature while sparging with 100% N₂ gas. Adjust pH to 7.5. Distribute into tubes or bottles under 100% N₂ gas. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically and anaerobically under 100% N₂ gas, add 50.0mL sterile thiosulfate solution per liter of medium.

Use: For the cultivation of *Thermoanaerobacter tengcongensis*.

Thermoanaerobacterium Medium (DSMZ Medium 903)

Composition per 1030.0mL:

KH ₂ PO ₄	0.5g
NaCl.....	0.4g
MgCl ₂ ·6H ₂ O.....	0.33g
Trypticase™.....	0.25g
CaCl ₂ ·2H ₂ O.....	0.05g
Resazurin.....	0.5mg
Sucrose solution.....	50.0mL
NaHCO ₃ solution.....	20.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
L-Cysteine solution.....	10.0mL
Selenite solution.....	1.0mL
Seven vitamin solution.....	1.0mL
Trace elements solution SL-10.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Sucrose Solution:

Composition per 50.0mL:

Sucrose.....	5.0g
--------------	------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine Solution:

Composition per 10.0mL:

L-Cysteine-HCl·H ₂ O.....	0.3g
--------------------------------------	------

Preparation of L-Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Selenite Solution:

Composition per liter:

NaOH.....	0.5g
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Selenite Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine hydrochloride.....	300.0mg
Thiamine-HCl·2H ₂ O.....	200.0mg
Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate.....	100.0mg
p-Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components, except seven vitamin solution, NaHCO₃ solution, sucrose solution, L-cysteine-HCl·H₂O solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.0. Distribute into anaerobe tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add, per liter, 10.0mL seven vitamin solution, 20.0mL NaHCO₃ solution, 50.0mL sucrose solution, 10.0mL L-cysteine-HCl·H₂O solution, and 10.0mL Na₂S·9H₂O solution. Mix thoroughly. The final pH should be 7.0.

Use: For the cultivation of *Thermoanaerobacterium polysaccharolyticum* and *Thermoanaerobacterium zeae*.

Thermoanaerobium brockii Medium

Composition per liter:

Pancreatic digest of casein.....	10.0g
Yeast extract.....	3.0g
K ₂ HPO ₄	1.5g
NH ₄ Cl.....	0.9g
NaCl.....	0.9g
KH ₂ PO ₄	0.75g
MgCl ₂ ·6H ₂ O.....	0.2g
Glucose solution.....	25.0mL
Na ₂ S·9H ₂ O (10% solution).....	10.0mL

Trace elements solution	9.0mL
Wolfe's Vitamin solution	5.0mL
Resazurin (0.025% solution).....	4.0mL
FeSO ₄ ·7H ₂ O (10% solution).....	0.03mL
pH 7.3 ± 0.2 at 25°C	

Glucose Solution:**Composition per 100.0mL:**

Glucose	20.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution:**Composition per liter:**

Nitritotriacetic acid	12.5g
NaCl	1.0g
FeCl ₃ ·4H ₂ O	0.2g
MnCl ₂ ·4H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
ZnCl ₂	0.1g
CuCl ₂	0.02g
Na ₂ SeO ₃	0.02g
CoCl ₂ ·6H ₂ O	0.017g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	100.0µg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 975.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. While still hot, aseptically add 25.0mL of the sterile glucose solution under 97% N₂ + 3% H₂. Adjust pH to 7.3 if necessary. Aseptically and anaerobically distribute into tubes. Cap with rubber stoppers.

Use: For the cultivation and maintenance of *Thermoanaerobium brockii*.

Thermoanaeromonas Medium (DSMZ Medium 963)

Composition per liter:

NaHCO ₃	5.0g
K ₂ HPO ₄	0.78g
KH ₂ PO ₄	0.75g
NH ₄ Cl	0.5g

Glucose	0.5g
Yeast extract	0.5g
MgSO ₄ ·7H ₂ O	0.25g
NaCl	0.2g
Na ₃ -EDTA	0.04g
CaCl ₂ ·2H ₂ O	0.03g
FeSO ₄ ·7H ₂ O	0.01g
Resazurin	0.5mg
Thiosulfate solution	20.0mL
Vitamin solution	10.0mL
Trace elements solution	10.0mL
Cysteine solution	10.0mL
pH 6.5 ± 0.2 at 25°C	

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Cysteine Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.25g
---------------------------------------	-------

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Thiosulfate Solution:**Composition per 20.0mL:**

Na ₂ S ₂ O ₃ ·5H ₂ O	1.24g
--	-------

Preparation of Thiosulfate Solution: Add $\text{Na}_2\text{S}_2\text{O}_3 \cdot 5\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Add components, except NaHCO_3 , vitamin solution, thiosulfate solution, and cysteine solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to 25°C while sparging with 80% N_2 + 20% CO_2 . Add solid NaHCO_3 . Adjust pH to 6.8–7.0. Distribute to anaerobe tubes or bottles under 80% N_2 + 20% CO_2 . Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add, per liter of medium, 10.0mL sterile vitamin solution, 10.0mL sterile cysteine solution, and 20.0mL sterile thiosulfate solution. Mix thoroughly. The final pH should be 6.5.

Use: For the cultivation of *Thermanaeromonas toyohensis*.

Thermoanaerovibrio Medium (DSMZ Medium 873)

Composition per liter:

NaHCO_3	0.8g
NH_4Cl	0.33g
KH_2PO_4	0.33g
$\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$	0.33g
$\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$	0.22g
KCl.....	0.33g
Yeast extract.....	0.25g
Peptone.....	0.25g
Resazurin.....	0.5mg
NaHCO_3 solution.....	20.0mL
$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ solution.....	10.0mL
Vitamin solution.....	10.0mL
Glucose solution.....	10.0mL
Calcium chloride solution.....	10.0mL
Magnesium chloride solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL
pH 7.0–7.3 at 25°C	

NaHCO_3 Solution:

Composition per 20.0mL:

NaHCO_3	2.0g
------------------------	------

Preparation of NaHCO_3 Solution: Add NaHCO_3 to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 80% N_2 + 20% CO_2 . Filter sterilize.

Magnesium Chloride Solution:

Composition per 10.0mL:

$\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$	0.33g
---	-------

Preparation of Magnesium Chloride Solution: Add 0.33g of $\text{MgCl}_2 \cdot 6\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N_2 . Filter sterilize.

Calcium Chloride Solution:

Composition per 10.0mL:

$\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$	0.22g
---	-------

Preparation of Calcium Chloride Solution: Add $\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N_2 . Filter sterilize.

Glucose Solution:

Composition per 10.0mL:

Glucose.....	3.0g
--------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N_2 . Filter sterilize.

$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ Solution:

Composition per 10.0mL:

$\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$	0.5g
---	------

Preparation of $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ Solution: Add $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N_2 . Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl- $2\text{H}_2\text{O}$	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B_{12}	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H_2 + 20% CO_2 . Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

$\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$	1.5g
$\text{CoCl}_2 \cdot 6\text{H}_2\text{O}$	190.0mg
$\text{MnCl}_2 \cdot 4\text{H}_2\text{O}$	100.0mg
ZnCl_2	70.0mg
$\text{Na}_2\text{MoO}_4 \cdot 2\text{H}_2\text{O}$	36.0mg
$\text{NiCl}_2 \cdot 6\text{H}_2\text{O}$	24.0mg
H_3BO_3	6.0mg
$\text{CuCl}_2 \cdot 2\text{H}_2\text{O}$	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$ to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N_2 + 20% CO_2 . Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N_2 + 20% CO_2 gas atmosphere. Add components, except NaHCO_3 solution, glucose solution, calcium chloride solution, magnesium chloride solution, $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ solution, vitamin solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 929.0mL. Mix thoroughly. Sparge with 80% N_2 + 20% CO_2 . Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL glucose solution, 10.0mL $\text{Na}_2\text{S} \cdot 9\text{H}_2\text{O}$ solution, 10.0mL magnesium chloride solution, 10.0mL calcium chloride solution, 10.0mL vitamin solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Adjust pH to 7.0–7.3 with 10.0mL NaHCO_3 solution. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Thermanaerovibrio velox* (*Thermosinus velox*).

Thermobacterium Medium

Composition per liter:

Agar	20.0g
(NH ₄) ₂ SO ₄	1.3g
Yeast extract.....	1.0g
Pancreatic digest of casein.....	1.0g
KH ₂ PO ₄	0.28g
MgSO ₄ ·7H ₂ O	0.247g
CaCl ₂ ·2H ₂ O	0.074g
FeCl ₃ ·6H ₂ O	0.019g
Salt solution	1.0mL

pH 8.5 + 0.2 at 25°C

Salt Solution:

Composition per liter:

Na ₂ B ₄ O ₇ ·10H ₂ O.....	4.4g
MnCl ₂ ·4H ₂ O.....	1.8g
ZnSO ₄ ·7H ₂ O	0.22g
CuCl ₂ ·H ₂ O	0.05g
Na ₂ MoO ₄ ·2H ₂ O.....	0.03g
VO ₂ SO ₄ ·2H ₂ O.....	0.03g

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 2.0 with H₂SO₄.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 11.0–12.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to solidify in a slanted position.

Use: For the cultivation and maintenance of *Thermomicrobium roseum*.

Thermobacteroides leptospartum Medium

Composition per 1168.1mL:

Yeast extract.....	2.0g
Trypticase™.....	2.0g
NaOH solution	1.0L
Glucose solution	113.0mL
Na ₂ S solution	22.6mL
Solution A	10.0mL
Mineral salts solution.....	10.0mL
Solution B	2.0mL
Resazurin solution.....	0.5mL

NaOH Solution:

Composition per liter:

NaOH	4.0g
------------	------

Preparation of NaOH Solution: Add NaOH to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Glucose Solution:

Composition per 100.0mL:

D-Glucose.....	5.0g
----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂ for 15 min. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S Solution:

Na ₂ S	2.5g
-------------------------	------

Preparation of Na₂S Solution: Gently heat 100.0mL of distilled/deionized water to 100°C. Boil for 5 min. Sparge with 100% N₂ for 15

min. Add the Na₂S. Mix thoroughly. Sparge with 100% N₂ for 10 min. Autoclave for 15 min at 15 psi pressure–121°C.

Solution A:

Composition per liter:

NH ₄ Cl	100.0g
MgCl ₂ ·H ₂ O	100.0g
CaCl ₂ ·2H ₂ O	40.0g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 4 with HCl.

Mineral Salts Solution:

Composition per liter:

EDTA·2H ₂ O.....	0.5g
CoCl ₂ ·H ₂ O	0.15g
MnCl ₂ ·4H ₂ O	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
ZnCl ₂	0.1g
AlCl ₃ ·H ₂ O	40.0mg
Na ₂ WO ₄ ·2H ₂ O.....	30.0mg
CuCl ₂ ·2H ₂ O	20.0mg
NiSO ₄ ·H ₂ O.....	20.0mg
H ₂ SeO ₃	10.0mg
H ₃ BO ₄	10.0mg
NaMoO ₄ ·2H ₂ O.....	10.0mg

Preparation of Mineral Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3 with HCl.

Solution B:

Composition per liter:

K ₂ HPO ₄ ·3H ₂ O	200.0g
--	--------

Preparation of Solution B: Add K₂HPO₄·3H₂O to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Resazurin Solution:

Composition per 100.0mL:

Resazurin	0.2g
-----------------	------

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Sparge 1.0L of NaOH solution with 100% CO₂ for 30 min. Add 2.0g of yeast extract and 2.0g of Trypticase™. Mix thoroughly. Add 10.0mL of solution A, 2.0mL of solution B, 0.5mL of resazurin solution, and 10.0mL of mineral salts solution with pipets which have been flushed a few times with 100% N₂. Mix thoroughly. Anaerobically distribute 9.0mL volumes into anaerobic tubes fitted with butyl rubber stoppers. Autoclave for 15 min at 15 psi pressure–121°C. One hour prior to inoculation, add 1.0mL of sterile glucose solution and 0.2mL of sterile Na₂S solution to each 9.0mL of medium.

Use: For the cultivation of *Thermobacteroides leptospartum*.

Thermobacteroides proteolyticus Medium

Composition per 1010.0mL:

NaHCO ₃	5.0g
Pancreatic digest of casein.....	2.0g
Yeast extract.....	2.0g
MgCl ₂ ·6H ₂ O	1.0g
NH ₄ Cl	1.0g
CaCl ₂ ·2H ₂ O	0.4g

K ₂ HPO ₄	0.4g
Na ₂ S·9H ₂ O.....	0.3g
Resazurin	1.0mg
Trace elements solution	10.0mL
pH 7.0 ± 0.2 at 25°C	

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
NiCl ₂ ·6H ₂ O.....	0.025g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Thermobacteroides proteolyticus*.

Thermococcus celer* Medium*Composition per liter:**

NaCl.....	40.0g
Sulfur.....	10.0g
Yeast extract.....	2.0g
(NH ₄) ₂ SO ₄	1.3g
KH ₂ PO ₄	0.28g
MgSO ₄ ·7H ₂ O.....	0.25g
CaCl ₂ ·2H ₂ O.....	0.07g
FeCl ₂ ·2H ₂ O.....	0.02g
NaB ₄ O ₇ ·10H ₂ O.....	4.5mg
MnCl ₂ ·4H ₂ O.....	1.8mg
Resazurin.....	1.0mg
ZnSO ₄ ·7H ₂ O.....	0.22mg
CuCl ₂ ·2H ₂ O.....	0.05mg
NaMoO ₄ ·2H ₂ O.....	0.03mg
VOSO ₄ ·2H ₂ O.....	0.03mg
CoSO ₄	0.01mg
Na ₂ S·9H ₂ O solution.....	10.0mL
pH 5.8 ± 0.2 at 25°C	

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.8. Do not autoclave. Sterilize by steaming at 100°C for 30 min on 3 consecutive days. Before inoculation, add 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly.

Use: For the cultivation of *Thermococcus celer*.

Thermococcus celer* Medium*Composition per liter:**

NaCl.....	40.0g
Sulfur, powdered.....	5.0g
(NH ₄) ₂ SO ₄	1.3g
KH ₂ PO ₄	0.28g
MgSO ₄ ·7H ₂ O.....	0.25g
CaCl ₂ ·2H ₂ O.....	0.07g
CuCl ₂ ·2H ₂ O.....	0.05g
FeCl ₃ ·6H ₂ O.....	0.02g
Na ₂ B ₄ O ₇ ·10H ₂ O.....	4.5mg
MnCl ₂ ·4H ₂ O.....	1.8mg
Resazurin.....	1.0mg
ZnSO ₄ ·7H ₂ O.....	0.22mg
Na ₂ MoO ₄ ·2H ₂ O.....	0.03mg
VOSO ₄ ·2H ₂ O.....	0.03mg
CoSO ₄ ·7H ₂ O.....	0.01mg
Yeast extract solution.....	2.0g
Na ₂ S·9H ₂ O solution.....	10.0mL
pH 5.8 ± 0.2 at 25°C	

Preparation of Sulfur: Add 10.0g of powdered sulfur to a flask and sterilize by steaming for 3 hr on 3 consecutive days.

Yeast Extract Solution:**Composition per 20.0mL:**

Yeast extract.....	2.0g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for a few minutes. Do not autoclave.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except sulfur, yeast extract solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 5.0g of sterile sulfur, 10.0mL of sterile yeast extract solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Thermococcus celer*.

***Thermococcus chitinophagus* Medium
(DSMZ Medium 766)****Composition per liter:**

Chitin, purified.....	4.0g
(NH ₄) ₂ SO ₄	0.5g
KH ₂ PO ₄	0.5g

Resazurin	1.0mg
(NH ₄) ₂ Ni(SO ₄) ₂	0.3mg
Na ₂ WO ₄ ·2H ₂ O	0.15mg
Na ₂ SeO ₄	0.15mg
Synthetic seawater	485.0mL
Trace elements solution SL-6	15.0mL
Na ₂ S·9H ₂ O solution	10.0mL
NaHCO ₃ solution	10.0mL

pH 6.7 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	0.2g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution SL-6:

Composition per liter:

MnCl ₂ ·4H ₂ O.....	0.5g
H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Synthetic Seawater:

Composition per liter:

NaCl	23.477g
MgCl ₂ ·6H ₂ O.....	4.981g
Na ₂ SO ₄	3.917g
CaCl ₂	1.12g
KCl.....	664.0mg
NaHCO ₃	192.0mg
H ₃ BO ₃	26.0mg
SrCl ₂	24.0mg
KBr.....	6.0mg
NaF.....	3.0mg

Preparation of Synthetic Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Purified Chitin: Cool 200.0mL of 37% HCl to 4°C. Add 20.0g chitin (practical grade from crab shells) to the cooled HCl. Mix thoroughly. Stir for 60 min at 4°C. Pour the suspension into 1 liter of distilled water, pre-cooled to 4°C. Filter through filter paper. Wash the residue five times with 500.0mL distilled water. Resuspend in 1.0L of distilled water. Neutralize the suspension with 10.0mL of 5M KOH to achieve a final pH of 6.5. Filter and wash with 3.0L of distilled water to remove KCl. Allow to air dry.

Preparation of Medium: Add components, except NaHCO₃ solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 980.0mL. Gently heat and bring to boiling. Boil for 5 min. Cool to 25°C while sparging with 100% N₂. Add 10.0mL NaHCO₃ solution. Adjust pH to 6.7. Distribute the medium into Hungate tubes under an atmosphere of 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Reduce the medium by adding 10.0mL Na₂S·9H₂O solution. Aseptically and anaerobically distribute to sterile tubes or bottles.

Use: For the cultivation of *Thermococcus chitinophagus*.

Thermococcus litoralis Medium

Composition per liter:

NaCl.....	25.0g
Sulfur	10.0g
(NH ₄) ₂ SO ₄	1.3g
Yeast extract.....	1.0g
Peptone	0.5g
KH ₂ PO ₄	0.28g

K ₂ HPO ₄	0.14g
Resazurin	0.001g
Na ₂ SeO ₃	0.001mg
NiCl ₂ ·6H ₂ O	0.001mg
Trace elements solution	10.0mL
Vitamin solution	10.0mL
Cysteine solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature. Adjust pH to 7.0.

Cysteine Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.3g
---------------------------------------	------

Preparation of Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add components, except Fildes enrichment solution, NaHCO₃, vitamin solution, cysteine solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 5 min. Cool to room temperature under 100% N₂. Add 1.0g solid NaHCO₃. Adjust pH to 7.2. Sterilize at 100°C for 3 hr on 3 consecutive days. Aseptically and anaerobically add 10.0mL vitamin solution, 10.0mL cysteine solution, and 10.0mL Na₂S·9H₂O solution. Mix thoroughly. Adjust pH to 7.2. Aseptically and anaerobically distribute to sterile tubes or bottles.

Use: For the cultivation of *Thermococcus* spp.

Thermococcus profundus Medium

Composition per 1010.0mL:

NaCl	25.0g
Sulfur	10.0g
Peptone	5.0g
Yeast extract	1.0g
Resazurin	1.0mg
Salt base solution	1.0L
Na ₂ S·9H ₂ O solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Sulfur: Sterilize powdered elemental sulfur by steaming for 3 hr at 0 psi pressure–100°C on 3 successive days.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**Na₂S·9H₂O 0.5g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Salt Base Solution:**Composition per liter:**

(NH ₄) ₂ SO ₄	1.3g
KH ₂ PO ₄	0.28g

Yeast Extract Solution:**Composition per 10.0mL:**

Yeast extract..... 1.0g

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**Na₂S·9H₂O 0.5g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Prior to use, neutralize solution by dropwise addition of sterile 1N HCl.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl 10.0mg
 Calcium DL-pantothenate 5.0mg
 Lipoic acid 5.0mg
 Nicotinic acid 5.0mg
p-Aminobenzoic acid 5.0mg
 Riboflavin 5.0mg
 Thiamine-HCl 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except sodium lactate solution, yeast extract solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Sparge with 100% N₂. Anaerobically distribute into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add to 1.0L of medium 20.0mL of sterile sodium lactate solution, 10.0mL of sterile yeast extract solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Thermodesulfobacterium commune*.

***Thermodesulfobium* Medium (DSMZ Medium 1005)**

Composition per liter:

Na₂SO₄ 2.8g
 KH₂PO₄ 0.78g
 K₂HPO₄ 0.75g
 NH₄Cl 0.5g
 MgSO₄·7H₂O 0.25g
 NaCl 0.2g
 Na₃-EDTA 0.04g
 CaCl₂·2H₂O 0.03g
 Na-acetate 0.15g
 FeSO₄·7H₂O 0.01g
 Vitamin solution 10.0mL
 Trace elements solution SL-9 10.0mL
 Cysteine solution 10.0mL

pH 5.7 ± 0.2 at 25°C

Cysteine Solution:**Composition per 10.0mL:**L-Cysteine-HCl·2H₂O 0.25g

Preparation of Cysteine Solution: Add L-cysteine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Trace Elements Solution SL-9:**Composition per liter:**

MgSO₄·7H₂O 3.0g
 Nitrilotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoSO₄·7H₂O 0.18g
 ZnSO₄·7H₂O 0.18g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 H₃BO₃ 0.01g
 Na₂MoO₄·4H₂O 0.01g
 CuSO₄·5H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution SL-9: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except vitamin and cysteine solutions, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to room temperature while sparging with a gas mixture of 80% N₂ + 20% CO₂. Adjust the pH to 5.5 with 10N H₂SO₄. Dispense under the same gas atmosphere in culture vessels (e.g., 20.0mL of the medium into 50mL serum bottles). Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add vitamin solution. Mix thoroughly. Prior to inoculation change atmosphere to 80% H₂ and 20% CO₂ gas mixture. Add the cysteine solution. Adjust pH to 5.5–6.0 if necessary. After inoculation pressurize vials to 0.5 bar overpressure with 80% H₂ and 20% CO₂ gas mixture.

Use: For the cultivation of *Thermodesulfobium narugense*.

***Thermodesulforhabdus* Medium**

CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O.....	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O.....	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
p-Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under an oxygen-free 100% N₂. Add components, except vitamin solution, Na-thioglycolate, NaHCO₃, and L-Ascorbic acid, to distilled/deionized water and bring volume to 990.0L. Mix thoroughly. Gently heat and bring to boiling. Cool while sparging with 100% N₂. Add 0.2g Na-thioglycolate, 1.3g NaHCO₃, and 0.2g L-ascorbic acid. Mix thoroughly. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 10.0mL sterile vitamin solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Thermodesulfobivrio yellowstonii*.

Thermofilum pendens Medium

Composition per liter:

Sulfur, powdered.....	10.0g
(NH ₄) ₂ SO ₄	1.3g
KH ₂ PO ₄	0.28g
MgSO ₄ ·7H ₂ O.....	0.25g
CaCl ₂ ·2H ₂ O.....	0.07g
Na ₂ S·9H ₂ O.....	0.3g
FeCl ₃ ·6H ₂ O.....	0.02g
Na ₂ B ₄ O ₇ ·10H ₂ O.....	4.5mg
MnCl ₂ ·4H ₂ O.....	1.8mg
ZnSO ₄ ·7H ₂ O.....	0.22mg
CuCl ₂ ·2H ₂ O.....	0.05mg
Na ₂ MoO ₄ ·2H ₂ O.....	0.03mg
VOSO ₄ ·2H ₂ O.....	0.03mg
CoSO ₄ ·7H ₂ O.....	0.01mg
Yeast extract solution.....	20.0mL
Sucrose solution.....	20.0mL
Polar lipid fraction.....	6.0–12.0mL

pH 5.2 ± 0.2 at 25°C

Yeast Extract Solution:

Composition per 20.0mL:

Yeast extract.....	2.0g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for a few minutes. Sparge with 100% N₂. Do not autoclave.

Sucrose Solution:

Composition per 20.0mL:

Sucrose.....	2.0g
--------------	------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Preparation of Sulfur: Add 10.0g of powdered sulfur to a flask and sterilize by steaming for 3 hr on 3 consecutive days.

Polar Lipid Fraction:

Composition per 20.0mL:

<i>Thermoproteus tenax</i> cells (wet weight).....	10.0g
Chloroform.....	500.0mL
Acetone.....	500.0mL
Methanol.....	500.0mL
TA buffer solution.....	80.0mL
Chloroform/methanol 1:1 (v/v).....	20.0mL

TA Buffer Solution:

Composition per 100.0mL:

Tris-HCl.....	0.79g
β-mercaptoethanol.....	0.78g
NH ₄ Cl.....	0.118g
EDTA.....	0.029g

Preparation of TA Buffer Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Polar Lipid Fraction: Add 10.0g (wet weight) of *Thermoproteus tenax* cells to 20.0mL of TA buffer solution. Mix thoroughly. Sonicate for 2 min. Centrifuge at 20,000 rpm for 20 min. Resuspend pellet in 20.0mL of fresh TA buffer solution. Recentrifuge at 20,000 rpm for 20 min. Again resuspend pellet in 20.0mL of fresh TA buffer solution. Recentrifuge at 20,000 rpm for 20 min. Resuspend pellet in 20.0mL of fresh TA buffer solution. Centrifuge at 5,000 rpm for

5 min. Decant the supernatant solution and discard the pellet. Extract the supernatant solution twice with 20.0mL of chloroform/methanol (1:1) each time. Chromatograph the extract on a SIL-LC (325 mesh) silicic acid column (20cm × 2cm) using 500.0mL of chloroform, followed by 500.0mL of acetone, followed by 500.0mL of methanol. The methanol fraction is further purified by DEAE chromatography using chloroform/methanol 1:1 and methanol.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except yeast extract solution, sucrose solution, sulfur, and polar lipid fraction, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Sparge with 100% N₂. Anaerobically distribute into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add to 1.0L of medium 20.0mL of sterile yeast extract solution, 20.0mL of sterile sucrose solution, 10.0g of sterile sulfur, and 6.0–12.0mL of sterile polar lipid fraction. Mix thoroughly.

Use: For the cultivation and maintenance of *Thermofilum pendens*.

Thermogymnomonas Medium (DMSZ Medium 1141)

Composition per liter:

KH ₂ PO ₄	3.0g
(NH ₄) ₂ SO ₄	0.2g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.25g
Glucose solution.....	50.0mL
Yeast extract solution.....	50.0mL

pH 3.0 ± 0.2 at 25°C

Glucose Solution:

Composition per 50.0mL:

Glucose.....	10.0g
--------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Yeast Extract Solution:

Composition per 50.0mL:

Yeast extract.....	1.0g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose and yeast extract solutions, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add glucose and yeast extract solutions. Mix thoroughly. Adjust pH to 3.0 with sterile 10N H₂SO₄.

Use: For the cultivation of *Thermogymnomonas* spp.

Thermoleophilum Medium

Composition per liter:

NaNO ₂	2.0g
Na ₂ HPO ₄	0.21g
MgSO ₄ ·7H ₂ O.....	0.2g
KCl.....	0.04g
NaH ₂ PO ₄	90.0mg
CaCl ₂	15.0mg
FeSO ₄ ·7H ₂ O.....	1.0mg
ZnSO ₄ ·7H ₂ O.....	70.0μg

H ₃ BO ₃	10.0μg
MnSO ₄ ·5H ₂ O.....	10.0μg
MoO ₃	10.0μg
CuSO ₄ ·5H ₂ O.....	5.0μg
<i>n</i> -Heptadecane.....	1.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except *n*-heptadecane, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 1.0mL of *n*-heptadecane. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Thermoleophilum album* and *Thermoleophilum minutum*.

Thermomicrobium fosteri Agar

Composition per liter:

Agar.....	20.0g
NH ₄ Cl.....	2.0g
Na ₂ HPO ₄	0.21g
MgSO ₄ ·7H ₂ O.....	0.2g
NaH ₂ PO ₄	0.09g
KCl.....	0.04g
CaCl ₂	0.015g
ZnSO ₄ ·7H ₂ O.....	70.0μg
H ₃ BO ₃	10.0μg
MnSO ₄ ·5H ₂ O.....	10.0μg
MoO ₃	10.0μg
CuSO ₄ ·5H ₂ O.....	5.0μg
FeSO ₄ ·7H ₂ O.....	1.0mg
Heptadecane, filter sterilized.....	20.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except heptadecane, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 20.0mL of sterile heptadecane. Mix thoroughly. Aseptically distribute into sterile tubes. Cool tubes rapidly in a slanted position.

Use: For the cultivation and maintenance of *Thermomicrobium fosteri*.

Thermomicrobium fosteri Broth

Composition per liter:

NH ₄ Cl.....	2.0g
Na ₂ HPO ₄	0.21g
MgSO ₄ ·7H ₂ O.....	0.2g
NaH ₂ PO ₄	0.09g
KCl.....	0.04g
CaCl ₂	0.015g
ZnSO ₄ ·7H ₂ O.....	70.0μg
H ₃ BO ₃	10.0μg
MnSO ₄ ·5H ₂ O.....	10.0μg
MoO ₃	10.0μg
CuSO ₄ ·5H ₂ O.....	5.0μg
FeSO ₄ ·7H ₂ O.....	1.0mg
Heptadecane, filter sterilized.....	20.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except heptadecane, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add

20.0mL of sterile heptadecane. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Thermomicrobium fosteri*.

***Thermomicrobium roseum* Agar
(DSMZ Medium 592)**

Composition per liter:

Agar	20.0g
(NH ₄) ₂ SO ₄ (sublimed)	1.3g
Yeast extract	1.0g
Tryptone	1.0g
MgSO ₄ ·7H ₂ O	0.247g
KH ₂ PO ₄	0.280g
CaCl ₂ ·2H ₂ O	0.074g
FeCl ₃ ·6H ₂ O	0.019g
Salt solution	1.0mL

pH 8.5 ± 0.2 at 25°C

Salt Solution:

Composition per liter:

Na ₂ B ₄ O ₇ ·10H ₂ O	4.4g
MnCl ₂ ·4H ₂ O	1.8g
ZnSO ₄ ·7H ₂ O	0.22g
CuCl ₂ ·H ₂ O	0.05g
Na ₂ MoO ₄ ·4H ₂ O	0.03g
VO ₂ SO ₄ ·2H ₂ O	0.03g

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Adjust pH to 2.0. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.5. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into Petri dishes or pour short slants with a long butt in screw-capped tubes.

Use: For the cultivation and maintenance of *Thermomicrobium roseum*.

***Thermomicrobium roseum* Medium
(DSMZ Medium 592)**

Composition per liter:

(NH ₄) ₂ SO ₄ (sublimed)	1.3g
Yeast extract	1.0g
Tryptone	1.0g
MgSO ₄ ·7H ₂ O	0.247g
KH ₂ PO ₄	0.280g
CaCl ₂ ·2H ₂ O	0.074g
FeCl ₃ ·6H ₂ O	0.019g
Salt solution	1.0mL

pH 8.5 ± 0.2 at 25°C

Salt Solution:

Composition per liter:

Na ₂ B ₄ O ₇ ·10H ₂ O	4.4g
MnCl ₂ ·4H ₂ O	1.8g
ZnSO ₄ ·7H ₂ O	0.22g
CuCl ₂ ·H ₂ O	0.05g
Na ₂ MoO ₄ ·4H ₂ O	0.03g
VO ₂ SO ₄ ·2H ₂ O	0.03g

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Adjust pH to 2.0. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Thermomicrobium roseum*.

***Thermomonospora* Medium**

Composition per liter:

Sucrose	30.0g
Agar	15.0g
Casamino acids	6.0g
NaNO ₃	3.0g
Yeast extract	2.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
KCl	0.5g
FeSO ₄ ·7H ₂ O	0.01g

pH 8.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Thermomonospora alba* and *Thermomonospora mesophila*.

Thermophilic *Bacillus* Medium

Composition per liter:

Peptone	8.0g
Yeast extract	4.0g
NaCl	3.0g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of a variety of thermophilic *Bacillus* species.

Thermophilic Hydrogen-Bacteria Medium

Composition per 1000.5mL:

Na ₂ HPO ₄ ·12H ₂ O	4.5g
KH ₂ PO ₄	1.5g
NaCl	1.0g
NH ₄ NO ₃	1.0g
MgSO ₄ ·7H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	10.0mg
FeSO ₄ ·7H ₂ O	10.0mg
Trace elements solution	0.5mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

ZnSO ₄ ·7H ₂ O	28.0mg
CoCl ₂ ·6H ₂ O	4.0mg
H ₃ BO ₃	4.0mg
MnSO ₄ ·5H ₂ O	4.0mg
MoO ₃	4.0mg
CuSO ₄ ·5H ₂ O	2.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Incubate cultures in 5% O₂ + 80% H₂ + 10% CO₂.

Use: For the cultivation and maintenance of *Hydrogenobacter thermophilus* and *Pseudomonas* species.

Thermophilic Maintenance Medium

Composition per liter:

NaHCO ₃	3.0g
Yeast extract.....	1.0g
NH ₄ Cl.....	1.0g
KH ₂ PO ₄	0.4g
K ₂ HPO ₄	0.4g
MgSO ₄ ·7H ₂ O.....	0.1g
Cysteine-sulfide reducing solution.....	40.0mL
Fructose solution.....	25.0mL
Wolfe's vitamin solution.....	10.0mL
Wolfe's mineral solution.....	10.0mL
Resazurin (0.01% solution).....	1.0mL

pH 5.6 ± 0.2 at 25°C

Cysteine-Sulfide Reducing Solution:

Composition per 100.0mL:

L-Cysteine-HCl·H ₂ O.....	1.25g
Na ₂ S·9H ₂ O.....	1.25g

Preparation of Cysteine-Sulfide Reducing Solution: Add L-cysteine-HCl·H₂O and Na₂S·9H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Fructose Solution:

Composition per 100.0mL:

Fructose.....	20.0g
---------------	-------

Preparation of Fructose Solution: Add fructose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	0.01g
Thiamine-HCl.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
Calcium pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Cyanocobalamin.....	100.0µg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·H ₂ O.....	0.5g
FeSO ₄ ·7H ₂ O.....	0.1g
CoCl ₂ ·6H ₂ O.....	0.1g
CaCl ₂	0.1g
ZnSO ₄ ·7H ₂ O.....	0.1g

CuSO ₄ ·5H ₂ O.....	0.01g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Preparation of Medium: Add components, except cysteine-sulfide reducing solution and fructose solution, to distilled/deionized water and bring volume to 935.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling until resazurin turns colorless, indicating reduction. Add 40.0mL of the cysteine-sulfide reducing solution. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C under O₂-free 90% N₂ + 10% CO₂. Add 25.0mL of the sterile fructose solution. Adjust the pH to 5.6 if necessary. Aseptically and anaerobically distribute into sterile tubes. Cap with rubber stoppers.

Use: For the cultivation and maintenance of a variety of thermophilic anaerobes, including *Clostridium thermoautotrophicum*.

Thermophilic Methanosarcina Medium

Composition per 1021.0mL:

NaCl.....	2.25g
Pancreatic digest of casein.....	2.0g
Yeast extract.....	2.0g
NaHCO ₃	0.85g
MgSO ₄ ·7H ₂ O.....	0.5g
NH ₄ Cl.....	0.5g
K ₂ HPO ₄	0.348g
CaCl ₂ ·2H ₂ O.....	0.25g
KH ₂ PO ₄	0.227g
FeSO ₄ ·7H ₂ O.....	2.0mg
Resazurin.....	1.0mg
Rumen fluid, clarified.....	50.0mL
Methanol solution.....	10.0mL
Vitamin solution.....	10.0mL
L-Cysteine-HCl·H ₂ O solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL

pH 6.5–6.8 at 25°C

Methanol Solution:

Composition per 10.0mL:

Methanol.....	5.0mL
---------------	-------

Preparation of Methanol Solution: Add methanol to distilled/deionized water and bring volume to 10.0mL. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Calcium DL-pantothenate.....	5.0mg
Lipoic acid.....	5.0mg
Nicotinic acid.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Riboflavin.....	5.0mg
Thiamine-HCl.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 80% N₂ + 20% CO₂.

L-Cysteine-HCl-H₂O Solution:

Composition per 10.0mL:

L-Cysteine-HCl-H₂O 0.3g

Preparation of L-Cysteine-HCl-H₂O Solution: Add L-cysteine-HCl-H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure-121°C.

Na₂S-9H₂O Solution:

Composition per 10.0mL:

Na₂S-9H₂O 0.3g

Preparation of Na₂S-9H₂O Solution: Add Na₂S-9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure-121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 190.0mg
 MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 Na₂MoO₄·2H₂O 36.0mg
 NiCl₂·6H₂O 24.0mg
 H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂.

Preparation of Medium: Add components, except methanol solution, L-cysteine-HCl-H₂O solution, and Na₂S-9H₂O solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Sparge under 80% N₂ + 20% CO₂ for 3-4 min. Autoclave for 15 min at 15 psi pressure-121°C. Aseptically and anaerobically add 20.0mL of sterile vitamin solution, 10.0mL of sterile L-cysteine-HCl-H₂O solution, and 10.0mL of sterile Na₂S-9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile screw-capped bottles under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Methanosarcina thermophila*.

Thermophilic Methanotrix Medium

Composition per liter:

NH₄Cl 0.5g
 K₂HPO₄ 0.4g
 MgCl₂·6H₂O 0.1g
 Resazurin 1.0mg
 NaHCO₃ solution 20.0mL
 Trace elements solution 10.0mL
 CaCl₂·2H₂O solution 10.0mL
 Sodium acetate solution 10.0mL
 Vitamin solution 10.0mL
 Coenzyme M solution 10.0mL
 Na₂S-9H₂O solution 5.0mL

pH 6.5 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO₃ 1.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ for 15 min. Autoclave for 15 min at 15 psi pressure-121°C.

Trace Elements Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g
 Nitrilotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoSO₄·7H₂O 0.18g
 ZnSO₄·7H₂O 0.18g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 CuSO₄·5H₂O 0.01g
 H₃BO₃ 0.01g
 Na₂MoO₄·2H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to approximately 500.0mL of distilled/deionized water. Dissolve by adding KOH and adjust pH to 6.5. Add remaining components. Bring volume to 1.0L with additional distilled/deionized water. Adjust pH to 7.0 with KOH.

CaCl₂·2H₂O Solution:

Composition per 10.0mL:

CaCl₂·2H₂O 0.1g

Preparation of CaCl₂·2H₂O Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure-121°C.

Sodium Acetate Solution:

Composition per 10.0mL:

Sodium acetate 3.3g

Preparation of Sodium Acetate Solution: Add sodium acetate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure-121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg
 Calcium DL-pantothenate 5.0mg
 Lipoic acid 5.0mg
 Nicotinic acid 5.0mg
 p-Aminobenzoic acid 5.0mg
 Riboflavin 5.0mg
 Thiamine-HCl 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂.

Coenzyme M Solution:**Composition per 10.0mL:**

Coenzyme M..... 0.142g

Preparation of Coenzyme M Solution: Add coenzyme M to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**Na₂S·9H₂O..... 0.5g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except NaHCO₃ solution, CaCl₂·2H₂O solution, sodium acetate solution, vitamin solution, coenzyme M solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 935.0mL. Gently heat and bring to boiling. Continue boiling for 10 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Gas the medium until the pH reaches 5.8. Anaerobically distribute the medium into serum bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile NaHCO₃ solution, 10.0mL of sterile CaCl₂·2H₂O solution, 10.0mL of sterile sodium acetate solution, 10.0mL of sterile vitamin solution, 10.0mL of sterile coenzyme M solution, and 5.0mL of sterile Na₂S·9H₂O solution. Bring gas atmosphere in each bottle to 30% CO₂.

Use: For the cultivation and maintenance of *Methanotherix thermophila*.

Thermophilic Spirochete Medium**Composition per 1012.0mL:**

Solution A..... 920.0mL

Solution D..... 50.0mL

Solution E (Vitamin solution)..... 20.0mL

Solution F..... 10.0mL

Solution G..... 10.0mL

Solution B (Trace elements solution SL-10)..... 1.0mL

Solution C (Selenite-tungstate solution)..... 1.0mL

pH 6.9 ± 0.2 at 25°C

Solution A:**Composition per 920.0mL:**

NaCl..... 4.0g

MgCl₂·6H₂O..... 0.8g

KCl..... 0.5g

NH₄Cl..... 0.3gKH₂PO₄..... 0.2gCaCl₂·2H₂O..... 0.03g

Resazurin..... 1.0mg

Preparation of Solution A: Prepare and dispense under 80% N₂ + 20% CO₂. Add components to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for a few minutes. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Anaerobically distribute into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):**Composition per liter:**FeCl₂·4H₂O..... 1.5gCoCl₂·6H₂O..... 190.0mgMnCl₂·4H₂O..... 100.0mgZnCl₂..... 70.0mgNa₂MoO₄·2H₂O..... 36.0mgNiCl₂·6H₂O..... 24.0mgH₃BO₃..... 6.0mgCuCl₂·2H₂O..... 2.0mg

HCl (25% solution)..... 10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C (Selenite-Tungstate Solution):**Composition per liter:**

NaOH..... 0.5g

Na₂SeO₃·5H₂O..... 3.0mgNa₂WO₄·2H₂O..... 4.0mg**Preparation of Solution C (Selenite-Tungstate Solution):**

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D:**Composition per 50.0mL:**NaHCO₃..... 3.0mg

Preparation of Solution D: Add NaHCO₃ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):**Composition per liter:**

Pyridoxine-HCl..... 10.0mg

Calcium DL-pantothenate..... 5.0mg

Lipoic acid..... 5.0mg

Nicotinic acid..... 5.0mg

p-Aminobenzoic acid..... 5.0mg

Riboflavin..... 5.0mg

Thiamine-HCl..... 5.0mg

Biotin..... 2.0mg

Folic acid..... 2.0mg

Vitamin B₁₂..... 0.1mg**Preparation of Solution E (Vitamin Solution):**

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:**Composition per 10.0mL:**

Starch, soluble..... 1.0g

Preparation of Solution F: Add starch to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G:**Composition per 10.0mL:**Na₂S·9H₂O..... 0.3g

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂. To 920.0mL of sterile solution A, aseptically and anaerobically add 1.0mL of sterile solution B, 1.0mL of sterile

solution C, 50.0mL of sterile solution D, 20.0mL of sterile solution E, 10.0mL of sterile solution F, and 10.0mL of sterile solution G in that order. Mix thoroughly.

Use: For the cultivation and maintenance of *Spirochaeta thermophila*.

Thermophilic Streptomyces Medium

Composition per liter:

Agar	20.0g
Maltose.....	20.0g
Soybean meal.....	5.0g
Yeast extract.....	2.0g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of thermophilic streptomycetes.

Thermophilic Streptomyces Medium

Composition per liter:

Soybean oil meal.....	20.0g
Glucose	10.0g
NaCl.....	10.0g
Pancreatic digest of casein.....	10.0g
Silica solution (Ludox)	500.0mL

Preparation of Medium: Add components, except silica solution, to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat until dissolved. Autoclave this solution and the 500.0mL of silica solution separately for 15 min at 15 psi pressure–121°C. Cool to 25°C. Adjust the pH of both solutions to 7.0. Aseptically combine the two sterile solutions. Mix thoroughly. Pour into sterile Petri dishes in 40.0mL volumes.

Use: For the isolation and cultivation of thermophilic streptomycetes.

Thermophilic Streptomyces Medium IA

Composition per liter:

Agar	20.0g
Sucrose.....	5.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	3.0g
MgSO ₄ ·7H ₂ O	0.5g
FeSO ₄ ·7H ₂ O.....	0.01g
Dung extract.....	5.0mL
Molasses.....	5.0mL
Trace elements solution	1.0mL

pH 7.2 ± 0.2 at 25°C

Dung Extract:

Composition per 100.0mL:

Sheep manure, dried	25.0g
---------------------------	-------

Preparation of Dung Extract: Add dried sheep manure to 100.0mL of tap water. Mix thoroughly. Autoclave for 30 min at 15 psi pressure–121°C. Filter through Whatman #1 filter paper. Store at 4°C under toluene.

Trace Elements Solution:

Composition per 100.0mL:

Fe(NH ₄) ₂ SO ₄	0.1g
ZnSO ₄	0.1g

MnSO ₄	0.05g
CoSO ₄	0.01g
H ₃ BO ₃	0.01g
CuSO ₄	8.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of thermophilic streptomycetes.

Thermoplasma acidophilum Growth Medium 7B

Composition per liter:

Sucrose.....	17.0g
(NH ₄) ₂ SO ₄68g
KOH.....	1.22g
Yeast extract.....	1.0g
MgSO ₄	0.5g
CaCl ₂ ·2H ₂ O	0.25g
H ₃ PO ₄ solution.....	1.5mL
Antifoam A	10.0μL

pH 1.60 ± 0.2 at 25°C

H₃PO₄ Solution:

Composition per 100.0mL:

H ₃ PO ₄	85.0g
--------------------------------------	-------

Preparation of H₃PO₄ Solution: Add H₃PO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except Antifoam A, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 1.60 with 50% H₂SO₄. Distribute into tubes or flasks. Sterilize by heating to 100°C for 30 min. Allow to stand at room temperature for 24 hr. Add 10.0μL of Antifoam A per liter.

Use: For the cultivation of *Thermococcus acidophilum*.

Thermoplasma acidophilum Medium

Composition per liter:

(NH ₄) ₂ SO ₄	1.32g
Yeast extract solution.....	1.0g
KH ₂ PO ₄	0.372g
MgSO ₄ ·7H ₂ O.....	0.247g
CaCl ₂ ·2H ₂ O	0.074g
Glucose solution	20.0mL
Yeast extract solution.....	10.0mL
Trace elements solution	10.0mL

pH 1.0–2.0 at 25°C

Glucose Solution:

Composition per 20.0mL:

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract.....	1.0g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:

Composition per liter:

FeCl ₃ ·6H ₂ O	1.93g
Na ₂ B ₄ O ₇ ·10H ₂ O	0.45g
MnCl ₂ ·4H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	22.0mg
CuCl ₂ ·2H ₂ O	5.0mg
VOSO ₄ ·5H ₂ O	3.8mg
Na ₂ MoO ₄ ·2H ₂ O	3.0mg
CoSO ₄ ·7H ₂ O	2.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except glucose solution and yeast extract solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Adjust pH to 1.0–2.0 with 10N H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 20.0mL of sterile glucose solution and 10.0mL of sterile yeast extract solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Thermoplasma acidophilum*.

Thermoplasma acidophilum Medium 7A

Composition per liter:

Glucose	10.0g
(NH ₄) ₂ SO ₄	6.8g
KH ₂ PO ₄	3.0g
Yeast extract	1.0g
MgSO ₄	0.5g
CaCl ₂ ·2H ₂ O	0.25g

pH 1.65 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 1.65 with 50% H₂SO₄. Distribute into tubes or flasks. Sterilize by heating to 100°C for 30 min.

Use: For the cultivation of *Thermococcus acidophilum*.

Thermoplasma Agar

Composition per liter:

Basal solution	450.0mL
Solution B	450.0mL
Solution C	100.0mL

pH 2.0 ± 0.2 at 25°C

Basal Solution:

Composition per 500.0mL:

KH ₂ PO ₄	3.0g
Yeast extract	1.0g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.25g
(NH ₄) ₂ SO ₄	0.2g

Preparation of Basal Solution: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 2.0 with 10N H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 55°C.

Solution B:

Composition per 450.0mL:

Noble agar	12.0g
------------------	-------

Preparation of Solution B: Add agar to distilled/deionized water and bring volume to 450.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 55°C.

Solution C:

Composition per 100.0mL:

Glucose	10.0g
---------------	-------

Preparation of Solution C: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine the cooled, sterile basal medium with sterile solution B and sterile solution C. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Thermoplasma acidophilum* and other *Thermoplasma* species.

Thermoplasma Broth

Composition per liter:

Basal solution	500.0mL
Solution C	100.0mL

pH 2.0 ± 0.2 at 25°C

Basal Solution:

Composition per 500.0mL:

KH ₂ PO ₄	3.0g
Yeast extract	1.0g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.25g
(NH ₄) ₂ SO ₄	0.2g

Preparation of Basal Solution: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 2.0 with 10N H₂SO₄.

Solution C:

Composition per 100.0mL:

Glucose	10.0g
---------------	-------

Preparation of Solution C: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add 500.0mL of basal solution to 400.0mL of distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 55°C. Aseptically add 100.0mL of sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Thermoplasma acidophilum* and other *Thermoplasma* species.

Thermoplasma volcanium Medium

Composition per liter:

KH ₂ PO ₄	3.0g
MgSO ₄ ·7H ₂ O	1.0g
CaCl ₂ ·2H ₂ O	0.25g
(NH ₄) ₂ SO ₄	0.2g
Glucose solution	10.0mL
Yeast extract solution	10.0mL

pH 6.5 ± 0.2 at 25°C

Glucose Solution:**Composition per 10.0mL:**

Glucose 5.0g

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Yeast Extract Solution:**Composition per 10.0mL:**

Yeast extract 1.0g

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution and yeast extract solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Adjust pH to 2.0 with 10N H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile glucose solution and 10.0mL of sterile yeast extract solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks. Final pH should be 2.0–3.0.

Use: For the aerobic cultivation and maintenance of *Thermoplasma volcanium*.

Thermoproteus Medium**Composition per liter:**

Solution A 500.0mL

Solution B 450.0mL

Solution C 50.0mL

pH 4.8–5.6 at 25°C

Solution A:**Composition per 500.0mL:**

Glucose 10.0g

FeSO₄·7H₂O 0.556gMgSO₄·7H₂O 0.492gCaSO₄·2H₂O 0.344g(NH₄)₂SO₄ 0.264g

Yeast extract 0.2g

KH₂PO₄ 0.014g

Resazurin 1.0mg

Trace elements 10.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Immediately filter sterilize.

Trace Elements:**Composition per liter:**Na₂B₄O₇·10H₂O 0.45gMnCl₂·4H₂O 0.18gZnSO₄·7H₂O 0.022gCuCl₂·2H₂O 5.0mgNa₂MoO₄·2H₂O 3.6mgVOSO₄·5H₂O 3.6mgCoSO₄·7H₂O 1.2mg

Preparation of Trace Elements: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.0 with H₂SO₄ to retard precipitation.

Solution B:**Composition per 450.0mL:**

Sulfur 10.0g

Preparation of Solution B: Add sulfur to 450.0mL of distilled/deionized water. Autoclave for 30 min at 0 psi pressure–100°C on 3 consecutive days.

Solution C:**Composition per 50.0mL:**Na₂S·9H₂O 0.85g

Preparation of Solution C: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine solutions A, B, and C under 97% N₂ + 3% H₂. Adjust pH to 4.8–5.6 with H₂SO₄. Aseptically and anaerobically distribute into sterile tubes or flasks under 97% N₂ + 3% H₂.

Use: For the cultivation and maintenance of *Thermoproteus tenax* and other *Thermoproteus* species.

Thermoproteus neutrophilus Medium**Composition per liter:**

Sulfur, powdered 8.0g

(NH₄)₂SO₄ 1.3gNaHCO₃ 0.85gKH₂PO₄ 0.28gMgSO₄·7H₂O 0.25gCaCl₂·2H₂O 0.07gFeCl₃·6H₂O 0.02gNa₂B₄·10H₂O 4.5mgMnCl₂·4H₂O 1.8mg

Vitamin solution	20.0mL
Sulfide solution	10.0mL
Yeast extract solution	10.0mL
Bicarbonate solution	10.0mL
Wolfe's mineral elixir	1.0mL

pH 7.1 ± 0.2 at 25°C

Sulfide Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Wolfe's Mineral Elixir:

Composition per liter:

MgSO ₄ ·7H ₂ O	30.0g
NaCl	10.0g
MnSO ₄ ·2H ₂ O	5.0g
(NH ₄) ₂ NiSO ₄ ·6H ₂ O	2.8g
CoCl ₂ ·6H ₂ O	1.8g
ZnSO ₄ ·7H ₂ O	1.8g
FeSO ₄ ·7H ₂ O	1.0g
CaCl ₂ ·2H ₂ O	1.0g
KAl(SO ₄) ₂ ·12H ₂ O	0.18g
CuSO ₄ ·5H ₂ O	0.1g
H ₃ BO ₃	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.1g
Na ₂ SeO ₄	0.1g
Na ₂ WO ₄ ·2H ₂ O	0.1g

Preparation of Wolfe's Mineral Elixir: Adjust pH of 1.0L of distilled/deionized water to 1.0 with dilute H₂SO₄. Add remaining components one at a time. Mix thoroughly to dissolve.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Bicarbonate Solution:

Composition per 10.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with gas mixture of 80% N₂ + 20% CO₂. Filter sterilize.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract	2.0g
---------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂ gas. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except vitamin, bicarbonate, sulfide, and yeast extract solutions, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min. Cool to room temperature while sparging with a gas mixture of 80% H₂ + 20% CO₂. Adjust the pH to 5.5 with 10N H₂SO₄. Dispense under the same gas atmosphere in culture vessels (balch tubes). Autoclave for 20 min at 6 psi pressure–110°C. Cool to room temperature. Aseptically add vitamin, bicarbonate, sulfide, and yeast extract solutions. Mix thoroughly. Prior to inoculation change atmosphere to 80% H₂ and 20% CO₂ gas mixture. Adjust pH to 7.0–7.2. After inoculation pressurize vials to 2.0 bar overpressure with 80% H₂ and 20% CO₂ gas mixture.

Use: For the cultivation of *Thermosulfidibacter* spp.

***Thermosyntropha* Medium (DSMZ Medium 731)**

Composition per liter:

Yeast extract	10.0g
Na ₂ CO ₃	3.0g
NH ₄ Cl	1.0g
NaCl	0.5g
K ₂ HPO ₄	0.3g
KCl	0.3g
MgCl ₂ ·6H ₂ O	0.3g
CaCl ₂ ·2H ₂ O	0.05g
Resazurin	0.5mg
Vitamin solution	40.0mL
Trace elements solution	10.0mL
Cysteine solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
NaHCO ₃ solution	10.0mL
Selenite-tungstate solution	1.0mL

pH 8.5 ± 0.2 at 25°C

Selenite-Tungstate Solution

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	3.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Cysteine Solution:**Composition** per 10.0mL:L-Cysteine-HCl·H₂O 0.15g

Preparation of Cysteine Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:**Composition** per liter:

MgSO₄·7H₂O 3.0g
 Nitritotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoSO₄·7H₂O 0.18g
 ZnSO₄·7H₂O 0.18g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 H₃BO₃ 0.01g
 Na₂MoO₄·4H₂O 0.01g
 CuSO₄·5H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition** per 10.0mL:Na₂S·9H₂O 0.5g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, cysteine solution, vitamin solution, selenite-tungstate solution, and trace elements solution, to distilled/deionized water and bring volume to 919.0mL. Mix thoroughly. Sparge with 100% N₂. Adjust pH to 8.5 with HCl. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL NaHCO₃ solution, 10.0mL Na₂S·9H₂O solution, 10.0mL cysteine solution, 40.0mL vitamin solution, 1.0mL

selenite-tungstate solution, and 10.0mL trace elements solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Thermosyntropha lipolytica*.

Thermoterrabacterium Medium (DSMZ Medium 778)

Composition per liter:

NaHCO₃ 10.0g
 Na₂-9,10-anthraquinone-2,6-disulfonate 8.25g
 Yeast extract 1.0g
 KH₂PO₄ 0.33g
 NH₄Cl 0.33g
 KCl 0.33g
 MgCl₂·6H₂O 0.33g
 NiCl₂·6H₂O 200.0μg
 Na₂SeO₃·5H₂O 120.0μg
 Na₂WO₄·2H₂O 30.0μg
 Calcium chloride solution 10.0mL
 Vitamin solution 10.0mL
 Glycerol (87%) 3.0mL
 Trace elements solution SL-10 1.0mL
 pH 6.8 ± 0.2 at 25°C

Calcium Chloride Solution:**Composition** per 10.0mL:CaCl₂·2H₂O 0.33g

Preparation of Calcium Chloride Solution: Add CaCl₂·2H₂O to 10.0mL of distilled/deionized water. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution SL-10:**Composition** per liter:

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 190.0mg
 MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 Na₂MoO₄·2H₂O 36.0mg
 NiCl₂·6H₂O 24.0mg
 H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Add components, except NaHCO₃, calcium chloride solution, and vitamin solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for several minutes to dissolve the anthraquinone. Cool to room temperature under an atmosphere of 100% CO₂. Add solid NaHCO₃. Adjust pH to 6.8 with NaOH. Dispense medium under CO₂ into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically and anaerobically distribute into sterile tubes or bottles. Before use, add calcium chloride and vitamin solutions from anaerobic, sterile stock solution.

Use: For the cultivation of *Thermoterrabacterium ferrireducens*.

***Thermotoga elfii* Medium**

Composition per liter:

NaCl	10.0g
Pancreatic digest of casein	2.0g
Yeast extract	2.0g
NH ₄ Cl	1.0g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
MgCl ₂ ·6H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.1g
KCl	0.1g
L-Cysteine·HCl·H ₂ O	0.5g
Sodium acetate	0.5g
Resazurin	1.0mg
Na ₂ CO ₃ solution	20.0mL
Na ₂ S·9H ₂ O solution	20.0mL
Modified Wolfe's mineral solution	10.0mL

pH 8.0 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO ₃	2.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 20.0mL:

Na ₂ S·9H ₂ O	0.4g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Modified Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·H ₂ O	0.5g
CaCl ₂	0.1g
CoCl ₂ ·6H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
AlK(SO ₄) ₂ ·12H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g

H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃	0.01g
NaWO ₄ ·2H ₂ O	0.01g
NiCl ₂ ·6H ₂ O	0.01g

Preparation of Modified Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except Na₂CO₃ solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Adjust pH to 8.0 with 10M KOH. Gently heat and bring to boiling. Cool to room temperature while sparging with 100% N₂. Anaerobically dispense into tubes in 5.0mL aliquots under an atmosphere of 80% N₂ + 20% CO₂. Autoclave for 45 min at 6 psi pressure–110°C. Just prior to use, aseptically and anaerobically add 0.1mL of sterile Na₂CO₃ solution and 0.1mL of sterile Na₂S·9H₂O solution to each tube.

Use: For the cultivation of *Thermotoga elfii*.

***Thermotoga elfii* Medium**

Composition per liter:

NaCl	10.0g
Sodium thiosulfate·5H ₂ O	5.0g
Pancreatic digest of casein	5.0g
Yeast extract	5.0g
NH ₄ Cl	1.0g
K ₂ HPO ₄	0.3g
KH ₂ PO ₄	0.3g
MgCl ₂ ·6H ₂ O	0.2g
CaCl ₂ ·2H ₂ O	0.1g
KCl	0.1g

L-Cysteine solution	10.0mL
Na ₂ CO ₃ solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Wolfe's mineral solution	10.0mL

Glucose Solution:

Composition per 20.0mL:

Glucose	4.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

L-Cysteine Solution:

Composition per 10.0mL:

L-Cysteine·HCl·H ₂ O	0.5g
---------------------------------------	------

Preparation of L-Cysteine Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂CO₃ Solution:

Composition per 10.0mL:

Na ₂ CO ₃	2.0g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge

with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na₂S·9H₂O 0.5g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Before use, neutralize to pH 7.0 with sterile HCl.

Wolfe's Mineral Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g
 Nitritotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoCl₂·6H₂O 0.1g
 ZnSO₄·7H₂O 0.1g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 CuSO₄·5H₂O 0.01g
 H₃BO₃ 0.01g
 Na₂MoO₄·2H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except glucose solution, Na₂CO₃ solution, L-cysteine solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 6.8–7.0. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 20.0mL of sterile glucose solution, 10.0mL of sterile Na₂CO₃ solution, 10.0mL of sterile L-cysteine solution, and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Thermotoga elfii*.

Thermotoga hypogea Medium (DSMZ Medium 794)

Composition per liter:

NaCl 10.0g
 Yeast extract 2.0g
 Trypticase™ 2.0g
 NH₄Cl 1.0g
 Na-acetate 0.5g
 L-Cysteine 0.5g
 K₂HPO₄ 0.3g
 KH₂PO₄ 0.3g
 MgCl₂·6H₂O 0.2g
 CaCl₂·2H₂O 0.1g
 KCl 0.1g
 Resazurin 0.5mg
 Na-thiosulfate solution 20.0mL
 NaHCO₃ solution 20.0mL
 Xylose solution 20.0mL

Na₂S·9H₂O solution 14.0mL
 Trace elements solution 10.0mL
 pH 7.3 ± 0.2 at 25°C

Xylose Solution:

Composition per 20.0mL:

Xylose 3.0g

Preparation of Xylose Solution: Add xylose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

NaHCO₃ Solution:

Composition per 20.0mL:

NaHCO₃ 2.0g

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Must be prepared freshly.

Na-thiosulfate Solution:

Composition per 20.0mL:

Na₂S₂O₃·5H₂O 5.0g

Preparation of Na-thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 20.0mL:

Na₂S·9H₂O 0.6g

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Trace Elements Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g
 Nitritotriacetic acid 1.5g
 NaCl 1.0g
 MnSO₄·2H₂O 0.5g
 CoSO₄·7H₂O 0.18g
 ZnSO₄·7H₂O 0.18g
 CaCl₂·2H₂O 0.1g
 FeSO₄·7H₂O 0.1g
 NiCl₂·6H₂O 0.025g
 KAl(SO₄)₂·12H₂O 0.02g
 H₃BO₃ 0.01g
 Na₂MoO₄·4H₂O 0.01g
 CuSO₄·5H₂O 0.01g
 Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas mixture. Add components, except xylose solution, Na₂S·9H₂O solution, Na-thiosulfate solution, and NaHCO₃ solution, to 926.0mL distilled/deionized water. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Adjust pH to 7.2–7.4. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C while sparging with 80% N₂ + 20% CO₂. Aseptically and anaerobically add 20.0mL sterile xylose solution, 14.0mL Na₂S·9H₂O solution, 20.0mL NaHCO₃ solution, and 20.0mL

Na-thiosulfate solution, . Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Thermotoga hypogea*.

Thermotoga Medium

Composition per 1017.0mL:

NaCl.....	20.0g
Starch, soluble.....	5.0g
NiCl ₂ ·6H ₂ O.....	2.0g
KH ₂ PO ₄	0.5g
Na ₂ S·9H ₂ O.....	0.5g
Yeast extract.....	0.5g
Resazurin.....	1.0mg
Artificial seawater.....	250.0mL
Trace elements solution.....	15.0mL

pH 6.5 ± 0.2 at 25°C

Artificial Seawater:

Composition per liter:

NaCl.....	27.7g
MgSO ₄ ·7H ₂ O.....	7.0g
MgCl ₂ ·6H ₂ O.....	5.5g
CaCl ₂ ·2H ₂ O.....	2.25g
KCl.....	0.65g
NaBr.....	0.1g
H ₃ BO ₃	30.0mg
SrCl ₂ ·6H ₂ O.....	15.0mg
Citric acid.....	10.0mg
KI.....	0.05mg

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O.....	3.0g
Nitrilotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
NiCl ₂ ·6H ₂ O.....	0.025g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Thermotoga maritima* and *Thermotoga neapolitana*.

Thermotoga 2 Medium

Composition per 1015.0mL:

Starch, soluble.....	5.0g
NaCl.....	3.46g
MgSO ₄ ·7H ₂ O.....	0.88g
EDTA·Na ₂	0.768g
MgCl ₂ ·6H ₂ O.....	0.69g
KH ₂ PO ₄	0.5g

Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
NiCl ₂ ·6H ₂ O.....	0.025g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Thermotoga thermarum*.

Thermotoga petrophila Medium (DSMZ Medium 913)

Composition per liter:

MOPS.....	5.0g
Yeast extract.....	2.0g
(NH ₄) ₂ SO ₄	1.0g
KH ₂ PO ₄	0.5g
Resazurin.....	0.5mg
Artificial seawater.....	750.0mL
Trace elements solution.....	10.0mL
Vitamin solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL

pH 7.0 ± 0.2 at 25°C

Artificial Seawater:**Composition per liter:**

NaCl	27.7g
MgSO ₄ ·7H ₂ O	7.0g
MgCl ₂ ·6H ₂ O	5.5g
KCl	0.65g
NaBr	0.1g
H ₃ BO ₃	30.0mg
SrCl ₂ ·6H ₂ O	15.0mg
Citric acid	10.0mg
KI	0.05mg
CaCl ₂ ·2H ₂ O	2.25g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.3g
-------------------------------------	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Preparation of Medium: Add components, except vitamin solution and Na₂S·9H₂O solution, to 750.0mL artificial seawater. Bring volume

to 980.0mL with distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to room temperature while sparging with 100% N₂. Distribute under 100% N₂ into anaerobe tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add, per liter of medium, 10.0mL vitamin solution and 10.0mL Na₂S·9H₂O solution. Mix thoroughly. The final pH of the medium should be 7.0.

Use: For the cultivation of *Thermotoga petrophila* and *Thermotoga naphthophila*.

Thermotoga subterranea* Medium*Composition per liter:**

NaCl	12.0g
MgSO ₄ ·7H ₂ O	0.5g
PIPES	3.4g
KCl	2.0g
Peptone	1.0g
Na ₂ S·9H ₂ O	0.5g
Yeast extract	0.5g
NH ₄ Cl	0.1g
CaCl ₂ ·2H ₂ O	0.025g
K ₂ HPO ₄	0.02g
Resazurin	0.5mg
Wolfe's mineral solution	10.0mL
Wolfe's vitamin solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Wolfe's Mineral Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Wolfe's Mineral Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with

KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except Wolfe's vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.0. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL of sterile Wolfe's vitamin solution. Mix thoroughly. Adjust medium pH to 7.5 by adding sterile anaerobic 1N NaOH. Aseptically and anaerobically distribute into sterile tubes or bottles.

Use: For the cultivation of *Thermotoga subterranea*.

Thermovenabulum Medium (DSMZ Medium 962)

Composition per liter:

Preparation of Trace Elements Solution: Add nitilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
p-Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Sodium Fumarate Solution:

Composition per 50.0mL:

Na ₂ -fumarate.....	3.20g
--------------------------------	-------

Preparation of Sodium Fumarate Solution: Add Na₂-fumarate to distilled/deionized water and bring volume to 50.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Meat Extract Solution:

Composition per 50.0mL:

Meat extract.....	3.0g
-------------------	------

Preparation of Meat Extract Solution: Add meat extract to distilled/deionized water and bring volume to 50.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components, except NaHCO₃, vitamin solution, sodium fumarate solution, and meat extract solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 3 min. Cool to 25°C while sparging with 80% N₂ + 20% CO₂. Add solid NaHCO₃. Adjust pH to 6.8–7.0. Distribute to anaerobe tubes or bottles under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add, per liter of medium, 10.0mL sterile vitamin solution, 50.0mL sterile meat extract solution, and 50.0mL sterile sodium fumarate solution. Mix thoroughly. The final pH should be 6.5.

Use: For the cultivation of *Thermovenabulum ferriorganovorum*.

Thermovibrio Medium (DSMZ Medium 961)

Composition per liter:

Synthetic seawater.....	970.0mL
Potassium nitrate solution.....	10.0mL
Yeast extract solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL

pH 6.5 ± 0.2 at 25°C

Synthetic Seawater:

Composition per liter:

NaCl.....	27.7g
MgSO ₄ ·7H ₂ O.....	7.0g
MgCl ₂ ·6H ₂ O.....	5.5g
CaCl ₂ ·2H ₂ O.....	0.75g
KCl.....	0.65g
KH ₂ PO ₄	0.5g
(NH ₄) ₂ SO ₄	0.25g
NaBr.....	0.1g
H ₃ BO ₃	0.03g

SrCl ₂ ·6H ₂ O.....	15.0mg
Resazurin	1.0mg
KI	0.05mg

Preparation of Synthetic Seawater: Add components to distilled water and bring volume to 1.0L. Mix thoroughly.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract.....	1.0g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Potassium Nitrate Solution:

Composition per 10.0mL:

KNO ₃	0.33g
------------------------	-------

Preparation of Potassium Nitrate Solution: Add KNO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of Medium: Gently heat and bring 1.0L synthetic seawater to boiling. Boil for 3 min. Cool to 25°C while sparging with 80% H₂ + 20% CO₂. Adjust pH to 6.8–7.0. Distribute 20.0mL aliquots into 100mL serum bottles under 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add per 20.0mL of medium, 0.2mL sterile potassium nitrate solution, 0.2mL sterile yeast extract solution, and 0.2mL sterile Na₂S·9H₂O solution. Mix thoroughly. Adjusted pH should be 6.5.

Use: For the cultivation of *Thermovibrio ruber*.

Thermus Agar

Composition per liter:

Agar	28.0g
Pancreatic digest of casein.....	2.5g
Yeast extract.....	2.5g
Na ₂ HPO ₄ ·12H ₂ O	0.43g
MgCl ₂ ·6H ₂ O	0.2g
Nitilotriacetic acid	0.1g
KH ₂ PO ₄	54.0mg
CaSO ₄ ·2H ₂ O.....	40.0mg
Micronutrient solution	1.0mL
Fe-citrate solution	0.5mL

pH 7.2 ± 0.2 at 25°C

Micronutrient Solution:

Composition per liter:

MnSO ₄ ·H ₂ O.....	2.28g
H ₃ BO ₃	0.5g
ZnSO ₄ ·7H ₂ O.....	0.5g
CoCl ₂ ·6H ₂ O	45.0mg
CuSO ₄ ·5H ₂ O.....	25.0mg

Na ₂ MoO ₄ ·2H ₂ O.....	25.0mg
Concentrated H ₂ SO ₄	0.5mL

Preparation of Micronutrient Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Fe-Citrate Solution:

Composition per liter:

Fe-citrate	24.5mg
------------------	--------

Preparation of Fe-Citrate Solution: Add Fe-citrate to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add nitrilotriacetic acid to 100.0mL of distilled/deionized water. Mix thoroughly. Adjust pH to 6.5 with KOH. Add remaining components and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Thermus* species.

Thermus BP Medium

(*Thermus* Beef Extract Polypeptone™ Medium)

Composition per liter:

Agar	25.0g
Beef extract.....	4.0g
Polypeptone™	4.0g
K ₂ HPO ₄	3.0g
KH ₂ PO ₄	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Thermus aquaticus* and other *Thermus* species.

***Thermus brockii* Medium**

Composition per liter:

Pancreatic digest of casein.....	1.0g
Yeast extract.....	1.0g
Salts solution.....	100.0mL

pH 7.6 ± 0.2 at 25°C

Salts Solution:

Composition per liter:

NaNO ₃	6.89g
KNO ₃	1.03g
MgSO ₄ ·7H ₂ O	1.0g
Nitilotriacetic acid	1.0g
CaSO ₄ ·2H ₂ O	0.6g
NaCl.....	80.0mg
FeCl ₃ solution.....	10.0mL
Trace elements solution	10.0mL

Preparation of Salts Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 8.2 with 1M NaOH. Add remaining components. Add distilled/deionized water to 1.0L.

FeCl₃ Solution:

Composition per 100.0mL:

FeCl ₃	28.0mg
-------------------------	--------

Preparation of FeCl₃ Solution: Add FeCl₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

MnSO ₄ ·H ₂ O	2.2g
H ₃ BO ₃	0.5g
ZnSO ₄ ·7H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	46.0mg
Na ₂ MoO ₄ ·2H ₂ O	25.0mg
CuSO ₄	16.0mg
H ₂ SO ₄	0.5mL

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Thermus brockii*.

***Thermus* Broth**

Composition per liter:

Pancreatic digest of casein	2.5g
Yeast extract	2.5g
Na ₂ HPO ₄ ·12H ₂ O	0.43g
MgCl ₂ ·6H ₂ O	0.2g
Nitrilotriacetic acid	0.1g
KH ₂ PO ₄	54.0mg
CaSO ₄ ·2H ₂ O	40.0mg
Micronutrient solution	1.0mL
Fe-citrate solution	0.5mL

pH 7.2 ± 0.2 at 25°C

Micronutrient Solution:

Composition per liter:

MnSO ₄ ·H ₂ O	2.28g
H ₃ BO ₃	0.5g
ZnSO ₄ ·7H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	45.0mg
CuSO ₄ ·5H ₂ O	25.0mg
Na ₂ MoO ₄ ·2H ₂ O	25.0mg
H ₂ SO ₄ , concentrated	0.5mL

Preparation of Micronutrient Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Fe-Citrate Solution:

Composition per liter:

Fe-citrate	24.5mg
------------------	--------

Preparation of Fe-Citrate Solution: Add Fe-citrate to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add nitrilotriacetic acid to 100.0mL of distilled/deionized water. Mix thoroughly. Adjust pH to 6.5 with KOH. Add remaining components and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Thermus* species.

***Thermus* Enhanced Agar**

Composition per liter:

Agar	28.0g
Pancreatic digest of casein	2.5g
Yeast extract	2.5g
MgCl ₂ ·6H ₂ O	0.2g

Nitrilotriacetic acid	0.1g
CaSO ₄ ·2H ₂ O	40.0mg
Phosphate buffer solution	100.0mL
Ferric citrate solution	0.5mL
Trace elements solution	0.5mL

Phosphate Buffer Solution:

Composition per liter:

Na ₂ HPO ₄ ·12H ₂ O	43.0g
KH ₂ PO ₄	5.44g

Preparation of Phosphate Buffer Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Ferric Citrate Solution:

Composition per 10.0mL:

Ferric citrate	24.5mg
----------------------	--------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

Nitrilotriacetic acid	12.8g
FeCl ₂ ·4H ₂ O	1.0g
MnCl ₂ ·4H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.3g
CuCl ₂ ·2H ₂ O	50.0mg
Na ₂ MoO ₄ ·2H ₂ O	50.0mg
H ₃ BO ₃	20.0mg
NiCl ₂ ·6H ₂ O	20.0mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Preparation of Medium: Add components, except phosphate buffer solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2 with NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile phosphate buffer solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Thermus* species.

***Thermus* Enhanced Agar with 1% Sodium Chloride**

Composition per liter:

Agar	28.0g
NaCl	10.0g
Pancreatic digest of casein	2.5g
Yeast extract	2.5g
MgCl ₂ ·6H ₂ O	0.2g
Nitrilotriacetic acid	0.1g
CaSO ₄ ·2H ₂ O	40.0mg
Phosphate buffer solution	100.0mL
Ferric citrate solution	0.5mL
Trace elements solution	0.5mL

Phosphate Buffer Solution:

Composition per liter:

Na ₂ HPO ₄ ·12H ₂ O	43.0g
KH ₂ PO ₄	5.44g

Preparation of Phosphate Buffer Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50–55°C.

Ferric Citrate Solution:

Composition per 10.0mL:

Ferric citrate 24.5mg

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

Nitrilotriacetic acid 12.8g
 FeCl₂·4H₂O 1.0g
 MnCl₂·4H₂O 0.5g
 CoCl₂·6H₂O 0.3g
 CuCl₂·2H₂O 50.0mg
 Na₂MoO₄·2H₂O 50.0mg
 H₃BO₃ 20.0mg
 NiCl₂·6H₂O 20.0mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Preparation of Medium: Add components, except phosphate buffer solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2 with NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50–55°C. Aseptically add 100.0mL of sterile phosphate buffer solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Thermus* species.

***Thermus* Medium**

Composition per liter:

Agar 30.0g
 Polypeptone™ 8.0g
 Yeast extract 4.0g
 NaCl 2.0g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Thermus aquaticus* and other *Thermus* species.

***Thermus* Medium
(DSMZ Medium 1033)**

Composition per liter:

Tryptone 1.0g
 Yeast extract 1.0g
 Mineral solution 1 100.0mL
 Mineral solution 2 10.0mL
 Ferric chloride solution 10.0mL

pH 8.2 ± 0.2 at 25°C

Mineral Solution 1:

Composition per liter:

NaNO₃ 6.9g
 KNO₃ 1.8g
 Na₂HPO₄ 1.11g
 MgSO₄·7H₂O 1.0g
 Nitrilotriacetic acid 1.0g
 CaSO₄·2H₂O 0.6g
 NaCl 0.08g

Preparation of Mineral Solution 1: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to and bring volume to 1.0L. Mix thoroughly.

Mineral Solution 2:

Composition per liter:

MnSO₄·2H₂O 0.22g
 ZnSO₄·7H₂O 0.05g
 H₃BO₃ 0.05g
 CuSO₄·5H₂O 2.5mg

Preparation of Mineral Solution 2: Add components to distilled/deionized water to 1.0L. Mix thoroughly.

Ferric Chloride Solution:

Composition per 100.0mL:

FeCl₃·6H₂O 4.6mg

Preparation of Ferric Chloride Solution: Add FeCl₃·6H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.2 with 1M NaOH. Dispense into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Thermus* spp.

***Thermus* 162 Medium

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Phosphate Buffer:

Composition per liter:

Na ₂ HPO ₄ ·12H ₂ O	43.0g
KH ₂ PO ₄	5.44g

Preparation of Phosphate Buffer: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Add components, except phosphate buffer, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Add 100.0mL warm phosphate buffer. Mix thoroughly. Pour into Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Thermus* spp., *Rubrobacter xylanophilus*, *Thermonema rossianum*, *Deinococcus geothermalis*, *Deinococcus murrayi*, and *Tepidimonas ignava*.

Thermus 162 Medium

Composition per 1010.0mL:

Agar	28.0g
Tryptone	2.5g
Yeast extract	2.5g
MgCl ₂ ·6H ₂ O	0.2g
Nitritotriacetic acid	0.1g
CaSO ₄ ·2H ₂ O	40.0mg
Phosphate buffer solution	100.0mL
Ferric citrate solution	0.5mL
Trace elements solution	0.5mL

pH 7.2 ± 0.2 at 25°C

Phosphate Buffer Solution:

Composition per liter:

Na ₂ HPO ₄ ·12H ₂ O	43.0g
KH ₂ PO ₄	5.44g

Preparation of Phosphate Buffer Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C.

Ferric Citrate Solution:

Composition per 10.0mL:

Ferric citrate	24.5mg
----------------------	--------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

Nitritotriacetic acid	12.8g
FeCl ₂ ·4H ₂ O	1.0g
MnCl ₂ ·4H ₂ O	0.5g
CoCl ₂ ·4H ₂ O	0.3g
CuCl ₂ ·2H ₂ O	50.0mg
Na ₂ MoO ₄ ·2H ₂ O	50.0mg
H ₃ BO ₃	20.0mg
NiCl ₂ ·6H ₂ O	20.0mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 7.0.

Preparation of Medium: Add components, except phosphate buffer solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2 with NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile phosphate buffer solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Thermus* species.

Thermus Medium Enhanced

Composition per liter:

Agar	28.0g
Yeast extract	2.5g
Tryptone	2.5g
MgCl ₂ ·6H ₂ O	0.2g
Nitritotriacetic acid	0.1g
CaSO ₄ ·2H ₂ O	0.04g
Phosphate buffer solution	100.0mL
Ferric citrate solution	0.5mL
Trace elements solution	0.5mL

Ferric Citrate Solution:

Composition per 100.0mL:

Ferric citrate	0.24g
----------------------	-------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Phosphate Buffer Solution:

Composition per liter:

Na ₂ HPO ₄ ·12H ₂ O	43.0g
KH ₂ PO ₄	5.44g

Preparation of Phosphate Buffer Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:

Composition per liter:

Nitritotriacetic acid	12.8g
FeCl ₂ ·4H ₂ O	1.0g
MnCl ₂ ·4H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.3g
CuCl ₂ ·2H ₂ O	0.05g
Na ₂ MoO ₄ ·2H ₂ O	0.05g
H ₃ BO ₃	0.02g
NiCl ₂ ·6H ₂ O	0.02g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except phosphate buffer solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile phosphate buffer solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Thermus* species.

Thermus Medium Enhanced with 1% NaCl**Composition per liter:**

Agar	28.0g
NaCl	10.0g
Yeast extract	2.5g
Tryptone	2.5g
MgCl ₂ ·6H ₂ O	0.2g
Nitritotriacetic acid	0.1g
CaSO ₄ ·2H ₂ O	0.04g
Phosphate buffer solution	100.0mL
Ferric citrate solution	0.5mL
Trace elements solution	0.5mL

Ferric Citrate Solution:**Composition per 100.0mL:**

Ferric citrate	0.24g
----------------------	-------

Preparation of Ferric Citrate Solution: Add ferric citrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Phosphate Buffer Solution:**Composition per liter:**

Na ₂ HPO ₄ ·12H ₂ O	43.0g
KH ₂ PO ₄	5.44g

Preparation of Phosphate Buffer Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:**Composition per liter:**

Nitritotriacetic acid	12.8g
FeCl ₃ ·4H ₂ O	1.0g
MnCl ₂ ·4H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	0.3g
CuCl ₂ ·2H ₂ O	0.05g
Na ₂ MoO ₄ ·2H ₂ O	0.05g
H ₃ BO ₃	0.02g
NiCl ₂ ·6H ₂ O	0.02g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except phosphate buffer solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile phosphate buffer solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Rhodothermus marinus*.

Thermus Peptone Meat Extract Yeast Extract Agar

See: Thermus PMY Agar

Thermus Peptone Meat Extract Yeast Extract Broth

See: Thermus PMY Broth

Thermus PMY Agar**(Thermus Peptone Meat Extract Yeast Extract Agar)****Composition per liter:**

Agar	15.0g
Peptone	5.0g
Meat extract	3.5g

Yeast extract	1.5g
NaCl	1.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Thermus aquaticus* and other *Thermus* species.

Thermus PMY Broth**(Thermus Peptone Meat Extract Yeast Extract Broth)****Composition per liter:**

Peptone	5.0g
Meat extract	3.5g
Agar	3.0g
Yeast extract	1.5g
NaCl	1.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Thermus aquaticus* and other *Thermus* species.

Thermus ruber Medium**Composition per liter:**

Agar	12.0g
Universal peptone	5.0g
Starch, soluble	1.0g
Yeast extract	1.0g

pH 8.0 ± 0.2 at 25°C

Source: Universal peptone is available from Merck, Sharpe, and Dohme.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Thermus ruber*.

Thermus sp. Medium**(DSMZ Medium 1045)****Composition per liter:**

Peptone	8.0g
Yeast extract	4.0g
NaCl	2.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Thermus* spp.

Thermus thermophilus Medium**(DSMZ Medium 74)**

Polypeptone™	8.0g
Yeast extract	4.0g
NaCl	2.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Thermus thermophilus*.

Thiamine Assay Medium

Composition per liter:

Glucose	40.0g
Peptone	22.0g
Sodium acetate	15.0g
Vitamin assay casamino acids	5.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.4g
Adenine sulfate	0.02g
FeSO ₄ ·7H ₂ O	0.02g
Guanine-HCl	0.02g
MnSO ₄ ·5H ₂ O	0.02g
NaCl	0.02g
Uracil	0.02g
L-Cystine	0.2mg
p-Aminobenzoic acid	0.2mg
Calcium pantothenate	0.2mg
Niacin	0.2mg
Pyridoxine-HCl	0.2mg
Riboflavin	0.2mg
Folic acid	0.5µg
Biotin	0.8µg

pH 6.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes or flasks in 5.0mL volumes while swirling the flask to disperse the precipitate. Add standard solutions or test solutions and bring volume of each tube to 10.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the microbiological assaying of thiamine using *Lactobacillus fermentum* as the test organism.

Thiamine Assay Medium LV

Composition per liter:

Glucose	20.0g
Pancreatic digest of casein	20.0g
K ₂ HPO ₄	10.0g
NaCl	10.0g
Sodium citrate	10.0g
Yeast extract, thiamine-free	10.0g
Sorbitan monooleate complex	2.0g
MgSO ₄ ·7H ₂ O	1.6g
MnCl ₂ ·4H ₂ O	0.28g
FeSO ₄ ·7H ₂ O	0.08g

pH 6.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Continue boiling for 2–3 min. Distribute into tubes or flasks in 5.0mL volumes while swirling the flask to disperse the precipitate. Add standard solutions or test solutions and bring volume of each tube to 10.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the microbiological assaying of thiamine using *Lactobacillus viridescens* as the test organism.

Thiamine Salts Medium

Composition per liter:

KH ₂ PO ₄	1.0g
FeSO ₄ ·7H ₂ O	0.05g
MgSO ₄ ·7H ₂ O	0.02g
CaCl ₂	0.02g
MnCl ₂ ·4H ₂ O	1.0mg
Na ₂ MoO ₄ ·2H ₂ O	1.0mg
Thiamine-HCl solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Thiamine-HCl Solution:

Composition per 10.0mL:

Thiamine-HCl	3.0g
--------------	------

Preparation of Thiamine-HCl Solution: Add thiamine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except thiamine-HCl solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Adjust pH to 7.0 with KOH. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add the sterile thiamine-HCl solution. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation of ATCC strain 25589.

Thiazole Medium

Composition per 110.0mL:

Solution A	100.0mL
Solution B	5.0mL
Solution C	5.0mL

pH 7.0 ± 0.2 at 25°C

Solution A:

Composition per 100.0mL:

Benzothiazole	30.0mg
NaOH (10% solution)	90.0mL

Preparation of Solution A: Combine components. Mix thoroughly. Adjust pH to 7.0 with concentrated HCl. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 50.0mL:

KH ₂ PO ₄	0.3g
---------------------------------	------

Preparation of Solution B: Add KH₂PO₄ to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 50.0mL:

MgSO ₄ ·7H ₂ O	50.0mg
FeCl ₃	10.0mg
CaCl ₂ ·2H ₂ O	6.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 100.0mL of sterile solution A with 5.0mL of sterile solution B and 5.0mL of sterile solution C. Mix thoroughly.

Use: For the cultivation of unidentified bacteria DSMZ 8993 and DSMZ 8994.

THIO Medium

See: **Thioglycolate Medium, Enriched**

THIO + Bile Medium

See: **Thioglycolate Medium with 20% Bile**

Thioalkalivibrio halophilus Medium (DSMZ Medium 1014)

Composition per liter:

NaCl	175.0g
K ₂ HPO ₄	1.5g
NH ₄ Cl	0.5g
Magnesium chloride solution.....	10.0mL
Magnesium sulfate solution.....	10.0mL
Thiosulfate solution	10.0mL
Bicarbonate solution	10.0mL
Trace element solution SL-4.....	1.0mL
pH 8.2 ± 0.2 at 25°C	

Magnesium Sulfate Solution:

Composition per 10.0mL:

MgSO ₄ ·7H ₂ O	0.25g
--	-------

Preparation of Magnesium Sulfate Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Magnesium Chloride Solution:

Composition per 10.0mL:

MgCl ₂ ·6H ₂ O.....	0.2g
---	------

Preparation of Magnesium Chloride Solution: Add MgCl₂·6H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Thiosulfate Solution:

Composition per 10.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g
--	------

Preparation of Thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Adjust to pH 10.0. Filter sterilize.

Bicarbonate Solution:

Composition per 10.0mL:

NaHCO ₃	4.0g
--------------------------	------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-4:

Composition per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O.....	0.2g
Trace elements solution SL-6	100.0

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Add components, except magnesium chloride, magnesium sulfate, thiosulfate, and bicarbonate solutions, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Adjust pH to 8.0–8.5. Dispense into screw-capped Erlenmeyer flasks (fill to 1/10 volume). Autoclave for 30 min at 6 psi pressure–110°C. Cool to room temperature. Aseptically add magnesium chloride, magnesium sulfate, thiosulfate, and bicarbonate solutions. Mix thoroughly.

Use: For the cultivation of *Thioalkalivibrio halophilus*.

Thiobacillus A2 Agar (T3 Agar)

Composition per 1100.0mL:

Solution B	1.0L
Solution A	100.0mL
pH 8.5 ± 0.2 at 25°C	

Solution A:

Composition per 100.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g
Na ₂ HPO ₄	4.2g
KH ₂ PO ₄	1.5g
NH ₄ Cl	1.0g
Phenol Red (0.2% solution).....	1.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 9.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B:

Composition per liter:

Agar	15.0g
MgSO ₄ ·7H ₂ O	0.1g
Trace metal solution.....	5.0mL

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Trace Metal Solution:

Composition per liter:

EDTA	50.0g
ZnSO ₄	22.0g
CaCl ₂	5.54g
MnCl ₂	5.06g
FeSO ₄ ·7H ₂ O.....	4.99g
CoCl ₂	1.61g
CuSO ₄	1.57g
(NH ₄) ₂ MoO ₄ ·4H ₂ O	1.1g

Preparation of Trace Metal Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0 with KOH.

Preparation of Medium: Aseptically add 100.0mL of sterile solution A to 1.0L of sterile solution B. Mix thoroughly. Adjust pH to 8.5 if necessary. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Thiobacillus versutus* and other *Thiobacillus* species.

Thiobacillus A2 Broth (T3 Broth)

Composition per 1100.0mL:

Solution B	1.0L
Solution A	100.0mL
	pH 8.5 ± 0.2 at 25°C

Solution A:

Composition per 100.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g
Na ₂ HPO ₄	4.2g
KH ₂ PO ₄	1.5g
NH ₄ Cl	1.0g
Phenol Red (0.2% solution)	1.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 9.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B:

Composition per liter:

MgSO ₄ ·7H ₂ O	0.1g
Trace metal solution	5.0mL

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Trace Metal Solution:

Composition per liter:

EDTA	50.0g
ZnSO ₄	22.0g
CaCl ₂	5.54g
MnCl ₂	5.06g
FeSO ₄ ·7H ₂ O	4.99g
CoCl ₂	1.61g
CuSO ₄	1.57g
(NH ₄) ₂ MoO ₄ ·4H ₂ O	1.1g

Preparation of Trace Metal Solution: Add components to distilled/deionized water and bring volume to 1.0mL. Mix thoroughly. Adjust pH to 6.0 with KOH.

Preparation of Medium: Aseptically add 100.0mL of sterile solution A to 1.0L of sterile solution B. Mix thoroughly. Adjust pH to 8.5 if necessary. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Thiobacillus versutus* and other *Thiobacillus* species.

Thiobacillus acidophilus Agar

Composition per liter:

Agar	15.0g
(NH ₄) ₂ SO ₄	3.0g
MgSO ₄ ·7H ₂ O	1.0g
KH ₂ PO ₄	0.5g

KCl	0.1g
Ca(NO ₃) ₂ ·4H ₂ O	18.0mg
FeSO ₄ ·7H ₂ O	0.01mg
Glucose solution	20.0mL
	pH 4.5 ± 0.2 at 25°C

Glucose Solution:

Composition per 20.0mL:

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Adjust pH to 4.5 with H₂SO₄. Aseptically add 20.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Thiobacillus acidophilus*.

Thiobacillus acidophilus Broth

Composition per liter:

Glucose	10.0g
(NH ₄) ₂ SO ₄	3.0g
MgSO ₄ ·7H ₂ O	1.0g
KH ₂ PO ₄	0.5g
KCl	0.1g
Ca(NO ₃) ₂ ·4H ₂ O	18.0mg
FeSO ₄ ·7H ₂ O	0.01mg
	pH 3.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.5 with H₂SO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Thiobacillus acidophilus*.

Thiobacillus acidophilus Medium (DSMZ Medium 108)

Composition per liter:

Agar	15.0g
(NH ₄) ₂ SO ₄	3.0g
MgSO ₄ ·7H ₂ O	1.0g
KH ₂ PO ₄	0.5g
KCl	0.1g
Ca(NO ₃) ₂ ·4H ₂ O	18.0mg
FeSO ₄ ·7H ₂ O	0.01mg
Glucose solution	50.0mL
	pH 4.5 ± 0.2 at 25°C

Glucose Solution:

Composition per 100.0mL:

D-Glucose	10.0g
-----------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL

sterile glucose solution. Mix thoroughly. Adjust pH to 4.5 with H₂SO₄. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Acidiphilium acidophilum*.

***Thiobacillus acidophilus* Medium (DSMZ Medium 108)**

Composition per liter:

(NH ₄) ₂ SO ₄	3.0g
MgSO ₄ ·7H ₂ O.....	1.0g
KH ₂ PO ₄	0.5g
KCl.....	0.1g
Ca(NO ₃) ₂ ·4H ₂ O.....	18.0mg
FeSO ₄ ·7H ₂ O.....	0.01mg
Glucose solution.....	50.0mL
	pH 3.5 ± 0.2 at 25°C

Glucose Solution:

Composition per 100.0mL:

D-Glucose.....	10.0g
----------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 50.0mL sterile glucose solution. Mix thoroughly. Adjust pH to 3.5 with H₂SO₄. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Acidiphilium acidophilum*.

***Thiobacillus* Agar**

Composition per liter:

Agar, noble.....	20.0g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	5.0g
KH ₂ PO ₄	3.0g
CaCl ₂	0.1g
MgCl ₂ ·6H ₂ O.....	0.1g
(NH ₄) ₂ ·Cl.....	0.1g
	pH 4.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 4.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically combine 500.0mL of the sterile basal medium with 500.0mL of the sterile agar solution. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of aciduric *Thiobacillus* species such as *Thiobacillus concretivorus* and *Thiobacillus intermedius*.

***Thiobacillus* Agar**

Composition per liter:

Ionagar No. 2.....	12.0g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	10.0g
K ₂ HPO ₄	4.0g
KH ₂ PO ₄	4.0g

(NH ₄) ₂ ·SO ₄	0.1g
MgSO ₄ ·7H ₂ O.....	0.1g
CaCl ₂	0.1g
FeCl ₃ ·6H ₂ O.....	2.0mg
MnSO ₄ ·4H ₂ O.....	2.0mg

pH 6.6 ± 0.2 at 25°C

Source: Ionagar No. 2 is available from Oxoid Unipath.

Preparation of Medium: Add components, except the agar, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust the pH to 6.6. Add the agar. Bring volume to 1.0L with distilled/deionized water. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of nonaciduric *Thiobacillus* species such as *Thiobacillus neapolitanus*, *Thiobacillus novellus*, and *Thiobacillus thiooparus*.

Thiobacillus* Agar I for Acidophilic *Thiobacillus

Composition per liter:

Solution A.....	500.0mL
Solution B.....	500.0mL
	pH 4.2 ± 0.2 at 25°C

Solution A:

Composition per 500.0mL:

Na ₂ S ₂ O ₃	5.0g
KH ₂ PO ₄	3.0g
CaCl ₂	0.1g
MgCl ₂ ·6H ₂ O.....	0.1g
NH ₄ Cl.....	0.1g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Adjust pH to 4.2 with 1N HCl. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution B:

Composition per 500.0mL:

Agar, noble.....	20.0g
------------------	-------

Preparation of Solution A: Add agar to distilled/deionized water and bring volume to 500.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Aseptically combine 500.0mL of sterile solution A and 500.0mL of sterile solution B. Combine the two solutions while still hot. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Thiobacillus thiooxidans*.

***Thiobacillus albertis* Agar**

Composition per 500.0mL:

Solution A.....	250.0mL
Solution B.....	250.0mL
	pH 4.0 ± 0.2 at 25°C

Solution A:

Composition per 250.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O.....	5.0g
KH ₂ PO ₄	3.0g
MgSO ₄ ·7H ₂ O.....	0.5g
(NH ₄) ₂ SO ₄	0.4g
CaCl ₂ ·2H ₂ O.....	0.25g
FeSO ₄ ·7H ₂ O.....	10.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Adjust pH to 4.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:

Composition per 250.0mL:

Agar 15.0g

Preparation of Solution B: Add agar to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine 250.0mL of sterile solution A with 250.0mL of sterile solution B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Thiobacillus albertis*.

Thiobacillus albertis Broth

Composition per liter:

Na₂S₂O₃·5H₂O 5.0g
 KH₂PO₄ 3.0g
 MgSO₄·7H₂O 0.5g
 (NH₄)₂SO₄ 0.4g
 CaCl₂·2H₂O 0.25g
 FeSO₄·7H₂O 10.0mg

pH 4.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 4.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Thiobacillus albertis*.

Thiobacillus aquaesulis Agar

Composition per liter:

Solution B 900.0mL
 Solution A 100.0mL

pH 7.4 ± 0.2 at 25°C

Solution A:

Composition per 100.0mL:

Na₂HPO₄·2H₂O 7.9g
 KH₂PO₄ 1.5g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.4. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:

Composition per 900.0mL:

Agar 15.0g
 Na₂S₂O₃ 5.0g
 NH₄Cl 0.4g
 MgSO₄·7H₂O 0.1g
 Phenol Red 3.0mg
 Trace elements solution 10.0mL

Trace Elements Solution:

Composition per liter:

Disodium EDTA 50.0g
 NaOH 11.0g
 ZnSO₄·7H₂O 11.0g
 CaCl₂·2H₂O 7.34g
 FeSO₄·7H₂O 5.0g

MnCl₂·4H₂O 2.5g
 CoCl₂·6H₂O 0.5g
 (NH₄)₆MoO₂₄·4H₂O 0.5g
 CuSO₄·5H₂O 0.2g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0.

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine 100.0mL of cooled, sterile solution A with 900.0mL of cooled, sterile solution B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Thiobacillus aquaesulis*.

Thiobacillus aquaesulis Broth

Composition per liter:

Solution B 900.0mL
 Solution A 100.0mL

pH 7.4 ± 0.2 at 25°C

Solution A:

Composition per 100.0mL:

Na₂HPO₄·2H₂O 7.9g
 KH₂PO₄ 1.5g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.4. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 900.0mL:

Na₂S₂O₃ 5.0g
 NH₄Cl 0.4g
 MgSO₄·7H₂O 0.1g
 Phenol Red 3.0mg
 Trace elements solution 10.0mL

Trace Elements Solution:

Composition per liter:

Disodium EDTA 50.0g
 NaOH 11.0g
 ZnSO₄·7H₂O 11.0g
 CaCl₂·2H₂O 7.34g
 FeSO₄·7H₂O 5.0g
 MnCl₂·4H₂O 2.5g
 CoCl₂·6H₂O 0.5g
 (NH₄)₆MoO₂₄·4H₂O 0.5g
 CuSO₄·5H₂O 0.2g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0.

Preparation of Solution B: Add components to distilled/deionized water and bring the volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 100.0mL of cooled, sterile solution A with 900.0mL of cooled, sterile solution B. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Thiobacillus aquaesulis*.

Thiobacillus aquaesulis* Medium*Composition** per liter:

Solution B	900.0mL
Solution A	100.0mL

Solution A:**Composition** per 100.0mL:

Na ₂ HPO ₄ ·2H ₂ O	7.9g
KH ₂ HPO ₄	1.5g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:**Composition** per 900.0mL:

Agar	15.0g

NH ₄ Cl	0.1g

pH 4.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 4.2 with 1N HCl. Mix thoroughly. Distribute into screw-capped tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Thiobacillus thiooxidans*.

Thiobacillus caldus* Agar*Composition** per liter:

Solution E	500.0mL
Solution A	460.0mL
Solution D	20.0mL
Solution B	10.0mL
Solution C	10.0mL

pH 2.5 ± 0.2 at 25°C

Solution A:**Composition** per 460.0mL:

Na ₂ SO ₄ ·10H ₂ O	3.2g
(NH ₄) ₂ SO ₄	3.0g
MgSO ₄ ·7H ₂ O	0.5g
KCl	0.1g
K ₂ HPO ₄	50.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 460.0mL. Mix thoroughly. Adjust pH to 1.75 with H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Cool and maintain above 60°C.

Solution B:**Composition** per 10.0mL:

FeCl ₃ ·6H ₂ O	11.0mg
Ca(NO ₃) ₂ ·4H ₂ O	10.0mg
H ₃ BO ₃	2.0mg
MnSO ₄ ·H ₂ O	2.0mg
ZnSO ₄ ·7H ₂ O	0.9mg
Na ₂ MoO ₄ ·2H ₂ O	0.8mg
CoCl ₂ ·6H ₂ O	0.6mg
CuSO ₄ ·5H ₂ O	0.5mg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Solution C:**Composition** per 10.0mL:

Glucose	0.45g
---------------	-------

Preparation of Solution C: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Solution D:**Composition** per 20.0mL:

Na ₂ S ₄ O ₆	0.77g
---	-------

Preparation of Solution D: Add Na₂S₄O₆ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Solution E:**Composition** per 500.0mL:

Phytigel™ (Gellan gum; available from Sigma Chemical Co.)	15.0g
---	-------

Preparation of Solution E: Add phytigel to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool and maintain above 60°C.

Preparation of Medium: Maintain solutions A and E above 60°C to prevent rapid gelling of medium. Aseptically combine 460.0mL of sterile solution A with 10.0mL of sterile solution B, 10.0mL of sterile solution C, 20.0mL of sterile solution D, and 500.0mL of sterile solution E. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the heterotrophic cultivation and maintenance of *Thiobacillus caldus*.

Thiobacillus caldus Broth

Composition per liter:

Solution A	960.0mL
Solution D	20.0mL
Solution B	10.0mL
Solution C	10.0mL

pH 2.5 ± 0.2 at 25°C

Solution A:

Composition per 960.0mL:

Na ₂ SO ₄ ·10H ₂ O	3.2g
(NH ₄) ₂ SO ₄	3.0g
MgSO ₄ ·7H ₂ O	0.5g
KCl	0.1g
K ₂ HPO ₄	50.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Adjust pH to 1.75 with H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 10.0mL:

FeCl ₃ ·6H ₂ O	11.0mg
Ca(NO ₃) ₂ ·4H ₂ O	10.0mg
H ₃ BO ₃	2.0mg
MnSO ₄ ·H ₂ O	2.0mg
ZnSO ₄ ·7H ₂ O	0.9mg
Na ₂ MoO ₄ ·2H ₂ O	0.8mg
CoCl ₂ ·6H ₂ O	0.6mg
CuSO ₄ ·5H ₂ O	0.5mg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Solution C:

Composition per 10.0mL:

Glucose	0.45g
---------------	-------

Preparation of Solution C: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Solution D:

Composition per 20.0mL:

Na ₂ S ₄ O ₆	0.77g
---	-------

Preparation of Solution D: Add Na₂S₄O₆ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 960.0mL of sterile solution A with 10.0mL of sterile solution B, 10.0mL of sterile solution C, and 20.0mL of sterile solution D. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the heterotrophic cultivation and maintenance of *Thiobacillus caldus*.

Thiobacillus caldus Broth

Composition per liter:

Solution A	970.0mL
Solution C	20.0mL
Solution B	10.0mL

pH 2.5 ± 0.2 at 25°C

Solution A:

Composition per 970.0mL:

Na ₂ SO ₄ ·10H ₂ O	3.2g
(NH ₄) ₂ SO ₄	3.0g
MgSO ₄ ·7H ₂ O	0.5g

KCl	0.1g
K ₂ HPO ₄	50.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Adjust pH to 1.75 with H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 10.0mL:

FeCl ₃ ·6H ₂ O	11.0mg
Ca(NO ₃) ₂ ·4H ₂ O	10.0mg
H ₃ BO ₃	2.0mg
MnSO ₄ ·H ₂ O	2.0mg
ZnSO ₄ ·7H ₂ O	0.9mg
Na ₂ MoO ₄ ·2H ₂ O	0.8mg
CoCl ₂ ·6H ₂ O	0.6mg
CuSO ₄ ·5H ₂ O	0.5mg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Solution C:

Composition per 20.0mL:

Na ₂ S ₄ O ₆	0.77g
---	-------

Preparation of Solution C: Add Na₂S₄O₆ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 970.0mL of sterile solution A with 10.0mL of sterile solution B and 20.0mL of sterile solution C. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the chemolithotrophic cultivation of *Thiobacillus caldus*.

Thiobacillus caldus Medium

Composition per liter:

Solution E	500.0mL
Solution A	460.0mL
Solution D	20.0mL
Solution B	10.0mL
Solution C	10.0mL

pH 2.5 ± 0.2 at 25°C

Solution A:

Composition per 460.0mL:

Na ₂ SO ₄ ·10H ₂ O	3.2g
(NH ₄) ₂ SO ₄	3.0g
MgSO ₄ ·7H ₂ O	0.5g
KCl	0.1g
K ₂ HPO ₄	50.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 460.0mL. Mix thoroughly. Adjust pH to 1.75 with H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°–65°C.

Solution B:

Composition per 10.0mL:

FeCl ₃ ·6H ₂ O	11.0mg
Ca(NO ₃) ₂ ·4H ₂ O	10.0mg
H ₃ BO ₃	2.0mg
MnSO ₄ ·H ₂ O	2.0mg
ZnSO ₄ ·7H ₂ O	0.9mg
Na ₂ MoO ₄ ·2H ₂ O	0.8mg
CoCl ₂ ·6H ₂ O	0.6mg
CuSO ₄ ·5H ₂ O	0.5mg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Warm to 60°C.

Solution C:

Composition per 10.0mL:

Glucose 0.45g

Preparation of Solution C: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Warm to 60°C.

Solution D:

Composition per 20.0mL:

Sodium tetrathionate 0.77g

Preparation of Solution D: Add sodium tetrathionate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Warm to 60°C.

Solution E:

Composition per 500.0mL:

Phytigel 15.0g

Preparation of Solution E: Add phytigel to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°–65°C.

Preparation of Medium: Aseptically combine 460.0mL of sterile solution A, 10.0mL of sterile solution B, 10.0mL of sterile solution C, 20.0mL of sterile solution D, and 500.0mL of sterile solution E. Mix thoroughly. Aseptically pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Thiobacillus caldus*.

Thiobacillus cuprinus Medium

Composition per 1010.0mL:

MgSO₄·7H₂O 3.45g

MgCl₂·6H₂O 2.75g

NH₄Cl 1.25g

NaCl 0.5g

Sulfur, powdered 0.5g

KCl 0.33g

CaCl₂·2H₂O 0.14g

K₂HPO₄ 0.14g

NiCl₂·6H₂O 2.0mg

Trace elements solution 10.0mL

pH 3.5 ± 0.2 at 25°C

Preparation of Sulfur: Sterilize 1.0g of powdered sulfur by steaming for 1 hr on three consecutive days.

Trace Elements Solution:

Composition per liter:

MgSO₄·7H₂O 3.0g

Nitritotriacetic acid 1.5g

NaCl 1.0g

MnSO₄·2H₂O 0.5g

CoSO₄·7H₂O 0.18g

ZnSO₄·7H₂O 0.18g

CaCl₂·2H₂O 0.1g

FeSO₄·7H₂O 0.1g

KAl(SO₄)₂·12H₂O 0.02g

CuSO₄·5H₂O 0.01g

H₃BO₃ 0.01g

Na₂MoO₄·2H₂O 0.01g

NiCl₂·6H₂O 0.025g

Na₂SeO₃·5H₂O 0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Preparation of Medium: Add components, except sulfur, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.5 with H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 0.5g of sterile sulfur. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Thiobacillus cuprinus*.

Thiobacillus denitrificans Medium

Composition per liter:

KNO₃ 5.0g

Na₂S₂O₃·5H₂O 5.0g

NaHCO₃ 1.0g

K₂HPO₄ 0.2g

MgCl₂ 0.1g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Thiobacillus denitrificans*.

Thiobacillus denitrificans Medium

Composition per liter:

Na₂S₂O₃·5H₂O 5.0g

KNO₃ 2.0g

KH₂PO₄ 2.0g

NaHCO₃ 2.0g

NH₄Cl 1.0g

MgSO₄·7H₂O 0.8g

Trace metals solution 1.0mL

pH 6.8–7.0 at 25°C

Trace Metals Solution:

Composition per liter:

Disodium EDTA 50.0g

NaOH 11.0g

CaCl₂·2H₂O 7.34g

FeSO₄·7H₂O 5.0g

MnCl₂·2H₂O 2.5g

ZnSO₄·7H₂O 2.2g

CoCl₂·6H₂O 0.5g

(NH₄)₆Mo₇O₂₄·4H₂O 0.5g

CuSO₄·5H₂O 0.2g

Preparation of Trace Metals Solution: Add EDTA to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 6.0 with NaOH. Add remaining components, one by one. Maintain the pH at 6.0. After dissolution of all the salts, adjust the pH to 4.0 with HCl. Store at 4°C.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Thiobacillus denitrificans*.

Thiobacillus ferrooxidans Medium**Composition per liter:**

Al ₂ (SO ₄) ₃ ·12H ₂ O	1.4g
NaCl	1.0g
KH ₂ PO ₄	0.4g
MgSO ₄ ·7H ₂ O	0.1g
(NH ₄) ₂ SO ₄	0.1g
CaCl ₂	0.03g
MnSO ₄ ·4H ₂ O	0.02g
FeSO ₄ ·7H ₂ O solution	100.0mL

FeSO₄·7H₂O Solution:**Composition per 100.0mL:**

FeSO ₄ ·7H ₂ O	10.0g
H ₂ SO ₄ , concentrated	0.09mL

Preparation of FeSO₄·7H₂O Solution: Add FeSO₄·7H₂O and H₂SO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except FeSO₄·7H₂O solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into flasks in 90.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 10.0mL of sterile FeSO₄·7H₂O solution to each flask. Mix thoroughly.

Use: For the cultivation of *Thiobacillus ferrooxidans*.

Thiobacillus ferrooxidans Medium**Composition per liter:**

Solution I	400.0mL
Solution III	400.0mL
Solution II	200.0mL

Solution I:**Composition per 500.0mL:**

K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.5g
(NH ₄) ₂ SO ₄	0.5g
H ₂ SO ₄ (1N solution)	5.0mL

Preparation of Solution I: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution II:**Composition per liter:**

FeSO ₄ ·7H ₂ O	167.0g
1N H ₂ SO ₄	50.0mL

Preparation of Solution II: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Warm to 45°–50°C.

Solution III:**Composition per liter:**

Agar	10.0g
------------	-------

Preparation of Solution III: Add agar to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Aseptically combine 400.0mL of sterile solution I, 200.0mL of sterile solution II, and 400.0mL of sterile solution III. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Thiobacillus ferrooxidans*.

Thiobacillus ferrooxidans Medium, APH**Composition per liter:**

FeSO ₄ ·7H ₂ O	40.0g
(NH ₄) ₂ SO ₄	2.0g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.5g
KCl	0.1g
Ca(NO ₃) ₂	0.01g

pH 3.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.0 with dilute H₂SO₄. Distribute into tubes or flasks. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Leptospirillum ferrooxidans* and *Thiobacillus ferrooxidans*.

Thiobacillus ferrooxidans**Medium with Ferrous Sulfate****Composition per liter:**

FeSO ₄ ·7H ₂ O	33.3g
KH ₂ PO ₄	0.4g
MgSO ₄ ·7H ₂ O	0.4g
(NH ₄) ₂ SO ₄	0.4g
0.1N H ₂ SO ₄	1000.0mL

pH 1.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 1.4 with H₂SO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Clostridium acetobutylicum*.

Thiobacillus ferrooxidans Medium with Tetrathionate**Composition per liter:**

K ₂ S ₄ O ₆	5.0g
KH ₂ PO ₄	3.0g
(NH ₄) ₂ SO ₄	3.0g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.25g

pH 4.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 4.4 with H₂SO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Thiobacillus ferrooxidans*.

Thiobacillus ferrooxidans Medium with Thiosulfate**Composition per liter:**

Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g
KH ₂ PO ₄	3.0g
(NH ₄) ₂ SO ₄	3.0g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂ ·2H ₂ O	0.25g

pH 4.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 4.4 with

H₂SO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Thiobacillus ferrooxidans* and *Thiobacillus thiooxidans*.

Thiobacillus halophilus Agar

Composition per liter:

NaCl	50.0g
Agar	15.0g
Na ₂ HPO ₄ ·2H ₂ O	7.9g
Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g
KH ₂ PO ₄	1.5g
NH ₄ Cl	0.4g
MgSO ₄ ·7H ₂ O	0.1g
Phenol Red (saturated aqueous solution)	12.5mL
Trace metals solution	10.0mL

pH 7.3 ± 0.2 at 25°C

Trace Metals Solution:

Composition per liter:

Disodium EDTA	50.0g
NaOH	11.0g
ZnSO ₄ ·7H ₂ O	11.0g
CaCl ₂ ·2H ₂ O	7.34g
FeSO ₄ ·7H ₂ O	5.0g
MnCl ₂ ·4H ₂ O	2.5g
CoCl ₂ ·6H ₂ O	0.5g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	0.5g
CuSO ₄ ·5H ₂ O	0.2g

Preparation of Trace Metals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 6.0. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Thiobacillus halophilus*.

Thiobacillus halophilus Broth

Composition per liter:

Solution A	900.0mL
Solution B	100.0mL

pH 7.3 ± 0.2 at 25°C

Solution A:

Composition per 900.0mL:

NaCl	50.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g
NH ₄ Cl	0.4g
MgSO ₄ ·7H ₂ O	0.1g
Phenol Red (saturated aqueous solution)	12.5mL
Trace metals solution	10.0mL

Trace Metals Solution:

Composition per liter:

Disodium EDTA	50.0g
NaOH	11.0g
ZnSO ₄ ·7H ₂ O	11.0g
CaCl ₂ ·2H ₂ O	7.34g
FeSO ₄ ·7H ₂ O	5.0g

MnCl ₂ ·4H ₂ O	2.5g
CoCl ₂ ·6H ₂ O	0.5g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	0.5g
CuSO ₄ ·5H ₂ O	0.2g

Preparation of Trace Metals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 6.0. Mix thoroughly.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:

Composition per 100.0mL:

Na ₂ HPO ₄ ·2H ₂ O	7.9g
KH ₂ PO ₄	1.5g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 900.0mL of sterile solution A with 100.0mL of sterile solution B. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Thiobacillus halophilus*.

Thiobacillus halophilus Medium

Composition per liter:

Solution B	900.0mL
Solution A	100.0mL

pH 7.3 ± 0.2 at 25°C

Solution B:

Composition per 900.0mL:

NaCl	50.0g
Agar, noble	15.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g
NH ₄ Cl	0.4g
Phenol Red	10.0mg
Hutner's basal salts solution	20.0mL

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Hutner's Basal Salts Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitritotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.335g
FeSO ₄ ·7H ₂ O	99.0mg
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	9.25mg
"Metals 44"	50.0mL

"Metals 44":

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.095g
FeSO ₄ ·7H ₂ O	0.5g
Sodium EDTA	0.25g
MnSO ₄ ·H ₂ O	0.154g
CuSO ₄ ·5H ₂ O	39.2mg
Co(NO ₃) ₂ ·6H ₂ O	24.8mg
Na ₂ B ₄ O ₇ ·10H ₂ O	17.7mg

Preparation of "Metals 44": Add sodium EDTA to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Add a few

drops of concentrated H₂SO₄ to retard precipitation of heavy metal ions. Add remaining components. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Hutner's Basal Salts Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Solution A:

Composition per 100.0mL:

Na ₂ HPO ₄	6.3g
KH ₂ PO ₄	1.5g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine 900.0mL of sterile solution B with 100.0mL of sterile solution A. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Thiobacillus halophilus*.

Thiobacillus Heterotrophic Medium

Composition per liter:

Glucose	5.0g
MgSO ₄ ·7H ₂ O	0.5g
(NH ₄) ₂ SO ₄	0.15g
KH ₂ PO ₄	0.1g
KCl.....	0.05g
Ca(NO ₃) ₂	0.01g

pH 3.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Use: For the cultivation and maintenance of *Thiobacillus organoparus* and other heterotrophic *Thiobacillus* species.

Thiobacillus intermedius Medium

Composition per 1010.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O	10.0g
Solution I.....	1.0L
Solution II	10.0mL

Solution I:

Composition per liter:

NH ₄ Cl	1.0g
K ₂ HPO ₄	0.6g
MgCl ₂ ·6H ₂ O.....	0.5g
KH ₂ PO ₄	0.4g
MgSO ₄	0.3g
CaCl ₂ ·2H ₂ O.....	0.2g
FeCl ₃ ·6H ₂ O	0.02g

Preparation of Solution I: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution II:

Composition per liter:

CaCl ₂ ·2H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O	0.09g
CuSO ₄ ·5H ₂ O	0.04g
MnSO ₄	0.02g
Na ₂ B ₄ O ₇	0.01g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	5.0mg

Preparation of Solution II: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine solution I, 10.0mL of solution II, and 10.0g of Na₂S₂O₃·5H₂O. Mix thoroughly. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and autotrophic cultivation of *Thiobacillus intermedius*.

Thiobacillus intermedius Medium

Composition per 1010.0mL:

Glucose	10.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	10.0g
Solution I	1.0L
Solution II	10.0mL

Solution I:

Composition per liter:

NH ₄ Cl	1.0g
K ₂ HPO ₄	0.6g
MgCl ₂ ·6H ₂ O	0.5g
KH ₂ PO ₄	0.4g
MgSO ₄	0.3g
CaCl ₂ ·2H ₂ O	0.2g
FeCl ₃ ·6H ₂ O	0.02g

Preparation of Solution I: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution II:

Composition per liter:

CaCl ₂ ·2H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.09g
CuSO ₄ ·5H ₂ O	0.04g
MnSO ₄	0.02g
Na ₂ B ₄ O ₇	0.01g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	5.0mg

Preparation of Solution II: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine 1.0L of solution I, 10.0mL of solution II, 10.0g of glucose, and 10.0g of Na₂S₂O₃·5H₂O. Mix thoroughly. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and mixotrophic cultivation of *Thiobacillus intermedius*.

Thiobacillus intermedius Medium

Composition per 1010.0mL:

Glucose	10.0g
Yeast extract.....	0.3g
Solution I	1.0L
Solution II	10.0mL

Solution I:

Composition per liter:

NH ₄ Cl	1.0g
K ₂ HPO ₄	0.6g
MgCl ₂ ·6H ₂ O	0.5g
KH ₂ PO ₄	0.4g
MgSO ₄	0.3g
CaCl ₂ ·2H ₂ O	0.2g
FeCl ₃ ·6H ₂ O	0.02g

Preparation of Solution I: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution II:

Composition per liter:

CaCl ₂ ·2H ₂ O	0.1g
ZnSO ₄ ·7H ₂ O	0.09g
CuSO ₄ ·5H ₂ O	0.04g
MnSO ₄	0.02g
Na ₂ B ₄ O ₇	0.01g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	5.0mg

Preparation of Solution II: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine 1.0L of solution I, 10.0mL of solution II, 10.0g of glucose, and 0.3g of yeast extract. Mix thoroughly. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and heterotrophic cultivation of *Thiobacillus intermedius*.

Thiobacillus intermedius Medium (LMG 113)

Composition per liter:

Agar	15.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	10.0g
MgCl ₂ ·H ₂ O	1.0g
NH ₄ Cl	1.0g
Yeast extract	1.0g
K ₂ HPO ₄	0.6g
KH ₂ PO ₄	0.4g
Chlorophenol Red	80.0mg
FeCl ₃ ·H ₂ O	33.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Thiobacillus intermedius*.

Thiobacillus Medium

Composition per 100.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O	1.0g
KH ₂ PO ₄	0.1g
NH ₄ Cl	0.1g
MgCl ₂ ·7H ₂ O	0.05g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Thiobacillus thioparus* and *Thiobacillus thiooxidans*.

Thiobacillus Medium

Composition per liter:

Na ₂ S ₂ O ₃ ·5H ₂ O	10.0g
K ₂ HPO ₄	4.0g
KH ₂ PO ₄	4.0g
CaCl ₂	0.1g
MgSO ₄ ·7H ₂ O	0.1g
(NH ₄) ₂ SO ₄	0.1g

FeCl ₃ ·6H ₂ O	0.02g
MnSO ₄ ·4H ₂ O	0.02g
pH 6.6 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into flasks in 100.0mL volumes. Autoclave for 60 min at 0 psi pressure–100°C on 3 consecutive days.

Use: For the cultivation of nonaciduric *Thiobacillus* species.

Thiobacillus Medium

Composition per liter:

Na ₂ S ₂ O ₃ ·5H ₂ O	10.0g
Na ₂ HPO ₄ ·7H ₂ O	7.9g
Sodium formate	6.8g
Glucose	3.6g
KNO ₃	2.0g
KH ₂ PO ₄	1.5g
NH ₄ Cl	0.3g
MgSO ₄ ·7H ₂ O	0.1g
Trace metals solution	5.0mL
pH 7.6–8.5 at 25°C	

Trace Metals Solution:

Composition per liter:

Disodium EDTA	50.0g
NaOH	11.0g
CaCl ₂ ·2H ₂ O	7.34g
FeSO ₄ ·7H ₂ O	5.0g
MnCl ₂ ·2H ₂ O	2.5g
ZnSO ₄ ·7H ₂ O	2.2g
CoCl ₂ ·6H ₂ O	0.5g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	0.5g
CuSO ₄ ·5H ₂ O	0.2g

Preparation of Trace Metals Solution: Add EDTA to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 6.0 with NaOH. Add remaining components, one by one. Maintain the pH at 6.0. After dissolution of all the salts, adjust the pH to 4.0 with HCl. Store at 4°C.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.6–8.5. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and anaerobic cultivation of *Thiobacillus* species.

Thiobacillus Medium

Composition per liter:

Na ₂ S ₂ O ₃ ·5H ₂ O	10.0g
Na ₂ HPO ₄ ·7H ₂ O	7.9g
Sodium formate	6.8g
Glucose	3.6g
KH ₂ PO ₄	1.5g
NH ₄ Cl	0.3g
MgSO ₄ ·7H ₂ O	0.1g
Trace metals solution	5.0mL
pH 7.6–8.5 at 25°C	

Trace Metals Solution:

Composition per liter:

Disodium EDTA	50.0g
NaOH	11.0g

CaCl ₂ ·2H ₂ O.....	7.34g
FeSO ₄ ·7H ₂ O.....	5.0g
MnCl ₂ ·2H ₂ O.....	2.5g
ZnSO ₄ ·7H ₂ O.....	2.2g
CoCl ₂ ·6H ₂ O.....	0.5g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	0.5g
CuSO ₄ ·5H ₂ O.....	0.2g

Preparation of Trace Metals Solution: Add EDTA to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 6.0 with NaOH. Add remaining components, one by one. Maintain the pH at 6.0. After dissolution of all the salts, adjust the pH to 4.0 with HCl. Store at 4°C.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.6–8.5. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and aerobic cultivation of *Thiobacillus* species.

***Thiobacillus* Medium (ATCC Medium 64)**

Composition per 500.0mL:

Solution A.....	400.0mL
Solution B.....	100.0mL

pH 2.8 ± 0.2 at 25°C

Solution A:

Composition per 400.0mL:

(NH ₄) ₂ SO ₄	0.4g
KH ₂ PO ₄	0.2g
MgSO ₄ ·7H ₂ O.....	0.08g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B:

Composition per 100.0mL:

FeSO ₄ ·7H ₂ O.....	10.0g
H ₂ SO ₄ (1N solution).....	1.0mL

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Aseptically add 100.0mL of cooled sterile solution B to 400.0mL of cooled sterile solution A. Mix thoroughly. Adjust pH to 2.8. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of a variety of *Thiobacillus* species.

***Thiobacillus* Medium (ATCC Medium 125)**

Composition per liter:

Sulfur.....	10.0g
KH ₂ PO ₄	3.0g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂	0.25g
(NH ₄) ₂ SO ₄	0.2g
FeSO ₄ ·7H ₂ O.....	5.0mg

Preparation of Medium: Add components, except sulfur, to tap water and bring volume to 1.0L. Mix thoroughly. Add 1.0g of sulfur to each of 10 flasks. Distribute the broth in 100.0mL volumes into the flasks. Pour the broth down the side of the flask so that the sulfur is not

wetted. Autoclave for 30 min at 0 psi pressure–100°C on 3 consecutive days. Be sure that sulfur remains on the surface of the broth during the sterilization.

Use: For the cultivation and maintenance of a variety of *Thiobacillus* species.

***Thiobacillus* Medium (ATCC Medium 152)**

Composition per liter:

Agar.....	15.0g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	10.0g
NH ₄ Cl.....	1.0g
Yeast extract.....	1.0g
K ₂ HPO ₄	0.6g
MgCl ₂	0.5g
KH ₂ PO ₄	0.4g
Chlorophenol Red.....	0.08g
FeCl ₃	0.02g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of *Thiobacillus* species.

***Thiobacillus* Medium (ATCC Medium 426)**

Composition per liter:

Na ₂ S ₂ O ₃ ·5H ₂ O.....	10.0g
Na ₂ HPO ₄ ·7H ₂ O.....	7.9g
KH ₂ PO ₄	1.5g
NH ₄ Cl.....	0.3g
MgSO ₄ ·7H ₂ O.....	0.1g
Phenol Red.....	2.0mg
Trace metals solution.....	5.0mL

pH 8.5 ± 0.2 at 25°C

Trace Metals Solution:

Composition per liter:

EDTA.....	50.0g
ZnSO ₄	22.0g
CaCl ₂	5.54g
MnCl ₂	5.06g
FeSO ₄ ·7H ₂ O.....	4.99g
CoCl ₂	1.61g
CuSO ₄	1.57g
(NH ₄) ₂ MoO ₄ ·4H ₂ O.....	1.1g

Preparation of Trace Metals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0 with KOH.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.5 with 10% Na₂CO₃. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 8.5 with sterile 10% Na₂CO₃ if necessary. The broth should be pink.

Use: For the cultivation and maintenance of a variety of *Thiobacillus* species.

Thiobacillus Medium (ATCC Medium 528)

Composition per liter:

Na ₂ S ₂ O ₃	10.0g
Yeast extract	5.0g
NH ₄ Cl	1.0g
K ₂ HPO ₄	0.6g
MgCl ₂	0.5g
KH ₂ PO ₄	0.4g
MgSO ₄	0.3g
Bromthymol Blue	0.03g
FeCl ₃	0.02g
Heavy metal solution	30.0mL

pH 6.8 ± 0.2 at 25°C

Heavy Metal Solution:

Composition per liter:

Ethylenediamine tetraacetate	1.5g
FeSO ₄ ·7H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.02g
Modified Hoagland trace elements solution	6.0mL

Preparation of Heavy Metal Solution: Add EDTA to approximately 900.0mL of distilled/deionized water. Dissolve by adjusting pH to 7.0 with NaOH. Bring volume to 1.0L with distilled/deionized water.

Modified Hoagland Trace Elements Solution:

Composition per 3.6L:

H ₃ BO ₃	11.0g
MnCl ₂ ·4H ₂ O	7.0g
AlCl ₃	1.0g
CoCl ₂	1.0g
CuCl ₂	1.0g
KI	1.0g
NiCl ₂	1.0g
ZnCl ₂	1.0g
BaCl ₂	0.5g
KBr	0.5g
LiCl	0.5g
Na ₂ MoO ₄	0.5g
SeCl ₄	0.5g
SnCl ₂ ·2H ₂ O	0.5g
NaVO ₃ ·H ₂ O	0.1g

Preparation of Modified Hoagland Trace Elements Solution: Prepare each component as a separate solution. Dissolve each salt in approximately 100.0mL of distilled/deionized water. Adjust the pH of each solution to below 7.0. Combine all the salt solutions and bring the volume to 3.6L with distilled/deionized water. Adjust the pH to 3–4. A yellow precipitate may form after mixing. After a few days, it will turn into a fine white precipitate. Mix the solution thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of a variety of *Thiobacillus* species.

Thiobacillus Medium B

Composition per liter:

Noble agar	15.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g

KH ₂ PO ₄	3.0g
NH ₄ Cl	0.1g
MgCl ₂	0.1g
CaCl ₂	0.1g

pH 4.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Thiobacillus thiooxidans* and *Streptomyces scabies*.

Thiobacillus neapolitanus Medium

Composition per 1002.0mL:

Solution I	1.0L
Solution II	2.0mL

pH 6.2–7.0 at 25°C

Solution I:

Composition per liter:

Na ₂ S ₂ O ₃ ·5H ₂ O	10.0g
KH ₂ PO ₄	4.0g
K ₂ HPO ₄	4.0g
MgSO ₄ ·7H ₂ O	0.8g
KHCO ₃	0.7g
NH ₄ Cl	0.4g

Preparation of Solution I: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution II:

Composition per liter:

Disodium EDTA	50.0g
NaOH	11.0g
CaCl ₂ ·2H ₂ O	7.34g
FeSO ₄ ·7H ₂ O	5.0g
MnCl ₂ ·2H ₂ O	2.5g
ZnSO ₄ ·7H ₂ O	2.2g
CoCl ₂ ·6H ₂ O	0.5g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	0.5g
CuSO ₄ ·5H ₂ O	0.2g

Preparation of Solution II: Add EDTA to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 6.0 with NaOH. Add remaining components, one by one. Maintain the pH at 6.0. After dissolution of all the salts, adjust the pH to 4.0 with HCl. Store at 4°C.

Preparation of Medium: Aseptically combine 1.0L of solution I and 2.0mL of solution II. Mix thoroughly. Adjust pH to 6.2–7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Thiobacillus neapolitanus*.

Thiobacillus novellus Medium

Composition per liter:

Na ₂ S ₂ O ₃ ·5H ₂ O	10.0g
K ₂ HPO ₄	4.0g
KH ₂ PO ₄	1.5g
MgSO ₄ ·7H ₂ O	0.5g
(NH ₄) ₂ SO ₄	0.3g

Yeast extract.....	0.3g
Trace metals solution.....	10.0mL
pH 6.8–7.2 at 25°C	

Trace Metals Solution:**Composition per liter:**

Disodium EDTA.....	50.0g
NaOH.....	11.0g
CaCl ₂ ·2H ₂ O.....	7.34g
FeSO ₄ ·7H ₂ O.....	5.0g
MnCl ₂ ·2H ₂ O.....	2.5g
ZnSO ₄ ·7H ₂ O.....	2.2g
CoCl ₂ ·6H ₂ O.....	0.5g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	0.5g
CuSO ₄ ·5H ₂ O.....	0.2g

Preparation of Trace Metals Solution: Add EDTA to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 6.0 with NaOH. Add remaining components, one by one. Maintain the pH at 6.0. After dissolution of all the salts, adjust the pH to 4.0 with HCl. Store at 4°C.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Thiobacillus novellus*.

Thiobacillus perometabolis* Medium*Composition per liter:**

Na ₂ S ₂ O ₃	10.0g
Yeast extract.....	5.0g
NH ₄ Cl.....	1.0g
K ₂ HPO ₄	0.6g
MgCl ₂	0.5g
KH ₂ PO ₄	0.4g
MgSO ₄	0.3g
Bromthymol Blue.....	0.03g
FeCl ₃	0.02g
Heavy metal solution.....	30.0mL
pH 3.0–4.0 at 25°C	

Heavy Metal Solution:**Composition per liter:**

Ethylenediamine tetraacetate.....	1.5g
FeSO ₄ ·7H ₂ O.....	0.2g
ZnSO ₄ ·H ₂ O.....	0.1g
MnCl ₂ ·4H ₂ O.....	0.02g
Modified Hoagland trace elements solution.....	6.0mL

Preparation of Heavy Metal Solution: Add ethylenediamine tetraacetate to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 6.8 to dissolve EDTA. Add remaining components. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Adjust pH to 6.8.

Modified Hoagland Trace Elements Solution:**Composition per liter:**

H ₃ BO ₃	11.0g
MnCl ₂ ·4H ₂ O.....	7.0g
AlCl ₃	1.0g
CoCl ₂	1.0g
CuCl ₂	1.0g
KI.....	1.0g
NiCl ₂	1.0g
ZnCl ₂	1.0g

BaCl ₂	0.5g
KBr.....	0.5g
LiCl.....	0.5g
Na ₂ MoO ₄	0.5g
SeS ₂	0.5g
SnCl ₂ ·2H ₂ O.....	0.5g
NaVO ₃ ·H ₂ O.....	0.1g

Preparation of Modified Hoagland Trace Elements Solution: Add components sequentially to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3–4. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. A flaky yellow precipitate forms after mixing but will change in a few days to a fine, white precipitate. Mix the medium thoroughly before use.

Use: For the cultivation of *Thiobacillus perometabolis* and other bacteria that can utilize thiosulfate as an energy source.

Thiobacillus plumbophilus* Medium*Composition per 1010.0mL:**

NiCl ₂ ·6H ₂ O.....	5.0g
MgSO ₄ ·7H ₂ O.....	3.45g
MgCl ₂ ·6H ₂ O.....	2.75g
NH ₄ Cl.....	1.25g
NaCl.....	0.5g
KCl.....	0.3g
CaCl ₂ ·2H ₂ O.....	0.14g
K ₂ HPO ₄	0.14g
Na ₂ WO ₄ ·2H ₂ O.....	0.5mg
Trace elements solution.....	10.0mL
pH 6.0 ± 0.2 at 25°C	

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	3.0g
Nitritotriacetic acid.....	1.5g
NaCl.....	1.0g
MnSO ₄ ·2H ₂ O.....	0.5g
CoSO ₄ ·7H ₂ O.....	0.18g
ZnSO ₄ ·7H ₂ O.....	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CuSO ₄ ·5H ₂ O.....	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O.....	0.01g
NiCl ₂ ·6H ₂ O.....	0.025g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0 with H₂SO₄. Distribute 20.0mL volumes into 100.0mL serum bottles. Sparge with 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Check pH of medium after autoclaving and bring to 6.0 if necessary. After inoculation add 3% sterile air (9.0mL per serum bottle) with a syringe. Pressurize bottles to 2 bar with 80% H₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Thiobacillus plumbophilus*.

Thiobacillus prosperus Medium

Composition per 1010.0mL:

MgSO ₄ ·7H ₂ O	3.45g
MgCl ₂ ·6H ₂ O	2.75g
NH ₄ Cl	1.25g
NaCl	0.5g
Sulfur, powdered	0.5g
KCl	0.33g
CaCl ₂ ·2H ₂ O	0.14g
K ₂ HPO ₄	0.14g
KH ₂ PO ₄	0.14g
NiCl ₂ ·6H ₂ O	2.0mg
Trace elements solution	10.0mL

pH 2.5 ± 0.2 at 25°C

Preparation of Sulfur: Add 10.0g of powdered sulfur to a flask and sterilize by steaming for 3 hr on 3 consecutive days.

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Preparation of Medium: Add components, except sulfur, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 2.5 with H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 0.5g of sterile sulfur. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Thiobacillus prosperus*.

Thiobacillus tepidarius Medium

Composition per liter:

Agar	10.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	4.96g
MgSO ₄ ·7H ₂ O	0.8g
NH ₄ Cl	0.4g
Phosphate solution	100.0mL
Bromocresol Purple, saturated solution	2.0mL
Trace metals A-5	1.0mL

Phosphate Solution:

Composition per 100.0mL:

KH ₂ PO ₄	4.0g
K ₂ HPO ₄	4.0g

Preparation of Phosphate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Metals A-5:

Composition per liter:

H ₃ BO ₃	2.86g
MnCl ₂ ·4H ₂ O	1.81g
Na ₂ MoO ₄ ·2H ₂ O	0.39g
ZnSO ₄ ·7H ₂ O	0.222g
CuSO ₄ ·5H ₂ O	0.079g
Co(NO ₃) ₂ ·6H ₂ O	49.4mg

Preparation of Trace Metals A-5: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except phosphate solution, to distilled/deionized water and bring volume to 900.0mL. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL of the sterile phosphate solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Thiobacillus tepidarius*.

Thiobacillus/Thermophilus Medium

Composition per liter:

Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g
NaHCO ₃	1.0g
Na ₂ HPO ₄	0.2g
MgCl ₂	0.1g
NH ₄ ·Cl	0.1g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 20 min at 6 psi pressure–109°C or filter sterilize.

Use: For the cultivation of *Thiobacillus* species and *Thermophilus* species.

Thiobacillus thiooxidans Medium

Composition per liter:

Sulfur, powdered	10.0g
KH ₂ PO ₄	5.0g
MgSO ₄ ·7H ₂ O	0.5g
CaCl ₂	0.25g
(NH ₄) ₂ SO ₄	0.2g
FeSO ₄	0.01g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except sulfur, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into flasks in 100.0mL volumes. Add 1.0g of sulfur to each flask. Autoclave for 30 min at 0 psi pressure–100°C on 3 consecutive days.

Use: For the cultivation of *Thiobacillus thiooxidans*.

Thiobacillus thiooxidans Medium

Composition per liter:

Flowers of sulfur	5.0g
K ₂ HPO	3.5g
MgSO ₄ ·7H ₂ O	0.5g
(NH ₄) ₂ SO ₄	0.3g

CaCl ₂	0.25g
FeSO ₄ ·7H ₂ O.....	0.02g
pH 4.5 ± 0.2 at 25°C	

Preparation of Medium: Add components, except flowers of sulfur, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into flasks or bottles in 100.0mL volumes. Add 0.5g of flowers of sulfur to each flask or bottle. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Thiobacillus thiooxidans*.

Thiobacillus thiooxidans Medium

Composition per liter:

Sulfur, powdered.....	10.0g
KH ₂ PO ₄	3.0g
CaCl ₂ ·2H ₂ O.....	0.14g
MgCl ₂ ·6H ₂ O.....	0.1g
NH ₄ Cl.....	0.1g
pH 4.2 ± 0.2 at 25°C	

Preparation of Sulfur: Add 10.0g of powdered sulfur to a flask and sterilize by autoclaving for 15 min at 8 psi pressure–112°C.

Preparation of Medium: Add components, except sulfur, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 2.5 with H₂SO₄. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically layer 0.5g of sterile sulfur onto the surface of the medium.

Use: For the cultivation and maintenance of *Thiobacillus* species.

Thiobacillus thioparus Agar

Composition per liter:

Agar, purified.....	12.0g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	10.0g
K ₂ HPO ₄	4.0g
KH ₂ PO ₄	4.0g
MgSO ₄ ·7H ₂ O.....	0.1g
(NH ₄) ₂ SO ₄	0.1g
CaCl ₂	0.1g
FeCl ₃ ·6H ₂ O.....	0.02g
MnSO ₄ ·H ₂ O.....	0.02g
pH 6.6 ± 0.2 at 25°C	

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.6. Add agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 20 min at 10 psi pressure–115°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Thiobacillus thioparus*.

Thiobacillus thioparus Broth

Composition per liter:

Na ₂ S ₂ O ₃ ·5H ₂ O.....	10.0g
K ₂ HPO ₄	4.0g
KH ₂ PO ₄	4.0g
MgSO ₄ ·7H ₂ O.....	0.1g
(NH ₄) ₂ SO ₄	0.1g
CaCl ₂	0.1g
FeCl ₃ ·6H ₂ O.....	0.02g
MnSO ₄ ·H ₂ O.....	0.02g
pH 6.6 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.6. Distribute into tubes or flasks. Autoclave for 20 min at 10 psi pressure–115°C.

Use: For the cultivation and maintenance of *Thiobacillus thioparus*.

Thiobacillus thioparus Medium

Composition per liter:

Na ₂ S ₂ O ₃ ·5H ₂ O.....	5.0g
K ₂ HPO ₄	4.0g
MgSO ₄ ·7H ₂ O.....	0.5g
(NH ₄) ₂ SO ₄	0.4g
CaCl ₂	0.25g
FeSO ₄	0.01g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Thiobacillus thioparus*.

Thiobacillus thioparus II Medium (DSMZ Medium 486)

Composition per 1003.0mL:

Solution A.....	900.0mL
Solution B.....	100.0mL
Vitamin solution.....	3.0mL
pH 7.4 ± 0.2 at 25°C	

Solution A:

Composition per 900.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O.....	5.0g
NH ₄ Cl.....	0.4g
Na ₂ CO ₃	0.4g
MgCl ₂ ·6H ₂ O.....	0.2g
Bromocresol Purple (saturated solution).....	2.0mL
Trace metals solution.....	1.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution B:

Composition per 100.0mL:

KH ₂ PO ₄	2.0g
K ₂ HPO ₄	2.0g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution:

Composition per liter:

Na ₂ -EDTA.....	50.0g
NaOH.....	11.0g
ZnSO ₄ ·7H ₂ O.....	11.0g
CaCl ₂ ·2H ₂ O.....	7.34g
FeSO ₄ ·7H ₂ O.....	5.0g
MnCl ₂ ·4H ₂ O.....	2.5g
CoCl ₂ ·6H ₂ O.....	0.5g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	0.5g
CuSO ₄ ·5H ₂ O.....	0.2g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Riboflavin	20.0mg
Ca-pantothenate	20.0mg
Nicotinic acid	20.0mg
Pyridoxine-HCl	20.0mg
<i>p</i> -Aminobenzoic acid	10.0mg
Thiamine-HCl·2H ₂ O	10.0mg
Biotin	1.0mg
Vitamin B ₁₂	1.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 100.0mL solution A, 900.0mL solution B, and 3.0mL vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Thiobacillus thioparusii*.

***Thiobacillus thioparusii* Agar**

Composition per 1003.0mL:

Solution B	900.0mL
Solution A	100.0mL
Vitamin solution	3.0mL

pH 7.1 ± 0.2 at 25°C

Solution A:

Composition per 100.0mL:

K ₂ HPO ₄	2.0g
KH ₂ PO ₄	2.0g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:

Composition per 900.0mL:

Agar	15.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g
Na ₂ CO ₃	0.4g
NH ₄ Cl	0.4g
MgCl ₂ ·6H ₂ O	0.2g
Bromcresol Purple (saturated aqueous solution)	2.0mL
Trace elements solution	1.0mL

Trace Elements Solution:

Composition per liter:

Disodium EDTA	50.0g
NaOH	11.0g
ZnSO ₄ ·7H ₂ O	11.0g
CaCl ₂ ·2H ₂ O	7.34g
FeSO ₄ ·7H ₂ O	5.0g
MnCl ₂ ·4H ₂ O	2.5g
CoCl ₂ ·6H ₂ O	0.5g
(NH ₄) ₆ MoO ₂₄ ·4H ₂ O	0.5g
CuSO ₄ ·5H ₂ O	0.2g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0.

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Vitamin Solution:

Composition per liter:

Calcium DL-pantothenate	20.0mg
Nicotinic acid	20.0mg
Pyridoxine-HCl	20.0mg
Riboflavin	20.0mg
<i>p</i> -Aminobenzoic acid	10.0mg
Thiamine-HCl	10.0mg
Biotin	1.0mg
Vitamin B ₁₂	1.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Filter sterilize.

Preparation of Medium: Aseptically combine 100.0mL of sterile solution A with 900.0mL of sterile solution B and 3.0mL of sterile vitamin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Thiobacillus thioparusii*.

***Thiobacillus thioparusii* Broth**

Na ₂ HPO ₄ ·2H ₂ O	7.9g
KH ₂ PO ₄	1.5g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.4. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution B:

Composition per 900.0mL:

NaCl	25.1g
Na ₂ S ₂ O ₃	5.0g
NH ₄ Cl	0.4g
MgSO ₄ ·7H ₂ O	0.1g
Phenol Red	3.0mg
Trace elements solution	10.0mL

Trace Elements Solution:

Composition per liter:

Disodium EDTA	50.0g
NaOH	11.0g
ZnSO ₄ ·7H ₂ O	11.0g
CaCl ₂ ·2H ₂ O	7.34g
FeSO ₄ ·7H ₂ O	5.0g
MnCl ₂ ·4H ₂ O	2.5g
CoCl ₂ ·6H ₂ O	0.5g

(NH ₄) ₆ MoO ₂₄ ·4H ₂ O	0.5g
CuSO ₄ ·5H ₂ O	0.2g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0.

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Vitamin Solution:

Composition per liter:

Calcium DL-pantothenate	20.0mg
Nicotinic acid	20.0mg
Pyridoxine-HCl	20.0mg
Riboflavin	20.0mg
<i>p</i> -Aminobenzoic acid	10.0mg
Thiamine-HCl	10.0mg
Biotin	1.0mg
Vitamin B ₁₂	1.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Filter sterilize.

Preparation of Medium: Aseptically combine 100.0mL of sterile solution A with 900.0mL of sterile solution B and 10.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Thiobacillus thyasiris*.

Thiobacillus thyasiris/*Thiobacillus halophilus* Medium (DSMZ Medium 484)

Composition per 1010.0mL:

Solution B	900.0mL
Solution A	100.0mL
Vitamin solution	10.0mL

pH 7.3–7.6 at 25°C

Solution A:

Composition per 100.0mL:

Na ₂ HPO ₄ ·2H ₂ O	7.9g
KH ₂ PO ₄	1.5g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution B:

Composition per 900.0mL:

NaCl	25.1g
Na ₂ S ₂ O ₃	5.0g
NH ₄ Cl	0.4g
MgSO ₄ ·7H ₂ O	0.1g
Phenol Red	3.0mg
Trace elements solution	10.0mL

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Trace Elements Solution:

Composition per liter:

Na ₂ -EDTA	50.0g
NaOH	11.0g

ZnSO ₄ ·7H ₂ O	11.0g
CaCl ₂ ·2H ₂ O	7.34g
FeSO ₄ ·7H ₂ O	5.0g
MnCl ₂ ·4H ₂ O	2.5g
CoCl ₂ ·6H ₂ O	0.5g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O	0.5g
CuSO ₄ ·5H ₂ O	0.2g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Riboflavin	20.0mg
Ca-pantothenate	20.0mg
Nicotinic acid	20.0mg
Pyridoxine-HCl	20.0mg
<i>p</i> -Aminobenzoic acid	10.0mg
Thiamine-HCl·2H ₂ O	10.0mg
Biotin	1.0mg
Vitamin B ₁₂	1.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 100.0mL solution A, 900.0mL solution B, and 10.0mL vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Thiobacillus thyasiris*, *Thiobacillus halophilus*, *Thiomicrospira thyasirae*, and *Halothiobacillus halophilus* DSM6132.

Thiocapsa halophila Medium

Composition per 1061.0mL:

NaCl	70.0g
MgCl ₂ ·6H ₂ O	4.5g
MgSO ₄ ·7H ₂ O	3.0g
NH ₄ Cl	0.5g
KH ₂ PO ₄	0.3g
CaCl ₂ ·2H ₂ O	0.05g
NaHCO ₃ solution	40.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Na ₂ S ₂ O ₃ solution	10.0mL
Vitamin B ₁₂ solution	1.0mL
Trace elements solution SL-12B	1.0mL

pH 7.2 ± 0.2 at 25°C

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.6g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Na₂S₂O₃ Solution :**Composition per 10.0mL:**Na₂S₂O₃ · 5H₂O 0.5g

Preparation of Na₂S₂O₃ Solution: Add Na₂S₂O₃ · 5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Vitamin B₁₂ Solution:**Composition per 10.0mL:**Vitamin B₁₂ 0.2mg

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-12B:**Composition per liter:**MnCl₂ · 2H₂O 50.0g

Disodium EDTA 3.0g

FeSO₄ · 7H₂O 1.1gH₃BO₃ 0.3gCoCl₂ · 6H₂O 0.19gZnCl₂ 42.0mgNiCl₂ · 6H₂O 24.0mgNa₂MoO₄ · 2H₂O 18.0mgCuCl₂ · 2H₂O 2.0mg

Preparation of Trace Elements Solution SL-12B: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except NaHCO₃ solution, Na₂S · 9H₂O solution, Na₂S₂O₃ solution, and vitamin B₁₂ solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature while sparging with 90% N₂ + 10% CO₂. Aseptically and anaerobically add 40.0mL of sterile NaHCO₃ solution, 10.0mL of sterile Na₂S · 9H₂O solution, 10.0mL of sterile Na₂S₂O₃ solution, and 1.0mL of sterile vitamin B₁₂ solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Thiocapsa halophila*.

Thiocapsa Medium**Composition per 127.0mL:**

Solution 1 76.2mL

Solution 2 + Solution 3 44.8mL

Solution 4 6.0mL

Solution 1:**Composition per 2.5L:**

NaCl 39.68g

CaCl₂ 2.0g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 2.5L. Distribute in 80.0mL volumes into 127.0mL screw-capped bottles. Autoclave for 15 min at 15 psi pressure–121°C.

Solution 2:**Composition per 100.0mL:**

Sodium ascorbate 2.4g

KCl 1.0g

KH₂PO₄ 1.0gMgCl₂ · 6H₂O 0.8gNH₄Cl 0.8g

Heavy metal solution 50.0mL

Vitamin solution 15.0mL

Vitamin B₁₂ solution 3.0mL

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Heavy Metal Solution:**Composition per liter:**

Ethylenediamine tetraacetate (EDTA) 1.5g

FeSO₄ · 7H₂O 0.2gZnSO₄ · 7H₂O 0.1gMnCl₂ · 4H₂O 0.02g

Modified Hoagland trace elements solution 6.0mL

Preparation of Heavy Metal Solution: Dissolve EDTA in approximately 800.0mL of distilled/deionized water. Add remaining components. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly.

Modified Hoagland Trace Elements Solution:**Composition per 3.6L:**H₃BO₃ 11.0gMnCl₂ · 4H₂O 7.0gAlCl₃ 1.0gCoCl₂ 1.0gCuCl₂ 1.0g

KI 1.0g

NiCl₂ 1.0gZnCl₂ 1.0gBaCl₂ 0.5g

KBr 0.5g

LiCl 0.5g

Na₂MoO₄ 0.5gSeCl₄ 0.5gSnCl₂ · 2H₂O 0.5gNaVO₃ · H₂O 0.1g

Preparation of Modified Hoagland Trace Elements Solution: Prepare each component as a separate solution. Dissolve each salt in approximately 100.0mL of distilled/deionized water. Adjust the pH of each solution to below 7.0. Combine all the salt solutions and bring the volume to 3.6L with distilled/deionized water. Adjust the pH to 3–4. A yellow precipitate may form after mixing. After a few days, it will turn into a fine white precipitate. Mix the solution thoroughly before using.

Vitamin Solution:**Composition per 100.0mL:**

Pyridoxamine · 2HCl 5.0mg

Nicotinic acid 2.0mg

Thiamine 1.0mg

Pantothenic acid 0.5mg

Biotin 0.2mg

p-Aminobenzoic acid 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Vitamin B₁₂ Solution:**Composition per 100.0mL:**Vitamin B₁₂ (cyanocobalamin) 2.0mg

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Solution 3:**Composition** per 900.0mL:NaHCO₃ 4.5g

Preparation of Solution 3: Add NaHCO₃ to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Bubble 100% CO₂ through the solution for 30 min. After CO₂ saturation of solution 3, add solution 2 and immediately filter the mixture through a Seitz filter (or a Millipore) using positive CO₂ pressure to push the liquid through.

Solution 4:**Composition** per 200.0mL:Na₂S·9H₂O 3.0g

Preparation of Solution 4: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 200.0mL. Add a magnetic stir bar to the flask. Autoclave for 15 min at 15 psi pressure–121°C. On a magnetic stirrer, slowly add 2.0mL of sterile 2M H₂SO₄. This partially neutralizes the solution. The solution should turn yellow. H₂S gas will be liberated; neutralization and distribution of the solution should be done as rapidly as possible under adequate ventilation.

Preparation of Medium: To the 80.0mL of sterile solution 1 in screw-capped bottles, add combined solutions 2 and 3 immediately after filtration and fill bottles to capacity. Mix thoroughly. Aseptically remove 6.0mL of the medium from the bottles and replace it with 6.0mL of neutralized solution 4. Let stand for 24 hr. The medium should form a fine white precipitate before using. To inoculate, remove 6.0mL of the completed medium from the bottles and replace it with 6.0mL of inoculum.

Use: For the cultivation and maintenance of a variety of *Thiocapsa* species.

Thiocyanate Agar**Composition** per liter:

Solution A 800.0mL

Solution B 100.0mL

Solution C 100.0mL

Solution A:**Composition** per 800.0mL:

Agar, noble 30.0g

K₂HPO₄ 1.0gKH₂PO₄ 1.0gMgSO₄·7H₂O 0.2gCaCl₂ 20.0mgFeCl₃·6H₂O (60%) 0.1mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:**Composition** per 100.0mL:

KCNS 3.6g

Preparation of Solution B: Add KCNS to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution C:**Composition** per 100.0mL:

Disodium succinate 1.5g

Preparation of Solution C: Add disodium succinate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine 800.0mL of solution A with 100.0mL of solution B and 100.0mL of solution C. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of a variety of microorganisms that can utilize thiocyanate as sole source of nitrogen and sulfur.

Thiocyanate Utilization Medium**Composition** per 1225.0mL:

Basal solution 1.0L

Solution C 200.0mL

Solution B 20.0mL

Solution A 5.0mL

Basal Solution:**Composition** per liter:Na₂HPO₄ 4.8gKH₂PO₄ 4.4gMgSO₄·7H₂O 0.5g

Preparation of Basal Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution A:**Composition** per 100.0mL:FeCl₃·6H₂O 1.0gCaCl₂ 0.1g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution B:**Composition** per 100.0mL:

D-Glucose 10.0g

Preparation of Solution B: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution C:**Composition** per 200.0mL:

NaSCN 1.0g

Preparation of Solution C: Add NaSCN to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 1.0L of cooled, sterile basal solution, aseptically add 5.0mL of sterile solution A, 20.0mL of sterile solution B, and 200.0mL of sterile solution C. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of a variety of microorganisms that can utilize thiocyanate as sole source of nitrogen and sulfur.

**Thiofaba Medium
(DSMZ Medium 1114)****Composition** per liter:

Solution A 960.0mL

Solution B 10.0mL

Solution C 10.0mL

Solution D 10.0mL

Solution E 10.0mL

pH 6.5 ± 0.2 at 25°C

Solution A:**Composition per 960.0mL:**

MgCl ₂ ·6H ₂ O.....	0.75g
CaCl ₂ ·2H ₂ O.....	0.15g
NH ₄ Cl	0.54g
Trace elements solution	2.0mL

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Sparge with a gas mixture of 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution B:**Composition per 10.0mL:**

KH ₂ PO ₄	1.19g
KH ₂ PO ₄	0.21g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution C:**Composition per 10.0mL:**

Na ₂ CO ₃	4.0g
---------------------------------------	------

Preparation of Solution C: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with a gas mixture of 80% N₂ + 20% CO₂. Filter sterilize.

Solution D:**Composition per 10.0mL:**

Na ₂ S ₂ O ₃ ·5H ₂ O	1.25g
--	-------

Preparation of Solution D: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg

Lipoic acid.....	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Dispense solution A under a gas atmosphere of 80% N₂ + 20% CO₂ into serum vials to 20% of volume. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add sterile solutions B–E in that order. Adjust the pH to 6.5. After inoculation pressurize with an amount of sterile air that is equivalent to 30% of the volume of the cultivation vessel.

Use: For the cultivation of *Thiofaba* spp.

Thiogel® Medium**Composition per liter:**

Gelatin.....	50.0g
Pancreatic digest of casein.....	17.0g
Glucose	6.0g
Papaic digest of soybean meal.....	3.0g
NaCl.....	2.5g
Sodium thioglycolate.....	0.5g
Agar	0.7g
Na ₂ SO ₃	0.1g
L-Cystine	0.25g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water preheated to 50°C and bring volume to 1.0L. Mix thoroughly. Let stand for 5 min. Gently heat while stirring and bring to boiling. Distribute into tubes, filling them half full. Autoclave for 15 min at 13 psi pressure–118°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of microorganisms based on their ability to liquefy gelatin.

Thioglycolate Bile Broth**Composition per 1050.0mL:**

Pancreatic digest of casein.....	15.0g
Glucose	5.5g
Yeast extract.....	5.0g
NaCl.....	2.5g
Agar	0.75g
L-Cystine	0.5g
Sodium thioglycolate.....	0.5g
Bile solution.....	50.0mL

pH 7.1 ± 0.2 at 25°C

Bile Solution:**Composition per 100.0mL:**

Oxgall	40.0g
Sodium deoxycholate.....	2.0g

Preparation of Bile Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except bile solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL vol-

umes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 0.5mL of sterile bile solution to each tube. Mix thoroughly.

Use: For the cultivation of *Bacteroides fragilis* and *Clostridium perfringens* from clinical specimens.

Thioglycolate Broth USP, Alternative

Composition per liter:

Pancreatic digest of casein.....	15.0g
Glucose.....	5.5g
Yeast extract.....	5.0g
NaCl.....	2.5g
L-Cystine.....	0.5g
Sodium thioglycolate.....	0.5g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Prepare freshly or boil and cool the medium just before use.

Use: For the cultivation of both aerobic and anaerobic organisms in the performance of sterility tests of turbid or viscous specimens.

Thioglycolate Gelatin Medium

Composition per liter:

Gelatin.....	50.0g
Pancreatic digest of casein.....	15.0g
Yeast extract.....	5.0g
NaCl.....	2.5g
Glucose.....	2.0g
Agar.....	0.75g
L-Cystine.....	0.25g
Na ₂ SO ₃	0.1g
Thioglycollic acid.....	0.3mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to 50°C. Let stand 5 min. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the determination of gelatin liquefaction by aerobes, microaerophiles, and anaerobes without special incubation.

Thioglycolate HiVeg Agar

Composition per liter:

Agar.....	20.0g
Plant hydrolysate.....	15.0g
Glucose.....	5.5g
Yeast extract.....	5.0g
NaCl.....	2.5g
L-Cystine.....	0.5g
Na-thioglycolate.....	0.5g
Resazurin.....	1.0mg

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Prepare freshly or boil and cool the medium just before use. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of facultative and anaerobic organisms. For the performance of sterility tests of turbid or viscous specimens.

Thioglycolate HiVeg Medium without Indicator

Composition per liter:

Plant hydrolysate.....	17.0g
Glucose.....	6.0g
Papaic digest of soybean meal.....	3.0g
NaCl.....	2.5g
Agar.....	0.7g
Na-thioglycolate.....	0.5g
L-Cystine.....	0.25g
Na ₂ SO ₃	0.1g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Prepare freshly or boil and cool the medium just before use.

Use: For the cultivation of facultative and anaerobic organisms. For the performance of sterility tests of turbid or viscous specimens.

Thioglycolate Medium (DSMZ Medium 530)

Composition per liter:

Agar.....	15.0g
Peptone from casein.....	5.0g
Meat extract.....	3.0g
Na-thioglycolate solution.....	100.0mL

pH 5.5 ± 0.2 at 25°C

Thioglycolate Solution :

Composition per 100.0mL:

Na-thioglycolate.....	0.5g
-----------------------	------

Preparation of Thioglycolate Solution: Add thioglycolate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Preparation of Medium: Add components, except thioglycolate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 100.0mL warm thioglycolate solution. Adjust pH to 5.5. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of various anaerobic bacteria.

Thioglycolate Medium with 20% Bile (THIO + Bile Medium)

Composition per liter:

Oxgall.....	20.0g
Thioglycolate medium without indicator.....	1.0L

Hemin solution.....	0.5mL
Vitamin K ₁ solution	0.1mL
pH 7.0 ± 0.2 at 25°C	

Thioglycolate Medium without Indicator:**Composition per liter:**

Pancreatic digest of casein.....	17.0g
Glucose	6.0g
Papaic digest of soybean meal	3.0g
NaCl.....	2.5g
Agar	0.7g
Sodium thioglycolate.....	0.5g
L-Cystine	0.25g
Na ₂ SO ₃	0.1g

Preparation of Thioglycolate Medium Without Indicator:

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin K₁ Solution:**Composition per 100.0mL:**

Vitamin K ₁	1.0g
------------------------------	------

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly.

Hemin Solution:**Composition per 100.0mL:**

Hemin.....	1.0g
NaOH (1N solution).....	20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Medium: Add 0.5mL of hemin solution, 0.1mL of vitamin K₁ solution, and oxgall to 1.0L of thioglycolate medium without indicator. Mix thoroughly. Distribute into screw-capped tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool tubes or flasks under 85% N₂ + 10% H₂ + 5% CO₂. Tighten caps.

Use: For the isolation, cultivation, and identification of a variety of obligate anaerobic bile-tolerant bacteria.

Thioglycolate Medium, Brewer**Composition per liter:**

Glucose	5.0g
Peptone.....	5.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Sodium thioglycolate.....	1.1g
Agar	1.0g
Beef extract.....	1.0g
Methylene Blue.....	2.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For determination of the sterility of solutions containing mercurial preservatives.

Thioglycolate Medium, Brewer Modified**Composition per liter:**

Pancreatic digest of casein.....	17.5g
Glucose	10.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	2.5g
K ₂ HPO ₄	2.0g
Sodium thioglycolate.....	1.0g
Agar	0.5g
Methylene Blue.....	0.002g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks, filling them half full. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of obligate anaerobes, microaerophiles, and facultative organisms.

Thioglycolate Medium, Enriched**(THIO Medium)****(Thioglycolate Medium with Vitamin K₁ and Hemin)****Composition per liter:**

Thioglycolate medium without indicator.....	1.0L
Hemin solution.....	0.5mL
Vitamin K ₁ solution	0.1mL

pH 7.0 ± 0.2 at 25°C

Thioglycolate Medium without Indicator:**Composition per liter:**

Pancreatic digest of casein.....	17.0g
Glucose	6.0g
Papaic digest of soybean meal.....	3.0g
NaCl.....	2.5g
Agar	0.7g
Sodium thioglycolate.....	0.5g
L-Cystine	0.25g
Na ₂ SO ₃	0.1g

Source: Thioglycolate medium without indicator is available as a premixed powder from Oxoid Unipath and BD Diagnostic Systems.

Preparation of Thioglycolate Medium without Indicator:

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin K₁ Solution:**Composition per 100.0mL:**

Vitamin K ₁	1.0g
------------------------------	------

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly.

Hemin Solution:**Composition per 100.0mL:**

Hemin	1.0g
NaOH (1N solution).....	20.0mL

Preparation of Hemin Solution: Add hemin to 20.0mL of 1N NaOH solution. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Medium: Add 0.5mL of hemin solution and 0.1mL of vitamin K₁ solution to 1.0L of thioglycolate medium without indi-

cator. Mix thoroughly. Distribute into screw-capped tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool tubes or flasks under 85% N₂ + 10% H₂ + 5% CO₂. Tighten caps.

Use: For the isolation, cultivation, and identification of a wide variety of obligate anaerobic bacteria.

**Thioglycolate Medium, Fluid
(Fluid Thioglycolate Medium)
(FTG)
(BAM M146)**

Composition per liter:

Pancreatic digest of casein.....	15.0g
Glucose.....	5.0g
Yeast extract.....	5.0g
NaCl.....	2.5g
Agar.....	0.75g
L-cystine.....	0.5g
Sodium thioglycolate.....	0.5g
Resazurin solution.....	1.0mL

pH 7.1 ± 0.2 at 25°C

Resazurin Solution:

Composition per 10.0mL:

Na-resazurin.....	10.0mg
-------------------	--------

Preparation of Resazurin Solution: Add Na-resazurin to 10.0mL of distilled/deionized water. Mix thoroughly. Prepare freshly.

Preparation of Medium: Add components, except sodium thioglycolate and resazurin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Add 0.5g sodium thioglycolate. Mix thoroughly. Adjust pH to 7.1. Add 1.0mL resazurin solution. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the cultivation of both aerobic and anaerobic organisms in the performance of sterility tests.

Thioglycolate Medium without Glucose

Composition per liter:

Pancreatic digest of casein.....	15.0g
Yeast extract.....	5.0g
NaCl.....	2.5g
Agar.....	0.75g
L-Cystine.....	0.25g
Methylene Blue.....	2.0mg
Thioglycolic acid.....	0.3mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. If medium becomes oxidized before use (Methylene Blue turns blue), heat in a boiling water bath to expel absorbed O₂. Cool to 25°C.

Use: For the cultivation of anaerobic, microaerophilic, and aerobic microorganisms. For use in sterility testing of a variety of specimens.

Thioglycolate Medium without Glucose

Composition per liter:

Pancreatic digest of casein.....	20.0g
NaCl.....	2.5g
K ₂ HPO ₄	1.5g
Sodium thioglycolate.....	0.6g
Agar.....	0.5g
L-Cystine.....	0.4g
Na ₂ SO ₃	0.2g
Methylene Blue.....	2.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks, filling them half full. Autoclave for 15 min at 15 psi pressure–121°C.

Use: Use as a base for fermentation studies of anaerobic bacteria and for the promotion of endospore formation.

Thioglycolate Medium without Glucose and Indicator

Composition per liter:

Pancreatic digest of casein.....	15.0g
Yeast extract.....	5.0g
NaCl.....	2.5g
Agar.....	0.75g
L-Cystine.....	0.25g
Thioglycolic acid.....	0.3mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. If medium becomes oxidized before use, heat in a boiling water bath to expel absorbed O₂. Cool to 25°C.

Use: For the cultivation of anaerobic, microaerophilic, and aerobic microorganisms. For use in sterility testing of a variety of specimens.

Thioglycolate Medium without Indicator

Composition per liter:

Pancreatic digest of casein.....	15.0g
Yeast extract.....	5.0g
Glucose.....	5.0g
NaCl.....	2.5g
Agar.....	0.75g
Sodium thioglycolate.....	0.5g
L-Cystine.....	0.25g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. If medium becomes oxidized before use, heat in a boiling water bath to expel absorbed O₂. Cool to 25°C.

Use: For the cultivation of anaerobic, microaerophilic, and aerobic microorganisms. For use in sterility testing of a variety of specimens.

Thioglycolate Medium without Indicator**Composition per liter:**

Pancreatic digest of casein.....	17.0g
Glucose.....	6.0g
Papaic digest of soybean meal.....	3.0g
NaCl.....	2.5g
Agar.....	0.7g
Sodium thioglycolate.....	0.5g
L-Cystine.....	0.25g
Na ₂ SO ₃	0.1g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Prepare freshly or boil and cool the medium just before use.

Use: For the growth of aerobic and anaerobic microorganisms in diagnostic bacteriology.

Thioglycolate Medium without Indicator-135C**Composition per liter:**

Pancreatic digest of casein.....	17.0g
Glucose.....	6.0g
Papaic digest of soybean meal.....	3.0g
NaCl.....	2.5g
Agar.....	0.7g
Sodium thioglycolate.....	0.5g
Na ₂ SO ₃	0.1g
L-Cystine.....	0.25g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks, filling them half full. For maintenance of cultures, a small quantity of CaCO₃ may be added to tubes before adding medium. Autoclave for 15 min at 13 psi pressure–118°C. Prepare freshly or boil and cool the medium just before use. Store prepared medium at 2°–8°C in the dark.

Use: For the isolation and cultivation of a wide variety of microorganisms, particularly obligate anaerobes, from clinical specimens and other materials.

**Thioglycolate Medium without Indicator with Hemin
(Thioglycolate Medium, Supplemented)****Composition per liter:**

Pancreatic digest of casein.....	17.0g
CaCO ₃ , chips or powder.....	10.0g
Glucose.....	6.0g
Papaic digest of soybean meal.....	3.0g
NaCl.....	2.5g
Agar.....	0.7g
Sodium thioglycolate.....	0.5g
L-Cystine.....	0.25g
Na ₂ SO ₃	0.1g

Hemin.....	5.0mg
Na ₂ CO ₃ solution.....	10.0mL
Vitamin K ₁ solution.....	10.0mL

pH 7.2 ± 0.2 at 25°C

Na₂CO₃ Solution:**Composition per 10.0mL:**

Na ₂ CO ₃	1.0g
---------------------------------------	------

Preparation of Na₂CO₃ Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Vitamin K₁ Solution:**Composition per 100.0mL:**

Vitamin K ₁	1.0g
Ethanol, absolute.....	99.0mL

Preparation of Vitamin K₁ Solution: Add vitamin K₁ to 99.0mL of absolute ethanol. Mix thoroughly.

Preparation of Medium: Add components, except CaCO₃, Na₂CO₃ solution, and vitamin K₁ solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Add 0.1g of CaCO₃ chips or powder to each of 100 test tubes. Distribute broth into the same tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 0.1mL of sterile Na₂CO₃ solution and 0.1mL of sterile vitamin K₁ solution to each tube. Mix thoroughly.

Use: For the cultivation of a wide variety of obligate anaerobes.

Thioglycolate Medium, Supplemented

See: **Thioglycolate Medium without Indicator with Hemin**

Thioglycolate Medium, USP**Composition per liter:**

Pancreatic digest of casein.....	15.0g
Glucose.....	5.5g
Yeast extract.....	5.0g
NaCl.....	2.5g
Agar.....	0.5g
L-cystine.....	0.5g
Sodium thioglycolate.....	0.5g
Resazurin.....	1.0mg

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of both aerobic and anaerobic organisms in the performance of sterility tests.

Thioglycolate Medium with Vitamin K₁ and Hemin

See: **Thioglycolate Medium, Enriched**

Thioglycolate Peptone Glucose Yeast Extract Medium

See: **TPGY Medium**

Thioglycolate Potato Liver Medium

See: **TPL Medium**

Thiol Broth**Composition** per liter:

Proteose peptone, No. 3	10.0g
Thiol complex	8.0g
Yeast extract	5.0g
NaCl	5.0g
Glucose	1.0g
<i>p</i> -Aminobenzoic acid	0.05g

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. For neutralization of penicillin, distribute medium into tubes to a depth of 60.0mm. For neutralization of streptomycin, distribute medium into tubes in shallow layers. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of bacteria from body fluids and other materials containing penicillin, streptomycin, or sulfonamides. Also used for the cultivation and maintenance of *Bifidobacterium* species.

***Thiohalophilus* Medium
(DSMZ Medium 1058)****Composition** per liter:

NaCl	120.0g
K ₂ HPO ₄	1.5g
NH ₄ Cl	0.5g
Bicarbonate solution	10.0mL
Calcium chloride solution	10.0mL
Magnesium chloride solution	10.0mL
Seven vitamin solution	1.0mL
Trace elements solution SL-10 with EDTA	1.0mL
Carbonate solution	variable

pH 7.6 ± 0.2 at 25°C

Thiosulfate Solution:**Composition** per 10.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g
--	------

Preparation of Thiosulfate Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Bicarbonate Solution:**Composition** per 10.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with a gas mixture of 80% N₂ + 20% CO₂. Filter sterilize.

Carbonate Solution:**Composition** per 10.0mL:

Na ₂ CO ₃	2.0g
---------------------------------------	------

Preparation of Carbonate Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with a gas mixture of 80% N₂ + 20% CO₂. Filter sterilize.

Magnesium Chloride Solution:**Composition** per 10.0mL:

MgCl ₂ ·6H ₂ O	0.4g
--	------

Preparation of Magnesium Chloride Solution: Add 0.4g of MgCl₂·6H₂O to distilled/deionized water and bring volume to 10.0mL.

Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sparge with 100% N₂.

Calcium Chloride Solution:**Composition** per 10.0mL:

CaCl ₂ ·2H ₂ O	0.05g
--	-------

Preparation of Calcium Chloride Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sparge with 100% N₂ gas.

Seven Vitamin Solution:**Composition** per liter:

Pyridoxine-HCl	300.0mg
Nicotinic acid	200.0mg
Thiamine-HCl	200.0mg
Calcium DL-pantothenate	100.0mg
Cyanocobalamine	100.0mg
<i>p</i> -Aminobenzoic acid	80.0mg
D(+)-Biotin	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Trace Elements Solution SL-10 with EDTA:**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
Na ₂ -EDTA	0.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10 with EDTA:

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.0.

Preparation of Medium: Add components, except magnesium chloride, thiosulfate, bicarbonate, and vitamin solutions, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ gas mixture for at least 30 min to remove dissolved oxygen and to saturate the solution with CO₂. Dispense into anaerobic culture vessels (e.g., Balch tubes) to 1/2 volume under air atmosphere. Close vials with butyl rubber septa to prevent free exchange of oxygen with the external atmosphere. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add magnesium chloride, thiosulfate, bicarbonate, and vitamin solutions. Mix thoroughly. Adjust pH to 7.5–7.8 using a sterile solution of sodium carbonate (5% w/v).

Use: For the cultivation of *Thiohalomonas denitrificans*, *Thiohalophilus thiooxydans*, and *Thiomicrospira halophila*.

Preparation of Carbonate Solution: Add Na₂CO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with a gas mixture of 80% N₂ + 20% CO₂. Filter sterilize.

Magnesium Chloride Solution:**Composition per 10.0mL:**MgCl₂·6H₂O 0.4g

Preparation of Magnesium Chloride Solution: Add 0.4g of MgCl₂·6H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sparge with 100% N₂.

Calcium Chloride Solution:**Composition per 10.0mL:**CaCl₂·2H₂O 0.05g

Preparation of Calcium Chloride Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sparge with 100% N₂.

Seven Vitamin Solution:**Composition per liter:**

Pyridoxine·HCl 300.0mg

Nicotinic acid 200.0mg

Thiamine·HCl 200.0mg

Calcium DL-pantothenate 100.0mg

Cyanocobalamine 100.0mg

p-Aminobenzoic acid 80.0mg

D(+)-Biotin 20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Sparge with 100% N₂.

Trace Elements Solution SL-10 with EDTA:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
Na ₂ -EDTA.....	0.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10 with EDTA:

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.0.

Preparation of Medium: Add components, except magnesium chloride, thiosulfate, bicarbonate, and vitamin solutions, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ gas mixture for at least 30 min. to remove dissolved oxygen and to saturate the solution with CO₂. Dispense into anaerobic culture vessels (e.g., Balch tubes) to 1/2 volume under air atmosphere. Close vials with butyl rubber septa to prevent free exchange of oxygen with the external atmosphere. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add magnesium chloride, thiosulfate, bicarbonate, and vitamin solutions. Mix thoroughly. Adjust pH to 7.5–7.8 using a sterile solution of sodium carbonate (5% w/v).

Use: For the cultivation of *Thiohalomonas nitratireducens*.

Thiol HiVeg Broth

Composition per liter:

Plant peptone No. 3.....	10.0g
Thiol compound.....	8.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Glucose.....	1.0g
<i>p</i> -Aminobenzoic acid (PABA).....	0.05g
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. For neutralization of penicillin, distribute medium into tubes to a depth of 60.0mm. For neutralization of streptomycin, distribute medium into tubes in shallow layers. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of bacteria from body fluids and other materials containing penicillin, streptomycin, or sulfonamides. Also used for the cultivation and maintenance of *Bifidobacterium* species.

Thiol HiVeg Medium

Composition per liter:

Plant peptone No. 3.....	10.0g
Thiol compound.....	8.0g

Yeast extract.....	5.0g
NaCl.....	5.0g
Agar.....	1.0g
Glucose.....	1.0g
<i>p</i> -Aminobenzoic acid (PABA).....	0.05g
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. For neutralization of penicillin, distribute medium into tubes to a depth of 60 mm. For neutralization of streptomycin, distribute medium into tubes in shallow layers. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of bacteria from body fluids and other materials containing penicillin, streptomycin, or sulfonamides. Also used for the cultivation and maintenance of *Bifidobacterium* species.

Thiol Medium

Composition per liter:

Proteose peptone No. 3.....	10.0g
Thiol complex.....	8.0g
Yeast extract.....	5.0g
NaCl.....	5.0g
Glucose.....	1.0g
Agar.....	1.0g
<i>p</i> -Aminobenzoic acid.....	0.05g
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. For neutralization of penicillin, distribute medium into tubes to a depth of 60mm. For neutralization of streptomycin, distribute medium into tubes in shallow layers. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of bacteria from body fluids and other materials containing penicillin, streptomycin, or sulfonamides. Also used for the cultivation and maintenance of *Bifidobacterium* species.

Thiomicrospira denitrificans Agar

Composition per 1001.0mL:

Solution A.....	940.0mL
Solution B.....	40.0mL
Solution C.....	20.0mL
Solution D.....	1.0mL
pH 7.0 ± 0.2 at 25°C	

Solution A:

Composition per 940.0mL:

Agar.....	15.0g
KH ₂ PO ₄	2.0g
KNO ₃	2.0g
NH ₄ Cl.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.8g
Trace elements solution SL-4.....	2.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and

bring to boiling. Adjust pH to 7.0 with NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Trace Elements Solution SL-4:

Composition per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Solution B:

Composition per 40.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g
--	------

Preparation of Solution B: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution C:

Composition per 20.0mL:

NaHCO ₃	1.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Solution D:

Composition per liter:

FeSO ₄ ·7H ₂ O	2.0mg
H ₂ SO ₄ (0.1N solution)	1.0mL

Preparation of Solution D: Add FeSO₄·7H₂O to 1.0mL of 0.1N H₂SO₄ solution. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Aseptically add 40.0mL of sterile solution B, 20.0mL of sterile solution C, and 1.0mL of sterile solution D to 940.0mL of sterile solution A. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes under 100% N₂.

Use: For the cultivation and maintenance of *Thiomicrospira denitrificans*.

Thiomicrospira denitrificans Broth

Composition per 1001.0mL:

Solution A	940.0mL
Solution B	40.0mL
Solution C	20.0mL
Solution D	1.0mL

pH 7.0 ± 0.2 at 25°C

Solution A:

Composition per 940.0mL:

KH ₂ PO ₄	2.0g
KNO ₃	2.0g
NH ₄ Cl	1.0g
MgSO ₄ ·7H ₂ O	0.8g
Trace elements solution SL-4	2.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.0 with NaOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution B:

Composition per 40.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O	5.0g
--	------

Preparation of Solution B: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 40.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution C:

Composition per 20.0mL:

NaHCO ₃	1.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Solution D:

Composition per liter:

FeSO ₄ ·7H ₂ O	2.0mg
H ₂ SO ₄ (0.1N solution)	1.0mL

Preparation of Solution D: Add FeSO₄·7H₂O to 1.0mL of 0.1N H₂SO₄ solution. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Trace Elements Solution SL-4:

Composition per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Aseptically add 40.0mL of sterile solution B, 20.0mL of sterile solution C, and 1.0mL of sterile solution D to 940.0mL of sterile solution A. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes under 100% N₂.

Use: For the cultivation and maintenance of *Thiomicrospira denitrificans*.

Thiomicrospira denitrificans Medium**Composition per liter:**

Part I.....	500.0mL
Part II.....	500.0mL

pH 7.0–8.0 at 25°C

Part I:**Composition per liter:**

NaCl.....	20.0g
KNO ₃	4.0g
(NH ₄) ₂ SO ₄	2.0g
MgSO ₄ ·7H ₂ O.....	1.5g
K ₂ HPO ₄	0.6g
KH ₂ PO ₄	0.4g
FeSO ₄ solution.....	2.0mL
Trace metals solution.....	2.0mL
HCl, concentrated.....	1.0mL

Preparation of Part I: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

FeSO₄ Solution:**Composition per 100.0mL:**

FeSO ₄ ·7H ₂ O.....	0.5g
HCl (1N solution).....	100.0mL

Preparation of FeSO₄ Solution: Combine the FeSO₄·7H₂O and 100.0mL of HCl solution. Mix thoroughly.

Trace Metals Solution:**Composition per liter:**

Disodium EDTA.....	50.0g
NaOH.....	11.0g
CaCl ₂ ·2H ₂ O.....	7.34g
MnCl ₂ ·2H ₂ O.....	2.5g
ZnSO ₄ ·7H ₂ O.....	2.2g
CoCl ₂ ·6H ₂ O.....	0.5g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	0.5g
CuSO ₄ ·5H ₂ O.....	0.2g

Preparation of Trace Metals Solution: Add EDTA to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 6.0 with NaOH. Add remaining components, one by one. Maintain the pH at 6.0. After dissolution of all the salts, adjust the pH to 4.0 with HCl. Store at 4°C.

Part II:**Composition per liter:**

Na ₂ S ₂ O ₃ ·5H ₂ O.....	10.0g
NaHCO ₃	3.0g
NaOH.....	0.05g

Preparation of Part II: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Aseptically combine 500.0mL of sterile part I and 500.0mL of sterile part II. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Thiomicrospira denitrificans*.

Thiophageococcus mangrovi Medium (DSMZ Medium 1162)

Composition per liter:

NaCl	20.0g
Sodium pyruvate	3.0g
MgSO ₄ ·7H ₂ O	2.0g
NH ₄ Cl	0.64g
K ₂ HPO ₄	0.5g
Yeast extract	0.4g
CaCl ₂ ·2H ₂ O.....	0.15g
Bicarbonate solution	10.0mL
Sulfide solution.....	10.0mL
Thiosulfate solution	10.0mL
Trace element solution SL-8.....	1.0mL
Vitamin solution.....	1.0mL
pH 7.5 ± 0.2 at 25°C	

Sulfide Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	1.0g
---	------

Preparation of Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Thiosulfate Solution:

Composition per 10.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O	1.5g
--	------

Preparation of Thiosulfate Solution: Add Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Bicarbonate Solution:

Composition per 10.0mL:

NaHCO ₃	1.0g
--------------------------	------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with a gas mixture of 80% N₂ + 20% CO₂. Filter sterilize.

Vitamin Solution:

Composition per 10.0mL:

Vitamin B ₁₂	2.0mg
-------------------------------	-------

Preparation of Vitamin Solution: Add Vitamin B₁₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-8:

Composition per liter:

Disodium EDTA	5.2g
FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	0.19g

MnCl ₂ ·4H ₂ O	0.1g
ZnCl ₂	0.07g
H ₃ BO ₃	0.06g
NaMoO ₄ ·2H ₂ O.....	0.04g
CuCl ₂ ·2H ₂ O	0.02g
NiCl ₂ ·6H ₂ O.....	0.02g

Preparation of Trace Elements Solution SL-8: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except sulfide, bicarbonate, thiosulfate, and vitamin solutions, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂ gas mixture. Dispense into culture vessels. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add sulfide, thiosulfate, bicarbonate, and vitamin solutions. Mix thoroughly. Adjust pH to 7.5.

Use: For the cultivation of *Thiophageococcus mangrovi*.

Thiophene-2-Carboxylic Acid Hydrazide See: TCH Medium

Thiorhodococcus Medium (DSMZ Medium 28a)

Composition per 5.0L:

Na ₂ S ₂ O ₃ ·5H ₂ O	2.5g
KH ₂ PO ₄	1.7g
NH ₄ Cl	1.7g
KCl.....	1.7g
CaCl ₂ ·2H ₂ O	1.25g

Preparation of Solution A: Add components to 4.0L distilled water. Mix thoroughly. Autoclave for 45 min at 15 psi pressure–121°C in a 5-liter special bottle or flask with four openings at the top, together with a teflon-coated magnetic bar. In this 5-liter bottle, two openings for tubes are in the central, silicon rubber stopper; one is a short, gas-inlet tube with a sterile cotton filter, and the other is an outlet tube for medium, which reaches the bottom of the vessel at one end and has, at the other end, a silicon rubber tube with a pinch cock and a bell for aseptic dispensing of the medium into bottles. The other two openings have gas-tight screw caps; one of these openings is for the addition of sterile solutions and the other serves as a gas outlet. After autoclaving, cool to room temperature under a 100% N₂ atmosphere with a positive pressure of 0.05–0.1 atm (a manometer for low pressure will be required). Saturate the cold medium with CO₂ by magnetic stirring for 30 min under a CO₂ atmosphere of 0.05–0.1 atm.

Solution B:

Distilled water.....	860.0mL
----------------------	---------

Preparation of Solution B: Autoclave distilled water for 15 min at 15 psi pressure–121°C in a cotton-stoppered Erlenmeyer flask. Cool to room temperature under an atmosphere of N₂ in an anaerobic jar.

Solution C:

Composition per 100.0mL:

Vitamin B₁₂ 2.0mg

Preparation of Solution C: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Filter sterilize Store under N₂ gas.

Solution D:

Composition per liter:

Disodium ethylenediamine tetraacetate (Disodium EDTA) 3.0g

FeSO₄·7H₂O 1.1g

H₃BO₃ 0.3g

CoCl₂·6H₂O 0.19g

MnCl₂·2H₂O 50.0mg

ZnCl₂ 42.0mg

NiCl₂·6H₂O 24.0mg

Na₂MoO₄·2H₂O 18.0mg

CuCl₂·2H₂O 2.0mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E:

Composition per 100.0mL:

NaHCO₃ 7.5g

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% CO₂ until saturated. Filter sterilize under 100% CO₂ into a sterile, gas-tight 100.0mL screw-capped bottle.

Solution F:

Composition per 100.0mL:

Na₂S·9H₂O 10.0g

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water in a 250.0mL screw-capped bottle fitted with a butyl rubber septum and bring volume to 100.0mL. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Neutralized Sulfide Solution:

Composition per 100.0mL:

Na₂S·9H₂O 1.5g

Preparation of Neutralized Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water in a 250.0mL screw-capped bottle fitted with a butyl rubber septum and bring volume to 100.0mL. Add a magnetic stir bar. Mix thoroughly. Sparge under 100% N₂ gas for 3 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Adjust pH to about 7.3 with sterile 2M H₂SO₄. Do not open the bottle to add H₂SO₄; use a sterile syringe. Stir the solution continuously to avoid precipitation of elemental sulfur. The final solution should be clear and yellow in color.

Preparation of Medium: Add solutions B, C, D, E, and F to solution A through one of the screw-cap openings against a stream of either N₂ gas or, better, a mixture of 95% N₂ and 5% CO₂ while the medium is magnetically stirred. Adjust the pH of the medium with sterile HCl or Na₂CO₃ solution (2M solutions) to pH 7.3. Distribute the medium aseptically through the medium outlet tube into sterile, 100mL bottles (with metal caps and autoclavable rubber seals) using the positive gas

pressure (0.05–0.1 atm) of the N₂/CO₂ gas mixture. Leave a small air bubble in each bottle to meet possible pressure changes. The tightly sealed, screw-cap bottles can be stored for several weeks or months in the dark. During the first 24 hr, the iron of the medium precipitates in the form of black flocs. No other sediment should arise in the otherwise clear medium. Incubate in the light at 500–1,000 lux intensity. Feed periodically with neutralized solution of sodium sulfide to replenish sulfide and with other supplement solutions.

Use: For the cultivation of *Thiorhodococcus minor*.

Thiosphaera Agar

Composition per liter:

Agar 15.0g

Na₂HPO₄ 4.2g

KH₂PO₄ 1.5g

NH₄Cl 0.3g

MgSO₄·7H₂O 0.1g

KNO₃ 0.1g

Vishniac and Santer trace metals 2.0mL

pH 8.0–8.2 at 25°C

Vishniac and Santer Trace Metals:

Composition per liter:

Ethylenediamine tetraacetic acid (EDTA) 50.0g

ZnSO₄·7H₂O 22.0g

CaCl₂ 5.54g

MnCl₂·4H₂O 5.06g

FeSO₄·7H₂O 4.99g

CoCl₂·6H₂O 1.61g

CuSO₄·5H₂O 1.57g

(NH₄)₆Mo₇O₂₄·4H₂O 1.1g

Preparation of Vishniac and Santer Trace Metals: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 6.0 with KOH. Mix thoroughly.

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 8.0–8.2. Filter sterilize. Warm to 45°–50°C. Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically combine the two sterile solutions. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Thiosphaera pantotropha*.

Thiosphaera Broth

Composition per liter:

Na₂HPO₄ 4.2g

KH₂PO₄ 1.5g

NH₄Cl 0.3g

MgSO₄·7H₂O 0.1g

KNO₃ 0.1g

Vishniac and Santer trace metals 2.0mL

pH 8.0–8.2 at 25°C

Vishniac and Santer Trace Metals:

Composition per liter:

Ethylenediamine tetraacetic acid (EDTA) 50.0g

ZnSO₄·7H₂O 22.0g

CaCl₂ 5.54g

MnCl₂·4H₂O 5.06g

FeSO ₄ ·7H ₂ O.....	4.99g
CoCl ₂ ·6H ₂ O.....	1.61g
CuSO ₄ ·5H ₂ O.....	1.57g
(NH ₄) ₆ Mo ₇ O ₂₄ ·4H ₂ O.....	1.1g

Preparation of Vishniac and Santer Trace Metals: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 6.0 with KOH. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.0–8.2. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Thiosphaera pantotropha*.

Thiosphaera pantotropha Medium

Composition per 1001.0mL:

Agar.....	20.0g
Na ₂ HPO ₄ ·2H ₂ O.....	7.9g
KH ₂ PO ₄	1.5g
NH ₄ Cl.....	0.3g
MgSO ₄ ·7H ₂ O.....	0.1g
Yeast extract solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL
pH 7.5 ± 0.2 at 25°C	

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract.....	1.0g
--------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except yeast extract solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile yeast extract solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Paracoccus denitrificans*.

Thiosulfate Citrate Bile Salts Sucrose Agar

See: **TCBS Agar**

Thiosulfate-Oxidizing Medium

Composition per liter:

K ₂ HPO ₄	2.0g
MgSO ₄ ·7H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
FeCl ₃ ·6H ₂ O.....	0.02g
(NH ₄) ₂ SO ₄ solution.....	100.0mL
Thiosulfate solution.....	100.0mL
pH 7.8 ± 0.2 at 25°C	

(NH₄)₂SO₄ Solution:

Composition per 100.0mL:

(NH ₄) ₂ SO ₄	0.1g
---	------

Preparation of (NH₄)₂SO₄ Solution: Add the (NH₄)₂SO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Thiosulfate Solution:

Composition per 100.0mL:

Na ₂ S ₂ O ₃ ·5H ₂ O.....	10.0g
---	-------

Preparation of Thiosulfate Solution: Add the Na₂S₂O₃·5H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except (NH₄)₂SO₄ solution and thiosulfate solution, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add the sterile (NH₄)₂SO₄ solution and the sterile thiosulfate solution. Mix thoroughly. Adjust the pH to 7.8 if necessary. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of iron and sulfur bacteria.

Thiosulfate Salts Broth

Composition per liter:

Na ₂ S ₂ O ₃ ·5H ₂ O.....	24.81g
NH ₄ Cl.....	2.2g
KH ₂ PO ₄	2.0g
Artificial seawater.....	500.0mL

Artificial Seawater:

Composition per liter:

NaCl.....	23.476g
MgCl ₂	4.981g
Na ₂ SO ₄	3.917g
CaCl ₂	1.102g
KCl.....	0.664g
NaHCO ₃	0.192g
KBr.....	0.096g
H ₃ BO ₃	0.026g
SrCl ₂	0.024g
NaF.....	3.0mg
pH 5.0 ± 0.2 at 25°C	

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Thiobacillus* species.

Thiothrix Agar
(DSMZ Medium 573)

Composition per liter:

Agar	12.0g
NH ₄ Cl	0.2g
Na-acetate	0.1g
K ₂ HPO ₄	0.01g
MgSO ₄ ·7H ₂ O	0.01g
CaSO ₄ (saturated solution).....	20.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution	5.0mL

pH 7.5 ± 0.2 at 25°C

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Trace Elements Solution:**Composition per liter:**

FeSO ₄ ·7H ₂ O.....	0.7g
EDTA	0.2g
ZnSO ₄ ·7H ₂ O	10.0mg
H ₃ BO ₃	10.0mg
MnSO ₄ ·4H ₂ O	2.0mg
Co(NO ₃) ₂	1.0mg
Na ₂ MoO ₄ ·4H ₂ O	1.0mg
CuSO ₄ ·5H ₂ O	5.0µg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL sterile Na₂S·9H₂O solution. Mix thoroughly. Pour into Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Thiothrix nivea*.

Thiothrix Agar

Composition per 1003.0mL:

Agar	12.0g
NH ₄ Cl	0.2g
Sodium acetate	0.1g
K ₂ HPO ₄	0.01g
MgSO ₄ ·7H ₂ O	0.01g
CaSO ₄ (saturated solution).....	20.0mL
Na ₂ S·9H ₂ O solution	3.0mL
Trace elements solution	5.0mL

pH 7.5 ± 0.2 at 25°C

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	1.0g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Trace Elements Solution:**Composition per liter:**

FeSO ₄ ·7H ₂ O.....	0.7g
EDTA	0.2g
ZnSO ₄ ·7H ₂ O	0.01g
MnSO ₄ ·4H ₂ O	0.002g
H ₃ BO ₃	10.0mg
Co(NO ₃) ₂	1.0mg
Na ₂ MoO ₄ ·2H ₂ O	1.0mg
CuSO ₄ ·5H ₂ O	5.0µg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 3.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Thiothrix nivea*.

Thiothrix Medium
(DSMZ Medium 573)

Composition per liter:

NH ₄ Cl	0.2g
Na-acetate	0.1g
K ₂ HPO ₄	0.01g
MgSO ₄ ·7H ₂ O	0.01g
CaSO ₄ (saturated solution).....	20.0mL
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution	5.0mL

pH 7.5 ± 0.2 at 25°C

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O	0.3g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Trace Elements Solution:**Composition per liter:**

FeSO ₄ ·7H ₂ O.....	0.7g
EDTA	0.2g
ZnSO ₄ ·7H ₂ O	10.0mg
H ₃ BO ₃	10.0mg
MnSO ₄ ·4H ₂ O	2.0mg
Co(NO ₃) ₂	1.0mg
Na ₂ MoO ₄ ·4H ₂ O	1.0mg
CuSO ₄ ·5H ₂ O	5.0µg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Thiothrix nivea*.

Thorne Medium, Modified**Composition per liter:**

Glycerol	20.0g
L-Glutamic acid.....	4.0g
Citric acid.....	2.0g
MgSO ₄ ·7H ₂ O	1.0g
Ferric ammonium citrate.....	0.5g
K ₂ HPO ₄	0.5g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH using NH₄OH (not NaOH). Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus licheniformis*.

Thymidine Auxotroph XPS Medium

See: XPS Broth with Thymidine

Tibi Medium**Composition per liter:**

Sucrose.....	100.0–150.0g
Fig, dried, quartered.....	1
Lemon wedge (0.5cm segment).....	1

Preparation of Medium: Add components to tap water and bring volume to 1.0L in a 1.0L Erlenmeyer flask fitted with a cotton stopper. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Inoculate with about 50.0mL of Tibi grains.

Use: For the cultivation of osmophilic bacteria and fungi from tibi grains.

Tieghemiomycetes Medium**Composition per liter:**

Agar	20.0g
Casein hydrolysate.....	10.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
ZnSO ₄ ·7H ₂ O	0.2mg
FeSO ₄	0.2mg
MnSO ₄ ·H ₂ O	0.2mg
Thiamine	0.2mg
Biotin	0.01mg
Glycerol	20.0mL

pH 6.0–6.5 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.0–6.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Tieghemiomycetes parasiticus*.

**Tindallia Medium
(DSMZ Medium 798)****Composition per liter:**

NaCl	10.0g
Na ₂ CO ₃	8.0g
Yeast extract.....	4.0g
NH ₄ Cl	0.5g

KCl.....	0.2g
K ₂ HPO ₄	0.2g
Na ₂ S·9H ₂ O solution	10.0mL
Trace elements solution SL-10	1.0mL
Vitamin solution.....	1.0mL

pH 9.0 ± 0.2 at 25°C

Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate	5.0mg
p-Aminobenzoic acid.....	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except vitamin solution, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Gently heat and bring to boiling. Boil for 5 min. Cool to 25°C while sparging with 100% N₂. Adjust pH to 9.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 1.0mL vitamin solution. Mix thoroughly. Aseptically and anaerobically under 100% N₂ distribute into sterile tubes or bottles.

Use: For the cultivation of *Tindallia magadiensis*.

**Tindallia Medium
(DSMZ Medium 1148)****Composition per liter:**

NaCl	30.0g
Peptone	5.0g
NH ₄ Cl	1.0g
Yeast extract	0.5g
KCl	0.2g
K ₂ HPO ₄	0.2g

Trace elements solution	1.0mL

pH 9.7 ± 0.2 at 25°C

Sulfide Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.25g
--	-------

Preparation of Sulfide Solution: Add $\text{Na}_2\text{S}\cdot 9\text{H}_2\text{O}$ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N_2 for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Bicarbonate Solution:

Composition per 10.0mL:

NaHCO_3 1.5g

Preparation of Bicarbonate Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with a gas mixture of 80% N_2 + 20% CO_2 . Filter sterilize.

Carbonate Solution:

Composition per 10.0mL:

Na_2CO_3 2.76g

Preparation of Carbonate Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with a gas mixture of 80% N_2 + 20% CO_2 . Filter sterilize.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl 10.0mg

Thiamine-HCl·2H₂O 5.0mg

Riboflavin 5.0mg

Nicotinic acid 5.0mg

D-Ca-pantothenate 5.0mg

p-Aminobenzoic acid 5.0mg

Lipoic acid 5.0mg

Biotin 2.0mg

Folic acid 2.0mg

Vitamin B₁₂ 0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H_2 + 20% CO_2 . Filter sterilize.

Trace Elements Solution:

Composition per 200.0mL:

$\text{MnCl}_2\cdot 4\text{H}_2\text{O}$ 0.72g

$\text{Fe}(\text{NH}_4)_2(\text{SO}_4)_2\cdot 6\text{H}_2\text{O}$ 0.4g

$\text{FeSO}_4\cdot 7\text{H}_2\text{O}$ 0.2g

$\text{CoCl}_2\cdot 6\text{H}_2\text{O}$ 0.2g

$\text{ZnSO}_4\cdot 7\text{H}_2\text{O}$ 0.2g

$\text{NiCl}_2\cdot 6\text{H}_2\text{O}$ 0.1g

$\text{Na}_2\text{MoO}_4\cdot 2\text{H}_2\text{O}$ 0.02g

$\text{CuSO}_4\cdot 5\text{H}_2\text{O}$ 0.02g

H_3BO_3 0.02g

$\text{KAl}(\text{SO}_4)_2\cdot 12\text{H}_2\text{O}$ 0.02g

HCl 5.0mL

Preparation of Trace Elements: Add components to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except sulfide, bicarbonate, carbonate, and vitamin solutions, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Sparge with 80% N_2 + 20% CO_2 gas mixture. Dispense into culture vessels. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add sulfide, carbonate, bicarbonate, and vitamin solutions. Mix thoroughly. Adjust pH to 9.5–10.0

Use: For the cultivation of *Tindallia* spp.

Tinsdale Agar

Composition per 1100.0mL:

Proteose peptone 20.0g

Agar 15.0g

NaCl 5.0g

Yeast extract 5.0g

L-Cystine 0.24g

Tinsdale supplement 150.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Tinsdale Supplement:

Composition per 100.0mL:

$\text{Na}_2\text{S}_2\text{O}_3$ 0.43g

K_2TeO_3 0.35g

Serum 100.0mL

Caution: Potassium tellurite is toxic.

Preparation of Tinsdale Supplement: Add $\text{Na}_2\text{S}_2\text{O}_3$ and K_2TeO_3 to serum. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Tinsdale supplement, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile Tinsdale supplement. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the primary isolation and identification of *Corynebacterium diphtheriae*.

Tinsdale HiVeg Agar Base with Tinsdale Supplement

Composition per liter:

Plant peptone 20.0g

Agar 15.0g

NaCl 5.0g

$\text{Na}_2\text{S}_2\text{O}_3$ 0.43g

L-Cystine 0.24g

Tinsdale supplement 150.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Tinsdale Supplement:

Composition per 100.0mL:

$\text{Na}_2\text{S}_2\text{O}_3$ 0.43g

K_2TeO_3 0.35g

Serum 100.0mL

Caution: Potassium tellurite is toxic.

Preparation of Tinsdale Supplement: Add $\text{Na}_2\text{S}_2\text{O}_3$ and K_2TeO_3 to serum. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Tinsdale supplement, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile Tinsdale supplement. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the primary isolation and identification of *Corynebacterium diphtheriae*.

Tissierella creatinophila Medium (DSMZ Medium 824)

Composition per 1022.0mL:

Creatine.....	3.8g
Na-formate.....	2.72g
Yeast extract.....	2.0g
KCl.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
NaCl.....	0.5g
NH ₄ Cl.....	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	0.5mg
Na ₂ SeO ₃ ·5H ₂ O.....	0.26mg
NaHCO ₃ solution.....	40.0mL
Na ₂ S·9H ₂ O solution.....	20.0mL
Vitamin solution.....	10.0mL
Seven vitamin solution.....	1.0mL
Trace elements solution SL-10.....	1.0mL

pH 7.5–7.8 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 20.0mL:

Na ₂ S·9H ₂ O.....	0.6g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine hydrochloride.....	300.0mg
Thiamine-HCl·2H ₂ O.....	200.0mg
Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate.....	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except NaHCO₃ solution, Na₂S·9H₂O solution, seven vitamin solution, and vitamin solution, to 950.0mL distilled/deionized water. Mix thoroughly. Sparge with 100% N₂ + 20% CO₂. Adjust pH to 7.6. Dispense 10.0mL aliquots into bottles. Autoclave for 15 min at 15 psi pressure–121°C. For each 10.0mL medium aseptically and anaerobically inject from sterile stock solutions 0.4mL NaHCO₃ solution, 0.2mL Na₂S·9H₂O solution, 0.1mL vitamin solution, and 0.01mL seven vitamin solution. Final pH should be 7.5–7.8.

Use: For the cultivation of *Tissierella creatinophila*.

Tissue Culture Amino Acids, HeLa 100X (TC Amino Acids, HeLa 100X)

Composition per liter:

L-Lysine.....	0.029g
L-Isoleucine.....	0.026g
L-Leucine.....	0.026g
L-Threonine.....	0.023g
L-Valine.....	0.023g
L-Tyrosine.....	0.018g
L-Arginine.....	0.017g
L-Phenylalanine.....	0.016g
L-Cystine.....	0.012g
L-Histidine.....	7.8mg
L-Methionine.....	7.5mg
L-Tryptophan.....	4.1mg

pH 7.2–7.4 at 25°C

Preparation of Tissue Culture Amino Acids, HeLa 100X:

Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.4. Filter sterilize.

Use: For the preparation of Eagle HeLa medium for tissue culture procedures and virus studies.

Tissue Culture Amino Acids, Minimal Eagle 50X (TC Amino Acids, Minimal Eagle 50X)

Composition per liter:

L-Arginine.....	0.1g
L-Lysine.....	0.058g
L-Isoleucine.....	0.052g
L-Leucine.....	0.052g

L-Threonine	0.048g
L-Valine	0.046g
L-Tyrosine	0.036g
L-Phenylalanine	0.032g
L-Histidine	0.031g
L-Cystine	0.024g
L-Methionine	0.015g
L-Tryptophan	0.01g

pH 7.2–7.4 at 25°C

Preparation of Tissue Culture Amino Acids, Minimal Eagle**50X:** Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.4. Filter sterilize.**Use:** For the preparation of TC minimal medium Eagle for tissue culture procedures and virus studies.**Tissue Culture Dulbecco Solution
(TC Dulbecco Solution)****Composition** per liter:

NaCl	8.0g
Na ₂ HPO ₄	1.15g
KH ₂ PO ₄	0.2g
KCl	0.2g
CaCl ₂ ·2H ₂ O	0.1g
MgCl ₂ ·6H ₂ O	0.1g

pH 7.2–7.4 at 25°C

Preparation of Tissue Culture Dulbecco Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.4. Filter sterilize.**Use:** For use in tissue culture and virus preparations.**Tissue Culture Earle Solution
(TC Earle Solution)****Composition** per 1002.0mL:

NaCl	6.8g
NaHCO ₃	2.2g
Glucose	1.0g
KCl	0.4g
CaCl ₂ ·2H ₂ O	0.2g
NaH ₂ PO ₄	0.125g
MgSO ₄ ·7H ₂ O	0.1g
Phenol Red (1% solution)	2.0mL

pH 7.2–7.4 at 25°C

Preparation of Tissue Culture Earle Solution: Add components, except Phenol Red, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add 2.0mL of Phenol Red solution. Adjust pH to 7.2–7.4. Filter sterilize.**Use:** For use in tissue culture and virus preparations.**Tissue Culture Hanks Solution
(TC Hanks Solution)****Composition** per liter:

NaCl	8.0g
Glucose	1.0g

Glutamine Solution:**Composition per 100.0mL:**

L-Glutamine.....	5.0g
NaCl (0.85% solution).....	100.0mL

Preparation of Glutamine Solution: Add the glutamine to the 0.85% NaCl solution. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glutamine and serum, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.4. Filter sterilize. Aseptically add 6.0mL of sterile glutamine solution and 50.0–100.0mL of sterile serum. Human serum, bovine serum, horse serum, or fetal calf serum may be used. Mix thoroughly.

Use: For use as a base in the preparation of liquid media used for the cultivation of tissue culture cell lines.

Tissue Culture Medium Eagle, HeLa (TC Medium Eagle, HeLa)

Composition per 1056.0mL:

NaCl.....	5.85g
NaHCO ₃	1.68g
Glucose.....	0.9g
KCl.....	0.373g

Deoxyadenosine	0.01g
Thymidine	0.01g
L-Aspartic acid	9.91mg
L-Glutamic acid	8.26mg
L-Arginine	8.09mg
L-Ornithine	7.38mg
Nicotinamide adenine dinucleotide	7.0mg
L-Proline	6.13mg
L-α-N-butyric acid	5.51mg
L-Methionine	4.44mg
L-Taurine	4.18mg
L-Hydroxyproline	4.09mg
D-Glucosamine	3.2mg
Coenzyme A	2.5mg
Glucuronolactone	1.8mg
Sodium glucuronate	1.8mg
Choline chloride	1.25mg
Coccarboxylase	1.0mg
Flavin adenine dinucleotide	1.0mg
Uridine triphosphate	1.0mg
Nicotinamide adenine dinucleotide phosphate	1.0mg
Vitamin A	0.25mg
Calciferol	0.25mg
<i>i</i> -Inositol	0.125mg
<i>p</i> -Aminobenzoic acid	0.125mg
5-Methylcytosine	0.1mg
Pyridoxine-HCl	0.0625mg

Pyridoxal-HCl	0.0625mg
Niacin	0.0625mg
Niacinamide	0.0625mg
Biotin	0.025mg
Folic acid	0.025mg
Menadione	0.025mg
Pantothenate	0.025mg
Riboflavin	0.025mg
Thiamine-HCl	0.025mg
α-Tocopherol phosphate	0.025mg
Serum	50.0–100.0mL

pH 7.2–7.4 at 25°C

Preparation of Medium: Add components, except serum, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.4 with 10% Na₂CO₃ solution. Filter sterilize. Aseptically add 50.0–100.0mL of sterile serum. Human serum, bovine serum, horse serum, or fetal calf serum may be used. Mix thoroughly.

Use: For the cultivation of a wide variety of cell lines in tissue culture.

Tissue Culture Medium RPMI No. 1640 (TC Medium RPMI #1640)

Composition per liter:

NaCl	6.46g
Glucose	2.0g
NaHCO ₃	2.0g
NaH ₂ PO ₄	1.512g
KCl	0.4g
L-Glutamine	0.3g
L-Arginine	0.2g
Calcium nitrate	0.1g
MgSO ₄ ·7H ₂ O	0.1g
L-Asparagine	0.05g
L-Cystine	0.05g
L-Isoleucine	0.05g
L-Leucine	0.05g
L-Lysine-HCl	0.04g
Inositol	0.035g
L-Serine	0.03g
Hydroxy-L-proline	0.02g
L-Aspartic acid	0.02g
L-Glutamic acid	0.02g
L-Proline	0.02g
L-Threonine	0.02g
L-Tyrosine	0.02g
L-Valine	0.02g
L-Histidine	0.015g
L-Methionine	0.015g
L-Phenylalanine	0.015g
Glycine	0.01g
L-Tryptophan	5.0mg
Phenol Red	5.0mg
Choline chloride	3.0mg
<i>p</i> -Aminobenzoic acid	1.0mg
Folic acid	1.0mg
Glutathione	1.0mg
Nicotinamide	1.0mg
Pyridoxine-HCl	1.0mg
Thiamine-HCl	1.0mg
Calcium pantothenate	0.25mg
Biotin	0.2mg

Riboflavin	0.2mg
Vitamin B ₁₂	5.0mg
Serum	50.0–100.0mL

pH 7.2–7.4 at 25°C

Source: This medium is available as a premixed powder and solution from BD Diagnostic Systems.

Preparation of Medium: Add components, except serum, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.4 with 10% Na₂CO₃ solution. Filter sterilize. Aseptically add 50.0–100.0mL of sterile serum. Human serum, bovine serum, horse serum, or fetal calf serum may be used. Mix thoroughly.

Use: For the cultivation of a wide variety of cell lines in tissue culture.

Tissue Culture Minimal Medium Eagle

Composition per liter:

Sterile salt solution	944.0mL
TC amino acids, minimal Eagle 50X	20.0mL
TC NaHCO ₃ , 10%	20.0mL
TC vitamins, minimal Eagle 100X	10.0mL
TC glutamine, 5%	6.0mL

pH 7.2–7.4 at 25°C

Sterile Salt Solution:

Composition per 944.0mL:

NaCl	6.8g
Glucose	1.0g
KCl	0.4g
CaCl ₂	0.2g
MgCl ₂	0.2g
NaH ₂ PO ₄	0.15g

Preparation of Sterile Salt Solution: Add components to distilled/deionized water and bring volume to 944.0mL. Mix thoroughly. Filter sterilize.

TC Amino Acids, Minimal Eagle 50X:

Composition per liter:

L-Arginine	0.1g
L-Lysine	0.06g
L-Isoleucine	0.05g
L-Leucine	0.05g
L-Threonine	0.05g
L-Valine	0.05g
L-Tyrosine	0.04g
L-Phenylalanine	0.03g
L-Histidine	0.03g
L-Cystine	0.02g
L-Methionine	0.02g
L-Tryptophan	0.01g

Preparation of TC Amino Acids, Minimal Eagle 50X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.4. Filter sterilize.

TC NaHCO₃, 10%:

Composition per 100.0mL:

NaHCO ₃	10.0g
--------------------------	-------

Preparation of TC NaHCO₃, 10%: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

TC Vitamins, Minimal Eagle 100X:

Composition per liter:

Inositol	2.0mg
Calcium pantothenate	1.0mg
Choline chloride	1.0mg
Folic acid	1.0mg
Nicotinamide	1.0mg
Pyridoxal	1.0mg
Thiamine-HCl	1.0mg
Riboflavin	0.1mg

Preparation of TC Vitamins, Minimal Eagle 100X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

TC Glutamine, 5%:

Composition per 100.0mL:

L-Glutamine	5.0g
NaCl (0.85% solution)	100.0mL

Preparation of TC Glutamine, 5%: Add the glutamine to the 0.85% NaCl solution. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 944.0mL of sterile salt solution, 20.0mL of sterile TC amino acids, minimal Eagle 50X, 20.0mL of sterile TC NaHCO₃, 10%, 10.0mL of sterile TC vitamins, minimal Eagle 100X, and 6.0mL of sterile TC glutamine, 5%. Mix thoroughly. Adjust pH to 7.2–7.4 if necessary.

Use: For the cultivation of mammalian cells in monolayer or suspension for tissue culture procedures and virus preparation.

Tissue Culture Minimal Medium Eagle with Earle Balanced Salts Solution (TC Minimal Medium Eagle with Earle BSS)

Composition per 1056.0mL:

NaCl	6.8g
Glucose	1.0g
KCl	0.4g
CaCl ₂ ·2H ₂ O	0.2g
MgCl ₂ ·6H ₂ O	0.2g
NaH ₂ PO ₄	0.15g
L-Arginine	0.1g
L-Lysine	0.06g
L-Isoleucine	0.05g
L-Leucine	0.05g
L-Threonine	0.05g
L-Valine	0.05g
L-Tyrosine	0.04g
L-Phenylalanine	0.03g
L-Histidine	0.03g
L-Cystine	0.02g
L-Methionine	0.02g
L-Tryptophan	0.01g
<i>i</i> -Inositol	2.0mg
Calcium pantothenate	1.0mg
Choline chloride	1.0mg
Folic acid	1.0mg
Nicotinamide	1.0mg
Pyridoxal	1.0mg
Thiamine-HCl	1.0mg
Riboflavin	0.1mg
Serum	50.0–100.0mL

Glutamine solution.....	6.0mL
CaCl ₂ ·2H ₂ O solution (optional).....	2.0mL
pH 7.2–7.4 at 25°C	

Glutamine Solution:**Composition per 100.0mL:**

L-Glutamine.....	5.0g
NaCl (0.85% solution).....	100.0mL

Preparation of Glutamine Solution: Add the glutamine to the 0.85% NaCl solution. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glutamine and serum, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.4 with 10% Na₂CO₃ solution. Filter sterilize. Aseptically add 6.0mL of sterile glutamine solution and 50.0–100.0mL of sterile serum. Human serum, bovine serum, horse serum, or fetal calf serum may be used. Mix thoroughly. To grow cells in a monolayer, aseptically add 2.0mL of a sterile 10% CaCl₂·2H₂O solution. To grow cells in suspension, omit the CaCl₂·2H₂O solution.

Use: For preparation of Eagle's minimal medium for the cultivation of cells in monolayer or suspension in tissue culture.

Tissue Culture Minimal Medium**Eagle Spinner Modified****(TC Minimal Medium Eagle Spinner Modified MEM-S)****Composition per 1056.0mL:**

NaH ₂ PO ₄	1.35g
NaCl.....	6.8g
NaHCO ₃	2.2g
Glucose.....	1.0g
KCl.....	0.4g
CaCl ₂ ·2H ₂ O.....	0.2g
NaH ₂ PO ₄	0.125g
MgSO ₄ ·7H ₂ O.....	0.1g
L-Isoleucine.....	0.026g
L-Leucine.....	0.026g
L-Lysine.....	0.026g
L-Threonine.....	0.024g
L-Valine.....	0.0235g
L-Tyrosine.....	0.018g
L-Arginine.....	0.0174g
L-Phenylalanine.....	0.0165g
L-Cystine.....	0.012g
L-Histidine.....	8.0mg
L-Methionine.....	7.5mg
Phenol Red.....	5.0mg
L-Tryptophan.....	4.0mg
Inositol.....	1.8mg
Biotin.....	1.0mg
Calcium pantothenate.....	1.0mg
Choline chloride.....	1.0mg
Folic acid.....	1.0mg
Nicotinamide.....	1.0mg
Pyridoxal-HCl.....	1.0mg
Thiamine-HCl.....	1.0mg
Riboflavin.....	0.1mg
Serum.....	50.0mL–100.0mL
Glutamine solution.....	6.0mL
pH 7.2–7.4 at 25°C	

Glutamine Solution:**Composition per 100.0mL:**

L-Glutamine.....	5.0g
NaCl (0.85% solution).....	100.0mL

Preparation of Glutamine Solution: Add the glutamine to the 0.85% NaCl solution. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glutamine and serum, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.4 with 10% Na₂CO₃ solution. Filter sterilize. Aseptically add 6.0mL of sterile glutamine solution and 50.0–100.0mL of sterile serum. Human serum, bovine serum, horse serum, or fetal calf serum may be used. Mix thoroughly.

Use: For the cultivation of mammalian cells in suspension.

Tissue Culture Tyrode Solution**(TC Tyrode Solution)****Composition per 1002.0mL:**

NaCl.....	8.0g
Glucose.....	1.0g
NaHCO ₃	1.0g
CaCl ₂ ·2H ₂ O.....	0.2g
KCl.....	0.2g
MgCl ₂ ·6H ₂ O.....	0.1g
NaH ₂ PO ₄	0.05g
Phenol Red (1% solution).....	2.0mL
pH 7.2–7.4 at 25°C	

Preparation of Tissue Culture Tyrode Solution: Add components, except Phenol Red, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add 2.0mL of Phenol Red solution. Adjust pH to 7.2–7.4. Filter sterilize.

Use: For use in tissue culture procedures.

Tissue Culture Vitamins Minimal Eagle, 100X**(TC Vitamins Minimal Eagle, 100X)****Composition per liter:**

Inositol.....	2.0mg
Calcium pantothenate.....	1.0mg
Choline chloride.....	1.0mg
Folic acid.....	1.0mg
Nicotinamide.....	1.0mg
Pyridoxal.....	1.0mg
Thiamine-HCl.....	1.0mg
Riboflavin.....	0.1mg

pH 7.2–7.4 at 25°C

Preparation of TC Vitamins, Minimal Eagle 100X: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Use: For the preparation of Tissue Culture minimal medium Eagle used in tissue culture procedures.

TMA Mineral Medium**Composition per liter:**

Agar, noble.....	20.0g
KH ₂ PO ₄	2.78g
Na ₂ HPO ₄	2.78g
(NH ₄) ₂ SO ₄	1.0g

Tetramethylammonium perchlorate solution	20.0mL
Hutner's basal salts solution	20.0mL
	pH 6.8 ± 0.2 at 25°C

Tetramethylammonium Perchlorate Solution:**Composition** per 20.0mL:

Tetramethylammonium perchlorate	1.0g
---------------------------------------	------

Preparation of Tetramethylammonium Perchlorate Solution: Add tetramethylammonium perchlorate to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Hutner's Basal Salts Solution:**Composition** per liter:

MgSO ₄ ·7H ₂ O	29.7g
Nitritotriacetic acid	10.0g
CaCl ₂ ·2H ₂ O	3.335g
FeSO ₄ ·7H ₂ O	99.0mg
(NH ₄) ₆ MoO ₇ O ₂₄ ·4H ₂ O	9.25mg
"Metals 44"	50.0mL

"Metals 44":**Composition** per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.095g
FeSO ₄ ·7H ₂ O	0.5g
Sodium EDTA	0.25g
MnSO ₄ ·H ₂ O	0.154g
CuSO ₄ ·5H ₂ O	39.2mg
Co(NO ₃) ₂ ·6H ₂ O	24.8mg
Na ₂ B ₄ O ₇ ·10H ₂ O	17.7mg

Preparation of "Metals 44": Add sodium EDTA to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Add a few drops of concentrated H₂SO₄ to retard precipitation of heavy metal ions. Add remaining components. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Hutner's Basal Salts Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Preparation of Medium: Add components, except tetramethylammonium perchlorate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 20.0mL of sterile tetramethylammonium perchlorate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Paracoccus kocurii*.

TMAO HiVeg Medium**(Trimethylamine-N-Oxide HiVeg Medium)****Composition** per liter:

Plant extract	10.0g
Plant peptone	10.0g
NaCl	5.0g
Agar	2.0g
Trimethylamine-N-oxide	1.0g
Yeast extract	1.0g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-capped tubes in 4.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in an upright position.

Use: For the cultivation and differentiation of *Campylobacter* species from foods. *Campylobacter jejuni* and *Campylobacter coli* will not grow.

TMAO Medium

See: **Trimethylamine N-Oxide Medium**

TMBS4 Medium**(DSMZ Medium 559)****Composition** per 1003.0mL:

Solution A	870.0mL
Solution C	100.0mL
Solution D	10.0mL
Solution E (Vitamin solution)	10.0mL
Solution F	10.0mL
Solution B (Trace elements solution SL-10)	1.0mL
Solution G	1.0mL
Solution H	1.0mL

pH 7.1–7.4 at 25°C

Solution A:**Composition** per 870.0mL:

NaCl	1.0g
MgCl ₂ ·6H ₂ O	0.4g
Na ₂ SO ₄	3.0g
KCl	0.5g
NH ₄ Cl	0.3g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly.

Solution B (Trace Elements Solution SL-10):**Composition** per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition** per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Flush with 80% N₂ + 20% CO₂ to remove dissolved oxygen.

Solution D:

Composition per 10.0mL:

Syringic acid 0.6g

Preparation of Solution D: Add syringic acid to distilled/deionized water and bring volume to 10.0mL. Adjust pH to 8.0 with NaOH. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl 10.0mg
 Thiamine-HCl·2H₂O 5.0mg
 Riboflavin 5.0mg
 Nicotinic acid 5.0mg
 D-Ca-pantothenate 5.0mg
p-Aminobenzoic acid 5.0mg
 Lipoic acid 5.0mg
 Biotin 2.0mg
 Folic acid 2.0mg
 Vitamin B₁₂ 0.10mg

Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:

Composition per 10.0mL:

Na₂S·9H₂O 0.4g

Preparation of Solution F: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G:

Composition per 10.0mL:

Na-dithionite 0.25g

Preparation of Solution G: Add Na-dithionite to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution H:

Composition per liter:

NaOH 0.5g
 Na₂WO₄·2H₂O 4.0mg
 Na₂SeO₃·5H₂O 3.0mg

Preparation of Solution H: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Gently heat solution A and bring to boiling. Boil solution A for a few minutes. Cool to room temperature. Gas with 80% N₂ + 20% CO₂ gas mixture to reach a pH below 6. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sequentially add 1.0mL solution B, 100.0mL solution C, 10.0mL solution D, 10.0mL solution E, 10.0mL solution F, 1.0mL solution G, and 1.0mL solution H. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels.

Use: For the cultivation of *Holophaga foetida*.

TMBS4 Medium

Composition per 1002.0mL:

Solution A 870.0mL
 Solution C 100.0mL
 Solution D 10.0mL

Solution E (Vitamin solution) 10.0mL
 Solution F 10.0mL
 Solution B (Trace elements solution SL-10) 1.0mL
 Solution G 1.0mL

pH 7.1–7.4 at 25°C

Solution A:

Composition per 870.0mL:

Na₂SO₄ 3.0g
 NaCl 1.0g
 KCl 0.5g
 MgCl₂·6H₂O 0.4g
 NH₄Cl 0.3g
 KH₂PO₄ 0.2g
 CaCl₂·2H₂O 0.15g
 Resazurin 1.0mg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 870.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3–4 min. Allow to cool to room temperature while gassing under 80% N₂ + 20% CO₂. Continue gassing until pH reaches below 6.0. Seal the flask under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B (Trace Elements Solution SL-10):

Composition per liter:

FeCl₂·4H₂O 1.5g
 CoCl₂·6H₂O 190.0mg
 MnCl₂·4H₂O 100.0mg
 ZnCl₂ 70.0mg
 Na₂MoO₄·2H₂O 36.0mg
 NiCl₂·6H₂O 24.0mg
 H₃BO₃ 6.0mg
 CuCl₂·2H₂O 2.0mg
 HCl (25% solution) 10.0mL

Preparation of Solution B (Trace Elements Solution SL-10):

Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:

Composition per 100.0mL:

NaHCO₃ 5.0g

Preparation of Solution C: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Gas under 80% N₂ + 20% CO₂.

Solution D:

Composition per 10.0mL:

Syringic acid 0.5g

Preparation of Solution D: Add syringic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Adjust pH to 8 with NaOH. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution E (Vitamin Solution):

Composition per liter:

Pyridoxine-HCl 10.0mg
 Calcium DL-pantothenate 5.0mg
 Lipoic acid 5.0mg
 Nicotinic acid 5.0mg
p-Aminobenzoic acid 5.0mg
 Riboflavin 5.0mg

Thiamine-HCl	5.0mg
Biotin	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution E (Vitamin Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution F:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.25g
Na ₂ S ₂ O ₄	0.25g

Preparation of Solution F: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution G:

Composition per liter:

NaOH	0.5g
Na ₂ WO ₄ ·2H ₂ O	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Solution G: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gas under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically and anaerobically combine solution A with solution B, solution C, solution D, solution E, solution F, and solution G, in that order. Mix thoroughly. Anaerobically distribute into sterile tubes or flasks under 80% N₂ + 20% CO₂.

Use: For the cultivation and maintenance of *Pelobacter* species.

TN Broth

See: **Trypticase™ Novobiocin Broth**

T₁N₀ Broth (Tryptone Broth)

Composition per liter:

Pancreatic digest of casein.....	10.0g
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add pancreatic digest of casein to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Vibrio cholerae* and other *Vibrio* species.

T₁N₁ Agar (Tryptone Salt Agar)

Composition per liter:

Agar	20.0g
NaCl	10.0g
Pancreatic digest of casein.....	10.0g
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the cultivation of *Vibrio cholerae* and other *Vibrio* species.

T₁N₁ Broth (Tryptone Salt Broth)

Composition per liter:

NaCl.....	10.0g
Pancreatic digest of casein.....	10.0g
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Vibrio cholerae* and other *Vibrio* species.

T₁N₂ Agar (Tryptone Salt Agar)

Composition per liter:

Agar	20.0g
NaCl.....	20.0g
Pancreatic digest of casein.....	10.0g
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Allow tubes to cool in a slanted position.

Use: For the cultivation of *Vibrio cholerae* and other *Vibrio* species.

T₁N₃ Broth (Tryptone Salt Broth)

Composition per liter:

NaCl.....	30.0g
Pancreatic digest of casein.....	10.0g
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Vibrio cholerae* and other *Vibrio* species.

T₁N₆ Broth (Tryptone Salt Broth)

Composition per liter:

NaCl.....	60.0g
Pancreatic digest of casein.....	10.0g
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Vibrio cholerae* and other *Vibrio* species.

T₁N₈ Broth (Tryptone Salt Broth)

Composition per liter:

NaCl.....	80.0g
Pancreatic digest of casein.....	10.0g
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Vibrio cholerae* and other *Vibrio* species.

T₁N₁₀ Broth (Tryptone Salt Broth)

Composition per liter:

NaCl 100.0g
Pancreatic digest of casein 10.0g
pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Vibrio cholerae* and other *Vibrio* species.

TN HiVeg Agar

Composition per liter:

Agar 15.0g
Plant hydrolysate 10.0g
NaCl 10.0g
pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of vibrios from food samples.

TNSA Agar

See: Trypaflavin Nalidixic Acid Serum Agar

TNT Medium (Tryptone NaCl Thiamine Medium)

Composition per liter:

Pancreatic digest of casein 10.0g
NaCl 5.0g
Thiamine-HCl 1.0mg
pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Escherichia coli*.

TOC Agar

(Tween™ 80 Oxgall Caffeic Acid Agar)

Composition per liter:

Agar 20.0g
Oxgall 10.0g
Caffeic acid 0.3g
Tween™ 80 10.0mL

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the differentiation and identification of *Candida albicans* and *Cryptococcus neoformans*. *Cryptococcus albicans* produces germ tubes and chlamydozoospores when grown on this medium. *Cryptococcus neoformans* appears as tan to brown colonies.

Todd-Hewitt Broth

Composition per liter:

Beef heart, infusion from 500.0g
Neopeptone 20.0g
Na₂CO₃ 2.5g
Glucose 2.0g
NaCl 2.0g
Na₂HPO₄ 0.4g
pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of group A streptococci used in serological typing, and for the cultivation of a variety of pathogenic microorganisms.

Todd-Hewitt Broth

Composition per liter:

Pancreatic digest of casein 20.0g
Infusion from 450.0g fat-free minced meat 10.0g
Glucose 2.0g
NaHCO₃ 2.0g
NaCl 2.0g
Na₂HPO₄ 0.4g
pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 10 psi pressure–115°C.

Use: For the cultivation of group A streptococci used in serological typing, and for the cultivation of a variety of pathogenic microorganisms.

Todd-Hewitt Broth (ATCC Medium 235)

Composition per liter:

Peptone 20.0g
Beef heart, solids from infusion 3.1g
Na₂CO₃ 2.5g
Glucose 2.0g
NaCl 2.0g
Na₂HPO₄ 0.4g
pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of group A streptococci used in serological typing, and for the cultivation of a variety of pathogenic microorganisms.

Todd-Hewitt Broth, Modified

Composition per liter:

Neopeptone	20.0g
Glucose	2.0g
NaHCO ₃	2.0g
NaCl	2.0g
Na ₂ HPO ₄	0.4g
Beef heart infusion	1.0L

pH 7.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 10 psi pressure–115°C.

Use: For the cultivation of streptococci for serological identification.

Todd-Hewitt HiVeg Broth

Composition per liter:

Plant peptone	20.0g
Plant special infusion	10.0g
Na ₂ CO ₃	2.5g
NaCl	2.0g
Glucose	2.0g
Na ₂ HPO ₄	0.4g

pH 7.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–1°C.

Use: For the cultivation of group A streptococci used in serological typing, and for the cultivation of a variety of pathogenic microorganisms.

Todd-Hewitt Medium (DSMZ Medium 697)

Composition per liter:

Casein peptone	20.0g
Meat infusion	10.0g
Glucose	2.0g
NaHCO ₃	2.0g
NaCl	2.0g
Na ₂ HPO ₄	0.4g

pH 7.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Globicatella sanguinis*, *Streptococcus cristatus*, and *Actinomyces hyovaginalis*.

Toluidine Blue DNA Agar

Composition per liter:

Agar	10.0g
NaCl	10.0g
Tris(hydroxymethyl)aminomethane buffer	6.1g
Deoxyribonucleic acid	0.3g
Toluidine Blue O	0.083g
CaCl ₂ , anhydrous	1.1mg

pH 9.0 ± 0.2 at 25°C

Preparation of Medium: Add tris(hydroxymethyl)aminomethane buffer to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 9.0. Add the remaining components, except Toluidine Blue O. Mix thoroughly. Gently heat and bring to boiling. Add Toluidine Blue O. Mix thoroughly. If used the same day, sterilization is not necessary. Cool to 50°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and differentiation of *Staphylococcus aureus* from foods.

Toluidine Blue DNA Agar

Composition per liter:

Agar	10.0g
NaCl	10.0g
Tris(hydroxymethyl)aminomethane buffer	6.1g
Deoxyribonucleic acid (DNA)	0.3g
Toluidine Blue O	0.083g
CaCl ₂ , anhydrous	1.1mg

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except Toluidine Blue O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Add Toluidine Blue O. Mix thoroughly. Medium does not have to be sterilized if used immediately. Pour into sterile Petri dishes or distribute into sterile tubes. Allow tubes to cool in a slanted position.

Use: For the cultivation and differentiation of bacteria based on their production of deoxyribonuclease (DNase). Bacteria that produce DNase turn the medium pink.

Tomato Dextrin Yeast Medium

Composition per liter:

Tomato paste	20.0g
Dextrin	20.0g
Agar	20.0g
Baker's yeast	10.0g
CoCl ₂ ·6H ₂ O	5.0mg

pH 7.2–7.4 at 25°C

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2–7.4. Add agar. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Streptomyces avermitilis*.

Tomato Juice Agar

Composition per liter:

Agar	12.0g
Pancreatic digest of casein	10.0g

Peptonized milk	10.0g
Tomato juice.....	400.0mL
pH 6.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of lactobacilli, especially *Lactobacillus acidophilus*.

Tomato Juice Agar (ATCC Medium 33)

Composition per liter:

Agar	11.0g
Pancreatic digest of casein	10.0g
Yeast extract.....	10.0g
Tomato juice, filtered.....	200.0mL
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of bacteria including *Lactobacillus*, *Leuconostoc*, *Pediococcus*, and *Propionibacterium* species.

Tomato Juice Agar Special

Composition per liter:

Agar	20.0g
Pancreatic digest of casein.....	10.0g
Peptonized milk	10.0g
Tomato juice.....	400.0mL
pH 5.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Avoid overheating—it results in a soft agar. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of lactobacilli.

Tomato Juice Broth

Composition per liter:

Tomato juice, desiccated.....	20.0g
Glucose	10.0g
Yeast extract.....	10.0g
K ₂ HPO ₄	0.5g
KH ₂ PO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.2g
FeSO ₄ ·7H ₂ O.....	0.01g

MnSO ₄ ·7H ₂ O	0.01g
NaCl.....	0.01g
pH 6.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of yeast and other aciduric microorganisms.

Tomato Juice Broth (ATCC Medium 433)

Composition per liter:

Pancreatic digest of casein.....	10.0g
Yeast extract.....	10.0g
Tomato juice, filtered.....	200.0mL
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of a variety of fastidious bacteria that require complex growth factors, including *Lactobacillus*, *Aerococcus*, *Bifidobacterium*, and *Pediococcus* species.

Tomato Juice HiVeg Agar

Composition per liter:

Agar	11.0g
Plant hydrolysate	10.0g
Plant hydrolysate No. 3.....	10.0g
Tomato juice	400.0mL
pH 5.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Avoid overheating—it results in a soft agar. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of lactobacilli.

Tomato Juice HiVeg Agar, Special

Composition per liter:

Agar	20.0g
Plant hydrolysate No. 3.....	10.0g
Plant peptone	10.0g
Tomato juice	400.0mL
pH 5.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Avoid overheating—it results in a soft agar. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of lactobacilli.

Tomato Juice HiVeg Medium Base with Tomato Juice and Cycloheximide

Composition per liter:

Agar	15.0g
Glucose	10.0g
Tomato juice solids, from 150.0mL	7.5g
Yeast extract	5.0g
Plant special peptone	5.0g
KH ₂ PO ₄	0.5g
CaCl ₂	0.125g
MgSO ₄	0.125g
KCl	0.125g
NaCl	0.125g
Bromcresol Green	0.03g
MnSO ₄	0.03g
Tomato juice, canned	150.0mL
Cycloheximide solution	10.0mL

pH 5.0 ± 0.2 at 25°C

Cycloheximide Solution:

Composition per 10.0mL:

Cycloheximide	0.1g
---------------------	------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except cycloheximide solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile cycloheximide solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of lactobacilli.

Tomato Juice Medium

Composition per liter:

Agar	15.0g
Glucose	10.0g
Polypeptone™	5.0g
Yeast extract	5.0g
KH ₂ PO ₄	0.5g
CaCl ₂ ·2H ₂ O	0.125g
KCl	0.125g
MgSO ₄ ·7H ₂ O	0.125g
NaCl	0.125g
Bromcresol Green	0.03g
MnSO ₄ ·4H ₂ O	3.0mg
Tomato juice, canned	150.0mL
Cycloheximide solution	10.0mL

pH 5.0 ± 0.2 at 25°C

Cycloheximide Solution:

Composition per 10.0mL:

Cycloheximide	0.1g
---------------------	------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except cycloheximide solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile cycloheximide solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of lactobacilli from wine.

Tomato Juice Medium

Composition per liter:

Tryptic digest of casein	10.0g
Yeast extract	10.0g
Tomato juice, filtered, pH 7.0	200.0mL
Tween™ 80	1.0mL

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Lactobacillus collinoides*.

Tomato Juice Milk Agar (DSMZ Medium 353)

Composition per liter:

Skim milk	100.0g
Yeast extract	5.0g
Tomato juice	100.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Filter canned tomatoes through paper to produce tomato juice. Leave overnight at 10°C. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Enterococcus faecalis*=*Streptococcus faecalis*.

Tomato Juice Yeast Extract Medium

Composition per liter:

Skim milk	100.0g
Yeast extract	5.0g
Tomato juice, filtered	100.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of yeasts and fungi.

Tomato Juice Yeast Extract Milk Medium

Composition per liter:

Skim milk	100.0g
Yeast extract	5.0g
Tomato juice, filtered	100.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Filter canned tomato juice through paper. Let stand overnight at 10°C. Add remaining components and bring to 1.0L with distilled/deionized water. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of a variety of fastidious bacteria that require complex growth factors, including *Lactobacillus*, *Streptococcus*, and *Enterococcus* species.

Tomato Paste Oatmeal Agar

Composition per liter:

Oatmeal (dried baby food).....	20.0g
Tomato paste.....	20.0g
Agar.....	15.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Melt agar by steaming for 20–30 min at 0 psi pressure–100°C. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Flexibacter* species.

Top Agarose

Composition per liter:

Pancreatic digest of casein.....	10.0g
NaCl.....	8.0g
Agarose.....	6.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 25 min at 15 psi pressure–121°C.

Use: For the distribution of bacteriophage or bacterial cells, especially *Escherichia coli*, evenly in a thin layer over the surface of a plate.

Torulopsis Medium

Composition per liter:

Glucose.....	100.0g
Agar.....	20.0g
Casamino acids.....	4.0g
Yeast extract.....	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.1g
NaCl.....	0.1g

pH 5.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 5.6. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Candida versatilis*.

Toxoplasma Medium

Composition per liter:

NaCl.....	6.8g
NaHCO ₃	2.2g
Glucose.....	1.0g
KCl.....	0.4g
CaCl ₂	0.2g
NaH ₂ PO ₄ ·H ₂ O.....	0.125g
Arginine.....	0.105g
MgSO ₄	0.1g
L-Cystine.....	0.024g

Glutamine.....	0.292g
Histidine.....	0.031g
Lysine.....	0.058g
Isoleucine.....	0.052g
Leucine.....	0.052g
Phenol Red.....	0.050g
Threonine.....	0.048g
Valine.....	0.046g
Tyrosine.....	0.036g
Phenylalanine.....	0.032g
Methionine.....	0.015g
Tryptophan.....	0.010g
Inositol.....	2.0mg
Choline.....	1.0mg
Folic acid.....	1.0mg
Nicotinamide.....	1.0mg
Pantothenic acid.....	1.0mg
Pyridoxal·HCl.....	1.0mg
Thiamine·HCl.....	1.0mg
Riboflavin.....	0.1mg
Fetal bovine serum, heat inactivated.....	100.0mL

pH 7.2–7.4 at 25°C

Preparation of Medium: Add components, except fetal bovine serum, to distilled/deionized water and bring volume to 905.0mL. Mix thoroughly. Adjust pH to 7.2–7.4. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL of sterile, heat-inactivated fetal bovine serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Toxoplasma gondii*.

TPBY

See: **Tryptone Phosphate Brain Heart Infusion Yeast Extract Agar**

TPEY Agar

(Tellurite Polymyxin Egg Yolk Agar)

Composition per liter:

NaCl.....	20.0g
Agar.....	15.5g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g
D-Mannitol.....	5.0g
LiCl.....	2.0g
Egg yolk emulsion (30% solution).....	100.0mL
Chapman tellurite solution.....	10.0mL
Polymyxin B solution.....	0.4mL

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Egg Yolk Emulsion (30% Solution):

Composition per 100.0mL:

NaCl.....	0.6g
Egg yolk.....	30.0mL

Preparation of Egg Yolk Emulsion (30% Solution): Add NaCl and egg yolk to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Chapman Tellurite Solution:

Composition per 100.0mL:

K ₂ TeO ₃	1.0g
---------------------------------------	------

Preparation of Chapman Tellurite Solution: Add K_2TeO_3 to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Polymyxin B Solution:

Composition per 100.0mL:

Polymyxin B 1.0g

Preparation of Polymyxin B Solution: Add polymyxin B to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components—except 30% egg yolk emulsion, Chapman tellurite solution, and polymyxin B solution—to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile 30% egg yolk emulsion, 10.0mL of sterile Chapman tellurite solution, and 0.4mL of sterile polymyxin B solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the recovery of staphylococci from foods and other materials.

**TPEY HiVeg Agar Base
with Egg Yolk, Tellurite, and Polymyxin B**

Composition per liter:

NaCl 20.0g
Agar 18.0g
Plant hydrolysate 10.0g
D-Mannitol 5.0g
Yeast extract 5.0g
LiCl 2.0g
Egg yolk emulsion (30% solution) 100.0mL
Chapman tellurite solution 10.0mL
Polymyxin B solution 0.4mL

pH 7.1 ± 0.2 at 25°C

Source: This medium, without egg yolk, tellurite, and polymyxin B, is available as a premixed powder from HiMedia.

Egg Yolk Emulsion (30% Solution):

Composition per 100.0mL:

NaCl 0.6g
Egg yolk 30.0mL

Preparation of Egg Yolk Emulsion (30% Solution): Add NaCl and egg yolk to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Chapman Tellurite Solution:

Composition per 100.0mL:

K_2TeO_3 1.0g

Preparation of Chapman Tellurite Solution: Add K_2TeO_3 to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Polymyxin B Solution:

Composition per 100.0mL:

Polymyxin B 1.0g

Preparation of Polymyxin B Solution: Add polymyxin B to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components—except 30% egg yolk emulsion, Chapman tellurite solution, and polymyxin B solution—to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile 30% egg yolk emulsion, 10.0mL of sterile Chapman tellurite solution, and 0.4mL of sterile polymyxin B solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the recovery of staphylococci from foods and other materials.

TPGY Broth

See: **Trypticase™ Peptone Glucose
Yeast Extract Broth**

**TPGY Medium
(Thioglycolate Peptone
Glucose Yeast Extract Medium)**

Composition per liter:

Pancreatic digest of casein 50.0g
Peptone 5.0g
Yeast extract 5.0g
Glucose 1.0g
Sodium thioglycolate 1.0g

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of anaerobic bacteria.

TPGYT Broth

See: **Trypticase™ Peptone Glucose
Yeast Extract Broth with Trypsin**

**TPL Medium
(Thioglycolate Potato Liver Medium)**

Composition per liter:

Potato 200.0g
Yeast extract 31.0g
Liver 25.0g
Glycerol 15.0g
Agar 15.0g
Meat extract 5.5g
Glucose 7.5g
Peptone 2.5g
NaCl 2.5g
Sodium thioglycolate 0.5g
Methylene Blue 1.0mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add peeled, sliced potato to approximately 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Cut up liver into small pieces and add to approximately 150.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth. Add boiled potato solids, boiled liver solids, and remaining components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Make sure each of the tubes receives a few pieces of liver. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Pseudomonas* species.

TPT 18 Medium (DSMZ Medium 1127)

Composition per liter:

Glucose	0.5g
Yeast extract	0.1g
Pancreatic digest of casein	0.1g
MgSO ₄ ·7H ₂ O	0.05g
CaCl ₂ ·2H ₂ O	0.02g

pH 6.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 6.0.

Use: For the cultivation of *Mucilaginibacter gracilis*.

TPY Medium

Composition per liter:

Pancreatic digest of casein	10.0g
Glucose	5.0g
Pancreatic digest of soybean meal	5.0g
Yeast extract	2.5g
K ₂ HPO ₄	2.0g
Agar	1.5g
Cysteine·HCl	0.5g
MgCl ₂ ·6H ₂ O	0.5g
ZnSO ₄ ·7H ₂ O	0.25g
CaCl ₂	0.15g
FeCl ₃	1.0μg
Tween™ 80	1.0mL

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Bifidobacterium* species.

TPYG Medium

Composition per liter:

Pancreatic digest of casein	10.0g
Peptone	5.0g
Yeast extract	5.0g
Glucose solution	50.0mL

Glucose Solution:

Composition per 100.0mL:

Glucose	20.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL of sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Clostridium felsineum*.

Trace Elements Solution HO-LE

Composition per liter:

H ₃ BO ₃	2.85g
MnCl ₂ ·4H ₂ O	1.8g
Sodium tartrate	1.77g
FeSO ₄ ·7H ₂ O	1.36g
CoCl ₂ ·6H ₂ O	0.04g
CuCl ₂ ·2H ₂ O	0.027g
Na ₂ MoO ₄ ·2H ₂ O	0.025g
ZnCl ₂	0.02g

Preparation of Trace Elements Solution HO-LE: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Use: For the enrichment of other media requiring added trace metals.

Transgrow Medium

Composition per liter:

GC agar base	730.0mL
Hemoglobin solution	250.0mL
Vitox supplement	10.0mL
VCN antibiotic solution	10.0mL

pH 7.3 ± 0.2 at 25°C

GC Agar Base:

Composition per 730.0mL:

Special peptone	15.0g
Agar	20.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Cornstarch	1.0g
KH ₂ PO ₄	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of GC Agar Base: Add components of GC medium base and the hemoglobin to distilled/deionized water and bring volume to 730.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:

Composition per 250.0mL:

Hemoglobin	5.0g
------------------	------

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Vitox Supplement:

Composition per 10.0mL:

Glucose	2.0g
L-Cysteine·HCl	0.518g
L-Glutamine	0.2g
L-Cystine	0.022g
Adenine sulfate	0.01g
Nicotinamide adenine dinucleotide	5.0mg
Coccarboxylase	2.0mg
Guanine·HCl	0.6mg
Fe(NO ₃) ₃ ·6H ₂ O	0.4mg
<i>p</i> -Aminobenzoic acid	0.26mg
Vitamin B ₁₂	0.2mg
Thiamine·HCl	0.06mg

Preparation of Vitox Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

VCN Antibiotic Solution:**Composition per 10.0mL:**

Colistin methane sulfonate.....	7.5mg
Vancomycin	3.0mg
Nystatin.....	12,500U

Preparation of VCN Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 730.0mL of cooled, sterile GC agar base, aseptically add 250.0mL of sterile hemoglobin solution, 10.0mL of sterile Vitox supplement, and 10.0mL of VCN antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and transport of fastidious microorganisms, especially *Neisseria* species.

Transgrow Medium**Composition per liter:**

GC medium base.....	730.0mL
Hemoglobin solution.....	250.0mL
Supplement B.....	10.0mL
VCNT antibiotic solution.....	10.0mL

pH 7.3 ± 0.2 at 25°C

GC Medium Base:**Composition per 730.0mL:**

Proteose peptone No. 3	15.0g
Agar	20.0g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Glucose	1.5g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of GC Medium Base: Add components to distilled/deionized water and bring volume to 730.0mL. Mix thoroughly. Gently heat until boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Hemoglobin Solution:**Composition per 250.0mL:**

Hemoglobin	10.0g
------------------	-------

Preparation of Hemoglobin Solution: Add hemoglobin to distilled/deionized water and bring volume to 250.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Supplement B:**Composition per 10.0mL:**

Supplement B contains yeast concentrate, glutamine, coenzyme, co-carboxylase, hematin, and growth factors.

Preparation of Supplement B: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Source: Supplement B is available as a premixed powder from BD Diagnostic Systems.

VCNT Antibiotic Solution:**Composition per 10.0mL:**

Colistin methane sulfonate.....	7.5mg
Trimethoprim lactate.....	5.0mg
Vancomycin	3.0mg
Nystatin.....	12,500U

Preparation of VCNT Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 730.0mL of cooled, sterile GC medium base, aseptically add 250.0mL of sterile hemoglobin solution, 10.0mL of sterile supplement B, and 10.0mL of VCNT antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and transport of fastidious microorganisms, especially *Neisseria* species.

Transgrow Medium with Trimethoprim**Composition per liter:**

Agar	20.0g
Hemoglobin	10.0g
Pancreatic digest of casein.....	7.5g
Selected meat peptone	7.5g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
Glucose	1.5g
Cornstarch.....	1.0g
KH ₂ PO ₄	1.0g
Supplement solution	10.0mL
VCNT inhibitor.....	10.0mL

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Supplement Solution:**Composition per liter:**

Glucose	100.0g
L-Cysteine-HCl.....	25.9g
L-Glutamine	10.0g
L-Cystine	1.1g
Adenine.....	1.0g
Nicotinamide adenine dinucleotide	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate	0.1g
Guanine-HCl	0.03g
Fe(NO ₃) ₃ ·6H ₂ O.....	0.02g
<i>p</i> -Aminobenzoic acid.....	0.013g
Thiamine-HCl	3.0mg

Source: The supplement solution (IsoVitaleX[®] enrichment) is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

VCNT Inhibitor:**Composition per 10.0mL:**

Colistin.....	7.5mg
Trimethoprim lactate.....	5.0mg
Vancomycin	3.0mg
Nystatin.....	12,500U

Preparation of VCNT Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except supplement solution and VCNT inhibitor, to distilled/deionized water and bring vol-

ume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C under 5–30% CO₂. Aseptically add 10.0mL of sterile supplement solution and 10.0mL of sterile VCNT inhibitor. Mix thoroughly. Aseptically distribute under 5–30% CO₂ into sterile screw-capped tubes.

Use: For the transportation and recovery of pathogenic *Neisseria* species.

Transgrow Medium without Trimethoprim

Composition per liter:

Agar	20.0g
Hemoglobin	10.0g
Pancreatic digest of casein	7.5g
Selected meat peptone	7.5g
NaCl	5.0g
K ₂ HPO ₄	4.0g
Glucose	1.5g
Cornstarch	1.0g
KH ₂ PO ₄	1.0g
Supplement solution	10.0mL
VCN inhibitor	10.0mL

pH 6.7 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Supplement Solution:

Composition per liter:

Glucose	100.0g
L-Cysteine·HCl	25.9g
L-Glutamine	10.0g
L-Cystine	1.1g
Adenine	1.0g
Nicotinamide adenine dinucleotide	0.25g
Vitamin B ₁₂	0.1g
Thiamine pyrophosphate	0.1g
Guanine·HCl	0.03g
Fe(NO ₃) ₃ ·6H ₂ O	0.02g
<i>p</i> -Aminobenzoic acid	0.013g
Thiamine·HCl	3.0mg

Source: The supplement solution IsoVitaleX[®] enrichment is available from BD Diagnostic Systems. This enrichment may be replaced by supplement VX from BD Diagnostic Systems.

Preparation of Supplement Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

VCN Inhibitor:

Composition per 10.0mL:

Colistin	7.5mg
Vancomycin	3.0mg
Nystatin	12,500U

Preparation of VCN Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except supplement solution and VCN inhibitor, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C under 5–30% CO₂. Aseptically add 10.0mL of sterile supplement solu-

tion and 10.0mL of sterile VCN inhibitor. Mix thoroughly. Aseptically distribute under 5–30% CO₂ into sterile screw-capped tubes.

Use: For the transportation and recovery of pathogenic *Neisseria* species.

Transport Medium

Composition per liter:

Sodium glycerophosphate	10.0g
Agar	3.0g
Sodium thioglycolate	1.0g
CaCl ₂ ·2H ₂ O	0.1g
Methylene Blue	2.0mg

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into screw-capped tubes or vials. Fill tubes nearly to capacity. Leave only enough space so that when a small swab is introduced the tube does not overflow. Autoclave for 10 min at 15 psi pressure–121°C. Tighten caps on tubes.

Use: For the transportation of swab specimens for the recovery of a wide variety of microorganisms, including *Neisseria gonorrhoeae*.

Transport Medium Stuart

Composition per liter:

Sodium glycerophosphate	10.0g
Agar	3.0g
Sodium thioglycolate	0.9g
CaCl ₂ ·2H ₂ O	0.1g
Methylene Blue	2.0mg

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into screw-capped tubes or vials. Fill tubes nearly to capacity. Leave only enough space so that when a small swab is introduced the tube does not overflow. Autoclave for 10 min at 15 psi pressure–121°C. Tighten caps on tubes.

Use: For the transportation of swab specimens for the recovery of a wide variety of microorganisms, including *Neisseria gonorrhoeae*.

Trebouxia Agar

Composition per liter:

Bristol's solution	850.0mL
Soil extract	140.0mL
Glucose	20.0g
Agar	15.0g
Proteose peptone	10.0g

Bristol's Solution:

Composition per 1000.1mL:

NaNO ₃ solution	10.0g
KH ₂ PO ₄ solution	7.0g
K ₂ HPO ₄ solution	3.0g
MgSO ₄ ·7H ₂ O solution	3.0g
CaCl ₂ solution	1.0g

NaCl solution	1.0g
FeCl ₃ solution	0.1mL

NaNO₃ Solution:**Composition** per 400.0mL:

NaNO ₃	10.0g
-------------------------	-------

Preparation of NaNO₃ Solution: Add NaNO₃ to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.**CaCl₂ Solution:****Composition** per 400.0mL:

CaCl ₂	1.0g
-------------------------	------

Preparation of CaCl₂ Solution: Add CaCl₂ to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.**MgSO₄·7H₂O Solution:****Composition** per 400.0mL:

MgSO ₄ ·7H ₂ O	3.0g
--	------

Preparation of MgSO₄·7H₂O Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.**K₂HPO₄ Solution:****Composition** per 400.0mL:

K ₂ HPO ₄	3.0g
---------------------------------------	------

Preparation of K₂HPO₄ Solution: Add K₂HPO₄ to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.**KH₂PO₄ Solution:****Composition** per 400.0mL:

KH ₂ PO ₄	7.0g
---------------------------------------	------

Preparation of KH₂PO₄ Solution: Add KH₂PO₄ to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.**NaCl Solution:****Composition** per 400.0mL:

NaCl	1.0g
------------	------

Preparation of NaCl Solution: Add NaCl to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.**FeCl₃ Solution:****Composition** per 100.0mL:

FeCl ₃	1.0g
-------------------------	------

Preparation of FeCl₃ Solution: Add FeCl₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.**Preparation of Bristol's Solution:** Add 10.0mL of NaNO₃ solution, 10.0mL of CaCl₂ solution, 10.0mL of MgSO₄·7H₂O solution, 10.0mL of NaNO₃ solution, 10.0mL of K₂HPO₄ solution, 10.0mL of KH₂PO₄ solution, and 10.0mL of NaCl solution to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add 0.1mL of FeCl₃ solution. Mix thoroughly.**Soil Extract:****Composition** per 200.0mL:

African Violet soil.....	77.0g
Na ₂ CO ₃	0.2g

Preparation of Soil Extract: Add components to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Autoclave for 60 min at 15 psi pressure–121°C. Filter through Whatman #1 filter paper.**Preparation of Medium:** Combine components. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Auto-

clave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Brachiomonas submarina* and *Trebouxia magna*.***Treponema bryantii* Medium****Composition** per liter:

L-Cysteine-HCl	1.0g
NaCl.....	0.9g
(NH ₄) ₂ SO ₄	0.9g
K ₂ HPO ₄	0.45g
KH ₂ PO ₄	0.45g
MgSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.12g
Resazurin	1.0mg
Rumen fluid, clarified	300.0mL
NaHCO ₃ solution	100.0mL
Glucose solution (10% w/v)	20.0mL
pH 7.0 ± 0.2 at 25°C	

NaHCO₃ Solution:**Composition** per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% CO₂.**Glucose Solution:****Composition** per 20.0mL:

Glucose	2.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% CO₂.**Preparation of Medium:** Prepare and dispense medium under 100% CO₂. Add components, except rumen fluid, NaHCO₃ solution, and glucose solution, to distilled/deionized water and bring volume to 580.0mL. Mix thoroughly. Adjust pH to 7.0 with KOH. Sparge with 100% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 300.0mL of sterile rumen fluid, 100.0mL of sterile NaHCO₃ solution, and 20.0mL of sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.**Use:** For the cultivation and maintenance of *Treponema bryantii*.***Treponema denticola* Medium
(DSMZ Medium 909)****Composition** per 1045.0mL:

Solution A	1.0L
Solution B	45.0mL
pH 7.1 ± 0.2 at 25°C	

Solution A:**Composition** per liter:

Trypticase™.....	10.0g
Yeast extract.....	2.5g
Agar	3.0g
Glucose	2.0g
L-Cysteine-HCl	1.0g
Na-thioglycolate	0.5g
L-Asparagine.....	0.25g
Brain heart infusion broth.....	450.0mL

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for 5 min. Cool to room temperature while sparging with 80% N₂ + 20% CO₂. Distribute to anaerobe tubes or bottles under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Brain Heart Infusion Broth:

Composition per liter:

Pancreatic digest of gelatin.....	14.5g
Brain heart, solids from infusion.....	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl.....	5.0g
Casein.....	5.0g
Glucose.....	3.0g
Na ₂ HPO ₄	2.5g

Preparation of Brain Heart Infusion Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Solution B:

Composition per 65.0mL:

NaHCO ₃	2.0g
Thiamine pyrophosphate.....	6.0mg
Volatile fatty acid solution.....	20.0mL
Rabbit serum.....	20.0mL

Volatile Fatty Acid Solution:

Composition per 102.0mL:

KOH, 0.1N.....	100.0mL
Isobutyric acid.....	0.5mL
D,L-2-methylbutyric acid.....	0.5mL
Isovaleric acid.....	0.5mL
Valeric acid.....	0.5mL

Preparation of Volatile Fatty Acid Solution: Combine components and mix thoroughly.

Preparation of Solution B: Add components, except rabbit serum, to distilled/deionized water and bring volume to 45.0mL. Mix thoroughly. Filter sterilize. Add 20.0mL rabbit serum.

Preparation of Medium: Aseptically and anaerobically add 0.45mL solution B and 10.0mL solution A to individual tubes. Pressurize the tubes with H₂ to 0.5 bar.

Use: For the cultivation of *Treponema denticola*.

Treponema Isolation Medium

Composition per liter:

Solution A.....	450.0mL
Spirolate broth.....	450.0mL
Rabbit serum, inactivated at 56°C for 30 min.....	100.0mL
pH 7.4 ± 0.2 at 25°C	

Solution A:

Composition per 450.0mL:

Agar.....	8.0g
Asparagine.....	0.25g
Sodium thioglycolate.....	0.25g
Pancreatic digest of casein.....	0.25g
Brain heart infusion broth.....	450.0mL

Preparation of Solution A: Combine components. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Brain Heart Infusion Broth:

Composition per liter:

Pancreatic digest of gelatin.....	14.5g
Brain heart, solids from infusion.....	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl.....	5.0g
Casein.....	5.0g
Glucose.....	3.0g
Na ₂ HPO ₄	2.5g

Preparation of Brain Heart Infusion Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Spirolate Broth:

Composition per liter:

Pancreatic digest of casein.....	15.0g
Glucose.....	5.0g
Yeast extract.....	5.0g
NaCl.....	2.5g
L-Cysteine·HCl·H ₂ O.....	1.0g
Sodium thioglycolate.....	0.5g
Palmitic acid.....	0.05g
Stearic acid.....	0.05g
Oleic acid.....	0.05g
Linoleic acid.....	0.05g

Preparation of Spirolate Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Combine 450.0mL of sterile solution A, 450.0mL of sterile spirolate broth, and 100.0mL of rabbit serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of oral, genital, and fecal treponemes.

Treponema Isolation Medium

Composition per liter:

Beef heart, solids from infusion.....	20.0g
Ionagar No. 2.....	7.2g
K ₂ HPO ₄	2.0g
Arabinose.....	0.8g
Glucose.....	0.8g
Maltose.....	0.8g
Polypeptone™.....	0.8g
Pyruvate.....	0.8g
Starch, soluble.....	0.8g
Sucrose.....	0.8g
Cysteine·HCl.....	0.68g
(NH ₄) ₂ SO ₄	0.6g
Serine.....	0.4g
Tryptose.....	0.4g
Yeast extract.....	0.4g
NaCl.....	0.2g
Rumen fluid.....	500.0mL
Rabbit serum-coccarboxylase solution.....	100.0mL
pH 7.2 ± 0.2 at 25°C	

Rabbit Serum-Coccarboxylase Solution:

Composition per liter:

Rabbit serum, heat inactivated.....	100.0mL
Coccarboxylase solution.....	1.0mL

Preparation of Rabbit Serum-Coccarboxylase Solution: Heat rabbit serum at 56°C for 1 hr. Add 1.0mL of coccarboxylase solution. Mix thoroughly.

Coccarboxylase Solution:

Composition per 1.0mL:

Coccarboxylase..... 0.5g

Preparation of Coccarboxylase Solution: Add coccarboxylase to 1.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except rumen fluid and rabbit serum-coccarboxylase solution, to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 500.0mL of sterile rumen fluid and 100.0mL of sterile rabbit serum-coccarboxylase solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of oral treponemes.

***Treponema macrodentium* Medium**

Composition per liter:

Glucose 1.0g
Nicotinamide..... 0.4g
Spermine-4HCl 0.15g
Sodium isobutyrate 0.02g
Carboxylase 5.0mg
PPLO agar..... 900.0mL
Bovine serum 100.0mL

pH 7.0 ± 0.2 at 25°C

PPLO Agar:

Composition per 900.0mL:

Beef heart, infusion from 50.0g
Agar 14.0g
Peptone..... 10.0g
NaCl 5.0g

pH 7.8 ± 0.2 at 25°C

Preparation of PPLO Agar: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly.

Preparation of Medium: Combine components, except bovine serum. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile bovine serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Treponema macrodentium*.

***Treponema* Medium**

Composition per liter:

Pancreatic digest of casein..... 30.0g
Ionagar No. 2 8.0g
Glucose 5.0g
Yeast extract..... 5.0g
NaCl 2.5g
Cysteine-HCl..... 0.75g
Horse serum, inactivated..... 100.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 100.0mL of sterile horse se-

rum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of oral treponemes.

***Treponema* Medium**

Composition per liter:

Spirolate agar 900.0mL
Rabbit serum,
inactivated at 56°C for 30 min 100.0mL

Spirolate Agar:

Composition per liter:

Pancreatic digest of casein..... 15.0g
Agar 14.0g
Glucose 5.0g
Yeast extract..... 5.0g
NaCl..... 2.5g
L-Cysteine-HCl-H₂O..... 1.0g
Sodium thioglycolate 0.5g
Palmitic acid 0.05g
Stearic acid..... 0.05g
Oleic acid 0.05g
Linoleic acid 0.05g

Preparation of Spirolate Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: To 900.0mL of cooled, sterile spirolate agar, aseptically add 100.0mL of rabbit serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation of oral treponemes.

***Treponema* Medium**

Composition per liter:

Spirolate agar 675.0mL
Brain heart infusion broth..... 225.0mL
Rabbit serum,
inactivated at 56°C for 30 min 100.0mL
pH 7.0–7.2 ± 0.2 at 25°C

Spirolate Agar:

Composition per 675.0mL:

Pancreatic digest of casein..... 15.0g
Ionagar No. 2 8.0g
Glucose 5.0g
Yeast extract..... 5.0g
NaCl..... 2.5g
L-Cysteine-HCl-H₂O..... 1.0g
Sodium thioglycolate 0.5g
Palmitic acid 0.05g
Stearic acid..... 0.05g
Oleic acid 0.05g
Linoleic acid 0.05g

Preparation of Spirolate Agar: Add components to distilled/deionized water and bring volume to 675.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Brain Heart Infusion Broth:

Composition per liter:

Pancreatic digest of gelatin 14.5g
Brain heart, solids from infusion 6.0g

Peptic digest of animal tissue.....	6.0g
NaCl	5.0g
Casein	5.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g

Preparation of Brain Heart Infusion Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Aseptically combine 675.0mL of cooled, sterile spiroate agar, 225.0mL of cooled, sterile brain heart infusion broth, and 100.0mL of rabbit serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of oral treponemes.

Treponema Medium

Composition per liter:

Solution A	440.0mL
Spiroate broth.....	440.0mL
Rabbit serum, inactivated at 56°C for 30 min	100.0mL
Mucin solution	20.0mL

pH 7.8 ± 0.2 at 25°C

Solution A:

Composition per 440.0mL:

Ionagar No. 2	8.0g
Brain heart infusion broth	440.0mL

Brain Heart Infusion Broth:

Composition per liter:

Pancreatic digest of gelatin	14.5g
Brain heart, solids from infusion	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl	5.0g
Casein.....	5.0g
Glucose	3.0g
Na ₂ HPO ₄	2.5g

Preparation of Brain Heart Infusion Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Solution A: Add 8.0g of ionagar to 440.0mL of brain heart infusion broth. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Spiroate Broth:

Composition per liter:

Pancreatic digest of casein.....	15.0g
Glucose	5.0g
Yeast extract.....	5.0g
NaCl	2.5g
L-Cysteine·HCl·H ₂ O.....	1.0g
Sodium thioglycolate.....	0.5g
Palmitic acid	0.05g
Stearic acid.....	0.05g
Oleic acid	0.05g
Linoleic acid	0.05g

Preparation of Spiroate Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°.

Mucin Solution:

Composition per 20.0mL:

Mucin	0.2g
-------------	------

Preparation of Mucin Solution: Add mucin to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 440.0mL of solution A, 440.0mL of spiroate broth, 100.0mL of rabbit serum, and 20.0mL of mucin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation of intestinal treponemes.

Treponema Medium

Composition per liter:

Agar	13.0g
Glucose	1.4g
Cysteine·HCl.....	0.64g
(NH ₄) ₂ SO ₄	0.5g
Polypeptone™	0.5g
Starch, soluble.....	0.5g
Yeast extract.....	0.5g
Resazurin	1.6mg
Salts solution.....	500.0mL
Bovine rumen fluid	280.0mL

pH 7.2–7.5 at 25°C

Salts Solution:

Composition per liter:

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂	0.2g
MgSO ₄	0.2g
CoCl	3.4mg
MnSO ₄	3.4mg
NaMoO ₄	3.4mg

Preparation of Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except bovine rumen fluid, to distilled/deionized water and bring volume to 720.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add bovine rumen fluid. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of intestinal treponemes.

Treponema Medium

Composition per liter:

Cysteine·HCl·H ₂ O	1.0g
Glucose	1.0g
Nicotinamide.....	0.4g
Spermidine·4HCl	0.15g
Sodium isobutyrate	0.02g
Thiamine pyrophosphate	5.0mg
PPLO broth	900.0mL

pH 7.8 ± 0.2 at 25°C

PPLO Broth:

Composition per 900.0mL:

Beef heart, infusion from solids.....	50.0g
Peptone	10.0g
NaCl.....	5.0g

Preparation of PPLO Broth: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly.

Preparation of Medium: Combine components, except rabbit serum. Mix thoroughly. Filter sterilize. Aseptically add sterile rabbit serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of oral treponemes. For the cultivation of *Treponema denticola*, *Treponema macrodentium*, and *Treponema oralis*.

Treponema Medium

Composition per liter:

Spirolate broth.....	675.0mL
Brain heart infusion broth.....	225.0mL
Rabbit serum.....	100.0mL

Spirolate Broth:

Composition per liter:

Pancreatic digest of casein.....	15.0g
Glucose.....	5.0g
Yeast extract.....	5.0g
NaCl.....	2.5g
L-Cysteine·HCl·H ₂ O.....	1.0g
Sodium thioglycolate.....	0.5g
Palmitic acid.....	0.05g
Stearic acid.....	0.05g
Oleic acid.....	0.05g
Linoleic acid.....	0.05g

Preparation of Spirolate Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Brain Heart Infusion Broth:

Composition per liter:

Pancreatic digest of gelatin.....	14.5g
Brain heart, solids from infusion.....	6.0g
Peptic digest of animal tissue.....	6.0g
NaCl.....	5.0g
Casein.....	5.0g
Glucose.....	3.0g
Na ₂ HPO ₄	2.5g

Preparation of Brain Heart Infusion Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Aseptically combine 675.0mL of cooled, sterile spirolate broth, 225.0mL of cooled, sterile brain heart infusion broth, and 100.0mL of rabbit serum. Mix thoroughly.

Use: For the cultivation of oral treponemes.

Treponema Medium

Composition per liter:

Heart infusion broth, modified.....	450.0mL
Spirolate broth.....	450.0mL
Rabbit serum, inactivated.....	100.0mL
pH 7.4 ± 0.2 at 25°C	

Heart Infusion Broth, Modified:

Composition per liter:

Beef heart, solids from infusion.....	500.0g
Tryptose.....	10.0g
NaCl.....	5.0g

Asparagine.....	2.5g
Sodium thioglycolate.....	2.5g
Pancreatic digest of casein.....	2.5g

Preparation of Heart Infusion Broth, Modified: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Spirolate Broth:

Composition per liter:

Pancreatic digest of casein.....	15.0g
Glucose.....	5.0g
Yeast extract.....	5.0g
NaCl.....	2.5g
L-Cysteine·HCl·H ₂ O.....	1.0g
Sodium thioglycolate.....	0.5g
Palmitic acid.....	0.05g
Stearic acid.....	0.05g
Oleic acid.....	0.05g
Linoleic acid.....	0.05g

Preparation of Spirolate Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Aseptically combine 450.0mL of cooled, sterile spirolate broth, 450.0mL of cooled, sterile heart infusion broth, modified, and 100.0mL of rabbit serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of treponemes.

Treponema Medium

Composition per 500.0mL:

Beef heart, solids from infusion.....	250.0g
Sucrose.....	50.0g
Tryptose.....	5.0g
NaCl.....	2.5g
Yeast extract.....	2.5g
Agar.....	0.5g
Sodium thioglycolate.....	0.38g
MgSO ₄	0.05g
Horse serum, inactivated.....	100.0mL
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Adjust pH to 7.4. Gently heat and bring to boiling. Distribute into tubes in 4.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Prior to inoculation, add 1.0mL sterile horse serum to each tube.

Use: For the cultivation and maintenance of *Treponema pallidum* and other *Treponema* species.

Treponema Medium 1

Composition per liter:

Thioglycolate agar USP, alternate.....	900.0mL
Normal calf serum.....	100.0mL
pH 7.1 ± 0.2 at 25°C	

Thioglycolate Agar USP, Alternate:

Composition per 900.0mL:

Pancreatic digest of casein.....	15.0g
Ionagar No. 2.....	7.0g

Glucose	5.5g
Yeast extract.....	5.0g
NaCl.....	2.5g
L-Cystine.....	0.5g
Sodium thioglycolate.....	0.5g

Preparation of Thioglycolate Agar USP, Alternate: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Aseptically combine 900.0mL of cooled sterile thioglycolate agar USP, alternate, and 100.0mL of calf serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of treponemes.

Treponema Medium 2

Composition per liter:

Pancreatic digest of casein.....	30.0g
Ionagar No. 2.....	7.0g
Glucose.....	5.0g
Yeast extract.....	5.0g
NaCl.....	2.5g
L-Cysteine·HCl·H ₂ O.....	2.0g
Rabbit serum.....	100.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except rabbit serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile rabbit serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of treponemes.

Treponema Medium 3

Composition per liter:

Spirolate agar.....	675.0mL
Brain heart infusion broth.....	225.0mL
Rabbit serum.....	100.0mL

Spirolate Agar:

Composition per liter:

Pancreatic digest of casein.....	15.0g
Ionagar No. 2.....	7.0g
Glucose.....	5.0g
Yeast extract.....	5.0g
NaCl.....	2.5g
L-Cysteine·HCl·H ₂ O.....	1.0g
Sodium thioglycolate.....	0.5g
Palmitic acid.....	0.05g
Stearic acid.....	0.05g
Oleic acid.....	0.05g
Linoleic acid.....	0.05g

Preparation of Spirolate Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Brain Heart Infusion Broth:

Composition per liter:

Pancreatic digest of gelatin.....	14.5g
Brain heart, solids from infusion.....	6.0g

Peptic digest of animal tissue.....	6.0g
NaCl.....	5.0g
Casein.....	5.0g
Glucose.....	3.0g
Na ₂ HPO ₄	2.5g

Preparation of Brain Heart Infusion Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Aseptically combine 675.0mL of cooled, sterile spirolate broth, 225.0mL of cooled, sterile brain heart infusion broth, and 100.0mL of rabbit serum. Mix thoroughly.

Use: For the cultivation of treponemes.

Treponema Medium, Prereduced

Composition per liter:

Agar.....	1.6g
Glucose.....	1.4g
Cysteine·HCl·H ₂ O.....	0.64g
(NH ₄) ₂ SO ₄	0.5g
Polypeptone™.....	0.5g
Starch, soluble.....	0.5g
Yeast extract.....	0.5g
Resazurin.....	1.6mg
Salts solution.....	500.0mL
Bovine rumen fluid.....	280.0mL

pH 7.2–7.5 at 25°C

Salts Solution:

Composition per liter:

NaHCO ₃	10.0g
NaCl.....	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
CaCl ₂	0.2g
MgSO ₄	0.2g
CoCl.....	3.4mg
MnSO ₄	3.4mg
NaMoO ₄	3.4mg

Preparation of Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except bovine rumen fluid, to distilled/deionized water and bring volume to 720.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 280.0mL of sterile bovine rumen fluid. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks under 100% N₂.

Use: For the cultivation of fecal and intestinal treponemes.

Treponema saccharophilum Medium

Composition per liter:

Pancreatic digest of casein.....	2.0g
Yeast extract.....	2.0g
L-Cysteine·HCl.....	1.0g
Resazurin.....	1.0mg
Salt solution A.....	200.0mL
Salt solution B.....	200.0mL
NaHCO ₃ solution.....	100.0mL
Glucose solution.....	20.0mL

<i>iso</i> -Butyric acid.....	0.4mL
<i>n</i> -Butyric acid	0.4mL
DL-2-Methylbutyric acid.....	0.2mL
<i>iso</i> -Valeric acid	0.2mL
<i>n</i> -Valeric acid.....	0.2mL

pH 6.7–7.0 at 25°C

Salt Solution A:**Composition per liter:**

MgSO ₄ ·7H ₂ O.....	0.96g
CaCl ₂ ·2H ₂ O.....	0.59g

Preparation of Salt Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Salt Solution B:**Composition per liter:**

K ₂ HPO ₄	2.25g
KH ₂ PO ₄	2.25g
NaCl.....	4.5g
(NH ₄) ₂ SO ₄	4.5g

Preparation of Salt Solution B: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

NaHCO₃ Solution:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% CO₂.

Glucose Solution:**Composition per 20.0mL:**

Glucose.....	2.0g
--------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize. Sparge with 100% CO₂.

Preparation of Medium: Prepare and dispense medium under 100% CO₂. Add components, except NaHCO₃ solution and glucose solution, to distilled/deionized water and bring volume to 880.0mL. Mix thoroughly. Adjust pH to 7.0 with KOH. Gently heat and bring to boiling. Continue boiling for 5 min. Cool to room temperature while sparging with 100% CO₂. Anaerobically distribute 8.8mL into anaerobic culture tubes. Autoclave for 15 min at 15 psi pressure–121°C. Using a syringe, add 1.0mL of sterile NaHCO₃ solution and 0.2 mL of sterile glucose solution to each tube. Check that final pH is 6.7–7.0.

Use: For the cultivation and maintenance of *Treponema saccharophilum*.

***Treponema succinifaciens* Medium (DSMZ Medium 275)**

Composition per liter:

Solution A.....	875.0mL
Solution B.....	50.0mL
Solution D.....	50.0mL
Solution C.....	25.0mL

pH 7.0 ± 0.2 at 25°C

Solution A:**Composition per 875.0mL:**

NaCl.....	1.0g
K ₂ HPO ₄	0.5g

Cysteine-HCl·H ₂ O.....	0.5g
KH ₂ PO ₄	0.5g
Yeast extract.....	0.5g
Peptone.....	0.5g
(NH ₄) ₂ SO ₄	0.5g
CaCl ₂ ·2H ₂ O.....	0.1g
MgSO ₄ ·7H ₂ O.....	0.1g
Resazurin.....	0.001g
Rumen fluid, clarified.....	300.0mL

Preparation of Solution A: Add components to 575.0mL of distilled/deionized water. Mix thoroughly. Adjust pH to 6.2–6.3 with 4N HCl. Heat to boiling point. Cool to room temperature under 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:**Composition per 100.0mL:**

Glucose.....	20.0g
--------------	-------

Preparation of Solution B: Add glucose to 100.0mL of distilled/deionized water. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution C:**Composition per 100.0mL:**

KH ₂ PO ₄	0.45g
Na ₂ HPO ₄ ·2H ₂ O.....	0.58g

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Solution D:**Composition per 100.0mL:**

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution D: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Distribute solution A under 100% N₂ into anaerobic tubes. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add appropriate amounts of solutions B, C, and D to achieve final concentrations.

Use: For the cultivation of *Treponema succinifaciens*.

Tributyryn Agar

Composition per liter:

Agar.....	15.0g
Tributyryn (glyceryl tributryate).....	10.0g
Peptone.....	5.0g
Yeast extract.....	3.0g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and enumeration of lipolytic fungi and bacteria, especially *Staphylococcus* species, *Flavobacterium* species, *Clostridium* species, and *Pseudomonas* species from butter. Lipolytic bacteria appear as colonies surrounded by a clear zone.

Tributyryn HiVeg Agar Base with Tributyrin**Composition per liter:**

Agar	15.0g
Plant peptone.....	5.0g
Yeast extract.....	3.0g
Tributyryn (glyceryl tributyrate).....	10.0mL
pH 7.5 ± 0.2 at 25°C	

Source: This medium, without tributyrin, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 990.0mL. Add 10.0mL of tributyrin. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection of lipolytic microorganisms.

Trichlorophenol Medium**Composition per liter:**

Pancreatic digest of casein.....	8.5g
NaCl.....	2.5g
Papaic digest of soybean meal.....	1.5g
K ₂ HPO ₄	1.25g
Glucose.....	1.25g
2,4,6-Trichlorophenol.....	1.25g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Arthrobacter* species and other microorganisms that can degrade chlorinated phenols.

Trichococcus Medium**Composition per liter:**

Pancreatic digest of casein.....	10.0g
Na ₂ SO ₄	4.0g
MgCl ₂ ·6H ₂ O.....	1.1g
KCl.....	0.7g
Glucose solution.....	30.0mL
pH 7.3 ± 0.2 at 25°C	

Glucose Solution:**Composition per 30.0mL:**

Glucose.....	3.0g
--------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 970.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 30.0mL of sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Trichococcus flocculiformis*.

Trichomonas HiVeg Agar Base with Serum**Composition per liter:**

Plant extract No. 2.....	25.0g
NaCl.....	6.5g
Glucose.....	5.0g

Agar.....	1.0g
Horse serum.....	80.0mL
pH 6.4 ± 0.2 at 25°C	

Source: This medium, without horse serum, is available as a premixed powder from HiMedia.

Horse Serum:**Composition per 80.0mL:**

Horse serum.....	80.0mL
------------------	--------

Preparation of Horse Serum: Gently heat sterile horse serum to 56°C for 30 min. Aseptically adjust pH to 6.0 with 0.1N HCl. Use immediately.

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 80.0mL of freshly prepared sterile horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Trichomonas vaginalis*.

Trichomonas HiVeg Agar Base with Serum and Selective Supplement**Composition per liter:**

Plant extract No. 2.....	25.0g
NaCl.....	6.5g
Glucose.....	5.0g
Agar.....	1.0g
Horse serum.....	80.0mL
Selective supplement.....	10.0mL
pH 6.4 ± 0.2 at 25°C	

Source: This medium, without horse serum or selective supplement, is available as a premixed powder from HiMedia.

Horse Serum:**Composition per 80.0mL:**

Horse serum.....	80.0mL
------------------	--------

Preparation of Horse Serum: Gently heat sterile horse serum to 56°C for 30 min. Aseptically adjust pH to 6.0 with 0.1N HCl. Use immediately.

Selective Supplement:**Composition per 10.0mL:**

Streptomycin.....	0.5g
Penicillin.....	1,000,000U

Preparation of Selective Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except horse serum and selective supplement, to distilled/deionized water and bring volume to 910.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 80.0mL of freshly prepared sterile horse serum and 10.0mL sterile selective supplement. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Trichomonas vaginalis*.

Trichomonas Medium**Composition** per liter:

Liver digest	25.0g
NaCl	6.5g
Glucose	5.0g
Agar	1.0g
Horse serum	80.0mL

pH 6.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Horse Serum:**Composition** per 80.0mL:

Horse serum	80.0mL
-------------------	--------

Preparation of Horse Serum: Gently heat sterile horse serum to 56°C for 30 min. Aseptically adjust pH to 6.0 with 0.1N HCl. Use immediately.

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 80.0mL of freshly prepared sterile horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Trichomonas vaginalis*.

Trichomonas Medium No. 2**Composition** per liter:

Glucose	22.5g
Liver digest	18.0g
Pancreatic digest of casein	17.0g
NaCl	5.0g
Pancreatic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Chloramphenicol	0.125g
Horse serum	250.0mL
Calcium pantothenate (0.5% solution)	1.0mL

pH 6.2 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from Oxoid Unipath.

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 750.0mL. Mix thoroughly. Autoclave for 15 min at 5 psi pressure–108°C. Cool to 45°–50°C. Aseptically add 250.0mL of sterile horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation of *Trichomonas vaginalis*.

Trichomonas Selective Medium**Composition** per liter:

Liver digest	25.0g
NaCl	6.5g
Glucose	5.0g
Agar	1.0g
Horse serum	80.0mL
Antibiotic inhibitor	10.0mL

pH 6.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Horse Serum:**Composition** per 80.0mL:

Horse serum	80.0mL
-------------------	--------

Preparation of Horse Serum: Gently heat sterile horse serum to 56°C for 30 min. Aseptically adjust pH to 6.0 with 0.1N HCl. Use immediately.

Antibiotic Inhibitor:**Composition** per 10.0mL:

Streptomycin	500.0mg
Penicillin G	1,000,000U

Preparation of Antibiotic Inhibitor: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except horse serum and antibiotic inhibitor, to distilled/deionized water and bring volume to 910.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 80.0mL of freshly prepared sterile horse serum and 10.0mL of sterile antibiotic inhibitor. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Trichomonas vaginalis* from specimens with a mixed bacterial flora.

Trichomonas Selective Medium**Composition** per liter:

Liver digest	25.0g
NaCl	6.5g
Glucose	5.0g
Agar	1.0g
Horse serum	80.0mL
Antibiotic inhibitor	10.0mL

pH 6.4 ± 0.2 at 25°C

Horse Serum:**Composition** per 80.0mL:

Horse serum	80.0mL
-------------------	--------

Preparation of Horse Serum: Gently heat sterile horse serum to 56°C for 30 min. Aseptically adjust pH to 6.0 with 0.1N HCl. Use immediately.

Antibiotic Inhibitor:**Composition** per 10.0mL:

Chloramphenicol	100.0mg
-----------------------	---------

Preparation of Antibiotic Inhibitor: Add chloramphenicol to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except horse serum and antibiotic inhibitor, to distilled/deionized water and bring volume to 910.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 80.0mL of freshly prepared sterile horse serum and 10.0mL of sterile antibiotic inhibitor. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Trichomonas vaginalis* from specimens with a mixed bacterial flora.

Trichophyton Agar 1**Composition** per liter:

Glucose	40.0g
Agar	15.0g

Vitamin assay casamino acids.....	2.5g
KH ₂ PO ₄	1.8g
MgSO ₄ ·7H ₂ O.....	0.1g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the differentiation of the *Trichophyton* species.

Trichophyton Agar 2

Composition per liter:

Glucose.....	40.0g
Agar.....	15.0g
Vitamin assay casamino acids.....	2.5g
KH ₂ PO ₄	1.8g
MgSO ₄ ·7H ₂ O.....	0.1g
Inositol.....	50.0mg
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the differentiation of the *Trichophyton* species.

Trichophyton Agar 3

Composition per liter:

Glucose.....	40.0g
Agar.....	15.0g
Vitamin assay casamino acids.....	2.5g
KH ₂ PO ₄	1.8g
MgSO ₄ ·7H ₂ O.....	0.1g
Inositol.....	0.05g
Thiamine·HCl.....	0.2mg
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the differentiation of the *Trichophyton* species.

Trichophyton Agar 4

Composition per liter:

Glucose.....	40.0g
Agar.....	15.0g
Vitamin assay casamino acids.....	2.5g
KH ₂ PO ₄	1.8g
MgSO ₄ ·7H ₂ O.....	0.1g
Thiamine·HCl USP.....	200.0µg
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the differentiation of the *Trichophyton* species.

Trichophyton Agar 5

Composition per liter:

Glucose.....	40.0g
Agar.....	15.0g
Vitamin assay casamino acids.....	2.5g
KH ₂ PO ₄	1.8g
MgSO ₄ ·7H ₂ O.....	0.1g
Nicotinic acid.....	2.0mg
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the differentiation of the *Trichophyton* species.

Trichophyton Agar 6

Composition per liter:

Glucose.....	40.0g
Agar.....	15.0g
KH ₂ PO ₄	1.8g
Ammonium nitrate.....	1.5g
MgSO ₄ ·7H ₂ O.....	0.1g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the differentiation of the *Trichophyton* species.

Trichophyton Agar 7

Composition per liter:

Glucose.....	40.0g
Agar.....	15.0g
KH ₂ PO ₄	1.8g
Ammonium nitrate.....	1.5g
MgSO ₄ ·7H ₂ O.....	0.1g
Histidine·HCl.....	0.03g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the differentiation of the *Trichophyton* species.

Trichophyton HiVeg Agar 1

Composition per liter:

Glucose	40.0g
Agar	15.0g
Vitamin-free casein enzymic hydrolysate.....	2.5g
KH ₂ PO ₄	1.8g
MgSO ₄	0.1g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the differentiation of the *Trichophyton* species.

Trichophyton HiVeg Agar 2

Composition per liter:

Glucose	40.0g
Agar	15.0g
Vitamin-free plant hydrolysate	2.5g
KH ₂ PO ₄	1.8g
MgSO ₄	0.1g
Inositol	5.0mg
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the differentiation of the *Trichophyton* species.

Trichophyton HiVeg Agar 3

Composition per liter:

Glucose	40.0g
Agar	15.0g
Vitamin-free plant hydrolysate	2.5g
KH ₂ PO ₄	1.8g
MgSO ₄	0.1g
Inositol	5.0mg
Thiamine	5.0mg
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the differentiation of the *Trichophyton* species.

Trichophyton HiVeg Agar 4

Composition per liter:

Glucose	40.0g
Agar	15.0g
KH ₂ PO ₄	1.8g

MgSO ₄	0.1g
Vitamin-free plant hydrolysate	2.5g
Thiamine hydrochloride.....	0.2mg
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the differentiation of the *Trichophyton* species.

Trichophyton HiVeg Agar 5

Composition per liter:

Glucose	40.0g
Agar	15.0g
Vitamin-free plant hydrolysate	2.5g
KH ₂ PO ₄	1.8g
MgSO ₄	0.1g
Nicotinic acid.....	0.02g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the differentiation of the *Trichophyton* species.

Trichosel™ Broth, Modified

Composition per liter:

Pancreatic digest of casein.....	12.0g
Yeast extract.....	5.0g
Liver extract.....	2.0g
Maltose	2.0g
L-Cysteine-HCl.....	1.0g
Agar	1.0g
Chloramphenicol.....	0.1g
Methylene Blue.....	3.0mg
Horse serum.....	50.0mL
pH 6.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 13 psi pressure–118°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile horse serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Trichomonas* species.

Trimethylamine N-Oxide Medium (TMAO Medium)

Composition per liter:

Beef extract.....	10.0g
Peptone	10.0g
NaCl.....	5.0g

Agar	2.0g
Trimethylamine <i>N</i> -oxide	1.0g
Yeast extract	1.0g
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-capped tubes in 4.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in an upright position.

Use: For the cultivation and differentiation of *Campylobacter* species from foods. *Campylobacter jejuni* and *Campylobacter coli* will not grow.

Triple Sugar Iron Agar (TSI Agar)

Composition per liter:

Peptone.....	20.0g
Agar	12.0g
Lactose	10.0g
Sucrose.....	10.0g
NaCl	5.0g
Beef extract	3.0g
Yeast extract	3.0g
Glucose	1.0g
Ferric citrate.....	0.3g
Na ₂ S ₂ O ₃	0.3g
Phenol Red.....	0.025g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position to form a 1.0-inch butt.

Use: For the differentiation of members of the Enterobacteriaceae based on their fermentation of lactose, sucrose, and glucose and the production of H₂S.

Triple Sugar Iron Agar (TSI Agar)

Composition per liter:

Agar	13.0g
Pancreatic digest of casein	10.0g
Peptic digest of animal tissue.....	10.0g
Lactose	10.0g
Sucrose.....	10.0g
NaCl	5.0g
Glucose	1.0g
Fe(NH ₄) ₂ (SO ₄) ₂ ·6H ₂ O	0.2g
Na ₂ S ₂ O ₃	0.2g
Phenol Red.....	0.025g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position to form a 1.0-inch butt.

Use: For the differentiation of members of the Enterobacteriaceae based on their fermentation of lactose, sucrose, and glucose and the production of H₂S.

Triple Sugar Iron Agar (TSI Agar) (BAM M149 Medium 2)

Composition per liter:

Peptone	15.0g
Agar	12.0g
Lactose.....	10.0g
Sucrose.....	10.0g
Proteose peptone.....	5.0g
NaCl	5.0g
Beef extract	3.0g
Yeast extract.....	3.0g
Glucose	1.0g
Na ₂ S ₂ O ₃	0.3g
FeSO ₄	0.2g
Phenol Red.....	0.024g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position to form a 1.0-inch butt.

Use: For the differentiation of members of the Enterobacteriaceae based on their fermentation of lactose, sucrose, and glucose and the production of H₂S.

Triple Sugar Iron Agar, HiVeg

Composition per liter:

Agar	12.0g
Plant hydrolysate	10.0g
Plant peptone	10.0g
Lactose.....	10.0g
Sucrose.....	10.0g
NaCl	5.0g
Plant extract	3.0g
Yeast extract.....	3.0g
Glucose	1.0g
Na ₂ S ₂ O ₃	0.3g
FeSO ₄	0.2g
Phenol Red.....	0.024g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position to form a 1.0-inch butt.

Use: For the differentiation of members of the Enterobacteriaceae based on their fermentation of lactose, sucrose, and glucose and the production of H₂S.

Tris YP Agar
(Tris Yeast Extract Peptone Agar)

Composition per liter:

Agar	19.0g
Yeast extract	3.0g
Glucose	1.0g
Peptone.....	0.6g
Tris buffer (0.05M, pH 7.5).....	1.0L
pH 7.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. For top layer agar, add 6.0g of agar instead of 19.0g. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and maintenance of *Bdellovibrio* species.

Tris YP Broth
(Tris Yeast Extract Peptone Broth)

Composition per liter:

Yeast extract	3.0g
Glucose	1.0g
Peptone.....	0.6g
Tris buffer (0.05M, pH 7.5).....	1.0L
pH 7.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bdellovibrio* species.

Trypaflavin Nalidixic Acid Serum Agar
(TNSA Agar)

Composition per liter:

Ionagar No. 2	12.0g
Peptone.....	10.0g
Beef extract	3.0g
H ₂ O	926.5mL
Bovine serum, heat inactivated.....	50.0mL
Nalidixic acid solution	20.0mL
Trypaflavin solution	3.5mL
pH 7.2–7.4 at 25°C	

Nalidixic Acid Solution:

Composition per 10.0mL:

Nalidixic acid.....	0.02g
---------------------	-------

Preparation of Nalidixic Acid Solution: Add nalidixic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trypaflavin Solution:

Composition per 10.0mL:

Trypaflavin.....	0.1g
------------------	------

Preparation of Trypaflavin Solution: Add trypaflavin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components—except bovine serum, nalidixic acid solution, and trypaflavin solution—to distilled/deionized water and bring volume to 926.5mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile bovine serum, 20.0mL of sterile nalidixic acid solution, and 3.5mL of trypaflavin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Listeria* species from preenriched specimens.

Trypanosome Medium

Composition per 1300.0mL:

Solid phase	1.0L
Liquid phase (Locke's solution)	300.0mL
pH 7.2–7.4 at 25°C	

Solid Phase:

Composition per liter:

Agar	15.0g
NaCl.....	8.0g
Peptone	5.0g
Beef extract.....	3.0g
Rabbit blood, defibrinated	300.0mL

Preparation of Solid Phase: Add components, except rabbit blood, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Adjust pH to 7.2–7.4. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 300.0mL of sterile defibrinated rabbit blood. Mix thoroughly. Distribute 10.0mL aliquots into sterile screw-capped tubes. Allow to solidify in a slanted position.

Liquid Phase (Locke's Solution):

Composition per liter:

NaCl.....	8.0g
Glucose	2.5g
KH ₂ PO ₄	0.3g
CaCl ₂	0.2g
KCl.....	0.2g

Preparation of Liquid Phase (Locke's Solution): Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically overlay agar slants (solid phase) with 3.0mL per tube of sterile liquid phase (Locke's solution).

Use: For the cultivation of *Leishmania donovani*, *Leishmania braziliensis*, *Trypanosoma gambiense*, and *Trypanosoma rhodesiense*.

Tryptic Digest Broth

Composition per liter:

Tryptic digest of beef heart	10.0g
NaCl.....	5.0g
Glucose	1.0g
pH 7.6 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For use as a base medium to which enrichments are added. For the cultivation of fastidious microorganisms.

Tryptic Nitrate Medium

Composition per liter:

Tryptose	20.0g
Na ₂ HPO ₄	2.0g
Agar	1.0g
Glucose	1.0g
KNO ₃	1.0g

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of *Pseudomonas* and related genera. For the differentiation of bacteria based on their reduction of nitrate to nitrite. After incubation of the bacterium in tryptic nitrate medium for 18–24 hr, sulfanilic acid and α-naphthol reagents are added. Nitrate reduction is indicated by the development of a red to violet color.

Tryptic Soy Agar

See: **Trypticase™ Soy Agar**

Tryptic Soy Agar Blood Agar Base

See: **Trypticase™ Soy Agar with Sheep Blood**

Tryptic Soy Agar with Magnesium Ions

Composition per liter:

Pancreatic digest of casein	17.0g
Agar	15.0g
NaCl	5.0g
Pancreatic digest of soybean meal	3.0g
Glucose	2.5g
K ₂ HPO ₄	2.5g
MgCl ₂	0.95g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Escherichia coli* for bacteriophage production.

Tryptic Soy Agar with Magnesium Sulfate

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	15.0g
NaCl	5.0g
Pancreatic digest of soybean meal	5.0g
MgSO ₄ ·7H ₂ O	1.5g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the cultivation of *Escherichia coli* from foods.

Tryptic Soy Agar with Magnesium Sulfate and Sodium Chloride

Composition per liter:

Pancreatic digest of casein	50.0g
NaCl	30.0g
Agar	15.0g
Pancreatic digest of soybean meal	5.0g
MgSO ₄ ·7H ₂ O	1.5g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the cultivation of *Vibrio* species from foods.

Tryptic Soy Agar with Sodium Chloride (ATCC Medium 2276)

Composition per liter:

Pancreatic digest of casein	50.0g
NaCl	20.0g
Agar	15.0g
Pancreatic digest of soybean meal	5.0g
MgSO ₄ ·7H ₂ O	1.5g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Vibrio* species.

Tryptic Soy Agar with 0.6% Yeast Extract

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	15.0g
Yeast extract	6.0g
Pancreatic digest of soybean meal	5.0g
NaCl	5.0g

pH 7.0–7.5 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Listeria monocytogenes* from foods.

Tryptic Soy Blood Agar

See: **Trypticase™ Soy Agar with Sheep Blood**

Tryptic Soy Blood Agar with VAN 4

See: **Trypticase™ Soy Agar with Sheep Blood and Vancomycin**

Tryptic Soy Broth**Composition** per liter:

Pancreatic digest of casein.....	18.0g
Papaic digest of soybean meal.....	6.0g
NaCl.....	6.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly.

Use: For the isolation and cultivation of a wide variety of microorganisms.

Tryptic Soy Broth with 0.001M Calcium Chloride
(ATCC Medium 1380)**Composition** per liter:

Pancreatic digest of casein.....	18.0g
Papaic digest of soybean meal.....	6.0g
NaCl.....	6.0g
CaCl ₂ solution.....	10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium, without CaCl₂, is available as a premixed powder from BD Diagnostic Systems.

Calcium Chloride Solution:**Composition** per 10.0mL:

CaCl ₂	0.111g
-------------------------	--------

Preparation of Calcium Chloride Solution: Add CaCl₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except CaCl₂ solution, to distilled/deionized water and bring volume to 990mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL CaCl₂ solution. Mix thoroughly. Distribute into tubes or flasks.

Use: For the isolation and cultivation of *Bronchothrix thermospacta*.

Tryptic Soy Broth with 0.1% Potassium Nitrate
(ATCC Medium 1183)**Composition** per liter:

Pancreatic digest of casein.....	15.0g
Agar.....	15.0g
Papaic digest of soybean meal.....	5.0g
NaCl.....	5.0g
KNO ₃	1.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium, without nitrate, is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Flavobacterium* sp.

Tryptic Soy Broth with Magnesium Ions
(ATCC Medium 1588)**Composition** per liter:

Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Pancreatic digest of soybean meal.....	3.0g
Glucose.....	2.5g
K ₂ HPO ₄	2.5g
MgCl ₂	0.95g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into flasks or tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli* for bacteriophage production.

Tryptic Soy Broth with 1M Potassium Chloride
(ATCC Medium 2074)**Composition** per liter:

KCl.....	74.5g
Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Gracilibacillus dipso-sauri*.

Tryptic Soy Fast Green Agar
(TSFA)**Composition** per liter:

Pancreatic digest of casein.....	17.0g
Agar.....	15.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g
Fast Green FCF.....	0.25g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically adjust pH to 7.3. Pour into sterile Petri dishes.

Use: For the isolation and cultivation of *Salmonella* species from foods.

Trypticase™ Agar Base**Composition** per liter:

Pancreatic digest of casein.....	20.0g
Agar.....	3.5g
Phenol Red.....	0.02g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of microorganisms based on their motility.

Trypticase™ Agar Base with Carbohydrate

Composition per liter:

Pancreatic digest of casein.....	20.0g
Carbohydrate.....	5.0g
Agar.....	3.5g
Phenol Red.....	0.02g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 13 psi pressure–118°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For differentiation of microorganisms based on their motility and fermentation reactions. Fermentation of carbohydrate turns the medium yellow.

Trypticase™ Azolectin Tween™ Broth Base

See: [TAT Broth Base](#)

Trypticase™ Broth, Supplemented

Composition per liter:

Pancreatic digest of casein.....	20.0g
MgSO ₄ ·7H ₂ O.....	0.015g
FeCl ₃	7.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Bacillus stearothermophilus*.

Trypticase™ Glucose Agar

Composition per liter:

Pancreatic digest of casein.....	17.0g
Agar.....	15.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
Glucose.....	7.5g
Yeast extract.....	3.0g
KH ₂ PO ₄	2.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Lactococcus raffinolactis*, *Streptococcus equi*, *Streptococcus pneumoniae*, and *Streptococcus uberis*.

Trypticase™ Glucose Extract Agar

Composition per liter:

Agar.....	15.0g
Pancreatic digest of casein.....	5.0g

Beef extract.....	3.0g
Glucose.....	1.0g

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the enumeration of bacteria in water, milk, and other specimens.

Trypticase™ Novobiocin Broth (TN Broth)

Composition per liter:

Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g
Bile salts No. 3.....	1.5g
K ₂ HPO ₄	1.5g
Novobiocin solution.....	10.0mL

pH 7.3 ± 0.2 at 25°C

Novobiocin Solution:

Composition per 10.0mL:

Novobiocin.....	0.02g
-----------------	-------

Preparation of Novobiocin Solution: Add novobiocin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except novobiocin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile novobiocin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of verotoxin-producing *Escherichia coli*.

Trypticase™ Peptone Glucose Yeast Extract Broth (TPGY Broth)

Composition per liter:

Pancreatic digest of casein.....	50.0g
Yeast extract.....	20.0g
Peptone.....	5.0g
Glucose.....	4.0g
Sodium thioglycolate.....	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 15.0mL volumes. Autoclave for 10 min at 15 psi pressure–121°C.

Use: For the cultivation of *Clostridium botulinum*.

Trypticase™ Peptone Glucose Yeast Extract Broth, Buffered

Composition per liter:

Pancreatic digest of casein.....	50.0g
Yeast extract.....	20.0g

Na ₂ HPO ₄	5.0g
Peptone.....	5.0g
Glucose	4.0g
Sodium thioglycolate	1.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Adjust pH to 7.3. Distribute into tubes in 15.0mL volumes. Autoclave for 8 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Clostridium perfringens* from foods.

Trypticase™ Peptone Glucose Yeast Extract Broth with Trypsin (TPGYT Broth)

Composition per 1067.0mL:

Pancreatic digest of casein.....	50.0g
Yeast extract.....	20.0g
Peptone.....	5.0g
Glucose	4.0g
Sodium thioglycolate	1.0g
Trypsin solution	67.0mL

pH 7.0 ± 0.2 at 25°C

Trypsin Solution:

Composition per 100.0mL:

Trypsin	1.5g
---------------	------

Preparation of Trypsin Solution: Add trypsin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except trypsin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 15.0mL volumes. Autoclave for 10 min at 15 psi pressure–121°C. Immediately prior to use, aseptically add 1.0mL of sterile trypsin solution to each tube. Mix thoroughly.

Use: For the cultivation of *Clostridium botulinum*.

Trypticase™ Phytone™ Glucose Medium

Composition per liter:

Glucose	15.0g
Pancreatic digest of casein.....	10.0g
Agar	8.0g
Papaic digest of soybean meal	5.0g
Yeast extract.....	2.5g
K ₂ HPO ₄	2.0g
L-Cysteine·HCl·H ₂ O.....	0.5g
MgCl ₂	0.5g
ZnSO ₄ ·7H ₂ O	0.25g
FeCl ₃	1.0mg

Preparation of Medium: Add ZnSO₄ to approximately 100.0mL of distilled/deionized water and dissolve. Add remaining components and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bifidobacterium* species.

Trypticase™ Phytone™ Glucose Medium with Tween™ 80

Composition per liter:

Glucose	15.0g
Pancreatic digest of casein.....	10.0g
Agar	8.0g
Papaic digest of soybean meal	5.0g
Yeast extract.....	2.5g
K ₂ HPO ₄	2.0g
L-Cysteine·HCl·H ₂ O.....	0.5g
MgCl ₂	0.5g
ZnSO ₄ ·7H ₂ O	0.25g
FeCl ₃	1.0mg
Tween™ 80.....	2.0mL

Preparation of Medium: Add ZnSO₄ to approximately 100.0mL of distilled/deionized water and dissolve. Add remaining components and bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bifidobacterium* species.

Trypticase™ Phytone Medium (DSMZ Medium 75)

Composition per liter:

Trypticase™ peptone.....	17.0g
Phytone™ peptone.....	3.0g
NaCl.....	5.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
Distilled water.....	1000.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Acinetobacter* spp.

Trypticase™ Phytone™ Medium

Composition per liter:

Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Phytone™ peptone.....	3.0g
Glucose	2.5g
K ₂ HPO ₄	2.5g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Acinetobacter* species.

Trypticase™ Serum Seawater Agar (ATCC Medium 1359)

Composition per liter:

Agar	12.0g
Pancreatic digest of casein.....	1.0g
Seawater.....	990.0mL
Horse serum.....	10.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except horse serum, to 990.0mL seawater. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of fastidious marine bacterial species.

Trypticase™ Serum Seawater Agar

Composition per liter:

Agar	12.0g
Pancreatic digest of casein	1.0g
Seawater	990.0mL
Horse serum	10.0mL

Preparation of Medium: Add agar and pancreatic digest of casein to 990.0mL of seawater. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Diplophrys marina*, *Haliphthoros milfordensis*, and *Ostracoblabe implexa*.

**Trypticase™ Soy Agar
(ATCC Medium 18)**

Composition per liter:

Pancreatic digest of casein	17.0g
Agar	15.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of heterotrophic microorganisms. For the cultivation of a wide variety of fastidious and nonfastidious microorganisms from clinical and nonclinical specimens. Also used for the rapid estimation of the bacteriological quality of water.

**Trypticase™ Soy Agar
(Tryptic Soy Agar)
(Soybean Casein Digest Agar)
(ATCC Medium 77)**

Composition per liter:

Pancreatic digest of casein	15.0g
Agar	15.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15

psi pressure–121°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of a wide variety of fastidious as well as nonfastidious microorganisms.

**Trypticase™ Soy Agar with Cefazidime
(ATCC Medium 1997)**

Composition per liter:

Pancreatic digest of casein	15.0g
Agar	15.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
Ceftazidime solution	10.0mL

pH 7.3 ± 0.2 at 25°C

Ceftazidime Solution:

Composition per 10.0mL:

Ceftazidime	4.0mg
-------------------	-------

Preparation of Ceftazidime Solution: Add ceftazidime to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ceftazidime solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile ceftazidime solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Klebsiella oxytoca*.

Trypticase™ Soy Agar with 1% Glucose

Composition per liter:

Pancreatic digest of casein	15.0g
Agar	15.0g
Glucose	10.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Saccharomonospora viridis*.

Trypticase™ Soy Agar with Glycerol

Composition per liter:

Pancreatic digest of casein	15.0g
Agar	15.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
Glycerol	50.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes. For blood plates, 50.0–100.0mL of sterile

defibrinated sheep blood may be added to sterile medium that has been melted and cooled to 45°–50°C.

Use: For the cultivation and maintenance of *Acinetobacter calcoaceticus*.

Trypticase™ Soy Agar with Human Blood

Composition per liter:

Pancreatic digest of casein.....	15.0g
Agar	15.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
Human blood, defibrinated	50.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except human blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile human blood. Mix thoroughly. Pour into sterile Petri dishes in 17.0mL volumes or distribute into sterile tubes.

Use: For the cultivation of a wide variety of fastidious microorganisms. For the observation of hemolytic reactions of a variety of bacteria. May be used to perform the CAMP test for the presumptive identification of group B streptococci (*Streptococcus agalactiae*).

Trypticase™ Soy Agar with Lecithin and Polysorbate 80 (Microbial Content Test Agar)

Composition per liter:

Pancreatic digest of casein.....	15.0g
Agar	15.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
Polysorbate 80 (Tween™ 80)	5.0g
Lecithin	0.7g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 13 psi pressure–118°C. Cool to 45°–50°C. Pour into sterile Petri dishes in 17.0mL volumes or leave in tubes.

Use: For the detection and enumeration of microorganisms in replicate plating techniques. Also used for the detection and enumeration of microorganisms present on surfaces of sanitary importance.

Trypticase™ Soy Agar-Magnesium Sulfate- Sodium Chloride Agar (TSAMS) (BAM M152a)

Composition per liter:

NaCl	20.0g
Trypticase peptone	15.0g
Agar	15.0g
Phytone™ peptone.....	5.0g
MgSO ₄ ·7H ₂ O	1.5g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes in 20.0mL volumes.

Use: For the cultivation of *Vibrio* species from foods.

Trypticase™ Soy Agar, Modified

Composition per liter:

Pancreatic digest of casein.....	17.0g
Agar	15.0g
NaCl.....	5.0g
Yeast extract.....	4.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of the *Simonsiella* species.

Trypticase™ Soy Agar, Modified (ATCC Medium 1386)

Composition per liter:

Agar	18.0g
Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
Yeast extract.....	0.4g
NH ₄ OH, concentrated	0.035mL

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components, except NH₄OH, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add NH₄OH. Mix thoroughly. Adjust pH to 7.5 if necessary. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of ATCC strain 31205.

Trypticase™ Soy Agar, Modified (ATCC Medium 1481)

Composition per liter:

Pancreatic digest of casein.....	17.0g
Agar	15.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
L-Glutamine	10.0mL

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components, except glutamine, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile glutamine. Mix thoroughly. Adjust pH to 6.5. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: Used as a base that is supplemented. For the cultivation of fastidious microorganisms. When supplemented with sheep blood, this medium is useful for the observation of hemolytic reactions of a variety of bacteria.

Trypticase™ Soy Agar, Modified (TSA II™)

Composition per liter:

Pancreatic digest of casein	14.5g
Agar	14.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
Growth factors (BBL)	1.5g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes. For blood plates, 50.0–100.0mL of sterile defibrinated sheep blood may be added to sterile medium that has been melted and cooled to 45°–50°C.

Use: Used as a base that is supplemented. For the cultivation of fastidious microorganisms. When supplemented with sheep blood, this medium is useful for the observation of hemolytic reactions of a variety of bacteria. It may be used to perform the CAMP test for the presumptive identification of group B streptococci (*Streptococcus agalactiae*).

Trypticase™ Soy Agar, Modified with Horse Serum

Composition per liter:

Pancreatic digest of casein	17.0g
Agar	15.0g
NaCl	5.0g
Yeast extract	4.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Horse serum	100.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Simonsiella* species, *Alysiella* species, and *Moraxella* species.

Trypticase™ Soy Agar with Sheep Blood (Tryptic Soy Blood Agar) (TSA Blood Agar)

Composition per liter:

Pancreatic digest of casein	15.0g
Agar	15.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g

Sheep blood, defibrinated	50.0mL
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes in 17.0mL volumes or distribute into sterile tubes.

Use: For the cultivation of a wide variety of fastidious microorganisms. For the observation of hemolytic reactions of a variety of bacteria. May be used to perform the CAMP test for the presumptive identification of group B streptococci (*Streptococcus agalactiae*).

Trypticase™ Soy Agar with Sheep Blood, Formate, and Fumarate

Composition per liter:

Pancreatic digest of casein	14.5g
Agar	14.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
Sucrose	2.0g
Growth factors	1.5g
Sheep blood, defibrinated	50.0mL
Formate-fumarate solution	13.0mL

pH 7.3 ± 0.2 at 25°C

Source: Growth Factors are available as a premixed powder from BD Diagnostic Systems.

Formate-Fumarate Solution:

Composition per 100.0mL:

Sodium formate	6.0g
Fumaric acid	6.0g

Preparation of Formate-Fumarate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.0. Filter sterilize.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes. Prior to inoculation, aseptically spread 0.2mL of sterile formate-fumarate solution on each plate.

Use: For the isolation of *Streptococcus pneumoniae* from a variety of clinical specimens.

Trypticase™ Soy Agar with Sheep Blood and Gentamicin

(TSA II™ with Sheep Blood and Gentamicin)

Composition per liter:

Pancreatic digest of casein	14.5g
Agar	14.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
Growth factors	1.5g
Sheep blood, defibrinated	50.0mL
Gentamicin solution	10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Gentamicin Solution:**Composition per 10.0mL:**

Gentamicin..... 2.5mg

Preparation of Gentamicin Solution: Add gentamicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sheep blood and gentamicin solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood and sterile gentamicin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of *Streptococcus pneumoniae* from a variety of clinical specimens.

**Trypticase™ Soy Agar with
Sheep Blood and Streptomycin
(ATCC Medium 1810)**

Composition per liter:

Pancreatic digest of casein..... 14.5g
Agar 14.0g
Papaic digest of soybean meal 5.0g
NaCl 5.0g
Growth factors 1.5g
Sheep blood, defibrinated 50.0mL
Streptomycin solution 10.0mL

pH 7.3 ± 0.2 at 25°C

Source: Growth factors are available as a premixed powder from BD Diagnostic Systems.

Streptomycin Solution:**Composition per 10.0mL:**

Streptomycin..... 0.5g

Preparation of Streptomycin Solution: Add streptomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sheep blood and streptomycin solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood and sterile streptomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Streptococcus gordonii*.

**Trypticase™ Soy Agar with Sheep Blood,
Sucrose, and Tetracycline**

Composition per liter:

Pancreatic digest of casein..... 14.5g
Agar 14.0g
Papaic digest of soybean meal 5.0g
NaCl 5.0g
Sucrose..... 2.0g
Growth factors 1.5g
Sheep blood, defibrinated 50.0mL
Tetracycline solution..... 10.0mL

pH 7.3 ± 0.2 at 25°C

Source: Growth factors are available as a premixed powder from BD Diagnostic Systems.

Tetracycline Solution:**Composition per 10.0mL:**

Tetracycline..... 0.5mg

Preparation of Tetracycline Solution: Add tetracycline to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sheep blood and tetracycline solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood and sterile tetracycline solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of *Streptococcus pneumoniae* from a variety of clinical specimens.

**Trypticase™ Soy Agar with
Sheep Blood and Tween™ 80
(ATCC Medium 1893)**

Composition per liter:

Pancreatic digest of casein..... 15.0g
Agar 15.0g
Papaic digest of soybean meal 5.0g
NaCl 5.0g
Sheep blood, defibrinated 50.0mL
Tween™ 80 10.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes in 17.0mL volumes or distribute into sterile tubes.

Use: For the cultivation of a wide variety of fastidious microorganisms.

**Trypticase™ Soy Agar with
Sheep Blood and Vancomycin
(ATCC Medium 1976)**

Composition per liter:

Pancreatic digest of casein..... 14.5g
Agar 14.0g
Papaic digest of soybean meal 5.0g
NaCl 5.0g
Growth factors 1.5g
Sheep blood, defibrinated 50.0mL
Vancomycin solution 10.0mL

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Vancomycin Solution:**Composition per 10.0mL:**

Vancomycin 4.0mg

Preparation of Vancomycin Solution: Add vancomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sheep blood and vancomycin solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add sterile sheep blood and sterile vancomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of *Streptococcus* and *Enterococcus* spp. from a variety of clinical specimens.

Trypticase™ Soy Agar with Sodium Chloride (ATCC Medium 176)

Composition per liter:

NaCl	30.0g
Pancreatic digest of casein	15.0g
Agar	15.0g
Papaic digest of soybean meal	5.0g
Bile salts No. 3	1.0g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Vibrio alginolyticus*.

Trypticase™ Soy Agar with 3% Sodium Chloride (TSA NaCl)

Composition per liter:

NaCl	30.0g
Agar	15.0g
Pancreatic digest of casein	15.0g
Papaic digest of soybean meal	5.0g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of halophilic microorganisms isolated from foods.

Trypticase™ Soy Agar with Sodium Chloride, Horse Serum, and Penicillin

Composition per liter:

NaCl	35.0g
Pancreatic digest of casein	15.0g
Agar	15.0g
Papaic digest of soybean meal	5.0g
Horse serum, inactivated	100.0mL
Penicillin solution	10.0mL
pH 7.3 ± 0.2 at 25°C	

Penicillin Solution:

Composition per 10.0mL:

Penicillin	1,000,000U
------------------	------------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except horse serum and penicillin solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat. Cool to 50°C. Aseptically add 100.0mL of sterile horse serum and 10.0mL of sterile penicillin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of fungi.

Trypticase™ Soy Agar with Starch (ATCC Medium 1818)

Composition per liter:

Pancreatic digest of casein	15.0g
Agar	15.0g
Starch, soluble	10.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
pH 5.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.5. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Bacillus naganensis*.

Trypticase™ Soy Agar with Tobramycin

Composition per liter:

Pancreatic digest of casein	17.0g
Agar	15.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
Tobramycin solution	10.0mL
pH 7.3 ± 0.2 at 25°C	

Tobromycin Solution:

Composition per 10.0mL:

Tobramycin	8.0mg
------------------	-------

Preparation of Tobromycin Solution: Add tobramycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except tobramycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile tobramycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Serratia marcescens*.

Trypticase™ Soy Agar with Yeast Extract (TSAYE)

Composition per liter:

Pancreatic digest of casein	17.0g
Agar	15.0g
Yeast extract	6.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g

K ₂ HPO ₄	2.5g
Glucose	2.5g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of heterotrophic microorganisms. For the isolation and cultivation of *Listeria monocytogenes* from foods.

Trypticase™ Soy Agar with Yeast Extract and Glucose

Composition per liter:

Pancreatic digest of casein.....	17.0g
Agar	15.0g
Glucose	7.5g
NaCl	5.0g
Yeast extract.....	3.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g

pH 7.0–7.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pediococcus urinaeequi*.

Trypticase™ Soy Broth (Soybean Casein Digest Broth, USP) (LMG Medium 185)

Composition per liter:

Pancreatic digest of casein.....	17.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bordetella* spp., *Capnocytophaga* spp., *Brachy bacterium* spp., *Erwinia amylovora*, *Curtobacterium flaccumfaciens*, *Aeromonas* spp., *Ralstonia* spp., *Ornithobacterium rhinotracheale*, *Riemerella* spp., *Arthrobacter* spp., *Pedobacter* spp., *Burkholderia vietnamiensis*, *Myroides* spp., *Chryseobacterium* spp., *Microbacterium* spp., *Nocardioideis* spp., *Cellulomonas* spp., *Agromyces* spp., *Pelistega europaea*, *Bergeyella zoohelcum*, *Bacillus* spp., *Burkholderia* spp., *Brevibacillus* spp., *Aneurinibacillus aneurinilyticus*, *Pandoraea* spp., and *Pseudomonas* spp. For the cultivation of a wide variety of fastidious and nonfastidious microorganisms from clinical and nonclinical specimens. Also used for the rapid estimation of the bacteriological quality of water.

Trypticase™ Soy Broth with 0.1% Agar

Composition per liter:

Pancreatic digest of casein.....	17.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
Agar	1.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of anaerobic microorganisms. For the cultivation of microorganisms isolated from root canals and other clinical specimens.

Trypticase™ Soy Broth Agar Modified (DSMZ Medium 535a)

Composition per liter:

Agar	15.0g
Pancreatic digest of casein.....	17.0g
NaCl	5.0g
Pancreatic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
Horse blood, defibrinated	50.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile, defibrinated horse blood. Mix thoroughly and pour into sterile Petri dishes.

Use: For cultivation and maintenance of *Corynebacterium glucuronolyticum*, *Corynebacterium durum*, *Corynebacterium falsenii*, *Corynebacterium singulare*, and *Corynebacterium xerosis*.

Trypticase™ Soy Broth with Calcium Chloride

Composition per liter:

Pancreatic digest of casein.....	17.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
CaCl ₂ ·2H ₂ O	0.15g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Brochothrix thermosphacta*.

Trypticase™ Soy Broth with Cefazidime

Composition per liter:

Pancreatic digest of casein.....	17.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g

Glucose	2.5g
Ceftazidime solution	10.0mL
pH 7.3 ± 0.2 at 25°C	

Ceftazidime Solution:**Composition per 10.0mL:**

Ceftazidime	4.0mg
-------------------	-------

Preparation of Ceftazidime Solution: Add ceftazidime to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except ceftazidime solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 10.0mL of sterile ceftazidime solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Klebsiella oxytoca*.

Trypticase™ Soy Broth with Ferrous Sulfate
(Tryptic Soy Broth with Ferrous Sulfate)
(BAM M186)

Composition per liter:

Pancreatic digest of casein	17.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
FeSO ₄	35.0mg

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Adjust pH to 7.3. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of *Salmonella* spp. from foods.

Trypticase™ Soy Broth with 10mM Glucose

Composition per liter:

Pancreatic digest of casein	17.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	1.8g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of fastidious and nonfastidious microorganisms from clinical and nonclinical specimens.

Trypticase™ Soy Broth with Fetal Calf Serum

Composition per liter:

Pancreatic digest of casein	17.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
Fetal calf serum	100.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except fetal calf serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add sterile fetal calf serum. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Serpula innocens* and *Brachyspira innocens*.

Trypticase™ Soy Broth with 10mM Glucose
(ATCC Medium 1189)

Composition per liter:

Pancreatic digest of casein	18.0g
Papaic digest of soybean meal	6.0g
NaCl	6.0g
Glucose	1.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium, without glucose, is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Staphylococcus aureus* subsp. *aureus*.

Trypticase™ Soy Broth with Glycerol

Composition per liter:

Pancreatic digest of casein	17.0g
NaCl	15.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glycerol	240.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Adjust pH to 7.3. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of a wide variety of microorganisms from foods.

Trypticase™ Soy Broth with Horse Serum

Composition per liter:

Pancreatic digest of casein	17.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
Horse serum, inactivated	100.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL of sterile horse serum. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Serpula innocens*.

Trypticase™ Soy Broth with Human Blood**Composition per liter:**

Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g
Human blood, defibrinated.....	50.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except human blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 50.0mL of sterile human blood. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Serpula innocens*.

**Trypticase™ Soy Broth
with 0.1% DL-7-Hydroxybutyric Acid
(LMG Medium 266)**

Composition per liter:

Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g
DL-7-Hydroxybutyric acid.....	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Gently warm with mixing until solution is complete. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For cultivation and maintenance of *Paucimonas lemoignei*.

Trypticase™ Soy Broth, Modified**Composition per 1000.2mL:**

Pancreatic digest of casein.....	17.0g
NaCl.....	15.0g
K ₂ HPO ₄	4.0g
Papaic digest of soybean meal.....	3.0g
Glucose.....	2.5g
Bile salts No. 3.....	1.5g
Novobiocin solution.....	0.2mL

pH 7.3 ± 0.2 at 25°C

Novobiocin Solution:**Composition per liter:**

Novobiocin.....	0.05g
-----------------	-------

Preparation of Novobiocin Solution: Add novobiocin to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except novobiocin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile novobiocin solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the isolation and cultivation of *Shigella* species from food.

**Trypticase™ Soy Broth, Modified
(mTSB)
(BAM M156)**

Composition per 1000.2mL:

Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
K ₂ HPO ₄	4.0g
Papaic digest of soybean meal.....	3.0g
Glucose.....	2.5g
Bile salts No. 3.....	1.5g
Novobiocin solution.....	0.2mL

pH 7.3 ± 0.2 at 25°C

Novobiocin Solution:**Composition per liter:**

Novobiocin.....	0.05g
-----------------	-------

Preparation of Novobiocin Solution: Add novobiocin to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except novobiocin solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile novobiocin solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the isolation and cultivation of *Shigella* species from food.

Trypticase™ Soy Broth with Neomycin**Composition per liter:**

Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g
Agar.....	1.0g
Neomycin solution.....	10.0mL

pH 7.3 ± 0.2 at 25°C

Neomycin Solution:**Composition per 10.0mL:**

Neomycin.....	5.0mg
---------------	-------

Preparation of Neomycin Solution: Add neomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except neomycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile neomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacillus megaterium*.

**Trypticase™ Soy Broth with 1M Potassium Chloride
(LMG Medium 256)**

Composition per liter:

KCl.....	74.5g
Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g

K ₂ HPO ₄	2.5g
Glucose	2.5g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Gracilibacillus dipsosauri*.

Trypticase™ Soy Broth with Sea Salts (LMG Medium 249)

Composition per liter:

Sea salts.....	20.0g
Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g
Yeast extract.....	1.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Cellulophaga baltica* and *Cellulophaga fucicola*.

Trypticase™ Soy Broth with Sheep Blood (LMG Medium 189)

Composition per liter:

Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g
Sheep blood, defibrinated.....	50.0mL

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Bartonella bacilliformis*.

Trypticase™ Soy Broth with 1.5% Sodium Chloride

Composition per liter:

Pancreatic digest of casein.....	17.0g
NaCl.....	15.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Pasteurella* species and *Listonella anguillarum*.

Trypticase™ Soy Broth with Sodium Chloride and Sodium Pyruvate

Composition per liter:

NaCl.....	100.0g
Pancreatic digest of casein.....	17.0g
Sodium pyruvate.....	10.0g
Papaic digest of soybean meal.....	3.0g
Glucose.....	2.5g
K ₂ HPO ₄	2.5g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Adjust pH to 7.3. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Staphylococcus aureus* from foods.

Trypticase™ Soy Broth with Starch (LMG Medium 232)

Composition per liter:

Pancreatic digest of casein.....	17.0g
Starch, soluble.....	10.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus naganensis*.

Trypticase™ Soy Broth with Tobramycin

Composition per liter:

Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g
Agar.....	1.0g
Tobramycin solution.....	10.0mL
pH 7.3 ± 0.2 at 25°C	

Tobramycin Solution:

Composition per 10.0mL:

Tobramycin.....	8.0mg
-----------------	-------

Preparation of Tobramycin Solution: Add tobramycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except tobramycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile tobramycin solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Serratia marcescens*.

Trypticase™ Soy Broth with Tween™ 80**Composition per liter:**

Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g
Agar.....	1.0g
Tween™ 80.....	1.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Corynebacterium genitalium*.

Trypticase™ Soy Broth with Yeast Extract**Composition per liter:**

Pancreatic digest of casein.....	17.0g
Yeast extract.....	6.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of a wide variety of heterotrophic microorganisms.

Trypticase™ Soy Broth with 0.1% Yeast Extract (LMG Medium 235)**Composition per liter:**

Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g
Yeast extract.....	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus* spp. and other heterotrophic bacteria.

Trypticase Soy Broth without Glucose**Composition per liter:**

Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a wide variety of microorganisms when the presence of carbohydrate is undesirable.

Trypticase™ Soy Broth with Yeast Extract (TSBYE)**Composition per liter:**

Pancreatic digest of casein.....	17.0g
Yeast extract.....	6.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Listeria monocytogenes* from foods.

Trypticase™ Soy Glucose Medium**Composition per liter:**

Glucose.....	50.0g
Pancreatic digest of casein.....	7.5g
Agar.....	7.5g
Papaic digest of soybean meal.....	2.5g
NaCl.....	2.5g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Pseudomonas cepacia*.

Trypticase™ Soy Polymyxin Broth**Composition per 1006.67mL:**

Pancreatic digest of casein.....	17.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
K ₂ HPO ₄	2.5g
Glucose.....	2.5g
Polymyxin B solution.....	6.67mL

pH 7.3 ± 0.2 at 25°C

Polymyxin B Solution:**Composition per 10.0mL:**

Polymyxin B.....	0.015g
------------------	--------

Preparation of Polymyxin B Solution: Add polymyxin B to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except polymyxin B solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 15.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 0.1mL of sterile polymyxin B solution to each tube. Mix thoroughly.

Use: For the isolation and cultivation of *Bacillus cereus* from foods.

**Trypticase™ Soy Sheep Blood Agar
(Tryptic Soy Blood Agar)
(TSA Blood Agar)
(BAM M159)**

Composition per 1050.0mL:

Pancreatic digest of casein	15.0g
Agar	15.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
Sheep blood, defibrinated	50.0mL
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes in 20.0mL volumes or distribute into sterile tubes.

Use: For the cultivation of a wide variety of fastidious microorganisms. For the observation of hemolytic reactions of a variety of bacteria. May be used to perform the CAMP test for the presumptive identification of group B streptococci (*Streptococcus agalactiae*).

Trypticase™ Soy Soil Extract
See: TS Soil Extract

Trypticase™ Soy Tryptose Broth

Composition per liter:

Pancreatic digest of casein	13.5g
Peptic digest of animal tissue	5.0g
NaCl	5.0g
Yeast extract	3.0g
Glucose	1.75g
Papaic digest of soybean meal	1.5g
K ₂ HPO ₄	1.25g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enrichment of *Salmonella* species from foods.

Trypticase™ Soy Yeast Extract Agar

Composition per liter:

Agar	28.0g
NaCl	10.0g
Pancreatic digest of casein	2.5g
Yeast extract	2.5g
Base medium	100.0mL
Phosphate buffer	100.0mL
pH 7.2 ± 0.2 at 25°C	

Base Medium:

Composition per liter:

MgCl ₂ ·6H ₂ O	2.0g
Titriplex I	1.0g
CaSO ₄ ·2H ₂ O	0.4g
NaOH pellets	0.2g

Fe-citrate solution	5.0mL
Trace elements solution	5.0mL

Fe-Citrate Solution:

Composition per 100.0mL:

Fe-citrate	0.25g
------------	-------

Preparation of Fe-Citrate Solution: Add Fe-citrate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Elements Solution:

Composition per 5.0mL:

CuCl ₂ ·2H ₂ O	50.0mg
Titriplex I	12.8mg
FeCl ₂ ·4H ₂ O	1.0mg
MnCl ₂ ·4H ₂ O	0.5mg
CoCl ₂ ·6H ₂ O	0.3mg
ZnCl ₂	0.2mg
Na ₂ MoO ₄ ·2H ₂ O	50.0mg
NiCl ₂ ·6H ₂ O	50.0mg
H ₃ BO ₃	20.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 5.0mL. Mix thoroughly.

Preparation of Base Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Phosphate Buffer:

Composition per liter:

Na ₂ HPO ₄ ·12H ₂ O	43.0g
KH ₂ PO ₄	5.44g

Preparation of Phosphate Buffer: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Add components, except phosphate buffer, and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile phosphate buffer. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Lactococcus lactis* and *Lactococcus plantarum*.

Trypticase™ Soy Yeast Extract Agar

Composition per liter:

Pancreatic digest of casein	17.0g
Agar	15.0g
NaCl	5.0g
Yeast extract	3.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Staphylococcus carnosus*.

Trypticase™ Soy Yeast Extract Medium

See: TSY Medium

**Trypticase™ Soy Yeast Extract Medium
(LMG Medium 217)****Composition per liter:**

Pancreatic digest of casein	17.0g
NaCl	8.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
Sheep blood, defibrinated	50.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Staphylococcus carnosus* and *Brachy bacterium* spp.

Trypticase™ Soy Yeast Extract Starch Medium

See: **TSYES Medium**

**Trypticase™ Starch Agar
(DSMZ Medium 56)****Composition per liter:**

Pancreatic digest of casein	17.0g
Agar	15.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
Yeast extract	2.0g
Soluble starch	1.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus* spp.

Trypticase™ Sulfite Neomycin Agar

See: **TSN Agar**

Trypticase™ Tellurite Agar Base**Composition per liter:**

Agar	20.0g
Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
NaCl	5.0g
Glucose	2.0g
Serum	50.0mL
Chapman tellurite solution	10.0mL

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Chapman Tellurite Solution:**Composition per 100.0mL:**

K ₂ TeO ₃	1.0g
---------------------------------	------

Preparation of Chapman Tellurite Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except serum and Chapman tellurite solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile serum and sterile Chapman tellurite solution. Sheep serum, rabbit serum, or human serum may be used. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the selective isolation of microorganisms from clinical specimens, especially from the nose, throat, and vagina.

Trypticase™ Yeast Extract Glucose Medium**Composition per liter:**

Pancreatic digest of casein	10.0g
Glucose	10.0g
KH ₂ PO ₄	6.8g
Yeast extract	5.0g
NaHCO ₃	1.0g
Tween™ 80	0.5g
Sodium formaldehyde sulfoxalate	0.5g
CaCl ₂	0.02g
MgSO ₄	0.02g
NaCl	0.02g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Propionibacterium* species.

Trypticase™ Yeast Extract Glucose Medium

See: **TYEG Medium**

Trypticase™ Yeast Extract Glucose Medium

See: **TYG Medium**

Tryptone Agar**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	8.0g
NaCl	8.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of fastidious aerobic and facultative microorganisms such as *Escherichia coli* and *Pseudomonas* species.

Tryptone Agar Base, HiVeg**Composition per liter:**

Plant hydrolysate	20.0g
Agar	3.5g
Phenol Red	0.02g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of fastidious aerobic and facultative microorganisms such as *Escherichia coli* and *Pseudomonas* species.

Tryptone Agar, HiVeg

Composition per liter:

Plant hydrolysate.....	20.0g
Agar	15.0g
Synthetic detergent No. 1.....	1.5g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of fastidious aerobic and facultative microorganisms such as *Escherichia coli* and *Pseudomonas* species.

Tryptone Beef Yeast Extract Acetate Agar

See: **TBYA Agar**

Tryptone Bile Agar

Composition per liter:

Pancreatic digest of casein.....	20.0g
Agar	15.0g
Bile salts No. 3.....	1.5g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the isolation and enumeration of *Escherichia coli* from foods.

Tryptone Bile Glucuronide Agar, Harlequin (Harlequin TBGA)

Composition per liter:

Tryptone.....	20.0g
Agar	15.0g
Bile salts No. 3.....	1.5g
X-glucuronide	0.075g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available from lab m.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Allow to soak for 10 min. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes.

Use: For the simple enumeration of *E. coli* without the need for membranes or pre-incubation. The medium has been modified by the addition of a chromogenic substrate to detect the β -glucuronidase, which is

highly specific for *E. coli*. The advantage of the chromogenic substrate is that it requires no UV lamp to visualize the reaction, and it is concentrated within the colony, facilitating easier enumeration in the presence of other organisms, or when large numbers are present on the plate.

Tryptone Bile X-glucuronide Agar, Chromocult (Chromocult® TBX) (Chromocult Tryptone Bile X-glucuronide Agar)

Composition per liter:

Peptone	20.0g
Agar	15.0g
Bile salts No. 3	1.5g
X- β -D-glucuronide	0.075g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available from Merck.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes.

Use: For the differentiation of *E. coli* from other coliforms. The presence of the enzyme β -D-glucuronidase differentiates most *E. coli* spp. from other coliforms. *E. coli* absorbs the chromogenic substrate 5-bromo-4-chloro-3-indolyl- β -D-glucuronide (X- β -D-glucuronide). The enzyme β -glucuronidase splits the bond between the chromophore 5-bromo-4-chloro-3-indolyle and the β -D-glucuronide. *E. coli* colonies are colored blue-green. Growth of accompanying Gram-positive flora is largely inhibited by the use of bile salts. The prepared medium is clear and yellowish.

Tryptone Broth

Composition per liter:

Pancreatic digest of casein.....	10.0g
Glucose	5.0g
K ₂ HPO ₄	1.25g
Yeast extract.....	1.0g
Bromocresol Purple solution	2.0mL

Bromocresol Purple Solution:

Composition per 100.0mL:

Bromocresol Purple	2.0g
Ethanol.....	10.0mL

Preparation of Bromocresol Purple Solution: Add Bromocresol Purple to 10.0mL of ethanol. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into screw-capped tubes in 10.0mL volumes. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the cultivation of *Salmonella* species from foods.

Tryptone Broth

See: **T₁N₀ Broth**

Tryptone Broth

See: **Tryptone Water Broth**

Tryptone Broth (ATCC Medium 274)

Composition per liter:

Pancreatic digest of casein..... 10.0g
pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add pancreatic digest of casein to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of fastidious aerobic and facultative microorganisms such as *Escherichia coli* and *Pseudomonas* species.

Tryptone Broth, 1% (ATCC Medium 274)

Composition per liter:

Pancreatic digest of casein..... 1.0g
pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add pancreatic digest of casein to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Escherichia coli* and *Pseudomonas* species. For the identification and confirmation of *Vibrio cholerae* in foods.

Tryptone Broth with CaCl₂

Composition per liter:

Pancreatic digest of casein..... 10.0g
CaCl₂..... 5.5g
pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of fastidious aerobic and facultative microorganisms such as *Escherichia coli*.

Tryptone Broth, HiVeg (Tryptone Water, HiVeg)

Composition per liter:

Plant hydrolysate..... 10.0g
NaCl..... 5.0g
pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the detection of indole-producing microorganisms.

Tryptone Glucose Beef Extract Agar (Tryptone Glucose Extract Agar)

Composition per liter:

Agar 15.0g
Pancreatic digest of casein..... 5.0g

Beef extract..... 3.0g
Glucose 1.0g
pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. If the dilution of the specimen is greater than 1:10, add 10.0mL of sterile 10% skim milk solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the enumeration of bacteria by the standard plate count procedure. For the cultivation and enumeration of bacteria from milk and dairy products. For the detection of thermophilic organisms.

Tryptone Glucose Beef Extract Agar with Sucrose

Composition per liter:

Agar 15.0g
Pancreatic digest of casein..... 5.0g
Beef extract..... 3.0g
Glucose 1.0g
Sucrose..... 5.0g
pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Saccharococcus thermophilus*.

Tryptone Glucose Beef Extract Agar with Yeast Extract

Composition per liter:

Agar 15.0g
Pancreatic digest of casein..... 5.0g
Beef extract..... 3.0g
Glucose 1.0g
Yeast extract..... 1.0g
pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Ancylobacter aquaticus* and *Spirosoma linguale*.

Tryptone Glucose Extract Agar See: Tryptone Glucose Beef Extract Agar

Tryptone Glucose Extract HiVeg Agar (Tryptone Glucose Yeast Extract HiVeg Agar)

Composition per liter:

Agar 15.0g
Plant hydrolysate 5.0g
Yeast extract..... 3.0g
Glucose 1.0g
pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enumeration of bacteria by the standard plate count procedure. For the cultivation and enumeration of bacteria from milk and dairy products.

Tryptone Glucose HiVeg Agar

Composition per liter:

Plant hydrolysate.....	20.0g
Glucose	5.0g
Agar	3.5g
Bromthymol Blue	0.01g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enumeration of bacteria by the standard plate count procedure. For the cultivation and enumeration of bacteria from milk and dairy products.

Tryptone Glucose Medium

Composition per liter:

Pancreatic digest of casein.....	20.0g
Glucose	5.0g
K ₂ HPO ₄	0.35g
KH ₂ PO ₄	0.2g
MgCl ₂ ·6H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.07g
Vitamin solution.....	10.0mL

Vitamin Solution:

Composition per 10.0mL:

Thiamine	200.0µg
Biotin	50.0µg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile flasks or tubes.

Use: For the cultivation and maintenance of *Amoebidium parasiticum*, *Capniomyces stellatus*, *Smittium culicis*, *Smittium culisetae*, *Smittium simulii*, and *Smittium* species.

Tryptone Glucose Yeast Extract HiVeg Broth

Composition per liter:

Plant hydrolysate.....	10.0g
Glucose	5.0g

K ₂ HPO ₄	1.25g
Yeast extract.....	1.0g
pH 6.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enumeration of bacteria by the standard plate count procedure. For the cultivation and enumeration of bacteria from milk and dairy products.

Tryptone with Sodium Chloride Broth

Composition per liter:

Pancreatic digest of casein.....	8.0g
NaCl.....	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of fastidious aerobic and facultative microorganisms such as *Escherichia coli* and *Pseudomonas* species.

Agar	15.0g
Pancreatic digest of casein	1.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to seawater and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus pacificus*.

Tryptone Soy Agar**Composition** per liter:

Agar	15.0g
Pancreatic digest of casein	15.0g
NaCl	5.0g
Pancreatic digest of soybean meal	5.0g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of microorganisms.

**Tryptone Soy Agar pH 5.5
(LMG Medium 241)****Composition** per liter:

Tryptone	15.0g
Agar	15.0g
Soy peptone	5.0g
NaCl	5.0g
pH 5.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.5. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of heterotrophic bacteria.

**Tryptone Soy Agar pH 6.5
(LMG Medium 242)****Composition** per liter:

Tryptone	15.0g
Agar	15.0g
Soy peptone	5.0g
NaCl	5.0g
pH 6.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of heterotrophic bacteria.

**Tryptone Soy Agar, HiVeg
(Antibiotic Assay Medium - J, HiVeg)****Composition** per liter:

Agar	15.0g
Plant hydrolysate	15.0g
NaCl	5.0g
Papaic digest of soybean meal	5.0g
pH 7.3 ± 0.1 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: A general purpose medium for cultivating a wide variety of fastidious microorganisms.

**Tryptone Soy Agar with Horse Blood
(LMG Medium 50)****Composition** per liter:

Tryptone	15.0g
Agar	15.0g
Soy peptone	5.0g
NaCl	5.0g
Horse blood, sterile defibrinated	50.0mL
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL sterile horse blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Paenibacillus lentimorbus*.

Tryptone Soy Agar with Horse Blood**Composition** per liter:

Agar	15.0g
Pancreatic digest of casein	15.0g
NaCl	5.0g

Pancreatic digest of soybean meal 5.0g
 Horse blood, defibrinated 50.0mL
 pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except horse blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile, defibrinated horse blood. Mix thoroughly and pour into sterile Petri dishes.

Use: For cultivation and maintenance of *Bacillus lentimorbus*.

Tryptone Soy Agar with 1% Sodium Chloride

Composition per liter:

Agar 15.0g
 Pancreatic digest of casein 15.0g
 NaCl 15.0g
 Pancreatic digest of soybean meal 5.0g
 Cocarboxylase solution 100.0mL
 pH 7.3 ± 0.2 at 25°C

Cocarboxylase Solution:

Composition per 100.0mL:

Cocarboxylase 2.0mg

Preparation of Cocarboxylase Solution: Add cocarboxylase to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cocarboxylase solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile cocarboxylase solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Haemophilus piscium*.

Tryptone Soy Agar with 4.5% Sodium Chloride

Composition per liter:

NaCl 45.0g
 Pancreatic digest of casein 17.0g
 Agar 12.0g
 Papaic digest of soybean meal 3.0g
 Glucose 2.5g
 K₂HPO₄ 2.5g
 pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Brevibacterium linens*.

Tryptone Soy Agar with Sheep Blood (LMG Medium 175)

Composition per liter:

Agar 15.0g
 Pancreatic digest of casein 15.0g
 NaCl 5.0g
 Pancreatic digest of soybean meal 5.0g
 Sheep blood, defibrinated 50.0mL
 pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Heat with frequent agitation and boil for 1 min to completely dissolve. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile, defibrinated sheep blood. Mix thoroughly and pour into sterile Petri dishes.

Use: For the cultivation and maintenance of *Bacillus* spp.

Tryptone Soy Broth

Composition per liter:

Pancreatic digest of casein 17.0g
 NaCl 5.0g
 Pancreatic digest of soybean meal 3.0g
 K₂HPO₄ 2.5g
 Glucose 2.5g
 pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a wide variety of microorganisms.

Tryptone Soy Broth, HiVeg (Antibiotic Assay No. 37, HiVeg)

Composition per liter:

Plant hydrolysate 15.0g
 NaCl 5.0g
 Papaic digest of soybean meal 5.0g
 pH 7.3 ± 0.1 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C.

Use: A general purpose medium for cultivating a wide variety of fastidious microorganisms.

Tryptone Soy Broth with 0.1% Tween™ 80

Composition per liter:

Pancreatic digest of casein 15.0g
 Papaic digest of soybean meal 5.0g
 NaCl 5.0g
 Tween™ 80 1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Corynebacterium genitalium* and *Corynebacterium pseudogenitalium*.

Tryptone Soy Broth with Yeast Extract

Composition per liter:

Pancreatic digest of casein 17.0g
 NaCl 5.0g
 Yeast extract 3.0g
 Pancreatic digest of soybean meal 3.0g

K ₂ HPO ₄	2.5g
Glucose	2.5g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Carnobacterium piscicola*.

Tryptone Soy HiVeg Agar with Added Sodium Chloride and Cocarboxylase

Composition per liter:

Agar	15.0g
Plant hydrolysate.....	15.0g
NaCl	10.0g
Papaic digest of soybean meal	5.0g
Cocarboxylase solution.....	100.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium, without cocarboxylase, is available as a premixed powder from HiMedia.

Cocarboxylase Solution:

Composition per 100.0mL:

Cocarboxylase.....	2.0mg
--------------------	-------

Preparation of Cocarboxylase Solution: Add cocarboxylase to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cocarboxylase solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile cocarboxylase solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Haemophilus piscium*.

Tryptone Soy HiVeg Agar with Lecithin and Polysorbate 80

Composition per liter:

Agar	15.0g
Plant hydrolysate.....	15.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
Lecithin	0.7g
Polysorbate 80.....	5.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium, without polysorbate 80, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For determining the efficiency of sanitization of containers, surfaces, and water-miscible cosmetics.

Tryptone Soy HiVeg Agar with Magnesium Sulfate (TSAM HiVeg)

Composition per liter:

Agar	15.0g
Plant hydrolysate.....	15.0g

Plant peptone	5.0g
NaCl	5.0g
MgSO ₄	1.5g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Escherichia coli* for bacteriophage production.

Tryptone Soy HiVeg Broth with 0.1% Agar (Soybean HiVeg Medium with 0.1% Agar)

Composition per liter:

Plant hydrolysate	17.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
Glucose	2.5g
K ₂ HPO ₄	2.5g
Agar	1.0g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of anaerobes from root canals, blood, and other clinical specimens and for determining glucose fermentation.

Tryptone SoyHiVeg Broth without Glucose (Soybean HiVeg Medium)

Composition per liter:

Plant hydrolysate	17.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a wide variety of microorganisms. For sterility testing.

Tryptone Soy HiVeg Broth with 10% Sodium Chloride and 1% Sodium Pyruvate

Composition per liter:

NaCl	105.0g
Plant hydrolysate	17.0g
Sodium pyruvate	10.0g
Papaic digest of soybean meal	3.0g

Glucose	2.5g
K ₂ HPO ₄	2.5g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Adjust pH to 7.3. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Staphylococcus aureus* from foods.

Tryptone Soy Salt HiVeg Agar with Magnesium Sulfate

Composition per liter:

Plant hydrolysate.....	50.0g
NaCl.....	30.0g
Agar.....	15.0g
Papaic digest of soybean meal.....	5.0g
MgSO ₄	1.5g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Escherichia coli* for bacteriophage production.

Tryptone Soy Yeast Extract HiVeg Agar

Composition per liter:

Plant hydrolysate.....	17.0g
Agar.....	15.0g
Yeast extract.....	6.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g
Glucose.....	2.5g
K ₂ HPO ₄	2.5g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of heterotrophic microorganisms. For the confirmation of *Listeria* in Henry's light.

Tryptone Soy Yeast Extract HiVeg Broth

Composition per liter:

Plant hydrolysate.....	17.0g
Yeast extract.....	6.0g
NaCl.....	5.0g
Papaic digest of soybean meal.....	3.0g

Glucose	2.5g
K ₂ HPO ₄	2.5g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of a wide variety of heterotrophic microorganisms. For the confirmation of *Listeria* in Henry's light.

Tryptone Thioglycolate Medium (DSMZ Medium 48)

Composition per liter:

Yeast extract.....	6.0g
K ₂ HPO ₄	5.45g
Peptone.....	2.0g
Tryptone.....	2.0g
KH ₂ PO ₄	1.2g
Na-thioglycolate.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.025g
CaCl ₂ ·2H ₂ O.....	0.015g
FeSO ₄ ·7H ₂ O.....	0.01g
CoCl ₂ ·6H ₂ O.....	2.5mg
Na ₂ MoO ₄ ·2H ₂ O.....	2.5mg
MnCl ₂ ·4H ₂ O.....	2.0mg
Glucose solution.....	50.0mL
pH 7.5 ± 0.2 at 25°C	

Glucose Solution:

Composition per 50.0mL:

D-Glucose.....	20.0g
----------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 50.0mL of sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Clostridium beijerinckii*.

Tryptone Thioglycolate Medium

Composition per liter:

Yeast extract.....	6.0g
K ₂ HPO ₄	5.45g
Peptone.....	2.0g
Tryptone.....	2.0g
KH ₂ PO ₄	1.25g
Sodium thioglycolate.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.025g
CaCl ₂ ·2H ₂ O.....	0.015g
FeSO ₄ ·7H ₂ O.....	0.01g
CoCl ₂ ·6H ₂ O.....	2.5mg
Na ₂ MoO ₄ ·2H ₂ O.....	2.5mg

MnCl ₂ ·4H ₂ O.....	2.0mg
Glucose solution	50.0mL
pH 7.5 ± 0.2 at 25°C	

Glucose Solution:**Composition per 50.0mL:**

Glucose	20.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL of sterile glucose solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Clostridium butyricum* and *Clostridium roseum*.

Tryptone Water Broth (Tryptone Broth)

Composition per liter:

Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Dissolve 15.0g in 1.0L of distilled water and distribute into final containers. Sterilize by autoclaving at 121°C for 15 min.

Use: For the cultivation of production of indole by microorganisms.

Tryptone Water, HiVeg (Tryptone Broth, HiVeg)

Composition per liter:

Plant hydrolysate.....	20.0g
NaCl.....	5.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For production of indole by microorganisms.

Tryptone Water Broth, HiVeg

Composition per liter:

Plant hydrolysate.....	10.0g
Glucose	5.0g
K ₂ HPO ₄	1.25g
Yeast extract.....	1.0g
Bromcresol Purple	0.04g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Dis-

tribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Salmonella* species from foods.

Tryptone with Sodium Chloride Broth

Composition per liter:

Pancreatic digest of casein.....	8.0g
NaCl.....	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of fastidious aerobic and facultative microorganisms such as *Escherichia coli* and *Pseudomonas* species.

Tryptone Yeast Extract Agar

Composition per liter:

Pancreatic digest of casein.....	10.0g
Agar	2.0g
Yeast extract.....	1.0g
Bromcresol Purple	0.04g
Carbohydrate solution.....	100.0mL
pH 7.0 ± 0.2 at 25°C	

Carbohydrate Solution:**Composition per 100.0mL:**

Carbohydrate.....	10.0g
-------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Glucose or mannitol may be used. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Distribute into tubes in 13.5mL volumes. Autoclave for 20 min at 10 psi pressure–115°C. Cool to 45°–50°C. Aseptically add 1.5mL of carbohydrate solution to each tube. Mix thoroughly. Solidify agar quickly by placing tubes in ice water.

Use: For the cultivation and differentiation of *Staphylococcus aureus* based on glucose and mannitol fermentation. Bacteria that ferment the added carbohydrate turn the medium yellow.

Tryptone Yeast Extract Agar 1

Composition per liter:

Agar	20.0g
Pancreatic digest of casein.....	10.0g
Yeast extract.....	5.0g
K ₂ HPO ₄	4.4g
Glucose	2.0g
NaCl.....	2.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of heterotrophic bacteria.

Tryptone Yeast Extract Broth*See: ISP Medium 1***Tryptone Yeast Extract Glucose Medium***See: TYG Medium***Tryptone Yeast Extract Glucose Salt Medium***See: TYGS Medium***Tryptone Yeast Extract HiVeg Agar
with Carbohydrate****Composition per liter:**

Agar	12.0g
Plant hydrolysate.....	6.0g
Yeast extract powder.....	3.0g
Carbohydrate solution.....	100.0mL
pH 7.0 ± 0.2 at 25°C	

Source: This medium, without carbohydrate solution, is available as a premixed powder from HiMedia.

Carbohydrate Solution:**Composition per 100.0mL:**

Carbohydrate.....	10.0g
-------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Glucose or mannitol may be used. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Distribute into tubes in 13.5mL volumes. Autoclave for 20 min at 10 psi pressure–115°C. Cool to 45°–50°C. Aseptically add 1.5mL of carbohydrate solution to each tube. Mix thoroughly. Solidify agar quickly by placing tubes in ice water.

Use: For the cultivation and differentiation of *Staphylococcus aureus* based on glucose and mannitol fermentation. Bacteria that ferment the added carbohydrate turn the medium yellow.

Tryptone Yeast Extract Medium**Composition per liter:**

Pancreatic digest of casein.....	10.0g
Yeast extract.....	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Haloferax volcanii*.

Tryptone Yeast Extract Mineral Medium**Composition per liter:**

Pancreatic digest of casein.....	10.0g
Yeast extract.....	10.0g
NaHCO ₃	6.0g
Arginine.....	3.0g
NaCl.....	1.0g
K ₂ HPO ₄	0.5g
KH ₂ PO ₄	0.5g
L-Cysteine·HCl.....	0.3g
CaCl ₂	0.1g

MgSO ₄	0.1g
Resazurin.....	0.1mg
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Peptostreptococcus helio-trinreducens*.

Tryptone Yeast Extract Salt Medium*See: TYES Medium***Tryptone Yeast Extract Salt Medium****Composition per liter:**

Solution A.....	500.0mL
Solution B.....	500.0mL
pH 6.8 ± 0.2 at 25°C	

Solution A:**Composition per 500.0mL:**

NaCl.....	125.0g
MgCl ₂ ·6H ₂ O.....	50.0g
K ₂ SO ₄	5.0g
CaCl ₂ ·6H ₂ O.....	0.2g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C.

Solution B:**Composition per 500.0mL:**

Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Aseptically combine 500.0mL of solution A with 500.0mL of solution B. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Haloferax volcanii*.

Tryptophan Assay Medium**Composition per liter:**

Glucose.....	40.0g
Sodium acetate.....	20.0g
Casamino acids.....	12.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.4g
L-Cystine.....	0.2g
Adenine sulfate.....	0.02g
FeSO ₄ ·7H ₂ O.....	0.02g
Guanine·HCl.....	0.02g
MnSO ₄ ·7H ₂ O.....	0.02g
NaCl.....	0.02g
Uracil.....	0.02g
Pyridoxine·HCl.....	0.4mg
Riboflavin.....	0.4mg
p-Aminobenzoic acid.....	0.2mg
Calcium pantothenate.....	0.2mg
Niacin.....	0.2mg

Thiamine-HCl	0.2mg
Biotin	0.8μg
pH 6.7 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 5.0mL volumes. Add standard solutions and test solutions to each tube. Bring volume of each tube to 10.0mL. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the assay of tryptophan using *Lactobacillus plantarum* as an indicator organism.

Tryptophan Broth

Composition per 100.0mL:

L-Tryptophan	0.5g
NaCl	0.5g
KH ₂ PO ₄	0.25g
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.4. Filter sterilize. Aseptically distribute in 1.0mL volumes into sterile screw-capped tubes.

Use: For the cultivation of *Flavobacterium* species and a variety of other bacteria. Also used to differentiate bacteria based on indole production. Indole is determined by the addition of modified Kovacs reagent to cultures that have incubated for 18–24 hr. Formation of a red color in the upper layer indicates indole formation.

Tryptophan HiVeg Medium

Composition per liter:

Plant hydrolysate	10.0g
NaCl	5.0g
DL-Tryptophan	1.0g
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 7.4. Filter sterilize. Aseptically distribute in 1.0mL volumes into sterile screw-capped tubes.

Use: For the cultivation of *Flavobacterium* species and a variety of other bacteria. Also used to differentiate bacteria based on indole production. Indole is determined by the addition of modified Kovacs reagent to cultures that have incubated for 18–24 hr. Formation of a red color in the upper layer indicates indole formation.

Tryptophan 1% Solution (Trypticase™ 1% Solution) (Tryptone 1% Solution)

Composition per liter:

Pancreatic digest of casein	10.0g
pH 7.0 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add pancreatic digest of casein to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of bacteria, especially members of the Enterobacteriaceae, based on their production of indole.

Tryptose Agar

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
NaCl	5.0g
Glucose	1.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of fastidious aerobic and facultative microorganisms.

Tryptose Agar (BAM M167)

Composition per liter:

Tryptose	20.0g
Agar	15.0g
NaCl	5.0g
Glucose	1.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes or leave in tubes. For slants allow tubes to cool in an inclined position.

Use: For the cultivation of a variety of bacteria for serology.

Tryptose Agar with Citrate

Composition per liter:

Agar	15.0g
Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
Sodium citrate	10.0g
NaCl	5.0g
Glucose	1.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of fastidious aerobic and facultative microorganisms, including *Brucella* species and streptococci.

Tryptose Agar, HiVeg**Composition per liter:**

Plant hydrolysate No. 1.....	20.0g
Agar.....	15.0g
NaCl.....	5.0g
Glucose.....	1.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of fastidious aerobic and facultative microorganisms. For the isolation, cultivation, and differentiation of *Brucella*, streptococci, and pneumococci.

**Tryptose Agar with Sheep Blood
(ATCC Medium 546)****Composition per liter:**

Agar.....	15.0g
Tryptose.....	10.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Sheep blood, defibrinated.....	50.0–100.0mL
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 900–950mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes in 17.0mL volumes or distribute into sterile tubes.

Use: For the cultivation and maintenance of a wide variety of fastidious microorganisms.

Tryptose Agar with Thiamine**Composition per liter:**

Agar.....	15.0g
Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue.....	10.0g
NaCl.....	5.0g
Glucose.....	1.0g
Thiamine-HCl.....	5.0mg
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of fastidious aerobic and facultative microorganisms, including *Brucella* species and streptococci.

Tryptose Agar with Thiamine HCl, HiVeg**Composition per liter:**

Agar.....	15.0g
Plant peptone.....	10.0g
Plant hydrolysate.....	10.0g

NaCl.....	5.0g
Glucose.....	1.0g
Thiamine-HCl.....	5.0mg
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of fastidious aerobic and facultative microorganisms, including *Brucella* species and streptococci.

Tryptose Blood Agar**Composition per liter:**

Agar.....	12.0g
Tryptose.....	10.0g
NaCl.....	5.0g
Beef extract.....	3.0g
Sheep blood, defibrinated.....	70.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes in 17.0mL volumes or distribute into sterile tubes.

Use: For the cultivation and maintenance of a wide variety of fastidious microorganisms.

Tryptose Blood Agar**Composition per liter:**

Agar.....	20.0g
Proteose peptone No. 3.....	10.0g
Tryptose.....	10.0g
Beef extract.....	5.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Sheep blood.....	100.0mL
L-Cysteine-HCl solution.....	2.5mL

L-Cysteine-HCl Solution:**Composition per 10.0mL:**

L-cysteine-HCl.....	1.0g
---------------------	------

Preparation of L-Cysteine-HCl Solution: Dissolve 1.0g of L-cysteine-HCl in distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Preparation of Medium: Add components, except sheep blood and L-cysteine-HCl solution, to distilled/deionized water and bring volume to 887.5mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Warm sheep blood to 50°C. Aseptically add 100.0mL of sterile sheep blood and 2.5mL of sterile L-cysteine-HCl solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Corynebacterium matruchotii*, *Propionibacterium propionicum*, and *Staphylococcus saccharolyticus*.

Tryptose Blood Agar Base**Composition per liter:**

Agar	15.0g
Tryptose	10.0g
NaCl	5.0g
Beef extract	3.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position to obtain a 4–5.0cm slant and a 2–3.0cm butt.

Use: For the cultivation and enumeration of *Salmonella* species from foods.

Tryptose Blood Agar Base, HiVeg with Sheep Blood**Composition per liter:**

Agar	15.0g
Plant hydrolysate No. 1	10.0g
NaCl	5.0g
Plant extract	3.0g
Sheep blood, defibrinated	70.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes in 17.0mL volumes or distribute into sterile tubes.

Use: For the cultivation and maintenance of a wide variety of fastidious microorganisms. For the isolation of fastidious organisms and determining hemolytic reactions.

Tryptose Blood Agar Base with Yeast Extract**Composition per liter:**

Agar	15.0g
Tryptose	10.0g
NaCl	5.0g
Beef extract	3.0g
Yeast extract	1.0g
Sheep blood, defibrinated	50.0mL
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes in 17.0mL volumes or distribute into sterile tubes.

Use: For the cultivation and maintenance of a wide variety of fastidious microorganisms.

Tryptose Blood Agar Base with Yeast Extract, HiVeg**Composition per liter:**

Agar	15.0g
Plant hydrolysate No. 1	10.0g

NaCl	5.0g
Plant extract	3.0g
Yeast extract	1.0g
Sheep blood, defibrinated	70.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 930.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood. Mix thoroughly. Pour into sterile Petri dishes in 17.0mL volumes or distribute into sterile tubes.

Use: For the cultivation and maintenance of a wide variety of fastidious microorganisms. For the isolation of fastidious organisms and determining hemolytic reactions.

Tryptose Blood Agar Base 298 Medium

See: **TBAB 298 Medium**

Tryptose Broth**Composition per liter:**

Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
NaCl	5.0g
Glucose	1.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of fastidious aerobic and facultative microorganisms, including streptococci. For the cultivation of fastidious aerobic and facultative microorganisms.

**Tryptose Broth
(BAM M167)****Composition per liter:**

Tryptose	20.0g
NaCl	5.0g
Glucose	1.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of bacteria for serology.

Tryptose Broth with Citrate**Composition per liter:**

Pancreatic digest of casein	10.0g
Peptic digest of animal tissue	10.0g
Sodium citrate	10.0g
NaCl	5.0g
Glucose	1.0g
Thiamine-HCl	5.0mg
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of a variety of fastidious aerobic microorganisms, especially *Brucella* species, from clinical sources and dairy products.

Tryptose Broth, HiVeg

Composition per liter:

Plant hydrolysate No. 1	20.0g
NaCl	5.0g
Glucose	1.0g
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of fastidious aerobic and facultative microorganisms, including streptococci.

Tryptose Cycloserine Glucose HiVeg Agar Base with Cycloserine

Composition per liter:

Agar	20.0g
Plant hydrolysate No. 1	15.0g
Papaic digest of soybean meal	5.0g
Yeast extract	5.0g
Ferric ammonium citrate	1.0g
Cycloserine solution	10.0mL
pH 7.6 ± 0.2 at 25°C	

Source: This medium, without cycloserine, is available as a premixed powder from HiMedia.

Cycloserine Solution:

Composition per 10.0mL:

D-Cycloserine	0.4g
---------------------	------

Preparation of Cycloserine Solution: Add D-cycloserine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cycloserine solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile cycloserine solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Clostridium* species, especially *Clostridium botulinum*, from foods.

Tryptose Cycloserine Dextrose Agar

Composition per liter:

Agar	20.0g
Tryptose	15.0g
Pancreatic digest of soybean meal	5.0g
Yeast extract	5.0g
Ferric ammonium citrate	1.0g
Cycloserine solution	10.0mL
pH 7.6 ± 0.2 at 25°C	

Cycloserine Solution:

Composition per 10.0mL:

D-Cycloserine	0.4g
---------------------	------

Preparation of Cycloserine Solution: Add D-cycloserine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cycloserine solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile cycloserine solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of *Clostridium* species, especially *Clostridium botulinum*, from foods.

Tryptose Phosphate Agar

Composition per liter:

Tryptose	20.0g
Agar	15.0g
NaCl	5.0g
Na ₂ HPO ₄	2.5g
Glucose	2.0g
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Erysipelothrix tonsillarum*.

Tryptose Phosphate Broth

Composition per liter:

Tryptose	20.0g
NaCl	5.0g
Na ₂ HPO ₄	2.5g
Glucose	2.0g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Prior to the inoculation of anaerobic microorganisms, place tubes of sterile medium in a 100°C bath for 15 min and cool undisturbed.

Use: For the cultivation of a variety of bacteria. For cell culture.

Tryptose Phosphate Broth, HiVeg

Composition per liter:

Plant hydrolysate No. 1	20.0g
NaCl	5.0g
Na ₂ HPO ₄	2.5g
Glucose	2.0g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from HiMedia.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Prior to the

inoculation of anaerobic microorganisms, place tubes of sterile medium in a 100°C bath for 15 min and cool undisturbed.

Use: For the cultivation of a variety of fastidious bacteria. For the cultivation of fastidious bacteria and as an adjuvant to tissue culture media.

Tryptose Phosphate Broth, Modified

Composition per liter:

Enzymatic digest of casein	20.0g
NaCl	5.0g
Na ₂ HPO ₄	2.5g
Glucose	2.0g

pH 7.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Prior to the inoculation of anaerobic microorganisms, place tubes of sterile medium in a 100°C bath for 15 min and cool undisturbed.

Use: For the cultivation of a variety of fastidious microorganisms, including pneumococci, streptococci, and meningococci.

Tryptose Sulfite Cycloserine Agar (TSC Agar)

Composition per liter:

Tryptose	15.0g
Agar	14.0g
Pancreatic digest of soybean meal	5.0g
Yeast extract	5.0g
Ferric ammonium citrate	1.0g
Na ₂ S ₂ O ₅	1.0g
Cycloserine solution	10.0mL

pH 7.6 ± 0.2 at 25°C

Cycloserine Solution:

Composition per 10.0mL:

D-Cycloserine	0.4g
---------------------	------

Preparation of Cycloserine Solution: Add cycloserine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cycloserine solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile cycloserine solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the presumptive identification and enumeration of *Clostridium perfringens*.

Tryptose Sulfite Cycloserine Agar (TSC Agar)

Composition per liter:

Tryptose	15.0g
Agar	14.0g
Beef extract	5.0g
Pancreatic digest of soybean meal	5.0g
Yeast extract	5.0g

Ferric ammonium citrate	1.0g
Na ₂ S ₂ O ₅	1.0g
Egg yolk emulsion	50.0mL
Cycloserine solution	10.0mL

pH 7.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Egg Yolk Emulsion:

Composition:

Chicken egg yolks	11
Whole chicken egg	1

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 1 chicken egg.

Cycloserine Solution:

Composition per 10.0mL:

D-Cycloserine	0.4g
---------------------	------

Preparation of Cycloserine Solution: Add cycloserine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cycloserine solution and egg yolk emulsion, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile cycloserine solution and egg yolk emulsion. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the presumptive identification and enumeration of *Clostridium perfringens*.

Tryptose Sulfite Cycloserine Agar with Polymyxin and Kanamycin

Composition per liter:

Tryptose	15.0g
Agar	14.0g
Beef extract	5.0g
Pancreatic digest of soybean meal	5.0g
Yeast extract	5.0g
Ferric ammonium citrate	1.0g
Na ₂ S ₂ O ₅	1.0g
Antibiotic solution	10.0mL

pH 7.6 ± 0.2 at 25°C

Antibiotic Solution:

Composition per 10.0mL:

D-Cycloserine	0.4g
Polymyxin B sulfate	0.03g
Kanamycin sulfate	0.012g

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation and enumeration of *Clostridium perfringens* from foods and clinical specimens.

**Tryptose Sulfite Cycloserine Agar without Egg Yolk
(TSC Agar without Egg Yolk)****Composition per liter:**

Tryptose	15.0g
Agar	14.0g
Beef extract	5.0g
Pancreatic digest of soybean meal	5.0g
Yeast extract	5.0g
Ferric ammonium citrate	1.0g
Na ₂ S ₂ O ₅	1.0g
Cycloserine solution	10.0mL
pH 7.6 ± 0.2 at 25°C	

Cycloserine Solution:**Composition per 10.0mL:**

D-Cycloserine	0.4g
---------------------	------

Preparation of Cycloserine Solution: Add cycloserine to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cycloserine solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile cycloserine solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the presumptive identification and enumeration of *Clostridium perfringens*.

**TS Agar
(DSMZ Medium 893)****Composition per liter:**

Agar	15.0g
Sucrose	5.0g
Tryptone	5.0g
Beef extract	3.0g
Glucose	1.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Saccharococcus thermophilus*.

TS Medium for *Spirochaeta caldaria***Composition per liter:**

Pancreatic digest of casein	2.0g
Cellobiose	1.0g
Maltose	1.0g
Yeast extract	1.0g
Dithiothreitol	0.15g
Resazurin	1.0mg
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 3 min. Cool to room temperature while sparging with 100% N₂. Anaerobically distribute into anaerobic tubes. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.0

Use: For the cultivation of *Spirochaeta caldaria*.

**TS Soil Extract
(Trypticase™ Soy Soil Extract)****Composition per liter:**

Pancreatic digest of casein	17.0g
Agar	15.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
Soil extract	250.0mL

Soil Extract:**Composition per 400.0mL:**

African Violet soil	154.0g
Na ₂ CO ₃	0.4g

Preparation of Soil Extract: Add components to tap water and bring volume to 400.0mL. Autoclave for 60 min at 15 psi pressure–121°C. Filter through Whatman filter paper.

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus xerothermophilus*.

TSA 5400 Selective Isolation Medium**Composition per liter:**

Pancreatic digest of casein	15.0g
Agar	15.0g
Papaic digest of soybean meal	5.0g
NaCl	5.0g
Bovine blood, citrated	100.0mL
Spectinomycin solution	10.0mL
pH 7.3 ± 0.2 at 25°C	

Spectinomycin Solution:**Composition per 10.0mL:**

Spectinomycin	0.4g
---------------------	------

Preparation of Spectinomycin Solution: Add spectinomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except bovine blood and spectinomycin solution, to distilled/deionized water and bring volume to 890.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile bovine blood and 10.0mL of sterile spectinomycin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation of *Treponema hyodysenteriae*.

TSBY Salt Medium

Composition per liter:

NaCl	18.0g
Pancreatic digest of casein	17.0g
MgCl ₂ ·6H ₂ O	4.0g
MgSO ₄ ·7H ₂ O	3.45g
Yeast extract	3.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
KCl	0.34g
NH ₄ Cl	0.25g
CaCl ₂ ·2H ₂ O	0.14g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus subtilis*, *Carnobacterium alterfunditum*, and *Carnobacterium funditum*.

TSBY Salt Medium

See: **Bacillus mascalens Medium**

TSC Agar

See: **Tryptose Sulfite Cycloserine Agar**

TSC Agar, Fluorocult (Fluorocult TSC Agar)

(Fluorocult Tryptose Sulfite Cycloserine Agar) (Tryptose Sulfite Cycloserine Agar, Fluorocult)

Composition per liter:

Agar	15.0g
Tryptose	15.0g
Peptone from soymeal	5.0g
Yeast extract	5.0g
Na ₂ S ₂ O ₅	1.0g
Ammonium ferric citrate	1.0g
D-Cycloserine	0.2g
4-Methylumbelliferyl-phosphate disodium salt	50.0mg

Source: This medium is available from Merck.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes.

Use: For the isolation and enumeration of the vegetative and spore forms of *Clostridium perfringens* in foodstuffs. The culture medium complies with the recommendations of the International Organization for Standardization (ISO) (1978) and the DIN Norm 10165 for the examination of meat and meat products. It also conforms with the APHA recommendations for the examination of foods (1992). D-Cycloserine inhibits the accompanying bacterial flora and causes the colonies which develop to remain smaller. 4-Methylumbelliferyl-phosphate (MUP) is a fluorogenic substrate for the alkaline and acid phosphatase. The acid phosphatase is a highly specific indicator for *C. perfringens*. The acid phosphatase splits the fluorogenic substrate MUP forming 4-methylumbelliferone which can be identified as fluores-

cence in long-wave UV light. Thus a strong suggestion for the presence of *C. perfringens* can be obtained.

TSC Agar without Egg Yolk

TSN Agar

(Trypticase™ Sulfite Neomycin Agar)

Composition per liter:

Pancreatic digest of casein	15.0g
Agar	13.5g
Yeast extract	10.0g
Na ₂ SO ₃	1.0g
Ferric citrate	0.5g
Neomycin sulfate	0.05g
Polymyxin sulfate	0.02g
Buffered thioglycolate solution	50.0mL

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Buffered Thioglycolate Solution:

Composition per 50.0mL:

Buffer solution	35.0mL
Sodium thioglycolate solution	15.0mL

Preparation of Buffered Thioglycolate Solution: Combine components. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Buffer Solution:

Composition per 100.0mL:

Na ₂ CO ₃	28.0g
K ₂ HPO ₄	5.7g

Preparation of Buffer Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Thioglycolate Solution:

Composition per 100.0mL:

Sodium thioglycolate	13.3g
----------------------------	-------

Preparation of Thioglycolate Solution: Add sodium thioglycolate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except buffered thioglycolate solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 12 min at 13 psi pressure–118°C. Do not overheat. Cool to 45°–50°C. Aseptically add buffered thioglycolate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the selective isolation of *Clostridium perfringens*.

TSY Medium

(Trypticase™ Soy Yeast Extract Medium)

Agar	20.0g
Pancreatic digest of casein	17.0g
Yeast extract	5.0g

NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

TSYES Medium

(Trypticase™ Soy Yeast Extract Starch Medium)

Composition per liter:

Pancreatic digest of casein	17.0g
Agar	15.0g
NaCl	5.0g
Papaic digest of soybean meal	3.0g
K ₂ HPO ₄	2.5g
Glucose	2.5g
Yeast extract	2.0g
Soluble starch	1.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus* species.

TTD Medium

(DSMZ Medium 480b)

Composition per liter:

NaCl (marine salts)	25.0g
Sulfur, powder	10.0g
Casitone	5.0g
NH ₄ Cl	0.33g
CaCl ₂ ·2H ₂ O	0.33g
MgCl ₂ ·6H ₂ O	0.33g
KCl	0.33g
KH ₂ PO ₄	0.33g
Resazurin	1.0mg
Na ₂ S·9H ₂ O solution	10.0mL
Vitamin solution	10.0mL
Trace elements solution SL-10	1.0mL

pH 6.9 ± 0.2 at 25°C

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Sparge with N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Store anaerobically.

Preparation of Medium: Prepare and dispense medium under an oxygen-free 80% N₂ + 20% CO₂ gas mixture. Add components, except vitamin solution and Na₂S·9H₂O solution, to 980.0mL distilled/deionized water. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Adjust pH to 5.9 with concentrated NaOH. Sterilize medium by heating for 1 hr at 90°C–100°C on 3 subsequent days. Sparge with 80% N₂ + 20% CO₂. Before use, aseptically and anaerobically add 10.0mL sterile vitamin solution and 10.0mL sterile Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Thermococcus stetteri*.

TTYSH Medium

Composition per liter:

Pancreatic digest of casein	10.0g
Tryptose	10.0g
Yeast extract	10.0g
Glucose	5.0g
NaCl	5.0g
L-Cysteine-HCl	1.0g
K ₂ HPO ₄	0.8g
KH ₂ PO ₄	0.8g

Ascorbic acid	0.2g
Bovine serum, heat inactivated	50.0mL
Hemin solution	20.0mL

Hemin Solution:**Composition per 50.0mL:**

Hemin	50.0mg
-------------	--------

Preparation of Hemin Solution: Add 50.0mg of hemin to distilled/deionized water and bring volume 50.0mL. Adjust the pH to 10.5 with 1N NaOH. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except tryptose, hemin solution, and bovine serum, to distilled/deionized water and bring volume to 600.0mL. Mix thoroughly. Add tryptose. Mix thoroughly. Gently heat and bring to boiling. Cool to 25°C. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL of sterile, heat-inactivated bovine serum and 20.0mL of sterile hemin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Crithidia fasciculata*.

Tween™ 80A Agar**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	5.0g
Yeast extract	3.0g
MgSO ₄ ·7H ₂ O	2.0g
Tween™ 80 solution	50.0mL

pH 7.2 ± 0.2 at 25°C

Tween™ 80 Solution:**Composition per 50.0mL:**

Tween™ 80	10.0g
-----------------	-------

Preparation of Tween™ 80 Solution: Add Tween™ 80 to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except Tween™ 80 solution, to distilled/deionized water and bring volume to 950.0mL. Gently heat and bring to boiling. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of sterile Tween™ 80 solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Agitococcus lubricus*.

Tween™ 80 Agar

See: Polysorbate 80 Agar

**Tween™ 80 Agar
(DSMZ Medium 884)****Composition per liter:**

Solution A	900.0mL
Solution B	100.0mL

Solution A:**Composition per 900.0mL:**

Agar	15.0g
Peptone	10.0g
NaCl	5.0g
CaCl ₂ ·2H ₂ O	0.1g

pH 7.1 ± 0.2 at 25°C

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Solution B:**Composition per 100.0mL:**

Tween™ 80	10.0g
-----------------	-------

Preparation of Solution B: Add Tween™ 80 to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Preparation of Medium: Aseptically combine 900.0mL sterile solution A and 100.0mL sterile solution B. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of unclassified bacterium DSM 13023.

Tween™ 80A Broth**Composition per liter:**

Pancreatic digest of casein	5.0g
Yeast extract	3.0g
MgSO ₄ ·7H ₂ O	2.0g
Tween™ 80 solution	50.0mL

pH 7.2 ± 0.2 at 25°C

Tween™ 80 Solution:**Composition per 50.0mL:**

Tween™ 80	10.0g
-----------------	-------

Preparation of Tween™ 80 Solution: Add Tween™ 80 to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except Tween™ 80 solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL of sterile Tween™ 80 solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Agitococcus lubricus*.

**Tween™ 80A Medium
(DSMZ Medium 618)****Composition per liter:**

Casitone	5.0g
Yeast extract	3.0g
MgSO ₄ ·7H ₂ O	2.0g
Tween™ 80 solution	50.0mL

pH 7.2 ± 0.2 at 25°C

Tween™ 80 Solution:**Composition per 50.0mL:**

Tween™ 80	10.0g
-----------------	-------

Preparation of Tween™ 80 Solution: Add Tween™ 80 to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except Tween™ 80 solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 50.0mL of sterile Tween™ 80 solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Agitococcus lubricus*.

Tween™ 80 Hydrolysis Broth**Composition per liter:**

Na ₂ HPO ₄	5.79g
NaH ₂ PO ₄	3.53g
Neutral Red.....	0.02g
Tween™ 80 solution.....	5.0mL
pH 7.0 ± 0.2 at 25°C	

Tween™ 80 Solution:**Composition per 50.0mL:**

Tween™ 80.....	10.0g
----------------	-------

Preparation of Tween™ 80 Solution: Add Tween™ 80 to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except Tween™ 80 solution, to distilled/deionized water and bring volume to 995.0mL. Mix thoroughly. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 5.0mL of sterile Tween™ 80 solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the differentiation of *Mycobacterium* species. Strains that hydrolyze Tween™ 80 within 5 days turn the medium pink to red.

Tween™ 80 Hydrolysis Broth**Composition per 125.0mL:**

Neutral Red.....	0.1g
Solution 1.....	38.9mL
Solution 2.....	61.1mL
Tween™ 80 solution.....	25.0mL
pH 7.0 ± 0.2 at 25°C	

Solution 1:**Composition per 400.0mL:**

KH ₂ PO ₄	22.7g
---------------------------------------	-------

Preparation of Solution 1: Add KH₂PO₄ to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.

Solution 2:**Composition per 400.0mL:**

Na ₂ HPO ₄	23.8g
--	-------

Preparation of Solution 2: Add Na₂HPO₄ to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly.

Tween™ 80 Solution:**Composition per 50.0mL:**

Tween™ 80.....	10.0g
----------------	-------

Preparation of Tween™ 80 Solution: Add Tween™ 80 to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except Tween™ 80 solution, to distilled/deionized water and bring volume to 975.0mL. Mix thoroughly. Adjust pH to 7.2. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 25.0mL of sterile Tween™ 80 solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the differentiation of *Mycobacterium* species. Strains that hydrolyze Tween™ 80 within 5 days turn the medium pink to red.

Tween™ 80 Hydrolysis Broth**Composition per 102.5mL:**

NaHPO ₄ (0.066M solution).....	61.1mL
KH ₂ PO ₄ (0.066M solution).....	38.9mL

Neutral Red (0.1% solution).....	2.0mL
Tween™ 80.....	0.5mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Combine components. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the differentiation of *Mycobacterium* species. Strains that hydrolyze Tween™ 80 within 5 days turn the medium pink to red.

Tween™ 80 Hydrolysis Medium**Composition per liter:**

Agar.....	12.0g
Peptone.....	10.0g
Tween™ 80.....	10.0g
NaCl.....	5.0g
CaCl ₂	0.1g
pH 7.2–7.4 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the cultivation and differentiation of *Pseudomonas* species based on their ability to hydrolyze Tween™ 80. Bacteria that hydrolyze Tween™ 80 appear as colonies surrounded by an opaque zone.

Tween™ 80 Oxgall Caffeic Acid Agar

See: **TOC Agar**

TY Medium**Composition per liter:**

Agar.....	15.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	3.0g
CaCl ₂ ·6H ₂ O.....	1.3g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a wide variety of bacteria.

TY Medium**(DSMZ Medium 1143)****Composition per liter:**

Tryptone.....	5.0g
Yeast extract.....	3.0g
CaCl ₂ ·2H ₂ O.....	0.9g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 6.8.

Use: For the cultivation of *Azorhizobium doebereineriae*.

TY Medium, 2X**Composition per liter:**

Pancreatic digest of casein.....	16.0g
Yeast extract.....	10.0g
NaCl.....	5.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 25 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli*.

TY Salt Medium

Composition per liter:

NaCl	10.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a wide variety of bacteria.

TY Salts Medium

Composition per liter:

Pancreatic digest of casein	1.0g
Yeast extract	1.0g
Salts solution	100.0mL
pH 8.2 ± 0.2 at 25°C	

Salts Solution:

Composition per liter:

NaNO ₃	6.89g
KNO ₃	1.03g
MgSO ₄ ·7H ₂ O	1.0g
Nitritotriacetic acid	1.0g
CaSO ₄ ·2H ₂ O	0.6g
NaCl	80.0mg
FeCl ₃ solution	10.0mL
Trace elements solution	10.0mL

Preparation of Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.2 with 1M NaOH. Autoclave for 15 min at 15 psi pressure–121°C.

FeCl₃ Solution:

Composition per 100.0mL:

FeCl ₃	28.0mg
-------------------------	--------

Preparation of FeCl₃ Solution: Add FeCl₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Elements Solution:

Composition per liter:

MnSO ₄ ·H ₂ O	2.2g
H ₃ BO ₃	0.5g
ZnSO ₄ ·7H ₂ O	0.5g
CoCl ₂ ·6H ₂ O	46.0mg
Na ₂ MoO ₄ ·2H ₂ O	25.0mg
CuSO ₄	16.0mg
H ₂ SO ₄	0.5mL

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components, except salts solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL of sterile salts solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Thermomonospora aquaticus*, *Thermus filiformis*, *Thermus flavus*, *Thermus ruber*, and other *Thermus* species.

TYE Broth Medium (ATCC Medium 1972)

Composition per liter:

Tryptone	16.0g
Yeast extract	10.0g
NaCl	5.0g
Glucose	4.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Aeromicrobium erythreum*.

TYE-CO

See: Clostridium thermoaceticum Medium

TYE HES Medium

Composition per 950.0mL:

NaCl	49.7g
MgSO ₄ ·7H ₂ O	49.3g
Noble agar	10.0g
Yeast extract	0.5g
Pancreatic digest of casein	0.5g
CaCl ₂ ·2H ₂ O solution	50.0mL
pH 7.2 ± 0.2 at 25°C	

CaCl₂·2H₂O Solution:

Composition per 100.0mL:

CaCl ₂ ·2H ₂ O	0.3g
--	------

Preparation of CaCl₂·2H₂O Solution: Add the CaCl₂·2H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Preparation of Medium: Add components, except CaCl₂·2H₂O solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 50.0mL of sterile CaCl₂·2H₂O solution. Mix thoroughly. Adjust pH to 7.2. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Planococcus* species.

TYEG Medium

(Trypticase™ Yeast Extract Glucose Medium)

Composition per 1050.0mL:

NaCl	100.0g
Pancreatic digest of casein	10.0g
Na ₂ HPO ₄ ·7H ₂ O	2.1g
NH ₄ Cl	1.0g
KH ₂ PO ₄	0.3g
MgCl ₂ ·6H ₂ O	0.2g
Glucose solution	50.0mL
Na ₂ S·7H ₂ O solution	25.0mL
Trace minerals solution II	10.0mL
Wolfe's vitamin solution	10.0mL
Yeast extract solution	5.0mL

Resazurin (0.2% solution).....	1.0mL
FeSO ₄ ·9H ₂ O (2.5% solution).....	25.0μl
pH 7.3 ± 0.1 at 25°C	

Glucose Solution:**Composition per 100.0mL:**

D-Glucose	10.0g
-----------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Aseptically bubble with 90% N₂ + 10% CO₂ to reduce.

Na₂S·7H₂O Solution:**Composition per 100.0mL:**

Na ₂ S·7H ₂ O	2.5g
---	------

Preparation of Na₂S·7H₂O Solution: Add Na₂S·7H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Use freshly prepared solution.

Trace Minerals Solution II:**Composition per liter:**

Nitrilotriacetic acid	12.8g
CoCl ₂ ·6H ₂ O	0.17g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.1g
NaCl	0.1g
ZnCl ₂	0.1g
NiSO ₄ ·6H ₂ O	0.026g
CuCl ₂ ·2H ₂ O	0.02g
Na ₂ SeO ₃	0.017g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g

Preparation of Trace Minerals Solution II: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Filter through Whatman filter paper. Store under N₂.

Wolfe's Vitamin Solution:**Composition per liter:**

Pyridoxine-HCl	10.0mg
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Thioctic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	100.0μg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically bubble with 90% N₂ + 10% CO₂ to reduce.

Yeast Extract Solution:**Composition per 100.0mL:**

Yeast extract	10.0g
---------------------	-------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Aseptically bubble with 90% N₂ + 10% CO₂ to reduce.

Preparation of Medium: Add components—except glucose solution, yeast extract solution, and Wolfe's vitamin solution—to distilled/de-

ionized water and bring volume to 960.0mL. Mix thoroughly. Adjust pH to 7.3. Gently heat and bring to boiling under 90% N₂ + 10% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically and anaerobically add 50.0mL of sterile glucose solution, 10.0mL of sterile Wolfe's vitamin solution, and 5.0mL of sterile yeast extract solution. Aseptically and anaerobically distribute into sterile tubes in 5.0mL volumes. Immediately prior to inoculation, aseptically add 0.125mL of sterile Na₂S·9H₂O solution per tube.

Use: For the cultivation and maintenance of *Halobacteroides acetoe-tylicus*.

TYES Medium**(Tryptone Yeast Extract Salt Medium)****Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	10.0g
NaCl	8.0g
Yeast extract	1.0g
CaCl ₂	0.3g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Escherichia coli*.

TYG Medium**Composition per liter:**

Yeast extract	5.0g
K ₂ HPO ₄	3.5g
Tryptone	1.0g
L-Cysteinium chloride-H ₂ O	0.5g
Na ₂ SO ₄	0.2g
Biotin	10.0mg
<i>p</i> -Aminobenzoic acid	10.0mg
Sugar solution	5.0mL
Resazurin solution	4.0mL
Trace elements solution	1.0mL

Resazurin Solution:**Composition per 100.0mL:**

Resazurin	25.0mg
-----------------	--------

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Elements Solution:**Composition per 100.0mL:**

FeCl ₃ ·6H ₂ O	2.7g
MgSO ₄	1.2g
NaMoO ₄ ·2H ₂ O	0.24g
MnSO ₄ ·7H ₂ O	0.17g
CaCl ₂ ·2H ₂ O	0.15g
ZnSO ₄ ·7H ₂ O	29.0mg
CuSO ₄ ·5H ₂ O	25.0mg
CoCl ₂ ·6H ₂ O	24.0mg
H ₂ SO ₄	2.8mL

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Sugar Solution:**Composition per 100.0mL:**

Glucose 1.0g

Preparation of Sugar Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-cysteinium chloride, biotin, *p*-aminobenzoic acid, and sugar solution, to distilled/deionized water and bring volume to 995.0mL. Mix thoroughly. Adjust pH to 7.0. Gently heat but do not boil. Cook for 5–10 min so that color first turns red and then turns yellow. Cool on ice. Add L-cysteinium chloride, biotin, and *p*-aminobenzoic acid. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 5.0 mL of sterile sugar solution. Mix thoroughly.

Use: For the cultivation of *Clostridium* species.

TYG Medium**Composition per liter:**

Pancreatic digest of casein 20.0g
 Glucose 5.0g
 KH₂PO₄ 4.0g
 Sodium thioglycolate 0.5g
 Yeast extract 0.5g
 MgSO₄·7H₂O 0.2g
 FeSO₄·7H₂O 5.0mg
 MnSO₄·4H₂O 5.0mg
 NH₄MoO₄ 5.0mg

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4 with NaOH. Distribute into tubes or flasks. Autoclave for 10 min at 11 psi pressure–116°C.

Use: For the cultivation of *Sprolactobacillus cellulosolvens*.

TYG Medium**(Trypticase™ Yeast Extract Glucose Medium)****(ATCC Medium 603)****Composition per liter:**

Pancreatic digest of casein 10.0g
 NaCl 8.0g
 Yeast extract 1.0g
 Glucose 1.0g
 CaCl₂·2H₂O 0.3g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Escherichia coli*.

TYG Medium**(Tryptone Yeast Extract Glucose Medium)****(ATCC Medium 741)****Composition per liter:**

Agar 20.0g
 Pancreatic digest of casein 3.0g
 Yeast extract 3.0g
 Glucose 3.0g
 K₂HPO₄ 1.0g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Thermomonospora fusca*.

TYGM-9 Medium**Composition per liter:**

NaCl 7.5g
 K₂HPO₄ 2.8g
 Casein digest 2.0g
 Gastric mucin 2.0g
 Yeast extract 1.0g
 KH₂PO₄ 0.4g
 Bovine serum, heat inactivated 30.0mL
 Rice starch solution 30.0mL
 Tween™ solution 0.5mL

pH 7.4 ± 0.2 at 25°C

Tween™ Solution:**Composition per 100.0mL:**

Tween™ 80 10.0g

Preparation of Tween™ Solution: Add Tween™ 80 to absolute ethanol and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Rice Starch Solution:**Composition per 100.0mL:**

Rice starch 5.0g
 Phosphate-buffered saline solution 100.0mL

Preparation of Rice Starch Solution: Heat sterilize rice starch at 150°C for 2 hr. Aseptically add 100.0mL of sterile phosphate-buffered saline solution. Mix thoroughly. Use immediately.

Phosphate-Buffered Saline Solution:**Composition per liter:**

NaCl 9.0g
 Na₂HPO₄·7H₂O 0.795g
 KH₂PO₄ 0.114g

Preparation of Phosphate-Buffered Saline Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Add components, except rice starch solution, Tween™ solution, and bovine serum, to distilled/deionized water and bring volume to 939.5mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 30.0mL of sterile bovine serum, 30.0mL of sterile rice starch solution, and 0.5mL of sterile Tween™ solution. Mix thoroughly. Aseptically distribute into sterile, screw-capped tubes or flasks.

Use: For the cultivation of *Dientamoeba fragilis*, *Ditrichomonas honigbergii*, *Entamoeba coli*, *Entamoeba dispar*, *Entamoeba gingivalis*, *Entamoeba insolita*, *Entamoeba histolytica*, *Entamoeba moshkovskii*, *Entamoeba polecki*, *Entamoeba ranarum*, *Pseudotrichomonas keilini*, and *Trepomonas agilis*.

TYGPN Medium**Composition per liter:**

Pancreatic digest of casein 20.0g
 KNO₃ 10.0g
 Yeast extract 10.0g

Na ₂ HPO ₄	5.0g
Glycerol (80% solution).....	10.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 25 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli*.

TYGS Medium

(Tryptone Yeast Extract Glucose Salt Medium)

Composition per liter:

Agar	15.0g
Pancreatic digest of casein.....	10.0g
NaCl.....	8.0g
Yeast extract.....	1.0g
CaCl ₂ ·2H ₂ O solution.....	100.0mL
Glucose solution	100.0mL

CaCl₂·2H₂O Solution:

Composition per 100.0mL:

CaCl ₂ ·2H ₂ O.....	0.3g
---	------

Preparation of CaCl₂·2H₂O Solution: Add the CaCl₂·2H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 100.0mL:

D-Glucose	1.0g
-----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except CaCl₂·2H₂O solution and glucose solution, to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add the sterile CaCl₂·2H₂O solution and sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of a variety of bacteria.

TYI-S-33 Medium

Composition per liter:

Pancreatic digest of casein.....	20.0g
Yeast extract.....	10.0g
NaCl.....	2.0g
L-Cysteine·HCl.....	1.0g
Ascorbic acid.....	0.2g
Ferric ammonium citrate.....	22.8mg
Bovine serum, heat inactivated.....	100.0mL
Special 107 vitamin mix	100.0mL
Buffer solution	50.0mL
Glucose solution	50.0mL

pH 6.8 ± 0.2 at 25°C

Glucose Solution:

Composition per 50.0mL:

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Buffer Solution:

Composition per 50.0mL:

K ₂ HPO ₄	1.0g
KH ₂ PO ₄	0.6g

Preparation of Buffer Solution: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Adjust pH to 6.8. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Special 107 Vitamin Mix:

Composition per 120.0.0mL:

Solution 1.....	1.2mL
Solution 2.....	0.4mL
Solution 3.....	0.4mL
Solution 4 vitamins.....	100.0mL

Preparation of Special 107 Vitamin Mix: Aseptically combine 1.2mL of sterile solution 1, 0.4mL of sterile solution 2, 0.4mL of sterile solution 3, and 100.0mL of sterile solution 4 vitamins. Bring volume to 120.0mL with sterile distilled/deionized water.

Solution 1:

Composition per 100.0mL:

Vitamin B ₁₂	40.0mg
-------------------------------	--------

Preparation of Solution 1: Add vitamin B₁₂ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution 2:

Composition per 100.0.0mL:

DL-6,8-Thioctic acid, oxidized.....	100.0mg
Absolute ethanol	100.0mL

Preparation of Solution 2: Add DL-6,8-thioctic acid to absolute ethanol and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution 3:

Composition per 100.0mL:

Tween™ 80.....	50.0g
Absolute ethanol	100.0mL

Preparation of Solution 3: Add Tween™ 80 to absolute ethanol and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Solution 4 Vitamins:

Composition per liter:

Vitamin B ₁₂	10.0mg
Calcium D-(+)-pantothenate	2.3mg
Choline chloride.....	1.25mg
Riboflavin.....	0.7mg
Calciferol (vitamin D ₂).....	0.25mg
Vitamin A, crystallized alcohol	0.25mg
<i>p</i> -Aminobenzoic acid.....	0.125mg
<i>i</i> -Inositol.....	0.125mg
Biotin.....	0.025mg
α-Tocopherol phosphate, disodium salt.....	0.025mg
Folic acid.....	0.025mg
Menadione (vitamin K ₃).....	0.025mg
Thiamine·HCl.....	0.025mg
Niacin.....	0.0625mg
Niacinamide.....	0.0625mg
Pyridoxal·HCl.....	0.0625mg
Pyridoxine·HCl.....	0.0625mg

Preparation of Solution 4 Vitamins: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except heat-inactivated bovine serum, special 107 vitamin mix, glucose solution, and buffer solution, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL of sterile, heat-inactivated bovine serum, 50.0mL of sterile glucose solution, 100.0mL of sterile special 107 vitamin mix, and 50.0mL of sterile buffer solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Entamoeba barreti*, *Entamoeba histolytica*, *Entamoeba insolita*, *Entamoeba invadens*, *Entamoeba moshkovskii*, *Entamoeba ranarum*, *Entamoeba terrapinae*, *Monocercomonas* species, *Phreatamoeba balamuthi*, *Spironucleus vortens*, and *Trichomonas tenax*.

TYM Basal Medium, Modified 1

Composition per liter:

Pancreatic digest of peptone	20.0g
Yeast extract	10.0g
Maltose	5.0g
L-Cysteine-HCl	1.0g
K ₂ HPO ₄	0.8g
KH ₂ PO ₄	0.8g
Agar, noble	0.5g
L-Ascorbic acid	0.2g

pH 7.8 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.8 with NaOH. Add the agar. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-capped tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Trichomonas* species.

TYM Basal Medium, Modified 1

Composition per liter:

Pancreatic digest of casein	20.0g
Yeast extract	10.0g
Maltose	5.0g
L-Cysteine-HCl	1.0g
K ₂ HPO ₄	0.8g
KH ₂ PO ₄	0.8g
Agar, noble	0.5g
L-Ascorbic acid	0.2g
Lamb serum, heat inactivated	300.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar and lamb serum, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Adjust to pH 7.2 with NaOH. Add the agar. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 300.0mL of sterile, heat-inactivated lamb serum. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes. Use soon after preparation.

Use: For the cultivation of *Hypotrichomonas acosta*, *Tetratrichomonas gallinarum*, *Trichomitus batrachorum*, *Trichomonas gallinae*, *Trichomonas vaginalis*, *Tritrichomonas augusta*, and *Tritrichomonas suis*.

TYM Basal Medium, Modified 2

Composition per liter:

Pancreatic digest of casein	20.0g
Yeast extract	10.0g

Maltose	5.0g
L-Cysteine-HCl	1.0g
K ₂ HPO ₄	0.8g
KH ₂ PO ₄	0.8g
Agar, noble	0.5g
L-Ascorbic acid	0.2g
Horse serum, heat inactivated	300.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar and horse serum, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Adjust pH to 7.2. Add the agar. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 300.0mL of heat-inactivated horse serum. Mix thoroughly. Aseptically distribute into screw-capped tubes.

Use: For the cultivation of *Trichomonas gallinae* and *Tritrichomonas foetus*.

TYM Basal Medium, Modified 2

Composition per liter:

Pancreatic digest of casein	20.0g
Yeast extract	10.0g
Maltose	5.0g
L-Cysteine-HCl	1.0g
K ₂ HPO ₄	0.8g
KH ₂ PO ₄	0.8g
Agar, noble	0.5g
L-Ascorbic acid	0.2g
Lamb serum, heat inactivated	300.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar and lamb serum, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Adjust to pH 7.0 with NaOH. Add the agar. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 300.0mL of sterile, heat-inactivated lamb serum. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes. Use soon after preparation.

Use: For the cultivation of *Trichomonas vaginalis* and *Hypotrichomonas* species.

TYM Basal Medium, Modified 3

Composition per liter:

Pancreatic digest of casein	20.0g
Yeast extract	10.0g
Maltose	5.0g
L-Cysteine-HCl	1.0g
K ₂ HPO ₄	0.8g
KH ₂ PO ₄	0.8g
Agar, noble	0.5g
L-Ascorbic acid	0.2g
Horse serum, heat inactivated	300.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar and horse serum, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Adjust pH to 7.0. Add the agar. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 300.0mL of heat-inactivated horse serum. Mix thoroughly. Aseptically distribute into screw-capped tubes.

Use: For the cultivation of *Pentatrichomonas hominis*, *Proteromonas lacertae*, and *Tritrichomonas foetus*.

TYM Basal Medium, Modified 3**Composition per liter:**

Pancreatic digest of casein.....	20.0g
Yeast extract.....	10.0g
Maltose.....	5.0g
L-Cysteine·HCl.....	1.0g
K ₂ HPO ₄	0.8g
KH ₂ PO ₄	0.8g
Agar, noble.....	0.5g
L-Ascorbic acid.....	0.2g
Lamb serum, heat inactivated.....	200.0mL
Dubos medium serum.....	100.0mL

pH 6.0–6.5 at 25°C

Preparation of Medium: Add components, except agar lamb serum, and Dubos medium serum, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Adjust to pH to 6.0–6.5. Add the agar. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 200.0mL of sterile, heat-inactivated lamb serum and 100.0mL of sterile Dubos medium serum. Mix thoroughly. Aseptically distribute into sterile, screw-capped tubes. Use soon after preparation.

Use: For the cultivation of *Pentatrichomonas hominis*, *Trichomonas vaginalis*, *Tritrichomonas suis*, and *Tritrichomonas foetus*.

TYM Basal Medium, Modified 4**Composition per liter:**

Pancreatic digest of casein.....	20.0g
Yeast extract.....	10.0g
Maltose.....	5.0g
L-Cysteine·HCl.....	1.0g
K ₂ HPO ₄	0.8g
KH ₂ PO ₄	0.8g
Agar, noble.....	0.5g
L-Ascorbic acid.....	0.2g
Horse serum, heat inactivated.....	300.0mL

pH 6.0 ± 0.2 at 25°C

Preparation of Medium: Add components, except agar and horse serum, to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Adjust pH to 6.0. Add the agar. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 300.0mL of heat-inactivated horse serum. Mix thoroughly. Aseptically distribute into screw-capped tubes.

Use: For the cultivation of *Tritrichomonas foetus* and *Trichomonas vaginalis*.

TYM Medium**Composition per liter:**

Pancreatic digest of casein.....	10.0g
Yeast extract.....	10.0g
NaHCO ₃	6.0g
NaCl.....	1.0g
K ₂ HPO ₄	0.5g
KH ₂ PO ₄	0.5g
L-Cysteine·HCl·H ₂ O.....	0.3g
MgSO ₄	0.1g
CaCl ₂	0.1g

pH 6.7–6.8 at 25°C

Preparation of Medium: Add components, except NaHCO₃ and L-cysteine·HCl·H₂O, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 100% CO₂. Add NaHCO₃ and L-cysteine·HCl·H₂O. Mix thoroughly. Continue sparging with 100% CO₂ for 5–10 min. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Final pH should be 6.7–6.8.

Use: For the cultivation of *Peptostreptococcus heliotrinreducens*.

TYN Medium**Composition per liter:**

Na ₂ S ₂ O ₃ ·5H ₂ O.....	10.0g
Pancreatic digest of casein.....	1.0g
Yeast extract.....	1.0g
Na ₂ SO ₄	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Thiobacillus* species.

Tyrosine Agar**Composition per liter:**

Solution 1.....	900.0mL
Solution 2.....	100.0mL

pH 7.0 ± 0.2 at 25°C

Solution 1:**Composition per 900.0mL:**

Agar.....	15.0g
Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling.

Solution 2:**Composition per 100.0mL:**

Tyrosine.....	5.0g
---------------	------

Preparation of Solution 2: Add tyrosine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling.

Preparation of Medium: Combine solutions 1 and 2. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of aerobic *Actinomycete* species. Clearing around a colony indicates utilization of tyrosine. *Streptomyces* and *Actinomyces* species utilize tyrosine. *Nocardia asteroides*, *Nocardia caviae*, and *Mycobacterium fortuitum* do not utilize tyrosine.

Tyrosine Agar**(International Streptomyces Project Medium 7)****(ISP Medium 7)****(ATCC Medium 1776)****Composition per liter:**

Agar.....	20.0g
Glycerol.....	15.0g
L-Tyrosine.....	0.5g
L-Asparagine.....	1.0g
K ₂ HPO ₄	0.5g

MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.5g
FeSO ₄ ·7H ₂ O	0.01g
Trace elements solution HO-LE	1.0mL
pH 7.3 ± 0.1 at 25°C	

Trace Elements Solution HO-LE:**Composition per liter:**

H ₃ BO ₃	2.85g
MnCl ₂ ·4H ₂ O	1.8g
Sodium tartrate	1.77g
FeSO ₄ ·7H ₂ O	1.36g
CoCl ₂ ·6H ₂ O	0.04g
CuCl ₂ ·2H ₂ O	0.027g
Na ₂ MoO ₄ ·2H ₂ O	0.025g
ZnCl ₂	0.02g

Preparation of Trace Elements Solution HO-LE: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptoalloteichus* species. For the differentiation of *Streptomyces* species based on melanin production.

Tyrosine Casein Nitrate Medium (TCN Medium)

Composition per liter:

Sodium caseinate	25.0g
Agar	15.0g
NaNO ₃	10.0g
L-Tyrosine	1.0g

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of streptomycetes from infected plants.

TYX Medium

Composition per liter:

Yeast extract	5.0g
K ₂ HPO ₄	3.5g
Tryptone	1.0g
Na ₂ SO ₄	0.2g
L-cysteinium chloride·H ₂ O	0.5g
Biotin	10.0mg
<i>p</i> -Aminobenzoic acid	10.0mg
Sugar solution	5.0mL
Resazurin solution	4.0mL
Trace elements solution	1.0mL

Resazurin Solution:**Composition per 100.0mL:**

Resazurin	25.0mg
-----------------	--------

Preparation of Resazurin Solution: Add resazurin to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Trace Elements Solution:**Composition per 100.0mL:**

FeCl ₃ ·6H ₂ O	2.7g
MgSO ₄	1.2g
NaMoO ₄ ·2H ₂ O	0.24g
MnSO ₄ ·7H ₂ O	0.17g
CaCl ₂ ·2H ₂ O	0.15g
ZnSO ₄ ·7H ₂ O	29.0mg
CuSO ₄ ·5H ₂ O	25.0mg
CoCl ₂ ·6H ₂ O	24.0mg
H ₂ SO ₄	2.8mL

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Sugar Solution:**Composition per 100.0mL:**

Xylose	1.0g
--------------	------

Preparation of Sugar Solution: Add xylose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except L-cysteinium chloride, biotin, *p*-aminobenzoic acid, and sugar solution, to distilled/deionized water and bring volume to 995.0mL. Mix thoroughly. Adjust pH to 7.0. Gently heat but do not boil. Cook for 5–10 min so that color first turns red and then turns yellow. Cool on ice. Add L-cysteinium chloride, biotin, and *p*-aminobenzoic acid. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 5.0 mL of sterile sugar solution. Mix thoroughly.

Use: For the cultivation of *Clostridium* species.

TZC Selective Medium

Composition per liter:

Agar	17.0g
Peptone	1.0g
Glucose	0.5g
Pancreatic digest of casein	0.1g
2,3,5-Triphenyltetrazolium·HCl solution	10.0mL

2,3,5-Triphenyltetrazolium·HCl Solution:**Composition per 10.0mL:**

2,3,5-Triphenyltetrazolium·HCl	0.05g
--------------------------------------	-------

Preparation of 2,3,5-Triphenyltetrazolium·HCl Solution: Add 2,3,5-triphenyltetrazolium·HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except 2,3,5-triphenyltetrazolium·HCl solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile 2,3,5-triphenyltetrazolium·HCl solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation, cultivation, and differentiation of *Pseudomonas solanacearum*. The virulent, wild-type strains appear as irregular to round white colonies with a pink center. Avirulent mutants, which readily occur in nature, appear as round, deep red colonies with a narrow blue border.

U Agar Plates
(*Ureaplasma* Agar Plates)
(MES Agar)

Composition per 100.2mL:

Base agar	65.0mL
Horse serum	20.0mL
Yeast dialysate	10.0mL
MES (2- <i>N</i> -morpholinoethane sulfonic acid) buffer solution	3.0mL
Penicillin solution	2.0mL
Urea solution	0.2mL

pH 5.5 ± 0.2 at 25°C

Base Agar:**Composition per liter:**

Papaic digest of soybean meal	20.0g
Agarose	10.0g
NaCl	5.0g
Phenol Red (2% solution)	1.0mL

Preparation of Base Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Yeast Dialysate:**Composition per 10.0mL:**

Yeast, active dried	450.0g
---------------------------	--------

Preparation of Yeast Dialysate: Add active, dried yeast to distilled/deionized water and bring volume to 1250.0mL. Gently heat and bring to 40°C. Autoclave for 15 min at 15 psi pressure–121°C. Put into dialysis tubing. Dialyze against 1.0L of distilled/deionized water for 2 days at 4°C. Discard tubing and its contents. Autoclave dialysate for 15 min at 15 psi pressure–121°C. Store at –20°C.

MES Buffer Solution:**Composition per 100.0mL:**

MES (2- <i>N</i> -morpholinoethane sulfonic acid) buffer	19.52g
---	--------

Preparation of MES Buffer Solution: Add MES buffer to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 5.5. Filter sterilize.

Penicillin Solution:**Composition per 10.0mL:**

Penicillin	100,000U
------------------	----------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Urea Solution:**Composition per 100.0mL:**

Urea	6.0g
------------	------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 65.0mL of cooled, sterile base agar, aseptically add 10.0mL of sterile yeast dialysate, 20.0mL of horse serum, 2.0mL of sterile penicillin solution, 3.0mL of sterile MES buffer solution, and 0.2mL of sterile urea solution. Mix thoroughly. Pour into 10mm × 35mm Petri dishes in 5.0mL volumes. Allow plates to stand overnight at 25°C to remove excess surface moisture.

Use: For the isolation and cultivation of *Ureaplasma* species.

U Broth
(*Ureaplasma* Broth)

Composition per 99.5mL:

Base agar	65.0mL
Horse serum	20.0mL
Yeast dialysate	10.0mL
Penicillin solution	2.0mL
MES (2- <i>N</i> -morpholinoethane sulfonic acid) buffer solution	1.0mL
Na ₂ SO ₃ solution	1.0mL
Urea solution	0.5mL

pH 5.5 ± 0.2 at 25°C

Base Agar:**Composition per liter:**

Papaic digest of soybean meal	20.0g
Agarose	10.0g
NaCl	5.0g
Phenol Red (2% solution)	1.0mL

Preparation of Base Agar: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Yeast Dialysate:**Composition per 10.0mL:**

Yeast, active dried	450.0g
---------------------------	--------

Preparation of Yeast Dialysate: Add active, dried yeast to distilled/deionized water and bring volume to 1250.0mL. Gently heat and bring to 40°C. Autoclave for 15 min at 15 psi pressure–121°C. Put into dialysis tubing. Dialyze against 1.0L of distilled/deionized water for 2 days at 4°C. Discard tubing and its contents. Autoclave dialysate for 15 min at 15 psi pressure–121°C. Store at –20°C.

Penicillin Solution:**Composition per 10.0mL:**

Penicillin	100,000U
------------------	----------

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

MES Buffer Solution:**Composition per 100.0mL:**

MES (2- <i>N</i> -morpholinoethane sulfonic acid) buffer	19.52g
---	--------

Preparation of MES Buffer Solution: Add MES buffer to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 5.5. Filter sterilize.

Na₂SO₃ Solution:**Composition per 10.0mL:**

Na ₂ SO ₃	0.126g
---------------------------------------	--------

Preparation of Na₂SO₃ Solution: Add Na₂SO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Urea Solution:**Composition per 100.0mL:**

Urea	6.0g
------------	------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 65.0mL of cooled, sterile base agar, aseptically add 10.0mL of sterile yeast dialysate, 20.0mL of horse serum, 2.0mL of sterile penicillin solution, 1.0mL of sterile MES buffer solution, 1.0mL of sterile Na₂SO₃ solution, and 0.5mL of sterile urea solution. Mix thoroughly. Pour into 10mm × 35mm Petri dishes in 5.0mL volumes. Allow plates to stand overnight at 25°C to remove excess surface moisture. Use within 48 hr.

Use: For the isolation and cultivation of *Ureaplasma urealyticum*.

U9 Broth (Urease Color Test Medium)

Composition per 101.6mL:

U9 base	95.0mL
Horse serum, unheated.....	5.0mL
Penicillin G solution	1.0mL
Urea solution.....	0.5mL
Phenol Red solution	0.1mL

pH 6.0 ± 0.2 at 25°C

U9 Base:

Composition per 100.0mL:

NaCl	0.63g
Pancreatic digest of casein.....	0.425g
Papaic digest of soybean meal	0.075g
K ₂ HPO ₄	0.063g
Glucose	0.063g
KH ₂ PO ₄	0.02g

Preparation of U9 Base: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 5.5 with 1N HCl. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Penicillin G Solution:

Composition per 10.0mL:

Penicillin G	0.63g
--------------------	-------

Preparation of Penicillin G Solution: Add penicillin G to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Urea Solution:

Composition per 30.0mL:

Urea.....	3.0g
-----------	------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Filter sterilize.

Phenol Red Solution:

Composition per 10.0mL:

Phenol Red.....	0.1g
-----------------	------

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 95.0mL of cooled, sterile U9 base, aseptically add 5.0mL of sterile horse serum, 1.0mL of sterile penicillin G solution, 0.5mL of sterile urea solution, and 0.1mL of sterile Phenol Red solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and identification of T-strain mycoplasmas from clinical specimens, especially *Ureaplasma urealyticum*. T-mycoplasmas are the only members of the *Mycoplasma* group known to contain urease. Bacteria with urease activity turn the medium dark pink.

U9 Broth with Amphotericin B

Composition per 101.6mL:

U9 base	95.0mL
Horse serum, unheated.....	5.0mL
Antibiotic solution	1.0mL
Urea solution.....	0.5mL
Phenol Red solution	0.1mL

pH 6.0 ± 0.2 at 25°C

U9 Base:

Composition per 100.0mL:

NaCl	0.63g
Pancreatic digest of casein.....	0.425g
Papaic digest of soybean meal	0.075g
K ₂ HPO ₄	0.063g
Glucose	0.063g
KH ₂ PO ₄	0.02g

Preparation of U9 Base: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 5.5 with 1N HCl. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Antibiotic Solution:

Composition per 10.0mL:

Penicillin G	0.63g
Amphotericin B	2.5mg

Preparation of Antibiotic Solution: Add penicillin G and amphotericin B to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Urea Solution:

Composition per 30.0mL:

Urea.....	3.0g
-----------	------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Filter sterilize.

Phenol Red Solution:

Composition per 10.0mL:

Phenol Red.....	0.1g
-----------------	------

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 95.0mL of cooled, sterile U9 base, aseptically add 5.0mL of sterile horse serum, 1.0mL of sterile antibiotic solution, 0.5mL of sterile urea solution, and 0.1mL of sterile Phenol Red solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and identification of T-strain mycoplasmas from clinical specimens, especially *Ureaplasma urealyticum*. T-mycoplasmas are the only members of the *Mycoplasma* group known to contain urease. Bacteria with urease activity turn the medium dark pink.

U9B Broth

Composition per 102.1mL:

U9 base	95.0mL
Horse serum, unheated.....	5.0mL
Penicillin G solution	1.0mL
Urea solution.....	0.5mL
L-Cysteine·HCl·H ₂ O solution	0.5mL
Phenol Red solution	0.1mL

pH 6.0 ± 0.2 at 25°C

U9 Base:**Composition per 100.0mL:**

NaCl.....	0.63g
Pancreatic digest of casein.....	0.425g
Papaic digest of soybean meal.....	0.075g
K ₂ HPO ₄	0.063g
Glucose.....	0.063g
KH ₂ PO ₄	0.02g

Preparation of U9 Base: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 5.5 with 1*N* HCl. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Penicillin G Solution:**Composition per 10.0mL:**

Penicillin G.....	0.63 g
-------------------	--------

Preparation of Penicillin G Solution: Add penicillin G to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Urea Solution:**Composition per 30.0mL:**

Urea.....	3.0g
-----------	------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Filter sterilize.

L-Cysteine·HCl·H₂O Solution:**Composition per 50.0mL:**

L-Cysteine·HCl·H ₂ O.....	1.0g
--------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Phenol Red Solution:**Composition per 10.0mL:**

Phenol Red.....	0.1g
-----------------	------

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 95.0mL of cooled, sterile U9 base, aseptically add 5.0mL of sterile horse serum, 1.0mL of sterile penicillin G solution, 0.5mL of sterile urea solution, 0.5mL of sterile L-cysteine·HCl·H₂O solution, and 0.1mL of sterile Phenol Red solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and identification of T-strain mycoplasmas from clinical specimens, especially *Ureaplasma urealyticum*. T-mycoplasmas are the only members of the *Mycoplasma* group known to contain urease. Bacteria with urease activity turn the medium dark pink.

U9C Broth**Composition per 102.0mL:**

U9C base.....	90.0mL
Horse serum, unheated.....	10.0mL
Penicillin G solution.....	1.0mL
Urea solution.....	0.3mL
L-Cysteine·HCl·H ₂ O solution.....	0.5mL
GHL tripeptide solution.....	0.1mL
Phenol Red solution.....	0.1mL

pH 6.0 ± 0.2 at 25°C

U9C Base:**Composition per 100.0mL:**

NaCl.....	0.85g
Pancreatic digest of casein.....	0.25g
Papaic digest of soybean meal.....	0.15g
K ₂ HPO ₄	0.12g
Glucose.....	0.12g
MgCl ₂ ·6H ₂ O.....	0.2g
Yeast extract.....	0.1g
KH ₂ PO ₄	0.02g

Preparation of U9C Base: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 5.5 with 2*N* HCl. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Penicillin G Solution:**Composition per 10.0mL:**

Penicillin G.....	0.63g
-------------------	-------

Preparation of Penicillin G Solution: Add penicillin G to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Urea Solution:**Composition per 30.0mL:**

Urea.....	3.0g
-----------	------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Filter sterilize.

L-Cysteine·HCl·H₂O Solution:**Composition per 50.0mL:**

L-Cysteine·HCl·H ₂ O.....	1.0g
--------------------------------------	------

Preparation of L-Cysteine·HCl·H₂O Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

GHL Tripeptide Solution:**Composition per 10.0mL:**

GHL tripeptide.....	0.2mg
---------------------	-------

Preparation of GHL Tripeptide Solution: Add GHL tripeptide (glycyl-L-histidyl-L-lysine acetate) to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Phenol Red Solution:**Composition per 10.0mL:**

Phenol Red.....	0.1g
-----------------	------

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 90.0mL of cooled, sterile U9C base, aseptically add 10.0mL of sterile horse serum, 1.0mL of sterile penicillin G solution, 0.3mL of sterile urea solution, 0.5mL of sterile L-cysteine·HCl·H₂O solution, 0.1mL of sterile GHL tripeptide solution, and 0.1mL of sterile Phenol Red solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and identification of T-strain mycoplasmas from clinical specimens, especially *Ureaplasma urealyticum*. T-mycoplasmas are the only members of the *Mycoplasma* group known to contain urease. Bacteria with urease activity turn the medium dark pink.

U4 Medium**Composition per 100.0mL:**

Hartley's digest broth.....	20.0mL
Fetal calf serum.....	15.0mL

Fresh yeast extract solution.....	10.0mL
Hanks' balanced salt solution, 10X	4.0mL
MgSO ₄ ·5H ₂ O (0.025% solution)	1.0mL
Urea (20% solution).....	0.25mL
Phenol Red (1% solution).....	0.2mL
pH 6.0–6.2 at 25°C	

Hartley's Digest Broth:

Composition per 10.0L:

Ox heart.....	3000.0g
Pancreatin.....	50.0g
Na ₂ CO ₃ , anhydrous (0.8% solution).....	5.0L
HCl, concentrated	80.0mL
pH 7.5 ± 0.2 at 25°C	

Preparation of Hartley's Digest Broth: Finely mince the ox heart. Add the meat to 5.0L of distilled/deionized water. Gently heat and bring to 80°C. Add the 5.0L of Na₂CO₃ solution. Cool to 45°C. Add pancreatin and maintain at 45°C for 4 hr while stirring. Add the HCl and steam at 100°C for 30 min. Cool to room temperature. Adjust pH to 8.0 with 1N NaOH. Gently heat and bring to boiling. Continue boiling for 25 min. Filter while hot. Cool to room temperature. Adjust pH to 7.5. Autoclave for 15 min at 15 psi pressure–121°C.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast, live, pressed, starch-free.....	25.0g
--	-------

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

Hanks' Balanced Salt Solution, 10X:

Composition per liter:

Na ₂ Cl.....	80.0g
Glucose	10.0g
KCl.....	4.0g
CaCl ₂	1.4g
MgCl ₂ ·6H ₂ O.....	1.0g
MgSO ₄ ·7H ₂ O	1.0g
Na ₂ HPO ₄ ·7H ₂ O.....	0.9g
KH ₂ PO ₄	0.6g

Preparation of Hanks' Balanced Salt Solution, 10X: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0–6.2 with HCl. Filter-sterilize medium. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Ureaplasma diversum*.

**UBA Medium
(Universal Beer Agar)**

Composition per liter:

Glucose	16.1g
Peptonized milk	15.0g
Agar	12.0g
Tomato juice, dessicated	12.2g
Yeast extract.....	6.1g
K ₂ HPO ₄	0.31g
KH ₂ PO ₄	0.31g
MgSO ₄ ·7H ₂ O	0.12g

FeSO ₄	6.0mg
MnSO ₄ ·5H ₂ O.....	6.0mg
NaCl.....	6.0mg
Beer.....	250.0mL

pH 6.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components, except beer, to distilled/deionized water and bring volume to 750.0mL. Mix thoroughly. Gently heat and bring to boiling. Add beer. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of microorganisms of significance in the brewing industry.

**Universal Agar for Yeasts
See: Yeast Malt Extract Agar**

Universal Beer Agar

Composition per liter:

Peptonized milk	15.0g
Agar	12.0g
Yeast extract.....	10.0g
Glucose	10.0g
Tomato juice solids	7.0g
K ₂ HPO ₄	0.5g
KH ₂ PO ₄	0.5g
MgSO ₄ ·5H ₂ O	0.2g
NaCl.....	0.01g
FeSO ₄ ·7H ₂ O.....	0.01g
MnSO ₄ ·H ₂ O	0.01g
Beer.....	250.0mL

pH 6.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except beer, to distilled/deionized water and bring volume to 750.0mL. Mix thoroughly. Gently heat and bring to boiling. Add beer. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 250.0mL of beer without degassing. Pour into sterile Petri dishes or leave in tubes.

Use: For the enumeration of contaminating bacteria and yeasts encountered in wort and beer.

**Universal Beer Agar
See: UBA Medium**

**Universal Beer HiVeg Agar with Beer
(UB HiVeg Agar)**

Composition per liter:

Glucose	16.1g
Plant hydrolysate No. 4.....	15.0g
Tomato juice	12.2g
Agar	12.0g
Yeast extract.....	6.1g
K ₂ HPO ₄	0.31g
KH ₂ PO ₄	0.31g
MgSO ₄	0.12g
FeSO ₄	6.0mg

MnSO ₄	6.0mg
NaCl	6.0mg
Beer	250.0mL

pH 6.3 ± 0.2 at 25°C

Source: This medium, without beer, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except beer, to distilled/deionized water and bring volume to 750.0mL. Mix thoroughly. Gently heat and bring to boiling. Add beer. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 10 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For cultivation of microorganisms of significance in the brewing industry.

Universal Medium for Yeasts (YM) (DSMZ Medium 186)

Composition per liter:

Agar	15.0g
Glucose	10.0g
Peptone.....	5.0g
Yeast extract.....	3.0g
Malt extract.....	3.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Saccharomyces* spp. and other yeasts.

Universal Preenrichment Broth (BAM M188)

Composition per liter:

KH ₂ PO ₄	15.0g
Na ₂ HPO ₄	7.0g
Tryptone.....	5.0g
Proteose peptone.....	5.0g
NaCl	5.0g
Glucose	0.5g
MgSO ₄	0.25g
Sodium pyruvate.....	0.2g
Ferric ammonium citrate.....	0.1g

pH 6.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Adjust pH to 6.3. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the enrichment of injured foodborne pathogens of different genera simultaneously in lieu of having to undergo separate simultaneous enrichment cultures for subsequent detection or isolation of each pathogen.

Urea Agar

Composition per liter:

Agar	15.0g
Urea.....	10.0g
Na ₂ HPO ₄ ·12H ₂ O	9.0g
NaCl.....	5.0g
KH ₂ PO ₄	1.5g
Meat extract	1.0g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MnCl ₂ ·4H ₂ O	20.0mg
CaCl ₂	1.2mg
Glucose solution	100.0mL

Glucose Solution:

Composition per 100.0mL:

Glucose	5.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Preparation of Medium: Add components, except glucose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile glucose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Corynebacterium glutamicum*.

Urea Agar

Composition per liter:

Agar	15.0g
Na ₂ HPO ₄ ·12H ₂ O	9.0g
NaCl.....	5.0g
KH ₂ PO ₄	1.5g
Meat extract	1.0g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MnCl ₂ ·4H ₂ O	20.0mg
CaCl ₂	1.2mg
Glucose-urea solution	100.0mL

Glucose-Urea Solution:

Composition per 100.0mL:

Urea.....	10.0g
Glucose	5.0g

Preparation of Glucose-Urea Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Preparation of Medium: Add components, except glucose-urea solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile glucose-urea solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Corynebacterium glutamicum*.

Urea Agar (Urease Test Agar) (Urea Agar Base, Christensen)

Composition per liter:

Urea.....	20.0g
Agar.....	15.0g
NaCl.....	5.0g
KH ₂ PO ₄	2.0g
Peptone.....	1.0g
Glucose.....	1.0g
Phenol Red.....	0.012g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components, except agar, to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Add agar to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add the 100.0mL of sterile basal medium. Mix thoroughly. Distribute into sterile tubes. Allow tubes to solidify in a slanted position.

Use: For the differentiation of a variety of microorganisms, especially members of the Enterobacteriaceae, aerobic actinomycetes, streptococci, and nonfermenting Gram-negative bacteria, on the basis of urease production.

Urea Agar Base

Composition per liter:

Agar.....	15.0g
NaCl.....	5.0g
Na ₂ HPO ₄	1.2g
Peptone.....	1.0g
Glucose.....	1.0g
KH ₂ PO ₄	0.8g
Phenol Red.....	0.012g
Urea solution.....	50.0mL

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Urea Solution:

Composition per 100.0mL:

Urea.....	40.0g
-----------	-------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except urea solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 20 min at 10 psi pressure–115°C. Cool to 50°C. Aseptically add 50.0mL of sterile urea solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. Allow tubes to solidify in a slanted position.

Use: For the detection of *Proteus* species based on rapid urease activity and the identification of other members of the Enterobacteriaceae based on urease activity. Urease-positive bacteria turn the medium pink.

Urea Agar Base, Christensen See: Urea Agar

Urea Broth

Composition per liter:

Na ₂ HPO ₄ ·12H ₂ O.....	9.0g
NaCl.....	5.0g
KH ₂ PO ₄	1.5g
Meat extract.....	1.0g
Yeast extract.....	1.0g
MgSO ₄ ·7H ₂ O.....	0.2g
MnCl ₂ ·4H ₂ O.....	20.0mg
CaCl ₂	1.2mg
Glucose-urea solution.....	100.0mL

Glucose-Urea Solution:

Composition per 100.0mL:

Urea.....	10.0g
Glucose.....	5.0g

Preparation of Glucose-Urea Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose-urea solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 100.0mL of sterile glucose-urea solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Corynebacterium glutamicum*.

Urea Broth

See: [Urease Test Broth](#)

Urea Broth 10B for *Ureaplasma urealyticum*

Composition per 100.5mL:

PPLO broth without Crystal Violet.....	70.0mL
Horse serum, unheated.....	20.0mL
Fresh yeast extract solution.....	10.0mL
L-Cysteine·HCl·H ₂ O solution.....	0.5mL
CVA enrichment.....	0.5mL
Urea solution.....	0.4mL
Phenol Red.....	0.1mL

PPLO Broth without Crystal Violet:

Composition per 900.0mL:

Beef heart, solids from infusion.....	16.1g
Peptone.....	3.25g
NaCl.....	1.61g

Preparation of PPLO Broth without Crystal Violet: Add components to distilled/deionized water and bring volume to 900.0mL. Adjust pH to 5.5 with 2N HCl. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 37°C.

Fresh Yeast Extract Solution:

Composition per 100.0mL:

Baker's yeast live, pressed, starch-free..... 25.0g

Preparation of Fresh Yeast Extract Solution: Add the live Baker's yeast to 100.0mL of distilled/deionized water. Autoclave for 90 min at 15 psi pressure–121°C. Allow to stand. Remove supernatant solution. Adjust pH to 6.6–6.8.

L-Cysteine-HCl·H₂O Solution:

Composition per 50.0mL:

L-Cysteine-HCl·H₂O 1.0g

Preparation of L-Cysteine-HCl·H₂O Solution: Add L-cysteine-HCl·H₂O to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

CVA Enrichment:

Composition per liter:

Glucose 100.0g
 L-Cysteine-HCl·H₂O 25.9g
 L-Glutamine..... 10.0g
 Adenine 1.0g
 L-Cystine·2HCl..... 1.0g
 Nicotinamide adenine dinucleotide 0.25g
 Cocarboxylase..... 0.1g
 Guanine·HCl 0.03g
 Fe(NO₃)₃ 0.02g
 Vitamin B₁₂ 0.01g
p-Aminobenzoic acid..... 0.013g
 Thiamine·HCl 3.0mg

Preparation of CVA Enrichment: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Urea Solution:

Composition per 30.0mL:

Urea..... 3.0g

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 30.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine the components, except the PPLO broth without Crystal Violet. Aseptically add this mixture to the cooled, sterile PPLO broth without Crystal Violet. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Ureaplasma urealyticum* and other *Ureaplasma* species. Urease-positive bacteria turn the medium peach orange.

Urea Broth Base

Composition per liter:

NaCl 5.0g
 Na₂HPO₄ 1.2g
 Peptone..... 1.0g
 Glucose 1.0g
 KH₂PO₄ 0.8g
 Phenol Red 0.012g
 Urea solution..... 50.0mL

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Urea Solution:

Composition per 100.0mL:

Urea..... 40.0g

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except urea solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Autoclave for 20 min at 10 psi pressure–115°C. Cool to 50°C. Aseptically add 50.0mL of sterile urea solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the differentiation of members of the Enterobacteriaceae based on urease production. Urease-positive bacteria turn the medium pink.

**Urea HiVeg Agar Base Autoclavable with Urea
(Christensen HiVeg Agar Autoclavable)**

Composition per liter:

Agar 15.0g
 NaCl 5.0g
 Na₂HPO₄ 1.2g
 Glucose 1.0g
 Plant peptone 1.0g
 KH₂PO₄ 0.8g
 Phenol Red 0.012g
 Urea solution..... 50.0mL

pH 6.8 ± 0.2 at 25°C

Source: This medium, without urea solution, is available as a premixed powder from HiMedia.

Urea Solution:

Composition per 100.0mL:

Urea..... 40.0g

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except urea solution, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 20 min at 10 psi pressure–115°C. Cool to 50°C. Aseptically add 50.0mL of sterile urea solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes. Allow tubes to solidify in a slanted position.

Use: For the detection of *Proteus* species based on rapid urease activity and the identification of other members of the Enterobacteriaceae based on urease activity. Urease-positive bacteria turn the medium pink. For the detection of urease production, particularly by *Proteus vulgaris*, micrococci and paracolon organisms.

Urea Nutrient Agar

Composition per 1050.0mL:

Agar 15.0g
 Peptone 5.0g
 NaCl 5.0g
 Yeast extract..... 2.0g
 Beef extract 1.0g
 Urea solution..... 50.0mL

Urea Solution:**Composition per 100.0mL:**

Urea..... 20.0g

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except urea solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of sterile urea solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Bacillus pantothenicus*.

Urea R Broth (Urea Rapid Broth)

Composition per liter:

Urea..... 20.0g
Yeast extract..... 0.1g
Na₂HPO₄..... 0.095g
KH₂PO₄..... 0.091g
Phenol Red..... 0.01g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the differentiation of members of the Enterobacteriaceae based on the rapid detection of urease activity. Urease-positive bacteria turn the medium cerise.

Urea Semisolid Medium

Composition per 450.0:

Solution A..... 400.0mL
Solution B..... 50.0mL

Solution A:**Composition per 400.0mL:**

Pancreatic digest of casein..... 6.0g
Yeast extract..... 2.0g
NaCl..... 1.0g
Yeast extract..... 0.8g
Agar..... 0.3g
L-Cystine..... 0.1g
Thioglycolic acid..... 0.12mL

pH 7.2 ± 0.2 at 25°C

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 400.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 60°C.

Solution B:**Composition per 50.0mL:**

Urea..... 8.0g
Na₂HPO₄..... 3.8g
KH₂PO₄..... 3.64g
Yeast extract..... 0.04g
Phenol Red..... 4.0mg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 50.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 400.0mL of sterile solution A and 50.0mL of sterile solution B. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes in 7.0mL volumes. Pass the tubes into an anaerobic chamber containing 85% N₂ + 10% H₂ + 5% CO₂ for 60 min. Close screw caps tightly.

Use: For the cultivation and differentiation of anaerobic bacteria based on their production of urease. Bacteria that produce urease turn the medium bright red.

Urea Test Broth

Composition per liter:

Urea..... 20.0g
Na₂HPO₄..... 9.5g
KH₂PO₄..... 9.1g
Yeast extract..... 0.1g
Phenol Red..... 0.01g
Urea solution..... 100.0mL

Urea Solution:**Composition per 100.0mL:**

Urea..... 20.0g

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except urea solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile urea solution. Mix thoroughly. Aseptically distribute into sterile tubes in 3.0mL volumes.

Use: For the cultivation and differentiation of members of the Enterobacteriaceae and aerobic actinomycetes based on their production of urease. Bacteria that produce urease turn the medium bright red.

Urea Test Broth

Composition per 99.6mL:

H broth base..... 85.0mL
Horse serum..... 10.0mL
Penicillin solution..... 2.0mL
MES (2-N-morpholinoethane sulfonic acid) buffer solution..... 1.0mL
Na₂SO₃ solution..... 1.0mL
Urea solution..... 0.5mL
Phenol Red solution..... 0.1mL

pH 7.2 ± 0.2 at 25°C

H Broth Base:**Composition per liter:**

NaCl..... 5.0g
Pancreatic digest of casein..... 5.0g
Peptone..... 5.0g
Beef extract..... 3.0g
K₂HPO₄..... 2.5g
Glucose..... 1.0g

Preparation of H Broth Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 4.0mL volumes. Autoclave for 15 min at 10 psi pressure–115°C. Cool to 45°–50°C.

Penicillin Solution:**Composition per 10.0mL:**

Penicillin..... 100,000U

Preparation of Penicillin Solution: Add penicillin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

MES Buffer Solution:

Composition per 100.0mL:

MES (2-*N*-morpholinoethane sulfonic acid) buffer 19.52g

Preparation of MES Buffer Solution: Add MES buffer to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Adjust pH to 5.5. Filter sterilize.

Na₂SO₃ Solution:

Composition per 10.0mL:

Na₂SO₃ 0.126g

Preparation of Na₂SO₃ Solution: Add Na₂SO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Urea Solution:

Composition per 100.0mL:

Urea 6.0g

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Phenol Red Solution:

Composition per 10.0mL:

Phenol Red 0.1g

Preparation of Phenol Red Solution: Add Phenol Red to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 85.0mL of cooled sterile H broth base, aseptically add 10.0mL of sterile horse serum, 2.0mL of sterile penicillin solution, 1.0mL of MES buffer solution, 1.0mL of Na₂SO₃ solution, 0.5mL of urea solution, and 0.1 mL of sterile Phenol Red solution. Mix thoroughly. Aseptically distribute into test tubes in 3.0mL volumes.

Use: For the cultivation and differentiation of *Ureaplasma* species based on their production of urease.

***Ureaplasma* Medium
(DSMZ Medium 1096)**

Composition per 1005.0mL:

Solution A 700.0mL

Solution B 305.0mL

pH 6.0 ± 0.2 at 25°C

Solution A:

Composition per 700.0mL:

Pancreatic digest of casein 7.0g

NaCl 5.0g

Beef extract 3.0g

Yeast extract 3.0g

Beef heart, solids from infusion 2.0g

Urea 0.4g

L-Cysteine-HCl·2H₂O 0.1g

DNA, fish sperm 0.2g

Phenol Red 0.02g

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 700.0mL. Mix thoroughly. Adjust pH to 6.0. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Solution B:

Composition per 305.0mL:

Horse serum 200.0mL

Yeastolate solution 100.0mL

Isovitalex 5.0mL

Yeastolate Solution:

Composition per 100.0mL:

Yeastolate 20.0g

Preparation of Yeastolate Solution: Add yeastolate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Solution B: Combine components. Filter sterilize.

Preparation of Medium: Aseptically add 305.0mL solution B to 700.0mL solution A. Mix thoroughly.

Use: For the cultivation of *Ureaplasma* spp.

Urease Color Test Medium

See: **U9 Broth**

Urease Indole Test Broth

See: **F35M Hajna Broth**

Urease Test Agar

See: **Urea Agar**

**Urease Test Broth
(Urea Broth)**

Composition per liter:

Urea 20.0g

Na₂HPO₄ 9.5g

KH₂PO₄ 9.1g

Yeast extract 0.1g

Phenol Red 0.01g

pH 6.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the differentiation of organisms, especially the Enterobacteriaceae, on the basis of urease production. Urease-positive bacteria turn the medium pink.

Uric Acid Agar

Composition per liter:

Agar 20.0g

Uric acid 10.0g

KH₂PO₄ 0.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Swirl flask while pouring medium.

Use: For the cultivation and maintenance of microorganisms, such as *Bacillus fastidiosus*, that can utilize uric acid as the sole source of carbon, nitrogen, and energy.

Uric Acid Agar**Composition per liter:**

Agar	15.0g
Na ₂ HPO ₄ ·12H ₂ O	9.0g
NaCl	5.0g
KH ₂ PO ₄	1.5g
Meat extract	1.0g
Yeast extract	1.0g
MgSO ₄ ·7H ₂ O	0.2g
MnCl ₂ ·4H ₂ O	20.0mg
CaCl ₂	1.2mg
Glucose-uric acid solution	100.0mL

Glucose-Uric Acid Solution:**Composition per 100.0mL:**

Glucose	5.0g
Uric acid	0.4g

Preparation of Glucose-Uric Acid Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Warm to 50°C.

Preparation of Medium: Add components, except glucose-uric acid solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile glucose-uric acid solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Bacillus* species.

Uric Acid Agar for Clostridia**Composition per liter:**

Agar	20.0g
K ₂ HPO ₄	4.0g
Uric acid	3.0g
Yeast extract	1.0g
Sodium thioglycolate	0.5g
MgSO ₄ ·7H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	5.0mg
Phenol Red (0.04% solution)	1.0mL

pH 7.6–8.0 at 25°C

Preparation of Medium: Add components, except uric acid, to approximately 900.0mL of distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.6 with 1N NaOH. Add the uric acid. Mix thoroughly. Adjust pH to 7.6. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of anaerobic bacteria, such as *Clostridium acidurici* and *Clostridium cylindrosporium*, that can utilize uric acid as the sole source of carbon and energy.

Uric Acid Broth**Composition per liter:**

Na ₂ HPO ₄ ·12H ₂ O	9.0g
NaCl	5.0g
KH ₂ PO ₄	1.5g
Meat extract	1.0g
Yeast extract	1.0g
MgSO ₄ ·7H ₂ O	0.2g
MnCl ₂ ·4H ₂ O	20.0mg
CaCl ₂	1.2mg
Glucose-uric acid solution	100.0mL

Glucose-Uric Acid Solution:**Composition per 100.0mL:**

Glucose	5.0g
Uric acid	0.4g

Preparation of Glucose-Uric Acid Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose-uric acid solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 100.0mL of sterile glucose-uric acid solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Bacillus* species.

Uric Acid Broth for Clostridia**Composition per liter:**

K ₂ HPO ₄	4.0g
Uric acid	3.0g
Yeast extract	1.0g
Sodium thioglycolate	0.5g
MgSO ₄ ·7H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	5.0mg
Phenol Red (0.04% solution)	1.0mL

pH 7.6–8.0 at 25°C

Preparation of Medium: Add components, except uric acid, to approximately 900.0mL of distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.6 with 1N NaOH. Add the uric acid. Mix thoroughly. Adjust pH to 7.6. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of anaerobic bacteria, such as *Clostridium acidurici* and *Clostridium cylindrosporium*, that can utilize uric acid as the sole source of carbon and energy.

Uric Acid Medium**Composition per liter:**

Agar	15.0g
Peptone	5.0g
NaCl	5.0g
Yeast extract	2.0g
Beef extract	1.0g
Uric acid solution	150.0mL

Uric Acid Solution:**Composition per 150.0mL:**

Uric acid	6.0g
-----------------	------

Preparation of Uric Acid Solution: Add uric acid to distilled/deionized water and bring volume to 150.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Add components, except uric acid solution, to distilled/deionized water and bring volume to 750.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 150.0mL of sterile uric acid solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes while agitating.

Use: For the cultivation of *Bacillus fastidiosus*.

Uric Acid Semisolid Agar for Clostridia**Composition per liter:**

K ₂ HPO ₄	4.0g
Uric acid.....	3.0g
Agar.....	2.0g
Yeast extract.....	1.0g
Sodium thioglycolate.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.1g
FeSO ₄ ·7H ₂ O.....	5.0mg
Phenol Red (0.04% solution).....	1.0mL
pH 7.6–8.0 at 25°C	

Preparation of Medium: Add components, except uric acid, to approximately 900.0mL of distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.6 with 1N NaOH. Add the uric acid. Mix thoroughly. Adjust pH to 7.6. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Clostridium acidurici* and *Clostridium cylindrosporium* that can utilize uric acid.

Uric Acid Utilization Agar**Composition per liter:**

Agar.....	15.0g
Uric acid.....	10.0g
K ₂ HPO ₄	0.5g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of anaerobic bacteria, such as *Bacillus fastidiosus*, that can utilize uric acid as the sole source of carbon and energy.

Urogenital Mycoplasma Broth Base**Composition per liter:**

Heart infusion powder.....	8.0g
Casein enzymatic hydrolysate.....	8.0g
Yeast extract.....	4.0g
NaCl.....	3.5g
Arginine hydrochloride.....	5.0g
Cysteine hydrochloride.....	0.1g
Phenol Red.....	0.05g
Horse serum.....	50.0ml
Urea solution.....	10.0mL
Vitamin solution.....	10.0mL
Selective supplement solution.....	10.0mL
pH 6.3 ± 0.2 at 25°C	

Source: This medium is available from HiMedia.

Selective Supplement Solution:**Composition per 10.0mL:**

Penicillin.....	5.0mg
Amphotericin B.....	1.0mg
Penicillin.....	100,000U

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Urea Solution:**Composition per 10.0mL:**

Urea.....	0.5g
-----------	------

Preparation of Urea Solution: Add urea to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Vitamin Solution:**Composition per 10.0mL:**

Glucose.....	2.0g
L-Cysteine-HCl.....	0.518g
L-Glutamine.....	0.2g
L-Cystine.....	0.022g
Adenine sulfate.....	0.02g
Nicotinamide adenine dinucleotide.....	5.0mg
Coccarboxylase.....	2.0mg
Guanine-HCl.....	0.6mg
Fe(NO ₃) ₃ ·6H ₂ O.....	0.4mg
p-Aminobenzoic acid.....	0.26mg
Vitamin B ₁₂	0.2mg
Thiamine-HCl.....	0.06mg

Preparation of Vitamin solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, urea solution, horse serum, and selective supplement solution, to distilled/deionized water and bring volume to 920.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add vitamin solution, urea solution, horse serum, and selective supplement solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the selective culture of *Mycoplasma hominis* and *Ureaplasma urealyticum*.

USP Alternative Thioglycolate Medium

See: Sterility Test Broth

Ustilago Complete Agar II**Composition per liter:**

Agar.....	20.0g
Glucose.....	10.0g
Hydrolyzed casein.....	2.5g
NH ₄ NO ₃	1.5g
Yeast extract.....	1.0g
Salt solution.....	62.5mL
Vitamin solution.....	10.0mL
Hydrolyzed nucleic acids solution.....	5.0mL
pH 7.0 ± 0.2 at 25°C	

Salt Solution:**Composition per liter:**

KH ₂ PO ₄	16.0g
KCl.....	8.0g
Na ₂ SO ₄	4.0g
MgSO ₄	2.0g
CaCl ₂	1.0g
Trace elements solution.....	8.0mL

Trace Elements Solution:**Composition per liter:**

CuSO ₄ ·5H ₂ O.....	0.4g
ZnCl ₂	0.4g
MnCl ₂ ·4H ₂ O.....	0.14g
FeCl ₃ ·6H ₂ O.....	100.0mg
H ₃ BO ₃	60.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	40.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Inositol	1.0g
Calcium pantothenate	0.2g
Choline chloride.....	0.2g
Nicotinic acid.....	0.2g
Thiamine	100.0mg
<i>p</i> -Aminobenzoic acid.....	50.0mg
Pyridoxine.....	50.0mg
Riboflavin	50.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Hydrolyzed Nucleic Acids Solution:

Composition per 80.0mL:

DNA, calf thymus.....	2.0g
RNA	2.0g
HCl (1M solution).....	30.0mL
NaOH (1M solution).....	30.0mL

Preparation of Hydrolyzed Nucleic Acids Solution: Add DNA to 30.0mL of 1M NaOH solution. Add RNA to 30.0mL of 1M HCl solution. Autoclave the two solutions separately for 10 min at 15 psi pressure–121°C. Mix the two solutions. Adjust the pH to 6.0. Centrifuge at 5000 × g for 10 min. Decant supernatant solution and filter. Bring volume to 80.0mL with distilled/deionized water. Store at –20°C.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Ustilago* species.

Ustilago Complete Broth II

Composition per liter:

Glucose	10.0g
Hydrolyzed casein.....	2.5g
NH ₄ NO ₃	1.5g
Yeast extract.....	1.0g
Salt solution	62.5mL
Vitamin solution.....	10.0mL
Hydrolyzed nucleic acids solution.....	5.0mL

pH 7.0 ± 0.2 at 25°C

Salt Solution:

Composition per liter:

KH ₂ PO ₄	16.0g
KCl.....	8.0g
Na ₂ SO ₄	4.0g
MgSO ₄	2.0g
CaCl ₂	1.0g
Trace elements solution	8.0mL

Trace Elements Solution:

Composition per liter:

CuSO ₄ ·5H ₂ O.....	0.4g
ZnCl ₂	0.4g
MnCl ₂ ·4H ₂ O.....	0.14g

FeCl ₃ ·6H ₂ O.....	100.0mg
H ₃ BO ₃	60.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	40.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Inositol	1.0g
Calcium pantothenate	0.2g
Choline chloride.....	0.2g
Nicotinic acid.....	0.2g
Thiamine	100.0mg
<i>p</i> -Aminobenzoic acid.....	50.0mg
Pyridoxine.....	50.0mg
Riboflavin	50.0mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Hydrolyzed Nucleic Acids Solution:

Composition per 80.0mL:

DNA, calf thymus.....	2.0g
RNA	2.0g
HCl (1M solution).....	30.0mL
NaOH (1M solution).....	30.0mL

Preparation of Hydrolyzed Nucleic Acids Solution: Add DNA to 30.0mL of 1M NaOH solution. Add RNA to 30.0mL of 1M HCl solution. Autoclave the two solutions separately for 10 min at 15 psi pressure–121°C. Mix the two solutions. Adjust the pH to 6.0. Centrifuge at 5000 × g for 10 min. Decant supernatant solution and filter. Bring volume to 80.0mL with distilled/deionized water. Store at –20°C.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Ustilago* species.

Ustilago Medium

Composition per liter:

Yeast extract.....	11.0g
Glucose	10.0g
NH ₄ NO ₃	1.5g
Salt solution	62.5mL
Vitamin solution.....	10.0mL

Salt Solution:

Composition per liter:

KH ₂ PO ₄	16.0g
KCl.....	8.0g
Na ₂ SO ₄	4.0g
MgSO ₄ ·7H ₂ O.....	2.0g
CaCl ₂	1.0g
Trace elements solution	8.0mL

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:

Composition per 500.0mL:

CuSO ₄ ·5H ₂ O.....	0.2g
ZnCl ₂	0.2g

MnCl ₂ ·4H ₂ O.....	0.07g
FeCl ₃ ·6H ₂ O.....	0.05g
H ₃ BO ₃	0.03g
Na ₂ MoO ₄ ·2H ₂ O.....	0.02g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Inositol.....	0.4g
Calcium pantothenate.....	0.2g
Choline chloride.....	0.2g
Nicotinic acid.....	0.2g
Thiamine.....	0.1g
Pyridoxine.....	0.05g
Riboflavin.....	0.05g

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile vitamin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Ustilago* species.

Ustilago Medium

Composition per liter:

Agar.....	20.0g
Glucose.....	10.0g
Peptone.....	10.0g
Malt extract.....	3.0g
Yeast extract.....	3.0g
Beef extract.....	1.0g

pH 5.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 5.7. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Ustilago* species.

Ustilago Minimal Medium

Composition per liter:

Glucose.....	10.0g
KNO ₃	3.0g
Salt solution.....	62.5mL

Salt Solution:

Composition per liter:

KH ₂ PO ₄	16.0g
KCl.....	8.0g
Na ₂ SO ₄	4.0g
MgSO ₄ ·7H ₂ O.....	2.0g
CaCl ₂	1.0g
Trace elements solution.....	8.0mL

Preparation of Salt Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution:

Composition per 500.0mL:

CuSO ₄ ·5H ₂ O.....	0.2g
ZnCl ₂	0.2g
MnCl ₂ ·4H ₂ O.....	0.07g
FeCl ₃ ·6H ₂ O.....	0.05g
H ₃ BO ₃	0.03g
Na ₂ MoO ₄ ·2H ₂ O.....	0.02g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Ustilago* species.

UVM *Listeria* Enrichment Broth

(University of Vermont *Listeria* Enrichment Broth)

Composition per liter:

NaCl.....	20.0g
Na ₂ HPO ₄	9.6g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g
Beef extract.....	5.0g
Yeast extract.....	5.0g
KH ₂ PO ₄	1.35g
Esculin.....	1.0g
Nalidixic acid.....	40.0mg
Acriflavine-HCl.....	12.0mg

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective isolation of *Listeria monocytogenes*.

UVM Modified *Listeria* Enrichment Broth

(University of Vermont Modified *Listeria* Enrichment Broth)

Composition per liter:

NaCl.....	20.0g
Na ₂ HPO ₄	9.6g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g
Beef extract.....	5.0g
Yeast extract.....	5.0g
KH ₂ PO ₄	1.35g
Esculin.....	1.0g
Nalidixic acid.....	20.0mg
Acriflavine-HCl.....	12.0mg

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective isolation of *Listeria monocytogenes*.

V Agar**Composition per liter:**

Agar	13.5g
Pancreatic digest of casein	12.0g
Peptone.....	10.0g
Peptic digest of animal tissue.....	5.0g
NaCl	5.0g
Beef extract.....	3.0g
Yeast extract.....	3.0g
Cornstarch.....	1.0g
Human blood, anticoagulated	50.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a prepared medium from BD Diagnostic Systems.

Preparation of Medium: Add components, except human blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 50.0mL of human blood. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and differentiation of *Gardnerella vaginalis* from clinical specimens. Plates are incubated under an atmosphere with 3–10% CO₂. *Gardnerella vaginalis* appears as small white colonies with diffuse β-hemolysis.

V-8™ Agar**Composition per liter:**

Agar	20.0g
CaCO ₃	4.0g
V-8™ canned vegetable juice	200.0mL
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Actinomyces* species, *Actinopolyspora* species, *Excellulospira* species, and *Microspora* species.

V-8™ Agar**Composition per liter:**

Agar	15.0g
CaCO ₃	2.0g
V-8™ canned vegetable juice	200.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of numerous yeasts and filamentous fungi.

**V-8™ Agar, Half-strength
(ATCC Medium 2211)****Composition per liter:**

Agar	15.0g
CaCO ₃	1.5g
V-8™ canned vegetable juice	100.0mL
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Actinomyces* species, *Actinopolyspora* species, *Excellulospira* species, and *Microspora* species.

**V-8™ Agar, Half-strength
(ATCC Medium 2216)****Composition per liter:**

Agar	15.0g
CaCO ₃	0.75g
V-8™ canned vegetable juice	50.0mL
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to 950.0mL distilled/deionized water. Mix thoroughly. Bring volume to 1.0L with tap water. Mix thoroughly. Adjust to pH 7.2 ± 0.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Actinomyces* species, *Actinopolyspora* species, *Excellulospira* species, and *Microspora* species.

V-8™ Agar, pH 7.2**Composition per liter:**

Agar	15.0g
CaCO ₃	3.0g
V-8™ canned vegetable juice	200.0mL
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Bipolaris leersiae*, *Bipolaris micropus*, *Campylopusium pellucidum*, *Cochliobolus spicifer*, *Cochliobolus bicolor*, *Cochliobolus miyabeanus*, *Cochliobolus australiensis*, *Cochliobolus sativus*, *Cochliobolus victoriae*, *Curvularia inaequalis*, *Drechslera catenaria*, *Drechslera panicumii*, *Embellisia chlamydospora*, *Helicospirium pallidum*, *Helminthosporium papulosum*, *Phytophthora cinnamomi*, *Phytophthora cryptogea*, *Setosphaeria rostrata*, and other yeasts and filamentous fungi.

V-8™-0 Agar**Composition per liter:**

Agar	15.0g
CaCO ₃	5.0g
CaCl ₂	100.0mg
β-Sitosterol	30.0mg
Tryptophan.....	20.0mg
Thiamine.....	1.0mg
V-8™ canned vegetable juice	354.0mL

Preparation of Medium: Add CaCO₃ to V-8. Centrifuge for 20 min at 4000 rpm. Decant the supernatant. Add the supernatant to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add remaining components. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Phytophthora syringae*, *Phytophthora palmivora*, *Phytophthora nicotianae*, *Phytophthora erythroseptica*, *Phytophthora drechsleri*, and *Phytophthora citrophthora*.

V-8™ Juice Agar (ATCC Medium 343)

Composition per liter:

Agar	15.0g
CaCO ₃	4.0g
V-8™ canned vegetable juice	200.0mL
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Filobasidiella depauperata* and *Leucosporidium scottii*.

V-8™ Juice Agar II (ATCC Medium 2040)

Composition per liter:

Agar	30.0g
V-8™ canned vegetable juice	300.0mL
pH 7.3 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of various yeasts and filamentous fungi.

V-8™ Juice Seawater Agar

Composition per liter:

Agar	15.0g
CaCO ₃	3.0g
Artificial seawater	800.0mL
V-8™ canned vegetable juice, unsalted	200.0mL
pH 7.0 ± 0.2 at 25°C	

Artificial Seawater:

Composition per liter:

NaCl	20.0g
MgCl ₂ ·6H ₂ O	5.38g
MgSO ₄ ·7H ₂ O	6.78g
KCl	0.72g
NaHCO ₃	0.2g
CaCl ₂ ·2H ₂ O	1.4g

Preparation of Artificial Seawater: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Halophytophthora masteri* and *Halophytophthora tartarea*.

V-8™ Rye Agar

Composition per 1050.0mL:

Agar	20.0g
CaCO ₃	0.2g
Rye broth	1.0L
V-8™ canned vegetable juice	50.0mL

Rye Broth:

Composition per liter:

Whole rye grains	50.0g
------------------------	-------

Preparation of Rye Broth: Soak the rye grains in 1.1L of distilled/deionized water for 24–36 hr at 24°C. Autoclave at 15 psi pressure–121°C for 30 min. Filter through four layers of cheesecloth. Bring the final filtrate volume to 1.0L with distilled/deionized water.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Phytophthora infestans*.

V24N Medium (DSMZ Medium 88b)

Composition per liter:

Starch, soluble	2.0g
(NH ₄) ₂ SO ₄	1.3g
Sulfur, powdered	1.0g
Na ₂ S·9H ₂ O	0.5g
KH ₂ PO ₄	0.28g
MgSO ₄ ·7H ₂ O	0.25g
Yeast extract	0.2g
CaCl ₂ ·2H ₂ O	0.07g
FeCl ₃ ·6H ₂ O	0.02g
Na ₂ B ₄ O ₇ ·10H ₂ O	4.5mg
MnCl ₂ ·4H ₂ O	1.8mg
Resazurin	0.4mg
ZnSO ₄ ·7H ₂ O	0.22mg
CuCl ₂ ·2H ₂ O	0.05mg
Na ₂ MoO ₄ ·2H ₂ O	0.03mg
VO ₂ SO ₄ ·2H ₂ O	0.03mg
CoSO ₄	0.01mg

pH 6.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust the pH to 6.0 with H₂SO₄ (25% v/v). Sparge medium with 100% N₂ gas. Distribute anaerobically into rubber-stoppered tubes or bottles that have been pre-sterilized by autoclaving. On 2 successive days heat the medium for 2 hr at 85 °C.

Use: For the growth and maintenance of *Thermophilum librum*.

Van Niel's Agar

Composition per liter:

Agar	20.0g
Yeast extract	10.0g
K ₂ HPO ₄	1.0g
MgSO ₄	0.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring

to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Rhodomicrobium vannielii*.

Van Niel's Medium, Modified

Composition per liter:

Yeast extract.....	10.0g
MgSO ₄	0.1g
EDTA.....	2.0mg
Trace elements solution.....	10.0mL
K ₂ HPO ₄ solution.....	2.5mL

pH 7.1 ± 0.2 at 25°C

Trace Elements Solution:

Composition per 100.0mL:

CaCl ₂ ·2H ₂ O.....	0.3g
Ferric ammonium citrate.....	0.2g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

K₂HPO₄ Solution:

Composition per 100.0mL:

K ₂ HPO ₄	4.0g
---------------------------------------	------

Preparation of K₂HPO₄ Solution: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except K₂HPO₄ and trace elements solution, to distilled/deionized water and bring volume to 987.5mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add trace elements and K₂HPO₄ solutions. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Rhodobacter sphaeroides*.

Van Niel's Yeast Agar

See: [Van Niel's Agar](#)

Van Niel's Yeast Agar with Glutamate (ATCC Medium 1370)

Composition per liter:

Agar.....	20.0g
Yeast extract.....	10.0g
K ₂ HPO ₄	1.0g
Glutamate.....	0.7g
MgSO ₄	0.5g

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Rhodomicrobium* spp.

Van Niel's Yeast Agar with Sodium Chloride

Composition per liter:

NaCl.....	25.0g
Agar.....	20.0g
Yeast extract.....	10.0g
K ₂ HPO ₄	1.0g
MgSO ₄	0.5g

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of halophilic *Rhodomicrobium* spp.

Van Niel's Yeast Agar with 25% Sodium Chloride (ATCC Medium 217)

Composition per liter:

NaCl.....	250.0g
Agar.....	20.0g
Yeast extract.....	10.0g
K ₂ HPO ₄	1.0g
MgSO ₄	0.5g

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of halophilic *Rhodomicrobium* spp.

Van Niel's Yeast Agar with Succinate (ATCC Medium 1243)

Composition per liter:

Agar.....	20.0g
Yeast extract.....	10.0g
K ₂ HPO ₄	1.0g
Succinate.....	0.6g
MgSO ₄	0.5g

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Rhodomicrobium* spp.

Van Niel's Yeast Medium with Pyruvate, Modified

Composition per liter:

Yeast extract.....	10.0g
MgSO ₄	0.1g
EDTA.....	2.0mg
Sodium pyruvate solution.....	100.0mL
Trace elements solution.....	10.0mL
K ₂ HPO ₄ solution.....	5.0mL
Trace metal A-5 solution.....	1.0mL

pH 7.1 ± 0.1 at 25°C

Sodium Pyruvate Solution:

Composition per 100.0mL:

Sodium pyruvate.....	1.1g
----------------------	------

Preparation of Sodium Pyruvate Solution: Add sodium pyruvate to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Elements Solution:

Composition per 100.0mL:

CaCl ₂ ·2H ₂ O.....	0.3g
Ferric ammonium citrate.....	0.2g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

K₂HPO₄ Solution:

Composition per 100.0mL:

K₂HPO₄..... 4.0g

Preparation of K₂HPO₄ Solution: Add K₂HPO₄ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Trace Metal A-5 Solution:

Composition per liter:

H₃BO₃..... 2.86g

MnCl₂·4H₂O..... 1.81g

Na₂MoO₄·2H₂O..... 0.39g

ZnSO₄·7H₂O..... 0.222g

CuSO₄·5H₂O..... 0.079g

Co(NO₃)₂·6H₂O..... 0.049g

Preparation of Trace Metal A-5 Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sodium pyruvate, trace elements, K₂HPO₄, and trace metal A-5 solutions, to distilled/deionized water and bring volume to 884.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically add 100.0mL of sterile sodium pyruvate solution, 10.0mL of sterile trace elements solution, 5.0mL of sterile K₂HPO₄ solution, and 1.0mL of sterile trace metal A-5 solution. Mix thoroughly. Adjust pH to 7.1 ± 0.1. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of photosynthetic bacteria, such as *Heliobacillus mobilis* and *Rhodospseudomonas palustris*.

Vanillate Medium

Composition per liter:

Agar..... 20.0g

(NH₄)₂SO₄..... 1.0g

KH₂PO₄..... 0.4g

Yeast extract..... 0.1g

MgSO₄·7H₂O..... 0.01g

Trace elements solution..... 10.0mL

Vanillic acid solution..... 10.0mL

Trace Elements Solution:

Composition per liter:

MnSO₄·4H₂O..... 0.4g

H₃BO₃..... 0.5mg

ZnSO₄·7H₂O..... 0.4mg

FeCl₃..... 0.2mg

(NH₄)₆Mo₇O₂₄·4H₂O..... 0.2mg

KI..... 0.1mg

CuSO₄·5H₂O..... 0.04mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Vanillic Acid Solution:

Composition per 10.0mL:

Vanillic acid, sodium salt..... 1.5g

Preparation of Vanillic Acid Solution: Add vanillic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vanillic acid solution and trace elements solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Warm the vanillic acid solution and the trace elements solution to 50°–55°C. Aseptically add 10.0mL of sterile vanillic acid solution and 10.0mL of sterile trace elements solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Pseudomonas fluorescens*.

VCR Medium

Composition per 1001.0mL:

Agar, noble..... 15.0g

NaNO₃..... 2.0g

KH₂PO₄..... 1.5g

K₂HPO₄..... 1.2g

NH₄Cl..... 0.5g

MgSO₄·7H₂O..... 0.2g

FeCl₃..... 0.01g

CaCl₂·2H₂O..... 15.0mg

CuSO₄·5H₂O..... 1.0mg

Vitamin B₁₂ solution..... 1.0mL

pH 7.2 ± 0.2 at 25°C

Vitamin B₁₂ Solution:

Composition per 10.0mL:

Vitamin B₁₂..... 10.0μg

Preparation of Vitamin B₁₂ Solution: Add vitamin B₁₂ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin B₁₂ solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 1.0mL of sterile vitamin B₁₂ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Sphaerobacter thermomethanica*.

Veal Infusion Agar

Composition per liter:

Agar..... 15.0g

Veal, infusion from..... 10.0g

Pancreatic digest of casein..... 5.0g

Peptic digest of animal tissue..... 5.0g

NaCl..... 5.0g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of microorganisms. Can be used for the cultivation of fastidious microorganisms when enriched with blood or serum.

**Veal Infusion Agar
(ATCC Medium 521)**

Composition per liter:

Veal, infusion from	500.0g
Agar	15.0g
Pancreatic digest of casein	5.0g
Peptic digest of animal tissue.....	5.0g
NaCl	5.0g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of microorganisms. Can be used for the cultivation of fastidious microorganisms when enriched with blood or serum.

**Veal Infusion Agar
(BAM M173)**

Composition per liter:

Veal, infusion from	500.0g
Agar	15.0g
Proteose peptone No. 3	10.0g
NaCl	5.0g
pH 7.3 ± 0.2 at 25°C	

Source: This medium is available from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Pour into sterile Petri dishes or leave in tubes. For slants allow tubes to cool in an inclined position.

Use: For the cultivation of fastidious microorganisms.

Veal Infusion Broth

Composition per liter:

Veal, infusion from	10.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g
NaCl	5.0g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Use freshly prepared solution.

Use: For the cultivation of streptococci and other microorganisms.

**Veal Infusion Broth
(ATCC Medium 521)**

Composition per liter:

Veal, infusion from	500.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g
NaCl	5.0g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Use freshly prepared solution.

Use: For the cultivation and maintenance of *Arthrobacter* species, streptococci, and other microorganisms.

**Veal Infusion Broth
(BAM M173)**

Composition per liter:

Veal, infusion from	500.0g
Proteose peptone No.3	10.0g
NaCl	5.0g
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of fastidious microorganisms.

Veal Infusion Broth with Horse Serum

Composition per liter:

Veal, infusion from	500.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue	5.0g
NaCl.....	5.0g
Horse serum, heat inactivated.....	100.0mL
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components, except horse serum, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 100.0mL of horse serum. Mix thoroughly. Aseptically distribute into tubes or flasks. Use freshly prepared solution or boil without mixing prior to use.

Use: For the cultivation and maintenance of *Streptococcus pyogenes*.

Veal Infusion Broth with Rabbit Serum

Composition per liter:

Veal, infusion from	500.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue	5.0g
NaCl.....	5.0g
Rabbit serum, heat inactivated.....	150.0mL
pH 7.4 ± 0.2 at 25°C	

Preparation of Medium: Add components, except rabbit serum, to distilled/deionized water and bring volume to 850.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 150.0mL of rabbit serum. Mix thoroughly. Aseptically distribute into sterile tubes or flasks. Boil without agitation prior to use. Use freshly prepared solution or boil without mixing prior to use.

Use: For the cultivation and maintenance of *Proteus mirabilis*.

Veal Yeast Extract Medium

See: **VY Medium**

Veillonella Agar**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	5.0g
Yeast extract	3.0g
Sodium thioglycolate	0.75g
Vancomycin	7.5mg
Basic Fuchsin	2.0mg
Sodium lactate (60% solution)	21.0mL

pH 7.5± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Caution: Basic Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Veillonella* species.

Veillonella HiVeg Agar Base with Lactate**Composition per liter:**

Agar	15.0g
Plant hydrolysate	5.0g
Yeast extract	3.0g
Na-thioglycolate	0.75g
Basic Fuchsin	2.0mg
Sodium lactate (60% solution)	21.0mL

pH 7.5± 0.2 at 25°C

Source: This medium, without lactate solution, is available as a premixed powder from HiMedia.

Caution: Basic Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation and cultivation of *Veillonella* species.

Veillonella HiVeg Agar Base with Lactate and Vancomycin**Composition per liter:**

Agar	15.0g
Plant hydrolysate	5.0g
Yeast extract	3.0g
Na-thioglycolate	0.75g
Basic Fuchsin	2.0mg
Sodium lactate (60% solution)	21.0mL
Selective supplement solution	10.0mL

pH 7.5± 0.2 at 25°C

Source: This medium, without lactate solution, is available as a premixed powder from HiMedia.

Caution: Basic Fuchsin is a potential carcinogen and care must be taken to avoid inhalation of the powdered dye and contact with the skin.

Selective Supplement Solution:**Composition per 10.0mL:**

Vancomycin	7.5mg
------------------	-------

Preparation of Selective Supplement Solution: Add vancomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL sterile selective supplement solution. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into sterile tubes or flasks.

Use: For the selective isolation and cultivation of *Veillonella* species.

Veillonella Medium**Composition per liter:**

Pancreatic digest of casein	5.0g
Yeast extract	3.0g
Tween™ 80	1.0g
Glucose	1.0g
Sodium thioglycolate	0.75g
Sodium lactate (60% solution)	21.0mL

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5 with K₂CO₃. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Veillonella* species.

Veillonella Medium, DSM**Composition per liter:**

Sodium lactate (60% solution)	7.5g
Pancreatic digest of casein	5.0g
Yeast extract	3.0g
Tween™ 80	1.0g
Glucose	1.0g
Sodium thioglycolate	0.75g
Putrescine	3.0mg
Resazurin	1.0mg

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Prepare and dispense medium anaerobically under 100% N₂. Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5 with K₂CO₃. Anaerobically distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Veillonella parvula* and other *Veillonella* species.

Veillonella Selective Medium**Composition per liter:**

Pancreatic digest of casein	5.0g
Yeast extract	3.0g
Tween™ 80	1.0g
Sodium thioglycolate	0.75g

Sodium lactate (50% solution).....	25.0mL
Streptomycin solution.....	10.0mL
pH 6.6 ± 0.2 at 25°C	

Streptomycin Solution:

Composition per 10.0mL:

Streptomycin.....	5.0mg
-------------------	-------

Preparation of Streptomycin Solution: Add streptomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except streptomycin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.6 with K₂CO₃. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile streptomycin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Veillonella* species.

**VEN CHI2 Medium
(DSMZ Medium 293a)**

Composition per liter:

NaCl.....	20.0g
MgCl ₂ ·6H ₂ O.....	3.0g
KCl.....	0.5g
NH ₄ Cl.....	0.25g
KH ₂ PO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.15g
Resazurin.....	1.0mg
NaHCO ₃ solution.....	10.0mL
Na ₂ -succinate solution.....	10.0mL
Na ₂ S·9H ₂ O solution.....	10.0mL
Vitamin solution.....	10.0mL
Quinic acid solution.....	10.0mL
Trace elements solution SL-10.....	1.0mL

pH 7.2 ± 0.2 at 25°C

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.36g
--	-------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

NaHCO₃ Solution:

Composition per 10.0mL:

NaHCO ₃	2.5g
--------------------------	------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Na₂-succinate Solution:

Composition per 10.0mL:

Na ₂ -succinate.....	3.25g
---------------------------------	-------

Preparation of Na₂-succinate Solution: Add Na₂-succinate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg

Riboflavin.....	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
p-Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin.....	2.0mg
Folic acid.....	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

Quinic Acid Solution:

Composition per 10.0mL:

Quinic acid.....	1.0g
------------------	------

Preparation of Quinic Acid Solution: Add quinic acid to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Adjust pH to 7.0. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Add components, except NaHCO₃ solution, Na₂-succinate solution, Na₂S·9H₂O solution, vitamin solution, quinic acid solution, and trace elements solution SL-10, to distilled/deionized water and bring volume to 949.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and anaerobically add 10.0mL NaHCO₃ solution, 10.0mL Na₂-succinate solution, 10.0mL Na₂S·9H₂O solution, 10.0mL vitamin solution, 10.0mL quinic acid solution, and 1.0mL trace elements solution SL-10. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or bottles. After inoculation, flush and repressurize the gas head space of culture bottles with sterile 80% N₂ + 20% CO₂ to 1 bar overpressure.

Use: For the cultivation of *Ilyobacter insuetus*.

**Venenivibrio stagnispumantis Medium
(DSMZ Medium 1146)**

Composition per liter:

MgSO ₄ ·7H ₂ O.....	7.0g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	2.0g
MES.....	1.95g
KCl.....	0.5g
MgCl ₂ ·6H ₂ O.....	0.4g
CaCl ₂ ·2H ₂ O.....	0.4g
NaOH.....	1.36g
NH ₄ Cl.....	0.2g

KH ₂ PO ₄	0.25g
Trace elements solution	10.0mL
pH 5.5 ± 0.2 at 25°C	

Trace Elements Solution:**Composition per liter:**

EDTA	5.0g
CoCl ₂ ·6H ₂ O	150.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	100.0mg
FeSO ₄ ·7H ₂ O.....	100.0mg
AlCl ₃ ·6H ₂ O.....	40.0mg
Na ₂ WO ₄ ·2H ₂ O.....	30.0mg
CuCl ₂ ·2H ₂ O.....	20.0mg
NiSO ₄ ·6H ₂ O.....	20.0mg
NaHSeO ₃	10.0mg
H ₃ BO ₃	10.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	10.0mg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Adjust pH to 3.0 with HCl. Mix thoroughly.

Preparation of Medium: Prepare anaerobic distilled/deionized water by sparging with 100% CO₂. Adjust pH to 5.5. Sparge with CO₂ for 15 min. Add components to the distilled/deionized anaerobic water and bring volume to 1.0L. Dispense into culture tubes. Stopper and seal tubes by crimping caps onto stoppers. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the cultivation of *Venenivibrio stagnispumantis*.

Viability-Preserving Microbiostatic Medium

See: **VMGII Medium**

Vibrio* Agar*Composition per liter:**

Sucrose.....	20.0g
Agar	15.0g
NaCl.....	10.0g
Sodium citrate·2H ₂ O.....	10.0g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	6.5g
Oxgall.....	5.0g
Yeast extract.....	5.0g
Pancreatic digest of casein.....	4.0g
Proteose peptone.....	3.0g
Sodium deoxycholate.....	1.0g
Sodium lauryl sulfate.....	0.2g
Water Blue.....	0.2g
Cresol Red.....	0.02g

pH 8.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.5. Gently heat and bring to boiling. Do not autoclave. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of the *Vibrio cholerae*.

Vibrio costicola* Medium*Composition per liter:**

China Blue.....	0.2g
Cresol Red.....	0.2g

pH 8.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.5. Gently heat and bring to boiling. Do not autoclave. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the isolation and cultivation of the *Vibrio cholerae*.

Vibrio* Medium*Composition per liter:**

NaCl.....	10.0g
Pancreatic digest of casein.....	10.0g
MgCl ₂ ·6H ₂ O.....	4.0g
KCl.....	1.0g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Vibrio diazotrophicus*.

Vibrio natriegens* Medium*Composition per liter:**

Urea.....	20.0g
NaCl.....	15.0g
Agar	15.0g
Peptone.....	5.0g
Meat extract.....	3.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Vibrio natriegens*.

***Vibrio parahaemolyticus* Agar
(VP Agar)**

Composition per liter:

Agar	20.0g
NaCl	20.0g
Sucrose.....	20.0g
Sodium citrate	10.0g
Na ₂ S ₂ O ₃ ·5H ₂ O	10.0g
Peptone.....	10.0g
Sodium taurocholate	5.0g
Yeast extract.....	5.0g
Sodium lauryl sulfate	0.2g
Bromthymol Blue	0.04g
Thymol Blue	0.04g

pH 8.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Pour into sterile Petri dishes.

Use: For the isolation, cultivation, enumeration, and presumptive identification of coliforms in milk, food, and other specimens of sanitary significance. For the enumeration of bacteria in cheese, especially *Pseudomonas fragi*, *Pseudomonas viscosa*, and *Alcaligenes metalcaligenes*. Sucrose-fermenting bacteria appear as yellow colonies with pale yellow peripheries. Sucrose-nonfermenting bacteria appear as mucoid, green colonies with a dark green center.

***Vibrio parahaemolyticus* Sucrose Agar
(VPSA)**

Composition per liter:

NaCl	30.0g
Agar	15.0g
Sucrose.....	10.0g
Yeast extract.....	7.0g
Tryptose	5.0g
Pancreatic digest of casein.....	5.0g
Bile salts No. 3	1.5g
Bromthymol Blue	0.025g

pH 8.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Cool to 50°C. Pour into sterile Petri dishes in 20.0mL volumes. Allow plates to dry before using.

Use: For the isolation, cultivation, and differentiation of *Vibrio parahaemolyticus* from seafood. *Vibrio parahaemolyticus* and *Vibrio vulnificus* appear as blue to green colonies. Other *Vibrio* species appear as yellow colonies.

***Vibrio parahaemolyticus* Sucrose HiVeg Agar**

Composition per 100.0mL:

Bromthymol Blue	0.6g
Ethanol, 70%.....	100.0mL

Preparation of Dye Solution: Add Bromthymol Blue to 100.0mL of 70% ethanol. Mix thoroughly.

Cellobiose Solution:

Composition per 100.0mL:

Cellobiose 10.0g

Preparation of Cellobiose Solution: Add cellobiose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat while mixing to dissolve the cellobiose. Cool. Filter sterilize.

Preparation of Medium: Add components, except cellobiose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat until dissolved. Adjust pH to 8.2. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 100.0mL sterile cellobiose solution. Mix thoroughly and pour into sterile Petri dishes. Final color of medium should be light blue.

Use: For the detection of *Vibrio vulnificus* from seafoods.

Violet Peptone Bile Lactose Broth

Composition per liter:

Lactose 10.0g
Peptone 10.0g
Bile salts 5.0g
Gentian Violet 0.04g

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective cultivation of members of the Enterobacteriaceae.

Violet Red Bile Agar

Composition per liter:

Agar 15.0g
Lactose 10.0g
Glucose 10.0g
Pancreatic digest of gelatin 7.0g
NaCl 5.0g
Yeast extract 3.0g
Bile salts 1.5g
Neutral Red 0.03g
Crystal Violet 2.0mg

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour immediately into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of members of the Enterobacteriaceae from brined vegetables. For the enumeration of members of the Enterobacteriaceae from brined vegetables by the pour plate technique.

**Violet Red Bile Agar
(VRB Agar)**

Composition per liter:

Agar 15.0g
Lactose 10.0g

Pancreatic digest of gelatin 7.0g
NaCl 5.0g
Yeast extract 3.0g
Bile salts 1.5g
Neutral Red 0.03g
Crystal Violet 2.0mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour immediately into sterile Petri dishes or leave in tubes.

Use: For the detection of coliform bacteria in water and food.

Violet Red Bile Agar, HiVeg

Composition per liter:

Agar 15.0g
Lactose 10.0g
Plant peptone 7.0g
NaCl 5.0g
Yeast extract 3.0g
Synthetic detergent No. 1 1.5g
Neutral Red 0.03g
Crystal Violet 2.0mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Boil to dissolve components completely. Do not autoclave. Cool to 45°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection of coliform bacteria in water and food.

Violet Red Bile Agar with MUG

Composition per liter:

Agar 15.0g
Lactose 10.0g
Pancreatic digest of gelatin 7.0g
NaCl 5.0g
Yeast extract 3.0g
Bile salts 1.5g
MUG (4-methylumbelliferyl-β-D-glucuronide) 0.1g
Neutral Red 0.03g
Crystal Violet 2.0mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour immediately into sterile Petri dishes or leave in tubes.

Use: For the differentiation of *Escherichia coli* from dairy products and other foods based on their ability to produce β-glucuronidase.

Violet Red Bile Glucose Agar**Composition per liter:**

Agar	12.0g
Glucose	10.0g
Peptone.....	7.0g
NaCl.....	5.0g
Yeast extract.....	3.0g
Bile salts No. 3.....	1.5g
Neutral Red.....	0.03g
Crystal Violet.....	2.0mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the detection and enumeration of Enterobacteriaceae from foods.

Violet Red Glucose HiVeg Agar with Lactose**Composition per liter:**

Agar	15.0g
Lactose monohydrate.....	9.5g
Glucose monohydrate.....	9.09g
Plant peptone.....	7.0g
NaCl.....	5.0g
Yeast extract.....	3.0g
Synthetic detergent No. I.....	1.5g
Neutral Red.....	0.03g
Crystal Violet.....	2.0mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the detection and enumeration of Enterobacteriaceae from raw foods.

Violet Red Glucose HiVeg Agar without Lactose**Composition per liter:**

Agar	12.0g
Glucose.....	10.0g
Plant peptone.....	7.0g
NaCl.....	5.0g
Yeast extract.....	3.0g
Synthetic detergent No. I.....	1.5g
Neutral Red.....	0.03g
Crystal Violet.....	2.0mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the detection and enumeration of Enterobacteriaceae from raw foods.

Violet Red HiVeg Agar**Composition per liter:**

Agar	15.0g
Lactose.....	10.0g
Plant peptone.....	7.0g
NaCl.....	5.0g
Yeast extract.....	3.0g
Synthetic detergent No. I.....	1.5g
Neutral Red.....	0.03g
Crystal Violet.....	2.0mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the detection and enumeration of Enterobacteriaceae from foods. Recommended by the ISO Committee for selective isolation and enumeration of coli-aerogenes bacteria in water. For the detection and enumeration of coliforms from water and food.

Violet Red HiVeg Agar (1.2%)**Composition per liter:**

Agar	12.0g
Lactose.....	10.0g
Plant peptone.....	7.0g
NaCl.....	5.0g
Yeast extract.....	3.0g
Synthetic detergent No. I.....	1.5g
Neutral Red.....	0.03g
Crystal Violet.....	2.0mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the detection and enumeration of Enterobacteriaceae from foods. Recommended by the ISO Committee for selective isolation and enumeration of coli-aerogenes bacteria in water. For the detection and enumeration of coliforms from water and food.

Violet Red HiVeg Broth**Composition per liter:**

Plant peptone.....	7.0g
NaCl.....	5.0g
Yeast extract.....	3.0g
Lactose.....	1.5g
Synthetic detergent No. I.....	1.5g
Neutral Red.....	0.03g
Crystal Violet.....	2.0mg

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not autoclave.

Use: For the isolation and detection of coliforms from water, milk, and other foods.

Viral Transport Medium (VTM)

Composition per 104.1mL:

Bovine serum albumin	0.5g
Veal infusion broth.....	100.0mL
Phenol Red	0.4mL
Amphotericin B solution.....	2.0mL
Gentamicin solution	1.0mL
Vancomycin solution.....	0.2mL

pH 7.4 ± 0.2 at 25°C

Veal Infusion Broth:

Composition per liter:

Veal, infusion from	500.0g
NaCl	5.0g
Pancreatic digest of casein.....	5.0g
Peptic digest of animal tissue.....	5.0g

Preparation of Veal Infusion Broth: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Use freshly prepared solution.

Amphotericin B Solution:

Composition per 10.0mL:

Amphotericin B.....	2.5g
---------------------	------

Preparation of Amphotericin B Solution: Add amphotericin B to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Gentamicin Solution:

Composition per 10.0mL:

Gentamicin	0.5g
------------------	------

Preparation of Gentamicin Solution: Add gentamicin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Vancomycin Solution:

Composition per 10.0mL:

Vancomycin	0.5g
------------------	------

Preparation of Vancomycin Solution: Add vancomycin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: To 100.0mL of sterile veal infusion broth, aseptically add bovine serum albumin, Phenol Red, amphotericin B solution, gentamicin solution, and vancomycin solution. Mix thoroughly. Dispense 2.0mL of medium into serum vials. Store at 4°C and use for up to 2 months.

Use: For the maintenance and transport of specimens suspected of being virally infected.

Vitamin B₆ Blood Agar (ATCC Medium 860)

Composition per liter:

Agar	15.0g
Pancreatic digest of casein.....	15.0g
Papaic digest of soybean meal.....	5.0g
NaCl.....	5.0g
Sheep blood, defibrinated.....	50.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile, defibrinated sheep blood. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of fastidious microorganisms, especially *Streptococcus* species.

Vitamin B₆ Blood Agar with Pyridoxal-HCl (ATCC Medium 1511)

Composition per liter:

Agar	15.0g
Pancreatic digest of casein.....	15.0g
Papaic digest of soybean meal.....	5.0g
NaCl.....	5.0g
Pyridoxal-HCl	0.01g
Sheep blood, defibrinated.....	50.0mL

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile, defibrinated sheep blood. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of fastidious microorganisms, especially *Streptococcus* species.

Vitamin B₁₂ Assay Medium

Composition per liter:

Glucose	40.0g
Sodium acetate.....	20.0g
Vitamin assay casamino acids	12.0g
Sorbitan monooleate complex	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.4g
DL-Tryptophan.....	0.2g
L-Cystine	0.2g
Adenine.....	0.02g
FeSO ₄	0.02g
Guanine.....	0.02g
MnSO ₄ ·5H ₂ O.....	0.02g
NaCl.....	0.02g
Uracil	0.02g
Pyridoxine-HCl	4.0mg
Niacin.....	2.0mg
Riboflavin	2.0mg
Thiamine-HCl	2.0mg
Xanthine.....	1.0mg

Calcium pantothenate	200µg
<i>p</i> -Aminobenzoic acid	200µg
Folic acid	100µg
Biotin	10µg

pH 6.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in 5.0mL volumes. Add standard solution or test solutions to each tube. Adjust the volume of each tube to 10.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the microbiological assaying of vitamin B₁₂ using *Lactobacillus leichmannii* as the test organism.

Vitamin B₁₂ Assay Medium with Colistin

Composition per liter:

Glucose	40.0g
Sodium acetate	20.0g
Vitamin assay casamino acids	12.0g
Sorbitan monooleate complex	2.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.4g
Colistin sulfate	0.5g
DL-Tryptophan	0.2g
L-Cystine	0.2g
Adenine	0.02g
FeSO ₄	0.02g
Guanine	0.02g
MnSO ₄ ·5H ₂ O	0.02g
NaCl	0.02g
Uracil	0.02g
Pyridoxine-HCl	4.0mg
Niacin	2.0mg
Riboflavin	2.0mg
Thiamine-HCl	2.0mg
Xanthine	1.0mg
Calcium DL-pantothenate	200µg
<i>p</i> -Aminobenzoic acid	200µg
Folic acid	100µg
Biotin	10µg
Cyanocobalamin	250.0ng

pH 6.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in 5.0mL volumes. Add standard solution or test solutions to each tube. Adjust the volume of each tube to 10.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus leichmannii*.

Vitamin B₁₂ HiVeg Agar

Composition per liter:

Glucose	20.0g
K ₂ SO ₄	20.0g
Agar	15.0g

Sodium acetate	12.0g
Plant acid hydrolysate, vitamin free	10.0g
Soypeptone, vitamin free	5.0g
Na-thioglycollate	1.7g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	1.0g
Polysorbate 80	1.0g
Ribonucleic acid	1.0g
MgSO ₄	0.4g
L-Cystine	0.2g
DL-Tryptophan	0.2g
NaCl	0.02g
FeSO ₄	0.02g
MnSO ₄	0.02g
Adenine sulfate	0.0176g
Guanine hydrochloride	0.0124g
Uracil	0.01g
Xanthine (sodium)	0.01g
Pyridoxal-5-phosphate	4.0mg
Pyridoxine hydrochloride	4.0mg
Calcium pantothenate	2.0mg
Niacin	2.0mg
Riboflavin	2.0mg
Thiamine hydrochloride	2.0mg
Folic acid	1.0mg
Biotin	1.0µg

pH 6.3 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 2–3 min. Distribute into tubes in 5.0mL volumes. Add standard solution or test solutions to each tube. Adjust the volume of each tube to 10.0mL with distilled/deionized water. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the microbiological assaying of vitamin B₁₂ using *Lactobacillus leichmannii* as the test organism.

Vitamin B₁₂ Medium

See: B₁₂ Medium

Vitamin B₁₂ Medium

Composition per liter:

Agar	15.0g
Casein hydrolysate	6.0g
K ₂ HPO ₄	0.2g
MgSO ₄ ·7H ₂ O	0.2g
Asparagine	0.15g
Vitamin B ₁₂	40.0µg
FeSO ₄ ·7H ₂ O	0.1µg
Glycerol	2.0mL

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Escherichia coli*.

Vitamin B₁₂ Nutrient Agar**Composition per liter:**

Agar	15.0g
Peptone.....	5.0g
NaCl.....	5.0g
Yeast extract.....	2.0g
Beef extract.....	1.0g
Vitamin B ₁₂	0.4mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Escherichia coli*.

Vitamin Medium for *Microbacterium***Composition per liter:**

Casamino acids	10.0g
Glucose	10.0g
(NH ₄) ₂ SO ₄	5.0g
KH ₂ PO ₄	5.0g
K ₂ HPO ₄	5.0g
MgSO ₄ ·7H ₂ O.....	0.5g
Vitamin solution.....	4.0mL

pH 7.0 ± 0.2 at 25°C

Vitamin Solution:**Composition per 100.0mL:**

Thiamine	0.05g
Riboflavin	0.05g
Pyridoxine-HCl	0.05g
Calcium pantothenate	0.05g
Nicotinic acid.....	0.01g
Biotin	0.01g
Folic acid.....	0.01g
<i>p</i> -Aminobenzoic acid.....	0.01g

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except vitamin solution, to distilled/deionized water and bring volume to 996.0mL. Mix thoroughly. Autoclave for 10 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 4.0mL of sterile vitamin solution. Mix thoroughly. Distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Microbacterium* species.

VL Agar with Blood**Composition per liter:**

Agar	20.0g
Tryptone.....	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Beef extract.....	2.0g
Glucose	2.0g
L-Cysteine-HCl.....	0.3g
Sheep blood or horse blood	100.0mL

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Adjust pH to 7.4. Gently heat and bring to boiling. Autoclave for 15

min at 15 psi pressure–121°C. Cool to 50°–55°C. Warm sheep blood to 50°C. Aseptically add 100.0mL of sterile sheep blood or 100.0mL of sterile horse blood. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Bacterionema helco-genes*, *Bacteroides nodosus*, *Bacteroides pyogenes*, *Bacteroides salivovus*, *Bacteroides suis*, *Bifidobacterium adolescentis*, *Bifidobacterium bifidum*, *Bifidobacterium breve*, *Bifidobacterium longum*, *Campylobacter coli*, *Campylobacter concisus*, *Campylobacter fetus*, *Campylobacter hyointestinalis*, *Campylobacter jejuni*, *Campylobacter lari*, *Campylobacter mucosalis*, *Campylobacter* species, *Campylobacter sputorum*, *Capnocytophaga gingivalis*, *Capnocytophaga ochracea*, *Capnocytophaga sputigena*, *Clostridium colinum*, *Clostridium difficile*, *Clostridium* species, *Clostridium spiroforme*, *Falcivibrio grandis*, *Falcivibrio vaginalis*, *Fusobacterium simiae*, *Gardnerella vaginalis*, *Leptotrichia buccalis*, *Pectinatus frisingensis*, *Peptostreptococcus anaerobius*, *Peptostreptococcus asaccharolyticus*, *Peptostreptococcus indolicus*, *Peptostreptococcus magnus*, *Peptostreptococcus micros*, *Peptostreptococcus prevotii*, *Peptostreptococcus tetradius*, *Propionibacterium acnes*, *Propionibacterium avidum*, *Propionibacterium granulosum*, *Propionibacterium lymphophilum*, and *Tonsillophilus suis*.

VL Medium**Composition per liter:**

Pancreatic digest of casein.....	10.0g
Agar	6.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Meat extract	2.0g
Glucose	2.0g
L-Cysteine-HCl·H ₂ O.....	0.3g
Antibiotic solution	10.0mL

pH 7.4 ± 0.2 at 25°C

Antibiotic Solution:**Composition per 10.0mL:**

Kanamycin.....	0.1g
Vancomycin	7.5mg

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except antibiotic solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile antibiotic solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the isolation and cultivation of *Bacteroides* species.

VL Medium**Composition per liter:**

Pancreatic digest of casein.....	10.0g
Agar	6.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Meat extract	2.0g
Glucose	2.0g
L-Cysteine-HCl·H ₂ O.....	0.3g

NaN ₃	0.05g
Ethyl Violet	0.05g
pH 7.4 ± 0.2 at 25°C	

Caution: Sodium azide is toxic. Azides also react with metals and disposal must be highly diluted.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Fusobacterium* species.

VM Medium

Composition per liter:

KOH	4.5g
Beef extract	3.0g
DL-Malic acid	2.5g
Agar	2.0g
NaCl	1.0g
Yeast extract	1.0g
KH ₂ PO ₄	0.6g
NH ₄ Cl	0.5g
K ₂ HPO ₄	0.4g
MgSO ₄ ·7H ₂ O	0.2g
Ferric EDTA	66.0mg
CaCl ₂	20.0mg
MnSO ₄ ·H ₂ O	10.0mg
Na ₂ MoO ₄ ·2H ₂ O	2.0mg
Biotin	0.1mg

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of unidentified bacteria ATCC 51563 and ATCC 51564.

VM1 Medium (DSMZ Medium 890)

Composition per liter:

NaCl	20.0g
MgCl ₂ ·6H ₂ O	12.6g
Na ₂ SO ₄	3.24g
CaCl ₂ ·2H ₂ O	2.38g
KCl	0.56g
Sulfur, powdered	0.5g
NH ₄ Cl	0.3g
K ₂ HPO ₄	0.2g
NaHCO ₃	0.16g
Trace elements solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g

FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 using H₂SO₄. Fill 20.0mL medium into 100.0mL serum bottles and seal with a rubber stopper. Add atmosphere of 78% H₂ + 20% CO₂ + 2% O₂ with an overpressure. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the autotrophic cultivation of *Hydrogenothermus marinus*.

VM1 Medium (DSMZ Medium 890)

Composition per liter:

NaCl	20.0g
MgCl ₂ ·6H ₂ O	12.6g
Peptone	5.0g
Na ₂ SO ₄	3.24g
CaCl ₂ ·2H ₂ O	2.38g
Starch	2.0g
Yeast extract	1.0g
KCl	0.56g
Sulfur, powdered	0.5g
NH ₄ Cl	0.3g
K ₂ HPO ₄	0.2g
NaHCO ₃	0.16g
Trace elements solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
CaCl ₂ ·2H ₂ O	0.1g
FeSO ₄ ·7H ₂ O	0.1g
NiCl ₂ ·6H ₂ O	0.025g
KAl(SO ₄) ₂ ·12H ₂ O	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 using H₂SO₄. Fill 20.0mL medium into 100.0mL serum bottles and seal

with a rubber stopper. Add atmosphere of 80% N₂ + 20% air. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the heterotrophic cultivation of *Hydrogenothermus marinus*.

VMGII Medium

(Viability-Preserving Microbiostatic Medium)

Composition per 1100.0mL:

Solution 1	900.0mL
Solution 2	100.0mL
Salt stock solution	100.0mL

Solution 1:

Composition per 900.0mL:

Noble agar	0.1g
------------------	------

Preparation of Solution 1: Add agar to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to 45°–50°C.

Solution 2:

Composition per 100.0mL:

Charcoal, bacteriological	10.0g
Gelatin peptone	10.0g
Meat peptone	1.0g
Cysteine·HCl	0.5g
Thioglycolic acid	0.5mL

Preparation of Solution 2: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Stock Salt Solution:

Composition per liter:

Sodium glycerophosphate	100.0g
NaCl	10.0g
KCl	4.2g
CaCl ₂ ·6H ₂ O	2.4g
MgSO ₄ ·7H ₂ O	1.0g
Phenylmercuric acetate	0.03g

Preparation of Stock Salt Solution: Add phenylmercuric acetate to approximately 800.0mL of distilled/deionized water. Gently heat. Add remaining components. Bring volume to 1.0L with distilled/deionized water.

Preparation of Medium: To 900.0mL of cooled solution 1, add 100.0mL of solution 2 and 100.0mL of stock salt solution. Mix thoroughly. Distribute into screw-capped tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of oral streptococci, including *Streptococcus mutans* and *Streptococcus sanguis*, and nonspore-forming bacteria, including *Lactobacillus* species from human dental plaque.

Vogel-Bonner Minimal Medium

Composition per liter:

K ₂ HPO ₄	10.0g
NaNH ₄ HPO ₄ ·H ₂ O	3.5g
Citric acetate	2.0g
Glucose	2.0g
MgSO ₄ ·7H ₂ O	200.0mg
Biotin solution	0.1mL

Biotin Solution:

Composition per 100.0mL:

Biotin	2.5g
--------------	------

Preparation of Biotin Solution: Add biotin to 50% ethanol and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Store at 5°C.

Preparation of Medium: Add components, except biotin solution, to distilled/deionized water and bring volume to 999.9mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 0.1mL of sterile biotin solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Neurospora* species.

Vogel and Johnson Agar

Composition per liter:

Agar	16.0g
Pancreatic digest of casein	10.0g
D-Mannitol	10.0g
Glycine	10.0g
Yeast extract	5.0g
K ₂ HPO ₄	5.0g
LiCl	5.0g
Phenol Red	0.025g
K ₂ TeO ₃ solution	20.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Caution: Lithium chloride is harmful. Avoid bodily contact and inhalation of vapours. On contact with skin wash with plenty of water immediately.

K₂TeO₃ Solution:

Composition per 100.0mL:

K ₂ TeO ₃	1.0g
---------------------------------------	------

Preparation of K₂TeO₃ Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except K₂TeO₃ solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL of sterile K₂TeO₃ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the detection of coagulase-positive *Staphylococcus aureus*.

Vogel-Johnson Agar Base, HiVeg

Composition per liter:

Agar	16.0g
K ₂ HPO ₄	5.0g
Glycine	10.0g
Plant hydrolysate	10.0g
Mannitol	10.0g
LiCl	5.0g
Yeast extract	5.0g
Phenol Red	0.025g
K ₂ TeO ₃ solution	20.0mL
pH 7.2 ± 0.2 at 25°C	

Source: This medium, without tellurite, is available as a premixed powder from HiMedia.

Caution: Lithium chloride is harmful. Avoid bodily contact and inhalation of vapours. On contact with skin wash with plenty of water immediately.

K₂TeO₃ Solution:

Composition per 100.0mL:

K₂TeO₃ 1.0g

Preparation of K₂TeO₃ Solution: Add K₂TeO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Potassium tellurite is toxic.

Preparation of Medium: Add components, except K₂TeO₃ solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 20.0mL of sterile K₂TeO₃ solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the detection of coagulase-positive *Staphylococcus aureus*.

Vogel N Medium

See: **N DeVogel Medium**

Vogel S Medium

for Slime-Like *Neurospora*

Yeast extract 0.75g
Pancreatic digest of gelatin 0.5g
Beef extract 0.3g
Vogel N 10X solution 10.0mL
Sorbitol 7.5mL

Vogel N 10X Solution:

Composition per 100.0mL:

Sucrose 15.0g
KH₂PO₄ 5.0g
Trisodium phosphate 3.0g
MgSO₄·7H₂O 0.2g
CaCl₂·H₂O solution 20.0mL
Biotin solution 5.0mL
Trace elements solution 5.0mL

Preparation of Vogel N Solution: Add components, except biotin solution and trace elements solution, to distilled/deionized water and bring volume to 70.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 5.0 mL of sterile biotin solution and 5.0mL of sterile trace elements solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

CaCl₂·H₂O Solution:

Composition per 20.0mL:

CaCl₂·H₂O 0.1g

Preparation of CaCl₂·H₂O Solution: Add CaCl₂·H₂O to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly.

Biotin Solution:

Composition per 100.0mL:

Biotin 5.0mg

Preparation of Biotin Solution: Add biotin to 50% ethanol and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Store at 5°C.

Trace Elements Solution:

Composition per 100.0mL:

Citric acid·H₂O 5.0g
ZnSO₄·7H₂O 5.0g

Fe(NH₄)₂(SO₄)₂·6H₂O 1.0g
CuSO₄·5H₂O 0.25g
H₃BO₃, anhydrous 0.05g
MnSO₄·H₂O 0.05g
Na₂MoO₄·2H₂O 0.05g

Preparation of Trace Elements Solutions: Add components successively to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly after addition of each component. Filter sterilize. Add 2–3mL of chloroform as a preservative. Store at 25°C.

Preparation of Medium: Add components, except Vogel N 10X solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile Vogel N 10X solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Neurospora* species.

Voges-Proskauer Medium

See: **VP Medium**

Von Hofsten & Malmquist Medium B

Composition per liter:

Agar 15.0g
NaNO₃ 2.0g
K₂HPO₄ 0.5g
CaCl₂·H₂O 0.02g
FeSO₄·7H₂O 0.02g
MgSO₄·7H₂O 0.02g
MnSO₄·H₂O 0.02g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Alteromonas* species and *Cytophaga saccharophila*.

VP Agar

See: **Vibrio parahaemolyticus Agar**

VP Broth, Modified, Smith, Gordon, and Clark

Composition per liter:

Proteose peptone 7.0g
Glucose 5.0g
NaCl 5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes in 5.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Bacillus cereus* from foods.

VP HiVeg Medium

Composition per liter:

Agar 20.0g
NaCl 20.0g
Sucrose 20.0g
Plant peptone 10.0g
Sodium citrate 10.0g
Na₂S₂O₃ 10.0g

Synthetic detergent No. V	5.0g
Yeast extract	5.0g
Sodium lauryl sulfate	0.2g
Bromthymol Blue	0.04g
Thymol Blue	0.04g

pH 6.9 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.9. Distribute into tubes in 3.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of bacteria based on their ability to produce acetoin.

VP Medium (Voges-Proskauer Medium)

Composition per liter:

Peptone.....	7.0g
K ₂ HPO ₄	5.0g
Glucose	5.0g

pH 6.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.9. Distribute into tubes in 3.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and differentiation of bacteria based on their ability to produce acetoin.

VPSA

See: *Vibrio parahaemolyticus* Sucrose Agar

VRB Agar

See: *Violet Red Bile Agar*

VRB Agar, Fluorocult (Fluorocult VRB Agar)

Composition per liter:

Agar	13.0g
Lactose	10.0g
Peptone from meat	7.0g
NaCl	5.0g
Yeast extract	3.0g
Bile salts mixture	1.5g
4-Methylumbelliferyl-β-D-glucuronide	0.1g
Neutral Red	0.03g
Crystal Violet	0.002g

pH 7.4 ± 0.2 at 25°C

Source: This medium is available from Merck.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat in a boiling water bath or in free flowing steam with frequent stirring until completely dissolved. Do not boil for more than 2 min. Do not autoclave. Do not overheat. Pour into sterile Petri dishes. The plates are clear and dark red.

Use: For the detection and enumeration of coliform bacteria, in particular *E. coli*. Crystal Violet and bile salts largely inhibit the growth of Gram-positive accompanying bacterial flora. Lactose-positive colo-

nies show a color change to red of the pH indicator. *E. coli* colonies show a fluorescence under UV light. Lactose-negative Enterobacteriaceae are colorless. Lactose-positive colonies are red and often surrounded by a turbid zone due to the precipitation of bile acids. Light blue fluorescing colonies denote *E. coli*.

VRB MUG Agar (Violet Red Bile Lactose MUG Agar)

Composition per liter:

Agar	13.0g
Lactose	10.0g
Meat peptone	7.0g
NaCl	5.0g
Yeast extract	3.0g
Bile salts mixture	1.5g
4-Methylumbelliferyl-β-D-glucuronide	0.1g
Neutral Red	0.03g
Crystal Violet	0.002g

pH 7.4 ± 0.2 at 37°C

Source: This medium is available from Fluka, Sigma-Aldrich.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Pour into sterile Petri dishes.

Use: For the detection and enumeration of coliform bacteria, in particular *E. coli*. Gram-positive accompanying flora are extensively inhibited by Crystal Violet and bile salts. A color change to red indicates lactose-positive colonies, within which *E. coli* can be demonstrated by fluorescence in the UV.

VRE Agar

Composition per 1004.0mL:

Tryptone.....	20.0g
Agar	10.0g
Yeast extract.....	5.0g
NaCl	5.0g
Sodium citrate	1.0g
Esculin	1.0g
Ferric ammonium citrate.....	0.5g
NaN ₃	0.15g
Selective supplement solution	4.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Selective Supplement Solution:

Composition per 4.0mL:

Meropenem.....	1.0mg
Vancomycin	6.0mg

Preparation of Selective Supplement Solution: Add components to distilled/deionized water and bring volume to 4.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 4.0mL selective supplement solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation of vancomycin resistant enterococci (VRE) from clinical samples. Nonresistant enterococci containing the *Van C* genes will not grow on this medium. The selective supplement suppresses growth of Gram-negative bacteria and *E. gallinarum*. The medium contains an indicator system to detect the growth of esculin-hydrolyzing organisms. Enterococci produce black zones around the colonies from the formation of black iron phenolic compounds derived from esculin-hydrolysis products and ferrous iron.

VRE Agar

Composition per 1004.0mL:

Tryptone.....	20.0g
Agar.....	10.0g
Yeast extract.....	5.0g
NaCl.....	5.0g
Sodium citrate.....	1.0g
Esculin.....	1.0g
Ferric ammonium citrate.....	0.5g
NaN ₃	0.15g
Selective supplement solution.....	4.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Selective Supplement Solution:

Composition per 4.0mL:

Gentamicin.....	512.0mg
-----------------	---------

Preparation of Selective Supplement Solution: Add gentamicin to distilled/deionized water and bring volume to 4.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 4.0mL selective supplement solution. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation of high-level aminoglycoside-resistant enterococci (HLARE) from clinical samples. Nonresistant enterococci containing the *Van C* genes will not grow on this medium. The selective supplement suppresses growth of Gram-negative bacteria and *E. gallinarum*. The medium contains an indicator system to detect the growth of esculin-hydrolyzing organisms. Enterococci produce black zones around the colonies from the formation of black iron phenolic compounds derived from esculin hydrolysis products and ferrous iron.

VRE Broth

Composition per 1004.0mL:

Calf brain infusion solids.....	12.5g
Proteose peptone.....	10.0g
Beef heart infusion solids.....	5.0g
NaCl.....	5.0g
Na ₂ HPO ₄	2.5g
Glucose.....	2.0g
Selective supplement solution.....	4.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Selective Supplement Solution:

Composition per 4.0mL:

Meropenem.....	2.0mg
----------------	-------

Preparation of Selective Supplement Solution: Add meropenem to distilled/deionized water and bring volume to 4.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat while stirring and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 4.0mL selective supplement solution. Mix thoroughly. Aseptically distribute into sterile tubes.

Use: For the isolation of high-level aminoglycoside-resistant enterococci (HLARE) from clinical samples. Nonresistant enterococci will not grow on this medium. The selective supplement suppresses growth of Gram-negative bacteria and *E. gallinarum*.

Wolfe's Mineral Elixir:**Composition per liter:**

MgSO ₄ ·7H ₂ O	30.0g
NaCl	10.0g
MnSO ₄ ·2H ₂ O	5.0g
(NH ₄) ₂ NiSO ₄ ·6H ₂ O	2.8g
CoCl ₂ ·6H ₂ O	1.8g
ZnSO ₄ ·7H ₂ O	1.8g
FeSO ₄ ·7H ₂ O	1.0g
CaCl ₂ ·2H ₂ O	1.0g
KAl(SO ₄) ₂ ·12H ₂ O	0.18g
CuSO ₄ ·5H ₂ O	0.1g
H ₃ BO ₃	0.1g
Na ₂ MoO ₄ ·2H ₂ O	0.1g
Na ₂ SeO ₄	0.1g
Na ₂ WO ₄ ·2H ₂ O	0.1g

Preparation of Wolfe's Mineral Elixir: Adjust pH of 1.0L of distilled/deionized water to 1.0 with dilute H₂SO₄. Add remaining components one at a time. Mix thoroughly to dissolve.

Bicarbonate Solution:**Composition per 10.0mL:**

NaHCO ₃	1.0g
--------------------	------

Preparation of Bicarbonate Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with a gas mixture of 80% N₂ + 20% CO₂. Filter sterilize.

Iron Sulfate Solution:**Composition per 10.0mL:**

FeSO ₄ ·7H ₂ O	0.1g
--------------------------------------	------

Preparation of Iron Sulfate Solution: Add FeSO₄·7H₂O to 0.1N sulfuric acid and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add components, except iron sulfate, bicarbonate, yeast extract, and vitamin solutions, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Boil for 1 min. Cool to room temperature while sparging with 100% N₂. Dispense into culture vessels under an atmosphere of 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add iron sulfate, bicarbonate, yeast extract, and vitamin solutions. Mix thoroughly. Adjust pH to 6.8–7.0. Aseptically dispense into culture vessels. It may be necessary to add 10–20mg sodium dithionite per liter (e.g., from a 5% (w/v) solution, freshly prepared under N₂ and filter-sterilized), if the medium is not completely reduced after inoculation.

Use: For the cultivation of *Vulcanibacillus modesticaldus*.

Vulcanibacillus Medium
(DSMZ Medium 1042)

KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·4H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	0.01g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitritotriacetic acid to 500.0mL of distilled/deionized water. Dissolve by adjusting pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L. Mix thoroughly.

Vitamin Solution:

Composition per liter:

Pyridoxine-HCl.....	10.0mg
Thiamine-HCl·2H ₂ O.....	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
D-Ca-pantothenate.....	5.0mg
p-Aminobenzoic acid.....	5.0mg
Lipoic acid.....	5.0mg
Biotin	2.0mg

Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Filter sterilize.

PIPES Solution:

Composition per liter:

PIPES (Piperazine-N,N'-bis[2-ethane-sulfonic acid])	3.62
---	------

Preparation of PIPES Solution: Add PIPES to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract	0.5g
---------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sparge with 100% N₂.

Sucrose Solution:

Composition per 10.0mL:

Sucrose	1.0g
---------------	------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sparge with 100% N₂.

Tryptone Solution:

Composition per 10.0mL:

Tryptone.....	1.0g
---------------	------

Preparation of Tryptone Solution: Add tryptone to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sparge with 100% N₂.

Potassium Nitrate Solution:

Composition per 10.0mL:

KNO ₃	0.33g
------------------------	-------

Preparation of Potassium Nitrate Solution: Add KNO₃ to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sparge with 100% N₂.

Magnesium Chloride Solution:

Composition per 10.0mL:

MgCl ₂ ·6H ₂ O	0.33g
--	-------

Preparation of Magnesium Chloride Solution: Add 0.33g of MgCl₂·6H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sparge with 100% N₂.

Calcium Chloride Solution:

Composition per 10.0mL:

CaCl ₂ ·2H ₂ O	0.33g
--	-------

Preparation of Calcium Chloride Solution: Add CaCl₂·2H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sparge with 100% N₂.

Preparation of Medium: Add components, except calcium chloride, magnesium chloride, potassium nitrate, tryptone, yeast extract, vitamin, and sucrose solutions, to distilled/deionized water and bring

volume to 940.0mL. Mix thoroughly. Sparge with 100% N₂. Adjust pH to 6.8. Dispense into vessels suitable for anaerobic growth (Hungate tubes or serum bottles) under an atmosphere of 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Add calcium chloride, magnesium chloride, potassium nitrate, tryptone, yeast extract, vitamin, and sucrose solutions. Mix thoroughly. Adjust pH to 6.8. Aseptically dispense into culture vessels.

Use: For the cultivation of *Vulcanithermus mediatlanticus*.

VY Agar

Composition per liter:

Agar	15.0g
Baker's yeast	10.0g
CaCl ₂ ·2H ₂ O	1.0g
Cyanocobalamin	5.0mg
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of myxobacteria.

VY2 Agar

Composition per liter:

Agar	15.0g
Baker's yeast	5.0g
CaCl ₂ ·2H ₂ O	1.0g
Cyanocobalamin	5.0mg
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Myxococcus amylovorans*.

VY5 Agar

Composition per liter:

Agar	15.0g
Baker's yeast	2.0g
CaCl ₂ ·2H ₂ O	1.0g
Cyanocobalamin	5.0mg
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of myxobacteria.

VY Medium (Veal Yeast Extract Medium)

Composition per liter:

Veal, solids from infusion	10.0g
Pancreatic digest of casein	5.0g
Peptic digest of animal tissue	5.0g
NaCl	5.0g
Yeast extract	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus subtilis*.

VY/4-SWS Agar (DSMZ Medium 958)

Composition per 1001.0mL:

NaCl	20.0g
Agar	15.0g
Yeast cell paste (baker's yeast, washed in deionized water) wet weight	2.5g
Seawater salts solution	1.0L
Vitamin B ₁₂ solution	1.0mL
pH 7.5 ± 0.2 at 25°C	

Seawater Salts Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	8.0g
CaCl ₂ ·2H ₂ O	1.0g
KCl	0.5g
NaHCO ₃	0.16g
KBr	0.08g
SrCl ₂ ·6H ₂ O	0.03g
H ₃ BO ₃	0.02g
Ferric citrate	0.01g
di-Na-β-glycerophosphate	0.01g
Trace elements solution SL-4	1.0mL

Trace Elements Solution SL-4:

Composition per liter:

EDTA	0.5g
FeSO ₄ ·7H ₂ O	0.2g
Trace elements solution SL-6	100.0mL

Preparation of Trace Elements Solution SL-4: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Seawater Salts Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Vitamin B₁₂ Solution:

Composition per 10.0mL:

Cyanocobalamin	5.0mg
----------------------	-------

Preparation of Vitamin B₁₂ Solution: Add cyanocobalamin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Add NaCl, agar, and yeast cell paste to 1.0L seawater salts solution. Mix thoroughly. Adjust pH to 7.5 with 1M NaOH. Gently heat and bring to boiling. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 1.0mL sterile vitamin

B₁₂ solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Haliangium ochraceum*, *Haliangium tepidum*, *Plesiocystis pacifica*, and *Enhygromyxa salina* (*Thaxtera salina*).

W Medium

Composition per liter:

Sulfur	10.0g
KH ₂ PO ₄	3.0g
MgSO ₄ ·7H ₂ O.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.25g
(NH ₄) ₂ SO ₄	0.2g
FeSO ₄ ·7H ₂ O.....	10.0mg

pH 3.0 ± 0.2 at 25°C

Preparation of Sulfur: Sterilize by steaming at 100°C for 60 min on 3 consecutive days.

Preparation of Medium: Add components, except sulfur, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0g of sterile sulfur. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Thiobacillus thiooxidans*.

Wadowsky-Yee Medium

See: BCYE Selective Agar with PAV

Wadowsky and Yee Medium, Modified

See: MWY Medium

Wagatsuma Agar

Composition per 1050.0mL:

NaCl	70.0g
Agar	15.0g
Mannitol.....	10.0g
Peptone.....	10.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	3.0g
Crystal Violet.....	1.0mg
Red blood cells.....	50.0mL

pH 8.0 ± 0.2 at 25°C

Red Blood Cells:

Composition per 100.0mL:

Blood, human or rabbit	100.0mL
------------------------------	---------

Preparation of Red Blood Cells: Mix freshly drawn human or rabbit blood with anticoagulant and an equal volume of sterile 0.85% saline solution. Centrifuge cells at 4000 × g at 4°C for 15 min. Pour off saline and wash two more times with sterile saline. After last wash, pour off saline and resuspend cells to their original volume.

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.0. Place in a steam bath for 30 min. Do not autoclave. Cool to 45°–50°C. Add 50.0mL of washed red blood cells. Mix thoroughly. Pour into sterile Petri dishes. Dry plates before using.

Use: For the cultivation and detection of thermostable hemolysin of *Vibrio parahaemolyticus* by the Kanagawa reaction.

Wagatsuma HiVeg Agar Base with Red Blood Cells

Composition per 1050.0mL:

NaCl.....	70.0g
Agar	15.0g
Plant peptone	10.0g
Mannitol.....	10.0g
K ₂ HPO ₄	5.0g
Yeast extract.....	3.0g
Crystal Violet.....	1.0mg
Red blood cells	50.0mL

pH 8.0 ± 0.2 at 25°C

Source: This medium, without red blood cells, is available as a pre-mixed powder from HiMedia.

Red Blood Cells:

Composition per 100.0mL:

Blood, human or rabbit.....	100.0mL
-----------------------------	---------

Preparation of Red Blood Cells: Mix freshly drawn human or rabbit blood with anticoagulant and an equal volume of sterile 0.85% saline solution. Centrifuge cells at 4000 × g at 4°C for 15 min. Pour off saline and wash two more times with sterile saline. After last wash, pour off saline and resuspend cells to their original volume.

Preparation of Medium: Add components, except blood, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 8.0. Place in a steam bath for 30 min. Do not autoclave. Cool to 45°–50°C. Add 50.0mL of washed red blood cells. Mix thoroughly. Pour into sterile Petri dishes. Dry plates before using.

Use: For the cultivation and detection of thermostable hemolysin of *Vibrio parahaemolyticus* by the Kanagawa reaction.

Wakimoto Medium, Modified

Composition per liter:

Agar	15.0g
Sucrose.....	15.0g
Peptone	5.0g
Na ₂ HPO ₄ ·12 H ₂ O.....	2.0g
Ca(NO ₃) ₂ ·4H ₂ O	0.5g
FeSO ₄ ·7H ₂ O.....	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Corynebacterium* species and *Pseudomonas* species.

Waksman's Glucose Agar

Composition per liter:

Agar	12.5g
Glucose	10.0g
Peptone	5.0g
Beef extract.....	5.0g
NaCl.....	5.0g

pH 7.4–7.6 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces* species.

Waksman's Sulfur Medium**Composition** per liter:

KH ₂ PO ₄	3.0g
MgSO ₄ ·7H ₂ O.....	0.5g
(NH ₄) ₂ SO ₄	0.2g
CaCl ₂ ·2H ₂ O.....	0.2g
Fe ₂ (SO ₄) ₃	0.1mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. It is not necessary to sterilize this medium. Distribute into sterile tubes or flasks.

Use: For the cultivation of sulfate-reducing microorganisms from soil.

Wall Defective Bacterial Medium**Composition** per liter:

Sucrose.....	100.0g
Papaic digest of soybean meal.....	20.0g
Agarose.....	10.0g
Yeast extract.....	10.0g
NaCl.....	5.0g
MgSO ₄ ·7H ₂ O.....	2.5g
Horse serum.....	200.0mL
Cholesterol solution.....	10.0mL

pH 7.8 ± 0.2 at 25°C

Cholesterol Solution:**Composition** per 10.0mL:

Cholesterol.....	0.04g
Ethanol (95% solution).....	10.0mL

Preparation of Cholesterol Solution: Add cholesterol to 10.0mL of 95% ethanol. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except cholesterol solution and horse serum, to distilled/deionized water and bring volume to 790.0mL. Mix thoroughly. Adjust pH to 7.8. Add 10.0mL of cholesterol solution. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 200.0mL of sterile horse serum. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of cell wall-deficient bacteria, such as L forms, that depend on osmotic stabilization.

Wallenstein Medium**Composition** per 4.225L:

Malachite Green.....	0.75g
Egg yolk emulsion.....	3.125L
Glycerol.....	100.0mL

pH 6.75 ± 0.2 at 25°C

Egg Yolk Emulsion:**Composition:**

Chicken egg yolks.....	66
Whole chicken egg.....	6

Preparation of Egg Yolk Emulsion: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Mix egg yolks with 6 chicken eggs.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation of *Mycobacterium* species other than *Mycobacterium leprae*.

Wallerstein Laboratory Differential Agar*See: WL Differential Agar***Wallerstein Laboratory Differential Medium***See: WL Differential Medium***Wallerstein Laboratory Medium with Tomato Juice***See: WL Medium with Tomato Juice***Wallerstein Laboratory Nutrient Agar***See: WL Nutrient Agar***Wallerstein Laboratory Nutrient Broth***See: WL Nutrient Broth***Walsby Medium****Composition** per liter:

Co(NO ₃) ₂ ·6H ₂ O.....	0.05mg
Iron-EDTA solution.....	1.0mL

pH 8.5 ± 0.2 at 25°C

Iron-EDTA Solution:**Composition** per liter:

EDTA.....	12.7g
FeSO ₄ ·7H ₂ O.....	4.98g

Preparation of Iron-EDTA Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of planktonic gas-vacuolate cyanobacteria.

Wang's Semisolid HiVeg Medium with Blood**Composition** per liter:

Plant hydrolysate.....	10.0g
Plant peptone.....	10.0g
NaCl.....	5.0g
Agar.....	4.0g
Yeast extract.....	2.0g
Glucose.....	1.0g
NaHSO ₃	0.1g
Sheep blood, defibrinated.....	100.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without sheep blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood. Sheep blood may be replaced by 50.0mL of horse blood and

50.0mL of sterile distilled/deionized water. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes in 4.0mL volumes. Allow tubes to cool in an upright position.

Use: For the cultivation, transport, and maintenance of *Campylobacter* species from foods.

Wang's Transport Storage Medium

Composition per liter:

Pancreatic digest of casein.....	10.0g
Peptic digest of animal tissue.....	10.0g
NaCl.....	5.0g
Agar.....	4.0g
Yeast extract.....	2.0g
Glucose.....	1.0g
NaHSO ₃	0.1g
Sheep blood, defibrinated.....	100.0mL
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components, except sheep blood, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile sheep blood. Sheep blood may be replaced by 50.0mL of horse blood and 50.0mL of sterile distilled/deionized water. Mix thoroughly. Aseptically distribute into sterile screw-capped tubes in 4.0mL volumes. Allow tubes to cool in an upright position.

Use: For the cultivation, transport, and maintenance of *Campylobacter* species from foods.

Water Agar

Composition per liter:

Agar.....	20.0g
-----------	-------

Preparation of Medium: Add agar to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and observation of sporulation of some fungi.

Water Agar

Composition per liter:

Agar.....	15.0g
CaCl ₂ ·2H ₂ O.....	1.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of myxobacteria.

Waxy Maize Starch Medium

Composition per liter:

Agar.....	20.0g
Waxy maize starch.....	5.0g
Pancreatic digest of casein.....	5.0g
Yeast extract.....	5.0g
CoCl ₂ ·6H ₂ O.....	0.1g

CaCl ₂ ·2H ₂ O.....	0.1g
Maltose solution.....	100.0mL
pH 6.7 ± 0.2 at 25°C	

Maltose Solution:

Composition per 100.0mL:

Maltose.....	10.0g
--------------	-------

Preparation of Maltose Solution: Add maltose to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except maltose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.7. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add maltose solution. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus* species.

Wayne Sulfatase Agar

See: Arylsulfatase Agar

WCX Agar

Composition per liter:

Agar.....	15.0g
CaCl ₂ ·2H ₂ O.....	1.0g
Cycloheximide solution.....	100.0mL
pH 7.2 ± 0.2 at 25°C	

Cycloheximide Solution

Composition per 100.0mL:

Cycloheximide.....	2.5mg
--------------------	-------

Preparation of Cycloheximide Solution: Add cycloheximide to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Caution: Cycloheximide is toxic. Avoid skin contact or aerosol formation and inhalation.

Preparation of Medium: Add components, except cycloheximide solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile cycloheximide solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of myxobacteria.

Weitzman, Silva-Hutner Agar

(WSH Agar)

(ATCC Medium 2032)

Composition per liter:

Agar.....	20.0g
Alphacel.....	20.0g
Pabulum Baby Oatmeal.....	10.0g
Hunt's Tomato Paste.....	10.0g
KH ₂ PO ₄	1.5g
MgSO ₄ ·7H ₂ O.....	1.0g
NaNO ₃	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Penicillium* spp. and other fungi.

Wesley Broth

Composition per liter:

Tryptose	20.0g
Bicine (<i>N,N</i> -bis-2-[hydroxyethyl]glycine) buffer	10.0g
NaCl	5.0g
Yeast extract	2.5g
Agar	1.0g
FeSO ₄	0.25g
Na ₂ S ₂ O ₃	0.25g
Sodium pyruvate	0.25g
Antibiotic solution	10.0mL
Alkaline hematin solution	6.25mL

Antibiotic Solution:

Composition per 10.0mL:

Rifampin	0.025g
Cefsulodin	6.25mg
Polymyxin B sulfate	20,000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Alkaline Hematin Solution:

Composition per 10.0mL:

Hemin	0.032g
NaOH (0.15 <i>N</i> solution)	10.0mL

Preparation of Hemin Solution: Add hemin to 10.0mL of NaOH solution. Mix thoroughly. Autoclave for 30 min at 5 psi pressure–108°C. Cool to 25°C.

Preparation of Medium: Add components, except antibiotic solution and alkaline hematin solution, to distilled/deionized water and bring volume to 983.75mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile antibiotic solution and 6.25mL of sterile alkaline hematin solution. Mix thoroughly. Aseptically distribute into sterile tubes. Use medium immediately or store overnight at 4°C.

Use: For the enrichment of *Campylobacter* species from foods.

Wesley Broth Base with Antibiotics and Hematin

Composition per liter:

Tryptose	20.0g
Bicine	10.0g
NaCl	5.0g
Yeast extract	2.5g
Agar	1.0g
FeSO ₄	0.25g
Na ₂ S ₂ O ₃	0.25g
Sodium pyruvate	0.25g
Antibiotic solution	10.0mL
Alkaline hematin solution	6.25mL

pH 8.0 ± 0.2 at 25°C

Source: This medium, without antibiotic and alkaline hematin solutions, is available as a premixed powder from HiMedia.

Antibiotic Solution:

Composition per 10.0mL:

Rifampin	0.025g
Cefsulodin	6.25mg
Polymyxin B sulfate	20,000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Alkaline Hematin Solution:

Composition per 10.0mL:

Hemin	0.032g
NaOH (0.15 <i>N</i> solution)	10.0mL

Preparation of Hemin Solution: Add hemin to 10.0mL of NaOH solution. Mix thoroughly. Autoclave for 30 min at 5 psi pressure–108°C. Cool to 25°C.

Preparation of Medium: Add components, except antibiotic solution and alkaline hematin solution, to distilled/deionized water and bring volume to 983.75mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile antibiotic solution and 6.25mL of sterile alkaline hematin solution. Mix thoroughly. Aseptically distribute into sterile tubes. Use medium immediately or store overnight at 4°C.

Use: For the enrichment of *Campylobacter* species from foods.

Wesley HiVeg Broth Base with Antibiotics and Hematin

Composition per liter:

Plant hydrolysate No. 1	20.0g
Bicine	10.0g
NaCl	5.0g

Cefsulodin	6.25mg
Polymyxin B sulfate	20,000U

Preparation of Antibiotic Solution: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Alkaline Hematin Solution:

Composition per 10.0mL:

Hemin	0.032g
NaOH (0.15 <i>N</i> solution)	10.0mL

Preparation of Hemin Solution: Add hemin to 10.0mL of NaOH solution. Mix thoroughly. Autoclave for 30 min at 5 psi pressure–108°C. Cool to 25°C.

Preparation of Medium: Add components, except antibiotic solution and alkaline hematin solution, to distilled/deionized water and bring volume to 983.75mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 10.0mL of sterile antibiotic solution and 6.25mL of sterile alkaline hematin solution. Mix thoroughly. Aseptically distribute into sterile tubes. Use medium immediately or store overnight at 4°C.

Use: For the enrichment of *Campylobacter* species from foods.

Wheat Peptone Agar

Composition per 750.0mL:

Agar	20.0g
Peptone.....	20.0g
Yeast extract.....	10.0g
Glycerol	10.0g
Wheat grain extract.....	500.0mL

pH 6.8–7.0 at 25°C

Wheat Grain Extract:

Composition per 500.0mL:

Whole wheat	30.0g
-------------------	-------

Preparation of Wheat Grain Extract: Add whole wheat to tap water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Continue boiling for 60 min. Filter through several thicknesses of cheesecloth padded with cotton.

Preparation of Medium: Add agar, peptone, yeast extract, and glycerol to whole grain extract filtrate. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation and utilization of *Septoria nodorum*.

Whey Agar

Composition per liter:

Whey permeate	50.0g
Casein hydrolysate.....	20.0g
Agar	15.0g
Yeast extract.....	10.0g
Tween™ 80	1.0mL

pH 5.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.6. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Lactobacillus* species.

Whey Agar

Composition per liter:

Whey permeate	50.0g
Casein hydrolysate.....	20.0g
Agar	15.0g
Yeast extract.....	10.0g
Tween™ 80	1.0mL

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Gently heat and bring to boiling. Distribute into tubes or flasks. Auto-

clave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Lactococcus* species.

Whey Broth

Composition per liter:

Whey permeate.....	50.0g
Casein hydrolysate.....	20.0g
Yeast extract.....	10.0g
Tween™ 80	1.0mL

pH 5.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.6. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus* species.

Whey Broth

Composition per liter:

Whey permeate	50.0g
Casein hydrolysate.....	20.0g
Yeast extract.....	10.0g
Tween™ 80	1.0mL

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactococcus* species.

Wickerham Broth

Composition per 100.0mL:

Carbohydrate.....	10.0g
Yeast nitrogen base	100.0mL

Yeast Nitrogen Base, 10X:

Composition per liter:

Glucose	10.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.1g
CaCl ₂ ·2H ₂ O	0.1g
DL-Methionine.....	0.02g
DL-Tryptophan.....	0.02g
L-Histidine·HCl.....	0.01g
Inositol.....	2.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine·HCl	0.4mg
Pyridoxine.....	0.4mg
Niacin.....	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid.....	0.2mg
Riboflavin	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
KI	0.1mg
CuSO ₄ ·5H ₂ O.....	0.04mg

Folic acid.....	2.0µg
Biotin	2.0µg

pH 4.5 ± 0.2 at 25°C

Preparation of Yeast Nitrogen Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: To 100.0mL of yeast nitrogen base, add 10.0g of carbohydrate. Mix thoroughly. Filter sterilize. Aseptically distribute 0.5mL into tubes containing 4.5mL of sterile, distilled/deionized water.

Use: For the cultivation and differentiation of bacteria based on carbohydrate assimilation.

Wickerham Broth

Composition per 100.0mL:

KNO ₃	0.78g
Yeast carbon base.....	100.0mL

pH 4.5 ± 0.2 at 25°C

Yeast Carbon Base:

Composition per liter:

Glucose	10.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
DL-Methionine.....	0.02g
DL-Tryptophan.....	0.02g
L-Histidine-HCl	0.01g
Inositol	2.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine-HCl	0.4mg
Pyridoxine.....	0.4mg
Niacin.....	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid.....	0.2mg
Riboflavin	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
KI	0.1mg
CuSO ₄ ·5H ₂ O	0.04mg
Folic acid.....	2.0µg
Biotin	2.0µg

Preparation of Yeast Carbon Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: To 100.0mL of yeast carbon base, add 0.78g of KNO₃ (or peptone). Mix thoroughly. Filter sterilize. Aseptically distribute 0.5mL into tubes containing 4.5mL of sterile distilled/deionized water.

Use: For the cultivation and differentiation of bacteria based on nitrate assimilation.

Wickerham Broth with Raffinose

Composition per 100.0mL:

Raffinose.....	20.0g
Yeast nitrogen base	100.0mL

Yeast Nitrogen Base, 10X:

Composition per liter:

Glucose	10.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.1g
CaCl ₂ ·2H ₂ O	0.1g
DL-Methionine.....	0.02g
DL-Tryptophan.....	0.02g
L-Histidine-HCl	0.01g
Inositol	2.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine-HCl	0.4mg
Pyridoxine.....	0.4mg
Niacin.....	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid.....	0.2mg
Riboflavin	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
KI	0.1mg
CuSO ₄ ·5H ₂ O	0.04mg
Folic acid	2.0µg
Biotin	2.0µg

pH 4.5 ± 0.2 at 25°C

Preparation of Yeast Nitrogen Base: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: To 100.0mL of yeast nitrogen base, add 20.0g of raffinose. Mix thoroughly. Filter sterilize. Aseptically distribute 0.5mL into tubes containing 4.5mL of sterile distilled/deionized water.

Use: For the cultivation and differentiation of bacteria based on carbohydrate assimilation.

Wickerham Carbon Base Broth

See: Yeast Carbon Base, 10X

Wilbrinck Agar for *Xanthomonas*

Composition per liter:

Sucrose.....	20.0g
Agar	12.0g
Peptone	5.0g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.25g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas caryophylli*, *Xanthomonas albilineans*, and *Xanthomonas axonopodis*.

Wilbrinck Agar for *Xanthomonas albilineans*

Composition per liter:

Agar	20.0g
Sucrose.....	10.0g
Peptone	5.0g

K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.25g
Na ₂ SO ₃ , anhydrous.....	0.05g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Xanthomonas albilineans* and other *Xanthomonas* species.

Wilkins-Chalgren Agar

Composition per liter:

Agar.....	15.0g
Gelatin peptone.....	10.0g
Pancreatic digest of casein.....	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Glucose.....	1.0g
L-Arginine.....	1.0g
Sodium pyruvate.....	1.0g
Hemin.....	5.0mg
Vitamin K ₁ (menadione).....	0.5mg
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Add antibiotic to be assayed; varying concentrations of antibiotics are used. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of anaerobic bacteria. For standardized antimicrobial susceptibility testing to determine the minimum inhibitory concentrations of antimicrobics for anaerobic bacteria.

Wilkins-Chalgren Anaerobe Agar

Composition per liter:

Agar.....	10.0g
Pancreatic digest of casein.....	10.0g
Gelatin peptone.....	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Glucose.....	1.0g
L-Arginine.....	1.0g
Sodium pyruvate.....	1.0g
Hemin.....	5.0mg
Menadione.....	0.5mg
Defibrinated blood.....	50.0mL
Tween™ 80.....	1.0mL
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components, except defibrinated blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–

55°C. Aseptically add 50.0mL of defibrinated blood. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of nonsporulating anaerobes.

Wilkins-Chalgren Anaerobe Agar with Cysteine

Composition per liter:

Agar.....	10.0g
Pancreatic digest of casein.....	10.0g
Gelatin peptone.....	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Glucose.....	1.0g
L-Arginine.....	1.0g
Sodium pyruvate.....	1.0g
L-Cysteine-HCl.....	0.3g
Hemin.....	5.0mg
Menadione.....	0.5mg
Defibrinated blood.....	50.0mL
Tween™ 80.....	1.0mL
pH 7.1 ± 0.2 at 25°C	

Preparation of Medium: Add components, except defibrinated blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of defibrinated blood. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Agromonas oligotrophica*, *Falcivibrio grandis*, and *Falcivibrio vaginalis*.

Wilkins-Chalgren Anaerobe Agar with GN Supplement

Composition per liter:

Agar.....	10.0g
Pancreatic digest of casein.....	10.0g
Gelatin peptone.....	10.0g
NaCl.....	5.0g
Yeast extract.....	5.0g
Glucose.....	1.0g
L-Arginine.....	1.0g
Sodium pyruvate.....	1.0g
Hemin.....	5.0mg
Menadione.....	0.5mg
Defibrinated blood.....	50.0mL
GN anaerobe selective supplement.....	20.0mL
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Oxoid Unipath.

GN Anaerobe Selective Supplement

Composition per 20.0mL:

Nalidixic acid.....	10.0mg
Hemin.....	5.0mg
Sodium succinate.....	2.5mg
Vancomycin.....	2.5mg
Menadione.....	0.5mg

Preparation of GN Anaerobe Selective Supplement: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except defibrinated blood and GN anaerobe selective supplement, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 20.0mL of GN anaerobe selective supplement and 50.0mL of defibrinated blood. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation of Gram-negative anaerobes.

Wilkins-Chalgren Anaerobe Agar with NS Supplement

Composition per liter:

Agar	10.0g
Pancreatic digest of casein	10.0g
Gelatin peptone	10.0g
NaCl	5.0g
Yeast extract	5.0g
Glucose	1.0g
L-Arginine	1.0g
Sodium pyruvate	1.0g
Hemin	5.0mg
Menadione	0.5mg
Defibrinated blood	50.0mL
NS anaerobe selective supplement	20.0 mL
Tween™ 80	1.0mL

pH 7.1 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

NS Anaerobe Selective Supplement:

Composition per 20.0mL:

Sodium pyruvate	1.0g
Nalidixic acid	0.01g
Hemin	5.0mg
Menadione	0.5mg

Preparation of NS Anaerobe Selective Supplement: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except defibrinated blood and NS anaerobe selective supplement, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 20.0mL of NS anaerobe selective supplement and 50.0mL of defibrinated blood. Bring volume to 1.0L with distilled/deionized water. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the selective isolation of nonsporulating anaerobes.

Wilkins-Chalgren Anaerobe Broth (Anaerobe Broth, MIC)

Composition per liter:

Pancreatic digest of casein	10.0g
Gelatin peptone	10.0g
NaCl	5.0g
Yeast extract	5.0g
Glucose	1.0g
L-Arginine	1.0g
Sodium pyruvate	1.0g

Hemin	5.0mg
Menadione	0.5mg
pH 7.1 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and antimicrobial susceptibility (MIC) testing of anaerobic bacteria.

Wilkins-Chalgren Anaerobe Medium with Yeast Extract

Composition per liter:

Yeast extract	20.0g
Pancreatic digest of casein	10.0g
Gelatin peptone	10.0g
NaCl	5.0g
Yeast extract	5.0g
Glucose	1.0g
L-Arginine	1.0g
Sodium pyruvate	1.0g
Hemin	5.0mg
Menadione	0.5mg

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Selenomonas acidaminovorans*.

Wilkins-Chalgren Anaerobic HiVeg Agar Base with Blood

Composition per liter:

Agar	10.0g
Plant hydrolysate	10.0g
Plant peptone	10.0g
NaCl	5.0g
Yeast extract	5.0g
L-Arginine	1.0g
Glucose	1.0g
Sodium pyruvate	1.0g
Fe ₄ (P ₂ O ₇) ₃ ·H ₂ O	5.0mg
Menadione	0.5mg
Defibrinated blood	50.0mL

pH 7.1 ± 0.2 at 25°C

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except defibrinated blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of defibrinated blood. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of nonsporulating anaerobes. For the cultivation and maintenance of anaerobic bacteria. For standardized antimicrobial susceptibility testing to determine the minimum inhibitory concentrations of antimicrobics for anaerobic bacteria.

Wilkins-Chalgren Anaerobic HiVeg Agar Base with Blood and Nonspore Anaerobic Supplement

Composition per liter:

Agar	10.0g
Plant hydrolysate.....	10.0g
Plant peptone.....	10.0g
NaCl	5.0g
Yeast extract.....	5.0g
L-Arginine.....	1.0g
Glucose	1.0g
Sodium pyruvate.....	1.0g
Fe ₄ (P ₂ O ₇) ₃ ·H ₂ O.....	5.0mg
Menadione	0.5mg
Defibrinated blood.....	50.0mL
Nonspore anaerobic supplement.....	

pH 7.1 ± 0.2 at 25°C

Source: This medium, without blood or nonspore anaerobic supplement, is available as a premixed powder from HiMedia.

Nonspore Anaerobic Supplement:

Composition per 10.0mL:

Sodium pyruvate.....	1.0g
Nalidixic acid.....	10.0mg
Ferric pyrophosphate, soluble.....	5.0mg
Menadione	0.5mg

Preparation of Nonspore Anaerobic Supplement: Add components to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except defibrinated blood and nonspore anaerobic supplement, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of defibrinated blood and 10.0mL nonspore anaerobic supplement. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of nonsporulating anaerobes. For the cultivation and maintenance of anaerobic bacteria. For standardized antimicrobial susceptibility testing to determine the minimum inhibitory concentrations of antimicrobics for anaerobic bacteria.

Wilkins-Chalgren Anaerobic HiVeg Broth Base with Blood

Composition per liter:

Plant hydrolysate.....	10.0g
Plant peptone.....	10.0g
Yeast extract.....	5.0g
NaCl	5.0g
Sodium pyruvate.....	1.0g
Glucose	1.0g
L-Arginine.....	1.0g
Fe ₄ (P ₂ O ₇) ₃ ·H ₂ O.....	5.0mg
Menadione	0.5mg
Defibrinated blood.....	50.0mL

pH 7.1 ± 0.2 at 25°C

Source: This medium, without blood, is available as a premixed powder from HiMedia.

Preparation of Medium: Add components, except defibrinated blood, to distilled/deionized water and bring volume to 950.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or

flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 50.0mL of defibrinated blood. Mix thoroughly. Aseptically distribute into tubes or leave in flasks.

Use: For the cultivation of nonsporulating anaerobes. For the cultivation and maintenance of anaerobic bacteria. For standardized antimicrobial susceptibility testing to determine the minimum inhibitory concentrations of antimicrobics for anaerobic bacteria.

Wilson and Blair's Medium

Composition per 165.0mL:

Nutrient agar solution.....	100.0mL
Solution B.....	45.0mL
Solution A.....	20.0mL

pH 6.8 ± 0.2 at 25°C

Nutrient Agar Solution:

Composition per 100.0mL:

Agar	1.95g
Pancreatic digest of gelatin.....	0.65g
Beef extract.....	0.39g

Preparation of Nutrient Agar Solution: Aseptically add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C.

Solution A:

Composition per liter:

Na ₂ HPO ₄	100.0g
Na ₂ SO ₃	100.0g
Glucose	50.0g
Bismuth ammonium citrate.....	30.0g

Preparation of Solution A: Aseptically add 30.0g of bismuth ammonium citrate to 250.0mL of boiling distilled/deionized water. Aseptically add Na₂SO₃ to 500.0mL of boiling distilled/deionized water. Mix the two solutions. Add the Na₂HPO₄ to the boiling mixture. Cool to 45°C. In a separate flask, aseptically add glucose to 250.0mL of sterile distilled/deionized water. Mix thoroughly. Aseptically add the glucose solution to the other cooled solution.

Solution B:

Composition per 225.0mL:

Ferric citrate.....	2.0g
Brilliant Green	0.55g

Preparation of Solution B: Aseptically add 2.0g of ferric citrate to 200.0mL of sterile distilled/deionized water. Mix thoroughly. Aseptically add Brilliant Green to 25.0mL of sterile distilled/deionized water. Mix thoroughly. Aseptically combine the two solutions.

Preparation of Medium: Aseptically combine 100.0mL of nutrient agar solution, 20.0mL of solution A, and 45.0mL of solution B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Clostridium welchii*.

Wilson Blair Base

Composition per liter:

Agar	30.0g
Proteose peptone No. 3.....	10.0g
Glucose	10.0g
Beef extract.....	5.0g
NaCl.....	5.0g

Selective reagent70.0mL
 Brilliant Green (1% solution)4.0mL
 pH 7.3 ± 0.2 at 25°C

Selective Reagent:

Composition per 320.2mL:

Solution 1100.0mL
 Solution 2100.0mL
 Solution 3100.0mL
 Solution 420.2mL

Preparation of Selective Reagent: Combine 100.0mL of solution 1, 100.0mL of solution 2, 100.0mL of solution 3, and 20.2mL of solution 4. Mix thoroughly. Gently heat to boiling until a slate-grey color develops. Cool to 50°C.

Solution 1:

Composition per 100.0mL:

NaHSO₃40.0g

Preparation of Solution 1: Add NaHSO₃ to 100.0mL of distilled/deionized water. Mix thoroughly.

Solution 2:

Composition per 100.0mL:

NaH₂PO₄21.0g

Preparation of Solution 2: Add NaH₂PO₄ to 100.0mL of distilled/deionized water. Mix thoroughly.

Solution 3:

Composition per 100.0mL:

Bismuth ammonium citrate12.5g

Preparation of Solution 3: Add bismuth ammonium citrate to 100.0mL of distilled/deionized water. Mix thoroughly.

Solution 4:

Composition per 20.2mL:

FeSO₄0.96g

Preparation of Solution 4: Add FeSO₄ to 20.0mL of distilled/deionized water. Add 0.2mL of concentrated HCl. Mix thoroughly.

Preparation of Medium: Add components, except selective reagent and Brilliant Green solution, to distilled/deionized water and bring volume to 976.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective reagent and Brilliant Green solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Salmonella*, especially *Salmonella typhi*.

Composition per 100.0mL:

NaHSO₃40.0g

Preparation of Solution 1: Add NaHSO₃ to 100.0mL of distilled/deionized water. Mix thoroughly.

Solution 2:

Composition per 100.0mL:

NaH₂PO₄21.0g

Preparation of Solution 2: Add NaH₂PO₄ to 100.0mL of distilled/deionized water. Mix thoroughly.

Solution 3:

Composition per 100.0mL:

Bismuth ammonium citrate12.5g

Preparation of Solution 3: Add bismuth ammonium citrate to 100.0mL of distilled/deionized water. Mix thoroughly.

Solution 4:

Composition per 20.2mL:

FeSO₄0.96g

Preparation of Solution 4: Add FeSO₄ to 20.0mL of distilled/deionized water. Add 0.2mL of concentrated HCl. Mix thoroughly.

Preparation of Medium: Add components, except selective reagent and Brilliant Green solution, to distilled/deionized water and bring volume to 976.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective reagent and Brilliant Green solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Salmonella*, especially *Salmonella typhi*.

**Wilson Blair HiVeg Agar Base
 with Selective Reagent and Brilliant Green**

Composition per liter:

Agar30.0g
 Glucose10.0g
 Plant special peptone10.0g
 Plant extract5.0g
 NaCl5.0g
 Selective reagent70.0mL
 Brilliant Green (1% solution)4.0mL
 pH 7.3 ± 0.2 at 25°C

Source: This medium, without selective reagent or Brilliant Green, is available as a premixed powder from HiMedia.

Selective Reagent:**Composition per 100.0mL:**

Solution 1	100.0mL
Solution 2	100.0mL
Solution 3	100.0mL
Solution 4	20.2mL

Preparation of Selective Reagent: Combine 100.0mL of solution 1, 100.0mL of solution 2, 100.0mL of solution 3, and 20.2mL of solution 4. Mix thoroughly. Gently heat to boiling until a slate-grey color develops. Cool to 50°C.

Solution 1:**Composition per 100.0mL:**

NaHSO ₃	40.0g
--------------------------	-------

Preparation of Solution 1: Add NaHSO₃ to 100.0mL of distilled/deionized water. Mix thoroughly.

Solution 2:**Composition per 100.0mL:**

NaH ₂ PO ₄	21.0g
--	-------

Preparation of Solution 2: Add NaH₂PO₄ to 100.0mL of distilled/deionized water. Mix thoroughly.

Solution 3:**Composition per 100.0mL:**

Bismuth ammonium citrate	12.5g
--------------------------------	-------

Preparation of Solution 3: Add bismuth ammonium citrate to 100.0mL of distilled/deionized water. Mix thoroughly.

Solution 4:**Composition per 20.2mL:**

FeSO ₄	0.96g
-------------------------	-------

Preparation of Solution 4: Add FeSO₄ to 20.0mL of distilled/deionized water. Add 0.2mL of concentrated HCl. Mix thoroughly.

Preparation of Medium: Add components, except selective reagent and Brilliant Green solution, to distilled/deionized water and bring volume to 976.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective reagent and Brilliant Green solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Salmonella*, especially *Salmonella typhi*.

Winge Agar**Composition per liter:**

Glucose	20.0g
Agar	15.0g
Yeast extract	3.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Candida albicans*, *Candida kefyr*, *Candida tropicalis*, *Citeromyces matritensis*, *Cryptococcus albidus*, *Neurospora crassa*, *Octosporomyces octosporus*, *Neurospora sitophila*, and *Saccharomyces* species.

Winge Melibiose Agar**Composition per liter:**

Agar	15.0g
Melibiose	10.0g
Yeast extract	3.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Saccharomyces cerevisiae*.

Winogradsky's Medium, Modified**Composition per liter:**

CaCO ₃	5.0g
(NH ₄) ₂ SO ₄	1.0g
K ₂ HPO ₄	1.0g
NaCl	1.0g
MgSO ₄ ·7H ₂ O	0.5g
FeSO ₄	0.4g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Do not autoclave. Distribute into tubes or flasks. Swirl flask while dispensing to suspend precipitate.

Use: For the cultivation of nitrifying bacteria.

Winogradsky's N-Free Medium**Composition per liter:**

Agar	20.0g
CaCO ₃	5.0mg
Sugar solution	100.0mL
Concentrated salt solution	5.0mL

pH 7.2 ± 0.2 at 25°C

Sugar Solution:**Composition per 100.0mL:**

Sucrose or glucose	10.0g
--------------------------	-------

Preparation of Sugar Solution: Add sucrose or glucose to 100.0mL of distilled/deionized water. Mix thoroughly. Autoclave for 10 min at 10 psi pressure–115°C. Cool to 50°C.

Concentrated Salt Solution:**Composition per liter:**

KH ₂ PO ₄	50.0g
MgSO ₄ ·7H ₂ O	25.0g
NaCl	25.0g
FeSO ₄ ·7H ₂ O	1.0g
MnSO ₄ ·4H ₂ O	1.0g
Na ₂ MoO ₄ ·4H ₂ O	1.0g

Preparation of Concentrated Salt Solution: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except sugar solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add sugar solution. Adjust pH to 7.2. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Azomonas insignis*.

Winogradsky's Nitrite Medium

Composition per liter:

Agar	15.0g
NaNO ₂	2.0g
Na ₂ CO ₃ , anhydrous	1.0g
K ₂ HPO ₄	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the selective isolation and cultivation of *Nocardia* species and *Rhodococcus* species.

WL Differential Agar

(Wallerstein Laboratory Differential Agar)

Composition per liter:

Glucose	50.0g
Agar	20.0g

WMC Medium

Composition per 1010.0mL:

NaHCO ₃	5.0g
Sodium acetate	1.0g
L-Cysteine	0.5g

Resazurin	1.0mg
Mineral salt solution 2xW.....	500.0mL
LIP solution.....	50.0mL
TYC solution.....	50.0mL
Trace elements solution	10.0mL
Na ₂ S·9H ₂ O solution	10.0mL

pH 7.2 ± 0.2 at 25°C

Mineral Solution 2xW:**Composition per liter:**

NaCl	40.0g
MgCl ₂ ·6H ₂ O.....	5.6g
MgSO ₄ ·7H ₂ O	0.7g
KCl.....	0.68g
NH ₄ Cl	0.5g
CaCl ₂ ·2H ₂ O.....	0.28g
K ₂ HPO ₄	0.28g

Preparation of Mineral Solution 2xW: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Store at room temperature in the dark.

LIP Solution:**Composition per liter:**

L-Isoleucine.....	10.0g
L-Leucine	5.0g
Pantothenate.....	0.1g

Preparation of LIP Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. May be stored unsterilized at -20°C.

TYC Solution:**Composition per liter:**

Casamino acids	100.0g
Yeast extract.....	50.0g
L-Tryptophan.....	1.0g

Preparation of TYC Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure-121°C.

Trace Elements Solution:**Composition per liter:**

MgSO ₄ ·7H ₂ O	3.0g
Nitrilotriacetic acid	1.5g
NaCl	1.0g
MnSO ₄ ·2H ₂ O	0.5g
CoSO ₄ ·7H ₂ O	0.18g
ZnSO ₄ ·7H ₂ O	0.18g
FeSO ₄ ·7H ₂ O.....	0.1g
CaCl ₂ ·2H ₂ O.....	0.1g
KAl(SO ₄) ₂ ·12H ₂ O.....	0.02g
CuSO ₄ ·5H ₂ O	0.01g
H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
NiCl ₂ ·6H ₂ O	0.025g
Na ₂ SeO ₃ ·5H ₂ O.....	0.3mg

Preparation of Trace Elements Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components. Add distilled/deionized water to 1.0L.

Na₂S·9H₂O Solution:**Composition per 10.0mL:**

Na ₂ S·9H ₂ O.....	0.5g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure-121°C.

Preparation of Medium: Prepare and dispense medium under 80% H₂ + 20% CO₂. Add components, except TYC solution and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Sparge with 80% H₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure-121°C. Aseptically and anaerobically add 50.0mL of sterile TYC solution and 10.0mL of sterile Na₂S·9H₂O solution. Mix thoroughly.

Use: For the cultivation and maintenance of *Methanococcus voltae*.

Wolin-Bevis Medium**Composition per liter:**

Agar	20.0g
(NH ₄) ₂ SO ₄	1.0g
KH ₂ HPO ₄	1.0g
Glucose	0.25g
L-Histidine·HCl.....	0.25g
Tween™ 80 (polysorbate 80)	3.0mL

pH 5.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure-121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the enhanced production of chlamydo spores by *Candida albicans*.

Wolinella succinogenes Medium**Composition per liter:**

K ₂ HPO ₄	5.0g
Fumaric acid	3.0g
Sodium formate	3.0g
(NH ₄) ₂ SO ₄	1.0g
Yeast extract.....	1.0g
MgCl ₂ ·6H ₂ O	0.2g
FeSO ₄ ·7H ₂ O.....	0.02g
Resazurin	1.0mg
Sodium thioglycolate solution	10.0mL

pH 7.0 ± 0.2 at 25°C

Sodium Thioglycolate Solution:**Composition per 10.0mL:**

Sodium thioglycolate	0.5g
----------------------------	------

Preparation of Sodium Thioglycolate Solution: Add sodium thioglycolate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure-121°C.

Preparation of Medium: Add components, except sodium thioglycolate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure-121°C. Aseptically add 10.0mL of sterile sodium thioglycolate solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation and maintenance of *Wolinella succinogenes*.

Woods and Welton Agar**Composition per liter:**

NaCl	23.4g
Casein hydrolysate	17.0g
Agar	15.0g
Glycerol	10.0g
Pancreatic digest of gelatin	5.0g
Glucose	5.0g
Papaic digest of soybean meal	3.0g
Beef extract	3.0g
Yeast extract	2.0g
Casamino acids, vitamin free	0.5g
Pancreatic digest of casein	0.5g
Na ₂ SO ₃	0.1g

pH 7.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.6. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Vibrio alginolyticus*.

Worfel-Ferguson Agar**Composition per liter:**

Sucrose	20.0g
Agar	15.0g
NaCl	2.0g
Yeast extract	2.0g
K ₂ SO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.25g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the detection of capsule production by *Klebsiella*. For serological detection of the Neufeld (Quellung) reaction.

Wort Agar**Composition per liter:**

Agar	15.0g
Malt extract	15.0g
Maltose	12.75g
Dextrin	2.75g
Glycerol	2.35g
K ₂ HPO ₄	1.0g
NH ₄ Cl	1.0g
Pancreatic digest of gelatin	0.78g

pH 4.8 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min with mixing. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat, as this will result in hydrolysis of the agar. An additional 5.0g of agar can be used to make a firmer agar. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of yeasts. The low pH of the agar selectively inhibits bacterial growth.

Wort Agar**Composition per liter:**

Agar	25.0g
Yeast extract	1.0g
Wort solution	1.0L

Wort Solution:**Composition per liter:**

Malt extract	110.0g
--------------------	--------

Preparation of Wort Solution: Add malt extract to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of yeasts and filamentous fungi.

Wort Agar 6°Brix**Composition per liter:**

Malt	250.0g
Agar	20.0g

Preparation of Medium: Add 250.0g of ground malt to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat to 55°–60°C. Maintain at 55°–60°C for 1.5–2.0 hr while mixing regularly. Elevate temperature to 80°C and maintain for 10 min with thorough mixing. Cool the wort to 25°C and filter through a linen bag. Adjust the concentration of sugars to 6° Brix (specific gravity of 1.024 at 24°C). Add 20.0g of agar. Gently heat and bring to boiling. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 30 min at 3 psi pressure–105°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Rhodococcus erythropolis*.

Wort Broth**Composition per liter:**

Yeast extract	1.0g
Wort solution	1.0L

Wort Solution:**Composition per liter:**

Malt extract	110.0g
--------------------	--------

Preparation of Wort Solution: Add malt extract to distilled/deionized water and bring volume to 1000.0mL. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a wide variety of yeasts and filamentous fungi.

Wort HiVeg Agar**Composition per liter:**

Agar	15.0g
Malt extract	15.0g
Maltose	12.75g
Dextrin	2.75g

NH ₄ Cl	1.0g
K ₂ HPO ₄	1.0g
Plant peptone.....	0.78g
pH 4.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min with mixing. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Do not overheat, as this will result in hydrolysis of the agar. An additional 5.0g of agar can be used to make a firmer agar. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and enumeration of yeasts. The low pH of the agar selectively inhibits bacterial growth.

Wort HiVeg Broth

Composition per liter:

Malt extract	15.0g
Maltose.....	12.75g
Dextrin	2.75g
NH ₄ Cl	1.0g
K ₂ HPO ₄	1.0g
Plant peptone.....	0.78g
pH 4.8 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Boil for 1 min with mixing. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and enumeration of yeasts. The low pH of the agar selectively inhibits bacterial growth.

Wort Sucrose Agar

Composition per liter:

Agar	25.0g
Yeast extract.....	1.0g
Wort solution.....	500.0mL
Sucrose solution.....	500.0mL

Wort Solution:

Composition per 500.0mL:

Malt extract.....	55.0g
-------------------	-------

Preparation of Wort Solution: Add malt extract to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Sucrose Solution:

Composition per 500.0mL:

Sucrose.....	50.0g
--------------	-------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Aspergillus oryzae*.

Wort Sucrose Broth

Composition per liter:

Yeast extract.....	1.0g
Wort solution.....	500.0mL
Sucrose solution.....	500.0mL

Wort Solution:

Composition per 500.0mL:

Malt extract.....	55.0g
-------------------	-------

Preparation of Wort Solution: Add malt extract to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Sucrose Solution:

Composition per 500.0mL:

Sucrose.....	50.0g
--------------	-------

Preparation of Sucrose Solution: Add sucrose to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly.

Preparation of Medium: Combine components. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Aspergillus oryzae*.

Xanthine Agar

Composition per liter:

Solution 1.....	900.0mL
Solution 2.....	100.0mL
pH 7.0 ± 0.2 at 25°C	

Solution 1:

Composition per 900.0mL:

Agar	15.0g
Pancreatic digest of gelatin.....	5.0g
Beef extract.....	3.0g

Preparation of Solution 1: Add components to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling.

Solution 2:

Composition per 100.0mL:

Xanthine.....	4.0g
---------------	------

Preparation of Solution 2: Add xanthine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gently heat and bring to boiling.

Preparation of Medium: Combine solutions 1 and 2. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the differentiation of aerobic *Actinomycete* species. Clearing around a colony indicates utilization of xanthine. *Streptomyces* species utilize xanthine; most *Nocardia* and *Actinomyces* species do not utilize xanthine.

Xanthobacter agilis Agar

Composition per 1100.0mL:

Solution A.....	1.0L
Solution B.....	100.0mL

Solution A:

Composition per liter:

Agar	15.0g
NaH ₂ PO ₄ ·12H ₂ O.....	9.0g
KH ₂ PO ₄	1.5g

NH ₄ ·Cl	1.0g
Sodium propionate or 3-hydroxybutyrate.....	1.0g
MgSO ₄ ·7H ₂ O	0.2g
Trace elements solution	1.0mL
pH 7.0 ± 0.2 at 25°C	

Trace Elements Solution:**Composition per 2.0mL:**

H ₃ BO ₄	560.0µg
ZnSO ₄ ·7H ₂ O	350.0µg
NiCl ₂ ·H ₂ O	160.0µg
Na ₂ MoO ₄ ·2H ₂ O	100.0µg
CuSO ₄ ·5H ₂ O	16.0µg
MnCl ₂ ·4H ₂ O.....	16.0µg

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 2.0mL. Mix thoroughly.

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Solution B:**Composition per 100.0mL:**

Ferric ammonium citrate.....	50.0mg
CaCl ₂ ·2H ₂ O.....	100.0mg

Preparation of Solution B: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine 1.0L of sterile solution A with 100.0mL of sterile solution B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Xanthobacter agilis*.

Xanthomonas Agar**Composition per liter:**

Agar	15.0g
Pancreatic digest of gelatin	10.0g
Sucrose.....	10.0g
Beef extract	6.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Xanthomonas* species.

Xanthomonas Agar**Composition per liter:**

CaCO ₃	30.0g
Agar	15.0g
Glucose	10.0g
Yeast extract.....	5.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Cool rapidly.

Use: For the cultivation and maintenance of *Alcaligenes latus*, *Erwinia tracheiphila*, *Pseudomonas amygdali*, *Xanthomonas albilineans*, *Xanthomonas axonopodis*, *Xanthomonas campestris*, *Xanthomonas fragariae*, *Xanthomonas maltophilia*, *Xanthomonas oryzae*, and *Xylophilus ampelinus*.

Xanthomonas albilineans Agar**Composition per liter:**

Sucrose.....	20.0g
Agar	15.0g
Peptone	10.0g
Yeast extract.....	5.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Xanthomonas albilineans*.

Xanthomonas maltophilia Medium**Composition per liter:**

Trizma [®] (tris[hydroxymethyl] aminomethane) base.....	6.04g
Glucose	5.0g
KCl.....	1.0g
NaCl.....	1.0g
L-Phenylalanine	0.9g
MgSO ₄	0.2g
L-Arginine.....	0.1g
L-Methionine.....	0.1g
(NH ₄) ₂ SO ₄	0.1g
NH ₄ Cl	0.1g
Glycerol	0.68g
L-Serine.....	0.22g
L-Alanine	0.18g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Stenotrophomonas maltophilia*.

Xanthomonas Medium**Composition per liter:**

Pancreatic digest of gelatin.....	10.0g
Sucrose.....	10.0g
Beef extract.....	6.0g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat with mixing. Distribute into screw-capped test tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Xanthomonas* species.

Xanthomonas TYG Agar**(*Xanthomonas* Tryptone Yeast Extract Glucose Agar)****Composition per liter:**

Agar	20.0g
Pancreatic digest of casein.....	5.0g

Glucose	5.0g
Yeast extract	3.0g
K ₂ HPO ₄	0.7g
MgSO ₄ ·7H ₂ O	0.25g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Xanthomonas* species.

XB45/XB90/PB90-2 Medium (DSMZ Medium 862)

Composition per 1069.2mL:

Solution A	940.0mL
Solution E	100.0mL
Solution D	10.0mL
Solution G	10.0mL
Solution F	7.2mL
Solution B	1.0mL
Solution C	1.0mL

pH 7.2 ± 0.2 at 25°C

Solution A:

Composition per 940.0mL:

NaCl	1.0g
KCl	0.5g
MgCl ₂ ·6H ₂ O	0.4g
KH ₂ PO ₄	0.2g
NH ₄ Cl	0.25g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	0.5mg

Preparation of Solution A: Prepare under 80% N₂ + 20% CO₂ gas atmosphere. Add components to distilled/deionized water and bring volume to 940.0mL. Mix thoroughly. Adjust pH to 7.2. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution B:

Composition per liter:

FeCl ₂ ·4H ₂ O	1.5g
CoCl ₂ ·6H ₂ O	190.0mg
MnCl ₂ ·4H ₂ O	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O	36.0mg
NiCl ₂ ·6H ₂ O	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O	2.0mg
HCl (25% solution)	10.0mL

Preparation of Solution B: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution C:

Composition per liter:

Pyridoxine hydrochloride	300.0mg
Thiamine-HCl·2H ₂ O	200.0mg
Nicotinic acid	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate	100.0mg

<i>p</i> -Aminobenzoic acid	80.0mg
D-(+)-Biotin	20.0mg

Preparation of Solution C: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Solution D:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl·2H ₂ O	5.0mg
Riboflavin	5.0mg
Nicotinic acid	5.0mg
D-Ca-pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Solution D: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Solution E:

Composition per 100.0mL:

NaHCO ₃	5.0g
--------------------------	------

Preparation of Solution E: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution F:

Composition per 10.0mL:

Glucose	1.0g
---------------	------

Preparation of Solution F: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Solution G:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.125g
---	--------

Preparation of Solution G: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas atmosphere. Sequentially add 1.0mL solution B, 1.0mL solution C, 10.0mL solution D, 100.0mL solution E, 7.2mL solution F, and 10.0mL solution G to 940.0mL solution A. Distribute anaerobically under 80% N₂ + 20% CO₂ into appropriate vessels. The pH should be 7.2.

Use: For the cultivation of unclassified bacteria DSM 12558, DSM 12559, and DSM 12595.

XED-AGAR (DSMZ Medium 1026)

Composition per liter:

Agar	18.0g
Xylan	7.0g
Yeast extract	3.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Microbacterium ulmi*.

Xenorhabdus Agar

Composition per liter:

Agar	15.0g
Peptone.....	10.0g
NaCl	5.0g
Yeast extract.....	5.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacteroides galacturonicus* and *Xenorhabdus nematophilus*.

Xenorhabdus Broth

Composition per liter:

Peptone.....	10.0g
NaCl	5.0g
Yeast extract.....	5.0g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacteroides galacturonicus* and *Xenorhabdus nematophilus*.

XL Agar Base (Xylose Lysine Agar Base)

Composition per liter:

Agar	13.5g
Lactose	7.5g
Sucrose.....	7.5g
L-Lysine.....	5.0g
NaCl	5.0g
Xylose	3.5g
Yeast extract.....	3.0g
Phenol Red.....	0.08g
Thiosulfate-citrate solution	20.0mL
pH 7.5 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Thiosulfate-Citrate Solution:

Composition per 100.0mL:

Na ₂ S ₂ O ₃	34.0g
Ferric ammonium citrate.....	4.0g

Preparation of Thiosulfate-Citrate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except thiosulfate-citrate solution, to distilled/deionized water and bring volume to

980.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 10 min at 14 psi pressure–118°C. Cool to 55°C. Aseptically add 20.0 mL of the sterile thiosulfate-citrate solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and differentiation of enteric pathogens. Nonfermenting xylose/lactose/sucrose bacteria appear as red colonies. Xylose-fermenting, lysine-decarboxylating bacteria appear as red colonies. Xylose-fermenting, lysine-nondecaboxylating bacteria appear as opaque yellow colonies. Lactose- or sucrose-fermenting bacteria appear as yellow colonies.

XL Agar Base

Composition per liter:

Agar	15 g
Lactose.....	7.5g
Sucrose.....	7.5g
L-Lysine.....	5.0g
NaCl.....	5.0g
Xylose	3.75g
Yeast extract.....	3.0g
Phenol Red.....	0.08g
Thiosulfate-citrate solution	20.0mL
pH 7.4 ± 0.2 at 25°C	

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Thiosulfate-Citrate Solution:

Composition per 100.0mL:

Na ₂ S ₂ O ₃	34.0g
Ferric ammonium citrate.....	4.0g

Preparation of Thiosulfate-Citrate Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components, except thiosulfate-citrate solution, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat while stirring and bring to boiling. Distribute into tubes or flasks. Autoclave for 10 min at 14 psi pressure–118°C. Cool to 55°C. Aseptically add 20.0 mL of the sterile thiosulfate-citrate solution. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and differentiation of enteric pathogens. Nonfermenting xylose/lactose/sucrose bacteria appear as red colonies. Xylose-fermenting, lysine-decarboxylating bacteria appear as red colonies. Xylose-fermenting, lysine-nondecaboxylating bacteria appear as opaque yellow colonies. Lactose- or sucrose-fermenting bacteria appear as yellow colonies.

XLD Agar (Xylose Lysine Deoxycholate Agar)

Composition per liter:

Agar	13.5g
Lactose.....	7.5g
Sucrose.....	7.5g
Na ₂ S ₂ O ₃	6.8g
L-Lysine.....	5.0g
NaCl.....	5.0g
Xylose	3.5g

Yeast extract.....	3.0g
Sodium desoxycholate.....	2.5g
Ferric ammonium citrate.....	0.8g
Phenol Red.....	0.08g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not overheat. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Plates should be poured as soon as possible to avoid precipitation.

Use: For the isolation and differentiation of enteric pathogens, especially *Shigella* and *Providencia* species. Nonfermenting xylose/lactose/sucrose bacteria appear as red colonies. Xylose-fermenting, lysine-decarboxylating bacteria appear as red colonies. Xylose-fermenting, lysine-nondecaboxylating bacteria appear as opaque yellow colonies. Lactose- or sucrose-fermenting bacteria appear as yellow colonies.

XLD Agar (Xylose Lysine Deoxycholate Agar) (BAM M179)

Composition per liter:

Agar.....	15.0g
Lactose.....	7.5g
Sucrose.....	7.5g
Na ₂ S ₂ O ₃	6.8g
L-Lysine.....	5.0g
NaCl.....	5.0g
Xylose.....	3.75g
Yeast extract.....	3.0g
Sodium deoxycholate.....	2.5g
Ferric ammonium citrate.....	0.8g
Phenol Red.....	0.08g

pH 7.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not overheat. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Plates should be poured as soon as possible to avoid precipitation.

Use: For the isolation and differentiation of enteric pathogens, especially *Shigella* and *Providencia* species. Nonfermenting xylose/lactose/sucrose bacteria appear as red colonies. Xylose-fermenting, lysine-decarboxylating bacteria appear as red colonies. Xylose-fermenting, lysine-nondecaboxylating bacteria appear as opaque yellow colonies. Lactose- or sucrose-fermenting bacteria appear as yellow colonies.

XLD Agar, HiVeg (Xylose Lysine Deoxycholate HiVeg Agar)

Composition per liter:

Agar.....	15.0g
Lactose.....	7.5g
Sucrose.....	7.5g

Na ₂ S ₂ O ₃	6.8g
L-Lysine.....	5.0g
NaCl.....	5.0g
Yeast extract.....	4.0g
Xylose.....	3.5g
Synthetic detergent No. III.....	1.5g
Ferric ammonium citrate.....	0.8g
Phenol Red.....	0.08g
Selective supplement solution.....	4.6mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from HiMedia.

Selective Supplement Solution:

Composition per 100.0mL:

Tergitol™ 4.....	Proprietary
------------------	-------------

Preparation of Selective Supplement Solution: Available as premixed solution.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not overheat. Distribute into tubes or flasks. Do not autoclave. Pour into sterile Petri dishes or leave in tubes. Plates should be poured as soon as possible to avoid precipitation.

Use: For the isolation and differentiation of enteric pathogens, especially *Shigella* and *Providencia* species. Nonfermenting xylose/lactose/sucrose bacteria appear as red colonies. Xylose-fermenting, lysine-decarboxylating bacteria appear as red colonies. Xylose-fermenting, lysine-nondecaboxylating bacteria appear as opaque yellow colonies. Lactose- or sucrose-fermenting bacteria appear as yellow colonies.

XL4 HiVeg Agar Base

Composition per liter:

Agar.....	18.0g
Lactose.....	7.5g
Saccharose.....	7.5g
Na ₂ S ₂ O ₃	6.8g
L-Lysine.....	5.0g
NaCl.....	5.0g
Xylose.....	3.75g
Yeast extract.....	3.0g
Plant peptone No. 3.....	1.6g
Ferric ammonium citrate.....	0.8g
Phenol Red.....	0.08g
Selective supplement solution.....	4.6mL

pH 7.4 ± 0.2 at 25°C

Source: This medium, without selective supplement solution, is available as a premixed powder from HiMedia.

Selective Supplement Solution:

Composition per 100.0mL:

Tergitol™ 4.....	Proprietary
------------------	-------------

Preparation of Selective Supplement Solution: Available as premixed solution.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not overheat. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes. Plates should be poured as soon as possible to avoid precipitation.

Use: For the isolation and differentiation of enteric pathogens, especially *Shigella* and *Providencia* species.

XPS Agar

Composition per liter:

Solution A	500.0mL
Solution B	500.0mL

pH 5.1 ± 0.2 at 25°C

Solution A:

Composition per 500.0mL:

Potatoes, infusion from	40.0g
Sucrose	15.0g
Peptone	5.0g
Glucose	4.0g
Casamino acids	1.0g
Na ₂ HPO ₄	0.79g
Ca(NO ₃) ₂ ·4H ₂ O solution	10.0mL

Potatoes, Infusion From:

Composition per 500.0mL:

Potatoes	4.0g
----------------	------

Preparation of Potatoes, Infusion From: Peel and dice potatoes. Add 400.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth.

Ca(NO₃)₂·4H₂O Solution:

Composition per 10.0mL:

Ca(NO ₃) ₂ ·4H ₂ O	0.5g
--	------

Preparation of Ca(NO₃)₂·4H₂O Solution: Add Ca(NO₃)₂·4H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Solution A: Add components, except Ca(NO₃)₂·4H₂O solution, to distilled/deionized water and bring volume to 490.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile Ca(NO₃)₂·4H₂O solution. Mix thoroughly. Cool to 50°–55°C.

Solution B:

Composition per 500.0mL:

Agar	20.0g
------------	-------

Preparation of Solution A: Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically combine 500.0mL of solution A with 500.0mL of solution B. Mix thoroughly. Aseptically pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Xanthomonas campestris*.

XPS Broth

Composition per liter:

Potatoes, infusion from	40.0g
Sucrose	15.0g
Peptone	5.0g
Glucose	4.0g
Casamino acids	1.0g
Na ₂ HPO ₄	0.79g
Ca(NO ₃) ₂ ·4H ₂ O solution	10.0mL

pH 5.1 ± 0.2 at 25°C

Potatoes, Infusion From:

Composition per 500.0mL:

Potatoes	4.0g
----------------	------

Preparation of Potatoes, Infusion From: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth.

Ca(NO₃)₂·4H₂O Solution:

Composition per 10.0mL:

Ca(NO ₃) ₂ ·4H ₂ O	0.5g
--	------

Preparation of Ca(NO₃)₂·4H₂O Solution: Add Ca(NO₃)₂·4H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Ca(NO₃)₂·4H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile Ca(NO₃)₂·4H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Xanthomonas campestris*.

XPS Broth with Thymidine (Thymidine Auxotroph XPS Medium)

Composition per liter:

Potatoes, infusion from	40.0g
Sucrose	15.0g
Peptone	5.0g
Glucose	4.0g
Casamino acids	1.0g
Na ₂ HPO ₄	0.79g
Thymidine	10.0mg
Ca(NO ₃) ₂ ·4H ₂ O solution	10.0mL

pH 5.1 ± 0.2 at 25°C

Potatoes, Infusion From:

Composition per 500.0mL:

Potatoes	4.0g
----------------	------

Preparation of Potatoes, Infusion From: Peel and dice potatoes. Add 500.0mL of distilled/deionized water. Gently heat and bring to boiling. Continue boiling for 30 min. Filter through cheesecloth.

Ca(NO₃)₂·4H₂O Solution:

Composition per 10.0mL:

Ca(NO ₃) ₂ ·4H ₂ O	0.5g
--	------

Preparation of Ca(NO₃)₂·4H₂O Solution: Add Ca(NO₃)₂·4H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except Ca(NO₃)₂·4H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 10.0mL of sterile Ca(NO₃)₂·4H₂O solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Xanthomonas oryzae*.

XSM Agar

Composition per liter:

Agar	15.0g
Glucose	5.0g
Sucrose	2.0g
Malt extract	1.0g

Yeast extract.....	1.0g
Liver extract concentrate	1.0g
Corn steep liquor.....	1.0g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-capped test tubes. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Streptomyces cinereus* and *Streptomyces flaveus*.

Xylan Medium

Composition per liter:

Xylan.....	30.0g
Agar	12.0g
Peptone.....	2.0g
Yeast extract.....	0.5g
L-Cysteine·HCl·H ₂ O	0.25g
Na ₂ S·9H ₂ O	0.25g
Rumen fluid	400.0mL
NaHCO ₃ solution	40.0mL
Mineral solution I.....	25.0mL
Mineral solution II	25.0mL
Wolfe's vitamin solution	10.0mL
VFA solution	10.0mL
Hemin solution.....	10.0mL
Trace elements solution SL-6	1.0mL
pH 7.0 ± 0.2 at 25°C	

NaHCO₃ Solution:

Composition per 100.0mL:

NaHCO ₃	3.96g
--------------------------	-------

Preparation of NaHCO₃ Solution: Add NaHCO₃ to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Gas with 100% CO₂.

Mineral Solution I:

Composition per liter:

K ₂ HPO ₄	3.0g
---------------------------------------	------

Preparation of Mineral Solution I: Add K₂HPO₄ to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Mineral Solution II:

Composition per liter:

Sodium citrate	20.0g
NaCl	12.0g
KH ₂ PO ₄	6.0g
MgCl ₂ ·6H ₂ O.....	2.0g
CaCl ₂	1.2g

Preparation of Mineral Solution II: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
Thiamine-HCl	5.0mg
Riboflavin	5.0mg
Nicotinic acid.....	5.0mg
Calcium pantothenate	5.0mg
<i>p</i> -Aminobenzoic acid.....	5.0mg
Thioctic acid	5.0mg

Biotin	2.0mg
Folic acid	2.0mg
Cyanocobalamin	100.0µg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

VFA Solution:

Composition per liter:

Acetic acid	178.3mL
Propionic acid	59.6mL
<i>n</i> -Butyric acid	38.4mL
Isobutyric acid	9.5mL
<i>n</i> -Valeric acid	9.4mL
Isovaleric acid.....	9.3mL
DL- α -Methylbutyric acid	4.4mL

Preparation of VFA Solution: Add components to distilled/deionized water and bring volume to approximately 500.0mL. Adjust pH to 7.5 with NaOH. Mix thoroughly. Bring volume to 1.0L with distilled/deionized water.

Hemin Solution:

Composition per 100.0mL:

Hemin	0.01g
-------------	-------

Preparation of Hemin Solution: Add hemin to 100.0mL of 0.01*N* NaOH. Mix thoroughly.

Trace Elements Solution SL-6:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·H ₂ O	0.03g
NiCl ₂ ·6H ₂ O.....	0.02g
CuCl ₂ ·2H ₂ O.....	0.01g

Preparation of Trace Elements Solution SL-6: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 3.4.

Preparation of Medium: Add components, except Na₂S·9H₂O, NaCHO₃, and L-cysteine-HCl·H₂O solutions, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool under 80% N₂ + 20% CO₂. Add L-cysteine-HCl·H₂O and Na₂S·9H₂O. Add sufficient NaCHO₃ solution to bring pH to 7.2 under 80% N₂ + 20% CO₂. Anaerobically distribute into tubes under 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Clostridium xylanolyticum* and other microorganisms that can utilize xylan as a carbon source.

Xylella Agar (LMG Medium 115)

Composition per liter:

Agar	17.0g
Yeast extract.....	10.0g
ACES	10.0g
Activated charcoal	2.0g
α -ketoglutarate.....	1.0g
KOH, 1 <i>N</i>	40mL
L-Cysteine-iron solution	20.0mL

pH 6.9 ± 0.2 at 25°C

L-Cysteine-Iron Solution:**Composition per 20.0mL:**

L-Cysteine-HCl.....	0.4g
Fe ₄ (P ₂ O ₇) ₃	0.25g

Preparation of L-Cysteine-Iron Solution: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add ACES to 500.0mL of distilled water at 50°C. Combine with a solution containing 40.0mL of 1N KOH in 440.0mL of distilled water. Add the other components except cysteine iron solution. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 20.0mL sterile cysteine iron solution. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Xylella* spp.

Xylella fastidiosa Medium (LMG 115)

Composition per liter:

Agar	17.0g
Yeast extract.....	10.0g
ACES buffer.....	10.0g
Activated charcoal	2.0g
L-Cysteine-iron solution.....	20.0mL

pH 6.9 ± 0.2 at 25°C

L-Cysteine-Iron Solution:**Composition per 20.0mL:**

L-Cysteine-HCl.....	0.4g
Fe ₄ (P ₂ O ₇) ₃	0.25g

Preparation of L-Cysteine-Iron Solution: Add components to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add ACES to 500.0mL of distilled/deionized water at 50°C. Add a solution containing 40.0mL of 1N KOH in 440.0mL of distilled water. Mix thoroughly. Add the remaining components, except L-cysteine-iron solution. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.9 with KOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 20.0mL of sterile L-cysteine-iron solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Xylella fastidiosa*.

Xylophilus Medium

Composition per liter:

CaCO ₃	20.0g
Agar	15.0g
D-Galactose	10.0g
Yeast extract.....	10.0g
Ferric ammonium citrate solution.....	10.0mL

Ferric Ammonium Citrate Solution:**Composition per 10.0mL:**

Ferric ammonium citrate.....	0.25g
------------------------------	-------

Preparation of Ferric Ammonium Citrate Solution: Add ferric ammonium citrate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except ferric ammonium citrate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°–55°C. Aseptically add 10.0mL of sterile ferric ammonium citrate solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Xylophilus ampelina*.

Xylose Lactose Tergitol™ 4 (XLT-4)

Composition per 1004.6mL:

Agar	18.0g
Lactose.....	7.5g
Sucrose.....	7.5g
Na ₂ S ₂ O ₃	6.8g
Lysine.....	5.0g
NaCl.....	5.0g
Xylose.....	3.75g
Yeast extract.....	3.0g
Proteose peptone.....	1.6g
Ferric ammonium citrate.....	0.8g
Phenol Red.....	0.08g
Selective supplement solution	4.6mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Selective Supplement Solution:**Composition per 100.0mL:**

Tergitol™ 4	Proprietary
-------------------	-------------

Preparation of Selective Supplement Solution: Available as a premixed solution.

Preparation of Medium: Add components, except selective supplement solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Add 4.6mL of selective supplement solution. Mix thoroughly. Gently heat while stirring and bring to boiling. Do not autoclave. Cool to 50°C. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the isolation and identification of salmonellae from clinical, environmental, and food samples. The presence of the selective agent, Tergitol™ 4, in this medium inhibits many organisms that can be problematic on other plating media. In addition, biochemical and pH changes within the medium allow *Salmonella* spp. (black colonies) to be differentiated from organisms such as *E. coli* (yellow colonies) and *Shigella* spp. (red colonies). The enhanced selectivity of XLT-4 Agar reduces the need for further identification procedures, saving time and money, and results in fewer false presumptive positive colonies when compared to other *Salmonella* plating media.

Xylose Lysine Agar Base

See: [XL Agar Base](#)

Xylose Lysine Desoxycholate Agar

See: [XLD Agar](#)

Xylose Sodium Deoxycholate Citrate Agar

Composition per liter:

Agar	12.0g
Xylose.....	10.0g
Sodium citrate.....	5.0g
Na ₂ S ₂ O ₃ ·5H ₂ O.....	5.0g

Beef extract	5.0g
Peptone.....	5.0g
NaCl	2.5g
Sodium deoxycholate.....	2.5g
Ferric ammonium citrate.....	1.0g
Neutral Red (1% solution).....	2.5mL
pH 7.5 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling for 20 sec. Do not autoclave. Cool to 45°–50°C. Pour into sterile Petri dishes.

Use: For the cultivation of *Salmonella* species and some *Shigella* species.

Xylose YP Agar (Xylose Yeast Extract Peptone Agar)

Composition per liter:

CaCO ₃	20.0g
Agar	15.0g
Xylose	10.0g
Yeast extract.....	10.0g
Peptone.....	10.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.01g
FeSO ₄ ·7H ₂ O.....	0.01g
NaCl	0.01g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-capped test tubes. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 6.8. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Lactobacillus vaccinos-tercus* and other microorganisms that utilize xylose as a carbon source.

Xylose YP Broth (Xylose Yeast Extract Peptone Broth)

Composition per liter:

Xylose	10.0g
Yeast extract.....	10.0g
Peptone.....	10.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.01g
FeSO ₄ ·7H ₂ O.....	0.01g
NaCl	0.01g
pH 6.8 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into screw-capped test tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus vaccinos-tercus* and other microorganisms that utilize xylose as a carbon source.

Y 1 Adrenal Cell Growth Medium

Composition per 101.0mL:

Ham's F-10 medium	90.0mL
Fetal bovine serum.....	10.0mL
Penicillin-streptomycin solution	1.0mL
pH 7.0 ± 0.2 at 25°C	

Ham's F-10 Medium:

Composition per liter:

NaCl	7.4g
NaHCO ₃	1.2g
Glucose	1.1g
NaH ₂ PO ₄ ·H ₂ O.....	0.29g
KCl.....	0.28g
L-Arginine-HCl.....	0.21g
L-Glutamine	0.15g
MgSO ₄ ·7H ₂ O	0.15g
Sodium pyruvate	0.11g
KH ₂ PO ₄	0.08g
CaCl ₂ ·2H ₂ O	0.04g
L-Cystine·2HCl	0.04g
L-Histidine-HCl·H ₂ O.....	0.02g
L-Lysine-HCl	0.02g
L-Asparagine-H ₂ O.....	0.01g
L-Aspartic Acid	0.01g
L-Glutamic acid.....	0.01g
L-Leucine	0.01g
L-Proline.....	0.01g
L-Serine	0.01g
L-Alanine.....	8.9mg
Glycine.....	7.5mg
D-Phenylalanine	5.0mg
L-Methionine	4.5mg
Hypoxanthine.....	4.1mg
L-Threonine	3.6mg
L-Valine	3.5mg
L-Isoleucine	2.6mg
L-Tyrosine	1.8mg
Vitamin B ₁₂	1.4mg
Folic acid	1.3mg
Phenol Red.....	1.2mg
Thiamine-HCl	1.0mg
FeSO ₄ ·7H ₂ O.....	0.8mg
Choline chloride.....	0.7mg
D-Calcium pantothenate	0.7mg
Thymidine.....	0.7mg
Niacinamide.....	0.6mg
L-Tryptophan.....	0.6mg
Isoinositol	0.5mg
Riboflavin	0.4mg
Lipoic acid	0.2mg
Pyridoxine-HCl.....	0.2mg
ZnSO ₄ ·7H ₂ O	0.03mg
Biotin	0.02mg
CuSO ₄ ·5H ₂ O.....	3.0µg

Preparation of Ham's F-10 Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Penicillin-Streptomycin Solution:

Composition per 100.0mL:

Streptomycin.....	0.5g
Penicillin G	500,000U

Preparation of Penicillin-Streptomycin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine components. Filter sterilize. Store at 4–5°C.

Use: For the cultivation of Y-1 mouse adrenal tissue culture cells used for the detection of heat-labile toxin (LT) produced by enterotoxigenic strains of *Escherichia coli*. LT causes the conversion of elongated fibroblast-like cells into round, refractile cells.

Y 1 Adrenal Cell Growth Medium

Composition per 580.0mL:

Ham's F-10 medium	500.0mL
Fetal bovine serum.....	75.0mL
Penicillin-streptomycin solution	5.0mL

pH 7.0 ± 0.2 at 25°C

Ham's F-10 Medium:

Composition per liter:

NaCl	7.4g
NaHCO ₃	1.2g
Glucose	1.1g
NaH ₂ PO ₄ ·H ₂ O	0.29g
KCl	0.28g
L-Arginine·HCl	0.21g
L-Glutamine.....	0.15g
MgSO ₄ ·7H ₂ O	0.15g
Sodium pyruvate	0.11g
KH ₂ PO ₄	0.08g
CaCl ₂ ·2H ₂ O.....	0.04g
L-Cystine·2HCl.....	0.04g
L-Histidine·HCl·H ₂ O	0.02g
L-Lysine·HCl	0.02g
L-Asparagine·H ₂ O	0.01g
L-Aspartic Acid	0.01g
L-Glutamic acid	0.01g
L-Leucine.....	0.01g
L-Proline	0.01g
L-Serine	0.01g
L-Alanine	8.9mg
Glycine	7.5mg
D-Phenylalanine.....	5.0mg
L-Methionine	4.5mg
Hypoxanthine	4.1mg
L-Threonine	3.6mg
L-Valine	3.5mg
L-Isoleucine	2.6mg
L-Tyrosine.....	1.8mg
Vitamin B ₁₂	1.4mg
Folic acid.....	1.3mg
Phenol Red	1.2mg
Thiamine·HCl	1.0mg
FeSO ₄ ·7H ₂ O.....	0.8mg
Choline chloride.....	0.7mg
D-Calcium pantothenate	0.7mg
Thymidine.....	0.7mg
Niacinamide	0.6mg
L-Tryptophan	0.6mg
Isoinositol.....	0.5mg
Riboflavin	0.4mg
Lipoic acid	0.2mg
Pyridoxine·HCl	0.2mg
ZnSO ₄ ·7H ₂ O	0.03mg
Biotin	0.02mg
CuSO ₄ ·5H ₂ O	3.0μg

Preparation of Ham's F-10 Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Penicillin-Streptomycin Solution:

Composition per 100.0mL:

Streptomycin.....	0.5g
Penicillin G	500,000U

Preparation of Penicillin-Streptomycin Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine components. Filter sterilize. Store at 4°–5°C.

Use: For the cultivation of Y-1 mouse adrenal tissue culture cells used for the detection of cholera enterotoxin (CT) produced by enterotoxigenic strains of *Vibrio cholerae* or *Vibrio mimicus*. CT causes the conversion of elongated fibroblast-like cells into round, refractile cells.

YA12

Composition per liter:

Agar	10.0g
Glucose	0.6g
NaCl	0.5g
Beef extract.....	0.2g
Yeast extract.....	0.02g

pH 6.5–6.7 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5–6.7. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Adelphamoeba galeacystis*.

YA Halophile Medium

Composition per liter:

NaCl	100.0g
Agar	15.0g
Sodium acetate·3H ₂ O.....	10.0g
Na ₂ HPO ₄	3.8g
KH ₂ PO ₄	1.3g
Mg(NO ₃) ₂ ·6H ₂ O	1.0g
(NH ₄) ₂ SO ₄	1.0g
Yeast extract.....	1.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except magnesium nitrate, to tap water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add magnesium nitrate. Adjust pH 7.2 with sterile KOH. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of halophilic microorganisms, including *Bacillus halodenitrificans*.

YB Medium

(Yeast Extract Beef Extract Medium)

Composition per liter:

Agar	20.0g
Peptone	10.0g
Beef extract	7.0g
Yeast extract.....	5.0g
NaCl.....	3.0g
Thiourea.....	0.1g
Methanol.....	20.0mL

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except methanol, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure—121°C. Aseptically add filter-sterilized methanol. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of bacteria that can utilize methanol as a carbon source, including *Achromobacter methanophila*, *Methanomonas methylovora*, *Methylobacterium* species, and *Pseudomonas methanolica*.

YC Agar without Tryptophan

Composition per liter:

Solution A	500.0mL
Solution B	500.0mL

Solution A:

Composition per 500.0mL:

Glucose	20.0g
Succinic acid	10.0g
NaOH	6.0g
(NH ₄) ₂ SO ₄	5.0g
KH ₂ PO ₄	0.6g
MgSO ₄ ·7H ₂ O	0.3g
Adenine	0.1g
L-Arginine	0.1g
L-Cysteine	0.1g
L-Leucine	0.1g
L-Lysine	0.1g
L-Threonine	0.1g
Uracil	0.1g
L-Aspartic acid	0.05g
L-Histidine	0.05g
L-Isoleucine	0.05g
L-Methionine	0.05g
L-Phenylalanine	0.05g
L-Proline	0.05g
L-Serine	0.05g
L-Tyrosine	0.05g
L-Valine	0.05g
NaCl	0.05g
CaCl ₂ ·2H ₂ O	0.05g
DL-Methionine	0.01g
L-Histidine-HCl	0.005g
Inositol	1.0mg
KI	0.5mg
H ₃ BO ₃	0.3mg
ZnSO ₄ ·7H ₂ O	0.2mg
MnSO ₄ ·4H ₂ O	0.2mg
Thiamine-HCl	0.2mg
Pyroxidine-HCl	0.2mg
Niacin	0.2mg
Calcium pantothenate	0.2mg
p-Aminobenzoic acid	0.1mg
Riboflavin	0.1mg
FeCl ₃	0.1mg
Na ₂ MoO ₄ ·4H ₂ O	0.1mg
CuSO ₄ ·5H ₂ O	0.02mg
Folic acid	1.0μg
Biotin	1.0μg

pH 5.7 ± 0.2 at 25°C

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Adjust pH to 5.6–5.7. Filter sterilize. Warm to 50°–55°C.

Solution B:

Composition per 500.0mL:

Agar, noble	20.0g
-------------------	-------

Preparation of Solution B: Add agar to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure—121°C. Cool to 50°–55°C.

Preparation of Medium: Aseptically mix 500.0mL of solution A and 500.0mL of solution B. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and maintenance of *Saccharomyces cerevisiae*.

YC Medium without Tryptophan

Composition per liter:

Solution A	500.0mL
Solution B	500.0mL

Solution A:

Composition per 500.0mL:

Glucose	20.0g
Succinic acid	10.0g
NaOH	6.0g
(NH ₄) ₂ SO ₄	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.1g
CaCl ₂ ·2H ₂ O	0.1g
Adenine	0.1g
L-Arginine	0.1g
L-Cysteine	0.1g
L-Leucine	0.1g
L-Lysine	0.1g
L-Threonine	0.1g
Uracil	0.1g
L-Aspartic acid	0.05g
L-Histidine	0.05g
L-Isoleucine	0.05g
L-Methionine	0.05g
L-Phenylalanine	0.05g
L-Proline	0.05g
L-Serine	0.05g
L-Tyrosine	0.05g
L-Valine	0.05g
Inositol	2.0mg
KI	1.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine-HCl	0.4mg
Pyroxidine-HCl	0.4mg
Niacin	0.4mg
Calcium pantothenate	0.4mg
p-Aminobenzoic acid	0.2mg
Riboflavin	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg

CuSO ₄ ·5H ₂ O	0.04mg
Folic acid.....	2.0μg
Biotin	2.0μg

Preparation of Solution A: Add components to distilled/deionized water and bring volume to 500.0mL. Adjust pH to 5.6–5.7. Filter sterilize. Warm to 50°–55°C.

Solution B:

Composition per 500.0mL:

Agar, noble.....	20.0g
------------------	-------

Preparation of Solution B: Add agar to distilled/deionized water and bring volume to 500.0mL. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50–55°C.

Preparation of Medium: Aseptically combine 500.0mL of solution A and 500.0mL of solution B. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Saccharomyces cerevisiae*.

YDC Agar

(Yeast Extract Dextrose Calcium Carbonate Agar)

Composition per liter:

CaCO ₃ , finely divided.....	20.0g
Glucose	20.0g
Agar	15.0g
Yeast extract.....	10.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes in 10.0mL volumes. Autoclave for 15 min at 15 psi pressure–121°C. Allow tubes to cool in a slanted position.

Use: For the cultivation and maintenance of *Pseudomonas* species on agar slants.

YDC Medium

Composition per liter:

CaCO ₃	20.0g
Glucose	20.0g
Agar	15.0g
Yeast extract.....	10.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Bdellovibrio* species.

Yeast Agar, Van Niel's

Composition per liter:

Agar	20.0g
Yeast extract.....	10.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g

pH 7.0–7.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of microorganisms, including *Cytophaga* species, *Heliobacterium chlorum*, *Rhodocyclidium vanniellii*, *Lysobacter enzymogenes*, *Rhodobacter* species, *Rhodocyclidium gelatinosus*, *Rhodospseudomonas palustris*, and *Rhodospirillum rubrum*.

Yeast Agar, Van Niel's with Glutamate

Composition per liter:

Agar	20.0g
Yeast extract.....	10.0g
K ₂ HPO ₄	1.0g
MgSO ₄	0.5g
Monosodium glutamate	0.85g

pH 7.0–7.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of bacteria, including *Bacillus firmus*, *Cytophaga johnsonae*, *Heliobacterium chlorum*, *Lysobacter enzymogenes*, *Rhodobacter capsulatus*, *Rhodocyclidium vanniellii*, *Rhodobacter sphaeroides*, *Rhodocyclidium gelatinosus*, *Rhodocyclidium gelatinosus*, *Rhodospseudomonas palustris*, and *Rhodospirillum rubrum*.

Yeast Agar, Van Niel's with 2.5% Sodium Chloride (ATCC Medium 1370)

Composition per liter:

NaCl.....	25.0g
Agar	20.0g
Yeast extract.....	10.0g
K ₂ HPO ₄	1.0g
MgSO ₄	0.5g

pH 7.0–7.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Chromatium vinosum* and *Rhodospseudomonas* species.

Yeast Agar, Van Niel's with 25% Sodium Chloride

Composition per liter:

NaCl.....	250.0g
Agar	20.0g
Yeast extract.....	10.0g
K ₂ HPO ₄	1.0g
MgSO ₄	0.5g

pH 7.0–7.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of halophilic bacteria, including *Haloarcula vallismortis*, *Halococcus morrhuae*, and *Halo-bacterium* species.

Yeast Agar, Van Niel's with Succinate**Composition per liter:**

Agar	20.0g
Yeast extract	10.0g
Sodium succinate	1.35g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g

pH 7.0–7.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Rhodobacter capsulatus*.

Yeast Ascospore Agar**Composition per liter:**

Agar	30.0g
Potassium acetate	10.0g
Yeast extract	2.5g
Glucose	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and observation of ascospore formation of yeast.

Yeast Beef Agar

See: Antibiotic Medium 4

**Yeast Carbon Base, 10X
(Wickerham Carbon Base Broth)****Composition per liter:**

Glucose	10.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.1g
CaCl ₂ ·2H ₂ O	0.1g
DL-Methionine	0.02g
DL-Tryptophan	0.02g
L-Histidine·HCl	0.01g
Inositol	2.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine·HCl	0.4mg
Pyridoxine	0.4mg
Niacin	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid	0.2mg
Riboflavin	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
KI	0.1mg
CuSO ₄ ·5H ₂ O	0.04mg
Folic Acid	2.0µg
Biotin	2.0µg

pH 5.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Use: Used as a base to which different nitrogen sources may be added. For the cultivation and differentiation of bacteria based on their ability to utilize diverse added nitrogen sources.

Yeast Dextrose Agar**Composition per liter:**

Agar	15.0g
Glucose	10.0g
Yeast extract	10.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of a variety of heterotrophic microorganisms.

Yeast Extract Agar**Composition per liter:**

Agar	15.0g
Malt extract	10.0g
Glucose	4.0g
Yeast extract	4.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Actinomyces* species, *Actinopolyspora* species, *Excellulospira* species, and *Microspora* species.

Yeast Extract Agar**Composition per liter:**

Agar	15.0g
Peptone	5.0g
Yeast extract	3.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Oxoid Unipath.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the enumeration of microorganisms in potable and fresh water samples.

Yeast Extract Agar**Composition per liter:**

Agar	15.0g
Peptone	9.5g
Yeast extract	7.0g
Beef extract	5.0g
NaCl	5.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Aeromonas salmonicida*.

Yeast Extract Agar

Composition per liter:

Agar	20.0g
Yeast extract	1.0g
Buffer solution	2.0mL
pH 6.0 ± 0.2 at 25°C	

Buffer Solution:

Composition per 400.0mL:

KH ₂ PO ₄	60.0g
Na ₂ HPO ₄	40.0g

Preparation of Buffer Solution: Add 40.0g of Na₂HPO₄ to 300.0mL of distilled/deionized water. Mix thoroughly. Add 60.0g of KH₂PO₄. Mix thoroughly. Adjust pH to 6.0.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes.

Use: For the identification of *Histoplasma capsulatum*, *Blastomyces dermatitidis*, and *Coccidioides immitis*.

Yeast Extract Agar

Composition per liter:

Agar	15.0g
Proteose peptone	10.0g
NaCl	5.0g
Yeast extract	3.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of heterotrophic microorganisms.

Yeast Extract Agar for *Schizosaccharomyces*

Composition per liter:

Glucose	30.0g
Agar	15.0g
Yeast extract	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Schizosaccharomyces japonicus* and *Schizosaccharomyces pombe*.

Yeast Extract Beef Extract Medium

See: **YB Medium**

Yeast Extract Dextrose Calcium Carbonate Agar

See: **YDC Agar**

Yeast Extract Glucose Agar

Composition per liter:

Agar	15.0g
Glucose	15.0g
K ₂ HPO ₄	5.2g
KH ₂ PO ₄	3.18g
NH ₄ Cl	0.54g
Yeast extract	0.5g
MgSO ₄	0.12g
Trace elements solution	5.0mL
pH 7.0 ± 0.2 at 25°C	

Trace Elements Solution:

Composition per liter:

ZnSO ₄ ·7H ₂ O	0.287g
CuSO ₄ ·5H ₂ O	0.249g
MnSO ₄ ·4H ₂ O	0.223g
Na ₂ MoO ₄ ·2H ₂ O	0.124g
CaCl ₂ ·6H ₂ O	0.118g
KJ	0.083g
H ₃ BO ₃	0.03g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus licheniformis*, *Bacillus* species, *Clavibacter michiganense*, *Flavobacterium indologenes*, *Hafnia alvei*, *Pseudomonas fluorescens*, and *Serratia marcescens*.

Yeast Extract Glucose Broth

Composition per liter:

Glucose	15.0g
K ₂ HPO ₄	5.2g
KH ₂ PO ₄	3.18g
NH ₄ Cl	0.54g
Yeast extract	0.5g
MgSO ₄	0.12g
Trace elements solution	5.0mL
pH 7.0 ± 0.2 at 25°C	

Trace Elements Solution:

Composition per liter:

ZnSO ₄ ·7H ₂ O	0.287g
CuSO ₄ ·5H ₂ O	0.249g
MnSO ₄ ·4H ₂ O	0.223g
Na ₂ MoO ₄ ·2H ₂ O	0.124g
CaCl ₂ ·6H ₂ O	0.118g
KJ	0.083g
H ₃ BO ₃	0.03g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Bacillus licheniformis*, *Bacillus* species, *Clavibacter michiganense*, *Flavobacterium indologenes*, *Hafnia alvei*, *Pseudomonas fluorescens*, and *Serratia marcescens*.

Yeast Extract Glucose Calcium Carbonate Agar

Composition per liter:

CaCO ₃	20.0g
Glucose	20.0g
Agar	15.0g
Yeast extract.....	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Erwinia* species.

Yeast Extract Glucose Carbonate Medium

See: [YGC Medium](#)

Yeast Extract Glucose Carbonate Peptone Medium

See: [YGCP Medium](#)

Yeast Extract Glucose Citrate Medium

See: [YGC Medium](#)

Yeast Extract Glucose Citrate Medium with Cysteine

See: [YGC Medium with Cysteine](#)

Yeast Extract Glucose Medium

Composition per liter:

Agar	15.0g
Yeast extract.....	10.0g
Glucose	10.0g

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of bacteria, including *Streptomyces* species, *Rhodococcus* species, and others.

Yeast Extract Glycerol Medium

Composition per liter:

Agar	15.0g
Yeast extract.....	5.0g
Glycerol	50.0mL

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Geodermatophilus obscurus* subspecies *utahensis*.

Yeast Extract HiVeg Agar

Composition per liter:

Agar	15.0g
Plant peptone.....	5.0g
Yeast extract.....	3.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the enumeration of microorganisms in potable and freshwater samples. A highly nutritive medium recommended for plate count of microorganisms in water.

Yeast Extract Malt Extract Agar

See: [ISP Medium 2](#)

Yeast Extract Malt Extract Agar, Diluted 1/10

Composition per liter:

Agar	20.0g
Malt extract.....	1.0g
Yeast extract.....	0.4g
Glucose	0.4g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Actinomyces atramentaria*, *Microtetraspora africana*, *Parvopolyspora pallida*, and *Streptosporangium fragile*.

Yeast Extract Malt Extract Glucose Agar

Composition per liter:

Agar	20.0g
Glucose	10.0g
Neopeptone.....	5.0g
Malt extract.....	3.0g
Yeast extract.....	3.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of yeasts.

Yeast Extract Malt Extract Glucose Agar

Composition per liter:

Agar	20.0g
Malt extract.....	10.0g
Glucose	4.0g
Yeast extract.....	4.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Nocardia asteroides*, *Nocardia farcinica*, *Streptomyces antibioticus*, *Streptomyces argenteolus*, *Streptomyces aureofaciens*, *Streptomyces bluensis*, *Streptomyces caelestis*, *Streptomyces cinnamoneus*, *Streptomyces echinatus*, *Streptomyces griseocarneus*, *Streptomyces griseus*, *Streptomyces hawaiiensis*.

sis, Streptomyces kanamyceticus, Streptomyces kentuckensis, Streptomyces murinus, Streptomyces netropsis, Streptomyces niveus, Streptomyces nogalater, Streptomyces nousei, Streptomyces paucisporogenes, Streptomyces rimosus, Streptomyces sparsogenes, Streptomyces spectabilis, Streptomyces tendae, Streptomyces tenebrarius, Streptomyces violaceoruber, Streptomyces viridifaciens, and Vibrio salmonicida.

Yeast Extract Mannitol Agar

Composition per liter:

Agar	15.0g
Mannitol	10.0g
CaCO ₃	4.0g
K ₂ HPO ₄	0.5g
Yeast extract	0.4g
MgSO ₄ ·7H ₂ O	0.2g
NaCl	0.1g

pH 6.8–7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Omit CaCO₃ if a clear solution is needed. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of members of the rhizobiaceae.

Yeast Extract Medium

Composition per liter:

Yeast extract	10.0g
---------------------	-------

Preparation of Medium: Add yeast extract to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pseudomonas cepacia*.

Yeast Extract Medium with Sodium Sulfide

Composition per liter:

Yeast extract	10.0g
Na ₂ S	0.15g

Preparation of Medium: Add yeast extract to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Immediately prior to inoculation, add 0.15g of Na₂S. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Rhodospirillum molischanum*.

Yeast Extract Mineral Agar

Composition per liter:

Agar	15.0g
Yeast extract	4.0g
NaHPO ₄ ·12H ₂ O	3.5g
K ₂ HPO ₄	1.0g
NH ₄ Cl	0.5g
MgSO ₄ ·7H ₂ O	0.03g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Bacillus azotoformans*.

Yeast Extract Mineral Medium (DSMZ Medium 259)

Composition per liter:

Agar	15.0g
Yeast extract	4.0g
Na ₂ HPO ₄ ·12H ₂ O	3.5g
K ₂ HPO ₄	1.0g
NH ₄ Cl	0.5g
MgSO ₄ ·7H ₂ O	0.03g

pH 7.1 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus azotoformans*.

Yeast Extract Nutrient Agar Medium

See: [YNA Medium](#)

Yeast Extract Nutrient Gelatin Medium

See: [YNG Medium](#)

Yeast Extract Peptone Beef Extract Medium

See: [YEPB Medium](#)

Yeast Extract Peptone Starch Agar

Composition per liter:

Agar	18.0g
Soluble starch	10.0g
Peptone	10.0g
CaCO ₃	5.0g
Sodium acetate	5.0g
Yeast extract	3.0g
KH ₂ PO ₄	0.5g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O	0.3g
Sodium citrate	0.027g
NaCl	0.01g
MnSO ₄ ·5H ₂ O	0.01g
CuSO ₄ ·5H ₂ O	1.0mg
CoCl ₂ ·6H ₂ O	1.0mg
FeSO ₄ ·7H ₂ O	1.0mg

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus* species that utilize starch as a carbon source.

Yeast Extract Peptone Sulfate Cysteine Medium

See: [YPSC Medium](#)

Yeast Extract Phosphate Agar (YEP Agar)

Composition per liter:

Agar	20.0g
Yeast extract	1.0g
KH ₂ PO ₄	0.3g

Na ₂ HPO ₄	0.2g
Phenol Red.....	1.0mg

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation of dimorphic pathogenic fungi from clinical specimens.

Yeast Extract Proteose Peptone Medium

See: **YEPP Medium**

Yeast Extract Rose Bengal HiVeg Broth Base with Sorbose

Composition per liter:

Na ₂ HPO ₄	17.25g
Yeast extract.....	5.0g
Synthetic detergent.....	2.0g
NaCl.....	1.0g
Sodium pyruvate.....	1.0g
Rose Bengal.....	0.04g
MgSO ₄	0.01g
Sorbose solution.....	100.0mL

pH 7.9 ± 0.2 at 25°C

Source: This medium, without sorbose solution, is available as a premixed powder from HiMedia.

Sorbose Solution:

Composition per 100.0mL:

Sorbose.....	4.0g
--------------	------

Preparation of Sorbose Solution: Add sorbose to distilled/deionized water and bring volume to 100.0mL. Filter sterilize.

Preparation of Medium: Add components, except sorbose solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45–50°C. Aseptically add 100.0mL of sterile sorbose solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cold enrichment for recovery of *Yersinia enterocolitica* and *Yersinia pseudotuberculosis* from foods.

Yeast Extract Skim Milk Agar

Composition per liter:

Agar.....	15.0g
Skim milk powder.....	10.0g
Yeast extract.....	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Lysobacter enzymogenes*.

Yeast Extract Sodium Lactate Medium

Composition per liter:

Agar.....	15.0g
-----------	-------

Pancreatic digest of casein.....	10.0g
Yeast extract.....	10.0g
Sodium lactate.....	10.0g
KH ₂ PO ₄	2.5g
MnSO ₄	5.0mg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation, cultivation, and maintenance of *Propionibacterium* species.

Yeast Extract Sucrose Agar (YESA) (ATCC Medium 2125)

Composition per liter:

Sucrose.....	20.0g
Agar.....	15.0g
Yeast extract.....	4.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of various fungi.

Yeast Extract Sucrose Agar

Composition per liter:

Sucrose.....	150.0g
Agar.....	20.0g
Yeast extract.....	20.0g
MgSO ₄ ·7H ₂ O.....	0.5g
Trace metals solution.....	1.0mL

pH 6.5 ± 0.2 at 25°C

Trace Metals Solution:

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O.....	1.0g
CuSO ₄ ·5H ₂ O.....	0.5g

Preparation of Trace Metals Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of various fungi.

Yeast Extract Tryptone Medium

See: **YT Medium**

Yeast Extract Tryptone NaCl Medium

See: **YTN Medium**

Yeast Fermentation Broth**Composition** per liter:

Carbohydrate.....	10.0g
Pancreatic digest of gelatin.....	7.5g
Yeast extract.....	5.5g
Bromcresol Purple.....	16.0mg

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into test tubes, each containing an inverted Durham tube. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For fermentation tests of specific carbohydrates used in the characterization and identification of yeasts. Gas accumulation in the Durham tube and a color change of the medium to yellow indicates carbohydrate fermentation.

**Yeast Fermentation HiVeg Broth Base
with Carbohydrate
(Bromcresol Purple HiVeg Broth Base)**

Composition per liter:

Plant peptone.....	10.0g
NaCl.....	5.0g
Plant extract.....	3.0g
Bromcresol Purple.....	0.04g
Carbohydrate solution.....	50.0mL

pH 7.0 ± 0.2 at 25°C

Source: This medium, without carbohydrate solution, is available as a premixed powder from HiMedia.

Carbohydrate Solution:**Composition** per 100.0mL:

Carbohydrate.....	10.0g
-------------------	-------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 100.0mL. Adonitol, arabinose, cellobiose, glucose, dulcitol, fructose, galactose, inositol, lactose, maltose, mannitol, raffinose, rhamnose, salicin, sorbitol, sucrose, trehalose, xylose, or other carbohydrates may be used. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute in 10.0mL volumes into test tubes containing inverted Durham tubes. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Add 0.5mL of sterile carbohydrate solution to each tube.

Use: For the determination of carbohydrate fermentation reactions of microorganisms.

Yeast Fermentation Medium**Composition** per liter:

Peptone.....	7.5g
Yeast extract.....	4.5g
Bromthymol Blue (1.6% solution).....	1.0mL
Carbohydrate solution.....	1.0mL

Carbohydrate Solution:**Composition** per 10.0mL:

Carbohydrate.....	0.6g
-------------------	------

Preparation of Carbohydrate Solution: Add carbohydrate to distilled/deionized water and bring volume to 10.0mL. Glucose, maltose, lactose, galactose, or trehalose may be used. If raffinose is used, prepare a 12% solution. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except carbohydrate solution, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute in 2.0mL volumes into test tubes that contain an inverted Durham tube. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add 1.0mL of sterile carbohydrate solution. Mix thoroughly.

Use: For the cultivation and differentiation of yeast based on carbohydrate fermentation patterns. Yeasts that can ferment a specific carbohydrate turn the medium yellow.

Yeast Glucose Agar**Composition** per liter:

Agar.....	15.0g
Pancreatic digest of gelatin.....	7.75g
Beef extract.....	4.75g
Yeast extract.....	2.5g
K ₂ HPO ₄	2.5g
Glucose.....	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a wide variety of bacteria.

Yeast Glucose Agar**Composition** per liter:

Glucose.....	20.0g
Agar.....	15.0g
Yeast extract.....	10.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Acetobacter aceti*, *Acetobacter Hansenii*, *Acetobacter liquefaciens*, *Acetobacter pasteurianus*, *Acetobacter* species, *Brevibacterium* species, *Dermabacter hominus*, *Clostridium saccharoperbutylacetonicum*, *Corynebacterium amycolatum*, *Gluconobacter asaii*, *Gluconobacter cerinus*, *Gluconobacter frateurii*, *Gluconobacter oxydans*, *Gluconobacter* species, *Lactococcus piscium*, and *Streptococcus mutans*.

Yeast Glucose Agar for Acetobacter**Composition** per liter:

Glucose.....	100.0g
CaCO ₃	20.0g
Agar.....	15.0g
Yeast extract.....	10.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Acetobacter aceti*, *Acetobacter pasteurianus*, and *Gluconobacter oxydans*.

Yeast Glucose Broth

Composition per liter:

Pancreatic digest of gelatin	7.75g
Beef extract	4.75g
Yeast extract	2.5g
K ₂ HPO ₄	2.5g
Glucose	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Staphylococcus caseolyticus*.

Yeast Glucose Broth

Composition per liter:

Glucose	20.0g
Yeast extract	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Enterococcus mundtii*, *Enterococcus pseudo-avium*, *Enterococcus raffinosus*, *Enterococcus solitarius*, *Enterococcus sulfureus*, *Lactococcus raffinolactis*, and *Vagococcus fluvialis*.

Yeast Glucose Broth (YGB)

Composition per liter:

Beef extract	10.0g
Peptone	10.0g
NaCl	5.0g
Glucose	5.0g
Yeast extract	3.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Enterococcus faecalis*, *Streptococcus anginosus*, and *Rhodobacter sphaeroides*.

Yeast Glucose Litmus Milk

See: **YGLM**

Yeast Glucose Litmus Milk with Chalk

See: **YGLM with Chalk**

Yeast HiVeg Agar

(Antibiotic HiVeg Assay Medium No. 4)

Composition per liter:

Agar	15.0g
Plant peptone	6.0g
Yeast extract	3.0g

Plant extract	1.5g
Glucose	1.0g

pH 6.6 ± 0.05 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For antibiotic assay testing.

Yeast Malate Medium

Composition per liter:

Yeast extract	5.0g
Sodium malate	1.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Rhodopseudomonas viridis*.

Yeast Malate Medium

Composition per liter:

KH ₂ PO ₄ ·12H ₂ O	1.0g
NaHCO ₃	1.0g
Sodium malate	1.0g
(NH ₄) ₂ SO ₄	0.5g
Trace elements solution	1.0mL

pH 6.8 ± 0.2 at 25°C

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except trace elements solution, to distilled/deionized water and bring volume to 999.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add 1.0mL of sterile trace elements solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Rhodopseudomonas viridis*.

Yeast Malate Medium (LMG 176)

Composition per 1001.0mL:

KH ₂ PO ₄ ·12H ₂ O	1.0g
NaHCO ₃	1.0g
Sodium malate	1.0g
Yeast extract	1.0g
(NH ₄) ₂ SO ₄	0.5g
Trace elements solution	1.0mL

pH 6.8–7.0 at 25°C

Trace Elements Solution:**Composition per liter:**

H ₃ BO ₃	0.3g
CoCl ₂ ·6H ₂ O	0.2g
ZnSO ₄ ·7H ₂ O	0.1g
MnCl ₂ ·4H ₂ O	0.03g
Na ₂ MoO ₄ ·2H ₂ O	0.03g
NiCl ₂ ·6H ₂ O	0.02g
CuCl ₂ ·2H ₂ O	0.01g

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8–7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Rhodospseudomonas viridis*.

Yeast Malt Agar**Composition per liter:**

Agar	20.0g
Malt extract	10.0g
Glucose	4.0g
Yeast extract	4.0g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of actinomycetes, yeasts, and fungi.

Yeast Malt Agar for *Arthrobacter viscosus***Composition per liter:**

NaCl	10.0g
Pancreatic digest of casein	10.0g
Yeast extract	5.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Arthrobacter viscosus* and *Escherichia coli*.

**Yeast Malt Extract Agar
(YM Agar)****Composition per liter:**

Agar	20.0g
Glucose	10.0g
Peptone	5.0g
Yeast extract	3.0g
Malt extract	3.0g

pH 6.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. The medium may be rendered selective by adjust-

ing the pH to 3.0–4.0 at 45°–55°C or by the addition of antibiotics at 45°–50°C or below. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of fungi, including yeasts, and other aciduric microorganisms such as *Actinoplanes* species, *Streptomyces* species, *Streptoverticillium* species, and *Nocardia* species.

**Yeast Malt Extract Broth
(YM Broth)****Composition per liter:**

Glucose	10.0g
Peptone	5.0g
Yeast extract	3.0g
Malt extract	3.0g

pH 6.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. The medium may be rendered selective by adjusting the pH to 3.0–4.0 at 45°–55°C or by the addition of antibiotics at 45°–50°C or below.

Use: For the cultivation of yeasts, molds, and other aciduric microorganisms such as *Actinoplanes* species, *Streptomyces* species, *Streptoverticillium* species, and *Nocardia* species.

**Yeast Malt Extract Broth
with 0.5% Calcium Carbonate
(YM Broth with 0.5% CaCO₃)****Composition per liter:**

Glucose	10.0g
Peptone	5.0g
CaCO ₃	5.0g
Yeast extract	3.0g
Malt extract	3.0g

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. The medium may be rendered selective by adjusting the pH to 3.0–4.0 at 45°–55°C or by the addition of antibiotics at 45°–50°C or below.

Use: For the cultivation and maintenance of *Dekkera anomala*, *Dekkera bruxellensis*, *Dekkera clausenii*, and *Dekkera lambica*.

**Yeast Malt Extract Broth
with 2.0% Calcium Carbonate
(YM Broth with 2.0% CaCO₃)****Composition per liter:**

CaCO ₃	20.0g
Glucose	10.0g
Peptone	5.0g
Yeast extract	3.0g
Malt extract	3.0g

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. The medium

may be rendered selective by adjusting the pH to 3.0–4.0 at 45°–55°C or by the addition of antibiotics at 45°–50°C or below.

Use: For the cultivation and maintenance of *Dekkera abstinens*.

Yeast Malt Extract Broth with Glucose (YM Broth with Glucose)

Composition per liter:

Glucose	290.0g
Peptone.....	5.0g
CaCO ₃	5.0g
Yeast extract.....	3.0g
Malt extract.....	3.0g

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. The medium may be rendered selective by adjusting the pH to 3.0–4.0 at 45°–55°C or by the addition of antibiotics.

Use: For the cultivation of yeasts and filamentous fungi.

Yeast Malt Extract Broth with 1.0% Methanol (YM Broth with 1.0% Methanol)

Composition per liter:

Glucose	10.0g
Peptone.....	5.0g
Yeast extract.....	3.0g
Malt extract.....	3.0g
Methanol	10.0mL

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add components, except methanol, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Filter sterilize the methanol. Aseptically add the sterile methanol to the cooled sterile basal medium. Mix thoroughly. Distribute into sterile flasks or tubes.

Use: For the cultivation and maintenance of *Pichia angusta* and *Wickerhamiella domercqiae*.

Yeast Malt Extract Broth with 18% Sodium Chloride (YM Broth with 18% NaCl)

Composition per liter:

NaCl	180.0g
Glucose	10.0g
Peptone.....	5.0g
Yeast extract.....	3.0g
Malt extract.....	3.0g

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of *Zygosaccharomyces rouxii*.

Yeast Malt Extract Broth with 40.0% Sucrose (YM Broth with 40.0% Sucrose)

Composition per liter:

Sucrose.....	400.0g
Glucose	10.0g

Peptone	5.0g
Yeast extract.....	3.0g
Malt extract.....	3.0g

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into flasks or tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Chrysosporium fastidium*, *Chrysosporium xerophilum*, *Curvularia pallescens*, *Eupenicillium molle*, and *Talaromyces ucrainicus*.

Yeast Malt Extract Broth with 70.0% Sucrose (YM Broth with 70.0% Sucrose)

Composition per liter:

Sucrose.....	700.0g
Glucose	10.0g
Peptone	5.0g
Yeast extract.....	3.0g
Malt extract.....	3.0g

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into flasks or tubes. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Aspergillus penicilloides*.

Yeast Malt Extract Catalase Agar (YM Catalase Agar)

Composition per liter:

Agar	15.0g
K ₂ HPO ₄	5.74g
Malt extract.....	5.0g
Yeast extract.....	5.0g
NH ₄ H ₂ PO ₄	1.15g
Magnesium sulfate solution.....	10.0mL
Catalase solution.....	10.0mL

Catalase Solution:

Composition per 10.0mL:

Catalase.....	60.0mg
---------------	--------

Preparation of Catalase Solution: Add catalase to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Magnesium Sulfate Solution:

Composition per 10.0mL:

MgSO ₄ ·7H ₂ O.....	205.0mg
---	---------

Preparation of Magnesium Sulfate Solution: Add MgSO₄·7H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except catalase and magnesium sulfate solutions, to distilled/deionized water and bring volume to 980.0mL. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add filter-sterilized catalase and magnesium sulfate solutions.

Use: For the cultivation and maintenance of *Rarobacter faecitabidus*.

Yeast Malt HiVeg Agar (YM HiVeg Agar)

Composition per liter:

Agar	20.0g
Glucose	10.0g
Plant peptone.....	5.0g
Malt extract.....	3.0g
Yeast extract.....	3.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of actinomycetes, yeasts, and fungi.

Yeast Malt HiVeg Broth (YM HiVeg Broth)

Composition per liter:

Glucose	10.0g
Plant peptone.....	5.0g
Malt extract.....	3.0g
Yeast extract.....	3.0g

pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of actinomycetes, yeasts, and fungi.

Yeast Mannitol Agar

Composition per liter:

Agar	15.0g
Mannitol.....	10.0g
K ₂ HPO ₄	0.5g
Yeast extract.....	0.4g
MgSO ₄ ·7H ₂ O.....	0.2g
NaCl.....	0.1g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Rhizobium* and *Azorhizobium* species.

Yeast Mannitol Agar

Composition per liter:

Agar	20.0g
Mannitol.....	10.0g
Na ₂ HPO ₄ ·12H ₂ O.....	1.2g
KH ₂ PO ₄	0.55g
MgSO ₄ ·7H ₂ O.....	0.25g

NaCl.....	0.25g
Yeast extract.....	0.25g
CaSO ₄ ·2H ₂ O.....	30.0mg
FeSO ₄ ·7H ₂ O.....	3.5mg
H ₃ BO ₃	500.0µg
MnSO ₄ ·4H ₂ O.....	400.0µg
ZnSO ₄ ·7H ₂ O.....	160.0µg
CuSO ₄ ·5H ₂ O.....	80.0µg

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Bradyrhizobium japonicum* and *Rhizobium leguminosarum*.

Yeast Mannitol Agar, Modified

Composition per liter:

Agar	15.0g
Mannitol.....	10.0g
CaCO ₃	4.0g
K ₂ HPO ₄	0.5g
Yeast extract.....	0.4g
MgSO ₄ ·7H ₂ O.....	0.2g
NaCl.....	0.1g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Amycolata autotrophica*, *Amycolatopsis orientalis*, *Nocardioides albus*, *Promicromonospora citrea*, *Rhizobium fredii*, *Rhizobium galegae*, *Rhizobium leguminosarum*, *Rhizobium loti*, *Rhizobium meliloti*, and *Rhizobium tropici*.

Yeast Milk Medium

Composition per liter:

Agar	15.0g
Skim milk.....	10.0g
Yeast extract.....	1.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Lysobacter enzymogenes*.

Yeast Morphology Agar

Composition per liter:

(NH ₄) ₂ SO ₄	32.5g
Agar	18.0g
Glucose.....	10.0g
Asparagine.....	1.5g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
NaCl.....	0.5g
CaCl ₂ ·2H ₂ O.....	0.1g
DL-Methionine.....	0.02g
DL-Tryptophan.....	0.02g

L-Histidine-HCl	0.01g
Inositol	2.0mg

Calcium pantothenate	0.4mg
MgSO ₄ ·7H ₂ O	0.4mg
Niacin	0.4mg
Pyridoxine-HCl	0.4mg
Thiamine-HCl	0.4mg
ZnSO ₄ ·7H ₂ O	0.4mg
<i>p</i> -Aminobenzoic acid	0.2mg
FeCl ₃	0.2mg
Riboflavin	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
KI	0.1mg
CuSO ₄ ·5H ₂ O	0.04mg
Biotin	2.0μg
Folic acid	2.0μg

pH 5.6 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For agar dilution and diffusion disk testing with 5-flucytosine. For the microbiological assay of flucytosine using *Candida kefyr* ATCC 28838 or *Saccharomyces cerevisiae* ATCC 36375 as the indicator microorganism.

Yeast Nitrogen Base

Composition per liter:

(NH ₄) ₂ SO ₄	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.1g
CaCl ₂ ·2H ₂ O	0.1g
DL-Methionine	0.02g
DL-Tryptophan	0.02g
L-Histidine-HCl	0.01g
Inositol	2.0mg
KI	1.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine-HCl	0.4mg
Pyroxidine-HCl	0.4mg
Niacin	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid	0.2mg
Riboflavin	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
CuSO ₄ ·5H ₂ O	0.04mg
Folic acid	2.0μg
Biotin	2.0μg

pH 5.5 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes

or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Alternately for carbon assimilation tests, prepare a 10X concentrated solution by adding components to distilled/deionized water and bringing volume to 100.0mL. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Prepare a carbohydrate solution by adding 0.5g of carbohydrate to 90.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize. Aseptically add 0.5mL of the 10X concentrated solution to 4.5mL of the filter-sterilized carbohydrate solution. Mix thoroughly.

Use: For carbohydrate assimilation tests in the characterization and identification of yeasts.

Yeast Nitrogen Base, 10X with Asparagine and Glucose

Composition per liter:

Glucose	10.0g
(NH ₄) ₂ SO ₄	5.0g
L-Asparagine	1.5g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.1g
CaCl ₂ ·2H ₂ O	0.1g
DL-Methionine	0.02g
DL-Tryptophan	0.02g
L-Histidine-HCl	0.01g
Inositol	2.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine-HCl	0.4mg
Pyridoxine-HCl	0.4mg
Niacin	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid	0.2mg
Riboflavin	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
KI	0.1mg
CuSO ₄ ·5H ₂ O	0.04mg
Folic acid	2.0μg
Biotin	2.0μg

pH 5.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Dilute 100.0mL of 10X medium with 900.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize. Aseptically distribute into sterile tubes or flasks.

Use: For susceptibility tests with yeasts and fungi.

Yeast Nitrogen Base with Carbohydrate

Composition per liter:

Carbohydrate	5.0g
(NH ₄) ₂ SO ₄	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.1g
CaCl ₂ ·2H ₂ O	0.1g
DL-Methionine	0.02g
DL-Tryptophan	0.02g
L-Histidine-HCl	0.01g
Inositol	2.0mg

KI	0.1mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine·HCl	0.4mg
Pyroxidine·HCl	0.4mg
Niacin	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid	0.2mg
Riboflavin	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
CuSO ₄ ·5H ₂ O	0.04mg
Folic acid	2.0μg
Biotin	2.0μg

pH 5.6 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize. Aseptically distribute into tubes or flasks.

Use: For carbohydrate assimilation tests in the characterization and identification of yeasts.

Yeast Nitrogen Base Glucose Broth

Composition per liter:

Yeast nitrogen base	25.0mL
Glucose solution	25.0mL

pH 5.6 ± 0.2 at 25°C

Yeast Nitrogen Base:

Composition per 500.0mL:

(NH ₄) ₂ SO ₄	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.5g
NaCl	0.1g
CaCl ₂ ·2H ₂ O	0.1g
DL-Methionine	0.02g
DL-Tryptophan	0.02g
L-Histidine·HCl	0.01g
Inositol	2.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O	0.4mg
MnSO ₄ ·4H ₂ O	0.4mg
Thiamine·HCl	0.4mg
Pyroxidine·HCl	0.4mg
Niacin	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid	0.2mg
Riboflavin	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O	0.2mg
KI	0.1mg
CuSO ₄ ·5H ₂ O	0.04mg
Folic acid	2.0μg
Biotin	2.0μg

Source: Yeast nitrogen base is available as a premixed powder from BD Diagnostic Systems.

Preparation of Yeast Nitrogen Base: Add components to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Filter sterilize.

Glucose Solution:

Composition per 500.0mL:

Glucose	10.0g
---------------	-------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 500.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Aseptically combine 25.0mL of sterile yeast nitrogen base and 25.0mL of sterile glucose solution. Mix thoroughly.

Use: For the cultivation and enrichment of yeast from sewage and polluted waters.

Yeast Peptone Agar (ATCC Medium 1858)

Composition per liter:

Agar	15.0g
Yeast extract	2.5g
Peptone	2.5g

pH 7.0 ± 0.4 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Cytophaga lytica*, *Pseudomonas lanceolata*, *Rhodobacter capsulatus*, *Rhodobacter sphaeroides*, *Rhodopseudomonas blastica*, *Rhodopseudomonas palustris*, *Rhodospirillum rubrum*, *Rubrivivax gelatinosus*, *Sphaerotilus natans*, and *Zoogloea ramigera*.

Yeast Peptone Broth

Composition per liter:

Yeast extract	2.5g
Peptone	2.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Rhodopseudomonas* species.

Yeast Peptone Salt Medium

Composition per liter:

Agar	15.0g
Peptone	2.5g
Yeast extract	2.5g
NaCl	1.25g

pH 7.0 ± 0.4 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Deinobacter grandis*.

Yeast Peptone Succinate Medium (DSMZ Medium 988)

Composition per liter:

Yeast extract	3.0g
Peptone	3.0g
Sodium succinate	2.3g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.2. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Sphingomonas aurantiaca* and other *Sphingomonas* spp.

Yeast Starch Agar

Composition per liter:

Agar	15.0g
Starch, soluble.....	15.0g
Yeast extract.....	4.0g
K ₂ HPO ₄	0.5g
MgSO ₄ ·7H ₂ O.....	0.5g

pH 7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.4. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Streptomyces albospinus*, *Streptomyces longwoodensis*, *Streptomyces cystargineus*, and *Promicromonospora sukumoe*.

Yeast Starch Agar, Diluted 1/10

Composition per liter:

Agar	15.0g
Soluble starch.....	1.0g
Yeast extract.....	0.2g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Catellatospora citrea*, *Spirillospora* species, and *Streptosporangium viridialbum*.

Yeast Starch Agar, Half Strength

Composition per liter:

Agar	15.0g
Soluble starch.....	5.0g
Yeast extract.....	1.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Microtetraspora ferruginea* and *Streptomyces sporoverrucosus*.

Yeast Starch Agar A (DSMZ Medium 1027)

Composition per liter:

Agar	15.0g
Starch, soluble.....	10.0g
Yeast extract.....	2.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Streptomyces* spp. For the cultivation and maintenance of *Actinomadura livida*, numerous *Actinoplanes* species, *Actinosynnema mirum*, *Amycolata hydrocarbonoxydans*, *Amycolatopsis mediterranei*, *Amycolatopsis orientalis*, *Catellatospora ferruginea*, *Dactylosporangium aurantiacum*, *Microbispora chromogenes*, *Microbispora thermodiastatica*, *Micromonospora chalcone*, *Microtetraspora angiospora*, *Microtetraspora incanescens*, *Microtetraspora niveoalba*, *Microtetraspora spiralis*, *Nocardia nitrifians*, *Planobispora rosea*, *Planomonospora venezuelensis*, *Saccharothrix aerocolonigenes*, *Saccharothrix mutabilis*, *Sporichthya polymorpha*, most *Streptomyces* species, many *Streptosporangium* species, and *Trichotomospira caesia*.

Yeast Synthetic Medium with 5'-dTMP

Composition per liter:

Glucose	20.0g
Agar	15.0g
Yeast nitrogen base without amino acids.....	6.7g
Casamino acids without vitamins	2.0g
2'-Deoxythymidine-5'-monophosphate	7.2mg

Preparation of Medium: Add glucose, yeast nitrogen base without amino acids, casamino acids without vitamins, and 2'-deoxythymidine-5'-monophosphate to distilled/deionized water and bring volume to 200.0mL. Mix thoroughly. Filter sterilize. Add agar to distilled/deionized water and bring volume to 800.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically combine the two sterile solutions. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Saccharomyces cerevisiae*.

Yeast Synthetic Minimal Medium

Composition per liter:

D-Glucose	20.0g
Agar	15.0g
(NH ₄) ₂ SO ₄	5.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g
NaCl.....	0.1g
CaCl ₂ ·2H ₂ O	0.1g
Inositol.....	2.0mg
H ₃ BO ₃	0.5mg
ZnSO ₄ ·7H ₂ O.....	0.4mg
MnSO ₄ ·4H ₂ O.....	0.4mg
Thiamine-HCl.....	0.4mg
Pyridoxine-HCl.....	0.4mg
Niacin.....	0.4mg
Calcium pantothenate	0.4mg
<i>p</i> -Aminobenzoic acid.....	0.2mg
Riboflavin.....	0.2mg
FeCl ₃	0.2mg
Na ₂ MoO ₄ ·4H ₂ O.....	0.2mg
KI.....	0.1mg
CuSO ₄ ·5H ₂ O.....	0.04mg

Folic acid.....	2.0µg
Biotin	2.0µg

pH 5.6 ± 0.2 at 25°C

Preparation of Medium: Add agar to 900.0mL of distilled/deionized water. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. In a separate flask, add remaining components to 100.0mL of distilled/deionized water. Mix thoroughly. Filter sterilize. Aseptically combine the two sterile solutions. Mix thoroughly. Pour into sterile Petri dishes.

Use: For the cultivation of a wide variety of heterotrophic microorganisms.

Yeast Synthetic Minimal Medium

Composition per liter:

Glucose	20.0g
Agar	15.0g
Yeast nitrogen base without amino acids.....	6.7g

Preparation of Medium: Add glucose and yeast nitrogen base without amino acids to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize. Add agar to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically combine the two sterile solutions. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Pichia angusta* and *Saccharomyces cerevisiae*.

Yeast Tryptone Medium

Composition per liter:

Pancreatic digest of casein.....	10.0g
NaCl	10.0g
Yeast extract.....	5.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli*.

Yeast Tryptone Medium with Streptomycin

Composition per liter:

Pancreatic digest of casein.....	10.0g
NaCl	10.0g
Yeast extract.....	5.0g
Streptomycin.....	0.2g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli*.

Yeast Tryptone Starch Medium

Composition per liter:

Agar	15.0g
Soluble starch.....	10.0g
Yeast extract.....	5.0g

Pancreatic digest of casein.....	5.0g
KH ₂ PO ₄	2.0g
CaCl ₂ ·2H ₂ O	0.5g
MnCl ₂ ·4H ₂ O	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bacillus circulans*.

Yeast Water Agar

Composition per liter:

Glucose	20.0g
Agar	15.0g
Casein hydrolysate.....	5.0g
Yeast extract.....	4.0g
KH ₂ PO ₄	0.55g
KCl.....	0.4g
CaCl ₂	0.13g
MgCl ₂ ·7H ₂ O	0.13g
FeCl ₃ ·6H ₂ O	2.5mg
MnSO ₄ ·4H ₂ O.....	2.5mg
Bromcresol Green solution	1.0mL

Bromcresol Green Solution:

Composition per 10.0mL:

Bromcresol Green.....	0.22g
Ethanol.....	10.0mL

Preparation of Bromcresol Green Solution: Add Bromcresol Green to 10.0mL of ethanol. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Zymomonas* species.

Yeastrel Agar

Composition per liter:

Agar	15.0g
Peptone	9.5g
Yeastrel	7.0g
Lab-lemco (meat extract).....	5.0g
NaCl.....	5.0g

pH 7.0 ± 0.2 at 25°C

Source: Lab-lemco is available from Oxoid Unipath. Yeastrel is produced by Mapleton's Foods Ltd., Moss Street, Liverpool and is available from health food shops.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Aeromonas salmonicida*.

YED Medium, Salted (DSMZ Medium 1123)

Composition per liter:

Agar	20.0g
NaCl	10.0g

Glucose 7.0g
 Yeast extract 4.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Martelella mediterranea*.

YEME Thiostrepton Medium

Composition per liter:

Sucrose..... 340.0g
 Peptone..... 5.0g
 Malt extract..... 3.0g
 Yeast extract..... 3.0g
 Thiostrepton solution 10.0mL
 MgCl₂·6H₂O solution..... 2.0mL

Thiostrepton Solution:

Composition per 10.0mL:

Thiostrepton 10.0mg

Preparation of Thiostrepton Solution: Add thiostrepton to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

MgCl₂·6H₂O Solution:

Composition per 100.0mL:

MgCl₂·6H₂O..... 50.8g

Preparation of MgCl₂·6H₂O Solution: Add MgCl₂·6H₂O to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Add components, except thiostrepton solution and MgCl₂·6H₂O solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL of sterile thiostrepton solution and 2.0mL of sterile solution. Mix thoroughly. Aseptically distribute into sterile tubes or flasks.

Use: For the cultivation of *Streptomyces lividans*.

YEP Agar

See: [Yeast Extract Phosphate Agar](#)

YEP Galactose Agar

Composition per liter:

Agar 20.0g
 Galactose..... 20.0g
 Peptone..... 20.0g
 Yeast extract..... 10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of heterotrophic microorganisms.

YEP Galactose Medium

Composition per liter:

Agar 20.0g
 Galactose..... 20.0g

Peptone 20.0g
 Yeast extract..... 10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Saccharomyces cerevisiae* and *Yarrowia lipolytica*.

YEPB Medium

(Yeast Extract Peptone Beef Extract Medium)

Composition per liter:

Beef extract..... 10.0g
 Polypeptone™ 10.0g
 Yeast extract..... 5.0g
 NaCl..... 3.0g
 MnCl₂·4H₂O 0.1g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0 with KOH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.0 with KOH.

Use: For the cultivation of *Microbacterium* species.

YEPD Agar

Composition per liter:

Glucose 20.0g
 Mycological peptone 20.0g
 Agar 15.0g
 Yeast extract..... 10.0g

pH 5.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.5. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of yeasts including *Botryozyma nematodophila*, *Bullera crocea*, *Candida* species, *Cryptococcus neoformans*, *Hanseniaspora uvarum*, *Kluyveromyces lactis*, *Kluyveromyces marxianus*, *Metschnikowia pulcherrima*, *Phaffia rhodozyma*, *Pichia* species, *Rhodospiridium toruloides*, *Rhodotorula graminis*, *Saccharomyces* species, *Schizosaccharomyces pombe*, *Schwanniomyces occidentalis*, *Trichosporon* species, *Yamadazyma stipitis*, *Yarrowia lipolytica*, *Zygosaccharomyces bailii*, and *Zygosaccharomyces rouxii*.

YEPD-FA Medium

Composition per liter:

Agar 20.0g
 Glucose 20.0g
 Peptone 20.0g
 Yeast extract..... 10.0g
 Tween™ 40 10.0g
 KH₂PO₄..... 5.0g
 K₂HPO₄..... 5.0g
 Myristic acid 70.0mg
 Palmitic acid 70.0mg
 Stearic acid..... 70.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Saccharomyces cerevisiae*.

YEPD Inositol Agar

Composition per liter:

Glucose	20.0g
Mycological peptone.....	20.0g
Agar	15.0g
Yeast extract.....	10.0g
Inositol	180.0mg

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Saccharomyces cerevisiae*.

YEPD Medium

Composition per liter:

Agar	20.0g
Glucose	20.0g
Peptone.....	20.0g
Yeast extract.....	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of a variety of heterotrophic microorganisms.

YEPD Medium

Composition per liter:

Peptone.....	20.0g
Yeast extract.....	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation and maintenance of a variety of yeasts, including *Botryozyma nematodophila*, *Bullera crocea*, *Candida* species, *Cryptococcus neoformans*, *Hanseniaspora uvarum*, *Kluyveromyces lactis*, *Kluyveromyces marxianus*, *Metschnikowia pulcherrima*, *Phaffia rhodozyma*, *Pichia* species, *Rhodospiridium toruloides*, *Rhodotorula graminis*, *Saccharomyces* species, *Schizosaccharomyces pombe*, *Schwanniomyces occidentalis*, *Trichosporon* species, *Yamadazyma stipitis*, *Yarrowia lipolytica*, *Zygosaccharomyces bailii*, and *Zygosaccharomyces rouxii*.

YEPD Medium with Heme

Composition per liter:

Agar	20.0g
Glucose	20.0g
Peptone.....	20.0g
Yeast extract.....	10.0g
Hemin stock solution	20.0mL

Hemin Stock Solution:

Composition per 10.0mL:

NaOH.....	0.04g
Hemin chloride	65.0mg
Ethanol (50% solution).....	100.0mL

Preparation of Hemin Stock Solution: Combine components and mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Saccharomyces cerevisiae*.

YEPD Medium with 0.3M Sodium Chloride

Composition per liter:

Agar	20.0g
Glucose	20.0g
Peptone	20.0g
NaCl.....	17.53g
Yeast extract.....	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Debaryomyces hansenii*.

YEPG Medium

Composition per liter:

Glucose	1.0g
Polypeptone™	2.0g
NH ₄ NO ₃	0.2g
Yeast extract.....	0.2g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Pseudomonas putida* and *Pseudomonas fluorescens*.

YEPG with 0.5% CaCO₃

See: *Bacillus racemilacticus* Agar

YEPP Medium

(Yeast Extract Proteose Peptone Medium)

Composition per liter:

Agar	15.0g
Proteose peptone.....	10.0g
NaCl.....	5.0g
Yeast extract.....	3.0g

pH 7.2–7.4 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Pseudomonas* species.

Yersinia Isolation Agar

See: CAL Agar

Yersinia Isolation HiVeg Agar**Composition per liter:**

Agar	15.0g
Plant peptone.....	15.0g
Lactose	10.0g
Sodium citrate.....	10.0g
Plant extract No. 1	8.5g
Na ₂ S ₂ O ₃	8.5g
Yeast extract.....	5.0g
Synthetic detergent No. II.....	3.0g
Synthetic detergent No. III.....	2.0g
CaCl ₂	1.0g
Ferric citrate.....	1.0g
Neutral Red.....	0.025g
Brilliant Green	0.3mg

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Heat to boiling. Do not autoclave. Pour into sterile Petri dishes.

Use: For the isolation and characterization of *Yersinia enterocolitica* from fecal specimens and enumeration of *Yersinia enterocolitica* from water and other liquid specimens.

Yersinia Selective Agar

See: CIN Agar

Yersinia Selective Agar Base**Composition per liter:**

Mannitol.....	20.0g
Peptone.....	17.0g
Agar	12.5g
Proteose peptone.....	3.0g
Yeast extract.....	2.0g
Sodium pyruvate.....	2.0g
NaCl.....	1.0g
Sodium desoxycholate.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.01g
Neutral Red.....	0.03g
Crystal Violet.....	1.0mg
Selective supplement.....	6.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from BD Diagnostic Systems and Oxoid Unipath.

Selective Supplement:**Composition per 6.0mL:**

Cefsulodin.....	15.0mg
Irgasan.....	4.0mg
Novobiocin.....	2.5mg
Ethanol.....	2.0mL

Preparation of Selective Supplement: Aseptically add components to 4.0mL of distilled/deionized water and 2.0mL of ethanol. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15

psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and enumeration of *Yersinia enterocolitica* from food and clinical specimens.

Yersinia Selective HiVeg Agar Base with Selective Supplement**Composition per liter:**

Plant special peptone.....	20.0g
Mannitol.....	20.0g
Agar	12.5g
Sodium pyruvate.....	2.0g
Yeast extract.....	2.0g
NaCl.....	1.0g
Synthetic detergent No. III.....	0.5g
Neutral Red.....	0.03g
MgSO ₄	0.01g
Crystal Violet.....	1.0mg
Selective supplement.....	6.0mL

pH 7.4 ± 0.2 at 25°C

Source: This medium, without selective supplement, is available as a premixed powder from HiMedia.

Selective Supplement:**Composition per 6.0mL:**

Cefsulodin.....	15.0mg
Irgasan.....	4.0mg
Novobiocin.....	2.5mg
Ethanol.....	2.0mL

Preparation of Selective Supplement: Aseptically add components to 4.0mL of distilled/deionized water and 2.0mL of ethanol. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add selective supplement. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and enumeration of *Yersinia enterocolitica* from food and clinical specimens.

YGB

See: Yeast Glucose Broth

YGC Medium**(Yeast Extract Glucose Carbonate Medium)
(ATCC Medium 73)****Composition per liter:**

Agar	20.0g
Glucose	20.0g
CaCO ₃	20.0g
Yeast extract.....	10.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 30 min at 10 psi pressure–115°C. Cool to 48°C. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Xanthomonas* species, *Erwinia* species, *Kluyvera* species, *Rhodococcus* species, *Streptomyces* species, *Pseudomonas pseudoalcaligenes*, and *Xylophilus ampelinus*.

YGC Medium
(Yeast Extract Glucose Carbonate Medium)
(ATCC Medium 459)

Composition per liter:

Glucose	50.0g
Agar	15.0g
CaCO ₃	12.5g
Yeast extract	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Acetobacter* species.

YGC Medium
(Yeast Extract Glucose Citrate Medium)
(ATCC Medium 216)

Composition per liter:

Beef extract	10.0g
Glucose	10.0g
Peptone	10.0g
Ammonium citrate	5.0g
Yeast extract	5.0g
Sodium acetate	2.0g
Tween™ 80	1.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.05g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Leuconostoc* species.

YGC Medium with Cysteine
(Yeast Extract Glucose
Citrate Medium with Cysteine)

Composition per liter:

Glucose	10.0g
Peptone	10.0g
Beef extract	10.0g
Yeast extract	5.0g
Ammonium citrate	5.0g
Sodium acetate	2.0g
Tween™ 80	1.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	0.05g
L-Cysteine·HCl·H ₂ O solution	10.0mL

pH 6.5 ± 0.2 at 25°C

L-Cysteine·HCl Solution:**Composition per 10.0mL:**

L-Cysteine·HCl·H ₂ O	0.5g
---------------------------------------	------

Preparation of L-Cysteine·HCl Solution: Add L-cysteine·HCl·H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except for the L-cysteine·HCl·H₂O, to distilled/deionized water and bring volume to

990.0mL. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically add L-cysteine hydrochloride solution.

Use: For the cultivation and maintenance of *Leuconostoc mesenteroides*.

YGC Medium with Glutamic Acid
(Yeast Extract Glucose Carbonate Medium
with Glutamic Acid)

Composition per liter:

Agar	20.0g
Glucose	20.0g
CaCO ₃	20.0g
Agar	20.0g
Yeast extract	10.0g
Glutamic acid	0.1g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 30 min at 10 psi pressure–115°C. Cool to 48°C. Mix thoroughly. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Xanthomonas campestris*.

YGCB Salt Medium

Composition per liter:

NaCl	50.0g
Beef broth	10.0g
Glucose	10.0g
Peptone	10.0g
Triammonium citrate	5.0g
Yeast extract	5.0g
Sodium acetate	2.0g
MgSO ₄ ·7H ₂ O	0.2g
MnSO ₄ ·4H ₂ O	50.0mg
Tween™ 80	1.0mL

pH 6.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Tetragenococcus halophila*.

YGCP Medium
(Yeast Extract Glucose Carbonate Peptone Medium)

Composition per liter:

Glucose	20.0g
Agar	17.5g
CaCO ₃	10.0g
Yeast extract	2.5g
Peptone	2.5g
NaCl	1.0g
K ₂ HPO ₄	1.0g
MgSO ₄	0.5g

Preparation of Medium: Add components, except calcium carbonate, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 7.2. Add calcium carbonate. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Xanthomonas campestris* and *Xanthomonas oryzae*.

**YGLM
(Yeast Glucose Litmus Milk)**

Composition per liter:

Glucose	10.0g
Skim milk powder.....	8.0g
Yeast extract.....	3.0g
Litmus	0.75g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly for 15–20 min. Distribute into tubes or flasks. Autoclave for 10 min at 10 psi pressure–115°C. Incubate for 1 week at 30°C to check for sterility before use.

Use: For the cultivation of *Gemella morbillorum*.

**YGLM with Chalk
(Yeast Glucose Litmus Milk with Chalk)**

Composition per liter:

CaCO ₃	20.0g
Glucose	10.0g
Yeast extract.....	3.0g
Litmus	0.75g
Skim milk.....	100.0mL

Preparation of Medium: Add components, except skim milk, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Add 10.0mL of skim milk. Distribute into tubes. Autoclave for 10 min at 10 psi pressure–115°C. Incubate for 1 week at 30°C to check for sterility before use.

Use: For the cultivation of *Gemella morbillorum*.

YGLPB Medium

Composition per liter:

Peptone.....	10.0g
Lab-Lemco.....	8.0g
Glucose	5.0g
Lactose.....	5.0g
Yeast extract.....	3.0g
KH ₂ PO ₄	2.5g
K ₂ HPO ₄	2.5g
MgSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·4H ₂ O.....	0.05g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the cultivation of *Lactobacillus delbrueckii*.

YGLPB Medium

Composition per liter:

Peptone.....	10.0g
Beef extract.....	8.0g
Glucose	5.0g
Lactose.....	5.0g
Yeast extract.....	3.0g
K ₂ HPO ₄	2.5g
KH ₂ PO ₄	2.5g

MgSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·4H ₂ O.....	0.05g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.8. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Carnobacterium divergens*, *Carnobacterium piscicola*, *Lactobacillus delbrueckii*, *Lactobacillus fermentum*, *Lactococcus lactis*, *Streptococcus ferus*, and *Streptococcus sobrinus*.

YGLPB Medium

Composition per liter:

Peptone	1.0g
Lab Lemco (meat extract).....	0.8g
Glucose	0.5g
Lactose.....	0.5g
Yeast extract.....	0.3g
K ₂ HPO ₄	0.25g
KH ₂ PO ₄	0.25g
MgSO ₄ ·7H ₂ O.....	0.02g
MnSO ₄ ·4H ₂ O.....	5.0mg

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Carnobacterium gallinarum*, *Carnobacterium mobile*, *Enterococcus dispar*, *Lactobacillus fructivorans*, *Leuconostoc carnosum*, *Leuconostoc gelidum*, and *Vagococcus salmoninarum*.

YGLPB Medium without Lactose

Composition per liter:

Peptone	10.0g
Lab Lemco.....	8.0g
Yeast extract.....	3.0g
Glucose	5.0g
KH ₂ PO ₄	2.5g
K ₂ HPO ₄	2.5g
MgSO ₄ ·7H ₂ O.....	0.2g
MnSO ₄ ·4H ₂ O.....	0.05g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C.

Use: For the cultivation of *Vagococcus fluvialis* and *Vagococcus salmoninarum*.

YI-S Medium

Composition per liter:

YI broth.....	880.0mL
Bovine serum, heat inactivated.....	100.0mL
Vitamin mixture 18.....	20.0mL

Source: Vitamin mixture 18 is available from Bio-fluids, Inc., Rockville, MD.

YI Broth:

Composition per liter:

YI base stock.....	780.0mL
10X Glucose buffer stock.....	100.0mL

YI Base Stock:**Composition** per 780.0mL:

Yeast extract.....	30.0g
L-Cysteine-HCl.....	1.0g
NaCl.....	1.0g
Ascorbic acid.....	0.2g
Ferric ammonium citrate.....	228.0mg

10X Glucose Buffer Stock:**Composition** per 100.0mL:

Glucose.....	10.0g
K ₂ HPO ₄	1.0g
KH ₂ PO ₄	0.6g

Preparation of 10X Glucose Buffer Stock: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of YI Base Stock: Add components to 600.0mL of distilled/deionized water. Mix thoroughly. Bring volume to 780.0mL with distilled/deionized water. Adjust pH to 6.8 with 1N NaOH. Distribute in 78.0mL aliquots to 100.0mL screw-capped bottles. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Preparation of YI Broth: Aseptically add 10.0mL of 10X glucose buffer stock to 78.0mL of cooled YI base stock. Adjust osmolarity with NaCl to 380.0milliosmols/kg.

Preparation of Medium: Aseptically add 2.0mL of vitamin mixture 18 and 10.0mL of heat-inactivated bovine serum to 88.0mL of YI broth. Distribute in 13.0mL aliquots to 16 x 125mm screw-capped test tubes. Store at 4°C in the dark with the caps screwed on tightly. Use within 96 hr.

Use: For the cultivation of *Entamoeba* species.

Source: Yeast nitrogen base is available as a premixed powder from BD Diagnostic Systems.

Preparation of Yeast Nitrogen Base Solution: Add components to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except yeast nitrogen base solution, to distilled/deionized water and bring volume to 900.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Aseptically add 100.0mL of sterile yeast nitrogen base solution to the cooled sterile basal medium. Mix thoroughly. Adjust final pH to 5.8. Distribute into sterile flasks or tubes.

Use: For the cultivation of a sorbitol-utilizing fungus.

YMA Agar

Composition per liter:

Agar.....	15.0g
Mannitol.....	10.0g
CaCO ₃	4.0g
KH ₂ PO ₄	0.5g
Yeast extract.....	0.4g
MgSO ₄ ·7H ₂ O.....	0.2g
NaCl.....	0.1g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Rhizobium fredii*, *Rhizobium galegae*, *Rhizobium huakuii*, *Rhizobium leguminosarum*, *Rhizobium loti*, *Rhizobium meliloti*, *Rhizobium phaseoli*, and *Rhizobium trifolii*.

YMA Medium (DSMZ Medium 1031)

Composition per liter:

Agar.....	20.0g
Mannitol.....	10.0g
Yeast extract.....	0.3g
MgSO ₄ ·7H ₂ O.....	0.2g
K ₂ HPO ₄	0.2g
NaCl.....	0.05g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Phyllobacterium trifolii*.

YMF Agar

Composition per liter:

Agar.....	20.0g
Peptone.....	5.0g
Sugar, brown.....	3.0g
Malt extract.....	3.0g
Yeast extract.....	3.0g

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of various fungi.

YMF Broth

Composition per liter:

Peptone.....	5.0g
Sugar, brown.....	3.0g
Malt extract.....	3.0g
Yeast extract.....	3.0g

pH 6.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.2.

Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of various fungi.

YNA Medium (Yeast Extract Nutrient Agar Medium)

Composition per liter:

Agar	15.0g
NaCl	5.0g
Peptone.....	5.0g
Meat extract	4.0g
Yeast extract.....	2.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the isolation and cultivation of *Kurthia* species according to the agar streak method.

YNG Medium (Yeast Extract Nutrient Gelatin Medium)

Composition per liter:

Gelatin.....	100.0g
NaCl	5.0g
Peptone.....	5.0g
Meat extract	4.0g
Yeast extract.....	2.5g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat until dissolved. Distribute into tubes or flasks. Autoclave for 30 min at 10 psi pressure–115°C.

Use: For the isolation and cultivation of *Kurthia* species using the gelatin streak method.

Yolk Milk Medium (YOM)

Composition per liter:

Egg yolk	500.0mL
Milk.....	500.0mL

Egg Yolk:

Composition per 500.0mL:

Chicken egg yolks.....	variable
------------------------	----------

Preparation of Egg Yolk: Soak eggs with 1:100 dilution of saturated mercuric chloride solution for 1 min. Crack eggs and separate yolks from whites. Add sufficient egg yolk to bring volume to 500.0mL. Mix thoroughly.

Preparation of Milk: Autoclave 500.0mL of milk for 20 min at 15 psi pressure–115°C.

Preparation of Medium: Combine 500.0mL of sterile egg yolk and 500.0mL of sterile milk. Mix thoroughly. Distribute into sterile tubes or flasks. Heat to 95°C for 20–25 min.

Use: For the cultivation of *Condiobolus obscurus*.

Yopp's Medium

Composition per liter:

NaCl.....	116.88g
MgCl ₂ ·6H ₂ O	10.68g
MgSO ₄ ·7H ₂ O	10.0g
KCl.....	2.0g
CaNO ₃ ·4H ₂ O	1.0g
Glycyl-glycine buffer.....	0.5g
K ₂ HPO ₄ ·3H ₂ O	0.065g
Ferric EDTA	5.0mg
Trace metals solution	1.0mL

pH 7.8 ± 0.2 at 25°C

Trace Metals Solution:

Composition per liter:

MnCl ₂ ·4H ₂ O	2.0g
H ₃ BO ₃	0.5g
ZnNO ₃ ·6H ₂ O	0.5g
Co(NO ₃) ₂ ·6H ₂ O	0.025g
CuCl ₂ ·2H ₂ O	0.025g
Na ₂ MoO ₄ ·2H ₂ O	0.025g
VO ₂ SO ₄ ·6H ₂ O.....	0.025g
HCl.....	3.0mL

Preparation of Trace Metals Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of halophilic cyanobacteria.

YP87 Medium

Composition per liter:

Na ₂ SO ₄	4.0g
NaHCO ₃	1.3g
KCl.....	0.5g
Yeast extract.....	0.5g
MgCl ₂ ·6H ₂ O	0.4g
NH ₄ Cl	0.25g
L-Ascorbic acid.....	0.2g
Na ₂ HPO ₄	0.2g
Sodium thioglycolate.....	0.2g
CaCl ₂ ·2H ₂ O	0.15g
Resazurin	1.0mg
Modified Wolfe's mineral solution.....	10.0mL
Wolfe's vitamin solution	10.0mL
Sodium lactate, 60% syrup	3.0mL

pH 7.5 ± 0.2 at 25°C

Modified Wolfe's Mineral Solution:

Composition per liter:

MgSO ₄ ·7H ₂ O	3.0g
Nitritotriacetic acid	1.5g
NaCl.....	1.0g
MnSO ₄ ·H ₂ O	0.5g
CaCl ₂	0.1g
CoCl ₂ ·6H ₂ O	0.1g
FeSO ₄ ·7H ₂ O.....	0.1g
ZnSO ₄ ·7H ₂ O	0.1g
AlK(SO ₄) ₂ ·12H ₂ O.....	0.01g
CuSO ₄ ·5H ₂ O	0.01g

H ₃ BO ₃	0.01g
Na ₂ MoO ₄ ·2H ₂ O	0.01g
Na ₂ SeO ₃	0.01g
NaWO ₄ ·2H ₂ O	0.01g
NiCl ₂ ·6H ₂ O	0.01g

Preparation of Modified Wolfe's Mineral Solution: Add nitrilotriacetic acid to 500.0mL of distilled/deionized water. Adjust pH to 6.5 with KOH. Add remaining components one at a time. Add distilled/deionized water to 1.0L. Adjust pH to 6.8.

Wolfe's Vitamin Solution:

Composition per liter:

Pyridoxine-HCl	10.0mg
p-Aminobenzoic acid	5.0mg
Lipoic acid	5.0mg
Nicotinic acid	5.0mg
Riboflavin	5.0mg
Thiamine-HCl	5.0mg
Calcium DL-pantothenate	5.0mg
Biotin	2.0mg
Folic acid	2.0mg
Vitamin B ₁₂	0.1mg

Preparation of Wolfe's Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except L-ascorbic acid, NaHCO₃, and sodium thioglycolate, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Gently heat and bring to boiling. Cool while sparging with 100% N₂. Add L-ascorbic acid, NaHCO₃, and sodium thioglycolate. Mix thoroughly. Sparge with 100% N₂. Distribute into tubes or bottles. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Thermodesulfobivrio yellowstonii*.

YPAD Medium for MAK Mutants of *Saccharomyces*

Composition per liter:

Peptone.....	20.0g
Glucose	20.0g
Agar	20.0g
Yeast extract.....	10.0g
Adenine sulfate	0.4g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of a variety of yeasts, including *Candida albicans*, *Candida boidinii*, *Candida pintolopesii*, *Saccharomyces cerevisiae*, and *Schizosaccharomyces pombe*.

YPC Medium

Composition per liter:

Agar	15.0g
Proteose peptone	15.0g
Yeast extract.....	5.0g
KH ₂ PO ₄	4.0g
Sucrose.....	2.5g
Glucose	2.0g
L-Cystine	0.5g
Na ₂ SO ₃	0.2g

pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Pasteurella multocida*.

**YPD Medium
(DSMZ Medium 393)**

Composition per liter:

Peptone	20.0g
Glucose	20.0g
Yeast extract.....	10.0g

pH 6.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the isolation and cultivation of *Yarrowia lipolytica* (*Candida lipolytica*), *Kluyveromyces* spp., *Saccharomyces* spp., *Pichia* spp., and *Candida* spp.

YPDA

(Yeast Peptone Dextrose Agar)

Composition per liter:

Agar	20.0g
Glucose	20.0g
Peptone	20.0g
Yeast extract.....	10.0g
Adenine sulfate	0.4g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Taphrina populina*.

YPDP Medium with 5'-TMP

Composition per liter:

Glucose	20.0g
Peptone	20.0g
Agar	15.0g
Yeast extract.....	10.0g
KH ₂ PO ₄	1.5g
Thymidine-5'-monophosphate solution.....	10.0mL

Thymidine-5'-Monophosphate Solution:

Composition per 10.0mL:

Thymidine-5'-monophosphate	100.0mg
----------------------------------	---------

Preparation of Thymidine-5'-Monophosphate Solution: Add thymidine-5'-monophosphate to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except thymidine-5'-monophosphate solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL of sterile thymidine-5'-monophosphate solution. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of *Saccharomyces cerevisiae*.

YPG Agar with 2% Sodium Chloride

Composition per liter:

Agar	20.0g
Glucose	20.0g
NaCl	20.0g
Peptone.....	10.0g
Yeast extract.....	10.0g

pH 5.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.2. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

YPG Medium

(DSMZ Medium 1017)

Composition per liter:

Glucose	70.0g
Yeast extract	10.0g
Peptone.....	10.0g

pH 6.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 6.0 with dilute HCl. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Saccharibacter floricola*.

YPG Medium

(DSMZ Medium 1172)

Composition per liter:

Yeast extract	1.0g
Peptone	1.0g
Glucose	1.0g

pH 5.7 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.6–6.0 with dilute HCl. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Asticcacaulis benevestitus*.

YPGA

(DSMZ Medium 1015)

Composition per liter:

Agar	15.0g
Yeast extract	7.0g
Peptone	7.0g
Glucose	7.0g

pH 7.3 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Stenotrophomonas maltophilia*.

Use: For the cultivation of a variety of yeasts and other fungi.

YPM Agar

Composition per liter:

Mannitol.....	25.0g
Agar	12.0g
Yeast extract.....	5.0g
Peptone	3.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Do not adjust pH. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Acetobacter aceti*, *Acetobacter pasteurianus*, *Acetobacter xylinum*, *Frateuria aurantia*, and *Pseudomonas aeruginosa*.

YPNC Medium

Composition per liter:

Agar	18.0g
NaCl.....	2.92g
KH ₂ PO ₄	0.596g
Yeast extract.....	0.5g
Sodium hydrogen glutamate (pH 6.0)	0.37g
K ₂ HPO ₄	0.107g
NH ₄ Cl	0.107g
MgSO ₄ ·7H ₂ O	0.049g
Glucose solution	10.0mL
Trace metals solution.....	1.0mL

pH 6.0 ± 0.2 at 25°C

Glucose Solution:

Composition per 10.0mL:

Glucose	4.0g
---------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Trace Metals Solution:

Composition per liter:

EDTA.....	50.0g
ZnSO ₄ ·7H ₂ O	22.0g
CaCl ₂	5.54g
MnCl ₂ ·4H ₂ O	5.06g
FeSO ₄ ·7H ₂ O.....	4.99g
(NH ₄) ₆ Mo ₇ O ₁₄ ·H ₂ O	1.10g
CoSO ₄ ·5H ₂ O	1.57g
CoCl ₂ ·6H ₂ O	1.61g

Preparation of Trace Metals Solution: Add components, one at a time, to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except glucose solution and trace metals solution, to distilled/deionized water and bring volume to 989.0mL. Mix thoroughly. Gently heat and bring to boiling. Adjust pH to 6.0 with KOH. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C. Aseptically add 10.0mL of sterile glucose solution and 1.0mL of sterile trace metals solution. Mix thoroughly. Pour into sterile Petri dishes or aseptically distribute into sterile tubes.

Use: For the cultivation and maintenance of a variety of *Cryptococcus* species.

YPS Medium (DSMZ Medium 990)

Composition per liter:

Sea salts, Sigma	35.0g
Sulfur, elemental	5.0g
PIPES (piperazine-N,N'-bis[2-ethane-sulfonic acid])	3.46g
NH ₄ Cl	0.5g
KH ₂ PO ₄	0.35g
CaCl ₂ ·2H ₂ O	0.2g
FeCl ₃ ·6H ₂ O	6.7mg
Na ₂ WO ₄	2.9mg
Resazurin	0.1mg
Yeast extract solution	10.0mL
Peptone solution	10.0mL
Sulfide solution	5.0mL

pH 6.8 ± 0.2 at 25°C

Sulfide Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O	0.5g
---	------

Preparation of Sulfide Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature. Adjust pH to 7.0.

Yeast Extract Solution:

Composition per 10.0mL:

Yeast extract	1.0g
---------------------	------

Preparation of Yeast Extract Solution: Add yeast extract to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sparge with 100% N₂.

Peptone Solution:

Composition per 10.0mL:

Peptone	4.0g
---------------	------

Preparation of Peptone Solution: Add peptone to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature. Sparge with 100% N₂.

Preparation of Medium: Add components, except yeast extract, peptone, and sulfide solutions, to distilled/deionized water and bring volume to 975.0mL. Mix thoroughly. Gently heat and bring to boiling. Cool to room temperature while sparging with 100% N₂. Adjust pH to 6.8. Prepare the medium without the yeast extract, peptone, and sodium sulfide. Boil the medium and cool under nitrogen. Adjust the pH to 6.8. Dispense into Hungate tubes or serum bottles under a nitrogen atmosphere. Sterilize the medium at 100°C for 3 hr on 3 consecutive days. Aseptically add the peptone and yeast extract solutions. Adding the sterile, neutralized sulfide solution to an end concentration of 0.025%. Final pH should be 6.8.

Use: For the cultivation of *Thermococcus marinus*.

YPS Medium (DSMZ Medium 1168)

Composition per liter:

Sea salts, Sigma	25.0g
Yeast extract	4.0g
Peptone	2.0g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.5. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Owenweeksia hongkongensis*.

YPS Agar

(Yeast Extract Peptone Sulfate Cysteine Agar)

Composition per liter:

Agar	15.0g
Yeast extract	1.0g
Peptone	1.0g
Sodium acetate·3H ₂ O	0.5g
MgSO ₄ ·7H ₂ O	0.25g
CaCl ₂ ·2H ₂ O	0.25g
L-Cysteine·HCl·H ₂ O	0.05g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.5 with sterile 10M NaOH. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bdellovibrio* species.

YPS Agar, Cation-Supplemented

Composition per liter:

Sodium acetate·3H ₂ O	50.0g
Agar	15.0g
Peptone	10.0g
Yeast extract	10.0g
MgSO ₄ ·7H ₂ O	0.74g
CaCl ₂ ·2H ₂ O	0.29g
L-Cysteine·HCl·H ₂ O	0.05g
Bacitracin solution	10.0mL

Bacitracin Solution:

Composition per 10.0mL:

Bacitracin	6,000U
------------------	--------

Preparation of Bacitracin Solution: Add bacitracin to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except bacitracin solution, to distilled/deionized water and bring volume to 990.0mL. Mix thoroughly. Gently heat and bring to boiling. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 45°–50°C. Aseptically add sterile bacitracin solution. Mix thoroughly. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation and enumeration of *Bdellovibrio* species.

YPS Medium

(Yeast Extract Peptone Sulfate Cysteine Medium)

Composition per liter:

Yeast extract	1.0g
Peptone	1.0g
Sodium acetate·3H ₂ O	0.5g
MgSO ₄ ·7H ₂ O	0.25g
CaCl ₂ ·2H ₂ O	0.25g
L-Cysteine·HCl·H ₂ O	0.05g

pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.5 with sterile 10M NaOH.

Use: For the cultivation and enumeration of *Bdellovibrio* species.

YPSC Soft Agar

(Yeast Extract Peptone Sulfate Cysteine Soft Agar)

Composition per liter:

Agar	6.0g
Yeast extract.....	1.0g
Peptone.....	1.0g
Sodium acetate·3H ₂ O.....	0.5g
MgSO ₄ ·7H ₂ O.....	0.25g
CaCl ₂ ·2H ₂ O.....	0.25g
L-Cysteine·HCl·H ₂ O.....	0.05g
	pH 7.5 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Adjust pH to 7.5 with sterile 10M NaOH. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Bdellovibrio* species.

YpSs Agar

Composition per liter:

Agar	15.0g
Soluble starch.....	15.0g
Yeast extract.....	4.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of bacteria that can utilize starch as a carbon source.

YPSS, Emerson Agar

Composition per liter:

Agar	15.0g
Soluble starch.....	15.0g
Yeast extract.....	4.0g
K ₂ HPO ₄	1.0g
MgSO ₄ ·7H ₂ O.....	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Allomyces javanicus*, *Melanospora tiffanii*, and *Sporothrix schenckii*.

YSP Agar

Composition per liter:

Sucrose.....	20.0g
Agar	12.0g

Peptone	10.0g
Yeast extract.....	5.0g
	pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Xanthomonas albilineans*.

YT HiVeg Broth

Composition per liter:

Plant hydrolysate	16.0g
Yeast extract.....	10.0g
NaCl.....	5.0g
	pH 7.2 ± 0.2 at 25°C

Source: This medium is available as a premixed powder from Hi-Media.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli*.

YT Medium

(Yeast Extract Tryptone Medium)

Composition per liter:

Pancreatic digest of casein.....	8.0g
Yeast extract.....	5.0g
NaCl.....	5.0g
	pH 7.2 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Escherichia coli*.

YTG Medium

Composition per liter:

Tryptone.....	10.0g
Na ₂ CO ₃	5.3g
Yeast extract.....	5.0g
Na ₂ HPO ₄ ·2H ₂ O.....	0.356g
L-Cysteine·HCl	0.2g
Na ₂ S·9H ₂ O.....	0.2g
KCl.....	0.075g
Resazurin	1.0mg
Glucose solution	20.0mL
	pH 10.1 ± 0.2 at 25°C

Glucose Solution:

Composition per 20.0mL:

D-Glucose.....	3.0g
----------------	------

Preparation of Glucose Solution: Add glucose to distilled/deionized water and bring volume to 20.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C.

Preparation of Medium: Prepare and dispense medium under 100% N₂. Add components, except glucose solution, to distilled/deionized water and bring volume to 980.0L. Mix thoroughly. Sparge with 100% N₂ for 30 min. Anaerobically distribute 9.8mL volumes into tubes. Autoclave for 15 min at 15 psi pressure–121°C. Aseptically and

anaerobically add 0.2mL of sterile glucose solution to each tube. Adjust pH to 10.1 with sterile anaerobic 3N NaOH solution.

Use: For the cultivation of *Clostridium paradoxum* and *Clostridium thermoalcaliphilum*.

YTN Medium

(Yeast Extract Tryptone NaCl Medium)

Composition per liter:

NaCl	30.0g
Agar	15.0g
Yeast extract	10.0g
Pancreatic digest of casein	10.0g
Glucose	1.0g
Trace elements solution	1.0mL
pH 7.2 ± 0.2 at 25°C	

Trace Elements Solution:

Composition per liter:

H ₃ BO ₃	2.85g
MnCl ₂ ·4H ₂ O	1.8g
Sodium tartrate	1.77g
FeSO ₄	1.36g
CoCl ₂ ·6H ₂ O	0.04g
CuCl ₂ ·2H ₂ O	0.027g
Na ₂ MoO ₄ ·2H ₂ O	0.025g
ZnCl ₂	0.021g
pH 7.2 ± 0.2 at 25°C	

Preparation of Trace Elements Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly.

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of ATCC strain 21588.

YTSS Medium, Half Strength (DSMZ Medium 974)

Composition per liter:

Sea salts	20.0g
Yeast extract	2.0g
Tryptone	1.25g
pH 7.0 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Roseovarius nubinhibens* and *Silicibacter pomeroyi*.

Z Agar

Composition per liter:

Agar	16.0
K ₂ HPO ₄	5.0g
K ₂ SO ₄	2.0g
KH ₂ PO ₄	1.0g
MgSO ₄ ·7H ₂ O	0.05g
Acetamide solution	40.0mL
pH 7.2 ± 0.2 at 25°C	

Acetamide Solution:

Composition per 100.0mL:

Acetamide	10.0g
-----------------	-------

Preparation of Acetamide Solution: Add acetamide to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Filter sterilize.

Preparation of Medium: Add components, except acetamide solution, to distilled/deionized water and bring volume to 960.0mL. Mix thoroughly. Autoclave for 20 min at 15 psi pressure–121°C. Cool to 70°C. Aseptically add 40.0mL sterile acetamide solution. Mix thoroughly. Pour into sterile Petri dishes. Dry plates at 37°C for 30 min.

Use: For the isolation of *Pseudomonas aeruginosa* from milk.

Z Broth

Composition per liter:

Acetamide	5.0g
K ₂ HPO ₄	5.0g
KH ₂ PO ₄	3.0g
KNO ₃	1.0g
K ₂ S ₄ O ₆	1.0g
MgSO ₄ ·7H ₂ O	0.05g
pH 7.2 ± 0.2 at 25°C	

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Cool. Aseptically distribute 10.0mL volumes into test tubes containing inverted Durham tubes. Heat for 15 min at 0 psi pressure–100°C.

Use: For the cultivation of *Pseudomonas aeruginosa* from milk.

Z Medium

Composition per liter:

Casein hydrolysate	10.0g
NaCl	10.0g
Yeast extract	5.0g
Glucose	1.0g
CaCl ₂ ·2H ₂ O	0.367g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Alcaligenes eutrophus*.

Zavarzinella formosa Medium (DSMZ Medium 1196)

Composition per liter:

N-acetylglucosamine	1.0g
Glucose	0.5g
KH ₂ PO ₄	0.1g
Peptone	0.1g
Yeast extract	0.1g
MgSO ₄ ·7H ₂ O	0.1g
Casamino acids	0.1g
CaCl ₂ ·2H ₂ O	0.05g
NaCl	0.01g
“Metals 44”	1.0mL
pH 5.9 ± 0.2 at 25°C	

“Metals 44”:

Composition per 100.0mL:

ZnSO ₄ ·7H ₂ O	1.095g
FeSO ₄ ·7H ₂ O	0.5g

Sodium EDTA.....	0.25g
MnSO ₄ ·H ₂ O.....	0.154g
CuSO ₄ ·5H ₂ O.....	39.2mg
Co(NO ₃) ₂ ·6H ₂ O.....	24.8mg
Na ₂ B ₄ O ₇ ·10H ₂ O.....	17.7mg

Preparation of “Metals 44”: Add sodium EDTA to distilled/deionized water and bring volume to 90.0mL. Mix thoroughly. Add a few drops of concentrated H₂SO₄ to retard precipitation of heavy metal ions. Add remaining components. Mix thoroughly. Bring volume to 100.0mL with distilled/deionized water.

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 5.8–6.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Zavarzinella formosa*.

ZF2 Medium (DSMZ Medium 943)

Composition per liter:

NaHCO ₃	3.8g
Yeast extract.....	3.0g
(NH ₄)HCO ₃	0.45g
MgSO ₄ ·6H ₂ O.....	0.13g
CaCl ₂ ·2H ₂ O.....	0.12g
Resazurin.....	0.5mg
Phosphate buffer.....	10.0mL
Glycine solution.....	5.0mL
Arginine solution.....	5.0mL
Na ₂ S·9H ₂ O solution.....	5.0mL
Dithionite solution.....	1.0mL
Seven vitamin solution.....	1.0mL
Trace elements solution SL-10.....	1.0mL
Selenite-tungstate solution.....	1.0mL

pH 7.3 ± 0.2 at 25°C

Arginine Solution:

Composition per 10.0mL:

Arginine-HCl.....	3.5g
-------------------	------

Preparation of Arginine Solution: Add arginine-HCl to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Filter sterilize.

Glycine Solution:

Composition per 100.0mL:

Glycine.....	15.0g
--------------	-------

Preparation of Glycine Solution: Add glycine to distilled/deionized water and bring volume to 100.0mL. Mix thoroughly. Sparge with 100% N₂. Autoclave for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Na₂S·9H₂O Solution:

Composition per 10.0mL:

Na ₂ S·9H ₂ O.....	0.3g
--	------

Preparation of Na₂S·9H₂O Solution: Add Na₂S·9H₂O to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to room temperature.

Dithionite Solution:

Composition per 10.0mL:

Na ₂ -dithionite.....	0.25g
----------------------------------	-------

Preparation of Dithionite Solution: Add Na₂-dithionite to distilled/deionized water and bring volume to 10.0mL. Mix thoroughly. Autoclave under 100% N₂ for 15 min at 15 psi pressure–121°C. Cool to 25°C.

Seven Vitamin Solution:

Composition per liter:

Pyridoxine hydrochloride.....	300.0mg
Thiamine-HCl·2H ₂ O.....	200.0mg
Nicotinic acid.....	200.0mg
Vitamin B ₁₂	100.0mg
Calcium pantothenate.....	100.0mg
<i>p</i> -Aminobenzoic acid.....	80.0mg
D(+)-Biotin.....	20.0mg

Preparation of Seven Vitamin Solution: Add components to distilled/deionized water and bring volume to 1.0L. Sparge with 100% N₂. Mix thoroughly. Filter sterilize.

Phosphate Buffer:

Composition per liter:

Na ₂ HPO ₄ ·12H ₂ O.....	43.0g
KH ₂ PO ₄	5.44g

Preparation of Phosphate Buffer: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 50°C.

Trace Elements Solution SL-10:

Composition per liter:

FeCl ₂ ·4H ₂ O.....	1.5g
CoCl ₂ ·6H ₂ O.....	190.0mg
MnCl ₂ ·4H ₂ O.....	100.0mg
ZnCl ₂	70.0mg
Na ₂ MoO ₄ ·2H ₂ O.....	36.0mg
NiCl ₂ ·6H ₂ O.....	24.0mg
H ₃ BO ₃	6.0mg
CuCl ₂ ·2H ₂ O.....	2.0mg
HCl (25% solution).....	10.0mL

Preparation of Trace Elements Solution SL-10: Add FeCl₂·4H₂O to 10.0mL of HCl solution. Mix thoroughly. Add distilled/deionized water and bring volume to 1.0L. Add remaining components. Mix thoroughly. Sparge with 80% N₂ + 20% CO₂. Autoclave for 15 min at 15 psi pressure–121°C.

Selenite-Tungstate Solution

Composition per liter:

NaOH.....	0.5g
Na ₂ WO ₄ ·2H ₂ O.....	4.0mg
Na ₂ SeO ₃ ·5H ₂ O.....	3.0mg

Preparation of Selenite-Tungstate Solution: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Sparge with 100% N₂. Filter sterilize.

Preparation of Medium: Prepare and dispense medium under 80% N₂ + 20% CO₂ gas mixture. Add components, except phosphate buffer, glycine solution, arginine solution, dithionite solution, seven vitamin solution, and Na₂S·9H₂O solution, to distilled/deionized water and bring volume to 973.0mL. Mix thoroughly. Equilibrate with 80% N₂ + 20% CO₂ to reach pH 7.3. Autoclave for 15 min at 15 psi pressure–121°C. Cool to 25°C. Aseptically and anaerobically add 10.0mL phosphate buffer, 5.0mL glycine solution, 5.0mL arginine solution, 1.0mL dithionite solution, 1.0mL seven vitamin solution, and 5.0mL Na₂S·9H₂O solution. Mix thoroughly. Aseptically and anaerobically distribute into sterile tubes or flasks.

Use: For the cultivation of *Sedimentibacter saalensis*.

Zoogloea Medium**Composition per liter:**

Agar	15.0g
Pancreatic digest of casein	5.0g
Glycerol	5.0g
Yeast autolysate.....	1.0g
Sodium lactate.....	0.5g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into screw-cap test tubes. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Zoogloea ramigera* and other *Zoogloea* species.

Zymbacterium Agar**Composition per liter:**

Pancreatic digest of casein	20.0g
Agar	15.0g
Orotic acid.....	2.0g
Na ₃ PO ₄ ·12H ₂ O.....	1.5g
Sodium thioglycolate	1.0g
NaOH.....	0.5g
Riboflavin	0.015g

pH 7.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water in the following order: tryptone, orotic acid, sodium hydroxide, sodium phosphate, sodium thioglycolate, riboflavin, agar and bring volume to 1.0L. Mix thoroughly. Some orotic acid will remain undissolved. Adjust pH to 7.9 using NaH₂PO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Mix thoroughly to dissolve orotic acid. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Clostridium (Zymbacterium) oroticum*.

Zymbacterium Broth**Composition per liter:**

Pancreatic digest of casein	20.0g
Orotic acid.....	2.0g
Na ₃ PO ₄ ·12H ₂ O.....	1.5g
Sodium thioglycolate	1.0g
NaOH.....	0.5g
Riboflavin	0.015g

pH 7.9 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water in the following order: tryptone, orotic acid, sodium hydroxide, sodium phosphate, sodium thioglycolate, riboflavin and bring volume to 1.0L. Mix thoroughly. Some orotic acid will remain undissolved. Adjust pH to 7.9 using NaH₂PO₄. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Mix again to dissolve orotic acid.

Use: For the cultivation and maintenance of *Clostridium (Zymbacterium) oroticum*.

Zymomonas Agar**Composition per liter:**

Glucose	20.0g
Agar	15.0g
Yeast extract.....	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation and maintenance of *Zymomonas mobilis* and other *Zymomonas* species.

Zymomonas Medium**Composition per liter:**

Glucose	20.0g
Agar	15.0g
Peptone	10.0g
Yeast extract.....	10.0g

pH 6.8 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Gently heat and bring to boiling. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or leave in tubes.

Use: For the cultivation of *Zymomonas anaerobia*.

Zymomonas Medium**Composition per liter:**

Glucose	10.0g
Yeast extract.....	10.0g

pH 4.8 ± 0.2 at 25°C

Preparation of Medium: Add components to tap water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 4.8. Distribute into tubes or flasks. Autoclave for 20 min at 15 psi pressure–121°C. Boil the medium immediately before use.

Use: For the cultivation of *Zymomonas mobilis* and other *Zymomonas* species.

Zymomonas Medium**(ATCC Medium 845)****(ATCC Medium 948)****Composition per liter:**

Glucose	20.0g
Yeast extract.....	5.0g

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Autoclave for 15 min at 15 psi pressure–121°C. Pour into sterile Petri dishes or distribute into sterile tubes.

Use: For the cultivation of *Zymomonas mobilis* and other *Zymomonas* species.

Zymomonas Sucrose Medium**Composition per liter:**

Sucrose.....	150.0g
Yeast extract.....	2.0g
Peptone	2.0g
KH ₂ PO ₄	2.0g
(NH ₄) ₂ SO ₄	2.0g
MgSO ₄ ·7H ₂ O.....	2.0g

pH 7.0 ± 0.2 at 25°C

Preparation of Medium: Add components to distilled/deionized water and bring volume to 1.0L. Mix thoroughly. Adjust pH to 7.0. Distribute into tubes or flasks. Autoclave for 15 min at 15 psi pressure–121°C.

Use: For the cultivation of *Zymomonas mobilis*.

 Metals "44", 5
Metanophrys diminuta, 989
Metanophrys species, 226

- Metarhizium anisopliae*, 1410
Metarhizium flavoviride, 1410
Methanobacillus Medium, 1073
Methanobacillus species, 1073
Methanobacter species, 1136, 1137
Methanobacteria Medium, 1073
Methanobacteria Medium with Glucose and Yeast Extract, 1074
Methanobacteria Medium with Xylose, Yeast Extract and Tryptone, 1074
Methanobacteria Medium with Yeast Extract, Sodium Acetate and Methanol, 1075
Methanobacterium alcaliphilum, 1076, 1578
Methanobacterium alcaliphilum Medium, 1076
Methanobacterium bryantii, 1084
Methanobacterium Enrichment Medium, 1076
Methanobacterium espanolae, 1077
Methanobacterium espanolae Medium, 1077
Methanobacterium formicicum, 1074, 1077, 1084, 1085
Methanobacterium formicicum Medium, 1077
Methanobacterium II Medium, 1083, 1084, 1085
Methanobacterium Mass Culturing Medium, 1077
Methanobacterium Medium, 1078
Methanobacterium oryzae, 1084, 1086
Methanobacterium ruminantium, 1079
Methanobacterium ruminantium Medium, 1077, 1078
Methanobacterium species, 1076, 1078, 1082, 1083, 1104
Methanobacterium subterraneum, 1079
Methanobacterium subterraneum Medium, 1079, 1736
Methanobacterium thermoalcalip, 1578
Methanobacterium thermoautotrophicum, 1074, 1080, 1081, 1082, 1240
Methanobacterium thermoautotrophicum Marburg Medium, 1079
Methanobacterium thermoautotrophicum Medium, 407, 1080
Methanobacterium thermoautotrophicum Medium, Taylor and Pirt, 1081
Methanobacterium thermoautotrophicum MS Medium, 1081
Methanobacterium thermoautotrophicus, 1081
Methanobacterium Transduction Agar, 1082
Methanobacterium Transduction Medium, 1082
Methanobacterium uliginosum, 1578
Methanobacterium wolfei, 1083, 1240
Methanobacterium wolfei Medium, 1083
Methanobrevibacter arboriphilicus, 1074
Methanobrevibacter curvatus, 1087, 1089
Methanobrevibacter curvatus DSM 11111, 1088
Methanobrevibacter curvatus Medium, 1086, 1087, 1088
Methanobrevibacter ruminantium, 1578
Methanobrevibacter smithii, 1240
Methanocalculus halotolerans, 1089
Methanocalculus halotolerans Medium, 1089
Methanocalculus pumilus, 1090
Methanocalculus pumilus Medium, 1089
Methanocalculus taiwanensis, 1027
Methanocalculus taiwanensis DSM 14648, 1029
Methanocalculus taiwanensis DSM 14663, 1030
Methanococcoides Medium, 1090
Methanococcoides methylutens, 1091, 1119
Methanococcoides species, 1098
Methanococcus deltae, 734, 1091
Methanococcus deltae Medium, 1091
Methanococcus frisius, 1104
Methanococcus jannaschii, 1092
Methanococcus jannaschii Medium, 1091, 1092
Methanococcus maripaludis, 1104
Methanococcus mazei, 710, 1084, 1085
Methanococcus McC Medium, 1092
Methanococcus McN Medium, 1093
Methanococcus McNail Medium, 1094
Methanococcus Medium, 1095
Methanococcus species, 1096
Methanococcus sp. Medium, 1095
Methanococcus species, 1092, 1093, 1094, 1095, 1104
Methanococcus thermolithotrophicus, 1104
Methanococcus vannielii, 734, 1096, 1097
Methanococcus vannielii Medium, 1096
Methanococcus voltae, 734, 1027, 1097, 1913
Methanococcus voltae BD Medium, 1097
Methanococcus voltae, 1027
Methanocorpusculum aggregans, 1100, 1101
Methanocorpusculum Medium, 1097
Methanocorpusculum species, 1104
Methanoculleus bourgensis, 1102
Methanoculleus marisnigri, 1105
Methanoculleus oldenburgensis, 1081
Methanoculleus olentangyi, 1099, 1105
Methanoculleus olentangyi Medium, 1098
Methanoculleus species, 1104
Methanofollis aquaemaris, 1027
Methanofollis aquaemaris DSM 14661, 1028
Methanogen Enrichment Medium, Barker, 1099
Methanogen Medium, 1099
Methanogen Medium, Zeikus, 1099
Methanogenic bacteria, 1099, 1100
Methanogenium aggregans, 1100
Methanogenium aggregans Medium, 1100
Methanogenium Alcohol Medium, 1101
Methanogenium bourgense, 1102, 1103, 1240
Methanogenium bourgense Medium, 1102
Methanogenium cariaci, 734
Methanogenium CV Medium, 1103
Methanogenium Medium, 1103, 1104
Methanogenium olentangyi, 734, 1105
Methanogenium olentangyi Medium, 1104
Methanogenium organophilum, 1103
Methanogenium species, 1017, 1102, 1104, 1105, 1240
Methanogenium species Medium, 1105
Methanogenium thermophilicum, 1106
Methanogenium thermophilicum Medium, 1105
Methanogeniummarisnigri, 734
Methanohalobium evestigatus, 1107
Methanohalobium Medium, 1106
Methanohalobium species, 1152
Methanohalophilus euhalobius, 1107
Methanohalophilus euhalobius Medium, 1107
Methanohalophilus halophilus, 1108, 1152
Methanohalophilus halophilus Medium, 1107
Methanohalophilus mahii, 795, 1109
Methanohalophilus mahii Medium, 1108
Methanohalophilus Medium, 794
Methanohalophilus oregonense, 526, 1109
Methanohalophilus oregonense Medium, 1109
Methanohalophilus species, 1152, 1153, 1568
Methanohalophilus zhilinae, 78, 1110
Methanohalophilus zhilinae Medium, 1109
Methanol Agar, 1110
Methanol Ammonium Salts Medium, 1110
Methanol Medium, 1111
Methanol Medium for *Achromobacter*, 1111
Methanol Medium with 1% Peptone, 1111
Methanol Mineral Salts Medium, 1111
Methanol Salts Medium, 1111
Methanol Urea Mineral Salts Medium, 1112
Methanol utilization, 1924
Methanolobus, 2 Medium, 1114
Methanolobus bombayensis, 1098
Methanolobus Medium, 1113
Methanolobus siciliae, 1114
Methanolobus taylorii, 1115
Methanolobus taylorii Medium, 1114
Methanolobus tindarius, 1114
Methanolobus vulcani, 1114
Methanol-Utilizing Bacteria Medium B, 1112
Methanol-Utilizing Bacteria Medium D, 1112, 1113
Methanol-Utilizing Bacteria Medium E, 1113
Methanomethylovorans hollandica DSM 15978, 1214
Methanomicrobium Medium, 1115
Methanomicrobium mobile, 1115, 1116
Methanomicrobium mobile Medium, 1115
Methanomicrobium paynteri, 1117
Methanomicrobium paynteri Medium, 1116

- Methanomicrococcus blatticola*, 1118
Methanomicrococcus Medium, 1117
Methanomonas Autotrophic Medium, 1117, 1118
Methanomonas methylovora, 1111, 1140, 1924
Methanomonas species, 1118
Methanoplanus limicola, 1104
Methanoplanus species, 1104
Methanopyrus kandleri, 1119
Methanopyrus Medium, 1118
Methanosaeta concilii, 1138
Methanosarcina acetivorans, 1119, 1120
Methanosarcina acetivorans Medium, 1119
Methanosarcina barkeri, 1084, 1085, 1120, 1125
Methanosarcina barkeri Medium, 1120
Methanosarcina BCYT Medium, 1120
Methanosarcina DPB Medium, 1121
Methanosarcina frisia, 710, 1084, 1085
Methanosarcina frisia Medium, 1122
Methanosarcina Mass Culturing Medium, 1122
Methanosarcina mazei, 710, 756, 1084, 1085, 1123, 1125
Methanosarcina mazei Alpha Basal Medium, 1123
Methanosarcina mazei Medium, 1123
Methanosarcina Medium, 1123, 1124, 1125
Methanosarcina MP Medium, 1126
Methanosarcina Nitrogen-Fixing Medium, 1127
Methanosarcina semesiae, 1128
Methanosarcina semesiae Medium, 1127
Methanosarcina species, 710, 1114, 1121, 1122, 1123, 1125, 1126, 1127, 1247
Methanosarcina thermophila, 710, 1125, 1129, 1130, 1731
Methanosarcina Thermophilic Medium, 1128, 1129
Methanosarcina vacuolata, 1125
Methanosphaera cuniculi, 1132
Methanosphaera Medium, I, 1130
Methanosphaera Medium, II, 1131
Methanosphaera stadimanae, 1131
Methanosphaerula Medium, 1132
Methanosphaerula species, 1133
Methanospirillum hungatei, 1134, 1135, 1136
Methanospirillum hungatei JMA Medium, 1133
Methanospirillum hungatei Medium, 1134
Methanospirillum hungatei SAM Medium, 1134
Methanospirillum SK Medium, 1135
Methanothermobacter thermautotrophicus, 1080
Methanothermobacter/*Methanobacterium* Transduction Agar, 1136
Methanothermobacter/*Methanobacterium* Transduction Medium, 1136
Methanothermus fervidus, 1137
Methanothermus sociabilis, 1138
Methanotherx Medium, 1138
Methanotherx thermophila, 1732
Methermicrococcus Medium, 1139
Methermicrococcus species, 1139
Methicillin-resistant *Staphylococcus aureus*, 841, 1069
Methyl Red test, 1236, 1237
Methyl Red–Voges–Proskauer Broth, 1236
Methyl Red–Voges–Proskauer Broth with NaCl, 1237
Methyl Red–Voges–Proskauer Medium, 1237
Methyl Red–Voges–Proskauer Broth with NaCl, 1237
Methyl Red–Voges–Proskauer Medium, 1237
Methylamine Salts Medium, 1139
Methylene Blue Milk Medium, 1139
Methylobacillus fructoseoxidans, 1154
Methylobacillus glycogenes, 914, 1112
Methylobacillus glycogenes, 1110
Methylobacillus pratensis, 1053
Methylobacterium Agar, 1140
Methylobacterium extorquens, 435, 444, 1112, 1139
Methylobacterium fujisawaense, 1112, 1292
Methylobacterium lusitanum, 1048
Methylobacterium Medium, 1140
Methylobacterium mesophilicum, 116, 1112, 1403
Methylobacterium organophilum, 1112, 1140
Methylobacterium podarium, 1055
Methylobacterium radiotolerans, 1112
Methylobacterium rhodesianum, 1111, 1112
Methylobacterium rhodinum, 1112, 1291
Methylobacterium species, 95, 435, 444, 1110, 1111, 1112, 1141, 1291, 1292, 1924
Methylobacterium suomiense, 1048
Methylobacterium thiocyanatum, 1141
Methylobacterium thiocyanatum Medium, 1141
Methylobacterium zatmanii, 1112
Methylocapsa acidiphila, 1141
Methylocapsa acidiphila Medium, 1141
Methylocella silverstris, 1142
Methylocella silverstris Medium, 1141
Methylocella tundrae, 1171
Methylococcus capsulatus, 912, 1291
Methylococcus Medium, 1142
Methylococcus species, 1142
Methylocystis heyeri, 1171
Methylocystis hirsuta, 1299
Methylohalobius crimeensis, 803
Methylohalomonas Medium, 1142
Methylohalomonas Medium with Acetate, 1143
Methylohalomonas species, 1142, 1143
Methylomicrobium Medium, 1143
Methylomicrobium species, 1144
Methylomonas agile, 1291
Methylomonas clara, 1292, 1299, 1310
Methylomonas methanica, 1291
Methylomonas methylotrophus, 1110
Methylomonas species, 95, 1112
Methylostratum Medium, 1144
Methylostratum Medium with Acetate, 1144
Methylostratum species, 1144, 1145
Methylophaga Agar, 1145
Methylophaga alcalica, 1146
Methylophaga alcalica Agar, 1145
Methylophaga alcalica Medium, 1146
Methylophaga Broth, 1146
Methylophaga marina, 1017, 1018, 1055, 1113, 1145, 1147
Methylophaga Medium, 1147
Methylophaga sulfidovorans, 1147
Methylophaga sulfidovorans Medium, 1147
Methylophaga thalassica, 1017, 1018, 1055, 1113, 1147
Methylophaga thalassica Agar, 1147
Methylophilus glucoseoxidans, 1154
Methylophilus leisingeri, 1176
Methylophilus methylotrophus, 435, 444, 1110, 1112, 1197
Methylophilus species, 95, 1017, 1018
Methylosarcina fibrata, 1148
Methylosarcina quisquiliarum, 1148
Methylosinus trichosporium, 95
Methylotrophic *Arthrobacter Hyphomicrobium* Medium, 1148, 1149
Methylovorus glucosotrophus, 1112
Methylovorus mays, 1053
Methylpyridine Medium, 1149
Metschnikowia hawaiiensis, 1001
Metschnikowia pulcherrima, 1000, 1942
Metschnikowia reukaufii, 1000
MF Endo HiVeg Medium, 1067
M-FC Agar, 1150
M-FC Agar, 669
M-FC Agar Base, 1151
M-FC Broth, 669

 Mineral Medium H-3, 1176
 Mineral Medium M9, 1177
 Mineral Medium S with 1% Sucrose, 1182
 Mineral Medium with 2,4-Dichlorophenoxyacetic Acid, 1176
 Mineral Medium with 2,4-Dichlorotoluene, 1176
 Mineral Medium with 2-Chlorobenzoate, 1174
 Mineral Medium with 2-Hydroxybiphenyl, 1177, 1178, 1180
 Mineral Medium with 3-Aminophenol, 1171
 Mineral medium with 6-Methylnicotinate, 1178
 Mineral Medium with Antipyrin, 1171
 Mineral Medium with Atrazine, 1172
 Mineral Medium with Benzylcyanide, 1172
 Mineral Medium with Camphor, 1173, 1176
 Mineral Medium with Chloridazon, 1173
 Mineral Medium with Crude Oil, 1174
 Mineral Medium with Cyanuric Acid as Nitrogen Source, 1174
 Mineral Medium with Dichlorobenzoate, 1174, 1175
 Mineral Medium with Dichloromethane, 1175
 Mineral Medium with Glucose, 1176
 Mineral Medium with Naphthalene, 1179
 Mineral Medium with Nicotinic Acid, 1179
 Mineral Medium with *o*-Nitrophenol, 1179
 Mineral Medium with PCP, 1180
 Mineral Medium with Phenol, 1180
 Mineral Medium with Phenylacetate, 1181
 Mineral Medium with Pyrrolic Acid, 1181
 Mineral Medium with Quinoline, 1181
 Mineral Medium with Salicylate, 1182
 Mineral Medium with Santonin, 1182
 Mineral Medium with Sulfolbenzoic Acid, 1183
 Mineral Medium with Toluene, 1183
 Mineral Medium with Vitamins, 1183
 Mineral Medium, 1170, 1171
 Mineral Medium, Brunner, 1173
 Mineral Medium, Nagel and Andreesen, 1178
 Mineral Medium, pH 7.25, 1180
 Mineral Pectin 5 Medium, 1227
 Mineral Pectin 7 Medium, 1228
 Mineral Salts Agar, 1184
 Mineral Salts Enrichment Medium, 1184
 Mineral Salts for Thermophiles, 1186
 Mineral Salts Medium, 1184
 Mineral Salts Medium for Thermophiles, 1185
 Mineral Salts Medium with Methanol, 1185
 Mineral Salts Medium with Methanol and Yeast Extract, 1185
 Mineral Salts Peptonized Milk Agar, 1185
 Mineral Salts with Butane, 1184
 Minerals Modified Glutamate Agar, 1186
 Minerals Modified Medium, 1186
 Minimal Agar I, 1186
 Minimal Agar II, 1187
 Minimal Agar III, 1187
 Minimal Agar, Davis, 1187
 Minimal Broth I, 1188
 Minimal Broth II, 1188
 Minimal Broth III, 1188
 Minimal Broth, Davis, 1189
 Minimal F-Top Agar, 1189
 Minimal Lactate Medium, 1196
 Minimal Medium for Denitrifying Bacteria, 1189
 Minimal Medium for *Penicillium* Interspecific Hybrids, 1189
 Minimum Essential Medium with Bicarbonate, Serum, and Antibiotics, 1189
 Minimum Salts with HiVeg Acid Hydrolysate, 1190
 MIO HiVeg Medium, 1190
 MIO Medium, 1223
Mischococcus sphaerocephalus, 70
 Mist Agar, 1191
 Mitis Salivarius Agar, 1191
 Mitis Salivarius HiVeg Agar Base with Tellurite, 1191
Mitrophora semilibera, 1002
Mitsuokella dentalis, 1192
Mitsuokella dentalis Medium, 1191
Mitsuokella jalaludinii, 1487
Mitsuokella multiacida, 631, 718
Mitsuokella multiacidus, 1459
 Mixed Cereal Agar, 1192
 Mixotrophic, 1759
 Mixotrophic *Nitrobacter* Medium, 1192
 Mixotrophic *Nitrobacter* Medium, 10%, 1192
 Mixotrophic *Nitrobacter* species, 1192
 MJ Medium for *Thiobacter subterraneus*, 1194
 MJ Medium, 1193
 MJANHOX-NO₃ Medium with Supplement, 1195
 M-Kleb Agar, 902
 ML Medium, 1196
 M-Lauryl Sulfate Broth, 932
 M-Lauryl Sulfate HiVeg Broth, 1196
 MLCB Agar, 1196
 M-LES, Endo Agar, 641
 MLGA, 1066
 MM Agar HiCrome™, 841
 MM10 Agar, 1196
 MMA Salts Medium, 1197
 MMB Medium, 1197
 MMJS Medium (Modified), 1198
 MMN Agar, 1198
 MMS Medium for *Thermotoga neapolitana*, 1199
 MN, 1064
 Mn Agar No. 1, 1004
 Mn Agar No. 2, 1005
 MN Marine Medium, 1199
 MN Marine Medium with Vitamin B₁₂, 1200
Mobiluncus Agar, 1200
Mobiluncus curtisii, 441, 659
Mobiluncus mulieris, 441, 659
 Moderate Halophilic Medium (HM), 1200
 Modified AEA Sporulation Medium Base, 1200
 Modified Biebl and Pfennig's Medium, 1201
 Modified Bile Esculin Azide Agar, 1201
 Modified Buffered Charcoal HiVeg Agar Base with Cysteine, 1201
 Modified *Campylobacter* Blood-Free Selective Agar Base, 1202
 Modified *Campylobacter* Charcoal Differential Agar, 1202
 Modified CCDA, 1202
 Modified CPLM HiVeg Medium Base with Horse Serum, 1202
 Modified CPLM HiVeg Medium Base with Horse Serum, Penicillin, Streptomycin, and Nystatin, 1202
 Modified Differential Clostridial Broth, 1203
 Modified Duncan Strong HiVeg Medium, 1203
 Modified Duncan Strong Medium, 1203
 Modified Fungal Agar Base, 1203
 Modified Fungal HiVeg Agar Base, 1203
 Modified FWM Medium, 1204, 1205, 1206, 1207, 1208, 1209, 1210, 1211, 1212, 1213
 Modified Gorodkova Agar, 1214
 Modified Inhibitory Mold Agar, 1203
 Modified Inhibitory Mold HiVeg Agar Base, 1203
 Modified ISP5 Medium with Sodium Chloride, 1214
 Modified ISP5 Medium, 1214
 Modified Lethen HiVeg Agar, 1215
 Modified Lethen HiVeg Broth, 1215
 Modified MacConkey Medium, 1037
 Modified Marine Broth, 1215
 Modified McBride *Listeria* HiVeg Agar Base with Blood and Cycloheximide, 1215
 Modified Medium, 10 Agar, 1196

- Modified MYP Agar Base, 1216
 Modified MYP HiVeg Agar Base with Egg Yolk and Polymyxin B, 1216
 Modified Oxford Antimicrobial Supplement, 7
 Modified Oxford *Listeria* Selective Agar, 1216
 Modified PYNFH Medium, 1217
 Modified Raggios Medium, 876
 Modified Rappaport Vassiliadis HiVeg Medium, 1217
 Modified Rogosa HiVeg Agar, 1217
 Modified Semisolid Rappaport Vassiliadis Medium, 1217
 Modified Shieh Agar, 1217
 Modified Skim Milk HiVeg Agar, 1218
 Modified Soyabean Bile Broth Base, 1218
 Modified Soybean HiVeg Agar, 1218
 Modified TII Agar, 1218
 Modified Thayer–Martin Agar, 1707, 1708, 1709
 Modified *Thermus* Medium, 1218
 Modified V.P. HiVeg Broth, 1219
 Modified VWM Medium, 1219
 Moeller Decarboxylase Broth, 1220
 Moeller Decarboxylase HiVeg Broth Base, 1220
 Moeller Decarboxylase HiVeg Broth with Arginine HCl, 1220
 Moeller Decarboxylase HiVeg Broth with Lysine HCl, 1220
 Moeller Decarboxylase HiVeg Broth with Ornithine HCl, 1221
 Moeller KCN Broth Base, 1221
 MOF HiVeg Medium, 1018
 MOF HiVeg Medium with Carbohydrate, 1221
 Molds, 54, 55, 123, 128, 133, 232, 233, 245, 249, 250, 254, 284, 318, 353, 469, 482, 593, 607, 638, 692, 810, 843, 998, 1000, 1001, 1002, 1003, 1203, 1261, 1337, 1411, 1412, 1413, 1414, 1415, 1416, 1417, 1517, 1530, 1533, 1910, 1911, 1912, 1934

Myxobacteria, 88, 319, 341, 390, 466, 467, 468, 602, 624, 1037, 1447, 1476, 1569, 1593, 1628, 1629, 1634, 1898, 1901
Myxobacteria Medium, 1272
Myxobacterium species, 189, 1186, 1370
Myxococcus amylovorans, 1898
Myxococcus coralloides, 1272
Myxococcus flavescens, 1272
Myxococcus flavescens Medium, 1272
Myxococcus fulvus, 257, 258, 260, 288, 648, 890, 1327, 1530
Myxococcus Medium, 1272
Myxococcus species, 323, 1272, 1594
Myxococcus xanthus, 12, 257, 258, 260, 288, 648, 979, 1038, 1272, 1327, 1526, 1530
Myxococcus xanthus Medium, 1272
Myxomicrobium multiplex, 1309
Myxosarcina species, 1200
Myxotrophic bacteria, 1227, 1256
N
N DeVogel Medium, 1272
N plus C Medium, 1272
N-Acetylglucosamine Medium, 44
N-Acetylglucosamine utilization, 44
Nadi reaction, 60
Naegleria australiensis, 1217, 1549
Naegleria fowleri, 706, 981, 1190, 1217, 1281, 1282, 1549
Naegleria gruberi, 706, 981, 1217, 1454, 1552
Naegleria jadini, 1217
Naegleria lovaniensis, 706, 1301, 1303
Naegleria minor, 706
Naegleria thornstoni, 706
NAG Medium, 1273
Nakayama Glucose Agar, 1273
Naladixic acid resistant bacteria, 1311
Nalidixic Acid Novobiocin Actidione Tellurite Agar, 1274
NAM Medium, 1273
Names of media, 1
NAMn, 1309
NANAT Agar, 1274
Nannocystis Agar, 1274
Nannocystis species, 1274
Naphthalene Medium, 1274
Naphthalene Mineral Salts Medium, 1053
Naphthalene Sulfonic Acid Medium, 1274
Naphthalene utilization, 1179
Natranaerobius Medium, 1275
Natranaerobius species, 1275
Natrialba species, 784
Natrinema ejinorense, 1053
Natrinema pallidum, 1346
Natroniella acetigena, 1276, 1277
Natroniella Medium, 1275, 1276
Natronincola histidinovorans, 1278
Natronincola histidinovorans Medium, 1277
Natronobacteria Medium, 1278
Natronobacterium gregoryi, 83, 84, 777, 1278
Natronobacterium magadii, 83, 84, 777, 1278
Natronobacterium Medium, 1278
Natronobacterium pharaonis, 83, 84, 777, 788, 1278
Natronobacterium pharaonis Medium, 1278
Natronobacterium vacuolata, 84
Natronococcus occultus, 84, 777, 1278
Nautilia lithotrophica, 1279
Nautilia Medium, 1278, 1279
Nautilia profundicola, 89
NBA Medium, 1280
NBY Medium, 1280
Nectria haematococca, 1438
Nectria ipomoeae, 1438
Neisseria animalis, 588
Neisseria gonorrhoeae, 89, 90, 324, 325, 360, 362, 441, 445, 587, 588, 725, 727, 728, 730, 731, 758, 821, 997, 1249, 1710, 1807
Neisseria lactamica, 813
Neisseria Medium, 1281
Neisseria meningitidis, 324, 325, 445, 1248, 1249, 1281, 1710
Neisseria meningitidis Medium, 1281
Neisseria species, 359, 360, 361, 445, 466, 721, 723, 727, 728, 729, 730, 1248, 1250, 1281, 1287, 1437, 1438, 1480, 1650, 1651, 1707, 1708, 1709, 1710, 1806, 1807
Neisseria weaveri, 1307
Nelson Medium for *Naegleria fowleri*, 1282
Nelson's Culture Medium for *Naegleria*, 1281
Neocallimastix frontalis, 1282
Neocallimastix Medium, 1282
Neomycin Agar, 1282
Neomycin Agar, Modified, 1282
Neomycin Assay Agar, 132
Neomycin Blood Agar, 1283
Neomycin Luria Agar, 1283
Neomycin Medium No. 1, 1283
Neomycin, Erythromycin Assay Agar, 123
Neomycin, Erythromycin HiVeg Assay Agar, 128
Neopeptone, 2
Neopeptone Glucose Agar, 1284
Neopeptone Glucose Rose Bengal Aureomycin[®] Agar, 1284
Neopeptone Infusion Agar, 1284
Neosporococcus excentricum, 479

- Nephrochlamys subsolitaria*, 70
Nepherodiella brevis, 70
Nesterenkononia halobia, 455
Nesterenkononia lacusekhoensis, 635
Nesterenkononia lutea, 1215
Nesterenkononia Modified Medium, 1284
Nesterenkononia species, 1284
Nesterenkononia xinjiangensis, 1214
 Neufeld (Quellung) reaction, 1914
Neurospora crassa, 365, 1273, 1909
Neurospora Culture Agar, 1284
Neurospora Medium, 1284, 1285
Neurospora Minimal Medium, 1285
Neurospora sitophila, 1284, 1286, 1464, 1909
Neurospora species, 1285, 1892, 1893
Nevskia Medium, 1286
Nevskia ramosa, 1286
 New York City Medium, 1286
 New York City Medium, Modified, 1287
 Niacin Assay HiVeg Medium, 1287
 Niacin Assay Medium, 1288
 Nickels and Leesment Agar, Modified, 1288
 Nickerson Medium, 217
 Nicotinate utilizing bacteria, 1178
 Nicotinic Acid Medium, 1288
 Nicotinic acid utilization, 1179
 Niger Seed Agar, 223
 Niger Seed Salts Agar with Yeast Extract, 1289
Nigrosabulum globosum, 1476
Nigrospora sacchari, 944
Nigrospora sphaerica, 452
 NIH Agar, 1289
 NIH Thioglycolate Broth, 1289
 NIH Thioglycollate Broth, 87
 Nine K Medium, 1289
 Nitrate Agar, 1289
 Nitrate assimilation, 1904
 Nitrate Assimilation Medium, Auxanographic Method for Yeast Identification, 1289
 Nitrate assimilation tests, 1290
 Nitrate Broth, 1290
 Nitrate Broth, *Campylobacter*, 1290
 Nitrate Broth, Enriched, 1290
 Nitrate HiVeg Agar, 1290
 Nitrate HiVeg Broth, 1290

The Most Complete Microbiology Reference Available

Handbook of MICROBIOLOGICAL MEDIA

Fourth Edition

Handbook of Microbiological Media, Fourth Edition is an invaluable reference for every medical, veterinary, diagnostic, and academic laboratory... and now in its fourth edition, it is even more complete. This edition carries on the tradition of CRC Press handbook excellence, listing the formulations, methods of preparation, and uses for more than 7000 microbiological media. With 1500 more entries than any previous edition, the handbook includes both classic and modern media used for the identification, cultivation, and maintenance of diverse bacteria, archaea, and fungi.

The breadth of culture media in this comprehensive resource is enormous and has greatly expanded in recent years with the exploration of extreme habitats and the use of molecular methods to identify new lineages of bacteria and archaea. The media also represent significant advances in the ability to use chromogenic substrates to identify specific species and strains of bacteria, e.g., *E. coli* O157 and methicillin-resistant *Staphylococcus aureus* (MRSA). These media are extremely useful for clinical diagnostics and for the protection of the food supply from pathogenic microorganisms.

With over 7000 formulations, this new edition includes all the media used for:

- Routine examination of food and water
- Cultivating specific strains of bacteria, archaea, fungi, and protists, including many anaerobes and extremophiles
- Cultivating the numerous microorganisms currently available from the world's global bioresource centers (BRCs)

Additionally, many culture media are now available that are free of animal components. Plant-based media eliminate possible contamination with prions, which is important for production of vaccines and pharmaceuticals.

The entries are arranged alphabetically by medium name and include composition, instructions for preparation, commercial sources, safety cautions, uses, and more. This reference contains the most comprehensive compilation of microbiological media available in a single volume. The only resource you need for all media types, it makes finding media for culturing diverse microorganisms quick and simple. With uniform presentations of media formulations and preparations, it presents easy-to-follow directions and cookbook recipes for preparing media. You won't find a more complete or user-friendly microbiology reference anywhere.
